Sir Winston Churchill's famous phrase that he had not become Prime Minister "to preside over the liquidation of the British Empire" has had a curious influence on British imperial policy since the war. It has not prevented his successors, or indeed Sir Winston himself when he returned to office, from presiding over the liquidation of the Empire, any more than Mr Macmillan's stout defence of his predecessor's actions in Egypt has prevented Mr Macmillan from systematically liquidating the Suez policy. It has, however, inhibited successive British governments from recognising, even to themselves, just what it was that they were doing. Having withdrawn from India, they proceeded logically enough to liquidate the positions in Iraq, Jordan, Egypt and the Sudan, which in the days of the Indian Empire had been thought vital. The preoccupation with a network of strategic arrangements in the Middle East remained for a time, however, as dominant in British policy planning as if there had been no withdrawals at all. Cyprus was selected as the permanent British headquarters for the Middle East automatically, by the elimination of the other possible sites; and the sense of insecurity, engendered by reverses elsewhere, produced an obstinate determination to hold on to sovereignty in the island. Only afterwards, when the Cypriots refused to allow this arbitrary choice to determine their political future, was it realised that Cyprus was an acute colonial problem itself. At the same time, the preoccupation with the Middle East diverted attention from the fact that Cyprus, a European island, was also a dormant international problem capable, once it erupted, of causing a deep division in the Atlantic alliance.

It was not until July, 1956, nearly a year after the failure of the tripartite conference between Britain, Greece and Turkey, and four months after the deportation of Archbishop Makarios to the Seychelles, that Sir Anthony Eden, then prime minister, for the first time plainly acknowledged a Cypriot right to self-determination—which to the Greeks meant enosis, and to the Turks came to mean partition. But British defence thinking, combined with the increasingly obvious conflict between Greek and Turkish aspirations, prevented the Government from naming a day, however distant, when the principle would be put into practice; and

this failure both frustrated the military pacification, and hamstrung the attempts of Lord Radcliffe and Sir Hugh Foot to get the island started along the path to self-government. By the time the British Government was ready to admit that sovereignty over the whole island, though a convenience, was not really a necessity, the antagonism between Greece and Turkey seemed to have barred the way to a peaceful transfer of power.

It is the change in the Greek and Turkish attitude over the last two or three months that has loosened at last the log-jam of years. When the futility and danger of their mutual antagonism did strike home, the two countries moved with astonishing energy to find a compromise. The agreements that were contrived in Zurich and later in London (they are summarised on page 767) naturally demand sacrifices from all parties to the dispute—though the basic interests of each are safeguarded. Britain loses a possession which had become an encumbrance. The foothold of its defence forces in the eastern Mediterranean is reduced to the merest toehold; but given British relinquishment of the island, the two base areas over which it is to retain sovereignty and the guaranteed defence facilities which it is to enjoy outside these areas, provide, on paper, a generous provision for this country's defence needs. No theoretical restriction is placed on the use of these defence facilities. In practice their effective use will no doubt need the tacit assent of the future government of Cyprus; but, then, if the island had remained British, Cypriot hostility would have made it worse than useless as a base.

Turkey, and the Turkish Cypriots, have sacrificed partition. But partition, in so far as it ever had any practical meaning, was a means to an end, not an end in itself. For Ankara it was a means of making sure that Cyprus, only forty miles from the Anatolian mainland, would not fall into hostile hands; that end is now to be met by the presence of British, Turkish and Greek forces in Cyprus and by the treaty rights to be given to the three powers to intervene, either separately or collectively, to maintain the *status quo*. For the Turkish Cypriots, partition was a way of making sure that they enjoyed their rights as a minority without interference from, or persecution by, the Greek majority; these rights have now been very fully taken care of in the draft constitution drawn up at Zurich.

GREECE and the Greek Cypriots make, it should be frankly admitted, the greatest contribution to the settlement. Greece has in effect repeated the decision that Venizelos took in 1924, to abandon policies of expansion and seek reconciliation with its neighbours. It loses the possibility of a new possession and the satisfaction of uniting the Greeks in Cyprus with their mother country. But it loses, too, what might have turned out to be not merely a grave responsibility, but a heavy burden. In return, it regains the friendship of Britain and Turkey; it gains the right to maintain troops in Cyprus and its special interest in the island is recognised; above all, it has secured for the Greek Cypriots a future in which they will be able to run their own affairs and, with help from Athens, develop their "Greekness" as they will.

Will this satisfy the Greek Cypriots? Mr Karamanlis said at the end of the Lancaster House conference that the negotiators had tried to ensure that there should be no victor except the people of Cyprus themselves. It may take time for the Greek Cypriots to see it that way. Those who have been genuinely devoted to enosis are bound to be dismayed; and no one takes kindly to having a cherished dream smashed for good. There are also practical objections from the Greek Cypriot point of view. There is the nature of the independence that the island is to get; freedom to remain exactly as they are may be considered something of a travesty. There is, too, the small part the Cypriots themselves have had in determining their future. Their representatives came to London, but only, in effect, to endorse an agreement already drawn up. There is to be no plebiscite.

FINALLY, the machinery of government that has been devised for the island is complex and ponderous with its checks and balances. It gives the Turkish minority a weightier voice and greater powers of interference than their numerical strength would justify; the powers of the Turkish vice-president would seem to be very nearly as great as those of the Greek president. If Cyprus could be considered in isolation, the system of government now proposed for it would be hard to justify; but, given the complicated inheritance of political, racial and strategic problems, the carefully adjusted agreements and treaties hammered out in Zurich and London are probably the best that can be hoped for. Now the bare outline of the constitution agreed at Zurich has to be filled in by the joint commission in Cyprus.

To quote the unexpected authority of Archbishop Makarios himself, "It is the spirit in the hearts of men that counts most." Without a very great deal of goodwill from both Greek and Turkish Cypriots an independent Cyprus has little more future than the dependent, discontented and divided Cyprus has had. And, besides goodwill, the new Cyprus will need provision for its economic viability. Mr Macmillan's announcement that the Government would consider sympathetically a Cypriot request to stay in the Commonwealth (with its economic advantages) is a welcome sign that this fact is recognised here. A prospect of peace, stability and economic revival can overcome the Greek Cypriots' present doubts. Perhaps in time they may even generate more than neutral feelings towards the flag "of neutral colour and design" which, according to the terms of the Zurich agreement, is to be devised for the new Republic. That is a problem for them to solve. For Britain, there can be no going back on the Cyprus settlement.

Moscow Revisited

Our special correspondent in the wake of Mr Macmillan and Mr Selwyn Lloyd describes the puzzling atmosphere of the visit

"A MILD wind from the west will blow over Moscow." That was the official weather forecast of the Central Institute for Prognosis which Muscovites read in their newspapers at the beginning of this week. For a moment at least it seemed that Mao Tse-tung's famous slogan about the east wind prevailing over the west wind was in abeyance. A beaming sun thawed out some of the detergent-white snow, unmarred by any industrial or coal smoke, that covers Moscow in winter. The muffled female figures who chip the ice off the city's broader streets and squares had an unusually easy time. Mr Macmillan, some Muscovites remarked, seemed to have brought a sample of the milder climate of England with him in his Comet. And there were other auspicious symbols. It was announced that one item on the Prime Minister's programme was a visit to a new atomic icebreaker; and his stay in Russia began aptly enough with the nearest thing in Soviet life to his own Edwardian foible—a weekend withdrawal to one of Mr Khrushchev's country estates.

True, Moscow itself seemed meanwhile to be filling up with truckloads of stern faced soldiers, and heavily overcoated officers hurried about with preoccupied faces. But this was the eve of the annual Soviet Army and Navy Day; and, on Monday evening, while the two Prime Ministers dined together at the British Embassy, immediately opposite the walls and onion domes of the Kremlin, much of this soldierly bustle was explained, when 20 salvoes of coloured fireworks rose into the sky with military precision.

By the time they sat down to that night's dinner, the ministers had already spent nearly two full days in both formal and informal talks, and Mr Macmillan was well on his way toward his goal of a conversational rather than a tourist visit. He had politely declined an invitation to go out shooting on Wednesday, saying that he would prefer to spend the day at another country house —the "dacha" which his hosts had allocated for his use during his stay, and which he had not yet had time to see—and following through with an invitation to Mr Khrushchev to come out and lunch there and linger for still another quiet chat.

The west wind, it seemed, was still blowing gently but steadily. The tone of the conversations, in which topics of general international concern such as Germany had taken precedence over bilateral Anglo-Soviet affairs, was cordial but frank. Indeed, Mr Khrushchev went out of his way in his speech at the Embassy dinner to tell Mr Macmillan that "what we like is your frankness." Admittedly, not all of the Soviet leader's colleagues shared this appreciative point of view. Mr Macmillan had urbanely introduced into his set speeches some telling thrusts at his hosts' habit of depicting to their peoples the Britain of Charles Dickens rather than that of the welfare state, and at the contrast between Britain's transfer of sovereignty to its former possessions in Asia and Russia's continued retention of its territories there; and, when he regretted that he and Mr Selwyn Lloyd would not have time to visit Stalingrad, he remarked innocently that the parliamentary system compelled them to be available at home from time to time to be questioned by their colleagues. The Soviet press showed a marked and understandable tendency to bowdlerise these passages.

PRESUMABLY the Prime Minister proved to be even franker and less easily budged than the Soviet leader had expected. Both sides had hitherto maintained a strict, and in the circumstances admirable, discretion about the details of what had passed between them. But on Tuesday Mr Khrushchev, for his part, revealed that he did not feel that he was making any progress. Having packed his guests safely off on an all-day trip to the atomic research centre at Dubna, 90 miles outside Moscow, he summoned to the Kremlin a chosen band of the constituents who will, on Sunday, elect him to a seat in the Supreme Soviet of the Russian Federal Republic, and made a speech which, reprinted in full, filled about half a page in Wednesday's Moscow newspapers. It was rumbustious stuff which drew repeated laughter as well as the normal applause; and it included a forceful reassertion of familiar Soviet theses on international issues.

This speech was immediately interpreted as an attempt to jostle Mr Macmillan into giving ground by making it clear that Mr Khrushchev was freshly and publicly committed to yielding none himself. A less imperturbable politician than the Prime Minister might well be expected either to change his views after this blunt warning or to take umbrage publicly—which would earn Mr Khrushchev a point in the contest to show oneself more willing than the other fellow. However, the Soviet leader may not have taken full account of Mr Macmillan's reputation for unflappability and masterly inaction, or of the likely effect on western and indeed on world opinion of the spectacle of the British Prime Minister being publicly rebuffed in the middle of his attempt to find common ground through personal contact in discreet privacy. But by the time Mr Macmillan and his host return from the provinces, there ought to have been time for reactions to show themselves and for their significance to sink in.

For the 70 British, American and west European journalists who have been allowed to come to Russia

to cover the British visit, Mr Khrushchev's speech and its implication fell like manna from heaven. "For the third day running I have described the snow," was how one of them expressed his feelings about the news value of the talks just before he heard of Mr Khrushchev's electoral activity. The press corps has been corralled on the far side of the Moscow River in a brand new mid-nineteenth-century hotel, strongly reminiscent of Cold Comfort Farm in the whimsical inconvenience of its layout, but fortunately better heated than the home of the Starkadders. The correspondents' hopes rose on Tuesday night when they were able to rub shoulders almost too literally with Messrs Khrushchev, Mikoyan and Gromyko at a jam-packed British Embassy reception. But even then there was for once hardly anything of lapidary value in the Soviet leader's party banter, except perhaps for the intriguing remark that he had not been out east to look at his own "virgin lands" projects in Kazakhstan and Siberia for over two years. And Moscow in general maintained its reputation as a difficult place to get any background or orientation about the events of the day.

Things are, however, considerably better now than they used to be for the visitor who does not have to try to follow the political story blow by blow—if he has enough of a smattering of Russian to get about on his own, use the telephone and make contact with the now numerous Muscovites in different walks of life who speak foreign languages passably and are prepared to go slowly and patiently through a conversation with a foreigner. At last there are adequate street maps of Moscow on sale; and the bookshops are also doing good business with a small classified telephone directory, which does not list individuals but is of considerable help (its only really awkward omission is a list of embassies). With the help of modest aids like these, even the short-term visitor now has a chance of breaking out of the cosy circle of Intourist hotels for top people; and the official shepherds themselves, although not altogether happy at being firmly directed off the well worn tracks, evidently feel less nervous than before about letting the visitor see the seamy side of the neighbourhood, as well as the many impressive features.

IN midwinter it is, of course, not physically easy to get into quick contact with the Muscovite in the street, eager though he often is to talk with visitors. Even for a fully acclimatised and fur-capped Russian it is a bit chilly to linger chatting in the open, and there is as yet little alternative; even including the big hotels, there are still only 78 restaurants, cafés and snack bars in this city of five million people, and most of them are expensive. Shops would be obvious places in which to pursue the Prime Minister's aim of "meeting the people," but they are apt to be packed with impatient customers who leave little elbow room.

Even so, and allowing a full margin of error for first superficial impressions, casual conversation is revealing. In striking contrast to the tone of the press, intelligent and linguistically competent Muscovites give the impression that there is no popular head of steam behind Mr Khrushchev's exercise in brinkmanship over Berlin. It is said that strong feelings about Germany remain at the back of all Russian minds, but most people do not actually show much anxiety about developments in Germany, or even any particular interest in talking about them.

Prominent among the subjects that people do seem to want to talk about, once encouraged by hearing a well-meaning foreigner stumbling ludicrously through their language, is life and living standards in other countries and the tantalising thought of being able to go there and see for themselves. (There is incidentally a surprising amount of indifference about sputniks, although the sputnik is everywhere employed in publicity as a true symbol of Soviet prowess; a new brand of filter-tip cigarettes in western style has appeared bearing the name and portrait of Laika.) The casually encountered Muscovite is filled with innocent pleasure on being told, apparently for the first time, about aspects of life which are now comparable in his country and in ours, and apt to need reassuring with cheering words when he learns about other aspects. He is not at all the braggart that his leaders and representatives make him out to be. Talking to him, one feels that the mild west wind may yet prevail over the cold eastern blasts that have come from Mr Khrushchev this week; but it may take a long time.

The Economist

FEBRUARY 26, 1859

PROSPECTS OF PEACE?

The assurance given by the Chancellor of the Exchequer in the House of Commons last night, that arrangements have been made for the simultaneous evacuation of the Papal States by the forces of France and Austria with the consent of the Papal Government—and the promise afforded by the mission of our French Ambassador, Lord Cowley. . . . on a pacific errand to the Court of Vienna—raise the best-founded hopes for the ultimate maintenance of peace in Europe, which we have been permitted for many weeks to entertain. Indeed, grave as the crisis no doubt is . . . we must keep well before our minds that if once the Papal States are honestly evacuated by both France and Austria *without any reserved intention of returning* be the immediate and internal consequences of their withdrawal good or bad, the European crisis is past—since there is no other point that can fairly be drawn into the international discussions, on which a question of peace or war could be supposed to hinge. As Lord Palmerston in his concise review of the state of Europe well observed, this is not a political crisis like that which usually precedes a great international quarrel, when the injured honour, dignity, and interests of one great nation seek to vindicate themselves by reprisals touching the honour and dignity of another great nation. . . . We must remember that neither the French nor the Austrian nation is identified with the Italian policy of its rulers. There is no fatal popular enthusiasm at work like that roused by a national insult. . . . If only the Emperor of France can be satisfied, the people he rules have never been in need of satisfaction. If only the Emperor of Austria thinks that he can retire with honour from the Papal States, the people of Austria are not likely to suggest any difficulty.

How to Help Agriculture

An article last week discussed how far there is a case for supporting agriculture in Britain. This article suggests how the system of giving support should be changed.

THE cost of supporting British agriculture appears (from the latest vote on account) to be falling from around £300 million to perhaps £260 million a year. This is still a very large sum to expend on the 300,000 full-time farmers—between £800 and £1,000 a head a year. Worse, however, is the fact that this money is being spent to keep most of British agriculture ticking over at a very low level of prosperity, while doing relatively little to improve its competitive efficiency or long-term utility.

The Economist has often been accused of seeing only the taxpayers' side of the case. Let it therefore be reiterated here that one of the main complaints against present agricultural policies is that under them most individual farmers are anything but prosperous or economically secure. Today two-thirds of British farmers earn on the average something like a bus-driver's wage, in return for longish hours of labour and for a sizeable input of working capital; and the "average" here disguises enormous variations not only between farms but also on the same farm in different years. Under the 1957 Agricultural Act farmers have in effect accepted that the taxpayer is bound to exact a progressive squeeze in their price guarantees. Although it will come only in limited and predictable doses, such a squeeze is bound to make a tough life tougher. This alone is a stiff prospect in a welfare state.

Admittedly, many of the least efficient farmers would be much better off out of farming, and one of the proper (though often unspoken) objects of the 1957 policy is to push them out. But in practice strong family traditions, a high average age, and a strong attachment to their land and locality render the farmers in question singularly immobile. Moreover, they have a workable alternative in the shape of cutting costs and risks to the bone, farming at a low but leisurely level, and living partly off their capital and land. Many farmers did this in the nineteen-thirties, and some are already doing it today. It is important to repeat that these possibilities do not concern just a few marginal farmers, but some two-thirds of the total number. Thus an unadulterated price squeeze may precipitate not merely a social problem but also an economic and strategic hazard—for a widespread deterioration of the land's capital and equipment is one thing which (as last week's article argued) ought not to be allowed. It is therefore extraordinary that there is not wider general support among all political parties, among intelligent farmers as well as among intelligent laymen, for a complete overhaul of agricultural policy and a studied re-direction of government aid.

The lines long which this reform should proceed are now surely fairly clear. The British system of farm support has one great advantage over the system prevalent in most foreign countries: the burden of it is placed openly on taxpayers by means of subsidy payments, not on consumers by means of protection against imports. But the system also has one great disadvantage: more than 95 per cent of the subsidies concerned are still unselective, and are paid out roughly in proportion to farmers' output. The larger farmers get the lion's share of the price subsidies, the fertiliser subsidies, the production grants, and even the capital improvement grants. This is wasteful (for larger farmers do not need all this assistance) and ineffective (for the smaller man's subsidies just keep him going, but leave no margin for development or improvement). A much higher proportion of aid—say, a third—ought to be selective: that is, it ought to be specifically designed to improve the competitive position of the smaller and less fortunate farmers.

To ladle out selective help admittedly involves all sorts of difficulties. Selective aid conjures up pictures of gross administrative paternalism, of rural suspicions, of favouritism and intrigue; it also raises tricky economic problems of investment and land tenure. That is why the Government has so far—with its new small farmers' scheme, announced last year—put only one toe into the water. Yet there is no alternative to facing the difficulties, except that of giving up all serious ideas of reform. The rest of this article offers some suggestions for a new programme of agricultural assistance; it will begin by discussing the two forms of present aid which ought to be cut, and will then discuss three new forms of aid which it is suggested, ought to be initiated or extended.

FIRST, then, price guarantees should be continued, but they should be scaled down to conform to the notion of a "floor," rather than a "ceiling," price. They should underpin, not overtop, the market. Instead of costing £210 million a year (or 70 per cent of all agricultural aid), as they did in 1957-58, they should not cost more than about £100 million in a normal year. In addition, it is important that different commodities should be protected much more equally. Because general price supports are indiscriminate, and offer most money to the biggest farmers who have the biggest output, an attempt has gradually been made to introduce a social purpose into them by the back door: the most generous supports are accorded to those things that small farmers can produce most easily. The result is that eggs and pigs now run away with two-fifths of the price subsidies. This is completely the wrong way to support small farmers; the aim of price guarantees

should be to encourage home farmers to grow those things that they can produce most economically.

Two of the functions of the price guarantee system are to achieve a reasonable (but not a "frozen") degree of price stability, and to give the home farmer some (but not excessive) protection against the competition of highly specialised—and sometimes also subsidised—overseas producers. The goal of stability does not require a high level of support. On the contrary, excessive subsidisation of particular products, which necessitates major Government switches in price "emphasis," is an enemy of stability, as farmers have been finding out. The goal of protection, on the other hand, inevitably entails a fluctuating level of support because import prices and the terms of trade are continually changing. This cannot be helped, and British taxpayers ought not to be alarmed at the unpredictability and occasional upward swings of the subsidy bill. But the average bill over the last five years has represented a degree of protection far too high to carry permanently.

The second form of unselective aid to agriculture at present consists of those direct subsidies which are made available to *all* farmers; they cost some £75 million a year. These unselective subsidies should be cut, and confined to a few key purposes connected with capital improvement and the maintenance of soil fertility. Examples are drainage and water-supply, fertilisers and grassland improvement. Some of the money saved on the price guarantees and on these unselective direct subsidies could then be diverted to the three selective forms of aid discussed below.

IN the first place, the present small farmers' scheme should be converted into a much larger scheme for the improvement and rehabilitation of sub-economic units. The test of eligibility should continue to be the farm's capacity to become (with assistance) fully economic in time, but "fully economic" should be defined more stringently.

Much larger aid would then be available to each farm which qualifies, but a more careful plan for using this aid would also be required. In some cases a farm's economic position could be improved mainly by changing its pattern of production, but more often the choice lies between intensifying production on the present acreage or enlarging the farm's total area. It is important that these questions should be faced, and economic advice brought to bear on them. The Government's advisory service, which is to administer the present small farmers' plan, is economically unqualified and has always fought shy of giving economic advice. Its qualifications and attitudes need to be changed. The implementation of a new "farm plan" might be helped if it were linked (as it is in many other countries) with the provision of cheap credit, as a partial alternative to grants.

Before going in for intensified production on the same acreage, the farmer and his advisers should take careful account of the probable downward trends in the price of eggs, pigs, and milk on world markets. Unless the farmer can expect to produce them profitably at lower prices than at present, he ought not to increase his dependence on these commodities. Often the best course for an individual farmer is to enlarge and re-organise his holding; but aid should not be given where the effect is seriously to injure adjacent units.

A MORE comprehensive attack on the problems of small size and bad lay-out is therefore essential. This should be the second feature of any new plan for more selective aid to agriculture. One of the major drawbacks of British agriculture is the ownership (often by absentees or non-agriculturists) of small parcels of land. Nationalisation of the land as a means to re-organisation has had its advocates in the past. A better case could in fact be made for it than for many of the other nationalisation projects which the Labour party has thought up since; but it is obviously not a likely starter at present. Instead, the state could lend its support to local co-operative organisations of farmers, formed to buy up land and re-allot farms.

This is the sort of agricultural policy for which both the Labour and Liberal parties should be pressing. Any help to farmers' co-operatives in this country would be a useful offset both to the class-conscious individualism of the ordinary farmer and to the monolithic grip of marketing monopolies.

THESE schemes of aid to both individuals and co-operatives would leave in the cold those farmers who are too small or too poor or too individualistic to participate in them. These people should not just be abandoned by the state, nor ought they to be abruptly dragooned out of farming if, knowing the hazards, they wish to remain. The third plank in a selective plan for agriculture should be designed to help them. The fairest and least offensive form of aid would be a "marginal farm grant," paid as of right to the occupier of any farm which failed to qualify for capital assistance. But it should be given only for a limited period—say ten years, or (in the case of farmers over 40) until their retirement or death. This would give fair notice to these farmers and their heirs of the choices before them.

To summarise, the suggested policy is for a smaller total of support to agriculture, perhaps half in price support and half in direct subsidies. These subsidies would include three selective forms of aid:

(1) An extended "small farmer" scheme, pegged to an individual "farm plan" and economic advice;

(2) Aid to co-operatives for the acquisition of land and rationalisation of farming units; and

(3) Temporary and terminable aid to the bottom strata of farmers.

These three measures between them would do a lot to make a tougher price policy acceptable to farmers, and to prevent such a policy having a deleterious effect upon the farmers' function (discussed last week) as economic and strategic reservist. Is it really impossible for either of the two big political parties to re-orientate its thinking along these lines?

TOWARDS THE NINETEEN-SIXTIES—VI

The Tired Continent?

European economic recovery since the war has been one of the West's few brilliant successes. How does the state of Europe's political system compare with its economic health?

PENNED in a corner, a man may be tempted to gaze out of the window, turning his back on the room he is in. British opinion has never really digested the extent of the failure of the great powers to produce a European political settlement out of the ruins and exertions of the last war, or the dangers which that failure represents for Britain. Nor has it ever quite grasped the further, and avoidable, failure of Britain to seize the opportunity for leadership which the war put in British hands in what remained of free Europe in 1945. Thus the demise of the free trade area project has come in London as a surprise, even a shock—though an imperfectly apprehended one, like the other disagreeable surprises that the postwar history of Europe has brought. The clamour of these facts is drowned in talk of far-flung overseas interests, or forgotten in pursuit of a mirage of a world-wide British system of power that is somehow to survive the dissolution of the Empire.

Mr Archibald MacLeish, in a lecture on *Poetry and Journalism* at Minneapolis last October, complained of the divorce between knowing and feeling in the well-informed western public of today. The present generation was provided with more facts than any previous generation, but

> we seem to be less and less capable of receiving the facts into our imaginations where they may come alive with feeling.

These remarks apply exactly to the British relationship with Continental Europe since the war. At the end of a half-century in which this country has fought two wars to the death to prevent a hostile power getting the upper hand on the Continent, it is hardly necessary to set out to prove that a stable and friendly Europe is a vital British interest. As Mr Maudling told the House of Commons on February 12th, in explaining why Britain did not choose to join the European common market, Britain is part of Europe "by tradition, strategic interest, culture, and everything else." All the same, he added a few minutes later, the sentiment in Britain for European unity and co-operation is "rather a tender plant," which could "wither and die back" if this country suffered another rebuff.

The fact is, however, that a stable and friendly Europe of the dimensions which it was possible for an optimist to conceive of in 1900 is by now inconceivably far out of reach. Each of the two great European wars, though "won" by the western side, left the frontier of western influence in Europe several hundred miles further to the west than it had been before. In consequence, the term "central Europe" has almost disappeared from the European vocabulary. In ordinary language there is now only a "western" and "eastern Europe," and of these two, only what is called western Europe is habitually regarded in the West as European at all. As the boundaries of free Europe have shrunk, western minds have been closed about what Europe geographically and historically consists of. The vision, or the recollection, of the large Europe that existed fifty years ago is left as a monopoly to the (fortunately few) advocates of reconquest. The rest of us have quickly got used to the idea of a very little Europe indeed.

EVEN this rump Europe that remains is regarded in Britain with a political and economic detachment which is hard to reconcile with the completeness of the British strategic involvement on the Continent. Britain continues to keep an army in north-west Germany, with its most advanced outpost in Berlin, as a tangible pledge of readiness to fight a third European war to stop any further nibbling at the West's frontier in central Europe. The promise to keep this army on the Continent for fifty years was made without inquiring whether there was any public support for it, in the autumn of 1954, when the wheels of western diplomacy needed greasing after the breakdown of the European Defence Community project. By the side of that promise, the commitments contained in the Treaty of Rome do not look revolutionary; but they have been declined because "there is no public support."

To accuse the leaders of continental western Europe in the same period of the same equivocation towards unity and co-operation would not be quite fair. What has been surprising about them is that they moved as fast as they did. They have, however, shown a similar ability to shut out unacceptable facts from the imagination—so that the lost parts of Europe are written off or forgotten, while policy confines itself to the organisation, in the tightest possible framework, of the main body of what remains. At first glance this concentration on the possible looks like realism. But, unfortunately, some of the facts that are put aside have too direct a relevance to be disregarded safely. Most obvious of these is the anomalous and isolated position of west Berlin. There are, however, others.

If Europe is to be organised into an eastern and a western economic block, each with its monochrome political and military complexion, how much thought has been given to the position of the neutrals: Finland, Sweden, Switzerland, and Austria? Or how much to

the dilemma of the poorer countries of southern Europe, some of them politically unable to fit into the prevailing categories, but equally unable to afford to be squeezed between two powerful trading systems. Partial technical solutions to some of these problems can probably be found, but they cannot remove the basic dilemma of a divided continent. Perhaps most dangerous of all the undigested facts, in the long run, to the fabricated unity of rump Europe, is the unresolved German question itself : the fact that the German member of the community of the Six is not all Germany, but only two-thirds of the reduced area, and three-quarters of the population, left to Germany at the end of the war. Historically minded champions of Little Europe will argue, just as historically minded communists do in Dresden or Prague, that Germany has been divided so often and for so long in the past that there is no real reason why it should not get used to being divided again. The concept of a single German state was, however, established and consolidated between 1866 and 1945, and it is blind to suppose that the Germans are going to give it up if they can help it.

To point to the parts of Europe that are left out is not to carp at the new European Community ; it is to raise an essential question which needs to be remembered, since in all probability it will, in one form or another, occupy the European statesmen for many years to come. Throughout the work of construction which has brought " Little Europe " to visible shape, it has been a principle of the architects that what they are creating is not merely a western continental block, it is a European union ; they have said again and again, and have anchored the principle in the treaty, that the other European nations can, and sooner or later will, join. There are a few cases where this aim can be actively pursued without pursuing a direct conflict with Russia. Britain, Spain, Portugal and Denmark are such cases ; but they are few. With those exceptions, expansion will mean either the winning over of neutrals or the active erosion of the Soviet system itself.

Most of the Six have good reasons for not wanting to court more active Soviet hostility than they have experienced already. France, in particular, since the return to power of General de Gaulle, sees the Community as a new block led by France and relatively independent of American guidance. The concept of a French-led block not only permits, it probably requires, Germany to remain divided. But if, in order to avoid external conflicts and pursue their own consolidation as an independent block, the Six have to give up any claim to a universal European character—and if they even have to accept as permanent the national division of one of their members—then their own cohesion is going to be subjected to obvious strain.

These are uncertain calculations. All that can be noted with certainty is that the dominant political combination in the free part of Europe today is the understanding between General de Gaulle and Dr Adenauer which is coming to be known as the Paris-Bonn axis ; that General de Gaulle's idea of the future of western Europe diverges markedly from Dr Adenauer's ; and that both men's ideas diverge in important ways from the existing facts of international life.

It is a matter for speculation how far, if at all, these sources of future trouble might have been avoided if the movement for European union had taken a different direction, with a somewhat looser basic concept permitting a larger membership in a system that might have been a shade less directly related to the cold war. Some such result might, just conceivably, have followed if the leadership in European union had come from London instead of, as it did, from the Christian Democratic triumvirate Adenauer-Schuman-De Gasperi. There can be no certainty of it. Ten years ago, Moscow showed a hostility just as implacable to the Organisation for European Economic Co-operation as it shows now to the European Economic Community. The Russians were never able to disrupt OEEC, though they were naturally able to prevent countries under Soviet influence from joining it.

On the face of it, their ability to disrupt the Six is much greater—if and when they choose to play the card of German reunification ; but this is a card they cannot play without exposing their own eastern European system, too, to serious strain. Their present challenge to the western position in Berlin looks like a dangerous gambit, to them as well as to the West : for on the one hand, they cannot expect to win all that they are asking there without war ; but, on the other, an east-west compromise over Berlin, if it does anything more than preserve the status quo, implies a change in the state of Germany and therefore a change of some kind in the eastern and the western European blocks. So far, in all German questions since 1945, the Russians have always preferred continued stalemate to any compromise involving change. But this may not always be so. When Mr Macmillan chooses to visit Moscow in circumstances that obviously oblige him to discuss Berlin with Mr Khrushchev, it is very natural that a rustle of uneasiness should run through the western European capitals ; they are all likely to be affected by what happens in Berlin. Dr Adenauer's visit to General de Gaulle next week has to be seen in this context.

The fragility of Europe's political arrangements stands out all the more sharply against Europe's economic vitality and resilience. M. Jean Monnet, in a recent interview on the position and prospects of the Six, was able to claim that the European Community was the region of the free world that had shown the most rapid rate of economic growth in the past ten years: an increase of 97 per cent in industrial output between 1949 and 1958, compared with 29 per cent in Britain and 39 per cent in the United States. This meant an expansion in the six countries equivalent to that of the previous century and a half put together. No doubt this picture of M. Monnet's is to some extent falsified by the existence in 1948 of a large reservoir of unused

German industrial capacity. However, the pace of German re-expansion, the modernisation of large sectors of the French economy, and the appearance of first-class modern industry on a large scale in north Italy have exceeded any reasonable expectations, and now form the basis for the expansionism which marks the common market's view of the future. M. Monnet anticipated a further doubling of the community's industrial production in the next 15 years.

This spectacle of economic virility in what is supposed to be the tired continent is not confined to the common market ; indeed it is not confined to western Europe ; several of the countries of eastern Europe are now achieving a rapid industrial expansion, whether because of or in spite of the efforts of their communist planners. Europe has reinstated itself as an industrial power-house, an economic pacemaker, and a centre of formation of capital—and, therefore, as an essential element in the calculations of the world's under-developed countries seeking the means of improvement. These facts might be expected to make Europe politically influential, but it is not clear that they will ; partly its division, partly its familiar and fatal disposition to form its schemes without enough regard to the existing facts, may keep Europe for a time yet an object, not a maker, of events.

NOTES OF THE WEEK

Flare-up in Central Africa

The Nyasaland cauldron at last boiled over this week. After watching it seethe for a few days, seeing labour trouble break out at Kariba, and hearing of renewed rioting in the Congo and an outbreak in Somalia, the Southern Rhodesian government suddenly declared a state of emergency in its territory, which has boasted of the quiet and moderation of its African population for fifty years. The proscribing of the African Congress parties, and jailing of their leaders, suggests either that the premier, Sir Edgar Whitehead, has got wind of a new uprush of African violence, or that Southern Rhodesia's nerves are badly shaken.

In Nyasaland, where so far no emergency has been declared, a week of rioting has driven the governor to ask Sir Roy Welensky to send in federal troops. This rioting will be put down to Dr Banda's increasingly perfervid speeches against federation ; but passions have been rising dangerously for a long time, and a contagious excitement is sweeping Africa. When Dr Banda first returned to Nyasaland to lead the Nyasaland Congress six months ago he showed momentary signs of wanting to temporise, but he was swept away by the pace set by the secessionist Congress leadership which received him as a messiah. His own temperament ill-fitted him to keep his feet or his head ; his egotism surprised even Africans at Accra last December.

The riots, and the vigorous reaction to them by Sir Edgar Whitehead and Sir Roy Welensky (who has called up his territorials), confront the Central African Federation with a new situation at a critical moment. A general election in Northern Rhodesia is pending, and Africans are being urged to heed the advice of moderate leaders, go to the polls and work the new constitution ; while the Minister of State for the Colonies, Lord Perth, planned to go out to discuss a new territorial constitution for Nyasaland. The cancellation of this trip, and the action of Sir Roy and Sir Edgar may be seen by Africans as further proof that ultimate power in the Federation lies with the white settlers and in Salisbury, not in London. These events come at a time when Sir Roy has not yet taken an African into his government, and before he has made a single liberal gesture towards the Africans of either Nyasaland or Northern Rhodesia. On the other hand, the white settlers have applauded his prompt action, and the right-wing Dominion party opposition has promised full aid. All this must make Sir Roy look too much like the white *baas* ruthlessly enforcing *baaskap* throughout the Federation ; and the rush of settler support may be as bad for him as adulation is for African leaders like Dr Banda.

These events hardly set the stage for growing racial partnership in the year that is left before the London conference on the Federation's constitution and future. They are as disastrous for Sir Roy as for everyone else, black or white ; and it is unfortunate that the opportunity to discuss means of saving a deteriorating situation with Lord Perth has been deferred. Mr Lennox-Boyd will have to take a hand himself.

Bongo in the Congo

Political tribalism set off the latest spasm of rioting at Brazzaville, the chief town and provisional seat of government of the new Congo Republic, last week. It was at Brazzaville that General de Gaulle twice proclaimed a glowing future for France's African peoples, but by the end of last week's forays the city counted 200 dead, besides bodies committed to the Congo river, hundreds injured, and the leader of Congo's parliamentary opposition, M. Jacques Opangault, arrested for inciting his trusties to sedition, rebellion and pillage. It was an exclusively Congolese grudge fight ; Brazzaville's white community was not involved.

French Congo has two leaders and two capitals. The present prime minister, the Abbé Youlou—whose bishop forbade him to take office—ousted M. Opangault from the premiership last November 28th by one vote in the territorial Assembly at the official capital of Pointe Noire. But this was in enemy country. No sooner was the vote taken than the Abbé and his friends, the Democratic Union for

the Development of African Interests, promptly moved the government to Brazzaville, their own stronghold. M. Opangault and his African Socialist Movement have been boycotting the Assembly's meetings in protest. But Brazzaville has its community of M. Opangault's Mbochi tribe, and it was between the Mbochis and the Balalis, the Abbé's supporters, that last week's feuding came to a head. Now, while Brazzaville's new hospital is filled with the wounded, the Mbochis have been reported making their way back to their tribal country in the north, some of them crossing the river into the Belgian Congo to escape Balali attacks. Doubtless they are waiting for the next round—by which they do not mean the now-promised but still indefinite elections.

The affair could cost the Congo's 700,000 inhabitants dear. The one hope they have of industrial prosperity rests on the development of the Kouilou barrage at an estimated cost of 80 milliard francs. Although there have been hopes that money might be diverted to the Congo from French projects originally intended for Guinea, the new evidence of Congo's restiveness is likely to deter investment.

DEFENCE—FIRST HALF

Filling in the Blanks

MR SANDYS will wind up the debate on the defence white paper after this issue of *The Economist* has gone to press; whether the debate can be judged useful or not will largely depend on how frankly he answers the questions that have been put to him as the result of his opening speech. It was a good speech; it filled in some of the blanks in the white paper; and it showed that Mr Sandys, notwithstanding his own disingenuous assertions to the contrary, is still revising the defence policy he first outlined in 1957. But he still faces questions on his policy's inconsistencies.

First, on the size of the forces' manpower. Mr Sandys has wisely stopped saying that the volunteer Army of 180,000 which he will now recruit is really the 165,000 which he first said was all that Britain needed. He was able triumphantly to confirm that nobody born after September 30, 1939, will need to register for national service; the Army is satisfied that it can fill the gap up to 1962 by relying on men who got deferments earlier. The Labour party saw the political point, and rushed in rather absurdly to try to snitch the credit; no MP, not even Mr Head, dared to make the point that conscription should even now not be abolished, but merely left in suspense, for nobody knows how many men we might need sometime in the future. Mr Sandys is now saying Britain can manage with so small an army because it would never have to fight any save the tiniest of limited wars without allies. But that does not prove that those allies in the remaining eventualities will be happy with such small British conventional forces—on land, sea or air.

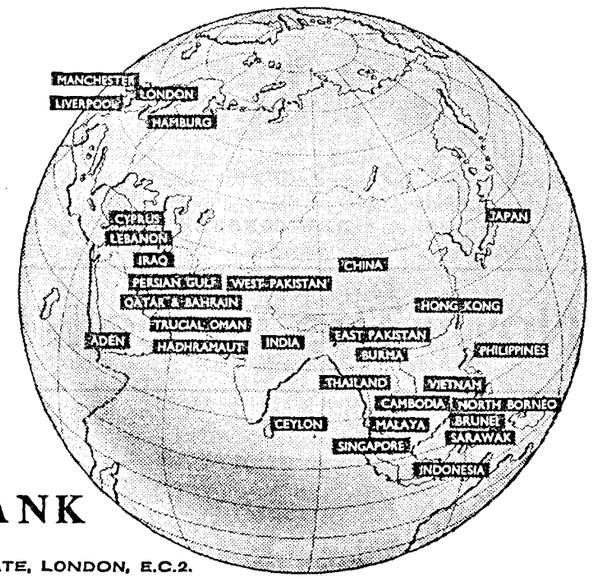
Secondly, on the deterrent. The Opposition was right to press Mr Sandys to explain why, if Britain now apparently does not need conventional forces for independent action, it still needs an independent nuclear deterrent. In his references to Thor, Mr Sandys made clear the store he set by Blue Streak because it will be all-British, and thus a replacement of the all-British V-bombers. There may be an argument for such independence, but Mr Sandys did not make it. On the other hand, Mr Grimond failed to carry conviction for the Liberal alternative—the Liberals argue that, while Britain does not need its own strategic nuclear deterrent, it must have its own tactical one. The real motives for investing in Blue Streak are far from being probed. They need to be. So does the rocket's cost. Mr Sandys always used to say that Britain got an independent deterrent cheaply because it had to have V-bombers for the conventional role anyway; now we are to have both rockets and planes. Is Mr Sandys still saying that this is cheap, and that the conventional forces will not suffer thereby? He should be pressed to be much more explicit on these, as on several other, questions of basic priorities.

FAROE ISLANDS

Six-Mile Limit

THE six-and-six formula whereby Britain and Denmark have temporarily settled the Faroese fishing dispute is worth trying elsewhere. The Faroe islanders are to extend their protection limits to 12 miles, but British trawlers, which are recognised as having "historic rights" in Faroese waters, will be able to fish up to a six-mile limit, except in three areas where line fishing alone will be allowed within agreed dates. The settlement will stay in force "pending a solution of the general problem of fishery limits," which may or may not spring from a second conference on the law of the sea next year. If no general agreement is reached, the Faroe settlement can be denounced after three years.

The present compromise is not exactly clear-cut, and the Faroese seem to have gained more than the British trawlermen have been able to save. But the days of simple, universal laws on fishery limits look like being over. It may be better to try for local arrangements which reflect the particular claims of Grimsby's and Aberdeen's historic right against Faroese or Icelandic self-interest, as this agreement has done. The Faroese have been protected from the trawler concentrations which they have feared since the Icelanders declared their 12-mile limit in September. The British middle-distance fleet has at least limited the damage to itself. Although the president of the British Trawlers Federation, Sir Farndale Phillips, says the agreement fills him with misgiving, he has sensibly bitten on the bullet and acknowledged the basic point that both sides "have been able to sit round a table, discuss problems dispassionately, and reach agreement." This is really much better than calling up the Navy.



The British terms for the Faroese have probably erred on the side of generosity for the simple reason that the agreement is now meant to leave the Icelanders out on their own. It was originally hoped to get the Faroese settlement in the bag before the Icelandic ultimatum expired in September. Yet if as good an offer had been made to Iceland last summer, the Royal Navy might not have been forced to spend the winter playing the fool off the bleak Icelandic coast. Now the Icelanders say it is not enough.

EUROPEAN COAL

Labour Truce in Belgium

A TRUCE has been reached in the mining dispute in the Borinage. The 100,000 strikers, who came out on strike last week in protest against the closure of uneconomic pits, are returning to work. In return the Belgian govern-

British Banking in Asia

These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. In London an effective credit information service and skilled assistance and advice are available to merchants and manufacturers seeking new business connexions in Asian markets.

ment, with aid from the European Coal and Steel Community, is to make greater efforts to find new jobs for the dismissed men and develop new industries in the area.

The High Authority at Luxemburg can feel some satisfaction with this result. The closure of pits, so long overdue, and which recession has precipitated, is to go on. And the Belgian government does seem to have been brought to a realisation that it faces, in the Borinage, not merely a local mining issue, but the broader problem of giving the whole region a new economic *raison d'être*.

The High Authority has suffered one qualified defeat. At Belgium's request it has agreed to consult the other five member governments to discover whether they want a "state of manifest crisis" to be declared, which would permit the imposition of production quotas on mines in the community. That might well be a retrograde step, slowing down the inevitable process of reorganisation in the mines of Europe. Here much will depend on the reaction of the German government. Professor Erhard has hitherto opposed such restrictive measures; but he has had to eat so many words already about coal policy that it would not be surprising if he had to swallow this principle, too. If the reports are true that he is to be kicked upstairs to the west German presidency—as successor to President Heuss—the conduct of German economic policy may well fall into the hands of Herr Etzel. The able minister of finance is a man close to Dr Adenauer's European ideas and, unlike Dr Erhard, little disposed to allow general economic principles to bring him into conflict with Ruhr industrial interests.

TELEVISION

Regulate the Breaks?

When Mr Mayhew introduced his bill on Tuesday to regulate more sternly the amount and timing of advertising on television, he said that the present relative freedom to place advertisements was "a source of great joy and profit to the programme contractors," and a main cause of the "almost indecently high" profits they are making. Anybody who favours this bill should make clear on which of two grounds he is supporting it.

Is Mr Mayhew saying that the gross revenue earned by television is already "indecently high"? That is an opinion held by some culturally-minded people who wish that television had never been invented, and it attracts vociferous support from those newspapers that made a mistake by not taking shares in the programme companies at the outset. But it is an opinion that seems very difficult to sustain by reference to market demand. Here is this medium which could bring to the millions entertainment events that otherwise only the thousands could see; and it is still not getting (or at any rate not spending) sufficient money to televise all the (e.g.) professional sporting events, reasonably modern films and West End theatre productions that the mass audience would undoubtedly like. No doubt the companies could get more of these even now if they bid higher and spent more of their "indecently high" profits on their programmes; but the way to force them to do so is surely by introducing more competition into the air (to some extent this process is already in train), not by imposing rigid parliamentary controls on the money that they can earn. If every other developing industry in the past century had had a parliamentary chopper brought down upon its gross revenue during its first pioneer boom, industrial growth would have been crippled and stunted.

The second ground on which one could support Mr Mayhew's bill is by the argument that advertisements are the wrong way in which to finance television's continuing growth. Once again, this is a view with respectable support from people who believe that advertising pollutes all entertainment and exposition which it finances; and, once again, Mr Mayhew can expect to draw loud cheers from those newspapers that have been losing advertisement revenue to the screen. But some of the possible alternative means of financing television (such as pay-in-the-slot-as-you-view) are not yet technically convenient, and others (such as a hefty increase in licence fees) do not seem to be specifically advocated by Mr Mayhew and his supporters. On the simple "damn-this-profit-making" arguments as he presented them on Tuesday, his bill does not deserve to pass its second reading next week.

STRIKES

Motor Mischief

Some 20,000 men have been put out of work in the past week by three strikes, two of them cases in which local shop stewards wanted to get particular fellow-workers sacked and the other a case in which they wanted to ensure that a clerk was not sacked. The first two cases, both of them the usual sort of closed shop disputes, are a disgrace to the trade union movement. At the Nuffield Metal Products works at Birmingham last week, 2,000 men were brought out at a snap of the finger because a shop steward said that two lavatory attendants, a gardener and two other workers ought to belong to the Transport and General Workers' Union; fortunately the mass of the workers had the sense to go back to work the next day when they had read in the papers what they were supposed to be striking about.

At the Ford works at Dagenham this week the shop stewards had prepared their ground more carefully, and struck on a narrower front. After some false starts in other departments, a row had been brewed between 250 militant men in the car door assembly department of the factory (in which the local convener of shop stewards works) and a workmate who had stopped paying dues to the Amalgamated Engineering Union, allegedly because he did not like the sort of trade unionism he saw about him in the factory. The shop stewards gave a fortnight's notice to the management that they would not work with this man, and the car door men struck when this ultimatum expired on Monday; the whole assembly line was thereby successfully stopped, and 7,000 other workers laid off in consequence.

This Dagenham dispute is only the latest and largest of a small series of wildcat strikes across the motor industry in the last few weeks; it does not require any great detective ability to deduce that some consultative group of shop stewards in the different areas must be organising them. What is more surprising is that the central bodies of the unions have been so slow to react to this challenge to their own authority. Throughout most of the fortnight while the door assemblers' ultimatum was running out, the central authorities of the AEU adopted the extraordinary attitude that they could not organise talks at Dagenham because they had not been informed by the workers (as distinct from

the management and the newspapers) that a dispute existed. Once the strike had started they issued a wordy statement expatiating on the "worthlessness of the non-unionist involved," but added that "having regard to the fact that the . . . dispute . . . has resulted in thousands of trade unionists being suspended without pay, we instruct those in dispute to resume work immediately." The shop stewards' present tactics are familiar; they will try to prevent the men from obeying this instruction for a few more days if possible, and then to go back to work, triumphantly announcing that they have "won" some concession (such as a discussion with the management about the placing of the non-unionist concerned) which they could have had weeks ago anyway.

Steel Muddle

By contrast with the motor stoppages, the serious strike which stopped production at the Steel Company of Wales works at Port Talbot last weekend at least had the virtue that the strikers were trying to save a mate's job rather than trying to victimise him. By contrast with them too, there may have been more muddle than mischief behind the Port Talbot affair. It seems that three weeks ago an allocation clerk in the electrical communications office made the last of an allegedly consistently inefficient series of mistakes, and was told by the indignant engineer in charge of his department to take a week's notice. In fact dismissals at the plant can take place only after a formal hearing at which a union representative can be present; there was a background of past animosity between the unpaid union officials in the works (who were perturbed at the mode of the clerk's dismissal) and the union's paid divisional organiser (who was telling them not to be silly); when, after formal hearings, it became apparent that the company still intended to dismiss the man, the matter had become one of face for various subordinate people on both sides. The local unpaid union leaders started the strike while the divisional organiser was up in London.

The 13,000 workers in the plant obeyed this call, but without great enthusiasm, as many of them are earning over £1,000 a year and carry heavy hire purchase commitments. On Tuesday, after the divisional organiser had returned to Port Talbot, the strike was called off unconditionally, with each side of the union organisation blaming the other for an unnecessary stoppage. The strike does not therefore necessarily imply that there is suddenly a mounting danger of more industrial trouble among the hitherto peaceable steel-workers; indeed the speed at which the strike was settled rather implies the opposite. Even on the most charitable interpretation, however, it was a ridiculously expensive matter of face that launched a stoppage that cost the company and the country some 35,000 tons of steel and the men nearly £100,000 worth of wages.

BALKAN PACT

False Hopes

On August 9, 1954, the Foreign Ministers of Jugoslavia, Greece and Turkey signed a treaty of alliance, political co-operation and mutual assistance—the Balkan Pact. Already during the long preliminary negotiations some of the obstacles to the alliance became obvious: much time was spent on the discussion of the relations between the Balkan pact countries and Nato. In the final text of the treaty, Jugoslavia's commitments, in case Greece or Turkey became involved in a conflict through their obligations to other Nato countries, were limited to mutual consultations. Nevertheless, the conclusion of the Balkan pact was generally interpreted, at the time, as a closer association of Jugoslavia with western defence arrangements. Although the treaty was hopefully forecast to run for "at least twenty years," it has played a negligible role in Balkan politics: a permanent secretariat was founded, and slowly dissolved; the proposed meetings, every two years, of the foreign ministers of the three countries never took place. Now, when the Cyprus deadlock exists no more, when Jugoslavia is firmly outside the communist block and Marshal Tito is expected to visit Greece after the conclusion of his Asian tour, the time seemed propitious for speculations on the revival of the pact. Officials in Belgrade have denied that there is any question of reviving the military side of the pact. A report in the Athens daily *Acropolis* about forthcoming negotiations among the three Balkan pact countries has been described in Belgrade as unfounded. "We view the Balkan pact," said the official spokesman there, "only as an instrument of peaceful co-operation among the three countries in the economic, cultural and political fields." He added that relations between Turkey and Jugoslavia had, during the past few months, deteriorated because of an anti-Jugoslav campaign conducted by a number of Turkish newspapers. Even if Marshal Tito had not made himself well known as an opponent of military blocks, Jugoslavia still has too little in common with either the Turks or the Greeks to make an early, and solid, alliance likely between them.

FOREIGN AFFAIRS DEBATE

Conventional Wisdom

A foreign affairs debate without the Prime Minister (except right at the end), the Foreign Secretary, Mr Bevan, or even Mr Healey, is not likely to be a gala occasion. The few members who turned up last week had even less to say than might have been expected because, for reasons of their own, both sides of the House were playing an especially careful game. The Government was busy dissociating itself from any suggestion that by sending the Prime Minister off to Moscow it was stepping out of line with its allies, while the Opposition, which had chosen the debate, was using it as a demonstration that its members were not out of step with each other.

It is however worth recording that two ideas seem now to have attained the status of "conventional wisdom" in most parts of the House. They are that "free elections" need not be the first stage of German reunification, and that there can be no military disengagement until the Americans are persuaded that withdrawal from Germany does not involve their withdrawal from the whole of Western Europe. Mr Bevan having called the snappish factions of the Labour Party's foreign affairs committee rather smartly to order before he departed with the prevailing flu, all ranks were on their best behaviour during the debate. Mr John Hynd, a leader of the Labour right-wingers' pro-Adenauer group, went out of his way to praise Mr Silverman, who could not forbear to confide in him that he had had it from Herr Ulbricht himself over the weekend that once disengagement

Continued on page 768

*The London Agreement on Cyprus**

The Cyprus settlement signed at Lancaster House on February 19th consists of a number of documents of which the first is the **"Basic Structure of the Republic of Cyprus"** which was signed by the Greek and Turkish prime ministers at Zurich on February 11th. All the 27 points in this document will be incorporated as basic articles in the Constitution of Cyprus. The most important are:

Cyprus is to be Republic with a Greek president and a Turkish vice-president, each elected by universal suffrage by his respective community for five years.

The *Council of Ministers* will consist of seven Greeks and three Turks chosen respectively by the president and vice-president. Decisions are to be by absolute majority.

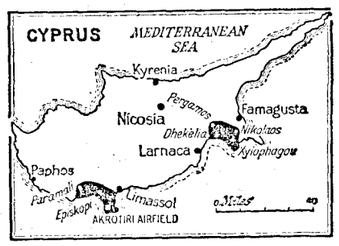
The *House of Representatives*, elected for five years by universal suffrage of each community separately, 70 per cent by the Greek and 30 per cent by the Turkish electorate. It will exercise authority in all matters except those expressly reserved to the Communal Chambers. Decisions are to be by simple majority.

The Constitutional Law, with the exception of its basic articles, may be modified by a two-thirds majority of the Greek members and a two-thirds majority of the Turkish members. A simple majority of Greek and Turkish members, considered separately, will be needed to modify the electoral law or to adopt any law about the municipalities or any fiscal law.

The president and vice-president, "separately and conjointly," shall have a *final veto* over any decision of the Council of Ministers, or any law passed by the House, dealing with foreign affairs (except the participation of Cyprus in international organisations or alliances to which Greece and Turkey both belong), or concerning defence and security. The defence questions subject to veto are: the composition and size of the armed forces and credits for them; appointments and promotions; imports of warlike stores and explosives; granting of bases and other facilities to allied countries. They shall also have the *right to return* any decision to the Council, or any law to the House, and the decision or law must be reconsidered within fifteen days.

A *Supreme Constitutional Court*, composed of one Greek, one Turk and a neutral appointed jointly by the president and the vice-president, will arbitrate on: (a) conflicts of authority between the House of Representatives and the Communal Chambers; (b) laws and decisions which the president or the vice-president believes to be discriminatory.

Two *Communal Chambers* are to exercise authority in all religious, educational and cultural questions, all questions of personal status and in all purely communal concerns.



The *Cyprus army* is to be 2,000 strong, 60 per cent Greek and 40 per cent Turkish. The police and gendarmerie are to be 2,000 strong, 70 per cent Greek and 30 per cent Turkish.

The *High Court of Justice* shall consist of two Greeks, one Turk and one neutral who will be the president of the court and will have two votes.

The Turks are to have *separate municipalities* in the five largest towns. In each of these towns there is to be a Greco-Turkish co-ordinating body. The continuance of these separate municipalities is to be examined by the president and vice-president within four years.

It is recognised that the total or partial union of Cyprus with any other state, or its partition are to be excluded.

A Turkish Cypriot is always to be either minister of foreign affairs, or of defence, or of finance.

Treaty of Guarantee between Cyprus on the one hand, and Greece, Turkey and Britain on the other. Cyprus undertakes "not to participate, in whole or in part, in any political or economic union with any state whatsoever" (art. 1). Greece, Turkey and Britain recognise and guarantee the independence, territorial integrity and security of Cyprus and also the basic articles of its constitution. They undertake to prohibit, "as far as lies within their power" all activity designed to promote "directly or indirectly" either the union of Cyprus with any other state, or its partition (art. 2). If concerted action should prove impossible, each of the three powers "reserves the right to take action with the sole aim of re-establishing the state of affairs established by the present treaty" (art. 3).

Under an additional article published separately and to be inserted in this treaty, Cyprus, Greece and Turkey undertake to respect the integrity of the areas remaining under British sovereignty and to guarantee to Britain its special rights in the island.

A Treaty of Alliance between Cyprus, Greece and Turkey provides that Cyprus, Greece and Turkey are to co-operate for their common defence. There will be a tripartite headquarters in Cyprus. The Greek contingent will be 950 officers and men, and the Turkish 650. The headquarters will be commanded in rotation for periods of a year by a Cypriot, a Greek and a Turk nominated by the Greek and Turkish governments and by the president and vice-president of Cyprus. The Greek and Turkish officers will train the Cyprus army.

The British Government, in a **declaration,** accepts the Zurich agreement and declares that with the exception of two named areas (shown black on the map) which will remain under full British sovereignty, Britain will transfer sovereignty over the island to the Republic, subject to various conditions which include: (1) such rights to be guaranteed by Greece, Turkey and Cyprus as are necessary to allow the British military bases to be used effectively as such. Some of these rights are set forth in an annex and include: the continued use of existing small sites containing military and other installations; unrestricted use of road, port and other communication facilities; use of public services and of Nicosia airport. (2) the fundamental human rights of the various communities in Cyprus, and the interests of the members of the public services to be protected. The British Government also agrees to co-operate with Cyprus, Greece and Turkey in the defence of the island.

Three bodies are to be established immediately:

(1) *Joint Commission in Cyprus*, composed of one Greek Cypriot, one Turkish Cypriot, one representative each of Greek and Turkish governments and a legal adviser. It will draw up a draft constitution incorporating the basic structure agreed at Zurich.

(2) *Transitional Committee in Cyprus*, composed of the Governor and leading representatives of the Greek and Turkish communities. It will make plans for adapting and reorganising the governmental machinery.

(3) *Joint Committee in London*, composed of one representative each of the governments of Greece, Turkey and Britain and one representative each of the Greek Cypriots and the Turkish Cypriots. It will prepare final treaties giving effect to the conclusions of the London conference.

The transfer of sovereignty is to be completed by February 19, 1960.

Continued from page 766

was in force there would be no difficulty about holding free elections in both parts of Germany.

However, Mr Silverman's own gloss on his party's policy was unexceptionable:

> It is said that we need the agreement of America for [disengagement]. Whoever said we did not? It is said that it is doubtful whether the Soviet Union and their friends would accept it. Whoever said it was certain?

Each time he speaks on the subject Mr Gaitskell himself sounds more doubtful about early Russian acceptance of full disengagement—all the emphasis in last week's speech was on possible opening gambits, such as the thinning out of foreign troops on either side of the Elbe. On the other hand Mr Gaitskell seems to have gained confidence from recent speeches by Senators Mansfield and Fulbright that he will eventually win the Americans over to support the sort of approach he wants.

OPPOSITION MOTIONS

Cheap Advice

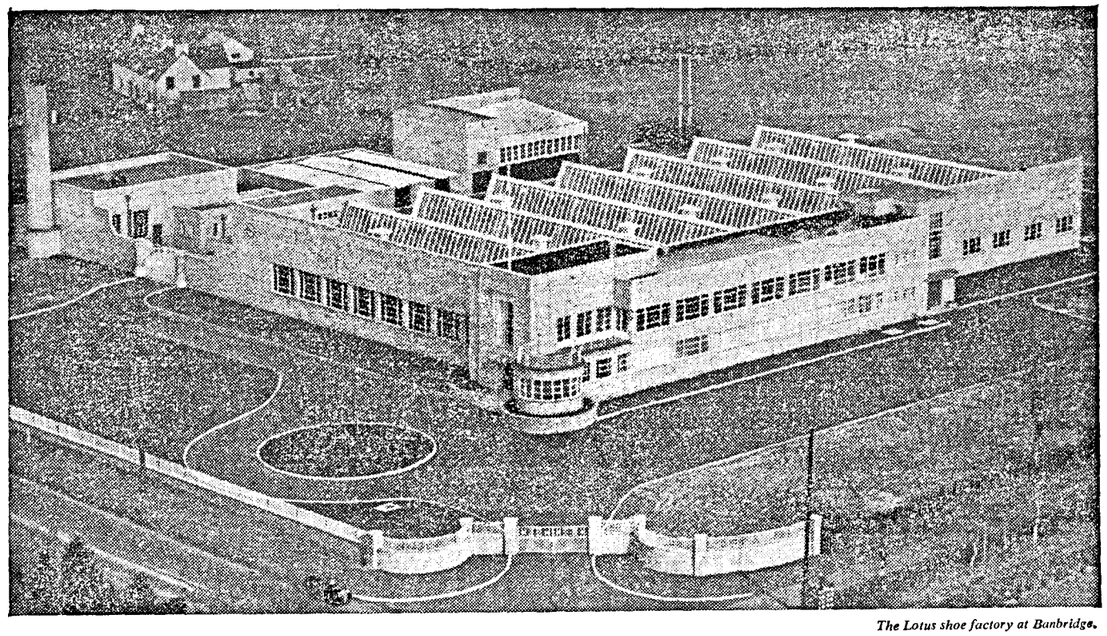
THE Opposition's division of its third supply day between motions on legal aid and on prison conditions in Kenya forced the House to endure in succession its two worst Front Bench speakers—the Attorney-General answering the first motion and Mr Creech Jones proposing the second. But although it sounded lame out of Sir Reginald Manningham-Buller's mouth, the Government had a fairly strong case on legal aid. Given the Treasury's unwillingness to be winkled out of more than a small extra sum for the scheme, this money is certainly better spent on trying to keep people out of the courts than in encouraging them to go there. To this purpose the Government is bringing Section 7 of the 1949 Act into effect next Monday. Under its provisions people with legal worries can for the price of half a crown (or for nothing, if they are really poor) get some preliminary oral advice, including help over the drafting of one letter, from any solicitor in the scheme. There is also a promise that Section 5, which offers help in financing further paper work after the despatch of this first letter, will shortly follow. So, during the next financial year, will the sections that deal with legal aid in the criminal courts.

At last the Government has got the priorities right. Next-to-free solicitor's advice should have preceded subsidised civil litigation instead of following it so tardily. It would then have been possible to test how many poor persons' cases could have been disposed of out of court in conditions under which solicitors would have had the maximum incentive to avoid recommending litigation. However, that opportunity was missed. The question now arises whether, following the recommendations of the Lord Chancellor's Advisory Committee on Legal Aid which were echoed in Sir Frank Soskice's motion, the income limits for total and partial subsidising of civil actions should be raised to take account of the inflation since the scheme was introduced.

Logically it might be better not to combine the introduction of cheap solicitor's advice with restored incentives to go to court. On the other hand, practical experience has shown that although legal aid is sometimes abused, this has happened much less frequently than had been feared. The amount of public money involved in raising the limits is not large. The Treasury is being generous in other directions. Humanly speaking, there is much to be said for the Opposition's demand. But before the Government is too generous in this direction some consideration must be given to a glaring anomaly of the present scheme that was raised in the debate by Mr Fletcher-Cooke—the inability of a successful (and unaided) defendant to recover even a part of his costs in a case brought against him by a state-assisted litigant.

Fair Play for Mau Mau

ALL the slips, fractured sentences and multiple perorations of Mr Creech Jones's deadbeat style of oratory could not altogether deprive his speech on Tuesday of its cumulative impact. His evidence of arbitrary beatings and other malpractices in Kenya's prisons and detention camps sounded disturbingly circumstantial. Moreover, everything that the opening speech lacked was soon supplied by Mrs Barbara Castle, who for this occasion was as cogent and circumspect as she was forceful. No one fortunately sought to belittle the nature of the Mau Mau emergency, or to deny Mr Julian Amery's argument that without detention there could have been no rehabilitation. The conflict was a basically simple one: between the natural view of an Opposition that a stream of signed complaints by African prisoners, supported by affidavits from two European convicts, a European formerly detained as a vagrant, and a recently retired European prison officer, called for an independent inquiry—and the equally normal reaction of a Government that for morale's sake a colonial administration must be trusted to run its own investigations.



The Government's case is not a negligible one. Working under extraordinarily trying conditions, the colonial authorities have reduced the number of Africans detained without trial from 80,000 at the peak of the rising to 2,400, of whom 800 are considered a "hard core" of irreconcilables and have been held for over four years. The vigorous prosecution of some members of the hastily expanded prison staff—fifty-six were convicted of breaking regulations in 1956 and seventy-three in 1957—can be cited as evidence that the Kenya government has not failed to follow up previous well-founded complaints.

All the same, the one overriding consideration in treating any present-day colonial question must be what last memories of the British way of doing things are to be left behind before the connections with Westminster are severed. The Kenya government's present investigation of the pile of affidavits against its prison staffs is apparently only an internal administrative process. Could there not be a tribunal partly recruited from London but including a representative of the Kenya judiciary?

PUBLIC LIBRARIES

Large or Small?

IT was inevitable that the committee appointed two years ago to investigate the structure of the public library service in England and Wales should find wide variations and even anomalies. The library service has grown up with local government itself, and is just as untidy to look at. There are parish libraries, surviving from the days when parishes were the effective basic units of local government, which spend 2d. per parishioner per year. At the other end of the scale, there are county councils which spend 3s. 1½d. per head of their population. There are equally well-found

The Lotus shoe factory at Banbridge.

You can rent a NEW factory FROM 9D PER SQUARE FOOT

and get the benefit of

33⅓% GRANTS towards CAPITAL OUTLAY

Premises . . . New modern factories are under construction with all services laid on; or can be built to order on a site of your own choosing. Sizes range from 2,000 to 73,000 sq. ft. Rents from 9d. per sq. ft. for the first ten years. Special-purpose factories of unlimited size can be financed on long repayment terms.

Labour . . . Three-shift working is possible and labour turnover and absenteeism are low.

Finance . . . Assistance includes an automatic annual grant toward the cost of new and second-hand equipment and of new buildings. The Minister of Commerce announced on February 12 that the grant rate was being increased from 25% to 33⅓%. The present maximum grant is £150,000 p.a. Alternatively, loans and larger grants are available for special projects.

Success . . . Over 130 British and American firms have set up in Northern Ireland since 1945; and many have expanded two and three times.

GO TO NORTHERN IRELAND — AND GROW

For full details of factories available now, and of the Factory Building Service as a whole, write to DEPT. E9, NORTHERN IRELAND DEVELOPMENT COUNCIL (CHAIRMAN, THE VISCOUNT CHANDOS), 13 Lower Regent Street, London, S.W.1 (*Tel.: WHItehall* 0651) *or:* 99 Park Avenue (7th Floor), New York 16, N.Y., U.S.A. *or, if you prefer, to:* THE MINISTRY OF COMMERCE, BELFAST (*Tel.:* 2827†).

the things they say!

You know, I don't think doctors ought to prescribe commercial drugs at all.

But *all* drugs are made by some commerical firm or other.

Yes, but they aren't all sold under fancy names in fancy packages—at fancy prices.

Surely it's wrong to make a profit out of illness?

But if the pharmaceutical manufacturers didn't make profits, where would they get the £4,000,000 they spend every year on doing research to find other drugs that are very badly needed?

But I thought most of the new drugs had been discovered by doctors working in the big hospitals!

Not at all. Most new drugs and anaesthetics have been discovered and perfected by the pharmaceutical industry—in other words, by the very people who make them.

Give me some examples.

Well, take I.C.I. It was their Pharmaceuticals Division that discovered 'Mysoline', an entirely new treatment for epilepsy; and quite recently they announced a new anaesthetic, 'Fluothane', which has properties that make it quite unique.

It was only at great effort—and cost—that these products were developed, perfected and made available. Many other pharmaceutical manufacturers could point to comparable contributions that *they* have made to the progress of Medicine.

U

ICI

county councils which spend 7½d. per head. The committee ambitiously set itself to provide a yardstick of what might reasonably be spent on the service, believing that this would settle which authorities ought to be entrusted with it.

Needless to say, the small authorities urged on the committee the importance of local ties in such an "intimate" matter as lending books. Equally unsurprisingly, the large authorities felt that the public was entitled to a service which only a rich authority could afford—a large stock of books, advice by highly trained librarians, gramophone records and tape *ad lib*. The professional librarians (a little over a third of those employed, mostly by larger authorities) naturally tended to the larger authorities' view. Meanwhile, the fact stands out that whereas in 1938-39 the capital expenditure of local authorities on libraries and museums was 0.31 per cent of their total capital expenditure, in 1955-56 it was just 0.13 per cent.

The committee's basic recommendation is that the provision of an efficient library service should be treated on all fours with the provision of public health. It thinks that not less than £5,000 a year is needed to run an efficient library, and it regards 2s. per head a year as a fair sort of sum to pay. This implies that the library authority should have a population of 50,000 or more. The committee also proposed that the Ministry of Education should police (mildly) the service.

All this looks logical enough, but also a little too tidy. To fix a stated minimum sum in these days of cost-inflation would be self defeating, and an enthusiasm for libraries which wants to give local authorities fresh powers to make compulsory purchases of land is excessive. Something slightly authoritarian about this report jars with the atmosphere of library work. But it should afford the basis for a reorganisation which could profitably be fitted in with the —it is to be hoped humane—reforms that are pending in local government itself.

UNITED ARAB REPUBLIC

Balancing Act

PRESIDENT NASSER'S speeches in Cairo and Damascus during the celebrations of the first anniversary of the union of Egypt and Syria were marked by cordial references to both Baghdad and Moscow. They came on top of mounting press campaigns which accused the Iraqi government of subservience to communism and the Soviet government of tolerating, if not encouraging, the immigration of Jews into Israel from Rumania.

It would be absurd to suppose that President Nasser was unaware of the press campaigns. The most highly coloured reports had been printed in newspapers under Nasser's own control. The statement was a clear invitation to Moscow to use its influence to curb the Rumanian authorities. Similarly, Nasser's long quotations in his speech from Mr Khrushchev's letter disclaiming any intention of interference in the internal affairs of the UAR were meant to commit Mr Khrushchev publicly as much as to impress the Arabs.

Haggling over the Anglo-Egyptian financial agreement ended on Thursday with an announcement that the document initialled on January 17th would be signed this Saturday. Once again the good offices of Mr Eugene Black have brought the sides together. Much of the goodwill that arose from the initialling of the agreement has been dissipated in arguments over the status of the Smouha estate. London and Cairo can now resume normal relations. It is for this, more than for the substance of the financial settlement, that the two governments should be grateful to the World Bank.

There is every reason to suppose that Nasser was sincere when he said he was not immediately interested in the question of union or federation with Iraq. Union with Syria has brought him a fair share of political and administrative headaches and he is disinclined to seek more such headaches just now. What he certainly does want is a common policy between Baghdad and Cairo, especially in international affairs. To that end he has been angling for some weeks for a personal meeting with General Qasim. One of the difficulties has concerned the meeting place. Qasim does not want Nasser in Baghdad for fear of his effect on the crowds; nor does he want to appear in a junior status by going to Cairo himself. The latest suggestion is that the meeting of the Arab League council on March 2nd should be attended by the prime ministers; this would enable Qasim to meet Nasser without loss of dignity. It is not, however, certain that Qasim wants to meet Nasser at all.

ISRAEL

Ingathering Troubles

THE state of Israel was founded on the principle that its gates would always be open to any Jew who needed or wanted to make his home within them. Israel's capacity to absorb all who come has often been questioned by economists and sociologists but seldom by the Israelis themselves. A way has always been found to reclaim another piece of the desert or to provide work in the towns. Israel's Arab neighbours are, however, upset by the news of increased immigration this year.

Having already been twice defeated by the Israelis, in 1948 and 1956, the Arabs have good reason to fear increases in Israeli manpower, military potential or economic capacity. But what alarms the Arabs most of all is the belief that Israeli territorial expansion will necessarily follow. The Israelis deny that they need any more territory. What they need is money to develop the territory they have. The Jewish communities abroad are expected to pay for over half the cost. Increased purchase taxes and customs duties

AIR SUBSCRIPTIONS TO *THE ECONOMIST*
22, Ryder St., London, S.W.1

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

	Airmail	Air Freight
Australia	£10 6s.	—
Canada	—	$25 or £9
Ceylon	£9 0s.	—
China	£10 6s.	—
East Africa	£9 0s.	£7 10s.
Egypt	£7 15s.	—
Europa	£6 0s.	—
Ghana	£9 0s.	£6 10s.

Sudan	£7 15s.	£6 15s.
U.S.A.	—	$25 or £9
West Indies	£9 0s.	—

and a compulsory loan in Israel should raise the rest of the amount needed. More than 100,000 immigrants are expected this year, most of them from Rumania, which is allowing Jews to leave the country in large numbers for the first time since 1951.

The remaining Jewish population of Rumania is perhaps 200,000. It looks as if all of them want to go to Israel even if the Rumanian government does not make emigration an enjoyable adventure. Much Jewish-owned property must be abandoned, charges for passports and transportation are exorbitant, and each emigrant can take only 100 pounds of belongings with him—in a box provided by the state. The Arabs are begging their Russian friends to stop Jewish emigration from all of eastern Europe. The Soviet government has already said that there is no question of any Russian Jews going. As a result of Arab complaints, the Rumanian government has hinted that it may reduce the number of exit visas being granted. But it has a domestic reason for encouraging emigration. The professional class in Rumania is becoming crowded by the new generation of doctors, engineers and teachers educated since the war. These products of people's democracy need the jobs which, in Rumania, have been traditionally filled by Jews.

AID TO EX-COLONIES

Over to the Commonwealth?

THE financial implications of the new Colonial Development and Welfare Fund bill are discussed on page 803; briefly, it fills the fund with the money it will need up to 1964, and provides that issues of loans under the bill can continue to 1967. The political question that now needs to be raised is whether the Commonwealth Relations Office should not be made a partner with the Colonial Office in this CD & W business. The currency of this bill, the fifth in the CD & W series since 1940, will cover a period when a considerable number of very underdeveloped colonies are likely to become fully independent—certainly the West Indies, Nigeria, Sierra Leone and Somalia (with a combined population of over 40 million people) not to mention Cyprus and perhaps others as well.

Hitherto the rule has been that grants or loans committed to colonial development before independence can continue to flow to newly independent dominions for the completion of the schemes to which they have been allocated; but tutelage over those schemes, and the possiblity of getting grants for new ones, stops with the change in the country's status. The attitude of the Commonwealth Relations Office is purist. Either, it says to Commonwealth members, you are independent or you are not; if you are, then the CRO will look after you with a better-than-Foreign-Office care for your susceptibilities, and with no hint of colonialist strings or supervision.

This is excellent in its way—but the fact must be faced that some of the territories reaching Commonwealth status during the period when the new bill will operate (and during which another £95 million in grants and perhaps £100 million to £150 million in loans will be spent) will want to have the best of both worlds. They will naïvely expect Commonwealth membership to confer substantial continued assistance. They will be in great need of such assistance; and the continuation of CD & W type schemes in their territories would be politically and economically advantageous. The next stage in expanding the Commonwealth will, in fact, be a new stage. The CRO should realise this, and take a special interest in this bill, with an eye to devising methods whereby it can, as a department, unobtrusively carry on Colonial Office work under a new name at a new address.

APPRENTICES

Tough on Training

A RECENT Fabian pamphlet* has had some hard but sensible things to say about British apprenticeship schemes. As the Carr report pointed out last year, these are now hopelessly out of date. They are still organised as if juvenile labour were cheap and as if craft restrictions were to be encouraged—at a time when the traditional crafts are on the decline and when, at present rates of juvenile pay, the training of apprentices (many of whom later leave the firm that trained them) is an expensive business. Proper methods of training are also rare; all too often, an apprentice gets no regular teaching on the job and no relevant instruction at a technical college. The results of all this, and of the fact that the most able boys go to the grammar schools anyway, are that apprenticeships have often ceased to be an extension of the education process; instead, many have become a widely practised, but fortunately rather ineffective, restrictive practice.

The need for a more efficient system is urgent for two reasons. The first—and immediate—one is that already the bulge in school leavers is beginning to present the nation with an unprecedented chance to raise the levels of skill in British industry. The second reason is that in the longer run, as the structure of industry changes, new skills are demanded (especially in industries like chemicals and engineering). The present system—whereby a traditional apprenticeship lasts five years and starts rigidly at fifteen or sixteen (with no opportunities given for older men to acquire new skills)—contains no flexibility to meet this situation.

The Carr report recommended that these apprenticeship problems should be tackled within the framework of the existing system. The suggestions for change in the Fabian pamphlet are much more radical. Among other changes, it suggests that an apprentice should be indentured not to a firm but to the whole industry, which should pay him out of industry-wide contributions; that training should be done in blocks and not by release for one day a week; and that a test of competence should be set at the end of the course. Only the last suggestion is dubious, since, by formalising the qualification for doing certain jobs, it would remove the "back door" entry into skilled trades which has been so useful since the war. A voluntary examination for a special certificate would be preferable; by raising standards, it might also take some of the cant out of present preaching on apprenticeships.

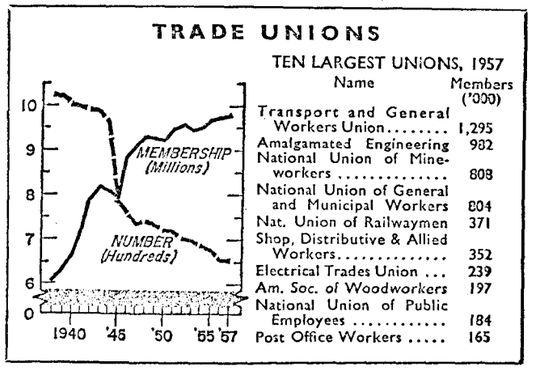
The Anatomy of British Trade Unions

A Special Survey in Two Parts

These three articles in the second part of this survey discuss the changing structure of the trade union movement and present problems of consultation on the factory floor.



Shapes and Sizes

THE trend of trade union membership in the last twenty years is set out in the chart, and some familiar conclusions about the march towards concentration emerge. The number of unions is still decreasing; the total membership is still slowly increasing; and the average membership per union is thus getting larger. Union membership as a whole is now heavily concentrated at the large end of the union scale. Of the TUC's affiliated membership (which comprises 85 per cent of all trade unionists), half is in the largest six unions and over two-thirds in the largest fifteen.

The traditional way of describing the structure of British unions has been to divide them between craft, industrial and general unions. The craft unions are supposed to be tight guilds of skilled men, while industrial and general unions are mass organisations. As three of the ten biggest British unions are former craft unions, the old names will really no longer do. A better terminology can be borrowed (with acknowledgements to Mr H. A. Turner, of Manchester University, who first thought of the idea) from a military analogy. The clearest distinction in British trade unionism today is between unions which (whatever they call themselves) are trying to advance on a "broad front" and unions which are trying to defend themselves by setting up a "strong point."

The "broad front" strategy has caused many craft unions to spread their membership to semi-skilled and unskilled workers, and caused general unions to leap from trade to trade after their more mobile members. Two significant examples of the broad front strategy are in engineering. These two major unions, both originally for craftsmen, the Amalgamated Engineering Union and the Electrical Trades Union, have become largely industrial unions willing to organise anybody from highly skilled workers to canteen girls. In building, too, both the Amalgamated Society of Woodworkers and the Amalgamated Union of Building Trades Workers, once craft strongholds, have now given in to expansionist ambitions and admitted unskilled workers. On the other hand, none of the so-called industrial unions has succeeded in organising all its industry. Most engine drivers and firemen stand resolutely by their own society instead of the National Union of Railwaymen; and the National Union of Mineworkers still has some overmen and clerical workers outside its organisation. Even the general unions in some way belie their name. The Transport and General Workers Union, organised as it is principally on a trade group basis (dockers, busmen, lorry drivers, etc.), is more like a multiple industrial union than a general one.

The broad front policy, even for former craft unions, has several advantages. Contributions can be pooled, strikes by one section of the union can be financed by the dues paid by another, economies in organisation can be reaped, and more weight can attach to the union's various public pronouncements. By contrast, the "strong point" policy is essentially restrictionist—though sometimes successful precisely for that reason. As happens in printing, all workers within a particular craft can be organised and entry regulated by a strict system of apprenticeship; and then, by using the full strength that high craft contributions and benefits give, bargains can sometimes be struck for much higher wages than the general unions (which finance themselves by contributions drawn from much poorer people) would usually dare to stand out for.

TEN LARGEST UNIONS, 1957

Name	Members ('000)
Transport and General Workers Union	1,295
Amalgamated Engineering	982
National Union of Mineworkers	808
National Union of General and Municipal Workers	804
Nat. Union of Railwaymen	371
Shop, Distributive & Allied Workers	352
Electrical Trades Union	239
Am. Soc. of Woodworkers	197
National Union of Public Employees	184
Post Office Workers	165

It is when unions are trying to follow a "strong point" strategy that demarcation strikes usually occur. If a big union is following a broad front policy, and finds that its recruitment threatens to impinge on a field that a small existing union regards as its preserve, it will not usually press ruthlessly forward; it knows that the TUC in turn will beat away any small union which encroaches on its own field. But if a craft union tries to set up a strong point, and encroaches thereby on the preserves of a smaller and weaker craft union, both sides are apt to plunge violently into battle. This sort of trouble between "strong point" unions (most notable perhaps in shipbuilding) can lead to a depth of bad feeling almost incomprehensible to an outsider, and to interminable inter-union disputes.

If the central authorities at the TUC had serious preten-

sions to liberalism, they should follow a two-point policy about demarcation disputes. They should actively encourage competition for membership in industries where a broad front policy is being followed—on the grounds that, whenever possible, it is a requirement of human freedom that a man should be allowed to choose to which union he would like to belong. The TUC should depart from this principle, and try to hand down judgments allotting people and particular jobs to particular unions, only when the livelihood of others is being threatened by a hold-up of work caused by a bitter dispute between two craft unions which are each following a strong point policy. Unfortunately, however, there is a stereotyped illiberalism about these matters at Congress House.

Official policy on disputes between unions is embodied in resolutions passed at a series of Trades Union Congresses, culminating with those agreed at Bridlington in 1939 ; and the TUC Disputes Committee has been working for over thirty years to give effect to these resolutions. Originally it was laid down that, while no union should be allowed to influence another union's members into changing membership, voluntary transfers should be allowed ; early awards consistently followed this line. But since then, partly because of a desire for a more streamlined union structure and partly from a general dislike of seceding bodies, the awards have been more and more severe on unions accused of any sort of "poaching." This was true throughout the thirties ; and as a result of an award in 1942, in a dispute between the NUGMW and the Tobacco Workers' Union, it has now been established that if a particular union had at any time organised the majority of workers in any grade, no other union should ever be allowed to recruit among that grade. Not a single postwar award of the disputes committee has, in fact, permitted transfers. Since these judgments both reflect and set precedents for the numerous demarcation discussions held between unions in private, it is plain that the right of workers to join the union of their choice is now being progressively limited.

Union officials have a ready answer to this charge of ossification. Further factionalism, they say, could only lead to an increase of inter-union disputes and to irresponsibility in industry. To a certain extent, unfortunately, this is true. But industry is changing fast ; and the heavy-handed tactics of the larger unions since the war towards such small bodies as the National Amalgamated Stevedores and Dockers and the Aeronautical Engineering Association show what dangerous precedents can be set by congress's Canutes.

THE changes in union structure which have taken place in the last thirty years, without any particularly obvious relevance to the TUC's various pronouncements on the need for industrial unionism, are paralleled in a rather different form among the white collar unions. On the one hand, there are the railway clerks, the bank clerks, and various grades of engineers, who are organised into bargaining groups in an ordinary working-class way. They sit on joint national councils and are mostly affiliated to the TUC. At the other end of the scale come the British Medical Association and the National Farmers' Union (unions in most things save unwillingness to affiliate with the TUC) which use their status as professional associations to bring direct pressure on the Government. In between come bodies like the Institution of Professional Civil Servants and the National Union of Teachers, which sit on conventional bargaining bodies and also have national standing. The trend here, however, is towards a type of organisation like that of the doctors, appealing as a professional group direct to employers (or, in nationalised concerns, to the Government). The teachers have recently tried to by-pass the Burnham Committee with their pay claim ; and an interesting idea was put forward last summer by the Engineers' Guild, a body that represents trained technologists as distinct from workers at the bench. It suggested that engineers, too, should withdraw from day-to-day negotiations and form a professional association of their own. In view of the opposition of middle-class people to some of the forms of unionism (as opposed to its benefits), this is an idea to ponder.

Balance of Power

LABOUR problems, more than any other branch of economics, must be seen in terms of particular personalities in particular places at particular times. But there is a tide of events that generally determines which sorts of people are most likely to be where when.

At the moment, as was briefly noted in an article last week, the block vote of top trade unionists within the Labour party is fairly stably right of centre. There are several reasons why it is likely to remain so. One reason is that up to 30 per cent of the membership of the unions (and a rather higher proportion of their members' wives) consistently vote Conservative at general elections. Another reason is that even visionary Labour ideologists tend to deviate towards the centre when they have a practical job to do in public affairs, as distinct from merely a platform to chant slogans from. The burden of responsibility usually helps to make a Labour government more right-wing than a Labour opposition ; and it is a peculiar feature of the Labour movement—a feature of great importance for the whole course of British politics—that the trade union leaders in the movement have a sobering and practical job to do even while the Tories are in office. Moreover, the succession to the top jobs in the union movement is generally fairly securely in the existing leaders' hands. Some of the 3,000 full-time jobs as union organisers are filled by appointment and others by election, but in both cases it is usual for the people already in control eventually to get their own way about who their colleagues shall be.

Most contested elections for office in the unions nowadays tend in the end to be straight fights between a candidate (or sometimes a choice of two candidates) favoured by the existing executive, against a candidate favoured by the communists. In most union elections (though with exceptions that prove the rule) the communists do not poll more than 4 per cent or so of the total vote—not dissimilar to the vote that communist candidates also average in any working class constituency when they stand for Parliament. But there are two complicating factors. One is that in union elections only 8 per cent or so of the whole union membership may bother to vote, so that the communists have a better chance of getting in. The second complicating factor is one which all unions leaders naturally hate to talk about.

Compared with the standards set in most other British institutions, the umpire and the partisan are not always sufficiently distinct beings at union elections. A wide-ranging judicial inquiry would be likely to unearth instances (not always only in communist branches) where votes have been cast in the names of people who have not filled in the proper forms.

Almost certainly, the knowledge that reverberating accusations might be made about methods of vote-counting in other unions has helped to slow action by the TUC in the present ETU row. If similar suspicions were aroused in any shareholders' elections for boards of directors (which are also apathetically contested, in all conscience), the Board of Trade would not be slow to set up a special inquiry. Some day soon a similar power (much wider than now) will have to be vested in the Minister of Labour or the Registrar-General for inquiries into union elections ; it is ridiculous that fear of seeing some dirty linen washed in public should make most members of the TUC so opposed to this. The structure of capitalism is not brought low when occasional crooked directors are thrown open to public obloquy or even sent to prison.

THE problems that occasionally arise about the election of some of the 3,000 full-time trade union officials in Britain are as nothing, however, beside the problems that can be set by the power wielded by some of the 200,000 trade union organisers on the factory floor. There is a battle of myths about the part played by shop stewards in British industry today. Three particular arguments are worth comment. First, it is often said that, when unofficial strikes and other troubles arise, it is all the fault of the central union executives for not having a more authoritative chain of command down from the general secretary to the shop stewards and below. In point of fact, however, the chain of command in many unions which have the worst records is not worse than in most other large British institutions. Perhaps naturally, the main concern of union executives tends to be, not so much to keep down groups of militants, as to prevent them from forming horizontal groups which might rival the union's own vertically organised power. In resisting the growth of authority of such horizontal groups as the National Council of Shop Stewards or the various Trotskyite factions, the union executives have been remarkably (indeed ruthlessly) efficient.

Secondly, it is said, on the union side, that the shop steward—in his capacity as unpaid representative of the union on the factory floor, in charge of recruitment of union members, of collecting dues and of everyday bargaining—can often be the most useful man in the whole structure of industrial relations and joint consultation. So he can be. But there is no point in denying that, with the power of a closed shop policy behind them, particular groups of shop stewards can also become anti-productive forces and focal points of individual tyranny and scandal. A dangerous dividing point has come with the growth of factory lotteries, football pools and fining systems. If things continue as they are going now, a series of American-type scandals is only too likely eventually to break over this section of the trade union movement.

Thirdly, it is sometimes said that bad groups of shop stewards gain power only in the works of inefficient employers who do not know how to handle trade union relations. This last point is sufficient of a half-truth to deserve examination in some detail.

Trouble with shop stewards (or other part-time union representatives in a firm) is most usual in three sorts of industry in this country. First, it is particularly prevalent in industries like the docks, public markets, and some branches of transport, where the goods or services produced are highly perishable. This makes management more than ordinarily afraid of a stoppage and plays into the hands of unofficial strikers ; that is one of the occupational hazards of being an employer in those trades. Secondly, the shop steward movement is strong in engineering, where the great variety of piecework systems, the numerous individual unions in a plant, and the slowness of official reference require constant co-ordination and bargaining by the work floor representatives ; in this industry, however, shop stewards, wisely handled, can be a potent force for co-operation as well as for trouble. Thirdly, trouble is especially likely to arise in relatively new or cyclically volatile industries (c.f. the motor industry, London Airport, some building sites). Industries that have taken on more workers than they need in a boom naturally run into trouble when they try to lay some of them off in a period of enforced economies or of recession.

In all these cases, good management and common sense can help to mitigate the worst problems. Where the stewards' power has grown beyond a certain point, recent experience (e.g. the bell-ringers' strike at Dagenham, the Covent Garden and Smithfield strikes, the London Airport dispute) shows that it is almost always worth while to stand up to a stoppage in order to restore order. Two things which the Government could do to help are briefly suggested on the following page. But can anything more positive and progressive also be done to contain shop stewards by giving them more responsibility: by putting new life into such favourite ideals as strengthening joint consultation and workers' participation in management ? It is to some points about these familiar ideals that the final article below is mainly devoted.

Round the Table

THE various methods of workers' participation in management all have a chequered history. At one extreme, workers' control in any very ambitious sense has died, or is dying, a natural death in most countries. This is true even of communist Jugoslavia, which was once very keen on the idea ; while in Western Germany the device of *Mitbestimmung* (putting trade union officials on a sort of advisory board of directors)—although it may have had the unforeseen anti-inflationary advantage of making some German union leaders rather more conservative-minded than British ones—is coming increasingly under fire.

The second form of workers' participation, in ownership as opposed to control, is through profit sharing. This form of industrial co-partnership is enjoying a small vogue in Britain at the moment, as it has done several times before ; but it has never got very far. In 1955, when the last Ministry of Labour survey was conducted, only 310 private profit-sharing schemes were in operation ; they

covered only 345,000 employees, or 1½ per cent of the civilian labour force. Many early profit-sharing schemes were disbanded during the depression of the thirties, when there were no profits to share; others lapsed through apathy; and 75 out of the 605 discontinued since 1900 were turned into awards of higher wages. Since 1955 the number of workers covered has increased, largely thanks to ICI, which in 1954 introduced a major profit-sharing and share distribution plan covering 75,000 of its permanent employees. But all experience suggests that devices of this sort work mainly as a useful subsidiary force for good industrial relations in firms where relations are pretty good already.

THE third, most enduring, and probably potentially most important, form of co-partnership in industry is through joint consultation. This has had its ups and downs since receiving its initial impetus from the report of the Whitley Committee in 1917. During the slump of the early 1920s most of the works committees and joint industrial councils which had been set up through the Whitley machinery were disbanded—not to be resuscitated until, in the slightly altered form of Joint Production Councils, they were reformed as part of the war effort in 1940. Since the war enthusiasm for these councils has rather waned on both sides of industry. Although well over 1,000 have been kept in being, supposedly to help solve the problems arising out of acute labour shortages, many of the councils are used by management only as an animated bulletin board; others have degenerated in the unions' hands into forums for wage bargaining and nothing more.

The big difficulty in the way of joint consultation has proved to be that, once it gets past the animated bulletin board stage, it is almost bound to involve the delegation of powers over the discipline of the men to the shop stewards. Top management is not always averse to this, particularly if the stewards are ready to co-operate about increasing productivity; but foremen and supervisors on the factory floor naturally hate it, and (except in industries like coal, where local bargaining is carefully integrated into the union procedure) the officials of local union branches often dislike it nearly as much. In Britain the union branch official, in contrast to his American counterpart, nearly always represents workers in a region or a craft, not in a particular firm. He is apt to regard a strong local shop steward movement as his rival.

If shop stewards seem to be in the ascendant in a firm in its district, the union branch will often try to stop any bargaining competition by making a drive to get hold of the firm's consultation machinery. When the branch officials succeed in their intervention, management sees the same faces and subjects turning up at productivity meetings as at general wage bargaining sessions; and its enthusiasm for consultation may soon wane. Nor do the unions always have much use for the extra machinery. Most union officials are already assured by full employment of consultation on wages and conditions adequate for their minimum needs; some of them regard consultation on other matters as merely a nuisance.

Consultation takes place extensively—indeed compulsorily—in the nationalised industries. There are differing opinions about whether it is a success in economic terms, though in some (not all) cases it has led to an ease of works communication which other industries might envy. But perhaps the most revealing experiment in an extreme form of joint consultation was that practised in recent years by one of the major British motor companies.

As the process developed in this company* after the war, the management delegated very wide areas of responsibility indeed to the workmen (in practice to the shop stewards). Wages were paid on a group bonus scheme, and within the groups the workers were given every incentive to streamline their wage structure and look after themselves. The stewards under this system naturally acquired great power, since they became representatives of management as well as of the workers; it was they, for instance, not the foremen, who determined the distribution of the labour force and the extent of overtime.

Initially the scheme was a success. Productivity increased (probably by more than it otherwise would have done), administrative costs were certainly cut, and earnings in the factory rose to be among the highest in the country; indeed, to some extent wages may have risen too rapidly, though the effect of this on costs may have been offset by a higher degree of mechanisation than in other motor firms. But when problems of redundancy had to be tackled, the brave and progressive vision of improved industrial relations largely collapsed. Under the impulse of redundancy, and allegedly also of planned infiltration by the communist party, the shop stewards' movement fell into the hands of a restrictive group; strikes broke out; and now the experiment has been partially discontinued, without any very active opposition from the central bodies of the unions mainly concerned.

It would be defeatism to regard this single story, about many of the details of which there is still dispute, as a proof that joint consultation is bound to be a failure. But it does reinforce the lesson that abuses of the shop steward movement, and in it, are one of the most important barriers to social and industrial advance today, just as good stewards are the key to effective consultation. It reinforces the case for two reforms:

(1) For the sort of legislation advocated by *The Economist* a year ago (February 22, 1958) which would give the ordinary worker a greater opportunity to sue for damages if he is injured by a misuse of power or conspiracy by shop stewards or local union dignitaries.

(2) For using the device of courts of inquiry, not to fix up more wage compromises, but to examine instances where systems of industrial relations within a particular works seem to be operating either particularly badly or (why not?) particularly well. Such inquiries should not be undertaken by "evenly balanced" courts of trade unionists and employers, but by completely neutral investigators.

Even then, any advances to effective industrial partnership could not take place quickly in Britain: present attitudes in industry, though tempered by the rise of a new class of professional managers, are still a reflection of the stratified class structure and lack of mobility in British society as a whole. But the need, especially when mass production methods have already removed so much personal responsibility from the job, is plainly for more positive participation in at least some aspects of industrial democracy by workers on the factory floor—both among small groups (the main concern at present of industrial psychologists) and among large ones. The trend over the next few years could and should be to use this as a more effective tool of labour relations, backed by braver action from the centre to clear some of the difficulties out of its way.

LETTERS

The Common Market

SIR—You noted on February 21st that one Liberal and one Labour backbencher advocated Britain's joining the common market. Had I caught Mr Speaker's eye, there would also have been at least one Conservative to point the inevitable logic of this course.—Yours faithfully,
House of Commons MARTIN MADDAN

Farm Policy

SIR—In the article in your issue of February 21st, which considers whether there should be "any agricultural support in Britain at all," you value the present level of home food production at £1,400 million a year, and you go on to say "to turn a pound's worth of imported feeding stuffs, domestic labour and capital into 10s. of milk, eggs or bacon . . . cannot possibly be a sound permanent policy."

Do you contend that the £1,400 million worth of home food production cost £2,800 million worth of "imported feeding stuffs, domestic labour and capital?" If so, it would be interesting to see a breakdown of your figures.

Your article ignores the argument that it is these farm subsidies (which seem to be levelling out at a total of about £300 million a year) which have enabled British farmers to increase prewar production by over 60 per cent, which at your estimate of the value of present production means an increased volume of food worth something over £525 million gross per year.

This increase in agricultural production enabled meat rationing to be relaxed and makes a valuable contribution to our balance of trade.—Yours faithfully,
House of Commons RICHARD GLYN

How Many Missiles?

SIR—A short explanation is required by your reference to my past discussions of the missile gap in the article, "How Many Missiles?" in your issue of February 14th.

I have never "talked of" a ten-to-one ratio of Russian to Western ICBM's, as your correspondent asserted. Last summer, I published what were then the national estimates of Russian missile development and production, prepared by the American government and then in official use. In a parallel column with these official estimates of the Soviet programme I showed the numbers of missiles that would be produced by our own defence programme. The ten-to-one ratio was inherent in the figures.

For various reasons, all highly dubious, the national estimates of Russian missile output have now been revised downwards. At the same time, our own missile programme has been slightly amplified. Mainly because of the revision in the national estimates, but also by using a decidedly peculiar balance sheet, Secretary McElroy is now able to speak of a three-to-one ratio. Senator Symington's four-to-one ratio was his interpretation of the same official figures that Secretary McElroy used.—Yours faithfully,
Washington, DC JOSEPH ALSOP

The Trade Unions

SIR—The author of "The Anatomy of British Trade Unions" states that "in trade union education (and especially at the labour colleges like Ruskin) the old-fashioned socialist morality persists."

As far as one can judge from the rest of the article this seems to consist of fondness for restrictive practices and a sentimental rather than analytical attitude to problems of wage determination. As I have been mainly responsible for teaching economics at Ruskin for the last twenty years, I am not altogether pleased with this implication that the subject is handled in a biased and unscientific manner. While I admit that I have sometimes signed wage awards which gave unions about half what they asked (and also some which gave them all they asked and some which gave them nothing) I really cannot admit to any weakness for restrictive practices. My present association with the Registrar of Restrictive Trading Agreements is one which neither I nor, I hope, he would willingly see disrupted. Moreover, on the last occasion on which I made a public pronouncement upon a restrictive practice I achieved the singular and perhaps unique distinction of earning simultaneous praise from *The Economist* and the *Daily Worker*, neither of them recognised vehicles for the expression of socialist morality although both, it may be, a little old-fashioned.

Even at the risk of seeming almost as brash as he, I suggest that, with regard to Ruskin College, the writer of your article does not know what he is talking about. This seems a more kindly interpretation of his remarks than to insist that he was saying this thing which was not. (But that may only be old-fashioned socialist morality cropping up.)—Yours faithfully, HENRY SMITH
Ruskin College, Oxford.

★

SIR—It is to be hoped that your trade union articles will have the widespread influence they deserve. As you rightly say, the idea that wages are a matter of social justice, rather than a function of customers' demand, is deeply rooted.

As chairman of a trade union administrative branch I have recently tried to turn the tide within my own small sphere of influence by drawing attention to the following table of comparative figures which was published in *Flight* on February 6th:

Route	Number of carriers	Return flights per week	Return seats per week	Average passengers per flight
1. N Atlantic	14	217	13,300	29
2. Europe/ Mid. East.	19	162	9,100	19
3. Mid. East/ India....	12	68	4,000	32
4. India/S E Asia	11	60	3,500	35
5. S E Asia/ Far East..	10	45	2,650	33

It is obvious that customer demand is going to determine the future of the airline corporations. Our ability to face international competition will depend to a large extent upon whether the workers in the industry understand some fairly simple facts about the economic position. Furthermore, unless our trade union negotiators also understand them, and act accordingly, it is difficult to see how we shall match the ruthless competition of the jet age. These aircraft have a passenger capacity of over 100, and they will be operating over most of the world trunk routes by 1960. Unless there is a very sudden upsurge of air travellers the competition for them is bound to be intense.

Perhaps this may serve as an example of how necessary it is to face up to the power of customer demand in a nationalised industry that is particularly vulnerable to international competition. It is to be hoped that the trade union leaders who are members of the National Joint Council for Civil Air Transport will see fit to pay some attention to the future needs of the industry. The easy way out has been annual overall increases for everyone for a number of years past. It will not be the answer in the future, although some may think it heresy to say so.—Yours faithfully,
Beckenham, Kent KENNETH BRYAN

Shareholders and Directors

SIR—Your article on February 14th, leaves the main issue unanswered. The abstract idea of a company having rights and duties distinct from its shareholders is entirely foreign and contradictory to British philosophical and political thought and practice.

In the present case we are in danger of accepting a substitute abstract idea of a public company in place of the real flesh and blood existing entity. You say: "... by so acting in the best interests of the company (or what they honestly believe are those best interests) it does not follow that the directors are necessarily acting in the evident interest of the shareholders." The word "evident" saves this sentence from becoming an acceptance of the abstract idea, for of course the interests of the company must be the interests of the majority shareholders. There can be no legitimate abstract entity of a company. Let those who dissent from this view draw up a model set of articles of association expressly stating where their abstract ideas about rights and duties, peculiar to the company itself, would differ from the

shareholders' rights and duties in that company. We can then see if such articles of association would be acceptable to existing shareholders, or appeal to new investors.

The improvement of communications between shareholders and directors is important, but it is secondary to the need to rebut this idea of a legal abstraction of a company having rights and duties separate and distinct from its shareholders. Perhaps our judges of High Court or law lords of Parliament will have second thoughts on the matter if future cases come before them, for in this *quasi*-legitimisation of abstract entities a very important political principle is involved.—Yours faithfully,

Carshalton ROBERT DAVIDSON

★

SIR—I was intrigued by the racecourse analogy used by your correspondent Mr D. B. Swift in describing the shareholder as standing with his company as a punter does to a horse. Quite fortuitously, I feel, he has got the right sport but the wrong participant. A shareholder buys his share like a man attending the sales at Newmarket. He buys a yearling for its growth prospects and a brood mare for yield.

In the former case, having acquired his asset, he hands it over to a trainer whose function it is to ensure that he, the owner, gets the best possible value for his money. The trainer will keep it thoroughly fit to take part in races, and will enter it only for those in which he feels it has most chance. Subject to the owner's consent, he will even geld it, or send it to stud, or turn it from flat racing to hurdles or steeplechasing.

The company director is the trainer; good ones cost more than bad ones, but produce better results for owners.—Yours faithfully, A. C. CORBETT

Golitzine, Corbett and Chand Ltd.,
W.1

Where Charity Begins

SIR—Your article in your issue of February 14th is indeed right. It would be illogical to maintain the discouragements in the way of individuals contributing to charitable objects, while increasing the encouragement of boards of directors to distribute their shareholders' money to such objects.

It does not seem logical that, in the welfare state, big commercial concerns should become patrons of the arts or of charities, at the expense of shareholders, who have enough of their incomes taken away from them already.—Yours faithfully, ELIOT WARBURTON

William R. Warner & Co. Ltd.,
Eastleigh, Hants.

Graduate Teachers

SIR—In your note last week you give the percentage of graduate teachers in English secondary schools other than grammar as 50 per cent. The percentage of graduate teachers in secondary modern schools in 1956-57 was 19.5 per cent.—Yours faithfully,

Kew, Surrey MURIEL COLLIER

BOOKS

Naught for your Comfort

The Reporter's Trade

By Joseph and Stewart Alsop.
Reynal & Co., New York. 377 pages $5.00.

EVEN in the United States, where the newspaper columnist is accorded the prestige that scarcely a handful justify, it is a rare journalist whose articles covering the last twelve years would bear resurrecting between stiff covers. It is a measure of the Alsop brethren's stature that the montage they have built up out of their taut, breathless, minatory columns can be confidently recommended to anyone with a desire to capture the taste, touch and smell of cold war Washington. Despite their contrasting temperaments—Mr Stewart Alsop, the younger brother, operating equably through his wide circle of friendly contacts, Mr Joseph Alsop, the elder, rejoicing loudly in the number and qualities of his enemies—their partnership was astonishingly harmonious. Now that Mr Stewart Alsop has accepted an editorial post on the *Saturday Evening Post* and Mr Joseph Alsop continues to blast away solo in the several hundred papers that syndicate his column (causing more agitation in foreign capitals as he does so than any other American except Mr Dulles), they have every right to look back with pride on their joint accomplishment.

In the first five chapters of their book, which precede the selections from their work, they explain what it is like to be the Alsops, how they got that way, and their highly exalted view of the journalist's rôle in the American style of democracy. That view allows for very few official secrets indeed. Most outside observers of the United States are astonished at the amount of military and diplomatic detail which is bandied about in the press, particularly the technical journals, and in the proceedings of congressional committees. But the Alsops, asking themselves how it could possibly be that no action resulted from their many years of circumstantial disclosure of the extent to which the Russians were catching up and overtaking western military strength, have concluded that if only they could have discovered twice the number of official secrets with the expenditure of half the effort, they could have aroused an irresistible public outcry for more drastic rearmament. And, being slightly uneasy that their readers may not be prepared to take from any journalists, however talented, the arrogance of a Field Marshal Montgomery, they put forward a special plea for a quasi-constitutional rôle for the American press. Because of the American system of separation of powers, they maintain, an Administration is less amenable to challenge by other politicians than under a parliamentary system. The press must therefore fill the vacuum.

There is something to this, but not so much as the Alsops think. The President is inaccessible to public examination except at press conferences. But a congressional committee can conduct a far more thorough investigation of a departmental head—and his subordinates as well—than is open to MPs in question time or in debate. American politicians claim many privileges of historians in uncovering the way in which decisions are made, and Washington, weighed down by the incredible bulk of the testimony that is perpetually being taken, suffers as much from censorship by saturation as it does from the use of the "top secret" stamp. The Alsops themselves often call attention to the fact that it is some officially endorsed figure that has failed to make its proper impact on public opinion.

While these journalists' industry and skill in digging up and checking fresh and often remarkable facts invite the admiration of their professional colleagues, it is still worth asking whether they are not to some extent victims of the characteristic American belief that, if all the facts can only be uncovered, the right course of action will speak for itself. The impact of the Alsops' columns has at times been diminished as much by a surfeit of indigestible military detail—in order to lend authenticity to their dire warnings—as by too monotonous a recourse to cries of "Woe Woe" (two faults which have been largely excised in this judicious selection). This may have something to do with the brothers' curious insistence on having their brand of journalistic punditry recognised as a branch of manual labour rather than a cerebral activity. The grunts and groans of the brothers Alsop as they charge around the world as well as across the United States, using up shoe-leather (their favourite expression) in their search for facts, echo down the years. It is a wonder, one says, that they have time to think. But think they do, and their incisive, if a shade too apocalyptic, pinpointing of issues and situations that governments would rather shy away from and forget is one of their greatest services to their country and its allies.

Moreover in their demand for total exposure the Alsops are facing head-on one of the central perplexities of modern democracy—that the decisions which ultimately will affect the people most are

those on defence and foreign affairs, which are conventionally least susceptible to public debate. Refreshingly the Alsops take up an extreme position. But, to use their own example, would we really now be better off if, when the United States had an atomic monopoly, the Americans had staged a great public debate on whether to threaten the Russians with preventive war if they rejected the Baruch Plan?

As this book reminds us, the Alsops were ahead of the journalistic field in such diverse matters as the political application of the term "egghead" (invented by a third Alsop brother); the pinpointing of Dienbienphu as the decisive battleground in Indo-China; the revelation that the Truman Administration was deeply divided over whether to make the H-bomb; the prediction that Russia would get an earth satellite up first; and the recognition that Senator Lyndon Johnson would develop into one of the most gifted senatorial leaders of all time.

Scattered through the book is intriguing evidence of the Alsops' mixture of admiration for the British and exasperation with them. They have a low view of the British press—"British serious newspapers are too often pretentious shams, with very little behind their fine, impressive literate facades"; a high view of Foreign Office briefings, which they find franker and more informative than what is dished out by the State Department; a great regard for some British politicians especially for "the singularly powerful and original mind" of Mr Antony Head; and occasional frustration at the failure of British Governments to land the United States in militant action for the defence of British (and, they would hold, in the long run western) interests.

No Bread

The Crowd in the French Revolution

By George Rudé.
Oxford University Press. 267 pages. 35s.

IN a world in which revolutions are so frequent that they are almost losing their front page priority, it is a salutary as well as a highly instructive exercise to be reminded of their mechanics and techniques—of what makes them tick in fact. Do similar causes produce different results among different races? What are the mysterious processes that turn dumb indifference first into sullen discontent, then into smouldering anger and finally into blazing revolt? Are the root causes political or social? And are they deep and simple, or multiple and complex? Finally, who leads whom: do the masses project the leaders, or vice versa?

On all these questions, Mr George Rudé has brought his severely disciplined but highly inquisitive mind to bear—with fascinating results. In a comparatively short book he has unravelled, by means of immensely detailed research into such *minutiæ* as the sectional police records of the Paris Préfecture during the Revolution, a new and intimate picture of the minds and motives of the men and women who stormed the Bastille, fetched the King and Queen back to Paris by force from Versailles, massacred the priests and aristocrats in the prisons, captured the Tuileries Palace and destroyed the Swiss Guards, and finally deserted Robespierre and the Terror on the night of Thermidor.

From his researches we learn what the crowds were really made of, the composition of the Parisian "mob," the very make-up of the *sans-culottes* in violent action. Mr Rudé finds his way clearly and logically through each successive revolt, from that first "July 14," 1789, to Bonaparte's "whiff of grapeshot" on the bloodstained steps of Saint-Roch Church six years later. The conclusions he presents are fundamental.

The French Revolution, like most upheavals before and since, was born, he writes, of hunger and fear—two of the most dangerous forces in human nature. At the head and tail of the working class revolt were the price and quality of bread, their main diet. These fluctuated violently and frequently, and people in the great cities were at times on the point of starvation, or actually did starve. It was then that the new and heady ideas of liberty and equality, spread in the news sheets like Marat's *L'Ami du Peuple* and Hébert's *Père Duchesne* and continually shouted at every street corner by revolutionary orators like Danton, swept the crowds into massive retaliation. At the same time the *bourgeoisie*, fearful of royalist counter-revolution with reimposition of discriminatory taxation, and of their newly won rights to vote and rule, joined forces with the *sans-culottes*. The combination was irresistible.

In an interesting comparison with mob psychology in other countries, Mr Rudé points out that the picture of the *sans-culottes* as bloodthirsty ruffians is overdrawn, and he cites the behaviour of the mob in Britain on various occasions, notably during the Gordon riots. Moreover, he shows how much better organised were the police forces of Paris than those in London; it is clear that when the police wished or were ordered to, in nearly every case they made short work of the workmen of the Faubourg St.-Antoine, as in the famous Réveillon riot of April, 1789. It is Mr Rudé's conviction that the high price of bread, which meant hunger to the masses, played by far the strongest part in the behaviour of the crowds in the Revolution, and that it was the crowds more than the politicians who really made it. If he is right—and he makes a convincing case—then Marie-Antoinette might well have uttered her shattering remark about "no bread, why not give them cake," and she would not have been so wide of the mark as history has painted her.

This is a book for the specialist. But it is also packed with stories about how ordinary men and women acted under the pressure of tremendous events; it thus deserves a wider circulation at a time when there are so many revolutions under our very noses to sniff at.

Russia's Sea Power

The Soviet Navy

Edited by M. G. Saunders.
Weidenfeld and Nicolson. 340 pages. 36s.

"IN a future war the struggle at sea will be of even greater importance than it was in the last war."

This statement, made by Marshal Zhukov, the outstanding Russian military personality of the postwar era, supports the dominant theme of this book: that Russia understands the implications of sea power. The Germans started the last war with 59 submarines; the Russians now have 500. They also have a surface fleet about twice as large as the Royal Navy. These and other facts provide salutary reading for those who tend to consider the Soviet military threat solely in terms of massive land and air armies, rocket missiles and weapons of total destruction. The book spells out the implications of 500 enemy submarines (a figure so frequently mentioned but so unclearly understood).

After a general introduction the history of the Russian navy is analysed with emphasis on the two world wars and the Revolution. After this background has been given, the remaining three-quarters of the book describes in detail the navy as it is today, and discusses the strategical implications. Eighteen contributors from eleven different countries have written articles; Commander Saunders has been skilful both in his choice of authors and the scope of subjects, which includes the Russians as naval opponents and allies and also as neighbours.

The quality of articles is evenly high, although there is a tendency to be dogmatic where reliable information is of necessity sparse. Most contributors stray from their subjects to discuss the broader aspects; but these several personal and frequently divergent opinions are of value, particularly when they try to assess the quality of Russian personnel and to interpret their naval policy.

Russia is often dismissed as a land based animal incapable of waging war at sea; yet, as this book shows, Russia has had maritime aspirations since the time of Peter the Great and has always considered itself a naval power, and the drive to build up a powerful navy has been continuous from Tsarist times to the present day. As long as Russian territorial expansion was confined to the contiguous land mass, its merchant fleet was inadequate in Western eyes. It is significant that a major merchant shipbuilding programme has now been under way for over two years; having re-established itself as a naval power, Russia now finds it necessary to become a maritime one.

The articles discussing the long-term strategical concepts must be the most provocative. The implications are sombre, but highlight the argument common to all contributions: that control of the sea is as vital to the West today as ever in the past; that the Russians fully appreciate this and wish to wrest control from us.

Peacemaking at Paris

The Ordeal of Woodrow Wilson

By Herbert Hoover.
Museum Press. 318 pages. 35s.

"MR HOOVER was the only man who emerged from the ordeal of Paris with an enhanced reputation": thus John Maynard Keynes. However, there are dangers in being fitted for one's halo too early, not least in the tendency it encourages to self-righteousness and complacency. Both these Hooverian characteristics are present in generous degree in this book. The ordeal of Woodrow Wilson is presented also as the ordeal of Herbert Hoover, and the supporting cast is, as readers of the Hoover Memoirs will expect, liberally sprinkled with wily, evil-plotting Old World diplomats and selfless, simple and trustful Americans.

Fortunately, despite this heavy admixture of irritants, Mr Hoover's book also contains a good deal that is of interest to any student of the period. It will not alter our thinking about any of the main features of the Paris peacemaking, but at some points it clarifies and amplifies the existing picture. It has most to say, naturally, about the background of hunger, homelessness and near-anarchy that were Mr Hoover's special concern as Director of the Relief and Reconstruction of Europe. More nearly perhaps than anyone else at Paris, Mr Hoover looked at the deliberations there with the eyes of the millions of war victims whose misery eclipsed, for the time being at least, their national attachments and aspirations. This gives a genuine nobility, even a certain uninflated eloquence, to the protests, printed on pages 245-8, which Mr Hoover addressed to the President when the terms of the Peace Treaty became known to him. It makes the less comprehensible Mr Hoover's leading part in the American decision to withdraw at the first available opportunity from the inter-allied economic councils that might have saved postwar Europe from economic chaos.

On some of the famous Versailles controversies Mr Hoover has some evidence of his own to provide. He amplifies the sad story of the food blockade and its perpetuance by the Big Four from his own impressions as a participant. He acquits House on the intemperate, Wilsonian "conspiracy" charge, though not on the "compromise" allegation. Mr Hoover also draws on the unpublished diary of Vance McCormick, who was the US adviser at Paris on blockade matters and whom Mr Hoover describes as "probably the President's most intimate adviser in Paris aside from Colonel House." Some of the extracts he quotes make interesting reading, but anyone who hopes to learn much that is new from them will be disappointed.

In general the book suffers from being an attempt to combine a synthesis of existing accounts of "What Happened in Paris" with the reminiscences and "revelations" which Mr Hoover himself provides. The result is neither a reliable historical narrative (there are several small errors of fact, quite apart from questions of interpretation) nor a vivid and immediate eye-witness picture. For all that, the historian of the Peace will not be wise entirely to neglect it.

A Historian on Advertising

The Responsibilities of American Advertising: *Private Control and Public Influence, 1920-40*

By Otis Pease.
Yale University Press. London: *Oxford University Press.* 247 pages. 40s.

OF all the techniques for the dispassionate examination of advertising, as distinct from the usual slanging match between attackers and defenders, that of the historian is the most obvious. Yet it has not been much used at a serious academic level because advertising on a significant scale is a recent growth and also because even past developments in this field are likely to arouse present prejudices. Mr Pease comes out rather well from the test of objectivity. He was apparently not encumbered in the first place by any intention to prove a case; he avoids the snares of current controversy by stopping short at 1940; and he is a sufficiently good historian and writer to order his facts neatly and present them readably. British readers have an additional aid to detached judgment in the fact that although the issues outlined in this book are very much alive in this country, the material examined by Mr. Pease is almost entirely American.

The book is about the development of the three main methods of controlling advertising, all of which were already in existence in 1920. Legal regulation, for example through the Pure Food and Drug Act, was not particularly lively. Internal rules, set by the advertisers themselves, were already well advanced and were encountering the usual limitations of those rules when faced with a really determined buccaneer. Consumers' organisations were on a limited scale and had not yet reached the stage of a national movement.

All three developments became fully fledged in the crucial twenty years covered by Mr Pease; the attack on advertising became more explicit and formidable; and the defences of the advertising business were co-ordinated and given a positive and aggressive form. In effect, by 1940 the advertisers were on top although the opposing forces were still in existence. Consumption had acquired a doctrine of its own, partly on the rebound from the great depression. All forms of regulation and control were running up against their natural limits in a democratic society. The psychologists had had their say and no answer had been found to the central question: if literal truth to fact is not the sole criterion for judging advertisements (as it clearly cannot be in view of the complex nature of persuasion and subjective satisfactions) what are the proper standards of judgment and control?

Mr Pease is a historian. This central question was first clearly posed in his period and the answers were not found. He records both facts in such a way as to bring out their full significance, and incidentally demonstrates that advertising could do with a few more professional historians.

OTHER BOOKS

THE CHANGING PATTERN OF DISTRIBUTION. By Nicholas Stacey & Aubrey Wilson.

We have received complaints from the authors of this book about two points of fact in the review that we published on January 24th. They write:

According to your reviewer, our estimate of the number of Co-operative supermarkets in 1957 is "wildly understated." We checked with the Co-operative Union (October, 1957) which had no accurate figures beyond 1955. Failing official information we used the *Financial Times* estimates which we have found authoritative (September 6th and 9th, 1957). Where does your reviewer get his figures? Of course, it all depends on what is meant by supermarkets on this side of the Atlantic. Perhaps your reviewer would declare his definition in terms of space, takings and organisation.

The reviewer quotes a statement on page 42 that not one department store "could be rebuilt today to operate at a profit," and then turns to page 199 where he alludes wittily, but inaccurately, to new department stores "now being built." To omit the rest of the sentence on page 199, which states that the new stores "now being built and equipped require another 3 per cent on mark up to show the same net profit as older stores" is mischievous since the meaning is deliberately distorted.

Our reviewer comments:

On page 186 of their book, Messrs Stacey and Wilson wrote: "By the end of 1957, there were eighty supermarkets in operation, all but one of them branches of multiple concerns"; they do mention the Co-operatives among "the main operators." According to the fifth and sixth editions of the annual "Self Service and Supermarket" Directory, which is the one authoritative and generally recognised source for figures of self-service shops and supermarkets in this country, there were 80 supermarkets, including 25 Co-operative supermarkets, at the end of July, 1957, and (as reported in *The Economist* of August 23, 1958, which also gave the definitions used) a total of 175, including 83 Co-operative supermarkets, at the end of July, 1958. It appears, however, that in the sentence quoted Messrs Stacey and Wilson have used the word "multiple" to include the Co-operative movement; this runs counter to common usage in the retail trade and to their own practice elsewhere in the book.

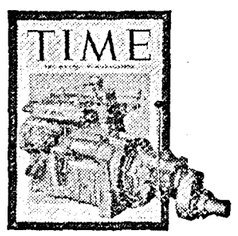
I reject the charge that the phrase "now being built" is mischievously taken from its context, since the authors have not shown why rebuilt stores should not be able to get an extra 3 per cent on mark up if new stores can.

CASSELL'S ITALIAN DICTIONARY. *(Italian-English and English Italian).* 1079 pages. 30s.

This is an entirely new dictionary compiled by Professor Piero Rebora, Professor of English at Milan University.

ITALIAN FOR ADULTS. By Charles Duff. *English Universities Press.* 376 pages. 16s.

This book sets out to teach Italian to the intelligent adult beginner; it is designed for both self-tuition or class use.



DRIVE for exports

MR. FRANK PERKINS has been very much in the news recently. Founder of F. Perkins Ltd., leading manufacturers of diesel engines, he is a great believer in driving for exports, just as his diesels are driving 423 different types of vehicles in 143 countries around the globe. Wherever power is needed, on land or sea, Perkins' engines are there with applications ranging from small industrial tractors to seven-ton trucks.

Frank Perkins has always known that drive for export sales is boosted by international advertising.

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Disunion in the Unions

WASHINGTON, DC

UNLIKE bones, trade union federations are liable to break twice in the same place. It is clear that the leaders of the American Federation of Labour and Congress of Industrial Organisations (AFL-CIO), who have been meeting in sunny Puerto Rico for the past ten days, are still inhibited by memories of the division which split the union movement from 1935 to 1955. The federation's executive council has made a number of ringing political declarations. Emboldened by the results of last November's elections, it has called on Congress to establish a thirty-five-hour working week for almost half of the entire labour force, and has repeated its demand that the statutory minimum wage be raised by a quarter. It has also announced that the trade unions will not support even Senator Kennedy's labour reform Bill—the mildest of the three now before Congress—unless they get their pound of flesh in the shape of changes in the detested Taft-Hartley Act. But in dealing with the federation's domestic problems, instead of putting its foot down firmly as many people wished, the executive council has trodden as gingerly as if its leg were in splints.

The AFL-CIO's internal troubles centre about the hyphen in its cumbersome name: the precarious link between the craft unions of the old AFL, whose members share a common skill but may be scattered through several different industries, and the industry-wide unions of the younger CIO, which are designed to enroll all the workers in a given industry whatever their particular function. The merger of 1955, a rough-and-ready job which simply slapped the two groups together in the hope that they would grow into one, never really reconciled the conflict of interest between them. This has recently emerged in several ways. One is the demand of the former CIO leaders—notably Mr Walter Reuther, the astringently honest president of the automobile workers—that Mr Maurice Hutcheson, the head of the carpenters who has been indicted on a bribery charge in Indiana and has refused to answer Senators' questions about it, be expelled from the executive council. But Mr Hutcheson's carpenters gave him authority last autumn to lead them out of the federation if he were removed, and other building craft unions have hinted that they might join the procession.

Together with Mr Hoffa's teamsters (or lorry drivers), who were expelled for wholesale corruption a year ago, this might cost the federation a fifth of the members with which it started life in 1955. Moreover, since the building workers keep in close contact with the teamsters, who fetch and carry for them, there was a danger that Mr Hoffa, ever ready to embrace a fallen unionist, might have gathered the new rebels into alliance with him. Mr Meany, the president of the AFL-CIO, has decided that the risk is too great. The offending Mr Hutcheson has been given yet one more chance to present his explanations in person. He will, in any case, have to submit himself for re-election to the council next autumn. But cynical observers have concluded that Mr Meany's zeal for purity is in inverse ratio to the number of members he will lose by pursuing it.

The building workers would hardly have been so ready to quit if they had not had other quarrels with the ex-CIO unions. There has long been bitterness over the proper division of construction jobs between the two groups. A year ago a compromise was agreed under which the craft unions would be entitled to do all new construction work, while the industrial unions would be responsible for repairs to buildings in which they work. But the steel workers, the second biggest industrial union, with whom the building workers conflict most sharply, have never accepted the settlement and there is also a jurisdictional no-man's land between "new" and "repair" jobs in which a number of disputes with other unions have gone unresolved. Last month Mr Reuther's car workers in the Detroit area signed a more specific agreement with the local building unions, providing for regular joint meetings to negotiate about doubtful cases. Mr Meany approves of this, but some leaders of the building unions, suspecting the superior wiles of Mr Reuther's negotiators, fear to extend it lest their rivals filch construction jobs which should be theirs.

Nor has the executive council reached a decision on a counter-complaint of the industrial unions. In the unremitting struggle to win new recruits, the metal trades unions—the other main stronghold, along with the building unions, of the old AFL stalwarts—have adopted the stratagem of uniting as a single group against an industrial union in elections to decide which shall represent the workers in a given plant. The industrial unions can hardly resort to similar tactics, since their spheres of influence are, by definition, more or less mutually exclusive; so they have asked for protection. One of their strongest claims on the federation's sympathy is that the ex-CIO unions, though they have less than half the total membership, provided three-quarters of the money spent by the movement in last November's election.

MEANWHILE, the exiled teamsters continue to flourish like the green bay tree. Mr Hoffa added 135,000 new members to his ranks last year, about the same number as the AFL-CIO lost through the recession. Having postponed his ambition to form a grand alliance of transport workers and to turn the New York police into teamsters, he is currently trying to organise Puerto Rico under the executive council's feet. And the one body which retains any legal hold on the teamsters, the board of monitors appointed by a federal judge last year to reform them, has yet to make its grip felt. Exasperated by the fact that Mr Hoffa has complied with only a few of their less inconvenient recommendations, the monitors have now persuaded the judge to rule that these have the force of court orders. But there are snags. The teamsters are appealing, and it is not certain that the judge was entitled to reinterpret his original order, to which they had consented, in a way to which they do not now consent. Even if the Appeals Court upholds the judge, he has specified that the monitors' orders must be "reasonable." This presumably leaves it open to the teamsters to challenge each one.

Mr Meany's troubles are aggravated by the erosion of the AFL-CIO's membership which is going on beneath him. The recent recession merely speeded a process already set on foot by automation and the changing composition of the labour force. In the last decade, while the total labour force has steadily expanded, the number of production workers has actually declined; these, the core of the trade unions, now account for well under a quarter of all employees outside the farms. The ex-CIO unions have been hardest hit, since their relatively unskilled members are the first to be replaced by machines. The drift of workers into the service industries, where the unions find it difficult to follow, has cost the steel and automobile unions a quarter of their members in the last few years and the booming teamsters may soon be the only union over the million mark. This year, after two years of comparative calm on the labour scene, three million unionists, led by the steel workers, will be bargaining for wage increases. It is arguable that, in pressing its demands for higher wages and fewer hours, the AFL-CIO is simply making automation more attractive to employers and is helping to turn itself into a rich but dwindling *corps d'élite*.

There are still an estimated 26 million workers who could be organised into unions. But half of these are in the white-collar group, for whom unionism is not yet quite respectable, and half of the rest are in the South, where there has always been strong opposition to the unions. Mr Reuther continues to proclaim there is really plenty of room for both the craft and industrial unions to expand, but its peaceful allocation calls for a good deal more leadership than the AFL-CIO has yet been able to provide. As long as this source of disunion remains, the brooding presence of the teamsters, as a rival camp to which the disaffected might rally, is going to disturb Mr Meany's nights.

The Economic Gap

SENATOR KENNEDY, the busiest potential Democratic candidate for the Presidency, made an eloquent and convincing appeal to Congress last week to seize a fleeting opportunity this year: the chance to make economic growth along non-totalitarian lines attractive and possible for the under-developed countries, most particularly for India. Calling the "economic gap" between the stable industrialised countries of the North and the over-populated impoverished nations of the South wider and more dangerous to the West than the much-publicised "missile gap," Senator Kennedy argued that in the Development Loan Fund, the Senate's own brain-child, the United States had the instrument to narrow, if not to close, this gap. The fund, properly financed, can offer the substantial long-term cooperation which would make it worth while for underdeveloped countries to have long-term plans. Two former Ambassadors to India, Senator Cooper and Mr Bowles in the House, are reviving, with Senator Kennedy, a resolution proposing a high level international mission to India to discover what is needed to complete the second five-year plan and to design the third. They feel deeply that India, with 40 per cent of the population of the uncommitted nations, offers the great chance to show that democracy can rival Communist China's "great leap forward."

This approach commands much warm support in the State Department. Mr Dillon, the Under Secretary in charge of economic affairs, told a House committee recently that the Development Loan Fund ran out of money at the end of January and was having to stand idly by while the Soviet Union stepped up its economic activities abroad—a perfect example of the costly and ineffective short-term methods which Senator Kennedy wants to end. The Administration is asking for a supplement of $225 million for the fund this year and for a new authorisation of $700 million for the year beginning in July, but this falls far short both of the $1 billion a year programme for five years which the Senate and the Administration supported in principle (but not in cash) and of the more than $1.7 billion in requests for help which have passed the first screening.

Economic aid has powerful friends in Congress. It also has the staunch support of the President who, only last week, asked Congress to contribute another $1.38 billion to the International Monetary Fund and double America's subscription to the World Bank. But these institutions, like the Export-Import Bank, make only "bankable" loans. The Development Fund, which accepts repayment in soft currencies, may, unfortunately, be badly squeezed this year between the desire of a Republican President to balance the Budget and the desire of a Democratic Congress to increase domestic spending. Even if it is not, Senator Kennedy's Marshall plan for the under-developed will probably have to wait for a more sympathetic tenant in the White House.

Unemployment Keeps Up

WHILE trade unionists' plans for a mass meeting in Washington of jobless workers is an over-dramatisation of the situation for political purposes, nevertheless unemployment is looming in an ever more threatening way over the optimism generated by the economic recovery, itself somewhat stunted recently. Concern is caused not so much by the actual number who were out of work in January, even though the figure was higher than for any January since the beginning of the war, as by the fact that, as a percentage of the labour force, the number of unemployed has stayed practically the same, around 6 per cent, after allowing for seasonal factors, for the last three months.

The increase in unemployment in January was to be expected at this time of year; and the rise of 600,000 between December and January in the number without jobs was only half as much as in the same period a year earlier, in the middle of the recession. But 1.4 million persons, nearly a third of the unemployed, had been out of work for fifteen weeks or more and in January, for the first time since last summer, this figure did not decline. The persistence of long-term joblessness provides a strong argument for continuation of last year's emergency plan for extending the duration of unemployment benefits; this expires at the end of March and the President insists that it must be

allowed to lapse for the sake of balancing the Budget and because he believes that the need for it will soon be over.

The President's stand is unwelcome to members of Congress, whatever their party, who come from those places where most of the unemployment is concentrated. It is found mainly in the north-eastern region, and in the durable goods industries even though these factories have recently been expanding their output. The failure of employment to match this expansion has several explanations, all of which make it seem likely that there will be little substantial rise in the number of jobs available in industry until boom

"Don't Look Now But I Think We're Being Followed"

conditions reappear. For the present manufacturers need use only their most modern equipment, which does not employ so many men as do the older facilities, and they can manage by working their existing employees longer hours instead of going through the process of engaging new ones. But even when there is a boom, many people doubt if it will bring full enough employment to absorb all the annual increase in the labour force. This is one of the main questions to be examined by the inquiry into the problems of ensuring economic growth and maintaining stable prices which is shortly to be opened by the Joint Economic Committee of Congress under Democratic auspices, as a rival to the similar inquiry being conducted by the Republican Vice President, Mr Nixon.

Inadequate Atoms?

THIS month has brought the usual annual meeting between the joint congressional committee and the independent government commission which are responsible together for atomic energy in the United States. Unfortunately the result has been not the ratification of peace, which had been expected to follow the truce established when Mr McCone succeeded the controversial Mr Strauss as chairman of the commission last summer, but a new outbreak of hostilities. The immediate flare-up came through Mr McCone's impatience with the arbitrary and perfunctory way in which the committee, following congressional custom, conducts its business. But the underlying cause of the renewed bitterness is the committee's disappointment with Mr McCone's proposals on the development of nuclear reactors for industrial purposes and its disgust at his claim that remarkable progress has been made during the past five years. The Democrats who are in charge of the committee contend that the commission has "failed miserably" mainly because it has relied on private industry instead of building reactors itself.

The long-range objective of Mr McCone's programme is to make the cost of electricity from nuclear generators competitive with power from other fuels within five years in countries lacking their own coal and oil and within ten years in those parts of the United States where energy costs are high. His conciliatory gesture was to announce that the government would pay half the cost of building prototype reactors; until now it has only contributed to the costs of research and of fuel. But Mr McCone still proposes that these experiments should be the responsibility of private companies; according to the Democrats, these cannot be expected to bear the risk of such uncertain economic propositions. It remains to be seen whether the improved terms now offered by the commission will stimulate private industry's lagging enthusiasm for atomic reactors.

The commission intends to spend $115 million in the coming fiscal year and proposes six new prototype plants. But the Democrats on the committee point out that this is only about a third of the average spent in recent years and that the new projects are not all net gain since a number of earlier ones are to be dropped. This may have been done at the insistence of the economy-minded Budget Bureau rather than at that of the Atomic Energy Commission itself. But in any case Mr McCone's proposals look like being no more than a starting point on which the congressional committee will build its own more ambitious programme.

Reading for the Quality

FROM A SPECIAL CORRESPONDENT

NEARLY two years ago *Colliers* and the *Woman's Home Companion*, magazines which had a circulation of over four million each, were no longer able to attract enough advertising to pay their way and ceased publication. Meanwhile the *New Yorker*, with about one-tenth the circulation of either, and advertising rates far higher in relation to size of its readership, was profitably embarked on its fourth decade of commercial and cultural success. An hour away by air, in Boston, the *Atlantic Monthly* was preparing to celebrate its one hundredth birthday, recently marked in Britain by the publication of an anthology* bulging with great names of contributors from Emerson to Einstein and from Mark Twain to Virginia Woolf. The *Atlantic's* circulation, the centennial issue noted, had doubled since 1944, and was nudging a quarter-million.

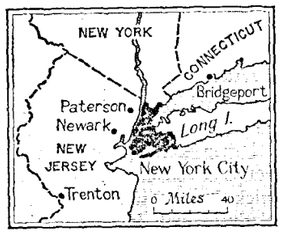
What accounts for the success of the magazines for upper middlebrows (to borrow a useful sociological adjective from Mr Russell Lynes, managing editor of yet another of the species, the 108-year-old *Harper's*) in a time when the giants for the lowerbrows are hard pressed to stay alive?

The answer can hardly be that these magazines have watered down their content to some lower common denominator of taste and intellect. The *New Yorker*, still very much the child of its late, great, eccentric editor, Harold Ross, remains a determinedly sophisticated mixture of cartoons, fiction, perceptive commentary and reviews of various arts from horse-racing to poetry. The magazine's one homely touch is its seemingly inexhaustible supply of detailed childhood reminiscences, a tribute alike to the merciless powers of total recall possessed by its contributors and to the surprising patience of its readers—or skippers. The aroma of small town American autumn, vintage 1902, emitted by these staples of the editorial side is more than compensated for by the overpowering evocation of glamour in the advertisements, designed to whet the appetites of an epicurean, much-travelled and many-dollared upper class of consumers. The magazine prides itself on having asked no one to subscribe to it since 1929; that over five times as many people buy it now as did then is attributable solely to the quality of the product. There is no credit business, no cut-rate subscription (except for a modest Christmas gift offer), no promotion, just two reminders to subscribers as their term draws to a close, and no "grace period" if the fatal week passes without a cheque having appeared.

For the *New Yorker*, nothing has succeeded like contempt for success, plus complete unwillingness to compromise, whether with writers who do not maintain a meticulous literary standard, with readers weary of reminiscences, or with advertisers seeking to evade the strict controls over content and tastefulness that the magazine enforces. If a *New Yorker* editor is asked how it is that so profitable an enterprise has so little competition, he answers, with Olympian tolerance, that there is only a small pool of first-rate talent in writing and cartooning and that these favoured people already work for the *New Yorker*.

HARPER'S and the *Atlantic* are a rather different breed, the last of the great nineteenth-century literary monthlies. Each has connections with a distinguished book publishing house: *Harper's* with Harper and Brothers, the *Atlantic*, less closely, with Little, Brown and Company. Both have become less literary (although not less literate) in their efforts to keep abreast of the twentieth century; they publish more articles than fiction, more journalism than poetry. Both make explicit efforts to include a variety of viewpoints and a balanced content. Neither magazine has the *New Yorker's* tendency to overshadow its contributors: the relationship is accurately reflected in the trivial fact that the author's name appears only in rather small print at the end of a *New Yorker* piece, never with the title at the outset, but it does appear—the *New Yorker* is not *The Economist*.

Shortly after the last war both *Harper's* and the *Atlantic* faced something of a crisis, with costs of production mounting and circulation and advertising revenue lagging. At that point, finding (to their surprise) that their subscription lists only overlapped by some 10 per cent despite their marked similarity of appeal, the two merged their advertising departments in a single organisation, Harper-Atlantic Sales, Incorporated. More recently the cost problem has been less acute, circulation has been going up, and the growth of institutional advertising (aimed at creating a favourable attitude towards a company rather than selling a specific product) has helped.



It seems, furthermore, that the coming of television, which has made things harder for the mass circulation magazines by cutting into their advertising revenue, has on the whole been advantageous to the "quality magazine." Those who read them are known to be less completely mesmerised by the new medium; a recent survey of readers of *Harper's* showed that they spent more on musical instruments than on television sets. Advertisers have developed the habit of using television to reach the mass audience, and then seeking out more specialised media for specific groups of consumers. The "quality magazines" have been quick to emphasise their advantage in such a situation—the relatively high income of their subscribers, and the fact that their readers actually read; many contributors have reported a greater response, in the form of correspondence, from an article in *Harper's* than from one published in magazines of twenty times the circulation. Perhaps most interesting is the emphasis upon the positions of leadership in opinion held by these readers. "To inoculate the few who influence the many is the *Atlantic's* perpetual formula," said one of its great editors, Mr Ellery Sedgwick; the words could equally well apply to *Harper's* or the *Reporter*, a fortnightly magazine with a liberal political emphasis which nevertheless braves the shade of George Orwell by issuing a booklet for potential advertisers entitled "Some People are More Equal than Others."

None of these periodicals can fairly be accused of shunning controversy. *Harper's*, particularly, often waxes iconoclastic, attacking such features of the American "establishment" as the farm block, the ex-servicemen's lobby, and the notion that United States Savings Bonds represent a prudent investment in an age of permanent inflation. This may explain the edge in circulation recently enjoyed by the *Atlantic*, which gives an impression of somewhat greater circumspection, running to such things as supplements (backed by Ford Foundation money) on literary and artistic life in, say, Indonesia. It is noteworthy that only the *Reporter*, of the magazines here being considered, presents itself explicitly as a left-of-centre organ. And although its circulation, at 125,000, is more than twice the combined total of those two venerable but ailing vehicles of radicalism, the *Nation* and the *New Republic*, the *Reporter* has not been much of a financial success, and cannot begin to match the 2,170,000 votaries of the American Century who buy Mr Luce's *Time*. The big battalions, as usual in the United States, are to be found very near the middle of the road.

Commuters at a Loss

THE time for study is over, the time for action is here, said Mr Rockefeller, the new Republican Governor of New York, recently. He was referring to the 200,000 or so commuters whom nine railways bring into New York City every morning at a loss from Connecticut, New Jersey, Long Island and Westchester and whom they take back—at a loss—every night. The railways claim that these passengers cost them $20 million a year. Such deficits,

the result of rising costs, of the competition of private cars and of inability to shut down services, are of long standing. What is new is that last year Congress made it easier to abandon unprofitable lines and many railways are threatening to do so unless they are given subsidies, tax reductions and other governmental help. If they did and if buses and cars had to double their present load, the city's congested streets would become a nightmare. Moreover, in a growing metropolitan region of 15 million people, the problem will become more, not less, acute with time.

Unfortunately when Mr Rockefeller, who is expected to give the lead, discussed the emergency with the Mayor of New York City and the Governors of neighbouring New Jersey (which sends 75,000 commuters to New York) and Connecticut (about 13,000) the decisions were all negative. Mr Rockefeller, already deeply embroiled with his taxpayers, turned thumbs down on the proposal for an interstate agency because it would cost too much. This was the remedy put forward last year, after long study, by the Metropolitan Rapid Transit Commission ; the proposal was then defeated in New Jersey though approved by New York. To find short-run solutions each state has now created a new division of railway transport.

Unlike Mr Meyner of New Jersey and Mr Wagner of New York City, both of whom are Democrats, Mr Rockefeller thinks that aid from the federal government should be a last resort. In this he also differs from his own Public Service Commission, which puts a change of heart in Washington at the top of its long list of recommendations, and from some of the railways and mayors of cities which are concerned. So far subsidies have been tried in only two cases: by Massachusetts and Boston to keep the Old Colony Line going, and by Philadelphia. The second is a much more interesting attempt to woo commuters back to the trains by giving them better service and lower fares. Traffic has risen, though not enough to reimburse the railways or the city, but the number of cars entering Philadelphia has fallen satisfactorily and the experiment seems a hopeful step toward a lasting solution.

Splitting Fever

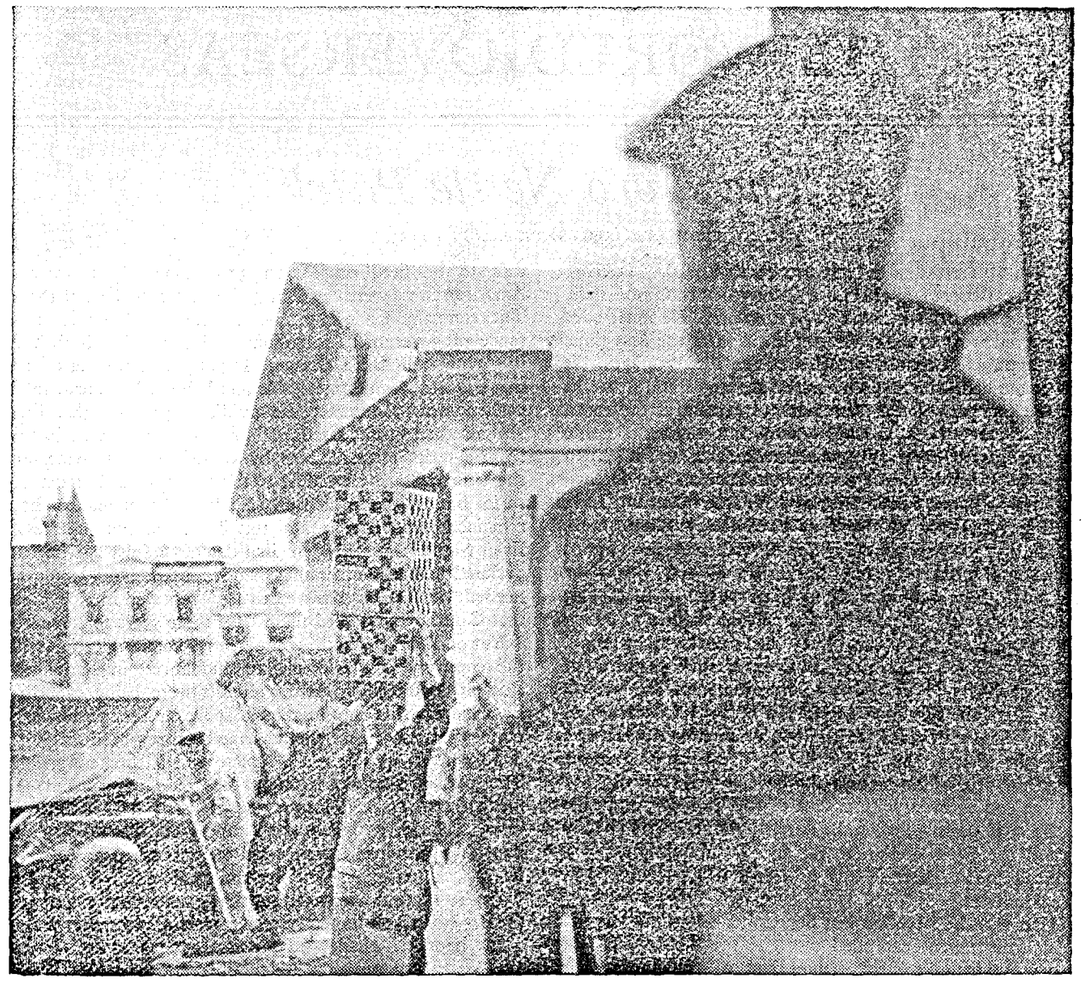
FROM A CORRESPONDENT IN NEW YORK

A RASH of stock splitting (the American equivalent of the British scrip or bonus issue) has broken out in Wall Street, with a growing number of corporations reacting to the rise in equity prices by simply issuing two or three new shares for every one now outstanding. Splitting is a by-product of bull markets ; it usually occurs in waves and the current swell is still far from a crest. In 1958 there were only 63 splits, the lowest for eight years, and most of them took place in the last quarter ; then, in January, 20 new splits of stock were proposed, and this month the fever has mounted.

Corporations contemplating splits believe that the lower price which results for each share broadens the market for their equities. This is not the only motive, however ; the shares of American Telephone and Telegraph Company, which at $200 each were already more widely held than any other issue, were split three-for-one last December partly because the company plans to turn to its shareholders for some of its future financing; and to some other firms splitting looks like an indirect means of broadening the market for their products by increasing the number of people with a personal interest in them. In general any issue selling at over $100 a share is a potential candidate for splitting, but well-managed companies avoid the move unless they are sure that both profits and dividends are going to increase ; this year, in fact, a considerable number of splits has been accompanied by higher dividends. Nevertheless, splitting is contagious and some companies with low-priced shares and questionable prospects are now indulging in splitting merely because it has become fashionable to do so.

While corporations divide their shares in response to a rising market, splitting itself stimulates higher prices and more active trading. An increase in the number of shares which he holds as the result of a split does not in itself bring any increase in a shareholder's equity, or in his income, but the prospect of higher earnings—and larger dividends—generally leads to a bidding up of prices in the shares of companies proposing splits and even of companies where such action is merely thought to be coming. There is a certain amount of such anticipatory buying going on now in some issues and, if no action is taken, disappointment may well be reflected in lower prices. Prolific splitting was one of the factors which stirred up speculation in 1929 and, although today the fever is mild by comparison, some observers think its re-emergence is symptomatic of a speculative, rather than an investment, market.

SHORTER NOTES



The death of Daniel Reed of New York, at 83 the Republican with the longest service in the House of Representatives, makes Mr Simpson of Pennsylvania the senior Republican on the House Ways and Means Committee. If the Republicans were to regain control of the House, which does not seem very imminent, he would be a chairman after Mr Reed's own heart for, although he is younger and the vigorous chairman of the Republican House Campaign Committee, he is just as conservative on taxes and tariffs as his predecessor, who thought the Eisenhower Administration outrageously liberal.

* * *

Mr Frank Costello, "the prime minister of the underworld," has been deprived of his American citizenship because when he applied for it in 1925 he did not reveal that he was a bootlegger when asked his profession. If his appeal is denied, Mr Costello, who is now serving a five-year term in prison for income tax evasion, will probably be sent back to Italy to join other deportees such as Mr "Lucky" Luciano.

* * *

As part of the post-sputnik strengthening of America's scientific effort, science attachés are once more being appointed to United States Embassies abroad. The new American Science Officer in London was once British ; Dr Osgood comes from Lincolnshire, studied at Cambridge and became an American in 1941.

In 1954 some 100,000 packs of fresh fruit and vegetables were sold in Britain. This year there will be 300,000,000.

Remarkable ? Even more so is the change in buying habits that this fact represents. In Covent Garden, and in the High Street, a revolution is taking place. Everywhere the demand is for the convenient, clean, reliable pack. And greengrocery is only an example. The whole trend of retail selling is towards more, and better, packs. For this revolution the Bowater-Eburite group of companies are well organised. They have the skill and the capacity to profit from the demands of the times.

The Avro Nettle Patch

FROM OUR CORRESPONDENT IN OTTAWA

MR DIEFENBAKER has grasped his first nettle. Lacking experience in this painful duty of prime ministers, he went at it like a boy on a dare. He must have discovered what every schoolboy learns after the first time. The impulsive-heroic approach has two disadvantages. It leaves the hand tingling with numerous stings and it breaks off the top part of the plant without getting at the roots.

Mr Diefenbaker's painful initiation into the art of nettle picking arose out of the government contracts, inherited from the Liberals, under which Avro Aircraft and Orenda Engines Ltd., the subsidiaries of A.V. Roe (Canada), Ltd., itself a subsidiary of the Hawker Siddeley group, were building 37 pre-production models of the new Avro-designed supersonic interceptor aircraft known as the Arrow or CF 105. The contracts dated from 1952, when the air force anticipated the need for a supersonic fighter to match the bombers the Russians were likely to have by 1958. Through all the vicissitudes common in such projects—of modifications and delays and improvements—the project grew from one test model expected in 1953 to cost about $30 million, with plans for 500-600 production models at a unit cost of less than $2 million, to the 1955 programme of 37 pre-production models at a development cost of $300 million and an eventual unit cost of $2.6 million ; and then to the 1958 position, when the development cost had already passed the $300 million mark, and the requirement was reduced to 100 aircraft, the unit cost being estimated at $12.6 million.

That was the situation last September when the Diefenbaker government cancelled outright the development of a new weapons control system and a special air-to-air missile which had been planned for the new aircraft, thus reducing the unit cost to $9 million. At the same time, Mr Diefenbaker announced the adoption of the American ground-to-air missile called the Bomarc and of the new American ground control system known as SAGE, which provides semi-automatic guidance for missiles or manned aircraft through computers. He explained that with missiles rapidly becoming the major threat, manned aircraft would be "less effective than previously expected." The press and public first accepted this announcement as meaning the end of the Arrow project. Its whole tone supported this view. But it did not say so conclusively. It left the door open for a reprieve by continuing the Arrow programme until March 31, 1959, as a "measure of insurance" and "in order to avoid the effects upon industry of abrupt termination."

What was Avro to do? If the project was indeed already condemned and merely given a final grace term of six months, then why did Mr Diefenbaker invite the company to see how far it could reduce costs by using the alternative American control system and missile? Such an effort would have been impossible if the project was really condemned. Skilled engineers and technicians would not wait to be fired on March 31st, especially as several American firms were eager to grab at least the best of them. The company made the most careful possible reconnaissance of government intentions and persuaded itself that its Arrow still had a chance. It persuaded its work force that the end was not inevitable and launched a considerable campaign to counteract the public impression that final sentence had been passed. It got powerful support in this from a series of statements by air officers in Canada and the United States. Devoted to their aeroplanes like cavalry to its horses, the airmen all said that the manned fighter remained indispensable and missiles could not replace it. Even Mr Pearkes, the Canadian defence minister, who had declared in the summer that manned interceptors would be needed "as far ahead as we can see," repeated in November that Canada would need them "for some years to come."

Yet on February 20th, without prior communication with the company, Mr Diefenbaker announced in Parliament that all contracts for Arrow aircraft were being cancelled by telegram that morning. He spoke as though his September announcement should have been regarded as giving Avro and all its workers complete and adequate warning. The parliamentary opposition, the trade unions and the management of A.V. Roe (Canada), Ltd., took a different view. The Avro management under its Canadian president, Mr Crawford Gordon, has never blushed unseen, nor has it accepted adversity with a smile. No one was surprised when it reacted violently to the government announcement. It fired all its work force, nearly 14,000 men, within a few hours ; it challenged the government on the facts of the Arrow programme ; and it filled the newspapers with its protests. The labour unions talked about a "march on Ottawa."

This week Mr Crawford Gordon started talks with ministers in Ottawa to see if some alternative programme could be devised with government assistance to keep Avro's fully equipped and modern plants in operation, provide employment for at least part of the work force and help to keep scientists and engineers in Canada. A Detroit manufacturer was doing record business with a special office hastily established in Toronto to select 50 of the newly dismissed engineers, and the only prospect for most of the technical staff seemed to be in the United States.

To any country with an extensive aircraft industry the Avro fuss may seem disproportionate. Development projects on which much money and effort have been spent commonly have to be written off without reaching production. But Roe's aircraft empire in Canada was not just one of a number of highly developed aircraft producers. It had always and wisely stressed that it was a Canadian and not just an exiled British enterprise. Many Canadians had come to regard it as a sort of symbol of a new era in Canadian industrial development. A.V. Roe enterprises confirmed the wishful belief of Canadians that their country should be a leader in the air age. The CF 100, the first Avro-designed and built all-weather fighter, now in service in Canada and Europe, was commonly regarded as a national achievement, and already the Arrow or CF 105, which first flew in March, 1958, had been accepted as an equal triumph. To kill it was for many Canadians to kill a patriotic dream. To kill it in favour of an American missile, to be produced in the United States and supplied free to Canada, was adding flagrant insult to grievous injury.

This reaction, admittedly, is of the heart rather than the head. But the fact remains that the whole future of industrial skills and technology in Canada is involved. A.V. Roe's aircraft enterprise may indeed have become too large and too concentrated for a country of Canada's resources in present conditions. But serious people are asking whether there is any better prospect for any other enterprise based on advanced design and development. Mr Pearkes blandly assured a television audience this week that he continually hears complaints about the shortage of scientists and engineers. But scientists and engineers are in demand only where industry is engaged on projects of advanced technology. Who is going to start Canadian plants on such projects? The Canadian government, as part of its new policy of integrating air defence under the joint NORAD command, has just announced that all "technical equipment" will be covered in the two-thirds of the cost of the present plans which the United States will pay. Canada's one-third will be spent on construction, which is bully for the construction industry but leaves all the more advanced manufacturing industries dependent on subcontracts from the United States. Their only hope is in the Canadian government's negotiations with Washington for "production sharing." These are proceeding with much good will but they face formidable political and practical obstacles.

These are some of the nettles which broke off in Mr Diefenbaker's hand as well as stinging it. There are other broken plants, too, suggesting that the new defence policy is a patchwork of service recommendations slung together with little realisation of the profound implications for Canada's industrial future or for its freedom of economic and political decision. Public disquiet about the extinguisher applied to A.V. Roe's aircraft enterprise may draw attention to the course on which Mr Diefenbaker's "pro-Canadian" government has set this country without realising, and certainly without acknowledging, where it may lead.

Mixed Feelings in Cyprus

FROM OUR CORRESPONDENT IN NICOSIA

THE unbroken spell of the miraculous which has settled on Cyprus affairs since the Zurich meeting has left most seasoned observers wilting and the average Cypriot slightly bewildered. The Greek community has stubbornly refused to celebrate the long-awaited settlement. But it is still remarkable what harmony has apparently sprouted between Greek and Turkish Cypriot leaders who only a few weeks ago would hardly be seen in the same room together. Also remarkable is the divergence between right and left wing Greeks.

The statements of Archbishop Makarios and of Dr Kutchuk after the London conference and their utterances since then could hardly have been more constructive and conciliatory. The mood of their immediate lieutenants has been no less reasonable. The leaders of the communities, doubtless chastened by their diplomatic peregrinations, now patently realise the futility of their former extremist policies. But in this their political understanding is more advanced than that of the mass of their followers ; in the coming weeks they will have to lead and mould popular opinion rather than merely be articulate.

Among the Greek nationalists (and this term embraces almost all Greeks who are not leftwingers) the predominant mood has been one of resignation. As soon as the London conference ended, the Ethnarchy laid down the "party line" that the settlement was in the island's true interests and that all Greeks must realistically accept it. On this basis the local Greek press has gradually begun to work up some positive feelings about the agreement, and by this time next week one suspects, especially with the tremendous emotional fillip which the Archbishop's arrival is bound to cause, that the Greeks may even have convinced themselves that after all a full-blooded victory has been achieved. By then, too, the sense of grievance over the municipalities (in some degree mollified by the provision that the separate Turkish councils are to be experimental for four years), the Turkish vice-president's veto powers, and the presence of Turkish troops on Cypriot soil, may have melted away.

IN contrast the mood of the Left has been one of growing restiveness and unofficial hostility. Mr Zhiartides who, it is understood, accepted the Zurich proposals when in London, gave the final agreement only very guarded public endorsement this week, and, perhaps ominously, laid much greater stress on the tribulations which lie ahead. The left wing press, without going so far as to attack Archbishop Makarios for accepting the settlement, has deplored it as a sell-out to the West. On the immediate question this weekend of the Archbishop's return, the Right and Left together are putting on an ostentatious show of national unity ; but the fissure is there and each side knows it.

For the present, however, the world's spotlight is more on the extreme Right—on Grivas and Eoka. All informed sources in Cyprus believe that Grivas will not go it alone in a new concerted campaign of violence and that he will be removed to Athens. But what is much less certain is whether the "tradition" of violence glorified in Eoka can be easily extirpated—in other words, whether the political gangsters, who have intimidated the Cypriots themselves even more than the British, can be induced to stop their devilry. Only a few days ago, even as the London agreement was being announced, an Eoka youth gang smashed the windows of a Nicosia restaurateur who had committed the "offence" of using English lettering. This is worse than the usual problem of juvenile delinquency ; in Cyprus it is almost a political tradition. Eoka's campaign against the British may fold up, but in an island where politics have always been polarised, the apparatus of terrorism may remain at the disposal of the extreme right wing and make it as fascist as the left wing is communist-dominated. It will be a tremendous feat on Archbishop Makarios's part if (as so many Cypriots naively hope) he can bring this private guerrilla warfare, and indeed the whole preposterous commercial boycott, to an end.

Indeed, economic affairs generally will absorb much of

the Archbishop's energies. The island has been for too long in the grip of inflation, the by-product of the emergency, although there has been a big development programme as well as a big defence expenditure. During the political fever of the past four years economic realities have been cavalierly by-passed. Cyprus could doubtless be economically viable—but only on the basis of a much lower standard of living than it at present enjoys. Commercial circles, who did not disguise their disappointment at not being represented on the Archbishop's list of advisers at the London conference, are fully alive to these points and there is little doubt that many of them wish to stay in the sterling area and retain their links with the Commonwealth. The Turks also share these sentiments. But the opinions of the rest of the island's population on these issues are gloriously confused and the result of a plebiscite now on association with the Commonwealth would be a very open question. Indeed at the present moment this issue is arousing more interest outside the island than inside, though it seems fated to become another topic of intense controversy before the year is out.

Cyprus now faces the quickest transition in the long history of British colonial emancipation. In this situation what matters most is not so much the plan on paper as the spirit of the people who work it. The incipient statesmanship which the leaders of the two communities have shown in the past few weeks deserves to be fostered and encouraged in every way by the parent powers.

Germany's Energy Problem

FROM OUR BONN CORRESPONDENT

SINCE the beginning of the year crude oil has been pumped overland from Wilhelmshaven to the big refineries in the Ruhr, and since the end of last week it has been reaching the new pipeline's southern terminal on the Rhine between Cologne and Bonn, some 240 miles from the North Sea. The general approval with which this achievement would normally have been noted is tempered by misgivings about the briskly expanding oil industry's responsibility for the mounting piles of unsold Ruhr coal. More than 14 million tons of hard coal are lying at the pitheads (total production last year was 133 million tons) and some 21,000 miners are without work.

There being no immediate prospect of an increase in the demand for coal, the government has tried its hand at some first aid. Since February 16th it has been levying a duty of 20 marks a ton on coal coming into the Federal Republic from any country that is not a member of the European coal and steel community; and that evangelical anti-cartelist, the Minister of Economics, Dr Erhard, has found himself having to talk a reluctant oil industry into ceasing to queer coal's pitch by agreeing not to reduce fuel oil prices any further before the end of 1960—indeed to accept a price list that virtually increases the price of fuel oil by 20 per cent. No one disputes that these remedies are superficial and must be followed soon by more constructive therapy. In concert with Germany's partners in the European coal and steel community, and through their own national organisations, west German industrial leaders are giving their minds to the part coal can be expected to play in providing fuel supplies during the next decade or two—a period that seems certain to be one of expanding demand for energy; and in which, for that matter, the Ruhr coal industry has been advised by the High Authority to raise production by 40 million tons a year until 1975.

Threatened by the government with a stiffer duty on imported oil unless they agreed to a fuel cartel, the major oil companies accepted price control as the lesser evil. They are discontented mainly for two reasons. One is that the smaller companies are not party to the deal, and naturally intend to make the most of the opportunity now presented to them (" Like pike in a carp pond," as one excited British Petroleum representative has put it). The other arises out of their conviction that oil's spreading conquest of home fires and factory furnaces cannot be halted, and from their impatience at the prospect of any attempt to delay the ambitious schemes based on this spotting of the winner. The Wilhelmshaven-Cologne oil pipeline is not the only project of its kind. Arrangements have been made to extend the Marseilles-Strasbourg pipeline to feed new refineries at Karlsruhe by 1963. And now that the Italian government has given its blessing to the projected oil pipeline from Genoa to Aigle, in western Switzerland, its extension to southern Germany is no longer merely a pipe dream.

IT is the German Mineral Oil Association's aim approximately to double west German refining capacity over a period of five years to 30 million tons. (Last year's throughput was 15.11 million tons.) The case for expansion is based largely on the increasing use of fuel oil. It is estimated that fuel oil consumption (200,000 tons in 1950; 7.6 million tons in 1958) will be running at 12.5 million tons a year by the end of 1960. Present trends certainly support such a prognosis. Steel producers such as Mannesmann and Klöckner have invested large sums in oil-fuelled installations. Some firms are going in for power plant that can operate either on oil or coke, according to the advantages of the moment. They include Volkswagen, and several makers of cement, ceramics, and optical and precision instruments. At least sixty municipalities have lately installed oil-burning plant of one kind or another. Baden-Baden, and some others, have contrived to inject oil on layers of coke in conventional vertical chambers. In addition to satisfying the growing demand for fuel, the oil companies are counting on increasing consumption by the motoring world and by petrochemical industries.

Although the output of west Germany's own comparatively new oilfields rose by roughly 12 per cent in 1958 to a total of 4.44 million tons (almost 200,000 tons more than had been estimated) it covered only a third of current requirements. The bulk of the country's mounting needs has to be met by imports. At present some 80 per cent of imported oil is coming from the Middle East and 20 per cent from the Caribbean region. Practically all of it is being refined in the Ruhr and Hamburg areas.

It was originally advocated that the north-west pipeline should run from Rotterdam, not only on the strength of existing transhipment arrangements and the prospect of readier financing, but also because the choice of Rotterdam instead of Wilhelmshaven would have shortened the sea route by 200 miles and the land route by 20 miles. But political considerations ultimately prevailed. There was a strong desire to put the bombed and dismantled former naval port of Wilhelmshaven on the map again. It had been declared a " distressed area," and its 100,000 inhabitants

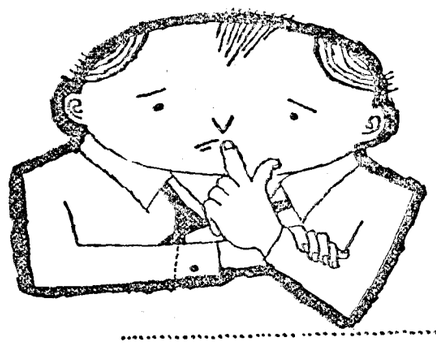
IN LIFE INTERNATIONAL

NEWS IS ONLY THE BEGINNING!



Influential people read LIFE INTERNATIONAL for its searching examinations of world-wide topics

News of people, places, events is the end product for many media. But LIFE INTERNATIONAL makes news its point of departure—for the most comprehensive analyses possible.

LIFE INTERNATIONAL draws together all the threads. That is why it is read by people who need to be informed: leading people in business, government and the professions in 120 countries around the world; people who appreciate the unique standard of LIFE's photo-journalism, the stimulating diversity of its full-length features and special issues, the authority of its expert opinions.

Moreover, they are people who not only buy for themselves, but who also influence the buying habits of others. In LIFE INTERNATIONAL's advertising pages they see first-class industrial products and consumer goods—prominently displayed in large pages, beautifully reproduced on quality paper.

claimed the distinction of living in west Germany's poorest town.

A company, the Nord-West Ölleitung GmbH, has been formed to run the pipeline and harbour. Some £25 million have been put into the project, principally by Esso (47.2 per cent) and British Petroleum (26.3 per cent). The laying of the pipeline, some 40 miles of which run underground, was carried out with the energy and boldness that mark so much industrial activity in Germany today. The whole work was completed in ten months. From time to time there were advances of over a mile a day. Naturally there were many obstacles that demanded special handling, not least the objections of landowners to the line crossing their property. There were 360 encounters with roads, railways, canals, streams, cables, and the like. Two Ruhr firms *Mannesmann* and *Phœnix-Rheinrohr*, supplied the 65,000 tons of 28-inch diameter pipe required for the undertaking.

Mr Gomulka Calls a Congress

On March 10th the Polish United Workers' Party (PZPR) will begin its third congress; it will be the first to be dominated by Mr Gomulka. When the first congress was staged, in December, 1948, to mark the "merger" between socialists and communists, Mr Gomulka was already in disgrace, though not yet in jail. When the next one took place in 1954, Stalin had been dead a year but Mr Gomulka had not yet returned to power. It was only two years later, in October, 1956, that his colleagues finally agreed that Mr Gomulka's return was the only way to ride the gathering storm. The changeover was full of drama. Mr Khrushchev, at the head of a powerful delegation, tried at the last minute to sabotage Mr Gomulka's return. In the end the Russians yielded and a clash was avoided. It was expected that the triumphant Mr Gomulka would call a party congress at once in order to confirm and consolidate his position. But the meeting kept on being postponed for two more years.

The delay makes it possible to assess the "Polish experiment" more realistically. In that heady autumn of 1956 everything seemed possible. Moscow had bowed to Warsaw; the Catholic, Cardinal Wyszynski, had backed the communist, Mr Gomulka; the communist, in turn, presided over the dismantling of what little collective farming there was. The communist press suddenly spoke with such freedom that it seemed as if all taboos had been lifted. This was "spring in October" and where would it all end?

The crushing of the Hungarian insurrection was the first reminder that the possibilities of change were strictly limited. Mr Gomulka was forced gradually to arrest the movement that was shaking his country and then to call for a partial retreat, thus disappointing some of his warmest supporters. Poland's angry young men, whose revulsion against Stalinism played its part in Mr Gomulka's comeback, were told to keep quiet. The censorship was strengthened and the powers of workers' councils curbed. Finally, Mr Gomulka was drawn, though with a relatively faint voice, into the "anti-revisionist" chorus.

The blame for the evolution of the last two years cannot all be laid on the categorical imperatives of geography. Part of the explanation is to be found inside Poland. Mr Gomulka, himself a victim of Stalinism, was certainly genuine in his desire not to repeat its crimes. But he has never ceased to be a communist. He was not deceived by the massive vote through which his countrymen endorsed his return to power in the general elections held in January, 1957. He knows that the country, with its mass of smallholders and its powerful Church, is predominantly anti-communist, that it accepts him as a lesser evil. His real complaint against the "revisionists" was that their activity would undermine the communist dictatorship and deprive him of his instrument of power.

Naturally, as long as Europe is divided into blocks, Poland must belong to the communist one. Mr Gomulka would have made such a choice on ideological grounds alone, but no choice was offered him. Soviet economic aid and Moscow's backing for Poland's disputed western frontier tighten still further the inevitable alliance. The Poles do, however, hope that relaxation between the blocks will give them more scope for independent action and they see the Rapacki plan as their own contribution to disengagement.

The compromise between Mr Gomulka and Mr Khrushchev is often misunderstood because of the similarity between the current "anti-revisionist" drive, directed against Belgrade, and the anti-Titoist campaign of ten years ago, which cost the Polish leader his freedom. But today, in exchange for a declaration of allegiance to the communist block, the rulers of eastern and central Europe are granted wider scope inside their own countries. Russo-Polish trade is now carried on at fair prices and Poland's economic reforms of the last two years were partly made possible by Soviet economic credits—even though Poland is certainly not faithfully copying the Soviet model. Relations between the party and the Catholic clergy have deteriorated; the Church, however, keeps a more privileged position than anywhere else in the communist world. The fostering of private farming contrasts with the collectivisation drive elsewhere in the block. The principle of priority for heavy industry is not binding. Adamant "revisionists," though they cannot express their views in print, have found refuge in academic jobs and other learned institutions. And for all the censorship, the Polish press still has a much freer ring than have the papers of other communist countries.

Ever since his return to power Mr Gomulka had been opposed by the Stalinists of what is called the Natolin group, who were at first directly prompted by the Soviet embassy in Warsaw. These men considered Mr Gomulka as too soft, as a potential grave-digger of communism. There are indications that their allies in Moscow were led by Mr Molotov and Mr Kaganovich, so that the defeat of the "anti-party group" was also a blow to the Natolin faction. If Mr Gomulka, who stayed on in Moscow after the end of the Soviet party congress earlier this month, was reassured on this score by Mr Khrushchev, he can turn his attention with greater confidence to economic problems.

On his return to power, the Polish leader granted important wage increases all round. This could be achieved without dangerous inflation only by a reduction in investment and through foreign credits (chiefly Soviet, but American as well). Such a solution was by its very nature provisional. The economic plan up to 1965, which is to be endorsed by the congress, provides for a fairly rapid but not over-ambitious expansion of the whole economy. Poland still has to digest its earlier transformation. In this once predominantly rural country, the population is now almost evenly divided between town and country, while the larger

part of the labour force is already employed outside agriculture. To absorb and integrate the uprooted peasants is a heavy task and no new major population shifts are envisaged for the moment. The other consequence of the industrial revolution is Poland's increased dependence on imported raw materials which must be paid for through higher exports, chiefly of capital goods. The development of trade within the Soviet block will provide part of the answer, but the Poles are also looking towards the underdeveloped countries as potential markets for their engineering products. Taking into account both the available resources and the fast rising birth rate, the plan provides for a 25 per cent increase in consumption per head by 1965.

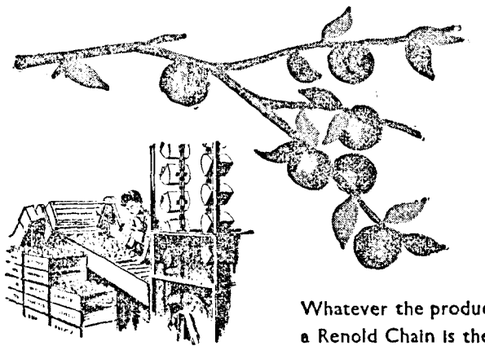
The rest of the congress will be taken up with political questions. A special commission will report on last year's purge which reduced the membership of the party by just over 200,000 to just over a million. The final item on the agenda is the election of the central committee which, in turn, should choose the party presidium. The representation of various trends in the new leadership will be worth watching, though the victory of Mr Gomulka's supporters is a certainty. His worries are of a different nature. Two years ago his hold on power was precarious, but he was backed by popular enthusiasm. Now, he has consolidated his position, but much of the enthusiasm has vanished. Speakers at the regional meetings that are being held in preparation for the congress all complain about the apathy of the members. The chief interest of Mr Gomulka's report will lie in whether he can suggest any other cures, apart from a steady rise in living standards, for this situation.

King Saud's Domestic Economies

FROM OUR MIDDLE EAST CORRESPONDENT

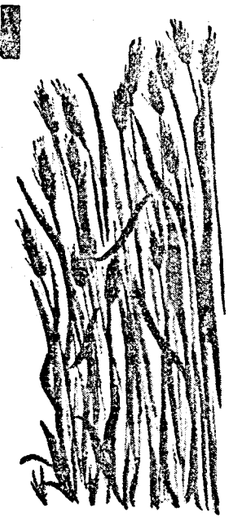
THE effort at economic retrenchment launched by the Saudi Arabian government early last year is beginning to show positive results. Royal expenditure has been reduced, and luxury imports discouraged. Substantial payments have been made by the government to the Saudi Arabian currency board, and much of the internal debt has been liquidated. The publication of the budget for the forthcoming year—a much more realistic document than we have come to expect from Riyadh—suggests that the effort to bring national income and expenditure into a more healthy balance will be continued.

Problems of economic recovery have absorbed nearly all the energies of the Saudi government. Whereas King Saud spent much of 1957 in well publicised state visits, and in offering mediation to all and sundry whenever a dispute broke out within reach, the past twelve months have seen his almost complete withdrawal from international politics. A few statements of general principle on orthodox nationalist lines have been issued in the name of the government; and there was a hint that the Saudi government is preparing once more to raise the question of Buraimi at the United Nations. Otherwise, King Saud's overwhelming preoccupation has been to cultivate his own garden.



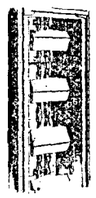
In the circumstances, it was a wise—almost unavoidable—decision. Involvement in Arab politics brought the Saudis little but grief, and bred, with the active encouragement of the West, a false idea of the country's standing. Meanwhile, the value of the riyal was falling steadily. In 1953, when King Saud came to the throne, it was rated a hard currency, standing at 3.75 to the dollar. By 1957, despite a huge increase in oil revenues, it had slid to 6.50, and would certainly have fallen further, as the government itself has admitted, if drastic steps had not been taken.

The first measures were announced in May, 1958; they were designed not merely to put an end to the series of budget deficits, but to create a surplus, estimated at 115 million riyals, to be repaid to the Saudi Arabian currency board. (The board had been raided so often that by August, 1957, its currency cover had sunk to 14 per cent.) In fact, the result exceeded the government's expectations. During the six months ending on December 31st, budgetary economies had enabled the government to repay nearly 200 million riyals. Combined with the board's own operations, the position had improved so far that the currency cover had risen to 51 per cent, and a substantial proportion of the board's indebtedness to local banks had been wiped out. The most obvious pointer to the success of these operations has been the steady rise in the value of the riyal. By the end of last year, it had climbed back to 5¼.



THE main effort in the field of economy has been made in respect of the civil list (upkeep of the royal family), in defence and in a more rigorous control of imports. In the past, the expenditure of the royal family has been shrouded in mystery. The appropriation for the civil list in last year's budget was 94 million riyals, out of a total expenditure of 1,375 million. This figure was wildly unrealistic, as the government has since admitted. In the official statement accompanying this year's estimate, it is claimed that the figure of 252 million—to be spent on the family, the palace secretariat and the royal bodyguard—is "very much less" than actual expenditure in the preceding year. No less remarkable is the fall in defence estimates, which include provision for the tribal levies known as *Mujahidin*. They have dropped about 50 per cent, from 564 million to 284 million. These economies have allowed the authorities to revise in an upward sense the appropriations for education and health, and to maintain virtually unchanged those for agriculture and communications, while keeping the total national budget, now standing balanced at 1,400 million, *below the level of last year. All this in addition to the sums* disbursed to the currency board and to the local banks.

In the field of general economic activity, the government is doing its best to discourage luxury imports. It is actively sponsoring the import only of foodstuffs, medicines, clothing and productive machinery, all of which are classed as essentials. The import of motor-cars was wholly forbidden for the first six months of the new regime, and it is going to be discouraged by various means for at least another six. The unspoken object of such regulation of trade is to encourage the riyal to rise still further. Few informed observers on the spot expect it to reach its former parity with the dollar; but it seems that a rate of 4½, or thereabouts, should be well within reach.



Despite the sad experience of the past—or perhaps, rather, because of the sharp lesson it taught—there is no reason to take a gloomy view of Saudi Arabia's financial future. Oil revenues on a massive and increasing scale are assured; the problem is simply to cut the coat according to the ample cloth that they provide. Whether mere economic recovery will satisfy the angry young Saudi is another question.

from APPLES to GRAIN

Whatever the product to be moved-up, down, or around—a Renold Chain is there to do the job.

With their all-steel construction, accuracy of manufacture, and high ratio of strength to weight, they are the hallmark of a first class conveyor installation. These features mean least power consumption for the load moved, and the avoidance of excessive weight in conveyor structures.

Visiting "Down Under"

for business or pleasure?

You have thousands of informative friends there already when you use . . .

. . . the Bank of New South Wales. This, the largest commercial bank 'down under', has well over 1,000 branches all over Australia and New Zealand at all of which the staff takes a pride in providing the most friendly and courteous banking and other services. Whatever your need—banking services, travel bookings, or commercial information—you will find the managers and other senior officials of the Bank willing and able to assist.

Bank of New South Wales

MAIN LONDON OFFICE: 29 Threadneedle Street, E.C.2.
HEAD OFFICE: Sydney, Australia.
(Incorporated in Australia with limited liability)

The Bank publishes many informative leaflets and booklets, among which is "Establishing a Business in Australia", free on request. "Australia for the Visitor" is 1/-, including postage.

Specialist Departments at Main Offices include:—
BUSINESS DEVELOPMENT · ECONOMIC DEPARTMENT
TRAVEL DEPARTMENT · POSTE RESTANTE

ALL OVER AUSTRALIA AND NEW ZEALAND

7 Avenue Edouard VII, Biarritz

THE BUSINESS WORLD

Common Market in Capital?

MONEY is moving more freely over Europe's frontiers. In relation to the amounts borrowed and lent domestically, the international flow is still small. Compared with the freedom of merchandise trade and of payment for it, Europe's markets in money and capital remain protected and to a substantial degree isolated by direct regulation and by differing administrative and fiscal practice. But barriers have been reduced in recent weeks; and Continental bankers and industrial finance officers tell the visitor that over the years the links will grow much closer.

A concurrence of influences is responsible for this widening of financial horizons. A dominant one is the common market, which besides its direct provisions for eventual free movement of capital gives an obvious stimulus to an increased flow between countries that are integrating their economies—and making "arrangements" between their industries. At the same time, hesitations about moving money abroad have been met by the grant of external convertibility in Europe, and by devaluation and financial reform in France; Continental bankers have long insisted that currency freedom is an essential concomitant of freedom of trade. The dual freeing, moreover, coincides with favourable developments in the capital markets of Europe's two big creditor countries, Germany and Switzerland. The Germans are just beginning to lend their huge current surplus in long term loans abroad, and the Swiss have recently resumed foreign lending (after suspending it to placate grave domestic unrest as rates on home mortgages topped 4 per cent). Since Swiss bankers now have doubts about formerly esteemed outlets overseas, including southern Africa and the United States, more of their money is available for Europe.

The broadening of capital markets is to some extent a world phenomenon, reflecting both some easing in the intensity of demand for capital in the industrialised countries and the better climate for foreign investment in a number of others. The World Bank has played a leading role, both in the scale of its own lending and in blazing the trail for private money; and the New York market has become much more receptive of foreign issues. But a large part of any foreign issue in New York, often an overwhelming part, is subscribed from Europe. Swiss bankers in particular may be heard to grumble that, if the dollar grows any more suspect, they will put up their own money in their own country.

"WE'RE all in the same boat" is not a *cliché* in Switzerland, and it is telling to hear it applied to Europe's economy at the present stage. Continental bankers generally share the same feeling—and the same concern that none of their number should seriously rock the boat. The great question mark hangs over France. The drastic new year surgery of its finances, more than any other single factor, has transformed the European economic outlook. To many Frenchmen the price seems a high one; and the great debate raging in Paris about the wisdom of checking industrial expansion for the sake of financial *assainissement* strikes a familiar chord. But few question the boldness of the French government's bid. It is a bid for investors—addressed to the gold-hoarding French peasant and middle classes, as well as to the foreign investor. The deflationary fiscal policy and highly competitive exchange rate is being accompanied by structural and fiscal reforms to broaden investment on the Bourse.

First results have been promising. The Bank of France is taking in foreign exchange every day, and the recovery is now much bigger than the pre-devaluation loss in December. But the authorities have hardly yet begun to tap the vast reserves of privately owned gold and foreign assets—estimated by the Rueff committee at the staggering figure of $10 billion in all, but more conservatively at $3-4 billion of gold and perhaps $2½ billion of foreign deposits and foreign securities. This will not return in a hurry; only when confidence is rock fast will Frenchmen disgorge their gold. But the authorities may not be over-optimistic if they hope that the various inflows on capital account will match the forthcoming repayments on recent foreign credits.

With crossed fingers, Europe's bankers and businessmen are hoping that France may now find financial stability. Even a tentative assumption that this may happen is a major change in the European financial scene, after years in which France has been automatically ruled out as an outlet for financial investment. Accordingly, France occupies a prominent place in each of the four main aspects in the widening of Europe's capital and money markets.

FIRST among these aspects is the increased scope for foreign investment on the Bourses. The French authorities are keen to get their stocks quoted on other Continental exchanges, and they themselves are providing reciprocal facilities: last month the first German share was quoted in Paris (and it has proved popular). In Frankfurt, too, rapid strides have been made in this direction, and important Dutch and Italian shares have been introduced there since the new year. Similar moves are in preparation in other countries of the Six.

France has removed restrictions on the disposition of capital funds owned by non-residents. Will Swiss and German investors—who alone in Europe enjoy full freedom to acquire assets abroad—respond? Years of inflation have carried French shares to high prices, for investors hedging against further inflation have been prepared to accept yields as low as 1 or 2 per cent. It can be argued even so that in terms of break-up value French shares are basically cheap ; and that as money tightens in France firms will be forced to raise more from the capital market and therefore to increase their dividends. Some Continental investors feel that French conservatism in dividends is more deeply entrenched ; they prefer German shares with their high yields and the D-mark basis. Others, including Swiss investors, have recently shown some nervousness about German shares, whose steep rise was checked by the cloud over Berlin. But if Europe's stock markets were fully free and integrated (which they are not) the first result might easily be a net flow from the weak to the strong. When French investors recently unloaded some of their large holdings of Congo securities, they took the proceeds to Switzerland.

