The forty-first Annual General Meeting of Bird & Company (Africa), Limited, will be held on February 14th at Tanga, Tanganyika.

The following are extracts from the circulated statement by Sir Eldred Hitchcock, CBE, chairman and *managing* director, including some additional comment:

The profit for the year after tax was £199,681, compared with £238,000 in the previous year. Our reserves built up over the years total £1,245,000, and the unappropriated profits carried forward at June 30, 1958, were £1,054,729, mainly absorbed in the Company's development. Your Board declared a total dividend for the year of 17½ per cent, the same as in previous years.

Future dividend policy will need careful consideration if primary commodity prices continue to fall, although present indications are favourable.

TEA DEVELOPMENT

During the year we have energetically pushed forward our tea development programme and are well in advance of it.

During the year 1958-59 our made tea will probably total 200,000 lb, but our factory is designed to meet a capacity to exceed 3 million lb a year when our tea areas come into full production. Expenditure to date on the Kwamkoro-Ngua-Ndola group, referred to now as "Kwamkoro," has totalled almost £500,000 which represents a high capitalisation per acre in respect of just over 1,000 planted acres at this stage.

As we complete our programme of a minimum of 2,700 planted acres, the scale of this expenditure may for a while increase but will then steadily decline, and unless local costs and the price of imported products and equipment increase, which some of them are tending to do, I believe that we shall not be far off the target of an overall final capital expenditure of £300 per acre. Before this programme is completed revenue should increase at a progressive rate, and I am glad to report that we are already making "quality" tea.

When first offered at the London Tea Auctions in December, our tea obtained the highest price of all African teas—from Tanganyika, Kenya, Uganda, Belgian Congo, Nyasaland and Mozambique, amounting to over 1s. per lb premium over the average. Tea, I find, is a more exacting but less complicated crop than sisal.

THE SISAL OUTLOOK

Following a visit which I made to Rio de Janeiro earlier in 1958, discussions on an international level are hoped for with the aim of achieving a more stable and better sisal price. Unlike most primary commodities the accumulated world carry forward of sisal is 5 per cent of the annual production and world consumption increases steadily with production. The problem should not be an unmanageable one.

Sisal producers have no intention of boosting the sisal price above its world economic level based on supply and demand. They are determined, however, to eliminate certain weaknesses in selling, partly the result of currency arrangement, which result in a price below its economic level.

LABOUR RELATIONS

Labour relations in Tanganyika, especially in the sisal industry, are traditionally good. I referred last year to the measures which the industry was taking under authoritative advice to set up formal consultative machinery to deal with all matters affecting conditions, wages and labour relations of the 130,000 workers engaged in the industry.

A Joint Council of the Industry consisting of 21 representatives elected by the workers engaged in the industry and 21 by management together with three trade union nominees of a recently formed Sisal and Plantation Workers' Union and three appointed by the Sisal Growers' Association, is now established under the independent chairmanship of Sir Barclay Nihill, who recently retired as President of the Appeal Court for Eastern Africa.

This Joint Council, besides being a conciliation and negotiating body, is a medium of information and education to both sides. It represents all sisal interests in Tanganyika a thousand miles apart. After two successive and prolonged Council meetings a comprehensive Wages Agreement for the whole of the industry was agreed unanimously by the workers and management representatives, only the three trade union representatives voting against.

Whilst over 90 per cent of the 169 producing sisal estates throughout Tanganyika, including our own, adopted the Wage Agreement, the union attempted by strikes and various means, on the remaining estates, to discredit the sisal workers' representatives, and to undermine the consultative machinery and the Agreement. The industry has displayed a patient and generous attitude on all these matters, but will not willingly see the good relations which have been freely established undermined by such tactics.

MANAGEMENT

There has for some time been foremost in the minds of your directors the question of the future management of your Company. For many years I have combined the function of managing director and chairman. I am now past 70, have been associated with the Company since 1920, and had undertaken to continue as managing director till June, 1960, and thereafter if the board and shareholders wished, to continue for some further period as chairman. We have, however, now been fortunate to secure the services as managing director of Mr John Francis Lloyd, who is a banker and joined the staff of the Standard Bank of South Africa Limited in 1928.

I shall still be available to continue as chairman and that should make for continuity. It will be necessary for me to relinquish my appointment as managing director a year earlier than I had previously agreed, and I have every confidence that the arrangement is in the interests of the future of the business.

FINANCIAL NOTICE

9/- a line.

THE ROYAL BANK OF CANADA

DIVIDEND NO. 286

Notice is hereby given that a DIVIDEND of 50 cents per share upon the paid-up capital stock of this Bank has been declared for the current quarter and will be PAYABLE at the Bank and its branches on and after March 2, 1959, to shareholders of record at the close of business on January 31, 1959.

Shares not fully paid for by January 31, 1959, to rank for the purpose of the said dividend to the extent of the payments made on or before that date on the said shares respectively.

By Order of the Board.
K. M. SUDGEWICK,
General Manager.

January 21, 1959.

ORDERS for advertisements in *The Economist* are accepted on condition that they are liable to rejection at the discretion of the Editor: that while every effort will be made to publish an advertisement on a specified date, no guarantee is given; and that white on black, reverse blocks, or large sizes of black-faced type may be stippled or lined at the Editor's discretion.

BUSINESS AND PERSONAL

9/- a line.

DISTINCTIVE HOSPITALITY 3 star. Commanding panoramic sea view. Warm sheltered terraces. Excellent cuisine. Swimpool. Educated staff. Colour brochure.—Greystoke Hotel, *Canford Cliffs*, Nr. Bournemouth.

A FAULT IN SPEECHES

MANY otherwise able public speakers talk to audiences who are half the time day-dreaming about something else. I can show any intelligent speaker, however dry his subject, how to make people listen with enjoyment. Write for verification.—John Radcliff, 50, Avenue Road, *Herne Bay*.

APPOINTMENTS REQUIRED

GENERAL MANAGER

Englishman, very experienced Business Administrator with many years' experience in *management and control* of foreign staff and labour, with Sales Engineering background (mechanical *and electrical*) at present employed in Middle East, having spent 13 years in Near and Middle East, desires a change. Age 40. Very active and driving personality, excellent references, fluent in three languages, working knowledge three others. Available to take up new appointment in July/August, 1959.—Write *Box 1109*.

PH.D. Economics (Pol. Th.), good French, U.S. experience, 27, seeks opening in industry, trade, research.—Box 1108.

INTERNATIONALLY RECOGNISED ECONOMIC and FINANCIAL EXPERT, now employed abroad, seeks post based on London as DIRECTOR or very senior ADVISER of large concern which already has overseas connections or wishes to develop them. He possesses an intimate, up-to-date knowledge of Western Europe and North America, has had wide executive and administrative experience, and is accustomed to *negotiations* on the highest levels.—For further details write Box 1110.

APPOINTMENTS

THE GUEST KEEN AND NETTLEFOLDS GROUP OF COMPANIES

requires a

STATISTICIAN

A new Operational Research Unit, *centred* at Cardiff and responsible for carrying out Operational Research in all Group companies in the area, requires a Statistician to fill a senior post.

Candidates should have a sound knowledge of statistics and an interest in the practical application of this knowledge. Industrial experience would be an advantage, and a desire to apply statistical *methods* in new fields is essential.

Applications should be addressed to:
Recruitment Officer,
G.K.N. GROUP RESEARCH LABORATORY,
Birmingham New Road, Lanesfield,
WOLVERHAMPTON.

ACTUARY required by a leading firm of consulting actuaries in South Africa and Rhodesia. Attractive commencing salary and prospect of a partnership within a few years.—Apply, giving full details of experience, to Box 1101. All applicants will be interviewed.

Scholarships Abroad 1959-60

Applications are invited from British students for scholarships offered by Austria, Belgium, Brazil, Denmark, Finland, France, Germany, Iceland, Iran, Italy, Japan, The Netherlands, Norway, *Poland*, Portugal, Spain, Sweden, Switzerland and Yugoslavia. The awards are *mainly* for university graduates and undergraduates and are tenable for periods varying from a few weeks to twelve months during the academic year 1959-60.—Full particulars and application forms, for which a stamped (3d.) self-addressed adhesive label should be sent, are obtainable *from* The British Council, 65 Davies Street, London, W.1, or from any British Council office in the United Kingdom.

THE BRITISH OXYGEN COMPANY LIMITED

HEAD OF ECONOMICS AND STATISTICS SECTION

There is a particularly interesting vacancy at the Head Office of The British Oxygen Company Limited, in the West End, for the Head of the Economics and Statistics Section. A man with appropriate qualifications is required, with industrial experience, preferably on the financial side, a practical knowledge of statistical methods and a flair for carrying out investigations and writing lucid reports. He should be a live, creative type, fairly young but *mature in outlook*. The post has been advertised before but not yet filled: previous applicants should therefore not re-apply. Please write to:—

The Staff Officer,
The British Oxygen Company Limited
Bridgewater House, Cleveland Row,
St. James's, London, S.W.1.

NORTHERN POLYTECHNIC
HOLLOWAY, LONDON, N.7

The Governing Body invites applications for appointment as PRINCIPAL of the Northern Polytechnic. Candidates should possess high academic qualifications and appropriate educational and *administrative experience*. Salary scale—£2,467 10s. rising by annual increments of £105 to £2,782 10s. per annum, plus London Allowance. In determining the commencing salary, increments, subject to the maximum of the scale, might be given to a suitable candidate. Duties will commence on *January 1, 1960*, or such date as may be agreed.

The Northern Polytechnic is a major Regional Technical College. To meet current needs and to provide for future development, a large site adjacent to the Polytechnic is now being acquired for a *substantial* extension.

Form of application, together with full particulars, will *be forwarded on request*, and should be returned to me, duly completed, not later than March 31, 1959.

R. H. CURRELL, A.C.A.,
Clerk.

UNIVERSITY OF SOUTHAMPTON.—Applications are invited for appointment on October 1, 1959, to a Chair in the Faculty of Economics. Initial salary not less than £2,300 per annum with child allowance and F.S.S.U. benefits.—Further particulars should be obtained from the *Secretary and Registrar*, to whom applications should be submitted not later than February 21, 1959.

COMPUTER DEVELOPMENTS LIMITED

The Joint Company of The General Electric Company Ltd., and the British Tabulating Machine Company Limited, producers of Digital *Computers* and complex Data Handling Systems, offer rewarding and interesting careers to the following specialists:

(1) MATHEMATICIAN/LOGICAL DESIGNER
with a Degree in Mathematics, Engineering or Physics, plus *experience in programming and/or logical design of Digital* Computers or like devices. Operations Research and Communications experience useful. Required to work with Team on new computer designs and concepts, including large Systems. Salary up to £1,500.

(2) GRADUATE MATHEMATICIAN/O & M STUDIES
(or equivalent); experience in operation or programming of one or more Digital Computers on commercial work. O & M or language translation. To investigate the operation and basic design of an automatic coding system. Salary up to £1,500.

Applications to The Chief Executive,
COMPUTER DEVELOPMENTS LIMITED,
Computer House, 390-394 Kenton Road, Kenton, Middlesex.
'Phone WORdsworth 0321.

Council of Europe Research Fellowships

The Council of Europe awards annually a number of Fellowships to encourage research into the following questions, considered in the light of their present-day importance: (a) political, legal, economic, agricultural, *social, educational* and scientific problems connected with European integration; (b) European civilisation (philosophy, history, literature and the arts).

The Fellowships are each of the value of 500,000 French francs and are tenable for a period of eight months. The *next awards will be made in July, 1959*.

Candidates are invited to propose such subjects as are likely to make a real contribution to the fields of study mentioned above with the object of writing a *publishable* work. Subjects which have an essentially national bearing *will not be accepted*.

Candidates must normally be nationals of a Member State of the Council of Europe. An exception, however, is made in favour of refugees *from European countries* non-Member States of the Council of Europe, provided that they are legally resident in the territory of a Member State.

The British Council assists in publicity and recruitment for these Fellowships in the United Kingdom. Further particulars and forms of application which must be submitted before *March 15, 1959, may* be obtained from the Director, Universities Department, Education Division, the British Council, 65 Davies Street, London, W.1.

AUSTRALIAN NATIONAL UNIVERSITY
RESEARCH SCHOOL OF SOCIAL SCIENCES

Applications are invited for appointment to a READERSHIP IN INTERNATIONAL RELATIONS *in the* Department of Political Science and of International Relations.

The Reader in International Relations will be expected to engage in and to assist in supervising research into the political, legal and economic relationships between *nations*. In its empirical work the Department pays considerable attention to the Asian and Pacific regions.

The salary range for Readers is £A2,763-£3,213. A Reader is appointed to the permanent staff; retiring age is 65 with the option of retiring after the age of 60. Study leave entitlement is one year on full pay in every six years, plus contribution of up to £A1,342 towards travel and other expenses.

Superannuation on the *Federated* Superannuation System for Universities pattern is provided and reasonable removal *expenses are paid*.

Further details are available from the *Secretary*, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on *February 27, 1959*.

For other appointments see page 375

COMPANY AFFAIRS

MASSEY-FERGUSON

MASSEY-FERGUSON is now busily engaged in two sets of negotiations. First, it is negotiating to purchase the tractor division of Standard Motor, which since the war has been manufacturing the light Ferguson tractor, and to sever its links, a contract and a substantial equity holding, with that company. Secondly, it is preparing to make a take-over bid for the ordinary stock of F. Perkins, the diesel engine manufacturers. Massey-Ferguson intends to build its own tractors and the acquisition of F. Perkins would give it ample capacity for producing diesel engines for the heavier types of tractors. The terms of the bid have not been announced. Perkins 10s. units, of which there are 5,200,000 in issue, have risen to 16s. in the market. At that sort of price, the deal would cost Massey-Ferguson about £4½ million. But Massey-Ferguson may not have it all its own way for there is already talk of a rival bid.

Since commercial vehicle manufacturers began to make their own diesel engines, F. Perkins has had a problem on its hands. In 1957 its turnover fell by £7 million to £14 million and it made a net loss of £319,000. Last year there was some recovery and it seems to have been earning a modest profit. Clearly, however, the directors were thinking in terms of diversification and within the last few weeks concluded an agreement on outboard motors, with the Oliver Corporation of Chicago, requiring the issue of 650,000 Perkins shares at 10s. each.

F. W. WOOLWORTH

WOOLWORTH'S preliminary results for 1958 tested the high price to which the 5s. ordinary units were carried in the recent market boom. The directors disappointed the optimists by failing either to raise the ordinary dividend (which for the third year running has been left effectively unchanged at 40 per cent) or to make a scrip issue, and in the setback in the industrial market Woolworth's 5s. units fell by 2s. to 49s. 6d. But there was a sweetener, for the directors will celebrate the company's golden jubilee by the payment of a special dividend of 4d. per share. This special dividend will be paid with the interim dividend next August.

The rise in profits before tax from £24,071,753 to £25,597,085 is satisfactory enough but the earnings cover on the ordinary dividend remains slender. Tax has risen from £12,838,552 to £13,561,840, leaving net profits £802,044 higher at £12,035,245. But the amount available for distribution has risen by £1,318,331 to £12,140,738 as there has been a windfall of £255,962 from a provision for investment depreciation no longer required. In contrast, the 1957 accounts were burdened with a charge of £76,574 for investment depreciation and expenses of £216,502 in connection with the revaluation of the company's properties and the scrip issue that ensued. But even including this windfall, the maintained ordinary dividend (absorbing £7,762,500 net) is still covered only one and a half times by earnings. This is not unusually low for a chain store trading for cash, but it does impose an effective check on the rate at which dividends can be expanded. On the bare 40 per cent dividend, the yield on F. W. Woolworth 5s. units is only 4 per cent. On a dividend of 46⅔ the yield is 4.7 per cent and most investors will believe this is the basis on which the yield should be calculated for it must seem hardly conceivable to them that after this special payment the stock will pay only 40 per cent in 1960. Woolworth has been classified as a growth stock for many years and it has been a popular counter with small investors. But the yield discounts the future some way ahead.

DECCA RECORD

A MINOR irritation suffered by ordinary shareholders in Decca Record is the absence of really up-to-date information about profits. But this has not unduly perturbed them for year after year, as the gramophone record boom has gone spinning on, there have been big rises in profits. This week the market responded generously to the increase in ordinary dividend from 1s. 9d. to 2s. per 4s. unit (from 43¾ to 50 per cent) for the year to March 31, 1958, and the news of the scrip issue, for which all the share premium account is being capitalised, to write up the nominal value of Decca units from 4s. to 10s. The 4s. shares gained 2s. 3d. to 42s. 6d. on the news, to offer a yield of 4.7 per cent on the higher dividend.

The directors follow their custom of giving some indication of turnover for the first nine months of the current financial year with the preliminary profit figures for the previous year. A year ago they reported that turnover was "considerably greater" than in 1956-57 and a few weeks later the chairman, Mr E. R. Lewis, disclosed that profits earned in 1957-58 would show a "marked increase." The figures now published show the increase in trading profits to have been of the order of 23½ per cent (from £2,389,000 to £2,950,000). Though the provision for maintenance and depreciation has risen from £788,000 to £937,000 and tax has gone up from £829,000 to £975,000, net profits have jumped from £573,000 to £885,000. The bigger ordinary dividend absorbs £484,000 net (against £423,000), but even so the earnings cover has improved from 1.3 to 1.9 times. Gross profit margins showed no sign of contraction; the group's sales rose by £3,900,000 to £20,950,000 and the ratio of gross profit to sales improved fractionally from 14.0 to 14.1 per cent.

But these results are now nearly a year old and investors have to draw their own conclusions about profits from the statement that in the first nine months of the current year turnover "has been maintained." It should be noted that last year's results, good though they were, indicated a slowing down in the rate of advance in turnover and profits and shareholders may therefore conclude that profits are not this time rising as quickly as they did in 1957-58.

TELEVISION DIVIDENDS

LAST year's boom in commercial television equities was justified by the enormous profits that were then beginning to emerge. But the market was always very short of stock and prices were bid up very sharply. Either the investor had to be content with an indirect interest in commercial TV by buying the shares of newspaper or cinema companies or he had to bid for the handful of shares directly relating to commercial TV that came on offer. Very few did so, for much of the stock was privately and firmly owned. Nor can this tiny market be said to be properly organised as yet: the 5s. "A" shares in **Associated Television** have yet to be introduced officially and official dealings are still suspended in **Granada** shares.

Faith in these TV equities has, however, just been given another boost. In advance of the statement for information to accompany the application for an official quotation for ATV units, the directors have declared an interim dividend of 40 per cent for the year to April 30th. Thus for the half-year the directors are paying more than the 30 per cent for the previous full year and conceivably the 1958-59 payment could be as high as three times last year's. The "A" shares are now quoted at 68s. The directors of **Associated British Picture** which controls **ABC Television** have followed this with an interim dividend of 20 per cent for the year to March 31st, against the previous interim of 7½ per cent and a total dividend of 30 per cent. Here, too, an increased final is obviously indicated. The 5s. ordinary units of ABP are now quoted at 49s. 6d.

GALLAHER

THE terms of Gallaher's one for four rights issue, underwritten by Edward de Stein and Company, have now been announced. Effectively, the new shares in 10s. units will be offered at 32s. 6d. each so that on the basis of Tuesday's closing price of 43s. 4½d. the rights are worth 2s. 2d. per share. This issue will raise nearly £9 million gross and follows only eight months after a loan stock issue which brought in £9.3 million. The directors hope to maintain the 25 per cent ordinary dividend on the increased capital; this should be covered well over twice, for a gross profit of at least £7.5 million for 1958 has already been announced. The old shares now yield 5¼ per cent and the new ones are offered at a yield of 7.7 per cent.

RICHARD THOMAS AND BALDWINS

THREE years ago the board of Richard Thomas and Baldwins was reconstituted and its links with the Steel Company of Wales were severed. Though SCOW was subsequently denationalised, RTB has stayed on in public ownership, the resale of its equity to investors seeming to turn on the outcome of the arguments about the new strip mill. Three years ago RTB faced a sellers' market for its sheet and tinplate, but since then SCOW has increased its output and export premiums have run off. RTB's gross trading profits have fallen in each financial year since 1955-56; the latest fall from £10,076,815 to £8,460,319 in the year to September 27th last the directors attribute in the main to increased competition in the export markets and "substantial losses" suffered by the group's "old type works" on the fall in demand for billets, bars and hand-made sheets. Three of RTB's steel works and three of its hand mills were closed down during the year; presumably up to their closing down they lived on as pensioners within the group. These closures also resulted in a loss of £254,569 on the realisation of stocks and in the final outcome the group's net profits fell sharply from £4,264,563 to £2,759,468. But £875,000 was written back from tax provisions no longer required (against £1,400,000 in the previous year) and the net income attributable to the group fell from £5,664,563 to £3,634,468. The allocation to fixed assets replacement reserves has been cut by £100,000 to £1,400,000 and other profit retentions, after meeting the cost of the maintained ordinary dividend of 13½ per cent paid to ISHRA, have come down from £3,323,987 to £1,393,892.

Now that the controversy about the siting of the new strip mill has been settled, it can been assumed that RTB will go ahead with plans for the expansion of strip steel production, presumably obtaining finance from ISHRA. During the year the directors authorised capital expenditure of £10,790,000 for the Ebbw Vale Works and £14,053,000 for the Redbourn Works.

LANCASHIRE STEEL

LANCASHIRE STEEL suffered a fall from £3,915,412 to £2,899,200 in trading profits in 1956-57. The advance from £2,899,200 to £4,001,470 in trading profits for the year to September 27th last thus does little more than to restore profits to that level. Indeed the latest trading profit is only 4 per cent higher than the £3,842,771 earned in 1954-55, the first year of its return to private ownership. Since that date the net assets of the group, at book value, have risen from £15.5 million to £19.2 million and capital expenditure by the group during the latest financial year was £2,076,870. Progress has been made in the development of the group's Rhodesian interests; a wholly owned subsidiary in Rhodesia has begun to draw wire and the reconstruction and expansion programme of The Rhodesian Iron and Steel Company (in which Lancashire Steel has a "substantial financial interest") has made further progress.

Since the end of the financial year the directors have reorganised the group's administrative structure: its iron and steel activities have been concentrated in a new subsidiary formed for this purpose and its structural and general engineering activities have been transferred to another subsidiary, the Pearson and Knowles Engineering Company. The parent company is now only a holding concern.

BOWMAKER

A RISE of 37 per cent, from £750,289 to £1,026,524, in Bowmaker's gross profit for the year to October 31st has been taken by the market to be only a foretaste of what is in store. Hire purchase shares rose steeply throughout 1958, and higher profits and an increase in distributions were discounted. Bowmaker has improved on its June forecast of a total ordinary dividend of 25 per cent for 1957-58 by raising the final payment to 17½ per cent, making 27½ per cent for the year. All shareholders will be entitled to this dividend except Lloyds Bank, which subscribed for 2 million ordinary 5s. shares at 29s. 6d. last August. Bowmaker's 5s. units gained a further 1s. 3d. on the results, rising to 36s. 1½d., and lowering the yield to 3.8 per cent. The justification for such a low yield is the flood of credit business that the relaxation of hire purchase restrictions has released, and the benefits that the company can reasonably expect from its association with Lloyds Bank and its recent acquisition of Midland Counties Motor Finance Corporation. One other factor that has contributed to last year's upsurge in profits and may also add to profits in 1959 is the fall in interest rates, which gives the company a larger margin of profit on the hire purchase paper that it holds, in the same way as falling rates help the discount houses. Tax rose from £430,696 to £572,623, leaving net profits of £453,901, against £319,593, of which the group has retained £254,432, against £158,919. The directors have also proposed a 100 per cent scrip issue to be made from the share premium account. This stood at £402,019 at October 31st, 1957, but the premium that Lloyds Bank paid in taking up about one-quarter of the equity will have raised this figure by £2,450,000.

LEICESTER PERMANENT

AS 1958 progressed, the pressure that high, competing rates of interest exerted on building societies slackened. Many societies with end-December accounting dates have been able to announce a further increase in total assets and many landmarks have been passed by individual societies. But Leicester Permanent's achievement in leaving the £50 million landmark behind is exceptional, since its total assets stood at only £44.4 million at December 31, 1957. Its total assets have risen by £6.6 million, or just under 15 per cent, to £51 million. An innovation introduced by the society a year ago when, like the other societies, it was perturbed by the slow rate at which new funds were flowing into its coffers has helped a good deal to make this achievement possible: deposits and shares for a fixed term of three years

425 Industrials:—1958/59: High, 59·75 (Jan. 21, 1959); Low, 48·20 (Jan. 10, 1958).

at a higher rate of interest than the classes subject to call at short notice made up £3.2 million of Leicester Permanent's new funds out of a total inflow of £10.4 million. Fixed term deposits and shares now account for 6.8 per cent of total subscribers' balances. The response to this attractive medium of investment when interest rates began to fall was evidently so good that the margin between the fixed and ordinary rates was reduced last October. There is no point in paying over the odds when the Building Societies Association's recommended rate is sufficient to attract new savings.

New mortgagors who bore the brunt of high interest rates benefited from Leicester Permanent's reduction in its *fixed rate, for the interest charged* on new mortgages was brought back to the Association's recommended rate of 6 per cent. New mortgage advances by the society rose by £674,000 to £8,705,000. The society was also intent on the orthodox and conservative policy of strengthening its liquid resources; its liquid assets at market value rose from £5.4 million to £7.2 million, raising the liquidity ratio at market values from 12.2 to 14.2 per cent. The ratio of reserves to total assets has been maintained at 5.9 per cent.

UNITED DAIRIES—COW & GATE

SUBJECT to Treasury consent, United Dairies and Cow & Gate have agreed "in principle" to merge. A new holding company will be set up on April 1st and it will exchange six of its 5s. ordinary units for £1 of UD ordinary stock and eight of these units for 20 of Cow & Gate's 1s. ordinary shares. United Dairies is the principal manufacturer of butter and cheese in this country; it has about 600 shops in the Greater London area; and it has the biggest milk "round" in that area. Cow & Gate is the second largest wholesale buyer of milk in this country and the second largest manufacturer of milk products. The directors of both companies say that the proposed merger is in the "national interest." Quite what they mean by that phrase is not clear, but it is obvious that economies will flow from the integration of these two complementary concerns and it may aid them in competing with the milk and dairy business of the co-operative retail societies.

For its part Cow & Gate must welcome an alliance with a group possessing over £5½ million in liquid assets, for its own expansion had left it by September 30th last with an overdraft of £1 million, against £840,000 in cash. On the other hand the alliance should be welcome to United Dairies, whose profits record has been comparatively static in recent years, for it will be linking itself with a company whose profits have been advancing steadily. But United Dairies as the bigger concern of the two must be looked upon as the senior partner in the new company; its chairman, Mr L. Maggs, will head the new concern with Mr E. Taylor of Cow & Gate as the deputy chairman.

The directors say that the market values of the ordinary shares of the respective companies are roughly three times par for the UD units and four times par for the Cow & Gate units, and that these values are in line with current dividend rates—15 per cent for UD and 20 per cent for Cow & Gate. Thus the proposed ratio of exchange is in keeping with "present dividend yields and is in line with market values." Stockholders in UD, however, are offered in addition £1 of 6 per cent preference stock in the new holding concern for every £4 of UD ordinary stock; this, the directors say, is to take account of the "surplus liquid funds" of UD. Finally, preference share holders, who are sometimes left out in the cold in such deals, are told that the possibility of extending the merger to cover their shares "is being examined." Throgmorton Street's reaction to these proposals was to leave the Cow & Gate units virtually unchanged at 4s. but to mark up the UD units by 1s. 3d. to 64s. 3d.

BOVRIL

BOVRIL has recently sold off most of its holding, which amounted to just under one million 5s. ordinary units, in Brand and Company, the preserved foods manufacturers. Most of the shares have been sold to the institutions at a price slightly under that ruling in the market. Since the completion of these sales, Brand units have risen from 13s. 9d. to 15s. Bovril recently added to its holdings in Virol so as to secure a controlling interest, but the £500,000 odd it has realised from the sale of the Brand shares will be spent in expanding its traditional business. Clearly, the directors believe that this money can be more profitably employed here than in retaining a holding in a company whose dividend record has been conservative and whose profits fell in 1957-58.

MONTAGUE BURTON

THE past record of Montague Burton, the multiple tailors, shows that its profits are vulnerable to swings in the prices of wool. Over its latest financial year to end-August, wool prices fell by 30 per cent and some loss on stocks, reflected in lower profits, was an obvious deduction for investors to make, especially as the group seemed to be intent on *keeping its selling prices down* and willing to accept lower margins in the hope that turnover would expand. *Nevertheless*, the actual drop in profits from £2,431,113 to £1,736,404 before tax and from £1,067,113 to £701,904 after tax—has surprised and dismayed the market. The 10s. ordinary shares were marked down from 31s. 6d. to 29s. 3d. and the non-voting 10s. "A" units from 24s. 9d. to 22s. 10½d. The ordinary dividend has been left unchanged at 10 per cent, and is still covered over twice by earnings. This company is *periodically the subject of* take-over rumours and the disparate yields—3.4 per cent on the ordinary and 4.4 per cent on the "A" units—are thin.

London Stock Exchange

FIRST DEALINGS:	Jan. 14	Jan. 28	Feb. 11
LAST DEALINGS:	Jan. 27	Feb. 10	Feb. 24
ACCOUNT DAY:	Feb. 3	Feb. 17	Mar. 3

GILT-EDGED stocks were reasonably firm before the weekend, only to encounter some selling on Monday after a public opinion poll put a more sober assessment on the Conservative party's election prospects. But prices rallied on Wednesday. Among the irredeemables, War Loan 3½ per cent lost ⅛ at 67⅛ and in the longer dated issues Treasury 3½ per cent 1977-80 dropped by ¼ to 78½. But the "tap" stock, Funding 1982-84 5½ per cent, remained firm at 101⅛. In colonial loans, St. Lucia 6 per cent placed at £98, closed on Wednesday at £99¾.

Industrial equities were also affected by the polls, losses spreading to virtually every sector of the market. Wednesday's rally throughout most of the industrial market did not spread to shipbuilding shares, which were depressed by the poor output figures. Swan Hunter fell by 1s. to 59s. and Harland and Wolff by 1s. 3d. to 21s. 6d. In miscellaneous industrials, Central Wagon lost 5s. 3d. to 22s. 9d. following the profit setback and Turner and Newall fell by 2s. 6d. to 72s. 3d. But Unilever NV, on Amsterdam buying, rose 1s. 6d. to 109s. and the Limited shares gained 6s. 9d. to 95s. 6d. Leading electrical shares rallied strongly, Decca gaining 2s. 3d. at 42s. 6d. and Philips Lamp 3s. 6d. at 94s. 6d. But "Emmies" eased 9d. to 54s. 9d. Stores closed strongly on Wednesday on consideration of the record December sales, but Debenhams, in which a big line of stock has been sold, closed on Wednesday 3d. weaker at 29s. *In a firm motor section*, Leyland rose by 1s. to 46s. 4d. and BMC, continuing their long rise, rose another 10½d. to 14s. 1½d. Textiles were firm in a market not too well supplied with stock, Linen Thread rising by 5s. 6d. to 22s. 6d., and Tootal by 1s. to 26s. Tobaccos were dull after their earlier rise, "Imps" losing 10½d. to 55s. 7½d. Insurance shares were irregular, Equity and Law falling by 6s. 3d. to 188s. 9d. and Legal and General by 3s. 9d. to 196s. 3d.

Oils were initially weak in sympathy with Wall Street but they also rallied on Wednesday. Thus BP were 9d. higher at 56s. over the week and *Burmah were 6d. better at 79s. 6d.* Ultramar, after sagging to 62s. 9d., rallied to 64s. 9d. Anglo-Egyptian "B" slipped by 5s. to 36s. 3d., with speculators selling on details of the Egyptian agreement.

In Kaffirs finance houses were strong, Anglo-American advancing by 6s. 3d. to 171s. 3d., Central Mining by 3s. to 78s. 6d., and General Mining the same figure to 116s. 10½d. Cape buying helped to push F. S. Geduld beyond the £6 mark for the first time since 1955; at 126s. 3d. they were 11s. 3d. better. St. Helena rose by 4s. 4½d. to 53s 6d., a new peak. Dealings in Western Deep Levels (nil paid) started at 20s.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended January 17, 1959, there was an "above-line" *surplus (after allowing for Sinking Funds)* of £95,252,000 compared with a surplus of £122,278,000 in the previous week and a surplus of £105,434,000 in the corresponding period of last year. There was a net expenditure "below-line" of £18,000 leaving a total deficit of £709,452,000 compared with £714,660,000 in 1957-58.

THE MONEY MARKET

THE allocation of Treasury bills at last week's tender was cut by £20 million to £220 million; total applications for the *offer of £240 million* rose slightly to £414 million. The excess of maturities over new bills this week was thus increased to £90 million, but credit was scarce in the money market, and small amounts money were taken at Bank rate on each of the first three days of the week. The banks were reluctant lenders in the course of making up their January balance sheets and outside institutions withdrew funds, causing an acute shortage of money on Wednesday. A very large amount of special assistance was given by the Bank.

The discount houses raised their common bid by 2d., to £99 4s. 5d. per cent, at last week's tender, but the allotment at the common price fell to 40 per cent, compared with 47 per cent a week earlier. The average rate of discount fell about ½ per cent to £3 2s. 3.42d. Conversely, the average rate for the allotment of United States Treasury 91-day bills rose sharply from 2.808 per cent to 3.035 per cent at last week's tender.

At yesterday's Treasury bill tender £230 million of 91-day bills were offered. Next week maturities of 91-day and 63-day bills will again amount to £310 million.

APPOINTMENTS

Vacant 9/- a line; Required 6/- a line.

SALES ENGINEER
SOUTH AMERICA

Decca Radar Limited and The Decca Navigator Company Limited jointly wish to appoint a Sales Engineer to promote their interests in South America by maintaining personal contacts with the companies' already established connections. Applications are sought from those who have had experience in that region. The successful applicant will be required to reside in South America and must speak fluent Spanish. Candidates must either be experienced electronic sales engineers or have had good operational experience of the types of equipments marketed by the companies. — Apply Chief Personnel Officer, DECCA RADAR LIMITED, 9 Albert Embankment, London. S.E.11.

KUMASI COLLEGE OF TECHNOLOGY
(Principal: W. E. Duncanson, Ph.D., D.Sc., F.Inst.P., A.M.I.E.E.)

Applications are invited for the posts of Senior Lecturer or Lecturer in (a) Accountancy, (b) Economics in the Department of Commerce.

The College prepares students for the B.Sc. degree in Estate Management and for the examinations of the A.C.C.A., C.I.S., and C.C.S. Applicants for posts: (a) should be an A.C.A. or A.C.C.A.; (b) should have a degree in Economics.

Appointment may be accepted on contract for five years or on pension or the College will be prepared to take over and maintain employers' contributions to former F.S.S.U. policies.

Contract salary scales: £1,738 x £66—£2,134 p.a. (Senior Lecturer), £1,250 x £60—£1,950 p.a. (Lecturer), plus gratuity payable at end of contract at the rate of £12 10s. for each month of satisfactory service. Pensionable and F.S.S.U. salary scales: £1,580 x £60—£1,940 p.a. (Senior Lecturer), £925 x £50—£1,625 p.a. (Lecturer).

Points of entry according to experience.

Children's allowances up to a maximum of three at the rate of £50 p.a. per child up to 10 years and £100 p.a. per child over 10 years in full time education up to 21 years. Annual leave with free return first class passages for the member of staff, his wife and up to three children under 17 years. Bungalows with basic furniture at moderate rental provided. Income tax low.

Applications (six copies) should be submitted to the Council for Overseas Colleges, 12 Lincoln's Inn Fields, London, W.C.2, giving age, qualifications, experience and the names of three referees. Closing date February 18, 1959.

For further appointments and other classified advertisements see page 365

ORGANISATION AND METHODS

A modern rapidly expanding company of manufacturing chemists in southern England requires an Organisation and Methods man for a new post in their Accounts Department.

This man should have had a wide experience of office and financial procedures and be able to apply technical analysis and a constructively critical approach to the organisational problems of rapid development.

An attractive salary with adequate pension and assurance provision will be paid and the position offers unique opportunities for an individual with energy and capacity.

Applications, with brief details of experience and qualifications, should be sent to Box 1113.

THE UNIVERSITY OF MANCHESTER
RESEARCH STUDENTSHIPS AND RESEARCH GRANTS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above studentships and grants, for research in Economics, Economic Statistics, Government, Social Administration, Social Anthropology or Sociology, tenable for one year in the first instance, and renewable for a further period not exceeding two years. The studentships are normally of the value of £250 or £400 per annum. They are offered to candidates who have obtained the degree of Bachelor or Master in this or any other approved University.—Applications should be sent not later than February 15, 1959, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

AIC Executive Selection Service *is advising on the following appointment*

CHIEF EXECUTIVE

A General Manager is required in Scotland by an Engineering Company which is part of a well-known Group. The Company manufactures medium to heavy compressors and employs about 600 people. The future General Manager must have had an engineering background and experience of company administration. There are early prospects of a Board appointment. A salary, varied according to qualifications, of not less than £3,000 a year is proposed. In addition, there will be "top hat" pension and life insurance schemes.

As this is a confidential service, the names of applicants will not be disclosed without their agreement. A brief statement of qualifications and experience should be sent to Mr. A. J. C. Lyddon, marked M(EC) 293 at Associated Industrial Consultants Limited

BUSH HOUSE LONDON WC2

ASSOCIATED INDUSTRIAL CONSULTANTS

TRAIN FOR TECHNICAL TEACHING

Applications are invited from men and women for TRAINING as FULL-TIME TEACHERS OF GENERAL, COMMERCIAL AND PROFESSIONAL SUBJECTS AND/OR OFFICE ARTS (Shorthand, Typewriting, Secretarial work) in TECHNICAL COLLEGES AND SCHOOLS The next course of training will begin in September 1959 and end in June 1960

Applicants should normally

(1) Be between about 25 and about 45 years of age
(2) Have good commercial experience
(3) Possess one of the following:
Professional qualification or degree,
Higher National Certificate in Commerce,
Advanced Certificates in English, Shorthand and Typewriting.

SUBSTANTIAL GRANTS AVAILABLE—FREE OF INCOME TAX—NORMALLY FREE TUITION, BOARD AND LODGING
Write for details and an application form to one of these colleges:

The Director (S/1/11), Bolton Training College, Manchester Road, BOLTON.
The Principal (S/1/11), Garnett College, 83 New Kent Road, LONDON, S.E.1.
The Director (S/1/11), Huddersfield Training College, Holly Bank Road, LINDLEY, HUDDERSFIELD. (2343)

MARKET RESEARCH. Precision engineering company in West London require an Assistant for Market Research department. Preference will be given to graduates in economics, aged 25-28, with statistics as a special subject and some industrial or commercial experience. The post calls for analytical skill in handling statistical material and relating the company's activities to trends in the national economy, and offers an excellent opportunity to build a career in a progressive firm. Pension scheme, excellent sports and social facilities. — Write, giving full details, to Box 1111.

CHARTERED ACCOUNTANT

A vacancy exists in an international firm of Chartered Accountants which will lead to a partnership in Switzerland. Candidates should be young Chartered Accountants who have had professional experience since qualifying. A knowledge of French and German is essential.

Six months' training in the London office will precede transfer to Switzerland.

Applications should give full details of age, experience and education, and should be sent in confidence to Box 1112.

The EUROPEAN ORGANIZATION FOR NUCLEAR RESEARCH—CERN
Geneva, Switzerland, requires an

ADMINISTRATIVE ASSISTANT

to work on a job analysis covering a large variety of occupational categories. He will also be concerned with the organisation and management of office services.

Good secondary or university education (scientific background desirable) with appropriate organisation and methods training and some practical experience. A genuine interest in international co-operation and a working knowledge of French are necessary. Age in the range 26-36.

Salary (tax free) from 13,000-17,000 Sw. Frs. plus certain allowances. Good leave and social security conditions.

Application forms and further information from Ministry of Labour and National Service (E.9), 26-28 King Street, London, S.W.1, quoting E9/CERN/100/SW1.

SURREY EDUCATION COMMITTEE
KINGSTON TECHNICAL COLLEGE
FASSETT ROAD, KINGSTON-UPON-THAMES

Applications are invited for a full-time ASSISTANT GRADE B in ACCOUNTANCY in the Department of Commerce, Languages and Professional Studies from April, 1959. Candidates should be Graduates and/or possess equivalent professional qualifications in Accountancy. Expected to teach to final level Accountancy and assist with other commercial subjects. Burnham Technical Scale. Assistant Grade B (men) £682 10s. x £26 5s. to £1,076 5s.; (women) £609 x £21 to £861 with equal pay additions. Allowance for experience and approved qualifications. London allowance payable.

Further particulars and application form on receipt of stamped addressed envelope from the Principal to be returned as soon as possible.

EDUCATION AND COURSES

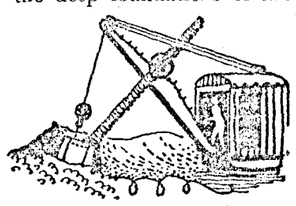
MILLIONS OF MEN WITH TEASPOONS!

RITCHIE CALDER, the science writer, tells about world wide possibilities for mechanical handling equipment (or automation if you prefer) . . .

LIKE GNOMES in some weird, exotic fairy-tale, copper-red bodies were swarming up swaying bamboo ladders with baskets of rubble on their heads. Others, in parasol hats, were crouched over great boulders which they were breaking up with chisels and wedges into pieces small enough for the basket carriers. This was in central Java, where the peasants were hewing a canal through the volcanic mountains. Along the canal would eventually flow the waters of the Progo River, to cascade over the terraces of The Hungry Hills. Here rice would grow where it had never been grown before.



SAME METHODS AFTER 2,500 YEARS

My brain, teetering in the sweltering heat, tried to grasp that this was the mid-Twentieth Century; this freakish effort of flesh-and-blood and primitive iron was how, as long ago as 542 BC, the slaves must have dug the Hillah Canal in Ancient Babylonia. Two thousand five hundred years later, the Javanese peasants had taken twelve months to cut 2½ miles of their 40 mile canal.

With picks and mattocks, hammers and chisels, they were engaged in a desperate clod-by-clod battle with the earth to dig that canal and get more food. With a few sticks of gelignite, mechanical diggers, hoppers and bulldozers, they could have had it in as many months as the years they were now taking.

It reminded me of an incident in the 1930's when I was standing on a bridge near London watching a giant steam-shovel biting off tons of earth to each 'mouthful', digging a railway cutting. Unemployed men were watching too and one of them said bitterly: "If it weren't for that ruddy machine, there would be work for hundreds of men with picks and shovels". "Or", said another bystander, "millions of men with teaspoons".

But mechanical handling is the winning of time. Modern developments—the deep foundations of tall buildings, the clearing of sites for new towns, the great hydro-electric schemes, could not be contemplated without it. "Millions of men with teaspoons" could never have excavated the vast new Chapel Cross atomic energy station—a station that will produce a unit of atomic power costing one-twentieth of the same unit in muscle power.

MITCHELL ENGINEERING are designing and constructing Mechanical Handling Plant to meet world needs in the New Atomic Age

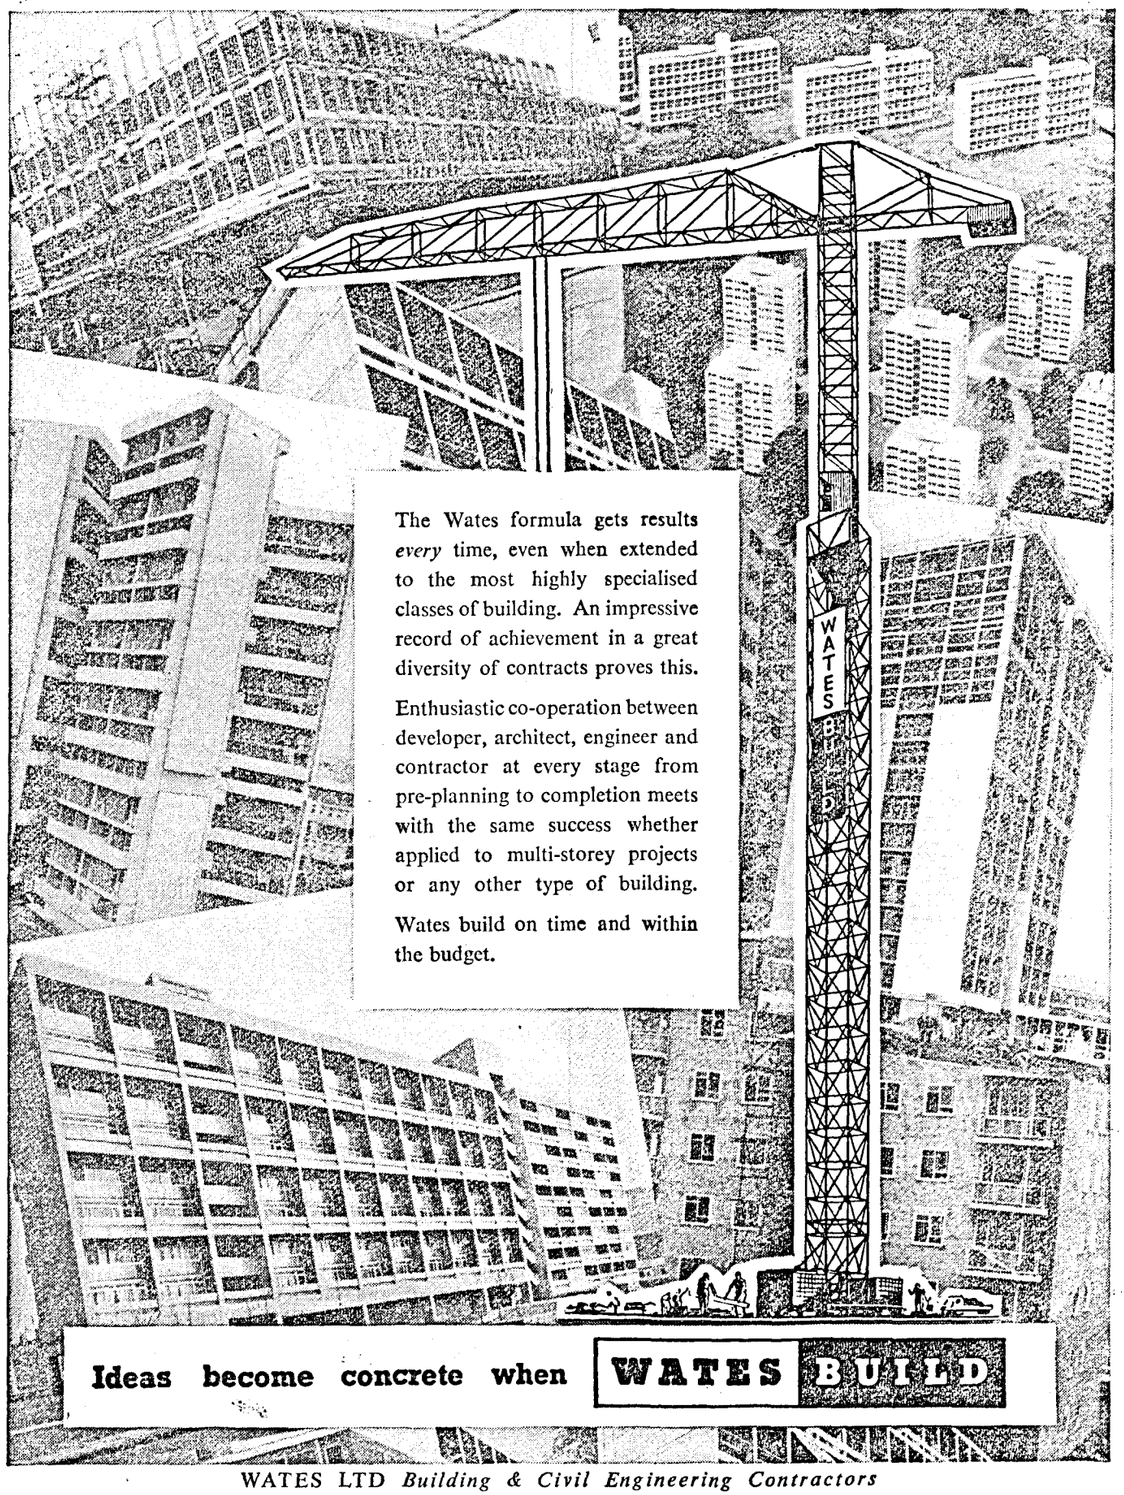
Ever since the Ice Age . . .

uninsulated buildings have made it seem . . .

that the Ice Age is still here



This assures you it isn't!

Insulating buildings is plain commonsense. Fibreglass provides the most effective means of doing it. Fibreglass is easily installed; it is inert, rotproof and incombustible; it does not settle and lasts for ever. For capital savings on heating plant, for considerable savings on fuel, for better working conditions and for short-term cost recovery—insulate with Fibreglass.

FIBREGLASS

Fibreglass Ltd., St. Helens, Lancs. Tel: St. Helens 4224

The Wates formula gets results *every* time, even when extended to the most highly specialised classes of building. An impressive record of achievement in a great diversity of contracts proves this.

Enthusiastic co-operation between developer, architect, engineer and contractor at every stage from pre-planning to completion meets with the same success whether applied to multi-storey projects or any other type of building.

Wates build on time and within the budget.

Ideas become concrete when WATES BUILD

Through Rattlesnake Mountain to Yellowstone Park

Yellowstone National Park in Wyoming is one of the wonders of the world. Every year its abundant wild life, its scenic beauty and its famous hot springs attract 1½ million visitors. One section of the National Highway leading to it, however, consists of a narrow, winding road which at times becomes a serious bottleneck for traffic. To solve this problem a new 32 ft. diameter tunnel is being driven through the 3,440 ft. of granite that is Rattlesnake Mountain. The Schmidt Construction Company have already completed the 8 ft. wide pilot tunnel for this. A path was blasted along a sheer cliff, 90 ft. above the ground, to the tunnel mouth, to which all equipment had to be manhandled. Finally the new highway will be built up to this level. All drilling teams used Atlas Copco lightweight rock drills fitted with Sandvik Coromant drill steels. As a result, in spite of the very heavy going, the pilot tunnel was completed 15 days ahead of schedule.

Filming the Vikings

Compressed air is versatile. Atlas Copco provides the means for all its many applications. During the shooting of the dramatic film 'The Vikings' several shots had to be taken of a sinking Viking ship. The ship was therefore fitted with tanks which could be pumped full of air by an Atlas Copco compressor, and by this means it was easily raised to the surface for re-shooting.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden. In the United Kingdom; Atlas Copco (Great Britain) Ltd., Beresford Avenue, Wembley, Middlesex.

Atlas Copco puts compressed air to work for the world

The Virtues of Buying Cheap

THERE are two ways of looking at the British Government's loud protest about the rejection of the English Electric Company's tender for the Greer's Ferry turbines. One is to regard it as an expression of understandable but perhaps tactically exaggerated exasperation. This exasperation, of course, is very natural. It is a spider-and-fly sort of trade policy for America to say that foreign firms can tender for a contract, and then, when they offer terms which are nearly 20 per cent cheaper than any native producer, to put forward "defence reasons" why their bids cannot be considered after all. An insult to the ordinary Briton's intelligence is added to an injury to his commerce when Americans pretend that the veto has been imposed in order to safeguard certain obscure machine tools for military production, when everybody knows that it has really been imposed in order to safeguard employment in Philadelphia.

But it is certainly no less important to remind Britons that American policy has not in fact been getting more protectionist in recent years. To anybody willing to look a little lower than the pronunciamentos, Washington's tactics have been for some time to escape towards greater liberalism, while throwing off to the following wolves occasional and much-publicised sacrifices, carefully chosen to do as little real harm as possible. These tactics have had a fair measure of success. Today Americans are still buying large numbers of foreign bicycles and Swiss watches, several years after the much-publicised tariff increases which everybody said would keep these articles out.

Thus, if one were concerned only that existing trends in trade policy should not get worse, Britain's right reaction to the peccadillo at Greer's Ferry might be to regard it merely as part of a familiar and perhaps even not unhopeful pattern; it has come shortly before a decision has to be reached on the much bigger demand by a group of American producers for a complete ban on the import of certain types of heavy electrical machinery, against which it is vastly more important that Washington should stand firm. And America's right reaction might be merely to note what a shattering error it makes in international public relations when it excuses an unwelcome commercial decision by transparent cant about defence; it is no part of any concept of alliance that a great nation's government should tell even political lies to its friends.

In a world where outside political developments were sleeping that might be enough said. But in a world in which vast krakens are waking one has a duty to say very much more, not on grounds of short term exasperation but on considerations of future strategy for the whole free world. It is a matter of comparatively small political significance if Britain is turned away today from places like Greer's Ferry. But it is a matter of huge political significance that tomorrow the industrialising countries of Asia and Africa will be knocking at these doors.

The distinguishing feature of liberal Americans today (liberal

Republicans as well as liberal Democrats) is their welcome recognition that, provided there is no thermonuclear war, the whole future balance of international manpower is likely to depend on one factor: on whether the poorer nations can be offered the prospect of getting richer within the free world's economic and political system than they would within the communist one. But the delusion of western politicians is that, to achieve this prospect, the main problem is going to be to lend these countries money; instead, it is going to be far more important, and often far more awkward, to open markets to them. If, once they are industrialised like so many Japans, they find that their "cheap labour" goods are shut out by the advanced countries of the west (as Japan's were shut out) then the free world will soon learn a bitter lesson: that the peoples most likely to be tempted towards communism are not the very poor, very dormant and illiterate, but the half-awake and half-educated who feel that they are being prevented by recognisable capitalists from becoming richer as quickly as their capabilities ought to allow. The strange thing is that, while one route to a great expansion of free world markets—the campaign for a massive increase in international liquidity—was partially blocked last year because some rich western countries thought that it might tend to put prices up, the west's chief objection to the obvious alternative route—through a great increase in freer trade—seems to be that it would serve to put prices down.

This warning is of general application. It is sauce for European ganders as well as for the American goose. But the American goose is so obviously the free world's leader that it is worth saying boo to it most loudly and directly. It will be wiser in the long run to be blasphemously specific about the main protectionist problems set by and for the United States.

CONSIDER, first, the field of raw materials. As recently as ten years ago American production of raw materials was cheaper than most production of them abroad, so that when America ran into a destocking recession in 1949 its imports fell more sharply than its offtake from domestic producers. Since then costs have risen higher in America so that in the recession of 1958 it was often found that American, not foreign, production had become marginal. This had the thoroughly welcome result—from the viewpoint of international politics—that when the American giant sneezed it was no longer economically inevitable that the underdeveloped world should catch pneumonia. Unfortunately the American reaction to this, at any rate in the case of lead and zinc, has been that if foreign supplies are no longer kept out by economic considerations during a recession, they had better be kept out by import quotas instead.

It is true that foreign sensitivity to American raw materials policy has been forcibly borne in upon the Eisenhower Administration, most forcibly of course upon Mr Nixon while in Latin America. But the Administration's only conclusion seems to have been that it should co-operate in studying "stabilisation schemes." There may be some scope for these; but, in so far as they would mean that a large number of uneconomic raw material producers might be temporarily kept in being all over the world by international bounty, they would obviously spin out the problem rather than tackle it. The blunt fact is that the efficiency of raw material production is being more rapidly increased in the hitherto undeveloped world than in the developed one. The logic of the free enterprise system is almost certainly that, over the next decade or so, many uneconomic American producers should get out of the raw material business.

THE same brutal considerations apply, perhaps politically even more embarrassingly, to agriculture. Some time the United States is going to have to decide whether it regards itself as an industrial economy or still as a partly peasant economy. The most obvious current absurdity concerns dairy products. Butter now costs over 70 cents (5s.) a pound in the shops of North America; if it were not for American import restrictions, New Zealand could now get butter into those shops at not much over 40 cents (about 3s.) a pound. The money which American consumers would save through a lifting of these import restrictions would then be diverted towards buying the products of other American industries. It is therefore nonsense to say that this cut in the American cost of living would spread unemployment in the United States. The crowning absurdity of America's policy of protecting high prices for domestic butter is that Americans' individual consumption of butter has fallen by 50 per cent in the last twenty years, in spite of increasing prosperity.

The American import restrictions concerned were imposed in the worst sort of contravention of the solemnly signed General Agreement on Tariffs and Trade—a contravention that other signatories to that agreement were bullied into agreeing to regard as a permitted waiver, on the entirely bogus grounds that butter production was essential to America's military defence. The result, of course, has been that a major breach has been opened in the whole structure of international trade, because other countries have hastened to follow America and justify their protectionism by saying that they, too, defend themselves by butter as well as guns.

Britain still supports its farmers to an economically unjustifiable degree, in all conscience, but at least it does not impose import barriers of this sort. Indeed, if the United States imported even half as much food per head as Britain does, it would add to its payments for imports by over $3,250 million annually, which would go far towards abolishing all further fear of dollar shortage, and would certainly enable other free countries to lift their remaining restrictions on imports of American manufactured goods. Because of the relative abundance of land in America compared with Britain, this straight comparison of proportions of food imported may not seem quite fair. But it is surely not really outrageous, although it may be political dynamite, to suggest that on strict economic grounds the trend should be for America's economy to become at least as nearly as industrialised as Britain's is.

Finally, in the field of manufactures, the next generation must expect to see an eruption from the underdeveloped countries of precisely the same sorts of light consumer and capital goods as erupted from Japan in the last generation, and at similar cut prices. It is precisely against those sorts of goods that protectionist barriers in North America are at present most forbidding. To justify such barriers on grounds of defence strategy just will not do. If the defence envisaged is for a brief and terrible thermonuclear war, then the keeping in being of certain isolated factories or machine tools is supremely irrelevant. If the struggle envisaged with Russia is a long cold tussle for the minds of uncommitted men, then the shoring up of an uneconomic American factory, which might prevent a lower cost competitor in India from expanding Indian prosperity through increasing its exports, is an actual liability to American defence. And a grim sort of Gresham's law works in this business whereby whenever America, as the free world's leader, acts illiberally, its allies feel bound to act less liberally in their own import policies. That is why foolishness such as that at Greer's Ferry matters very much more than an Arkansas dam.

TOWARDS THE NINETEEN-SIXTIES—II

Mr Khrushchev's Foreign Fronts

Now that the postwar period is over, is the world entering on a period of stability, or on a new prewar period? The purpose of this series of articles is to consider the international postures of America (dealt with in the first article on January 24th), Russia and Britain and the outlook for some of the crucial regions of the world.

MR KHRUSHCHEV in his marathon message to the 21st party congress on Tuesday repeated Russia's economic challenge to the West. Pointing to the *lunik* as a proof of Soviet power, he announced that Russia had started production of intercontinental rockets which it could send to any part of the globe "without a miss." At the same time he reaffirmed Moscow's wish for a ban on nuclear weapons and its desire for a summit conference. Mr Khrushchev's 45,000 words to the highest assize of the communist party will now be discussed, assessed and interpreted in all sorts of ways throughout the world; the speech is discussed more fully on page 419. The following article examines the framework in which Soviet foreign policy now operates.

Western statesmen, preoccupied as they are with the communist world and the menace that it represents, often fail to understand that the Russians, too, fear attack and view the western bases surrounding their territory as bases for aggression. Soviet foreign policy is indeed bent upon extending communist influence and Russian power; but it is also deeply affected by the fear of "encirclement" by those who distrust its intentions and oppose its aims.

The Russians can meet this fear in different ways: by grabbing land and thus keeping western forces at a distance from Soviet frontiers or, alternatively, by negotiating a mutual withdrawal, leaving a vast no man's land between the contesting parties. The third, and parallel, solution is to build up such striking power as to neutralise their opponent's positions. The *lunik* has confirmed that the Russians are a step ahead in the ballistic race. Men who send a rocket beyond the moon need not have a military inferiority complex.

A second misconception is to view Soviet foreign policy as something altogether rigid, made by a monolithic leadership, unaffected by internal pressures and impervious to counter-proposals. Without any doubt, the totalitarian leaders in the Kremlin are communists believing in the ultimate victory of their cause, and confident of success in the world through the ineluctable process of history; but they differ among themselves on method, means and tactics as western statesmen do. They, too, have their "containers," convinced that any withdrawal might bring the whole structure down, and their "disengagers". Between these extremes there are many shades.

The influence of public opinion is not easily discernible in a totalitarian dictatorship; still, it exists. Any ruler is tempted to strengthen his position with the popular slogan of "peace and plenty"; internal reforms and international moves are often interconnected. It is not necessary to take everything in the official Soviet indictment of Mr Molotov and his associates as gospel-true. But the accusation that they opposed reforms within the block, the reconciliation with Tito, and a more flexible diplomacy seems plausible. Soviet aims may be fixed, but Soviet foreign policy is not immutable.

All this has to be kept in mind when looking at the international position of Russia six years after Stalin's death. The Soviet Union is now separated

from the western powers by a belt of European states —with a total population of nearly 100 million—in which Stalin established and riveted his own brand of communism after the war. The reliability of these states is, however, uncertain ; and the amount of attention they require, and the claims they make on Russian resources, are certainly resented by Russia's Chinese allies, who felt happier when Stalin was in control and eastern Europe was kept firmly in its place.

On its eastern frontier, the Soviet Union has for the last ten years had its rear protected on land by the massive bulk of China. China is certainly no satellite. It is frequently a very awkward ally. The younger of the revolutionary partners is also the more dynamic of the two. Having less to lose, it is more willing to take risks in foreign policy. Within the wider communist block, over the last year, China has visibly dictated the pace of the campaign against "revisionism" or any form of liberal relaxation. At home, the Chinese search for a short cut to communism, through the establishment on a nation-wide scale of integrated "communes," must have appeared to Mr Khrushchev as a dangerous example, just when he has been using the opposite method of concessions to stimulate his own agricultural production. He has just admitted that "their methods of building socialism are in many respects unlike ours." And China's determination to industrialise at a very fast rate must either involve an additional strain on Soviet economic resources, or lead to ill-feeling if the additional help is not given.

The communist partnership, however, has not only this captious side. Cemented, but not made, by western ostracism of China, the alliance is founded on a community of views and interests. It also gives practical advantages to Russia. From 1931 to 1949 the Soviet Union had to keep a large proportion of its armed forces in the Far East ; in the last decade most of this sector was taken over progressively by China. Even if it becomes necessary to equip the Chinese with atomic weapons, the proposition will still be a paying one for Moscow. In more general terms, the victory of the Chinese revolution has been the biggest communist triumph since the war.

With its back well covered, Moscow has been able to maintain massive military strength in Europe and at the same time to look southward ; it is in the Middle East that post-stalinist diplomacy has made its most striking scores. The ground was propitious. The clash between rising Arab nationalism and Israel provided the Russians with an opportunity to get a foothold in Egypt. The *sputnik*, as forerunner of the inter-continental missile, destroyed the assumption of western policy in this area rich in oil—namely, that a monopoly could be preserved thanks to a superior military deterrent. Helped by the reverses that western policy has suffered in its dealings with the Arabs, Russia has been able to get fairly near to its first goal, which was to spread "neutralism" among Arab states so as to wreck the bastion of the Baghdad Pact. The Iraqi coup last July was an important success.

Soviet policy in the Middle East has always courted one serious risk. If the western powers were to succeed in conciliating the leaders of Arab nationalism with economic aid and helpful trade policies, a Nasser could well change sides as spectacularly as a Chiang Kai-shek (one of Moscow's earlier nationalist allies) did in the past. This is probably why the Russians have refrained from putting all their eggs in one basket. They have not yet recognised the rebel Algerian government, though China has. They keep their supporters in Syria, and particularly in Iraq, as a reserve weapon in case Nasser should change sides.

The general Soviet premise, however, seems to be that nationalism is as vital a force in Asia and Africa now as it was in Europe in the nineteenth century and, wherever conditions are not ripe for communism, the Kremlin must work with it. Indeed, it is in the Middle East that Soviet policy remains at its most "stalinist" ; the fate of local communist parties is completely subordinated to the interests of Russian diplomacy. The coincidence of arrests of communists in Cairo with the announcement of an agreement for Russian aid in the construction of the Aswan dam was significant. The Soviet Union is self-sufficient in oil, while the West is heavily dependent on its Middle Eastern sources of supply. Mr Khrushchev has now spoken out against the campaigns "conducted in some countries against progressives under the spurious guise of anti-communism." But there is no doubt that he still regards his investment in Egypt as worth while.

The combination of a nationalist wave and a nuclear balance opens up great vistas for Soviet diplomacy. It is increasingly difficult for Washington to apply modern versions of the Monroe doctrine to other continents. Africa is, naturally, the next target for Soviet envoys, but Latin America, though it may come later, cannot be excluded after that. The Russians may thus drive towards their penultimate objective, which an acute commentator has defined as the isolation of the United States to an extent that some American theoretician would have to invent the doctrine of "capitalism in a single state."

The immediate outlook for Soviet diplomacy is relatively least bright in Europe itself, where the bulk of Russia's military forces is concentrated. Stalin's successors apparently grasped that his methods, which had brought his brand of communism up to the Elbe, were no longer yielding results. For a time, while they set about reforming the empire they had inherited from Stalin, it seemed that they might go even further and accept a withdrawal within Russia's frontiers as part of a broader bargain. In order to get the Americans out of Europe, they might have done this, hoping that rapid gains in the west of the continent would compensate their immediate losses in the east. Whether this opportunity ever existed it is impossible to tell ; it was never even explored.

Many things have happened since then to harden the Soviet line. In the first place, the series of explosions starting with the Berlin rising in 1953 and culminating in the Hungarian insurrection of 1956 served as a warning to the Kremlin of what might happen if eastern Europe were let loose. And prospects of rapid gains in western Europe were dimmed by the communist setback in France. It may be, too, that the Soviet ballistic exploits of the last two years, by opening up the prospect of a Russian supremacy in intercontinental rockets, have made the Russians feel less vulnerable to western nuclear bases on German soil, and therefore less ready to negotiate about Germany (though their fear of nuclear arms in German hands remains). The lyrical tone in which the Soviet press greeted the *lunik* was not due only to the eternal dream to get out of this world and conquer space ; it also furnished ordinary Soviet people with confirmation of the fact that their government is a world power of the first rank, able to talk to the Americans on, at least, equal terms.

All these considerations are not likely to create a particularly conciliatory mood within the Soviet leadership. Yet there are two factors working the other way. A country's capacity for annihilating its opponents does not make it any more keen on collective suicide. Those Russians who believe that a world war could start by accidental friction may still be interested in disengagement as a safety measure, however strong they feel their retaliatory system to be. The second factor springs from Russia's internal development. The Soviet leaders, convinced of the superior efficiency of their economic system, have promised their people to outstrip American levels of output in the not so very distant future. They have just launched a seven year plan that could bring them within sight of that goal. But the pace of development could be speeded up, the strains diminished and living standards improved, if this plan could be combined with international economic deals and cuts in defence spending.

According to the latest figures, Soviet defence spending has been reduced to less than 14 per cent of total budgetary expenditure. But this has been achieved by expanding the budget, while keeping military expenditure roughly stable. A substantial cut in defence spending could help in improving the ordinary man's lot in Russia. Mr Khrushchev has embarked on bold reforms of industrial management, agriculture and education. All these measures involve risks and clearly meet with resistance. What could do more to increase his chance of success and consolidate his position than to come back from an international parley with guarantees of greater security and the solid promise of a better life ?

On balance the Soviet Union has no compulsive need for an international agreement; it can wait for better terms. It can concentrate practically all its military strength in the West, while exerting such subsidiary pressure on other fronts (chiefly in the Middle East) as it chooses. It can go on keeping its deterrent up to date, hoping that the vagaries of western economic growth, compared with its own regular advance, will eventually give it the lead in the economic race. The recipe that might suit the Kremlin best, at this stage, is probably an international pact underwriting the political *status quo* in Europe (that is, the maintenance of communist regimes in Central Europe), combined with a mutual withdrawal of troops from Germany and, possibly, with a deal halting the nuclear race—a recipe which the West could not accept.

But, as Mr Molotov may muse on his way from Ulan Bator to The Hague, Soviet diplomacy, too, can change course under prodding or pressure. Mr Khrushchev has officially confirmed the Russian interest in early great-power talks. It is for the western powers to see whether such talks can be used to shift the Russians from the position on which they are dug in. Neither on disarmament, nor on the German question, is any compromise, acceptable to both sides, readily apparent. Such compromises would have to be searched for, probably at length. Time will not necessarily improve the West's bargaining position.

The Economist

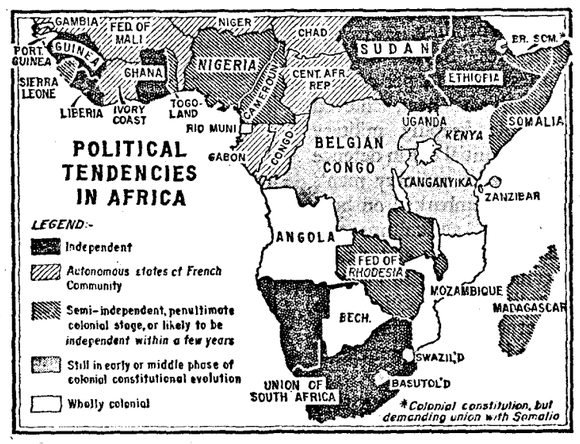
JANUARY 29, 1859

THE ABUSE OF CONGRESSES

"*Canning*," says the historian of the Thirty Years' Peace, quoting from Mr Canning's biographer, "always protested against the system of holding Congresses for the government of the world." We are now told that a European Congress can alone settle the questions at issue between France, Piedmont, and Austria. We must renew Mr Canning's protest. . . . A Congress is only in place where there exists a real desire, on the part of all the influential States which compose it, to come to an agreement, and a sufficiently near approximation of opinion to render discussion useful instead of dangerous. . . . A Congress must always take its stand either on a prescriptive right of long standing and obvious justice, or on the *status quo*. It has no pretence for interfering with the *status quo*, unless it be in accordance with the indignant moral opinion of Europe, violated by some flagrant breach of international equity. Then, indeed, and then only, an overwhelming combination against the offending State may compel it to disgorge its prey. But in any other case it can only settle the affairs of Europe in accordance with the existing balance of power. This may be just or unjust,—and quite as often unjust as just,—still it is all a Congress can do: any effective appeal against the actual preponderance of any one great military power in a European Congress,—unless it be a preponderance so dangerous as to unite all the other powers against it,—is useless in a mere conference. Each power is certain to hold its own,—and to break up the Congress altogether rather than be deprived of what it believes it has the power to retain. Thus in 1815 the annexation of Poland to Russia was an act of even far grosser injustice than the recognition of the right of Austria to Lombardy ; and yet the protests of the dissentient powers were quite unable to prevent it. It is perfectly clear that a Congress is in general only able to arrange European affairs on the *general* basis of admitting that each State shall keep what it has at present within its grasp,—that it is at least only on the minor questions of boundaries, mutual exchanges, and compensation,—on which something might be yielded for the sake of peace,—that it can act with effect.

Fulcrum of Africa

The Congo riots have increased the pace of change in Africa. White settlers and black leaders alike face a new situation



KING BAUDOUIN'S promise that Belgium will lead the Congo "towards independence without delay but also without inconsiderate haste" has been widely received as a decisive victory for African nationalism. It may well be asked why so cautious a commitment should appear so fateful, when events are moving so much more rapidly in British and French West Africa. The Belgians had already, for two years at least, been planning a modest development of representative institutions in the Congo. The cagey statement of intentions made last week by the Belgian government can have added little to what was in draft; the time-table is vague; all that is clear is that racial discrimination is to go, and, by a series of indirect elections, the Congolese will elect some sort of national assembly some time in 1960, to which responsibilities will be transferred by undefined stages thereafter. On paper, that is little enough.

The significance of the statement lies in its timing and in the key position the Belgian Congo occupies in Africa. The promise of independence was made after riots whose immediate cause was an agitation for political change, even if their deeper reason was economic distress; and both the riots, and the Belgian reaction to them, came after the Pan-African nationalist congress at Accra. In turn, the statement has been followed by more rioting, which is evidence of tense Congolese feelings. Furthermore, the goal of independence under an African regime has been set, for the first time, for a territory in which there is a considerable white settlement (there are about 85,000 Belgians in the Congo, compared to 50,000 whites in Kenya) without any by-your-leave from the settlers themselves. Deprived of any say in a paternalist government of the Congo in which the Africans were similarly voteless, the whites are not even to be consulted in future. The Congo is not to be entrusted to them even transitionally. This way of doing things, however gradually, ranges the Belgian Congo's political future decisively with the African states of the north and west rather than with the multiracial, or white-dominated, territories of the east and south. It brings the challenge of African nationalism to their doors. Overnight, Elizabethville promises to become a political suburb of Accra.

This is, potentially at any rate, a tremendous shift in the balance of Africa. For the last ten years the Congo has been the buffer state, the *cordon sanitaire*, between the two regions which white men have frankly, if unofficially, called "Black Africa" and "White Africa." On the map this huge, sparsely peopled area interposes vast tracts of tropical forests between the territories (north and south of the Sahara) in which the colonial powers have allowed the inflammable doctrines of democracy, liberalism and nationalism to race to their logical conclusion, and the territories in which power remains with the white officials or the settled white minorities (whether or not the African majority has some voice in government).

BUT this division was not merely geographical. To the white settlers in East and Central Africa the Congo was not simply a colony which democracy had not yet reached; to them it was an area in which a colonial government had the sense to see that democracy would not work, and was proceeding on the completely different track of *putting economic advance before political* advance for Africans. It was insulating the area from politics by the drastic method of denying political rights to all, black and white alike.

It is the suddenly revealed bankruptcy of this "practical" colonial policy that has most painfully struck the white minorities in East and Central Africa, as well as in the Union. The Congo, it appears, has its nationalist parties and its African politicians even without the vote, even without scholarships to take bright mission lads to the London School of Economics. The whites in *southern Africa have* now to ask themselves seriously whether, if this can happen in the Congo, it may not happen presently in the Portuguese colonies of Angola and Mozambique, which they also regard as part of the insulating belt between *them and African* nationalism. Clearly, if dangerous thoughts can so easily hop from Brazzaville to Leopoldville, they can hop the next few miles to Angola.

In considering the challenge of African nationalism, the whites of the east and south have until now taken comfort from the thought that time would show whether the West Africans were capable of running powerful modern states, or only so many Liberias and Haitis; and it seemed to them worth while to gain time, since, if black leadership came to grief, some form of white leadership in the south—partnership or apartheid—would emerge as the winning answer to African problems. The acceleration of events is working against any such competitive test, even if it ever made sense. In 1960, four new African states will emerge—Nigeria, Togoland, Cameroon and Somalia; by then the degree of French African independence, within or without the French Community, will also be plain. This will probably speed up events in East Africa.

For instance, the Tanganyika African Nationalist Union already bids to become the governing party in that trustee territory after the elections next month at which its candidates will have little opposition to meet. It will hardly refrain from declaring that what other trust territories are given, irrespective of their administrative capacity or economic viability, Tanganyika cannot be long denied. The proposal of a visiting United Nations mission that a twenty-year timetable for independence should be set—laughed down by the British then—begins to look reactionary. Again, Uganda is at present divided only on the best way to achieve independence, not on the goal. The general atmosphere in Africa in 1960 may, in turn, make it impossible for the Belgians to stick to their plan of moving "without inconsiderate haste." African assemblies are apt to emulate the Tiers-Etat of 1789 in assuming constituent powers—as the French have discovered. Meanwhile, it is clear that Africans are learning the crucial technique of organisation.

Thus the hopes the white minorities had of waiting to see whether the West African states would really make a success of independence behind a firebreak of Belgian and Portuguese paternalism are growing slim. Sir Roy Welensky has himself got a date in 1960 to come to London to talk about independence for the Federation of Rhodesia and Nyasaland; but Dr Banda and Mr Nkumbula (or whoever are then leaders of the Nyasaland and Northern Rhodesian African Congresses) will be able to point to the difference between the type of independence envisaged for the Congolese and for their countrymen, if Sir Roy gets what he asks for. (It is, of course, possible that by 1960 Sir Roy's ardour for independence will have cooled, while Britain's may have increased.) Similarly, Mr Tom Mboya has for long been demanding that the British Government should make some definite statement of its ultimate intentions for Kenya. The Belgian statement now puts London in an awkward position; it can hardly promise anything less, and it will find it hard to attach to independence much more stringent safeguards for White and Asian interests than the Belgians do. If the Belgians can subordinate the interest of their settlers, Mr Mboya can argue, so can the British.

THERE are, unfortunately, great dangers in this new impetus to the pace of change in Africa. African leaders, impatient and buoyed up by the sense that the tide-race is with them, may well become more stubborn in negotiation, more overbearing in their demands, and less responsible in their handling of the crowds who come to hear and cheer them. There could easily be more violence, which at best would hinder an orderly constitutional advance, and at worst could saddle the West with one or more minor Algerian situations in black Africa. This might ruin their relations with the emergent states of West and North-East Africa without saving the political future or personal fortunes of the whites in East and Central Africa. But it would also wreck the prospects of the present African leaders—the Mboyas, Kianos, Bandas, Nyereres and Kasabuvus—who wish to inherit the sort of viable state that was Britain's supreme gift to Dr Nkrumah. There is very great reason, therefore, for everyone to be reasonable and to hold together in the racing current.

This implies big mental adjustments by the white minorities: the sort of mental adjustment that could first find expression in Dr Verwoerd drawing back at the last moment from abolishing native representation in South Africa, in Sir Roy Welensky going ahead with his plans to appoint African ministers in the Federation government in the teeth of his party's prejudices, in Colonial Office readiness to risk giving Nyasaland Africans control of their territorial parliament within the Federation. Such a mental change would embolden the four East African governors, who conferred this week in London, to return to their charges in the spirit of so many Arden-Clarkes, determined to educate, guide and canalise, but not dam up, African ambitions; and just as determined to teach realism to the whites. It should find expression in the statement the Kenya settlers are expected soon to make.

The Congo, which is now about at the same stage of its political evolution as the Gold Coast in 1948 also needs its Arden-Clarke. For it is the fulcrum by which the southern end of Africa is being heaved out of its immobility.

AIR SUBSCRIPTIONS TO THE ECONOMIST

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

	Airmail	Air Freight
Australia	£10 6s.	—
Canada	—	$25 or £9
Ceylon	£9 0s.	—
China	£10 6s.	—
East Africa	£9 0s.	£7 10s.
Egypt	£7 15s.	—
Europe	£6 0s.	—
Ghana	£9 0s.	£6 10s.
Gibraltar, Malta	£5 0s.	—
Hongkong	—	£8 15s.
India	£9 0s.	£7 10s.
Indonesia	£9 0s.	—
Iran, Iraq	£7 15s.	—
Israel	£7 15s.	—
Japan	£10 6s.	—
Jordan	£7 15s.	—
Lebanon	£7 15s.	—
Malaya	£9 0s.	—
New Zealand	£10 6s.	—
Nigeria	£9 0s.	£6 10s.
Pakistan	£9 0s.	—
Philippines	£10 6s.	—
Rhodesia (N.&S.)	£9 0s.	—
S. Africa	£9 0s.	£7 10s.
S. America	£9 3s.	—
Sudan	£7 15s.	£6 15s.
USA	—	$25 or £9
West Indies	£9 0s.	—

NOTES OF THE WEEK

UNITED ARAB REPUBLIC

Cairo's Go-slow

THE delay in the signing of the Anglo-Egyptian financial agreement is over questions of detail rather than principle. Of the 350 or so British businesses abandoned two years ago, it is not at all easy to know which were taken over by Egyptians for the duration and which were taken over for good. The agreement attempts in an annexe to distinguish between sequestrated businesses, which are to be handed back, and "Egyptianised" concerns, to be retained upon payment of compensation. But the two governments do not see eye to eye over this list, and their delegates cannot sign the agreement until they have finished horse-trading. Under the spur of Mr Black's mediation, Royal Dutch-Shell's separate agreement with Cairo, and the fear of increasing communist influence in Iraq, both sides were anxious to subscribe an agreement in principle without waiting to settle all the details.

The interval between initialling the agreement and signing it has given President Nasser the opportunity to make it appear that the British are more anxious to resume diplomatic relations than he is. Cairo press and radio are enjoying themselves with solemn discussion on whether or not London's presumed advances ought to be accepted. Provoking as their attitude may be, they must be allowed their day. The temptation to take the British down a peg or two is, after all the years of Raj, too strong to resist. But diplomatic relations have not yet become an issue ; nothing more has yet been discussed than the setting up of a British mission in Cairo to supervise the implementation of the agreement.

None of this sparring alters the fact that it would be to the advantage of both sides to get back to normal diplomatic and trade relations as quickly as possible. Britain has interests in the Middle East which it cannot secure if it is permanently estranged from Cairo ; while, for its part, Egypt cannot sustain its neutrality if the western scale of the balance is half-empty. If in the course of haggling over the financial agreement the United Arab Republic gains a little face—and if the British government does not feel the need to do the same—some corners may be cut off a difficult path.

BAGHDAD PACT

Defence without Offence

AT the half-yearly meeting of the Baghdad Pact council at Karachi this week, Iraq, once regarded as the keystone of western defence arrangements in the Middle East, was not represented ; the United States, having assumed active leadership, was still not a full member of the pact.

Between the regional members and the Americans there were differences of opinion concerning the scope of the pact. Pakistan and Persia are dissatisfied with the draft bilateral military and economic agreements which Mr Dulles has offered them as a substitute for full United States membership in the pact. Pakistan, mindful of its perennial quarrels with India and Afghanistan, wants guarantees against aggression from any quarter. Persia, lacking either the Nato connections of Turkey or the Seato connections of Pakistan, wants safeguards against revolutionary Iraq. The Americans, caught up in the limitations of President Eisenhower's executive authority, cannot easily extend their commitments beyond what Congress has approved—the promise of help against outright communist aggression. In any case, they do not want to be drawn into local disturbances ; nor are they anxious to give offence in India, Iraq or Afghanistan. Negotiations for the bilateral defence agreements will continue in the hope that they will be safely signed before the council meets again in July. Presumably to show the rest of the world that the differences between the pact members and their good friends are not to be taken too seriously, the regional members asked for the July meeting to be held in Washington ; however, there was no immediate American response, and they decided to meet at Teheran after all.

At Karachi the council sensibly paid increased attention to the economic aspects of the pact. As Dr Eqbal, the Persian prime minister, pointed out during the Karachi meetings, progress towards carrying out plans for economic development has been very slow. The council has adopted communications as the field in which it can do the most useful work. If the projects now being considered can be pushed beyond the survey stage, then the Baghdad Pact may be able to win some much-needed prestige in an area where good roads and modern railways are rare.

BY-ELECTIONS

Bogey for Southend

SOUTHEND WEST was polling on Thursday, and the result was expected to be announced that night. The figures there are bound to be extensively analysed because of their possible bearing on the timing of the general election. Some preliminary warnings to the analysts may be useful. In 1955 the Conservative candidate won 64.2 per cent of the votes here, Labour 20.8 per cent and the Liberals 15 per cent. It would be reasonably in line with what might be called last November's standard of by-election experience if the principal movement of electoral opinion has been for the Liberals to increase their share of the Southend West vote to over 20 per cent, mainly at the expense of the Tories. A paradoxical result could ensue: it would be conceivable for Labour to have dropped to third place in the poll—and yet for the proper statistical analysis to be that the swing against the Tories has been maintained at a level that would give Labour a better-than-average chance of winning the next general election.

Certainly if the Liberals have not increased their vote at Southend they should be disappointed. In the heady days of Rochdale and Torrington, less than a year ago, when people were talking of the possibility of 30 or so Liberal MPs, Southend West was actually being marked down as a possible Liberal gain ; there are only about twenty-five other seats in the country which, on past form, it would be easier for them to win. The fact that nobody was dreaming of a Liberal victory on Thursday shows how far that Rochdale-Torrington revival is feared to have faded. Tory-minded analysts seemed to be poised with two arguments before Southend: ready to blame any bad result on the candidate's family connection ("another Guinness was not good for us"), and ready rather cautiously to discount any favourable result by saying that the Government must expect at the moment to do better in the south of Britain than it would in the north. Either argument should be taken with a pinch of salt. In recent by-elections and local elections there has, in fact, been an above average swing against the Tories in most seaside resorts ; if the Conservatives prove to have maintained their share of the vote at Southend, they can reasonably regard it as a happy omen for their chances in the country as a whole. A final point worth making is that, as the register of voters was drawn up eleven and a half months ago and as a lot of people are away from Southend at this off-season time of the year, it would be normal to expect a smaller total vote than at the May general election in 1955. Even quite a heavy drop in the turnout here should not necessarily be interpreted as a sign of increasing apathy among the electorate.

GOVERNMENT SPENDING

A Little for the Arts . . .

THE index of industrial production for December (discussed on page 431) continues to support the view that the economy has passed the turn, although as yet without any strong follow through. Certainly ministers are still assuming that the unemployment figures for January and February will show a sufficiently sharp seasonal increase to prove a pretty painful political bullet to bite on. Nevertheless the Chancellor implied in a parliamentary answer this week that he is unlikely to cut purchase tax rates before the budget. The next questions that eager reflationists put to him should presumably be about the date of that budget and about invesment allowances.

Meanwhile, however, the Treasury is feeling able to adopt an unusually (albeit still cautiously) generous attitude towards more of the worthy causes that habitually come to it asking for money. Last week it was the turn of the arts. The Government announced that the annual purchasing grant of the National Gallery is to go up from £12,500 to £100,000 (it had asked for £150,000), that of the Tate Gallery from £7,500 to £40,000 (it had asked for this plus a lump sum of £100,000 to overtake arrears), and Covent Garden opera house's grant through the Arts Council from £362,000 to 43 per cent of its expenditure subject to a maximum of £500,000 (this should give it some £450,000 next year, while it had asked for £500,000). The Chancellor has also agreed that the galleries can continue to ask for special grants for exceptional acquisitions, an arrangement which has in the past benefited the National Gallery more than the Tate since it is easier to get public money for a Uccello than for a Picasso. An important innovation is that at last these three big institutions can plan ahead, for the new grants are to hold for three years for Covent Garden and five years for the galleries. Provincial museums and galleries should benefit from an increase in the amount and scope of the Victoria and Albert's grants-in-aid for their acquisitions, and their claims to house some of the works of art surrendered in lieu of death duties will be considered.

. . . And a Little for the Elderly

THIS week, a little more money was released to elderly people who are still doing part time work. The so-called "earnings limit" has been raised, so that retired people and widows will now be allowed to earn up to £3 a week, and widowed mothers up to £4 a week, without suffering any reduction in their pensions. The Government estimates that this should cost only about £1 million a year, which probably means that it does not expect more than about 50,000 people to be affected. The minister said that he could not abolish the earnings rule altogether because that would "cost over £100 million a year," nearly all of which would go to the half million or so men between 65 and 70 (and women between 60 and 65) who have chosen to continue in full time work and thus temporarily to forgo their pensions.

But the Government should never think only of its own outlay ; it should always think also of national income. The presumption must be that an abolition of the earnings rule would induce more elderly people to stay on at work and thus add to national production, while the Government's own figures suggest that tinkering with the earnings limit will not do so. Yet one Labour MP argued that the minister, "bearing in mind that there is now quite an amount of unemployment," should have consulted the trade unions before making even his ten shillings increase in the earnings limit. If Labour thinks that the right way to cover up unemployment is to force the elderly to retire before they want to, then it believes in a scrapheap society.

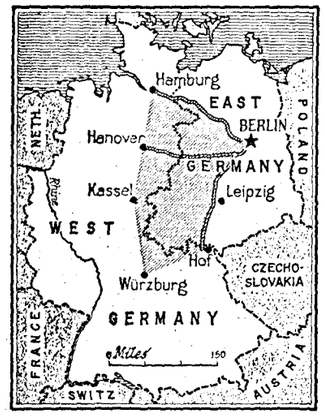
MOROCCO

The Rivals

THE Istiqlal, Morocco's ruling party, has been badly shaken by the revolt of its left-wing leaders under M. Mehdi Ben Barka. Its cohesion, increasingly suspect, may now be shattered beyond repair. It was learned in Rabat last Saturday that M. Ben Barka had resigned from the party's executive committee, whose meetings he had stopped attending for some months. He and his lieutenants promptly challenged the executive by addressing nine regional conferences in Rabat, Casablanca and other towns, carefully prearranged and attended by local party militants, particularly from working-class districts. This defiance brought the Istiqlal's leader and founder, M. Allal el-Fassi, into action, expelling M. Ben Barka and six of his friends —including M. Ben Ammar, the present minister of agriculture, and M. Ben Seddik, the trade union leader—from the party. The executive seems to be solidly opposed to any concessions to the rebels.

This new blow to Moroccan stability—while the Berber tribes are in arms in the Riff and Middle Atlas mountains—is scarcely a surprise. The Istiqlal began as a national movement, united only in its opposition to the French protectorate. By attempting to submerge its economic differences in the interests of national cohesion, it has become the prey of internal strain and dissension. The orthodox government of M. Balafrej, which bowed to the palace's wishes and in which the left wing of the party was

kept under strict control, fell in November. The present government of M. Ibrahim is popular with the Left and the trade unions, but has been strongly opposed by M. Balafrej and his supporters, who control the party executive. Their latest quarrel has centred on responsibility for the Berber unrest and on the decision not to devalue Morocco's currency with the French franc—a policy that has begun to hit exports. If the Istiqlal, which has provided the backbone of Moroccan administration since the protectorate, is now permanently split, the national readjustment may be long and hard.



GERMANY

A Plan for Berlin

Now that Mr Dulles has conceded that free all-German elections may be "not the only method" of unifying Germany (January 13th), Mr Khrushchev has said that the Russians for their part "have never objected to free elections" (January 22nd). Thus, on the hypothetical aspects of the German question, differences which were held to be vital are suddenly found to be secondary. But the real aspect of the German question which is going to force itself first on the attention of the powers is the position of west Berlin; and on that, neither the Russian nor the western attitude has so far shifted.

Dr W. W. Schütz, the chairman of the "Indivisible Germany" organisation and a thoughtful and passionate advocate of German unity, has submitted to the Bonn government a tentative proposal about Berlin which, one suspects, will probably go the way of all earlier plans to resolve aspects of the German question; but it is an interesting idea, based on serious thought about the real matters in dispute, and it is possible that it may influence the future search for a solution, even though the Russians, or the western powers, or both, turn it down now.

Dr Schütz's scheme treats the approaches to Berlin, rather than Berlin itself, as the area of conflict and danger; and it is designed not to disturb the existing arrangements either of Nato or of the Warsaw Pact in any essential way. It would not remove the western garrisons from Berlin or affect the rights of the western powers there. A zone would be established covering all the routes to Berlin from the West, and from that zone all foreign troops would be withdrawn; alternatively, the zone might be demilitarised entirely. The zone (shown as the shaded area on the accompanying map) is not very precisely demarcated at this stage, but the intention is that it should neutralise roughly equivalent areas of west and east Germany.

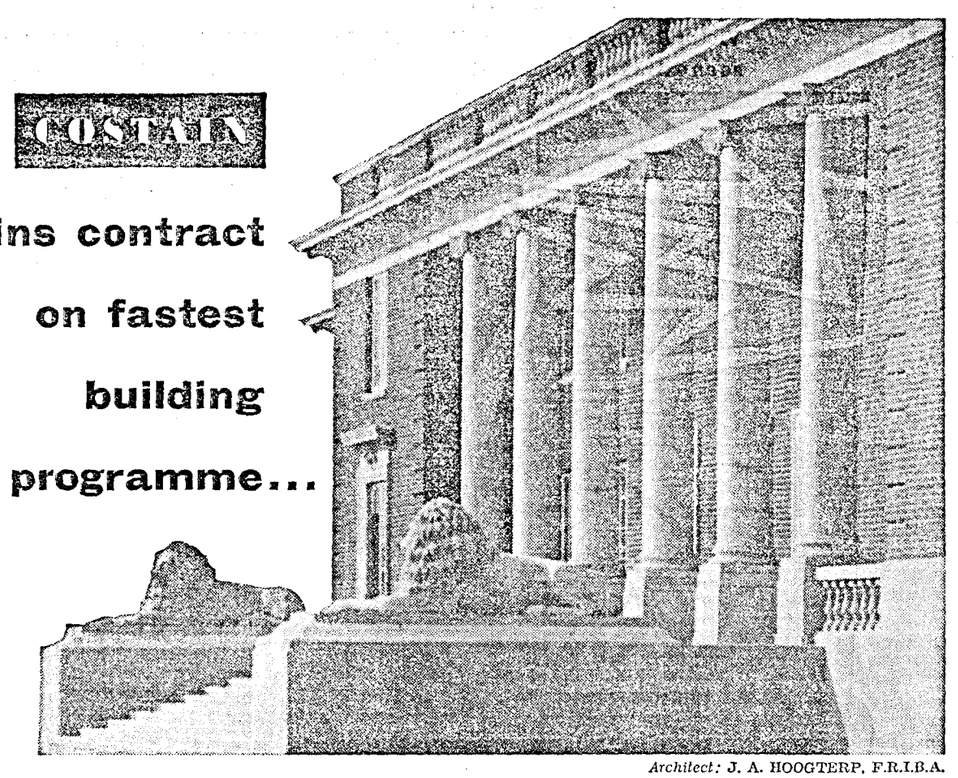
Nobody seems to intend to publish this plan officially just now. All concerned are more likely to wait and see what the reactions are; it does not appear that the initial reaction in Bonn has been hostile. The Communist reaction may be hostile, simply because the Schütz plan would not remove the western powers from Berlin—a declared Russian objective. But if the Communists were to look more closely, they would see that what is proposed is a zone of disengagement in the heart of Germany, from which a start on a more general disengagement might be made in conditions of relative safety.

VEGETABLES

Growers' Consolation Prize

The support conceded to the operatic end of Covent Garden has been extended simultaneously to the department of home-grown vegetables. The Government has announced a plan for £7½ million worth of aid for the horticultural industry, to be spread over five years. Horticulturists, unlike farmers, have hitherto been protected only by tariff, not by subsidy; and they have been strongly pleading for an increase in the tariff levels fixed in 1954. The Government has now rejected this demand so far as vegetables are concerned. This liberal decision has inevitably aroused a storm of protest from many growers (particularly glasshouse ones) who have been suffering severely from competition from European countries where horticultural wages are lower. The new aid programme is plainly a sort of consolation prize to vegetable growers.

The Government is certainly right to refuse to raise the tariff walls, interfering with the flow of cheap all-the-year-round vegetables to the British housewife and increasing her cost of living. In view of this, criticism of the consolation prize should perhaps be muted. The fact remains, however, that this particular *bon marché* is not likely to do much good to anyone. A maximum of £1½ million a year will spread very thin among the 50,000 commercial growers unless its uses are very closely and carefully circumscribed—and that seemingly is not the Government's intention. Although the details have still to be worked out, improvement grants are to be paid for a wide variety of purposes connected with both production and marketing, and most growers (including co-operative associations) will apparently be eligible. Even more than with the small farmers scheme, there is an obvious danger that the resulting gains in efficiency will not justify the scheme's administrative overheads; if horticulture is to be directly aided, a plan that was both larger and more selective would probably be preferable.



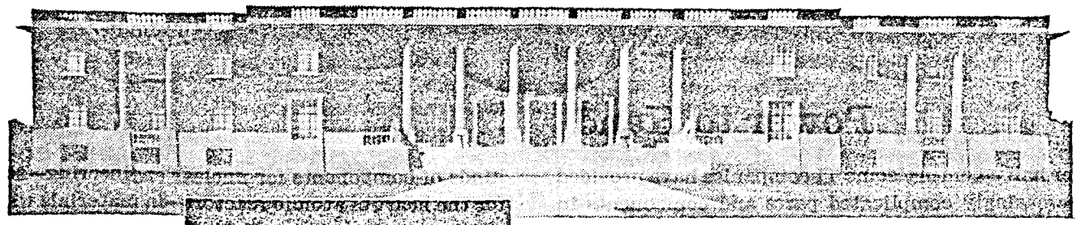
The Government's political calculation is presumably that the subsidy may allay the maximum amount of growers' wrath for the minimum of expenditure. But things do not always work out that way. The National Farmers' Union, which is very careful nowadays to try to satisfy its horticultural wing, has given the scheme a cool reception; it has decided to press on with a fresh set of claims for tariff increases. People who work in glasshouses are busy throwing stones.

HOUSE OF LORDS

Brains Trust in Ermine?

The new quartet of life peers—Sir Eric James, Sir Edwin Plowden, Sir Hartley Shawcross and Professor Lionel Robbins—have all the marks of a shrewdly balanced Brains Trust; if Dr Bronowski and Mr Norman Fisher

LUSAKA HIGH COURT NORTHERN RHODESIA



wins contract on fastest building programme...

Architect: J. A. HOOGTERP, F.R.I.B.A.

completes it eight weeks ahead of schedule

For this impressive new High Court in LUSAKA, Northern Rhodesia, speed and craftsmanship were the essence of the contract. Richard Costain (Africa) Ltd. secured this order on the fastest building programme submitted—twenty-two weeks ahead of the next best time. Even so, Costains completed the work eight weeks in advance of their own schedule! Experience, technical "know-how", vast resources—all these place Costains in a position for unrivalled service in building enterprise.

As I see TI...

Victor Reinganum, the English artist, here sees Tube Investments Limited almost as an extra limb to Man in his endeavours to harness all world sources of power.

Power to Hand

For half a century some TI companies have provided increasingly complicated parts and components in steel and its alloys for the engineers who wrest power from the elements, rivers, coal mines and oil wells. They are now producing over a hundred different kinds of components for nuclear engineering—some for the heart of atomic reactors—in materials which until recently were available in laboratory quantities only. TI technologists are alert to the needs which could arise from new sources of power.

STEEL TUBE DIVISION—ENGINEERING DIVISION—ELECTRICAL DIVISION—
ALUMINIUM DIVISION—IRON & STEEL DIVISION—GENERAL DIVISION—CYCLE DIVISION.

TUBE INVESTMENTS LIMITED *The Adelphi, London, W.C.2. Trafalgar 5633*

could be similarly ennobled, it would be scarcely necessary for the BBC to stoop to commoners for its future programmes. Taken as a whole, Mr Macmillan's second selection is more imaginative than his first. The new peers are the kind of active men of distinction whose absence from the House of Commons is now frequently deplored and who in the past might have gone there as members for university seats. The Commons will need to look to its public relations if the people are not to turn increasingly for guidance to the "senate of intellect."

The last fortnight's debates in the Lords, although they may foreshadow the harder times ahead for the Government front bench, did not quite live up to that Elysian ideal. In an exchange on the question of "how green are our diplomats?" Lords Attlee and Hailsham demonstrated that, so long as any old House of Commons men are around, the "you're another" technique will not be altogether lost. And the actual falterings of the Government front bench were in the face of assaults neither from an official opposition revived by an infusion of "lifers'" half blue blood, nor from the new egghead élite, but from the more familiar sources of service leaders and the landed and hereditary interests.

In a week that ended with the Government bending before Lord Tedder's barrage over the Malcolm clubs the rot was started by Lord Brocket, a former chairman of the Land Union and the owner of a good many Scottish acres. He refused to take excuses from Scotland's premier baron, Lord Forbes, for waiting until 1962 to begin the new close season for red deer, and carried an amendment against the Government to start it one year sooner. The next day Lord Reading's motion to admit women hereditary peers (now that the life peeresses have broken through the sex barrier) prevailed against both Government and Opposition whips.

This last debate was mainly remarkable for another chapter in the delicious process by which Lords Hailsham and Salisbury have been exchanging positions on almost every issue since the one gained, and the other ceased to hold, office. Lord Hailsham now rehearsed at Lord Salisbury's expense the caution with which Lord Salisbury used to admonish his rank and file during the Labour Government—that issues that are mainly of interest to peers should not be pushed against official Labour opposition. But on one point the Lord President's non-partisan vehemence carried him rather further than the chairman of the Conservative party might think prudent. In listing the proposals the Government would rather give time to than to the distressed female peers he included repeal or revision of the laws on the Lords Day Observance, betting, licensing, obscene publications and marriage. There is a simple solution to Lord Hailsham's complaint. Let us have no election until February, 1960, and let us have a pre-election session of three months devoted exclusively to these topics.

EDUCATION

Church Controversies . . .

LAST week's debate on the education white paper was not very constructive, except perhaps for a welcome hint that both front benches, having at last woken up to the facts of the teacher shortage, might accept adjustments to the plan to lengthen the teachers' training course from two years to three. But the most intriguing educational problem for this election year looks like being the old familiar hot potato of the church schools, which neither party is eager to pick up. To telescope many complexities, the compromise which was reached in 1944—after long-drawn interdenominational argument—and which has been extended since was that: (a) the running costs (including salary costs) in church schools should continue to be borne by the state; (b) the state should also meet (though partly at the minister's discretion) 50 per cent of the cost of bringing existing church schools up to the new standards called for; but (c) there should be no state grant towards building new church schools. Since 1944 this last principle has to some extent been whittled away, in order to meet special problems set by movements in population and so on. But the main structure of the compromise remains.

In the church schools controversy of 1959, the participants are lining up roughly as follows:

(1) The Roman Catholics are asking that the present state contribution of 50 per cent to the cost of reorganising their existing schools should be raised to 75 per cent, and that the state should also meet 75 per cent of the cost of building the many new Roman Catholic schools they want. This is in pursuance of their aim to get every Roman Catholic child into a Roman Catholic school.

(2) The Church of England wants more for reorganising existing Anglican aided schools, but it has almost abandoned hope of persuading its faithful to cough up even 25 per cent of the cost of building new ones. It therefore opposes grants for building new schools as "the introduction of a new principle."

(3) The Free Churches have few aided schools of their own. They fear the "missionary" effect of the extension of Roman Catholic schools aided by taxpayers' money.

(4) The local authorities dislike the complexities of the present system of administering grants, and would support simplification. But most of them are afraid of opening the door to a rash of inefficient and expensive little voluntary schools in the catchment areas of good county schools.

(5) Some teachers would regard the growth of denominational schools as a threat to their professional prospects, if not to their freedom.

. . . and Secular Principles

THE broad principles of a fair new deal in this church schools controversy are surely clear. It would be a pity to allow purely religious squabbles to muddle them. The most important thing is that the improvement of all existing British schools, and the distribution of resources engaged for such improvements, should not be held up or distorted by interdenominational rivalries. The Roman Catholics and the Church of England both have a reasonable argument when they say that the 1944 compromise has been made obsolescent by the rise in repair costs; their case for an increase in the 50 per cent grant to 75 per cent deserves sympathetic consideration. The second point (*pace* some zealots in the low churches) is that it would be an advance in human freedom, which the state should support within the limit of its resources, if every British Roman Catholic parent could send his child to a Roman Catholic school if he wants to. But, in a secular state, this has in most areas to be regarded as definitely a second priority after wider educational improvement—especially of secondary schools. The case for a state grant towards building a new church school, in any place where a church would like one, cannot be conceded unconditionally. But there are strong arguments for widening the minister's discretion in deciding when and where such grants can be made.

HOLLAND

Friends and Allies

HOLLAND'S relations with Britain have been only marginally improved by this week's visit of the Dutch foreign minister, Dr Luns, to London. Before his arrival, the Government had deferred until the end of February the application of its decision to reduce KLM (Royal Dutch) flights to Singapore from two to one a week. Dr Luns brought with him statistics on passengers carried which conflicted with those presented by the British Overseas Airways Corporation. The two sets of figures, and other technical data, are now to be studied; but no assurance has been given to Dr Luns that the reduction will not be enforced.

As was pointed out on page 244 of *The Economist* of January 17th, this decision is, on practical grounds alone, small-minded and shortsighted. It is also politically undesirable. The Dutch are friends who have recently suffered much through arbitrary Indonesian behaviour. Britain, incidentally, needs their support, and has usually had it, in the negotiations in Europe that arise out of the creation of the common market.

It was psychologically unfortunate that the KLM decision coincided with the granting of licences to the Fairey Aviation Company for the sale of 18 reconditioned Royal Navy Gannets to Indonesia. The decision to permit this sale was taken, despite Dutch and Australian representations, after the Indonesians had given assurances that they had no aggressive designs on Dutch New Guinea.

The obvious argument in favour of meeting the Indonesians' requests for arms is that they would otherwise buy elsewhere; another, more doubtful, argument is that only those who provide arms have a say in the use made of them. But at present there are other reasons why the wisdom of selling British arms to Indonesia is debatable. In December, Labour MPs seemed unaware of the incongruity of asking the Government to stop the delivery of arms to General Batista in Cuba only four days after pressing it to let British arms go to President Sukarno. International convention approves the sending of arms to a country in a state of "civil disturbance," but not to one torn by civil war. Yet on December 11th Mr Profumo, in defending the Government's refusal—at that time—to let arms go to Indonesia, told Mr Callaghan in the House of Commons that there was a "civil war" in that country. The situation has not changed since then.

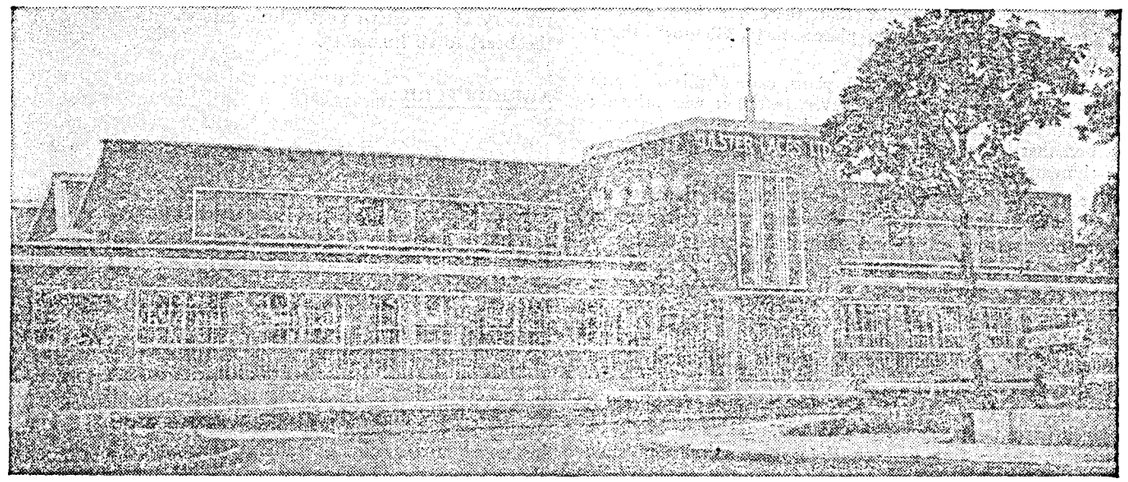
FINLAND

A Little Diversion

PRESIDENT KEKKONEN suddenly left Helsinki on January 21st for Leningrad. Although his visit was described as private, it soon developed into a high-level Russian-Finnish negotiation. Mr Sakharov, the Soviet deputy foreign minister, accompanied by experts on Scandinavian affairs, came from Moscow to welcome the president; on the 22nd, Mr Khrushchev and Mr Karjalainen, the Finnish minister of trade and industry, appeared on the scene. The President visited the room in the Smolny Institute where, forty years ago, the declaration of Finnish independence had been signed; in an after-luncheon speech Mr Khrushchev expressed his hope that the president's "informal visit" would constitute a "little diversion from the daily cares of statesmanship."

There was not much basis for this kindly hope of Mr Khrushchev's. The Finns went to Leningrad because their relations with the Soviet Union had, for some months, been going extremely badly, and this, the Soviet Premier must have known, was not entirely their own fault. The last government in Helsinki, that of Mr Fagerholm, had to go because it contained, and was backed by, men unacceptable to Moscow; now the new, purely Agrarian government of Professor Sukselainen, having only a narrow parliamentary basis, needs all the goodwill it can get, and this means Soviet goodwill in particular. There are now some 85,000 unemployed in Finland, the highest number for ten years. In his speech, Mr Khrushchev dwelt on the part trade with Russia had played in helping the Finns solve their employment troubles; at the same time, he warned his guests, quite openly, that his country had no intention of being on the losing side in its trade with Finland, and that those people in Helsinki who hope to sell more to Russia while buying less from it are bound to be disappointed. As far as trade with Finland is concerned, the Russians will have their own way. The Finns have solved their problem of government for the moment, and have gained at least a temporary Russian tolerance for the solution they have found. It looks as though Mr Kekkonen and the Finnish communists have agreed on the future conduct of Finnish-Russian relations, and that on this basis the communists have agreed to give Professor Sukselainen a trial.

GLASGOW



Scots A'Roaming

GLASGOW'S plan for eventually dispersing one-fifth of its million inhabitants to places all over Scotland (and one in England) has set off a spirited controversy. The scale of the proposed migration is a measure of Glasgow's appalling problems of congestion and squalor, which dwarf those of any English city. Half a million people are crammed into four square miles of the city, 80,000 of them living in the intolerable sordidness of over three persons per room. The city's 20-year redevelopment plan provides for the wholesale demolition of the worst slums and their replacement by tall blocks of flats, but even so it will displace 200,000 people. It is proposed that some of these should move to the nearby new towns of East Kilbride and Cumbernauld, but—according to present Scottish plans—the majority are to move right out of the congested Clyde valley.

In general terms, the plan is an excellent one. The shame of Gorbals, Hutchesontown, and the rest, cannot be erased until many of their inhabitants move; and a redistribution of people and jobs within Scotland would bring new life to many stagnant areas. To so naturally mobile a nation there ought to be nothing that is distasteful, and much that is beneficial, in the prospect. But social dreams have a habit of jarring their heads against economic realities. In particular:

(1) Compensation will be offered at market values to the numerous small firms whose premises will be acquired under Glasgow's redevelopment programme. Particularly to the city's very Socialist council this must seem fair enough. But compensation that is sufficient to pay for old

rent a NEW factory
FROM 9ᴰ PER SQUARE FOOT

get the benefit of 25% GRANTS towards CAPITAL OUTLAY

These are only two of the reasons why over 130 British and American firms have set up in Northern Ireland since 1945; and many have expanded beyond their original plans, some by two and three times.

Here are some more reasons . . .

* New, modern factories are already built, ready to walk into and with all services laid on. Sizes range from 2,000 to 73,000 sq. ft., with space for at least 100% expansion.
* Alternatively, standard factories like the one in the picture can be built to order on a site of your own choosing. Rents for both these types of factories—from 9d. per sq. ft. for the first ten years.
* Financial assistance includes an automatic annual grant of twenty-five per cent toward the cost of new and second-hand equipment (limit £100,000 in any one year) plus twenty-five per cent of the cost of new buildings—limit £50,000 per annum.
* Alternatively for projects of special value to the Northern Ireland economy there is an extensive range of grants to which the above limits do not apply. Loans are also available.
* Special purpose factories may also be built for you. These can be of unlimited size and may be financed on attractively long repayment terms.
* Plenty of adaptable labour is available. Three-shift working is possible and labour turnover and absenteeism are low.
* Belfast is only 90 mins. by Viscount from London Airport. Air, sea and road freight services are speedy, efficient and economical.
* Scores of firms will tell you of the reputation of the Northern Ireland Ministry of Commerce for endless and constructive helpfulness with every problem, large and small, that may face a firm setting up in a new territory.

PLANNING NEW PRODUCTION?—CONTACT NORTHERN IRELAND NOW

For full details of factories available now, and of the Factory Building Service as a whole, write to DEPT E6, NORTHERN IRELAND DEVELOPMENT COUNCIL (CHAIRMAN, THE VISCOUNT CHANDOS), 13 Lower Regent Street, London, S.W.1 (*Tel.: WHitehall* 0651) *or:* 99 Park Avenue (7th Floor), New York 16, N.Y., U.S.A. *or, if you prefer, to:* THE MINISTRY OF COMMERCE, BELFAST (*Tel.:* 28271).

GO TO NORTHERN IRELAND—AND GROW

and written down premises is not likely to be enough to enable their owners to build new ones. Many of these firms are liable to close down, thus adding to Scotland's unemployment problem.

(2) Those firms that want and need to stay in the city will require the corporation to do more for them than mention the "possibility" of flatted factories.