A second, more predictable, channel of foreign investment is in new issues. The Swiss market is now in full use by foreign borrowers. Since the ban was lifted last summer, issues have been made by American, German, French, Austrian and South African concerns and by the World Bank ; the next issue is by British Petroleum, for 60 million Swiss francs. This will bring the total in six months to over 600 million francs, or some £50 million—well above the total in the best full calendar year since the war. Nor are there any signs yet that the market has overreached itself.

The Swiss National Bank is anxious to encourage capital exports to take excess money out of Switzerland. But it has been forced by political pressure to agree to a ban, while the negotiations for a free trade area remain in their present *impasse*, on any issue to a concern in one of the six countries of the common market. Since Swiss investors are now less enamoured of the prospect in Africa, they will presumably look favourably on approaches from European countries outside the Six. The BP precedent suggests that the British authorities would not hold back similar issues by other major British companies of international range and capacity to carry the exchange risk.

Germany, too, is opening its market to foreign borrowers. But despite the steep decline in interest rates there since 1957, the cost is still high. Austria has twice paid around 6 per cent for its money, and the German authorities will count it a great achievement if they can soon place a World Bank issue at 5 per cent—a full one per cent above the Bank's recent Zurich issue. Among other European countries, Holland has recently been concentrating on repatriating its own shares from American and other foreign portfolios. Italy, a net importer of capital, has recently been running a big current surplus and is prepared to grant some long term foreign credits for specific purposes: an Italian group has offered to finance the construction of an *Autobahn* from Vienna to the Italian frontier.

THE third main channel of cross investment in Europe is through investment trusts. All countries are anxious to broaden the investment habit, which is widely spread only in Switzerland. Investment trusts on the Continent, which often take the form of open ended mutual funds or unit trusts, are in many cases run by the big banks. A number of new trusts have been set up in Germany in the past year or two; they have received an impetus in Holland, and the French authorities are now believed to be preparing the way. At the same time, the international accent has suddenly become prominent. In Switzerland, where the big banking groups have for some time sponsored funds holding North American and South African securities, new trusts have been formed to hold shares of other European countries—including British securities, though bankers stress the handicap imposed by the high taxation on British dividends. In Germany, *Europa I* has been sponsored by the private bankers Hardy & Co. to invest exclusively in securities of the Six, and the Dresdner Bank has launched a new trust to include securities of other common market countries. Most recently, a group of European banks, mainly *banques d'affaires*, is launching *Eurunion* simultaneously in the markets of the Six. This is an early fruit of the co-operation that has recently been arranged between various banking groups in the Six countries. There is a feeling that Britain is being left out in the cold.

Finally—and here Britain figures more prominently—short-term money is flowing much more freely between the major banking centres. Convertibility gave an important fillip ; and the European Monetary Agreement provides a little publicised guarantee against devaluation of balances held by central banks. Today Swiss and German bankers are taking advantage of the higher short term rates ruling in London, and in Paris. French francs are virtually always covered forward against the exchange risk ; some bankers (but by no means all) now leave sterling funds uncovered. The headache of Swiss and German bankers is too few outlets for too much money ; yet it is difficult to attract short-term financing business to these centres, largely because world traders are accustomed to invoicing their goods in sterling, and would be shouldering an exchange risk if they took finance outside London. In practice Swiss and German money plays its role indirectly, working through the London money market. The upshot of these movements, and of the capital flows, is that in January neither the Bundesbank nor the Swiss National Bank gained reserves. Thus private movements of funds are making their own contribution towards a better distribution of world liquidity. They could do more ; but here again everything rests on confidence. How does the world look from the banking parlours of Zurich ? That requires an article to itself.

New Prices for Oil

With the United States partly insulated from the world oil market, the balance of international prices is shifting

SINCE Gulf and Shell came into line this week, all the major petroleum companies posting prices in the Persian Gulf have now followed British Petroleum in cutting crude prices there by 18 cents a barrel right across the board, as against the recent cuts of 15 cents a barrel for similar crudes in Venezuela and the United States. Middle East crudes, after supplies were fully restored following the Suez interruption, never rose as much above pre-Suez levels as did crude prices in the Western hemisphere ; these latest cuts, indeed, bring posted prices for Middle East crudes (for example, $1.67 a barrel for Kuwait crude of 31.0-31.9 API gravity) slightly below those ruling before Suez, whereas comparable crudes in the United States and Venezuela are still well above their prices then.

In one sense, these Middle East cuts do no more than take formal note of the substantial discounts below the previous posted prices at which oil sales have for some time been taking place to independent customers in Europe and the Far East. But they happen also to be the first formal changes in Middle East prices since the United States oil industry, in the autumn of 1957, accepted " voluntary " restrictions upon the volume of oil imports—restrictions which are expected to be made mandatory by the US government, possibly with a further cut in volume, during the next few days.

Those restrictions removed an important influence, for the time being at least, from the traditional structure of world oil prices. This had been the readiness of the United States to mop up all marginal supplies of crude oil on offer at its own market prices. In principle, this would tend to put a floor under Caribbean and Middle East crude prices: so long as producers in these areas could dispose of their next barrel of crude at prices which, allowing for freight and insurance, permitted them to deliver into the United States market at competitive prices, they had no need to take less from any other bidder. In practice, many other factors as well as these marginal sales have also influenced posted prices, as the importance of Eastern hemisphere output and markets in the world pattern increased ; moreover, at any one time a good deal of business is usually being done in oil at discounts below posted prices. Broadly, however, it is possible to rationalise the trends of crude prices in the main producing centres since the war in accordance with this " watershed " principle of pricing —though it depends upon how one values the factor of freight in this equation. Output in the Middle East needed expansion to take full advantage of low production costs ; as producers there were able to extend their competition westward into the United States, accepting a growing disadvantage in transport costs, fob prices of crude in the Middle East became cheaper relatively to prices in the United States and the Caribbean. One may even strain the principle to cover the wider differential set in the prices posted after Suez, on the assumption that Middle East crudes were competing further and further inland from the East Coast of the United States—though the people who actually set the prices would protest that this takes marginal mathematics much too far.

But once the United States ceased to be a ready buyer for marginal supplies of crude from abroad, this logical link between its own market price and world prices was severed. Venezuelan and Middle East supplies have continued to compete, so far freely, for shares of the restricted American imports, but the total volume imported is being determined politically, not by prices in the market. In their new form, these restrictions, indeed, might reduce the total volume of imports ; more important, they may discriminate in favour of Canadian and perhaps Venezuelan suppliers.

This does not mean that the volume of oil imports into the United States will necessarily be stabilised for long. Demand will go on rising there as the economy expands, and no doubt there will be limits to the American consumer's readiness to pay more than he need for his oil in order to stimulate increasingly costly exploration for and secondary recovery of American oil. Recently revised estimates of demand for oil in the United States over the next ten years differ sharply

according to the expert one chooses, but both sides postulate increases in the volume of imports.

But while imports continue to be set by regulation, and not in response to prices, the United States market will be insulated to a considerable extent from the international oil prices upon which until 1957 it had so significant an influence. To a far greater degree than before, competition between Middle East and Venezuelan crudes elsewhere in the world will presumably determine the level of world prices. This shift of emphasis has taken place at a time when world demand for oil is not rising fast enough to absorb all the production for which producers in the Middle East and Venezuela have planned in their expansion programmes; when a number of substantial independents are coming into production in Venezuela and others hope to soon in the Middle East but the American market these producers had in mind is closed to them; and when there is pressure of various kinds from host governments upon concessionaires for larger total revenues.

In these circumstances, the pressure on prices is downward. There is some speculation in the oil business already about whether some Venezuelan prices may be cut further. This will perhaps be affected by the degree of preference, if any, granted to Venezuelan oil in the new American import restrictions. Other factors are differences in quality—certain Venezuelan crudes, in particular, offer a much larger yield of fuel oil than those from the Middle East, though the prices of these heaviest crudes tend to move independently—and the significance of the Caribbean in the international trade in refined products. But sharper competition outside the insulated American market will mean continued pressure on producers' margins—which may be harder to bear in Venezuela than in the Middle East.

There have already been sales of refined products at fairly large discounts in certain western European markets (though in Germany the cartel arrangements have now outlawed this); demand has not been as buoyant as before, and shipments of products have been on offer cheaply from independents in Venezuela and also from Russia, which is now putting some 9-10 million tons of oil a year on to the world market, mainly in the form of products. Refining margins in Europe had therefore been squeezed; the cuts in crude prices were no doubt intended to restore the balance. Integrated companies invoice their crude to their refineries at posted prices, so that for them the cuts will widen refining margins that have recently been under pressure. Taxes on refineries in consuming countries are related to these margins, so that their Governments are reluctant to see posted prices of crude remain long above the price at which business can effectively be done.

The crude cuts, in turn, must reduce operating margins for producers, and their rate of profit per ton of oil. Profit-sharing arrangements with their host governments are in most cases based upon posted prices of crude, rather than on prices actually realised. For the companies, this is an obvious incentive to realism in pricing. For the host governments the change will be judged primarily by its results on total revenues: in the current state of the world market these must mainly depend on a continued expansion of sales of Middle East oil. Last year production in the Middle East rose by a record 37 million tons, and its share of the free world's output to 27 per cent. Admittedly, host governments are taking an increasing interest in the results of transport, refining, and marketing of the oil produced in their countries; still, it is these basic statistics that count.

BUSINESS NOTES

WALL STREET

Over 600

Buying of British industrial equities has been sufficiently strong to keep prices firm and to edge *The Economist* indicator up from 252.4 to 253.5. Some of the buying both of industrial issues and Kaffir shares has been on American account. But though a few American investors have been attracted by the high dividend and earnings yields offered by British securities, the vast majority of them are still putting their trust in their own domestic equities, despite the thinness of their yields and despite the unemployment figures, the stickiness of automobile sales and the reduction in oil prices. Their buying has now carried the Dow Jones industrial average through the psychological barrier of 600; on Tuesday the average touched a new peak of 602.91. The next day the market boiled over a little, bringing the average back to 601.18 but the confidence of investors remains high and may remain so as long as credit is readily available.

The higher that prices rise on Wall Street, the greater must be the chance that a sizeable correction may follow. The fear in the minds of some dealers is that the market could take off in a flight from reality. Recently, there has been a marked increase in speculative activity, with the low priced issues moving up much the faster and dealers in odd lots finding difficulty in obtaining the stock to match buying orders. On the belief that the prospect is for a further rise in prices, punctuated by intermittent corrective falls, some analysts are arguing that a drop of between 5 and 10 per cent in prices would be salutary.

MONEY MARKET

Turn Round in Bill Rate

As each Thursday goes by with Bank rate unchanged at 4 per cent the possibility increases that it might not come down after all. Unless the Bank moves before mid-March it can hardly do so before Easter and the budget; and by late April a reduction may be ruled out by a more buoyant mood in the economy, to say nothing of a possible election. Such reasoning undoubtedly lay behind the *volte face* in the tactics of the discount market at the Treasury bill tender last week, which caused a momentary weakening of gilt-edged. The discount houses cut their syndicated bid by 9d. to £99 4s. 3d., equivalent to an increase in their discount rate of 3s. per cent per annum. As was to be expected, the market suffered a further drop in its allotment; only 27 per cent of applications at the common price were successful. But the outsiders were left with bills for which they had paid too much—the average rate of discount on the whole tender was £3 1s. 10d., compared with £3 3s. at the common price—and the discount houses secured a useful turn on the bills they did get. Outside competition has long been nibbling at both the quota of bills obtained by the market and the margin of bill rate over the cost of its borrowed money. This encroachment is almost inevitable when falling bill rates offer all and sundry the chance of capital profits. It can be checked, and the market can afford to teach the outsiders a lesson, only when the continuation of the fall in rates looks less certain.

COLONIAL LOANS

Rates and Merits

A bill published at the end of last week makes provision for the new Exchequer loans to colonies agreed at the Montreal conference. These loans are to be quite separate from the machinery of the Colonial Development and Welfare Acts, though the bill also provides an additional authorisation of £95 million under those arrangements in the next five years. Such money is made available for specific purposes, nearly always in the form of a grant. Exchequer loans, which may be made up to £100 million in the next five years with a ceiling of £25 million in any one year, are for general purposes; they will be granted only when the British authorities are satisfied that the colony could not raise the money on the market. These facilities are similar to those available to independent countries of the Commonwealth under Section III of the Export Guarantees Act, and the rate of interest is the same. This is ¼ per cent above the rate at which the Exchequer lends to public corporations, which reflects the notional rate at which the Exchequer itself could borrow for a similar term on the market. The loans to the colonies will not be tied, as loans through ECGD must be, to the purchase of United Kingdom products.

FINANCE OF COLONIAL DEVELOPMENT
(£mn.)

Sources of Finance, 1946–57		London Loans since 1952	
Local resources	600	1952	30·9 (postwar peak)
CD & W Acts	137	1953	23·5
London market	187	1954	16·1
World Bank	13½	1955	9·7
		1956	11·3
		1957	15·5
Total	937½	1958	5·0

Colonial borrowers will be required to repay by equal annual instalments of interest and principal, so that the annual service charge will be higher than on a market loan paid off or renewed on maturity. But for colonies, as for independent Commonwealth territories, the anomaly remains that the borrowers whose credit does not at present attract the market get their money more cheaply than the creditworthy. The political concession on the interest rate is clear. But few people doubt that Exchequer facilities had to be given if the colonies were to get their money. The amount forthcoming from the London market has been dropping in recent years; and while fixed interest securities are now more in favour, investors tend to be disturbed rather than encouraged by the approach of self-government.

HAWKER SIDDELEY

Empty Quiver

The Hawker Siddeley group had plenty of warning during the past year that production of the group's Canadian-built Arrow fighter might be severely pruned; it had not expected outright cancellation. The telegram announcing that the Canadian government would not be responsible for work done on Arrow production lines after last Friday's shift went home faced the company with two idle, silent Canadian factories full of partially built aircraft at a time when its hands were full with preparations at home for the debenture issue expected now in a week or so. The company sent home the whole of its 14,000 labour force. It had no other work for them to do, and no prospect of any.

The Arrow can claim to be the biggest, fastest fighter in the world, touching nearly three times the speed of sound even with an engine smaller than the one that it was expected to use when it came into service next year. Designed for long-range Arctic defence, it reached a peak of performance for manned aircraft, rather in the way that the last of the express mail coaches did early in the nineteenth century—only, like them, to fall victim to a cruder, noisier form of transport. The Canadian government is replacing the cancelled Arrows with guided missiles. It looks very much as if it has decided at the same time that Canada cannot afford a large-scale venture into aircraft manufacture.

The Arrow was first ordered, as most military aircraft are ordered today, in small, experimental quantities: the first orders were for six aircraft, and later this total was increased to 37. A normal production order for 100 aircraft was eventually placed. Hawker Siddeley had assumed throughout that only the latter production order was in danger of cancellation; and that the government fully intended to take delivery of the "experimental" batch, of which six are flying, eleven are about to fly and the remainder are spread through the shops in various stages of completion that represent about twelve months' work for the factory. This work would have given Avro Canada a breathing space to find other orders. Its unexpected cancellation has brought both factories to a standstill.

By the time it has paid Hawker Siddeley compensation for cancelling these orders, and met the heavy expenses connected with it, the Canadian government may reckon, as the British Government has often discovered, that it would have been cheaper to take delivery of the aircraft than to cancel them half-way down the production line. But the fact that it may end with a large balance of cash in hand does not make it any easier for the Hawker Siddeley group to find new work at such short notice. Nor is it the best curtain raiser for a new issue at home.

AIR NAVIGATION

Decca Rejected

THE rejection of the British-built Decca system of air navigation by the International Civil Aviation Organisation of the United Nations is disappointing but not unexpected. The Decca system is both too big and too elegant to suit the taste of many airlines who are prepared to leave the difficult and dangerous task of leading aircraft through crowded traffic to radar controllers on the ground, despite radar's limitations as a sound and safe system of controlling air traffic. The Ministry of Transport has worked hard to win support for Decca and it was backed by the pilot's federation. But these efforts did not convince the airlines, even though the meeting in Montreal was concerned with the crowded European-Mediterranean area, where the air routes resemble a map of Clapham Junction. To say that the decision to reject the Decca system and continue with the simpler, less accurate American beacon system of navigation was a purely political one probably misconstrues the motives of the delegates. A truer explanation of their action might lie in the general reluctance of airlines and air traffic control authorities to spend money on navigation aids.

UNILEVER'S PROFITS

Margins Improve

WHEN the directors of the Unilever diarchy announced the 25 per cent scrip issue in November they announced what the 1958 ordinary dividends would be. These dividends, payable on the capital before the scrip issue, are now formally declared: 4s. 2.4d. for Limited (against 3s. 6d.) and 18½ per cent (against 15½ per cent) for NV. The major interest therefore in the preliminary statement is how profit margins fared in the last six months of 1958. By this text, the results make a distinctly satisfactory showing, for the margin of gross profits to sales at 5.7 per cent in these months was higher than at any time in the preceding eighteen months. Again, however, it is the profits of NB which have made the most positive contribution to this result.

COMBINED SALES AND PROFITS

£ million

Six months ended	June 30, 1957	Dec. 31, 1957	June 30, 1958	Dec. 31, 1958
Turnover	846·0	874·0	860·0	868·0
Gross profit	43·7	41·6	43·2	49·4
Net profit	19·4	20·9	20·3	27·0
Gross profit turnover per cent	5·2	4·8	5·0	5·7

Taking the year as a whole, the combined gross profits of Limited and NV have risen from £85.3 million to £92.6 million and net income from £40.3 million to £47.3 million. Within these totals, the gross profits of NV, which largely serves Continental markets, have advanced from £43·5 million to £50.9 million; but those of Limited, which serves the British market and which is intimately linked with the giant's operations in Africa and the United States, have fallen slightly from £41.8 million to £41.7 million. Sales over the whole year show little change at £1,728 million, against £1,720 million, but these figures include inter-group transactions and the directors specifically say that sales to third parties in the last six months of the year rose by 4½ per cent. Thus Unilever has come through a year of recession unperturbed, unperturbable.

JET FARES

A Token Surcharge

THE outcome of the airlines' negotiations about jet fares will really satisfy no one, least of all the passengers. One group of airlines went to the meeting that opened in Paris two weeks ago determined to have imposed on jet flights a surcharge that would be big enough to discourage passengers from travelling in that type of aircraft. They have obtained a surcharge, but one not large enough to achieve the object they had in mind. The meeting compromised by adding £10 14s. to the cost of a £162 return third class fare on the North Atlantic and £14 6s. to the cost of a £280 return first class ticket. Fares to South America by jet are raised by the same proportion. These increases seem hardly large enough to discourage any significant number of passengers from using the jet services when they halve the time spent hard sledding by third class air travel.

The handful of airlines that went to the meeting determined to oppose a surcharge have for their part conceded an important principle against a more or less negligible increase in fares. It has never been suggested by operators of jet aircraft that it was necessary to charge higher than normal fares to make these aircraft pay. The decision to impose a surcharge was arrived at solely to make jets less attractive to passengers that other operators wanted. Jet operators on long range services, such as Pan American and BOAC, will in future make £10 to £14 pure profit per ticket that they would not otherwise have received. An attempt to impose similar surcharges on jet flights inside Europe, which start this spring, was not approved. It now remains to be seen whether governments, and in particular the US Civil Aeronautics Board, will approve the new fares before they come into force in April. The CAB has frequently made a nuisance of itself by refusing to rubber stamp decisions taken by international airlines at meetings of this kind. But it might be a very good thing for sense in air fares if it chose to be awkward on this particular occasion.

THE WHEAT CONFERENCE

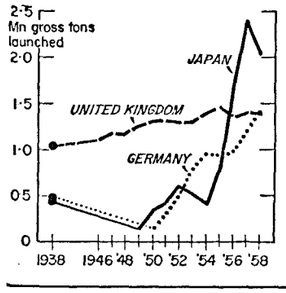
Negotiations Go On

AFTER negotiating for four weeks, the international wheat conference in Geneva has decided to continue for another two weeks. The spirit of the negotiations, held to draw up a new wheat agreement to replace the one that expires on July 31st, is reported to be constructive, though the real test is yet to come. There is general, if as yet vague, agreement that the disposal of surplus wheat on concessional terms should be brought within the scheme, and that domestic agricultural policies should be regularly reviewed by the council. It is also agreed that the minimum and maximum prices (currently $1.50 and $2.00 a bushel for No. 1 Northern Manitoba wheat) do not need to be protected by the cumbersome procedure of obliging importers to buy fixed quantities at the minimum price, and exporters to sell fixed quantities at the maximum price. A number of proposals have been canvassed; the one which

now seems to have most support is that importers should undertake to buy from member exporters a fixed percentage of their total imports. This undertaking would apply at all times, not only when prices are at the minimum. This would certainly be effective, provided that the percentage is high.

The British delegation, which believes that prices should fall to the minimum in times of surplus (as now), is said to have suggested that if an importing country considers that exporters are following a rigid price policy, it should have a qualified right to withdraw from the scheme as a sanction of last resort. The future levels of the minimum and maximum prices have not been fully explored; on this and other matters the delegates are only just getting down to brass tacks.

LABELLING



Hard Words about Soft Drinks

THE Government's Food Standards Committee was under no illusions about the reception that its acid report on soft drinks was likely to receive among manufacturers who are now selling £100 million worth of fruit drinks and fizzy concoctions to the public each year. The committee quotes objections made by the trade to each of its suggestions, which are that the percentage of fruit should be put on each bottle, that manufacturers should not continue the wartime practice of using cheap saccharine sweetening when they can now get sugar or other carbohydrates, and that they should not claim energy-giving properties for glucose drinks that do not possess them. One of the two consumer organisations in this country tartly reported not so long ago that a glucose cordial gave hardly any more energy than a cup of sweet tea, without the benefit of those proteins and vitamins contained in milk.

In each case the committee said that it could not accept the industry's objections. Difficulties in analysing fruit content are not insuperable. The fact that the saccharine industry would lose two-thirds of its market if soft drinks had in future to be made of sugar did not unduly disturb the committee. Nor would it accept that glucose drinks could give any more energy than ordinary sweetened fruit squashes. What is surprising is the fact that there should be any objections at all to recommendations that will strike many people as long overdue. The industry knows well that the quality and value of soft drinks fluctuates over a wide spectrum, which would surely suggest that it is in the interest of some manufacturers at least to put the fruit content of their drinks on their labels. Perhaps the general reluctance to do so may be explained by evidence produced by the committee that most consumers think they are getting much more fruit juice in their drinks than they actually do.

The soft drinks industry appears to have enjoyed a special position since wartime control ended, sheltered from the rigours of general legislation designed to protect the public (such as the Food and Drugs or Merchandise Marks Acts) but still kept subject to a number of special departmental orders remaining over from the days of shortage, rationing and allocations. The committee did not suggest that the public was being deliberately exploited by sections of the industry, but it did suggest that consumers could easily be under illusions about the value they were getting. The trade replied that this hardly mattered so long as the public liked the taste of what they bought. But should they not know what they are buying? Equally, is there any ground for stopping them from buying saccharine if they want to?

WORLD SHIPBUILDING LEADERS

In 1957 Japan passed Britain by building more shipping tonnage than any other nation: in 1958, by a small margin, launchings from the German shipyards exceeded those of British yards.

LOCOMOTIVES

Partly from the Same Pocket

THERE are surprising aspects to the Treasury's decision to lend the North British Locomotive Company £1,750,000, announced last Friday. It is an unusual use to make of the Treasury's powers under the Distribution of Industry Acts, and it is unusual for a company to get into financial difficulties as the result of accepting an end to progress payments. This was apparently agreed by the industry in January, 1958, to ease the financial problems of the British Transport Commission. Policies on public investment have changed rather sharply in the last 18 months: still, it is rather odd for the Treasury to be lending a supplier part of the money which that supplier has to find mainly as a result of Government pressure for economy in the capital expenditure of its nationalised customer. The company, however, is borrowing the money on very favourable terms.

As compared with those of other locomotive manufacturers the circumstances of North British are indeed special and parlous. This is one of the two remaining independent locomotive manufacturers; other builders are mainly members of large industrial groups with wider resources to spread the financial load. North British was in a particularly weak financial position, having come to the production of high-powered diesel locomotives rather later than other companies; it therefore had to convert its works to diesel production more hastily than its rivals. The company last made a profit in 1955, when this technical change-over was beginning. Since then it has lost £403,000 in 1956 and £61,000 in 1957; a further heavy loss is forecast for 1958. No other company is in a comparable situation; the only other independent, Birmingham Railway Carriage and Wagon, obtains the Sulzer diesel engines it uses from Vickers-Armstrongs, who make them under licence at Barrow, and buys its electrical equipment from Crompton Parkinson. North British builds its own MAN diesel engines and hydraulic transmissions; it has thus had a heavier capital investment programme to finance.

North British reckons that without progress payments it now requires £1,400,000 of working capital to finance an order for 50 main-line diesels. Its existing borrowings, all on a temporary and unsecured basis, amount to about £2,700,000; it has now arranged to borrow £1,750,000 from the Treasury at 5 per cent, to obtain overdraft facilities

up to £1,500,000 from the Clydesdale & North of Scotland Bank, and to borrow £500,000 from the General Electric Company which is its main supplier of electrical equipment. Presumably this implies some reduction in present borrowings, as it is proposed to increase directors' borrowing limits only from £3 million to £5 million. The GEC loan is also at 5 per cent; GEC will have the right of conversion into ordinary shares at £1 for every £1 stock. These terms could be altered if North British makes a scrip issue, and GEC could participate in any cash issue. The present issued capital of the company is £750,000 in 5 per cent cumulative preference and £1¼ million in ordinary stock: as the new arrangements may affect the interests of the preference shareholders, it is proposed to make a scrip issue to them of one 5 per cent "A" Cumulative Preference share for every £10 they hold of the existing preference stock.

INLAND WATERWAYS

Development, Redevelopment . . .?

THE problems raised by Britain's 2,000 miles of nationalised canals have generally been those of finding means rather than ends: classification of the canals into profitable, unprofitable, or useless has hardly changed since the 1954 report of a survey board of the Transport Commission, which owns most of the waterways. But ways of dealing with each type of canal were recently studied by the Bowes Committee, which was set up in 1956 and reported last July, and the Government's attitude to its recommendations has now been stated in the form of a White Paper*. Broadly, the committee recommended that the 380-odd miles of big-barge canals which, taken together, now make a profit, should receive the bulk of future capital development; that the 935 miles of narrow-boat canals which carry some commercial traffic but which taken together now make a loss should be reinstated and maintained at their present capacity; and that 770 miles which have no commercial value should be abandoned. The committee was divided on how to accomplish these goals and on how best to administer the canals: half of them favoured enlarging the present Waterways Sub-Commission of the Transport Commission, half wanted to set up a new independent corporation.

The white paper generally accepts the committee's views on the profitable "Class A" canals; but the Government have put off the formation of any waterways corporation for at least two years. Future administrative responsibility will continue to rest with the Transport Commission. As to the unprofitable but still usable canals, the Government has again decided on a two-year "experimental" waiting period; it seems likely that some of them will eventually be retained and developed. During the next two years the Transport Commission will have to maintain these "Class B" canals in their present condition; it is felt that to recondition all of them fully would be unjustifiably expensive. The canals that are already derelict pose the largest problem. As many as possible will be "redeveloped" for "alien" uses—water supply, drainage, angling, farming, or pleasure boating—any old thing, in fact, provided that the costs of continued operations can largely be met by the "alien" user. An Inland Waterways Redevelopment Advisory Committee will be set up to promote and consider schemes for using these derelict canals; in general, such schemes will then be initiated by the Transport Commission. Where a proposed redevelopment scheme will serve many interests that cannot together match the total capital cost, the Government is "prepared in principle to make a small *ad hoc* grant toward bridging the gap." Carefully done, this should cost no more than filling the canals in; but though the administrative machinery for "redevelopment" is vaguely described in the white paper, no mention is made of the way in which canals for which no other purpose can be found on such terms will finally be abandoned.

* Cmnd 676.

BUILDING SOCIETIES

How to Merge

THERE may be no equity in a building society, but in the last analysis its reserves belong to its shareholders and that point becomes significant when one society merges with another. Mergers are a matter of present concern to the building society movement, for since trustee status will not be accorded to societies with less than £500,000 of assets, amalgamations—or, in the legal term, transfers of engagements—are likely to become more common. Merger proposals have to be put to a vote of shareholders and because the Chief Registrar of Friendly Societies has discretionary powers on the voting procedure in practice he keeps a watchful eye on them. The possibility that the terms proposed for an amalgamation might be to the disadvantage of either body of members of the two merging societies is to that extent safeguarded, even though the real responsibility rests with the directors. It is their duty to ensure that the merger is to the mutual benefit of their members.

Within the movement, however, views differ on how this principle is best secured. Writing in the *Building Societies Gazette*, Sir Bruce Wycherly, the managing director of the Abbey National, concedes that a "rescue operation" (as in the case of Scottish Amicable) may be justified but he deplores the idea of "take-over" bids (as occurred with Sheerness and Gillingham) and frowns on the dissipation of reserves that may result from the payment of a bonus to shareholders on the transfer of engagements to another society. On the other hand, Sir Ernest Johnson in his presidential address at the annual general meeting of Leek and Moorlands argues that such expenditures as advertising and the opening of new agencies may weaken reserves just as effectively as the payment of a bonus to secure an amalgamation. Leek and Moorland put in a bid for Sheerness and Gillingham. It was unsuccessful and now Sir Ernest says:

> Our proposition was that the members should come in with us on equal terms and that their surplus reserves over and above those of our own ratio should be distributed to them on the transfer.

These words embody an arithmetical formula for making a bid. They emphasise the paramount fact that in contemplating a merger the directors of a society must not think of their own convenience and benefit but of that of the members. Open, competitive bidding between societies may seem distasteful and the payment of a bonus that seriously weakens the reserve strength of the merged societies has to be avoided. But within those bounds it is the duty of the directors to test the reactions of other societies to the idea of a merger and to close with the offer that is most

In New Zealand he's a national institution
. . . and so are we!

They've got a lot of apples and pears in New Zealand. In one year, 56,007,000 lbs. of apples and 1,382,000 lbs. of pears were exported. So you can see that in New Zealand the Fruit Grower is a national figure of national importance. And it is only natural that when he needs the services of a Bank he should turn to us. For we are national too, with more than 150 branches and agencies in the North and South Islands, and with a fund of banking knowledge and experience that is available not only to those who live and work in New Zealand but to those who travel there as well. If you are thinking of visiting New Zealand, of trading with New Zealand, or if you want to know anything at all about New Zealand—then surely it is logical to contact New Zealand's National Bank—the *National* Bank of New Zealand.

THE NATIONAL BANK
OF NEW ZEALAND LIMITED

and at 58 Victoria Street, London, S.W.1.

advantageous to shareholders. And that must mean thinking about the size of the bonus offered as well as the local interests of the society.

HP ORGANISATION

A Bill After All?

THE Finance Houses Association, the body that represents the biggest of the companies providing hire purchase finance, has revised its articles of association to widen its range beyond the dozen members that at present qualify for membership. The existing minimum of capital and reserves of £500,000 has been scaled down considerably, though as hitherto the association will not be guided solely by size. The lowering of the barrier could raise membership to as much as thirty. There are many medium sized companies below previous FHA size but larger than most of the members of the Industrial Bankers' Association, the body formed by six companies in 1956, which now numbers fourteen, and shows no signs of disintegration. Then there are the hundreds of really local companies.

The Governor of the Bank of England last autumn publicly advocated "a more comprehensive organisation" in the hire purchase field; and the move by the Finance Houses Association has been prompted largely by the Bank's wishes. In time this should produce a more comprehensive organisation of the larger houses; but the Bank may be hoping for too much if it expects any organisation on voluntary lines to be really comprehensive. Even some of the larger and more experienced companies are reluctant to bend their individuality to common agreements, and tend to be suspicious of official contacts which they fear may be only one remove from official control. The smaller companies live in a world in which the language of Whitehall and Threadneedle Street is barely understood. Realists in finance houses themselves are now saying privately that if the authorities want regulation they will have to impose it.

ECONOMIC POLICIES

The Reluctant Recovery

AMONG economists, it seems, 1959 already threatens to become known as the year of reluctant recovery. The impetus to re-expansion of the world economy must come from the major industrial countries, yet none seems keen to provide it. This is implied in the latest annual review* of the Secretariat of OEEC, and it is said explicitly by Mr Christopher Saunders, director of the National Institute of Economic and Social Research, who has less need to tread warily. While governments are agreed on the need to stimulate an adequate rate of economic growth, the OEEC review states, the situation will have to be watched carefully to see if further steps prove necessary. "Countries in a stronger economic position [Germany is not named] have the major responsibility...."

The review suggests that now that reserves are more comfortable European countries need not look so closely over their shoulders at the United States in preparing reflationary measures.

Mr Saunders, writing in the *Westminster Bank Review*,† first stresses Western Europe's remarkable growth as a dynamic force in the world economy:

> What happens there is now at least as important as what happens in the United States for the course of world trade and prices, for the development of the primary producing areas and for the creation of opportunities for Britain's own exports and overseas investment.

Western Europe is now a larger market than the United States for the primary producing countries, taking 37 per cent of their exports in 1957, whereas the United States took 32 per cent and Britain 24 per cent. Industrial production in Western Europe grew much more rapidly between 1950 and 1955 than in the United States and Britain; and from 1955 to 1957, when output in those countries almost marked time, Western Europe continued to forge ahead, providing the major expansionary force in world trade. Imports into Western Europe grew by about eight per cent a year from 1950 to 1957, twice as fast as the primary producing countries' imports. Over the same period the volume of total British exports rose by 15 per cent, and exports to Europe accounted for two-fifths of that increase.

Mr Saunders concludes that the United States is unlikely to take active steps to increase the speed of its recovery, while the French can hardly afford to encourage expansion this year. Germany appears unwilling to take any serious risks, though, as he says, "it may well appear to a British observer that no other country is so well placed to play the Godot for which we are all waiting." So much hangs on how far the British Government, which also faces certain risks, "is prepared to put more steam behind the gradual and uncertain recovery of British industry and, thereby, of the world economy."

* *Policies for Sound Economic Growth.* † *Western Europe in the World Economy.*

ECONOMIC FORECASTING

The Mathematical Approach

MANY people in Britain have recently begun to engage in economic forecasting and several different kinds of techniques are being used, other than that of simply having a hunch about what is going to happen. One way is to take a survey, among a sample of business firms and consumers, of reactions to a battery of questions about prospects and intentions. Another is to build up, from reasoned conjecture, a complete set of national income aggregates, so that at least the various sets of guesses are consistent one with another. A third method relies on a more mechanical process—the econometric model which represents the actual workings of the economy by a system of mathematical equations. It is into this third and more precise field of forecasting that the Oxford Institute of Statistics has now ventured: its current *Bulletin* describes work carried out on what is claimed to be the first econometric model ever made of the British economy.

The main factor which this model tries to explain is the level of industrial production. Needless to say, it is a complicated system presenting formidable problems of data collection and computation; 72 variables and 30 equations are involved. In order to make predictions, not only have considered assumptions to be made about the expected behaviour of variables which are under direct Government control, but past measurements of a considerable number of factors have to be used. Obviously a good deal depends on the quality of these past measurements. It is somewhat unfortunate that since the Institute made these predictions,

the series for industrial production has been revised so that the latest figures give a less pessimistic look than they did two months ago. Too much, therefore, cannot perhaps be read into its judgment that "production will continue its present decline into the early part of the year and then recover during the latter half." But it is of interest to note that when preparing an annual model for the whole of this year, on the assumption, among other things, of a ten per cent cut in tax rates and a Bank rate of 3½ per cent, the Institute estimated that production would rise back to its 1957 average level but the level of unemployment would still be about 600,000 people "at a mid-year average."

STEEL IN SHEFFIELD

"A Little Tiny Bit Better"

SHEFFIELD has not lightly escaped the consequences of last year's drop of 11½ per cent in steel output and it is easily understandable that steel people there should be sucking thermometers every morning to see if they feel better. The answer is that they do—or think that they do. But they are far from fully recovered from the shock which greeted them on their return from holidays last summer when even their best customers, supplying the booming car trade, cut their orders to the bone. In the United Steel Companies group, which covers an important cross-section of Sheffield steel making, there were signs late in December of a pick-up in orders for special steels (from the Samuel Fox works) from the motor industry's suppliers. Output there, which dropped below 70 per cent of capacity in September and October, has recovered to 90 per cent of a markedly higher nominal capacity.

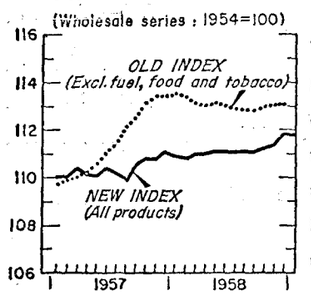
Both here, and at the Steel, Peech and Tozer works, there is new plant that could do with a lot more work—a highly mechanised bar and rod mill at Samuel Fox and a medium width strip mill at Steel, Peech which is running in on a weekly output of 3,500 tons and ought to be capable of a comfortable 9,000 tons. At this latter plant, long associated with the production of railway materials, there is gloom about the prospects for wagon wheels and springs, because of the paucity of home and export orders. But the general picture is of improvement, if only to 75 per cent operation as yet. And at the big mild steel works at Appleby-Frodingham, improved business in plates and sections has been done in the last month or two.

All fingers are crossed about this recovery. It may be the first flicker of restocking which could lift the miseries of destocking off the steel industry rather earlier than the mid-year date that everybody had in mind. But as yet it lacks real body. It is a good thing that steel dividends are generally so well covered, for it is not to be expected that earnings for the year to next September will be too bright.

THE SMALL INVESTOR

Really Too Dear?

NO stockbroker likes to turn business away. But is the business of the small investor worth his while? The answer suggested by an article written by Mr Philip Montague in the latest issue of the *Stock Exchange Journal* is that it is not. Putting the cost of a transaction to the broker at £3, he says that "any transaction worth less than £300 does not cover all expenses and anything less than £75 puts the stockbroker definitely out of pocket." That statement is open to comment. First, do small broking firms that are not involved in expensive statistical and advisory services have to spend £3 in putting a deal through? Secondly, does the contact made through a small bargain, however costly it may be in the present, never lead to profitable business in the future? Thirdly, is not this argument based on average costs? What the broker must consider is the marginal cost of the transaction. If he does not have to add to his staff or require them to work overtime, any business will help; but if he can cope with the business of small investors only by adding to his resources, it may not indeed be worth the effort and added cost. Lack of enthusiasm for the small man's business is, in fact, the product of an active market.

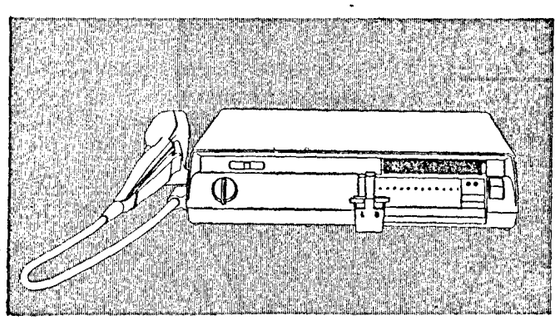


Mr Montague lists a number of steps which would help to bring the small man to Throgmorton Street: more and better information from public companies; a streamlining of the cumbersome and costly system of share transfer; the quotation of inclusive prices; the abolition of stamp duty; greater freedom for brokers to advertise; and the encouragement of investment clubs, with their proclaimed faith in "averaging." This is a comprehensive and good list. But it does not say what the brokers themselves should do to attract the small investor's business. If they do not deliberately woo it, it will not come to them but go instead to the unit trusts—a fact that the bigger brokers may not regret at all.

INDUSTRIAL DIAMONDS

Synthetics' Progress

IT is just four years since the General Electric Company of the United States announced that its scientists had produced the world's first synthetic industrial diamonds. GE began production of synthetic crushing boart just over a year ago; and recent reports in the United States indicate that the company's output in the first year totalled about 750,000 carats—roughly ten per cent of American consumption of crushing boart last year. Mr J. D. Kennedy, head of GE's diamond division, is reported to have told a meeting in San Francisco last week that American industry has "broken the British diamond cartel's stranglehold on the world supply of valuable stones." Since beginning production, GE has reduced its price by roughly half, to about 21s. a carat, compared with the price of 20s. a carat which the Central Selling Agency of the Diamond Corporation has asked for natural boart since August, 1957. General Electric has also claimed that it is able to produce up to 3½ million carats a year; this would be equal to about half



PRICES OF MANUFACTURED GOODS

The Board of Trade's new index of wholesale prices of manufactured goods for the home market shows a slight rise for last year. It has a wider coverage than the old index.

the present demand for crushing boart in the United States.

Talk of "breaking strangleholds" seems a shade ebullient: GE can only make boart and sales of gem diamonds—which made up three-quarters of De Beers' sales of £65 million last year—remain firmly in the grip of the Diamond Corporation. Furthermore, it is felt that synthetic diamonds large enough to be used in drills or other tools will not be produced for some years. But the development has certainly established a new—and unquestionably a formidable—competitor in crushing boart. While clearly neither De Beers nor General Electric would welcome a price war in diamond abrasives, GE's price is now low enough for many American buyers to find it attractive, especially in view of the occasionally paranoid American concept of "national security." Since GE's boart is made by subjecting graphite to conditions of temperature and pressure identical to those under which real diamonds are created, it seems probable that the properties of both types are about the same; this is, however, not yet certain.

The shortage of crushing boart supplies which marked the years 1950-56 ended with the American recession; De Beers' sales of all industrial stones fell by nearly a third in 1958 compared with 1957. But the revival of industrial activity should leave a reasonable market for both natural and synthetic diamonds. An unknown factor here is future buying by the US Government for stockpiling. It has been rumoured in the United States that stockpile buying from De Beers—which was resumed last year after being stopped in 1957—will cease again at the end of this year now that synthetic stones are available. But General Electric may benefit only indirectly from this, since it may mean that all buying of boart for the doubtless now enormous US stockpile will cease.

EXPORTS TO USA

The Basket Broadens

JANUARY was the fourth successive month in which British exports to the United States set a new record—this time of £27.8 million, £1.3 million above the monthly average for the fourth quarter of 1958. That increase was less than the further rise—partly seasonal—of £2 million to £8.1 million in shipments of cars. But though the motor car industry continues to lead the expansion of British exports to this market a number of other industries have recently provided stronger support.

Pottery	3·7	+ 0·1	1·8	+ 0·5	5·5	+ 0·6

In the first nine months of 1958 British exports to the United States amounted to £193 million, nearly £10 million more than in the same period of 1957. Shipments of textiles, electric machinery and manufactures of metals were all lower than in 1957, while chemicals and pottery showed little change. The big increases were in motor cars, up by £16.3 million, aircraft, up by £5.2 million and whisky, up by £2.8 million. In the last quarter of the year British exports rose much more sharply, to £79.7 million, nearly £19 million more higher than a year ago. This time only half of that increase was attributable to cars and aircraft, which rose by £7 million and £2½ million, respectively. Shipments of non-electric machinery rose by £2½ million and electric machinery rose by £700,000. Pottery and chemicals were each about £500,000 higher, while iron and steel and non-ferrous metals were up by £1.1 million and £700,000 respectively. Shipments of textiles, exceptionally, continued to fall, though the American quota restrictions are held responsible for the drop in wool fabrics. With the American economy now set for a further advance the expansion in British exports should become more broadly based. The full potentialities of this market are far from exploited, and the recent conference of the Dollar Exports Council showed that British exporters are not running out of ideas.

ATOMIC ENERGY

The Japanese Order

"I WOULD not like," said the managing director of the General Electric Company's atomic energy division referring to negotiations now starting in Japan, "to put this in terms of a definite order." While to all outward appearances the Japan Atomic Power Company has decided to accept GEC's tender to build a single-reactor 150 MW nuclear power station on the east coast of Tokyo, and rejected those of GEC's two British competitors, the gap between cup and lip has never been more in evidence. Not long ago the Japanese asked all three bidders to send representatives to Japan to discuss whittling down their tendered prices. GEC has plainly made some price concessions and opened up the way for other perfectly genuine price reductions by preparing to substitute Japanese for British-built components in the power station. A case in point is steel plate for the reactor pressure vessel. Just how far this substitution can be carried will be decided during the talks that will precede the signing of a letter of intent. On this will depend the final cost of the power station, which stands at present at between £30 and £31 million. It is still conceivable that the Japanese, having pressed GEC so far, will ask for concessions that the company is not prepared to grant—in which case the Japan Atomic Power Company has made it known that it will immediately see whether it cannot do better with the company second on its list.

Export orders for nuclear power stations are vital to the British consortia not for the profit they bring, which is non-existent, but to keep design and research teams and expensive construction equipment employed. Since the size of nuclear power stations has risen in Britain to 500-600 MW, the number needed to complete the Generating Board's 6,000 MW programme during the next eight or nine years has shrunk to a bare eight or nine stations to be divided among five consortia, each of which would be prepared to start one new station every six months. Apart from the prestige that goes with an export order, there is advantage

for a company in GEC's position not to attempt to recover overheads such as research from the foreign customer and to charge the bare cost of designing and building his station.

MOTORS

An Unseasonal Dip

PRODUCTION of passenger cars (including taxis) in January totalled 76,121, compared with 89,875 in the previous month and 85,639 in January, 1958. While this represents an increase in the weekly rate of production over the previous month, it is more than ten per cent below the rate of output of a year earlier. This is not, however, the result of a decline in the level of demand upon the industry ; the major manufacturers state that this is being maintained at a high level. But output in January was affected by the switch over to three new models at BMC—the Wolseley, Austin A55 and MG—by preparations for "face-lifts" of other manufacturers, such as the three big Fords and the Vauxhall Victor, and by unofficial strikes during the month which affected the output of both BMC and Standard.

Motor output this month may also suffer on account of unofficial strike action. Although the walkout at Steel Company of Wales's plant was quickly settled, a strike of 150 men began at Ford's Dagenham plant on Monday ; production stopped, and 7,000 workers were laid off. By the time that this issue of *The Economist* went to press no settlement had been announced.

Production of commercial vehicles in January increased slightly compared to the previous month and rose above the level of a year ago ; 26,321 vehicles were produced in January, compared with 29,636 in December, a five-week month, and 25,961 in January, 1958.

PLATINUM

Price Rises Sharply

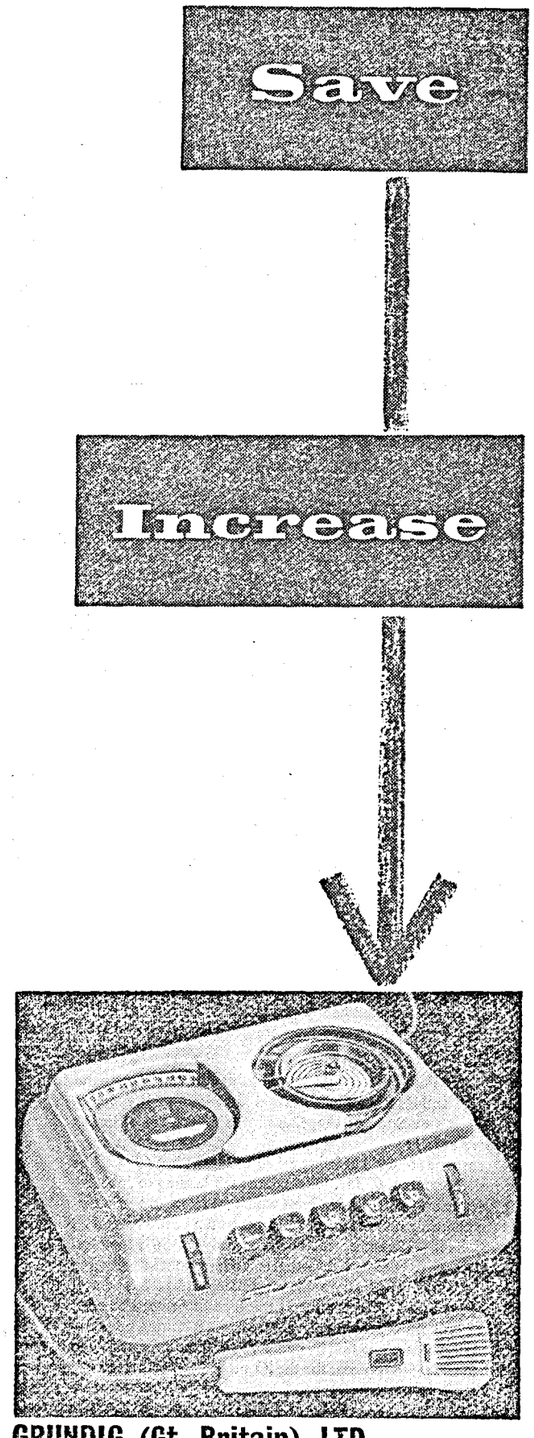
FOR nearly two years platinum producers in South Africa and Canada, which provide the bulk of world output, have watched Russia undermine their market. Some fall in prices was inevitable. Production was expanded to meet the needs of the oil companies for platinum as a catalyst in refining and it was bound to fall when the industry had enough cat crackers. But the "official" price fixed by the major producers would not have fallen so abruptly—from £34 to £19 10s. an ounce—if Russia had not been such a pressing seller. After forcing down the official price to within £2 of its own price, Russia renewed its offers at a bigger discount, and so weakened the market further. Had such competition come from outside the Soviet block the major producers might have guessed when the rout would stop. But knowing nothing of Russia's output, production costs or domestic consumption, they could only wait. Early this month the chairman of Rustenburg Platinum Mines, the South African group, could see no indication of any hardening in the price. He added, however, that changes in the market tend to be rapid.

Rapid they have been. For some months there have been signs of an improvement in demand, noticeably in the United States and Continental countries. Russian prices had been a little firmer, and for large quantities the major producers had been able to obtain a price closer to their published price. The market was evidently ripe for a turn, and it came two weeks ago. Russia withdrew temporarily from the market, and then offered small quantities at a higher price. Buyers came in, Russia raised its price further, buyers followed and the rise went on. Prices on the free market have now risen by over £9 to about £27 an ounce and the major producers have successively raised their own prices by £5 10s. to £25 an ounce. The sharpness of the recovery, which owes something to speculative buying, casts some doubts on whether it can be held. Consumers must have run down their stocks when prices were falling, and may now be building them up. It remains to be seen whether consumption of platinum is rising too. Production in South Africa is sharply curtailed and supplies ought now to be in closer balance, but Russia remains the joker in the pack. If its stronger selling policy reflects a reduction in its available supplies other producers will breathe more freely.

TIN MARKET

Prices Above £780

EVENTS in the tin market have moved fast. Last Saturday the Tin Council announced that exports from members of the International Tin Agreement would be allowed to rise to 23,000 tons in the second quarter from 20,000 tons in the first quarter. The chairman of the council confirmed that the manager of the buffer stock had been selling from the special stock, which is believed to have amounted originally to about 5,000 tons ; a "very substantial part," he said, had been sold. On the following Monday tin prices weakened, but the market subsequently firmed, closing on Thursday at £782 a ton for cash metal, a gain of £9 on the week. Three months' tin continues to command a premium. Then on Friday the chairman announced that all the tin in the special stock had been sold. So with tin over £780 a ton the manager can at last sell metal in the ordinary stock, which totals 23,350 tons. As demand is buoyant, and supplies from producing countries cannot start to increase for another month, the manager will certainly be able to sell without making much impact on prices.



RUBBER TRENDS

is our new quarterly bulletin for producers, manufacturers or dealers concerned with rubber. It gives the results of research, not available elsewhere, into the longer term trends affecting rubber, including :

Regularly	Periodically
The world balance	Trends in rubber-using industries
Price outlook	Rubber consumption in the U.S.S.R.
Trends in consuming countries	Technical developments
Market reports	Trends in synthetic rubber
General notes	The effect of planting programmes

time, effort, money

A Stenorette Dictating Machine on your desk would save you and your secretary each at least one hour daily in dealing with routine correspondence and administration. It would clear your desk, give you more time to think, leave you free to get on with more important matters.

output, accuracy, convenience

The Stenorette Dictating Machine takes 25 minutes continuous dictation, records telephone calls or conferences verbatim, has automatic erase and back spacing facilities and plays back instantaneously. Transcription speed is controlled to suit every typist's requirements. It increases output, ensures accuracy, is light and convenient to carry and operate. In fact, it has all the amenities of machines costing twice as much. No wonder over 400,000 Stenorettes are now in daily use.

Schweppshire Guide to public speaking

No. 1 HOW TO MAKE A JOLLY GOOD SPEECH

If you don't already you have to some day.
Study once more out of Schweppshire (so like us only so much more so) how to make a speech in comfort.

Everybody in public speaking, and more particularly public hearing, knows Sir Dan Plunkington of Plunkington's. No need to "Pray Silence" when he is on his feet. Funnily enough, as someone to sit next to, he is a dead bore: and at home, under the influence of Lady Plunkington, he is actually almost completely silent. But everyone is so certain that he makes a jolly good speech, that although nobody can ever quite remember what he says, the fact that it must be all right is so generally agreed that everybody enjoys it anyhow, except of course the other speakers.

You, too, can be a Plunkington: and Schweppshire Research is on hand to tell you how he does it. Our analysis of 100 ten-minute P. speeches proves that it is a question of shape. And it is a question of timing *(in mins. and secs.):*
Begin with surprise *(0'·00")* at being asked to speak: but *(0'·15")* be tremendously honoured. *0'·35"*, joke against self leading to Joke 2—amusing reference to chief Lady Guest which (a) refers to her in pig-tails and (b) plausibly underestimates her age by ten years. At *1'·50"*, use reserve joke if (2) has misfired. Then suddenly *(2'·30")* look tremendously solemn. Even say—*2'·33"*—that something must be becoming increasingly obvious. *3'·40"*, try applause-extractor (A) ("Wonderful work been done by..."). Then after 3½ mins. padding, turn to most important or only titled person present and make flattering reference without actually mentioning him by name. *7'·40"* refer humorously to staff and then slide into top gear for the finish.

SCHWEPPERVESCENCE LASTS THE WHOLE DRINK THROUGH

FOREIGN NOTES

Free Arbitrage

AUTHORISED banks were informed by the Bank of England this week that they are allowed to export Bank of England notes not only against payment from an external account but also as the counterpart of purchases of foreign notes. Previously, dealings in foreign notes were unrestricted but payments for notes purchased here could only be made by crediting the appropriate non-resident sterling account. The freedom to export sterling notes applies also to notes of the rest of the sterling area. The only limitations that remain on the market in foreign notes in London are those that emanate from overseas countries whose own regulations still restrict the use and import of their own notes. The greater freedom given to authorised banks in their dealings in notes is expected to attract to the London market some of the business that has tended to gravitate to freer markets, notably that in Zurich, which takes premier place in dealings in foreign notes and foreign coins. The London market in notes has expanded considerably in recent years following the permission given to British tourists to take the whole £100 of their allowance out of this country in the form of foreign notes. French francs and Spanish pesetas can still be obtained more cheaply in the form of notes than against travellers' cheques at the official rate of exchange.

THE BILL ON LONDON

Rather More Free

THE ban imposed in September, 1957, on "third country" credits granted by London banks to finance trade between countries other than the United Kingdom has been removed. Such credits finance, for example, coffee from Brazil to Germany, rubber from Malaya to the United States, wool from Australia to France. The ban was imposed because of the increase in the use of London credits to speculate against sterling by postponing payments. There is manifestly no danger of any such abuse in the transformed mood of the exchange markets to-day, and therefore no reason why London houses should continue to be deprived of traditional business. Overseas traders have not lost the habit of sterling credits and there has been no important move in any other centre to replace London's facilities.

Somewhat anomalously, the authorities have not lifted the ban on "refinance" credits (nor that on overdrafts to non-residents, also imposed in the 1957 crisis). These are usance credits, usually of three months' duration, opened in order to meet sight drafts payable in London. A typical example would be that of an Australian exporter of wool selling to an American buyer and requiring payment against a sight draft drawn under a London credit. The American buyer, if the rate of interest in London were attractive, or if he wished for speculative reasons to postpone his payment in sterling, would arrange a refinance credit in London. The proceeds of this credit would be used to pay the sight draft drawn by the Australian exporter. The credit would extend by three months the time within which the American buyer had to cover sterling. The line of demarcation between refinance credits and third country credits is blurred. In the illustration given, the credit would now pass muster if the US buyer were to arrange a three months' London credit in favour of his supplier in Australia, but would fall under the ban if the proceeds of the London credit were intended to meet the Australian exporter's sight draft.

SHORTER NOTES

The directors of Borax (Holdings) announce unaudited trading profits (after depreciation) of £689,838 for the three months to December 31st, against £45,575 for the previous comparable period. But overproduction of potash in the USA "continues to cause concern."

* * *

The directors of I. & R. Morley, the hosiery manufacturers, have announced that the group's trading profits in 1958 fell from £593,971 to £292,392. The ordinary dividend maintained at 12 per cent for the fifth successive year is paid by drawing upon the carry-forward.

* * *

Individual statements of the London clearing banks for mid-February show a total rise in advances of £72 million, despite repayments of £9 million by nationalised industries. Liquid assets are falling sharply as the Exchequer repays floating debt from tax receipts, and the banks sold further substantial amounts of gilt-edged in the period, totalling £60 million. Barclays was the biggest seller. Lloyds, the District, Martins, Williams Deacon's and the National have liquidity ratios barely above 30 per cent.

* * *

On Tuesday the Chancellor of the Exchequer told the House of Commons that he might postpone the introduction of purchase tax on secondhand jewellery, while he considered the representations made by MPs and the trade.

* * *

As the price of raw sugar under the International Sugar Agreement had fallen below 3.25 cents a lb, export quotas were reduced on February 21st by 2½ per cent, or 160,000 metric tons. The Sugar Council will shortly announce what further action is to be taken to support the price.

COMPANY MEETINGS

SUN LIFE ASSURANCE SOCIETY

RECORD FIGURES

MR G. C. RANDOLPH'S STATEMENT

The annual general meeting of the Sun Life Assurance Society will be held at 107 Cheapside, London, E.C.2, on Tuesday, March 24, 1959. Mr C. G. Randolph, Chairman of the Society, has issued a statement to shareholders, which in outline is as follows:

FUNDS, INCOME AND OUTGO

The total funds at the close of the year amounted to over £137 million, having increased during the year by £10,700,000. The life premium income and the consideration for annuities granted reached the record totals of £16,143,000 and £3,920,000 respectively, together passing the twenty million pound mark for the first time.

The gross interest income of the Life Assurance, Annuity and Sinking Fund Accounts amounted to £6,740,000, representing a rate of £5 9s. 11d. per cent, which is 7s. 8d. higher than in the previous year.

Although the claims by death at £3,018,000 exceeded those of the previous year by £320,000, the number of claims was again less than the number expected according to the mortality tables employed in our calculations.

NEW BUSINESS

I am pleased to be able to state that the new life sums assured granted last year amounted to £70,179,000 and exceeded by £9,372,000 the record total reached in 1957. The new life sums assured include an increased amount of with profits assurances; this is no doubt to some extent attributable to the satisfactory rates of bonus declared as a result of our triennial valuation made as at December 31, 1957.

In addition, annuities of £1,858,000 per annum were granted, mostly in connection with staff pension schemes.

I would like to take this opportunity of thanking all our connections for their continued support.

You will be aware that we endeavour to ensure that, wherever possible, persons requiring life assurance protection shall be able to obtain it. To this end our treatment of proposals on the lives of persons who are below average from the life assurance point of view is kept continuously under review so that effect can be given to the advances of medical science and our reputation for liberal underwriting maintained.

PENSION SCHEMES

A substantial proportion of our new business last year was again secured under new and existing pensions schemes. Many new schemes of various types were inaugurated during the year and our "with profits" group pension scheme continues to be popular.

An important development affecting the future of pension schemes business was the publication by the Government last October of the White Paper entitled "Provision for Old Age," followed early this year by the introduction of the National Insurance Bill. It has long been our opinion that the state pension scheme should be limited to the provision of pensions to cover basic needs and I am glad to see that it is stated in the White Paper that the Government is convinced that changes in the field of National Insurance should be so framed as not to prevent the vigorous development of independent provision for old age, whether through occupational schemes or otherwise. It is proposed under the Bill that the present flat-rate pension benefits should be augmented by graduated benefits related to earnings, but it would appear that it will continue to be necessary to provide substantial additional pensions to be secured independently of the state scheme for most employees, especially higher paid staffs.

HOUSE PURCHASE

Owing to the continued heavy demand for mortgages under our house purchase scheme we have reluctantly found it necessary to maintain the quota system, to which I have referred in recent years, in order to limit the total amount to be advanced.

INCREASABLE ASSURANCE

In March of last year we announced the introduction of a new policy entitled the "Increasable Assurance," which we believe to be an important development in life assurance practice, and the encouraging initial reception given to the new policy indicates that it meets a real need. The policy provides life assurance with the option at regular intervals of effecting additional assurance up to specified amounts at the tabular rate of premium irrespective of the life assured's state of health when each option is exercised. It is thus particularly suitable for the man who wishes to ensure that additional cover commensurate with his growing responsibilities will be available when it is required even if in the meantime his health should deteriorate and he should become unassurable or acceptable only at an increased premium. We shall be happy to forward full details on application.

INVESTMENTS

The year 1958 witnessed a marked change in the national economy; not only was it free from the periodic financial crises arising from inflationary pressures with which we have become all too familiar in the postwar years, but there was evidence of a degree of deflation.

The enhanced confidence in Government credit both at home and abroad has been marked by a substantial rise in the prices of fixed interest securities. The appreciation in the prices of medium-term and long-term British Government securities has been approximately 7-10 per cent during the twelve months, but the appreciation in the market prices of ordinary shares has been much greater.

A valuation of our Stock Exchange securities at the end of 1958 showed that the market value considerably exceeded the value at which they stand in the balance sheet, without taking into account the investment reserve fund of £5 million.

NEW CHIEF OFFICE PREMISES

Four years ago I mentioned that the accommodation at our Chief Office premises at 63 Threadneedle Street had long been insufficient for our requirements and that we had acquired a prominent site in Cheapside on which new Chief Office premises were to be erected. It was a notable occasion in the Society's history when in July last the new building was formally opened by the Lord Mayor of London, Sir Denis Truscott.

STAFF

It is my pleasure to congratulate the executive and the staff on the success which has attended their efforts and to thank them, on behalf of the Board, for their loyal co-operation and gratifying achievements.

I also take this opportunity to express the gratitude of the Board to Mr Murrell, who, after completing 43 years' service with the Society and having occupied the position of general manager and actuary for nearly ten years, retired at the end of January 1959. We wish him good health and every happiness in his retirement.

I extend a welcome to Mr Mears, who has been appointed general manager. He has spent all his business career with the Society and he will, I feel sure, at this time of succeeding to its highest office, continue to enjoy the full confidence of the Board and the staff.

SOUTH ESSEX WATERWORKS COMPANY

The annual general meeting of South Essex Waterworks Company was held on February 24th in London, Mr G. Francis Stringer, OBE (the chairman), presiding. The following is an extract from his circulated statement:

The Directors' Report and Statement of Accounts for the year to December 31, 1958, give some indication of the continued expansion of the work undertaken by your Company. There is a total net increase in capital expenditure during the year of £145,730 of which a further sum of £60,662 has been spent on the Hanningfield Works. During the year under review an average of five and three-quarter million gallons per day was supplied from these works, your Company taking approximately three and one-third million gallons per day.

The Revenue and Expenditure Account shows a net increase in revenue of £23,949. Such increase was lower than it would have been owing to a substantial reduction in revenue from building supplies due to credit restriction, also the continued wet weather during the summer months resulted in a fall in demand for water for non-domestic purposes.

From December 26, 1958, the domestic rate for supplies of water was increased from 8 per cent to 9 per cent on net annual value and an addition of 1d. per 1,000 gallons on one graduation of the scale of charges for water supplied by meter for combined domestic and trade purposes. Since 1928 these charges have been less than those authorised by the Company's special Acts.

The report was adopted.

MONTAGUE BURTON LIMITED

SUCCESSFUL TRADING AT LOWER PROFIT MARGINS

INCREASED TURNOVER

MR LIONEL JACOBSON'S STATEMENT

The twenty-ninth ordinary general meeting of Montague Burton Limited was held on February 24th at the registered office of the company.

Mr L. Jacobson (the Chairman) presided.

The secretary (Mr H. V. Evans, ACA) read the notice convening the meeting and the report of the auditors.

The following is the statement by the Chairman circulated with the report and accounts:

You will remember that last year I stated that the Group had decided, in spite of steadily increasing costs, not to increase our retail prices even though such a policy might result in a lower level of profit. It was not an easy year. We traded successfully but at lower profit margins. The increase in turnover was inadequate to absorb the increased costs. In consequence profits are reduced but as forecast last year, sufficient for all purposes. After providing for taxation on profits earned to date, dividends, appropriations amounting to £94,748 for the redemption of debentures and preference shares some £284,000 has been added to revenue reserves. The burden of this "Price Standstill" was spread and proportionately shared by all associated companies and the Group made this considerable contribution as a check to inflation.

NEW BRANCHES

The four Burton Tailoring branches recently opened in the new towns are trading on a satisfactory level. The expansion of the Jackson The Tailor Group and Peter Robinson stores continues. It may interest you to know that amongst the major undertakings this year is the conversion of the Tivoli Theatre in the Strand to a store for Peter Robinson which, when completed, will be one of the most modern in Europe. It is hoped to open in the Autumn of this year. That Company has plans well advanced for similar stores in Birmingham, Bristol and Norwich and the Jackson Company will shortly open new shops in Cardiff, Belfast and Doncaster.

Expenditure in connection with the erection of buildings, fitting out of the stores, refitting existing shops and stores, and replacement of plant is considerable and it can be anticipated in a business of this size it will be a permanent feature of our accounts. We have faced, and are still facing a period of considerable capital expenditure and it may be some time yet before we reap the benefit of these developments.

BUSINESS HEALTHY

Competition shows no sign of decreasing, but the business is healthy and retains the greater proportion of the retail tailoring trade of the country.

The price of wool, our major item of consumption, is still favourable to us. We have been able to do some useful buying at these lower price levels, the benefit of which should be felt in the current year.

Stocks are heavier than at the end of last year, a reflection of the near static conditions which prevailed, and the desire of your directors to assist our suppliers over a difficult period. Stocks are, however, well bought throughout and now no more than consistent with Group requirements.

CREDIT FACILITIES IN TAILORING SECTIONS

The tendency for the man in the street to budget his income has had our careful consideration for some time. Over the past few years there has been a rapid growth in credit trading of one kind or another. When credit facilities are available for a variety of goods there is a tendency for the consumption of those offered on a cash basis to decline, or at best remain stationary. Further, there has been a marked increase in the growth of shops specialising in credit tailoring and in departmental stores offering some form of credit facility in their tailoring sections. Your directors decided, therefore, to introduce a scheme on November 1, 1958, which would provide customers with this additional service at a cost to them of only 5 per cent.

The scheme has been well received by the public and a substantial pool of new goodwill has been made available to the Group. We are, of course, favourably placed to enter this new market on highly competitive terms. The scheme represents no material change in Group policy. Our aim will always be to offer first-class quality clothing at competitive prices. If we feel that some customers need assistance to buy it, then we must seek to provide that assistance.

PROSPECTS FOR CURRENT YEAR

Although last year was difficult, particularly Autumn 1957 and Spring 1958, there was a welcome return to more normal trade later and a marked revival towards the end of 1958. I am, as always, reluctant to forecast what the future holds, but I am confident that we will enjoy our full share of national prosperity.

It is with a sense of very real pride that I advise you that Her Majesty Queen Elizabeth The Second and His Royal Highness The Duke of Edinburgh were graciously pleased to visit the Hudson Road Leeds Works of this Group on Friday, October 17, 1958. This visit was a source of real joy to the 6,000 employees of this particular Works who accorded the Royal Visitors an enthusiastic welcome. It was a memorable occasion for all concerned.

TRIBUTE TO STAFF AND PERSONNEL

I am, as ever, indebted to my colleagues, staff and personnel of the Retail and Manufacturing Divisions for their loyal support over the past year.

The report and accounts were unanimously adopted. The Directors retiring in accordance with the Articles of Association were re-elected to the Board. The Auditors, Messrs Price Waterhouse & Co. and Messrs Volans, Leach & Schofield continue in office.

The Meeting concluded with a vote of thanks to the Chairman.

THE

ROYAL BANK OF SCOTLAND

ST. ANDREW SQUARE, EDINBURGH

and over 230 Branches in Scotland and London

ASSOCIATE BANKS

WILLIAMS DEACON'S BANK LIMITED

with over 220 Offices in England and Wales

GLYN, MILLS & CO.

with 3 Offices in London

THE THREE BANKS GROUP

Consolidated Statement of Accounts as at 31st December, 1958 shows :—

Total Assets	£413,300,852
Current, Deposit and other Accounts	£341,838,679
Capital and Published Reserves	£11,727,486

Each of The Three Banks has its own long tradition of personal service to the public and still preserves its separate entity. Within the Group their resources and experience merge to give strength and to provide the many services required from a modern banking institution.

SPIERS & POND LIMITED

ANOTHER YEAR OF PROGRESS

The seventy-fourth annual general meeting of Spiers & Pond Limited was held on February 25th in London, Mr T. N. Matthews (vice-chairman), presiding.

The following is an extract from the chairman's circulated review:

I am happy to preside for the first time at this Company's Annual General Meeting, and I am happy to be able to put before you Accounts which show another year of progress.

The Trading Profit of the Group amounts to £293,335, as against £247,531 for the previous year.

Expenditure on repairs and renewals amounts to £94,905. Although this is slightly lower than the expenditure during the previous year, considerably more work has been carried out in the hotels of the Group, in particular interior decoration, a great proportion of which has been executed by direct labour with consequent substantial savings in cost.

Further expenditure of a capital nature has been incurred in providing additional amenities at Marsham Court, Bournemouth, and Bailey's Hotel, London, where new cocktail bars have been installed.

The net profit after providing for taxation is £100,993, of which the holding Company's proportion is £99,472.

The dividend for the year on the 6½ per cent Preference Stock has been paid, and your Board recommends a dividend on the Ordinary Stock of 12½ per cent less tax. The sum of £38,597 has been transferred to General Reserve, and a transfer of £3,500 to the Company's Sickness and Benevolent Fund is proposed. The foregoing allocations, if confirmed, will leave a balance of £128,482 to be carried forward.

Current Assets of the Group at £502,280 compare with £402,819 for the previous year, whilst Current Liabilities amount to £228,904 as against £280,631. There is, therefore, an appreciable improvement in the liquid position of the Group.

As far as the current year is concerned, the turnover and profits for the first three months show a satisfactory increase in comparison with the same period last year. Whilst much must depend on the summer season, every possible effort is being made to increase the already extensive banqueting and convention business which we enjoy throughout the year.

In conclusion I should like to pay tribute to my co-Directors, senior executives and all staff for their sustained efforts during the past year, which have contributed so materially to the satisfactory results before you. Through the constant efforts of all concerned your Company continues to enjoy a very high degree of goodwill in the hotel and catering industry.

The report and accounts were adopted and an Ordinary Resolution authorising the Directors to enter into an Agreement for the purchase of all the issued shares in the capital of Chicken Inns (London) Ltd. was unanimously approved.

The hotels operated by the Group are as follows: Bailey's Hotel, Gloucester Road, London, SW7; Grand Hotel, Brighton; Marsham Court, Bournemouth; Queen's Hotel, Eastbourne; Royal Clarence Hotel, Exeter; Grand Hotel, Scarborough; Warnes Hotel, Worthing; Calverley Hotel, Tunbridge Wells; The Bull's Head Hotel, Aylesbury.

THE WEST INDIES SUGAR COMPANY, LIMITED

FACTORS AFFECTING PROFITS

MR PETER RUNGE'S STATEMENT

The twenty-second annual general meeting of The West Indies Sugar Company, Limited will be held on March 18th at Bucklersbury House, London, E.C.

The following is the statement by the chairman, Mr Peter Runge, which has been circulated with the report and accounts:

Since my last statement we have suffered two severe losses on the Board. Mr Albert Palache, a member of the original Board, died in February last year. He had been ill for some months but his death nevertheless came as a great shock to us. Sir Arthur Evans, who had been on the Board since 1939, died suddenly in September. Both these Directors were associated with the Company during its early and difficult days and had seen it grow to its present size and importance. My colleagues and I miss their wisdom and counsel, and feel their loss most deeply.

Mr J. F. P. Tate, a Director of Tate and Lyle and of Caroni, has been invited to join the Board, and we welcome his contribution to our deliberations.

TRADING RESULTS

The Consolidated Trading Profit for the year amounted to £709,699, and the Consolidated Net Profit to £360,739. The comparative figures for 1958 and 1957 are shown below:

	1958 £	1957 £
Consolidated Trading Profit	709,699	1,119,133
Consolidated Net Profit	454,720	821,508
Less: Proportion attributable to outside holdings in Ste. Madeleine Sugar Co. Ltd.	93,981	85,549
	£360,739	£735,959

Our Subsidiary Company in Trinidad had a very good year but the results of the Parent Company were disappointing. The year's figures, compared with previous years, are shown below:

	1958	1957	5 years' average 1953/57
	£	£	£
Trading Profit.....	324,844	838,510	838,099
Net Profit.....	284,307	650,785	443,711
	Tons	Tons	Tons
Sugar Production :—			
Monymusk.....	50,712	59,431	66,076
Frome.....	77,959	83,772	73,013
	128,671	143,203	139,089

DIVIDEND MAINTAINED

Your Directors recommend payment of a Final Ordinary Dividend at the rate of 1s. 1d. per Share, free of tax, which, with the Interim Dividend of 3d. per Share paid on October 31, 1958, makes a total distribution of 1s. 4d. per Share, free of tax, the same rate as last year.

The severe drop in profits is only partly due to world prices having returned to normal in 1958. A much more important factor is concerned with agricultural operations at Monymusk. Four or five years ago there was every indication that Jamaica was over-producing. It fell to Monymusk to reduce its sugar output by planting bananas. But the over-production did not materialise; indeed there was a call for every ton of sugar that could be produced. Within certain limits harvesting of cane can be continued in one year at the expense of the following year. That is what has been happening at Monymusk in order to fill the demand for sugar, and cropping has got further and further out of step with the seasons. This state of affairs was seriously aggravated by the 1957 strike, and it became clear that sooner or later immediate production would have to be sacrificed in order to restore the proper growth cycle. Weather conditions made it advisable to do so last year. Production will be considerably higher in 1959 and will continue to expand in the following years.

SUGAR AGREEMENTS

With some amendments and the likelihood of a larger number of participants, the International Sugar Agreement has been negotiated for a further three years. Under its terms, the sugar exporting territories of the Commonwealth collectively undertake to limit their exports to 2,500,000 tons in 1959 and to 2,575,000 tons in 1960 and 1961. This modest increase is well within the capacity of the industry and considerably less than the expected rise in the requirements of importing Commonwealth countries. We have made a significant sacrifice in the interests of obtaining the signatures of Brazil and Peru to the Agreement and it is hoped that thereby sugar markets will become more stable.

The Commonwealth Sugar Agreement has been extended for a further year to 1966. Thanks to an increase in consumption in the United Kingdom the quantity which is bought at negotiated prices is to be increased by 2½ per cent. Following the review in November, the price is to be increased by approximately 3 per cent. The total rise in price over 5 years has been approximately 10½ per cent.

MARKETS

Our 1958 sugar crop was sold in the following markets:

	Tons	Per cent	fas price £ s. d.
Jamaica.....	22,000	17	29 2 0
Canada.....	28,000	22	33 18 6
UK.....	78,000	61	41 11 0
	128,000	100	

Our trade with Canada is vitally important from many points of view. It is supported by a Preferential Canadian Import duty. We intend to use this Preference to keep our Canadian customers supplied at prices which are out of reach of foreign raw sugar producers; and to keep them supplied with the quality they require, at the right place, at the right time. Unfortunately, as so often happens with sugar, politics are being dragged into the picture. Last year, for the first time, Icelandic cod was imported into Jamaica. The traditional suppliers are Newfoundland and the Maritime Provinces of Canada who are helped by a Preferential Jamaican Import duty. Ill feeling was engendered because the cod was bought by Government bulk purchase and because a statutory price structure was introduced which was said to penalise good quality.

The Canadian interests involved, who have considerable political influence, in order to lend weight to their protests, have launched an attack on the Sugar Preference in the Canadian Press and by Parliamentary lobbying. This is to be regretted. However, a more helpful step has been taken by the Canadian Chamber of Commerce which has organised an extensive tour of the West Indies by a delegation whose members will hold informal talks with leaders of Jamaican Government and industry. Canada is taking an intense interest in the new Federation. It is sincerely to be hoped that both countries will go out of their way to try to understand each other's complex problems.

TWENTY-FIRST ANNIVERSARY

In conclusion I think it is worthy of remark that our Company has this year achieved its 21st birthday, and I am sure that, on its coming-of-age, you would like me to send your greetings and thanks to our General Managers, and our staff and workpeople, for all that they have done in the past to help build this great enterprise. A 21st birthday, however, is not an occasion merely for looking back, and I should at the same time like to express our confidence in the future, in which they and we are partners.

CASTLEFIELD (KLANG) RUBBER ESTATE LIMITED

MR ADDINSELL'S STATEMENT

The fifty-second annual general meeting of Castlefield (Klang) Rubber Estate Limited, was held on February 13th in London, Mr Jack Addinsell, chairman, presiding.

The following are extracts from his circulated statement for the year to June 30, 1958:

Our estates had a good year and harvested a crop of 2,504,500 lb, nearly 8 per cent up on last year's output. Tapping standards were maintained or improved and yields from the old seedling rubber on Bukit Benut estate and from the modern rubber on Castlefield estate more than fulfilled expectations.

Compared with the previous year, rubber prices were well down and our net proceeds were about 3½d. per lb lower on average. Duty and cess, falling with the price of the commodity, accounted for £9,269 less, but costs of production showed little variation. The profit before tax was £75,877, compared with £108,417, and in the circumstances is not unsatisfactory.

DIVIDEND RECOMMENDATION

After providing £10,700 for tax and taking account of the balance brought forward, together with a small amount in respect of disposal of fixed assets, there is £79,643 for appropriation. An interim dividend of 10 per cent, absorbing £5,750 net, was paid last July and a final dividend for the year is not recommended.

From the carry-forward on profit and loss account your directors recommend a dividend for no specified period of 35 per cent, less tax at the standard rate.

During the period reviewed 280 acres of the small remaining area of old seedling rubber on Castlefield estate was replanted with modern material and about 276 acres of new extensions at the Johore estate were successfully established. For the current year the programme is to replant about 55 acres at Castlefield and to plant 178 acres of jungle land at Bukit Benut.

In 1956, when the then issued capital was reduced to £100,000 by the repayment of 1s. per 2s. share, it was desired to reinstate the capital to the original £200,000, but this could not at the time be done without incurring a liability for tax. A change in tax law, however, now permits us to restore the original position.

The report was adopted and at a subsequent extraordinary general meeting resolutions approving the Capitalisation Issue were duly passed.

ALLIED BAKERIES LIMITED

SCRIP ISSUE APPROVED

An Extraordinary general meeting of Allied Bakeries Limited was held on February 19th in London.

Mr W. Garfield Weston, the chairman, presided and, in the course of his speech, said:

Our reserves are again firmly established and if you approve the first two resolutions, a sum of approximately £5,600,000 will be utilised to double our existing issued ordinary capital, again equally divided between voting and non-voting shares. The effect of this issue will be to bring the issued capital of the company more nearly into line with the value of the assets permanently employed in the business.

After this issue, any holder who acquired our ordinary shares prior to the first capitalisation issue in 1954, will have had his holding multiplied eight times and based on the present market price, the value of each 5s. share issued in 1935 at 6s. per share has multiplied approximately thirty-two times.

Our expansion since 1943 has been on an entirely cash basis, financed very largely by our policy of retaining a large proportion of each year's profits in the business. However, the retention of profits has not been sufficient to finance the whole of our expansion, and in 1954 we raised approximately £1¼ million by the issue of Preference Shares, followed in the next year by an issue of £5 million Unsecured Loan Stock.

Since 1955, our development has continued and our total of bank and other borrowings has reached a level which should, we think, be reduced. We are, therefore, now proposing to raise £2,750,000 by an issue of Ordinary Shares at 12s. 6d. per share with a right to existing Ordinary Shareholders to subscribe for them on the basis of 1 voting and 1 non-voting share for each 10 shares held on January 30th, last.

When I spoke to you at the annual general meeting, I told you of our intention that the first interim dividend of 10 per cent would be followed by two further interim dividends of 5 per cent each, which would be payable on the capital as doubled by the scrip issue and further increased by the cash issue which we have announced. There are now only another five weeks to go to the end of our financial year and nothing has happened to alter the forecast which I made in December that our profits would show an increase over those of the previous year.

There being no questions, the resolutions were put to the meeting and on a poll were duly carried. For each resolution votes cast in favour exceeded 2,396,000, and votes against were fewer than 300.

THE POWER-GAS CORPORATION LIMITED

RECORD TRADING PROFIT

The fifty-ninth annual general meeting of The Power-Gas Corporation will be held in London on March 19, 1959, Mr W. R. Brown, DSO (Chairman and Managing Director), presiding. The following is an extract from the Chairman's circulated statement:

Gross Profit shows a satisfactory increase at £1,380,186 compared with £1,052,562 last year. This figure hardly reflects the use of our latest extensions, little of which had come into operation by the end of the financial year. However, the availability of these new assets seems likely to coincide with a slacker period of business just when we had been hoping for a larger volume. I believe, nevertheless, that this country's economy will continue to expand and I see no reason to expect a long-lasting postponement of growth for our business.

It would be wrong to infer that the whole of the increase in profit represented additional profitability of our business. The results of one 12-month period can be deflated by a concurrence of unfinished contracts carried over, or inflated by a number of contracts profitably concluded.

We are recommending payment of a Final Dividend of 10 per cent which would bring the total distribution for the year up to 15 per cent, the same figure as for the preceding year. We have also declared a Special Interim dividend of 5 per cent in respect of the year ending September 30, 1959, payable at the same time as the final dividend for last year. This special dividend we shall not take into account when we come to consider payment of further dividends for the current financial year.

We expect to declare a further interim dividend of 7½ per cent in September, 1959. Our subsequent recommendation of a final dividend will necessarily be governed by the trading results and conditions at that time.

A year ago, our forecast of approaching changes in market conditions was already causing us some degree of apprehension. Certain major projects, in which we could confidently expect to participate, seemed likely to be postponed; this was particularly noticeable in the case of iron and steel works development where political uncertainties, coupled with a fall in demand, were breeding hesitancy.

It was not unexpected that orders booked in the year under review at a figure of £9.25 million amounted to only 73 per cent of the high levels reached in 1956 and 1957. In the accounts much of the profit stems from contracts that were commenced as much as four years ago. There are also other large contracts, that are now approaching a profitable conclusion, the full effect of which will not appear until the 1959 accounts are published, and some will even carry over into 1960.

The Blast Furnace Division garnered all they could in orders from a harvest that was extremely meagre, the Division booked the only major furnace contract that was placed in the United Kingdom during 1958. Three furnace plants and one large sinter plant were completed.

The Gas Plant Division has secured orders in six different countries. The Division is supplying part of the high pressure plant for gasifying coal in Scotland by a process which may prove suitable in other coal field areas.

The Chemical Plant Division has experienced renewed activity, booking orders for most of our specialty plant lines.

LEEK AND MOORLANDS BUILDING SOCIETY

FINANCIAL STRENGTH AND STABILITY FURTHER ENHANCED

The 162nd annual general meeting of Leek and Moorlands Building Society was held on February 23rd at Leek, Staffordshire.

In his printed address, the President, Sir Ernest Johnson, JP, said: It has been my custom each year to give a review of those forces operating within the economic and financial framework of the Nation. I do not propose this year to follow my usual custom but instead to leave to the Chairman of Directors, Mr Gilbert Tatton, the task of reviewing the results for the year and of bringing to your notice the very important Government measure now before the House of Commons, viz House Purchase and Housing Bill. This is a very far seeing and a far reaching measure and will, I feel sure, write a new history in the building society story.

I congratulate the Society on the progress revealed in the Accounts in what was, after all, a most difficult year.

CHAIRMAN'S ADDRESS

In the course of his address, Mr Gilbert Tatton (Chairman of the Board of Directors) said: Shareholders' balances increased during the year by a sum of £2,256,211 to the record figure of £35,560,264. Balances due to Depositors amount to £2,220,733, making a combined total due to Investors of £37,780,997. The intake from Investors, particularly during the last quarter of 1958, was most encouraging.

The Society has reached another milestone in its progress with total assets now exceeding £40 million and reserves of over £2 million. We feel that the figures disclosed in the balance sheet prove that the Leek and Moorlands can justifiably claim both size and stability.

Some few weeks ago the National and Provincial Press gave what seemed to me to be rather a lot of prominence to a very reasonable and proper offer we made in connection with a proposed Transfer of Engagements of a Building Society in the South-East of England.

Commenting on the various ways in which Building Societies grow, Mr Tatton said that one way was for societies to get together and negotiate amalgamations which their respective Members would regard as mutually advantageous. He added: Our proposition was that the members should come in with us on equal terms and that their surplus reserves over and above those of our own ratio should be distributed to them on the Transfer.

The financial stability, unimpaired security and indeed, popularity of the Leek and Moorlands is the answer to those who seek to criticise us on facts which hitherto they seem to have failed to observe.

As and when opportunity presents itself, your Directors will seek to expand the Society's services by what they believe to be the best and cheapest methods in the interest of all those who seek to use them.

Referring to the Government House Purchase measure, Mr Tatton said:

I am satisfied that on all counts your own Society will bear the closest examination and will more than satisfy, I hope, all the requirements to permit it to become a designated Building Society.

The report and accounts were adopted.

THE METROPOLITAN RAILWAY COUNTRY ESTATES LIMITED

ANOTHER GOOD YEAR

SIR BERNARD DOCKER ON THE OUTLOOK

The Thirty-ninth Annual General Meeting of the Metropolitan Railway Country Estates Limited will be held on March 5th at Kensal House, 553/579 Harrow Road, London, W.10.

The following are extracts from the Statement by the Chairman, Sir Bernard Docker, KBE, circulated with the Report and Accounts for the year ended October 31, 1958:

We have had another good year. Group Profits before taxation are £77,869, compared with £75,373 in 1957, and after dealing with taxation, which will take £33,798, compared with £42,766 in the previous year, and providing for payment of the same dividend of 15 per cent, the undistributed balance of taxed profits to be carried forward will be £169,094, compared with the £155,210 which we brought forward from the previous year.

CAPITALISATION OF RESERVES

Our authorised and issued capital at £350,000 has remained unaltered since 1929, yet the value of our net assets now exceeds £600,000 represented by our Capital, Reserves and undistributed balance carried forward. We feel therefore that the time has come to ask you to approve the following:

1. That the authorised capital of the Company be increased to £700,000;
2. That £70,000 of the General Reserve (now standing at £90,000) be capitalised and distributed to shareholders on the basis of one fully paid 10s. share for every five such shares now held.

We have no immediate plan for any issue for cash of any part of the increased capital. It is, however, convenient under present conditions, to have a reserve of unissued capital which can be called upon if the need arises. Furthermore, we visualise the profitable use of additional funds in the future and we are seeking an increase in our borrowing powers. We also have under consideration the desirability of securing some additional funds by means of an issue of Preference Shares, and if we so decide, we shall call a further meeting of the shareholders to authorise a further increase in capital to enable us to make such an issue. We believe that the utilisation in due time of further resources obtained by borrowing, supplemented if found feasible by a limited issue of Preference Shares, will prove of considerable benefit to Shareholders.

We have been advised that as our present Articles are not in accord with the best current practice, having been adopted many years before the passing of the Companies Act, 1948, we should take the present opportunity to adopt new Articles.

After referring to the trading results for the year of the parent Company and the subsidiaries and to the dividend of £20,000 from the trade investment in The Whelmar Property Co. Ltd., the prospects for which seemed very favourable, and also referring to the beneficial effect the provisions of the new Planning Bill would have on current negotiations in respect of land to be compulsorily acquired, the Statement continues:

Local and other public authorities acquiring land compulsorily will also benefit, I am quite sure, because now that a proper, if not generous, measure of compensation is assured, they will be met by landowners willing to sell without the long drawn out opposition that has been the general feature of such negotiations since 1947.

FUTURE PROSPECTS

My colleagues and I are optimistic as to the future. While a generally high level of internal prosperity and full, or nearly full, employment is maintained in most parts of the country, there must be a continuing demand for good modern housing. A demand for housing implies a steady demand for land. We specialise in the provision of developable land complete with roads and services and ready for use for building purposes. Building land, however, is getting very scarce and very dear. If the Government desires house building for individual home ownership to expand or even to continue at the present rate, considerable relaxation of planning restrictions will be required and a second look at some of the Green Belt and "White" areas hitherto regarded as inviolate. Plans to this end need consideration now, otherwise the supply of building land will dry up when it may most be needed.

If our trading profits are maintained at the level of earnings in the last three years, the reduced rate of Profits Tax now applicable should enable us to maintain the rate of dividend on the capital as increased by the proposed scrip issue.

KILLINGHALL (RUBBER) DEVELOPMENT SYNDICATE, LIMITED

MR ADDINSELL'S STATEMENT

The forty-ninth annual general meeting of this company was held on February 20th in London, Mr Jack Addinsell, chairman, presiding. The following is an extract from his circulated statement for the year to June 30th, 1958:

Once again our crop for the year at 419,100 lb showed an increase mainly due to satisfactory yields from our 1937-38 rubber, whilst output of areas replanted in 1948, 1949 and 1950 continued to rise steadily. Rubber replanted in 1952 and 1953 with clonal seed amounting to 151 acres was brought into tapping towards the end of the year and should contribute to a substantial increase in crop during the current year, which it is estimated may reach a figure in the region of 500,000 lb.

As a result of the fall in rubber prices net proceeds at £34,948 were £4,306 lower than for 1956-57. This fall amounting to nearly 3¼d. per lb was partially offset by a reduction of just under 1½d. per lb in cost of production and export duty and cess. It is, however, satisfactory that our tin tribute income for the year was £6,171 higher and as a result profit before tax on the year's working was up by £2,911.

The profit for the year, including £17,757 tin tribute, amounted to £35,844. An interim dividend of 20 per cent was paid on July 31, 1958, and your Board recommend a final dividend of 45 per cent. The directors also recommend the payment, out of the carry forward of £6,656, of a dividend for no specified period of 15 per cent.

Yields from our young rubber continue at a satisfactory rate and several fields are now in the four-figure yield category. We can look forward to higher rubber outputs over the next few years.

The report and accounts were adopted.

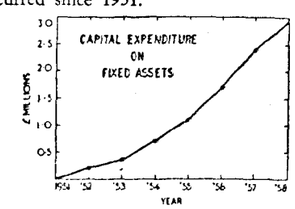
THE PROPRIETORS OF HAY'S WHARF

SIR RUPERT DE LA BERE'S REVIEW

The fifty-first annual general meeting of The Proprietors of Hay's Wharf Limited was held on February 25th in London, Sir Rupert De la Bere, Bart, KCVO, chairman, presiding.

The following are extracts from his statement circulated with the report and accounts for the year to September 30, 1958:

Last year I said that provided no further heavy increases in costs arise and assuming that there will be no serious recession in the country's overseas trade, the Company should be able to maintain its present distribution of dividend. No one could have foretold at that time the serious dislocation to the trade of the Port of London caused by the unofficial dockworkers' strike which regrettably took place last May, and which lasted nearly six weeks. Under these circumstances the Group did well to increase its net profit, and I am glad to be able to recommend a maintained distribution by way of dividend for the year 1957-58, and to declare a special interim dividend for the year 1958-59.



CAPITAL INVESTMENT

It was decided to build on the Company's freehold land a new waterside cold store, incorporating the latest technical improvements in cold storage and the results of many years of practical experience of operation. The work of erection has begun and is being undertaken by our own engineering and building departments.

The additional finance required for this has caused the Company, for the first time for many years, to obtain from the public additional funds for carrying out one of its major capital projects. These funds were procured by the issue of £1 million 6 per cent Debenture Stock 1978-83.

It should be remembered that there will be a development period during which the cost of servicing the Company's Debenture Stock will be a charge upon the profits, without a compensating increase in income. Whilst I have every confidence in the long-term value to the Company of the investment, it is possible that it may be some years before its full benefits can be realised.

The extent of the Company's recent development expenditure is clearly seen from the accompanying graph, which shows the cumulative total of the capital expenditure incurred since 1951.

The main headings under which this capital expenditure was incurred are as follows:

	£
Warehouses	1,104,000
Cranes, plant and machinery ...	745,000
River craft and tugs	384,000
Road vehicles	167,000
Offices, commercial buildings, roadways, land, etc.	523,000
Total	£2,923,000

Further improvements are in hand and our building and engineering departments have a full programme of new capital work, both for the Company and the Company's tenants and other outside firms, which will keep them occupied for the next three years.

During the year, an independent valuation was obtained of the Company's freehold and leasehold properties, disclosing a figure substantially in excess of the total figure shown in the consolidated balance sheet.

SUBSIDIARY COMPANIES

Hay's Wharf Ltd.—The Port Transport Industry was faced with a substantial wages claim last May which was rejected on the grounds that increases in port costs really must be halted. However, after interminable discussions, the Minister of Labour and National Service appointed Lord Cameron to preside over a Court of Inquiry last August, the result of which was a wage award to all dockworkers throughout the country, effective from the 1st September, last.

The increased labour costs could not be wholly borne by the industry for more than a few months, and it became necessary to raise the handling charges in London with effect from January 1, 1959. This has been done by the Port of London Authority and by the Public Wharfingers with the greatest reluctance and it should be noted that no increase was made in rent charges on goods, in spite of the fact that rent rates for goods stored in warehouses are so low as to make replacement of buildings used solely for general warehousing entirely uneconomical.

The trading results, during what was a very difficult year, show an improvement on last year. I must, however, warn that, based on experience so far this year, there will have to be a very considerable increase in business if this improvement is to be maintained: for the Company has had to carry the whole of the pay increase awarded to dock-workers for the four months to January 1, 1959, and the tonnage of goods landed and in warehouse remains low. However, there is reason for confidence that in due course, if not perhaps in the current year, the results of this Company will reflect more closely the increasing investment which has been made.

Lighterage Companies.—There has been much work done during the year on further expansion. The old-established lighterage Company, McDougall and Bonthron, Limited, has been acquired, and has provided a very useful addition to our fleet of craft.

In view of the difficult year, the trading results of the lighterage Companies were not as satisfactory as those of last year, but are by no means discouraging; and, since the beginning of the current financial year, the fleet has been fully engaged, and there are signs that this may continue well into 1959.

Cartage.—The Company's fleet of vehicles was further expanded during the year, and I am glad to say that, in spite of the dock-workers' strike and other difficulties, most of the fleet was kept working to capacity, and a satisfactory increase in revenue was achieved.

Bonded Vaults and Bottling.—All the Companies engaged in this section of the business have shown steady progress during the year. With additional vatting and bottling equipment installed to provide a more extensive and comprehensive service, it can

be expected that increased earnings will accrue in the coming year.

Shipping, Forwarding and Travel.—Earnings of most of the shipping and forwarding Companies have increased during the year. Increasing costs were experienced by all the Companies during the year, but so long as turnover can be increased correspondingly the shipping and forwarding companies should be able to make a useful contribution to the profits of the Group.

The report was adopted.

THE OMNIUM INVESTMENT COMPANY

INCREASED GROSS REVENUE

VALUATION DISCLOSES GRATIFYING APPRECIATION

MR H. C. DRAYTON ON COMPANY'S PROGRESSIVE RECORD

The seventy-second annual general meeting of The Omnium Investment Company Limited was held on February 24th in London.

Mr H. C. Drayton, the chairman, who presided, said:

In the year under review, our gross revenue amounted to £397,700, against £363,600 in the previous year, an increase of £34,100. After deducting our expenses, directors' fees, debenture interest and income tax, we are left with a net amount of £184,000, against £166,200. Your directors are recommending a dividend of 14 per cent, against 13 per cent in the previous year, and there will remain £47,500 to be added to the carry forward.

INVESTMENT VALUATION

The outstanding fact about our balance sheet this year is that our valuation of the investments is £6,924,000, against £5,153,000 for the year ended December 31, 1957, an increase of £1,771,000.

Valuations, as a rule, reflect income to come in the future. That has been my experience over 43 years in the City, but I am not certain that it is so today. We have seen a rising market, whilst industrial profits, as a whole, have been stationary, and in some cases falling; although one must admit dividends from industrial companies have not fallen with their fall in profits.

I do not mean to convey to you that we are not likely to have an increase in revenue in the current year; I think we will. We can still, by judicious change of investments, improve our revenue, but what I do want to try to convey to you is that I do not think that you must take it for granted that the revenue will tend to rise in the same steep manner in which our valuation has risen.

To put the valuation in a form which is understandable, the break-up value of our Deferred stock at December last was 71s. 3d. per unit, but since then we have issued, as you know, as rights to you one share for every ten pounds held, so that roughly 142,000 additional stock units have been issued. Taking this into account, and applying the valuation of last December, the break-up value of the present capital is approximately 66s. for each Deferred unit.

TEN YEARS' PROGRESS

It is interesting to look back over ten years in this company. Just over ten years ago, our Deferred capital was £632,225; today, that Deferred capital is £1,597,200, or just over 1½ times. All of that increased stock has been offered to stockholders as rights year by year at par. In those same ten years, although we have issued that large amount of Deferred stock at par, the dividend has increased from 7 per cent to 14 per cent. Any person who held £100 Deferred stock ten years ago and had taken up all his rights, today would hold £250 of Deferred stock, showing him a cash profit at the present price of £420. In addition, he would have received an average yield in dividend on his cost price of 11 per cent per annum.

Ten years ago the cover for our Debentures was 3 times as regards security and 2½ times as regards interest. Today, it is 5¼ times as regards security and 7½ times as regards interest. The cover for the Preferred has gone up from 3½ times to 8½ times as regards security, and, as regards dividend, from 3½ times to 9½ times, so that you can see that the policy the board has adopted does not only benefit the Deferred stockholders, but it has also made our Debenture interest gilt-edged; it has also almost made our Preferred into a Debenture, at any rate as regards its cover from the security angle and from the interest angle.

THE CURRENT YEAR

As regards the current year, I am not pessimistic about our revenue. I think we shall be able to present to you a reasonable report for the year we are now in. As I have mentioned, I do not look forward to an upward swing in revenue at all commensurate with the upward swing in valuation, but I think, when we meet you next year, you will be satisfied.

BUSINESS AND PERSONAL

WHEN is a sherry like a shaft of sunshine? When it's El Cid. That's the superb Amontillado that adds brightness to life. El Cid has the authentic Spanish quality. It's light, full-bodied, lovely.

CITY OF LONDON COLLEGE: OLD STUDENTS please note retirement after over 40 years' teaching economics, etc., of Mr L. Aaronson, B.Sc.(Econ.), M.B.E., who taught many of them. A testimonial fund is open in his honour.—Please send contributions to Miss M. Swannie, at City of London College, EC2, payable to L. Aaronson Testimonial Fund.

APPOINTMENTS

FORD MOTOR COMPANY LIMITED wishes to recruit staff around the ages 24-28 with *sufficiently high ability to work in their* central staff on commercial, financial and economic studies covering all aspects of the Company's operations and future plans. Applicants are requested to indicate, in addition to the normal details of academic record and previous experience, the extent to which they have the broad background and analytical approach necessary to appreciate the requirements of senior executives and the full implications of the problems to be tackled. Starting salary and prospects depend entirely on the calibre of the applicant.

Please send full particulars to Training and *Recruitment Department (012A), Ford Motor* Company Limited, Dagenham, Essex, quoting reference CGV.

RESEARCH ASSISTANT required by the Labour Party. Preference will be given to a specialist in economic affairs but consideration will also be given to a suitable candidate with a *general interest and knowledge* of political, social or industrial problems. Honours degree, though not essential, is an advantage. Salary *scale Grade III £665-£725.—Application forms obtainable* from the Secretary, the Labour Party, Transport House, Smith Square, London S.W.1, to be returned by March 14th.

COUNTY COUNCIL OF ESSEX

STATISTICIAN

Applications invited for above appointment on established staff of Health Department—salary not exceeding £1,175.

Candidates must be University graduates who have taken statistics as a subject of degree course. Preference given to those with previous experience in medical and other vital statistics. Superannuation. Medical examination.

Application forms from County Medical Officer of Health, County Hall, Chelmsford, to be returned by March 16, 1959. Canvassing disqualifies.

MARKETING MANAGER

A Marketing Manager is required. This is a new appointment in an old-established food manufacturing company, with headquarters in London. Age limits 35-45 years. The successful candidate, who must be capable of earning immediately a minimum salary of £3,500 per annum, will be responsible to the Managing Director for the development, planning and execution of the Company's marketing operations. He must have experience at a senior level of marketing branded food products. He must also have experience of sales, advertising and the use of market research as he will be responsible for the co-ordination of the activities of these departments. The Company has a contributory pension scheme and the prospects are good.—Applications, which will be treated in strict confidence, giving details of age, qualifications and experience, should be sent to Box 1135.

AMERICAN COMMUNICATION CONCERN in Tripoli, Libya, requires the services of a QUALIFIED ACCOUNTANT. Must have at least 5 years' commercial experience. Salary commensurate with experience plus $4,00 daily cost-of-living allowance.—Air-mail replies to Hycon-Page, P.O. Box 666, Tripoli, Libya, giving full details of personal history, previous employment, and salaries received.

GENERAL MANAGER required by a young but important company in the Punched Card/Accounting Machinery field. This Company produces entirely new type of equipment to provide input tape for punched card machines or computers. The Offices are in London. The position has great scope and should lead in due course to a seat on the Board. Salary would be according to qualifications but not less than £2,000 per annum. Experience of selling and systems is essential.—Box 1136.

WOOLWICH POLYTECHNIC

LONDON, S.E.18

Applications invited for an Assistant Lecturer, to teach Accounting, Economics and allied subjects up to Intermediate Professional standard. Candidates should have an Honours Degree in Economics with Accounting as a special subject and/or a Professional qualification in Accountancy.

Salary scale within £475-£1,075 (plus 5 per cent), commencing salary according to qualifications and experience, with London allowance of £36 to £48 (plus 5 per cent).

Particulars and application form from Clerk to Governors, to be returned by 14th March, 1959.

UNIVERSITY OF CAMBRIDGE

DEPARTMENT OF APPLIED ECONOMICS

Applications are invited from economists and statisticians for appointments from October 1, 1959, in connection with the Department's research programme. Each appointment will be for a limited period related to the duration of the specific research project to which the applicant is assigned; the projects vary greatly in character, and call for very different types of qualification. In particular, some projects involve statistical and field research into productive capacity and economies of scale due to technical factors. Applicants should normally have at least a good second class honours degree in economics or statistics, and research experience in either field is desirable for appointments in senior grades. The pensionable stipends of the posts are on scales ranging from £650 to £1,750 a year.—Applications, giving details of academical qualifications, experience, and any special research interests, together with the names of two referees, should be sent before April 4, 1959, to the Director, Department of Applied Economics, 7 West Road, Cambridge.

For other appointments see page 835

THE UNIVERSITY OF NEW SOUTH WALES

SENIOR LECTURER/LECTURER IN ECONOMICS

NEWCASTLE UNIVERSITY COLLEGE

The University invites applications for appointment to the position of Senior Lecturer/Lecturer in Economics at the Newcastle University College.

Salary: *Senior Lecturer*, £A2,208-£A2,558 *per annum*.
Salary: Lecturer, £A1,508-£A2,108 per annum.

Commencing salary according to qualifications and experience.

Applicants for position of Lecturer must possess a degree with honours or equivalent qualifications; for appointment as Senior Lecturer applicants must possess a higher degree or equivalent qualifications.

Subject to satisfactorily passing a medical examination, the successful applicant will be eligible to contribute to the State Superannuation Fund.

Appointee will be eligible for twelve months' study leave on full salary after six years of service.

It is expected that a scheme to assist members in house purchase will shortly be implemented.

The University pays first-class sea passages and reasonable removal expenses for an appointee and his dependent family in taking up duty.

Four copies of applications, including the names of two referees, should be forwarded to the Agent General for N.S.W., 56, Strand, London, W.C.2, and a copy forwarded by air mail in an envelope marked "University Appointment," to the Bursar, Box 1, Post Office, Kensington, New South Wales, Australia, by *March 31, 1959*.

THE ECONOMIST FEBRUARY 28, 1959

COMPANY AFFAIRS

IMPERIAL TOBACCO

FROM the preliminary profits statement of Imperial Tobacco, discussed here on February 14th, shareholders knew that the advance in profits in the year to October 31st was the product of a full year of higher cigarette prices. Imperial Tobacco still accounts for about 70 per cent of cigarette sales in this country, but it lost just a little more ground to its competitors last year. Hence, it is a reasonable deduction that since costs, including leaf tobacco, were still rising and since the group has been spending more on advertising, another forward surge in profits this year is unlikely. Stable profits at their 1957-58 level, however, are not to be despised. They provide satisfactory cover on the 21 per cent ordinary dividend, restored after only one year of 20 per cent.

Year to October 31	1957	1958
Consolid. earnings:	£	£
Trading profit	28,895,116	31,432,827
Income from invests.	5,252,375	5,492,924
Depreciation	2,463,473	2,625,576
Interest charges	4,851,572	4,488,586
Profit before tax	26,806,940	29,785,990
Tax	14,800,029	15,459,707
Net profit	12,004,849	14,324,300
Ordinary dividend	6,911,602	7,257,182
Ordinary dividend (per cent)	*20*	*21*
Retained profits	4,590,629	6,496,093
Cons. balance sheet:		
Net fixed assets	29,935,781	32,780,625
Net current assets	150,738,291	145,512,791
Stocks	157,973,588	152,494,020
Debtors	59,434,250	60,054,778
Bank overdrafts	26,416,513	29,055,596
Loan capital	65,000,000	55,000,000
Reserves	57,119,486	63,647,273
Ordinary capital	60,100,880	60,100,880

£1 ordinary unit at 56s.6d. xd yields 7·4 per cent.

On an income stock such as "Imps" investors cannot expect much growth in dividends. This year net profits will benefit from the change to a flat rate of profits tax, but presumably the directors will continue to put the emphasis on profit retentions to support the replacement of assets and the big research programme. The group, moreover, has the continuing liability of financing stocks (including a large element of duty on tobacco out of bond). In 1957-58, the tobacco crops both in Rhodesia and in the United States were not of the quality required by Imperial Tobacco, which was accordingly unable to purchase a full year's using of many grades of tobacco. As there was a small increase in duty-paid stocks, the fall of £4.7 million to £152.5 million in the book value of stocks does not fully reflect the decline in their physical volume. That decline enabled the company to pay off the £10 million in 3¼ per cent notes (1953-58) without undue strain: only £2½ million more was borrowed from the banks, to which the group was in debt on October 31st to the tune of £29 million. The aim of Imperial Tobacco must be, as far as it can, to build up its stocks again this year, at some increase in short-term debt. But that is a far less serious worry now that interest rates have fallen and credit is easier to obtain.

CARRERAS

WHEN Rembrandt of South Africa through its British subsidiary Rothmans acquired full control of the voting ordinary stock in Carreras, the "B" ordinary shareholders who owned the bulk of the equity but had no votes were left out in the cold. They have since been wondering how they would fare as a big but powerless minority in a new company. They should be encouraged by what the new chairman, Mr A. E. Rupert, who is also the chairman of Rembrandt, had to say at the annual general meeting. He was frank and forthright and offered no easy solutions. Mr Rupert is clearly not willing to leave "B" shareholders out in the cold for good, for he hopes to appoint directors who will be specifically concerned with the general well-being of Carreras and "in particular of the vast body of 'B' shareholders."

Mr Rupert had a formidable list of what he called the "major defects" of Carreras. They include: lack of sales strength; a costly superstructure; outmoded machinery and plant; a new factory at Basildon far too large for modern manufacturing conditions; ancillary services performed within the group that could be done more efficiently outside it; management by committees; and unpredictable export markets. Costs at Carreras were higher in relation to sales than in the Rembrandt/Rothmans group. To remedy these defects, Mr Rupert proposes:—

(1) Selling the old Arcadia works, worth about £2 million more than book value;

(2) Integration of purchasing, manufacture and distribution both in England and Canada within the new group;

(3) New blood in executive management;

(4) A new research station at Cambridge;

(5) Equipping Basildon with modern machinery.

These reforms will be carried through in the belief that the new group Rembrandt/Rothmans/Carreras "has much more power to withstand competition than the three have separately." This should lead to "savings in purchasing, production and distribution" and give "much more bargaining power with the suppliers of machines and materials." The "B" shareholders, still powerless to influence the destiny of the company, have better grounds now for the hope that they may gain more from the merger with Rembrandt than if Carreras had continued to go it alone.

HOOVER

HOOVER earned as much in the second half of 1958 as in the whole of 1957. The removal of hire purchase restrictions is largely responsible for hoisting the group's gross profits from £3,757,312 to £5,847,490 in the year to December 31st. This easily surpasses the previous peak in profits in 1954. Gross profits in the last six months of the year were £3,740,000, against £2,107,000 in the first half of the year. Over the whole year turnover rose by 28 per cent, but profits rose by more than 50 per cent, indicating how an acceleration in demand can reduce overhead costs and improve margins. The total dividend on the ordinary and "A" ordinary shares has been raised from 50 per cent to 60 per cent; the new dividend absorbs £845,250 from net profits of £2,339,980, and compares with ordinary dividend disbursements of £704,375 from net profits of £1,923,976 in 1957. The greater part of the increase in net profits has therefore been retained in reserves. The directors say that the dividend rate has been fixed after taking into consideration "projects still under development" which, in keeping with the group's usual practice, are being financed internally. The 5s. ordinary units held a rise of 2s. 4½d. to 64s. 6d. over the week following the announcement. The yield at this price is 4.7 per cent.

MONSANTO

WHEN the chairman of Monsanto Chemicals, Sir Miles Thomas, disclosed a slight fall in the group's sales and a sharp drop in profits for the first six months of 1958 he added that results in the second half of the year should benefit from new plant coming into production. Sales did improve in this period and profit margins were a little better. Over the full year the sales of the parent company fell by 1.6 per cent from £15,683,272 to £15,426,633, but the group's trading profit rose by 3.4 per cent from £3,094,081 to £3,200,047.

But profit margins will have to widen more than this if equity earnings are to benefit, for the rise in depreciation by nearly a quarter from £862,143 to £1,069,857 and the jump in interest of £200,394 to £388,781 (reflecting a full year's service of the £3 million debenture stock) led to a fall of almost 8 per cent in net profits—from £1,078,557 to £992,415. The ordinary dividend has been left unchanged at 13½ per cent. Sir Miles now says that the starting up of new plant should strengthen Monsanto's ability to reach new or expanded markets in the "increasingly competitive" conditions now ruling—an observation to which point is given by the fall from 41 per cent to 35 per cent in the share of total sales represented by exports.

LEWIS'S AND HARRODS

THE 1958-59 profits of the two big department store groups—Lewis's and Harrods—do not make exciting reading but the pill is sugared for shareholders in Lewis's Investment Trust for they are receiving an effective 16 per cent on the enlarged ordinary capital following the 25 per cent scrip issue (against an equivalent 13 3/5 per cent). The earnings cover of 2¾ times may suggest to some investors that scope for raising the dividend even further is not exhausted and the 4s. units at 17s. 9d. yield only 3½ per cent. This is in contrast with the return of 4½ per cent offered by the £1 ordinary shares of Harrods standing at 78s. 6d. Perhaps this discrepancy reflects in part the market's disappointment with the failure of the Harrods directors to make a scrip issue—let alone raise the dividend—following last year's disclosure of the hidden reserves behind the balance sheet figures of fixed assets. Their decision to hold the ordinary dividend (although it is covered 2¼ times by earnings) at 17½ per cent for the fifth year running will do nothing to alleviate this feeling of disappointment. Presumably both groups are now doing better business, for their profits last year must have been affected by the London bus strike and could have benefited only slightly in the latter months from the Government's measures to stimulate consumption. The gross profits of Lewis's Investment Trust fell by £134,000 to £4,581,383 but its net profits rose slightly from £1,969,217 to £1,974,939. Harrods' gross profits fell even more sharply, dropping by £227,950 to £2,245,166 but its net income remained practically unchanged at £1,076,744. Whatever specific reasons may explain these results, they leave the impression that the department stores are still losing trade to the multiples.

ENGLISH ELECTRIC

ENGLISH ELECTRIC'S recent appeal for new money has taken care of the huge rise in its bank overdrafts that the publication of its full accounts for the year to December 27th has now revealed. The group's overdraft, excluding that of the Canadian subsidiaries, jumped from £8¾ million to £20½ million during the year, but the issue of a £6 million debenture and a rights issue of ordinary shares which brought in about £4½ million since the end of the year has restored the overdraft to more normal dimensions. A large part of the short-term debt was used to finance a rise of £8¾ million to £57½ million in stocks and work in progress.

The rise in trading profits from £10,233,840 to £11,036,124 showed that the group could advance without faltering through difficult as well as favourable years, and the 50 per cent scrip issue and the prospect that the 1959 dividend will be at least equivalent to the 14 per cent paid last year came as a powerful reassurance to the market when investors in heavy electrical engineering shares, following the reduction in the GEC dividend, were beginning to become a little anxious. A further reassurance can be found in English Electric's order book: although the incidence of large orders in 1957, including the Hinkley Point nuclear power plant, caused the value of new orders received during the year to fall from £184 million to £132 million, outstanding orders both at home and in Canada were almost unchanged at £264 million (against £269 million).

From a different angle of vision, however, the picture is slightly less charming. To say that profit margins are being eroded is commonplace, but over the last three years the sales figures which English Electric has disclosed for the first time show that increased turnover has been solely responsible for the advance in profits. Indeed the ratio of net profits to sales and to capital employed, has contracted sharply. The ratio to sales fell from 2.02 to 1.86 per cent over the last three years and as a percentage of net assets from 5.02 to 3.91 per cent. If English Electric is to maintain its high level of profits, it would seem that its order book ought to be expanding.

CLARKE, CHAPMAN

NINETEEN FIFTY SEVEN must seem a long way off to the present shareholders in Clarke, Chapman. The trading profits the company then announced for the financial year, 1956, showed a tremendous jump to a peak of £1,954,645, and the dividend was six times covered at a time when any share with an interest in atomic power was accorded pride of place in the market. The company's £1 shares rose to 180s. and the yield fell to about 3 per cent. That was a vintage year and the two succeeding years show how exceptional it was. In 1957 the trading profit declined to £1,475,999 and the ordinary dividend was left unchanged at 27½ per cent. In 1958 the trading profit declined further to £1,041,208, and allowing for the one-for-one scrip issue the dividend at 13¾ per cent is again left effectively unchanged. The dividend is covered three times by net earnings of £371,775, but this profit is well down on the 1957 figure of £555,641. The units fell 4s. 6d. after the announcement and now stand at 60s. 7½d. and offer a yield of 4.5 per cent. A clear warning was given by Mr J. B. Woodeson in his review last year. Contracts from conventional power stations kept the firm busy in the years of peak profits. Contracts from nuclear power stations present different engineering problems and the switch from one to the other demands far-reaching adjustments. Mr Woodeson also said then that profits would return to "more normal levels" and would continue at this lower rate until the company had "become fully established in the expanding nuclear field."

BRITISH HOME STORES

FOR the year to January 3rd the directors of British Home Stores raised the ordinary dividend from 37½ per cent to

41¾ per cent and they also announced a one for ten scrip issue. The chairman, Mr H. Hindley now tells shareholders that it is hoped to maintain the new rate on the larger capital. In making this statement Mr Hindley specifically refers to the "somewhat conservative dividend policy" hitherto pursued and argues that this policy can be modified now there is greater freedom for financing capital spending. On this new dividend basis, the 1s. units at 9s. 1½d. yield 5.3 per cent.

The slight fall in trading profits last year from £1,686,997 to £1,640,140 shows that profit margins have been reduced for turnover has risen "substantially." No doubt the two new stores at Birmingham and Wigan will add to sales this year but the policy of price cutting that BHS is now following—like its big competitor, Marks and Spencers—may squeeze margins still more.

AUSTRALIAN ISSUES

AUSTRALIA has a big appetite for capital and "rights" issues of ordinary stock by three of the largest Australian companies came hard on the heels of the relaxation of CIC controls in this country.

Broken Hill Proprietary, the iron and steel giant, made a one for five issue of £1 ordinary shares at par in the spring of 1957 and again in 1958. Now comes the hat trick with a further rights issue on the same terms. As the company is domiciled in Australia, it needed CIC consent for the 4,000 shareholders on its London register (with a combined holding of approximately 3½ million shares) to have the right to subscribe for 700,000 £1 ordinary shares out of the total issue of 10 million units. The current price of the £1 units in London is 42s. 9d.

Consolidated Zinc, registered in this country, does not need CIC consent for its one for six rights issue of £1 ordinary shares. The issue price has not yet been fixed but the current market price on the existing units is 60s. 3d.

Dalgety and Company, which combines a huge wool business with a wide range of ancillary merchanting interests, has announced plans for raising £6,200,000. About £2 million will come from a three for eight rights issue of £1 ordinary shares at a price of 24s., against a current price of 36s. Another £2 million will come from the issue of 6 per cent debenture (1979-84) at par. Holders of all classes of capital and existing debenture holders will have the right to subscribe. Finally, an offer of £1,200,000 of secured notes will be made in Australia. These issues will be made against a not very inspiring background. Profits for the year to June 30th are expected to show a substantial fall. But the directors intend to pay a tax free interim dividend of 3 per cent on existing capital and a tax free dividend of 4 per cent on the larger capital; this compares with the equivalent of 7¼ per cent, tax free, paid for 1957-58.

"CHARTERED"

TO qualify as an overseas trade corporation, the British South Africa Company has transferred the greater part of its investments to a subsidiary company; the holdings of the group as a whole are worth at market values about £35 million. The transfer was made at market values or the directors' valuation in the case of unquoted securities. This gave rise to a surplus of £8,528,720 over the original book value. But on this surplus the company has had to pay £676,545 in tax, so that £7,852,175 has been transferred to capital reserve. The new OTC status took effect provisionally from March 21, 1958, and the tax saving in the financial year to September 30th was approximately £750,000. But the directors estimate that in present circumstances the saving each year will be in the region of £600,000. The introduction of a flat rate profits tax has reduced the attractions of OTC status for the company; under the old two-tier régime, the president, Lord Robins, estimated a year ago that the saving would be about £1 million.

Out of total income for the year of £9,126,561, compared with £12,259,530, mineral royalties fell from £8,758,252 to £6,120,829, while investment income declined from £3,412,795 to £2,907,081. The reduction in taxation has been so large that the net income has fallen only from £4,830,496 to £4,363,217. The ordinary dividend has been effectively raised from 30 per cent to 35 per cent by the payment of a special interim for 1958-59. At 85s., Chartered's 15s. units yield 6.2 per cent.

GILLETT BROTHERS

ALTHOUGH the authorities kept the discount market on a tight rein last year, the reduction in Bank rate from 7 per cent to 4 per cent naturally gave the discount houses handsome profits on their portfolios of bills and bonds. Gillett Brothers disclosed a net profit of £203,344 after transfers to reserves for the year to January 31st; this is the highest ever and compares with £85,777 for the previous year. The ordinary dividend has been raised from 11¼ per cent to 12½ per cent, the level that the board had hoped to maintain following a scrip issue in 1955. But the main emphasis has been on building up reserves to meet future contingencies. Bills held at the balance-sheet date were valued at £60¼ million, compared with £58¼ million a year ago, but bond holdings rose by about £3¾ million to £20½ million. The turnover of bonds increased by more than three-fifths over the year, while the turnover of Treasury bills rose by less than one-fifth. Turnover of commercial bills fell 6 per cent, but if interest rates fall further, more business can be expected. Gillett Brothers, as reported previously, has agreed to subscribe £20,000 of a total capital of £100,000 in a new Rhodesian discount house. Two acceptance houses have already opened their doors in Rhodesia and a flow of commercial paper at attractive rates seems certain.

LEYLAND MOTORS

THE focal point of interest in Sir Henry Spurrier's statement with the full report of Leyland Motors is his reference to the rate of new orders. During the financial year to September 30th orders dwindled, accumulated orders were worked off and the output of the group's factories fell below full capacity. The factories are still not working to capacity, but new orders are now at least matching the current level of deliveries. Business contracted almost equally at home and overseas, but one important development abroad is the tendency to extend longer periods of credit to customers.

KITCHEN AND WADE

THE long and bitter struggle for control of Kitchen and Wade ended a week ago, when Asquith Machine Tool announced that it had received acceptances for its revised offer from over 60 per cent of Kitchen and Wade shareholders. The contest had followed the classic pattern; a bid and a revised bid from Asquith were countered by a series of increased dividends and a capital repayment from Kitchen and Wade. The original offer was made to the Kitchen and Wade board in November. Mr Kitchen announced on December 1st that a bid had been rejected, and he advised shareholders against selling. An extra interim dividend of 6¼ per cent was declared on December 2nd, and on the 3rd Asquith announced their offer. Its terms were finely drawn, giving one Asquith share and two shillings in cash, or a total of 25s. 6d., for two Kitchen and Wade shares, worth 23s. on December 1st. Kitchen and Wade followed this bid by a capital repayment of 2s. 6d. a share on December 9th, and a third interim dividend of 6¼ per cent on January 10th. The Kitchen and Wade shares had reached 18s. 6d. by January 13th, and on the 14th Asquith, which had made a 100 per cent scrip issue on January 6th, increased its offer to five Asquith ordinary shares and 5s. in cash for every four ordinary shares in Kitchen and Wade. This offer was worth about 19s. a share, and it is the one which has now been accepted, despite a fourth interim of 8¾ per cent announced by Kitchen and Wade on February 10th; that dividend was conditional on the company retaining its independence.

The shareholders in Kitchen and Wade no doubt considered that the more buoyant profit record of Asquith offered better prospects for the future than did the belated generosity of their board. The attraction that Asquith found in Kitchen and Wade was that the works of the two companies adjoin one another, so that their production can easily be rationalised. The Asquith foundry had recently been mechanised, and its capacity exceeded the needs of their own works; Asquith also wanted to obtain the benefits of larger-scale production. The increasingly competitive conditions in the industry produced by the recession in machine tool orders has doubtless made this of greater importance.

London Stock Exchange

FIRST DEALINGS:	Feb. 11	Feb. 25	Mar. 11
LAST DEALINGS:	Feb. 24	Mar. 10	Mar. 31
ACCOUNT DAY:	Mar. 3	Mar. 17	Apr. 7

GILT-EDGED stocks were dull on Monday following the rise in the Treasury bill rate but by Wednesday's close some of the undated and longer dated stocks were showing small gains and the tap stock Funding 5½ per cent 1982-84 rose by ¼ to 103⅝. In a quiet Dominion loan section, the new Rhodesian and Nyasaland 6 per cent stock opened at ⅛ discount on its issue price of £99 and by Wednesday the discount had widened to ¾. Among foreign bonds, Greek 7 per cent lost 1½ to 32 on profit taking.

Industrials closed firmly, if quietly, on Friday following the overnight rise on Wall Street to a new peak. Over the week to Wednesday's close *The Economist* Indicator advanced by 1.1 to 253.5. Power-Gas, following the full report, gained 1s. 6d. to 44s. and Bowater on dividend hopes rose by 1s. 7½d. to 49s. 7½d. But Glaxo on profit taking lost 1s. to 50s. and Unilever NV 1s. 6d. to 104s. Electricals were strong, Thorn jumping by 4s. to 36s. and Vactric by 5s. 9d. to 42s. 6d. in a market short of stock. The market in store issues was firm, Gamage on dividend hopes rising by 2s. 6d. to 66s. 6d. while H. Samuel jumped by 5s. 3d. to 28s. Among textiles, Courtaulds gained 1s. 3d. to 35s. 10½d. following the better figures for man-made fibre output. In building shares R. Costain gained a further 4s. 9d. to 69s. 9d. Motor shares were active, Ford gaining 1s. 1½d. to touch a "high" of 54s. 10½d. Jaguar on the full report jumped by 6s. to 62s. 6d. while Rover at 19s. 3d. and Standard at 9s. 6¾d. were 1s. 9d. and 6d. higher on vague rumours of a link up. But in aircrafts, Hawker lost 1s. 6d. to 31s. 10½d. on the Canadian Government's decision to end the Avro Arrow project. Television shares were affected by the Labour move to curb advertising, Associated TeleVision "A" falling by 4s. 3d. to 64s. 6d. But HP shares were strong on estimates of future business, UDT gaining 7s. 6d. to a new peak of 140s.

Oils were dull following US and Continental selling, Shell dropping by 1s. to 139s. Other leaders eased but Anglo-Egyptian "B" following moves to speed the signing of an Anglo-Egyptian agreement rose by 6s. 10½d. to 38s. 4½d. Kaffirs after suffering from end-Account profit taking rallied strongly; F. S. Geduld advanced a further 4s. 4½d. to a fresh peak of 153s. 1½d. Other OFS shares moved up in sympathy and finance house shares scored good gains. In diamonds, De Beers on dividend hopes rose by 3s. 4½d. to 134s. 7½d.

Coppers were firm following the reports from "Chartered" and Messina but platinum issues turned dull after their earlier rise on the increase in the price of the metal.

THE MONEY MARKET

In recent weeks outside bidders have received the lion's share of the Treasury bill allotment and have forced down the average rate of discount to a level that left no running profit on holdings of new bills over the current rates paid for short money. But at last week's tender, as described in a Business note, the discount houses staged a tactical surprise by cutting their concerted bid by 9d. to £99 4s. 3d. They suffered a further fall from 30 per cent to 27 per cent in their allotment of 91-day bills at the concerted bid price. The average rate of discount rose from £2 19s. 10.89d. per cent to £3 1s. 9.89d. per cent. The rate obtained by the market for its small allotment was £3 3s., suggesting that outside tenderers also lowered their bids.

Money turnover contracted and funds were obtained more easily this week, although rates of 3 and 3¼ per cent had to be paid at times and privilege money was taken. The authorities gave a moderate amount of help on Monday, but on Wednesday they intervened as sellers to take up a surplus of funds. The discount houses have been reluctant sellers of bills: May maturities were sold at 2 29/32 per cent before last week's Bank rate decision; after the bill tender, the rate rose to 3 1/16 per cent.

- **Labour Force to Grow 80%**
- **Natural Income to Triple**
- **Per Capita Income May Double**

We all know just how rapidly Canada is growing, but the Gordon Royal Commission was the first to make any studied forecasts of that development. The growth predicted by 1980 will mean constant changes in Canada's economy. Through our more than 500 branches of the Toronto-Dominion and by our close participation in that economy, we're right at the centre of all Canadian business activity... able to assist any manufacturer planning market expansion in prosperous Canada by supplying such information as:

- **market statistics** • **corporation procedure** • **information on plant sites**
- **advice on customs problems** • **data on market distribution** • **incorporation procedure**

APPOINTMENTS

Vacant 9/- a line; Required 6/- a line.

ASSISTANT TO GENERAL PUBLICITY MANAGER

MULLARD LIMITED invite applications for a new post with interesting prospects. The work will be primarily concerned with the promotion of industrial electronics. Applicants should have had sufficient experience of industrial marketing to enable them to liaise effectively with the Company's various sales and marketing divisions. A general knowledge of advertising would be an advantage but is not essential. A University graduate would be preferred ; age about 30 years. Written applications should be sent to the Personnel Officer, Mullard House, Torrington Place, LONDON, W.C.1.

BIRMINGHAM CHAMBER OF COMMERCE

Applications are invited for the post of Personal Assistant to the Secretary. University degree and/or professional qualifications in law or commerce desirable. Age not over 30. Qualities sought include initiative, tact, breadth of outlook and ability to express ideas clearly and concisely. Appointment offers interesting and varied work, good prospects and contributory pension scheme. Details of education, experience, personal interests and salary required should be sent to the Secretary, Birmingham Chamber of Commerce, 95, New Street, Birmingham, not later than March 14th, marked "Confidential."

ASSISTANT ADMINISTRATION OFFICER

Applications are invited for the above position to assist in the development of administrative control in relation to our Men's Outerwear Trade.
The Headquarters are located at Leeds, and the appointee will be expected to reside in that area. Candidates should preferably have had experience in the clothing industry and membership of the Institute of Cost and Works Accountants is advantageous.
A sound knowledge is essential of Costing, Budgetary Control and the preparation of statistical information for Management. Experience of Punch Card techniques is desirable.
The Society offers a contributory Pension Fund and attractive conditions of employment.
Salary will depend on qualifications and experience, but will be in the region of £1,250 per annum.
Applicants should state details of age, education and experience, and address their replies to The CO-OPERATIVE WHOLESALE SOCIETY Limited, Central Labour Department, 1, BALLOON STREET, MANCHESTER, 4, endorsed "Assistant Administration Officer," to be received not later than 6th March, 1959.

UNIVERSITY COLLEGE, LONDON (Gower Street, W.C.1), requires ASSISTANT LECTURER in POLITICAL ECONOMY. Duties to commence October 1959. Salary range £700-£850 per annum, plus £60 London allowance. Superannuation and family allowances.—Applications, to be received by March 31, 1959, should be sent to the Secretary, from whom further particulars may be obtained.

ACCOUNTANT, NIGERIA. The Tunnel Portland Cement Co. Ltd. as Managing Agents requires a qualified Accountant of some years' experience, age 23/35, as assistant accountant to the Nigerian Cement Co. Ltd., near Enugu Eastern Region, Nigeria. Salary about £1,500 p.a. plus bonus, 18 months' tours, three months' paid leave, free house and medical attention, free return passages self and family, appropriate allowances.—Apply, with full details, to the Staff Manager, The Tunnel Portland Cement Co. Ltd., 105, Piccadilly, W.1.

LEADING BRITISH OIL COMPANY requires an ASSISTANT in its SALES PROMOTION BRANCH Head Office in London. The successful applicant, aged about 26, will be concerned with planning and interpretation of international long- and short-term MARKET RESEARCH. Applicants, possessing a good degree in the Sciences and having had about 3 years' experience in consumer and retailer market and opinion research, preferably with actual practitioners in the field, should write giving full details of age, qualifications and experience and quoting H.4617, to Box 6012, c/o 191, Gresham St., E.C.2.

further appointments and other classified advertisements see page 824

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of ASSISTANT LECTURER IN ECONOMIC STATISTICS. Duties to commence on October 1, 1959. The salary scale is as follows :—£700 x £50 to £850 per annum. Membership of F.S.S.U. and Children's Allowance Scheme.—Applications must be sent not later than March 15, 1959, to the Registrar, The University, Manchester 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF DURHAM

Applications are invited for the post of Reader in Agricultural Economics tenable in the Newcastle Division of the University. The Reader will also be the Provincial Agricultural Economist and the Head of the Northern Provincial Centre for the Provincial Agricultural Economic Service. The person appointed will be required to take up duty on October 1, 1959. Salary in accordance with the Readers' scale (i.e. £1,750 x £75 to £2,125 x £25 to £2,150 a year) with family allowances and membership of F.S.S.U. Further particulars may be obtained from the undersigned with whom applications (15 copies), containing the names of three referees, should be lodged not later than April 11, 1959. (Applicants from outside the British Isles may send one copy only).—E. M. Bettenson, Registrar, University Office, 46 North Bailey, Durham.

SALES DEVELOPMENT MANAGER

Applications are invited from SCIENCE or ENGINEERING GRADUATES aged 30 to 40 years for a senior executive position of unusual breadth and interest in an old established company with a world-wide selling organisation.

After an initial period of training, the successful applicant will be responsible for leadership and management of the Technical Service Department including planning of long term technical development work, laboratory investigation, supervision of the Training School and the care of day to day problems arising in connection with the application of "Sprayed Limpet" Asbestos in railway rolling stock, ships, buildings and other applications at home and abroad in co-operation with the company's sales representatives and distributors.

Applicants must have a pleasing personality and the ability to discuss technical problems at top level. A knowledge of modern languages is desirable, preferably through residence abroad.

The post is pensionable and is located at the Company's new headquarters, near Bolton. A contribution would be made towards the cost of moving.

Please reply giving full particulars of education and experience to the Technical Director.

J. W. ROBERTS LIMITED, Chorley New Road, Horwich, Lancs.

LONDON Merchant Bank with International Investment Department requires ANALYST, age not over 28, with minimum four years quality grounding in Securities Research. Academic or Professional qualifications helpful, but not essential. Career position.—Write Box FE/90, c/o 95, Bishopsgate, London, E.C.2.

THE DISTILLERS COMPANY LIMITED

COSTING ASSISTANT

This vacancy occurs in the Chemical Division of The Distillers Company Limited in London. Candidates should be aged between 25 and 35 and have some experience of costing production processes and budgetary control. The position, responsible to the Divisional Accountant, will be concerned with the scrutiny of various budgets, preparation of standard cost and profitability statements, assisting in the evaluation of the costs of new products and other detailed analyses associated with budgetary control.

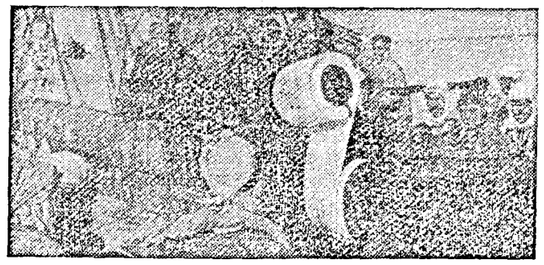
BOWLING GREEN LANE · E.C.1

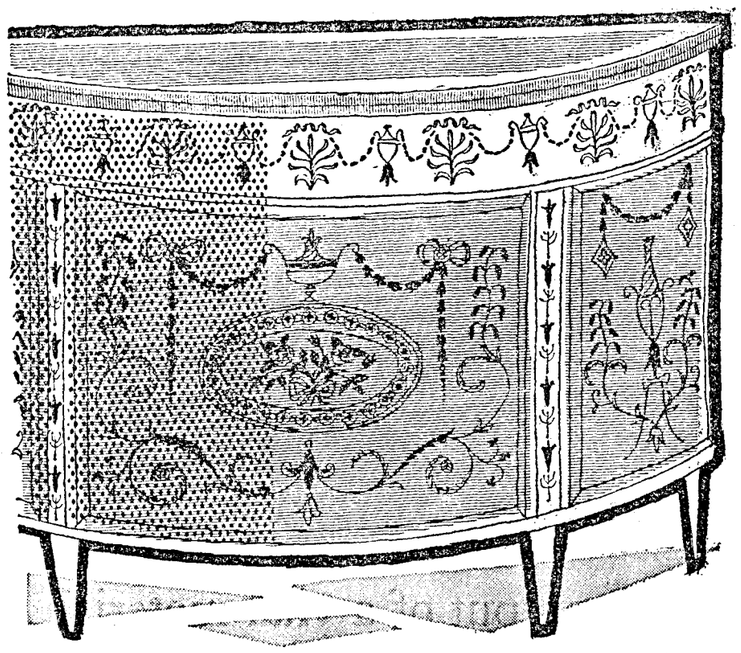
Sixty Eight Years of Specialized Publishing



Since oil was first struck...

and pipes went underground...

corrosion has baffled boffins.

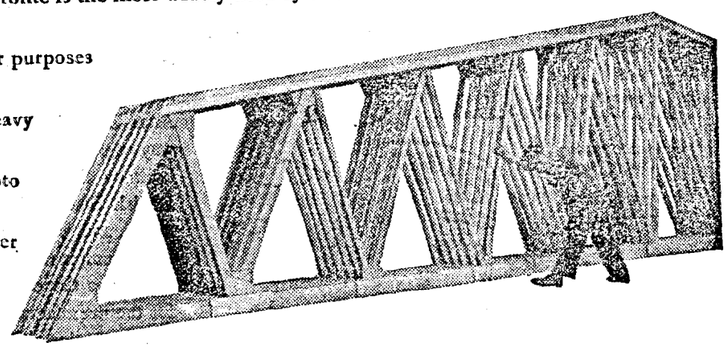


This has unbaffled them!

Anyone concerned with pipelines knows corrosion is a headache. Anyone familiar with Fibreglass knows the cure. Fibreglass Reinforced Tissue, supporting suitable bitumen or coal tar enamels, gives maximum protection against corrosion. During application it provides an immediate bleed-through of enamels, plus high tear and tensile strengths; it withstands immersion at over 500°F., and can be applied quickly and economically. And what's good for oil pipes is good for gas and water pipes—very good!

FIBREGLASS

Fibreglass Limited, St. Helens, Lancs. St. Helens 4224

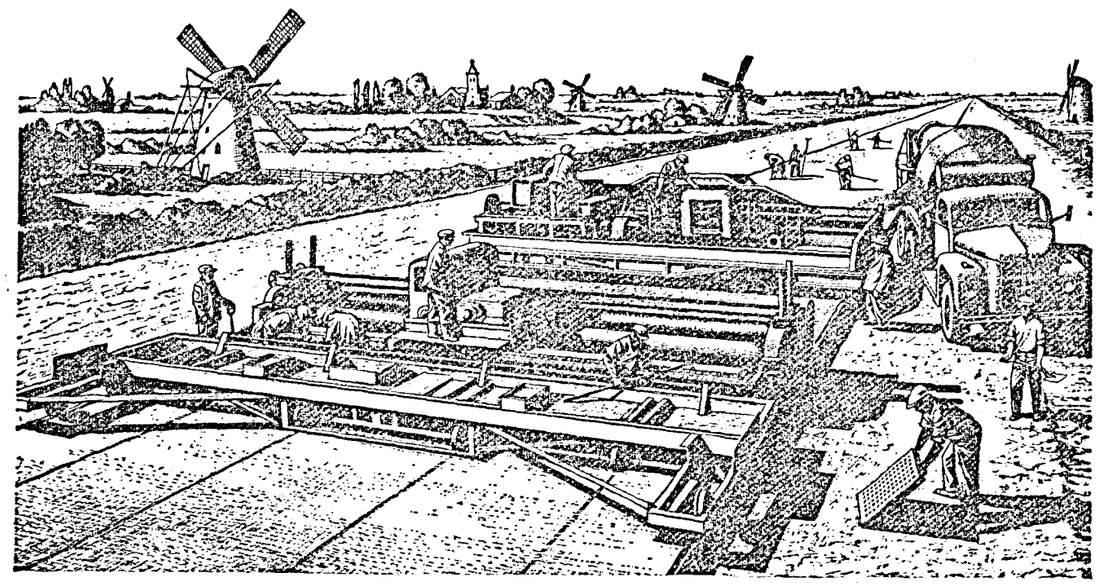


ANNUS MIRABILIS

The ancients—and the great 18th century craftsmen, too—knew the advantages of layered wood. But until recently, plywood was suspect because of the inadequacy of the glues used. New adhesives were developed for aircraft manufacture during the war, so that today the glue line becomes the strongest part of the structures.

Line of Life

Aero Research Ltd., now CIBA (A.R.L.) Ltd., made the first urea-formaldehyde and resorcinol-formaldehyde glues produced in Great Britain. Aerolite is the most widely used synthetic resin adhesive in this country, and is employed for purposes ranging from the construction of heavy timber roof members (as in the photo of a lattice truss by Rainham Timber Engineering Co. Ltd.) to miscellaneous repairs in the home.



Aerolite & Aerodux glues for wood

Aerolite and Aerodux are registered trade names.

Dutch firm trebles output of a vital material

Holland's roads depend on cement. Indeed, the Dutch produce and use more cement per head of population than many other countries in Europe. Of Holland's entire output 65% comes from the ENCI Cement Company at Maastricht, who now produce over 900,000 tons per year, more than three times their pre-war figure. Compressed air is vital to the cement industry. When ENCI began to expand, they made a very careful study of available compressed air equipment. They chose two Atlas Copco compressors—and saved £3,000 a year on fuel bills alone. To-day nine Atlas Copco AR and AA compressors are installed at the ENCI works, supplying air for drilling in the pit, stirring operations, agitating the mixture in slurry tanks, and for the pneumatic transport of cement and other materials.

Brakes that never fail

Compressed air is versatile. Atlas Copco provides the means for all its many applications. For over 40 years Atlas Copco have supplied brake compressors for railway engines of all types. The latest diesel locomotives built by the NOHAB Company for Norwegian and Danish State Railways have a maximum speed of 65 m.p.h. and weigh nearly 98 tons—and use Atlas Copco brake compressors.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

Towards the Nineteen-Sixties

THOSE readers who have persevered with this series of articles to the end may feel entitled to an apology : firstly (and justly) for the length to which the series, by some sinister life force of its own, has grown ; secondly (and wrongly) for the failure to draw categorical conclusions or state a doctrine. If there is a single general statement that emerges from the complex and inconclusive picture that has been drawn, it is the drab generalisation that no single power today is unfettered in its choice of courses of action. Even the greatest powers, the United States and Russia, are severely limited in the choices they can make—by the vulnerability of each to the actions of the other ; by their own built-in limitations ; by their inescapable concern for the solidity of their alliances, and for the figure they cut in the vast uncommitted regions that are neither ally nor enemy. Either in military or in economic terms, no powers of the weight of America or Russia have ever been seen before ; but the men who control these unprecedented accumulations of strength enjoy remarkably little power of movement.

If it is looked at against this background, what is called the decline of British power in the world is not as depressing a phenomenon as it is usually assumed to be. Britain's imperial decline has not resulted from any absolute decline in the strength and energy of this country, but from changes elsewhere that have made the business of dominating others more difficult, as well as more obviously unrewarding, than it used to be. The former subject and client peoples no longer consent to be governed from outside ; the growth of the Soviet Union and the United States has made the great-power competition stiffer than it ever was in the nineteenth century. What has changed is not that Britain has ceased to be strong enough to hold down an actively rebellious Empire by force, or to fight a world war on its own ; Britain never was. The effort required to retain control of distant territories has simply become disproportionate, thankless, and incompatible with the contribution which the needs of the western alliance, and therefore Britain's real vital interest, require from Britain nearer home.

Britain's salvation has been in its readiness to adjust itself to these facts, accepting the necessity of retreat in Asia and Africa, as Labour and Conservative governments alike have done since 1945. But the pace of adjustment is slow, and its reasons are not plainly enough stated and therefore not properly understood. False ideas of what is happening in the world produce an unfounded sense of inadequacy and failure, and lead to false decisions like the decision in 1956 to dam up the stream of Arab nationalism by landing troops in Egypt. If it had not been felt then that the evacuation of the Suez Canal Zone a few months before had been an act of weakness, the reaction to Nasser's seizure of the canal would not have been so violent or so unconsidered. In fact, however, the Suez Canal Zone had long been a military liability and to have insisted unreasonably on retaining it would have been an act of weakness ; there

was no reason to be ashamed of having left, and no sufficient reason to attempt to go back. It was, and is, widely supposed that British power has declined because the British, out of softness or amiability or the folly of socialists, have successively given up the territorial positions on which their national strength rested. But this is wrong.

BRITAIN'S national strength, like the national strength of any other country, is a domestic product, the resultant of its energies, skills and virtues and of the institutions through which these things are co-ordinated. The world-wide chain of bases, depots, dry-docks and cantonments was merely a convenient way of bringing this strength to bear where it might be wanted, for purposes which have now largely ceased to apply, in conditions which are rapidly, very rapidly, ceasing to exist. If Britain after the war had refused to give up India, British strength would not have been increased, but diminished, by the pointless and interminable repressive struggle that would have resulted ; and the refusal would no more have enabled the British to maintain their short-lived military domination of the Middle East than it would have enabled them to retain the Indian Empire itself. In practice this is generally grasped, and acted upon, in a commonsense way in individual situations, though only after they have become seriously troublesome.

When another country gets into such a situation—like France in Syria or Indo-China, or Holland in Indonesia—nobody except the French or the Dutch supposes that France or Holland can strengthen itself by refusing to go. Austria-Hungary fifty years ago was not strengthened, but weakened, by clinging to its subject territories, as was shown when its centre came under pressure and the whole imposing structure tumbled apart. Yet the belief persists that a retreat in one place is a defeat and makes it necessary to compensate by digging in in another. Once established as a mere convenience, bases tend to be regarded as ends in themselves. Behind this is a belief that a world-wide chain of footholds will somehow keep Britain stronger than it is—as is indicated by every defence white paper and by the dogged construction of Naafi clubs and married families' quarters at distant staging-posts that are successively discarded as untenable or useless.

As was argued in the preceding article (February 28th, page 759), Britain's actual behaviour in two world wars suggests that when it comes to a matter of life and death this country fully appreciates that its vital defence interest lies in Europe. Those experiences also show that the security of Europe requires the alliance of the United States, and that the true lifeline of this country (as of Europe) runs not across the Indian Ocean but across the Atlantic. Therefore the American alliance is, and must continue to be, the iron framework of British policy.

Against this it is sometimes pleaded that Middle Eastern oil is also vital. Certainly Middle Eastern oil is commercially and economically very important. At a pinch, however, it can be done without, as the Suez crisis showed in 1956 and 1957 ; the oil can be got from across the Atlantic, with the drawback only that it then has to be paid for wholly, instead of only partly, in dollars. It follows not that Britain should prepare to go to war for Middle East oil, but that it should avoid being completely dependent on one source of oil or one set of routes. If that is done, to keep the sources of the oil under military control is not a necessity but a luxury ; in peacetime it is enough to be able to buy the oil—not because it is indispensable, but because it is profitable.

This is not to suggest that Britain, or Europe, can afford to disinterest itself in the Middle East. What happens to and in the Middle East is plainly of great importance. But it has to be asked whether the methods by which the British interest in the Middle East has been pursued are any longer appropriate, and also whether the priority given to the Middle East in British foreign policy has not perhaps been too high in relation to other priorities. Thus, in Europe, Britain has not yet finished paying for the withdrawals of troops from Germany for Middle Eastern service in 1956. In the fourth article of this series (page 472, February 7th) it was argued that physical containment by such arrangements as the Baghdad Pact is proving ineffective to keep Russian influence out of the Arab countries. There is at present no certainty that Soviet infiltration of the Middle East can be stopped by anybody, if the Russians are set upon it ; but such chance as there is seems to lie in the national self-assertion of the Middle Eastern peoples themselves.

Europeans, who have often in the past blamed Britain for wasting its energies in Middle Eastern adventures, when it ought to have been attending to the problems of Europe and the Atlantic alliance, are not above a little inconsistency themselves ; thus M. François-Poncet, who is experienced enough and wise enough to know better, wrote in *Le Figaro* the other day that Mr Macmillan's expedition to Moscow "arose from a feeling unfavourable to European solidarity." The continental critics of British actions, who are at present more vocal and more severe than at any time since the war, might usefully have noticed that whereas the B and K talks in London in 1956 were largely wasted in a fruitless attempt to secure a free hand for Britain in the Arab world, the main subject of Mr Macmillan's talks in Moscow in 1959 has been, as he said when he got back on Tuesday, "these grave problems of the future of Central Europe."

NO doubt it is inevitable that his critics at home and abroad should be asking two questions. Why, and by what authority, does a British prime minister make the future of Central Europe his business ? What could a British initiative hope to achieve in a matter that concerns the Atlantic alliance as a whole ? The first question can be simply answered by asking who keeps troops in Berlin, and why. The answer to the second is more complicated. Clearly Mr Macmillan had to face embarrassments in Moscow because Mr Khrushchev wants to talk to a man whose decisions can bind the whole Atlantic alliance, and the British Prime Minister is not that man. Certainly the other leading men of the alliance in Europe, Dr Adenauer and General de Gaulle, have been uneasy and suspicious, either about the purpose of the Prime Minister's journey, or about its possible effects ; a false step by him could have made trouble for them, while the greatest good judgment on his part could not have achieved more than has, in fact, been achieved. This amounts to the assurance of some chance to negotiate in tolerable conditions before the Berlin crisis gets finally out of control. It is more than a trifle. To make use of it, however, requires a consensus of the principal allies ; Mr Macmillan's coming visits to Bonn, Paris, and Washington are therefore not a polite formality but an essential part of the whole action. He needs not only their approval for what he has done, but their active assent to the next step.

Through fortuitous circumstances, the British Prime Minister has been the only leading man of the western alliance able and willing to undertake this action at this moment. The purpose of it was not to demonstrate that Britain can do something on its own. Should it succeed, however, it may serve as an illustration of one kind of useful contribution that a country in Britain's position can occasionally make. There will be other occasions when the initiative is best left to others and when Britain's most useful contribution will lie in the effectiveness of the backing it gives to its friends. A country strong and healthy in itself and intelligently led can play a part of which it need not be ashamed, even though it is not powerful enough to set up as world leader.

Federation Still ?

The calamitous events in Nyasaland throw in doubt not the goal of racial partnership in Central Africa but the means of its achievement

ALMOST exactly six years ago, this newspaper, in common with many other liberal organs of opinion, supported the formation of the Federation of Rhodesia and Nyasaland as a calculated risk. It was apparent even then that most articulate African opinion in Nyasaland and much of it in Northern Rhodesia was opposed to the terms of the junction with Southern Rhodesia. But the federal constitution sought to offer genuine safeguards for African interests and to make possible a gradual increase in the African vote and representation. The economic benefits seemed assured —at least to impoverished Nyasaland and near-bankrupt Southern Rhodesia. Above all, federation attracted support through the bleakness of the alternative. That alternative was that Southern Rhodesia would be thrust inexorably into the embrace of South Africa ; and that a battle line would be drawn across the continent for the struggle between black nationalism and white supremacy, without any attempt being made to establish the middle way of "partnership" in the buffer zone between them. On balance it had to be right to give federation its seven-year trial, until the promised constitutional conference of 1960.

The state of the Federation this week, with only a year to go before its working is to be reviewed in London by all five governments involved, is calculated to test sorely the faith of those who gave their blessing at its birth. Nyasaland has been brought by the leaders of the Nyasaland African Congress to a condition of incipient revolt at the very moment when talks on a new constitution were about to begin with Lord Perth. Dr Banda, who had returned home from his surgery in suburban London only six months ago, was threatening another Cyprus. A reluctant governor had first to call in federal troops (and even Tanganyikan police) to back up his own police in restoring law and order ; and then, when (according to Mr Lennox Boyd) he was told that massacres were planned, to declare a state of emergency and arrest the Congress leaders. While contradictory statements fly about, the local security forces (under white settler officers) are acting with Southern Rhodesian toughness. They have already killed 30 rioters. In Southern Rhodesia the government did not wait for any disorders before declaring an emergency, proscribing the Congress party (whose growth it has observed with dismay for many months) and jailing its leaders. It has even pounced upon St Faith's interracial mission farm.

The federal government has called up its reservists as a matter of security under its defence powers ; and it has expelled a British Labour MP under its immigration laws. In Northern Rhodesia, where a general election is only a fortnight ahead, these events come calamitously just when the less and the more extreme sections of the African Congress are debating whether or not African voters should be urged to boycott the new Colonial Office constitution, which gives them some African elected representatives and a say in the election of white members for the first time.

These disasters come after a gradual widening of the breach between the two races in the country over the past six years. The new schools and hospitals have not reconciled Nyasaland Africans to federation ; the small increase in the representation given to them in their constitution in 1956 dissatisfied them, and their suspicions grew when a further change was delayed.

In Southern Rhodesia the granting of a 20 per cent share in the common voting roll to Africans was regarded as a trick ; the Congress discouraged Africans from registering and voting, and thereby deprived the liberal Mr Todd of any voice in the legislature. The restricted franchises given to Africans, and the increase in their representation granted in the federal and Northern Rhodesian constitutions, were also attacked as a deception behind which white supremacy would be extended. African leaders have lost faith in the efficiency of the African Affairs Board since the Colonial Secretary disallowed its submission that these changes in the federal constitution amounted to racial discrimination.

On the white side of the fence, the Southern Rhodesians threw out their ex-missionary prime minister, Mr Todd, last year, and voted so many Dominion party right-wingers into the legislature that Sir Roy Welensky decided he had to lead his whole United Federal party rightwards. Liberals vainly hoped that after Sir Roy's confirmation in power last autumn he would make some gesture to the Africans. Instead, the rush of events has carried him towards "a showdown with Banda," and Dr Banda has been ready to help.

THIS is the reverse of a picture of growing mutual esteem between black and white. It is all the more tragic because, in reality, in six years the Africans have made many new advances. However inadequate the constitutional changes put through by Mr Todd and Sir Roy Welensky may appear to liberals in Britain, Africans have got votes and influence where before they had none or little ; black civil servants work beside white ones in the federal service and there are more black members in the legislatures ; black students sit beside white at the University ; black technicians are being advanced to skilled posts in the Copperbelt. In Southern Rhodesia, where in the past Africans have been resettled and pushed around by the British South African Police and the Native Affairs Department in almost a South African way, a Congress party was formed ; and even the social discrimination at petty shopping-street level has abated.

To those who knew the country and the ingrained attitudes of white farmers and suburbanites in 1953, such progress in liberalism is not inconsiderable. To people on the spot, it is breathtaking. Angry at the belittlement of their own achievements, more and more white settlers like to believe that the advances made would fully meet legitimate African claims at this stage, were it not for the "agitators" whom "the Colonial Office" so reprehensibly permits to undermine the whole edifice. For this reason the settlers cheer the presence of their troops in Nyasaland, call for the end of a dyarchy which they say can never work in Africa, and demand to be entrusted with full power to complete the experiment in their own time and way.

But events have been moving beyond the borders of the Federation far faster than they realise. In 1953 Ghana was still the Gold Coast ; now all Africa north of the Zambesi is in a process of transformation, with Dr Nkrumah going through motions to suggest that he is orchestrating it. This has produced in African leaders everywhere a sense of frantic haste. The fear that Britain might hand over ultimate power to white settler leadership, and thus balk African nationalists of a success that seemed just over the horizon, has become an obsession with the African leaders in the Federation. The thought of being left out of a movement which has reached the Belgian Congo is intolerable. It is far from certain that Dr Banda wanted Lord Perth to come to Nyasaland.

WHAT happens now ? Some Labour members are saying that the events of this week have shattered confidence in partnership ; as a judgment of fact they may be right, but that does not mean that there is any logical alternative to trying to restore it, and still within the Federation. An independent Nyasaland would decline into a rural slum, lacking means to educate its own people to run it. An independent Northern Rhodesia might be viable on its copper—but this presupposes that a totally inexperienced African government would be compatible with an efficient industry, employing thousands of white miners, which must be doubted. Cut off from the copper and wider economic opportunities of the two protectorates, Southern Rhodesia on its own again would wither. The territories have grown together since federation and would bleed economically if torn apart.

The political consequences of breaking up the Federation would be more disastrous still. Southern Rhodesia would then seem certain to become at the least a satellite of South Africa's ; ultimately a mere province. What Lord Malvern feared would happen without federation in 1952 would be still more likely in the mood that would supervene after the breakdown of the federal experiment. Before any members of the British Labour party start to rejoice at the prospect of breaking the Federation, they ought to reflect that against the "liberation" of the five million Africans in the protectorates, they would have to set the loss to an Afrikaner-dominated Southern African state not only of the two million Southern Rhodesian Africans, not only of the majority of Nyasalanders who must find work beyond their homeland, but of the million Africans in the three British High Commission territories as well. Africa would finally split into hard-and-fast white and black blocks at the Zambesi. What would happen then is anybody's guess. One possibility is that the Afrikaners would resume their northward march ; another is that through black nationalism's southward pressure there could eventually be a black *versus* white war, in which the Russians could always outbid even the most left-wing British or American government in their support of black Africa.

The Federation, if in a modified form, has surely got to remain a primary object of British policy in Africa. Paradoxically, one advantage might be reaped from this

week's catastrophes. It seems possible that by 1960 Sir Roy himself may be less keen on the early attainment of independence under white settler control. The white settlers themselves may soon agree in this with the Africans ; British protection is their best safeguard. In this atmosphere it would be easier to loosen the federal shoe where it pinches both the black and the white foot. It should then become possible to make the necessary constitutional adjustments to develop Nyasaland as a black state within the framework of the Federation. Far from pretending that more independence can be granted to the Federation in 1960, it would be better to start discussing some powers that should be restored by the federal government to the territories (non-African agriculture in Nyasaland is a good example).

After this week's disturbances all Rhodesians and Nyasalanders should now accept that the Federation cannot develop to Commonwealth status in the same way as Australia or Ghana. Its problems have no quick solutions. It is fated, if it is to survive at all, to a long period of partnership with Britain. When the dust has died down, these hard truths will have to be faced equally by the Congress leaders in jail and by Sir Roy Welensky in Parliament House. The task of British politicians is to rub these truths home, firmly but tactfully on the precipice edge, with a diplomacy that will arouse the least passions. One task of British electors at the next general election will be to decide whether Mr Lennox Boyd or Mr Callaghan would be more likely to succeed in doing this.

St George in the Kremlin

Our man in Moscow concludes that the Macmillan talks were more than a dialogue of the deaf.

HIGH on the wall behind Mr Macmillan and Mr Khrushchev, as they addressed the gathering at Monday night's reception in the Kremlin, the familiar figure of St George slaying his dragon in bas relief caught the eye. One must not get confused about the symbolism. This was no English emblem, delicately chosen to complete Moscow's welcome to its visitors; the huge white hall of St George, the largest of all the Kremlin's splendid rooms, commemorates the highest military order of knights of Imperial Russia. Nor was the slaying of dragons on the programme that night—a programme which incidentally included the singing of "Tipperary" and the dancing of the gopak, but no vodka—or at any other time during the Prime Minister's visit to the Soviet Union. After encounters such as these it is natural that many people should think in terms of adding up the score and pronouncing one of the participants the victor ; but to assess Mr Macmillan's Russian journey in that way would be misleading and pointless.

A sceptical observer might well dismiss the Anglo-Soviet discussions as what the French call a dialogue of the deaf. Mr Macmillan came, saw, but had no thought of either conquering or being conquered. He prudently took great pains both before and during his visit to avoid arousing expectations that he would bring back anything tangible—even a scrap of paper—and his retreat from Moscow was thus more or less according to plan. Mr Khrushchev, for his part, seemed to be concentrating on one simple maxim: "This man has come to see if I am really in earnest ; very well, I shall show him that I am really in earnest." At an early stage in the talks he rammed home points in the speech he made in Moscow while Mr Macmillan was visiting Dubna ; just before they ended, he did so again in Monday's diplomatic note. The whole thing looked remarkably like an implacable force meeting an unflappable object.

Paradoxically both Prime Ministers represented themselves as defenders of the *status quo*: Mr Khrushchev insisting that the division of Germany must be accepted, and that nobody but a troublemaker could possibly feel reluctant to regularise the position of the two German states ; while Mr Macmillan, with Berlin obviously in mind, repeatedly urged that none of the powers ought to take any unilateral action affecting the rights and interests of others. The British Prime Minister laid special stress on this point at the press conference he gave just before leaving Moscow on Tuesday, in a hot and crowded room full of long-legged men painfully cramped into rows of seats designed for short-legged men. Although wearily urbane to the weary end, he spoke with particular firmness on the general theme of not rocking the boat ; and, when questioned by a correspondent of the Soviet Army newspaper *Red Star* about the possibility of a resort to force to maintain Western rights in Berlin, he declared that agreement on the need to negotiate in any situation of this kind was one of the real advances made during his talks.

IT is not easy to reconcile this claim with the statement in the Soviet note of the previous day about Russia's determination to give full military backing to the east German government "after it obtains full control over the lines of communication between West Berlin and the Federal German Republic." On the surface, it might suggest that this has been one of those unfortunate and sometimes perilous encounters from which each side takes away a different idea of what has in fact been agreed. In reality, however, things are nothing like as confused as that.

For all the appearance of a dialogue of the deaf, both parties have in fact been listening carefully to what

the other had to say. For all their admission of inability to agree on "questions relating to Germany," they entered into the talks with a pretty clear idea of the limits to the possibilities of action there by all concerned, and they undoubtedly emerged from the talks with an even clearer idea. This is admittedly scant consolation; the spectre haunting the Europe of 1959 has certainly not been exorcised. But as far as it is possible to assess the significance of the Moscow talks from Moscow itself on the morrow of their somewhat confused ending, one at least feels able to suggest that Mr Macmillan's visit has had some inhibiting effect on the likelihood of any disastrous miscalculated move in Germany. The tone of public policy statements may have been sternly uncompromising, but the Prime Minister's gesture in coming to Russia at this time has itself not been altogether without effect.

On the effect of his television address to the Moscow public, there are, as might be expected, many conflicting judgments to be found here. But your correspondent's own personal observations suggest that this unprecedented event also left its mark, if only on a strictly limited number of minds. It was certainly a fascinating experience to sit in front of a television set with a little group of Russians watching the familiar face of Mr Macmillan—looking surprisingly like the Soviet head of state, Marshal Voroshilov—and hearing him reel off, in a most un-British manner, a whole catalogue of national convictions, aspirations and achievements, of which the greater part of his audience was wholly unaware (next morning's Moscow newspapers did their best to preserve the innocence of those of their readers who had not seen the programme). It was illuminating to listen first to the spontaneous, and later to the more carefully considered, comments of the viewers. It afforded some striking insight into the strict insulation imposed on Russian minds. The Prime Minister's visit may have been worth making for this one episode alone.

NOTES OF THE WEEK

After the Moscow Visit

MR MACMILLAN'S diplomatic travels are only beginning. He will be in Paris on Monday and Tuesday, and in Bonn on Thursday and Friday. After that, in a fortnight's time, comes the journey to Washington and Ottawa. The western answers to Mr Khrushchev's note of Monday on the steps to the summit will probably be delayed until these journeys are over. Mr Macmillan will have plenty to tell his hosts, and some of them will certainly have something pithy to say to him. After President de Gaulle and Dr Adenauer had talked behind firmly closed doors at Marly on Wednesday they were reported to be agreed that some negotiation with the Russians was desirable. Since both France and west Germany had, in fact, proposed a foreign ministers' conference in the last round of western notes to Moscow on February 16th, this may well be true but it is not new. What needs to be known is whether they will accept the particular form of foreign ministers' conference that Mr Khrushchev has said he will accept; and this will presumably not emerge until the western consultations have gone further.

Whatever Mr Macmillan's memories of Moscow and of the member for Kalinin's election speech during his stay there, he may well face this week's test with more trepidation. There would be no point in his going to Bonn on a reconnaissance; for his travels to have any positive result he must convince Dr Adenauer that the Russian position on Berlin is potentially negotiable. If Mr Dulles, last month, was looking for willing horses to break a Berlin blockade, Mr Macmillan is now looking for something else. This, in fact, is the major development on the western side since the crisis began. One of the western leaders is now publicly committed, by his words in Moscow, to serious and exhaustive negotiation. In return, Mr Khrushchev, although emphasising that he means business, has extended his ultimatum indefinitely by agreeing to a conference of foreign ministers whose work could continue for two or three months. The Moscow communiqué's mention of further study for the question of a zone of limited armaments—nuclear and conventional—in central Europe looks like a possible jumping-off point. Both sides in the Commons have welcomed it. But the indications are that it does not please the partners at Marly.

Parity in Pawns?

MR KHRUSHCHEV, although straining mightily at the idea of a foreign ministers' conference, has consented to swallow it, protesting all the while that it will simply be a meeting of gnats. He may be right. Without Mr Dulles, who alone has carried full political responsibility, the foreign ministers inspire little confidence in their ability, or authority, to reach substantive agreement. The busy Mr Gromyko, as Mr Khrushchev called him, is even more strictly a functionary than Mr Molotov used to be. It is sufficient commentary that the presence of the Polish foreign minister, Mr Rapacki, would now be counted as adding distinction to the convocation of great powers. By contrast, the Czech representative would be unlikely to contribute much that was original.

Yet Mr Khrushchev sets some store by this establishment of parity among pawns. Among his farewell words to Mr Macmillan was the assurance that he would do his utmost to explain the British point of view, as he understood it, to his allies. There seems, in fact, to be no insuperable reason why the West should not agree to a conference of six. Its unwieldiness should be no greater than that of a conference

of four, and the more explaining Mr Khrushchev has to do to his allies the better. The ideal parity is, of course, one-to-one. If the outcome of the present jockeying were that the United States and the Soviet Union got together by themselves at the summit, the discussion might be more realistic and even more purposeful.

Even this, however, has its peculiar problems. The unavowed object of United States tactics has been to avoid saddling President Eisenhower with the strain of a prolonged series of negotiations with Mr Khrushchev. (The dilemma of American representation at either a foreign ministers' or summit conference is further discussed on page 872.) At Geneva, in 1955, the West shut its eyes to the fact that Mr Khrushchev was not of prime ministerial rank; it treated him as the chief Soviet negotiator—although it was Marshal Bulganin who actually appeared in the official photograph of the smiling four. It is not too much to ask of Mr Khrushchev now that he should sit down with a deputy like Mr Herter or an expert like Mr Murphy who would be given full powers to negotiate on behalf of the President of the United States.

Secrets of Marly

DR ADENAUER and General de Gaulle conferred at Marly on Wednesday. *Our Paris Correspondent writes*: Franco-German meetings "at the summit" have become a routine. The German Chancellor, who this time came to Paris, paid a brief courtesy call on the French Prime Minister on Wednesday morning and then proceeded to the hunting lodge of Marly-le-Roy for real talks with the general. The provision of the new French constitution—that "the President negotiates treaties"—must be interpreted as meaning that he effectively runs the country's foreign policy. And he does it with his characteristic predilection for secrecy. News hawks were not allowed around the hunting lodge built by Louis XIV.

The sense of the talks must thus be deduced from other cues. The French press showed little enthusiasm for Mr Macmillan's journey to Moscow. Was not the British Prime Minister stealing laurels that the general's admirers had once expected for him? French papers reported Mr Macmillan's setbacks in Russia with obvious *Schadenfreude*, and minimised what he had achieved in preparing ground for further negotiations.

Dr Adenauer, perturbed by British initiative, Mr Dulles's illness and signs of greater flexibility in American diplomacy, has fallen back on his new European partner to defend a rigid front. As far as can be gathered their "views were very close" both on Berlin and the German question. Who would have thought, only a little while ago, that a Paris-Bonn axis would be the guardian of Atlantic orthodoxy or that Gaullist diplomats would be on the watch for slippery snow on Mr Macmillan's boots when he comes here next Monday?

THE ELECTION

Giving Whom the Lead?

IT was four years ago this week that Sir Anthony Eden returned from a visit to the East (to Siam) and told his colleagues that he had decided that he wanted a May election, at a time when everybody else had been assuming that the earliest likely date was October. The first rumours of Sir Anthony's decision did not reach the public until three weeks later. It is unlikely that history has been repeating itself behind the scenes this week, although a May election still cannot be ruled out as quite impossible. The Prime Minister's Moscow visit has probably notched up a few more electoral points among the unusually large number of "don't knows" (according to some calculations, 29 per cent of the total electorate) who are said to be dominating the current public opinion polls. Some such success was to be expected; to suggest that Mr Macmillan might make a hash of the "political show" part of his visit would have been almost as insulting as to suggest that Sir Laurence Olivier might make a mess of playing Hamlet. Nor will Tory vote-collectors have been displeased by the more messianic tone of the Prime Minister's homecoming speech at London Airport ("Lots of difficulties ahead . . . I hope you will think it right . . . that we in Britain should try to give a lead to find a way through"). As Mr Macmillan flies on across the world in the next few weeks, attention seems likely to concentrate more and more upon him, and an increasing national pride is liable to be built up around his person. In addition, spring weather has come early to Britain and there are some signs that the March employment figures (which will not be published until April) should rise with the temperature.

As had been expected, the Conservatives have arranged the East Harrow by-election for March 19th (although their expectation of a straight Conservative vote there has been disturbed by the appearance of a split-the-vote small shopkeepers' candidate); there is no doubt that some Tories are still awaiting the result of this by-election, and of that in Labour's very marginal seat of South-West Norfolk (March 25th), like greyhounds in the slips. If these by-elections should show a definite swing back to the Conservatives, then party pressure could still be strong to set the game afoot for May. But perhaps some of what might be called the efficient, as distinct from the undignified, parts of the Conservative party and the Government are almost hoping that no clear trend will be apparent, so that the early summer can be devoted without distraction to the foreign negotiations ahead.

CENTRAL AFRICA

The Way Out

QUITE irrespective of its authorship and the debating circumstances in which it was advanced, the Opposition's proposal for a parliamentary commission to go to Nyasaland offers the best escape from further bloodshed. The Government should accept it. The combination of the presence of settler police and the exclusion of a British MP by the federal authorities can leave only the most disastrous impression on the Nyasas of British impotence and federal mastery. The important thing now is not to wrangle over the exact order of Mr Stonehouse's departing, but to send out a high-powered delegation from the British Parliament—to inspect the evidence which led the Governor to conclude that another Mau Mau rising was imminent, to receive the complaints of the Nyasa leaders just as the Watson Commission to the Gold Coast in 1948 received those of Mr Nkrumah and his friends, and to reassure the Nyasas that Britain still has the will and the authority to implement its pledge not to hand them over to a sovereign federation without their consent. A parliamentary com-

mission would not be a blow at Sir Roy Welensky himself; his most urgent need now, although he dare not say this, must be to grasp at anything which could help to avoid white settler excesses on the spot (as the presence of a parliamentary commission would do). And a parliamentary commission, if wisely manned, could have a signally advantageous effect on political attitudes in Britain; the need now is to foster anything which might help to make British policy for central Africa more bipartisan.

Beside these crying needs, the treatment accorded to Mr Stonehouse is a very minor affair. The texts available suggest that his speeches in Rhodesia were more responsible than some parts of his past record had led either Africans or settlers to expect; perhaps rabble rousers on both sides were even rather disappointed thereby. The federal government moved in and expelled him nevertheless, because it wanted to have some sacrifice to throw to its wildly excited constituents at this time; the expulsion order was made only after Mr Stonehouse had gone into the protectorates, where the Governors, had they thought that he was really being a dangerous nuisance, could have removed him under their own powers. There can be differing views on Sir Roy's wisdom in thus stretching the arm of federal power to the limit, but one can only guess from this distance at the pressure working upon him. He cannot have liked expelling Mr Stonehouse; he must have seen that by doing so he was likely to strengthen the opposition at Westminster to giving the Federation constitutional advances in 1960.

It will therefore be a great mistake if the personalities involved—Sir Roy Welensky, Mr Callaghan, Mr Stonehouse and others—are now themselves allowed to become major issues. Mr James Griffiths, who might have been expected to know better, cannot have advanced any worthwhile cause by declaring that "all European leaders in Central Africa" had shown themselves to be "completely untrustworthy." But at least Mr Callaghan made some amends on Wednesday night for earlier gaffes by the studied moderation of his speech and by his offer not to divide the House on the Opposition's motion of censure about Mr Stonehouse if the Government would grant a parliamentary commission. The Government, whose mind seemed to be bent mainly on discrediting Mr Stonehouse, did not show much interest. If an Algeria is to be avoided in Central Africa it should think again, and quickly.

UNITED ARAB REPUBLIC

Better than No Agreement

JERKING and jolting to the end, the Anglo-Egyptian negotiations have finally produced a signed, sealed but not very exhilarating agreement. After so much time and talk, most of its substance had been aired in advance; all the same, the finished product contains two surprises. The first is the remarkably frank way in which the major claims on either side have been stated and waived. It was assumed that the United Arab Republic's claim for war damage and Britain's claim for the expropriation of the Suez Canal base would be tacitly set off against one another; in fact, an exchange of letters makes the waiver explicit and formal. This at least shows a willingness to face the past and bury it, although both governments are now manufacturing soothing emollients for domestic consumption. Cairo gets round the waiver by explaining that the UAR has really made £62½ million out of the seizure of the British base, but that in order not to embarrass the British Government, it is not describing this sum as reparation for the acts of 1956. In Britain, the Government is trying to assuage domestic criticism by belittling what the Egyptians seized: thus it describes as obsolete junk equipment which, not three years ago, was thought valuable enough to be guarded and maintained by an expert corps of engineers.

The other surprise is the extraordinary careless drafting of the English version of the agreement. Although the Foreign Office has had two and a half years to collect information about the British owners of property in Egypt, the lists annexed to the agreement look like mere clumsy transliterations of the details produced by the other side. The result in places is bizarre enough to be worthy of the attention of Mr Paul Jennings. Some of the unfortunate property owners may yet have trouble from this source in establishing their claims. Details of the compensation they can expect are discussed on page 898.

A British mission, with diplomatic immunities and privileges, is in Egypt to implement the agreement. Although the mission's functions are narrowly defined, the Foreign Office seems to expect that a natural course of events will gradually and unobtrusively bring its leader, Mr Colin Crowe, diplomatic status as well. The trouble is that Anglo-Egyptian relations, bedevilled by emotions and complexes, are still less than natural.

BRITAIN AND EUROPE

Purity from Brussels

JADED hearts in London that are still hoping against hope for the resurrection of the free trade area will get no touch of spring from the European Commission's proposals for relations with outsiders. *Pur et dur* is one description of the proposals. The commission offers certain quota negotiations over the next four years to ease the effect of discrimination by the common market. It suggests talks between the Six and other European countries to establish a common policy as a starting point for tariff talks in the General Agreement on Tariffs and Trade. But it makes it pretty clear that there is no room for a second European system of automatic tariff reductions and institutions. The commission has stuck resolutely to its principle that the community comes first.

As the realisation that the free trade area is dead slowly sinks in in London, thoughts are inevitably turning to examine other solutions. One, which seems misguided, is the revived idea of a little free trade area between Britain, Scandinavia, Switzerland and Austria. For a start, the idea raises profound misgivings in certain countries. Denmark is torn between its farmers' wish to join the common market and loyalty to the rest of Scandinavia. The Austrians, and even the unbending Swiss, two-fifths of whose exports go to the Six, have a greater interest in the long run in reaching commercial arrangements with the Six, provided these leave their neutrality intact. Above all, this scheme, which offers only slender and short-term economic advantages, is based on a false political premise. It cannot be the object of British policy to deepen the political division of Europe and postpone the day of political *rapprochement* with the Six. Time, as two years of negotiation have shown, is not on Britain's side. The idea of the little free trade area can only confuse the choice Britain has to make.

MALTA

Docks and Nettles

THE riot of dockyard workers in Malta last week must have been good news to Mr Mintoff, for it showed that in the basic issue between himself and the British Government his shock troops are passionately on his side. Six thousand dockers received with their pay a slip advising them that the Admiralty was discharging them as redundant but that Messrs. Baileys, who are converting the dockyard to civilian purposes, would re-employ them at once on approximately the same terms. Their anger and dismay at being transferred from the cosy security of Admiralty work to the private sector in a commercial economy led them to smash and burn installations, stone an admiral, and generally demonstrate to Messrs. Baileys' representatives on the spot what sort of men they proposed to find jobs for. Apparently, according to a recent remark of Mr Mintoff's, they would not have been quite so rough if, instead of Baileys, it had been Vickers. Both Mr Mintoff and the Maltese dockers still appear to believe that, if they cut up rough enough, they will force the Admiralty to send its ships (if even they don't exist) to Malta for repair, or compel any British firm they choose to come to Malta. It is a very strange outlook.

It is also a very bleak outlook for Admiral Sir Guy Grantham, the new governor who is to follow Sir Robert Laycock. To many people it must have seemed a false step to make an admiral governor of an island which Britain proposes to demilitarise and civilianise as fast as Mr Mintoff will allow. But Sir Guy has been outstanding in his career both as an administrator and as a sailor; many naval officers considered that his abilities entitled him to go even higher in his service; and he knows Malta well. He may be better fitted than would almost any other governor to persuade the Maltese that the Navy can still provide a proportion of the dockers with lucrative work, and that the rest must in their own interests co-operate with such incoming industrialists as the British Government can still attract after Mr Mintoff's threats to make life impossible for them. Moreover Sir Guy looks like having one valuable ally. Last week's riots induced the Roman Catholic archbishop, Mgr. Gonzi, to return in haste from Rome and address—almost for the first time—words of warning and remonstrance in public to his flock. If Malta threatens to be another Cyprus, at least the local church (a powerful influence) this time bids to be upon law and order's side.

DEFENCE—SECOND HALF

Rifles and Rockets

THE second day of last week's defence debate was notable for only two things: the further—partly eye-witness—revelation of the shoddy condition of the British army's equipment and the changing tune of Mr Sandys's arguments for an independent British deterrent. Labour speakers had the best of it when they complained that British troops who are moved from other overseas stations to Germany have to leave their FN rifles behind them and pick up the bolt-action 303 rifles left by the unit they are relieving—and which are, of course, non-standard with the rifles of the other Nato forces. Mr Aubrey Jones was quite properly pulled up again and again for first of all promising to talk about the new equipment coming to service and then becoming dithyrhambic about equipment still on the drawing board or only in a stage where alternative prototypes are being considered. He had a poor hand to play, and Labour's military spokesmen (a more informed bunch than Labour has usually had before) were in no mood to allow him to try to force hidden cards. Mr Sandys had done far better earlier to admit that the Government was vulnerable in the matter, but was trying to save taxpayers' money by using up ex-Korean war stocks.

More remarkable was the way in which Mr Sandys knocked from under himself what used to be his principal argument for an independent British deterrent. There is a grim humour in the changing international fashion in these arguments. Back in 1957 Mr Sandys used to hint that Britain needed a big war deterrent, as well as small war forces, for fear that the Americans might one day leave us in the lurch. This is an argument that is now increasingly used by the French for wanting to mount bombs and rockets of their own. They profess to apprehend that the time might be coming when, because the American homeland can be attacked in weight by Russia, America may not feel so ready to threaten to use its nuclear weapons to defend positions which other countries regard as life or death to them. But Mr Sandys roundly declared last Thursday that Russia's growing power to devastate America would not in one whit diminish America's readiness to threaten to strike back if Europe were touched. His solidest argument for the British Blue Streak rocket now is that the Americans want us to go ahead with it as complementary to their own rocket development. But it emerged from the debate that other countries are contemplating their own Blue Streaks; can America really want *all* its allies to do this? In support of the prestige-ridden urge to have a deterrent of their own, the French are using today the arguments that the British used yesterday; no doubt tomorrow they will be using the arguments that the British are using today; and it is an interesting subject for speculation what arguments the British themselves will be using then.

FRANCE

Second Thoughts

THE first electoral test in France since the gaullist UNR's sweeping success last November has gone appreciably against the right-wing parties forming M. Debré's majority. In addition, the communist vote has more than made up the ground lost in November. Three by-elections to the Assembly, caused by the invalidation of the general election results at Huningue, in Alsace, Romans, in the south, and La Rochelle, on the west coast, do not make up a swing by themselves. But the shift in opinion coincides with earlier cantonal returns suggesting that the communists have even improved on their local showing before last May.

The three by-elections all saw the invalidated members—one MRP and two Independents—triumphantly upheld by their constituents. They also produced the customary drop in turn-out. Within the limitations of the exercise, the electorate seemed to be saying that it disliked the government's austere financial policy; whether it was thinking about Algeria is less certain. As a result, the gaullist UNR lost a number of recruits, who returned to their traditional allegiance, the MRP or the Radicals. The

communists showed up strongly, particularly at La Rochelle, where their share of the poll went up by 14 per cent compared with January, 1956. They plainly profited in the second ballot from the support of Socialist and Radical voters who had ostracised them in November.

These trends can soon be tested against the municipal election results, particularly in Paris and the twelve big towns where proportional representation will be in force. The voters' verdict this Sunday and next may be rather different from what it was before M. Pinay's budget.

GERMANY

Dr Erhard's Narrow Squeak

DR ADENAUER could not have thought of a more gracious way of extinguishing Dr Erhard's political career than putting him up as successor to President Heuss. But Dr Erhard on Tuesday declined this political silken bowstring; it appears that the Minister of Economics is by no means yet a spent force.

A variety of factors occasioned the Chancellor's proposal. The Christian Democrats wanted a presidential candidate who could command the broad popular support outside the party which would bring victory over Professor Carlo Schmid, the popular and respected Social Democratic candidate. Some sectors of industry have long sought to get rid of the liberal minister, who has been so resolute a crusader against cartels and protectionism. Dr Adenauer has never shown much kindness to men who have been talked of as possible successors to himself. After Dr Erhard's defeats on coal policy and the free trade area, the Chancellor evidently felt the moment opportune to transfer him to an honourable position on the shelf. Dr Erhard's reported first utterances on hearing the news suggested that he was resigned to accept the master's verdict. But when he discovered the strength of the party support which he could muster, he plucked up his courage and refused.

The immediate effect is to give a sharp increase in political stature to a man whose influence in the government had waned steadily since the morrow of the elections in 1957, when, having contributed heavily to the Christian Democratic victory, he was given the office of vice-chancellor. His chances of eventually succeeding Dr Adenauer now stand higher than they did before the skirmish. The Chancellor, however, is not a man to take political setbacks of this sort lying down. Life will not get any easier for the minister of economics. Dr Erhard has once more shown that he can command party and popular backing, but Dr Adenauer remains the most accomplished tactician, as well as the undisputed master of party affairs and cabinet policies, in the Christian Democratic regime.

BOURNEMOUTH PRIMARY

Half True Blues

THE results of Lord Hailsham's private election down among the Tories of Bournemouth East and Christchurch confirmed both Mr Nigel Nicolson's claim that the Association's executive was not fully representative of its rank and file and the executive's assertion that the Association could never live happily with Mr Nicolson. The valid votes in the postal ballot split almost half and half between those with no confidence in Mr Nicolson and those with no confidence in Major Grant—the member lost by only 91 votes out of over 7,000.

Mr Nicolson is probably right in attributing his defeat mainly to the deep emotion still felt at the seaside about Suez, the justified belief that his opponents would not give up the controversy if he won, and the pull of party loyalty. On the other side, Mr Nicolson no doubt gained some votes from Tories who disliked him personally but who were distressed by the black eye their executive's erratic behaviour was giving the party throughout the country.

Because the executive does not want a by-election at this stage Mr Nicolson has agreed to serve out his term. Throughout the controversy he has, as Lord Hailsham handsomely acknowledged, behaved with exemplary forbearance towards his extraordinary constituents. But it may be doubted whether, in his final generous defence of them from the reproach of being "nothing more than a set of antediluvian blimps," he did his party a kindness by adding that "they are no more unrepresentative of Conservatism than the Conservatives of Sheffield, Truro or Stow-in-the-Wold."

The most interesting question for the long run, of course, is whether this "primary" is a healthy precedent. Some commentators have argued that it threatens to turn MPs into delegates. It does not. No one is suggesting a referendum on a single controversial decision taken or to be taken by a MP. A postal ballot merely ensures that where there is controversy, a more representative body of party members participates in the choice of a candidate for the following election than would otherwise be the case. Critics of this development are in effect saying that in a safe seat a member should never have to answer to anyone for the way in which over a period he has exercised his judgment, or if to someone then to a small clique.

There is already one other obvious candidate for a "Hailsham primary"—Belfast North, where the member, Mr Montgomery Hyde, who has made himself unpopular by supporting the Wolfenden recommentations on homosexuality and showing interest in un-Irish issues, was first backed for re-adoption by a small majority of the local Ulster Unionist executive and then repudiated in his absence by a meeting of the association. But of course the postal ballot, welcome innovation though it is, is only a patchwork solution to the problem of the (perfectly legitimate) divisions that spring up within a local party. The real democratic answer is to have the alternative vote in the election itself. Then any Tory, even Mr Randolph Churchill, could run for Bournemouth East safe in the knowledge that vote-splitting would not let the Liberal or Socialist in—and the whole electorate of the constituency would decide which face of Toryism it should show in Westminster.

WAGES

Longer Term Agreements?

A CERTAIN amount of interest has been aroused by an article in (of all places) the Institute of Directors' journal written by Mr Robert Willis, this year's chairman of the Trades Union Congress. Mr Willis argues that, to avoid the annual wage struggle in British industry, other trade unions should follow the practice of his own printers' trade union in negotiating longer-term settlements. They should agree that, after getting a wage increase in one year, they will not put in another wage claim for perhaps two

The Company of Adventurers . . .

RITCHIE CALDER, the science writer, describes how atomic freighters could travel under the icebound seas of the Arctic throughout the year

THE OFFICER'S MESS at Fort Churchill on Hudson Bay is a bus-ride from the cinema. But there is no bus. Instead one walks through centrally heated corridors, built-in streets, buried beneath the snow, which link the living quarters with the cinema, the school, the shops and other civic amenities. In the winter the average temperature outside is 20° below zero FAHR.

This is the Frozen North. Yet this Canadian base and port is no further north than Oslo, Stockholm or Leningrad. Beyond it lie The Barrens, the snow deserts of the wandering Eskimos, before it Hudson Bay, which extends as far south as most of England yet is frozen solid for seven months of the year.

ATOMIC AGE MINERALS

Today, on the Bay at Churchill, stand the great grain silos. The port handles over eleven million bushels of grain every year. Across the Bay is Ungava, a region of great mineral resources, including some of the biggest iron deposits in the world. To the north of Churchill is Keewatin, that region where geologists and prospectors are discovering the minerals of the Atomic Age.

Access to new agricultural and mineral wealth of the mid-west and north of Canada depends on Hudson Bay, yet it is ice-locked for the greater part of the year, with deep water channels navigable only from August till early October.

Hudson Bay owed its discovery to the quest for the North West Passage, and its development to King Charles II's "Company of Adventurers". The successful navigation of that Passage by mid-20th century adventurers, may well provide the means of liberating the Bay from its ice-bondage.

U.S. atomic submarines, the Nautilus and the Skate, have navigated under the Arctic ice and opened the passage from west to east and east to west. Similarly, submarine atomic freighters could travel under the ice of Hudson Bay, throughout the year. Atomic heat could keep Churchill and other harbours open, like seals' breathing holes in the ice, for all-the-year handling of freight and so revolutionise not only the port itself, but the economy of half a continent.

The end to a perfect dinner— as decreed by French Law

French Law controls the naming of the finest brandy with extreme severity. It decrees that only brandy originating from the Grande and Petite Champagne districts of Cognac may bear the proud title of *Fine Champagne*. Remy Martin produce Fine Champagne V.S.O.P. Cognac justly called the "Pride of Cognac". And it is important to you that Remy Martin make *nothing* less good. This means that when you insist on Remy Martin, you are sure to get a really fine brandy . . . genuine Fine Champagne Cognac.

PRIDE OF COGNAC

REMY MARTIN

or three years, although with some cushion inserted into their agreements in the shape of automatic cost-of-living adjustments. There is, inevitably, a great deal of special pleading in Mr Willis's article. His own London Typographical Society is just coming to the end of a three-year contract, and Mr Willis is keen to point out that "stabilisation of wages . . . cannot be secured on the basis of niggardly increases" (a sentence which, on the face of it, rings rather odd). Nevertheless, it could be particularly valuable if discussion of this sort of scheme were set rolling just now.

At the moment most trade unions are not pressing forward with new wage demands; in part this is because their leaders do not want to make organised labour unpopular just before a parliamentary general election, in part it is no doubt a result of the dampening effect of unemployment. It is Mr Willis's bad luck that his own printers' contract is coming to an end at a period when employers cannot afford the "sufficiently substantial" initial increase which he thinks his system demands. The situation in which settlements for a period of years might be useful, however, would be one in which productivity (and with it profits) was expanding quite rapidly, but in which employers were frightened to grant the wage increases which might be immediately affordable, for fear that they might set a standard for increases in later years when further rises in productivity looked like being much smaller. Just conceivably, a number of British industries could be in precisely this situation by the beginning of next year. It is reasonable to suppose that there might be a substantial initial spurt in productivity when re-expansion starts, as the slack in industry is taken up; but that the rate of advance might slow down later when resources have become more fully employed. The device of a sizeable wage increase followed by a promised period of freeze might be a useful horse to trot on to several courses in 1960.

EAST GERMANY

Agriculture under the Lens

EAST GERMAN top people and their foreign guests gathered at Leipzig in late February for the sixth conference of the "chairmen and activists of agricultural co-operatives." Herr Ulbricht, who spoke second, discussed past achievements and plans on the agricultural front. He described 1958 as a very successful year, during which 3,121 new producer co-operatives were established, and small units were merged into bigger ones. Whereas at the end of 1957, 33 per cent of arable land in east Germany was farmed by co-operatives and state farms, a year later the proportion rose to 46 per cent. Although Herr Ulbricht and his friends have a harder task than Mr Khrushchev, their proposals for east German agriculture resemble those of the Soviet seven-year plan; the drive for more and larger collectives will be intensified; more agricultural machinery will be provided; there will be new rules for the conduct of producers' co-operatives.

Herr Ulbricht's long and shapeless report contained some impressive figures. But the east German leaders are well aware of the fact that the decisive struggle for collectivisation lies ahead. So far, they have been making it attractive for the peasants to join the clubs; there were real material gains (the farmers received wages plus rewards in kind), and the bonds were not too tight. New members could, for instance, retain their own cattle. The land they brought into the pool did not automatically pass into collective ownership upon their death. The new laws, now in draft and certain to be passed soon, do away with such alleviations. Heirs will not be able to claim the land made over to the co-operative by their parents; cattle and other property will pass, irrevocably, into collective possession. During this second stage of agricultural reform, it looks as though the farmers will be driven instead of led. Once the collectives have passed the half-way mark in the amount of arable land they control, the elimination of the private farmers will probably gather speed. The socialisation of agriculture on the Soviet pattern has proved a far more difficult task in eastern Europe than the nationalisation of industry. In east Germany, 90 per cent of all the means of industrial production were nationalised directly after the war; but the state's conquest of agriculture still has a long way to go.

LAOS

When is a Pact Fulfilled?

A TANGLE of problems has landed softly in the lap of Mr Selwyn Lloyd in his occasional capacity as "co-chairman" of the Geneva conference of 1954. Mr Lloyd inherited this function from Sir Anthony Eden, via Mr Macmillan—his two predecessors at the Foreign Office. As "co-chairmen" the British and Russian foreign ministers assumed a continuing responsibility for the observance of the Geneva agreements, which ended the Indo-China war.

The present trouble started with a statement by the Laotian prime minister, Mr Phoui Sananikone, that Laos considered the portions of the agreements relating to itself to have been fully implemented. He added that Laos could not accept the communist interpretation that, so long as the reunification of neighbouring Vietnam had not taken place, the agreements would continue to bind Laos.

Mr Sananikone's statement was the logical sequel to the disbandment last year of the truce commission for Laos, at the request of his predecessor. But it was immediately, and inevitably, denounced in the communist press of north Vietnam, which has a clear interest in maintaining the Geneva machinery intact; for if the Geneva agreements continue to be whittled down, north Vietnam's chances of

ever gaining control over the south, already greatly reduced, will be further impaired. An unfortunate comment from Washington, to the effect that the United States was now free to establish a military mission in Laos, has given ammunition to the bigger communist guns. The Chinese communist foreign minister, Mr Chen Yi, has treated this as evidence of an American plan "to turn Laos into an American military base." He has asked the co-chairmen to stop this alleged American scheme.

Mr Profumo, Minister of State, told the Commons this week that he did not believe the Laotians had repudiated the Geneva agreements. The truth, however, may not be so simple. The Laotian government has acted with great energy in preventing communist infiltration; it clearly does not want north Vietnam to have any say in its affairs, even indirectly through the Geneva machinery. Before Mr Lloyd replies to the Chinese note, he will need answers to some awkward questions, such as: How long must a sovereign state be bound by agreements affecting several other states when the portions affecting its own territory have been substantially fulfilled?

LUNGWORM INFECTION

Breakthrough for Helminthologists

THANKS to a newly developed British vaccine, cattle can now be immunised against the disease known as "husk," or lungworm infection. This news is of much wider interest than even the serious figures of annual loss from this disease—in deaths, loss of condition, and cost of treatment—would suggest. For the vaccine in question is the product of an entirely new technique; it constitutes a major breakthrough on an obstinately resistant front, that of helminthology. Hitherto it has not been possible to apply to parasitic worms the principle that has served in combating so many bacterial and virus diseases: that of stimulating, by a sub-clinical dose of the infective agent, the formation of protective antibodies giving immunity against subsequent invasions.

This is what has been achieved by the research workers of the veterinary department of Glasgow University and of Allen & Hanburys Ltd., who are now producing the vaccine commercially. Larvae of the lungworm—which infest an estimated 90 per cent of British pastures and, when swallowed by grazing cattle, make their way from the digestive tract to the lungs, where they mature, breed, and cause bronchial pneumonia—are subjected to irradiation by X-ray. This reduces the vitality of the larvae to a nicely calculated level, allowing them, when swallowed in an appropriate dose, to survive just long enough to stimulate an adequate immunising reaction, but not to reach the lungs and produce clinical symptoms. Whether the immunity so conferred will prove lifelong, whether the break in the lungworm's life cycle will eventually clear the infested pastures entirely, are questions on which the expert spokesmen will not commit themselves without reserve. But they are willing to forecast a diminution in lungworm disease comparable to that in diphtheria among human beings.

Still more cautiously, they refuse to speculate about the prospects of applying similar methods to other kinds of helminth infestation. Research is going on, but there is no specific news about its nature. Obviously each parasite must present a separate set of technical difficulties. Social difficulties even more forbidding stand in the way of any transfer from the veterinary to the medical field—especially in those tropical and sub-tropical lands where success would have the most transforming effect on the health, happiness and productive efficiency of a parasite-riddled population. It would be premature to expect such a revolutionary forward surge in the conquest of disease, in man and beast, as was set off by the discovery of the antibiotics. But the breakthrough is a genuine one even if, initially, on a narrow front; and in the perspective of time it seems certain to stimulate, both technically and psychologically, efforts leading to a much wider advance.

ITALY AND AUSTRIA

South Tyrolean Storm

THAT persistently stormy tea-cup, the South Tyrol, is again causing trouble. Last week the Austrian ambassador to Italy was recalled to Vienna for consultations and in Italian cities there were anti-Austrian student riots. In Rome, Signor Segni, the new prime minister, has declared that Austria cannot be allowed to interfere in an internal Italian affair. In Vienna, Dr Figl, the foreign minister, announced this week that Austria would take the matter to the World Court if direct talks, for

THE VIRTUES OF MALE NOVELISTS

ADAM BEDE. By GEORGE ELIOT. 3 Vols. *Blackwood and Sons.*

Novel-writing has of late years devolved so largely upon women, that it is quite rare to meet with a well-matured and carefully executed novel by a man of genius. We may add that it is as pleasant as it is rare. In novels written by women, the exaltation and predominance of one class of feelings, and the slight and inadequate treatment of all that lies beyond their immediate influence, make even the best of them seem disproportionate and unreal. The life which they represent is a kind of *Saturnalia* of love and the domestic affections, the practical business part of it being either slurred over or ludicrously misapprehended. Novels written by men are nearly always more in keeping with the actual world, have a wider outlook, and embrace a greater variety of interests. Even if they are dull, there is generally some positive, impersonal sort of knowledge to be gained from them; when they are original and clever and artistically constructed, they are more delightful as well as more profitable than the best novels by women. "Adam Bede" is one of the best of this best class of novels. It has the great merit in these days of rapid writing, of being carefully and deliberately composed. . . . In his choice of subject, too, the author has shown the confidence of genius in the resources of his art. It has no obvious attractions, or ready sources of interest belonging to it. The humble loves of a village carpenter, at that most unromantic period—the beginning of the present century—would have seemed to an inferior artist about the most unpromising groundwork for a novel that could well be imagined, yet Mr Eliot has managed to extract from that rugged soil the materials of a story far surpassing the more ambitious works of better known men in depth and purity of colour. . . . After a course of the feverish, self-critical, posted-up-to-the-latest-dates novels of the present day, reading "Adam Bede" is like paying a visit from town to the open hill sides, pure air, and broad sunshine of the country which it describes. We trust it may be no longer than is necessary for the conscientious attainment of the high standard reached in this book before we shall meet Mr Eliot again.

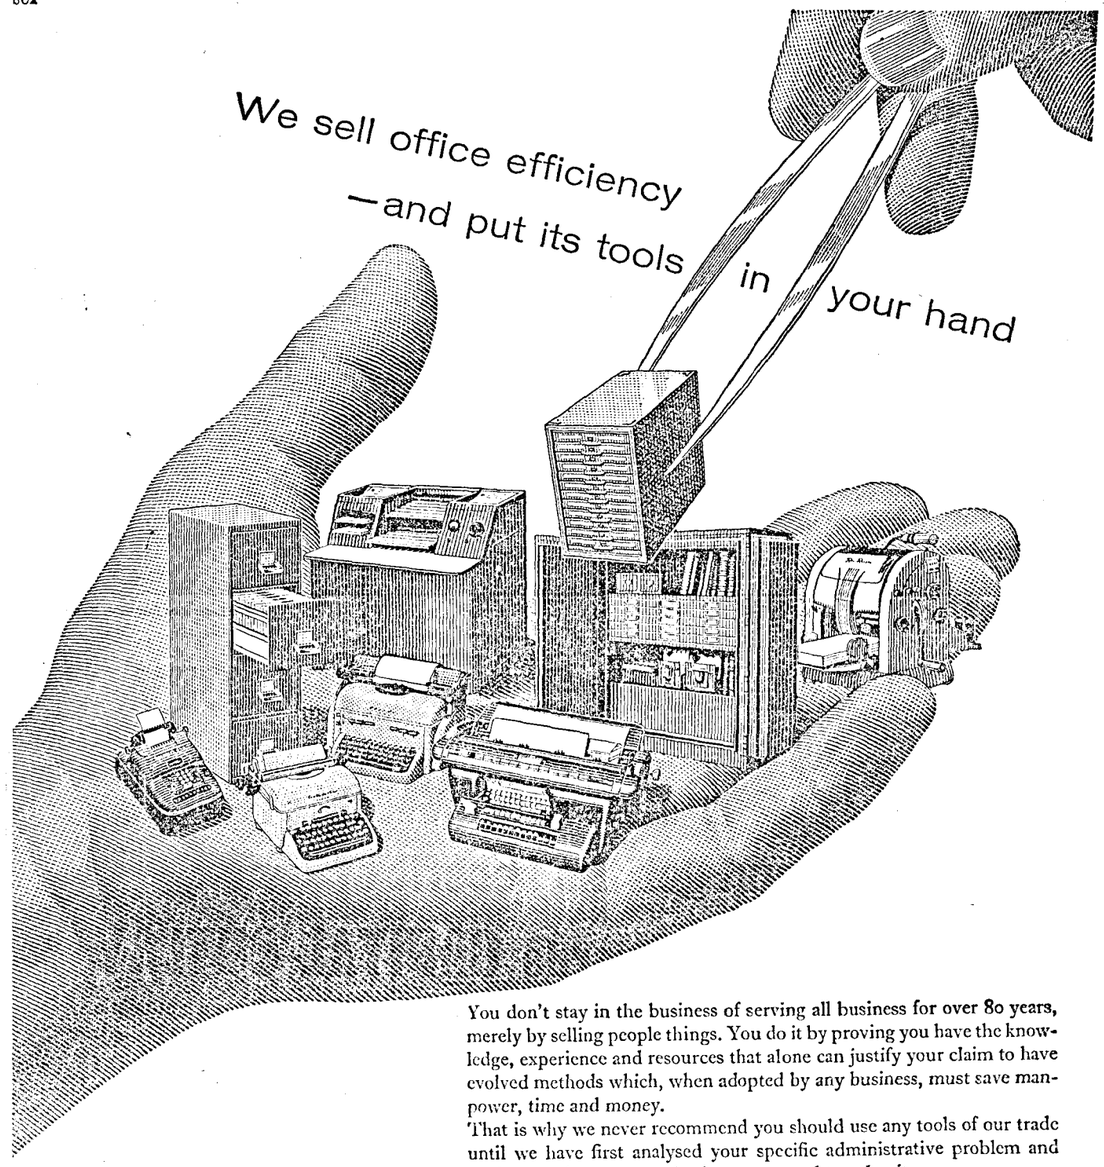
The Lotus shoe factory at Banbridge.

You can rent a NEW factory FROM 9D PER SQUARE FOOT

and get the benefit of

33⅓% GRANTS towards CAPITAL OUTLAY

Premises . . . New modern factories are under construction with all services laid on; or can be built to order on a site of your own choosing. Sizes range from 2,000 to 73,000 sq. ft. Rents from 9d. per sq. ft. for the first ten years. Special-purpose factories of unlimited size can be financed on long repayment terms.



Labour . . . Three-shift working is possible and labour turnover and absenteeism are low.

Finance . . . Assistance includes an automatic annual grant toward the cost of new and second-hand equipment and of new buildings. The Minister of Commerce announced on February 12 that the grant rate was being increased from 25% to 33⅓%. The present maximum grant is £150,000 p.a. Alternatively, loans and larger grants are available for special projects.

Success . . . Over 130 British and American firms have set up in Northern Ireland since 1945; and many have expanded two and three times.

or, if you prefer, to: THE MINISTRY OF COMMERCE, BELFAST (*Tel:* 28271)

You don't stay in the business of serving all business for over 80 years, merely by selling people things. You do it by proving you have the knowledge, experience and resources that alone can justify your claim to have evolved methods which, when adopted by any business, must save manpower, time and money.

That is why we never recommend you should use any tools of our trade until we have first analysed your specific administrative problem and made sure they are exactly those you need to solve it.

And since we make the world's most comprehensive range of office equipment, once we have pin-pointed the problem, we can provide the right machine or system to cope with it.

Furthermore, because an office machine is no better than the service that goes with it, every one we install is backed by a service organisation—staffed by highly skilled mechanics—that keeps it functioning profitably, year after year.

which it was ready, came to nothing. There have been political repercussions too. At the beginning of February the *Volkspartei*, which represents the German-speaking population of the Trentino-Alto Adige region of Italy, withdrew from the regional junta where it had been in coalition with the Italian Christian Democrats; the three deputies and two senators whom the *Volkspartei* send to the Italian Parliament have also withdrawn their support from the Christian Democrats.

This particular spot of bother was touched off by some new housing regulations issued by the Fanfani government, establishing a measure of control over local authorities' housing schemes. They apply in fact to the whole of Italy; but the German majority in the Alto Adige felt that their provincial powers were being undermined and that the new regulations would be used—as, they maintain, other housing regulations have been used in the past—to discriminate against them. Their grievances over this and various other issues is made worse by their feeling that they have been diddled over the implementation of the De Gasperi-Gruber agreement of 1946. They believe—it seems, mistakenly—that under that agreement the German-speaking majority of the Alto Adige should have been given full local autonomy; instead they have been joined with the predominantly Italian province of Trentino in a larger region which, though it is autonomous, has an Italian majority. The Germans are thus particularly concerned lest the powers of the provincial council at Bolzano, on which they have a majority, should be whittled away any further.

Signor Segni's cabinet has decided to take the dispute with the Bolzano provincial council over housing powers to the Constitutional Court. But it is unlikely that legal verdicts, whatever they are, will bring permanent peace and quiet to the South Tyrol. Nor, although housing is admittedly an internal Italian affair, will it do to treat the matter in a narrowly nationalistic way and deny that the Austrian government, a signatory of the 1946 agreement, is concerned in the future of the South Tyrol as a whole. The Italian and Austrian leaders might do well to copy the example set at Zurich by Mr Karamanlis and Mr Menderes.

BOOKS

Putsch by Proxy?

Les 13 Complots du 13 Mai

By Merry and Serge Bromberger.
Artheine Fayard. 443 pages. 1,200 francs.

SUCCESS can turn black into white and vice versa. The heroes of the various plots described by the Bromberger brothers could almost all have been indicted for high treason by the public prosecutor of the Fourth Republic. Most of them are now eminent dignitaries of the Fifth. Among those involved in plots to change the regime, or among their protectors, are the present prime minister of France and his deputy; the leader of the National Assembly; the chief of general staff and the commander-in-chief in Algeria; the military advisers of the prime minister and of the President. The list could be continued. It covers the whole galaxy of the new regime with the notable exception of the main beneficiary of the *coup d'état*. According to these authors, General de Gaulle was kept informed but did not direct the *coup* that brought him back to power.

The Bromberger brothers are journalists well known for their revelations of the Suez "secrets." This time they have interviewed most of the protagonists in the events of last May that brought about the change of regime in France. The longest and most interesting part of the book deals with happenings in Algeria. Indeed, after M. Mollet's abdication before tomato-throwing settlers in February, 1956, the seat of French power was progressively shifting from Paris to Algiers. The authors have an intimate knowledge of the officers, colonialist politicians, thugs and shady operators who move among the political fauna of Algiers at war. The "plotters," who could work unhindered thanks to governmental complicities in Paris, can be roughly divided into two groups: the "activists," who wanted to bring the regime down merely to perpetuate the war and ensure that Algeria remains French; and the "gaullists," who wanted to channel such an Algerian explosion so as to bring the general back to power. (This line of division is valid for the military as well as the civilians, and provides an interesting key to subsequent reshuffles.)

The seizure of the governmental buildings in Algiers on May 13th was the work of the "activists." The army as well as the "gaullists" jumped on the wagon subsequently. The purpose of the operation was to prevent the formation of the Pflimlin government in Paris, which was suspected of favouring a negotiated peace. On the 14th the gamble had failed. The Pflimlin government had been formed; it could cut off money and supplies for an Algiers in open rebellion. Commanding officers, worried about their future, were beginning to think of a way back to favour. But on the 15th, in the morning, General Salan shouted "Long live de Gaulle" and, in the afternoon, the voice from Colombey echoed: "I am ready to assume the powers of the Republic." The rest, up to the general's investiture on June 1st, reads like the story of a government bent on suicide.

People who have watched this slow death at close quarters are still divided on certain issues. Was the threat to invade France real or simply bluff? It was certainly partly bluff. "Intoxication," the spreading of all sorts of rumours, was part of a plan designed to frighten the government, parliament and country. But this book claims that a real plan of invasion did exist as well. "Operation Resurrection," as it was called, sounds phoney however. The civilian troops of the *putsch* seem farcically small (at one stage the shock element is described as consisting of 1,500 Indo-China veterans, including 300 Hungarians). Only some 4,000 paratroopers and the tanks stationed at Rambouillet could apparently be mustered for the job. Paris was in fact to be

taken over by its own police. One cannot say whether such small forces could have brought down the republic; when the woman consents, rape is impossible. President Coty had asked General de Gaulle for his terms on May 5th. M. Mollet was in touch with the general's advisers almost from the beginning. M. Pflimlin, towards the end, was only trying to save face.

The other question is connected with the part played by the general. The authors clearly want to put him beyond suspicion. Having described how he was kept informed by his friends of their plans, they insist that General de Gaulle did not commit himself: "He is France and he will see what is offered to France, if anything is offered at all." One thing, however, is striking. If General de Gaulle had planned a *coup*, he could not have devised a better formula for success. His intervention on the 15th kept Algiers going. The threat of paratroopers softened a hostile chamber and a shivering government. Had the paratroopers struck, it might have been civil war. With the paratroopers kept on a lead, legal pretences could be maintained and the doors to the Elysée opened from inside. The general appeared as France's saviour from paratroopers, civil war and all other evils.

Historians may need more distance. But this journalistic account will be of use to them, for the protagonists have apparently spoken quite freely. One can reproach the authors, however, for having been too faithful reporters; they tend to take the versions told them too much at their face value. This sensational story is certainly not the last word on the events of last May. But it tells a lot and it reads like a thriller.

A Modern City State

Government Administration in New Zealand

By R. J. Polaschek.
Oxford University Press for New Zealand Institute of Public Administration. 324 pages. 35s.

NEW ZEALAND has, on the face of it, the simplest government in the world. A unitary state, it has practically no written constitution, and only one House of Parliament. Yet its two and a half million people have forty-one departments, and almost a thousand local authorities, government sponsored companies and public corporations, to attend to their needs. In this book, which is heavy going some of the time (as books on administration so often are), but which is highly entertaining in parts, Mr Polaschek explains why.

New Zealanders, he points out, "are not theoretically minded." If they want something done, they ask the government to do it. The government obliges by creating a department to do it for them. It may be a department or a public corporation, according to the kind of government and the conditions of the time; and it may later be turned into a public corporation or a section of a department if it began as a department, or department if it began as a public corporation. There does not seem to be any rule. Even when the cry of Economy is raised, and the government runs for cover, it hardly ever thinks of reorganising the service so as to combine the departments and sections that have something in common. It does not seem to mind a minister carrying ten portfolios. (This was the redoubtable Mr Nash, who is now Prime Minister; with such experience he could sack his whole Cabinet and commune with himself.) It may move the pieces about the board, but it plays the same game in the end. Although Mr Polaschek thinks things could be better, he wisely assumes that they will not be. "There are no absolutes in government, particularly where agricultural and industrial groups are concerned," he says; and since agricultural and industrial groups seem to be all that New Zealand governments have to worry about, they will continue to proliferate government agencies to show that they are doing something, if not the thing they promised to do.

Many shafts of light are thrown on New Zealand life. Women number one-fifth of the clerks in the public service, but there is not one of them in the top 1,000 positions. There are eight permanent Cabinet committees, including the Committee on Hotels and Licensing. As recently as 1914 a Chief Justice described the Public Service Act as the most republican statute in any British colony, seeming to go even beyond republicanism, because appointments were to be made by the Public Service Commissioner and not the Governor. Of 37 permanent heads in 1955, 18 had qualified as accountants. A Minister has never been known to resign because of his subordinates' misdeeds, but Ministers have been known to criticise their subordinates in public.

In general, it seems to be a mistake to classify New Zealand as a modern state. Its government has more in common with that of a great city like Glasgow or Birmingham. It is parochial and homely, administration rather than government. When something happens to remind it of the responsibilities of a sovereign state, such as a depression or a war, there is tremendous scurrying and a great shake-up; but in between these times it reverts to its quietude.

Force and Guile

Dragon and Sickle

By Guy Wint.
Pall Mall Press. 109 pages. 10s. 6d.

MR WINT, who has observed politics at close quarters in both China and India, is concerned in this admirably concise little book with two main themes: how the communists came to power in China and how they are trying to come to power in India. In his view the success of Mao Tse-tung in China was due to his ability to free himself from orthodox Marxist dogma and the precedents of the Russian Revolution in a persistent quest of victory through civil war. Mr Wint shows with effective quotations how Mao substituted a guerilla peasant insurrection for the revolutionary action of the industrial proletariat as the means for the attainment of power by a communist party. But he seems to exaggerate somewhat the contrast between the conspiratorial nature of Russian Bolshevism and the mass movement led by the communists in China; the Bolsheviks were only able to seize and hold power in 1917-20 because of the degree of mass support they were able to organise, and the Chinese communists for their part remained throughout so conspiratorial in their policy-making that they were able to deceive whole classes of the population about their real intentions.

For the most recent period Mr Wint thinks that "the lessons of the Chinese revolution are already partly outdated"; he points out that the method of insurrection that was so successful in China was a failure elsewhere in Asia in the years from 1948 onwards—in India, Burma, Malaya, Indonesia and the Philippines; only in Vietnam was there a partial victory and then only with large-scale Chinese assistance. Since Stalin's death there has been a turn of Soviet policy away from encouragement of communist revolts to what Mr Wint calls "drastically over-bidding the West as friend and patron of Asian nationalism." It is open to question, however, whether this is more than just another phase in the zig-zagging course of international communism and whether, in spite of the example of Kerala, the new "parliamentarianism" of the Indian communists is to be taken seriously. There is scope within the framework of Marxist-Leninist doctrine for an immense variety of tactics for obtaining power, but the resort to force must figure somewhere in the scheme, and there is no reason to suppose that any communist party has in fact abandoned it.

Worldwide Economics

Introduction to the World Economy

By A. J. Brown.
Allen and Unwin. 212 pages. 18s.

THE blurb of this book recommends it to "readers whose interest in economics has been awakened by economic geography, economic history, or the survey of current world affairs." Fair enough. Given such an interest, given such an approach to that interest, and given a fairly high degree of perseverance, "Introduction to the World Economy" can be warmly commended as a sensible, well-constructed and thoroughly competent work. It goes a long way towards introducing realism into that generally nonsensical business, the comparison of international standards of living. It draws usefully (and with due acknowledgment) on Mr Colin Clark and Professor W. A. Lewis for light on the nature and causes of economic growth. It treats especially well those questions of local specialisation and comparative advantage which are such a stumbling block to the uninitiated. It

sets the subsistence economy, the planned economy, and the more or less free market economy in an understandable relationship to one another. It is sound, if not original, on income flows and prices—though the treatment of these last might well seem less than clear to a reader entirely lacking, as its readers are presumed to lack, any prior notion of value theory. It is written with a modest respect for the uncertain and the unknowable. Perhaps it treats money and credit rather sketchily; perhaps, too, it leaves sociological factors rather too much in the background. These are matters of judgment.

Having said so much, one remains slightly puzzled about who is going to read this book. For the "general reader" in the usual sense it is too long, too untopical and, if truth must be told, too stodgily a textbook to be attractive. Yet considered as a textbook it is neither sufficiently comprehensive nor sufficiently provided with an analytic skeleton to meet the needs of a student seeking an introduction to economics. Here and there, no doubt, it will just fill the bill. International civil servants; members of the Foreign, Colonial, and Commonwealth Relations services; some teachers; some publicists; all these who particularly need, as the background rather than the substance of their special expertise, some knowledge of what makes the world economy tick; these could hardly do better. But do they add up to a market? Not only for Professor Brown's sake, one may hope so. If they did, it would be possible to feel rather happier about the future rationality of economic affairs.

The Conquest of Canada

The Plains of Abraham

By Brian Connell.
Hodder and Stoughton. 288 pages. 21s.

THIS year marks the bicentenary of the Year of Victories—Minden, Quebec, Quiberon Bay. Mr Connell's book is only concerned with Quebec and what went on before and after it on the American continent. The fact that the other victories are not even mentioned indicates a faulty perspective in what is otherwise a fluent and colourful story, full of Indian war whoops and red coats on the run. It is all very well to follow Francis Parkman with a popular account of the fighting on the American frontier; but what happened there can only be appreciated in relation to what was happening in Europe, above all in the Bay of Biscay, where the blockading fleets prevented the despatch of those forces which Montcalm so desperately needed. It was the beauty of Pitt's strategy to see the war on a world scale from India to Canada, so that the operations in one area were related to the general pattern elsewhere. In spite of its virtues as a narrative, this book fails to make that clear. Nor do minor inaccuracies inspire confidence in the historical validity of the whole: Holmes's flagship was not a frigate; Cook was not a captain; Wolfe could not have given Jervis a miniature the night before the battle because the latter's ship was ten miles away, nor was he by any means "delighted" to accept the plans proposed by his brigadiers.

Quebec was not just a soldier's battle. What is rightly called "the ten minutes that changed America" was the climax of the most successful combined operation in British history. Perhaps the despatches which make that clear are not quoted here because Townshend and Murray are presented as the villains of the piece, on account of their insubordinate conduct towards an idealised Wolfe. Murray at least deserves more justice, since his heroic defence of the city is almost on a par with the victory by which it was won. The whole campaign cannot be understood unless the conquest of Canada is seen as the inevitable result of the mastery of the St Lawrence valley, which was won by the united forces of the army and the navy. If for no other reason, that happy combination deserves to be recalled in order to give the lie to the notion, which seems to be gaining ground, that the Americans discovered the secrets of amphibious operations during the last war.

Fresh Eyes on China

Red Carpet to China

By Michael Croft.
Longmans. 286 pages. 21s.

IT is refreshing to find a "non-political" book that gives so clear an insight into a system of such political complexity as China's. Mr Croft is refreshing both because his approach is itself fresh, and because of his percipience and literary talent. The only political judgments the author allows himself are in the prefatory note, in which he is almost certainly premature by a few years in describing communist China as "a world power of the first magnitude." But in all that he sees or records he is intelligent and entertaining.

Mr Croft went to China as a member of an international youth delegation, doubtless qualifying as founder of the National Youth Theatre rather than for any lack of years. His travelling companions included a remarkably undogmatic Russian, a Ceylonese with a roving eye and two Egyptians. By chance, the "delegates" were travelling about China in October and November 1956, and the simultaneous bursting of news in Egypt and Hungary subjected them to almost intolerable strains. Mr Croft, who did not approve of the Anglo-French expedition, found his only defence as "British delegate" consisted in insisting at all times that the Russians should get their full share of available opprobrium. At least once, this impartiality involved him in physical danger.

As one would expect of the author of "Spare the Rod," Mr Croft had many questions to put to Chinese teachers and professors. Although his visit took place during the short-lived "hundred flowers" experiment, he soon found that all discussion, however "free," had a preordained end. As with other visitors to communist China, he found it difficult to make a fair balance between loss of liberty and rising material standards. The message, therefore, is not new, but Mr Croft almost succeeds in persuading us that it is.

Study of Play

Mass Leisure

Edited by Eric Larrabee and Rolf Meyersohn.
The Free Press, Glencoe, Illinois. 439 pages. $6.00.

THIS collection of articles or chapters from books, written mostly over the past thirty-five years, ranges from a severely factual examination of the length of the working week to Bertrand Russell's philosophical defence of idleness. Brought together in this fashion, not written originally with any connecting theme in mind, and sometimes with only an exiguous relation to the problem of leisure, the pieces do not appear to be clustering round any central thesis. The editors tell us, however, that the volume is an attempt to counter the impression that the study of play is inherently lacking in significance. Certainly most of the items selected from recent American books or journals tend to be informed by a moral purpose. But only David Riesman's contribution discusses the relation of leisure to its background, that is, work and the society in which the work is performed.

He argues that, with few exceptions,

HMSO

from the Government Bookshops
or through any bookseller

HMSO

Americans now work short hours, have money to spend and plenty of time in which to spend it. But "the word 'to soldier' means 'to loaf' and conscription gives training in soldiering to a large proportion of the work-force. For a time, men will go on producing because they have got the habit, but the habit is not contagious." "Men will scarcely . . . greatly extend themselves to earn more money which they are increasingly bored with spending," Mr Riesman continues.

> Hence, the evidence of disintegration and incompetence that is all around us . . . notably in the service trades, whose gross inefficiency we only conceal from ourselves. . . . It is extraordinary how little we have anticipated the problems of the bountiful future, other than to fall back on remedies which did not work in the less bountiful past, such as individualism, thrift, hard work, and enterprise on the one side, or harmony, togetherness, and friendliness on the other.

The analysis is acute—and depressing, although the editors say that the book is meant to be a cheerful one. And Mr Riesman's assertion that for "millions of Americans . . . the trip to the end of the consumer rainbow retains its magic . . ." is made only in the context that by "pressing for satiation at ever more opulent levels . . . we jeopardise this achievement in a world . . . in which there are many more desires . . . for things other than abundance."

However one feels about this particular contribution, the researcher will find the book valuable as a starting point for exploring any aspect of leisure, from its economics—a $30,000 million market—to the history of fashions and fads. There is an all-embracing bibliography.

Erhardism

Prosperity Through Competition

By Ludwig Erhard.
Thames and Hudson. 263 pages. 25s.

THE credit titles on the paper cover of the English translation of Dr Erhard's book are suggestive: "The economics of the German miracle—by its creator Ludwig Erhard." Written in German in time for the west German elections in 1957, the book is an unashamed piece of publicity. In a sense it is none the worse for this. If there is any special single gift which distinguishes the west German Minister of Economics from his colleagues in other countries it is his skill in publicity, his ability to enlist German consumers in defence of their interests by discussing economic issues in everyday language—bringing to them something of a common touch. In "Prosperity through Competition" Dr Erhard expounds his economic philosophy and tries to show how his liberal policies, fostering competition and enterprise, have made possible west Germany's economic recovery and helped it towards a more flexible and open social order.

Mixtures of argument and fact can be misleading. Dr Erhard's picture of the causes of Germany's spectacular economic recovery is not a balanced one. He does mention the great economic facts that have lain behind it: the huge increase in population, the Korean war boom, the potentialities of a great industrial economy crippled but not killed by war. But in a book designed to show off the role of certain principles of policy all this is given a secondary place. There are plenty of economic pundits, too, who will find Dr Erhard's economic philosophy somewhat naïve. The west German economy today, like other advanced industrial economies, is governed only partly by competition; other principles that accord less well with Dr Erhard's liberalism play a part.

Dr Erhard's book, however, does provide an opportunity to discover where he stands on many important issues. Two of his points are of particular interest; he is profoundly convinced that a high standard of living—high consumption—can be achieved only through rapid economic growth generated by high investment; rapid economic growth, in turn, can be achieved only if inflation is stamped out first. In his exposition three principles—competition, stern deflation and high investment—have inspired the German "miracle." British readers will smile sadly on reading of his conviction that a free trade area is a vital complement to the European Economic Community of which west Germany is a member.

Father and Son

The American Henry James

By Quentin Anderson.
Calder. 369 pages. 25s.

THE philosophical views of the elder Henry James were of a Swedenborgian cast, and are commonly supposed to have been of a cloudiness justifying his children's lighthearted description of them simply as "Father's ideas." There is no direct evidence that the younger Henry James ever revised this estimate. When, in 1885, he received from his brother William a copy of "The Literary Remains of the Late Henry James"—which William must have edited largely as a matter of piety—he responded with a letter giving his opinion that the whole system was "intensely original and personal" and regretting that he could not himself much enter into it. And since the younger Henry was eminently one who, in Mr T. S. Eliot's words, "preyed not upon ideas, but upon living beings," there is little ground for any expectation that it should be otherwise.

Mr Anderson, however, in a book that must be praised for a carefully achieved command of its materials, has come to quite a different conclusion. He finds the influence of the father's speculative thought widespread in the son's major fiction, and he judges his discovery to be very important. "If Dante," he writes,

> had been read by three generations of devoted and intelligent persons before it was learned that he had been influenced by Aquinas and Ptolemaic astronomy, his work would have been distorted in a manner analogous to the distortion in the current view of Henry James.

Many readers of James will find this hard to take. The "current view" of the Master is certainly one that allows not merely for a moralist in the artist but, also, in Mr Anderson's phrase, for "a moralist of a particular sort, who emerged from a particular scene." That James as a thinker is "an exquisitely ordered version of the most general manifestations of the culture of his origin" has for long surely admitted of no dispute. But if Mr Anderson is in fact making no large discovery here, he does excellently fill out this part of the picture, and so justifies the title he has chosen for his book. His more specific thesis, in which the elder James is presented as a detached and distinct influence, is less persuasive. That "the younger Henry James's psychological stock in trade" consisted of his father's system for the analysis of character is a claim that would be hard to substantiate. And anyone who reads on page 289 the note on James's choice of the name Fanny Assingham in "The Golden Bowl" may be inclined to doubt the adequacy of Mr Anderson's judgment and taste to some of the tasks of interpretation that he has set himself.

OTHER BOOKS

THE SKILLS OF THE ECONOMIST. By Kenneth E. Boulding. *Hamish Hamilton.* 193 pages. 16s.
The American edition of this book, published by *Howard Allen, Inc.*, was reviewed in *The Economist* of August 9, 1958.

STRUGGLE FOR EUROPE. By Chester Wilmot. *Collins.* 832 pages. 5s.
This book, which was reviewed in *The Economist* of February 2, 1952, has now been published as the first of a new series of paperbacks called "Fontana Monarchs."

A SERBIAN VILLAGE. By Joel Martin Halpern. *Columbia University Press.* London: *Oxford University Press.* 325 pages. 48s.
An account by an American social anthropologist of a year spent in a Serbian village examining in great detail the process of social and cultural change. It is the first community study in English on Jugoslavia.

THE INDUSTRIAL REVOLUTION, 1750-1850. By H. L. Beales. *Cass and Company.* 104 pages. 10s. 6d.
This book was first published in 1928 by *Longmans.* It is now published with a new introductory essay and bibliography and has been revised and enlarged.

LETTERS

Disarmament Doors

SIR—On my recent return from the Middle East my attention has belatedly been drawn to the article in your issue of January 3rd, and I should like to make the following observations regarding Mr Khrushchev's remarks to me and my father concerning the abolition of nuclear stocks.

Since 1945 and until today, the Soviet Government's formal position has always been that all nuclear weapons including stocks should be abolished as part of a disarmament agreement. Through 1957, the Russians said repeatedly that stopping new production (the so-called "cut-off") was of no real interest to them because existing stocks are so great that it is pointless to add to them, and that therefore, when western governments describe the "cut-off" as an important disarmament measure, this was humbug.

When Mr Khrushchev told my father and me that he was not concerned about existing stocks and that he would not trust the Americans to abolish theirs, these remarks appeared to us to be designed principally to impress us with the military strength of the Soviet Union and the large numbers of nuclear weapons which it has in stock.

But when Mr Khrushchev began discussing the real dangers of the situation in which twelve or fifteen nations might all be making and stock-piling their own nuclear weapons within ten years from now, and to the possibility that some new Hitler might appear on the international scene, he entered into a serious discussion of practical measures for abolishing stocks and for ensuring that a potential aggressor should not use a secret stock to dominate or blackmail other states.

My father reminded Mr Khrushchev that the Soviet Government had, in March 1957 and again later, proposed the total abolition of all missiles of all ranges which could carry a nuclear bomb. He explained that he had examined this proposition in detail in his recent book, "The Arms Race," and had urged that to it should be added the total abolition of military aircraft capable of carrying bombs. He urged that there would be no particular difficulty in ensuring this since missiles and aircraft cannot be manufactured and tested, nor troops trained in their use, in secret. In reply, Mr Khrushchev said very categorically: "That would be acceptable; that is real and concrete."—Your faithfully,

FRANCIS NOEL-BAKER
House of Commons

Somaliland

SIR—We read with interest the article in your issue of February 14th. The fifteen-year-old plan to create a Greater Somalia out of the region of the Horn of Africa at the expense of Ethiopia has always been a cause for disagreement between the interested parties and the Ethiopians. For its part, Ethiopia is on record as prompting the Somali desire for self-determination and independence.

Ethiopians have reason to believe that western powers are behind the idea of creating a Greater Somalia. This, we think, is encouraging the extreme Somalis with their grandiose territorial ambitions to try to carve off Ethiopian territory. It is a fact borne out by history that Ethiopia will defy any ambition of such a nature.—Yours faithfully,

KEBBEDE ABBEBE
Imperial Ethiopian Embassy, SW7

Trade Unions

SIR—You say in your issue of February 28th: "One reason is that up to 30 per cent of the membership of the unions (and a rather higher proportion of their members' wives) consistently vote Conservative at general elections." I am at a loss to understand how you arrived at this percentage. However, accepting it as a reasonable estimate or approximation, I am of the opinion that those who do vote Conservative are mainly the older members and their wives who were sons and daughters of staunch Conservatives and Liberals of forty to fifty years ago; or, as one may say, before Labour as a party was seriously considered by the electorate. The vote among the older school is governed to a great extent by family "spirit." The next twenty years will, in my view, make a considerable dent in this section of Conservative support. To explain this viewpoint, I recall witnessing, about six years ago, thousands of Clydeside apprentices on strike marching in Glasgow and shouting "We want a pound, we want a pound" (increase) and comparing conditions in my own apprenticeship days of nearly fifty years ago. In those early days apprentice engineers and draughtsmen in their first year got 4s. for a 54-hour week.

I cannot avoid the thought that Conservatives in trade unions are mainly of the old school. Indeed, the implications for the Conservative "old school" vote extend beyond trade union members.—Yours faithfully,

Glasgow, S2 H. FERGUSON

★

SIR—Your articles have been read with interest by our members who are readers of your journal, and I have been asked to make one brief comment on the second of the two articles, which refers to the fact that "bank clerks sit on joint national councils."

I must point out that the National Union of Bank Employees, which is the national, independent trade union for bank staffs, affiliated to the TUC, is denied national negotiating machinery of a joint council character, although it has 50,000 members. Efforts have been made to establish national negotiating machinery in England and Wales over the years, but the employers have seized excuses to avoid this.—Yours faithfully,

T. G. EDWARDS
National Union of Bank Employees, SW1

★

SIR—May I fill a blind spot in the eyes of the writer of your survey of British trade unions? His list of the ten largest unions in 1957 should have included the National and Local Government Officers' Association which, with 243,000 members in 1957 and 252,000 today, is entitled to seventh place. It is also, probably, the most rapidly growing of the bigger unions, having increased in membership by over 100,000 since 1947.—Yours faithfully,

W. C. ANDERSON
National and Local Government Officers' Association, NW1

Wages in Television

SIR—Your note, in your issue of February 21st, rightly suggests that BBC employees will not welcome action which implies acceptance that the same work can be paid at a lower rate in the BBC than elsewhere. The value of your note is that it draws attention to a problem too often ignored: that the BBC has to compete with contractors able to increase their staffing budget at will while the corporation's ability to do so is limited. The gloves are off on both sides, but one party has its hands tied behind its back.

From the employees' point of view, the outcome is not nearly so clear-cut as the contrast in source of income would suggest: any comparison between BBC and commercial rates must take account of certain conditions of employment where BBC staff have the advantage, and of the fact that in certain sectors, e.g. clerical and secretarial, BBC rates and conditions are incontestably superior. The fact remains, however, that thanks to their financial structure the BBC's competitors can at any time at all points give their staff better terms—so long as the level and source of the BBC's income are unchanged.

Wherever they work, television staff are doing basically the same jobs for the entertainment and enlightenment of the viewer. This Government (or the next?) will soon have to decide who is to be responsible for the third television programme. If it decides that there is a continuing need for public service television, either on its present or any other basis, it should not expect to get it on the cheap. It must enable public service television genuinely to compete with its commercial rivals and its staff should not have to work on terms which accept that the reward of labour in one sector of the industry can be inferior.

As the union which negotiates terms and conditions of employment for all categories and grades in the BBC and in the Independent Television Authority, this association believes that, meanwhile, all the unions concerned should be making a united effort to solve the problem by working out a pay policy

that does justice between the different sections of staff within each side of the industry and also between staff in independent television and in the BBC. We should be agreeing on common standards for the whole industry, combining what is best in agreements negotiated for the different sections.

Incidentally, however Sir Tom O'Brien gets out of what you describe as his "cleft stick," it will not, as you suggest, commit BBC staff as a whole. This is because the number of BBC staff for whom, outside the area of joint representation, this association exclusively negotiates, is well over 14,000, compared with about 550 represented jointly with the National Association of Theatre and Kine Employees.—Yours faithfully,

G. T. RHYS

Association of Broadcasting Staff, W9

Qasim's New Ministers

SIR—Being acquainted with the circumstances under which Mr Hussain Jamil joined the Iraqi Cabinet for the first time, may I correct an error in your reference to him on February 21st? Mr Jamil accepted the post of minister of justice in Mr Ali Jawdat Al-Ayubi's cabinet and not "under Nuri es-Said." Al-Ayubi's cabinet was formed on December 10, 1949, and resigned on February 1, 1950, when Nuri es-Said's party and the Regent himself refused to support it in its foreign policy and particularly on the *rapprochement* with Egypt.—Yours faithfully,

New Delhi ADNAN RAOUF

Japan and Korea

SIR—Referring to your note in your issue of February 21st, may I comment that you make some points which are contradicted by the facts concerning the question of the Korean residents in Japan?

In the first place, it is quite untrue that there are many Koreans in Japan who have failed to take the legal steps that would have given them permanent residence. Since the 600,000 Korean residents now in Japan wish to settle in that country, they cannot evade such a requirement originating from the local law. Naturalisation is, however, a different matter.

In the second place, I think it rather natural that the past negotiations between Korea and Japan on the question of the Korean residents in Japan ended without success. Japan has ignored the fact that these Koreans are entitled to fair treatment as aliens, and has always attempted to find measures to drive them out of its territory. No government, if it is conscious of the obligation to protect its own nationals abroad, would easily agree to proposals that are designed to discriminate against its own people—against sound international practice among civilised countries today.

In my opinion, Japan is using the principle of free choice of residence, historically established to allow refugees to settle themselves in the free parts of the world, to justify its inhumane scheme of mass deportation of innocent Koreans whom it once needed so much during the Pacific War. One may well wonder why the Kremlin, through the Soviet Red Cross, is now pressing Japan to take quick action in this matter.—Yours faithfully,

Y. T. KIM

Korean Embassy, SW1

Scottish Teachers

SIR—The Knox Committee's 21 members included six laymen, two directors of education, two training college principals and four representatives of higher education as well as seven day-school teachers, so that it was far from consisting "almost entirely of members of the teaching profession," as stated in your comment of February 21st. Secondly, not all male teachers in secondary schools must be graduates, though all male teachers of academic subjects in both primary and secondary schools are normally required to hold a degree. The Chapter VI subjects (technical, commercial, domestic subjects, art, music) are taught mostly by teachers who hold appropriate diplomas.

Thirdly, you are in error in stating that the cost of the proposal to reduce the incremental period from seventeen to ten years would ultimately be over £2.5 million. The committee estimates the cost of *all* its salary proposals for honours and ordinary graduates at about £1.9 million in the first year, and ultimately £2.5 million per annum.

Finally, in a comment in the same issue on higher salaries for senior civil servants, you appear to approve the principle that their salaries should be equated to salaries in comparable professions. But in your comment on the Knox report, there is no reference to the applicability of this principle to the salaries of highly qualified teachers, of whom over 4,000 in Scotland have the same initial qualifications as civil servants in the administrative grade—an honours degree in Arts or Science.—Yours faithfully, ROBERT BRITTON

Educational Institute of Scotland, Edinburgh.

Legal Aid

SIR—While opinions may differ on priorities under the Legal Aid Act of 1949, you do not present a fair picture of the workings of the scheme at present in force.

The assisted plaintiff outside the divorce division litigates not because he prefers this to negotiations, as you seem to imply, but because his opponent will not concede the justice of his claim until he is forced to do so by the issue of proceedings. In the year of the last report on legal aid, out of 2,924 cases in the Chancery and Queen's Bench Divisions of the High Court in which the assisted person was successful, almost half the cases were settled before the date of hearing. In county courts, of 648 successful assisted persons, over 40 per cent settled likewise.

Over 80 per cent of actions by assisted plaintiffs are won or settled. This is some evidence that the legal aid scheme had not led to irresponsibility on the part of litigants or lawyers. While a solicitor's letter may sometime lead to the satisfactory solution of a dispute, solicitor's correspondence without the ultimate sanction of legal proceedings will not always achieve results.

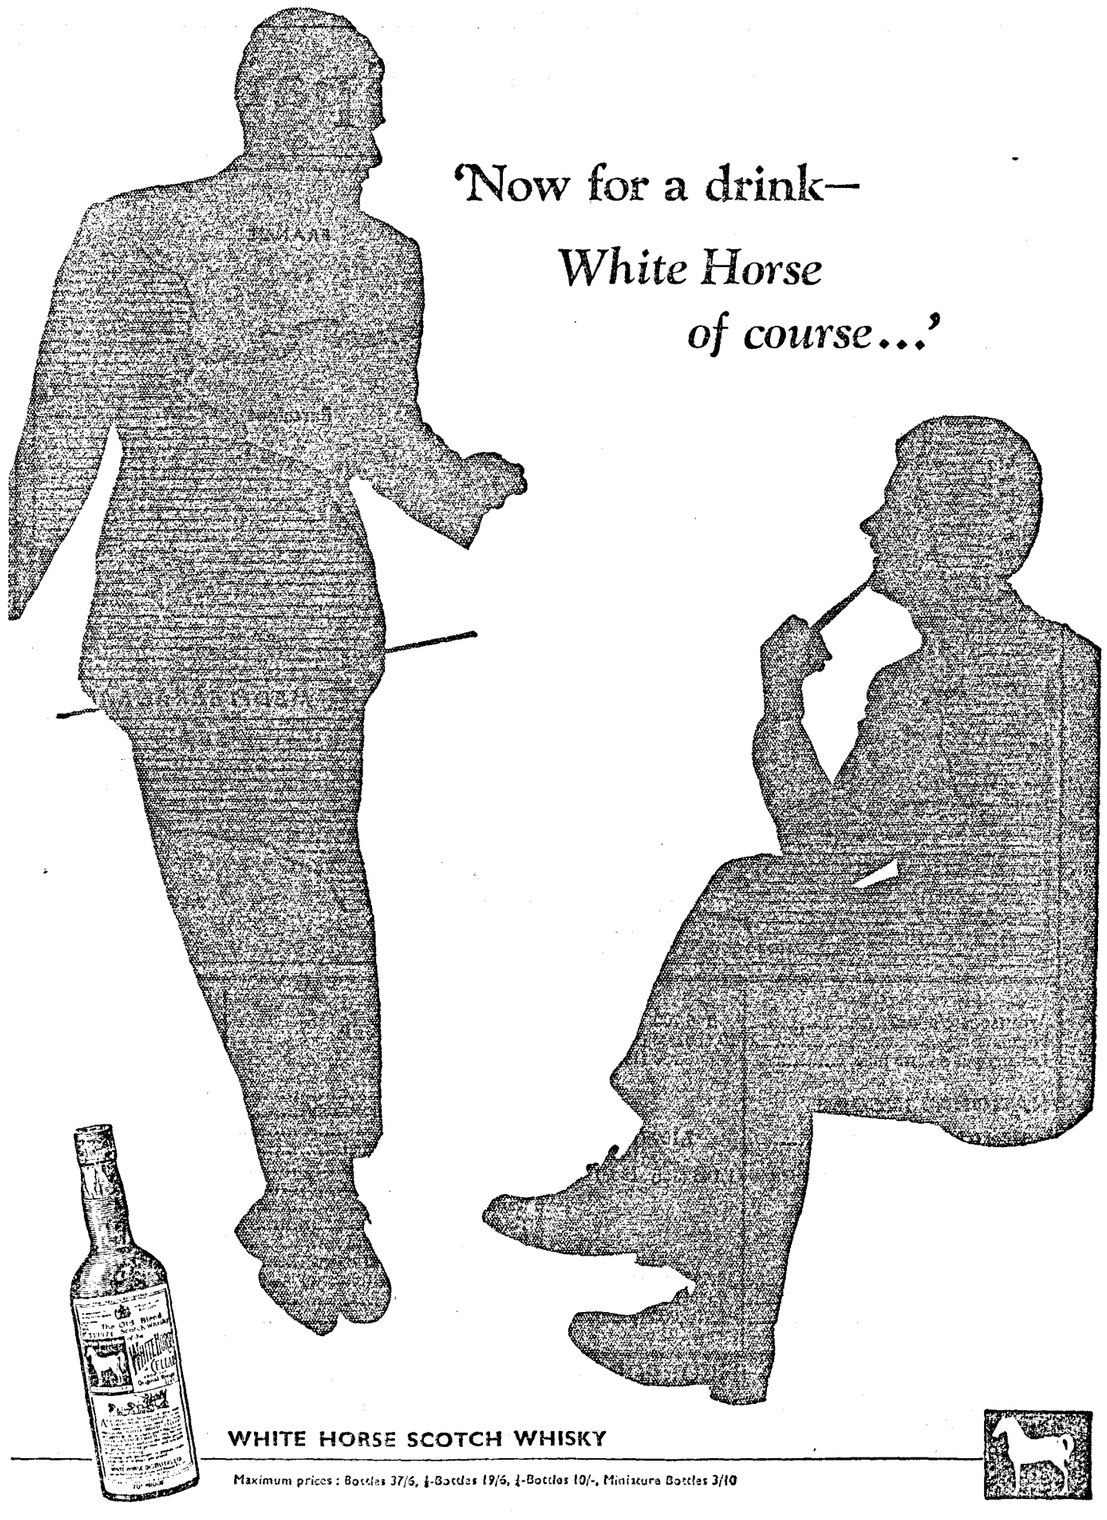
The part of the scheme dealing with litigation has in seven years enabled 121,338 people to go to court. Wages have risen during these years, but the upper limit of the scheme and allowances for dependants have remained the same. The result has been lamentable. Year by year more people have been excluded from the scheme, although their real earnings have not risen. Last year 15 per cent of persons offered legal aid had to refuse it because they could not afford the high rate of contribution demanded of them.

The Lord Chancellor's Advisory Committee, on which lawyers are a minority, recommended in April, 1958, that the "disposable income" limit be raised from £420 a year to £600 a year and that allowances for dependants come into line with the National Assistance (Determination of Needs) Regulations, 1957. This extension was estimated to cost about £175,000 a year.

Few will grudge the under-privileged free or subsidised interviews with a solicitor. However, if the Government really cannot afford another £175,000 a year, the claims of hundreds of civil litigants who have been virtually excluded from access to the courts by inflation might well be considered more urgent than the proposed extension of legal aid *inter alia* to accused persons with previous criminal convictions, who are already in receipt of legal aid under the Poor Prisoners Defence Act.—Yours faithfully,

J. SOFER

Temple, EC4



The Supply of Teachers

SIR—Mrs Jenkins is rather optimistic about the use that could be made of married women as part-time teachers. I am the mother of two young children and teach three afternoons a week. I find that this time is all too short for me to get down to solid and constructive work and that I tend to overlap with the morning teacher. From the point of view of the children (and I speak with reference to the infant school child) this constant changing of teachers is most unsatisfactory.

However, the part-time teacher could be of great value in coaching the backward pupils. At my last school I had about eight children for the whole morning, and could give more time and individual attention to them than the ordinary teacher with a class of forty or more. The results were most satisfactory and the class teacher was also able to take the remainder of the class on to more advanced work.

As far as I know, such a plan is not usual in schools and I feel that local authorities could employ more married women as part-time teachers to advantage in this way.—Yours faithfully,

Tunbridge Wells RUTH WEBSTER

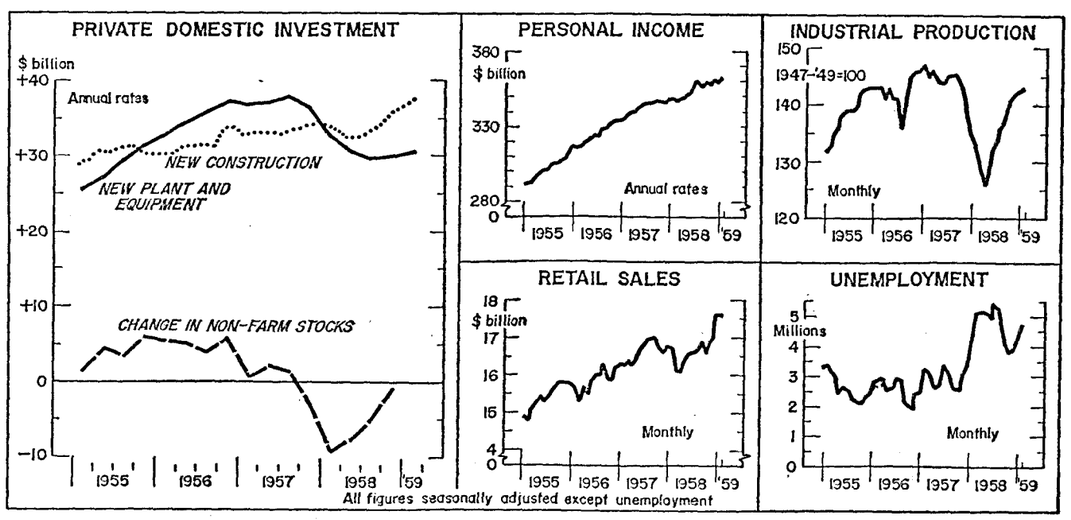
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Gloom or Boom?

WASHINGTON, DC



THE year 1959 may be different from others in many respects, but in one it is the same: it has produced the customary winter wave of caution—almost pessimism—about the economic outlook. Perhaps it is the effect of the weather, for this seems to happen every year; associated with it must be the well-known depressive effect of looking six months ahead. The farther into the future that a forecaster looks, the harder it is for him to find anything in the gross national product that will push the economy upward. He sees the exhaustion of current influences, such as the present swing from the liquidation of stocks to the accumulation of them, and sees nothing to take their place. Thus he begins to predict that the upward movement in the economy will "level off" in the last half of the year just as, in a year of slump, he would argue that, even if a change should come, the economy would "bump along the bottom" for a long time before turning up.

This general school of thought has not had very good results in the past but at the moment its devotees are being heeded once again, in part because of the persistence of a distressingly high level of unemployment. It need only be demonstrated that the annual rate of the gross national product in the fourth quarter of the year will be of the order of $475 billion instead of above $480 billion—the basis of the Administration's calculations—to "prove" that there will be heavy unemployment throughout the year and thus to conclude that something must be done about it.

Although some government economists share this winter gloom it has not infected the men in charge of the government's policy. They, too, are upset by the level of unemployment but, almost without exception, they are confident that the economy will be rising strongly throughout the year and that unemployment will become progressively less severe. The facts of the immediate situation—as distinct from the search for upward pressures six months from now—are mostly on their side.

Personal incomes have been going up briskly, in spite of the unemployment figures, because those working are working longer hours at higher pay. The Federal Reserve Board's index of industrial production is still rising, though at one point a month instead of the earlier two or three. It is still too soon finally to judge the public's reaction to the 1959 automobile models, but both sales and output have been running decisively ahead of last year. The steel industry, where orders are admittedly bolstered by fear of a summer strike, is about to have a record week. Electric power output, railway freight loadings, paperboard production, all move slowly but inexorably upward. And, of course, the stock market, after about six weeks of sluggishness, has just put on another burst of exuberance and reached new high ground.

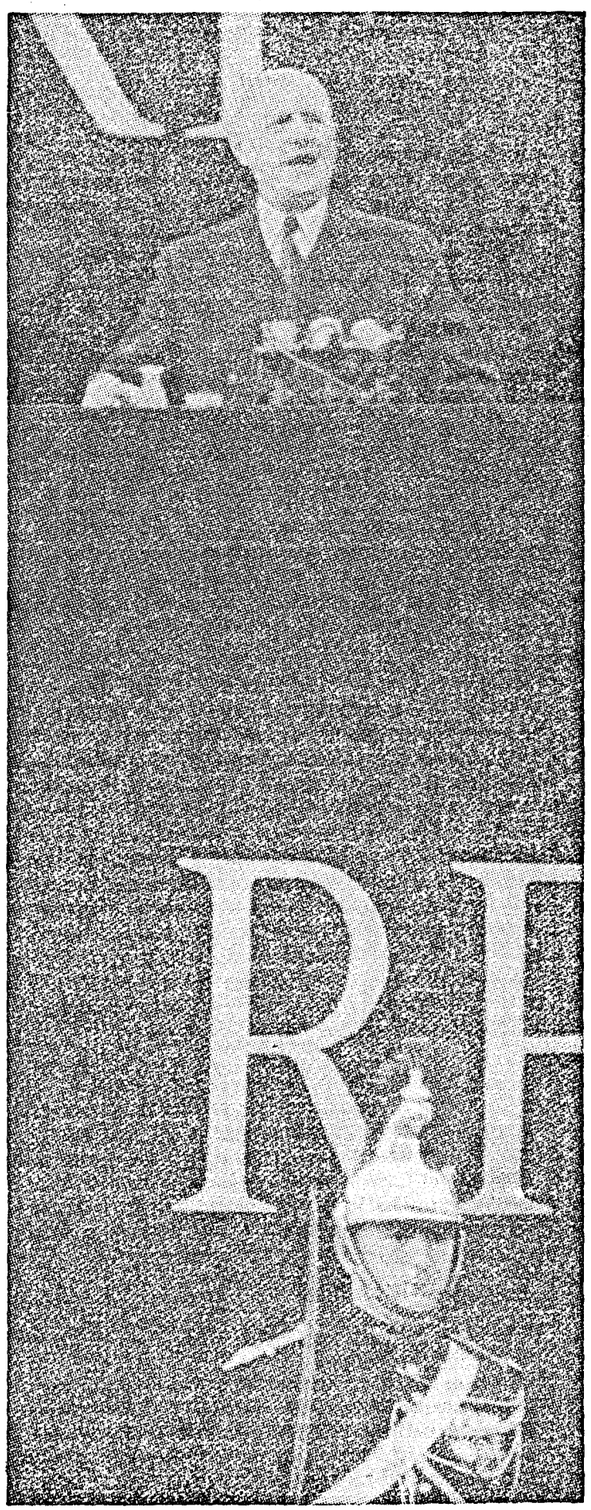
In short, the typical momentum of a recovery seems still to be working in classic fashion. At the tail end of the chain of upward pressures the consumer, with his expanded income, has been buying briskly. Retail sales in January maintained the record pace of December and this should work its way back to business stocks and then to production. Apart from fears, less now than they were a few months ago, that the present level of long-term interest rates may

discourage starts on new housing later in the year, the main justifications of the cautious school are investment by business and spending by the federal government. The former has still shown no sign of a decisive upward movement (though advance figures on appropriations for capital spending by large firms indicate a definite, though modest, improvement later in the year) and the latter will cease to provide any additional push after the early summer. The optimists, however, are not put off. They are reasonably certain that spending on new plant and equipment will move up more rapidly than recent surveys have indicated, arguing that it always does at this stage of the cycle.

Looking at all of the evidence, and with one eye always fixed firmly on history, Mr Saulnier, the chairman of the President's Council of Economic Advisers, has publicly predicted that unemployment by the end of the year should be "not much above 3,000,000," or about 4 per cent of the labour force, compared with 4,700,000 and 6 per cent in January ; he adds that there should be further improvement in 1960. There is no doubt that he is honestly optimistic about the outlook. Since he holds these views and since the Treasury and the Federal Reserve Board still see inflation lurking under every bed, there is no prospect that the government will do anything to stimulate the economy. Nor is it likely that Congress, no matter how exuberant the Democrats may be, will be able to force such measures on the Administration. The things that Congress is doing or considering will have their main effects in later years.

THERE is a distinct possibility that the Administration will be vindicated on every count: the pace of recovery could well continue to be brisk ; unemployment could decline at a rate satisfactory to all but the most liberal of liberals ; and prices, stable for nine months, may stay that way, particularly in view of the farm outlook and the lack of pressure on resources generally. What is more, with a labour force growing somewhat faster than in the recent past and with a good chance that productivity will improve more in this period of rising activity than it did in the last one, even the doubts about the adequacy of the country's economic growth may fade away. More than one economist in Washington believes that the strange falling-off in growth in 1956 and 1957 was an aberration rather than a trend. If the economy achieves and then maintains anything like full employment, the gross national product in real terms may be in for a great burst upward.

Admittedly, everything could work out the other way. If it does, the President and the Republican party generally are going to have to reckon with a very serious problem of real human suffering. The 1957-58 recession and its aftermath have exposed some fairly glaring gaps in the American welfare state. Unemployment compensation is inadequate in many states and in all too many localities there are not even decent programmes of public assistance for the able-bodied needy of working age. In places where the programmes are adequate, there has often been, and often still is, a severe financial pinch on state or local governments. The State of Michigan had to beg large business corporations to pay their taxes in advance in order that it might meet its bills.



Unemployment is, of course, the heart of the matter. The very growth of the labour force and the impressive increase in productivity which provide the opportunity for a period of rapid expansion also raise the spectre of continuing unemployment. If the forces in the private economy which press for recovery continue strong, all will be well in the best of all possible worlds, and the winter pessimists will once again have been proved wrong. But if these forces falter, and if the general public should ever come to associate the Republicans with hardship in the "affluent society," then the party may find that it has done as badly politically out of the prosperity of the nineteen-fifties as it did out of the depression of the nineteen-thirties.

Uncertain Washington

PRESIDENT Eisenhower seemed nearly as unhappy this week about the Russian willingness to negotiate over Germany as he did last week when the Russians appeared to have no intention whatever of negotiating. It is ironic that the prospects for the meeting of foreign ministers which the United States has always tried to arrange should become bright just when the United States is without a foreign minister to attend it. It is not surprising in the circumstances that Mr Eisenhower is doubtful about the value of Mr Macmillan's visit to Moscow, especially as commentators are citing it as evidence that the United States has lost its leadership in world affairs since the Secretary of State's illness. More specific evidence that this is indeed the case has been provided by the President's uncertain answers to questions on the Berlin situation at his recent press conferences.

Fortunately as it becomes clearer than ever that Mr Dulles is irreplaceable, it also begins to look as if he may be back at work—not that he has ceased to work even while in hospital—by the time Mr Macmillan visits Washington in mid-March or at least by the time of the North Atlantic Treaty meeting in early April. Although the President, the newspaper reporters and perhaps Mr Dulles himself are more optimistic than many doctors, he is said to be standing the trying radiation treatment for his cancer unusually well. Once it is over, which it will be soon, Mr Dulles is to decide for himself if he should resign. But whether or not he is still officially Secretary of State, his influence with the President is so great and his knowledge is so unique that his will be the hand guiding American foreign policy, on the German question at least, as long as he is able. And his determination is such that he will be able longer than most men would be.

Meanwhile Senators and others are getting worried that the Russians may think that the United States does not mean business on the Berlin situation because it is not getting down to the business of planning for the deadline of May 27th, when the East Germans are to take over from the Russians there. In Congress there has been a flurry of discussion designed to show the Russians that the United States is determined to stand firm in Berlin, to arouse Americans to the danger there—and to show them that the Democrats in Congress are filling the gaps left by the Republican Administration's hesitations. But the final responsibility is, and must be, the President's. He may eventually ask Congress, as he has done on similar occasions, to confirm his authority to use armed force if necessary to defend allied rights in Berlin. But this would involve a confusing debate which might suggest—entirely erroneously—that the country is not united on the basic issue.

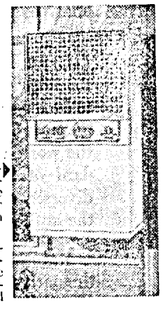
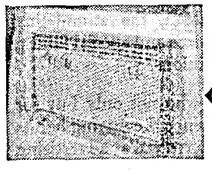
new window air conditioner!

COMPACT, YET COOLS LARGE ROOMS!





mounts flush outside, extends only 4½" into room

For a powerful window air conditioner, the Airtemp Imperial Model is wonderfully compact.

Outside the building it is flush with the wall . . . inside, it extends only 4½" into room. Yet the Imperial is available in ½-, ¾-, and 1-hp. models and so can cool sizeable rooms.

No plumbing is required . . . only an electrical outlet and a sleeve for the unit. Needs little maintenance . . . only normal cleaning and oiling. Famous Chrysler Corporation engineering assures dependability. These features make the Imperial adaptable to any type of new construction.

Airtemp's casement-window room air conditioners are available in ½- and ¾-horsepower Custom and Custom Royal models.

Airtemp's conventional-type room air conditioners are available in ½-, 1-, 1½-, and 2-horsepower, Custom and Custom Royal models.

Oil and Security

NOTHING is absolutely certain about the new scheme for restricting imports of oil, to be announced next week, but it is practically certain that it will provide for mandatory controls on imports of crude oil and of most refined products, to replace the present voluntary quotas which apply only to crude oil and to some semi-refined products. These quotas have been increasingly ineffective, with total imports running higher than ever before by the end of 1958, because some importing firms have refused to co-operate and because others have been making up for the reductions imposed on them by bringing in more refined petroleum. Thus, while domestic demand for oil has been going up, domestic output has not and prices have been driven down by the competition from cheaper foreign oil. Now it

appears, although this has not been officially announced, that the Office of Civil and Defence Mobilisation has reaffirmed its ruling that the safety of the country in time of war is threatened by the present level of imports of crude oil. Petroleum products also are said to be included in this ruling for the first time and the OCDM has apparently recommended that all quotas should be made mandatory. It is not yet clear whether the ruling is now broad enough to cover imports of residual oil, an important industrial fuel on the east coast of the United States, but in any case no reduction is likely to be required at present in these imports.

In anticipation of the ruling a scheme has been prepared which, it is reported, would cut total imports of oil to an average of just over 1 million barrels a day. The quotas of the big companies under the voluntary scheme would be reduced by 20 per cent and there would be quotas fixed according to a sliding scale for the smaller companies whose growing interest in imported oil did so much to upset the voluntary scheme. Some people believe that the legality of the mandatory controls may be successfully challenged in the courts, on the ground that the allocations are unfair. This is one of the reasons why the Administration has hesitated to impose a mandatory system; Senator O'Mahoney of Wyoming has now introduced a Bill which would put it on a sound legal footing. Another reason, the one which is now said to be delaying the final announcement of the details, is its inflationary aspect; an official attempt to push up oil prices is not very suitable at a time when the Administration claims that inflation is the most fundamental threat to the national security.

Democracy for Democrats

LAST week the Democrats fixed their next presidential nominating convention for July 11, 1960, in Los Angeles, braving the smog, the heavy cost of getting there for many delegates, and the bad timing for television broadcasts to the populous East where the clocks are three hours ahead. The Republicans will not follow the Democrats' example. Los Angeles is the home ground of one of their prospective candidates, Mr Nixon, and it is barred, in the interests of fair play, just as is New York, which is Nelson Rockefeller territory. Philadelphia or Chicago is more likely. The Democrats' vote for Los Angeles is a victory for Mr Ziffren, the ambitious committeeman from California, who believes that the party's future is bright in the fast-growing West, and for Mr Butler, the party's liberal—and controversial—national chairman. The bitter-end opposition of the political bosses of big cities in the East was based on more than a desire to win for Chicago or Philadelphia the custom of the delegates, although this is valuable enough to warrant bids from the competing cities runnning up to $700,000. California likes Mr Stevenson, and other candidates, such as Senator Kennedy and Senator Johnson, do not relish the idea of Los Angeles' big new sports arena being packed with supporters of their rivals.

Most of the party's host of presidential and vice-presidential candidates were present to celebrate Jefferson-Jackson Day in Washington last Saturday, and to hear the Speaker of the House, the venerable and respected "Mr Sam" Rayburn, call for the party to avoid a north-south split. So far the two Texans who lead the Democratic majorities in Congress, Mr Rayburn and Senator Johnson, have held both sides together with immense skill. The host of liberals sent to Washington by the voters last November resent the compromises this entails on issues dear to their constituents in the big cities, but their protests have not shaken the leaders' authority.

It will hardly come tumbling down because Mr Proxmire, who sits for Wisconsin in McCarthy's old seat, has courageously brought the grumbles against Senator Johnson's one-man rule out into the open and demanded a say for every Democrat in deciding the party's policy and legislative plans. Many liberals privately dislike Senator Johnson's southern compromises and agree that the urban East is cruelly under-represented in the party's policy and steering committees and in the powerful chairmanships of committees. But few care to challenge Mr Johnson openly or even to defend Senator Proxmire from accusations of rank ingratitude to a leader who went to great lengths to procure his re-election. In Congress Senator Johnson's authority is not likely to wane until there is a strong Democratic President—who might conceivably be Senator Johnson himself. The majority leader's decision to describe himself as a Westerner, not a Southerner, hints of presidential ambitions, whatever Mr Johnson may say. It is usually taken for granted that the Democrats will never nominate a Southerner.

Migrant Harvest

FROM A CORRESPONDENT IN CALIFORNIA

To the ever-growing number of city-dwellers, the farm is more and more removed from real life. Most Americans speeding along the highways are no longer familiar with the life lived on the farms they pass so quickly. They see farm workers only as stooping figures in the fields or as poorly dressed and unkempt migrant families crowded into ramshackle buses, dilapidated lorries and cars with flaking paint. In Congress, where farm problems are almost always discussed in the context of "subsidies" or "surpluses," little attention has been paid to the low wages, long hours and poor working conditions of American farm workers, whose numbers vary from 250,000 to more than a million and a half, depending upon the season.

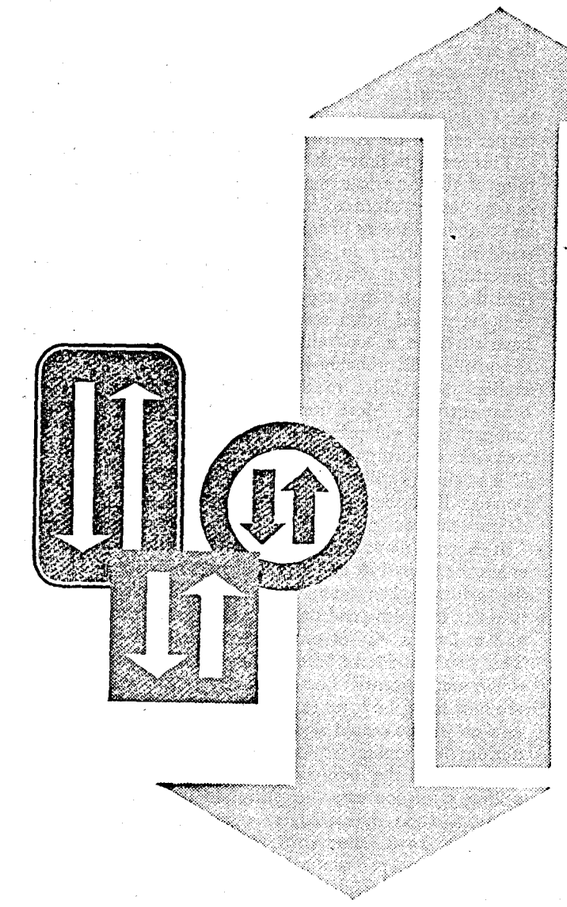
Farm labourers are not covered by federal regulations on wages and hours or by state compensation or unemployment insurance laws and their right to organise in their own defence is not protected. Migratory workers, who follow the harvests—of fruit, vegetables, sugar beet, wheat and cotton—from Florida to New England and from Texas to the State of Washington, are even worse off. In 1957 their average earnings for the year were $859 ($745 from farm employment) and even in prosperous California melon pickers are paid as little as 50 cents an hour, while in some parts of the South the wage is 30 cents an hour.

At a recent hearing held in Washington, DC, by a newly established group of prominent citizens, to investigate the conditions of farm labour, Mr Mitchell, the Secretary of Labour, said that the migratory worker would

> never be able to successfully resist exploitation until federal legislation guarantees him a decent minimum wage. . . . [until] he has fairly continuous employment. . . and receives the equal protection of all federal and state laws.

Although it is extremely unlikely that Congress will take any action at this session, there are signs that the public is beginning to demand that wages and working conditions of farm labourers should be improved. Their cause has been taken up by religious groups, especially by the Quakers and Roman Catholics, and by social welfare organisations; the Department of Labour is increasingly concerned; and the American Federation of Labour and Congress of Industrial Organisations is once more talking about a serious attempt to build up agricultural trade unions. Many states have reacted by establishing commissions to investigate charges that farm workers, especially but not exclusively the 380,000 American migrants, are ill-treated and badly paid.

The problem of farm labour in America is extremely complicated and not susceptible to a simple solution. There are many contributory causes. The shift from a rural to an overwhelmingly urban population has reduced the working force available on the farms; so has the change from the attitude that farm work is a worthwhile life-time occupation to the view that agricultural jobs are only temporary stations on the way to the factory. There has been a decline in the number of farms and an increase in the size of those that remain, but mechanisation on a large scale has not altered the need of farmers, during harvests, for a large number of workers for only short periods of time.



Some harvesting can be done mechanically, but most crops still require back-breaking "stoop" labour. Moreover, as long as wages are low, picking cotton by hand is cheaper and more efficient than using a mechanical cotton picker. Specialty crops, chiefly fruit and vegetables, which require much seasonal labour, are particularly dependent upon public taste, which can prove fickle, and on skill and luck in marketing. Finally, many farm workers are members of minority groups who already suffer from social discrimination. To all these problems another was added after the last war when the government, to alleviate the shortage of farm labour, embarked on a programme of bringing large numbers of Mexicans, known as braceros, across the border as temporary immigrants.

Since the war the braceros have been used more and more. Nearly 500,000 of them worked on farms during 1958 under conditions established by a treaty with Mexico. Before a farmer or an association of farmers may employ the braceros, there must be a certified shortage of American workers in the area. But it is often charged that low wages are deliberately offered to the American workers so as to create a shortage, thus providing the necessary excuse for the hiring of the braceros. Up to now, the Labour Department's attempts to regulate the wages, working and living conditions of the braceros have met with a good deal of resistance from farm groups. Nevertheless, the department has succeeded in establishing in theory minimum wages for the Mexicans, if not for a smaller number of other foreign workers brought in, under the ægis of the Immigration Service, from the British West Indies, Japan, the Bahamas and other countries.

Native Americans in the migrant labour force lack even this degree of federal supervision and protection. Farm groups representing the larger growers have traditionally and successfully resisted any form of federal or state regulation affecting wages, hours or working conditions. So far, the farm workers themselves have not been able to organise trade unions to improve their lot. The interstate transportation of migrant workers by labour contractors has only recently been placed under the Interstate Commerce Commission, while the camps and shelters, often tents and unheated shacks, in which the migrants live are still supervised by the states only in the most desultory way. Migrant farm workers and their children benefit very little from the health and education services and social security provisions open to the more permanent residents of any community.

The conditions of the farm labourers who stay put but who, like the migrants, work for many different employers during a year also compare unfavourably with those of the industrial workers. The average farm wage of 88 cents an hour is well below the dollar an hour of even the lowest paid industrial worker and few farm workers earn anything like a full year's pay. This is why the children of farm workers are often forced to work alongside their parents in the field. But even if their earnings were not needed, there are rarely any facilities for taking care of the children while the parents are working.

Problems like these are attracting more public attention than at any time since the days of "The Grapes of Wrath," John Steinbeck's novel about the uprooted Okies. There is some awareness among farm groups, that they will have to soften their opposition to protecting farm workers as well as industrial ones against exploitation. But the process will be a long and difficult one, since the farm lobby is strong in Congress and is even stronger in the legislatures of the agricultural states.

States' Rights to Tax

MUCH of the present resentment against the Supreme Court is based on the fear that it is undermining the rights of the states, particularly in the fields of Negro education and of civil liberties and in criminal trials. This was one element in the recent vote of the American Bar Association calling on Congress to nullify a number of the Court's more controversial decisions. Last week, however, the Court confirmed states' rights in a matter close to the hearts of states hungrily searching for new revenues—the right to tax. It ruled, in a 6 to 3 decision, that a state may tax a proportion of the net income of out-of-state corporations—the part deemed to be earned in the state—even if the income arises wholly in the course of interstate commerce. And in another decision, upheld by a 6 to 2 majority, the Court ruled that state property taxes may be levied on imports of raw materials if they are stored in the state for immediate use ; at that point they are held to have lost the character of imports and hence their immunity from state taxation.

The Constitution provides that no state may tax imports or exports and reserves to Congress the right to regulate interstate commerce. The majority argued, however, that the two decisions did not involve any fresh departure from these basic principles ; this was hotly disputed in both cases by Justice Frankfurter. On taxing the interstate income of out-of-state corporations, Justice Clark, for the majority, pointed out that the principle had been upheld in cases going back to 1918, although its application had been restricted. Now there is no longer any doubt that Georgia, for example, can tax a "foreign" corporation which has income from sales in Georgia even if it has no plant there and even if it maintains no sales office in the state. The alternative, Justice Clark wrote, would be to exempt certain corporations from paying their fair share for the benefits conferred by states in which they do business.

The majority recognised the risk that the decision may lead to confusion and double taxation. Of the 49 states, 24 tax the income of out-of-state corporations, but they do not all use the same formula to apportion it among the various states and so far efforts to write a uniform code have failed. Until they succeed, it will be up to the taxpayers to convince the courts if they feel that the formulas are unfair. In fact, the burden of corporate taxes is not expected to become intolerably heavy as a result of the decision, at least not right away. Businessmen are much more afraid that the real burden, as Justice Frankfurter predicted, will prove to be the multiplicity of records which they will have to keep to satisfy several—perhaps before long 51 in extreme cases—different tax authorities.

Big Three's Small Lines

SMALL cars were big news again last month after the *New York Times* reported that this autumn the Ford Company would offer a small model, similar to the British Zephyr, at under $2,000. This story was promptly denied, but it is now common knowledge that all the Big Three—the General Motors and Chrysler Corporations and Ford—have lines of small cars under development ready for the time when demand justifies their production. Moreover, it is generally taken for granted that the time will be next autumn, when the new model year opens. That the age of the "compact" car had come was confirmed by the success of the new Studebaker Lark, following on that of American Motors' Rambler. It is predicted that these small makes plus foreign imports will capture nearly 20 per cent of the American market this year.

This seems to prove that there has been a change in the taste of the American motorist which the big companies can no longer afford to ignore. The demand is now for an economical means of transport rather than for a "higher standard of living in cars." The conventional, roomy, powerful car will always have a market, but even in this field the new trend is expected to end the competition for ever bigger and better models, which has meant that they have all come to look alike. Next autumn's restyling of the giants will probably bring smaller dimensions, lighter bodies, more miles to the gallon and less extravagant ornamentation. More important, the entirely new lines of compact cars will present the engineers and stylists with welcome opportunities to make completely fresh starts. The small cars will not be as small or as cheap as the most popular European makes ; they will be not copies but definite new designs by Americans for Americans.

It is only natural that the Big Three have refused to announce their shift away from bigness officially. To publish a future change might interfere with sales of present models ; it is also good policy to keep competitors guessing and to have a way of escape should current trends alter. This year's cars have been coming off the production lines slowly until recently, because of strikes, but dealers' stocks are now being built up to satisfactory levels. Output from now on will be geared closely to sales which should be high during the coming weeks of spring demand. They will have to be if the industry is to achieve its modest goal of selling 5,500,000 cars this year. In the first two months about 830,000 were sold, 18 per cent above the similar period of 1958. But 1958 was a very bad year and an increase of 30 per cent will be needed during the rest of 1959 if the automobile industry is to play its part in keeping the economic recovery going.

Wild West on Television

FROM A CORRESPONDENT IN COLORADO

FOR years hundreds of remote communities have owed their television fare to "booster" stations that are built on high places and that relay and amplify the original broadcast signal. Such stations, which are not usually run for profit, have been most useful in the West, for television signals cannot penetrate a mountain range. Without them the people of remote valleys could not watch the heroes of "Westerns" galloping across their screens. There are now more than 400 such boosters in the 13 western states alone, none of which has ever been licensed. They are put up either by communities or by enterprising businessmen who have television sets to sell.

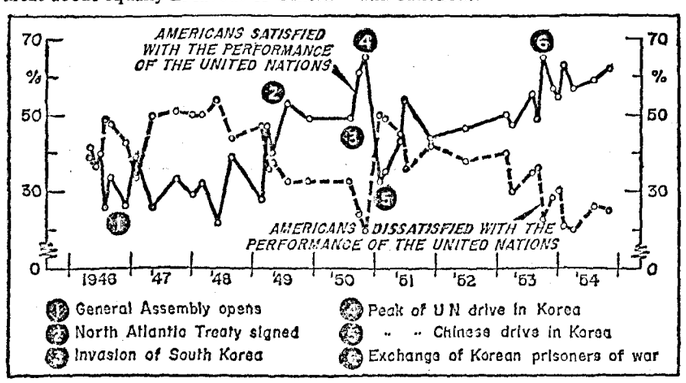
The Federal Communications Commission has long objected to them on the ground that their rebroadcast signals, flooding on the original wavelength far beyond their service areas, can, and do, interfere with signals on that wavelength from licensed stations. Last December the commission finally ordered that all such boosters cease operating by April 1, 1959, saying that they might be allowed to reopen on the empty ultra-high frequency spectrum instead of on the crowded very-high frequency one which they have been using. This would involve rebuilding of the boosters and alterations to all the home sets they serve, costing in all, it is estimated, about $6 million and affecting over 600,000 people.

The FCC has blundered into a hornets' nest. Two years ago when it first threatened the boosters, the Governor of Colorado commissioned their operators as members of his "communications staff" (a legally non-existent entity) in order to throw the state's protecting arm about them. Recently when Mr Doerfer, the chairman of the FCC, visited Denver to discuss the matter with representatives of the 13 western states, their chief spokesman, Governor McNichols of Colorado, said it would "take the militia" to close down the boosters.

Given such determined opposition, the FCC seems to have decided that it would be wise to retreat. The date by which the boosters must shut down has been postponed until June 30th, and the commission has ordered its staff to prepare regulations which would permit these relays to continue if it can be shown that they do not interfere with other broadcasts. In the meantime Senators and Representatives from the western states have introduced Bills which would create a Bureau of Community Television Service in the FCC ; it would supervise the continued operation of the booster stations. If both of these approaches fail, the commission faces lengthy legal action, going as far as the Supreme Court, before it can enforce its order to close down the boosters. It seems likely, therefore, that no western viewers will be deprived, for a long time to come, of the sight of Wyatt Earp riding into the sunset on the standard television frequencies.

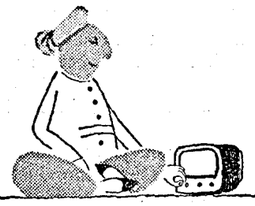
United States and United Nations

FROM A SPECIAL CORRESPONDENT



IT is often said that if the public opinion poll had been invented twenty years earlier, the Senate would have ratified the Treaty of Versailles and brought the United States into the League. We fortunate children of light who live under the new dispensation of Gallup and Hurry have no excuse for guesswork. A large body of pollsters' statistics exists to tell us what the biggest democracy thinks about the world organisation of which it is the principal begetter and supporter. In "The United States and the United Nations"* Mr Scott and Mr Withey, working under the auspices of the Survey Research Centre at the University of Michigan, have brought together such of these statistics as are available for the years 1945-55. Their book is part of a series which the Carnegie foundation is sponsoring on member states and their attitudes towards the United Nations and is to be followed by two more devoted to an analysis of the actual policies which the United States has pursued in relation to the United Nations.

Not surprisingly, Messrs Scott and Withey's findings contain no surprises. They do not always even provide straightforward answers to the obvious questions, owing to the failure of pollsters to ask consistently enough of the questions that students and historians would wish to put. All the same, some useful facts emerge.



First, it is established beyond doubt that an overwhelming majority of Americans have been "for" the United Nations ever since it was established, with about 80 per cent positively in favour of it and only about 10 per cent positively against. Approval of its functioning, however, rose and fell in a predictable style according to the brightening and darkening of the international sky, with Korea providing sensational alternations of satisfaction and concern. During most of the period about a third of the population displayed vestiges of prewar isolationist attitudes, such as hostility to foreign aid or a desire to rely on national strength alone, but of this third only a third again seems to wish to contract out of the United Nations and its obligations. Interestingly, though there was a strong and increasing sentiment against seating the Peking government in the United Nations (80 per cent in 1954), the proportion favouring a withdrawal by the United States from the organisation if this occurred never rose above 25 per cent.

The surveys drive another nail into the hoary superstition that the Middle West is still the geographical seat of isolationism. Polls taken between 1942 and 1945 "found respondents in all areas about equally in favour of United States participation." Since then, they reveal that "there are no appreciable differences between eastern and midwestern attitudes towards the United Nations." Nor is there much, in normal times, between the rank and file of the parties, though Korea, understandably, soured more Republicans than Democrats. The authors seem justified in their conclusion that "almost any proposed US action in the United Nations would find almost equal proportions of supporters—or equal proportions of opponents—among adherents of both parties."

Of course there is ignorance. Just as in the war years almost a half of the population was unaware that the United States had never joined the League, so three years after the war "one American out of four admitted that he had never heard of the [UN] Organisation or could not even vaguely define its purpose." But as the authors point out, this is just an aspect of the general public ignorance about public affairs, and no one should be surprised that the United Nations is not "central enough to most people's day-to-day thinking to require them to have a well-developed picture of its structure and functions."

Manufacturer's exports multiply 26 times in 10 years!*

From an export turnover of £81,000 to over £2,000,000 in just ten years! That's the success story of a manufacturer in the radio industry who went after the world markets in 1948 with the right sort of backing—ECGD insurance. In fact, had it not been for ECGD cover during these past ten years, a number of unforeseen losses might have cost him £236,000. What a good thing he was insured! For although £82,000 of this money has since been recovered, these are the sort of losses that no exporter, however big, can afford to face alone. There's money, big money, to be made in the export markets. But a few bad debts or a suddenly blocked currency could bring serious financial loss. If you're all set to launch out overseas, *first have a talk with your ECGD man.* With ECGD behind you, you get your money whatever happens. For consumer goods the cost averages less than 10/- for every £100 insured.

THE WORLD OVERSEAS

Mr Khrushchev's German Platform

FROM OUR SPECIAL CORRESPONDENT

Leipzig, Wednesday.

LEIPZIG, at the time of the spring fair, has made as fine and dandy a setting as any available for Mr Khrushchev's latest act of showmanship. Here in 1959 his loudly brandished confidence in the future of the communist German state of Soviet making seems wholly justified. The city was never lovely. "Leipzig, I presume, is not the seat of the graces," sneered Chesterfield two centuries ago. By no means. But since the war it has emerged from utter bleakness to become increasingly the credible window of many people's hopes of better living through communist planning and co-operative co-existence with the western world.

The streets are still depressingly dingy (is it really beyond the scope of the planners to put on a bit of paint ?) and the chores of day to day living are still burdened by unnecessary discomforts and annoyances. Yet behind their dilapidated fronts the shops are much better stocked than three years ago. So are the shabby ill-lit public eating places. Men, women and children are much better turned out and look healthier. The machinery on show at the fair, which used to seem so tantalisingly remote from the grim realities of the Leipziger's daily round, can no longer be reproached with having only an other-worldly significance. The Democratic Republic as a whole has become indisputably viable and the Leipzig fair is much more than a promise of pie in the sky.

Doubtless some such reflections as these were among those that passed through Mr Khrushchev's mind as he looked over the Wilhelm Leuschner Platz on Wednesday, sniffing the all-pervading odour of chemicals carried on the wind from the neighbouring Leuna works. He rubbed it in that the Leipzig fair at which all (not quite all) the countries of Europe are represented testified to the growing authority and expanding economy of the German Democratic Republic. Consequently, as he had just been reminding Mr Macmillan in Moscow, the Soviet government was resolved to acknowledge the "realities of the situation" by negotiating a peace treaty, if not with the two existing German states, then with the one German state that was ready to respond obligingly to the demand for the perpetual suppression of German militarism.

Mr Khrushchev has since been closeted with Herr Ulbricht and other Soviet and east German leaders, who on their own admission have been preparing the ground for one or other of the treaties envisaged. They are all talking and acting quite consistently as they have done all along. They do not want Germany to be reunited except on their own terms. They believe the progress registered annually at Leipzig to be one convincing sign that everything is going their way. They are prepared to wait for the consummation of their policy. Confidence condenses out of the air.

In the circumstances, much of the western argument about the future of Germany, and the western endeavour to persuade the Russians to modify their ideas on the subject, have an utterly academic ring. The Russians obviously have not the slightest intention of changing their ideas about Germany, and in the government of the German Democratic Republic they have a reliable instrument for consolidating and strengthening, if not extending, what has been achieved politically and economically within the republic's frontiers since 1945. In the coming negotiations, whatever shape they take, there are going to be no concessions worth a fig to the Federal Republic and the western allies.

The saddening and disturbing feature of the ever-hardening partition of Germany is the studied misrepresentation in the Democratic Republic of conditions in the Federal Republic and of the motives of its leaders. In place of a genuine wish for understanding there is a widespread desire to believe only evil of the west Germans. Admittedly the west Germans lay themselves open to misunderstanding. Dr Adenauer is himself much to blame for having set the example of appointing to positions of trust men whose reputation is not blameless and for whom there could be perfectly adequate substitutes. How easy it was for Herr Ulbricht to call the Leipzig audience's attention to the anti-semitic pamphleteers and memoir-writing generals of the Federal Republic. And whose flight of fancy was it to set up on the Frankfurt-Leipzig autobahn, as a last message to motorists leaving federal territory, signposts proclaiming the exact number of kilometres to Königsberg and Danzig ?

It is from these isolated symptoms, which are discovered and condemned by the majority of the west Germans themselves, that the east German press malevolently draws its grotesque caricature of a west Germany rearing to drop atomic bombs on eastern Europe. The self-righteousness and venomous distortions of east German propaganda are phenomena scarcely worthy of a state claiming to have rid itself of all Nazi states of mind, and clamouring for international recognition.

Israel Makes Room

FROM OUR SPECIAL CORRESPONDENT LATELY IN ISRAEL

ARAB protest against the immigration of Rumanian Jews into Israel has come rather late in the day. The Rumanian government began handing out exit visas in August, 1958, and in the six months since then some 20,000 immigrants have arrived in Israel. The Israelis were given no warning and their legation in Bucharest has always been kept in the dark ; Jewish Agency officials in Vienna, who are responsible for the transport of most of the newcomers, know the numbers they have to deal with only when they

count the immigrants coming off the train. At first, the Israeli government, afraid to break a spell it could neither understand nor control, kept as quiet as possible about what was going on. But as the numbers grew, the need for caution had to be weighed against the need for money ; it was impossible to raise the additional revenue for the new immigration without publicising the urgency of the cause.

So caution was dropped ; Israeli ministers went off on money-raising tours and foreign newspapers were urged to make known the weight of the new burden. The Arab reaction suggests that the Israelis may have changed course too boldly ; but the Arabs may merely have felt the need for a safe rallying call for Arab unity. The old accusation that Israel must seek more territory to absorb the new immigration is, for the time being at least, far wide of the mark. Israel needs money, time and organisation to develop the land it already has ; but it has no time at all and is behind-hand with its planning.

ONLY the Rumanians know how clean the sweep of their Jews will be. Altogether there are thought to be some 270,000, of whom more than half have at some time registered for permission to emigrate to Israel. So far only those who applied some years ago are getting exit visas, but the Jews who have already arrived in Israel give the impression that most of those who are left are now anxious to get out as quickly as possible. The Israeli government is quoting the round figure of 100,000 immigrants this year (most of them Rumanians), but this can only be guesswork. In February the numbers dropped a bit but only because of transport problems. Most of the Rumanians come first to Vienna and the Austrian authorities were finding the traffic too heavy. Alternative routes are being talked about ; but for the time being the Jewish Agency is struggling to keep the channel through Austria clear.

Two or three plane-loads of immigrants are now being flown daily from Vienna to Tel Aviv. The Jewish Agency much prefers to bring the newcomers by train to Naples and thence by ship to Haifa so that during the sea voyage there is a chance of finding out who they are, what they do and where they can most usefully go. When they come by air, all this has to be done much more arbitrarily in a few hours at Lydda airport. But there may now be some 20,000 Jews who are waiting with exit visas, and it is considered vital, whatever the confusion, to get them out of Rumania as quickly as possible.

First things first. Afterwards come two great question marks : who pays for it all and what is to be done with the new arrivals ? The first question is the simpler, or, put another way, it is even more difficult for the Israelis to conjure jobs out of the air than money. It costs about £700 to bring an immigrant to Israel, put a roof over his head and look after him for the first few months ; much more money is needed to provide him with permanent employment. The draft 1959-60 budget allowed for only 40,000 immigrants, and the finance minister, Mr Eshkol, is now trying to get an additional £37 million. He hopes to raise about half of this overseas (including drought relief from the United States) and £15 million is being extracted from the local population by indirect taxes and a compulsory loan—a horrid decision for a minister in election year. The heavily-taxed Israelis accept the new burdens philosophically, although, to Mr Ben-Gurion's chagrin, they were unresponsive to his earlier attempt to raise money voluntarily.

Even when the money is available there remains the problem of fitting the newcomer in. During its first years of independence Israel survived far more overwhelming waves of immigration ; between 1948 and 1951, some 650,000 newcomers were absorbed into a country that was far less developed and prepared than it is now. The present wave is choking the state for three solid reasons : the type of people now coming in are particularly hard to absorb ; standards have risen since the early days and, most important of all, the state badly needs a lull for agricultural and industrial readjustment. But Israel is not master of its pauses.

Two or three years ago the country was short of people with professions or skilled trades. But the Rumanian exodus, with its high proportion of professional people, has come too closely on the heels of the Polish immigration in 1957, and there are no longer any vacancies for the doctors, accountants and electrical engineers, or for the cobblers, clerks and tailors, who are pouring in. The doctors' situation looks rather grim. If the Rumanians let a lot of their Jewish doctors go, there may be a thousand or more physicians applying for jobs that do not exist. An emergency plan may send some of these doctors on half-pay to small, remote villages, in the hope that they or their wives will make up the rest of the money by keeping hens or growing vegetables. In the early days of zionism, before the founding of the state, many doctors and other professionals abandoned their careers to till the land in Palestine ; in modern times such sacrifice is sure to be less voluntary and far less enthusiastic.

Even if a newcomer agrees to abandon his trade or profession, he may not be able to find a satisfying alternative. In theory, he is now sent direct to a house in the area where he is expected to settle, and so skips the horrible stage of transit camps. All over the country houses are being built at blinding speed ; still, they cannot keep up with the flow. Some of the newcomers will have to live in prefabricated asbestos huts ; others may have to spend at least their first few months in wooden shacks.

AN immigrant who has no relations in Israel to help him, has to be sent where there is a roof for his family. Unlike the Poles, many of whom either had a little money or else some saleable belongings, the Rumanians cannot keep themselves while they look around on their own. Most of them were turned out of Rumania at very short notice, allowed to bring only 150 lb, or less, of personal belongings, and unable to smuggle any money—even if they dared—because of the heavy costs involved in their departure. They have therefore to go wherever the Jewish Agency can find accommodation.

The Rumanians are not chicken-spirited. Many rejoicing in their new security, are eager to make a fresh life for themselves and their families wherever the state can find room and use for them. There is room ; the need is for economic development to give the newcomers work. The pressure of immigration is turning economic planning upside down and workers are being established in development towns long before the industries that it is hoped will eventually employ them. The shortage of jobs is critical. Instead of unemployment pay, every new immigrant is guaranteed 12 days work a month (or 20 days if he has a large family) but this emergency labour—destoning the land, building roads, or planting trees—is disheartening and inadequate. The new houses are fine but the immigrants waiting for jobs complain " we can't eat the walls."

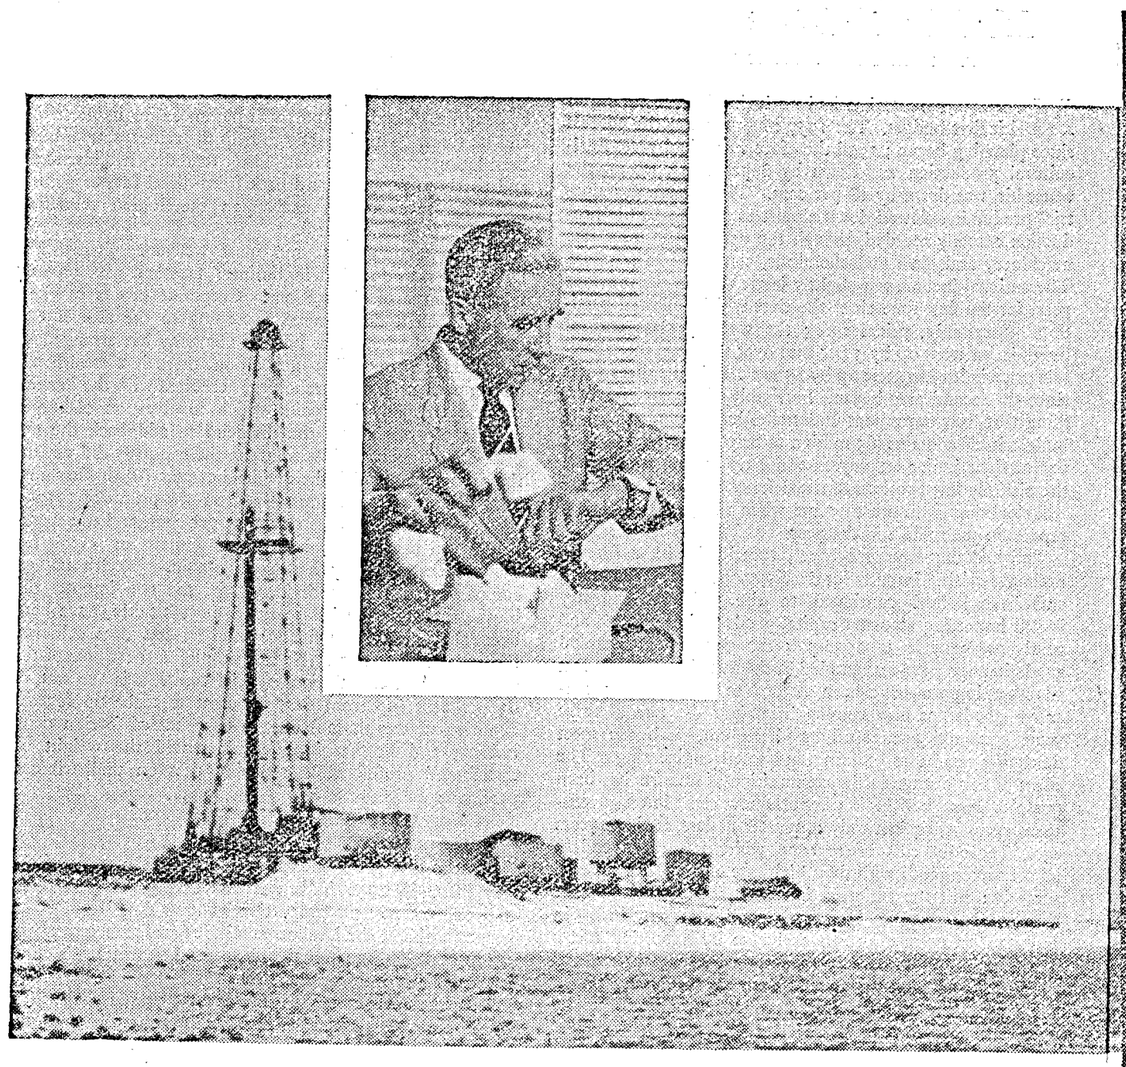
Mr Desai's First Budget

FROM OUR CORRESPONDENT IN INDIA

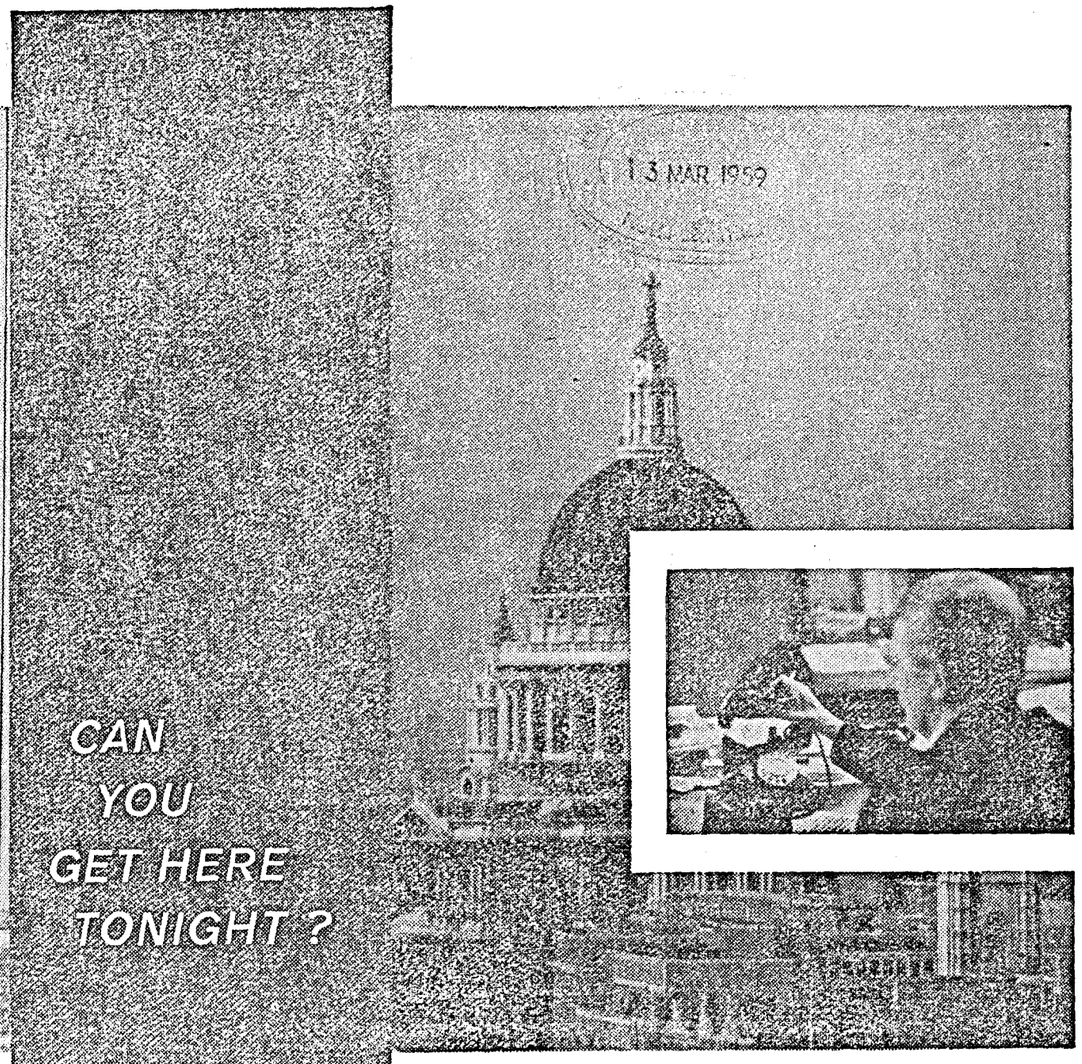
MR MORARJI DESAI has had no luck with the timing of his first budget. The 1957 monsoon was the poorest since planning began ; 1958 therefore was a bad year. Agricultural production was down by 8 per cent ; wheat, the worst hit, was down by 18 per cent. The growth in industrial production slowed down almost to a stop ; textile production actually receded, though the newer industries, like machinery and glass and chemicals, continued to advance. The national income was slightly lower than in the previous year, for the first time since the riots which followed partition. Inevitably, prices rose ; the working class cost of living index went up by 5 per cent over the year, the wholesale price index has gone up by 15 per cent in the three years since the second plan began. Inevitably, the costs of everything that the government undertakes have risen, too. The budget itself contains £5 million to help the states raise the pay of their junior employees and £1.5 million to increase the pitifully low pensions of the defence services ; and there will doubtless be more to come when the pay commission reports in the middle of the year.

The bad monsoon, moreover, coincided with a foreign exchange crisis. Imports for development have not suffered, and have indeed continued to rise. Private industry is still importing as many capital goods as in 1955-56, and nearly as many as in 1956-57 ; the government's capital goods imports have quadrupled in the last three years. But all other imports have been slashed to the marrow ; consumer goods are now coming in at half the rate of three years ago, and even steel has been cut, with the most damaging results to building and small engineering. The effect of this change in the composition of imports has been twofold. First, half India's imports now come in on government account, against only a quarter as late as three years ago. Secondly, customs revenue, which is very dependent on consumer goods with their high rate of duty, has suffered severely ; and the suffering has been made worse by the simultaneous need to reduce or abolish export duties in order to earn more foreign exchange by exporting more. Revenue in 1958-59 was £30 million below estimate, and most of the drop was in customs duties ; in the budget itself the export duty on tea has been reduced, at a cost of nearly £750,000 per year.

MR DESAI, therefore, faced a revenue deficit of £60 million for 1959-60 ; this although he had successfully introduced a major cut in the defence estimates of £27 million, or over one-eighth, as against the figure Mr Nehru sanctioned last year when he was finance minister. After the heavy doses of new taxation that the Indian economy has had to accept almost every year since the first plan began, Mr Desai felt it was not possible to fill the gap all at once, although he hinted at more to come later in the year, presumably when the effects of the good 1958 monsoon have had time to show themselves.



He has confined himself to an extra £18.5 million ; but within this sum, which is, of course, much bigger in the Indian context of poverty and a narrow tax base than it seems to western eyes, Mr Desai has succeeded in getting something out of everybody. The rich will pay another half per cent on their wealth tax, and the two most obvious loopholes in the expenditure tax have been firmly patched ; gold and jewellery will no longer be exempt, and the expenditure of wives and minor children will be aggregated with that of the assessee even where their incomes are separate. The middle classes will pay more for their rayon and their cigarettes. Everybody will pay more for cottage sugar and cooking fat. Road transport will pay more for its diesel oil and its tyres. This is partly to help the railways, who have been losing traffic to the roads faster than they had intended, and partly to push demand back from diesel fuel to petrol, and thus save foreign exchange ; the Indian refineries produce a surplus of petrol.



The most important, and most welcome, change Mr Desai has introduced is in business taxation. At present this is a maze of elaborations. Corporate profits can pay taxes at half a dozen rates, according to the size of the dividend and whether or not the company has arranged to pay dividends in India ; in addition, there is a wealth tax on companies. The shareholder is credited with the income tax the company has paid, which involves an elaborate process of grossing up the dividend to add back the tax paid, and of deciding just what tax the company did pay on the profits from which the dividend came. All this has now been swept away. In future—as from the profits of 1959—the company will pay a straight 45 per cent, and the shareholder will pay tax on his dividend without any credit for the tax the company has already paid. Wealth tax on companies and excess dividend tax, the two imposts the business community has resented most bitterly, have both been abolished. The finance minister has thus achieved two objectives at once. He has simplified the whole of the company taxation ; the one special case left is the rate of 63 per cent (up from 61.5 per cent to make up for the abolition of wealth tax) on the branches of foreign companies ; and he has in effect increased the weight on distributed profits while reducing that on undistributed profits.

BEHIND this grim budgetary effort lies the story of the Plan. In 1950 India was investing 5 per cent of its national income ; the proportion has now doubled to 10-11 per cent, almost the level economists regard as necessary for the real take-off into growth. The central government's effort is particularly impressive. Private industry, having got its investment up to about £140 million a year, is held there by import restrictions, difficulties over steel, and the unresponsiveness of the capital market. Capital formation from the central government's resources, on the other hand, has gone up eight-fold since 1950-51, to nearly £600 million. Total expenditure on the plan, capital and revenue, central and state, has gone up by three-quarters (to £725 million for 1959-60) in the three years since the Plan began. To pay for all this, starting from a budget in deficit, is not easy. Some items are covered by the revenue budgets of the centre and the states ; but most have to be met from borrowing, or external finance, or the creation of money. The biggest single source is foreign aid and loans which are to provide £250 million next year. This will come from half the world—Canada and Czechoslovakia, Russia and Rumania, England and the United States, West Germany and Japan ; but most is either American or from the World Bank. Almost as large a source is borrowing, from which Mr Desai hopes to get nearly £240 million.

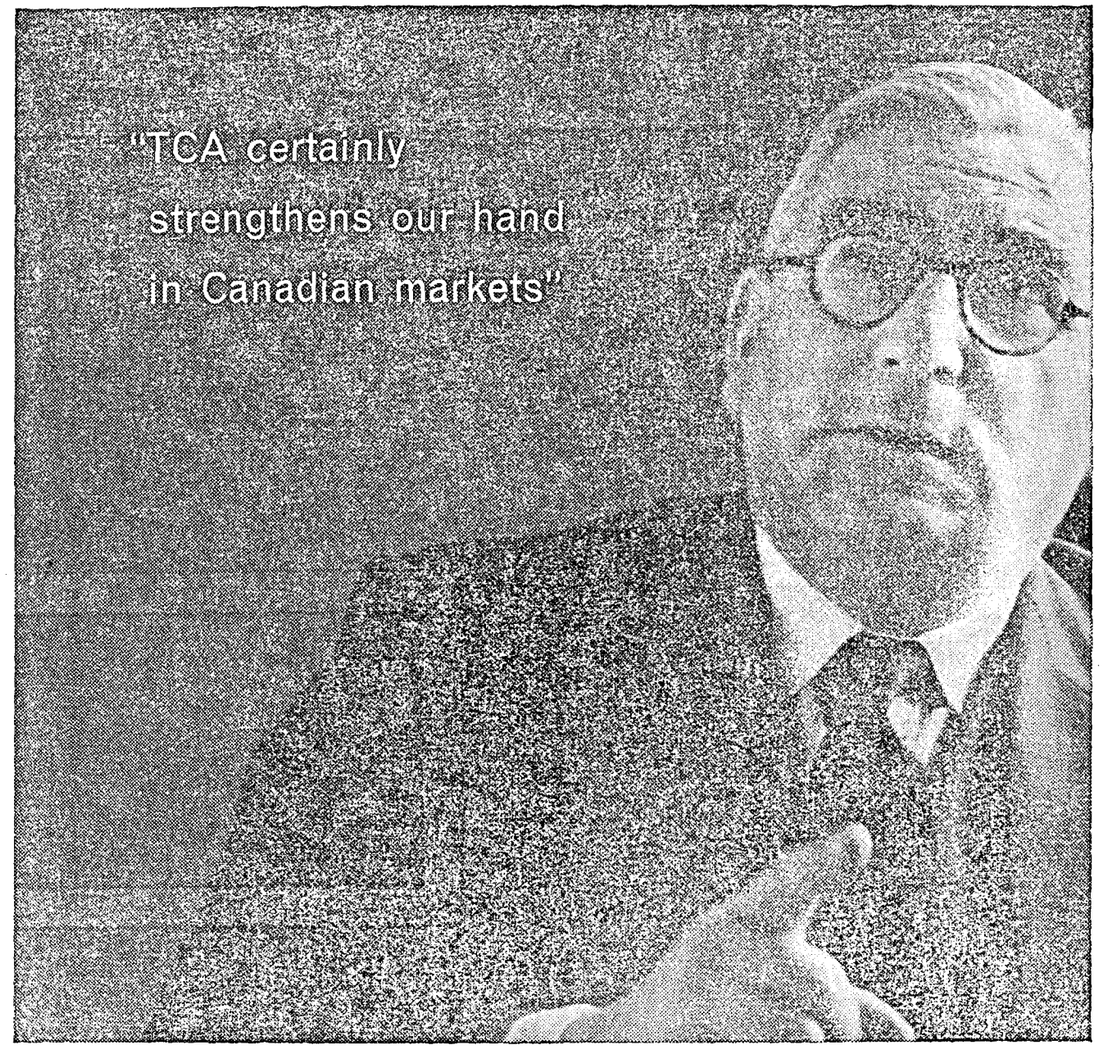
THE ECONOMIST MARCH 7, 1959



Time was when business men spent most of their days behind their desks. In moments of crisis they kept their fingers crossed, and hoped things would work themselves out. Today, the pace is quicker, the personal touch is a lot more important. Business men really need a transport service between this country, Europe, and the Middle East that's fast, reliable and comprehensive. And in BEA they have it. A route-plan that serves every important capital and commercial city in Europe. A time-table that offers a wide choice of frequent flights to these places. A daily passenger capacity of over ten thousand seats. In short, BEA provides the kind of air-service Europe needs, an air-service that can bring people together anywhere in Europe, almost any hour of the day.

BEA

BRITISH EUROPEAN AIRWAYS

BEA brings them face to face

You may already be doing reasonably well in Canadian markets. But could you do better? Are you getting your share of the new business that's lined up for British firms in Canada? Or could you somehow tighten up your marketing operations? It might help if you and your executives were to make a few reconnoitres into the business heart of Canada. You needn't lose any time or sleep. It's easy enough to fly overnight, *any night*, by TCA—Canada's own international airline—and get down to business the very next morning. And you'll find your bargaining power is increased when you know that TCA Air Freight can help you by-pass any distribution problem . . . *with the only daily direct-delivery service to all Canada.*

FLY TCA—DE LUXE CLASS
You can really relax aboard a giant TCA Super G Constellation. You'll like the fully reclining seats: good food and drink: attentive service. And the chances are you'll meet some of the many Canadian business men who always fly TCA.

Your Travel Agent is the man to see

Continued from Page 883

Small savings, though always below estimate, have been going up every year, and the banks are so flush with deposits, because imports have been cut and because of the way American aid works, that their willingness to hold government securities is now very much greater than it was eighteen months ago.

Finally comes deficit finance, the issue of treasury bills to the central bank, which will provide £184 million, almost the same as in the year just ended. This year, the country was protected from the inflationary effect of this deficit financing by the running down of the sterling balances and the increase in the banks' time deposits ; money supply to the public rose only by £56 million. But the sterling balances have now been held at roughly the same level for six months, and time deposits are unlikely to increase quite so rapidly next year. Protection from inflation will have to come in 1959-60 from increased production. Fortunately, the crops are good. Rice, at 30 million tons, is a record, one-fifth above last year ; wheat promises to be equally bumper ; and when agriculture flourishes, industry is not likely to lag behind, especially as a considerable part of India's new steel capacity is due to come into production this year.

Mr Desai has done a workmanlike job. The second five-year plan, like the first, was nearly swept away in mid-stream, but now looks like reaching the opposite bank in safety. A good deal of the credit must go to the finance minister's clarity, determination, and commonsense.

France's Fourth Estate

FROM OUR PARIS CORRESPONDENT

THE treatment of the press is often a good guide to the political freedom prevailing in a country. Frequent seizures of newspapers during the last two years of the Fourth Republic were a source of concern to those who cared about French democracy. After the collapse of the Fourth Republic last May, anyone who read the French newspapers was bound to be struck by their conformism and laudatory style. With a few notable exceptions, the press seemed to have altered its function from that of enlightened criticism to being the government's advocate, if not its panegyrist. In a country with a long tradition of free speech and acid comment it was a puzzle to know whether newspaper owners and editors decided to behave in this way by political choice, by a feeling for the country's mood or by fear of legal reprisals.

The law which will have the greatest direct impact on the contents of French papers, particularly of the popular dailies, has come into force only this week. The judicial reform, intended to bring up to date and make more efficient the legal code inherited from Napoleon, contains two important changes affecting the press. The first tries to improve the secrecy that nominally surrounds the preliminary investigation of a case: heavier penalties are introduced for policemen or journalists who break the rules. The other change is an attempt to create a dogma of judicial infallibility. Article 226 of the new code provides penalties of up to six months in jail and two million francs in fines for anyone whose criticism of a judicial decision can be interpreted as "a slur on the authority of the judiciary."

Englishmen used often to be perplexed by the freedom with which French papers dealt with matters still *sub judice*, and were sometimes shocked by what seemed to them trial by the press. It must, however, be remembered that in a country where procedure is slower and the judiciary less independent, these appeals to public opinion occasionally prevented abuses. The advocates of the new system claim that the French press will no longer be filled with unsavoury reports on scandals like the present *Ballets Roses* affair. The critics point out that if the rule of infallibility had applied in earlier days, Dreyfus would have died on Devil's Island and Voltaire would not have been allowed to plead for the protestant Calas. Maitre Maurice Garçon, the eminent lawyer who quoted these two examples, at the same time gave a warning that the text of the new law, as it stands, can easily be used to cover up abuses, particularly in the political field.

The impact of the new law remains to be seen. For some time now, in any case, the Algerian war has made the life of an independent French journalist awkward. The Ministry of Defence recently reminded newspapermen that they must take their news about the fighting from official sources, and that while inaccurate reports about troop movements can do damage, accurate but premature reports are even more harmful. The worse problem for editors, however, is that their writings can be interpreted as "undermining the morale of the troops" and, therefore, seized. It is true that seizures of newspapers have not been very frequent in recent weeks and that Parisian non-communist papers can be regularly bought in Algeria. Yet it is difficult to determine whether this is not partly the result of editorial self-censorship.

THE third, and potentially the biggest, threat to press freedom springs from the change in the functions of the President of the Republic. Article 26 of the press law of 1881 provides penalties of up to one year in prison and 30 million francs in fines for offences against the president. The list of offences is long. The law is not new, but it did not matter much as long as the president was a figurehead. Now that he has become the effective head of the executive, an extensive interpretation of this clause could make criticism extremely difficult. One of the boldest of Paris editors told your correspondent that if his paper is prevented from criticising the judiciary, the army, and the president, it will have to limit its comments to the latest women's fashions. There is no doubt that the new law-makers have an authoritarian bent and, except in economic matters, they are instinctively on the side of Leviathan.

Even without the new law, the government had a sufficient apparatus of control to keep the press quiet—more than sufficient, since the press had been censoring itself since July. This docility however showed signs of erosion after the financial shocks of Christmas. The new year brought a changed atmosphere. Parisian *chansonniers* suddenly began to bring out their barbed shafts. Popular papers began timidly to criticise, if not the general then his ministers. It has even been suggested that the Gaullist reign, like that of Louis-Philippe, will turn into a cartoonist's paradise. The authorities usually resort to defence mechanisms only when they feel in danger ; they try to muzzle the fourth estate when the third is in motion. The number of seizures, fines or trials of newspapers (or their absence) in the forthcoming months should show what use the government intends to make of the legal weapons at its disposal.

New Lease for a General

As many people suspected when General Ne Win took over in Burma last October, the job of cleaning up the country by April 30th proved beyond even his capacity. The elections that were promised by that date will not now be held before next year, if then. For form's sake, General Ne Win resigned the premiership three weeks ago; now, at his request, the constitution has been revised to enable him to be re-elected as prime minister. This also has duly been done, against the votes of the communist-controlled National United Front, which stands to lose most from postponed elections and prospective stability.

For better or for worse the army's position now seems unassailable. The old ruling party, the Anti-Fascist People's Freedom League (AFPFL) is still split into factions with face-saving labels. U Ba Swe's "stable" AFPFL was the more enthusiastic in supporting Ne Win's bid for a further lease of official life. U Nu's "clean" AFPFL tagged along reluctantly, presumably through unwillingness to be seen voting with the communists. The ex-prime minister's appeal to U Ba Swe for the reunification of the two groups, made in a speech at the end of the year, has gone ignored. The "clean" AFPFL's general secretary, Thakin Kyaw Dun, was arrested in January. These developments leave U Nu in a poor position to take the initiative.

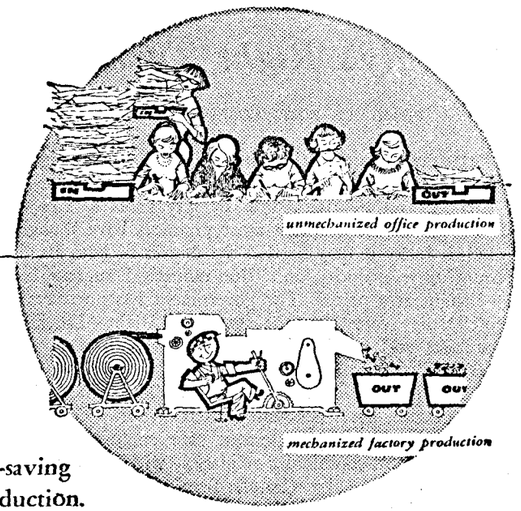
Hungarian Peasants Under Fire

BY A CORRESPONDENT

IMMOBILISME is to end in Hungary. The Party has, after all the fears and heart-searchings, decided that progress on the one and only road to socialism is to be resumed this spring. While the Soviet Union is catching up with America and the Chinese comrades are doing their big leap, Hungary will attempt a little leap so as to catch up with, of all places, Bulgaria.

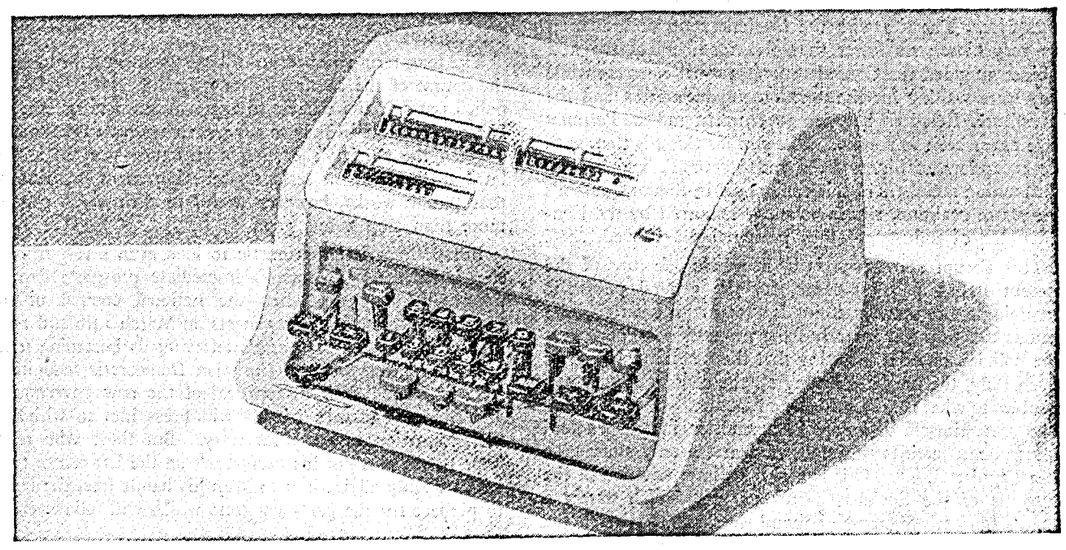
In other words, a series of decisions has been taken to push on with the collectivisation of agriculture. On being put in power, the Kadar government repeatedly renounced the use of force to drive the peasants into collectives. It acknowledged that forcible collectivisation had been the most serious "shortcoming" of the Rakosi regime, and promised strict adherence to the "principle of voluntariness." But with a mere 15 per cent of the country's agricultural area collectivised, it had to hang its head in shame before the achievements of the Czech and Bulgarian comrades. Then "principle of voluntariness" was not getting any results. The lower party cadres regarded it as merely silly, or as a tacit licence to do nothing in the countryside. They were still supposed to employ peaceful persuasion. But as a county party committee member put it: "Our peasants never deny that the future belongs to the collectives. But why should they give up private farming unless they absolutely have to?"

Now they are told in no uncertain terms that they absolutely have to. Threats of force are still (albeit thinly) veiled, and consist mainly of a condemnation of the "exaggerated stress on the principle of voluntariness," but there are, particularly at the county level, hints of more to come if veiled threats do not suffice. This year only modest progress is envisaged, with the big leap coming in 1960. Time is needed to organise the national task force of 500 staunch party workers, the county task forces (each 20 to 40 strong) and the village collectivisation committees who will be responsible for making the peasants see reason. Also, it will take time (to put it mildly) to find the machinery and building materials for the new collectives. It should also take time to arrange for the Soviet Union to underwrite the ensuing fall in agricultural output and the all-too-predictable balance-of-payments trouble.



The resumption of collectivisation is received as an unmitigated disaster in Hungary. Once again, the party leadership has disappointed those who thought that its reason might prove stronger than its religion. The voice of reason (which seemed to have one or two mouthpieces even within the Political Committee, for the eventual decision was a strongly contested one) spoke in favour of leaving the peasants well alone. Collectivisation between 1949 and 1953 alienated not only the peasants themselves, but all the urban intelligentsia who had roots in the countryside; but for it, Imre Nagy could not have become the rallying point of the opposition. After the 1956 explosion, all the Kadar regime needed to do was to assure the peasants of security of tenure, and they would have provided a solid rock of political stability. It was the workers, who had nothing to lose, who revolted and struck; the peasants quietly dangled their feet from the fence. If they are transformed into workers too, rural Hungary will become politically just as explosive as urban Hungary already is; having no business of their own to mind, the former peasants will start minding the country's business, and will have to be kept at bay by the protective Soviet military presence.

However, the voice of religion also referred to that presence; it drew the opposite conclusion, and it prevailed. Great-power agreement on Germany and a Soviet military withdrawal from much of eastern Europe could not be ruled out; if Hungary were not collectivised to something like the Czech or Bulgarian degree by that time, it never would be. The land-owning peasantry was the breeding ground of capitalism; if it were not liquidated, a "bourgeois restoration" would remain on the cards.



As a piece of supreme irony, it fell to Lajos Feher to explain and propagate the decision to the public at large. A known adherent of Imre Nagy who just managed to mount the Soviet bandwagon in time to become a member of the Political Committee when willing candidates for such posts were rather scarce, his main claim to fame is a study showing the disastrous effects of collectivisation on farm output. Despite the fact that collectives have had first claim to the meagre fertiliser supplies and tractor stations, the net value added was substantially lower in collectivised than in private farming. This is concealed by slightly higher gross crop yields in the collectives. Mr Feher, however, now prefers to ignore this distinction between gross and net product, and it is perhaps hoped that the Soviet government, whose task it will be to bail out the Hungarian economy or else let living conditions deteriorate, will not blame him and his colleagues for their contempt for such niceties. It does, however, certainly not want the Hungarian communists to get themselves again in such a mess that Russian tanks must rescue them; and the risk of some such mess has certainly been increased by the decision to collectivise. It is unexpected indeed to recognise the gambler in the drawn features of Mr Kadar.

Italy's Right Turn

FROM OUR ROME CORRESPONDENT

WITH the support of the four right-wing parties Signor Segni's government won its vote of confidence in the Chamber on February 27th by 333 votes to 248—a wide margin in Italy, where most premiers have thought themselves lucky if they needed the fingers of both hands to count their majority on. But numerical success has been bought at a price. The government has not merely accepted the votes of the extreme Right—Liberals, Monarchists and neo-Fascists—as Signor Zoli, who also headed a Christian Democrat minority government, was eventually forced to do in June, 1957. This time it has courted, in some cases negotiated, their favour. To please them its foreign policy statements are confined to the expression of anti-communist solidarity, with a nationalist line for the Alto Adige (South Tyrol) thrown in. Its economic policy is calculated to allay any fiscal apprehensions and to satisfy the aversion of the Liberals to state enterprise. The ties with the Confederation of Industries are very close; no fewer than five members of the new cabinet attended the Confederation's annual congress while they were waiting for the government declaration and the investiture. Relations between government and the *Patronat* have never been so cordial. The curious thing is that, with the exceptions of Signor Pella and Signor Taviani, all the outstanding members of this cabinet sat in Signor Fanfani's left-centre coalition, whose policies—abhorred by the Confederation of Industries—they presumably approved.

This abrupt about-turn is a disquieting feature of the present Italian political scene, for the general public is becoming aware that something is wrong with a party whose leaders can pass indifferently from progressive to conservative policies, one day asserting that the recession will never reach Italy, the next attributing all the country's economic troubles to what is called the "conjuncture." Signor Segni, who was himself deputy prime minister in the Fanfani government, justifies this right turn as the only alternative to a Popular Front. This is a curious interpretation of the outcome of the Socialist party congress, which barely a month ago gave Signor Nenni and the "autonomists" (the group that opposed the Communist alliance) a free hand. It is evidently to allay their fears of socialism, increased by Signor Nenni's victory and the Social Democrat party's split, that the Italian conservatives now conjure up the bogey of a Popular Front.

One feature of the Segni experiment looks like being this fomentation of an atmosphere of anti-communist excitement in home affairs and foreign relations alike. The most will be made of the international tension over Berlin. At present the conservative press and the Italian radio and television are stressing the "Macmillan fiasco," with pitying comment on Britain's naïve effort at appeasement. There are dark hints at an Anglo-Soviet trade pact whose real aim is to throttle the common market.

It is easy to see how the difficulties that are piling up for the Italian economy in the opening phase of the common market will be attributed to such foreign manœuvres. The new foreign minister, Signor Pella, is personally in favour of widening the European Community to include the other OEEC countries. He has authorised your correspondent to say that in his view the efforts to form a free trade area should be continued in order to prevent Europe and Nato itself from splitting. Such an extension, he says, should not hurt, but rather should strengthen, the common market. But whatever may be the government's views, its monarchist and neo-fascist supporters (and probably many Liberals) certainly do not favour a widening of the common market, the inward-looking philosophy of which satisfies the autarkic and corporative mentality of Italy's nationalist conservatives. One monarchist leader, Signor Roberto Cantalupo (a former fascist ambassador), this week described the free trade area as a British imperialist plot.

Signor Segni told Parliament the other day that in Italy foreign and domestic policies are intimately linked. A choice in one field implied a similar choice in the other. He himself has chosen the militant anti-communist line in both spheres. The government's domestic policies will inevitably tend to attribute labour unrest—in fact the product of rising unemployment—to communist agitation. Already, in the few weeks which have passed since the government took office, the array of police in Rome, as doubtless in other cities, has become increasingly noticeable. Somebody, at the Home Office or at the Prefecture, expects trouble.

The long-term prospects of this government depend upon the course of the country's economic difficulties, which its policies appear more likely to aggravate than to relieve. It is not reasonable in Italy to suggest that private investments —given the country's economic structure—can be stimulated to the point of seriously relieving unemployment, or that public works, however useful in themselves, can do more than stop a few gaps.

But perhaps it is optimistic to look even a few months ahead, for the government's immediate prospects depend upon what happens when the national council of the Christian Democratic party meets on March 14th and 15th. The discontent in the party's left wing is becoming more articulate. Many of the Christian Democratic federations have expressed their disapproval of the new government, and Signor Fanfani's friends will press him to withdraw his resignation as party secretary. But those who really hope to see him put his party back on the left-centre track will probably advise him to keep his hands free, the better to prepare for the party congress which will follow.

RUBBER TRENDS

is our new quarterly bulletin for producers, manufacturers or dealers concerned with rubber. It gives the results of research, not available elsewhere, into the longer term trends affecting rubber, including:

Regularly	Periodically
The world balance	Trends in rubber-using industries
Price outlook	Rubber consumption in the U.S.S.R.
Trends in consuming countries	Technical developments
Market reports	Trends in synthetic rubber
General notes	The effect of planting programmes
Statistics

PORT LOUIS: The earliest visitors to the bay where Port Louis now stands were the Dutch, who arrived early in the 17th century. The reception committee apparently consisted entirely of turtles, in honour of whom they christened the bay 'Turtle Bay'. (Lurking, no doubt, in the background was the appealing but now extinct dodo.) About a hundred years later the French took over Mauritius and settled it in a desultory way, but little real progress seems to have been made until the arrival of Count Mahé de la Bourdonnais in 1735. A man of immense energy, he soon established Port Louis as a thriving port and many of the buildings for which he was responsible survive to this day. The island changed hands again at the end of the Napoleonic Wars, being ceded to Britain under the Treaty of Paris and today Port Louis is the capital, chief commercial centre and main port.

The Bank established its first office in Mauritius 40 years ago and we keep in constant touch with the latest commercial developments in the Island. Business men who wish to benefit from this knowledge are invited to get in touch with our Intelligence Department at 54 Lombard Street, London, E.C.3.

BARCLAYS BANK D.C.O.

THE BUSINESS WORLD

Bankers of Zurich

ZURICH has not always been Switzerland's leading financial centre, and even today its pre-eminence in its own country cannot be compared to that of London in Britain. Switzerland has no fewer than 518 separate banking institutions; of these 87 are in the city of Zurich. Nor has Zurich a monopoly of international business. Basle, Geneva and to a less extent Lausanne all have a cluster of private banks, not always small, often of ancient lineage, sometimes without a nameplate on the door—but usually doing a wide international business, and having a shrewd idea of how to spot an *agent provocateur* from France.

But it is Zurich, with most of the large banks and most of the business in gold and foreign exchange, that has become identified in popular minds as the operating centre of the international bankers. In recent years, "Zurich" has become something of a dirty word. Politicians and commentators of many shades have found it convenient to evoke its machinations as the arbiter of other countries' policies. The popular impression has become distorted in its picture of the manner and the motives of the men of Zurich, and of their function and real powers. It is not mistaken in feeling that what they think and do is very important.

When exchange markets all over Europe were freed at the end of December by the move to external convertibility, wiseacres were heard to ask whether Swiss bankers would now be out of a job. The Zurich exchange market had grown very rapidly since the war, ousting Paris as premier centre of the Continent and at times doing more sterling-dollar business than London. Zurich was conducting predominantly arbitrage business, which it attracted because direct dealings were forbidden in the domestic or traditional centres. When restrictions were lifted, it was to be expected that such business would return to its normal channels. Zurich bankers have lost substantially in this way—mainly to London, but also to Frankfurt, Paris and other centres. Zurich has also lost much trade in gold, which the Russians formerly sold there to get sterling at a discount. The Swiss shed few tears over this, as they dislike dealing with communist countries; but they are philosophical also about the weightier impact on their exchange business. They dislike the squeeze on their dealing margins; commissions of all kinds account for up to a quarter of the earnings of Swiss banks, and foreign exchange business is expected to contribute its part. In London and New York exchange business is regarded more as a service for customers, and Zurich dealers contend that banks in these centres will even deal at a loss. But Zurich bankers welcome the wider market, which gives them a much bigger range of dealings, and also some new business to help offset the losses.

Zurich has been glad to accept a smaller exchange business in the general good. Arbitrage was only a by-product, if a profitable one, of its main business. Switzerland is the true world bank, without the capitals, and its accounts serve a number of different purposes. There is the truly hot money, the mobile funds ready to move from centre to centre as interest rates, or political hopes and fears, dictate; for these funds Switzerland is the world's waiting room, where the doors never close. At the opposite extreme are foreign funds accumulated and kept idle in savings accounts, attracted to Switzerland by the stability of its currency and of much else, and not infrequently by the sanctity of Swiss bank accounts from tax inspectors. Other foreign funds managed, or simply held, by Swiss bankers are actively invested, all over the world.

There are no official figures of foreign funds in Switzerland; but some good estimates have recently been made by Dr Franz Aschinger. He puts total foreign deposits at 5-6 billion Swiss francs, or around $1¼ billion. That would be around a sixth of Switzerland's total deposits. About one half is held in accounts denominated in dollars and very large amounts of foreign securities and gold are held in trust for foreign owners at Swiss banks. Excluding these "dollar" accounts, total foreign-owned assets in Swiss

francs, including Swiss securities and property, are put at Swiss frs 9-10 billion, over $2 billion. These are twice covered by Swiss assets abroad. United States sources show Swiss bank deposits of some $800 million and dollar securities of around $2 billion; but at least half these funds are thought to be held on account of non-Swiss clients. Switzerland's own holdings of foreign deposits and financial securities are estimated at the equivalent of Swiss frs 12-13 billion; direct investments and property bring total Swiss assets abroad to Swiss frs 17-18 billion, or around $4 billion.

THE Swiss bank, therefore—unlike the London bank—is not endangered by any withdrawal of foreign funds. But withdrawals would involve a diminution of business, especially for the private banks in Basle and Geneva that have been taking in French money. Frenchmen may account for half the foreign funds in Switzerland; and a lasting recovery in France would undoubtedly have important consequences for Swiss banking. Few Swiss bankers expect that any such recovery of French confidence can come quickly; but the big bankers all hope that it will come, irrespective of the effect on Swiss banking business.

The fact is that, probably unconsciously, Swiss bankers have an underlying confidence that in the modern world their services will stay in demand. It would need an extraordinary outbreak of peace and stability in the world to rob Switzerland of its superiority in these important matters; while it would need counter-revolutions of unimaginable dimensions throughout the world to restore taxes and the general climate for capitalists to parity with the world's oldest republic. The foreign man of means paying a visit to his Swiss banker on the way to St Moritz may have raised his eyebrows this year at the reduction in the Swiss working week to 46 hours; but he will have noted, too, that the other burning domestic political questions are still whether women should vote and whether the canton of Basel *Stadt* should merge with Basel *Land*. Nor need he have been concerned about the recent arrest of Swiss bank officials *en route* for customers in Spain. The most significant moral of this story is the distress it has caused among Swiss bankers that bank officers should have carried the code to numbered accounts, thus threatening the bank secrecy which in Switzerland is upheld and required by statute law.

There is, in short, almost every reason in the book to keep a sizeable nest egg in Switzerland; and whenever things get hot for those with money in their own countries, or in the world outside Switzerland, the reasons become compelling. That is why there is scarcely a disturbance in the world outside whose ripple does not extend to the placid waters of Lake Zurich. Every move by Arabs to manage their own affairs adds to the liquidity of the Swiss money market. When the Congolese stoned police in January the Swiss National Bank had to take $15 million off the market in two days.

What to do with the money of the world's frightened, or simply cautious, capitalists is quite a problem for a country of this size. Domestic outlets are limited, especially as the Swiss themselves are great savers. Many firms actively discourage foreign buying of their shares—after the British Aluminium affair, the Swiss aluminium company declined to accept any new registrations by foreigners. There is virtually no market for short-term money in Switzerland. As a result Swiss bankers place a substantial part of their funds abroad. Their great prudence itself encourages them to match external liabilities with external assets. But it forces the bankers of Zurich into taking the closest view of foreign events. What is that view now?

Hitherto, perhaps one half of their foreign assets have been held by the Swiss banks in the United States. The New York money market has been the main outlet for liquid funds, and the Swiss banks have placed much of their own and their customers' money on Wall Street. South Africa, the Belgian Congo and Belgium itself have also been popular since the war. Today Zurich is having second thoughts all round. The potential political danger in Africa is felt more strongly; the Congo looks as if it may be a burden rather than a boon to Belgium, and Belgium itself looks over-priced. But above all, the guns have turned on the US dollar. The chief executive of one of the big Zurich banks has wagered the chairman of the Federal Reserve Board a case of champagne that America will devalue the dollar in three years; he will be glad to lose his bet, but does not think he will.

ON what basis do Swiss bankers reach their decisions? How good is their information? The banks maintain extensive intelligence departments, whose researches extend deep into stock market analysis. Unquestionably, however, hunch and feel play a big part, and these are inevitably coloured to some extent by what Swiss bankers feel to be sound and right. Thus the main worry about America now is the size of the budget and the power of the unions; the biggest dislike about Britain is its high taxes and the possibility of a Labour government—from which Swiss bankers fear not so much financial weakness as an unsympathetic climate for business. (In this, the bankers of Zurich may not differ so much from the business men of Britain.) But it is wrong to suppose that Zurich always acts purely on instinct. The troubles in Central Africa have caused no commotion. Again, despite irritations about the attitude of the Six, Swiss bankers are turning increasingly to Europe.

Four thousand million dollars' worth of money abroad, some of it hot, must be a major element in world finance, and it may often seem to be a decisive one. Hot money has been much abused; yet money that is mobile between centres can play a very useful part in world payments, as it has done since 1957. It is also true that in modern times the flow dictated on primary economic grounds may be upset by particular

national policies, from taxes to self-government. If governments wish to keep their policies independent of the opinion of foreign capitalists about them, they have an easy remedy: they should not take their money, or taking it, they should hold it in special reserve. It is unreasonable to blame the lenders for watching their own interests; it is still more unprofitable to shoot at the banker they have retained to act or keep watch for them. If Zurich did not exist, many people would certainly have done their best to invent it.

Competition in Thermoplastics

Britain's plastics manufacturers are greatly increasing their capacity over the next few years. How will they fare against foreign competition?

MANUFACTURE of plastics has been one of Britain's fastest-growing industries since the war; production of all types of plastics topped 400,000 tons last year, compared with 150,000 tons in 1950. The most spectacular growth has been in thermoplastics, with a more than fourfold increase in ten years—about 240,000 tons (including imports) were sold in Britain last year. Today the growth of demand is slowing down. After fantastic increases in earlier years, consumption of all plastics last year was only eight per cent higher than in 1957, and home sales plus exports rose by only six per cent. Internationally, the boom years of the industry's infancy are probably over. Overproduction and idle capacity appeared in the United States last year, owing partly to recession; stocks of plastics, particularly of polyethylene and polyvinyl chloride, have risen and for some months there have been reports of idle capacity in several other countries, including Britain. Yet capacity to produce thermoplastics is still growing throughout the world as fast as ever.

Against this background four British manufacturers appealed to the Board of Trade last December for protection under the key industry duties for four thermoplastic materials. The Board was able to reject this demand only after a special tribunal had put itself through a semantic hoop and proved to its own satisfaction and to no one else's that these plastics were not synthetic organic chemicals and so did not qualify for protection. The import duty thus remained at ten per cent *ad valorem*, and was not raised to 33⅓ per cent. But an important question raised then is worth repeating now: if Britain's plastics manufacturers must seek tariff protection in order to meet foreign competition, ought they to be investing in so much new plant?

Admittedly, the plastics industries of Britain's chief competitors have grown up largely behind high tariff walls; the United States, Germany, Italy, France and Japan all have higher tariffs on thermoplastics than Britain has. Furthermore, some of these countries could have been dumping in Britain; this is always difficult to prove and the British manufacturers cannot be blamed for seeking the easy way to protection via the Key Industry route last year. But the KID tribunal's play upon words has blocked that route. How will British manufacturers fare without higher protection?

The question poses itself most sharply in the case of three of the four materials concerned in the KID hearings: polyethylene, polystyrene, and polyvinyl chloride. At present about 65,000 tons of normal polyethylene are made in Britain, chiefly by Imperial Chemical Industries. Within a few months ICI will increase its capacity to 90,000 tons a year, and new plants to make low-density polyethylene are being erected by Monsanto, Shell Chemicals, and Union Carbide. In addition, Shell Chemicals will make high-density polyethylene by the Ziegler process and polypropylene; and British Hydrocarbon Chemicals—a subsidiary of British Petroleum and the Distillers Company—will begin production of high-density polyethylene by the Phillips process. By 1961, with these new plants, British capacity in "polyolefin" plastics will be over 150,000 tons a year.

The present output of polystyrene is about 28,000 tons a year, divided between Shell, Distillers and Monsanto; this will be increased by almost half by 1961. Polyvinyl chloride, or pvc, is made by ICI and Distillers, and total capacity is now about 90,000 tons a year, although present output is somewhat less. New capacity has to be added in fairly large chunks in the plastics industry in order to achieve reasonable economies of scale—for polyethylene this means about 10,000 tons capacity at a cost of perhaps £4-5 million. But demand naturally rises more gradually; no new plant can be expected to be fully employed at once. Against the new plant now planned in Britain and the inevitable increases in production by improvement of existing plant must be set the undoubted intensification of foreign competition and the questionable course of future demand.

Foreign competition is most serious in pvc. Raw material costs are important in plastics, and several countries can apparently get materials more cheaply for pvc than Britain can. Japan, whose exports to this country more than doubled in the last half of 1958, commands cheap supplies both of hydro-electric power and of chlorine. Japan could make over 200,000 tons of pvc; such an export potential is bound to provide stiff competition to a higher-cost producer. Italy also probably makes cheaper pvc than Britain, using its cheap natural gas. The United States has similar advantages, plus those of a larger industry.

Britain is competitively better placed in polystyrene. For one thing, manufacture of this plastic is essentially a batch process: additions to capacity are consequently small and more easy to match with sales promotion. It

has been argued that British manufacturers cannot cut their prices (and hence need a higher tariff in order to compete) because they provide a sizeable amount of after-sales technical service. This is probably true at present only in the case of polystyrene, which is usually blended and coloured by the manufacturer rather than the fabricator, and which consequently needs close technical guidance from its maker. British polystyrene producers can therefore probably compete with little difficulty in their home market despite slightly higher labour costs. For many other plastics such technical service is less important, particularly when their main uses have become fully established. And if fabricators prefer cheapness to technical service at extra cost, cannot British manufacturers meet them ?

By the time that Shell Chemicals' plant at Carrington reaches its full capacity of 45-50,000 tons a year, the industry will be well on its way to a polyolefin capacity of 200,000 tons a year. Competition from America has become steadily greater in polyethylene—as in pvc—since controls on dollar imports were removed last year. American manufacturers can now produce nearly 500,000 tons of polyethylene, both high- and low-density types ; they have had considerable idle capacity and have been cutting prices for over a year ; and convertibility may make the export market appear worth more effort than they may have devoted to it in recent years. Germany is also a serious competitor in both high- and low-density polyethylene, as is Italy in polypropylene ; both now have the benefit of the Common Market. World output of polyethylene may exceed 1 million tons within a very few years.

These plastics are among the petroleum chemicals that companies make from gases produced either as joint products of the process of petroleum refining or by special cracking of oil fractions: the factors governing their costs are somewhat remote from the public eye. So, indeed, are the financial conditions of the companies or divisions that make them, nearly all of which are sections of big groups doing other things, and publish no separate accounts. British firms would appear to be on a fairly equal footing with each other in costs. Though there may be some slight difference in the cost of feedstocks, most British plant is of about the same age and economic scale. But Shell appears to have stolen a march on other British companies by being the first to make high-density polyethylene and polypropylene on a large scale here. The Ziegler process that Shell will use has taken some time to bring to a commercial scale in this country. But it has the advantage of using much lower temperatures and pressures than the method first discovered by ICI ; the product is tougher and more resistant to heat than the conventional material and also less permeable. Polypropylene, which is now being made by Montecatini in Italy and Hercules Powder in the United States, and with which ICI is known to have been experimenting, has properties as promising as those of high-density polyethylene. In addition, it now has the advantage that propylene is at present much cheaper than ethylene in Britain.

Britain's power to compete, therefore, may vary between companies as well as between products. What, then, is the outlook for demand ? The biggest fields for expansion in thermoplastics seem to be packaging—with the advantage for the manufacturer that the finished product is immediately and cheerfully destroyed—and the building industry. American experience has shown that the novelty which brought such enormous demand for plastics a few years ago may have almost worn off. The market for consumer goods, even in the most affluent and gadget-prone—not to say junk-prone—countries is certainly not a limitless one.

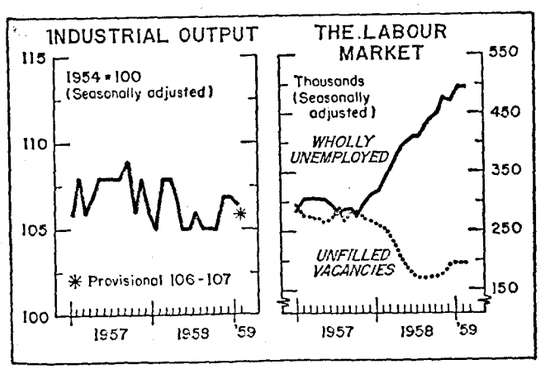
Over one-third of the polyethylene and over one-sixth of the polystyrene now made go into packaging, either as film or in solid containers ; there are great possibilities for expansion in this field. The use of plastic film in packaging may easily double in the next three or four years—though the present tendency is to make the film thinner, so that the amount of plastic so used will not increase at the same rate. Prepackaging of foods in plastic is in its infancy in Britain, and is bound to spread as self-service retailing increases. Solid and semi-solid containers are increasingly being made of plastic, particularly in cases where the cost of packaging is not important.

High-density polyethylene may eventually be used in milk bottles (since it can stand high enough temperatures to be sterilised) ; polypropylene is believed to have wide potential applications both in packaging and in fibres. In addition, blending of high- and low-density types may be possible. But these new polyolefins illustrate a potential problem. As well as competing—at a cost disadvantage in some cases—with such things as tinplate and glass, new plastics will also compete with each other and may replace existing plastics, exaggerating the total problem of capacity rather than solving it. American assessments are that the uses of high- and low-density polyethylene will ultimately overlap by about 15 per cent ; like many of the industry's estimates, this may be too optimistic.

The use of plastics in the building industry may also offer the chance of great expansion : this will depend at least in part on the speed with which various technical problems are solved. For instance, high density polyethylene has been tried in pipe ; but this material is not yet satisfactory for carrying hot water. Plastic-coated metals and fibreboards, plastic panelling, and the expanded materials are bound to be used more widely. Finally, export markets for plastic—particularly in the underdeveloped countries within the Commonwealth and the sterling area where plastics fabrication is likely to increase and where there is no local manufacturing industry—should certainly grow.

But though demand will continue to rise, capacity is rising even faster. Within two years' time, Britain's capacity to make thermoplastics may exceed demand here by as much as 100,000 tons. A similar situation will be felt throughout Europe, and in the United States. For the firms in the British industry, overcapacity is bound to mean much more bitter competition.

BUSINESS NOTES



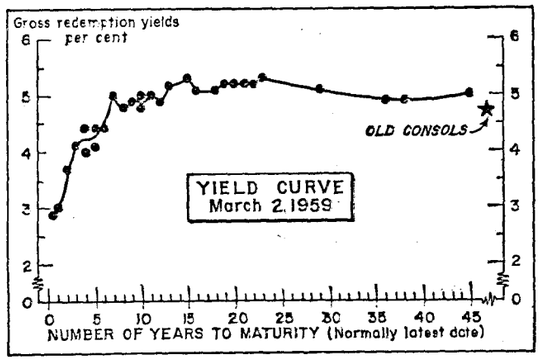
THE ECONOMY

Level Again

INDUSTRIAL output in January may have been as high as in November and December, allowing for seasonal fluctuations, and the number of people unemployed in mid-February was effectively the same as in mid-January. Whether or not one puts it down to an impulse of freer hire-purchase that seems, from the February records of contracts made, largely to have spent itself, industrial activity seems from these latest signs to have levelled off again at a rate about 2 per cent above the low level of last summer.

Since even motor output fell in January, owing to strikes and model changes, it would not have been surprising to see a fall in output indicated for January: there are certainly plenty of other industries producing less than before. In fact the index is expected to be 106-107, against figures of 107 for both November and December ; these are seasonally adjusted figures, and for the latest month are none too certain. There is not much sense in straining to refine interpretation of figures that have varied no more than two points upward or downward since output first attained that level of 107 in autumn, 1955. As a statistician concerned with these matters commented last autumn : "I am constantly being asked whether I can discern any trend in the index, as if it's difficult. It's as plain as ever—dead horizontal."

Between January and February the number of people wholly unemployed fell by 1,000 to 549,000, and the number temporarily stopped dropped by 11,000. The change in numbers wholly unemployed is insignificant, as one ordinarily expects at this time of year ; and the Ministry of Labour reckons that better weather for builders and farmers would completely account for the fall in the number



temporarily unemployed between January and February. Nor, allowing for the season, did the number of vacant jobs on offer alter. *Communiqué* from all fronts : "Situation unchanged."

GILT-EDGED

Khrushchev's Market

UNCERTAINTY still hovers as a dampening influence over the stock markets, and in the past week international political influences have assumed particular importance. Unfavourable signs from Moscow depressed both gilt-edged and industrials at the end of last week. Gilt-edged were also hit by the disturbances in Central Africa—which naturally had a sharper impact on Rhodesian government stocks and on Rhodesian mining shares—and by the further rise in the Treasury bill rate last Friday to over 3¼ per cent, compared with under 3 per cent a fortnight before.

The discount market, and the outside tenderers, now seem to have written off the likelihood of an early reduction in Bank rate. News that the banks had made further substantial sales of gilt-edged in the four weeks to mid-February, and the indication that bank liquidity might require further sales, added another bear influence. But by the middle of this week, when Mr Macmillan's Russian tour closed on a happier note, gilt-edged were recovering. The vacillations of the market in line with the temperature of East-West relations at the moment reflects the decisive major uncertainty, troubling every financial centre in Europe, of the significance of Mr Khrushchev's deadline for Berlin.

The shape of the yield curve has shown little significant change for many months ; though if expectations of a further reduction in Bank rate were to disappear altogether, yields at the short end will presumably rise. The curve still shows the slight but obstinate "hump" in medium-dated securities.

These are the maturities too long for the banks and too short for the life funds. Arbitrage operations by dealers and by private investors attracted by the relatively high element of tax-free redemption profit prevents yields from getting too far out of line. But so far there has been little sign that the banks are going longer ; ten years is still usually the limit, and ventures into the Conversion 1974s are isolated. The banks' eyes remain fastened on advances, and their memories on their recent gilt-edged losses.

STERLING

Modest Gold Gain

STERLING has been firm this week, rising to $2.81⅛ against the US dollar and showing notable gains on the D-mark and Swiss franc. A notable feature of the European exchange markets has been the weakening of the Swiss franc against the dollar, which is attributed not to last week's reduction in the Swiss Bank rate from 2½ to 2 per cent—Bank rate has no effective importance in the Swiss market—but rather to purchases of foreign shares by Switzerland's newly formed European unit trusts. Dealers in sterling have evidently not shared the pessimistic interpretation in some press comment of the latest figures of the reserves.

The reserves rose by £16 million, or $45 million, in February, and stood at $3,156 million at the end of the month. There was again no settlement through the multilateral clearing under the unfavourable terms of the European Monetary Agreement. The rise in the reserves is much smaller than the true increase in January, adjusting for the lag in settlements with the old European Payments Union. But the January increase was swollen not only by receipts from Reynolds Metals' purchases of British Aluminium stock, but also by a big backwash of money that had been temporarily lost in December, in anticipation of the exchange realignment. The February increase is only a little below the average true monthly increase in December and January together. At this season, the reserves should be doing better, and the gain was smaller than in previous years. Omens in the market are still good, and there has been little sign of significant withdrawals of funds, in response either to election fears or to the Rhodesian troubles. The gold figures of coming months will be closely scrutinised, with allowance for the $200 million to be repaid to the International Monetary Fund before the end of April, as a first instalment of the Suez drawing of $561 million.

Sterling Balances Rise

A MORE arresting revelation is that in the last quarter of 1958 the sterling balances of other countries rose by £80 million (though sterling held by the World Bank and other non-territorial organisations fell by £13 million); so that in the year 1958 as a whole Britain did not continue to repay sterling liabilities to other countries. These increased by a net £76 million in the year. The balances of other sterling countries fell rather more than that, but balances of the non-sterling countries rose by £158 million, of which £42 million was in the last three months. At £728 million on December 31, these balances were the highest since 1955; and they certainly increased in the new year following the establishment of external convertibility.

The change in the last quarter of 1958 was that the balances of the overseas sterling countries rose—by £38 million—for the first time since mid-1957. The last quarter has not in the past been notably favourable seasonally to the overseas countries. One important prop must have been from external capital. India in particular checked the drain on its reserves by taking large loans from international creditors, including Britain. If the overseas countries have managed to check their drawings on the sterling bank, pressure on the central reserves will be relieved. The relief that comes from the accumulation of balances by bankers and merchants in non-sterling countries is also useful—though no one ever knows how long this cushion will remain, and the authorities are doubtless prepared to meet withdrawals when the time comes.

THE STERLING BALANCES
(£ million)

End of periods	Overseas sterling area	Non-sterling countries	*Of which* Dollar area	*Of which* OEEC countries	All countries
1957 :—

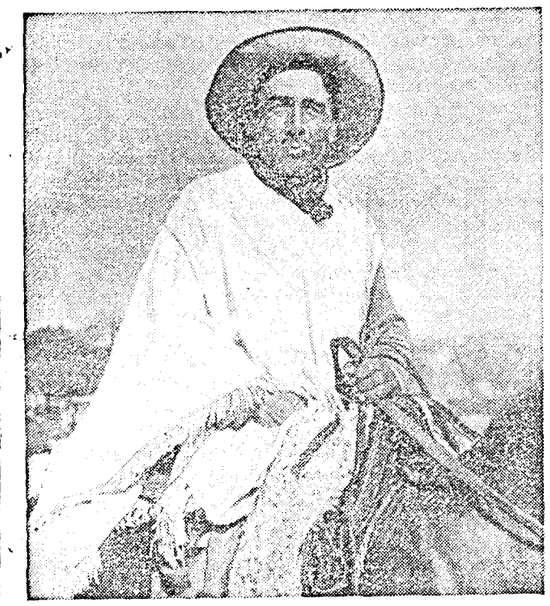
* Rise reflects German central bank's 1957 deposit of £68 mn.; its deposit for purchases of arms is reflected in the figures for the second half of 1958.

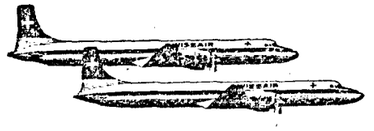
AGREEMENT WITH EGYPT



Trade Back to Normal

FOR the first time for nearly three years trade between Britain and Egypt can be conducted in a normal way. The financial and commercial agreement* frees Egypt's sterling balances, all of which were blocked in mid-1956 after Egypt seized the Suez Canal. The old restrictions on the No. 2 account have not been re-imposed by the Bank of England. Deducting the £27½ million earmarked for compensation, Egypt's sterling balances are now down to £41½ million. Another debit will be the sums that former residents will be allowed to transfer from their Egyptian funds, or from the sale of property. As permission is to be granted immediately for such transfers up to £E5,000, and may be granted for more, the total sum could run into several million pounds. Egypt also has the small special current account opened to receive canal dues and sterling payments from third countries. Releases from the sterling balances, which have to finance imports from Britain and other countries as well, are to be strictly controlled. A report from Cairo states that the maximum allocation for "ordinary" imports is to be £6 million; presumably this refers to annual imports of consumer goods. The rest is to used to pay for capital goods for the development programme.

In the face of the obstacle placed in their way, British exports to Egypt were remarkably high last year. After falling from £22.7 million in 1956 to £2.3 million in 1957, exports last year rose to £12.8 million, covering a wide range of goods. While a large part of these exports were presumably paid for through the special account, some have probably been financed by exchange deals through third countries, or paid for in dollars.



Nor have Egypt's sales to Britain been completely extinguished; here, too, means of payment have been found. Imports from Egypt fell from £7.3 million in 1956 to only £690,000 in 1957, and then rose to £2 million last year. Britain has not been buying cotton, but in both 1957 and 1958 imports of onions, another Egyptian staple, exceeded £500,000. It is difficult to be optimistic about

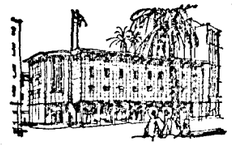
FIDUCIA·ET·FIDES



A tale of Twenty-two Cities

From Tunisia to India, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

Tunisia, Libya, Lebanon, The United Arab Republic, Syrian Region, Iraq, Jordan, Saudi Arabia, Kuwait, Bahrain, Qatar, Muscat and Oman, Dubai and Sharjah, Aden and India: these are the territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

Incorporated by Royal Charter 1889

HEAD OFFICE: 7 KING WILLIAM STREET, LONDON, E.C.4
Telephone: MANsion House 2643 (6 lines)
Capital & Published Reserves £4,272,000

"If only I'd known it was on,

You have probably said that at one time or another. Perhaps it was when you read the reviews of Granada's plays, like ALL MY SONS, A MEMORY OF TWO MONDAYS, GARDEN OF LONELINESS or NO FIXED ABODE; or after one of Granada's special shows like HOMOSEXUALITY AND THE LAW or weekly programmes like SEARCHLIGHT and WE WANT AN ANSWER and entertainment programmes like 'CHELSEA at nine' which have introduced the world's greatest artistes to television.

I'd have watched it!"

Might we suggest you enter in your diary Granada's next play
ITV March 17th at 8.30 pm

The Skin of Our Teeth by THORNTON WILDER will introduce to television drama **MISS VIVIEN LEIGH.** You will also see George Devine, Margaret Rawlings, Ruth Dunning, David McCallum, Perlita Nielson. Thornton Wilder's famous comedy is a saga of the human race, as represented by George Antrobus, his wife, and two children, and their general utility maid Sabina. The Antrobuses have survived fire, flood, pestilence, a hundred depressions and a thousand wars. They are the true offspring of Adam and Eve, victims of all the ills that flesh is heir to. They have survived each calamity by the skin of their teeth. The play is a tribute to their indestructibility.

GRANADA TV

British purchases of cotton. Egyptians are apt to accuse Lancashire of letting politics influence its buying; Lancashire replies that it simply buys in the cheapest market. The Sudan, not Egypt, is the cheapest source of long-staple cotton now. Prices have fallen so far that certain Sudan grades have not only lost their traditional premium but cost slightly less than a broadly comparable American cotton. Once spinners have learned to make do with different types of cotton they are reluctant to change back again; moreover, technical changes have diminished demand for the long-staples. Egypt, in turn, has obtained new markets in Communist countries, which now take about 60 per cent of its total exports. But, like the Sudan, it has a big crop this season, and has every reason to try to expand its sales.

Whose Responsibility?

THE £27½ million to be paid by Egypt in compensation has to cover all claims for property sold or nationalised and also compensation for damage to sequestrated property which Egypt is to return. The value of this was estimated by the Chancellor in the Commons debate at well over £100 million and probably £130 million; this figure includes the oil companies seized by the Egyptians, which are being returned under a separate agreement. An annex provides that British owners will be liable to pay sequestration charges to the Egyptian Sequestrator in return for his "protection," up to a total of £E2½ million.

But the hardest cases are likely to arise among owners of "Egyptianised" property. The Chancellor revealed that total claims reached £45 million for business properties, and a few more million for land. Who should square the difference between this and what Egypt is to pay? The Government refused to accept the commitment; and it bluntly points out that business men are apt to take a rosy view of their lost assets when making claims.

People who invest in countries where political risks are high count that risk in their calculations, and often demand and get high current returns to justify it. If the Government were to underwrite their capital for them they would have it both ways, and might fail to take the proper precautions. That is the objection to proposals being mooted in some countries for Government insurance—this of course on payment of premiums—of capital assets abroad.

The present case is not so straightforward. It is arguable that what has befallen British property owners must be laid at the door, not of the Egyptian government, but of HMG. But that line of retreat from the general principle, obviously, is ruled out for the Government on political grounds. Consequently, when the Foreign Compensation Commission has at length totted up individual claims, interested parties may hear how much they will be paid out in the pound. For the present, neither the big concerns such as Barclays DCO nor the many small owners have any clear idea of what they will receive, and when.

CREDIT TREND

Advances and Gilt-edged

THE banks are still increasing their advances and selling investments to pay for them; and although the authorities have been helping the gilt-edged market to absorb the sales, their repayments of floating debt in this season of tax inflows have been big enough to squeeze liquidity ratios at a number of banks very near the conventional minimum of 30 per cent. Since the season of Exchequer repayment of floating debt is not yet over, the banks may have to sell more gilt-edged. The changes in disposition of bank assets since the lifting of the credit squeeze are

LONDON CLEARING BANKS

	(£ million) February 18, 1959	Change on July, Month	Change on July, 1958	Change on Year

* Excluding items in course of collection. † Excluding all transit items.
** Excluding transit items, except for changes on July and on year.

now very considerable. In the seven months since July, advances have risen by £335 million, while investment portfolios have been reduced by £231 million (in part as a result of running off the January maturity). In the latest four weeks to February 18, sales of gilt-edged were £59½ million; advances rose by £81 million. This marks a quickening of the earlier pace, but may reflect no more than the seasonal influence of borrowing to help meet the tax bill.

BUILDING SOCIETIES

The First Reduction

THE Leicester Permanent, a member of the Building Societies Association but not on the council, is the first to break with the association's recommended rate for mortgage lending. It has given notice that from July 1st its rates on old mortgages, of which the highest is 6½ per cent, will be reduced by one-half of one per cent, subject to a minimum of 5½ per cent, and that from March 1st the rate on new mortgages is 5½ per cent. But the Leicester Permanent's borrowing rates—3 per cent on deposits, 3½ per cent on shares and 3¾ per cent on fixed term shares, all net—are left unchanged and still conform to the association's recommendations on share interest.

The society justifies the reductions in mortgage rates on a number of grounds: the trend in long-term interest rates is sufficiently well-established to justify a "limited reappraisal" of mortgage rates; the inflow of new funds is rising; and it is the society's policy to give borrowers the benefit of lower rates at the earliest opportunity. This reduction entails a voluntary cut in margins, however, that could be undertaken only by a strong society. Leicester is that: it enters its investments in its books at market value; its true reserve ratio remained unchanged last year at 5.9 per cent; its margin available for reserve appropriation improved from 4s. 3d. to 5s. 3d. per cent; and its liquidity ratio rose from 12.2 to 14.2 per cent. The Leicester's reserve ratio must be looked upon with envy by those societies that have been pursuing expansion. Leicester has by no means stood still, but it has always kept a careful watch on expenses.

Societies with reserve ratios less strong and keeping their eye on the requirements for trustee status would not gladly accept such a cut in their margins ; they are waiting for the moment when lending and borrowing rates can be brought down together.

If the Budget produces a reduction in the standard rate of tax (and hence in the building societies' composite rate) margins for building up reserves will be improved. If, as well, the next few months see the long-delayed reduction in the association's recommended rates, Leicester will have operated on a reduced margin for a limited quantity of money only. It is well placed to take that risk and is so placed itself that it can give almost immediate effect to any change in rates recommended by the association. In the meantime it will have earned goodwill of its borrowers, which will be of advantage if mortgage lending becomes freer and more competitive.

The Halifax Giant

BECAUSE of its size, strength and prestige, the Halifax is much of a law unto itself in the building society movement. It is not a member of the association and from December 1st it has been charging less for mortgages and paying less on its shares than the association's recommended rates with its mortgage rate at 5½ per cent and its share interest rate at 3¼ per cent net. Its reserve ratio is less strong than that of the Leicester and it brought down its rates in such a way as to preserve its reserve margin. But for two months of its financial year it was offering less than its competitors on shares. That did not, as its figures for the full year reveal, lead to massive withdrawals. Investors remained loyal. But the Halifax did not gain its full share of the big influx of new funds of recent months into the building societies' coffers.

Years to January 31st	1953 (£ '000)	1959 (£ '000)
Receipts from investors	85,375	89,041
Withdrawals by investors	50,258	60,339
Net investment	35,117	28,702
Mortgage advances	66,676	66,702
Mortgage repayments	44,058	49,460
Liquid assets	61,529	71,932
Total assets	344,012	389,865
Reserves	13,012	14,261
Liquidity ratio	17·9%	18·2%
Reserve ratio	3·8%	3·7%

That was to be expected and in a few months' time if rates throughout the movement come down, as possibly they may, the managers of the Halifax will no doubt be able to say that their independent line of action has done the society no harm. Indeed, it may create goodwill. And, more broadly it may do the other societies good to have their elbows jostled by this self-reliant competitor. Its power to compete is formidable: in the year to January 31st, its total assets went up from £344 million to nearly £390 million and by a fairly stern system of rationing its mortgage advances were kept down to £66.7 million. Its net receipts from investors were down on the year from £35 million to £29 million, but as mortgage repayments were slightly up and as gilt-edged prices had improved its liquidity ratio rose from 17.9 to 18.2 per cent. The true ratio is even higher than this, for on January 31st the market value of its quoted investments was £2.7 million higher than their book value. But the Halifax's operations last year had a cost: its reserve ratio fell slightly to just under 3.7 per cent.

INDUSTRIAL LOCATION

Swansea—and Why Not?

THE new factory being built for the Pressed Steel Company at Crymlyn Burrows, near Swansea, will be the largest factory yet financed by the Government in a development area. It will be built by McAlpine's at a cost of about £2 million ; work is expected to begin almost immediately, and completion is scheduled for next spring, at which time it will be leased to Pressed Steel by Wales and Monmouthshire Industrial Estates, on behalf of the Board of Trade. Although the company will receive neither the rent rebate not the partial rent "holiday" which the Government announced last month that it will give to some companies in development areas, Pressed Steel has stated that some financial consideration was received from the Government, and the Board of Trade have repeated that all factories within development areas are let at rentals lower than would be needed to cover the cost of new building.

The new factory will house the company's "Prestcold" refrigerator division. All production of refrigerators—which is now located at Oxford and at Theale, near Reading—will be transferred to South Wales, and eventually doubled there. Subsequently, other domestic appliances may also be made at Crymlyn Burrows ; employment is expected to reach 2,000 within 18 months after occupation of the new plant, and 4,000 after about five years. Production of car bodies can then be increased at Oxford and at Theale ; the company also makes car bodies—but not refrigerators—at its plant at Swindon.

The choice of South Wales for the new plant appears to be a fortunate one, both for the Government and for Pressed Steel. It will be close to supplies of flat steel and in an area where adequate supplies of labour should be available for some time to come—an especially important consideration for a manufacturer of consumer goods whose production may expand appreciably within the next few years. Transport costs are probably insignificant for so expensive a finished article as a refrigerator, and the company should benefit from concentrating on car bodies at its other plants, where—especially at Oxford—further expansion might otherwise be difficult. On the other side, Pressed Steel will have furthered the Government's policy for dealing with black spots of unemployment ; if it has been lucky enough to get some sort of concessionary rental for doing this, so much the better.

COMMONWEALTH DEVELOPMENT

More Money for CDFC

THE Commonwealth Development Finance Company, set up in 1953, is seeking more capital in order to play a more active role in its task of providing money for Commonwealth development, especially in association with private enterprise. Total commitments shown in the last balance sheet were no more than £14½ million ; and it is clear that shortage of permanent finance has been the limiting factor. The capital consists of 8,250,000 "A" shares of £1 subscribed by 91 industrial, commercial and financial companies ; but this is only 2s. paid. The Bank of England has subscribed 6,750,000 "B" shares of £1, now 10s. paid. Thus the total paid up capital is £4.2 million ; the company's bank advances on March 31, 1958, were £5½ million.

It is now proposed that both classes of capital should be increased. Lord Godber, chairman of CDFC, this week invited subscriptions from a number of additional large industrial and commercial companies. At the same time, the Bank of England is prepared to take up further "B" shares, while remaining a minority shareholder. The company also intends, when market conditions are propitious, to raise loan capital at long term. The announcement refers to the increase in the demand for development capital in the Commonwealth highlighted at the Montreal conference last September. But nothing is said about the plan mooted at Montreal for participation in the capital of CDFC by other Commonwealth central banks. Plainly there has been no rush to subscribe. Money has to come from Britain.

DRIVE-IN BANKS

Through the Looking Glass

TWO English clearing banks have taken the plunge and built into new branches facilities for the reception of customers who cannot or would prefer not to leave their motor cars. The Westminster Bank was first with a drive-in bank in the suburbs of Liverpool, and last Monday the Minister of Transport opened a new branch of Martins at Charles Street in the heart of Leicester. Basically, all that is needed is a carriageway that allows the motorist to manœuvre himself off the high road and alongside the bank, and a sliding drawer to take his cheque and return his cash. Martins' new drive-in branch consists of much more refined paraphernalia. In this case the motorist leaves the road and enters a tunnel resembling the entrance to many hotel garages in the centre of cities. The entrance is guarded by a power-operated shutter door. The incoming motorist passes a photo-electric cell and an audible signal warns the cashier of his approach. He will then be greeted by a smiling lady cashier from behind her bullet-proof window. Speech is transmitted by microphone and loudspeaker, and an electrically operated steel drawer, part of an elaborate desk imported from America, moves out to receive customer's tokens. The motorist then circles the bank and re-enters the thoroughfare. The Westminster's apparatus is simpler and has been largely devised by its own staff.