(3) Whatever happens, and despite all inducements to incoming industrialists (including government assistance under the Scottish Town Development Act), it is going to be difficult to ensure that there are jobs enough in the smaller and remoter places among Glasgow's thirty proposed reception towns.

(4) As so often happens with plans, parts of this one seem to have become out of date even before it was printed; insufficient attention has been paid to the voluntary emigration that has already taken place from some of the worst slum areas.

The economists at Glasgow University, who have seemingly played little part while decisions were being made, have now sprung to life and started airing their doubts.

What is clearly needed is not abandonment of the 20-year plan, but flexibility in it. Given the general improvement of public utilities in Scotland and recent signs of appreciably greater industrial mobility, parts of the plan seem to have a fair chance of success: particularly those that envisage the transfer of some major industrial units to other parts of central Scotland, such as Midlothian which has a large scheme in prospect. Glasgow would be wise to concentrate first on these economically possible parts of its plan, and to recognise that the economically improbable will take a little longer.

COMRADE BURNS

Their Ayrshire Lad

PUSHING and butting with cultured ease, the Russians moved in last Sunday to gatecrash the celebration of the two hundredth anniversary of the birth of Robert Burns. By the end, they were pretty well running the party. Scottish idolaters of the national, and proletarian, poet offered surprisingly little resistance. Concerned at the native reputation for using Burns night as a hoary excuse for "getting fou and unco happy," the local litterateurs hummed and hawed in anxious re-evaluation, conceding genteelly that Burns, after all, might belong as much to his age as to all time. Most of their hearers, it may be hoped, dissented.

The Russians had no doubts. It was not merely that Moscow broadcast, in the doric verse of Mr Samuel Marshak, the fraternal assurance that

> In this boundless land of ours your homespun views we cherish;
> From Baltic to Pacific shores your fame will never perish.

Full play was made with Soviet exhibitions, lectures, poesy corners and critics' rhapsodies. In the absence of Mr Malik, himself a known devotee, a first secretary of the Soviet embassy was despatched to the ceremony at Ayr, near the poet's birthplace. The Scottish communists, not to be outdone, hired the largest hall in Glasgow for their spree. Finally, to improve the shining ideological hour, the newspaper *Trud* rebuked the English reactionaries, principally the Postmaster-General, who had done their best to "distort and belittle" Burns by not issuing a postage stamp in his honour. Mr Emrys Hughes, MP for South Ayrshire, who had periodically thrust the Russian stamp before Mr Marples's unsympathetic gaze, was given a hearing on Moscow radio. All that seemed to be missing was an anti-party assessment from that old Burnsian admirer, Mr Malenkov.

This piety did not spring entirely from pure poetic pleasure. The Russians play the cultural game hard, and they play it to win. They can count it a small scoop to have muscled in so smartly, in the eyes of the world, on the memory of a western poet whose gift was to speak from the heart to all humanity.

AGRICULTURE

Small Farm Mergers?

THE passage of the Small Farmers' bill through its committee stage revealed what, if the scheme is to produce its full effects, is obviously going to be a besetting difficulty of administration. An advantage of the bill is that the lower acreage limit of the scheme is not only a negative provision, designed to exclude those holdings too small to yield an adequate full-time livelihood; it is also, potentially at least, a positive incentive to their amalgamation. Two fifteen-acre holdings, each ineligible alone, could qualify for government help if merged into a single "farm business" under joint operation. The committee debate showed that the Government, as well as the Opposition, hopes to see a substantial amount of this small-scale rationalisation set in train as the scheme's attractions become clear.

But two difficulties stand in the way. One is the doubt as to what constitutes, for these purposes, a single "farm business." A full partnership would obviously meet the case. But not all farmers are willing either to face the legal formalities and expenses involved or to submerge their independence so permanently and completely. How elastic an interpretation is possible? How close an integration is needed before two farms can rank as one? *Prima facie*, there is some divergence between what the Minister said in the debate and what farmers have been told in the official leaflet explaining the scheme. The leaflet was the tougher statement. Obviously a delicate balance will need to be struck between a rigidity that frustrates the scheme's possibilities and a laxity that makes nonsense of its limits. It is important that this balance should be struck both correctly and clearly. Otherwise much justifiable annoyance can be expected.

The other difficulty concerns the National Agricultural Advisory Service. The NAAS is a technical body. The merging of farm businesses is far from being a purely technical affair. A NAAS official who has long familiarity with his neighbourhood and its farmers can indeed both take tactful initiations in suggesting amalgamation and actively help to carry it through. A newcomer would be almost paralysingly handicapped. And a great many NAAS officials are, in practice, going to be newcomers, shifted from their usual areas to the small-farming regions of Britain to meet the special demand for their services arising out of the scheme. This is not a difficulty to be conjured away at short notice. It is the more important not to lose sight, during the inevitable teething-troubles of the scheme, of the fact that an increase in amalgamations could be one of its most valuable long-run results.

THE HEALTH OF THE SCHOOLCHILD

Generation of Billy Bunters?

NO one could have foreseen fifty years ago, when the school health service had just completed its first year, what spectacular changes would subsequently occur in the health and appearance of schoolchildren. Even twenty-five years ago, the virtual eradication of infectious diseases (including respiratory tuberculosis) as a cause of death would not have been thought possible. Nor would it have been foreseen, in the hungry thirties, that it is obesity in schoolchildren rather than malnutrition that would now attract attention in school clinics.

Compared with their predecessors of fifty years ago, according to the annual report of the Chief Medical Officer of the Ministry of Education (HMSO 10s. 6d.), boys and girls in urban areas are 2-3 inches taller at the age of five and 2-4 inches taller at the age of twelve. At the same ages, they are 4-6 lbs. and 7½-9 lbs. heavier. How much of the increase in growth is the result of the school health service, together with the provision of school milk and meals and the general improvement in nutrition of the last twenty years, is not known. The same change has been reported in America and in other countries of Western Europe and is noticeable in all social classes—not only among the poorer ones. Thus, there seems to be a long-term secular increase in growth, on which an increase due to a specific improvement in living conditions has been superimposed. There is also some evidence that the secular change is tending to wear out, for the maximum rate of increase has shifted from early childhood to school age.

In an increasing number of children, according to the report, obesity is being superimposed on the increase in weight resulting from the other two factors. It is itself, of course, the result of higher incomes all round, coupled with a tendency to interpret instructions that children should be well fed as that children should be allowed to eat as much as they like. The greater prosperity of the children themselves encourages them to supplement excessive feeding at mealtimes with excessive eating of sweets in between. Obesity can be as big a handicap to a child's progress at school as malnutrition, and Sir John Charles is right to draw attention to the potential dangers of over-eating.

UNIVERSITIES

Churchill and Cambridge

CHURCHILL COLLEGE is coming into existence with commendable speed: a beginning with its corporate life may be made even before 1961, if the building, which will be started this year on land sold to the trustees by St John's College, proceeds fast enough. Two-thirds of the new college's members will be science men and one-third arts men, a ratio which may mirror Britain's future technological needs but which more or less reverses the present pattern of Cambridge as a whole. Sir John Cockcroft is to be the first master—a logical choice, both because of the proposed numerical preponderance of scientists and technologists and because of the high proportion of post-graduate students which the college intends to attract.

At last week's meeting at the Senate House the opposition of some Cambridge dons to the foundation of Churchill was not, after all, pressed to a vote. The critics dislike the idea of a college in which science so preponderates; they also deplore the prospective influx of 600 more men to Cambridge, and are afraid that the new foundation will eventually cause some change in the character of the university as a whole. Many of their specific complaints will be regarded by other people as specific advantages of the scheme. It can be confidently predicted that in a few years this preliminary backbiting will have been forgotten, and the only question will be where to put other colleges of this kind. When it seems so hard to get a start made on the new universities that the country badly needs, it is right to send up a prayer of thanksgiving for so useful an interim blessing.

RESTRICTIVE PRACTICES IN HOSPITALS

Who Washes the Walls?

"*The general cleanliness of all parts of a hospital makes an important contribution to the prevention of infection.*" This indisputable statement appears in a report, published recently, by a committee of the Central Health Services Council on staphylococcal infections in hospitals, outbreaks of which are causing growing concern. Walls are specifically mentioned in the report as potential depots where staphylococci can survive.

"*Where washing down [of walls and paint work] has been decided on instead of repainting it is considered skilled labour should be used.*" This is part of a recommendation for the hospital service agreed on by both sides of the ancillary staffs council builders' committee and accepted by the minister. As a result, there is a tide mark along the walls of many hospitals representing the limit beyond which the unskilled Mrs Mops are not allowed to clean. Above this limit, usually shoulder level, the dust accumulates, and harbours the staphylococci, until the skilled painters have time to remove it by the methods which Mrs Mop is accustomed to use in her own home.

BOOKS AND PUBLISHING

Exports and Propaganda

TO judge by the records put up by British publishing last year, the industry continues to flourish. The number of new titles and reprints issued rose from the 1957 high of 20,719 to 22,143. The number of new books published (16,172 titles) is actually 25 per cent above the American figure, though the American turnover, owing to huge paperback editions, is higher. Of the total annual turnover (which was over £60 million in 1957, and was £45½ million for the first nine months of 1958) 37½ per cent was exported. This proportion shows only the slightest signs of sagging. But publishers say that they are encountering great difficulties in countries where the amount of foreign

Appointments, Business and Personal notices, and other Classified Advertisements pages 450 and 459

exchange allocated for the purchase of books is restricted, as well as growing competition in those areas—and in others—from heavily subsidised books and reprints emanating from behind the iron curtain.

In recent months a number of spokesmen for the publishers have come forward to complain of this state of affairs; to describe the political damage entailed by the loss of traditional British book markets in countries like Israel, Pakistan and India; and to urge that in the national interest (and indeed as part of the cold war) sales of British books to these areas should be in some—unspecified—way subsidised by the taxpayer. They are eagerly awaiting a statement from Dr Charles Hill on his return next week from Singapore.

Arguments of this kind, coming from an interested group, ought always to be scrutinised severely. The narrower part of the problem is that some foreign countries have imposed restrictions on imports of British books because they are short of foreign exchange. The Americans meet this difficulty by building up blocked accounts in local currency which are used for propaganda purposes. Britain could hardly afford to do this on an American scale, even if it were desirable. The wider problem is competition from cheap Russian and Czech books. Here, it is alleged, the cheap reprints of Dickens are the spearhead of more subversive literature (banned by most British colonial governments, not always wisely). But would the offer for sale of British paperbacks at, say, half their published price in Britain turn Africans or Asians from reading communist propaganda to reading *Erewhon* or *Lucky Jim*—or even *Dr Zhivago*—if they were available? And would the result be politically significant? If a propaganda counter-offensive by the west is felt necessary—and it may be—it is far from certain that the normal book export trade is the right channel through which to direct it.

SOVIET UNION

How Many Russians?

MILLIONS of Soviet citizens have been answering questions about their age, job, mother tongue and so on. The first census to be staged for twenty years has been in progress. Four similar inquiries had been held in the past, though the results of the 1937 one were never published. The long delay since the 1939 census is probably explained by Moscow's reluctance to reveal its tremendous war losses. It was presumably feared that these losses would be viewed not as a symbol of Soviet sacrifices but as a sign of Russia's resulting weakness. When Moscow disclosed that its estimated figure for Soviet population at the beginning of 1956 amounted to only 200 million, the figure was much lower than the available western estimates. The Soviet government now evidently feels that the country has recovered enough not to need further camouflage of this particular kind.

Fifteen questions have been put altogether. The results, when published, should provide valuable information about the age-structure and the social make-up of the population. Taking into account the huge area involved, the census presents quite a lot of technical problems. Some preliminary inquiries were made last year in the far and frozen North, but the bulk of the job has been carried out in mid-winter. Population results are promised for April; certain other figures are to be published before the end of the year. If the censor does not intervene, this information will greatly increase knowledge of Soviet society.

LETTERS

Primary Elections

SIR—In your article entitled "The Public's Business," you put the strong case for the introduction of primary elections in this country, and I suggest that the few objections you mention can be easily overcome in a typically British way.

There need be no expenditure by the prospective candidates if it were accepted that it is the duty of the party organisations to short-list candidates and to circularise the ballot forms together with the candidates' own statements of their qualifications, policies, and proposals. "Writing in," in the approved American style, should be permitted, thus giving an opportunity to members to indicate support for any candidate of their own choice.

The primary elections could be conducted quite efficiently by party organisations with less disclosure of party membership than is involved in the contracting out of political levies by trade union members. A change of this nature would bring a fresh and stimulating change into stagnant or decaying political associations, and might even persuade the cynics that the existing parties can be democratically influenced from within.
—Yours faithfully, J. HARLEY
London, NW4

Official Parties

SIR—There is another and equally important aspect to the question discussed in your article—"HMG Requests the Pleasure." Businessmen like myself who attend international conferences have been shocked by the parsimony of Treasury allowances to important United Kingdom officials.

As the senior British officials who attend these conferences are men of the highest calibre they are more often than not appointed chairmen of key conference committees. Yet their allowances hardly permit them to have meals in their hotels, much less give an official dinner or cocktail party.

Russia and her satellites readily fill the entertainment gap thus opened up by short-sighted Treasury policy.—Yours faithfully, ROBERT KIRKWOOD
Kingston, Jamaica

Gallup Polls

SIR—You suggest in your last issue that students of by-elections were better informed about the political health of the nation than those who were content with reading opinion polls. By an odd coincidence one of your respected contemporaries, *The Spectator*, carried a week earlier a detailed article warning against reading the signs of the times from by-election results. Dare we be so churlish as to side with *The Spectator*?

We have a very considerable store of data which does not get published. It suggests the following conclusions, as at the present time:

(a) There is a breaking up of the national swing which made the life of the psephologist and the pollsters so easy and pleasant.

(b) There is a danger in arguing from by-election results to the outcome of the General Election, even in the same constituency.

(c) The extent of the swing is not uniform throughout the regions.

—Yours faithfully, HENRY DURANT

BOOKS

Cosmoscope

The Sleepwalkers: *A History of Man's Changing Vision of the Universe*

By Arthur Koestler.
Hutchinson. 610 pages. 25s.

THIS is a big, useful, but puzzling and often banal book: useful because it brings in small compass an adequate history of what can loosely be termed the materialists' view of the universe in its struggles to become what we call science; puzzling because Mr Koestler seems to have written it as much for the codification of his own views as for any prerecognised public, so it often becomes banal, its progress punctuated with judgments and statements of fact already familiar to people with even a smattering of the history of science. It is useful, and in the author's intimately colloquial style easy, to have the modern mass public's inherited views about Galileo put right; yet at least two books by Italian and American savants have done this fully and effectively within the last three years. Mr Koestler gives us, in English for the first time (strange to say but true), a lot more about Kepler and his family. But it is almost thrown in as he goes along; and at the end of his long book both the savant and the uninstructed may well wonder to what end all the work was done.

Nothing now put into English about Kepler, for instance, alters the scientists' world view of him and his work; and Mr Koestler's accomplished weaving through Brahe, Galileo, and so on does not clarify what really went on between the Church and the secular authorities on the one side and the New Scientists on the other. Accordingly, as we approach the final sections on the Newtonian synthesis and our atomic era, we are like men long travelling in a jungle with a few tracks: the open horizon appears, but there seems nothing on it, and we know not whether we were led hither to die in a desert, or whether we may find meat and drink and company. Nor does the author. On the penultimate page of his text this appears:

> Thus within the foreseeable future, man will either destroy himself or take off for the stars. It is doubtful whether reasoned argument will play any significant part in the ultimate decision, but if it does, a clearer insight into the evolution of ideas which led to the present predicament may be of some value.

So it may; but from this book it is not clear of what value. The author seems to have missed his chance to lay bare more of what actually went on between the New Scientists, the Churches, the arms of the secular authorities, and the organisation of society and education in other climes and eras. For example, a true Marxist (as Mr Koestler should well know) has his cosmoscopy whereby he explains all. So does a believer like Dr Butterfield, who can discern in the historical unfolding—as did long before him both unbelievers and believers, like Acton and Hobhouse, Spencer and Westermarck—something like a "Consciousness the Will informing, till It fashion all Things fair." It would have been more helpful to us, struggling as we are in all our so-called social sciences, if Mr Koestler had taken natural scientific thought or cosmology and traced its development as a part of the development of occidental rationalism. Indeed, early on, he throws out the oft-made but seldom analysed observation that all our knowledge of the so-called "physical world" stems from north of the equator, on the hither side of India and Ethiopia. Why? Why was there in these regions such obvious parallelism between what came to be called religion and science, almost a "psycho-physical parallelism"? The internecine feuds of the early Christian church are shot through with cosmologies bearing much within them of ancient, heathen, physical lore. Sir Steven Runciman's "Medieval Manichee" was a brilliant, constructive sally into these borderlands of matter and spirit, science and religion, mythology and reason. Mr Koestler's fertile mind might have taken us farther and "some place else." Instead it brings us to a full stop before this penultimate sentence:

> Our hypnotic enslavement to the numerical aspects of reality has dulled our perception of non-quantitative moral values; the resultant end-justifies-the-means ethics may be a major factor in our undoing.

But are our young, new scientists so enslaved; and, if so, is it "to the numerical aspects of reality"? Are not philosophers and scientists, "rationalists" or not, alike pushing beyond numbers and mathematical presentations to "the meaning of Meaning"? And is *any* kind of ethics around us today a "resultant" of our enslavement to numerical aspects of reality? Could it not be said that, everywhere in that West whence these things came, the pendulum of Galileo is swinging back fast, especially in the New Thought of the Russians? After all, the horrors of our New Scientific era have only made themselves horrible enough to awaken men's spiritual, as well as strategic and political and economic, alarm through their "numerical" (or at least their physical) aspects. Accordingly the end of the Age of Reason is not yet, and the triumph of myth, slogan and irrationality is by no means secure. Nor is the self-destruction of man, even though the means lie now within his own hands. Mr Koestler throws his little lantern backward along the rough track, kindly and helpfully. We stand fearful on a dangerous ledge. But the track leads ahead, and we cannot go down again. How much more helpful would his lantern have been if he had shone it round and forward.

Three Men in a Boat

The Charm of Politics

By R. H. S. Crossman.
Hamish Hamilton. 246 pages. 18s.

Along the Road to Frome

By Christopher Hollis.
Harrap. 288 pages. 17s. 6d.

Distinguished for Talent

By Woodrow Wyatt.
Hutchinson. 264 pages. 21s.

THERE is no compelling reason why these three books should be read or reviewed together. But each is well worth reading, and to take them together is at any rate to glimpse one weakness of political parties. For all three authors are, in their fashion, thwarted politicians. Mr Crossman, whose book is simply a clutch of shrewd and idiosyncratic book reviews, may still survive to be a really distinguished Minister of the Crown; Mr Hollis and Mr Wyatt are in the wilderness, without seats for all the one's wit and the other's earnestness.

Yet, undeniably, all three of these authors, in intelligence, in curiosity and in their own (very different) forms of piety, are well above the average of most MPs and many ministers. If Mr Crossman is the most civilised of them, Mr Hollis, whose book sets out very simply, very well and very modestly the faith and fun of a lifetime, is certainly the most cultured; while Mr Wyatt, who has tried not altogether successfully to collect his impressions of the persons he has met who represent the hopeful growing points of a forward-looking Britain, is equally certainly the most contemporary.

All three of them share two simple things. One, momentarily masked but not at all concealed by the sometimes weary-seeming elegance of Mr Crossman's don-cum-journalist manner, is the very simple desire to do good in politics. The other, probably because of this old-fashioned urge, is an honest discomfort in any doctrinal straitjacket. Of the three, who should none of them stay too long on the literary and television sidelines, Mr Crossman is (and can yet show himself to be) the biggest; his famous inconstancy of judgment is no greater than that of Winston Churchill at his age—and both men have been spokesmen of Zion. Mr Hollis is (though he would blush to have it said) the good man of the three; and Mr Wyatt is the practical and didactic one who hankers after prodigies. Anyone who wants to make a quick comparison of these three books should read what they have to say about the one subject they all three include: Lord Attlee.

Upstarts in Japan

The Rise of the Merchant Class in Tokugawa Japan 1600-1868

By C. D. Sheldon.

J. J. Augustin, New York. 208 pages. $5.

IT is one of the paradoxes of Japanese history that, although the rise of the merchant class during the Tokugawa era was a major factor in the collapse of feudalism and of the old regime, the members of that class played only a modest role in the leadership of the new society as it emerged at the time of the Meiji Restoration (1868). Dr Sheldon had this paradox in mind in writing his concise and well documented book, and he clothes a story, familiar in general outline to Western students, with much fascinating detail. He shows how the policy of the Tokugawa Government after its firm establishment early in the seventeenth century fostered the growth of internal trade, the diffusion of a money economy and the growth of a prosperous merchant class.

At times it seemed as if that class would develop as a force independent of feudal authority. Examples can be found of individuals who displayed enterprise of a high order. The merchants devised elaborate forms of commercial organisation and ingenious instruments for handling financial business. They contributed notably to the superb cultural and artistic flowering that made the Genroku period (1688-1703) one of the most gracious in human history. But they never made any serious attempt to wrest political power from the feudal classes, and from time to time they received brutal reminders that it was not for them to usurp the places and privileges of their betters. Consequently, the majority of them remained conservative in temper, restrictionist in commercial policy and content to accommodate themselves to the demands of feudal society. In this connection, the seclusion policy, enforced from 1641 until the middle of the nineteenth century, was of the utmost significance, for it meant that for two hundred years the merchants were never exposed to the vitalising influences of foreign trade.

Yet, although the merchants served mainly as instruments of the feudal order, their commercial and financial activities gave rise to forces destructive of the economy of the old regime, based as it was on peasant agriculture and payments in kind and service. Individuals from the samurai sometimes engaged in trade and allied themselves with merchant families; but as a class the samurai, like the Tokugawa Government itself, were too contemptuous of the merchants, and too anxious to assert the exclusive privileges of their order, to conceive the possibility of constructive compromise. Although the Government and the lords looked to the merchants to sustain their tottering finances, they were never prepared to let the merchants promote the economic development that might have alleviated the increasing impoverishment of the feudal classes after the middle of the eighteenth century and so saved the regime from its ultimate collapse.

Physicist Off Beam

Mind and Matter

By Erwin Schrödinger.

Cambridge University Press. 104 pages. 13s. 6d.

THESE are the Tarner lectures delivered at Trinity College, Cambridge, in October, 1956. Professor Schrödinger is a very eminent physicist and a brilliant lecturer. Who could resist—or, indeed, would wish to resist—the Viennese charm of his delivery as he freely roams about from physics to metaphysics, from the Upanishads to Boltzmann's "statistical theory of time." He is an expert storyteller and is at his best when he relates, albeit at second hand, the absorbing findings of the physiologists.

But however delightful it may have been to listen to the lively *raconteur*, as reading matter these lectures are as disappointing as they are disconcerting. We are often told that a scientific training is a training in careful observation, critical judgment of the evidence, and a systematic striving for truth. How is it that eminent scientists, and physicists (it seems) particularly, when straying into subjects not their own, so often betray no signs whatever of this admirable training? Professor Schrödinger calls physics "the humblest of sciences"; yet it would hardly seem to be a sign of humility if the students of matter now feel entitled to discuss the problems of mind as if no one else had ever given more than the most fleeting attention to them. The first lecture, for instance, purports to deal with consciousness. On the basis of a few exceedingly elementary observations—that habitual actions can be performed without attention—we are presented with the following "tentative answer" to this deep and abiding mystery:

> Consciousness is associated with the *learning* of the living substance; its *knowing how* (*Können*) is unconscious. Consciousness is a phenomenon in the zone of evolution.

We are then told that "the theory of consciousness that I have adumbrated seems to pave the way toward a scientific understanding of ethics." Now this is great news indeed. How does Professor Schrödinger understand ethics scientifically?

> The ethical law . . . is plainly a fact . . . I regard its puzzling existence as an indication of our being in the beginning of a biological transformation from an egoistic to an altruistic general attitude, of man being about to become an *animal social*.

The next lecture deals with "Understanding." Here the eminent physicist deals with the genetic effect of individual behaviour—he calls it "feigned Lamarckism"—ending up with a page and a half on economics. He warns us (in what Professor Galbraith would no doubt enjoy as a splendid example of "conventional wisdom") that evolutionary

dangers lurk behind the "protection of the workers against exploitation and unemployment and many other welfare and security measures":

> We cannot shut our eyes to the fact that, by alleviating the responsibility of the individual to look after himself and by levelling the chances of every man, they also tend to rule out the competition of talents and thus to put an efficient brake on biological evolution.

He thinks that "competition between big firms and concerns all over the world . . . is as uninteresting as it is biologically worthless":

> Our aim should be to reinstate in its place the interesting and intelligent competition of single human beings.

And so we move happily on, to all the most stupendous questions of mankind. How can a great scientific mind produce so much triviality and confusion? Professor Schrödinger describes Kant's attitude to science as "incredibly naïve." This reviewer is at a loss how to describe Professor Schrödinger's attitude to man's most difficult intellectual problems.

Squalor in Delhi

Slums of Old Delhi

A survey by the Bharat Sewak Samaj Delhi Pradesh, with a Foreword by Jawaharlal Nehru. *Atma Ram.* 239 pages. 15s.

THE stupendous task before the authority that is planning a Greater Delhi emerges from this socio-economic report which Jawaharlal Nehru accurately describes as "useful, impressive and distressing." In Old Delhi, there are today 951,000 people living in accommodation intended for 301,000. Of this 650,000 "excess population," no fewer than 365,000 are crammed into the walled city built by Shahjehan in 1648 to accommodate 60,000 people. Forty-three per cent of the property is privately owned; 57 per cent is owned by government agencies. Almost the only source of water in these slums is the municipal tap, available in 66 per cent of the tenements while 34 per cent depend on public hydrants outside the buildings. An average of 8 families, or 40 persons, uses each tap. Latrines are virtually non-existent. The approaches to the *basti* (or hut) type of slum are normally littered with excreta.

People live in slums because they cannot afford to move. Most of Delhi's slum dwellers are unskilled labourers or petty craftsmen (mechanics, carpenters and so on), 80 per cent of whom are compelled by poverty to live within walking distance of their jobs. Only 15 per cent can afford cycles and 5 per cent public transport. The average size of a slum family is 4.81 persons and of its income 30s. per head a month. Only 3.4 per cent earn more than £15 per month. Fifty-four per cent of the children between the ages of 6 and 14 attend school. Twenty-eight per cent of Delhi's slum dwellers are "squatters" and pay no rent. Nearly 70 per cent believed that shifting people out of the slums would be good, but 24 per cent said that they could not afford to move further away from their work. Seventy-six per cent expressed willingness to move and nine out of ten are willing to pay higher rents for better quarters up to 12s. a month compared with present average of 4s. 6d.

Some of the solutions recommended are that the government should cease to open new offices in Delhi and move as many existing as possible elsewhere, and that the planning authority should redistribute economic activity now concentrated on Old Delhi over a Greater Delhi region—a chain of new townships, each more or less self-contained but with an economic function related to the metropolis and to the other townships. One salutes the sense of dedication that has produced this well thought out and exhaustive report, but the task is bigger than the mere building of new houses; slum prevention and cure depend on the growth of the national income. The index of India's income per head has risen from 100 in 1948 to 115 today; but the clamorous demands that are simultaneously being made upon it suggest that Old Delhi will have to take its place in the queue.

Women and Work

Wives and Mothers in Victorian Industry

By Margaret Hewitt.

Rockliff. 245 pages. 30s.

THIS is a neat and extremely competent study of the social effects of the employment of married women in Victorian industry. It begins with a series of sweeping generalisations, made by shocked contemporaries, and ends, as all such studies must do, with a series of cautious and carefully qualified conclusions. If its content is of general interest, its techniques are of special interest to students of social history. Miss Hewitt has read widely, made use of hitherto unexamined sources, and above all retained her commonsense. No opinion or judgment escapes her critical scrutiny, and yet she contrives at the same time to feel as well as to criticise. Victorian women are not remote and distant to her, but flesh-and-blood creatures, subject to strain yet capable of happiness.

The kind of generalisation which she is anxious to challenge was often highly rhetorical. Women's work, Gaskell wrote in 1833, "lays the axe to the root of social confederacy, [and] paves the way for the break-up of the bonds of society which are the basis of national and domestic happiness." Lord Ashley was equally vehement a decade later. "Domestic life and domestic discipline must soon be at an end; society will consist of individuals, no longer grouped into families." More specifically but no less violently, Mrs Bayley, a member of the National Association for the Promotion of Social Science, asserted in 1861 that

> the wife and mother going abroad for work was, with few exceptions, a waste of time, a waste of property, a waste of morals, and a waste of health and life and ought in every way to be prevented.

Miss Hewitt shows that there is insufficient data to substantiate the first two of Mrs Bayley's points, that there is no reason for believing the third to be true—she has a whole chapter on this—and that the last point needs breaking down according to circumstances. Mothers with young children exposed their children to grave risks when they handed them out to the care of others and relied on artificial feeding and "infants' preservatives": on the other hand, the position of wives without young children cannot be so easily assessed. In a chapter called "some unsolved problems" Miss Hewitt explains why. She also makes some sensible remarks about the evolution of social policy, demonstrating how concern for the "sanctity of the family" actually held back effective action. Her unpretentious study is a model for parallel works on other aspects of Victorian society.

11-12, Clement's Inn Passage, Aldwych, London, W.C.2

century to the beginning of the fourteenth, the city spent a fortune on works and buildings that were to be the symbols of its greatness. His theme is how that fortune was amassed.

This work is particularly useful because it resolves the contradiction between two views of early Renaissance Pisa: that it was an age of wealth and luxury on the one hand, and of decline due to civil and foreign war—it was resoundingly beaten at sea by Genoa in 1284—on the other. Pisa was, indeed, outstripped by Genoa and Florence, but at the same time its own prosperity notably improved. It is the same story as that of Venice in the sixteenth century when, as M. Braudel has recently shown, after the Portuguese had short-circuited its spice routes, it declined in relation to Antwerp and Lisbon, but improved nevertheless on its own prosperity in the previous century. Another useful achievement of the author's is to emphasise that Pisa is yet another exception to M. Sombart's thesis that immigration from the medieval countryside to the towns raised urban rents and thus led for the first time to the accumulation of profits on a capitalistic scale. In Pisa the aristocratic grip on property kept the cost of living high, and a drastic overhaul of the tax system in the popular interest was needed before urban industries could begin to function on a really profitable scale. And this revolution, in spite of its early date, was not carried out by men who are mere cyphers to us. Mr Herlihy is confident that his sources (largely notarial contracts) enable him to chart the personality of the petty merchant whose political influence brought it about and whose economic drive enabled him to explode it.

The main theme of the book is thus immigration from the countryside to the town, the political struggle needed to ensure a favourable economic environment there, the improvement of communications as trade increased both inland and to the ports used by Pisa in place of its own silted river mouth, and the fight to keep an expanding population alive in a marshy, malaria-ridden atmosphere. It can be said, indeed, that Pisa's failure to keep on expanding was to a great extent a matter of hygiene. To keep a thriving population healthy the city needed costly drainage projects, and the money went instead on war. To keep its industries refreshed with cheap labour it needed the full resources of its agricultural hinterland, but much of this was malaria-ridden marsh. The Black Death hit Pisa harder than its rivals because it was already more disease-prone.

The author avoids jargon and tells his statistic-strewn story with a shrewd ear for the telling phrase. He spends, perhaps, too much time describing his sources, and lets his joy in the act of discovery sometimes impede his narration of what has actually been discovered, but the pleasures of research are worth communicating, and he has given us no gutted thesis but a readable and—appropriately enough—civilised book.

Pacific Paradise

British Columbia Rides a Star

By Vera Kelsey.
Dent. 309 pages. 30s.

CANADA'S far western province has been celebrating its centenary. Miss Kelsey tells us she was chosen to write this book about it as "someone with little or no knowledge, preconceived impressions or opinions" and, above all, none of "the rooted loyalty" of its own denizens. "What would such an innocent see, hear, find significant, interesting, amusing, beautiful?" The answer is so much that three hundred packed pages seem hardly enough to do justice to it all. Clearly Miss Kelsey enormously enjoyed the cobweb of comprehensive travels that took her to nearly every corner of British Columbia; her readers cannot but share her enjoyment. Indeed, it seems unreasonable, on putting down the book, not to take passage instantly for a country offering such varied and spectacular delights.

Although it makes no pretence of investigating or analysing the significance of the impressions it records, the book gives a picture of the complex geography of the province, with maps to help the reader trace its intricacies. There are also a number of beautiful illustrations, which go far to confirm descriptions, given in a style so vivid that it occasionally verges on the flamboyant, that might otherwise be taken for Münchausen exaggerations. There are undoubtedly seamy sides to life in British Columbia, but they did not impress Miss Kelsey. She found both people and places—almost all of them—exhilarating and enchanting.

The Fall of the Kuomintang

The Inflationary Spiral: *The Experience in China, 1939-50*

By Chang Kia-ngau.
Chapman and Hall. 401 pages. 80s.

IN 1949 the forces of the Chinese Communist Party drove the Nationalist Government to the island exile of Taiwan. This was the government which, only a short time before, had won the praise of the free world for its heroic stand against aggression, which had raised China to the status of a "big four" power, and which had been a founder of the United Nations. The fall of such a government provoked heated debate about its causes.

Professor Chang Kia-ngau now presents a first objective account of the disintegration of the Chinese economy, which preceded the political and military collapse and was the cause of it. The state of the economy was reflected in the hyperinflation which Professor Chang correctly assesses as the "direct and immediate cause which overshadowed all other factors" contributing to the collapse of the Nationalist government. From the over-sanguine estimates of the economy early in the war, to the discouraging dislocation caused by Japanese successes, the problems of supply and excessive demand, the increased expenditures following V-J Day, and the continued harassing of the economy by the Communist forces, the author recounts the story of a government without a long-run economic policy, forced from one temporary scheme to another until disaster occurred. When in August, 1948, the people sold their hoardings of gold and dollars for the new notes and when the government betrayed this last gesture of trust, the Nationalist Government clearly lost the mandate of heaven, the moral right to rule.

Although Professor Chang held high government positions throughout the period, including the governorship of the Central Bank of China, the book is a completely impersonal study. To readers familiar with the memoirs of western military leaders, it will carry some of the impact of Caesar's "Gallic Wars." To the extent that the decisions in China rested on personal and family considerations, to the extent that corruption influenced the course of public affairs, the story of the fall of Republican China is still not fully told. Yet this book, written for the student of modern history as well as for the economist, is the most important to have been published yet on the last years of the Kuomintang's power.

OTHER BOOKS

BETWEEN EAST AND WEST: *Essays dedicated to the memory of Bela Horovitz,* Edited by A. Altmann. *East and West Library.* 214 pages. 30s.

This sumptuous volume embraces many of the late Dr Horovitz's interests. The very typography, the fine roman and Hebrew fonts, are a tribute to the founder of the Phaidon Press and to a man who, during his whole busy life, loved books both for their content and their outward beauty. As is invariably the case with *Festschriften* of this kind, the contributions are uneven. Fragments of monographs alternate with formal essays. Some of the latter, in turn, are hurried restatements of material set out more authoritatively elsewhere. But the range does honour to Horovitz's numerous activities: Maimonides and the Hebrew University, Nineteenth-Century Frankfurt and the Dead Sea Scrolls, an unpublished Hebrew poem from Spain and the novels of Kafka. But it is highly significant of both Judaism and Horovitz's personal originality that there should be nothing here for the art historian.

NUCLEAR POWER YEAR BOOK 1958-59. Edited by William Davidson. *Rowse Muir Publications.* 750 pages. £2 12s.

This is the second edition of a reference book that first appeared last year, the only one to specialise exclusively on atomic energy. It is rather more than a straight buyer's guide; roughly a third of the pages are given over to technical information, for instance, the properties of heavy water, and to a directory of the world authorities involved in nuclear research.

BUILDING SOCIETIES' YEAR BOOK 1958. Compiled, edited and published by *Franey and Company.* 795 pages. 42s.

Poland lies at Europe's nerve centre
read
POLISH PERSPECTIVES
a monthly published in English in Warsaw
for
* **a discussion of the various features of the new Socialist economic pattern now emerging in Poland;**
* **an appraisal of Polish efforts aimed at détente and European security;**
* **a balanced overall picture of developments in Poland;**
* **economic information and facts at first hand.**

The forthcoming issues of Polish Perspectives will contain Stefan Jedrychowski's article "On the Economic Relations among the Socialist Countries" and Michal Kalecki's comprehensive contribution on the perspectives of the long-term economic plan in Poland, 1961-1975. A detailed analysis of the 2 years of the new economic policy and a special number devoted to the problems of Polish agriculture are also planned.

Subscription rates are 12s. 6d. for six months and 24s. for one year. Place your orders with the Cracovia Book Company, 58 Pembroke Road, London, W.8, or Blackwell's of Broad Street, Oxford.

Write for a complimentary copy to our distributors or to Polish Perspectives, Palace of Culture & Science, 17th Floor, Warsaw.

LIVERPUDLIANA No. II
Substauntial free burgesses in Liv'pole
Extracts from the Liverpool precedents (Municipal Records) circa 1580.

Prior to this time the public business of the town had been conducted by the Mayor, Aldermen, and all burgesses in Common Hall assembled.
"fforeasmuche as upon due consideracon of the auncient customes of this towne, it semethe there owe (ought) to be a common councell within the same of the Maior Aldermen and xxiiij others of the most discrete and substauntiall free burgesses Inhabitants thereof, by whose discreacon or the greatter nomber of theime in their comon assemblies wthowt the rest of the comunaltie . . . All causes towchinge the comon wealthe & good governemt of this towne owe from tyme to tyme by ordered and disposed, wch said good usage by userpacon of late disordered assemblies of wholl comons (wherein throughe the varietie of oppinions of suche A multitude seldom any good successe hath ensued")...

...travel in a BIG way

Your first full day at sea! You enjoyed a leisurely breakfast followed by a stroll round the decks in the fresh, bright morning air; you played deck tennis before lunch and spent the afternoon in blessed idleness. You had tea on the promenade deck and, later, luxuriated in a glorious hot bath before dinner. With dinner over, the evening festivities begin. The choice is yours; concert; horse-racing; cinema; or dancing to a perfect band on a perfect floor. This is the life . . . carefree enjoyment all the way . . . a welcome and invaluable breathing-space for those who are on business—and secretarial services are available if you need them. No matter whether you are travelling First, Cabin or Tourist class, this is travel in a big way.

STEADY AS YOU GO . . .

R.M.S. Queen Elizabeth & R.M.S. Queen Mary together with many other ships of the Cunard fleet, are fitted with stabilisers to smooth your way across the Atlantic, thus adding still further to your comfort and carefree enjoyment.

Rest, relaxation and entertainment all the way to U.S.A. and Canada

Cunard

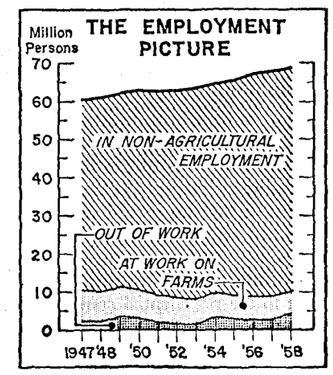
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

High Price for Restraint

WASHINGTON, DC



ACCORDING to a special analysis in the President's Economic Report last week, prices, with the possible exception of those of manufacturing facilities, have risen less in the past five years in the United States than they have in other industrial countries. Another special analysis shows quite clearly that the slump in American exports in 1958, and the outflow of gold, can in no important sense be attributed to the fact that American goods are being "priced out of world markets." Still another shows that the government's very large amount of deficit financing in the fiscal year which ends next June has largely been completed already, and that there has been no undue expansion of bank credit from this cause. Another reveals that a significant portion of the price increase which occurred between 1956 and 1958, and particularly the increase in the first half of 1958, was accounted for by special conditions in agriculture and by non-economic factors affecting the prices of a number of services. Finally, prices—from those of "sensitive" commodities to the cost of living—have been stable for six months, except for industrial prices at the wholesale level; there is reason to believe that the averages will probably remain stable for some time, particularly in view of the outlook for farm prices.

Yet in spite of all these things, the over-riding theme of both the President's Budget and his Economic Report was that inflation is the primary economic problem confronting the United States. There can be no doubt of the genuineness of the Administration's convictions on this score. Dr Saulnier, the sophisticated chairman of the Council of Economic Advisers, appears to believe nearly as strongly as do the Secretary of the Treasury and the chairman of the Federal Reserve Board that creeping inflation will seriously threaten economic growth. The Economic Report accepts so clearly the concept of "cost push"—the independent forces in the economy which raise wages and hence prices without regard to the state of demand—that it could hardly do otherwise than issue a warning that there is a threat of more price increases. If labour and business (particularly labour) do not exercise "restraint," two alternatives are held out by the Economic Report: rising prices or direct controls.

But it also mentions a third, more significant, alternative: if the economic power of private individuals—chiefly trade unionists—is used to force up the price level, the report said, "restrictive monetary and fiscal policies" would be required and thus "our chances of fully realising our potential for economic growth" would be lessened. This is not an academic threat. Whatever the causes, a rising price level in 1956-57 did provoke a restrictive monetary policy and an effort at least at a restrictive fiscal policy. Again, whatever the cause, the economy practically stopped growing in real terms. Now in 1959 a herculean budget squeeze, helped substantially by the ending of a number of non-recurring obligations, has sharply reduced estimates of future spending by the federal government and the central bank, aided by private operations, has driven interest rates up to levels not seen since the nineteen-twenties. All this has happened without any noticeable signs of inflation except that prices failed to fall during the recession and wages continued to rise.

WILL this combination of policies again hold up economic growth, as the trade unions and some of the more intellectual Democrats are saying? The Administration's own projections—made public in connection with its estimates of next year's budget receipts—imply that the rate of growth will be only slightly slower this year than in the extraordinary recovery year of 1955. This is true even though the projection of an annual rate of $480 billion for the gross national product in the final quarter of 1959 is only 6 per cent higher than in the last quarter of 1958, compared with a leap upward of 10 per cent during the same interval in 1955, after the last recession. The difference is largely accounted for by the fact that the recovery began sooner in the year this time and thus had gone farther by the fourth quarter of 1958. When the changes from the lowest quarter of each recession are compared, the rise by the fourth quarter of this year will have been 12½ per cent, compared to 14½ per cent last time.

Because unemployment was higher when this slump began, and rose more during it, such an increase in total national output will not be enough to restore "full employment" by the end of the year, but it is still a very respectable rate of growth. The question is whether it will actually occur in the face of the budget squeeze and the degree of monetary restraint already existing. For example, even though much of the reduction in expenditures in the Budget is more technical than "economic," there will still be a downward drift in purchases of goods and services by the federal government during the last half of this year, meaning a downward drift in one important sector of demand. And there is more than a possibility that the mild monetary restraint, and even more the reaction of long-term interest rates to it, will begin to affect the housing industry in the last half of the year.

The Administration is clearly willing to take these chances and, in addition, to oppose new domestic programmes involv-

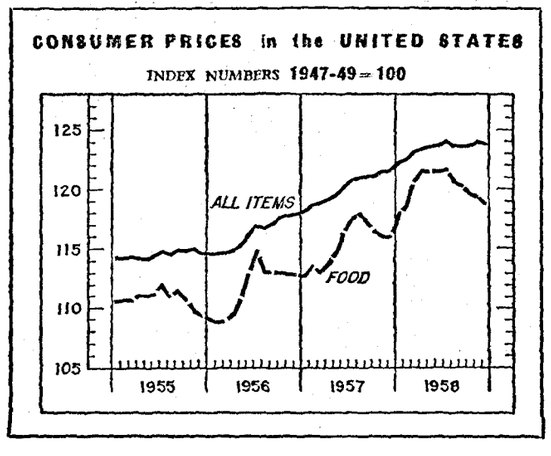
ing expenditure and to permit only a nominal rise in defence spending and in foreign economic aid. As in Britain, it can be argued that there is considerable room in the economy for a little more reflation, and that there is need for more government services. Furthermore, there are no present signs of inflation. What, then, is the explanation of the Administration's view?

A large part of the reason for it lies in the unpublicised field of debt management. The nervousness of the money markets—a nervousness attributed in Washington to "inflation psychology"—has given nightmares to the Treasury and the Federal Reserve Board. The government's recent modest long-term bond offering fell below the issued price within a week of the closing of the books. A record amount of short-term debt must be re-financed this year, mainly because last year's deficit financing, while it was conducted without excessive resort to the banks, was almost entirely on a short-term basis. The only hope of bringing order into the situation that the Treasury can see is to balance the Budget and thus to remove at least the need for raising new money. A balance would also, in the Treasury's view, have the effect of persuading the financial community that inflation is in fact being got under control. Moreover, it would help to restore the respect for the dollar abroad, which some people in Washington seem to feel has been threatened by recent events, particularly by the deficit of $13 billion in the Budget.

The Administration, in the belief that the next price rise must be tackled before it begins, has been willing to antagonise the trade unions, to make the government's public image one of "*do-nothingness*" and to give the Democrats an opportunity of assuming the part of the activists. It has firmly rejected the idea that the present state of the economy needs any stimulus from fiscal policy and has made clear it would prefer the recovery from this slump to be somewhat more gentle than it was from the last one, even though this will mean fairly high unemployment for some time. All this is very courageous, even "bold" in a negative sort of way. But it is not only the "*irresponsible spenders*" who wonder whether it is also wise.

Republican Mutiny

GENERAL EISENHOWER may have won two battles for the Presidency but he has lost the Republican war against the Democrats and should be retired: that at least was the judgment of the Republican National Committee at its heated meeting in the freezing Middle West last week. Strongly representative of the reactionary influences in the party the committee has never ceased to resent Mr Eisenhower's "modern Republicanism"; but its leaders have waited to mutiny against him until the moment when he appears to have become almost as conservative as they. The explanation for this paradoxical timing is that he is now in the last two years of his Presidency and is already losing command of his party. One member of the committee even suggested that he should resign at once in favour of Vice President Nixon and it was clear that the committee wanted Mr Nixon to command the party in 1960. To him this may seem ominous for, ever since 1940, the Republican who has gone to the presidential convention with the backing of the right wing of the party has lost the nomination to the candidate of the liberals—to someone like Mr Nelson Rockefeller.



To do the members of the National Committee justice what they are, with some justification, accusing the President of failing to provide is leadership in that "unremitting political effort" which he and they agree is vital if November, 1960, is not to be an even worse disaster than was November, 1958. They endorsed the detailed programme which their able and intelligent chairman, Mr Alcorn, put before them for raising funds, improving publicity, recruiting workers and candidates and attracting young people—in fact, for curing the party of its "political anæmia." The purpose of all this, in Mr Alcorn's view, is to erase from the voters' minds the "false image" of the Republicans as the party of big business and of privilege, a party which is against the trade unions and has nothing to offer the young.

But although the committee realised that a fresh face would be needed to fill the blank it was not its job to draw one and luckily it did not try. There were many demands for a new statement of where the party stands and Senator Goldwater, just appointed chairman of the Senate Campaign Committee, is only one of many who says that this should be right of centre because the left is overcrowded. From this it is obvious that, if the National Committee had drawn up a fresh statement of policy, it would only have served to etch Mr Alcorn's false image more firmly into the voters' minds. If the National Committee's were the only voice in the Republican party there would be little hope that the GOP, old though it may already be, would ever be grand again.

First With the Most

REVERSING the usual pattern, it seems that this year Congress will propose, the President dispose. The Democrats are convinced that their electoral victory in November was a vote against Republican stagnation and inaction; a good many trace their personal triumphs to the President's veto of a Bill to assist depressed areas and to the failure of new housing legislation to surmount a Republican blockade. In the Senate, where the press of would-be presidential candidates is thickest, many Democratic Bills were given a flying start before the Administration made up its mind on its own proposals.

The fact that the Democrats have seized the initiative and control the majority in both Houses does not mean that the President is powerless. The Republican leaders say he will use the veto freely to defend the precarious balance

of the Budget if the Democrats pass extravagant welfare measures. Housing and the modernisation of airports will probably provoke the first clash; the Democrats want much more generous provision than the Budget makes for urban renewal, slum clearance, public housing, college buildings, and housing assistance for the aged and other special groups; they are in a position to exact a good deal as the price of giving the President the authority to continue insuring private mortgages which he must have if the housing boom is not to collapse. On the other hand—and this is a restraining factor where much legislation is concerned—the two-thirds majority to over-ride a presidential veto will be forthcoming only if measures are moderate enough to win broad support.

One of the most remarkable coups of these opening weeks was the introduction of a Negro rights Bill by Senator Johnson, the Democratic leader; he stole most of the Administration's least controversial ideas while it was havering over proposals to deal with the most controversial issue of all—continued racial segregation in southern schools. In one move, Senator Johnson check-mated the Administration and the liberals of both parties who back a Bill to force the South to integrate; intentionally or not, he managed to blanket much of the publicity for Senator

"By The Way, Did You Get My Message Of November 4?"

Kennedy's labour Bill. The Johnson proposals are moderate enough to pass, probably without provoking a southern filibuster: he would extend the life of the Civil Rights Commission to January, 1961; give the Department of Justice powers of subpoena so that it can secure access to voting records; make it a federal crime to transport explosives across state lines knowing that they were to be used to blow up buildings; and—his personal contribution—create a federal conciliation service for racial problems. The constitutional rights of Negroes may hardly be a suitable subject for conciliation, which implies concessions. But if, for the second time in two years, a Democratic Congress passes a civil rights Bill, the party will be in a strong position in 1960; so, incidentally, will Mr Johnson if, in spite of his disclaimers, he decides to challenge the unwritten rule that a Southerner cannot win a presidential nomination.

Carrying on with the Carriers

FROM A DEFENCE CORRESPONDENT

In spite of the insistence of land-based critics that the aircraft carrier is obsolescent the Navy is pressing full speed ahead for another big carrier in this year's building programme. It has reluctantly laid aside its hope for another *Enterprise* (the big nuclear-propelled carrier scheduled to be launched in 1961) in favour of another *Forrestal*, which would be conventionally powered, but otherwise would be as "modern" as the *Enterprise*. Another *Enterprise* could range the seas indefinitely, but its cost—$300 million—would probably sink it in Congress. Another *Forrestal* will cost $120 million less, and yet will supply the additional big flight-deck, 1,046 feet long, which the naval planners declare is essential to American sea-power.

Even so, the fight for congressional approval will not be easy, but the Navy is confident enough to have signed the contract early this month for a new dry dock 1,152 feet long (needed for a carrier and nothing else except perhaps an Ark). The development of long-range missiles has made even the advocates of land-based aviation realise how vulnerable a huge, fixed airbase is. A naval task force may be threatened by enemy submarines or by advanced types of guided missiles, but a 30-knot carrier on a constantly altering course offers no target whatever to a long-range ballistic missile.

The other effective argument which the Navy will use before congressional committees is that neither an A-bomb nor an H-bomb has been employed in the 17 limited wars of the past 13 years. The communist forces have made their gains with conventional weapons, and the free world has blocked them with conventional weapons. In two recent crises, in Lebanon and the off-shore Chinese islands, completely conventional naval forces served most efficiently. As the Navy's air chief, Vice Admiral Pirie points out, naval aviation is immediately available all around the globe and is able to provide the exact amount of force required, with precision and discrimination.

The modern carriers which the Navy wants will have the new improved steam catapults, the canted deck, the landing mirror, the fast-moving lifts and, properly, a hull initially designed to meet all stresses. They should also have the long, broad deck and the stability which has cut accidents in half on the *Forrestal* compared with those on the shorter Midway and Essex types and which make it relatively easy to recover aircraft, even in stormy seas.

Fifteen truly modern carriers is what the Navy would like, but it may have to make do with 12 by 1965. Today there are only four *Forrestal*-class carriers with three more, plus the *Enterprise*, to be launched by 1961. With the three converted Midways, the gap must be filled by conversions of Essex types, for all the disadvantages of their 520-foot landing strips compared with ones of 720 feet. The Navy will fight hard to get another new carrier every two years.

Vice President to Mr Nixon?

WASHINGTON, DC

UNTIL recently the man thought most likely to be the Republican candidate for Vice President in 1960 was Mr James Mitchell, the Secretary of Labour in the present Administration. Mr Mitchell is a Roman Catholic from the eastern seaboard, with the kind of face that novelists describe as ruggedly honest and a flair for getting along with the trade unions better than most people believed possible for any Republican in his office. This seemed to make him an ideal running mate for Mr Nixon, a Protestant westerner who needs more support among trade unionists and whose face—at least in the photographs which are all that most people see—has a look which his friends call alert and his enemies downright devious.

But, if Mr Mitchell has ambitions for the Vice Presidency, two recent developments have put difficulties in his way. One is the emergence of Governor Rockefeller of New York as a potential rival to Mr Nixon. Mr Mitchell, who hails from New Jersey and made his business career in New York, comes from the same corner of the country. Worse still, both easterners are ranked among the party's liberals. In the unsubtle operation known as " balancing the ticket " this is a grave disadvantage. Mr Mitchell's fate is thus tied to Mr Nixon's.

His second difficulty arises from the trade union legislation which Congress, aroused by the exposures of the McClellan committee, is once more tackling. Last summer Mr Mitchell surprised many observers by vigorously attacking the Kennedy-Ives Bill, a moderate measure chiefly designed to make sure that the unions held secret elections and published accounts of their financial activities. It was killed by the House of Representatives after being passed by the Senate. Mr Kennedy has now re-introduced a similar Bill, and Mr Mitchell has repeated his criticisms of its alleged inadequacy. He wants the Secretary of Labour to be given wider powers to check the truthfulness of the reports he receives. He also wants to impose restrictions on secondary boycotts—the practice by which unions bring pressure to bear on a firm not involved in a strike to prevent it from doing business with one that is—and on picketing designed to force an employer into accepting organisation of his workers even if fewer than half of them wish it.

The trade union movement, which accepted the Kennedy-Ives Bill after some qualms, strongly opposes the additions. Unfortunately for Mr Mitchell, the Bill which the Administration introduced this week will be guided through the Senate by Mr Goldwater of Arizona, the senior Republican on the labour committee and a radical right-winger who thinks that Mr Mitchell's proposals are, if anything, too mild. The Republican right wing will tug Mr Mitchell in one direction and his hope of preserving his good name with the unions will pull him in the other.

This is a pity, because in his five years in office Mr Mitchell has been one of the most effective Secretaries of Labour in the history of the job. He had had experience in labour relations when he worked for large New York stores ; and since he took over the department in 1953 (after President Eisenhower's brief and unsuccessful experiment at putting a Democratic trade unionist in the post) he has expanded its activities and reasserted its authority. Under Democratic Administrations union leaders dealt directly with the White House and in Mr Eisenhower's early days the conservative Secretary of Commerce, Mr Weeks, plainly thought that labour matters ought to come under his wing. But in 1954 Mr Mitchell successfully opposed an attempt by Mr Weeks to make the unions subject to the anti-trust laws. Since then Mr Mitchell has become the President's adviser on labour relations, and has gradually taken on the role of supervising the various independent agencies which deal with labour. He is now one of the more substantial figures in the Cabinet.

Perhaps the reserves of good will he has built up with the trade unions will last him through the present crisis, if Congress can pass a labour law without too protracted a quarrel. Certainly some of the things Mr Mitchell says are calculated to make many Republicans wince. At the height of the debate over union corruption last summer, in his appeal for a distinction to be made between the sheep and the goats, he said: "I think it is a good thing for the country that labour has assumed a more influential position in the total sum of our affairs." In 1955 he supported the successful move to raise the statutory minimum wage to a dollar an hour, and this year he has questioned, at least by implication, the view that the unions' wage claims are chiefly responsible for inflation. Not many Republicans enjoy this kind of appeal.

Merging to Compete

THE Manufacturers Trust Company, determined to preserve its position as the third largest bank in New York City, is considering a merger with the Bankers Trust Company, now the sixth largest bank. The new institution would have assets of $6.7 billion and would thus be able to trump the $4 billion of the new Morgan Guaranty Trust Company which will otherwise become the runner-up to the two present leaders, the Chase Manhattan and the First National City Banks. The Morgan-Guaranty merger is still being considered by the various regulatory authorities ; if it is not approved, the Manufacturers-Bankers amalgamation, should it become a formal proposition, may not be approved either. But in that case the two banks would not mind very much, for the main purpose of their proposal is to enable them to compete more effectively with the Morgan-Guaranty giant.

Essentially the Manufacturers Trust is a " retail " bank, serving small depositors and borrowers, while until recently the Bankers' Trust was a " wholesale " bank concentrating on business customers. But it too has been spreading out and, if the merger takes place, the new bank will have some 160 branches, far more than any other in New York City. The competitive pressure for more branches, to bring in more deposits and to tap the ever-growing market for loans for buying consumer goods, has been one of the main reasons for the successive waves of bank mergers since the war. It is cheaper and quicker to take over existing branches than to set up new ones.

Another reason why banks want to grow bigger, affecting the wholesale rather than the retail side of the business, is that there is a legal limit, fixed in relation to a bank's capital, on the amount of money it may lend to a single customer ; no bank wants to share with competitors the interest on a loan which it might have handled itself if it had had more capital ; in any case large borrowers may prefer to deal with only one institution. Some banks also look for mergers to bring in younger and better managerial talent ; this is one of the benefits which the Guaranty Trust will obtain from joining Morgan's. Finally, the best way of checking the rise in operating costs, and of increasing earnings, is to introduce mechanical equipment ; but a bank must be big for this to be worth doing on any large scale.

New Start for Atoms

IF only the Budget were a little more elastic, room probably could be found at last for a settlement of the quarrel between the Administration and the Democratic majority on the Joint Congressional Committee on Atomic Energy over the right way to develop this great new resource. The Democrats fear that the United States will be left behind in the technical race unless the government itself builds large-scale plants to produce electricity from the atom, but up to now the Administration has left this to private industry, with the government paying the costs of fuel and research. Fortunately, the new chairman of the Atomic Energy Commission, Mr McCone, is more sympathetic toward the Democrats than his stiff-necked predecessor, and an advisory committee he appointed to reappraise the whole programme has provided some elements of a compromise.

This committee, like the Democrats, feels that the government must give a stronger lead and firmer direction to atomic development. It would leave the building of large-scale plants until this becomes profitable for private industry but, to reach the goal of competitive nuclear energy by 1970, the committee says that more must be spent on research and that the commission should start work this year on several new prototype reactors, if industry will not build them. One of these is of the gas-cooled type which Congress, over-riding the Administration last year, said that the commission must build unless private interests submitted an acceptable offer in double-quick time. The advisory committee thinks that the private offer to build a more advanced version ought also to be accepted. But congressional suspicions of the reliability of private industry have been sharpened by the recent decision of the Pennsylvania Power and Light Company and the Westinghouse Electric Company to abandon their project for a large-scale homogeneous-type plant ; this may tilt the scales against reliance on private enterprise.

Mr McCone, taking courage from his advisers, has boldly announced that next year's government construction programme will include some small reactors. He seems to feel that the commission, after five years of exploring different concepts, should start to develop the most promising. He also threw out a welcome hint of more financial aid to advance private construction of nuclear electricity plants. But first he will have to convince the President ; the Budget, which gives the commission more to spend than it has ever had—$2.7 billion—makes no provision for any new departures in developing peaceful atomic energy.

Displaced Negroes

FROM A CORRESPONDENT IN IOWA

LIKE other northern cities which have hastened to take advantage of the grants now offered by the federal government to help to clear slums and to build roads linking town centres with the great new interstate highway system, Des Moines is being made to realise that the North, like the South, has its racial problems and that the gravest of these is discrimination against Negroes in housing. In spite of legal decisions, the earliest over forty years ago, declaring that segregation in housing cannot be enforced by law, it has been increasing steadily as whites have moved out to all-white suburbs and Negroes have crowded from the rural South into the decaying central portions of the big towns, northern and southern.

Like all northern towns with more than a token number of Negro residents Des Moines, which has 10,000 of them to 180,000 white citizens, discriminates in various ways against Negroes by custom, although none of these is backed by law or by much open public support, and some are beginning slowly to break down, particularly in employment. But the Negroes remain segregated residentially, living almost exclusively in three run-down districts near the central business section.

There are blocks and blocks of houses entirely inhabited by Negroes, and then a surrounding belt where white and coloured live side by side. In these mixed areas there is a strong tendency for most new residents to be Negroes ; but in Des Moines (unlike parts of New York, Chicago, and other cities where the Negro population has been growing quickly) these " transitional neighbourhoods " do not change their racial balance very rapidly, remaining bi-racial for many years. However, estate agents, familiar with what has happened in Chicago, believe that once a single Negro moves into a block near a coloured district, then the houses on both sides of the street from corner to corner are bound in the long run to become predominantly or wholly Negro ; in the meantime whites are ill-advised to move in.

Some estate agents encourage—and profit from—panic sales by the whites who are already there but most consider such " block-busting " unethical ; it is also considered unethical to bring the first Negro into a block. Social scientists do not believe that one Negro is enough to turn a whole section black but they do believe that there is a " tipping point," perhaps around 10 per cent, certainly much less than half. A large but undetermined percentage of the public shares these views, though in less mathematical form and with dwindling force.

In practice, when a Negro tries to rent or buy a house anywhere outside the informally established coloured area, there is likely to be a tremendous flurry among the neighbouring whites, with indignant and threatening telephone calls to the owner and agent. Sometimes meetings are held and petitions signed ; sometimes the objectors recognise that the Negro has a right to buy, and attempt to buy him off. People who claim to have no personal objection to a Negro neighbour are hysterical about the loss in the value of their property. If the Negro moves in, " For Sale " signs often appear on white houses nearby and youngsters shout insults,

dump sacks of refuse on the newcomer's doorstep, or throw stones through his windows. Bombings and hostile crowds make headlines, but these milder protests are too common to be treated as news. They have in fact been relatively rare in Des Moines because the Negroes form a small and rather static minority, and only a few prosperous professional men have challenged the colour bar in housing.

BUT now the new road is going through the main Negro district and part of it is also included in the related slum clearance scheme. Soon houses will be torn down and hundreds of Negroes will be looking for new homes. Several local groups are preparing for this upheaval and are hoping to use it to break the colour bar and to establish in custom as in law the right of Negroes to buy or rent dwellings wherever they can afford to go. A striking feature of the last decade or two, in Des Moines and elsewhere, has been the whites, few but dedicated, who are willing to spend time and energy and to risk unpopularity in order to press for justice for Negroes, and the Negroes, also few but militant, who are willing to do the same to win advances for their race. These activists have great influence since the principles for which they stand are ones which few Northerners care to oppose formally in public because they will be pilloried by the press, the politicians, the teachers, the preachers, and the ex-servicemen's groups.

Now the Quakers of Des Moines are undertaking to get a thousand people, preferably well-known and respected leaders in the community, to sign a manifesto saying that they believe in equality in housing and will welcome Negroes of good character who come into their own neighbourhoods. Other religious organisations are supporting this effort, mainly by the educational work and personal approaches which they think will be needed before very many people will "stand up and be counted" on this issue.

Two official city advisory committees are also seriously concerned with the coming displacement of the Negroes: the Urban Redevelopment Committee and the City Commission on Human Rights. These, also, agree that equal opportunity in housing must come and want to speed the day; but they differ somewhat on how to go about it. Part of the Urban Redevelopment Committee's responsibility is to recommend to the city council how decent and sanitary houses are to be provided for people whose homes are about to be pulled down. Most of them expect to find their own dwellings, but for those with very small incomes this will be difficult. Iowa is one of the few states which does not permit its cities to take grants from the federal government for building subsidised public housing, so the committee plans to borrow money, buy cheap land, and lease it to private contractors who will put up low-cost dwellings there. The contractors will also be required to welcome Negroes and whites alike, both in this "relocation area" and in the larger slum area to be cleared and rebuilt later.

The "relocation area" picked as a site for building 200 dwellings is mostly vacant, but in a district which was 40 per cent Negro in 1950 and is now 65 per cent Negro. The committee saw this as an established inter-racial area and thought that in any case the new project would create its own wholesome climate and attract both races. The Commission on Human Rights (backed by the local branch of the National Association for the Advancement of Coloured People) objected that it was in a district which was in transition from all-white to all-Negro occupancy. The Urban Renewal Committee stood its ground and the city council adopted the recommendation, with assurances that it stood against compulsory segregation. But if the arrival of a single Negro occupant can change an all-white district into one in transition, as the estate agents contend, no satisfactory site can be found anywhere. The only answer is to drive out this concept all over the city, as the religious groups are trying to do.

A detailed report on racial discrimination in housing, "Where Shall We Live," was published last year by the University of California Press. $1.50. 77 pages.

Unfair to the Subconscious

SUBLIMINAL advertising caused a great stir in 1957 and early 1958, but for almost a year little has been heard about this Orwellian scheme for influencing people by flashing on cinema or television screens symbols or messages which can be perceived only by the subconscious mind. The message flashed to one Democratic Congressman, however, has not been forgotten; it was "ban the horror." Last week Representative Wright of Texas, himself formerly an advertising man, introduced a Bill to forbid any device "designed to advertise a product or indoctrinate the public by means of making an impression on the subconscious mind" when the public was unaware of it. The proposed penalties include a $5,000 fine and five years in prison.

It is not yet certain that the subconscious needs such a heavy-handed guard. The first experiment did show that sales of popcorn rose by 58 per cent when the message "East Popcorn" was flashed on the screen so rapidly as to be invisible to the conscious mind. A whole new dimension of manipulation seemed to be at hand and Senator Potter called for control over this "revolutionary and frightening development." But such effective salesmanship was not maintained in all cases. For three weeks a television station in Maine, W-TWO, urged its viewers to "Write W-TWO," but its post remained obstinately stationary. A test by the Canadian Broadcasting Corporation showed that only one viewer out of 500 received the right message and, when members of the Federal Communications Commission and of Congress submitted themselves to subliminal advertising, Senator Potter's own fears must have been relieved; his response was to demand a hotdog when he should have asked for popcorn. The subliminal technique, it is suggested, can also be used to heighten pleasure or emotion by superimposing symbols upon the screen, either abstract ones such as triangles or, presumably for less sophisticated audiences, traditional ones such as hearts or serpents.

Not all Americans objected to acting as guinea-pigs, but some reacted strongly; temperance societies, for example, feared that subliminal advertising might break down resistance to alcohol. Public protests led a television station in California to abandon plans for using the new technique; the big networks refused to permit it. The FCC declined to issue a ban, and is waiting to see what Congress decides. The risks no doubt were grossly exaggerated; the inventor, Mr Vicary, never claimed more than that subliminal advertising was useful as "reminder advertising." It cannot be used to introduce new products. Even so, it might save a good deal of time for pure entertainment if sponsors used it for their commercials.

THE WORLD OVERSEAS

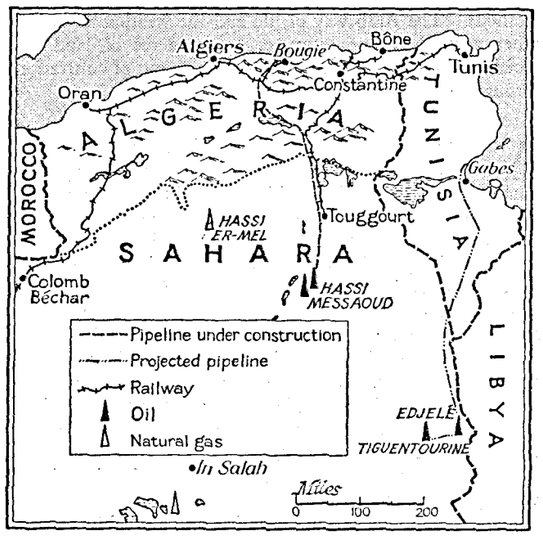
The Fight for Algeria—II

FROM OUR SPECIAL CORRESPONDENT

THE soil of Algeria is favourable to illusions, if to little else. But one illusion, at least, has withered: it is no longer supposed that the rebellion can be defeated by repression alone. Political equality, education, housing, social services, and economic improvement all have their place in the French programme for Algeria today. Those Frenchmen who see things simply would say that the object of the programme is to root out Arab nationalism in the country by making *l'Algérie française* a reality. Others, more sophisticated, hope that as the years go by and the identity of the rebel leaders, kept at arm's length by the omnipresent Army, becomes more shadowy in Algerian minds, benevolent government and social progress will produce a new Algerian elite which sees the benefits of the French connection. Thus the rebellion, they hope, will become outmoded and pointless. In either case the programme is much the same; it is merely the view of the end that differs. The only other possible programme—a political negotiation with the rebels, quite a different thing from General de Gaulle's *paix des braves*—is ruled out for the present by the political condition of France.

At every point, the programme of pacification by improvement faces very great obstacles. The men engaged in it themselves call it a gamble. Political equality cannot mean very much in a country engaged in civil war, where opposition is identified with rebellion. The present political spokesmen of the African community in Algeria are not to be found in the National Assembly in Paris, but in the government in exile, the rebel army, the prisons and the internment camps, and in hiding. How is this to be changed? In education, the French are making a conscientious effort, but it will be an entirely new thing if education proves successful in leading the youth of an undeveloped country away from nationalism; most experience points the other way.

What of economic improvement? It is not understood by most people in France, let alone in Britain, how poor, how unevenly developed, and how difficult to improve the Algerian economy is. The powerful wine, the out-of-season vegetables and delicious fruits that represent the Algerian economy in the markets of north-west Europe give a false picture; milk and honey flow only in patches of the narrow coastal plain, a tiny area of the country, providing work for a modest fraction of its population. An excellent official publicity presentation of the problem, *Documents Algériens*, estimates that only a quarter of the population of Algeria, Europeans included, participates at all in the "modern sector" characterised by the specialisation of labour and the common use of money: that is, in industry and trade, public and other services, and cultivation for the market. This organised sector supports, say, a million Europeans and a million and a half Muslims. Certain others, principally the Kabyles, live by exporting their labour to France. The rest, the bulk of the Muslims of Algeria, live by a steppe, mountain, and desert economy which has no affinities with Europe. A rural improvement service works doggedly, but on too small a scale, at the reclamation, irrigation, and terracing of land and the improvement of small farming methods. The Arab way of life and the weather work the other way. By one estimate, 50,000 acres of land are reclaimed every year, but 125,000 acres go out of cultivation through erosion.



A HUNDRED years ago this huge arid country sustained perhaps two and a half million people. Today it is inhabited by 10 million, with no doubt an appreciably higher mean standard of life; but it would not be quite accurate to say that it sustains them now, since Algeria has a large and regularly growing budget deficit, met by subsidies from Paris, and a large and growing deficit in its external trade. Population increases at a fantastic rate, something over 260,000 (well over 2½ per cent) a year. Forty per cent of the population is under 15. To raise the national product year in, year out, as fast as the population rises would be quite an achievement; but if the Algerians are to be made into Frenchmen, there has to be a much faster improvement than that.

Statistical unemployment makes little showing in a country where most people have never been regularly employed; but, by an authoritative and probably conservative French estimate, the equivalent of an unemployment figure of 600,000 is spread over about two million men in the form of under-employment. The essence of the ten-year plan described on page 53 of *The Economist* of January 3rd is to create 780,000 to 850,000 new jobs by public expenditures of 5,000 milliard francs; General de Gaulle's plan announced at Constantine in October is in effect a commitment to get half of this plan into effect in five years—an acceleration of what had been intended.

Obviously the government can create some of these jobs directly by housing and road schemes and other public works. But there will still be a need for a stimulus to miscellaneous industrial enterprise to take advantage of the offer of subsidies and tax rebates to firms starting up in Algeria. This will be crucial. A return of political confidence is hardly a stimulus, but rather a first condition of the industrial expansion that the government desires. Before Arab nationalism had been heard of in Algeria, very little French industry settled there; to an outsider it is not clear why, but the chambers of commerce seem unanimous that costs are too high, the market too small, and the competition of the metropolitan French firms too formidable. Nearly all manufactured goods are imported, in consequence, from France; and few traders in Algeria expect much change.

The idea that Algeria can be modernised in a few years to support a fast-growing population at a decent standard of life does not spring, however, from a calculation of probabilities but from political necessity. Under this compulsion, French opinion has been groping around for a golden key to unlock the door, and has found it in the energy

resources—oil and natural gas—of the Sahara. Oil and gas are to take up about a fifth of the expenditure under the ten-year plan. A succession of discoveries at widely separated points has made it clear that the Sahara does contain important oil and gas deposits. The three that come immediately in question for development are the oilfield at Hassi Messaoud, from which a pipeline is being laid to Bougie ; two oilfields near Edjelé, further south and close to the Libyan frontier, which are to be connected by a second pipeline across Tunisia to the Gulf of Gabès ; and the gas field at Hassi er-Mel, estimated to contain five or six times the reserves of Lacq, in southwest-France.

A short visit to Hassi Messaoud this month left no doubt that this oilfield is being energetically developed. Because of the great depth of the formation and the distance (500 miles) from the coast at Bougie, the drilling operations and the pipeline are taking very large amounts of capital, but they are now getting close to the point at which they will give a useful return. Most of the pipe has been laid, and work has started on the first two of four pumping stations. The project is being pressed ahead at a pace that reflects the high political priority of a link calculated to bind France and Algeria yet tighter together. The planned outputs of 4,500,000 tons a year by October and 14 million tons a year in April, 1960, may not be reached dead on time, but they should not be missed by big margins.

Failing some unlikely misfortune, an oil production of about 20 million tons a year from the French Sahara seems fairly assured in 1961 or soon after. Clearly this will be a useful asset to the franc area ; but it will have cost a lot to get. The further exploration and development that are planned will cost a lot, too—and a large part of it will come out of the French budget in the form of working capital for the French state-owned oil companies. On the face of it, it will be many years yet before the French oil operations in the Sahara begin to yield revenue faster than they draw capital. (When they do, the revenue will go not to Algeria but to Paris, through the Saharan regional organisation.)

What the French economic planners hope for from the Sahara is not quick money, but a cheap source of energy, which, it is hoped, will somehow provide the wanted stimulant to release a burst of industrialisation in Algeria. This cheap energy is sought in natural gas—perhaps by piping the waste gas from the oilfields ; perhaps by developing the natural gas field at Hassi er-Mel as a separate project. But if either of these sources is developed, at heavy cost, merely to supply the small and dispersed market of the Algerian coastal economy, the gas when delivered is not going to be cheap. Ideas are being bandied about for opening up a bigger market by exporting the gas (by ship or submarine pipeline) across the Mediterranean. Much of this is still fanciful. But on the uncertain basis of such ideas there is serious talk of an iron and steel complex at Bône, using the good-quality iron ore of eastern Algeria with the gas of the Sahara. Not only the economics but the technology of this scheme look quite indeterminate. Oil refineries and petrochemical plants are mentioned—excellent things, which make money ; but, like steelworks, they take very large capital investment to create very few jobs ; and what Algeria wants is employment.

Somewhere about this point the imagination begins to run out. The truth is that it is not at all likely that the development of Sahara oil and gas will bring about rapid or widespread economic development in Algeria. What Algeria needs even more urgently than sources of energy is an energy-consuming economy, with all its miscellaneous industrial components which take many years of investment to create. Above all, it needs a huge effort to extend and improve the cultivable land and to develop systematic agriculture over large areas as the staple means of livelihood.

It seems hard to resist the conclusion that the French economic effort in Algeria will not bring much more than negative benefits for many years to come. It may stem the tide of poverty, which without French help would grow to appalling dimensions ; but it cannot in a few years so transform the country that the people will experience the change of heart which France desires. The Muslims of Algeria, where they are not committed to the rebellion, are waiting to see who wins ; with few exceptions, their attitude to the French is at best non-committal. Perhaps the best result for which the French can hope is that time, attrition, and sustained evidence of effective French goodwill will produce a desire for compromise and an Algerian elite genuinely prepared to run the country's affairs for a time in collaboration with France. Even such a new elite would seek, and obtain, independence in the end ; but it might by then be an independence which both sides could accept. It is hard to see how this long process could be shortened, except by a negotiated peace ; and the mood neither of France nor of the rebel leaders is ripe for that yet.

Mr Khrushchev's Message to Congress

LAST Tuesday was Mr Khrushchev's day of glory. For over six hours he read his message to the 21st party congress. To the 1,269 Soviet delegates as well as to the upper crust of the world communist movement packed in the Kremlin hall (with only Mao Tse-tung conspicuously absent) his was the real voice of Russia's leadership. True, at the celebrated last congress three years ago Mr Khrushchev played the leading part and his secret speech was the great sensation of the meeting. But that speech marked the beginning of a critical period for Mr Khrushchev. Eastern Europe was shaken by a series of internal convulsions later the same year and in June, 1957, Mr Khrushchev's policies and leadership were challenged in a dramatic way inside the Kremlin.

Since then, however, his star has been rising. His opponents from the "anti-party group" have been kicked out of all important jobs. His own radical reforms have been started. Even the rocket to the moon became a symbol of his success. And this week came the crowning glory. The highest body of the party met with one item on its agenda—the new economic plan—and with Mr Khrushchev as the only rapporteur. His proud words about Russia's bright future were enthusiastically applauded by the Kremlin's distinguished audience. As Mr Khrushchev's manifesto, they were in fact aimed at the Soviet people as a whole.

Much of Mr Khrushchev's marathon oration was taken up with an exposition of the goals of the new seven-year plan (*The Economist* of November 22, 1958, page 673). The Soviet economy is to go on forward without change of gear at only a slightly lower speed. Within the next seven years gross industrial output is to increase by about 80 per cent, with basic production still developing faster than the light industries. This progress is to be achieved chiefly through modernisation and higher productivity. Oil and gas are to have an increasing share in the fuel balance. The generation of electricity is to be more than doubled ; the output of chemicals is to be trebled. The massive influx of skilled technicians and graduated engineers, technological change, automation—it is on all these that Mr Khrushchev is banking. He hopes, too, to derive advantages from an eastward shift of Soviet industry towards cheaper sources of energy.

Though heavy industry still gets priority, consumers are not forgotten. Real wages are to rise by 40 per cent over the period ; peasant incomes, pensions and social benefits are also to go up. The fulfilment of this pledge will partly depend on the success of the ambitious agricultural plan. The laggard of the Soviet economy is now scheduled to surge forward by leaps and bounds. Total agricultural output is expected to rise by seventy per cent and for many foodstuffs production is to be doubled. Previous plans to increase agricultural production have not succeeded, but Mr Khrushchev seems to think that the time has now come to reap rewards from past investments and recent reforms in Soviet agriculture.

By emphasising Mr Khrushchev's promise to eliminate income-tax, foreign correspondents have made him into a sort of Soviet Poujade crusading against taxation. But in a country where the state directly controls the level of wages, the raising of income tax always seemed a duplicating operation. Even now it accounts for less than eight per cent of the budgetary revenue, which comes chiefly from the indirect turnover tax and a levy on the profits of state enterprises. The gradual abolition of income tax, if unaccompanied by a levelling of wages, would go against the recent egalitarian trend. This pledge is certainly not the most welcome part of the new deal for most Russians.

For the average Russian the most attractive feature, in addition to the promise of better food and more consumer goods, is the prospect of a gradual reduction of the working week towards the goal of 35 hours. Next, for a lot of people, comes the pledge to raise minimum wages and pensions substantially. Last but not least is the prospect of 15 million new flats—a staggering figure in itself, yet hardly sufficient to meet Russia's present needs and the rapid growth of its population.

The slogan remains "to catch up with America." Mr Khrushchev has now claimed that in output per head this should be achieved five years after the end of the current plan, that is to say about 1970. This boast naturally neglects the competitor's performance. Nevertheless, Mr Khrushchev seems absolutely convinced that in the not so distant future the Soviet Union will take the lead in the economic race and that this will ensure the ultimate victory of communism. He did not, however, forget about armaments. He quoted Soviet exploits in space as proof of the deadly accuracy of Soviet rockets, while asserting that inter-continental missiles are now in serial production. But he also emphasised Russia's anxiety to disarm, which he described as the "task of tasks."

In his long oration Mr Khrushchev made frequent and wide-ranging excursions into the foreign field. But it was on China and the Middle East that he said new things worth noting. For the first time the Soviet leader has acknowledged openly, from a public platform, that Russians and Chinese differ on the road to socialism, that the Chinese will not follow the Soviet example. With this admission, and Mao's absence, Mr Khrushchev's angry dismissal of suggestions that there might be a rift between the two countries as "reactionary fabrications" sounded somewhat hollow—unless he merely wanted to say that the two leaders of the Communist block have agreed to disagree. Next day, Mr Chou En-lai attacked American "imperialists" and Jugoslav "revisionists" for their efforts to break the Russo-Chinese bond.

Mr Khrushchev made one proposal that concerns his Chinese ally. He put forward a sort of Rapacki plan for the Far East, the creation of a nuclear free zone in this part of the world. This would not only relieve Moscow from ever having to supply China with atomic weapons. It would also put the Chinese, with their vast manpower resources, in a favourable position *vis-à-vis* the United States, since any such "free area" is bound to include Japan, Formosa and other American bases in the Pacific. Strangely enough, Mr Chou did not take up this idea.

For President Nasser Mr Khrushchev had a bouquet and a warning. He included the President of the UAR with General Qasim of Iraq among leaders "who have won the warmest regard of the Soviet people." But he also obviously had the Egyptian leader in mind when he criticised the anti-communist campaign in the Middle East. Mr Khrushchev said it was absurd to lump Zionists and Communists together as imperialist agents, since nobody "is more resolute in the struggle against colonialists than the Communists." This lesson from the congress pulpit

was a clear reminder to Colonel Nasser that if he wants help he must behave.

Mr Khrushchev left the rostrum after six hours amid tremendous ovations. This is clearly his congress. And yet it would be wrong to conclude that the struggle within the Soviet leadership ended with the defeat of Mr Molotov, Mr Malenkov and their associates. The victorious Mr Khrushchev has just announced a further reduction in the size of the security police. It would not be a sign of strength if he were now compelled to bring his defeated opponents into the dock. His promise to bring the Soviet people, in seven years, within sight of the land of plenty is certainly popular. But he still has to keep it. He cannot relax after this hour of triumph.

Knockabout Farce in Japan

FROM OUR CORRESPONDENT IN TOKYO

THE worst thing that can happen to a Japanese prime minister is for his party to win a general election with an ample majority. This calamity befell Mr Nobusuke Kishi in the middle of last year. The election results seemed to make it clear that the reins of government were not likely to pass out of the hands of the Liberal-Democrat party in the foreseeable future. The effect of this reassurance on the Liberal-Democrats was that they immediately turned their backs on the boring business of governing the country in order to devote themselves to factional strife. The battles were waged in subterranean fashion for some time, but erupted into the open during the season of peace and goodwill, in an explosion that leaves Mr Kishi still prime minister, but wearing much-tattered political clothes and considerably begrimed with political gunpowder.

Though theoretically a hyphenated merger, the Liberal-Democrats are in fact only a loosely jointed coalition of rival factions bearing a strong family resemblance to the warring clans of feudal Japan. Several of the factions, temporarily banded together as the "anti-main current," resented the prestige that the election victory had conferred on the "main current" led by Mr Kishi. They therefore sought some means to cut the prime minister and the "main current" down to size, and decided they had found it in the widespread unpopularity attending Mr Kishi's Bill for beefing up the powers of the police. The "anti-main current," it should perhaps be stressed, had no objection in principle to the police having more power to deal with gangsters and also, if need be, with recalcitrant trade unions. But they gladly seized on the public apprehensions that the Bill aroused, as evidence of a "main current" blunder for which Mr Kishi should personally be forced to eat humble pie.

Anxious to retain at least a semblance of party unity, and also with an eye on the approaching convention of his party, Mr Kishi decided, no doubt reluctantly, to eat his pie with as good a grace as possible. He therefore made appropriate noises of appeasement towards the "anti-main current" factions. But this in turn roused the ire and distrust of some of his own "main current" factions, who apparently feared that the prime minister was about to try to double-cross them: it would not be the first time that Mr Kishi has blithely switched horses in mid-stream. The prime minister suddenly found himself fighting a defensive battle on two fronts within his own party. To extricate himself from this cross-fire, Mr Kishi decided that attack would be the best method of defence. Rather spiritedly carrying the war into both camps, he boldly accepted the resignations of three prominent "anti-main current" faction leaders from his Cabinet, but at the same time briskly lopped off three "main current" heads that had prematurely believed themselves to be indispensable to him. The outcome of all these manœuvres is that Mr Kishi is still afloat; four new cabinet ministers, agreeable to both factions, have been appointed, and last weekend Mr Kishi was re-elected president of the Liberal-Democratic party.

The newspapers almost unanimously accuse the Liberal-Democrats of transforming democratic government into a knockabout farce. As Japan has a two-party system this would seem to provide the Socialists with their opportunity. But nobody seriously expects them to be able to take it. The Socialists are just as faction-ridden as the Liberal-Democrats. Superbly ignoring the chance to strike a hard blow at the squabbling conservatives, the left-wing Socialists have chosen this moment to urge the party leadership to abandon all pretensions of being an alternative government capable of winning power through an appeal to the whole electorate. Instead, the left-wingers demand that the Socialists should confine their appeal strictly to the working class, and offer to lead the proletariat to victory over all other classes, including the fast-growing middle class, with the object of setting up a working-class dictatorship. Rightly appalled by this rash reversion to Lenin's early period—even the Japanese Communist party nowadays eschews the revolutionary road—the party leadership, which mainly represents the right wing, has firmly rejected the proffered advice, but without being able to conceal that the Socialists are as much at war with one another as are the Liberal-Democrats.

IT is highly improbable that the weak Socialists can lead the proletariat, or anyone else, to victory, even over the in-fighting conservatives. Amid the growing political gloom, some Japanese business leaders have gone so far as to make tentative overtures to the least radical Socialist leaders, in the dim hope of seeing the emergence of a third party that might combine the more stable elements of the two existing ones. But a middle-of-the-road, faction-free third party seems a very distant ideal. All the politicians of whatever ideology are clearly more fascinated by their personal prospects than they are moved by the principles which they profess.

The chances are that Mr Kishi will somehow contrive to continue as prime minister, by playing off one set of factions against another. Should he fall, his place will be taken by Mr Ishii, or some other compromise candidate temporarily acceptable to a majority of the factions. But the Liberal-Democrats will remain in power, and the game will go on, though with all important matters—the proposed revision of the US-Japan Security Treaty, Japan's relations with Communist China, even the future of what the Japanese call "the national livelihood," meaning trade—piled up once more in the pending tray.

The Japanese are fortunately not a demanding people. They ask little more from their politicians than that they should annually suspend their internal feuding long enough to get a Budget through the Diet. Day-to-day administration rests in the capable hands of trained bureaucrats. The United States is still in practice responsible for the country's defence. Japan has no foreign policy independent enough to call for painful decision-making at top levels. It seems to be just as well.

Signor Fanfani Gives Up

FROM OUR ROME CORRESPONDENT

JUST before his government fell, Signor Fanfani announced briskly that his cabinet would only resign if it were beaten on a vote of confidence. Instead, like all his predecessors who have won parliamentary investiture (except Signor Zoli whose government died a natural death when the last parliament came to an end) Signor Fanfani has come to grief as a result of the internal conflicts within his own party and its partner, the Social Democrat party.

This crisis, however, is substantially different from its predecessors, and more serious. Earlier premiers—Pella, Scelba, Segni—threw in their hands when they found that they had lost the support of the party secretary. But last July, after years of laborious planning, Signor Fanfani succeeded in uniting the offices of prime minister and party secretary in his own person. He had just led the Christian Democrats successfully through a general election which gave them twelve and a half million votes and 273 seats in the Chamber; and the stage was set for him to show what could be done when the man who leads the government controls the party. In partnership with the Social Democrats he presented a government programme which read like a ten year development plan, assumed that the government would stay in office for the whole legislature and clearly required the tacit support of the Socialists. For this reason, although Signor Fanfani had fought the election under the cautious slogan of "Progress without Adventure," his government was hailed by many—and deplored by others—as the first step in a great Catholic move to the left.

A FEW weeks sufficed to show that these hopes and fears were misplaced. Signor Fanfani was not the man to make a positive political choice. He avoided the few measures such as nationalising electricity or planning industrial investments in the south which would have shown the Socialists that he meant business. At the same time he made the mistake of allowing his adversaries in his own party to see that they had nothing to lose by rebellion. A handful of Sicilian deputies were the first to point out the contrast between the government's words and its deeds. They were expelled and formed a regional government which left the main body of the Christian Democrats at Palermo in opposition. This was the signal for revolt in Rome, where a score of Christian Democrat *francs tireurs* began systematically to vote against the government.

Signor Fanfani, who had made the strict observance of the national wage contract a cardinal point of his programme, fell battling against a threatened general strike of state employees and against rural agitation caused by the farmers' refusal, after a ruling of the constitutional court, to keep on an obligatory quota of labourers. With the country quite unprepared to receive the impact of the European common market the government was unable to resist pressures from landowners and industrialists for greater freedom to turn away labour. A lock-in strike at the Galileo works in Florence has ended this week in forced eviction and street fighting with the police. At Naples and Salerno the *cotonieri meridionali* are in turmoil because 1,500 spinners have been sacked. With little understanding of the country's main problem of redundant manpower, the Fanfani government, under the influence of its conservative Treasury and Budget ministers, Signor Medici and Signor Andreotti, has pursued a monetary policy anchored to a hard lira and a reduced deficit.

Economic unrest and political disappointment are the background to the present crisis whose immediate cause was the resignation of the Social Democrat minister of labour, Signor Ezio Vigorelli; he has joined his party's left wing which threatens to break away from Signor Saragat and join the Nenni Socialists. The extreme rapidity with which events have followed Signor Nenni's victory at the Socialist congress last week shows that a political void has existed which only a revived Socialist party can fill. The government has fallen, the Social Democrat party is breaking up, the Christian Democrats are splintering—a new and more serious cleavage is to be expected in Sicily—and the only solution in view is a general election within the next few months.

Signor Fanfani and Signor Saragat hope at all costs to restore their coalition, but failing this—and there is no chance whatever of a majority for such a government—the Christian Democrats would prefer the elections to take place at once before the Socialists have time to prepare the country and their own party for a big come-back. The calculation may be wrong, for though the country would be puzzled by a general election within a year of the last one, it would understand that a great Christian Democrat experiment has failed. As the intermediate step between the present crisis and a general election, a caretaker government headed perhaps by Signor Tambroni or Senator Merzagora, now president of the Senate, is to be expected.

East Germans Seek Trade without Politics?

THE trade arrangement between the Federation of British Industries and the east German Chamber for Foreign Trade announced on Monday is the first formal trade agreement between east Germany and a representative British body. In the past the negotiation of an agreement has been held up by conflict between the British wish not to do anything which might imply a measure of recognition to the German Democratic Republic and the opposite east German view. At the same time, however, the FBI has been exploring the possibilities of a private agreement which would by-pass the political issue. It has now succeeded. The new agreement was concluded by an exchange of letters which leave the formal position of both governments untouched.

The agreement provides for a major growth in trade. Last year British exports and re-exports to east Germany were worth only £2.6 million; imports were worth £3.4 million. The new deal suggests figures of £7 million each way. Though the agreement was theoretically a private one, the Board of Trade was closely in touch with the negotiations, and the figure for British imports implies a willingness to grant import licences where necessary. Presumably the figure for imports on the east German side implies an intention to buy. How fast British exports grow

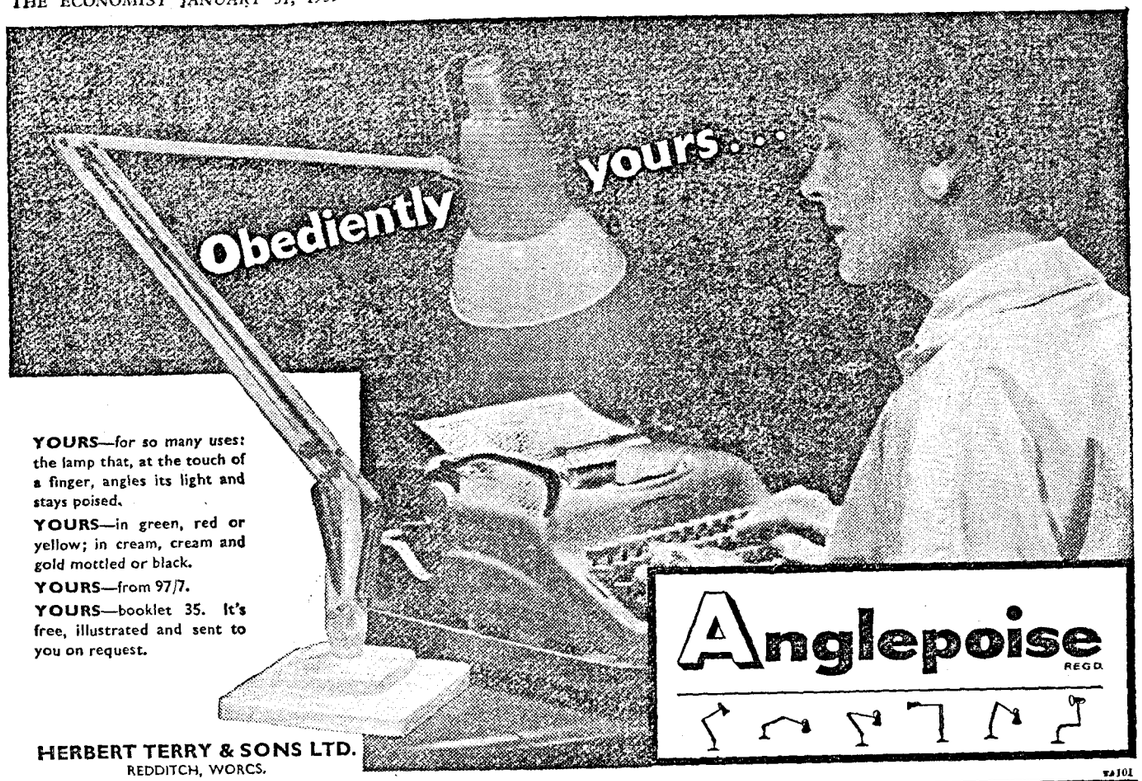
in practice depends, of course, on east Germany's sterling resources; these may be adequate at present, but whether export earnings come up to expectations remains to be seen.

Despite the absence of any formal political commitment, all this will mean a little more contact between Britain and east Germany. The German chamber is expected to set up an office in London with the FBI's help. More British business men may be found in Leipzig and east Berlin. One or two eyebrows may be raised in Bonn at this, for the east German government is making special efforts at the moment to acquire political respectability not only in Berlin but in Asia, where the premier, Herr Grotewohl, has been on tour. It would be silly, however, to attach too much political importance to the FBI's initiative. West Germany has had trade agreements with east Germany for years, and maintains regular technical contact to implement them.

Ghana's Bread and Butter Politics

FROM A CORRESPONDENT LATELY IN ACCRA

CONTINUED deportations, sedition trials, preventive detention of opposition leaders, talk of coups d'état, planned assassinations, and the judiciary overruled by parliament: one might ask if Dr Nkrumah's "African Personality" simply amounts to the gradual dismantling of democracy and the rule of law, at least in so far as it applies to the domestic political scene. A government with overwhelming support both in parliament and in the country is behaving in a fashion that alienates many of its friends and can only be explained by a feeling of insecurity which is difficult to account for. Last year saw the final demise of chieftaincy as a political force; the most important opposition members from Northern Ghana crossed the carpet; why should the government worry?



Much of the feeling of bitterness of the Convention People's Party towards the opposition undoubtedly goes back to the days before independence, when the National Liberation Movement and its allies terrorised CPP supporters in a way which made even their friends wonder just how democratic *they* would have been had they succeeded in gaining power. This desire to repay past wrongs has been reinforced by the essentially tribal character of the opposition, which the CPP considers, and considers rightly, an obstacle to the growth of national consciousness.

A more fundamental explanation may be that colonial rule is hardly the best preparation for democracy. After fifty years of rule based on power rather than consent, it would have been more surprising if the CPP were more sensitive than it is now to minority views, or less ruthless in driving home a tactical advantage. No doubt this ruthlessness has cost the party some of its support, though not enough to affect its electoral prospects. The intellectuals had already been disaffected, and are, in any case, too few and too scattered to count politically. Most of them are teachers, civil servants or other professional employees of the government, and therefore in no position to participate actively in politics. Most other middle-class positions outside the civil service are still occupied by expatriates, and the struggling African business community is in no position to put pressure of any kind on the government.

Politics is still very much a bread-and-butter affair in Ghana, and continued support of the CPP by the bulk of the population will depend on whether it delivers the goods, in the form of roads, schools, hospitals, electricity and drinking water, and most of all expanding employment opportunities. Both Dr Nkrumah and his minister of finance, Mr Gbedemah, are aware of this, just as they are aware that the government cannot indefinitely go on expanding the social services without at the same time widening the agricultural and industrial base of the economy. This is why the government's declarations about its anxiety to attract foreign capital and treat it well are quite certainly sincere. This is also why the government takes no notice of its struggling businessmen-backbenchers, who would like to see expatriate firms pushed out of the country to make it easier for them to earn a living. The CPP realises that most of its voters, while by no means enthusiastic, indeed sceptical, about preventive detentions and the like, do not worry over-much about the "drift to dictatorship" so long as their standard of living rises.

How well, then, has the government done on the economic front? Gross national income has risen by about 15 per cent in real terms since the CPP came into power in 1951; during the same period gross expenditure a head rose from £44 to £46 in real terms. This is not exactly spectacular, but it is something, and people in urban areas have certainly done better. The number of wage and salary earners has increased by over a quarter since 1952, despite a fall in mining employment by a fifth, and is now around 275,000, more than half of it in government employment. While the real income of this group has only increased from £102 to £106 a head, the operative fact is that 50,000-60,000 people have moved out of the subsistence sector, where income *per capita* is probably not more than £30, into the urban £100 plus group, whose political importance is far in excess of its numerical strength. More than anything, the future popularity of the CPP depends on its success in ensuring that this process continues; the greatest source of danger to it is the flood of 30,000-40,000 young people leaving middle-school every year, who will not dream of returning to the land, and for whom jobs have to be found in the towns. Hence the Builders' Brigade, though so far it has been more a welfare scheme than an economic project.

THUS the outlook for an opposition to the CPP is not particularly bright, and their task is made no easier by the Ghanaian sense of humour: most of those who worry about the government's strong-arm measures get it out of their system by making jokes about it. Any serious challenge that Dr Nkrumah will have to face in the next few years will almost certainly come from within his own party There is no likelihood of a split; Mr Gbedemah, who might be the natural focus of dissatisfaction with Dr Nkrumah's leadership, has lost face by being defeated in his opposition to some of the more extreme strong-arm measures. His instincts may be no more democratic than Dr Nkrumah's, but he is more concerned about the effect of domestic political measures on foreign opinion, particularly among potential investors. If his fears are borne out, he will certainly gain in influence within the party.

KINGSTON: the capital of Jamaica, owes its birth to the earthquake which almost obliterated Port Royal in 1692. The damage was so extensive that a new town was planned and a 200 acre site purchased for £1,000. This town—Kingston—progressed slowly at first, but the fire of 1703, which again ravaged Port Royal so disheartened its inhabitants that they moved in great numbers to Kingston which from that time prospered. By 1716 it was the largest town in Jamaica and a centre for the island's trade, and in 1872 it became the seat of the Jamaican Government. Kingston has had to withstand many disasters, culminating in the earthquake and fire of 1907. But like the phoenix it rose again and again from the ashes, and today, with a population of about 300,000, Kingston remains the chief city and main port of Jamaica, destined by its situation to play a leading part in the island's ever-expanding economy.

Business men who require information on current commercial conditions in Jamaica are invited to get into touch with our Intelligence Department, 54 Lombard Street, London, E.C.3. Up-to-date reports from our branches in Kingston and elsewhere in the island are readily obtainable on request.

THE BUSINESS WORLD

A Judgment on Price-Fixing

"We do not intend to pass judgment for or against minimum price schemes in principle, either in the cotton trade or in any other," said Mr Justice Devlin, delivering the judgment of the Restrictive Practices Court this week on the price agreement of the Yarn Spinners' Association of Lancashire. The president of the new Court was understandably concerned to delimit the formal precedents set by this first major decision, which in effect forms the biggest instalment of the Court's case law so far. But he will not have been under any illusion that the economic and political implications of this uncompromising decision that the spinners' scheme was contrary to the public interest—or the reactions of British business to it—can be nearly so neatly limited.

It remains to be seen how important these reactions will prove in the long run. It would be hyperbole to hail this decision as a 20th-century equivalent of the repeal of the Corn Laws, a seminal event of which the continuing consequences, in shifting attitudes throughout British industry, are likely to be appreciated only in historical perspective. But the implications of the judgment should by no means be underrated. It has reminded British industry that the Restrictive Practices Act of 1956 lays down quite unequivocally, as a general presumption, that price restrictions are contrary to the public interest. Neither the special circumstances that the cotton spinners could plead as an obviously distressed industry, nor the much more fashionable doctrine that "persistent local unemployment" demands protection regardless of cost, have availed with the Court.

This should not be interpreted to mean that more prosperous industries, with no such painful tales to tell, will therefore stand no chance of justifying price schemes before the Court; the effects of price stabilisation in such industries, during a period of inflation, may be more complex than its clear cut effect in holding prices up in a steadily declining industry. Nevertheless, the economic and political repercussions of this judgment must reach far beyond the mills and the marginal seats of Lancashire. This newly appointed Court, set up by a Conservative Government that explicitly denied itself any power to override its new arbiter, has firmly reasserted a recently much-diluted law of the copybook headings—that price rings nearly always are disreputable. The Monopolies Commission, to do it justice, said this often enough from 1948 onwards, but the Commission was so constituted that governments could listen politely and take no action—which is what they usually did. The writ of the Restrictive Practices Court commands compliance, and is not subject to any politicians' veto. This has immediate and uncomfortable consequences for practice in Lancashire. Its effects upon how much British businessmen in general think that they need compete to be respectable will be more indirect and more gradual; but they could be equally salutary. If so, they will in the long run be far more important.

CONTRACTION OF THE COTTON INDUSTRY SINCE 1954.

Lancashire under the Hammer

The maximum price is an artificial figure calculated on a hypothetical average cost . . . every mill will therefore be above it or below it by a small or large margin. In theory it is designed to tide the spinner over short periods of recession [but] the fact is that for most of the time since 1952 the majority of spinners have been operating at the minimum price. . . . One way or another the minimum price appears to ensure a reasonable return all the time to the majority of spinners . . . since 1951, on the average, the prices obtained for yarn have been higher than they would have been in a free market.

Everyone agrees that spinning is a contracting industry; therefore reductions in capacity ought broadly to match the falling demand and high-cost producers ought to be closing down. The scheme has not altogether prevented the natural process but has seriously retarded it. . . . Since 1952 the spindle capacity in the industry has been running on the average only to the extent of about 70 per cent . . . the industry can and ought to be made smaller and more compact.

THESE were the Court's general conclusions. By the terms of the Act all price-fixing schemes are *prima facie* against the public interest, unless mitigating circumstances can be proved under one or other of the seven grounds set down in Section 21. The Yarn Spinners' Association sought exoneration under two: that the scheme benefited the general public, or alternatively the buyers of yarn; and that its abolition would be likely to have a serious and persistent effect on the general level of employment in areas in which a substantial proportion of the spinning industry is located.

The Registrar sought to show that the scheme was against the public interest in three main ways: it maintained yarn prices at a high level; it handicapped the export trade; and it resulted in excess capacity and thus wasted national resources. The court accepted all three. It is satisfied that the price of yarn could be lower than it is, and that

quite a considerable export business has been lost, not so much in yarn as in cloth, through the rigidity of the scheme . . . anything which appreciably hinders or diminishes the export trade must be regarded as a public detriment. . . . [Lastly] It is in the public interest that labour and capital should be employed as productively as possible, and we consider therefore that the excess capacity in the cotton industry is a public detriment.

Against these considerations the Court had to balance the mitigating circumstances pleaded by the Association. It gave little weight to the industrial and commercial benefits claimed for the scheme, holding that these were either outweighed by the loss of a free market or would not be affected by the abolition of the scheme.

Under the second head, the Court found that the closing of mills that would follow abolition of the scheme would have a serious adverse effect on the general level of employment in cotton spinning areas. It also found, "though with even greater doubt and hesitation," that the effect would be persistent. But the effect would be localised, and the price of its avoidance would have to be paid nationally—in the price of cotton goods, the loss of export trade, and waste of resources.

. . . on balance it would be unreasonable to continue the restrictions in the scheme in order to avoid the degree of local unemployment which we fear.

ON Monday, then, the scheme will be declared void, and Lancashire will be forced to have a free market in yarn prices after more than twenty years of price control. Does this really sound the "death knell" for the spinning industry? Only a few cotton men this week fully supported the phrase that Sir Andrew Clark had used before the Court on their behalf; but almost everyone feared that it would bring hard times. Those who believed, as the Court did, that abolition of the scheme would ultimately be beneficial to the industry and its employees, could be numbered on the fingers of one hand. "Price-cutting is a disease in Lancashire," said one spinner. "We have had it for the last seven months in spun rayon yarn, and for two to three years in mixture yarns. People will cut prices and hurt somebody else—they don't see that they're crippling themselves at the same time." Another one said: "Competition will be fierce, perhaps as fierce as in the twenties and thirties."

Though price cutting must be expected in an industry with surplus capacity and many small units, there is no logical reason why spinners should make weavers "a present" of their yarn. Spinners have some bargaining power, if they keep their heads. The recession in cotton textiles has been prolonged because buyers have been waiting for the case to be tried and judgment delivered. Buying has continued to fall short of consumption and stocks, therefore, have continued to fall. The volume of orders held by converters, weavers and spinners is lower than at any time in the last few years, though many spinners have a good stock of yarn on hand. There must be a big bout of buying ahead to meet consumption and build up stocks, and buyers will have to weigh their desire for lower prices against the need for quick delivery.

If in the past six years competition among the spinners had operated freely, or even if the minimum price had been set at a lower level, the excess capacity might have been got rid of gradually without serious disturbance to the labour market. The scheme has held back the outflow from the industry and it is inevitable that when the dam is breached, the flood should be greater than the normal flow.

Mr Justice Devlin's fears are echoed in Lancashire—and with less equanimity. "I know half a dozen mills in Bolton, to take one town," said a cotton man the day after the decision was announced, "that today and tomorrow will be discussing with their solicitors how quickly they can get out." Other mills will postpone liquidation in the hope of attracting a take-over bid or of getting compensation from a redundancy scheme. The Court's verdict has intensified and complicated the argument about a redundancy scheme in Lancashire—or rather schemes, for there is excess capacity in other sections as well as in spinning. A majority of spinners, including Lancashire Cotton Corporation and other big combines, are evidently in favour of trying to introduce a scheme as soon as possible. They realise that the absolute cost of compensation should be smaller in two or three years' time, when more spinning mills will have been forced to close, and when mills still in operation would probably settle for a smaller payment per spindle than they would now. But as the mills that intend to stay in business will almost certainly have been making smaller profits, the burden of financing compensation from the remaining mills might be no lower, and might even be higher, than at present. Other spinners, led by Fine Spinners & Doublers, one of the big combines, are still opposed to a scheme, and put their faith in natural forces. Those forces will surely be stronger now than in the past.

Proponents of a scheme will try to extract the maximum financial help from the government, which has stated more than once that it would examine sympathetically any proposals from Lancashire. But Whitehall is unlikely to move quickly. Moreover, a purely private scheme for buying up spindles, which is avowedly action in restraint of trade, would have to be registered and in due course brought again before the Restrictive Practices Court, if only for approval.

To Whom It May Concern

ROUGHLY 2,000 trading agreements remain on the Register of Restrictive Practices and over half of these contain some sort of provisions for price-fixing. But only about half of those concerned with prices attempt to set minimum prices, as did the Yarn Spinners' agreement. Most of the rest operate in such a way as to fix a market price (neither explicitly minimum nor maximum), and a few fix maximum prices (which in practice fairly often turn out to be minimum prices as well). The cotton industry was in decline during the time that the Yarn Spinners' agreement was in force. But price-fixing agreements have also operated in expanding industries, and in some cases may be argued to have kept prices lower than they otherwise might have been. To the economist, holding prices too low can be as objectionable, because it may distort demand and investment by keeping them too high. But this view is not shared, for example, by most politicians, and it would, in any case, be premature to draw too many specific inferences as to the fate of other agreements from the Court's first big judgment.

The Court has explicitly held, however, that price stability is not, as a general rule, of sufficient benefit to the public to outweigh the loss of a free market. So in future the parties to any price-fixing agreement are likely to have to show either that their formal price stability brings specific benefits to a large part of the public involved, or alternatively that no benefit would be likely to accrue to the public from a free market. Two other features of the Court's judgment—that any appreciable adverse effect on exports or, more important, that it counts any waste of national resources by the preservation of excess capacity as significant public detriments—may also be taken as precedents on which all future schemes, whether or not they fix prices, will have to measure.

The remaining agreements on the Register are of widely varying kinds. Some recommend either fixed or minimum prices, as did the constructional steelwork agreement. Some control margins as does the Radio Valve Manufacturers' agreement. And a great many control distribution, as did the Chemists' Federation's agreement. Many of them are local or regional in character, and some are concerned with small or relatively unimportant industries. The Registrar's aim so far has been to bring examples of the different basic types before the Court in the early stages, to secure a widely ranging set of decisions and precedents as quickly as possible. The Yarn Spinners' case was only the second case fully argued before the Court. Nearly a hundred agreements have been abandoned or suitably modified since the Act came into force. It is likely that with each adverse judgment, an increasing number of small agreements will be abandoned. Other small agreements may be dropped before their "prototype" is heard; but if judgment on it is favourable, they can easily be revived.

There is likely to be one other effect. Most of the agreements now on the Register were drawn up before the passage of the Act, and certainly were never drafted with the idea of being defended in Court from the standpoint of the public interest. It is one thing to argue that "What's good for cotton is good for cotton," another to argue successfully that it is also in the public interest. The Yarn Spinners' decision has awakened British businessmen to the reality of the Act. Existing agreements may well be revamped (and any new ones will certainly be drawn up) with an eye to satisfying the Court. In the 69 years since the passage of the Sherman Antitrust Act was passed, American businessmen have devoted as much energy to keeping clear of the Department of Justice as some of their British counterparts today devote to tax avoidance. If a similar emphasis on "corporation law" should develop here, the Court may find the economic arguments in future cases much more sophisticated and complex.

Lessons for Lombard Street

DEAR money at its highly abnormal peak sixteen months ago gave the Lombard Street dealers in bills and short-dated Government bonds an uncomfortable and even alarming time. By contrast, falling money rates, starting early in 1958, gave them an exceptional opportunity to repair the damage they inevitably suffered from high interest rates. Of the eleven public companies—there is also one private company—that comprise the discount market proper, only three make up their accounts at the end of the calendar year; but the results announced by these three show that the opportunity has been seized.

The Union Discount, biggest house of all, reports record profits: £550,000, compared with £415,000 for 1957 and £505,000 at the previous peak in 1954. The Union Discount's dividend policy has always been conservative—the payment has never been reduced—and it is making a capitalisation of reserves that should have the effect of increasing the distribution by one-fifth in 1959. The results of the other two companies, if less impressive on the longer view, are equally striking on the short Twelve months ago the National Discount showed a widening of the uncovered depreciation on its bond portfolio, with a slightly increased "balance" on profit and loss account sustained by undisclosed credits resulting from writing up the book values of investments ("amortising the discounts"). Now the depreciation has been wiped out; the profit "balance" is raised from £208,000 to £284,000—computed this time after transfers to inner reserves; and the dividend is restored to 12 per cent after being cut to 10 per cent in 1955. A year ago Alexanders also showed an uncovered depreciation, though a narrower one; it made a second cut in its dividend (from 12½ to 7½ to 5 per cent); and even so the chairman thought it necessary to give warning that "if Bank rate continues at its present high level, our profits will be seriously and directly affected for some time to come and future dividends will be in jeopardy." Now the depreciation has disappeared, the published profit has jumped from £51,000 to £167,000, and the second of the dividend cuts is immediately restored. It can safely be assumed that in each of these companies the improvement during the year has been larger than the published figures disclose.

No appraisal of the recent and prospective fortunes of the discount market should focus too closely on these unquestionably good results. The fortunes of Lombard Street have always been prone to considerable fluctuations; and the greater the chances of profit the wider the fluctuations are likely to be. The gradual return after 1951 to a flexible monetary policy increased the potentialities in the discount market—but increased by at least as much the risks that it must run. A bad time may not inexorably follow a good one, nor a good one a bad; but only rarely will the market enjoy conditions so profitable as those of the past year, unless it has just suffered abnormal difficulty. Those in the market whose memories reach back beyond the 20-year spell of virtually stabilised short money rates are well aware, indeed, that this is so. For them it is a consolation as well as a warning. They know that any period of exceptional difficulty can generally be trusted to give place to one of more than average opportunity. Hence the first precept that experience teaches in Lombard Street is the need to husband sufficient resources from the fat years to carry the business safely through the lean.

FOR a discount house, prudent finance in this sense is much more than a moral virtue; it is a practical necessity. A discount house resembles a deposit bank in that it carries a very large volume of assets in proportion to its own resources of capital and reserves: the multiplier for the market as a whole is rather over twenty times, and in some of the smaller houses it is considerably higher than that. But a discount house differs from a bank in that almost the whole of the external finance by which 95 per cent or more of its portfolios are financed consists of short money that can be borrowed from the banks (and certain other lenders) only against the deposit of collateral security which affords an appropriate margin in its market value over the amount of the loan. This collateral comprises the bills and bonds that the loans are required to finance.

The discount houses serve the monetary authorities as controllers of the credit system; they serve the Treasury in its capacity of borrower, and the commercial banks in their disposition of liquid assets; and they serve the traders who borrow on commercial bills. All these services derive from their operations in making a market in the two broad categories of securities, Treasury and commercial bills and short bonds, and in the money by which these portfolios are financed. The limits to the operations of a discount house are set by its ability to finance the margins that have to be provided by the collateral it tenders; in other words, they are set by the amount of its capital and reserves. The extent of the margins does not depend, as in the case of a bank, on opinion or convention; it is settled by the behaviour of discount rates and bond prices in the open market.

When money rates are both low and stable, the margins required on bill money are correspondingly low; and at the same time it may seem reasonable to reduce the surplus of unpledged securities (or of margins voluntarily offered in excess of the recognised minima) kept in reserve against the contingency of a

rise in bill rates or a fall in bond prices. During the long period of pegged and low money rates, which was also the time of rapidly increasing borrowings by the Government the discount houses greatly increased the scale of their operations relative to their capital resources, for both these reasons. It was, moreover, only then that the carrying of short bonds became a really large and officially recognised part of their operations; and it was not until the end of the war that they assumed any clear responsibility for making a market in such securities. But bond dealing makes much bigger demands on capital; not only do lenders against bonds require bigger margins: the greater risks of fluctuation require the operator to keep a bigger reserve of collateral in hand—though just how much is reasonable at any time naturally depends upon how soon and by how much interest rates are likely to rise.

The enlarged and much more fully extended discount market had its foretaste of the effects of rising rates in 1951-52, but the movement then was relatively gradual. The first real test came early in 1955, when Bank rate rose from 3 to 4½ per cent; and it then became apparent that some houses had not really measured up to the stark discipline of the margins, and to the fact that if the capital reserve should be insufficient to leave scope for manœuvre when stress occurs, the resultant losses will be severely intensified. If the dealer's capital is insufficient to provide the additional margins required on depreciating bonds, he will have to reduce his portfolios and take a realised loss. If he holds on to bonds of anything but the shortest life, he will suffer for a long time after the rise from a reduced margin between the yield on his bonds and the cost of financing them, or even from an outright running loss.

Several members of the market suffered acutely in this fashion during 1955 and 1956; for it has to be remembered that the larger houses, unless they scent trouble far in advance, have bond portfolios too big to be radically readjusted—in any case, when the market has started to fall it is their function as jobbers to act in some measure as shock absorbers. The houses that suffered most were those that had been tempted unduly into the 2 per cent bond issues made by the Treasury in the heyday of 1954. These bonds fell so severely as to make it impracticable for houses heavily committed to cut their losses. They had therefore to be carried on money costing at least twice as much as their coupon yield, so that the bond side of the business had not only severely strained their capital resources but continued to impose a heavy drain upon profits earned on bills.

In some instances a drain of this kind evidently persisted for at least two years—until the short spell of strength in the bond market in early 1957, when Bank rate came down from 5½ to 5 per cent, at last thawed out the frozen holdings. Throughout this lengthy period the capacity of the short bond market was seriously narrowed. Some of the bigger Lombard Street houses, however secure they might have felt on the longer view, were in effect too crippled to perform their jobbing function.

Thanks to the respite of early 1957, the most vulnerable houses were better poised to face the shock of the 7 per cent Bank rate than they would otherwise have been. An unexpected rise in rates by 2 per cent inevitably involved losses throughout the market, but the period of exceptionally dear money was generally less damaging than the 1955-56 period had been, chiefly because of its relatively short duration. The bond market had made a notable recovery well before the first reduction in Bank rate last March, and thereafter nearly all the adverse influences rapidly gave place to favourable ones.

Admittedly, the current margin between bill rates and the costs of short money steadily narrowed, until it is now no more than about ⅛ per cent, compared with an average of ⅜-½ per cent over 1958 as a whole and about ⅞ per cent in 1956. Until quite recent weeks, however, the average return from the bill portfolio has always much exceeded the current market rate, so that bill business over the year has been highly profitable, in spite of the intensification of outside competition. The corresponding benefit from the lag in the fall of earnings behind that in costs has been even more important on the bond side of the business. Bonds bought during the late summer on a yield basis of well over 4½ per cent are now being financed with money costing, say, 3 per cent on average.

The year's excellent running profits from both bills and bonds, together with jobbing profits on bonds and the recovery in market values, should have fully replenished the inroads made into capital resources in the difficult years. Aggregate true resources of the twelve houses, which at the worst point cannot have been much over £30 million, are now almost certainly above the previous peak of about £45 million reached in 1954. If the market is wise, however, it will not regard this success as having wiped the mistakes of a few years ago clean from the record. If the discount houses are to continue to enjoy present facilities for bond dealing—the results of which are increasingly important in their profits—they must demonstrate their capacity to operate constantly in the interests of maintaining a flexible market. This means that in good times such as the present they must avoid the twin temptations: they must not push their portfolios close to the limits of capacity, nor must they concentrate on the longer stocks within their range.

BUSINESS NOTES

IN THE MARKETS

Bank Rate Quandary

THURSDAY passed with Bank rate unchanged at 4 per cent. Decision must be finely balanced. Domestically, a cut might seem called for by the rise in unemployment expected to be announced for January. It would certainly be useful politically; would it be economically wise? In a speech to the Leeds Chamber of Commerce last week-end, the Governor of the Bank of England said:

> Downward trends have to some extent flattened out and, though there are still soft patches, here and there one sees signs of a gradual pick-up.

That does not of itself suggest that Mr Cobbold thinks that measures of stimulation have been carried too far. The longer term danger of a new bout of inflation "has still to be reckoned with . . . but it does not seem an immediate threat." Mr D. J. Robarts, chairman of the National Provincial Bank, says in his annual statement this week that 4 per cent is "perhaps still rather on the high side for a period of recession."

In such circumstances the decision would normally be swung by international considerations. But these also point both ways. On the one hand, European money rates are still falling. The central banks of Germany and Holland have each cut their rates to 2½ per cent; Belgium has also cut its rate and is expected to be followed by the Bank of France. These adjustments encourage the flow of short-term funds to London; and while these give a useful prop to sterling and the reserves, the Bank of England and the Treasury have no desire to attract hot money whose withdrawal may add to sterling's strains during a May election or the heavy commercial demands of the summer.

Money rates in the United States, however, are moving upward. Treasury bills yield 2.98 per cent for three months' maturities and 3.34 per cent for six months' bills; this compares with 3.11 per cent for London's three months' bills. Many Americans now expect a further rise in official discount rates from their present 2½ per cent. A ½ per cent reduction in London Bank rate might put London bill rates significantly below New York. It could be argued that the current distrust of the dollar permits London this rare luxury; it could also be argued that the conjuncture might encourage international operators to question their current implicit assumption that America's inflation is going to be worse than other people's. Amidst all these conflicting considerations, has anyone on the Bank Court suggested a not quite unprecedented ¼ per cent?

Election Shadow

THE Stock Exchange has been subdued this week. The approaching election, and investors' fears that Labour might win it, have again been the main influence. Turnover has been much smaller than last week. To some degree, the election influence is the deadening one of sheer uncertainty; that is bad for any market. But industrial shares have been hit worse than gilt-edged. That may reflect the feeling that while a Labour government might after all be tough in general economic policy, there is little chance of its being sympathetic to the shareholder. *The Economist* ordinary indicator dropped in the week to Wednesday by 6.6 points to 245.0, bringing the fall since the December 31st peak to about 4 per cent. The relatively good showing of gilt-edged, in the face of some further bank selling, is by no means entirely the result of political considerations. Industrial shares look high after their long rise, and many have discounted a trading recovery that has not yet started. Some of the institutions will not now consider shares with yields under 4 per cent. They are holding off, too, in expectation of a number of new issues known to be on the way, after the long absence of new outlets.

The gilt-edged market has been firm enough to absorb successfully a loan of £2,584,000 for the Government of Barbados. The coupon, like that on other recent issues of West Indies governments, was 6 per cent, for dates 1971-73, and the offer price was 98½—sufficiently on the cheap side. The offer opened and closed on Thursday and the loan was oversubscribed. The gross redemption yield of £6 3s. 2d. to latest date gives a useful margin, of almost a full point, above yields on British Government stocks of comparable length. But not many colonial, or recently ex-colonial, governments have the credit to borrow on the London market at all. The dollar influence in the Caribbean is undoubtedly a help. Jamaica has for many months been negotiating for a loan in New York; it is finding the requirements of the New York authorities exacting, and London's terms by comparison may not seem so onerous after all.

Dip on Wall Street

THURSDAY'S fog was in keeping with the renewed feeling of uneasiness in the London industrial market, for the day before the Dow Jones average had fallen by 6.13 to 588.53 in very heavy dealings as a late wave of profit-taking swept over Wall Street. At their present heights, dollar stocks, offering low earnings and dividend yields, are sensitive and a slight shift in the balance of buying and selling quickly brings about an abrupt change in their values. Two factors are especially worrying at the present time: first, there have been reports of net selling by some large institutional holders and, secondly, there is as yet little statistical confirmation of the optimistic prophecies that business will boom this year. Nevertheless, dealers on Wall Street continue to believe that the boom will come and to shrug off sudden dips in market prices as technical corrections. They believe that the trend in equity prices will still be upwards but, unlike last year when the recovery was characterised by slight intermittent pauses, they are now arguing that there will be repeated breaks in this upward movement, producing quite violent swings in the prices of individual stocks. The bulls, in fact, are looking a little tired, just as they are in London.

THE ECONOMY

Signs of Recovery

NOTHING in this week's statistical indications about the economy need modify the official opinion about a moderate recovery. The Central Statistical Office still holds to its estimate that there has been an upturn in production, with amendments to its figures for September now putting the turn between October and November. The index, seasonally adjusted, is now shown at 105 (1954=100) in September and October, as it was during most of the summer; with a rise to 107 in November. Its first impression of the level of production in December, 106-107, suggests that allowing for seasonal fluctuation production has been maintained at this rather higher level, suggesting that December was quite as high as the year before. Another rather more optimistic gloss upon economic indications has come from the Board of Trade, which reckons from a sample of businessmen's investment intentions that it took just before the end of last year that private investment this year will be roughly the same as last year. The replies to its questionnaire suggested that manufacturing investment will be about a tenth lower than last year; private investment outside manufacturing is expected to be higher than in 1958. An earlier sample taken last summer had suggested a fall in manufacturing investment of about a sixth; the companies who replied then have not changed their minds, but a larger number of companies offered forecasts at the end of the year than in the summer, and those replying only to the later inquiry forecast much smaller declines in investment.

No Collusion

THE Central Statistical Office has now published—in the current issue of *Economic Trends*—its estimates of national income in the third quarter of last year. These present a rather more optimistic picture than those given out ten days before by the National Institute of Economic and Social Research in its new bulletin *Economic Review*. The official estimates suggest that, measured at constant prices, the gross domestic product in the three months July to September was only 1 per cent lower than a year ago; in the previous quarter the corresponding fall had been 2 per cent. To compete with the new bulletin, the Central Statistical Office now chances its arm at ironing out seasonal factors and, after so doing, hazards that "the gross domestic product, at constant prices, probably fell slightly during the first half of 1958, but the fall appears to have been halted in the third quarter." The National Institute does not think so; according to its estimates the gross domestic product was still falling gently.

Admittedly the two sets of estimates are not exactly comparable; one is at market prices, the other at factor cost, one is built up from the expenditure angle, the other from production records. Nevertheless they do reflect a real difference in stock figuring, the trickiest part of the accounting. With a large residual element in their estimation, the National Institute, after taking seasonal influences into account, reckoned that stocks on balance, right across the economy, had begun to fall in the third quarter of last year; the official estimates, which claim to be more direct ones, do not support this view. No outsider can judge the relative quality of the estimates, although it might be thought that the official statisticians should be in a position to make the more reliable ones. On the other hand, it is difficult to see why the national product should have started to rise again in months when industrial output did not.

On the external account, the latest estimates show that the surplus on trade in goods and services had virtually disappeared by the third quarter, after totalling £237 million in the first six months. Although to some extent the closing of the gap is seasonal, the value of both imports and exports were back to their 1956 level.

CONVERTIBILITY DEBATE

The Next Move

STERLING'S further rise in the exchange markets this week—the rate touched $2.81 on Tuesday—provided a sobering background to Labour's attack in the Commons debate on the rashness of unifying the transferable and American sterling accounts. The Chancellor confirmed that the authorities do not regard this as a significant change in sterling's vulnerability to speculative attack; he went further than official spokesmen have in the past to confirm the degree of backdoor convertibility previously existing through the transferable markets overseas, and to admit that there was very little room for manœuvre in letting the transferable rate go. Nor was there any real conflict between Mr Amory's description of official considerations in the timing of the move and the version Mr Gaitskell drew from Paris. In the late autumn the authorities were looking for a favourable opportunity for unification of the rates; in choosing the opportunity, the prime consideration was European and above all French and German co-operation; in the event, an unexpectedly impressive concerted step forward was achieved.

Mr Amory confirmed that the next step in external liberalisation is to be on the trade side—liberalising imports of dollar consumer goods. Until this programme is "well launched," Britain will not make the move from the temporary transitional provisions of article 14 of the International Monetary Fund to *de jure* convertibility under Article 8. The IMF articles do not require freedom for capital transfers; and Mr Amory reminded the House that control over foreign withdrawals of capital remained unchanged. City hopes that Britain may follow Continental example and scrap the restrictions on security sterling may be premature.

The main burden of the Labour attack was that current convertibility in the London market would increase the risk in a future crisis; Mr Gaitskell repeated that despite opposing the decision, "we would have to do our best to work it." His report of an estimate that "the total amount" of exchange business likely to be gained by London bankers "does not exceed about £125,000 a year" is mystifying: Mr Gaitskell may be thinking of profit rather than turnover, but even then his figure seems much too low.

ROAD CONSTRUCTION

No Lessons from Preston

NOTHING is admitted to be wrong with the design of the Preston motorway nor with the specification of a "flexible" type of road carriageway base incorporating pre-

mixed water-bound macadam. The programme of testing the subsoil with bore holes was inadequate; for example, it missed a peat bog that was encountered during construction and had to be wholly excavated. At the beginning of the project the constructors, Tarmac Ltd., asked for the construction period to be extended by twelve months; it was eventually agreed by the Ministry of Transport and its agents, the Lancashire County Council, that a five-month extension should be given. Summer rainfall during the three summers in which construction was going on was a third higher than the previous 80-year average, and the cold spell in January, preceding the thaw that broke up part of the surface of the Preston motorway, was one of the severest this century. Trial bore holes suggest that most of the excess moisture in the various layers of the road had been held in since the construction period, but final conclusions cannot be drawn until there has been a period of continuous thaw.

These were the factual ingredients in the preliminary report that the Minister of Transport gave to Parliament on last week's damage to the motorway. Mr Watkinson denied suggestions that his Ministry urged undue haste in completion—the timetable of construction, he said, had been entirely a matter of the County Council to decide—or that the methods of construction adopted, and in particular the amount of drainage, had been affected by his department's pressure for cheapness. He refused to have an independent inquiry into this damage to parts of the road surface, which he described as a "minor issue" although he was taking it seriously. Road building on this scale, he argued, involved inevitable risks; any local authority which felt that risks should reasonably be taken on the basis of professional competence would have his support, as the Lancashire County Council had for the Preston road.

Supplementary drainage on the parts of the road where excess moisture has caused damage are to be completed by the end of next week. Resurfacing will follow as soon as there is a complete thaw; and eventually the road will be reopened, possibly first to car traffic and only later to heavy vehicles. Mr Watkinson said that the particular kind of construction used at Preston which had been used successfully since 1952 in parts of Lancashire and Yorkshire, was not being used on the London to Birmingham motorway or the Ross-Spur motorway, though in parts of these lean concrete and water-bound macadam are being employed. But the specifications and materials used at Preston still appeared to him to be as suitable for conditions there as those used in the different circumstances of the other motorways. These too, he admitted, were subject to the risks unavoidable in major road construction in British weather, though all possible care was being taken to avoid any trouble with them. During the present spell of bad weather, he added, there has been no work on the London to Birmingham motorway except in bridge construction.

CREDIT TREND

Record Credit Expansion

THE volume of bank credit rose in 1958 by more than in any year since 1947: for the first time, the authorities can feel, the increase was by design. The best figure of net deposits available for this period shows a rise of £245 million, or 3¾ per cent. As the table shows, that increase was achieved in face of a decline in liquid assets (which reflected the success of the government's sales of stock in the gilt edged market and of small savings securities).

The banks had some cushion of excess liquidity; the average ratio was run down from 38.4 per cent at end-1957 to 34.6 per cent. But the increase in advances, which reached £366 million or almost one fifth in the year, rose to such proportions after the lifting of the credit squeeze in mid-year that the banks had to reverse their earlier increases in investment portfolios. Their purchases in the first half

* Excluding items in course of collection, and internal items in transit (but these are not available for the change on the year). † Assets as a ratio of gross deposits.

of the year were sufficient to keep the end-1958 total some £54 million above that a year before; but the individual statements of the banks for their January make-up show a total decline of £81 million in the first three weeks of this year. Most of these reductions, including the big movements at the Midland and Westminster, reflected the maturity of Conversion stock on January 15th rather than sales of stock. Liquidity ratios have received a welcome boost.

These January statements show, once again, that an exceptionally rapid rise shown in bank credit in November-December was strongly influenced by special end-year items. The greater detail in the banks' combined statement shows a rise of £144 million in "balances in course of collection," swelling the total of gross deposits, and also a rise of £54 million in internal clearings not included in "balances"; these two items swell both deposits and advances. Excluding them, the rise in deposits in the six weeks was just over half the rise of £410 million in published deposits; that in advances was £69 million, compared with the published rise of £123 million. This marks a rate of expansion similar to that prevailing since September. The January statements show on the whole little change in the advances items; and since the extraneous items must have fallen sharply, the increase in advances has evidently continued into the new year.

BRITISH RAILWAYS

Faster Freight to the Midlands

IT may seem ironic that British Railways should attempt to recover some of the ground which it has lost to road transport by supplanting certain of its rail freight services with its own road vehicles. However, this is the essence of the plan which the London Midland Region announced this week that it will put into effect in coming months. The London Midland, largest of the four operating divisions of British Railways, is also the biggest freight carrier; two-thirds of its total annual receipts of about £160 million

come from this source. The plan involves a reduction in the number of sundries depots from 170 to 48, and of marshalling yards from 111 to 46; the remaining depots will be extensively modernised to speed handling of freight —particularly merchandise—traffic.

Parcels traffic will be concentrated at six centres (Birmingham, Leicester, Liverpool, London, Manchester and Nottingham), through which 90 per cent of the London Midland Region's parcels traffic already passes. Freight will be delivered from the railheads to its destination in the railway's own motor vehicles, thus cutting out the delay incurred by rail transhipment to local stations. Thus, between points within the zone served by each railhead, British Railways will be operating an ordinary road haulage service (although there is not much traffic of this type now). Other measures include increasing the number of express freight trains (now just over 600), which in turn depends on fitting more wagons with vacuum brakes; increased dieselisation, the mechanisation of warehouse facilities, the development of special containers, and modernisation of signalling and control facilities in stations and yards.

It is also probable that the railway's fleet of road vehicles will be both expanded and altered somewhat in composition to handle the longer trips involved. Their licences, however, limit their operations to within a radius of 20 miles. The London Midland's plan is essentially a regional acceleration of the overall 15-year modernisation plan for British Railways; much of it will be accomplished this year, and it is scheduled to be completed within three and a half years. Its total cost may run to £25-£30 million, including £5½ million spent this year; but with the savings in costs—including considerable cuts in manpower—it is hoped to recover this new money in five or six years.

CONSULTING THE SHAREHOLDERS

Lord Chandos Makes a Promise

UNLESS the articles of association forbid it, the directors of any company, so long as they are acting in good faith, can issue unissued shares without first consulting the existing shareholders. A good deal of fuss was made about these powers when the board of British Aluminium proposed to issue ordinary shares to Alcoa. Not all investors were sure that this was a legitimate—as opposed to a legal—use of these powers and now several spokesmen of various sections of British industry have made it plain that they will not contemplate issuing a large block of unissued ordinary stock without first seeking authority from shareholders. A week ago, the directors of Associated Electrical Industries called an extraordinary general meeting, seeking authorisation from shareholders for the issue of AEI shares in connection with the London Electric Wire Company deal and

at that meeting the chairman, Lord Chandos, spoke of the principles involved and the distinctions that could be drawn. The principle, he argued, was that

> shareholders should normally be consulted unless their interests would be damaged by publicity. Nevertheless, if any deals which involve either an important proportion of the equity, or where the nature of the business appears to be altered are under consideration, the risks of publicity will have to be run. The proprietors are entitled to be consulted on major transactions.

The distinctions that Lord Chandos made were that he and his fellow directors would always consult shareholders on every occasion where the issue of a block of shares to a single company or portfolio is concerned, unless the issue represents only "a very small percentage" of the capital; and that they would also do so where an exchange of shares with another body of shareholders was proposed unless the issue represents only "a small percentage" of the capital. As Lord Chandos rightly says, absolutely rigid rules confer no advantage and the directors must have some discretion to decide what is "very small" or just "small." By distinguishing cases, Lord Chandos, in fact, has set down a most useful policy guide for other boards of directors to follow when they have to consider their responsibilities to ordinary shareholders.

TIN MARKET

Russia's 'Understanding'

THE International Tin Council is at last able to announce that an "understanding" with Russia has been reached. After breaking the tin market last September, Russia, it is now stated, has "moved towards the desires of the exporting and importing members of the council" and intends to limit exports of tin to non-communist countries this year to 13,500 tons. The head of the Russian Trade Delegation in London and the chairman of the council will keep in touch to resolve any questions which might arise. The unforeseen spurt in sales by Russia last year raised its total exports to the free world to about 18,000 tons. The tonnage was not large in terms of world consumption, but the sudden increase shattered the statistical basis of the council's control over exports, and the finances of the buffer stock became exhausted in buying what was, in effect, Russian tin.

In response to Russia's move Britain and other countries have removed their restrictions on imports of tin from Russia. It is open to argument whether Russia could have exported substantially more than 13,500 tons had these restrictions been maintained, and therefore hard to assess how real a concession Russia has made. As the understanding applies only to 1959 Russia's new-found sympathy with the tin market does not go far, but as far, perhaps, as it was reasonable to expect. The council would naturally prefer Russia to join the agreement as an exporter, and thus formally accept export restriction and the other obligations of producing members, particularly the contribution to the buffer stock. Whether Russia can in time be persuaded to join is anyone's guess.

It would be churlish just now to question Russia's good faith. It is clearly alive to the criticism that its sales have hurt the primary producing countries. But it is as well to bear the limitations of the understanding in mind. A good portion of Russian exports are believed to be tin made from Chinese ore, or Russian tin made surplus because bigger supplies are being received from China. If China chose to start exporting tin the council would then have to try to plug a new hole in the tin scheme. This is why the British government will continue to watch imports of tin from the communist countries as a whole. The announcement has not made much impression on the market; cash metal closed on Thursday at £767 a ton, a gain of £3 10s. on the week, but this mainly reflected the tightening in supplies.

EXPORTS OF MANUFACTURES

Germany Overtakes Britain

THERE were three notable developments in world trade in manufactures in the first nine months of last year. The value of trade declined for the first time since 1953, because of a sharp fall in shipments from the United States, the largest exporter; West Germany replaced Britain as the second largest exporter; and the British share of the total remained steady after falling continuously since 1950. Provisional estimates made by the Board of Trade, covering about nine-tenths of trade in manufactures within the free world, put the total for the first nine months at $30,757 million, three per cent down on the same period of 1957. Shipments from the United States fell by 13 per cent to $7,198 million, lending support to the view that America is pricing itself out of world markets. Three countries—Germany, Holland and Italy—managed to increase their exports in face of a contracting demand. West Germany's exports were four per cent up at $5,657 million and its share rose sharply to 18.4 per cent from 17.2 per cent in the first nine months of 1957. Though Germany has overtaken Britain in manufactures, Britain still leads Germany in total exports by a short head: total British exports amounted to $8,982 million in 1958 and total German exports to $8,802 million. Exports of manufactures by Britain fell by three per cent to $5,612 million, leaving its share of world trade unchanged at 18.2 per cent.

WORLD CAPITAL MARKET

Three More Issues

THE international capital market grows steadily more active. Three important loans (besides BP's issue in Zurich foreshadowed last week) are being launched now or in the near future. The Electricity Supply Commission of South Africa is raising 50 million Swiss francs in Zurich. The loan has a coupon of 5 per cent—a high rate for Swiss investors—and is repayable in fifteen years. Secondly, the Japanese Government will shortly issue its first postwar external bonds, in an issue of $30 million in New York. The interest rate is not yet known. Half the loan will be redeemable in three to five years, and the remainder after fifteen years. Thirdly, the Verbundgesellschaft of Austria, the national electricity corporation, has arranged a further foreign loan. A syndicate of German banks headed by the Berliner Handelsgesellschaft of Frankfurt is extend-

THE OLDEST NAME IN 'SCOTCH'

the things they say!

The trouble with the workers is—they don't work hard enough!

Hold on! Some of them are having to work too hard
for the results that they achieve.

That's odd, coming from you. *Haven't you made a great thing of Work Study in I.C.I.?*

Yes, we aim to help everyone work more effectively, by studying the jobs they are doing. We try to discover unnecessary drudgery or strain, frustrating time spent waiting for instructions, tools, materials and so on.

You make it sound quite pleasant . . . But what about the old stopwatch?

Well, we use it for measuring time—just as we use weighing machines to measure quantities and rulers to measure lengths. We don't guess a ton of salt for a customer, and we don't guess times when we're dealing with the way the other fellow does his job—it wouldn't be fair.

And it pays?

Would we employ a Work Study staff of 1,400 if it didn't? I can remember when one of our manufacturing Divisions was thinking of spending a million pounds on a new factory, but they were able to postpone it for years, just by making better use of the machines and equipment they already had.

Pity more people don't use Work Study, considering our economic position. Why don't people face the facts?

Well, you can't face the facts unless you have them. That's what Work Study provides. More and more people are learning to face facts each year.

And not only I.C.I. people. Already 1,600 leaders of other organisations have come to I.C.I. to hear how we go about this Work Study business—and we in turn are learning from them.

ICI

ing a loan for Dm 100 million to finance construction of power plants. This is the first Austrian loan to be placed exclusively in Germany since the war; though German banks participated in Austria's issue of dollar bonds at the end of last year.

German banks and other financial institutions are also preparing to invest more heavily in ordinary shares of the leading industries of the common market countries. A number of new investment trusts have been formed, with provisions to embrace leading securities on foreign Bourses. They include Europa 1, formed by the Frankfurt banking house of Hardy & Co.

HAWKER SIDDELEY

Funding and After

SINCE the beginning of the year the £1 ordinary units of Hawker Siddeley have risen from 29s. to 33s. There have been quite big buying orders for the stock and its price has been as high as 34s. The reason is that the air of uncertainty that has hung over the stock for so long has been dispelled first by the directors' comments on the funding problem and secondly by the snap announcement of the intention to raise £15 million on a new convertible debenture. That issue will more than cover the Brush Group's overdraft of £10 million and will fund a good part of the total overdraft of £23 million in this country. This overdraft and the £10½ million owing to banks in Canada is, in the directors' opinion, more than adequately covered by net current assets and the banks are prepared to go on financing the group. But the massive new interests of Hawker Siddeley and the fact that the group has now to find almost all the money for aircraft development from its own resources point to the need for a funding operation.

Not so very long ago the directors seemed to be thinking in terms of a rights issue of ordinary stock, but now they have plumped for a convertible debenture—that hybrid for which the institutional investors do not nowadays much care. It must be assumed that the institutions are prepared to agree that Hawker's exceptional problems demand an exceptional answer and that an issue guaranteeing a fixed return while the process of absorption, consolidation and re-organisation is being completed is preferable to the immediate dilution of the equity. From the company's point of view, the issue will provide breathing space, but it will want to purchase that space as cheaply as possible, for it is paying a little under 5 per cent on its bank overdrafts. The terms of the issue are still being negotiated but the negotiations, even though there is the job of settling exactly what is the security on the debenture, do not seem to have run up against any unexpected snags. Clearly, the aim of these negotiations is to hit on a formula that gives as an attractive as possible option on the equity and keeps the coupon on the debenture as low as possible—say, 5¾ per cent or under.

The issue clears the air but it will not solve Hawker's basic problems overnight. These are to fit the administration and management of a group that was concerned almost solely with aircraft in this country to the new role of a capital goods producer, largely in Canada; to focus the aircraft business on the civil market; to tidy up the tangled affairs of the Brush Group; to nurse Canadian Car and Foundry over a period of famine in the hope of a feast to come; and to prepare Dosco for further development. Dosco is the key to the future; new money will have to be found if it is to become a fully integrated and modern steel concern and, here, the obvious solution would be to raise fixed interest capital in North America without disturbing the parent's equity holding in Avro Canada. Some progress towards solving these problems has been made and some vigorous and not untimely changes have already been made in the managerial structure of the group. At least, a convertible debenture will give investors a chance to hedge the risks.

BUILDING SOCIETIES

The Co-operative Consolidates

EXPANSION has long been a factor in the policy of the Co-operative Permanent Building Society. Last year it absorbed the Scottish Amicable, which had got into trouble with its gilt-edged investments, and this added about £22½ million out of the total growth of £42 million in the Co-operative's assets last year. Withdrawals by shareholders and depositors in Scottish Amicable were between £2 and £2½ million—about half the expected rate—and a rising gilt-edged market helped the Co-operative to sell the irredeemable stocks and some of the long dated stocks in the Scottish Amicable portfolio.

ASSETS AND RATIOS
£'000s

Years to December 31	1957	1958
Received from shareholders	36,547	42,428
Withdrawn by shareholders (cum interest)	23,486	29,942
Mortgage advances	29,064	30,265
Liquid assets	23,609	32,368
Liquidity ratio*	13·28%	15·02%
Reserves	4,780	5,713
Reserve ratio*	1·70%	1·99%
Total assets	162,621	204,523

* Calculated on the market value of investments.

That meal can now be said to be digested but 1958 was not an easy year for the building societies—at least not until the credit squeeze was relaxed. The Co-operative lent £30 million on new mortgages (against £29 million) but, like the other leading societies, it was carefully nursing its liquidity ratio. At book values, this ratio improved from 14.52 to 15.83 per cent and, thanks to the rise in gilt-edged prices, it went up from 13.28 to 15.02 per cent. The recovery in the gilt-edged market is also reflected in the improvement in the reserve ratio, which, after allowing for the depreciation on the portfolio, has risen from 1.70 to 1.99 per cent. But this ratio is still low; at book values, because of the absorption of Scottish Amicable, it actually fell from 2.94 to 2.80 per cent. The Co-operative must build up its reserves, for it would not wish to jeopardise the prospect of trustee status under the government's housing bill. Consolidation and a controlled rate of growth are now the aim. The Co-operative is not adding to its branch offices and it is making a drive to secure more small investors. At the moment, therefore, its managers, conscious of the competition of national savings certificates and premium bonds and of the possibility that the demand for new mortgages will remain high, may not be too keen to see any reduction in the borrowing and lending rates of the societies. Its own recent reduction of its rate on 20-year mortgages was to the Association's recommended rate of 6 per cent on all mortgages; but the Co-op. continues to

charge more than the recommended rate on mortgages with a longer life, though the Association does not look too kindly to mortgages of more than 25 years.

ATOMIC ENERGY

Uranium at Springfields

THE uranium processing plant at Springfields is the first of the Atomic Energy Authority's factories to reach the end of its useful working life through obsolescence. Ten years old, built at an original cost of £5 million, it is about to be closed down in stages as a new £15 million ore-smelting and rod-producing plant comes into production. The differences between the old and the new Springfields plants are similar to those that distinguish a jobbing foundry from one concentrating on continuous production runs. The new plant is highly mechanised and the operations are carried out in an almost unbroken sequence from start to finish. Much of the operation could be completely automatic but for the fact that plant engineers still think it a wise precaution in atomic energy plants to rely on operators rather than on automatic control.

The Springfields re-equipment plan was drawn up partly to increase capacity, partly to cut costs. The new plant has a much bigger potential rate of output than the old. In its present form it can supply the combined needs of the AEA's eight reactors at Calder Hall and Chapel Cross, the Generating Board's civil power stations, and any immediate export demand. It is laid out in such a way that output can be increased to keep pace with export sales—if any. This is important since a power-producing reactor needs an initial charge of fuel running to several hundred tons in the bigger power stations, and each fresh design of fuel rod requires its own production line. But changes in the dimensions of the uranium rods produced at Springfields, other than small changes of length, could not be carried out in less than three months; radical changes in design, such as a switch from rod to thin metal plates, would take considerably longer. Because of this element of inflexibility, which is the price of higher output, part of the old plant will be refitted on a jobbing basis.

The plant's ability to cut fuel costs will be closely watched by the British companies now trying to sell nuclear power stations abroad. More complex design of fuel elements, introduced to increase heat transfer efficiency inside the reactor, have sharply raised production costs. With the new Springfield plant working all out it should be able to sell manufactured fuel rods at between £20,000 and £22,000 a ton. This is less than the cost would have been on the old plant, but it is a good deal higher than industry had expected on the basis of estimates for older, simpler, kinds of fuel element.

UNIT TRUSTS

Shield for Small Investors

CO-OPERATION between N. M. Rothschild and Sons, the merchant bankers, and the National Group of unit trusts has given birth to a new unit trust that is very like Philip Hill Higginson's British Shareholders Trust. The management company, Shield Fund Managers, has offered 5 million units in its new trust, Shield Unit Fund, at 10s. each. The prospective yield at this price is 4 per cent; it compares with the 4¼ per cent offered by BST last November when it offered the same number of units at the same price, but at their current price the BST units yield just 4 per cent. Both these unit trusts are cash funds in which the managers act as agents, but the Shield Trust does not give investors the dubious opportunity of buying units on instalments. Instead, it has given them an opportunity of "averaging" on a mixed bag of securities by adopting a thrift plan with a minimum payment of 10s. a week. Other unit trusts already operate similar schemes, but BST favoured the deferred payment plan and it associated itself in this respect with United Dominions Trust. The Shield Fund has one indirect link with BST for the chairman of UDT, Mr J. Gibson Jarvie, will sit on its investment advisory panel. The initial aim is that three-quarters of the trust fund's portfolio will be made up of a wide spread of British stocks and one-fifth of North American securities.

Block issues by unit trusts have their critics, but recently they have proved their worth as a means of making unit trusts more popular—at least among white-collared workers: BST, for instance, has sold over 10 million units since its inception. Some critics have argued that the management of the unit trusts' portfolios has failed by comparison with the indices of industrial ordinary shares, but the injection of merchant bank expertise into the movement may help to disarm this criticism.

MONEY MARKET

A Rhodesian Discount House

RHODESIA is taking another step towards the establishment of an organised money market; and the structure that is emerging is much closer to the London pattern than that in any other Commonwealth or foreign country. Soon after a central bank was set up, with Mr Grafftey Smith from the Bank of England as governor, two acceptance houses, Rhodesian Acceptances and the Merchant Bank of Central Africa, were formed with the help of the great mining companies. Now it is announced that a discount house is to be formed. This follows the precedent in the Union of South Africa, where Anglo American Corporation set up a discount house to flank its Union Acceptances. But the discount house proposed for Salisbury is independent of the acceptance houses, on the London pattern.

One fifth of the capital of £100,000 of Discount Company of Rhodesia is being supplied by Gillett Brothers, a leading light in the London market. The Bank of England's sanction does not imply any change in its general opposition to overseas ventures by London discount houses; Rhodesia is regarded as a special case, worthy of help and with limited resources of its own in this sphere. The rest of the capital of the new company is being supplied by leading Rhodesian investment houses and by British and South African insurance companies operating in Rhodesia. The chairman is Mr G. Ellman-Brown, the managing director is Mr E. Clifton-Brown (who helped in the formation of Union Acceptances and Rhodesian Acceptances) and Gillett Brothers are making available one of their directors, Mr C. J. B. Chalkley, as well as an experienced manager.

SHARES FOR EXECUTIVES

The Costain Plan

RICHARD COSTAIN, the public works contractors, has devised a scheme to retain the services of its managerial executives by offering them a chance of a tax free capital gain in place of a taxable bonus. Because of the sporadic nature of the business, Richard Costain finds it difficult to hold on to the technical staff that forms the middle management of the group by the normal incentives of salaries, bonuses and pensions. This new scheme is therefore limited to those of its executives who earn £1,350 or more a year, but it does not extend to the directors of the company. In place of a bonus or commission, these executives can borrow a sum, limited in scale with their salaries, from a trust set up by the company and use that money to buy newly-issued ordinary stock of Richard Costain either at the market price or just a little below it. They have to pay some interest on their loans and if they sell the stock within three years of buying it, the capital profit accrues to the trustees and not to them.

The scheme is hedged in with a number of safeguards. Not more than 10 per cent of the ordinary capital can be issued under it, protecting shareholders from any excessive dilution of their equity. Shareholders will be asked to authorise the scheme before it goes into operation and a number of institutions have already been consulted and they have raised no objections. But the scheme is not all that far removed from the purchase of shares by instalments and it does tie executives tightly—perhaps too tightly—to the fortunes of the company that employs them. Both these executives and the company itself, for it is the company that at one remove makes the loan, have a joint interest in the market value of the company's own stock. The success of the scheme in retaining executives in the company's employ turns on the market value of the ordinary stock. In announcing the scheme the directors have declared an interim dividend of 5 per cent and indicated a final of 10 per cent. Thus within three years the dividend has been effectively trebled; the £1 units now stand at 62s. 9d. xd and yield 4.8 per cent.

CO-OPERATIVES

Cassandra Speaking

LAST week, that centre of reaction in the co-operative movement, the Co-operative Wholesale Society, published its views on the trading reforms approved by last November's Congress. Predictably, it has rejected them all; particularly those—the most important—proposing the setting up of an independent retail development society to run co-operative chain stores. This is a high-handed move that will almost certainly do the society no good; but it typifies the sterile attitude that still afflicts the high places of co-operation.

Another example of this attitude is to be found in the current issue of the monthly review of the Co-operative Union. This says some sensible things in a thoroughly defeatist way. Last year's disappointing results are analysed. Total sales rose by less than 2¼ per cent in value; in many of the profitable dry goods lines they actually fell. This confirms again the forebodings expressed in the independent commission's report last year and seems at last to have forced on the executive a grudging acceptance of the spirit, as well as of the form, of the commission's proposals. But then come the warnings about the future—and they make dreary reading. Again and again the point is made (though one would have hoped that it no longer needed making) that the fat postwar years of high retail margins and minimal competition are gone; that new methods of retailing, and the price cuts they make possible, are here to stay; and that co-operatives must either match this competition or fade away. But throughout the analysis one vital thing is missing, as it has been from all co-operative policy for the last thirty years: a sense of enthusiasm for the job in hand.

Nobody, in fact, could be less enthusiastic or optimistic about the future than the Co-operative Union—and for less reason. As they themselves say, they have half of the country's 180 supermarkets and a high proportion of the cut-price stores. They are even planning to rationalise production on the line pioneered by Marks and Spencer. But the union dreads getting its hands soiled in the hurly-burly of competition. Thus, even after the commendably liberal remark that "price-cutting stores share with their customer the economies of self-service" and must thus "be welcomed by co-operators," the central executive return to their old defensive posture. Easier hire purchase facilities have created a "problem" and cut prices will mean lower margins which "must be accepted as the price of maintaining sales in the face of price competition." But what about expanding sales? And what about a policy designed, not as a countermove against more enterprising competition, but with an eye to the commercial opportunities of the movement itself? The co-operatives are ideally placed to take advantage of the new age of working-class prosperity, but new blood will be needed before they realise it.

SHORTER NOTE

Copper prices have risen steadily. Cash metal closed on Thursday at £239 a ton, having gained nearly £19 since the month began.

PARTICULARS

Objects

The purpose of Shield Unit Fund is to provide an investment suitable for everyone. The Fund is, however, specially designed for the smaller investor and for the investor who has, perhaps, *neither* the time nor the experience to take adequate care of his own investment affairs.

Since 1948 the real value of the £ has fallen from 20s. to 13s. 9d. so that £1 invested in 1948 must now be represented by £1 9s. 1d. for the original investment to have maintained its real value.

Nevertheless an investment made in 1948 in a wide representative selection of ordinary shares would on balance have kept pace in value with the rise in the cost of living. This would not have been so with an investment in a representative selection of Government Stocks or of other fixed interest securities.

A similar investment in a skilful choice of such ordinary shares might have done even better.

Through Shield Unit Fund the small saver, however modest his holding, can obtain not only a wide spread of investment but also, and this is perhaps even more important, the benefit of skilled professional investment management.

It is the opinion of the Managers of the Fund that investment in well chosen ordinary shares is likely in the future, as in the past, to offer to the ordinary investor the best chance of safeguarding the value of his capital and savings. Accordingly it is this investment policy, applied with such flexibility as may seem appropriate, that the Managers intend to pursue. It should, however, be borne in mind that any general decline in Stock Exchange prices, even one of relatively short duration, must be reflected in the value of the Fund and therefore of Units.

The Fund

The Fund is of the Cash Fund type. This means that all moneys received from the issue of new Units are paid direct into the Fund after deduction only of the sales charge referred to below. It will be seen therefore that in the creation of Units the Managers act as agents for the Fund and all benefits resulting from advantageous investment dealing accrue solely to the Fund.

Trusteeship

As Trustees to the Fund, Rothschild Executor & Trustee Company are responsible to Unitholders for the safe custody of all securities and cash and for the collection and distribution of income.

Under the terms of the Trust Deed the Trustees have the right to refuse to permit the inclusion in the Fund of any security which for any reason they consider unsuitable.

Investment Advisory Panel

The Investment Advisory Panel provided for in the Trust Deed will consist initially of five members whose names are shown above. Between them they bring to the Panel extensive experience and knowledge of investment in all its aspects.

Two members of the Panel are appointed by the Trustees as their nominees and they in turn appoint the other three members. All the members of the Panel are independent of the Managers to the Fund whom it is their function to advise, though the Managers remain responsible for investment policy.

N. M. Rothschild & Sons have undertaken to make freely available to the Panel the benefit of their wide investment experience.

Investment Policy

The investment policy of the Fund is, by a wide, carefully balanced spread of investment in the securities of many well-known domestic companies and of selected overseas concerns and in British Government Stocks, to achieve so far as possible a steady appreciation in the capital value of the Fund and at the same time a regular and growing return for the Unitholder by way of income.

The Fund will comprise not less than fifty securities but it is intended to effect a wider spread by the inclusion of substantially more than this number. The initial investments of the Fund may include Gilt-edged and other Trustee securities, the stocks or shares of any of the companies set out in the list below and such other investments permitted by the Trust Deed as the Managers may decide.

At the time of the payment of each half-yearly distribution of income Unitholders will receive an up-to-date list of the investments of the Fund, showing the percentage of the Fund invested in each.

Initially the geographical spread of investments will be approximately:—

United Kingdom	73.5%
U.S.A.	10.0%
Canada	10.0%
Other Commonwealth countries	5.0%
Miscellaneous	1.5%
	100.0%

Income Distributions and Yield

The whole of the distributable income of the Fund will be paid to Unitholders on 1st April and 1st October in every year. The first distribution will be made on 1st October, 1959. The half-yearly distributions of income are to be audited and certified by Peat, Marwick, Mitchell & Co., Auditors to the Fund.

It is estimated that the initial yield on the Fund, calculated according to the formula of the Board of Trade, will be at the rate of approximately 4 per cent. per annum before deduction of income tax.

Applying for Units

To apply for Units you should fill in the application form herewith and send it, so as to arrive not later than 3 p.m. on 4th February, 1959. Letters of allotment will be sent to applicants in respect of Units allotted to them and Unit Certificates representing their holdings will be prepared and posted to them as soon thereafter as possible. Any commissions payable to agents will, under the terms of an agreement with the Managers, be paid by the Distributors, Investment Funds Services Ltd.

Selling Units

If at any time you want to sell any of your Units you may do so by offering them, either direct or through an agent, to the Distributors, who will buy them on behalf of the Managers. The price that the Managers will pay is to be quoted daily and published in the Press. No deduction will be made by the Distributors but agents may charge their usual commission for their services. The minimum price to be paid is governed by Board of Trade regulations and is calculated on the Stock Exchange prices of the securities held in the Fund. Under normal conditions, however, the Managers expect to be able to quote a price above this minimum.

Management

Shield Fund Managers Limited is a new company formed in association with The National Group of Fixed Trusts Limited, especially for the purpose of managing Shield Unit Fund. Its Directors, whose names appear above, have a wide experience of finance and investment and of Unit Trust Management. Three of them have already served in the direction and management of Unit Trusts for over twenty-five years.

The Managers are responsible for meeting all the expenses of administering the Fund including the remuneration and disbursements of the Trustees and such remuneration as may be payable to the members of the Investment Advisory Panel. To provide for these expenses and for their own remuneration the Managers are entitled to a half-yearly service charge of three-sixteenths of one per cent. of the average value of the Fund payable from the income of the Fund. In addition a sales charge of five per cent. is included in the price of the Units.

Under the terms of their agreement with the Managers the Distributors receive out of the sales charge a commission on the sale of Units, from which they are paying the commissions due to Stockbrokers, Banks and other agents in respect of Application Forms bearing their stamps, and are meeting the costs of the advertising and promotion of this issue.

The Trust Deed

It is intended that the Fund shall continue for a minimum period of twenty years and subject to compliance with the provisions of the Trust Deed the life of the Fund is not limited. Under certain circumstances, explained in the Trust Deed, the Fund can be terminated by the Unitholders, the Trustees or the Managers. The Trust Deed contains provisions for its alteration by Supplemental Deed which in some cases will require the approval of a meeting of Unitholders. A copy of the Trust Deed may be inspected at the offices of the Trustees and of the Managers or may be had from the Managers on payment of 5/-.

Copies of the Prospectus and Application Forms may be obtained from all branches of National Provincial Bank Limited, from N. M. Rothschild & Sons and from the Managers and Distributors.

List of Companies whose stocks or shares may be included in the initial investment of the Fund

Banks and Insurance
Alliance Assurance

SAVINGS PLAN The Managers propose to introduce a Savings Plan to be run in conjunction with the Fund.

By means of this Savings Plan it will be possible for investors and small savers to take an interest in the Fund by making regular monthly payments. These regular payments will be accumulated in the Plan member's account and every time the cash balance is enough to buy ten Units these will be bought and held for him. The minimum payment that can be accepted will be at the rate of 10/- per week. Above this minimum there will be no limit to the amount that can be invested in this way.

No additional charge will be made by the Managers for administering the Savings Plan.

A booklet describing the Savings Plan will in due course be available on application to the Managers or the Trustees or to the Bankers and their branches. It is expected that the Savings Plan will start operating shortly and its inception will be announced in the Press.

How to Buy Units

Fill in the Application Form below and send it, to arrive not later than 3 p.m. on 4th February, 1959, to NATIONAL PROVINCIAL BANK LIMITED, *New Issue Department, P.O. Box No. 71, 22, Old Broad Street, London, E.C.2 (or any Branch of that Bank) or to* N. M. ROTHSCHILD & SONS, New Court, St. Swithin's Lane, London, E.C.4, together with a remittance in favour of the *appropriate Bank. Units may only be bought in multiples of 10, with a minimum of 40.*

APPLICATION FORM — EC.1

To: SHIELD FUND MANAGERS LTD.

I hereby apply for Units, or such lesser number as may be allotted to me, of Shield Unit Fund at a price of 10s. per Unit, upon the terms of the prospectus dated 30th January, 1959, and of the Trust Deed and I authorise you to place my name on the register accordingly. (Applications must be for multiples of 10 Units, with a minimum of 40 Units.)

* I declare that I am not resident outside the Scheduled Territories and that I am not acquiring the above mentioned units as the nominee of any person(s) resident outside these Territories.

I enclose the sum of £ being payment in full.

Date 1959

SIGNATURE

SURNAME
Please state Mr., Mrs. or Miss.

CHRISTIAN NAMES (in full)

ADDRESS

Application Forms for joint holdings will be issued on request.

* If you are unable to make this declaration, the form must be lodged through a Bank, Stockbroker, Solicitor, or other Authorised Depositary. "Authorised Depositary" and "Scheduled Territories" are defined in Bank of England Notice E.C. Securities 8, as amended.

Authorised Depositaries are informed that permission has been given by the Bank of England for subscriptions to be made on behalf of non-residents, payment being effected in External Sterling or Blocked Sterling (Security Sterling).

COMPANY MEETINGS

NATIONAL PROVINCIAL BANK LIMITED

MR D. J. ROBARTS ON MEETING PRIVATE BORROWERS' NEEDS

ENTRY INTO HIRE-PURCHASE FINANCE A DEVELOPMENT OF MAJOR IMPORTANCE

WORLD CONFIDENCE IN UK RESTORED DURING 1958

NEED TO PRESS FORWARD TOWARDS FULL CONVERTIBILITY

The one hundred and twenty-sixth annual general meeting of National Provincial Bank Limited will be held on February 19th at the head office, 15 Bishopsgate, London, E.C.2.

The following is the statement by the Chairman (David John Robarts, Esq), which has been circulated with the report and accounts for the year ended December 31, 1958:

Board of Directors.—Since our last Annual General Meeting the Right Honourable Sir Percy James Grigg, KCB, KCSI, who joined our Board in 1949, has been elected a Deputy Chairman of the Bank. We have also had the pleasure of announcing the election to seats on the Board of the Right Honourable Lord Sinclair of Cleeve, KCB, KBE, MA, and Sir Cecil William Aykroyd, Bart. The former is well known as the chairman of Imperial Tobacco Company (of Great Britain and Ireland), Limited and for his wartime services in the Army Council, the Ministry of Production and the Board of Trade: the latter is a leading figure in the woollen industry and has been a Local Director for Bradford and District since 1947. Both bring to our Board long experience and expert knowledge of trade and industry, which will be of much value to the Bank.

Mr Alan James Peech, a prominent figure in the steel industry, has been elected a Director for the Sheffield Local Board.

SUBSIDIARY COMPANIES

The Balance Sheet of Coutts and Company as at December 31st last and the Profit and Loss Account for the year ended December 31, 1958, accompany our own Report and Accounts. A Consolidated Statement of Assets and Liabilities of North Central Wagon and Finance Company Limited and its subsidiary companies as at September 30, 1958, is also included.

STATEMENT OF ACCOUNTS

The Balance Sheet and Accounts of the Bank together with the Directors' Report are before you.

It will be seen that the liabilities of the Bank to its Current, Deposit and other Account holders at £862,495,561 exceed last year's figure by £31,789,692.

The total of our liquid assets—Cash, Money lent at Call and Short Notice, and Bills—represents 36.0 per cent of our deposit liabilities. This compares with 39.6 per cent twelve months ago.

Investments in securities of, or guaranteed by, the British Government continue to be shown at a figure which is below their market value. The Balance Sheet value of £215,726,394 gives a ratio of 25.0 per cent to Deposits as against 25.9 per cent last year We hold no undated government securities and the majority of our holdings mature within ten years.

Our Advances stand at £284,411,586 which represents 33.0 per cent of our Deposits. The corresponding figures at December 31, 1957, were £240,093,573 and 28.9 per cent.

PROFIT AND LOSS ACCOUNT

The account shows a net profit for the year of £2,236,426 compared with £2,061,966 for 1957.

Together with the amount brought in of £628,729 there is a balance for disposal of £2,865,155. An interim dividend of 9 per cent has been paid, taking £544,056, leaving available £2,321,099.

It is now proposed to deal with this balance as follows:

To pay a final dividend of 11 per cent	£664,957
To appropriate to Contingencies Account	£1,000,000
This will leave to be carried forward	£656,142

The proposed final dividend of 11 per cent makes, with the interim dividend of 9 per cent paid in July last, a total dividend of 20 per cent in respect of the year 1958.

MANAGEMENT AND STAFF

During the year Mr C. G. Wheatley, a Joint General Manager, retired after more than 43 years of distinguished service to the Bank, including seven years as Joint General Manager. The Directors have been pleased to appoint as Joint General Managers Mr S. B. Heys and Mr F. A. Vaughan.

The question of staff training continues to receive the closest attention.

Our Junior Training College at Chalfont was established in July, 1955, and we believe it is proving to be a very worthwhile venture. At Unsted Park, near Godalming, we have our Training Centre for more senior members of the staff.

Some time ago we felt that our Managers would welcome the opportunity of discussing with some of their colleagues the problems which arise in the course of their daily work, and at Middleton Park, near Bicester, we have now set up a Managers' Conference Centre. There for a fortnight at a time sixteen Managers from all parts of the country and from every type of branch meet in ideal surroundings and in an atmosphere of complete informality. They exchange views and experiences on the basis that each has something to contribute for the benefit of all, and visits to the Centre by General Managers and other Head Office officials help towards a closer understanding between branches and Head Office. The two hundred Managers who have already had the opportunity of staying at Middleton Park have been unanimous as to its very real value to them.

The ladies on our staff—they now number about 4,700—continue to give excellent service and in recognition of this we have given appointments, appropriate to the work they are doing, to a limited number of these ladies of long service and of outstanding merit.

Our Athletic Association continues to play an important part in the welfare side of our staff, particularly, of course, in London. We have a finely equipped sports ground at Lower Sydenham, which is well supported, and our Rowing Club at Hammersmith has again been very much in the news this year. For our Coxless Four to beat the Russian crew at Henley, to be the runners up in the Steward's Cup there, to represent England in the British Empire Games at Lake Padarn and become Gold Medallists, and, finally, to represent their country in the European Championships in Poland, is a record of which any crew, and, indeed, any bank, can be proud.

We are fortunate in the National Provincial Bank in having a thriving Staff Association and a Ladies Guild. The freely elected representatives on these bodies have ready access at all times to the Directors and General Managers. We welcome full and frank discussion of any problem, large or small, concerning the conditions and welfare of the staff. It is worth noting that in the event of failure to reach agreement either side can take the case to arbitration, thus ensuring an impartial settlement. I am glad to say that it has never been necessary to resort to this machinery, and I hope that the need to use it will not arise in the future. The non-clerical staff also have their own Association which meets the Directors and the Management from time to time.

Once again I wish to put on record the most cordial thanks of the Directors to the Management and the Staff of the Bank. The men and women who serve the National Provincial Bank are a body second to none in their industry and loyalty, and they have completed another year of excellent work which has made possible the satisfactory results which we are able to place before you today. It is through the fine calibre of our staff that we are able to maintain our high tradition of service to the public.

NORTH CENTRAL WAGON & FINANCE COMPANY LIMITED

In July last the Chancellor felt able to relax the credit squeeze and to modify or abolish many of the financial restrictions then existing. This made possible the entry of the National Provincial Bank into the hire-purchase finance business—a development of major importance in the history of the Bank. A review of the considerations which led to this decision is, therefore, desirable.

The business of hire purchase, in one form or another, is of long standing in this country and has grown steadily over the years. It has extended from capital goods into many kinds of consumer goods, and, providing it is kept within bounds and does not encourage inflationary trends, it has its appropriate part to play in modern life. There seems no doubt that the financing of hire purchase will continue to expand and will form an increasingly important part of the credit system of this country, provided that the companies engaged in it continue to be managed with prudence. A bank such as ours can make a useful contribution to a hire-purchase finance company, both by way of financial support and by the introduction of customers of the bank who require hire-purchase facilities.

Against the background of these views, your Directors gave careful consideration to the best method of entering this type of business. We decided that, hire-purchase finance and banking being in many ways different, they should be kept separate from each other and therefore that a hire-purchase finance company operating as a subsidiary of the Bank but under its own established and proved management was the best arrangement. We were fortunate indeed in being able to acquire by purchase for cash the ordinary share capital of the North Central Wagon and Finance Company Limited. The National Provincial Bank has been the sole banker to North Central since the formation of the latter company nearly 100 years ago. Based upon our long connection, we have the highest opinion of the management of North Central and we intend to leave that management undisturbed. The only changes which have occurred in its board since we acquired the share capital of North Central are the elections as directors of Mr Keighley, Chief General Manager of the Bank, and of Mr. Wheatley, until his recent retirement, a Joint General Manager.

We look forward to working in the closest co-operation with North Central and to the steady progress of our investment in that company.

PERSONAL LOANS

With the ending of the credit squeeze last July, the matter of "Personal Loans" came into prominence. Such loans, being in the private sector of the bank's lendings, had been severely pruned at the request of the authorities over the years when the credit squeeze was in operation. When it became possible to adopt a more liberal lending policy, the banks were naturally anxious once again to meet the legitimate needs of their private customers, and much consideration was given as to how this could best be done. Your Directors decided that the existing system of the National Provincial Bank, which could now be used with greater freedom, would best meet the needs of the new situation. Every Branch Manager in the Bank has a discretionary power which enables him to make loans to his customers on his own judgment and within this discretion. In general, the level of this discretionary power will enable him to meet the normal requirements of most of his private customers—above that level, reference to Head Office is necessary and arrangements are such that a prompt reply is forthcoming. Since last July it has been possible for this system to function in the manner for which it was designed and our Managers have been, and are, able once again to grant loans on proper banking lines and at normal banking rates of interest to their private customers.

SPECIAL DEPOSIT SYSTEM

Among the events of importance to British banking which occurred in 1958, the introduction by the Bank of England of a system of Special Deposit Accounts must rank high. The object of the system, which exists in one form or another in several other countries, is to enable the authorities to exercise control over bank credit through direct action upon the liquid assets of the banks. The system is designed in the following manner. Should the authorities wish to curtail bank credit, the Bank of England would make a call, with due notice, upon the banks to place on deposit with the Bank of England a sum of money based upon a percentage of their deposits. Interest at approximately the Treasury bill rate will be allowed upon these Special Deposits, but they will not rank as liquid assets of the banks for balance sheet purposes. A call would at once diminish the liquid resources of the banks and so curtail the volume of bank credit. Provision is made for adjustment of the amount of its Special Deposit in the event of any bank coming under exceptional pressure.

These arrangements are of an interim character pending the recommendations of the Radcliffe Committee, and the banks have agreed to co-operate in them on a voluntary basis as they did in the operation of the credit squeeze. So far the machinery of Special Deposits has not been used and at the present time conditions do not call for restriction of credit. Meanwhile it is satisfactory to note that the Chancellor accepts the view that the method of "official requests" to the banks to restrict total advances, although it has proved efficacious for short periods, hampers the efficient working of the banking system and is thus damaging both to the banks and to the public interest, if carried on for too long or too frequently renewed.

With proper management of Government finance, there is no reason why it should be necessary in the future again to resort to any artificial means of curtailing the ability of the banks to finance the legitimate requirements of their customers.

CHANGED TEMPO OF BUSINESS ACTIVITY

The past year has seen a definite change in the tempo of business activity in this country. The long-sustained boom of the postwar years first levelled off and then was succeeded by a small but significant decline in industrial production. The change was worldwide. It may have been touched off by the dearer money policies pursued in some measure by the United States authorities and more markedly in the United Kingdom, but the basic cause seems to have been a general over-expansion of productive capacity stimulated by recent years of shortage and optimism. Whether we look at shipping, steel, aeroplane manufacture and many branches of engineering, or at base metals like copper, lead and aluminium, production and productive capacity have expanded during the past ten years on a scale which exceeds even the very rapid increase in demand. Moreover, technological changes—e.g., in regard to power stations—have in some cases caused demand to fall away just after productive capacity had been encouraged to expand. The policies of governments in building up or disposing of stockpiles and the emergence of Russia as an exporter of raw materials have also had their effect. The result was a general fall in most commodity prices which encouraged manufacturers to live on stocks and traders to liquidate rather than to increase inventories. In fact, the recession has the typical marks of a downward movement in the trade cycle.

The Government have taken energetic action to meet the situation. Successive changes in Bank rate have reduced it from the crisis level of 7 per cent to 4 per cent—

perhaps still rather on the high side for a period of recession. Apart from dropping the credit squeeze and relaxing the restrictions on hire purchase, generous facilities have been provided to encourage house-building and house-repair. The Government also reversed the measures taken last year to cut down capital investment by the public authorities and have announced large programmes of expenditure on power stations, railways and other public services. These programmes can all be justified on a long view but they can hardly be expected to have much influence on the present difficulties of business, having regard to the inevitable time lag in turning plans into plants. Of more immediate importance is the Government's undertaking to provide finance, in different ways, to the Governments of India, Pakistan and other Commonwealth countries for their development plans which are already in course of execution. This type of measure is probably the most helpful both to the Commonwealth countries and to the United Kingdom economy and it deserves the fullest support. It may be hoped that the capital required for all these schemes can be raised out of genuine savings, without recourse to inflation. As the Cohen Council has said, inflation has certainly been scotched, but it would be rash to assume that it has been completely eliminated from our system.

SATISFACTORY FEATURES

One of the most satisfactory features of the past year has been the way in which our exports have been maintained and even increased—particularly, despite the recession, to America. With the fall in prices of raw material imports, this has enabled us to attain a favourable balance of payments running to upwards of £300 million. It is not to be expected that such an achievement can be repeated in 1959. If the recovery in the United States is sustained, commodity prices ought to improve with the result that the cost of our imports will increase, while our exports to the Commonwealth countries must feel the backwash of the reduction in their export earnings during the past year. Moreover, the introduction of the Common Market in Europe, even though its impact may be only gradual, raises a question mark as to the future of our trade with the six countries concerned. We shall certainly need to do all we can to maintain and if possible improve our competitive position if, with our many external commitments, we are to keep our economy on an even balance.

The sterling exchange has had a very good year. The Government were able to make a number of substantial relaxations in the exchange control system culminating in the restoration of convertibility to non-resident holders of sterling. Free convertibility is the best test, and the only safeguard, of the value of a currency and every advantage should be taken of the present propitious conditions to press forward towards full convertibility and the abolition of all exchange controls.

CONCLUSION

To sum up: 1958 may fairly be regarded as the year in which world confidence in the United Kingdom was restored. Sterling recovered from a position of weakness to one of strength. Given a reasonable level of world trade, there is no reason why 1959 should not see further substantial progress. When we look back upon the enormous achievements of the post-war years, built as they were upon small financial foundations, we can surely look forward to great developments for this country in the years ahead, provided always that the Government maintain a sound financial policy.

LLOYD'S PACKING WAREHOUSES (HOLDINGS)

FACTORS AFFECTING RESULTS

SIR ERIC A. CARPENTER'S REVIEW OF OPERATIONS

The sixty-third Annual General Meeting of Lloyd's Packing Warehouses (Holdings) Limited was held on January 28th in Manchester, Sir Eric A. Carpenter, OBE (the Chairman), presiding.

The following is an extract from his circulated statement:

In the Accounts for the year to September 30, 1958, now presented, those for Regentone Products Limited have, as previously, been excluded from the Consolidated Profit and Loss Account and Balance Sheet and are shown separately.

The Consolidated Profit and Loss Account shows the Group Trading Profit as £167,711 as against £389,404 for the previous year.

The substantial fall in Trading Profit is accounted for to the extent of approximately £100,000 by a non-recurring loss to which I make further reference in my remarks regarding the Timber Division.

After making provision for Taxation £88,514 as against £236,396 last year, there is an aggregate Net Profit of £79,197 compared with £153,008 a year ago. There is an available balance in the Group of £377,625.

An interim dividend of 4 per cent less tax was paid on the Ordinary Stock in July, 1958. This payment meets the requirements with regard to distributions for Profits Tax purposes; any further distributions for the year would have involved an additional charge to Profits Tax. Your Directors, therefore, do not recommend the payment of any final dividend on the Ordinary Stock for the year ended September 30, 1958, but they have declared a special interim dividend on the Ordinary Stock of 6 per cent less tax, in respect of the year to September 30, 1959. The tax saving by this procedure amounts to approximately £12,000. The special interim dividend will absorb £51,750.

The major changes in the fixed and net current assets in the Consolidated Balance Sheet reflect the sale of the Group interest in J. Smith Hargreaves & Company Limited (to which I made reference last year) and Cawthorn & Sinclair Limited, and the purchase of the remaining 49 per cent interest in Regentone Products Limited, making that Company a wholly owned Subsidiary of the Group. The value of the investment in Regentone Products Limited shown in the Balance Sheet at £750,000 is the equivalent of the total of that Company's Capital and Capital Reserve.

The Consolidated Accounts of Regentone Products Limited show a Trading Loss of £75,721 compared with a Trading Profit of £94,536 for the previous year. This regrettable change is mainly accounted for by a non-recurring loss of £145,936 directly arising from an American contract, to which I make further reference in my remarks regarding the Regentone Group.

DIVISIONAL ACTIVITIES

Packing Division.—Textile packing has suffered a precipitous fall in volume, particularly during the latter half of the year under review, with consequent fall in profits. The decline has far outpaced the benefits derived from the concentration measures previously carried out. Further concentration, though presenting practical difficulties in view of obligations to tenants, will be essential unless there is an early and substantial improvement in the prospects.

The machinery packing section established in suitable premises a year ago has attained a substantial turnover and, after surmounting initial difficulties and expenditure, has achieved profitable operation.

Paper and Packaging Division.—The year under review has been a difficult one for the paper industry. With many extensions of paper making and converting plants coming into operation production has tended to exceed demand in the industry generally, resulting in reduced margins.

Timber Division.—The re-organisation of timber importing and merchanting referred to a year ago has proved beneficial and this section has returned satisfactory profits. On the other hand, I regret to have to report that the cabinet making undertaking has been a costly failure, incurring a loss of approximately £100,000. From its inception, labour and management problems proved far more difficult than had been anticipated. These were accentuated in some measure by the difficulties experienced at Regentone Products Limited referred to later. The factory has been closed and much of the plant is being transferred to the Regentone Group cabinet works.

Transport Division.—Gross earnings of the fleet were maintained in spite of increased competition, but increased costs with no compensating increase in rates again reduced net earnings.

REGENTONE GROUP

Stockholders will recall that initially the Group purchased from Mr W. Harries a 51 per cent interest in the Regentone Products Limited Group. Mr Harries retained the remaining 49 per cent and continued as Chairman and Managing Director.

In any such arrangement there is a tendency for dual control to militate against maximum efficiency and I regret that in our view this proved to be the case in this instance. In the circumstances your Board decided that it would be in your best interests to acquire from Mr Harries his 49 per cent interest and thereby unify control. Mutually acceptable terms were agreed to that end and the purchase was completed in July, 1958.

Prior to July, 1958, a serious loss was incurred in connection with a large contract for the supply of merchandise to the USA due in the view of your Directors to a failure to provide adequately for the particular requirements of the American market. The total amount of the loss has been ascertained at £145,936.

Mr J. H. Williams has been appointed Managing Director of the Regentone Group and your Directors have complete confidence in the management of the Group and good reason to anticipate that the investment in Regentone Products Limited will prove to be advantageous.

The recent relaxation of Credit Restrictions will be a helpful factor during the current year.

SUMMARY

The year under review has been a difficult one and your Directors do not regard the results with any degree of satisfaction. Apart from the non-recurring losses to which I have made particular reference, the underlying causes of the lower profits have been falling margins, highly competitive conditions, wage increases and rising costs. With the present tendency to recession, there is no reason to expect relief from these conditions and it is evident that profits will be harder to earn. In such circumstances, it is particularly dangerous to forecast but after a very careful survey, I have reason to be confident that the current year will produce better results in both the Lloyds and Regentone Groups.

The report and accounts were adopted.

THE UNION DISCOUNT COMPANY OF LONDON LIMITED

PROPOSED SCRIP ISSUE

LORD KENNET'S STATEMENT

The Annual General Meeting of The Union Discount Company of London Limited, will be held on February 20, 1959, in London.

The following is the circulated statement of the chairman, The Right Honourable Lord Kennet of the Dene, PC, GBE, DSO:

The year under review has not repeated the conditions which made difficulties for the Discount Houses during the previous year. Five successive reductions in Bank Rate during the year, from 7 per cent to 4 per cent, have made conditions easier in comparison, and profits are shown at a record figure of £550,993 as compared with £415,253 for 1957. Hence our Balance Sheet reflects a reversal of last year's trend. But a concomitant result was increased competition for Treasury Bills from outside quarters, and a lower volume of Bank Bills coming forward. Bills discounted were therefore over £19 million lower at £165,718,532. Our contingent liability on bills rediscounted, which stands in the balance sheet at £30,213,986 compared with £34,523,989 for 1957, reflects fairly accurately the reduced turnover in commercial bills during the course of the year. High money rates, low commodity prices, and the general stagnation of commodity markets, have caused this diminution in the Discount Market's traditional business. Current indications, however, are that commercial bill business is picking up again.

Dealing in bonds has been profitable in a year of falling Bank Rate, and the yield on bonds has remained substantially above money rates. We have, therefore, increased our bond portfolio by over 50 per cent from £58,154,071 to £88,296,604 in order to take advantage of these favourable conditions.

It will be noted that we propose to capitalise a part of our reserve by the issue of £1 of Stock for every £5 held, bringing the issued capital to £6,652,800. We accordingly propose to transfer £750,000 from "carry forward" to our published reserve.

In the course of the year our Manager, Mr A. W. Trinder, retired after forty years' service. The Board wish to record their grateful recognition of his long and distinguished service to the Company. He will be greatly missed by his many friends in the City. We welcome as his successor Mr F. W. Arnold, who has been his chief assistant for the past twelve years.

Finally, we would like to thank all our friends and customers for their continued co-operation, and to record our appreciation of the good work by both management and staff.

The Union Discount Company of London, Ltd.

TANGANYIKA CONCESSIONS LIMITED

CAPTAIN CHARLES WATERHOUSE'S REVIEW

A REFLECTION OF AFRICAN ECONOMIC CONDITIONS

The Annual General Meeting of Tanganyika Concessions Limited was held on January 22, 1959, at the Head Office of the Company, Tanganyika House, Salisbury, Southern Rhodesia, Captain The Right Honourable Charles Waterhouse, MC, DL, *the Chairman, presiding.*

The Chairman addressed the Meeting as follows:

"Since the last Annual General Meeting, Mr Harry Oppenheimer has accepted an invitation to join the Board. He has been able to attend several Meetings in the last twelve months and his experience and wisdom will be of the greatest value to the Company.

"You will have seen the portrait of Sir Robert Williams at the beginning of the Annual Report, and you will have noticed that last Tuesday, January 20th, marked the 60th Anniversary of the foundation of this Company. We may therefore feel that this Meeting commemorates its Diamond Jubilee.

PROFIT AND DIVIDEND

"The financial year to July 31, 1958, ended with a net profit of £3,446,103 as against £4,309,796 in the previous year. The Board recommends a final dividend of 2s. 3d., making a total of 3s. 9d. for the year on the doubled capital of the Company, as compared with 9s. 6d. last year on the old capital.

"An agreement, after prolonged negotiations with the Inland Revenue authorities, makes it possible to pay 6d. of this year's dividend out of a section of the revenue reserves which had paid United Kingdom Income Tax, bringing a material advantage to Shareholders resident in Great Britain. The total dividend of 3s. 9d., if agreed to, should be considered in its entirety as justified by this year's earnings. It therefore indicates no modification of the Company's dividend policy but it involves a readjustment of the figures in the Balance Sheet within the general heading of 'Revenue Reserves.' This, unhappily, is a process which cannot be repeated.

COPPER PRICE

"At our meeting last year I referred to the sharp fall in the price of copper which during 1957 averaged £219 per ton. That fall continued in the first months of this year, until in February the low figure of £163 was touched. Since then, there has been a marked improvement, though it has unfortunately been followed by a fall from the highest point reached. The average price for 1958 was £198.

"On January 3rd this year, the Union Minière paid an interim dividend after taxation of 600 Belgian francs against 750 francs in 1957. They stated that in so doing they merely reverted to an earlier principle whereby a fixed interim dividend of 600 francs was paid each year and that the size of the interim dividend should not be taken as an indication of the size of the total distribution; the latter would only be fixed in May, 1959.

"The sales of copper by Union Minière have remained satisfactory in 1958, which has led that Company to make substantial deductions from its stocks. To maintain these at the level required for an efficient organising of the sales, it was decided in October to come back to a rate of production nearly equal to that of 1957. We therefore await the Union Minière results for the year ended December 31, 1958, with as much interest as ever.

"As you have heard, some disturbances have taken place recently in the Belgian Congo. They have been limited to Leopoldville where there is a turbulent group of the Bakongo tribe. The Congo is a vast country and the ethnical and economic problems differ widely from one province to another.

"For some time before this trouble arose, the Belgian Government had been preparing a new programme for the political development of the Congo. This programme, which has now been made known, sets the various stages of the evolution and the conditions to be fulfilled at each stage, the final aim being a continued association between Belgium and the Congo. The need to carry on economic development and to promote public and private enterprise was emphasised.

THE BENGUELA RAILWAY COMPANY

"The year 1958 has not been an easy one for the Benguela Railway. Freight rates are in some cases dependent on the price of the metal carried, and the low price of copper and of other metals and ores has therefore resulted in lower freight receipts. Even more important has been a material fall in the flow of traffic inward to the Belgian Congo. On the other hand, internal Angola traffic is developing in the steady but unspectacular way which one would expect in a healthy agricultural economy. In spite of this and certain compensations from other sources, the net revenue shows a material decline on that for 1957.

"During the year the Company has done its utmost to meet the demand for the transport to Lobito of increasing quantities of iron ore from Cuima deposits and in the last months of 1958 had worked up the tonnage to over 30,000 tons per month. This considerable achievement on the part of Dr Pinto Basto and his Board, supported by the highly competent staff in Africa, will, we hope, receive the full recognition it deserves both from the Angola Government and the Mining Companies in the negotiations which are now taking place in Lisbon between them and the Railway Company concerning the long term development of this traffic.

"The exploration projects in Northern Rhodesia and in Tanganyika Territory in which, with The Zambesia Exploring Company, we are interested through our associate company, Tanganyika Holdings Limited, are continuing according to plan, but as yet, there are no major discoveries of economic value to report.

"You will have noted with satisfaction the conclusion of the merger between The Zambesia Exploring Company Limited and Kentan Gold Areas Limited, from which material benefits should accrue to the Shareholders of both companies.

"On behalf of the Shareholders of Tanks, I am happy again to offer my thanks to the Staffs both of this Company and of its Associates."

The Report and Accounts were adopted, the payment of the final dividend was approved and the retiring Directors were re-elected.

SECOND COVENT GARDEN PROPERTY COMPANY LIMITED

EXPANSION OF ACTIVITIES

The 25th annual general meeting of Second Covent Garden Property Company Limited was held on January 20th in London, Sir Brian Mountain, Bart (the chairman), presiding. The following is an extract from his circulated statement:

The Group profit before taxation for the year to September 30th, 1958, amounted to £604,569 which compares with £571,042 for the previous year. The net profit after providing for taxation and minority interests is £175,133 which compares with £153,546 for the previous year.

The revenue of the Group has shown a satisfactory increase during the year and several development schemes have been satisfactorily completed. Your Board is pressing ahead with further schemes of this nature with the object of expanding your Company's activities wherever possible.

During the year the Company acquired a substantial equity interest in The Arndale Property Trust Limited, a public property development company with headquarters in Bradford. Your Directors consider that this stake in this most progressive Company will grow steadily in value and they welcome the association with it.

The Covent Garden Market has had a satisfactory trading year, and I hope that the current year will turn out to be equally satisfactory. In the House of Commons on June 11, 1958, the Minister of Agriculture, Fisheries and Food announced that the Government accepted the view of the Runciman Committee on horticultural markets that the market at Covent Garden should not be moved, and had decided that a statutory Covent Garden Market Authority should be created to acquire and run the Market. Your Directors are naturally very concerned to see that the interests of your Company and of the Market traders are properly protected, and are continuing to take the best advice to achieve this.

Your Directors recommend a Final Dividend of 7½ per cent, less income tax, making a total of 12½ per cent for the year, compared with 10 per cent for the previous year. The retained profits of the Group amount to £47,196 as compared with £47,171 for the previous year.

Your Directors consider that in view of the increasing value of your Company's shares, the time has come to sub-divide each Ordinary Share of £1 into four Ordinary Shares of 5s. Shareholders are therefore being asked at an Extraordinary General Meeting to approve this. A resolution is also being submitted for the adoption of new Articles of Association in modern form.

The report and accounts were adopted and at the subsequent extraordinary general meeting a special resolution sub-dividing the Ordinary Shares and adopting new Articles of Association was passed. At a separate class meeting of the holders of the 5 per cent Cumulative Preference Shares sanction was given to the adoption of new Articles of Association.

ALEXANDERS DISCOUNT COMPANY LIMITED

AN EVENTFUL YEAR

SIR ERIC GORE BROWNE'S STATEMENT

The Ninety-first Annual General Meeting of Alexanders Discount Company Limited will be held on February 19th in London.

The following is the circulated statement of the Chairman, Sir Eric Gore Browne, DSO, OBE, TD:

The year 1958 was one in which there were very few dull moments in the City of London.

A paradox is defined as "a proposition seemingly absurd yet really true." I think that the year for which we now account has been fairly described as a year of paradox. Looking back on it, you will remember that it started with a 7 per cent Bank Rate, the aftermath of the sterling crisis in the Autumn of 1957, that the economic and financial position in the USA was then obscure, and that, owing to the fall in world commodity prices, the purchasing power of some of the countries which are our best customers for finished articles was seriously diminished. Then, in the Spring of 1958, sunshine began to break through the mist. By the end of the year Bank Rate was down to 4 per cent—this country had a large increase in gold and dollar reserves and a record surplus on international account—some restrictions on bank lending and hire purchase had been removed—"personal" loans had found a place amongst the facilities offered by the banks—and, as the year drew to its close, the £ sterling was made fully convertible, within the prescribed official rates, by holders outside the Sterling area. And all these great events had taken place in spite of a moderate increase in unemployment and some fall in production in this island kingdom.

A PARADOX INDEED!

But for myself I am proud to think that this improvement in our national position marks a great tribute to British character on which in no small degree the value of the £ Sterling, in the markets of the world, depends. In a world of controlled economies it is difficult to know the true value of any currency. "Gild the farthing if you will, yet it is a farthing still." Or is it not?

BANK RATE CHANGES

In the result, as you can well imagine, 1958 was a year full of incident in the history of your Company. I have already referred to the 3 per cent fall in the Bank Rate over the year. This was accomplished in five stages. The first, a reduction of a full 1 per cent being made on March 20th; subsequent reductions of ½ per cent at a time were made on May 22nd, June 19th, August 14th and November 20th, bringing the rate down to 4 per cent where it now stands.

The only Government loan falling due for repayment during the year was the 4 per cent Conversion 1957/58 on June 15th; an offer to convert this into 4¾ per cent Conversion 1963 or 5¼ per cent Funding 1974 was accepted by the great majority of holders. There were two issues of stock bearing interest at the rate of 5½ per cent during the year; one in January falling due in 1966 and one in February with a longer maturity 1982/84. In December an offer limited to 250 million was made to holders of 2 per cent Conversion 1958/59 to convert into 4¾ per cent Conversion 1964. This was fully accepted.

THE YEAR'S RESULTS

Now, if you will turn to the figures which accompany this statement, you will see that your Capital, Share Premium Account and General Reserve remain unchanged, that the balance carried forward has been increased to £198,543, that our holding of Government securities, now shown at market value, is £42,527,056 and of bills £80,389,380, and that the increased dividend which we propose to you has been fully earned. Our turnover in Treasury Bills has increased by nearly 6 per cent during the year and our total holding of Commercial Bills constitutes a record in the history of the Company.

I hope you will regard these results as satisfactory. But I must remind you that we have to look forward to a future when the operation of the Bank Rate and circumstances over which we have no control may not prove to the advantage of holders of Bills of Exchange or of short dated Government securities. And thus it behoves your Board to make its primary objective to reconstitute once more its reserves, having due regard to the interests of the shareholders which are always in our minds.

It is again my pleasant duty to express the gratitude of all of us to the Banks for their unfailing support, and to Sir Antony Macnaghten, Mr Dawkins and all of our staff for their hard work and devotion to duty during the past year.

We have a very good team. Sir Antony, in his capacity as Chairman of the Discount Houses Association, gave evidence in January of last year to the Ratcliffe Commission on the operation of the London Discount Market. We await the findings of this Commission with keen interest.

THE DAVID BROWN CORPORATION LIMITED

MR DAVID BROWN'S REVIEW

The Eighth Annual General Meeting of The David Brown Corporation Limited was held at Park Gear Works, Huddersfield, on Monday, January 26, 1959, at 12 noon. The following is an extract from Mr David Brown's review: The financial year covered by the Accounts which it is my pleasure to present to you was one of steady improvement for almost all angles and the orders received by the Group were some £1,200,000 higher than those obtained during the previous year. In parallel with this, the value of goods despatched to our customers increased by over £800,000 and the turnover was the highest in the company's history.

Unfortunately, the year has also been one of rising costs and, with business becoming increasingly competitive, these increases have had to be absorbed in order to keep the prices of our products stable. In spite of these increasing costs in material and labour we have, by concerted attacks on overhead costs, had some success in neutralising their effect, as will be seen from the fact that our profit before taxation is £703,336, as against last year's figure of £469,240. Some of the economies have been of a drastic nature but will, I am sure, be beneficial in the years to come.

I think you will agree that an increase in Profit before Tax of £234,096 calls for congratulations to all concerned. As usual, this pleasure is spoilt by the large slice which goes to the tax collector, and this year he takes £469,002 as against £291,490. Part of the increase in this year's taxation figure results from the change in the basis of Profits Tax, and it seems strange that, as a prudent organi-

sation which ploughs back as much as possible of its resources into the business, we should be made to suffer for so doing.

NEW DEVELOPMENTS

You will be interested to know that the careful and patient study of the Company's products undertaken by our Development Departments over the last few years, is now beginning to show results and is enabling us to open up markets which are helping to mitigate the decline in others which have been almost traditional with us. For instance, we have been successful in obtaining orders from China, Germany and Russia which are well in excess of a million pounds and the most satisfactory aspect of this is that they cover Machine Tools, General Gearing, Small Tools and Tractors. We have been able to place on the market an entirely new Aston Martin, in the shape of our Mark IV model, and orders have already been received which will more than dispose of the production for the coming year. In previous reports I have mentioned the developments which were taking place in our Agricultural Machinery Unit at Leigh and current orders on hand are of such a volume that we can predict with certainty that its turnover in the current year will be the highest on record.

FUTURE OUTLOOK

It would be foolish of me to leave you with the impression that everything has reached a state of perfection. We are meeting intense competition, not only at home but also overseas, and where orders are being won these are on considerably narrowed margins of profit; in many cases we are finding, particularly in the export market, that credit of a long-term nature is becoming a vital factor. Our customers are demanding shorter delivery periods and you will see that this again compelled us to increase our Stocks and Work in Progress by some £650,000.

We are, at present, carrying an order book in excess of £7 million and our General Gearing, Machine Tool and Automobile Divisions have more than sufficient work in front of them to keep them in full production for the rest of the current year, but our Foundries Division, while still fully occupied, may suffer a diminution of volume in common with the trade generally.

In spite of these factors, I feel confident that the results for the current year will be no less satisfactory than those I am at present placing before you.

The report and accounts were adopted.

A COMPLETE BANKING SERVICE FOR TRANSACTIONS WITH KUWAIT

THE BURNLEY BUILDING SOCIETY

SOUND AND CREDITABLE PROGRESS

The Annual Meeting of The Burnley Building Society was held on January 28th at Burnley.

Sir John H. Grey, JP (the Chairman), presided, and, in the course of his speech, said:

The Society's one hundred and eighth Annual Report and Statement of Accounts records another year of very creditable progress. The enlargement of our asset figure to £55 million is a particularly noteworthy achievement when viewed against the perpetuation of the Government's credit restriction policy until the middle of the year. They are figures in which we take a great pride because they demonstrate our enjoyment of an extensive goodwill and a widespread background of unfailing support. Our progress has been essentially sound in character and wholly to be commended in that the expansion of our assets has been matched by an appropriate increase in our reserves.

The Government's ability in July substantially to unshackle the economy from the credit restriction had the effect of freeing money for investment in building societies. Indeed, investments flowed into the Society in the last four months of the year at a rate comparable with that seen prior to the imposition of credit restriction at the beginning of 1955.

INTEREST RATES

Commenting on interest rates, the Chairman said: The reasons which prompted us in 1957 to face a rising Bank rate without resorting hastily to an alteration in our own interest rates are precisely those which have persuaded us in 1958 to face a fall in Bank rate with similar circumspection. It would have been precipitate and irresponsible for the Building Society Movement to lower its rates immediately with the reduction in Bank rate without waiting to observe the effect such fall would have upon the level of long term interest rates. In fact, the yield on War Loan, which may be taken as a guide to long term rates, is now little different from that obtainable in 1956 when our rates were stabilised at their present level.

The enormous and vital contribution which the Building Society Movement has made in the housing of the people has been based upon its continued ability to offer competitive terms for the attraction of investors' funds, due regard being paid to the undoubted security and the facility for investment and withdrawal which our members enjoy. This competitive position is one which we are obliged to maintain if money is to flow freely on mortgage, and if our ability to perform our essential worthwhile function is not to be imperilled. We must therefore, resist any irresponsible pressure to reduce our rates: we must ensure, before any reduction is countenanced, that our investing members would be justified in leaving their funds in our keeping.

In operating the House Purchase and Housing Bill laid before Parliament in December, as is our intention, there will be no relaxation in our lending policy. A little over 10 per cent of our mortgage advances already relate to houses within the Government's qualifying limits—i.e., built before 1919 within a price ceiling of £2,500. Exchequer grants will be available to us for the financing of this class of business if we should need to avail ourselves of them.

The report and accounts were adopted.

R. A. LISTER & CO. LTD.

The Annual General Meeting of R. A. Lister & Company Limited was held at Dursley on January 23rd. In the course of his statement Sir Percy Lister, the Chairman, who presided, said:

From the Consolidated Balance Sheet and accounts you will have observed that the Group Profits have been maintained in a trading period that has been far from normal.

These encouraging results have been in part due to the steady development of your principal subsidiary and associated companies, both at home and overseas, which have increased their volume of turnover and, in consequence, their yield on your investment in them.

In the Home Market the wide and varied range of the products of your group of companies has enjoyed a growing demand. The production volume of the air cooled diesel engine range has been increased with encouraging results. The introduction of Lister Air Cooled Diesel driven power units to our range of Lister Auto Trucks has increased the demand for new trucks and permitted users of the petrol driven models to convert to diesel and enjoy the greatly added economy of operation.

Your Marine company has enjoyed another successful year and its range of marine propulsion and marine auxiliary diesel engines is building an enviable reputation both at home and overseas. The activities of this company will, we believe, steadily grow based on the good reputation of the products and service behind them.

Last year, I was able to report of the benefits accruing to your Australian company resulting from the sale of certain of its fixed assets, which could not be profitably employed. This has released resources for developing the other manufacturing activities of this company, which are being steadily developed in line with the logical requirements of that great country.

During the year, your associated company in Mexico has commenced its trading operations on a basis which should permit of the future expansion of the business in this market.

Your Rail Traction company, the formation of which I referred to last year, has made steady progress and will, during the coming year, have additions to its range, of interest we believe, to the home and overseas markets.

As I forecast to you a year ago, your Directors, after securing expert advice, have during the year created the R. A. Lister Pensions Trustees Limited, in order that it may give to the Staff and Employees, the best possible scale of benefits and security from a self-operated Pensions Scheme. The Benefits accruing to all concerned are considerably increased over those previously available and increased ex-gratia payments are being made to existing pensioners.

The Record Turnover, the Record Net Profit, the strength of the Reserve Position created by the ploughing back of profits for many years, and bearing in mind that during the year all in your employ have secured increased emoluments, there is a long deferred opportunity of increasing the dividend to our Shareholders, whose support and co-operation has been fundamental to our progress. This higher dividend, though much appreciated, represents less than 7 per cent on the capital employed in the Group.

The Political and Economic difficulties, which have beset the Middle and Far East and many of the Latin American and European countries, together with the currently lower prices of primary products seriously affecting the purchasing power of those who produce these products, make any attempt to forecast future trends hazardous. We take courage from the fact that there is a great need and demand for the products of our modern and well-equipped factories and we can only hope that peace and sanity will permit of the need being satisfied in the normal manner for the benefit of all concerned.

In conformity with your Board's policy of making provision for the future direction and management of your Parent Company and its Subsidiaries, they have invited Mr P. MacKay-James (who has been Director of Blackstone & Company Limited and in charge of the Blackstone Factory at Stamford) and Mr F. E. Blackstone (who has been a Director of some of your Subsidiary Companies and an executive with our Export Sales Division) to join your Board, and these appointments I now have pleasure in formally submitting to you for your confirmation.

BROOK MOTORS LIMITED

IMPROVED PROFITS DESPITE INCREASED COMPETITION

The Ninth Annual General Meeting of Brook Motors Limited was held on January 24th at Huddersfield. Mr Frank V. Brook, the Chairman and Joint Managing Director, presided.

The following is an extract from his statement circulated with the report and accounts:

The trend of improved profits shown in our brief half yearly Statement continued, but at a slower rate. In line with the general fall in demand experienced throughout British industry, we also felt its effect, although our overall export orders helped to retain full production. Whilst some reductions in prices of materials have assisted the control of manufacturing costs, the recent further wage awards are likely to more than offset this advantage. Increased competition on both home and export markets is to be expected which must be met by improved production methods, better technical facilities, and concentration in types of equipment manufactured. The popularity of the new British Standard Motors is a major factor in helping to achieve this position.

In the last few months an opportunity was taken to terminate existing agency agreements in Canada and form our own Canadian Subsidiary Company under the name of Brook Electric Motors of Canada Limited, with headquarters in Toronto.

Sales through the American Subsidiaries, Brook Motor Corporation and Brook Motor Corporation of Florida, have continued to expand. The last few months of the year under review particularly indicated a trade revival and produced satisfactory results.

In other overseas markets our experience has been one of retention rather than expansion. Import restrictions imposed by the New Zealand government are having some effect and more recently heavy import duties on the popular sizes of motors have been imposed by the Eire government. These unfortunate restrictions present many difficulties to the manufacturer who is export minded.

Our new fractional horsepower motor factory has now been in full production for a number of months. It has come into operation at a time when the demand for this class of motor is increasing, partly as a result of the easement in credit restrictions resulting in higher demand for domestic machinery, where large quantities are required.

Although competition is keener and is likely

to remain so in the foreseeable future, your Company is well equipped to meet that challenge although profit margins may be lower. We are expecting continued expansion from both of our Subsidiary Companies and the order book is in a satisfactory state.

I would take this opportunity of thanking all your employees on behalf of the shareholders and the Board, for their continued loyalty and enthusiastic interest in the prosperity of the Company.

Mr David Brook was re-elected to the Board.

The report and accounts were adopted.

EDUCATION AND COURSES

9/- a line.

SHORT COURSE IN OPERATIONAL RESEARCH.—The London School of Economics and Political Science, Houghton Street, London, W.C.2, in conjunction with the Operational Research Society, will hold a course in *Operational Research, from 6-17 April, for graduates*, or persons with equivalent qualifications and suitable experience. Residential accommodation will be available and *fees will be £65, including residence, or £50 non-resident*.—Particulars and applications forms can be obtained from the Registrar of the School. The last date for the return of completed application forms is March 4th.

UNIVERSITY OF LONDON: A course of two lectures entitled "Economic Growth and the Problem of Inflation," will be delivered by Mr. N. Kaldor (Cambridge) at 5 p.m. on February 6 and 13, at the London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2. ADMISSION FREE. WITHOUT TICKET.

JAMES HENDERSON,
Academic Registrar.

THE RAPID RESULTS COLLEGE

Complete inexpensive tuition for, G.C.E. Accountancy Secretaryship, Law, Civil Service, Local Government, Banking, Insurance, etc.—No PASS—NO FEE guarantee. Over 50,000 successes. For FREE 100-page book write to-day to the Principal, The Rapid Results College, Dept. E.13, Tuition House, London, S.W.19, or call at 235 Grand Buildings, Trafalgar Square, W.C.2 (WHI 8877). Open week-days incl. Sat. mornings.

SUCCESSFUL TUITION FOR THE B.SC.ECON. DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for Lond. Univ. B.Sc.Econ. (three if entrance is included). Moderate fees, instalments. 1,147 W.H. students passed Lond. Univ. B.Sc.Econ. exams. 1950-58. *Tuition also for* G.C.E., Law, Statistical, other exams.—Prospectus from J. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P16, WOLSEY HALL, OXFORD.

SECRETARIAL TRAINING, especially for university graduates and older students. *Six-month and intensive* 14-week courses.—Write, Organising Secretary, DAVIES'S, 2 Addison Road, W.14. PARK 8392.

B.SC.(ECON.) LONDON UNIVERSITY

UNIVERSITY CORRESPONDENCE COLLEGE provides postal tuition for the above Degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in commerce or industry, government or municipal posts. The College, established 1887, is an Educational Trust. Highly qualified Tutors. Low fees; instalments.—Prospectus of U.C.C. Courses for London Degrees and Diplomas, G.C.E. Law, free from the Registrar, 60 Burlington House, Cambridge.

EXPERT POSTAL TUITION

for *Examinations*—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical *(non-examination)* courses in business subjects.—Write today for free prospectus, and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/22).

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4.

FINANCIAL NOTICE

BENGUELA RAILWAY COMPANY

The following preliminary traffic results for the year 1958 compared with the year 1957 have been issued.

	1958		
Kilometres run			*6,091,660*
	Tons		
Passenger Traffic	1,585	— Esc.	17,006.000
Local Traffic:			
Minerals	197,110	— ,,	27,429.000
Other	597,881	— ,,	71,290.000
Transit Traffic:			
Minerals	463,793	— ,,	225,306.000
Other	104,634	— ,,	74,594.000
Miscellaneous Receipts	—	— ,,	9,865.000
Tons (excluding Service Traffic)	1,365,003	— ,,	425,490.000
Working Expenses in Africa			240,328.000
Net Operating Receipts			185,162.000
	1957		
Kilometres run			*5,992,120*
	Tons		
Passenger Traffic	1,540	— Esc.	16,765.000

Tanganyika Concessions Limited owns all the Debentures and 90 per cent of the equity of the Benguela Railway.

APPOINTMENTS

Vacant 9/- a line; Required 6/- a line.

STAFFORDSHIRE COUNTY COUNCIL

Applications are invited for the appointment of an officer to have charge of the administrative and clerical work of the County Planning and Development Department. The officer will be designated as Chief Clerk and the appointment will be on A.P.T. Grade V (£1,175-£1,325 per annum) the commencing salary to be according to qualifications and experience.

Applicants should have had extensive experience of administrative work and in the writing of reports and memoranda. They should have a degree in Administration, Economics, Law or Commerce, or a recognised *secretarial qualification*.

The Council are prepared to grant lodging allowances of 35s. per week for a period of six months and second-class railway travel home every two months during the initial six months to married applicants maintaining a home outside the geographical county. Consideration will also be given to the granting of financial assistance in appropriate cases towards removal expenses.

Applicants should give details of age, education and *training, qualifications, present and previous appointments* and experience, and the names of two persons to whom *reference can be made. Applications, in which relation*ship to any member or senior officer of the County Council must be disclosed, should be sent to D. W. Riley, County *Planning and Development Officer*, 41a Eastgate Street, Stafford, not later than February 11, 1959. Canvassing will disqualify.

T. H. EVANS,
Clerk of the County Council.

ORGANISATION AND METHODS

Men aged 24-30 with a keen interest in O. & M. work are required in expanding departments in the Midlands and North in an industrial group. The commencing salary will be in the range £750-£1,250 p.a.

Candidates should have had one or two years' experience in this field. They should preferably possess a degree in commerce or economics, or an accounting qualification.

Successful candidates will be given such further training as is necessary, and will be expected to specialise in O. & M. for five years, after which they will be encouraged to take appointments within the group at executive level.

Applications will be treated in confidence.—Box 1118.

GOVERNMENT OF THE FEDERATION OF RHODESIA AND NYASALAND

VACANCY: BIOMETRICIAN: DEPARTMENT OF RESEARCH AND SPECIALIST SERVICES: MINISTRY OF AGRICULTURE

A vacancy exists for a fully qualified consultant Biometrician. Duties would include the design of experiments in all phases of Agriculture and Animal Husbandry Research, together with the analysis of data and related statistical practice.

Salary range: £1,925 x £75—£2,000 x £50—£2,050 p.a.

Application forms and further details may be obtained *from the Secretary (R), Rhodesia House, 429 Strand*, London, W.C.2. Closing date February 14th.

MINISTRY OF LABOUR AND NATIONAL SERVICE

Psychologist (Vocational Officer) for unestablished post *required at Industrial Rehabilitation Unit. Possibility of* establishment by open competition later. Age at least 21 years. Qualifications: Good honours degree in psychology or equivalent and preferably with post-graduate training or experience in occupational psychology. Work involves aptitude testing and vocational guidance. National salary scales: *Men* £575 (at 21)—£920 (at age 30 or on entry if over 30)—£1,215. *Women* £575 (at 21)—£910 (at 30 or on entry if over 30) —£1,180.—Particulars and application forms from I.L.N.S., Technical and Scientific Register (K), 26 King Street, London, S.W.1 quoting G.159/8A.

ACTUARY required by a leading firm of consulting actuaries in South Africa and Rhodesia. Attractive commencing salary and prospect of a partnership within a few years.—Apply, giving full details of experience, to Box 1101. All applicants will be interviewed.

GENTLEMAN required as Assistant by Managing Director of Large Industrial Group. Candidates for this position should be in age group 35-40, of good address and thoroughly experienced in commercial matters and administration; competent to advise in the *engagement of commercial staff as required, and possessing the* ability to carry out negotiations at executive level. Commencing salary for the position will be adequate and intending applicants should at present be in receipt of not less than £1,500 per annum. Successful applicant must be prepared to reside in Northern England. Applications will in first instance receive full consideration prior to interview, and will be treated with the utmost confidence.—Write Box 1116.

ECONOMIST required by BRITISH PETROLEUM COMPANY LIMITED in Its Head Office in London. Applicants, aged 28-35, should have a good degree in Economics and have experience of Applied Economics. Would be required to undertake economic studies of individual countries in which an Oil Company would be interested. Salary according to age and experience. Non-contributory Pension Fund. Assisted House Purchase scheme. Removal expenses and settling-in allowance payable in certain cases. Luncheon Club.—Write, giving *full particulars, quoting reference* B.4450, to Box 5981, c/o 191 Gresham House, E.C.2.

UNIVERSITY OF SOUTHAMPTON, Department of Economics.—Applications are invited for the post of Lecturer or Assistant Lecturer in *Sociology*. Candidates should have a good Honours Degree in Sociology, or Economics with Sociology. Salary scales: Lecturer £900 x £50—£1,350 x £75—£1,650 with an efficiency bar at £1,300. Assistant Lecturer £700 x £50—£850. The initial salary will depend on qualifications and experience.—Further particulars should be obtained from the Secretary and Registrar, to whom applications (7 copies from U.K. applicants) should be sent, not later than February 28th.

COMMONWEALTH OF AUSTRALIA

APPLICATIONS ARE INVITED FOR POSITION OF COMMISSIONER

EXPORT PAYMENTS INSURANCE CORPORATION

The Corporation is a statutory body established to promote trade with countries outside Australia by providing Insurance against the risk of non-payment in Export Trade. In its first full year of operation to June 1958, the Corporation issued policies to a face value of over £11 million.

The Commissioner is responsible for the operation of the Corporation. He will be required in the course of promoting the business of the Corporation to further a high standing for the Corporation and its officers with leaders of industry and commerce and export trade throughout Australia. Liaison with overseas and international organisations in this field is also required.

Applications will be judged on qualifications and experience, not necessarily in the field of insurance.

The appointment will be for a period of seven years and there is provision for re-appointment.

Salary will be commensurate with the responsibilities of the appointment and the qualifications and experience of the successful applicant. Appropriate allowances also will be paid.

The headquarters of the Corporation are in Sydney with a Branch Office in Melbourne.

Applications will be treated in strictest confidence. They should be marked "E.P.I.C.," and be lodged not later than February 28, 1959, with the Official Secretary, Australia House, The Strand, London, from whom further particulars can be obtained.

NATIONAL HEALTH SERVICE

TRAINING POSTS IN HOSPITAL ADMINISTRATION

The Minister of Health and the Secretary of State for Scotland invite applications for up to the sixteen training posts in Hospital administration.

Successful applicants will hold these posts for a maximum of three years, beginning in the autumn of 1959, and will be given practical experience of all branches of hospital administration, together with courses of instruction at the University of Manchester or at the Hospital Administrative Staff College of King Edward's Hospital Fund for London.

A short list of applicants will be called for interview by a Selection Committee.

Applicants should be not more than 30 years of age at September 1, 1959, but the Selection Committee has discretion to accept applicants up to 35 years. Subject to the discretion of the Selection Committee in exceptional cases, one of the following qualifications is required:

If already employed in the hospital service, applicants should either:

(i) have graduated from a British University; or

(ii) hold a professional qualification acceptable to the Selection Committee; or

(iii) have had at least three years' experience in the hospital service on September 1, 1959, and to have passed at least the intermediate examination for a professional qualification.

If not employed in the hospital service, applicants should either:

(i) have graduated (by September 1959) from a British university; or

(ii) have obtained (by September 1959) a professional qualification acceptable to the Selection Committee.

Applicants should have discharged their obligation for National Service.

Applications will be considered from students who are *due to take their final examinations in 1959.*

The salary during the training period begins at £575 (plus a small addition in the London area) with the increment of £30 in the second and third years. Applicants already in the hospital service will retain their present salary scale if higher than this. Training fees will be met.

Further information and application forms can be obtained from University Appointments Boards or by writing to the Secretary, Ministry of Health, Savile Row, London, W.1, or to the Secretary, Department of Health for Scotland, St. Andrew's House, Edinburgh 1. Applications should be completed and returned to the appropriate Ministry *not later than Saturday, February 28, 1959.*

For other appointments see page 459

ORDERS for advertisements in *The Economist* are accepted on condition that they are liable to rejection at the discretion of the Editor: that while every effort will be made to publish an advertisement on a specified date, no guarantee is given; and that white on black, reverse blocks, or large sizes of black-faced type may be stippled or lined at the Editor's discretion.

COMPANY AFFAIRS

GENERAL ELECTRIC

THE big electrical manufacturing companies are finding that the returns on big electrical engineering contracts, especially in nuclear power, are small. The manufacturers cannot afford to lose their stake in the capital goods markets and they have to spend heavily on research and development. But while AEI and English Electric have managed to live with these unpleasant facts, the other giant of the industry, General Electric, seems less able to do so—at least, its ordinary shareholders are the losers in income. Although GEC's turnover has been rising, its profits have been falling since 1955 and in the two last financial years (ending on March 31st) its ordinary dividend was cut from 14 per cent to 12½ per cent and then to 10 per cent.

The market had hoped that there would have been no further drop in equity earnings from the level of 14 per cent reported in 1957-58 and that the ordinary dividend would be left unchanged in the current financial year. Electrical shares therefore had a bad knock when the GEC directors announced that the interim dividend was again to be cut, this time from 3¼ to 3 per cent. The £1 ordinary units lost 5s. 6d. to 33s. 9d., on the obvious inference that the final dividend will be reduced too. This is a sorry state of affairs and the directors say:

> Turnover shows a slight increase, but the provisional results for the first nine months' trading, together with an estimate for the remainder of the financial year, indicate that the decline in profits has continued. Continuing high expenditure on research and development, particularly in the nuclear field, combined with the increase in wages and other costs, has again constituted a heavy burden on profits. The full benefits of reorganisation have not yet been felt.

Two new directors—Mr S. G. Catto, a managing director of Morgan, Grenfell, the merchants bankers, and Mr R. N. Millar, the manager of GEC's heavy engineering and nuclear establishments at Erith—have been appointed. It is upon the strength of the management and the vigour with which the policies of reorganisation are pursued that the future of GEC depends. Its recent past has been unimpressive.

LINEN THREAD

IN recent years, Linen Thread's United States subsidiary has not pulled its weight. In the financial year to September 30th last it incurred a substantial trading loss which completely wiped out the trading profits of all the other members of the group. The directors have taken two brave decisions: to sell the unprofitable business which represents about half of the group's net assets and to distribute to ordinary shareholders a large part of the proceeds from this sale. Linen Thread Company Incorporated has been sold to Indian Head Mills, of New York, for $6,500,000 in cash, $5,000,000 in 5 per cent notes repayable over five years and the transfer of a sub-subsidiary to Linen Thread at a book value of $475,000. Subject to Treasury consent Linen Thread will receive about £4,276,000 at nominal values and will make a capital profit of £1,500,000 from this sale. The directors of Linen Thread have cut the losses and they now propose to make a capital distribution of 10s. per £1 ordinary share. This distribution will require £1,650,000, or rather less than the cash that Linen Thread will receive immediately from the sale.

Just before the announcement the £1 units had started to climb but when it was made they jumped by 6s. 1½d. to 27s. 7½d. The present price reflects, of course, the tax free capital payment but once that has been paid over to shareholders it should be possible for investors to put a realistic value on the Linen Thread business in this country.

JUTE INDUSTRIES

JUTE INDUSTRIES is the largest British producer of jute goods, and is an efficient, modernised group. But efficiency and size cannot shelter it from the storms that buffet Dundee. In his statement at this time last year the chairman, Mr W. G. N. Walker, said that profits might show a further decline. In the event, the trading surplus for the year ended September 30, 1958 fell by £402,653 to £716,546, and net profits dropped by £193,047 to £149,876. There were several reasons for this setback. This was the first full year since the Board of Trade decided to give Dundee a smaller margin of protection against imports of jute goods from India. In the summer, partly because buyers correctly expected that prices of raw jute would fall, demand slackened to the extent that production during the three months May to July was one-fifth smaller than during the same period of 1957. The group suffered losses on stocks, and also lost money on its trading in the United States, but it is now taking further steps to concentrate production among the lower cost units by making the greatest possible use of multiple shift working. The Belmont works, used as a machinery store since the war, has been sold and another works is up for sale.

Since the summer, Mr Walker reports, business in both the home and export markets has increased. Prices of raw jute have risen and the spinning and weaving sections "are operating at a high level of activity," thanks largely to the bigger demands from the carpet and linoleum industries. Mr Walker "could not fail to be optimistic" about the outlook, were it not for two imponderables—Indian competition and the prices of raw jute. Evidently the chairman does not feel confident that the Board of Trade will not try to squeeze further the margin of protection against Indian goods, and he rightly wonders whether Pakistan, so heavily dependent on exports of raw jute, will be able to maintain its present minimum export prices. Supplies this season are ample, and India has now entered the market as an exporter of low-grade fibre.

For 1957-58 the dividend was cut from 20 per cent to 13 per cent. Investors are clearly aware of the elements of uncertainty: the 10s. ordinary units have fallen by 10½d. to 11s. 6d. since the preliminary results were issued nearly a month ago, and at this price they yield 11.3 per cent.

F. PERKINS

THE TREASURY has given its consent to the bid by Massey-Ferguson for the 5,200,000 ordinary shares of 10s. each of F. Perkins, the Peterborough diesel engine manufacturers. Through the merchant bankers, Philip Hill, Higginson, Massey-Ferguson is offering 17s. 3d. per 10s. share in cash, and the offer remains open at least until February 12th. In a circular to shareholders, the directors of F. Perkins, with the support of their financial advisers, Baring Brothers, describe the offer as "fair" and unanimously recommend acceptance. For their own part, the directors are accepting the offer; that may mean that the bid will go through without much difficulty for the Perkins family interest, though not a controlling one, is thought to be large.

The Oliver Corporation of Chicago reaps an unexpected windfall for having agreed to receive 650,000 shares at par in exchange for Perkins' right to manufacture its outboard motors, it is now to be paid 13s. per share by Massey-Ferguson. Other shareholders will realise that the bid of 17s. 3d. per share falls far short of the 33s. 6d. that was paid for the shares when markets were at their peak in 1955. But it has to be set against the "high" of only 14s. last year and the prospective market price in the next few years. The decision by the commercial vehicle manufacturers to make their own diesel engines cut into F. Perkins' principal market, and a policy of diversification would have taken a long time to carry through.

R. A. LISTER

THAT the experience of F. Perkins may not be quite typical of the diesel engine field as a whole is suggested by the performance of R. A. Lister. But this group supplies diesel oil engines for a variety of uses, including locomotives, autotrucks and marine propulsion. One clue to Lister's success lies in the com-

plementary nature of its many products, for its dairy and agricultural equipment is frequently powered by its own engines. In the year to September 30th last, which is described by the chairman, Sir Percy Lister, as being "far from normal," the group managed to hold its gross profits at £1,074,972 (only £4,164, down over the year). A lower tax charge left net profits actually £12,181 higher at the record figure of £488,120. But equity earnings work out at only 21½ per cent, and indeed they have shown no real growth since 1955.

But the directors have now raised the ordinary dividend from 10 per cent (paid in the three preceding years) to 12½ per cent. In justifying their decision they cite the record turnover, the record net profit and the strength of reserves. Investors looking ahead will take account of the chairman's "cautious optimism," even though he had stressed in his statement the difficulties that beset the underdeveloped countries whose purchasing power has been cut by the fall in prices of primary products. The £1 ordinary shares yield 7.4 per cent at 33s. 7½d.

PRIMITIVA HOLDINGS

LAST June, Mr W. M. Codrington, the chairman of Primitiva Holdings, said it was the duty of the board to see that as much money as possible was returned to stockholders at the earliest possible moment. But the company's tangled affairs do not permit a speedy solution. Though the directors were able to negotiate an agreement with the Argentine Government on compensation for the nationalisation of the group's gas undertakings, it was followed by a postponement *sine die* of the delivery of the bills that formed part of the settlement. Later, however, the nine bills of £206,000 each were handed over, and the first was redeemed by the Argentinian Government in November. The last does not fall due for repayment until the end of 1962. Assuming the successful negotiation of the bills promised by the Argentine Government, the directors put a tentative value of 17s. 9d. on the possible capital repayment. But that estimate excluded the prospective recovery of income and excess profits tax from the Inland Revenue. Now this claim has been met and the directors propose a repayment of 12s. 6d. per share, and revise their estimate of the total repayment that shareholders will eventually receive to about 23s. per share. At December 31, 1957, the company held £153,000 in cash and securities and its subsidiary, Primitiva Gas, in which the parent owns three-quarters of the equity, held £1.3 million in quick assets. Since then it has received £412,950 from the Argentine Government. The proposed repayment of capital would amount to £1,493,000. The company has not been able to discount the other seven negotiable promissory notes at a satisfactory rate, and the eighth bill, which is a guarantee against fees and expenses payable by the company is not discountable at all. The market has therefore been cautious in its assessment of the value of the company's £1 stock; dealings had taken place at around 17s. before the announcement, and after it the price rose only 1s. 6d. to 18s. 6d.