The cost of a drive-in window is high, but not prohibitively so. Many bankers dispute its usefulness on the grounds either that the money could be spent to better effect on the provision of other facilities, or that the type of transaction that can be handled is severely limited. Barclays and the Midland, among others, have considered this facility, and have rejected it. Few would claim that the drive-in bank can contribute more than a mite towards the solution of the parking problem or that security is very much enhanced. But a bank that is prepared to spend considerable sums on the comfort and aesthetic content of its branches should not stand its ground if customers after all display a preference to remain outside the bank. If the new branches attract customers, then competition will ensure that they will spread, as they have in America and to a limited extent on the Continent. Consumers are often prepared to pay for apparently frivolous comforts.

Planet XI

THE American rocket that travelled to and past the moon this week to become the sun's eleventh planet brings the Americans more or less level with the Russians in the new art of moonmanship. It is assumed that, like the Americans, the Russians had had four previous tries before they succeeded in reaching the moon on the fifth attempt. It is suspected, on rather less reliable evidence, that the Russian rocket fired early in January deviated slightly from its planned track, which should have led to a direct hit on the moon. The American Pioneer IV is also fractionally off course. According to the ploys of the game, the Russians score on two counts: their rocket was 240 times as heavy and it was launched eight weeks sooner than the American. Science, however, will not remember a gap as small as this, only the value of the information sent back by these trail blazers in outer space.

Scientific Possibilities : Moonmanship apart, the value of the probes depends on how much they can learn, in the limited time their batteries remain alive, about conditions immediately above the atmosphere, near the moon and in the waste of cosmic space lying between earth, moon and sun. This is not as empty as it would seem and the probes should take readings over a fair range of space from the launching pad to the point where the package of instruments go into interminable orbit round the sun.

The two most pressing questions to which scientists want an answer are (a) what causes and keeps going the two totally unexpected and possibly very important belts of radiation round the earth discovered by earlier rockets and (b) whether the moon has a magnetic field. If it has, conventional ideas about the origins of the moon and whether it has a cold dead core, or a hot molten one, will have to be revised. Unfortunately Pioneer IV is too far off course to be of much help here, and if the Soviet Planet X discovered anything of note, the Russians have not said so.

Practical Importance : Interest in outer space is no longer limited to academic geophysics. The US Air Force plans to send manned aircraft to heights of 100 miles this summer, well outside the "normal" limits of the atmosphere. Once men begin to fly at this altitude it becomes imperative to get accurate reading of conditions through which the aircraft fly, which are considerably more directly influenced by conditions in outer space. High altitude rockets can take more useful readings here than satellites since they take measurements over a greater distance whereas satellites make readings on a single orbit over a considerable sequence of time.

But now that these massive military rockets have become beaten into what still looks a lethal type of ploughshare it is pertinent to ask whether they have to be built on a scale capable of travelling all the way to the moon. The moon is 250,000 miles away, while many of the most important phenomenon, such as the radiation belts, lie well within 100,000 miles of the earth. What scientists most require are not tantalising snippets of information transmitted erratically as the rocket hurtles into space, but a controlled series of readings from a large number of small rockets rather than one big one. Much useful data could be learned from fitting some of them with hydrogen or high explosive warheads to be exploded at great distances from the earth. The scientific uses of a controlled explosion above the atmosphere have not received the attention they deserve, probably because it is the kind of ploy that would lose marks in moonmanship and spacemanship.

COINAGE

Silver and the Franc

THE silver market, which had been fairly firm since mid-December, has become exceptionally strong following the announcement of a new coinage plan by the French Government. Against the modern trend of replacing expensive silver coin by copper and nickel, France intends to give the new "heavy franc" the metallic solidity of an impressive new silver coin. This is expected to be either 0.835 or 0.70 fine. The principal new coins will be of 2, 5 and possibly 10 "heavy" francs (each equal to 100 of the present francs). Doubtless it is hoped that precious metal will help to restore domestic confidence in the new franc; but this psychological gimmick must be more expensive than knocking off the two noughts. The minting programme will absorb between 20 million and 30 million ounces of silver. The French Government has already purchased considerable quantities—and the bulk has come from Russia. But some of the buying has been through the London market, and it has been the principal influence in lifting the price of silver from 76⅜d. an ounce a month ago to 79⅜d. this week.

Newly mined silver reaching the London market, mainly from Australia and Burma, normally covers essential industrial demand. When coinage orders come on the market as they have done on a minor scale from Austria, and more recently and more vigorously from France, the limitations of available supplies are immediately revealed. The impact of such demand is to some extent cushioned by occasional sales of demonetised coin. The Bank of England is still prepared at times to accommodate the market, but in very modest amounts. The dearth of supplies revealed by the coinage demand from France may have to be remedied by sales of silver by the US Treasury. Silver in New York has now risen to over 91 cents, the figure at which the US Treasury is empowered, though not compelled, to sell silver from its surplus stocks. The London and New York quotations have been leap-frogging and the London price touched this week is the highest since 1957. Whether it will go higher still must depend on the readiness of the US Treasury to sell.

COMMERCIAL TELEVISION

Welcoming A Newcomer

ONCE nuclear power equities caught the investor's fancy. More recently the equity stocks of the commercial television contractors have been doing so. The two booms have had a very different flavour. Speculation on nuclear power could be attached to the stocks of well established electrical companies whose equities already enjoyed a broad market; to get into commercial television meant scrambling for a limited number of shares in a narrow market and in some cases through the back door of the stock exchange. The nuclear power boom was intended for the long pull. The commercial television boom is based on the present fact of enormously expanded profits and dividends. That is why a direct stake in commercial television—or even an indirect stake through the shareholding companies whose equities are quoted—costs so much. But except in the special case of the Granada Group (whose profits because of its agreement with Associated Rediffusion have not yet rocketed) the yields offered by TV shares are not risibly thin. That is as it should be, for the initial impetus which turned losses into fat profits in a few months is spent and earnings and dividends cannot now be expected to go on expanding at their old rate. The coming year's earnings may even receive a check if the Independent Television Authority orders contractors to cut their peak advertising; this it may very well do since the tendency to concentrate advertisements on the most popular viewing times (provided the average over the day as a whole did not exceed six minutes an hour) has begun to attract considerable parliamentary attention.

A welcome was given to TWW, the contractors for Wales and the West of England, when dealings began in its 5s. non-voting shares under rule 162 (2), which provides for specific bargains to be made with the Council's permission in unquoted stocks, on the assurance that the company will seek a fully fledged quotation this summer. Dealings were expected to begin at 35s. but the opening price on Wednesday was 39s. corresponding to a yield basis of about 7½ per cent, on a 58½ per cent dividend, which is the equivalent rate on the new capital to the payments made last year. In that calendar year, the company turned a loss of £70,509 into a gross profit of £873,105.

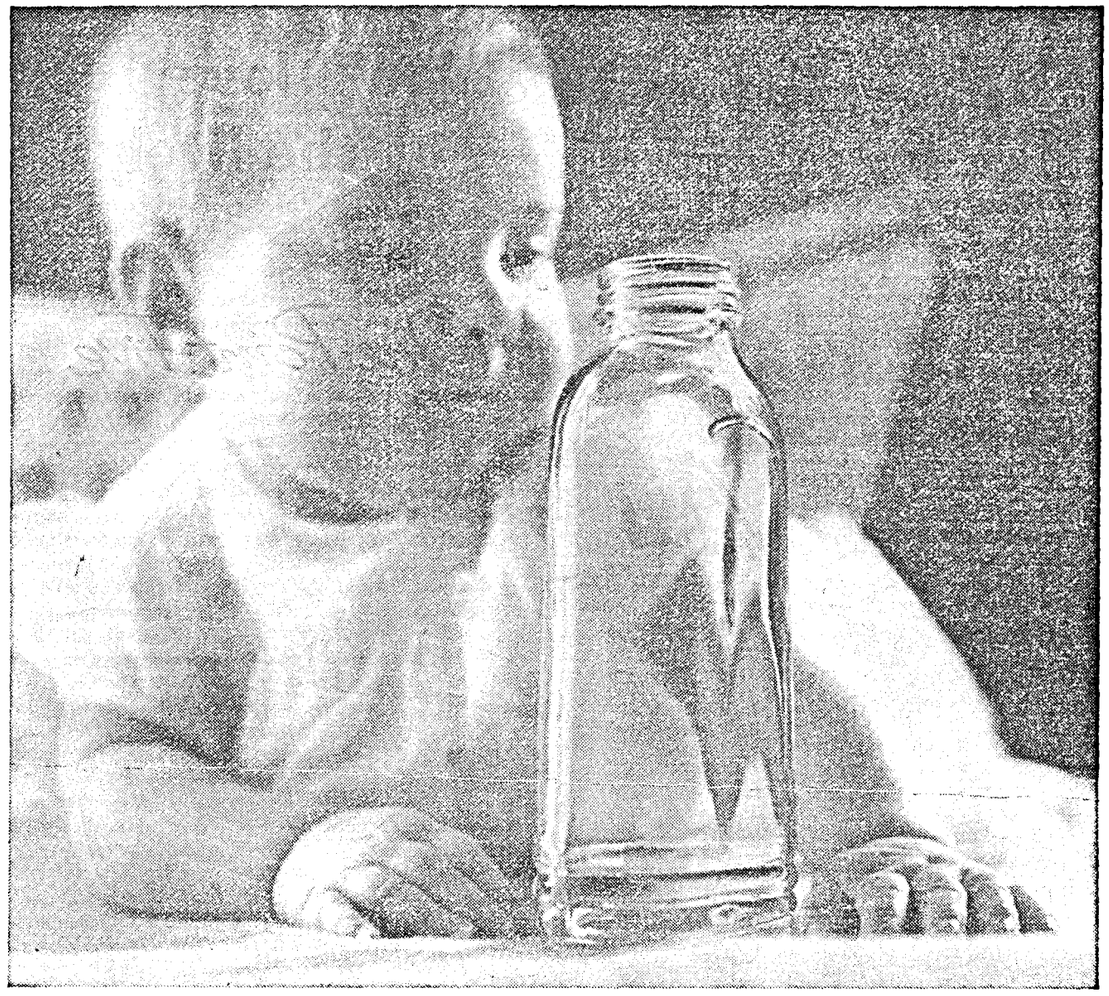
ENERGY POLICY

Freer Imports of Fuel

IN the last of three lectures to the London School of Economics upon "The Political Economy of Energy," Dr Georg Tugendhat this week propounded an energy policy that he thought might be fitting for this country in the era of convertibility: one based upon buying all our fuel in the cheapest market, wherever in the world that might be. Practically, this would mean importing coal as freely as we now import oil and propose to import electricity and possibly natural gas. Since the war only the National Coal Board has occasionally been authorised to import coal, at times when the landed price has been far higher than prices here. Customers such as the Associated Portland Cement Company can buy a cargo of Russian fuel oil, but would not at present get a licence to buy a cargo of Polish coal if they wanted to; the Gas Council can import 2,000 tons of Texas methane, but could not buy one ton of Pennsylvania carbonisation coal.

Dr Tugendhat was not too clear about what the results of such a change in policy might be. On the one hand, he instanced the possibility of landing American coal in Europe at $11-12 a ton today; this is well below the cost of freight alone two years ago. He believed that American coal-owners were prepared to buy their own ships and guarantee 15-20 year contracts at fixed cif prices (fixed to reflect today's unremunerative level of Atlantic freights?). On the other hand, he said that all our foreign competitors protect home-produced fuels in one way or another and that "we should afford the same advantages to our fuel industries, provided always that price levels to the consumer do not exceed those in force elsewhere." He thought it would not be impossible to produce about 100 million tons of coal from the East Midlands and North-Eastern divisions of the National Coal Board at "internationally competitive" cost; but went on elsewhere ambiguously to suggest that the level of British coal output which could be maintained at competitive costs "would be much higher than anyone of us is prepared to forecast today."

Price **£575** *plus £288. 17s. P.T.*



If you like the 'feel' of a finely engineered car, the response of a sports-tuned engine, the positive feel of good steering, sureness in cornering—if you value these things, the Riley One-Point-Five is for you. It's a smaller Riley with a 1½ litre sports-tuned engine with 68 b.h.p. output! Acceleration through the gears is sparkling and there's an extra-high top gear which is the equivalent of an overdrive. This car is beautifully finished too with polished walnut finish and real leather upholstery. It gives you Magnificent Motoring with real economy. See it in your Riley Dealer's Showroom.

For silky-smooth six-cylinder power and luxurious comfort, try the magnificent Riley Two-Point-Six.
Price £940
plus £471.7s. P.T.
Fully automatic transmission is optional.

FOR MAGNIFICENT MOTORING

Every RILEY *carries a* 12 MONTHS' WARRANTY *and is backed by Europe's most comprehensive service*—B.M.C.

RILEY MOTORS LTD., Sales Division, Cowley, Oxford

Is your baby discovering the glass age?

TODAY'S BABY grows up in a world of glass. Many of his foods, drinks and medicines come in it. No wonder! Only glass is pure enough – and mothers know it. Glass never affects what's in it. It's clean – and you can *see* it's clean. It makes the most hygienic containers of all.

More manufacturers are choosing glass

Manufacturers of all kinds of products – for grown-ups as well as babies – are using glass containers more and more. United Glass Ltd. give them the service they need. Their facilities now include the Glass Packaging Advisory Bureau, set up to solve the manufacturer's problems and to develop new packaging for him. If you could use glass in your packaging, please get in touch.

UNITED GLASS

Britain's leading makers of glass containers

United Glass Ltd., 8 Leicester Street, London, W.C.2. Telephone: GERrard 8611. Telegrams: Glaspak, Lesquare, London

It is clear that British coal cannot long command a price higher than imported coal can be landed for—though Dr Tugendhat might bear in mind that until eighteen months ago bringing it into line with world prices would have meant putting it up substantially. It is not, in effect, wholly insulated from world competition on price at present. The prices of American coal and natural gas, plus freights, already set a ceiling to fuel oil prices here, which are low enough to take an increasing share of markets where oil competes with British coal. But in the shape of coal, imported fuel could certainly compete in the Coal Board's remaining markets as well. Reactions to this quite powerful thesis of Dr Tugendhat's will be partly political. But economically they will depend also upon one's assumptions about long-term trends in cost, which are less easy to speculate about than, say, those in the period of surplus capacity that now besets fuel industries everywhere in the world. As he says "there is plenty of fossil fuel in the free world." But not everybody would agree that "we can state with equal certainty that the cost of exploration, production, processing and transportation could be reduced greatly below the present levels."

COPPER

Strikes and the Market

STRIKES and fears of strikes continue to pull copper prices higher. The American custom smelters, more sensitive to market pressure than the integrated producers, have raised their prices by another half cent to 32 cents a lb (£256 a ton), which is two cents above the producers' price. Copper is short in the United States. Consumers have been ordering extra supplies in case American miners go on strike in the summer before a new wage contract is settled, and now strikes have occurred at an Arizona smelter and a Chilean mine. There is no shortage in Europe, but the London market has been influenced by American events, and still more by the troubles in Africa, which could spread to the Rhodesian copperbelt. Cash metal closed in London on Thursday at £246 a ton, a rise of £5 on the week. It is not profitable to send copper from London to New York over the tariff of nearly £13 a ton, but if the margin between the two markets widened by another few pounds more, African and Chilean copper could flow direct to the United States; freight costs to the USA and Europe are almost the same.

LABELLING

All that Glisters . . .

HARD on the heels of the committee which declared that the public should know how much orange makes a squash comes another report recommending that it should also know how much gilt is on the lily. When the tendency is to seek protection of the unsuspecting and frequently gullible consumer by clear, descriptive labels, it becomes important to see that all industries keep in step. The report of the departmental committee on hallmarking of precious metals found that strict though the hallmarking regulations may seem, they have become encrusted, since they were first introduced in 1238, with a wealth of detail that makes them wellnigh incomprehensible to the uninitiated. The committee picked its way through gold braid and silver wire, the ingenuities of the fake antique dealer, and innumerable exemptions to hallmarking hallowed by history but not by anything else. It has now recommended complete revision of the 30 or more statutes still in force, their extension to platinum for which there is no legal standard in this country although there is in Europe, the inclusion of gem jewellery as well as ornaments made from precious metal only, and the amalgamation of several assay offices.

Having completed this spring-cleaning operation, the committee then tackled a more difficult issue, the protection of the public from a range of loose descriptions such as "gold filled," "rolled gold," "nickel silver" and a host of others which get attached to articles with little, if any, gold or silver in them. It now suggests that terms such as these should be given a legal definition, the Herculean task of seeing that they are correctly applied being left to the assay offices. It is no more difficult to test the gold or silver content of, say, a bracelet, than it is to test the fibre content of a piece of cloth. But the shifty jeweller selling "solid" gold is playing for higher stakes than the textile manufacturer who adds a little more rayon to his "wool" cloth. The pursuit of every sub-standard trinket is not going to be easy; that is no reason why it should not be attempted or at least threatened.

RAW SUGAR

Guessing the Surplus

RAW sugar on the "free" world market is still about 3.10 cents a lb, fob Cuba; so far the drastic action taken by the International Sugar Council late last week has not brought about a rise, though it may have prevented a further fall. As the prevailing price under the sugar agreement was below 3.15 cents a lb export quotas could have been cut by the maximum of 20 per cent of the basic export tonnages. The council could not quite bring itself to do that, but it has made almost as big a cut and in a way that gives it more flexibility for future action than would otherwise have been the case. The minimum requirements of the free market in 1959 are now put at 5,580,000 metric tons, somewhat higher than the council's previous estimate. Supplies available from non-member exporters are put at no more than 325,000 tons, which is well below certain private estimates. If that figure is fulfilled, exports from member countries would be 5¼ million tons, compared with the basic export tonnages of 6.4 million.

Export quotas had already suffered an automatic cut of 2½ per cent of the basic tonnages, and have now been cut by another 5 per cent, or by 480,000 tons in all. In addition, the council has decided that all exporters should hold back a quantity equal to 10 per cent of the basic tonnages, or 640,000 tons, "so long as market conditions warrant." In effect the supply available from members is reduced to 5,280,000 tons, thus balancing demand on paper. So early in the year no estimate of supply and demand can be better than an informed guess. Many private traders think that the council is under-estimating the true surplus; the council thinks that they are exaggerating it. Time will show who is right.

DISTRIBUTION

The Organised Grocer

A "VOLUNTARY group" of grocers, the Wavy Line Grocers' Association, announced this week that it had enrolled 1,400 members since it was launched on a full scale last September. Other associations of this type have also

increased their membership rapidly in the past year. The Spar organisation, which is strongly entrenched on the Continent, had only 72 full members at the end of 1957, its first year of operation, and now has over 1,000; the Alliance of Individual Grocers, which was the first one to be formed in Britain five years ago, has risen from 340 members in 1957 to 700 now. There are no reliable figures for the total number of retailers in these associations, but it is clear that they have been rising at a progressively increasing rate since resale price maintenance began to be broken down last year. These associations, originally formed to enable the independent grocer to match the large-scale buying of the multiple, have become more valuable as a defensive measure since the multiples and supermarkets began price competition in branded goods, from which the independents had previously felt themselves immune.

Two kinds of voluntary association now exist in Britain. In a "group," one wholesaler supplies all the retailers with all the goods they buy, apart from any specialities he may not stock. In a "voluntary chain," several wholesalers get together with retailers to form a probably more widespread association, in which each wholesaler has a monopoly of one area, but co-operates with the others in matters such as advertising. Both give very much the same benefits; the most important of these are the retailer's freedom from concern about his buying, the wholesaler's ability to limit his deliveries for each district to one large "drop" instead of many small ones, and the benefits of common advertising. The retailers are free to concentrate their time and working capital on selling, while their combined purchasing power is great enough to obtain price concessions from manufacturers on goods that will be sold as "special offers." Most manufacturers are now reconciled to seeing their goods sold at cut prices, and indeed glad of the extra volume of sales this may bring. Even so, though the manufacturer increases his sales, he is accepting a less dominant role in the distributive process. If the chains and groups follow the multiples and the co-operatives in asking for their own brand labels on products, as Spar does on the Continent and hopes to do here later this year, he may find himself one seat farther back.

SECONDHAND JEWELLERY

Purchase Tax Postponed

THE Chancellor of the Exchequer, in a written answer, told the House of Commons last week that the introduction of purchase tax on secondhand jewellery would be postponed to May 1st to give the trade time to adjust its business to the new conditions. The tax, which hitherto has been payable only on new jewellery at a rate of 30 per cent of the wholesale value, was to have taken effect on March 1st. Mr Amory said that he was considering the representations made by all sections of the trade and by the London auctioneers (who consider that taxation of secondhand jewellery would disrupt the market and seriously impair London's standing as the leading international art market). At present he could see no practicable alternative to the tax, "in view of the evidence of widespread malpractice disclosed by the investigations of the Customs and Excise." This week a number of men in London and the provinces were charged with a conspiracy to defraud the revenue of purchase tax "by subtle means and devices," in particular by pretending that certain new jewellery was secondhand.

TANKERS

A Packet of Sausages

THE flexible "sausage" barge for liquid cargoes that was invented by Professor W. R. Hawthorne in 1956 and is being developed by Dracone Developments, Ltd., has now come one step nearer practical use. Last week a prototype barge carried a cargo of paraffin for Esso from Fawley to Newport, Isle of Wight, which is claimed to be the first commercial voyage by a flexible vessel. Several prototypes, with a capacity of 10,000 gallons or about 40 tons, have been on trial on Southampton Water for the last six months. A batch of similar barges is to be built for sale at a price of £3,300, compared with a price of about £3,000 to £3,500 for a conventional barge of this size; and two are being sent out to West Africa for tests on the rivers there by Shell Tankers Ltd. and a shipping company. A larger sausage, to hold 350 tons of liquid, is now under construction and it is hoped that this will prove a step towards much larger versions.

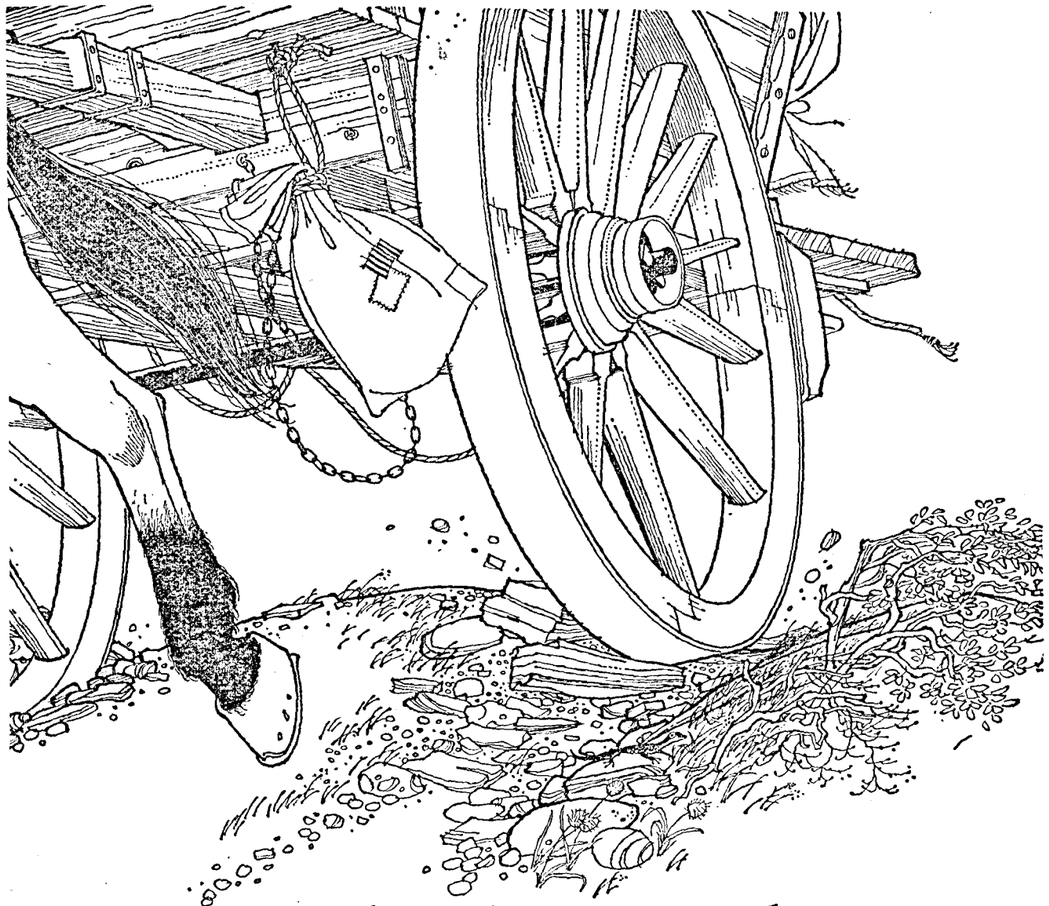
These kinds of barges were originally intended for cheap ocean carriage of oil, but the emphasis is now shifting towards the carriage of liquids on inland waterways or in coastal waters, for which the smaller barges that are likely to be available in the more immediate future will be suitable. They have especial attractions in the more remote regions, to which the costs of transporting a normal barge may exceed its cost of construction. The flexible barge is much cheaper to transport, because it can be carried in a collapsed state, so that its price to the user will be lower than that of a conventional barge. One new use in which there is now considerable interest is as a substitute for storage tanks. Where temporary facilities for keeping liquids are needed, and where water is available, it should prove cheaper to use a floating flexible container than to build steel tanks.

The barge is made by P. B. Cow Ltd. for Dracone from woven nylon cloth three-sixteenth of an inch thick, coated with synthetic rubber. The price per ton is expected to fall with increases in size and the scale of production, but if it proved possible to use a cheaper material such as polyvinyl chloride, which Herr Doerpinghaus, the German inventor of a similar barge, is believed to be employing, much larger reductions in cost could be made. For so long as the costs remain comparable with those of normal barges the use of sausages seems likely to be limited to places distant from shipyards, or for uses where its collapsible nature is an advantage.

MONOPOLY

Commission in the Background

THE activities of the Monopolies Commission during 1958 are reviewed, at no great length and less depth, in the annual report on the Monopolies and Restrictive Practices Acts of 1948 and 1953, published by the Board of Trade this week. The only job that the commission completed last year was a report on whether (and to what extent) its recommendations of some years ago concerning trade in imported timber had been carried out: its report that they had not is still being considered by the Government, with



'YES SIR, I said, YOU'RE THE BOSS!'

You're the boss, you give the orders . . .
and the Independent haulier carries them out. There's no red-tape
to stand in his way. He makes his own decisions swiftly . . . executes them
promptly. And he puts *you*, the customer, first.

Personal service—that's the reason why so many firms are regular customers—
have been for a long time—of Independent hauliers. They like the scrupulous attention paid
to their special demands. They know how Free Enterprise competition
has held down prices since de-nationalisation. And, of course, they like the prompt service
given equally to the heaviest freight and the smallest load,
to the local delivery and the long cross-country haul.

The Free Enterprise Haulier puts *you* first

Get in touch with your local area office of the Road Haulage Association
or directly with the Head Office at: 146 New Bond Street, London W.1. MAYFAIR 9050

This is a road

Call it what you will—bridle path, track, or cattle-route. *This is a road.* Primitive, of course, compared to today's great highways. But it leads somewhere. It is a vital line of communication.

Roads are the arteries of civilised life. And the traffic on them, as if you hadn't noticed, grows denser and heavier. To meet the world-wide call for stronger, faster and safer roads, engineers are thinking in new surfaces, new highway patterns, sometimes even in new dimensions. And time and again they are turning to bitumen (or asphalt, as it is called in America).

Shell Bitumen, a product of petroleum, is a tough ally in these projects. A road is only as good as its base, and conventional bases are often inadequate for modern traffic. But new bitumen-bound base courses take the extra strain comfortably and are being used more and more, particularly in Europe, to increase the strength of roads while decreasing the cost of making them. Thanks to bitumen, durable and non-skid surfaces are making roads safer. And, thanks to bitumen's versatility, road engineers can make use of cheaper and locally available materials. The world's biggest supplier of bitumen for roads is Shell.

Perhaps you know Shell mainly through the Service Stations you call at in your car. But Shell products, inspired by research, are also helping to improve the roads you run on.

YOU CAN BE SURE OF SHELL

the Timber Trade Federation. The commission is working on four cases at present, dealing with chemical fertilisers, cigarettes and manufactured tobacco, tobacco manufacturing and packaging machinery, and "electrical equipment for mechanically-propelled land vehicles." A report on the chemical fertilisers case will probably appear some time this summer. The annual report notes several subjects which have been recommended to the Board of Trade for submission to the commission; among these are aluminium ingots, electric shavers, gramophone records, shotgun cartridges, the distribution of petrol and lubricating oil for motor vehicles, and sole agencies and exclusive arrangements generally But the board did not refer any subjects to the commission last year.

As if in courteous deference to one of the commission's infrequent public appearances, the Restrictive Practices Court has had a quiet week. Hearings have been completed on the Blanket Manufacturers' Agreement, although a decision is not expected to be announced immediately. Last week the court asked for a fuller and clearer statement concerning the motor vehicle distribution scheme.

GERMAN MONEY MARKET

Discount Houses in Fashion

MEMBERS of the London discount houses awaiting with trepidation the report of the Radcliffe Committee on whether or not they are obsolete must be noting with relief the crop of new discount markets springing up abroad. Following the moves in Commonwealth countries, including South Africa, Rhodesia and Australia (where the Commonwealth Bank has now announced that it will act as lender of last resort to four dealer companies) a discount company has been formed in Germany.

Germany has had no discount market since the war. The move to set one up now is designed for a limited purpose. Privatdiskont AG will not handle government paper—there is virtually none of it in Germany—and it is not designed to encourage the use of trade bills for internal financing. The Bundesbank remembers with awe the experience of the Reichsbank before the war: it found itself left with nine-tenths of the paper in the market. Nor does the central bank want to encourage export finance; its eyes are commendably fixed on the need to ease the burden of Germany's external surplus. Only two categories of bills are eligible for discount at the new institution, those financing imports and those financing international transit trade. Bills must carry an indication that they are financing one of these two types of transaction.

The Privatdiskont AG has been formed by 38 banks, including the big banks, private banks and savings banks. In contrast with discount houses in other centres, the company will not itself provide finance, but will act merely as an intermediary, taking discount business from the big banks or private banks and passing it on to the savings banks and other institutions seeking an outlet for short term funds. Bills that pass through the company will be eligible for re-discount at the Bundesbank. So far business has been very small—it will take time to train new staff in forgotten ways and the credit is not cheap. To a basic charge of 2½ per cent must be added the banks' acceptance commission of 1½ per cent, and tax equivalent to 0.6 per cent. The total of over 4½ per cent is more than has to be paid in New York—though not very different from London.

AUTOMATIC SELLING

Slot Sales Surge

AN International Automatic Vending Exhibition that was held in London this week is a sign of how fast selling through the slot has recently been developnig. Four years ago, when the industry was beginning to start operations again after the end of sweet rationing, there were only an estimated 4,000-5,000 slot machine "columns" in use. (The number of columns, each serving a single slot, were the measure normally employed for chocolate and cigarette machines, rather than the number of individual machines.) The industry was then prepared to guess that there would be some 40,000 columns in use by 1960. But growth has so far exceeded expectations that current estimates now range from 50,000 to 120,000, or even 250,000, complete machines in use. The only official estimate of the value of sales from them relate to those not owned by retailers; it is of £2.3 million for 1957, a figure regarded by the trade as far below their total sales. Machines selling chewing gum are the most numerous; one estimate suggests that there may be up to 150,000 now installed, and that cigarette machines come next, with 40,000-50,000.

These machines are of the type familiar for many years, but the most interesting recent development is the introduction of the more elaborate machines selling food or drinks. These machines have been much more extensively developed in America and on the Continent than in England; development consists mainly of catching up with the foreigner, and most vending machines are being built under licence from foreign manufacturers. A number of large companies have recently begun making these machines, including Hawker Siddeley, Elliott Automation, and Camp Bird. About 10,000 are believed to be in use, installed outside shops, to give round the clock sales, on railway stations, in hotels, factories or offices, and in garages. Vending machines are popular in factories because they enable workers to buy refreshments without leaving their work, which is convenient for them and is believed to improve productivity by reducing time spent in drinking cups of tea. Indeed, the more single-minded managements prefer to have cold drinks sold in bottles from machines, rather than tea or coffee in cups, because drinking the one is assumed to be stimulating, while the other is supposed to induce a feeling of relaxation.

ANOTHER RECORD

Mr. E. R. Lewis on a Vital and Adventurous Business

The 29th annual general meeting of The Decca Record Company Limited was held on February 26th in London.

Mr. E. R. Lewis (the chairman) presided and, in the course of his speech, said: In the Consolidated Profit and Loss Account the balance from Trading Account, which amounts to £2,952,539, shows an increase over that of the previous year of £563,171. Maintenance and Depreciation amount to £937,890, an increase of £149,898, but interest charges were lower by £49,491 at £121,772. The balance of profit for the year at £1,861,685 shows an increase of £459,171 over the previous year.

After charging taxation and tax equalisation, including £50,000 credit from the previous year, of £930,701, the net profit amounts to £930,984, an increase of 60 per cent. The balance carried forward shows an increase of £406,457. I feel sure that you will regard these results as highly satisfactory, and justifying the forecast I made at the last meeting.

Consolidated turnover for the year to March 31st, 1958, at £20,950,000 was £3,900,000 greater than that of the previous year having increased by twenty times since 1946.

We are recommending a Final Dividend on the Ordinary and "A" Ordinary shares of 1s. 5d., less tax, making a total for the year of 2s. 0d., less tax, an increase of 3d. per share over that of the previous year.

Exports reached the record total of £5,320,000 including £1,350,000 to the USA and Canada.

Review of Operations

Production and sale of records were greater than in any previous period, the company maintaining its share in total industry production though the rate of increase slowed down towards the end of the financial year. Improved results were shown by our Canadian and American subsidiaries and large sums were received by means of royalty payments for records pressed in many overseas territories.

Our Radio and Television Division also had an excellent year, sales being greatly in excess of those of any previous period.

The Decca Navigator made further progress during the year, which was a record one for new hirings. The Swedish chain was brought into commission by the Royal Swedish Navy, the Canadian and New York chains were erected and a number of special survey projects were carried out in various parts of the world. The long range "Dectra" system was established over the Atlantic and a large number of evaluation flights were made by the Ministry of Supply, BOAC, Pan American and Swissair. On the Radar side we had a good year, the turnover being larger than in any previous period.

All the company's facilities were stretched to the utmost to cope with development and production in the various activities in which we specialise.

The Current Year

The rate of increase in the record industry has, as you will have gathered from the press, slowed down and has at times dipped below the overall figure attained in the previous year, with the result that the total industry sales for the nine months to December, 1958 were somewhat lower than for the preceding similar period. Fortunately we managed to keep our own sales slightly ahead of those of the previous year and so of course have had a small increase in our share of the total industry.

Our American and Canadian subsidiaries have forged ahead strongly this year despite the general trade recession and a considerable improvement in results is expected. The reception of our stereophonic record, both in this country and in the USA and Canada has been most encouraging and in the latter countries stereo records are already making a material contribution towards our profits. Our high precision stereophonic pick-up, manufactured by our subsidiary company, Reid & Sigrist, has met an enthusiastic reception amongst specialists on both sides of the Atlantic and is considered to be the finest pick-up on the market.

I have referred on more than one occasion to the heavy burden of purchase tax which is levied on records at the highest existing rate. A joint committee has been formed by the leading recording companies with a view to bringing to the notice of Members of Parliament and the Chancellor of the Exchequer the contribution made by the industry to the cultural life of the country, to our prestige abroad and to the export trade. Our case is undoubtedly receiving most sympathetic consideration in many quarters and we feel that if any reductions in purchase tax are to be made, we have an exceedingly strong case for the maximum consideration. Naturally we hope that this heavy, and we believe

quite unjustified burden on our comparatively small but very vital industry, will be abolished.

Our radio and television department has made further progress since March. Television sales, which were restricted in the first few months, went strongly ahead in the autumn.

The Navigator

In the Navigator business the last 11 months have been a period of exceptional achievement.

Hiring contracts and sales of Navigator receivers now total over 5,500 having almost doubled over the last four years. These figures are proof enough of the value of the system to marine and air users and we have built up a rental income of quite substantial proportions.

In Nigeria a chain of Decca Navigator stations has been brought into service and the Dutch Government has purchased and is using a Decca Chain for their Delta Plan operations.

There have been three separate contracts in the Persian Gulf with the Arabian American Oil Company, the Consortium and the Japanese exploitation group.

The New York chain has been brought into operation and is being used by New York airways in an experimentation programme conducted by the United States Federal Aviation Agency. Unfortunately, and much to our surprise, the American Coast Guard has banned the use of the chain by shipping. As a result, amongst many others, the great Atlantic liners of Britain, France, Sweden and Holland and even the American liners SS United States and SS America are unable to use the valuable facility provided, despite the fact that they are all equipped with our receivers.

The trial period for the Canadian chains came to an end on September 30th last. We have received a letter of intent from the Canadian Department of Transport as a result of which we can anticipate their final agreement to the purchase of the Canadian Decca chains within the next few months.

You will have gathered from the newspapers, radio and from television of the debates just concluded at the meeting of the International Civil Aviation Organisation (I.C.A.O.) in Montreal to decide whether the American VOR—DMET system or the British Decca Navigator System should be adopted as the standard equipment for short range air navigation.

Although unfortunately the vote has gone against us, I wish to state that we shall continue to do our best to maintain and improve on our position as a leading company in the important field of air navigational aid development.

The Spanish Government has ordered a Decca chain which is being manufactured in Spain under licence. It will give valuable coverage along the Spanish North-West Coast and overland to Madrid.

Radar

Our Radar business continues to progress and we recently announced an entirely new series of seven marine radars which cover the requirements of all classes of shipping. Already orders have been received for five hundred units, and of particular interest has been the wide adoption of true motion radar, of which we are the pioneers, and which should make a material contribution to safety at sea. To date over 8,000 Decca marine radars have been sold and hired, representing nearly 50 per cent of radar-fitted ships. Our new harbour radar is now in commission at the ports of Southampton and Liverpool and we are in the process of installing similar equipment in the ports of London and Hamburg.

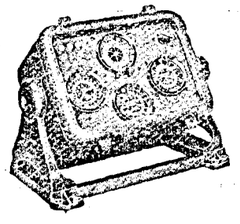
Our new Decca Civil Air Radar meets requirements for the control of jets. Orders have been received from the Swedish Civil Aviation Board for installation at the new Stockholm airport and for the airport at Gothenburg. Doppler, a new air navigation aid, has been developed for use on its own or in conjunction with the Decca Navigator system.

We have developed an extensive world business in Meteorological radar. Decca windfinding radar has been specified for use in many installations throughout the world from Antarctica to the Equator.

Essential security forbids giving details of the extensive scale of Decca work in the field of military radar. In co-operation with Compagnie Française Thomson-Houston joint systems have been developed and are in production.

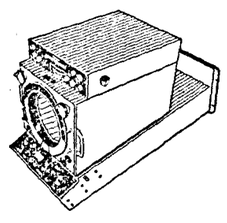
Confidence in Continued Progress

I hope that I have said enough for you to appreciate something of our very vital and adventurous business.



I am confident that with our physical resources, the ability, resourcefulness and enterprise of our executives and personnel, and our know-how and experience we can look forward to the future with that same confidence that has enabled us to reach a position in the industrial world undreamed of fifteen years ago.

Results for the current year should again be very satisfactory and we can look forward to continued progress in the varied fields in which we are engaged.



The report was adopted and at a subsequent extraordinary general meeting a resolution increasing the nominal amount of each Ordinary Share and "A" Ordinary Share in the capital of the Company from 4s. to 10s. and the creation of a further 1 million shares of 10s. each was approved.

COMPANY MEETINGS

RALLI BROTHERS LIMITED

AN OVERALL IMPROVEMENT

MR JACK VLASTO'S REVIEW OF OPERATIONS

The annual general meeting of Ralli Brothers Limited will be held on March 24th in London.

The following is an extract from the statement by the President, Mr Jack Vlasto, which has been circulated with the report and accounts for the year ended August 31, 1958:

Although the consolidated trading profit is only slightly higher than for 1956/57, the overall picture for the year is better. Our merchanting earnings showed a welcome recovery which offset the reduction, which was expected, in the profits of our subsidiaries, while the news regarding associated companies is brighter.

Our merchanting earnings would, indeed, have been appreciably better than they were but for the slump in Atlantic freight rates to which I referred a year ago. A number of previous bookings at high rates had still to be worked off during the first months of our financial year and our poor results in grain are largely attributable to these.

We did not do well in cotton either. The difficulty there arose from a continually sagging price level which, coupled with the particular trade problems facing our cotton spinner buyers, made them so shy that it was often impossible to liquidate a holding before the market slipped away and the loss became quite hurtful.

In all articles, however, we maintained our share of the business and, with a number producing satisfactory results, we covered the bulk of our total working expenses for the year of about £1,100,000, which includes depreciation of fixed assets of £74,205. Our turnover was about £53 million.

THE ACCOUNTS

It will be seen that extraordinary items, in the shape of the major part of our Indian excess profits tax post-war refund and further realisations from our Japanese blocked yen account, have improved the total results. I would add, on the other hand, that we were, unfortunately, involved in the difficulties of the Amato group in South Africa and have made a provision of £35,000 against outstandings for jute supplied.

Although the profit unappropriated in our accounts is down by £33,478, and our capital reserves by £26,903, the group total of capital and revenue reserves is up by £40,928, whereas the previous year they were reduced by £38,090. As I have indicated, this reflects a better picture than a year ago, but results must improve much further before we can regard them with satisfaction.

SUBTRACTIONS AND ADDITIONS

In West Pakistan, the final phase of the planned withdrawal of our up-country organisation was completed. Apart from our cotton ginnery at Nawabshah, which we continue to work, our reduced activities are now confined to the Karachi area.

In Uganda, we recently sold our large Kampala office building at slightly above cost. We now rent space on the ground floor.

In the United Kingdom, we have closed our hides department. For some years our hides business had given poor results.

The main addition to operations is our new venture in the credit mail order business in the United Kingdom, about which I have already advised you. At the last minute we were persuaded, in view of possible trade mark complications, to drop the name Minerva House and our new subsidiary is Bollin House Limited.

SUBSIDIARY COMPANIES

Our subsidiary companies contributed £396,861 to the consolidated trading profit shown in the accounts. The largest single contributor was The Maritime Shipping & Trading Company with an amount of £274,682 in respect of its year ended March 31, 1958. Their current year has benefited from the last few voyages, contracted long previously, at high rates and may show some profit. For many months, however, their six tramp vessels, other than the "Mapledore" which is laid up, have all been working at around present low freight rates, which do little more than cover actual cash running expenses. Unfortunately there is no sign whatsoever of any betterment in the outlook.

Over many years, The Maritime have made a major contribution to our earnings and I can only express the hope that their absence in this role will be shorter than I fear.

In Tanganyika, Ralli Estates were able to offset the effect of lower selling prices for sisal by reduced costs of production. This year sisal production is running ahead of last year and may exceed 6,000 tons. Costs will be up, owing to the wage increase, but, if the improved price level for sisal can be maintained, results should be better. A third factory unit is being installed near the centre of the property to serve the Bamba area, a part of which has been opened up and developed. These 1,500 acres carrying flourishing young sisal, which were virgin forest when I saw them three years ago, look most promising.

Our Dindira Tea Estate will this year reach 900 acres of planted tea, though only about half will be mature. The crop is now running at fully 300,000 lbs per annum. It may double within three years and should certainly do so within four. The new factory is working well, though the hydro-electric scheme has not yet fulfilled expectations. The incidence of depreciation, on this developing estate, is proving onerous and, until revenue is considerably higher, the accounts will show losses. Last year's was £20,323.

Labour relations at Dindira and at Ralli Estates have hitherto been excellent but both estates were affected by the strike wave which recently occurred in Tanganyika.

Berg River Textiles achieved another satisfactory year. Towards the end, however, the trade recession in cotton goods in South Africa brought a drop in sales and a contraction in manufacturing margins. Production is still at full capacity, but results for the current year will obviously be less favourable.

ASSOCIATED COMPANIES

On a short visit to Rallis India in Bombay and Calcutta, I was happy to find them quietly confident and optimistic. The reshaping of their establishment to the pattern of their reduced merchanting scope being now well behind them, they have, more recently, devoted an increasing proportion of their efforts and resources to industry.

In association with the well-known British manufacturers, a factory is being set up at Mulund, near Bombay, to produce a wide range of Wolf electric tools. This step is the sequel to the distribution and then also the assembly of these tools in India by Rallis India. A company has been registered under the name Ralliwolf Private Limited.

A second subsidiary, Ralli-Hoyland Private Limited, will manufacture umbrella ribs in the Calcutta district. This also is in association with the British manufacturers whose product Rallis India have, for years, distributed in their home market.

Rallis India have themselves designed and manufactured a high-class pedestal and standard electric fan. Sales are making a promising start.

Time will be required before the foregoing developments get into their stride. Other projects are under consideration.

More immediate in effect is the purchase of an established pharmaceutical enterprise. This brings under Rallis India's wing the manufacture and distribution of the TCF liver extracts and other nutritional products made in the TCF factory at Andheri, near Bombay.

The accounts of Rallis India disclose that the deficit brought forward from the previous year was reduced from Rs.4.4 to Rs.3.25 million.

In East Pakistan, I was glad to observe a marked improvement in labour discipline at The Crescent Jute Mill. Their accounts, to September 30, 1957, show a loss carried forward of nearly Rs.2 million and this will be increased when those to end September, 1958, are published. The mill is now working at a small profit but it will be a long hard pull to prosperity and one which will largely depend on whether labour works and behaves or not. A reversion to the state of indiscipline ruling a year ago, or even prior to Martial Law, could prove disastrous. Even now, there is ample scope for further improvement as production, at some 50 tons of jute manufactures per day, is still 20 per cent less than it should be.

THE OUTLOOK

On the merchanting side, our current year is running rather better than its predecessor at this time. On the other hand, the profits of our subsidiary companies will be considerably lower than last year. There will again be similar, though smaller, extraordinary items to bring to the credit of our profit and loss account. I hope we will achieve sufficient improvement in merchanting to offset the reduced profits from subsidiaries. To do so will require continued progress and no setbacks.

A new factor, however, comes into reckoning in the shape of the Bollin House development. The first catalogue is out and the essential office and warehouse organisation established, all exactly to time schedule. The task now in hand is that of finding agents and customers and building up the business. All this has already involved substantial expense and higher expenses, which include the bulk of the first advertising campaign, will be incurred during the remainder of our financial year, while earning possibilities, during that period, are relatively insignificant. As I indicated to you originally, it will be at least a year from now, taking us to the six months' life of the catalogue to be issued in February, 1960, before we can hope, all going well, to start covering expenses. In the meantime, I expect that development expenditure, to end August, will be about £90,000. This is quite an item, though all that really matters is that the expenditure should prove fruitful and the business successful. Those who are directing the affairs of Bollin House are satisfied with progress and optimistic of the outcome.

PERSONNEL

We have a large staff, composed of many races of many creeds, and working in many parts of the world. One thing which all have in common is a complete loyalty and devotion to the company they serve. Our thanks are again due to all in our organisation for another year of hard work and strenuous endeavour.

H. M. HOBSON LIMITED

The twenty-third annual general meeting of H. M. Hobson Limited was held on February 27th in London.

Mr T. Simpson, FRAeS (chairman and managing director), presided and, in the course of his speech, said:

Your Board are pleased to report a further satisfactory year's result. The Group Profit before taxation amounted to £782,136 compared with £747,548 last year. Taxation absorbs £402,968 so that the Consolidated Net Profit is £379,168 compared with £373,623. Your Directors recommend a dividend of 7½ per cent (less tax) and have declared a special Interim Dividend of 5 per cent, less tax, for the year ending September 30, 1959.

The present satisfactory state of affairs has only been attained by the conservative policy adopted by the Company whereby we have retained much of the surplus earnings each year in the business, making ourselves continuously more effective to meet the competition which is now arising.

As a result of decrease in Service demands, it is obvious the total amount of aircraft business in the country is going to be much lower for some time ahead. However, we have a healthy order book and deliveries to the aircraft industry still form a substantial part of the output and, we believe, will continue to do so for some time.

We have obtained a long term contract with the Atomic Energy Authority which assures continuity of work for our organisation and this, with other projects which we are undertaking in the Atomic Energy field, will mean a considerable amount of work for our factories.

The report was adopted.

THE PATALING RUBBER ESTATES

MR H. B. E. HAKE'S STATEMENT

The annual general meeting of The Pataling Rubber Estates, Limited, will be held on March 23rd in London.

The following is an extract from the statement by the chairman, Mr H. B. E. Hake, circulated with the report and accounts:

You will know of our grievous loss in the death on July 11, 1958, of Sir Eric Miller. Sir Eric was the first secretary of the old Pataling Rubber Estates Syndicate when that company was formed in 1902. Throughout these 56 years he gave the company devoted service and guidance. In 1953 he brought about the merger with the Anglo-Malay and Bikam companies, which increased our issued capital to its present figure of nearly £750,000, making us one of the leading companies in the industry. We deeply regret his going but we remember the example he set and his great contribution not only to Pataling but to our industry as a whole.

ACCOUNTS

The rubber crop harvested on the company's estates for the year, including 164,500 lb. from Kuala Kubu estate acquired on July 1 last, was 12,135,515 lb. (10,852,059 lb.). In addition 4,400 lb. (308,000 lb.) were bought in latex form.

The profit before taxation in comparison with the previous year declined by some £86,000, but with taxation taking some £59,000 less, the net profit at £317,783 is only £27,000 down. The shareholders' proportion of the year's profits has been restricted to the 10 per cent interim dividend paid in October last but we are, however, recommending payment of a 25 per cent dividend from the balance on Profit and Loss Account.

ACQUISITIONS

Kuala Kubu estate was bought as from July 1st last. It comprises 950 acres, some two-thirds of it pedigree rubber, and adjoins our Batang Kali estate, with which it is jointly managed.

On January 15th this year we made an offer to the directors of The Strathisla (Perak) Rubber Estates Limited to purchase, at a price of 6s. per 2s. stock unit, the £73,000 of that company's issued capital of £80,000 not already held by us. Excluding that company's net liquid assets and trade investments, the offer was equivalent to a price of £80 per acre for its 2,196 acres of rubber. Including acceptances of our offer to date our holding in Strathisla is now 92.4 per cent of the issued capital. The property, half of which is pedigree rubber, has a fine modern factory equipped to manufacture all grades of rubber. Situated only a short distance from our Chumor estate, both can be worked together economically.

REPLANTING

Our rejuvenation programme was further advanced by the successful replanting of 1,111 acres. New extensions of 69 acres were also planted. Some 250 acres of new rubber came into production. About 8,500 acres of old rubber, or 34 per cent of our rubber acreage, remain to be replanted and we propose to push forward with this. We also propose to develop our jungle reserve at North Labis: a new extension there is planned for this year. Some 7,300 acres, or 29 per cent of our rubber, are in various stages of immaturity and will prove a source of great strength in our earning power as they come into production.

ESTATES

At all our estates the usual good standard of field upkeep has been maintained and the extensive immature areas continue to develop satisfactorily. There has been a vast improvement in the Emergency situation: the Malayan Government has dealt with the Communist menace with admirable firmness and seems determined that there shall be no complacency until the job is finished.

A new agreement on wages, which has been the subject of prolonged negotiations between the Employers' Association and the National Union of Plantation Workers, has at last been signed, though it will not come into force before June 1st. The new structure guarantees a basic wage at varying price levels, with an incentive in additional pay for greater effort. It is, I think, a satisfactory agreement for all concerned.

FUTURE PROSPECTS

For the current year the crop, including Strathisla's from date of acquisition, is estimated at around 14¼ million pounds, and in 1964/5 we may expect it to pass the 20 million mark. Subject therefore to a fair and appropriate level of wages our cost of production should be improving all the time with these expanding harvests. The growth of this concern, from a crop of under 4,000 lb. in 1904, through two major slumps, two world wars, and ten years of banditry to its present size and strength, constitutes a record of achievement which I am confident will guarantee a rewarding future. The continuous support of the Board by shareholders over all these years, especially their acceptance of the Board's policy of ploughing back profits for purposes of prudent development, is a factor which I should also like to record in this context.

RUBBER OUTLOOK

Although world consumption of natural and synthetic rubber during 1958 about equalled 1957, there was a substantial reduction in USA absorption. The business recession in that country seriously curtailed car and truck production, but the contraction in new tyre equipment was offset by increased tyre replacements. There has been a welcome recovery, and the outlook is quite promising. Significant also have been the larger imports of natural rubber by the rest of the world, particularly Russia and China: the plans for economic development in both these countries must inevitably mean an expansion in motor transport and consequently an increasing demand for rubber.

The growth in latex consumption is indicative of the many new products where rubber is playing such an important part. It would be unwise, however, to overlook the increase in the use of synthetic not only in the USA, but in other countries where plants are now coming into production. Admittedly without these supplies the world's requirements of rubber could not be met but in the long term it will not be in the best interests of the plantation industry if too wide a price differential compared with synthetic continues for too long a period. On the whole, the outlook, as I see it, seems to be as sound as we could wish it.

MERCANTILE BANK LIMITED

DIFFICULT TRADING CONDITIONS

PROPOSED MERGER WITH THE HONGKONG AND SHANGHAI BANKING CORPORATION

SIR KENNETH W. MEALING'S STATEMENT

The sixty-sixth annual general meeting of Mercantile Bank Limited will be held on March 24th in London.

The following is an extract from the statement by the chairman, Sir Kenneth W. Mealing:

The effect of the business recession which commenced in the USA in 1957 spread to most areas of the free world in 1958. Foreign exchange shortages, and restrictions on imports and exports in some territories where the Bank operates have continued to affect business and make trading conditions difficult. The Balance Sheet total is down by some £5 million to £71 million. Deposits are down by £5 million, whilst on the Assets side Cash is lower by approximately £3,800,000. Bills Receivable by £1,700,000 and Loans and Advances by £1,400,000. Investments are higher by £2,400,000.

The net profit for the year 1958 is lower at £324,267, and interim dividends have been paid amounting in total to 12½ per cent. It has been announced already that no further dividend will be paid for the year ended December 31, 1958. From the balance available the usual allocations have been made to Officers' Pension Fund whilst the sum of £100,000 has been transferred to the Reserve Fund which now stands at £2,200,000, leaving the balance carried forward at £231,407 against £231,452 brought forward from the previous year.

In November, 1958, your Board was approached by The Hongkong & Shanghai Banking Corporation, who were already holders of a substantial percentage of the Bank's equity capital, with the proposal that negotiations should take place with a view to a share-exchange offer being made by The Hongkong Bank to the shareholders of the Mercantile Bank. Your Board agreed to negotiate and a notice was immediately issued on November 28, 1958, informing shareholders to this effect. On December 24th a further notice was issued to shareholders informing them that agreement had been reached and the terms thereof. The formal offer, carrying the Board's recommendation in respect of the offer to exchange one new Hongkong Bank HK$125 (London Register) share for 20 Mercantile Bank £1 Ordinary shares, was posted to shareholders on January 23, 1959.

It is intended that the change in control shall not affect the management, staff, relationship with constituents, or business progress of the Bank. The Head Office and Board will continue in London as hitherto, and the Board believe that an association or merger of ownership such as this will strengthen the resources and provide opportunity for the progress of both Banks which should in the future prove beneficial to their constituents throughout the world.

The principal world events of 1958 were the end of the 4th and birth of the 5th French Republic under the guidance of General de Gaulle, now President of France, and the passing of Pakistan, Iraq and Burma from quasi democratic to military forms of government. In the Lebanon and Jordan the USA and UK gave urgently requested military assistance, and the cold war for the minds of men continued unabated. Mr Khrushchev appeared to reach his own summit, but little progress was made in the matter of disarmament, without which there is unlikely to be any real relaxation of tension or of the cold war.

In the United Kingdom, the steps taken by the Government in September, 1957, and subsequently, resulted in a progressive improvement in gold and dollar reserves, in the value of sterling and in the checking of the inflationary trend. In the USA although the feared recession did not reach great proportions, there was a definite flattening out of the prosperity curve and an increase in unemployment. This recession was not confined to the USA but reacted to a greater or lesser degree on most other countries including the UK where there was some increase in unemployment.

INDIA

1958 was a difficult year for India. The financial burden of the second five-year Plan, although pruned to some extent, resulted in severe contraction of external assets and threatened a serious financial crisis which was only averted by the assistance of India's main creditors and the provision of new loans arranged at meetings organised by the World Bank in August in Washington and in New Delhi in October. Assistance in various forms has thus been provided by the USA, Canada, UK, Japan, West Germany and the USSR. This assistance undoubtedly saved the situation during 1958 and will enable the "hard core" of the Plan to go on during 1959, but there will still be a substantial time-gap before the benefits hoped for from this vast investment can be reaped. In the meantime India's imports are restricted to or below the minimum of essentials and her exports have declined. Taxation is extremely severe and Ministers periodically promise more socialism which is hardly calculated to stimulate investment or initiative in private enterprise. Deficit financing, high taxation and shortage of consumer goods through the necessary import restrictions, coupled with food shortage due to crop failures have naturally resulted in continuing inflation. This in turn has resulted in growing discontent—particularly in Bengal—among the younger, middle and labouring classes, and growing infiltration of communism among both industrial and plantation labour. The pressure of population, now estimated to increase by 2 per cent annually (over 6 million a year) and the need to import and pay for between 2 and 3 million tons of food annually presents a sombre picture. Nevertheless, the reclamation and irrigation of large areas of land as the new projects come to fruition, the greater emphasis on food production now being undertaken by the Government, and a fruitful harvest, may brighten the picture during the coming year.

PAKISTAN

On October 7, 1958, President Iskander Mirza declared Martial Law, and, by Proclamation abrogated the Constitution, thus dissolving Parliament and the Government of Mr Firoz Khan Noon. Three weeks later the President resigned and left Pakistan and General Mohamed Ayub Khan assumed the Presidency.

Political life in Pakistan had, for some time, been falling into disrepute.

As a result Parliamentary democracy had fallen into such disrepute that the new regime was hailed in many quarters with relief.

It is understood that President Mohamed Ayub Khan's Government intend to maintain firmly its alignments with SEATO, the Baghdad Pact and with the Commonwealth. In the fullness of time it seems probable that there will evolve a new and less vulnerable constitution suited to the particular genius of the people of Pakistan and that the economic and financial situation of the country will show rapid improvement under the firm and patriotic guidance it now has.

CEYLON

In Ceylon all the events of the past year have been over-shadowed by the widespread and destructive communal riots, the worst in the history of modern Ceylon, which occurred during the last week of May and had to be put down by military force. A state of emergency was declared by the Governnor-General on May 27th and still continues though in a modified form.

During April and May a strike of workers in the tea industry almost stopped the export of Ceylon's most valuable earner of foreign exchange. The tea crop for 1958 is estimated at 410 million lb, a record. The Port of Colombo was nationalised during the year and, not unnaturally, met with considerable difficulty in the first months under new administration. Some 60 million lb of tea were shipped from Trincomalee and the opening up of this old naval base may prove a useful alternative to Colombo.

Ceylon is a potentially wealthy country with a relatively small population and with good, firm and far-sighted Government should be a happy and prosperous island. It is to be hoped it will never see a repetition of May, 1958.

BURMA

In April, 1958 the Anti-Fascist People's Freedom League of which the Prime Minister, U Nu, was the Leader, split into two factions. Political instability increased from that time and in October U Nu retired from the Premiership of Burma, which, except for a short break in 1956/7 he had held for ten years. He was succeeded by General Ne Win.

Political uncertainty naturally resulted in business uncertainty. The volume of bank credit declined and deposits increased. Exports decreased and imports increased, with a resulting drain on the country's foreign exchange resources. Altogether 1958 was a bad year for the private sector for which the further diversion of business to Government trading organisations is to some extent responsible.

FEDERATION OF MALAYA

Despite adverse trading conditions Malaya has emerged from its first year of Independence basically sound, politically and economically, and with spirit undaunted. Regarding the prospects for 1959, the outlook for rubber is more favourable and there

are also signs that the Tin Industry will enjoy better trading conditions, than in 1958.

SINGAPORE

It is expected that the General Election under the new Constitution will take place in April or early May and may be preceded by a Bill to make voting compulsory.

The outcome of the forthcoming General Election will be awaited with considerable interest. Upon it may largely depend the outlook for the island in the coming years.

THAILAND

Thailand's potential resources bearing in mind existing plans for the improvement of communications, irrigation and power supply, largely financed with American aid, give every reason to hope that her economic progress will make further strides forward in the coming year.

HONGKONG

Hongkong has an estimated population of 3 million, an increase of 1½ million since 1947. The problem of feeding, clothing, housing and finding employment for such a rapidly expanding population is not easy. Government have appointed a Committee to consider the advisability of forming an Industrial Bank for the purpose of financing new industries. The report of this Committee will be awaited with interest.

Hongkong has enjoyed freedom from political problems.

MAURITIUS

As a result of the Report of the Eve Commission Mauritius will be divided into 40 single-member Constituencies and General Elections will be held in the spring of 1959. The Ministerial system introduced in 1957 appears to be working satisfactorily. There were practically no labour disputes of any importance throughout the period.

Given reasonably good weather conditions in 1959 the outlook for Mauritius should be favourable.

JAPAN

During 1958 the remedial measures taken in 1957 to which I referred last year, became effective and overcame the recession in Japan's economy. As a result the reserves of foreign exchange recorded a very substantial improvement. This was almost entirely effected by reduction of imports, and the decline in import prices.

It would seem that Japan is reaching or has reached the crossroads in that the period of feverish activity of postwar reconstruction and expansion has ended, while competition in overseas markets is becoming more severe. On the other hand, there is a tremendous potential for hard work in the country and provided imports can be held at a level consistent with a planned expansion of the economy, and adverse balances of payments averted, the country should continue to prosper.

The recession in trade, political and financial difficulties in many countries, increasing pressure of population, higher taxation controls on credit, on imports and exports and increasing costs of maintenance all tended to affect the business of banking in the areas served by the Bank. Nevertheless, under the Chief Managership of Mr C. R. Wardle, with Mr C. F. Pow as Deputy and the loyal and efficient work of our Staff in London and at our offices throughout the East, the Bank continued to provide valuable assistance to the trade of the many countries we serve.

BTR INDUSTRIES

DIVERSIFICATION PROGRAMME

The thirty-fifth annual general meeting of BTR Industries Limited will be held on March 25th in London.

In the course of his circulated statement the Chairman, Sir Graham Hayman, said that the major cause of the contraction disclosed by the Accounts was the exceptional fall in the profitability of certain of the principal products upon which the earning power of the Group had, in the past, been based.

He continued: Excluding belting, and despite the lower selling prices, we have been able to maintain the total sales turnover of the remainder of the products manufactured by the Group. We had to face the fact, however, that at the present time in some of the Industrial Products sections, of the British Rubber Manufacturing Industry, there is an undue proportion of excess productive capacity, and this adverse influence on both turnover and earnings is likely to continue until there is a real improvement in industrial activity throughout the country.

The foregoing emphasises the necessity for diversifying our interests and broadening the base of our Group's operations, a policy which has been actively and continuously pursued by your Directors.

The trading profit at £1,003,052 compares with £1,441,135 the previous year, and there is a net profit of £348,120 against £564,144. Your Directors recommend the same distribution as last year, namely a total of 15 per cent.

The most significant factor which accounts for our reduced profit is the contraction of demand for Conveyor Belting. The competition for this reduced volume has become so acute and the selling prices so low that, whilst the volume is still important, the profit from the business has reached an inadequate level.

Group export sales enjoyed a further increase during the year. This progress has been made in the face of heightened competition, which has been world-wide. We have recently executed substantial contracts for Conveyor Belting for the USSR and Poland, and have reasonable expectations of further business from these sources.

NEW ACQUISITIONS

As stated in the Directors' Report, the Company has acquired the whole of the capital of Microcell Ltd., and of its Associated Companies, Glass Yarns and Deeside Fabrics Ltd. and Arrtite Resins Ltd.

The Microcell Group has a highly trained Executive Management and operating personnel, and very substantial forward contracts and orders are in hand. While the rapidly expanding activities of this Group have to a substantial degree been based on Government contracts, there is a steadily increasing development of commercial activities in those fields which appear to offer opportunities for profitable growth. Your Directors consider this acquisition will show an immediate and satisfactory return on the investment, and the extensive development programme now in hand is expected to provide an increasing rate of earnings in the future.

Glass fibres have provided the basis of the activities of the Microcell Group. The principal Company of the Group—Microcell Ltd.—has three main divisions, Aircraft Engineering, Plastics and Electronics and, as already stated, while a substantial proportion of the business is under Government contract, there is an expanding volume of business in many commercial fields, at home and abroad.

Glass Yarns and Deeside Fabrics Ltd. is playing a leading part in the production of glass fibre yarns and mats which, combined with synthetic resins produced by Arrtite Resins Ltd., are finding growing application in the Automobile, Aircraft, Shipping and Engineering Industries.

With regard to future prospects, it is impossible to anticipate with any certainty a marked improvement in earnings in the current year. The reorganisation of the Group's activities, combined with the drive into new fields, offer the most promising means of recovery. Whilst the short-term prospect is indeed difficult, the Company's resources should enable it to meet the challenge of the present testing conditions.

THE BRITISH VACUUM CLEANER AND ENGINEERING COMPANY

The fifty-fifth ordinary general meeting of The British Vacuum Cleaner and Engineering Company Limited was held on February 27th at Leatherhead.

Mr O. D. Angell (the chairman) presided and, in the course of his speech, said that he was able to report a more prosperous year. The consolidated trading profit was £127,639 and the proposed dividend showed earnings cover of over two-and-a-half times after allowing for non-recurring liabilities of £51,010.

The Balance Sheet position was strong and given the anticipated further improvement in their earning ability the Board would seek to place the finances of the Company on a more permanent basis. The timing of such action must obviously be carefully chosen.

In the course of a detailed review of the Company's activities the Chairman said that their new lower priced range of cleaners had found an immediate response from the Trade and the Company created a record both in the manufacture and the sales of domestic cleaners. The Company had again had a record year in its sales of Teasmades.

They were maintaining their position in the BVC Industrial vacuum cleaner division and there was a very healthy outlook in the export field.

Referring to the many and varied problems of pneumatic conveying the chairman said that new models to meet changing conditions were under way, particularly relating to the United Kingdom Atomic Energy Authority.

The Magenta Time Company division continued to expand its operations in the sales of Time Recorders, Clock Systems, and Public Address equipment.

In the BVC Electronics division they had increased their range of small specialised motors and their high standards were recognised in the sphere of electronics.

After drawing to the attention of those in Authority the serious repercussions caused to Industry by the uncertainties created each year regarding Purchase Tax pending the presentation of the Budget proposals, the chairman concluded:

I have had the privilege and pleasure of being your Chairman during changes which I think will prove to be the "bridge head" for a great new era in the history of your Company.

The report was adopted.

ABBEY NATIONAL BUILDING SOCIETY

SIR HAROLD BELLMAN'S REVIEW

The Annual Meeting of the Abbey National Building Society was held on February 27th at the Wigmore Hall, London, W.1.

Sir Harold Bellman, DL, JP, LLD, Chairman of the Society, in moving the adoption of the report and accounts, said:

The year now under review will be remembered for the fact that in a long span of sound and steady progress the Society's assets exceeded £300 million for the first time.

Despite, for the greater part of the time, an unfavourable national economic background, sound and steady progress was the keynote of our activities last year.

New savings received from shareholders and depositors amounted to £57 million. Withdrawals from share and deposit accounts totalled £32 million. Throughout 1958 the rate of interest on the Society's shares was *maintained* at 3½ per cent per annum with income tax paid by the Society and equal to £6 1s. 9d. to those subject to tax at the standard rate

Towards the end of the year the Society introduced *Build-Up* Shares which qualify under specified conditions for an additional one-half per cent interest above the ordinary share rate. This scheme is designed to encourage the small saver who may wish to put aside regular sums at monthly intervals.

Turning to the mortgage side, new advances to assist home ownership were appreciably higher at £41 million, compared with £38 million in the previous year.

The low ratio of management expenses, measured against total assets, again shows to good advantage, being only 10s. 1d. per cent and affording evidence of economical administration.

I have already made reference to our financial background in 1958. Perhaps I may develop this matter a little further. In my references to these matters I shall be concerned almost exclusively with the events and circumstances of 1958. I make this important qualification, since I do not wish it to be understood that the same facts and considerations will necessarily apply throughout 1959. If 1959 should mark the real turning point in general interest rates, we shall take all measures necessary and practicable to bring the Society into line with any such development, but in the meantime I wish to outline the kind of factors which have to be taken into account in reaching a decision on these matters. When 1958 opened Bank Rate stood at 7 per cent. It began its descent on March 20th, reaching 4 per cent on November 20th. This signified a remarkable recovery from the crisis conditions of September, 1957, and marked a general strengthening of the country's economic position. With these reductions in Bank Rate, however, there has been much comment in the press on the question of the future of the building societies' mortgage rate. I think it may be helpful to restate the facts in order to help to establish the proper perspective.

First of all, it appears there are still those who do not understand the gap between the 3½ per cent paid to the shareholders and the 6 per cent rate paid by the borrower. Let me state that when the Society pays 3½ per cent free of liability to income tax it does so at a cost, including the tax liability it discharges, of approximately 5¼ per cent. Management expenses absorb ½ per cent, leaving only ¼ per cent surplus for the necessary allocation to reserves.

Next the mortgage rate, applicable to owner-occupied houses, charged by the great majority of building societies is 6 per cent. The decision to raise the rate to this level was taken in late 1956, when Bank Rate was 5½ per cent. We have, however, been at pains to explain that *there is no direct connection* between Bank Rate and building society mortgage rates. It seems desirable to underline this point once more. When I mention Bank Rate at all in this context, it is merely as a pointer to general economic conditions. A high Bank Rate signalises a disturbed economy with general interest rates also at a high level; a very low Bank Rate generally has the converse significance.

Bank Rate was reduced from 5½ per cent to 5 per cent on February 7, 1957, and it was made known on behalf of the authorities that this did not indicate a general change of policy. The building societies continued to keep the subject of interest rates under close review, but before conditions made any change possible, the economic crisis of the late summer and autumn of 1957 was upon us and Bank Rate was hoisted to 7 per cent. Some financial theorists strongly advised building societies to increase their mortgage rate above 6 per cent in order that they could pay their investors more than 3½ per cent. The societies hesitated to take this step, although they were not without reasons for doing so, primarily out of consideration for their borrowers. In the event, we held the mortgage rate pegged at 6 per cent and the share rate at 3½ per cent but admittedly there were times when we were hard pressed.

Let me again emphasise that the mortgage interest rate is not a matter which societies determine at will in some secret conclave. The main factor governing this issue is the rate which has to be paid to the investors in the Society. This, in turn, is determined by the bargaining of the market place.

Thus the building societies must be in a position to offer a competitive rate of interest if they are to retain the funds of their investors, apart from the question of attracting additional money. In the light of the facts which I have cited, the 3½ per cent income tax paid, offered to shareholders by the majority of societies is a fair and economic return. It is clear, then, that the building societies normally cannot, of their own volition, determine the mortgage rate of interest.

An important announcement has been made the effect of which will be to strengthen the appeal of building societies to the discriminating investor. Under the Government's House Purchase and Housing Bill, provision is made for building societies which satisfy prescribed standards and which are approved by the Registrar, to be given Trustee status in respect of their deposit accounts. The standards are such that any well conducted building society over a certain size should be able to satisfy them and as a result the granting of Trustee status on these lines may well serve as a hall-mark for the guidance of the investing public.

The announcement in 1958 that a Knighthood was conferred upon the Chairman of our Finance Committee, Mr William Cash, in recognition of his many years of distinguished public service, brought great pleasure to his colleagues and friends

Sir Bruce Wycherley, MC, FCIS, in the absence through indisposition of Mr Stanley C. Ramsey, FRIBA, Deputy Chairman, seconded the motion for the adoption of the report and reading from Mr Ramsey's speech said:

The Abbey National mortgage service seeks to cater for as many needs as possible. It is also marked by flexibility, which means that it is capable of responding to varied requirements. I mention these points because an impression has developed during the recent period of monetary stringency that the building societies had, to some extent, failed in providing mortgage facilities. If there was any failure it was in the fact that building societies had not always an amount of money to lend equal to the abnormal demand. But it should be recognised that the building societies were by no means alone in this situation. In fact, most other lenders on mortgage had either stopped lending altogether or had drastically curtailed their usual facilities. Their short-fall in relation to normal demands for mortgages was comparatively small; it was their short-fall in relation to a wholly abnormal demand which attracted attention.

The Abbey National, for its part, aimed throughout at making advances available on a basis which was fair to as many people as possible. This will be evident from the great emphasis which we have put on advances to owner-occupiers and the very moderate figure of the average amount advanced. All this tends to confirm that our working creed and everyday practice are not things apart.

Sir Bruce Wycherley, MC, FCIS, Managing Director of the Society, said:

One of the results of the relaxations which marked the end of the "Credit Squeeze" was the swift expansion of personal credit, notably in hire purchase and banking fields. A fundamental belief of the building society movement has always been that the provision of house mortgages is the basic form of personal credit, on the simple reasoning that a man must needs have somewhere to live. The events of the past few months surely go to justify our belief. More people than ever wish to own their own homes, and more people than ever are turning to the building societies with that aim in mind.

It is important, then, that the building societies should be able to meet the demands that are likely to be made upon them. Their state of health deserves some examination in the light of present-day conditions. It is true first to say that the mutuality which is the heart of their being remains unimpaired. Because of their dependence upon their own members they are buffered, though never insulated, from the effects of financial events.

It should not be thought that the Government's proposals embodied in the House Purchase and Housing Bill, to which Sir Harold has referred, require us to abandon our mutual character. The funds we are to be allocated from the Exchequer will undoubtedly be welcome, but they are so restricted, in application and in relative amount, that they cannot be more than ancillary to the funds we must attract ourselves.

It is, of course, in the matter of raising funds from which to lend that we are brought face to face with the acute competition that exists. We are aware that in this sophisticated age we must go out and, in a celebrated phrase, "meet the people."

We are renowned for our contribution to home-ownership, yet the continued success of that contribution depends materially upon maintaining a like renown for the partner in our mutual endeavour, the partner of investment and savings.

ILFORD LIMITED

(Manufacturers of Photographic Materials)

TURNOVER MAINTAINED—LOWER PROFIT MARGINS

BENEFITS FROM ARRANGEMENTS WITH ICI

INTRODUCTION OF NEW COLOUR PRODUCTS ENVISAGED

THE HONOURABLE JAMES P. PHILIPPS ON THE YEAR'S EVENTS

The Annual General Meeting of Ilford Limited will be held on March 25th at Winchester House, Old Broad Street, London, E.C.2.

The following is the statement by the Chairman, The Honourable James P. Philipps, copies of which have been circulated for the convenience of shareholders with the report and accounts for the year ended October 31, 1958:

Ladies and Gentlemen, Before proceeding with my annual statement on the affairs of the Company I wish to refer to the recent appointment of Mr R. A. Withers, ACA, as a Director of the Company. In view of the planned expansion of the Company's business Mr Withers has, as already announced, been elected Deputy-Chairman of the Board and, subject to his re-election as a Director, at the Annual General Meeting, appointed Joint Managing Director, this latter appointment to have effect from April 1, 1959. Mr Withers has for a number of years been a senior partner in a leading firm of Industrial Consultants and has been particularly identified with the control of its overseas activities. The Board is confident that his outstanding experience will be of great value to the Company in its future progress.

The Company's turnover during the year under review was slightly above that of the previous year in spite of a very bad summer at home and the effects of the fall in world prices of some primary commodities on our export trade. Our profit margins, however, unfortunately continued to shrink. One encouraging aspect was the ready sale for the Ilford Sportsman camera at its price of only £11 18s. 5d., including purchase tax. We have also recently introduced a cheaper model known as the Sporti which sells for only £3 19s. 9d., including purchase tax. These should in due course create additional demand for Ilford film both in black and white and in colour.

TAX EQUALISATION RESERVE

You will observe from the Accounts that a Taxation Equalisation Reserve has been created and included with the other Revenue Reserves. This Reserve has been built up in the main by a transfer of £295,500 from Contingencies Reserve and has been increased by a transfer of £95,500 from this year's Profit and Loss Account. There are two reasons for creating this Reserve; first, to provide for the liability in respect of Income Tax which has been deferred by the application of Initial Allowances on capital expenditure; secondly, where the level of capital expenditure has varied substantially as between one year and another, to show a fairer comparison of the Aggregate Net Profits, bearing in mind that depreciation charged in the Accounts is designed to write capital expenditure off at a more or less even rate over the effective working life of the assets thereby acquired. Since the end of the war capital expenditure has been increasing especially during the last few years. Much of it has been spent on facilities for research work where capital allowances give tax relief in respect of the entire expenditure over five years, three-fifths of it being allowed in the first year. To the extent that Initial and Annual Allowances exceed or fall short of the charge for depreciation, it is intended that an appropriate transfer will in future be made each year to or from Taxation Equalisation Reserve. The Profit and Loss Account will then reflect the total Income Tax liability which the Company will ultimately be called upon to pay on the profit for the year, and which will be less influenced by fluctuations in capital expenditure.

PENSION ARRANGEMENTS

Ilford Limited was in the forefront of those companies which between the two world wars introduced Group Life Assurance and Pension Schemes for their employees. Changes in circumstances and in the value of money since that date have necessitated amendment of these Schemes and certain improvements have been introduced with effect from December 31, 1958. In view, however, of the Government's proposals for a national graduated pension scheme your Directors have decided to postpone fixing the final form of the Company's pension arrangements until after these proposals have become law. On the other hand, it is clear that any revision of the National Pension Scheme will not provide worthwhile retirement benefits for older employees and your Company will have to continue to provide supplementary pensions at least for these employees. In order to equalise this additional expense so far as possible over the years, your Directors have decided to establish now a Supplementary Pensions Reserve and have transferred to this Reserve from the profits for the year under review the sum of £100,000.

Additions of £250,000 and £140,000 have been made to the General and Contingencies Reserves respectively and it is recommended that the Final Ordinary dividend be maintained at 11 per cent leaving £174,201 to be carried forward.

CLOSE CO-OPERATION WITH ICI

The outstanding event of the year was undoubtedly the arrangements made for co-operation with Imperial Chemical Industries Limited, of which I gave you a full explanation in my letter of September, 23, 1958, when convening the Extraordinary General Meeting held on October 23, 1958, to approve those proposals. I can now add that, since Mr Leslie Williams and Dr John Avery joined our Board, the advantages of these arrangements have become even more evident, as close co-operation is also being attained in a number of fields where it was not previously foreseen.

The building of our new factory at Basildon is proceeding in spite of delays due to the exceptionally bad weather experienced ever since the beginning of last summer, and we hope by the end of the year to be able to transfer our colour processing station and several other departments to the new premises which provide space for the expansion anticipated during the next few years. Meanwhile, our laboratories are working at high pressure to take full advantage of the information and assistance now available from ICI. It is hoped that we shall soon be able to introduce new colour products and so extend the range of colour films available to our customers.

EXPORT MARKETS

Two years ago I said in my address to members that we had come to the conclusion that, if Britain entered the European Common Market, it could benefit your Company substantially but that, if Britain remained outside while Germany and Belgium were members, we should almost inevitably lose much of our important European Market. As you are aware, Britain is not a member of the Common Market and, failing agreement on a Free Trade Area, exports of photographic goods to the Common Market countries (Holland, Belgium, Luxemburg, France, W. Germany and Italy) may ultimately become impracticable, though we do not anticipate these exports will be affected seriously in the initial period.

We already have selling companies of our own in Holland, Denmark and France and have decided to form another in Western Germany. It may well, however, later become necessary to manufacture in one of the Common Market countries.

Other overseas selling companies are established in India, Australia and the USA. An Australian factory has been built outside Melbourne and this has commenced operations on a limited scale. The American Company, Ilford Inc., has made excellent progress, though it still made a loss in the year under review.

THE FUTURE

It is very difficult at present to foresee the trend of world trade over the next few years, but at least it seems probable that expansion in our sales of colour film will be rapid, though naturally some part of this may be at the expense of our former black and white trade. We are preparing to meet the inevitable increase in competition in export markets on which we are dependent for a large part of our sales.

In conclusion, I feel sure you would wish me to thank on your behalf all our staff and employees, both at home and overseas, for the part they have played in achieving the results shown in the Accounts for the year, which was difficult both from the point of view of a poor summer at home and competitive conditions abroad.

We regret that owing to a misprint last week the Leek and Moorlands Building Society's annual meeting was reported by us as being the 162nd instead of the 102nd.

THE INVESTMENT, LOAN AND AGENCY LIMITED

SIR NUTCOMBE HUME'S STATEMENT

The forty-ninth Annual General Meeting of The Investment, Loan and Agency Limited, will be held on March 23rd in London. The following is an extract from the statement by the Chairman, Sir Nutcombe Hume, KBE, MC:

In my statement last year I informed you that it was the board's intention to publish annual accounts in future without having to wait several months for accounts of the subsidiaries. Board of Trade approval has been received to the presentation of accounts in this form and in future we should be able to report our results within two months of our year end.

Our profits for 1958 were swollen by the inclusion of £14,890 dividends from Indonesia; an amount which must be regarded as very unlikely to be repeated. Omitting this revenue altogether your directors are able to report an increase, both gross and net, in the income from investments and, because of this, they feel able to recommend a final dividend of 7 per cent on the capital enlarged by the recent issue from reserves of one share for 10. With the interim dividend which was increased from 4 per cent to 5 per cent the total for the year is thus 1 per cent greater and it is hoped that the rate of 12 per cent will be at least maintained in future years.

In March, 1958, we made a new issue for cash which brought in £225,000 and the use of this money has contributed to last year's increase of profits; but it was by no means fully invested throughout the year and even at December 31st you will see from the balance-sheet that your Company held £219,554 in cash and short-term deposits. This, however, included £158,000 arising from the sale of our holding of 118,000 £1 shares in Nandi Tea Estates Limited. Whilst we hope to be able to deploy these cash resources in general investments of good quality during the present year, we feel quite sure we would be unwise to do so except when favourable opportunities present. So many funds of different kinds are pressing on the market for "Blue Chips" that we feel we ought to do better by going more slowly and waiting to take advantage of new issues and other opportunities which occur from time to time; and moreover we feel we can afford to do so.

It will be seen from the balance-sheet that at December 31st the total value of investments was approaching £2½ million. This is an appreciation of 99.29 per cent over net book value, and compares with 53.89 per cent at the end of the previous year.

The two estates in East Java are maintained in normally satisfactory order and thus far, the loss of Dutch staff has not seriously affected efficiency.

Good rubber crops were produced last year at reasonably low rupiah cost, but the coffee crop was a comparative failure owing to poor weather at blossom time. For 1959 the rubber crops should be about the same as in 1958, and coffee crop prospects are more promising.

GENERAL

As the war period recedes and trading becomes more "normal" world competition gets keener, and profits become much harder to make. The choice of good investments is more than ever dependent upon backing good management which can find profitable employment for the great quantity of new plant which has been installed during the past few years. It is now generally accepted that this can only, and certainly can best, be done if the enormous populations in the under-developed countries can be helped to raise their standard of living and, with it, their power to purchase goods manufactured in the industrialised countries. It was encouraging to see that at the meetings last autumn both at Montreal and New Delhi this necessity was recognised. One feels that if only the threat of war could be removed and expenditure now allocated to armaments diverted to peaceful development, the other difficulties in the international field would be solved quite quickly; and then the suggestion that the standard of living could be doubled in 25 years should be attainable. I am convinced that this target can be reached with good will and good management in both politics and business; but unfortunately both are in terribly short supply.

MITCHELL COTTS GROUP LIMITED

MR H. C. DRAYTON ON PROSPECTS

The thirty-ninth ordinary general meeting of Mitchell Cotts Group Limited was held on February 27th in London.

Mr H. C. Drayton (the Chairman) presided and, in the course of his speech, said that the Consolidated Profit amounted to *£1,343,000 and after deductions there was a* profit for the year of £873,000. To that sum had to be added £12,000 Adjustments from previous years and £156,000 Profits on sales of fixed assets. The Directors had declared two interim dividend payments totalling 25 per cent which enabled £272,000 to be added to the carry forward making that £2,651,000.

Mr Drayton added: Our consolidated profit is quite materially down as compared with 1956/57. There are three main reasons for this fall, the most important of which was the collapse of earning power from our shipping subsidiary in the last four months of the year. The second was the revolution in Iraq which brought business to a standstill, and thirdly the restriction of imports into the Sudan

After reviewing the Group's world-wide interests, the Chairman continued: As I mentioned last year, we hoped that the CIC would give the Company permission to issue more capital, and I did point out what the consequences of not doing so would be—a possible decrease in our exports owing to more highly competitive conditions existing and the necessity to give increased credit. To our surprise, the CIC did not give us permission to issue more capital, and our exports have dropped from £8,350,000 to £7,050,000. There is no need for me to say anything more about the demise of the CIC, at any rate as regards raising new money in this country. "To mourn a mischief that is past and gone, is the next way to draw a mischief on."

CURRENT YEAR

Referring to the current year, Mr Drayton said: On the shipping side we must expect a further drop in profits. In the Sudan the full effect of the import licences will fall with severity on this year's figures, and I do not think for the year ending June next we can look forward to any more from South Africa. On the other hand, East Africa, after a difficult period, looks like doing better than last year, and I also have hopes that the London produce side will show better results. Iraq, although it is now looking up, will not, I am afraid, be able to contribute much to this year's profit, but I am optimistic, and I think if all goes well there we can look forward to better times in the next year. Whilst I am confident that Canada with the new contracts it has got in bridge-building is going to show a profit, again I do not think it will be able to contribute anything in the year ending June 1959. So that on the whole I am not optimistic about the present year's figures.

However, this is a trading company, and in the past the Directors have been extremely conservative in the distribution of dividends, and have taken the view that our business is one which must be taken over a long period. My own view is that in a company of this sort it is necessary to take a five-year view of results and average out the profits over such a period.

The report and accounts were adopted.

GHANA MAIN REEF

MR C. J. BURNS'S STATEMENT

The twenty-fifth annual general meeting of Ghana Main Reef Limited, was held on February 27th at the Chartered Insurance Institute, London, EC.

Mr C. J. Burns, Chairman, presided.

The following is an extract from his Statement circulated with the Report and Accounts for the year ended June 30, 1958.

As shown in the Report and Accounts, the profit for the year under review amounted to £71,612, which, added to the balance brought forward, £61,362, plus certain taxation provisions not now required, £111,175, made an available total of £144,149.

The year under review can be regarded as a most successful one and the profit earned satisfactory and in line with the forecasts made in March, 1958. This profit level was maintained in spite of a 6 per cent wage increase awarded in February, 1958. For this reason it is now possible for the Company to benefit from the legislation creating Overseas Trade Corporations, and the necessary steps are being taken to qualify as from April 6, 1959. This decision has enabled your Board to anticipate the future status of the Company in its taxation charges and pass on the resultant benefits to Members.

It has been decided to recommend the payment of a Final Dividend of 2½ per cent, less Income Tax, for the year ended June 30, 1958, making a total of 7½ per cent, less Income Tax for that year. In addition, your Board have declared for the remaining pre-OTC period an Interim Dividend of 7½ per cent, less Income Tax, and a Bonus of 2½ per cent, less Income Tax.

GHANA GOVERNMENT'S ASSISTANCE

During the year under review your Company received £12,607 by way of a grant from the Ghana Government, part of the £200,000 set aside by Government to cover the years 1957, 1958. This grant ceased in May, 1958, and since that date a review of the gold mining industry in Ghana was made by Dr G. C. Monture, OBE, DSc, Administrator of the Canadian Emergency Gold Mining Assistance Act, at the request of the Ghana Government. Dr Monture's Report is currently being studied and his recommendations, and possible Government reaction thereon, are awaited with interest. However, your Company has utilised the assistance already given to it (some £26,496 during the financial years 1957, 1958) to great advantage, so that profits for the first six months of the current year, without the help of Government assistance, are at a higher level than those for the corresponding period of the year under review.

This has been accomplished in spite of rising costs and an unrealistic fixed price for gold out of all proportion to economic conditions. The report and accounts were adopted.

COMPANY AFFAIRS

P & O

IF the directors of P & O were taking the long view last year when they raised the ordinary dividend from 8 to 11 per cent, they are still taking that view now. When they took that decision the full impact of the fall in freight rates had not hit profits. It was then clear that profits would suffer in 1958 and the directors said that the increase in the dividend carried "no implication as to the level of dividend that can be maintained in years to come." Profits were sharply down in 1958, as had been expected, but the P & O directors are leaving the ordinary dividend unchanged at 11 per cent, even though the final dividend of the important subsidiary, British India Steam Navigation, has been passed (effectively reducing its full year's payment from 10 to 4 per cent, following a fall in its gross income before tax from £5,011,851 to £1,181,207 and in net profits from £3,243,694 to £384,918).

Before all charges P & O's trading profits fell from £30.1 million to £22.8 million. Its gross income before tax fell by 42 per cent, from £17,640,269 to £10,183,978, and its net income by 39 per cent, from £8,658,930 to £5,265,236. The 11 per cent ordinary dividend absorbs £1,742,860, but the earnings cover has fallen from about five times to about three times. The directors say that this decline is due to a sharp reduction in the earnings of cargo tramps and cargo liners and they add that the fall would have been even larger had not the passenger liners, whose earnings were severely affected in 1957 by the Suez crisis, done "substantially better." The directors end their comments on the preliminary profits on a distinct note of foreboding: "the present results do not reflect the full force of the current depression in shipping which will be still more apparent in the figures to be produced in twelve months' time." The question that must now be in shareholders' minds is whether the directors will then be ready to leave the ordinary dividend unchanged once more. The £1 deferred shares at 34s. 6d. yield 6.4 per cent.

ASSOCIATED ELECTRICAL

AFTER the acquisitions made by Associated Electrical Industries last year the advance in its 1958 profits needs to be examined with care. The preliminary figures show a large recovery in trading profits in the last six months of the year; at £8,870,000 they compare very favourably with the £6,990,000 earned in the first six months and also with £6,760,000 and £6,940,000 in the two halves of 1957. This suggests that AEI has made real progress for the first time since the severe decline in profits in 1956.

But any excessive jubilation needs to be curbed, for net profits for the whole of 1958 have risen only to £4,778,485, against £4,504,075 for 1957.. Gross trading profits amounted to £15,860,448, against £13,699,528, but the depreciation provision rose by £1,080,340 to £4,791,392 and tax by £483,840 to £5,968,241 and £322,330 of net profits was earned by the new subsidiaries prior to their acquisition by AEI. Since £571,380 was written back from an unwanted tax reserve in 1957, compared with £142,458 in 1958, the net balance attributable to AEI for 1958 is, in fact, virtually unchanged at £4,995,805, against £4,979,693 in 1957. And it should be noted that the acquisition of Associated Insulation Products last May and W. T. Henley's Telegraph Works last November considerably enlarged the equity capital. The ordinary dividend has been left unchanged at 15 per cent for the year, but this rate of dividend absorbs £3,186,217, against £2,901,407, and since the end of the financial year the ordinary capital has been again increased, following the acquisition of London Electric Wire. At 55s. 9d. the £1 ordinary stock yields 5.4 per cent.

RUGBY PORTLAND CEMENT

WITH construction seemingly on the wane, it looked a year ago as if 1957 would be the temporary high water mark for the profits of Rugby Portland Cement. In his statement with the full accounts last April, the chairman, Sir Halford Reddish, reported that none of the company's works in the United Kingdom was producing to capacity and that he would be surprised if profits in 1958 reached the record figure for the previous year. But when in May shareholders arrived at the annual general meeting, they were told that most of the company's works were again back to full production, and that output from the plants in Australia and Trinidad was above that achieved in the corresponding months of the previous year.

Now the preliminary statement for 1958 shows that Rugby Portland Cement has capped its previous profit peak for yet another year; that the dividends paid on the ordinary 5s. units and the highly geared "A" 1s. units have been raised; and that a rights issue is to be made.

One million 5s. Ordinary shares will be issued to ordinary shareholders in the proportion of one to six at 21s. 6d. each and the rights of holders of the 1s. shares to participate in net profits will be adjusted accordingly. With the existing shares at 32s., the rights are worth 1s. 6d. and on the assumption that the current dividend will be maintained on the enlarged capital the new shares are being offered on a yield of 5.8 per cent. The background to this issue is a reassuring one. Last year trading profits advanced from £1,448,409 to £1,552,275. Depreciation and obsolescence rose from £342,024 to £380,892, but the tax charge was cut by £50,000, to £320,000, leaving net profits £114,998 higher at £851,383. The ordinary dividend has been raised by one-ninth, from 22½ per cent to 25 per cent, giving a yield of 3.9 per cent on the 5s. units at 32s. The dividend on the million 1s. units, half of which were issued on behalf of workers at par in 1954, jumps by one-fifth, from 125 per cent to 150 per cent. These units stand at 37s. and yield 4.1 per cent. Even so, total distributions on the company's equity capital absorb only £258,750, leaving £569,921 to swell reserves.

A. W. GAMAGE

THE results of A. W. Gamage for the year to January 31st provide a welcome contrast to those reported last week by Lewis's and Harrods. Gross profits have risen by 13 per cent, from £342,842 to £388,430, and net profits by 25 per cent, from £151,038 to £189,800. The ordinary dividend proper is again left unchanged at 25 per cent, but the bonus is stepped up for the second year running by 5 per cent. The bonus is now 15 per cent, so that in effect the payment on the 10s. ordinary units has been raised from 35 to 40 per cent. A. W. Gamage, like other smaller department stores, has been the subject of take-over rumours and the chairman, Mr Eric M. Gamage, has declared that the directors will discourage anything in the nature of a bid.

The prospects depend in part on the redevelopment of the City of London, which may give this Holborn store an element of growth that some of its competitors do not possess. Gamage may also stand to gain more than some other groups from the expansion of credit trading, for it runs a big mail order and instalment credit business. At 66s. 6d. the 10s. ordinary units yield 6 per cent.

BRITISH WAGON

THE banks have no reason to regret their investment in hire purchase finance, for the latest reports of the houses in this business make good reading. Gross profits of British Wagon for 1958, for instance, have jumped from £369,114 to £553,835 and, after tax, its net profits have advanced from £180,083 to £261,118. The ordinary dividend has been raised from 20 per cent to 22½ per cent, so that at the current price of 131s. 6d. the £1 fully paid shares yield

3¼ per cent. The Royal Bank of Scotland and its two associated English clearing banks, Williams Deacon's and Glynn Mills, acquired approximately 40 per cent of the company's equity at a price of 92s. 6d. for every £1 of paid up capital. The final dividend of 17½ per cent has been paid on the new capital, which now consists of £850,000 in fully paid £1 shares and £425,000 in £20 shares, £5 paid. The directors propose to double this by capitalising £1,275,000 from reserves. Holders of the £1 shares will receive a one-for-one scrip issue, while the £20 shares will be written up to £10 paid. The partly-paid shares will then be subdivided into £2 shares, £1 paid.

A small HP finance house **Anglo Auto Finance**, a subsidiary of Gwent and West of England Enterprises, is to seek a stock exchange quotation. Anglo Auto Finance now has an issued capital of £250,000 and assets in excess of £1 million. The group, which is not linked with any of the banks, seems to be prospering. Its managing director is Mr Julian Hodge and he guarantees depositors a rate of 6 per cent till the end of 1959, and hopes to pay this rate indefinitely.

BRITISH OXYGEN

THE decision by the directors of British Oxygen to raise the ordinary dividend effectively from 10 per cent to 12 per cent for the year to September 30th was a small break with their conservatism of recent years and it was made in a year of record sales and profits. British Oxygen's gross profits rose by 21 per cent, from £5,964,085 to £7,224,500, despite substantially higher depreciation and interest charges, on a turnover that was 15.7 per cent higher. The full accounts now show that these profits expressed as a ratio to capital employed improved from 14 to 15 per cent. But the chairman, Mr J. S. Hutchison, warns shareholders that although favourable results are expected for the current financial year (owing, it seems, to continued expansion of sales overseas) the recession in heavy industry and general engineering in this country is affecting British Oxygen's sales of industrial gas which are now running below the previous year's levels.

British Oxygen remains a big spender on capital account. Mr Hutchison says that the current three years' development programme will cost about £24 million—the group will finance this from internal resources, and it will not make an issue for cash of shares or loan capital. The additional capacity being installed is linked with the development plans of the steel, chemical and other industries which British Oxygen serves. The yield of 4½ per cent offered by the £1 ordinary shares at 52s. takes the long view.

CONSOLIDATED ZINC

THE terms of Consolidated Zinc's rights issue and its preliminary profit statement for 1958 have been announced simultaneously. The group will raise almost £3½ million by the issue of 1,455,100 ordinary £1 shares in the proportion of one for six at 48s. per share. Currently, these units stand at 63s. 3d., giving a value of 2s. 3d. per share on the rights. The dividend for 1958, as was expected, has been reduced. A final payment is recommended of 2s., making a total dividend of 3s., compared with 3s. 9d. for 1957 and 4s. 6d. for 1956. Last year, the group's net profit fell from £1,770,000 to about £1,560,000. The new money will be used to erect two smelting plants, one at Swansea and the other at Cockle Creek in New South Wales. At the current price the yield on the existing ordinary shares is 4.7 per cent and the new shares yield 6¼ per cent on the issue price, but the directors of Consolidated Zinc say that on the assumption that as economic recovery gathers way the demand for lead and zinc will improve earnings this year will be "in line" with those of 1958.

RELAY EXCHANGES

RELAY EXCHANGES, in the radio relay and television and radio renting business, had already whetted the appetite of shareholders by disclosing last November that turnover in the first ten months of 1958 had exceeded expectations. The jump of 53 per cent in trading profits for the year from £1,503,670 to £2,304,637 will not disappoint them now. In terms of net profits, the advance is no less spectacular—a jump of 62 per cent, from £236,288 to £381,894. This contrasts with earlier years when equity earnings were pegged down by what the chairman has called "a very conservative policy" to provide for renewal of plant and equipment.

Such conservative financing is not uncommon in renting companies. Nor is the desire to expand. Expansion has generated a thirst for new money and "rights" issues of ordinary shares were made by Relay Exchanges in 1955 and again in September, 1958. But Relay Exchanges, like the other renting companies, was frustrated by CIC controls and it has been quick, with these controls out of the way, to come to the market. Its present intention is to raise £1¾ million by making another "rights" issue, of one for four at 20s. per share, putting a value on the rights of 2s. In addition the directors have under consideration the placing of a third series of loan stock.

Relay Exchanges' profit record should by itself ensure success for the issue, for trading profits are now about two and a half times what they were when the 5s. ordinary shares were first quoted on Throgmorton Street in 1955. But it is also being made against the background of an effective increase in the ordinary dividend, from the equivalent of 20 per cent, allowing for last September's 100 per cent scrip issue, to 22½ per cent (including a special profits tax interim of 2½ per cent). Presumably a dividend of at least 22½ per cent will be paid on the new capital this year. On that assumption, the existing shares at 30s. 3d. yield 3.7 per cent and the new shares 5.6 per cent on the issue price.

BRITISH-AMERICAN TOBACCO

AMONG the short list of tobacco equities for the British investor, British-American Tobacco is an established favourite. It has size-net assets at September 30th were over £236 million—a wide geographical spread, and, far more important, a potentially expanding market. The group is firmly entrenched in the United States, but a large part of its interests are in the primary producing countries, new and old, where potential growth is immense. But last year's results were disappointing; gross trading profits virtually unchanged at £62,631,000 compared with £62,617,000

Years to Sept. 30,	1957 £	1953 £
Cons. balance sheet:		
Net fixed assets	55,177,054	57,993,066
Trade investments	7,903,141	7,791,073
Stocks	200,635,036	199,154,696
Debtors	35,809,072	33,282,973
Liquid assets	38,950,201	54,870,524
Bank loans	2,073,235	1,982,282
Net current assets	*208,447,299*	*217,512,470*
Notes and loans	17,049,143	15,556,077
Minority interests	24,374,908	25,176,710
Reserves	165,248,136	178,191,748
Preference capital	10,500,000	10,500,000
Ordinary capital	47,515,522	47,515,522

£1 ordinary unit at 53s. 4½d. yields 5·7 per cent.

in 1956-57. It was to be expected that the group might mark time last year, but even marking time has its advantages. There was a great accretion of strength in the group's finances during the year; cash and easily realisable assets held by all members of the group have risen from £39 million to £55 million. The group has a very small overdraft and finances its huge stocks from internal resources. Stocks actually declined in value by £1½ million to £199 million over the year, but the directors reveal that the volume of leaf stocks held by the group rose, though purchases of American leaf tobacco were lower.

TRIPLEX

IN their first interim report since last year's reorganisation the directors of Triplex present somewhat disappointing results. The fall in profits cannot be wholly attributed to the sale of Quickfit and Quartz last June and it occurred in a period when the motor industry was enjoying a boom. Over the six months to December 31st production in the Triplex safety glass factories failed to match available capacity, for though the demand for curved laminated glass rose the demand for curved toughened plate fell—a fact that the directors explain by referring to changes in the models produced by the motor industry. This factor was particularly potent in the last quarter of 1958 and the decision to leave prices unchanged in the face of increases in the price of plate glass and in labour costs led to a sharp drop in the trading surplus, from £660,230 to £582,504. Although there were "signs of an upward trend" towards the end of the year the directors disclose that the 1958-59 results will fall short of the record level achieved in 1957-58. On this report the 10s. ordinary shares fell 9d. to 53s. 6d., to yield 5 per cent.

DOWTY GROUP

A PRICE of 36s. 6d. for the 1,920,000 10s. shares now being issued by the Dowty Group to pay for its acquisition of Rotol puts a value of 1s. 7d. per share on the rights. The new shares are offered on a yield basis of 5.5 per cent gross, for the directors say that the ruling 11½ per cent tax free dividend will be maintained on the larger capital. That dividend is certainly justified, for Dowty's projected profit is £2 million for the current year to March 31st and Rotol's £735,000. The group will raise about £3,425,000, which will virtually meet in full the cost of £3.5 million for the acquisition. Rotol's net tangible assets, less future tax of £322,710, are £2,917,100 but Dowty shareholders will be less concerned with book values than with Rotol's prospects in a contracting aircraft industry. On this point the chairman, Sir George Dowty, explains that while Dowty's aircraft division—which is only one sector of the group's diversified business—is primarily concerned with military aircraft, two-thirds of Rotol's output is in equipment for civil aircraft. For the group as a whole, he does not expect the volume of aircraft work to decline substantially over the next two years. Rotol is already engaged in the development and manufacture of products outside the aircraft field and has received orders for diesel engine turbo chargers and aircraft equipment has become steadily less important in Dowty's own activities.

ILFORD

ONLY five months have passed since the directors of Ilford announced the details of the planned association with ICI in colour photography, but already the chairman of Ilford, Mr James P. Philipps makes an encouraging progress report. In his statement with the full accounts, he says that the advantages of this link have grown more evident as the months have passed and co-operation has been extended into a number of new fields that had not been foreseen. Ilford's laboratories, aided by a flow of information and assistance from ICI, are now working at high pressure; and Ilford hopes soon to be able to widen the range of colour film it sells. ICI has already subscribed £320,000 to Ilford, paying up 1s. on 6,400,000 5s. ordinary shares. This addition to Ilford's liquid resources, with £2,269,259 in cash or near-liquid form, with further subscriptions from ICI to come means that it will be able in the next four years to pursue its own development of black and white photography. The association with ICI, which will eventually own 32 per cent of the equity, gives Ilford greater strength to combat the increasingly competitive conditions in export markets and to correct the erosion of profit margins, which was responsible for the fall from £813,748 to £788,994 in net profits in the year to October 31st. But the market prospects for film cannot be described as bullish. Mr Philipps looks forward to rapidly expanding sales of colour film in the next few years, but this may be partly at the expense of black and white film. Moreover, Ilford is threatened in its export trade to the member countries of the European Common Market; to meet Belgian and German competition in this market it has set up local selling companies and may eventually have to set up a manufacturing organisation there. The yield of 4½ per cent offered by the 5s. ordinary units at 17s. 1½d. puts a generous price on the hope that Ilford's association with ICI will help it to solve new and difficult marketing problems.

LINEN THREAD

THE new chairman of Linen Thread, Mr W. Luke, naturally devotes much of his statement to shareholders to the future of the group, now shorn of its American subsidiary. Demand for the company's traditional products is slowly declining. The directors' policy is to offset the decline in profits from the existing linen interests by income from investment in the growth industries of the present day. "Our business," Mr W. Luke says, "will gradually veer away from textiles." He also makes it clear that the company intends to use what remains of the money received from the sale of its American subsidiary after the capital distribution of 10s. per share, which absorbs £1,650,000, to carry through this policy of diversification. The capital distribution virtually exhausts the reserve available for tax free distribution. The capital profit on the deal was about £1½ million and Mr Luke explains that "any further distribution would appear to involve either an exceptional taxable dividend to ordinary stockholders or a reduction of capital on the terms of which different classes of stockholders would have conflicting interests."

After considering many projects, Linen Thread has chosen two "very promising enterprises in the United Kingdom" which it is negotiating to purchase for more than £2 million. But, unfortunately, having thus roused shareholders' interest, Mr Luke does not indicate in what industries the new investment is to be made. Shareholders will expect to know, as soon as it is possible to tell them without disturbing the course of negotiations, where the money is to be invested. Eventually, diversification will mean that non-textile interests will be responsible for a large proportion of Linen Thread's income. Immediately, however, the group's profits still hinge on the success of the home textile division and of the widely thrown net of subsidiaries, several of which are not earning a satisfactory rate of profit. In the year to September 30th last, excluding the figures of the American subsidiary, the group's gross profits fell from £397,565 to £246,838 and net profits contracted to £146,123. The 6 per cent ordinary dividend and preference dividends would absorb £183,425 in a full year. The £1 ordinary shares, with the 10s. capital payment still to come, currently stand at 29s. 10½d. xd.

London Stock Exchange

FIRST DEALINGS:	Feb. 25	Mar. 11	Apr. 1
LAST DEALINGS:	Mar. 10	Mar. 31	Apr. 14
ACCOUNT DAY:	Mar. 17	Apr. 7	Apr. 21

NO change in the Bank Rate, the sharp rise in the Treasury bill rate and the unsettled international situation led to widespread falls in gilt-edged prices. These were only partly regained in the rally on Wednesday. The *Financial Times* Index of Government Securities fell by 0.66 to 86.38 over the week to Wednesday's close. Among undated stocks, War Loan 3½ per cent lost ½ to 67½ despite a rally of ¼ on Wednesday. In Dominion loans, the discount on the new Rhodesian and Nyasaland 6 per cent 1978-81 widened from ½ to 2¼. In foreign bonds, German bonds fell over the week, with Dawes losing 2 points to 166. Greek 7 per cent gained one point to 33 on debt settlement hopes.

Selling led to widespread falls in industrial equities but Wall Street's climb to fresh peaks and the strength of the reserves helped the market to regain some of the ground lost earlier. *The Economist* Indicator fell by 1.5 to 252.0 over the week to Wednesday's close. Among electricals "Emmies" (which has attracted American buyers) lost 7½d. to 54s. 7½d. but Philips rose by 1s. 9d. to 101s. But heavy electrical equipment shares strengthened on the results from AEI, London Electric Wire gaining 1s. 6d. to 72s. and Reyrolle 6d. to 95s. 3d. In a firm motor section Rolls-Royce jumped by 3s. 3d. to 104s. 3d and Jaguar rose a further 1s. 3d. to 63s. 9d. In aircraft, Hawker fell by 1s. 4½d. to 30s. 6d. Food shares were firm, Liebig's rising by 5s. 3d. to 78s. 3d. and United Dairies by 1s. 3d. to 70s. 6d. xd. Banks were quiet apart from Lloyds which rose by 2s. 6d. to 52s. 6d. following the news of the "rights" issue after Easter, but HP shares were weak, UDT dropping by 3s. to 137s. and Mercantile Credit by 2s. to 25s. 3d.

Oils were initially firm as American and Continental selling dried up, but Tuesday's gains following the climb on Wall Street were partly lost the following day on profit taking. Nonetheless, Shell, which was particularly weak at first on Paris selling, closed 1s. higher at 140s. and BP were the same amount better at 52s. But Ultramar lost 3d. over the week to 67s. 3d. and Burmah lost 9d. to 76s.

Kaffirs fell and Tuesday's recovery petered out as the Nyasaland situation worsened. Hence the *Financial Times* gold share index lost 3.8 to 86.9. FS Geduld fell by 1s. 3d. to 151s. 10½d. despite the good monthly returns and among other OFS shares St Helena lost 3s. 9d. at 55s. 1½d. and Harmony 1s. 9d. at 42s. Finance Houses were also weaker, Anglo-American losing 7s. 6d. to 173s. 9d., General Mining 6s. 3d. to 125s., and Central Mining 4s. 3d. to 72s. 6d. In diamonds, De Beers dropped by 3s. 9d. to 130s. 7½d. on selling from Paris.

EXCHEQUER RETURNS

For the week ended February 23, 1959, there was an "above-line" surplus (after allowing for Sinking Funds) of £38,524,000 compared with a surplus of £21,979,000 in the previous week and a surplus of £1,688,000 in the corresponding period of last year. There was a net expenditure "below-line" of £28,969,000, leaving a total deficit of £140,772,000 compared with £201,729,000 in 1957-58.

THE MONEY MARKET

After surprising outside tenderers by cutting their concerted bid by 9d. at the previous Treasury bill tender, the discount houses reduced their bid by a further 9d. to £99 3s. 6d. at last week's tender. This time the outside applicants, who obtained an unexpectedly large share of the bills offered in the previous week at rates unfavourable to later dealing rates in the market, reduced the size of their applications. Total applications at the tender fell by £29 million to £318 million, although the quantity of bills offered rose by £20 million to £220 million. The market's allotment rate therefore rose from 27 to 51 per cent of its requirements; the average discount on the whole allotment was £3 5s. 6.22d. per cent.

The discount rate on Treasury bills in the United States also rose sharply; the average rate for 91-day bills rose from 2.589 per cent to 2.816 per cent.

The authorities gave a fairly large amount of assistance to the market on Thursday before the week-end, but two or three houses had to borrow from the Bank. Further help was required over the week-end and one or two houses were "in" the Bank on Monday. Subsequently a small surplus of funds emerged, and the rates paid for short loans eased correspondingly.

(3) Annual figures are total for the fiscal year ended June 30th. (4) Bonds due or callable from 10 to 20 years. (5) Revised from 1957 onwards. (7) Figure for third quarter. (8) Revised series beginning January, 1957.

Butter on both sides!

Bread-and-butter is such an accepted part of our lives that we might be excused for taking it for granted. Only when it has some extra quality does it penetrate our consciousness. When, for instance, we discover a piece which has *butter on both sides.*

It is often such seemingly trivial extras which give life its stimulus. Like taking out the usual bread-and-butter Life or Endowment policy with Legal & General and finding that, because it is "with profits", a generous annual addition comes along.

LEGAL & GENERAL

ASSURANCE SOCIETY LIMITED

CHIEF ADMINISTRATION: 188 Fleet Street, London, E.C.4. Telephone: CHAncery 4444

UNILEVER LIMITED AND UNILEVER N.V.

The Boards of Unilever Limited and Unilever N.V. announce the provisional results for the year ended 31st December, 1958. Although the results are subject to completion of the consolidated accounts and audit, the Boards are satisfied that any difference between the provisional and final figures will be relatively unimportant.

The total value of turnover for LIMITED and N.V. was:
1958 ... ... £1,728 million 1957 ... ... £1,720 million
Deductions are shown in brackets (All figures are shown in £ millions)

1957				1958		
N.V.	LIMITED	COMBINED		COMBINED	LIMITED	N.V.

The N.V. figures have been converted to sterling, as for 1957 at the official parity of Fl. 10·64=£1.

The Boards, assuming the existing rate of exchange between the £ sterling and the guilder, intend to resolve on 13th March, 1959, to recommend to the Annual General Meetings to be held on 24th April, 1959, final dividends for 1958 on the Ordinary capitals ranking for dividend in respect of that year, payable in May, 1959, at the following rates:—

1. In the case of Unilever Limited a dividend of 2/1·2d. actual per £1 of stock before deducting income tax (1957—2/3·6d.), making 4/2·4d. per £1 of stock for the year ended 31st December, 1958 (1957—3/6d.).
2. In the case of Unilever N.V. a dividend of 91% actual (1957—101%) being the equivalent of the Unilever Limited dividend calculated in accordance with the *Equalisation Agreement* between the two companies, making 191% for the year ended 31st December, 1958 (1957—154%).

The total dividends for the year include the special interim dividends which, as was explained in the announcement on 14th November, 1958, were paid in connection with the scrip issues made last December. The rates of the final dividends stated above are as forecast in that announcement.

In accordance with the terms of issue the final dividends for 1958 are not payable on the above scrip issues.

It is intended to send the Report and Accounts for 1958 to stockholders on 2nd April, 1959.

26th February, 1959.

for 'Pace Eggs'

but YORKSHIRE

for Insurance

Pace Egging is still a part of our country life. At Easter-time gaily decorated hard boiled eggs are rolled down grassy slopes—the winner being the boy or girl whose egg is the last to crack! Some celebrate the day with traditional Pace Egging songs and plays.

Tradition is not only associated with old customs, it plays its part in our more everyday affairs. Behind "Yorkshire Insurance" lies a history of almost 150 years of service and security. This old established Company, progressing with new ideas, provides all types of modern insurance.* It will be to your advantage to get into touch with our local Branch Manager about your own problems.

** No game can be played and enjoyed without risk. The "Yorkshire" issues insurance policies to cover all kinds of sports and sportsmen. Hunting, Shooting, Fishing, Golfing, Bowling, and Amateur Sports Clubs are catered for and special policies are available for cameras, binoculars, bicycles, etc.*

Estate Duties Investment Trust Limited

is an investment trust whose business it is to purchase and to hold minority shareholdings in family businesses, and small public companies, whose shareholders have to meet Estate Duty liabilities.

Executors and trustees holding shares in such companies and faced with Estate Duty liabilities will wish to avoid selling out or losing control. They will find Estate Duties Investment Trust Limited—known as EDITH—ready to help in this problem.

Our booklet, M6, 'The Death Duty Problem', will be sent on request.

APPOINTMENTS

Vacant 9/- a line; Required 6/- a line.

SENIOR

ACCOUNTANT

A vacancy exists for a Senior Accountant in a large company in the North of England, which manufactures a wide range of products. Applications are invited from Chartered Accountants, aged between 30 and 45, who have had a number of years' industrial experience, including the management and control of large numbers of staff. The successful applicant will be responsible to the Chief Accountant for the control of about 100 staff. The Company is well-known for its progressive policy and range of staff benefits.

THE STARTING SALARY WILL DEPEND ON AGE AND EXPERIENCE BUT WILL BE OVER £2,000, and there are good prospects of advancement for the right man.

Applicants, who possess the above qualifications, should write, giving brief particulars of their age, qualifications, experience and present salary (quoting reference B.2) to Box 1139

LANCASHIRE AND MERSEYSIDE INDUSTRIAL DEVELOPMENT ASSOCIATION

Applications invited from suitably qualified persons for appointment as DEPUTY DIRECTOR OF THE ASSOCIATION. Salary £1,400 p.a. Post superannuable. Further particulars and form of application obtainable from Joint Honorary Secretaries of Association, Town Hall, Manchester. Applications returnable by the 23rd March, 1959.

THE UNIVERSITY OF SHEFFIELD

Applications are invited for a post of LECTURER in ACCOUNTANCY (with special reference to Costing and Management Accounting) to begin duties on October 1, 1959. Initial salary according to qualifications and experience on the scale £900 x £50—£1,350 x £75—£1,650, with F.S.S.U. provision and family allowance. A grant towards removal expenses will be made. Further particulars should be obtained from the Registrar to whom applications (4 copies) should be sent by April 18, 1959.

CENTRAL ELECTRICITY GENERATING BOARD

PLANNING DEPARTMENT

SENIOR ASSISTANT ENGINEERS are required in the STATION PLANNING SECTION at Headquarters, London, S.E.1.

The Section is concerned with the planning of new generating capacity throughout England and Wales, the investigation and selection of sites for conventional and nuclear power stations, and negotiations for statutory and other consents for both classes of station.

Candidates should have a sound engineering or scientific background, and must possess an Honours degree or the requisite qualifications for corporate membership of a senior Engineering Institution.

An aptitude for forward thinking, experience of economic studies, or experience of one or more of the problems arising in the siting of power stations, e.g. geology and ground exploration; thermal and hydraulic aspects of the use of large volumes of river or sea water for cooling purposes; questions of town and country planning; would be an advantage.

Salaries within scales £1,590—£1,940 or £1,475—£1,835 per annum, according to duties and responsibilities.

Application form obtainable from the Personnel Officer, 24/30, Holborn, London, E.C.1, should be completed and returned by March 23. Please mark envelopes "Confidental Ref. E./69."

AUSTRALIA

UNIVERSITY OF SYDNEY

STAFF TUTOR

Applications are invited for the position of Staff Tutor in the Department of Tutorial Classes. Candidates should be graduates in Arts or *Economics* with honours in Psychology, Anthropology, Education, Political Science or Economic History and should have had some previous experience of adult education work. Experience in methods and planning of social surveys or in adult education work with trade unions would be an advantage.

Salary will be within the range £A1,500-£90-£2,100 per annum, plus cost of living adjustment and will be subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in Australia and London, is *April* 18, 1959.

KIMBERLY-CLARK LIMITED require a young Economist/Statistician, preferably with experience of consumer market research to head small Statistical Section. *In addition to the control of the section's work the duties will cover examination of market research data and guidance to sales management on market trends and potentialities.*

This is an expanding company associated with the Reed Paper Group and the post offers a good starting salary commensurate with ability and experience. There is a non-contributory pension scheme in operation and working conditions and prospects are above average.

Please apply in writing, to the Personnel Officer, *Kimberly-Clark Limited, Larkfield, Nr. Maidstone, Kent.*

DIVISIONAL SALES MANAGER

MIDLANDS DIVISION

If you have a lively mind and are unafraid of hard work and you possess a proven record of sales ability and field Management, including the handling of a specialised sales force you are invited to apply for this very responsible post which has arisen within the Ful-O-Pep Animal Feed Sales Force. The successful applicant will have a sound agricultural background, be used to *dealing with the trade at Director level, and will come from the 30/42 age group.* Expansion is proceeding rapidly, and the future can offer enormous opportunities. A current driving licence is essential. Please write stating age and full details of education and career to date to: The Personnel Manager (DSM 15), Quaker Oats Limited, Bridge Road, Southall, Middlesex.

MARKET RESEARCH

Woman Field Supervisor

PETFOODS LIMITED, *the manufacturers of* KIT-E-KAT, LASSIE, CHAPPIE, PAL-MEET and TRILL *invite applications for a* woman field Supervisor.

The duties will involve training and supervising interviewers who are based in towns in an area from Liverpool to Leicester. Applicants must, in addition, be completely mobile and be prepared to travel throughout Great Britain.

The successful applicant will have a good educational background and be thoroughly versed in the field application of market research survey techniques of all kinds. This implies that she will be a first-class interviewer herself and have had supervisory experience.

The gross remuneration will be in the range of £700 to £1,000 p.a. A Company maintained car is provided plus normal business expenses. The Company also provides a very generous—non-contributory—sickness, life assurance and pension scheme.

Applicants should write giving details of age, background and experience, endorsing the letter "Market Research Supervisor" to the Personnel Officer, Petfoods Ltd., Melton Mowbray, Leics.

MIDDLESEX COUNTY COUNCIL

EDUCATION COMMITTEE

BRUNEL COLLEGE OF TECHNOLOGY

WOODLANDS AVENUE, ACTON, W.3.

RESEARCH WORKER in the SOCIAL SCIENCES

Candidates must be university graduates in one of the social sciences and have some experience in the conduct of social research. Preference will be given to candidates who are familiar with technology and problems of technological education. The appointment is for three years. The successful candidate will work under professional direction as a member of a small newly formed research team set up with a grant from the Nuffield Foundation.

Salary in accordance with the Burnham (Technical) Report, i.e., for Assistants Grade B £650 x £25—£1,025 plus London allowance and other additions for previous experience as appropriate. This salary is now subject to 5 per cent increase.

Application forms and further particulars (foolscap S.A.E.) from the Principal.

C. E. GURR, M.Sc., Ph.D.,
Clerk to the Governing Body.

UNIVERSITY OF DURHAM

Applications are invited for the post of Reader in Agricultural Economics tenable in the Newcastle Division of this University. The Reader will also be the Provincial Agricultural Economist and the Head of the Northern Provincial Centre for the Provincial Agricultural Economic Service. The person appointed will be required to take up duty on October 1, 1959. Salary in accordance with the Readers' scale (i.e. £1,750 x £75 to £2,125 x £25 to £2,150 a year) with family allowances and membership of F.S.S.U. Further particulars may be obtained from the undersigned with whom applications (15 copies), containing the names of three referees, should be lodged not later than April 11, 1959. (Applicants from outside the British Isles may send one copy only).—E. M. Bettenson, Registrar, University Office, 46 North Bailey, Durham.

THE MILK MARKETING BOARD invite applications for assistants in the newly constituted Statistics and Surveys Department of its Production Division. This department is concerned with the study of factors governing milk production, feeding practices, cattle population trends, etc.

Applicants should have an agricultural science or economics degree. Students expecting to graduate in 1959 will be considered. The commencing salary will be £650/£750 per annum according to qualifications and experience and there are excellent prospects for the future. The appointments are permanent and pensionable after a probationary period.

Applications to Chief Personnel Officer, Milk Marketing Board, Thames Ditton, Surrey.

THE INSTITUTE OF BANKERS have a vacancy for a male administrative assistant. Applicants should have a degree of a United Kingdom University—or appropriate professional qualification—and experience of banking or kindred matters; they must be vitally interested in education and experienced in public speaking. Age should be around 30. The post is progressive and pensionable with commencing emoluments of £1,250 or more according to experience.—Apply, in writing, by April 1, 1959, to the Secretary, The Institute of Bankers, 10 Lombard Street, London, E.C.3.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF SOCIAL STUDIES

Applications are invited from suitably qualified graduates for appointment as temporary Assistant Lecturer in Politics in the Department of Social Studies at a salary within the range £700-£850 a year according to age, qualifications and experience. The appointment will be for one year in the first instance with a possible extension for one further year. Preference will be given to candidates with a special interest in the sociological study of political institutions.—Applications (three copies) stating date of birth, qualifications and experience, together with the names of three referees, should reach the Registrar, The University, Leeds, 2 (from whom further particulars may be obtained), not later than April 15, 1959.

NORTHUMBERLAND COUNTY EDUCATION COMMITTEE

ASHINGTON COUNTY TECHNICAL COLLEGE

Required Grade A teacher of Shorthand and Typing Salary: Man, £498 15s. x £26 5s.—£945 p.a.

Woman, £451 10s. x £21 and one final increment of £10 10s.—£756 plus equal pay increment.

Teacher training an advantage.

Applicants should hold appropriate qualifications and have had good trade/office experience.

Forms of application and further particulars may be obtained by forwarding a stamped addressed foolscap envelope to the Director of Education, County Hall, Newcastle-upon-Tyne, 1, to whom completed forms should be returned by not later than fourteen days after the date of the advertisement.

MARKET RESEARCH

Surveys Technical Assistant

(Woman)

PETFOODS LIMITED (*the manufacturers of* KIT-E-KAT, LASSIE, CHAPPIE, PAL-MEET and TRILL) invite applications for a *woman* technical assistant in connection with market research surveys.

The duties involved in this position provide a valuable training for an executive career in market research. More specifically, they involve participation, under the direction of the Research Officer, in the construction of questionnaires, sampling procedures, the analysis of consumer research operations including the coding and tabulating of surveys and in the application of appropriate statistical techniques.

The minimum requirements for this post are a good educational background with a leaning towards mathematics (about G.C.E. "A" level or higher), some basic statistical knowledge together with a willingness to enhance her knowledge in this direction, a pleasant personality and in the age *range* of 21-30 years.

The gross remuneration will be in the range of £650 to £900 p.a. The Company also provides a very generous—non-contributory—sickness, life assurance and pension scheme.

Applicants should write giving details of age, background and experience, endorsing the letter "S.C. Market Research," to the Personnel Officer, Petfoods Limited, Melton Mowbray, Leicestershire.

ESSEX EDUCATION COMMITTEE

NORTH-EAST ESSEX TECHNICAL COLLEGE

SHEEPEN ROAD, COLCHESTER.

COMMERCE DEPARTMENT

A LECTURER in ECONOMICS and related subjects is required from September 1, 1959. Applicants should possess a good honours degree and be capable of teaching to finals standard.

Salary: £1,200 x £30 to £1,350 (men) and £960 x £24 to £1,080 plus equal pay increments (women) with 5 per cent. special addition.

Details and forms (stamped addressed foolscap enclosed) from the Clerk to the Governors, Divisional Education Office, Park Road, Colchester.

THE UNIVERSITY OF SHEFFIELD

Applications are invited for the following posts; duties to commence October 1, 1959:—

A LECTURER IN APPLIED ECONOMICS.
A RESEARCH/TEACHING FELLOW IN APPLIED ECONOMICS.

Candidates should have a special interest in Industrial economics. Salary scales: Lecturer—£900 x £50—£1,350 x £75—£1,650; Teaching Fellow in the range £750-£1,000, with F.S.S.U. provision and family allowance. Initial salary for either post according to qualifications and experience. Grants towards removal expenses will be made. Further particulars should be obtained from the Registrar to whom applications (4 copies) should be sent by April 4, 1959.

Enquirers should name the post in which they are interested.

UNIVERSITY OF BIRMINGHAM

FACULTY OF COMMERCE AND SOCIAL SCIENCE

DEPARTMENT OF ACCOUNTING AND ADMINISTRATION

Applications are invited for the post of LECTURER in ACCOUNTING, to begin duties on October 1, 1959, or as soon after that date as possible.

Applicants must have a recognised professional qualification in Accounting, and should preferably be graduates.

The salary scale for lecturers is £900 x £50 to £1,350 x £75 to £1,650. The initial salary of the successful candidate will be fixed according to his qualifications and experience, within the range £900-£1,350. The appointment will be reviewed at the end of the first year.

Applications (three copies), with the names of three referees, should be sent on or before April 11, 1959, to the Registrar, The University, Birmingham 15, from whom further particulars can be obtained.

UNIVERSITY OF MALAYA

Applications are invited for:

CHAIR OF PUBLIC ADMINISTRATION

Salary between £2,268 and £2,548 p.a., at fixed point determined by qualifications and experience. Allowances: *expatriation* £378 p.a., cost of living £210-£560 p.a. Passages for appointee, wife and children under 12 years. Part-furnished quarters at reasonable rent. Provident Fund Scheme.

Detailed applications (8 copies), naming 3 referees, by April 15, 1959, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

FORD MOTOR COMPANY LIMITED have a vacancy for an Economist aged 24-30 with a sound knowledge of statistics and market analysis. A degree in economics is essential and appropriate commercial experience will be an advantage. The position is progressive and pensionable. Please write to Training and Recruitment Department G12A, Ford Motor Company Limited, Dagenham, Essex giving details of age, qualifications, experience and quoting reference FLC.

THE UNIVERSITY OF SHEFFIELD

Applications are invited for a post of LECTURER or ASSISTANT LECTURER in ECONOMICS to begin duties on October 1, 1959. Candidates should be interested in Economic Theory. Salary scales: Lecturer—£900 x £50—£1,350 x £75—£1,650; Assistant Lecturer—£700 x £50—£850, with F.S.S.U. provision and family allowance. Further particulars may be obtained from the Registrar to whom applications (4 copies) including the names and addresses of three referees, should be sent by April 8, 1959.

LONDON TRANSPORT

has vacancy for

STATISTICAL ASSISTANT

in the

OFFICE OF THE TRAFFIC AUDITOR

An assistant is required for the general review and interpretation of traffic statistics, for investigating and reporting upon particular aspects and for developing and adapting the service of traffic statistics to meet existing and new needs of management.

Applicants must have a keen interest in transport economics and a sound knowledge of the principles and techniques of statistical analysis, together with practical experience in applied statistics. They should possess initiative and administrative ability and be able to write good reports.

Possession of a University Degree in Statistics or Economics or the Diploma of the Incorporated Statisticians Association would be an advantage.

Salary scale:— £814 per annum to £979 per annum.

Medical examination: Free travel: Contributory superannuation scheme.

Applications within 14 days to Staff & Welfare Officer (F/EV 724/2) London Transport, 55 Broadway, S.W.1.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF ECONOMICS AND COMMERCE

Applications are invited for two posts in the Department of Economics and Commerce. The first is a Lectureship or Assistant Lectureship in industrial economics. Candidates for this post should have specialist knowledge of either management subjects, industrial relations or industrial organisation. The second is an Assistant Lectureship for which candidates should have a particular interest in economic theory and some acquaintance with statistical method as used in economics. Salary on the scale £900 x £50—£1,350 (effectively bar) x £75—£1,650 a year for a Lecturer, or within the range £700-£850 a year for an Assistant Lecturer.—Applications (three copies) stating date of birth, qualifications and experience and the names of three referees, should reach the Registrar, the University, Leeds, 2 (from whom further particulars may be obtained) not later than April 25, 1959.

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited from suitably qualified candidates for Tutorships in the following subjects:

ECONOMICS
PHILOSOPHY

Salary on the scale £575 to £625 per annum according to qualifications and experience.

Further particulars can be obtained from the Registrar, University College, Singleton Park, Swansea, by whom applications (six copies) must be received not later than *Saturday*, April 4, 1959.

UNIVERSITY OF ST. ANDREWS

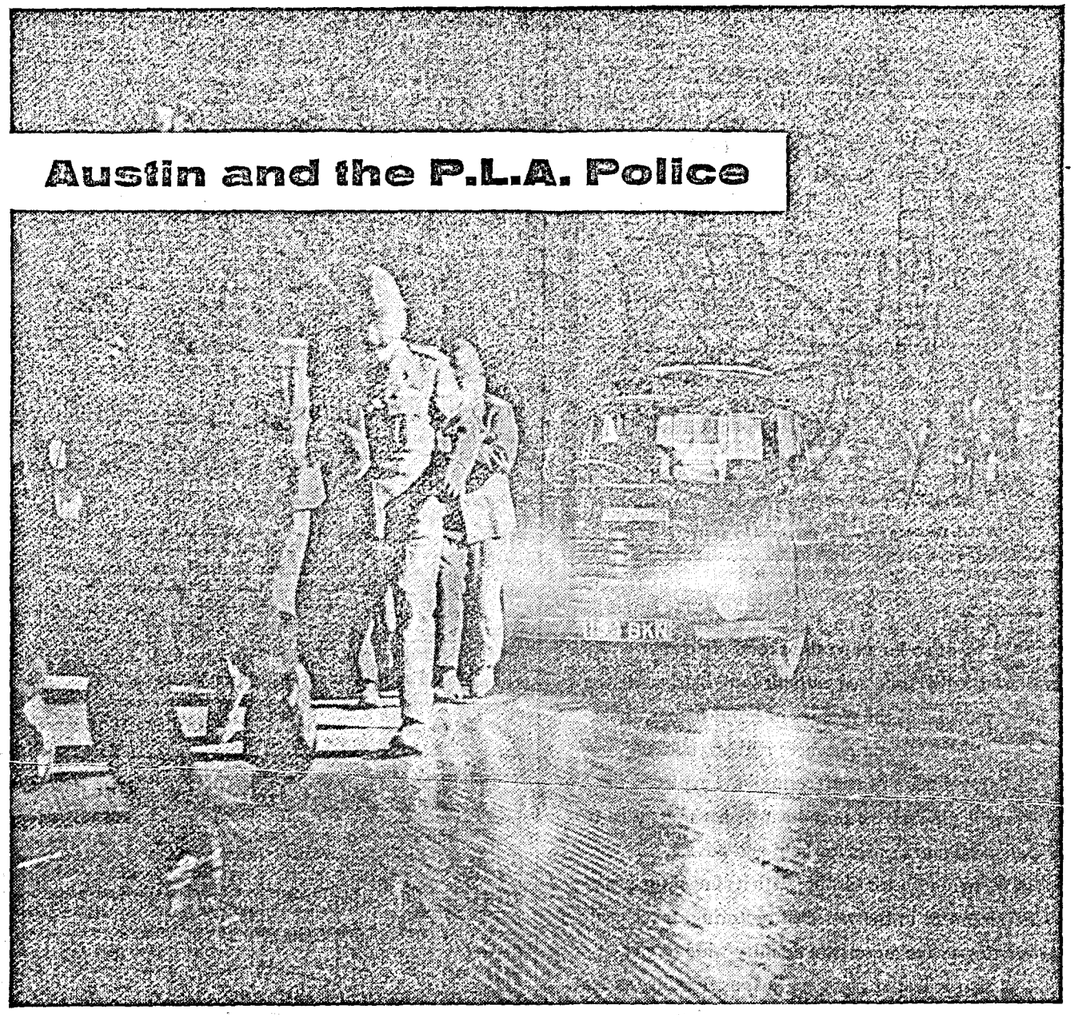
Random sample

People don't just make sweeping generalisations any more, one iconoclast remarks. Thanks to the advance of market research techniques they take random samples, *then* make sweeping generalisations.

What he meant was, you don't just take space in a paper and announce 'Nearly Everyone Uses I.C.I. Silicones' just because someone thinks it would make a good slogan. You've got to find out if it's true, by taking a random sample. You ought to pick names from the voters' list, but if you want to cheat you ask more or less the first person you meet 'Do you use I.C.I. Silicones?' If he says 'Don't know' you start asking him, how about his new raincoat, hasn't he noticed how it simply sheds the water, and what about the furniture polish his wife uses, doesn't it give a marvellous easy shine, and did he happen to notice that she isn't having that trouble with her cakes sticking to their paper cases any more, and is he by any chance a paint technologist, because if he is he probably knows all about the heat-resistant properties of silicone paints—all that sort of stuff.

Anyway, when you've got it written down and thanked him very much, there's your random sample. *Now* you can make your sweeping generalisation:



Nearly everyone uses

(whether they know it or not)

IMPERIAL CHEMICAL INDUSTRIES LTD., LONDON, S.W.1

Austin and the P.L.A. Police

IN 1802 a hundred men, armed with musket and cutlass, guarded London's first commercial docks. Today the tidal reaches of the Thames, 69 miles from the Estuary to Teddington, are controlled by the Port of London Authority.

The five great dock areas—in Wapping and Shadwell, Rotherhithe and Bermondsey, the Isle of Dogs, North Woolwich and Tilbury—are protected by the P.L.A. Police. At the dock gates, on the quays, in the roads, round the warehouses, they are on guard.

Riches of the world The P.L.A. are probably the largest warehousekeepers anywhere. Their tall gaunt buildings, clustered about the docks, hold the world's wealth. Wine and wool, tea and tobacco, rubber, meat, drugs and timber, oil, ivory and ostrich feathers. Dockland is rich in temptation, its protection a man-sized job.

The 600 men who make up the P.L.A. Police are highly trained, highly skilled, ready, when trouble flares up, to assemble at a moment's notice. Night or day, the P.L.A. Police are constantly on the alert. The mobile part of the force is soon at a danger spot.

At a moment's notice A mobile force needs dependable transport. The Port of London Authority have chosen Austins. Their police vans are likely to be needed anywhere, at any time, to carry any and every kind of load. Speed, manoeuvrability and large capacity are essential. The P.L.A. Police find what they need in Omnivans.

And more besides Load space in the Austin Omnivan is exceptional—200 cubic feet for a good 15 cwt. Low floor and wide rear door make for easy loading. All-steel monoconstruction gives great strength—with lightness. Power from 1500 c.c. O.H.V. engine. Luxury comfort in cab. 12 months' warranty and the backing of B.M.C. Service—Britain's best service and parts organisation.

See the Omnivan at your Austin dealer's. Ask him, too, about the rest of the Austin commercial range: ½ ton to 7 tons plus prime movers for gross train weights up to 15 tons.

AUSTIN

THE AUSTIN MOTOR COMPANY LIMITED · LONGBRIDGE · BIRMINGHAM

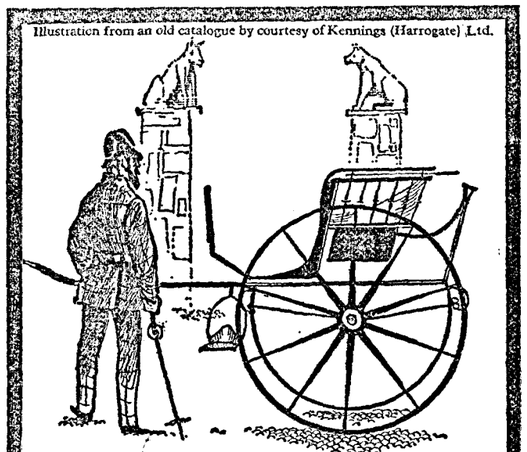


Illustration from an old catalogue by courtesy of Kennings (Harrogate) Ltd.

"A 18th Century gig much favoured by genteel folk"

Not so long ago the proud gig owner enthusiastically discussed with his local blacksmith the latest model and the niceties of hubs, felloes, thills, thoroughbraces and lazybacks.

Today, miracles of engineering have replaced the simple gig and the proud car owner must turn to experienced enthusiasts for help and advice.

The Kenning Motor Group, with its finger on every development in the world of motoring, takes pride in offering to the motorist a country-wide service that is just as personal, just as friendly, as that given by the blacksmith of yesterday.

Over 100 depots in 25 counties represent the nation-wide contribution to the maintenance of road transport by the Kenning Motor Group—identified by the Kenning Shield, a guarantee of an efficient service.

Working with us

If you were a science graduate working with us, you would find yourself at the very hub of a virile and expanding industry. For ours is an organisation which is making a unique contribution to progress in electronics.

In the seven Mullard research, development and applications laboratories, scientists are engaged on a diversity of projects which include electronic valves and semiconductors, radar and telecommunications, radio and television, automatic control devices and computer memories, particle accelerators and ultrasonics.

In sixteen modern factories, they are making an important contribution to the production of valves, tubes, transistors and components (which flow from these plants in their millions) and specialised electronic equipment.

This is the stimulating environment in which you would find unusual opportunities for advancement, satisfying work and very good conditions of employment.

Would you like to work with us? There are openings for graduate mechanical and electrical engineers, physicists, chemists and metallurgists. Why not ask for a copy of our book 'Opportunities in Electronics' which is obtainable through your University Appointments Board?

Mr Macmillan

BRITISH politics are now more heavily overlaid by a single personality than at any time since Sir Winston Churchill's heroic wartime days. The present Prime Minister is adulated by a far wider section of the Conservative party than that which usually indulges in leader-worship; and Labour spokesmen find it much more tactful to attack his party than himself.

When Mr Macmillan became Prime Minister, it was not easy to foresee that he would have this success; and now that he is travelling around the world, trying to "give a lead" to other free countries, one hears the same instinctive disparagement of him on the international plane as one used to hear in England two years ago. Foreigners, as the next article in this issue of *The Economist* emphasises, do not find it easy to trust him as the brilliant broker; they suspect that there may be something a little phoney (because vote-catching) under the fur hat. Here in Britain most professional political observers have been through Doubting Castle about Mr Macmillan before; and it may be worth while as an act of reassurance abroad, at the risk also of seeming a little impertinent at home, to say some frank things to the outside world about British experience of him.

Throughout his career it has usually been the cleverer people who have underestimated Mr Macmillan. They have said, with some evidence to support them, that he is not an outstandingly original or imaginative man; since the war he has generally become converted to effective new ideas a little behind the pioneers, although also a little in advance of the mass of his party. This was certainly true of his administrative career immediately after the Conservatives came back to power in 1951. His first departmental office in 1951 was as Minister of Housing and Local Government, when, in enthusiastically discharging the political commitment into which his party had entered, his part was to spend too much of the country's substance in building more new houses than the economy could at that time afford; as a departmental legislator he left behind him only a too timid new Rent Act which did not work, a Town and Country Planning Act which Mr Brooke has since had substantially to amend, and he kept carefully away from all ideas of local government reform.

His next office was the Ministry of Defence, where perhaps he did not have sufficient time to make a real mark on an obviously mismanaged departmental policy; the fact remains that, while there, he did not make even a perceptible dent upon it. From there he went to the Foreign Office where for eight months he had the reputation of being Sir Anthony Eden's very secondary fellow-traveller, a mouthpiece for rash meteorological forecasts that there was not going to be no war; the wisest thing he did at the Foreign Office was when, after realising that Sir Anthony regarded it as a mere repository for his own ideas, he insisted vehemently on leaving it. Finally, at the Treasury both his private and public utterances were something of a disappointment to informed

economists who had got used to British Chancellors showing such clear minds (if muddled emotions) as Messrs Butler, Gaitskell and Cripps. His management of the national finances was neither distinctive nor distinguished.

When Mr Macmillan took up his present high office, on the wave of the peculiar emotions after the Suez episode which gave him his chance, the auguries therefore did not seem good for forceful leadership of this country. But two things should have given his critics much more pause before belittling him. One was that, in his departmental days, Mr Macmillan always attracted much greater support from those who were intimately associated with him than from those who could judge merely on the record of his speeches and policies (or lack of them). The other point was that, although as a departmental minister he never appeared to be a procreator of forceful reforms, he also never allowed himself to become a known opponent of them; it is significant that during his prime ministership he has encouraged other men to carry forward new ideas most speedily in the very departments which he himself previously tenanted. Although Mr Macmillan is not a swift mover into wise action, he has the knack of becoming converted to it just before the timider forces around him begin to think it may be "safe." This reputation for prudence in his sense of timing is a great domestic asset in a political leader; it has to be seen whether he can now acquire it internationally.

THE second major role of a prime minister, next to that of co-ordinator of ideas, is as the leading character actor in the great daily political play. In this it is now generally accepted at home (though not yet abroad) that Mr Macmillan is a past master. It was not always so. The dividing line in politics between the successful character actor and the flop is whether or not his opponents regard it as safe to try to bully and ridicule him. In Mr Macmillan's departmental days Labour MPs at Westminster often found it profitable to show their restlessness under his over-elaborate parliamentary wit; and in those days many even among Conservative MPs would say, that they "found it a little difficult to bear Macmillan's cloth cap." A great change has happened between then and now, when he has only to put on an old cardigan for it to be eulogised as an Edwardian waistcoat.

In part this change may be the result merely of his accession to power; Sir Winston Churchill has spoken, admiringly, of the effects of "royal jelly" on Mr Attlee. But this cannot be the whole explanation. Shortly after Sir Anthony Eden became prime minister, the cartoonists were poking profitable fun at his alleged fussiness and dithering; with Mr Macmillan they poke fun only at other people's delusions of his supermanship. Within nine months of Sir Anthony's succession a Sunday newspaper was running the rumour that he might resign; this would have been an inconceivable sort of rumour to run about Mr Macmillan. When Sir Anthony finally did retire, the cruel story told around the clubs to distinguish the rather similar looks of the two men was that "Eden is the sheep trying to look like a man, and Macmillan is the man trying to look like a sheep." This story was viciously unfair to Sir Anthony, who was in many respects a braver and more positive leader of the Conservative party than Mr Macmillan; Sir Anthony had a vision, at home as well as abroad, of where he wanted the Tories to go, and in recent months he would certainly have spoken out more daringly than has his successor to stem the drift towards illiberalism in Bournemouth and other backwoods of the party. But the fact that few people yet think of criticising Mr Macmillan personally for this is a sign that, in the eyes of the public, this successful extravert has something which his predecessor did not have, and has it in the right place for leadership.

THE third question about the Prime Minister concerns his motivation in politics: what is it that makes him tick in public life? There is no disguising the fact that many Americans and other allies believe that what is making him tick so loudly at the moment is the approach of the elections; they think that his peace journeys are designed purely as before-the-poll attractions. This is vastly unfair, as Mr Khrushchev could ruefully testify; his deliberately rude speech on the third day of the Moscow visit was the direct result of his visitor's toughness from the start. After the speech Mr Macmillan showed no inclination to come and lick his hand in appeasement; nobody who knew the Prime Minister could have suspected that he would do so. For Mr Macmillan has a special sort of firmness, which arises largely from his own special sorts of caution and ambition. It is true that he has not often, in his maturer administrative years, been quick to stick his neck out into politically embarrassing policies here at home; but equally he has never been known to run away from an awkward course once it has been set, if he feels it to be right. The psychological source of both his initial caution and his subsequent firmness is that he wants above all things to be respected; the difference between him and more liberal Tories, who would rush more quickly into contentious policies and then might retreat more quickly before political awkwardnesses, is that those other Tories want above all things to be loved.

It is therefore as wrong for Britain's allies to regard Mr Macmillan as a soft politician in search of domestic votes as it is for some Tories at home to regard him as beyond criticism or reproach. It is possible that the approach of the election may have affected Mr Macmillan's usually exquisite sense of timing in his peace journeying, but the journeying itself is taking place simply because he believes that it is internationally as well as nationally the right thing to do. Any of his hosts in Washington, or in points north or east of it, who discount his sincerity will certainly be underestimating this safe harlequin, this courageous man of caution, this scholarly unintellectual, this eclectic pragmatist of a prime minister.

Who Leads the West?

Mr Macmillan's arguments for Western readiness to talk to the Russians do not mean a bid for leadership

THE disarray of the western alliance has become painfully evident as the Berlin crisis has developed. Not all of it is due to Mr Khrushchev's sleight of hand, but if this was one trick that he meant to make last November he can contentedly pick it up now. The West's own bad luck and bad judgment have had a good deal to do with setting it at odds with itself, so much at odds that Mr Macmillan's energies now seem to be directed as much to reassuring his allies about Britain's firmness in the face of Soviet pressure as to persuading them of the merits of flexibility in the approaching East-West talks. The West's descent into this private diplomatic Hades has been a disconcerting, and quite possibly calamitous, progress.

The initial western reaction to the Berlin crisis was to stiffen as if by instinct into immobility—although, in fact, this does not seem to have been Mr Dulles's own wish. Before Mr Khrushchev actually spoke of handing over to the east Germans by May 27th, Mr Dulles had rehearsed the possibility of dealing with them as the agents of the Soviet Union. This piece of finesse was dropped when Mr Khrushchev's terms were officially judged, in Washington as well as in Bonn, to be nothing less than an ultimatum. But Mr Dulles tried again. On January 13th he raised the heretical speculation that the formula of free, all-German elections might be "not the only method" of unifying Germany. His purpose appeared to be the limited one of trying to induce some realistic understanding of the times into western thought on Berlin. At that stage it was he, and not the shade of Neville Chamberlain in Downing Street, who was roundly accused of selling the pass to the Russians. Mr Dulles did not insist, at least in public, on this flexible approach when he visited Europe last month; and, as it happened, his willingness or ability to adopt such tactics in actual negotiation with Mr Khrushchev became academic after his operation.

The effect of Mr Dulles's removal from the scene was to reveal the limitations of authority, and even of diplomatic experience, in Washington. Mr Macmillan has been charged with having deliberately exploited this incapacity at the top of the State Department. American pique, Gallic pride and west German fears formed ranks in an awkward squad that has carped at both the temerity and the naivety of Mr Macmillan's initiative. When the Prime Minister got his double snub from Mr Khrushchev in the middle of the visit, it was greeted with unconcealed satisfaction by these critics as an inevitable rebuff. Had Mr Macmillan returned with empty hands, the best he could have expected from certain sections of the western press was a heavy-handed patronage as the awful warning to other unbroken colts who thought of bolting from the corral. When Mr Macmillan did, in fact, return with the Moscow communiqué—even although it specifically admitted disagreement about "the juridical and political aspects of the problems involved"—this was found to be even more horrific.

M. François-Poncet in Paris, Senator Butler in Washington, and others have seen Mr Macmillan's attempt to set serious negotiations on foot with the Russians in terms of Munich and 1938. These views are apparently shared by President de Gaulle and Dr Adenauer, who, in close convocation at Marly last week, seem to have agreed on united opposition to even the suggestion of any military thinning-out in central Europe. (Our Paris correspondent reports on the uncordial state in which Mr Macmillan's visit has left the Anglo-French *entente* on page 983). At the same time, Mr Macmillan's ideas for breaking the Geneva deadlock on nuclear tests have had an even chillier reception. President Eisenhower said last week that the study given to these proposals so far did not "reassure us that they are completely practical." General de Gaulle has never wavered from his contention that he cannot accept the suspension of nuclear tests at the Geneva talks—where France (which still has to test its own bomb) is not represented—unless the destruction of existing stocks of weapons is also carried out.

The European suspicions of British policy carry overtones of resentment at the special position that Britain has claimed for itself within Nato; and the breakdown of the free trade area talks—again on British claims of interests and responsibilities outside Europe—has not improved the atmosphere. Although Mr Macmillan was entirely circumspect about not claiming too much for his Moscow mission, his one departure from this, when he spoke at London airport of Britain trying "to give a lead," has been seized upon with disapproving relish. Nor has *The Times*' suggestion that President Eisenhower is in decline, Dr Adenauer old and unhappy, and President de Gaulle preoccupied with other problems done much to smooth the Prime Minister's path to such touchy personalities. Before Mr Macmillan goes to Washington and puts his Moscow efforts to the final test of allied approval, it seems desirable to place the British initiative in its proper perspective.

MR MACMILLAN did not use Mr Dulles's illness to take over the formulation of western policy. In fact, he discussed his visit to Moscow with Mr Dulles in London before he announced it in the Commons, before the Secretary of State went into hospital, and before the recurrence of cancer was discovered. What happened was that Mr Dulles's illness added a new importance to the Prime Minister's mission. At no time did Mr Macmillan give the impression that he

was empowered, or disposed, to negotiate with Mr Khrushchev on behalf of the West. But what his talks in Moscow revealed—as Mr Khrushchev's own words in east Germany have since confirmed—is that the Soviet Union seems prepared to enter into some serious negotiations with the West before carrying out its threat to hand over to the east Germans in Berlin. In the face of this attitude, implying a limited (perhaps, indeed, very limited) opportunity to take some of the heat out of the Berlin crisis before the border posts are changed, the prime necessity of western policy has been at least to show an equal readiness to talk. This seems to be all that Mr Macmillan is trying to persuade the allies to do; and the British argument seems already to have been toned down out of regard for allied susceptibilities on the thinning-out of troops in central Europe.

Pique of any kind must be harmful to the workings of the alliance, and Mr Macmillan will certainly not arrive in Washington, where the western decision must ultimately lie, expecting to be snubbed there. His ideas on a possible approach to the Berlin problem cannot be judged unorthodox beside those to which American opinion has been introduced by Senator Mansfield and Mr Stevenson. What American reports have called an "honest difference of opinion" can be respected. But the Prime Minister's job must be to make the facts clear, as he sees them. From what Mr Khrushchev has been saying it must be concluded that the Soviet Union is acting from strength in Berlin and that it means business there. Mr Khrushchev has agreed to a foreign ministers' conference, but it is plain that he sees no purpose for it except to arrange for a meeting at the summit. The geographical weakness of the western position in Berlin suggests that at this juncture the West has a direct interest in agreeing to talk, and to talk to the one man who determines Soviet policy: Mr Khrushchev himself.

There is a world of difference between being soft and appeasing in actual negotiations with Mr Khrushchev on Germany, and being deft in trying to get serious negotiations on foot at all. What is the choice? President Eisenhower himself said on Wednesday that Berlin could neither be defended by ground troops nor liberated by a nuclear war. The unity of western opinion that could alone justify daring Mr Khrushchev to a nuclear showdown over Berlin—which remains the ultimate sanction—would be better secured by testing Mr Khrushchev's proposals for two or three months than by turning them down out of hand as "wisecracks." This is the heart of the matter. Mr Macmillan is not asking for surrender, but for recognition of the West's true interest and the best ways to serve and defend it. Who leads whom to the summit on the western side does not matter at all, provided it is done with open eyes.

The Muscovites

Back from Moscow, our special correspondent transcribes his notes.

THE big man at the next table introduced himself as a train driver on the Metro. He and his friend spoke nothing but Russian, but they showed an intense, if naive, curiosity about the outside world. Both had quite well paid jobs (the restaurant where we sat talking, Moscow fashion, until it closed, was pretty expensive) and seemed contented young products of Soviet society; one assumed that they accepted without question their masters' daily diatribes against the wicked West. Yet when I gently expressed the hope that they did not believe all they were told about western militarism and aggressiveness, the Metro driver grinned broadly, clapped a huge paw on my shoulder and cried: "That stuff—it's all just propaganda!"

Other unexpected experiences awaited a British visitor in Moscow at the time of Mr Macmillan's journey. In a few brief days, one met a remarkable number of Russians who had read "Dr Zhivago" by various ingenious means, and learnt something of the high repute that Boris Pasternak enjoys even among members of the official "apparatus" that has condemned him; an evening's talk with some "official" writers ended with the impassioned recitation of poems from "Zhivago" and other volumes of Pasternak. In privacy, one saw some examples of the "secret" painting and sculpture, matching western work in vigour, in profundity, and in gaiety too, which young Russians are producing behind the backs of their appointed mentors. On a less furtive level, on a recent Saturday afternoon the only well attended room in the Pushkin gallery on Volkhonka Street was the one where some of the Gauguins, Matisses, Van Goghs and early Picassos of the Shchukin collection are now again on show.

Only five or six miles out from Red Square—say, as far as from Trafalgar Square to Acton or Golders Green—on a road chosen at random, one was already passing through a white and lifeless landscape, past an occasional horse drawing a crude sledge, past sagging huts and little wooden village stores, past churches looming above huddles of one-storey buildings. Back in Sverdlov Square and Gorky Street, with crowds in their Sunday best for once strolling at a leisurely pace in the sunshine and stopping to buy the first mimosa of spring, there was for a moment the atmosphere of a central European town, for all the lack of attractive shops and cafés, of fresh paint and lively colour. But Moscow's fantasy is all its own. In places off Intourist's well-worn track, skull-capped Turkis let their shashlik go cold while they watched, with narrow-eyed intensity, a rouged pseudo-Parisienne chanteuse singing "Arrivederci Roma" and even "Volare" (the swift arrival of the latter tune suggests that Russia is indeed drawing abreast of America). Late after midnight in the February snow, two or three young Muscovites gazed silently at the melancholy statue of Gogol which has been removed from Arbat Square to a less prominent site and replaced by a more cheerfully "positive" monument. At the Lenin stadium a vast audience applauded an ice-show turn in which the chorus girls, scantily disguised as circus horses, wiggled their tails and rumps in provocatively "western" style. At the Lenin library an armed policeman checked each reader's papers at the turnstile.

The personal cult of "our Nikita Sergeyevich," while nowhere near Stalinist dimensions, seems to have grown to a disquieting extent. There is no more talk of collective leadership. The leader's photograph, his torrents of speeches, and the court circulars recording his official activities, dominate the press. Even in literary and artistic journals, he is reverently saluted and cited, and the art shops display and sell his lifesize portrait in colour, so idealised as to astonish anyone who has met him at close quarters: this distinguished patrician, impeccably dressed with a subtle suggestion of tallness, the wart removed, no trace even of the engaging Terry-Thomas gap in his teeth—can this really be "our Nikita Sergeyevich"?

A VISITOR who is grudgingly granted only a brief stay in Moscow, refused permission to travel even to "open" places like Leningrad, and forced to live in a rich and rare Intourist hotel, cannot hope to probe far into the life of the city. Intourist's guides are friendly if bewildered people, but their efforts to be really helpful run counter to the main aim of the organisation, which is evidently to give any intelligent visitor the worst possible impression. (When Mr Khrushchev has a spare moment, he could do much for his country's reputation if he liquidated Mr Kirienko's whole bureaucratic empire, and set up a travel agency instead—an agency which helped people to travel instead of hindering, which booked them at the kind of hotels they want instead of at the hotels it wants them in, which could give an inquirer, say, the telephone number of the Indian embassy without having to unlock a safe). Under Intourist's present rules, one asks a guide to direct the car straight eastwards through central Moscow and is at once taken off to the familiar south-west, where the capital's most impressive new showpieces are clustered around the approach from the singularly unimpressive airport. Once bitten, next time one takes a bus or taxi, wondering fretfully what exactly Intourist thinks it is trying to hide.

There is really no hiding the poor sodden drunks around the sordid little liquor-booths—and if this problem did not exist, what would be the point of the present very sensible restrictions on purchases of vodka? There is no hiding the overcrowded tenements, wynds and shanty towns (some of them ridiculously screened by new high palisades) that extend right into the heart of Moscow—and if they did not exist, the big current rehousing drive would simply not make sense. By western standards the "new Moscow" out at Cheremushki will still be overcrowded, with a high proportion of flatlets with only one bed-sitting room; but these will be a great improvement on their occupants' former homes, where several families commonly have to share one inefficient kitchen, even when, as the group of aerials on the low roof proclaims, each has its own TV set. If the Soviet authorities would let visitors get an honest view of Russia's poverty and problems instead of making futile and irritating attempts to deny their existence, they would generate far more foreign sympathy and understanding. Meanwhile, however, if it remains the aim to show that Soviet society has abolished, say, prostitution, Intourist had better let foreign visitors stay at more modest hotels than those frequented by the colonels, industrial tycoons and other well-heeled provincial gentlemen up in town without their wives. Even a foreigner with only a limited grasp of colloquial Russian eventually gets the drift of the inviting phone calls made to his hotel bedroom around or after midnight.

The prevalence of colonels, in restaurants and official cars, on the Metro and on the pavements of the "West End," seems natural in the military atmosphere of

The Economist

MARCH 12, 1859

SOCIALIST EXPERIMENTS

SIR—*The Economist* was not more lucky in the outline it gave of my views in the literary criticism on Mr Sargant's book, than in the statement that I was concerned in establishing the *Ateliers Nationaux*. Never did I propose that "the Government should enter the market on behalf of Socialism, paying higher wages and selling cheaper goods than individual capitalists can do." Observing, as I have written over and over again, that Society was making, every day, through its representatives, trials of all sorts of destructive engines, while nothing was tried to ascertain what mode of social relations was most likely to be conducive to the happiness of the different members of the community; and fully convinced that a question so vital to the welfare of a nation was worthy of calling forth the exertions of real statesmen, I proposed, at the Luxembourg, an industrial plan bearing an obvious analogy with the educational practice of England, that is, based onthe principle of advancing public money in aid of associations, such as those created in this country for the purpose of erecting and conducting schools, under certain stipulations, and subject to a certain control. According to my plan . . . the grant to a determined number of associations of workmen would have been merely a *loan* secured by mortgage on the establishments to which it was advanced, and not at all a "*charitable donation*". . . . In fact, the scheme was, that the State—by which I mean the nation acting as a whole—should make, with all due caution, a step towards the foundation of co-operative associations, by enabling the workmen to combine their efforts with a view to a *joint benefit*, so as to become gradually self-supporting. Is there anything there which is not just, nay strictly *Christian*? . . . If using the produce of a general taxation for helping the poor into working out their welfare be plundering the capitalists, what must we think of using the produce of a taxation raised partly on the poor, for maintaining a system of institutions in the advantages of which the poor so little participate? . . . It is because you aim at general good, that you advocate the principle of unlimited competition: well, I have *nothing* else in view, when I advocate the co-operative principle. . . . I am, Sir, your most obedient servant,

LOUIS BLANC.

Moscow, where the fighting services have their own sports and shopping centres, their theatre and other institutions, where heroic helmeted figures frown in the "Kitchener Needs *You*" manner from so many posters, magazine covers, and window displays. But, as in the traditional Hindu code, soldiers are not the highest caste in this stratified society. The real Brahmins do not risk defilement by venturing even into the "first-class de luxe" hotels and restaurants (except, on occasion, the new Sovietskaya); unless invited to a Kremlin reception, one glimpses them only when a big chauffeur-driven car cuts brusquely through the scurrying, shopping-laden pedestrians.

Their children, however, are not always so aloof; some of them may be seen whooping it up quite democratically with the rest of Moscow's gilded youth at the Pekin or the Praga. These young people leave a rather favourable impression. They may get noisy in a high-spirited way, but the boorish "stilyag" fashion seems to be yielding to a fair imitation of Mr Gregory Peck's clean-cut young "Man in a Grey Flannel Suit," with a correspondingly polite squiring of young ladies whose dance dresses would often get by in Petersfield or Paignton.

Of the many other castes and cross-sections, the most boring comprises the tired hacks who can do nothing but intone the current "line"; in private, even their own professional colleagues term them "old gramophones." Some of them, however, are redeemed by innocence, like the suburban party functionary who, on the day of the local elections, proudly showed me his charmingly decorated (and quite undisturbed) polling booths, while behind us the electorate prudently demonstrated its loyalty by voting for the solitary candidate in public. (Election day was improved for me by a series of dialogues with voters on these lines: "Have you voted yet?"—"Yes." "Is your candidate a good one?"—"Yes," or "I hope he is." "What's his name?"—"Er . . . ." In at least two of Moscow's fifteen raions, the chaps at the local Agitpunkts seem to have been lying down on the job.)

ONE interesting social group represents the survivors from political prison camps released under recent amnesties. They have naturally developed a pretty extensive and effective old-boy network. They recall, with irony, that most of them had to wait for release up to two years longer than those sentenced for collaborating with the Nazis; with gusto, that some camp commanders, whose long service in Kolyma or Vorkuta has left them unqualified for any other kind of responsible post, are now reduced to working for a living. It would be a mistake to suppose that all these survivors detest the whole system under which they have suffered such harsh injustice. They are Russians—better Russians than the men who framed them; and in talk with a foreigner, they will speak up honourably for their country's achievements.

Another interesting group, small but growing, comprises youngish people in middling walks of life who are getting a modest taste of the foreign contacts that are still mainly reserved for their betters. As these people return from various journeys abroad with boxfuls of western books and a new taste for uninhibited discussion, contact slowly filters down, making those who have not yet had their chance still more impatient.

This impatience can be fully comprehended only by those who have themselves breathed the thin Tibetan air of mentally insulated Moscow, where one finds Russians who are pitifully grateful for even the *Daily Worker* or *Neues Deutschland* as supplements to their own button-lipped press, where the meagre permitted ration of the magazine *Amerika* is snapped up the moment it appears on the bookstalls and thereafter changes hands briskly at three times the published price. It is heartwarming, in casual conversation with a Muscovite, to see his nervousness at having any unauthorised contact with a foreigner yielding to his absorbing curiosity.

It would be misleading to give the impression that the whole population of Moscow feels such a strong curiosity. There are other ways of reacting against drab regimentation. In the bookshops, even the special political bookshops, where piles of new editions of doctrinal works specially issued for the recent party congress still lay about unsold a month after it had ended, the only brisk trade seemed to be in brightly coloured bunny-books for children. Swept into one of Moscow's biggest general stores on a shoving tide of ever-questing shoppers, one found an array of placards announcing "Gifts for Women's Day, March 8th: Special Perfume and Cosmetic Week."

For most Muscovites, cosmetics seem more appealing even than the cosmos, a topic which official publicity has hammered away at, ever since the first sputnik, to well past the point of general boredom. For the more independent minds, however, it appears to be the human unknown beyond the curtain of silence that holds most fascination. It would be rash to claim, after a short and circumscribed visit, that one had any clear idea of what intelligent Muscovites are now thinking. But one does return with a faint suspicion that Mr Khrushchev himself does not really know either.

AIR SUBSCRIPTIONS TO THE ECONOMIST
22, Ryder St., London, S.W.1

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

	Airmail	Air Freight
Australia	£10 6s	—
Canada	—	$25 or £9
Ceylon	£9 0s.	—
China	£10 6s.	—
East Africa	£9 0s.	£7 10s.
Egypt	£7 15s.	—

West Indies	£9 0s.	—

Events in Africa

In the past week there have been important developments in five territories in Africa; the comment on these is placed together to signpost the turbulent crosscurrents in African affairs.

Cooling Nyasaland Down

THE Government has now decided against the immediate despatch of a parliamentary commission to Nyasaland, preferring to restore Nyasaland to the itinerary of Lord Perth's tour; but Lord Perth is now to report on events, not negotiate a new territorial constitution. This decision was probably inevitable because of the unfortunate way in which the sound Labour suggestion for a commission was made, and Mr Lennox-Boyd's equally unfortunate reaction; but it is good news that the Government has by no means ruled such a commission out later.

Mr Lennox-Boyd should earnestly ponder its real advantages. Even those British newspapers which most sensationally played up the allegation of a plot to massacre the whites in Nyasaland are now uneasily asking that outside inquiries should be made. What most needs to be emphasised, however, is not the investigatory functions of a parliamentary commission, but its potential usefulness in making political attitudes at Westminster more bipartisan and in averting the danger of excesses on the spot. The arrival of MPs of all parties would act as an immediate restraint, if restraint is needed, upon the police and the Southern Rhodesian troops; at the same time it would be the most convincing demonstration possible to Africans that Britain has not abdicated its role in the protectorate to the white settlers from Salisbury. And this is an essential preliminary if Lord Perth is now to get anywhere at all with such constitutional blueprints as he may have in his brief-case. The blueprints he was carrying to Nyasaland before this trouble started presumably themselves envisaged an African political advance.

Sir Roy Welensky might find it politic to oppose a parliamentary commission in public, while being rather glad of it in private. He may appropriately be reminded that the Kenya settlers had little fault to find with the white paper which was produced by the parliamentary commission that visited Kenya in 1954 to look into the conduct of the Mau Mau campaign. Only those who have made false statements have anything to fear for their repute from such a report. Unfortunately, Sir Roy has hardly strengthened the credibility of the account of developments in Nyasaland so far put out from Nyasaland, Salisbury and London by discovering that the whole thing (whatever it was) was hatched at the Accra conference between the Nyasaland delegates (who included Dr Banda) and the Russian delegation, with the unfriendly connivance of the Ghana government.

Almost certainly, some African leaders in Nyasaland were making preparations for strikes, which in African conditions often degenerate into riots. The skill with which the Nyasans have been sabotaging communications points to some organisation, as well as, of course, to general fury at the incarceration of the Congress leadership. Some wild and bloody things are very likely to have been said by individual Africans. But it will probably be very difficult to make stick any specific charges that a massacre was really likely, or to make all the emergency measures taken seem in retrospect to have been very wise. The plain fact is that most of the African casualties have been sustained since the declaration of emergency and the detentions (now totalling 400), while no white has been killed; and the job of restoring real tranquillity is likely to be a considerable one. British MPs should certainly see it being done.

Questions for Southern Rhodesia

A BRITISH parliamentary commission, of course, will have no right to discuss events in Southern Rhodesia, which is a self-governing colony. But events there stand in need of some investigation, and it is a world's pity that somebody like Mr Todd is not in the Southern Rhodesian house to ask some questions rather quickly. It was Sir Edgar Whitehead's hurried declaration of an emergency in Southern Rhodesia on February 26th which preceded all other action in the Federation. The suspicion persists that Sir Edgar and Sir Roy Welensky may then have pressed Sir Robert Armitage to follow suit in Nyasaland, for fear that Sir Edgar might be left out on a limb. Mr Lennox-Boyd has denied that there was any such pressure. But why did Sir Edgar declare his emergency in Southern Rhodesia? No officials in the territory have been suggesting that mass trouble was brewing. There had been a rumour of a general strike which proved false; and it was said that a strike would be called if the three month sentence on the Secretary General of the Southern Rhodesian Congress was upheld. But that is about all, apart from allegations, now being sedulously put out, that the Congress in Southern Rhodesia has been resorting to intimidation. This is usual, but hardly a sound reason for an emergency.

Sir Edgar Whitehead first said that the emergency was declared because the Congress in Southern Rhodesia was backing that in Nyasaland; and then that it was because of "general tension in the Federation," although, until Thursday's arrests, the general election campaign in Northern Rhodesia was still proceeding in an outwardly calm atmosphere. Then Sir Edgar contradicted all his explanations by saying that he had been planning the mass arrests for three weeks—long before Nyasaland boiled over. All this has aroused apprehensions that Sir Edgar was only waiting for the flimsiest excuse to jail the African Congress politicians—as well as Mr Clutton-Brock of St Faith's Mission.

Under present law, Sir Edgar would have either to release the detainees or prefer specific charges against them before the end of this month; if he stood by this law, liberal criticism of him would be muted. But now he has introduced a bill, palpably South African in its political inspiration, to make membership of any African National Congress (and presumably any party demanding more power for Africans) into a crime; and an African, when accused, is to be presumed guilty until he can prove his innocence. This may enable Sir Edgar to keep recalcitrant African leaders in prison by a well-worn "cat and mouse" procedure. Meanwhile the present emergency gags the press, though it is one of the ironies of the Federation (which must annoy Sir Edgar, but which Africans should ponder) that news can be telegraphed from Lusaka in Northern Rhodesia which might get pressmen into jail in Salisbury. The most notable absentee at the secret high-level conference held at Blantyre attended by Sir Edgar, Sir

Roy, Sir Robert Armitage and the British High Commissioner was the governor of Northern Rhodesia, Sir Arthur Benson. Sir Edgar has, in fact, a good deal to explain—to the bar of world opinion if not to his own parliament.

Kenya on the Tightrope

IN the shadow of more startling events in the Federation, the Kenya government has also suddenly put thirty African politicians in jail and banned two newspapers. But this should not be seen as another example of Kenya's aping of Southern Rhodesian policies. For one thing, the Kenya government has not thrown out Mr Stonehouse, but has let him look at prisons as he desired. This was wise, especially as he visited them with other journalists. In the second place, the Kenya government has banned an extremist white paper (*Independent*) as well as an even worse organ of black racialism (*Uhuru*). Whether it was wise to put the editor of *Uhuru,* Mr Agar, in prison along with thirty other black political undesirables is another matter. It is advisable to keep the number of "prison graduates" to a minimum in colonial political evolution. Mr Mboya could be politically embarrassed by seeing his followers receive the crown of martyrdom but being denied it himself. The danger is that he might now feel obliged to court it.

It is therefore timely that Mr Michael Blundell, the Minister of Agriculture, should have made a statesmanlike bid to break the deadlock in Kenya this week, and to divert everybody's attention to more constructive channels. He has forthrightly called for a round-table constitutional conference; this is virtually what Mr Mboya and the other African elected members (as well as the Asians and a few liberal Europeans like Mr Vasey, the Minister of Finance) have been demanding. If Mr Blundell gets enough backing from the other Kenya white politicians, this should permit the governor and Mr Lennox-Boyd to reverse their former stand and announce that "a new situation" has been created. Even so, it would be unwise to expect Mr Mboya, who has a suspicious nature, to accept his own suggestion at Mr Blundell's hands; moreover, such a conference would require careful preparation in order to prove fruitful. But to offer it is to test the sincerity of all parties in Kenya. It is to be hoped that enough liberalism and common sense survive to make possible a fresh and methodical approach to a compromise in Kenya.

Ghana's Guided Democracy

IN Ghana, which is accused of plotting against the security of multi-racial territories in colonial Africa, two members of parliament and an army major are being tried for plotting against the security of Dr Nkrumah. This trial has had its *opéra bouffe* moments, but its background is not particularly funny. Neither the announcement of a firm date for the Queen's visit (to which all Ghanaians look forward with unalloyed pleasure) nor the jollities occasioned by the second anniversary of independence should be allowed to obscure the constitutional transformation which is rapidly taking place in the country. This takes the form of steady advance to what Dr Nkrumah's supporters call centralisation, and his enemies call dictatorship. The regional assemblies, which the Convention People's Party always said they would destroy, have been duly abolished. Party politics have been further narrowed by the new law which penalises the Opposition by laying down that any members of parliament who boycott meetings should be deprived of their seats (which will probably then be won by CPP adherents). No less important is a new rule which alters the procedure for civil servants' promotion. Formerly only promotions to permanent secretary were made after consultation with the prime minister; now this consultation must be carried out for promotions to the much more numerous posts of director in departments and government corporations, so that the prime minister can ensure that only men he thinks he can trust shall advance in any minister's department. Most serious of all are the new rules for appointments to the bench. The judicial service commission is to be dissolved. The prime minister is to advise the Governor-General on appointments of puisne judges, and is to be concerned with the Chief Justice in the appointment of appeal judges and magistrates.

Very little, if anything, is left of the safeguards for minorities entrenched by Mr Lennox-Boyd in the Ghana constitution; this may have something to do with the Asantehene's decision to attend the anniversary celebrations in Accra this year. But visiting business men and foreign officials are impressed by the fact that, by whatever means, Dr Nkrumah is master in his own house and Ghana is an island of stability in Africa's ferment. Accordingly the publication of the second development plan this week is quite well timed; and, indeed, in detail it seems to be a sensible piece of economic planning, which tries to take some account of the physical capabilities of Ghana. Of its proposed expenditure of £350 million in five years, £100 million is for hydro-electric development and £125 million is the core-plan, regarded as urgent. The plan appeals to private investors, friendly governments and the world bank; and probably Dr Nkrumah's Ghana is as likely to attract foreign money as any part of Africa just now—but not necessarily for reasons that liberals will approve.

Congo Cataract

THE Congo Republic created within the new French Community now faces the disintegration into tribal fiefs that Dr Nkrumah has resisted in Ghana. Its government says that it will hold a referendum in the northern part of the country in an attempt to clarify the political situation after the tribal rioting in Brazzaville last month. The principal northern tribe, the Mbochis, who came off badly in the Brazzaville fracas, are adherents of the opposition party in the Congo assembly, the African Socialist Movement. The party's leader, M. Jacques Opangault, is still in prison, charged with responsibility for the rioting. In their belligerent mood, the Mbochis are now to be asked if they prefer to remain within the Congo Republic or to set up an independent state of their own.

The Mbochis are not thought to be in any condition to set up a republic of their own; if they do vote for secession they are likely to apply to join the Central African Republic (formerly Oubangi-Chari) across their northern border. The prime minister of the Central African Republic, M. Boganda, is an advocate of the United States of Latin Africa—by which he means the four states of French Equatorial Africa, Cameroon, the Belgian Congo and Angola. How he would welcome the Mbochis remains to be seen. They could scarcely hope to win any economic benefit from the change. Congo's apparent recognition of a right to home rule for any dissatisfied areas is an ominous development: that way tribalism, not merely balkanisation, lies for central Africa.

NOTES OF THE WEEK

FRANCE

The Gaullist Recession

THE first round of France's municipal elections last Sunday confirmed that plenty of Frenchmen are having second thoughts about Gaullism. The results from Paris and the dozen other cities of over 120,000 inhabitants where proportional representation was in force showed the communist vote markedly on the rise; nearly three months of *sévérité* have put the party back where it was before the Gaullist tide wrested away nearly a million and a half communist votes last November. In Paris itself the communist share of the poll soared from November's 19.9 per cent to 29.1 per cent—an increase even on the last communist municipal vote in 1953. At Le Havre, the one large town where a communist mayor stood at bay against a determined Gaullist offensive, the party picked up 10,000 votes compared with November; but control of the council depends on the two socialist members' decision on which side to support.

M. Soustelle's UNR held on stoutly in Paris, where it got 21 per cent of the poll (22.2 last November) and in Bordeaux, another of Gaullism's customary strongholds. But even in Paris the party has not touched the high mark the Gaullist Rally did in 1947. At Lyons M. Soustelle himself, hoping to capture the mayoral chair that M. Herriot occupied for so long, was decisively turned back by the local Radical champion, M. Pradel. Although the socialists did well at Lille and Marseilles, M. Mollet has been left in danger in the second ballot at Arras. The socialists seem to have profited locally by alliances with Left and Right; the party can now expect to hang on to most of its *mairies,* a gratifying position that may scotch recent murmurings of revolt against M. Mollet's leadership. The new *Union des Forces Démocratiques,* although scarcely a mass movement, elected M. Claude Bourdet in Paris, and M. Mendès-France's friends were returned at Louviers.

The full picture will not be clear until after the second ballot in the smaller towns this week-end, but the UNR is not hiding its concern at the check. Coalitions against the Communists may arrest the left-wing tide. The new municipal representatives will shortly go to the polls themselves to elect the Senate—a body that will have more influence, perhaps much more influence, in the Fifth Republic than in the Fourth. The Communists can hope to be better represented there than in the assembly. As for the assembly itself, it already seems to be out of step with the present change in public opinion.

Stifling the News

THE democratic professions of M. Debré's government are put in doubt when it treats the press as it has treated the French weekly newspaper *L'Express* this week. *L'Express* was seized in Paris on Wednesday night—an experience it frequently undergoes in Algiers—because, it was officially claimed, it printed a "scandalous interview" which "indecently praised" the Algerian rebel army. In fact, the article was a straightforward piece of reporting in which a rebel officer, Commandant Si Azzedine, described negotiations he had had on a local cease-fire with General Massu and the French authorities in Algiers. Neither *L'Express* nor its correspondent, M. Jean Daniel, offered any comment except to point out discrepancies between Si Azzedine's story and official French statements.

The touchiness of the authorities is no doubt understandable. Si Azzedine, after being captured last November, had several meetings with General Massu in which he spoke of his own anti-Communist views and of divisions between the rebels in Algeria and those in exile. The French had high hopes that he would arrange a local cease-fire, as he had promised, and prepared for a considerable publicity success. But Si Azzedine disappeared in January and has now turned up in Tunis, eager to fight for what he believes to be his country. It is all very embarrassing for M. Debré, but stifling the news could prove even worse in the world's eyes.

IRAQ

Qasim Survives

EVER since the death of Nuri es-Said there has been considerable doubt whether Iraq has found its new master. General Qasim led the revolution but has since been obliged to juggle with the forces that helped him to succeed; it has never been clear how far he was juggling with them or they with him. Basing himself on the army and his popular appeal, he has been trying to retain the support of both the Communists and the anti-Communist pan-Arab nationalists. But the army was itself divided—particularly since the breach between General Qasim and Colonel Aref—and the rising at Mosul on Sunday (further discussed on page 979) shows beyond doubt the army's uneasiness over the alliance between communism and nationalism.

The revolt was essentially an attempt to discard the Communists and keep Iraq from diverging from the main stream of Arab nationalism—as marked out by President Nasser. Trouble had been brewing in the north for some time. The death sentence on Colonel Aref, the cabinet shuffle and the economic agreement with the Soviet Union confirmed latent fears about the way Baghdad was running things, and when a noisy communist-led horde arrived at Mosul for a "peace day" celebration, the spark was fired. Colonel Shawaf's coup has been checked before it had time to develop into full-scale civil war, and for the moment the worst has been avoided—for the oil companies as well as for the Iraqis. The unhappy result of the revolt is that it may force the Iraqis to take sides for either Communism or Nasserism, instead of steering their own course in between.

The danger is that General Qasim may now swerve towards the Communists. Before the rising his independent footing had already become dangerously narrow. Relations between Iraq and the United Arab Republic have been

brought to breaking point by the expulsion of all the members of the UAR embassy in Baghdad but the chargé d'affaires, and General Qasim's spokesmen are freely accusing President Nasser of inspiring the revolt. Initial UAR reaction to the revolt was cautious, partly from a natural reluctance to take a line until the course of events was clearer; but now insult is being answered by insult in a vituperative slanging match.

General Qasim's best hope lies in the fact that it is in nobody's interest to rock his boat from the outside. President Nasser, however much he may distrust General Qasim, (and he has dropped all his earlier euphemisms about international communism) has no wish to become responsible for the government of Iraq in its present state. Any Russian temptation to interfere is held in check by the thought that the Soviet Union cannot strengthen its position in the one Arab capital, beyond a certain point, without risking its influence in the other. The Russians, too, are playing a balancing game.

GERMANY

Mr Khrushchev's Variations

WHILE Mr Macmillan has been exploring the icy wastes of Paris and Bonn Mr Khrushchev has been playing variations on his Berlin theme. He continues to combine stubborn pressure on the substance of the issue with a demonstrative willingness to talk. He said at Leipzig on March 5th that Russia would not carry out its threat to hand over control in Berlin on May 27th to the east Germans, if the West had shown willingness to negotiate and a conference was still going on. On Monday he put forward a new variation on his Berlin plan to a mass meeting in east Berlin. He was not opposed to American, British, and French troops staying on in the western half of the city as part of an international garrison "to guarantee its status as a free city and prevent interference in its internal affairs," but in that case the garrison would have to include Soviet troops; it might include neutrals as well.

Behind this new suggestion there is, apparently, a fairly detailed plan; its outlines are discussed by our special correspondent on page 980. Obviously it contains snags for the West, but equally obviously the West will have to find out more about it. At the same meeting Mr Khrushchev flatly rejected the suggestion that has been made (though not officially) in the West that the proposal for a free city be applied, not just to west Berlin, but to all Berlin. The local Russian objectives clearly remain unchanged—to end the four-power occupation regime and with it the western allies' special position in west Berlin, to absorb east Berlin into the German Democratic Republic, to secure recognition for the east German regime and to give it control of communications with the city.

While they remain unchanged, they are, together, unacceptable to the West. But Mr Khrushchev's willingness to talk is also important. On the narrow issue of Berlin, where his position is so threatening, it does not seem particularly helpful. The western powers cannot do as he wishes. What they want to know, or should want to know, is whether the Russians are prepared to move on broader issues which would put the Berlin issue in a different light. On Monday Herr Ollenhauer, the leader of the west German Social Democrats, had a talk with Mr Khrushchev at the latter's invitation. It is the first time the Russians have made such a gesture to the west German Socialists. But on the substance of the wide issues of German unity and European security which the two discussed, Herr Ollenhauer evidently got cold comfort.

TELEVISION AND THE ELECTION

Viewers' Political Rights

NEGOTIATIONS between the three political parties, the BBC and the ITA about the coverage of the election by radio and television are nearing completion and a statement of some sort is believed to be imminent. It is very important that such a statement should be explicit enough to permit a full public airing of the question in advance of the dissolution. The public must not be confronted with agreed ground rules for the electoral debate as a *fait accompli* at the same time as the debate itself is about to begin.

All indications are that the main impact of the coming election on the voter's consciousness will be made through the television screens. Although the army of protest which will turn out for rallies on nuclear disarmament or Nyasaland continues to defy the trend, all the experience of party political meetings is that audiences are not to be lured away from the telly (except, of course, when they think that television cameras will be there and they want to appear on the screen themselves). This situation should be exploited to ensure that this time the British people will be the best-informed voters who have ever trooped to the polls.

This will never be accomplished if the task is left exclusively to the parties. It looks as if, in addition to the parties' own private political telecasts (which in striving to be less dreary than usual may suffer from over-slickness), there will be some degree of ordinary news coverage of the election in the field on both television channels. This will be a most welcome contrast to previous campaigns, in which the BBC's technique was to stop all political programmes (except the party politicals), prevent comedians making political jokes and wait for the election to go away. But it is vital that the choice of constituencies and issues to be covered in the corporations' own programmes should be left in the unfettered hands of the BBC and the ITA.

Why Cosset Politicians?

ELECTIONS are for the benefit of the public, and are decided by those who at this stage "don't know"; they are not a private party for partisans. Television networks, like the press, should be a countervailing force to party politicians' restrictive practices. This is why legitimate suspicions are aroused by any suggestion of secret covenants secretly arrived at between the two television authorities and the big parties' professional organisations. Admittedly there may have to be a few ground rules, openly acknowledged well in advance. But the "South Ealing formula," which has been used in some by-elections, should not be one of them.

Under it any one of the candidates can veto television coverage of the campaign in a constituency; candidates deliver brief speeches of equal length to an invited bipartisan or tri-partisan audience (equal portions of which have been recruited by each party); and questions, submitted in advance, can be rejected by any of the participants.

One of this formula's manifold weaknesses has just been exposed in the Harrow East by-election, where the Conservative candidate has kept the cameras off limits because it is not in his interest that people should know about the third, *poujadist*, candidate, who threatens to walk off with some of his votes.

But in addition it is quite wrong to represent the country as consisting of two or three teams of knock-down drag-out partisans. Where in this formula is there the space for the reasonable questions of reasonable men, who may watch the screen or go to meetings for the old-fashioned purpose of finding out what the parties say before deciding how to vote?

A third element in the television election, in addition to the formal presentation of the parties' merits by themselves and the news coverage of their strivings in the constituencies, should be various forms of prying into personalities and issues under conditions that are not in the least controlled by the parties. There could be television debates (what would a debate between Mr Aneurin Bevan and Mr Selwyn Lloyd on foreign policy not do to clarify the choice of the doubtful viewer?); feature programmes on minor candidates; interviewing of party spokesmen by experts, and so on. The BBC should put each of the three channels of sound broadcasting to appropriate use—the thought of having their policies dissected on the Third Programme might have some small salutary influence at headquarters (and in a close election even the egghead vote counts).

Perhaps the public will shortly be reassured on all these grounds. In that case it will have done no harm to have asked.

LABOUR PARTY

Mr Mikardo's Table Talk

AT a lunch at Leipzig last week, Mr Mikardo, the Labour MP for Reading, got into conversation with Mr Khrushchev. Mr Mikardo recalled the famous row between Mr Khrushchev and Mr George Brown at the Labour party's dinner to the Soviet leaders in London in 1956, and Mr Khrushchev said that "it was Brown who made the difficulties." According to the British journalists present, Mr Mikardo sycophantically replied:

> The position of the Labour party has fallen ever since that day. And that day was also the end of Brown's political career.

This statement was, of course, intensely irritating and factually untrue. It was irritating because it must have confirmed the Labour leaders' worst and most infuriated suspicions about the sort of things that are habitually said by those of their left wing MPs who most often attend east European embassy cocktail parties. It was untrue because a month after the Khrushchev dinner in 1956 the Tonbridge by-election in fact showed the first big swing against the Tories in the country; *post hoc* (though not *propter hoc*) it was support for the Conservatives that declined for about two years, while support for Labour slightly increased. Moreover, if a Labour government comes to power at the next election Mr Brown will certainly get a cabinet post, while Mr Mikardo almost equally certainly will not.

Nevertheless, the really interesting thing about this incident will be to observe Labour's method of handling it, compared with what would have happened during the Bevanite split in the last Parliament. Four years ago a posse of trade union leaders (Mr Brown is a trade union MP) would have hurried round to Transport House and demanded that Mr Mikardo be disciplined. Mr Morgan Phillips would have said one thing, and some of his subordinates at Transport House would have waited to hear what he said before themselves saying the opposite. There would have been secret meetings of the Labour executive, leaked by both sides to the press, and a great grinding of axes and knives. So far, a similar comedy of passions has not been set afoot this time; it looks as if the undoubted fury aroused by Mr Mikardo's reported remarks will not be allowed to override the common-sense attitude of treating his table talk with indifference. Mr Gaitskell's chosen tactic seems to be to prevent the Khrushchev-toadying left in his party from organising into blocks, but to let individual sillies spout.

CYPRUS

Grivas Accepts

UNCERTAINTY over Eoka's attitude towards the London agreements on Cyprus has played a major part in moderating the Cypriots' enthusiasm for the settlement. Last Monday, however, over a fortnight after the agreements were signed, Grivas broke his silence; impressed no doubt by the Cypriots' obvious reluctance to forgo the chance of peace and stability, he said that he was "obliged to order the stoppage of the struggle" and he exhorted the Cypriots to close their ranks and unite round the Ethnarch, "the symbol of unity and power." He added that although this was not the solution to which they had aspired, he preferred to accept it, and to retire from politics either in Cyprus or in Greece, since the alternative was a national division in which they would lose everything. With frank reluctance, Grivas has thus done the right thing.

Sir Hugh Foot and the British authorities, for their part, have been introducing the measures needed to bring the island back to normal—and presumably they can now press on with greater confidence. The release of the detainees has been proceeding steadily ever since the agreement was signed. Under the terms of an amnesty announced on February 27th, some 250 political prisoners are being gradually released. Last Sunday the Governor announced that of the 72 political prisoners convicted of more serious offences, 23 would be sent to Greece and the rest released; the cases of those Eoka men still at large who are wanted for various reasons by the authorities are now under consideration. Last week, the Governor took a calculated risk by deciding to disarm the Cyprus police immediately. This week, with the archbishop in effect providing liaison between the authorities and Grivas, detailed arrangements have been worked out, and are being put into effect, for the collection of Eoka arms and ammunition.

Thus the way is being cleared for Sir Hugh Foot and the Greek and Turkish representatives to lay the foundations of the island's independence. Some friendly preliminaries have already been completed; and however equivocal the archbishop's role in the past, nothing that he has said or done since his triumphant return suggests that he is not genuinely anxious to make a success of the compromise settlement. Formidable stumbling blocks lie ahead; but the goodwill and good sense that all concerned are showing encourages the hope that they may be overcome.

EUROPE

Steel after Devaluation

WHILE the Paris-Bonn entente continues to present a cheerful political face to the world, Franco-German relations within the coal and steel community, the parent venture of the Six, are under some strain. Ever since the devaluation of the franc at the turn of the year German steelmakers have been complaining that cheap French steel has been undercutting them on the home market. The devaluation has evidently worked too well for their liking. They have been demanding imposition of an export tax by France to redress the balance.

The French, who have so often had difficulties in keeping up their end, naturally dislike imposing such a tax the moment they have attained a competitive position. Dr Erhard, the west German minister of economics, is anxious to sustain the downward pressure on German steel prices which the French competition is bringing. So far, in any case, the French price advantage has not brought spectacular inroads into the German market. The high authority of the community at Luxemburg dislikes the idea of a tax which would infringe the principle of the common market.

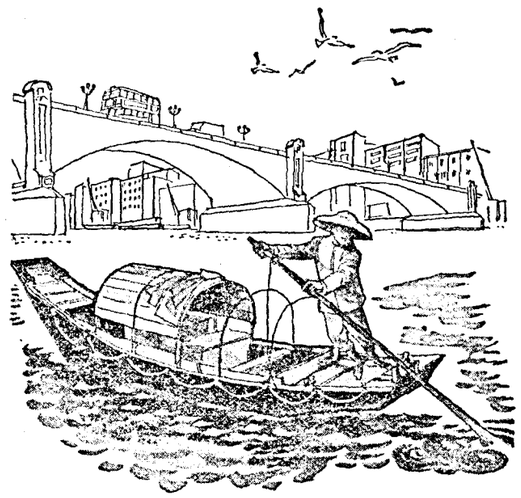
None the less, under German pressure, it has felt compelled to make some proposals for French action. It has suggested a 4 per cent tax on French steel exports, which would be gradually reduced to nothing over a period of eight months. The German steelmakers would like more; they may still be obliged to keep their prices below last year's. But the tax remains a disagreeable pill for the French to swallow.

Two morals can be drawn. The first is that the real test of a common market system comes in time of recession. It is a moral which is only too obvious in coal. The second is that a devaluation, bearable between nations protected by tariffs and quotas, is a great deal more uncomfortable where a common market already exists. So far the coal and steel community has survived both tests; in steel this is due as much to the friendly relations between the industries in the community as to formal obligations. For the future, much depends on whether recovery comes quickly.

OLD AGE

The Right to Work On

LAST Friday's debate on the employment of older workers showed a welcome shift of parliamentary attention from the old as social service beneficiaries to the old as active and self-supporting producers. It is a shift which ought to be encouraged in every possible way. Two generations ago, Britain had one person of the present pensionable age for every ten workers; today there are two; by the mid-1980s there will be three; and the economic burden will, with higher pension rates, grow ever more steeply. At present the encouragement to elderly workers to work on beyond the minimum retirement age for a higher pension is far too small; in its impact on the ratio of producers to non-producers, this encouragement is probably cancelled out by the "earnings rule," which penalises all but the most insignificant part-time earnings. And in the field of private occupational pension schemes retirement now casts an increasingly long shadow before. It is notoriously difficult for the older man, even well short of retiring age, to find in case of need an employer who will fit him into the existing private structure.



The Pension Bill's provision for transferability of occupational pension rights will do something to mitigate this latter difficulty. But a drastic change of general attitudes is more necessary than any particular legal reform. It should be recognised that just as a man is likelier today than fifty years ago to be still alive at eighty, so he is likelier at sixty-five to be fit and anxious to go on earning. Also, both human and economic considerations demand that instead of the clean break now regarded as normal—full time and overtime this week, the beginning of lifelong idleness the next—there should be more possibility of step-by-step retirement to less exacting or part-time work. There is no real reason why such a retreat down the ladder of "seniority" should be thought humiliating or odd.

Finally, ideas about the treatment of older workers in cases of redundancy need radical reshaping. Far too many trade unions and employers have agreed during the recent recession that the right man to lay off first is the older man, for whom loss of his job probably means an enforced, premature and wasteful retirement; instead, a humane redundancy policy should steer dismissals first to the younger man, who can make a fresh start in an expanding firm, occupation or area. It would take much ingenuity to devise incentives to encourage employers in such a policy. Should Britain start thinking about a national severance pay scheme, as a supplement to unemployment benefit, which would give the highest severance pay to those with the longest service? If, on the analogy of the Pensions Bill, employers were allowed to contract out of a national severance pay scheme only if they made equally good private arrangements, they might begin to find it more expensive to sack older workers. Or might one even start discussing whether employers' contributions to the national insurance fund itself should vary inversely with the age of the worker? It is time, at any rate, for people to start throwing out such ideas. The seven ages of man no longer fit the old-time scheme; and the sooner the need is recognised for a psychological transformation the better.

DEFENCE

Pullthrough

THE debates on the estimates should have left the service ministries with a chastened awareness of their shortcomings in such gritty matters as signals equipment; but it cannot be said that they have thrown any more light on the gaps in defence policy which were shown up in the defence debate. Debates on estimates are usually more notable for ingenious suggestions than for the unfolding of grand themes, and it is perhaps these that should be recorded. Two or three important points were argued which will have to be raised again soon. One was the growing danger that while under voluntary recruiting Britain may get enough men for small all-regular forces, it may not get enough officers. The inadequate entry into Sandhurst is causing perturbation, and the naval officers who always thought the reorganisation of Dartmouth was wrong because it would discourage the intake of the "hereditary" naval officer element are saying "we told you so." It is obvious that the services need, for modern officer material,

Expecting a shipment from Singapore? If trade with the Far East interests you, that is something you have in common with us. The largest British Bank established by the Far East for the Far East, we have branches in twenty countries throughout the world and maintain a complete network of agents in the other principal trading centres. Up-to-date details – on currency matters, credit information, local conditions, market statistics *et cetera* – are continuously channelled through our London office. Why not call on us next time you are in town? Our experience and our facilities are yours to draw upon whenever you need them.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

HEAD OFFICE: HONG KONG

LONDON OFFICE: 9 GRACECHURCH STREET EC3

Branches throughout the Far East; also in New York, Hamburg and Paris. Offices of our Subsidiary in San Francisco and Los Angeles.

SAFE and SOUND

Total assets standing at over £304,000,000! Here is a level of security to satisfy the most critical investor. Another important point: the yield is attractive too—currently 3½ per cent per annum with income tax paid by the Society. This represents £6.1.9 per cent when income tax is paid at the standard rate.

There are now some 600,000 Abbey National investors. Their savings are safe and profitable. Their future is the brighter for their wisdom in the past.

REGULAR SAVERS!

Why not enquire about BUILD-UP shares—the simple, profitable Abbey National plan for those who can save between £1 and £10 per month?

I S R's Intol... Stable Price, Consistent Quality, Immediate Delivery

I.S.R.—The International Synthetic Rubber Co. Ltd.—
is 'on stream' at Hythe, near Southampton, 24 hours a day, every day of the year, producing 'INTOL' S B Rubbers.
Production of 'INTOL' is constant and completely predictable, so that delivery promises can be met without fail. The quality of 'INTOL'—produced in the world's most modern synthetic rubber plant—never varies. The price is unaffected by day-to-day market fluctuations.
'INTOL' is the only British-made S B Rubber on the market.
Three grades are in production.

Full technical data are available on all INTOL grades. I.S.R. offers a full advisory service to manufacturers.

the gene for leadership combined with two or more A level passes in GCE ; and as industry, the civil service and the professions want exactly this combination also, some competitive bidding is inevitable. The first need is to give potential officers a clearer picture of their likely future careers both in and out of the service. Mr Sandys should also note how many MPs who study defence still think that 200,000, not 180,000, is the right size for an all-regular army.

The debate on the navy estimates brought forth a notably well-argued case from Mr Paget for a navy devoted much less to anti-submarine warfare, and much more to the job of moving the army to the theatres of limited wars and backing it up there from carriers. At present this aspect of the navy's cold and small war role falls, like transport command, between the stools in all the services ; it is pre-eminently Mr Sandys's job to stop this disastrous process in the Navy, as he has tried to stop it in the Royal Air Force. The airlift for troops and equipment is at last increasing ; but so are the air barriers over Africa and Asia, while the number of British bases and staging points is diminishing. The natural insurance seems to be a navy that is also capable of landing 10,000 to 15,000 men equipped for battle on any given shore. MPs have also begun to think more about means of economising army manpower in police work ; Mr Goodhart coined a nice phrase that we now need a "mob-deterrent," presumably of a chemical nature, to prevent riots without killing so many rioters in situations such as that in Nyasaland. This is a point worth chasing, even though other suggestions for the use of African troops to save British manpower all over the world seem rather extraordinary suggestions to raise just now.

CHINA AND JAPAN

A Rough Wooing

PEKING has once again decided to tackle the problem of its relations with Japan, but the way it has gone about it is hardly friendly to the present Japanese government. Leaders of the Japanese communist party arrived in Peking on February 23rd ; nine days later, the inevitable joint declaration expressed concern at the "current situation in Japan, and especially at the fact that American imperialism, working hand in glove with Japanese reactionaries, is plotting to revise the US-Japanese security treaty."

The declaration suggested that a peace pact and non-aggression treaty should be concluded between China and Japan ; echoing Mr Khrushchev's proposal for a peace zone in the Far East, the Japanese communists demanded "the establishment of a zone free of nuclear weapons in Asia." It was further proposed that diplomatic relations and close economic and cultural exchanges should be established between China and Japan. The responsibility for the absence of such ties, according to the declaration, "lies entirely with the reactionary ruling clique in Japan." On the day this declaration was published, another Japanese delegation left for China—this time a socialist mission, which is now being treated to similar proposals in Peking. In view of these developments, the newly formed cabinet council on foreign affairs in Tokyo declared that Japan should proceed cautiously in the matter of improving relations with communist China.

Since Mr Khrushchev first put up his idea of a "zone of peace" in the Far East, a Chinese campaign of this kind has been expected in Tokyo. Although the Japanese press has speculated on the possibility of ambassadorial talks between the two countries, and although even Mr Fujiyama, the foreign minister, seems to be of the opinion that now is the time for his government to negotiate, it seems extremely unlikely that an official meeting will take place. The present Chinese campaign looks as if it is primarily intended to bring about a change of government in Japan. The Chinese communists take it for granted that a left-wing Japanese Prime-Minister would come to Peking to negotiate ; their problem is to get him installed in Tokyo.

INDONESIA

The Turn of the Wheel

THE constitutional wheel has turned full circle in Indonesia, where the assembly is to be asked to approve a return to the 1945 constitution which ushered in the Indonesian Republic. In 1949 the Dutch helped the Indonesians draft a second constitution for the short-lived Republic of the United States of Indonesia ; when the Indonesians misguidedly dropped the federal structure, a third constitution—that of August 15, 1950—marked the advent of a unitary state. The 1955 general elections produced the present constituent assembly which has been labouring, under various handicaps, to draft a more permanent document.

One of the handicaps was—and still is—the rebellion of colonels and economists which has deprived the constituent assembly of at least a portion of its mandate. Another handicap has been President Sukarno's "concept" of guided democracy. In its original form, the concept called for an all-party cabinet supervised by a national council representing all groups and strata in the community. The anti-communist parties, particularly the liberal Moslem Masjumi, strongly opposed the inclusion of the communists in the government and in fact they never have been included.

Now President Sukarno is offering a new concept to replace the old one. In a recent speech proposing a return to the 1945 constitution, he said it provided all the elements of guided democracy: a parliament, a high advisory council and a body drawn from members of parliament and representatives of regions and social groups. The communists (PKI) have given the proposal a guarded welcome ; it is clear, however, that it is a blow to their hopes of coming to power at the next general elections. If the 1945 constitution is readopted, more than 50 per cent of the membership of parliament will be "functional," that is, nominated by various groups including the army. Communist influence is therefore almost bound to be reduced.

Although Dr Sukarno did not dwell on this point, the 1945 constitution also provides for presidential rule ; the President will therefore be the chief executive as well as the head of state. There are to be presidential as well as parliamentary elections, but no date has been fixed for either. As considerable areas of Sumatra and Celebes are still under rebel control, the new design for the Indonesian state may not become a reality for some time. President Sukarno intends, however, to give his proposals the force of law before leaving on a tour of Latin America next month. But the persistent reports of his ill-health cast a doubt on his availability as a candidate for another term as president when the time comes.

NATIONAL UNION OF TEACHERS

What Teachers Want

THE annual conference of the National Union of Teachers will take place in a fortnight's time while the negotiations for more pay are proceeding in the Burnham committee; it is not therefore surprising that the agenda for the conference should contain motions demanding the full impossibilities of the £600-£1,200 basic scale plus larger increments, a 10-year incremental period, and more special allowances. Most of the remaining motions add up to total incomprehension of the educational equation. Some are merely defensive—against any reduction in the length of teacher training or any lowering of entry qualifications. Others call positively for the reduction of all classes to a maximum of 30 pupils, a final examination at teachers' training colleges of degree standard, a sabbatical year for all teachers, a lower school entry age and a higher school leaving age; and one motion, perhaps more calculating but also more breathtaking, proposes to add that children should be given part-time education rather than be left to the mercies of unqualified staff or be taught in oversize classes. If the motions were intended to reflect the maturity of the professional outlook of teachers, the agenda would be a sad document; but of course the militants get their motions in, but do not necessarily have them carried. Some of the motions have been entered against other union members. Though the agenda carries motions urging absolute parity between all branches in the profession, and other such nonsense which probably emanates from women at the primary school teaching end of the profession, the grammar school teachers have their motion too, and there is evident restiveness about the way in which the union conducts its pay claims.

Nobody would expect an agenda to reflect a considered professional approach to the problems of education, in a period when difficult choices must be made between size of classes, length of training and provision of training facilities. In fact, it is bound to suggest a belief in the idea that highly-qualified teachers can be plucked in unlimited quantity from gooseberry bushes. But is it too much to ask that after a year in which the limitations in educational resources, and the alternatives which these impose, have been exhaustively analysed, the final resolutions of the conference shall suggest just such a considered professional view? Or do members of the teachers' union think that it is mainly the size of the pay packet which qualifies people for professional status?

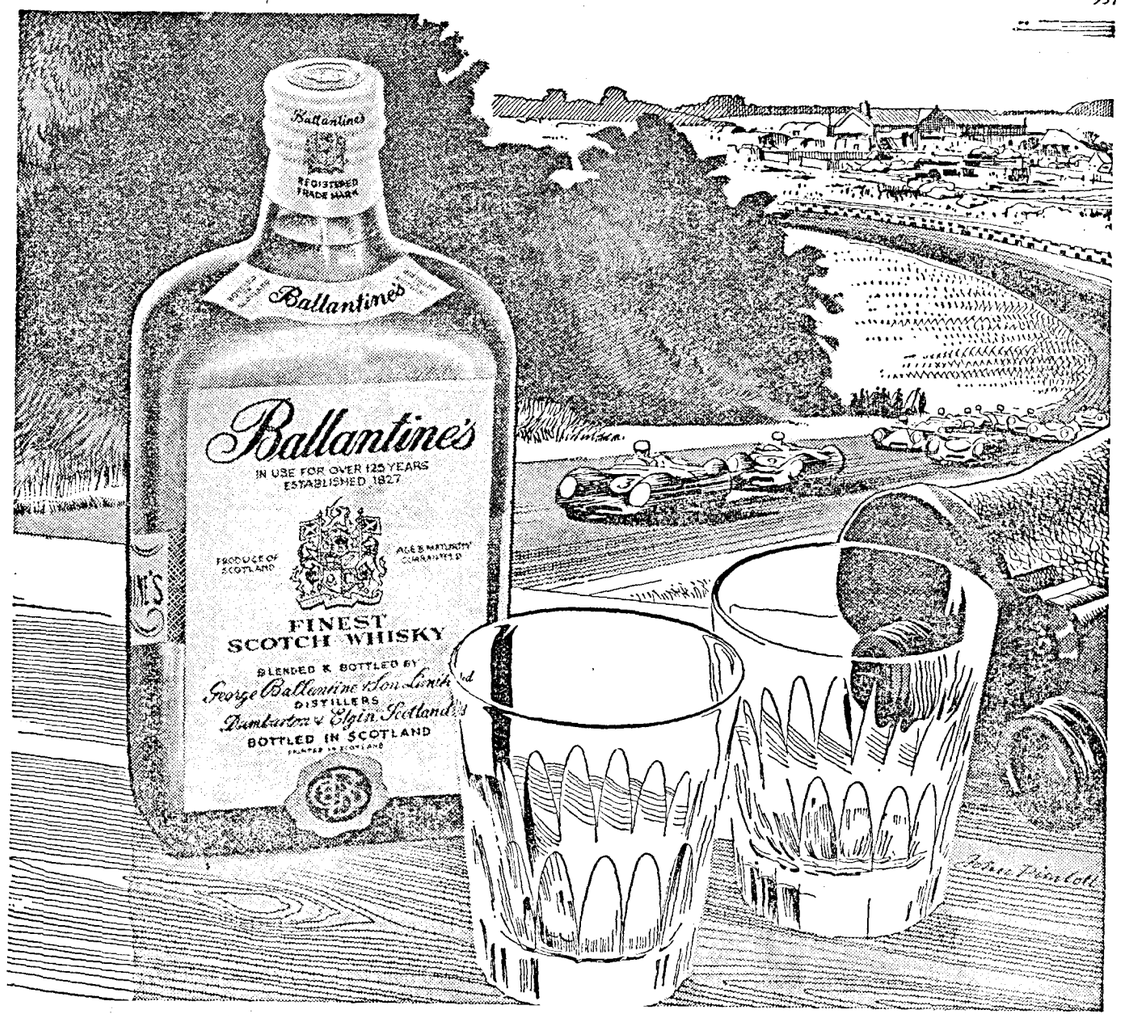
MISUSE OF PRIVATE BILLS

Coup D'Eau at Pocklington

A FRESH instance has occurred in Yorkshire of a bad and growing habit by large municipal corporations and nationalised industries of short-circuiting local public inquiries by means of a private act of Parliament. The Sheffield Corporation, which wants more water, has decided to take it from the River Derwent. This will involve the dumping of a large amount of sludge. Between them the corporation and the waterways section of the British Transport Commission have hit on the idea that the ten-mile canal at Pocklington, which is in poor repair and has long ago seen its last barge, would be an excellent ditch for that purpose. The commission has consequently arranged for an extra clause, allowing it to transfer the canal to Sheffield Corporation, to be inserted at the last minute into its own catchall private bill, which is already before the House of Commons. The corporation would then be relieved of any statutory obligation to keep the canal open. The exact terms of the new clause were published only last week, and any local objectors have only until April 8th to register their opposition at Westminster.

The first that anyone heard of this proposal locally was towards the end of January, when the owners of riparian rights on the canal received two successive letters from the Transport Commission, which in its usual heavy-handed way told them that they had better sign away their rights within seven or at most fourteen days and settle for what small compensation they could get unless they wanted to face the immense expense of opposing the bill.

This "stand and deliver" approach has quite naturally caused great local resentment, especially among (a) anglers, who describe the Pocklington canal as providing the best coarse fishing in Yorkshire; (b) the members of the Wilberfoss and Thornton Level Drainage Board, which was not officially consulted although the canal is an important part of its drainage system; and (c) waterway enthusiasts, who had supposed from a reading of the recent Bowes Report that they would soon have an opportunity to put their case for restoring Pocklington canal to its former glory. There have been protest meetings; a local resident has published an "Ode to Pocklington Canal"; the representative of the Inland Waterways Association has declared that "Pocklington canal has a great future in the new waterway age now booming on the continent, Russia and the United States"; and a reader of the *Yorkshire Evening Press* has suggested that the sludge should be shipped in barges to Sheffield where it should be dumped in front of the town hall.

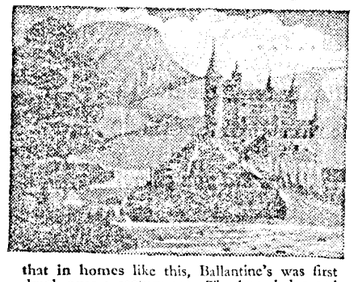


Quite possibly, the economic case for disposing of the sludge in the canal is overwhelmingly good. Much more obviously, however, the device of using a bill to avoid a meticulous public inquiry into the matter is overwhelmingly bad. The Transport Commission has created a wholly artificial atmosphere of great urgency. It is quite wrong to foreclose by shock tactics and furtive legislation an issue in which so many conflicting interests are involved.

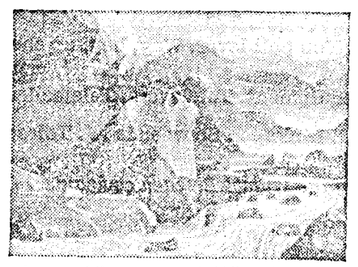
MIDDLE EAST

Propping Up the Northern Tier

BY the signing of bilateral agreements with Persia, Pakistan and Turkey on March 5th, the United States has shored up the anti-Russian front shaken by the collapse of the Hashemite regime in Iraq. The conclusion of separate agreements is constitutionally simpler for Washington than becoming a full member of the Baghdad pact; adherence to the pact would require Senate approval, whereas the President is already empowered by the Eisenhower doctrine to pledge American assistance to Middle East states which fear communist aggression.



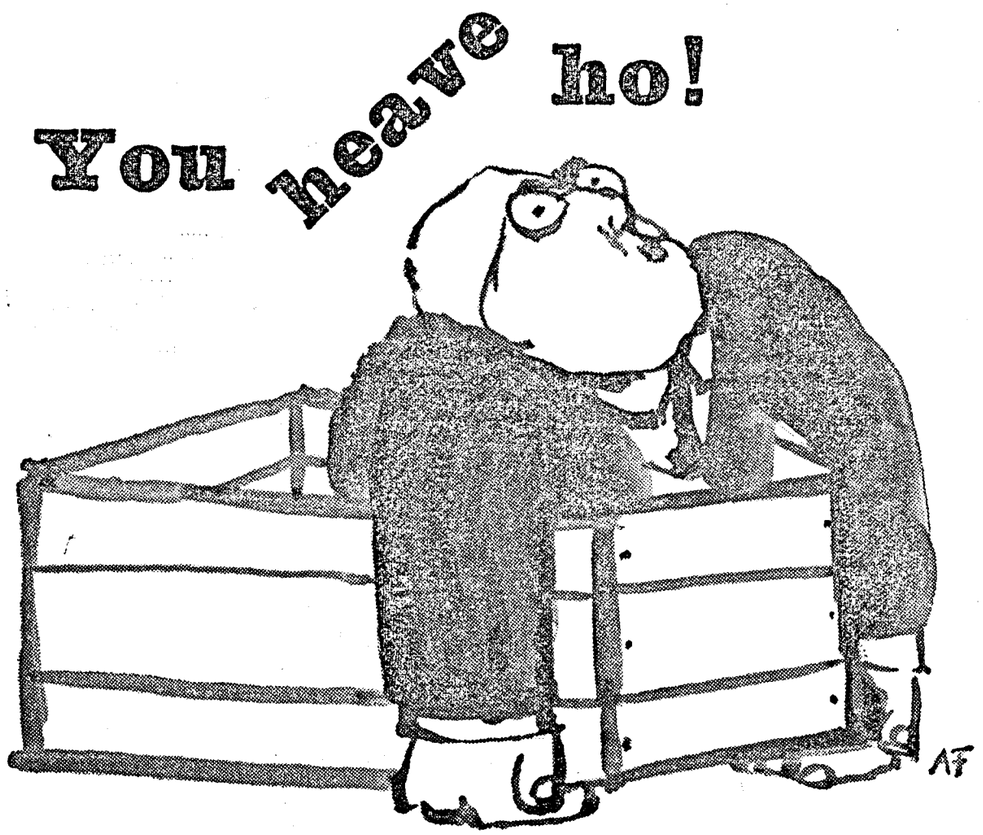
Of the three countries, Persia is geographically the most vulnerable, and diplomatically it was the least protected. Turkey was already linked to the United States by the North Atlantic treaty, which obliges all its members to go to the assistance of any one of them that is directly attacked. Pakistan had the weaker guarantee of the 1954 Manila



The more you know about Scotch, the more you like Ballantine's

THE SUPERB SCOTCH

Did you know, for example?...



that in homes like this, Ballantine's was first drunk over a century ago. The knowledge and appreciation of really good Scotch has been handed down with the family escutcheon — the same famous names appear in the order books of to-day.

that sparkling streams bubbling down the heather-clad hills are used in the making of Ballantine's. Their crystal-clear waters impart their own unique character to the flavour of this fine Scotch.

that Ballantine's is one of the best liked Scotches in the world. In the United States, Sweden, France and many other countries, it is a top seller. The world over, when friends meet together, they naturally prefer the superb Scotch.

Q: *What do with drunken sailor?*

Simple! Scuppers. Hose-pipe on him. Long boat till sober. Never fails.

Q: *What do with sand, gravel, rock, rubbish, ready-mixed concrete, aggregate, ballast, tarmac, clinkers, coal, cobblestones, beach boulders, etc. etc.? How carry? How unload? No answer? . . . Come, now.*

Know answer! Telehoist tippers. Trucks long, short, trucks squat, lorries, dumpers, transporters, all fitted Telehoist tipping gear. Full marks.

Days of yore, brute force, muddy ignorance. Shovels and sweat. Swear-words. Nowadays, Telehoist. You pull lever. Way, hey, *up* she rises . . . . .

Telehoist tipping telequipment. Telelevers. Teleloaders. Highly telefficient. Sturdily teletechnical. Links . . . Scow ends . . . Telescopic rams (think of that!) . . .

Telehoist Limited one of the Wilmot Breeden companies? Correct. How did you guess?

WILMOT BREEDEN are at Birmingham:
also at London, Manchester, Bridgwater, Glasgow, Melbourne, Toronto.

treaty (Seato), under which each of the signatories rather vaguely pledges itself to "act to meet the common danger (of armed attack against any of the Seato territories) in accordance with its constitutional processes."

Mr Dulles began negotiating the new agreements immediately after the Iraqi revolution last July. The signing has been delayed because the Shah was hoping to get from the Americans more than they were willing to give. Mindful of what happened to King Feisal, he was angling for some kind of guarantee against trouble at home and against neighbours who, though unfriendly, are not communists. The Americans, on the other hand, were offering a straight defence pact against communist attack only. The result is pretty ambiguous. The agreement promises:

> In the case of aggression against [Pakistan, Persia or Turkey] the government of the United States . . . will take such appropriate action, including use of armed force, as may be mutually agreed and as envisaged in the Joint Resolution to promote peace and security in the Middle East [Eisenhower doctrine].

The Pakistanis were the first to point out that this formula does not specify that the enemy must be communist; the Indians have noticed this too. The State Department has countered by pointing out that the new agreement is specifically based on the Eisenhower doctrine, which promises help only against "armed aggression from any nation controlled by international communism."

AUSTRIA

Cracks in the Coalition

AUSTRIA has been ruled for the past fourteen years by a coalition of the People's party and the Socialists, a system which has for some time displayed a marked tendency to ossify; it is now under severe strain. The Agrarians had presented Herr Raab, the Chancellor, with a sharp memorandum recommending early general elections. After a meeting on March 5th, the People's party made the same demand; the Socialists, a day later, agreed, though reluctantly. The date has provisionally been fixed for May 24th. Indeed, the Socialists have good reasons to prefer elections at a later date: if the present parliament is dissolved in time for the Austrians to go to the polls in the spring, it will prevent the passage of several laws in which they have a vested interest. The right-wing parties, on the other hand, argue that the international situation requires Austria to have a government that can look ahead and take decisions.

The date of the general elections is by no means the only point of difference between the two partners in the coalition. During the past two months no progress has been made on several controversial matters—the reform of the building programme, the revision of income tax, the new agricultural law, the overdue reform of the broadcasting organisation and the airlines, and the plan to float public shares in nationalised industries. At the same time, the present coalition regime, which has been described by the term *Demokratur* (a mixture of *Demokratie* and *Diktatur*), came under heavy fire from the Austrian independent press. The Austrians will certainly find it difficult to give up the idea of coalition between the Socialists and the People's party. Since the Socialists are, so far, more reluctant than their partners to scrap it, its survival will depend on the attitude of the People's party leaders, and on the tone they adopt in the forthcoming election campaign.

BBC AND CANDIDATES

A Question of Integrity

IT was a pity that Dr Horace King was unable to obtain a better time than the fag end of a Friday afternoon in which to deploy his telling arguments against restricting the political rights of the BBC's staff. "The House" which he was addressing consisted, for the occasion, of the Assistant Postmaster-General, a government whip and a lone Labour backbencher. Yet the happiest solution of the controversy would be a proper understanding by all MPs that their own ranks should be open to recruitment from the widest range of occupations. The BBC would then have little reason to fear that its reputation for impartiality would be impugned if an active politician were occasionally kept on in a key position.

The uneasiness of the Assistant Postmaster-General, Mr Thompson, was exposed by a reply whose unctuousness requires quotation for belief. Rules, such as the BBC's:

> are drawn up . . . so that the system by which we all live in a highly organised, closely integrated society, can work as smoothly and conveniently as possible to the greatest advantage of the greatest number. . . . By his actions this person [Mr Christopher Rowland, who was dismissed as a talks producer by the BBC after becoming the prospective Labour candidate for Eastleigh] has demonstrated that there are some people who are willing to help operate rules which are framed to add to the sum total of freedom of all other people. By so doing, I feel that he has rendered some measure of public service. . . .

Of course it is a nuisance and may even be an embarrassment for the BBC to have one or two of its talks producers making partisan speeches in their spare time. The question is whether as a good and conscientious employer (which, within its own self-imposed limits, everyone acknowledges the BBC to be) it should not set an example to other employers, who might likewise fear embarrassment from the private political activities of their staff, by accepting some inconvenience for the greater public good.

Mr Rowland's dismissal seemed rather an extreme interpretation of the BBC's own rules because, although he handled some political programmes for overseas audiences, he was not engaged in anything so sensitive as arranging political broadcasts deliberately aimed at the voters at home. A good case could be made for steering an active politician away from a handful of highly-charged assignments. This should not be difficult since past experience suggests that only a very few of the corporation's servants seek political honours. Where other programmes (either for home or overseas audiences) are concerned, the question is surely one, as Dr King underlined, of the confidence the BBC can be expected to place in the integrity of its staff. There are numerous examples in British life of men who manage to be partisan in one capacity and impartial in another. Has the BBC forgotten that the head of the judiciary is a political member of the Cabinet?

BOOKS

The Nineteenth Century

The Age of Improvement

By Asa Briggs.
Longmans. 547 pages. 35s.

TWENTY-FIVE years after its inception, the Oxford History of England is approaching completion. So, at least, irate subscribers were assured when their patience gave way recently. Now the third volume has appeared in the new Longmans series of ten, which seems promising; but then Oxford's initial rate of striking was also high. No doubt Professor Medlicott, editor of the Longmans History, is, like all general editors, an optimist: he may need to be, for more than one reason. "There seems," he says, "to be room for a rewriting of the history of England which will hold the attention of the general reader while it appeals at the same time to the student." He does not explain why he thinks so, and the arguments are far from obvious. Certainly the two series must compete with each other and invite comparison.

Useful as it is to have an up-to-date account, the earlier part of Professor Briggs's book, from 1784 to 1815, is surprisingly tentative, often very general and occasionally trite. After Waterloo, he is back on his own ground and the difference is apparent. No one is better able to emphasise the economic and social basis of nineteenth-century politics, to demonstrate that London was not England, and to indicate the diverse richness of mid-Victorian ideas and attitudes. Here, as usual, Mr Briggs displays a robust common sense only lightly touched by fashionable nostalgia, a capacity to bring out fresh aspects of old problems, and an adroit use of evidence, especially from literary sources. For anyone familiar with his period, and the qualification is essential, two-thirds of this volume is full of good things: a long, discursive essay, conversational in tone, suggesting as many profitable questions as it answers. The crotchety scholar may have his complaints, but its appeal to the student is certain.

Whether the attention of the general reader will be held is another matter, and here comparison is inevitable. Too often Mr Briggs's lengthy, packed paragraphs read like the transcript of a lecture, with the liveliness of the spoken word submerged. In addition, his general design is confusing. There is no need to be bound down by strict chronology, but in this kind of work the sequence should be clear. The Younger Pitt has been dealt with in much detail fifty pages before the reasons for the crisis over Catholic Emancipation in 1800-01 are reached; the repeal of the corn laws is separated both from discussion of the issues involved and the agitation of the Anti-Corn Law League. Indeed, with the notable exception of the first and second Reform Acts, the examination of political questions is usually scattered and their significance in danger of being diminished. This seems a high price to pay for a redressing of the old lack of balance by lavish description of administrative development and the evolution of society. The age of improvement was also the age of reform.

What is lacking is the neat coverage of Sir Llewellyn Woodward's volume in the Oxford History, as well as its elegant clarity. The "Age of Reform" has always been open to criticism, and it is now more than twenty years old. But the general reader will still need to read Woodward before he can appreciate Briggs, and from the latter there are things of importance he will never learn. For example, quite apart from their intrinsic interest, perhaps irrelevant here, Ireland and India played a major part in English politics between 1784 and 1867. This is largely omitted, with consequent distortion. In his introduction Professor Briggs offers a somewhat self-conscious defence. Yet he himself points to the enormous bulk of "official paper devoted to Ireland"; and he quotes approvingly that well-known parliamentary aside—"we are all of us Members for India."

This is an important book—yet disappointing. Much of the material for an outstanding reassessment of an age has been assembled; many of the topics raised are brilliantly handled. But cohesion and comprehension are missing. Certainly there are plenty of good lectures and stimulating essays embedded in the "Age of Improvement." And, just as Gibbon learnt something of his trade in the militia, one can detect here the bustling head of a university department, sympathetic to the reforming administrators; the historian of business, warming to the men of Manchester and Birmingham in their heyday; and the president of the Workers' Educational Association, benevolently surveying, like his radical ancestors, the Mechanics' Institutes and the self-improvement of the earnest artisan, most deserving of the poor. Even if there had been nothing more, this volume would offer a fascinating reflection of the man of business at work as historian.

Background to Violence

European Politics in Southern Rhodesia

By Colin Leys.

Oxford University Press. 334 pages. 42s.

MR LEYS'S account of the political background in Southern Rhodesia could not have been published at a more appropriate moment, when the political conflict between the settlers and the Africans has reached a point at which the African Nationalist Congress has just been proscribed. The main theme of the first part of the book is the determination of all the political parties to maintain European domination, and the fear of African economic competition; against this background one sees the interplay of other fears, particularly that of Afrikaner nationalism. It is a carefully documented and exact account of the social, economic and political development of the country from the days of its first occupation seventy years ago, amply supported by statistical tables and footnotes. Mr Leys traces the story from the days of Cecil Rhodes and the Matabele War to the eve of Federation, describing with great clarity the intricate changes in the political scene and the fluctuations of the political parties.

In the second half of the book Mr Leys deals in detail with the electoral law and party system, devoting much of his attention to the report of the Tredgold Commission on the Franchise in 1957, and the subsequent Electoral Amendment Act. This report was an honest attempt to find an acceptable solution to the conflict between two divergent points of view. On the one hand the commission acknowledged universal suffrage as the ultimate goal, and contrived a franchise which would for the first time grant the right to vote to a substantial and increasing number of Africans; on the other hand it proposed so to limit the influence of the new electorate that white settlers need have no fear for years to come of African political domination. At the same time it rejected unhesitatingly any form of communal rolls or racial distinction. Mr Leys, who is an uncompromising advocate of universal suffrage, can see little good in the commission's report, and analyses it like a barrister cross-examining a hostile witness.

The proposals were, however, too liberal for the politicians of Southern Rhodesia, and they were rejected. Instead another system was devised. The Electoral Amendment Act, which was passed later in 1957, provides for an ordinary qualification that gives the vote to most of the Europeans and some 1,500 Africans, and also a "special" qualification which might enfranchise in the first instance another 8,000 Africans. There is, however, a limitation in this, which Mr Leys describes thus—"once the number of voters qualifying on the special qualifications reached one-sixth of the total electorate in the colony, the "special" qualification would be abolished; subsequently all would have to possess the ordinary qualifications." This statement is misleading and does less than justice to an undeniably illiberal Act. Section 11 (3) in fact provides that when the number so qualified reaches one-sixth of the whole electorate no more names shall be added to the "special" list, though those already on

it shall retain their rights. This is very different from what Mr Leys implies.

The case against the racial policy of the Southern Rhodesian Government is undeniably strong. The consequences of such an attitude are now being seen in the Nyasaland disturbances. One may well agree with Mr Leys's dislike of that policy; but at the same time the book would be of greater value if it gave a fairer picture, and recognised that there is a case to be heard on the other side too, and that that case should be justly stated. Apart from this, the book is a most valuable record of the events in Southern Rhodesia that lie behind the violence of recent weeks.

Obscene Publication?

Getting Married

Edited by Winifred de Kok.
British Medical Association. 160 pages. 1s.

DISTRIBUTION of this booklet, issued by *Family Doctor*, the British Medical Association's journal for the layman, has been stopped by the chairman of the association's council after the great majority of the copies printed had been sent out. The wisdom of this action, taken as a result of protests from members of the association, will doubtless be questioned by other members; it will certainly result in far wider publicity for the booklet than it would otherwise have got.

Will this publicity be justified? Does the booklet deserve to be read as widely as it now probably will be? Most of the articles are concerned with the housekeeping side of marriage—in its widest aspect; with choosing furniture, budgeting, shopping, entertaining, cooking, and so on. A few of them are concerned with the sexual aspect of marriage, and there is nothing in them to offend anyone—except those who think that this aspect should never be discussed in print at all. The two that seem to have disturbed the British Medical Association's members are one by Dr Pilkington on "Marrying with a Baby on the Way" and one by Dr Eustace Chesser on "Is Chastity Outmoded?"

Dr Pilkington writes clearly and straightforwardly about a very real problem: should two people be forced into marriage because the woman is pregnant? He shows that the issue need not be so stark as it sounds; that a marriage entered into in these circumstances can have a solid basis and can be successful, given mutual affection, honesty and respect—and no recriminations. Dr Chesser also writes on a topic that is certainly a live one. Taken out of their context, some of his remarks on premarital sexual intercourse may seem to be wholeheartedly in favour of it. Read as a whole the article gives a quite different impression; the chief criticism to be made is that Dr Chesser's style is so confused that it will be difficult for his readers to know just what he is getting at. But he, like Dr Pilkington, Dr de Kok and the other contributors, emphasises the importance of personal integrity and of mutual tolerance and mutual respect in human relationships. One can object to the pamphlet on other grounds—on its lapses into facetiousness, for instance—but this emphasis is surely one to commend it. The council of the British Medical Association should think twice before it confirms the ban.

Class under the Microscope

The Psychology of Social Class

By Maurice Halbwachs.
Heinemann. 153 pages. 16s.

THIS lucid translation of a prewar work by one of France's most eminent sociologists, who died in Buchenwald concentration camp, will be welcome to British readers who may be overwhelmed by the near-Teutonic ponderousness of some contemporary American sociology. For this small volume is in the best Gallic tradition, with scholarship of a high quality, thought clearly and elegantly expressed and no word wasted. Not the least of Professor Halbwachs's merits is that his hypotheses of over twenty years ago should be largely valid today. His starting point, the conditioning of man by society, is focused on a study of politics in terms of the group-influences to which the individual is subjected. Yet the author does not ignore the individual, for he observes, felicitously, that

> the political furnace is one that attracts some people strongly: they bask in its warmth, are foremost in stoking it and even occasionally fall in and are devoured by the flames.

The analysis that follows is impressive in its sweep. The peasants, the bourgeoisie, the modern working class, all come in turn beneath his discerning microscope, and though his material is more meagre than today's, Professor Halbwachs's findings, including his sophisticated differentiations between manual and white-collar workers, are confirmed by contemporary sociology. There is also an intuitive understanding of the ethos of trade unionism in modern communities, and an awareness of the sociological forces that today have a bearing on "cost-inflation".

Professor Halbwachs does not emphasise the class factor in politics to the point of naiveté. He is well aware of other factors, such as nationalism, that submerge it, and of the often atypical nature of leaders whom a class throws up. His underlying moral is a more abiding one: that in a complex modern civilisation, happiness often cannot be achieved by individual effort alone, and that society must also provide opportunities for a developing collective life.

Yorkshire Worsteds

Black Dyke Mills

By Eric M. Sigsworth.
Liverpool University Press. 385 pages. 35s.

THE records of several English wool textile concerns founded over a century ago would probably illustrate every economic theory and contain more significant history than any list of kings and battles. This story of Black Dyke Mills should not have ceased with 1891, when the firm was made into a limited company. That change by no means ended its great career.

The firm's story is placed after an outline of the worsted industry in the nineteenth century—an outline, however, that is broken by faulty trade and Government records as serious as those in the mill's sequence of books. Mr Sigsworth must have longed for a Wool Industry Bureau of Statistics through the Victorian age and a permanent Pepys in Foster's office. John Foster was woolcomber, spinner, weaver, colliery owner, clay merchant, brickmaker, farmer and shopkeeper, and he and his sons branched out into landed estates and railway promotion in this country and trade with France, Germany, Poland, Turkey, America and Australia. They alternately fought and collaborated with competitors, most of whom are now out of business. Yorkshire's exports of yarn and fabrics were promoted by German merchants who settled in Bradford, and German and Polish mills grew by acquiring Bradford machines and Bradford operatives to work them. Mr Sigsworth's account of the alpaca and mohair industry, from Foster's records, has probably never been equalled, and will be new to most Bradford traders.

There are a few strange omissions. Much space is given to Lister combing, but none to Noble, which had virtually ousted it before the 'nineties. Wool weights are given in packs, but the weight of the pack is not stated, nor whether weights or prices refer to raw or clean-scoured material. Yarn counts are defined in hanks per lb, but the length of the hank is not given. Spinning and twisting spindles are not differentiated. There is hardly a detail of fabric construction, weight per yard, machinery speeds or production costs. The Black Dyke Brass Band, famous to thousands who never heard of Foster's fabrics, is hardly mentioned.

But the book will interest the general reader, the woolman with some pride in the West Riding's history and the economist; it is also just the sort of quarry that makes life easy for the "place-and-period" novelist.

The Round of East Africa

Rhodesia and East Africa

Edited by F. S. Joelson.
East Africa and Rhodesia. 432 pages. 25s.

THIS comprehensive compilation, undertaken by the editor of the weekly that specialises on East African and Rhodesian affairs, is most timely. Change has been rapid in these territories in the past five years, but it is not slowing down. By including in his symposium not only the usual political subjects—the white highlands, the native franchise, Mau Mau, and so forth—but also economic factors, education, wild life and tourism, Mr Joelson, as impresario, gives the survey perspective

and interest. Not least useful are chapters on territories often forgotten in this geographical context—Zanzibar, Seychelles and, most importantly, Somaliland. The Royal Commission on East Africa comes in only for incidental mention.

The large number of eminent authorities assembled to handle the subject inevitably causes it to lose a certain coherence; moreover, it is a "safe" selection of authors. The Colonial Secretary manages to be quite naughty in his own way, and there is punch in the contributions by Colonel Grogan, Lord Milverton and Bishop Beecher; but the necklace of gubernatorial surveys that embraces the book fails to glitter much. Mr Garfield Todd is unaccountably dull, Lord Malvern puckish only in patches, and, of course, one looks in vain for a real blast on an African trumpet—by, say, Mr Mboya or Mr Nyerere. Perhaps they were asked and refused. People who organise books about colonies, however, ought to think about possible prime ministers of tomorrow: a successful nap ensures that the book will live, whatever they say, or do not say.

Scientist's Testament

The Computer and the Brain

By John von Neumann.

Yale University Press. 100 pages. 24s.

THIS book is the last testament of a dying man who was one of the greatest scientists of our time. Early in 1955, John von Neumann was invited by Yale University to present the Silliman lectures for 1956. By January of that year he was confined to a wheelchair; by March the hope that he would ever read his lectures was abandoned. He died in February, 1957.

This little book, which can be read in an evening, contains the material he managed to prepare. It is entirely introductory, and includes nothing new; his scientific papers published elsewhere reveal much more of his work on this topic. But here is a master hand, writing simply and clearly about some very deep questions.

Although he was one of the inventors of computing machines, von Neumann does not plunge into the details of their design. The first half of his book deals with how computers behave: the principles by which they handle and store information. He differentiates between analogue and digital methods, and explains the importance of the speed with which stored information is accessible to the machine. The second part discusses the brain in the same way. There is no physiology here, but an explanation of how a single nerve cell is thought to behave, and of the many distinct ways in which a brain is able to remember. This permits a clearly drawn and calculated comparison between computers and brains. Artificial componentry, for example, is a great deal faster than the natural mechanism of the brain—ten to a hundred thousand times faster. The brain, on the other hand, is much more compact. A computer large enough to compare in function with the brain would be between a hundred and a thousand million times as big.

But his most important comparison lies in the idea of memory and the call made upon it. It is here that we see best both how inaccurate is the epithet "electronic brain" for existing computers, and also how possible it is to conceive of more advanced machines that would come nearer to earning that title.

Because he was dying, von Neumann produced an introductory book for general consumption. For the specialist, the last eight pages foreshadow what the book might have become and what science may well have lost.

Hands from the Plough

The Industrial Efficiency of Rural Labour

By C. D. Harbury.

University of Wales Press, Cardiff. 233 pages. 35s.

THE Government's renewed efforts to cajole firms into the development areas make Mr Harbury's book topical. Business men faced with the problem of deciding whether or not to set up a branch plant or a new main works in what they inevitably regard as a remote and benighted area can be forgiven for snatching at any tangible evidence about what their costs are likely to be if they do. As regards rent, rates, transport and services one can make a reasonable guess. As regards the cost and efficiency of labour the business man can do little more than rely on the relatively few studies by research economists, to which Mr Harbury now makes a welcome addition.

Mr Harbury's study is not exhaustive, though it covers 400 operatives in 25 firms. Nor is it free from bias. The workers whose efficiency it proved possible to compare were mostly unskilled, and, in addition, it must be presumed that those firms which refused to take part in the study were on the whole the less rather than the more efficient. The book is mainly concerned with comparing labour efficiency between rural Wales and industrial England. Too few development area plants were studied for any reliable conclusions to emerge about labour efficiency there.

One has to admire the perseverance and energy that Mr Harbury and his assistant have put into the task of finding comparable firms and processes in rural and industrial areas, as well as their thorough and logical analysis of the considerable amount of statistical data which they have accumulated. Nor should they be blamed because their conclusions are largely negative, for that is almost inevitable with a study like this.

The main finding is that, once trained, there is no evidence to suggest that labour is either more or less efficient in a rural than in an industrial area; in half of the studies, rural efficiency was certainly not lower. The main attractions of rural labour are its "amenability," coupled with good labour relations. The authors suggest that this may have been partly because trade unionism also appeared to be weaker in the rural plants.

As so often happens, this study brings out the importance of management in achieving high labour efficiency. Given good management, rural labour can acquit itself well—the only proviso being that, in the short run at least, highly skilled labour may have to be brought in from industrial areas. This is just one more piece of support for the view that anything we can do to improve standards of management in British industry is likely to pay considerable dividends.

Little Round Top

The Twentieth Maine: *A Volunteer Regiment in the Civil War*

By John J. Pullen.

Eyre and Spottiswoode. 338 pages. 30s.

The Civil War in the United States

By W. Birkbeck Wood and James Edmonds. *Methuen.* 328 pages. 30s.

EVERY regiment in every army has its *one moment of nerve-racking glory.* That moment came to the 20th Maine, a volunteer regiment, on the second day of Gettysburg: it held the Federal flank at Little Round Top. Its ranks made their tiny contribution to history and were then forgotten, until Mr Pullen had the idea of recapturing the atmosphere of the Civil War by writing the history of the regiment. The military history of the Civil War is now in danger of being over-written, for the controversies about the few facts still in dispute are becoming as stale as the retelling of the many facts that are not. Re-interpretation is all very well, but when it becomes either an excuse for a full-blown prose (in which untrustworthy sources are accepted at their face value) or a squabble about minor details it rapidly loses its value. Mr Pullen, however, has kept a sense of proportion.

Occasionally he lapses into bathos, as when he describes Lee and Jackson as those "fine officers," but more often he sticks closely to his task of recreating the life of one regiment. By using diaries and letters written at the time and the memoirs written afterwards, he is able to see and to describe how the war appeared to the volunteer in the Federal Army. To him, like other soldiers, it was bloody and brutish, a job to be done. To some men it was an *opportunity, and from the 20th Maine* appeared Joshua Chamberlain, a college professor who became one of the few *efficient non-regular generals employed* by the North. He and the 20th Maine were there at Appomattox, to salute the Army of Northern Virginia as it laid down its arms. Mr Pullen recalls this episode movingly but without misty-eyed sentimentality. This is one of the few of the many books recently written in the United States about the Civil War to be republished in this country. It is one of the few worth republishing,

because by focusing on the part it illuminates the whole.

Another publisher has chosen to reissue one of the standard books written about the Civil War in this country. This book, written by Mr W. Birkbeck Wood and Brigadier General Sir James Edmonds, provided an excellent and thoughtful single volume study of the war when it was first published in 1905. It was drastically revised and brought into line with more modern findings and criticism in 1937. Then the narration of the earlier battles and campaigns was condensed into a single introductory chapter, and the authors concentrated upon a detailed analysis of Grant's and Sherman's campaigns in 1864 and 1865. It thus made a suitable textbook for a staff college examination. For a close study of those campaigns it is indispensable, though rather dry. It is in that identical form that the book has been reissued: even the inadequate maps it then contained are retained. The book jacket is new.

People as Human Beings

Managerial Psychology

By H. J. Leavitt.

University of Chicago Press. London agents: *Cambridge University Press.* 335 pages. 37s. 6d.

PEOPLE *are* human. Mr Leavitt sets out to explain what this oft-repeated slogan really means, and why traditional organisational theory is inadequate because it skips over the complexities of human behaviour. He has produced a useful and sensible book for management students who have time to read, and a sufficiently thought-provoking one which practising managers should at least skim.

Industry is increasingly faced with a conflict between the kind of behaviour needed for success in a changing business environment and that which people tend to display in large organisations. Modern business demands multiple decisions that must often be of an objective long-term character. But the pressure of authority and the struggle for promotion encourage short-term subjective action. Mr Leavitt discusses some of the ways in which organisations may try to reduce this conflict. One of the most helpful, he suggests, is changing the climate within the organisational structure without significantly changing the structure. The atmosphere can be changed if people feel more secure in their jobs and more independently in control of their own destinies. They will then give more of their time to solving problems rather than to their personal position and prestige. Too many people in industry tend to trade on fear, not realising what a diversion of effort this can involve. Security does not mean no sacking, but rather that people are kept in the picture, are given an opportunity to learn, to participate in making decisions and are able to have confidence in the competence of their superiors.

Mr Leavitt rejects as psychological nonsense the current attempts to meet the problem of overlapping authority by

A GREAT SWISS NEWSPAPER

The Story of the Neue Zürcher Zeitung

ELIZABETH WISKEMANN

The Neue Zürcher Zeitung, founded in 1780, radical in opinion throughout the nineteenth century and becoming essentially conservative in the twentieth, is now the most influential among the serious newspapers of Europe. *Professor* Wiskemann *tells its story with* detachment and insight.

Illustrated 18s net (19 March)

increasingly lengthy and rigorous job descriptions. He favours greater decentralisation, which is one of the most common methods used at present to try to overcome some of the pressures of authority. However, he makes the interesting suggestion that decentralisation is only a phase that will cease to be of value as programming lowers the level of middle management jobs. He predicts indeed that within ten years middle managers may be as tied to routine as the hourly worker. He suggests, rather optimistically, that this may reduce many of our present human relations problems at the level of middle management, but he makes no attempt to discuss the problems—human relations that such a change would obviously create.

Intellectual Gap

History and Philosophy of Science: *An Introduction*

By L. W. H. Hull.

Longmans. 340 pages. 25s.

MR HULL is trying, as he says in his preface, to "bridge the gap between the humanities and science," and he goes on, very rightly, to point out the comparative newness of this regrettable chasm. Naturally, he has had to confine his inquiries considerably, for he has written, in one volume, a "historical introduction" to a large topic. But, to this reviewer, at least, it seems that the author has been rash as well as brave in choosing astronomy and mathematics as his major scientific examples. In a work with the excellent aim of making the reader aware of the influence of scientific thinking on thought in general, it seems odd to find little on Marx or Darwin, and nothing on Freud.

After all, Marx and Freud, though we may disagree with them, were the first to make use of inductive, fact-finding methods in two new fields, and both have profoundly influenced both action and thought. Astronomy and mathematics are indeed important, and their beginnings are of interest; but we want to go on, and may feel disappointed at being so constantly brought back to Mesopotamia and Alexandria and to ideas no longer current when more immediate influences have been crowded out. One can admire the author's austere courage in taking the difficult way, but regret may remain.

However, when he can bear to tear himself from early equations, or mediaeval conjectures about orbits, Mr Hull can be fresh and contemporary. For instance, in writing of the way in which Voltaire and Madame du Châtelet extended mathematical awareness when they expounded Newton, he also illustrates his point about how "the gap" has widened:

> We should be surprised today to find an able controversial defence of Relativity written by (e.g.) Mr Evelyn Waugh. Yet the parallel would be fairly close. Relativity has been about as long established now as Universal Gravitation was when Voltaire wrote: and there is surely a literary kinship between "Candide" and "Decline and Fall," in each of which the misfortunes of an innocent make material for satire on a false world.

Mr Hull can also write well on the ways of scientific thought: "Scientific discoveries do not usually arise from the analysis of a great mass of facts," but from a few very striking facts, and he goes on to suggest, neatly and clearly, the next steps; the forming of a hypothesis (which he defines as "a shrewd imaginative guess"), and then the testing of the logical consequences of a tentative generalisation. He is perhaps less happy in his remarks on how scientists often use analogy. "Analogy," he says, "is generally invalid as an argument, but frequently invaluable as a source of inspiration." He seems to assume that the scientist is looking for, and "ought" to try to find, absolute parallels, whereas surely what he needs and seeks is not an "absolute" but an analogy which is valid in a particular context.

LETTERS

Federation Still?

SIR—Your leading article on March 7th is no doubt right to warn those who take up a liberal attitude towards the problems of the Central African Federation that its dissolution would have serious political consequences for Africans as well as for Europeans, particularly in Southern Rhodesia. It is the more unfortunate, therefore, that your treatment of the possible economic consequences of disintegration appears to rest on a confusion about the "viability" of the three constituent territories.

You say, to begin with, that federation in 1953 brought "economic benefits—at least to impoverished Nyasaland and near-bankrupt Southern Rhodesia." The inference is that Northern Rhodesia was the prosperous partner. Further on in your article, however, you state that "An independent Northern Rhodesia *might be viable* on its copper" (my italics), while "An independent Nyasaland would decline into a rural slum" and "Southern Rhodesia on its own again would wither, cut off from the copper and wider economic opportunities of the two protectorates." Statements of this kind are simply asking to be misrepresented. To the Marxists they will be further evidence (not that Marxists ever felt constrained by a lack of data) in support of their fallacious notions about imperialist capital depending on "wider economic opportunities in protectorates." To those who are not well versed in the concepts of "external and internal economies" there will be an evident contradiction between the inference that Nyasaland and Southern Rhodesia derived economic benefit from federation with the prosperous Northern Rhodesia and the statement that an independent Northern Rhodesia *might* be viable. If the Federation is viable, whatever this word is to mean, it is largely because Northern Rhodesia's economy has been in a very healthy state, so they will argue.

Finally, to those who are prepared to concede some benefit, direct or indirect, to each of the three territories, merely from the savings that can follow from political mergers, there must remain many doubts whether you have posed the only practicable alternative to complete disintegration. The argument, politically, revolves around Nyasaland's membership—no one has seriously suggested dividing the two Rhodesias again. The view has been expressed, elsewhere, that Nyasaland might, if its independence meant an economic decline, be associated with Tanganyika. Be this as it may, it would be a service if you could present a more detailed account showing, as far as possible, to what extent Nyasaland has benefited economically from Federation. This would help to clarify the economic position of Nyasaland, and enable some of the political arguments you advance to be seen in better perspective.—Yours faithfully,

IAN G. STEWART
Department of Political Economy, University of Edinburgh

BBC and Politics

SIR—Educationists, like others who put store by their belief in the integrity of the BBC, would not have failed to have been arrested by the corporation's statement, in correspondence in *The Economist* of February 14th, that in its view there is "a valid distinction between the editorial responsibility for a programme borne by a producer who is a permanent member of the corporation's staff and the role of an interviewer or commentator contracted for a particular programme." It would be interesting to know how "editorial responsibility" is defined in relation to those controversial, documentary types of programme that can be equally influential with youths and with adults, and whether it is extended to writers also.

"The Hungry Years," broadcast on February 10th, according to the *Radio Times*, was "a documentary feature on the great depression of the 1930s," written by Mr Constantine Fitzgibbon, and edited and produced by Mr Robert Pocock who, in an article in the same issue, stated inaccurately that "a national government was formed with Baldwin as Prime Minister." Mr Ramsay Macdonald, of course, was the national leader.

On behalf of the corporation, presumably, Mr Fitzgibbon, in a continuing correspondence in *The Times*, has replied to political criticism of "The Hungry Years," referring to it as "my programme," to what "I was attempting to do," and to what "I was not trying to compile." Would one be correct in assuming that Mr Fitzgibbon is a member of the corporation's permanent staff? If he were not a member, may one ask how his statements could be squared with the "distinction" which the corporation, responding to your own pertinent editorial note on an important issue, has assured readers of *The Economist* is a valid one. Were the "distinction" to give the corporation nominal editorial control, the real control being with a writer, or other part-time worker, who would feel able to answer critics in the language of an editor, would it not be a curious one indeed?—Yours faithfully,

JOHN C. CROWDER
House of Commons

Faroe Islands

SIR—In a commentary in your issue dated February 28th on the proposed agreement over Faroese fishery limits, you end by stating "Yet if as good an offer had been made to Iceland last summer, the Royal Navy might not have been forced to spend the winter playing the fool off the bleak Icelandic coast."

May I refer you to Her Majesty's Government's memorandum on "The Problem of the Fisheries Around Iceland" of November last in which it was said (page 17) that the Icelandic government was offered last summer—

> An exclusive fishing limit of 6 miles pending the outcome of a Second World Conference on the Law of the Sea, coupled with provision whereby more extensive areas at certain parts of the coast would be reserved for the forms of fishing practised by the smaller Icelandic fishermen.

This was exactly the same kind of arrangement as that which it is now proposed to make at the Faroes.

Incorrect statements such as that made by you can only bring undeserved discredit on us and do a shameful disservice to those officers and men of the Royal Navy who have been on duty off the inhospitable Icelandic coast during the stormy winter months.—Yours faithfully,

FARNDALE PHILLIPS
British Trawlers' Federation, Grimsby

Soft Drinks

SIR—As proprietors of Lucozade, the leading glucose drink in this country, we ask you to correct the misleading impression created by your reference to glucose drinks in *The Economist* of February 28th.

You summarise the Food Standards Committee's views as being, *inter alia*, that manufacturers "should not claim energy-giving properties for glucose drinks that do not possess them." This statement is not only an incorrect paraphrase of the relevant passage in the Food Standards Committee Report, it is in itself misleading, as inferring that glucose drinks have no such properties. In fact, the energy value of Lucozade is 21 calories per fluid ounce, and this provides a significant amount of food energy in its most easily assimilated form. Because liquid glucose is only one-quarter as sweet as sugar, high concentrations of carbohydrate can readily be accepted in the form of glucose beverages.

You go on to quote a statement by a consumer organisation that "a glucose cordial gave hardly any more energy than a cup of sweet tea." This comparison is quite wrong. A reasonable amount of sugar in a 6-oz cup of sweet tea is two heaped teaspoonfuls, which on British Standards' measurements, would provide 36 calories. Six oz of Lucozade provides 126 calories—three and a half times as much. Those who drink tea with seven spoonfuls of sugar per cup can accept your statement; for those whose tastes are normal it is completely erroneous.—Yours faithfully,

Beecham Group Ltd J. O. RINTOUL
Brentford *Vice-Chairman*

The relevant passage from the report referred to is as follows:

> "Glucose beverages are at present widely advertised as a source of energy with the inference that they provide energy in a special form that is quickly and readily available to the body. But the amount of energy likely to be obtained in this way is only a small fraction of the normal total daily energy requirement and is not significantly greater than can be obtained just as easily from other soft drinks containing sugar. If account is taken of the amounts likely to be consumed in a normal diet, no soft drink at present on the market can in our view be regarded as a sufficient source of carbohydrate to justify special claims relating to energy value."

Port Talbot Strike

SIR—It is a little odd that you should be bothered (in your issue of February 28th) by the loss of 35,000 tons of steel as a result of a strike at Port Talbot, when we are losing more than a hundred times that amount per year because the steel firms—not the unions—have decided for some time to work well below capacity. Could it be that any stick will do with which to beat this particular dog?—Yours faithfully,

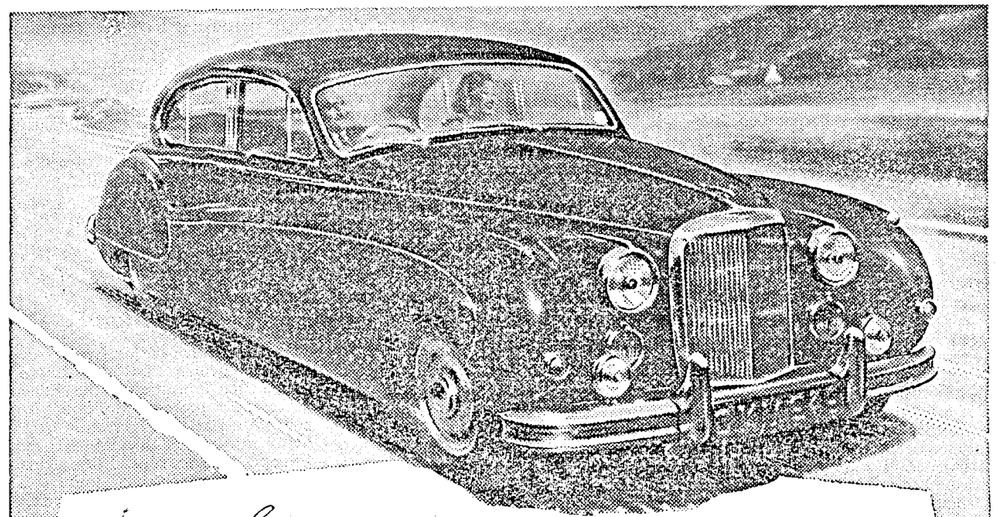
KENNETH GLYNN
Society of Technical Civil Servants, SW8

Trade Union Education

SIR—In your two articles on the trade unions you state that "almost all unions maintain a thriving education department." In fact most unions are too small or do not have the resources to run one.

The bulk of union education work is done by the National Council of Labour Colleges, which runs educational schemes for over 100 trade unions, and by the Workers' Educational Trade Union Committee, which runs schemes for over 40.—Your faithfully,

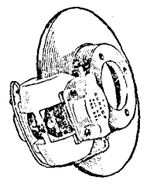
J. P. M. MILLAR
National Council of Labour Colleges, Tillicoultry, Scotland



Somaliland

SIR—On the eve of Mr Lennox-Boyd's policy statement on the future of Somaliland Protectorate, the Ethiopian government protested to both Britain and America for creating discord between two African countries, Ethiopia and Somaliland, by giving the Somalis a chance to unite. This, whether out of malice or panic, Mr Abbebe of the Ethiopian Embassy repeated in your issue of March 17th; in fact he had protested to another paper already for reporting the Colonial Secretary's statement. "He hit me and cried, outran me and complained" is an Arabic verse which fits him well. But is he complaining about the fact that Britain is setting its empire free and therefore betraying Ethiopia and repudiating the terms of the Berlin Conference and the "Scramble for Africa" ideology of the last century? This I do not dispute while Ethiopia, in institution and outlook, is a century behind the world. The western powers, and Britain especially, have been upholding the Ethiopian Empire from decay—natural or unnatural—through good and bad times, a fact which Mr Abbebe's history does not relate.

Did he forget the Long Exile into which Britain smuggled Haile Selassie and his throne? Eritrea, the Haud and the Reserved Area as recently as 1954? Or don't they keep a record of their Imperial diplomatic transactions?



He fallaciously alleges that our rightful claims for the Ogaden (a Somali tribe) on the Haud and the Reserved Area are being instigated by Britain and America. On the contrary, we think that Britain, by handing those territories over to Ethiopia, and America, by arming Ethiopians with weapons they cannot use rightly or properly, are appeasing Ethiopia. But it would be advisable for Ethiopia to abandon graciously the sinking ship of imperialism which its more powerful and more skilful mates (Britain and France) have gone half-way to do. Could anyone tell me what is more rightful than that a small nation like ours, which had been fragmented into five bits, should seek unity peaceably? Despite our sparse population and poor economy our indestructible individuality as a nation survives.—Yours faithfully,

SAID MOLID ALI
Dublin

Setting the pace...maintaining a great tradition

The introduction of the Mark Nine, equipped with a 3.8 litre 220 b.h.p. engine, disc brakes and power steering, brings still greater variety of choice to the Jaguar range. The 3.4 and 2.4 litre Saloons provide the answer to the motorist who wants a full 5-seater saloon car with high performance and elegant, compact proportions. The new XK150 Roadster joins the Drophead and Fixed Head Coupes on the Home Market. AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Fall-out Falls in

WASHINGTON, DC

THE words "eleventh hour" have been heard in Washington in the last couple of weeks not, as might be expected, in connection with Berlin—most Americans remain trustfully Micawberish about that problem—but in connection with the negotiations at Geneva for stopping tests of nuclear weapons. Those who want these talks to succeed have realised that they have reached a deadlock at the stage which is ideal for those who would be happy to see them fail. If the Americans and the British want to point an accusing finger as they walk out of the conference room, now is the best time, when the Russians are at their most mulish about giving the control organisation any effective powers to police tests. Mr Dulles, whose absence from the State Department makes liberals' hearts grow daily fonder of him, is no longer there to whisper "persevere" in one of the President's ears as the Defence Department and the Atomic Energy Commission say "desist" into the other. It was he who over-ruled the original reluctance of these agencies to enter into the atomic negotiations at all.

As the rumours that the Administration is moving towards breaking off the talks revived this week, those who want to forestall such a decision have been rather desperately searching for new ideas to keep the negotiations going, spurred by recent suggestions that portions, at least, of the earth's surface are getting a heavier dusting of dangerous strontium 90 from fall-out from tests than can be comfortably ignored. Samples of wheat gathered in Minnesota in the last two years have almost all contained more than half of what is usually regarded as the maximum safe amount of strontium 90 and samples from places as far apart as Germany and Chile have exceeded the permissible level. Now the Atomic Energy Commission itself has disclosed that in several American cities the strontium content of milk, which along with its products is the vehicle for three-quarters of the strontium that gets into human bones, has recently been many times above what was assumed to be the national average only eighteen months ago; in North Dakota milk has contained up to a third of the maximum acceptable dose.

It is true that, as Dr Libby of the AEC has pointed out, one meal of an excessively strontium-laden food is no cause for alarm; the maximum permitted levels are those which, if consumed regularly over a long period of years, would result in a risky concentration of strontium in a man's bones. It is also likely that the strontium which has produced the worst of these statistics is that which has fallen directly upon wheat ears or cows' fodder—and has thus had a "one-shot" contaminating effect—rather than that which has settled in the topsoil and may poison successive crops. Nevertheless, the scientists who have been critical of the AEC's complacency feel that the new data have strengthened their argument.

For one thing, since the present system of sampling for strontium content is, to put it mildly, a patchy affair, it is possible that some even more poisonous local concentrations have gone unobserved. Secondly, there are reasons for taking a closer look at the figure which is normally cited as the "maximum permissible concentration." At present the custom is to fix this, by what is admittedly pure rule of thumb, at one-tenth of the level permitted for industrial workers exposed to hazards from radiation. A substantial number of American scientists think the permissible concentration ought to be cut by, say, a half. With two such areas of doubt, it is not surprising that some observers fear the onset of that "combination of unusual circumstances" in which, according to a report published by the AEC, "it is possible that fairly large numbers of people in some localities may accumulate strontium 90 in their bones . . . above the permissible limit for large populations." A group of scientists is now drafting a proposal to put the Public Health Service in charge of a revised—and closely monitored—code of radiation safety.

SOME of those who have talked to the Russians at Geneva believe that it may yet be possible to coax them into signing a treaty to halt all atomic tests. One of the ideas being circulated in Washington is to offer to increase the number of neutral representatives on the control commission in the hope that the Russians will withdraw their demand for a veto; another is to set an annual "ration" of on-site inspections so as to lull Soviet fears that roving control teams might indulge in indiscriminate prying. This approach assumes that the technical problems raised by the American underground tests last autumn are not as great as the Administration has suggested.

These tests, by revealing that underground nuclear explosions produced smaller seismic disturbances than expected, made the sceptics fear that only the bigger bangs—from 15 to 20 kilotons upwards—could be distinguished from earthquakes without recourse to extensive on-site inspection. But new evidence presented to Senator Humphrey's disarmament subcommittee last month suggests that the problem is not insoluble. By measuring surface waves, for instance, and burying seismographs in holes to reduce the "background noise," it may become easier to distinguish between man-made and natural concussions. If the number of suspicious events calling for on-site inspection is reduced enough, the Russians may be persuaded, some think, to put up with patrols in principle.

Quite possibly, however, they may never accept mobile control teams. It is generally assumed in Washington that

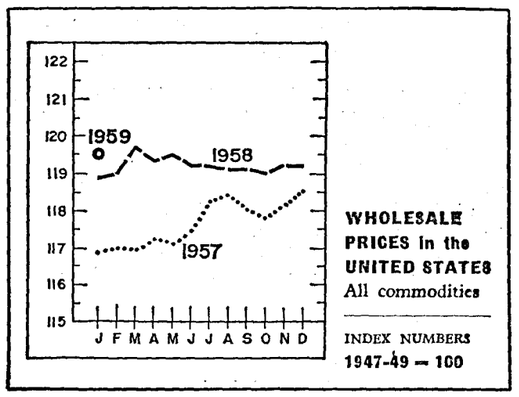
the suggestion which Mr Macmillan put to Mr Khrushchev in Moscow involved the "threshold" concept; this, by legalising underground tests below a certain size, dodges the worst of the problem of on-site inspection. As Mr Eisenhower has said, there are technical snags in this too. It is difficult for the tester to forecast exactly what the yield of his explosion will be, so that he may violate the "threshold" by accident. The size of the signal recorded on the seismographs also varies according to the kind of rock in which the explosion takes place. The more radical suggestion made last week by young Senator Church of Idaho avoids all these complexities. He would simply confine the ban on tests to explosions in the earth's atmosphere, which could be adequately monitored from fixed observation posts.

The Russians may reply that, for a treaty limited purely to tests in the atmosphere, a "gentleman's agreement" supervised from outside their borders will be enough. If they do not, this proposal has an attractive simplicity. It would stop the contamination of the air. It would provide the rudiments of an international control system, even if on-site inspection would not be called for. Since underground tests (which have no fall-out of radiation) would continue to be free for all, the Atomic Energy Commission would be able to go on with its experiments with "clean" bombs and explosions for peaceful purposes, such as obtaining petroleum from oil shale. The Defence Department would be less happy, since it is more interested in measuring the effect of explosions and in fitting a bigger bang into strategic warheads, both of which seem to require tests above ground. But, if the President decides that the world cannot afford to see the last glimmer of negotiation at Geneva snuffed out, some of the generals—both American and Russian—will have to be disappointed. If it is impossible to agree on full inspection, Senator Church's intelligent idea deserves the State Department's study.

Three Per Cent Question

WHEN the long-expected rise in the discount rate, the interest charged on loans to member banks by the Federal Reserve Banks, came last week it was a great surprise, since only the day before a Governor of the Federal Reserve Board had made a speech which was interpreted as meaning that no further tightening of money was likely while unemployment remained at its present high level. Since these views were known to be shared in the New York Bank, which almost makes a habit of being less ready to restrict credit than is the Board in Washington, it was an added surprise when that Bank led the move to raise the discount rate from 2½ to 3 per cent. It seems clear that on this occasion Washington was setting the pace and insisting that monetary policy should be guided by long-term fears instead of by current ones—or rather one since, apart from the unemployment figures, the usual economic indicators are all fairly, and some very, satisfactory.

Officials of the Federal Reserve Board agree with those at the Treasury that the common belief that inflation is inevitable must be exploded if the stock market is to be controlled, if order is to be restored to the government bond market and if international confidence in the United States is not to be undermined. More specifically they are said to be concerned at the sharp increase in speculative activity on Wall Street, at the rising trend of industrial prices—it is the decline in farm and food prices which has kept the wholesale price index steady—and at the danger that towards the end of the year corporations will again be borrowing heavily to finance renewed expansion.



To forestall these inflationary pressures the Federal Reserve Board therefore defied the Democratic economic experts. The challenge was at once taken up—by some businessmen as well—with the Board being accused of heartlessly ignoring the immediate plight of 4,750,000 people who are out of work for the sake of tilting at an imaginary inflation. In this week's report from Congress's Joint Economic Committee, the Democratic majority advocated a less restrictive monetary and credit policy in 1959 as its main remedy for unemployment. Far from heeding these recommendations the Federal Reserve seems more likely to follow up its increases in the price of money by actually limiting the supply.

Technically the rise in the discount rate was merely a long overdue adjustment to bring it into line with the interest being paid by the Treasury for its short-term borrowing; this has been above the discount rate ever since last summer, even though the rate had already risen twice, in August and October; commercial banks have thus been encouraged to borrow from the Federal Reserve Banks for investment in Treasury bills. The rise was also timed to avoid disturbing the market when the government was engaged in borrowing operations; the Treasury was in the market in February and will be needing another $3 or $4 billion in ten days' time.

Strength to Hold Berlin

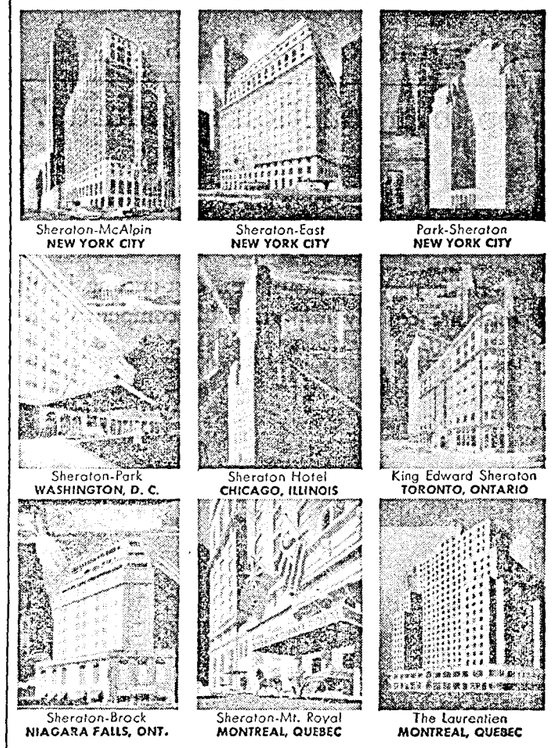
SENATOR JOHNSON opened new defence hearings on Wednesday to discover whether America's conventional and atomic forces are adequate for the approaching crisis over Berlin. There is not a quiver of disagreement in either party about the President's determination to insist on maintaining American rights and responsibilities in Berlin. What deeply perturbs members of Congress is whether he has all the forces he needs. This was the one concern, it seems, of the heads of the military and foreign relations committees when they went to the White House at the President's invitation last week.

Many Senators think that this is no time to proceed with cuts in the number of servicemen, either because it looks

"If only I'd known it was on,

You have probably said that at one time or another. Perhaps it was when you read the reviews of Granada's special shows like HOMOSEXUALITY AND THE LAW, INSANITY OR ILLNESS? THOU SHALT NOT KILL, and the weekly programme WE WANT AN ANSWER

I'd have watched it!"



Might we suggest you enter in your diary Granada's new fortnightly Feature—Searchlight ITV March 16th at 10.15 pm

Searchlight is thrown on **THE REPAIRS MUDDLE.** There are more than 45 million electrical appliances in British homes, enough to support a prosperous repairs industry. But when breakdowns occur, can the customer always rely on getting good service at a fair price?

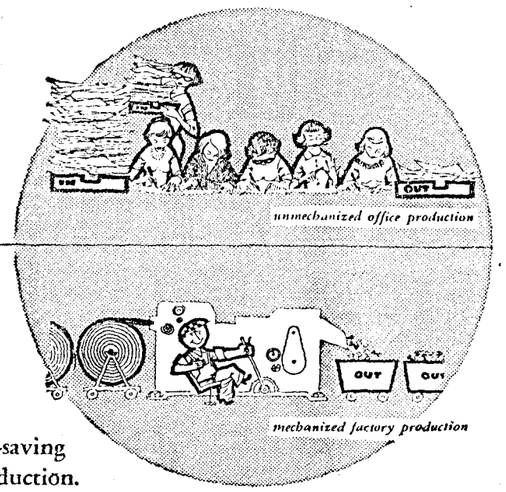
AMERICA'S WELCOME TO THE WORLD



Sheraton Hotels have become first choice of International visitors, as well as Americans, for many reasons. Here are a few:

- Reservations held if ship or plane delayed
- Facilities for banquets, business meetings and conventions
- Sheraton's family plan (*no room charge for children under 14 in same room with adult except in Syracuse, French Lick and Austin*)

For reservations see your travel agent, or write Mr. Albert de Leon, Director, International Department, Sheraton Hotels, Sheraton-McAlpin, Broadway and 34th Street, New York 1, N. Y., U. S. A.

THE WELCOME IS WONDERFUL AT
SHERATON HOTELS
"The Diners' Club card honored for all hotel services."

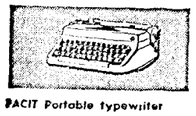
are your office tools

up to production standards?

In the factory... in the office... cost-cutting, labour-saving tools are equally important for competitive production.



Let your Facit dealer show you exactly where and how the Facit fully automatic electric calculator can lower your operating costs and increase your office production! See for yourself that his recommendations are sound. He lends you, absolutely free, the Facit CA1-13 calculator for a two-week trial period.

Literature from nearest local agent or Åtvidabergs, Stockholm, Sweden.

FACIT: Manufacturers of calculators, adding machines, electronic computors, typewriters, duplicators. • Factories in Sweden and West Germany. Sales and service offices in 102 countries. • More than 450,000 FACIT calculators in service to-day.

like weakness, or because they fear that the West may be forced, through inadequacy on the ground, to choose between surrender or waging atomic war. Others favour some military gesture, such as calling up reserve divisions or sending more troops to Europe, to impress the Russians with America's determination not to abandon Berlin. Mr Acheson, the Democratic ex-Secretary of State, has been proposing more strength for the North Atlantic Alliance, as well as a "crash programme" for missiles. So far all Congress has been able to do is to extend conscription for four more years.

The President took the war into the camp of his Democratic critics with great vigour at Wednesday's press conference. What was the use, he asked, of keeping men unnecessarily in the services or sending more troops to Europe when there was no intention of fighting a big ground war that would put the West at a fatal disadvantage? Mr Eisenhower refused to dwell on the alternative of a nuclear war except to say that it was not an impossibility, if the Russians made the first move toward hostilities. Nettled by the constant charge that he is more interested in a balanced Budget than in the balance of military power, he insisted that, even if there were a surplus, he would spend any extra money on foreign aid or education, rather than on defence—though he also asked why advocates of more defence spending did not propose more taxes.

Now that Mr Eisenhower is the sole spokesman on foreign policy, he is speaking with a new briskness and confidence; he has wisely discouraged any provocative emergency step which might make negotiations with the Russians more difficult. With the Democrats he has not been so prudent. The Administration may have a strong case. But to hint that the demand for larger forces is either self-seeking or hysterical, and to threaten that, if Congress insists on them, the troops will be kept twiddling their thumbs is not calculated to soothe the irritations or lessen the anxieties of men in both parties.

All Aboard for Hawaii

NEW states have usually come in pairs and Alaska and Hawaii, that strangely assorted couple of sun and ice, are to be no exception. The islands in the Pacific have had to wait a long time. There have been twenty-two sets of hearings in all; the House has voted a statehood Bill three times only to see it ignored by the Senate or, as in 1954, tied to a Bill to admit Alaska which the House at that time was not ready to accept. Yet both parties have been committed to "immediate statehood" for Hawaii since 1952.

The long delaying action by Southerners in the Senate arose primarily because the admission of Hawaii, whose population is three-quarters non-Caucasian (though almost all native-born) would strengthen the supporters of the rights of racial minorities and dilute the power of the South. To placate the Southerners, Hawaii, whose population of 540,000 entitles it to two Representatives as well as two Senators, is going to have to wait for the second Representative until after the 1960 census. The South, now apparently resigned to the inevitable, takes some comfort from the fact that in recent elections Hawaii has at least taken a Democratic turn. The other chief objection, that the islands are in thrall to communist labour leaders, such as Mr Jack Hall of the dockers' union, remains, but even the chairman of the House Un-American Activities Committee feels that communist influence is diminishing. Finally, the complaint that Hawaii does not adjoin the United States has lost any weight it had since the admission of Alaska in January.

The Senate, which in the past has dragged its heels, is now narrowly ahead in the race to make Hawaii the fiftieth state. The Interior Committee voted unanimously for S50, the symbolically numbered Bill which had 55 sponsors, more than enough to pass it, and an overwhelming vote of approval by the whole Senate is imminent. The friends of the new state are excitedly calculating that, if the House acts before the Easter recess, Hawaii will have time to hold its elections and be proclaimed a state before this session is over. The chief obstacle has been removed now that the Rules Committee, that citadel of last-ditch opposition, has surrendered its power to delay a vote. The newest state, with its mixture of white, Japanese, Korean, Chinese and Polynesian strains, will provide a unique proof of America's belief in racial equality.

Oil's Bad Example

ALTHOUGH it does not affect Britain directly this week's imposition of mandatory quotas on imports of oil into the United States was justifiably cited by Sir David Eccles in his condemnation before the American Chamber of Commerce in London; it is another example of the way in which protectionism is getting around the Reciprocal Trade Agreements Act by disguising itself in the alleged needs of the national security. The quotas are being imposed on the basis of the original finding nearly two years ago that the availability of adequate reserves of petroleum, ready for speedy exploitation in time of war, depended on an active domestic industry and that the health of this industry was being threatened by increased imports. Voluntary restrictions on imports did not prove effective; in addition, according to the President, the present surplus of oil has disrupted world markets and would have spread to the United States if production had not been cut back there, to the detriment of the domestic industry.

Starting immediately for crude and semi-refined oil, and on April 1st for refined products, all imports will be under licence. The quotas, to be reviewed constantly, are based on percentages of domestic demand, so that foreign producers may share the benefits of the growth in American consumption. The regulations are more stringent for the states east of the Rocky Mountains, where there is excess oil capacity, than for the west coast, which is partly dependent on imports. In the east total imports of all types of oil are limited to 9 per cent of estimated demand; within this limit imports of semi-refined oils requiring further processing are not to exceed 10 per cent of imports of crude and semi-refined oils combined and imports of refined products, including the heavy residual oil which is much used by industry on the east coast, are not to exceed the amount brought in in 1957. The same arrangements apply to imports to the west coast, except that there the maximum for all types is to be fixed at an amount equal to total demand in the area when local output is taken into consideration.

It is estimated that as a result imports of crude oil will be cut to 750,000 barrels a day from 883,000 in the east and

to 195,000 from 220,000 in the west. Residual fuel oil, at about 475,000 barrels a day, will be only slightly reduced. But other finished products will be down sharply, to about 60,000 barrels a day; these were not covered by the voluntary quotas and so imports have been rising steeply, with the average for 1958 being 148,000 barrels a day. These refined oils come mainly from Venezuela and the Dutch West Indies; altogether about 45 per cent of American imports come from Venezuela and 9 per cent from Canada, which will be bitterly disappointed that no exception is apparently to be made for its oil. The real flood of complaints will begin when the quotas are allocated among the various importing companies and by them among their sources of supply. Only then will it be possible to judge the full effect of the new restrictions.

Difficult Neighbour Policy

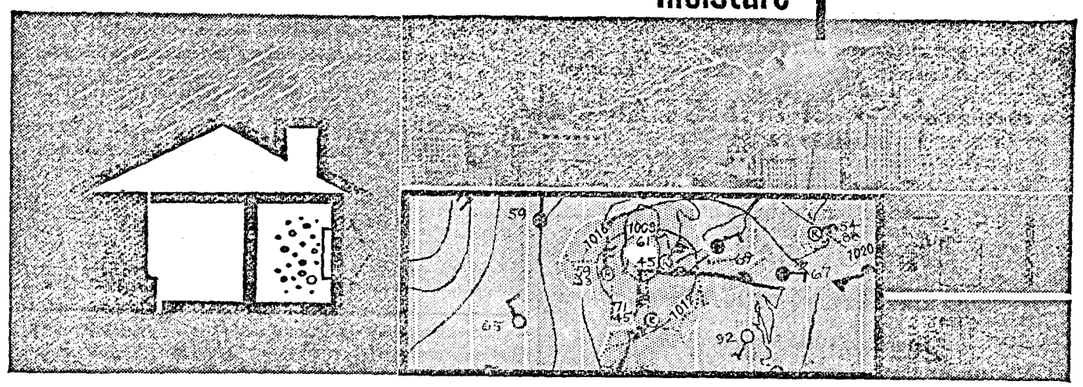
LATIN Americans should be flattered that the new Ambassador to Brazil is to be Mrs Luce, a Republican who, with her husband, the owner of *Time* magazine, has considerable political influence and who has also proved her ability as Ambassador to Rome. It is a pity, of course, that *Time* should have chosen the week of her appointment to offend Brazil's neighbour, Bolivia. Fortunately the anti-American riots which this set off were treated with good sense in Washington (except by Senator Bridges, whose immediate reaction was to call for the Marines); and the Bolivian government itself realised that it could not afford a quarrel with the United States. Hard-hit by the fall in the price of tin and in its output, bankrupt Bolivia cannot do without the $23 million or so a year which the United States has been providing to stabilise its economic situation and keep the moderates in power.

Much nearer home, in the Caribbean, the United States is finding it hard to embrace the prickly Cuban premier, Senor Castro, with all the warmth that Dr Milton Eisenhower recommended for democratic regimes. However great the crimes of the fallen Batista dictatorship, Americans do not care for the way the rebel leader has demanded that judges should bring in verdicts of guilty on individuals. The State Department's sense of protocol has been offended because Senor Castro accepted an invitation to speak at a meeting in April of the American Society of Newspaper Editors without first informing Washington. The Cuban Telephone Company, which is American controlled, has been deprived of rate increases granted to it by President Batista and will be run, temporarily at least, by a Cuban administrator.

What is more serious is the risk that the triumphant democrats of Cuba and the nearby Trujillo dictatorship, one of the few still remaining in Latin America, may soon be at each other's throats. The backdoor to General Trujillo's Dominican Republic, where ex-President Batista and other exiled dictators have been made welcome, is Haiti, the impoverished and backward Negro republic which occupies the other half of the island of Hispaniola. Cuba has given not only asylum but also the use of its radio facilities to enemies of President Duvalier of Haiti; a landing there of some of the 120,000 Haitians in Cuba is not impossible. Neither is a decision by General Trujillo to strike first. Many Latin Americans consider President Duvalier himself to be a dictator. But the United States has no desire to see Haiti made an ideological battleground and its people further impoverished. It has ostentatiously given the Duvalier government an emergency grant of $6 million and has sent a military mission to Haiti; it still has not lifted the embargo on arms to Cuba. The new Ambassador, Mr Bonsal, who is popular with the Cubans because of his record of opposition to dictators, will have to try to persuade them to keep their revolution at home.

Television Boxed In

THE 1958-59 television season is well into its second half and with only one new show in the Top Ten, "last year's show is better than ever" seems increasingly justified as an epitaph. Television has been under constant attack, ever since sponsors became reluctant to buy time last autumn, as a "six-day idiot box" from which serious programmes emerge only on Sundays. The climax has been the announcement that Mr Edward Murrow of the Columbia Broadcasting System will take a sabbatical year; he is a distinguished broadcaster known at home and abroad for his constructive approach to television journalism. He has long criticised the general standards of American television and some people doubt whether he will ever return full-time to CBS.



Television is now operating in a buyers' market and the sponsor or his advertising agency, interested in audience figures rather than in the quality of programming, is dictating policy. The result is an overdose of Westerns and violent action features which have proved their appeal with the public, and a tendency not to experiment outside the "bland norm." Also the increased use of film, which accounts for over one half of each network's prime evening time, has led to an upsurge of companies churning out packaged features in which success is judged by how little time is spent on production. These features are then sold direct to the sponsor, who buys only time from the network.

The networks, as well as the critics, are unhappy. Although total advertising revenue is increasing, costs are rising even more, and sponsors hesitate to commit themselves for long periods of time. In an industry accustomed to increasingly high returns, profits last year were down 17 per cent. The expansion of the American Broadcasting Company still, in terms of receipts, less than half the size of the giants—CBS and the National Broadcasting Company—is continuing and it is felt that there is not enough advertising money around to split three ways and keep profits up to former levels. It is small wonder that the growing financial success of independent television in Britain is regarded with some envy.

But at least there is increasing awareness among network executives that perhaps some critics are right in claiming that the standard of programmes must be raised if a regular,

One way street for moisture

Silicones properly applied to a porous masonry surface keeps moisture out—won't keep moisture in. The application doesn't seal the surface, it merely coats the walls of the pores with a molecular thin film of silicone. Water hates silicone—it simply won't enter those pores—not even when driven with hurricane force. Masonry treated with silicones sheds water like a duck's back.

Water can cause extensive damage when it penetrates brick, concrete or mortar. It freezes and chips the surface. It dissolves salts and leaves disfiguring streaks and patches. It seeps through to damage interior plaster and woodwork, causing decay.

Now water damage can be prevented with an easy to apply water repellent formulated from UNION CARBIDE Silicones. Applied by spraying or brushing to almost any surface one application of this clear liquid coating affords protection for years. An application of UNION CARBIDE Silicones will not affect the appearance of any surface to which it is applied.

FREE—For information and further details on how UNION CARBIDE Silicones can be profitable for you, ask for our booklet IE-3. Write to UNION CARBIDE INTERNATIONAL COMPANY, Division of Union Carbide Corporation, 30 East 42nd Street, New York 17, New York, U.S.A. Cable Address; UNICARBIDE, N. Y.

Original and Provocative Investment Letters From America

The Monthly Letters published by J. R. Williston & Beane have proved to be of interest and investment benefit to serious investors around the world. These original and stimulating essays are prepared by the partner in charge of our Research Department. They attempt to define current business and economic trends and estimate their probable effect on the stock market and specific issues.

The following headlines illustrate the wide range of subjects dealt with in our most recent Monthly Letters:

"Is It Too Late To Protect Yourself Against Inflation?" . . . "Does Pan Arabism Make It Dangerous To Own Mid-East Oils?" . . . "Is Moscow Determining Your Investment Future?" . . . "Your Basic 1959 Investment Policy"

If you would care to receive a current copy of this unusual investment publication, without cost or obligation, write to Mr. H. Thomas Osborne, Foreign Department.

FAMOUS SINCE 1795

A Congressman's Day

WASHINGTON, DC

8.15 a.m. An orange, early-March sun is still only a hand's width over the Capitol dome as Congressman X, a Democratic member of the House of Representatives from a border state between the Middle West and the South, holds his morning staff meeting in the office building across the street from the Capitol where both houses of Congress meet. Mr X has two rent-free rooms in this building, a structure in the post-office-classical manner, and keeps a staff of four—a political aide, a public relations assistant and two secretaries—for whose salaries he gets an allowance of $30,000 a year; a proposal is now under consideration which would add another $14,000. Unlike one in seven of his colleagues, he has no relations on his payroll. Recently, after it had been found that an Iowa Democrat was paying his student son nearly $12,000 a year for helping in the office, a news agency published a list of 65 Representatives who had people of the same surname on their staff; although two Smiths and a Brown have indignantly denied any kinship, a few of the others have embarrassedly talked of cutting their wives' and children's salaries.

9 a.m. The post is dealt with. On the average, Representative X gets about 35 letters a day. Up to a half are requests of various kinds—to help someone to get a pension, to intercede with the Commerce Department on behalf of a local businessman, to persuade the Air Force to bring a husband home from England. Another third express opinions. At the moment a good many of these are concerned with inflation, and internal evidence suggests that several are inspired by business organisations supporting the President's campaign for a balanced Budget. Not one mentions the Berlin crisis. All that are sane and signed are handed to the appropriate staff member and will be answered. The Congressman also gets a telephone call from the Democratic whip for his region asking if he plans to support an impending Bill. Apart from a mimeographed list of legislation due to be considered by the House each week, occasional telephone calls from the whips are the only way in which the majority of members are approached by the party leaders. As in the Senate, the Democratic caucus, a meeting of all the members, is now called only once a year and is a pure formality.

IN COMMITTEE

10 a.m. Part of Mr X's committee, on Education and Labour, meets to hear evidence on the labour reform Bills before Congress. Since the "palace revolution" which took place two years ago against the chairman—Mr Graham Barden, an immovably conservative Democrat from the South—the education and labour group has been one of the more democratic and productive committees in a system which is not notable for either virtue. Mr Barden remains chairman, but the liberal members have insisted on regular fortnightly meetings and have farmed out a good deal of work to sub-committees whose chairmen are much more eager to get legislation written than he is.

It is in the importance it gives to committees that Congress probably differs most from the House of Commons. They summon government officials and outside experts to give evidence; they hammer together "committee bills" from perhaps half a dozen proposals submitted by various Representatives on a single subject, and then guide them through the House. Since the seniority rule has given the chairmanship of 14 of the 20 House committees to Southerners or border-state members, and since most of these are far more conservative than their fellow-Democrats, the power of chairmen to call meetings only when they feel like it can effectively stifle legislation. One House committee has only just held its first meeting in the current session, now two months old.

THE HOUSE ASSEMBLES

12 noon. As usual, the first hour is spent in "letting off steam." Members cluster round the Speaker's dais, and either orate briefly on subjects close to their hearts or else hand up statements to be inserted in the *Congressional Record*, a large part of which consists of these unspoken pearls. Some Representatives use this device to insert prize-winning high-school essays and eulogies of local worthies. Since Congressman X's district is absolutely safe—consisting half of southern hill farms and half of small mining towns, both of which vote Democratic for quite different reasons—he scorns such frivolities. At present he is inserting a series of articles about the plight of families of out-of-work miners who, having exhausted their unemployment benefits, are now living largely off a meagre and poorly balanced supply of food distributed free by the federal government.

Representative X also uses this visit to the floor of the House to introduce a private Bill "for the relief of" a Hungarian living in his district whom he has agreed to get naturalised by this short-cut method. He then takes a constituent to lunch in the House cafeteria; although his district lies several hundred miles from Washington, forty or fifty such visitors pass through his office each week.

2.30 p.m. The Education and Labour committee continues its hearings. It has been given permission to meet while the House, now sitting as the Committee of the Whole, debates one of the few Bills that have yet cleared the committee stage. The division bell rings twice, sending the members trooping along the underground passage between the House office building and the Capitol. Congressman X votes against a couple of Republican amendments but does not speak; his speeches on the floor are limited to about ten a year, mostly on Bills his committee has dealt with.

4 p.m. Back to his office, where a number of telephone calls has accumulated. Representatives get a yearly telephone allowance of 50 hours of free long-distance calls and a telegraph allowance of 20,000 words. Mr X makes arrangements to address a meeting in his district the following weekend and to give one of his regular local wireless talks. It is here that the otherwise generous allowances he receives are inadequate. He gets only one free round trip a year to his constituency; in practice he finds it necesssary to go there six or eight times.

AFTER HOURS

5 p.m. By now the House has adjourned. At this stage in the session it is meeting on only about four days a week for two or three hours at a time; by the summer, when Bills have piled up and members want to get home, it will be sitting late into the evening. Mr X himself adjourns to the Speaker's office in the Capitol for a chat about the day's affairs over a drink of bourbon whisky. He is one of the select band of a dozen or so congenial souls who receive these invitations from Mr Rayburn. Not many Democrats are on such cosy terms with the Speaker, whose immense powers go with an old-fashioned preference for running things through his NCOs, the senior committee chairmen. Other Representatives have to be content with their chance to buttonhole him on the floor or make a more formal visit to his ever-busy office in working hours.

6.45 p.m. After a last visit to his office, Mr X leaves for home as the sun goes down behind the Washington Monument. One of his colleagues who recently equipped himself with a pedometer found that in the course of a ten-hour day, covering and re-covering the ground between his office, his committee room and the House floor, he had walked twelve miles. Congressman X still faces cocktail parties or dinners on four or five nights a week. To comfort himself, he can reflect on what a British MP would feel about his salary: in addition to all his allowances, he gets $22,500 a year.

Continued from page 972

responsible audience is to be held. Colour television will also be an attraction, if only as a short-term novelty, and wider use of videotape should cut costs and bring back some of the spontaneity of the now moribund live show. A recent report in *Variety* suggests that, having written off the balance of this year, the prime concern of sponsors is already with the 1959-60 season beginning in October. Concrete evidence of this is the sensational $25 million contract signed last week by Mr Perry Como, the well-known singer and compere, for sixty-six shows over two and a half years.

Motels Come Full Circle

FROM A CORRESPONDENT ON THE ROAD

IT used to be that a hotel was within the town limits, was a single structure several stories high, and offered rooms ranging from comfortable to luxurious, at uncomfortable prices, while a motel (a portmanteau word for motor-hotel) was on a main road or bypass near a town, consisted of a number of separate units spread out horizontally, and provided basic accommodation at low cost. But in the past few years, this traditional distinction between the two has become blurred. Now motels look like hotels, and hotels have moved to the outskirts of towns so, when a motorist is attracted into a driveway by a neon sign, he may not know which he has chosen—even when he leaves next morning.

Ten years ago, he would have been in no doubt and twenty years ago he would probably not have been caught dead in a motel. Of the 13,000 or so motels built before the last war the majority were no more than wayside shacks with hard beds, primitive furniture, a single naked electric bulb, small oil stove, and cold running water. Those who stayed there and paid $2 to $3 a night for two persons usually could not afford hotel rates; a typical name was "Uncle Tom's Cabins." Since the war, with the increases in incomes, leisure and car ownership in the United States, both the quantity and quality of roadside accommodation has improved vastly. According to various estimates, by last summer there were about 58,000 motels in the country representing a total investment of about $5,000 million and receiving close to 1.5 million guests, who spent as much as $1,750 million each year.

The wayside cabins began by evolving into motor courts with more sleeping units (between 11 and 40 as a rule) and better ones. Typically, there is a basic spring bed, carpet on the floor, desk and bedside table with lamp, central heating, a shower cabinet and hot running water. Motorists are invited to patronise "Eldorado Motor Court" or "Lake-view Motor Lodge" and charged $4 to $5 nightly for two persons. Usually a court is owned by an individual or a married couple, who have invested somewhere between $10,000 and $75,000 in its construction.

Motor courts, for the most part, confine themselves to providing adequately comfortable overnight sleeping and bathing facilities for transient guests, travelling on either business or pleasure. But, in recent years, some enterprising motel operators have begun to compete for regular hotel business, on the assumption that many hotel patrons are increasingly bothered by traffic congestion and parking problems in town centres, and would be glad to spend the night on the outskirts if they could count on accommodation and service comparable to that of a hotel. The outcome has been to expand the motel back to the motor hotel or high-way hotel, many built on two floors or even more, with wall-to-wall carpeting, bath as well as shower, large cup-boards, radiant heat, a dressing table, air conditioning and free television in all rooms. There is usually a restaurant, or at least a coffee shop, either run by the proprietor or rented to an outside operator, and perhaps a cocktail bar. A swimming pool has become almost a "must" and, mind-ful of family patronage, most motels now being built include a children's playground and wading pool and many offer a baby sitting service and accommodation for pets.

A variant of the motor or highway hotel is the resort motel, found especially in the holiday regions, such as Florida, California and Arizona, and designed to attract guests for a longer stay than overnight. They are in colourful surroundings, in the country or by the sea, with elaborate gardens. There are beach chairs and umbrellas by the swimming pool, games such as pingpong and shuffle-board, a picnic area, barbecue pit, piped-in music. A few of the more luxurious, such as the Western Hills Hotel, at Fort Worth, Texas, even have golf courses.

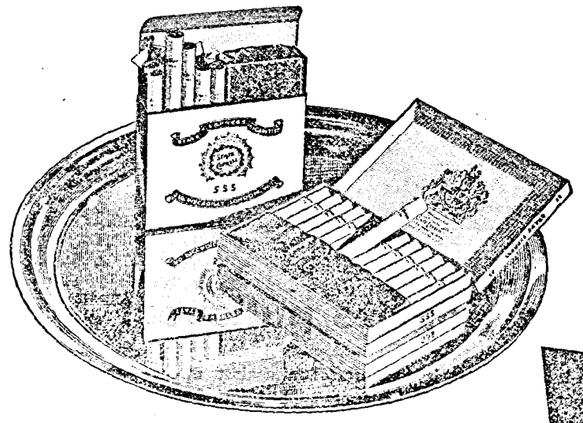
THE highway hotel, whether resort type or otherwise, is likely to bear such a name as "Mayfair Motor Hotel," "The Hi-way Inn" or (in the Southwest) "El Rancho." The charge may be as high as $15 to $20 a night for two persons at the height of the season. There may be 100 or 200 rooms and as much as $100,000, $500,000 or even $1 million may be invested in one. Few individuals or married couples have that kind of money, so they are owned by an investment syndicate or a company which runs a group of them. Recently, hotel corporations, the Hilton, Sheraton and Knott chains, have begun to build highway hotels. They could ignore the competition of cabins and motor courts, but not that of the new, luxurious motor hotels.

In entering the field they have carried the evolution of motel back into hotel yet a stage further. Hotel-operated motels, such as the Sheraton Syracuse Inn, just off the New York Thruway, and the Knott-owned Thomas Jefferson Inn, at Charlottesville, Virginia, have added garages (one of the original selling points of motels was that the traveller could park outside his bedroom), room and valet service, dining rooms, decorated cocktail lounges, ballrooms. An hotel earns a good deal during the year from conventions, and so these companies have planned their highway hotels accordingly, with meeting rooms and display areas.

Such a place is as expensive as a luxury hotel; it may be as much as $25 to $30 for two persons, though the average is lower. A motel-hotel, therefore, is no longer a cheap place to stay. But there is another side to this coin. The increase in the number of motels, and the competition between them, has resulted in a general raising of standards. Call it a motel or a hotel, at the present time it is possible for a couple to stay the night just off the main road in the vicinity of any town of any size at all in the United States, in complete comfort, not to say modest luxury, for from $7 to $10 a night. The improvement in facilities has been markedly greater than the increase in charges since the days of the early cabins and courts.

Common sense

In every big building or civil engineering project there are three main parties: the owner, his consultants, and the contractors. Traditionally, the contractors come into the picture only after design and specification have been settled. But with the size and complexity of modern construction, much can be gained if collaboration starts earlier. The contractor, who is to carry out the scheme, is familiar with the latest construction techniques and materials. He knows, from practical experience the possibilities (and limitations) of mechanical plant and equipment.



is good sense

John Laing and Son Limited maintain an active Development and Planning Division for solving today's problems while probing for the methods and materials of tomorrow. Surely commonsense requires that such facilities should be available *at the design stage* of a project, when construction problems can be solved most cheaply. What commonsense suggests, experience has in fact confirmed. Leading architects and consulting engineers responsible for major construction projects throughout the world have collaborated thus with John Laing and Son Limited without losing the safeguards of competitive tendering. We are at the service of all concerned with the planning of new works and their completion on time.

There goes your favourite pullover!

You didn't need it in the Summer did you? You left it in the drawer. On the first chilly Autumn morning out it came — looking more like a piece of lace than the stout old friend it used to be. Reason? Moths!

Mothproofing *of their whole output* has been the aim of woollen manufacturers for years. But the general use of mothproofing agents, giving lasting and safe protection, has so far been ruled out by their high cost. The results of Shell Chemical Company research, however, have put an end to the expensive meals of billions of moth larvae.

Now, with 'Dielmoth', all types of woollen furnishing materials, carpets, knitwear, blankets and clothing can be given lasting protection against moths — economically. 'Dielmoth' is easily applied during the dyeing process to wool or to wool blends and yarns and it is safe to user and wearer. Under controlled application conditions, the proofing is fast to washing and dry cleaning.

If effective low-cost moth-proofing would be an asset to your products; or, indeed, if you have any problem concerning the use of chemicals, industrial or agricultural, you should consult Shell. To do so is easy.

Write to the Sales Promotion Manager, Shell Chemical Company Limited, Marlborough House, 15-17, Gt. Marlborough Street, London, W.1.

Revolt at Mosul

FROM OUR MIDDLE EAST CORRESPONDENT

It was said in this correspondence four weeks ago (February 14th, page 605) that the last Iraqi government reshuffle was putting the loyalty of the army to its severest test. This test came sooner than might have been expected with the revolt of the Fifth Brigade at Mosul. The coup was launched while the prime minister, General Qasim, was addressing the first conference of the Iraqi league for the defence of women's rights—a gathering liberally sprinkled with militant ladies from eastern Europe. It certainly gave him his biggest shock yet, for it called in question the attitude of the army towards himself and to President Nasser.

The government shuffle in February, which got rid of the remaining Nasserists in the cabinet, left General Qasim with a dangerously narrow basis of authority resting on National Democrats, Communists and independents. His smouldering quarrel with President Nasser led him progressively to break his links with the strong forces of orthodox Arab nationalism inside Iraq which, throughout the long struggle against the regime of Nuri es-Said, had looked towards Cairo for leadership and inspiration. To fill the gap General Qasim leant increasingly heavily on left-wing National Democrats and Communists. A notable feature of the Iraqi press in recent weeks has been the attempt of the National Democrats to outdo the Communists in violence of expression.

The immediate cause of the revolt was a monster rally of "peace" partisans held at Mosul. It was sponsored by the Communists, but also attended by National Democrats and people whipped up from anywhere. It is officially claimed that 250,000 people were massed in Mosul for this rally, although anything approaching such a figure must have severely strained Iraqi transport resources. During the gathering, clashes occurred between Communists and Arab nationalists and several people were killed. These incidents and the speeches proved too much for the local brigade commander, Colonel Abdul Wahab Shawaf, who two days later raised the standard of revolt.

Colonel Shawaf's eight points justifying his attempted coup show clearly his anti-Communist, pro-Nasser position. In summary, they condemn, first, despotism and the cult of personality; second, the persecution of free officers and others—a reference to the trial and sentence of Colonel Abdul Salam Aref and his supporters; third, the subjection of the country to the Communists (they were not named as such, but it is clearly indicated). At the same time, in a bid for the support of the Kurds and peasantry, he stressed his allegiance to the constitution promulgated after the July revolution, which guaranteed the Kurds full rights, and his approval of the land reform bill. The burden of his accusation against the prime minister was that he had deviated from the principles of July and betrayed the revolution.

In the event, Colonel Shawaf won little support from his fellow unit commanders. Brigadier Nazim Tabakjali, commanding the second division in and around Kirkuk, whom Shawaf claimed to have consulted before launching his coup, held aloof and telegraphed a message of loyalty to General Qasim. Troops in the Baghdad area and in the south rallied to the government along with the air force, which is deeply penetrated by Communist elements. Whether the failure to support Colonel Shawaf is due to a genuine lack of sympathy with his aims or to faulty organisation remains to be seen. What seems certain is that the Nasserists in Iraq cannot afford to make many more mistakes without bringing serious discredit on themselves.

Colonel Shawaf's revolt will certainly deepen the rift between General Qasim and his supporters on the one hand and the pan-Arab nationalists on the other—a rift already dramatised by the expulsion from Baghdad of nine diplomats belonging to the United Arab Republic. The Communists are calling for a renewed purge of a civil service that is already sadly depleted by the loss of men who gained their experience under the Hashemite regime. It is certain that the army, too, is due for another careful combing. The revolt has shown that the officers still have minds of their own, just as General Qasim himself had during the years of cautious plotting against the Hashemites. But another army purge—which will certainly bite deep—poses formidable problems. The Fifth Division is in process of formation; General Qasim has promised the formation of a sixth. But where will he find his officers?

The revolt seems to have enjoyed some civilian support in the Mosul area, while Kurdish enemies of the Barzanis (a Kurdish family whose leader returned from exile in Prague last year) took the opportunity of paying off old scores. But the importance of such support is always difficult to assess. The Arabs in general are suckers for demonstrations and, with all sides claiming a monopoly of nationalism, it is usually easier and always safer to follow the man with the gun. This argument, of course, cuts both ways. In Baghdad monster demonstrations, staged in favour of General Qasim, shouted death to the traitors. But Baghdad is a big town where it is possible to call a quarter of a million people on to the street and still enjoy only minority support when it comes to the point.

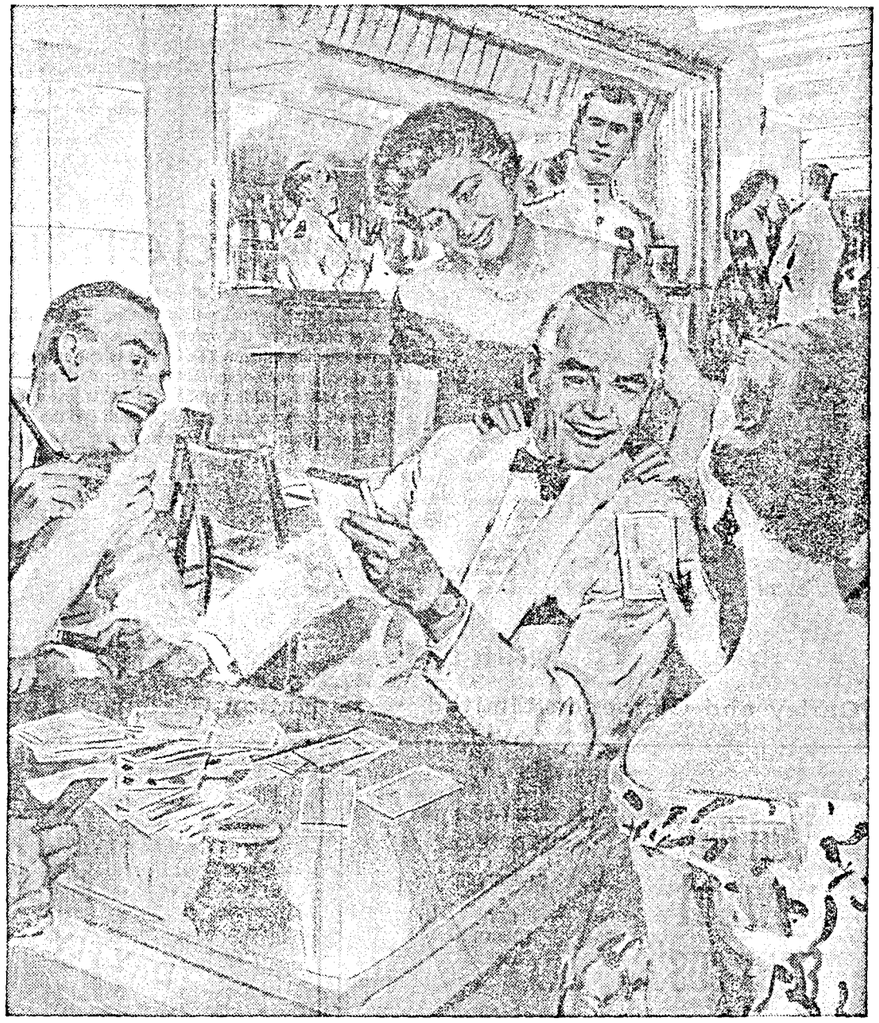
Now that he seems to have finally parted brass rags with the Arab nationalists and President Nasser, General Qasim is in a dangerously exposed position. To the north and east are Turkey and Persia, both watching him with deep suspicion. To the north-west there is unfriendly Syria—the Damascus press reports of Colonel Shawaf's revolt left no doubt where President Nasser's sympathies lay. To the west and south are Jordan and Saudi Arabia, neither of which has much use for regicides, and neither of which would wish or dare to support Qasim against

Nasser. With a substantial proportion of his own people doubtful or lukewarm, it seems that General Qasim has precious little room left for manœuvre. He is likely to fall into an increasing dependence on his Communist allies, who, for all their own isolation in a hostile Middle East, at least have a world power behind them and a hard unyielding toughness of their own.

In conclusion, one should spare a thought for the political prisoners lying under sentence of death in Baghdad jails. Whenever the tension heightens in Iraq, the Communists and their allies redouble their demands for the execution of the sentences. During Colonel Shawaf's revolt, the powerful voice of Colonel Mahdawi, the president of the people's court, was added to this clamour in the shape of a personal appeal to General Qasim to approve the sentences passed by the court. The condemned men include Colonel Aref as well as outstanding men of the old regime. General Qasim may well consider Colonel Aref to be the greatest immediate danger to his government; but he can hardly approve his execution while holding his hand over such men as Fadel Jamali and General Daghestani. His decision over the prisoners will doubtless be governed by his assessment of his personal position in relation to the Communists.

Mr Khrushchev Soliloquises

FROM OUR SPECIAL CORRESPONDENT LATELY IN LEIPZIG



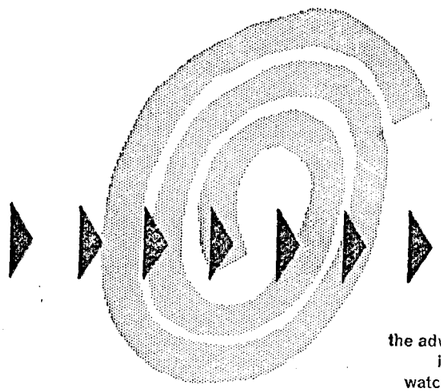
MR KHRUSHCHEV'S protracted ministrations in the Democratic Republic have given a massive boost to the morale, and perhaps even to the status, of the east German regime. Can it be that he wanted to compensate his hosts for some eating of words about Berlin? There are signs that this may be so. But Mr Khrushchev's improvisations were so many, and so unpredictable, that they greatly disconcerted the officials who had counted on being able to invite visitors to this or that function and to explain coherently the policies of the aspiring east German state. The western journalists whose ear Mr. Khrushchev obviously wanted to catch, were left almost wholly to gatecrash and piece together what they could from eavesdropping and pooling afterwards the scraps. He has chiefly himself to thank should he find he has been misquoted or misunderstood.

A fair deduction from the hurly-burly would be that there is at least one important issue on which Mr Khrushchev would like the West to continue to be kept guessing and himself at liberty to improvise. This is the manner of the prosecution of his policy, in the face of allied opposition, for turning west Berlin into a Free City. It is probable that he has not made up his mind, and that in his talks in east Berlin this week he has been reviewing the various courses open and their possible consequences. It is also probable that as far as Berlin is concerned improvisation will continue to be the order of the day—that the intention is to squeeze the allies out of west Berlin during the next year or two by recourse to one device after another, improvised to meet whatever opportunity presents itself.

In such a programme, the introduction of Russian troops into west Berlin could obviously play a part. According to a statement by the Soviet Embassy in Berlin to the *Frankfurter Allgemeine Zeitung* Mr Khrushchev's latest proposal for a Berlin settlement might be expanded roughly as follows. The three western powers would maintain "military missions" in west Berlin. So would all the other powers whose representatives in Berlin were accredited to the old Control Council, including Russia, Poland, Czechoslovakia, Denmark and Norway. The three western powers would be asked to make symbolic reductions in their garrisons; and all the missions concerned would be given "United Nations status." The whole of Berlin would become legally part of the east German Democratic Republic; but in view of the peculiar circumstances the Democratic Republic would undertake not to exercise sovereignty in western Berlin. The Berlin occupation statute would be abolished, so that the western powers would no longer have any say in Berlin affairs. An agreement or treaty defining these arrangements would be signed by the four big powers, the Democratic Republic and the west Berlin Senate. A second agreement would define the western powers' right of access to Berlin. This agreement would require the signatures of the three western powers, the (west) German Federal Republic and the (east) German Democratic Republic. According to the Soviet Embassy spokesman, the Democratic Republic is being advised to improve its own measures to stop the flow of political refugees to Berlin rather than to expect to be given an opportunity to exercise some sort of inspection of the passenger lists of western aircraft leaving Berlin.

THE objectives of Russia's medium and long term policies for Germany as a whole were not left obscured by Mr Khrushchev's unconventional and sometimes conflicting flow of wise saws and modern instances. He stated them most clearly at an "all-German" workers' rally at Leipzig. The Soviet Union, Mr Khrushchev said once again, would never be a party to unifying Germany so long as it meant the disintegration of the Democratic Republic. German workers ought to be at one in this matter; and he asked the west German workers present—it was claimed there were 1,100—whether they were not embarrassed to hear capitalists so often commending their trade union and socialist leaders. The true home of all German workers was the Democratic Republic. It would be satisfying, Mr Khrushchev reflected, to see the authority of the east German premier, Herr Grotewohl (a former Social Democrat), extended to the whole of Germany. As for Herr Ulbricht, the east German communist chief, he was not the impossible person that he was so often made out to be. He was, in fact, Mr Khrushchev's good friend, for the excellent reason that he possessed a character which capitalists did not like. The generally detested Ulbricht, it seems, is there to stay. But it would have been too much to expect Mr Khrushchev to consider "the facts of the situation" quite as frankly and thoroughly as his manner seemed to claim. He conveniently disregarded both the anti-communist vote recorded by the west Berliners on December 7th after the Soviet proposals for Berlin had been made known, and the unceasing flight of workers from the part of Germany run by the men he was commending as good for the whole.

Immediate aims in Berlin and long-term aims in Germany apart, Mr Khrushchev made it clear that for the time being Soviet policy will be to continue to press for a German confederation, defined and cemented by a peace treaty. In concert with the clumsy and unscrupulous east German propaganda apparatus, Mr Khrushchev was at pains to use the Leipzig Fair to sell the idea of a confederation to west

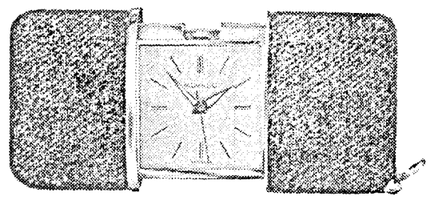


Whose deal next? It could be yours

They still talk about the Mancunian who made a fourth with three gentlemen from 'Down Under'. He lost that game and several more but found three firm friends. At Sydney he left the ship with an order for two hundred thousand pounds. The ends were less unusual than the means. For this is the P & O First Class Service to Australia. Here in one of the mighty ships of the P & O fleet the British businessman can come to terms with Australia and the East.

It's unavoidable. Out of some six hundred and fifty fellow passengers travelling first-class *nearly half will be people with similar or connecting interests in the same territory as yourself.* A high percentage of *those* will be people from the very area you are visiting. *They'll* give you the lie of the land as none else can. Conditions are ideal. On P & O both the sun and the service wear a smile. You have time to know people, to pursue ideas without interruption, to rest properly. You do more constructive work in four weeks at sea than you do in four months at home. Yet you arrive back fresher than when you left!

If you have interests in Aden, India, Pakistan, Ceylon, Malaya, the Pacific or 'Down Under'—it *pays* to travel *all or part way* by P & O First Class Service to Australia (or the Far East). Special seasonal terms and Executive Tickets are available. Ask someone to check *now* with your Travel Agent or with P & O direct. 14/16 Cockspur St., S.W.1. Telephone: WHItehall 4444 or 122 Leadenhall St., E.C.3. Telephone: AVEnue 8000.



P&O *First Class to Australia is an investment*

Confidentially...

The latest thing in quality time-keeping is a piece that combines all the advantages of the elegant fob watch and the practical travelling clock . . . in fact, the Movado Ermeto. The Ermeto is not only a precision-made, Swiss watch, but a shock-protected, upright clock for desk or bedside table. The rolled gold Ermeto, at £48-7-0, is just one of the wide range that includes the Automatic Ermeto, the Ladies' Ermeto and the special alarm Ermetophon. Consult your nearest Movado Jeweller.

German exhibitors and visitors. There were honeyed words and fair promises for the big west German industrialists (who had honoured Ulbricht by their disapprobation and are still generally depicted as arch-instigators of war and oppression). Travellers from west Germany were greeted at the formidably policed frontier by signs telling of the sweet reasonableness of a confederation ; and as they showed their passports and changed their money (painfully at one west mark for one east) they were invited to carry away a miscellany of pamphlets elaborating the theme. A group of leading east German publicists (including the editor-in-chief of *Neues Deutschland*), who regularly distort and omit on a nightmarish scale, had the nerve to come out with a special appeal to visiting west German journalists to straighten their crooked seeing and work like decent chaps for the admirable goal of a confederation of the two German states.

Confederation or no confederation, peace treaty or no peace treaty, the two German states seem unhappily destined to have to live in a state of cold war for many years to come ; for both regimes, and their respective major patrons, are insisting on conditions for a settlement for which neither is prepared to pay the price stipulated by the other.

Good Manners in the Sudan

WITHOUT much flurry or anyone getting hurt, three Sudanese generals last week marched a few of their troops to Khartoum, ousted half the members of the Supreme Military Council (the sovereign body since the equally peaceful coup in November) and installed themselves instead. On March 4th, the president, General Abboud, dissolved the junta ; a day later he reformed it without the five junior members but including the three corps commanders. At the weekend, General Abdul Wahab, the very able minister of the interior whose heavy hand was apparently one of the main causes of fuss, was quietly dropped from both the cabinet and the council. In the meantime the two sectarian leaders, Sayed Abdur-Rahman el Mahdi and Sayed Aly el-Mirghani, had joined voice to appeal for national unity. They have considerable say over the behaviour of the army (most of the officers come from villages in the north), particularly when they say the same thing.

Cairo press has applauded the change and attributed it to the " fervent Arab nationalism " of the rebellious generals. This seems wishful thinking. General Abdul Wahab, as a supporter of the anti-Egyptian Umma party, was no friend of President Nasser's, but this was not why he was unpopular. There is no evidence that the dissident officers had any quarrel with the junta's foreign or domestic policy—the clash seems to have been on a much more personal level. The corps commanders, jealous at the way in which relatively junior officers had leap-frogged over them into the supreme council, decided to take matters into their own hands by forcing the president to make room.

General Abboud's weakness is that he has not the physical resources to discipline his unruly generals and colonels. Presumably only some of his officers were satisfied by the results of the march to Khartoum ; General Abdul Wahab, too, may not take his dismissal meekly. While the clashes will probably go on being well-mannered, there seems at the moment no prospect of the junta being either willing or strong enough to return the country to civilian government.

Not So Cordial

FROM OUR PARIS CORRESPONDENT

PARIS was probably not the easiest stage in Mr Macmillan's post-Russian journey. Yet, on the face of it, the Franco-British talks ended on Tuesday in an official mood as bright as the Paris weather. Mr Macmillan and Mr Selwyn Lloyd had spent most of the two days with their French counterparts: M. Debré, the new premier, and M. Couve de Murville, the foreign minister. They also had one meeting, continued through lunch, with the President. Bidding his guests farewell at the airport, M. Debré said that such frank and friendly talks between the two countries would take place frequently.

The conversations centred on Berlin and the various aspects of the German problem. The French gave an account of their talks with Dr Adenauer last week. The British gave a long report on their Russian journey and their conversations with the Soviet leaders. They took great pains to dismiss the idea, inspired by the Moscow statement, of a British conversion to Mr Kennan's ideas. What the British Government has in mind, they insisted, is not " disengagement " but a thinning-out process on the lines of the Eden plan, the controlled limitation of armaments in an agreed area. The area should not be limited to one country (to avoid discrimination against Germany), nor should the limitation apply to only one kind of arms.

The two sides agreed on the contents of the reply to be made to the latest Russian note as well as on the time and place for the suggested conference of foreign ministers (it is reported that the date will be mid-May and the place, once again, Geneva). This is as much as could be gathered from official sources, which on both sides were outwardly satisfied. So far, so good. The strains in the *entente* only appear when the talks are placed in their context.

MR MACMILLAN'S journey to Moscow aroused no enthusiasm in Paris. And no amount of pledges of Atlantic loyalty will alter the fact that it was he, and not the President of the French Republic, who went. Subsequent suggestions in the British press that Mr Macmillan had thus taken on the leadership of western policy were greeted by the French press with an anger that one would have been inclined to attribute to an inferiority complex if there had not been comparable manifestations in Washington. The misgivings have not yet vanished. Mr Khrushchev's concessions are ascribed here to western firmness, not to any British efforts at conciliation. The idea of partial disarmament in a limited area has been received coldly. And the French seem to show less inclination than their guests to examine Mr Khrushchev's latest suggestion of a possible maintenance of token forces in Berlin.

The voice of Paris now has a touch of a German accent, and the prime minister's visit takes on a somewhat diminished appearance when compared with Dr Adenauer's visit to Paris last week. The chancellor had less time with M. Debré than Mr Macmillan did, but he spent the best part of a day in long talks with the general at Marly. Mr Macmillan had only an hour and a quarter's direct talks with General de Gaulle at the Elysée. This is not merely a question of protocol. It also suggests with whom the real head of the French executive is now on most intimate terms.

A story now going round Paris may be apocryphal, but it is symptomatic. Asked whether he intends to move his residence to the castle of Vincennes, General de Gaulle is reported to have answered jokingly: "Why should I hurry? In a few years it will be moved to Aix-la-Chapelle (Aachen)." The conception behind this is of a European confederation dominated by France and Germany. As the elderly chancellor finally leaves the stage, the slightly younger general would become the undisputed leader of the coalition and would inherit the throne of Charlemagne.

This Carolingian dream is bound to come up against obstacles in real life. Germany is unlikely to accept the role of junior partner; nor is it inclined to back the general's claims for a privileged place in the Atlantic alliance. At the same time, France's commitment to give faithful support to Dr Adenauer's policy on the reunification of Germany precludes any French flirtation with Moscow, which was once potentially the biggest Gaullist bargaining card within the Atlantic alliance. General de Gaulle's many, and in part contradictory, ambitions may thus not be fulfilled, but his road to "greatness" seems to lead through partnership with western Germany and a continental alliance.

Parisian wits claim that France has changed creditors at the same time as regimes and that an old slogan—"Germany will pay"—is now being revived. Political ties often follow economic interests and Britain's exclusion from the common market may have an impact on its political relations with continental Europe. The *Entente Cordiale* was cemented by French fear of Germany. France's new nationalist regime is still groping for a foreign policy, and its movements are hindered by the Algerian war. But there seems to be no favoured place for Britain in the general's current continental (or Euroafrican) vision.

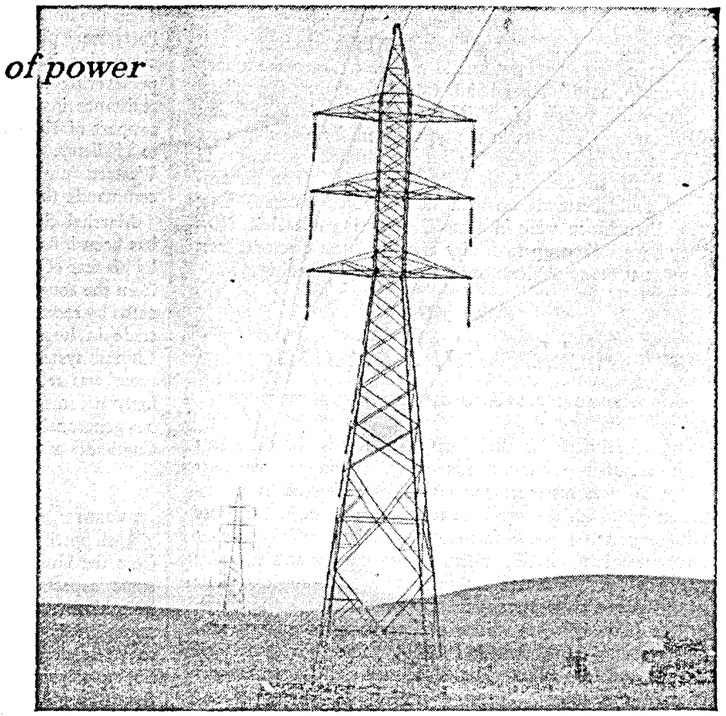
Two Months of Sévérité

FROM OUR PARIS CORRESPONDENT

Two months is a brief period in which to assess the impact of a new economic policy. But since the financial new deal, launched by the French government at Christmas, was based on a series of calculated risks, it is worth while estimating how they have worked out up to now.

The financial experts' first hope was that the rise in prices and wages would be kept within prescribed limits. Fear of recession is making their calculations come true. The cost of living index in January rose by less than 3 per cent and in February by 1 per cent. True, not all the increased costs resulting from devaluation or cuts in subsidies have as yet been passed on to the consumers. (The wholesale price index rose by 4.6 per cent in January.) But there are clear signs that retail prices are not being increased by more than the actual rise in costs, if that. For once Frenchmen are not reacting to devaluation by defence mechanisms developed through years of inflation.

The wage front is also stable, except for civil servants, workers in nationalised industries and those earning the minimum wage who have been granted the promised 4 per cent rise. Fear of unemployment acts as a check. The official figure of unsatisfied demands for jobs is still only 164,000, but the drastic reduction of working hours in several sectors does not create a climate favourable to successful labour action. Mass dismissals may lead to sporadic outbursts, as they have at Lille, but the trade unions do not yet seem in a position to fight effectively to preserve the real wages of the workers. The government's premise—that the price level should not rise by more than 5-7 per cent, while the bulk of wages remains frozen—may well be fulfilled.



The experts also hoped that the prospect of a "heavy," steady franc would attract foreign funds to Paris and also induce Frenchmen to call their money back from abroad or to bring their hoarded gold into the light of day. M. Pinay claimed last week that since Christmas $600 million has been recovered by the French exchange stabilisation fund. Over $300 million of this is accounted for by speculative funds which had moved out before devaluation; the bulk of the rest apparently came from Switzerland and Belgium (probably French-controlled money) as well as Germany. French shares on the Paris *bourse* showed very marked progress in the first weeks of the year, but have climbed down a little since then. Foreign interest in French investments certainly helps the balance of payments. The trend, however, will have to be reinforced and last much longer to offer a guarantee of security (particularly since foreign funds can now move out at call) or to have an impact on French investment.

THE dream of gold coming out in tons from the proverbial French stockings has not come true. Gold is still selling on the "parallel" market at a high premium. To increase the supply, it has been suggested that death duties between husband and wife or those imposed on direct descendants ought to be abolished. Gold is often hoarded to dodge the tax collector, but the government still hesitates because abolition would be greeted as a "gift for the wealthy." Altogether, it is still too early to assess the drive to attract capital, which has been given a fairly auspicious start. The hope of a miracle which would change the financial situation overnight has on the other hand proved an illusion.

The balance of payments is ultimately dependent on trade. The foreign trade deficit of 29.4 billion francs in January is not, on its own, a worry. After a couple of months in rough balance, exports once again covered only four-fifths of the import bill. This setback, however, can be explained by seasonal fluctuations and the immediate effects of devaluation. In February the deficit was reduced to 10 billion francs. More alarming are recent studies of the structure of French trade, showing the relatively small proportion of finished industrial goods on the export side and, particularly, the very unfavourable balance in capital goods. The French steel industry has shown that there are branches in which France is very competitive. But is French engineering in a position to take advantage of the new price comparisons? A recovery led by the export industries would be the ideal solution for the government.

Looking at the whole situation it would seem that the government is most perturbed by the reason for its own success. The extent to which it has managed to keep wages and prices in check has been a sign that the recession was having its effect and now the recession, in turn, has become the government's worry. It is being recalled that last time, too, France was hit by the crisis later than its European partners. The government is trying to stimulate production through state investment. The nationalised industries have been urged to speed up their plans. Bank

For modern highways of power

IRAQ CHOOSES FERAL CABLE

Historically, Iraq, the home of great civilizations was one of the world's most fertile areas. But for over half a millenium its fertility, dependent on irrigation, has been largely dormant. To restore it and modernise their country generally, the people of Iraq are now using their considerable oil revenues for extensive irrigation projects—which also provide a means of flood control and of generating electric power. Prominent in this development is Northern Iraq, with large dam projects at Dokan and Derbendi Khan. And to supply burgeoning Mosul, Kirkuk, and other northern cities, power is being carried from the new Dibis thermal station on transmission lines equipped with FERAL CABLE—*reliable* Swedish ACSR.

Dusty ground of Northern Iraq calls for cables with close, even stranding in each layer. For the power lines of the new 132,000-volt system, Svenska Metallverken has supplied some 1,400 miles of steel-cored aluminium conductor.

When planning power lines, consult

rate, recently reduced by 0.25 per cent, will soon be brought down to 4 or even 3.75 per cent. Some credit restrictions have been relaxed. Yet all this will have little impact if private industry does not intend to invest. To make money too cheap, on the other hand, would go against the official deflationary policy of *vérité* and *sévérité* launched last Christmas. Optimists in the government believe that after six months of this balancing act the French economy will find itself on the safe side of the crisis. The government could certainly do with such a quick success. Last year Frenchmen were in a mood expecting miracles. Now they have woken up to reality and the latest electoral tests show that many of them did not like the awakening.

A Marshal's Health

FROM OUR CORRESPONDENT LATELY IN SIAM

THE health of Marshal Sarit Thanarat is the dominant factor in Siamese affairs today. Nobody knows how successful was his recent operation for a chronic liver condition, although the preoccupation of the Bangkok censors with any newspaper references to anxiety or hope about his health is admirably calculated to spread and magnify the very rumours which authority wishes to suppress. For after his earlier treatment in the United States the tough soldier (still only 51) gained a fresh lease of energy, zeal and resolution, physical and moral, which has astonished friends and foes alike. The West may well hope that this is no fitful lease.

Before and since introducing his new interim constitution last month, Marshal Sarit has been carrying out a shining crusade for domestic reform and political reconstruction, and a hard-driving all-out campaign against communist subversion. He has hit back at Chinese interference with Siamese exports by banning all Chinese imports. He has, at long last, ordered the suppression of the opium traffic—to the consternation, it is whispered, of several of his supporters. (A bewildered police officer, in charge of an illicit cargo of ten tons of opium, was recently picked up as he floated serenely down the Mekong and, despite his outraged protests, thrown into one of his own establishments.)

Marshal Sarit is rounding up communist suspects with no *habeas corpus* nonsense. He is even tackling corruption in public life and attempting to discourage gambling. Like an oriental La Guardia, he leaps into his luxurious limousine to chase the Bangkok fire-brigade to the scenes of the city's numerous and disastrous fires and there supervises, on the spot, the detection, trial and punishment of suspected firebugs. (By Siamese tradition, the physical presence of a ruler is believed to help allay any serious fire, but Sarit has sworn to stamp out the old and honourable Bangkok commercial custom of meeting deficits from fire insurance.)

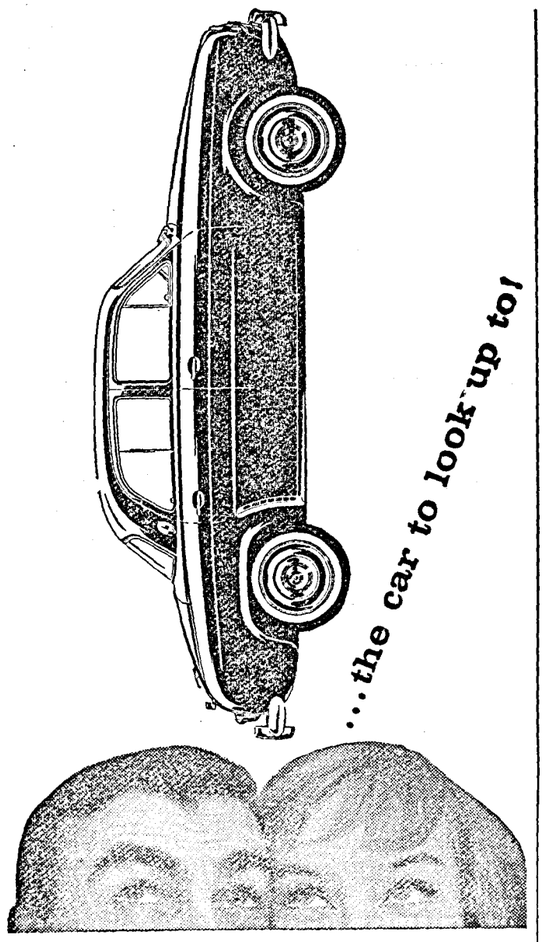
"SARIT has got religion," his discomfited enemies jeer. A more plausible explanation is that, brooding in English convalescence after his medical treatment in the United States, he resolved to establish and dedicate himself as an heroic figure of reform and progress in what he believes may be his last term of power as Siam's strong-arm ruler. There are many Buddhist precedents for this ambition. So much has been rotten in the state of Siam for so long that there was, it must be conceded, general scepticism when the initial reforms by the marshal's new Revolutionary Party were promulgated. And certainly only the surface of corruption has so far been scraped. But the marshal is persevering and has successfully overridden the massive resistance inside his own following. He can count on the support of King Phumipol, and none seems strong enough to challenge him. "Sarit still commands the tanks," one Western diplomat repeated the cliché—"and whoever commands the tanks rules Siam."

Marshal Sarit's normal and expedient anti-communism has been inflamed by Cambodian recognition of Peking and by his fear of subsequent Chinese infiltration and subversion from the south. He has also been moved to warm soldierly oaths by recent Chinese manœuvres designed to spoil Siam's trade in hogs and water-buffaloes with Hongkong. The Chinese systematically undercut Siamese prices whenever an order was received from Hongkong, whose buyers accordingly became wary of Siamese commitments. Now China has generously passed on this small but profitable sideline to Cambodia as an indulgent reward.

ARRESTS of suspected communist agents have been stepped up inside Siam since Marshal Sarit's return from the United States. A western liberal would wince at some aspects of the official technique; but communist intimidation and terrorism in outlying villages has been undoubtedly—if roughly—curtailed, and there is apt, alas, to be scant scope for the realistic expression of western liberal principles in either the jungles or the counsels of South East Asia.

The question that haunts western diplomats in Bangkok is who will succeed Marshal Sarit, should ill-health compel him to retire suddenly before his reforms have been established. Like all dictators, he is reluctant to proclaim an heir apparent. Without doubt, his current reforms have been accompanied by action to break up and disperse rival factions in both the army and the police and to render harmless the dispossessed interests now suffering under his moralistic decrees. But who would carry on if he were unable to do so?

There is a nasty suspicion that it might be Marshal Sarit's powerful and enigmatic director of civil affairs, General Prapart; and he is not a man who has been vouchsafed a vision of a burning Buddhist memorial in the skies. Even more horrendous is the prospect of a return of the former minister of the interior, General of Police Phao Sriyanond, master of organised corruption and intrigue, who was expelled to Europe when Marshal Sarit deposed Marshal Pibul Songgram in September, 1957. Pibul himself, it is stressed, has no hope of a comeback; the King, who is popular, has privately indicated that he would never tolerate another Pibul regime. There is accordingly a passionate and even slightly hysterical sincerity in the *basso profondo* toasts of western diplomats in Bangkok as they drink the health of Marshal Sarit.



BUSINESS IN EUROPE

A very important stage has been reached in the formation of the European Common Market. Through our European services, we can keep you abreast of events and show how they are likely to affect your interests.

THE ECONOMIST INTELLIGENCE UNIT LTD.

LONDON: 22 Ryder Street, S.W.1. (WHItehall 1511)

NEW YORK: Lincoln Building, 60 East 42nd Street. (Murray Hill 2-6195)

Lovely to look at and delightful to be seen in, there's real prestige in driving a Renault Dauphine. Good looks, surging power, gay colours, superb performance—they are all to be found in this one sparkling package. Let her rip at over 70, let her perform miracles at 47 to the gallon, let her glide over roads on her independent suspension and you will *know* that she is the car for you this year, next year and for many years to come. Go on, put your foot down and insist on driving a Dauphine. Write to us at the address below for the name of your nearest demonstration dealer.

Price £758.17.0 (inc. P.T.) 2-pedal control optional extra.

RENAULT Dauphine

Fully assembled at Renault Limited, Western Avenue, London, W.3.

THE BUSINESS WORLD

Are Interest Rates Too High?

A COUPLE of months or so after Bank rate was hoisted to its crisis point of 7 per cent in September, 1957, short money rates started to fall. In the last few weeks that fall has been sharply checked. In mid-February, the Treasury bill rate dipped below 3 per cent for the first time in four years. It is now nearly 3 5/16 per cent. Although the immediate cause of this rise was a technical one, behind it lies the waning of hopes that Bank rate, reduced to 4 per cent last November, would be further reduced. Any remaining hope has now been all but extinguished by the rise in New York. The US Treasury bill rate rose at the end of February and was followed by increases, from 2½ to 3 per cent, in the official rediscount rates of the New York and several other Federal Reserve Banks; this week the bill rate has risen still further, from 2.816 to 3.062 per cent, its highest since end-1957. So the City is coming to think that any further reduction of Bank rate is likely to wait until after a Budget which the prophets expect to be full of reflationary stimulus; if that fails, then it will be time to use Bank rate—but not before.

This change of prospect for short-term rates explains part of the recent setback in gilt-edged, though political uncertainties and further selling by the banks have played their part too. But the limiting factor in the medium and long-term market is not set by Bank rate policy. Disappointment in the money market in the last few weeks has been trivial by comparison with the disappointment of the gilt-edged market for twelve months or more. Next week will mark the anniversary of the first reduction of Bank rate from the 7 per cent crisis rate; Bank rate has come down in a year to 4 per cent, and the bill rate from just over 6 per cent to 3 5/16 per cent, but there has been only a small easing of the yields on medium and long-term gilt-edged.

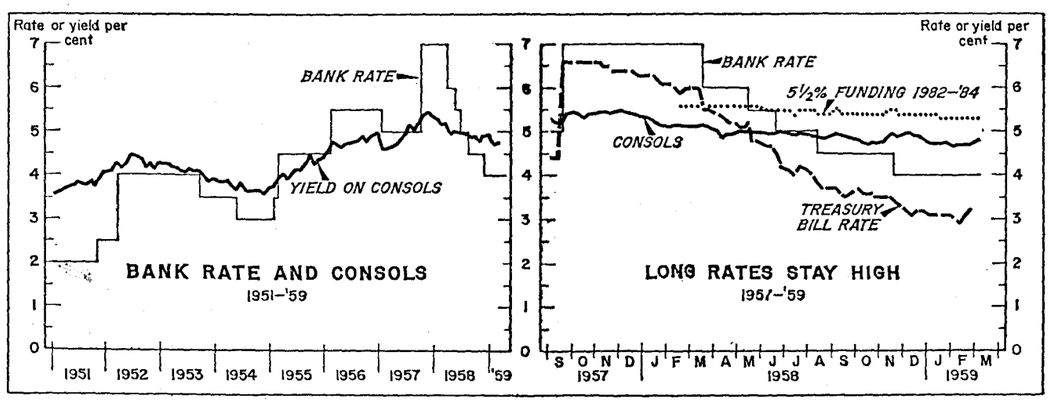
The long-term gilt-edged rate had risen steeply well before the emergency measures of 1957; indeed, the demoralisation of the gilt-edged market that summer was a prime factor in persuading the Government to take stern measures. By the eve of 7 per cent Bank rate, Consols were already yielding 5¼ per cent, against 4½ per cent early in the year. The impact of 7 per cent was therefore less violent than it otherwise would have been. The yield on Consols shot up momentarily to over 5½ per cent, settled for a while a little lower, and then, by the eve of the first Bank rate reduction, had regained its pre-crisis point.

AFTER this initial recovery, progress has been extremely slow. In these past twelve months the yield on Consols has fallen, on balance, by little more than ¼ per cent; it is now 4 13/16 per cent. Despite the improvement in the basic health of the British economy and of sterling, the Consols yield today is scarcely back to its level of early May, 1957, when demoralisation started. In nearly two years, the yield has never dropped perceptibly below 4.7 per cent. There has been no such sustained period of high rates since the years immediately following World War I. Indeed, if one excludes the period 1955-59, there have been only two years since 1931 when the average return on Consols topped 4 per cent; and in no single year since 1921 has it been as high as in 1958.

The yield on Consols is the most convenient measure of long-period movements, but it rather understates the extent of the market's reaction. At the peak towards the end of 1954 a representative long-dated stock, 3 per cent Transport 1978-88, showed a redemption yield fully ⅛ per cent below the flat yield on Consols; today there is a difference of nearly ⅜ per cent in the opposite direction, for Transport stock yields 5 5/32 per cent. On the two longest stocks that are currently on tap to the market *via* the Government broker—5¼ per cent Conversion 1974 and 5½ per cent Funding, 1882-84—yields of almost 5⅜ per cent can still be obtained.

There is one school of thought, possibly a grow-

ing school, that regards it as paradoxical that such high gilt-edged yields should be maintained at a time when the economy has surplus capacity which the Government is deliberately trying to absorb by applying stimuli to raise output. So far, an easing of medium and long-term rates of interest has played no perceptible part in this process of stimulation. Since the credit squeeze was ended early in July—when policy started to swing into deliberate reflation—long rates have declined by no more than ⅛ per cent. Why, the monetary expansionists ask, not enlist the traditional reflationary instrument of cheap capital—especially since it might aid investment rather than consumption ?



THIS line of argument implies that the monetary authorities are responsible for the present unusually high level of rates. There is something in this. Official policy has tended to keep rates up first by funding—that is by financing the requirements of the public sector so far as possible by sales of securities that do not rank as liquid assets at the banks ; funding has not been abandoned even though reflation has started. The attractive rates on national savings securities have been pulling in a large flow of funds, and the "departments" plainly never lose an opportunity for selling stock to the market. Every recurrence of demand for long-term gilt-edged stocks has been readily matched by sales from official holdings.

Moreover, the success of the authorities in selling securities to the public, coupled with the fact that, before the squeeze ended, the banks themselves became anxious to exchange any surplus liquid assets for high-yielding gilt-edged securities, forced down bank liquidity ratios to a point that gave them little latitude for expansion. Accordingly, the banks have had to finance a large proportion of the exceptionally large addition to their advances by selling investments. Since last September the portfolios of the clearing banks have been reduced by no less than £241 million, of which probably £180 million have been sold through the market. Clearly, sales of this magnitude within a short period would have inflicted major damage to the market unless the authorities had been prepared to give substantial aid. But despite official help, selling from bank portfolios has inevitably acted as a drag upon the market.

Evidently, if the authorities had not been so concerned to sustain their grip on bank liquidity by funding, the easing of medium and long term rates would have gone perceptibly further in these past twelve months or so. To admit this, however, is very far from accepting the contention that in the absence of the official brake there would have been a dramatic decline in rates. On the contrary, there is evidence that market psychology would in itself have imposed a braking action fairly quickly—because investors are still highly sensitive, perhaps hypersensitive, to any tendency that might conceivably be construed as a threat of renewed inflation. The sharp break in the market last autumn was partly brought about by fears that the pace of reflationary action in the preceding couple of months—modest though it had been—was "inflationary."

In the circumstances, that was an irrational fear ; but it still lurks only a little below the surface in investors' thinking. This fear is a curb on any policy of credit expansion which aims at driving down medium and long-term rates substantially. Unless and until public confidence in the ability of governments to avoid a recurrence of inflation becomes much stronger than it is now (so that investors become much more ready to hold long-dated fixed interest securities), it is certain that any deliberate drive for lower rates would take a large amount of credit to produce a relatively small effect. And if the credit expansion went far it would be liable to defeat its purpose by causing holders of gilt-edged (not to mention holders of sterling) to take fright.

If there were no other effective instruments to hand for reflating the economy, or if those instruments had been put to work and found insufficient, then, admittedly, it would be right to enlist the aid of credit expansion of this kind. Then, indeed, the public's fear of future inflation would almost certainly be less obsessive, so that the immediate disadvantages would look less disturbing. There would still be, however, the ultimate disadvantages, flowing from the fact that the

economy would be flush with credit at the very moment when action had to be taken to stem credit—so that the scope for monetary restraint would be impaired at the very moment when its efficacy was most important. It is hard to see what advantage could be gained from forcing rates down now that would justify saddling the economy with this future disadvantage. The other reflationary methods will in themselves involve some credit expansion if they are not to cause an actual rise in interest rates. At present it would seem wise not to press credit creation significantly further than is needed for that limited purpose.

Retailing on the Move

One way of increasing productivity in which even small shopkeepers are prepared to invest is the mobile shop

WHILST the self service revolution and the march of the multiples have focused public attention to retailing on to the larger units, there have been substantial though less spectacular developments in a type of retailing that is essentially "one-man." Mobile shops have more than doubled in number since the war, and are still taking extra trade on to the roads at the rate of perhaps fifteen a week. They account for 2½-3 per cent of the nation's retail food trade ; their high productivity and the strength of their position in country districts and new housing estates will probably ensure their continued growth.

The idea of mobile shops is as old as distribution itself. Most of the goods passing through the channels of distribution are destined for households and there is no necessary reason why the last link, between a fixed retail depot and the home, need be provided by the housewife herself. The itinerant vendor has always been with us. The salesman going from pitch to pitch or door to door is conceptually more closely related to the mobile shop than the van delivering goods that have been selected previously and will be paid for later. But in some cases it is the cost of delivery, superimposed on the cost of collecting and filling orders that has led to the introduction of mobile shops.

It is not surprising that problems of definition bedevil the statistics. The 1950 census of distribution list separately the travelling shops only of co-operative societies. Others are included with hawkers and pedlars under "house-to-house selling." Roundsmen delivering milk and bread are excluded, though some of them do a trade in orange juice, flour confectionery and other articles. Should one include also the 4,500-5,000 vehicles that sell 15 per cent or more of Britain's ice cream ? The most comprehensive surveys of mobile shops in Britain were made in 1946 and 1955 by the Co-operative Union. Between 1946 and 1955 the co-operative mobile stores increased in number from about 2,250 to more than 3,900: of the later total 1,750 were grocers, 1,360 butchers and more than 700 sold other kinds of food.

In 1955 the Scottish and Northern regions had most mobile shops in relation to fixed shops (28 per cent and 32 per cent respectively) and the South and West had fewest (7 per cent and 4 per cent). The greatest proportionate increase since 1946 was shown by the South-West (which had in Devon the only footwear mobile shop and in Somerset three out of the four ladies' hairdressing ones—the fourth being in Oxford). The Co-ops ran 41 drapery mobile shops, 6 furnishing, 6 selling radio and TV, two men's wear, one corn and seed and one fried fish and chips. Numbers will now be approaching 6,000 and are going on rising at an annual rate of some 550 vehicles—probably three times the corresponding figure for all other operators combined. Co-operative annual trade by mobiles will now be around £70 million per annum ; one can only guess at the rest but it should bring the total over the £100 million mark, carried by possibly 10,000 vehicles.

THE main stimulus to this growth has undoubtedly been the dearth of fixed shops on new housing estates. In many cases families have been in occupation there for years before the shops provided for in the plans were built and operating. Even without this lag, rehousing has meant a thinning out of population and a lower ratio of shops to houses, both of which benefit the mobile shop. But other factors have been at work, such as clever design which provided inside service (and avoided purchase tax), the provision of washbasins,

MOBILE SHOP RESULTS
(Co-operative only : 1950 Census)*

fluorescent lighting and cold storage containers, and the development of the battery-electric vehicle which makes for easier stopping-and-starting and is more economical over low mileages.

Moreover, the "productivity" of mobile shops is

high as the table, based on the 1950 census, shows. (The totals differ from the Co-operative surveys probably because they include only mobile shops operating as "independent branch establishments.") Co-operative censuses have shown that, compared with static shops in the same trade, of the same turnover, mobile shops averaged sales that were two-thirds to three-quarters as high again per person employed. Many operators would claim much more than a driver-salesman can sell, with one pair of hands, three or four times as much as the average assistant in a fixed shop.

This high productivity of the modern mobile shop was first discovered by Gottlieb Duttweiler of Switzerland in the 1920s, and mobile shops—now over 100 of them—still account for 7 per cent of the retail turnover of his vast *Migros* organisation despite its great postwar development of supermarkets. The *Migros* type of vehicle, with no protection from the weather and next to no display, is unsuitable for this country, but the Duttweiler insistence on strict adherence to a timetable is still the secret of success. Customers must be able to rely on the shop being available at the time when they expect it (once or twice a week). With this proviso, and within broad limits, they will shop when the retailer chooses, so that retailing's biggest problem, the alternation of rush hours and slack periods, can be replaced by a steady flow of work.

This is the principal reason for the high efficiency in selling of the mobile shop. Others are that the physical arrangement is such that almost everything is within reach, that there is a higher average sale per customer, that the functions of preparation and of service tend to be separated, and that in a one-man show the owner or manager has, or can be given, every incentive to work hard and long. One multiple pays its driver-managers £12 10s. plus 6d. in the £ on all sales over £200 per week.

Other costs are of the order of £10 per week for a 2-ton petrol vehicle doing 20 miles a day. First cost of a fully equipped mobile shop is about £1,700 and it would be wise to allow £300 a year for depreciation and repairs, £125 for petrol and oil, and £100 for garaging and sundry expenses. This is 5 per cent of sales at £200 per week, 3.3 per cent at £300, 2½ per cent at £400. A butcher's sales will be nearer £150, but he can manage with a smaller vehicle. How do these compare with fixed shops? A general dealer in a back street, with living accommodation in the same building and not requiring the full-time attention of an adult male, certainly has a far lower break-even point; but there will be no question of its sales exceeding £250 per week. A grocery multiple branch may nowadays break even only at £250, and its net profit after that will certainly rise less steeply than that of the mobile shop, because of the need to add extra staff. Sales in fixed shops are less predictable; expensive promotional efforts may be needed to reach capacity, and the alternative of working well below capacity will be preferable, whereas the mobile shop can usually reach whatever capacity the energy and methods of its operator set.

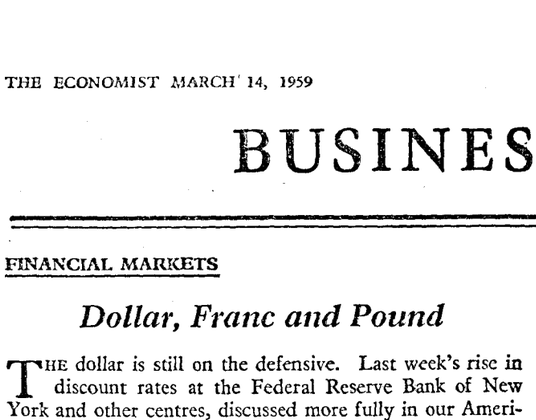
The mobile shop has its own disadvantages, of course, though most of the technical ones—heating, refrigeration, and washing facilities—have now been overcome, and in case of breakdown a "standby" vehicle can be hired from the manufacturers when needed. It is an embarrassment to supply a mobile shop, since it is undesirable that goods should simply be dropped at its garage in the absence of the operator. Stocks in the vehicle itself, even of the packaged groceries, have to be replenished daily and unless this is done by the operator from his own garage store it means assembly and clerical work at a central depot.

For these reasons few multiples operate large fleets of mobiles. One exception is Baylis of Reading, which bases its fleet on a special depot; another is Thrift Stores of Leeds where the mobile shops are attached to branches, the manager receiving a bonus on their sales to ensure his support. In general they are used in ones and twos to break into newly developing areas where for one reason or another a fixed shop is not available or not suitable. A greater demand comes from independent shopkeepers, often for a son emerging from National Service.

In such a case, there is no question of checking stocks or fixing prices, and the gross profit can reach £50 a week, which leaves enough to write off the cost of the vehicle very quickly. This represents a form of expansion and capital expenditure amongst a class of retailer not noted for either, and financing it is easy with quick profits and a down payment of only 20 per cent.

Because mobile shops are neither fish, fowl nor good red herring, they have stirred up several arguments about what the law is or should be. They may blow their musical horns only when on the move; they are subject to hygiene regulations, and to C-licence restrictions on hours of work, but not to shop closing hours as determined by the local authority. There have been complaints that they are a danger to young children playing in the estates, and a proposal that they should pay a registration fee corresponding to the rates that they would pay if they were fixed shops in similar localities. They are not, like new fixed shops, subject to planning permission, nor, like public service vehicles to the licensing of their route; any attempt to regulate their numbers and routes would pose some knotty problems.

What of their future? Local authorities may catch up with the provision of shops on new estates but experience shows that even the full planned provision need not prevent the mobiles operating profitably. The new car owners will in most cases not use them much for "convenience" shopping. Mobiles do not need to compete with supermarkets; their role it seems, is to replace the small shop in bringing goods near the home. In this role they can bring more, nearer, more cheaply. For years to come there will be housewives, tied to the home by distance, children, or laziness, who will welcome them.



BUSINESS NOTES

FINANCIAL MARKETS

Dollar, Franc and Pound

The dollar is still on the defensive. Last week's rise in discount rates at the Federal Reserve Bank of New York and other centres, discussed more fully in our American survey, has not led to any weakening of sterling or other European currencies against the dollar. Exchange is still flowing into France, and the Bank of France has announced that it has no further need of the swap facilities made available by the Bank of England and Continental central banks; the special credit facilities granted by the Bank for International Settlements and a group of American banks are still intact.

The move by the American monetary authorities had been too largely discounted to have impressed foreign opinion, which is still waiting for some (unspecified) decisive action to "stop the rot" in American public finances. But the rise in American money rates—the three months' Treasury bill rate reached 3.062 per cent this week, only ¼ per cent below the London rate and significantly above short money rates in Frankfurt, Amsterdam and some other Continental

centres—may exert its own pull on American and European funds that have moved into Europe. It is a long time since rates in New York have stood above important Continental centres. Swiss bankers, faced with a plethora of liquid funds, have recently been buying US Treasury bills.

Sterling this week faced in addition the trouble and confusion in Iraq, and rumours that the election might after all be in May. Its continued firmness against these several influences is a reflection of the strength of underlying confidence. Gilt-edged securities have fared rather worse. Bank selling has not stopped, and the market has to adjust itself to the new Bank rate prospect. After Thursday's "no change" it became clear that there could be no question of a reduction until after the Budget. Equities have been fairly bright. Even oil shares were little scarred by Iraq, and the market as a whole is successfully absorbing the flow of new issues released by the removal of the CIC control. The latest batch is covered in our notes on Company Affairs.

Australia has announced its expected issue to deal with the maturity in June of £20,675,000 of 3½ per cent 1954-59 stock. Holders are offered conversion into an issue of £10 million 5½ per cent stock 1973, and £10 million of 5½ per cent 1976-79, both at 99. Cash offers will be accepted if conversion applications leave something over. These terms—the gross redemption yields are around £5 12s. per cent—are almost the same as for Australia's issue of £15 million of new money last October.

STEEL

Cutting Down Stocks

By the end of last year stocks of steel in consumers' hands were lower, in terms of the rate of consumption, than at any time since mid-1956; and they will have been falling further since. Even so, the 3,526,000 tons of finished steel in those stocks represented about 14.7 weeks' consumption, which was higher than in most postwar years; right across the whole range of steel usage, that tonnage hardly yet means short commons. With steel production output running 25 per cent below capacity, customers know that they can get delivery of most products relatively quickly. There is still no very significant improvement in the rate of ordering, though there are more signs than a month or two ago that certain customers at least have stopped running down their stocks. Production in February was at the rate of 349,000 ingot tons a week, slightly lower than in January because of the strike at the Steel Company of Wales and through mechanical difficulties elsewhere; it was about 18½ per cent lower than in February, 1958.

At an annual rate, that would represent just over 18 million ingot tons, against a steel-producing capacity this year of some 24½ million tons. This state of surplus, as the British Iron and Steel Federation recently pointed out, "cannot leave the industry's long-term development unaffected," in that it must mean reviews of companies' plans. The immediate effect of recession, however, has been to leave plant manufacturers freer to get on with schemes already in hand; the Iron and Steel Board reports this week that last year the industry managed to spend £105 million on modernisation and development, against £95 million in 1957. Second thoughts or not, the manufacturers expect to spend at least as much this year.

The board's comment some months ago that from schemes already in hand it could see capacity for about 27 million ingot tons of steel by 1962 has been interpreted to mean that it was revising its long-term plans downward. This week it said that while about 500,000 tons of capacity in obsolete works had been closed earlier than it had originally expected,

> the prospect now is that the production capacity for crude steel will approach 28 million tons by 1962. If there is the demand, production in excess of that capacity should be possible.

That does not take account of any significant production by 1962 from the two new projects for strip mills at Ravenscraig and Newport.

The Newport Mill

SOME details of the Newport project, which is looked on in the steel industry as by far the more important of these two new strip mills, were announced by Lord Mills this week. This entirely new integrated plant, which is to be built by Richard Thomas and Baldwins, the last major company still nationalised, is to have an initial crude steel capacity of a million ingot tons, from which "not less than 600,000 tons of strip mill products" will be rolled on a semi-continuous strip mill; it is to be sited at an excellent deepwater anchorage. The ingot capacity of the new steel works will be lower than that in the strip mill project submitted by the company to the Iron and Steel Board in March last year, after the board had turned down its original proposal for a steelworks there which would have been laid out for an eventual strip mill, but in the first place would have included only a billet mill. The new scheme, which has now been approved by the board, however, retains one major feature of the original proposal: it will have a margin of crude steel capacity to supply extra slabs to RTB's existing continuous strip mill at Ebbw Vale, releasing the slabs now sent there from the company's Redbourn works at Scunthorpe. That steel, produced from home ore, will now be made into billets at a new continuous billet mill to be installed at Redbourn.

The Newport plant is estimated to cost £100 million: RTB is to borrow £60 million of this direct from the Government under an agreement roughly similar to that under which £50 million is being lent to Colvilles to build the other new strip mill at its Ravenscraig works. The company will finance the rest, plus development at Ebbw Vale and Redbourn, from its own resources and its normal borrowing from the Iron and Steel Holdings and Realisation Agency, which is at present its sole shareholder. The nationalised company will draw the £60 million in ten tranches over five years, at interest rates set by the Treasury having regard to the cost of long-term Government borrowing at the time (the same formula as applied to Colville's). The first tranche is to be drawn in October this year, and the loan is to be repaid by 1971. The heads of agreement agreed in principle include provision for the possible return of the company to private ownership during this period.

The Newport plant is expected to come into operation in 1963, to achieve "significant output" by 1964, and to come into full production by 1965 or 1966. It is designed to be capable of conversion to a fully-continuous mill—and presumably for very considerable expansion from its initial capacity.

STANDARD-MASSEY-FERGUSON-ROVER

Trembling on the Brink?

As this issue of *The Economist* goes to press, no announcement has been made concerning either of the two business deals involving the Standard Motor Company on which discussions have been taking place in recent weeks: namely, the sale of Standard's tractor division to Massey-Ferguson, and a merger between Standard and Rover. The scene of the negotiations may have been shifted this week to Geneva, where officials of Rover and Standard are attending the Motor Show. Agreement between Massey-Ferguson and Standard has been rumoured to be near for some time; Massey-Ferguson announced in January that it did not intend to renew its contract for tractor production with Standard, which does not formally expire until 1965, and stated at that time that it was negotiating to buy Standard's tractor division. Last week Rover and Standard issued a joint announcement that preliminary talks between the two companies were taking place, with the objective of "assessing whether the two companies can help one another."

Presumably the two sets of negotiations depend upon each other to a high degree; a final agreement involving all three companies may be announced simultaneously. Roughly one-half of Standard's present annual output of about 150,000 units is represented by tractors. Sale of so large a part of the company's assets (and earnings) would make some rapid increase in car and commercial vehicles essential, and a merger with another manufacturer is one obvious way to do this. On the other hand Standard and Rover could merge even if the former kept its tractor division: such a merger was discussed a few years ago, but the idea was dropped. Between them the two companies now have an estimated annual output of about 100,000 cars, plus about 50,000 Land Rovers, a year.

A price of £12-£13 million has been suggested for Massey-Ferguson's purchase of Standard's tractor works at Banner Lane; against this about 24 per cent of Standard's equity is held by Massey-Ferguson and would presumably figure in the deal. It has been suggested that these shares might be taken over by Rover, for which Standard could then make an offer. Massey-Ferguson could purchase the tractor division with its own shares; but a cash deal seems more likely in view of Standard's current shortage of cash. A Standard-Rover combination would initially have an output approaching that of Vauxhall and Rootes; but would probably need to expand its facilities if it hoped to compete in markets with BMC and Ford.

FORD MOTOR

Better than Expected

THERE was talk of a scrip issue and the £1 ordinary shares of Ford Motor were firm before the preliminary statement. There is no scrip issue but the shares justifiably gained another 1s. 7½d. to 57s. 1½d. on the "special non-recurring" interim dividend for 1959—clearly a profits tax interim—of 3 per cent. This implies an

THE LABOURS OF HERCULES

THE FIFTH LABOUR

THE AUGEAN STABLES

In our more philosophical moments, it's comforting to reflect that things got into a mess in the Ancient World just as easily as they do to-day. Those Augean Stables, for instance! Not only Hercules but the whole country knew they were there and needed attention. And it took the combined resources of two rivers, which Hercules diverted, to sweeten things up.

Hercules can learn lessons, too. In his more mature guise, as a modern chemical company, he knows now that the best way of dealing with a mess is to prevent it ever happening. Hence his Pentalyn synthetic resins for inks and varnishes—Cellolyn resins for lacquers—Ethyl Cellulose for speciality coatings—to name three of his present weapons at random. These help to stop production messes before they start, if only because of the standard of quality and consistency they reflect. Do you too dislike the prospect of messes? If so, and the weapons of industrial chemistry are indicated, check on this aspect of the Hercules story.

HERCULES POWDER COMPANY LIMITED

ONE GREAT CUMBERLAND PLACE · LONDON · W.1

effective rise in the ordinary dividend from 9 to 12 per cent, against the market's best expectations of 11 per cent, and the shares now yield 4.2 per cent.

The dividend is backed, naturally enough after a boom year in the motor industry, by impressive profits. Last year Ford Motor's sales jumped from 338,421 to 421,572 vehicles, and in value from £165.9 million to £206.6 million. Trading income, before charging back-pension contributions, advanced from £19.4 million to £26.3 million. But the real significance in the figures is that the fall in profits in the second half of the year was not so significant as the directors apprehended in the interim report at the beginning of October. A seasonal influence can be discerned in the drop in the number of vehicles sold, but profit per vehicle (which affords a rough guide though it takes no account of business in spares) and the ratio of trading profits to turnover have both remained remarkably constant in the last eighteen months. There was a slight drop in profit margins in the second half of the year which must be largely attributable to the slightly lower rate of production over that period.

COMMON MARKET IN CARS

Line-up at Geneva

GENEVA'S *Salon d'Auto, 1959,* which opened this week, is a curtain raiser for motor competition inside the Common Market—though held outside the frontiers of the Six and with outsiders, particularly the British motor industry, there in some force. Of the Common Market's manufacturers only the Italian Fiat company has launched a really new model, the Fiat 1800. This is a six-cylinder model, with alternative capacities of 1,795 or 2,054 cc: it has been designed to fill the lack of modern medium-sized Italian cars. It is a saloon built on much the same straight-lined pattern as the Austin A.55 (Farina seems to have had about the same amount of influence on both designs). Whether it will replace Fiat's existing 1400 and 1900 models has not been announced. Its domestic price of some £850 ensures, at present tariff rates, the exclusion of possible foreign competitors. Both the Italians and the French are pursuing a most aggressive sales policy in Germany, and are making much more rapid headway in Germany than in either of the other markets. Fiat sells a car for under £250 in Germany and sold some 20,000 cars during the last 6 months, while licences for German cars in Italy have been limited to less than 2,000.

The Italian-styled A.40, A.55, Wolseley 1500, MG Magnette Mark III, in all of which Farina has played a part, and the Standard Vignale, designed by Michelotti are showing at Geneva for the first time, reflecting the British desire to enter the Continental market. Competitors have marked with surprise the changing look of British cars. But nobody is worried while the British competition remains outside their new trading enclave. British salesmen are trying to make the best of the circumstances: Rootes are building up a streamlined sales organisation in the centre of Europe based in Geneva and have more agents and salesmen on the road than ever before. First impressions in Geneva suggest that the scene is well set for a European competitive market in motor cars, with competition at its fiercest in the Common Market. British manufacturers made good use of the period of germination of the Free Trade Area. They cannot be blamed that it was stillborn.

OVERSEAS TRADE

The Gap Narrows

IN February imports usually fall more sharply than British exports, thus narrowing the trade gap. Last month's trade followed that pattern. Imports fell by £36 million to £292.4 million cif, while exports dropped by £19 million to £250.9 million fob. With re-exports £1 million higher at £10.4 million, the apparent visible deficit fell by £18 million to £31.1 million. The buoyancy shown by imports and exports in the fourth quarter has faded, at least for the time being. In the fourth quarter imports were 1½ per cent higher in value than a year ago, and were expected to increase further as Britain pulled out of its recession. They have not done so: taking January and February together imports were still only 1½ per cent higher than a year ago. Exports in the fourth quarter were only 1½ per cent smaller than a year ago, but in January and February the average was three per cent smaller than a year ago.

* Provisional.

Shipments to North America fell by £4½ million to £36.8 million last month, though the average for the two months was still one-fifth higher than in the same period of 1958. Shipments to the United States in February dropped by £3.3 million to £24.5 million while shipments to Canada were £1.1 million lower at £12.3 million.

THE SMALL INVESTOR

A Choice of Risks

SIR EDWARD WILSHAW'S championship of the merits of investment trusts is well supported by the practical steps he has taken to make Cable and Wireless popular among small investors as well as big. His contribution to the debate on how best to serve needs of the small investor, in his statement to Cable and Wireless stockholders, is certainly provocative in the distinctions that it draws between investment trusts and unit trusts.

His warning that an investor in a unit trust puts his capital at risk is opportune. A general and prolonged fall in industrial equities would shake the confidence of many new investors in unit trusts and, thrift plans or no thrift plans, it would be much more difficult to appeal to them again. Then Sir Edward carries the argument on to more debatable ground, with the suggestion that the ordinary shares of a well-managed investment trust are a better repository for small savings than a unit trust. He advances two reasons. First, the value of investment trust stocks is

not determined by the day-to-day fluctuations in the value of the underlying securities. Secondly, whereas a unit trust distributes all its income, the typical investment trust puts part of it to reserve. Sir Edward does not, incidentally, mention a third and palpable attraction: the effect of gearing on investment trust equities.

Day-to-day changes in the market value of an investment trust equity may be smaller and slower than those of a trust unit. But that is the result of a narrow market as much as of intrinsic merits ; investment trust equities can slump just as quickly as the general run of ordinary shares—and on occasions more quickly. The reserves set up by investment trusts provide a backing for growth and some insurance that dividends can be preserved in bad years. But, turning Sir Edward's argument on its head, there are some holders of investment trust ordinaries who might prefer more generous dividends which would bring the value of their holdings closer to break-up values, and carry the risk of greater fluctuation in market values and dividends. There is, in fact, room for both investment trusts and unit trusts. Sir Edward's plea for the merits of investment trusts is timely. His further argument that the number of unit trusts should be controlled is not so easy to accept.

GOLD AND SILVER

Sophisticated Hoarding

SAMUEL MONTAGU AND CO, whose annual bullion review always sheds some new and intriguing light on the precious metals, this year draws a distinction between "hoarding" and "investment" in gold. The review estimates that in 1958 private hoarding demand fell away to a mere 4 million ounces, compared with 7½ million in 1957, but that "investment" in gold rose sharply from about 1½ million in 1957 to around 8 million ounces. What is the line of demarcation between primitive hoarding and sophisticated investment? Both usually involve speculation about the price of gold, but it is possible to distinguish between French and Indian peasants hedging against the instability of their own currency, and international investors hedging against a rise in the world price of gold. This new demand has been canalised mainly through Switzerland, Toronto and London ; London is at a disadvantage since the authorities still ban forward dealings in gold. Samuel Montagu does not rule out the possibility that America might be forced to raise the gold price.