BARING BROS. & ERLANGERS

INFORMATION about merchant banks is so rare that the balance sheets of the few that publish them have a special interest—even if the amount of information disclosed, especially in the profit and loss account, is limited by the special dispensation enjoyed by a banking company. **Baring Brothers,** with capital and reserves of £3 million and deposits of nearly £22 million, shows a substantial increase in its acceptance business in 1958, from £9 million to £11 million in the year to December 31st. This may reflect the increasing volume of foreign business attracted to London in recent months: for the fall in commodity prices, as well as London's relatively high interest rates, would be expected to have reduced the value of acceptances. Baring's big issuing and underwriting business hardly figures in the balance sheet. Investments other than gilt-edged are down from £4.0 million to £3.6 million; while gilt-edged are up from £6.3 to £7.9 million.

Erlangers, which has £2.3 million of capital and reserves and £5.6 million of deposits—a much smaller ratio—also shows a marked increase in acceptances, from £4.5 million to £4.9 million. It is very liquid; cash and call money at December 31st were £2.94 million, about £1 million higher than a year before. Market value of gilt-edged rose by £12,501 to £256,754, and other investments rose from £30,495 to £318,512. Advances and other accounts were almost stationary at £3 million.

ALLIED BAKERIES

THE rights issue by Allied Bakeries certainly lives up to Mr Garfield Weston's promise made at the general meeting that it would be "at a favourable price." As the "A" shares closed at 48s. 9d. and the "B" at 47s. on Tuesday the "rights" issue of one share for every ten held at January 30th at 12s. 6d. contains a substantial bonus element. Allowing for the 100 per cent scrip issue, the "rights" are worth 11s. on the "A" and 10s. on the "B" shares. The parent company, George Weston Holdings, will take up its due allotment and the London and Yorkshire Trust is guaranteeing the issue free of charge to the company. Mr Weston has already said that the directors are not dissatisfied with the profits earned so far in the current year and their forecast of an ordinary dividend of 15 per cent on the doubled capital (equivalent to the 30 per cent paid in the previous year) is an indication of their confidence. As the new "A" shares are offered at a yield of 7½ per cent cum the 10 per cent payment this will be a sweetener to shareholders whose present shares yield only 3 per cent.

GALLAHER

IN their third circular to shareholders concerning the one for four "rights" issue of 10s. units at 32s. 6d., the directors of Gallaher, the cigarette and tobacco manufacturers, demonstrate in figures what they meant by the "continued expansion" to which they referred in their earlier statements. Last year, they report, turnover rose from £204 million to £244 million and at the end of the year tobacco stocks and debtors were nearly £12 million higher at about £73 million. The group's total borrowings, including loan capital, had risen from £28,377,582 to no less than £40,690,878 by the end of December. The proceeds of the latest issue will bring in about £8,750,000 net and will thus fund about half of the group's short-term debt. But the directors already anticipate a further growth in working capital commitments this year. Following the announcement of the issue terms, the £1 shares (to be converted into 10s. units) dropped by 3s. to 40s. 4½d.

OFSIT AND WRIT

THE rising tide of production, profits and dividends at Orange Free State gold mines is reflected in the bigger investment incomes of **Ofsit** and **Writ.** These holding companies form part of the Anglo American group and they have played a useful part in the development of the goldfields in the OFS and the Klerksdorp area. Ofsit paid a maiden dividend of 15 per cent in 1956, doubled the payment to 30 per cent in 1957 and has now declared a final dividend of 25 per cent for 1958, making 40 per cent or 4s. per share for the year. Its net profits have almost doubled from £1,396,319 to £2,682,000. The earlier dividends absorbed nearly all available profits, but the latest advance in earnings has enabled the directors to increase the dividend by a quarter and, in addition, to transfer £500,000 to general reserve. The 10s. units now stand at 83s. 9d. and yield 4.7 per cent.

The dividend income of Writ first began to reflect a sharp increase in dividends from the new mines in 1956. But in 1957 profits nearly doubled and the dividend was raised from 20 per cent to 30 per cent on the increased capital. Last year, both the rise in profits and the increase in dividend were of rather more modest proportions. Writ's net profits rose from £1,714,297 to £2,636,000 and its total dividend has been increased from 30 per cent to 35 per cent. Its 10s. units at 56s. 9d. xd yield 6 per cent while the 10s. ordinary shares of Anglo American Corporation, which like other finance house shares have recently enjoyed a strong rise in the Kaffir market, yield 4.8 per cent at 166s. 10½d., but its final dividend for 1958 has still to be declared.

WESTINGHOUSE BRAKE AND SIGNAL

CAPTAIN A. R. S. NUTTING, the chairman of Westinghouse Brake and Signal, in his statement accompanying the full accounts, says that profits in the current year should be at least equal to the 1957-58 level of just over £2 million. Indeed, he said he will be "disappointed" if they are not "somewhat better," for, as he points out, Westinghouse has large orders, extending over several years, for electro-pneumatic braking equipment and compressors in the home market. The group will probably also benefit this year from the rephasing of its contracts with British Railways. Moreover, sales of the "Vespa" scooter, which were running at a reduced level in the summer, were at "a very satisfactory level" in the closing months of 1958, following the ending of HP restrictions.

Thus, shareholders, noting that the maintained ordinary dividend of 10 per cent is twice covered by earnings and that capital commitments are down from £856,000 to £347,000 (as the big expansion programme nears completion), may hope for a dividend thaw. But they should also note that the growth of fixed assets at book values by £1,282,851 to £7,715,372, and the rise in stocks, by £1,161,190 to £9,602,505, has brought down liquid resources from £875,756 to £218,281, while the bank overdraft has gone up from virtually nothing to £1,598,176. That is a factor that investors cannot ignore, but the market, in putting the £1 shares on a yield basis of 5 per cent at 40s. 3d.xd, is looking well ahead—to the time when the massive expansion in fixed assets in recent years is fully reflected in earnings. Whether they will be so in the current year may well depend on the success with which the group combats those pressures of rising costs and competition which contributed to the check in profits in 1957-58.

COTTON PROFITS

THE £1 shares of **Lancashire Cotton** Corporation had risen by 3s. 10½d. to 41s. 10½d. before the Restrictive Practices Court announced its decision on the Yarn Spinners Agreement. They were subsequently marked down to 35s. 10½d. and at that price they yield nearly 9¾ per cent on an ordinary dividend of 17½ per cent. The decision to leave the dividend unchanged for the third year running is justified arithmetically, for though equity earnings fell from 46 per cent to 34½ per cent in the year to October 31st they still cover the dividend nearly twice. But the chairman, Mr R. M. Lee, does not make any forecast about future trading. Indeed, he again puts the emphasis on the familiar uncertainties of the Lancashire cotton industry, arguing that further contraction in the industry is not merely urgently necessary but inevitable.

Year ended October 31,	1957 £'000s	1958 £'000s
Consolidated earnings:		
Trading profit	4,021	2,777
Tax	2,100	1,488
Net profit	2,163	1,640
Ordinary dividend	814	814
Retained	1,318	794
Consol. balance sheet:		
Net fixed assets	8,326	9,011
Stocks	6,626	6,161
Debtors	1,976	1,944
Liquid assets	12,172	12,344
Net current assets	17,622	17,048

The group has hardly begun to tread the path of diversification—indeed, three of the four new subsidiaries it acquired during the year were in the textile industry. Formed in an earlier slump in a deliberate attempt to bring some measure of rationalisation to the industry it is perhaps more difficult for Lancashire Cotton to adopt a policy of diversification than it is for other cotton spinners.

In contrast, the **Amalgamated Cotton Mills Trust** seems to have been more bold, but it too has broadened its base within the textile industry, not outside it. Towards the end of 1958, following a £1.6m take-over bid, it added British Van Heusen shirts and collars to the "Adastra," "Vantella" and "Aertex" clothing it already supplied. In so doing it probably exhausted its £750,000 of liquid assets. But, like Lancashire Cotton, Amalgamated Cotton cannot opt out of the industry's ills, and its net profits of £194,599 for the year to September 27th compare with those of £249,498 for the previous nine months. The ordinary dividend is set at 25 per cent, but this represents effectively a slight cut in the payment, for 20 per cent was declared for the preceding nine months. At 9s. 6d.xd. the 5s. shares yield 13 per cent.

WEST RIDING WOOLLEN AND WORSTED

SIR JOHN KEELING strikes a note of optimism in his statement with the full accounts of West Riding Worsted and Woollen Mills for the year to August 31st. He points out that since mid-October wool prices have steadied and he argues that once confidence revives there should be a substantial backlog of orders to work off. Since the end of the financial year the group's factories have been "well employed," and profits running well above the previous year's levels. There are other reasons for encouragement as well. First, though wool prices fell by 30 per cent during the financial year, bringing stock losses in its train and dragging down profits before tax from £925,432 to £695,094, production fell by only 10 per cent while equity earnings of 23 per cent were sufficient for the payment of a maintained ordinary dividend of 17 per cent. Secondly, the current year will benefit from a full twelve months of profits tax at a flat rate. Thirdly, West Riding's liquid resources have been strengthened, the bank overdraft having been reduced from £553,524 to £73,524 and cash balances having been strengthened from £115,220 to £294,715. The Bradford woollen industry is noted for its volatility and the stock market is not taking too much for granted in pricing the company's £1 units at 48s. 3d., to offer a yield of 7 per cent.

London Stock Exchange

FIRST DEALINGS:	Jan. 14	Jan. 28	Feb. 11
LAST DEALINGS:	Jan. 27	Feb. 10	Feb. 24
ACCOUNT DAY:	Feb. 3	Feb. 17	Mar. 3

AFTER a few days of uneasiness gilt-edged stocks rallied, as sterling was firm and there was some talk of a further reduction in Bank rate. At Wednesday's close some losses remained, but there was a further improvement on Thursday. Old Consols rose 1/8 on balance to 52 1/16. In the medium dated stocks Transport 4 per cent 1972-1977 rose by ¼ to 85¾ and the "tap" stock, Funding 5½ per cent 1982-1984, rose by 1/8 to 102 3/16.

Election fears encouraged some investors to sell equity shares and prices fell in every section of the industrial market; *The Economist* Indicator fell by 6.6 points over the week to 245.0. Hoover fell by 2s. 6d. to 56s. 9d., British Oxygen by 1s. 9d. to 51s. 3d., and Glaxo by 1s. 6d. to 41s. 6d. Unilever NV fell by 2s. to 107s. despite Amsterdam buying and the Limited shares were 1s. 9d. lower at 93s. 9d. Steels were weak as the market awaited Labour's policy statement, John Summers losing 2s. 3d. to 35s. 9d. and United Steel 2s. to 25s. 3d. Textiles were dull, following the decision against the yarn spinners' price maintenance agreement; Lancashire Cotton fell by 4s. 1½d. to 35s. 10½d., Fine Spinners by 9d. to 19s. 3d. and Bradford Dyers by 1s. 10½d. to 16s. 1½d. Electricals were affected by the cut in GEC's interim dividend; AEI fell by 2s. 6d. to 55s., but English Electric closed only 3d. lower at 58s. 6d. Reyrolle fell by 3s. 3d. to 89s. 9d. and "Emmies" by 1s. 3d. to 53s. 6d. In shipping Donaldson gained 2s. to 26s., although P & O weakened by 1s. 3d. to 36s. In shipbuilding, Harland & Wolff rose by 2s. 7½d. to 24s. 1½d., and John Brown by 2s. 4½d. to 34s. 1½d. Stores shares rallied after the initial uncertainty following the Chancellor's statement on purchase tax, Harrods closing 2s. 6d. higher at 78s. Sun Insurance lost 3s. 9d. to 175s. and Equity and Law 5s. to 186s. 3d. In property shares Baranquilla gained 3d. to 81s. 3d. and City Centre 4s. to 49s. 6d., as it was announced that Pearl Assurance and City Centre had bought a substantial interest in Baranquilla.

Oil shares remained firm after optimistic forecasts from the United States on earnings prospects, and Shell Trinidad, on US buying, jumped from 125s. to 134s. 9d. Royal Dutch rose by 1 3/8 to 17 3/8 and Shell, which attracted some Paris buying, rose by 4s. to 150s. Kaffir shares after some initial uncertainty went ahead strongly following the lead of FS Geduld, which jumped a further 13s. 9d. to 146s. 3d. on Thursday following the announcement of good development values. Union Corporation rose by 1s. 10½d. to 51s. 3d. and Selection Trust by 1s. 3d. to 103s. 1½d. Coppers were better following the rise in the price of the metal, Bancroft gaining 1s. to 29s. 3d. and Nchanga 3/8 to 11½.

THE MONEY MARKET

FOR the second week in succession, the Treasury "cut the top off" the bill tender on Friday of last week, allotting £220 million of the offer of £230 million. The discount market kept its concerted bid at £99 4s. 5d., and its allotment at this rate declined from 40 per cent to 31 per cent. Other tenderers raised their bids and the average rate of discount eased from £3 2s. 3.42d. to £3 2s. 1.96d. This week the offer of 91-day bills has been restricted to £220 million.

The market had a surplus of maturing bills over new bills of £90 million this week, but next week, unless the offer is again cut, the surplus will fall to £30 million. A little special help from the authorities was sufficient to tide over patchy conditions for much of this week, but credit was seldom easy. On Wednesday three or four houses borrowed small amounts from the Bank. Up to $3\frac{1}{8}$ per cent was paid for overnight money. Turnover in bills was small.

The US Treasury sold its latest offer of 91-day bills at an average rate of 2.975 against 3.035 previously, but the rate for 182-day bills rose from 3.233 per cent to 3.337 per cent.

The active circulation of Bank notes declined by £8.3 million to £2,003 million in the week to January 28th.

APPOINTMENTS

Vacant 9/- a line; Required 6/- a line.

THE BRITISH OXYGEN COMPANY LIMITED

HEAD OF ECONOMICS AND STATISTICS SECTION

There is a particularly interesting vacancy at the Head Office of The British Oxygen Company Limited, in the West End, for the Head of the Economics and Statistics Section. A man with appropriate qualifications is required, with industrial experience, preferably on the financial side, a practical knowledge of statistical methods and a flair for carrying out investigations and writing lucid reports. He should be a live, creative type, fairly young but mature in outlook. The post has been advertised before but not yet filled: previous applicants should therefore not re-apply. Please write to:—

The Staff Officer,
The British Oxygen Company Limited
Bridgewater House, Cleveland Row, St. James's, London, S.W.1.

COUNTY BOROUGH OF BURNLEY

EDUCATION COMMITTEE

BURNLEY MUNICIPAL COLLEGE
DEPARTMENT OF ARTS, COMMERCE AND ADMINISTRATION

Applications are invited for the following posts:

(a) *Lecturer in Economics.* Candidates should possess an Honours Degree and also be willing to teach Economic History to degree level. Salary scale £1,260 to £1,427 10s.

This is an amended advertisement and previous applications will be considered.

(b) *Assistant Lecturer Grade B.* Candidates should possess a degree and/or professional qualifications as an Accountant or Secretary. The successful applicant must be willing and able to teach to the level of the final examinations of the Professional Institutions. Salary scale £852 10s. to £1,070 5s., together with appropriate allowance for qualifications, training and approved experience.

Application forms and further particulars from the Director of Education, Education Office, Burnley, by whom completed forms must be received not later than 14 days after the issue of this advertisement.

C. V. THORNLEY,
Town Clerk.

(1) MATHEMATICIAN/LOGICAL DESIGNER
with a Degree in Mathematics, Engineering or Physics, plus experience in programming and/or logical design of Digital Computers or like devices. Operations Research and Communications experience useful. Required to work with Team on new computer designs and concepts, including large Systems. Salary up to £1,500.

(2) GRADUATE MATHEMATICIAN/O & M STUDIES
(or equivalent): experience in operation or programming of one or more Digital Computers on commercial work, O & M or language translation. To investigate the operation and basic design of an automatic coding system. Salary up to £1,500.

Applications to The Chief Executive.

COMPUTER DEVELOPMENTS LIMITED,
Computer House, 390-394 Kenton Road, Kenton, Middlesex.
'Phone WORdsworth 0321.

COMPUTER PROGRAMMERS

RECKITT & SONS LTD. are installing a National Elliott 405 computer in March, 1959, and wish to appoint a Methods Study Assistant and an additional Programmer. Preparations are being made to produce invoices and sales statistics and other work to be tackled will include stock control and the analysis of market research surveys. These appointments offer an excellent introduction to the organisation of an expanding concern.

If you are interested and have relevant experience, please write to the Personnel Director,

RECKITT & SONS LIMITED, DANSOM LANE, HULL.

The Company has a contributory pension fund and good recreational and welfare facilities. Interviews may be arranged in London or Hull.

CENTRAL OFFICE OF INFORMATION requires INFORMATION OFFICER (unestablished). Duties involve the study of either U.K. social and political affairs or general economic affairs (both home and overseas), the selection of "source" material and the writing of factual articles and reference papers on one of these subject fields. Desirable qualifications are a University degree, knowledge of relevant sources of information; experience in preparing basic material to serve information purposes (e.g. factual articles, reports, lectures or broadcasts). Salary £1,110 to £1,285 (men); £1,064 to £1,234 (women). Write, giving age, *full details of qualifications and experience*, to Manager (Ref. PF.2265), Ministry of Labour and National Service, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Only applicants selected for interview will be advised.

PURCHASING OFFICERS' ASSOCIATION requires a TECHNICAL OFFICER to be responsible for the preparation of publications, educational programmes and research studies. Applicants should have writing and speaking ability, a thorough understanding of economics, and be willing to travel extensively in the United Kingdom. Commencing salary £1,250 to £1,500 according to age and experience.—Applications, marked "T.O.," should be addressed to the Secretary, Purchasing Officers' Association, Wardrobe Court, 146a Queen Victoria Street, London, E.C.4. Previous applicants are asked not to re-apply.

UNIVERSITY OF OXFORD. INSTITUTE FOR RESEARCH IN AGRICULTURAL ECONOMICS. *Applications are invited for appointments as research workers in agricultural economics, particularly research into demand for farm products.* Starting date April 1, 1959. Two year appointments, with possibility of extension to six years. Some lecturing duties possible. Salary up to £900 p.a. for recent graduates; higher rate could be considered for experienced workers. Applications to the Secretary.

UNITED NATIONS TECHNICAL ASSISTANCE PROGRAMME

Applications are invited from ECONOMISTS who are interested in undertaking short-term (usually up to 12 months) assignments in underdeveloped countries under the United Nations Technical Assistance Administration. Must have high academic qualifications and experience of economic planning and development at a senior level in underdeveloped countries. Salaries usually of the order of £800 *per month plus liberal allowances.* All emoluments are entirely tax free. Immediate vacancies in Libya, Tunis, Lebanon, Afghanistan, *Colombia and the Philippines.* Similar vacancies also occur for STATISTICIANS. —For application forms and job descriptions, write Ministry of Labour & National Service (E.9), 26-28 King Street, London, S.W.1.

CENTRAL OFFICE OF INFORMATION requires an EDITOR with wide general knowledge and interests to commission short topical and semi-topical talks, and organise interviews with overseas visitors to the United Kingdom *for use by local radio stations abroad.* Experience of broadcasting techniques, preferably including experience outside the United Kingdom, and good knowledge of use of tape-recorders essential. Would be primarily concerned with the production of "cut-in" tape and would collaborate with other producers of recorded material as requested. His own output will largely *supplement an existing service* of written material supplied to Information Officers for placing with radio stations overseas. The Post is *graded Senior Information Officer* (unestablished), salary £1,380 to £1,605 (men), £1,302 to £1,541 (women).—Write, giving age, full details of *qualifications* and experience, to Manager (P.E.276), Ministry of Labour and National Service, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Only applicants selected for interview will be advised.

APPOINTMENT REQUIRED

THIS SENIOR EXECUTIVE *intends returning* to Britain after spending seven years in Canada. He is Assistant to the President of a large corporation and chief executive of a group of diversified subsidiaries. Aged 48, his maturity is founded on broad experience *and uninterrupted success.* His all round grasp of contemporary management skills enables him to lead and inspire a strong executive team and to assume responsibility for profitable development of a sound organisation. He is practised in re-organisation and is a capable negotiator at all levels.—Full particulars of background, experience and present responsibilities from Box 1117.

BUSINESS AND PERSONAL

THE BRITISH ASSOCIATION OF ACCOUNTANTS AND AUDITORS LIMITED (Incorporated 1923). The next Examinations will be held on Tuesday, Wednesday, Thursday and Friday, the 26th, 27th, 28th and 29th May, 1959. Membership can only be obtained by those who have passed the prescribed Examinations. *Copies of the Syllabus can be obtained from the Secretary,* 4 Clareville Grove, South Kensington, LONDON, S.W.7.

STATISTICIAN/ECONOMIST

not over age 27, required for Investment Department of an important financial institution at its Head Office in the City of London. Work *primarily* research. Previous investment experience is not necessary but academic or professional qualifications are desirable though not essential. Excellent prospects.—Replies, which will be treated in strict confidence, should be sent to Box 1114.

For further appointments and other classified advertisements see page 450

CHARTERED ACCOUNTANT

A vacancy exists in an international firm of Chartered Accountants which will lead to a partnership in Switzerland. Candidates should be young Chartered Accountants who have had professional experience since qualifying. A knowledge of French and German is essential.

Six months' training in the London office will precede transfer to Switzerland.

Applications should give full details of age, *experience and education*, and should be sent in confidence to Box 1112.

WOOLWICH POLYTECHNIC

LONDON, S.E.18

Applications invited from Honours Graduates for an Assistant Lecturer, *Grade B, to teach Geography* up to degree standard and Economics to Intermediate standard. Salary scale within £650-£1,200 (plus 5 per cent), commencing salary according to qualifications and experience, with London allowance of £36 to £48 (plus 5 per cent). Particulars and application form from Clerk to Governors, to be returned by February 14, 1959.

ECONOMICS GRADUATE

to analyse and interpret sales records, store audit reports, consumer and trade surveys, and prepare reports as basis of marketing recommendations to management.

Position, which is considered an important one in our expanding organisation, calls for a keen, intelligent and qualified man, about 30 years of age, with related experience, preferably with manufacturer in consumer product field, and with working knowledge of statistical processes.

Substantial commencing salary, excellent prospects and *many amenities.*

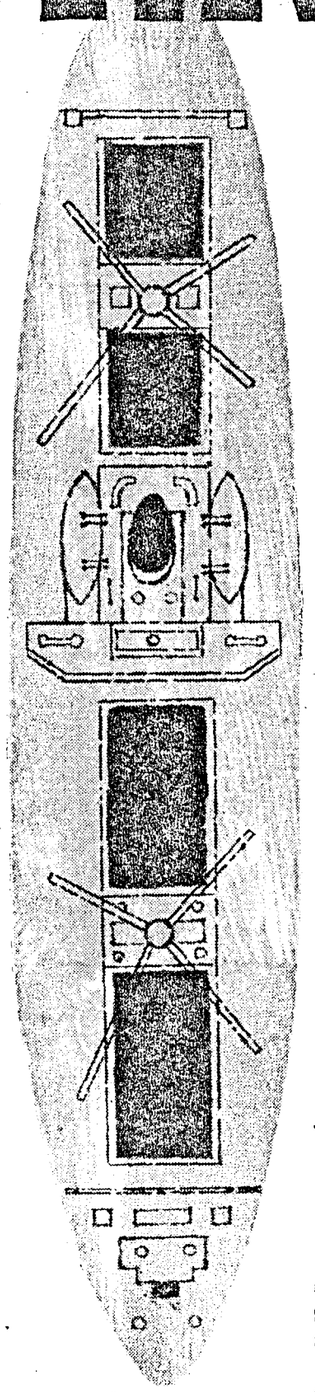
Applicants invited to write in strict confidence, giving details of age, education, qualifications and experience, to Executive Administrator—Personnel, Nabisco Foods Limited (formerly The Shredded Wheat Company Limited), Welwyn Garden City, Hertfordshire.

GOVERNMENT OF THE FEDERATION OF RHODESIA AND NYASALAND

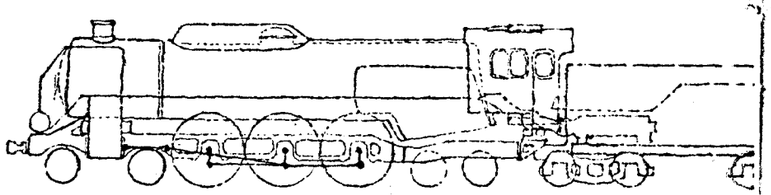
VACANCIES: ASSESSORS: DEPARTMENT OF TAXES

Vacancies exist in the Department of Taxes for male Assessors who hold one of the following qualifications:

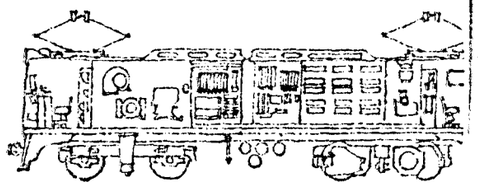
B.Com., C.I.S., C.A., A.A.C.C.A., C.C.S.



Successful applicants will be appointed as Tax Officers at commencing salaries of £640 p.a. or more, dependent on their initial qualifications and experience. Chartered or Incorporated Accountants can expect to proceed to £1,250 per annum as Grade II Assessors one year after appointment; Certified Accountants (A.C.A.A.) can proceed to this salary *in not more than two years*; while holders of a B.Com., C.I.S., or C.C.S. can expect to reach this salary in not more than three years. The salary scale for Assessors Grade II covers the range £1,250-£1,550 by increments of £50 per annum.



Senior posts within the range £1,600-£3,050 are sufficiently numerous to ensure good career prospects. These posts are normally filled by internal promotion from within the Department.



Further details are obtainable from the Secretary (R), Rhodesia House, 429 Strand, London, W.C.2. Closing date February 28th.

BRITISH EUROPEAN AIRWAYS

THEY CAN CAN COAL IN FRANCE

Charbonnages de France (the French coal authority) have found a clean, easy way to deliver coal—by packing it in corrugated sheet steel. This pack is a triangular jerrican holding 33 pounds of coal. The coal is delivered in the can, to be tipped from it straight into the stove or grate, thus avoiding the dusty, dirty shifting of coal from sack to cellar to scuttle to fire.

"BULLY"

This is only one example of the versatility of sheet steel as a packaging material. Ever since the early 19th century tinplate (which is sheet steel with a protective coating of tin) has been the premier pack for food. Without such stand-bys as bully-beef and dried milk, Great Britain would have been starved out by the rigorous blockades of two world wars. And today, despite much competition from new materials, tinplate maintains its pre-eminence as a food pack. No less than 3,500 million cans of food were marketed last year. There isn't a larder in the country that doesn't contain half a dozen tins "just in case."

THE FUNCTIONS OF THE IDEAL PACK

Food, being highly perishable, needs efficient protective packing to retain freshness. That is where tinplate comes in. More than any other material, tinplate fulfils all the functions of the ideal pack.

Tinplate affords complete and permanent protection to the product against climate, contamination and decay (a tin of beef 87 years old has been opened and found perfectly fit for consumption).

Because tinplate takes colour-printing as brilliantly as art-paper it is an excellent medium for establishing product identity. This characteristic of tinplate is increasing in importance as the popularity of supermarkets increases.

But the advantage of a tinplate pack most attractive to traders and the buying public is its convenience. A tin is easy to transport, easy to handle, easy to store, easy to open and easy to dispose of. For all forms of perishable goods, tinplate as a pack has no equal.

TINPLATE—THE PACKAGING MATERIAL OF THE FUTURE

There is little doubt that tinplate will maintain its lead as a packaging material. Its many great advantages — already known — are being still further developed by The Steel Company of Wales, who make two-thirds of Britain's tinplate.

It has always been the policy of The Steel Company of Wales to pay particular attention to customers' specific problems, and to ensure that its products are "tailor-made" to individual requirements. If you have a packaging problem it will be worth your while to write to us or telephone Swansea 51571. We believe we can help.

MAN MEETS GOOD JOB: JOB MEETS GOOD MAN

Every year a number of the country's leading industrial and commercial companies take full pages in the Manchester Guardian to speak about themselves: to announce what they are looking for in the way of executive personnel and what prospects they offer for the right man with the right ambitions.

The sixth series of these 'Careers' advertisements is now running in the Guardian. To Employers, to Careers Masters and others who work with the young, to graduates and school-leavers, these announcements give a valuable picture of the current employment situation. Past years have shown that they serve as an excellent introduction between men-in-search-of-jobs and jobs-in-search-of-men. Here is an interesting and imaginative approach to the problem of executive recruitment which you may well find worth considering.

Reconnaissance in Moscow

EXACTLY what brought Mr Dulles to London this week may remain uncertain; but there is not much doubt what he and Mr Macmillan talked about when he got here. The idea of a personal excursion to Moscow by the Prime Minister has germinated quickly; it is only a week or two ago that a few seeds were being tentatively scattered from the top of the tree to see how they took. Probably not many people now will find the idea alarming or even very unexpected. Things are different from the days of the B and K visit to London in 1956, though the change is hard to define. Perhaps it is merely that in 1956 the heirs of Stalin had still not been long in the saddle, and contacts with them were still a perilously unknown quantity. Or perhaps the new technique of bland conciliation which they employed appeared a more formidable threat to western unity then than it does now, when experience has shown how little it means.

Relatively little apprehension is going to be spread by Mr Macmillan's decision to return the B and K visit this month. That he would not do it against American disapproval—which is a first consideration—is, or ought to be, obvious. What has to be asked is what purpose Mr Macmillan's trip can serve. It cannot run to an actual negotiation on any of the important matters at issue between Russia and the West—all of them intricate and intractable questions which will not be settled without lengthy manœuvre. It might, however, produce a few hours of serious discussion, not for the propaganda record, which could allow the two sides some insight into each other's mind. This is most urgent, and could be most useful, about Berlin, where the running out of the Russians' six months' time-limit, announced on November 27th, threatens an ugly situation soon. On this topic, there are three propositions that the Prime Minister can usefully convey. The West is in earnest in its determination not to be squeezed out of Berlin. Arrangements are conceivable by which the occasions of tension in Berlin, and of friction on the approaches to Berlin, could be narrowed down. Any such arrangements would involve a first step towards a longer-range objective, a solution of the German question; but the West would regard that as an inducement, not a deterrent.

The idea that the trip to Moscow may contain a possible electoral advantage for Mr Macmillan and his party is bound to cross somebody's mind. Certainly the trip will be vastly (if unthinkingly) popular; and politicians not uncommonly have an itch to do something to improve their electoral chances, as well as a hankering to bring off some personal stroke for peace. Both motives may have played a part in the sudden renewal of the Moscow invitation. But there should be no great harm. Mr Macmillan can be trusted not to pull off an ill-considered or simulated "stroke for peace" for the short-lived domestic effect it would have. It is easier to imagine him allowing the glow of the mission to Moscow to warp his judgment of the best date for the next election; that would not be a disaster, but it might be a pity.

The European Nettle

In the vacuum left by the collapse of the free trade area project, it is not enough to leave the thinking to the Six. A new approach is required from Britain

WHEN a well-intentioned policy has come a cropper in an irritating way, and the tang of approaching elections is in the air, nothing is more tempting than to tuck the uncomfortable subject away out of sight. There are, however, few issues that so urgently impose a review of policy as the breakdown of the European free trade area project. The white paper and blue book* which appeared a week ago tell a sad story: of how British ministers were misled in the early stages by vague French declarations of intent that were never carried out; of the emerging differences of principle and attitude that seemed to lead inexorably to the final break. The lessons of that failure cannot safely be neglected: this is a nettle that has to be grasped. The necessities which gave birth to the idea of a free trade area exist unchanged and require that a course of action be chosen. The initial impact on British industry is described on page 519.

Because the British plan ran aground on the objections of the Six, *it is tempting, and superficially logical,* to leave it to them to make the next move. And they have indeed been doing some thinking. The executive commission of the common market has been working out proposals; last week the member responsible for the community's external relations, the Belgian Liberal M. Jean Rey, toured the six capitals to try them out on governments. Two major principles inspire these ideas of the Six. The first is a proper determination to be liberal in their commercial policies towards the outside world, to do what they can to mitigate any ill-effects the emergence of their community is having on outsiders. But the second principle is less encouraging for outsiders; it is a quite clear determination to defend the community as a political and economic idea by "discriminating." All of its members now accept that non-members, such as Britain, who do not subscribe to all its obligations, shall not get the same treatment as the members do.

These principles have caused two different policies to be outlined in Brussels for the consideration of the six governments. The first can be described as the world-wide approach. Several countries outside Europe send a larger proportion of their exports to the community than Britain does. The community has been under fire in the General Agreement on Tariffs and Trade at Geneva, as well as in the Organisation for European Economic Co-operation in Paris. To meet both attacks at once, the commission would like to make a start on reducing trade barriers on a world-wide scale, using the new power of the community's future external tariff to take up the American offer of tariff talks in Gatt. In itself the approach is welcome, but it is not surprising that it has met with a pretty cool reception from the member governments. They know the difficulties of world-wide tariff negotiations including the United States. They know that the world-wide approach hardly solves the political problems in Europe which their community has precipitated.

The Six have, therefore, been brewing some ideas about Europe as well. But there, of course, all the old objections hold them back. Some members of the commission would like to limit arrangements in OEEC to quotas and to leave tariffs to Gatt. No doubt the Six, if pressed, will come up with some tariff proposals for "big Europe." But all the schemes that are on the cards are unsatisfactory mongrel creatures. One idea is to liberate trade in a few sectors of industry where agreement is easy to reach, making special arrangements about the outer tariff in each case. But that plainly means free trade where it does not hurt and therefore where it is worth least. Another idea is to cut tariffs in the OEEC area, but at a slower pace than in the common market, creating a second more modest preferential zone in Europe. In this, European countries would be operating three different tariffs amid mountains of forms.

Both schemes would be abominably bureaucratic, gross affronts alike to the spirit and the letter of Gatt. Neither is likely to provide for automatic cuts in tariffs within the area, ending in their complete removal. All seem likely to have a nasty political bite in the form of constant bickering about discrimination, hardly a service to the unity of Europe. The Six have discovered *no magic new solution.* Indeed, their efforts merely rub in the lessons of the past two years, that Britain cannot hope to achieve its objectives—close political participation in the new European groupings, equal benefits with the Six from the dismantling of trade barriers—without a radical new approach in its own policies.

THERE have been times in the past two years when a new move might just conceivably have broken the free trade area jam. But events have now moved so far that it is difficult to see what initiative is open to Britain except the most radical: a proposal to join the common market itself. Little serious consideration has ever been given to this idea; it is time that it was.

It is, of course, possible that the Six, or the French at least, might simply answer No, despite the provision in their treaty inviting other European states to join; there are French industrialists who dislike the idea of more competition in any framework. But the opposition has never come exclusively from the protectionists; they have at all times been able to enlist in their support a wider body of opinion, in France and in the other five countries, by the argument that the free trade area endangered the community of six and all it stands for; *that is why the British effort to appease the protectionists* by granting all sorts of exceptions to free trade has never got anywhere. Conceivably a serious British proposal to join the communities might transform the situation, by bringing a great body of reasonable European opinion over to the British side.

The proposal would not, of course, have to be so heavily hedged about with conditions that Britain would once more be open to the charge of seeking to get the benefits without paying the fee. To make it would involve some major decisions. Britain would have to be ready to accept all the features of the common market that are essential to its character as an economic community: the institutional set-up, the investment fund and rehabilitation fund, the free movement of capital and labour, and the harmonisation of social charges—notably equal pay for women—as provided for by the Treaty of Rome. There is nothing here that obviously rules out a British proposal to join. Concerted economic policies, free movement of the factors of production—even, perhaps, funds to overcome regional difficulties—were implicit in a free trade area if it was to work.

More distrusted in this country than these economic proposals are the feared political implications of the authority exercised by the institutions of the common market. But there is no insuperable objection here either. The idea that the economic commission or executive is a sort of supra-national dictator, which would be empowered to boss Britain about, rests on very little more than a misreading of the treaty. There are one or two specific cases in which the commission is given a disciplinary task—for instance to enforce the ban on export subsidies. For the rest its task is to formulate and propose policies on which the council of ministers of the member governments then decides. Sometimes the council must decide unanimously, sometimes by majority—which is precisely the pattern that was beginning to emerge in the free trade area discussions. The existence of the European Commission does not in itself make it easier for one country to be overruled by the others; rather the reverse. The idea is to have a strong independent body able to formulate acceptable compromises and common solutions before a problem reaches the ministers.

THERE is, quite obviously, one major condition that Britain would need to attach to any offer to join. It concerns the Commonwealth. Joining the common market must not mean slamming the door on Commonwealth exports. At bottom the Europeans recognise this. But as with the political approach to the common market, so with the Commonwealth, there has to be a new approach. The feeling has to be removed that Britain simply wants to remain the exclusive meeting point of two great trading areas, enjoying preferences in both. There would seem to be only one logical new approach: that is, a broader association between the Commonwealth and Europe, opening the preferences the Commonwealth gives British industries to Europe *too, and giving Commonwealth* farmers markets in Europe in return. The Commonwealth itself should welcome this. Its economic advantages—cheap food for industrial Europe, cheap industrial products for the Commonwealth—are plain: so plain, indeed, that if no lead comes from Britain, some Commonwealth countries will make their own terms with the Six.

Many ways of solving the technical problems of the Commonwealth relationship are conceivable, provided they are based on the premise that, as Britain steps into Europe, that relationship becomes one aspect of a common European policy towards the outside world. And the idea of joining the Commonwealth with a united Europe is an idea that has imaginative appeal to match its practical advantages.

Whatever the next step is to be, it will need first

WHITEHALL DOES NOT KNOW BEST

"There is a certain Pharisaism of intellect which is created or fostered by the habits of official, and especially of departmental life. It is a dangerous thing for a man to live with all the official data he can want for any decision always within his reach, docketed in pigeon-holes, with intellectual labourers always at his command to search, investigate, and condense for him. There is no profounder idolatry,—no deeper prostration of mind, than that which the constant use of these neatly-arranged and exhaustive stores of information is apt to produce. Sir James Stephen, like many other able men, is in constant danger of this idolatry of accurate information; and on Saturday last he indulged himself, at the Law Amendment Society, with a perfect paroxysm of Pharisaic scorn over the loose fragments of thought and knowledge which go to make up what is commonly called "public opinion." . . . Now we can really sympathise with such men as Sir James Stephen and Mr Chadwick. From the list of editorial *improvisations* which Sir James Stephen derides, he might, perhaps, be inclined to make some slightly favourable exception for the substratum of fact and figure on which our columns generally rest. More than most journals can we enter into that somewhat rabbinical spirit of belief in Blue-Books, which is apt to pervade the Civil Service. . . . [But] the people may be very vague-minded and tolerably ignorant, and yet the necessity of securing their acquiescence may breathe a completely new spirit into political life. It ensures in statesmen a wider range of thought;—it obliges the well-informed official to take a broader base for his calculations. It would be, however, lost labour to meet with any seriousness Sir James Stephen's ebullition of caste-feeling, were not that ebullition of his a wholesome reminder of the Pharisaic exclusiveness of mind to which even the ablest and most sagacious officials, in the consciousness of their vastly superior special knowledge, are liable. . . . They regard the nation as existing for the sake of Census-tables, instead of Census-tables as existing for the sake of the nation; for they hold themselves culpably careless if they do not study and master all the lessons taught by the former, and culpably deficient in self-respect if they listen at all to the lessons of popular conviction proclaimed aloud from the myriad lips of the latter.

to be discussed unostentatiously with the European governments and the European Commission, so that a new initiative will not break down in a clash of public postures as the last one did. A useful preliminary gesture to the common market might be to accredit the present able ambassador to Euratom to the commission of the common market as well. But there is not too much time to lose in the preliminaries. Britain has already lost too many opportunities in Europe ; and each year, each month even, sees the European communities hardening in the mould and their common policies taking shape on such vital matters as agriculture and the outer tariff. It will be best for everyone if the next British move is made soon.

TOWARDS THE NINETEEN-SIXTIES—III

Middle Eastern Interregnum

The last thirteen years have seen a continuous decline in the western position in the Middle East and a steady gain for the Communist interest. The third in this series of articles on the international outlook examines the conditions in which western policy has to face a prolonged and difficult holding operation.

In the Middle East, since the war ended in 1945, the West has failed to hold the positions taken over from the Turks a generation earlier. Syria and Lebanon set out on their own in 1946 ; Palestine was cast aside in 1948 ; the occupation of Egypt came to an end in 1956. Last year the pace quickened. In Iraq, a revolution put an end to western influence ; pro-western voices were silenced in Lebanon ; King Saud gave up his American-inspired efforts to become the leader of the Arab world and the arbiter between the Arabs and the other Middle Eastern peoples. American troops spent three months ashore in Lebanon and the British Army returned briefly to Jordan without changing the trend of Middle Eastern politics. As the process went on, it was bound to reach a point at which the West no longer had any effective control over the course of events in the Middle East. Has this point been reached ? The present inability of the West to find a balance between its own interests in the area and those of the Middle Easterners themselves indicates that it has.

The West, then, has to consider the implications of its present status in an area where its influence continues to decline but in which it still has three great interests. Two of these interests—oil and the containment of Russia—have grown fast in importance in the last fifteen years. The third, communications, the cause of western involvement in the area for much longer, is closely related to the other two. Since 1946, when Russian troops finally departed from the Persian province of Azerbaijan, and 1947, when President Truman agreed to assume responsibility for Greece and Turkey, the West has been committed to " contain " the Soviet Union on its present southern borders. In Turkey and Persia, whose peoples have past experience of Russian imperialism, the policy has been reasonably successful. It has not, however, kept the Russians from jumping nimbly over the barrier and landing with aplomb in some of the Arab countries south of the northern tier. Now the West finds itself sustaining an island in a sea of Soviet influence. Physical containment, as it now appears, is not enough against an opponent who can arm himself with psychological weapons.

Western Europe needs the oil of the Middle East and will continue to need it, perhaps indefinitely. In dealing with the problems of the Middle East, the West cannot afford to sit back and wait for the technicians to fulfil the scientists' promise of virtually limitless atomic energy. The men of the oil industry have, on the whole, been more successful in getting along with the Middle Eastern peoples than have western diplomats and politicians. While the western political position has been deteriorating, the oil companies have increased their operations steadily. No doubt their task is the simpler. The risk remains that their arrangements will be blown apart by a political explosion.

Security of communications, important enough only two years ago to set off the Anglo-French expedition to Egypt, now appears as a less urgent anxiety. Ships pass without incident through the Egyptian-controlled Suez Canal. Oil still flows through the pipelines to the Mediterranean. The experience of 1956-57 has shown that, at least for a limited period, the West can live (if uncomfortably) without the Canal. It is equally relevant that, until a big Asian market develops, the Arabs cannot get the money they need from their oil except by selling it to the West.

Did the decline of western influence mean that Russia was free to set the pace in the Middle East ? Russian interests in the area are not so easily defined as western interests are, but there is more to them than merely the propagation of the communist faith. The Russians have an understandable concern about encirclement along their southern borders. They do not

accept western assurances—missiles notwithstanding—that bases in Turkey, Persia, Arabia and Pakistan will be used only for defence. They do not need the oil of the Middle East for themselves ; but it may suit their purpose to be able, at need, to deny it to the West.

So far, the Russian penetration of the Middle East has been painless. While the West was hampered by old obligations and embarrassed by old friends, the Russians adopted local enthusiasms and suspicions and, by doing so at no cost to themselves, became popular and respected. But they had not yet assumed the responsibilities that come with control. For this reason they still had to step carefully for fear that their friends in the Middle East would recognise traits of the old imperialism beneath the cloak of friendship. The Russians could not move into a position of absolute control over any one country without driving the others back towards the western camp.

The Turks and Persians understand the implications of the changes in political authority in the Middle East since the war. Russia holds much territory that once belonged to Turkey or to Persia, but to the Arabs the replacement of westerners by missionaries from the Soviet block is not so alarming. They have insisted that there is no connection between Russia as a friend and communism as an enemy. It was partly through fear of communism that a group of Syrian army officers, in February, 1958, hastily placed their country in President Nasser's hands. In December, Egyptian and Syrian communists were rounded up and gaoled, while Cairo and Damascus radios tried to warn their listeners against communism without actually calling it by name. More recently, Cairo's leading daily, *al-Ahram,* has invited Mr Khrushchev to mind his own business. Arab propaganda had been so exclusively concentrated against the West that it was difficult for the Arabs to believe that the Soviet Union could do wrong: so it was supposed that if Arab communists were misguided, Russia need not be to blame.

One lesson learnt from post-war experience is that Britain cannot go on alone trying to do all the western chores in the Middle East. After fifty years of effort against the establishment of German, French, Italian, or even American, control in the area, the only remaining purely British chores are those to be done in the Persian Gulf, which the British Government has classified as its own particular last ditch, and along the southern coast of Arabia. Who would take over for the West ? Only the Americans are in a position to try. They have become the leaders (while avoiding full membership) of the Baghdad Pact ; they have made offers of financial help ; and they are ready, occasionally, to whack down the policeman's truncheon, as in Lebanon last summer. These, however, are all old remedies. One or another of them may succeed briefly but none will keep the West out of trouble indefinitely.

If it were possible for the West to find a substitute for control based not, as in the past, on money, shaky thrones, pacts, or tame local politicians but on the peoples of the Middle East the outlook would not be so dismal. Are the Middle Easterners ready to cope with their own problems ? There are few signs that they are. Turkey and Persia are becoming increasingly isolated and increasingly dependent on the West. The Arabs quarrel with the Turks over Alexandretta and the Persians quarrel with the Arabs over Bahrain. With Israel the Arabs have maintained a theoretical state of war, and an actual state of political and economic warfare, since the day it was founded in 1948. Whenever trouble breaks out between them the Arabs cry for help not to other Arabs, who would not or could not give it, but to the United Nations. Such an attitude necessarily puts them at the mercy of outsiders.

The Arabs regard Israel as an outpost of western imperialism, though Russia was among the first to recognise the state of Israel ; after ten years they still refuse to settle the Palestine refugees, though greater numbers of refugees have been settled elsewhere in the world. The Israelis have shown that they can take care of themselves in warfare with the Arabs, but when the Middle East is considered as a whole they remain apart. Not until there is an Arab leader strong enough to admit publicly that Israel is there to stay can the Israelis take their place as a Middle Eastern people.

All the talk of Arab brotherhood has not brought the Arabs together. The revolution in Iraq did not for long stop the bickering between Cairo and Baghdad. The Egyptians and Syrians dare not bring down the government of Jordan, which they have threatened to do, because when it comes to the point they are willing neither to take on the problems of Jordan for themselves, nor to see Israel pick up the pieces. Arab national leaders have been, in practice, notably less enthusiastic about a united Arab state than the masses who listen to the promises of Cairo. President Nasser has, perhaps, failed the Arabs by not bringing about wider political unity among them. Internal and external pressures have debarred him from becoming the empire builder the West feared he would become. If he had, the initial shock to the West would have been greater ; but the Arabs might by now have been better prepared to stand on their own.

Thus it seems that the western powers are no longer in a position to control the Middle East, and that the time has not come when the peoples there are ready to assume the responsibilities that go with the independence they have gained. It cannot be assumed that the Soviet Union will not be tempted to take over what used to be the western position ; and it is this, rather than the success of Middle Eastern nationalism, that the West really needs to avoid. Western relations with the Middle Eastern nationalities need to be conceived for the future in this framework ; but first, there are prejudices and vestigial emotions, on both sides, to be discarded.

Prospect for Prisoners

The Home Office deserves unstinted congratulations on its new white paper on penal reform

ANY fears that Mr Butler's plans for penal reform would be hampered by the "restore flogging" motions of last autumn's Tory conference should be dispelled by the white paper he presented to Parliament this week. There is no hint in it of any concession to the myth that prison regimes have become too soft to have any deterrent effect on criminals. Between the two extremes of opinion about prisoners—the one castigating them all as bad and the other sympathising with them as mad—"Penal Practice in a Changing Society" steers an essentially pragmatic course. Its object is to help the prison service to achieve its main aim: that a person who has served a prison sentence does not return to serve another one.

It is true that the white paper does at one point go out of its way to deny that a modern penal system should place the interests of the offender before those of his victim. This denial might be regarded simply as an attempt to reassure the more fearful among the population at large and the reactionaries in the Tory party in particular. But the white paper also recalls that the late Margery Fry had proposed a scheme of state compensation to the victims of violent crimes. Consideration of the interests of the victims has its place in any progressive scheme of penal reform, and the Government is setting up a working party to examine Miss Fry's technically difficult proposal.

Apart from this brief digression on the need for a reappraisal of the philosophy of punishment, the white paper is mainly concerned with how to make punishment both effective and humane. All penal reform has been hampered by the combination of a flood of prisoners—the inevitable result of the postwar increase in crime—and, until recently, a complete lack of new prison buildings. It is thus not surprising that buildings bulk large in the white paper. Because most of the postwar increase in crime is accounted for by the younger age groups, the programme already planned, and in part carried out, includes three secure borstals for boys and one for girls, four open borstals for boys, one borstal reception centre for boys and six detention centres for boys (four of which have already been completed). What is called the future programme provides for another six detention centres and such additional borstals as prove to be necessary if the amount of crime committed by young adults continues to increase.

How necessary these new institutions are can be seen by the numbers of youths in local prisons, either waiting for transfer to borstal or because the young prisoners' centres cannot take them. Furthermore, although the Criminal Justice Act of 1948 provided for the establishment of remand centres for young adults who would otherwise be remanded to prison, none has yet been built. Work on the first one, to serve the Crown courts of Manchester and Liverpool, will begin this year, and the "future programme" includes enough centres "to accommodate all untried prisoners and such convicted prisoners as require observation before being classified."

This does not exhaust the list of buildings in the present and future programmes; there are also to be more security prisons, including one for dangerous prisoners, and Holloway is to be replaced and Dartmoor reconstructed. But the urgency and size of the problem can be gauged from the white paper's statement that even if the work were completed now, there would still be over 1,500 men sleeping three in a cell in local prisons; as things are, there are about 6,000. In the meantime, therefore, the only way to relieve the intolerable congestion, according to the white paper, is to increase the numbers placed in open prisons.

Open prisons have the support of everybody except those living in the area chosen by the prison commissioners as a site for one. But it is astonishing how quickly objections die away when the prison is established and fears are not realised. The English open prisons have, in fact, won international admiration, and the prison commissioners would be justified in accepting a rather bigger risk in the selection of men for transfer to them. The risk of an occasional incident must be set against the 6,000 men sleeping three in a cell.

CONGESTION has given the building programme an urgency that cannot be denied. But, in the long run, and on the assumption that a further increase in crime does not overtake the provision of new institutions, they should also provide elbow room for a better classification of prisoners and for experiments in treating them. The prison commissioners have made an important proposal for integrating borstal and imprisonment by the provision of a single indeterminate sentence for youths, with a minimum of six months and a maximum of two years. This does not mean that for more serious offences the courts will be precluded from passing sentences of imprisonment of three years and upwards. And for offences meriting a sentence of less than six months boys will go to detention centres when there are enough of them. But, in between the two, by passing an indeterminate sentence of custodial training, a court will enable a youth to be sent to either borstal or a young prisoners' centre, according to whichever seems more appropriate after he has been carefully studied at a reception centre; and he could also be transferred from one type of institution to another according to the way in which he responds to training. This proposal is one of the very few contained in the white paper that would need legislation before it could be put into effect.

The problem of sentence—of how to ensure that a convicted person is sentenced appropriately—does not apply only to younger offenders. It has for some time been realised that, though Parliament may have placed various forms of treatment at the disposal of the court, the assize courts, which sit infrequently and for short periods, do not always have before them all the information about an offender that ought to enter into their consideration of what to do with him. This difficulty is at present being considered by a committee under the chairmanship of Mr Justice Streatfeild.

THE ultimate success of any arrangements for sentencing offenders, classifying them and transferring them to what appears the appropriate institution will, however, stand or fall by what happens to him when he gets inside it. Ex-prisoners have been so vocal, and so literary, in the last few years that the public may be inclined to think that life in prison is dominated by primitive sanitation and reactionary warders. In fact, within the very limited resources put at the prison commissioners' disposal, a great change has been wrought in some prisons, both in physical conditions and, more subtly, in the attitude of the custodians. But entrenched habits of mind die hard. In most of the local prisons the existence of two closed and mutually hostile communities still serves as a barrier to effective treatment.

The white paper acknowledges this, and points to the Norwich experiment, now being extended to other small local prisons, as a means of relaxing tension between prisoners and staff. But, for effective treatment, a more sympathetic and humane understanding in prison warders is not enough. In the tricky business of changing hardened attitudes of mind, a warm heart has to be accompanied by a cool head. The white paper recognises that prison staffs need special skills, or at least special techniques, if casework, whether individually or in groups, is to be undertaken within the prison service. But in seeking to attract recruits capable of acquiring these skills and techniques, will it not be competing with the mental health services, which are already short of much the same sort of workers and will need more when the community care provisions of the Mental Health Bill come into force?

A shortage of skilled staff is more likely to prevent the full realisation of new model prisons and the remodelling of local ones than a shortage of accommodation. For once the building programme has got under way and has the force of the administrative machine behind it, it will probably survive any economic crises and cuts on spending. The important thing is that over staff as well as buildings the Home Office and the prison commissioners have set their sights high and deserve unstinted congratulations. Nearly fifty years ago a Home Secretary said to the House of Commons:

> The mood and temper of the public with regard to the treatment of crime and criminals is one of the unfailing tests of the civilisation of any country.

It remains for the public to pass this Churchillian test by accepting the responsibilities and obligations of Mr Butler's white paper as wholeheartedly as it was welcomed on Monday by all political parties.

The Business of Marriage

Our correspondent, recently engaged, sets out the knotty problems which modern couples have to unravel before the knot itself is tied

FEW things are booming so satisfactorily in Britain today as the marriage market. One reason for this is the more even balance between the sexes; marriageable men, for long in short supply, are now in small surplus. More money for the young and a less inhibited social code have also contributed to the boom. In all, there were 399,100 weddings last year, at an average age of 25 for the groom and 22 for the bride (both two years younger than the average age twenty years ago). Today half of the population is married, compared with a third at the beginning of the century. Nineteen-fifty-nine looks like beating all records yet. The firms in or on the fringes of the marriage business are already rubbing their hands in pleasant anticipation.

The trades that make money out of marriages are a varied and generally fiercely competitive lot; success in this business requires a great deal of know-how. Their first problem is to tap the market. This is done partly through personal contacts, and, much more important, through pestering those who announce their engagements in the press. Especially picked as targets are those supposedly more opulent couples (and the girls' mothers) who advertise in the *Daily Telegraph* or *The Times*. The first telephone call in the struggle for contracts might come at 8.30 a.m. on the morning that the engagement is announced; in the following fortnight, the woman who advertises in one of these papers is likely to get at least thirty letters. Roughly half of these will come from caterers and photographers, the rest from a motley assortment of silversmiths, brewers, stationers, furniture stores, and the like. The man will usually be sent advertisements of a more serious sort. Insurance and birth control leaflets predominate.

It is, however, a group of manufacturers who do not advertise by post who cream some of the best profits from the marriage market. These are the jewellers. Total British jewellery production, a high proportion of which is made up of engagement and wedding rings,

increased from £3½ million in 1938 to £12 million in 1954, a real increase as well as a money one. Moreover, the big chain jewellers, for whom these rings form some 90 per cent of total turnover, seem to have done better than average. Engagement rings can be bought for any sum between £4 (for phoney rubies and diamonds) to upwards of £4,000 (for real ones at Cartier's); the trade says (perhaps a little hopefully) that the average price paid nowadays is about £20, allegedly with little difference between buyers in different social classes.

The pattern of sales has changed recently. During and just after the war, when jewellers were closely controlled by the Government's hold on the supply of precious metals, most rings sold were second-hand. Now, because of pressure from British goldsmiths, many jewellers advise customers to buy new rings, and back this up by showing a price differential between new and second-hand jewellery that, substantial ten years ago, is now very small. In part, the narrowing of the gap is due to the reduction in purchase tax rates on new jewellery (from 100 per cent in 1948 to 30 per cent). But there are some signs of a restrictive practice here.

Perhaps the most pushful of the trades providing services for marriage — more pushful even than the caterers —are the photographers. They have organised their trade on a basis that gives high profits on any contract secured, so that competition among them shows itself in a rush of applications for the job. That is true of many other branches of the marriage business. The claims made in some firms' brochures are so synthetic, and the ignorance of most people about how to get married so profound, that a new service has recently been evolved—that of the wedding counsellor.

These counsellors will give up-to-date advice on organising receptions, buying flowers, hiring cars, dealing with photographers, and almost anything else. (They must not be confused with owners of marriage bureaus, who advise on a possible husband or wife as well.) One such counsellor whom your correspondent interviewed has already advised on over 350 weddings and is expanding her business steadily. As well as saving time and bother, her service is free. Commissions are collected off the suppliers, not off those to whom the advice is given. If commissions are expressed as a percentage of total expenditure, this could provide an incentive to recommend the most expensive suppliers; although so far this trade impressed your correspondent as being conducted both productively and efficiently, it might be better in the long run to organise the system of payment the other way round.

The marriage business is throughout geared to a white wedding and a large reception—and usually rightly. For although most people do not go to church —only 28 per cent go once a month or more—70 per cent get married there. This may be either because more people are basically religious than practise religion (the churches' explanation), or because the girl likes a church wedding where her friends can see her (her friends' explanation), or because parents like to keep up with the Joneses in disposing of their children. Weddings also provide the opportunity for a large family gathering, which is impossible on almost all other occasions except at a funeral; this feeling, buttressed by a thoroughly practical desire on the part of the couple to get as many presents as possible, usually ensures that a great mass of relatives and friends are invited.

A church wedding is nearly always a good deal more expensive than one in a registry office. Admittedly the basic fee for getting married in a church is only 36s. 6d. against £4 5s. in a registry office; but it is the church extras that add up. By the time the vicar, choir and organist have been paid, and the verger and a few others helped on their way, the cost of a wedding in even an ordinary church can be considerable. If a fashionable church, like St Margaret's, Westminster, is chosen, prices are high indeed. Ringing bells in St Margaret's costs £6, the organ and full choir £25, and guardsmen with polished swords will require a substantial tip. But even a very ordinary white wedding is likely to cost, say, £15 for the wedding itself; when the costs of the reception and of all the manifold preliminaries are added in, the bride's father will be lucky if he escapes with spending less than £100. With 400,000 marriages a year, more than two-thirds of them in church, total expenditure in the marriage business probably exceeds £30 million, perhaps even £40 million, a year.

This is a sizeable sum; but from a business point of view it has its drawbacks. Chief among these is the seasonality of the trade. This arises for the most part because a ridiculously complex series of income tax regulations enables people marrying in certain months to qualify for much higher income tax rebates than those who marry in others. The basic facts are that on marriage a man always gets an extra £100 of his income for that and subsequent years freed from tax; while a woman, if she goes on working, gets in the year she is married an extra £140. The problem is to maximise the total gain from these allowances; for two people earning between them, say, £1,700 before marriage, the difference between getting married at the best and worst times amounts to nearly £90. (April will be the best month for this if the woman stops work; October if she goes on). Since £90 will cover the cost of quite a good honeymoon, even the most unbusinesslike of couples cannot afford to ignore it. This means that churches and registry offices are full to capacity at some dates—including Lent—and empty at others.

Against all these extra problems posed by the advance of bureaucracy, young people getting married today can count on some solid help not widely available to previous generations. This comes from a number of voluntary organisations, chief among them the Marriage Guidance Council. The council runs courses and issues booklets whose sensible contents belie the awful sentimentality of their covers. There is also the Family Planning Association, another voluntary body whose advice fills a gap which ought, but for absurd Government regulations, to be filled by the national health service. How much advice is needed can be gauged from the lack of success which running a marriage by intuition has had in the past. One out of every seven British marriages now ends in divorce.

NOTES OF THE WEEK

ELECTION DATE

Wait for the Next Tide?

ALTHOUGH last Thursday's pea-soup fog kept the total poll at Southend West to below 43 per cent, the result there was again almost extraordinarily well in line with the pattern set in by-elections up and down the country in November; it therefore accorded closely with the "bogey for Southend" discussed in *The Economist* last week. The logical statistical conclusion is that any early general election would be likely to be a very close run thing. This conclusion, incidentally, now seems to be shared by both the public opinion polls and the students of by-election statistics; the only difference between them is that the Gallup pollsters believe that this prospect is partly a result of a significant recovery by Labour in the last few weeks, while believers in by-election pointers maintain that it is merely a continuation of a state of affairs which has persisted since last autumn at least.

It is against this background that Mr Macmillan must be pondering the best date for appealing to the country. So long as there is so great a danger that a general election might result in something near to a dead-heat, he should be urged to delay it. Nothing could be worse for Britain than a new Parliament in which either side had only a very small and therefore timid majority. On purely party grounds, one would also have thought that in delay there lay more hope of plenty for the Tories. Mr Macmillan can afford to play the waiting game up to and including about March of 1960 if he wants to—but always standing prepared to pounce into a general election if ever opinion seems to have shifted those last few critical points in his favour.

Optimistic Conservatives at Westminster have been hoping for some time that two factors may help opinion to do just that. One factor is the budget, which Mr Amory is plainly expected to approach in the mood of a Chancellor bountiful. The other factor, at which they have always looked longingly, is the possibility of some démarche in the foreign field. It is established lore at Westminster that, although it would probably at present be politically embarrassing for President Eisenhower to appear to take the lead in arranging new discussions with the Russians, it would undoubtedly be politically advantageous for Mr Macmillan to do so. This week's prospect of the Prime Minister going to Moscow with American approval has undoubtedly made the Conservatives very happy indeed. But rather than decide now to hold an election in the immediate wake of that visit, the Prime Minister would surely be wise to wait for the results of the next two by-elections in England —probably Harrow and South Norfolk—to see whether the cheques of popularity are being cashed.

Southend's Statistics

THE statistical outcome at Southend West was that the Liberal increased her share of the vote by 9.2 per cent, while the Tories' share dropped by 8.6 per cent and Labour's by 0.6 per cent. As was foreshadowed here last week, this had the paradoxical result of relegating Labour to third place in the poll and yet of serving to fortify Labour's hope that it has at least an equal chance of being elected to be the next government. This is not primarily because the drift of former Tory votes to the Liberals is in danger of wiping out many marginal Tory majorities. On present form, and looking at the present list of intended runners, one would guess that less than twenty seats which the Government should otherwise retain would now go to Labour as a result of the new Liberal inroads on the former Tory vote.

In addition the Liberals might expect to win some three or four seats from the Tories themselves at any early general election (although, to counterbalance this, the Liberals' own present seat at Torrington must now be in some danger, and so would their existing seats at Bolton and Huddersfield if the Tories decided to put up candidates there). But the major point is that, compared with 1955, there now seems to be a greater degree of apathy among the Government's supporters than among other electors. This greater apathy is at present on a scale which seems liable to show itself in a swing from Tory to Labour of between about 2 and 3 per cent in the average straight fight between the two big parties. And it would require a general swing of only just over 2 per cent at a general election to bring Labour to equality with the Conservatives in a new Parliament.

MALTA

After the Inquest

NEITHER side in the House of Commons emerged with much credit from this week's debate on Malta. The immediate danger, under the Conservative government, is that Mr Lennox-Boyd's present bill—to give the governor interim powers to rule the island by ukase until Mr Mintoff, or the Maltese, come to their senses—will be taken as an excuse by the Colonial Office to give up the arduous task of thinking out Malta's future. Once a colony is being run by colonial civil servants there is a permanent temptation to postpone taking it out of their capable hands again—at least until this or that important scheme has matured, or this or that threat of disorder has been removed. This would be disastrous; the only condition which makes governor's rule in Malta tolerable is the promise that it is only temporary, and Mr Lennox-Boyd must be kept very strictly to his promise.

Unfortunately, this sense of urgency did not emerge in Government speeches, and Opposition criticism was far more concerned with trying to score party points in an inquest on past failures than to make constructive suggestions for the future. Mr Lennox-Boyd's only suggestion seemed to be that if Mr Mintoff stewed in his own juice long enough he would begin to come round, though whether to the "integration" proposals of 1955 or to the offer of an autonomous status made just before the breakdown last spring, Mr Lennox-Boyd did not explain. Such a passive attitude—typical of the Colonial Office—is more likely to make the imbroglio more intractable. If the Colonial Office wants the Maltese to part company with Mr Mintoff, it must take the initiative. In the first place it ought to nerve itself to an all-out effort to make quite clear to the Maltese man or woman in the street what the facts of the island's position are—Conservative and Labour members showed themselves at one on these facts—and what are the alternatives. The logical alternatives to hold out are independence on Mr Mintoff's revised terms or 1955-style integration on Britain's; both the Colonial Secretary and Mr Bevan agreed this week that integration would still be the most statesmanlike solution. Then, having given the Maltese people the plain facts through Mr Mintoff's propaganda barrage, the only sensible thing to do is to let them choose.

If they choose Mr Mintoff—a neutralised independence by 1962 with no visible means of support, no base to hock, and no £100 million in the bank—then Britain's responsibility will have been discharged, both to the Maltese and to Nato. The support for Mr Mintoff's day of mourning shows that at present reason would not win the day. That is unfortunate, but eventually the Maltese must be allowed to make an adult decision. The present constitution makes no provision for testing this by a general election; but a referendum might be an appropriate instrument. The first requirement is that just enough time should be allowed to make sure the Maltese do know and face the facts, and that they should feel free of intimidation when voting. Above all, the time interval should not be too long. Should not the Colonial Office decide now that it will aim to hold a referendum before Mr Mintoff's target date of 1962 for independence? It would be a grim risk, for Mr Mintoff will probably never believe that if he gets independence he cannot sell it again to somebody profitably; but a greater risk is to let matters drift.

UNITED ARAB REPUBLIC

Caveat Vendor

THE battle for British assets in Egypt is now being fought over the playing fields of Smouha. The financial agreement, initialled on January 16th, has not been signed and the good offices of Mr Eugene Black, president of the World Bank, have again been sought.

Only after the initialled agreement arrived in London was it discovered by the British side (who surely might have been expected to know) that land at Alexandria, on which the Smouha family had built a racecourse, a golf course and a garden suburb, was described in the document as Egyptianised agricultural land worth £1 million. As developed property which may be worth as much as £12 million, it should have been on the list of "sequestrated" properties. This and other inexplicable errors sent Sir Denis Rickett with more haste than dignity to Washington last weekend to seek Mr Black's support for a provisional solution. But Mr Black has gone fishing, not back to Cairo. The British Government still wants to conclude the financial settlement on the terms reached in January if the Egyptians will agree to the insertion of a saving clause detailing the few properties in dispute for later agreement. Claims on the Smouha land are further complicated by provisions of the Egyptian land reform laws.

The other point still not settled is the extent of the immunities and facilities to be granted to the British team delegated to carry out the property agreement. The Cairo newspapers have ceased to air the pros and cons of resuming diplomatic relations, and there has been no real indication that Saudi Arabian views affect the question one way or the other. Perhaps the Saudis have not recovered from the shock of being asked.

The goodwill engendered by the initialling of the agreement may be jeopardised by haggling over details that might have been more easily settled earlier in the talks. There is still time to correct the mistakes that have been made without starting the whole business all over again.

ADEN

The First Six

IN Aden and the protectorates around it the British Government still has a chance to create a state—the last chance it is likely to have in the Arab world. After years of discussion of the form that state should take, the rulers of six of the eighteen states of the Western Aden Protectorate have agreed to set up a federation later this month.

While this may appear to be a step in the right direction, the federation is being brought forth because the rulers fear the acquisitive tendencies of the Imam of Yemen. They are not federating because they are now better prepared to take over more responsibility for their own affairs but because, by joining together, they can demand more attention from old mother Britain who has promised financial and military aid. The rulers want to build a federal capital near Aden and instal therein the trappings of modern government—a president, prime minister, ministers and the usual bureaucrats. But they need capital investments far more than a capital city.

The Abdali Sultanate of Lahej, Aden Colony's closest neighbour and the most advanced of the protected states, is not among the founding members of the new federation. The former sultan of Lahej is in Cairo, where he pays his way by broadcasting anti-British and anti-federation speeches. The new sultan, recently elected by the elders of Lahej, apparently still finds it prudent to sit on the fence.

What is to be the role of Aden Colony in plans for the federation? Will the colony continue to be regarded as part of a world strategic plan, too important to join its poor relations in the hinterland? Aden is part of the Arab world and will sooner or later have to be treated as such. It is also the natural leader of the petty states around it and the closer it can be allied to them the sooner that leadership can be effective.

President Nasser may regard the federation plan as a wicked British trick, but his Cairo radio commentators err when they describe the Aden government as a gang of imperialist vampires. There are British officials in Aden who would like to see it become a useful member of the Arab community. An unwarranted amount of criticism and interference from Cairo only makes their task more difficult.

STEEL NATIONALISATION

Much Ado About Mr Hurry

SCATTERED across a hundred or so towns and country districts in Britain, there are about a hundred thousand otherwise unremarkable people who hold the political destiny of this country in their wavering hands. They are those political four leaf clovers, the floating voters in marginal constituencies, and for years it has been the dream of every practising political scientist that somebody would give him up to half a million pounds to ferret out these, our real but accidental governors, and find out exactly what makes them tick. Mr Colin Hurry's public relations organisation has now got the money to set a market research bureau searching for that grail. It is therefore quite maddening that he is using it to ask such silly questions and in such an unscientific way. He is concerned only to ask marginal constituents what they think should be done with Labour's dying (but not quite dead) policy of nationalisation. Everybody knows that the majority answer to that will merely be something rude.

Still, the businessmen who are financing Mr Hurry's survey are using their own (or more exactly, their shareholders') money; the trend of opinion in these marginal constituencies is likely to affect British business conditions as much as any other single factor capable of being subjected to research; and the survey, even as conducted, will have some slight (very slight) value as a contribution to political knowledge. It is therefore ridiculous that Labour dignitaries should scream so loudly that the poll should not have been undertaken or that its results should not be shown to anybody; they have come very close to suggesting that political research among the grassroots should be undertaken only by the political parties themselves or by impartial institutions instead of being undertaken by as many people as possible. The scurry about Mr Hurry is another symptom of the way in which certain Labour leaders, having decided to paper over some of their problems about policy, have become almost neurotic about problems of vote-counting and organisation.

The result of Labour's protest could be odd. Mr Hurry's only logical reason for concentrating his survey on questions about steel nationalisation was that this might help that subject to come further into the forefront of political controversy; the more widely steel nationalisation is debated, the more likely is Labour eventually to abandon it. The Hurry survey had been continuing for several months without getting any publicity, until Transport House did the steel firms' job for them by attracting such sudden public attention to it last weekend. The stock exchange probably showed the right sophisticated reaction by marking steel shares slightly higher on Monday.

PARLIAMENT ON TV

Questions in the Home

IF Mr Macmillan is going to be as much off his best form as he was on Tuesday when answering a proposal for the televising of question time, he might become more opposed to the idea than he sounded. As in the old days before he had reached the top of the greasy pole, he laboriously dug himself a trap of heavily over-prepared jokes about the quiz shows between which parliamentary question time would be scheduled—and released a prolonged howl of catcalls when he fell into it.

But the really interesting feature of this exchange was that this was its only noisy interlude. A short while back, when the unlamented fourteen-day rule was in effect, any wild verbal swing at the encroachments of the camera was good for a cheer. On Tuesday there were no cheers for Mr Herbert Morrison when he trotted out the traditionalists' standby—that if there were microphones and cameras MPs would talk to them instead of to each other. And there was no audible protest when the Prime Minister, who had first stated that the matter was one for the House as a whole rather than for the Government, made his personal inclinations clear by remarking that Mr Morrison's argument was also the one used against the publication of *Hansard*.

The fact is that, fourteen-day rule or no fourteen-day rule, the House of Commons will continue to dwindle in the public mind until some of its proceedings, which are after all the public's business, can be seen in the home. The right to televise Parliament should not be confined to question time, which, *pace* Mr Ellis Smith, is not always or even usually "dynamic." Television at Westminster would present formidable technical difficulties. But once these are overcome it would have the supreme merit of portraying to the voters the great issues of the day being contested by the country's real political leaders rather than by the colourful but peripheral substitutes who now fill the screen. The thought of constituents looking in might even induce rather more members to attend debates.

STREET OFFENCES BILL

Trusting the Police

THE vote of 235 to 88 by which the Street Offences Bill obtained a second reading in the House of Commons last week did not fully reflect the extent of the doubts which had been sown in MPs' minds by the pamphlet published by the Church of England Moral Welfare Council. This was partly because the Tories were whipped in while the Opposition was not, partly because Mr Reginald Paget's totally hostile amendment was chosen for debate by the

Speaker (in preference to the reasoned rejection favoured by the women's organisations) and partly because many members felt that their libertarian qualms could be more appropriately expressed at the committee stage.

Undoubtedly a rather alarming amount of trust is being placed in the honesty and common sense of the police in recognising a prostitute when they see one. On the assumption that when the penalties are higher there will be more defended cases, the bill does away with the need, at present perfunctorily discharged, to prove that residents or passers-by were annoyed. This means that any two policemen, without requiring other witnesses, can, after watching a woman's activities (and in Mr Butler's revealing language), "condemn her as a common prostitute and bring her before court." Only in the case of such a "common prostitute," a term which is nowhere defined, does loitering or soliciting become punishable as a nuisance in itself.

But how else are the streets to be cleared of these offensive purveyors? The Moral Welfare Council's attempt to dispense with the term "common prostitute" by defining the offence to cover any person loitering in a public place for a libidinous purpose was wisely rejected by Mr Butler: it threatened far more dangers to private liberty than it might have averted. Mr Butler did accept as a police practice, though not as a part of the statute, the proposal for prior cautioning, although this made him vulnerable to Mr Greenwood's contention that if it is generally known that there would be no prosecutions until two cautions had been administered, this in itself would prejudice a woman when she came before the court. Even the Moral Welfare Council, however, when proposing to keep annoyance as one form of the offence, had to suggest that "nuisance," which does not involve producing people who have been annoyed, should be included as another form if the bill is to be effective.

There remains Mr Paget's root-and-branch attack on the whole idea of driving prostitutes off the streets. His strongest point was that by doing so society would be tampering with something it did not understand; his weakest was that without streetwalkers London would have a call-girl system as in New York. In the first place the New York system would be an improvement; in the second if there was any demand in London for the kind of arrangements exposed by Mr Ed Murrow in his radio programme on "The Business of Sex," which was quoted in the debate, it would not depend for its satisfaction on the absence of opportunities for soliciting in the street.

On the whole, although its safeguards should be tightened in committee where this seems feasible without destroying its central purpose, this bill had better be tried—and most scrupulously watched.

LONDON'S GOVERNMENT

Eight Ministries Say . . .

THE evidence presented by eight government departments to the Royal Commission on Local Government in Greater London (HMSO, 10s.) is well worth reading. For once the ministries have not carefully "co-ordinated" (i.e., emasculated) their respective views. The departmental hobby-horses therefore get an indecent and refreshing exposure. Only the Ministry of Housing and Local Government has fallen, through anxiety to remain impartial, into the most horrible sort of white-paperese. It even perpetrates the following:

> Inevitably some [housing] authorities have been more vigorous and efficient than others, though the level of performance has on the whole been pretty even.

The Board of Trade offers an admirable students' essay on the principles of weights and measures administration, and the Ministry of Agriculture is reassuring about the capacity of a hundred-odd councils to chase rats along London's 3,400 miles of sewers.

It is the Ministries of Education, Health and Transport that offer the most interesting and definite opinions. Education rejoices in a most unexpected manner over the efficiency, imagination, and good public relations of the London County Council, which it is anxious to leave undisturbed. (With some reservations and doubts, the LCC gets a remarkably good press all round.) Health emphasises the importance of keeping the health and welfare services under the same local council, and does not want a system of delegation. Transport is the most precise. It wants to abolish completely the present system of highway and traffic administration in London; it would like to set up instead 22 local councils for road maintenance and improvements, together with a single traffic control authority dealing with traffic regulations and parking for the whole of built-up London.

What guidance can the royal commission extract from this maze of opinions? One point is clear. Everybody seems to agree that the hundred lower-tier councils in Greater London, already enfeebled, cannot manage even their remaining tasks satisfactorily. Many of these have too little road mileage to be efficient highway authorities, many (particularly the metropolitan boroughs) are revealed as extravagant collectors and disposers of refuse, while their participation in education through delegation schemes is cumbrous and unhappy. *Per contra,* the LCC (like to a lesser extent the other counties) scores simply because it is a large and wealthy body which can afford to attract efficient staff; these chaps, the central civil servants seem to be saying, are almost like us. The LCC also scores through the lack of any departmental argument for a Greater London authority save for traffic control—and even here a policy, not an authority, is or should be the first need. On the other hand, government departments' aversion from any bigger regional-size elected authority may well have coloured their evidence, while civil servants are not the people to over-emphasise the point that for some other functions the LCC emerges as unnecessarily large.

ITALY

The Christian Democrats Split

IT is Signor Fanfani's misfortune that although by energy and ability he has given the Christian Democrats the efficient party machine which they had previously lacked, his personality uncovered his party's deep divisions. A week ago he resigned the post of party secretary which he had held since he supplanted Signor de Gasperi in 1954. This apparently completely unexpected step was preceded by party discussions which are reported to have been very stormy, and it may be doubted whether Signor Fanfani was really as calm as he said he was when he wrote his letter of resignation. His long-term political calculations are uncertain; so are his enemies' next moves. All that is certain is that Italy, with its ruling party deeply split, faces a grave problem of government.

How to choose a good executor

So much will be required of him. Your estate must be wound up quickly, efficiently and in strict accordance with your wishes, yet no worry or responsibility must lie upon the shoulders of your family. Your assets must be safeguarded, yet no friend or relative should be burdened with the technical and administrative problems involved. And always there must be available a sympathetic adviser to whom your dependants can turn in time of need . . . Those are the requirements; and all of them are fulfilled when you

appoint
MIDLAND BANK EXECUTOR AND TRUSTEE CO. LTD

The Manager of any branch of the Midland Bank or of the Trustee Company will gladly give you further details and arrange for confidential discussions; or you may write direct to Midland Bank Executor and Trustee Co. Ltd., Head Office, 6 Threadneedle Street, London, E.C.2.

SAFE and SOUND

Total assets standing at over £304,000,000! Here is a level of security to satisfy the most critical investor. Another important point: the yield is attractive too—currently 3½ per cent per annum with income tax paid by the Society. This represents £6.1.9 per cent when income tax is paid at the standard rate.

There are now some 600,000 Abbey National investors. Their savings are safe and profitable. Their future is the brighter for their wisdom in the past.

REGULAR SAVERS!
Why not enquire about BUILD-UP shares—the simple, profitable Abbey National plan for those who can save between £1 and £10 per month?

ABBEY NATIONAL
BUILDING SOCIETY

ABBEY HOUSE, BAKER STREET, LONDON N.W.1
Member of The Building Societies Association
ASSETS £304,000,000

CVS-513

Signor Fanfani's move has not resolved the crisis. President Gronchi has apparently found himself sharply at odds with the leaders of the Christian Democrat parliamentary group whom he does not believe fully to represent the feelings of the rank and file. He refused to accept their nominee (Signor Segni) for premier because they failed to produce an agreed government programme as well ; and he has been trying to get them to hold a full meeting of the parliamentary group so that the strength of the various Christian Democrat factions can be more accurately assessed. The party leaders have strongly resisted this pressure, maintaining that the president is trying to split the party.

On Tuesday, therefore, President Gronchi took what looked like a desperate decision. He rejected Signor Fanfani's resignation as premier and invited him to go before the Chamber and seek a vote of confidence. Signor Fanfani refused on Thursday to take up this challenge, presumably calculating that his chances of getting his vote were too low, especially as neither the Nenni Socialists nor the left wing of the Social Democrats were at all likely to support him. If the president's new round of consultations does not produce a solution, he may have no alternative, as he himself has hinted, but to hold new elections. This possibility could be viewed with more enthusiasm if there were a reasonable chance that the electorate would not return the mixture very much as before.

FRANCE

The First Round

FRANCE is settling down into the new normality of the Fifth Republic. The emergency powers given to General de Gaulle, and then assumed by M. Debré, expired on Thursday in a final flurry of decrees. The special session of the Assembly, summoned to approve M. Debré's policy statement, had already been closed on presidential orders ; parliamentary life will resume on April 28th. The Assembly's sitting ended in mild uproar and dubious legality when a UNR deputy, M. Moatti, was allowed to introduce a specious motion intended to associate the right-wing majority with the integrationist cause in Algeria. President de Gaulle himself, speaking to the country for the first time since he moved into the Elysée Palace, appeared on television a few hours later. In this fireside briefing to " the infantry, which always wins the battles," he discounted slogans and rhetoric in bringing peace to Algeria, and reminded the Assembly that he would dissolve it if it misbehaved.

The French Community, linking France with the dozen newly-autonomous republics of west and equatorial Africa and Madagascar, drew its first ceremonial breath at the Elysée on Tuesday. Less formal convocations of African federalists and anti-federalists elsewhere in Paris showed clear signs of trouble ahead. With the word that High Volta and Dahomey were having second thoughts about their membership of Mali, the anti-federalists gathered at the home of M. Houphouet-Boigny in noticeably high fettle. Exactly how President de Gaulle intends to run the periodic meetings of the Community's executive council—and how much personal influence M. Houphouet-Boigny is to be allowed in its affairs—remains to be seen.

On the financial front the figures for the first month after *vérité et séverité* seemed to bring a lightening of M. Pinay's burden. The franc has been buoyant on the open market ; capital entering, or re-entering, France in January made up for December's pre-devaluation drain ; the Bank of France has felt able to cut bank rate by ¼ per cent. But the next three months may bring sterner tests. Politically, three by-elections for the Assembly, beginning on February 22nd, and the municipal elections on March 8th and 15th will give a first demonstration of popular reaction to the budget.

BBC AND POLITICS

No Love for Candidates

MR CHRISTOPHER ROWLAND, a talks producer in the BBC Overseas Service, was recently dismissed from his job as a result of his adoption as prospective Labour candidate for Eastleigh, a highly marginal seat at present held by the Tories with a 500 majority. Under the BBC's regulations anyone holding a " restricted " post—which means one in which he might be called on to handle delicate party or other controversial questions—may not " nurse a constituency " without the corporation's written permission. This, in Mr Rowland's case, was denied.

It is easy enough to understand the motives for this Reith-like regulation. Like Caesar's wife, it is said, the BBC must be above suspicion of partiality. A talks producer is responsible for the choice of speakers in straight talks, discussions, and features and for maintaining the proper balance between parties. His *bona fides* above all others must be apparent to party organisations. There are subsidiary arguments about the diversion of a candidate's energies from his work and the possibility of conflict of loyalties when he is speechmaking in his constituency. But talks producers are a fairly numerous race, and only some programmes are political. Mr Rowland's entire output was directed abroad, away from British voters, and the work could have been shuffled so as to have kept him off politics. The fact that the BBC did not use its discretion in his favour shows that it has determined on an extreme interpretation of its own regulations (it was even suggested to Mr Rowland at one point that he would be ineligible to run overseas programmes on sport because a Labour MP might be called on to do a commentary).

The odd thing is that the BBC is sticking to these regulations in the case of sound radio, where it still has a monopoly, at a time when different standards are developing in television, which has a much greater impact on the voter. In at least one commercial television company an adopted candidate is in charge of editing a weekly current affairs show, while in the BBC itself some curious fictions are keeping well-known personalities with political ambitions on the screen. Heaven forbid that they should be taken off it, as a result of any further extension of the BBC's misconception of the public interest. That interest lies in ensuring that the best possible candidates are available to go into politics. Under the British system prospective candidates are adopted some time before an election, which is itself of uncertain date. Immediate forfeiture of employment is a severe and undesirable deterrent. There are many private and public employers who could make out as good a case as the BBC that they run a risk of embarrassment if they allow their employees to nurse constituencies. By assuming such a risk, the BBC should be setting a good example, instead of its present excessively timid one.

PRICES AND WAGES

A Year of 2 Per Cent Inflation

THE final figure for the cost of living index in 1958 shows that retail prices rose less last year than in any previous year since 1953. The official index, after some month-to-month fluctuations, finished the year no higher than in June and only 2 points (just under 2 per cent) higher than at the end of 1957. This compared with an average annual rise of 4½ per cent from 1954-57.

CHANGES IN RETAIL PRICES

	Index* at Dec., 1958	Points difference from Dec., 1957		Index* at Dec., 1958	Points difference from Dec., 1957
Food	109·2	+3·2	Tobacco	107·8	Nil
Housing	125·1	+8·2	Drink	105·8	+0·1
Fuel and light	116·6	+1·0	Transport & vehicles	113·1	+0·4
Durable household goods	99·9	−1·4	Miscellaneous goods	113·6	+2·0
Clothing and footwear	102·7	−0·3	Services	115·4	+1·2
			Total Index	110·2	+2·0

* Based on 100 at January 17, 1956.

The cost of housing rose more than any other form of spending last year—by 7 per cent—and caused the total index of retail prices to go up by 0.7 points. But, because food is four times as heavily weighted in the index, the 3 per cent increase in food prices contributed more to the general rise—1.1 points. Most other items rose only a little in price, and clothing and durable household goods became very slightly cheaper. Six foods had a lot to do with the fluctuations in the general level of prices: potatoes, tomatoes, eggs, milk, bacon and apples. (The first four of these, incidentally, are foods for which there are producer marketing boards.) Some of the movements were seasonal ones, but these do not necessarily have exactly the same timing each year. In October, vegetables were 14 per cent dearer than they had been a year before ; fruit, on the other hand, was 10 per cent cheaper. More significant, at that date the price index for meat and bacon was 9 per cent above a year before ; this alone would have put up the total index of retail prices by 0.8 points.

Wage rates still kept ahead of prices last year ; they rose by 4 points (or just over 3½ per cent), about the same as in 1953. In the intervening years the average annual rise had been just over 6 per cent. Nearly 11¼ million workpeople benefited last year and got, on average, an extra 6s. a week. But, with some reduction in hours, take-home pay did not grow as much. In October earnings were only 2 per cent higher than twelve months before in industries in which wage rates had risen by 3½ per cent.

SOVIET UNION

The Penitent Form

AFTER Mr Khrushchev's remarkable performance the party congress in Moscow went on its expected way. All successive speakers paid tribute to the undoubted master of the ceremony. Most of them, including Mr Chou En-lai, condemned the activities of the " anti-party group." But there were differences in emphasis. It was left to Mr Spiridonov, the Leningrad party secretary, to launch an all-out attack. He claimed that the guilty men should be called to account before the congress for their actions, " particularly those who are still members of the central committee." He made it plain that he had the former chief planners, Mr Saburov and Mr Pervukhin, in mind. And indeed Mikhail Pervukhin, now Soviet ambassador in Berlin, duly spoke his *mea culpa on Tuesday*.

The official inclusion of Mr Pervukhin and Mr Saburov among the " plotters " confirms that in the crucial struggle of June, 1957, the " anti-party group " had a majority in the party presidium ; of the eleven full members, six—Molotov, Kaganovich, Bulganin, Malenkov, and the two now mentioned—belonged to the group. Mr Khrushchev managed to survive only by shifting the struggle to the larger arena of the central committee packed with his own supporters. Since then he has punished his defeated rivals. Messrs Malenkov, Molotov, Kaganovich and Shepilov went first ; then Marshal Bulganin, whose confession is now judged insufficient. Now comes the turn of Pervukhin and Saburov.

There are differences of behaviour among the accusers as well as among the accused. Mr Spiridonov, before coming to the congress, published an article in *Party Life* recalling the Leningrad affair, the mysterious purge of 1949 which Mr Khrushchev revives whenever he is gunning for Mr Malenkov. Mr Mikoyan, on the other hand, has now repeated what he had said in the United States, namely, that " the faction has not increased by a single person " and that, if the matter is raised again, it is simply " to prove again with facts how wrong the political position of this faction was." Clearly not all the leaders agree on the best way of handling the opposition. The question whether to put them on trial or not may have been argued out at some secret session of which nothing has been heard. The answer will be an indication of Mr Khrushchev's position and of the structure of power within the Soviet Union.

SCANDINAVIA

Room for Manoeuvre

MOSCOW has for some months been taking an interest, keener than usual, in Scandinavia and the waters around it. Finland was the first object of the intensified Soviet concern for this area. A leading article in the Warsaw paper *Trybuna Ludu* argued on January 28th that one of the reasons for the recent meeting between Mr Khrushchev and President Kekkonen in Leningrad, and for the earlier lightning visit of Mr Mikoyan to Copenhagen, was the Soviet intention to launch a campaign for the " neutralisation of the Baltic sea."

Last week's foreign policy debate in the Norwegian parliament must have stimulated Moscow's Scandinavian experts to some more thought. The main topic was the economic integration of the Scandinavian countries: Mr Skaug, the minister of trade, reported on the meeting of government delegations which had taken place in Oslo at the weekend. He said that his government has so far taken no stand on the highly controversial issue of a northern customs union, and that no agreement among the governments has been reached. The Rapacki plan also came under discussion—it was during his visit to Norway that the Polish foreign minister made the revised version of his plan public for the first time. Mr Finn Moe, the chairman of the parliament's foreign affairs committee, expressed his opinion that the plan for a central Europe free from atomic weapons and with thinned-out conventional forces was certainly worth

considering ; speakers for the Conservative party disputed this view, and Mr Lange, the Labour foreign minister, said that the question might be discussed in the coming international negotiations on Berlin.

The Russians are bound to oppose any plan for economic integration in Scandinavia (if only because such a plan would be likely to attract the Finns), just as they will applaud any initiative to detach the Scandinavian countries from Nato. Mr Lange dwelt longer, however, on the dispute about the Norwegian intention to build a civil airport on Spitzbergen. The Russians object to this project as contrary to the Spitzbergen convention of 1920. They have always been sensitive about this strategically important group of islands, where they possess mining concessions ; in 1951, they protested against the stationing of Norwegian troops there. A general Soviet diplomatic offensive is in course in Northern Europe, with a divided, and preferably disengaged, Scandinavia as its aim.

SOUTH AFRICA

Instalment of Apartheid

At the opening of the new session of the South African parliament something more was learned of the system of native representation which is to emerge, along the lines of apartheid, when Dr Verwoerd abolishes the present white representatives of the Union's nine million Africans. "Bantustan" is to come into existence—but it is to be carefully divided into five tribal areas, each of which is to have a secretary-general who is to have direct access to the Minister of Bantu Development, an arrangement that is said to be a far better way of getting Bantu wants and grievances known than by parliamentary questions from their present white MPs. As the secretary-generals are to be appointed by the Ministry this may be doubted ; but the argument evades two other points. The first is that it cuts the last line of contact between white and black at the political level —for the white MPs did tour their Bantu constituencies (if much to Dr Verwoerd's disgust). The second point is that while each of the five tribes will have a native official to keep them in touch with their own tribesmen working in the "white" areas, the detribalised Africans will have no representation at all. In the Nationalists' eyes they are, of course, unpersons ; for a cardinal object of apartheid is to get Africans back into their traditional tribal boundaries —mental if not territorial—and to prevent them becoming black proletarians without tribal loyalties.

Meanwhile, though it is stated that the native authorities are to be elected in these five Bantu areas, no dates are given. But something has been set up which can be talked of as a solution and, hollow as it is, it would be wrong to suppose that South Africans will not soon persuade themselves and tell the world that they have given their Bantu virtual self-government. They are already calmly comparing their system with the new constitution of Basutoland, where adult franchise is being introduced at once. Thus the division between theoretical apartheid and the grim reality of racialism goes on.

CAMEROONS

Vote for Secession?

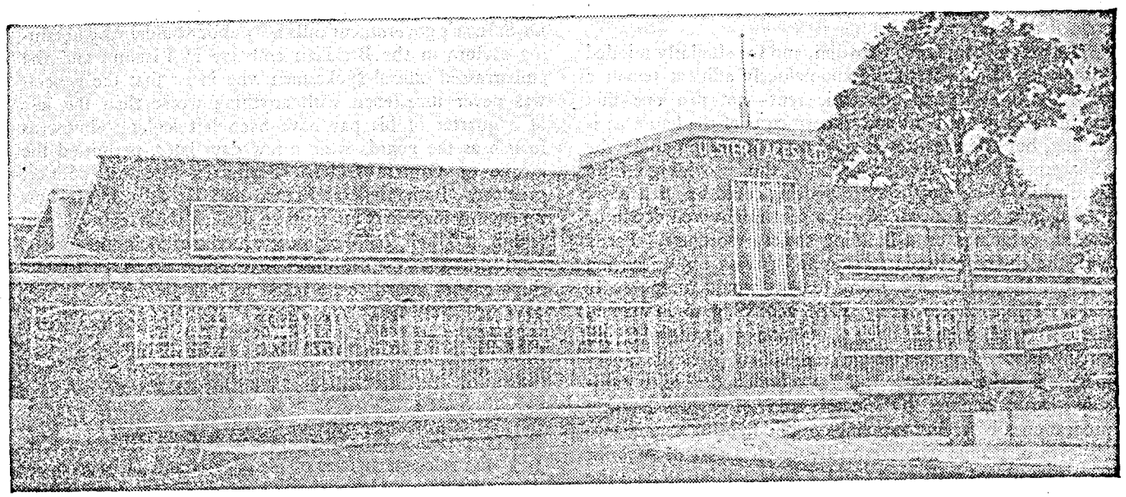
The election in the British trusteeship territory of the southern Cameroons has ended in a narrow but unexpected victory for the Kameroun National Democratic party led by Mr Foncha who has been asked to form a government. With 14 seats in the new legislature, he has a majority of two over the supporters of the outgoing premier, Dr Endeley, who had wanted the Cameroons to remain as part of the Nigerian federation when it becomes independent in October, 1960. Mr Foncha's party opposed the terms agreed for the Cameroons at the Nigerian constitutional conference last year, and it is assumed that he stands for joining the French Cameroons to the east. As a matter of prestige, but not of economics or even ethnology, the French Cameroonians desire to recreate the unity of the pre-1914 German colony ; possibly propaganda from the French Cameroons had some influence on the election.

But it is not certain that Mr Foncha has made up his mind. He does not know the terms on which the British Cameroons, with a population of 800,000, would be allowed to unite with the French, with 3,500,000. He favours a federal link, but Mr Ahidjo, the premier of the French Cameroons, wants a French-type unitary state. Nigeria has always heavily subsidised the British Cameroons, but it is not certain if the French territory could do the same—or whether it is even viable ; and nobody knows if the French Cameroons will opt for full independence in 1960 or elect to remain in the Franco-African community. Dr Foncha has hedged in the past with the suggestion that the British Cameroons ought to be able to choose to remain under British trusteeship if it wants. Such a solution would find no support in Nigeria, or the United Nations, and little (despite the compliment) in Britain.

Obviously, there must now be a plebiscite to try to discover what the southern Cameroonians really want (the northern Cameroons certainly wants to remain part of northern Nigeria, as before). But what alternatives are to be put before voters—and when is it to be done ? Everything has to be fitted into the tight timetable of Nigerian independence ; yet Mr Foncha certainly wants to gain time. The issue is now being discussed in the meeting of the trusteeship council, and will come before the special session of the United Nations on February 20. But the report of the visiting UN mission, which reported this week, hardly suggests that the United Nations has any clear ideas. The Cameroons show again the complete artificiality of frontiers in Africa.

CROYDON'S COUNCIL HOUSES

Ins and Outs



The decision of the Croydon Borough Council to turn out all those council-house tenants whose family incomes (excluding children's earnings) exceed £20 a week is both courageous and dreadfully stupid. The Croydon

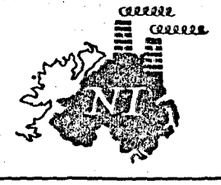
rent a NEW factory
FROM 9D PER SQUARE FOOT

get the benefit of 25% GRANTS towards CAPITAL OUTLAY



These are only two of the reasons why over 130 British and American firms have set up in Northern Ireland since 1945; and many have expanded beyond their original plans, some by two and three times.

Here are the main advantages . . .

* New, modern factories are under construction with all services laid on. Some are ready to walk into, Sizes range from 2,000 to 73,000 sq. ft., with space for at least 100% expansion.
* Alternatively, standard factories like the one in the picture can be built to order on a site of your own choosing. Rents for both these types of factories—from 9d. per sq. ft. for the first ten years.
* Financial assistance includes an automatic annual grant of twenty-five per cent toward the cost of new and second-hand equipment (limit £100,000 in any one year) plus twenty-five per cent of the cost of new buildings—limit £50,000 per annum.
* Alternatively for projects of special value to the Northern Ireland economy there is an extensive range of grants to which the above limits do not apply. Loans are also available.
* Special purpose factories may also be built for you. These can be of unlimited size and may be financed on attractively long repayment terms.
* Plenty of adaptable labour is available. Three-shift working is possible and labour turnover and absenteeism are low.
* Belfast is only 90 mins. by Viscount from London Airport. Air, sea and road freight services are speedy, efficient and economical.
* Scores of firms will tell you of the reputation of the Northern Ireland Ministry of Commerce for endless and constructive helpfulness with every problem, large and small, that may face a firm setting up in a new territory.

GO TO NORTHERN IRELAND—AND GROW

For full details of factories available now, and of the Factory Building Service as a whole, write to
DEPT E7, NORTHERN IRELAND DEVELOPMENT COUNCIL (CHAIRMAN, THE VISCOUNT CHANDOS),
13 Lower Regent Street, London, S.W.1 (*Tel.: WHitehall* 0651)

or, if you prefer, to: THE MINISTRY OF COMMERCE, BELFAST (*Tel.:* 28271).

councillors are right to regard it as an anomaly that well-to-do council tenants should everywhere be subsidised out of rates paid by less well-to-do occupants of private houses. Their new system is possibly an ethical improvement on the existing arbitrary division of "ins" and "outs," which makes the present privilege of council tenancy depend neither on present ability to pay nor on present need but on the past hazards of the waiting list. But the problem could be solved much more effectively by enlisting market forces as an ally, instead of by relying on council decree.

The proper course for Croydon, and for similarly minded authorities, is to charge the anomalously affluent tenant a perfectly hard-hearted economic rent—not just one that would cover the interest and upkeep costs of the house he is renting, but one that would yield a profit margin above the replacement cost of that house today, thus providing a fund from which more social service housing could be financed or total deficits be reduced. Such a rent might well equal, or exceed, outgoings on a building society mortgage. Faced with the choice between staying and paying up, or leaving and building or buying, many tenants would undoubtedly leave. But a choice freely made according to individual circumstances is one thing; eviction regardless of all circumstances but the single element of present family income is quite another. It is far more conducive to hardship; it runs counter to the whole spirit of postwar housing programmes by trying to reduce public housing estates into enclaves of people who are all living on a sort of superior form of national assistance; and it does nothing to help the council's finances.

Of course, the charging of differential rents involves a means test. But so does the present scheme. The Croydon councillors have demonstrated their courage. If they would now also demonstrate their intelligence they could give a valuable lead to every local authority concerned to achieve a little more justice between "ins" and "outs."

SPAIN AND PORTUGAL

Iberian Itch

FIRST reports of the Spanish monarchists' latest moves seem to have exaggerated their dramatic quality. Their meeting in Madrid last week under the banner of the Union Española did not amount to an open defiance of the ban on all political parties other than the Falange. The union's spokesmen now say that it is not a party, that it has no headquarters or offices, and that it is not antagonistic to General Franco's regime. Certainly its announced programme, so far as it goes, corresponds pretty closely to the general's own definition of the "Catholic, traditional and representative" monarchy to which, in his own good time, he proposes to bequeath Spain. And although the monarchist union is seeking to draw into its ranks as many different groups as it can, it has not attracted the social democratic or even the Christian democratic groups.

For the present, the government is evidently maintaining its tactics of cracking down hard on socialists and moderates—the victims of the round-up carried out two months ago—who want to see a speedy restoration of Spanish liberties, while using the velvet glove on restive dissidents among the ranks of the regime's own "establishment." The latest example of the gloved technique was the formal and farcical "trial" and immediate release of the former leading Falangist, Sr Dionisio Ridruejo, who had been charged with criticising General Franco and his government in a Cuban newspaper. Proceedings of this kind may be meant to show that the regime has become tolerant, an impression that the treatment of more serious critics belies; in fact they are apt to leave the impression that it is hesitant.

A similar impression of uncertainty and half-heartedness is left by some of the Portuguese government's recent actions. General Delgado, the opposition candidate in the 1958 presidential elections, has successfully created what Dr Salazar's government calls a "public scandal" by obtaining asylum in the Brazilian embassy in Lisbon; and the embarrassed official spokesmen who insist that the general was never threatened with anything worse than the loss of a quarter of his pay have been left looking almost as foolish as the guards who, a few days later, permitted the escape of Captain Galvao, Portugal's foremost political prisoner. Both General Franco and Dr Salazar are now up against ingenious attempts to weaken their regimes from within, and their fumbling merely increases their antagonists' confidence that the old order is breaking down. Dictatorships cannot afford to be made to look foolish.

MONACO

Coup de Grace

HIS patience exhausted, Prince Rainier III suspended the relevant articles of his charter and disbanded the elected bodies of Monaco on Thursday of last week. *Rien ne va plus.* Europe is not Latin America, where the tide has turned against absolute rulers. Whether he has been spurred to action by example across the frontier (his new French-appointed minister of state was General de Gaulle's minister of the interior) or simply wanted to reassert the hereditary rights of the Grimaldis, Prince Rainier has now ended a chapter in his struggle with the well-heeled Commons of Monaco.

In the last few years Monaco's elected National Council has tried to exercise some control over the activities, particularly financial, of the Prince and his advisers. Prince Rainier has now reminded the elected members that their rights were subject to his good will. It is not yet clear whether he, too, will attempt to bolster his hereditary position by a "massive" popular vote. One thing points in this direction. The Prince has announced his intention of giving women the vote. Court pundits have let it be understood that the Monegasques owe this prospective boon to Princess Grace—on top of all the other blessings: the glamour, the boom in the tourist trade and, most important of all, an heir, who assures their continued independence of France.

Prince Rainier could, if he chose, find a logical justification for his absolute power. Elsewhere in the western world, the growth of parliamentary government has been associated with the growth of taxation. The happy few who live in this charmed half of a square mile, where tax-collectors do not tread, should logically accept the deprivation of political rights as a corollary. But this does not seem to be the view of all Monegasques. They argue that their privilege is ensured by treaty; some even seem to feel that now that they have an heir apparent, the reigning prince is no longer indispensable. Still, it would be a little naive to expect a Cromwell or a Robespierre to arise in the shadow of the Monte Carlo casino.

LETTERS

Sending Books Abroad

SIR—I hope you will allow me to correct some errors of fact, as well as of implication, in your note on exports and propaganda last week.

Publishers have never asked for a general subsidy for book exports, nor have they failed to specify, very precisely, what help they think is needed. They recognise that, however much it may be in a nation's interest that the publications of its nationals should have the widest possible distribution overseas, the British Government cannot afford to subsidise book exports on anything like the same scale as the US government and the USSR already do. Nor do they believe it is necessary; for British books have at present two great initial advantages in their cheapness and in the predisposition of readers in many parts of the world to British modes of instruction and of entertainment. Publishers ask only for the reintroduction of the "British book export schemes" that were in operation at the end of the war; they would limit them to at most six or seven countries; and they have estimated the maximum amounts that would have to be accepted in blocked currency (whose disposal, though partly controlled by the government of the country in which it was held, would certainly not be confined, as you say, to propaganda purposes).

Furthermore, the suggestion that a subsidy is required to counter the Russian and Chinese production of cheap books has emphatically not come from publishers. This is, for the present a political and not a commercial problem.

Your claim that the arguments must be severely scrutinised would be accepted by all. What publishers have been working for, over the last five years and more, is only that the arguments should be heard, and fairly heard. The chances of a fair hearing are not increased by your suggestion that one of the parties to the dispute is in no sense disinterested and is making exaggerated and unpractical demands.—Yours faithfully,

R. W. DAVID

Export Research Committee of the Publishers' Association, W.C.1

Liberals

SIR—Hardened as Liberals have become to being hit below the belt by *The Economist*, I am still stung to protest against its statement that "In the heady days of Rochdale and Torrington, . . . Southend West was actually being marked down as a possible Liberal gain." By whom? Certainly I, the prospective Liberal candidate, indulged in no such pipe-dream; and the Southend West Liberals, who last Thursday so adequately demonstrated their tenacity and spirit, are far too sensible to have thought that they could overset an 18,000 Conservative majority in the time available—though in the event they reduced it by 10,000.—Yours faithfully,

HEATHER HARVEY

London, S.W.7

Shaw's Alphabet

SIR—The opening sentence in your article "Masked Words" in your issue of January 24th reads: "Bernard Shaw believed, just before he died, that life could be made easier by adding a dozen or so letters to the alphabet."

This is doubly wrong. In the first place, it was no last-minute whim of an aged man but the most dearly cherished and considered judgment of a creative lifetime; and in the second he wanted, and left his money for, a British alphabet of 40 new letters, not a dozen or so additional letters to the Roman alphabet.

I published an advertisement in the programme of *My Fair Lady* to explain to at any rate some of the public what Shaw had in mind. Part of it read:

> "In his Will he provided for the design of a British alphabet *additional to our Roman alphabet*—an alphabet of 40 letters at least, in which one visible letter, and only one, was to represent one audible letter. He objected to SH, wanting one new letter in lieu of the combination of two quite irrelevant old letters. He objected also to H h (which are two very different versions of but a single letter), insisting on only one form for any letter. Indeed, he wanted to get right away from the 26 Roman letters to a newly-to-be-designed set of 40 British letters.
>
> "In Shaw's view, WOZ for WAS is, and always will be, an "obscenity." Therefore the new alphabet, if it were to be acceptable, must have brand new forms for W, for O, and for Z—in which case the new word form for WAS would become a form both so new and so economical that everyone might see without prejudice the advantage of the new form. . . .
>
> "'Androcles and the Lion' in this most interesting format will be published probably late in 1959: please keep a space in your bookshelf for it, and above all, do not allow any adverse predisposition, with which you may have started, to becloud your judgment of a great Irishman, or of his last Will and Testament, which generously and ingeniously sought to achieve for the language he so greatly loved the dearly cherished hopes of an exceptional man."

—Yours faithfully, I. J. PITMAN

House of Commons

Painters in Hospitals

SIR—Since the hospital membership of my organisation exceeds that of any other two unions combined, I feel justified in commenting on your note last week. Contrary to your inference, there is not and never has been ". . . a tide-mark along the walls of many hospitals representing the limit beyond which the unskilled Mrs Mops are not allowed to clean. . . ."

The agreement to which you refer was reached by the ancillary staffs council in 1952, after a number of circulars calling for economies in the hospital service resulted in many hospital management committees postponing necessary painting in their hospitals and, instead, having the paintwork cleaned. This sort of operation has nothing in common with ". . . the methods which Mrs Mop is accustomed to use in her own home. . . ." A typical case is a hospital painted some fourteen years ago and not cleaned for the past seven years, where the corridor walls, some fifteen feet high, are being cleaned by men on ladders and scaffolding with abrasives. Surely even the most ardent opponent of restrictive practices would not consider this normal employment for a middle-aged hospital cleaner.

It would be unfortunate in the extreme if sensational and inaccurate references were allowed to cause trouble in a field where the unions have made every effort to ensure the smooth running of the hospitals and where there just aren't any restrictive practices.—Yours faithfully,

RICHARD W. MARSH,
Health Service Officer

National Union of Public Employees, S.E.3

The City's Business

SIR—A business note in your issue of January 31st dealing with the convertibility debate reads in part:

> His [Mr Gaitskell's] report of an estimate that the "total amount" of exchange business likely to be gained by London bankers "does not exceed about £125,000 a year" is mystifying: Mr Gaitskell may be thinking of profit rather than turnover, but even then this figure seems much too low.

Mr Gaitskell is probably basing his statement on a misreading of an article in *The Observer* of January 4th wherein it is estimated that the additional business in sterling likely to accrue to London after the closing down of the transferable account markets abroad should not exceed £1,000,000,000; that the average rate earned by foreign exchange dealers is one-eighth per mil, and that consequently the maximum additional profit for London would therefore not exceed £125,000 per annum.

There are some 134 separate first-class banking institutions conducting foreign exchange operations in the City of London, so that this estimate would mean an average daily gain per dealing organisation of about £3, a figure which caused some eyebrow-raising in the City. Assuming, however, that it is true, what is it that Mr Gaitskell wants? More profits for the wicked City of London? If not, then his message to the world is that the London market offers its facilities in converting foreign currencies at threepence per £100, which must be extremely reassuring for every trader and a great incentive to the very expansion which Mr Gaitskell so ardently desires. But does not this make a point for, and not against, the Government's policy?—Yours faithfully,

H. W. AUBURN

London, N.W.3

BOOKS

Business in Economists' Eyes

The Structure of British Industry

Edited by Duncan Burn.

Published for the National Institute of Economic and Social Research by the *Cambridge University Press*. Volume I (covering agriculture, building, road and rail transport, coal, oil, chemicals, steel, building materials, machine tools), 403 pages, 45s. Volume II (covering motors, aircraft, shipbuilding, electronics, cotton and rayon, woollen and worsted, man-made fibres, pottery, pharmaceuticals, and cutlery), 499 pages. 50s.

WHEN this survey was originally planned it was intended that all the chapters should be contributed by professional economists who were already experts on the industries in question. This soon proved impossible —partly because there were not enough economists who knew enough about any particular industry. Some of the 19 industries discussed in this symposium, therefore, had to be studied afresh and in more detail by economists who had some acquaintance with them. This has delayed publication, but has also enabled a good deal of fresh fact to be quarried out and assembled. It increases the value of the symposium, which is a patchwork of existing expertise and new applied economic research. Several of the authors whose acquaintance with particular industries is comparatively recent have produced or are producing longer books upon them; but this work will remain a unique summary of up-to-date economic opinion about a selection of Britain's more important and interesting industries.

The difficulty that confronted the editor must equally nonpluss any reviewer. It would be a brave man who pretended to universal and equal competence in assessing all of these studies —and one is uneasily conscious that some of those that seem most impressive are about the industries with which one is least familiar—such as, in this reviewer's case, Mr Raeburn's account of British agriculture. The studies are inevitably uneven in approach as well as in the quality of their reasoning and writing; and the advantage is not always upon the side of the established expertise. Professor Reddaway's fresh approach to the chemical industry, for example, has produced possibly the most interesting section of the first volume. One senses some frustrations behind his deliberate limitation of any detailed examination to sulphuric acid, alkali, dyestuffs, and plastics materials. But his discussion first of how far this can be called an industry at all and secondly (perhaps conversely) why it often pays one firm or group to engage in so wide a variety of its activities, whets one's appetite for a fuller and deeper treatment using the same approach. On the other hand Professor Walker on road and rail transport and Professor Beacham on coal, for example, are experts producing workmanlike accounts of industries, plus distillations of their known views upon them.

The point is oddly illustrated by Dr Burn's own studies of steel, upon which he can count himself an expert, and of oil, upon which he probably would not. One turns with interest to the chapter on steel to find out how Dr Burn's strongly held opinions on some controversial issues have stood the test of time, and finds some of the expected *obiter dicta* still very strongly expressed, though not to the complete exclusion of other views; but these stud an only adequate summary of the present nature and condition of the industry. For anyone wanting an outline of an industry simply within the compass of this book, however, his more modest and less controversial summary of the oil industry possibly does the job better.

Among those contributors who take the opportunity of suggesting changes in "problem industries" one might single out the study of the machine tool industry by Messrs Beesley and Troup, which happens to be the first study of this baffling business ever published by independent economists. One may or may not put as much emphasis as they do on the significance of the exclusive distributing agency as a factor in the weaknesses of this industry, but their argument is a useful starting-point for the informed discussion it so sorely needs. Professor Devons, again, describing the aircraft industry, goes closely into the vexed question of how government pricing, development contracts, and support for research influence the successful development and timely production of militarily and commercially competitive aircraft. Mr Wilson, discussing the electronics industry, takes issue at some points with the findings of the Monopolies Commission regarding valves: he, like Dr Hague in discussing man-made fibres, finds that a good deal more effective competition exists than the structure of the industry may suggest to the outside observer.