The supplies of newly mined gold out of which this private monetary demand for gold has to be satisfied are increasing steadily. Total world production excluding the USSR is put at 30,200,000 ounces for last year, an increase of 800,000 ounces on the total for 1957 and 2 million on that for 1956. Soviet production is estimated by Samuel Montagu at about the same figure as that of South Africa, namely a little over 17½ million ounces ; Soviet gold sales in 1958 are put at about 6 million ounces.

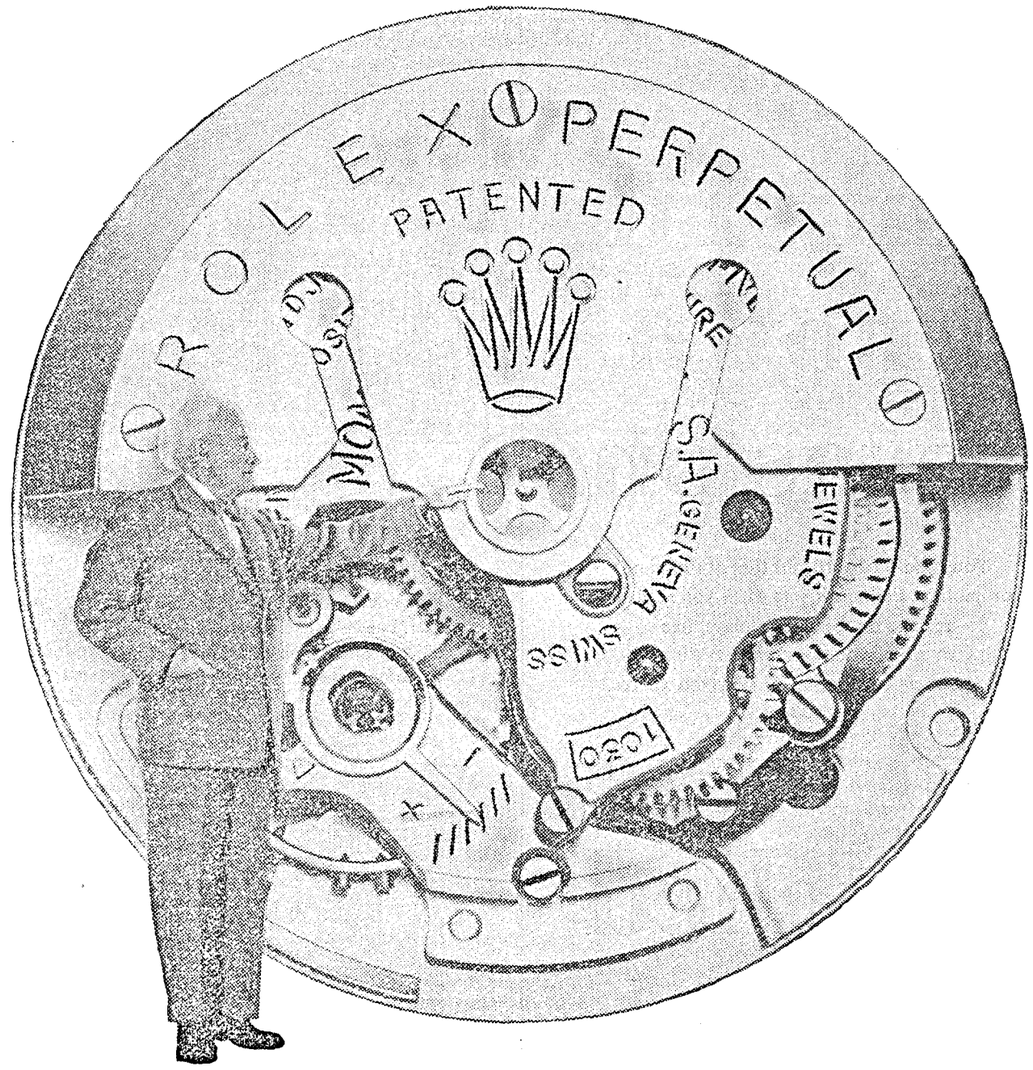
The review's comments on silver are notable for the silver saga of Saudi Arabia. This is the only country that has so far failed to make any arrangement with the United States for the repayment of Lend-Lease silver obtained during the war. Far from repaying silver (it borrowed 21 million ounces in the war) Saudi Arabia has in recent years been absorbing it on a substantial scale as a result of an expensive programme of minting and circulating silver ryals. These coins have been made 11/12ths fine and for some time past their silver content has exceeded the exchange value of the paper ryal. Greshan's Law has duly come into play and almost as fast as the new coins have come in the silver has gone out again, some of it melted in the Lebanon, but more recently shipped in the form of coin through Aden to the world's markets, including London. It is estimated that at least 12 million ounces of silver have been extracted in this manner, to the considerable profit of the dealers concerned but with diminishing prospect of the United States ever recouping the Lend-Lease silver still owing by Saudi Arabia.

INTERNATIONAL INVESTMENT

A Banker Speaks Out

ONCE again, Sir George Bolton strikes an individual note to stockholders of the Bank of London and South America. Last year, he argued that the world might be moving from the scarcity economics of postwar years "into a position of abundance, smaller profit margins and fierce trade competition." He sees no reason to modify that view. But this year he turns to the increasing economic power of Europe in relation to the United States, and argues the need for Britain to join in common European financial ventures.

Europe's capital market is assuming increasing importance when America's is beset by fears of inflation. He hopes that the steps, "belated but important" (and these are significant words from Sir George, who was in charge of exchange policy at the Bank of England for many years and is still on the Bank Court) to convertibility last December open the way towards full freedom for European financial institutions to "combine their resources and expertise to finance industrialisation in Latin America and the Commonwealth." Exchange control is still an obstacle to participation by the Bank of London and South America in the financing consortiums now being arranged on the Continent. But the bank has made a new drive for expansion in Europe and North America, and the loss of deposits caused by transfer of the bank's Caribbean branches to the new Bank of London and Montreal has been more than made good. The bank's foreign exchange business has doubled in the past year.



Sir George believes that financial and trading interests in the West must revise their ideas of where they can make

TIME IS HIS BUSINESS

TIME

For Mr. HANS WILSDORF, President of the Rolex Watch Company, Geneva, almost all sales of his famous wrist watches are export sales.

By long experience, he knows that selling to the world springs from telling the world—through international advertising.

That's why HANS WILSDORF uses TIME, The Weekly Newsmagazine, as an international mainspring to his world markets.

TIME, The Weekly Newsmagazine, Talstrasse 39, Zürich.

Five separate weekly editions covering the globe.

money. Africa he almost rules out, on wide political grounds; nor does he see a sympathetic climate for western business in the Middle East or Asia. That leaves, apart from Australasia, Europe and the Americas—the areas in which the Bank of London and South America operates. Instability of currencies and of governments of Latin America does not worry the Bank of London, and Sir George see no reason why it should worry businessmen. These countries now allow free remittance of profits, and that is all that matters. Certainly Germany is going ahead; Mercedes is putting up plants worth £50 million in Brazil. Against those British businessmen who recall unfavourable experiences a few years ago, Sir George maintains that the attitude of South American governments to foreign investors has since changed radically.

Eurunion in Britain

THE rapid march of events in Continental financial centres has provoked thought in the City about its own part in the European capital market. Obstacles to full and active participation are still considerable, and British investors have not in the past shown great interest in Continental securities. Difficulties of institutional practice and legal requirements act as a further brake, which has been particularly restrictive on participation in the European unit trusts that have recently been created.

These difficulties have been highlighted in the case of Eurunion, the common market trust launched by a Continental banking syndicate and sold in all financial centres of the six common market countries. N. M. Rothschild are acting as London agents. But the provisions of the Prevention of Fraud (Investments) Act, impede the marketing of these units. Eurunion cannot be brought within the Board of Trade regulations on unit trusts for several reasons: its trustees are foreign; and its loading charge is 16 per cent over 20 years, against the maximum allowed by the Board of Trade of 13½ per cent. Rothschilds have felt able to pass on details of the offer to banks and brokers only, leaving them to contact institutional and other investors. The yield of 2 per cent is another deterrent to British investors. Subscriptions in this country are so far small; but the interest shown suggests that Continental securities may in future become more important in the London market.

BRITISH ALUMINIUM

The £88,000 Postscript

A POSTSCRIPT to the British Aluminium dispute proposes that compensation for loss of office should be voted to Lord Portal, the former chairman of BA, in the sum of £30,000 and to Mr Geoffrey Cunliffe, the former managing director, in the sum of £58,000. Both gentlemen resigned from the BA board last month after Tube Investments and Reynolds Metal had secured control of the company following a battle of much bitterness. Average emoluments of the twelve directors of British Aluminium in 1957 were about £9,000. The *ex gratia* payments now proposed will presumably be free of tax.

Compensation to directors for loss of office has been attracting a lot of attention recently. The anomalous nature of such a payment was recognised by the Royal Commission on Taxation. It argued that it was comparable with a payment in lieu of salary, which "should certainly be regarded as taxable"; the Royal Commission therefore recommended that compensation payments should in future be treated as taxable income. Thus far, they have not been. However large the *ex gratia* payment is, the Inland Revenue cannot intervene. What it can do is tax any part of the compensation that is a payment for past services, and any compensation that arises from a contract. These payments are due for approval on April 1st, that is before the Budget in which the Chancellor, if he has a mind to do so, could belatedly implement the Royal Commission's recommendation.

AIRCRAFT ORDERS

Rotodyne on a See-Saw

PROSPECTS for Fairey Aviation's Rotodyne, a first-generation cross between an aircraft and a helicopter, go up and down with see-saw regularity. No orders have been placed for commercial versions of the prototype now flying, which can seat up to 48 passengers, but there has been a good deal of interest in the proposed version of the same machine powered by larger engines, a pair of Rolls-Royce Tynes in place of the existing Napier Elands. The change seemed sensible, and the Treasury was willing to allow the Ministry of Supply to pay half the development cost if the company bore the rest, up to a combined maximum of £8-£10 million. There were several potential customers—British European Airways, the American helicopter operator, New York Airways, and the Canadian Okanagan Helicopters, with the virtual certainty that if these ordered the Rotodyne, the Belgian airline Sabena would do the same.

Yet almost as soon as this decision had been taken, it became plain that at least one of these potential customers, British European Airways, had transferred its interest elsewhere. BEA stated flatly that the only Rotodyne it was prepared to consider buying was one that not only had Tyne engines, but also had a bigger fuselage capable of seating 65 passengers. This was not mere fickleness on BEA's part. Such an enlarged Rotodyne promises to be able to carry passengers for half the cost of the present version and to be the first helicopter (if it can be called such) capable of paying its way. But the change in requirements has been enough to suggest doubts to the Treasury whether BEA intends to buy the machine at all. There is not likely now to be government aid for further development of the Rotodyne unless BEA actually gives the company a letter of intent showing willingness to buy the 20 Rotodynes that it has frequently said it would like to have.

New York Airways has been negotiating for a renewal of its licence to operate helicopter services and has had to show what provision was being made for new machines. The

letter of intent received by Fairey from the American company is for five machines with an option on a further 15. This is a long way from a firm order even though it includes a down payment, but it would be sufficient, combined with a BEA order for another 20, plus two for the Canadian company, to justify Fairey in tooling up to produce Rotodynes. Everything depends on whether Lord Douglas is prepared to commit BEA during the next few weeks to spending £10 million on 20 machines that could make or break his airline. Fairey has made it plain that it will be able to keep its design teams together for only another few weeks at most.

AIR NAVIGATION

The Next Move

THE next move in the now deeply embittered dispute over competing British and American systems of air navigation will not take place for some time. The meeting held in Montreal at the beginning of the month by the International Civil Aviation Organisation, at which the British proposal to use the Decca system as the standard navigation aid in Western Europe was resoundingly defeated, was a purely technical one, with no authority to do more than circulate its recommendations to ICAO's 73 member states for their comment. It is not likely that those comments will lead the committee to alter its views in favour of the American VORDME system of navigation, which UK air navigation experts consider inadequate for safe traffic control in crowded areas. But the last word rests not with the technical committees but with the ICAO council on which 21 states are represented and from which the report needs to get a two-thirds majority before the American system is approved as the international standard navigation aid for the next decade.

Four of the member states on the council have already voted against the VOR system on the technical committee. It might be more practicable for UK delegates to organise sufficient opposition to get the report rejected in this relatively compact meeting, which consists of countries with highly developed air transport systems than it was at the bigger meeting held in Montreal. But even if it could thus prevent acceptance of the American system, this would contribute nothing towards easing the near-chaos with which air traffic over Europe is threatened. Any decision on future methods of air navigation, even a bad one, would be better than the present uncertainty.

RAW WOOL

Consumption Revives

THE modest recovery in wool prices this year now seems to be firmly based on a revival of world consumption. In the third quarter of 1958 the rate of consumption of new wool in ten leading countries was slightly higher than in the previous quarter, though still nine per cent lower than in the third quarter of 1957. Figures now published by the Commonwealth Economic Committee show that in the fourth quarter, the rate of consumption was again a little higher than in the previous quarter; of the six largest countries covered, only France showed no rise. And for the first time since the recession began, consumption was actually higher—by 1½ per cent—than in the same quarter a year ago. For the whole of 1958 consumption in the ten countries fell by 11 per cent compared with 1957.

The recession hit wool growers hard. In the first seven months (July to January) of this season Australia, the largest producer, sold the same quantity as in the corresponding period of last season, but its receipts dropped sharply by 31 per cent to £117½ million. New Zealand, which produces mainly crossbred wool, sold 7½ per cent more wool than in the same period of last season, and its receipts dropped by 21 per cent to £28.9 million. Crossbreds did not fall as sharply as merino wools, thanks mainly to the New Zealand support scheme. A further recovery in prices this season can be expected, though it can hardly wipe out the earlier decline. Wool's troubles, it now seems clear, were caused mainly by a reduction in trade and manufacturing stocks, not by any fall in purchases by the public.

DATAC

Auction in Subsidies

ON the same day that Mr Douglas Jay published a pamphlet proposing the scheduling of a number of new development areas and the building of factories by the Government in advance of arranging tenants for them in certain "development places," the Government announced that it was adding five places (in Lancashire, Scotland, and County Durham) to its list of areas qualifying for special financial assistance to industry under last year's Act. The towns where Mr Jay wants "advance factories" built and those where the Government is adding to its list include a high proportion of marginal constituencies; this is not the only similarity between what Mr Jay would like the Government to do and what it says it is trying to. His proposals, made after visiting a number of the places in the kingdom where unemployment is particularly high, also include:

> resumption throughout the development areas of factory building by the industrial estate companies with finance from the Board of Trade, and lifting of the ban on "schemes not able to be completed by October 31st this year";
>
> grants to local authorities in the newly listed places as well as in the actual development areas to improve basic services and tidy up derelict areas;
>
> larger rent concessions in offering industrialists Government-financed factories in these areas; and
>
> more effective use of the "machinery for ensuring that unemployment areas get reasonable preference in Government contracts, and in work placed by publicly owned industries."

Within the context of this policy of making work seek the worker, which both political parties accept, some of Mr Jay's detailed complaints about slackness in the policy for development areas and muddle in the application of the much more limited financial assistance available to the areas listed under last year's Act appear reasonable. But he has to strain fairly hard to make the broad policy he has in mind look very different from the one that he is attacking. How, for example, does one use industrial development certificates "more toughly" to steer companies wanting to build new factories away from congested areas that are already short of labour; instead of saying "No," should the Board of Trade say "No, damn you"?

Nor does Mr Jay address himself squarely to the industrial

weaknesses that may be created by this whole policy, carried too far. He says:

> Repeated experience since the war has shown that the great majority of industrial expansions (*sic*) can be economically placed in one or another or many locations, particularly in the light engineering and textile trades.

There is something in this; but would he apply it, for example, to the steel developments of which political considerations have settled the location during the last few months? The location of industry may often not matter much. Even so, Britain now has to compete with a Common Market in which, over the next few years, Continental industries should at least have the chance to gain advantages from more specialisation and better location. Both parties propose to do so by bigger and better State subsidies for the mislocation of new British industry.

NUCLEAR SUBMARINES

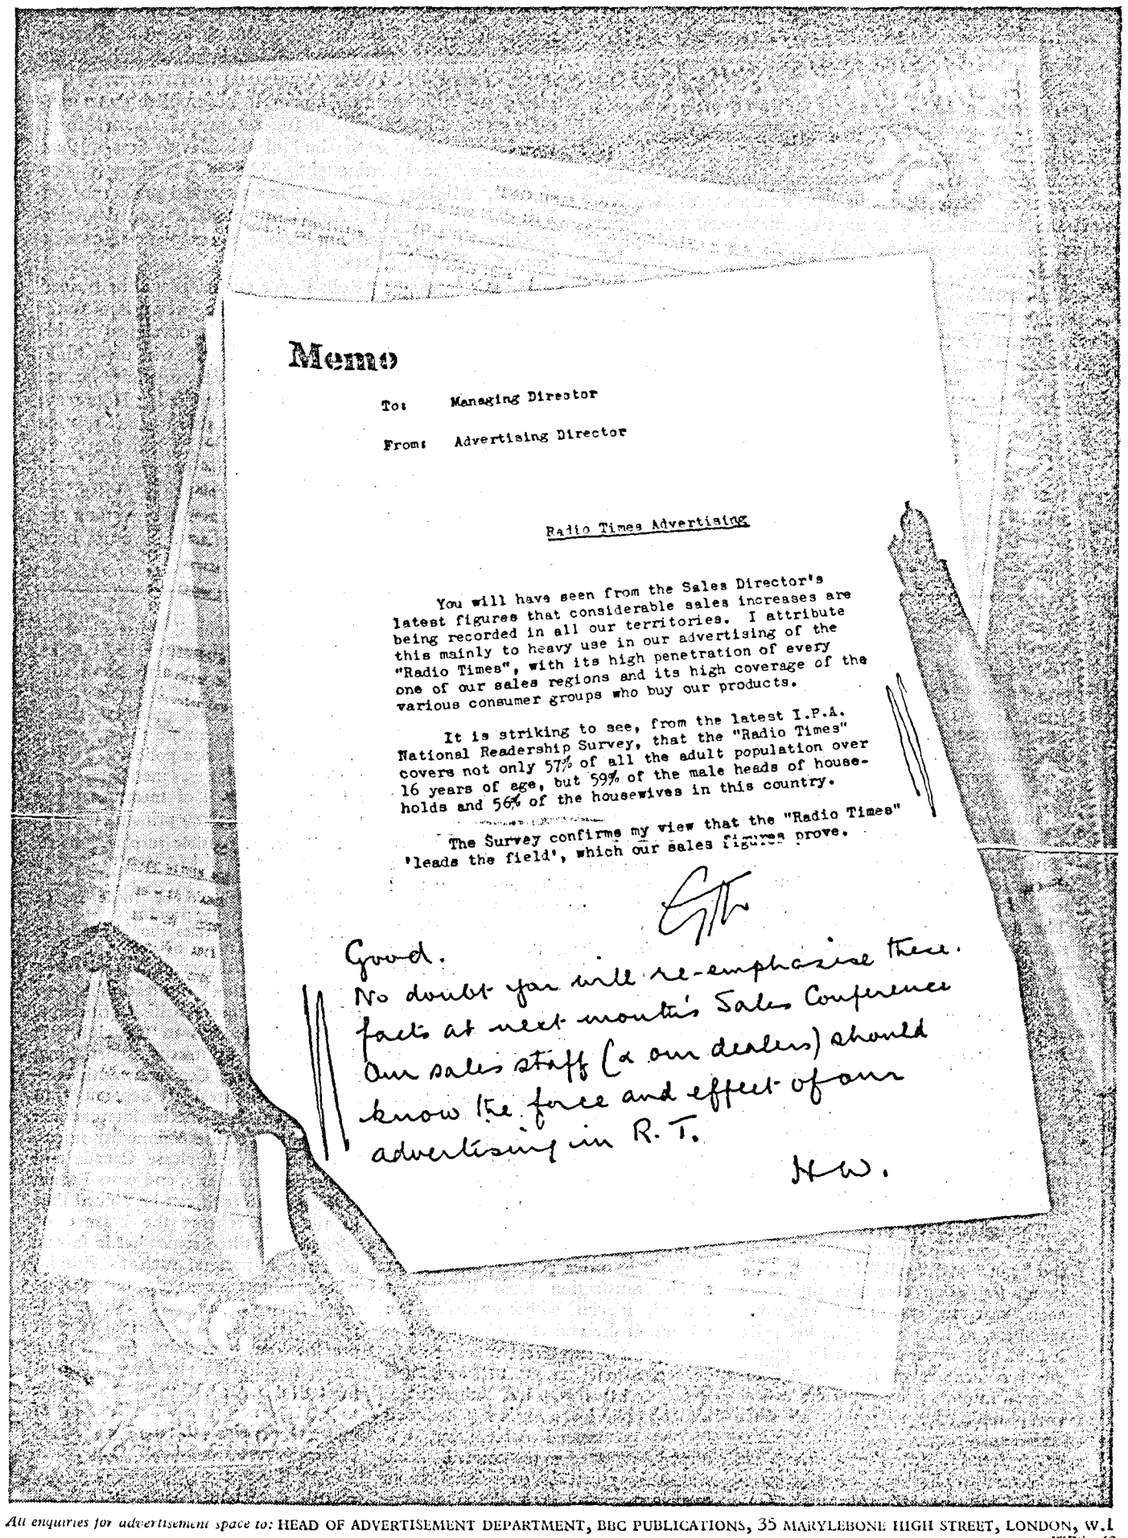
Making a Start

PLANS for a small British fleet of nuclear submarines have been shelved for the best part of three years while Britain and the United States have been trying to reach agreement over the terms on which American know-how would be made available to this country. Just why the negotiations have taken so long is not clear. A final agreement between the two manufacturers involved, Rolls-Royce in this country and Westinghouse in America, was completed only this month. Under it, a complete American-built reactor together with its fuel and propulsion machinery will be supplied for the hull of the Navy's first nuclear submarine, the Dreadnought. This is according to plan since the Ministry of Defence has a marked preference for British, as against American, underwater detection machinery: this ruled out buying a complete submarine from the United States.

By this agreement, Rolls-Royce engineers will be trained by Westinghouse in the design of the pressurised water reactors used for submarines, a type not developed in this country. With this training, Rolls-Royce will then build an anglicised version of the American reactor under licence from Westinghouse, on a site already prepared at Dounreay; when this has been proved, it will be able to start routine production of submarine reactors as and when the Navy wants them. The company will thus become the only organisation in Britain with direct experience of pressurised water reactors. The financial arrangements governing the exchange of information with Westinghouse have not been revealed.

Britain in the New Wheat Scheme

AGREEMENT has been reached in Geneva for a new international wheat scheme to start on August 1st and run for three years. All exporting countries are expected to join with the major exception of Russia. Among importers the big change is that Britain, the largest importing country, intends to join after an absence of six years. The new scheme is broader than the expiring one, and the means of protecting the interests of exporters and importers are more effective and simpler in conception, though in certain circumstances less simple in execution. In the old scheme, neither side has been under any obligation to buy or sell while wheat prices kept within the agreed margins. Only at the maximum price could exporters be obliged to sell a fixed quantity and only at the minimum price were importers obliged to buy the same fixed quantities.



The guaranteed percentages: The new scheme rejects fixed quantities and the "put" and "call" for them. Instead, importing countries undertake each year to buy from exporting members, as long as the market price is below the maximum, not less than a given percentage of their total commercial imports; the exporters collectively undertake to supply *all* their commercial requirements. When prices are declared to be at the maximum the exporters' obligation broadly continues, but the importers' obligation lapses. If one or more exporting countries are declared to be at the maximum price while others are not, importers obtain a partial release from their obligations.

Under the new agreement Britain has offered to buy not less than 80 per cent (roughly 4 million tons) of its total imports from exporting members; as Britain normally buys almost all its wheat from them the risk that the Government might have to compel the trade to fulfil this guarantee is remote. Some importers have guaranteed more than 80 per cent, some less. Japan guarantees only 50 per cent, possibly to indicate its dissatisfaction with the failure to lower the minimum price. This is to be kept at 150 Canadian cents a bushel for the standard grade, No. 1 Northern Manitoba wheat, ex-Fort William, though the maximum has been cut from 200 to 190 cents a bushel. If a member considers that its interests are being prejudiced, for example by price policies, and cannot obtain satisfaction from the wheat council, it can withdraw from the scheme at the end of the crop year.

Disposal of surpluses: Wheat bought on concessional terms, such as India's large purchases from the United States under public law 480, is not included in the guaranteed percentages, but must be reported to the council. Such transactions can be considered at its regular meetings, or at the annual review that the council must make of national production policies, stocks, prices and trade, the disposal of surpluses and methods of increasing consumption. As now, members retain full liberty to determine their internal agricultural and price policies. In disposing of surpluses, members must inform the council of measures taken to comply with three principles:

1. Wherever possible surpluses should be disposed of by efforts to increase consumption;
2. Disposal should be made in an orderly manner; and
3. Concessional sales should not harm normal patterns of production and international commercial trade.

"Confrontation" the test: The new scheme thus meets British criticisms, and Britain returns to the club. It thereby lives up to its undertaking, reaffirmed at the Commonwealth conference in Montreal last September, to consider on their merits international schemes to stabilise commodity prices. The decision will please Canada and Australia particularly, and costs Britain nothing. Indeed it can be argued that in the new scheme the balance of advantage is tilted somewhat in favour of large importers, such as Britain, whose import needs do not change much from year to year. But the important thing is that the new agreement provides an oportunity for tackling internationally the problems of wheat through the forum of the council. The test will come in the annual review of national policies—the famous OEEC policy of "confrontation." Until then, judgment on the crux of the new scheme must be deferred.

CAR HIRE

Drive It and Leave It

In the past, motorists wishing to hire a car for travelling in Britain have had their plans controlled, to some extent, by the need for returning the car to the city in which it was hired: one-way journeys have probably thus been uneconomic. Now J. Davy Car Hire has announced a new plan, known as the Carline system, whereby it will be possible to hire a car in one major city, drive it to another, and leave it without having to pay the cost of its return to base. Under this system, which J. Davy will begin operating *on April 1st, rates between cities will* be based on the mileage given in the Automobile Association's handbook, and a flat rate including the cost of petrol and insurance will be charged for this distance; if the AA mileage is exceeded a small additional charge per mile will be made. The plan will be operated between thirteen cities—over what the company calls "144 standard routes"—at first, and the company hope to have covered every major town in Britain by the end of this year.

Cost of this method of travel compares very favourably with travel by rail if fairly long journeys are made, and if several people share the same car: whereas four people hiring an A-35 to drive from London to Southampton would pay 2s. 3d. apiece more than second class rail fare between the two cities, six people sharing the cramped delights of a Ford Consul from London to Liverpool would save 8s. apiece on the comparable rail fare. The most likely use of the new system appears to be travelling to ports; although *it may also appeal to businessmen* and holiday travellers who wish to reach their destination in a leisurely fashion but have no particular need for a car once they arrive. A similar scheme has been in operation in the United States, where the much greater distances travelled would appear to make it more feasible; but American firms hiring cars on this basis customarily make a moderate fixed charge—still less than the two-way rental charge—for returning the car, whereas J. Davy will not.

Surprisingly, neither recession nor the removal of restrictions on hire-purchase appear to have affected car hire firms' business this winter, and mild weather has undoubtedly helped it; several of the large London firms report that rentals are running at higher levels than a year ago. Indeed, easier hire-purchase terms may indirectly have helped to boost rental business. Experience in the United States and elsewhere indicates that car hiring increases in popularity as car ownership rises.

COARSE GRAINS

Bargains in Barley

Cheap offers of Canadian barley to the British market have dried up and prices have risen. In the last two weeks barley for May delivery on the London futures market has risen by about 15s. to £21 5s. a ton. The cheap offers were a legacy from the autumn. The European harvests were late and poor in quality, and demand for imported barley rose sharply. Britain's needs are met mainly by Canada—because the duty normally keeps out foreign barley—and large quantities were bought for shipment from Vancouver. Gradually it became clear that more barley was on its way here than the market could comfortably absorb, and in recent weeks "distress" sales have been made at up to £2 a ton below the cost of replacement. But not everyone has been willing to sell at low prices; some holders have stored their barley in Liverpool and Hull, hoping for higher prices later. They may get them—if the St Lawrence river should reopen late and the growth of pasture in Europe is delayed

Barley still commands a premium of up to £2 a ton over maize, although makers of feedingstuffs have been switching to the cheaper grain. No. 2 yellow American maize for April shipment is quoted at about £20 10s. a ton cif, whereas a year ago it was a little dearer than barley. Maize remains relatively cheap because the United States, with a record crop on its hands, is a keen seller, while Argentina also has more to sell this year. Maize is expected to become cheaper still; it is offered for November shipment from the United States at about £19 10s. a ton.

THE DOMICILE BILL

Home Sweet Home

The latest Domicile Bill, which has passed the House of Lords but has not yet got a second reading in the Commons, represents according to the viewpoint of the observer either a triumph of common sense over doctrinaire tidiness, or a defeat of principle by expediency.

In the United Kingdom the determination of the domicile of an individual has hitherto depended on rules established by common law and case law—the domicile of origin prevails until it is displaced by a domicile of choice and the burden of proof lies on whoever asserts that a change has taken place, residence in itself being of little importance. The Private International Law Committee considered these rules and recommended that they should be revised to bring British practice into line with that of other countries. To implement these recommendations a Bill was introduced into the House of Lords last year which provided, *inter alia,* that a person's domicile should be in the country where he has his home and intends to live permanently, and which set up a statutory presumption that a person who has a home in a country would be presumed to intend to live permanently in that country.

This presumption spread alarm and despondency among foreign businessmen residing and working in this country for overseas firms. Such individuals have been outside the general rule that earnings shall be taxed in the country in which the work is done; they are liable on only so much of their earnings as they purport to remit to the United Kingdom. The Court of Appeal's decision in *Thomson v. Moyse* this week shows that foreign earnings can be enjoyed untaxed by side-stepping the technicality of remittance—though it would be surprising, if the House of Lords upholds the decision, if this loophole were not plugged in a future Finance Act.

But the 1958 bill was withdrawn and its successor has been shorn of earlier objections. It goes no further than providing that a person acquires a domicile in a country by residing there with the settled intention of making it his permanent home. The onus of proof rests, as at present, with the person alleging that a change of domicile has taken place. The Bill would thus leave matters very much where they have been for a century or more: the recommendations of the International Private Law Committee go back to the pigeon hole and British tax practice remains out of step

with the rest of the world. Many members of the House of Lords, including the Lord Chancellor, felt that the earlier bill was the better one and dropped the clauses to which objection had been taken with reluctance. Foreign businessmen are welcome in this country and it may be right that they should enjoy tax advantages to which the native cannot aspire—but they play havoc with tax reform.

COMPUTERS

Preaching to the Unconverted

An electronic computer has much in common with a good farm dog, in the sense that its performance is governed to a large extent by the skill of its handler. With the growing tendency to use computers as a tool for management, as well as a means of mechanising tiresome routine clerical operations, company executives and sometimes directors have to be taught how to work hand in glove with a computer, how to get it at the press of a button to round up widely scattered information, select and sort through it, herd it into appropriate categories and finally present from a staggering mass of statistics only those facts that are strictly relevant to the day's decisions.

Computer manufacturers are therefore faced with a difficult exercise in tact, the re-education of senior executives to whom it is hoped to sell an installation that can cost almost anything that the customer is prepared to pay up to say £1½ million. The International Computers and Tabulators company, formed out of a recent merger of Hollerith and Powers-Samas, has tried the experiment of explanatory one-day courses for directors; and since its London centre opened 18 months ago, 200 have taken these short courses and another 150 have stayed on for 4-days instruction. These courses are quite different from the serious training given to those who will actually be responsible for putting work on to the computer. How much of the information actually sinks in is difficult to say. While computers have been accepted by engineers as an invaluable aid to quick calculation, those concerned with administration show a proper scepticism about the help they can give to management. This explains why so much computer time is frittered away doing nothing more important than calculating wage packets. In a few industries, of which coal is one, the wage structure may be complex enough to justify this, but in the majority of cases manufacturers are resigned to regarding the use of as subtle a machine as a computer to work out the number of notes and half-crowns and half-pennies in a wage packet merely as a means to an end. The end in this case is the process of education inside the company so that the computer can be used to take decisions of greater importance.

SHORTER NOTES

The Montecatini Company, Italy's largest manufacturer of petroleum chemicals, has announced that it will build a new plant at Brindisi which will produce up to 700,000 tons of petrochemicals and plastics a year. The new plant, which will be the largest in Italy and one of the largest in Europe, will be completed in about three years' time; its output will include polypropylene, polyethylene, and polymers for the manufacture of synthetic fabrics, aldehydes, alcohols, and organic solvents.

In a note in *The Economist* of February 28th on the new financial arrangements for the North British Locomotive Company it was stated that the only remaining independent locomotive manufacturers were North British and the Birmingham Railway Carriage and Wagon Company. This statement is true only of those companies making main-line locomotives for the British Railways re-equipment programme. There are a number of other independent companies making locomotives, mostly for shunting or industrial use, though Beyer Peacock and Company Ltd and the Hunslet Engine Company Ltd continue to build main-line steam locomotives independently of other companies.

* * *

The directors of Ultra Electric Ltd., the operating subsidiary of Ultra Electric (Holdings), announce that they have completed negotiations for the acquisition of all the issued capital of Pilot Radio Ltd. for cash.

* * *

The directors of Rhodesian Anglo American are paying an interim ordinary dividend of 1s. 3d. net per 10s. unit for the year to June 30th, against 1s. net in 1957-58, when it was followed by a final of 3s. net. Rhokana is raising its interim ordinary dividend from 5s. net per £1 unit to 7s. 6d. net. In 1957-58 its final was 20s.

* * *

Saxone, Lilley & Skinner, the footwear group, has secured a £2 million loan at 6 per cent from an insurance company. This loan is secured by a mortgage on certain of the group's properties and it is repayable at the company's option between 1979 and 1999.

* * *

De Beers' deferred ordinary dividend has been left unchanged at 10s. per 5s. share for the eighth year in succession. Net profits of the parent company fell from £10,303,500 to £9,654,255 last year. The deferred units fell 1s. 10½d. to 128s. 9d. on the eve of the announcement and have since declined to 123s. 9d.

COMPANY MEETINGS

THE CHARTERED BANK

FURTHER EXPANSION OF BUSINESS

AID FOR NEWLY INDEPENDENT NATIONS

COMMON MARKET PROBLEMS

MR V. A. GRANTHAM'S REVIEW OF ACTIVITIES

The one hundred and fifth annual general meeting of The Chartered Bank will be held on April 1st at 38 Bishopsgate, London, E.C.2.

The following is an extract from the statement by the Chairman, Mr V. A. Grantham, which has been circulated with the report and accounts for the year 1958:

THE BANK'S BALANCE SHEET

The accounts indicate a further expansion of the Bank's business. The total of our own balance sheet at £243,118,186 is some £11,500,000 up on last year's figure which was itself a record.

Current and Other Accounts show a slight reduction of £2,032,672, which is more than offset by a substantial increase in Fixed Deposits of £15,994,119. Our acceptances are lower by £2,778,353.

On the assets side Cash in Hand, at Call and at Bankers, Government and Other Securities and Bills of Exchange show increases of £1,324,674, £10,402,781 and £5,848,798 respectively and evidence a strong degree of liquidity. The ratio of cash and call money to our demand and time liabilities, excluding the notes in circulation against which security has been lodged, is slightly lower at 22.1 per cent against 22.9 per cent last year. Advances to Customers and other Accounts show a contraction of £3,975,323.

The increase in the net figure for Bank Premises and Furniture is due to our continued expansion and the modernisation of our properties in the East.

The Consolidated Balance Sheet includes the figures of all our wholly owned subsidiaries and the total at £285,430,502 is £13,532,487 higher than last year.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

The continued upward trend of working costs, especially salaries and wages, in conjunction with a lowering of interest rates during the period under review has resulted in a decrease in our net profits from £1,000,890 in 1957 to £993,590.

In October last the issued capital of the Bank was increased to £5 million by the capitalisation of £600,000 out of the Reserve Fund and £400,000 was restored to the Reserve Fund by a transfer from Reserves for Contingencies Account.

The Bank paid an interim dividend of 7¼ per cent less income tax in September last on £4,400,000 capital, absorbing £189,750, and it is now proposed that out of the balance available a final dividend of 7¼ per cent be paid on the increased capital of £5 million, costing £215,625.

We have allocated £250,000 to Bank Premises and Furniture and £125,000 and £20,000 respectively to the Pension Fund and Widows' and Orphans' Fund. We have transferred £150,000 to Reserves for Contingencies and the balance carried forward is £481,673.

INTRODUCTION

During the months of October and November last year I travelled in India, Pakistan and Ceylon and it was helpful to me, as your Chairman, to be afforded the opportunity of seeing the Bank at work in one of the most important spheres of its oversea activities. On my way home I was able also to visit our branches in Aden. It was evident to me that the business transacted at the branches I visited is sound and profitable and that it is conducted efficiently and economically. I was impressed, too, by the ability and loyalty manifested by the staff of every grade. At places where the branch organisations of The Chartered Bank and The Eastern Bank Limited overlap effective measures of co-ordination have already been brought into operation and the staffs of the two institutions are working happily side by side.

When I was in India I was glad also to have the opportunity of meeting and having discussions with the Chairman and the General Manager of our affiliate, Allahabad Bank Limited.

THE COURT OF DIRECTORS

There have been no changes in the composition of the Court of Directors during the period to which the present report relates. In April last Mr A. P. Cameron and Mr N. S. Golder retired from the Board of The Eastern Bank Limited and at the end of the year Mr W. G. Pullen took Mr Morford's place as a Director of that institution.

THE GENERAL MANAGEMENT

On December 31st Mr H. F. Morford retired after serving the Bank for forty-three years, four of them as Chief General Manager. The stockholders will, I am sure, wish to be associated with the Court of Directors in acknowledging, with gratitude, the highly distinguished services he rendered. We congratulate him on the important appointments he has since received which will continue to keep him busy in the City.

The Court have appointed Mr W. G. Pullen as Chief General Manager, confident that he brings to the highest executive office all the qualities of leadership and professional competence that the position demands.

Mr G. A. Leiper has been promoted from Assistant General Manager to Joint General Manager and Mr A. T. Hobbs, who has served the Bank with distinction in a succession of executive posts in the East, has been appointed an Assistant General Manager.

THE IRANO BRITISH BANK

Our acquisition of the share capital of the Eastern Bank gave us a direct interest in the Middle East and our assessment of the political and economic situation there convinced us that our representation would be incomplete without an interest in Iran. We were pleased, therefore, to have an opportunity of joining with influential Persians in promoting a joint banking venture in their country. The authorised capital of the Irano British Bank is Rials 200 million, of which Rials 100 million have been subscribed and paid up. We have subscribed 8,000 shares of Rials 10,000 each and the Eastern Bank 1,800 shares of a similar denomination, which gives us 49 per cent of the capital of a bank which has now been registered and granted a banking licence in the above name.

This Bank will have as its General Manager an officer seconded from our Eastern covenanted staff and it will open for business in Tehran on March 10, 1959, and later in Khorramshahr. It is pleasing to note that the return of British banking interests has been generally welcomed and we hope that this new joint venture bank, by bringing experience and knowledge to the handling of imports and exports, will assist the country in its trade expansion programme.

REPRESENTATION IN BIRMINGHAM

We have felt for some time past that the revolution which has taken place in the United Kingdom export trade since the end of the war necessitated our establishing closer contact with the new exporting industries in the Midlands. It has been decided, therefore, to appoint a representative of the Bank and its subsidiaries and associates to reside in Birmingham and to set up there an organisation which will facilitate more extensive participation in the financing of exports of Midland manufactures to the Asian markets in which we, The Eastern Bank Limited and The Irano British Bank are established. Mr A. M. R. Currie, until recently our Manager in Indonesia, has been appointed to the post and he will take up his duties during the month of April. It is not proposed, at present, to open a branch of the bank in Birmingham; the new office will be equipped to impart economic and credit information and to serve as a link between the export trade of the Midlands and Head Office.

OVERSEA SURVEY

Two recent events, the extension of sterling convertibility and the inauguration of the European Economic Community or Common Market, are of considerable significance to us in our business as an international bank.

For the first time since before the second world war sterling earned from commercial transactions by residents outside the sterling area is convertible, without restriction, into gold, US dollars, or any other currency. Other European countries have taken parallel steps in dismantling the formidable array of exchange control regulations established in wartime. That it has proved possible in the case of sterling is a tribute to the efficiency of the stringent measures which were necessary as recently as September, 1957, in order to restore confidence in sterling as an international currency and the medium of 40 per cent of the world's visible trade and a large proportion of its invisible transactions.

The increased scope of convertibility, by inducing confidence, should encourage the wider use of sterling by countries which are outside the sterling area such as Japan and the Philippines, in our own sphere of operations, and there should be a greater readiness for those countries to accumulate and hold sterling. The Philippines, for example, are amending their monetary laws to allow currency reserves to be so held.

I have, on previous occasions, stated that it is still insufficiently appreciated that the City of London's oversea earnings in respect of its banking, merchanting and other services comprise a substantial proportion of the United Kingdom's invisible income. Without that invisible income the country would be unable to afford the trade deficit which it habitually runs. Moreover, the City's oversea earnings involve very little expenditure of foreign exchange.

COMMON MARKET PROBLEMS

The second event which calls for comment is not so promising for the Chartered Bank and its associates, which engage primarily in the financing of oversea trade. I refer, of course, to the impasse which has been reached in the negotiations for the setting up of a wider free trade area to supplement the newly established Common Market and it is by no means clear that the European Economic Community (EEC) will not detrimentally affect the trade position of a number of Asian countries in which we operate. In theory, the increased scale of industrial operations possible in a unified market of some 170 million people should lead to an increase of trade with the outside world, but many of the Asian countries fear that the establishment of EEC may mean the creation of a new system of tariff preferences within Europe which will have the opposite effect.

In general, it is possible that these fears are exaggerated, for the agricultural exports of the South-East Asian countries differ generally from those of the French and Belgian African territories which receive preferential treatment, and for manufacturing countries like India and Hongkong imperial preference is still the most important factor in their trade. Nevertheless, it would be a very retrogressive step if South-East Asian countries had to resort to bilateral agreements with the Common Market, and it is to be hoped that for the sake of Asia as well as the United Kingdom a formula will be found to extend the present EEC to the envisaged free trade area.

CYPRUS

Our newly acquired business in Cyprus was put to a severe test during the year and progress was made notwithstanding the effect of the terrorist activities of Eoka, a series of curfews and strikes, communal animosity and a boycott of British goods. This satisfactory outcome is in no small measure due to the efforts of our staff, whose personal safety has from time to time been in some jeopardy, and they are to be commended for the efficient manner in which at all times they carried out their duties.

LEBANON

It is estimated that the total volume of Lebanon's oversea trade fell by as much as thirty per cent over the year, with the result that merchants had difficulty in disposing of stocks and the banks had to allow extended credit. By the end of the year local conditions had improved, but some time will be needed for a full recovery.

IRAQ

Iraq is still in a state of transition, and trade patterns may well change to conform to the foreign policy of the new government. In the meantime the banks generally have so far experienced little interruption in their ordinary routine. Since the revolution all imports have been subject to licence, the object being to restrict "luxury" expenditure; but as markets generally were overstocked during the first half of the year and licences were freely given for essential goods, current business was not greatly affected.

Oil revenue was buoyant, with a further increase in prospect during 1959.

PERSIAN GULF

Bahrain.—Bahrain had another quiet and prosperous year and imports were maintained at about the 1957 level.

Doha.—There is little to report from Doha, except that development continues and merchant business shows further improvement.

Sharjah.—After a slack period in the early months, there was some improvement in business, but unfortunately this was not maintained.

HADHRAMAUT

The Eastern Bank has had a branch at Mukalla since 1955. Merchant business shows some improvement, while the volume of goods imported direct rather than through Aden is increasing.

ADEN

Owing to shortage of foreign exchange in neighbouring territories and to the disturbed political situation in the hinterland Aden's entrepot trade has been on a reduced scale. There has been difficulty in finding export markets for locally grown cotton and the output of refined oil has been lower. These factors have inevitably depressed local business activity, although fortunately more shipping has been using the port and its bunkering facilities.

INDIA

At one stage during the past year there seemed a grave danger that the import programme sanctioned soon after the inception of the plan in April, 1956, had not only outstripped India's ability to finance it, but also the extent of the foreign aid that was likely to be forthcoming. Fortunately, following the Finance Minister's foreign tour last September, he was able to secure sufficient credits to meet India's shortage of foreign exchange until next March, and possibly to March, 1961. Moreover, it is generally understood that arrangements are in hand for the provision of enough foreign assistance to complete the essential features of the plan, which suggests that the worst of the crisis may be over. Unfortunately, the extent to which the government has resorted to deferred payments has left a burden, to be shouldered in the years to come, which will leave little margin for additional foreign exchange expenditure during the third five-year plan, even allowing for possible savings on exchange which are likely to accrue when the new steel works and heavy industries, set up under the present plan, commence operations.

It seems to me that India has to accomplish two things in order to safeguard its future; firstly, and this applies equally to Pakistan, it has to improve its relations with its neighbour to an extent that the proportion of military and other service expenditure in its budget is so drastically reduced that a lowering of taxation is possible. Secondly, that the gold in the hands of the people be made available to the government. This is a psychological problem depending on confidence, but it might be possible to introduce a form of bearer loans against gold, or even free imports, and allow an economic rate to be found and confidence restored in that way. Success in this could go a long way towards solving India's foreign exchange problem.

The widespread publicity given to India's difficulties during the past year or more should not be allowed to obscure the extensive progress that has been achieved in carrying out the country's development programme. The task of improving the living standards of a population of some 400 million, which is increasing by about five million each year, is obviously immense and it is greatly to the credit of the Indian government that it has chosen to implement its five-year plans by democratic means.

PAKISTAN

The new regime has acted with energy to effect an improvement in the country's circumstances. Although at first there was some confusion in business circles because of the many regulations fixing prices and limiting profits and dividends, the authorities have shown a commendable spirit of compromise and a general soundness of judgment in the introduction of new measures.

It is pleasing to see that national effort is to be concentrated on the agricultural sector of the economy, on which the country's prosperity will depend for many years to come and when Pakistan can again feed its population and stop the large imports of foodgrains which have entailed such heavy outlay of foreign exchange in the last few years, then a great step forward will have been taken towards restoring equilibrium to the national economy. It is fair to say that Pakistan enters 1959 in circumstances more hopeful than for some years past.

CEYLON

The major and disquieting feature which has dominated trade and industry in Ceylon during the past year has been the widespread and increasing state of unrest.

Fortunately, and because of the country's inherent agricultural wealth, the total volume of all exports was maintained at much the same level last year as in 1957. The volume of imports on the other hand decreased, partly because strikes in the port of Colombo made it difficult to land cargoes. Because of this the external balances, which had shown a marked fall in 1957, were well maintained.

Nevertheless, one cannot look with any great optimism to the future until the government comes to grips with the unlawful elements in the island and puts labour on a realistic basis satisfactory to the government and private industry as employers and to the solid mass of decent, hard-working employees.

BURMA

The outstanding event in Burma last year was the appointment in October of General Ne Win as Prime Minister in succession to U Nu.

Considering the good work being accomplished in many directions it is disappointing that the administration seems still strongly wedded to State trading and barter, notwithstanding the unfortunate experiences of the past years, and it would be a pity if the opportunity were not taken now to allow that freedom of private enterprise and trading which might make a vital difference to the balance of payments and hence the standard of living.

The beneficial effects on the administration of a continuance of the recent stable government, together with the country's steadily increasing agricultural wealth, ensures that Burma enters the new year under more favourable auspices than for several years past.

SINGAPORE

The first elections under the new constitution, on which agreement with the British government was reached last year, are now due to be held in May of this year. In recent months there has appeared a growing awareness of the serious responsibilities to be shouldered by those entrusted with the government of the territory as a result of the elections. Now and in the future there is no guarantee that the living standards of Singapore's population, which at present are relatively high for South East Asia, can be maintained let alone improved if the goods and services available in Singapore are not fully competitive internationally. It is a matter for cautious optimism that the paramount importance of the free port to the life of Singapore is gradually being accepted by all political parties.

FEDERATION OF MALAYA

The most important event in Malaya, and one which is of special significance to the Bank, has been the establishment of the Central Bank of Malaya (Bank Negara Tanah Melayu), which commenced business on January 26, 1959. The new bank is in a position to exert considerable influence, not only on the banking system of the Federation, but also on the territory's economy as a whole. It is in keeping with the practical attitude which has been shown by the authorities in the Federation in setting up their Central Bank that, although the relevant legislation includes provisions under which the new institution can take over from the Board of Commissioners of Currency, Malaya and British Borneo, the issue of the Federation's currency, for the time being it has been decided to allow the existing arrangements to continue. So far there are no arrangements between the two governments concerned for any extension of the activities of the Central Bank of Malaya to Singapore. It must, therefore, be a matter for satisfaction that the continuance on the same parity basis, of the existing currency arrangements, to put it at the very least, postpones the fragmentation of the unified currency area comprising the Federation, Singapore and the British territories in Borneo, in which first the Straits dollar and subsequently the Malayan dollar have provided a stable and effective medium of exchange.

Last September the World Bank made a loan to the Federation in connection with the Cameron Highlands hydro-electric scheme and this Bank participated therein.

NORTH BORNEO

The consistent rise in oversea trade turnover in recent years and the favourable trade balance achieved show that North Borneo is capable of standing on its own feet and it is clear, too, that the sums invested in developing the Colony's economic potentialities are producing encouraging results.

Arrangements are proceeding to extend our branch system in North Borneo to Tawau, where we hope to open an office within the next few months.

BRUNEI

In May our two new branches at Brunei Town and Kuala Belait commenced business. His Highness the Sultan of Brunei honoured us by performing the opening ceremony at our office in Brunei Town. Our business in Brunei has expanded steadily during the year.

SARAWAK

Lower commodity prices, in particular for rubber, in international markets during the past year have had their effect on Sarawak's oversea trade, the total value of which after disregarding the oil transit trade, shows a reduction in comparison with 1957.

Although lower revenue and a reduction in surplus balances are necessarily limiting the financial resources which the government can allocate to development schemes, encouraging progress has been made during the past year in improving airfields and road communications and also the port facilities at Kuching.

INDONESIA

The past year has been one of great difficulty for the Republic. The rebellion and its aftermath have inevitably had the effect of reducing exports, but somewhat surprisingly provisional figures for the first ten months of the year show that Indonesia not only had a trading surplus but that the surplus itself was substantially higher than for the same period of 1957. Although there is still much leeway to be made up some progress has been made in restoring the country's trade position.

For the time being there remains a serious shortage of foreign exchange and because of this it is unlikely that the import of other than strictly essential goods will be permitted for some time to come.

In view of the restrictive policy being followed by the authorities in regard to profit remittances and with the difference between the internal and external value of the rupiah I see little prospect for the time being of any worthwhile reward being received for the extensive services which we offer and the business which we conduct in Indonesia.

THAILAND

It is probable that economic factors, no less than political, played their part in causing Field Marshal Sarit to effect an unexpected *coup d'état* last October. Reduced export earnings had caused a deterioration in Thailand's balance of trade and the resultant reduction in the country's holding of foreign exchange together with a sharp rise in the cost of living brought about a situation in which it was evidently thought necessary to effect a change of government.

Although the country had a rather unsatisfactory trading year in 1958, the prospects for the export of rice, rubber and tin for the coming year are probably better and, assuming that the new powers vested in the government departments do not stifle enterprise, Thailand can rely on its traders to find markets abroad notwithstanding the more competitive conditions foreshadowed.

VIETNAM

Politically the country still takes a very strong anti-communist line, which may be not entirely unconnected with its complete dependence on American aid, which finances more than three-quarters of its imports. Although direct aid is given in road construction, military equipment and technical assistance, imports consist largely of consumer goods which probably accounts for the air of prosperity in Saigon itself but effectively conceals the fact that the country is making very little progress towards self support.

A more friendly view is being taken towards foreign investment, particularly British, and in general although the future of the country cannot be said to hold a great deal of promise at the moment, it is clear that our bank can still play an important and helpful role in the economy.

CAMBODIA

Cambodia will finally benefit from the major development schemes that are being financed by foreign aid, but in spite of further aid which paid for substantial imports of consumer goods the country, in contrast to the previous year, had an unfavourable trading balance. No doubt this has influenced the government in encouraging foreign investment for, with the possibility of the amount given in aid being considerably reduced in the next few years, a determined effort will have to be made to increase the ratio of exports to imports.

THE PHILIPPINES

Good rice and grain crops in the Philippines and improved export earnings from coconut products, sugar and minerals should have helped the Republic to restore the extremely serious position created by the adverse trade balance of Pesos 400 million in 1957, but although it is estimated that the deficit in 1958 will be reduced to Pesos 100 million, a further fall in the external reserves to US$125 million in a comparatively favourable trade year was most disappointing.

The President has recently again affirmed the government's opposition to devaluation and its firm intention to maintain the present exchange value of the peso and has called for the support of all sections of the community to assist in stabilising the economic and fiscal situation. The controversial barter trade law is being repealed and a stabilisation programme consisting largely of disinflationary measures has been approved by the Monetary Board. The main necessity, however, is that of a balanced budget, for there can be little doubt that the excessive resort to deficit financing has been the major inflationary factor and thus the prime cause of the continued deterioration in the Republic's economy.

HONG KONG

Hong Kong's trade has been on a reduced scale during the past year, mainly because of a sharp reduction in imports. In many respects this was a reflection of the world-wide recession in business which was a feature of 1958 and in the circumstances local industry has had a fairly satisfactory year.

The colony is becoming increasingly dependent for its prosperity on imperial preference, and the dangers of such dependence are illustrated by the case of the Hong Kong textile industry, which has now under pressure given an undertaking to limit textile shipments to the United Kingdom. If they are to survive, the Colony's new industries need access to an expanding range of international markets. The limitation which has now to be imposed on the exports of one of its principal industries is therefore a serious setback and one which has caused much anxiety locally, particularly as textiles are only among the first

of a steadily expanding range of Hong Kong products which can be expected to compete in the British and other international markets in the future.

Our new building is also nearing completion and it is hoped that it will be officially opened in August, 1959.

CHINA

China's efforts to industrialise rapidly have received extensive publicity in recent months and substantial increases in industrial production have been made. In the agricultural sector bumper harvests may lead to China's emergence as a major rice exporter, while if, as is claimed, the size of the cotton crop is double that of the previous year, China may be becoming one of the world's leading cotton growing countries. The transportation of steel and foodstuffs has, however, imposed a strain on the internal system of communications and in recent weeks this has evidenced itself in an unusual delay in fulfilling export contracts.

JAPAN

During the past year the Japanese economy has successfully adjusted itself to what at the outset were generally expected to be extremely difficult conditions.

Although over the whole of 1958 there was a reduction in the country's total exports, it was relatively small. Imports were considerably reduced in volume without adverse repercussions on industry by running down stocks of imported raw materials which had accumulated during 1957 when excessive imports had imposed a serious strain on the country's balance of payments. With imports lower in volume and cheaper in price and exports little reduced, Japan, again aided by a bumper rice crop, achieved a substantial payments surplus for the year and greatly strengthened its foreign exchange reserves.

NEW YORK

Now that American industry is replenishing its stocks and again beginning to increase production, trans-Pacific trade should improve. The business of our New York agency is likely to benefit accordingly.

HAMBURG

Germany is keenly interested in developing trade with Asia and our Hamburg agency is well situated to share in the expansion of banking business that is likely to accrue from an increased German demand for raw materials now that the EEC is in being.

CONCLUSION

The oversea territories in which we operate are receiving increasing publicity and it is generally recognised that the developing of the natural resources of the South East Asian countries and the raising of the standard of living there is of vital importance to future peace and progress in the world. This challenge is being accepted by the Western Powers in a most understanding and generous manner and the extent to which aid and credit is given to the newly independent nations of the area is staggering.

Very few of the countries concerned would survive economically were it not for the tremendous infusion of assistance they receive and one can only hope that wise counsel and incorruptibility within these countries and a tolerant direction from the donors will help attain the objective of self-supporting economies with ever increasing exports. This objective cannot be reconciled with a western fear of Asian competition and attempts to avoid that competition and, in this connection, perhaps too little significance has been given to the attitude of the United Kingdom government in acquiescing in limitations on the textile shipments from Hongkong to the United Kingdom.

AN IMPORTANT PRINCIPLE

This particular issue raises a principle of major importance in matters of international trade. The communiqué issued last October at the conclusion of the Commonwealth Trade and Economic Conference at Montreal "recognised how important it is that obstacles should not be placed in the way of the export of manufactured goods of the under-developed members of the Commonwealth and agreed that Commonwealth governments will give full weight to this consideration whenever decisions are necessary concerning the terms of access of such goods to their markets." The distinguished economists who compiled for Gatt the Haberler report on "Trends in International Trade," which was published the same month, consider that "it may be a natural and economic development that relatively poor countries with high population densities, like India and Hongkong, should export cheap labour-intensive manufactures." They therefore suggest that "it is of great importance that the highly developed countries should refrain from protecting their domestic industries from such imports."

It seems regrettable, therefore, that many in this country who in theory are in favour of raising Asian living standards have not felt it inconsistent also to argue in favour of imposing such restrictions on the grounds that goods produced by what they term cheap labour compete unfairly with those manufactured at higher cost in the United Kingdom. This sort of reasoning strikes at the very root of international trade and if it were to gain wide acceptance, might well be invoked, to take an important example, to justify the virtual exclusion of British manufactures from the United States market. It cannot be too strongly emphasised that what is by standards in this country, relatively cheap labour, need not be exploited labour and that in the case of Hongkong the government has taken already active steps to improve working conditions.

In this context it is perhaps ironical that in a recent announcement the United Kingdom government pledged itself to support Hongkong fully in resisting the attempts of American manufacturers to force Hongkong into voluntarily restricting its textile exports to the United States.

Copies of the full text of the statement will be sent on application to the Secretary of the Bank, 38 Bishopsgate, London, E.C.2.

CABLE & WIRELESS (HOLDING)

Merits of Investment Trusts

The thirtieth annual general meeting of Cable & Wireless (Holding) Limited was held on March 6th in London.

Sir Edward Wilshaw, KCMG, DL, JP, LL.D, FCIS (the Governor) in the course of his speech commented on another record year and reviewed the ten years of steady progress since the company became an investment trust company.

He said that the investments now held were worth over £28 million, an increase of £12 million, and added:

In 1950, £100 of stock could be purchased for about £96, yielding a gross income of £6. Since then a further investment of £35 in order to take up the "rights" issues would provide a stockowner with stock now worth £392 instead of £96 and a gross income of £15 14s. instead of £6. Those who put their money in ten years ago have trebled their capital and more than doubled their income.

Referring to 1958, Sir Edward said that gross income was up by £137,772. They were again paying a 10 per cent dividend but on a larger capital, transferring £250,000 to General Reserve and carrying forward £459,000, more than a full year's dividend.

THE SMALL INVESTOR

I have endeavoured to play my part in encouraging the small investor, by splitting the shares of our group of Trust Companies into five shilling units.

I think I ought, without disparaging the basic merits, to put on record my own feelings about Unit Trusts. Whilst they are admirable methods of investment, I do not think it is being made sufficiently clear to the small investor that by buying an interest in a Unit Trust or for that matter, in an Investment Trust, he is risking his money. It may increase or it may decrease. I would prefer it to be made more clearly known that he is putting up "risk capital" by investing indirectly in equity shares, for it must be clear to anyone who buys the ordinary shares of any company that they may go up or may go down.

A Unit Trust is so constituted that the value of its units must fluctuate with the prosperity of industry as a whole and you cannot say, particularly at this moment when prices are high, that there is no possibility of them dropping and of a consequent fall in the value of Unit Trust units. Caution should also be exercised in the establishment of Investment Clubs.

To my mind, a properly managed Investment Trust is an even better medium for the small investor. If a shareholder invests 13s. in a 5s. share of this Company his investment is covered by a stake in about 850 companies. The market value of the shares is not dependent on a day-to-day valuation of its investments, and furthermore it is the general practice for an Investment Trust to put something away out of its profits and thereby create a reserve against a possible rainy day.

I am greatly heartened in my efforts to attract the small investor by the warm letters recently received from stockowners expressing thanks for the success of their Company and the benefits which they have enjoyed as a result.

Looking ahead, I have every confidence in the future prosperity of this Company, and apart from any unforeseen circumstances beyond our control, am confident we shall be able to continue paying a 10 per cent dividend; our policy is to plough back any additional profits. The report was adopted.

NATIONAL AND GRINDLAYS BANK

FEATURES OF THE YEAR'S WORKING

A SOUND BUSINESS

MR J. K. MICHIE'S SURVEY OF FAR EAST & AFRICA

The annual general meeting of the National and Grindlays Bank Limited, will be held on April 7th in London.

The following is the statement of the chairman, Mr J. K. Michie, circulated with the report and accounts:

Having become the National Overseas and Grindlays Bank Limited on January 1, 1958, we were able to shorten the name to National and Grindlays Bank Limited on January 1st last. The first accounts of the integrated banks are therefore presented under the new title which I am glad to say is a more popular and a simpler one.

At the last Annual General Meeting I reported verbally the sad and severe loss we had sustained in the sudden death of the then Deputy Chairman, Mr A. N. Stuart, CBE, whose wide knowledge and experience, which he put so freely at the service of the bank, we greatly miss. We also mourn his loss as a friend. When illness struck him he was in fact engaged on bank business and was staying with our Manager in Dar-es-Salaam. Mr Stuart had been a member of the Board for eighteen years and Deputy Chairman for over eleven years. As many of you will know, his father was a member of the Board and was also Deputy Chairman for a number of years.

In succession to Mr Stuart, Mr E. J. Mackenzie Hay was elected Deputy Chairman. He has been a member of the Board since April, 1948, and has all the qualifications for the position.

At the conclusion of our last Annual General Meeting we lost the services of Mr W. H. Miles and to fill this vacancy we were fortunate in having Mr Ronald Mann join the Board in April, 1958. His wide connections with and experience of business in Ceylon and East Africa will be known to many of you and will be valuable to the bank. His appointment falls to be confirmed at the Annual General Meeting.

With the amalgamation of the two banks the calls on the time of the Chairman and the Deputy Chairman naturally increased and it was decided that the best method of meeting this need was to appoint a second Deputy Chairman in the person of Sir Toby Low who both by training and by family tradition is eminently fitted to undertake this wider role.

FACTORS AFFECTING PROFIT

The total of our balance sheet at £151,491,479 shows a reduction of £10,613,741 on the amalgamated figure for the year 1957. Our net profit is also lower by £55,783 at £371,707, arrived at, as usual, after providing for taxation, for bad and doubtful debts and for other necessary reservations. Two interim dividends of 7½ per cent have been declared, the total distribution, therefore, being unchanged at 15 per cent.

The reasons for the smaller profit figure are several. One which will be non-recurring is the inescapable expenditure in connection with the amalgamation which though limited by all possible means was still considerable. Then, as will emerge from my remarks on our individual territories, apart from the ever-increasing competition which is a feature of banking in the East and in East and Central Africa—in some cases from growing indigenous banks and in others from new entrants in the field, or from both—in none of our territories were conditions more favourable for bankers and in most they were more difficult than in recent times.

On the other side of the slate British Government securities staged a considerable rise during the year and our inner reserves have benefited in consequence. Incidentally, it has been and still is the policy of the bank to meet out of current income depreciation in the values of what can be termed "local" securities held by branches but we do not "write up" such securities should they appreciate but leave the reserve untouched until realisation or maturity.

INDIA

At this time last year India was facing a critical balance of payments situation which I am glad to say has been at least temporarily resolved partly by her own exertions and by the aid obtained from the World Bank and various Governments, including our own. There are still hurdles ahead but I think there is justification for believing they too will be cleared and that when many of the larger capital projects now being financed come into operation the present difficulties in this respect will lessen.

Nevertheless, food production must continue to be the fundamental problem of countries like India which have both a low average standard of living and a rapidly growing population, and one cannot help being a little doubtful if agriculture gets its fair share of attention vis-a-vis industrialisation.

Because of the international recession in textiles India's exports of finished goods have fallen to 70 per cent of the 1957 figure. Jute, too, has had a depressing year with continuously falling prices. Tea exports on the other hand have risen appreciably and the trade benefited in some degree from the difficulties which developed in Ceylon.

LENDING RATES

Last year I commented on the paradox that in India money was simultaneously scarce and cheap. Now it is not quite as scarce—but despite the relative financial situations of the two countries lending rates remain much on the same level in India as in this country and of course they never reached the heights in India which they did here when our Bank rate was at 7 per cent.

The balance of payments position resulted in a distinct reduction of the amount of overseas business flowing through normal banking channels in 1958 and in consequence the exchange side of banking was and still is adversely affected. Indeed this movement has been accentuated by the methods of purchase followed by the Government of India as an increasing part of such business is being channelled through the State Bank of India which in other circumstances would be spread over commercial banks in general. The growth of indigenous banking has always appeared to us to be both desirable and inevitable and our hope—until recently justified by events—has been that though our share of banking would be smaller in percentage it would not necessarily be so in volume.

PAKISTAN

As a means of rectifying the political and economic ills which had beset Pakistan for some time, a proclamation was issued by President Mirza on October 7th abrogating the constitution and placing the country under Martial Law with the Commander-in-Chief, General Mohammed Ayub Khan, as chief Martial Law Administrator. Two weeks later General Mohammed Ayub Khan succeeded General Mirza as President.

Very strict measures of currency and other controls have been instituted and the Government claims that already the balance of payments position has improved materially. The Government also proposes to introduce very far-reaching changes in the ownership of land which it is hoped will lead to higher yields of agricultural produce which since Pakistan became a separate country have undoubtedly been disappointing, particularly in food grains.

Swingeing increases in import duties mainly on what are regarded as luxuries have recently been announced, some of which will particularly affect European residents.

In January the State Bank of Pakistan raised its rate from 3 per cent to 4 per cent, a level which cannot be regarded as too high.

In common with India, the cotton and jute trades of Pakistan have had a difficult time although recently the jute milling industry which earlier was running into difficulties has enjoyed much better trading conditions. A rising threat to this industry in both countries is the rapidly increasing production of jute in China.

The Pakistan tea crop was recently estimated to be about 15 per cent larger than in 1957 and exports reflect this increase.

CEYLON

The difficulties in regard to port labour which I reported a year ago had a very adverse effect on the economy of the country last year and this was accentuated by the most unfortunate racial riots which broke out in May and which continued for several weeks. Tea and rubber shipments were seriously delayed and markets lost to other producers and in the first nine months of the year Ceylon's external reserves dropped by Rs.56 millions to Rs.883,300,000. Credit conditions naturally have been tight and Banks had to finance stocks of tea, rubber, etc., for much longer periods than usual.

It is to be hoped that the recent racial animosities will soon be forgotten and that a country so blessed by nature will this year

find firm ground both politically and financially.

BURMA

On somewhat parallel lines with Pakistan the Control of Government passed into the hands of the Commander-in-Chief, General Ne Win, late in October of last year when he took over from the Prime Minister U Nu and formed a new cabinet. Administration was tightened up in many directions. On February 13th, however, General Ne Win tendered his resignation to the President but at the time of writing a successor has not been appointed or a new cabinet formed.

A year ago it was expected there would not be much more than 1,200,000 tons of rice and rice products available for export in 1958 but an additional 200,000 tons was found and exports reached 1,400,000 tons, nearly all of which was disposed of on a Government to Government basis.

The surplus available for export this year is estimated at 2 million tons which would be the highest figure achieved since the war and indicates a reviving interest in production by the cultivators in answer to the better terms they are being offered. About 800,000 tons should be available for disposal through ordinary trading channels and altogether the financial prospects of the country are considerably brighter. Fortunately the Government has also put a stop to capital expenditure on projects which promise no immediate advantage to the economy of the country.

At December 31st last foreign exchange reserves showed a rise of over K 10 Crores since the end of 1957. The difficulties I mentioned last year over remittances of profits, etc., and in respect of overdrafts to foreign controlled companies I regret continue.

EAST AFRICA

New branches have been opened at Nandi Hills (sub-branch to Eldoret, Kenya), Shinyanga (subbranch to Mwanza, Tanganyika) and Korogwe (sub-branch to Tanga, Tanganyika).

KENYA

The Government of Kenya and other public bodies have so far still been unable to float any public loans in London—although a loan of £2,750,000 was raised locally in December—but I understand prospects for entering the London market later in the year are more favourable.

Monetary conditions have been tight throughout the year and this state of affairs has been aggravated by the declining prices made for coffee, one of Kenya's staple exports. Tea production continues to expand and a year ago the acreage had reached 30,000 against the licensed maximum of 70,000 acres —a target it will take many years to achieve at present costs.

UGANDA

In the event both the main cash crops of the Protectorate did distinctly better than was feared, 351,000 bales of cotton being produced against an estimate of 310,000 bales while coffee did even better with a yield of 62,000 tons against an estimated 45,000 tons.

In the coming season a record cotton crop of 435,000 bales is expected while the coffee yield is estimated at 65,000 tons. These figures should ensure a sound economy.

TANGANYIKA

After a distinguished Governorship lasting ten years Sir Edward Twining, GCMG, MBE (as he then was), was succeeded by Sir Richard Turnbull, KCMG, in July last year. Sir Edward has since been awarded a life peerage and his knowledge of East Africa and its problems should be of great value to the House of Lords.

Sisal prices are a little better than they were a year ago but are not highly remunerative and some estate owners have been, and are, diversifying by developing tea growing which is a wise policy of spreading the risk.

The cotton crop in the Lake province reached a record yield of 151,000 bales last year, but this year it is expected to be smaller. Coffee areas have suffered as elsewhere from the falling market.

ADEN

Political factors affect the volume of trade passing through Aden and these have not been very stable over the past year.

A federation of six states has just been agreed to which should help to restore confidence in this area but what is also wanted is a firm understanding between HM Government and the Yemen, for it is through Aden that a larger part of the trade of that country passes. Activity in the port continues at a high level.

SOMALILAND PROTECTORATE

Rainfall was good last season with beneficial effects on the export of livestock. The harbour facilities at Berbera are being considerably improved.

ZANZIBAR

The inevitable reaction from a record crop of cloves duly happened and the estimated yield for the 1958-59 crop is 5,000 tons as against the 21,500 tons produced in 1957-58 much of which has still to be digested.

Ceylon's troubles over shipments of coconut and copra gave Zanzibar an opportunity of entering the Europe market for those commodities of which she took good advantage.

FEDERATION OF RHODESIA AND NYASALAND

1958 was not an easy year for banking in the Federation for it was one of economic adjustment which included the restriction of imports and a continuance of the restriction on lending imposed upon banks. However, proceeds of the tobacco crop realised practically the same figure as the previous year, while as I write copper is being sold at around £236 per ton as against just over £160 a year ago.

Recently a local loan of £6½ million was raised and a loan of £10 million has just been subscribed in London.

In consequence of the easier conditions the Central Bank has lifted its restrictions governing lending by commercial banks and relaxed certain restrictions on hire purchase transactions. The Central Bank discount rate is unchanged at 4½ per cent.

During the year Belmont Sub-Branch (to Bulawayo) and New Highfield Sub-Branch (to Salisbury) were opened.

LIABILITY FOR UNCALLED CAPITAL

At present this is 7s. 6d. per £1 share and the fact that there is such a liability undoubtedly narrows the market for your shares and we know has exercised the minds of some of our shareholders.

The question of arranging for the elimination of this disability and the method to be used has been engaging the attention of the Board and it is their intention to place proposals before you in the near future. However, the Board also consider it right to let you know that unless a higher level of income eventuates than they now foresee they would not consider it prudent to recommend any increase in the amount paid out in dividends.

GENERAL

Since I last addressed you a metamorphosis has happened in the financial affairs and standing of this country and of the pound sterling bringing with it two outstanding results—the gold and dollar reserves at the end of December had moved up to £1,096 million which compares with £660 million to which they fell in September, 1957, and the Bank of England rate has fallen to 4 per cent from 7 per cent current a year ago.

That these manifestations of improved economic health spell security is neither the belief of the Chancellor of the Exchequer nor of any unbiased person but at the lowest assessment they mean that we have ridden the storm more successfully than was hoped or feared and that given no major setbacks in world trade or world politics we are on the road to better things. What these may be must await, amongst other things, the Budget.

As to our own immediate future we have a sound business and a good and loyal staff to whom we are again beholden. Although as I have told you we have difficulties to contend with, some of which are new and unpalatable, I am sure that we shall as in the past surmount or adjust ourselves to them.

R. B. PULLIN & CO. LIMITED

FURTHER SUCCESS

The twenty-second annual general meeting of R. B. Pullin & Company Limited, was held on March 12th in London, Mr R. B. Pullin, OBE, chairman, presiding.

The following is an extract from his circulated statement:

In presenting the accounts for the twelve months ended September 30, 1958, I do so on an optimistic note. Generally, the affairs of your Group are prospering and there are signs that, as far as we are concerned, the anticipated recession in trade has passed. Trading profit has increased from £230,116 to £273,748.

In the Parent Company, the order book has been maintained at a very satisfactory level and the plant is fully occupied. Indeed, the productive labour employed at Phœnix Works on the Great West Road is higher than it has been at any time since the war. We are still largely dependent upon a substantial volume of Government work, but our efforts to increase the purely commercial side of our business are meeting with success. Certainly we have not hesitated to spend large sums on research and development, sums which have affected current profits and are likely to continue so to do for some time to come.

Although in all companies in your Group it is becoming increasingly difficult to secure adequate profit margins, we feel that the strength of the organisation is such that we are able to look forward to another successful year of trading.

The report and accounts were adopted.

TIMOR OIL LIMITED

INTENSIFIED FIELD AND GEOLOGICAL WORK

AGREEMENT WITH AMERICAN OIL EXPLORATION COMPANY

MR K. A. CAMERON ON THE OUTLOOK

The Second Annual General Meeting of Timor Oil Limited was held recently in Sydney, Mr K. A. Cameron (the Chairman) presiding.

The following is an extract from the Report of the Directors:

The net liquid position shows a surplus of £186,080 at June 30, 1958, and the fixed asset position shows that the Company owns adequate and substantial drilling and other technical equipment, transport and field establishments.

FIELD OPERATIONS

Drilling of Aliambata No. 1 well was suspended at a depth of 4,165 feet and the hole was plugged. The well penetrated an unexpected and considerable thickness of fractured limestone with occasional shale bands. A showing of oil was logged at 80-90 feet and again at 185 feet, and gas was reported repeatedly between 640 and 1,000 feet. Neither of these occurrences was considered of immediate commercial importance. The well gave valuable geological information. Very difficult drilling conditions were encountered in the last several hundred feet with caving ground, loss of circulation, and heavy flows of water. The increasing cost of continuing the hole to an uncertain objective was considered not warranted at that stage, and the decision was made to suspend drilling to concentrate activities on field geological work.

The field and geological work was intensified during the year and the area studied was extended to embrace a regional reconnaissance survey of the major portion of the concession area. Detail work was carried out from four centres—Aliambata, Viqueuque, Same and Suai. The regional geology continues to present a rather complex picture, but as a result of work done during the year, four areas are now emphasised for further detailed study and in three of them, favourable structures are indicated although not yet conclusively delineated. It is expected that current field mapping, together with diamond core drilling and gravimetric surveys in selected locations will enable these structures to be defined and additional well sites selected in the second half of the current financial year. It is believed that, although the demands of additional fieldwork have inevitably reduced the funds available for well drilling, the result in the long run will be satisfactory in that clear warranty will be obtained for the further work and drilling necessary to test the structures.

PROSPECTING CONCESSION

By notice in the Government Gazette of November 20, 1957, issued in Lisbon, the term of the exclusive prospecting concession was extended for two years to October 9, 1959. Steps already have been taken to obtain a further extension of the concession, and there is no reason to believe it will not be granted. However, in the remote event that it is not, the concession can be safeguarded by demarcation of areas and obtaining leases over them. The tenure position is thus protected.

FUTURE PROSPECTS

Since the close of the financial year, the Directors have announced the negotiation with American interests for future drilling of structures now being defined.

A recent report from Dr Schneeberger, the Company's Consulting Geologist, who visited the field in September, is to the following effect:

"Notwithstanding the complicated structure as it obtains in the mountainous central part of the Island, the foothills and coastal plains of the south coast offer structural conditions which are favourable for the entrapment of liquid and gaseous hydrocarbons. The presence of petroleum is evident through numerous seepages, of which the ones at Suai are the most interesting.

"The Upper Tertiary (Miocene) age of the oil-bearing beds of Matai (Suai area) has been reconfirmed by the present survey. This is a feature which undoubtedly adds to the attractiveness of the general prospect, because it links Timor with the oil producing islands of Western Indonesia, i.e., Sumatra, Java and Borneo.

"Summarising our opinion on the petroleum prospects of Portuguese Timor, we can say that the presence of seepages of high quality oil and the indication of the presence of suitable anticlinal folds to trap the oil, are prerequisites for a successful drilling campaign. Provided the detail mapping will prove the anticlinal structures to be effective traps for oil, there remains only the systematic testing with the drill in order to prove or disprove the presence of commercial quantities of oil."

CHAIRMAN'S ADDRESS

In his address to Stockholders the Chairman said: The accounts present a clear picture of expenditure during the financial year and show the financial position of the Company as at June 30, 1958. At the present time the Company has in hand approximately £100,000, and operating expenditure currently is running at the rate of about £12,000 per month.

As set out in the Directors' Report, all fieldwork now is concentrated on the detailed exploration of three areas in which three and possibly four interesting structures are indicated. The work comprises surface mapping, shallow core drilling, and a gravimetric survey.

The original plan was to carry out a comprehensive programme of exploration and testing so that an overall geological picture could be developed as quickly as possible. The objective was, with relatively small capital, to test the prospect in Timor to the stage where the merits of the venture were so enhanced as to justify the expenditure of further capital.

We have developed the prospect now to the stage where the unanimous view of the Board, supported by the advice of our specialists, is that the prospect fully warrants additional expenditure.

The confidence which we hold in the venture has been confirmed—and in a most realistic manner—by the completion of an agreement with an overseas oil exploration company.

I am sure you have all been delighted and encouraged by the recent favourable results achieved in Papua, and will join me in congratulating all concerned on their perseverance in the face of indifferent early results. Our venture in Timor is young and, so far, has cost relatively little. The prospect is a good one, and now, our interests have widened, and our chances of success have correspondingly improved. We are entitled to, and should maintain, our confidence.

AGREEMENT WITH TRADEWINDS EXPLORATION INC.

I am pleased to be able to announce the details of this agreement which has just been completed. At the outset, I want to say that your Directors feel this is good news, inasmuch as the association with experienced American oil operators cannot but be to the advantage of our Company.

The agreement between the two Companies provides (amongst other things) that:

1. There will be an immediate interchange of 250,000 fully paid stock units between the two Companies. On each block of stock there will be a qualified prohibition on trading. (Current market price of Tradewinds' stock is approximately 62 cents per unit.)
2. Until March 31, 1959, Tradewinds Exploration Inc. has the right to elect to drill in Timor, 15,000 feet of well hole, in two or more locations at no cost to Timor Oil Limited. This will earn for Tradewinds a 50 per cent interest in the benefits of the concession area.
3. The drilling operation is to commence within 90 days of election, and the full 15,000 feet must be completed by Tradewinds before they earn their interest. Thereafter, they must contribute on a pound for pound basis towards all future drilling and other field operation costs.
4. In consideration for the right to drill, Tradewinds will, upon election to drill, allot to Timor Oil Limited, free of cost, an additional 150,000 fully paid stock units in Tradewinds.
5. Upon Tradewinds electing to drill, both companies have the right to require the interchange of a further 250,000 fully paid-stock units between the two Companies and the same qualified prohibition on trading will apply.
6. Tradewinds may use Timor Oil's Brewster rig if they so desire, free of cost to Tradewinds, and will purchase any of Timor Oil's stocks of consumable drilling materials, which they can beneficially use.
7. Oil produced will be marketed in Australia as far as economic conditions permit, and all operations then will be conducted by both Companies under a Joint Operating Agreement.

In every respect Timor Oil will retain its own fixed assets and identity.

Dr George Reed Downs, an eminent overseas Geologist, is now in Timor directing geological work on the target areas at Suai, Ossulari, Viqueque and Aliambata. The geologists are being assisted in their mapping by the information flowing from two diamond core drills which already have completed some 6,000 feet of drilling in shallow holes, and by the results of gravimetric surveys. It is interesting to note that in several of the holes in the Suai area, oil and gas showings were evident.

The immediate objective is to define the apparent structures and to indicate at least three drilling sites.

Mr James A. McRae and Mr Wayne Granger, Vice-President and Chief Geologist of Tradewinds, together with your Company's Consulting Geologist, Dr W. F. Schneeberger, recently visited the field in Timor and they were impressed by the following aspects:

1. The fact that the immediate target areas are all near the coast and so easily accessible.
2. The exceptionally high grade and volatile qualities of the oil from seeps.
3. The number of active seeps so widely spaced throughout the concession.
4. The scope and possibilities of country still to be more closely investigated within the concession.

With an exclusive licence covering 6,851 square miles in Timor where prospects are encouraging; with the expectation that 15,000 feet of well hole will be drilled free of cost to your Company; and with an immediate and substantial interest in Tradewinds' concessions overseas, your Directors feel that Stockholders are quite justified in viewing the future with optimism.

UNIVERSAL ASBESTOS MANUFACTURING

LARGER TURNOVER

The twenty-second annual general meeting of this company will be held on April 2nd at 8 Upper Grosvenor Street, London, W.

The following is an extract from the statement by the chairman, Mr F. W. R. Douglas, circulated with the report and accounts for the period September 30, 1957, to September 28, 1958:

The financial results for the year, which have already been published, show Trading Profits at £335,237 compared with £201,358 for the previous year, and thus very nearly equal our record figures achieved in 1956. I report this with all the greater pleasure because these satisfactory results were achieved in a year from which not a great deal was to be expected. You may recall that, in my statement to you at this time last year, I warned that the credit squeeze and the official discouragement of spending was bound to affect the building industry. At the same time I was able to say that, for the first few months of the then current year, improved trading conditions had been experienced, and that it was therefore to be hoped that we might be able to give a good account of ourselves. The final figures have, of course, more than come up to our expectations, and I hope that you will regard them, in the circumstances, as being highly creditable.

The turnover of the Group for the year showed considerable improvement in all sections. Deliveries to the home trade exceeded those of the previous year, but regrettably our export tonnage was considerably reduced.

I have, on previous occasions, mentioned the success we have had in the discovery of new outlets for asbestos cement, particularly in the production of those forms which are now required under the Thermal Insulation (Industrial Buildings) Act of 1957.

PROFIT AND DIVIDEND

The Trading Profit of the Group, after making full provision for depreciation and all other trading expenses, amounts to £335,237, compared with £201,358 for the previous year, and the Group Net Profit, after making full provision for taxation, is £151,933 as compared with £84,309. Your Board has decided to transfer the sum of £70,000 to General Reserve and is recommending a final dividend on the Ordinary shares of 7½d. per share which, added to the interim dividend already paid of 4½d. per share, makes a total distribution to Ordinary shareholders in respect of the year 1957-58 at the rate of 1s. per share, compared with 10½d. per share last year.

It is pleasing to be able to report that current business conditions still remain favourable. From the start of our financial year, orders have been received in such volume that, despite our increased capacity, production in many cases remains far behind demand. The end of the credit squeeze has encouraged greater stocking of our materials, while the continued demand for our sandwich constructions increases the total overall demand for asbestos cement.

With such increased business, the profits, as compared with last year, have risen in a most encouraging way and I think it would not be at all imprudent to look forward to some further improvement in our final results for the year.

ABRIDGED PROSPECTUS

Consent of Her Majesty's Treasury has been obtained to this issue in compliance with the Order made under Section 1 of the Borrowing (Control and Guarantees) Act, 1946.

GOVERNMENT OF THE COMMONWEALTH OF AUSTRALIA

ISSUE OF £10,000,000 5½ PER CENT REGISTERED STOCK, 1973,

at the rate of £99 per cent.

Interest payable 1st June and 1st December,

AND

ISSUE OF £10,000,000 5½ PER CENT REGISTERED STOCK, 1976-1979,

at the rate of £99 per cent.

Interest payable 1st June and 1st December.

The Government of the Commonwealth of Australia will comply with the requirements of the Colonial Stock Act, 1900, in order that Trustees may *invest in the Stocks*, subject to the provisions set forth in the Trustee Act, 1925.

OFFER OF CONVERSION TO HOLDERS OF

£20,675,100 COMMONWEALTH OF AUSTRALIA 3½% REGISTERED STOCK, 1954-1959,

maturing 1st June, 1959.

This offer of conversion is limited to a maximum of £10,000,000 in each of the above mentioned Stocks. The list for each Stock will be closed when conversion applications for that Stock reach a total of £10,000,000. In any case, the lists for both Stocks will be closed not later than 3 p.m. on 16th March, 1959. The balance of £675,100 will be paid off out of Sinking Fund moneys which have been accumulated for this purpose.

Commonwealth Bank of Australia is authorised by the Government of the Commonwealth of Australia to offer to holders of Commonwealth of Australia 3½ per cent. Registered Stock, 1954-1959, conversion of their holdings, in whole or in part, into an equal nominal amount of either Government of the Commonwealth of Australia 5½ per cent. Registered Stock, 1973, or Government of the Commonwealth of Australia 5½ per cent. Registered Stock, 1976-1979, *or partly into one and partly into the other on the terms set forth in the full prospectus.*

The Principal of both new Loans will be repaid in London at par. The 5½ per cent. Registered Stock, 1973, will be repaid on 1st June, 1973. The 5½ per cent. Registered Stock, 1976-1979, will be repaid on 1st June, 1979, but the Government of the Commonwealth of Australia reserves the right to redeem this Stock at par in whole or in part at any time on or after 1st June, 1976, on giving three months' notice by public advertisement.

Holders whose applications are accepted for conversion into 5½ per cent. Registered Stock, 1973, will receive on 1st June, 1959, a cash payment of £1 per cent., representing the difference between the issue price of the new Stock and the redemption at par of the old Loan. They will also receive the usual six months' interest payable at that date.

Holders whose applications are accepted for conversion into 5½ per cent. Registered Stock, 1976-1979, will receive on 1st June, 1959, a cash payment of £1 per cent., representing the difference between the issue price of the new Stock and the redemption at par of the old Loan. They will also receive the usual six months' interest payable at that date.

Six months' interest on both the new Stocks will be paid on 1st December, 1959.

Applications for conversion must be lodged on the appropriate forms accompanied by the relative Stock Certificates, at the COMMONWEALTH BANK OF AUSTRALIA, Stock Department, 8/10, Old Jewry, London, E.C.2. These forms have been posted to the Stockholders or, in the case of joint accounts, to the Stockholder first named in such accounts.

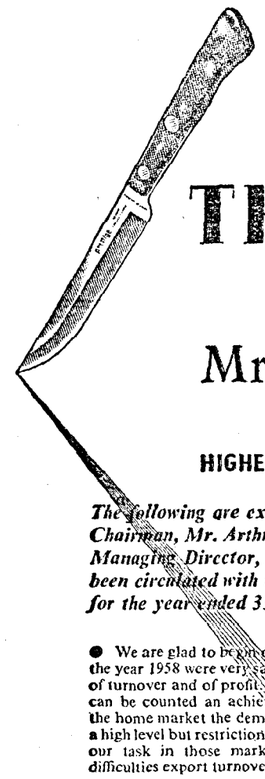
Any Commonwealth of Australia 3½ per cent. Registered Stock, 1954-1959, not converted will be paid off at par on 1st June, 1959, together with six months' interest then due.

The Stocks now offered will be registered and transferable in any amount by deed, at the COMMONWEALTH BANK OF AUSTRALIA, Stock Department, 8/10, Old Jewry, London, E.C.2. Stamp duty on all transfers will be paid by the Government of the Commonwealth of Australia.

Commonwealth of Australia Stocks issued and payable in London and the interest thereon, the property of persons not residing in or ordinarily resident in Australia, are not, and will not be, subject to any taxes, duties or levies in Australia.

All Commonwealth Loans, all Loans issued by the several States and now taken over by the Commonwealth and all Loans guaranteed by the Commonwealth, carry a Sinking Fund in accordance with the provisions of the National Debt Sinking Fund Act, 1923-1950, and the Financial Agreement Acts.

The revenues of the Commonwealth of Australia alone are liable in respect of this Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of Her Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto.—40 and 41 Vict., cap. 59, sec. 19.



A commission of 5s. per £100 Stock will be paid to Bankers and Stockbrokers on allotments made as a result of conversion acceptances bearing their stamp.

Full Prospectuses, with Statistical Statement relating to the Commonwealth of Australia, may be obtained from the Commonwealth Bank of Australia, Stock Department, 8/10, Old Jewry, London, E.C.2; from Messrs. R. Nivison & Co., 25, Austin Friars, London, E.C.2; and at the Offices of the Government of the Commonwealth of Australia, Australia House, Strand, London, W.C.2.

COMMONWEALTH BANK OF AUSTRALIA,
8/10, OLD JEWRY, LONDON, E.C.2.

6th March, 1959.

The Lists for Conversions will be closed not later than 3 p.m. on Monday, 16th March, 1959.

THE PRESTIGE GROUP LIMITED

Mr. Arthur Keating reports on another successful year

HIGHER TURNOVER AND PROFITS: INCREASED DIVIDEND AND 150% BONUS ISSUE

The following are extracts from the Statement by the Chairman, Mr. Arthur Keating, and the Managing Director, Mr. T. O. Rauworth, which has been circulated with the Report and Accounts for the year ended 31st December, 1958.

● We are glad to begin our report by telling you that the results for the year 1958 were very satisfactory for your Company in terms both of turnover and of profit. The substantial advance over recent years can be counted an achievement, in unsettled world conditions. In the home market the demand for our type of consumer goods was at a high level but restrictions in export markets have continued to make our task in those markets a hard one, although despite these difficulties export turnover increased in 1958.

● *The net profit before taxation amounted to £805,233 compared with £601,668 in 1957. Provision of £445,214 has been made for* taxation on these earnings, leaving the profit for the year after taxation at £360,019. To this figure should be added £75,000 previously set aside for taxation but not now required, leaving the available net profit of the Group for the year at £435,019 compared with £284,668 in 1957.

● The balance on Profit and Loss Account brought forward from 1957 amounted to £1,257,362. A sum of £10,601 has been set aside for the redemption of Preference Shares in 1959. Dividends paid and recommended for payment will require £162,664 leaving a balance of £1,519,116 to be carried forward. The amount of the profit for the year retained in the business will be £261,754.

● Your Directors recommend the payment of a final dividend of 40% on the Ordinary Shares, making a total dividend of 50% for the year, compared with a total of 45% in the previous year.

● The Consolidated Balance Sheet at 31st December, 1958 continued to show a strong financial position. Fixed assets at cost, less depreciation, amounted to £1,605,932, a decrease of £98,800 on the previous year. Current assets totalled £3,039,662 of which £1,295,739 was represented by cash and short term investments. Working capital amounted to £2,031,480 at 31st December, 1958 compared with £1,341,945 at the previous year end.

● The principal feature of 1958 operations was the drive to obtain high but economic production to meet the increased sales achieved in the home market. That this was for the most part realised has been a source of satisfaction to your Company and to its customers. Turnover in the home market was 21% higher than in 1957. The pressure is being kept up in our world export markets and if restrictions should ease in certain major territories there is little doubt that export sales will once more regain the high proportion of total sales which they enjoyed before 1956. Export turnover was 10% higher than in 1957.

● The year 1959 has opened satisfactorily and it is hoped that, subject to there being no adverse trends in home or export markets, the steady advance of your Company will continue. While we do not anticipate an increase in turnover and profit commensurate with that achieved in the past year, we can give the assurance that the drive for increased sales and for more economic production will be carried forward with the same vigour and enthusiasm which has always characterised our business. Your Directors will, at the same time, be watching for an opportunity of utilising your Company's liquid funds to the best advantage for expansion purposes.

The Annual General Meeting will be held on 2nd April, 1959. An Extraordinary General Meeting will be held immediately afterwards to approve the following proposals:

● To increase the authorised ordinary share capital of the Company from £750,000 to £2,000,000.

● To capitalise £780,000 of retained profits and reserves, and to issue fully paid Ordinary Shares to existing holders in the proportion of three new shares for every two shares held on 23rd March, 1959.

THREE YEAR RECORD

	1956	1957	1958
	£	£	£
Sales	3,391,119	4,207,947	4,588,379
Group Profit Before Taxation	456,650	601,668	805,233
Available Group Net Profit after Taxation	221,955	284,668	435,019
Net Dividends	148,200	148,058	162,664
Other Appropriations	9,510	24,392	10,601
Group Profit Retained	64,245	112,218	261,754
	221,955	284,668	435,019
Total Net Assets	2,594,557	2,791,341	3,146,597
Issued Preference Shares of £1 each			£452,590
Issued Ordinary Shares of 5s. each			£520,000
	1956	1957	1958
Ordinary Dividends	45%	45%	50%

SAXONE, LILLEY & SKINNER (HOLDINGS)

A GRATIFYING ACHIEVEMENT

BENEFITS FROM INTEGRATION POLICY

MR THOS. LILLEY ON A YEAR OF CONSOLIDATION

The annual general meeting of Saxone, Lilley & Skinner (Holdings) Limited will be held on April 2nd at King's Cross, London.

The following is the statement by the Chairman, Mr Thos. Lilley, which has been circulated with the report and accounts:

Before reviewing the Group's activities for the past year I must first make reference to changes in the Board. Mr Edward Hill, Chairman of Benefit Footwear Limited for many years, died suddenly last August. The loss of his friendship and wide commercial experience will be deeply felt by the Directors of that Company and, indeed, by all of us within the Group. Mr J. S. Abbott has been invited to succeed Mr Hill as Chairman of Benefit Footwear and Mr R. T. Eggleton, Managing Director of the Company, has accepted an invitation to join the Parent Company's Board. I have also much pleasure in asking stockholders to confirm the appointments of Mr W. S. Abbott and Mr M. O. Skinner as Directors of the Parent Company. The addition of one further Director from each of the Group's main operating subsidiaries will, we are sure, be of benefit to the present members of the Board and widen its representative nature.

DIVIDEND MAINTAINED ON INCREASED PROFITS

The accounts now before you show a Group profit, before tax, of £1,249,575, an increase of £121,343 over 1957. After tax, the improvement in net profits is £149,663. Stockholders will note that the charge for Profits Tax is substantially less this year. This is due to the effect of the new rate of Profits Tax which was introduced in the last budget and was effective for nine months of the year covered by the accounts.

We have provided £176,395 in the profit and loss account to meet the loss on realisation of investments in South Africa and Australia, to which I shall refer later. We propose to transfer £50,000 to General Reserve bringing that reserve up to £1 million, and to make a further addition of £30,000 to the provision for renewals of shop fronts, fixtures and fittings. I have mentioned before the importance to us of maintaining these assets at a high standard.

Your Directors recommend a final dividend on the ordinary stock of 15 per cent making 22½ per cent for the year which is the same as for 1957. These appropriations leave a balance of £181,678 to carry forward as compared with £188,621 last year.

Taking the Group results as a whole it is gratifying to be able to report the increase in net profits, as 1958 was not an easy year for our industry. The credit restrictions which were in force during the first half of the year exercised a general restraint on spending by the public and the relaxations which followed gave more immediate benefit to industries whose products are sold under hire purchase contract than to cash traders like ourselves. Nevertheless I am pleased to say that the integration within the Group, particularly on the manufacturing side, which has been going on steadily since the amalgamation of the Saxone and Lilley & Skinner companies in 1957, has enabled us to make valuable economies in administration and production.

SALE OF INVESTMENTS ABROAD

Last year I said that we had met with disappointing results in our South African and Australian companies. This was especially true of South Africa where our manufacturing subsidiary in Port Elizabeth has been particularly affected by conditions of over production now prevailing in that country. It is not easy for a manufacturing unit without retail outlets to survive the recurrent recessions and changes in demand which have been typical of the South African market for women's fashion shoes. When, therefore, early in 1958, the Industrial Development Corporation of South Africa invited our subsidiary, Port Elizabeth Shoes Limited, and two other well known manufacturing concerns to combine their resources into one larger and stronger organisation, better able to meet South African trading conditions, we thought it wise to accept the offer and accordingly we sold our investment in South Africa to the Corporation.

In Australia we have had to solve a rather different problem. There is undoubtedly a demand for the high quality men's footwear of Saxone grade which are made in the Melbourne factory but the market is a specialised one and must be closely and constantly studied if it is to be exploited to the full. That is not a task which can be undertaken at long range and we have for some time been aware of the need for a much stronger local control than we have had hitherto and which can make the best use of the resources of the Australian factory. It has been very difficult to find the calibre of the executive we require in Australia and we were able to adopt the alternative plan of merging our interests with those of another company. We have accordingly sold the majority of our shares in Saxone Shoe Company Australia Proprietary Limited to General Shoe Corporation Proprietary Limited of Melbourne, a progressive company whose interests in the manufacture and marketing of women's fitting shoes under the Foot Rest brand are complementary to our own in men's shoes. We have every confidence in the ability of the Directors of General Shoe Corporation (which has no connection with the American company of that name) to provide the Australian company with the administration and sales management which it needs and, through the substantial investment which we have retained in the company, we look forward to working in partnership with our new friends in Australia to the mutual advantage of both companies.

The sale of our manufacturing interests in South Africa and the disposal of the major part of our shareholding in the Australian company will release funds which we feel we can use to better advantage. Another important change in the company's policy announced last autumn which will have the same effect was the decision to close Lilley & Skinner (Wholesale) Ltd. This company was the largest and one of the oldest established businesses in the industry with a long history of goodwill and service behind it. I would like to take this opportunity of thanking our many friends for their support of the wholesale company during its life and for their understanding attitude when the decision to close it down was made known.

FORMATION OF NEW SALES COMPANY

We have formed a new company named Lilley & Skinner (Sales) Ltd to market at home and abroad a proportion of the products of the Group's Kilmarnock and Leicester factories. This company, which is under the management of Mr John Skinner, has made a most promising start in the present year. In addition to the well-known Lily shoes for women and Jumping Jacks for children, the Company will market an entirely new range of women's fashion shoes branded Festif Vanities and made in our Leicester factories. These shoes are internationally styled and reflect the newest trends in modern design at a moderate price. They will definitely appeal to the fashion-conscious young woman. Festif Vanities have met with a ready acceptance by the leading independent retailers and department stores, as well as in the Group's own branches.

So far as the future is concerned it is too soon yet to say whether the steps which have been taken by the government to encourage industrial expansion and restore full employment will have much effect on trade in the present year but, if they lead to an increase in spending on consumer goods, your Company is well prepared to participate in the improved trading conditions.

1958 has been mainly a year of consolidation. I have referred to certain of the main features but two other important developments deserve mention. I referred last year to our plans for building a new warehouse at Leeds. Work on that warehouse is well advanced and we hope to be established in our new premises there by August of this year. We believe that great advantages will flow from the modern methods of mechanical handling and storage of goods which are being adopted, not only in a faster distribution of supplies to branches but also in savings in administrative and transport costs.

The second development of note has taken place in London. In September we completed the work of modernising our Lilley & Skinner store in Oxford Street. The shop front has been completely re-designed in line with our latest architectural developments. This replanning has incorporated large full vision windows for the maximum display of the store's outstanding merchandise. The interior of the store itself has been remodelled to provide spacious lobbies and expansive departments for men, women and children, which ensure greater selling efficiency and the highest degree of comfort for our customers. It is gratifying to report that these extensive alterations have brought many new customers to the store and resulted in an immediate increase in sales. I submit we are fully justified in our claim that this well-known branch of the Company is indeed the finest as well as the largest shoe store in the world.

ARRANGEMENTS FOR ADDITIONAL FINANCE

For the past few years your Company has had to depend for a large part of the year on temporary borrowings in order to carry the heavy stocks required in readiness for the seasonal trade which provides a large part of its revenue. Your Directors have given much thought to the adjustment of this position by funding the overdrafts and temporary loans and at the same time meeting the cost of the new warehouse at Leeds. I am glad to say that arrangements have now been successfully completed to raise additional loan capital of £2 million which covers our estimated requirements in the foreseeable future. The money will be advanced by an insurance company and will be secured by a mortgage on certain of the Group's properties. The loan, which will carry interest at 6 per cent, will be repayable in the option of the Company at any time between 1979 and 1999.

During the present year the process of consolidation will continue. A scheme for acquiring the Preference Shares of Benefit Footwear Ltd held independently of the Group, in exchange for the Preference Shares in the Parent Company has been approved by the shareholders of Benefit Footwear. That company will therefore become a direct and wholly owned subsidiary of Saxone, Lilley & Skinner and certain advantages in administration and in the simplification of the capital structure of the Group will follow. Further integration of the buying, manufacturing and repairing divisions of the Group is planned and the programme of modernisation and expansion of the retail shops, which I mentioned last year, will continue.

I would like to express our thanks to the executive, staff and employees of all the Companies in the Group who by their loyal support and co-operation have contributed to the success we have achieved in the past year.

BORAX (HOLDINGS) LIMITED

LORD CLITHEROE'S CAREFUL OPTIMISM

The sixty-first Annual General Meeting of Borax (Holdings) Limited was held on March 11th in London.

THE ACCOUNTS

The accounts presented to the meeting showed a trading surplus, before depreciation, of £3,161,095 in the year to September 30, 1958, compared with £3,971,140 in the previous year. Profits after taxation attributable to the stockholders of Borax (Holdings) Limited amounted to £573,976 against £1,203,237 in 1957. Dividends on the Deferred Ordinary stock totalled 5½d., less tax, per 5s. unit of stock, equal to 8¾ per cent less tax; these were the same as in the previous year and absorbed £452,813.

In the course of his circulated review of the year ended September 30, 1958, the Chairman, Lord Clitheroe, said:

It has not been an easy or satisfactory year due to difficulties encountered in the United States of America. Results achieved so far during the current year, however, confirm, as expected, that some of the problems have been overcome.

Sales outside the United States of America were within 1 per cent of the previous record by tonnage, and exceeded the previous record in value. This was very satisfactory in a year when world trade generally was suffering from a recession; it illustrates that your business is securely founded on a widespread world demand for our products for a great variety of industrial and agricultural purposes.

The low profits returned by United States Borax & Chemical Corporation resulted in a reduction of cash available to that member of our Group. It therefore became desirable to advance money to that Corporation, and this was done by our American holding company, Consolidated Borax, Inc. At September 30th the amount outstanding was $3,730,000; none of this advance will be called for repayment during the present financial year. In order further to strengthen its cash resources, United States Borax & Chemical Corporation has discontinued the declaration of regular quarterly dividends for the time being. Mr F. A. Lesser (Deputy Chairman and Managing Director of Borax (Holdings) Limited), Chairman of the American company, and Mr J. M. Gerstley, its President, had said:

"Operation of the new open pit mine at Boron has been up to expectations. The problems which arose during the year were related to the new plants. The completion of successive units originally scheduled for the middle of 1957 was delayed by various difficulties encountered by the contractors, and the last unit did not become operative until January, 1958.

"Various problems not infrequently associated with the start-up of plants of this magnitude had to be overcome before the new plants attained their intended productive capacity. Many additional problems have been solved, but much remains to be done before anticipated cost levels are reached."

OUTLOOK FOR THE FUTURE

It continues to be the opinion of your Board and Managements that your Company's business will grow over the years and that the outlook is not unfavourable. The old, tried and well-established uses of boron products are maintaining their share of our sales, and new uses and products are being developed.

A note of caution must be sounded about potash. There is over-production within the industry and the resultant competition has forced prices down. A new source of competition is arising in Canada, where very large and very rich beds of potash have been discovered, albeit over 3,000 feet below the surface, a depth which, of course, presents, certain serious mining problems.

The United States Borax & Chemical Corporation has conducted certain exploration in the Canadian potash fields and has certain permit holdings on Crown Lands in the Province of Saskatchewan. An extensive study of economics of Canadian production in comparison with that in New Mexico is at present taking place.

I would close on a note of careful optimism. I do not forecast a spectacular increase in profits, but I look to a steady improvement over the years, though from time to time there may well be setbacks such as we had last year.

At the meeting Lord Clitheroe referred to the Consolidated Profit Statement for the three months ended December 31, 1958, which was circulated to stockholders on February 23, 1959. He said that the group profits after tax for the December, 1958, quarter amounted to £475,390 compared with £25,532 in the December 1957, quarter.

In the December quarter of 1957 the American operating company had shown a loss as a result of difficulties experienced when the new plant at Boron was put into operation, and the considerable improvement in the profits for the December, 1958, quarter showed that many of the difficulties at Boron were now being overcome.

The report and accounts were adopted.

CO-OPERATIVE PERMANENT BUILDING SOCIETY

The Seventy-fifth Annual General Meeting of the Co-operative Permanent Building Society was held on March 7th in London.

Mr C. J. Dunham FRICS (Deputy Chairman) deputised for Mr H. L. Store (President) who was absent through indisposition, and read the President's address.

The year 1958 began for building societies with a diminished flow of money, and a demand for mortgages from owner-occupiers so strong that it defied high interest rates, the credit squeeze and fears of a recession. The year ended with the flow of money considerably improved and with the demand for mortgages undiminished. The inflow of money from investors was at an all-time "high," although withdrawals were also higher than in previous years. The net intake of money at £12,500,000 was extremely satisfactory. I am pleased to report that mortgage lending also constituted an all-time record.

During the year the society effected a merger with the Scottish Amicable Building Society.

Revenue during the year amounted to over £10 million, and after paying interest to shareholders and depositors, income tax, and profits tax, the balance available for appropriation was £467,000. To this has been added the reserves of the Scottish Amicable, which, together with the balance brought forward and other items, have made possible a transfer to general reserve of £1 million. Our total reserves now amount to £5,600,000, and in addition there is a balance carried forward of £112,000. Our cash and investment holdings at the end of the year amounted to £32,300,000, of which £6,900,000 was immediately available in cash and Treasury Bills.

At the end of 1957 there was a difference between the book value and the market value of our quoted investments of some £2 million. Notwithstanding the addition of the gilt-edged holdings of the Scottish Amicable, that difference had by last December 31st been reduced to £1,650,000. All securities held are dated stocks, and if held to maturity will show a surplus of over £3 million.

Although the Bank rate has come down from 7 per cent to 4 per cent, there has been no reduction in building society interest rates. We are asked why we have not reduced rates. There are very good reasons. In the first place building societies' rates have never moved automatically with variations up or down in the Bank rate. In the second place, building societies should only reduce rates when they feel that at the reduced rates payable to investors they will be able to obtain sufficient money. Thirdly, it is as important to borrowers that building societies should meet the demand for mortgages as it is that they should keep their rates low.

The various forms of competition for savings indicate why building societies have to recognise that conditions are very different from a few years ago. Investment in a building society remains attractive and popular. The security offered and the freedom from fluctuation of capital, combined with the ability to withdraw money readily, continue to attract savings. These advantages, however, must be combined with rates of interest which the investor regards as fair. Although we consider the time has not yet arrived for a general readjustment of rates, I can assure borrowers that every consideration will be given to their case in the coming months.

We look forward to the future with confidence.

STATE BANK OF INDIA

RECORD TOTAL OF DEPOSITS—SHRI. P. C. BHATTACHARYYA'S SPEECH

The fourth annual general meeting of the State Bank of India was held on February 27th at Bombay, Shri. P. C. Bhattacharyya, the chairman, presiding.

The Bank recorded during the year 1958 a sizeable expansion in its business. Considerable progress was achieved under the Developmental activities of the Bank.

The following are the salient features of the Bank's Annual Report for the year 1958 and the Chairman's Speech delivered at the meeting:

DEPOSITS AND ADVANCES

The Bank's total deposits rose from Rs. 344.3 crores on December 27, 1957, to a record level of Rs.454.0 crores on December 26, 1958, when they formed 28.8 per cent of the total deposits of all scheduled banks in India. By far the most important factor that accounted for this large growth in the Bank's deposits was the receipt of counterpart funds under US PL480. The increase of Rs.109.7 crores in its deposits helped the Bank to augment its investment portfolio which rose by Rs.98.4 crores to Rs.268.8 crores over the year.

The Bank's advances in India, which stood at Rs.164.6 crores at the end of 1957 reached a busy-season peak of Rs.204.1 crores in March, 1958, and subsequently declined, due to slack season influences, to Rs.158.5 crores at the end of October. They stood at Rs.166.1 crores at the close of the year. Over the year ended October, 1958, advances to industry increased from 64.3 per cent to 71.7 per cent, while advances to commerce declined from 18.5 per cent to 12.2 per cent. The Bank's credit as a proportion of all scheduled bank credit remained practically unchanged at 19.2 per cent over the year. The Bank did not need any assistance from the Reserve Bank of India during the major part of the year.

FOREIGN EXCHANGE BUSINESS

The Bank succeeded in maintaining during the year the increase in its foreign currency turnover recorded in the previous year, despite the fall in exports and the restrictions on imports, which reduced the total foreign currency transactions of banks in India. A substantial increase was recorded in the business transacted by the Bank under the deferred payments scheme. The Rupee Travellers Cheques scheme inaugurated by the Bank in January, 1958, has been well received in India as well as abroad. Sales of Travellers Cheques up to the end of November, 1958, amounted to about Rs.60 lakhs, of which over Rs.10 lakhs were sold by the Bank's foreign offices and other selling agencies abroad.

RURAL CREDIT

The Bank recorded further progress in implementing its policy of meeting the financial needs of co-operative institutions. The credit limits granted by the Bank to marketing co-operatives stood at Rs.52.3 lakhs on December 20, 1958. As on September 30, 1958, seven co-operative sugar factories availed themselves of the credit facilities from the Bank, aggregating Rs.2.5 crores. In addition, the Bank established letters of credit for Rs.3.2 crores on behalf of fifteen co-operative sugar factories covering import of machinery and gave the requisite deferred payments guarantees for Rs.4.0 crores on behalf of thirteen factories in respect of such imports.

The Bank has also taken the lead in evolving an appropriate procedure for granting advances against warehouse receipts and on December 20, 1958, it had in all 140 such accounts totalling Rs.14.9 lakhs. The remittance facilities granted by the Bank to co-operative banks and societies during the year ended June 30, 1958, amounted to over Rs.84.3 crores. The credit limits granted to co-operative banks increased further from Rs.10.0 crores to Rs.14.0 crores on November 30, 1958. Total holdings of debentures of co-operative central land mortgage banks as well as advances to co-operative banks against such debentures registered further expansion to Rs.62.3 lakhs and Rs.32 lakhs respectively as on November 30, 1958.

FINANCE FOR SMALL-SCALE INDUSTRIES

An important step taken in the year was to extend to all the branches the Bank's Pilot Scheme, initiated in 1956, for the provision of co-ordinated finance to small-scale industries. On recommendations of the Evaluation Report, some modifications have been made in the lending procedure as well as terms and conditions. The lending rate has been fixed as an all-inclusive rate not exceeding 6 per cent; medium term advances will be granted to selected constituents for purposes of modernisation, expansion, etc.; and the list of commodities against which advances may be granted by the Bank has been enlarged.

The total credit limits sanctioned by the Bank to small-scale industries increased during the year from about Rs.80.3 lakhs to about Rs.2.4 crores, the number of accounts increasing from 189 to 696. Agreements have been signed with two State Financial Corporations, under which the Bank acts as their agents in their dealings with small-scale industrialists.

BRANCH EXPANSION

The pace of the Bank's Branch Expansion Programme increased further during 1958 when 105 new branches were opened, as compared to 91 opened during 1957. The total number of new branches opened since the Bank's establishment in July, 1955, till the end of December, 1958, was 262, compared to the target of 400 branches in five years. Out of these 262 new branches, 167 branches were opened at towns with a population below 25,000 and 78 branches at places with a population between 25,000 and 50,000.

The Bank has also been operating offices at important airports, which remain open for business on all days including Sundays and public holidays. Some of them work round the clock to serve air passengers.

ADMINISTRATIVE SET-UP AND SPECIALISED TRAINING

With a view to controlling and guiding the five branches in Pakistan effectively, an office of Manager for Pakistan Branches was established at Karachi on May 1, 1958, which works directly under the Central Office. Under a special training programme for the Bank's supervising staff, nine officials were deputed during the year for training in UK, USA, Germany and some other countries.

PROFITS AND THEIR APPROPRIATION

The Bank earned a net profit of Rs.1.90 crores for the year 1958, as against Rs.1.87 crores for the previous year. Earnings from interest and discount have increased from Rs.8.25 crores in 1957 to Rs.12.21 crores in 1958, while those from commission, exchange and brokerage were more or less the same at about Rs.3.54 crores. Interest paid on deposits, borrowings, etc., increased from Rs.3.40 crores to Rs.6.25 crores.

The dividend to shareholders is maintained at the rate of Rs.16/- per share. Rs. 37.5 lakhs have been transferred to the reserve fund as compared to Rs. 25 lakhs last year and Rs.36 lakhs are absorbed as bonus to staff as compared to Rs.32 lakhs in 1957. The Staff Welfare Fund has been credited with Rs.5 lakhs and another amount of Rs.15 lakhs has been transferred to the Staff Co-operative Housing Fund, as compared to Rs.10 lakhs each in 1957.

STATE BANK OF INDIA

(Condensed) BALANCE SHEET AS ON 31st DECEMBER, 1958

CAPITAL AND LIABILITIES	Rs.	PROPERTY AND ASSETS	Rs.
1. Capital—Issued, Subscribed and Paid Up	5,62,50,000	1. Cash in Hand and due from other banks	55,47,10,490

HOOVER LIMITED

AN OUTSTANDING RESULT

The Annual General Meeting of Hoover Limited will be held on April 1st at the company's offices at Perivale, Mr H. W. Hoover is to preside.

The following are extracts from the "Annual Review":

The consolidated profit for the Group at £5,847,490 shows an increase of 56 per cent on 1957, with turnover of the British companies up by no less than 28 per cent. This outstanding result achieved last year marked a milestone in the history of the Company, with turnover far exceeding any previous year and profits surpassing the previous peak of 1954 by no less than £1,265,529.

Following the reduction of purchase tax in April, a number of steps were taken by the Government to revive economic activity throughout the country and to stimulate consumer demand. These culminated with the complete removal of hire purchase restrictions in October, a factor which has been primarily responsible for the sharp rise in our earnings during the latter part of the year.

Although sales were stimulated by reductions in purchase tax and the removal of hire purchase restrictions, even further impetus was added by the introduction to the home market of an entirely new Cleaner in October and a new Spin Dryer in November.

The swiftness with which the community responded to the decontrol of hire purchase illustrates, very clearly, their eagerness to obtain labour saving appliances, which had been damped down by the high deposits imposed by Government order.

NEW CLEANER

This past year has seen the introduction of the Model 1334 Cleaner, of an entirely new design, which has been well received by the trade and the public. This Cleaner incorporates a number of entirely new features, is styled in contemporary colours and, we believe, is the best all round cleaner, in its price range, in the world today. It embodies the unique beating and sweeping principles upon which our success in this field has been built and which has kept us far ahead of our competitors in spite of their attempts to adapt these principles of cleaning to their products.

We are planning its introduction overseas during the early part of 1959, and are confident that the excellent reception accorded to it at home will be repeated abroad.

NEW SPIN DRYER

In November we launched a new Spin Dryer on the British market. It has been designed as a companion to our hand wringer type of Washing Machine, or for use as an independent unit and with the special design features we have incorporated, which place it in advance of any other make, we believe sales are likely to be of a high order.

These two new developments are evidence of our belief in the necessity of bold forward planning of products, irrespective of varying market conditions and it is, perhaps, indicative of this belief that the decision to invest the large capital sums involved was taken at a time when sales were at a low ebb and the outlook was gloomy, with a high rate of purchase tax and stringent credit restrictions in operation.

THE HOME MARKET

During the first quarter of the year, the hire purchase restrictions, requiring a deposit of 50 per cent of the purchase price, and purchase tax of 60 per cent had imposed a severe curb on business and the outlook was not promising.

With the reduction in purchase tax from 60 per cent to 30 per cent in April, a much needed impetus was given to the market, and the subsequent reduction and eventual elimination of hire purchase restrictions, created conditions which taxed our production facilities to the limit.

The ready approval which marked the introduction of the Hoovermatic last year, and the subsequent increase in its popularity, coupled with the introduction of our new upright Cleaner, Model 1334, and the enthusiastic reception accorded to it, added their weight to the general upsurge in demand, with the result that our turnover at home increased by 38 per cent.

THE EXPORT MARKET

This has been a particularly difficult year. The recession in the United States, the fall of commodity prices in the primary producing countries, and the disturbed political situation in the Middle and Far East, militated against the development of our trade, although the position is now slowly improving. In spite of this, our total export business was maintained at a level close to that of the previous year.

The consolidated net profit before taxation of £5,847,490 was arrived at after deducting £1,229,624 for depreciation against £1,096,008 last year.

Your Board recommends an increase of 10 per cent in the final dividend to 50 per cent less tax on each Ordinary and "A" Ordinary share, making a total of 60 per cent for the year.

This recommendation was arrived at after a very careful assessment of the future capital required to develop our overall business, which will involve heavy expenditure on new projects, on new buildings and plant, and also considerable investment overseas to further the development of our trade in many important markets.

PROSPECTS FOR 1959

The prospects for the current year are difficult to assess with any degree of certainty, because so much hinges on the future course of Government action. The measures taken by the Government to stimulate consumer demand have met with some success, but this demand cannot be expected to continue at the high levels reached in the last quarter of 1958.

In Exports, with the current revival of the American market and the recovery of other markets, which may occur towards the end of the year, we can see some possibility of an improvement in later months.

On balance we look forward to a good year in 1959 although, as we have not failed to point out, competition is becoming increasingly severe in all our markets, and the necessity to utilise a greater proportion of our revenue in merchandising activities in order to maintain our leadership at home, and to increase our business overseas may well reduce our available margins.

LEICESTER PERMANENT BUILDING SOCIETY

ASSETS EXCEED £50 MILLION

The Annual General Meeting of the Leicester Permanent Building Society was held on March 5th in Leicester.

Mr A. D. Carmichael, CBE (the Chairman), presided and, in the course of his speech, said:

Last spring and summer, with high interest rates and a continuing credit squeeze, was a very unfavourable period for Building Societies. Yet it was the best year in our long history.

The total assets of the Society now exceed £50 million, and show an increase on the previous year of £6,565,478.

Mortgage advances reached the record figure of £8,705,223, representing 6,252 individual loans.

The Society's liquid position improved. The total liquid funds at the end of the year were £7,227,419, or £1,805,261 more than in 1957.

After making provision for depreciation of Government Securities, reserves and unappropriated profit amounted to £3,005,296 compared with £2,607,576 in 1957, and are equivalent to nearly 6 per cent of the total assets.

At the beginning of last year, to make more funds available for potential house purchasers we introduced Fixed Term Investments at a slightly higher rate of interest. The investors undertook to leave their money with us for a period of three years, and in return the Society guaranteed the rate of interest for the same period.

This new form of investment proved most popular and provided £3,200,000 of new money.

TRUSTEE STATUS FOR DEPOSITS

The Government Housing Bill now before Parliament incorporates two important matters which affect Building Societies; the granting of Trustee Status for deposits, and Government loans to Building Societies for the specific purpose of financing the purchase of older houses.

The proposal that Trustee Status should be granted for deposits in Building Societies subject to conditions and regulations regarding liquidity and reserve ratios is welcomed.

In assessing liquidity and reserves a realistic attitude has been adopted and quoted stocks are to be taken at their cost or market value, whichever is the lower. This is a course we have been advocating for some years and have always followed in presenting our Accounts.

The Bill includes a condition that free reserves should be equivalent to not less than 2½ per cent of total assets. It should be emphasised, however, that the Government proposals are concerned with the security provided for Depositors, not Shareholders, and the adoption of this ratio carries no implication that 2½ per cent is adequate for all contingencies. Accounts published by Building Societies show an average Reserve Ratio of about 4½ per cent and there is no suggestion that this is in any way too high for normal requirements.

In principle, the intention of the Government to make loans available for the financing of the purchase of older houses must commend itself to us, but in operating this scheme it will not be in the interests of borrowers for Building Societies to relax

their present prudent standards of lending.

NEW LENDING RATE

The rate charged on new mortgage applications from owner-occupiers was reduced to 5½ per cent as from March 2nd. Existing borrowers have also been considered, and unless conditions change, rates will be reduced by ½ per cent, subject to a minimum of 5½ per cent from July 1st.

The Report and Accounts were adopted.

BLACK-CLAWSON INTERNATIONAL LIMITED

(Manufacturer of Pulp and Paper Making Machinery)

A YEAR OF CONSOLIDATION

The annual general meeting of Black-Clawson International Limited was held on March 5th in London.

The following is the statement by the chairman, Mr Karl F. Landegger:

The financial results show a net profit before taxation of £264,379, a total obtained after charging depreciation of £85,795 and Debenture Stock interest of £36,000. After adding the balance brought forward from the previous Accounts of £148,907 the sum of £413,286 has been appropriated:

(a) as to £132,865 provision for taxation, and

(b) as to £36,000 dividend (net) on Ordinary Shares leaving a balance to carry forward to next year of £244,421.

The net profit of £264,379 compares with a figure of £243,126 for the preceding year when the Debenture interest was some £14,000. During the year under review the excess of current assets over current liabilities has increased by approximately £93,000, and at September 30th last the total net assets of the Company amounted to £894,420.

The past year was a period of consolidation for the Company following our acquisition in 1957 of the foundries and machine works at Newport, Monmouthshire. We are now employing over 800 men in the manufacture of the whole range of pulp and paper making machinery produced by the Black-Clawson Group of Companies.

During the year the works were fully employed and at September 30th last the Order Book exceeded £3,600,000. In addition to our line of pulp and paper making machinery we also produced steel castings amounting to some £300,000 in sales. We are experiencing, however, along with other companies in this trade, a heavy increase in competition.

It is a pleasure to report that Black-Clawson paper machine made at our Newport works are giving excellent performances in the United Kingdom and overseas. About 50 per cent of our pulp and paper mill machinery is exported, and we shall continue our policy of developing exports to new and existing markets.

HIGH QUALITY PRODUCTS

During the past year there was produced at the Newport works a complete vacuum pick-up magazine paper machine which we believe is the first paper machine to be imported into Germany since before the first World war. A further magazine paper machine has been delivered to one of the leading companies in England. We also produced 35 of the cylinders for the world's largest paper machine—a 342 inch newsprint machine now operating at Great Lakes Paper Company, Fort William, Ontario, Canada. This achievement is a credit to the skill of our workmen and the high quality products of which the Newport Works is capable.

The results of the wide research and development programme of the Black-Clawson Company of America will continue to be available to us.

The business built up by the Company together with the experience and knowledge of the Group available to it gives us confidence that we will be able to compete successfully from the smallest pump to complete pulp and paper mill installations.

The Consolidated Accounts of the Black-Clawson Company of America for the year ended September 30, 1958, showed sales of US$46,098,658.

The report was adopted.

FALCON MINES

The forty-ninth annual general meeting of Falcon Mines, Limited, will be held on March 31st, at Bulawayo, Southern Rhodesia.

The following is an extract from the Statement of the Chairman, Mr F. L. Wigley, dated February 17, 1959, circulated with the Report and Accounts for the year ended September 30, 1958:

The net profit for the year was £136,653. The sum of £60,000 has been appropriated for expenditure on fixed assets and mine stores. After providing an amount of £560 for Northern Rhodesia Territorial Surcharge Tax in respect of the M'tuga Tribute and for dividends Nos. 9 and 10 totalling 10½d. per share (17½ per cent), which absorbed £79,433, there remained a balance unappropriated of £12,601 compared with £15,941 brought forward from last year.

DALNY MINE

At the Dalny Mine, the new reduction plant units were brought into operation in October, 1957, and the rate of tonnage milled was raised gradually to about 20,000 tons per month. Your Board is satisfied with the results obtained from the treatment of the additional tonnage, having regard to the mechanical and metallurgical difficulties which followed the starting-up of the new plant.

Working costs have been reduced during the first four months of the current financial year following the improvement in operating conditions but it will not be possible to maintain this reduction if a recently proposed increase in the electricity tariff is assented to by the Electricity Council. The new tariff would have the effect of increasing working costs by about eightpence per ton milled as from February 1, 1959.

The estimated ore reserve at September 30, 1958, was 572,600 tons valued at 4.42 dwts over a width of 97 inches, an increase of 36,300 tons and 0.1 dwts per ton in value as compared with the previous year. The year's development results were satisfactory, the percentage payability and average value of the footage sampled being well maintained. The crosscut north from the 7th level, Dalny Section, reached the Pixy Reef area in September, 1958, at a point some 1,000 feet west of No. 2 borehole. This borehole, as mentioned in the Chairman's Review for 1956, intersected an ore-body assaying 33 dwts per ton over a true width of 92 inches at a vertical depth of 425 feet. The crosscut intersection was made in disturbed ground and the area is now being explored by development and diamond drilling. To assist this exploration, a shaft has been sited and sinking from the surface has commenced.

TEMPERANCE PERMANENT BUILDING SOCIETY

SIR CYRIL BLACK'S REVIEW OF 1958

The 105th Annual Meeting of the Temperance Permanent Building Society was held on Friday, March 6th, at the Caxton Hall, London.

Sir Cyril Black, JP, DL, MP, FRICS, Chairman of the Society, in the course of his speech, said: The sharply fluctuating conditions prevailing in the financial economy of the nation during 1958 had a marked effect on the operations of Building Societies. In the early months the 7 per cent bank rate was still in operation and some forms of investment more closely related to bank rate than are Building Society shares and deposits proved to be strong competitors in the monetary field. With the gradual reductions in bank rate this competition lessened, and the comparative attractiveness of the terms and facilities which we have continued to offer to investors resulted in a steady increase in the inflow of new money in the closing months of the year.

FORTY MILLION

It has given us particular pleasure to record the fact that our Assets have now for the first time passed the £40 million mark. I would like to take this opportunity of emphasising the point that this position has been achieved without any departure from the policy which we have consistently adopted of putting strength before size and of attaching the greatest importance to the maintenance of adequate reserves and liquid funds. Our reserves still represent approximately 6 per cent of share and deposit capital and we are proud of the fact that for several years we have been able to maintain our reserves at that level.

The amount standing to the credit of shareholders and depositors at the end of the year amounted to £37,400,630, an increase of a little over £1½ million. The amount advanced on mortgage was just under £3,700,000, and the mortgage asset reached just over £32,150,000. Of this sum over 94 per cent related to balances not exceeding £3,000. From this it will be realised that the great bulk of our mortgage securities, which are well spread throughout the country, consists of the smaller and medium sized properties for which there is a ready demand and which are not subject to excessive fluctuations in value.

LIQUID ASSETS

It is gratifying to note that the market value of our British Government securities has improved very substantially and at the end of 1958 was nearly £100,000 higher than in 1957. They all have fixed dates of redemption at par so that on redemption we shall receive a sum in excess of the book value. Our total liquid funds at December 31st amounted to £7½ million representing about 18½ per cent of total Assets. This percentage is an increase on last year and has ensured a good start to the mortgage programme for 1959.

INTEREST RATES

There has been a good deal of discussion in recent months on the question of interest rates, and suggestions have been put forward, often based on an inadequate knowledge of the facts, that Building Societies are keeping up the rates to lenders unnecessarily and that a reduction is overdue. It needs to be stated that it is not the policy of Building Societies to maintain interest rates at a higher level than is justified by conditions in the money market. Building Societies do not profit by higher interest rates, but they have to maintain a margin between the rates at which they lend and the rates which they pay to their investing members in order to cover Taxation, Management Expenses, and the essential provisions to Reserves.

Given a continuation of existing conditions, I view the prospects for 1959 as bright and encouraging. Providing the Country does not run into any financial setbacks it appears clear that we are going to have more money available for making loans for house purchase, and we are, as at all times, anxious to play the fullest part possible in helping to solve the housing problem, and in particular in enabling families to purchase their own homes; this we are convinced is the method of solving the problem which is likely to bring the most abiding satisfaction to the families concerned, and the greatest benefits to the Nation as a whole.

The Report and Statement of Accounts were adopted.

BRITISH INDUSTRIAL PLASTICS LIMITED

RECORD TRADING RESULTS

The annual general meeting of British Industrial Plastics Limited was held on March 12th in London.

The following is an extract from the circulated statement of the Chairman, Mr E. R. Crammond:

The Net Profit of the Group, before taxation, for the year to September 30, 1958, was £698,614, compared with £667,440 in the previous year. This is now the record in the Group's trading profits since its inception and I feel sure you will consider this result very satisfactory.

All the Subsidiary Companies, with the exception of BIP Reinforced Products Ltd., showed a profit. The latter Company only commenced full-scale operations during the period under review and so could hardly be expected to show a profit but in the Accounts provision has been made in full for the losses incurred. This year BIP Reinforced Products Limited is establishing its position—its Filon sheeting has been well received by the building trade and it should make a modest profit in the year to September 30, 1959.

CAPITAL EXPENDITURE

During the year the total capital expenditure of the Group amounted to over £490,000. We have pursued our policy of modernisation at our chemical factories in order to meet the highly competitive conditions of our times. There is in course of erection at Oldbury a new plant for the manufacture of formaldehyde which is one of the main raw materials used in the production of amino plastic moulding powders and resins and, in our Engineering factories, we are continuing our policy of progressive replacement of plant and machinery by the most modern and advanced types available. Certain of the machinery produced by BIP Engineering Ltd. is being successfully modified to meet the specialised requirements of industries other than Plastics.

In September, 1958, your Company raised approximately £500,000 by the issue of 2,250,000 2s. Ordinary Shares at the price of 4s. 6d. per share. Just over 90 per cent of these shares was offered to existing Ordinary Shareholders in the ratio of one new share for each six shares held and the offer met with a very satisfactory response.

NEW VENTURES

South Africa: Since the end of the Company's financial year a site has been purchased near Durban, South Africa, and a factory will shortly be erected there for British Industrial Plastics SA (Pty.) Ltd., a wholly owned Subsidiary. It is intended at the outset to manufacture resin for the South African paint trade and, in due course, expansion in other directions can be expected.

Holland: We now have under active consideration the formation of a new Company jointly with a prominent Dutch concern, Algemene Kunstzijde Unie NV. Negotiations for such a project are in an advanced stage and it is proposed that we should have a substantial holding, but not a controlling one, in the new Dutch Company which it is intended should erect a factory in Holland for the manufacture of urea formaldehyde and melamine formaldehyde moulding powders and resins to supply the needs of the European Economic Community.

Germany: It has been decided to establish a small wholly owned Subsidiary Company in Western Germany for the assembly, sale and servicing of the products manufactured by BIP Engineering Ltd. and BIP Tools Ltd.

FUTURE OUTLOOK

As you will see from the foregoing our business continues to expand. We are, as you know, engaged in the thermosetting side of the industry, but in due course we propose to extend our activities into other fields within the industry.

As to the immediate future, sales for the period since the beginning of the new financial year to date have held up satisfactorily. We may have to expect smaller margins of profits as time goes on and competition increases, but we hope to combat this situation by increased sales.

The report and accounts were adopted and the final dividend of 12½ per cent on the increased capital making, with the interim dividend of 7½ per cent paid in September last, a total of 20 per cent for the year was approved.

THE SCOTTISH PROVIDENT INSTITUTION

MUTUAL LIFE ASSURANCE

MR C. G. M. PEARSON'S REVIEW OF A RECORD QUINQUENNIUM

In moving the adoption of the Report and Accounts at the 121st Annual General Meeting held in Edinburgh on March 10, 1959, the Chairman, Mr C. G. M. Pearson, CA, referred first to the record New Business figures. Net new sums assured under ordinary policies of over £10 million and under Group policies of over £5 million, exceeded by a substantial margin anything previously achieved. Although Life Offices generally showed improved new business returns, the high percentage increase in the figures of the Scottish Provident was particularly gratifying and afforded signal proof of increasing prosperity and of a growing appreciation by the public. Both the premium income, £4,600,000, and the net interest income, £2,250,000, had increased by over 50 per cent during the quinquennium just ended and the total Funds now amounted to over £48 million.

Investment conditions said Mr Pearson, had been generally favourable to institutional funds and the market value of the Stock Exchange securities considerably exceeded the price at which they stand in the Balance Sheet and there was therefore a very substantial margin available for future contingencies. The interest yields, £6 5s. 4d. per cent gross or £4 19s. 6d. per cent after deduction of income tax were the highest in the history of the office; although new investments were still available on favourable terms it was unlikely that dear money rates would continue indefinitely and there were already signs that profit margins in industry were shrinking.

QUINQUENNIAL INVESTIGATION

In considering the results of the quinquennial investigation as at December 31, 1958, Mr Pearson drew attention to the surplus of almost £3¼ million, which was not only the largest in the long history of the Scottish Provident but was almost double what had been available only five years before. All the rates of bonus now declared were very greatly in excess of those of five years ago. Policies which had been effected at very low rates of premium under the office's 'Distinctive System' and now entitled to share, received compound bonuses for the period 1954-58 at 40s. per cent per annum (Old Series) and 35s. per cent per annum (New Series). As the number of Old Series policies was now small they were being given in addition a special "equalising bonus" to enable the same rate of bonus to be allotted at future investigations to both Old and New Series policies.

The administrative convenience would be great and the Directors were satisfied that everyone had been fairly treated. Endowment assurances with profits would receive bonus at the rate of 50s. per cent per annum compound. The Chairman was confident that members would feel highly gratified with the excellent results of the Investigation.

STATE PENSION SCHEMES

Mr Pearson felt sure that the proposed new State pension scheme would not halt the setting up of private insured schemes but thought it abundantly clear that this State scheme, involving the integration of private schemes with it, was bound to give rise to difficult and complex problems. It was important that the Scottish Provident should continue, as in the past, to offer the kind of pension scheme which employers wanted. Today the call was largely for pension schemes with profits and during the year the Directors had taken appropriate steps to enable our representatives to offer contracts in this form.

Mr Pearson concluded his remarks by expressing the thanks of the Directors to Officials and staff at Head Office and Branches and to Agents throughout the country. The continued progress of the office reflected great credit on all of them.

The Report and Accounts were adopted.

ORIENT STEAM NAVIGATION COMPANY LIMITED

SIR AUSTIN I. ANDERSON'S REVIEW

The Fifty-Ninth Annual General Meeting of the Orient Steam Navigation Company Limited will be held on April 16th in London.

The Chairman, Sir Austin Anderson, said in his annual review that the operating profit for the year ending September, 1958, after providing for depreciation was £795,051. Results of the voyages via Suez between United Kingdom and Australia showed a considerable improvement upon those in 1957 which were disastrously affected by the Suez crisis. Traffic had not, however, picked up to its pre-Suez level, partly on account of lower prices for Australian exports and partly as a result of disturbed conditions in Ceylon. New traffic had been encouraged by very cheap off-season fares. Sir Austin stressed, however, that while the Company's future success depended on its ability to keep fares as low as was economically practicable, there was no point in following what seemed to be the policy of some of the airlines—namely to expand traffic by quoting fares inadequate to cover the cost of carrying it.

Suez results for the current year were likely to be worse than for 1958. This was partly due to Australia getting lower prices for her exports and partly to the entry of the Dutch Mail Lines into the Australian trade after the loss of their Indonesian traffic. The homeward passenger trade from Australia was already severely over-tonnaged by the ships chartered outward for migrants by various Government organisations. Shipowners believed in the freedom of the seas and were prepared to face competition of this kind. They could not, however, refrain from commenting that, when Dutch airlines, in a similar predicament to the Dutch shipowners, tried to find alternative traffic from Malaya, the British Government were quick to step in to protect the British and Australian airlines by methods which, in shipping parlance, would be described as flag discrimination.

On the Pacific service, operated jointly with P. & O. under the title of Orient and Pacific Lines, there was an increase of 7½ per cent in the average number of passengers embarking in North America for each sailing and over half this traffic was booked in North America. The aim was to do everything possible to expand such traffic, and a formidable programme of North American advertising had been arranged to introduce the new O. & P. service between North America and the Far East.

The Company had to look ahead to the days when its three postwar ships, "Orcades," "Oronsay," and "Orsova" would be running in conjunction with "Oriana," which is now building. As well as providing the cheapest form of overseas transport in the lowest grades of accommodation, ships had to satisfy the needs of those who preferred the comfort and restful atmosphere of a mobile hotel to the undeniable strain of hurtling from one place and climate to another, at a speed approaching that of sound. A ship's design, therefore, had to keep pace with that of a modern holiday hotel. Thus, the three post-war ships were being completely air-conditioned and more private baths and showers were being provided in First Class. In Tourist Class the standard of the cheaper cabins was being generally raised. These improvements involved withdrawing the three ships in turn from service for about three months and the whole operation was expected to cost over £2 million.

Sir Austin said the 37,000 tons tanker, being built by Vickers Armstrongs would be called "Garonne" and was expected to be completed for service in December, 1959. Owing to the increase in building prices and the setback in tanker rates, it had been decided not to build the second tanker, as originally planned.

The Preference Stock Books will be closed in London at the same time. All books will be reopened on Thursday, the seventh day of May, 1959.—By order of the Board, T. F. Turner, Secretary. Montreal, March 9, 1959.

APPOINTMENTS REQUIRED

VANCOUVER, B.C. Chartered Accountant (Edinburgh), with mercantile background, is visiting the United Kingdom shortly and would be interested to discuss any *business proposition, preferably on a part-time basis,* connected with British Columbia.—Box 1141.

COMMONWEALTH citizen, graduate economics, plus some technical knowledge, domicile Germany, at *present* Assistant to Management leading heavy engineering concern, seeks change and wishes to contact British concern desirous expansion/consolidation in common market. Excellent contacts *European industrial/financial/* trade circles. References in U.K. available. Fluent German.—Contact Box 1142.

U.S.A. Specialist in Anglo-American trade development and export-import market investigations, age 42, now and for past 12 years resident U.S.A., seeks new appointment in U.S.A. Commerce graduate British and American universities with broad knowledge and experience international trade.—Box 1126.

B. COM., 40, bilingual in Russian and Polish, with some knowledge of Ukranian, German, French and *Chinese, after 10 years with the Foreign Office, seeks* position with prospect in Business, Research or Academic field. Willing to travel.—Box 1140.

APPOINTMENTS

INDUSTRIAL ECONOMICS AND PLANNING

The United Kingdom Atomic Energy Authority, Industrial Group requires a well qualified economist in the *Technical Policy Branch at Risley, Warrington, Lancashire.* The branch is responsible for the forward co-ordination of the Group's commitments which include production of fissile materials for defence purposes and of fuel elements for civil reactors, together with the development of civil reactor systems whose success will require many years of well directed effort.

The successful candidate will be responsible to the Manager Economics and Programmes, for the development and application of methods of deriving forward costs for use in the formulation of policy decisions and for investigation of a wide range of problems involved in determining the deployment of resources.

Wide experience in the use of economic techniques as an aid to industrial management is essential. A degree in economics is desirable.

Salary between £1,795 and £2,040.

Contributory superannuation. Staff housing scheme.

Send postcard for application form to Recruitment Officer, at above address. Please quote reference 2991/J.20.

Closing date: March 30, 1959.

UNIVERSITY OF BIRMINGHAM

WILMOT BREEDEN RESEARCH FELLOWSHIP, 1959

Applications are invited for a Research Fellowship to be held in association with the University of Birmingham. The value of the Fellowship, which is for a two-year term, is £1,000 p.a.

A candidate for the Fellowship should normally have had two or three years' research or industrial experience. He must be acceptable to the University and would be expected to have an Honours degree of a University in the British Commonwealth, a Diploma in Technology or an equivalent qualification.

The Wilmot Breeden Fellow will *engage in* an enterprise of such a character as to require the facilities both of the University and the Company, and his time will be divided between the two. The activities with which the Company is especially concerned include Mechanisms, Electro-Chemistry, Metal Finishing, Metallurgy, Metal *Formation, Hydraulics, Electronics.*

Full details may be obtained on application to the Secretary, Wilmot Breeden Limited, Amington Road, Birmingham, 25. Final applications must be received by the Secretary before May 1, 1959.

GOVERNMENT OF THE FEDERATION OF RHODESIA AND NYASALAND

VACANCIES: STATISTICIANS: CENTRAL AFRICAN STATISTICAL OFFICE: MINISTRY OF ECONOMIC AFFAIRS

Applications are invited from suitably qualified persons or persons expecting to qualify in June/July, 1959, for appointment as STATISTICIANS in the Central African Statistical Office. Preference will be given to applicants who possess a University Degree with first or second class honours (or equivalent qualification) in Statistics, Economics or Mathematics. Applications from persons who have passed approved Statistical Society examinations will be considered.

Commencing salary, in the scales £700-£1,650 p.a. for men and £630-£1,330 p.a. for women, will depend upon qualifications, approved previous experience and/or approved National Service. Highest commencing salary £1,250 p.a. men and £940 p.a. women.

Application forms and further details from the Secretary (R), Rhodesia House, 429 Strand, London, W.C.2. Closing date March 31st.

UNIVERSITY OF EXETER

Applications are invited for the post of Assistant Lecturer or Lecturer in Economic and Social Statistics.

Salary scale:

Lecturers £900 — £1,650 (with efficiency bar at £1,300).

Assistant Lecturers £700 — £850.

Further particulars may be obtained from the Secretary of the University.

Closing date for applications, April 11, 1959.

For other appointments

see page 1031

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited from suitably qualified candidates for Tutorships in the following subjects:

ECONOMICS.
PHILOSOPHY.

Salary on the scale £575 to £625 per annum according to qualifications and experience.

Further particulars can be obtained from the Registrar, University College, Singleton Park, Swansea, by whom applications (six copies) must be received not later than Saturday, April 4, 1959.

UNIVERSITY OF NOTTINGHAM

Applications are invited for the appointment of ASSISTANT LECTURER IN INDUSTRIAL ECONOMICS, duties to include teaching of statistical method. Business experience desirable, but not essential. Salary scale £700 x £50 to £850, with membership of the teaching universities Superannuation Scheme and children's allowances. Conditions *of appointment and form of application, which should be* returned by Saturday, April 18, 1959, from the Registrar.

AUSTRALIA
UNIVERSITY OF SYDNEY

LECTURESHIP/SENIOR LECTURESHIP IN ECONOMICS

Applications are invited for the above position.

The salary for a Senior Lecturer is within the range £A2,200—£A2,800 per annum; for a Lecturer *within the range* £A1,500 — £A2,100 *per annum.* In each case cost of living adjustment will be allowed. The salary is subject to deductions under the State Superannuation Act. The salary of the successful applicant will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of *application may be obtained from the Secretary,* Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London, on April 20, 1959.

COMPANY AFFAIRS

HUDSON'S BAY

FOR the second successive year the Hudson's Bay Company has surprised investors with record profits and dividends. After raising the ordinary trading dividend from 15 per cent to 20 per cent a year ago, it is now paying 24 per cent for the year to January 31, 1959. In addition, the tax free payment from the surplus arising from land sales is doubled to 5 per cent, and there is also a special distribution "on this occasion only" of 2 per cent from the land account. Last year £672,000 was transferred from capital reserve to land account, raising it to nearly £1.8 million, so that this source of income to shareholders is by no means exhausted. The 2 per cent windfall is best ignored, but even so the £1 ordinary are clearly on a dividend basis of 32.7 per cent gross, against 24.3 per cent a year ago. On that assumption the ordinary shares yield 3.4 per cent at 192s. 6d., to which they jumped from 172s. 9d. after the dividend was announced.

"Bays" have long been popular with British investors (who own roughly three-quarters of the equity). They have been popular with speculators attracted by the potentialities of Hudson's Bay Oil and Gas, in which the group has a minority interest. Hudson's Bay has yet to receive a dividend from this source. But the latest profit figures suggest that it is doing remarkably well from its established interests in fur trading, wholesaling and retailing. Despite the recession in North America, gross profits in 1958-59 jumped by 13 per cent, from £4,329,000 to £4,896,000, and net profits from £2,312,000 to £2,637,000. In part, this increase probably reflects the money that the group has been spending on modernising its stores and in building new ones.

NEWS OF THE WORLD

A STOCK EXCHANGE quotation for a flourishing business benefits both vendors and potential investors. The public offer of one-tenth of the equity of the *News of the World* seems to leave the balance of advantage well in favour of the vendors, for this must surely be the minimum amount that can reasonably be made available for sale when applying for quotation of all the issued capital. The capital of the *News of the World*, as reconstituted recently, consists of £1,600,000 in 5s. voting Ordinary shares and £800,000 in new non-voting 5s. ordinary shares. These latter are tied to the voting shares by offering the public 320,000 composite units, each consisting of two ordinary shares and one non-voting share at 43s. for the three. Hambros Bank has underwritten the offer for a commission of 1s. 0½d. per composite unit. The vendors seem to be reluctant sellers and certainly reluctant to relinquish any great measure of control; all holders of importance have contributed their tithe to the pool now made available to the public. It may therefore be assumed that the market in the voting stock will not be swelled by a trickle of sales by these firm-holders, for the non voting shares provide a means of selling for cash without losing control. After the offer the Carr and Jackson family groups will each hold just over 1,800,000 of the voting shares, which gives them together 57½ per cent of the votes.

Three-quarters of the record gross profit of £1,517,370 for the year to June 30th last was earned by the group's Sunday newspaper. Other interests include the *Greyhound Express*, the Worcestershire firm of Berrow's Newspapers Limited, Walton Heath golf course and a stake in TWW, the television contractor for South Wales and the West of England. The group holds about one-quarter of the small amount of voting capital and about one-sixth of the non-voting capital of TWW. Profits for the whole group in the six months to December 31st compare "not unfavourably" with earnings in 1957. For the calendar year 1959 profits are expected to be a little lower than in 1958, but a dividend of 20 per cent is forecast. At the issue price of 43s. for three 5s. units the yield will be almost 7 per cent.

HOOVER AND MORPHY-RICHARDS

SALES of domestic appliances by Hoover immediately after the lifting of HP restrictions have to be regarded as exceptional and some slackening in turnover must now be expected. Moreover, difficulties in Hoover's export markets seem likely to persist for a time. Nevertheless, the directors of Hoover expect a "good year." It should certainly stand comparison with 1958, which opened with Hoover operating under the shadow of high purchase tax rates as well as HP restrictions. Nor does it seem that any temporary recession of demand will deter the directors from carrying out their development plans. For instance, although a substantial loss was sustained by the French subsidiary while record profits were being earned elsewhere, Hoover is planning large developments in France during the next five years—presumably to ensure a foothold in the common market. At home, factory space in South Wales which seemed adequate in 1957 is now apparently insufficient and a big increase in factory space is actively under consideration. The call that these developments may make on resources probably explains why the directors have limited the increase in the ordinary dividends from 50 to 60 per cent, despite the rise in trading profits from £4,943,000 to £7,182,000 and in net profits from £1,924,000 to £2,340,000.

Morphy-Richards' interim report for the six months to December 31st also reflects boom conditions: in that period turnover exceeded £5 million and was 25 per cent above the 1957 level. The interim ordinary dividend for the year to June 30th has been raised from 8 to 10 per cent, payable on a capital of £845,028, since practically all the £500,000 loan stock issued in 1956 has now been converted into ordinary shares. At 59s. 3d.xd Hoover 5s. ordinary units yield 5 per cent, while Morphy-Richards' 4s. units yield 4.2 per cent at 22s., assuming a total dividend of 22 per cent.

EASTERN BANKS

AMALGAMATION among the eastern exchange banks has aimed at securing a wider spread of political risks and at economies from the fusion of overlapping branches. These moves were overshadowed by recession last year. Disclosed profits declined and balance sheets made up at December 31st show a general fall in advances and a tendency for total deposits to contract.

The Chartered Bank absorbed the Eastern Bank in 1957, acquiring a widespread interest in the Middle East, and the group recently subscribed 49 per cent of the capital of a new bank in Iran. Total deposits of this group increased by £16 million, thanks wholly to a rise in fixed deposits. Advances fell by £6.1 million to £106 million and acceptances declined by £2.8 million to £7.6 million. Net profits are shown at £993,590, compared with £1,000,890; but the ordinary dividend is maintained at 15 per cent, giving a yield of 6.6 per cent at the current price of 45s. 3d.xd for the £1 units.

National and Grindlays Bank was formed as a fully merged institution at the beginning of last year. Total deposits have declined by £10.7 million to £141.8 million. Advances dropped by £14.6 million to £70.3 million. Disclosed profits were £371,707, against £427,490 in 1957, and the dividend is unchanged at 15 per cent, giving a yield of 6.7 per cent at the current price of 28s. for the £1 units, 12s. 6d. paid.

Last month the Hongkong and Shanghai Banking Corporation announced that its bid for the **Mercantile Bank** had been successful. Mercantile's deposits fell by £4.5 million to £63.8 million in 1958 and total assets contracted by £5.3 million to £71 million. As at the other banks, liabilities for acceptances declined sharply, from £1,200,000 to £350,000.

BRITISH ROPES & R. HOOD HAGGIE

IF shareholders agree, and there seems to be no reason why they should not, two leading companies manufacturing wire ropes, fibre ropes and cordage will merge, for the directors of both companies—British Ropes and R. Hood Haggie—have agreed on the terms for an amalgamation. The directors say that by combining their respective resources —in particular in research—the two companies will be better placed to meet the more competitive conditions now ruling in export markets. Both companies are listed as parties to an agreement on steel wire and fibre ropes that is on the register of restrictive trade practices.

British Ropes certainly seems willing to pay a high price for the benefits of amalgamation with Hood Haggie, for the bid of £5 in cash for every £1 ordinary share in Hood Haggie contrasts with a market price of only 64s. before the merger terms were announced. The Hood Haggie directors (who own about 15 per cent of the ordinary capital) are recommending acceptance. At £5 the Hood Haggie shares on the maintained dividend of 17½ per cent offer a yield of only 3½ per cent and an earnings yield of 11.8 per cent. This puts a high value on a concern whose profits have shown little sign of expanding—indeed they fell in 1958 to their lowest level since 1954. But on September 30th, Hood Haggie held no less than £975,000 in liquid form and this presumably is one reason for the high bid price.

PYE

LAST month Pye made a cash bid for the capital of Lindley Thompson Transformer and Service Company, of 2s. 6d. per share for the 4.6 million 1s. ordinary shares (requiring £575,000) and 16s. for the 100,000 6 per cent cumulative redeemable preference shares of £1 (involving a further £80,000). Presumably the owners of Lindley Thompson wanted cash and an offer based on a share exchange could have given rise to difficulties in the market. But Pye cannot have much cash in its coffers even after the injection of £2½ million from its debenture issue. A rights issue for a moderate sum would hardly have been feasible and Pye finally decided to place up to 1,068,960 5s. ordinary shares at 13s. each to Guinness Mahon and Company, subject to a commission of 6d. per share. The intention is to place the shares with other investors at 12s. 9d. each. The market price of the existing shares has remained steady at 14s. 9d.

JOHN BROWN

JOHN BROWN is to raise about £1.9 million by a one for seven rights issue of 1,311,658 ordinary shares of £1 each at 30s. per share; this puts a value on the rights of only a few pence, for the existing shares stand at 32s. 6d. The directors intend to maintain the 10 per cent ordinary dividend on the new capital and thus the new shares are offered on a yield of 6⅔ per cent. The cover on this dividend is likely to be no more than adequate, for earnings in 1957-58 amounted to 23½ per cent on the old capital; the directors expect that gross profits for the year to March 31st "will be not more than 10 per cent below" the previous year's figure of £3,336,382, but that net profits will be practically unchanged from last year's £1,391,960. The directors say that no major development schemes are envisaged at the moment but that the new money coming from this not especially exciting offer is needed to finance a higher volume of stocks and work in progress, and export credits.

ARMY & NAVY STORES AND BENTALLS

THE sharp contrast in the 1958-59 results of Bentalls of Kingston and Army and Navy Stores of Victoria cannot simply be explained by last year's bus strike. The Army and Navy Stores must have lost more trade during this strike than Bentalls. But these results have also to be viewed against the background of the development of suburban shopping on the American model at the expense of metropolitan stores like the Army and Navy. Both groups have been ploughing back profits to finance development, but Bentalls has been spending its money not only on the main store at Kingston but also on new ones at Ealing and Worthing. In the year to January 31st, its gross profits after depreciation went up by over 5 per cent, from £490,702 to £516,996 and its net profits were £22,822 higher at £221,966. The ordinary dividend has been raised from 7d. to 8d. per unit, or from 29 1/6 per cent to 33⅓ per cent. A year ago the chairman, Mr Gerald Bentall, hinted that the purse strings would be loosened once new projects had come to fruition and it had become easier to raise new money on the capital market. Investors were clearly expecting some increase in the payment, for after it was announced the 2s. units gained only 3d. to 15s. 4½d. Clearly, too, they expect still more in the future, for at this price the units yield only 4.4 per cent.

In contrast, the 10s. ordinary shares of Army and Navy yield 6 per cent at 18s. 6d. They fell 9d. after the preliminary statement had revealed a decline in gross profits from £273,497 to £267,787. Net profits were £22,010 higher at £143,770, but this was simply the product of the change in the basis of profits tax. The directors have passed this on by raising the ordinary dividend from 10½d. to 1s. 1½d. per unit, or from 8¾ per cent to 11¼ per cent. But they have not repeated the tax-free capital distribution paid for the previous five years. Such distributions must always be regarded as precarious but, in effect, as this distribution was 1¼ per cent, tax free, in 1957-58, the ordinary shareholders this year have gained only one third of one per cent in dividend.

London Stock Exchange

FIRST DEALINGS:	Feb. 25	Mar. 11	Apr. 1
LAST DEALINGS:	Mar. 10	Mar. 31	Apr. 14
ACCOUNT DAY:	Mar. 17	Apr. 7	Apr. 21

GILT-EDGED prices fell over the week to Wednesday's close as another rise in US interest rates led to further selling. Losses were heaviest among the irredeemable and long dated stocks, War Loan 3½ per cent falling by ½ to 67⅛ and Transport 3 per cent (1978-88) by the same amount to 68¼. However, there was some buying of high coupon shorter dated issues, and Conversion 4½ per cent 1964 went up by 1/8 to 100½. African loans weakened still further on the Nyasaland troubles, the discount on the Federation of Rhodesia, and Nyasaland 6 per cent loan (1978-81) widening from 2½ to 3½ by Wednesday's close.

Leading industrials fell until Monday's close, in line with the trend on Wall Street and the uncertain political outlook. Following the start of the three week Easter account on Wednesday and Wall Street's firmer tone many small gains occurred, but investment demand was still lacking *The Economist* Indicator fell by 1.1 to 250.9 over the week. Beecham Group jumped 4s. 4½d. to 29s. 9d. following the new penicillin discoveries. British Oxygen hardened by 9d. to 54s. 6d. But these were isolated exceptions. Unilever Ltd., lost 2s. 1½d. to 88s. 4½d. and the NV units 9d. to 104s. 9d. Electricals were strong, Philips Lamp rising by 1s. on Wednesday, to close 6d. higher over the week at 101s. 6d., and Thorn were the same amount better at 34s. Birmingham Sound Reproducers were once more in demand, gaining 3s. 6d. to 36s. 6d. Standard eased by 3d. to 8s. 1½d. and Rover gaining 2s. 3d. to 22s. following the announcement of the exploratory talks being conducted by the two companies. Jaguar continued to gain more ground, closing 2s. 6d. higher at 66s. 3d. Fairey Aviation rose by 2s. 2½d. to 19s. 9d. following the announcement of the new orders for the Rotodyne.

Liebig's jumped from 81s. 3d. to 89s. 4½d. on Thursday following the announcement of the rights issue, scrip issue and prospective increase in dividend.

Oils were little affected by the revolt in Iraq and, following Wall Street's lead, they improved with the rest of the market, but over the week to Wednesday's close BP, despite the success of its Swiss loan, lost 9d. to 51s. 3d., and Shell was 1s. 3d. lower at 138s. 9d. Ultramar closed 4s. 9d. down at 62s. 6d.

Kaffirs rallied strongly on Tuesday when selling from the Continent dried up and buying from London and the Cape started up again. FS Geduld led the rise in the OFS shares, jumping 6s. 3d. to 158s. 1½d. Finance House issues shared in the recovery but failed to regain fully the ground lost earlier.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended March 7, 1959, there was an "above-line" surplus (after allowing for Sinking Funds) of £46,583,000 compared with a surplus of £38,524,000 in the previous week and a surplus of £58,944,000 in the corresponding period of last year. There was a net expenditure "below-line" of £19,634,000, leaving a total deficit of £113,823,000 compared with £162,309,000 in 1957-58.

THE MONEY MARKET

MONEY rates in London have become adjusted to the change in expectations about Bank rate. At last Friday's tender the syndicate kept its basic bid at £99 3s. 6d. per cent; but outside tenderers, probably taken by surprise by the second sharp drop in the syndicate's bid in the previous week, lowered their bids. Although total applications recovered from £318 million to £370 million, the syndicate secured 57 per cent of its applications at the minimum rate compared with 51 per cent in the previous week. The average rate of discount rose from £3 5s. 6.22d. to £3 6s. 0.14d. per cent—virtually the same as the basic rate of the syndicate. In New York the Federal Reserve Bank raised its discount rate from 2½ per cent to 3 per cent, and at the subsequent Treasury bill tender the average rate of allotment for 91-day bills rose from 2.816 per cent to 3.062 per cent.

A small amount of special help was given by the Bank of England at the weekend; overnight money commanded 3½ per cent at the beginning of the day. The clearing banks secured ample cash this week and the authorities intervened to absorb surplus funds on Tuesday and Wednesday. The rate paid for overnight loans quickly slipped down to the clearing banks' minimum rate of 2⅜ per cent.

223-227 REGENT STREET, LONDON, W.1. PHONE: REGENT 7282

From all corners of the earth people come to **SION**

to admire the sight of the famous Castle-Church of Valère and the ruins of Tourbillon Castle, both on hilltops towering high above the beautiful valley of the Rhône.
Of great historical interest is also Switzerland's first Christian inscription, dated A.D. 377, in the Town Hall.
Sion, a starting point for alpine excursions, is a well-known wine, fruit, and vegetable centre. Strawberries and asparagus are regularly flown to the London and Paris markets.
The Sion Branch of the **Union Bank of Switzerland** is always at your disposal for every kind of financial transaction.

THE UNION BANK OF SWITZERLAND HAS CORRESPONDENTS ALL OVER THE WORLD

"In my view, Sir, the fact that they are but recently established should not dissuade us from availing ourselves of a service which, to my knowledge, is unique—even in 1859."

"I must admit that this idea of the insurance and inspection of boilers being administered by one company is an extremely modern one. Nonetheless, admirable: and doubtless, here to stay. Inform me again of their name."

*"The Steam Boiler Assurance Company."**

"And my Board meets tomorrow. Excellent."

***A CENTURY LATER,** and since 1896 known as The Vulcan Boiler and General Insurance Company Limited, we have a century's experience behind us—and every day are learning more. Our clients are now numbered in tens of thousands. The expert specialist inspection *and* insurance of industrial machinery—boilers included—still makes our services exceptional: even in 1959.

APPOINTMENTS

Vacant 9/- a line; Required 6/- a line.

VETERINARY ADVISER

Pfizer Ltd., Manufacturing Chemists of Folkestone, Kent, invite applications from Veterinary Surgeons for the new position of Assistant in their Veterinary Advisory Department.

Suitable applicants would be under 30 with good academic qualifications and some experience in general practice.

The position entails advisory work, field research and product development. The appointment will cover a wide range of technical interests in Great Britain and overseas.

The Company provides a non-contributory pension and assurance cover, together with removal expenses.

Applications, in writing, should be made to:

STAFF RECRUITMENT OFFICER,
PFIZER LTD.,
137-139 SANDGATE ROAD, FOLKESTONE.
QUOTING REF. E. 0735.

Previous applicants need not re-apply.

STATISTICIAN (Assistant Planning Officer (Research)) —A.P.T. Special Grade (£750 — £1,040) for County Borough of Southampton, Borough Architect's Department. Duties: Research; compilation of planning statistics; Direction of survey work on population, employment, etc., in connection with review of Development Plan. Qualifications: University Degree in economics or other appropriate subject, with special reference to statistics. Commencing salary according to experience. Candidates should state housing requirements.—Application forms from the Borough Architect, Civic Centre, Southampton, returnable by April 3, 1959.

DUNDEE TECHNICAL COLLEGE

DEPARTMENT OF MANAGEMENT AND HIGHER COMMERCIAL STUDIES

Re-advertisement

Applications are invited for the newly-created post of LECTURER in Industrial Administration. Candidates should possess an honours degree, or an equivalent professional qualification. Experience in industry in a responsible position is essential.

Salary—

Honours graduate, or equivalent—
Grade II (a) £785 x £35 — £890 x £40 — £1,250/ x £50 — £1,350.
Plus 5 per cent at each " point " on the scale.
Other qualifications—
Grade II (b) £700 x £35 — £805 x £40 — £1,005/ x £50 — £1,125.
Plus 5 per cent at each " point " on the scale.

The full particulars and application form may be obtained from The Clerk and Treasurer, Dundee Institute of Art and Technology, 40 Bell Street, Dundee, to whom the completed form should be returned not later than two weeks after the appearance of this advertisement.

FINANCIAL CONTROLLER

required for a large engineering company in the East Midlands area. Candidates must be chartered accountants, aged 35 to 45. Other qualifications would include (a) five to ten years' industrial experience, preferably in the engineering industry, with practical experience of budgetary control and other aspects of management accounting, and (b) three to five years' responsibility for financial and accounting management at top level. Commencing salary about £3,500 according to qualifications and experience; excellent prospects. Write, with full particulars, including salaries earned, to Price Waterhouse & Co., 3 Frederick's Place, Old Jewry, London, E.C.2.

For further appointments and other classified advertisements see page 1022

EAST AFRICA HIGH COMMISSION

STATISTICIANS, EAST AFRICAN STATISTICAL DEPARTMENT

Candidates should possess or obtain this summer a good Honours degree preferably in Economics with Statistics as a *main* subject. The latter is *not essential* provided that Statistics has been included in the degree course and the candidate has a good knowledge of statistical methods and the handling of statistical data. Experience desirable of work in a government or commercial statistical organisation or post graduate research in economic analyses or statistical surveys. Age limit 40. Appointment may be pensionable or on contract terms. Inclusive salary scale £919 — £1,863, point of entry determined by experience. Gratuity of 13½ per cent of salary if appointment is on contract. Income tax at local rates. Free passages on first appointment and on leave for officer and family. Liberal home leave on full salary. Government quarters, when available, at moderate rental.—Application forms and further particulars from Director of Recruitment, Colonial Office, Sanctuary Buildings, Great Smith Street, London, S.W.1; reference BCD 59/88/02.

UNIVERSITY OF CAMBRIDGE SCHOOL OF AGRICULTURE

Mathematical graduates required to work in Agricultural Research Council Statistics Group; previous statistical experience not essential. Appointments will be in Assistant Experimental Officer grade, starting salary from £429 p.a. at age 21 to £670 p.a. at age 26 or over. Application, in writing, stating age and qualifications and giving names of two persons to whom reference may be made, should be sent to the Secretary, School of Agriculture, Downing Street, Cambridge, not later than April 11, 1959.

ORGANISATION & METHODS DEPARTMENT

SENIOR EXECUTIVE APPOINTMENT

The CO-OPERATIVE WHOLESALE SOCIETY LIMITED propose to establish at their HEAD-QUARTERS in Manchester an ORGANISATION & METHODS DEPARTMENT to provide an advisory service in relation, initially, to their administrative, accounting and statistical procedures. The Department will be responsible for Electronic developments.

The Officer to be appointed will be responsible for the inception of the Department and the training of supporting personnel.

This is a senior executive appointment and calls for a man of high calibre with extensive experience in Organisation and Methods work.

Applications, giving full details of age, experience, education and qualifications, etc., which will be treated in strict confidence, are invited from persons with the necessary training and experience for this important appointment and should be addressed to the Secretary and Executive Officer, C.W.S. Limited, 1 Balloon Street, Manchester, 4, quoting Ref. CLD/OM.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for (1) a post as Research Officer and (2) a post as Research Assistant in the field of advertising and promotional activity. Candidates for the post of Research Officer should have a degree in Economics, Modern History or Sociology, with some knowledge of statistics. Experience of the advertising business would be an advantage, but is not essential. The salary would be in the range £650-£1,500 per annum, plus £60 London Allowance, according to qualifications and experience. Candidates for the post of Research Assistant should have a degree, preferably in Economics or Economic History. Salary scale £450 x £25 — £525 per annum.

Applications, with the names of three referees, should be sent by April 15, 1959, to The Research Fellow in Advertising and Promotional Activity, The London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2.

THE MOND NICKEL CO. LTD.

have a vacancy for a young Economist, age 22-25, with a sound knowledge of statistics. Some commercial experience will be an advantage.—Please apply to the Statistical Department, The Mond Nickel Co. Ltd., Thames House, Millbank, S.W.1, *giving age, qualifications and experience.* Mark envelope Confidential.

AMERICAN COMMUNICATION CONCERN

requires

ELECTRONIC ENGINEERS

Positions open based on one year contract with probability of indefinite extension if services are satisfactory. In addition to salary, which will be based on qualifications and experience, FOUR U.S. dollars ($4.00) a *day granted* for living expenses while in Tripoli (Libya). Transportation will be provided from home to Tripoli and return on expiration of contract. In reply, state experience, present salary and salary desired in addition to living expenses. Ability to speak English essential.—Write air-mail to Hycon-Page Libya, P.O. Box 666, Tripoli (Libya).

LANCASHIRE AND MERSEYSIDE INDUSTRIAL DEVELOPMENT ASSOCIATION

Applications invited from suitably qualified persons for appointment as DEPUTY DIRECTOR OF THE ASSOCIATION. Salary £1,400 p.a. Post superannuable.

Further particulars and form of application obtainable from Joint Honorary Secretaries of Association, Town Hall, Manchester. Applications returnable by the 23rd March, 1959.

ARMSTRONG-WARDEN

wants another

ASSISTANT MARKETING RESEARCH EXECUTIVE

Applicants should have a degree in Economics or Statistics (or similar) and about two years' advertising experience.

Apply:

The Secretary,
Armstrong-Warden Ltd.,
Armward House,
69 New Oxford Street,
London, W.C.1.

AUSTRALIA UNIVERSITY OF QUEENSLAND

LECTURER IN ECONOMICS WITHIN THE DEPARTMENT OF EXTERNAL STUDIES

Applications are invited for the above position. Applicants should have an Honours Degree in Economics, or equivalent qualifications.

Salary £A1,540/£A2,040 per annum.

Further particulars and application forms are obtainable from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1, or from the Registrar, University of Queensland, Brisbane, Queensland, Australia.

Applications close, in Australia and London, on April 30, 1959.

EDUCATION AND COURSES

9/- a line.

TRAINING FOR PERSONNEL OFFICERS

A short full-time course which will contribute to the preparation of senior staff for personnel work in industrial concerns, will be conducted by the Department of Industrial Administration and commence on Monday, April 13, 1959. The duration of the course will be six weeks. The emphasis throughout will be upon the practice of personnel work including interview and selection procedures for the range of industrial occupations, administration of personnel services and the conduct of industrial relations. The tuition fee for this course is fifty-eight guineas.—Application forms and further details from the Registrar, College of Technology, Costa Green, Birmingham.

UNIVERSITY OF CAMBRIDGE DEPARTMENT OF ENGINEERING

POSTGRADUATE COURSE IN STRUCTURES AND MATERIALS

The 1959-60 Postgraduate Course in Theory of Structures and Strength of Materials will be held in the Department of Engineering, Cambridge University, beginning on October 6, 1959 and finishing in June, 1960.

The latest advances made in the understanding of the behaviour of metallic structures under static, repeated or fatigue loading will be the principal subject of the course, with particular emphasis on welding as a method of fabrication. No attempt will be made to teach conventional methods of design, but present-day practice and possible future developments will form the subject of critical study.

The object of the course is not to train research workers, but to help engineers to apply the latest advances in knowledge. The course will include lectures, colloquia and laboratory work, and each student will be encouraged to make a detailed study of some problem of particular interest to him.

The course is open to university graduates with industrial experience, and to others with suitable equivalent qualifications and of sufficient experience to obtain full benefit from a post-graduate course.

Further details and forms of application for admission may be obtained from the Secretary, Cambridge University Engineering Laboratory, Trumpington Street, Cambridge. The completed forms of application should be returned to the Secretary not later than May 31, 1959.

UNIVERSITY OF CAMBRIDGE DEPARTMENT OF ENGINEERING

POSTGRADUATE COURSE IN CONTROL ENGINEERING

The 1959-60 Postgraduate Course in Control Engineering will begin on October 6, 1959, and will last approximately nine months. This is the fifth course of a series which has been established in order to meet the need of industry for men trained to a high standard in the theoretical principles and practical application of automatic control and to afford opportunity for study of advanced techniques and modern development in the general field of Control Engineering.

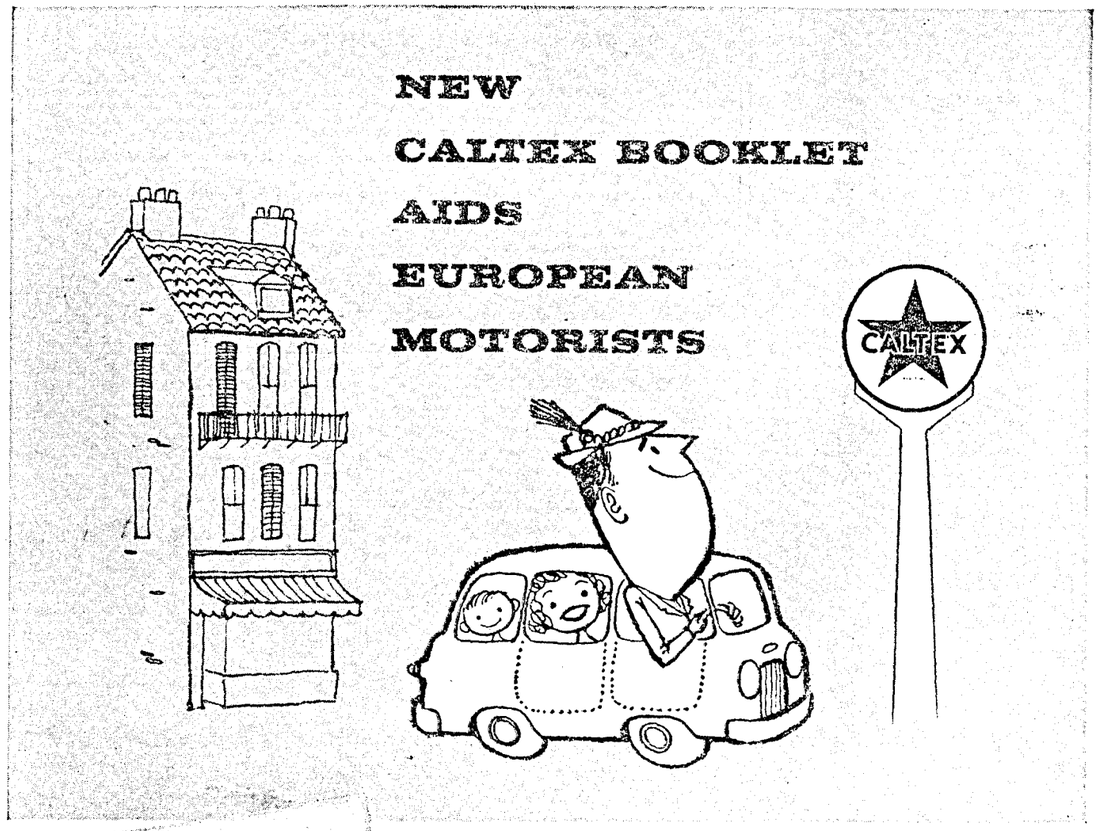
The number of students will be limited and applications must reach the Secretary of the Department not later than July 1, 1959. Candidates should hold a degree in Engineering or a suitable alternative qualification and have had some practical training and experience. They will be required to attend for interview in Cambridge on or before August 15, 1959.

Further details and forms of application for admission may be obtained from the Secretary, Cambridge University Department of Engineering, Trumpington Street, Cambridge.

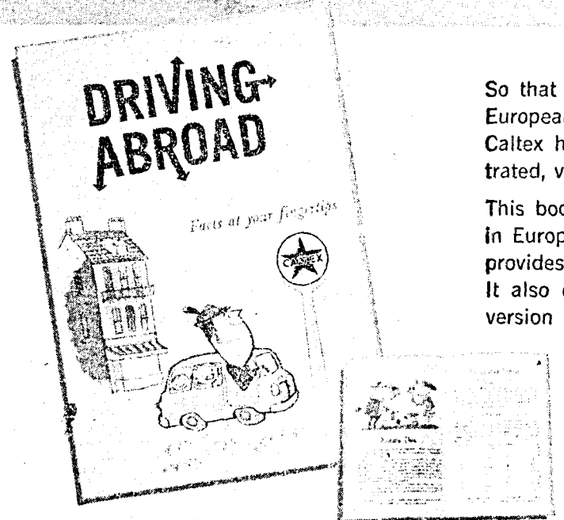
SUCCESSFUL TUITION FOR THE B.SC.ECON. DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for *Lond. Univ. B.Sc.Econ. (three if entrance is included)* at moderate fees. 1,147 W.H. students passed Lond. Univ. B.Sc.Econ. exams. 1950-58. Tuition also for G.C.E., Law, Statistical, other exams.—Prospectus (mention exam.) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.116, WOLSEY HALL, OXFORD.

SECRETARIAL TRAINING, especially for university graduates and older students. Six-month and intensive 14-week courses.—Write, Organising Secretary, DAVIES'S, 2 Addison Road, W.14. PARK 8392.



EXPERT POSTAL TUITION



for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, *Management, Export,* Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus, and/or advice, mentioning examination or subjects in which interested, to the Secretary (C9/2).

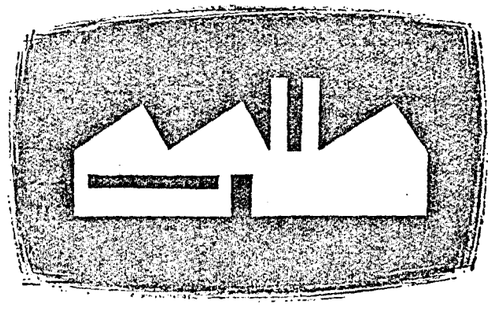
VOLUME CXC · NUMBER 6030

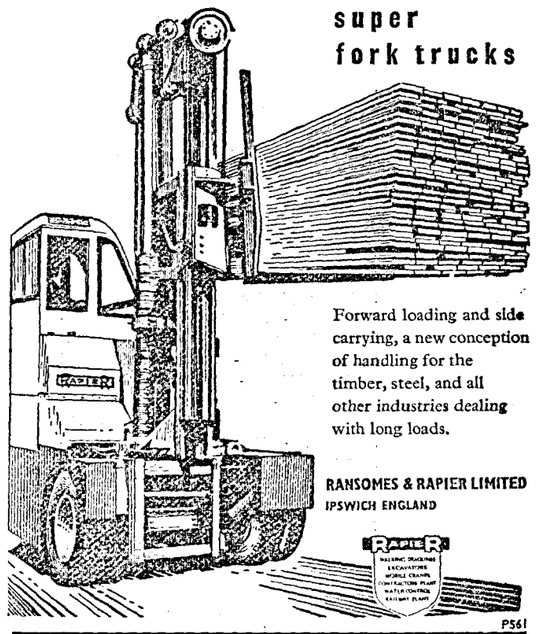
The rapid post-war development of Thorn Electrical Industries Limited owes much to the company's decision to move certain of its manufacturing activities in the lighting, radio and electric cooker fields, to Spennymoor in County Durham.



THE KEY TO INDUSTRIAL SUCCESS...

Like other industries which have taken this step, Thorn have not regretted the move. Today, after only seven years, they occupy some 400,000 sq. ft. of factory and office space and employ 2,700 people on the manufacture of radio and radiogram receivers, fluorescent lighting fittings and control gear, and domestic electric cookers. Local people, who know little of light electrical engineering, have surprised and pleased the company by their ability to learn a wide range of skills.

Development laboratories set up at Spennymoor are engaged on the design of new products and local people are taking over many of the jobs in these laboratories. The company's apprentice scheme for local youths is intended to train young men to take over as designers and executives in the organisation. Willing co-operation from local authorities, trade unions and other organisations have enabled Thorn Electrical Industries Limited to establish themselves as a progressive and highly productive manufacturing unit. Their decision to move to County Durham proved a key to industrial success.



...COUNTY DURHAM

In many parts of County Durham there are first-class industrial sites, offering a wide range of advantages to different industries. All have excellent access to provide the vital communications links, the essential services in County Durham are plentiful and cheap, labour is available and adaptable. A booklet "Industrial Opportunities in Durham" gives more details of these positive advantages. Copies are available from The County Planning Officer, Durham County Council, 10 Church Street, Durham, who will be pleased to assist in any way.

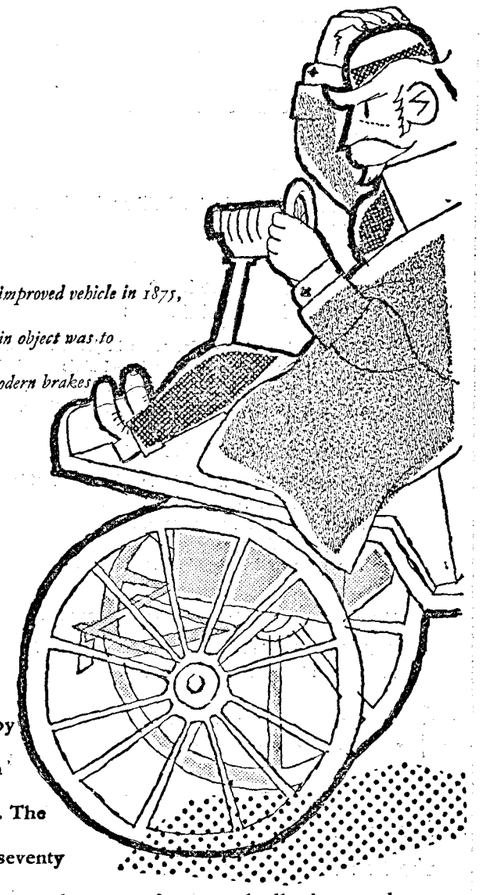
ITALO—ARGENTINE INDUSTRIAL CO-OPERATION AGREEMENT

Italian Industry to Supply Products Worth $31 Million

Another outstanding success has been scored by Italian industry in Argentina with the signing of a contract for the supply, within the framework of an Italo-Argentine co-operation agreement, of 280 Diesel-electric locomotives. This contract was achieved after competitive bidding in which leading industrial concerns participated.

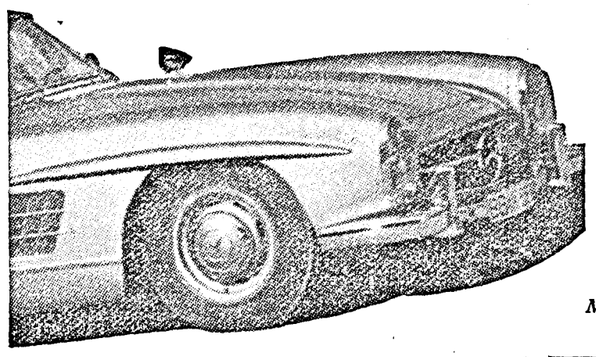
The agreement, which provides for delivery of products totalling $53 million, calls for close co-operation between Italian and Argentine industries. It was agreed that, while the first 80 locomotives will be built entirely in Italy, Argentina will increasingly participate in the construction of the others. This will be made possible through the completion of two new factories which, together with the existing FIAT Engine Works at Cordoba, will enable the greater part (80%) of each locomotive to be built in Argentina itself.



The group that was awarded this contract comprises two of Argentina's most outstanding mechanical and electro-mechanical industries, on the one hand, and for Italy CGE, OM, and two Finmeccanica Companies (ANSALDO SAN GIORGIO and OFFICINE MECCANICHE FERROVIARIE PISTOIESI), on the other.

The former will supply the electrical equipment and motors, whilst the latter will produce the mechanical parts. In total, the FINMECCANICA Companies will, under the agreement, handle work costing approximately $6 million. With this contract Italian industry adds yet another success to the long series of those scored over the last few years, particularly in the field of exported mechanical equipment, thus producing new evidence of the country's competitive ability.

ANNUS MIRABILIS



start....

Siegfried Marcus took the first motor ride in 1865. He built a much improved vehicle in 1875, which is preserved in the Vienna Technical Museum. In those days, the main object was to make the car go. Nowadays it is equally important to make it stop, and modern brakes must be capable of dealing with increased loads, higher speeds, frequent use.

and stop....

Some of the world's most advanced motor vehicle designs use brakes in which the linings or pads are attached to the shoes by Redux adhesives. Longer life, greater efficiency, freedom from chatter and from scoring are a few of the resulting advantages. The same method is used for bonding the structures of more than seventy types of aircraft. Redux, developed by CIBA (A.R.L.) LTD., is one of a range of structural adhesives used throughout industry for bonding metals, glass, ceramics, plastics, wood, rubber and many other materials.

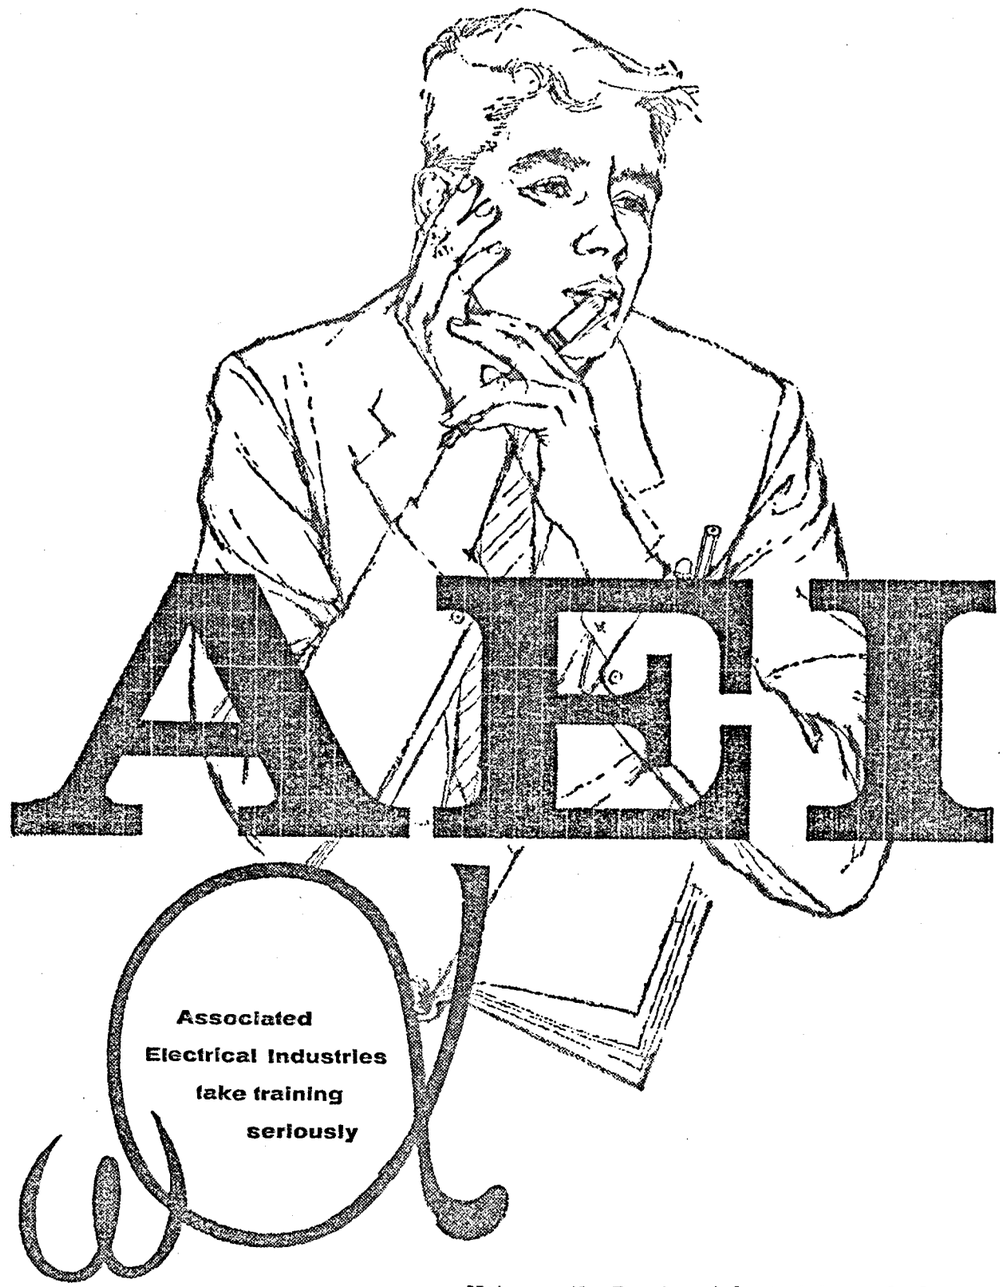
GRACEFUL GIRDERS OVER THE RIBBLE ON BRITAIN'S FIRST MOTORWAY

SAMLESBURY BRIDGE — PRESTON BY-PASS
OPENED BY THE PRIME MINISTER 5th December



The graceful lines of the new Samlesbury Bridge are made possible by modern welding technique employed by CLEVELAND. The eight 158 ton triple span steel box girders were assembled on site from many prefabricated sections giving the smooth unbroken contour which is a feature of the design.

Design and supervision by Mr. James Drake, B.Sc., M.I.C.E., M.I.Mun.E., County Surveyor & Bridgemaster, Lancashire County Council.

CRYSTAL GAZING?

A G.E.C. research engineer inspects a large single crystal of germanium which he has just removed from apparatus in which it has been "grown". Large crystals of germanium are "grown" artificially in the laboratory and, once formed, are sliced into tiny segments and used in the manufacture of transistors in the electronics and radio industry.

What do you see when you look into the future—in five years' time? Do you picture yourself as a scientist? a research engineer? a production controller? a management or sales executive in a prosperous, progressive industry?

If you will be leaving a public or grammar school with G.C.E. Advanced level in mathematics and science, or if you are graduating this year, your future could lie with the G.E.C.—one of Britain's leading electrical manufacturers.

G.E.C. Training Schemes can help make your future crystal clear.

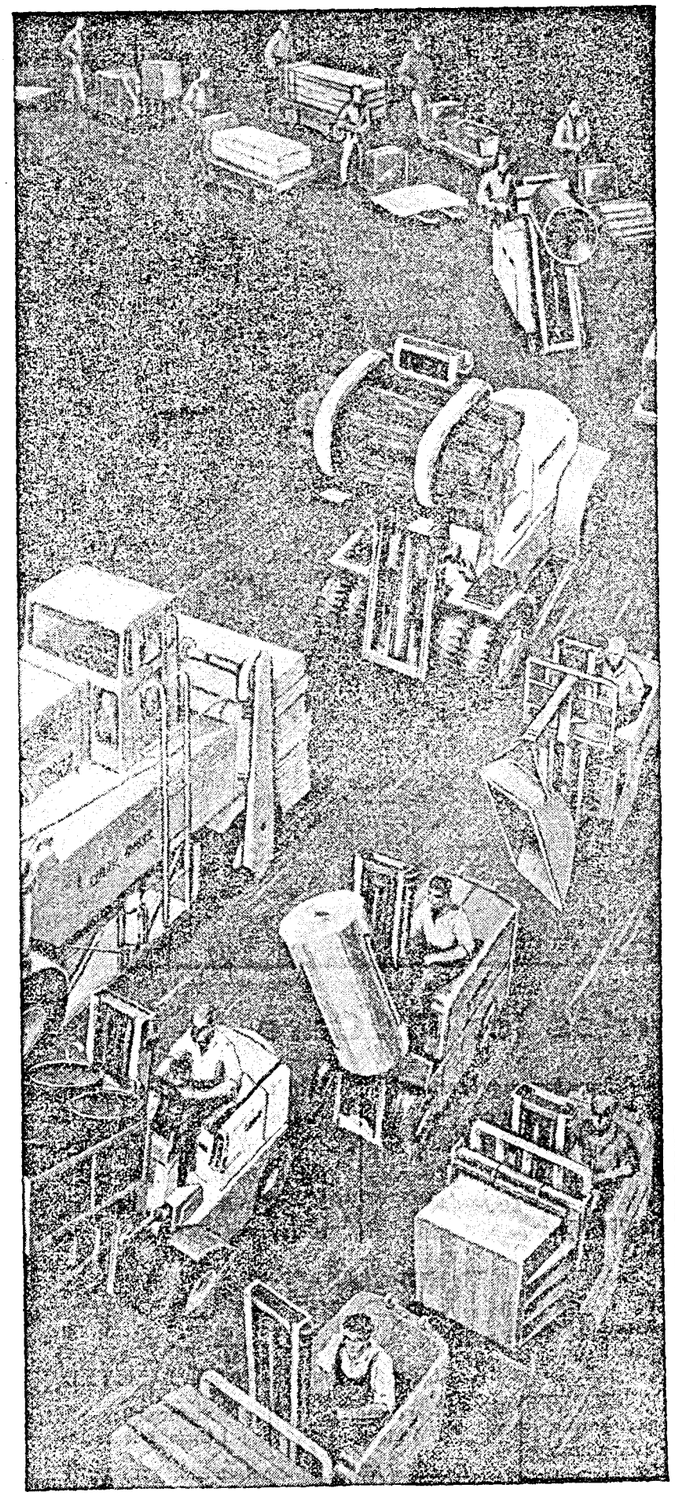
Spray type deaerator for 100,000 lb/hr.

Industrial Deaerators

The recirculating deaerator developed by Hick Hargreaves provides a simple and dependable means of preventing corrosion by reducing the oxygen content of the feed water. Effective deaeration is assured under all conditions of flow, no matter how wide or rapid the fluctuations in the feed rate, whilst the absence of floats and spray valves ensures great reliability. Three types are available. The Straight Spray Type is suitable for handling feed water from 130°F (55°C) to 200°F (95°C) and requires no heating steam for its operation. The Direct Contact Heating Deaerator accomplishes the dual purpose of deaerating and heating cold water up to a maximum outlet temperature of 180°F (82°C).



The pressure type deaerator is capable of operation with outlet temperatures up to 240°F (115°C).

Standard designs for all types are available with capacities from 20,000 lb/hour (10,000 kgs/hour) to 450,000 lb/hour (200,000 kgs/hour).

Fire worries for Mr. Care

You're feeling upset, Mr. Care?
More than somewhat,
Mr. Carefree.
Worried by the fire engine?
It sends cold shivers down
my spine.

You feel your home may be on fire?
Might quite easily be.
And I bet it's not fully insured?
That's why I'm so worried.
If I were you, I'd get fixed up with The Northern.

Won't it mean a lot of fuss?
Not in the least.
The Northern are wonderfully friendly and helpful.
I'll get in touch with them to-day.

YOU'LL BE ON GOOD TERMS WITH THE **Northern**

Africa to Scale

A MONTH has passed since the storm first broke over the Central African Federation. All three federal territories are now deeply involved. Scattered riot and sabotage have spread, the troops have been deployed, and the emergency regulations put into effect; the leaders and active organisers of the Congress movements in Nyasaland and Southern Rhodesia and of the Zambia faction in Northern Rhodesia have been penned in detention camps and jails. Reports of violent incidents continue to come in. There is no lull; but the tempo has slowed down, and there is more opportunity now for sober reflection.

This opportunity should not be lost. In the rush of recent events, it has been natural for attention to be fixed upon each particular aspect of the crisis as it evolved. Allegations, denials, and counter-allegations about specific local incidents; arguments about the rights and responsibilities of British members of parliament in general and about the treatment of Mr Stonehouse in particular; controversy over the division of authority within the federal system, and between Whitehall and Salisbury; wide-ranging but as yet unsubstantiated statements about impending massacre and Soviet inspiration—these have successively filled the headlines, the correspondence columns and the public's mind. Inevitably so: the riot and sabotage, the violence and the massive repression, the utter breakdown of confidence between black and white, the threat to all ideas of racial partnership—these, with the urgent problems they present of both public safety and political liberty, are the immediate, inescapable local facts; and the picture drawn by our Salisbury correspondent on page 1074 is gloomy indeed. But it is precisely because of the gravity of what is going on there and now that the chance should be seized to stand back for a moment to view the whole unhappy predicament of the Federation in its wider perspective.

The Federation is African; and the course of the great mainstream of political evolution in Africa can be charted by the steady flow of events in other parts of that continent. Northern Nigeria, which alone contains twice as many people as the whole Central African Federation, has just attained full internal self-government, and this is one of the last paving stones along the road to the sovereign independence that Nigeria as a whole will achieve next year. The neighbouring Cameroons, under the terms of last week's decisions in the United Nations Assembly, will pass out of tutelage in 1960. So will Somalia; and British Somaliland, raw though its new political institutions may be, has now been assured that if it chooses union with Somalia its choice will be respected. The new republics of the French Community in Africa are at grips with the first stresses and strains that their changed status involves, but there is no question of turning back their clocks, however discordant the chimes. In the Belgian Congo and in Tanganyika, the immediate neighbours of Rhodesia and Nyasaland, striking differences in past policies, in economic resources and in other circumstances have not prevented a broadly similar

trend from emerging: a trend towards ultimate rule by Africans.

It is a trend which the world outside Africa recognises and approves. Asian goodwill and respect for Britain is now largely determined by British readiness to recognise African aspirations and by British skill in smoothing the path for African advancement. In both Europe and North America there is widespread congratulation and relief whenever one more stage in the tricky process of "disimperialism" is successfully negotiated. And it is a trend which the Federation itself was founded to pursue, by stages, in its own different fashion; different because the goal here was a developing and real partnership in rule between white Africans and black. But the test here too, inevitably, was the pace of the advance of the black majority. It is this that has now been thrown fundamentally into question.

One cannot expect even well-informed opinion in every country to grasp all the complex realities of the current problems of a dozen or more different territories in Africa. The Federation is not Ghana or Nigeria, the Cameroons, or Somalia. But it is still the general trend towards African emancipation that matters in the eyes of the world, as in the intention of the Federation when it was constituted. What is dismaying to Britain's friends all over the world, and to Britons, too, is the sight of mass arrests of political leaders and their active followers, and the sound of repeated firing upon unarmed demonstrators who "refuse to disperse." it is not enough—indeed it will seem hardly relevant—to retort, truthfully or not, that, immediately, the blacks started it. The local responsibility for seeing that partnership could go peacefully forward was reposed in the ruling white minority; and the responsibility if the Federation becomes another Cyprus or, worse, another Algeria will be Britain's own.

The object lesson of France in Algeria lies bleakly before our eyes. There, too, there are white Africans, a great community of them; and there, too, and disastrously, no fair partnership with the large local majority has been begun. In Algeria the French have lost not only blood and treasure, but also the sympathy of many old friends and potential friends alike. Britain's network of relationships across the face of the globe is even more extensive than France's, and more vulnerable. As the centre of a Commonwealth of sovereign nations in every continent; as a great trading nation; and as the friend and ally of many nations to whom colonialism is suspect and racial domination even more repugnant, Britain stands to lose a great deal—materially as well as morally—if the world sees it brought to the forcible suppression in one part of Africa of nationalist aspirations of the same kind that it has helped forward in so many other places. And the Federation stands to lose its reason for existing.

The facts of the Federation's present plight are too intractable, and passions on both sides are too high, for it to be resolved simply by moralising. Both blacks and whites are bloody-minded now. But the moral question, for Britain and the world, is itself a question of fact. Is the Federation, which was created to raise up the blacks with the trust and aid of the whites, now doomed to fail—whatever the reason? Surely, not, we must say: the enterprise in partnership promised too much to fail so soon and so easily. But the question must be put plainly to the Rhodesians: Can you make partnership work? Do you believe in it—and do you see that in the (not so very) long run the only alternative to partnership is not white domination but black?

Above all, now, it must be made unmistakably clear to the Southern Rhodesian and Federal politicians and their supporters that, while Britain will gladly and energetically play its full part in any agreed programme for restoring peaceful co-existence between them and the more restive of their African neighbours, it cannot, in the last resort, help to sustain or even tacitly support a policy of continuing repression, under whatever guise. This is not because of the "spinelessness" with which the sturdy Rhodesian likes to charge the British as a whole. It springs from a simple calculation of the balance of British interests—as well as British self-respect—in the world.

A Tidier House

A select committee of MPs has recommended sensible improvements in Parliament's procedures, but has not raised searching enough questions about the job Parliament ought to be doing

PARLIAMENT'S main function is to criticise, which should mean making life more awkward for administrators. The inefficiency of Parliament is therefore a great prop to complacency and inefficiency in administration. The principal criticism to be made of the Select Committee on Procedure, whose report has just been issued (although the minutes of evidence are not to be available until after Easter) is that, while most of its proposals are sensible in detail and may provide some occupational therapy for the frustrated backbencher, it avoids or skates over some of the more fundamental problems.

The unspoken reason for this conservatism, which is shared to some degree even by the more enterprising minority members of the committee, is the paralysing effect of the omnipotence of Parliament. Its sovereignty is felt to be a great deterrent which must never be used, lest the heavens (or the upper echelons of the civil

service) fall. The backbencher must be given enough to do to prevent him jumping off the terrace into the Thames in despair, but apparently ought not to have the facilities to ensure that his criticisms are really well grounded.

The most efficient parts of the select committee's report are therefore those that are designed to clear away a number of untidinesses of procedure which cumulatively lower the House's effectiveness and prestige. About question time, for instance, the committee's suggestions are eminently sound: the number of questions which can be asked by any one member on any day should be reduced from three to two (in practice a third question is nearly always a repetition, in another form, of one of the other two); the House should support the Speaker in curbing supplementaries and getting a move on with the agenda (sometimes, nowadays, fewer than forty questions are reached out of a total of more than a hundred on the order paper); and Prime Minister's questions should be allotted a definite quarter of an hour period twice a week instead of, as at present, being dealt with only if Question Number 45 happens to be reached before the question hour ends at 3.30. It is anomalous that so highly capricious a system should have lasted so long, for it is of the very essence of parliamentary responsibility that the head of the Government should regularly be amenable to interrogation. This should be the Opposition backbencher's most glorious opportunity of making news, since the Leader of the Opposition, by tradition, does not initiate questions, except those that are asked at the end of the regular question hour by private notice.

ANOTHER set of desirable reforms is designed to give acceptable relief to the Speaker on the surprising number of occasions when he may now be obliged to make spot decisions with inadequate notice in highly controversial circumstances. For example, it is proposed that an issue of privilege should not have to be raised at the first available opportunity, but should retain its freshness for a further twenty-four hours.

A much more important rule of procedure, which probably causes more time and temper to be wasted on points of order than any other, is Standing Order No. 9, which obliges the Speaker to rule whether a member has made his case for moving the adjournment of the House "for the purpose of discussing a definite matter of urgent public importance." This is in effect the one means whereby the Government's timetable can be upset by a determined group of Opposition backbenchers (the Opposition Front Bench has other devices if it wishes to force a debate). It is therefore significant that the select committee unanimously agrees that the Speaker should be allowed time to consider his ruling—since the debate, no matter how urgent, does not take place until 7 p.m.; that, while he should still rule on whether the matter is "definite" and "urgent," it should be left to forty members of the House rising in their places to rule that it is of "public importance"; and that the restrictive rulings of past Speakers should be disregarded as precedents. This should lead to more of the snap debates being held.

Backbenchers should also be encouraged by proposals designed to give more of them an innings in the ordinary debates. Privy Councillors should indeed be deprived of their absolute priority in catching the Speaker's eye; and the idea of an hour that could be set aside, at the Speaker's discretion, for speeches limited for five minutes and immune from interruptions, sounds a sensible experiment.

Finally, in order to make more room for more general debates, especially on subjects about which royal commissions have reported, the committee has recommended that the detailed examination of bills should, as a more regular rule than at present, be banished "upstairs" into standing committees. Two criticisms could be levelled here. First, some people will say that the House is at its best when it is concerned with detailed examination of legislation, and at its worst in some of its more wide-ranging (but scantily attended) "general discussions." Probably the new rule about banishing bills to standing committees should not be too slavishly implemented; the fact remains that the House would profit from having more time for the sort of general debate in which, in another place, their lordships "move for papers." Secondly, and perhaps more pointedly, the committee, having decided that it wants to save time, does not give the House clear enough guidance on the details of how to go about it.

The main time-saving proposal is supposed to be by referring part or all of the Finance Bill to a standing committee. But the select committee confines itself to listing a number of different ways in which this could be done, without deciding between them. Since apparently one standing committee could not handle the whole bill in the time, the best method surely would be to divide the bill between two or more committees. Moreover, in view of the emphasis which the report lays throughout on channelling more work to the standing committees, it is a pity that the report is at its weakest in discussing their procedure. Such committees cannot, and at present do not, give every part of a bill adequate examination unless a timetable is established from the outset. But an ingenious proposal by Mr Blackburn for a business committee to draw up such timetables was rejected by seven votes to three.

GRANTED that most of the select committee's ideas would be helpful, why can it be given only two cheers for effort instead of three for important accomplishment? Part of the answer lies in the proposals which the committee's majority turned down. It is a huge pity that it rejected by seven votes to six a proposed paragraph drafted by Mr Leslie Hale, which pinpointed the main reason why MPs are at a hopeless disadvantage when trying to take on the bureaucratic machine on behalf of the public. They lack even the most simple amenities. Mr Hale was even too modest

in listing what is needed. An MP should have at least an office, a secretary, and the services of a greatly expanded research library. Fewer tears need perhaps be shed over the proposal for two-hour morning debates, without votes or whips, during which junior ministers should reply to points raised mainly by backbenchers. This looks more like backbench therapy than a measure to increase parliamentary efficiency. But if there is some genuine demand for such debates, there would be no conceivable harm in trying them as an experiment.

A MUCH more important principle was involved in Mr Hale's unsuccessful proposal for a first experiment with the device of a specialist committee—for the colonies. It is indicative of the conservatism, even of the minority members, that some of them would probably not have voted for the proposal at all if the suggestion of morning debates had not previously been turned down. Moreover, Mr Hale's plan itself was only for a debating committee, which should include a junior minister among its members. But would anyone really be much the wiser if once or twice a week a bipartisan group of colonial enthusiasts batted their ideas to and fro with Mr Julian Amery? To improve their knowledge of colonial affairs—and so refine the pertinence of their criticism—members of the committee should be able to examine witnesses (including some officials partly off the record) and should certainly travel widely in the colonial territories. Any such innovation—even in Mr Hale's mild form—is, however, to be ruled out, on the (surely exaggerated) apprehension that it would "ultimately be aimed at controlling rather than criticising" the policy of a Government department.

One final shortcoming of the select committee is its failure to deal at all adequately with the question of how and by what means Parliament should check the estimates. This really comes to the heart of the House's duty to keep the administration up to the mark, while also not impeding it. The present detailed presentation of estimates is a farce, and for the Treasury it must be an expensive one. The form in which the figures are set out is dictated by traditions of Parliamentary accountability which have fallen into disuse. Supply days are used for general debates, chosen by the Opposition. The select committee on estimates does a spot check, whose usefulness in checking extravagance is greatly overvalued in the present report. A really radical committee investigating Parliament's procedure would surely have recommended that Parliament forgo its right to have the estimates presented to it under the present multifarious subheads which nobody really reads, in a form and under a time schedule which are themselves potent sources of extravagance. It would then have examined ways in which the less exhaustive expenditure estimates which should be presented to the House could be more exhaustively scrutinised.

The select committee's work should enable members to spend their time a bit more sensibly. But without fundamental reforms governments will still get away with more than they should.

Khrushchev's Arab Ledger

President Nasser's apparent foolhardiness in cocking a snook at communism may be based on his realisation that the Soviet Union, no less than the West, would be embarrassed if compelled to take sides openly between Iraq and Egypt.

THE row between Iraq and the United Arab Republic is pushing both sides uncomfortably far into the open. True, in the past, Arab slanging matches have been known to rumble away into nothing long after reaching a point that seemed to onlookers to be one of no return. But this last week, spades have so candidly been called spades that it may prove equally difficult for General Qasim to resume his balancing act between communists and Arab nationalists and for President Nasser to go back to his opportune dichotomy between Arab communist parties and international communism.

The revolt at Mosul which inspired the brawl has been buried under thousands of words of grief and anger. In some half-dozen virulent speeches in as many days, President Nasser in Damascus has attacked communism as no less a danger to Arab nationalism than imperialism or Zionism; accused General Qasim of being under the domination of the subservient and atheistic agents of "foreign powers"; and thrown in some heavy, if inaccurate, hints about Egypt's historic mission to liberate Iraq from the foreign influence of "Tartars." Baghdad, in retaliation, has called President Nasser the agent of imperialism, reaction and American capitalism (for good measure it blames the Mosul revolt on the Baghdad pact as well as on the United Arab Republic). President Nasser has denounced a communist plot to create a "fertile crescent" comprising Iraq, Syria and Jordan; Colonel Mahdawi, Iraq's notorious public prosecutor, has demanded Syria's liberation from the bondage of union with Egypt. Both sides, understandably running out of original abuse, have dragged in uncharitable comparisons with Nuri es-Said.

It is not yet entirely clear how Mr Khrushchev will take all this. The Soviet leader, still a newcomer to the role of international philanthropist, is not as accustomed as the western powers to having his helping hand bitten. From 1955, when the first Czech arms were sold to Egypt, until the end of 1958, the Russians did well in the Middle East by floating with the tide. Their target was to dislodge western influence; all they had to do was to provide a little money and munitions, identify themselves with nationalist aims, and leave the rest to Arab chauvinism and western blunders. Since there was no question of Egypt's suppressed communist party coming to the top, they dissociated themselves from it and so won bouquets for their non-interference. President Nasser, congratulating himself for being able to manage the Russians, accepted their money and intensified his campaign against communist activities in Egypt and, particularly, in Syria.

The turn of events in post-revolutionary Iraq may have encouraged Mr Khrushchev to set his sights higher. He can hardly be expected to turn down the chance—if he gets it—of exerting direct influence through the Iraq communist party in a country so strategically placed and so important to western interests. But he has now to draw up a difficult balance sheet. Will he, by investing too heavily in Iraq, run the risk of alienating the rest of the Arab world? In other words, will he find himself repeating the western mistake of trying to exert influence through ill-chosen friends?

THE first sign of a show-down came in December, when President Nasser, speaking at Port Said, bracketed the Syrian communists with imperialists and Zionists as joint enemies to the Arab cause. Although there was then none of today's frank speaking, he clearly implied that he was looking beyond Syria to Iraq. For the first time Russia showed its annoyance; at its 21st party congress, Mr Khrushchev condemned anti-communist measures in Arab countries and suggested that President Nasser was going too far. The UAR returned the ball smartly into the Soviet court by suggesting that Mr Khrushchev should please keep his nose out of other people's affairs. Last Monday Mr Khrushchev pointed out that he considers events near the Russian frontier to be his affair, and told President Nasser, in effect, to leave Iraq alone. Speaking at a Kremlin party held to celebrate a 550 million rouble credit to Iraq, he warned the President "in a friendly way" that an anti-communist policy would get him nowhere: "attempts made under the cover of the nationalist flag to ignore the interests of the population, of the working people, are doomed to failure."

But having said this, he gave public notice that Soviet relations with the UAR would remain unchanged. One western mistake that he apparently is not going to repeat is the brusque withdrawal of promised aid. The Soviet Union is committed to build the first stage of the Aswan high dam; if it backs out now, it makes nonsense of all its promises to keep its aid free of strings. President Nasser might well emerge as unscathed from a second setback over the dam as he did from the first; the Soviet Union, on the other hand, might find its reputation newly discredited throughout Asia and Africa.

Mr Khrushchev could, of course, try to call President Nasser to order less publicly; an obvious form of persuasion would be to go slow over the supply of spare parts for Egypt's Migs, tanks and small arms. This would effectively discomfit Egypt's military regime. But unless an open clash between the Arabs forces him to take sides, Mr Khrushchev's reassurance probably means what it says; for as long as President Nasser remains the principal leader of Arab nationalism, Moscow cannot afford to dispense with his good will.

SOVIET policy may prove flexible enough to work one way in Baghdad and another in Cairo. The axiom "he who is not for us is against us" applies to heretics in the Communist camp, such as Marshal Tito, but so far there has always been a different set of standards for the "uncommitted." Lately Mr Khrushchev has been showing less patience with neutralism; Mr Nehru, as well as President Nasser, has come under Soviet fire. But a tougher attitude means less than a change in course. Russia's Middle East policy has paid good dividends, and it would be unlikely to risk losing all by prematurely cracking a doctrinal whip. Instead, it may have to stomach the fact that President Nasser's positive neutrality will not always be as positively friendly as it has been for the past three years. The President gives as good as he gets: his reply to the latest Kremlin warning is both unequivocal and unabashed:

> We hope that this friendship [with the Soviet Union] will continue and prosper, but we cannot accept support for the communist minority in our country against the unanimity of the Arab people and their determination to pursue a national and patriotic independent policy based on non-alignment and positive neutrality.

This is not to suggest that President Nasser will now swerve towards the West—even if the West would have him. Baghdad's main line of attack now is that he is identifying himself with western interests and, for all his resilience, it would be suicidal for him to substantiate this charge. The conclusion of the Anglo-Egyptian financial wrangle (the squabble that continued in Westminster this week no longer involved Cairo) and the comforting presence of World Bank officials in Cairo give him ballast, but nothing more.

For once the Soviet Union and the West have parallel interests in a Middle East situation: both are anxious to avoid an open clash between Arabs. But if any lesson at all can be drawn from the confusion of the last two weeks, it may be this: Arab nationalism does not need western instigation or western bases to take a stand against the spread of communism in the Middle East.

Levant and Couchant

An account of the sad, splendid law suit of William of Effingham

THE parish of Effingham in Surrey, a few miles from Leatherhead on one side and Dorking on the other, lies on the fringe of London's outer suburbia. It is part of a wealthy district, whose inhabitants are for the most part valued commuters of British Railways. The majority of them draw their livelihood not from the soil, but from the Stock Exchange, Lloyd's and the Baltic, or from some other profitable employment in the City. Some of them, no doubt, have farms ; but many of them farm with one eye on their surtax returns and the other on the prestige of a connection with the agricultural interest. It is not, at first sight, a district likely to beget a law suit turning on mediaeval rights of pasture and on the abstruse niceties of Anglo-Norman land tenure.

But Effingham has done it. It has recently produced a case that might have come straight from the reign of Elizabeth I. It has watched the case through two courts ; and has received from a Lord Justice a word of appreciation for giving him "a refreshing expedition through what is becoming a rather obscure branch of the law."

The plaintiff was a Mr Estler, who has a smallholding of five and a-half acres. To help him in his work he had a horse called William, and in the summer months it was his custom to graze William on the local common. William (now aged 19) sounds rather a nice horse, but the Lord of the Manor objected to him, challenged William's right to graze, and several times had him impounded, thereby not only interfering with his life's work but also keeping him away from the Guildford pageant, where he was booked to make an appearance in person. Mr Estler disputed the Lord of the Manor's right to impound William. The Lord of the Manor resisted and put in a counter plea that poor William was *damage feasant*, claiming £30 on that head. Mr Estler lost in the county court, but, being a man of spirit, he went to the Court of Appeal. There, after a splendid fight, he lost his case again—and lost it on the old familiar law of levancy and couchancy.

The Economist

MARCH 19, 1859

THE ITALIAN IMBROGLIO

When you have two exasperated Potentates face to face, ready for war, and inflamed by mutual and long-fostered animosities, one of whom scarcely can, and the other of whom scarcely wishes, to back out ; when you have two hostile armies lying within a few miles of each other, one of which contains thousands of sanguine patriots and youthful aspirants from various provinces, all eager for the strife, full of bright hopes, and maddened by intolerable wrongs ; when in every state of the Peninsula human combustibles of the most explosive character are lying in masses, surrounded not by smouldering sparks, but by blazing torches ; and when a fire lighted in any one spot must become a universal conflagration,—who can hope that the question of peace and war is likely to be left to the calm decision of Cabinets and Statesmen who protocol and correspond in their arm-chairs ? A shot fired in haste or in mistake ; the vehemence of some impetuous subalterns ; a resented wrong or insult which in quieter times would have been endured in silence ;—these are the things which in all likelihood will inaugurate the struggle, the final issue of which God only can foresee. But in this struggle we assuredly have no need and no right to intermix. We may deprecate it—for war is always an evil, even when it leads to good and is righteous in its origin ;—and few wars can be much worse for humanity or much more costly and mischievous to Europe than the present state of armed expectation, or the condition for some years past of unhappy Italy.

READERS of *The Economist* will not need to be reminded that in English law the rights of common of pasture are four in number ; but to refresh their memory the varieties may be named. They are:

1. Common of Pasture *appendant*.
2. Common of Pasture in gross.
3. Common of Pasture *pur cause de vicinage*.
4. Common of Pasture *appurtenant*.

Mr Estler's advisers naturally had to decide, first of all, on which of these four legs they were going to stand. Two of the legs were obviously useless. Appendant, if it had been put forward, would have been laughed out of court. The right in gross was a washout, too. Pur cause de vicinage might perhaps be useful in an emergency. But the weight of the argument must undoubtedly rest on appurtenance. Anyone can see that. It has many advantages in law and, apart from anything else, it has always been popular with the judges, who realise that appurtenance (like William feeding on the common) is "unfettered in its character."

But if appurtenance was to be the winning card counsel must deal very carefully with levancy and couchancy. To an uncultured mind levant and couchant sound rather like a French version of bed and breakfast ; but that is not their true meaning. They denote, in fact, a means of deciding the number of beasts that a man may graze on a particular common. It has been settled since 1799 that there must be a limit to the number, and levancy and couchancy are the agents that decide it.

How do they fix the limit ? What do levancy and couchancy do ? Well, first they ascertain how many acres of the claimant's land have the right of pasture appurtenant to them. Then they make inquiries about what happens in the winter, finding out how many beasts the claimant can feed during the winter months on the produce of his land. If he can keep seven beasts fed in the winter, then he can turn seven out to graze in the summer. If three, then he can turn out three, and so forth.

Now to feed one horse in the winter takes a ton of hay ; and to produce a ton of hay you need about three acres of land. So a smallholder with three acres of the right sort has the right to graze one horse throughout the summer. That looked good for Mr Estler with his five and a half acres. They should surely give him everything he wanted for William with a good margin to spare.

But things did not work out like that—and for a very subtle reason connected with levancy and couchancy, which are not so simple as they sound. When it comes to the common of pasture appurtenant, levancy and couchancy will only take note of land that was copyhold until 1926. Anything that was freehold before that year means nothing to them. They do not recognise it. And unhappily only two of Mr Estler's five and a half acres were ever copyhold. The others have been freehold all the time. So levancy and couchancy made their calculation of his rights on two acres only. And two acres would give him a right to two-thirds of a horse. To graze two-thirds of a horse on a common being physiologically impossible, Mr Estler lost both his case and his horse. Moreover he must pay £20 for the damage William did.

Involved in this litigation have been one county court judge and three judges in the appeal court, at least three learned counsel, a firm of solicitors at Guildford, and two particularly eminent firms in London. The costs have been estimated to be £1,000. The case lasted for three days in the Court of Appeal, and, while it must, of course, enhance our respect for the majestic simplicity of the English law, it may also make us wonder what it is that drives ordinary folk to go to law on such terms as these. Of the principal figures in the case the most intelligent, it may be thought, was William.

NOTES OF THE WEEK

MR MACMILLAN

The Last Lap

MR MACMILLAN has crossed the Atlantic with higher hopes than seemed possible a week ago. The slow evolution of western policy has reached the point at which a summit conference now seems to be accepted as inevitable, even by those who still plainly believe it to be undesirable. Exactly how far the West is prepared to go to revoke its earlier precondition—that a foreign ministers' conference must report progress before the heads of government agree to leap to the summit—will become apparent with the publication of the reply to the Soviet Note of March 2nd. President Eisenhower seemed to desert this charge in substance, if not in form, in his broadcast on Monday (which is discussed more fully in a despatch from Washington on page 1064). All along, it has been a hopeful sign from the British point of view that the delivery of the western Note should be delayed until after Mr Macmillan had been able to present his arguments for flexibility as widely as possible within the alliance. The West is not likely to give too much away in its reply ; what matters more is the general atmosphere that surrounds its presentation. (Mr Khrushchev, for his part, in the press conference that he was giving on Thursday afternoon as *The Economist* went to press, seemed preoccupied with the contest to show more willing than the other fellow.)

But if the West has made up its mind on the summit, it has still to reach agreement on the positions—particularly the fall-back positions—that it will take up there. Now that Mr Macmillan has reassured the French and the Germans about what he means by a military thinning-out in central Europe, the relevant phrases of the Moscow communiqué probably look less interesting than they did to Mr Khrushchev. But this is still by far the best jumping-off ground for a discussion. President Eisenhower's assurance that he is "willing to listen to new ideas and . . . prepared to present others" will be important both at Camp David this weekend and at any east-west meetings this summer.

Mr Macmillan's stopover in Ottawa has been the easiest stage of his travels. Mr Diefenbaker, although tragically deprived of his external affairs minister, Mr Sidney Smith, has readily upheld the British preference for serious and sustained talks with the Russians on Germany—on which he has some ideas of his own. If the summit is ever thrown open to lesser chamois, Canada has better claims than most to an invitation.

GERMANY

Two Visitors

AFTER the polite inconsequence of Mr Macmillan's Paris visit, his trip to Bonn brought a rather more substantial *rapprochement* of views. To Germans, Mr Khrushchev's threatening posture over Berlin is far from being an academic exercise. Memories of the 1948-49 Soviet blockade of the city, and a pretty clear appreciation of the weakness of the western position there today, combine to explain the rather nervous sense of crisis which lay behind the wave of mistrust of Mr Macmillan's Moscow visit. To Mr Macmillan, on the other hand, Dr Adenauer's trip to Paris was hardly a help. The Prime Minister's Bonn journey seems to have restored a good deal of mutual confidence. Bonn seems prepared to accept the path of negotiation that Mr Macmillan is trying to follow ; on the British side, a cautious interpretation of the reference, in the Moscow communiqué, to a central European zone of restricted armament, has set some German fears at rest.

It is not only in the West that differences of emphasis between allies are evident from time to time. Mr Khrushchev's speeches in east Germany and his proposal for a separate peace treaty with its government no doubt pleased Herr Ulbricht. But there are a good many indications that at the end of his visit Mr Khrushchev reined in his ally in

private. The east German press, which had been merrily canvassing the prospect of an imminent separate treaty, changed its tune this week and returned to the theme of a treaty for all Germany. Herr Ulbricht can be pretty confident that Mr Khrushchev will try to get recognition for the east German Democratic Republic and a settlement on the basis of the *status quo*; but he cannot be sure, as long as the broader German question remains on the table.

On Tuesday, however, Herr Erler and Professor Schmid, two members of the executive of the west German Social Democratic party, who have been visiting Mr Khrushchev in Moscow, reported that he had told them: "Nobody really wants the reunification of Germany at this moment—nobody at all!" At one point he did toy with the notion of gradual disengagement in parallel with steps to German unity, but he rubbed in the Soviet argument that these must be negotiated between the two German states.

BY-ELECTIONS

Bogey for Harrow

THE result of the Harrow East by-election, which was taking place on Thursday, may be a decisive factor in influencing Mr Macmillan towards or against a May general election. In 1955 Mr Ian Harvey won just under 54.4 per cent of the vote at Harrow, against just over 45.6 per cent won by Labour—a majority of 8.7 per cent, which means that Labour would need a swing of just under 4.4 per cent to win the seat. In recent by-elections up and down the country the average swing to Labour seems to have been around 3 per cent, which is very slightly higher than the swing that Labour would require nationally in a general election in order to attain parity with the Conservatives in the House of Commons. Where non-party candidates have intervened in recent by-elections (as a small shopkeepers' candidate has intervened at Harrow), even the oddest right wing independents have been winning up to 10 per cent of the total vote; most of it has come from the Conservatives compared with 1955, but it seems generally to have included the 3 per cent or so of former Conservative voters who in recent straight fights have swung over to Labour. On this reckoning, the small shopkeeper's intervention would deprive the Tories of the seat only if he has won more than 8.7 per cent of the total poll.

In last year's local elections Harrow showed a slightly above-average swing away from the Conservatives. Moreover, the special factors attached to Mr Harvey's resignation might normally be expected to induce some Tories to stay away from the polls this time (although Mr Harvey's conviction has never threatened to be as major a political factor as many Conservatives gloomily assumed at the time, when they said that it might lose them the whole general election). Against this, the small shopkeepers' Mr Lynch is such a very odd independent that it has seemed difficult to envisage how more than a few hundred people could really persuade themselves to vote for him.

If Labour has won East Harrow, either through sufficient Tory desertions to Mr Lynch, or through a direct increase in its own share of the poll, then Labour should be regarded as the favourite to win an early general election. If the Conservatives have won Harrow by a majority of anywhere between a few hundreds and about 1,200, this will suggest that public opinion remains just about where it has been all winter, with desperately level pegging in the national race between the two big parties. If the Conservatives have won with a majority of anything over 2,500, then that could be regarded as a sign that the Conservatives have made a recovery in these last few weeks, at any rate in the fully employed South of England. Even before Mr Macleod announced lower national unemployment figures on Wednesday, many experienced judges of political trends (and some of the public opinion pollsters) were suggesting this week that such a regional recovery seemed to be in train.

Belfast and Norfolk

BELFAST EAST was also polling on Thursday, but its result is unlikely to be nationally significant. Because the Northern Ireland Labour Party has been becoming increasingly "respectable" on the partition issue, one had expected a sizeable swing towards Labour here; now that the releases of IRA militants from the Curragh have inflamed loyalist passions, the leftist swing might or might not be stopped. But the way that Ulster passions go, under the influence of these special circumstances, will be no clear guide to the trend of opinion in the rest of the United Kingdom.

The next big test after Harrow will therefore be the by-election at South West Norfolk, which takes place next Wednesday. Labour won this seat in 1955 by 193 votes, or 0.6 per cent of the total poll; a success of this sort is not so much a majority as an accident. Norfolk was the only area of the country to show a distinct swing to Labour in 1955 compared with 1951. This could mean that there is less scope for a leftward swing there now; it is possible that the main army of potential floaters to Labour had already floated Labourwards by 1955. In normal circumstances, the party that won a straight fight in South West Norfolk now might be regarded as the favourites to win an early general election.

But three local developments have complicated the picture. First, the by-election is not going to be a straight fight. A right wing nationalist has intervened; although his anti-American views might conceivably win some support from the extreme left, he seems much more likely to siphon off more votes from the Conservatives (with whom he has previously had political affiliations). Secondly, the Conservative candidate is a Mrs Kellett, and there is some statistical justification for the view that rural constituencies have a prejudice against voting for a woman. Thirdly, the details of this year's agricultural price review were published on Thursday; and in the week after any price review (even one as beneficent as Mr Hare's) all farmers tend to grumble against any government. If Mrs Kellett carries South West Norfolk next Wednesday, and if this follows upon a Conservative majority of anything over 2,500 at Harrow, then Conservative pressure for a May general election is likely to become very strong.

Victory Through No Issues?

Our special correspondent who has been in East Harrow writes:

RIGHT up to the eve of poll Commander Courtney, the Conservative candidate, was bouncing from meeting to meeting in his blue jeep proclaiming to all who would listen his joy at discovering that there were no major issues in Harrow. No housewife had cried out about prices, the ugly word which the commander had evidently once thought was the ulcer that might destroy him. There is no unemployment in this characterless constituency, most of whose male inhabitants travel daily to work in London. The commander's election literature displays the curious combination of super-patriotism and enthusiasm for closer economic relations with Russia that are becoming the mark of the Tory right wing. "As a small cog in the wheel of British sea-power," this bluff sailor had seen, under the socialists, "disastrous surrender at Abadan and the handing over of our best jet aircraft engines to Soviet Russia." But the Conservative candidate also turns out to be a Russian-speaking expert on Soviet trade unions and other Soviet domestic affairs, a professional consultant on East-West trade, and, to judge from a photograph which he proudly publishes, a personal friend of the Polish prime minister.

His Labour rival, Mr Merlyn Rees, a local schoolmaster, spends much of his energies explaining what the Labour party's education policy does not mean. Specifically, one gathers, it does not mean comprehensive schools at Harrow—and Mr Rees, who informs the voters that he once wrote a thesis on "The Economic and Social Development of Extra-Metropolitan Middlesex in the Nineteenth Century," has tentative and moderate-sounding views about replacing the eleven-plus exam. For the rest he talks, soundly but vaguely, about helping underdeveloped countries and working for peace through disengagement. At one meeting he had to try to reassure a worried supporter who had misgivings about Labour's municipalisation plan if this was going to turn her into the tenant of a Tory council.

If Harrow is setting any pattern for the general election, it suggests that the Tories are planning to fight largely on the contrasting personalities of the rival front benches. Commander Courtney harped on the personal feuds in which some shadow Labour ministers have embroiled themselves with men with whom they would have to deal when in office—Mr Bevan with Mr Dulles and Mr Callaghan with Sir Roy Welensky. It also shows that the Labour party's publication of its policy documents has given Tory candidates something to aim at. Even though some of Commander Courtney's shots were wild, they did have the effect of forcing his opponent into a defensive posture.

Little was seen or heard of the third entry in the race, the shopkeepers' Mr Lynch. There is much to be said for a candidate of protest; but a candidate of protest without a voice is an absurdity.

NYASALAND

The Wrong Commission?

SIR ROY WELENSKY has now declared that the only thing that is delaying the publication of a white paper on the "plot against the Europeans" in Nyasaland is the possible preparation of proceedings against African leaders. He cannot prematurely publish what could be part of the evidence in cases that may soon be *sub judice*. Here at home Mr Butler said much the same thing to a Sheffield audience this week: "Our next course will be to acquaint the British people with all the facts. . . . We shall then take up the suggestion for some form of adequate inquiry into the situation." There are strong rumours that the British Government intends to make this inquiry a judicial rather than a parliamentary one. It looks sadly as if the Colonial Office thinks that it has got sufficient proof of something nasty in Nyasaland to convince a judge, and that it wants to use this to justify itself before the country against the Labour Opposition.

This may look very tempting in terms of electoral strategy, but it would be a mistake in terms of statesmanship. There are three things that a wise British Government should now want, and each of them would be more likely to be furthered by sending an all-party group of MPs to Nyasaland than by sending a judge. First, here at home, the Government needs to work out a bipartisan policy with Labour—not, on this issue, to widen the rift with it. If some Africans have been plotting terrible things in Nyasaland, then Labour MPs who studied the facts in a commission on the spot would learn usefully to temper their present extreme assumption that all black Nyasan politicians are necessarily blameless and all white settlers necessarily wicked. If a judge is sent out to issue a report explaining this, some Labour MPs are quite capable of making emotional noises about not believing even the most carefully-documented judicial findings; Labour policy towards the Federation would then become a matter, not of bi-partisanship, but of face.

Secondly, about the white Southern Rhodesians. They would hate to see British politicians invading Nyasaland at this moment. That does not matter; the need now is to convince black Nyasalanders that they are dealing with Britain, not only with Sir Roy. An all-party commission of MPs could help to reassure them of this. Thirdly, about Nyasaland's future constitution. An all-party commission of MPs could help in framing this, and also pave a way towards reopening negotiations with some Nyasan leaders—negotiations which will have to be started, and sooner rather than later, plot or no plot. Under each head of policy, the prime need now is to make preparations to face the future; the prime need is not, on either side, to look back in judgment on the immediate embittered past.

FARM PRICES

Avoiding Conflict

FARMERS have done fairly, though not outrageously, well in this year's price settlement. The Government has increased the total value of its guarantees (including the cost of the small farmer scheme) by £3 million; this compares with an estimated increase in farmers' costs of at most £11 million. This cut of £8 million or less in what farmers call their "just recoupment" is a modest one in the light of the Government's declared policy of progressively reducing price guarantees. The maximum cut that would have been permitted under the 1957 Act was some £30 million. Last year something approaching the maximum cut was in fact imposed, in the teeth of indignant opposition from the National Farmers' Union; this year the Government has stayed its hand and has reached an agreed settlement with the union.

This result is not due solely to electoral considerations. The Government has more respectable reasons for being generous, in particular the fact that agricultural subsidies in the current year will cost some £50 million less than was originally estimated, owing to the rise in market prices. The much-subsidised pig has become obligingly less prolific, and the decline in both pig-breeding and milk production

has provided the union with a respectable case against any further cut in pig and milk prices. This has left eggs as the one commodity where over-production is undeniable, and price cuts have been fairly bravely applied to them. They have also been applied to wool, wheat, and rye, but all other price guarantees remain unchanged. The calf subsidy has been increased to encourage a further switch from milk to beef. Altogether a modest £3 million has been lopped off the general price and production guarantees, but the addition of the cost of the small farmers' scheme makes total Government liabilities £3 million higher.

Last year's cries of gloom and doom from the farmers make strange reading now. The past year's decline in farm incomes seems, in fact, to have been wholly attributable to the weather. Apart from this factor, the stiff price cuts administered last spring would have been assimilated through greater efficiency without any diminution in total farm income. Had this not been an election year, the Government would surely have seized the opportunity of repeating the dose and thus making the breach in the agricultural subsidies really effective. Even as politics are, it might have been rather tougher, for the union was under the awkward harrow that it could not really squabble publicly over the price review for a third time in four years and still retain its privileged negotiating position, especially as it now knows that its complaints last year were exaggerated. Both parties in fact needed to agree, and neither was prepared to try anything new. The resulting pedestrian compromise, while not too economically offensive, represents a year's setback in placing agricultural policy on a sounder footing.

ITALY

Signor Pella in London

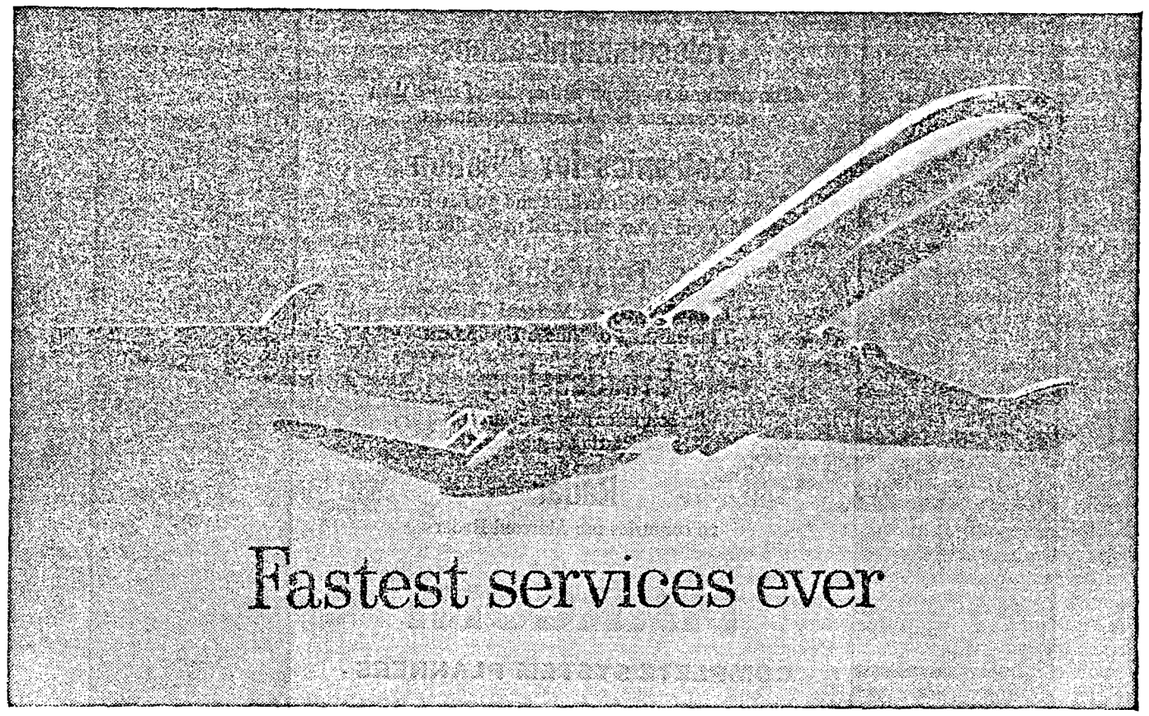
To cut a more considerable figure on the international scene is nowadays a principal object of Italian governments. The last prime minister, Signor Fanfani, who was his own foreign minister, thought to do this by adopting a more independent attitude towards his Atlantic allies and by trying to acquire influence and an economic stake in the Middle East. His successor, Signor Segni, and the new foreign minister, Signor Pella, appear to be trying to gain the same end by bringing Italy back to strict adherence to the Atlantic pact, while at the same time seeking a weightier voice in the counsels of the alliance. Their designs seem to be favoured by events. The diplomatic pother created by Mr Macmillan's visit to Moscow, Mr Khrushchev's pronouncements, and the closer prospect of negotiations with the Russians, has enabled them to play an active part in the comings and goings. This week Signor Pella has been in London at the invitation of the British Government; together with Signor Segni he has also been visiting Paris and Bonn; and early next month he plans to go to Washington for the spring session of the North Atlantic Council.

Italy's desire to be represented at any talks with the Russians, which Signor Pella is believed to have brought forward in London, is unlikely to be gratified, at any rate not at the level of complete parity with the Big Four. But apart from this Signor Pella has reason to be satisfied with his visit, since he was fully and completely briefed on Mr Macmillan's Russian journey and was, in effect, taken into the inner councils of the Atlantic alliance. The experience must have been reassuring as well as gratifying for Signor Pella, since the Italians, like the French and the Germans, have been nourishing certain suspicions about Mr Macmillan's intentions. Signor Pella, for his part, was reassuring and helpful about the problems of European economic collaboration; but whether he can carry his cabinet or its parliamentary supporters with him is another matter.

Indeed, the internal weakness of the Segni government is an obstacle to most of its aspirations abroad. Although Signor Segni and Signor Pella are labelled reactionaries by their political opponents, they seem anxious to support a western policy of "flexible firmness" towards the Russians. But differences over foreign policy still contribute to the divisions of the Christian Democrats, whose national council, although eventually agreeing on a new party secretary in succession to Signor Fanfani, has this week been giving a fresh display of party disunity.

NATO

The General Disengages



General de Gaulle's decision not to put his Mediterranean fleet under Nato's command in time of war is part and parcel of his outlook on the Atlantic alliance itself. He said on Wednesday that France's responsibilities outside Europe required the step, but it is difficult to see what more the fleet could do to pacify Algeria. Earlier explanations at less exalted levels in Paris seem even less valid. It is no use arguing that other Nato members have disregarded Shape's wishes lately. If France wants recognition as a great power its apologists ought not to shelter behind the Danish and Belgian conscription laws. The claim to a larger share of the Mediterranean commands now that France is stationing a bigger fleet there makes slightly more sense. But where does that leave the French general commanding Allied Forces Central Europe, whose French divisions have gone to Algeria? The American Sixth Fleet and the British V-bombers are not inside Nato, it is true, but their function, armed as they are with the nuclear deterrent, is appreciably different from that of the French navy.

Ever since General de Gaulle returned to power he has been putting Nato into what he thinks should be its place. He has turned down missile bases because they would not be under French control. He has shown no desire to put the French air defences under an integrated Nato command. He has pressed forward with the costly development of France's own atomic bomb. So far, the military results have not been entirely happy for him. The Americans have refused to make the missiles a bargaining point in Paris, and have moved on to Rome. The effect of the general's naval gesture will very likely be to give the Americans the excuse they have been looking for to avoid letting France share the secrets of atomic submarine construction.

Inside Nato itself anxiety is now increasing that the final stage of General de Gaulle's disengagement may be to return the French ground forces now nominally allotted to Shape to national control. While the bulk of the French army is tied down in Algeria the threat remains more than a little academic. But the general may use it—and his right to seek a revision of the North Atlantic treaty after its tenth anniversary next month—to reassert his claim to a bigger say in Nato's inner direction. Whether Nato is to be an integrated military unity or revert to a loose national coalition is now very much at issue.

B·O·A·C COMET 4 JETLINER

NOW TO THE FAR EAST!

To Middle East, Pakistan, India, Burma, Thailand, Hong Kong and Japan

From April 1st, *you* can fly to any of these destinations by the finest jetliner in the world — BOAC's *Comet 4*. You reach Tokyo in as little as 32 hours—more *swiftly, smoothly, silently* than you thought possible!

You scarcely hear the *Comet's* four mighty Rolls-Royce jet engines . . . you delight in the *Comet's* luxury and BOAC's world-famed *personal service* . . . *you arrive gloriously fresh, barely realising you've travelled at all!*

There are frequent de Luxe First Class and Tourist Class flights from London to Hong Kong and Tokyo. Also daily de Luxe "Monarch" and First Class transatlantic services London — New York; and weekly services to Montreal.

Consult your local BOAC Appointed Travel Agent or any BOAC office.

JUGOSLAVIA

Defiant "Revisionists"

MARSHAL TITO'S three months' journeying through Asia and Africa provoked a bitter and sustained chorus of disapproval from other communist countries, indicating a very real fear of his ability to increase his own influence and prestige among the uncommitted countries at the expense, principally, of the Sino-Soviet block. On his return to Jugoslavia two weeks ago, President Tito at once announced that he would no longer ignore the block's campaign. In particular, he pitched into "a certain Enver Hoxha" who had just publicly accused Jugoslavia of plotting with Greece to dismember Albania; he threatened to hale Albania before the United Nations on a warmongering charge.

Marshal Tito can be trusted to give as good as he gets in any slanging match with Tirana or Sofia. And he would not be likely to take it all too tragically were it not that, as he himself has pointed out, the offensive verbal onslaughts against him could be stopped at once by orders from above. The probable reason why these orders are not given was described by Mr Gomulka in his report to the Polish party congress last week. He said that "revisionism" is the gravest danger to the communist movement because it undermines its "solidarity, cohesion and unity." And since the Jugoslavs insist that they are communists (and not social democrats) the "revisionist" party programme that they adopted last year represents an undermining of Marxist ideology, and is consequently not their own internal affair but a blow delivered at the entire international communist movement. Mr Gomulka told the Jugoslavs that they could not remain "outsiders" indefinitely; either they will intensify their revisionist tendencies and become social democrats, or they will reject revisionism and return to the communist fold.

This reasoned attack on the Jugoslavs may be part of the price which Mr Gomulka has to pay to Russia in return for being allowed a comparatively free hand inside his own country. To Marshal Tito it must look very like an attempt to split the Jugoslav communist party. Even if there is little danger of such a split, at least in the marshal's lifetime, he will no doubt consider that Mr Gomulka's strictures require a more careful rebuttal than most of his enemies' attacks.

STEEL NATIONALISATION

The Voice of the Trimmer

THE debate on steel nationalisation has now reached the stage where the voices of both the trimmer and the cuckoo are heard in the land. The voice of the trimmers was shown in a long and carefully-documented article by Mr D. N. Chester and five collaborators in last week's issue of *The Spectator*. They recommend that the denationalised nine-tenths of the industry should be left in private hands, but that the remaining one-tenth (consisting of one large company and thirteen smaller ones), whose equity capital is still owned by the government's realisation agency, should continue as a permanently publicly-owned sector of the industry. This recommendation has the debating advantage that it may be what is going to happen under a Tory government anyway, because the agency's remaining equities do not look like being easy to sell. But it is not at all clear why anybody should want it. Mr Chester seems to argue that, if and when the government thinks that more steel producing capacity should be created than the private companies deem to be necessary, the government should create this capacity directly within that portion of the industry which has been left in its hands. That means, in and under the control of those companies which private investors did not want to buy. This hardly seems a formula for ensuring that such development should take place in the right places.

It is a great pity that the muddle about ownership is being allowed to confuse the real current problems of public policy in the steel industry. Up to a short time ago there was a good case for saying that the "dual control" system contained in the Conservatives' 1953 denationalisation act looked like the best formula that anybody had yet thought up for steel. Under this the Iron and Steel Board has certain powers to control (and to advise the government to encourage) adequate development in both the private and public sectors of the industry. Unfortunately, the recent and completely uneconomic decision to yield to Scottish political pressure, by siting the new (and largely publicly financed) Colville's strip mill at Ravenscraig, has shown that when it comes to a political pinch the present Conservative government simply by-passes this elaborate dual structure. The system that the Conservatives are in fact operating therefore has many of the evils of the old nationalised system; for the Labour party has hastened to say that a nationalised industry, too, would have yielded to the Scots about Ravenscraig. The conclusion for liberal critics should be that there is a need to refurbish the system of dual control in some way that will make this sort of political weakness less likely in future. The conclusion for cynics could be that there is little to choose between renationalisation and the present system, and a pox on both the big political houses. Fortunately for the Tories, however, Labour is busy publishing pamphlets which will bring down a special call of pox on itself.

A Gift to the Tories

LABOUR'S national executive this week capped a long series of publicity howlers on the steel issue by adopting, as an official party statement, a slightly edited version of a pamphlet on "Steel and the Nation" which had been privately prepared by Mr Hilary Marquand, MP. The pledges contained in it are meant to confirm the "moderate socialists'" policy of full nationalisation with the least possible disturbance—"fair compensation," by implication no break-up of the individual steel companies, lots more research, safeguarding of workers' existing pension rights, and so forth. Unfortunately the arguments in the pamphlet, from its very first words (about industries which are "owned by the people") to its very last words ("planning for the whole nation, not for the few"), are the most irritating possible jumble of mismanaged soporifics, free gifts for Tory sarcasm, and surprisingly neurotic little outbursts of anti-capitalist hate.

At present, Mr Marquand reveals, private enterprise steel companies "can do as they like so long as they provide profits for the banks and insurance companies with whom ultimate power resides." (He adds, with loaded irrelevance, that "the chairman of the Steel Company of Wales is a joint vice-chairman of Lloyds Bank"). Under a Labour

government, this bankers' ramp will be replaced by a system in which "physical and financial planning will go hand in hand, so that output of and demand for steel will correspond" (eh?), and in which the workers in the iron and steel industry ("the nation is proud of them") will "work more willingly than ever when they can be sure that they are working wholly for the nation." These are not unrepresentative quotations; there are eighteen pages of exactly the same stuff. What is it that is so defiling in British party politics that it can induce a former professor of industrial relations (as Mr Marquand is) to write this sort of pamphlet, and that can get it the official imprimatur of a party led by so reputable an economist as Mr Gaitskell? And why does Labour do it? Uneducated floating voters will not read this turgid document, and educated ones are bound to have their worst suspicions of Labour confirmed.

SINGAPORE

Election Eve

THE Legislative Assembly of Singapore has reached its final session before the elections under the new constitution of the autonomous city-state take place, and electioneering is already in full swing. It promises to be a campaign of unexampled bitterness. The main contenders are the Singapore People's Alliance, led by the present premier, Mr Lim Yew-hock, and the People's Action Party, standing well to the left of it, led by Mr Lee Kuan-yew—and this party controls the city council. In the last few days Mr Lim's minister of education, Mr Chew Swee-kee, has resigned both office and seat after allegations that he had been paid a large sum of American money for party uses; but though this means that Mr Lee inflicted heavy injury on Mr Lim, who lost not only a minister but also another member of his party who crossed the floor, the upshot has done personal harm to Mr Lee as well. For in the heat of the debate Mr Lim accused Mr Lee of supporting, when in London, the one proviso in the new constitution which the Singapore delegation then collectively condemned: the banning of known subversive persons from standing as candidates at the elections. Mr Lee has steadily cleansed his party in recent months from the taint of extremism, but it was always a delicate process, in which he did not dare to go too far; and this accusation will obviously embroil him with his own extreme wing.

Thus, while the fortunes of the People's Action Party are tending to rise, Mr Lee himself is under a cloud; and this might mean greater power for other PAP leaders who have far less realistic views about the possibilities of Singapore's "entrepot economy," its soaring population and its need for reunion with the Malayan mainland. The PAP mayor of Singapore is typical of these alternative leaders. They would offer little prospect of a smooth operation of the mixed council, under a Malayan chairman, which is to hold a watching brief over the security of the British naval base.

CANADA

Loggers in Arms

THE Canadian prime minister, Mr Diefenbaker, may well wonder who is going to up and hit him next. Already beset by angry prairie farmers, even angrier aircraft workers, and forty hereditary chiefs of the Six Nations Indians on a modernised warpath in their Ontario reserve, he is now trading punches with most of the province of Newfoundland. To make matters worse, he found on Monday that he didn't even have the head of the Mounties on his side.

Newfoundland's loggers, who belong to the International Woodworkers of America, have been on strike after a claim for higher pay and shorter hours was rejected last autumn. With newsprint surpluses in North America and pulp and paper mills working at only partial capacity, the big Newfoundland companies have contended that the loggers' claims are unrealistic. Into this explosive situation stepped the premier of Newfoundland, Mr Joseph Smallwood, with a fiery personal campaign against the IWA and the International Brotherhood of Teamsters. Mr Smallwood declares roundly that he means to drive "these two gangster, criminal outfits" out of the province. He has taken away the IWA's certificate and has set up a rival loggers' union. Although most of the men have stayed loyal to the IWA, the rest of the province has taken the prime minister's side. Police have been brushing with the strikers and, at the same time, trying to keep the local population from getting at the IWA. Mr Smallwood has called on Ottawa to send more Mounties and a royal commission in quick time.

But Mr Diefenbaker has remained sternly unimpressed by these appeals. For one thing, Mr Smallwood seems to have gone too far in trying to force the loggers to renounce the union of their choice. For another, Canadian labour is likely to make political trouble for the Conservatives if Mr Diefenbaker does not stand firm. But there is a legal point. Ottawa is legally bound to send police reinforcements to provinces if requested by the provincial government. When Mr Diefenbaker's refusal to do so was made known the head of the Royal Canadian Mounted Police promptly resigned in protest. Mr Diefenbaker may have welcomed Mr Macmillan and the chance to talk foreign affairs—even on Berlin—this week simply as a respite.

TRADE UNIONS

Trouble Brewing

IN spite of the TUC's desire for industrial peace and quiet until after the general election, several cauldrons are now bubbling awkwardly in the trade union world. The most publicised is on the railways, where the National Union of Railwaymen—though not as yet the two other railway unions—has just decided to submit a substantial wage claim. On economic grounds, such a claim is quite unjustified; it might also appear to be unnecessary, since the Guillebaud committee, which is now investigating the relationship between pay on the railways and in comparable outside jobs, is expected to come up in the autumn with figures to justify a wage increase. The union's demand is probably meant to be merely an anticipation of this report, though its timing was largely determined by intensive rank and file pressure for a more militant leadership; if and when any award is made on the basis of the report, the NUR leaders would naturally like their members to think that it was because they themselves were making noises to demand it. But the report, a complex document, will take time to produce, and although the level-headed Mr Greene does not really seem to be running any great risks of inviting trouble before the election he may find himself, later in the year, left out on a bargaining limb.

Another unpalatable—and potentially much more important—development for Congress was the election last week of Mr Paynter, the South Wales communist, to succeed Mr Horner as general secretary of the National Union of Mineworkers. After a long election, during which three other non-communist candidates were eliminated, he beat Mr Ford by 250,000 votes to 197,000. This result, on a reasonably high poll, ran completely against the general trend of recent union elections, in which communists have been slowly but surely ousted from office. There was, however, an obvious reason for Mr Paynter's success, quite apart from his forceful personality; he had spent much of his life in the pits while Mr Ford, who started as a clerk, had not. Mr Horner, the miners' former general secretary, was also a communist, but a very unorthodox one; Mr Paynter is orthodox Moscow-line. There is no point in underestimating the dangers arising from his election, even although he will have a staunchly anti-communist executive around him. For the future course of industrial relations in the mines, the accession of Mr Paynter could be a very serious development indeed.

The other sore spot for the union leadership at the moment is in the Midland motor firms. There, and especially at the various branches of the British Motor Corporation, the well-co-ordinated series of unofficial stoppages that have been taking place for some months continues unchecked. The latest strike of 32 electricians at the Morris Commercial factory against the employment of a non-unionist, has the additional complication on the union side that the communist Electrical Trades Union has stoked the fires by recognising it as official. Sixteen hundred members of other unions are idle as a result.

TANGANYIKA

Mr Nyerere's Kingdom Come?

THE Governor of Tanganyika, Sir Richard Turnbull, has now responded to Mr Julius Nyerere's demands for a majority of elected Africans in the Legislative Council, a majority of African ministers, and universal franchise in the trustee territory. Mr Nyerere made these demands for the complete supersession of the Twining constitution after his party, the Tanganyika African National Union, had won the majority of seats, Asian and even European as well as African, in the elections last month. Sir Richard's offer, made at the opening of the new Legislative Council, is to take three elected Africans into the new (twelve-man) council of ministers and to set up a committee to examine further constitutional change immediately. He implied that upon its recommendations he would be ready to accept further steps to self-government. The committee will be empowered to recommend further African representation in the legislature, the appointment of nominated members, and changes in the franchise short of making it universal. Clearly this offer envisages a very rapid jump towards giving Mr Nyerere and his party effective control over Tanganyika, within a year or two at most.

But will Mr Nyerere accept it? He could certainly do so on the justification of Dr Nkrumah's maxim (carved on the plinth of his statue in Accra), "Seek ye first the political kingdom." If he accepts Sir Richard's terms, which are plainly designed to avoid a clash between the government and TANU, he must know that he will very soon be dictating the pace of Tanganyika's march to self-rule. He is reputed to be a moderate, and he may well wish to take the peaceable path, in which so few boulders are strewn. But his followers are in an excited mood, eager for great gestures, and ready to make trouble; already they are dangerously near to flouting law and order despite their leader's pleas for calm. They may feel that a little rioting can only help matters, on the excuse that it is now established practice, and indeed essential to the dignity of a nationalist movement. It will be a very great pity indeed if Mr Nyerere feels that he has to outbid Sir Richard with demands for power on a plate. But he stands between the spectacle of Somalia and of Nyasaland, a very awkward geographical position for any African leader just now.

COMMERCIAL EDUCATION

Wanted—Business Schools

THE report of the Advisory Committee on Further Education in Commerce, published this week, should have the Minister of Education's urgent attention. It has long been clear that British commercial education, even of the most elementary kind, is falling behind the needs of the times; just how far behind can now be seen by comparing Britain's 35,000 students doing evening courses and other part-time study with the committee's devastating account of what is being done on the continent (see paragraph 25 of its report). If this does not frighten British businessmen and politicians into action, nothing will.

The plain fact is that the great majority of young people going into business from school do not do any further study at all—though a great many of them will be promoted in time to responsible positions which they will hold with a formal education of at best GCE ordinary level. Very few take an Ordinary National certificate in commerce (which gives them some accounting, economics, economic geography, English, law and statistics, etc.), and there is little provision for day release to take such courses. Teaching of foreign languages in Britain is even more rudimentary; on the continent, the commercial schools teach two or even three languages to their pupils.

But while many British employers are ready, when answering questionnaires, to ask for qualifications in commercial education, they do supinely little about helping it forward, either in their own firms or in collaboration with local technical colleges. It will be for the Ministry to ginger them up, as the committee failed to probe the employers' minds when producing the report. The committee asks for a massive effort to extend existing commercial apprenticeship schemes; for a great expansion of day release for commercial studies at intermediate level and the provision of teachers and colleges to provide them; for comparably greater provision for advanced studies, leading to degrees or other awards; and for frank acceptance of the needs of specialised training in such techniques as distribution, sales management and marketing.

This report provides yet one more answer to those university dons who fear an "undue" expansion of universities and lowering of their standards. A lot of the commercial training for which the report calls should be provided through an expansion of university facilities: by pass degrees in commerce, as well as by national certificates and diplomas from local technical and commercial colleges. Variety should be the keynote—but it should run right up to, and unsnobbishly merge with, university degree work.

SOVIET UNION

Reshuffling the Uzbeks

MR KHRUSHCHEV seems to have recurring trouble with the leadership of the Soviet republics of Central Asia. The Uzbek rulers are the latest to have come under fire. Last weekend both the prime minister and the party boss of the republic were dismissed from their posts and also removed from the party's political bureau. They were accused of "serious shortcomings and mistakes" in both ideological and economic work.

Mr Kamalov, who now loses his job as the party's first secretary, was only appointed to that post in 1957. As recently as February he was still the official Uzbek spokesman at the party congress in Moscow. At that time, Mr Khrushchev praised the Uzbeks for their progress in cotton cultivation and had no words of blame for their economic performance. The reason for Mr Kamalov's disgrace is probably political, and the name of his successor gives a clue to the changing line. Mr Rashidov, who takes over, has been up to now the chief assistant of Mr Mukhitdinov, Moscow's specialist in dealings with the Arab world.

The Uzbek purge was preceded by the removal of an old-established boss, Mr Babayev, from the leadership of the party in the Turkmen republic. It is quite possible that the Soviet attempt to evolve a more flexible policy for these outlying nationalities is meeting the opposition of local leaders who are not in favour of experiments. The attempt is certainly not an easy one, since nationalist feeling is not to be allowed to exceed prescribed limits, but the risks are worth while from Moscow's new angle. As Mr Mukhitdinov put it before the Moscow congress: "The successful solution of the national question in our country is of great international significance, especially for the people of Asia and Africa." More reshuffles can be expected in Russia's Moslem world.

COAL MERCHANTS

Nationalise the Coal Lorries?

NOT for the first time, the Co-operative and trade union wings of the Labour movement are radically disagreeing on the merits of a nationalisation proposal. The National Union of Mineworkers has recently been demanding—admittedly without much hope—the nationalisation of coal distribution; the Co-ops, which have a large coal trade of their own, have greeted the proposal with copious protest. The *Co-operative Review*, as angrily as any Tory in the backwoods, roundly declares that the National Coal Board's use of its "virtually monopoly powers" has priced it out of the market—the inference being that similar powers over coal distribution would produce similar effects—and asks what twelve million Co-operators would say to the prospect of giving up their dividend on Co-op coal deliveries at the mineworkers' union's request.

This is surely a story with a moral. Labour has said that it will stand ready to nationalise every industry which "is failing the nation." It happens that a case could be made out for saying that the trade of coal distribution is doing so. Nearly twenty years of rationing and control have left it with few of the virtues of a competitive structure. No other basic household necessity is at present supplied with so primitive and erratic an inefficiency. Every cold snap brings the kind of chaos and local famine which, for other commodities, could be expected only in case of earthquake, flood, civil strife or blitz. Every wet spell imposes on the customer—and especially on the buyer of smokeless fuel with its high absorptive capacity—a forced purchase of large quantities of highly incombustible rainwater at about a shilling a gallon. Dark stories circulate about the cost, to desperate householders, of private bonuses to delivery men. It is possible that some housewives do not mind this. Perhaps, the human mind being what it is, some customers really would rather pay for their heating by way of shilling-a-gallon dirty water and periodic *douceurs* (let alone supplementary electric fires and paraffin stoves in each winter's emergency) than by way of the higher prices which the trade might well have to charge for dry honest fuel regularly delivered, like the mails or the milk, come hell or high water. But there has been little sign of coal merchants competing eagerly to find out whether some would not.

It is probable—to be fair to the coal merchants—that the present sad state of affairs is largely the consequence of the fact that price control and rationing were kept on for too long; supporters of free enterprise will argue that the recent decontrol should bring efficiency back to the industry more quickly than nationalisation would. But the Co-ops, as part of the Labour movement, are not supposed to believe unvaryingly in such dogma. This is a case in which they must feel acutely uncomfortable carrying their hearts and their pocket books on different sides.

INSTITUTE OF STRATEGIC STUDIES

Extremes of War

THE debutant issue of *Survival*,* the first of the bi-monthly reprints of important military articles to be issued by the Institute of Strategic Studies, ventilates two of the knottiest military problems today. The first is whether an overwhelming surprise attack, an atomic "Pearl Harbour," is possible in an age of missiles (or at what point in it). The second is how an insurrectionary or revolutionary war can be successfully fought by a Western colonial power. Neither Mr Wohlstetter on the delicacy of the balance of terror, nor M. Paret on the principles of dealing with modern nationalists in revolt, are entirely convincing; and since their studies originally appeared they have been subject to much discussion. But such systematic studies of modern strategic problems have received less attention than they should in Britain. Had they received more, it is doubtful if Mr Sandys's 1957 white paper would still be the basic document in discussions of British defence policy; indeed, it might have been differently written. A new school of British strategic thinking is much to be wished, and *Survival* (aptly named) promises to provide the needed forum for its dialectic.

* Obtainable from the Institute of Strategic Studies, 18 Adam Street, London, W.C.2, 42s. a year.

BUSINESS IN EUROPE

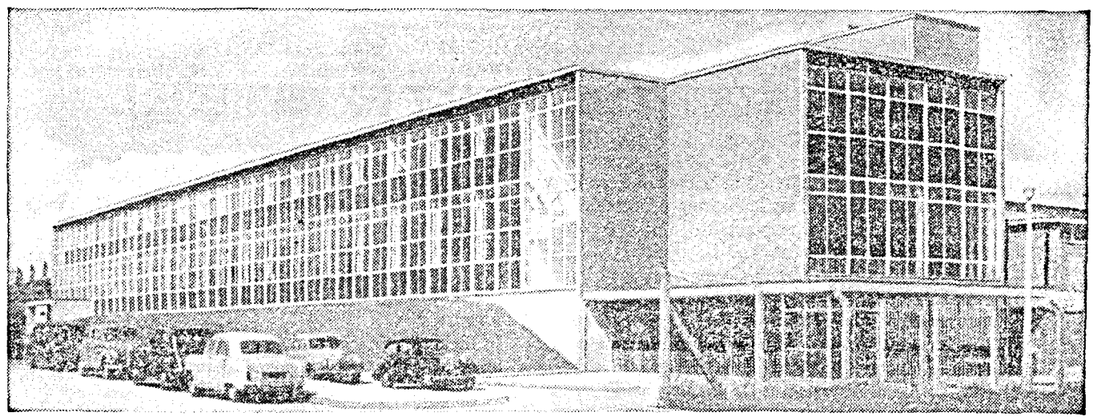
A very important stage has been reached in the formation of the European Common Market. Through our European services, we can keep you abreast of events and show how they are likely to affect your interests.

THE ECONOMIST INTELLIGENCE UNIT LTD.

LONDON: 22 Ryder Street, S.W.1. (WHitehall 1511)

NEW YORK: Lincoln Building, 60 East 42nd Street. (Murray Hill 2-6195)

You can rent a NEW factory from 9D PER SQUARE FOOT

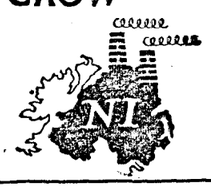


Premises . . . New modern factories are under construction with all services laid on; or can be built to order on a site of your own choosing. Sizes range from 2,000 to 73,000 sq. ft. Rents from 9d. per sq. ft. for the first ten years. Special-purpose factories of unlimited size can be financed on long repayment terms.

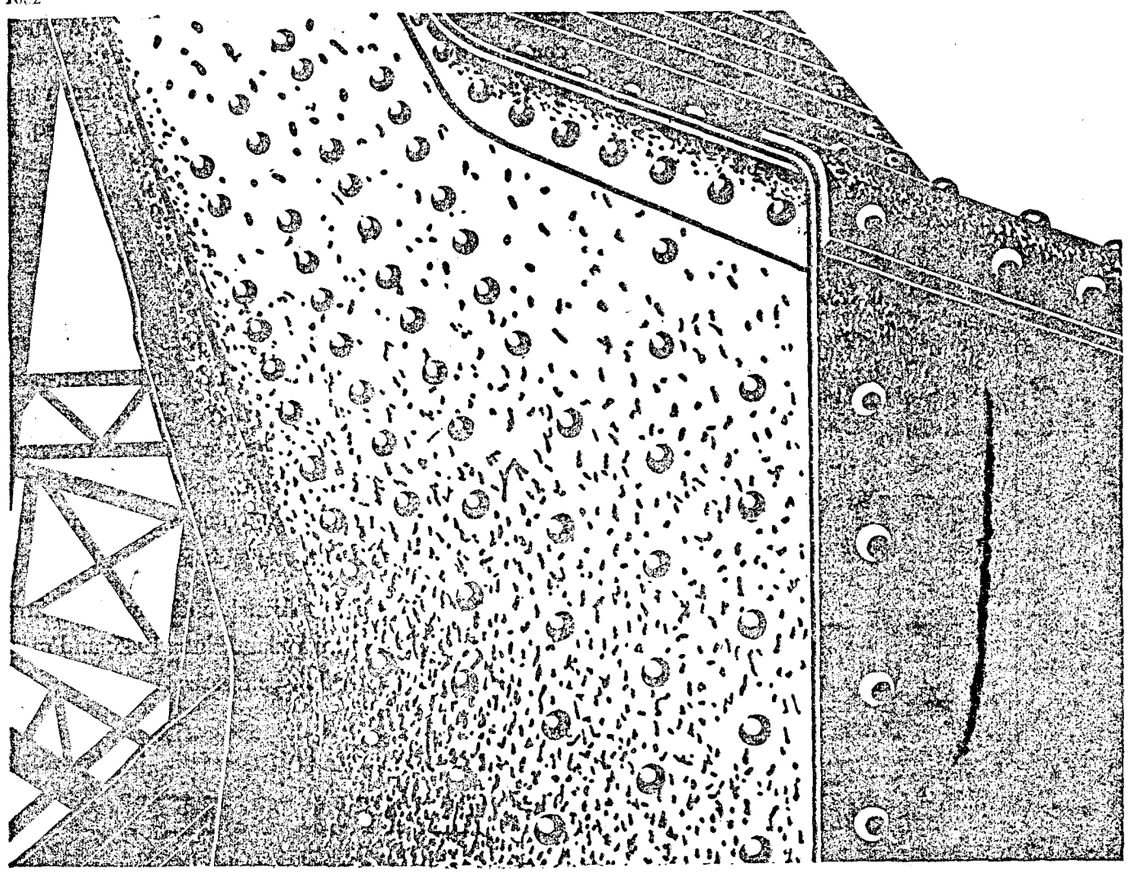
Labour . . . Three-shift working is possible and labour turnover and absenteeism are low.

Finance . . . Assistance includes an automatic annual grant toward the cost of new and second-hand equipment and of new buildings. The Minister of Commerce announced on February 12 that the grant rate was being increased from 25% to 33⅓%. The present maximum grant is £150,000 p.a. Alternatively, loans and larger grants are available for special projects.

Success . . . Over 130 British and American firms have set up in Northern Ireland since 1945; and many have expanded two and three times.



and get the benefit of 33⅓% GRANTS towards CAPITAL OUTLAY



A 100,000 sq. ft. extension to the International Computors and Tabulators (ICT) factory at Castlereagh.

GO TO NORTHERN IRELAND—AND GROW

For full details of factories available now, and of the Factory Building Service as a whole, write to DEPT. E11, NORTHERN IRELAND DEVELOPMENT COUNCIL (CHAIRMAN, THE VISCOUNT CHANDOS), 13 Lower Regent Street, London, S.W.1 (*Tel.: WHItehall* 0651) *or:* 99 Park Avenue (7th Floor), New York 16, N.Y., U.S.A. *or, if you prefer, to:* THE MINISTRY OF COMMERCE, BELFAST. LETTERS

Trade Unions

SIR—Some of the members of my union branch have read with great interest and satisfaction your very fair assessment of the place of trade unions in present day society.

We hope that some attention will be given in future articles to the place of the trade union officer as the "poor man's lawyer." One of our members recently appeared before the commissioner of national insurance, and chose to conduct his own case. The chief insurance officer put forward the view (which the commissioner rather appeared to accept) that the appellant must have a weak case because he was not supported by a trade union. We were a little startled by this very strong advocacy of the "closed shop" from a government officer. We regret the increasing tendency of both the Ministry of Labour and the Ministry of National Insurance to regard trade unions as the only people with whom they should negotiate. We believe in trade unionism by conviction rather than by compulsion.

We live in an age of administrative tribunals, some of which can exercise great power over a man's life. We do not want to develop a special profession of "appearers before tribunals."

I often have queries to raise with the Ministry of Labour and the Ministry of National Insurance, and I have tried, verbally and in writing, approaching them as "myself," and approaching them as the secretary of a trade union branch. I regretfully say that the last-named approach has invariably brought a more satisfactory response. In some cases, approaching a government department as a private person, I have merely been told, somewhat tersely, to "consult my union." The possibility that I might be exercising my freedom not to belong to one is not considered in official circles.—Yours faithfully, R. C. HORWOOD
Transport & General Workers Union, Olney, Bucks

Soft Drinks

SIR—In your issue of February 28th, under the heading of "Hard Words about Soft Drinks," you commented on the Food Standards Committee report on soft drinks.

The general tone of the report may well obscure for others, as it apparently has for you, the constructive approach by the industry to the question of control. The difference of view between the industry and the committee is one of degree, as has been noted in other reviews of the report.

May I make briefly the following points :—

1. The industry is in no way enjoying a special position "sheltered from the rigours of general legislation designed to protect the public," as you suggest; it is subject to both general legislation and specific standards legislation.

2. The industry has been consistently in favour of compositional standards for soft drinks. To its regret, the Food Standards Committee report proposes to abolish them in the section of the industry having the largest sales.

3. The industry has been consistently in favour of a limit on saccharin, but objects to a complete ban on the use of this harmless ingredient, which is technologically of great assistance.

I hope that the remarks above may help to put the matter into perspective for all concerned.—Yours faithfully,

F. J. LAWTON
Director and General Secretary
Food Manufacturers' Federation Incorporated

Wages in Airlines

SIR—Kenneth Bryan, who contributed a letter in *The Economist* of February 28th commenting on your trade union articles, may have perhaps given the impression that his views are broadly shared by the administrative staffs' trade union branches in the State Airways Corporations. This is not the case. Nor do we believe they are shared by managements of the two corporations either.

Airlines operate in a highly competitive market, but it is a market in which prices are fixed by international regulations and therefore there is no question of higher salaries and wages being passed on to the customer in terms of higher prices. Increased labour charges obviously do affect cost levels and accordingly profitability, but they are irrelevant to the share of the market which is won by the undertaking. Airline operation is an extremely complex problem and at this stage of the art commercial policies are largely empirical in the short run. Determining factors much more significant than labour costs are political considerations, aircraft availability and operating techniques and engineering requirements. In other words, given the bilateral agreements and, one way or another, some extra capacity ton miles, the airline will immediately look for greater aircraft utilisation.

In the long run it is quite clear that no airline can hope to survive if it is not prepared to pay competitive rates to its employees. Accepting the intensive competition, the level of expansion and the newness of the industry it is apparent that the quality of airline personnel is of tremendous importance. Happily in the state corporations there are large numbers of dedicated men and women but if they are to be retained and reinforced then their remuneration must keep pace with that in other industries.

Mr Bryan is chairman of an administ*rative branch and his strictures on trade* union negotiators are hardly justified, for this category of staff has barely maintained its position during the last seven years *vis-a-vis* either comparable jobs in industry generally or to the cost of living. The only cases where individuals have actually reached higher standards is where jobs have been revalued and increased responsibilities have been agreed by corporation managements to merit higher remuneration.—Yours faithfully,

Southall D. HOLLINGS

Berlin

SIR—In your issue of February 21, 1959, you say in connection with the consent of the three Western occupying powers to the establishment of the Bundesrepublik and the expected consent of Russia to the Deutsche Demokratische Republik's exercising sovereignty in Eastern Berlin:

> A basis of logic can be found for this distinction. But the Russians, as conquerors, *can* assert as much right to transfer sovereignty in a government in east Berlin as the western powers, as conquerors, *can* claim to transfer sovereignty to a government in Bonn. . . . (italics mine.)

No doubt, the Russians *do* assert as much right. But *can* they do it in accordance with traditional standards of international law and consistently with the expressly specified objectives of the United Nations Charter?

The western powers transferred sovereignty on the basis of free elections *and other guarantees of a modern democratic regime.* There may be neopositivistic authors of international law who recognise the Russian action as the "right" of the conqueror. What disturbed me in your statement was the analogy: "can assert *as much* right. . . ."

I agree with the substance of your courageous and clear statements. Exception is made to that analogy only.—Yours faithfully, JOHN D. SWIFT
Bellefonte, Pennsylvania

AMERICAN SURVEY

AMERICAN SURVEY *is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.*

Veni, Vidi, Semi-Vici

WASHINGTON, DC

LIKE Caesar in another land, Mr Macmillan will find that America is divided into three parts. Public opinion is still either silently frightened or silently resolute, but in any case silent, about the Berlin crisis. The correspondence columns of the newspapers are almost empty of comment, and so are the post-bags of Congressmen. In Congress itself, although Senators Mansfield and Fulbright have brought a few new ideas briefly to the surface, most members seem to have turned back to older and frostier ways of thinking. A number of recent speeches, particularly some by newly elected Senators, suggest that it is not Americans and Russians who face each other across the Elbe so much as ghostly abstractions of good and evil. This is exactly the moralist approach to world problems for which Mr Dulles has been assailed so often by his critics. But in the State Department itself, Mr Dulles's home territory, this frosted approach now seems to be out of fashion. There, at any rate, the proposals for negotiation from a firm but flexible stance which the Prime Minister is reported to be bringing with him are likely to get a relatively sympathetic hearing.

If Mr Macmillan's first objective was to induce Mr Eisenhower to go to the summit, he has conquered before he even came and saw him. It is only a fortnight since the President was grumbling at his press conference about the dangers of the summit, but in the interval the State Department seems to have made up its mind that he should go. This does not depend on whether or not the earlier foreign ministers' talks make any progress; even if they do not, the reasoning runs, it will be necessary to go to the summit as a last resort to prevent war. The argument which has delayed the sending of the latest allied note to Moscow is largely a matter of wording. The Americans do not want, after proposing a foreign ministers' meeting in May, to go on to mention the summit in a way which might tempt the Russians to suggest skipping the first step. But in his broadcast to the country on Monday night the President attached only the vaguest qualification to his willingness to talk to Mr Khrushchev.

On the proposals which the West should put forward when the two sides meet, Mr Macmillan is also likely to find the Americans more open-minded than would have been possible a few months ago. The "new ideas" which the President mentioned on Monday have been bubbling to the surface of the State Department ever since the middle of the winter, when Mr Dulles invited the department to reconsider the whole German problem. It is clear that the Americans have now moved decisively away from the belief that it is any use pressing for free elections as an early stage in the process of reuniting Germany. But if Germany is not to be reunited in one fell swoop, the only alternative to the *status quo* would seem to be some form of confederation, however temporary it is hoped that it will be.

From the trickle of information which seeps out around even the most tightly sealed doors in Washington, it appears that the State Department is willing to consider a "package" offer to the Russians involving both this and a thinning-out of forces along the Elbe (rather than a wholehearted disengagement, which is still an improper word in Washington). The various possible components of such a package are now being discussed by a four-nation working party in Paris, and no final decision can be taken before the foreign ministers of the North Atlantic Treaty countries assemble in Washington at the beginning of next month. It may be Mr Macmillan's chief task this weekend to encourage the President to overcome French and German qualms about such a plan.

BUT there is also the question of what happens if it turns out to be impossible, as it well may, to reach agreement on Germany as a whole. It is here that differences between the British and Americans seem most likely to develop. If the Russians insist on handing over control of the Berlin supply routes to the East Germans, the State Department now admits that it would be quite possible to supply the allied garrison by air; the technical difficulties of an airlift apply only to the much larger problem of getting food and fuel to the civilian population. It would be far more difficult for the East Germans to challenge an airlift than a road convoy, which could be halted by a single blown bridge. But there is a marked reluctance in Washington even to talk about an airlift.

There is even more reluctance to deal with East German officials at the check-points on the land routes. The argument in both cases is the same: that either step would amount to a moral defeat, and would weaken the West's legal claim that it has a conqueror's right of access to Berlin by road and rail as well as by air. But the British are said to reply that the West can hardly threaten to go to war, which by the President's testimony last week might well be a nuclear one, over a point of law, as distinct from the actual closing of its supply routes. Rather than this, it is suggested in Washington, it might be better to turn to the United Nations for some kind of guarantee of West Berlin, including perhaps the replacement of part of the allied garrison by a UN force.

There is also disagreement among the Americans themselves on what kind of war, if war comes, it will be. Unlike Mr Eisenhower, who implies that it would be nuclear or nothing, the chiefs of staff of the armed services think that it might be limited to conventional action so long as the Russians used only their allies' troops. To encourage them

to keep their own forces out, there might be a case for at least starting the fight along the Autobahn without the Americans (which means, in effect, with British and West German troops). But Mr Dean Acheson, the former Democratic Secretary of State who has called for reinforcements to be sent to Europe, thinks that even if the two great powers became embroiled they might shrink from using atomic weapons. He seems to envisage a limited war leading to a limited defeat for the West: a bloody nose that might set the North Atlantic Treaty Organisation to improving its defences as thoroughly as it promised in 1949.

For the immediate future, the service commanders agree with the President—against Mr Acheson and a good many other Democrats—that there is no need for large-scale reinforcements or mobilisation. The most they appear to have asked for in their testimony before Senator Johnson's preparedness sub-committee last week was the "filling-out" of the five American divisions in Germany and the calling-up of some reservists. At present the communist and non-communist armies in Germany are fairly evenly balanced. The Nato forces can deal with any action in which the Russians themselves do not take part; and for every couple of extra chessmen the Americans push on to the European board the Russians can reply with twenty. Mr Acheson argues that to send reinforcements to Europe might encourage the Russians to compromise; but it might also increase the chances of their own troops being involved in any fighting that broke out.

In the longer run, however—if there is a longer run—the crisis may have some radical effects on American policy. Two influential Republicans, Senator Saltonstall and Senator Bridges, have already joined quietly in the chorus of Democrats who say that next year's defence Budget is too small and who attack the President for insisting on cuts in the army. And it may go beyond this. It is beginning to dawn upon Washington that the present Nato forces are neither flesh, fowl, nor good red herring. They are too small to deter the Russians without the threat of resorting to a nuclear war. Yet the present commitment to a German contingent and to keeping five American divisions in Germany puts foreign policy-makers into a straitjacket. Two lines of escape from this dilemma are beginning to be examined. If the West survives the Berlin crisis, there is likely to be a renewed demand for the creation of an army in Europe big enough to provide an effective non-nuclear deterrent. Alternatively, the advocates of disengagement may find that this year's events have given new strength to their arguments.

Foreign Aid Without Friends

THE crisis over Berlin has a small silver lining. It ensured a respectful hearing on Monday for Mr Herter, the Acting Secretary of State, when he opened the testimony on the foreign aid programme for the next financial year before the House Foreign Affairs Committee. Without Berlin—and perhaps even with it—foreign aid might fall fatally between two stools. The President's Message, asking for $3.9 billion in new authorisations (about what he asked last year, but $650 million more than he got), contains no new ideas and does not request enough money to please members of Congress who want to give the under-developed countries a big, continuing push toward a higher standard of living. It is even cheese-paring where military assistance is concerned; the President conceded that the $1.6 billion he asked is only enough to prevent serious deterioration in collective defence. In all, the programme will cost less than one per cent of the expected gross national product this year; of this, economic aid represents about a third.

Yet the $3.9 billion total seems to many critics too much to spend abroad when, to balance the Budget, spending on defence is held down and new public works at home, which would absorb unemployment and please the voters, are threatened with a presidential veto. Many Democrats, provoked by being called "big spenders," are threatening to balance the President's Budget for him at the expense of foreign aid. In the House, where economic aid is unpopular, an appropriations subcommittee confirmed the pessimists' worst fears last week by cutting, from $225 million to $100 million, the supplemental appropriation needed for this year by the Development Loan Fund, the one really promising new instrument for stimulating growth in under-developed countries such as India.

The trouble in the Senate is quite another matter. Influential Senators on the Foreign Relations Committee are frosty because they discern the "same old bias" toward military assistance. Senator Fulbright, the chairman, pointed out angrily that the President had not even asked for the loan fund to be put on the long-term basis which is needed if it is to undertake successful development programmes. Senators feel particularly aggrieved because they drew the President's attention last year to the distortion of the economies of under-developed countries in Asia through too much military and too little economic aid. It was tactless of the Draper committee, which the President appointed to look into this complaint, to make its first recommendation one to give the North Atlantic Treaty countries $400 million more in money for weapons. Its final report will emphasise the need for at least $1 billion a year in loans for economic development, compared with the $700 million the President is asking for 1956-1960, and may be more to the Senate's liking.

Working at Unemployment

WITH the February figures confirming that unemployment remains obstinately out of step with the pace of the general recovery, and with the approach of March 31st, when last year's emergency scheme for supplementing unemployment compensation by payments from the federal government is due to end, both political parties have apparently decided that they dare not allow it to do so. If it does end, some 405,000 people who have been out of work for long periods would suddenly stop receiving benefits, while there is a growing awareness that unemployment figures are not just tables of statistics, but a reflection of human misery and often despair. Increasing attention is being paid to the plight of the ageing worker, unable to use skills acquired over a long period of years, and of the recent entrant into the labour market, who is the first to be laid off under seniority rules prevailing in most factories.

To ensure quick action the Democrats have stopped trying to extend the emergency scheme for a whole year, while President Eisenhower has announced that his insistence on a balanced Budget does not necessarily mean that he will

reject a shorter extension. It is expected that he will accept a Bill along the lines of that approved by the House of Representatives this week. This provides for the federal supplements to state unemployment benefits to taper off gradually over a period of three months. This means that those who have begun to receive aid on March 31st will continue to receive it until their rights expire—a maximum period of thirteen weeks. The total cost of the extension is put at $78 million; this will not unbalance the coming Budget, since all benefits will be paid before June 30th.

At the same time the Senate Banking Committee was approving a Bill to help areas where there is chronic long-term unemployment. This would provide loans and grants to encourage industry to move to such areas. The Administration sympathises with the intention, but is only prepared to spend $50 million or so, while the Democratic Bill, as it stands at present, provides nearly $400 million. A similar Bill was vetoed by the President last year.

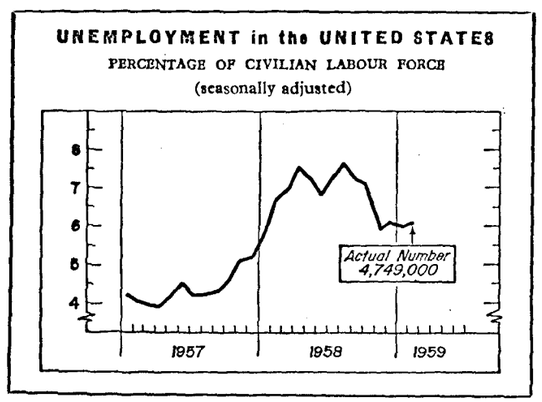
The third part of the current attempt to alleviate unemployment is an effort to set higher and uniform levels for regular state unemployment benefits. Here again the Administration is sympathetic, but will do no more than urge the states to improve their individual insurance systems, while the Democrats want to establish some sort of federal standards. There was a danger that, if the emergency scheme had been extended for a year, attention might have been distracted from the need for this much more important basic measure; this explains the lack of enthusiasm of labour leaders and many other normally liberal people for the original Democratic proposals. But the immediate remedy for the current lag in employment, according to trade unionists, is to spread the work by establishing a 35-hour week and a 7-hour day.

Rockefeller's Winning Ways

PROGRESSIVE Republicans, who hope that the party's presidential candidate in 1960 will be Mr Rockefeller, the new Governor of New York, are rejoicing because he has emerged triumphant from his first exacting test. Enough members of the Republican majority in the State Legislature have been charmed, convinced or bulldozed to secure the passage of the Governor's bold and unpopular Budget. This involved raising taxes to maintain the services performed by the state without going further into debt. It was a close thing, with only one vote to spare in the Senate and two in the Assembly. But a fortnight ago, faced with united Democratic opposition and a revolt in his own party, a damaging defeat seemed possible at the very outset of Mr Rockefeller's political career. He was publicly booed only a few months after his great victory at the polls.

The Governor's original Budget proposed the spending of $2,041 million, an increase of $240 million over last year's total, and tax increases of $277 million, of which the income tax was to provide $150 million. The Governor has had to make concessions. Spending is to be reduced by $40 million, almost all of which has been used to ease the sharpest pinch, that on the allowances of married couples. But by giving a little ground here, the main aim of the Budget—to make people pay-as-they-go for more of the services they rightly require of the state—has been preserved. This is a triumph of political skill which no one was sure Mr Rockefeller possessed until he flung himself, with zest and good temper, into the job of persuading the legislators that taxes must go up and that it would be better to raise them now rather than in later years when there are important elections. It was left to others to point out how short-sighted it would be of Republicans to embarrass a man who might become the party's presidential candidate.

Mr Rockefeller also has some say over how another $2 billion Budget—that for New York City—is to be balanced. The state must approve new sources of revenue; Mr Wagner, the Democratic Mayor, says he needs another $151 million. The Governor and the Republican leaders in the Legislature have turned down the scheme for a tax on off track betting which Mr Wagner hoped would solve all his problems. They have also rejected taxes on the transfer of shares and on bank cheques which seemed certain to drive business out of the city and the state instead of encouraging new economic growth, which is one of Mr Rockefeller's main aims.



Railways in Clover

FROM A CORRESPONDENT IN LOS ANGELES

THE traveller who crosses America by train these days is struck by a contrast when he makes the inevitable change at Chicago. The train that brought him from the East is drab-looking, the equipment run down, the service indifferent. But the one that carries him westward is brightly painted, comfortably equipped and attractively decorated, and the service is efficient and courteous.

The earnings of a few of the big railways in the East and in the West help to explain the difference. In the past few years, the profits of the big eastern systems have been declining, and in the first six months of 1958 even such giants as the New York Central Railroad and the Pennsylvania Railroad incurred huge deficits although, with additional subsidies for mail and relief under the Transportation Act of 1958, they managed to report small earnings for the year as a whole. To try to bridge the gap between income and expenses, these systems have cut down on repair and maintenance, reduced their labour forces, abandoned services, and otherwise pinched pennies.

The western railways, on the other hand, have continued to report sizeable profits, and some of them, including the Southern Pacific Company and the Atchison, Topeka and Santa Fe Railway (two of the biggest west of Chicago), have earned even more in the recession year of 1958 than

they did in 1957. The other big western system, the Union Pacific Railroad, did suffer a minute falling off in net income last year—but was still very much in the black. Other smaller railways, such as the Northern Pacific, the Western Pacific, the St Louis & San Francisco, also earned more in 1958 than in 1957.

The happier experience of the western systems is the result of advantages that must make railway executives in the East highly envious. Railways in the West carry relatively few passengers, who are notoriously unprofitable; revenues from this source account for about 6 per cent of the Southern Pacific's total, and around 8 per cent for the Santa Fe, compared with about 20 per cent each for the New York Central and the Pennsylvania. Moreover, the western railways are not burdened with the huge losses sustained by the big lines in the Northeast from carrying commuters in and out of major cities, such as New York, Philadelphia, and Boston.

RAILWAY PROFITS

	1958	1957	1956	1955
		($ millions)		
Eastern Systems:				
New York Central	4·0	8·4	39·1	52·2
Pennsylvania	3·5	19·0	41·5	41·1
New Haven	—4·3	—2·3	0·2	4·2
Western Systems:				
Union Pacific	77·8	78·2	78·5	79·2
Southern Pacific	47·1	46·6	45·4	51·6
Santa Fe	67·2	61·9	70·2	77·5
From Non-railway Sources				
Western Systems:				
Union Pacific	54·3	61·3	61·5	61·5
Southern Pacific	23·9	22·4	24·0	18·8
Santa Fe	13·9	14·3	14·0	13·7

They have also escaped the sharp competition from the *air lines which have deprived the eastern railways of much* of the first-class passenger business on the short hauls between big cities. The passenger business on western lines is heavily concentrated in crack trains, for which premium rates are charged, and which can compete with air travel because of their scenic routes. The railways have enhanced this appeal by the addition of so-called vista-dome cars to their prestige trains, such as the Santa Fe *Super Chief* and the Union Pacific *City of Los Angeles,* which run between Chicago and the west coast.

The western lines are also better off as haulers of goods. In the East, again because of the short distances, competition is strong both from motor and water transport. In the West, because of the long hauls, the terrain of desert and mountain, and the climatic extremes of both winter and summer, the railways are in a much stronger position. In recent years, moreover, they have pioneered in the introduction of so-called "piggyback" service, involving the transfer of motor trailers to railway wagons and back to the road.

Traditionally the western railways have carried the products of farm, mine and forest, on which freight rates have been low. They benefit from the growing population and industrialisation of the West, because an increasing share of their traffic consists of the more lucrative manufactured goods, such as cars, petroleum products, chemicals, tinned and packaged foods. In 1957, one-third of the tonnage but 50 per cent of the revenues of the Southern Pacific came from such goods.

The long distances in the West, the remoteness of many communities, and the lack of capital are also responsible for the operation by the railways of many ancillary services, including those involving competitive forms of transport. The Southern Pacific, for example, runs store-to-door delivery services, and road transport facilities co-ordinated with its railway operations. It owns office buildings, warehouses, land management companies, and a street market in Los Angeles.

The Santa Fe also runs a road haulage company and bus services, and owns office blocks, warehouses, land management companies, and the Los Angeles Union Stockyards. The Union Pacific owns bus lines and hotels, including the winter ski resort of Sun Valley, Idaho. The Northern Pacific, which connects the northern Middle West with Washington, Oregon and northern California, operates lorries, buses and a telephone company. The Southern Pacific and the Union Pacific between them control the Pacific Fruit Express Company, which supplies refrigerated railway wagons for the transport of perishable commodities. All these are sources of revenue not generally available to railways in the East.

As if this were not enough, in recent years the western railways have begun to derive increasing earnings from the development of natural resources on the land which the government gave them to encourage the opening of the West. There has always been some income of this kind. For example, the Union Pacific owns the Union Pacific Coal Company, one of the largest producers west of the Mississippi River, and the Northern Pacific gets profits from timberlands. But the big difference has been made by the discovery of oil.

The Union Pacific, for instance, owns a substantial amount of oil-bearing land next to its goods yards at the Los Angeles and Long Beach harbours, and also in the Rangeley Field, in Colorado. In 1957, the company made a net profit of some $29.1 million from oil and gas; in 1958, the recession in the oil industry presumably contributed to the drop in the company's income from non-railway sources.

The Santa Fe also has an oil and gas affiliate, Chanslor-Western Oil Development Company, which in the past decade has contributed over $6 million a year in dividends to the parent firm. Just in the past few years, the Northern Pacific has joined the "oil railroads," as a result of the discoveries in the Williston Basin of North Dakota and Montana.

The Southern Pacific earns, so far, only a relatively small income from oil royalties and direct production; it came to $3.6 million in 1957. In 1955 the railway launched an 8-year programme of exploration on its extensive holdings of land in the hope of increasing its oil revenues. But three years ago the Southern Pacific made history by becoming the first American railway to enter the business of providing oil pipelines. Facilities have been built along the Southern Pacific's rights of way from El Paso, Texas, and Los Angeles, to Arizona and eastern California and from San Francisco to Reno, Nevada, and adjoining communities. Valuable additional income comes from these operations.

Such developments have sharply increased the non-operating income of the western systems, and have helped to stabilise their total earnings. The income of the Union Pacific which is not derived from railway operations has doubled since 1945. For the Southern Pacific it has nearly trebled. Since, in addition, it is still possible to operate a railway profitably in the West, it is not surprising that the transcontinental passenger fares better west of Chicago, and that railway presidents differ about the seriousness of the industry's maladies and their cure depending upon whether they come from the flourishing West or the care-worn East.

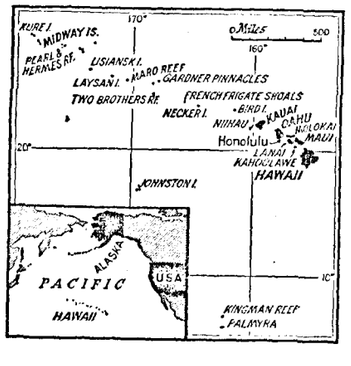
Generating Protection

THE delays in announcing decisions on this year's wool tariff quota and on the plea of the electrical industry for restrictions on imports of heavy equipment may, of course, only be to save the President embarrassment while Mr Macmillan is in Washington. But they suggest that the implications of the decisions are being considered carefully at the White House. It is hoped that the outcome may be some alleviation of the present wool quota's discrimination against Britain and for electrical equipment the substitution of a case by case approach, which in effect prevails at present, for a general ruling against imports. In some ways, however, the latter might be preferred by the British industry; it would then at least know for certain that it was useless to compete.

Meanwhile the American industry is using the delay to attack from every angle, while the case for foreign imports has been put best by the Tennessee Valley Authority, well accustomed to answering criticism, although this is usually of its alleged extravagance. On this occasion it was defending itself for having ordered a huge steam turbo-generator from C. A. Parsons and Company of England. The delivered price will be $12 million compared with nearly $18 million bid by two American firms, a differential which far exceeds both the advantages legally allowed to American suppliers and the cost of higher wage rates in the United States. The TVA invited foreign bids for this project because it was disturbed at the sharp rise in the prices of American generators—over 50 per cent since 1951 compared with an average rise in wholesale prices of 5 per cent. It is this, of course, coupled with the stepped-up efforts of the exporters, which explains why foreign electrical manufacturers have been increasingly successful in breaking into the American market. And their success explains why American manufacturers have been protesting with increasing heat, even though imports, whether of electrical products in general or of heavy equipment, are still infinitesimal compared with either total American output or American exports of such goods.

The plea for restrictions on imports is based on the threat to the national security of being dependent on foreign suppliers; if this plea, almost impossible to justify, is accepted, a flood of similar demands is likely, especially since the new compulsory quotas on oil imports are also officially excused on the same grounds. With unemployment causing so much concern it is certainly difficult for the Administration to resist such demands. But the need to resist and to set a good example to other countries is underlined by the concern being caused by the deficit in the American balance of payments and the fall in American exports. One remedy for this is obviously to press for relaxations of restrictions against American imports, such as Britain has already conceded, now that the world is no longer suffering from an acute shortage of dollars.

Pacific Comet



THE fiftieth, and probably the last, star to appear on the American flag is arriving with the speed of the comet which the new state of Hawaii resembles. In the end it took only two days—after forty years of effort—for Congress to approve statehood for the eight inhabited islands, 2,000 miles from the mainland, and the tail of volcanic reefs and atolls which stretches another 1,500 miles across the Pacific ocean. The Midways and one or two other outlying islets, such as Palmyra and Kingman Reef, are not included in the new state.

The President has already signed the Bill, but from now on things will move more slowly: the people of Hawaii must themselves agree to accept statehood—a foregone conclusion—and must approve the boundaries and other provisions in the Act; they must also select candidates for the various new elective offices in a primary election and then vote for two United States Senators, one Representative and a Governor; finally the President must proclaim that Hawaii has officially become a state. All this cannot be accomplished before the end of June, and in fact is not likely to be completed until the late summer. This may comfort the flag makers a little, for they will be able to sell for use on one Fourth of July at least some of the 49-star flags on which they have been working since Alaska was admitted last winter.

When the Hawaiian members of Congress arrive in Washington there will be 100 Senators permanently and 437 Representatives until after the redistribution following the 1960 Census. The western influence in Congress will again be enhanced as it was when the Alaskan members arrived. There is a possibility that one of the new members may be of Asian descent; this would strengthen the international impact of the granting of full equality to Hawaiians, 75 per cent of whom are non-white, a demonstration that the United States is genuinely opposed to racial discrimination.

The main benefit which the Hawaiians themselves are obtaining from statehood is the right to run their own affairs. It is one for which they are fully equipped—well educated, politically-minded, with good newspapers and three television stations, and self-supporting at a high level of living. Unlike under-developed Alaska, Hawaii's new status is imposing neither new demands on the federal government nor new tax burdens on the island's own inhabitants. There are about 600,000 Hawaiians, enough for the available land but not too many, with an annual income of $1,821 a head, higher than in 26 other states.

Sugar production is the island's main source of income, with the pineapple industry a close second. But the tourist trade, based on the perfect tropical climate, the beautiful scenery and vegetation, and the lovely beaches, is coming up fast and seems certain to be stimulated by the speed and cheapness of travel in the jet age. Hawaii's prosperity is also helped by the fact that the islands are at the hub of trans-Pacific communications of all kinds. Industry, particularly in the service trades, is developing in the islands. One thing they lack which Alaska has—mineral wealth—and in one thing they resemble Alaska; the federal government's huge defence installations are an essential element in the economy.

Here, without fuss or ostentation,
is the essence of what a car should be.
As the months go by, its qualities
continue to impress you. They result from
the carefulness of Rover engineering.

The ROVER 90

is a rewarding car to own

In addition to the 90, price £1538.17.0 including P.T., the Rover range includes the 2-litre 60, the 75 and 105 models, all with improved appearance and technical specification; and of course the new 3-Litre, which is available with fully automatic transmission.

Museum on Show

FROM A CORRESPONDENT IN BALTIMORE

THOUGH it has wealth and tradition, Baltimore is not renowned for its support of the arts. Its symphony orchestra suffers from recurrent financial crises, its voters have rejected proposals for enlarging its treasury of ancient and medieval art, the Walters Gallery, and a well-known playwright recently called it the worst show town east of the Mississippi. But the thirty-year-old Baltimore Museum of Art flourishes on a small budget and is becoming a powerful force in the community, mainly because it has made art *chic* and museum membership a distinction. Mrs Breeskin, who has directed it for seventeen years, believes that an art gallery must create its audience and carry it along through educational and missionary work.

In the past decade the museum has acquired three new wings and more than $5 million worth of pictures and art objects from benefactors, and has supplemented its income and its paid staff by encouraging people to belong to it and to do voluntary work. Its chief emphasis is on recent and contemporary movements, which has given it the support of the younger and more progressive Baltimoreans, though its collections cover most periods and cater to other tastes. Financially the museum is in a far weaker position than museums in other American cities of comparable size. The municipality gives it $220,000 a year, which pays for salaries and maintenance. From other sources it receives $107,000 ; $44,000 of this comes in the form of dues from 4,200 members , who pay from $1,000 a year for corporate members to $5 a year for associates. Benefits vary according to the type of membership, but generally include free copies of publications, cheap tickets to museum events, invitations to the museum's annual ball and to the twice-monthly members' evenings, the use of a members' room supplied with art periodicals, the right to call on the staff for professional advice, and so on. Members also attend, for a small fee, the "museum mornings," a series of weekly lectures with an attendance of about 275.

The museum puts on an average of one exhibition a week ; this imposes a heavy burden on the staff of four curators, one of whom is also the director, and one of whom is occupied by the educational programme. Most of the remaining 48 employees are guards, caretakers and secretaries, though Mrs Breeskin attributes the smooth handling of the many exhibitions to the work of a designer and a small but efficient staff, who lay out the displays. Part-time teachers are engaged for the self-sustaining art classes.

Perhaps the most forceful volunteer help comes from the Women's Committee, whose 32 members find their position anything but a sinecure, and who are chosen without regard to Baltimore's rather rigid social structure. The committee organises the annual ball, held in the museum itself, which is the city's liveliest social function and brings in new members. The women also run the dramatic evenings, generally of ballet, held in the museum's pleasant little theatre, and the profitable gallery where modern pictures are available for rent or for sale at prices which younger collectors can afford. The committee is also responsible for the programmes for young people ; a hundred or so meet twice a month and for a nominal subscription of $1 a year enjoy lectures, demonstrations and refreshments, while becoming interested enough (the committee hopes) to be potential future members. Another activity which began at the museum and has now spread out into the schools is the Young Musicians' Series, privately organised and financed to bring children first-class chamber music.

On another level, the museum is grateful to a committee of artists representing most local groups, which takes upon itself the invidious task of choosing the pictures for the annual regional art exhibition, and of picking out three local artists who are given one-man shows each year. Other committees concern themselves with the museum's finances and its architecture, and most of the many corporate members were enlisted by a group of male volunteers.

The museum reaches out into the community in other ways. It offers special memberships for art teachers, and shows their pupils' work from time to time. It collaborates with the art department of Johns Hopkins University, which it adjoins. It gives houseroom to a potters' guild and other craft groups, and cheerfully welcomes displays of commercial art, modern furniture, first-class photography or spring daffodils. At Christmas it is taken over by the garden clubs for a show of wreaths and decorations, with suitable music ; in summer its pretty rose garden may ring with Beethoven quartets or ultra-modern jazz. This catholic approach to art, serious and selective but neither grim nor academic, has its critics among conservative Baltimoreans but, whatever their feelings about their museum, they have quite fallen out of the habit of ignoring it.

Strategic Bargain

FROM A CORRESPONDENT IN COLORADO

FOR over seven years, from 1951, soon after the Korean outbreak, until mid-1958, the federal government in effect "grubstaked" owners of promising deposits of strategic minerals. Development loans under the Defence Minerals Exploration Act were designed to encourage the exploitation of such deposits in order to increase supplies of minerals which were needed for military purposes. Loans were to be repaid without interest, in the form of royalties of 1.5 to 5 per cent on the value of minerals sold. The Attorney General, Mr Rogers, has now reported that this was one of the best investments ever made by the United States. New deposits of ore proved under the programme are worth an estimated $494 million ; the owners have already taken out $51 million worth of these ores, and the government has already been repaid $2,500,000 out of the $21 million it actually advanced. Mr Rogers has said that most of the rest will be repaid, too ; and that in any event "the deposits (found) represent a vast stockpile in the ground available in case of defence or civilian needs."

About two-thirds of the money went to develop deposits of copper, lead, zinc, tungsten, and uranium. There were nearly 4,000 applications, of which 1,169 were actually approved although about half were later cancelled without actual mining having taken place. Most of the developed mines are in the West. The government spent about $8 million in administration and inspecting properties on which a loan was asked so the total cost approaches $30 million—still a bargain, says Mr Rogers. The 85th Congress passed a successor Act in August, 1958. This provides for similar loans, but they must be repaid with interest, are limited to $250,000 for any one mining development, and the owner must have been unable to enlist private capital as well.

THE WORLD OVERSEAS

Central Africa's Troubles

FROM OUR CORRESPONDENT IN SOUTHERN RHODESIA

Wednesday

AMID the gloom overhanging Central Africa two glimmers of hope shone this week. First was the fact that as almost the last act in his term as governor of Northern Rhodesia, Sir Arthur Benson, without having declared a state of emergency, was steering Northern Rhodesia up to polling day on March 20th in the first general election in Central Africa where the African vote is playing a significant part. And the second was the remarkable response which Salisbury Africans in their thousands gave Mr Garfield Todd when the former Southern Rhodesian premier tore the Southern Rhodesian government's Unlawful Organisations Bill to shreds—but went on to paint a bright picture of the Federation's potential future.

Nevertheless, gloom lay heavily on all three territories. In Nyasaland the toll of deaths declined, curfews were relaxed slightly and the Zulu-descended Chief Angoni advised the tribesmen to co-operate with the government. But no government, British or Rhodesian, gave any sign of an imaginative and positive statement about the protectorate's future calculated to dissuade Africans from entering a prolonged state of sullenness towards authority which could do more lasting harm than brief violence. The minister of state for the colonies, Lord Perth, moved through Nyasaland and Northern Rhodesia almost, it seemed, in carpet slippers; after the noisy progress of his parliamentary predecessor, Mr Stonehouse, on his fact finding mission, Lord Perth was determined to give any dogs that remained sleeping the chance to lie. Advocates of the plan for a British parliamentary commission to tour Nyasaland have lost ground here; local journals have attacked the scheme because they suspect British members of parliament of the base motive of suggesting the trip merely to gather more ammunition for election speeches. And while the officials delay in announcing the new Nyasaland constitution, Mr Wellington Chirwa, the last Nyasaland African of any stature left undetained, has affirmed that the terms he would accept are identical with those of Dr Banda: an overwhelming African majority in the legislative council and consequent secession from the Federation. So the hopes of those who thought they could put Dr Banda out of their minds and negotiate more happily with Mr Chirwa appear to be smashed.

In Northern Rhodesia, one step ahead in having a new constitution, doubt persisted until this week whether it would be allowed to work. Would the 7,617 Africans who had registered as voters after the imaginative sales campaign by the government go in the end to the polls? Looking on this 25 per cent of the electorate as the most important part in terms of significant constitutional advance, Sir Arthur Benson gave them cottonwool treatment; as soon as the extremists of the break-away Zambia African National Congress showed signs of physically carrying out their threats to stop African voters from polling, he arrested the Zambia leaders under normal powers. He has not copied the treatment given to the 750 Congress leaders arrested in Nyasaland and Southern Rhodesia; the Zambia detainees have merely been moved to areas away from their homes with orders to report to the police once a week. But a bigger threat to the working of the governor's constitution has been made by the United Federal party, with Sir Roy Welensky's full backing (and backing is hardly the word since the Federal prime minister has been well to the fore in this manœuvre). His party's objective is to win sixteen of the twenty seats contested so that it could dominate the thirty-strong legislative council which now contains only six official members. If they win only fourteen elected seats, their announced intention is to force the governor to accept their choices for two nominated seats, under the threat that otherwise they will use their large holding to make the constitution unworkable. This manœuvre is the culminating move in a long war between Sir Roy Welensky and the Colonial Office. If Sir Roy wins, the British Government will lose some of its powers in Northern Rhodesia before the tables are even set out for the 1960 constitutional talks.

Sir Roy Welensky himself, conducting a typically fighting campaign and striking out at Ghana, Mr Todd and the "poison gas" of Mr Fenner Brockway, looked to his hoped-for sixteen-member majority and added ominously in a speech at Lusaka that "it would be a very brave governor who would overrule them. He would soon be looking for another job." Growing pressure among United Federal party spokesmen for federalising the police force—a move which would be anathema to the African population—points to a major clash between the British and the Federal governments, and it is a clash which Sir Roy's provocative words and his party's attitude to the Northern Rhodesian constitution can only hasten.

But perhaps it is in Southern Rhodesia that the gloom lies most thickly. The Unlawful Organisations Bill which seeks to outlaw permanently the four African Congresses in central Africa has come under a mighty fusillade from the most dignified sentries of liberty: the Anglican archbishop has called it an "echo of the Hitler regime"; the Salisbury bar has attacked it on nine legal grounds as "an encroachment upon the right of free association"; and Mr Garfield Todd has said it will bring Southern Rhodesia into contempt with other Commonwealth members. Nevertheless, while they have extracted some changes, members of parliament seem determined to press through a bill which empowers police to search without warrant and arrest without evidence; a bill, moreover, whose validity is not to be tested in a court of law and which empowers magistrates to pass five-year prison sentences. Another bill to discipline Africans in the reserves is in prospect. Sir Edgar Whitehead declared in justification that existing public order and native affairs legislation was inadequate to deal with congress agitation and that "had we waited another three months, trying to enforce old laws and taking no action beyond those laws, we would have had civil disobedience, probably ending in riot here." Legal critics suggest that any inadequacy lay in the skill of the prosecutors, not in the laws.

Another detention bill introduced this week, which Sir Edgar has indicated he may use to keep 250 Congress detainees imprisoned for up to five years without trial, will obscure vital questions which could only come out in a court trial of the Congress leaders: how far advanced was Congress (to quote the fearsome preamble to the Unlawful Organisations Bill) in its "malicious and wicked campaign for usurping the functions of government"? And was a declaration of emergency in consequence necessary and justified?

Preoccupied with all this repressive legislation, Southern Rhodesian members of parliament have had little time to suggest positive measures to heal the deep racial wounds inflicted by the present troubles. They have made passing reference to new industrial conciliation and apprentices bills which will help to advance the Africans through multi-racial unions and better technical training; but they have shown no realisation that all races, jolted out of complacency or apathy, were fleetingly in a mood to accept new ideas.

THIS is the probable explanation of Mr Todd's remarkable triumph on Monday. He had seen what can almost be called the hunger of the Africans of Southern Rhodesia for urgent and constructive thought and the sudden acceptance of this among many ordinary Europeans. While Sir Roy Welensky was speaking without much more than his usual urgency about the need to remove social "pinpricks," Mr Todd called for a "massive and immediate" ending of the colour bar in the government sphere. While three government members failed to get a hearing from the hostile crowd in a Salisbury African township, 6,000 Africans came a dozen miles to hear Mr Todd speak and applauded him continually.

What he said to them was hardly new by objective analysis. He confessed that he had not done enough when he was premier; he said he loved the country and trusted its Africans and that it had such a rich potential that no European need ever fear African economic competition. Rolling up his sleeves and leaving the microphones far behind him, he said that the country must plan advances in days, not months. He gave out confidence by almost echoing Franklin Roosevelt's words: "There's nothing to fear but fear itself." He inspired trust, paradoxically, because he confessed to selfish motives, that he wanted to save all the possibilities of Rhodesia and he saw that this could only be done by implementing partnership without delay.

Franklin Roosevelt was already president when he spoke of the spectre of fear. Mr Todd is the leader of a party without parliamentary representation. Whether his United Rhodesia party can next month be given greatly renewed life in Southern Rhodesia by being absorbed into the new Central Africa party; whether Sir John Moffat, the Northern Rhodesian leader of the Central Africa party, can get elected to the legislative council and gather about him a large enough voting block to influence territorial politics; whether they, together, can inspire Sir Roy Welensky and Sir Edgar Whitehead with some of their urgency for drastic reform; these are three questions upon which the future of the Federation may now chiefly depend.

France Swings Back

FROM OUR PARIS CORRESPONDENT

LOCAL elections usually arouse only local interest. The French municipal elections, held over the last two Sundays, were an exception to this rule. They provided the first nation-wide test of public opinion since that strange autumn of last year when Frenchmen overwhelmingly endorsed General de Gaulle's return to power and supplied him with a neo-gaullist Assembly. The test is not only the first; it is also the last for a very long time to come.

The spell is over. The results can now be interpreted in purely rational terms. This time Frenchmen did not go to the polls under the shadow of civil war. And the stronger their former hopes, the bigger their disappointment now. Six months after the referendum, four months after the general election, many people seem to have discovered that the new regime has no magic panaceas; the Algerian war goes on and it now has to be paid for, as the budget last Christmas caused them painfully to realise. The outcome was easily predictable: the neo-Gaullist UNR, which last year benefited from the desire for a change, has suffered a setback; the Communists have staged a spectacular recovery. The tide has begun to turn.

Comparisons between votes are difficult. Municipal elections are held throughout the country. Under the previous electoral law the majority system with two ballots (the winning list getting all the seats on the council) applied only in villages and towns of less than 9,000 inhabitants. Largely in order to get rid of communist councillors, the majority system has now been extended to all the towns with a population of up to 120,000 people. Naturally, the smaller the place the greater is the influence on the result of parish pump politics and the personality of the mayor. But in bigger towns, and particularly in the thirteen largest cities where proportional representation did apply, the vote had a more general political character. Detailed comparisons are thus ruled out by the change in the voting system and the confusion of labels and coalitions in the second round. Yet the general trend can be discerned.

THE UNR is the main victim of the changing mood. Its setback is uneven; it is less pronounced in Paris than in the provinces. The fact that the party is a new one without strong local traditions cannot explain the phenomenon. When the Gaullist Rally was created, it scored a tremendous success in the municipal elections of 1947 and became, for a while, the biggest party in France. Last year the gaullist wave was of similar proportions. Now the come-down is particularly striking for the men who played an active part in the change of regime last May. M. Soustelle has had to give up his hope of succeeding M. Herriot as mayor in Lyons. M. Neuwirth and Colonel "Leatherneck" Thomazo, both of Algerian fame, were deserted by the bulk of their electors in Saint Etienne and Bayonne respectively.

Older parties, like the conservative Independents or even the MRP, reaped some advantage from the gaullist losses. The Socialists fared well in some of their strongholds, like Lille and Marseilles. Elsewhere they have in many cases profited from second round coalitions. It has even been suggested that the Socialist party has inherited the Radicals' chameleon-like skill in contracting alliances on both left and right (with only two councillors out of 37, the Socialists

have managed to wrest from the Communists the post of mayor of Le Havre). But, on balance, the Socialist party is rather on the losing side. It is the Communists who have come out best in this poll.

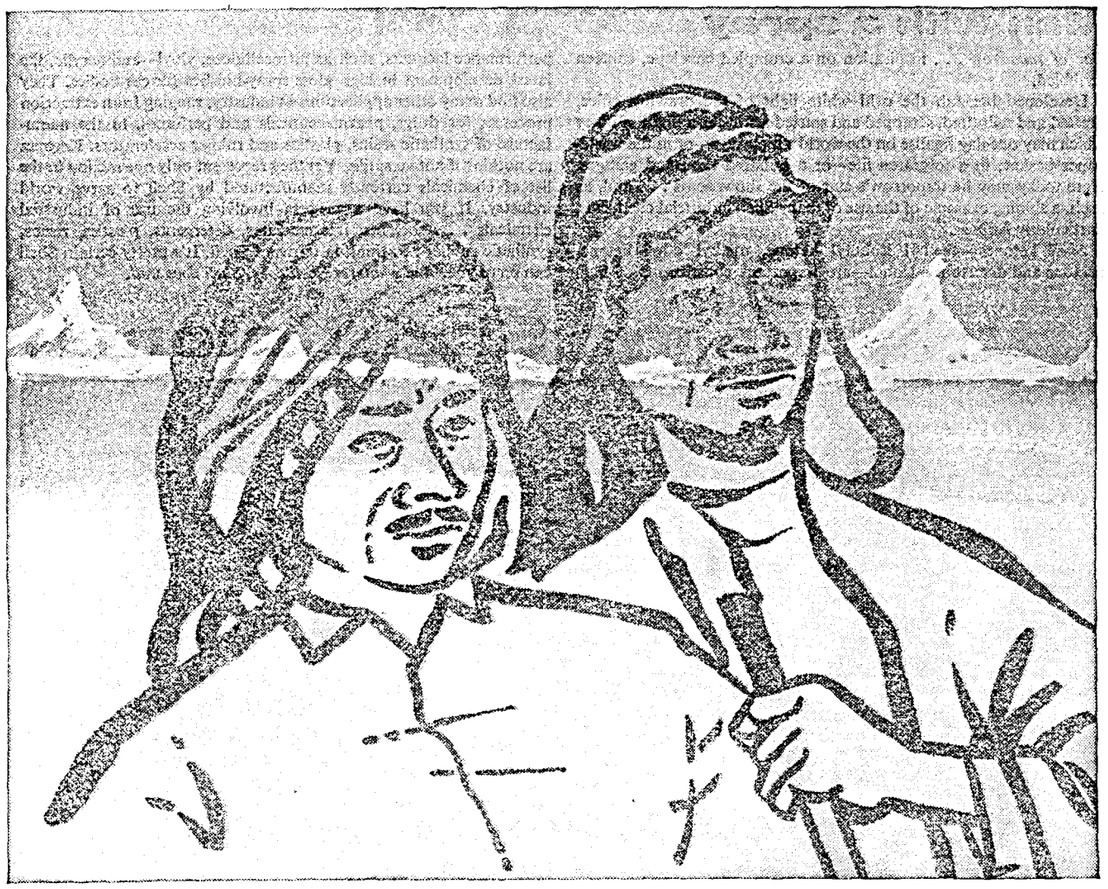
The non-communist opposition was too weak and wavering to capture the mood of discontent; the Communists may rightly claim that they are the strongest anti-gaullist party. They will now have fewer local councillors in the country as a whole. Where proportional representation has been abandoned, they have often been driven out of the council by a "national" coalition. But in some places they have managed to get the majority vote and all the seats. What is more important, they have recovered their old voting strength. The red belt of Paris is redder than ever. In most places the Communists obtained as many votes as in 1953 (the date of the last municipal election) and in some even more. Last year's partial eclipse is over. On this showing, at any rate, one Frenchman in four would again vote communist at a general election.

M. Thorez can draw yet another comforting conclusion: the Communists are coming out of isolation. Popular discontent and the electoral system have, in some instances, pushed the Socialists into their arms. There were about fifty "popular front" alliances between Communists, Socialists, small left-wing groups and, occasionally, Radicals. In most cases, the coalition polled roughly as many votes in the second ballot as its component parts had done in the first. Even in the northern towns of Tourcoing and Douai, which were the exception to this rule, the loss was not very heavy. Many popular front alliances failed because they provoked the defence mechanism of the Right and drove many conservative abstainers to the polls. The significant fact remains that, despite the warnings of M. Mollet (himself elected mayor of Arras by Catholic votes), the bulk of socialist voters did not hesitate to mix their ballots with the Communists wherever a common list was presented. Nine months of gaullist rule have achieved more than years of communist efforts.

THE immediate political impact of the changed mood will be small. The constitution makers of last year insured against swings of the pendulum. The president has wide powers. There may be no fresh popular vote for years; the creation of "substitutes" for deputies drastically reduces the scope for by-elections. The new local councillors will be called next month to elect the Senate. The extension of majority voting will prevent the new Senate from being too tilted to the left. It may be less "gaullist" than the Assembly, but it will not be a real counterpoise. And in any case parliament has now much less importance.

One paradoxical result of the municipal elections will be to strengthen still further the general's control over the neo-gaullist deputies of the lower chamber. The UNR must now be even more frightened of a dissolution which would force it to face the verdict of the people. On the other hand, the ruling circles cannot remain unaffected by such unmistakable signs of the changing political temperature (a recent opinion poll shows that only 55 per cent of the people still have confidence in the government). There may be pressure on the general to introduce some more popular measures. But the tests will no longer be electoral or parliamentary. It will be necessary to watch the factories and trade unions carefully to see whether the Fifth Republic is not slowly heading for a clash with a popular front.

Cyprus Settles Down



FROM OUR CORRESPONDENT IN NICOSIA

IF anyone had any lingering doubts whether Eoka was a popular and patriotic movement these must surely have been dispelled after the public acclamation, indeed the near-apotheosis, of Colonel Grivas, even amongst moderate Greeks who secretly deplored the savage excesses of Eoka. Amid the constant invocation of the glories of 1821 during recent days there has been an extraordinary self-deception and a remarkable capacity to call black white which suggests that some Cypriots could yet be most malleable material for trained communist propagandists.

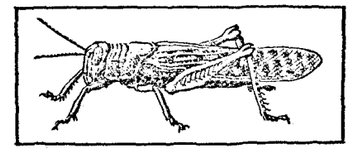
And the trouble about 1821 and all that is that so many Cypriot nationalists seem still to live and think ideologically in terms of that era. Thus, for example, Grivas himself has announced that the Cyprus Communist party "is isolated. Youth have turned their back on it and many old members have abandoned it." This utterance almost coincided with the disclosure by one of the island's leading Communists that the underground membership of Akel (the Communist party) had reached nearly 7,000—the highest since 1946. (The figure may not be exact but there is no reason to believe it has been deliberately falsified.) Undercover membership appreciably increased at those times when the leftwing was the special victim of Eoka savagery. Ironically, perhaps, no one has done more to produce a situation which will breed communism than the right-wing Grivas.

BUT now that he has vanished from the scene the dust is beginning to settle, and Cypriots are facing the task of carrying out in ten months, in collaboration with the British administration, constitutional changes which in other colonies have taken years or even decades. They do so with a deep inner uneasiness that the often blame-worthy British will soon no longer be there to blame. Yet on the credit side there is much to be grateful for. Already the emergency is virtually at an end; Eoka has been practically disbanded and most of its arms surrendered; Grivas has left the island without disturbance, proclaiming his allegiance to Archbishop Makarios; the archbishop himself has matured in statesmanship and his supremacy over the pro-enosis faction is complete; a transitional committee has already got into its stride, meeting twice a week; and before the month is out a council of ministers will meet. It is an impressive record of political and administrative achievement for which the Governor himself, and also Archbishop Makarios and Dr Kutchuk, deserve much credit. But at the same time there is a slightly honeymoonish flavour about it all and only a fool would disregard the dangers which lie ahead. There are still three latent sources of conflict: Greeks and Turks might get at loggerheads again, the Right and the Left could clash, and the Greek nationalists might fall out amongst themselves.

On balance, the Greeks are probably ahead of the Turks in their thinking about the new situation, but then the line that "we can get on with the Turks if only the British won't interfere" has always been a facile Greek argument. Meanwhile the Turks are doggedly sticking to the concept of separation in all things, and though partition as a constitutional formula has been renounced, the idea of partition is an unconscionable time dying. Thus the Turks are still bent on a policy of economic apartheid bolstered by aid

Flame in the far desert

Today, a spreading yellow stain: advancing, enlarging, flowing together, smouldering under the desert sun. Tomorrow—if not extinguished—a searing, consuming flame, flying on the breast of the wind, fiercer by far than the ever-burning fires of Baba Gurgur in Irak, a plague borne on a thousand million wings.



From time immemorial, the desert locust (*Schistocerca gregaria* FORSK.) has scourged, year by year, a vast sweep of Africa and Asia. Through bitter centuries, men of many tongues have watched helplessly and without hope as the greenness was stripped from the earth.

Today the battle is being fought on more equal terms—and with mounting success. By international co-operation. By swift action based on shared information and intelligence. By the use of the most advanced and powerful insecticides science has to offer, such as aldrin and dieldrin, developed by Shell.

Aldrin, spread before the advancing, wingless hoppers, has been used successfully in many locust-infested areas of the world. Now, dieldrin—most persistent and versatile of modern insecticides—is being employed in a new technique which reduces both transportation and handling costs. Applied at extremely low application rates as a vegetation drift spray through a simple attachment to the exhaust pipe of a light vehicle, it has obtained high kills over periods of up to 36 days or more after only one treatment. Dieldrin retains its toxicity over long periods: this important Shell insecticide can *wait* for the fire to reach it to be extinguished.

dieldrin

Powerful against the Desert Locust, powerful against the vectors of malaria and other insects which carry disease to man, powerful against the grasshopper plagues of South America. Such is dieldrin, one of the six pesticides developed by Shell for world-wide use. Between them, aldrin, dieldrin, endrin, Phosdrin, D-D and Nemagon control virtually every major pest. Whatever Shell does, Shell does well.

Man with a spray

Car of tomorrow . . . inspiration on a crumpled envelope, canteen scribbled.

Developed beneath the cold white light of the drawing office, drafted and redrafted, scrapped and started again . . . a flight of fancy which may one day finalise on the world's highways—or in the waste-paper basket; *in a forgotten file—or a hundred thousand garages.* Here today may be tomorrow's star of the showrooms . . . and, as such, a shining example of the use of many Shell industrial chemicals, particularly *ketones.*

Shell ketones—methyl isobutyl ketone, methyl ethyl ketone, acetone and diacetone alcohol—are important constituents of high performance lacquers, such as nitrocellulose, vinyl—and acrylic, the latest development in high gloss spray-finishes for car bodies. They also find many other applications in industry, ranging from extraction processes for drugs, pharmaceuticals and perfumes, to the manufacture of synthetic resins, plastics and rubber accelerators. Ketones *are nothing if not versatile.* Yet they represent only one section in the list of chemicals currently manufactured by Shell to serve world industry. If *you* have a process involving the use of industrial chemicals . . . solvents, intermediates, detergents, plastics, resins, synthetic rubber . . . think in terms of Shell. It's pretty certain Shell can serve you. *And whatever Shell does, Shell does well.*

Shell Ketones

from Ankara; while a local trade boycott of Greek merchants is still tightly in force. Further disturbing signs of *Turkish separatism* may appear in the work of the committee which is to work out the new constitution in detail. The London agreement is vague or incomplete in many respects, and this plainly may lead to at best hard bargaining and at worst acrimonious controversy. It is a reasonable assumption that the Turks will be extremely legalistic in claiming their minority rights.

The direct danger from the Left is still not an immediate one, but in the long term the Right-Left conflict will be the biggest issue in the island. For the present, the left wing is still content to support Archbishop Makarios in the interests of unity—and the archbishop for his part is obviously not prepared to cross swords with them. Whatever he may think about them privately he has almost gone out of his way not to ruffle their susceptibilities. The first issue between them may arise in the coming week over the appointment of ministers to the new ministerial council. Will, for example, Archbishop Makarios select Mr Zhiartides as minister of labour, as many non-communists have advocated? A lot might depend on this decision.

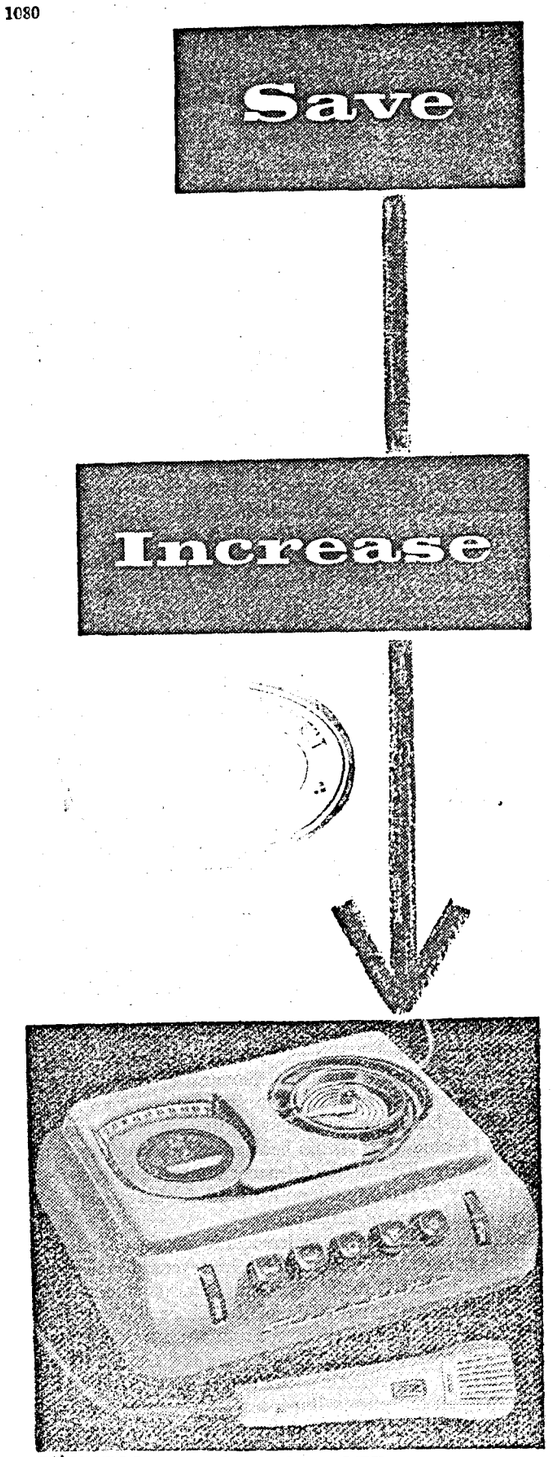
A more serious possibility, however, is that the Greek right wing may spilt into factions, now that the bogey of British rule is almost removed. Already there are all the ominous signs of lobbying for office and manœuvring for position. By the end of March, when the names of the first ministers are announced, Archbishop Makarios will have made quite a lot of enemies. These incipient right-wing rivalries could play beautifully into the hands of the Communists. "We are not ambitious just now about portfolios, but we shall watch the right wing squabble amongst themselves over the fruits of office—and then step in," was the frank confession of one leading member of the communist hierarchy in the island.

On all sides today, from the Governor to Grivas, there are insistent calls to maintain the spirit of the "Zurich miracle." If the same spirit of good will is maintained Cyprus can yet have a golden future; if not, it is hard to see how the new republic can avoid serious trouble.

The German Presidency

FROM OUR BONN CORRESPONDENT

WHEN the postwar occupation of Germany began, most people assumed that it would take some time for an adequate number of political leaders to emerge in Germany. The political and racial emigration of the thirties, and the prodigious losses of the war—some 5,750,000 dead and over two million missing—were convincing enough explanations. At the same time it was conjectured that many potential leaders were still trying to find their political bearings in the post-Nazi world, and that some, with fewer scruples, were simply waiting to identify the band waggon.



Occupation has since evolved into alliance. The Federal and the Democratic republics have come into being. Yet for ten years or more the German political establishments have been manned largely by the same persons, and few promising newcomers have caught the public eye. Herr Ulbricht, it used to be put about until quite recently, would retire from the eastern scene as soon as Dr Adenauer made a like move in the west. But such a simultaneous *exeunt* no longer seems likely. Nor, for that matter, is there any immediate prospect of even one of these untiring protagonists vanishing into the wings.

Undoubtedly, it is in western Germany that the dearth of leaders of quality is the more acutely felt. In the authoritarian east German state, enough of the kind of functionaries required to keep things running are either at hand or being systematically schooled. In democratic western Germany, where civic standards are set higher, the pool of reserve leaders, which ought by now to be numerously and variously stocked, is very poorly populated. And this at a moment when the Federal Republic, obviously about to undergo a *period of intensifying strain,* is especially in need of men of fresh vision and new ideas.

Just how short western Germany is of leaders of undisputed stature is to be seen in the fumblings after a successor to Professor Theodor Heuss, the first president of the Federal Republic. By general consent, President Heuss has set an exemplary precedent. His second five-year term of office ends in September. He and most of the persons who have a say in the matter have rejected a proposal, which at one time Dr Adenauer supported, that the constitution should be so amended that the president might be elected for a third term. As Professor Heuss himself has pointed out, tampering with the constitution to meet the needs of the moment is not the way to promote the healthy growth of democracy.

WHILE Dr Adenauer, in his characteristically complacent, almost contemptuous, manner went on to reckon that he could present as a presidential candidate the *worthy but unimpressive leader of his party in the Bundestag,* Dr Heinrich Krone, the Social Democrats proclaimed their intention of putting up a really first-class and popular man, Professor Carlo Schmid. The Christian Democrats did not hide their consternation. Dr Adenauer promptly dropped Dr Krone, and tried to push the redoubtable Dr Erhard into the breach. But, backed by a large part of industry and much of the Christian Democratic Union, who want him to continue his good work as minister of economics and be at hand to succeed the Chancellor when the time comes, Dr Erhard declined the proffered honour. So has Herr Kai-Uwe von Hassel, the young chief minister of Schleswig-Holstein, who has not yet made much of a name for himself elsewhere in the country. So has Dr Eugen Gerstenmaier, the president of the Bundestag. In face of these setbacks, and some others, the Christian Democrats have now set up a special committee to find a candidate. It has been asked to report as soon as possible after Easter. Dr Adenauer wants the issue to be settled before he leaves Bonn on April 9th for his customary spring holiday south of the Alps.

To all who would like to see democratic practices developing stronger roots in Germany, there are several disquieting aspects of the search for a president. First and foremost is the disclosure it has brought of the Chancellor's determination to present himself in 1961, at the age of 85, for another five years of office. As all but a few Germans are ready to admit, Dr Adenauer has served his country well during the past ten years. But it has long been urged that he should be preparing to hand over to somebody else, not only in order to introduce some new thinking into the quest for solutions to the German problem, but also to lessen the administrative dislocation that might well follow his long and egocentric innings.

time, effort, money

A Stenorette Dictating Machine on your desk would save you and your secretary each at least one hour daily in dealing with routine correspondence and administration. It would clear your desk, give you more time to think, leave you free to get on with more important matters.

output, accuracy, convenience

The Stenorette Dictating Machine takes 25 minutes continuous dictation, records telephone calls or conferences verbatim, has automatic erase and back spacing facilities and plays back instantaneously. Transcription speed is controlled to suit every typist's requirements. It increases output, ensures accuracy, is light and convenient to carry and operate. In fact, it has all the amenities of machines costing twice as much. No wonder over 400,000 Stenorettes are now in daily use.

Another highly discouraging feature of the search is the extent it has revealed of party and confessional intolerance. Since suitable candidates are so scarce, it would have been heartening if the Christian Democrats had had the grace not only to recognise, as most of them do, that Professor Carlo Schmid would make an excellent president, but also to let him stand unopposed. How impressive at home and abroad such unanimity would have been at this moment, and how timely a stay to socialist prestige. But no: a Christian Democrat must be found at all costs, and he must be chosen in accordance with the rules of confessional arithmetic, which unalterably ordain that a Catholic chancellor shall be matched by a Protestant president, or vice versa. It is an unedifying spectacle.

Birthday in Bourguibaland

FROM A CORRESPONDENT LATELY IN TUNIS

INDEPENDENT Tunisia was three years old on March 20th. At the " Victory Congress " of the Neo-Destour party, held a fortnight ago at Sousse to celebrate its twenty-fifth anniversary, President Habib Bourguiba made a three and a half hour progress report to the nation and was given a mandate to carry on as unchallenged leader of Tunisia. The measure of his present confidence is that he felt strong enough to speak bluntly to both France and Egypt and, more obscurely but not less firmly, to the Algerian National Liberation Front (FLN). The accepted London idea of Mr Bourguiba as the prisoner of these conflicting forces needs looking at afresh in the light of the Sousse congress. He emerges not only as the most securely established head of state in the Arab world, but also as a nimble statesman who is managing to play a hand of considerable strength from positions of weakness.

He appears to have convinced most of the powers with diplomatic missions in Tunis, including Britain and the United States, of his value as a potential point of stability in a chaotic Arab world. This he has done by his readiness to stand up to President Nasser, work for a Franco-Algerian settlement, and deter the FLN from becoming over-dependent on Cairo or the Soviet block or from attempting to extend the war to the whole of the Maghreb. The Sousse congress must have removed any doubts in the outside world about his popular backing in his own country and the genuineness of his contempt for the threats of Cairo Radio. His audience of local Neo-Destour delegates were helpless with merriment when he mimicked the Voice of the Arabs accusing him, Bourguiba, of being an imperialist tool and declaring that he had no support among the people. His power of ridicule is devastating, for instance, when he mimes the Arab League politicians cringing under President Nasser's crude efforts to boss the entire Arab world, or when he revels in Nasser's present difficulties in Iraq. Only Charlie Chaplin at his greatest could match him for sheer technique in this *genre*.

The Sousse speech came at a tricky moment in Tunisian relations with France and the FLN. The discovery of the phone-tapping network in the dovecote of the French Embassy and the recent case of hot pursuit by a French aircraft across the border were not, as might be imagined, the chief causes of embarrassment. President Bourguiba, as he explained in the long recital of his struggle, uses such incidents to wrest further advantages from the French. With the FLN operating from Tunisian territory, incidents are common enough for him to ignore or exploit them as he chooses, timing his demonstrations to achieve maximum effect. Sakiet, one almost felt, had been a cheap price to pay for the withdrawal of French troops.

The real embarrassment on this occasion was the miscarriage of some renewed attempt to set discussions going between Paris and the FLN. Persistent rumour had it that the Algerian " government " was going to transfer its headquarters from Cairo to Tunis during the Sousse congress, and that this would coincide with soundings for negotiations, with President Bourguiba in the role of middleman. The Algerians, in the event, stayed in Cairo. President de Gaulle was ostentatiously otherwise engaged in friendly exchanges with the King of Morocco. As a result, Mr Bourguiba was broodingly pessimistic about the Algerian war and publicly voiced doubts whether General de Gaulle is still master of his Algerian policies.

This pessimism was doubtless genuine, but almost certainly merely tactical. Mr Bourguiba, who, by his own confession, has erected empiricism into a system, is quite resilient enough to seize any new chance to mediate in Algeria if it looks like paying a dividend. Meanwhile he is reinsuring against a long war by increasing his own army from around 12,000 to 20,000 men—which is clearly meant, but not proclaimed, to be a deterrent to the FLN. Little-publicised incidents between Algerians and Tunisians also occur. When necessary, Mr Bourguiba takes firm action, to make it clear that, however much his sympathies are with the Algerians, he intends to remain master in his own house.

On the home front, the " Victory Congress " tightened up the already remarkably efficient party machine. President Bourguiba defends this step on the ground that, given the size of Tunisia and the state of continuing emergency which faces it internationally, only a very disciplined and united country can hope to defend its independence. His critics retort that he is so completely in control that he could easily afford a loyal opposition and a freer press. Their other reproach is that Mr Bourguiba fails to grapple seriously with economic and budgetary problems. It is true that he glossed over these majestically in his speech to the party, probably in the belief that aid and trade are the logical reward for his courageously pro-western policy, and that, in a country the size of Tunisia, a little aid goes a long way.

What President Bourguiba seems to be doing, with

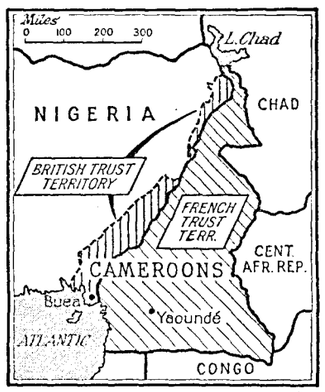
prudent calculation, is to replace Tunisia's dependence on France, economically and politically, by a wider partnership with selected countries of the free world. "Trust Bourguiba; he knows best" may not sound a very democratic domestic programme to sensitive western ears. But to the average Tunisian, in his third year of independence, it still probably sounds good enough to be jogging along with.

Russian Diplomats Return to Canberra

FROM OUR CORRESPONDENT IN AUSTRALIA

Moscow radio says that Australia made the first move to persuade the Russians to send back their diplomatic mission to Canberra. Perhaps that statement is intended to restore some of the face lost in 1954 when Vladimir Petrov sought asylum (and £A5,000) by defecting from his embassy, and when his wife was saved by an Australian air hostess and some Darwin police from two Russian plug-uglies who were escorting her to Moscow. Canberra, on the other hand, is under the impression that Mr Firubin, the Soviet deputy foreign minister, made the first pass in the recent exchanges. He came as a delegate to the meeting of the United Nations Economic Commission for Asia and the Far East—which a need for hundreds of hotel beds of uniform standard had driven to Broadbeach, Queensland. But he found it necessary first to fly to Canberra, a thousand miles out of his way, to say hello to the prime minister. In any case, this was not the first time the subject had been mentioned. Australian and Russian representatives have met at international conferences before; and in 1956, when a large Russian contingent came to the Olympic Games in Melbourne, discussions became quite serious. But the Hungarian revolt put an end to that rapprochement.



The important question is not who made the first move, but who stands to gain more from the return of missions. Though Australia treated the Russian withdrawal with bland unconcern, it would seem to have a small something to gain from the new agreement. The first possibility is an increase in trade. This was not discussed by Mr Casey and Mr Firubin, but they did agree that expert talks should be held later this year. It would be rash, however, to expect much to come of these. For one thing, though the presence of Russian buyers at Australian wool sales may give a slight boost to prices, the Russians have presumably been getting all the wool they needed through intermediaries. The other reservation is that Australian trade is sewn up in trade agreements and import licensing, and it is difficult to see where the Russians would get the reciprocity that they would expect if they were to buy more from Australia.

A second possible advantage to Australia from a resumption of full diplomatic relations is the opportunity for direct talks about Antarctica. The Russians established a base in Australian Antarctic territory during the International Geophysical Year, all in the interests of science of course. Now they show no intention of going and see no reason to do so, since they do not recognise Australia's claim to the territory and, what is more, know that the United States does not recognise it either. Whether the reopening of the Canberra embassy will make any difference to this attitude seems doubtful. But even if the immediate advantages appear small, the return of the diplomatic missions is to be welcomed—at least if the conditions of their return (which are a closely guarded secret) will prevent them from indulging in more espionage than is customary.

Disposing of the Cameroons

FROM A CORRESPONDENT AT THE UNITED NATIONS

The extent and verbosity of the United Nations debate on the future of the Cameroons raise questions that were far from being answered when it ended. The basic problem was the old and seemingly simple one of what would happen to the caretakers' daughters when the caretakers should cease taking care. Of the various regions put under Uno trusteeship agreements, the Cameroons (the French sector, and the two British sectors, north and south) are the first to be declared ready for independence; whatever arrangements are made for the actual process of freeing them will, of course, have extra value as precedents and should therefore be examined with extra care. They were, although perhaps not always for that reason.

Since the respective caretakers had already agreed that the regions were ready for independence, in theory all should have been sweetness and rejoicing. In fact, the swarming acrimony shook spirits, rattled loudspeakers, extended into night sessions. Rivalry swirled between and about the three groups; big-power pressure, helpful suggestions on the part of small powers, oratory from Panama, did little but darken waters that were already muddy. When the first faint gleams of possible agreement showed against a torn horizon the Commission on the Status of Women arrived, by dire coincidence, for its regular Uno meeting. Hearing that plebiscites by male suffrage only were being contemplated, they flung outraged demands for woman suffrage into a debate already suffering from an embarrassment of conflicting choices which must somehow be reconciled to the satisfaction of eighty-two nations. The spectacle of the unfortunate British delegate having to explain toward the end of a fourteen-hour session, just how pained he was at not being able to agree with the lady delegate from Liberia, was somehow a symbol of the whole tangle in which wards, trustees and spectators found themselves.

The French wanted their sector to be freed by January, 1960, and left then to govern itself; on the other hand, the local premier wanted the French and British portions to be merged and the combination admitted to Uno as a new member, while another group, with Afro-Asian support, clamoured for new elections before independence. The British, for their part, suggested that the northern sector, becoming free in October, 1960, should then merge with

Continued on page 1083

Continued from page 1082

Nigeria, while the more contentious south should hold a plebiscite to determine what future connections the majority of its people really wanted. At first, the north was apparently willing to go along with this, but one southern group wanted a merger with the French Cameroons, while a Nigerian leader wanted only the north to be merged with Nigeria.

Meanwhile, twenty-five petitioners had appeared to present their own variants of these positions, or to speak in the names of groups that felt themselves not otherwise represented, some because they had been banned as troublemakers, some because they had been in jail when the visiting mission came their way. Fifty-one identical postcards, dignified by the Secretariat as "petitions," arrived from East Germany and Czechoslovakia supporting "the youth and the people of Kamerun in their fight for immediate reunification and national independence for the Kamerun." The Soviet Union, alone in disapproving the report of the Trusteeship Council, found these turbid waters a fine place for fishing.

After days of argument and reams of speeches, the decisions reached by exhausted delegates to the trusteeship committee represented compromises that sounded very like the official recommendations with which the sessions began. The final decision to approve (by 56 votes to 9 with 16 abstentions) the freeing of the French Cameroons on January 1, 1960, followed a split in the Afro-Arab group and represented a victory for the official French position. To it was added an hospitable paragraph endorsing the admission of the territory to Uno once it became free. The British had harder luck. By a vote of 57 to 0, with 24 abstentions, the committee called for a plebiscite in both sections of the British Cameroons, in the north in mid-November of this year, in the south between December 1 and April 30, 1960.

The net effect of the session was disquieting. Certainly it is, as one weary official said, better for these younger countries to come and talk out their woes than to stay at home and riot over them. But the whole procedure is unconscionably clumsy. There is little chance of improving it, and even less chance of putting through a closure rule than there is, for example, in the United States Senate. But the Senate at least has power, while the Assembly must depend on persuasion. In the process, it may some day talk itself, not into peace, but to death.

Sudan Seeks its Place

FROM A CORRESPONDENT IN KHARTOUM

A somewhat cynical interpretation of the recent government crisis in the Sudan (described on page 938 of *The Economist* last week) suggests that the crisis was due to the ambition of senior officers previously excluded from the sovereign Supreme Military Council. It is certainly true that events were precipitated by the unauthorised presence in Khartoum of certain companies of soldiers from regiments belonging to the eastern and northern commands, which were later officially though improbably stated to have been there for "recreation" during a normal period of reposting. Yet it would be wrong to attribute solely to personal motives a crisis that was at least partly a question of national policy and was a logical development of the process inaugurated by the major coup of November 17th last year. The latter ended the uneasy, two years old, coalition between the Umma and the People's Democratic parties, presided over by Sayed Abdullah Khalil, whose position had become untenable because of his unqualified support of the western powers.

It was the apparent continuance of this policy under the inspiration of General Abdul Wahab, who was believed to be in close contact with Abdullah Khalil, which led to the general's downfall. The two men have fallen victim to the same sort of influences which brought about the eclipse of Camille Chamoun in the Lebanon, although in other respects the two states are very different. And just as Chamoun became too much a sectarian leader, so Khalil's policy became too identified with the Ansar, the unorthodox religious group led by Sayed Abdur-Rahman el Mahdi; although in November the Ansar regarded the former prime minister's complicity in the military coup as something of a betrayal. The recent change, however, does not imply that the Sudan is about to abandon its old friends or throw itself into the arms of Egypt. Egyptian intentions are regarded with a deep and widespread mistrust; and any attempt to bring about a close union with Egypt would probably produce a violent reaction from the Ansar.

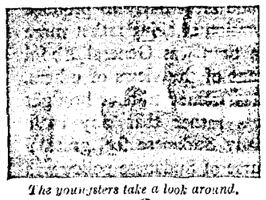
Though official statements were in a sense correct in saying that the crisis arose among senior officers over purely internal affairs, it is clear that the politically minded classes had an influence on the course of events in a country which is still only in process of becoming a nation and in which tribal and sectarian loyalties tend to prevail over national feeling. In the wider context of the Arab east, the crisis was just one more landmark in the adjustment to the growing emancipation of the area from outside influences. In the case of the Sudan, it will take time for its citizens to decide exactly what their position is between the sometimes conflicting claims of the Arab world and of Africa.

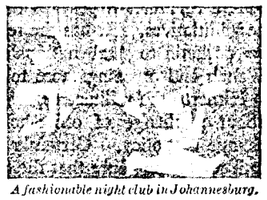
General Abdul Wahab seems to have accepted his relegation to the retired list with good grace. Official recognition of his "patriotic attitude and self-abnegation" was countered by a statement from the general himself to the effect that he was "exceedingly happy and prayed God to help his colleagues in the exercise of the powers which they had now assumed." General Abboud's position, as president of the Supreme Council and prime minister, does not seem to have been seriously prejudiced. His action avoided the use of force; and this senior officer, perhaps a dozen years older than his colleagues, seems content with the position of an arbitrator. Among the newcomers, Brigadier Abdul Rahim Shannan is perhaps the one most likely to produce new initiatives. He has the reputation of being rather more sympathetic to Arab nationalism than was General Abdul Wahab and of being more tolerant of the views of others.

Hitherto the military regime has seemed to have brought about a change of office-holders rather than any basic change of policy. Certainly many Sudanese feel grateful to it for making sure that the course of Sudanese policy was decided within the country and not in the interest of any outside power, western or Arab, at a moment when the parliamentary regime was demonstrating its ineffectiveness. Certainly, too, it is appreciated that policy decisions have been taken with greater promptitude and determination than they were before November 17th. But now that the regime's claim to have established political stability has been called in question, it will require all its skill to convince the public of the long-term merits of a military regime.

"South Africa gives you the holiday of a lifetime!"

SAYS THE CAPTAIN OF THE FLAGSHIP





We carry a largenumber of passengers who come to South Africa to escape the winter and to enjoy a holiday you won't find anywhere else in the world.

South Africa offers a welcome change from a European holiday. There is so much to do and to see that is completely and fascinatingly different. Where else can you study wild animals in their natural surroundings and do it safely from a car? Where else will you see Native life in all its colour and quaintness? And when you've travelled around and seen and enjoyed all the marvels of this amazing land, there are quiet resorts where you can relax — or fashionable places where you may join in a gay social round.

But it's the sunshine that makes everything so marvellous. There it is, shining on you every day...bright, beautiful and heartening. South Africa gives you the finest holiday you'll find anywhere in the world.

The youngsters take a look around.

A fashionable night club in Johannesburg.

Dollars for European Equities

BY OUR WALL STREET CORRESPONDENT

THE American investor is not internationally minded: so far there has been no dearth of domestic outlets to induce him to be. Apart from large American holdings in international oil companies and in Canadian securities—and in Wall Street Canada is hardly a foreign country—investment in foreign shares is closely circumscribed, and confined to the bluest of blue chips. Recently, however, interest in European equities has grown, along with a more favourable reception for foreign bonds. The more sophisticated American investors have drawn some pointed contrasts between the check in the growth of the American economy and the rapid strides made in Europe—and between the diminishing yields on common stocks on Wall Street and the relatively generous yields in London, Holland and Germany. The European common market has highlighted and augmented hopes for Europe's economic future; and it helps to soothe Americans' political fears about foreign entanglements for their money. American investors over-extended themselves in foreign securities in the 'twenties, and they have been slow to put themselves at the mercy of foreign governments again. Yet in the new realities of nuclear politics American and European interests are tied much more closely together ; while a Europe that is moving towards economic and political unity is less likely to slide into most of the aberrations from which American investors have suffered in the past.

This line of thought is clearly behind the recent formation of Eurofund, a closed-end investment trust that plans to put $50 million into the shares of companies based in the common market area. There are already three smaller funds specialising in foreign securities, and still another, the Sterling Fund with a portfolio in British securities, is in process of formation. This lead may be followed by the established open-ended mutual fund groups, which pride themselves on the wide range of their special funds and are always attracted by new sales avenues. Another sign of interest is the trip to Britain and the common market nations proposed next month by members of the influential society of New York security analysts.

INTEREST in foreign securities has been largely confined, in the past, to a relatively small group of individuals and institutions, mainly brokerage firms who have direct acquaintance with European markets. Most of the buying has been done by these brokers, on their own account or for their largest customers, and they have skimmed off much of the cream of profit for themselves. They have not yet made much attempt to interest the small investor in European securities. But this sophisticated group has broadened considerably in the last year, and has gained recruits from, for example, industrialists who have been impressed with what they have seen abroad. The mutual funds, again, have been responsible for a large share of the recent increase in foreign share purchases. In the last quarter of 1958, for example, the biggest single investment made by 25 leading funds was in the shares of Philips Lamp, the Dutch electronics firm.

The small investor has not been weaned away from his domestic holdings, and it is doubtful whether a switch of any real size—except through the medium of mutual funds—is yet in the making. That thundering herd of brokers, Merrill Lynch, Pierce, Fenner & Smith, reports no echo of the professional interest in foreign stocks in its 15,500 daily transactions ; nor do the other big houses. Brokers who are themselves impressed with the virtues of undervalued foreign shares are finding their clients singularly resistant—more so than they would be to the shares of an unknown American company. But this does not mean that the average American

investor is completely immune to the romantic, if remote, appeal of foreign expansion, for there is a growing demand for the shares of those American firms with large subsidiary operations abroad—a demand formerly confined to the shares of the international oil companies.

American purchases of European equities today amount to no more than a few hundred million dollars a year—a drop in the ocean of the American capital market. Portfolio investment has played a minor part in American capital exports since the war compared to the direct investments abroad made by United States corporations. Many of the mutual funds are subject to legal restrictions that prohibit or limit their purchases of foreign issues; and investment in British or German shares faces a major tax disadvantage. While an individual, through the double taxation agreement, can set against his US taxation the 42½ per cent income tax deducted at source by the Inland Revenue, or the more moderate 25 per cent withheld in Germany, the mutual fund, which pays virtually no taxes on its own account, cannot. Nor, unless a fund has more than half of its portfolio in foreign securities, can it pass a tax credit along to its shareholders. The tax-free charitable and pension funds are faced with the same handicap. This is a major deterrent to participation by the really big funds.

UNLESS he is his own expert or has his own sources of information, the individual American investor has great difficulty in following the daily fluctuations of foreign shares or in securing any background material on individual foreign companies. The mechanics of investing abroad are unusually cumbersome and slow compared with the ease of buying or selling domestic securities in the United States, and they are costly in terms of such incidentals as commissions and cables. Nor can the American investor trade on margin in these stocks.

Some European companies are making special efforts to woo the American investor with, in a few instances, perceptible results. Dutch firms have done a particularly good job of promotion, aided by the fact that their government imposes no withholding tax. Some German firms have been redesigning their balance sheets to conform more closely to American practices. But most reports, judged on American standards, do not appear to address themselves to the average shareholder. Even professional Wall Street analysts, perhaps bedazzled by the wealth of detail provided by American corporations, complain that European company accounts are confusing rather than informative.

Obstacles to investment abroad do not apply to those foreign companies listed on the New York exchanges, which have the status of being American by adoption. Shares of the Royal Dutch-Shell group, British Petroleum, Electrical and Musical Industries and Royal Dutch Airlines are responsible for the bulk of American investment in foreign equities; in 1958, Royal Dutch Petroleum was the fourth most active issue on the New York Stock Exchange, Shell Transport and Trading took twelfth place, and EMI just scraped into the list of the fifty most active stocks of the year. Similarly, names such as Unilever, Imperial Chemical Industries and British-American Tobacco fluctuate in popularity but enjoy the familiarity of long association.

Outside the established group of equities, Americans tend to invest in companies whose names are brought forcibly to their notice. This recognition may result from the popularity of an imported product; European car manufacturers have attracted a certain amount of American capital. KLM is also benefiting from direct familiarity, and is now following Royal Dutch Petroleum's example and raising money through a new dollar equity issue in the United States. More often the American investor gains interest and confidence in a European company by virtue of its domestic involvements; the Bowater Paper Company popularised its shares by the decision to operate a plant in Tennessee, and Tube Investments has recently been attracting attention through its association with Reynolds Metal. In line with domestic investment fashions any equity with an electronics flavour enjoys support. But in general, publicity is at least as important as an impressive earnings record in attracting money.

The banks now operate depositary receipts for 120 European firms, but effective interest continues to concentrate on a much smaller group. The American investor, always nervous in the foreign field, likes the reassuring companionship of his compatriots. Institutional buyers share this trait, as their concerted addiction to the shares of Philips Lamp indicates. The tendency to move with the crowd inevitably produces violent changes in fashion in particular foreign stocks. The American professionals who deal in European securities switch their holdings quite radically, and that is why they are an important influence in the European stock markets despite the relatively small total stake.

AMERICAN buying of foreign securities is still small in volume. It may be encouraged as the weight of money flowing through the institutions seeks a higher return than can be obtained on Wall Street. Certainly professional investors feel encouraged by the growth of mutual funds in Europe, by the broadening base for European equities, and by the tendency for European capital markets themselves to bridge national frontiers. If American participation is to show any big increase it will probably manifest itself through the mutual funds —and particularly through those designed specially for the purpose. They alone possess sufficient resources for the extensive security research necessary to reassure the American investor. The propensity of the mutuals to buy foreign securities for their more general portfolios should not be exaggerated. With funds of $14 billion, even a small fraction in foreign equities represents a considerable sum. But Europe's progress is not the only determinant; if a recession hit the domestic stock market, foreign equities would inevitably lose glamour.

How Many Copies?

New methods are providing economical answers to a question every office considers every day

ONE of the main operations in any commercial office is document copying and printing: for few other productive operations have there been so many new methods offered in recent years. Britain was later than the USA and most of Europe in this development, and many of the machines originated abroad. But since about 1950 seven new or improved processes have come into use here, and by now a significant change in office methods has begun to be obvious. So many machines are available that it is essential to settle what kind of copying the machine will mainly be used for before trying to discover which type is worth buying.

It can be estimated, on the basis of a study of the cost of typing made last year by Production Engineering Ltd., that it takes a typist 20 minutes to copy and check an average foolscap page; that she costs in wages and welfare payments an average of £9 13s. for a 37-hour working week, and that it costs about 2s. 3d. for her to produce a single page. Six is the maximum number of carbon copies that she can make on a normal typewriter, and these will cost about 5d. each. If she uses an electric typewriter, she will be able to make 20 copies, which will cost about 1¼d. each. The cost of typing a copy varies widely with the complexity of the document to be copied; but the cost of copying a page photographically is constant, depending on its size: and a photographic copy does not need to be checked.

The cost of making a copy varies widely between the different types of photocopying machine. It can be from 1d. to 8½d. for a foolscap sheet; the time to make six copies varies from one to six minutes, and for twenty from 2½ to 20. For more than 20 to 25 copies it will prove cheaper to use some kind of duplicator than even the cheapest type of photocopyer; a stencil or "master" can be typed for about 3s. to 3s. 6d., and a master for an offset lithography machine, which can be prepared from any existing document without retyping in a photocopying machine at a cost of about 2s. to 3s. 6d. The cost of subsequent copies is basically paper, ink and the operator's wages. With an output of 40 to 150 copies a minute from a modern duplicator these charges are small.

HOW COPYING PROCESSES COMPARE IN COST

(Based on a foolscap original with a fair amount* of detail and taking material and labour costs only)

(Key: A best, B next, etc.)

Processes	Number of copies required						Capital cost of equipment £'s
	1	2	5	10	25	80–100	
Reflex	E	G	E	...	...	...	39–117
Transfer type	F	F	G	...	...	...	39–186
Thermofax	C	E	F	...	...	...	145–245
Xerography	B	B	B	...	...	...	1,000
Verifax	G	D	D	D	G	I	70–170
Dyeline (if transparent original)	A	A	A	A	E	F	73–1,900
Dyeline (if autopositive has to be made)	D	C	C	C	F	G	112–1,185
Paper litho plates made by Xerography	...	...	...	B	A	A	1,440–2,500
Photoscope and stencil	...	...	...	I	I	E	485–620
Typed paper litho plate	...	...	...	E	B	B	500–1,560
Typed spirit master	...	...	...	F	C	D	100–2,000
Typed stencil	...	...	...	G	D	C	100–2,235

*20 minutes typing and checking. *Source: Unilever, Limited.*

The table, from a Unilever Organisation and Methods Bulletin published last year, shows how the relative "prime" costs of the various photocopying processes varies with the numbers produced. The cheapest are those which use the cheapest types of paper and chemicals; where expensive photographic or other specially treated paper is used the cost per copy rises, though there may be other advantages in the process. Capital charges are not very significant except with xerography. Some of the seven photocopying processes that have come into use since the war are adaptations of earlier systems or systems already used outside the general office: others are completely new.

The oldest photocopying process in general use is the **Reflex** process; but the modern version is immensely simpler than the one first used some 30 years ago, which required conventional development and fixing of the photographic paper copy, and bulky apparatus. Modern desk-top units such as the "Polyprint," made by E. N. Mason, cost from £39 upwards: they can make two to four copies a minute, costing 5½d. for the first copy and 2¾d. for each subsequent print.

Dyeline, or **Diazo** processes have been used for many years in drawing offices, but have been introduced in small fast-copying machines only since the war. They employ the principle that ultra-violet light projected through a translucent master will bleach away a yellow "diazo" coating on paper underneath, except where print or lines on the master shield it; the special paper print can then be developed to make the print black or various colours. This type of machine gives the lowest costs of any photocopying process; it can produce 200 to 1,500 prints an hour at a cost of about a penny a print. It needs a translucent master, and preparation of this can put up its costs; but many kinds of typing paper will do already, and some offices are having everything typed on suitable papers.

Most though not all dyeline machines are more suitable for general office use than for small desk-top copiers; so is **xerography.** This process employs a metal plate with a "photoconductive" coating that can be electrically charged in the dark to take an electrostatic image from exposure to an optical image. When the plate is coated with powder particles, the electrostatic image forms a powder image that can be transferred to paper and fixed. Xerography is a dry process, which can print on to any type of paper. The machines, made under licence in this country by Rank-Xerox, cost about £1,000 for an ordinary office machine. An office machine costs about 9d. to expose a plate, and then only ½d. to ¾d. for each

subsequent copy up to six, which gives six at 2d. each. But with the high capital cost of xerography the machine needs using to capacity.

Between the general office machine and the desk copier come medium-sized machines using the **direct positive** process, which differs from the reflex process in that copies are made direct on to positive paper without any photographic negative. These copies (which can be used as masters for dyeline processes) take about 1½ minutes to make and cost about 4d.; the machines cost from about £80 upwards.

Of the small desk-top machines, those employing the **photo-transfer** process are the most widely used. The paper used is the key invention. The photographic image is transferred from the negative to the positive without exposure, when the two are passed through a chemical solution and squeezed together by rollers. These machines cost from £40 to £185, and make a good copy in 20-30 seconds costing about 8½d. So far only two copies can be made from a negative; but negative papers from which up to ten prints could be made are soon to be produced. Aluminium sheets can also now be processed in these transfer machines to produce masters for offset-lithographic duplicating machines.

Kodak's **"Verifax"** machine, using a variant of the transfer process, is the only one made in Britain; it employs a rubber matrix instead of a paper negative, and offers six or seven copies from this one matrix. It costs about 11d. to make the first copy, but the other five cost less than a penny each. The Verifax costs £70 to £170; it can produce a paper master for offset lithography so that fewer copies can be run than from a metal sheet.

The **Thermofax** machines made by the Minnesota Mining and Manufacturing Company share the desk-top market with the transfer machines; they use infra-red light, which is reflected from white paper but absorbed by the black type or lines, producing a corresponding image in specially-coated copying paper held behind the original. It takes about four seconds to make a copy, costing about 7d. for a foolscap sheet. This is a dry process, and possibly the simplest of all to operate; but it is limited to copying documents printed with graphite or carbon-based inks and will not reproduce light colours, while the transfer machines will copy anything. Thermofax machines cost £145-£245.

DUPLICATING machines have not changed technically nearly as much as have photocopyers. The chief developments have been in the preparation of masters for duplicating, and the xerographic and photocopying machines are responsible for the most recent changes in this direction. The increasing tendency to use the small offset lithography machine may gain further stimulus from this development. In comparing different duplicators, the chief difference is the higher capital cost of the offset machine as compared with stencil or spirit machines. The former cost £440 to £2,000, and the two latter £30 to £175, or up to £2,000 for some special spirit duplicators. The offset process has lower running costs, and gives higher quality results: there is a growing tendency for companies to do their own printing on an offset machine, instead of sending it out.

The development of photocopyers has already brought many possibilities for improving office efficiency, particularly where the documents to be reproduced are complex. But this is still a field of innovation. It is believed that a simplified xerographic machine will appear in a few years, reducing cost and complexity. Electrostatic duplicating methods also are being developed in the United States: this seems likely to be the field in which most progress will come.

BUSINESS NOTES

THE ECONOMY

Unemployment Turns Too

AS a prophet, able to forecast precisely how high unemployment figures would go this winter and when they would turn, and as a politician, able to bring out new facts at exactly the right time to deflate a Labour attack based on old ones, Mr Macleod was entitled to his double triumph this week. On March 9th, he was able to tell the Commons the number of people out of work was 550,000, against 608,000 in early February. There had been a significant decrease in unemployment in every region of Great Britain and even in Northern Ireland, and in almost all major industrial groups (except shipbuilding and ship-repairing). The national percentage of unemployment had come down from 2.8 to 2.5.

The reduction is concentrated in the number wholly unemployed, which came down by 48,000. Judgment of how much of this was seasonal depends upon the factors of seasonal correction that particular statisticians prefer; independent estimates would suggest that a fall of about 20,000 should be expected between February and March. (The number of vacancies, which rose by 25,000, showed little more than a seasonal change.) Mr Macleod's remarks about "three times greater than the seasonal decrease could possibly be" would thus appear to be largely bravura; but this might well be forgiven any politician flourishing such shaky statistical refinements. The reduction is substantial, and clearly much more than seasonal.

The Minister's impressive infighting with the figures this winter has discomfited the Opposition more than once; it has incidentally reflected a good deal on the time that his department ordinarily takes to put out these unemployment figures. The figures he gave on Wednesday, ten days after the actual count, would not ordinarily be published until "the early part of next month," according to the Ministry. The eventual statement will be much more detailed, but

what was released this week drew upon most of the major detailed tables that are published. It was, again, labelled "provisional"; but does that matter? These early counts of unemployment that Mr Macleod has been producing in the last few months offer one official statistic that is far more up-to-date, for example, than the earliest indications of the level of industrial production in times like these, they are worth the extra effort required. One can understand Mr Macleod's temptation to produce them at just the times required to dish Mr Douglas Jay; but there is a case for publishing the early figures as early as possible, even if that easy exercise should pall.

THROGMORTON STREET

An Air of Exuberance

FOR a pre-budget account, the market in industrial equities has been surprisingly exuberant. That the budget will be expansionist is expected by every investor; but that assumption was being made and discounted in market prices in the boom at the end of last year. Now the market has broadened, helped no doubt by the turnover in new issues, and over the week to Wednesday's close *The Economist* indicator went up from 250.9 to 253.7, within hailing distance of the peak of 255.6 touched on the last day of 1958. On Thursday, prompted by the sharp fall in unemployment, all sectors of the market went ahead and steel shares were particularly strong. There have been a few temporary setbacks, but the market has been able to shrug off the political and economic uncertainties with comparative ease. A stream of good dividends has contributed to the strength of the market, but the speculative element has become increasingly apparent. That is most obvious in the property share market, but it is also apparent elsewhere, in the quickness of prices to respond to rumours of take-overs and in the queues that have been formed to deal in shares newly placed or introduced to the market.