The contributors to this symposium concentrate on the structure of the individual industries they are considering rather than on their part in Britain's general industrial structure. The coverage was, moreover, never intended to be complete—almost inevitably, for example, it did not prove possible to include any effective analysis of that heterogenous huddle of activities that goes on under the label of "general engineering." Even so, to crown a series of studies of this quality, some general discussion of the pattern of British industry, of how it is changing, and of how the industries discussed here fit into it, might have been useful. Dr Burn's "Retrospect," the final chapter in the volume, does not attempt to do this: it is a discursive discussion of some of the general factors brought up in the individual studies, such as measures of relative efficiency, restrictive practices, technical progressiveness, and relations with the Government. It displays that characteristic, uncompromising refusal to accept easy or convenient explanations, that rather gnarled writing, and that occasional arrogance ("There is a school of thought, or more precisely of opinion," for which read, "somebody disagrees with me") which readers of his more periodical jottings upon British industry have learned, over the years, to expect and to savour.

More Religion?

Religious Behaviour

By Michael Argyle.

Routledge and Kegan Paul. 196 pages. 25s.

AN age of mass cultures, scientific innovation, rapidly rising living standards and international tension is bound to be a testing-time for voluntary organisations, not least the religious institutions. Indeed, it is often assumed that religion is on the decline, if not on the way out. One of the merits of Mr Argyle's study is that he examines this assertion through a dispassionate factual microscope and shows how, certainly in Anglo-Saxon society, the long-term slump in religious activity has been halted, even reversed.

The author has drawn on a widely varied range of empirical studies bearing on religious activity, mainly since the turn of the century, and has, thanks to the catholicity of their scope and the ingenuity of his own analyses, produced a most comprehensive picture. Although the fruits of this method may be richer than those of a current field study, there is nevertheless a risk, especially in view of the abstract nature of the subject, in "fusing" so many disparate investigations in time and place. Thus it is always possible that certain differences noted by the author in the association between religious activity and education in Britain, as compared with the United States, may be the result of methodological differences in the surveys concerned. Mr Argyle's analysis, particularly the application of statistical and psychological theory to the basic data, is technically excellent; but the subject is inherently subtle, and the author has to steer between the Scylla of excessive simplification and the Charybdis, less successfully avoided, of over-emphasising the obvious: for example, "the logarithm of the rate of church attendance was linearly related to favourability of attitude to the church."

Although the subject matter will be easier for specialists than for laymen, there is plenty here for the general reader. Here is an interesting assortment of facts: the lack of much positive association between religion and economic depression (if anything, there is more religious activity during times of prosperity); the particularly high proportion of American combat troops reporting an increase in faith; the greater marital happiness among religious people. There is room for further investigations, both intensive and extensive, into the subject which Mr Argyle has so admirably outlined.

Heretic with a Difference

Can Inflation be Controlled?

By Harold G. Moulton.

Anderson Kramer Associates. 296 pages. $4.95.

TO call Dr Moulton, President Emeritus of the Brookings Institution, a monetary heretic, is to risk misinterpretation; monetary heretics generally believe that money is all-important. To call him a monetary reactionary, an anti-Keynesian, is no better; anti-Keynesians generally hanker for the discipline of gold, but otherwise share the heretics' conviction. Dr Moulton's heresy and anti-Keynesianism are of a very different kind; they consist in a belief that money, or at all events monetary policy as wielded by central banks and governments, hardly matters at all. Prices change in response to changes within the productive system. They rise when, and only when, higher remuneration is paid for the same services—a matter outside the control of any monetary or credit authority—and fall in converse circumstances. Interest rates are as insignificant, in influencing the wages-output relation, as the quantity of money; interest is a negligible element in business costs. Money and credit, in fact, are passive; they react, and must react, to the underlying wage-and-output relationship, and it is on stability in this relationship that any hope of stable prices must rest. Price and wage control being impracticable in peacetime, stability can be ensured only by the self-restraint of organised labour and the willingness of business to lower prices to the consumer as productivity improves.

This argument is, in substance, recognisably an extreme version of the "needs of trade" theory of banking policy. In method, it represents a possibly useful shift of emphasis from the "What" of the quantity-theory or Keynesian equations—given such-and-such numerical values, such-and-such other values follow automatically—to the "How" of real-life events and sequences. But it really will not do. It will not do, as a matter of observable human behaviour, to maintain that increments of money income have no effect on the recipients' valuation of liquid assets versus consumption—a proposition necessary to Dr Moulton's denial of the possibility of "suppressed" inflation. It will not do to assert—on the strength of the fact that auctions are not a representative form of retail transaction—that there is no such thing as "too much money chasing too few goods," that prices are set, in fact, regardless of the recorded or prospective buoyancy or slackness of the market. But this is a proposition necessary to the denial of "demand-pull" inflation. The parallel denial that competition between employers plays any part in setting wages—backed by the offhand assertion that labour is immobile except under duress—really defies comment; but it is necessary to the further denial that extra funds in the hands of entrepreneurs will initiate a general rise in earnings, which in turn is essential to the argument that monetary authorities cannot influence earnings through the supply of such funds. It will not do to equate "interest" as a very small accountant's item in corporation costs, with "interest" as the price of the use of capital; but this feat is necessary to the argument that changes in credit policy make no difference to business activity. One could continue the list for a long time; and it would take longer to itemise Dr Moulton's confusions between necessary and sufficient causes and between causal and temporal sequences.

It is salutary to be made to re-examine basic propositions and to pay more attention to the leads and lags, the sometimes tortuous and obstructed channels of causality, which are among the practical data of monetary policy. Dr Moulton's book—the first venture of a new publishing enterprise—was worth publication But he does not come within even remotely measurable distance of overthrowing the orthodoxies.

Since Hiroshima

Japan's Economic Recovery

By G. C. Allen.

Oxford University Press for Royal Institute of International Affairs. 215 pages. 25s.

THE economy of West Germany today is something very different from the "pastoralism" of the Morgenthau Plan, and the current economic condition of Japan likewise differs widely from the intentions of the victorious Allies in 1945. Both in Germany and Japan the waning of the original spirit of revenge among the victors and the emergence of the cold war against communism as the central international issue had the effect of inducing the western occupying powers to promote economic revival instead of perpetuating economic ruin, and in both cases the revival has been on an impressive scale. The German example is well known; the Japanese has attracted less attention, and has been harder for western observers to follow because of the special features of Japanese economic life that lie outside western experience. The economic recovery of Japan has now, however, found a uniquely qualified interpreter; a professional economist who formerly taught in Japan and acquired an extensive first-hand knowledge of the Japanese prewar economy, Professor G. C. Allen has been highly successful in describing and explaining its postwar development, first under the directing hand of the Allied (in effect American) occupation, and since 1952 under sovereign Japanese governments acting with substantial American support.

Professor Allen points out that Japan was in a desperate condition at the end of the Pacific war. Not only had there been immense devastation by bombing —a quarter of the total housing accommodation of the country had been destroyed—but also large quantities of machinery from civilian industry had been scrapped to provide metal for munitions. All external assets had been lost and the mercantile marine virtually wiped out. For the first two years of the occupation SCAP was less concerned with restoring Japanese industry than with eliminating what was left of the nation's war potential and with introducing social and political reforms that in some cases had the effect of retarding economic recovery. But from 1948 onwards it became American policy to strengthen Japan economically and remove opportunities for communism to thrive there by exploiting national misery. The currency was stabilised and industries built up again. Then came the Korean war as an unmixed blessing for Japan, for the Japanese, without being themselves involved in the fighting, got the benefit of massive procurement expenditure.

Today Japan has in the author's words "once again emerged as the leading industrial country in Asia"; it

HMSO

Commonwealth and Sterling Area Trade 78th Statistical Abstract

The latest edition of a publication providing comprehensive statistics of the external trade of Commonwealth and Sterling Area countries up to the end of 1957. Summary tables show the trend of trade of these areas with other parts of the world, and of the main commodities exchanged and also cover related subjects such as production, consumption and prices.

from the Government Bookshops *or through any bookseller*

HMSO

has "increased manufacturing production to more than twice that of the middle 1930s and raised income a head well above the prewar level." The international trading position of Japan remains nevertheless precarious as it is a marginal supplier of many classes of goods and highly vulnerable to adverse changes in market conditions. Professor Allen does not ignore the points of weakness in the economy, but he concludes from his survey that "Japan owes her recent success to good management as well as to good luck."

The Steel Frame

The English Utilitarians in India

By Eric Stokes.
Oxford University Press. 350 pages. 45s.

THE Indian Empire, described by Macaulay as "the strangest of all political anomalies," was a testing ground for many nineteenth century British theories and movements. As Professor Stokes remarks in a brilliant introduction to his study of the Utilitarian impact on India and the Indian impact on Utilitarianism, "particularly in the earlier decades, India provided that element of scale and expansiveness to the new middle-class mind, so essential for the deployment of its political and moral ideas." The Utilitarians saw all Indian problems as opportunities, and framed an analysis of social change that centred on reform of land revenues, a strong administration, and systematic codes of law.

From the start, their programme diverged from that of less doctrinaire Liberals, and it proved possible on Indian soil to reconcile, for a time at least, traditional paternalism and theories of progress. During the late nineteenth century Utilitarian emphasis on power, justice and authority tinged new theories of "imperialism." The writings of Fitzjames Stephens, who abhorred "popular Liberalism" and defended the "belligerent civilisation" of the British in India, expressed one element in what by that time had become "an authentic Utilitarian tradition." The enduring influence of Utilitarianism on India was represented, indeed, in the administrative and judicial system, "the steel frame," which continued, as Professor Stokes notes, "to supply the daily framework of State action to the end of British rule and beyond. It was in the realm of authority and not liberty that the Utilitarian work was done."

Such themes are vast and fascinating, and this is an extremely interesting and searching book, which should be of interest to students of India and to historians of British political ideas. The best part of the book, however, is the beginning rather than the end. The introduction and the admirably lucid chapter on "the doctrine and its setting" explore competing and complementary theories—Evangelicalism as much as Utilitarianism—with insight and critical power. Fitzjames Stephens at the end of the book is taken rather too much at face value. For all his pooh-poohing of "sentimentalism," he admitted that he never heard "God Save the Queen" or saw the Union Jack flying in India without feeling the tears in his eyes. Not all his criticism of his opponents hit the target, and he was completely uncritical of himself. At this point in the story a fuller analysis is needed of other elements in late nineteenth century Liberalism and of emerging concepts of nationalism. More too, perhaps, should be said about the limitations of "political economy" as a guide either to economic or social progress in Victorian India. Steel frames are never enough and this, indeed, is one of the main lessons of this book

A New Dig in Dickens

Charles Dickens: *The World of His Novels*

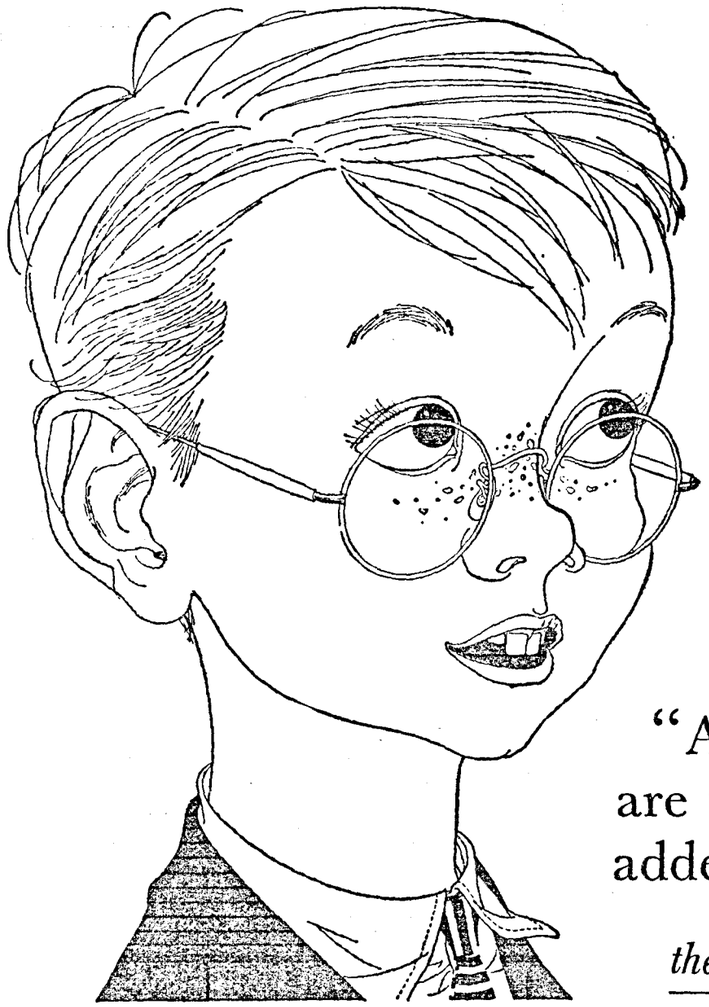
By J. Hillis Miller.
Harvard University Press. London: *Oxford University Press.* 362 pages. 30s.

THE dust-cover of this book tells us that the author "manages to transport us into the midst of Dickens' 'world' and to bring alive for us the whole strange and wonderful tribe that people his novels." No reader should be put off by the more than common absurdity of this. Mr Miller is not engaged in the superlatively otiose labour suggested; rather he is making an unusually philosophical and analytical examination of "Dickens' deepest apprehension of the world and of the human condition within it." That this is indeed philosophy without much cheerfulness breaking through—that one unfamiliar with Dickens could read the book from cover to cover without gathering that the novelist is often quite funny—by no means invalidates Mr Miller's work. Dickens is now acknowledged to be a serious novelist. Beneath all the laughter there is as sombre a questioning of life as is to be met with in Hardy or Conrad, and this makes a sufficient, indeed a formidable, subject for detached study.

"Pickwick Papers" dramatises in the adventures of its hero a definitive exit from innocence. And Pickwick sees no solution to the problem of living in the fallen world he has discovered; having the material means at his disposal, he simply retreats again to an artificial Eden of his own contriving. But how is a person who cannot withdraw going to avoid destruction by the evil forces of the world? Dickens propounds this problem at its stiffest in "Oliver Twist," begun while "Pickwick" was still appearing. How is someone who starts as an outcast going to discover anything that will be a support for his identity and the source of a coherent life? This, according to Mr Miller, is the grand question insistently presenting itself to Dickens throughout his career, so that he is in a sense—although Mr Miller does not use the expression—an obsessional novelist. And the attempts to answer the question are made at progressively greater depth. The characters are engaged in "a constant attempt to reach something transcendent, something more real than one's own consciousness or than the too solid everyday material world." Eventually they make the surprisingly modern discovery that "the transcendent spiritual power glimpsed at the margins or in the depths of the material world is not really a positive support for human values, even for good ones, but is the negation and reduction to nothing of all the human world indiscriminately."

As a consequence the mature Dickensian protagonist, rather than receiving selfhood as a gift from the outside and from the past, "imposes value on himself and on the world as he assumes his future, including his death, in a dynamic process of living." Some will find this a strange region of discourse to encounter in relation to books which appeared wholly transparent to them in childhood. But to dig in Dickens is indubitably to find successive layers of meaning, and Mr Miller's particular excavation is new, arresting and largely persuasive.

Disorder and Genius



The Life and Times of Frédérick Lemaitre

By Robert Baldick.
Hamish Hamilton. 283 pages. 25s.

THIS is a model biography of an actor. Frédérick Lemaitre was by common consent the finest actor of his day, and was as important to the Romantic movement in France as Hugo himself. He drank, had mistresses and died in poverty; but Dr Baldick has refrained from writing a *vie romancée* and has given only so much of his private life as is needed to illuminate his development as an actor; this he has done with rare clarity.

Frédérick was an innovator. He broke through the conventions of his time and ranked as a naturalistic actor. He would not have seemed so to us, but he used the gestures and voice that conveyed truth to the audiences of his time, who revelled in Hugo and Dumas. Like most great actors, he could do everything that came his way: he was intensely moving in powerful drama, but he made his name as Robert Macaire, a comic and satirical figure representing the worst of the bourgeois monarchy, which would have been remembered as well as the drawings of his friend Daumier if its vigour had not necessarily died with him.

His misfortune was that he was tied to those particular times. The romantic theatre was a firework show, which soon expired; and the jealousy and bureaucracy of the official theatre always excluded him from the Comédie Française and the French classics. To the end, he was acknowledged as the finest actor of his country, but the playwrights who might have served him were writing no longer; and too often he acted in second rate plays designed as a crude vehicle for his talents, instead of himself bringing out the talent of good authors.

"Additives, Sir, are things that are added to things..."

the boy's a genius

It sounds simple enough. To add special qualities to a motor oil, you just... well... add things to it.

Simple? It was revolutionary! Shell X-100 Motor Oil was welcome news for every motorist. Here was a new *kind* of oil, doing things no oil could do before – and all because of remarkable chemical additives. Additives to fight acid corrosion, major cause of engine wear; additives to keep engines clean and free from clogging deposits; additives to enable oil to withstand the sterner demands of modern engines.

Even more remarkable, perhaps, is the latest development – additives which actually affect the way oil behaves in heat and cold. As every schoolboy knows, oil tends normally to thicken in cold and thin out as it gets hot. But with these additives, oil stays free-flowing even in freezing cold and toughly protective in boiling heat. It becomes "Multigrade" – several grades in one – just right at all engine temperatures. Thanks to Shell X-100 Multigrade, motorists start easily on winter mornings, warm up more quickly and use less petrol in their everyday driving.

Shell has played a leading part in introducing additive motor oils which have contributed to the long life and reliability of today's engines. Here is another example of Shell research at work developing the better products a changing world demands.

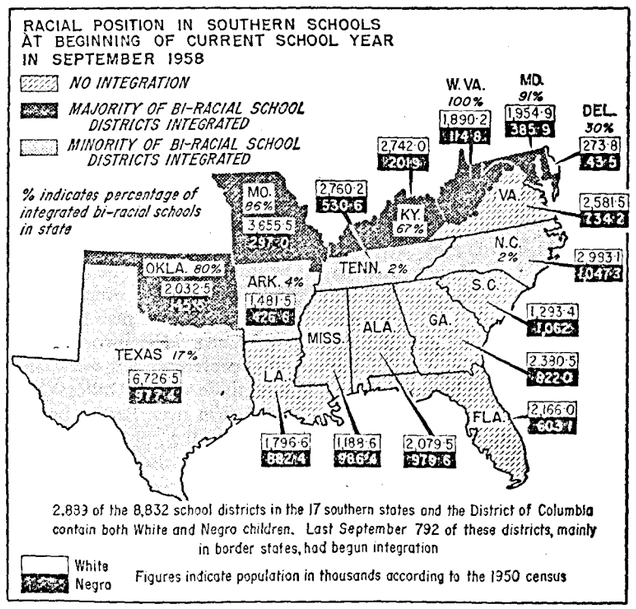
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Resistance Changes Course

WASHINGTON, DC



THE South has lost a battle, but it is not yet safe to prophesy that it has lost the war. In Virginia on Monday, in the frosty early morning sunshine, twenty-one Negro children were admitted peaceably to seven formerly all-white schools in Norfolk and Arlington. Two days earlier a special session of the Virginian Legislature, in which the wholly unyielding segregationists suddenly found themselves in a minority, had grumpily conceded that it was no longer able to prevent a certain amount of racial integration in the state's schools. Virginia has thus withdrawn from the group of seven states committed to a policy of total non-compliance with the Supreme Court's orders to abandon the colour bar in tax-supported schools.

Virginia's moral authority in the South is such that at least some of the other six are now likely to waver. But the twenty-one young Negroes who entered white schools on Monday mark only the tiniest of advances towards racial integration. There are 1.7 million coloured children in these seven states alone, and nearly half as many still attend unmixed schools in the other southern states where integration has been nibbling at the fringes. Even if the soberer leaders of the South are now abandoning the melodramatics of "massive resistance," there is still room for them to fight a delaying action so lengthy and so damaging to national unity that the reformers may settle for something less than total compliance.

For a number of reasons, it was easier for Virginia to be flexible than it is likely to be for some of its sister states farther South. It is known that Governor Almond, a former Attorney General of the state, had privately admitted for some time that the "massive resistance" laws, which Virginia adopted on the insistence of Senator Byrd were unworkable. Since the State Supreme Court confirmed his pessimism by invalidating these laws last month, he has successfully controlled the wrath of the die-hard segregationists of southern Virginia. The legislation which the General Assembly passed last weekend does no more than make school attendance voluntary and provide tuition grants for pupils who want to opt out of racially integrated schools; Mr Almond threatened to veto anything more radical. Other Governors may be less prudent. The case of Judge Wallace of Alabama, who deliberately—though unsuccessfully—courted a prison sentence last month by refusing to hand over records of voting registration directly to the Civil Rights Commission, suggests that some southern politicians are hungry for martyrdom.

Moreover, Virginia was able to sweeten the pill by swallowing it on the prescription of its own courts. The State Supreme Court, in setting aside Senator Byrd's handiwork, invoked the clause in Virginia's constitution which requires it to maintain a state-wide system of free schools; this makes it unconstitutional for the Governor to shut individual schools when federal courts order them to accept Negro pupils. But South Carolina, for instance, has already repealed a similar item in its own constitution, and others are likely to follow suit. They will thus strip themselves of the comforting pretence, to which they may one day want to resort, that they are yielding to the inevitable at the behest of their own rules rather than those of the abominated Supreme Court of the United States.

It is not only the state constitutions which pose the choice of either giving way when the courts insist on integration or else abandoning the entire system of state-supported schools. The ruling of the federal court in Norfolk last month, which was overshadowed by the decision of the Virginia Supreme Court on the same day, declared that the closing of a few schools to avoid integration, while the rest stay open, violates the guarantee of "equal protection of the laws" provided by the Fourteenth Amendment of the Federal Constitution. This ruling has not yet been upheld by the US Supreme Court. If it is, it will mean that the last device for nullifying integration orders, short of cutting the throat of public education, has been taken out of the segrega-

The figures given above for the Negro populations of South Carolina and Georgia were transposed in error.

tionists' hands. But there are still various ways in which they can seek to slow down the issuing of orders and to soften their impact.

For instance, the Supreme Court in Washington has found that the pupil placement laws of Alabama and North Carolina are, on their faces, perfectly proper because they do not mention the factor of race. It may often be a very moot point whether or not a pupil has been assigned to a given school on racial grounds; and some courts may be tempted, as the country grows weary over the long conflict, to accept a little integration instead of insisting on a lot. Again, although the Supreme Court said last year that the threat of violence could not be allowed as a reason for delaying integration, it will be difficult for lower courts completely to ignore the local background—or what they are told is the local background—in deciding whether compliance is proceeding with "all deliberate speed" as the Supreme Court said it should. In the last resort a few extremist Governors may use the threat of closing the entire system of public education as a kind of massive deterrent against early court action. Meanwhile, the availability of tuition fees will encourage a drift away from the tax-supported schools; and the segregationists will cling to their not entirely unfounded hope that in time all things may change, including the reformers' resolve and the membership of the Supreme Court.

A good many liberals are willing to give the region as long as fifteen or twenty years to accept total racial equality. Whether the segregationists merely extend their period of grace, or succeed in permanently diluting the Supreme Court's medicine, will depend partly on the legislation on Negro rights adopted by the present Congress. The liberals have little hope that they will be able to pass the measure proposed by Senator Douglas last week. This would give the federal authorities the power—omitted from the Civil Rights Act of 1957—to set the legal process rolling in desegregation cases instead of leaving it to private plaintiffs to start it. It would also authorise the Administration, if all else fails, to draw up its own integration plans for the South. Now that Senator Johnson, the Democratic leader, has thrown his enormous authority behind a rival Bill, it is doubtful whether Mr Douglas can rally as much as a third of the Senate behind his proposals. A great deal thus depends on the effectiveness of Senator Johnson's plan for a federal conciliation service to mediate in racial disputes.

It is not entirely fair to complain, as some of Mr Johnson's critics have, that there can be no mediation between what is lawful and what is not. The supporters of his Bill insist that their plan simply does not apply where the law is clear-cut, as in the case of the Negro's right to vote. Where they expect it to operate is in the legal no-man's-land which lies around the definition of what constitutes "integration." It is possible that the conciliators could help to smooth the process of negotiation which goes on before a federal court issues its order. They might, for instance, help Negro parents and the local school board to agree whether integration should begin in the first forms or the older classes, and how long the process should take.

A fairer criticism is that the whole concept of mediation implies the existence, to mediate between, of two groups of roughly equal strength—like the trade unions and industry. In cities like Atlanta, where the Negro community is strong and organised, this may be valid. In the rural counties of the South, where the Negro is weak and often terrorised, it is harder to see the "conciliators" striking a fair bargain. The danger is that in some areas mediation will result in putting the stamp of federal approval on an arrangement which gives the Negroes no more than an irreducible minimum of their rights.

The segregationist South can no longer hope to win the war, in the sense of preventing the entry of any Negroes into its white schools. But it is still possible for it to achieve a stalemate by admitting a few thousand coloured children with such reluctant and sluggish hostility that faint hearts in the rest of the country will seize upon this token compliance as a reasonable compromise. Conceivably, Governor Almond's new-found moderation, by leading the retreat from a patently untenable legal position, may ultimately help the South to cling to most of what it holds.

Fulbright's Foreign Relations

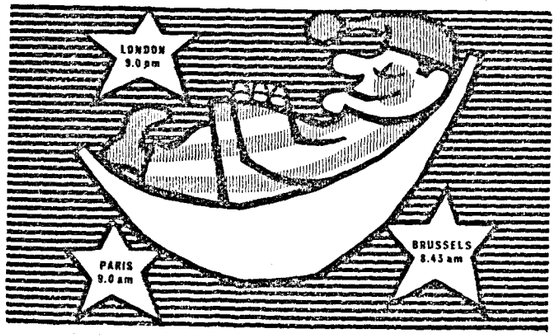
Before Mr Dulles left Washington on Tuesday to concert the western response to Mr Khrushchev's proposals on Berlin and Germany, he had a long meeting with Senator Fulbright, the new chairman of the Senate Foreign Relations Committee. This important post long held by Democrats whose ability and interest in foreign affairs were far inferior to those of the Secretary of State has now fallen to the intellectual Mr Fulbright, the most articulate critic of Mr Dulles's alleged refusal to explore new ways of reaching agreements with the Russians. Senator Green, who at 91 is the oldest man ever to serve in Congress, displayed his characteristic good sense by recognising that he was no longer equal to the demands of the chairmanship, although he will remain a member of the committee.

Both Mr Dulles and Mr Fulbright know that, whatever their personal feelings, they must co-operate or face two years of frustration which would damage things they both believe in; the Secretary of State, who wants to remain in office until President Eisenhower retires, must feel this with particular keenness. In many ways, the confrontation is a healthy development. Mr Dulles, who has a reputation for flexibility where Congress is concerned, will be brought into closer and more continuous contact with new thinking in the field of foreign policy, not only with the views of the able and powerful Democrats in the majority on the Foreign Relations Committee, but also with ideas being discussed by intellectuals at the universities and elsewhere. Senator Fulbright is a former president of the University of Arkansas and the man for whom the Fulbright scholarships are named. His own positions, which he discussed at a press conference last week, are by no means all at variance with those of Mr Dulles: he believes that the West must stand firm over Berlin, but be ready to discuss with the Russians the possibility of disengagement in Central Europe; he also favours exploring a settlement in Asia, but concedes that recognition of Communist China is unlikely at present.

Although the Foreign Relations Committee can make life hard for a Secretary of State, it can seldom force him to change his policy, particularly when it cannot withhold his appropriations; in this Congress the purse-strings are held by Senator Johnson, the Democratic leader, who is far less

Common sense

In every big building or civil engineering project there are three main parties: the owner, his consultants, and the contractors. Traditionally, the contractors come into the picture only after design and specification have been settled. But with the size and complexity of modern construction, much can be gained if collaboration starts earlier. The contractor, who is to carry out the scheme, is familiar with the latest construction techniques and materials. He knows, from practical experience the possibilities (and limitations) of mechanical plant and equipment.



is good sense

John Laing and Son Limited maintain an active Development and Planning Division for solving today's problems while probing for the methods and materials of tomorrow. Surely commonsense requires that such facilities should be available *at the design stage* of a project, when construction problems can be solved most cheaply. What commonsense suggests, experience has in fact confirmed. Leading architects and consultants responsible for major construction projects throughout the world have collaborated thus with John Laing and Son Limited without losing the safeguards of competitive tendering. We are at the service of all concerned with the planning of new works and their completion on time.

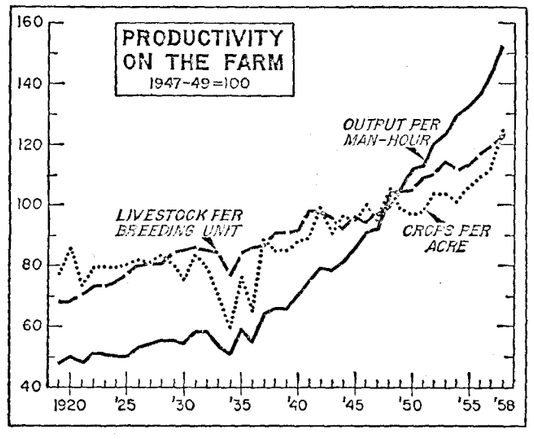
willing to crack this whip at Mr Dulles than are the more liberal Democrats who surround Mr Fulbright. Senator Fulbright's real opportunity is his chance to educate the country on the issues and choices in foreign affairs. In the past he has made some remarkable speeches, but he has not been noted for his staying power or toughness. He was an outspoken critic of Senator McCarthy but, perhaps understandably, he crumbled where racial segregation—and his prospects of re-election in Arkansas—were concerned.

Space Overshadowed

THE grand inquest with which the Democrats have opened their attack on the President's Budget was billed in advance as an effort to discover whether, to save money, the United States is being exposed to unnecessary military risks and accepting a back seat in space. For this reason the Senate Space Committee joined in the hearings of the Preparedness Subcommittee. But what captured the headlines for Senator Johnson and Senator Symington was the "missile gap." This is the likelihood, which the Administration concedes, that in the early nineteen-sixties, before the second generation of missiles, the Polaris and Minuteman, are available, the United States may well have fewer intercontinental missiles than the Russians and will have to continue to rely too much on manned bombers. In all the publicity excited by the open hearings and the hush which attended the secret ones, the question of whether the Administration is doing enough to catch up with the Russians in space was pushed to one side.



Yet in December a select committee of the House expressed grave doubts, which the Lunik seemed to bear out, over whether the present programme was bold enough, and its military, though not its civilian administrators complain that they need more money than the $700 million allotted to space projects in the coming financial year. Dr Glennan, the head of the civilian National Aeronautics and Space Administration, says that America must roll up its sleeves—and keep them rolled up—if it wants to eliminate the Russian lead of one or two years, but that progress must be scientific and orderly. More money for ill-considered crash programmes, he argues, is no substitute for sustained effort over many years. Unfortunately nothing in the President's statutory report on "Year One of the Space Age" seems likely to persuade the critics that this prudent attitude is allied with a sufficient sense of urgency. The report expresses a bland confidence that the successes and failures of the past year provide a firm foundation for future projects.

To remedy the chief cause of these failures, contracts have been let for two rocket engines of 1,500,000 pounds thrust, a single chamber one and a "clustered booster"; lack of adequate propulsion is the outstanding weakness of the American space programme and it will not draw level with the Russian efforts, in this respect, for three years or so. Another project, Mercury, is to launch a man into orbit in about two years, though probably not until the Russians have done so; 112 candidates with the suitable qualifications have already been sorted out electronically. What many critics allege, however, and what Congress may well ask, is whether the proliferation of agencies and bureaucrats in the last year is not multiplying rather than reducing the obstacles to the exploration of space.

Horn of Overplenty

PRESIDENT EISENHOWER'S latest farm message is a dramatically factual presentation of how the American taxpayer is still being swamped by the flood of agricultural plenty. But the remedies he proposes amount to no more than an increase in the number and strength of the ones which have so far proved ineffective. This is partly because his Secretary of Agriculture, the determined Mr Benson, genuinely believes that with perseverance this gradual lowering of price supports can eventually stop the surpluses from accumulating. But the President also wants to put the responsibility for rescue operations directly on Congress and, rather unexpectedly, the Democratic leaders in the Senate are apparently prepared to accept this responsibility —although their acceptance is taking a form very different from that which Mr Eisenhower wants.

Certainly Congress has never given Mr Benson a fair chance to show whether his schemes for modernising the price support system are the answer to the technological

progress which is the reason for today's agricultural abundance. If it had, the government might not now be expecting to spend well over $5 billion, the equivalent of about 40 per cent of farm income, on supporting agricultural prices next year. The Bill now being drawn up in the Senate in reply to the President's challenge is basically a revival of the Truman Administration's ten-year-old Brannan plan, under which farmers would sell their output at market prices and receive payments from the government, when necessary, to bring their incomes up to a "fair" amount. An attempt to repair the splits which Mr Benson has encouraged in the old farm block, the Bill is the result of an unprecedented coalition between the liberal Senator Humphrey from wheat-producing Minnesota and the reactionary Senator Talmadge from cotton-growing Georgia. But this Brannan plan has never been very popular even with Democrats; moreover, if the new version does go through, it will probably be vetoed. On the other hand Congress is not likely, as far as can be judged at present, to do much about the legislation which the President wants. It looks therefore as if the Democrats may have the double political satisfaction of offering a fresh approach to the farm problem and of leaving the President in an "intolerable" position.

Book Business

FROM A SPECIAL CORRESPONDENT

ST MARTIN'S PRESS, the happy publisher of "Anatomy of Murder," a recent best-selling novel, reported an increase of 147 per cent in its net income for its last fiscal year. St Martin's is a small house and the novel was unusually successful, but the figure illustrates the extraordinary dependence of the book-publishing industry on the occasional success. *Publisher's Weekly*, the principal medium through which the publishers approach the retail book sellers, is thick with promises of "big" books to be backed by national advertising campaigns. True, these campaigns are minute in comparison with those of the cigarette and toothpaste makers, but publishers commit themselves to spend what are, for them, very sizeable sums before they see the reviews of their books, and sometimes even before the books are finished, in the usually vain hope that they can thus whistle up a best-seller.

These feverish efforts are not inspired primarily by an expectation that economies can be made by large-scale production. Demand can seldom be predicted in advance, and profits from best-sellers have often been dissipated by miscalculations in the number of copies printed. The explanation is rather that the average book simply does not pay its own way. The publisher who sells three to four thousand copies of a book to the retail trade is fortunate if he recovers his out-of-pocket costs, even on a relatively expensive book. Book prices in the United States are almost double those in Britain, running to $4 or $4.50 for a 300-page novel and up to $5 for a non-fictional work of equal length. And the chart of a publisher's sales is likely to show a plateau at or below the 4,000-copy mark, with a few hillocks and an occasional lonely peak, but also with a sprinkling of valleys.

Even before television Americans had not acquired the habit of reading books. It has been estimated that since 1946 spending on books and maps has declined from 15 to only 10 per cent of total personal outlays on recreation. Mounting costs and lagging prices also carry part of the blame for the publishers' difficulties. While costs of production increased by 100 per cent between 1940 and 1957, the prices of books have gone up by only between 60 and 70 per cent. Only three publishing houses are large enough to attack costs directly by operating their own printing plants and their ability to do this is dependent on their substantial outside printing business. Moreover, there is little prospect of reducing overhead charges by other means.

By far the greatest share of the blame, however, falls on the thoroughly inadequate system of retail distribution. Depending on the generosity of the tabulator, there are in the United States only between 1,200 and 1,500 really well stocked book shops and book departments in large stores. The latter are among the least efficient and the least profitable of department store operations and are often tucked away in an inaccessible corner of the building, while the book shops do no more than provide a meagre livelihood for book-lovers who have a minimum of commercial instinct. There are two substantial chains of book-shops, Brentano's Incorporated and Doubleday Book Shops, which have introduced some modern marketing techniques, but between them they are responsible for only three to four per cent of sales and they are concentrated in the north-eastern part of the United States. In fact there are many parts of the country, particularly in the south and west, where it is impossible to find an adequate bookshop and where, if the potential buyer cannot pick out a paperback edition of the book he wants from a rack in a drugstore or on a newsstand, his desire must go unsatisfied.

The ubiquity of these racks has helped to maintain a precarious solvency for the publishers. Some 240 million paperbacks were sold in 1957, compared with 30 million hard-cover books. Few established publishers have moved into the paperback field, except for limited lines aimed chiefly at academic and intellectual readers. But, when a publisher makes a contract with an author, he buys not only the primary right to produce a trade edition, but also a number of so-called subsidiary rights, which frequently make the difference between profit and loss on the book. An author's agent may retain some of these rights and handle them separately on the author's behalf, but the publisher customarily takes a half-interest in the author's royalty on the paperback edition (if any).

The other principal sources of income from subsidiary rights are the hundred-odd book clubs, which distributed more books in 1957 than the combined retail sales of adult and juvenile hard-cover books. These clubs range from the sleek, prosperous Book-of-the-Month Club, and its even larger, although more plebeian, rivals, the Literary Guild, the Doubleday Dollar Book Club, and the Readers' Subscription (which has been offering "Lolita" to its sophisticated members). The Readers' Digest supplements its capsulised journalism with a Readers' Digest Book Club, with condensations of three or four full-length books in a single monthly volume. Usually the book club member may return unwanted selections (provided he retains a minimum number during the year) and periodically he receives a "book dividend" to reward him for his continued patronage. The clubs have suffered from the recent increase in postal rates, since they must send out between 50 and 100 circulars to secure one new subscription, but they are vulgarly prosperous in an industry where genteel poverty is the rule. The quality of their selections, however, sticks dismally close to the lowest common denominator.

IF a book is not sought after either by the paperback houses or by a book club, its publisher can usually predict for it an obscure life—and a short one. Unless a new title strikes fire almost immediately, it flickers out. Fiction in particular may last less than six months before booksellers exercise their almost unlimited privileges of returning unsold copies and the publisher turns his excess stock over to the remainder houses—or to the paper mill.

Because fame is almost as fleeting as oblivion, and even best-sellers are soon forgotten, every publisher cherishes his staples: his Bibles, his dictionaries, his cookery books, and those rare products of the human imagination that endure more than a season. Statistics indicate the importance of this backlist: between 12 and 13,000 new titles are brought out every year, but the annual catalogue of books in print has almost ten times as many listings. Many of these fail to return the ever-increasing cost of handling and storage but the backlist still accounts for half the annual business of the industry and it provides some publishers with as much as three-quarters of their business.

One possible solution to the publisher's problems is to

cultivate a particularly durable backlist. This requires the development of a superior staff, which is hard to come by in an industry that still treats editorial positions rather like lieutenancies in an eighteenth-century army. Another solution is to expand the force of salesmen and to use them to teach modern methods to the retail trade; so far there have been some fairly spectacular results from this approach. Finally, the happy experiences of the book clubs in using the postman as a salesman and delivery boy are being applied informally by the publishers themselves to single titles and groups of titles. Publishers now send out circulars to people on mailing lists, bought from a growing class of "list brokers" or specially tailored. These mailing lists are not cheap so they are used chiefly for high-priced gift books or those with particular mail-order appeal—books on psychic phenomena are an example of the type that seem to fall into this latter class. Even if these efforts do not have very spectacular results by comparison with other industries, in this most unbusinesslike of American businesses any improvement looks impressive because there is room for so much.

Nettles for the Governor

IN the two most important states in the Union, New York and California, new Governors, the first a Republican and the second a Democrat, have just unveiled record Budgets of over $2 billion—and the tax increases needed to pay for services to an expanding population. Each is asking for over a quarter of a million dollars, practically all of it to finance existing programmes. Each suffers from the fiscal irresponsibility of his predecessor (oddly, a Republican in California and a Democrat in New York) who raided the state's financial reserves rather than grasp the nettle of higher taxes. Mr Brown, the Californian Democrat, at least has one comfort; he can claim to be proving that "liberal leadership is responsible leadership" where money is concerned. He also has the advantage that California in the past has not taxed tobacco or alcohol; if Mr Brown can overcome the objections of his labour supporters, he has two rich sources of untapped revenue to exploit—something that all the hard-pressed states hunger for.

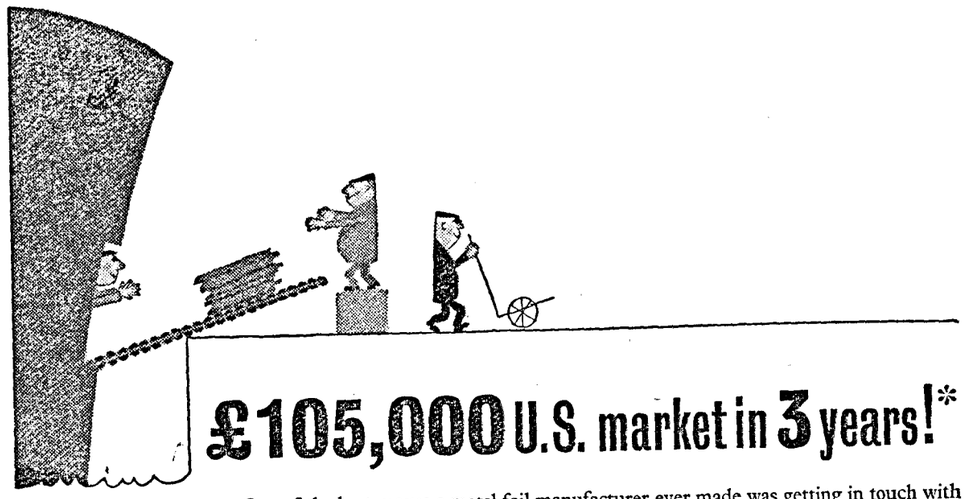
On the other hand, Mr Rockefeller, as a Republican millionaire, is presumed to be sound on money; what he has to prove, politically, is that a Republican is also responsive to human needs. But first he has to find the revenue to meet the state's existing obligations. On Monday he took the plunge, asking for an increase of $277 million in taxes, $150 million of this in increased levies on incomes, the rest in higher taxes on cigarettes, petrol, and estates. Exemptions are to be at a flat rate of $600 for each individual, making 400,000 more people liable to tax and ending the discrimination in favour of families; by instituting a "pay-as-you-earn" system, tax avoidance will be reduced and the state, which is to forgive the taxes due on 1958 income, will start in April to reap the richer harvest due on incomes earned in the recovery year of 1959. There are to be no new taxes on industry, which the Governor wants to attract to New York, but the top rate of income tax will be 10 per cent instead of 7 per cent.

The Democratic cry that this is a "soak-the-poor" Budget is particularly hurtful to a Republican who is a millionaire. Even some Republicans have qualms. But Mr Rockefeller has shown great energy and political resource in disarming criticism just as he has shown courage and energy in tackling the disagreeable task of putting the state on a sounder financial footing. The Republican majority in the Legislature will have to stand shoulder to shoulder to pass his Budget over Democratic opposition. But defections are not likely so early in the term of a new, popular and determined Governor.

Inflation in Committee

WHETHER or not inflation is as immediate a threat to the American economy as the President thinks—the expert evidence now being heard by Congress suggests that it is not—one aspect of Washington's life, its committee work, is certainly being inflated as part of the effort to counter the more general threat. The Cabinet Committee on Price Stability for Economic Growth is under the chairmanship of the Vice President, Mr Nixon, his first important executive responsibility. His desire to become more widely known and to keep in the public eye will be furthered by one of the committee's duties, which is to foster better understanding of the problem of inflation; this will probably be done through public hearings and television programmes. But Mr Nixon may find himself in trouble with both trade unions and businessmen as the result of the committee's other duty, to study factors affecting the stability of costs and prices. Here it is expected to concentrate not only on wage increases but also on other practices which push up costs—building codes and methods of distributing food.

To ensure that the government itself is not contributing to inflation by pushing up its own costs, the President has set up another committee, under Dr Saulnier, of his Council of Economic Advisers and composed of the chief economists from government operating agencies. It is to consider practices, in connection with procurement, stockpiling, subsidies, import quotas and so on, which may lead to higher prices. The third of the minor moves against inflation which the President announced in his Economic Report last month—the major move was his balanced Budget—was a request to Congress to amend the Employment Act of 1946 and to add "reasonable price stability" to the mandatory objectives of the government's economic policy. These are now three—the attainment of maximum employment, production and purchasing power. Many critics argue that the last of these implicitly includes price stability and that, even if the President's amendment is desirable, it is unnecessary.



On one thing at least the Democrats agree with the President: that inflation will be a big political issue in the next two years. For this reason there is great competition among members of Congress for a share in the publicity. Senator Kefauver has already pre-empted a large piece, with his series of hearings on price fixing, and the Senate Banking Committee will probably get another by conducting hearings on the amendment to the Employment Act. Its new chairman, to succeed Mr Fulbright, is Senator Robertson, a conservative Democrat who shares the President's distrust of heavy government spending. But the main act of the drama is likely to be the study of the basic causes of inflation today which Senator Johnson has promised but which will probably be produced by Senator Douglas, the liberal, independent economist who has just, once again, become chairman of Congress's Joint Economic Committee.

Over 3,000 miles between you and your most promising market could certainly offer plenty of scope for misunderstanding, frustration, and 'unavoidable' delays. That is what you might expect, unless you knew something of the way TCA services link Europe and Canada. Any day, any week, a relaxing over-night flight can place you in the heart of Business Canada. No need to lose any sleep over the competition. TCA has daily services to all Canada—so you can bring the personal touch to developing new territory in next to no time. Goods can get there quickly too, with daily TCA Air Freight to any part of Canada direct. So it's good-bye to distribution problems too.

FLY TCA—DE LUXE CLASS
Relax aboard a giant TCA Super G Constellation. Take it easy on fully reclining seats. Enjoy good food and drink and wonderful service. And it's more than possible that you'll meet some of Canada's many business men who always travel TCA.

£105,000 U.S. market in 3 years!*

One of the best moves a metal foil manufacturer ever made was getting in touch with his ECGD man. Four years ago his exports to the U.S.A.—his only market—were worth £1,000. To expand any further meant giving large-scale credit, a risk he couldn't take on his own. ECGD gave him secure backing in the form of credit vetting and insurance. Immediately exports shot up to £29,000. In the second year to £72,000. By last year he had an American market worth over £105,000. In the past year he's also built up a £13,000 European market, again under ECGD cover. All this has cost him as little as 6/6d. for every £100 insured. The same organisation that helped that exporter to expand can underwrite your drive for new business. Have a talk with your ECGD man. It might turn out to be one of the best moves *you've* ever made.

* This is a true story, but because business between ECGD and exporters is strictly confidential any details which could identify the exporter have been left out.

E·C·G·D

EXPORT CREDITS GUARANTEE DEPARTMENT

HEAD OFFICE: 59 GRESHAM STREET, LONDON, E.C.2. BRANCH OFFICES IN LONDON, BELFAST, BIRMINGHAM, BRADFORD, BRISTOL, EDINBURGH, GLASGOW, LEEDS, LIVERPOOL, MANCHESTER, NEWCASTLE, NOTTINGHAM, SHEFFIELD.

E.C.G.D. is a Government Department set up to help exporters. Its services are fully explained in the booklet 'Payment Secured'. Write for a free copy.

THE WORLD OVERSEAS

Is Iraq Going Communist?

FROM A CORRESPONDENT LATELY IN BAGHDAD

Apart from a brief dust-storm which reduced visibility to a few yards from dawn till dusk, Baghdad has been enjoying cloudless winter sunshine, as acceptable to the rare visitor from the rainy north as it is unwelcome to the Iraqi peasant whose land is suffering from a shortage of rain. In politics, however, low visibility has been the rule. Everything in Iraq seems, for the moment at least, to depend on the decisions of the *Zaim al Auhad* or unique leader, about whose views nothing was known before the revolution and whose present silences about the future direction of Iraqi policy leave the way open to as many conflicting interpretations as do General de Gaulle's utterances about the future of Algeria. Both generals were brought to power by a military movement which canalised strong popular feelings; both have to arbitrate between supporters who hold conflicting views. Nobody can be quite certain in which direction either will move.

One tendency in Iraq is that of the traditional form of Arab nationalism, as developed by President Nasser; the other is that of people who are sometimes called progressives but are known to their opponents as communists or leftists and for whom the Iraqi censor prefers the designation "friends of the Republic." The attempt of Colonel Aref, presumably with the aid of Rashid Ali, to rush Iraq into union with the UAR provoked a reaction. This resulted in the arrest and secret trial of the two men, while General Qasim resorted to the "friends of the Republic" to mount demonstrations in favour of the regime. They alone appear to have had an organisation ready to act; its nucleus may well have been the former Communist party which the repressive measures of the Nuri regime had not prevented from developing underground. When the crisis was over and the improvised volunteer "defence force" began to make a nuisance of itself in various ways, such as stopping foreign cars on the pretext of searching for arms, General Qasim put it under army control and gave instructions that its activities should in future be confined to times of emergency; his orders were immediately carried out.

Doubts were nevertheless aroused in the minds of foreigners, and of many Arabs too, by the prominence which the Left thus achieved; they had already been disturbed by the rapid appearance of a host of communist embassies and the conclusion of numerous trade agreements with communist states. Another cause of alarm was the prominence given in Iraqi news bulletins to the most trivial happenings in communist countries often to the exclusion of important world news. Very noticeable too is the emphasis given in the new Republic to the words "democratic" and "the people" (as in the "People's Court" where the wall is decorated not with "*bismillah*"—"in the name of God," but with "*bism-ashshaab*"—"in the name of the people").

The impression is heightened by an examination of the rather limited output of Iraqi periodical literature. For example, the current issue of a well-written monthly review called *New Culture—al-Thaqafa al-Jadida*—opens with two articles, to which prominence is given by heavy type and coloured overprints. They are devoted to the subject of freedom of thought which is, satisfactorily enough, declared to be the basis of all healthy national development. The first writer, however, then goes on to say that freedom of thought and the framework in which it operates are instruments of government which must be so employed as to deny freedom to the people's enemies. The second writer, a woman, says more briefly and emphatically that an essential accompaniment of freedom of thought is a dictatorship exercised against the people's foes. A longer article in the same issue discusses the definition to be given to the word "people." After rejecting as equivalents "the inhabitant of a country" or "those having a common sense of nationality" the writer arrives at the conclusion that the interpretation must depend on circumstances. In those of Iraq today, he says, "the people" must be taken to mean the workers and peasants and such of the bourgeoisie as are willing to co-operate in building a true democracy.

Though there is a remarkable display of communist propaganda on the bookstalls this may represent the amount of funds available to the distributors of this form of literature rather than the number of Baghdadis who read it; but it is also an indication that young Iraqi intellectuals have been extensively influenced by marxist terminology; for it is impossible today to find any corresponding literature in Iraq devoted to the exposition of more liberal principles.

This sort of evidence has quite naturally given many people the idea that Iraq is rapidly sliding towards a communist type of government. Among Europeans such feelings are intensified by the days or weeks of delay which the censorship causes in the delivery of foreign newspapers, by the difficulty which business colleagues or friends encounter in obtaining visas, and by the restrictions on movement outside Baghdad. On top of all this, the one European language newspaper of Baghdad, the *Iraq Times*, has been turned by the censor into a channel for the diffusion of Iraq government propaganda. This is written in a style of English which is apt to have the opposite effect on European readers from what is intended; at the same time the paper has been virtually cut off from all world news sources, and so has lost its value as a conveyor of news. In these circumstances, for which the exaggerated censorship is largely responsible, it is not surprising that many observers regard Iraq as half communist already. But there is another side to the picture.

An equally good, perhaps a better, case can be made out that Iraq will not go communist. First and foremost, nobody who has met General Qasim supposes that he is a communist; the strongest criticism made of him is that his previous career has not provided him with either the

experience of the constructive ideas by which his undoubtedly good intentions can be implemented. Secondly, for what it is worth, spokesmen of the new regime indignantly deny that Iraq has any idea of establishing any totalitarian regime after the pattern of the communist states of eastern Europe. They see the Iraqi revolution as a revolt against a totalitarian system, not a move towards one. Few foreigners in fact seem to realise how completely the former regime did have the appearance of a police state in the eyes of the great majority of politically active or politically minded Iraqis. Since the British and Americans, as the allies of the former rulers, enjoyed a privileged position, they tend to think that the restrictions of which they now complain are a novelty in Iraq ; whereas these are in fact very limited in their application compared with the extensive restraints on freedom under the old regime.

When a system of direct parliamentary elections had at last been granted in Iraq, the parliament that resulted was dissolved after a single meeting, because a dozen nationalists had managed to get into it in spite of administrative manipulation. This seemed to the foreigner a joke ; but it was a shameful and humiliating outrage in the eyes of most Iraqis. Thus, when representatives of the new regime say that one of their main aims is to give free expression to opinion, they are not necessarily proved insincere by the fact that the preceding repression has led to an outburst of leftist feeling. It is claimed with plausibility that there never were anything approaching free elections for anybody at all in pre-revolutionary Iraq ; and it is pointed out that only now have, for example, school teachers been allowed to elect a body to represent them. The elections for this body were held last week and if the leftists have gained a big majority and officials hold important posts, there was at any rate an honest election with a high percentage of participants. The losing list in fact polled a very large number of votes, as General Qasim, who spent an hour or two watching the proceedings, was able to observe. As a former teacher, he dropped a voting paper in the urn—leaving it, however, blank to indicate that the "unique leader" was impartial. His presence on this occasion and at other popular gatherings has made a good impression ; one of the failings of the former rulers was that they failed to give the appearance of taking any interest whatever in what ordinary Iraqis were doing.

TOWARDS the oil company the government has so far behaved with great correctness, taking care that work shall be maintained with undiminished efficiency, and declaring its intention of abiding by agreements. Other foreign employers of labour do, indeed, complain of the compulsory raising of wages, and of a labour insubordination which the authorities do little to remedy. On the other hand, the more enlightened recognise that the lot of the Iraqi working classes is in great need of betterment (as a peep behind the facade of the handsome new Baghdad which is now arising is quite sufficient to show) and that the creation of trade unions, however inconvenient their first blundering efforts may be, is long overdue. Where trouble occurs, it is caused by the inefficiency of an administration unsettled by changes in outlook and in personnel, and by the difficulty of getting inexperienced officials to take necessary decisions, rather than by deliberate obstruction. The finance minister, Mohammed Hadid, who is now also minister for development, has no intention of turning the carefully thought-out development plans topsy-turvy ; though he wishes (in the fashion of labour governments elsewhere) to vary the priorities in favour of speeding up housing plans and creating light industries which bring speedy benefit to the classes that need it most. Rents have already been cut by a fifth. No doubt it will be much harder to implement than to promulgate the land reform laws ; yet nobody can doubt that the attempt to tackle the problem was decades overdue.

Many Iraqis criticise the procedure, though not the sentences, of the "People's Court," which is trying the leading figures of the old regime. This is a military tribunal of a revolutionary character, which assumes the guilt of the accused in advance more than it seeks to establish it by careful legal processes. The public, who are admitted to the full capacity of the former parliament building where the proceedings take place, are encouraged to intervene by shouting slogans demanding the blood of the accused, or reciting poems exalting the revolution and its leader. On the other hand, the accused have not suffered physical ill-treatment during their detention—indeed their motor-cars can be seen at meal times taking their food to them from their homes—and they are allowed to speak in their defence for as long as they wish. Since the entire proceedings are televised, the public has every opportunity of judging the issue for itself. In these respects the trials are claimed to be an improvement on those held under the former regime. The number of prisoners is not great, and the dozen or so death sentences passed have not so far been carried out ; the ultimate decision rests with General Qasim, who has a reputation for humanity, not for severity. Indeed, the blood spilt in the revolution has been extraordinarily little. Of the killings in the first hours of July 14th some at least were certainly not intended by the revolutionary leader and are officially regretted.

When the various influences at work are surveyed as a whole, it seems undeniable that there is, somewhere, a communist nucleus which is directly active, unhindered by the authorities, and that Marxist views are widespread among the younger generation. Yet the desire of the majority who support and acclaim General Qasim is not for a Marxist state but for a state that will represent the Iraqi people more genuinely than the former regime did ; that will permit free elections to be held, will encourage the growth of trade unions, and will give more attention to the immediate needs of the masses than was done in the past. Certainly the revolutionary fervour has not yet worked itself out ; but if it is too soon to say definitely that Iraq is not going communist, it would certainly be very rash to assume that it is.

Keeping Berlin Going

FROM OUR BONN CORRESPONDENT

NEARLY three of the six months have passed in the course of which the western allies are invited to reconcile themselves to accepting the communist prescription for the future of Berlin. Notwithstanding their announced intention of doing nothing of the sort, and the Berliners' own unequivocal rejection on December 7th of Mr Khrushchev's unsolicited gift of emancipation, many uncertainties remain. One of them is how strongly western public opinion would back a show of force should east German frontier officials try to hinder allied transports. The federal German government would like more particularly to know how strongly west Germans feel that Berlin is worth making sacrifices for. Should they be hesitant—and probably many are—it is not for want of guidance. A swelling chorus of influential official and unofficial voices intones: "Who has Berlin, has Germany. Who has Germany, has Europe." In a newly-published book about Berlin, Burgomaster Brandt, one of the joint authors, writes:

> In earlier years we used to speak of the "free world's shop window" and of a "lighthouse of democracy." Our friends called Berlin an "outpost," a "bulwark," or a "front-line city." Of course there is still a good deal of validity in these terms today. But we have come increasingly to speak simply and positively of "the Berlin capital."

There are signs that the movement of all good men to the aid of Berlin, the capital, is slowly gathering political and economic momentum. Here and there, in the political field, there has even been something of a stampede. There was, for instance, a perceptible wince or two in the provisional Bonn capital last week when the Berlin capital announced, without warning, its robust plans for observing the tenth anniversary of the lifting of the blockade on May 8th—just under three weeks, that is, before the six months' period fixed by the Russians for allied cogitation expires. If the Berlin Senate has its way, and everybody plays ball, Mr Truman and Lord Attlee, along with the allied politico-military brass of blockade days (Lucius Clay, Brian Robertson, Joe Koenig, Jean Ganeval, Geoffrey Bourne and General Frank Howley and all) will be taking part in a series of commemorative ceremonies, which, at that delicate moment, are bound to be considered highly provocative east of the Brandenburg Gate.

WHETHER the Bundestag will persist in meeting in west Berlin in June for the purpose of electing a successor to President Heuss remains to be seen. There can scarcely be any objection at present to the plans of the federal ministry for family and youth affairs to send altogether 70,000 young west Germans to Berlin in the course of this year "in order to see for themselves the special political, economic, and cultural position and achievements of the capital of divided Germany." In the meantime it is becoming increasingly fashionable to sport the Brandenburg Gate badge which the Indivisible Germany movement is urging everybody to wear as a token of sympathy for divided Berlin.

Practical measures to ensure that the isolated west Berliners do not grow dispirited through diminishing opportunity to earn a square living are being co-ordinated mainly by the Federation of German Industries. Unemployment in west Berlin has been constantly higher than in western Germany. Today roughly six per cent of west Berlin's working population are without jobs ; and those responsible for the city's morale are understandably anxious to prevent the figure rising. Some big west German firms have commissioned one of their senior staff to keep a look-out for chances to buy from Berlin.

Several firms which already have branches there are proposing to develop them, partly with the help of public funds. Daimler-Benz are planning an extension of their engine-building plant at Berlin-Marienfelde, which should double the present strength of 1,500 workers. Siemens say they will be able to take on another 2,000 in consequence of an additional investment of 36 million marks in their Berlin operations. Osram, who produce in Munich these days as well as in Berlin, have decided to allot to Berlin 8 million of the 13.6 million marks they have earmarked for investment in 1958-59. Phoenix-Rheinrohr, steel tube makers in the Ruhr, have announced their intention of building a factory at Berlin-Spandau for making lamp-posts and ships' masts. An extension of capacity by some thirty per cent is also projected by Muratti, the only cigarette factory in Berlin that was operating before the war.

These are all promises which the Federation of German Industries believes to be serious and valuable. Yet the Federation is not satisfied that expansion of existing undertakings, or launching of new ones, is the best way of tackling the problem. It believes that it is more important to keep the existing industrial wheels profitably turning. Of the approximately 5,500 firms in west Berlin, 38 employ more than a thousand persons ; 156 employ between 200 and a thousand. The remainder 5,300 in number, are comparatively small undertakings, and it is these that most want assurance of support in the days ahead. Unluckily many of them are engaged in making clothes, leather articles, and precision instruments, industries that are going through a slack time in west Germany itself. The value of west Berlin's industrial output in 1956 was estimated at DM 6,600 million (approximately £500 million). West German buyers took DM 4,700 million, foreign countries (including Britain) DM 1,000 million, and local customers the remainder. Estimates of the additional orders required to maintain full employment vary from DM 600 million to DM 1,000 million. It should not be difficult to get these from one part or another of the western world if the western world means what it says about Berlin. Last year west German industry alone placed orders, including those in Berlin, worth altogether DM 200,000 million.

It would be idle to speculate at the moment how far Berlin, and the generosity of its sympathisers, are going to be put to the test before the summer is out. For their part, the western allies are dutifully using their six months' grace to build up west Berlin's stocks, not only of fuel and food but also of the raw and semi-finished materials required to keep the factories and workshops going should supplies be interrupted.

Korea's Clouded Crystal Ball

FROM OUR SPECIAL CORRESPONDENT

THE Koreans have already begun to fight their 1960 presidential elections. Despite his 84 years President Rhee proposes to stand for a fourth term. His opponent may be the present vice-president, Mr John Myun Chang. On Christmas Eve the ruling Liberals, occupying the main hall of the National Assembly while policemen detained the Opposition in the basement, rushed through 22 bills in a few hours. The opposition Democrats, of whom vice-president Chang is the titular head, are still protesting. A new security law threatens to gag the press and suppress the Opposition. City and town mayors and village heads will be appointed by the government instead of being elected. The president now has power to postpone the creation of an Upper House. He is also empowered to increase the number of Supreme Court judges from nine to fifteen. In October, President Rhee was given power to retain district court judges on the bench beyond their ten-year tenure, but with the right to dismiss them any time thereafter. Formerly the president had either to reinstate or dismiss judges, without leaving them in suspense, and was furthermore expected

to reinstate judges recommended by the Judges' Council. In fact, the president has seen fit to dismiss judges unanimously recommended by the council for reinstatement. The Seoul district court judge and a Supreme Court judge have attacked these new powers as destroying the independence of the judiciary.

The political tensions that these drastic innovations have produced in Korea are being watched with apprehension by the Americans, who in the past four years have furnished the Republic with billions of dollars of aid, and who had hoped to make Korea a "showcase of democracy" under the very noses of the Communists. It is all the more ironical that alleged new communist "assassination plots," and alleged "infiltration" of the opposition Democrats by communist agents from the North are the excuse given by the Liberals for their measures, though it is an excuse that few Koreans or Americans are prepared to accept at face value. The Americans have been further upset by President Rhee's obvious annoyance and resentment at American press criticisms of his actions. The president has in effect told the United States to mind its own business; a good many Americans thought Korea *was* their business, in the sense that they feel responsible for democratic processes being preserved in the Republic, which owes its continued existence predominantly to 30,000 American soldiers who died fighting there a few years ago.

THE Americans had already been expressing some uneasiness over the way in which the Korean government handled the aid funds. There existed considerable suspicion that supporters of the Liberal party were getting most of the government concessions, in return for kickbacks into the party funds. In addition, the Korean government has tended to turn a hard face towards private foreign capital. The excuse given is that any invitations extended to foreign investors would bring back the hated Japanese, but American businessmen complain that they, too, are adversely affected by the government's insistence on protecting Korean businesses from foreign competition. When President Rhee suddenly tightened the screws on his political Opposition, some Americans had already been speculating aloud about whether the Democrats would not prove to be a better bet from their point of view than the Liberals.

The Democrats are now in a very awkward position. They feel that if they allow Mr Rhee to have his way with them, political democracy will effectively cease to exist in Korea. It is not inconceivable that some leading Democrats, like the vice-president, might find themselves sharing the fate of Mr Cho Bong-Am, the leader of the now banned Progressive party, who is at present in prison under sentence of death on a charge of working secretly with the North. At his first trial, Cho Bong-Am got only five years, but a second trial jacked this up to capital punishment. On the other hand, a frontal assault by the Democrats against the government might provoke a debacle that could benefit only the Communists, which is certainly the last thing the Democrats want to happen. The Democrats therefore have the delicate task of opposing Mr Rhee just enough to persuade him to retreat but not enough to precipitate a serious internal struggle. Some sort of compromise is possible, but the prospects are not very bright. The Liberals may find it expedient to make some display of flexibility, but their determination to win the 1960 elections appears inflexible, and it is anything but certain that they can win without resort to "emergency" powers.

In any event nearly all observers agree that a real struggle for power will ensue immediately President Rhee passes from the scene. Amid the anticipated political turmoil the classical pattern would then be for the army to step in. But President Rhee has already thought of this, and all the really strong military men appear to have been shipped out of the country as ambassadors, while the remainder seem to be too equally matched in a watchful balance of power for any one general to emerge as an accepted leader. Some observers, however, are inclined to believe that the general most likely to succeed is whoever the American military advisory group decides to back. It is, of course, too early to say who that would be, and the contingency may not even arise. But it is perhaps not without significance that the American military advisory group in Korea is at present being strengthened; the period of duty in Korea is being extended from 13 to 24 months and officers and enlisted men are being allowed to have their wives and families with them. Housing projects are now under way in Seoul and other cities. When they are completed, there will be some 2,500 American military dependants living in Korea.

Before the Korean war, there were 1,600 American military dependants living in the country. The Koreans joke that while the Chinese in the north are withdrawing their troops, the American soldiers in the south are bringing in their wives. The Koreans may not be permitted to nullify the American war sacrifices even if they show a disposition to do so. But there are not likely to be any Koreans crying "Yankee, go home!" The Liberals can scarcely object to continued protection against the Communists; the Democrats may be glad to be assured of protection against the Liberals.

The Admirals' Smalls

FROM OUR CORRESPONDENT IN AUSTRALIA

LAST month the usual steady movement of population into overgrown Melbourne was temporarily reversed when there began a wholesale migration of the Australian defence departments from that city to Canberra. In the days when the sheep station in the bush was being made ready for its role as the federal capital, the seat of the federal government was temporarily Melbourne; but it is a quarter of a century since the other departments moved into Canberra, leaving the defence departments behind until accommodation could be built for them.

It has been a most inconvenient separation, obliging ministers and officials to conduct delicate discussions by teleprinter and to make countless air journeys between Canberra and Melbourne. One might have thought, therefore, that the present move would have been universally recognised as long overdue. Instead, it has been accompanied by moans and groans and tears and jeers. The trouble is houses. Before the Commonwealth government can move its servants to Canberra it must first build them somewhere to live. All the controversy concerns the standards to which it builds.

Australians as a whole do not believe in Canberra. Most of them have never seen it, for all that it is becoming a tourist attraction. They regard it as a huge extravagance, a monument to the rivalry between Melbourne and Sydney, neither of which would allow the other to be the capital. They think of it as a place where Parkinson's Law works

overtime, and where public servants, remote from reality, feather their nests when they are not reefing money off honest citizens and trying to impede them in their lawful pursuits. Any house that is built with their money for public servants is too good for them. And why, they ask, must the defence departments now join the party in the ivory tower?

That is the reaction of a large part of the general public. A section of the population in Canberra is even more hostile. Married couples normally wait something under six months for a government house, while the single may languish in government hostels for as long as ten years, paying in Nescafé the price of their celibacy. They are indignant that the defence personnel should be able to walk into specially built houses without having, so to speak, done their stint in purgatory. They are even more indignant because the most senior officers and officials of the defence departments are getting special houses, a little larger than the others and planned in recognition of the fact that they will have to do a good deal of entertaining. This causes ill-feeling, too, among officials of other departments who have got their government houses but have not rated a "special" one. And what is all this about senior officers having to entertain, they ask. Will cocktail parties save Australia from the yellow men or from a Russian nuclear submarine?

The defence people take a different view. The ordinary houses built by the Department of the Interior are of only 1,150 square feet superficial area, and resemble a local authority house in Britain except that they are rather smaller and built all on one floor. The VIP houses are of only 1,700 square feet. In nearly all cases, therefore, the move from Melbourne means giving up a much larger house, selling some furniture, abandoning the mature garden—not to mention the friends, shops, theatre, concerts, sea bathing and lower prices to which Melburnians are accustomed. Those who are getting the ordinary houses are perhaps less discontented, oddly enough, than some of those who are getting special houses. They will pay a subsidised rent and will have the chance to buy on very favourable terms, and some of them have plans to build on a room or a "sleep-out" in due course. But some of the senior officers (who being itinerants cannot buy) and more particularly their wives, feel that the special houses are incompatible with their age and station, and that it is hard, after years of service, still to be occupying a bijou residence. They tell you, wryly, that a certain ambassador has complained about the VIP houses built behind his embassy, and has erected a trellis to shut out his view of the admirals' smalls.

Here are two irreconcilable and personal points of view. But some objective judgment is possible in the light of the future appearance of Canberra. The centre of the city shows, half developed, an impressive plan. The shaded boulevards and curving carriageways of Walter Burley Griffin, the Chicago architect who won an international competition for the city's design, are now well established. The parks and gardens are beautiful, and some time in the next decade the River Molonglo will be dammed to produce an artificial lake, beside which a new Parliament House will stand, replacing the present temporary structure. (Sir William Holford, who recently refurbished Burley Griffin's plan, thinks that there should also be a royal residence where the Queen would regularly stay.) But in the newest suburbs the tiny bungalows huddle ever more closely together, as the cost of taking electricity and water to them rises and as building costs still soar. When their gardens are mature they will look tolerable, for the red soil of Canberra is very fertile when well watered, and its profusion of trees and flowering shrubs would make even a Nissen hut look enticing. But in their present nakedness they stand revealed as unsuited to the dignity of a national capital, and the dark blue beauty of the surrounding mountains merely emphasises the unworthy use that is being made of an incomparable site.

What can be done? First, surely, a greater effort could be made to "sell" Canberra to the Australian public, so that it no longer grudges the money that is spent there. Australia needs new cities—Melbourne and Sydney are both too large, and either would be intolerable if it were also the seat of government. As for the charge of remoteness, that is not so apt now, with the excellent internal air services—though Canberra is still too homogeneous a community. Secondly, a strenuous attempt should be made to bring down building costs, which are over three times as high as in Britain (where they are bad enough); the "special" house of 1,700 square feet costs £A8,000. Some of the high cost is undoubtedly due to the haste and consequent overtime, with which these houses are built.

Canberra is a fine place for the many New Australians who are here to build up some capital, but will it be a fine place for posterity?

Mr Zhivkov Explains

MR ZHIVKOV, the Bulgarian party boss, made a mammoth speech to his central committee on January 15th; four days later he delivered it all over again to the National Assembly. His object was to enlighten party and people on what to expect as Bulgaria makes the "great leap forward" in its economic development that he first proposed last November. The prospect is daunting. Mr Zhivkov envisages changes that if fully carried out will make Bulgaria a more exact model of Mr Khrushchev's Soviet Russia than any other country of eastern Europe. He also makes proposals which smack of Chinese influence (although that influence is in fact ostentatiously ignored) and which could have a profound effect on family life; various measures, such as the development of communal kitchens and nurseries, are to help women to get out of the home and into the factory, and are to assist them in overcoming "the Philistine petty-bourgeois survivals about life and work" to which housewives apparently are particularly prone.

The most important part of Mr Zhivkov's "theses," however, is a drastic administrative reform along the lines of the managerial revolution initiated by Mr Khrushchev in Russia two years ago. In future the economy is to be managed by local bodies from regional centres instead of by ministries from the centre. Seven ministries in Sofia are being completely scrapped and the country is being divided into thirty new administrative units. The object is to do away with the "exaggerated swelling of the apparatus," the "departmentality," red tape and "passiveness" in planning which Mr Zhivkov freely laments. It does not mean less actual control from the centre; on the contrary, Mr Zhivkov is careful to emphasise that it will mean more. It means, too, that a large number of redundant civil servants (according to a Jugoslav journalist, 140,000) will have to be absorbed willy-nilly into industry; but as there is already considerable unemployment, especially in the large towns, this may take some time.

In the countryside important changes are also contemplated; their object is both to raise production and to reach a higher ideological level. Compulsory deliveries are abolished, but the obligation to supply the state with the necessary foodstuffs and industrial raw materials remains. The activities of the amalgamated collectives (their number has now been reduced from 3,450 to 625) are to be enlarged—by taking over, for instance, local industry and the local trading network—and they are to make more efficient use of their members' labour in winter as well as in summer. They are also to take over the Machine Tractor Stations—as was done in Russia just a year ago. Members are being encouraged "voluntarily" to renounce the rents that they are paid for the land they brought into the collective so that the "national ownership" of the land (as in Russia) can gradually supplant "co-operative ownership." The payment of farm workers is also to be reorganised with the object of moving closer to the ultimate goal of eliminating all differences between rural and industrial labour.

These changes are bound to produce at least temporary difficulties and dislocation. But they are designed to secure much greater production, both industrial and agricultural, and production targets have in fact already been drastically, and some might even think fantastically, stepped up; agricultural output, for instance, is to be doubled this year—even though the production of some important crops actually dropped last year. Mr Zhivkov insists that this great leap forward in the country's economic development must be made before it is possible to reach the goal of a substantial improvement in living standards. One can approve wholeheartedly of his goal while remaining unconvinced of the wisdom of his methods.

Indian Business Becomes U

FROM OUR CORRESPONDENT IN INDIA

INDEPENDENCE in 1947 found India with a reasonable supply of its own army officers and civil servants, doctors and engineers; but its big business was still managed very largely by foreigners. Today, business, even when the capital is foreign, is being increasingly run by a cadre of professional Indian managers, a cadre mainly created by the initiative of British companies.

The growth of this cadre is shown very clearly by the annual census of employees of foreign controlled firms earning £900 a year or more. Today half of all such jobs are held by Indians as against one in twelve in 1947 and one in four in 1951. The Indians in this group have increased from 504 to 6,704. Moreover, except for the occasional specialist artisan, there are now virtually no foreigners earning less than £900 a year.

Yet the reason why there are so many more Indians in management now is not because of any wholesale reduction of foreign employees but because foreign business here has expanded so much. There are still 5,625 foreign managers, only 192 less than in 1947—though 1,452 less than in 1952, when expansion had already got under way, but many of today's Indian managers were not yet trained, often not yet recruited. The percentage of Indians in the higher income brackets still drops off sharply; foreigners hold only 38 per cent of the £1,350-£1,800 posts, but 94 per cent of those over £4,500. This is partly because many Indians are still fairly new to business, but also partly because many foreigners are specialists who have to be tempted to come for a short spell by a high salary (some of the best paid of all are the senior Russians at the Bhilai steel works), and even those who spend most of their lives in India have to be offered some premium for expatriation. The result is that, taking these groups as a whole, the foreigners still earn £15 million a year against the Indians' £9½ million.

THESE twelve thousand Indians and foreigners (80 per cent of whom are British), together run enterprises which represent a foreign investment of £400 million (also 80 per cent British). It has doubled since independence. Nearly one-third of it has come from ploughed-back profits; the rest has been new money, mainly coming from the great international engineering and chemical firms whose products range from oil refineries to bicycles, from explosives to dyestuffs. It is these new enterprises that have the largest percentages of Indian managers—about 75 per cent in rubber and chemicals and oil. ICI's subsidiary has an Indian chairman, Hindustan Lever has three Indian directors. In many joint ventures with Indian capital, the foreign partner, Raleighs or Tube Investments or Pilkingtons, for instance, is content with a minority of seats on the board. The proportion of senior Indians is much smaller in the older British businesses, which are expanding less rapidly or not at all, and which have to wait for their employees to retire to replace them with Indians because they cannot offer them posts somewhere else. In jute and tea Indian managers are still only one in four, though even here the new recruits are now mainly Indian. The tea plantations, for instance, normally take two Indians to one European; their biggest difficulty is the dislike of many Indian wives for the loneliness of plantation life.

Behind these figures lies a quiet social revolution. Before the war Indians of good education and family hardly ever thought of a career in business. They gravitated automatically to government service or the professions. Business was for the less well-bred "banias" or for Britons. Today business itself has become a profession, absorbing numbers comparable with those who go into the armed forces and much bigger than those in the administrative service. For the first time, therefore, there is spreading among the educated who in India make policy, an inside knowledge of the problems, the techniques and the outlook of business

Uniform for Unit Trusts?

PROPERLY drilled, unit trusts are a useful platoon in the brigade of savers. Members of the movement itself and some Tory MPs would like to see them grow into the shock battalions of a property-owning democracy. Why, they ask, should this country now lag behind Germany, Australia and the United States ? A fresh wave of interest in popular investment, redoubled efforts by existing unit trusts, the formation of three new ones backed by the prestige of merchant banks, and a boom in industrial equities have lately revitalised the movement. The Government looks with favour on this new growth. But at the same time that some people are pressing the Government to make concessions so that unit trusts can become more accessible and more attractive to the small investor, other people are asking for further safeguards to protect him. The President of the Board of Trade has said that he is ready "to consider any recommendation, either from unit trusts or from the public, for the improvement of legislation," but many people will agree with him that present legislation affords "adequate safeguards."

The Board of Trade was given wide powers of regulation over the unit trusts by the Prevention of Fraud (Investments) Act in 1939. Major scandals in the movement are impossible, if only because trustees hold the investments and issue units against them. There are arguments about management costs and about methods of organisation which are important, but these hardly justify a crusade based on the contention that the legislation is out of date and badly needs revising. The emphasis ought to be more on what can be done to encourage the unit trusts to invest well and economically and less on grandmotherly amendments to the regulations under which they operate.

At the moment, the unit trust movement is a compact body of about fifty trusts run by less than a dozen groups. The swift advance of the last six months has carried the savings for which it is responsible to about £100 million. In 1939 there were nearly one hundred trusts with portfolios worth about £80 million. What has happened since the war hardly represents an astounding achievement, but it has to be remembered that for most of the time the trusts were cramped by controls by the Capital Issues Committee based on the absurd idea that the raising of capital for financial purposes was wrong. All unit trusts are governed by strict Board of Trade regulations on management charges and the calculation of buying and selling prices and yields, and by general provisions about trustees, advertising and disclosure of management accounts. The regulations do indeed leave unit trust managers some latitude, particularly in their stock dealing operations ; they have never attempted to resolve the argument between the merits of the "cash fund" and "appropriation" type trusts, which was first brought out into the open in one of the several prewar surveys of the movement by *The Economist*.* The accompanying table sets out the main particulars of some of the important trusts.

THERE is certainly room for differing opinions on one recent development in the unit trust movement. This is the making of a block issue, on the lines of a public issue, as distinct from offering units on tap. It is argued that this new method of block issue can in some circumstances upset the equitable balance that the managers should preserve between new unit holders and existing holders. Other questions are at least as important. One is concerned with the way in which managers repurchase their units. Only three trusts are quoted on the stock exchange ; in other cases the cash value of the units can be realised only by surrendering them to the trust managers. They then have an alternative. They can hold them for resale ; or they can unwind the units they hold by selling the equivalent underlying securities and cancelling the units. If the managers hold—that is, if they job in their own units—they save the cost of unwinding them and the cost of creating new units when the public again comes in to buy. So it is sensible and economical that managers should act as jobbers in their units, and it is not necessarily objectionable that occasionally their

* *The Economist*, April 17, 1937

book as principals in this jobbing function may be substantial. Sellers get a better price so long as the trust is not being unwound. But there is nothing in the Board of Trade regulations to stop them from accepting a price lower than the realisation value when a trust is being unwound. Units cannot be sold above the maximum price calculated by the Board of Trade formula, but managers can offer to repurchase units below the minimum price which a unitholder is entitled to demand. A small revision of the regulations prohibiting the repurchase of units below the Board of Trade price would enable the prospective seller, without further inquiry, to obtain full value for his units. This point

apart straight forward jobbing in the units can be beneficial to unit-holders, and managers who quote close prices in their units are entitled to a reasonable jobbing "turn"

THE argument between "cash fund" and "appropriation" trusts involves the question of whether managers should be at risk (and therefore interested as principals and not merely acting as agents) both in the creation of units for sale and in the appropriation of securities into the trust. In the "appropriation" type of trust it is possible—and for some securities with a difficult market it may be expedient—for the managers to buy securities on their own account and appropriate them into the trust later at a different price. That fact can expose them to the question whether they are acting solely as agents for the unitholders, or whether in some degree they are acting as principals in their own interest. The cash fund type of trust in which the managers act solely as agents is not on such equivocal ground. It is the type that has been chosen by all the recently formed trusts.

This twenty-year-old argument about agents and principals is still a matter of dispute between individual unit trusts. Most of them, however, would agree that at least three tax modifications would be welcome. The first is that costs of management should be chargeable against gross income, as they are for investment trust companies, and not, as now, found out of net income. This tax point has led some trusts to deduct them from the capital of the fund, which is not satisfactory. The second is a plea for the abolition or reduction of the transfer stamp duty ; there are lower rates of stamp duty already for transactions in small property and something for the genuine small investor is sought. (The unit trusts presumably would not demur from the general proposition that a 2 per cent duty on investment transactions is an outrage anyway). The third is that the unit trusts should be able to regain the tax already deducted at the standard rate from the dividends they receive and then make their own distributions gross, leaving the Inland Revenue to settle with each unitholder for any tax that is due. That might help to make unit trusts more popular among those who pay less than the standard rate of tax. But most unitholders seem to fall into the ranks of the lower middle-class and pay at least some tax ; the Inland Revenue would take some convincing that such a concession, involving a further breach in the principle of tax deduction at source, is necessary.

Tax changes would help. So would a relaxation of the limits for management charges. The maximum charge now allowed for new unit trusts, based on the market value of the fund, is 13¾ per cent over twenty years, of which the initial loading charge is normally restricted to 5 per cent. If those managers that receive income from supplementary sources, not always apparent to unitholders, are to forgo it, the question will arise of the adequacy of the remuneration currently allowed to managers. The quality of the trusts' management is as important as their growth and it is worth paying for. Superficially, the idea of raising the limit is attractive, for the trusts could then sell their units much more vigorously. Competition between the trusts would presumably keep charges down ; many managers already take less than the permitted maximum. It ought to be possible to avoid ambiguity about the payment of dealing commissions. In fact, the purchaser pays directly or indirectly and what he pays and to whom should always be evident.

The aim of the government's regulations should be to guide the movement, not to truss it. From the government, the unit trusts can reasonably seek the privileges already enjoyed by other small savings media. Beyond that, they should not expect concessions which cannot be extended to other forms of investment. The unit trust movement itself must sell the idea of expert management and the spreading of risks to the public. The trusts that give investors confidence will be those who take investors into their confidence, whether they operate as cash funds or by the appropriation method. Among the unit trusts themselves there has always been keen argument on this and other points of method. But that is no reason why an association of unit trust managers should not do good work in widening the movement's future service to the small investor. It might be preferable to a revised code of regulations imposed by the government.

Packaged Holidays

New concessions in air fares to travel agents will encourage the packaged holiday

ABOUT two million people went abroad last year for their holidays, spending some £50 a head on fares and hotel bills alone. About a million and a half booked their holidays through travel agents. In a few cases they were disappointed, when the agent went bankrupt or misappropriated at the local casino funds intended for hotel bills ; but the great majority of the agencies' customers appear to have been satisfied. They are now spending winter evenings poring over sunlit travel brochures and their lunch hours queueing at the agencies' desks. By March, as things go today, most of the hectic business of booking holidays will be over, with dates fixed and deposits paid. If in April or May illness, shortage of cash or a change of plan cause the Joneses to cancel their August holiday the agency will find it hard to fill their vacated seats and hotel rooms ; the Smiths and Browns who were on its waiting list will by that time have made other arrangements.

The business of retailing travel has grown and altered a lot since the war. The backbone of a travel agent's trade remains much what it was when Thomas Cook hired his first excursion train nearly 120 years ago ; it is his ability to get discounts from carriers on big bookings. But the airlines, with their rigidly controlled international fares, have introduced a new element. Forbidden to cut fares to the public without prior international agreement, the airlines have worked out any number of devices for cutting the prices charged to the travel agent. These cuts often have no connection at all with bulk bookings ; they really amount to a "Dutch auction" to sell spare seats.

The astonishing proliferation of small travel agencies in recent years is due in part to the concessions that they can get from airlines, both the international operators and the small charter companies. There are about 450 travel agencies (using the term in its strict sense) in Britain. These businesses, which have 800 offices in the country as a whole, sell tickets of all kinds as well as packaged holidays, taking a straight commission of 7 to 7½ per cent from the airlines, railways and shipping companies that deal through them. They are open all the year round, with permanent staff and the usual office overheads. The biggest of them all is Cooks, with 2,000 people working in its Berkeley Street office alone and a total payroll of 12,000. About four-fifths of Cook's business consists of the routine sale of tickets and booking of hotels, and only one-fifth is made up of packaged holidays. But the profits on retailing holidays are much greater than those on the straight sale of tickets.

At the other end of the scale are perhaps 1,000 businesses that can hardly be described as travel agents because they do not do the whole of a normal travel agent's business. The trade calls them "tour operators," and the public knows them as retailers of packaged holidays, many of them at bargain prices. They do not run a normal ticket agency. Some of them close down entirely during slack periods or keep only a skeleton staff. They incur the minimum of overheads and wages and they offer much cheaper holidays, if a more restricted choice, than their larger competitors. It needs little more capital to start such a business than is necessary to pay for a few advertisements in the week-end papers at this time of year and perhaps also to rent a doll-sized office. Bookings, as they come in, automatically provide working capital. In this particular business, size brings no economies of scale. The bigger travel agents maintain that these small businesses skim much of the cream off the lucrative holiday market: but their customers seem well satisfied.

The airlines are partly responsible for this, because they have turned holiday travel by air into a closed shop. Any group of 15 people can go to British Railways and buy a special party ticket, and the bigger the party, the cheaper the rate they are offered. Any school teacher can fill in his holidays taking parties of children abroad for two weeks at a time, and the railways, the shipping companies and the hotels will be prepared to make a special price for him. The airlines will not do so to anything like the same extent.

AIRCRAFT can be chartered for single flights by anyone able to pay for them, but the public cannot buy tickets on flights run at cut prices. The airlines have an agreement under which they can sell special holiday tickets: the return ticket costs only 25 per cent more than the normal single fare. But the only way that the public can take advantage of these tickets is to go to a travel agent and buy a packaged holiday, usually consisting of two weeks or ten days (the poor man's fortnight) for an all-in charge that includes air ticket and hotel bill. The airlines make only one stipulation, that the total charge shall be at least as much as the price of a normal return air ticket to the place concerned.

British airlines can make further cuts if they choose. They can go to the Government-appointed Air Transport Advisory Committee and apply each season for a licence to operate "inclusive tour" services ; the ATAC in its turn advises the Minister of Transport whether to grant a licence or not. It is granted on precisely the same terms as those agreed by the international airlines, that tickets on the flights are not sold direct to the public but only through a travel agent. Holiday air traffic of this kind has been the mainstay of some of the small independent airlines. British European Airways gets only about 15 per cent of its

revenue in this way but this summer it intends to make a direct frontal attack on the holiday market.

In such an " inclusive tour," the aircraft is technically considered to be on charter to the travel agent organising the holidays. No other passengers can be carried, and if bookings fall below expectations, the travel agent has still to pay for all the seats on the flight and can stand to lose substantial sums. One medium-sized travel agent lost £4,000 last year on two tours that sold badly. The price at which the packaged holiday is sold depends largely on the travel agent's own estimate of the number of bookings over the season. The higher load factor on each flight for which he is financially at risk, the lower his price can be.

The bombshell that BEA has sprung on the travel market is an offer to match these low charter rates but for individual seats on normal scheduled flights. It is offering cut-price fares, substantially below even the usual " inclusive tour " concession, to travel agents that want to book customers to 15 different holiday routes. BEA is stipulating two conditions : that these cheap fares are sold only as part of a packaged holiday, and that the flights are made during the middle of the week or on the night services. The price cuts range from half to less than half the normal return fare, the biggest concessions being offered at night. They double the usual discount of 16¾ per cent offered to travel agents on holiday tickets.

Those agents who have stayed out of the air charter business because they felt it introduced an element of unreliability and so might affect their reputations are frankly delighted at this new arrangement. They will now be able to book holiday makers on normal scheduled services at bargain prices that compare for the first time with those offered by the enterprising small man round the corner.

Although air travel has added as much as £20 a head to the cost of a packaged holiday, from a third to a half of the customers of travel agents choose to fly in preference to the overland journey. They do this partly to get an extra day's holiday, partly to avoid the rigours of second class rail travel on the Continent. The new BEA tariff, especially on night flights, narrows the gap between air and surface travel to a relatively insignificant difference of a few pounds. This is a perfectly sensible device to boost traffic on slack, off-peak services. But the travel agent does not enter into any kind of charter arrangement with BEA. Nor does he incur any financial liability, as he does in the usual type of inclusive tour. He simply books passengers at these special rates as they come in. Thus it will be possible for two people to fly side by side in the same aircraft, getting the same service, but one having paid more than twice as much for his seat as the other. From BEA's standpoint, this is a much better arrangement than leaving the second seat empty. But some ordinary air passengers will think it strange that this way of getting fares down involves such a manipulation of IATA's cats-cradle.

BUSINESS NOTES

IN THE MARKETS

Gilts in Good Heart

BANK rate is still unchanged at 4 per cent but persisting hopes that it will soon be reduced, the putting of CIC into cold storage and the good gain in dollars shown by the reserves kept all sections of the stock market in good heart this week. Industrial equities remained firm and *The Economist* indicator rose from 245.0 to 248.3. But interest is now centred more firmly on the gilt-edged market. The government broker is still finding a fair amount of custom, especially for the Funding 5½'s 1982-84 ; but his supplies are not exhausted. The authorities are clearly exerting less pressure on prices than in the days of vigorous funding of 1958 ; but prices have not run away and the authorities' continued restraint is shown by the yield differential offered by the 1982-84 stock over issues of comparable life. If the authorities are still anxious to stimulate the economy, they may do more to pump in liquidity. That could mean a further deceleration of funding ; it could mean that as stocks on tap in official portfolios run out, there may be no hurry to replace them.

* Flat yield.

The strength of the gilt-edged market offers an attractive prospect for the £15 million issue by Esso Petroleum of a 5½ per cent debenture (1979-83) at 98. The terms are slightly finer than those on the English Electric issue of a 5½ per cent stock (1979-84) offered at 97 and the Esso stock gives a running yield of £5 12s. 2d. per cent and a redemption yield to 1983 of £5 13s. per cent. But the English Electric stock is now quoted at 2 premium and stagging of the Esso issue and a premium on it when dealings begin are probable.

COTTON INDUSTRY

Yarn Prices Fall

IN Manchester this week many yarn salesmen have had the novel experience of selling in a free market. With the ending of the minimum price schemes for single and doubled yarn salesmen have had to negotiate on price as well as on quantities. A fair amount of business has been done, though not as much, evidently, as many salesmen expected in view of the lack of business before. Prices have fallen by between 5 and 7½ per cent, with the biggest reductions generally in the finer yarns, which is the most distressed section of the trade. The initiative in cutting prices seems to have come from the small mills, and the big combines, who account for only about 40 per cent of the total spindleage, have been obliged to follow. But there is a good deal of variation, even among mills within a combine, depending on the trading circumstances of particular mills and their customers. As competition among weavers is keen it is taken for granted that cloth prices will reflect the fall in yarn. A reduction of 2d. a lb on one type of single yarn formerly selling for about 48d. a lb, is equivalent to ½d. a yard on a cloth weighing 4 ounces a yard. It is impossible to guess when yarn prices will stabilise, and at what level. Some merchant convertors are confident that they will be able to sell more cloth abroad, and believe that Lancashire weavers may win back some business from merchants who have been buying cloth from Hongkong.

The government, whose sympathy for Lancashire industry may be somewhat greater now that the yarn spinners' scheme has been abrogated, has again repeated its willingness to help the industry. After the Prime Minister told the Commons that he would be making a statement shortly about the reorganisation of the industry, Mr John Rogers, Parliamentary Secretary to the Board of Trade, said in a written answer that the Cotton Board would be making a report on the reorganisation of the various sections of the industry. The Government, he said, was anxious to discuss the proposals as soon as they became available and to hear whether direct government help was asked for. It certainly will be asked for, and hope of obtaining compensation from a redundancy scheme is encouraging many mills to postpone a closure that they know to be inevitable.

CAPITAL ISSUES COMMITTEE

Dead but Embalmed

PERSONS or firms in the United Kingdom need no longer apply to the Capital Issues Committee to borrow money. The only remaining official control of domestic issues is over redeemable bonus issues, which the Treasury itself is continuing to scrutinise to check tax avoidance. Local authorities and other trustee borrowers are still subject to sanction of the Bank of England of the terms and timing of issues over £50,000 ; and the Bank's agreement is also needed on the timing of industrial issues over £1 million. But these arrangements are designed to secure orderly marketing ; they are not restrictive.

So after two decades the heavy hand of CIC is lifted from the British economy. There is every cause for rejoicing. The control was irksome, haphazard, and therefore inefficient. If anyone did want to control the private investment in Britain, this was not the way to do it ; if they did not what was CIC's job? That has been the contradiction of CIC in these past eight years of Tory government. Even now it is not clear that the lesson has been learned. The authorities see the freeing as a relaxation in line with other official measures to stimulate economic activity ; not as a clean cut. Is the corollary that the control will return when the economy is again in need of restraint? Certainly that could be the deduction from the form of the relaxation. In the worst bureaucratic manner, the relaxation is wholly discretionary. The Control of Borrowing Order, which underlies the whole structure, is unamended. Borrowers could be obliged to queue up at CIC again without the Treasury having to waive a statutory instrument. Most ominously of all, perhaps, the CIC itself remains in being. The functions of Lord Kennet and his colleagues are now reduced to one—to vet applications by overseas borrowers. It is difficult to believe that this power would not have been handed over to the Treasury or the exchange control if someone had not been reluctant to see the committee disappear.

The practical results of the relaxation are likely to be few. Since July the CIC has been instructed to be more liberal. But one incomprehensible decision has been advertised to the world—the blocking of a rights issue by the Midland Bank. Presumably this will now go forward—and presumably other banks will follow. Investors have been quick to appreciate this, and on Thursday bank shares moved up sharply.

CONVERTIBILITY

Sterling Pulls in the Gold

THE external reserves shown by the Exchange Equalisation Account rose by $42 million, or £15 million, during January, to $3,111 million (£1,111 million). Since £30 million in gold had to be paid in the final settlement of the European Payments Union to meet the heavy deficit in the pre-convertibility weeks of December, this is a highly satisfactory result. It was to be expected that the special operations of the French authorities and the speculative selling of sterling in Zurich in anticipation of the Christmas cur-

* Adjusting for one month lag in EPU settlements, for $250 million drawn from Export-Import Bank in October, 1957, for small receipts of US aid and for special payments, including $196 million in December on North American debt. December figures slightly distorted by inclusion for first time of non-dollar currencies now convertible.

rency changes would have a favourable backwash in January. The authorities knew, too, that they were taking the convertibility plunge at the season when commercial demand for sterling is at or near its peak, and that the London money market still offers a significant margin above rates on the Continent. Convertibility has certainly encouraged the inflow of money—and much of it now comes uncovered, exerting its full impact on the official reserves.

Another important inflow on capital account has come from the Reynolds Metals purchases of British Aluminium shares. These involved total sterling outlays of about £10 million. Part of this was obtained through the security sterling market but the buying quickly mopped up the supplies of this type of sterling, and lifted its rate near parity with the official rate. The balance had to be satisfied by purchases in the market for convertible external account sterling. The reserve probably benefited to the extent of about £5 million through this one operation. No dollar transfers took place last month in connection with the Massey Ferguson/Perkins deal but this together with the sale of the American subsidiary of Linen Thread should have a beneficial effect on the reserves in the near future.

Allowing for the special influences, the initial experience of convertibility in Europe is good. If the figures for December and January are taken together, and the special debt payments excluded, Britain shows a true dollar surplus for the two months of just over $100 million—much the same rate of increase as in October-November. London, unlike Brussels, and to some extent also, Frankfurt, has not been hit by the repatriation of funds to Paris, which has reached the considerable total of $400 million.

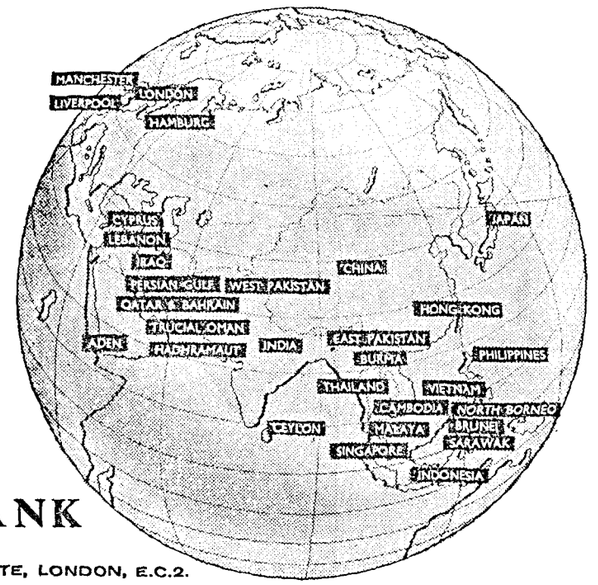
From EPU to EMA

THE Treasury statement again embraces "gold and convertible currencies," including the West European currencies that have lately been freed (though formally these currencies, like sterling, are not *de jure* convertible). All but a small portion of the reserves are in gold and dollars. No mention is made in the return of any currencies that may be brought into the new multilateral clearing of the European Monetary Agreement, which has replaced EPU. Britain, not surprisingly, appears to have made no use of the clearing in January. It is likely that EMA will be used for clearing only in abnormal circumstances, since the terms of its settlements are at the extremes of the notified exchange margins that are most unfavourable to the central bank taking the initiative in using the clearing. Unless those margins or the parities are changed during a settlement period, better terms will be available in the open market.

Details have now been worked out on the liquidation of the European Payments Union. Britain has incurred bilateral debts of $466 million; but it has bilateral claims (mainly against France) of $88 million; and it is able to offset, under the existing agreements, some $146 million of its debts against postwar debts owed to Britain by Germany, the Netherlands and Austria. All but $82 million of the gross debt is covered by the existing funding agreements, under which Britain pays about $3 million a month in total; and since no account has been taken up to now of Britain's EPU claims, the net effect of the EPU liquidation is not expected to involve any net increase in Britain's commitments.

The residual assets of EPU have now been disbursed. Under the EMA agreement, $113 million has been transferred to the European Fund; and a further $123½ million is being held in suspense to be paid into the Fund dollar for dollar as subscriptions of member countries rise above $148 million. The remaining $167 million of gold and dollars held by EPU has been distributed to creditors—mainly Germany, which has received $130 million. Under the EMA arrangements EPU is to provide a total of $272 million (including claims on Norway and Turkey) to the European Fund and member countries $328 million. But the scale of members' subscriptions is now under review, and for the time being the European Fund is working with $113 million. This is sufficient to provide the "float" for any multilateral settlements that take place; an addition to its resources will become urgent only when the Fund receives the first requests for short term (up to two year) advances to countries in payments difficulties.

COAL



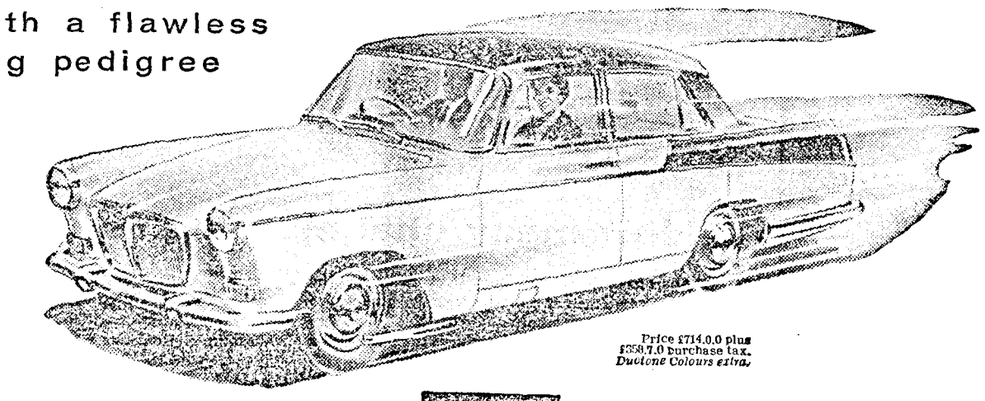
Stocks Level Off

IN about the middle of December total coal stocks in Britain stopped rising, at something over 38¼ million tons, and by January 17th they had come down to 35¼ million tons. This brought no financial relief to the National Coal Board since the whole fall has been in the distributed stocks of coal in merchants' and consumers' hands. The unsold stocks at collieries and opencast sites still total nearly 19½ million tons, the vast amount of coal on the ground in Britain has not prevented local shortages of certain kinds of coal for householders during recent cold weather. Nevertheless, there are few signs that the "stock turn" in coal held by the industry's customers is sharper than usual; and it would take many weeks of very bad weather to make any real impression on the Board's mountains of coal.

While the Coal Board talks sagely about much greater efforts on the marketing side, little new policy has as yet emerged. One of the leading coal distributors, Charringtons, has begun offering "branded" house coal and smokeless fuel in paper bags, at a slightly higher price for the convenience. Neither the Coal Board nor any British supplier has yet offered coal in metal containers from which it can be tipped straight into the stove or fire, as the French *Charbonnages* are doing. It is clear that solid fuels can no longer maintain their domestic market on price alone, because growing affluence among average householders is making them ready to pay a premium for cleanliness. Further development of the packaging of coal and coke to the bag small enough to put on to the fire without opening it at all—seems advisable.

On balance, the Coal Board may have welcomed last week's Government decision to cease offering loans at preferential rates to industrialists for the purpose of putting in fuel saving equipment. Any kind of fuel saving equipment usually saves coal—though it is only fair to say that the Coal Board is a heavy contributor to the funds of the National Industrial Fuel Efficiency Service. But in recent years this special financial assistance to investment in fuel saving equipment—which was supplemented by investment allowances for which other capital investment does not qualify—may well have tipped the balance in the decisions of quite a large number of industrialists to switch over to oil. Switching over, in the national picture, must very often have increased fuel efficiency and saved the consumer money. But it is a kind of improvement about which nobody could expect the Coal Board to be too enthusiastic.

British Banking in Asia



These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. In London an effective credit information service and skilled assistance and advice are available to merchants and manufacturers seeking new business connexions in Asian markets.

THE CHARTERED BANK
(Incorporated by Royal Charter 1853)
HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2.

Branches in the United Kingdom at Manchester and Liverpool. Agencies at New York and Hamburg.

THE EASTERN BANK LIMITED
Head Office: 2 and 3 Crosby Square, London, E.C.3.

How many chairmen at this table?

Apart from the Captain himself, at least one of the other gentlemen at this table usually turns out to be a Chairman. Counting nearby tables, the score would be much higher. For this is the P & O First Class Service to Australia. Here, in one of the mighty ships of the P & O fleet the British businessman with his eye on Australia or the East, encounters prospects from the outset.

It's no accident. Out of some six hundred and fifty fellow passengers travelling first-class *nearly half will be people with similar or connecting interests in the same territory as yourself.* A high percentage of *those* will be people from the very area you're visiting. *They'll* give you the lie of the land you're visiting as none else can. Conditions are ideal.

On P & O both the sun and the service wear a smile. You have time to know people, to pursue ideas without interruption, to rest properly. You do more constructive work in four weeks at sea than you do in four months at home. Yet you arrive back fresher than when you left!

If you have interests in Aden, India, Pakistan, Ceylon, Malaya, the Pacific or 'Down Under'—it *pays to travel all or part way* by P & O First Class Service to Australia (or the Far East). Special seasonal terms and Executive Tickets are available. Ask someone to check *now* with your Travel Agent or with P & O direct. 14/16 Cockspur St., S.W.1. Tel: WHItehall 4444 or 122 Leadenhall St., E.C.3. Tel: AVEnue 8000.

P&O *First Class to Australia is an investment*

STEEL

Scrap to Spare

EXPORTS of ordinary grades of steel scrap under open general licence, which were originally permitted for a two-month period that came to an end this week, can continue until March 7th under an extension granted by the Board of Trade last week. These exports, which have been prohibited for years, were permitted under licence from August last year, and since the beginning of December have been free—reflecting primarily the softening of demand from the steel industry during its recession. Last year the industry cut its consumption of scrap by about the same proportion as its output fell, but its "internal arisings" hardly fell at all, mainly because consumers were placing smaller individual orders for finished steel and being more exacting in their requirements.

Accordingly, the industry cut its imports of scrap very heavily indeed—from about 670,000 tons in 1957 to not much more than 70,000 tons last year. Then it reduced its buying from scrap merchants in Britain—from 5,340,000 tons in 1957 to 4,370,000 tons last year. By the middle of last year merchants' stocks of scrap were exceptionally high. Since August the merchants appear to have exported perhaps 350,000 tons of scrap ; with world demand for steel-making materials generally depressed, they are getting about £11 a ton for it, roughly the same as the agreed British price.

AIR NAVIGATION

Argument at Montreal

A BITTER argument that began in Geneva last year will be revived in Montreal next week. What form of air navigation aids should be used by aircraft flying in Europe and the Mediterranean area ? The majority of representatives at a meeting of the International Civil Aviation Organisation last year wanted to continue with various versions of the existing radio beacons, a system known as VOR which originated in America and has gradually become the most commonly used international navigation aid. Britain's Ministry of Transport, which operates an air traffic control network that many airlines consider the finest in the world, said flatly that its experts considered VOR was obsolescent, if not already obsolete. It wanted the meeting at least to leave the door open for the introduction of the British Decca system already used by BEA and Silver City Airways, and adopted a week or so ago by BOAC. The meeting failed to agree, and the question of navigation aids was held over to talks that open in Montreal on Tuesday.

During the intervening months the Ministry has been attempting to win over airlines and air traffic controllers of other countries to its view. In the past weeks it has been demonstrating the accuracy of the Decca navigator in a Comet II borrowed from the Ministry of Supply, flying it first in this country, then in Paris, in New York and finally in Montreal. The basic difference between the new Decca and the old VOR is that the latter consists of a string of radio beacons emitting signals picked up by aircraft: navigating with it is much like navigating cross-country by prominent landmarks. The Decca system consists of associated chains of transmitting stations laying a fine grid of radio signals across a whole area: the aircraft can pick a precise course anywhere it chooses across this grid as if it were navigating by a detailed ordnance map. One of the Decca system's greatest assets is that it uses a pen in the cockpit to trace the precise course of the aircraft across the grid, so that the pilot can navigate by watching the track of the pen.

British air traffic controllers believe that this system is accurate enough to allow aircraft to fly much closer together than they could otherwise do with safety. This reduces congestion in and around airports, and airlines coming into Britain have already been warned that those navigating by Decca will get increasingly preferential treatment over those that do not. This threat, combined with the growing fear of mid-air collision, are the two factors working most strongly in the Ministry's favour. But it may take more than this to swing opinion, particularly American opinion, in favour of a British-built device whose adoption will involve them in an expensive programme of re-equipment. Much hangs on tests that Pan-American are about to carry out on their jet Boeings using a long-range version of the Decca system: if American airlines can be won over to it, it will be difficult for the American authorities to refuse to instal it.

AIRCRAFT INDUSTRY

Change Partners

IT has taken just over a year for Hawker Siddeley and the Bristol Aeroplane Company to decide how to implement their joint undertaking to marry their aero-engine divisions. The significant feature of the new company, Bristol Siddeley Engines, is the care that has been taken by its parents to cut it off completely from the aircraft manufacturing activities of either Bristol or Hawker Siddeley. The new organisation is designed to set up a completely independent engine manufacturing company, taking a leaf from Rolls-Royce's book of not being associated with any particular aircraft manufacturer or designer.

The engine division of Bristol has provided Rolls-Royce with its only serious competition in this country for many years, and has recently won a coveted order in a straight fight between the two companies. Amalgamation with Armstrong-Siddeley will give it the extra manpower and factory resources needed to put the same kind of development into its engines that has made Rolls-Royce's name so famous in foreign markets. The reorganisation will concentrate the manufacture of aero-engines at Bristol, leaving Armstrong-Siddeley to manufacture diesel engines and both Bristol and Armstrong-Siddeley cars.

The first fruits of Mr Aubrey Jones's policy of amalgamation must be eminently gratifying to his Ministry, but the formation of the new company leaves some loose ends. The separation of the lucrative Bristol Engines from Bristol Aircraft brings into question the future of the aircraft manufacturing division at Filton. The same could be asked of many of the Hawker Siddeley Group's scattered aircraft factories. Some of them have now taken over certain orders, jigs and tools transferred from the factories of the Brush group, but others are still finishing off aircraft orders placed long ago. In forming a special aircraft division, Hawker Siddeley's management have recently shown signs of hoping to weld these scattered aircraft activities into a single whole headed by a single design team. The group's weakness in the past has been the number of apparently autonomous companies, each with its own management, marching raggle-taggle under the Hawker Siddeley banner.

The group's new management, which is taking shape after a kaleidoscopic series of board changes, appears to have taken the lesson that amalgamation begins at home.

ELECTRONIC BANKING

Taking the Plunge?

THE problems to be solved before electronic methods can usefully be introduced seem up to date to have proved somewhat more intractable in the sphere of banking than in some other spheres in which the basic needs might seem at first glance to resemble those of the banks. Some notable progress has, however, now been made. Both the difficulties and the progress were this week surveyed by Mr J. D. Cowen, a general manager of Barclays Bank and chairman of the Committee for Electronics appointed by the clearing banks rather more than three years ago for continuous study of these problems. This committee has so far made only one public announcement. It intimated in 1957 that the banks had agreed in principle to the use of magnetic ink as the means of encoding vouchers so as to communicate the data on them to electronic apparatus, whether for bank bookkeeping or for cheque sorting. Given this decision, the banks were able to issue to manufacturers a "preliminary forecast" of the sort of equipment they seemed likely to need. Since then, nothing has been officially revealed about the work of the committee. Mr Cowen's survey, given as the first lecture in the Institute of Bankers' spring series, this year wholly devoted to electronics, is therefore especially welcome.

In spite of recent progress, it is still impossible to formulate precise estimates of what savings might or might not result from the use of electronic methods. Therefore, says Mr Cowen, "if no bank is prepared to make a move until assured of a safe answer on the profit and loss account, then this country will have to wait a long time for electronics in banking." It is evident, however, that he expects some banks to be prepared to "go ahead blind"—perhaps in the fairly near future. There is, it is clear, no longer any technical reason to prevent the use of electronic methods for bank book-keeping—provided that the data contained on cheques and other vouchers are first conveyed on to magnetic tape or punched cards in order to communicate them to the computer. As yet, however, no satisfactory means seems to have been devised of conveying the information direct from the original vouchers—which is what is needed if electronic methods are to yield their full potentialities in this sphere. The banks and the manufacturers are obviously paying close attention to this problem, and Mr Cowen gives the impression that there is reason to hope it may soon be solved.

BUDGET ESTIMATES

£109 Million for Supplementaries

THIS year's seasonal crop of new year supplementaries amounts to £109 million. Submission of supplementaries is not itself a sign that total spending will exceed the estimate, but simply that spending under individual votes is threatening to do so. This year the Treasury has given a broad hint that offsetting economies are likely to be seen in supply expenditure. The budget accounts themselves look a little less favourable than at the end of December. Ordinary expenditure is up by £151 million on the year (compared with an estimate of £156 million in the full year) while revenue is up by £77 million, compared with an expected £97 million. Yet by recent standards the budget is still reasonably on course; while by Keynesian precepts, the Chancellor ought not to be deterred from budget concessions by a fall in his surplus that is the reflection of recession in the economy. The biggest item in the supplementaries, £26½ million for national insurance, is a direct result of the higher level of unemployment, and of unemployment pay. Other big additional votes are for national health (£19 million), colonial services (£12¾ million, partly for a loan to British Guiana), roads (£11¼ million), foreign office grants (£6¼ million) and the Ministry of Power (£6 million).