It is typical of the present mood that an offer for sale of 450,000 ordinary shares of 4s. each by Corsets Silhouette at 12s. 6d. per share was oversubscribed 33 times and had to go to ballot. At the same time the cash-cum-conversion offer by the Australian Government failed to secure a full subscription list. About 47 per cent of the £10 million of the 5½ per cent stock 1973 was left with the underwriters and about 72 per cent of the £10 million of 5½ per cent stock 1976-79. Both stocks were issued at 99 and in both dealings began at a small discount. Because of the conversion element in this issue, the offer had to remain open for a longer period than is normal, and in that period gilt-edged prices weakened. Presumably, with Dominion and Colonial loans rather out of favour, the next gilt-edged issue will be a Corporation one. But that is not the only new issue that the market will have to absorb. The lifting of CIC controls has brought forward a rush of rights issues and placings. And now there are two big issues—from Hawker Siddeley and Lloyds Bank—on the threshold of the market. The pressure of this weight of new issues may eventually curb the market's exuberance.

Hawker's Unusual Issue

THE terms of the £15 million issue of Hawker Siddeley of a convertible debenture have now been announced. They are unusual ones. The debenture is redeemable between 1979 and 1984 and is thus in the 20 to 25 year bracket that attracts the life and pension funds, but with a coupon of 5¾ per cent it is being issued at par. The yield is just about in line with current rates on first class industrial debentures, but while the issue at par offers a high running yield, attractive to tax-free funds, it offers no element of tax-free capital profit on redemption to taxed funds. The stock is convertible into £1 ordinary shares in each of the five years 1960 to 1964 on the basis of £34 nominal of ordinary shares for every £50 of stock. That effectively puts a conversion price on the ordinary shares of about 29s. 5d. These rights differ from those offered in the past by other convertible debentures in two respects. First the conversion price is not above the present market price of 29s. 6d. and secondly the conversion price does not run up as the years pass.

The unorthodoxy of the issue reflects the exceptional nature of Hawker Siddeley's funding problem. On the one hand, the institutions nowadays do not particularly care for that hybrid, the convertible debenture, but, on the other hand, they must recognise that an immediate dilution of Hawker Siddeley's equity is out of the question while the process of digestion, absorption and re-organisation of the new Canadian interests is being completed. The group needs time to fit itself to a radically different pattern of operations and investors need time to see how it will fare in whatever new shape it finally takes. The convertible debenture, funding much of the group's bank debts of £23 million in this country, provides that time. The issue has clearly been tailored to suit the institutions' requirements. There is a high rate on the debenture if events go awry and a low and attractive conversion price into the equity if they go well. It is the low conversion price into the equity that is the major attraction to taxed funds, for if Canadian earnings become an increasingly important portion of the group's profits the tax rate payable by Hawker Siddeley on its profits could fall below the British standard rate. The investor can, in fact, hedge his risks and the terms of the issue have been so pitched as to tempt him to do so.

Big Money for Lloyds

THE rights issue by Lloyds Bank, foreshadowed some weeks ago, is surprisingly big. Existing shareholders are being offered 6,961,901 new shares—one for every four now held—at a price of 37s. 6d. each. The market price before the announcement was 51s.; the value of the rights at 2s. 9d. was modest, and the shares dipped to 48s. 9d. (at which price the rights are worth 2s. 3d.). The size of the issue, £13 million, was also a depressing influence. When the Midland Bank last month blazed the trail it asked for only £4 million—and the rights on that issue were worth 5s. 9d. Lloyds' capital funds, moreover, had already been raised very substantially through transfers from inner reserves; its ratio of capital and published reserves to deposits at end-1958 was 3.6 per cent, higher than at any other bank, including the Midland after its capital issue. The proposed addition to Lloyds' capital will bring its total capital funds to £59½ million, well above that at any other bank, and the ratio to 4.6 per cent. This is coming within sight of the ratio of around 6 per cent common among the big banks just before the war, which the inflation of deposits reduced by more than half. Few people in Britain have found any reason for concern; but the decline in the capital base has attracted attention abroad. If the banks do use their new freedom from CIC to try and

get back to the former ratio—and there is no reason why they necessarily should—the new issue market will be faced with substantial demands. The question now is whether other banks—the National Provincial has specifically foreshadowed an issue, and others are expected to follow—will choose the modest course of the Midland or the ambitious one of Lloyds. One special influence for Lloyds has undoubtedly been its heavy commitment in hire purchase trade investments, which makes its total of fixed assets the highest of any bank. The amount of the rights issue happens to be exactly the same as the bank's stake in hire purchase houses, but that appears to be a coincidence.

THE BUDGET

The Green Light?

IF Mr Heathcoat Amory wishes to reinforce the Keynesian (and as his opponents will say the electoral) arguments for budget reliefs by turning to the traditional criterion of the Exchequer accounts, it seems pretty certain that the out-turn for 1958-59 will rise to the occasion. Important movements in the accounts can occur in the last fortnight of the fiscal year; but at March 14th the out-turn looked close to target, and on the right side of it. Ordinary expenditure was about £100 million above the total twelve months before, whereas the original estimates envisaged a rise of £155 million. Ordinary revenue, which has been flowing strongly in the new year, is up by £122 million, compared with an estimated rise of £96 million. Thus the above line surplus, at £477 million, is £23 million better than at the corresponding date a year ago—whereas the budget envisaged a drop in the surplus from £423 to £364 million. Net expenditure, below line, at £573 million on March 14th, shows a drop on the year of £32 million, broadly in line with the reduction expected in the full year.

WALL STREET

Tightening Credit

AT the end of last week, prices of common stock on Wall Street climbed to a fresh peak. The Dow Jones average rose to 614.69. That was immediately followed by what the American security analysts like to call a "technical correction," and by the close on Wednesday the Dow Jones average was back to 610.87. There is a trace of uneasiness in Wall Street and the movement in the average conceals quite wide swings in low priced and speculative stocks. The Federal Reserve Board is now trying to curb excessive speculation by tightening up on its margin requirements. The basic margin remains unchanged, at 90 per cent in cash for a stock purchase, but the new regulations are designed to curb the use of credit made available to investors when the basic margin requirement was lower. In the short run, these new regulations may not have any really significant effect but they should in the end bring about a contraction in credit available to Wall Street. In particular, the regulations hit at those who borrow from the banks and then re-lend the money at high rates to speculators. The Federal Reserve Board recognises that its proposals may freeze the market in the popular speculative stocks and that might give rise to violent price swings in a thin market.

Ford Makes Another Offer

FOR the second time, the Ford Foundation is offering common shares in Ford Motor to the investing public. Its first offer was of 10,200,000 shares in 1956 and it now proposes to offer another 2 million at the current market price. On the basis of the present price of $57 the issue would bring in about $114 million to the coffers of the Ford Foundation, which is seeking to diversify its own portfolio. The Foundation sees in present market conditions a good opportunity to secure a fair price and the offer should increase the number of Ford shareholders. That number has fallen markedly since the first offer and the poor market performance put up by the shares in 1957. The response to the latest offer is not likely to be anything like as overwhelming as that which greeted the first marketing. Then the sponsors of the issue simply had to take orders. This time they will really have to sell the shares. But their prospects of doing so seem to be good. In the last few days the price of the existing shares have been rising; a syndicate is reported to be buying them in the market so as to ensure a "good climate" for the new issue.

FINANCE HOUSES

Truce on Terms

FREE competition in provision of hire purchase finance has not lasted long. When hire purchase companies and stores broke loose from statutory control last October they carried to extraordinary lengths their competition over the amount that customers did not have to put down and the period over which they could spread their payments. Many of the extreme facilities that have been publicised, from one per cent down to five years to pay, turned out to be difficult for anybody actually to obtain; but the biggest finance house, United Dominions Trust, set the pace with 10 per cent down and three years to pay, and others followed. Many did so unwillingly. In the motor trade, dealers' margins tend to be somewhat over ten per cent; so any finance house having to repossess a vehicle would have difficulty in getting its money back even on the day after the contract was signed.

This week the bigger finance houses reached a limited truce. Terms on new cars are still wholly at the discretion of individual houses; but the fifteen members of the Finance Houses Association and their subsidiaries—two new members have joined recently, and others are expected soon—have agreed that on used cars, light vans and motor cycles the following will be asked:

On vehicles up to three years old, at least 20 per cent down and not more than 3 years to pay.

On vehicles more than three years old, at least 25 per cent down and not more than 30 months to pay.

The Finance Houses Association, it is understood, is registering the agreement with the Registrar of Restrictive Practices. Finance houses do not enjoy the special dispensation of the banks as providing "services" which the Act does not cover (for example, the banks' agreement on deposit rates). Finance houses are formally dealers in goods, owning a vehicle during the period of hire and selling it for a nominal sum to the hirer at the end of the contract.

The Association would obviously hope to justify its agreement before the court without too much difficulty. Hire purchase terms stretching beyond a certain point make little sense; in general, the hirer should have a stake in the product at least equal to its fall in value on immediate resale, and repayments should be adequate to cover subsequent depreciation. But it is a great pity that the individual houses could not fix responsible terms of their own accord. Regimentation and imposed uniformity is no less objectionable in this field than in others. Nor will the members of the Finance Houses Association have a clear run. The small and medium-sized houses outside have recently had some difficulty in competing. Will they now be still further tempted to compete by offering easier payments than the big houses do?

THE PRESS

More Magazine Mergers

ODHAMS' offer for the entire capital of Hulton Press, of which the financial details are discussed in a Company Note on page 1120, continues the process of concentration in the periodical press of which the Daily Mirror group's purchase of Amalgamated Press in December had been the latest major development. Odhams is indeed said to have considered bidding against the Mirror for Amalgamated at that time. Its approach to Hulton, which still owns a number of quite flourishing periodicals, is a logical move to prepare for the competition that the new owners of the Amalgamated Press will certainly be hoping to intensify—though perhaps not very quickly. Odhams this week also appointed as its vice-chairman Sir Christopher Chancellor, general manager of Reuters and one of the outstanding executives in the newspaper industry.

Both Hulton Press and Odhams itself, in the last few years, have suffered from the shrinking shrinkage of demand for some of their general interest magazines; *Picture Post* and *Illustrated*, pictorial magazines which were particularly vulnerable to television systems that do their job better, have sunk without trace. *Illustrated* picked up but little circulation from the closing of *Picture Post*; nor did *John Bull*, with which it in its turn was "merged" last year, appear to gain any circulation from the *Illustrated* readers who might have been hoped to transfer. Odhams, however, retains some faith in the process of merging all that remains of magazines on their deathbeds. This week it was reported to be negotiating to buy the title of *Everybody's*, the Amalgamated Press general weekly magazine which the new owners had already decided to close down; it apparently intends to merge this title, too, with *John Bull*. This paper, the last of the popular general magazines, was selling just under a million copies during the last half of last year, and is said to have gone up somewhat since; if any of *Everybody's* 400,000 readers are prepared to transfer, they will obviously be welcome.

With the Hulton group, Odhams would acquire the *Farmer's Weekly*, a solidly-established trade magazine; *Housewife*, which with a circulation of only 212,000 would not rank as a leading woman's magazine, the general monthly *Lilliput*, and four lively children's papers, *Eagle*, *Girl*, *Swift* and *Robin*. Its own woman's magazines, *Woman* and *Woman's Realm*, are far stronger; here it competes most directly with Newnes, the other major magazine group, and with Amalgamated Press, which at the time it was taken over by the Mirror appeared markedly the weakest of the three.

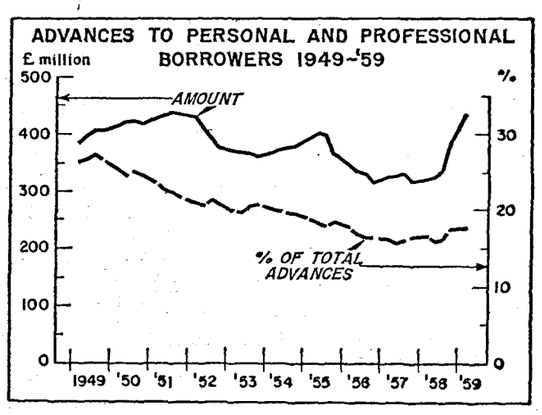
AIR FARES

Room for Price Cutting?

WHEN the government's Air Transport Advisory Council meets on April 3rd it will have before it some of the most embarrassing applications for air fares that it can have received since it was reconstituted seven years ago. Three independent airlines, Eagle, Hunting and Airwork, are applying for permission to make fare cuts on long distance routes that would undermine the entire fare structure of the British Overseas Airways Corporation. Since the flights are confined to British territory—Nairobi, Hongkong, Singapore, Malta, and Jamaica are some of the routes—there is no need to obtain the authorisation of the International Air Transport Association for any changes in fares. Sole responsibility for accepting or rejecting the applications lies with the ATAC—and Mr Watkinson.

The airlines are proposing fares that are about half or less of those now charged by BOAC. Hunting and Airwork, operating in partnership, are suggesting a return fare to Hongkong of £245, compared with BOAC's new rate of £415 16s. which takes effect from April. The proposed fare to Aden is £107 return against £217 16s. by BOAC, and the fare that Eagle wants to charge to Malta is £19 return against £52 12s. by British European Airways.

The independent airlines can produce figures that purport to show that with aircraft like Britannias and Douglas DC 6s, they will break even on these fares if they can fill from 40 to 60 per cent of the seats offered on each aircraft, the proportion depending on the route. And these are quite reasonable load factors on which to calculate: the average load factor achieved over the world's major airlines comes out at between 62 and 63 per cent of the seats offered.



The independents suggest that they can make such low fares pay by cutting standards of seating and eliminating catering. But in actual fact the seating proposed is barely half an inch less than the ordinary third-class standard (34 inches of leg room) now in use on the North Atlantic, and airlines have repeatedly maintained that food costs so tiny a sum per head that it can be disregarded. Perhaps the main reason for dressing up these applications in deliberately unattractive colours lies in the Government's immensely confusing directive to the ATAC, which says that independent airlines may operate cut-price flights provided that they set a new low in travelling conditions, but not otherwise.

But even disregarding the political issues raised by independent airlines trying to scratch a living *vis-à-vis* the state air corporations, the fact that these companies can seriously apply for fare cuts of 50 per cent will suggest to many people that BOAC has been soaking travellers on these Far and Middle East routes to recoup some of the losses it makes on other services. The steps taken by the government to protect the corporation from competition from the Dutch airline KLM at Singapore give a fair indication of its anxiety to shelter BOAC and bode ill for the new fare applications. It will not stop people asking why, in territory where fares are entirely under its own control, BOAC is charging twice as much as the accountants of other airlines, with shareholders to consider, argue they would find remunerative. The answer may lie in the independent airlines' pressing anxiety to find work for expensive new aircraft like Britannias, which cost £1¼ million, but even this does not wholly explain a discrepancy as large as 56 per cent.

BANK ADVANCES

Upsurge Analysed

SINCE the credit squeeze was lifted last summer the rise in bank advances has been much bigger than most people thought likely at the time. The "clean" and detailed figures published this week show that in the six months to February this rise reached £375 million, or 18 per cent. This unprecedented upsurge, reflecting in large part the release of pent-up demand, has not added to a fully equivalent degree to demand in the economy; the public has put more into liquid assets, including gilt-edged securities which the banks have sold heavily. But the stimulus through these months of recession has been welcome, and the authorities do not yet feel that it has gone too far. The expansion in the three months from November was £245 million (easily the largest ever in a single quarter), compared with £129 million in the preceding three months. The true pace has not necessarily quickened, for advances are seasonally high in the early months of the year, as individuals pay surtax and shops restock with spring lines.

Personal borrowers accounted for an important but far from a major part of the expansion. Advances of the "personal and professional" group in the six months rose by £100 million—fully 30 per cent—and at nearly £437 million had all but made good the encroachment suffered in successive periods of credit restriction. Even after the remarkable rebound since last summer, the personal and professional borrower still plays a much smaller role in total advances than he did ten years ago.

Of the latest quarterly increase, this group took £53½ million. Big increases were also shown by the financial categories, notably the hire-purchase companies. Their advances have more than doubled since mid-August, to a peak of £59 million, and during this period they have also received substantial permanent finance from the banks; but the finance houses' business, too, shows a rise of 50 per cent since August. The increase in hire purchase credit is also reflected in the rise of £34 million during the quarter in advances to retail trade. This leaves an increase of around £100 million in advances to industry and other trade. The heavy industries, including steel, engineering, shipping and shipbuilding, were especially prominent.

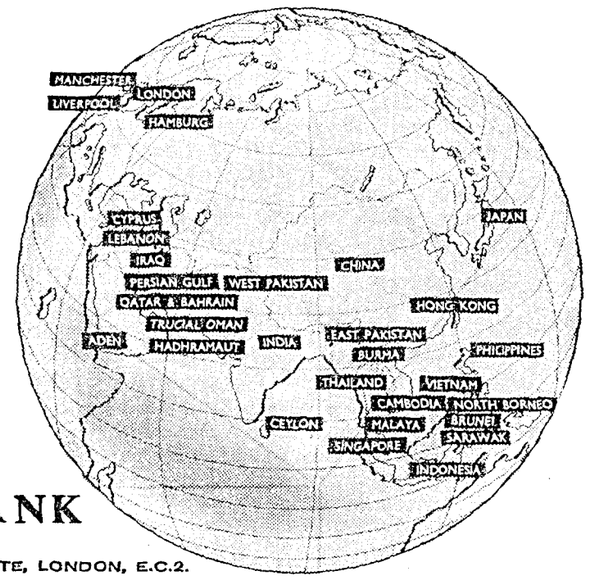
BUILDING SOCIETIES

Waiting for the Budget

IT has been apparent for some months that whether or not the Building Societies Association will recommend a reduction in rates depends upon the budget. Now the council of the association has formally postponed any decision on rates until April 10th, three days after the budget. That is a sensible if obvious course. There are still plenty of new mortgage borrowers willing to pay 6 per cent and money is still flowing very handsomely into share accounts paying 3½ per cent, net. That is the basic argument for no change in rates put forward by those societies that are anxious to build up their reserves so as to be sure of trustee status. But there are other societies that are almost embarrassed by the present inflow, and they can meet the demand for new mortgages and still put a sizeable proportion of new funds into gilt-edged stocks. These societies sense too the possibility that within a year or two they will have to compete for mortgage business and those of them that have a big reserve ratio would be happy to see the rates reduced soon.

The size of its reserve ratio, in fact, largely dictates an individual society's reaction at the present time to a change in rates. And it is upon reserve margins that the budget can have a decisive effect. Whatever happens, the mortgage rate can hardly be brought down by anything less than one half of one per cent, to 5½ per cent. What, then should the rate be on shares? When rates come down, margins available for reserve appropriation are automatically improved, and any reduction in the standard rate of tax would improve them still more. A cut of 6d. in that rate might bring the composite rate paid by building societies down by as much as 3d. to 5s. 4d. in the £, and a change in personal allowances could reduce it still further.

On that assumption, there might be a case for a rate on shares of 3½ per cent, net, against a mortgage rate of 5½ per cent. But that would mean a slender reserve margin for those societies that have expanded quickly and have heavy management expenses; these societies might be happier with 5¼ per cent mortgages and 3 per cent, net, on shares. At that level, however, the competing attractions on national savings would become even more obvious, and no one can estimate how much of the new money the societies have recently received is "hot." What rates the association may eventually recommend may turn therefore not only on changes in personal tax but also on whether or not a new series of national savings certificates at a lower rate of interest than the current issue is introduced.



SYNTHETIC FIBRES

The "Terylene" Decision

ALTHOUGH Courtaulds and the Calico Printers Association have still a margin of several days within which to appeal against the decision to give CPA a five-year extension of its "terylene" patents, there have been no signs that either side will in fact do so. The decision of the Assistant Comptroller of the Patent Office, Mr H. S. Gilham, struck a neat compromise between the views of the two sides—CPA's claim that conditions during the war and postwar years held back the development of the new fibre, and

British Banking in Asia

These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. In London an effective credit information service and skilled assistance and advice are available to merchants and manufacturers seeking new business connexions in Asian markets.

THE CHARTERED BANK
(Incorporated by Royal Charter 1853)
HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2.

Branches in the United Kingdom at Manchester and Liverpool. Agencies at New York and Hamburg.

THE EASTERN BANK LIMITED

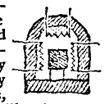
Electrical Aids in Industry — *Data Sheet* **No. 4**

Resistance Heating

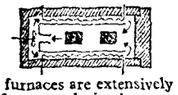
In this form of heating, the heat is produced by passing an electric current through a high resistance conductor which is termed the "heating element."

The heat is transferred from the heating element to the work by convection, radiation or conduction or by a combination of any, or all, of these. When it is a question of radiation or convection, the element can be a bare wire or strip of suitable material, provided it is adequately supported on electrical insulation capable of withstanding the temperature.

When there is to be contact between the work and the element, heat being transferred to the work by conduction, the wire or strip must be surrounded by suitable insulating material and enclosed in a protective sheath.



In the majority of cases, the wire or strip forming the heating element is made of a nickel-chromium alloy which has a high electrical resistance and can be safely used in air at temperatures of up to 1050°C., or in a suitable atmosphere, of up to 1150°C. Other element materials are available for use at higher temperatures.

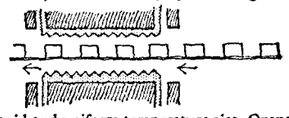


Electric resistance heating may profitably be put to many diverse uses; two of these are described briefly below, others will be listed in a subsequent data sheet.

Furnace Heating

Electric resistance furnaces can be divided into two main categories, batch type and continuous. In most cases, the heating elements are of nickel-chromium alloy, for furnace temperatures up to around 1050°C., but higher temperatures, up to nearly 3000°C., can be obtained by using other metals or alloys, or in some cases non-metallic elements. A protective atmosphere is desirable to prolong the life of some of these higher-temperature elements. For all temperatures electric resistance furnaces can be constructed so that the heating process takes place in a controlled atmosphere if this is dictated by the composition or heat requirements of the work charge. In some furnaces, fans are used to circulate the air or special atmosphere over the charge, thereby giving increased heating rates and a uniform temperature over the whole charge.

Automatic temperature control and programme control of the heating process are readily effected.



Electric furnaces are extensively used in industry, for example in the general heat treatment of metals, in the glass and ceramics industries, for grazing and sintering, and for many other applications requiring temperatures above 500°C.

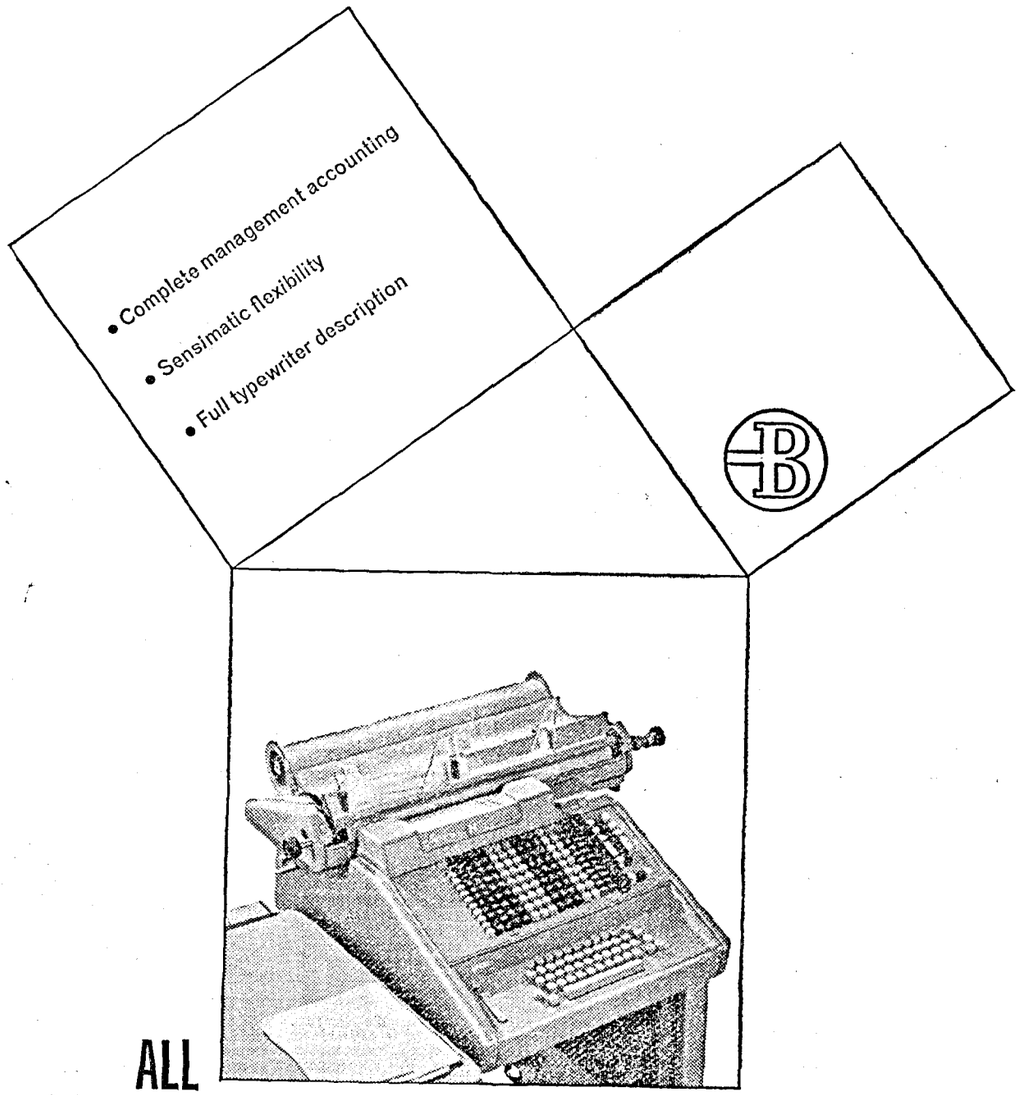
Oven Heating

There are two basic forms of heat transfer used in electric resistance ovens; convection and radiation. The latter is dealt with in a separate data sheet under the heading "Infra-Red Heating".

Convection ovens may again be of the batch or continuous type. In either case, the charge is heated mainly by the movement of hot air, which is sometimes assisted, as in furnaces, by fans to give a

rapid and uniform temperature rise. Ovens are normally designed for temperatures of up to about 500°C., and the heating elements are invariably of nickel-chromium or nickel-chromium-iron alloy.

Ventilation, when required, can be provided and regulated entirely to suit the heating process. Temperatures and times are readily controlled. A vacuum can be maintained in suitably designed ovens to assist in the extraction of moisture and solvent.



Convection ovens are extensively used for drying, baking and stoving operations, and for a host of other processes requiring a low or medium temperature.

For further information, get in touch with your Electricity Board or write direct to the Electrical Development Association, 2 Savoy Hill, W.C.2.

Excellent reference books on electricity and productivity (8/6 each or 9/- post free) are available — "Resistance Heating" is an example; "Induction and Dielectric Heating" is another.

E.D.A. also have available on free loan a series of films on the industrial use of electricity. Ask for a catalogue.

ALL YOUR ACCOUNTING ON ONE MACHINE

Unmatched flexibility. The *control unit* on the Burroughs Typing Sensimatic permits each job to be individually programmed; four or more programmes may be incorporated in ONE unit. The *type keyboard* follows the standard alpha arrangement; it has a natural slope with 42 keys scientifically placed for speed and ease of operation.

The *writing unit* itself is a removable box printer two inches wide by one inch high containing 84 characters.

Automatic features simplify the machine operation. Up-to-date management reports are provided as a by-product of routine accounting applications.

Contact your local Burroughs office or write direct to: Burroughs Adding Machine Limited, 356-366 Oxford Street, London, W.1. Tel: Hyde Park 7061.

BURROUGHS TYPING SENSIMATIC

Courtaulds' contention that they did not. The five-year extension he has granted seems to meet CPA's case that wartime conditions (the patent was registered in 1941) made speedy development impossible. The fact that he did not grant the full eight years for which CPA applied accepts in part Courtaulds' view that much of the delay which resulted in the fibre taking more than 13 years to reach the market was due not to shortages but to the sheer technical difficulty that Imperial Chemical Industries, CPA's licensee, found in getting "terylene" into production. The decision is an important one for ordinary shareholders in CPA because "terylene" royalties have become an increasingly important source of income and dividends. After the announcement of the extension was made the CPA's £1 ordinary units were marked up 4s. 6d. to 44s. 6d.

British Celanese, now owned by Courtaulds, has patents on two alternative ways of making a "terylene"-like polymer—the material that is eventually spun into yarn. As matters stand, it probably could not spin this polymer into yarn without infringing the basic CPA patents. Neither Celanese nor Courtaulds have any plans for entering the "terylene" market for high-cost, high-performance synthetic fibres as opposed to low-cost ones like rayon. But the family of synthetic fibres is expanding so fast, that the main reason behind Courtaulds' objection to extending the existing "terylene" patent for as long as 8 years was the urge to retain some room for manœuvre in and outside the laboratory. ICI's "terylene" output should reach 30 million lb a year within a matter of months, and there are plans to increase this to 50 million some years from now when new plant extensions are completed. But the company also plans to start "terylene" production in America at the rate of 40 million lb a year in partnership with the Celanese Corporation of America as soon as the American patents, sold outright by CPA to du Pont, expire in 1961.

Nylon in the Slipstream

EVEN the previously invulnerable nylon industry was caught in the slipstream of the textile depression that blew through Lancashire last year: the profits of British Nylon Spinners to December 31st dropped from £4,699,233 to £2,970,054. This still represents a high rate of earnings on capital employed, one that the chairmen of many textile businesses would be extremely happy to earn. The other big manufacturer of synthetic fibres, Courtaulds, was earning far less for most of the period covered by the BNS accounts.

The fall in earnings was only in part due to the state of the market. BNS has been accustomed to a steadily rising demand each year; all that happened to its sales last year was that the anticipated increase did not take place and stocks mounted—from £4.5 million to £8.6 million. A marked trading recovery in the past few weeks is running these down again to more manageable proportions, but a more ominous pointer for the future is the fact that a good part of the drop in trading profit was due to a rise in raw material prices. All British Nylon Spinners' raw material comes in the form of nylon polymer, small white chips of plastic, from the Imperial Chemical Industries' plant at Wilton.

COTTON TEXTILES

Business Still Sluggish

BUSINESS in cotton textiles is still sluggish in both the home and overseas markets. When the Restrictive Practices Court finally declared the minimum price scheme for cotton yarn void, producers of cotton textiles confidently looked forward to a substantial revival in orders. Buyers of finished goods, it was argued, had run down their stocks, and when yarn margins settled down they would come into the market. Margins have settled down, but there has been no appreciable improvement in business. New orders are believed to be still running below the current rate of consumption, and producers are puzzled by the evident ability of distributors to reduce their stocks even further. In cotton textiles, as in other goods, it seems that traders are learning to live on smaller stocks than they believed possible.

Reasons for not buying are never scarce. One is the general belief that prices of raw cotton will continue to fall. Early in February, a few days after the yarn spinners' scheme was withdrawn, the American government announced an increase in the rate of subsidy on exports of raw cotton in the season beginning August 1st; and it has repeatedly stressed that the subsidy will be increased again if it is necessary to meet foreign competition. That explains why American cotton for delivery on the Liverpool futures market in December-January is quoted at only about 19d. a lb, which is about 4¼d. a lb below the theoretical cost of this cotton when the new subsidy takes effect. Spinners could make use of these forward discounts by basing forward sales of yarn on them—if only they could find buyers. Another reason given for the lack of business is that more mills are going to close, and buyers expect the unsold stocks of these mills to be offered at bargain prices. Both reasons would have less force if spinners and weavers generally were not carrying ample stocks. If buyers feel that they can obtain reasonably quick delivery, why should they run the risk of buying ahead?

SUPERSONIC AIRLINER

Prickly Nettle

NOW that the consortium of aircraft designers and government scientists set up two years ago has completed its study of the feasibility of building a supersonic airliner and has presented this to the Minister of Supply,

the report is likely to remain in his pending tray—at least until after the General Election. This is not the kind of project on which any government is going to take a snap decision. It raises issues almost as big, and a deal less clear-cut, than those surrounding the decision to build the Blue Streak rocket. Estimates that a large civil airliner flying at between two and three times the speed of sound could be developed in this country for £100 million appear somewhat optimistic; a more realistic figure might be £200 million, while preliminary estimates in the United States indicate that the cost there could exceed £350 million.

The report is said to be a favourable one, concluding, as similar American studies have done, that it is technically possible to put such an airliner on the drawing board using the knowledge and the materials now available, and to have it in service in about ten to twelve years' time. The Minister has now to decide whether the economic advantages of high speed justify the inevitably high cost of such a machine and if so, whether there is a case for arranging to produce supersonic civil aircraft in Britain. The economics of airline operations at such speed are still controversial: the arguments in favour rest on rather more than passengers' alleged preference for crossing the Atlantic in two to three hours rather than six to ten. It can be argued that the extra work done by the faster machine will more than compensate for its high construction cost and its avid appetite for fuel, so that it may in fact show a net saving over slower machines. Its advocates believe, however, that very high speeds, in the 1,500 to 2,000 mile an hour range, would be needed to show these savings: because of the time wasted in climbing to and coming down from supersonic cruising altitudes these advantages would also be confined to very long flights. Should this be the case, there will never be many of these machines required in service at one time. They would be in some ways analogous to the great Transatlantic liners, in carrying capacity and in numbers required:

Pakistan's Financial Reform

A special correspondent writes:

LATE last year the newly installed military government of General Ayub Khan invited two German financial experts to survey the whole field of Pakistan's ailing finances. The experts were Dr Wilhelm Vocke, the widely respected former president of the German central bank, and Herr Rolf Lüke, of the Berliner Handelsgesellschaft. Both men are unrepentant advocates of economic liberalism; and their report makes few concessions to expediency. The Pakistani government has already accepted and implemented a number of their recommendations, including some of those for reform of the foreign exchange system. It remains to be seen whether the radical pill is swallowed in full—and how it works in this eastern economy.

The central recommendation of the German experts is that the budget should be balanced. The first suggestion—already accepted—is to give the finance minister a veto against proposals for expenditure made in the Cabinet where funds are not available. Moreover, further recourse to short-term borrowing at the State Bank has been stopped; the experts suggested that it should be legally forbidden as long as the budget was unbalanced.

To achieve fiscal equilibrium, they say, the emphasis should be shifted from administrative and physical controls to a dynamic monetary and fiscal policy. The present administrative system, by lack of experience, efficiency and discipline, does not seem to them capable of running a system of physical controls. In the new approach, demand should be restricted in four main ways: (i) maximum economy in Government expenditure; (ii) higher taxation, mainly through new taxes in the agricultural sector—industry and trade should if anything have their very high tax burden reduced, to encourage production; (iii) promotion of savings; (iv) if necessary, credit controls. Price controls on both agricultural and industrial products should be abolished, and replaced by price incentives.

The reform most urgently needed has been in foreign exchanges, since a drain on the central reserves continued to the point at which they were inadequate to cover both outstanding commitments and immediate requirements. In order to establish equilibrium in the foreign exchange budget, the German experts suggest that all foreign exchange dealings should be centralised at the State Bank of Pakistan. Authorised foreign exchange dealers would thus daily have to sell all their intake of foreign exchange to the State Bank, and would be allocated foreign exchange by the State Bank according to a specified scheme.

UNDER this scheme, ten per cent of foreign exchange earnings are to be added to the central reserve of the State Bank; twenty per cent credited to an account available for general licences for imports issued under the export promotion scheme; and the balance of foreign exchange earnings divided between an account for Government imports and an account for private imports in the ratio of 40:30. Special import licences are to be issued only from this account, and according to official priorities. A bonus of 20-40 per cent of export proceeds should be given in the form of transferable general licences, available to bearer, valid for four months. Profits on exports should be exempted from all restrictions and export controls and export licences should be removed.

By putting the emphasis on an expansion of trade the German experts hope that a liberal export incentive scheme will induce exporters to make an all out effort. The most important object, however, is to provide a fool-proof system under which no commitments can be made without the resources being first assured for them.

When the government put the programme into effect in mid-January it exempted raw materials from the bonus scheme and did not publish its own programme for imports under the special licence scheme. Furthermore, controls on prices and profits were not abolished, with the result that importers were not much inclined to pay for general licences, because they were not allowed to include the price in their landing costs. The Government was reluctant to use the whole of the incoming foreign exchange in the new scheme because of outstanding commitments. The German experts had envisaged a complete fresh start, leaving the old commitments to be covered out of existing foreign exchange reserves, notwithstanding their further diminution. Pakistan's industry is running on an average of 30 per cent of its capacity, owing to lack of raw materials and spare parts. Further austerity might lead to stagnation.

The German experts do not claim that Pakistan could solve all its economic problems itself. Foreign aid is required and should be given, provided that Pakistan's own efforts represent an essential contribution. The experts came home with the impression that the new government is willing and able to provide such a contribution.

completely new
with a flawless sporting pedigree

The M.G. Magnette Mark III is today's concept of *safety fast motoring*, the sports saloon with the spacious air and the continental line. Longer, sleeker, with a new elegance throughout, it provides full panoramic vision, generous extra luggage space and a host of luxury refinements. Standard equipment includes heater and demister, windscreen washers, and real leather upholstery. And with sweeping advances in design have come further improvements in performance. You get faster cruising with greater economy. You get luxurious high performance motoring at a remarkably modest cost.

more space
more verve
more luxury

There's extra luggage space, and every cubic foot is fully effective! The detachable exhaust duct is free of obstruction—extends to the full width of the body. Lid opening is torsion-bar assisted. Spare wheel is housed beneath the floor.

This recent sculpture by David Wynne, F.R.S.A., for Taylor Woodrow has a very real significance for all who have new building in mind.

It was created primarily to symbolize the spirit of teamwork that pervades all levels of the Taylor Woodrow organization, the enthusiasm and drive that so often completes contracts well ahead of meticulously planned and therefore very tight schedules. But it also symbolizes a new dynamic in building—that of bringing Taylor Woodrow into full collaboration with your consultants right from the start. This we call Tayplanning, which brings to your new project a degree of efficiency and speed obtainable in no other way.

TAYPLANNING saves time—a great deal of time. Design problems—which today are often construction problems too—can be studied by Taylor Woodrow specialists in the light of their world-wide experience of new and advanced construction techniques. The whole project is streamlined into a single, perfectly co-ordinated master-plan—to meet the standards all building owners require—highest quality construction, economy of design and execution and completion in the shortest possible time.

We welcome an opportunity of discussing Tayplanning with you. You will find that it adapts itself to your special needs and requirements.

government money, incidentally, went to help build the Queens, though the supersonic liners might require hundreds of times as much.

The question that the British government has to decide is whether the prospective market for such aircraft would be large enough to justify two production lines, one in this country and one in America. If a commercial market is justified at all, the American industry will certainly not allow it to become a British monopoly. Although it would be a serious disappointment to the British aircraft industry, it might be decided that this was the point at which to draw the line, and that taxpayers' money should not be used to finance such a venture, any more than it should be used to build intercontinental ballistic missiles of 5,000 mile range, or supersonic bombers of the same capability.

STOCK EXCHANGE JOBBERS

Putting Through

WHERE the market is narrow, as it can be for example in rubber and tea shares, the jobbing system may not work either smoothly or perfectly. The brokers in these shares then find it convenient to "marry" the buying and selling orders. The normal practice has been for such a deal to be "put through" a jobber at a very small turn for him. The growth of institutional investment had led to an increase in this method of dealings, which some jobbers find irksome. The stock exchange council, holding to its faith in the jobbing system and anxious to make the market as free and broad as possible, has now proposed a change in the rules governing these "put through" deals.

The proposed amendment adds up to little more than the codification of customary practice. The essential change is that the broker must consult the jobber about the put through price before attempting to marry the business outside the market; under the old rules, it was possible for the broker to marry the business before going to the jobber. The jobber now has the prior right to make a price for any portion of the broker's business but that right is subject to the important proviso that it cannot be exercised in such a way as to prevent the execution of the order on behalf of the client. That means, in effect, that where the client requires the buying or selling order to be executed as a single transaction in a block of shares, the jobber cannot insist on his right to execute part of the business. It is difficult to believe that the new rules will broaden the jobber's business to any great extent, but the new procedure will at least give him some foreknowledge of what is going on.

STEEL

Looking Ahead

BROADCASTING of one of its propaganda films on BBC television last week advertised to the public at large that the British steel industry is once again in the market for scrap; the market has indeed been reserved to it once again, in that the Board of Trade did not renew the licensing arrangements to export scrap steel when these came to an end at the beginning of March. Freedom to export iron and steel scrap thus lasted from September to March; during this period, the only one since the war in which merchants were allowed to sell overseas, about 400,000-500,000 tons was in fact sold abroad. The British Iron and Steel Federation has now arranged for central stocking of about 250,000 tons of shipbreaking scrap a year, and individual steelworks are to maintain their own stocks at least at present levels, which would mean buying at the rate they consume. The steel industry has itself been the economy's heaviest sufferer from the ability of its customers to run down their stocks; this is a reminder that for certain of its raw materials it has tended to do the same thing itself.

Last year the industry used just over a million tons of scrap, about 11 per cent less than the year before; since much of what it charges into its steel furnaces arises within its own works, the reduction must have borne much more heavily upon its purchases. This year it has given the scrap trade some degree of assurance about its forward buying policy. Many of the merchants who prefer the settled pattern of a confined home trade at an agreed home price do not object to renewal of the ban on exporting.

Attention to Practice

IN the Commons this week, Mr Maudling was asked about the inquiry made by the Iron and Steel Board into restrictive trade practices within the steel industry, and its discussions on the subject with the British Iron and Steel Federation. He replied that the board had reported upon this inquiry in its last annual report; it was continuing to discuss the matter with the federation, and would be mentioning these exchanges in its next annual report.

In that 1957 report, the board said it had inquired into agreements by which the maximum prices that it set as fair for steel products produced in Britain tended in fact to become minimum prices as well. It recorded its satisfaction with a form of words whereby the constituent conferences of the federation merely recommended that these official prices should be the prices charged with no sanctions whatever. This verbal formula, which to the Board seemed compatible with its duty to ensure that steel is supplied "under competitive conditions," has since been the subject of further attention inside the industry—and outside. Further refinements of phrasing and practice, to remove any remaining implication that the conferences in any way collectively fix the prices, have been discussed inside the industry. Neither the formula nor the facts of practice seem likely in any case to worry the Iron and Steel Board, which is not imbued with any strong belief that price competition is a good thing for a steel industry. But steelmakers have had reason to notice in the last few months that there are other authorities, besides the board, concerned with competitive conditions in British industries—and that these incidentally could be a little more inclined to act as the ghost of Adam Smith.

LINTANG INVESTMENTS

An Exceptional Case

THE opening of dealings in Lintang Investments drew the biggest crowd of dealers for very many years. Originally, of the issued capital of 6,300,000 shares of 5s. each, 1,575,000 shares were placed privately, some of them through the market, at 11s. 9d. each. The vendor was a reluctant seller and, presumably, got the best price he could from those who seemed likely to remain firm holders. But the number of shares available to the market was limited

and the issue, because of the almost magical quality of the names of Dolphin Square and Mr Maxwell Joseph, caught the investing public's fancy. The issue had received a lot of publicity and it was in a market, property shares, where speculative values and low yields are commonplace. Dealings began at 16s. and closed at 22s., which put a market valuation of about £6.5 million on a company with net assets, at book values, of about £3.2 million. That was a higher price than anyone seemed to have imagined it would be. Fortunately, the market was orderly and no scrum of brokers milled round the jobbers' stands. But that was so only because in response to bids from the dealers the vendors released more shares at prices then ruling in the market. Some of the investors with whom the shares had been placed also sold part of their holdings for a very quick profit and so too did some of the minority shareholders in Lintang (which was formerly the "shell" company, Bukit Lintang Rubber Estates).

The Lintang dealings have to be looked upon as the exceptional case, where investors got the bit between their teeth. It does not in itself add up to an indictment of the present system of bringing new issues to the market. The stock exchange council has already said it prefers placings, of which Lintang was one, to introductions, and offers for sale to either. But the offer for sale is expensive and is not attractive to the vendor who is willing to release only a small proportion of his holdings. And what would have happened if it had been used for the Lintang issue? Probably a ballot and hectic dealings when the market opened. Would that have been more equitable than the queue?

COFFEE

Latin America Buys Time

After falling for most of the past two years prices of Brazilian coffee, and the "mild" coffee grown in other Latin-American countries, have recently become steadier. Collective restriction of exports from these countries, which account for three-quarters of world production, is now holding prices up, instead of merely braking the fall. On the New York futures market the discount on the distant delivery months has narrowed, and mild coffee for September delivery, at 42½ cents a lb, has gained over 2 cents this month, while Brazilian coffee has risen by 1½ cents to 34 cents a lb. Prices of African robusta coffee have been buoyant. These coffees have enjoyed a growing demand, mainly for use in "instant" coffee, and prices have recently risen owing mainly to an apparent squeeze in marketings from Uganda. On the London futures market robusta coffee for three months' delivery is now quoted at about 233s. a cwt, 46s. more than at the beginning of this year. But robustas may be facing stiffer competition. The premium commanded by mild and Brazilian coffee has narrowed so much that these grades seem relatively cheap; and though robustas have won a rather special place in the trade, there is scope for substitution.

Latin-American coffee prices can probably be held at about the present level for some time. Stocks in most European countries and the United States are low; stocks in the United States at end-January totalled about 1,650,000 bags (of 132 lb), over a million bags smaller than in January last year. Consumption in the United States, which drinks nearly half the world's coffee, is rising, largely because retail prices are at the lowest level for almost ten years. But it is difficult to believe that prices can be maintained for very long. To hold supplies off the market solves nothing; it merely buys time. This season world production is estimated at a record 59 million bags, 5½ million more than last season. Assuming that consumption in the producing countries rises by about 250,000 bags to 8¾ million, and net exports rise by about 750,000 bags to 38½ million, the carry-over would still be 37 million bags, half as large again as the previous carry-over, and equal to roughly one year's exports. With new coffee plantings coming into bearing world production will continue to increase (though harvests could suffer from bad weather from time to time). Latin-American countries are so dependent on coffee that they must try to avert a collapse in prices. But their efforts so far have ignored the problem of curbing production.

FACTORIES

Flat or Not?

How far can factory design contribute to efficiency in production processes—as well as economy in initial cost? A new study by the Building Research Station, the first of a series looking at this general question, has just been published: the station has selected the relative operating costs of single and multi-storey factories for its first subject, at the suggestion of the Midland Regional Board for Industry.

The most outstanding general change in factory design over the last forty years has been the replacement of multi-storey by single-storey buildings, and this report asks whether the move may not have gone too far. Some 80-90 per cent of factories built in Britain since the war have been single storey. But about half the factory labour in Britain is still employed in industries that according to this report could use multi-storey factories, despite new factors such as flow-line production, modern handling equipment, electric power and the greater mobility of labour which have made the single-storey structure more attractive. Factories have been built outside towns, where the price per square foot of the site is relatively lower; previously they were built in town centres to be accessible to their workers. But the rising cost of land is again making the multi-storey design relatively more attractive, and there are further economies in building costs to count in. These increase with the size of the factory. In a factory of 50,000 square feet a single-storey design will have a wall and roof area of 70,000 square feet—if it is 200 feet by 250 feet in plan. A two-storey factory of 125 feet by 200 feet will have a site area of 55,000 square feet, some 20 per cent less. On a factory of 500,000 square feet the saving for a two-storey building will be some 40 per cent.

The factor that has most strongly influenced industry against the multi-storey factory has been the greater adaptability of the single-storey design to changes in requirements. There is less need to allow for the changes in production techniques that may come in the future; but foresight in this respect is important to the efficient design and use of both types of factory. But properly designed the multi-storey factory can have as long an economic life as its single-storey counterpart.

SYNTHETIC RUBBER

Polyisoprene in Production

A new and potentially strong competitor for natural rubber has appeared in the United States. Shell Chemical Corporation has announced that it will shortly begin commercial production of polyisoprene, from which the United States Rubber Company will manufacture heavy truck tyres and other items formerly made solely of natural rubber. Although several companies have experimented with this form of synthetic in recent years, it has not been produced commercially before, and its price has been higher than that of natural rubber. Shell now announces that it has developed a production process which will enable it to offer the synthetic material for 30 cents a pound, roughly the same price as the comparable grades of natural rubber. Shell's output is expected to reach 15-20,000 tons a year in the near future; and Firestone have also announced that they will build a plant capable of making up to 30,000 tons a year of polyisoprene and another synthetic.

Although the use of synthetic rubber has greatly increased in recent years, natural rubber has held its own for many uses, owing to its superior physical properties. The commonest synthetic, GR-S or styrene-butadiene rubber (of which about 75,000 tons a year is now being made in Britain by International Synthetic Rubber) is superior to the natural product for passenger car tyres, but is not suitable for uses, such as large truck tyres, where large loads must be carried. Polyisoprene, on the other hand, is claimed to have exactly the same properties as natural rubber, and hence can compete with it in these uses, where synthetics have hitherto been unusable.

In the United States—where the ratio of passenger cars to trucks is higher than in Britain—synthetic rubber constitutes about two-thirds of all rubber consumption; it accounts for about one-fourth of a much smaller total consumption here. There are no plans at present to produce polyisoprene in Britain; isoprene is a much more expensive petroleum derivative than butadiene and styrene, and polyisoprene cannot be made at plants making GR-S. Its appearance in commercial quantities may, however, eventually have a considerable effect on the price of natural rubber.

LOCOMOTIVES

Capacity for Diesels

Home demand for diesel locomotives has risen sharply in the last few years with the British Railways re-equipment programme, but a fall in export sales which has coincided with it has made expansion of existing manufacturers' capacity unnecessary. But at least one new manufacturer has entered the field since the war; Birmingham Railway Carriage and Wagon, formerly a rolling stock manufacturer, now builds diesel-electrics. Capital investment has gone more into the conversion of works from steam to diesel production than their expansion. When the Transport Commission placed an order for 69 diesels in January it was explained that this further order was being given because the industry had stated that it had spare capacity and could therefore give delivery of 49 of these engines during 1959. Another 226 more engines were ordered in February and some of these, too, are to be delivered during 1959. Clearly the industry is not overloaded by this British re-equipment programme.

Of the 881 engines ordered 120 have now been delivered, and 294 of the remainder are being built in British Railways' workshops. There may be only about 400 to come from private companies on present orders; and the last of these are due for delivery before December, 1961. The peak rate of delivery from private companies is unlikely to exceed 275 at its peak this year, and will soon fall below this.

With five companies contributing to the programme it also seems unlikely that any single company will be overburdened with work. Of the different companies, English Electric received orders for 174 locomotives, North British for 164, Birmingham Railway Carriage and Wagon for 112, Brush for 80, Metropolitan-Vickers for 20, British Thomson-Houston for 37, and the British Railways' workshops for 294. The problem that will eventually face this industry is what to do with its existing and long-established production capacity when the railway re-equipment programme slows down to a replacement rate, than how to expand its capacity to meet present home requirements. Unless export demand revives—and makers hope it will do as they demonstrate their ability to build diesels in quantities, and perhaps if they manage to lower their production costs with their larger scale of production—surplus capacity seems bound to appear.

SHORTER NOTES

Raw sugar on the "free" world market continues to sag. The Cuban spot price fell this week to 3.03 cents a lb; it was 3.09 cents at the beginning of the month.

* * *

A protective committee has been formed in London to co-operate with similar bodies already formed in New York and Zurich to safeguard the rights and interests of preference shareholders in the Deutsche Golddiskontbank, which is in the process of being wound up.

* * *

Treasury consent is now needed for all issues of redeemable shares capitalising profits or reserves. Bonus issues of this type, which are usually designed to avoid tax by converting income to capital, have hitherto been subject to control only where they exceed £50,000.

letter of intent received by Fairey from the American company is for five machines with an option on a further 15. This is a long way from a firm order even though it includes a down payment, but it would be sufficient, combined with a BEA order for another 20, plus two for the Canadian company, to justify Fairey in tooling up to produce Rotodynes. Everything depends on whether Lord Douglas is prepared to commit BEA during the next few weeks to spending £10 million on 20 machines that could make or break his airline. Fairey has made it plain that it will be able to keep its design teams together for only another few weeks at most.

AIR NAVIGATION

The Next Move

THE next move in the now deeply embittered dispute over competing British and American systems of air navigation will not take place for some time. The meeting held in Montreal at the beginning of the month by the International Civil Aviation Organisation, at which the British proposal to use the Decca system as the standard navigation aid in Western Europe was resoundingly defeated, was a purely technical one, with no authority to do more than circulate its recommendations to ICAO's 73 member states for their comment. It is not likely that those comments will lead the committee to alter its views in favour of the American VORDME system of navigation, which UK air navigation experts consider inadequate for safe traffic control in crowded areas. But the last word rests not with the technical committees but with the ICAO council on which 21 states are represented and from which the report needs to get a two-thirds majority before the American system is approved as the international standard navigation aid for the next decade.

Four of the member states on the council have already voted against the VOR system on the technical committee. It might be more practicable for UK delegates to organise sufficient opposition to get the report rejected in this relatively compact meeting, which consists of countries with highly developed air transport systems than it was at the bigger meeting held in Montreal. But even if it could thus prevent acceptance of the American system, this would contribute nothing towards easing the near-chaos with which air traffic over Europe is threatened. Any decision on future methods of air navigation, even a bad one, would be better than the present uncertainty.

RAW WOOL

Consumption Revives

THE modest recovery in wool prices this year now seems to be firmly based on a revival of world consumption. In the third quarter of 1958 the rate of consumption of new wool in ten leading countries was slightly higher than in the previous quarter, though still nine per cent lower than in the third quarter of 1957. Figures now published by the Commonwealth Economic Committee show that in the fourth quarter, the rate of consumption was again a little higher than in the previous quarter; of the six largest countries covered, only France showed no rise. And for the first time since the recession began, consumption was actually higher—by 1½ per cent—than in the same quarter a year ago. For the whole of 1958 consumption in the ten countries fell by 11 per cent compared with 1957.

The recession hit wool growers hard. In the first seven months (July to January) of this season Australia, the largest producer, sold the same quantity as in the corresponding period of last season, but its receipts dropped sharply by 31 per cent to £117½ million. New Zealand, which produces mainly crossbred wool, sold 7½ per cent more wool than in the same period of last season, and its receipts dropped by 21 per cent to £28.9 million. Crossbreds did not fall as sharply as merino wools, thanks mainly to the New Zealand support scheme. A further recovery in prices this season can be expected, though it can hardly wipe out the earlier decline. Wool's troubles, it now seems clear, were caused mainly by a reduction in trade and manufacturing stocks, not by any fall in purchases by the public.

DATAC

Auction in Subsidies

ON the same day that Mr Douglas Jay published a pamphlet proposing the scheduling of a number of new development areas and the building of factories by the Government in advance of arranging tenants for them in certain "development places," the Government announced that it was adding five places (in Lancashire, Scotland, and County Durham) to its list of areas qualifying for special financial assistance to industry under last year's Act. The towns where Mr Jay wants "advance factories" built and those where the Government is adding to its list include a high proportion of marginal constituencies; this is not the only similarity between what Mr Jay would like the Government to do and what it says it is trying to. His proposals, made after visiting a number of the places in the kingdom where unemployment is particularly high, also include:

> resumption throughout the development areas of factory building by the industrial estate companies with finance from the Board of Trade, and lifting of the ban on "schemes not able to be completed by October 31st this year";
> grants to local authorities in the newly listed places as well as in the actual development areas to improve basic services and tidy up derelict areas;
> larger rent concessions in offering industrialists Government-financed factories in these areas; and
> more effective use of the "machinery for ensuring that unemployment areas get reasonable preference in Government contracts, and in work placed by publicly owned industries."

Within the context of this policy of making work seek the worker, which both political parties accept, some of Mr Jay's detailed complaints about slackness in the policy for development areas and muddle in the application of the much more limited financial assistance available to the areas listed under last year's Act appear reasonable. But he has to strain fairly hard to make the broad policy he has in mind look very different from the one that he is attacking. How, for example, does one use industrial development certificates "more toughly" to steer companies wanting to build new factories away from congested areas that are already short of labour; instead of saying "No," should the Board of Trade say "No, damn you"?

Nor does Mr Jay address himself squarely to the industrial

weaknesses that may be created by this whole policy, carried too far. He says:

> Repeated experience since the war has shown that the great majority of industrial expansions (*sic*) can be economically placed in one or another or many locations, particularly in the light engineering and textile trades.

There is something in this; but would he apply it, for example, to the steel developments of which political considerations have settled the location during the last few months? The location of industry may often not matter much. Even so, Britain now has to compete with a Common Market in which, over the next few years, Continental industries should at least have the chance to gain advantages from more specialisation and better location. Both parties propose to do so by bigger and better State subsidies for the mislocation of new British industry.

NUCLEAR SUBMARINES

Making a Start

PLANS for a small British fleet of nuclear submarines have been shelved for the best part of three years while Britain and the United States have been trying to reach agreement over the terms on which American know-how would be made available to this country. Just why the negotiations have taken so long is not clear. A final agreement between the two manufacturers involved, Rolls-Royce in this country and Westinghouse in America, was completed only this month. Under it, a complete American-built reactor together with its fuel and propulsion machinery will be supplied for the hull of the Navy's first nuclear submarine, the Dreadnought. This is according to plan since the Ministry of Defence has a marked preference for British, as against American, underwater detection machinery: this ruled out buying a complete submarine from the United States.

By this agreement, Rolls-Royce engineers will be trained by Westinghouse in the design of the pressurised water reactors used for submarines, a type not developed in this country. With this training, Rolls-Royce will then build an anglicised version of the American reactor under licence from Westinghouse, on a site already prepared at Dounreay; when this has been proved, it will be able to start routine production of submarine reactors as and when the Navy wants them. The company will thus become the only organisation in Britain with direct experience of pressurised water reactors. The financial arrangements governing the exchange of information with Westinghouse have not been revealed.

Britain in the New Wheat Scheme

AGREEMENT has been reached in Geneva for a new international wheat scheme to start on August 1st and run for three years. All exporting countries are expected to join with the major exception of Russia. Among importers the big change is that Britain, the largest importing country, intends to join after an absence of six years. The new scheme is broader than the expiring one, and the means of protecting the interests of exporters and importers are more effective and simpler in conception, though in certain circumstances less simple in execution. In the old scheme, neither side has been under any obligation to buy or sell while wheat prices kept within the agreed margins. Only at the maximum price could exporters be obliged to sell a fixed quantity and only at the minimum price were importers obliged to buy the same fixed quantities.

The guaranteed percentages: The new scheme rejects fixed quantities and the "put" and "call" for them. Instead, importing countries undertake each year to buy from exporting members, as long as the market price is below the maximum, not less than a given percentage of their total commercial imports; the exporters collectively undertake to supply *all* their commercial requirements. When prices are declared to be at the maximum the exporters' obligation broadly continues, but the importers' obligation lapses. If one or more exporting countries are declared to be at the maximum price while others are not, importers obtain a partial release from their obligations.

Under the new agreement Britain has offered to buy not less than 80 per cent (roughly 4 million tons) of its total imports from exporting members; as Britain normally buys almost all its wheat from them the risk that the Government might have to compel the trade to fulfil this guarantee is remote. Some importers have guaranteed more than 80 per cent, some less. Japan guarantees only 50 per cent, possibly to indicate its dissatisfaction with the failure to lower the minimum price. This is to be kept at 150 Canadian cents a bushel for the standard grade, No. 1 Northern Manitoba wheat, ex-Fort William, though the maximum has been cut from 200 to 190 cents a bushel. If a member considers that its interests are being prejudiced, for example by price policies, and cannot obtain satisfaction from the wheat council, it can withdraw from the scheme at the end of the crop year.

Disposal of surpluses: Wheat bought on concessional terms, such as India's large purchases from the United States under public law 480, is not included in the guaranteed percentages, but must be reported to the council. Such transactions can be considered at its regular meetings, or at the annual review that the council must make of national production policies, stocks, prices and trade, the disposal of surpluses and methods of increasing consumption. As now, members retain full liberty to determine their internal agricultural and price policies. In disposing of surpluses, members must inform the council of measures taken to comply with three principles:

1. Wherever possible surpluses should be disposed of by efforts to increase consumption;
2. Disposal should be made in an orderly manner; and
3. Concessional sales should not harm normal patterns of production and international commercial trade.

"Confrontation" the test: The new scheme thus meets British criticisms, and Britain returns to the club. It thereby lives up to its undertaking, reaffirmed at the Commonwealth conference in Montreal last September, to consider on their merits international schemes to stabilise commodity prices. The decision will please Canada and Australia particularly, and costs Britain nothing. Indeed it can be argued that in the new scheme the balance of advantage is tilted somewhat in favour of large importers, such as Britain, whose import needs do not change much from year to year. But the important thing is that the new agreement provides an oportunity for tackling internationally the problems of wheat through the forum of the council. The test will come in the annual review of national policies—the famous OEEC policy of "confrontation." Until then, judgment on the crux of the new scheme must be deferred.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in Hong Kong with limited liability.)

REPORT OF THE DIRECTORS PRESENTED TO THE MEMBERS AT THE ORDINARY YEARLY GENERAL MEETING HELD AT THE HEAD OFFICE, HONG KONG, ON FRIDAY 13th MARCH, 1959.

The Directors have pleasure in submitting the Balance Sheet at 31st December, 1958, together with the Profit and Loss Account for the year ended at that date.

	Hong Kong Dollars
The Profit for the year, after providing for taxation on profits earned to date and after making transfers to the credit of Reserves for Contingencies, out of which provision for diminution in value of assets has been made, amounts to	$23,466,050
To this must be added the undistributed profit brought forward from the previous year	2,062,463
	$25,528,513
An Interim Dividend of £1 2s. 6d. per share on 400,000 shares was paid on 11th August, 1958, amounting to £450,000 at 1/2 - 13/16.	7,291,139
leaving a balance available for distribution of	$18,237,374
This balance the Directors recommend be appropriated as follows:—	
Amount to be written off Bank Premises	$4,000,000
A Final Dividend of £1 17s. 6d. per share on 400,000 shares, £750,000 at 1/2 - 13/16	12,151,899
	16,151,899
leaving a balance to be carried forward to next year of	$ 2,085,475

The above appropriations have been incorporated in the Accounts.

DIRECTORS.—During the year, Mr C. Baker, MC, ED, resigned his seat and Mr S. J. Cooke joined the Board.

Mr B. T. Flanagan The Hon H. D. M. Barton MBE, and Mr R. J. Sheppard retire by rotation, but, being eligible, offer themselves for re-election.

AUDITORS.—The Accounts have been audited by Messrs Peat, Marwick, Mitchell & Co. and Messrs Lowe, Bingham & Matthews, who are eligible for re-appointment.

By Order of the Board,

Hong Kong, 27th February, 1959. MICHAEL W. TURNER, Chairman.

BALANCE SHEET AT 31st DECEMBER, 1958

	Hong Kong Dollars	Sterling Equivalent
SHARE CAPITAL:		
Authorised and Issued—		
400,000 Shares of HK$125 each, fully paid	$50,000,000	£3,125,000
RESERVE FUND	128,000,000	8,000,000
PROFIT AND LOSS ACCOUNT	2,085,475	130,342
	$180,085,475	£11,255,342
HONG KONG CURRENCY NOTES IN CIRCULATION:		
Authorised Note Issue $30,000,000		
Excess Note Issue 677,742,000	707,742,000	44,233,875
CURRENT, DEPOSIT AND OTHER ACCOUNTS, including Reserves and Provisions for Contingencies and Taxation	$2,726,272,937	
AMOUNTS DUE TO SUBSIDIARY COMPANIES	403,031	
ACCEPTANCES ON BEHALF OF CUSTOMERS	16,455,003	
PROPOSED FINAL DIVIDEND in respect of the year ended 31st December, 1958	12,151,899	
	2,755,287,865	172,205,492
	$3,643,115,340	£227,694,709

NOTES:—

1. Contingent Credits, Guarantees and Engagements amount to HK$39,975,868 (HK$438,185,440 in addition to which there are commitments in respect of outstanding Forward Exchange Contracts.
2. Foreign Currency Balances have been converted into Hong Kong Dollars at approximately the rates ruling at 31st December, 1958. The sterling equivalents of the figures shown in the above Balance Sheet have been converted at the rate of HK$1=1/3.
3. Investments having a market value of HK$32,559,904 are deposited with The Crown Agents to cover the liability in respect of the Authorised Note Issue.
4. At 31st December, 1958, the Bank had offered to purchase the 2,580,681 issued shares of the Mercantile Bank Limited not already owned by them, on the basis of one new Bank share for every 20 Mercantile Bank Limited shares or for 44s. per share in cash.

MICHAEL W. TURNER, Chief Manager.
P. F. HUTTON, Chief Accountant.

	Hong Kong Dollars	Sterling Equivalent
CASH IN HAND AND BALANCES WITH OTHER BANKS	$274,571,048	£17,160,691
MONEY AT CALL AND SHORT NOTICE	264,903,923	16,556,808
BRITISH AND OTHER GOVERNMENT TREASURY BILLS	431,811,809	26,988,238
TRADE BILLS DISCOUNTED	437,281,274	27,330,080
HONG KONG GOVERNMENT CERTIFICATES OF INDEBTEDNESS issued in respect of funds deposited as security for the Excess Note Issue	677,883,047	42,367,690
INVESTMENTS, at under market values:		
British, Colonial and Other Government Securities:		
Quoted in Great Britain $229,500,000		
Quoted outside Great Britain 130,650,000		
Other Investments:		
Quoted in Great Britain 35,020,235		
Quoted outside Great Britain 13,764,037	408,934,272	25,558,392
ADVANCES TO CUSTOMERS AND OTHER ACCOUNTS, less Provision for Bad and Doubtful Debts	1,096,013,621	68,500,851
AMOUNTS DUE BY SUBSIDIARY COMPANIES	2,872,392	179,524
LIABILITIES OF CUSTOMERS FOR ACCEPTANCES, per contra	16,455,003	1,028,438
	$3,610,731,394	£225,670,712
FIXED ASSETS:		
Investments in Subsidiary Companies, at cost $12,837,159		
Investment in Associated Company, at cost 2,003,499		
Bank Premises at cost, less amounts written off 17,543,283	32,383,946	2,023,997
	$3,643,115,340	£227,694,709

B. T. FLANAGAN
H. D. M. BARTON } Directors.
R. J. SHEPPARD

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited Accounts of the London Office and with the Returns received from the other Offices. We have obtained all the information and explanations we have required for the purposes of our examination. The above Balance Sheet gives the information required by the United Kingdom Companies Act, 1948, in the manner prescribed for a Banking Company and on that basis, in our opinion, is a full and fair Balance Sheet properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1958, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

Hong Kong, 27th February, 1959.

PEAT, MARWICK, MITCHELL & CO. } *Chartered Accountants,*
LOWE, BINGHAM & MATTHEWS } *Auditors.*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1958

THE HONGKONG AND SHANGHAI BANKING CORPORATION—*continued*

STATEMENT IN CONNECTION WITH SUBSIDIARY COMPANIES

1. The Investments in Subsidiary Companies appearing in the annexed Balance Sheet represent 14,975 Shares of the Capital Stock of The Hongkong and Shanghai Banking Corporation of California and the whole of the Issued Share capital of three Trustee Companies and four Nominee Companies. The Balance Sheet of The Hongkong and Shanghai Banking Corporation of California at 31st December, 1958, is annexed. The Accounts of the three Trustee Companies and the four Nominee Companies have not been submitted as the Directors are of the opinion that such Accounts would be of no real value to the members of the Bank.
2. No part of the profits earned by the Subsidiary Companies has been dealt with in the Accounts of the Bank. The net aggregate amounts of the Subsidiaries' profits, after deducting the Subsidiaries' losses, so far as they concern the Bank, are as follows:—

	Hong Kong Dollars
(i) For the year ended 31st December, 1958	$162,232
(ii) For previous financial years	472,309
	$634,541

THE HONGKONG AND SHANGHAI BANKING CORPORATION OF CALIFORNIA

(Incorporated in the State of California with limited liability.)

MICHAEL W. TURNER, Chairman of the Board. S. J. H. FOX, President.
R. M. ROCHE, Treasurer.

ACCOUNTANTS' REPORT TO THE BOARD OF DIRECTORS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION OF CALIFORNIA

We have examined the Balance Sheet of The Hongkong and Shanghai Banking Corporation of California as of December 31, 1958. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances. Our confirmation of the principal assets and liabilities was made as of November 28, 1958, with subsequent review and selective verifications as of December 31, 1958.

In our opinion, the accompanying Balance Sheet presents fairly the financial position of The Hongkong and Shanghai Banking Corporation of California at December 31, 1958, in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year.

San Francisco, California. PEAT, MARWICK, MITCHELL & CO., *Certified Public Accountants.*
February 5, 1959.

and not only did the entrepot trade fall off but the movement of population tended to be virtually a one way traffic. Under such circumstances some other kind of economic activity had to be developed to take the place of the dwindling entrepot trade with China and to give employment to the growing number of immigrants. This took the form of the establishment of light industries, many of which have been most successful, and of these the cotton spinning industry is the largest and has made the greatest impact on world markets. If conditions to-day are looked at from this historical background I think that on the whole the record is one of which we may be justifiably proud. That does not mean that everything is perfect or that labour conditions in all cases are what they should be, but steps have already been taken to improve these, and I do think it is fair to ask that criticism of Hong Kong should be tinged with a sense of realism and appreciation of what is possible under the circumstances as they exist. The reports of the members of the Parliamentary delegation, which we were very pleased to see here in the autumn, were an example which might well be followed by others.

The rising volume of exports of cotton textiles to the United Kingdom and the growing pressure from the Lancashire cotton industry for the fixing of a ceiling have been the main causes of the publicity which Hong Kong has recently received. Negotiations in the past failed to make much headway, but in September a delegation from the United Kingdom Cotton Board visited the Colony and had discussions with a special committee set up to negotiate on behalf of the local industry. This time it was found possible to reach agreement and a ceiling of one hundred and fifteen million square yards per annum of exports of cotton piece goods to the United Kingdom for retention there was laid down for a period of three years; and the Hong Kong government agreed to set up the necessary administrative machinery, to ensure that the limit was adhered to. It was hardly to be expected that this compromise would be received with enthusiasm by either side but I hope that it will give a little breathing space, which will enable this question to be considered in the future rather more objectively than has been the case in the past. I should like to pay tribute to the tact and patience displayed by the members of the Hong Kong negotiating committee, which had considerable difficulties to overcome locally in reconciling the different points of view of the various interests involved. It is satisfactory that the Minister of State at the Board of Trade recently stated in the House of Commons that it was not their intention to sponsor similar arrangements in respect of other exports from Hong Kong.

With conditions not so favourable in neighbouring territories it is not surprising that general economic activity in the Colony showed some signs of slackening off, but the general level still remains satisfactory. Building continues on a considerable scale and it is estimated that fifty per cent of all domestic accommodation in the urban area is now of postwar construction. The need to provide low priced housing remains as urgent as ever and, in spite of all that has been done, the government consider that the number of squatters now remaining is at least as great as the number which have been settled. The complaints that have been received from various countries with regard to competition from Hong Kong products have focused emphasis on the need for diversification of local industry. There is, I think, a certain justification in this criticism but it is perhaps not surprising that private capital should tend to concentrate on the production of the well tried and easily saleable article.

HONG KONG'S TRADE

Hong Kong's trade in 1958 showed a decrease in value of about seven per cent compared with the previous year mainly due to a fall in imports as exports remained at about the same level. Total trade amounted to HK$7,600 million with imports at HK$4,600 million and exports at HK$3,000 million. China continued to be the Colony's largest supplier and imports from this country increased by about one quarter with most other areas showing reductions, in particular Japan and the United Kingdom. Exports to Japan and Indonesia showed a drop but this was made up by higher purchases by the United States and the United Kingdom. The balance of trade with the last mentioned countries, however, still remains unfavourable to Hong Kong.

Exports of Hong Kong products showed a rise of about five per cent over last year's figure. The United Kingdom continued to be the best customer with the United States in second place, and the increases to these countries more than covered the drop in exports to Asian territories particularly Indonesia. Nearly five hundred new factories were registered during the year, a rise of about one third compared to 1957.

Business on the Stock Exchange showed a slight increase over last year but the volume is still not very large and there is no sign of a return to the more active conditions of some years ago.

Land values tended to decline during the year and it looks as if the demand, which

has been so strong in recent years, is now less active.

For the first time for some years the total bank clearings showed a decrease over the previous year's figure and were at about the same level as in 1956.

FINANCES OF HONG KONG

The financial position of the Colony continues to show the steady improvement which has been such a feature of recent years. For the current year a surplus of at least HK$40 million is now expected, as not only was revenue buoyant, but once again expenditure on non-recurrent public works was considerably lower than was expected. In fact this is the twelfth consecutive year in which there has been a surplus and revenue is now double what it was seven years ago, although there has been no major change in taxation. Since the war all expenditure, recurrent and capital, has been financed out of revenue, apart from a public loan of HK$50 million floated in 1948 and a loan from the United Kingdom towards the cost of the new airport.

For the financial year 1959-60 revenue is expected to remain at about the same level but the estimated expenditure shows a substantial increase, which will produce a deficit of nearly HK$90 million. The Financial Secretary considers it more likely this year that the money voted will in fact be spent, but, even if this should turn out to be the case, it is perhaps not surprising that apart from a few minor adjustments there is no increase in taxation.

CHINA

China has been engaged during the past year on what is described as "the great leap forward" and figures issued by the official agencies show a tremendous increase in industrial and agricultural production. Much statistical information is now published at frequent intervals which shows that in practically every field of production targets have been surpassed, while reports from various parts of the country describe the numerous projects such as reservoirs, irrigation work and railroad construction which have been completed or are under way. Rural society, already transformed by the merging of small units into co-operative farms, experienced an even more radical change by the organisation of the people's communes. Built on the basic rural administrative area, comprising about 30,000 people, the establishment of the commune results in the whole activity of a district, agricultural, industrial, cultural and military, being under central control, while communal nurseries and dining rooms enable the women to work as hard as the men. This movement, which was started in Honan province in April, spread rapidly throughout the country and was given added impetus by the military activity in the Formosan Straits. It is reported that by the end of the year "more than 99 per cent of China's peasant households" have joined. Complementary to this policy was the development of rural industry. Small production units, many of the cottage type, were set up in all districts, and in villages and towns rapidly constructed blast furnaces turned out pig iron as a first step in the drive for more steel. Output of coal is reported to have increased by over 50 per cent, much of it mined by hand, and numerous public works are being completed at a surprising speed by manual labour with few mechanical aids.

The above are a few of the main features relating to China's development which have been continually stressed in their own periodicals and until December there was no hint that there would be any turning back. In fact communes were to be introduced at any early date in the cities, and this was to be the final stage in the transformation from Socialism to Communism when wages and private ownership would disappear. A resolution of the Central Committee of the Communist party published towards the end of the year, however, made it clear that the pace could not be forced and that they "should not be in a hurry to set up people's communes on a large scale in the cities." The resolution went on to warn against "any premature attempt to negate the principle of 'to each according to his work' and replace it with the principle of 'to each according to his needs'." In conclusion the various committees were urged to make use of the winter months "to carry out an overall and thorough inspection." Reports of increased rationing of foodstuffs and the difficulty of the export corporations in fulfilling their contracts abroad are further evidence of strain, but production targets published for 1959 make no allowance for this and are about a third higher than 1958.

Even if one is not prepared to accept all their claims at their face value, and it is only necessary to study the Chinese press to find mention of inaccurate statistical reports from the countryside, there is no doubt that there has been considerable progress in practically every field and industrial production has shown a marked increase. These achievements have only been possible due to a high degree of central direction of effort, which has laid particular emphasis on speed, but the transport system in the country has been severely strained and distribution has inevitably suffered. What will probably be more surprising to shareholders, who are acquainted with China, is that labour has been found to be insufficient and the establishment of the communes was no doubt aimed at increasing the supply, particularly of female labour. It is clear, however, that the attempt to introduce this radical change in the countryside, to increase crops by deep ploughing, to operate small blast furnaces in the villages and to improve rural irrigation—all at the same time—has proved more than the economy can bear. In spite of this setback it cannot be denied that what has already been achieved is a challenge to other countries in Asia. How fast it will be possible to continue the process without serious dislocation is not so easy to predict.

The recently signed trade agreement with Soviet Russia which will provide for the construction over the next few years of seventy-eight large enterprises covering metal, chemical, coal and oil installations makes it clear that there is to be no turning back on the road to greater industrialisation. British trade with China during the first eleven months of the year showed considerable improvement with exports more than double the previous year's figure and imports up by one third. An interesting development has been the entry of China into the shipping market where, taking advantage of the low prices ruling during the year—partly by charter and partly by purchase—a considerable volume of tonnage has been acquired.

JAPAN

Few countries are more directly concerned than Japan with the emergence of China as an industrial power, as the Chinese mainland is Japan's most natural source for industrial raw materials and the competition from Chinese manufactured goods in South East Asian markets is a threat to her export trade which seems likely to grow in intensity. Private discussions took place in the early part of the year, with the object of concluding a trade agreement between the two countries, and at one time it looked as if these would be successful. When it became clear, however, that diplomatic representation would not be granted to a Chinese trade delegation in Japan negotiations were broken off and direct trade between the two countries virtually ceased. This was a considerable blow to Japan's economy, particularly in the Osaka area, at a time when purchasing power in some of her markets in South East Asia was falling off. It has recently been announced that there is a possibility of negotiations being resumed but there is likely to be some hard bargaining before agreement is reached.

The elections in May resulted in the return of the Liberal-Democratic Party with Mr Kishi in particular considerably strengthening his position. He was thus able to form a new Cabinet in which it was claimed that factional differences were considerably reduced, with only the Foreign Minister remaining from his previous team. The course of the new administration seemed to be set to fair until in October the Police Duties Law Revision Bill was introduced which was greeted with a considerable degree of opposition. There is no doubt that since the war the police have been severely handicapped in their efforts to deal with demonstrators, as at present they are prohibited from taking preventive action. The new Bill would have greatly increased their powers and permitted them to act both in private premises and public places if there was a clear and present danger of public disorder. These proposals were strongly opposed by both the Socialist Party and a great part of the public as well and the Prime Minister in November finally bowed before the storm and agreed to shelve the Bill. Although it would be unwise to attach too great significance to these developments there is no doubt that public opinion made its influence felt as never before and was the deciding factor in the course which events took. Three members of the Cabinet have since resigned, and although Mr Kishi was recently re-elected president of the party for a further term, the strength of the opposition has weakened his position and it is clear that the factional strife, which has for so long prevented the taking of decisive action on controversial matters, will continue to be as active as ever.

In November the engagement of the Crown Prince was announced and the marriage is expected to take place in April. Traditionally the wife of the heir to the throne has been selected from one of the half dozen families closely associated with the throne and the Crown Prince's choice of a commoner is another sign of the slowly changing pattern in this basically conservative country.

The economic measures taken in 1957 to curb the boom, which was threatening the balance of payments, were successful in their immediate objective and the foreign exchange reserves at the end of the year were US$861 million, a rise of US$337 million during the year in spite of a repayment of US$125 million to the International Monetary Fund. Industrial production however declined and, although the drop in the value of commodities benefited Japan's terms of trade, the main cause of the improvement in the balance of payments was a reduction in imports particularly of industrial raw materials. Imports in fact fell by about one third while exports maintained the same level as in 1957 and were unable to show the steady growth of previous years. Statistics relating to unemployment in Japan are somewhat unreliable, as in a great many cases workers become underemployed rather than being put out of work altogether, but the increase in unemployment must I think have been quite considerable. On the whole the deflationary policy would seem to have been successful and has resulted in a more healthy balance between supply and demand. Advances by the Bank of Japan to the banking system for example have registered a sharp drop.

From October onwards there have been various signs that business is picking up. Wholesale prices, the production index and exports all started to rise while letters of credit opened during the last quarter for imports showed an increase of 20 per cent over the third quarter. The outlook for iron and steel and shipbuilding is much brighter but the textile and fertiliser industries still remain somewhat depressed. Whether this general improvement will be maintained remains to be seen but the upward trend in demand from Europe and the United States should begin to make its influence felt; while China in recent months has been less active in her sales in south east Asian markets, a factor which should benefit Japan even if it may be only temporary. The rice crop turned out to be the second largest in Japan's history and would probably have been better still but for the bad weather during the harvest.

On the whole the economy enters 1959 in a fairly strong position to take advantage of any improvement in world economic activity. The problem of developing new and active export markets however remains as pressing as ever.

PHILIPPINES

The present administration, after a year in office, has not succeeded in solving the foreign exchange problem which is itself merely a symptom of a much graver economic condition. It is true that restriction on imports has halted the rapid fall in the reserves, which was such a danger in 1957, but as long as deficit finance continues any significant improvement is unlikely. In view of the administration's disinclination or inability to adopt the necessary austerity measures which alone will halt the increasing inflation, it is perhaps not surprising that applications for aid from international agencies receive lukewarm receptions, and that the visit to the United States of the President of the Republic and the Governor of the Central Bank achieved only a limited success.

The budget for 1960 is expected to be balanced at the record figure of Ps.1,280 million, with one fifth of the revenue being raised from additional taxation including a 25 per cent premium on the sale of foreign exchange. The President has made it clear that in his view "the need for fiscal and economic stabilisation is urgent" and has once again urged Congress to repeal "the no dollar import law." Similar exhortations have been made at this time of year before without any noticeable effect and Congress has been more inclined to approve expenditure than to pass the measures for raising the necessary revenue. There is perhaps more reason for hope this year as a mission from the International Monetary Fund has arrived in the Philippines to study the position on the spot. Meanwhile the rediscount rate has been raised from 4½ per cent to 6½ per cent per annum and the reserve which banks are required to hold against their demand liabilities has been increased.

Relations with the United States are going through a difficult stage and the respective ambassadors have been recalled for consultations. The American bases in the Philippines are the main cause of friction and this subject has been under discussion for some years. President Eisenhower recently described the differences as "psychological" and it would be surprising if some settlement were not reached fairly shortly. From January 1, 1959, both countries doubled the percentage of the standard duty which will be charged on imports from each other in accordance with the gradually increasing scale arranged in 1955.

VIETNAM

The political situation in Vietnam shows little outward change but security conditions continue to improve, due to a large extent to the development of more refugee settlement schemes, supported by Government grants, in the outlying regions. American assistance is an important support, but progress in providing for the day when this is no longer forthcoming is very slow as industrial development schemes take a long time to mature.

Although the total of imports for the first eleven months of the year was reduced by twenty per cent, compared with the previous year, the surplus over exports continues to be very large. Exports also fell by about one-third in value, with the two main products, rubber and rice, both running below the previous year's figures. Importers continue to have difficulties in disposing of their stocks as the market remains sluggish, due to local purchasing power being so low and it is estimated that there will be a further reduction of about fifteen per cent in imports during 1959. The current rice crop is expected to produce a considerable exportable surplus which, if it can be sold, should show a better balance between imports and exports at the end of the year. The internal price, however, is too high and it may be necessary to grant some form of subsidy if overseas markets are to be found.

The budget for 1959 is expected to be in balance at about eight per cent higher than 1958. Increased expenditure will mainly be used for development projects connected with agriculture and the setting up of light industries, such as sugar refining and paper mills, where the raw materials are available locally. In his budget address to the National Assembly, President Ngo Dinh Diem described his government's policy in the agricultural field as aimed at extending the area under cultivation and increasing production. The agreement recently signed with the French government, for the purchase of rice lands belonging to persons under French jurisdiction, will enable these rice lands to be distributed under the agrarian reform programme, while the improved system of agricultural credit and the programme for improving communications should also benefit the rural population.

CAMBODIA

The internal political situation continues very much as before and the elections to the National Assembly resulted in an overwhelming victory for the Popular socialist Party. In July Cambodia recognised Communist China, but the policy of strict neutrality has not been in any way changed. A border dispute with Thailand unfortunately resulted in diplomatic relations being broken off for a time between the two countries, but, thanks to the mediation of a special representative of the United Nations, a settlement appears to be in sight.

Trade for the first nine months of the year resulted in a considerable adverse balance due to a rise of about one third in imports compared with 1957. Although all categories of goods show some increase, imports of machinery, motor vehicles and textiles accounted for the major part. The foreign exchange balances are however still at a very satisfactory level.

THAILAND

The government, composed of members of the National Socialist Party, which was formed after the elections in December, 1957, never seemed to be particularly secure in the saddle and by September, 1958, the dissension within their ranks and the worsening economic situation made it likely that some change would be made. This took a somewhat unexpected form as Field Marshal Sarit Thanarat, returning suddenly from England, assumed absolute power on October 20th and suspended the constitution of 1932. At the beginning of this year an interim constitution was promulgated and a constituent assembly was appointed, composed of nominated members, to prepare a fresh constitution. Field Marshal Sarit Thanarat meanwhile headed a new Cabinet and stated that improvement of the nation's administrative machinery would be one of the main tasks of his government. It is perhaps unwise to seek too close a parallel in the establishment of this military regime with similar changes that have occurred elsewhere, as politics in Thailand have always to a large extent been dependent on personalities rather than on parties; nevertheless the suspension of the 1932 constitution will postpone for an indefinite period the formation of an assembly entirely elected by the people.

Economic conditions were severely affected by the drop in export earnings which caused an increase in the adverse balance of trade. Exports of rice and tin were reduced by 400,000 tons and 5,000 tons respectively and, while shipments of rubber were higher than last year, earnings were less. Timber benefited for a time from the freight war between shipping lines to European destinations and exports were better than was expected, although they fell off at the end of the year as the market in Europe is reported to be overstocked. The new rice crop is expected to be about average, but indications so far in 1959 seem to show that the price is not competitive in world markets. It is hardly surprising, in view of what I have mentioned above, that importers are being cautious about entering into new commitments.

An Economic Advisory Committee, set up immediately after the coup d'état, made a determined effort to reduce the cost of living and then turned its attention to the promotion of industry and encouragement of foreign investment. The budget, the introduction of which has once again been postponed, will no doubt eventually be conditioned to a large extent by the recommendations of this committee.

FEDERATION OF MALAYA

The first full year of independence has been extremely encouraging and the government have tackled realistically the problems which faced them both at home and overseas. The Alliance still continues to retain the confidence of the majority of the people and their prospects for the elections, which will be held later in the year, seem at the moment to be good. Considerable progress has been made in the battle against the terrorists, in particular in Johore and Perak, where until quite recently they were very active—a culmination of years of effort by men and women of many nationalities. The lessening of the military danger does not give any grounds for complacency however, as the threat of internal subversion has if anything increased, but the government seem to be fully conscious of the necessity to guard against this danger and have taken a number of steps to this end. In foreign policy an independent attitude has been adopted, the only commitment being the mutual defence treaty with the United Kingdom. On the other hand there seems general agreement that as long as the Emergency remains in force a neutral policy is not possible and accordingly there is no form of diplomatic relationship with the

communist countries. The Federation has played an active part in the United Nations and other international organisations and, at the meeting of the International Bank in New Delhi, was asked to provide an executive director for the coming year.

It is unfortunate that this new country has had to face so soon a decline in revenue due to the lower price of rubber and the reduction under the International Tin Agreement of the export of tin. A deficit of M$90 million is expected for 1958 and it is estimated that this will be followed by a slightly higher deficit in 1959. Basically the financial position of the Federation is sound as, although the revenue account will become overdrawn by the end of this year, there are substantial credit balances in other accounts more than sufficient to cover. Nevertheless the continuing deficit on revenue account is a matter for concern and a progressive reduction, in the words of the Minister of Finance, "would appear to be the major task of 1960." In view of the country's present financial position the development estimates for the coming year are around M$150 million only, or at about the same figure as in 1958, but in view of the long term loan of M$100 million, which has since been arranged with the Government of Brunei, it may be possible to accelerate the pace. A loan of US$10 million has been obtained from the US Development Loan Fund to develop port facilities in the north Klang Straits and a larger loan of US$35 million from the International Bank for the Cameron Highlands hydro-electric scheme. In this latter loan we have agreed to a small participation in some of the earlier maturities.

Legislation was passed toward the end of the year for the regulation of banking and the establishment of the Central Bank of Malaya, which opened for business on January 26, 1959. Mr W. H. Wilcock, who has been banking adviser to the government, was appointed the first Governor. The Central Bank has been granted the usual powers required by such an institution and in addition there is a clause which leaves the way open for the accession of other territories. Included in these powers is the right to issue currency, although it is not intended to do so at this stage, and the Currency Board will continue to be responsible for the note issue as in the past. This I think is a wise move as it will give a breathing space and may prevent the irrevocable severance of the currency arrangements between the Federation and Singapore, which would I am sure not be in the best interests of either territory.

With the object of offering inducements to new industries, the Pioneer Industries Ordinance, providing for tax concessions to be granted in such cases, was introduced and it is hoped that this measure will provide an attraction to potential investors. It is the policy of the government to encourage the investment of foreign capital, and on the whole they are doing their best to create a suitable climate, but it was unfortunate that the many claims on the reduced revenue necessitated an increase in company tax from 30 per cent to 40 per cent.

While there is no doubt of the necessity to set up local industries it seems evident that the needs of the growing population will require the development of some of the many tracts of virgin land which are still largely unexploited. A certain amount is being done in this direction but the pace is still too slow. The conflicting claims of agriculture, forestry and mining, and the problem of reconciling with a national policy the jealously guarded rights of the States to control their own land, are some of the difficulties that will require to be overcome, but the importance of agricultural development to the whole future of the country makes it essential that some solution should be found.

Taking everything into account the present position of the Federation is a happy one and the future prospects are good. A great deal of the credit for this state of affairs is due to Tengku Abdul Rahman, whose resignation from the post of Prime Minister was announced last month. His withdrawal from an active part in the government will be a loss to his country but there are indications that this decision may not be permanent.

TIN AND RUBBER

The reduction in industrial activity in both the United States and Europe resulted in the price of tin remaining weak and a large part of the restricted exports was absorbed by the Buffer Stock and subsequently by the special fund set up largely by producers' contributions. The position was aggravated by large stocks which came on the market from Russian sources and at the end of August the United Kingdom announced a quota on imports from Russia, a lead which other countries followed. Unfortunately this action seemed to have been taken too late and in the middle of September the Buffer Stock Manager was forced to withdraw support from the market which caused a sharp drop although the price quickly recovered. While there is no doubt that the heavy sales on Russian account were the main cause of the failure of this latest effort at stabilising the price of tin, the decision of the International Tin Council to raise the floor price in March, 1957, has been criticised.

Since the beginning of the year the tendency has been firmer due to greater demand. The agreement reached with Russia to limit exports to 13,500 tons for 1959 naturally assisted this upward movement but even the increase of 3,000 tons in the export quotas for the second quarter of this year only caused a temporary reaction. At the end of last month the price reached the level at which tin in the Buffer Stock may be sold and, with the statistical position greatly improved, the Buffer Stock Manager should be able to exercise considerable influence on the market.

During the first half of the year the price of rubber was steady at an average of 76½ cents but in July it started to rise mainly on Russian buying. Demand fluctuated during the following months but Russia came in again as a buyer in the last quarter which caused prices for a time to rise to over 90 cents with an average of 83¾ cents for the second half of the year. Pan-Malayan production increased by 4 per cent compared with 1957 and December was a record month which shows that the replanting programmes since the war are now beginning to yield results. The volume of exports was slightly higher than last year.

SINGAPORE

The constitution for the State of Singapore was published at the end of the year and elections for the fifty-one member Legislative Assembly are expected to be held in May, with the constitution coming into force on the Monday after the election day. The new State will have full internal self-government but defence and external affairs will remain the responsibility of the United Kingdom.

On the whole this constitution, which has been arrived at after a considerable period of negotiation, should meet the needs of the people of Singapore, while at the same time granting the United Kingdom Government the safeguards which are required The sense

of urgency, which a few years ago permeated all discussions on Singapore's future, was less in evidence last year while there are signs that all parties have retreated somewhat from the extreme positions they once held and are showing a greater sense of responsibility. This is a most significant development which, if it should continue, will do more than anything else to allay any feelings of apprehension as to the future which a constitutional change is bound to raise.

The main contenders at the elections seem likely to be the new party formed by the present Chief Minister, Mr Lim Yew Hock —the Singapore People's Alliance—and the People's Action Party. The aims of the former have considerable support amongst a certain section of the community but strenuous efforts will have to be made in the short time still available to build up a much stronger organisation than at present exists. The People's Action Party on the other hand have already shown, by their success in the City Council elections, the degree of efficiency which their party machine has achieved. Whichever should be successful, two important objectives would seem to be worthy of a high degree of priority—the first to maintain overseas confidence in Singapore to avoid any damage to the entrepot trade, and the second to move forward with the ultimate aim of forging closer links with the Federation of Malaya. There are already signs that the necessity for Singapore and the Federation marching in step is becoming more generally appreciated in both territories and I hope that nothing will be done to prevent this feeling from gaining strength.

Economic conditions were not as good as in previous years due to smaller shipments of tin, a less favourable price for rubber and a falling off in the transit trade with Indonesia. The improvement in the price of rubber was however beginning to have its effect at the turn of the year and I think it is true to say that, on the whole, Singapore weathered a difficult year very well. Labour relations, it is encouraging to note, show a great improvement.

The budget for 1959 is expected to be in balance due to an increase in company tax similar to the Federation and a rise both in income tax, on a graduated scale, and in the duty on cigarettes. With the object of leaving the incoming government a free hand, development expenditure has on the whole been restricted to the completion of existing commitments. These are considered to be within "the limit of what can be financed with safety and certainty in 1959" and more ambitious plans will depend to a great extent on loans. The Financial Secretary however pointed out that the prospect of raising loans at the present time can hardly be considered bright due not only to a lack locally of available resources, but also to the disinclination of investors to commit themselves until the future political outlook is clearer. The needs of this mainly young population, on the other hand, require continuing expenditure on such things as housing, education and hospitals which emphasises the importance of political stability with a satisfactory climate to encourage investors both local and foreign.

In the closing sessions of the present Legislative Assembly several measures received approval which were intended to give encouragement to local industry. These comprised the setting up of a People's Investment Corporation which, with locally raised capital—subscriptions limited to M$500 per person—would participate in the manufacture of cigarettes and matches; legislation to control manufacturers and to encourage pioneer industries; and an amendment to the Customs Ordinance to enable tariffs to

be imposed on certain imported goods to give protection to local industries. Free trade has been for so long such an integral feature of Singapore's whole economic development that the criticism which greeted the introduction of this last measure was hardly surprising and the Government were obliged to accept a number of amendments. It is quite understandable that there should be growing concern about the danger of unemployment, which is probably the most serious threat to Singapore's future, and that there should be the wish to take some positive action to encourage the setting up of local industries. It is however questionable whether protection, with the inevitable increase in the cost of living which will follow, is in the best interests of the people as a whole and this point was made by a number of speakers in the debate. Unless export markets are developed by the new industries at a fairly early stage the duties will require to be continued almost indefinitely, as the market in Singapore itself would seem to be too small to enable costs in most cases to be competitive with similar goods manufactured elsewhere.

Pan-Malayan total external trade showed a drop of nearly 9 per cent with the adverse balance increasing by over a third compared with last year to M$368 million. Exports showed a drop of 10 per cent in value while imports fell by 7 per cent. Trade for the year was in fact the lowest since 1954.

NORTH BORNEO

North Borneo has had on the whole a very satisfactory year and, in spite of lower commodity prices, has found it possible to balance the budget without higher taxation, while the value of foreign trade has increased by about 7 per cent. Agricultural development seems likely for many years to come to be the mainstay of any economic progress and the government are making every effort to encourage a greater variety of crops. Progress continues in the growing of hemp, and very favourable reports have been received on the possibility of large scale production of cocoa, while plans for the establishment of oil palm plantations are progressing well. The abandonment of the oil drilling project at Hankin Shoal has been a setback, but hopes of finding oil off the coast elsewhere have not by any means been abandoned. Rubber replanting continues to be vigorously encouraged and, with the help of the Colonial Development Corporation, an area in the Keningau Plain will be developed, with the planting of one thousand acres of rubber and the setting up of a central rubber factory. The timber industry has also done well and last year provided the most valuable single export.

The shortage of labour has been commented on frequently in these reports and was in fact one of the main causes in the past for the slow pace of development. For this reason I was interested to see that the Governor in his budget address was able to state "that today there is no shortage whatsoever of labour for our current needs." This is apparently due to the influx of unsponsored Indonesian immigrants and the improvement in the labour situation, coupled with the greater number of technically trained personnel coming forward, should enable progress to be made at a quicker rate than has been possible in the past.

BRUNEI

Negotiations on the proposed constitution have continued during the year and it seems likely that a deputation will be going to London shortly to discuss outstanding problems. New immigration laws came into force which restricted the automatic right of entry and residence to members of the State's indigenous races. Persons who did not qualify, but had lived in the State for the previous seven years, were eligible to apply for permanent residence permits.

Revenue is expected to be slightly less in the coming year due mainly to reduced production of oil and lower prices, but the State were still very fortunately placed. The main expenditure under public works is on the very necessary programme for further road development.

One of the main events of local interest was the opening of the magnificent new mosque in the capital which has taken about five years to complete. This ceremony was performed by the Sultan, in September, in the presence of leading representatives from neighbouring territories.

SARAWAK

Our office in Kuching was opened in April and has got off to a good start in spite of the fact that trade decreased during the year by about 12 per cent. The Governor in his budget address stated that the policy for 1959 was one of "consolidation rather than expansion" and that the rate of expenditure could not continue at the same level as previously. It was decided to impose a cess of two cents a pound on rubber exports to raise revenue for the rubber replanting scheme, to meet the increased cost of planting material due to the tax imposed on the export by the Federation of Malaya. On the whole the year has not been an easy one but the Government have made every effort to improve the lot of the people with the resources available.

INDONESIA

The Government were successful in withstanding the military threat from the rebel forces in Sumatra and North Celebes and in regaining possession of the major towns, but it is questionable whether their writ runs very large in the neighbouring countryside. The rebel leaders still remain at large and it has been found necessary for the military to continue to participate, to a considerable extent, in the running of the civil administration and of the commercial enterprises taken over from the Dutch; while the State of Emergency has been extended until December 1959 and at the end of last month it was announced that the country would return to rule by Presidential decree. More success has been achieved in the control of the barter trade between Sumatra and Singapore although copra from the Celebes still continues to be exchanged for consumer goods. Certain steps have also been taken, which should go some way to meet the complaints of the outer islands that they do not receive their fair share of the foreign exchange cake.

It is hardly surprising that with the political situation remaining so disturbed economic conditions have been far from happy. The loss of the Dutch-owned coastal shipping, much of which was specially constructed for this trade, will take some time to replace and, until it is found possible to maintain a greater degree of law and order, produce from the estates will not be able to reach the ports. The budget for the coming year estimates a deficit of Rp.8,000 million, advances to the Government by Bank Indonesia have risen in twelve months from Rp.15,000 million to nearly Rp.25,000 million and the note issue has increased by Rp.5,600 million. Foreign exchange reserves remain at about the same level as a year ago, but this has of course resulted in the percentage of cover for the note issue being reduced. It has therefore been found necessary to amend two statutes of Bank Indonesia, one which laid down a minimum foreign exchange cover to be maintained against the note issue and the other which limited the level of advances to the Government. Restrictions on private imports continue to be very severe and the future outlook for foreign business generally and the activities of our bank in particular hardly look very promising. As was advised to you by my predecessor last year our Surabaja office was closed and we are taking steps to reduce the staff of our Djakarta office to a minimum.

INDIA

The dissolution of the civil administration by the military in Pakistan has naturally been a matter of lively interest to India and the general trend in this direction in this part of the world is being carefully watched, not without a certain amount of apprehension. All has not been plain sailing for the central government internally during the past year; relations with the state government in Kerala remain difficult, quarrels between ministers and party leaders in the Punjab have been frequent, demonstrations have been organised by the extreme Hindu right-wing in Calcutta and Delhi while the pressure for the division of Bombay State remains very active. The realisation that Mr Nehru, who threatened to resign during the year, may wish to lay down office sooner than was once expected has naturally raised speculation about his successor and seems to have resulted in factions developing within the cabinet. Notwithstanding the various troubles with which the country has had to contend, and the continuing challenge by communism, India has good claims to be considered to be the most stable democracy in Asia and the future of parliamentary institutions in this part of the world seems likely to depend on how they develop within her borders.

The drawing down of the foreign exchange reserves, which was such an important feature of the Indian economy in 1957, continued during 1958 although at a somewhat slower pace as the balance of trade was more favourable than during the previous year. This was due to severe import licensing, which not only reduced the level of imports of consumer goods but of raw materials as well. Industrial production as a result showed a slight falling off in comparison with the steady annual rise which has been so consistent for the past few years.

In August a meeting of the countries most directly concerned was held in Washington under the aegis of the International Bank and arrangements were made to provide credit to cover India's foreign exchange commitments until March, 1959. A further meeting will be held shortly at which the more difficult problem of finding the money to carry out the last two years of the second five year plan will be discussed. It seems likely that some arrangement will be arrived at which will enable the plan to be completed, if not in such an ambitious form as was once hoped, at least with the main essentials basically unaltered. This will only have been achieved at a considerable cost as not only have the sterling balances been run down to almost below safety level but a large foreign debt has been incurred which will be a burden to service much less to repay.

Development however is a continuing process which cannot be halted in mid-stream and the rising population is already resulting in an increase in unemployment, which shows how necessary it is for there to be no turning back. Consideration is already being given to the third five year plan and there are indications that many favour a more ambitious edition of the second, with con-

centration on the construction of further large scale industrial enterprises. This would be a further step along the path at which India wishes to tread but I wonder whether the inflationary pressure will not prove to be too great unless self-sufficiency in food grains has been achieved. It is true that the present harvest is a good one but planning cannot depend on the vagaries of the monsoon, nor can the country continue indefinitely on the present austerity level of imports. Would it not be better, as a first step, to concentrate on a well planned programme of agricultural development in conjunction with an active campaign to improve existing farm methods? This would give the necessary base without which rapid industrialisation can hardly hope to succeed, namely, steadily rising agricultural production. Unfortunately the recent decisions at the Congress Party conference at Nagpur are not encouraging, nor is the proposal to impose an immediate ceiling on land holdings, with the surplus being run by peasant co-operatives, likely to result in any short term improvement in food production which is the most immediate problem.

BURMA

The dissensions within the Anti-Fascist People's Freedom League, which had been simmering beneath the surface for some time, finally erupted in April when the party was split into two factions. The Prime Minister, U Nu, who led one of these factions, was able to reorganise his Cabinet in June but the loss of the support of his former deputies seriously weakened his position in the country. In an effort to regain his former authority he proclaimed a general amnesty, with the object of bringing to an end the activities of the insurgents, but this task, which the united party found beyond their powers, proved even more intractable after the split. In September he handed over the premiership to the supreme commander of the army, General Ne Win, who formed a caretaker government which was intended to remain in office until April when fresh elections would be held. These seem likely to be postponed and the constitution has recently been amended to permit General Ne Win to continue as Prime Minister, notwithstanding the fact that he is not a member of parliament.

This basically military government has in a short time brought about a considerable improvement in conditions throughout the country. Prices have been reduced as a result of active steps being taken against hoarders, a drive has been instituted to clean up Rangoon city and many industrial projects, which seemed likely to be a strain on the economy, have been abandoned. Trade has however suffered and the volume financed by the Commercial banks in November compared with the same month in 1957 was only about one-third.

The import restrictions which were introduced with the object of halting the drop in the foreign exchange reserves were extremely successful and almost the whole of the loss sustained in 1957 has been recovered. The rice crop is expected to be good and there are estimates of an exportable surplus of two million tons in 1959, although marketing may not be so easy with large surpluses elsewhere. The future economic outlook must depend to a large extent on political conditions but, if the present difficulties should be resolved, an improvement in trade should result even if progress at first may be slow.

CEYLON

The civil strife and communal rioting, which occurred in May, left a scar which will take a long time to heal and it has not yet been found possible to repeal the State of Emergency. The passing of the bill to provide for "the reasonable use of Tamil" is a step towards a solution of the language question but this measure suffers from the usual defects of any compromise. Labour relations have been most unhappy and the long line of waiting ships, which has been such a familiar sight on the Colombo skyline for most of the year, is practical evidence of the conditions in the port. At the turn of the year the banks were involved in a strike which had some rather unpleasant features but, as a settlement of the matters under dispute has now been reached, I do not propose to make any further comment on our particular experience. There is however little doubt that even a country, as richly endowed by nature as Ceylon is, cannot afford an indefinite continuance of the racial and labour troubles which have been such a feature of 1958.

The budget for the coming year showed a deficit of nearly Rps.500 million and to meet part of this gap an increase in direct taxation was proposed, with the introduction of a completely new range of taxes on gifts, wealth and expenditure. These proposals met with an unfavourable reception from the commercial community but so far the finance bill incorporating them has not been published and it is thus difficult for tax payers to estimate their liability.

Preliminary figures show that trade was almost in balance last year, with imports somewhat below the previous year's level. The tea crop was a record but conditions in the port of Colombo held up shipments and at one time there was a danger that plucking and manufacture would cease. Arrangements made to utilise the ports of Galle and Trincomalee averted this stoppage, which would have been a disaster to the island's economy, and nearly one-third of the year's exports were shipped through these ports. The price obtained for high grown teas showed a slightly higher average than in 1957 but sellers of other grades had to accept less favourable terms.

CONCLUSION

As usual I have tried to give shareholders a brief review of the main events in the eastern territories in which we are interested. Economically the year has not been too favourable for these countries but on the whole they have managed to bear with the burden of low commodity prices without any serious dislocation. The future outlook seems brighter but much will depend on the speed with which industrial production rises in the west, particularly in Europe, and the strength of the competition from China which the rice producing countries may have to face.

A great deal of progress has been made since the war in promoting development in countries where the standard of living is low and the work in this field seems likely to grow. There are however two matters which I should like to mention as it seems likely that they will become increasingly important in the future.

The first is the necessity for the less developed countries to attract foreign private investment. Since the war a large part of the capital these countries have received has come from governmental sources and international agencies, which have to a large extent taken the place of the private investor. This is a development with which I should not wish to quarrel and in many cases the large amounts required could not have come from any other source. There still remains none the less a role for private capital to play, particularly in the supporting industries without which any broad basis of industrialisation is impossible. Not only that, but private has one advantage over institutional capital in that there is less likelihood of the repatriation of the original investment and, provided the venture is successful, a portion of the profits will be ploughed back each year for future development. It would seem therefore that countries which are short of capital should, in their own interests, make every effort to see that a suitable climate exists which will encourage foreign private investment. This I am afraid is not always the case and, making due allowance for the fear of foreign exploitation, I am sure that the present policy of some countries is most unwise.

The second concerns the necessity for countries which are setting up new industries to be able to find markets in which they can sell their manufactured goods. These will be to a large extent in countries where the purchasing power is high and probably in competition with existing home industries. It is here that the more highly developed countries can help, but from our experience in Hong Kong the outlook is not too promising. I do not under-estimate the political difficulties, as it is obvious that pressure will continue to be applied on governments to give protection to their own industries. Nevertheless I am sure that, if it is the policy of the western nations to encourage development in countries less fortunately placed, then it will be necessary for them to go further and to open up their markets to some of the products which this development will cause. Aid has been given on a most generous scale in recent years and has achieved much. It remains to be seen whether the same enlightened attitude will be adopted over the more difficult problem of trade.

THE STERLING TRUST

The forty-second annual general meeting of The Sterling Trust Limited was held on March 17th in London, Mr M. F. Berry (the chairman) presiding.

The following is an extract from his circulated statement:

One important feature of the year has been the increase in the issued capital of the company. In July, 328,125 ordinary shares of £1 each were offered to the ordinary stockholders at 35s. a share, in the proportion of one new ordinary share for every £4 nominal amount of ordinary stock held.

With this increase in capital not yet fully effective, the results show a modest increase in gross income from £488,518 to £495,447. The prospect is, of course, that the fresh money will earn more during 1959 than it has earned during 1958, so that our revenue should, for that reason, show some increase next year.

The valuation of the investment funds of the company has shown a substantial increase during the year, the appreciation at December 31, 1958, being 85½ per cent against a figure a year earlier of 51½ per cent. This increase is satisfactory but it must be remembered that the value of the ordinary stock of the company rests ultimately on its income, rather than on the capital value of the underlying securities and the trend of income is not necessarily related to this rather spectacular increase in capital values.

We have increased the proportion of our investments in the USA and Canada from 27.3 per cent to 29.3 per cent, and of our funds in the USA, a high proportion is in public utility and bank stocks.

The report was adopted and a final dividend of 9 per cent on the capital as increased was approved.

PHILIPS' INCANDESCENT LAMP WORKS HOLDING COMPANY
EINDHOVEN

The Annual Report and Accounts of the above-named company and of the Operating Company, Philips' Incandescent Lamp Works, will shortly be available in their English translation. The Holding Company owns fl.536,734,000 Ordinary shares of the Company out of a total of fl.537,038,000 and fl.143,604,000 Preference shares out of the fl.144,000,000 in issue. Below are given the Balance Sheet and Profit and Loss Account of the Operating Company as at 31st December, 1958.

BALANCE SHEET AS AT 31st DECEMBER, 1958

ASSETS			LIABILITIES		
Property, plant and equipment:			**Share capital and reserves:**		
Replacement value	724,343,000		Ordinary share capital	537,038,000	
Depreciation	345,972,000	378,371,000	6% cum. part. pref. share capital	144,000,000	
Intangible assets		—	Share premium account	118,245,000	
Investments in and amounts due from Associated Companies		1,460,669,000	Retained profit	621,978,000	
Sundry non-current assets		7,184,000		1,421,261,000	
Stocks:			Revaluation	330,753,000	1,752,014,000
Factory stocks	174,333,000		**Sundry provisions:**		
Commercial stocks	77,135,000	251,468,000	Long-term provisions	44,488,000	
Debtors:			Short-term provisions	37,290,000	81,778,000
Trade and other debtors	125,959,000		**Long-term Liabilities:**		
Prepaid expenses	11,844,000	137,803,000	3½% 25-year debentures (unsecured)	52,500,000	
Liquid Assets:			3½% 20-year dollar debentures (unsecured)	19,000,000	
Marketable securities	4,565,000		4% 25-year dollar debentures (unsecured)	76,000,000	
Cash at bank and in hand	317,787,000	322,352,000	5% 15-year Convertible debentures	102,286,000	
			Other long-term liabilities	218,679,000	468,465,000
			Current Liabilities:		
			Bank overdrafts	10,681,000	
			Creditors, includ. provision for taxation	112,697,000	
			Accrued expenses	29,926,000	153,304,000
			Profit available for distribution		102,286,000
(All amounts in guilders)		2,557,847,000			2,557,847,000

PROFIT AND LOSS ACCOUNT FOR THE YEAR 1958

Profit, including profits made by Subsidiaries, after foreign taxation and before deduction of the following items		382,559,000
Depreciation of property, plant and equipment	42,418,000	
Interest paid	20,580,000	62,998,000
Profit before taxation		319,561,000
Provision for Netherlands tax on profits		90,200,000
Net profit for the year		229,361,000
Profit available for distribution:		
Shareholders' dividends at the rate of 7·6 per cent. per annum on the Cumulative Participating Preference Shares and 14 per cent. on the Ordinary Shares		86,129,320
Board of Directors and Board of Management		7,619,814
Personnel interests		8,536,285
		102,285,419

The development of the Philips Group as a whole over recent years is shown in a table published in the Annual Report, from which the following figures have been extracted.

	1958	1957	1956	1955	1954
	In millions of guilders				
Sales	3,595	3,177	2,686	2,280	1,936
Increase on the preceding year	13%	18%	18%	18%	21%
Trading profit	357	442	337	292	268
As percentage of sales	15·5%	13·9%	12·5%	12·8%	13·8%
Net profit	244	187	158	148	119
Increase on the preceding year	30%	18%	7%	24%	35%
Retained profit	142	92	64	77	71
As percentage of net profit	58%	49%	40%	52%	60%
Dividend on Ordinary Shares	14%	14%	14%	14%	14%
Dividend on Preference Shares	7·6%	7·6%	7·6%	7·6%	7·6%
Net worth	1,922	1,665	1,535	1,426	1,029
Long term liabilities	951	896	631	473	377
Current liabilities	1,305	1,105	1,005	803	687
Current assets	2,748	2,354	2,079	1,862	1,439
Ratio of current assets to current liabilities	2·1	2·1	2·1	2·3	2·1
Additions to property, plant and equipment	259	275	293	239	144
Depreciation of property, plant and equipment	140	118	100	82	74
Number of employees	174,000	160,000	152,000	143,000	123,000

Copies of the above Accounts will be obtainable from the Company's British Fiscal Agents,

PHILIP HILL, HIGGINSON & CO. LIMITED

THE WHITEHEAD IRON AND STEEL COMPANY

VERY SATISFACTORY RESULTS IN A DIFFICULT YEAR

RENATIONALISATION—BASIC INDUSTRY USED AS A POLITICAL PAWN

EXPORT TRADE THREATENED BY CUMBERSOME BUREAUCRATIC CONTROL

MR G. H. LATHAM ON AN IMPRESSIVE RECORD OF ACHIEVEMENTS

The fifty-second annual general meeting of The Whitehead Iron and Steel Company Limited will be held on March 23rd at the Westgate Hotel, Newport, Mon.

The following is the circulated statement of the Chairman and Managing Director, Mr G. H. Latham, LLD, JP:

The Accounts have been presented on the basis adopted for the past few years and, I think, set out clearly the balance sheet position and trading results.

The Group manufacturing and trading profit of £1,125,321 represents an increase of 11.6 per cent over the corresponding figure for the previous year. After deducting debenture interest and crediting investment income, bank interest and the increase in the market value of securities, the net income before taxation amounts to £1,204,721, which is 20 per cent more than the corresponding figure for the year 1956-57.

The profit after charging taxation, but before making any allocation to fixed assets replacement reserve is £587,503 as compared with £476,633 for the previous year, an increase of £110,870 or 23 per cent. I consider that in all the circumstances this is a very satisfactory result and a welcome improvement over the previous year.

The only other item which I think calls for any comment is the fall in the Group stock and work-in-progress figures—from £1,926,151 in 1957 to £1,636,794 in 1958. This is due to the fact that under present trading conditions it is no longer necessary to carry such large stocks of raw materials.

The reduced amount invested in stocks of materials, together with the investment of temporarily surplus funds, accounts for the increase in the value of investments from £1,059,687 in 1957 to £1,731,150 in 1958.

As I still think that the information showing how each £1 of our income was spent is of value and interest, I am repeating it for the current year.

I think the shareholders will be interested in the following figures giving details of the turnover, the profit and the tax paid over the past five years:

Year	Turnover	Profit before tax	Tax	Profit after tax
	£ '000	£ '000	£ '000	£ '000
1954	10,016	931	482	449
1955	11,346	1,216	631	585
1956	12,237	1,266	645	621
1957	12,493	1,004	527	477
1958	14,265	1,205	617	588

TRADING POSITION

I am pleased to be able to say that, despite the recession experienced by certain sections of the Steel Industry, the output of our Hot Rolling Mills has been maintained during 1958. The output figures for the past five years are:

Year	Tons
1954	229,000
1955	246,000
1956	250,000
1957	251,000
1958	255,000

ANALYSIS OF GROUP TRADING RESULTS FOR THE YEAR ENDED 27th SEPTEMBER, 1958

	To nearest £ '000	% of total income
Purchase of raw materials...	12,571	78·01
Wages and salaries	1,190	7·39

You will, no doubt, remember that in my previous Statement I referred to the fall in demand for the products of our Cold Rolling Department. The recession did not ease throughout the year 1958, but I am pleased to say during the last month or two there have been distinct signs of improvement in demand and I have every reason to hope the Department will, from now onwards, be operating on a more satisfactory level of output.

The demand for the bricks and wire produced by our subsidiary company, Whitehead Hill and Company, Limited, has been at a reduced level during 1958. Compared with the previous year the brick output has fallen by 15 per cent and the wire output by 7 per cent. The competition for orders for bricks continues to be keen and business is being taken at prices which would show no advantage to our Company, especially as it is unnecessary to push the output of the brickworks on an uneconomic basis.

The output of our subsidiary company, Godins "The Rollers of Steel Sections," Limited, has been maintained at a satisfactory level during 1958, but as a result of the very competitive conditions in the market for cold formed sections there has been some reduction in the profit.

I would summarise the position by saying that 1957-58 has been a difficult year, and whilst the demand for certain of our products has been satisfactory there has been a reduction in the demand for others. The overall position for the year has been good and despite the reduced demand for certain of our products, I think you will agree the profit has been maintained at a satisfactory level.

FUTURE PROSPECTS

At the present time there are no signs of a general improvement in trading conditions and I am sure you would not expect me to make any wild prophecies as to when demand will increase; but there seems to be no reasonable doubt that in the longer term expansion in the demand for our products will be resumed. Fortunately, the variety of our products has helped us to weather the storm quite well during the year 1958, and I am equally confident that the efficiency of our plant and the excellent support we receive from our employees will ensure that until trading conditions are more favourable we shall be able to obtain a fair share of business.

Obviously, any improvement in the demand for our goods depends on an improvement in the country's economy generally. As you know, the Government has already adopted measures to relax credit restrictions, such as hire purchase, and the effect of this action should materially help demand. Let us hope the Government will take steps to encourage capital investment and in this connection the reintroduction of investment allowances would, I am sure, be a very valuable advance in the right direction.

DIVIDEND POLICY

When the preliminary announcement of our results was made on December 13, 1958, some indication was given about our future dividend policy and, perhaps, I should take this opportunity of making a few additional observations in this connection.

It has always been the policy of the Company to retain a substantial proportion of the profits in the business and, as a consequence, we have been in a position to finance capital developments from our own resources. In 1954 our financial position was very sound; the accumulated reserves amounted to £4,094,000 and the issued ordinary share capital was £783,835. As a result of denationalisation in 1955, which necessitated the reorganisation of the capital structure, the reserve position became less satisfactory, the accumulated reserves amounting to £2,410,000 and the issued ordinary share capital to £1,250,000. It was, therefore, considered desirable to adopt a conservative dividend policy and retain in the business a relatively high proportion of the profits earned. As a consequence of this policy the strong reserve position of the Company has, to a large extent, now been re-established.

It is still our intention to continue to retain in the business an adequate proportion of our profits to enable us to finance as far as possible any future capital developments out of our own resources. On the other hand, I am of the opinion that the time has arrived when we are able to adopt a more generous dividend policy and, as you are aware, we have already indicated in our announcement early in December, 1958, that the Board recommend to the shareholders that the final dividend be increased to 15 per cent for the year 1957-58 as compared with 10 per cent for the previous year.

RENATIONALISATION

As our Annual Meeting is later than that of most Companies, you will have read the

comments of my colleagues on this subject. These statements convey very clearly the unanimous objections to — indeed abhorrence of—the declared intention of the Labour Party to renationalise the Steel Industry.

I am sure you would wish me to express publicly my views on the issue and to inform you with complete candour what effect any such measures—if put into operation—would have on the future of your Company.

It is very odd—indeed a calamity—that a basic industry such as ours should be used as a political pawn. This must be so because we are told by responsible people that the proposal for the renationalisation of steel is NOT because we are inefficient—indeed, we are given credit for maximum efficiency, technique and salesmanship. We are supervised by the Iron and Steel Board, who by its constitution and record has given and is still giving consumers all the protection they need. I should have thought any responsible body which was contemplating such a radical change would have satisfied themselves that the change would

(a) Improve efficiency,
(b) Increase productive capacity,
(c) Improve quality,
(d) Assist in the expansion of our export trade which is so vital to the economy of the country.

I venture to suggest our export business has been built up by personal contacts, ability to make quick decisions and a real interest to find out what the overseas buyer wants—and to give it to him at a price which shows a competitive advantage. How could this country keep its exports in steel if it were handicapped by cumbersome bureaucratic control, and judging by other state-controlled industries, higher prices?

I think the Steel Industry can claim:

(i) The industry has an impressive record in production, productivity, exports, research, labour relations and development.

(ii) These achievements are the result of careful forward planning, constant research, introduction of new techniques and a comprehensive training system.

(iii) There is a great team spirit within the Industry, tempered by competition and an awareness of steel's vital importance to the whole economy.

(iv) The industry accepts the need for public supervision embodied in the far-reaching powers of the Iron and steel Board (prices, development, raw materials, research), but not for public ownership.

(v) Those within the Industry are proud of their companies and their aims and achievements. They fear the frustration of increased bureaucracy, loss of flexibility, loss of local responsibility, and inability to take decisions on the spot, which result from nationalisation.

(vi) The present system combines the safeguards of public accountability with the initiative, vision and competitive spirit of private enterprise. It is up to the nationalisers to prove that under nationalisation the economy, the works in the Industry, the consumers or the citizens generally, will benefit. This they have failed to do.

Let the politicians think again before it is too late.

HART & LEVY LIMITED

A CENTURY OF PROGRESS

The sixty-second annual general meeting of Hart & Levy Limited was held on March 19th at Leicester, Sir Tresham Lever, Baronet, chairman, presiding.

The following are extracts from his circulated statement for the year ended October 31, 1958:

Exactly a century ago this year Israel Hart and Joseph Levy formed the partnership that subsequently became the limited liability company of Hart and Levy Limited. We therefore celebrate in 1959 one hundred years of successful trading, with the business still controlled by the direct descendants of the founders.

It naturally gives me especial pleasure to be able to announce in this notable year what I am sure all must regard as a very satisfactory result. The trading profit has only fallen by approximately 7 per cent, and the net profit by less than £9,000.

Your directors propose the payment of a final Ordinary dividend of 12 per cent, making 20 per cent for the year.

In these uncertain times it is difficult, and indeed, it would be imprudent, for me to say very much as to the future. I can only tell you that our trade during the first three months of our present financial year has been promising, showing an increased trading result over the corresponding period of last year. I am quite confident that we shall secure our fair share of whatever business is available and it is reasonable to forecast that I shall be able to present a satisfactory result in twelve months' time.

The report and accounts were adopted.

This notice is under no circumstances to be construed as an offering of these securities for sale or as a solicitation of offers to buy any of these securities, but appears solely for purposes of information.

BRITANNIC ASSURANCE COMPANY LIMITED

RECORD NEW BUSINESS FIGURES

INCREASED BONUSES TO POLICYHOLDERS

MR FREDERICK A. POWELL'S STATEMENT

The ninety-third annual general meeting of the Britannic Assurance Company Limited will be held on April 3, 1959. The following statement by the chairman, Mr Frederick A. Powell, FCA, has been circulated with the accounts:

There was a big fall in the market values of stock exchange securities in 1957 and we felt it wise in that year to write large sums off book values and to increase the investment reserve funds very substantially. That market values are not the best test of intrinsic values is shown by the considerable recovery in prices which occurred even within a year. We are now able to certify that without taking into account our investment reserve funds, our assets are fully equal in the aggregate to book values. Nevertheless, in view of the magnitude of the movements in stock exchange prices which have occurred in recent years, we still think it wise to transfer each year a sum to investment reserves, and this year we have utilised £375,000 of our surplus in that way, bringing the investment reserve funds in the life branches to £9,125,000.

GENERAL PROGRESS

We again made satisfactory progress in all branches in 1958 and record new business figures were written in both life branches. The company's total income increased by £1,153,000 and amounted to £19,620,000. Premium income in the life branches at £13,889,000 showed an increase of £575,000. Total net interest income increased by no less than £520,000 to £4,890,000. Claim payments were £1,093,000 lower at £7,427,000, due to a reduction in payments under maturing endowment assurances. Policies in force in the life branches assured with bonuses £243,176,000, and there were also in force immediate and deferred annuities securing £418,000 per annum. The total funds held for the security of policyholders amounted to £112,587,000, an increase of £6,575,000.

ORDINARY BRANCH

In the Ordinary Branch there was a record increase in new business in 1958, the new sums assured under life policies being £10,155,000, compared with £7,884,000 in 1957. New annual premiums for life assurance and deferred annuities amounted to £517,000 compared with £466,000 in 1957. Single premiums and annuity consideration amounted to £125,000, which was the same as the previous year.

Premium income at £4,515,000 was £170,000 more than a year ago. Net interest at £1,548,000 increased by £140,000, and the net rate earned on the fund increased from £3 16s. 10d. per cent to £4 3s. 1d. per cent. After two abnormally heavy years for maturing endowment assurances, total claims fell from £3,528,000 to a more normal total of £2,452,000. The fund increased during the year by £2,327,000 to £39,088,000.

The actuarial valuation of the life and annuity contracts was made at the same rates of interest and by the same mortality tables as in 1957, the life contracts being valued by the net premium method at 2½ per cent interest. The surplus disclosed, inclusive of £450,071 brought forward from 1957, amounted to £1,962,407. Out of this surplus £125,000 has been transferred to investment reserve fund and £1,220,985 allocated to policyholders. A reversionary bonus of 44s. per £100 sum assured under with-profits policies has been declared, compared with 42s. declared for 1957 and 40s. for 1956. A first declaration of 35s. per cent on the amount of the annuity has been made on with-profits approved retirement annuities in respect of each full year's premium paid up to December 31, 1958.

INDUSTRIAL BRANCH

Substantial progress was again made in this branch. Premium income increased by £404,000 to £9,374,000 and funds by £3,816,000 to £62,960,000. Sums assured under new policies increased by £928,000 to the record figure of £15,652,000. The net rate of interest earned on the fund increased by 7s. 9d. to £5 10s. 11d. per cent. The expense rate again increased, and at 28 per cent was .5 per cent higher than the rate for 1957. Death claims were up by £38,000 to £1,765,000 but were within the amount expected by the table of mortality used in the valuation. Maturity claims at £3,208,000 were down by £57,000.

Endowment assurances continue to form the bulk of the new business and during 1958 new premiums under such contracts were 91 per cent of the total new premiums. They are an excellent form of saving, both from the policyholders' and the national point of view, and the regular call of the agent at the home of the policyholder does much to ensure that premium payments are maintained. During 1958, on the whole of our Industrial Branch business, no less than 19s. 9d. in the £ of all premiums falling due was collected.

The actuarial valuation was again made on a net premium basis at 2½ per cent by the same mortality table as a year ago. Inclusive of £1,481,538 brought forward from 1957, the surplus disclosed was £4,171,245. Out of this surplus £250,000 has been transferred to investment reserve fund and £1,720,000 allocated to policyholders. On Britannic policies a reversionary bonus of 30s. per £100 sum assured under premium-paying policies on which at least one year's premiums had been paid by December 31, 1958, has been declared and total reversionary bonuses payable on claims before the next declaration will now run from 1½ per cent of the sum assured after payment of one year's premiums up to 39½ per cent after payment of premiums for 39 years or more. On British Legal policies a reversionary bonus of 20s. per £100 sum assured has been declared, and total reversionary bonuses payable on claims before the next declaration will be at the rate of 31 per cent, being 1 per cent for each year's premiums paid since the transfer of the business to the Britannic in 1927.

INVESTMENTS

During 1958 there were signs of a slowing up of industrial and commercial activity in this country, and a realisation on the part of the government that the complex apparatus of official restriction and control which had been used in the fight against inflation was no longer appropriate for use in present circumstances. The credit squeeze was therefore abolished and replaced by measures designed to stimulate the national economy whilst maintaining a high standard of financial soundness.

These measures have had a beneficial effect, although their sufficiency has not yet been fully tested. World confidence in this country has been restored, the pound sterling has recovered strength and there are indications that a reasonable degree of internal price stability is being achieved.

The relaxation of the credit squeeze was accompanied by a progressive lowering of the bank rate which was reduced in stages from the crisis level of 7 per cent to 4 per cent, and there has in consequence been a considerable rise in the value of securities. Conditions for the investment of long-term money at satisfactory rates of interest have, however, remained reasonably good.

The main changes in our assets, as shown in the balance sheet, consist of increases of £2,225,000 in mortgages, £1,723,000 in British Government and British Government guaranteed securities, and £1,599,000 in debenture stocks. Ordinary stocks show an increase of only £441,000, but this modest rise does not reflect our investment policy which still favours this type of security. We actually invested some £1,800,000 in this class, but we received no less than £1,360,000 for our ordinary shareholdings in hire purchase finance houses which were taken over by banks.

HOUSE PURCHASE SCHEME

During 1958 there was a continuing demand for house purchase facilities and we made 2,329 advances to owner-occupiers. The amount advanced to these borrowers was £3,529,000. We have been operating our scheme of mortgages coupled with life assurance for over 50 years, during which time £40 million has been advanced to our policyholders, of which £22 million remains outstanding. During the whole of this period we have never raised the rate of interest on existing loans, as we have felt that one of the great advantages of our scheme is that the borrower has known precisely from the beginning of the transaction what the limit of his annual liability would be. Our experience as a lender to the home-owner has always been satisfactory and default and foreclosure are relatively rare occurrences.

FIRE AND ACCIDENT BRANCH

It is pleasing to report that for the first time the premium income exceeded £1 million, the increase of £103,000 in the year taking the total to £1,098,000. It is not so pleasing however, to report a reduction in our profits in this branch from £43,129 to £27,976. A worsening claims experience in all types of business during 1958 was responsible for this, but by far the largest contributor was the motor-car and motor-cycle section, despite the higher premium rates which operated throughout the year.

Again I wish to record our appreciation of the help and co-operation we receive from the British General Insurance Company with whom the whole of our general insurance business is reinsured, and to thank them for the attention which they so readily give to the day-to-day administration of Britannic business.

STAFF

The progress of a "Home Service" life assurance company whose reputation is built upon the service its staff gives at the homes of its policyholders, is largely in the hands of its outside staff. In our own company this home service is given by a field force of approximately 3,100 which includes 2,300 agents attached to 325 district offices throughout the United Kingdom. In addition, there are some 450 district office clerks and a staff of nearly 500 at the chief office in Birmingham. It is the team work of all these people which is mainly responsible for the very satisfactory report I have been able to lay before you. I know you will endorse the thanks which the directors have expressed in their report. Our relations with all sections of the staff continue to be firmly based on goodwill and mutual understanding, and I am confident that the transfer of £275,000 to the staff pension fund which we are proposing to make, will have your full support.

THE CARDINAL INVESTMENT TRUST LIMITED

INCREASED REVENUE

The fifty-second Annual General Meeting of The Cardinal Investment Trust Limited, was held on March 12th in London, Mr R. G. Mills (the chairman) presiding.

The following is his Review which was circulated with the Report and Accounts for the year ended December 31, 1958:

There are two items in the audited Accounts to which I should draw the attention of Members. The first relates to the Balance Sheet and reflects an increase of £150,000 in the issue of 4 per cent Debenture Stock, particulars of which are given in the Directors' Report. Secondly, there is an amount of £1,500 brought to the credit of the Appropriation Account which arises from over-provision for Profits Tax made in the previous year.

Gross revenue for the year was £139,222 against £132,215 and net revenue was £65,763 against £59,664. Deducting Preferred dividends and the interim dividend and the final payment now recommended on the Deferred capital and taking into account the Profits Tax credit to which I have just referred, the amount retained is £16,139 against £14,401 last year.

This increase in revenue enables the Board to recommend to you a final dividend of 11 per cent which, added to the interim payment of 5 per cent, makes a total of 16 per cent, being an increase of 2 per cent over that paid for the previous year.

An analysis of our investments is set out in a more detailed and I think improved form on page 12 of the Accounts and on pages 13 and 14 there is an innovation, namely, a 10-year record showing the growth of the company together with a capital history covering the same period. I feel that Members will agree with me that these figures are very satisfactory.

With regard to the outlook for the coming year, I adhere to my customary caution, particularly as we will be confronted within a measurable space of time with a General Election. In the absence of unforeseen circumstances I expect that our revenue for the current year will show a moderate increase.

The report and accounts were adopted.

THE MESSINA (TRANSVAAL) DEVELOPMENT COMPANY LIMITED

(Incorporated in the Union of South Africa)

OPTIMISM ENGENDERED BY STEADY PROGRESS TOWARDS HIGHER PRICE LEVELS

BETTER RESULTS ANTICIPATED FOR CURRENT YEAR

COMMANDER H. F. P. GRENFELL ON IMPORTANT DEVELOPMENTS

The ninth annual general meeting of stockholders of The Messina (Transvaal) Development Company Limited, was held on March 18th in Johannesburg, Commander H. F. P. Grenfell, DSC, RN (Retired), presided.

In the course of his address to the Meeting, the Chairman said:

This time last year the price of copper was still under £180 per ton and the immediate future looked uncertain. However, although not apparent at the time, the turning point had been reached and the recession in the United States, which had been the major cause of the collapse in prices during 1957, was already coming to an end. This, together with the effect of the cuts in production made earlier by several of the large producers, which only really began to become effective from March, 1958, onwards, brought about a gradual improvement in price, and by the end of our financial year it had risen to £212.

Since then the market has been influenced by a number of factors which have caused severe fluctuations at times, some beneficial, some adverse. Among the more important of these factors were the decision by the Western European countries to remove the restrictions on trading in unwrought copper and other non-ferrous metals with countries behind the Iron Curtain; labour unrest resulting in prolonged strikes in Northern Rhodesia and Canada—and more recently—stoppages at plants in the USA and Chile; stock releases by the British Government; and finally racial disturbances in Central Africa; broadly speaking, however, the picture is one of steady progress towards higher levels.

The current quotation on the London Metal Exchange is approximately £257 15s. per ton, and our position is a good deal happier now than it was twelve months ago. Economic recovery seems to be well under way in the United States, there are definite signs of increasing trade between the Western and Eastern European Blocs, and world stocks are relatively low. Taking all these, and other factors, into consideration I cannot feel other than optimistic about the future and I have little doubt that our results for the current year will be considerably better than those now presented to you.

MESSINA

The most important feature of Messina's operating results last year was a decrease in working costs, which fell 3s. 8d. to 32s. 10d. per long ton of ore produced, equivalent to £120 per long ton of recoverable copper. On a short tonnage basis the corresponding figures are 29s. 4d. and £107.

Another pleasing feature was a further increase in ore reserves, which now stand at just over five and a half million tons.

UMKONDO

At Umkondo there has also been an appreciable increase in ore reserves due to the disclosure, by development on the upper levels, of a larger tonnage of ore than was previously believed to exist.

As a result of these disclosures, production will be stepped up, the drop in grade experienced last year due to mining a higher proportion of lower grade quartzites will be counteracted, and the profitable life of the mine will be extended.

MANGULA

At Mangula, a total of 10,700 short tons of concentrates were produced during the year at an overall cost, including realisation charges, of £88 10s. per ton. The fact that with only half its milling capacity in commission the Company was able to show a small profit, despite the low level of copper prices which prevailed throughout the year, was in my opinion a very fine achievement.

The second mill unit has now been installed, and as soon as tests have been completed the Mine will work up to its planned production of 3,000 tons of ore per day. The achievement of full production should result in a considerable decrease in working costs, and I do not expect these to exceed 22s. per short ton of ore produced once the operations have settled down on a routine basis.

NEW SMELTING PLANT IN S. RHODESIA

An important matter, directly affecting the fortunes of Mangula, is our decision to build a smelting and refining plant in Southern Rhodesia. A new Company—The Messina Rhodesia Smelting and Refining Co. Ltd.—is to be formed with an initial capital of £750,000, of which £600,000 will be subscribed by ourselves and the balance of £150,000 by Mangula. Situated on rail at Alaska, 45 miles from Mangula, the plant will treat concentrates from this and any other mines we may bring into production in the territory, and will also operate on a custom basis. Construction has already begun and the plant should be operating within the next 18 months.

The erection of this new smelter will bring many advantages to Mangula. It will enable that Company to sell its output in the form of fire refined copper instead of concentrates, freight and other charges will be substantially reduced, and by arrangement with the Government of Southern Rhodesia Mangula will be exempt from the payment of royalty. Under an agreement with the new Company, Mangula will also be assured throughout its life of smelting and refining capacity for its output.

ALASKA

I now turn to Alaska, which is a copper prospect situated within about 4 miles of the proposed site for the smelter. The deposit consists of a number of sulphide and oxide ore bodies, which are estimated to contain approximately 5 million tons of ore of an average grade of 1.8 per cent copper. Our investigations are now complete and we have decided to bring the property into production on an initial scale of 500 long tons of ore per day. On this basis the life of the mine will be 28 years. The average annual output will amount to approximately 2,600 long tons of copper in the form of concentrates which will be sent for treatment to the new smelter.

In view of their proximity it will be possible to arrange a number of services and buildings, such as offices, stores, recreation club, etc. on a common basis for the Alaska Mine and the smelting company, and a substantial saving in capital expenditure will result. Taking this into account we estimate that it will not cost more than £500,000 to put Alaska into production, and your Directors propose that this sum shall be provided from the Company's resources. The mine will be brought into production at approximately the same time as the smelter comes into operation—i.e. within the next 18 months. As in the case of Umkondo, I have no doubt that Alaska will prove to be a profitable undertaking and that it will make a valuable contribution to the revenues of your Company.

The Directors' Report and Balance Sheet and Accounts for the year ended September 30, 1958, were adopted.

The retiring Director, Mr D. E. Cox, was re-elected and the remuneration of the Auditors for the past year's audit was fixed.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY

A VERY PROGRESSIVE YEAR

MR J. N. SHAW ON EXTENSIONS TO NATIONAL INSURANCE SCHEME

The One Hundred and Twenty-Eighth Annual General Meeting was held on March 12th in Edinburgh, Mr J. N. Shaw, MC, CA, Chairman of the Board of Directors, presided. In the course of his remarks, Mr Shaw said:

RECORD INCREASE IN NEW BUSINESS

"A year ago we had before us the results of the quinquennial investigation covering the period from 1953 to 1957 inclusive, and my predecessor in Office, drew attention to the steady and substantial expansion in business which had taken place during these five years. I am happy to say that this trend has continued and that we have had a very progressive year in 1958. Net new premiums for the year amounted to £854,342. This total is considerably in excess of the corresponding figure of £511,810 for 1957 and with this increase we have naturally had a substantial rise in the benefits secured by these premiums both in the case of life assurances and annuities. As regards new life assurances there has once again been a gratifying increase in the number of new policies issued, while the net sums assured have risen from a total of £6,652,871 in 1957 to a new record of £8,381,416. This latter figure consists of £6,156,633 under policies on individual lives and of £2,224,783 under policies on groups of lives in connection with staff schemes. Not only are these figures also records but the increase of nearly £1,730,000 over the 1957 total is the highest in any one year in the history of the Society. The total annuities issued during the year amounted to £462,668 per annum net against a total of £428,888 per annum in 1957.

A particularly welcome feature is the substantial proportion of our new business that comes each year from existing members and their connections showing that those who have entrusted their savings to the Scottish Equitable are satisfied clients who return to us when they require further life assurance and recommend the Society to others.

HIGH INTEREST YIELD

Interest income for 1958 is again substantially greater than for the previous year due to three main causes—increased funds, increases in ordinary share dividends and a full year of higher interest rates compared with a few months only in 1957. At the Annual Meeting last year we showed a rise in the Society's gross rate of interest from £6 1s. 5d. per cent to £6 5s. 1d. per cent—I am very pleased to be able to report a further advance in 1958 to £6 6s. 4d. per cent. On the other side of the Account unusually large sums fell due for payment in respect of endowment assurances reaching maturity, but full reserves are, of course, carried to meet these maturities. Claims by death also show an increase over the 1957 total but to determine whether the results are satisfactory we must bring into consideration the ages at death and the duration of the policies. In fact the year's Mortality experience has been very good and is actually more favourable than that for 1957 despite the slightly larger disbursements. Commission shows an increase but this is only to be expected in view of the substantial progress shown by our new business figures. Expenses are also higher but are not out of line with the increased size and scope of our operations and our plans for the future. The bonus-earning power of a Life Office depends mainly on three factors, the maintenance of a high earned rate of interest, favourable mortality experience and a reasonable level of expense. The strength of the Society in this respect was shown convincingly in the record bonus declaration as at December 31, 1957, and from the details I have just given you it is obvious that this favourable position is continuing.

STRENGTH OF ASSETS

The principal changes in the Balance Sheet are, in round figures, increases of £120,000 in loans to our associate the Standard Property Investment Company Limited, £330,000 in British Government Securities, £180,000 in Debentures and £550,000 in Ordinary Stocks and Shares. A year ago we were faced with the heavy fall in prices which had occurred in Stock Exchange Securities following on the crisis of September, 1957, and the increase in the Bank rate to 7 per cent. We were able to report that despite the severe depreciation then ruling there was still a comfortable margin between the market values and the balance sheet values of our Stock Exchange Securities. As a result of the improvement which has occurred during the year this margin has increased greatly and is now very substantial indeed.

NATIONAL PENSIONS

In recent years great interest has been taken in the question of a possible extension of state pensions. Some two years ago the Labour Party issued a booklet giving details of a very comprehensive scheme which they intended to introduce in the event of their coming to power. This scheme is not only most ambitious—in fact one might say too ambitious—but would be very costly and would necessarily involve greatly increased contributions and additional taxation. It would also seriously restrict the future development of life assurance and pension schemes and consequently affect most adversely the great and growing contribution which planned saving of this nature has made to the welfare of the country. While I agree wholeheartedly that one of the primary obligations of the Government is to provide a basic minimum standard of living for the elderly, I also believe most strongly that this is as far as the Government should go. Any additional provision over and above this minimum is a matter for private arrangement and should be free from any State interference. Life Offices have had many years of experience in this type of business and their schemes can be framed to meet precisely the varying needs of employers and employees in a way which can never be possible under a State scheme which in order to be practicable must of necessity be on a more or less uniform basis. The Government have now introduced their proposals for extending the National Insurance Scheme by way of graded contributions and benefits and details are given in a White Paper published in October, 1958. I am very glad to see that these proposals are much more realistic than those of the Labour Party. Taking into account modern conditions, the level of pension benefits can, I think, reasonably be regarded as being within the conception of provision for basic needs. With little material alteration these proposals have been incorporated in the National Insurance Bill which has recently been debated in Parliament. The additional benefits proposed in the Bill are modest and relate only to future contributory service so that as in the past a private pension over and above the National Pension is, in many cases, essential if true independence and a reasonable standard of life are to be attained in retirement. Moreover the Government have stated that they are determined to encourage private schemes and that there is no reason why an employer contemplating a new private scheme should hesitate to go ahead. The Society's schemes are fully flexible and can readily be adjusted to suit changing circumstances. The Bill makes clear the general intentions of the Government although many details have still to be settled but with the information which I have at present my advice to the many employers who already have schemes insured with the Society is to maintain their schemes and to regard the benefits as supplements to the National Scheme benefits. To those employers who have not yet established schemes I commend the Society's attractive terms and I say 'Go ahead now.' The Society has informed men ready and willing to discuss these problems and to render all possible assistance and I invite employers to give their immediate attention to the matter."

The Report and Accounts were adopted unanimously.

MTD (MANGULA) LIMITED

(Incorporated in Southern Rhodesia)

FIRST YEAR OF PRODUCTIVE OPERATIONS

BRIGHTER OUTLOOK FOR COPPER PRICES

COMMANDER H. F. P. GRENFELL ON PROMISING BEGINNING

The twelfth Annual General Meeting of stockholders of MTD (Mangula) Limited was held on March 11th in Salisbury, Southern Rhodesia. Commander H. F. P. Grenfell, DSC, RN (Retired) (the Chairman), presided and, in the course of his speech, said:

Ladies and Gentlemen, On September 17, 1957, the first Aerofall Mill unit was brought into operation, almost exactly two years after the construction programme was begun under the direction of The Messina (Transvaal) Development Company Limited, and from October onwards regular sales of concentrates have been made to refineries overseas.

VERY SATISFACTORY RESULTS

The accounts now presented to you reflect, therefore, the first year's productive operations by your Company, and when one takes into account the teething troubles which are inevitable during the first year of a mine's operations; the fact that only one unit of the Mill was in commission; and the low level of copper prices; the resultant profit of £3,740 may, I think, be considered very satisfactory. The average price for the twelve months covered by the accounts was approximately £186 per ton.

However, since then there has been a welcome recovery, and with the end of the recession in the United States and the removal of trade restrictions on unwrought copper and other non-ferrous metals between Western European countries and those behind the Iron Curtain, prospects are considerably brighter than they were this time last year.

The copper market has always been sensitive to outside influences, and fluctuations in prices either way are bound to occur from time to time, but broadly speaking the picture, as I see it, is one of steady progress towards higher levels.

THE YEAR'S OPERATIONS

During the year the mill handled approximately 495,000 short tons of ore, and operating costs amounted to 27s. 8d. per ton of ore treated. A total of 10,700 short tons of concentrates averaging nearly 52 per cent copper was produced, the equivalent cost figure being £64 per short ton. Realisation charges amounted to £24 10s. per ton, and the overall cost was therefore £88 10s. per short ton of concentrates. Taking all factors into consideration these costs are very creditable for the first year of production.

The second Aerofall Mill unit has now been installed, extensions have been made to the Flotation Plant, and as soon as the initial testing period is over output from the mine will be increased to its planned production of 3,000 short tons of ore per day.

On this scale of production, working costs will also be substantially reduced and I do not expect them to exceed 22s. per short ton of ore once the mine has settled down on a routine production basis. As the output will have been at the lower rate for the first half of the financial year, however, the full benefits of increased production will obviously not be experienced until next year, although even this year there should be a substantial improvement.

ORE RESERVES

There was an increase in ore reserves of about 1¼ million tons after allowing for the year's production. This can be considered satisfactory because, for reasons of economy, underground development in the Molly Section was greatly reduced.

For the same reasons field work and exploration elsewhere on the property were also kept to a minimum, but now that the future looks more promising, underground development will be increased, and as funds permit we shall continue our search for additional ore deposits within our Exclusive Prospecting Area.

We have already obtained promising indications by geochemical surveys in several parts of the property, and on one of them—in the Norah area—a small prospect shaft has been sunk and some development carried out underground. At a depth of 150 feet we have exposed two parallel ore bodies of which one, about 30 feet wide, averages 1.86 per cent copper over a strike length of 600 feet. Development is still incomplete, but we have good reasons for hoping that we may discover further ore bodies of a similar nature over at least another 2,000 feet to the north. The Norah area, as you may remember, is situated about 4½ miles south of the Molly Section, along the new road to Zawi, and if we are successful in finding new ore bodies there transport to the Mill will be quite a simple matter. However, we have by no means arrived at that stage yet, and at the moment I would prefer to describe Norah as a promising prospect.

PARTICIPATION IN NEW COMPANY

There is one other very important matter with which I must deal before concluding my speech. You will have seen from a recent announcement in the Press that our parent Company, The Messina (Transvaal) Development Company Limited, is to proceed immediately with the erection of a Smelting and Refining Plant adjacent to the railway at Alaska, and only 45 miles by road from Mangula.

A new Company—The Messina Rhodesia Smelting and Refining Co. Ltd.—is to be formed with an initial capital of £750,000, of which a participation of £150,000 has been offered to your Company. In view of the undoubted advantages—to which I will refer in a moment—which will accrue to your Company, your Board have had no hesitation in accepting this offer and in agreeing to enter into a long term contract for the treatment of the whole of the output from the mine.

The chief benefits will be as follows. First, your Company will always be assured of smelting and refining capacity for its output; second, it will be able to market a more saleable product in the form of fire-refined ingots; third, there will be a substantial saving in freight and other charges as compared with present arrangements; fourth, by agreement between the Government of Southern Rhodesia and the parent company, your Company will be exempt from the payment of royalty; and finally, by accepting a participation in the capital of the Smelting and Refining Company, your Company will share pro rata in its profits.

This brings me to the end of my review—and I can best sum it up by saying that your Company has made a promising beginning under difficult conditions, and that I have no doubt that it has before it a successful future.

The report and accounts were adopted.

BRITISH HOME STORES

INCREASED TURNOVER

The Thirty-first Annual General Meeting of British Home Stores Limited was held on March 18th in London.

The Right Honourable The Earl of Lisburne, JP, presided in the absence of the Chairman, Mr Harold Hindley, through indisposition.

The following is an extract from the Chairman's circulated statement for the 52 weeks to January 3, 1959:

Profits before tax were £1,512,965 as compared with £1,574,177 for 1957, and after taxation was £718,465 slightly ahead of the previous year. In recommending a final divided on the Ordinary Stock of 3½d. per unit, making a total for the year of 5d. per unit against 4½d. last year, your Directors have had in mind the somewhat conservative dividend policy adopted over the past years. Further, it is proposed to issue one new Ordinary Stock unit for each ten units held by capitalisation of Reserves.

TRADING

We reduced the selling price of many of our ranges during the year and we shall continue this process in the months ahead. Purchase tax reductions are greatly welcome but such changes always involve losses on stocks held at the time and as a result we suffered considerably in the year under review. The Government's financial measures in September, 1958, had a definite effect upon the level of turnover during the latter part of the year and our sales experience was considerably better than earlier in the year. Although turnover was substantially ahead of any previous year costs of operation tended to increase.

During the last few years we have increased substantially the volume of our food business and again the turnover of our Cafeterias was very satisfactory. We continue to give good meals at very reasonable prices cooked and served in modern conditions. The fact that we serve over 300,000 customers every week is an indication of the popularity which our Cafeterias and Tea Bars enjoy.

DEVELOPMENT

Last May we opened our store at New Street, Birmingham. This is the largest and most important store to date in our Chain. In October we opened the new store in Middlesbrough. This, like Birmingham, is located in an excellent central position and comprises a total area of 29,000 sq. ft. In both cases we have been very pleased with the results and feel that these stores will contribute well to our trading results in the future. During the year we extended the Wood Green store and completed the first phase of an extension at Wigan, while increasing selling space to a minor extent in several other stores.

At Crewe, where we have not previously been represented, we open a new store on March 12th. Later in the year our new unit

at Lord Street, Liverpool, will be completed. We are glad to report that arrangements have now been finalised for the erection of a new and important store in Bristol to replace the store which was destroyed by enemy action. We hope that building works will be completed by the end of 1960. With the erection of this store we shall have replaced all the losses which we suffered during the war.

We are proceeding upon major extensions at Slough, Bedford, Nottingham, Tunbridge Wells and Gravesend and in the near future some other extensions to existing properties will commence. With the end of the credit squeeze we are now able to accelerate our development programme.

It is difficult to forecast the pattern of events for the next year. We shall continue to use our best endeavours to offer the public really attractive ranges of merchandise of good value with a view to achieving results which you will consider to be satisfactory.

The report was adopted and the capitalisation of reserves approved.

EASTBOURNE MUTUAL BUILDING SOCIETY

ASSETS EXCEED £7 MILLION

The eighty-second annual general meeting of the Eastbourne Mutual Building Society was held on March 18th at Eastbourne.

Mr Laurence A. Caffyn, chairman, in the course of his speech, said:

During the first half of the year the country was labouring under a high Bank rate and the credit squeeze. During the second half the credit squeeze was considerably relaxed and the Bank rate was reduced. In spite of the withdrawals occasioned by the temporary period of higher interest rates early in the year, the assets of the society have increased by the substantial sum of £80,000, and now amount to practically £7,300,000.

The total amount of reserves and carry forward at the end of the year amounted to £372,000 or 5.1 per cent of the total assets of the society. It must be obvious that a society with reserves of this order offers a high degree of security to investors.

There is one aspect of the society's operations which is being neglected by the public at the present time. The total amount standing to the credit of all Deposit Accounts as at the end of the year was only £445,000. Each £1 deposited with the society is covered by assets valued in the Balance Sheet at the sum of £12 18s. 7d. There can be very few investments in this country carrying such a rate of interest as 3 per cent with income tax being paid by the society, making an equivalent of £5 4s. 4d., which offer such security. I would strongly recommend this investment.

The net surplus which is available for transfer to reserve this year is the highest ever shown by the society.

The report and accounts were adopted.

BANCA NAZIONALE DEL LAVORO

PROGRESS OF BANCA NAZIONALE DEL LAVORO DURING 1958

DEPOSITS rose from Lit.734,652 million to Lit.823,526 million (£gs.470,586,300).
PROFIT rose from Lit.1,026 million to Lit.1,075 million (£gs.614,300).
RESERVES rose from Lit.9,540 million to Lit.11,660 million and, after approval of the Balance Sheet, to Lit.13,000 million (£gs.7,428,600).
STAFF RETIREMENT FUND rose from Lit.17,461 million to Lit.19,945 million (£gs.11,397,100).
PREMISES, ETC., figure at a value of one Lira after Lit.804 million (£gs.459,400) had been written off during 1958. The real estate gave a rent of Lit.846 million (£gs.483,400). An amount of Lit.508 million (£gs.290,300) spent during the last year for the installation, reconstruction and organisation of the Bank's premises and Branch Offices, was also written off.
PARTICIPATIONS in the Autonomous Sections and Sundry Participations stand in the Balance Sheet at a value of one Lira after Lit.14 million (£gs.8,000) had been written off during 1958. Dividends therefrom amounted to Lit.117 million (£gs.65,900).
TAXES paid in 1958 amounted to Lit.3,431 million (£gs.1,960,600).
RECOVERIES in 1958 amounted to Lit.692 million (£gs.395,400).
THE TOTAL OF THE BALANCE SHEET, exclusive of the "Contra Accounts," rose from Lit.985,476 million to Lit.1,112,512 million (£gs.635,721,100).

AUTONOMOUS SECTIONS

BANCA NAZIONALE DEL LAVORO also operates in various specific fields of activity through the intermediary of its following Autonomous Sections, the annual accounts of which are shown separately:

— Section for Mortgage Credit
— Section for Hotel and Tourist Credit
— Section for Motion Picture Credit
— Section for Credit to Co-operatives
— Section for Credit to Medium-sized and Small Industries

The importance of these Sections and of their intervention in their respective spheres of activity during 1958 will appear from the following:
TOTAL CAPITAL FUNDS of the Sections rose from Lit.5,537 million to Lit.6,387 million (£gs.3,649,700).
TOTAL RESERVES of the Sections rose from Lit.2,596 million to Lit.3,797 million (£gs.2,169,700) after approval of the Balance Sheets as at 31st December, 1958.
ADVANCES AND LOANS (including half-yearly payments due) which on 31st December, 1957, amounted to Lit.104,556 million, reached a total of Lit.118,046 million (£gs.67,454,900) at the close of 1958.
PROFIT of the Sections rose from Lit.780 million to Lit.905 million (£gs.517,100).
THE TOTAL OF THE BALANCE SHEETS OF THE SECTIONS, exclusive of the "Contra Accounts," rose from Lit.112,184 million to Lit.132,030 million (£gs.75,445,700).

COMBINED CAPITAL AND RESERVES OF BANCA NAZIONALE DEL LAVORO AND ITS AUTONOMOUS SECTIONS, AFTER THE APPROVAL OF THE BALANCE SHEETS AS PER 31st DECEMBER, 1958, AMOUNT TO Lit.30,074,615,611 (£gs.17,185,495).

THE SCOTTISH MUTUAL ASSURANCE SOCIETY

The seventy-sixth annual general meeting of The Scottish Mutual Assurance Society was held on March 18th in Glasgow.

Mr T. R. Patterson, CBE, DL, JP (the chairman) presided, and in the course of his speech said that the figures for New Business were again a record. Premiums in the Life Fund exceeded £2 million for the first time and gross interest earned now exceeded £1 million. The gross rate of interest earned on the Funds had increased by 1s. 8d. to £6 5s. per cent and the net rate by 4s. 5d. to £5 10s. 9d. per cent. These were the highest in the Society's history, and it might well be that they were peak rates.

Referring to the Triennium, the chairman said that the Directors had made a careful review of all the Assets of the Society and there was a considerable appreciation over the values as stated in the Balance Sheet. Throughout the triennium the mortality experienced by the Society had been more favourable than that assumed in the valuation, while the average net rate of interest earned on the Funds had been £5 5s. 6d. per cent against the rates of 2½ per cent, 3 per cent, and 3½ per cent used in the valuation. The Directors had declared a bonus of 50s. per cent per annum at a cost of £712,730, leaving £233,702 to be carried forward. This was a very high rate of bonus and they had every reason to be proud of it.

In conclusion Mr Patterson said the Funds of the Society were invested in sound securities earning a good rate of interest, there were substantial hidden reserves, and the mortality experienced by the Society was favourable.

The report was adopted.

LEYLAND MOTORS LIMITED

POLICY OF DIVERSIFICATION JUSTIFIED

The fortieth annual general meeting of Leyland Motors Limited was held on March 18th at Leyland, Lancashire.

The following is an extract from the circulated Statement of Sir Henry Spurrier (Chairman and Managing Director):

We have, without doubt, experienced during the past financial year the most difficult conditions of trading we have had to contend with since the end of the War. The reasons, I believe, are well known to you, and it would serve no useful purpose for me to table a list of the depressions which descended upon us during that period in unfailing regularity. The depression has been halted, but prosperity in our industry is by no means restored. By the commencement of the year the substantial backlog of orders referred to in my last Statement had been eaten into and dwindled to less than half in number. Towards the end of the year business began to improve but very slowly and today, whilst we are not working to full capacity, new orders are at last matching deliveries.

Fortunately, the Company's policy of diversification, pursued during the past few years, and put into being, has stood us in good stead, and enabled the Group to maintain its turnover at almost last year's record figure, and to show us a profit that, although only slightly lower, has of necessity absorbed two wage awards with no compensating increase in the selling prices of our products.

Commenting on the Company's contract for 2,800 Hispano-Suiza tracked vehicles, the Chairman said that the first prototype, completed nearly twelve months ago, showed that there were certain design weaknesses which needed attention. The necessary redesign and development work had now been completed and vehicles had been delivered to Germany for approval.

HOME AND ABROAD

He continued: By and large, I would estimate that we have felt the falling off in business almost equally at home as in our overseas markets. The causes, however, are by no means similar in character. At home, the situation has been brought about very largely through legislative measures as opposed to any natural trend.

After referring to the very sudden and drastic anti-inflationary measures which the Government found necessary to apply, and the anomalous imposition of purchase tax of 30 per cent on commercial vehicles, the Chairman continued: The declaration by the Labour Party of their policy to re-nationalise long distance road haulage, and severely to restrict movement of the "C" licence holders has brought all-round nervousness amongst operators. We at Leyland are worried still further by the nationalisation proposals for iron and steel. It seems inconceivable that any party, for political ends only, should wish to interfere with the workings of what is probably today one of Great Britain's most efficient industries. If these plans are carried through the ultimate effect will, in my view, be to increase the cost of these vital commodities to the user.

Until matters such as these are resolved one way or another, I can see little improvement for us in the home market; in fact the situation could easily deteriorate still further.

Commenting on the Company's business overseas, the Chairman said that they could look forward to a steady trade, particularly within the Commonwealth. They had also been able to make good progress in other countries by a policy of assistance in establishing local assembly or manufacturing plants, and making arrangements for selling and servicing.

He continued: This is a policy that I feel is a right one for us to pursue and develop. The whole of our future in overseas markets will depend on just how far we will be able to expand in this direction.

The unforeseen can and does happen from time to time, and when it does it usually upsets our plans and calculations. Striking an average, however, I have great confidence in the Leyland Group to progress and prosper. We are large and strong enough to undertake a steady programme of expansion. We are not so large, however, as to be unwieldy and impersonal. We are a family, and I believe a happy one.

The trading profit for the Group is £5,937,646 and is very similar to the results of the previous year, when you will remember a record was achieved.

The report and accounts were adopted and a dividend of 2s. 6d. per Stock unit, less tax, was approved.

COMPANY AFFAIRS

P & O

THE slump in shipping, the worst since the early thirties, will probably persist until at least the end of 1960. In the full accounts of P & O the directors make no bones about the severity of this slump. The full force of the depression is not reflected in the 1958 accounts, in which net profits are shown to have tumbled from £8¼ million to £5¼ million, and the directors are expecting lower profits this year. They say bluntly: "the fall in rates took place at a time when the volume of world tonnage was increasing, and it is clear that for the present volume of world trade there is a surplus of tonnage in existence which must be aggravated by the formidable amount of new tonnage building for early delivery." More specifically they say of tramp freights: "at these rates very few ships can trade at a profit, after allowing for depreciation; many are making a cash loss with no allowance for depreciation; and the owners of some five million tons throughout the world have decided that it is preferable to lay the ships up rather than trade them at a loss. There are at present no signs of a revival in rates and it would be unrealistic to assume that conditions are likely to change quickly."

£1 deferred unit at 32s. 6d.xd yields 6¾ per cent.

P & O itself has a large number of vessels now building, and it has not trimmed this programme at all significantly. It has cancelled an order for one cargo vessel and postponed the building of seven others, and it has re-phased its tanker building programme. Two orders have been cancelled, bringing the programme down to 16 tankers. But these are of larger average size and the total deadweight tonnage remains unchanged at 500,000 tons, as was first envisaged in 1955 when the group booked berths for the building of 25 tankers. The cost of the programme, too, remains unchanged at over £40 million. P & O put in its orders for tankers at the top of the boom and it is paying a high price for new tonnage. Nevertheless, nearly all the tankers have been chartered forward "at satisfactory rates" and the two in operation this year will work at a profit.

Many of the directors of P & O have seen a shipping slump before and they seem to be facing up to the depressing prospect with equanimity, going ahead with their plans to compete on some of the Pacific liner routes with American shipping lines. But can shareholders, whose deferred units yield 6¾ per cent on the maintained dividend of 11 per cent, remain unperturbed at the certain prospect of lower earnings this year? They have one consolation: the dividend was not cut last year and it was covered about three times by earnings.

HULTON PRESS

AT the time of the bid by the Daily Mirror for Amalgamated Press it was rumoured that Odhams Press was on the point of making a counter offer. Now Odhams has made a bid on a share exchange basis, which if accepted in full would be worth the equivalent of about £1,800,000, for the £1 million of ordinary capital of the Hulton Press. As the Amalgamated Press bid and others have demonstrated, a vote has to be paid for and the terms of the proposed deal put a big premium on the possession of a vote. Odhams are offering one of its 10s. ordinary shares for every five of the Hulton 2s. 6d. voting ordinary shares and for every seven of its 2s. 6d. non-voting ordinary shares. On the basis of market prices on the eve of the bid, that put a price of about 5s. 9d. on the voting shares and 4s. 2d. on the non-voting ones. That reflects the differential that already existed in the price of these shares in the market, where the voting units were quoted at 4s. and the non-voting units at 2s. 6¾d. The premium does not arise out of the directors' holding, for the directors of the Hulton Press hold about 59 per cent of "each of the two classes of shares" and as the non-voting shares were created through the capitalisation of reserves the minority shareholders have no reason to complain of unfair treatment. Helbert, Wagg, the financial advisers to Hulton Press, say that the offer is fair to both sides. Certainly, given the differential already established in market dealings, the offer seems equitable enough, but this bid, like so many others, emphasises what an awkward brute the non-voting ordinary share can be. As the directors of Hulton Press propose to accept the bid, the opportunity for any counter-offer seems to be ruled out.

Odhams seems to be willing to pay a high price for a magazine group that has not been faring especially well in recent years. Its bid for a group with net assets worth about £1,400,000 puts a value on goodwill of about £400,000. But as the Odhams dividend is well covered by earnings, the company will have no difficulty in servicing the enlarged capital that results from this high price. That fact and the spread of magazine interests possessed by Odhams should make the offer attractive to minority shareholders in Hulton Press.

SWAN, HUNTER

THE shipyards and marine engineering works of Swan, Hunter & Wigham Richardson began 1958 with a substantial volume of work on hand and a substantial backlog of uncompleted orders. The low level of freight rates must have reduced the flow of new orders substantially, but the preliminary profit figures for 1958 show that the group's gross profits before all charges slipped only slightly, from £3,594,321 to £3,528,338. A sharp rise occurred in depreciation, which jumped from £539,564 to £641,395, and the first contribution of £127,396 to the works insurance funds was made. But these higher charges were partly offset by a fall from £1,458,761 to £1,356,134 in taxation, and net profits declined by only £86,674 to £1,406,989. A major step in the liberalisation of the company's conservative dividend policy was taken last year when the ordinary dividend was raised from 14 per cent to 18 per cent, despite the lack of buoyancy in profits. The directors have taken a further step in the same direction this year; the dividend has been raised to a total of 20 per cent for 1958, absorbing £436,069 net. A 100 per cent scrip issue is also proposed, and the directors give the usual warning that no dividend increase is necessarily implied by the proposal. On the preliminary statement the £1 ordinary units gained 4s. 6d. to 62s. and yield 6½ per cent.

LIEBIG'S

JUST over a month ago Liebig's £1 ordinary stock stood at 59s. But since then a big recovery in profits for the year to August 31st last and an increase in the ordinary dividend have been announced, and that set the price of the stock on its upward path. The full accounts helped to keep the price moving up and now at the annual general meeting the chairman, Mr K. R. M. Carlisle, has rounded off a bountiful month by proposing a scrip issue, a rights issue on bonus terms and a slight increase in the dividend for 1959. To that news the market price responded with a further rise of 14s. 3d. to 96s. 3d. before easing to 90s. 9d.

The scrip issue will double the ordinary capital from £2 million to £4 million. The rights issue is to be made

at par in the proportion of one for four shares as existed before the scrip issue and it will raise £500,000. The money is needed to reduce the group's reliance on bank overdrafts and acceptances to finance the growth in stocks. The rights issue is a modest one; the group's net indebtedness at August 31st was over £2 million, but the pressure on liquidity is seasonal. The increase in the prospective distribution for 1959 stems from the decision to declare future dividends as a gross percentage and to break with the custom of paying dividends free of tax. Last year's total tax-free dividend of 13 per cent is equivalent to 11.3 per cent gross on the increased capital, but this year's dividends will be rounded up to 12 per cent, with an interim payment of 8 per cent on the original capital and 8 per cent on the capital as increased by the one-for-one scrip issue. At the ex all price of 42s. 7½d. the old shares yield 5.6 per cent.

PROPERTY COMPANIES

AN offer of seven new shares at 20s. per share for every eighteen ordinary shares held in **Peachey Property** gives the public, avid for such equities, the opportunity to subscribe just under £560,000 out of a total of £1,400,000 of new money. Mr C. W. Hutley and Mr G. F. Farrow, the joint managing directors, hold the remaining three-fifths of the equity. The equity held by minority shareholders in A. Peachey and Company was effectively extinguished last summer when they accepted cash or a debenture in Bell London Provincial Properties, in which the joint managing directors had previously acquired a holding of four-fifths of the equity on their own account. They held just over half of the equity of A. Peachey and Company and therefore in this deal probably took cash for their holdings. Since then they must have also dribbled out in small lots some of the equity of the product of the merger between A. Peachey and Bell London, which was renamed the Peachey Property Corporation. The ordinary shares in this company were split into 2s. units, and there are now 1,500 outside shareholders owning in small lots about forty per cent of the equity. Property owners have the advantage of being able to predict future income with considerable accuracy and the directors of Peachey Property now forecast that for the year ending in June, 1960, the total dividend will be 70 per cent. Last year they said that aggregate gross profits would reach £565,000 in 1958-59, and they now say that investment income alone exceeds a rate of £425,000 per annum. After the rights issue announcement the 2s. ordinary shares fell 3s. 6d. to 27s.

About 400,000 10s. ordinary shares in **Great Portland Estates**, another property company, are being made available to the market at 15s. The total placing is of 1,953,000 shares out of an issued capital of 7,750,000 ordinary 10s. units, and after the placing the directors and their associates will still control about 70 per cent of the equity. A final dividend of 2½ per cent will be paid in June for the year to March 31st, and it is expected that the total dividend in 1959-60 will be 5¼ per cent. That puts the prospective yield on the issued shares at 3.8 per cent.

SAVOY HOTEL

AT December 31st last, the assets of the Savoy Hotel group included £3,647,000 of freehold property, £388,000 in leasehold property and £1,136,000 in cash assets. Over the year the group's gross trading profits advanced from £803,202 to the highest level yet of £839,212 and its net profits went up from £190,415 to £224,403. The distribution on the ordinary capital, which since 1955 has included a small amount of highly geared voting stock, has been raised from 17 to 19 per cent and in addition there is to be a tax free distribution of 1 per cent from capital sources. The syndicate, which acquired Mr Harold Samuel's shares after the long take-over struggle in 1953, has now finally sold almost all the shares it then acquired at a modest profit. The 10s. "A" ordinary stock units now yield 5.5 per cent at the current price of 34s. 3d.

INTERNATIONAL NICKEL

THE annual report of this company, the giant of the nickel world, breathes an optimism undampened by the trials of last year. In 1958, for the first time for nearly ten years, the company worked at less than capacity. Demand for nickel declined, particularly in the United States; the average price of copper was lower than in the previous year, and prices and deliveries of platinum and palladium fell sharply. Late in September the company's operations in Ontario were shut down by a strike that lasted for three months. For the whole year deliveries of nickel dropped from 290 million lb to 206 million lb; deliveries of copper from 281 million lb to 211 million lb, and deliveries of platinum metals from 339,400 ounces to 145,400 ounces. As net earnings plunged from $86.1 million to $39.7 million and net earnings per common share came down from $5.90 to $2.71 the common dividend was cut from $3.75 to $2.60 per share.

Nickel remains in surplus but production capacity is still being increased. The company is going ahead with its Manitoba project, which is due to come into full-scale production at an annual rate of 75 million lb in 1961. In that year International Nickel expects that free world capacity will be roughly 650 million lb a year, more than 50 per cent higher than consumption in the peak year, 1957. "This," says the company, "represents a challenge which we as a major producer must meet." The "major emphasis" now is on developing markets. Since nickel became plentiful the trend toward substitution has been reversed. In addition to broadening existing uses the company is developing new ones, such as nickel-containing steel equipment for the storage and transportation of liquid oxygen and other gases at sub-zero temperatures. Its research laboratories are developing a super high-strength nickel-containing steel for use in aeroplane landing gear and missiles, and a new high-nickel alloy for use as nozzle guide vanes in jet engines. But market development takes time. Of more immediate concern to shareholders is that there are now indications of a revival in demand for nickel, and that prices of copper and platinum have risen.

UNITED STATES STEEL

A YEAR ago American steel consumers vied with each other in the speed with which they could reduce their stocks of steel products. If they are now tumbling over each other to order fresh supplies before a steelworkers' strike overtakes them, they changed their minds too late to prevent 1958 from being a very bad one for the producers. United States Steel Corporation produced in 1958 its smallest output of steel ingots and castings in any year since 1946. Nevertheless, in European eyes it was a contraction to a gigantic figure of 23.8 million net tons—which translated into the British standard of long tons was still greater than the whole of British output. But this compares with 33.7 million tons in 1957 and a record output of 35.8 million tons in 1953. Production in 1958 was running at just under 60 per cent of rated capacity. Capacity was re-rated at 41.9 million tons at the beginning of this year, after US Steel had spent a gross sum of $448 million on additions and replacements to plant in 1958. US Steel, on this new rating, is now credited with 28.4 per cent of the total capacity of the United States industry. In 1958 the group's gross investment fell below the $515 million spent in 1957, but authorisations for further expenditure made during the year rose from $405 million to $513 million. Deliveries of steel products fell from 23.4 million tons to 17 million tons over the year, but by the last quarter they had recovered to a rate of about 19 million tons a year, and profits were then as good as in the corresponding quarter of 1957. As deliveries in that quarter were still running below the corresponding level in 1957, this recovery in profits can be attributed to the price increases made by US Steel last August. Although depreciation charges were cut by $71 million to $205 million (reflecting the accelerated rate of depreciation allowed in earlier years by the government on investment for defence purposes), US Steel's net income dropped from $419 million to $302 million. Earnings per share contracted from $7.33 to $5.13, but the total dividend for the year on the common stock was held at $3.00. At the current price in London of 167½ mock dollars the yield is 3.2 per cent.

DU PONT DE NEMOURS

RECESSION and recovery in America have been faithfully reproduced in the sales figures of E. I. Du Pont de Nemours, the chemical combine. Sales began the year 17 per cent below the 1957 level, but recovered progressively to run towards the end of the year 8 per cent higher than in the corresponding months of 1957. Over the whole year, total sales declined 7 per cent from $1,965 million to $1,829 million. Chemical companies with their high rate of technical innovation are able to keep down their prices more successfully than most other industries: in 1958 Du Pont's prices were cut by one per cent while the costs of production continued to spiral upward. Its net income fell from $281 million to $225 million. Dividends on Du Pont's holding of 63 million shares in General Motors remained unchanged at $116 million, so that its total income fell less sharply—from $397 million to $341 million, or from $8.48 to $7.25 per share. The distribution for the year was cut by 50 cents to $6.00 per share. The shares offer a yield of 2¾ per cent at the price of $405¼ (London terms). Under anti-trust legislation, Du Pont must somehow divest itself of control of 22½ per cent of the equity of General Motors. Due to the present state of tax legislation, a distribution of this stock *pro rata* to its own shareholders would be taxable in the same way as common dividend distributions. The company wants to retain the stock, and has propounded an ingenius solution to the dilemma, by suggesting that it should retain the General Motors stock on its own books while transferring the voting rights attached to the stock to shareholders.

DEPARTMENT STORE PROFITS

RESULTS published by department stores so far this year have been disappointing. They strengthen the impression that this method of retailing is still losing ground to the multiples. The gross profits of **Frederick Gorringe** of Victoria fell for the second year running, this time from £58,044 to £54,021. But a fall in tax left net profits virtually unchanged at £25,139 and the directors were able to maintain the ordinary dividend at 10 per cent, to which they reduced it from 12½ per cent in 1957-58. The £1 ordinary shares rose by 6d. to 48s. on the publication of these results. At this price they yield only 4 per cent on dividend and less than 7 per cent on earnings. That seems to suggest that in the market hopes of a take-over bid are not dead.

The return of 5.7 per cent that the 10s. ordinary shares of **A. W. Gamage** now offer at a price of 70s. 3d., having risen from 66s. 3d. since the preliminary figures were issued, derives more firmly from the trading results than does the price on the Gorringe units. The jump of over 25 per cent in net profits from £151,038 to £189,800 that this Holborn store achieved was due not simply to the new profits tax but also to the redevelopment of the City, especially of the Holborn Circus area. Moreover, earnings in 1958 scarcely reflected the impact of the freeing of HP from controls last October and the new influx of HP business will be reflected in the current year's profits. The speed with which Gamage's HP business has grown in relation to its cash trading is suggested by the comparison between an advance of only £16,612 to £408,702 in ordinary debtors and a jump of £54,901 to £195,879 in HP debts. The ordinary distribution has been raised from 35 per cent to 40 per cent, of which no less than 15 per cent is declared as a bonus.

A different tale is told by the directors of the **John Lewis Partnership** for the 53 weeks to end-January. Trading profits fell from £1,416,000 to £1,313,000, although turnover rose by nearly £2½ million to £32,325,000. Hence, as a percentage of sales, profit margins dropped from 4.8 to 4 per cent, but this represents an improvement on the first six months of trading when margins were down to just under 3 per cent. The directors attribute the decline in margins to the cost of rebuilding the John Lewis Store in Oxford Street and to their own decision to credit much of the HP profit directly to reserves.

BRADFORD DYERS

AFTER the passing of the interim ordinary dividend last July the preliminary figures of Bradford Dyers for 1958 should occasion little surprise. The directors then said that trade in cotton and rayon piece dyeing had fallen sharply and that immediate prospects were unpromising. In fact the drop in the trading profits of the parent and its British subsidiaries by nearly 50 per cent from £722,708 to £380,978 was largely responsible for the fall from £875,687 to £549,669 in the trading profits of the group as a whole. The group's investment income fell by only £11,790 to £149,550, while the profits of overseas subsidiaries actually rose by £15,712 to £168,691. The omission of an ordinary dividend for 1958, following a cut from 10 per cent to 6 per cent in 1957, was hardly avoidable, as net profits all but disappeared. But the directors have declared a "profits tax" interim of 3 per cent for 1959, justifying their decision by referring to the carry forward of £265,348 and the group's financial strength.

The directors also say that they will "consider" a tax free distribution from "part" of the capital profit it expects to receive when its Egyptian claims arising from the sale of its majority holding in Beida Dyers SAE are finally settled. It is with this prospect in mind that the current price of 15s. 10½d. for the £1 ordinary shares must be viewed. The preliminary statement already suggests that BDA may want to hold some of the money coming from Egypt back in order to pursue a policy of diversification much more vigorously.

London Stock Exchange

FIRST DEALINGS:	Mar. 11	Apr. 1	Apr. 15
LAST DEALINGS:	Mar. 31	Apr. 14	Apr. 28
ACCOUNT DAY:	Apr. 7	Apr. 21	May. 5

GILT edged stocks remained dull until Wednesday when investment buying led to widespread small gains, and finally on Wednesday's close the *Financial Times* Index of Government Securities was back to 85.88. Over the week, 3½ per cent War Loan rose by ⅛ to 67⅝. Among medium dated issues Conversion 5½ per cent 1974 gained ⅜ to 100⅛. Dominion loans were dull following the poor response to the two new 5½ per cent Australian issues, the 1973 loan opening at ⅛ discount and the 1976-79 stock at ½ discount. The discount on the new Rhodesia 6 per cent 1978-81 (£35 paid) widened further, under the shadow of the Nyasaland disturbances, from 3½ to 4½.

In contrast, leading industrial equities scored numerous gains following the opening of the budget account. On Monday 19,597 bargains were marked, just short of the record of 19,831 attained in mid-January. The rise was sustained by Tuesday's rally on Wall Street and the announcement late on Wednesday of lower unemployment figures. *The Economist* Indicator rose by 2.8 points to 253.7 over the week to Wednesday's close. Selected building and roadmaking issues were firmer following the announcement of the Government's new road plans, Associated Cement jumping by 4s. 6d. to 57s. 6d. Among active motor shares Rover rose by 1s. 7½d. to 23s. 6d. and Leyland by 2s. 6d. to 48s. Among electrical issues "Emmies" went ahead by 5s. 9d. to 60s. 6d. on American buying, but Decca lost 3d. to 40s. 3d. Among textile shares, Calico Printers rose by 2s. to 42s. following the five year extension to its "terylene" patents. Linen Thread jumped by 4s. to 23s. 10½d. in a narrow market. Leading store shares were strong, Curry's rising by 2s. 9d. to 24s. 3d. in front of the results.

Property shares were very active, with the Lintang shares, placed at 11s. 9d., opening on Friday at 16s. and closing on Wednesday at 20s. 7½d. Insurance shares remained steady but Legal and General fell by ⅜ to 11¾ after the dividend announcement.

Oils were firm at first on news that Venezuela was considering bigger tax allowances on reinvested profits. But interest waned after a setback on Wall Street. Ultramar touched 69s. 3d. on Friday before closing 2s. 9d. down on the week at 63s. 9d. Shell lost 9d. to 138s. and BP 2s. 6d. to 49s.

Kaffirs turned dull, but recovered later under the lead of FS Geduld which rose to a fresh peak of 163s. 1½d. St. Helena rose by 1s. 7½d. to 56s. 7½d. on the news of its increased dividend. Rubber shares were unusually active, with many new peaks being attained; Bukit Rajah rose by 6s. 3d. to 40s. 6d. and US Betong rose by 4s. 3d. to 75s. 6d.

EXCHEQUER RETURNS

For the week ended March 14, 1959, there was an "above-line" surplus (after allowing for Sinking Funds) of £40,756,000 compared with a surplus of £46,583,000 in the previous week and a surplus of £16,842,000 in the corresponding period of last year. There was a net expenditure "below-line" of £22,327,000, leaving a total deficit of £95,394,000 compared with £150,446,000 in 1957-58.

THE MONEY MARKET

OUTSIDE tenderers put in more competitive bids at last week's Treasury bill offer, while the discount houses made their concerted bid at £99 3s. 6d. for the third week in succession. The market therefore received a reduced allotment of 43 per cent at that price compared with 57 per cent in the previous week. The average rate of discount declined very slightly from £3 6s. 0.14d. per cent to £3 5s. 11.05d. per cent.

Credit was short on Thursday of last week and rates of 3-3⅛ per cent had to be conceded. The authorities gave a moderate amount of help which did not prevent one or two houses borrowing a marginal amount from the Bank. A shortage of funds persisted over the weekend but the amount of assistance that the market required to balance its books diminished progressively. On Monday government disbursements added to the funds available to the market, the cost of short loans fell to the banks' minimum lending rate, and some funds were unlent. On Tuesday the authorities intervened to take up a small surplus, but easy credit conditions persisted on Wednesday.

At the latest tender for United States' Treasury bills, the average rate of allotment for 91-day bills fell back sharply from 3.062 per cent to 2.763 per cent.