Putting More Oil in Stock

ONE of the supplementary estimates published this week recalls the emergency arrangements that had to be made to maintain oil supplies in Western Europe following the Suez incident. In the middle of last year the OEEC committee that administered those arrangements recommended to the governments concerned that they should increase their oil stocks from the existing average of about two months' supplies to about three months' supplies. The stocks concerned exclude stocks of oil held for purely military purposes, and, in certain countries, some other "earmarked" stocks that can be used only in special circumstances; they represent the stocks available for ordinary purposes in these countries' home markets. It was recommended at these Paris meetings that the governments with their oil companies concerned should settle the method of carrying out the recommended increase in stocks.

It is not too clear how far all these countries have yet managed to fulfil the recommendation—since oil consumption in most of these countries is increasing pretty rapidly the job of accumulating and storing the extra oil can be a fairly large one. Britain appears to have been building its oil stocks up to somewhat more than the recommended minimum, and the Ministry of Power is sharing the cost of doing so with the oil companies. This operation, rather than increases in "strategic stocks" of oil as such, is reflected in the £6,002,600 specially set aside for oil stocks in the supplementary estimates.

BRITISH EXPORTS TO THE COMMON MARKET IN 1958

The Common Market— Where Britain Suffers

THE embryo of the European Common Market exists; the dream of a Free Trade Area is shattered. It is fruitless to speculate just now about what may be saved from the wreckage; it is more useful to measure, as far as one can, the barriers to British trade and industry erected around the common market. Reports that some Continental agents of British manufacturers are already thinking of giving up their exclusive connections here in favour of companies within the common market seem exaggerated, but there is no doubt that in time British firms will find it harder to retain good agents. The uncertain future of British trading relations with the common market makes it difficult for British industry to take crucial decisions: should they expand or establish branch plants in the common market; should they take an interest in Continental firms; or should they wait and see? And American companies who thought of investing in Britain as a convenient springboard into both the free trade area and Commonwealth markets may conclude that investment in the common market is the better bet.

Discrimination by quotas: The common market countries undertook to convert any bilateral import quotas for manufactures that they had with one another into one quota open to all members. The value of the quota for each commodity had then to be increased by at least 10 per cent, and the total value of all the common quotas had to be increased by 20 per cent. If a common quota was still equivalent to less than three per cent of domestic production of that item—or no quota existed at all—the quota had to be raised to, or opened at, a level equivalent to three per cent of domestic production. To avoid trade discrimination within the OEEC area, Britain proposed that the common market countries should apply this procedure throughout the area, and that other OEEC countries should do the same.

Owing to the opposition of France this proposal has not been accepted. Instead, the common market countries have proposed that each member should negotiate bilaterally with other OEEC countries to obtain reciprocal increases. Britain and France are now exploring this approach. While it is conceivable that Britain might obtain an increase of 20 per cent overall on its existing quotas from France, it cannot expect anything like equality of treatment on items covered by the negligible or nil quotas opened for common market countries.

Taking basic materials and manufactures, Germany has liberalised imports to the extent of 94 per cent, the Benelux countries to 96½ per cent, and Italy to 99.7 per cent. A comparable figure for France is not available; for all imports, however, its liberalisation stands at 90 per cent. One hundred per cent liberalisation means that no import restrictions remain on goods which were imported on private account in the base year (1949 for Germany, 1955 for Benelux and 1948 for France and Italy). Though the yardstick is somewhat antiquated, the liberalisation achieved by Germany, Benelux and Italy is meaningful for Britain, for their remaining quantitative restrictions cover only a fraction of British goods.

★

From Britain's point of view Germany stands highest on liberalisation; imports of almost all the items in which Britain is interested are free, even motor cars. Benelux comes next. Its global quotas, which really are global, have been preserved and increased by 20 per cent, so Britain suffers no discrimination here. Of the goods on bilateral quotas, less than a dozen—including pharmaceutical products, paints, sheet glass, bottles and other glassware, twist drills and hard-tipped tools—are of interest to Britain.

France (especially) and Italy are the countries that injure Britain by the refusal to open to all OEEC countries the quotas that are equivalent to three per cent of domestic production of those items. Hitherto, the Italian import quota for cars from Germany amounted to about £800,000, from France to about £350,000 and from Britain to less than £750,000. The quota for common market countries now goes up to about £2.5 million, and though Belgium is now able to export to Italy the main beneficiaries of this increase are clearly Germany and France. A full increase of 20 per cent in Britain's quota would amount to less than £150,000.

Roughly one-third of French imports of industrial products from Britain are subject to quotas. They include high quality wool fabrics, a wide range of engineering goods, consumer durables, radio and television sets, office machinery and furniture, motor cycles, toys, pottery and clothing. Though France has not yet announced its new quotas it is possible to indicate the order of discrimination against Britain and other "outsiders." Broadly speaking, the value of French quotas to members of the common market, and to other members of OEEC, are each about £50 million. An increase of 20 per cent on each amounts to £10 million. But to the quotas for common market countries must be added the value of the new quotas equivalent to three per cent of domestic production; this is believed to amount to roughly £30 million.

French production of motor cars in 1957 was about 725,000 units; three per cent of this is about 22,000 units. Imports from common market countries in 1957 amounted to about 8,000 units, and imports from Britain to about 1,600 units. The quota from common market countries will therefore jump by nearly three times to about 22,000 units, while imports from Britain can hardly rise by more than 20 per cent.

Discrimination by tariffs: On January 1st the common market countries reduced their tariffs against each other on industrial goods (excluding those covered by the coal and steel treaty) by 10 per cent. The tariffs against all other members of OEEC and Gatt were also reduced by 10 per cent, unconditionally, but not if this reduction would bring the tariff below their eventual common external tariff. On such items, therefore, the tariff against countries within the common market is now lower than that against outsiders. The French and Italian tariffs are generally above the eventual external tariff; the German tariff is close to it already, and the Benelux tariff is generally below it, and will have to be raised in time. Among British exports to Germany, the major item now suffering discrimination is wool fabrics; the tariff for members of the common market has been cut to a range of 10½ to 15 per cent; for Britain and other countries it remains at 12 to 17 per cent.

★

As the Benelux tariff is already low—on engineering goods generally it is only six per cent—the degree of discrimination is small, though widespread. But motor cars bear a high tariff; for common market countries it dropped to 21½ per cent, and stayed at 24 per cent for non-members. Details of the changes made so far by Italy are not yet available, and the reductions made so far by France do not cover the items in which Britain is most interested.

Though the immediate effects of the changes in quotas and tariffs are not likely to be severe, discrimination will steadily increase. All quotas are to be increased at intervals until they eventually disappear, just as the tariffs on goods moving within the common market are to be reduced until they too disappear. Clearly there is every need for Britain and other countries to strive for a form of association with the common market that will give them something like equitable treatment.

CIGARETTES

Kings Go Forth

A NEW competitor in the smallest, but fastest growing, section of the British cigarette industry will make its appearance this month, when W. D. and H. O. Wills will introduce their king-size tipped Kingsway brand. Kingsways, which will be in the tobacconists' shops on February 23rd, will sell for 3s. 11d. for 20, the same price as most of the existing king-size tipped brands. They will be the second long, tipped brand made by the Imperial Tobacco group; the other is Churchman "K," which was introduced last October. Along with Gallaher, Imperial Tobacco make nearly nine-tenths of all the cigarettes made in Britain; Gallaher, however, has not yet produced a king-sized tipped brand. The present sales leader of this type (and the first to be introduced here, in March, 1957) is Rothmans, made by Rembrandt Tobacco of South Africa. With the introduction of Kingsway, Wills will offer a tipped brand at each of the three main price levels in the market; their tipped Woodbines now lead sales in the lowest-priced group, 2s. 6d. for 20.

Tipped cigarettes now account for an estimated 10-12 per cent of the total market in Britain. In the United States, nearly half of all cigarettes sold are tipped, and most of these are king-size; however, it seems unlikely that similar popularity will be enjoyed by them in Britain for a long time, if ever. The phenomenal success of tipped brands in America comes—at least in part—from public fears arising from experiments showing that nicotine could produce cancer in mice; about three years ago, American manufacturers of tipped cigarettes captured a large part of the total market from untipped brands on this account. British manufacturers, noting the drop in total cigarette consumption in America at the time of the cancer scare, assiduously refrain from using the word "filter" in their advertising, on account of its psychological implications. Other reasons for the popularity of tipped cigarettes may be their relative cleanliness and their economy (since they may be completely smoked without wasting a stub). The method of assessing duty on tobacco in Britain also favours tipped brands; since duty is paid on tobacco before it is made into cigarettes (in contrast to Federal and State taxes levied on each package in the United States) a tipped cigarette, containing less tobacco than an untipped one of equal length, carries less duty.

Sales in Britain of king-size cigarettes—all of which are tipped—have increased nearly threefold in the past year and a half; however, they still account for only about one per cent of all cigarette sales. Although exact figures are not available, it is believed that women account for somewhat more than half of tipped brands' sales. Popularity among men, however, is growing. One of the few well-substantiated triumphs of "motivation research" to date has been to discover—and help to overcome—the notion that smoking tipped cigarettes is effeminate.

IMF

Quotas and Convertibility

THE process of raising members' quotas in the International Monetary Fund and the World Bank is in the final stage. The Fund announced this week that it has received affirmative votes from governors representing countries with more than 99 per cent of the present quotas for the proposal of the executive directors to raise quotas by 50 per cent (and those of Germany, Canada and Japan by considerably more). Each country has now to ratify the increase in quotas offered to it; the increases will become effective if countries having 75 per cent of the present quotas do so. Members are asked to notify the Fund of acceptance of increases in their quotas by September 15th. The British Government has already introduced a bill providing for its own increase. Britain's quota will rise from $1,300 million to $1,950 million, and $162½ million of this will have to be paid in gold. A much bigger payment of gold or dollars to the Fund, of $200 million, is to be made before the end of April as the first instalment on the Suez drawing of $561 million.

This burden could be significantly reduced if other countries took drawings from the Fund in sterling. Last year Mr Jacobsson and his colleagues were thinking of encouraging the use of sterling and D-marks in this way by easing the obligation that any drawing, even of an inconvertible currency, has to be repaid in a convertible currency. They now seem to have decided that the moves to external convertibility of European currencies make a change unnecessary. Sterling and Continental currencies are still not fully convertible *de jure* under IMF articles, and the Fund could therefore not accept these currencies in repayment of drawings. But since they can be converted freely into dollars in official markets, a country borrowing them from the Fund need not worry about the dollar obligation.

Looking further ahead to the day when European currencies are convertible *de jure*—which will be when all restrictions on current trade and transfers have been removed—some observers have expressed concern that for countries holding most of their reserves in sterling this will involve an immediate jump in the reserves recognised by IMF and may therefore involve an obligation to make earlier repayments of IMF drawings. This hypothetical argument appears to overlook Schedule B, Section 3, of the IMF articles, which explicitly states that in calculating members' reserves in connection with repayment obligations, no account is to be taken of the increases resulting from currencies having become convertible.

TELEVISION PROFITS

Odd Contractor Out

ONE contractor, the Granada Group, is not at the moment reaping a fortune from commercial television. But, unlike those that are, it did not have to bear the burden of heavy losses when the programmes were first put out. Associated British Picture, which wholly owns ABC Television, has announced that profits before tax in the year to March 21st next will be of the order of £4.6 million, compared with £2.8 million, and it has already raised its interim ordinary dividend from 7½ to 20 per cent. Associated Television, now seeking a fully fledged quotation on the London Stock Exchange, estimates its profits for the year to April 30th next at over £5.1 million, compared with £3.7 million, and it intends to follow up the interim payment of 40 per cent on the ordinary shares with a final of 60 per cent—making the total payment 100 per cent, compared with 30 per cent in 1957-58.

Your Guests' Choice

That depends very much upon what you have to offer—the selection of wines, spirits and liqueurs that you made some time before you knew you would be entertaining that particular individual.

We can help you to overcome that difficulty, for we have been choosing wines, spirits and liqueurs to meet the hospitality needs of firms who have to entertain many people of quite varying types.

To meet the taste of the unknown guest—our customers tell us we have a flair for it. We should like to exercise it for you by helping you in forecasting your guests' choice. It is rather an expert service.

Commercial television profits will, no doubt, continue to advance but, as the directors of ATV say, they cannot be expected to do so "at the same high rate" as in the recent past. As yet, however, the Granada Group has not fully shared in the boom. It is true that its gross profits jumped from £330,000 to £1,100,000 in the year to September 27th, but it is still tied to a network agreement with another contractor (rumoured to be Associated Rediffusion) which saved Granada from heavy losses initially but which now puts a brake on current profits. That agreement can be terminated in 1960 and Mr Sidney Bernstein said of it at the annual general meeting:

> We may wish it to continue. I can't say. It will depend on conditions at the time. If we do terminate, obviously it will be because we think it will be to our advantage.

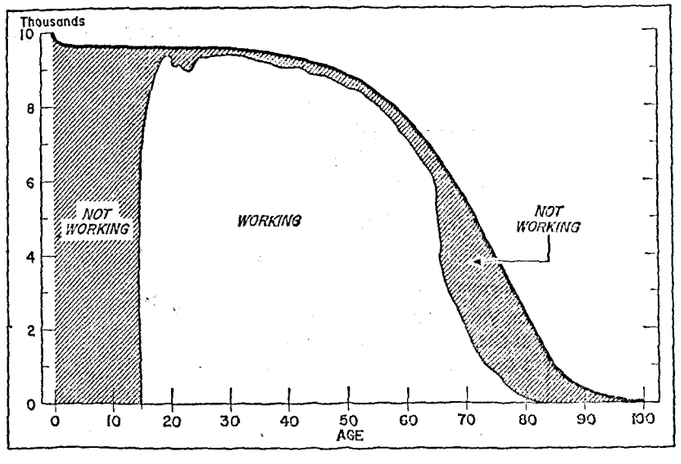
Whatever minority shareholders in Granada may feel about this, the fact remains that three-quarters of the capital is in the hands of the Bernstein family and their associates: whatever fuss is created outside the boardroom, it is this controlling interest that will settle the destiny of the company. Mr Sidney Bernstein and his brother have now said that the intended issue of deferred shares in the television company will not be issued to them but to the parent company. The meeting empowered the directors (who had a big majority of proxies in their hands) to issue 400,000 "A" 5s. shares to directors and executives at par, but Mr Bernstein said that the first 200,000 shares would not be all issued at once and that those that were could not be sold by the owners while they were still employed by Granada unless a stock exchange quotation had been secured. The second tranche of 200,000 shares would not, Mr Bernstein added, be issued without the prior approval of shareholders.

GOLD SHARES

A Rich Strike

THE rich strike at Free State Geduld set in train a familiar series of reactions in the Kaffir market. First, there had been some anticipatory speculation in these shares in Johannesburg. The announcement of the rich development values brought in dealers and professional investors at London and the Cape and the price rose sharply. OFSIT and Blinkpoort, which both have substantial holdings in FS Geduld, and the neighbouring mine, Western Holdings, followed this lead. After the week end the market broadened, if only temporarily, and most OFS issues were in demand. These reactions were sufficient to carry up the *Financial Times* index of gold shares in the week to Wednesday's close up from 86.1 to 88.4, just a shade above the previous peak touched in the middle of November. The strike in the south-western development of FS Geduld, giving an average value of 9,772 inch-dwts from a small footage of reef, is certainly rich and it is a different area from the earlier "jackpot" boreholes that have made FS Geduld the leading counter in the OFS market. At 146s. 3d., Free State Geduld are not overvalued if this pocket of enrichment turns out to be a zone of high values in the southern portion of the mine. But the strike has been made in an area of complex faulting and it will be some months before the find can be fully assessed. The strike justifies the flurry, but in itself does not form the base for another strong and sustained advance in Kaffirs.

The market, however, could remain reasonably firm, for there are no signs that the finance houses are sellers. The main reason is that with the OFS mines still in the early stages of their lives the shops want to hold on to the shares as high-yielding investments. The second is that in the autumn the newly formed American-South African Investment Company (ASA) bought its portfolio of shares directly from the finance houses. It bought them at a value equivalent to $25.80 per ASA share and by the end of the year that value had risen to $30.05. Mr C. V. Richdale and Mr C. W. Engelhard, who launched this venture, are now reported to be considering the formation of a second trust on similar lines to ASA. Whether it will be the same size as ASA and whether or not the shops will again be ready to sell shares directly to it remains to be seen.



How Long at Work

HOW many years a man of a given age may expect to continue at work is the subject of a new official pamphlet.* Following the lines of actuarial life tables, the Ministry of Labour's statisticians have calculated the figures illustrated in the chart. These show, out of 10,000 males assumed to be born at the same time, how many should have survived at different ages and how many should be in employment—or be seeking employment—on the assumption that death rates and working habits remain unchanged from those general in 1955.

In addition to those continuing full-time education, there are always some men, even at younger ages, who, because of sickness, infirmity or, perhaps, good fortune, remain outside the labour force. Out of the 10,000 starters, 9,437 would be expected to be surviving at the age of 30, but only 9,390 would, on 1955 experience, be in the working population. Two-thirds of the starters are expected to survive to the age of 65, and 87 per cent of these may be expected to be still working; but, by the next year, at age 66 the proportion occupied has dropped to 60 per cent. Nevertheless it is not until the age of 68 is reached that there are more men in retirement than at work.

Such calculations can be looked at another way. Taking the number at any given age in the working population, the total future man-years they may expect to spend in the labour force can be shared out between them to give an estimate of their average expectation of working life. On this basis, a youth of 15 may expect to live another 55 years and to spend 48½ years of it at work; a man aged 40 may expect to live another 31½ years and to work another 25 years.

Between 1931 and 1955, the expectation of working life at birth rose from 40½ years to 45½ years and there was some increase at all ages up to the middle-forties, after that, earlier retirement outweighed the reduction in mortality rates. Whereas in 1931, 54 per cent of men aged 70 were occupied (including part-timers), in 1955 the proportion was only 40 per cent; at age 75 the proportion has fallen from 36 per cent to 21 per cent.

* The Length of Working Life of Males in Great Britain. Ministry of Labour and National Service. HMSO. 3s. 6d.

EXPORT CREDITS

No Breakaway

BRITAIN'S efforts to check the sag in its exports to countries that have suffered falls in their own export earnings depend in some part on its willingness to supply the exports on credit. Happily, there has been no general breakaway, here or by the other member countries of the Berne Union, from the agreed maximum period of repayment of five years for official insurance of export credits; the recession in world trade has set off no credit war. But the greater needs of Britain's customers for extended credit, as well as Britain's strengthened external finances, encourage more generous treatment of applications. The Government itself has led the way, by extending credit direct through the Section 3 machinery of the Export Guarantees Act. The emphasis at the Montreal conference was on Commonwealth borrowers, who were to be charged only ¼ per cent above the rate at which the British Government itself borrows; but apart from the substantial aid to India, and a loan to Pakistan, the new borrowers so far have been non-Commonwealth countries, Sudan and Jugoslavia, and another non-Commonwealth application is now being considered. Such borrowers do not appear to get the cheap "Commonwealth rate."

The bulk of export finance comes from private banking sources, and receives publicity only when a new venture is made (and not always then). This week Hambros Bank, which has long been active in financing trade with Scandinavian countries, announced a new credit for up to £3 million to finance British exports to Finland (which have been falling off in recent years). The credit will cover capital goods for the most part, including agricultural machinery; it provides for payment by Finnish importers of 20 per cent in cash and the balance over five years. The credit is dependent on co-operation of the Export Credits Guarantee Department, which has to satisfy itself that the credit terms are appropriate for the particular items in question. A number of British exporters will benefit from this credit, which is expected to foster new exports to Finland as well as help traditional business.

RADIO AND TV

Thorn's Transatlantic Agreements

THE agreement announced this week between Thorn Electrical Industries and Philco International, of New York, is not the first time that Thorn has stated it would co-operate with an American manufacturer in the production of television equipment. On August 29, 1955, Mr Jules Thorn, chairman of the company, announced that it intended to embark on the manufacture of cathode ray tubes for television receivers in conjunction with Sylvania Electric, an American firm; it had previously worked with Sylvania in the production of fluorescent lamp tubes. At that time, Thorn stated that it would sell TV tubes thus produced to the public at prices up to a third lower than those charged by the members of the British Radio Valve Manufacturers' Association, whose trading agreement standardises valve and tube makers' discounts. But no tubes were ever made by Thorn in conjunction with Sylvania.

Under the announced terms of the agreement with Philco, Thorn will obtain the use through licence of all Philco patents and designs in black and white television, radio and phonographs, including high-fidelity and stereophonic sound. In addition, it is reported that Thorn will acquire—for an undisclosed consideration—the issued capital of Philco (Overseas), Philco's radio and television manufacturing subsidiary in Britain. Philco (Overseas) in turn owns a sales company, Philco (Great Britain); both of these companies will continue to operate in their present form, as subsidiaries of Thorn, who will make radio and television sets under the Philco trademark both for sale in Britain and abroad.

Thorn has probably been the largest British producer of television receivers since it took over production of EMI's HMV and Marconiphone radio and television in 1957; its sets are sold under several names, the largest-selling one being "Ferguson." The company also claims to be the largest maker of fluorescent lamps in Britain, and its subsidiary Atlas Lighting makes a wide range of other lighting apparatus including street lighting. In addition another subsidiary produces domestic electric cookers. Philco is one of the leading American manufacturers of electrical and electronic appliances and equipment; it has extensive international connections, including manufacturing licensees in fifteen countries. Its "Predicta" television set, in which the picture tube is separate from the rest of the receiver chassis, has met with very favourable reception in America. Philco also has a licensing agreement with Semiconductors, Ltd., for the manufacture of transistors.

ATOMIC ENERGY

Euratom Signed

OFFICIALS of the Prime Minister's Atomic Energy Office heaved a sigh of relief this week at the signing of a treaty with Euratom. This manages by a miracle of

Appointments, Business and Personal notices, and other Classified Advertisements pages 537 and 547

diplomacy to give least offence all round. The treaty is closely modelled on the so-called "power agreements" that cleared the way for the sale of British nuclear power stations to Italy and Japan. The important clauses in these agreements are those that govern the supply of nuclear fuel. Because Euratom is the sole distributing agent for nuclear fuels produced in or supplied to the six member countries, Britain was obliged to complete a similar "power agreement" with Euratom in order to remove what would otherwise have been an insuperable legal barrier to the sale of British-built reactors to members of Euratom.

It is no secret that Euratom negotiators would have preferred a very different sort of treaty, one that was something more than a legal formality. Britain, however, is especially anxious for commercial reasons not to give the impression of offering bigger concessions to Euratom, in the form of co-operation and technical aid, than are offered to any other potential customer of the UK nuclear engineering industry. The Euratom countries are not particularly good sales prospects compared with some of the other OEEC members outside the Common Market. They have the engineering know-how to design and build their own nuclear power stations, as the French are already doing, and the mere existence of Euratom as a co-ordinating authority gives them an added incentive to do so.

The United States, with no commercial nuclear power industry at home, considered it well worth while to buy a foothold for US manufacturers in Europe by offering lavish concessions to Euratom. Britain, on the eve of completing its second major atomic export contract, felt that any attempt to match American generosity would give more offence to potential customers outside the six countries than it would win friends inside them. The decision has certainly cost some good will at Euratom headquarters; time alone will show whether it was the right one to take.

BANK FIGURES

Other Accounts in Other Accounts

THE banks are meeting the long-standing demands for more information about their balance sheets little by little. Since the autumn, footnotes have appeared on the combined monthly statement showing subdivisions of most items, and showing the banks' internal clearing items which artificially swell deposits and advances. The January statement adds a further subdivision—and the banks state officially that the change has been made by agreement with the Radcliffe Committee. The new information is about the "other accounts" included with deposits. The most important of these accounts are internal, representing inner reserves. It would be hoping for too much to expect the banks to reveal their hidden reserves; but the new split gives little clue to their magnitude. Internal funds are grouped with suspense accounts (a notorious banking hotchpotch) and "credits in course of transmission" (which arise when a bank debits an account before another is credited). The total of the three items is £414 million—included in the aggregate deposits item of £6,936 million. It is virtually impossible to guess the size of the special clearing items, thus only the broadest range can be given to internal funds. A complementary yardstick is the total published capital and reserves—rather over £200 million.

The January statement confirms that, allowing for the special transit items, advances have gone on rising strongly this year. Indeed the pace seems to have quickened somewhat; but that was to be expected at the opening of the taxpaying season. The true rise in the first three weeks of January was £44 million.

CHEMICALS

Silicon from ICI

IMPERIAL CHEMICAL INDUSTRIES' announcement that they have begun to produce high-purity silicon in a large-scale development plant emphasises the growing use of this material in semi-conductor devices. Germanium is still much more widely employed, being cheaper and easier to use, but silicon has advantages for some applications. That it can stand much higher temperatures than germanium is perhaps of only limited value. More important are its ability to stand higher voltages and its much lower leakage. There are different opinions in the industry concerning the extent to which these characteristics will enable silicon to supersede germanium, but it seems likely that silicon's main application in the immediate future will be in rectifiers and microwave diodes. But the extent to which its use increases in transistors will depend on how far costs fall as experience is gained in its use.

Up to now British-produced high-purity silicon has not been available on the market, and supplies have been imported from France and the United States. Standard Telephones and Cables began production for their own use on a substantial scale some two years ago, using the process they had developed for converting silene gas to silicon. They sold the North American and British rights to this process to du Pont last spring, and du Pont are employing it at their new factory in North Carolina, from which much of the British supplies are at present coming.

ICI's entry into the market will add an independent British source of silicon, which should be able to compete with imported supplies and facilitate its extended use. In spite of the price of over £100 a pound silicon is less expensive to use than it might appear; only microscopic quantities need be employed. So ICI's output of 4,000 pounds a year by next June will represent a significant addition to British supplies.

THE ROYAL BANK OF SCOTLAND

VERY SATISFACTORY RESULTS

DRAMATIC RECOVERY IN COUNTRY'S FINANCIAL POSITION

GROWING RECOGNITION OF ROLE OF HIRE PURCHASE IN CREDIT SYSTEM

NEED FOR FUNDAMENTAL CHANGE IN SCOTTISH INDUSTRY TO COMBAT EMPLOYMENT PROBLEM

THE DUKE OF BUCCLEUCH ON AN EVENTFUL YEAR

The Annual General Court of Proprietors of The Royal Bank of Scotland will be held on February 24th in Edinburgh.

The following is the circulated statement of the Governor of the Bank, His Grace The Duke of Buccleuch and Queensberry, KT, PC, GCVO, LLD.

The past year will, I am sure, go down in banking history as one of the most eventful for a very long time. There can scarcely have been in any other period of six months so many important developments as took place in the second half of the year. They followed, and indeed came as a result of, the changes in monetary policy made possible by the dramatic recovery in the country's financial position from the low point touched in the late summer of 1957. Since March 20th last, five successive reductions in Bank Rate, following fairly closely upon one another, have brought it down to 4 per cent from the crisis level of 7 per cent, to which it had been increased in September, 1957; with one exception of minor importance—the granting of credit for the speculative buying or holding of shares, materials or property—the restrictions which had for so long hampered the Banks in their lending were withdrawn in July; the controls on hire purchase trading were subsequently relaxed and later removed completely; and by December our Gold and Dollar reserves had been built up to a level which, with the strength being displayed by Sterling, justified the Authorities in making fully convertible all Sterling accruing on current account to persons outside the Scheduled Territories. This granting of convertibility to all non-resident account Sterling was a demonstration of the confidence with which the future of our currency is now viewed—in marked contrast to the fears held in September, 1957—and it should enable London to regain its position as the world's leading International Foreign Exchange Market. Already there are indications that much of the exchange business transacted in recent years in exchange centres overseas is returning to London. Another declaration of confidence was the decision to resume payment of the interest on the American and Canadian Loans.

EXPORTS WELL MAINTAINED

It must be conceded that the recovery in our external financial position was in considerable measure due to the improvement in the terms of our overseas trade brought about by the fall in the prices of the primary commodities which we import. Nevertheless our exports were well maintained throughout a period of recession in international trade when they might have been expected to fall substantially, and there was the most encouraging feature that in some of the most competitive lines we actually succeeded in expanding our sales in overseas markets. The actual extent of the increase in our Reserves over the year was £284 million; in the first half of the year the surplus of £334 million on our Current Payment Account was a record, and it is noteworthy that Sterling continued in demand in the second half of the year, the period when the pattern of our overseas trade generally brings it under severe pressure.

Internally, the situation is rather less satisfactory for there was a substantial decrease in the level of our production during the year and despite the success of the monetary policy in other directions it did not succeed in completely halting further wage increases. The increases actually granted were less than in recent years, the average rate working out at around 4 per cent, but—and this is the most disturbing feature—the increases were not matched by a corresponding increase in the productivity of industry generally. The impact of the wage increases granted was, however, fortunately more or less neutralised by the lower prices of our imports of basic commodities and it was to this factor as much as any other that we were indebted for the relative stability in the level of our prices. Had the terms of trade not been so favourable for us our prices would inevitably have risen as a result of the wage increases granted. We cannot hope to be so fortunately placed in this respect every year.

SPECIAL DEPOSITS SCHEME

The withdrawal in July of the controls over credit was warmly and universally welcomed and, while we shall have to await the Report of the Radcliffe Committee before we shall know how the credit situation is to be regulated in future, it is to be hoped that controls of the nature we have had in recent years will never be reimposed. The Authorities have however made it clear, and it bears out what I have said in the past, that the Bank Rate weapon is not now considered sufficient by itself to regulate the credit situation. It is admitted by the Chancellor of the Exchequer that some additional method must be available "to reinforce the existing machinery of interest rates and open market operations." Accordingly, the Authorities, with the co-operation of the Banks, have drawn up a Special Deposits Scheme to be put into operation should the need to restrain an increase in the total of Bank advances arise before the Radcliffe Committee reports. The Scheme, which is an innovation of a fundamental character in British Banking policy, invests the Bank of England with power to call upon the Banks to make Special Deposits with it—Deposits which will be set apart from and not regarded as part of the Banks' liquid assets. This will, by reducing the liquidity of the Banking system, limit its capacity to add to its lending. Special Deposits will be distinguishable from Treasury Deposit Receipts, which were issued during and immediately after the last war, in that they are to be used purely as an instrument of monetary policy and not as a means of borrowing from the Banking system to finance Government expenditure.

ENTRY INTO HIRE PURCHASE FIELD

Following upon the relaxation of credit restrictions, a number of the British Banks acquired interests in the Share Capital of Hire Purchase Finance Companies. In our case, in conjunction with our Associated Banks—Williams Deacon's Bank Ltd. and Glyn, Mills & Co.—we purchased a 40 per cent interest in the capital of The British Wagon Co. Ltd., with whom Williams Deacon's Bank Ltd. have had a close connection since the Company commenced business almost ninety years ago. We look forward to a long and happy association with the Company and I am confident that the partnership will be to the mutual benefit of the Company and our Group. This association of the Banks with Hire Purchase Companies will give the Banks an interest in a section of the credit machinery which has become increasingly important in recent years. It will also add strength to the Hire Purchase financial system. In the past the Banks were the chief providers of credit but now many other types of concerns are also providing credit either for general or specific purposes. Partly as a result of this and partly because of the restraints on Bank lending in recent years, the Banks have actually been supplying a much smaller share of the credit requirements of the country than formerly. It is surely, therefore, in their own interests and, I would say, in the interests of the community as a whole, that the Banks should not continue to stand aside and allow an increasing share of their traditional business to pass into other hands. There has undoubtedly been a great change in the public attitude to hire purchase and much of the prejudice with which it was formerly regarded has disappeared. There is now a much greater disposition to recognise that hire purchase has an important place in the credit system, that it stimulates the production and use of consumer durable goods, and that it encourages the acquisition of durable goods with money which might have been devoted to less worth-while forms of spending.

PERSONAL LOANS

I think I should at this stage refer to the new category of personal loans which we have instituted. This type of loan has not

been introduced to take the place of the conventional personal overdraft which we have always been willing to give to credit-worthy customers, nor has our policy in regard to these changed in any way. We consider that the new type of loan, with its fixed repayment terms and the fact that in the event of the death of the borrower before repayment the balance of the loan outstanding is extinguished, may be more acceptable than an ordinary overdraft to some people, particularly the salary and wage earner in receipt of a regular income. I should like to see a wider section of the community availing themselves of the services of the Banks and we, on our part, must do everything we can to encourage this by offering to those whom we wish to attract as new customers the kind of service which most appropriately fits their circumstances and needs.

EUROPEAN FREE TRADE AREA

So far all the efforts directed towards the establishment of a European Free Trade Area to take its place alongside the European Common Market have not met with success. A year ago I said that we could not, by refusing to become part of the Free Trade Area, afford to isolate ourselves from the European Community. I hoped then that by this time a Free Trade Area would have become a reality and, still being as acutely conscious today of the desirability—not only in this country's own interests but in the interests of Europe as a whole—of the setting up in Europe of a Free Trade Area on the widest possible basis, I trust that our Ministers will persevere in their endeavours to reach agreement with the other nations concerned.

SCOTTISH UNEMPLOYMENT PROBLEM

One of the most unfortunate and disturbing features of 1958, which we are carrying with us into 1959, is the level to which unemployment has risen. This is a particularly serious matter for Scotland where, due to the character of our economy, unemployment is traditionally higher than in other parts of the United Kingdom. The proportion of the working population unemployed at present is twice the average for the whole country and even this does not reflect the full measure of the hardship felt in some areas, where a very high percentage of the working population is out of work. This is a state of affairs for which there is no easy or quick remedy. It is one of the consequences of the present structure of Scottish industry and it will be necessary for this to be fundamentally changed before any real and lasting improvement can be looked for in our general employment situation. Considerable effort has been devoted towards diversifying Scottish Industry and indeed, much has been accomplished in this direction but the country is still too dependent on the shipbuilding and capital goods industries. Figures published during the year suggest that approximately 12 per cent of the Scottish population is dependent, directly or indirectly, upon shipbuilding. Furthermore, the proportion which capital goods production bears to consumer goods production is much higher in Scotland than in the United Kingdom as a whole, and because of this, I do not anticipate that the Scottish unemployment problem will get any quick relief from the recent policy changes designed to stimulate consumer spending. What Scotland needs more than anything is the establishment of new industries manufacturing a wide range of consumer durable goods. Our economy is at present seriously deficient in this respect.

AN IMPORTANT INDUSTRIAL DEVELOPMENT

It is for this reason principally that I welcome the decision to build a Steel Strip Mill at Ravenscraig. It is satisfactory that Scotland is being allocated a share of the whole strip mill project, and the Government's decision was, I think, in the circumstances, a fair and reasonable compromise in view of all the considerations—political, economic and social—involved. When the Mill is fully operational it will be capable of producing abundant supplies for the existing sheet steel consuming industries in Scotland and still leave adequate supplies available for new industries. Accordingly, if the country is to reap the maximum benefit from the new project, new sheet steel consuming industries must be attracted to Scotland. I believe that it is one of the most important industrial developments in Scotland in recent times and that it will provide us with a really great opportunity to secure the most substantial contribution yet to the diversification of our industry. Apart from this, it will bring a better balance into our steel industry, which has always hitherto been predominantly engaged in producing for the heavy side of industry. The effect of this is seen in the extent to which the steel industry in Scotland operated below capacity in 1958—44 per cent as compared with 25 per cent in the United Kingdom as a whole.

In September of this year we are again to have in the Kelvin Hall, Glasgow, a Scottish Industries Exhibition organised by the Scottish Council (Development and Industry) on similar lines to the successful Exhibitions of 1949 and 1954. The Exhibition is to be essentially a Trade Fair with the primary object of promoting Scottish Export Trade and stimulating further interest throughout the world in Scotland and her products. The emphasis will be on increasing the sales of the goods we produce. It is not enough that we can make goods of a high quality; we must also be able to sell them.

In a year in which the Scottish economy has suffered from the general decline in manufactures it is very encouraging that work has started on the new extension to the British Hydrocarbon chemical plant at Grangemouth. As befitting such a venture, the first pile was driven by Mr Maclay, the Secretary of State for Scotland, at a formal ceremony in October. I have in other years stressed the value to Scotland of the developments at Grangemouth and I hope with the Secretary of State that "the versatility of the Chemicals produced at Grangemouth will" before long attract to the area "a still wider range of industrial production."

WOOL

Our high class woollen industry which a few years ago was conducting a very substantial export business, particularly to Dollar Markets, encountered difficult conditions in 1958, partly because of the import quota arrangements imposed by the United States of America and partly because of the American recession. Prospects for 1959 are, however, regarded as being more favourable. In a recession the demand for high quality goods in the luxury range is one of the first to be affected by the cutting down of personal expenditure, and I hope that when the recession in the United States and Canada finally passes, purchases of the products of our woollen industry will revive and thereby restore the industry to a leading position as a Dollar earner.

SCOTCH WHISKY

Exports of Scotch Whisky still continue to expand and a new record was achieved in 1958. Our exports of this great Dollar earner are still limited by the capacity of the Trade to increase the amount of blended whiskies available for sale, but there should be an improvement in this respect in the years ahead and there is every prospect that exports will continue to expand.

SHIPBUILDING

Although the larger shipbuilding yards in Scotland have full order books and some have sufficient work in hand for the next five years, the future prospects, particularly of the smaller yards, are less bright because of a definite scarcity of new orders. Keener prices and earlier delivery dates from countries with shorter order books, such as Germany and Japan who have now greatly increased capacity, have resulted in much fiercer competition. A factor in attracting orders to foreign yards has been the generous credit terms offered by them. The cancellations of orders have also been a disquieting factor, especially for some of the smaller yards which for the first time since before the war find themselves with empty berths. But even if the future has its uncertainties, it cannot altogether be without prospects when it is remembered that there is still a considerable backlog of old shipping to be replaced and that a new demand may arise for ships using nuclear power. Moreover, the continued expansion in the consumption of oil will increase the need for more tanker capacity, and the long-term outlook may therefore not be so unpromising as it may appear.

FARMING

The weather during the past year was again unkind to farmers. The spring was disappointing but towards the end of April an improvement set in and the better weather in May favoured lambing on the hills. The crops looked very healthy in early July when the weather was good but thereafter for a period of about seven weeks the rainfall was abnormally heavy. This greatly affected the cereal crop, the east of Scotland suffering more in this respect than the west. At one time the position in the Lothians was desperate. Although September brought better weather, the harvesting conditions were difficult and there can be no doubt that many farms suffered substantial damage. Livestock markets, however, were buoyant and fat cattle prices tended to rise to guaranteed prices and beyond. Notwithstanding all the difficulties which they have had to face, particularly adverse weather and rising production costs, our farmers are still doing a first class job and continue to contribute substantially to our economic health.

THE BANK'S AFFAIRS

Turning now to our own affairs, I feel sure you will derive considerable satisfaction from the results for the year and the state of the Bank's affairs as contained in the Annual Report and Accounts, a copy of which accompanies my Statement.

The Profit for the year—£690,771 after the usual allocations—is a record and it has enabled the Court of Directors to recommend an increase of 2 per cent in the final dividend, which will make 16 per cent for the year as compared with 14 per cent last year. It is proposed to transfer £150,000 to the Published Reserve Fund and if the dividend recommendation is approved there will be a balance of £145,002 at credit of the Profit and Loss Account to be carried forward. It is hoped that in the absence of unforeseen circumstances the dividend will be maintained next year at the increased rate of 16 per cent.

Deposits at nearly £135 million were approximately £14 million above the figure at December, 1957, and, while they include some balances which were higher than normal and which may have been built up to provide for special payments due in the early part of the new year, the trend of our Deposits throughout the year has been very encouraging, particularly in the second half of the year when the level showed a gratifying increase.

Our Advances at December 31st amounted to £45,700,000—just over £3 million higher than at the end of 1957. With the upsurge in demand which has been in evidence since the restrictions were withdrawn in July and with commitments not fully drawn against at the end of the year, we anticipate that a further increase in our lending will take place in the current year. Although our Personal Loans Scheme has met with an encouraging response the total involved is not likely to become, for some time at any rate, a major factor in our total Advances.

Notes in Circulation showed an increase of £400,000 over the total in circulation at the end of 1957. The smallness of this increase, in relation to the general expansion in our business, is an indication of the less prosperous times being experienced by industry and the consequent rise in unemployment and short time working.

STRONG FINANCIAL POSITION

The Balance Sheet again shows a strong and liquid position. Our Investments are entered at or under their market value at the end of the year. The improvement in the prices of British Government Stocks is one of the most favourable features of the past year and our Stockholders will not need to be reminded that the Bank's results are affected by the provisions which have to be made to cover any diminution in the market value of our Investments and other contingencies.

The increase in the Trade Investments from £166,500 to £1,218,687 reflects our investment in The British Wagon Co. Ltd.

ASSOCIATED BANKS' CONTINUED PROGRESS

I am pleased to report that our Associated Banks continue to make satisfactory progress. They show strong liquid positions, but perhaps the most pleasing feature is the expansion in the totals of Deposits, and the higher resources thus available, together with the increase in Advances, have enabled both Williams Deacon's Bank Ltd. and Glyn, Mills and Co. to record higher profits. You will have observed from the Press that during the year Williams Deacon's Bank increased their Paid-up Capital from £2,275,000, consisting of £5 "A" Shares £1 paid and "B" Shares £1 fully paid, to £2,500,000 in £1 Shares fully paid. Following this reconstruction of their Capital, Williams Deacon's Bank raised their Reserve Fund to the same amount as their Paid-up Capital. Our practice is to value the holdings in our Associated Banks as Paid-up Capital and Published Reserve Fund, and accordingly you will observe from our Balance Sheet that the total under Subsidiary Companies is now shown at £7,400,000 as against £6,950,000 for last year. Both Williams Deacon's Bank and Glyn, Mills and Co. have declared dividends at increased rates for 1958.

Last year I referred to the policy of Williams Deacon's Bank in expanding their Branch system and I am glad to report that in furtherance of this policy they opened during 1958 new Branches at Bristol, Cardiff, Chester, Leeds, Nantwich, Southampton and Warrington.

Looking at the Group as a whole, the total of Deposits amounted to £341,838,679 as compared with £316,953,048 for the previous year, while Advances at £113,746,841 showed an increase of over £6 million. The consolidated Profit amounted to £996,289, an increase of £102,000 over the 1957 figure.

There has been only one change in the composition of the Court of Directors since last year—the appointment to the Court of Mr Hugh Cowan-Douglas, CA, of Glasgow, who strengthens our representation from that City and brings to the Court a wide knowledge and experience of Scottish Industry. We feel very fortunate to have secured his services. The Stockholders will be invited to approve his re-election.

RESIDENTIAL STAFF COLLEGE

I feel that I should take this opportunity of informing Stockholders of the inauguration during the year of a residential Staff College. Since 1954 we have carried through a programme of training courses for our Branch Accountants and this experiment proved so successful that your Directors decided to broaden the basis of the scheme by extending the benefits to all Members of the Staff by instituting a Staff College. Accordingly, the Bank acquired suitable property in Edinburgh and I am pleased to say that the College was opened on October 6th with a Branch Managers' Conference. It is intended that the College will operate for the greater part of each year and the Courses will embrace all grades of Staff from Managers to Apprentices. Your Directors are confident that this development in Staff Training will be beneficial to the Bank and Staff alike and it affords the Board and Management the opportunity of meeting socially a wider circle of the Staff than has hitherto been possible.

Once again I would like to pay tribute to our Staff. The very satisfactory results which I have just reported could not have been achieved without considerable application and team work. To Mr Ballantyne and all those who serve so loyally under him I would like to convey the sincere appreciation of all of us.

ARTHUR LEE & SONS LIMITED

GROUP'S STRONG FINANCIAL POSITION

The first annual general meeting of Arthur Lee & Sons Limited was held on January 30th at Sheffield.

The following is an extract from the statement by the chairman and managing director, Mr G. Wilton Lee, TD, JP, which has been circulated to all members:

The Trading Profit for the year as shown in the Consolidated Profit and Loss Account is £794,395, which compares with £820,922 in the previous year. It should be noted, however, that this is after charging Depreciation and Additional Depreciation totalling £330,043, i.e. approximately £50,000 more than in the previous year. Other income is £44,096 compared with £71,165, the fall being mainly due to the hiving off of investments to the Investment Company. The profit for the year before taxation is thus £838,491 against £892,087 last year. I think this profit can be regarded as reasonably satisfactory in all the circumstances of varied and difficult trading conditions through which we have passed. We commenced the trading year with a good order book in all departments, and in the early part of the year our profits showed an improvement over the figures for the corresponding period of the previous trading year. Then came the delayed effect of the Government's measures to combat inflation, i.e. severe credit restrictions, high interest rates, reduced Government spending, etc., resulting in liquidation of stocks and weakening of demand by most of our customers.

Simultaneously, the export market became progressively more competitive and whilst the value of export sales was only 12¼ per cent less than the figure for the previous year, profits on exports decreased by nearly 50 per cent, this being largely due to the recession on the Continent as a result of which our competitors in Germany and Belgium, and even in Sweden, have taken orders for export at prices considerably below those of their home trade and in many cases below the cost of production. Commonwealth trade, notably in India and New Zealand, owing to import and credit restrictions, and Colonial trade, due to lack of finance, have contracted severely. These markets are now receiving Government attention at high level with a view to restoring demand from them.

During these difficult trading conditions a certain amount of short time became necessary in our hot rolling mills. In addition, our profits on hot rolled strip were affected by difficulties with certain new plant, and especially by the arbitrary reductions in selling price in April last whereby the effective margin was considerably reduced. In the cold working sections of our business, despite the various adverse circumstances little short time has been necessary. This I believe is due to our rather unique position in the cold worked steel industry as makers of steel strip, bars and wire which are complementary, and to the comprehensive nature and high quality of our products.

It is difficult to forecast future trading conditions. I am, however, optimistic as orders recently have been more encouraging. Easier credit facilities, coupled with Government measures for the easement of hire purchase restrictions and for increased investment should now result in increasing demand, particularly as most customers' stocks are now at the minimum for economic working.

RECONSTRUCTION

It is not my intention to repeat all that I said in my circular addressed to Shareholders last March but, in brief, your Directors felt that the separation of certain of our investments from our trading assets might prove very beneficial to you in the event of the re-nationalisation of the Steel Industry. This necessitated the carrying through of a complicated procedure after you had given your approval at the end of March. The result was that a new company emerged, namely, Arthur Lee (Investments) Ltd., which does not form part of our Group and whose shares are now quoted separately on the Stock Exchange.

ACCOUNTS

As a result of the Reconstruction, there are a number of differences in the Balance Sheets which are explained in the Notes on the Accounts. Perhaps to the shareholder the

most significant point is that the Revenue Reserves of the old Group have now become Capital Reserves in the new Group. Put briefly, this means that they can no longer be regarded as available for the purpose of paying dividends. Your Directors, however, have always followed a conservative dividend policy, believing that dividends, however described, should be well covered by the profits available of each current year. It is their intention to continue this policy, but it should be explained that subject to sufficient profits being available they intend that future Ordinary dividends, which will all be subject to deduction of tax, shall not be less in total net amount than those distributed in recent years in the form of Ordinary dividend and tax-free capital bonus. It is the intention of the Directors to consider the payment of an interim dividend in the Spring of 1959.

The Consolidated Balance Sheet shows that the Group is in a very strong financial position. Despite the "hiving off" of the investments, the total of Share Capital and Reserves at £4,267,325 shows an increase of £112,674. The Net Current Assets have increased by £237,562 to the impressive figure of £3,242,894. Due mainly to some lessening in Stocks and Debtors, our Bank Balances, Short Term Loans and Cash are £557,952 higher than last year.

DEVELOPMENTS

Some three years ago we purchased a new site of 25 acres, within two miles of our present Trubrite Works, on which we intend to develop our wire production. This has become necessary due to the fact that the old buildings at our Crown Works and at Shipmans do not lend themselves to economic handling and production, and owing to geographical features it is not possible to remedy this on the existing sites. In order to remain competitive, we must accelerate production and handling, and the only way to do so is to develop on a new site.

Considerable planning has been carried over the past two years and visits have been paid to other plants both at home and abroad, where friendly co-operation was appreciated. The project is likely to be expensive but when completed we believe that we shall have equipment for high-grade wire production which will be at least equal to that of the best of our competitors from the point of view of production costs. We expect to finance this project entirely out of our own resources.

RE-NATIONALISATION

In my Statement last year I drew attention to the threat of the re-nationalisation of our industry in the event of a return to power of a Labour Government. My feelings on this matter have in no way altered in the interim. The Socialist opposition in Parliament have not said anything to contradict what has been said by me and by other Chairmen of public companies, nor have they advanced any sound or logical reasons for carrying out their intentions.

STAFF AND WORKPEOPLE

In closing, I would again pay tribute to the work which has been put in by all our staff and workpeople in a year of difficult trading conditions. They have faced up to circumstances quite new to many of them in a determined manner, and their co-operation has been much appreciated. We look forward to a continuance of this endeavour with optimism for the future success of our undertaking.

The report and accounts were adopted.

THOS. FIRTH & JOHN BROWN LIMITED

SIR JOHN GREEN'S STATEMENT

The Seventy-eighth Annual General Meeting of Thos. Firth & John Brown Limited was held on January 29th at Atlas Works, Sheffield, Sir John Green, JP (the Chairman), presiding.

The following is an extract from his circulated statement:

The gross surplus after providing for Directors' Remuneration but before providing for Debenture Interest £131,986, Depreciation £664,600, and Additional Depreciation £599,000, amounts to £5,856,879, an increase of £1,018,776 as compared with last year. United Kingdom Taxation amounts to £2,611,723, compared with £2,113,392 for the preceding year.

The amount of Unappropriated Profit brought forward is £1,133,098, giving a net amount of £2,982,668 to be dealt with in the Consolidated Accounts of the Group.

Your Directors propose to transfer £1,300,000 to General Reserve, and to pay a final dividend of 6 per cent, which together with the interim dividend of 4 per cent absorbs £442,750, leaving £1,239,918 to be carried forward.

The Current Assets of the Group now amount to £17,830,513, as compared with Current Liabilities of £5,225,882, giving a cover of the latter of 3.4 times.

CAPITAL EXPENDITURE

During the year £1,959,781 has been spent on Land, Buildings, Plant and Machinery by the Group.

The capital expenditure of the associated company, Firth-Vickers Stainless Steels Limited, was £1,075,181.

Outstanding capital commitments already entered into amount to £1,342,000 for the Group, and £100,000 for the associated company, Firth-Vickers.

During the year the following major projects have received the approval of the Iron and Steel Board: (1) A new Ring Rolling Mill. (2) A new 4,000 tons Forging Press. (3) A new 2,000 tons Forging Press.

The approximate cost of this equipment is £1,900,000, and the Company is engaged on the preliminary planning work.

The abnormal conditions associated with the financing of the Iron and Steel industry at this time makes it necessary to retain a substantial proportion of the trading surplus for the purpose of meeting the heavy capital charges involved in the various schemes of improvement and modernisation to which the Company is committed.

TRADING CONDITIONS AND PROSPECTS

The Company and its subsidiaries commenced the year with a satisfactory Order Book, and for the greater part of the financial year were able to operate the plant at full capacity. Unfortunately, during the whole of the period there was a continuing contraction in demand, so that certain of the plant has in recent months been worked below capacity. If the present rate of order intake does not improve, the Company's plant overall will have to operate at about two-thirds capacity. This will have a more than proportionate effect on profits, since overheads such as administration charges and operating costs cannot be reduced in direct proportion with production.

It is difficult to predict the likely trend in business. The relaxation of credit restrictions may lead to an increased demand for flat products and affect the stainless steel and hardened steel roll demand favourably. The demand for special steels for the aircraft industry would appear to have suffered a permanent contraction as a result of recent Government decisions relating to the future scope of the Royal Air Force. Both the Parent Company and William Beardmore & Co. Limited have a large stake in the heavy forgings trade, the products of which are used essentially in capital schemes. Most of the industries concerned—shipbuilding, electrical and mechanical engineering, etc., are finding business difficult to obtain, and even when an improvement does take place there will be a time lag before your Company begins to experience a substantial expansion in demand.

The price of primary commodities is still low, so that in many of our export markets funds are no longer available for new capital schemes. It is very desirable that steps should be taken to improve the credit facilities available to the Commonwealth countries so that their development programmes can proceed.

STABILISATION OF NATIONAL PRICE STRUCTURE ESSENTIAL

The general reduction in demand for steel both in this country and on the Continent has led to increased competition, and a reduction in profit margins. Notwithstanding the warnings of employers, the demand for wage increases persists. During the year increases in wages and salaries were awarded, freight rates and fuel costs were also increased. Under present trading conditions both in this country and in the export markets, these increased costs cannot be passed on. I must emphasise again the urgent necessity to infuse stability into our national price structure.

Having regard to the unusual trading conditions experienced during the year, the overall results are considered very satisfactory and reflect the hard work and loyalty of our workpeople, staff and executives. On your behalf and on that of the Board, I have the greatest pleasure in thanking them all.

The report and accounts were adopted.

COLVILLES LIMITED

SIR ANDREW McCANCE ON FEATURES OF THE PAST YEAR

SCOTLAND'S FIRST MODERN STRIP MILL

HOW NATIONALISATION DEFEATS ITS OWN ENDS

The twenty-eighth annual general meeting of Colvilles Limited was held on February 6th at Glasgow.

The following is the circulated statement by Sir Andrew McCance, DL, DSc, LLD, FRS, chairman and managing director, for the year to September 30, 1958:

DIRECTORATE

During the past year the Board suffered a heavy loss through the unexpected death of Mr Sam Thomson, who had been a director for seven years and had served Colvilles for no less than 52 years. He combined an extensive knowledge of steel manufacture with a rare managerial capacity and his energetic and forceful personality was devoted wholly to the interests of the Company. It is with great regret that I record the passing of a most valuable and helpful colleague.

I am also very sorry to record that Mr Robert Marshall, director in charge of sales, found it necessary to tender his resignation owing to ill-health. Mr Marshall, too, has spent a lifetime of service with Colvilles and throughout the whole industry he is widely known and held in the highest esteem. It is a matter of particular regret that the state of his health did not permit him to continue his long and eminently useful service with the Company.

The directors have appointed Mr J. A. Kilby, Mr T. J. Smith and Lord Clydesmuir to fill vacancies on the Board and I welcome their collaboration in directing the affairs of the Company. Mr Kilby, as Chief Engineer to the Company, has been responsible for the technical details of the many development schemes which have been sponsored in recent years. Mr Smith has been in charge of all purchasing, including raw materials, which have increased greatly both in volume and in importance with the development of our pig iron production. In Lord Clydesmuir, who is managing director of The Steel Company of Scotland Limited, we welcome the continuance of the association of the Colville family with the Company.

Two more special directors have been appointed—Mr E. W. Ferguson, who has been in charge of export sales, and Mr Duncan Ferguson, Purchasing Manager. Both bring to their new responsibilities a wide experience and a long term of service with the Company.

The conditions during the past year, particularly during the latter half of it, have by no means been easy and I wish to record the sincere appreciation of the Board for the fine manner in which the staff and all the employees have given of their best in dealing with the difficulties brought about by changing conditions.

ACCOUNTS

The decrease of £376,000 in the manufacturing and trading profit is explained principally by the recession in the demand for steel during the second half of the year. The reduction in the profit would have been greater but for the operations at Ravenscraig and General Terminus. Their modern facilities enabled the reduced production to be carried out more economically.

This is the first year in which the charge for interest on the £10 million 4½ per cent Debenture Stock has been paid in full, and there is also interest for a little more than half a year on the 6 per cent Debenture Stock issued in January, 1958. The total interest charge is greater in consequence by nearly £477,000. Income from investments has risen by £8,906, but the balance of income before taxation is lower by some £844,000.

The significant difference this year compared with last year is the greater charge for taxation which is explained by the reduction in the relief in respect of Investment Allowances. This relief amounts to only £112,091 compared with £1,043,911 in last year's balance sheet, when we had the full benefit of the Investment Allowances on the major development at Ravenscraig. In total, the charge for taxation is some £779,000 more, so that the net profit after taxation is reduced by £1,623,000 to £1,571,850, rather less than half the figure for last year.

The settlement of taxation relating to the war and some of the postwar years enables over £1,050,000 to be restored from the provisions set aside in these years. This may seem a large sum, but it must be considered in the light of the period covered which stretches for more than twelve years and the complexity and uncertainty of the taxes involved. Its restoration goes some way to restore the balance available for appropriation.

The amount retained by subsidiary companies is small, the available profits having again been concentrated in the accounts of the Parent Company, where they are available for dividends or for investment in any sector of the Group's activities. This does mean, however, that subsidiary companies cannot cover development expenditure from their own resources and must borrow from the Parent Company. To avoid the consequent increase in loans creating the impression that there were liquid funds in the hands of subsidiary companies, advances which are known to have been spent on fixed assets have been separated from current advances. This explains the entry in the balance sheet of Colvilles Limited under the heading of "Subsidiary Companies" where "Fixed Loans for Development" appears for the first time.

The balance sheets also show that the investment in stocks has been reduced and the lower rate of turnover is reflected in the smaller amounts for debtors and creditors. These changes, coupled with the fact that the expenditure has not as yet been significant on the new slabbing mill, for which the proceeds of the issue of the £6 million Convertible Debenture Stock were earmarked, explain the considerable change for the better in the liquid position during the year.

To offset the inadequacy of depreciation allowances for the replacement of assets, £2 million has been transferred to the capital reserve and it is also proposed that £1,500,000 be transferred to the general reserve.

The Board recommend that a final dividend of 8 per cent be paid, making a total of 13 per cent for the year.

SUBSIDIARY COMPANIES

As in the Parent Company the earnings of the subsidiary companies have been affected by the recession in trade which has been in progress for nine months or more and is unfortunately still noticeable.

The rebuilding of the finishing equipment of the mills at The Lanarkshire Steel Company Limited is now completed and in operation, the last stage having been carried through at the last New Year holiday period. This change allows speedier operation and also enables the saleable yield to be increased. The new equipment will also be able to deal with broad-flanged beams.

Early in the year the falling away in demand for heavy sections entailed the cessation of production at the Hallside Works of The Steel Company of Scotland Limited.

Hallside was our highest cost producer of steel sections. For some time considerable losses have been made on products rolled there, but so long as the demand exceeded the capacity of our other works, the responsibility of meeting that demand was carried by the Company in spite of the financial loss which resulted. Once the demand had fallen, however, the works inevitably had to be closed down. The reconstruction of the plant is now proceeding without the hindrance of having to carry on production at the same time and this will undoubtedly make for quicker progress. We are not yet in a position to state when it may be possible to restart the works on its new products.

The extension to the Light Foundry at the Craigneuk Works of The Clyde Alloy Steel Company Limited has been in operation for a large part of the current year and has enabled the output of castings to reach new records in spite of a marked slackening in the demand during the past six months. Due to a similar fall in demand the rolling mills producing special steels have been living from hand to mouth and quick delivery has become of paramount importance. Fortunately the organisation has stood up well to these testing times and I am glad to report that the earnings of this company have been the highest in its history.

It is not easy to forecast the course of future trade, but it can be said that with the steady developments of the past year The Clyde Alloy Steel Company Limited is in an excellent position to respond to any improvement in demand.

I reported last year that The Carnlough Lime Company Limited had made a small loss in spite of the installation of new equipment. I am glad to say that after further changes in operating methods, the corner has been turned and profits are now being earned.

Blanchland Fluor Mines Limited is not a large-scale undertaking, but it has made a contribution commensurate with its size.

Fullwood Foundry Company Limited, Colville Constructional Company Limited and Smith & McLean Limited have all continued earning profits, although naturally at a lower rate owing to the reduced level of demand.

Only in the case of Colville Constructional Company Limited can it be said that the reduced activity is directly associated with the credit squeeze of the past year or so. Undoubtedly investment in steel frame buildings has been influenced to a substantial degree by the Bank rate changes and it is to be hoped that the gradual restoration of normal conditions will soon be reflected in terms of increased work.

It has been found necessary to cease coke and pig iron production at Dixon's Ironworks Limited on account of the recession. When the demand for pig iron in Britain exceeded production, imports of pig iron were needed to maintain steel production at the level required. During 1956, for instance, this country imported over 500,000 tons of pig iron. It was therefore an advantage to the national economy to produce pig iron even in uneconomic units and the production from Dixon's was useful to the Group during that time. When the demand for pig iron fell, production was transferred to the more efficient unit at Ravenscraig. The closure of Dixon's was not final until November, 1958, and it will not adversely affect future earnings of the Group.

FUEL ECONOMY

For many years coke oven gas has been supplied from Dixon's to the Scottish Gas Board, who distributed it to users in Glasgow. With the closure of Dixon's we have concluded an arrangement with the Scottish Gas Board to supply them with coke oven gas from both Clyde Iron and Ravenscraig Works. The necessary boosting and control plant has been installed and supplies of coke oven gas are now flowing into the Gas Board's mains for distribution. Our agreement provides for a supply of 4 to 6 million cubic feet of gas per day from each works with the possibility of a future increase from Ravenscraig should it be required.

This agreement represents a change in policy, for hitherto the Company has encouraged the full utilisation in the production of steel of the coke oven gas and blast furnace gas which are produced in large quantities in an integrated works. The steel furnaces which used this gas will now increase their use of fuel oil to balance heat requirements. The change is in the long term a contribution to the conservation of national fuel resources.

PRODUCTION AND COSTS

The production of coke, pig iron and steel during the past financial year has been as follows:

	Six months to March 31 Tons	Six months to Sept. 30 Tons	Total Tons
Coke....	447,027	336,337	783,364
Pig Iron..	505,914	413,028	918,942
Steel	1,051,488	795,575	1,947,063

The output during the first six months of the year was moving towards new records, but the decline in demand during the second six months prevented their complete attainment when these two periods were taken together.

The advantages of Ravenscraig have been clearly demonstrated even although the plant has not yet been able to show what it can do under the steady pressure of an urgent demand. The blast furnace has maintained an output in excess of its rated capacity of 7,000 tons per week and we are confident that when required an output of 9,000 tons per week can be obtained. Steady progress in the development and operation of the furnace and the sinter plant by the works staff has reduced the coke consumption for long periods to very low figures. The open hearth furnaces have also given excellent performances and record outputs in excess of 4,000 tons per week have been attained. When the demand for steel improves, even greater outputs from these furnaces will be possible by the application of oxygen.

Unfortunately the reduction in operating costs which high production can achieve is often offset under present conditions by the depreciation charge required for the very expensive plant necessary to bring it about. We are in a position to compare the steady advances in the cost of manufacturing plant, since we make at Mossend Engineering Works some of the steelworks plant required for our own development plans. Expressing our cost per ton of machinery in 1938 as 100, the cost today is 425 and we believe that this figure is comparable with those of other makers. Owing to this increase in the cost of plant, it has been found in some cases that new plant may not show any commercial advantage over the plant it was replacing.

Nevertheless even when it is known that such plant may do little more than earn during its lifetime sufficient money to pay for its installation, there is no alternative. Obsolete plant if allowed to continue in operation can only hasten industrial decline. This factor must be recognised adequately in the margins allowable on all steel products.

DEVELOPMENT

As announced recently, the Board have agreed to prepare and submit a scheme for a major extension to the Ravenscraig Works, which will embrace the construction of a semi-continuous strip mill for the production of light plates and sheet with additions to the steelmaking and pig iron production necessary for this expansion of output.

There has been some ill-informed talk and criticism of this proposal arising from a lack of knowledge and appreciation of the capabilities of the semi-continuous type of mill.

For the manufacture of flat products such as sheets, the cast ingots are rolled in a heavy primary mill into slabs, each of which may weigh up to 15 tons or more according to requirement. These slabs constitute the feed material for the strip mill, which may be of the continuous or semi-continuous type. In the first case, the slab passes continuously through a series of roll stands—usually ten in number—arranged in tandem, the slab being progressively reduced in thickness until it emerges from the last set of rolls as a thin strip of the required gauge. In the case of the semi-continuous mill, the number of stands of rolls can vary from five to seven with resultant saving in capital cost. The reduction in thickness which the slab undergoes in the first set of rolls of the semi-continuous mill has therefore to be greater than is the case in the fully continuous mill, and as a result the rolling process takes a little longer. Nevertheless, there are semi-continuous mills already in operation which have produced over two million tons per annum compared with three million tons per annum from fully continuous mills, and even larger outputs are considered possible as improvements in rolling techniques are perfected.

This new mill will therefore have ample capacity to meet the demands of the available market and to allow for the expansion of this market in the foreseeable future.

The Ravenscraig proposal will include two additional blast furnaces similar in size to the existing furnace with corresponding coke ovens and blowing equipment. An increase in the steelmaking capacity will bring the total ingot capacity of the Group to between 2,900,000 and 3 million tons per annum.

It is planned to send the hot rolled strip in coils to the Gartcosh Works of Smith & McLean Limited, where cold rolling and ancillary equipment will be installed for the production of finished sheets, which will be dispatched direct from these works.

The Company's engineers are now in consultation with the manufacturers of the steelworks plant and when the details have been completed the scheme will be submitted to the Iron and Steel Board and to the British Iron and Steel Federation for consideration and approval.

One of the noteworthy features in the expansion of steel demand in recent years has been the increase in the proportion of the steel output made into sheet. In Britain ten years ago this proportion was about 10 per cent. Today the proportion is approximately 20 per cent and is still growing. For many years the corresponding proportion in the United States has averaged about 30 per cent, and, bearing in mind the similarity in the pattern of development of the steel industry in most countries, it is confidently expected that the growth in the demand for sheets in Britain will continue for some years ahead.

It is hoped therefore that this development will make a major contribution to the encouragement of Scottish industrial activity, particularly in the field of those lighter industries which are based on the use of sheets and which have hitherto been hindered from establishing themselves in the Scottish area because local supplies of sheets of strip mill quality were not available.

FINANCE

As shareholders have already been advised, the cost of the plant and equipment, together with the cost of installation, is estimated at approximately £50 million. Whilst this amount is very substantial, it is much less than would be required for any equivalent production on a green field site on account of the considerable contribution made by the civil engineering work and the other facilities already available at Ravenscraig. The new slabbing mill foreshadowed last year as part of our second development plan fits admirably into the new proposals. It will be able to handle the increased ingot production now required with the provision of additional heating facilities, but with relatively little other change. The new blast furnaces will also be less costly than would otherwise be the case.

Owing to the political threat of renationalisation the steel industry is suffering a serious disadvantage in obtaining the finance required for capital extensions of this kind. So long as that risk continues and the possibility exists that industries may have their assets taken over in the name of the State at less than their real value, so long will it be impossible to obtain finance from the sources which would normally be available. A damaging drag on progress by established channels has been created.

The desirability of constructing a strip mill in Scotland was generally agreed and the long term advantage admitted for the reasons I have already given.

Initial considerations with Mr John S. Maclay, Secretary of State for Scotland, were followed by discussions with Lord Mills, Minister of Power, together with Sir Archibald Forbes, Chairman of the Iron and Steel Board, and these discussions resulted in an agreement being reached that the finance required for the strip mill proposal would be provided up to a maximum of £50 million from Government sources.

The acceptance of this loan requires an extension of the borrowing powers of the Company. The measures required to effect this and the details of the agreement have already been circulated to you, and I hope that you will feel justified in passing the necessary resolution to grant the directors the increased borrowing powers they need to implement this development.

RENATIONALISATION

This threat of renationalisation has brought much uncertainty into the future prospects of the steel industry and we can see evidence of that uncertainty in the present state of trade. I have already stressed the difficulty of finance which has affected the rate of development. Other factors in that uncertainty are equally disturbing.

PROFITS DISAPPEAR

In the arguments put forward originally to justify the policy of nationalisation, it was always tacitly assumed that the profits being made under private ownership would continue after the industries became State controlled. The records of the nationalised industries for the past ten years, during which time private enterprise industries were moving from success to success, has shown how completely fallacious that argument has proved. The truth must be faced that under public ownership heavy losses, more often than not, have made former profits disappear.

NO PROFITS—NO TAXES

Industries which formerly made substantial contributions by way of income tax to the national income now make no contribution at all. This loss of revenue is made good by larger tax contributions from the rest of the population, including the wage-earners themselves. It should not be overlooked that the tax contributions from the activities of private enterprise pay a substantial part of the cost of the Welfare State. Destroy that income and the finances of the country would be seriously disturbed. That is the threat which nationalisation policies contain.

"PUBLIC ACCOUNTABILITY" —BUT HOW ?

In the search for arguments to support such policies, frequent reference is made to "public accountability"—a phrase of rather nebulous meaning. If those directing the affairs of a company whose shares are held by individual investors fail to conduct the business of the company efficiently, the shareholders have direct and immediate channels of redress. The same thing can certainly not be said of the nationalised industries.

THE PUBLIC ARE IMPOTENT

When year after year, as has been experienced, depressing results are reported that would stir the shareholders of a private concern into angry revolt, it seems completely beyond the powers of the public who own these industries to change ineffective management or to modify their control. It has become abundantly clear that nationalisation does nothing to enforce public accountability on those industries which it takes over—it merely allows them to escape public accountability in the ordinary meaning of the term.

LEAVE STEEL FREE

It is universally conceded that the steel industry is efficient and progressive. It is in the national interest that it should be allowed to remain so. I would ask all our shareholders who own the assets of the Company to resist any threat that would change their ownership by compulsion. That support would counter those policies which imperil the future success of the industry and imperil the existence of companies like our own which have built up that success by private enterprise.

APPENDIX
ANALYSIS OF INCOME AND EXPENDITURE

	1958 (£'000)	1957 (£'000)
Income from sales, interest, etc.	75,480	77,100
Cost of materials, trade expenses and services bought	36,247	38,126
Cost of fuel	13,883	13,941
Depreciation	2,500	2,842
Debenture interest	643	166
	53,273	55,075
Balance available for wages, salaries, taxation, dividends and re-investment by way of reserves	22,207	22,025
Distributed as follows:		
Wages, salaries, national insurance and superannuation contributions	13,223	13,148
Taxation	3,791	3,016
Dividends—Gross	1,520	1,511
Reserves	3,673	4,350
	22,207	22,025

Note.—Since wages and salaries are paid before deduction of tax, dividends have been treated on the same basis and the amount of taxation has been adjusted accordingly.

Number of Employees, 16,500. Number of Shareholders, 39,000.

MASSEY-FERGUSON LIMITED

Summary of Consolidated Results for year ended 31st October, 1958

	1958	1957
Sales	$440,109,455	$412,411,468
Net Profit before tax	$ 21,712,151	$ 603,800
Net Profit after tax	$ 13,025,282	*Loss* ($ 4,737,341)
Dividend per common share	40c.	40c.

Copies of the Annual Report to 31st October, 1958, may be obtained from the London Transfer Agents, The British Empire Trust Company, Limited, 3, Lombard Street, London, E.C.3, on application.

Residents in the British Isles, whose shares are not registered in their own names and other interested parties who wish their names placed on the Mailing List for future communications, should notify the London Transfer Agents accordingly.

THE AVON INDIA RUBBER COMPANY

The sixty-ninth ordinary general meeting of The Avon India Rubber Company Limited was held on February 2nd at Melksham, Wilts, Mr C. M. Floyd, OBE (the chairman), presiding. The following is an extract from his circulated statement:

The Group profit after providing for taxation of £259,339 amounted to £302,488. Group sales value has been maintained but a repetition of last year's record profit was not attainable. Even so Group net profit before tax is the second highest recorded.

After commenting on the acquisition of the entire share capital of Henley's Tyre & Rubber Company Limited and on the further investment in the International Synthetic Rubber Company Limited, in accordance with their commitment, the chairman continued:

All subsidiaries of your Company have been affected by the more difficult trading conditions but George Spencer, Moulton & Company Limited continues fully to justify the confidence your Directors have expressed in respect of this purchase, and J. W. & T. Connolly Limited, in which our holding has been increased from two-thirds to five-sixths during the year, has continued to make progress. Those subsidiaries trading in rubber products other than tyres will benefit in due course from the improved production facilities that are planned.

The current financial year has started with a satisfactory level of orders both in Home and Export markets and your Directors have full confidence in your Company's ability to continue to make progress.

The report was adopted.

ELY BREWERY COMPANY LIMITED

Mr. L. Nidditch on the Board's Policy

THE *sixty-second annual general meeting* of the Ely Brewery Company Limited was held on January 29 at the New Inn Hotel, Pontypridd.

Mr. L. Nidditch, F.F.S.(Eng.), F.R.Econ.S., F.V.I. (chairman and managing director, financial director) presided, and in the course of his speech said:—

In presenting the Accounts for the year ended 31st August, 1958, it is with a welcome to all the Company's stockholders and in particular those new stockholders on our enlarged register, who have joined the longstanding members. The policy that has been pursued since I became executive leader, and, I hope, 'aggressive defender' of your true investment, has not been unrewarding.

The Accounts show the Company's earnings for the year (subject to certain usual outgoings and taxation) £322,023. A satisfactory result considering the upward trend of the profits in the last few years, and aims in priority given to *consolidation* and, then the moving on.

The Board agreed the new approach to the payment of dividend of an amount per share instead of a percentage figure. An Interim Dividend on the Ordinary Capital of 1¼d. per share had been declared and paid. Your Board now recommend a final dividend of 2d. per Ordinary Stock unit, making in all 3¼d. per stock unit for the year (less tax).

As your Directors have already reported, Major The Hon. Oscar M. Guest died in May, 1958; he was a *nominee* Debenture representative of Hambros Bank Executor & Trustee Co. Ltd., a near kinsman of Sir Winston Churchill, a former member of Parliament and a former Parliamentary Private Secretary to a Cabinet Minister, he was a world travelled man of great common sense and balance, respected in Society, and also commanded the respect of his Board Room colleagues. There grew up a mutual understanding and respect between us, both as persons and in our respective offices. During the last decade, I regret that his sound advice and pressure for restraint towards stopping outrageous actions in diverse situations in the trial of strength and *envious greed* was ignored. He was the Chairman of several public industrial companies, and a man who used no idle words nor "empty" statements.

Take Over Ethics

We would like to cover the walls of all our Toilets with Vitrolite glass and install refrigeration in our bars and high trade house cellars and modern glass plate external doors, also central heating, etc. How can we proceed when our shares do not enable any rights issue benefit.

Sir Anthony Eden's resignation helped to prove the *unfortunate* fickleness of *hesitation* or *non*-disclosure of goings on behind the scenes.

As Lord Goddard had occasion to say "The causes of *crime today* are *the same* as *they* were in the days of the Old Testament—greed, love of easy money, jealousy, lust and cruelty."

I have said before and I say again that, if anyone wishes to take over your company, considering the achievement resulting from virile leadership and management effort and success, they should do so *in an honourable way*, by making an open bid at a fair price, or leave us—and our shares—alone and 'inside bears' with pressure of harassing, cease damaging our credit worthiness towards raising normal and just *expansion capital*.

History *has* shown that the Country's business *can be* transacted and run efficiently by men of calibre, with *human sympathies* and *no axe to* grind.

In the lingering unfortunate situation created and *thrust upon us*, it is *necessary to re-emphasise* the intention to do all that can be done to safeguard the position of the general body of stockholders of, and the employees in, this *important* independent unit of the British Brewing industry in Wales and that, so long as this principle is not *placed in jeopardy*, we will *continue* to co-operate to the maximum with sincere parties on such matters in which we have mutual interest.

With our *consolidated* success record, where is there reason and purported honesty to allow our Ordinary Units last year to a 27% earnings yield against the usual 10% to 14% and, a 'fear yield' grip on our Preference?

It will be noted that during the year, the cash *liquidity* was reduced by about £110,000, although we also received £11,732 Capital Repayment from trade investment. I feel I should point out that we *have paid out substantial sums for our new* bottlery—buildings and plant—as also freeholds acquisition of leasehold houses. Our Debenture *Debt has been reduced by another £20,000* (subject to capital gain on market values against 1946 values) and, while our creditors and taxation *account are about comparably equal to 1957*, our debtors and stocks are greater by £66,000, consequential to healthy trading demands. These are *important items to assess as a picture in any* Balance Sheet in any Company.

Trend of Trade

As you will know, the trend of trade has been very difficult in the first half of the year. The licensed house trade was affected as much as any —commencing November, 1957, until Easter —when there was a general depression in the country resulting from the 7% Bank Rate and economic crisis, some unemployment and fears of this being enlarged, exceedingly bad weather, Asian 'flu and other annual winter epidemics of short duration that traversed through the country. Our Summer two months of rain was not of compensatory advantage. However, I am pleased to say that by strong team work and concentration at *points* of sale, we obtained our fair share of trade, although rising costs in all directions continued: we made every endeavour to minimise and *control outgoings* and get the best value for money in all our commitments which run at £10,000 a week excluding purchase of materials *of our trade*.

During the year we marketed a new Stout 1s. per half bottle under the trade mark "Gold and *Silver*"; this has been well received and bringing in a regular trade greatly gaining popularity, being receptive to a widening circle of patrons.

In the area where one of the small *mines* are being closed, on the extreme edge of our general area, a club is being extended for drinking and concerts and £8,000 expenditure with no approval required of any authority—except bye-laws and new cottage converted 'clubs' opened at cost of 5s. Yet Monopoly Law charge persists. There are still **10,000** surplus 'poor results' licensed houses where a bare living is earned, *awaiting a realistic decision relative to clubs* and concerts and, the newly developed competition (aided by small open gambling) of Housey Housey and £10 or £20 *prize purse*. ***Industrialists refuse to open factories in Wales*** principally because of the 'dead atmosphere' Sunday, with non access to Cloak Room *facilities on leaving one's* home. Wales and the Board of Trade officials would have less arguments to face from those *industrialists* they seek to attract, aided by executives and wives refusals, if recognition were given to clear World Conditions of freer choice of use of *social time*.

Our new Bottlery can provide treble our present bottling production, now governed and aided by increased conditioning tank and new refrigeration space, and, by small alterations in the main Brewery we will by end year have facilities for an extra 20,000 barrels annually. We also have plans approved under Bye Law and Town Planning to extend production capacity by another 25,000 barrels per annum.

I have obliterated despondency at Ely.

The report and accounts were unanimously adopted without question or comments, and the other formal business transacted.

The proceedings terminated with a cordial vote of thanks to the chairman, directors, staff and employees.

AVELING-BARFORD LIMITED

EXTENSION OF OVERSEAS ACTIVITIES

The Sixty-fourth annual general meeting of Aveling-Barford Limited, was held on January 28th at Grantham.

In the absence of the Chairman, Mr Edward Barford, MC, owing to illness, Mr H. C. Ryan, Managing Director, presided.

The following is an extract from the Chairman's circulated statement for the year ended September 30, 1958.

The world demand for the earth-moving equipment and contractors' plant of the types manufactured by your Company has been at a much lower level during the past year.

Our activities are predominantly overseas and much of our output was formerly going into the developing countries which have been the most hard hit by the fall in commodity prices—the reduced purchasing power of these countries has therefore hit us with particular severity.

INCREASED INTERNATIONAL COMPETITION

The increased international competition for the smaller demand has presented considerable difficulties, but reports from our export markets have indicated that we have more than maintained our share of the business available, so that turnover was not substantially reduced although profit margins suffered further.

Under the circumstances prevailing, the trading profit of £589,889 is regarded as satisfactory.

Last year, we extended the activities of all our subsidiaries abroad and formed new ones. Last year I stressed the vital necessity of competitive export credits, and I now emphasise again the urgency and importance of what I then said.

At home the Road Programme is most welcome, but it has not yet reached sufficient proportions to have made a marked impact upon our domestic volume of business. To build the new motorways, modern and specialised earth-moving equipment is required. This type of equipment is used extensively overseas and a larger home demand will be of great benefit to us.

The Engineering and Technical Division has had another very busy year. New models of advanced design are now available in practically all the lines in which your Company and its subsidiaries are so well known.

THE OUTLOOK

I find it difficult to express a view as to how long the present depression in our industry is likely to last. There is little doubt that the continued low demand has resulted in a general consumption of contractors' equipment which will need replacing on an increased scale before very long. Additionally, many countries are now embarking upon road schemes and other public works projects which are a vital necessity if those countries are to continue to prosper and develop.

Whenever the revival takes place, we shall be in a strong position to satisfy the demand for the types of equipment in which we specialise.

The final Dividend has been recommended at 7½ per cent as last year, making a total gain of 12½ per cent for the full year.

The report and accounts were adopted.

BOWMAKER LIMITED

A MOST EVENTFUL AND SUCCESSFUL YEAR

SIR ARTHUR MORSE ON NEW ACQUISITIONS AND INTERESTS

The thirty-first annual general meeting of Bowmaker Limited will be held on February 24th in London.

In the course of his circulated statement the Chairman, Sir Arthur Morse, CBE, said that the financial year under review had proved not only the most eventful but also the most successful in the history of the Company and its subsidiaries. The business transacted increased by more than 35 per cent and there was a similar increase in the balances outstanding under hire purchase agreements at the year end. The bulk of the expansion took place in the second half of the Company's financial year and following the abolition of controls in October transactions in the new financial year again showed a material increase.

At the end of the financial year deposits exceeded £10 million and were more than double the figure in the previous consolidated balance sheet. Having ample funds available facilitated the planned expansion which had taken place in the business.

Referring to the changes in the capital structure, Sir Arthur recalled that shareholders on the register as at February 14, 1958, received an allotment free of cost of one new Ordinary share of 5s. each for each three Ordinary shares held. In order to bring the capital and reserves of the Company more into line with the expansion of deposits and turnover the Board decided in May, 1958, to acquire three companies whose assets consisted solely of cash. The vendors accepted a cash sum of £103,010 together with the allotment of 1,214,000 Ordinary shares of 5s. each fully paid and those shares were offered by the vendors at 16s. per share to the Ordinary shareholders of the Company in the proportion of one new Ordinary share for each four Ordinary shares held on May 29, 1958.

Lloyds Bank's Interest

Sir Arthur continued: With the entry of the joint stock banks into the hire purchase field we were approached by Lloyds Bank Limited, whose unfailing support and co-operation throughout the history of your Company have made a very important contribution to the growth of the Company. The negotiations which ensued resulted in Lloyds Bank Limited subscribing for 2,000,000 5s. Ordinary shares at 29s. 6d. per share. The cash proceeds of the issue amounted to £2,950,000 and Lloyds Bank Limited became the proprietors of approximately 25 per cent of the Company's issued Ordinary share capital.

In the result of all these operations the Company's issued Ordinary share capital has increased from £910,500 to £2,017,500 represented by 8,070,000 Ordinary shares of 5s. each.

Shortly before the close of the financial year your Company made an offer to purchase the issued Ordinary share capital of Midland Counties Motor Finance Company Limited, and since the close of the financial year an offer was made to acquire the issued preference share capital. Both these offers have been accepted by well over 90 per cent of the shareholders concerned and the balance will be acquired. Your Company will have invested approximately £2,600,000 in this new subsidiary.

Early in November, 1958, the Bowmaker stocks and shares investment plan was introduced and received very wide and favourable publicity. It is designed to assist investors to buy stocks and shares of their own choosing and after a *minimum initial outlay* to pay the balance of the cost by *instalments out of income*. The plan meets the requirements of the small investor who wishes to invest part of his savings in stocks and shares.

Accounts

Reviewing the accounts, Sir Arthur said that the group profit before tax of £572,623, amounted to £1,026,524, compared with £750,289. The Board recommended a final dividend of 17½ per cent making 27½ per cent., less tax, for the year.

He continued: During the year the share premium account has increased from £402,019 to £3,151,765 and in the result the reserves of the company are again unduly large in relation to the issued capital. It is, therefore, proposed to increase the authorised share capital from £3 million to £6 million and to apply £2,017,500 of the amount standing to the credit of the share premium account in paying up in full new Ordinary shares of 5s. each and to distribute these shares in the proportion of one new Ordinary share for each Ordinary share held on February 24, 1959.

The capital and reserves of the group have increased from £3,785,451 to £8,138,285 and the total assets from £19,784,669 to £29,381,326.

Referring to Bowmaker (Ireland) Limited, the Chairman said that in August last the 40 per cent interest in the issued Ordinary share capital of that Company previously held by another Company was sold to The National Bank Limited.

Sir Arthur concluding his statement said: The first two months of our financial year are normally the slackest but with the elimination of controls under the Hire Purchase Orders last October a quite exceptional amount of business was transacted in November and December. It is not unreasonable to suppose that some of this increased business might normally have been spread over a longer period. Nevertheless, the prospects for the current year, subject to unforeseen circumstances, appear to be satisfactory.

FIRST RE-INVESTMENT TRUST LIMITED

SIR DENYS LOWSON'S ADDRESS

The Annual General Meeting of First Re-Investment Trust Limited was held on January 29th in London.

Sir Denys Lowson, Bt (the Chairman) presided, and in the course of his remarks said:

The revenue for the year amounted to £113,364, which is a record in the history of the Company; and compares with £100,590 for the preceding twelve months.

Part of the increase in revenue is due to the additional Ordinary Share capital which was issued during the course of the year; but from which we have not yet received a full year's income. We shall receive the full benefit from a revenue angle during the course of the current twelve months, and I am pleased to tell you that the estimate which we have prepared in addition shows that, barring unforeseen circumstances, we may also expect some increase in our normal revenue over 1958.

After payment of a dividend of 12 per cent on the Ordinary shares, there is a surplus of £12,235 which, added to the Profit and Loss Account, now gives a total of £89,718 to be carried forward. As shown in the accounts it will be seen that we have the following priority percentages:

Debenture interest takes from 0-10.25%
Preference dividend 10.25%-25%

Dividend on the Ordinary stock 25%-79.5% with the balance, i.e., 79.5 per cent—100 per cent being retained in the business.

Our investments with a book value of £1,284,674, had a market value of £1,981,142; thus showing an appreciation over book cost of some 54 per cent.

It is your directors' intention to make a further issue of Ordinary shares on bonus terms in the near future, in the proportion of one Ordinary share at par for each five Ordinary shares held. Consent for this issue has already been received from the Capital Issues Committee.

FUTURE OUTLOOK

In the past year the economic climate has changed considerably; the inflationary pressure has temporarily ceased, and there are some signs of a recession in trade. There has been an increase in unemployment, industrial production has fallen and is no higher than it was three years ago; in spite of the volume of investment in capital equipment which took place between 1954 and 1955. As is already well known, when industrial production falls, the ratio of overhead costs to output rises; and this would appear to have been one of the reasons why manufacturing costs in the past year have not felt the full benefit of the lower prices of imports. Steps have been taken during the last six months to ease hire purchase controls. Whilst this will stimulate internal demand, it must be borne in mind that it will also increase our import requirements; as we in this country are dependent to a great extent on countries overseas for our raw materials. If, therefore, benefit is to be gained from the easing of controls, it must be accompanied by a proportionate increase in the volume of our exports; otherwise such a step will weaken our Balance of Payments.

During the year under review there has been a reversal of the rising trend in exports during recent years, which for 1958 amounted to £3,208 million compared with £3,324 million in 1957—a fall of 3½ per cent. Furthermore, we are faced with the prospect of lower exports to some of the other sterling area countries, notably Australia, India and New Zealand, whose overseas reserves are considerably lower than a year ago

BALANCE OF PAYMENT PROBLEMS

I have on previous occasions mentioned the possibility that we may lose the dollars earned by certain countries such as Ghana, Malaya and Singapore who have now attained full independence; and naturally may wish to use the dollars which they earn for their own purposes. In order to meet this possibility, it is obviously essential that we must increase the volume of our exports to the dollar area. It is very gratifying therefore to learn from statistics recently published by the Board of Trade that exports to the United States of America during 1958 were 17 per cent higher than in the previous year. The United States with a gross national product of $420,000 billion and a population of 175 million (which it is estimated will increase by over 90 million or perhaps as much as 55 per cent in the next twenty years), offers great opportunities to the British exporter, provided he can sell his goods at competitive prices.

One of the outstanding features of the year has been the strength of Sterling, and the improvement in our gold and dollar reserves which have risen from £812 million at the end of 1957 to £1,096 million. If it is remembered that this improvement was helped by the terms of trade moving in our favour, it can be seen that our Reserves in the coming year may well have to bear a greater strain, if there is an increase in the cost of imports through a rise in commodity prices. It follows that if we are to avoid a substantial fall in our Reserves, we must ensure that any expansion in production in this country is accompanied by a proportionate increase in the volume of our exports.

You will see from what I have said that I look forward with restrained confidence to the coming twelve months. There are clearly problems ahead, but I feel that in this Company with over 400 different investments in our portfolio we are in a position "to meet the slings and arrows of outrageous fortune" should they arise.

The adoption of the Report and Accounts was seconded by Colonel Robert Adeane, OBE, and carried unanimously; as well as the other formal resolutions. The proceedings then terminated with a hearty vote of thanks to the Chairman, Directors and Staff.

BARCLAYS BANK LIMITED

ANNUAL MEETING OF STOCKHOLDERS

The Annual General Meeting for the year 1959 of the stockholders of Barclays Bank Limited was held on February 4th at the Head Office of the Bank, 54 Lombard Street, London, EC3.

Mr A. W. Tuke (the Chairman) presided.

The Secretary read the Notice convening the Meeting and the Report of the Auditors.

The Chairman moved:

"That the Report of the Directors of the Company now produced, together with the Accounts annexed as at December 31, 1958, duly audited, be received, approved and adopted, and that there be declared, payable on February 20, 1959, to the stockholders registered in the books of the Company on January 10, 1959,

a Final Dividend of 6 per cent, making 12 per cent for the year, on the Ordinary stock and a Final Dividend of 10 per cent, making 20 per cent for the year, on the Staff stock (excluding the £50,000 Staff stock issued on January 6, 1959), less income tax at the standard rate in each case."

Mr John Thomson, Deputy Chairman, seconded the Motion which was carried.

The Right Honourable the Earl of Airlie, KT, GCVO, MC, Mr Anthony Charles Barnes, DSO, OBE, Mr Lawrence Emlyn Douglas Bevan, Mr Julian Stanley Crossley, Sir George Colvile Hayter-Hames, CBE, the Right Honourable the Viscount Knollys, GCMG, MBE, DFC, Marshal of the Royal Air Force the Right Honourable the Viscount Portal of Hungerford, KG, GCB, OM, DSO, MC, and Colonel William Henry Whitbread, retiring Directors, were re-elected Directors of the Company, and other ordinary business was transacted.

The Meeting passed a Special Resolution increasing to £40 million the nominal capital of the Company.

A Vote of Thanks to the Staff and a Vote of Thanks to the Chairman for presiding at the Meeting were unanimously accorded.

KOLOK MANUFACTURING COMPANY LIMITED

(Manufacturers of Carbon Papers and Typewriter Ribbons)

The fiftieth annual general meeting of Kolok Manufacturing Company Limited, was held on January 30th in London, Mr E. S. Dumont (chairman and managing director) presiding. The following is an extract from his circulated statement for the year ended August 31, 1958:

The net profit of the company for the year under review is £159,908, and the net profit for the Group is £178,815 as compared with £174,377 and £196,997 for the previous year. Although the profit is lower, I believe you will consider it satisfactory bearing in mind the previous year's figures included approximately £9,000 covering a provision no longer required.

The demand for our products continued at a high level resulting in a higher turnover and output, but costs have continued to rise and have been absorbed instead of being passed on to our customers. In so far as the current year is concerned, incoming orders are satisfactory. Competition in export markets has intensified and towards meeting this we have invested £23,695 in an overseas company manufacturing products similar to our own, which should prove remunerative in due course.

The financial strength of the Group remains strong, the excess of current assets over current liabilities amounting to £443,924 as compared with £441,509 for the preceding year.

Your directors propose to recommend the payment of a final dividend of 16½ per cent, an interim dividend of 5½ per cent having been paid. The total dividend for the year will then be 22 per cent; this represents the same total distribution as last year.

Mr D. S. Richardson, who has now attained the age of 70 years, has decided to retire from the Board, having continuously served the company for over twenty years, and on your behalf, and my own, I express our best thanks for the assistance he has given during this period.

The report was adopted.

THE STANDARD TRUST LIMITED

TOTAL REVENUE EXCEEDS MERGER ESTIMATE

CAPTAIN NUTTING'S STATEMENT

The fifty-sixth Annual General Meeting of The Standard Trust Limited will be held on February 25th in London.

The following is an extract from the circulated statement by the Chairman, Captain A. R. S. Nutting, OBE, MC:

The proposals for the scheme of merger of this Company with The Trust Company of London & Scotland Limited, and The Phoenix Investment Trust Limited, were duly approved and became effective as from January 1, 1958; the accounts now presented reflect the changes resulting therefrom.

It is gratifying to note that our total revenue exceeds the merger estimate by almost £19,000. It will be seen that for the first time there is a charge on a subsidiary Company of £3,706 for Profits Tax; it is considered unlikely that this figure will be exceeded during the current year. The net revenue of the group, after deducting the Preference dividend, amounts to £311,001, equivalent to earnings of 26.13 per cent on the Ordinary Stock, compared with 24.25 per cent envisaged under the merger proposals and the Directors recommend a final ordinary dividend of 13 per cent, making 19 per cent for the year, an increase of 1 per cent on the dividend forecast.

VALUATION OF INVESTMENTS

A valuation of the Investments, of which 98 per cent are publicly quoted, shows an appreciation of 82.11 per cent on the figure at which they appear in the consolidated Balance Sheet, an increase of slightly more than 30 per cent on the year. In this connection it should be emphasised that the close of our financial year coincided with the peak of Stock Exchange prices for 1958 and it would be unwise to attach too much importance to any valuation made at any particular date. Although there are some indications of an industrial recovery, there is no doubt that some branches of industry are passing through a period of reduced activity with fewer orders and with lower profit margins. The anti-inflation measures which the Government took in 1957 have undoubtedly been effective and as evidenced by the recent easing of credit and hire purchase restrictions, the Chancellor is moving from a policy of restraint to one of expansion. Nevertheless the prospects for 1959 must be viewed with caution.

THE CURRENT YEAR

The revenue estimate in respect of the current year indicates that earnings may not be far different from those now under review. Subject to the possibility of restrictive legislation or other unforeseen contingencies, your Directors are hopeful of being able to recommend an equally satisfactory distribution twelve months hence.

To reduce the disparity between the two dividend payments on the Ordinary Stock it is intended in August next to pay an interim dividend of 8 per cent, but this must not be taken to indicate an increase in the total dividend for the year.

RADIO RENTALS LIMITED

YEAR OF CONSIDERABLE PROGRESS AND EXPANSION

MR P. PERRING-THOMS ON WELCOME RETURN TO FREE TRADING CONDITIONS

The twenty-second annual general meeting of Radio Rentals Limited was held on February 4th at The Dorchester Hotel, Park Lane, London, W.1, Mr P. Perring-Thoms (chairman and managing director) presiding.

The Secretary (Mr A. O. B. Wall, CA) read the notice convening the meeting and the report of the auditors.

The following is the statement by the chairman which had been circulated with the report and accounts:

In presenting to you the Directors' Report and Accounts of the Group for the year to August 31, 1958, I am pleased to report that the year under review was one of considerable progress and expansion.

After meeting all charges, other than taxation, the trading profit of the Group amounted to £1,736,887—compared with £1,322,900 for the previous year. This constitutes a new record in the history of the Organisation. The net profit of the Group, after providing £911,947 for taxation, amounted to £824,940—an increase of £219,221.

In the Consolidated Profit and Loss Account the only item to which I wish specially to draw your attention is the charge for depreciation. This considerable figure has been calculated on the same basis as for previous years and it is interesting to note from the Group's Accounts for several years past that trading profits, depreciation and capital employed have all increased proportionately as the Group progressed and this illustrates the fact that the increased profit is due to planned expansion and steadily improving efficiency throughout the Group and not to an increase in profit margins. Indeed, our terms of business are now more highly competitive than ever. Rental charges and sale prices have been stabilised, whilst an even better range of products has been offered to the public.

GROWTH OF NEW BUSINESS

During the year under review eight additional branches were opened, including several in areas not previously covered by our service, thus bringing us closer to complete national coverage. In addition, seven existing local branches were re-sited, to greater trading advantage.

There has been an appreciable rise in the number of Television sets installed to new customers. Over the twelve months a record number was achieved which represented an increase of 15 per cent over the previous year. Our Regional Works have met the increased demands arising from maintaining many more instruments and I am pleased to report that our reputation for prompt and efficient service remains unparalleled. Two Regional Repair Works at Nottingham and Bristol have been extended by the purchase of adjacent premises and Works have been acquired in Manchester to replace a unit at Stockport now inadequate for our needs.

Mains Radio Gramophones Limited, our manufacturing subsidiary, has achieved a new record level of production, enabling the Parent Company to keep pace to a greater extent with the growing public demand for our products. All new receivers distributed throughout the year were manufactured by our subsidiary.

ADMINISTRATIVE OPERATIONS

Operating costs in offices in maintaining accounts have been rising for many years due to an all-round shortage of clerical labour, especially in our larger cities, and the administration of a very large number of subscribers' accounts calls for modern methods and techniques. I am pleased to inform you that during August, 1958, a large-scale National-Elliott 405 Electronic Computer was installed at the Company's Watford Offices as part of our long-term plan to promote increased efficiency, stabilise operating costs and to minimise the necessity continually to replace and recruit clerical labour. The computer will progressively take over the maintenance of all our subscribers' accounts, and it is planned to incorporate other aspects of our administrative operations in due course.

APPROPRIATIONS

Turning now to the matter of appropriation, your Directors propose to transfer £750,000 to General Reserve, and recommend the payment of a final dividend at the rate of 10 per cent on the 8 million Ordinary Shares of the Company, an interim dividend of 10 per cent having been paid on June 1, 1958, on the then issued 4 million Ordinary Shares.

In the existing circumstances your Directors have also decided to pay on February 5, 1959, a first interim dividend of 5 per cent, less Income Tax, on the Ordinary Capital of the Company in respect of the year to August 31, 1959.

During the four months ended December 31, 1958, Government Controls on Renting and Hire Purchase were completely removed in two stages. This has had a stimulating effect on our trading, particularly on the Television Rental side of the business. Whilst your Directors have welcomed the return to free trading conditions, they recognise that the present high peak of public demand will undoubtedly level off in due course.

Month by month we are increasing the number of trading outlets, a further eight new branches having been opened during the first three months of the current financial year, with many more in the planning stage. Your Directors will continue their endeavours to increase efficiency of operation and production, to enable the Group to avoid the necessity of passing on increases in costs to its customers.

RIGHTS ISSUE

I am glad to be able to tell you that the consent of HM Treasury has been received to the issue of 1,600,000 Ordinary Shares of 5s. each at 15s. per share. Your Directors propose to offer these shares to Ordinary Shareholders by way of Provisional Allotment Letters in the proportion of one new share for every five Ordinary Shares held at the close of business on January 16, 1959.

It is expected that the necessary documents will be posted to Ordinary Shareholders shortly after the Annual General Meeting.

The year ended August 31, 1958, has been a year of considerable achievement in all fields of staff activity. Moreover, the year under review has seen a large extension of staff social activities, operating in the main on a regional basis throughout the country. Spring, 1958, marked the occasion of the first anniversary of the Group's own House Magazine, a highly popular medium and valuable for staff relationships. I count us fortunate indeed in having so able and loyal a staff. Accordingly, it gives me great pleasure, on behalf of the Directors and the Shareholders, to record a hearty vote of thanks to the staff of the Group.

The report and accounts were adopted and the retiring director, Mr R. M. Blair, was re-elected.

MICHAEL NAIRN & GREENWICH LIMITED

The thirty-seventh annual general meeting of this company was held on February 3rd at Kirkcaldy, Sir M. George Nairn, Bt, chairman, presiding. The following are extracts from his circulated statement for the 52 weeks ended September 28, 1958:

The net profit of the group, after providing £512,966 to meet taxation, amounts to £494,687, an increase of £234,699. The Board recommend a final dividend of 5 per cent, less income tax, on the issued Ordinary Stock, which makes a total distribution of 6¼ per cent for the year. It is the intention of the Board to declare a special interim dividend of 1¼ per cent, less tax, for the financial period 1958-59. The reasons for this are the improvement in the group's earnings and the recent change in the basis of the charge for profits tax.

Your company has had a considerably better year. In all our activities competition is keen and profit margins are consequently low, but the continual modernisation of our plants has enabled us to manufacture and trade on a more economic basis, which has helped to produce these improved results.

Business generally should benefit from the government's policy, and their decision to press on with the provision of new schools and hospitals and to encourage the building of more flats and houses should ultimately prove of special advantage to the floor covering industry. Unless unforeseen circumstances arise, therefore, I see no reason why the future prospects of the company should not be regarded as encouraging.

The report and accounts were adopted.

RUSTENBURG PLATINUM MINES LIMITED

(Incorporated in the Union of South Africa)

EXTRACT FROM CHAIRMAN'S SPEECH

The Twenty-seventh Annual General Meeting of Members was held at Johannesburg on February 5, 1959. Mr. D. A. B. Watson (Chairman) presided and, in the course of his speech, said:

FINANCIAL RESULTS FOR THE YEAR ENDED AUGUST 31, 1958

The profit from the sale of metals during the year ended August 31, 1958, before providing for transfers to and from Reserves, and before providing for taxation, was £1,519,000 as compared with £4,480,000 for the previous year. Revenue from the sales of metals other than platinum, although somewhat lower than in the previous year, was at a reasonably satisfactory level and the two main factors which adversely affected trading results were, firstly, the decline in the volume of the sales of platinum to approximately 50 per cent of that for the preceding year and, secondly, the fall in the official retail price of the metal to an average of £27 15s. as compared with a price of £34 per ounce during the twelve months ended August, 1957.

The estimated tax liability arising from the year's operations and from adjustments to previous assessments amounted to £116,000. An amount of £589,000 was transferred to the Stock Realisation Reserve, being the value of the increased stocks of metals at cost of production. Net capital expenditure amounted to £294,000, and after adjusting for sundry expenditure and revenue and bringing into account the sum of £178,000 arising from a reduction in the value of stores and materials on hand, the balance of the year's profits was approximately £680,000.

During the year a loan of £1 million was obtained from The Standard Bank, repayable over a period of five years at a rate of not less than £200,000 per annum. The first repayment falls due in April, 1959. This loan was raised to finance current operations and the term of five years was arranged to afford an opportunity to extend, if considered desirable, the period over which the deficit in funds as at August 31, 1958, will be extinguished by appropriations from current profits.

In considering the question of a dividend for the year ended August 31, 1958, the Board of Directors decided that, because of the uncertainty of the platinum metal market, no dividend should be paid in respect of that year, and that the whole of the available profit of about £680,000 should be applied towards a reduction of the deficit in the amount of the funds which had been provided to meet expenditure incurred up to August 31, 1957. After applying the sum of £680,000 to this purpose, the amount still to be provided in respect of past expenditure amounted, at August 31, 1958, to approximately £1 million.

OPERATIONS

Early in the calendar year 1958 output at the mines was reduced to a rate below the estimated level of sales, and that rate of production has since been maintained. Both Rustenburg and Union sections are operating, certain advantages being gained by the continuance of production at the latter mine at a low milling rate and at a low cost of production. The mines have been and will be maintained in such conditions that mine output can immediately be increased if necessary.

STOCKS

During the first six months of the past financial year, mine production of platinum was in excess of sales, which had declined rapidly and progressively during the same period. As a consequence the total stocks of platinum increased during the year under review. A relatively satisfactory level of sales was achieved in respect of the by-product metals, stocks of which remained virtually unchanged. The value, at cost of production, of the increase during the year, in stocks of all metals was approximately £589,000.

The value of the increase in stocks during the previous financial year 1957 was £895,000, and therefore during the past two financial years nearly £1½ million was appropriated to finance the increase in metal stocks. It is of interest to note that this figure, which represents the cost of production of tangible assets in the form of stocks of metal which can in due course be realised, is in fact greater than the deficit of approximately £1 million between expenditure and funds provided up to August 31, 1958.

DEMAND

During the financial year under review, the pattern of demand remained more or less constant. Of the decrease in the total volume of sales during the year compared with the previous year, about two-thirds occurred in the United States and one-third in the United Kingdom.

The consumption of platinum by industrial users in countries other than the USA and the UK remained at relatively satisfactory levels and in the case of certain countries whose industrial development is advancing, previous levels of consumption were in fact well maintained.

The USA is, however, by far the largest single consumer and that country and the UK constitute our most important markets. The decline in consumption by those two countries has therefore overshadowed the variations in demand by other consumers.

As regards sales of platinum to the different types of industrial users, diminished demand from oil refineries in the United Kingdom and the United States accounted for about 70 per cent of the decline in the company's total sales in those two countries.

SUPPLIES

The supply position remains easy with Russia offering platinum relatively freely in various markets. Total exports from Russia to the Western countries, in so far as these can be determined, were less during the period under review than in each of the previous two years. These sales were nevertheless material, and have had and continue to have a marked effect on the platinum market.

As regards the International Nickel Company of Canada, the mine output of unrefined platinum group metals as by-products of nickel was probably reduced during 1958 as a result of the curtailment of nickel production to a rate equivalent to about two-thirds of the normal rate. That company's operations were, furthermore, interrupted by a strike which continued virtually throughout the last three months of 1958. On the termination of the strike, the company announced that production of nickel was to be resumed at a rate which is equivalent to about 80 per cent of the rate of production at the end of 1957. Despite the reduction in mine output during the calendar year 1958, the refined output of platinum group metals by the International Nickel Company may not necessarily have been materially reduced during that year, but a reduction in refined output during the current year can reasonably be anticipated.

The other platinum producers throughout

the world which operate individually on a relatively small scale have in the aggregate produced less platinum during 1958 than in previous years.

A quantity of platinum scrap was released by US authorities during the calendar year 1958 with some adverse effect on the market. The quantity released was immediately absorbed by dealers.

PRICE

Supplies from Russia provide a strong competitive element in the markets with a consequential depressing effect upon prices. The drop in the official price of Rustenburg metal from £34 in 1957 to an average of £27 15s. in 1958, and to the present figure of £19 10s., is a most serious factor affecting the profitability of the operations of this company, but for so long as other producers are prepared to reduce their prices in an endeavour to obtain additional sales in the present restricted world markets, we have no alternative but to remain in a fully competitive position by continuing to match our prices with those of other producers and sellers.

The continuous decline of the past eighteen months has resulted, in my opinion, in a price of platinum which is too low when considered in relation to the capital employed in the production and refining of platinum, and the financing of the necessary pipelines of unrefined metals and the trading stocks of refined metals. Again, when considered historically, the increase in the price of platinum from $37 in 1939 and to $52 in 1959 at the present moment is on a lower scale than the increases which have occurred in the prices of other industrial metals over the same period.

In my opinion, the price of platinum is now at such a level as to be likely in due course to discourage a continuance of the free flow of platinum on to the world markets.

FUTURE OUTLOOK

As stated previously, 70 per cent of the decline in the company's total sales of platinum has been occasioned by the marked reduction in sales to the oil industry throughout the world. At the present time there is no significant change in the position as regards this industry, whose reduced requirements for platinum during the past year have to a large extent been met from its accumulated stocks. The number, and total capacity, of oil refining plants throughout the world are, however, both increasing and there are good grounds to believe that this increase will continue. At the moment there are no indications of any major changes in the techniques involved in the production of high octane fuel by the use of platinum catalysts. Should no adverse change occur, and if the increase in world refining capacity continues as expected, there is every likelihood that overall sales of platinum to the oil industry will again increase as stocks now in the hands of oil refining companies become depleted.

The economy of the United States appears at present to be moving forward out of the recent recession and, should this movement continue, the expansion of industrial activity is likely to assist the market for platinum. Since the end of the financial year 1958, there have in fact been signs in the United States of an increased interest by industrial users, other than oil refiners.

There has in recent months been some slowing down in the rate at which the price of platinum has fallen but there is at present no indication of any hardening of the price, which may indeed decline further. Neither is there any firm sign of the material reduction in the over-supplied state of the market which is a prerequisite for a return to more rational prices.

Changes in the platinum market tend to be rapid, whichever way they develop, and it is always difficult to forecast the future position of this company. Present indications, however, after five months' operations during the current financial year, are that sales will be at a higher level than they were during the year ended August 31, 1958.

Given the presently indicated volume of sales of platinum and the associated platinum group metals, copper and nickel, in relation to the current rate of production, there will be a significant reduction during the current year in the available stocks of metals held by us and, particularly, in the stocks of platinum. Provided that there is no material reduction in prices over the balance of the current year and provided that sales remain in accordance with present indications, it appears that operations for the year ending August 31, 1959, should, after a substantial transfer of funds from the Stock Realisation Reserve in respect of metals sold out of stocks, yield sufficient profit to extinguish, if we so decide, the present deficit in funds of approximately £1 million and to leave a surplus in hand.

This forecast is contingent, as I have said, upon the continuance of the present indicated level of sales and upon prices remaining at about the present level.

I wish to draw attention to various factors which will favourably affect the financial position during the current year but which are likely to operate less favourably in future years. Firstly, the hoped-for improvement in the financial position, if it is achieved, will arise largely from the disposal of a considerable portion of the excess stock of platinum which was produced last year and the year before in anticipation of a higher level of sales during the years 1958, 1959 and 1960. The depletion of stocks against a low level of production cannot continue indefinitely and therefore the improvement in the company's financial position which may arise from the reduction of stocks during the current year will not necessarily be repeated in subsequent years.

Secondly, as a result of heavy capital expenditure in recent years a considerable sum is available as a redemption allowance to set off against profits for tax purposes for the current year. Present indications are that the tax liability during the year ending August 31, 1959, will be insignificant. Although further amounts will be allowable for redemption after the end of the current year, the effective rate of tax levied on profits in subsequent years is likely to increase, the rate of increase being dependent naturally upon the profits earned during such years.

Thirdly, although it is anticipated that there will be virtually no capital expenditure during the current year, it will be necessary at some stage in the future to undertake certain work of a capital nature which has been deferred during the present period of reduced sales.

At the same time therefore as indicating to shareholders the possibility that the current year's operations may result in an improvement in the financial position sufficient to convert the present deficit in funds into a surplus, I wish to emphasise that such results, if achieved, will not necessarily be indicative of the results which may flow from a similar level of sales in future years when some or all of the favourable factors which I have outlined above may no longer be operating.

I am not prepared at this stage to forecast when this company will resume the payment of dividends. The position remains extremely uncertain and it will be necessary to assess the results of the financial year in September, 1959, in the light of probable future market conditions at that time before deciding upon the magnitude of the appropriations to be made to provide, not only for the repayment of the outstanding loan, but also for possible future contingencies.

I should report that Rustenburg has recently been informed that it will shortly be gazetted as a controlled mine of Group B in accordance with the provisions of the Pneumoconiosis Act, 1956 (Act No. 57 of 1956). It is not expected that this will have any significant effect upon working costs."

9/- a line.

ADVERTISING

A group of young advertising executives have recently formed a consulting and service agency for progressive business concerns wanting to expand. If you are interested in a new approach to your selling write to Box 1120.

TRUSTEE

services offered.

H. J. Gutberlet, 11 Anzengruberstrasse, Frankfurt/Main.

A CAMERA OF QUALITY. The Swedish Hasselblad—Perfection. The best camera in the world. £244 19s. City Sale & Exchange Ltd., 66 Cheapside, E.C.2.

CASTLES in Spain? Don't dream of good living, make it a reality right here at home with superb El Cid Sherry. This is the light yet full-bodied Amontillado that is so pleasing to the palate.

TV URGENTLY NEEDS SCRIPTS! Our correspondence course can teach you to earn big money by writing TV scripts that sell. Individual and practical coaching by experts. Free Prospectus from Department 128, Television Writing School, 7 Harley Street, London, W.1.

THE CHARTERED INSTITUTE OF SECRETARIES

Employers requiring the services of Chartered Secretaries to fill secretarial and similar executive posts are invited to communicate with the Secretary of the Institute (Dept. E), 14 New Bridge Street, London, E.C.4.

APPOINTMENTS

MARKET RESEARCH MANAGER

VACANCY AT BLOXHAM'S

This is an advertising agency which has not only grown steadily but has a list of clients which any agency in the world would be proud to handle. A vacancy has arisen for a new manager for its vigorous Research Department.

Applicants should have a degree, wide experience of research techniques, administrative ability, the personality to lead, and the conviction (after meeting us) that their future is closely bound to ours. This is a well-paid post for somebody senior in experience—though possibly young in age. Please write to the

CHAIRMAN,
CLIFFORD BLOXHAM & PARTNERS LTD.,
LION HOUSE, RED LION STREET, W.C.1

For other appointments see page 547

FARM ECONOMIST, KENYA

Required to undertake farm costings and surveys in European and African farming areas of Kenya.

Candidates must have a university degree in Agriculture or Economics with experience or training in farm costings, surveys and agricultural use of land surveys.

Appointment on contract/gratuity terms with gross salary in scale £939-£1,863 per annum. Gratuity at the rate of 33⅓ per cent of salary. Free passages on appointment and leave for officer, wife and children up to three adult passages in all. Furnished quarters, when available, at moderate rental.

Apply, giving brief particulars, to Director of Recruitment, Colonial Office, London, S.W.1, quoting BCD 63/7/048.

COMPANY AFFAIRS

STANDARD BANK OF SOUTH AFRICA

THE Standard Bank of South Africa is to make a rights issue of a further 1,840,000 £1 ordinary shares at 37s. in the proportion of one new share for every five held. This will bring in £3.4 million of new capital. The Standard Bank has links with the clearing banks by way of overlapping directorships and direct shareholdings. It certainly seems to have had an infusion of their recent spirit. Last December it was announced that the Standard Bank had agreed to acquire a 40 per cent interest in the equity of Mercantile Credit's South African subsidiary at a cost of £500,000. It has followed the example of several banks in anticipating the usual dividend announcement by projecting a substantial increase. The final dividend normally declared in May will be raised from 7½ per cent to 9 per cent, making a total dividend of 14 per cent, against 12½ per cent. The new shares will rank for the final payment. The issue price of the new shares was pitched close to the price then ruling in the market of 39s. 4½d., putting a value of less than fivepence on the rights. But the promise of an increase in dividend is the real attraction and after the announcement the ordinary shares rose to 41s. 6d., putting a value of 9d. on the rights. The old units yield 6¾ per cent at this price, and the new shares yield 7½ per cent on the issue price on the assumption of an annual payment of 14 per cent.

BANK OF LONDON AND SOUTH AMERICA

LAST September the directors of the Bank of London and South America agreeably surprised the market when they said that they expected to maintain the total dividend for 1958 at 9 per cent on the capital as increased by the one for two rights issue on bonus terms. They have now gone one better by declaring a final dividend of 6 per cent, against 5 per cent in 1957, raising the total dividend to 10 per cent. The disclosed net profit has fallen from £683,000 to £649,000. Part of this fall is due to the transfer of its Caribbean branches to the newly created Bank of London and Montreal, jointly owned with the Bank of Montreal, on October 1st. Just over £3 million was raised by the rights issue, and the directors said that this money was required because "the encouraging prospects" of the new venture in partnership with the Bank of Montreal might require the subscription of further capital by the parent companies. On the increase in the dividend the £1 ordinary stock rose 1s. 6d. to 33s. 9d., to yield 5.9 per cent.

BOWMAKER

IT was a shrewd stroke of business by the joint stock banks when they decided to take up an interest in the hire purchase finance houses. Lloyds Bank, for instance, bought a 25 per cent interest in Bowmaker at 29s. 6d. a share. The Bowmaker 5s. ordinary shares now stand at 39s. 4½d.xd and Bowmaker has just presented a balance sheet that tells a tale of expansion and promises more expansion to come. Much of the expansion took place in the second half of the financial year that ended on October 31st. On that date, Bowmaker's HP debtors stood at £22.4 million (against £16.3 million) and its "deposits and retentions" at just under £11 million (against £5¼ million).

It then held £2½ million in money at call but since the end of the financial year that sum has been absorbed in its purchase of the ordinary and preference capital of another HP finance house, Midland Counties Motor Finance. This new investment will cost Bowmaker about £2.6 million in all; last year the new subsidiary's gross profits came to not less than £300,000 and it held about £5 million in HP paper. That is one tangible sign of Bowmaker's ambitions; another is the launching of the scheme to enable investors to buy shares on the instalment plan. But the heart of the business remains in hire purchase finance and the chairman, Sir Arthur Morse, points out that quite an exceptional volume of business was transacted in November and December, following the lifting of the HP controls. It is reasonable to suppose, he suggests, that some of this increased business might normally have been spread over a longer period and he then rather conservatively concludes that the outcome for the present financial year should be "satisfactory."

LEYLAND MOTORS

ALTHOUGH its net profits fell from £2,222,069 to £2,045,745 in the year to September 30th, the directors of Leyland Motors are holding the ordinary dividend at 12½ per cent. This decision is justified not only by the cover that earnings of 35 per cent provide but also by the faint signs of recovery in the commercial vehicle industry, to which the chairman of Associated Commercial Vehicles, Lord Brabazon, has already borne cautious testimony. In recent months, Leyland Motors has secured a number of important contracts, the latest being for diesel trucks from Iran. No doubt the chairman, Sir Henry Spurrier, will make his comments on the industry's future at the annual meeting in March, but he has already pointed out that the home market has reached saturation point, so that Leyland's future seems to turn on its ability to continue to sell more than half its output abroad. That output covers the whole range of commercial vehicles, including buses, lorries, fire engines, petrol and heavy oil engines.

Leyland's £1 shares yield 5½ per cent at 45s. 3d., a return that the group's performance last year justifies. The heavy commercial vehicle industry did not share in the boom in passenger cars. At home, demand has been checked by recession, by fears about renationalisation and by the 30 per cent purchase tax, while overseas, customers are demanding lengthening lines of credit. Throughout the industry profit margins have been shaved. In these circumstances, for a concern even as dominant as Leyland in the industry to return net profits only 8½ per cent lower was indeed creditable.

CABLE AND WIRELESS (HOLDING)

CABLE AND WIRELESS (HOLDING) has done as well as the market expected. In 1958 its consolidated gross income rose by 11½ per cent (from £1,167,772 to £1,302,000); this compares with an advance of 7 per cent in 1957. But it has to be remembered that Cable and Wireless raised £1.2 million from a one for five "rights" issue last March. Tax takes £55,000 more at £560,000, leaving net profits £80,000 higher at £742,000. This trust does not fully distribute its earnings, ploughing some of its income back to strengthen the base for further growth. The ordinary dividend is held at 10 per cent but this is paid on the capital as increased by a 10 per cent scrip issue and the 20 per cent "rights" issue, so that effectively the dividend has been raised from 9 1/11 to 10 per cent. But the directors are still able to plough back £307,000 to reserves, which is equivalent to about 40 per cent of net profits; this compares with the practice in most trusts of retaining one quarter to one fifth of net earnings. The 5s. units at 13s. yield 3.8 per cent; this is lower than the general run of yields among the investment trusts, but the earnings cover and the break-up value on the ordinary shares is strong.

MONTAGUE BURTON

THE net profits of Montague Burton fell by a third, from £1,063,867 to £698,979, in the year to August 31st but the maintained ordinary dividend of 10 per cent was still covered by equity earnings of 23 per cent. This suggests that shareholders in Montague Burton, having seen the price of wool fall by 30 per cent or so, can look with confidence to the current year now that the price of Burton's chief raw material has steadied. That confidence will be strengthened by Mr Lionel Jacobson's disclosure that there was "a marked revival" in trade towards the end of 1958. Mr Jacobson points out that the group still retains "the greater proportion" of the nation's multiple tailoring trade, and increased its turnover in 1957-58 when the clothing trade as a whole had ceased to expand.

The directors are clearly determined to consolidated their gains, for they have introduced credit trading, at 5 per cent,

to offset both competition from credit clothiers and from other HP traders. But over the long term the directors are pinning their faith on a big programme of modernisation and development. The conversion of the Tivoli in the Strand into a modern store is planned for the current year and both the principal subsidiaries, Peter Robinson and Jackson the Tailor, are opening new stores in the provinces. But such expansion must be paid for and the chairman warns shareholders that capital spending at the present rate will be a permanent feature of the accounts. For the current year capital commitments of £648,400 should fully employ Burton's year-end cash resources of £623,065. Although the ordinary shares have fallen from a 1958 peak of 34s. to 29s. 4½d. xd they still yield only 3.4 per cent and the "A" non-voting ordinary units at 23s. 3d. yield 4.3 per cent. To some extent these prices still reflect repeated, but apparently not too well founded, take-over suggestions. But on trading merits alone, even though some recovery in profits is likely, they look high enough.

MASSEY-FERGUSON

IN the year to October 31st Massey-Ferguson turned a net loss of $4,737,341 into a net profit of $13,025,282. The rise of 7 per cent to $440.1 million in total sales cannot be the full explanation and it is significant that sales in the United States alone rose by 46 per cent to $130.3 million, making the United States the largest single market as France was in 1956-57. But Europe as a whole took 45.7 per cent of sales by value, against North America's 38.8 per cent. As the volume of sales increased, the total cost of selling fell by 3 per cent to 82 per cent of net sales. Nor did profits in 1957-58 suffer from the previous year's debit of $8.7 million for stock write-offs and non-recurring expenses. The big reorganisation programme affecting every division of this giant producer of tractors and self-propelled combines has clearly played its part.

But these are early days for shareholders to be thinking of any restoration of the dividend to the 50 cents per share paid in 1956, let alone the 60 cents of earlier years. Although the dividend, left unchanged at 40 cents per share, is covered over three times by equity earnings of $11,931,188, shareholders must recognise that the big investment programme has driven up bank loans and overdrafts by $7.7 million to $12.9 million and has brought down liquid resources by $17 million to $13.3 million. Presumably all these resources will be needed to finance the $13.78 million take-over bid for F. Perkins, the Peterborough diesel engine manufacturers. The report sheds no light either on this deal or on the negotiations with Standard over the future of the Banner Lane tractor plant and Massey's declared intention of disposing of its holding (now 24.28 per cent) in the Standard Motor equity once the deal is closed. But the directors do report that in the first two months of the current year sales were running at still higher levels. The common shares of no par value—of which British investors hold roughly 5 per cent—have risen by ⅜ to $23⅜ and yield just over 3 per cent.

WATNEY, MANN

WATNEY'S merger with Mann, Crossman in March, 1958, established one of the largest brewery companies in Britain with total net fixed assets of about £34 million. Economies will obviously ensue in time, and Watney, Mann, is now well represented in those areas, notably Essex, Luton, Dunstable, and Coventry, where Watney by itself was weak. But the chairman, Mr S. H. Combe, makes it clear that the union was the direct outcome of the impending loss to Watney of the Stag Brewery site at Victoria. The re-development of this site will ultimately bring money into the coffers, but to have built a completely new brewery would have cost about £4 million whereas the concentration of output at Mortlake and Whitechapel and their subsequent development (made possible by the merger) would require much less. But £1½ million will still have to be spent at Mortlake alone and extensions to brewing capacity have already reduced liquid assets from £2,779,072 to £2,405,689. By now they will have fallen to much lower levels as trade reaches its seasonal peak and tax liabilities have to be met. The ordinary dividend has been left unchanged at 21 per cent even though it is covered by equity earnings of 39 per cent. The brewery industry is of course highly competitive, and Watney, Mann's trading profits in the year to September 30th actually fell by 6 per cent from £3,595,650 to £3,373,743. Sales fell in line with the slight fall in beer consumption but the chairman blames this not simply on the bad summer weather which affected most breweries, but also on the seven-week London bus strike last year. Nor is he particularly hopeful about the current year's outcome as he is unable to see any decided tendency for trade to pick up. Like other brewers he points to hire purchase sales as a competing attraction, and to the big duty on beer. On the other hand Watney, Mann should benefit from the merger and from the recently negotiated reciprocal trading pact with Bass. At 77s. 9d., the £1 deferred ordinary shares yield 5.4 per cent.

CAMP BIRD

FOLLOWING the hullabaloo over the Ghana Minerals affair, the Stock Exchange Council suspended dealings in the 10s. ordinary shares of Camp Bird. After seven weeks the ban has now been lifted. Dealings began in an active market at 10s. to 11s. 3d. and by Wednesday's close the price had settled down to 11s. Since the ban some shareholders have canvassed support for the requisition of an extraordinary meeting to consider the appointment of a shareholders committee. This group claims it has already secured substantial support in its demand for a scrutiny not merely of the Ghana Minerals affair but also the conduct of the Camp Bird business as a whole.

London Stock Exchange

FIRST DEALINGS:	Jan. 28	Feb. 11	Feb. 25
LAST DEALINGS:	Feb. 10	Feb. 24	Mar. 10
ACCOUNT DAY:	Feb. 17	Mar. 3	Mar. 17

GILT-EDGED stocks remained firm throughout the week to Wednesday's close and the *Financial Times* Index of Government Securities rose 0.62 to 87.04. The market reflected hopes of an early reduction in Bank rate and the continued strength of sterling. Among the irredeemables, War Loan 3½ per cent gained 1/16 to 68 3/16, Old Consols ⅝ to 53½, and Daltons ⅞ to 51. High coupon Dominion and Corporation loans were in good demand and the new Barbados 6 per cent scrip issued at 98½ closed at 1⅛ premium on Wednesday. The Fife 5½ per cent stock (£30 paid) gained 1/8 to 31 1/16.

Industrials weakened on Friday following the setback on Wall Street only to rally strongly in a market not too well supplied with stock after the week-end. *The Economist* Indicator rose by 3.3 to 248.3. Unilever NV rose by 1s. 9d. to 108s. 9d., Metal Box by 2s. 6d. to 70s. 3d., and ICT, the product of the British Tabulating and Powers Samas merger, by 1s. 9d. to 64s. 6d. Borax on the good quarterly figures from the American company rose by 1s. 4½d. to 17s. 1½d. xd. Engineering shares were particularly strong, Tube Investments rising by 5s. 9d. to 79s. 9d. and Babcock and Wilcox rose by 1s. 6d. to 48s. 9d. Electrical issues were also firm, shaking off their earlier dullness; BICC gained 2s. 6d. to 48s. 9d., GEC 1s. 3d. to 33s. 9d. and Parsons 1s. to 50s. Steels were firmer, John Summers rising by 1s. 3d. to 37s. and United Steel by 1s. to 26s. 3d. Textile shares hardened on the prospect of Government help for Lancashire. Lancashire Cotton rose by 2s. 1½d. to 38s. and Amalgamated Cotton was 9d. better at 10s. 3d. xd. Calico Printers gained 1s. to 38s. 9d. In store shares, Woolworth rose by 1s. to 48s. 9d. and United Drapery improved by 2s. 9d. to 38s. 6d. Among building shares, Eastwoods rose by 2s. 3d. to 48s. and Wallpaper Deferred by 3s. to 86s. 3d. However, Wimpey lost 2s. 6d. at 82s. 6d. on the proposed capital distribution. HP shares were strong; Astley rose by 3s. to 24s. 4½d., UDT by 3s. 3d. to 126s. 6d., and Lombard by 1s. 3d. to 24s.

Oils were dull before the week-end, reflecting the setback on Wall Street. Although they shared in the ensuing general rally, US selling had led to further losses by the close on Wednesday. Shell Transport lost 5s. 6d. to 144s. 6d., Burmah 1s. 3d. to 78s. 9d. and British Petroleum 2s. 6d. to 52s. 9d. Gold shares forged ahead following the lead of FS Geduld. Western Holdings, which adjoins FS Geduld, benefited from switching and gained 10s. 7½d. to 135s. OFSITS moved up from 83s. 9d. to 92s. 3d. In the finance house section, Union Corporation rose by 3s. 3d. to 54s. 6d., Central Mining by 3s. 9d. to 80s. 9d. and Anglo American by 8s. 7½d. to 175s., 7½d.

THE MONEY MARKET

THE authorities gave a large amount of assistance to tide the market over the customary shortage of funds in the tax gathering season, but credit remained difficult up to Tuesday. Very small amounts were taken from the Bank last Thursday and again on Monday and a rate of 3½ was readily conceded for overnight loans. Pressure was relieved on Tuesday when calling diminished to negligible proportions, later balances becoming available from the banks at their minimum rate of 2½ per cent. The authorities did not intervene, but on Wednesday the supply of credit was barely adequate and some use was made of privilege facilities.

At last week's Treasury bill tender the full offer of £220 million was allotted. The discount houses left their concerted bid at £99 4s. 5d. for the third week in succession and again received 31 per cent of their applications at that price. The average rate of discount was almost unchanged at £3 2s. 1.68 per cent, total applications dropping by £27.1 million to £388 million. This week the offer has been further reduced to £210 million and maturities will amount to £300 million.

The seasonal reflux of Bank notes from active circulation came to an end in the week to February 4th. Notes in circulation rose by £1.8 million to £2,003 million.

Keep up to date . . .

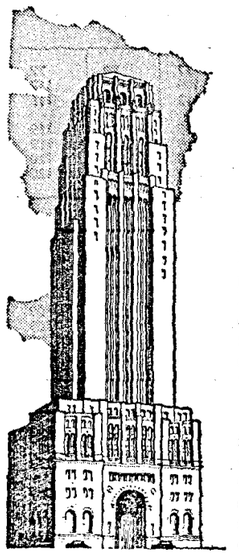
with the help of either of these two informative monthly publications. *Trade Trends* summarises the latest state of trade throughout South, Central and East Africa; *The Standard Bank Review* gives a detailed survey of economic, commercial and industrial conditions in those territories. If you have business interests there, we invite you to apply to the Secretary for free copies.

THE STANDARD BANK OF SOUTH AFRICA LIMITED

10 CLEMENTS LANE, LONDON EC4

800 branches and agencies throughout South, Central and East Africa.

CORNWALL *for* 'Stary-gazy' *but* YORKSHIRE *for Insurance*



"Stary-gazy" is the Cornish word for fish pie or pasty. These are usually made from whole pilchards covered with a special pastry and are a well known local dish.

"Yorkshire Insurance" is well known throughout the country—bringing peace of mind and a feeling of future security to its policy-holders. This old established Company, progressing with new ideas, provides all types of modern insurance*. There are many ways in which our Local Branch Manager can help you—it will be to your advantage to get into touch with him now!

★ *For instance the "Everyman's" Accident Policy which provides £10 per week for 100 weeks if you are totally disabled in an accident. A lump sum is payable in the event of certain permanent injuries or death. The cost is little—it ensures a good deal!*

THE PERMANENT SICKNESS INSURANCE CO. LTD.

3 CAVENDISH SQUARE, LONDON, W.1

Telephone : LANgham 0311 (4 lines)

BAY HALL TRUST LIMITED

Summary of Directors' Report for the year ended 31st December, 1958 and of the accompanying Statement by the Chairman, Sir Charles J. Hambro, K.B.E., M.C.

The gross revenue amounted to **£244,117** and showed a satisfactory increase as compared with **£228,515** in 1957. After providing for Taxation, Directors' Fees and other outgoings amounting to **£105,156**, there was a net profit of **£138,961** as compared with **£136,244** in the previous year. The increase in net profit would have been greater but for the incidence of Profits Tax, to which the Trust became liable during the year under review. The charge for Profits Tax, as at present levied, can be expected to be lower in future years. Adding **£138,325** brought forward, the total available for appropriation is **£277,286**. The Directors have placed **£100,000** to General Reserve and recommend a dividend of 17 per cent, less tax, which will absorb **£103,063**, leaving **£74,223** out of which the Directors further recommend a bonus dividend of 1 per cent, less tax, which will absorb **£6,062**, leaving **£68,161** to be carried forward. The bonus dividend has been recommended instead of increasing the annual dividend in order to minimise Profits Tax. It is intended to initiate the payment of interim dividends in 1959.

Full provision has been made in the Profit and Loss Account for United Kingdom Income Tax and Profits Tax in respect of all income to 31st December, 1958. Double taxation relief allowable to the Company amounting to **5s. 1d.** in the **£** has been taken into account in arriving at this provision.

At market prices on 31st December, 1958 (or where no market price existed, at valuations by the Directors at that date amounting to **£358,238**) the Investments had an aggregate value of **£3,848,628** as compared with their book value of **£2,017,151**. There is thus an indicated appreciation of **£1,831,477** over book cost.

At the valuations taken at 31st December last, over **95** per cent of the Investments are situated in the United Kingdom, Union of South Africa and other parts of the British Commonwealth. About **94** per cent of the Investments are in ordinary stocks and shares and the balance in fixed-interest-bearing securities.

APPOINTMENTS

Vacant 9/- a line; Required 6/- a line.

GKN

The Guest Keen & Nettlefolds Group of Companies

wish to make the following appointment in one of their constituent companies.

MARKETING—HOME AND OVERSEAS

An exceptional *opportunity* exists for a fully experienced Sales Executive to join a large *engineering* company in the Midlands.

As this appointment can lead to a Directorship, applicants must be able to provide evidence of particularly sound experience of selling at all levels in the engineering or allied industries, possess ability to organise internal and external sales force *and deal* with publicity, etc.

A number of *new* products are about to be launched on a world-wide basis and there are particularly good prospects and scope for a man with drive and initiative.

Salary and associated benefits commensurate with this very important top level appointment.

Appropriately qualified men who consider that *they have had relevant experience* are invited to write, stating full details of age, *qualifications*, career to date, etc., to the Group Personnel Officer, Guest Keen & Nettlefolds Ltd., 66 Cannon Street, London, E.C.4. No one who has recently applied for a sales appointment within the Group *need* re-apply.

ASSISTANT SECRETARY to take charge of legal and taxation department at Association of British Chambers of Commerce. Post requires extensive reading of Bills and Statutes affecting business also serving Finance and Taxation Committee. Candidates should have legal background, knowledge of accounting and taxation principles, and have initiative for research. Ability to *prepare memoranda* essential. Salary £1,000-£1,500 according to qualifications. Pension scheme.—Applications to Secretary, 14 Queen Anne's Gate, London, S.W.1, *marked Confidential.*

THE BRITISH OXYGEN COMPANY LIMITED

HEAD OF ECONOMICS AND STATISTICS SECTION

There is a particularly interesting vacancy at the Head Office of The British Oxygen Company Limited, in the West End, for the Head of the Economics and Statistics Section. A man with appropriate qualifications is required, with industrial experience, preferably on the financial side, a practical knowledge of statistical *methods* and a flair for carrying out investigations and writing lucid reports. He should be a live, creative type, fairly young but mature outlook. The post has been advertised before but not yet filled; previous applicants should therefore not *re-apply*. Please write to :—

The Staff Officer,

The British Oxygen Company Limited

Bridgewater House, Cleveland Row, St. James's, London, S.W.1.

For further appointments and other classified advertisements see page 537

ADMINISTRATIVE STAFF : The United Kingdom Atomic Energy Authority require to make a few senior appointments on salaries in the range £2,200-£3,150 *leading with policy, primarily* in the fields of finance, Accountancy and Personnel. Some of the posts are in London and carry a London *addition of £100 a year.* There is a contributory pension scheme.

People with high quality administrative or managerial experience in financial control, management accounting, commercial policy, contract negotiation, or staff management (industrial or professional), and senior professional accountants with suitable experience are invited to send a postcard for an application form to the Establishments Officer, Room 317, United Kingdom Atomic Energy Authority, 11 Charles II Street, London, S.W.1.

Closing date for completed application forms, February 28, 1959.

EDITOR

For new business and industrial publication. (1) Must be thoroughly grounded in subject. (2) Must have top editorial training, able to select, handle team of reporters, contributors ; must be keen to get "story behind the story."

Commencing salary not less than £3,000 plus amenities and attractive prospects.

Useless applying unless of this calibre. Applications treated in very strictest *confidence.*—Box 1121.

COMMONWEALTH OF AUSTRALIA

APPLICATIONS ARE INVITED FOR POSITION OF

COMMISSIONER

EXPORT PAYMENTS INSURANCE CORPORATION

The Corporation is a statutory body established to promote trade with countries outside Australia by providing Insurance against the risk of non-payment in *Export Trade.* In its first full year of operation to June, 1958, the Corporation issued *policies* to a face value of over £11 million.

The Commissioner is responsible for the operation of the Corporation. He will be required in the course of promoting the business of the Corporation to further a high standing for the Corporation and its officers with *leaders of industry* and commerce and *export trade* throughout Australia. Liaison with overseas and international organisations in this field is also required.

Applications will be judged on qualifications and experience, not necessarily *in the field of insurance.*

The appointment will be for a period of *seven years* and there is provision for *re-appointment.*

Salary will be commensurate with the responsibilities of the appointment and the qualifications and experience of the successful applicant. Appropriate allowances also *will be paid.*

The headquarters of the *Corporation are in* Sydney with a Branch Office in Melbourne.

Applications will be treated in strictest confidence. They *should* be marked "E.P.I.C." and be lodged not later than February 28, 1959, with the Official Secretary, Australia House, The Strand, London, from whom further *particulars* can be obtained.

GENTLEMAN required as Assistant by Managing Director of Large Industrial Group. Candidates for this position should be in age group 35-40, of good address and thoroughly experienced in commercial matters and *administration*; competent to advise in the engagement of commercial staff as required and possessing the ability to carry out negotiations at executive level. Commencing *salary* for the position will be adequate and intending applicants should at present be in receipt of not less than £1,500 per annum. Successful applicant must be prepared to reside in Northern England. Applications will in first instance receive full consideration prior to interview, and will be treated with the utmost confidence.—Write Box 1116.

MARKET INVESTIGATION OFFICER

Important Group in the heavy chemicals industry seeks Market Investigation Officer to :

(a) interpret the significance of economic and marketing data

(b) carry out market studies.

Applicants should have three years' *experience* of such activities, be University *graduates*, and the preferred age range is 28 to 35.

This is a *new appointment*, reporting to top management, to which considerable importance is attached, in the light of a policy to expand *sales at home* and abroad, and to widen the product range.

A progressive salary of at least £1,500 per annum is offered, in accordance with qualifications and experience, and there is a pension scheme.

The Group's *employees have been informed* of the vacancy.

Write, in strict confidence, attaching a chronological summary of experience, to Urwick, Orr and Partners Limited, who have been asked to advise *in connection* with this appointment, at 8, Buckingham Palace Gardens, London, S.W.1, quoting reference LOR/1288 on the envelope.

COUNTY COUNCIL OF ESSEX

COUNTY PLANNING DEPARTMENT

Applications invited for the post of Planning Assistant APT Grade I (£575-£725) at Braintree.

Applicants should have had experience in development control *and/or* development plan work, particularly design and elevation control, but consideration will be given to those who are *qualified in* Economics, Geography or Landscape Architecture and wish to train and study for a qualification in *Planning.*

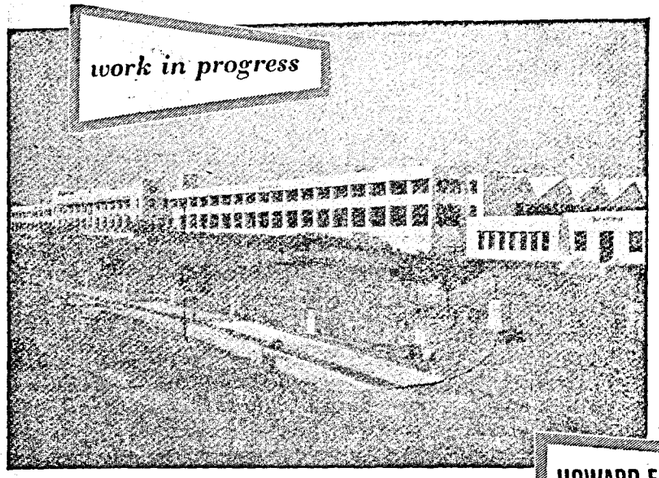
Who are the women behind the



MANCHESTER GUARDIAN?

The woman on the left is against. Practically everything. Particularly the *Manchester Guardian*, which is often wildly for. As she reads it she grows against-ster and against-ster. Pretty soon she will raise that well-oiled hockey stick and knock down the editor, who will thus join a select company which includes a Grenadier Guardsman, Great-uncle Charles, and two Cabinet ministers.

In the centre is the Hon. Felicity Sparks, who is a model. She is usually to be found wearing pale grey clothes in pale grey photographs. Her cheek-bones are high, her brow is low. The photographer, however, thought it would be an amusingly colourful idea to stand the pale grey Miss Sparks behind the pale pink *Manchester Guardian*. Alas, she herself reads only papers in which pictures outnumber the words.

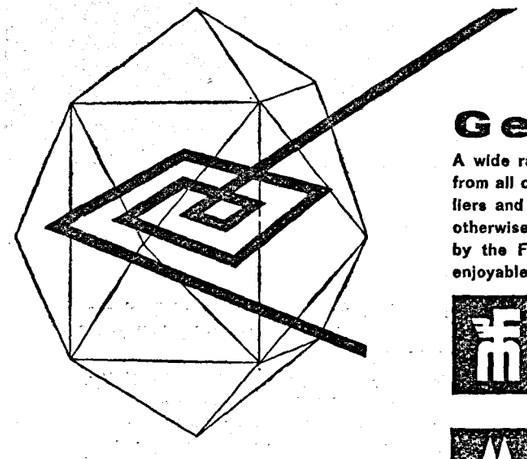
The woman on the right is a beautiful, kind, wise, witty, cultured mother of three children. She is also an economist, and therefore sees the good sense of buying the *Guardian*, which for three pence a day provides her with paper for wiping the omelette-pan, and for giving to the children to make cocked hats. The *Manchester Guardian*, moreover, has another interesting feature which is provided at no extra cost; the staff take pains to write it so accurately, intelligently, and amusingly that it is actually quite a pleasure to read it before you wipe the floor with it.

Messrs. Dodge & Ried, Chartered Architects & Surveyors

Wherever the sign of Howard Farrow appears there is work in progress.

This photograph illustrates a general view of the Firestone Tyre & Rubber Co. Ltd., showing East and West wing extensions recently completed.

Work in progress includes sewerage, tunnelling, concrete structures, factories, and domestic buildings.



A folder giving a selection of Howard Farrow contracts covering a wide field of projects will gladly be sent on request.

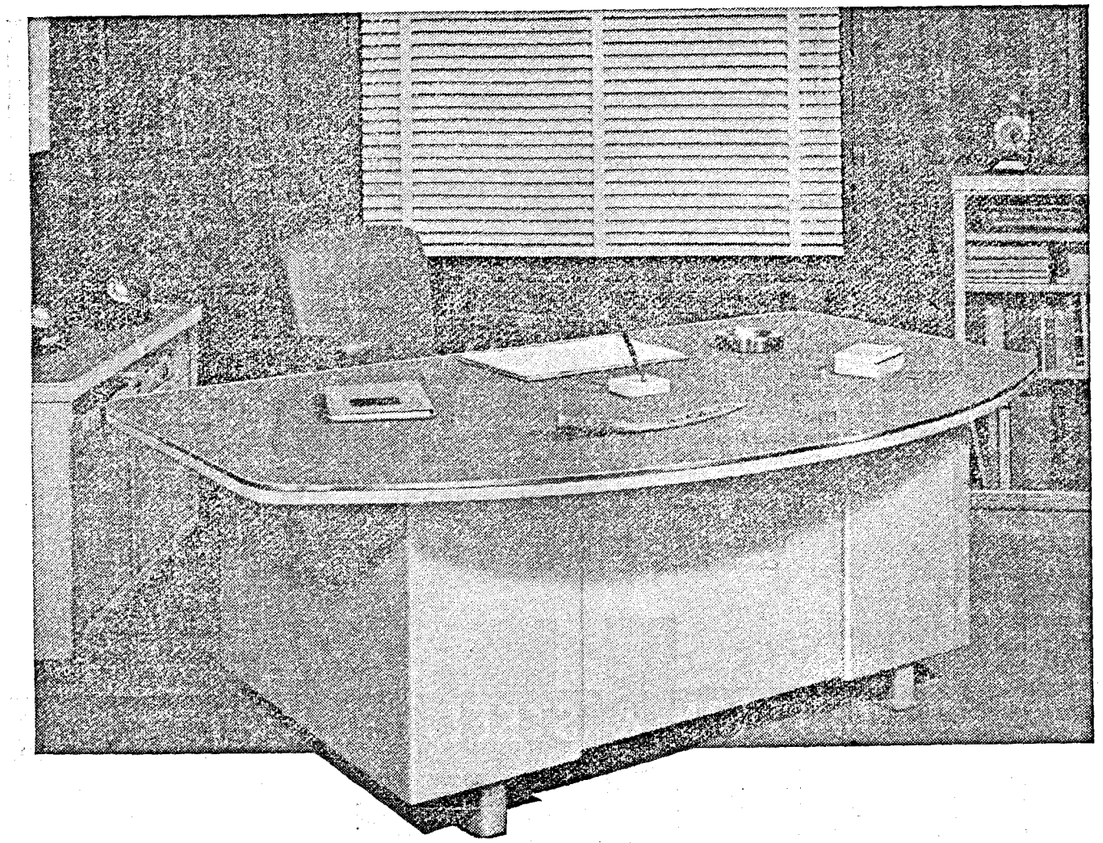
Marine Diesels



CLARK-SULZER, N.E.M.-DOXFORD, N.E.M.-GOTAVERKEN.
All leading names in marine diesels. These engines are built and installed in vessels of all types and sizes at our Works at Wallsend and Sunderland together with all other engine-room equipment, boilers, auxiliaries, shafting, propellers, etc.
At Wallsend and also at Hartlepool we build and install steam propelling machinery—turbines, reduction gearing, condensers, Foster Wheeler and Babcock & Wilcox design water tube boilers—for ships of all kinds.
But this is only a part of the Hartlepool activity. In the recently completed extension to our Turbine Shop there we can build some of the largest steam turbines and alternators, of Brown-Boveri design, yet envisaged for public electricity supply.

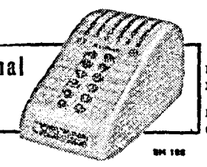
What are these men doing?

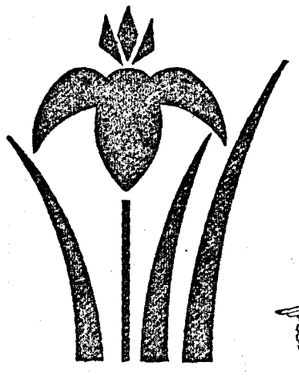
They are having a telephone conversation...



With the new Ring-Master intercom there's no dialling or lifting of receivers—no need to stop what you're doing, in fact. The caller just presses the numbered buttons for the extension required. Conversation can be held quite normally at either end—even when the speaker is some way from the desk unit! And with the crystal-clear sound reproduction, voices can be recognised immediately.

The revolutionary Ring-Master system can bring *instant push-button contact to your* organisation, however small or large—ffom 2 to 999 extensions!

Ask for further details of the Ring-Master—telephone or write to one of the addresses below.



Extra facilities for visual paging, calling preference, public address and secretary interception can easily be added.

Powers-Samas *plus*

On 30th January, Powers-Samas Accounting Machines Limited and The British Tabulating Machine Company Limited merged under the name of International Computers and Tabulators Limited.
This Company (I·C·T for short) is now Britain's largest manufacturer and distributor of data-processing machinery.
Its operations will be world-wide.

International Computers and Tabulators Limited

I·C·T

October 27, 1958: Pan American began daily Jet Clipper* service between Paris and New York. Today Pan American Jet Clippers offer the fastest service to New York from London, Paris and Rome. Both Deluxe and Economy-Class Service . . . at no increase in fares. Fly Pan American—World's Most Experienced Airline.

*Trade-Mark, Reg. U. S. Pat. Off.

Hollerith *plus* Powers-Samas *plus* equals I·C·T

On 30th January, International Computers and Tabulators Limited (I·C·T for short) became Britain's largest manufacturer and distributor of data-processing machinery.

In this Company, Hollerith has been strengthened by its association with Powers-Samas — and Powers-Samas similarly strengthened by its association with Hollerith. These two Companies established the punched card industry in the United Kingdom and have remained in the forefront of world development in the data-processing field.

What advantages can I·C·T fairly claim? Among others:

The ability to make available a wider range of punched card and computing equipment.

A pooling of the wide variety of experience — 50 years for Hollerith, 43 years for Powers-Samas — in mechanising statistical and accounting procedures and in contributing to scientific management at home and overseas.

The more effective deployment of research and development resources.

On the formation of I·C·T, The British Tabulating Machine Company Limited and Powers-Samas Accounting Machines Limited pay tribute to the very large number of users of their equipment in Government, Local Authority, Industry and Commerce, at home and overseas, with whose support the *Goodwill* of both Companies has been firmly established. I·C·T is proud to take over this *Goodwill*, and assures both present and prospective users that it will be as strenuously guarded as in the past and strengthened in the future.

Does your wife see red?

Every Ego or Id. must influence, to a greater or lesser degree, the behaviour pattern of mankind. So *your* book-habits, which you no doubt fondly believe are your own business, are not a purely domestic matter. If you throw your books around like confetti at a wedding, or if your wife has frequent crying fits after dusting your collected works, it's time you faced the truth — that your book-habits may well start a revolution and bring 1984 and Newspeak closer than is comfortable.

Fortunately, there is always a solution. Minty have specialised for years in making bookcases that house your books behind glass and keep them dust-free. They give your books an elegant, well-tailored home, and leave you more room to walk around in. They allow you to go on reading and buying—for Minty bookcases are *sectional* and may be started for as little as £9.2.0—on deferred terms if you prefer. Only at Minty showrooms can you see and buy Minty bookcases (and furniture); only by this *direct* selling from Minty to *you* can Minty offer you such fine furniture at such moderate prices. There are seven Minty showrooms each within reasonably easy reach of most people, but if for any reason you can't call, Minty will be glad to send you a catalogue and particulars of post-ordering. Write to Dept. E.1, Minty Ltd., 44-45 High Street, Oxford.

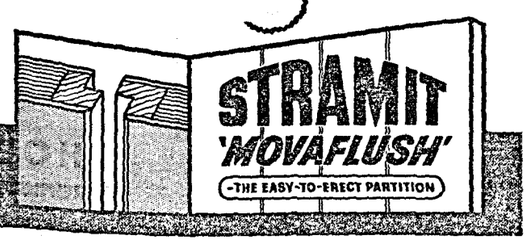
"Something new in partitions, old chap"

"Tell me more."
"I knew you'd be interested in this, old chap. You're thinking of dividing up that big office of yours aren't you?"

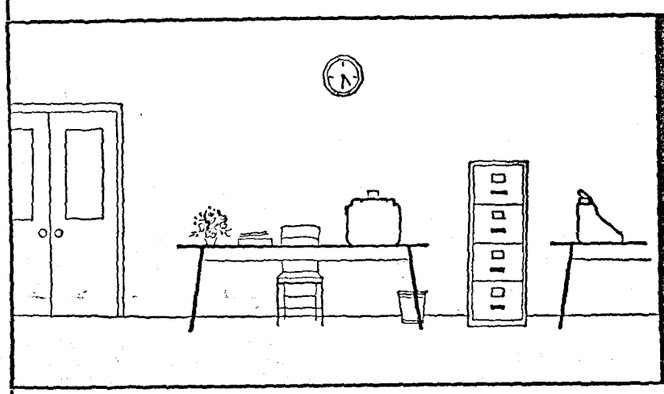
"It's quite a possibility."
"Well, these new Stramit 'Movaflush' partitions really have something. It's all in the way they fit together, actually. They're ready-made panels with an L-shaped piece at each side and they simply butt up together, one after another. You put a screw through them—and that's that. They go up at simply astonishing speed. Knock pounds off the normal erection costs."

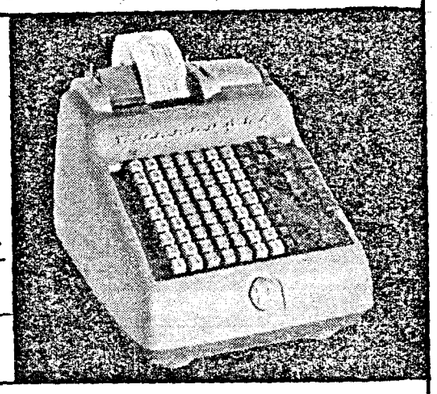


"What are they like, when they're up?"
"Eh? Oh, I see what you mean. Well, according to this leaflet I've got, 'Movaflush' partitions have all the virtues. They're over two inches thick, you know, for a start. They're strong and rigid. They deaden sound. And they're faced with hardboard so they can be decorated easily."

"How much, old boy?"
"Well, the surprising thing is, *not much at all*. Something like five bob a square foot, including things like timber sections, doors, screws and what have you."

"I must get one of those leaflets."
"Why not get your secretary to fill in a coupon, or something."





Please send me, without obligation, full details of Stramit 'Movaflush' partitions

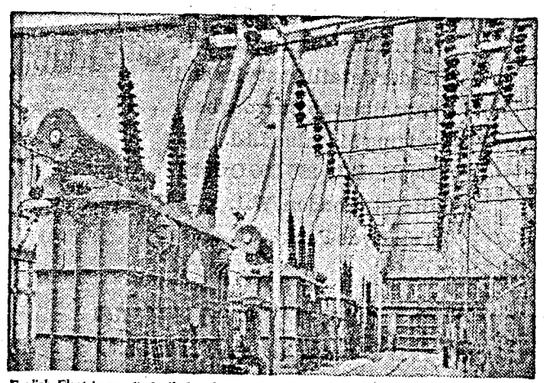
Tel: Hyde Park 7061.

BURROUGHS ADDING MACHINES

Conventional power stations will still provide most of the world's electricity for many years to come. At Vierfontein, South Africa, twelve English Electric 30,000 kW steam turbo-alternator sets have been installed in one of the Union's largest power stations. Nearly 30 countries throughout the world use English Electric steam turbo-generating plant.

THE WORLD IS CRYING OUT FOR MORE POWER



MAN has only just begun to tap the power resources within his reach—power locked in the sunlight, in the sea, in the earth, in the atom. More power can bring unthought-of prosperity. Creating the means to produce, distribute, and use power is the business of The English Electric Company, both here and abroad.

In the latest British power stations, giant English Electric turbo-alternators are helping to generate more electricity from each ton of coal; and at Hinkley Point, Somerset, the Company is building, with Babcock & Wilcox Ltd. and Taylor Woodrow Construction Ltd., a great atomic power station—the world's largest. Such projects point the way to more abundant power at an economic price, which will be used in more efficient industrial equipment, faster electric trains, better refrigerators—all made also by English Electric.

But English Electric's work abroad is just as important to you.

It earns millions of pounds' worth of foreign currency; it helps to raise living standards abroad; and it adds to English Electric's world-wide fund of experience—experience available to all.

Here, for all, is a fine new future: a life made richer and fuller by *power*.

English Electric supplied all the plant and equipment for the new Salime hydro-electric station in Asturias, Spain. Four 32,000 kW water turbine generating sets supply power through these four large step-up transformers and air-blast circuit-breakers.

Power is the business of

ENGLISH ELECTRIC

... bringing you better living

An Independent Cyprus?

AT last it looks as if a new dawn for Cyprus may be breaking. The depressing cycle of abortive solutions and broken hopes, of mistrust and recrimination, of murder and repression, has been arrested by the agreement on an independent regime for Cyprus reached at Zurich on Wednesday by the prime ministers and foreign ministers of Greece and Turkey. Both sides were apparently agreed on the principle of independence before they came to the conference table; but it took five days of hard diplomatic slogging to hammer out mutually acceptable guarantees for that independence. That success finally came, when hope for it had been all but abandoned, was primarily due to the fact that for the first time both Mr Karamanlis and Mr Menderes were set on agreement, and ready to compromise to get it.

For the first time, that is, the indispensable condition for a successful solution of the Cyprus problem—agreement between Greeks and Turks—has been fulfilled: though Britain, to whom the island belongs, has still to give its verdict on what has been agreed. Earlier efforts to find a solution—the Radcliffe constitution three years ago, the British plan last June, and Mr Macmillan's pilgrimage to the eastern Mediterranean in August—all foundered on the mutual distrust of Greeks and Turks and on their consequent common determination not to abandon their conflicting claims. In fact, although Britain's fumbling with the Cyprus problem for thirty years must have contributed to the Greeks' and Turks' growing animosity, it has not in recent years been within the power of any British Government to root out their wickedly burgeoning mutual distrust.

That Greeks and Turks should now have taken matters into their own hands seems, in the light of all the attitudes that have been struck in Athens and Ankara, a near-miracle. And as always with near-miracles one can only speculate on how it has come about—and hope that it may not be, after all, a mirage. The heart of the problem was to get the Greeks and the Turks to exclude both enosis and partition. Last October Archbishop Makarios did in fact offer to forgo enosis in favour of independence and not to change the island's status without the consent of the United Nations. But his offer was regarded as equivocal by the Turks, who feared that enosis would be brought in by the back door after independence had been gained; and in October the failure of the efforts to arrange, with Nato's help, another tripartite conference made the Cyprus deadlock look more intractable than ever. But just before Christmas, when the Nato powers were meeting in Paris, the outlook brightened; the talks that Mr Selwyn Lloyd then held with the Greek and Turkish foreign ministers stopped the rot and pointed the way to this week's agreement.

Greece's rebuff at the United Nations last November and its deep dislike of the Macmillan plan which the British doggedly pressed on with; Turkey's growing disenchantment with partition in any form; the obvious impossibility of any settlement without compromise by both

sides ; increasing pressure from Washington ; above all, a more lively appreciation of the dangers to Greek and Turkish security involved in a perpetuation of the Cyprus quarrel—all these factors must have made their contribution towards bringing the Greek and Turkish leaders together. Their conduct of the Cyprus dispute has in the past often been criticised here ; all the more reason to applaud the courage, determination and good sense they have now shown.

There should be an equal welcome from the British Government ; and Mr Selwyn Lloyd's initial statement on Thursday in the Commons suggests that this is in fact forthcoming. Independence goes beyond anything that Britain has yet offered. With enosis and partition excluded, Britain is asked to cede its sovereignty. Until now British thinking on the future of the island has rested on the premise that it was necessary to have an interim period of self-government, during which passions on both sides could cool off, before settling Cyprus's permanent status. But now that Mr Karamanlis and Mr Menderes have agreed on the outlines of a definite solution, the idea of an interim cooling-off period loses its meaning ; what is now all important is to seize the precious chance of a settlement while it is there. The great majority of the Cypriots (who, as is often forgotten, are the people most concerned) will no doubt welcome in principle any solution that promises them stability, freedom and a quiet life, although our correspondent in Nicosia suggests (on page 602) that there are a good many doubts and reservations in the first Cypriot reactions. Presumably both premiers believe that they can sell their plan to their respective supporters at home—and their political opponents. Archbishop Makarios has lost no time in expressing his satisfaction. Whether Grivas will approve is more doubtful. He has always fought for enosis, and has not specifically endorsed the archbishop's offer of independence, although in his leaflets he has recently been demanding freedom rather than enosis. In a Cyprus at peace, his occupation will be gone.

The negotiators in Zurich had the blessing of the British Government and in return emphasised that they were keeping its interests always in mind. Details of the agreement have not yet been published ; and Britain's precise attitude will no doubt be governed by these. But one must suppose that the Government will thankfully endorse any settlement that allows it to retain base facilities in the island and provides reasonable guarantees for the minorities in Cyprus and against the island falling into undesirable (that is, communist) hands. According to unofficial reports these guarantees are to be provided both by the proposed constitutional arrangements and by treaty. Each community is to have internal autonomy exercised through separate Greek and Turkish communal councils ; above these there is to be a joint assembly, in which the Turks (18 per cent of the population) would have some 30 per cent of the seats. Legislation will require the assent, not only of the Greek president, but also of the Turkish vice-president, who will thus in effect, be able to veto any discriminatory legislation.

The independent status of the island is, it seems, to be preserved both by an international treaty of guarantee signed by Greece, Turkey, Britain and Cyprus, and by the presence of a joint Greek and Turkish force. British forces, too, are to remain on the island in possession of the bases that Britain now holds. Mr Selwyn Lloyd said on Thursday that sovereignty over these bases would remain unchanged. This should mollify some Tories ; it is to be hoped that the Cypriots, whose assent is necessary if the bases are ever to be of much use, will agree.

The British Government cannot by its own unaided efforts resolve the Cypriot conflict or impose a solution; but any solution requires its assent, and it has an essential and inalienable part to play in implementing the solution for which others are primarily responsible. Even though Greeks and Turks have at last agreed on what they wish to be done, a trying period of transition, of shaking down and changing gear, is inevitable ; it may well throw up difficulties and dangers threatening the success of the compromise settlement so painfully reached. Britain's particular contribution to this settlement must be to make sure that the Cypriots get off to as good a start as they possibly can in what all will hope is a new and happier chapter in their history.

Blank White Paper

Mum's the word from the Minister of Defence this year. Does this mean that Mr Sandys has fulfilled his mission?

SINCE Mr Sandys's last defence white paper appeared, public controversy has sharpened and hardened about the basic tenets of present British defence policy. The wisdom or error of the original decision to develop an independent British nuclear deterrent, the adequacy of our conventional forces, the sufficiency (both in military and political terms) of Britain's reduced contribution to the Nato shield forces and to the needs of our other alliances —all these have been keenly argued. But this year's white paper ignores the lot. Mr Sandys is not to be drawn. He has nothing to add, except 15,000 regulars to the army. For all the answers to all the problems the public is referred to the monumental white paper of 1957, as amplified last year. Policy is unchanged and unexplained ; all that the public gets this year are brief notes on manpower, new equipment and pensions.

This suggests either a contempt for the critics or a determination to run away from controversy with them. The questions that continue to be asked about the premises of our defence policy continue to be made more urgent by changing circumstances. There is the new evidence of Russian advances in rocketry which has led to warnings in America (examined on page 590) that Russia might be achieving a position in which it could destroy most of the West's retaliatory capacity at one blow and thus break the nuclear stalemate. Does this erode some of the original reasons given in 1957 for assuming that the West could safely make some economies in defence. There is General de Gaulle's accession to power, and his determination to develop France's nuclear deterrent, for precisely the excuses of prestige and independence of allied action once given for developing Britain's. Does this affect British plans or priorities ? And there is the threat to Berlin, which seems to pose the whole problem whether and in what form there might ever be such a thing as a European-type limited war— and to raise a host of questions about possible reliance on the graduated use of atomic weapons, which (or the alternatives to which) Mr Sandys has hitherto flatly refused to discuss. Against the rush of the past year's events, the incommunicativeness of this year's defence white paper stands out as starkly as did the bold (but not infallible) thinking behind its predecessor of 1957.

Why ? It is nonsense to suggest that in fact the military planners think all the right decisions were made in 1957. They do not. It may be that they cannot think of anything better, and do not wish to commit themselves to views that may look all wrong in February, 1960. Or it may be (indeed it is more likely) that the generals, admirals and airmen are deeply divided on crucial issues, and the Government no less ; so that the policy behind the defence white paper is simply the defensive one of keeping mum. The one explanation the white paper does give—about the reasons for raising the army's target strength from 165,000 to 180,000 regulars—is less than frank. The plain fact is that all the experts have always agreed that the safe *minimum* for the army is well above 165,000 (the Hull Committee recommended 197,000) ; and it would be absurd to turn recruits away when it looks as if the Hull figure can after all be approached. In this respect, Mr Sandys took a great risk with the country's security in 1957, and Britain (and Nato) should now be relieved that the full penalty of that risk is not having to be paid.

NO doubt the imminence of a general election has played some part in the drafting of this year's white paper. The two previous papers produced a deal of controversy. Last year an excited argument was set off by Mr Sandys's warning that a massive attack by the Russians with conventional weapons would be met with nuclear weapons. By contrast, this white paper, by keeping out of all controversy and merely detailing this year's shopping list of hardware for the services, will have a politically sedative effect. (If it has this effect in Nato it can be claimed even as an advantage.) Economically, too, it is neutral. Mr Amory's task of tax remission in April is not made even easier by the new defence estimates (which, at £1,514 million, are some £20 million greater than expected actual expenditure for the current financial year) ; but the Chancellor has not allowed to the defence departments the additional real resources which some of the civil spending departments are to enjoy. The £20 million extra for defence will be more than absorbed by increases in prices, service pay and pensions.

In real terms, in fact, spending on the army is taking a small but quite significant cut. That needs to be remembered when considering the white paper's promises of a lot of badly needed new service equipment (see page 615) and more hydrogen warheads to boot. Some public criticisms of the army's scruffiness may appear to be met by a hopeful list of the scout and armoured cars, trucks and submachine guns and FN rifles it is now getting. But there are notable gaps in the list, such as tanks, carriers, antitank guns and wireless.

By contrast, the navy (awarded £30 million more than in its original estimate for 1958-59) is to get at any rate some of the money needed to modernise its ships ; and it is told again that the nuclear submarine *Dreadnought* is coming along. The RAF is to get its Canberra replacement, its supersonic fighter to defend the deterrent and, above all, more transport planes. But the white paper gives no real guidance on what these aircraft will mean—to take an urgent point—in terms of the actual units which can be transported with their equipment to a given brushfire. Again, it does not deal with the older aircraft carriers, which might do useful service as combined trooper and commando launchers It discusses the British deterrent without a hint that what matters is not what you have on the ground but what you can get into the air in the time it takes for a missile to reach Britain from Poland. It gives no data for considering the rightness or wrongness of the choices Britain can make and the priorities these entail.

The white paper also omits all reference to the reorganisation of the central defence planning system, which last year put—presumably—the coping-stone on Mr Sandys's work. For Mr Sandys was called into office partly in order to end the inter-service rivalries: to start a new era of inter-service thinking, which alone could bring the 1957 plan (or indeed any defence policy nowadays) to full fruition. Can the reasons for the white paper's silence about the reorganisation be that the disagreements on the Defence Board suggest that this object is still far from realisation ? Or can it possibly be that the reorganised *Oberkommando* is working so well that Mr Sandys looks as if he might be working himself out of a job ?

It would indeed be no shame to him if he was. Let it be fairly said that as defence minister Mr Sandys has done a tough, unpopular, intellectual job for the Government. He created a defence policy in a few weeks of hectic bulldozing work in 1957, out of a

vacuum where Britain previously had virtually no defence policy at all. In some of the details of his plan, such as in his assumption that the country could recruit a regular force of 375,000 in all arms after the abandonment of conscription, he has proved himself splendidly right and most of his critics shamefacedly wrong. But even if he were also right about most of the other details of his policy, does not the laying of the coping-stone on his reorganisation (personified by Lord Mountbatten) mean that his mission is fulfilled? Does it really need a man of Mr Sandys's restless energy, blunderbus approach to personal relations and passion for minutiae as well as principles to keep an established machine running? Or to produce another such white paper as this?

Alternatively if, as his critics believe, this white paper suggests that a second look is needed at some of the policies of 1957, does not Britain require a new minister to take it? A decision-maker who has had to fight ruthlessly to get any decisions accepted is not well-placed to look back later to see (and then explain) whether and why some of his decisions were wrong. It would be no personal disparagement now if the Prime Minister were to move him on. There are other ministries that need a man like Mr Sandys—even if the thought sends a thrill of fear round Whitehall.

TOWARDS THE NINETEEN-SIXTIES—IV

Afro-Asia's Casting Vote

Emancipated, or in course of emancipation, from European rule, the peoples of Asia and Africa are impatient with the great-power conflict and inclined to set their own course. The fourth article in this series considers how their attitude is likely to affect the world balance of forces.

In one sense, the cold war suits Asians and Africans pretty well. True, their tendency to deplore the whole thing is genuine and natural. Intent on their own problems, most of them resent being pressed to take sides; they long for the resources now poured into the arms race to be diverted to their advantage; they are no less worried than the rest of us about the risk of world war. Yet their more sophisticated leaders have learnt to make quite a good best of the situation. To be wooed by wealthy rivals can be profitable. The arms race maintains demand for certain primary products; and above all, if there were no nicely balanced great power conflict, Asia and Africa would not wield a sort of "casting vote" on many international issues.

In this sense, it is as much to their interest that the world should remain sharply divided as it was to Britain's interest, in the days of Eyre Crowe, that continental Europe should not come under one dominant authority. If the communist block did not exist, Asia and Africa would, at best, be less well placed to bargain with the West; if the West did not exist, or even if its strength were sapped, they would be easy prey for the communist powers. As things stand, however, despite their economic and military weakness, their wishes often have to be taken into account, even by the super-powers.

The logic is simple. If Asia and Africa finally reject communism, as Europe has already rejected it, Soviet dreams of world-wide victory will be just as finally exploded. If they accept it, liberty will be doomed—in both the Old World and the New; for a "free world" comprising only the Americas and western Europe could not withstand a communist system that controlled three quarters of mankind—unless it sacrificed its own freedoms to some form of total discipline.

A casting vote is not a veto. Asians and Africans have learnt the limitations of their influence as well as its extent. During the first postwar decade, as they advanced to an ever more prominent place on the world stage, their natural tendency was to exploit the cold war situation to obtain concessions from the formerly dominant West. This phase reached what seemed a triumphant climax in 1955, with the Bandung conference, at which a newly emancipated Asia claimed to serve notice on Europe to quit Africa too; with the Bulganin-Khrushchev honeymoon tour of southern Asia, and the Russian arms deal with an Egypt which was, at the same time, gathering in promises of aid toward the building of the Aswan high dam; and also with the formation of the Baghdad alliance, which, however hotly resented by Egypt and India, did create new Asian claims on western support.

From 1956 onward, however, things became more complicated. Doubts developed about the "disinterested" nature of Soviet aid. Burma, Ceylon and others learnt painful truths about barter deals with the communist powers. And although the shock of the Suez adventure temporarily alienated nearly the whole Bandung group from Britain and France, Asians and Africans noted with appreciation the "uncommitted" attitude of other western countries, and some of them drew two further conclusions: first, that the West was no longer up to playing the old role of ogre; secondly, that "uncommitted" Asia and Africa themselves should take more care to see that their actual words and deeds did not widen the gap between them and the West.

But to recognise the West's relative loss of strength and the need to adjust the balance accordingly is a very different matter from taking the western side. Apart from the Chinese, already engulfed by communism, there are well over a thousand million Asians and

Africans, and very few of them—most of those few being directly under the shadow of the Russian and Chinese giants—feel involved in the world struggle to stem the advance of communism. In part this reflects a false sense of security, and some indifference to personal liberty; but among politically active Asians and Africans, the biggest factor is still a desire to be fully free of western dominance in any form—including the dominance of western concepts of world politics.

Westerners may understandably be puzzled by the continuing intensity of this seeming obsession. Since the war, nearly 700 million Asians and Africans have been emancipated from European rule; twenty-one new sovereign states have sent their representatives swarming into the United Nations Assembly; in vast areas where Europeans did not ostensibly rule but in fact had the final word, sunset has also descended on the consuls; and the great retreat still goes on. In 1957 Malayan independence effectively completed the European withdrawal from mainland Asia, leaving only a spattering of coastal specks, from Aden and Kuwait by way of Goa and Singapore to Hongkong and Macão. Next year, when Nigeria, Cameroons and Somalia become independent, the greater part of Africa's population will have passed out of the European hands into which it fell a bare life-span ago; France has already invited all its dependencies south of the Sahara to opt out if they wish; and with the cracking of the Congo "dyke," the pace of change is now quickening not only in West but also in East and Central Africa.

The westerner of today may well feel that the Bandung crusade is all but won. How much faster, he may wonder irritably, do these fellows expect things to go their way? Can it be that they really are leagued with the communists to goad and persecute a West which is already in full retreat?

Certainly, the communist powers miss no opportunity of exacerbating disputes between Afro-Asia and the West, and they do their utmost to capture and direct anti-western movements. To identify themselves with Asian and African nationalism, they have been willing to fawn upon backward or even barbarous potentates, as in Yemen or Afghanistan, to acclaim the atavistic beastliness of Mau Mau, and to woo governments which, like Burma's, are at war with communist rebels, or, like the United Arab Republic's, have suppressed and imprisoned their own communists. But however successfully they have exploited Afro-Asian anti-westernism, they are not responsible for its continued existence. It continues to exist partly because there are still territories, not only in Africa but around the Arabian shores and elsewhere, that are restive or rebellious against European control; partly because political independence does not always make those who now enjoy it feel wholly free of foreign domination.

Suspicion of the West may linger to an unreasonable extent, but it is scarcely surprising against the historical background. The foreign companies that developed the modern economy of Asia and Africa still loom large after the transfer of political power; and their burra sahibs and bwanas, effendis, tuans and taipans have not all adjusted themselves to new forms of gracious co-existence. Western offers of alliance are apt to awaken, in Asian ears, echoes of bygone treaties which at first tempted sultans, sheikhs and rajahs with the promise of protection, but in due course drew them into a less welcome tutelage. Monstrous blunders like the 1956 attack on Egypt, and lesser miscalculations such as marked British and American actions in the Arab world in 1958, all leave their mark. And, towering above all other factors, there is western man's seeming inability to rid himself of racialism.

Racialism is stranger than fiction, and the distant observer may find it hard to believe that, eleven years after India became free and sovereign, a colour bar should still be applied in a Bombay swimming pool. Such a bizarre exception might be held merely to prove the rule; but there are many less bizarre, and more alarming, instances, ranging from the supercilious conduct of certain senior British staff at Durgapur, where Indo-British teamwork is furthering India's steel programme and ought to be furthering Indo-British personal relations, to the offensively infantile treatment by white Rhodesians of the political leaders of their African "partners." It is perfectly true that the white man has already divested himself of much of his racial arrogance along with his burden; it is also true that in our grandfathers' days Asians and Africans accepted white superiority as part of the scheme of things (their own world being itself stiffly hierarchical). But their demand for racial equality has grown, and is still growing, faster than white enlightenment.

Communist China's appeal to the Afro-Asian mind rests only partly on pig-iron production; just as telling has been the sight of a once prostrate and humiliated country getting its own back on the proud white man in many different ways. Egypt has done the same; Japan, although brought low in 1945, had previously won Asia's admiration twice—in 1905, when it defeated Russia, and in 1941-42, when it swept the Americans and Europeans out of the whole Far East.

It would thus be a dangerous self-deception for the West to suppose that Asian and African aspirations can be satisfied by purely economic and diplomatic means. The under-developed countries—facing almost unimaginable economic tasks, and problems which in some ways are becoming not less, but more, acute—are indeed crying out for aid, and for support in such forms as an open door and price stabilisation for their products; but their sensitivity about the terms on which they will accept aid should be given its full significance. Neither power block can hope to buy more than a fraction of their favours, however much the emphasis is shifted from the making of alliances to the distribution of aid. Indeed, as postwar Europe also learnt, over-dependence

on foreign aid is apt to deepen the resented feeling of inferiority ; note how the communists have sought to present many of their offers of aid as normal commercial transactions between equals. Asia's ambition is—and Africa's will be—to pay their own way to economic advance by regular trade, not aid.

Asian and African eyes will long be fixed on the goal of equality in terms of respect—both personal and national respect—and on the problem of lifting backward economies out of stagnation near the poverty line. And in many Asian, and almost all African, states, the political structure itself, under the strain of tremendous economic and social pressures, will remain for years a matter of contention ; the series of military coups in 1958 was only one illustration of this continuing ferment. Moreover, fears and conflicts between and even within the new states themselves—Kashmir, Arab rivalries, and splintering trends in Indonesia already provide examples—can be expected to continue and probably to increase, particularly as new African states emerge, with poor prospects of independent viability, and artificial frontiers which reflect the accidents of colonial history.

Small wonder that the communists see in these regions limitless possibilities for the sowing of their seed, which thrives on frustration, insecurity, and uncertainty about the way ahead. Against them, there are the signs of an emerging maturity, of a new scepticism about the glittering promises of Moscow and Peking, about the value of ritual pledges of non-interference, about the wisdom of slapping down the foreign investor with one hand while beckoning him in with the other. No single standard can be applied to a group of peoples who range from the sophisticated Japanese to the Congo pygmies. But it is as unlikely that Asia and Africa will advance willingly into communism's bear-hug as that they will set aside all their old scores against the West and fall demurely into line with its policies. While the stalemate between the super-powers lasts, they will retain their kind of casting vote.

Should Charity Begin in the Office?

A suggestion to Mr Amory for one small and specific tax reform

THE publication of the £3 million list of subscribers to the new Churchill College again emphasised the part that is being played by industry in providing the main sinews of charity in Britain today. Like the fund for the advancement of scientific education, which has provided schools outside the state system with another £3 million, this latest benefaction is a measure of industry's anxiety to swell the flow of trained scientists available for it. But industry does not direct its largesse to utilitarian objects alone. National appeals, such as those for St Paul's and Westminster Abbey and for the disaster funds, are underpinned by the gifts of the business world. This country has insensibly drifted into a position where the main impulse behind the stream of charity in our national life is provided by boards of directors, who have taken upon themselves the charitable impulses of the shareholders in the individual companies concerned.

Is this a good thing ? To pose this question is not to attack charitable businessmen ; the country is very lucky that they are doing the job if it is inevitable that nobody else could. Certainly the welfare state has not, and should not have, rendered independent charitable effort unnecessary or undesirable. Plenty of avenues remain —the young and the aged, the uneducated and the pagan—all the gaps that a munificent state does not fill. But the gaps are obviously likely to be filled—or left unfilled—in a different way when the main benefactors are big industrial concerns and when private giving is stifled by Britain's tax laws. Charity which begins in the boardroom is liable to be more inflexible in its practical effects, as well as being arguably more dubious in some of its implications, than charity which begins in the home. At the very least, tax laws should bear no more heavily on the individual who gives away his own money than on companies who give away their shareholders' money.

At the moment the British tax system smooths the way for gifts by the boardroom and impedes that for gifts by the individual. In making its contribution, industry is able to carry the Revenue with it as sleeping partner, to the extent that its contributions are about doubled by the tax relief obtained. If the charitable object is one that directly benefits the employees of the donor company, so that the money is " wholly and exclusively laid out for the purposes of the trade," full relief is available for both income tax and profits tax purposes. Together, these taxes now amount to 10s. 6d. in the pound, so that a contribution of £1 will cost the company only 9s. 6d.

If the charitable purposes are remote from the company's business, relief can still be obtained for income tax purposes (though not for profits tax) either by the execution of a deed of covenant or by the creation of a charitable trust by the company. If a covenant is used, the company must undertake to make a regular annual payment for a period exceeding six years. The charitable trust, which is being increasingly used as an alternative, provides a means whereby a company can undertake to pay a certain amount to charitable trustees for seven years or more without committing itself in advance to make payments to any one particular charity. The trustees distribute the funds from time to time as and when they like.

An individual can also save income tax by executing deeds of covenant. But since 1946, when Mr Dalton objected that rich men were making themselves look charitable at the Revenue's expense, an individual has not been able to claim any surtax relief in this way. It is surtax at up to ten shillings in the pound that is stifling private charity ; and, in a year when Mr Amory is likely to have tax revenue to give away, there is a strong case for saying that something specific should be done to revive it. But the wisest course would not necessarily be to repeal the Dalton amendment. Deeds of covenant are things that only the very rich or very charitable are likely to draw up ; a charity tax law based on them would not make it easier for the ordinary man to yield to a generous impulse at the time of, say, an influx of Hungarian refugees or of some particular local or national call which especially appeals to him. An alternative suggestion can be proffered to the Chancellor.

Would it not be possible to exempt charitable donations aggregating not more than 5 per cent of an individual's taxable income from both income tax (without need for covenants) and surtax ? This would be in line with long-standing American practice—which, indeed, allows relief on up to 30 per cent of an individual's income. It is not possible to estimate how much such a concession would cost the Exchequer: probably relatively little in the short run, especially as many of the causes which wither while private charity is impeded tend to fall back on state support of one sort or another in the end. But if, in the longer term, the state found that more money was going to charity than it could afford to allow to escape from its own coffers, it could then reconsider income tax law in relation to charity from a position of equality as between industrial and private donations. It might well find then that it would be better to begin to tighten up at the business rather than the individual end of the line.

NOTES OF THE WEEK

FRANCE

The Willing Horse

MR DULLES'S diplomatic stopover in Paris on February 6th was brief enough to show how changed times are. After London's restiveness, Paris seemed as willing a draught horse for the Nato relief column into Berlin as anyone could wish for. Complete agreement was unanimously reported after his meetings with President de Gaulle and MM. Debré and Couve de Murville. The President, although personally dubious about inviting the Russians to a conference before the Berlin ultimatum expires on May 27th, did not insist on the point. For him, the preservation of the axis with Bonn, forged at Bad Kreuznach on November 26th, is clearly paramount, a gesture which Dr Adenauer, interviewed for French television on the day Mr Dulles was in Paris, responded to with warm recollections of family life at Colombey. President de Gaulle is being credited in some quarters with having taken the initiative in the allied talks on dealing with a Berlin blockade.

The French reaction to Mr Macmillan's Russian visit—which seems to have been arranged without undue consultation with Paris—self-righteously reflects this new toughness. Where the journey has not been dismissed as pure electioneering it is seen, equally darkly, as a sign of British unreliability. Mr Macmillan seems to be doing off his own bat exactly what British and American diplomacy feared General de Gaulle might try last year—and what is more, he is doing it first. The reversal has been too neat for it to be played down in the gaullist press.

Besides Berlin, the Elysée talks centred on President de Gaulle's own plans for a triumvirate to direct western policy outside the Nato area. Government and press in Paris have put great emphasis on the meetings between Mr Murphy, deputy under-secretary of state, and the British and French ambassadors that have been going on in Washington for the past two months. Western political consultation, they claim, is now back to pre-Suez effectiveness. Yet there seems to have been little progress toward the tight world-wide integration of policy, particularly in military affairs, that President de Gaulle has sought. Nor is it likely to develop.

(*Mr Dulles's visit to Bonn is discussed on page 608.*)

ALGERIA

In M. Mollet's Footsteps

THREE years after M. Mollet, another prime minister, the gaullist M. Debré, was hooted by the crowd at the Algiers war memorial on Monday. M. Debré answered back on the spot. His more formal speeches did, however, steady the nerves of the European population which had been sadly frayed for some weeks by distrust of President de Gaulle's clemency measures, a perceptible rise in rebel attacks, and rumours of an impending rundown in army strength. Encouraged by local firebrands and by metropolitan deputies like M. Biaggi—in Algiers to address the new *Mouvement Algérie française*—the settlers were again impatient to hear the word " integration " on official lips. Eight months of gaullist rule had not given it them, and M. Debré was not the man to break a good habit. His vocabulary, including the affirmation that Algeria was a " land of French sovereignty " and that France would remain there, was popularly held to be more integrationist than the President's. But he made it clear that the Presi-

dent's policy was sacred; for a prime minister, it seems, only phrasemaking is moderately free.

M. Debré's chief task was to launch the Constantine plan to provide 400,000 new jobs through industrial and agricultural development in the next five years. At the opening meeting of the planning council M. Delouvrier, the delegate-general in Algiers, emphasised that one asset the government was relying on was French industry's new willingness to invest in Algeria's future. The extent of this willingness, and of the prospect of attracting German capital, has still to be discovered. A governmental decision on the proposed iron and steel works at Bone is hoped for next month; but first the French steel industry has to have its say.

The settlers' fears that the French army effectives will be reduced this year have been partly allayed by official reassurances. Because of the drop in the birthrate during the last war the conscript classes available for service will be appreciably smaller and Algeria's claims may be hard to meet. The idea is disconcerting to a population that has seen how it is beyond the strength even of the present huge army to stifle the rebellion.

LABOUR AND GERMANY

Purloining the Gaitskell Plan

THE revival of newspaper headlines about a split in the Labour party over Germany, occasioned by the appearance of rival backbench motions on the order paper, is almost certainly premature. The old Bevanites are in no position openly to challenge Mr Gaitskell, who in the last resort would be even more inclined to use the big stick on insurrectionists against Labour's foreign policy than Mr Attlee was. Instead their tactic has been to pretend that, by favouring discussions with the Russians about disengagement, the party has at last seen the light and to all intents and purposes come round to the point of view for which they had, such a short time before, been facing martyrdom. Of course there are still a few little matters outstanding between them and the leadership, such as their desire that Britain should refuse to have anything to do with the H-bomb or American rocket bases. But last week Mr Mikardo, speaking with the authority of the vice-chairmanship of the national executive, told a television audience that whatever might be said during the election campaign the party would before the end of the next Parliament have come round to his group's view on the H-bomb also.

There are about 40 Labour MPs in this group, all of them former Bevanites from the heady days when Mr Bevan was one too. The tone of their propaganda was set when Mr Zilliacus shouldered his way on to the platform at the "Victory for Socialism" rally at Scarborough, pronounced in his most patronising manner that, despite a few factual errors, the party's foreign policy was now not in too bad a shape, and added his personal word (on the basis of his talks with Soviet officials) that the gap between this policy and that of Russia was not unbridgeable; within the party the leftists' line is that, since it is their heresy that has become the new orthodoxy, they have a special right to interpret it. But the point is, of course, that, by recommending discussions about disengagement, the Labour party has not swallowed whole the Bevanites' former argument for a unilaterally disarmed western Germany. And it is certainly not committed, as the new Silverman-Mikardo-Zilliacus motion would commit it, to anything so rash as the public acceptance in advance of negotiations of the Russians' views on the *de facto* recognition of east Germany and the formation of an all-German Federal Council by the two Germanies.

Mr Gaitskell sensibly decided that there was no need for him to deter this minor show of activity, which has stuck almost ludicrously close to the sequence of revolt mapped out for a left-wing group in Wilfred Fienburgh's posthumous novel *No Love for Johnnie*. He left it to Mr Herbert Morrison and ninety-four other Labour members, including four who in the far too casual way of Westminster had originally lent their signatures to Mr Silverman, to restore perspective by tabling an unexceptionable amendment calling for a four power conference on Germany. But the major question for the longer term must be the personal effect on Mr Bevan of the increased activity of the Mikardo group. In the last few months, Mr Bevan has leaned over backwards to keep out of the rebels' way (and thus also of their fire). By doing so, he is in danger of giving the impression, in the quarters whose confidence he most needs to gain, that if he comes to office his policy could be vulnerable to the sapping and mining of the busy men on the left whose idol he used to be.

RESTRICTIVE PRACTICES

No Myth

THE National Joint Advisory Council, a body composed of 17 employers, 19 trade unionists and 6 representatives from the nationalised industries, all under Mr Macleod's chairmanship, has produced the only sort of report so unwieldy a group could produce on restrictive practices in industry. So many voices had to be heard on the council before the lowest common multiple of agreement was reached that the result is an extreme form of portmanteau writing. It contains no conclusions, a great deal of circumlocution, and defensive phrases galore; but the council does have the results of an initiative to report. In 1956 it sent out letters to employers' organisations and unions covering the great majority of workers in British industry, asking if they had any problems of "manpower efficiency" (officialese for restrictive practices), and whether they would set up machinery for union-employer discussions about them if they had.

After an initial period of utter apathy, during which it appeared that hardly anybody was going to reply to the minister's letter, the council is now able to report that industries employing 29 per cent of workers in British industry said they had no problems of manpower efficiency; 39 per cent agreed they had some problem, but said that they would or had set up joint consultation machinery for dealing with it (varying, of course, from the vigorous to the useless); and 7 per cent had labour restrictions but saw no hope that the unions would co-operate in effective consultation machinery at all. Another 16 per cent of workers are in industries which were not asked to report to the council (including the National Health Service, which might well have had something to say), and the remaining 10 per cent either did not reply to the minister or in effect told him to go away. Among the most important industries, the engineering industry is listed as having machinery which could discuss problems of restrictive practices, but the council "had some misgivings" about whether it is doing anything effective. In the shipbuilding industry, the employers feel that, despite a signed agreement in 1957, "the unions concerned have shown no willingness to discuss outstanding problems." And the National Federated Electrical Association (faced by the ETU) does "not consider that any purpose would be served by discussion with the union concerned."

One can form one's own judgment of the extent of restrictionism in industry according to how these figures and facts are viewed (the council makes much of the 29 per cent without restrictions, others might make more of the 46 per cent with them). The council does not report a single instance in which, as a result of its initiative, any restrictive practice has yet been abandoned. But at least, where some machinery of consultation has been set up or reactivated, any impact from the council's initiative can only be for the good; even if most of the old restrictive practices remain, the introduction of any new ones would cause some red faces at future council meetings.

IRAQ

Old Politics—New Economics

THE sorting out continues in Baghdad. On February 7th, Prime Minister Abdul Karim Qasim appointed eight new cabinet members to replace six whose resignations had been accepted on the same day. Now there are no Baath socialists or Istiqlal conservatives left in the cabinet. The leading parties of the old opposition to Nuri es-Said are demoralised. The Baath overplayed its hand in the Aref affair and the right-wingers are clearly out of step with prevailing trends in Iraq. Three of the new ministers are from the army; the new foreign minister represented republican Iraq at the United Nations last summer. Dr Ibrahim Kubba, minister of economics, and Muhammad Hadid, minister of finance, remain in the cabinet. These changes are further discussed on page 605. None of the new members is regarded as being a strong communist sympathiser, but the enemies of the Baghdad government claim that the cabinet counts for nothing, and that Iraq is being ruled by a small clique of communists who issue the orders and instructions and direct the press, radio and television.

Colonel Abd al-Salam Aref, only last July the hero of the Iraqi revolution, was sentenced to death on February 5th at the tenth secret session of the court set up to try him for plotting against the regime and attempting to assassinate the prime minister. Aref pleaded not guilty to both charges and was found guilty only of the second. In what was not so much a recommendation as it was a reminder, the court mentioned the prime minister's right to exercise clemency should he choose to do so.

It may be true that the Iraqis are, as they insist, politically holding their own against the inroads of communism but they appear to have weakened where matters of economics and development are concerned. According to a statement broadcast on February 7th, the pattern of Soviet economic penetration already established in Syria and Egypt is to be extended to Iraq. A Soviet economic delegation and the Iraqi ministers of economics and finance have agreed in principle on the provisions of a draft agreement involving large-scale economic and technical co-operation. In dealing with their new friends the Iraqis may feel that they are in a more comfortable bargaining position than Syria and Egypt. For so long as the West continues to buy the oil of Kirkuk, Mosul and Basra the Iraqis need not become totally dependent on Soviet largesse and trade.

KUWAIT

A Local Affair

THE admirers of President Nasser and the United Arab Republic are many in Kuwait. To celebrate the first anniversary of the founding of the UAR, on February 1st, they received permission from the Kuwaiti authorities to have a parade and speeches in the public square between Jashanmall's Indian stores and the British bank. Sheikhly approval was expressed by the gift, from Sheikh Abdullah Mubarak, of fifty sheep to be consumed by the crowd after the ceremonies. Everything went according to plan. The populace cheered Abdullah Mubarak as he took his place on the platform and everybody settled down for a jolly Arab time.

The organisers of the event had, however, imported a surprise package in the person of Ahmad Said, the Egyptian political commentator whose gravelly voice is well known to the millions who listen to Cairo's Voice of the Arabs. Ahmad Said had not come merely to promote good will; he launched into a violent attack against the present government of Iraq—a display of bad manners which infuriated his host and did not please all the crowd. The Kuwaiti authorities are sensitive to the dangers of antagonising the government of Iraq, whether monarchy or republic.

While they would not object to a pro-Nasser or a pro-Qasim speech, they know that criticising either leader is something that even the rich little state of Kuwait cannot afford. The four organisers of the anniversary celebrations were arrested. The political clubs and newspapers, ordinarily regarded as places for letting off steam, were closed temporarily. There was no state of emergency and, for once, the oil company and the British escaped criticism.

There is some doubt whether the goings on in the public square are connected with the changes in government posts announced soon after. The ruling family remains firmly in control. All security forces have, after years of discussion, come under the control of Abdullah Mubarak, who appears to be consolidating his position as heir-presumptive. The appointment of Sheikh Jabr al-Ahmad as president of the treasury and the ruler's representative to the oil company is generally welcomed, because he is active and popular, but also because this is the first time the ruler has allowed anyone else to touch the finances of the state.

ECONOMIC CONTROLS

Set Imports Free?

FOR the first time in just under twenty years Britons are now, in effect, free to use and spend their own money in their own country as they like. Last week's discontinuance of official scrutiny over British capital issues can reasonably be described as the demobilisation of the final small rearguard of Britain's once vast system of domestic rationing and internal physical controls. The few remaining internal economic controls are all, in practice, social or political or merely administrative in intent; the most important are the remaining rent restrictions on working-class

housing and the various powers used to try to divert new factory building away from flush areas towards, if possible, regions with above-average unemployment. Nobody would suggest that these controls are likely to be made looser before the general election. But the Government must still be hoping to do something in this Parliament about two of the three major external economic controls that remain: Britons are still not free to import all types of foreign consumer goods, or to spend as much as they like on foreign travel, and (officially at any rate) they still cannot export their capital without permission.

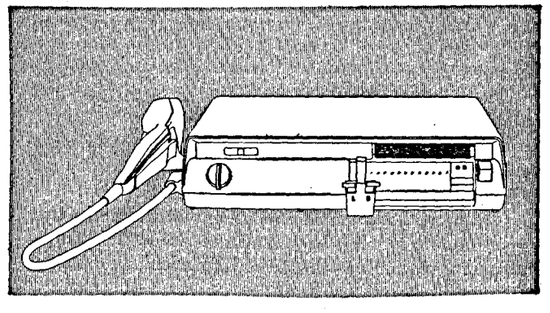
The Government promised at Montreal that it would move forward this year to relax import controls on consumer goods from the dollar area. Remaining controls on imports from outside the dollar area are unimportant from a balance of payments point of view, although important to the domestic industries they protect (e.g., the jute control, or quotas on some isolated European manufactures such as watches and cameras); there will be no political incentive to relax these before the election. The balance of payments difficulty about relaxing import restrictions from the dollar area is that nobody can tell which American goods the British people are really hungering for, after having been cut off from American suppliers for twenty years. For some goods (such as American motor cars) it is clear that Britons are not hungering at all, since the tiny quotas already allowed have not been fully taken up. For other goods (such as tinned salmon, which was put on the open list to please Canada at the Montreal Conference) the initial response to freedom has already given the Board of Trade a fright; possibly of course, difficulties in selling the salmon will frighten future importers also. Perhaps one of the biggest question marks, however, is how much of the £900 million-odd of the national income now spent by British teenagers would go on American "pop records," natty gents' suiting and other aspects of transatlantic culture if the Board of Trade sets imports free. It will be interesting to see whether the strategy in liberalising dollar imports will be to concentrate first on lifting controls altogether on a wide range of goods for which there is unlikely to be any additional British demand, or on raising quotas gently on the things that the Government thinks the British people probably want most. The former strategy would look more impressive, and the latter strategy do more good.

And Tourists Too?

SIMILAR problems of tactics will presumably arise if and when the Government decides to increase the foreign travel allowance, which is now £250 a year for British tourists to Scandinavia and £100 a year to everywhere else. There is no doubt that British tourism (which is already by no means a light element in the balance of payments) is likely to cost the country an increasing amount of foreign exchange; as industrial workers get richer, more and more are likely to spend their holidays abroad. But not many people can afford more than £100 each for an annual holiday anyway, so that to raise the general allowance to the Scandinavian limit probably would not be costly.

Unfortunately, an increase of this sort would not remedy the worst defect of the limited travel allowance today. The main trouble is not the restriction the present limit imposes on the annual holidaymaker, but the barrier it places in the way of a rather longer stay abroad by private British citizens (such as retired people who want to seek a year in the sun, or professional people on a private sabbatical year abroad, or young people whose parents might be willing to finance them on a year of travelling abroad as an alternative to giving them a university education). The usual argument is that there can be no general de-control for these people (although there can be, and have been, some *ad hoc* administrative relaxations) because general de-control would in effect open the door to the export of British capital, which most people think should not yet be freed. Is there not a simple way out of this difficulty? Could not the Treasury lay down that, as an alternative to the £100 or a £250 annual allowance, any private citizen who wished to could opt instead for an allowance of £3 or £4 a day?

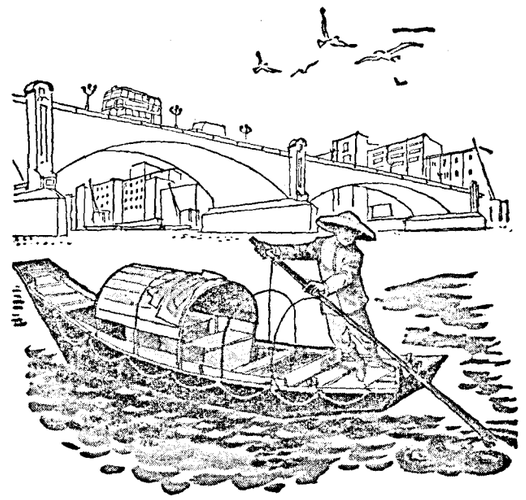
NUCLEAR DISARMAMENT



The Nth Power

LORD SIMON OF WYTHENSHAW'S motion on a pact of renunciation of atomic weapons by the middle powers was worth debating in the House of Lords on Wednesday. At least it focused some attention on the state that the world can expect to get into, as the number of nuclear powers grows, if no agreement is reached to arrest the nuclear arms race. The end in view is one to which almost everyone (Lord Strang was of the minority that favours atomic bombs for every Ruritania) would subscribe—and to which, indeed, the Government did subscribe; all that is in dispute is how it can be reached. The proposition that Britain should offer to renounce its own nuclear weapons as part of a pact between it and other potential nuclear powers to leave the great deterrent strictly to Russia and America is at first sight attractive. It could inaugurate inspection and control techniques outside Russia and America which later become acceptable to the super-powers themselves. It was moderately urged—with one or two lapses—by Lord Simon and Lord Russell as a practical first step.

But the difficulties are formidable. To rope Sweden, Switzerland and Canada in such a policed abstinence area is one thing; to bring in France and China is another. It would have to leave the existing balance of power between the West and the East undisturbed, and hence the deployment of American and Russian nuclear bases outside American and Russian soil would have to continue; those bases would thus find themselves within the policed area. Lord Home made the reasonable and obvious point that the immediate objective is to get three-power agreement on suspension of tests now—the best possible gesture to the non-nuclear countries—and Russian agreement to inspection, which would be a greater immediate gain.

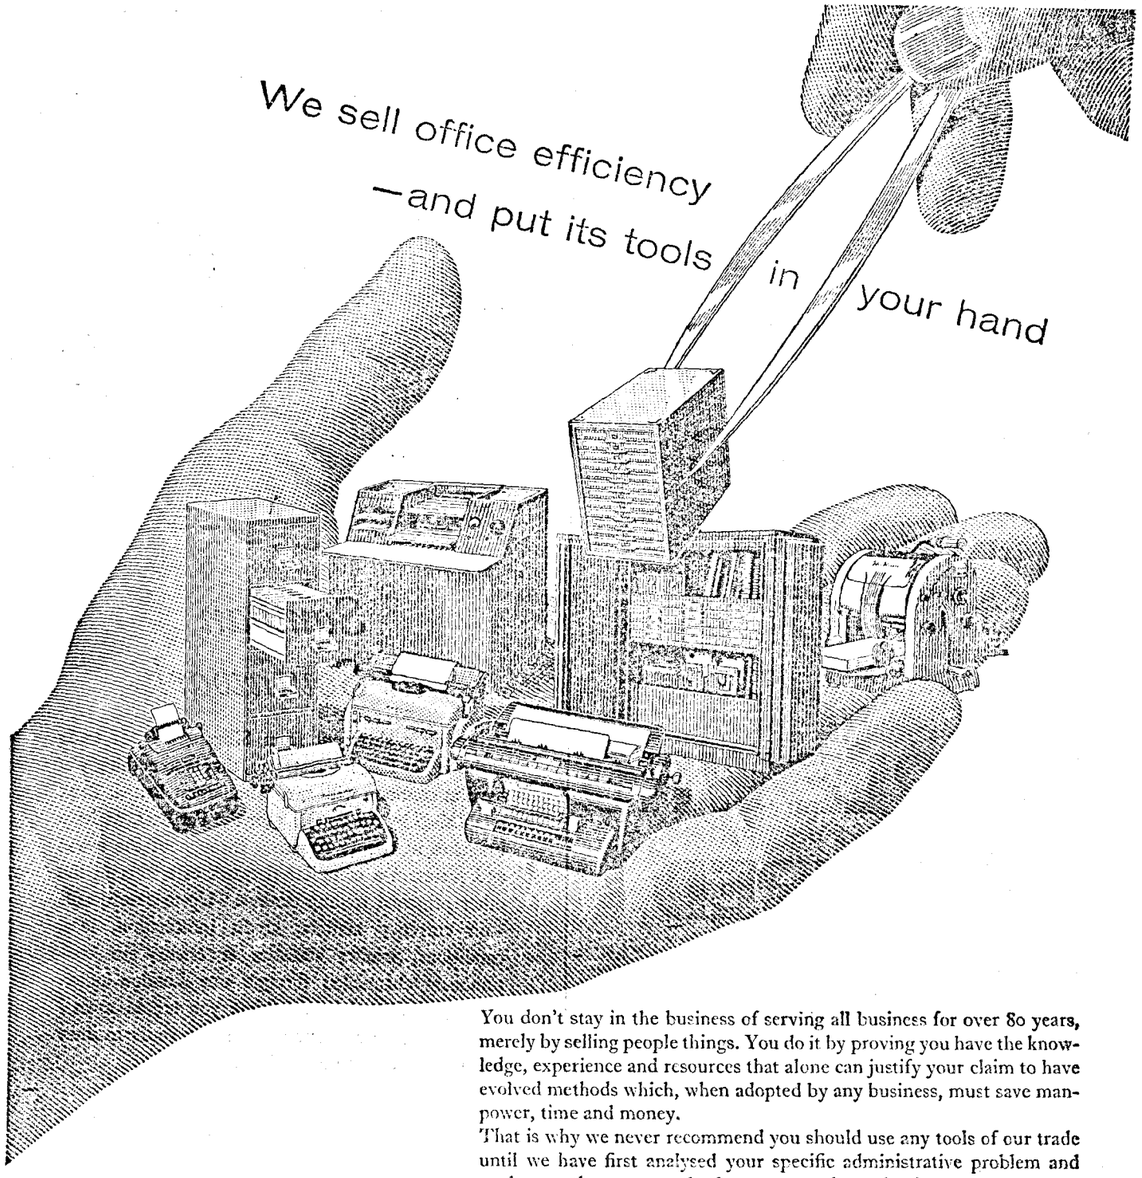


The objections to proposals of this kind from people who are in fact believers in much more radical forms of nuclear abstinence emerged in the debate. Lord Simon's cohort of bishops was far keener on moral gestures than on practical policies; and others of his supporters clearly showed that they saw such a plan as a mere stalking horse for more impractical forms of unilateral disarmament. Labour's official refusal to support the motion was therefore significant. In fairness it must be added that, on the Government side, the debate also brought into the open many of the more unreal arguments for Britain's clinging to her bombs irrespective of fourth, fifth and nth powers having them too. Lord Home's vision of the British H-bomb as a shield for Commonwealth defence is a prize example.

BEFORE YOU BUY DICTATING MACHINES CONSULT THE PEOPLE WHO PIONEERED THEM...

DICTAPHONE
REGD. TRADE MARK

DICTAPHONE CO. LTD., 17-19 STRATFORD PLACE, LONDON W.1. HYDe Park 9461
and branches all over the British Isles



Sampan at Southwark

Expecting a shipment from Singapore? If trade with the Far East interests you, that is something you have in common with us. The largest British Bank established by the Far East for the Far East, we have branches in twenty countries throughout the world and maintain a complete network of agents in the other principal trading centres. Up-to-date details – on currency matters, credit information, local conditions, market statistics *et cetera* – are continuously channelled through our London office. Why not call on us next time you are in town? Our experience and our facilities are yours to draw upon whenever you need them.

THE
HONGKONG AND SHANGHAI
BANKING CORPORATION

HEAD OFFICE: HONG KONG
LONDON OFFICE: 9 GRACECHURCH STREET · EC3

Branches throughout the Far East; also in New York, Hamburg and Paris. Offices of our Subsidiary in San Francisco and Los Angeles.

You don't stay in the business of serving all business for over 80 years, merely by selling people things. You do it by proving you have the knowledge, experience and resources that alone can justify your claim to have evolved methods which, when adopted by any business, must save manpower, time and money.

That is why we never recommend you should use any tools of our trade until we have first analysed your specific administrative problem and made sure they are exactly those you need to solve it.

And since we make the world's most comprehensive range of office equipment, once we have pin-pointed the problem, we can provide the right machine or system to cope with it.

Furthermore, because an office machine is no better than the service that goes with it, every one we install is backed by a service organisation—staffed by highly skilled mechanics—that keeps it functioning profitably, year after year.

SOMALILAND

The Bull by the Horn

MR LENNOX-BOYD has taken to heart the many warnings he has had in the past year that British policies in the horn of Africa were running into serious trouble. His promise at Hargeisa on Monday to rush Somaliland into self-government within a year, and to give it an open licence to merge with an independent Somalia thereafter, was political wisdom, though it is almost certainly administrative nonsense. For that, however, the Colonial Office has largely to blame its past mistakes—though it can also blame the Foreign Office for the agreement to hand the Haud back to Ethiopia, which alienated most of the tribes' former loyalty to the British tie and provided a springboard for the spread of pan-Somali nationalism in the protectorate. As the British moved sluggishly along the well-trodden path of colonial education and constitutional advance, the Italians next door, saddled with the heavy cost of their trustee territory and conscious of having something to live down, rushed Somalia through a crash training programme towards independence by 1960; indeed, it is virtually Somali-run now. The contrast between the two territories became too glaring, and what Mr Lennox-Boyd has done, to put it bluntly, is to save us from bloodshed by an extremely rapid retreat.

There was nothing else to be done; but this means that there is now a very great deal to be done. Somaliland is an arid, undeveloped, remittance territory. A heavy fall in administrative standards is inevitable; but it is now urgent to train at any rate a handful of leaders to take responsibility at the top. In the event of amalgamation, British Somaliland must expect to be mainly ruled from the former Italian area. But this is not all: together the two areas need a subvention of something like £5 million a year to make progress. It is becoming an urgent question who is to be rich uncle to the new state. If it came within the Commonwealth, something might perhaps be arranged. If not, will the United Nations, or the United States, accept the responsibility? Undismayed by thoughts of income and expenditure, the Somalis themselves are in an expansionist mood; some of them think Somalia's southern frontier is in the suburbs of Nairobi, and they intend to reclaim the Haud. This is disturbing not only for the Kenyans but for the Ethiopians too. The two-year course in political education will have to include some lectures on good-neighbour policy, with particular reference to cases in which the neighbours are bigger and richer than oneself.

MALAYA

The Tengku Steps Down

THE Malayan prime minister, Tengku Abdul Rahman, has done what U Nu of Burma did and Mr Nehru failed to do: he has laid down the burden of office to devote himself to his party. His decision was unexpected, although ten days earlier, he had handed over the external affairs portfolio, which he also held, to the Malayan ambassador in Washington, Dr Ismail bin Dato Abdul Rahman.

The Tengku announced his retirement at a meeting of his party, the United Malays' National Organisation (UMNO). After a holiday, he will visit every district to strengthen the party machine before the general elections in August.

There is little doubt that UMNO needs a shake-up. Finances are low because so many subscriptions are in arrears; there have been complaints of poor co-ordination between the state executive committees and the local divisions. Indeed the ruling Alliance party as a whole looks unhealthy. It has suffered reverses at by-elections and, recently, at the Ipoh town council elections. The Chinese wing of the Alliance, the Malayan Chinese Association, is divided on the issue of a new party constitution.

The Tengku has handed over the premiership to his able deputy, Dato Abdul Razak, who, at 37, is 20 years younger than he. It is generally believed in Malaya that Tengku Abdul Rahman will resume office after the elections, which the Alliance ought to win despite its present troubles. This will be widely hoped, both outside and within the Malayan Federation; his successor's abilities are no substitute for the Tengku's common sense, natural dignity and international stature.

On the international scene, indeed, the Tengku has chosen an unfortunate time to resign. He visited the Philippines at the beginning of the year with plans for an economic and cultural alliance in South East Asia. The statements of his host, President García, showed him to be more interested in a wider regional arrangement, extending to Japan and Formosa. This is clearly not what the Tengku had in mind, for on his return he spoke of a "rebirth of the Malay race from the Straits of Malacca to the Pacific Ocean." This sounds visionary, but not necessarily unfruitful, despite disturbing echoes of President Nasser's "one Arab nation from the Atlantic Ocean to the Persian Gulf." When the Tengku returns, more will be heard of his plans.

LIBERALS AND COTTON

Bravery at Bolton

SINCE the Liberal Party received some pointed criticism from its friends during some recent by-elections, when it seemed to be bending in the direction of local special interests that felt aggrieved, it seems only fair to give a round of applause to Mr Arthur Holt, who sits rather precariously for the textile town of Bolton West. After the blast of the Restrictive Trade Practices Court's admirable decision condemning the yarn-spinners' price-fixing agreement had hit Lancashire, Mr Holt endorsed it without qualification at a rally in Bolton town hall. Moreover, he stuck his neck out still further by including in his casti-

gation, as well as price-fixing, the agitation for protection against imports from the Commonwealth. His yarn-spinning constituents were told that their campaign for quotas and tariffs had not only made matters worse, by delaying vital decisions in the industry, but was largely irrelevant. The fact that imports had gone down by £1 million in 1958 had not stopped this from being a very difficult year for cotton.

> The trade therefore did not suffer through an increase in imports as the public at large is often led to believe. But it did lose £16 million of export business. You can't stop this by putting a protective tariff on Commonwealth exports.

Actually Mr Holt is unlikely to lose his seat by his plain speaking. He can probably hold it in a straight fight with Labour. He will probably lose it if the local Tories decide to run a candidate. (Rumours that they have decided to do so appear to be premature, having sprung from the anxious activity of some local Tory ladies). But their decision is unlikely to turn on cotton policy—since, after all, it was the Tory Government that set up the Restrictive Practices Court and is refusing to take protective measures. However, prompt candour such as Mr Holt's is sufficiently rare to be remarked upon. If other parties would copy it, Lancashire would see its proper course sooner, and the habit of bravery might even be catching in other parts of the country.

THE HOSPITAL SERVICE

A Call for Leadership

THE Acton Society Trust has rounded off its interesting and valuable series of pamphlets on the hospital service by a general survey called "Creative Leadership in a State Service." The title sums up the trust's findings: the main criticism to be brought against the Ministry of Health is not that it controls too much but that it inspires too little. It has failed to use its special position at the centre to give any leadership or purposeful direction to individual hospital authorities or even to initiate badly wanted comparative studies of costs and efficiency.

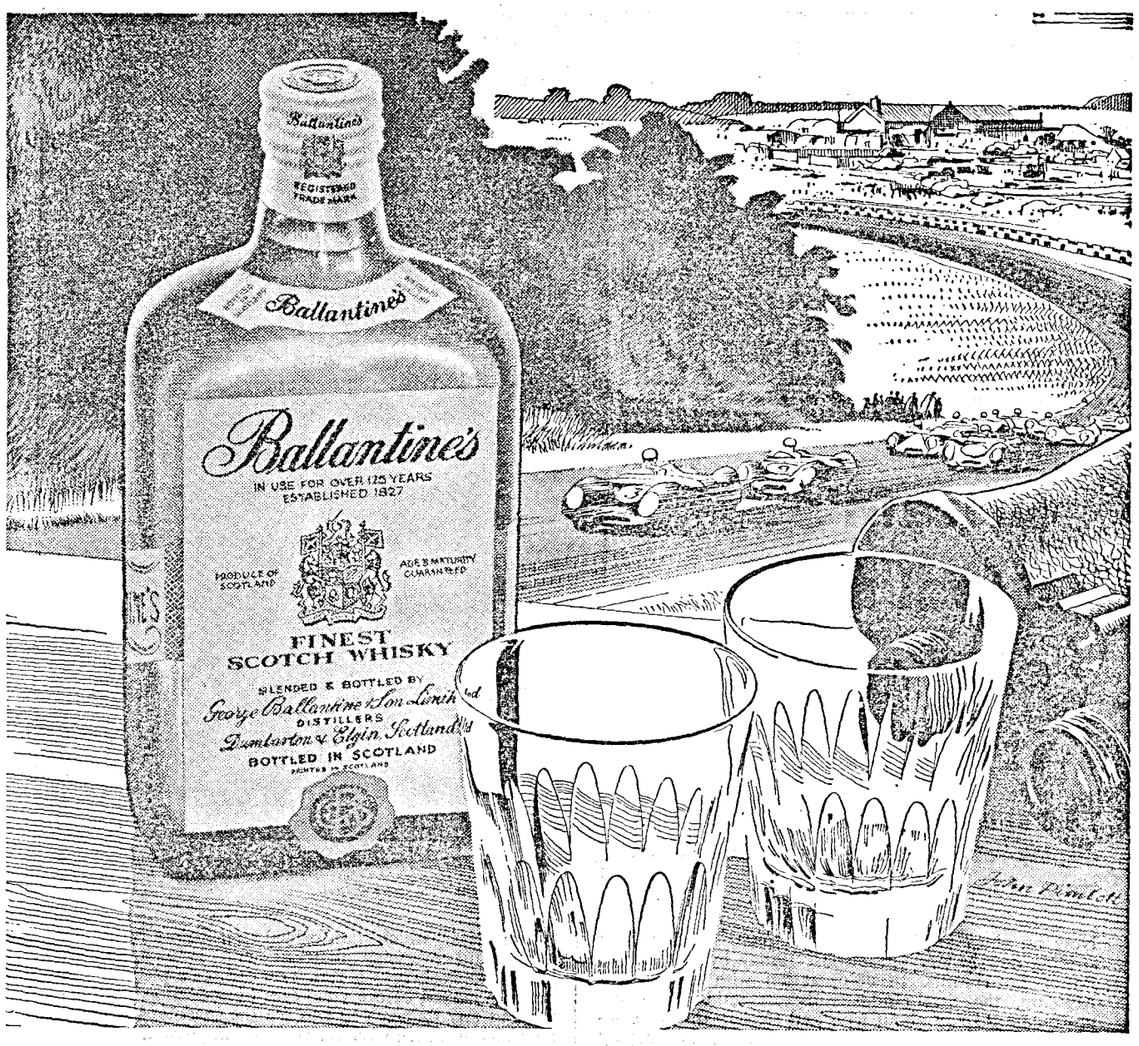
The Ministry's organisation, the trust points out, urgently needs a central intelligence and statistics department. "At present a vast amount of statistical material pours into the Ministry and remains unprocessed." No one considers whether this material justifies its collection, whether it answers the questions, or even whether the right questions are being asked. It took nine years for a more realistic form of hospital costing to be introduced, and even now there seems to be a disposition to regard the new costing system as an end in itself instead of merely a technique. No one, for instance, has yet tried to work out, in the words of the trust, "what a given service ought to cost if performed with reasonable standards of efficiency."

One reason for the Ministry's failure to give leadership is its status. Since 1951, when housing and local government were separated from it, it has been a junior department whose minister has had no seat in the Cabinet. This means that it lacks an effective voice in wider Government decisions now (a Minister of Health in the Cabinet, for instance, might have obtained more realistic sums for capital expenditure on the hospitals); it also means that it does not get the best recruits, which threatens the future efficiency of the department. In a personal statement, Sir George Schuster, one of the Acton Society trustees and chairman of a regional hospital board, makes two important sug-

aress of yo

gestions for improving the Ministry of Health's effectiveness: the first, and more drastic, is that the department should have a body to supervise the hospital service analogous to the Army Council in the War Office, with the top posts filled by people with professional experience in the field; the second is that there should be exchanges of staff between the Ministry and the hospital authorities. This second suggestion is both useful and immediately feasible. But the whole pamphlet is full of constructive suggestions that should be followed up. An interesting commentary on the negative, empirical basis on which relations between the Ministry and hospital authorities have developed is the current controversy over who should wash the hospitals' walls.

EDUCATION

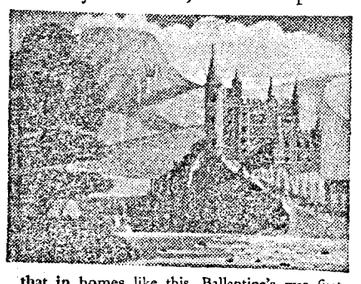


Sums for Teachers

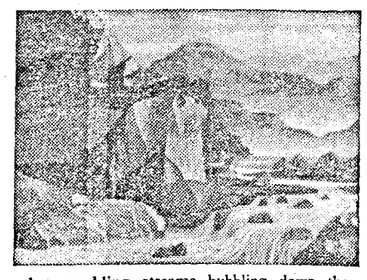
SINCE "The Future Labour Offers You" was published it has become extremely difficult to understand just what Labour's education policy is. This is particularly true of the semantics of the comprehensive system, but it also extends to the arithmetic of teacher-training; and the recent conference at Harrogate, at which Labour's educationists spoke, did not clarify it. It seems that Labour is promising to reduce all classes to the proposed maxima of 30 in secondary schools and 40 in primary almost at once; and some Labour educationists are impatient for a pledge to reduce *all* classes to a maximum of 30. Of the excellence of this proposal for education nobody can be in any doubt. But who is adding up the sums?

On the basis of a ratio of one teacher to 27 pupils in primary schools and one to 16 in secondary, the first proposal would require another 60,000 teachers today; and the second proposal over 50,000 again on top of that. The newly expanded teacher-training programme will at best produce 18,000 more teachers by 1963, and the extension of the training course by an additional year in 1960 will immediately consume about 15,000 of these. At the present rate of expansion (mostly, as Mr Lloyd has just revealed, by the quick method of adding wings to old colleges, not building anew) there will be only 285,000 to 290,000 teachers in 1963, against a requirement of 316,000 for the more modest of Labour's proposals, and 370,000 for its more ambitious one.

Thus Labour has to choose between postponing this political competition in class-cutting, postponing the lengthening of the course, or setting out to train some 25,000 additional teachers to meet its first proposal, or 75,000 more to meet its second. The achievement of any such figure by 1963 is flatly impossible, and it is unlikely by 1968.



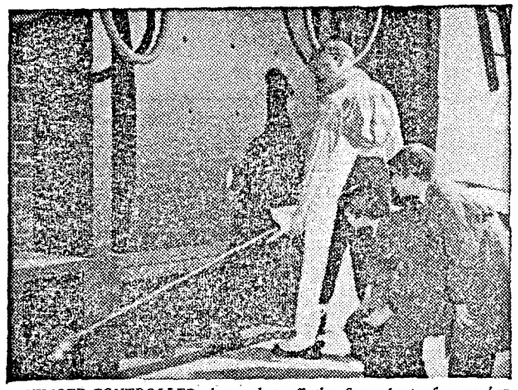
This is not to say that a teaching profession of 370,000, teaching average classes of 30, is an absurd ideal. But if the school leaving age were raised by a year, another 25,000 would have to be added. Then it must be remembered that state school teachers are not the only teachers. There are also at present some 67,000 teachers in special schools, direct grant schools, nursery schools, private schools, in further education, technical colleges and universities; existing programmes call for a substantial increase in these staffs too. Teachers and academic staffs of all kinds probably number 320,000-330,000 now. To meet all the reforms that are being discussed so airily, the total would have to rise



The more you know about Scotch, the more you like Ballantine's

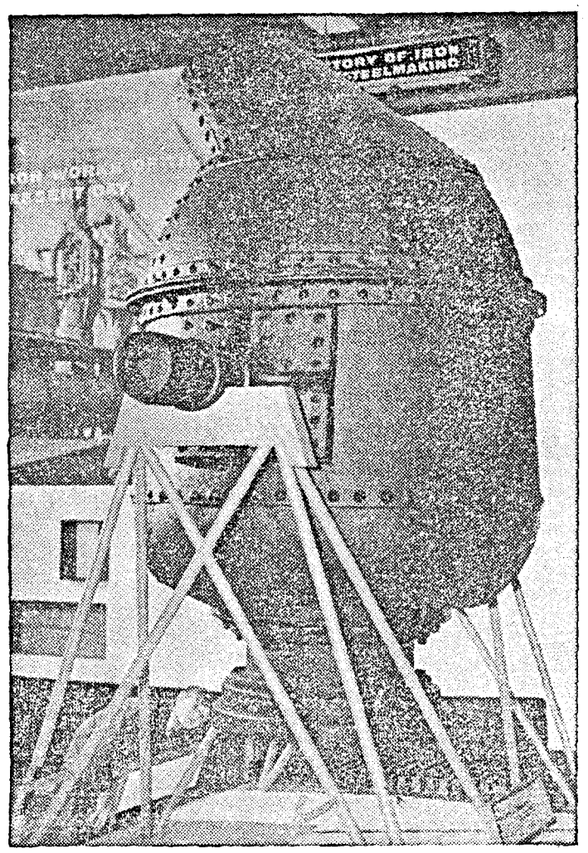
THE SUPERB SCOTCH

Did you know, for example? . . .



that in homes like this, Ballantine's was first drunk over a century ago. The knowledge and appreciation of really good Scotch has been handed down with the family escutcheon — the same famous names appear in the order books of to-day.

that sparkling streams bubbling down the heather-clad hills are used in the making of Ballantine's. Their crystal-clear waters impart their own unique character to the flavour of this fine Scotch.



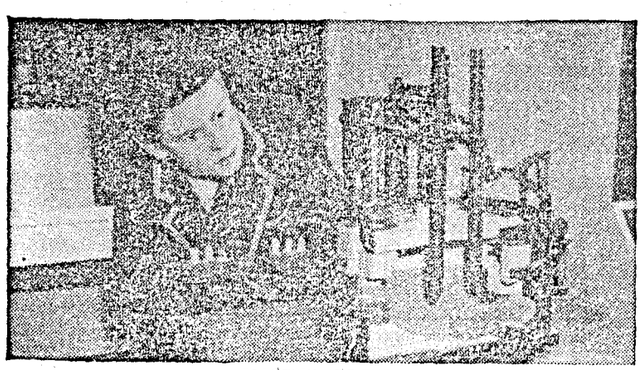
that Ballantine's is one of the best liked Scotches in the world. In the United States, Sweden, France and many other countries, it is a top seller. The world over, when friends meet together, they naturally prefer the superb Scotch.

REMOTE CONTROLLED doors shut off the fierce heat of a modern open-hearth steel furnace. It's really a model (full size) and forms the central part of the new Science Museum gallery designed by Willy Rotter, F.S.I.A., one of Britain's most celebrated industrial artists.

Britain's Steel men show how it's done

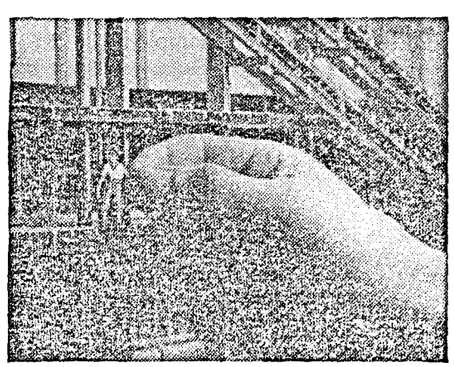
Lord Mills opens new Science Museum display of Britain's up-to-the-minute ways of making steel

FIRST-EVER method for mass production of steel was patented by Sir Henry Bessemer in 1856. This is one of his original "converters". Since then, Britain has been in the forefront in the modern manufacture of steel.



Now on show at the Science Museum, London, is a striking new gallery opened last Friday by Minister of Power Lord Mills. In co-operation with the Science Museum, the Steel Industry is presenting the most up-to-date display about iron and steel in the world — with the emphasis on the modern methods used today by Britain's steel makers.

MELTING STEEL WITHOUT FLAME



Here you can see the whole fascinating process, from the iron ore dug from the ground, to the finished tough, resilient steel. You can see one of Bessemer's original "converters" which transformed steel from a rarity into a plentiful everyday material – and how a modern integrated steelworks is run. You can see a piece of steel actually melted before your eyes by induction heating – without any flame. You can see the ingenious scientific methods by which steel is tested and improved.

The story of steel is one in which British inventors and British pioneers have led the world. Britain has played the leading role in giving the world this metal, on which civilisation depends.

The British Iron & Steel Federation

ELECTRIC ARC FURNACE model shows how some special steels are made. Behind it, there is an apparatus in which you can watch steel being melted without flame, by high frequency current.

WORKING MODEL of a modern "sinter" plant – used to process iron ores – is another of the marvellously detailed models. All have full explanations.

to 500,000 or so. This would be quite expensive ; it would also mean that one out of every ten people in the most intelligent 25 per cent of the working population would have to become a teacher. Teachers would say "why not ? ", and it may be hard to gainsay them. But every industry and profession is already complaining that it does not get its fair share of brains—and predicts disaster therefrom. These figures are rough, because circumstances are so hard to forecast ; but formidable as they are, educational theorists should bear them in mind occasionally.

INDONESIA

Chat with a Neighbour

THE Indonesian foreign minister's visit to Australia this week has been a red-carpet occasion ; it must also have been an experiment in the art of agreeing to differ. On all points except one the two countries are friends as well as neighbours. Indonesia sends students to Australian universities and receives Australian aid under the Colombo Plan. The one point of difference is, however, substantial: Indonesia claims Dutch New Guinea, and Australia, which administers the eastern half of the island, supports Holland's refusal to part with it. Before the minister, Dr Subandrio, had left Jakarta, he had assured the Australian ambassador there yet again that Indonesia did not intend to use force in settling the New Guinea dispute. It was, perhaps, unfortunate that a two-day conference of the Indonesian West Irian (west New Guinea) Liberation Front had been arranged in Jakarta for the week of Dr Subandrio's trip.

Dr Subandrio has probably been trying to persuade his opposite number, Mr Casey, and the prime minister, Mr Menzies, that Indonesia is bound to get Dutch New Guinea in the long run, and that Australia's defence planning should be based on this assumption. Indonesian spokesmen have been arguing that Indonesia needs to settle the New Guinea dispute (in its favour, of course) because of the growing strength of communist China. This argument could just as plausibly be used to justify the *status quo* ; but Dr Subandrio gave a clue to what he had in mind when he remarked that Indonesia was "a shield for Australia."

Jakarta chose this moment to announce that American light equipment for twenty Indonesian battalions was to be delivered. This, however, is the fulfilment of a commitment assumed by the United States last August—against Dutch and Australian objections. Colonel Siswadi, deputy chief of the air staff, who accompanied Dr Subandrio, revealed that Indonesia has also received 51 MiG and Ilyushin aircraft from Czechoslovakia. All these statements, arguments and disclosures are designed to build up a picture of Indonesia as a reliable (but neutral) bastion shielding Australia from the communist world. They are unlikely, in the near future, to produce a change of policy in Canberra.

FINLAND

Squalls After Leningrad

NEITHER the formation of Professor Sukselainen's government, nor the prospect of a *rapprochement* between Finland and Russia—the appointment of a new Soviet ambassador to Helsinki last week was the first concrete sign of improving relations—has soothed Finland's political unrest. As soon as President Kekkonen returned from Leningrad after his unexpected meeting with Mr Khrushchev, the executive committee of the Social Democrats sharply condemned his journey. They questioned the wisdom of Mr Kekkonen's negotiations, emphasising that he had not informed the government of his intentions and had even left his foreign minister behind.

Dissensions among the socialists and the Agrarians further illustrated the unhealthy state of politics. At the end of last week it was announced that the organ of Mr Simonen's left-wing socialists, which is run and supported by a trade union group, would amalgamate with the Social Democrat press. Hopes of a reconciliation between the two socialist groups rose, only to be disappointed when Mr Simonen said he would go on publishing the paper under new management. At the same time, Mr Simonen attacked the majority socialists, blaming them for the economic depression and for the recent government crisis.

During the socialists' squabble, the Agrarians also got into difficulties. Mr Vennamo, a former Agrarian deputy, announced his intention to form a new party, which would represent the "small peasants." Mr Vennamo is the director of the influential, though non-political, "bureau of colonisation," which, among other things, protects the interests of the displaced inhabitants of Karelia. The Agrarian leaders are in no doubt that Mr Vennamo's breakaway may cost them a lot of votes.

Thus it seems that the new session of the Finnish parliament has some dangerous quicksands to negotiate. By attacking Mr Kekkonen—not without justification—the Social Democrats have shown that even the office of the president is not as sacrosanct as it used to be. The Finnish politicians' realisation that they are not the undisputed masters of their own fate, and their shock on seeing their government fall at Moscow's displeasure, clearly made a considerable contribution to their present restiveness.

LCC & FREE SPEECH

Councillors' Gag

NO sooner do the Conservatives make asses of themselves in Bournemouth than the Labour party goes one worse in the London County Council. Luckily for the London public, the Labour aldermen include awkward customers like Dr Donald Soper, who has promptly and in a loud voice defied the Labour group's decision to threaten withdrawal of the whip from any member who attacks the party line in a speech or a letter to the press. Whatever merits there may be in the arguments for and against the present measure of party discipline in the House of Commons, the contention that a much stiffer dose of it is needed to run local government is utterly indefensible. So, too, is the feeble answer given by Sir Isaac Hayward, the Labour leader of the LCC, to all invitations to offer a defence of his behaviour—that this is a private party matter of no proper concern to the press.

There are times, in contemplating the behaviour of local politicians, when one wonders just how elementary is the level at which instruction is needed about the essentials of a democracy. How many local councillors or officials of party associations would pass an eleven-plus examination on the rights of the public to know why and how policies are being devised in their name ? The accumulation of reports of local councils stooping to transparent ruses to

exclude the press from their meetings, of party discipline (especially in Labour-held boroughs) being enforced over the most picayune details, and of hole-in-corner methods used by all parties in selecting parliamentary candidates suggests that there would not be many.

If the public is to be aroused out of its dangerous apathy, politicians must not shirk their public duty of politically educating their masters and inciting their participation. The proper democratic method is to bring controversy out into the open. Any party which abuses a permanent monopoly of power, as Labour in effect possesses in London, to prevent a majority of the councillors from talking politics in public is conspiring to intensify the apathy. The LCC is, by and large, an efficient authority. Doubtless it is tiresome to have public criticism from within the governing party. But Sir Isaac Hayward should remember that he and his party have been given the privilege of governing a great democratic metropolis, not a backward tribal reservation.

TOWN CLERKS' SALARIES

Restoring the Differentials

LAST week the Industrial Court announced two awards which put up the pay, as from the beginning of last August, of some 1,350 full-time town and district council clerks, some 2,150 chief officers (accountants, treasurers, engineers, surveyors, chief education officers and architects), and some 6,500 other senior council staff.

This is the first occasion on which these officers have gone to arbitration on their salary scales, after their usual joint negotiating machinery with the employers had failed to settle the dispute—which has been going on since the autumn of 1957. The first postwar national scales related 1949 salaries to the population of the authority, but provided a range of scales within which an individual council of a given size had discretion to choose. Since then, until this new award, two revisions had increased the scales for small authorities relatively more than those of the large ones. Thus a clerk in a district of 10,000 population had had a 24 per cent rise since 1949, but a clerk in a borough of 500,000 had received only 12½ per cent more.

EXAMPLES OF NEW MAXIMUM* SCALES

Population (in thousands)	Town and District Council Clerks £	Chief Officers £
5— 10	1,125—1,295	990—1,190
30— 45	2,060—2,290	1,450—1,990
75—100	3,005—3,280	2,125—2,800
250—400	4,010—4,270	2,995—3,675
400—600	4,345—4,600	3,200—4,010
Over 600	At discretion	At discretion

* Maximum is reached after 3—5 years' service in a post.

The town clerks' claim was broadly for a restoration of the 1949 position—a return to the differentials established in that year and a 40 per cent rise all round to compensate for the fall in the value of money since then. The chief officers sought a more fundamental overhaul of the structure of their scales which would have involved some larger rises. The employers offered only a 5 per cent increase over current scales. The Industrial Court, under Sir John Forster, has agreed with the town clerks that the 1949 differentials should be restored; but, instead of compensating fully for the 40 per cent fall in the value of money since then, it has awarded increases throughout of 30-33 per cent over 1949 (the maximum of the town clerks' scales throughout has been raised about 2 per cent less than the minimum). This has meant that clerks and chief officers in the smallest authorities receive £50-£80 (5 to 7 per cent) more; those in the largest boroughs £440-£690 (16 to 19 per cent) more. In finding in favour of the few at the top of this pyramid who have the highest professional qualifications, instead of spreading the money which it judged could be afforded more thinly over the lower-paid staff, the court has followed the interesting pattern set in some other recent public service awards.

INDIA AND PAKISTAN

Land for the Little Man

BOTH India and Pakistan have made new, and characteristically different, moves to reform land tenure for the benefit of the "small man." President Ayub Khan has bluntly issued detailed marching orders for the carrying out of land reform throughout West Pakistan by the end of September. (In East Pakistan, the evils of absentee landlord zamindari had already been abolished.) The soldier-president is equally blunt about his intention of destroying the political power of the great landlords. He is not reducing them to penury; each landowner may keep 500 acres of irrigated or 1,000 acres of unirrigated land, 150 acres of orchards, and even larger areas if his land is poor; and compensation will be paid, in 25-year bonds, on a reasonable scale. But the political landlords' wings will also be clipped by limitations on their power to eject tenants, raise rents, and demand free labour. Forfeited land will first be offered to the existing tenants, who may hire-purchase it over a 25-year period, and afterwards to other "deserving" purchasers.

A fortnight earlier, the Indian Congress party's latest tussle with the long-debated project of limiting all land holdings ended with a resolution which called for the fixing of ceilings on land ownership before the end of 1959, and for the handing over of all forfeited land to be run by co-operatives of landless peasants. But, quite apart from the fact that lively criticism of these proposals continues, few people in India really seem to expect to see them implemented at any early date—though, if and when they do go through, the ceilings will evidently be much lower than the Pakistani ones.

Both countries face familiar economic dilemmas. Outright ownership ought to embolden the cultivator to experiment and give him more interest in improving his crops; but arbitrary fragmentation may, on the contrary, reduce output sharply—and both India and Pakistan urgently need to step up food production. (The latest estimate gives India's population growth at well over six million a year.) India's latest remedy is co-operatives, Pakistan's a new ban on undue fragmentation; but neither of these is a real solution, and in both countries the political argument for land reform—the argument that power and responsibility must be more broadly distributed—is stronger than the purely economic ones.

The Economist

FEBRUARY 12, 1859

RESTITUTION BY CRIMINALS?

A paper in the last number of the "National Review" deals clearly and ably with the perplexed subject of criminal punishment. Its main purpose is to draw attention to the practical exigencies which arise from broad phenomena in criminal life which have never been contemplated by our jurisprudence and, indeed, have only lately become the subject of any definite attention. It is now, however, very clearly established and very distinctly noted, that the particular acts of crime with which our Courts of Justice are called on to deal spring from two very distinct classes of criminals. In one case, they are the exceptional lapses of men whose lives are in the main conformable to law; in the other, they are the regular activity of men whose whole lives are in contravention of the law. This distinction is particularly applicable to the numerous offences which may be placed under the general category of thieving. It is not unfrequent for new and pressing want or sudden temptation to lead a man to steal. But the great mass of stealing, of burglary, of robbery, against which society tries to guard itself, is the work of men who make it their business to steal and depend on it for their regular livelihood, as implicitly as the gentleman on his profession, or the artisan on his handicraft. . . . No punishment exercises a deterring influence on one of this class. Prison is to him only ill success, and liberation is the opportunity to try his luck again. He no more thinks of changing his life when his three months or three years are over, than a bankrupt thinks of leaving trade and going into the army. . . . The paper we have referred to suggests, we think, the only sensible mode of dealing with criminals of this class. It is necessary to protect ourselves from them, and there seems to be but one way hitherto proposed which holds out any hope of our doing so without incurring expenses even more oppressive to society than the undisturbed professional labours of the thief, and at the same time without shutting out from him the chance, small though it be, of choosing a new life within the pale of society. This way is to incarcerate for extremely long or even indefinite periods of time—terminable, however, by the payment of money fines to be discharged by the criminal out of the surplus proceeds of his prison industry after he has earned a minimum sum to defray the expense of his subsistence. Every prisoner would thus be compelled to work for his own support, and encouraged to work for his liberation.

SWITZERLAND

Housewives' Choice

SWITZERLAND'S patient suffragettes seem to be getting somewhere at last. After 40 years of gentle agitation the first national referendum on women's suffrage, held on February 1st, found two Swiss males against this risky plunge into emancipation for every one willing to chance it. But in the three French-speaking and protestant cantons of Geneva, Neuchâtel and Vaud the all-male electorate voted the women's way for the first time; and Vaud, the first canton ever to do so, narrowly admitted women to full political rights in cantonal affairs. Inspired by these successes and hoping for more than the lip service they have had from male politicians, the suffragettes are showing a new militancy. After they had heard the results, the women teachers at the girls' *lycée* in Basle promptly declared a one-day strike over the outraged protests of their male colleagues.

The suffragettes believe that their political participation in Vaud, which includes the city of Lausanne, will come to shame the diehards elsewhere and, equally, persuade them that political equality does not necessarily upset party policies or alignments. As Unesco studies have confirmed, most women everywhere still vote the same way as their husbands. But Swiss men say the vote belongs only to those who have a duty to fight for the country (although women did help in the defence forces in the last war). They also claim that Switzerland's system of government, requiring numerous federal and local plebiscites, makes it hard for housewives to keep in touch with issues that may call for their vote every third Sunday. The big stumbling block is the reluctance of many Swiss women to claim the vote in conservative cantons where the three Ks—*Kinder, Küche, Kirche*—still fix their place in family life. This primacy of family principles is curious in a country that has one of the highest divorce rates in Europe.

To get the federal vote the suffragettes must amend the constitution, which involves securing a popular majority and a majority in over half the 22 cantons. They have a long way to go before Switzerland leaves the dwindling company of non-Moslem states which, like San Marino and Paraguay, still keep their women out of politics. But after 25 local defeats since 1919, things are now modestly looking up.

HORTICULTURE

Vegetable Trouble

VEGETABLES have this week been the cause of an unusual amount of political fuss. First, Conservative MPs on the party's agricultural committee are indignant at the Government's rejection of higher tariffs for fresh tomatoes, new potatoes and other vegetables. The Government has so far stood out bravely against them; the danger is that it may be tempted to appease the objectors by conceding the other horticultural claim—for higher tariffs on cut flowers—which is still outstanding.

Secondly, two producer-controlled marketing boards are again in trouble. A fresh move to abolish the precarious tomato and cucumber board is under way. It would be unfair of growers to visit their tariff disappointment upon the board's head; better home marketing, and not import protection, is or should be its job. But by campaigning for this (and other) horticultural boards on the grounds that their existence would strengthen the case for import regulation, the farmers' union has itself invited precisely this reaction. It cannot complain if its protégés now feel the draught.

Meanwhile Mr Jack Merricks, the cuckoo in the potato board's nest, has broken ranks by openly criticising his colleagues' policy of following up their introduction of acreage controls with a decision to levy the maximum penalty (£10 an acre) upon any producer who exceeds his quota. Mr Merricks is quite right to emphasise the bad effects of the quota system on farmers' cropping programmes. But the board has a new problem. If the Government were still guaranteeing potato prices directly, the rational and proper way of checking a potato surplus (if such is likely) would be a reduction in the support price. The Government, however, has transferred responsibility for any price support to the board, to whom it will pay a subsidy; and the board—afraid of burning its fingers in the open market—clearly means to play extra safe by restricting supplies. Paradoxically, this safety play could be a great danger to it. If the board's policy of restriction should lead to a potato shortage later in the year, Mr Merricks's protest will be remembered; and the public revolt against the board could become a major affair indeed.

LETTERS

BBC and Politics

SIR—In your note in last week's issue you referred to the policy under which certain staff in the BBC are not allowed to nurse a constituency without the corporation's consent, and to the fact that such permission had recently been refused to a talks producer in the BBC Overseas Service.

Your readers may be interested to know that it is our policy to allow the fullest possible freedom to staff over their outside activities provided that the corporation's reputation for impartiality and its standing as a public body are not prejudiced. You fairly state the reasons underlying this policy and appear to agree that the open expression of political views involved in nursing a constituency could be inappropriate for a talks producer. You go on, however, to describe the BBC's refusal of permission to a particular overseas talks producer as "excessively timid" because the producer's "entire output was directed abroad, away from British voters" and "the work could have been shuffled so as to have kept him off politics."

It is true that this producer's "entire output was directed abroad," but the inference you draw from this is in the corporation's view wrong and also leaves out of account the number of service men within the audience for the overseas services. Apart from electoral considerations, the need for impartiality is no less great in broadcasts overseas than it is in broadcasts within this country. Indeed, much of the strength of the BBC's reputation abroad is due to the knowledge that our overseas broadcasts are subject to the same standards of impartiality as our output within this country. The possibility of "shuffling" the work was carefully considered in this case, but it did not prove feasible.

There is in our view a valid distinction between the editorial responsibility for a programme borne by a producer who is a permanent member of the corporation's staff and the role of an interviewer or commentator contracted for a particular programme.

From the refusal to grant permission in one particular case, you infer that the BBC "has determined on an extreme interpretation of its own regulations." I know of no substance for this statement. Each application is considered on its merits and the corporation continually exercises discretion in favour of freedom for the outside activities of its staff.—Yours faithfully, J. H. ARKELL

Broadcasting House, W.1

Painters in Hospitals

SIR—I must refute the letter from the National Union of Public employees in your issue of February 7th. The present position appears to be that painters have achieved a virtual monopoly for the cleaning of paint in the hospitals up and down the country. With the present limitation of money for maintenance this means that hospital walls may go anything from twelve months to several years without anyone touching them unless the cleaner mops shoulder-high leaving a high-tide mark.

Your correspondent mentions a hospital where the walls have not been cleaned for seven years and indeed cites this as a typical case. My contention is that the Ministry directive 52/153 does in fact allow unskilled labour to wash walls and indeed a few hospitals have begun to clean their walls either with suction brushes or with long-handled, specially impregnated mops; in one East End hospital this is now being done once a week. This seems to me an obvious approach.

No one disputes the need and right of the painters to do a proper spring-cleaning, particularly prior to re-painting, but surely it ought to be accepted practice for cleaners and porters to undertake the cleaning in the intervals between the major washing.—Yours faithfully, F. AVERY JONES

Harley Street, W.1

Co-operative Wholesaling

SIR—Having read the one paragraph in your issue dated January 31st, in which you dismiss the document "The Challenge Before Us," published by the Co-operative Wholesale Society, I am forced to the conclusion that *The Economist* is no student of co-operative affairs. There can surely be no other explanation for the succession of inaccuracies contained in so few words.

You write that the CWS had "published its views on the trading reforms approved by last November's Congress." This is wrong. Three of the five chapters deal with subjects specifically remitted by congress to the CWS Board and its shareholders for their consideration and action. Congress decided that far from making pronouncements on these subjects, which covered the whole field of co-operative production and wholesaling and the control of the CWS and its Scottish counterpart, it would not even discuss them. The reason for this was that decisions affecting the future of the two national federations could only be made by their directors and shareholders.

Perhaps you were confusing congress *resolutions* with the *recommendations* of the independent commission. But if so you are wrong again when you say that the CWS "... has rejected them all; particularly those—the most important—proposing the setting up of an independent retail development society to run co-operative chain stores."

The CWS directors have not rejected all the trading reforms recommended by the commission. We have welcomed many of them. That sentence also contains a common error that CRDS would "run" the national chains. Neither the independent commission nor the congress resolution recommends this. Because the CWS regards the setting up of chain stores as urgent and will in any event be called upon to play a major part in the capital arrangements for them, it was considered necessary to give our shareholders the CWS ideas on how the chains should be run. There is nothing in the early submission of these ideas which could be construed as a desire on the part of the CWS to disregard the wishes of congress.—Yours faithfully,

HUGH STEELE

Co-operative Wholesale Society Manchester

The Business of Marriage

SIR—Lest it be concluded from your article that the church's only interest is in ceremonial and the charges therefor, may I point out that it is not only secular societies that offer help to those intending to marry. An increasing number of parish clergy now ask those coming to put up the banns to attend one or more pre-marital instructions. In my own case the number is three; the first on the physical aspects, the second on the spiritual, and the third on the actual service.

Although these classes are voluntary, I have never yet met with a refusal to attend, and in the majority of cases I have been thanked either by the parents or by the young people themselves. I hope that in time this may constitute a more worthy reason for choosing a "church" wedding than many of those you mention—justifiably—in your article. —Yours faithfully, J. C. TOWNSEND

Melbury Osmond, Dorset

★

SIR—In your article reference was made in several paragraphs to the jewellery trade. I hope you will allow me to correct the statement that the fact that certain secondhand goods are offered for sale not much cheaper than new articles indicates a restrictive practice.

It will be appreciated that at the time when the purchase tax on jewellery was between 60 and 100 per cent, secondhand articles, which were not subject to purchase tax, could be sold at a figure higher than their intrinsic value. It is not surprising, therefore, that a number of jewellers may have secondhand articles in stock for which they paid comparatively high prices.

The fact that purchase tax on new jewellery has been reduced since last April to 30 per cent has caused a drop in prices of secondhand jewellery. On the other hand, the jewellery trade is a highly competitive one. It is not difficult for a small manufacturer to set up in business and produce his rings, etc., with a minimum profit. It is logical, therefore, that new articles including purchase tax can be offered for prices not much higher than old secondhand stock.—Yours faithfully,

F. L. COPPERMAN

J. Aardewerk (Diamonds) Limited, E.C.1

★

SIR—Your correspondent has succeeded in contributing a little more misunderstanding to the subject of marriage, concerning which sufficient misunderstanding exists.

The statement that basic fees are 36s. 6d. in a church and £4 5s. in a register office is alarmingly inaccurate so far as the register office is concerned. The statutory fees payable for a marriage by certificate (i.e., after 21 clear days' notice) is 14s. 3d. where both parties reside in the same registration district; if they reside in different districts then the cost is 17s. 3d. By licence the fee is £3 6s. 9d., but your correspondent was not discussing marriage by licence either in church or register office. These fees include a certificate of marriage—the "marriage lines."—Yours faithfully,

L. A. CLARKE

National Association of Registration Officers, Epsom

★

SIR—Marriage failure, if measured by the divorce statistics, is not so widespread as the final sentence in your correspondent's article asserts. The Registrar-General has suggested that on average about 7 per cent (*not* 1 in 7) of all marriages end in divorce. His calculations necessarily cover couples marrying over the past twenty years or so, during which time war disrupted family life and legal aid made the courts more accessible to estranged couples hitherto excluded. This proportion inevitably hides some interesting differentials which, in our work for the Population Investigation Committee, we have attempted to examine. Using the rather scanty data available, we have estimated, for example, that marriages contracted in the wartime year 1942-43 have so far proved rather more divorce-prone than those entered into either before or since: ten years after the date of marriage 46 per 1,000 of these couples had got divorced as against 36 per 1,000 of those married in 1938-39 and 38 per 1,000 in 1944-45. Only time can show, of course, whether the mid-war marriages continue to break up more than others. Recent figures suggest, however, that so far the postwar marriages are rather more stable than the wartime ones, and that the divorce rate may be no longer rising.

The astonishing thing about recent trends is not the divorce rate but rather the growing popularity of marriage and the increasing youth of the parties. Their enthusiasm promotes the "business" your correspondent so engagingly describes. It does not confirm the fears of older people that marriage as a social institution is in decay.—Yours faithfully,

GRISELDA ROWNTREE
N. H. CARRIER

Population Investigation Committee, W.C.2

BOOKS

Most Eminent Victorian

Walter Bagehot: *A study of his life and thought together with a selection from his political writings.*

By Norman St John-Stevas.
Eyre and Spottiswoode. 501 pages. 36s.

"THE most original mind of his generation," wrote Lord Bryce of Bagehot when he came to set down his recollections of the figures of his youth. Although there have been some dissenting voices—Keynes had no admiration for his literary essays or Harold Laski for his economic views—this is a judgment that has been more widely endorsed than challenged in the hundred years since Bagehot became editor of *The Economist*. But he has always remained an elusive figure: partly because of the diversity of his gifts and attainments, as a banker and economist, as a social psychologist, as a political analyst, as a literary essayist and as an editor, so that he evades any attempt to classify his work or mind; partly because of the comparative paucity of biographical material, for the files of letters, journals and diaries, out of which it has been possible to reconstruct the personalities of Darwin, Matthew Arnold or Leslie Stephen, have in his case been the victim of time and mischance. In consequence he has too often been regarded merely as an aphorist rather than as one of the key figures in the development of nineteenth-century ideas.

The only collected edition of Bagehot's works was published in 1915 and is now hard to come by. A new life of him is due to be published later this year. Meanwhile, in this book Mr St John-Stevas has set out to rescue him from this partial oblivion by producing a new edition of "The English Constitution"—Bagehot's most famous book—together with a selection of his political essays. Here are the studies of Brougham and Disraeli and, above all, "The Character of Sir Robert Peel," the "man of common opinions and uncommon abilities," perhaps the shrewdest character sketch of a British politician ever written.

This Mr St John-Stevas has prefaced with a long and useful essay on Bagehot himself. Such biographical material as was assembled by Bagehot's sister-in-law is reduced to readable proportions, and it is followed by a scholarly comparison between Bagehot's views on the British and American constitutions and the later development of both—of the points where time has upheld his judgment and where it has falsified it. To the student of modern constitutional history, who is often encouraged to take Bagehot as his point of departure, but who has little means of spanning the gap between 1867 and 1959, it is a great help to have a continuous commentary of this kind.

In terms of the book's own sub-title, this essay has one shortcoming. It is preponderantly concerned only with Bagehot's views on politics, and his other works, "Physics and Politics," "Lombard Street" and "Economic Studies" are only referred to summarily. This is perhaps less surprising in the case of his economic writings, for his trenchancy in this field derived from the very fact that he was dealing with ephemeral rather than fundamental problems. But it is curious to see "Physics and Politics" dismissed as "rather dated," for it is in many ways the most pioneering of his works and the clue to the unity of Bagehot's method and enduring importance—his insistence on the connection between the social and the political structure of a nation.

Tenth Birthday in Italy

Comitato Nazionale per la celebrazione del primo decennale della promulgazione della Costituzione: *Vol I, Discorsi e scritti sulla Costituzione; Vols II and III, Studi sulla Costituzione; Vol IV, I precedenti storici della Costituzione; Vol V, L'attuazione della Costituzione.*

Milan. 148, 552, 496, 331, 265 pages respectively. 12,000 lire the set.

WRITTEN constitutions are like vintage motor cars: splendid to look at, but uncertain in action. The one with which the Italian Republic furnished itself at the end of 1947 is no exception. These five volumes, published to celebrate its tenth anniversary, show this very clearly.

The eminent committee that presided over their preparation, collecting articles and studies from the Italian President, ministers and politicians, academics and journalists, was obliged to handle its charge gingerly. The root of the problem was the awkward fact that the constitution was the product of a strange moment in Italian history. During most of the time it was under discussion, communists and socialists were members of the government along with the Christian democrats and their allies. Signor Nenni, later to be branded the arch enemy of the reborn parliamentary regime, headed the ministry set up to prepare for the constituent assembly—and it was a communist, Signor Terracini, who presided over its labours.

Ten years later, at the time when the commemorative committee was set up, the Christian democrats were alone in power, and far from anxious to be reminded—or to remind others—that their long tenure of power had seen

certain essential parts of the constitution put into effect only tardily, and the quiet interment of others. It is not at all surprising, therefore, that these volumes shy away from a number of awkward problems.

There is hardly a word, for example, about the delicate—and highly important—matter of church-state relations; and only muffled references to the failure to put into effect the regional structure foreseen by the constitution. The working of parliament is also given only superficial treatment. There are pages of statistics showing how often, and for how long, each chamber has met, how long they have taken to vote and so on, but, apart from a highly theoretical article by Signor Basso, no attempt to examine how power has been distributed within the system. There are one or two laments that the constitution has little to say about the position of political parties within the state, but no examination of the impact of their increasingly disciplined masses on the way the organs of the state work.

The more one reads—especially the contributions of the experts in constitutional law—the clearer it becomes how artificial and academic their minute analyses of the constitutional text are. Some of the wisest words in the whole five volumes come from Signor Ruini, one of the constitution's chief architects, He allows himself to wonder whether rigid constitutions are in fact suited to modern states, and whether their provisions deal effectively with the factors that have now emerged as decisive for their life and health. Valuable though some parts of these studies are—especially the volume which chronicles how the present text was arrived at—it is impossible not to conclude that most of the important factors in Italy's political life in the past decade have here found no place.

This Way to the Bloodbath

South African Winter

By James Morris. *Faber.* 196 pages. 18s.

No Further Trek

By P. V. Pistorius. *Central News Agency,* South Africa. London: *Gordon and Gotch.* 84 pages. 11s.

Hope for South Africa

By Alan Paton. *Pall Mall Press.* 95 pages. 10s. 6d.

It is increasingly noticeable that books about South Africa take on a fatalistic tinge, even books which set out to offer solutions to the impasse. When all the facts have been piled up: the history of racial antagonism; the eternal triangle of Boer, Briton and Bantu; the victory for messianic Afrikanerdom; the totalitarian power of the Nationalist part; the towering structure of repressive legislation; the maniacal absurdity of the official panacea, apartheid; the ever more certain evidence of an ever more deadly hatred of the black serfs for their white masters—when all this has been set out, any solutions proposed, any "hope" offered, seem so puny as to complete the outsider's growing impression that revolution is the inevitable end. These diverse books are no exception; one is by an Afrikaner, one by an English-speaking South African, one by a Briton. The Briton, Mr James Morris, undoubtedly has the best of it. He leaves the South African entanglement most lucidly and inextricably tied up and then, after sympathising charmingly with everyone concerned, brings his study of South African attitudes to a close with the dry reflection that the situation would look a *little* brighter if one heard the Government saying one morning "your obedient servant, Mr Jones." His book puts the South African problem with an imaginative understanding that not only makes the tragedy more poignant, but adds a compulsive force to the sense of doom.

Mr Paton is a Liberal party politician concerned with remedies of a specific nature. He explains cogently just where the Liberal party stands, and why—for example—it demands votes for natives and Asians, but not as yet, on practical grounds, universal franchise. If even a restricted franchise for non-whites were introduced by Dr Verwoerd tomorrow, one imagines that the Liberal party would probably form a sizable block on the opposition benches, to put it no higher. Dr Verwoerd has the power; but unfortunately he will not do it and nobody else can. It follows that the Liberal party will remain a group of people telling South Africa what they would do if Dr Verwoerd would let them. There is sense in this. Nobody should dismiss it lightly. But the South African Liberal party is not going to put any of its plans into operation. It will have all its work cut out, as an inter-racial party, even to maintain political contact between its members of differing races. It can be accused of contravening the Suppression of Communism Act any day. But a study of its origins and proposals in this excellent and lucidly written tract also adds up neatly to a demonstration that the only change likely in South Africa is—revolution.

"No Further Trek" has a special interest as a tract for Afrikaners: it was written for a South African, not a liberalistic British, public. It fills out and reinforces the impression given by both Mr Morris and Mr Paton that Afrikaners are marching to the ultimate bloodbath with their eyes wide open. They know they cannot win; they know apartheid is a mirage beyond which lies the revolution; they know that there is no further trek, that they are in the laager already. Mr Pistorius sets out no solutions; he modestly confines himself to the preconditions of a solution. These include indefinite white guardianship of blacks, the simultaneous upholding of Afrikaner, British and Bantu nationalism, the preservation of white civilisation, respect for colour prejudice, advancement for Africans and the formula that every measure "must not favour any group to the detriment of any other group." Unless these conditions are fulfilled, says Mr Pistorius, the road ahead leads to "disaster," *scilicet* revolution. The reader can only draw his own conclusions.

But, of course, given an efficient police, it may be quite a long road, with time for money-making, cricket-matches and Volk-dancing on the way. That is almost certainly what Dr Verwoerd believes. The alternative is a miracle. Nobody who reads Mr James Morris's exquisite descriptions of Afrikaner religious belief can doubt that Dr Verwoerd believes in miracles, too.

Oft Told Tale

T. E. Lawrence

By Jean Beraud Villars.
Sidgwick and Jackson. 358 pages. 30s.

When T. E. Lawrence wrote in 1915 of his ambition to "biff the French out of all hope of Syria," he framed a cherished but most un-allied thought. His French colleagues in the desert campaign (some of whom came from Algeria and knew just as much about the Arabs as he did) reciprocated his dislike and mistrust. But even though he lost, and they won, the desired end—for Syria became a French mandate out of which they were not biffed until thirty years later—Frenchmen still persist in seeing his shade prodding at his successors. In view of their obsession, it is not surprising to find the political part of this book cluttered with guesses and dark hints about the British Secret Service. Admittedly, Lawrence served Military Intelligence at intervals from the time of the Sinai survey of 1913 onwards, but not before that and not with the regularity here suggested. It is queer how reverently MI is mentioned by foreigners even in areas where it has few triumphs to show for its pains.

M. Villars, in an important review of the petulant and much-criticised Aldington book which appeared in 1954, remarked that he hoped Mr Aldington's cantankerous strictures would at least have the virtue of stimulating contradiction, and so producing new material. It did not do this, and so he perforce worked over the old familiar sources, and has nothing new to say, bar the spy-stuff, about the political or the physical side of Lawrence's life. He is sensitive and understanding about the mental tortures through which so disturbed a soul was wont to put itself, and his literary criticism of Lawrence's books is perceptive; one or two interesting comparisons are drawn with French minds, notably Gide's.

Unfortunately, most English readers will derive more irritation than pleasure from a book so ill-translated. Sentences such as "Intransigent in ideals, and manly in pride, the child learnt with obstinacy to master himself" would barely pass muster at O level, and it is best, when rendering French into readable English, to remember that in the common construction: "*S'il est sévère, il est juste*" the English for "*Si*" is not "if," but "although." Nor is the text free from the sin of careless copyings from the Lawrence letters; for instance,

the snow seen in Syria in July was on Mount Hermon, not Carmel (which is only 1,800 feet high) and Gertrude Bell was neither an "elderly lady" nor "installed in Baghdad" in 1911. But, all told, enough books of this type have been written on Lawrence—three in the last three years. The book of books has yet to be written—and by someone who is ready to do the varied work that would relate his military exploits to the war as a whole and his archæological ones to the then state of archæology. The rest of the tale will always be *sui generis.*

Looking at the Law

Current Legal Problems 1958

Edited by G. W. Keeton and G. Schwartzenberger.
Stevens. 304 pages. 35s.

The most radical contribution in this year's collection of the fruits of progressive legal research comes from a solicitor, Sir Edwin Herbert. He and Mr W. O. Hart, the Clerk of the London County Council, are guest artists in a production otherwise consisting entirely of professors. Unfortunately Mr Hart's essay on local government in London is almost entirely factual, which, considering that he is a former professor, is disappointing. Sir Edwin Herbert makes several sound suggestions designed to overcome the present difficulties facing both branches of the legal profession. Although strongly in favour of preserving the division of the profession, he proposes that it should be made as easy as possible for a barrister to become a solicitor and *vice versa.* As a means to this end he suggests that basic legal training should be the same for both branches and that only at a comparatively late stage should a law student be required to choose which branch to join. This is one way of avoiding the present waste of ability that results from large numbers of men and women being called to the bar without any substantial hope of making a living, a situation which is accompanied by a shortage of young and able solicitors. It would have been even more instructive if Sir Edwin had permitted his controversial speculations to wander into the field of closer association or even partnership between solicitors and accountants.

Mr Prevezer throws out some ideas for reforming English criminal law and draws on the American Model Penal Code. It is curious that we have enriched the legal system of several countries by providing them with criminal codes and have denied ourselves the same convenience. Most lawyers would be willing to settle for piecemeal reform of different branches.

Dr Schwartzenberger's essay on the legality of nuclear weapons suffers, like all writings on this type of subject, from the fact that basically the problems are political and not legal. Dr Schwartzenberger protests that every single question discussed in his essay is strictly of a legal character and, at least tentatively, answerable by reference to international law; this may be so in theory, but sometimes he is subjected to a certain amount of strain. On the other hand, it is possible to draw some comfort from Dr Cheng's review of state ships and state aircraft. He finds in the law of England, in common with the law of other nations, an increasing submission of state ships and aircraft to the ordinary rules of law in respect of the contractual, quasi-contractual and tortious liabilities of the Crown. In fact it would be irrational as well as mutually inconvenient to persist in carrying into commercial activities rules of immunity conceived for entirely different conditions, which leads to the conclusion that mutual convenience and ability, even on the part of small nations, to hit back are the true basis of such international law as we have.

Lessons of History

The Great Powers: *Essays on Twentieth Century Politics*

By Max Beloff.
Allen and Unwin. 240 pages. 20s.

The historian has long been at the politician's elbow when he makes history, but it takes a bold and dedicated man—among historians—to say what he should, and should not, do. This collection of Professor Beloff's articles and addresses—almost all safely above the fugitive standard—in the past decade has one dominant theme. He declares: "I have become more and more convinced . . . of the relevance of historical experience to our own problems, provided we know where to look for this experience and how to apply it." Mr Beloff has some sensible things to say on political analysis and its present academic status. Where he is most devastating is in his application of historical experience to two of the major debates in the western alliance today: European federation—not to mention "federal solutions" elsewhere — and anti-colonialism in American foreign policy.

Each essay in the American section, in fact, opens a new door. An anniversary piece on Benjamin Franklin's diplomacy in 1776 leads directly to an assessment of the natural foreign policy "for a newly enfranchised nation, for a new member of international society," that is immediately illuminating. So, too, a modern look at Tocqueville compels a reassessment of easy, "Pilgrim Dinner" platitudes on Anglo-American political roots and activities. All this needed saying: Mr Beloff has done it acutely and trenchantly.

Successful Colony

A History of Hongkong

By G. B. Endacott.
Oxford University Press. 322 pages.

This is a record of the administration of the colony which, never intended and never trying to be a colony, has become the most successful one today and looks like never wanting to be anything else. As a great trading post Hongkong has outrun the most optimistic dreams of its founders; as a colony the ingredients could not have looked more unpromising—a governing European community of professed non-residents and a vast and ever-increasing and ever-changing Chinese population. The Europeans wanted security and such home comforts as result from good local government; the Chinese cared for none of these things and traditionally shunned all activities of Government. They found, however, that law and order were good for trade, and both European and Chinese merchants consistently fought in their different ways against any limitation of free trade. They had thus a complete identity of interest in the economic field and one, moreover, that was bound to be constant, the making of profits.

Mr Endacott intersperses his record with periodic chapters on social and economic conditions, which show the conflict between two opposed ways of life in which such problems as prevention of crime, penal reform, town planning and sanitation could be solved only with difficulty. The record ends in 1947 and the only reference to the last ten years is a footnote saying that Sir Alexander Grantham's governorship was the longest in the colony's history. It might at least have added that it was also quite the most remarkable, for the late Governor set the seal of his personality, probably indelibly, on the colony's economic, social and cultural progress. Under his inspiring leadership Europeans and Chinese have cooperated in making Hongkong a place in which 2¼ million people will be able to live

in decent conditions with excellent social services.

The history of Hongkong is a great story. This book, however, though of value for reference is not at all easy to read; it consists almost entirely of a chronological catalogue of administrative details, a great many of which are of little or no consequence today, and includes many names of bygone officials not significant in the colony's history.

★

The Economic Growth of Hongkong

By Edward Szczepanik.
Oxford University Press for the Royal Institute of International Affairs. 200 pages. 25s.

EIGHT years ago Hongkong appeared economically doomed. Today these 400 square miles on the edge of the Asian continent are witnessing a remarkable industrial revolution. Although exports of Hongkong's manufactures totalled more than £50 million in 1956, this hardly indicates their full importance in the world economy. This book is an account of the course of this revolution. Mr Szczepanik, senior lecturer in economics at the University of Hongkong, has successfully described the interlocking, complementary stimuli which, based on the social and economic overheads required by the entrepot trade, have caused that take-off to self-sustained growth which has eluded the underdeveloped nations of the world. It is an exicting story, and he has told it clearly.

The relevance of this study to other economies is not, however, immediately apparent. With the possible exception of Singapore, the situation of Hongkong would appear to be unique, and the author has not focused on those factors, for example, entrepreneurship, which might be common to all developing economies.

Even within the limits of a single economy the author faced difficult problems. Mr Szczepanik has been forced to quote his own statistical estimates, the proof of which lies mainly in a series of articles not readily available outside Hongkong. These estimates are based on incomplete and questionable data, and analysis depending upon them must be suspect. Other statistics simply are not available, and the author may well have misinterpreted the role of the banks in the new industries; nor can he prove the importance of the open-money market, or even be certain of the relative importance of the various possible sources of capital for Hongkong's development.

Writing in early 1957, the author would appear to have been unprepared for the current economic recession in Hongkong, nor does he touch on the international controversies that recently brought the colony into the economic news. In spite of these limitations, Mr Szczepanik has made an important and useful case study of economic growth in an area of particular interest.

Japanese Trafalgar

The Fleet that had to Die

By Richard Hough.
Hamish Hamilton. 205 pages. 18s.

TSUSHIMA is the Japanese Trafalgar, one of the few complete naval victories ever won. It is easy to see now why the annihilation of the Russian fleet was inevitable, but it was not possible to forecast it then. The Russian ships rolled and plunged on their long voyage of agony across half the world to their doom, scattering in their wake, like the black cinders from their funnels, diplomatic crisis after crisis. Relics of a bygone age of ironclad experiment or modern ships of bad design, the ships were manned by officers and ratings in the thrall of a curious kind of fatalism—at one moment recklessly and uselessly energetic, at the other lethargic and defeatist. The voyage has the tragic, pathetic air of a blunder. But, like the fat man slipping on the banana skin, it is also funny.

As a historical farce, almost as a joke, is how Mr Richard Hough has decided to treat it. Fortunately, the jest comes off. It does so because this is an intimate vivid writing up of carefully collated and documented facts. The effort of research has been made, but it does not appear in the writing. This is not perhaps the way purists like to see naval history written, but the book is never, never dull.

OTHER BOOKS

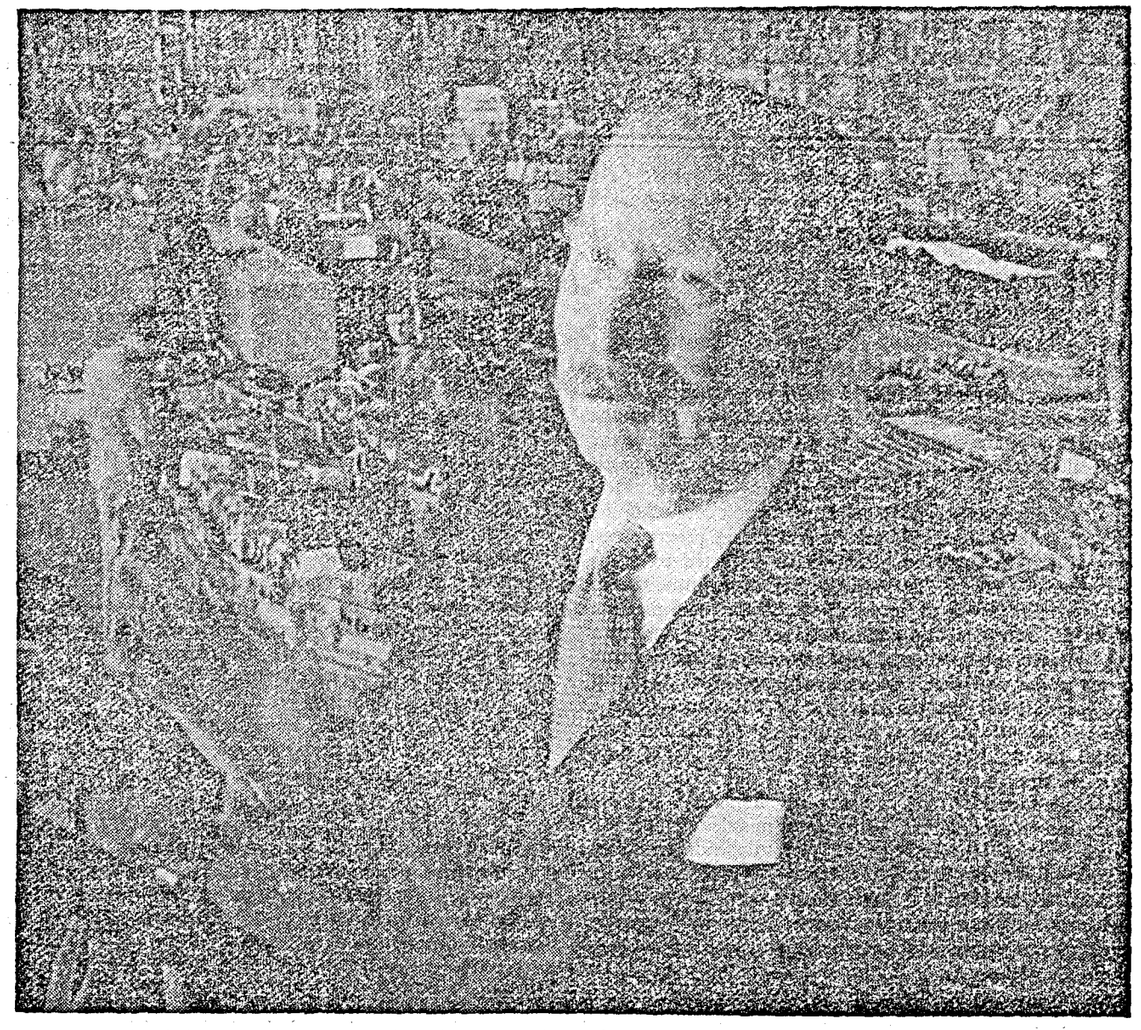
THE SECOND WORLD WAR. By Winston S. Churchill. *Cassell.* 1033 pages. 35s.

This abridged version provides most of the grandeurs and the delights of Sir Winston's incomparable account without the military detail and texts of telegrams that are of little interest to the ordinary reader. It contains, as well, a twenty-page epilogue, written in 1957, surveying the events of the twelve years since Sir Winston, to his still undisguised disappointment, was defeated. There are some understandable omissions; for example, there is no mention of Suez, unless there is a veiled reference to it in the condemnation of the United Nations as "a vain assertion of the equality of influence and power which has no relation to the facts." Sir Winston touches briefly on the great opportunities that were missed, by the Americans for example, when they allowed the Russians to sweep into Europe. But he does not believe that the democracies have acquitted themselves too badly when, having vanquished one despotism, they seemed to be confronted by another; and he has hopes that the Russians, as they experience the "complications and palliatives" of their expanding standard of life, will outgrow the confines of Marxism.

BRITISH RUBBER MANUFACTURING. By Audrey G. Donnithorne. *Duckworth.* 159 pages. 25s.

This survey of the products and processes involved in rubber manufacturing would serve as an excellent introduction to the industry were it not for the fact that it sets itself a different task—to study the relationship between innovation and the structure of the industry. Miss Donnithorne's conclusion is that there is "little evidence . . . to link innovation with the degree of monopoly or competition in the industry," by which is meant, presumably, the structure of the industry. The conclusion is almost certainly correct. Although innovations, defined here as original inventions and their development, have shaped many industries, the present form of rubber manufacturing is due as much to the influences exerted by other industries and to the effects of the McKenna duties as to anything else.

In her examination of innovation Miss Donnithorne finds much to be critical of in the British industry. In particular, she claims that innovations in synthetic rubber and tyres over recent years have been left largely to American firms. At a time when European firms have led in the development of steel cord breaker tyres, this may occasion some surprise, and it can be argued that the well-base rim and latex foam, both Dunlop developments, provide excellent instances of British research and endeavour. Nevertheless, this well-written book gathers together much that should be known about an important, if complex, industry.



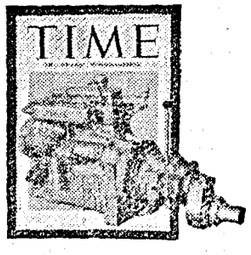
EXPLORING VILLAGES. By Joscelyne Finberg. *Routledge and Kegan Paul.* 253 pages. 28s.

This book is addressed to students of all ages. Although the narrative is packed with facts, there is no confusion and only a slight air of the schoolroom. The village is first of all analysed by shape, size and site; its historical evolution reviewed; and the reader skilfully guided through the centuries by simple explanations of geology, geography, place names, boundaries, farm practice, and the like. The anatomy of village buildings is revealed from the early cruck to the Victorian prize cottage. The church has a chapter to itself. Society is also treated in its widest sense: crafts, the rise of industry, the poor, the influence of the squire. Wisely, Mrs Finberg only hints at the twentieth century.

There are nearly a hundred good practical sketches, mostly by the author, a bibliography at the end of each chapter and an index. As an inspiration to deeper reading and personal observation, it is worthy of a wide public.

PROSPERITY AND DEPRESSION. By Gottfried Haberler. *Allen and Unwin.* 520 pages. 18s.

When Professor Haberler's "Prosperity and Depression" first appeared, under the League of Nations imprint, in 1937, it was an up-to-date critical conspectus of the various current schools of economic thought on the nature, causes and possible cure of the trade cycle. The 1939 edition included an account of the General Theory; that of 1941 took in the first post-Keynesian developments. In this new, revised and enlarged edition the original critical conspectus, up to and including the General Theory, remains unchanged; losing topicality, it retains a solid historical value, proof against the passing of time. The stop-press section of the 1941 edition has, however, been scrapped and replaced by new matter; a less expository, more critical chapter on "Monetary and Real Factors Affecting Economic Stability," condensed from a paper presented in 1956 to the Congress of the International Economic Association, and, as appendices, two reprinted and translated articles—"Notes on the Present State of Business Cycle Theory," and "The Pigou Effect." While the result lacks the symmetry and unity which might have been achieved had the new matter been melted down and digested in a major revision of the whole, it undoubtedly offers the best available means of seeing cycle theory in perspective.



DRIVE for exports

MR. FRANK PERKINS has been very much in the news recently. Founder of F. Perkins Ltd., leading manufacturers of diesel engines, he is a great believer in driving for exports, just as his diesels are driving 423 different types of vehicles in 143 countries around the globe. Wherever power is needed, on land or sea, Perkins' engines are there with applications ranging from small industrial tractors to seven-ton trucks.

Frank Perkins has always known that drive for export sales is boosted by international advertising.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

How Many Missiles?

WASHINGTON, DC

IF Damocles had climbed on his chair to measure the width of the hair that held the sword above his head, he would have been no wiser about the future than the Senators who are currently arguing about the width of the "missile gap." Certainly the joint sessions of the Senate's Space Committee and its Preparedness Subcommittee, summoned two weeks ago to make an "honest count" of the present state of America's missile and rocket programmes, have had some successes. They have extracted from the Secretary of Defence, Mr McElroy, who at one time tended to clap his telescope to his blind eye at the mere mention of missile statistics, the admission that there is indeed a gap between the number of intercontinental missiles which the Russians and the Americans will possess in the next few years; it will open this year, if it has not opened already, and will go on widening at least until 1961. But the committee has not yet established what the pessimists have claimed, that the gap will amount to virtual nakedness for the United States; and to the really important problem facing the defence planners—how many missiles are needed?—it has got only the dusty answer that it depends what they are intended to do.

Some obscurities have been cleared up. Mr McElroy and his most persistent critic, Senator Symington, are now tolerably close to one another in their estimate of how far ahead the Russians will be in intercontinental missiles in 1961. The Secretary puts it at three to one, the Senator "conservatively" at four to one; at least both figures are more cheerful than the ten to one or worse which Mr Joseph Alsop has been talking of. It is also generally accepted that the Americans are still ahead in manned bombers; but the Russians have such an overwhelming lead in intermediate-range missiles that they can neutralise not only the sprinkling of these missiles which the Americans are deploying in Britain and southern Europe but also a large part, at least, of the Strategic Air Command's bases outside the United States. This is undoubtedly unpleasant. The question is whether it is enough to nullify the power of the United States to deter aggression.

There are three reasons why the Administration can reasonably claim that it is not, that even in the worst of circumstances—a surprise Russian attack—the Americans could still retaliate with vigour. In the first place, so long as the superiority of the Soviets in ICBMs is not more than about four to one, most of these long-range missiles would have to be devoted to knocking out their American counterparts. It is reckoned that, even with the five-megaton warhead the Soviet missiles are said to carry, their inaccuracy would make it necessary to fire several of them to guarantee the destruction of a single target. As the Americans progress from the first crowded and vulnerable launching site to shielded and finally to underground positions, this "multiplication factor" is likely to increase. Thus, even if the Russians could obliterate at a blow all the Americans' long-range and intermediate-range missiles, and most or all of the airfields used by the big bombers overseas, they are unlikely to have enough left over to deal with the home bases of the Strategic Air Command.

Secondly, even though the Russian anti-aircraft defences are believed to be so good that they may soon be able to destroy most of an attacking bomber fleet, this is being offset by the Americans' acquisition of air-launched missiles which the bombers can let fly at a discreet distance. The Hound Dog, with a range of up to 500 miles, is now going into production; the Bold Orion—an air-launched ballistic missile which is still only a glitter in the scientists' eyes—is reported to have a planned range of 1,000 miles. Thirdly, it is not enough for the Russians to take into account only the SAC bases; if they hope to wipe out the Americans' power to retaliate, they must also reckon with the many smaller airfields from which even a fighter-bomber could set off with an atomic load on a one-way trip to the Soviet Union. And the farther a Russian attack deviates from the conditions of pure surprise, the more time the Americans will have to get their bombers safely into the air.

THERE remain a great many people who say, despite all this, that the Administration ought to spend substantially more on missiles, that its current defence estimates are based on the amount that can be spent without unbalancing the Budget or increasing taxes, rather than on the needs of national security. Some of these critics are concerned chiefly with the political implications of giving the Russians best. Senator Jackson of Washington, one of the most lucid defence analysts in Congress, has argued that for the United States to admit that it cannot match the Soviet Union in missile production would be to risk the disintegration of the western alliance. In the short run there is some force in this. In the long run, however, the political danger depends on the military one; it is unlikely that America's allies will be hopelessly dismayed by the inferiority of the United States in this one type of weapon unless they become convinced that it has lost its power to protect them. To prevent this, some critics are now insisting that the United States must regain what is called, in Air Force jargon, its "counter-force" capacity.

In its pristine form, the counter-force strategy was based on the hope that the Russians' own bases could be overwhelmed virtually at a single blow. Only if American cities were immune from retaliation, ran the argument, would the allies really believe that the United States would be willing to use its massive deterrent power in their defence. This hope withered as soon as the Russians acquired a substantial intercontinental bomber strength, let alone missiles. The ambition of the counter-force strategists is now to amass so many missiles that it would be possible to do major damage to the Russians' launching sites even after the United States had suffered a serious attack; thus the amount of devastation inflicted on American cities would at least be limited. But even if all the Soviet sites could be detected, which is unlikely, the "multiplication factor" would call for vastly swollen forces of missiles to guarantee the destruction of even a part of them. It is doubtful whether this kind of leap—from a one-to-four inferiority to something approaching the reverse—is within the reach of the Americans in the immediate future.

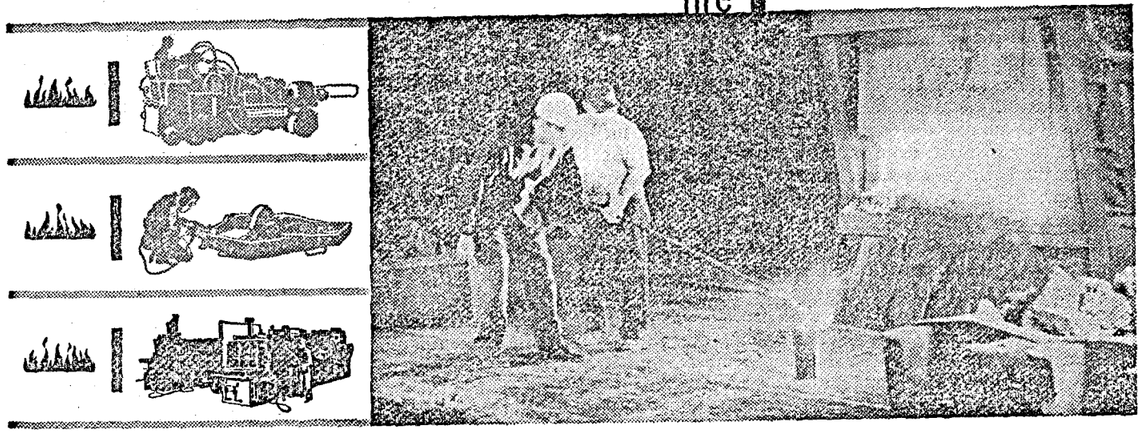
It is the fear that the Russians will in turn achieve a "knock-out" capacity, or something near enough to make the Americans unwilling to continue the fight, which stirs most of the congressional critics. Senator Symington wants more funds to be devoted immediately to the construction of the Atlas, the first of the ICBMs, which will begin to go into service this summer, and the Titan, which has just made its first short-range test. By contrast, Senator Jackson shares the Administration's reluctance to concentrate too many eggs in the baskets of the Atlas and Titan, both already condemned to rapid obsolescence. He would like to devote substantial extra funds—perhaps a billion dollars in the coming fiscal year—to their solid-fuelled and less vulnerable successors, the Polaris and the Minuteman; he hopes to advance the date when these will be ready for service, and to make more of them when they are. At present the Polaris is expected, at least by the sanguine Mr McElroy, to go into operation late next year and the Minuteman in 1962.

Once the deterrent weapons can be tucked away in cosy invulnerability below ground or under water a black cloud will obviously lift from the brows of the defence experts. But the hastening of the scientists' work depends only partly on the infusion of extra money. The Administration's case is that the gains to be won, in time and numbers, are not big enough to justify either upsetting the precious balance of the Budget or asking more of the taxpayer.

America Needs Mr Dulles

PRESIDENT EISENHOWER'S emotional tribute to his Secretary of State, as Mr Dulles entered hospital, might have gone even further. Not only does America need him, it can hardly do without him; nor for that matter can America's allies, critical as they have often been of Mr Dulles. Experienced, profound, devoted, he has relied on himself alone to plan and conduct the foreign policy of the United States for six years. Now there is no one with sufficient knowledge to take over, except perhaps the President himself—and Mr Eisenhower does not feel that he can give any more time to foreign affairs, even in this emergency. The Under Secretary of State who is to deputise for Mr Dulles, Mr Herter, came to the job with both experience and reputation but he has been given little opportunity to add to either. Moreover, he is thought to differ from Mr Dulles on the vital issue which must be discussed while the Secretary is away—what to do about the Russian threat to Berlin.

Indeed many people, among his colleagues as well as his allies, are thought to differ from Mr Dulles on this issue, although the extent of the differences, particularly where the British are concerned, has obviously been exaggerated in certain newspapers. That all are agreed to use force if necessary to preserve the western position in Berlin has been confirmed by Mr Dulles's trip round the European capitals last week and by the assurances now being given to Mayor Brandt. But this theoretic agreement has still, it appears, to be translated into specific details. Once his operation is over Mr Dulles intends to spend his convalescence of several weeks thinking about the German problem; he will also be available for consultation by his colleagues. This gives rise to fears that they—and negotiators for other countries—may feel that they have no independent authority and that final decisions may be held up until Mr Dulles comes back. By then May and the Berlin deadline will be very near.



Officially there is absolute confidence that Mr Dulles will come back, that his present illness will respond to treatment and that he will soon be adding to the 560,000 miles he has already flown on official business. Much as everyone hopes that this will be so and probable as it seems that his determination and toughness will conquer his ill-health, nevertheless there is naturally speculation about a possible successor. Many names are mentioned but, since Mr Herter suffers severely from arthritis, the two who head the list are the other Under Secretary of State, Mr Douglas Dillon, who has specialised in economic matters with imagination and success, and Mr Henry Cabot Lodge, who represents the United States at the United Nations.

Getting Around the Veto

CONGRESS put aside work this week to join in the bi-partisan celebrations of the 150th anniversary of the birth of Abraham Lincoln, the great Republican. But the Democrats, urged on by their leader in the Senate, Mr Johnson, had left the present occupant of the White House with more to think about than log cabins, the immortal Gettysburg address, or the new Lincoln penny. Ever since the election in November Mr Eisenhower's stance has been that of a St George attacking the dragon of Democratic extravagance, which could so easily swallow up the frail $100 million surplus in the Budget for the year beginning next July. But the housing and airport Bills which the Senate passed last week, by big majorities, contain enough concessions to the President's demand for economy to make him look unreasonable and politically short-sighted if he vetoes them. These concessions will also make it easier to find a two-thirds majority to pass the Bills over his veto if he sticks to his doctrinal guns.

Over the next six years the Senate's housing Bill is expected to cost just under $2.7 billion, about $1 billion more than the President proposed. The big long-term difference is over urban renewal and slum clearance, which is naturally dear to Democratic liberals who speak for the big cities. But because urban renewal needs long planning ahead, the congressional provisions which really affect next year's Budget are those for direct loans to ex-servicemen in rural areas and to colleges. The accommodating Mr Johnson, after a talk with the President, cut the first from $300 million to $150 million, and second by $100 million. Moreover, both the Senate and House, which has yet to pass a full housing Bill, have approved increases in the interest which may be charged on government-insured mortgages, something they have been unwilling to do in the past. This should attract more private lenders. Mr Johnson now claims that the Senate Bill would add, at most, only $135

UCON hydrolubes help protect against fire

In a large steel mill recently, molten slag was accidentally dumped on a steel plate floor which covered copper hydraulic lines connected to furnace control equipment. The hot slag pierced the steel flooring and melted the hydraulic lines. About 20 gallons of UCON Hydrolubes sprayed out before the pumps could be turned off. Yet, no fire resulted. A serious fire that could have caused extensive property damage and serious personal injury was prevented by using UCON Hydrolubes, the fire resistant fluid. UCON Hydrolubes also provide wear and corrosion resistance equal to petroleum oil.

UCON Hydrolubes are available in a range of viscosities to meet the requirements of various types of equipment such as: die-casting machines, ingot manipulators, furnace controls, electric welders and presses. Conversion of your present hydraulic equipment can be done quickly and inexpensively.

Ask for our FREE booklet IE-2 and learn why UCON Hydrolubes are the economical answer to fire-resistance in hydraulic fluids. Write to UNION CARBIDE INTERNATIONAL COMPANY, Division of Union Carbide Corporation, 30 East 42nd Street, New York 17, New York, U.S.A. Cable Address: UNICARBIDE, New York.

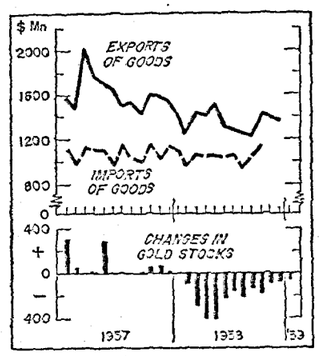
UNION CARBIDE

million to spending in the next fiscal year and perhaps much less; he implies that among reasonable men this is hardly worth quarrelling about.

Mr Johnson's concession on the airport Bill is of only academic interest to Mr Eisenhower; it was simply to cut off the last year of a five-year programme in order to bring the cost down from $565 million to $465 million. The President wants to spend only $200 million over four years, arguing that federal aid should be confined to making airports safer. But after the disaster at Idlewild this month, which cost over 60 lives, cities and towns are not likely to look with favour at the tapering off of federal assistance at the beginning of the jet age.

The Treasury Goes Short

MUCH against its will, the Treasury unexpectedly had to raise $1.5 billion this week through the sale of seven-month tax anticipation certificates. This was to pay off holders of $2.1 billion of maturing certificates who demanded cash last week instead of accepting new government securities. These had been made particularly attractive in the hope of ensuring the success of the big refunding operation. In all, it amounted to $14.9 billion of maturing securities, of which $9.2 billion were held by the public and the rest by the central banking system and government trust funds. In exchange the Treasury offered a new one-year certificate bearing 3¾ per cent interest and a new 3-year note bearing 4 per cent—both of these higher than the going rate on securities of comparable maturity.



A demand for cash amounting to 22 per cent on the part of the public is second only to the attrition of 30 per cent encountered last summer when the bond market collapsed. The Treasury had abandoned plans to offer a long- or intermediate-term bond; it sold only $1.4 billion of the three-year notes; and for many even one year was too long. Few investors wish to tie their money up for more than very short periods when they are convinced that interest rates are bound to rise farther as the recovery goes on and when they know what heavy refinancing lies ahead for the Treasury this year. Others, fearing that the government deficit will continue and revive inflation, or anxious for quick profits, prefer to put their money into the stock market. The banks will buy only very short-term securities.

One effect of forcing the Treasury to rely on short-term financing may be to drive the short-term rate above that for long-term money. Another is to make it harder for the central bank to control inflation; and this in turn may make investors still more unwilling to buy long-term bonds. So far no escape from this circle of misfortune is in sight, but it explains why many officials in Washington are "obsessed" with balancing the Budget.

Losing the Midas Touch

LAST year the United States, which in 1949 owned 70 per cent of the free world's stock of gold, found that everything it touched no longer turned to gold. Instead it lost—or rather sold—gold worth $2.3 billion, the largest figure for any year on record. This contribution to the better distribution of the free world's $39.5 billion stock of gold does not leave the United States in pressing financial difficulties. Its remaining stock, worth over $20 billion, is still $8 billion more than is legally required as a reserve against currency and deposits. But some American advocates of balancing the Budget have been quick to conclude that the loss reflects distrust of the dollar abroad and that this is inspired by the prospective deficit of $13 billion in the government's Budget this year.

The balance of payments offers a more reassuring explanation. During 1958 America's commercial exports were a sixth lower than they had been in 1957, a year when they were swollen by abnormal demands for petroleum, wheat and cotton. The Council of Economic Advisers ascribes three-quarters of the fall in exports in the first half of the year to "special circumstances" affecting these three and three other groups—metals, coal and motor cars. Imports, sustained by domestic consumer demand, fell very little, and exports of capital, both private and governmental, remained higher than they were in 1956, though they fell somewhat below 1957. The United States not only did not export its recession, but is recovering from it without the rise in exports which was so helpful in 1953-54.

The consequence was that during the first three quarters of the year foreign countries increased their holdings of gold and dollars by over $2.2 billion, adjusted for seasonal variation, through their transactions with the United States—compared with an average annual increase of $1.6 billion between 1952 and 1956. The spectacular rise in purchases of gold has two explanations. One is that the European countries which amassed dollars are traditional buyers of gold; the other is that the return on short-term investments was unattractively low in the first part of the year because of an easy money policy. Now that it is higher, purchases of gold are diminishing. So far from there being any "flight from the dollar," foreign countries increased their holdings of dollar assets by nearly $1 billion in the twelve months ending in September.

Baghdad in the Suburbs

FROM A CORRESPONDENT IN NEW YORK

THE migration to the suburbs, which has been such a feature of American life since the war, faced the city shops with a choice. They could try to woo back their customers, or they could follow them. Most of the big stores have elected to pursue their quarry by means of the shopping centre. In effect, this is a little bit of the urban shopping district, transplanted to the suburb.

Whether a shopping centre is simply a "neighbourhood" one, grouping a handful of shops to supply perhaps 1,000 families, or a mammoth "regional" development, with more than 150 shops, supermarkets, banks, and other

enterprises serving a community of half a million, it is a modern and extremely functional bazaar made up of independently-owned businesses. Along with its variety of shops (which is the city's great *attraction*) the suburban development aims at beauty of design, which the city usually lacks. Wide and handsome malls are combined with the convenience of "one-stop" shopping. Most important of all, it has room for the motor cars which rule the lives of suburban people. There is no shopping centre, big or small, that does not have a car park large enough to accommodate every customer's car. The shopping centre may be part of a general decentralisation, but it effectively centralises the commercial affairs of the sprawling suburbs.

About 2,700 shopping centres (of which about 1,200 are the giant regional ones) exist already, serving about 80 million people, nearly half the population of the country. About 2,000 more are in various stages of planning or construction ; their growth has been so rapid and so widespread that it is hard to keep count. Ten years ago there were only 75. An editor of *Redbook* magazine, who is generally accepted as an authority, thinks that the centres sold goods worth $50 billion in 1958, and thus accounted for about a quarter of the country's retail sales.

THESE new markets have their own special characteristics. For example, the suburban population is younger, on the whole, than that in the city. Consequently, stores in shopping centres display prominently the maternity garments and the children's clothes which their city cousins tuck away upstairs. A shop in Levittown, Pennsylvania, has had to ask its home office to stop sending the so-called "stylish stout" sizes, since all of its matrons are slim. Delivery of parcels is no trouble ; suburban housewives take everything home in the car. A chain store in a Miami centre has found that the popular 10-pound package of garden fertilizer does not fill the bill ; the central buying office has had to supply it with 100-pound sacks.

Most shopping centres have play areas for children and many have closed-circuit television cameras keeping an eye on them ; their mothers can watch them from receiving sets scattered round the centre. At the huge Southdale centre in Minneapolis, the children are even provided with a full-fledged zoo. Finally, shopping centres keep open much longer hours than is usual in the city. About two-thirds of the supermarkets, most of which are in shopping centres, stay open after six o'clock six or seven nights a week and 27 per cent are open all day on Sunday. The Lakewood centre in California, in area the largest in the country, does more than 60 per cent of its business after five in the evening. Costly as these late hours are, they bring big rewards in terms of sales.

Trial and error have shown that the construction of a shopping centre is a big job requiring careful planning. For lack of this, a number of centres are in financial difficulties and a couple have gone bankrupt. It is not enough simply to build in a growing suburb, as many of the promoters of the earliest centres have discovered. A careful survey needs to be made of the habits, incomes and shopping tastes of the population and to discover what competition already exists. Then the developer (an independent estate specialist or a departmental or chain store company) decides whether the centre is to be a neighbourhood affair, with 10 to 15 shops covering ten acres or less and serving a market of 1,000 ; a "community" or district one, with a branch of the big store, on a 10 to 25 acre site to serve 5,000 families or more ; or a regional centre, covering 35 acres and including several big stores in a complex of more than 100 shops and serving at least 100,000 people.

The detailed architectural plan must be attractive both to the prospective customers and to the prospective shopkeepers. The big central stores must be placed so as to bring in the crowds and then send them circulating throughout the centre. This is because the profitability of the whole venture depends very largely on the wellbeing of the little shops. The big stores can and do demand preferential treatment. While a little shop may have to pay rent equal to 15 per cent of its sales, the large ones will pay a relatively nominal tribute of 2 or 3 per cent or less, and may even demand exclusive rights to sell certain kinds of goods in order to protect themselves against what is held to be the greater risk. Competition between the shops in a centre is kept in mind as a working theory ; in one case however, a trader addicted to price-cutting was thrown out by the shopkeepers' association.

SOMETIMES potential sales are overestimated right from the start, and many a centre has been abandoned before it was off the drawing boards. There is concern today even for the well-planned ones, simply because there are so many of them. In densely-populated Bergen County, New Jersey, a suburb of New York with about 750,000 residents, two of the giants rub shoulders. One, Garden State Plaza, is run by Allied Stores, the biggest chain of department stores ; the other, Bergen Mall, is the showplace of Macy's, whose New York store is probably the biggest in the world. Ultimately, each of these centres will sprawl over 1,500,000 square feet, with parking space for 12,000 cars. It would appear to be saturation of the market on a classic scale.

But both Macy's and Allied feel that energetic promotion will keep their plazas thriving. The former has been serving free coffee and pastry to housewives who show up daily for "Breakfast on the Mall." The latter has scheduled art shows. The possibilities are almost boundless. At the Hillsdale centre in southern California there are daily "fishing derbies for small fry" in well-stocked trout pools. At Mondawmin Mall in Baltimore there are starlight symphony concerts. In Raleigh, North Carolina, and Houston, Texas, circuses are the attraction. Not long ago the Northshore centre in Peabody, Massachusetts, featured

AIR SUBSCRIPTIONS TO *THE ECONOMIST*
22, Ryder St., London, S.W.1

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. *Where only one service is shown this is* because the alternative is either not available or not recommended.

a review of the British Grenadiers and Scots Guards, massed pipers and all.

Perhaps the best example of success against high odds is suburban Detroit, where so far $82 million has been invested in shopping centres. A dozen have gone up outside the city, another six are being built and nine more are planned. Hudson's, a big store in Detroit, underwrote two of the centres and did $50 million worth of business in each during the first year. It now leases space to over 160 shops. What is remarkable is that Hudson's big central store has grown too. Part of the explanation may be that the company has induced Detroit to add 6,000 municipal parking spaces to those in existing car parks and garages, and even has the city government thinking about urban renewal schemes revolutionary enough to include a shopping mall in the centre of the city.

Middle Road on Civil Rights

WHEN the Senate committee starts work on civil rights in about a month's time, it will have a trio of plans before it, supplied by Senator Douglas, Senator Johnson and President Eisenhower who, as might be expected, steers a middle course between the two Democrats. In the mood of hope for conciliation which prevails after Virginia's abandonment of massive resistance to racial integration in education and after the peacefulness with which a few token Negroes have been received in its white schools, there is a real possibility that some effective legislation on civil rights may be passed this year. But its content will depend largely on Senator Johnson, for only he has the power to prevent the southern filibuster which could keep any Bill from coming to a vote.

His measure is designed to placate the Southerners for it contains no reference to the school difficulty, although he claims that his special community relations service will cope with problems arising out of integration in education. Senator Douglas's plan is guaranteed to provoke a filibuster for it empowers the federal authorities to force schemes for racial integration on school boards which refuse to make their own. He would also have the federal government provide technical and financial help for communities which wish to open mixed schools. The President wants to do the same, provided that the help is requested by the local school board. He also wants it to be a federal offence to interfere with a court order on school desegregation ; this would enable violence such as that at Little Rock to be dealt with without the use of troops. But the President does not ask, as does Senator Douglas, for power to bring lawsuits on behalf of people who are suffering from discrimination but who dare not start proceedings themselves. The Attorney General is understood to have desired these powers but to have changed his mind in the light of the comforting developments in Virginia. On the school question the President has now spoken more directly and explicitly than ever before in support of the Supreme Court's decision against segregation. His approach may well appeal to some northern Democrats more than either of the schemes put forward by members of their own party.

Both the President and Senator Johnson would extend the life of the Civil Rights Commission for two years and would give the Department of Justice power to subpœna voting records, to make it easier to deal with obstruction of the kind which the commission recently faced in Alabama. Finally, both plans would strengthen methods of countering the bombing of schools and churches ; there was an epidemic of such outrages last year.

Oregon's Hundredth Birthday

FROM A CORRESPONDENT IN PORTLAND

LITTLE more than a century ago, the first settlers began to pour into the lush, green land then known as the Oregon Country. They cleared away the tall firs to make homes in the valley of the Willamette River, on the shores of Puget Sound and, to the north, along the Fraser River in what was to become British Columbia by international treaty. So now is the time for centenary celebrations in the Pacific Northwest of America. British Columbia began them last year, and in 1961 comes the turn of the State of Washington ; but this year belongs to Oregon, which became the thirty-third state in the Union one hundred years ago, on February 14, 1859.

For the past three years a state-wide committee has been making preparations for a birthday party to which all the world is asked ; some four million persons, more than double the present population of the state, are expected to accept the invitation. The celebration is to begin this weekend with a formal reception in the rotunda of the State Capitol in Salem, and the Vice President of the United States, Mr Richard Nixon, is to head a long list of distinguished guests. Once the centennial has been launched in this way, virtually every community in Oregon will offer its own programme for the entertainment and the enlightenment of visitors. They will be able to pan for gold, to send mail by pony express, to fish and shoot in areas specially restocked with game so that they compare with the undespoiled land when the white man first came. And there will be modern entertainments ranging from art festivals to open-air symphony concerts.

The Oregon Historical Society and the State Highway Department are co-operating to complete the marking of the state's historic landmarks for the information of visitors. These preparations have been inspired by a Van of History, a mobile display of historical relics which has been touring Oregon for the past three months, carrying exhibits which include petroglyphs carved by Indians in pre-Columbian days and the gold-headed sword-cane of the Hudson Bay Company's factor, Dr John McLoughlin, the dour Scotch-Canadian who was the Oregon Country's most distinguished citizen in the decades before statehood.

The practical purpose of a centennial, of course, is to call

The Greatest AVIATION ENTERPRISE IN THE COMMONWEALTH

Of the 182 aircraft flying at the 1958 Farnborough Show, no fewer than 129 came from the Hawker Siddeley Aviation Division — an indication of the powerful contribution Hawker Siddeley is making to Britain's Air Power.
It provides the Royal Air Force with its only day interceptor, the Hawker Hunter; the only all-weather fighter, the Gloster Javelin; and its most potent V-bomber, the Avro Vulcan. At sea, the Avro Shackleton Mark III, serving with the RAF Coastal Command, is probably the most effective maritime reconnaissance aircraft in the world; and the Armstrong Whitworth Sea Hawk is in front-line service with the Fleet Air Arm.
Apart from their contribution to Britain's Defence, Hawker Siddeley aircraft are helping N.A.T.O. and other countries of the Free World with powerful means to defend themselves. The Hawker Hunter alone is in service with a dozen different air forces. Latest aircraft from the Hawker Siddeley " stable " are the Avro Arrow supersonic fighter being produced in Canada; and the Argosy freightercoach, first turboprop freighter in the world, which is about to start its flight trials. Looking to the future, projects include a novel form of vertical take-off close support fighter admirably adapted for modern methods of defence.
Such scope of activity requires vast design, research, development and production facilities. Hawker Siddeley has them both at home and overseas, forming the greatest aviation enterprise in the Commonwealth.

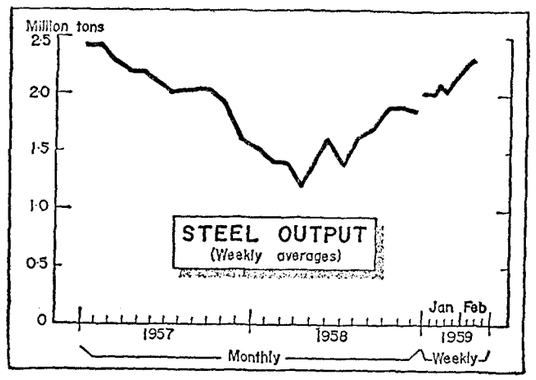
HAWKER SIDDELEY AVIATION DIVISION

Pioneer... and World Leader in Aviation

Reading from top to bottom: 1. Avro Shackleton submarine hunter. 2. Armstrong Whitworth Sea Hawk. 3. Hawker Hunter Two-Seater. 4. Hawker Hunter ground attack/interceptor. 5. Gloster Javelin all-weather fighter. 6. Avro Arrow supersonic fighter. 7. Avro Vulcan bomber. 8. Armstrong Whitworth Argosy freightercoach.

Continued from page 595

attention to the opportunities offered by the state, and for this the main effort will be the Centennial Exposition and *International Trade Fair, which will open in Portland on* June 10th. It will be on a 165-acre tract at the northern edge of the town, on the bank of the Columbia River. The chief building will put eleven acres under one roof and will be surrounded by a number of attractions, including a demonstration tree farm and a display of the products of the Northwest's lumber industries, which will include a permanent exhibition of modern techniques of building in wood. A dramatic feature will be an 80-foot-high "tower of fire," fed by the natural gas which has recently been *brought to Oregon from the southwestern regions of the* United States and from far over the Canadian border. There will be an Adventureland, with an authentic Indian village, a reconstruction of a community in the time of the explorers Lewis and Clark, a frontier town, a ghost town, an early logging camp and a children's zoo. Stands have been built along the bank of the Columbia River, from which spectators will be able to view water sports and a nightly water pageant at the "aqua centre."



In the trade fair space has already been reserved by over twenty foreign governments. The exhibits will feature the coming century and will include the first American appearance of the model prepared by the United States Atomic *Energy Commission for the Brussels World Fair.* Oregon's building industries will show a $75,000 "home of tomorrow" and there is to be an "international garden of tomorrow," which will cover 50,000 square feet and will include rare species, new hybrids and plants from all over the world—a suitable exhibit for a state which prides itself on the horticultural advantages of its damp, temperate, "English" climate. The garden will include "the world's largest candle," constructed from bits of candle contributed by the school children of Oregon.

Fifty-three years ago, Oregon was host to the world at the Lewis and Clark Centennial Exposition, marking the hundredth anniversary of the explorers' historic overland trek to the Pacific Ocean. During the 137 days of that exhibition, approximately 2,500,000 persons, most of them from other states or countries, were admitted. The 1905 Exposition is generally credited with sparking the remarkable development of Oregon's industry and population in the first half of this century. It is hoped that this year's will do as well for the second half.

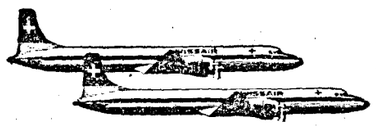
Steel's False Spring?

THE American economy as a whole may not be booming but steel output, a basic indicator, has been shooting up in recent weeks to levels not reached for nearly two years. Partly this is because consumers have let their stocks run down so far that even in the sluggish car industry they are inadequate for current needs. But mainly it is because buyers expect either a steel strike when the present three-year contract expires on June 30th or higher prices as the result of wage increases. Competition for supplies of certain types of steel is already such that four months may not give some customers time to build up as large reserves as they would like. Even though this early spring fever will almost undoubtedly mean a sharp falling-off in the demand for steel during the summer, the producers welcome it. Determined to be tough in their bargaining with the union, which is also breathing fire and thunder—perhaps only for psychological purposes—the employers feel that their position will be stronger if their customers are able to carry on without any new supplies of steel for some time.

Clinging to the banner of the anti-inflation campaign the companies insist that they will not grant any wage increases that are not justified by higher productivity; the union is talking of winning another $1 billion a year. That pro-

ductivity has increased in steel seems clear from the fact that employment has not been rising as fast as output. Annual capacity has gone up by 14.3 million tons since the end of 1956. The industry now needs to run at only about 80 per cent of capacity to produce steel in amounts which required all-out working only two years ago and the new facilities are obviously more economic than the old. The leading companies are showing satisfactory profits for 1958 even though they were operating at under 60 per cent of capacity during the year; the Republic Steel Corporation had net earnings of nearly $4 a share on an average rate of 52.5 per cent of capacity. The traditional "break-even" point has been well above this.

A possible strike is not the only threat to steel's bright future. The Bethlehem and Youngstown companies have decided to drop their proposed merger rather than appeal to the Supreme Court against a lower court's ban on it. But the Department of Justice is still concerned about undue concentration and monopolistic practices in the steel industry and is thinking of proceeding against it on several fronts. At least these enquiries will cover newer ground than will the grand jury which is about to examine once again the ramifications of the much-investigated General Motors Corporation.



SHORTER NOTE

The Twenty-Second Amendment to the Constitution, which was adopted in 1951 to limit each President to two four-year terms, also provides that if the Vice President succeeds during the first two years of his predecessor's term, he may stand for the Presidency only once in his own right. January 20th marked the end of the first two years of Mr Eisenhower's second term of office and therefore the end of a political, if theoretical, disadvantage for the Vice President. If Mr Nixon should succeed to the White House during the next two years, he would still be free to serve two further terms.

"actually I'm a private secretary . . .

and I'm waiting for my boss. He's flying in from Europe—by SWISSAIR as usual—so he's sure to be in a good mood!" Yes, *men of experience know that precision,* personal attention and luxury-plus distinguish each Swissair flight. Whatever your destination, Swissair offer every week twelve flights to the Middle East . . . nine to North America . . . services to South America every Sunday and Thursday . . . to the Far East every Tuesday and Friday. Luxurious First or unrivalled Tourist Class, each flight is swift and smooth with weather-radar . . . each meal brings a well-dined, well-wined satisfaction. **See your Travel Agent.**

The Garden of Loneliness

by Gerhart Hauptmann

The Garden of Loneliness was recently produced with success at the Arts Theatre. It is set in the early eighteen-nineties, at a country-house near Berlin. It gives a striking picture of the Germany of those days; and it has as its hero a young man whose character and whose problems have remarkable parallels with the present day. John Vockerath, a young scientist in revolt against the society he lives in, is torn between his love for his beautiful, patient and conventional wife Kitty, and his comradeship with a remarkable and brilliant "New Woman", Anna Mahr.

A Memory of Two Mondays

by Arthur Miller

Miller says of this play: it is a pathetic comedy; a boy works among people for a couple of years, shares their troubles, their victories, their hopes, and when it is time for him to be on his way he expects some memorable moment, some sign from them that he has touched them and been touched by them. They barely note his departure. I wrote it, I suppose, in part out of a desire to relive a sort of reality where necessity was open and bare; I hoped to define for myself the value of hope, why it must arise, as well as the heroism of those who know, at least, how to endure its absence.

presented by GRANADA TV NETWORK

THE WORLD OVERSEAS

Mr Khrushchev's Middle Way

THE twenty-first congress of the Soviet communist party, which ended last week, was a personal triumph for Mr Khrushchev. His long report on the seven-year plan opened the proceedings. The 86 Soviet speakers who followed him during the next eight days, as well as the foreign delegates, all paid tribute to his performance. Mr Mikoyan described his report as a "symphony of communist construction." Others paid their homage to Mr Khrushchev's contribution to each sphere of Soviet activity from maize to foreign affairs. The first secretary is undeniably the first. But now that the Kremlin hall has emptied and the applause died down, Mr Khrushchev's programme must be closely examined if his position and power are to be assessed.

The empirical Mr Khrushchev dealt largely with facts and figures. But he was compelled to venture into theory in order to tackle the problem of "transition to communism." He argued that this transition cannot be sudden and abrupt; it will be long and gradual. The many reforms for which he claims credit are merely designed to speed up the pace of Soviet development. By the end of the seven-year plan, the Soviet Union should approach American levels of production; by 1970 it is hoped to reach American output per head. Yet even this is described as only a stage in the long march towards a society of plenty. Only when this goal is achieved, he argued, will it be possible to put into practice the old, attractive slogan: "from each according to his capacity, to each according to his needs."

It suits Mr Khrushchev and his associates to brand his opponents of the "anti-party group" as diehards resisting every progressive and popular measure. His speech, however, revealed that he also has to contend with a different kind of opposition. The answers he gave were an admission of the kind of ideological questions that are being asked, particularly by younger men. Why, despite Russia's economic growth, are there still such big differences in earnings and in living and social standards? What is being done to bridge the gap between physical and mental labour, and the gap between town and country? Why does not the state show more signs of "withering away"? Having proclaimed that the party must return to "Leninist principles," Mr Khrushchev can hardly be astonished that the early slogans of the revolution are being revived.

Mr Khrushchev would like to appear as the unquestioned leader of the reformers. In practice, he has to fight on two fronts. Against Russia's conservatives his campaign is easy as long as his reforms prove successful. He is finding it more difficult to curb the zeal of impatient youth. His main argument is that the ground is already being prepared for some of the desirable long-term objectives. The state, he claims, already takes care of some 20 million old-age pensioners and spends large amounts on education and social welfare. It will spend still more on kindergartens, boarding schools, free meals and so on. The strengthening of the Soviet block enables the state to rely less on coercion ("there are no political prisoners"). Incomes are becoming less disparate, thanks to the gradual increase in minimum wages. Shorter hours, automation and the reform of education should narrow the gulf between labourers and white collar workers. When collective farms grow richer and more modern, it should be easier to transform them into state property. But, for the time being, the emphasis must remain on incentives because, without a rapid increase in the country's wealth, the other dreams will not come true.

His strictures on social experiments unwarranted by the state of material progress were aimed not only at the internal position, but at the Chinese leadership as well. For all the denials, the congress confirmed the existence of an ideological rift between Moscow and Peking. But at the same time it has shown the basis of the "agreement to disagree" reached between the partners. Last year Mr Khrushchev may well have been more worried by the Chinese "leap forward" through the method of the communes than by Jugoslav experiments with workers' councils. Peking, however, has never even suggested that it might move outside the Soviet block. The main accusation against Belgrade during the Kremlin debate was that Jugoslavia has tried to sit on "a separate chair" between the two camps. Mr Khrushchev seems to have accepted the principle that communist countries can follow their "own roads," suited to their particular conditions. What he will not tolerate is any questioning of allegiance to the block. This is probably why his definition of inter-party relations was endorsed so wholeheartedly by Mr Gomulka. The Polish leader is more interested in relative freedom of action at home than in quixotic aspirations to independence in foreign policy.

One of Mr Khrushchev's theoretical statements must have appealed to the Chinese. He argued that all the countries of the block will reach communism at roughly the same time. This must mean that the laggards are expected to catch up with the more advanced countries. In other words, the Soviet Union, in the van, should help the more backward members. The Chinese, at any rate, received one immediate benefit from this line of thinking. Last Saturday, after the congress had ended, Mr Chou En-lai signed an agreement in Moscow providing for additional Soviet aid for 78 Chinese investment projects over the next eight years; the credits involved amount to 5,000 million roubles. Was this cheque enough to end the ideological dispute between the communist partners?

The congress shed comparatively little new light on Soviet foreign policy. It merely confirmed Russia's mood of self-confidence combined with its desire for international talks. Marshal Malinovsky, the minister of defence, described the might of the Soviet forces and warned the would-be attackers: "Your arms are too short." Mr Gromyko, the minister of foreign affairs, particularly took to task Dr Adenauer, and cautioned western statesmen that if no agreement is reached over Germany, the Soviet Union "will explore other ways of

solving this problem." Finally, Mr Khrushchev, in his second speech, warned outsiders not to doubt his assurance that the Soviet Union now has inter-continental rockets in serial production. At the same time, while restating the Soviet position on German reunification and nuclear control, he expressed his wish to negotiate and threw out an invitation to President Eisenhower to visit Moscow.

Mr Khrushchev is always in need of success. Indeed, his supporters' chief argument against the "anti-party group" was the progress that the country had made since the group's defeat. This argument could be weakened by, say, a bad harvest. The fatter the next seven years are, the easier will be Mr Khrushchev's defence against critics of his reforms. But this is not his only problem.

The treatment of the "anti-party group" has revealed the limitations and extent of "destalinisation." Nobody at the congress, at least not in open session, dared to defend the viewpoint of the opposition or to question Mr Khrushchev's premises or performance. On the other hand, the recantations of Mr Pervukhin and Mr Saburov were markedly lukewarm and in the end other "culprits" were not dragged before the open congress. When it is proclaimed that there are no longer any political prisoners, and that persuasion has replaced coercion, it becomes more difficult than in Stalin's time to eliminate and uproot opposition.

Success thus brings its own problems. Better fed, better educated, feeling more secure, the Russians are likely to be more outspoken about their political rights. This was not a congress of young men. Four delegates out of five were over forty, that is to say they were fairly advanced in their careers at the time of Stalin's death. The next party congress, scheduled for 1961, may hear the voice of a younger generation call for a freer as well as a better society.

Cyprus Hears the News

FROM OUR CORRESPONDENT IN NICOSIA

WHEN a rumour spread through Cyprus on Tuesday that the return of Archbishop Makarios was imminent, bells rang in village churches, flags came out, and excited Greeks gathered in Ledra Street discussing the phenomenon. When on the following day the fact of the Zurich agreement became known, most Cypriots went about their business, no doubt inwardly uplifted, but ostensibly unmoved; some, indeed, were patently suspicious. These reactions epitomise both the unpredictable Cypriot character and the confused feeling that the fate of Cyprus has become enmeshed in a diplomatic spider's web of which the ordinary man has little comprehension.

Yet it is possible to detect several distinct, though interwoven, strands of reaction to the Zurich agreement. The basic emotion is a human relief that the end of the four year nightmare seems in sight. Despite the violence, the Cypriots are basically kind and friendly people, most of whom have longed for "the end to the troubles," in their own phrase, more than for anything else. At the same time a contrary reaction seemed to come into play—the old obsessive distrust about Britain and in particular the present government's intentions. "The British don't want a solution" has been a pet Greek slogan in the press and the pulpit alike for the last four years; and it is still much in evidence. Even at this stage, with all the indications of a new relationship between the three governments concerned, Greek Cypriots are still uneasy that somewhere and somehow "the Tories will cheat them."

This obsessive distrust (to which Britain itself has contributed) could seriously affect the embryonic settlement in the coming weeks if certain circumstances arise. If the British Government should approve of the Zurich plan in principle but recommend delay—on the ground that a too hasty transition to independence is not in the island's true interests—this would almost inevitably be construed by the Cypriots as a British attempt to torpedo the whole scheme. They will see deferment as synonymous with rejection. Nothing so far has leaked in Cyprus about the time-table of the new plan, but if dates are being weighed up the British Government would do well to pay some belated regard to the Cypriot mentality and susceptibilities.

A third strand of local reaction to the Zurich agreement is a rational concern about the vagueness (at the moment of writing) of what is known of the Greco-Turkish plan on certain important points. In particular the Greek Cypriots are worried about the fate of the municipalities—a topic which has lately assumed giant proportions in coffee shop controversy. Only about a week ago it was being freely forecast that if the Cyprus government officially approved the establishment of separate Turkish municipal councils this in itself would be a signal for a new wave of Eoka violence. In the last resort one suspects that Archbishop Makarios would not reject the whole scheme merely on the score of the municipalities; but in the island, whatever decision is made seems bound to cause a great fuss.

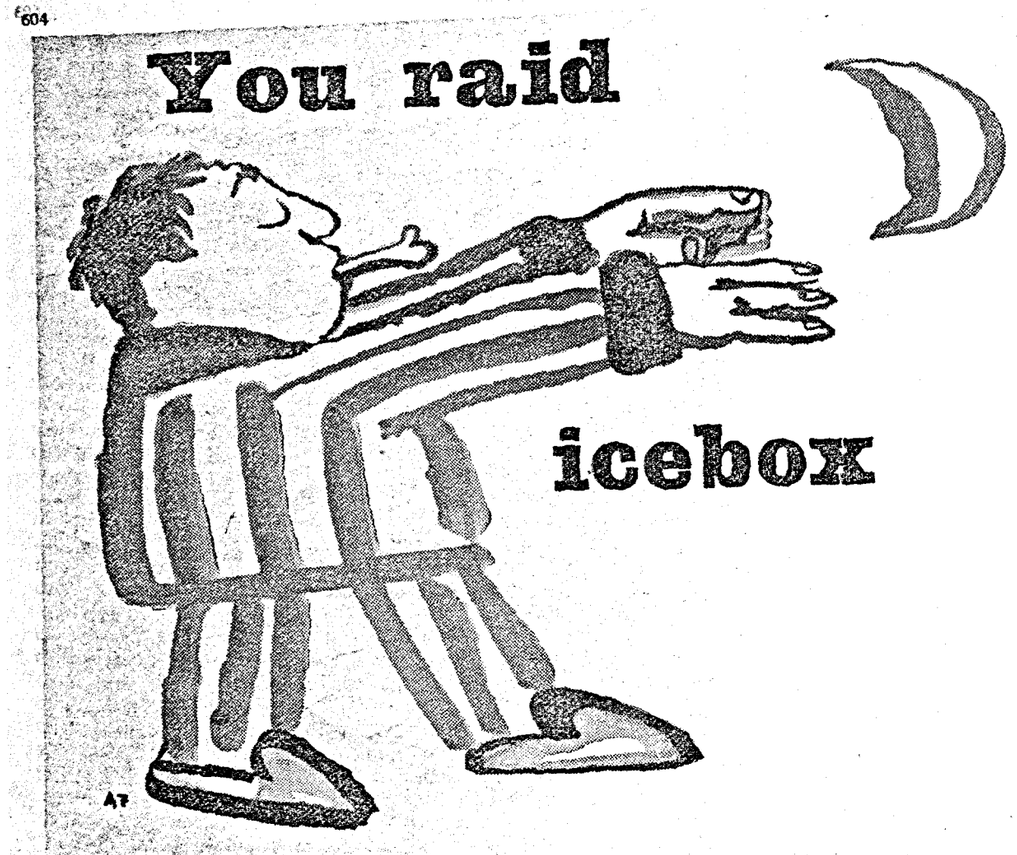
THE Greeks are similarly uneasy about the exact veto powers envisaged for the Turkish minority in the national assembly, and about the functions of the two lesser assemblies for communal affairs—which, according to some reports, are being carried over from the Macmillan plan. These understandable apprehensions may be dispelled when the full details are made public; the present uncertainty largely explains why Greek Cypriot reaction to the Zurich plan has been cautious. Underlying the reserve is a suspicious feeling that the whole Cyprus question has mysteriously been "fixed" by the diplomats without the Cypriots themselves directly participating.

On the left wing, the mood of caution is even more pronounced. The commitment to Nato which the new plan envisages is a rebuff to left-wing hopes of an independent republic with its waggon hitched to the Soviet star. The leaders of the left, however, have a fine sense of practical politics; most probably they will not now force an issue with Archbishop Makarios over the bases, but will tactically bide their time—which almost certainly will come. Their ranks include convinced and able men, such as Mr Ziartides himself, who have given their allegiance to Marxism largely because they have never seen any ideology of comparable dynamism in the West.

On what seems to be the eve of a new phase in Cyprus's turbulent history a shadow is cast by two inescapable factors. One is the grim fact that intimidation is as powerful today as ever. Violence has too long been glorified and the island will pay a heavy price for it in its own political development. Archbishop Makarios, whose return seems daily more urgent, may be able to bring Eoka's activities to an end; but the fact remains that when the first elections are held a great many people will still be armed. The other harsh reality is that the right has so far shown little awareness of the implications of independence and made no attempt to work

Old Father Thames keeps corroding along

Dear to the hearts of Londoners the Thames has always been, but today there is no blinking the fact that, in its industrial reaches at least, it is a very dirty stream. So dirty that, until recently, Port of London Authority tugs needed a bottom repaint *every six months* to fight off the corrosive effect of continuous working in highly polluted waters. Then Shell scientists came up with a far better answer to the corrosion problem — 'Epikote' resins. Some of the tugs now protected by paint based on 'Epikote' resins have been in service for two years or more, with the same paint film still doing a good job of work.



Improved adhesion, toughness, flexibility and resistance to chemicals are qualities that make 'Epikote' resin-based coatings outstanding.

Little wonder that they are now used on factories and bridges, towers and tunnels, ships and piers, and all kinds of industrial and domestic equipment, wherever better structural protection or product finishing is wanted. These same resins are also used for such diverse jobs as potting delicate electrical components and making revolutionary low-cost jigs and tools.

Have you a task for which the special properties of 'Epikote' resins are the answer? Why not find out? In fact, if you have any problems concerning the use of chemicals, industrial or agricultural, Shell may well be able to help you.

Write to the Sales Promotion Manager, Shell Chemical Company Limited, Marlborough House, 15-17 Gt. Marlborough Street, London W.1.

out a programme. Successive slogans of enosis, self-determination and independence have been the be-all and end-all of political existence, and now that independence seems in sight one suspects that few of them have very clear ideas what they will do with it. Yet in their ranks, too, there are individual men of high calibre who are capable of statesmanship and could be effective allies of the West. One thing clearly is emerging from the crucible; new ideological alignments are being subtly formed. The acrimony that has accumulated will have to be quickly put aside if an independent Cyprus is not to become a flotsam in an ideological whirlpool. Britain, Greece and Turkey, alike, will need to give the new country magnanimous support.

New Faces in Baghdad

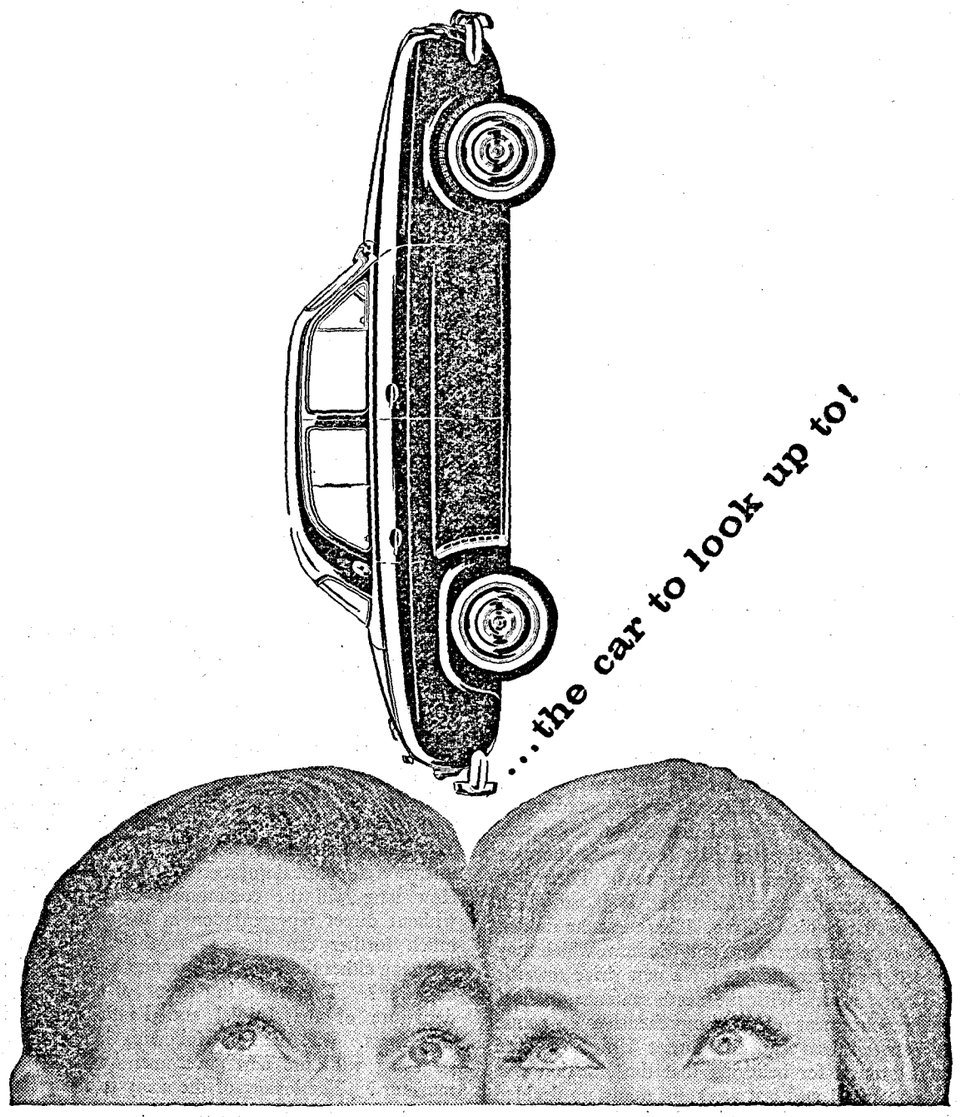
FROM OUR MIDDLE EAST CORRESPONDENT

THE revolutionary caravan in Iraq lurched sharply to the left with a sweeping reconstruction of the cabinet last weekend. But the terms "left" and "right" are less precise in the Arab world than in Europe; and it is by no means clear towards what sort of left the caravan is now heading, nor how fast. Despite official claims that the aim of the reshuffle was "to maintain and consolidate the unity of ranks" it seems unlikely that the reconstructed ministry represents a new angle of repose. Unity has been achieved (if at all) by a surgical operation; by the removal of ministers representing large slices of Iraqi public opinion. To that extent, General Qasim has failed to hold the revolutionary movement together. The basis of his new government is much narrower than that of its predecessor.

The immediate cause of the change of government was the death sentence passed on Colonel Aref by the People's Court in Baghdad. But for the past few weeks the case of Aref has become a symbol of wider issues. There was the growing bitterness between Cairo and Baghdad which disturbed nationalist opinion in Iraq. There was the sudden squall that blew up between Cairo and Moscow, which may have heartened Iraqi communists for a new drive towards influence, if not power. With the death sentence on Aref came the announcement of a comprehensive economic agreement between Iraq and the Soviet Union. There seemed some ground for believing that the situation was getting out of control and last week six ministers decided that, without necessarily challenging the leadership of the prime minister, General Qasim, they could no longer accept their share of responsibility for his policies.

Some of the outgoing ministers were members of the right-wing Istiqlal party or of the left-wing Baath party. Both these parties are anti-communist and both favour closer links with the United Arab Republic. To that extent the cabinet changes represent a gain for the communists. But the allegation that the new government is communist-dominated is certainly wrong. The new ministers are either National Democrats or independents. In western terms National Democrats are socialists in temporary alliance with communists. But they are not themselves communists; nor are they opposed in principle to closer links with the UAR. Independents are non-party men on whom the prime minister—himself a self-proclaimed non-party man—thinks he can wholly rely. It is true that the new government is supported by the communists, who continue their steady organisational activity. Provided they are allowed freedom to strengthen their positions in the government, in trade unions and in professional syndicates they may well be content for the moment to keep out of the limelight.

The first words of the new government suggest a wish to end the propaganda war with the UAR. The minister of guidance suspended a communist newspaper on the ground that it had expressed needlessly violent criticism of the outgoing ministers. There is some doubt, however, whether the suspension was effectively enforced. The minister called for "unity in Iraq and the Arab homeland" and for moderation in press comment on Arab affairs. He explicitly held out both India and the UAR as models of true neutralism. Too much weight should not be attached to the mere utterance of such thoughts (the Arabs have their fair share of the human facility for keeping words and deeds in separate compartments). But it is an advance, however temporary, on the sterile insults of recent weeks.



The propaganda organs of the United Arab Republic have not responded favourably to the tentative peace overtures from Baghdad. The immediate reaction of Damascus and Cairo newspapers is not encouraging. Despite broad hints from Baghdad that the transcript of the People's Court proceedings against Aref would reveal UAR complicity in his alleged treasonable activities, nothing of the sort has emerged. Indeed, a careful study of the record suggests that Aref's only "crimes" were personal ambition, instability and disagreement with the prime minister on important points of policy; and that President Nasser's only known reaction to him (before the martyr's crown was forced on his head) was displeasure at his table manners.

The suggestion that more changes are in the offing seems well founded. The sudden departure of six ministers, and the administrative changes that will certainly follow the arrival of the new brooms, must strain the already slender resources at the prime minister's disposal. But more important than such technical problems are the still unanswered political questions that cloud the future of Iraq. How long will the communists be prepared to remain without direct representation in the government? How much further can they press their advantage without alarming either the National Democrats or the independents, or both? The most important of all perhaps is the departure of the Istiqlal and Baath parties into the wilderness. Will their old following in the officers' corps go along with the new government without question or murmur? The loyalty of the army to the prime minister is being put to its severest test yet.

Cambodia's Neutral Stars

FROM OUR CORRESPONDENT RECENTLY IN PHNOM PENH

IT is reliably reported in the beguiling, tree-shaded little capital of Cambodia that a hard-headed western ambassador once seriously contemplated adding a local astrologer to the embassy staff. He argued, logically enough, that all royal astrologers received their basic training at the same traditional fount of starry wisdom and that he would therefore know at any time what decisive astrological advice was influencing the dynamic, able and all-powerful ruler of Cambodia, young (37) Prince Norodom Sihanouk. But the ambassador's brave heart failed him when he thought of possible newspaper headlines at home.

Lovely to look at and delightful to be seen in, there's real prestige in driving a Renault Dauphine. Good looks, surging power, gay colours, superb performance — they are all to be found in this one sparkling package. Let her rip at over 70, let her perform miracles at 47 to the gallon, let her glide over roads on her independent suspension and you will *know* that she is the car for you this year, next year and for many years to come. Go on, put your foot down and insist on driving a Dauphine. Write to us at the address below for the name of your nearest demonstration dealer.

Price £758.17.0 (inc. P.T.) 2-pedal control optional extra.

RENAULT Dauphine

Fully assembled by Renault Limited, Western Avenue, London, W.3.

Ancient customs still persist pleasantly in Cambodia. Royal personal air timetables are governed by last-minute horoscopes, and agricultural forecasts and plans are shaped by the dietetic choice of sacred bulls between priestly offerings of corn, wheat, rice or alcohol after a *Hinayana* Buddhist festival (attended, significantly, by three Brahmin priests.) But these picturesque survivals have not impeded or distracted Prince Sihanouk in his astute, energetic and versatile programme for raising his happy little country's living standards and, while harkening to the old, making the best of the two *modern worlds*—Communism and the West.

To him, neutralism is the only possible policy for Cambodia. To him, the South Vietnamese and the North Vietnamese (alike) and the Siamese are more dangerous forces than the Chinese Communists. He dived into deep waters last year when he decided to recognise Peking, and thus brought the first official Chinese Communist representatives, instead of the Chinese Nationalists, into his strategic area, bordered by Siam, Laos and South Vietnam—all determined on armed resistance to Chinese communism.

So far, the neutral stars have shone brightly and encouragingly on the Prince's ambivalent endeavours. He is reaping aid from a record variety of rival and opposing donors. Theoretically, it will soon be possible for a lucky Cambodian pedestrian, who has been knocked down by a Polish steam locomotive, travelling to a port constructed by the French on a railway line built by the Chinese, to be rushed in an East German ambulance, driven by a Japanese-trained chauffeur and fuelled by American petrol, along a highway built by the Americans, to a modern hospital erected by the Russians and staffed by nurses, using Czech medical equipment, who have been educated under the Colombo Plan.

THE Prince admits, frankly, that American aid, so far, has been "much more important" than Chinese aid. (American aid to Cambodia last year: $32.9 million; probably less this year. Overall Chinese commitments: $28.3 million.) But the American aid is hedged round with customary and unavoidable congressional conditions; it is largely devoted to basic but unpublished needs such as army pay and police training; it seldom seeps down to the people in recognisable form, and it is geared to long-range plans—reafforestation, rubber plantations and, strangely, avocado pears. Now the Chinese, turning speculative eyes towards this friendly oasis in the hostile Seato-South Vietnam desert, are planning a generous and expedient aid offensive, which will be short-ranged, quick and spectacular: a railway to the new port from Phnom Penh, simple ditch-canal irrigation designed to double rice production by June next year, cash handouts, cement and sugar plants, a national radio station (personal gift of Chou En-lai), and oil, coal and iron surveys.

It is absurd to suggest that Prince Sihanouk, who abdicated as king to rule as prime minister, is pro-communist. (His mother, Queen Kossamak, told a western diplomat informally: "There have been eighty kings on the Cambodian throne; if the Communists come here, there will be no more.") He was greatly impressed by his observations in China, and now, toiling in shorts with calloused hands, regularly leads his people in Chinese-style mass-labour projects, such as road-building and dam-digging. Only he knows his real thoughts as he thanks the sycophantic ambassadors and officials of communist embassies for their spontaneous, perspiring contributions to these communal undertakings. He has rejected an arms offer by the Chinese and has said that he is more than satisfied with the present arrangement under which the Americans pay and the French train his minuscule armed forces.

He still places his trust in the neutral stars and believes sincerely that strict neutralism will continue to protect his four million devoted subjects and to ensure a dual flow of aid from both the East and the West. There are suggestions, probably apocryphal, that palace officials were vastly relieved when the capital's roguish white elephant, in one recent week, gored an American and tossed a Czech; it had previously, by evil misfortune, charged, butted and beaten up with its single remaining tusk a small bus, laden with terrified Chinese entertainers on a cultural visit: the later anti-western exuberances, no matter how regrettable, at least demonstrated that the holy elephant's illwill was not ideological or even racial.

Footnote: The US authorities should take note of the fact that *all* Chinese technicians and advisers posted to Phnom Penh speak Cambodian.

Roman Conjuring Trick

FROM OUR CORRESPONDENT IN ROME

A CHRISTIAN DEMOCRAT minority government supported in parliament by the Right is the prospect that is taking shape here this week. The Liberals will decide on Saturday whether to vote for Signor Segni or benevolently abstain. The two monarchist parties are inclined to vote for him, and the neo-fascist MSI say that they find his economic and foreign policies satisfactory. Signor Segni has announced that his government will have a strictly orthodox attitude towards Nato (with no preconceived ideas about Berlin), will put the common market well before a free trade area or any similar plan and will fight the effects of recession by loosening credit so as to stimulate private enterprise. State enterprise will be encouraged to operate in the depressed areas and the unemployment problem will be met by a programme of public works. A loan will be floated to meet the demands of state employees for increased pay.

Everything that the confederation of industries could ask for is in this list of "priorities" which Signor Segni claims to have chosen "in view of the present state of the country" from the programme laid down by the Christian Democrat party after the general election last May. Last week the prime minister designate promised President Gronchi to make that programme his own. Today the conservative press congratulates him on a programme that it considers to be the opposite of Signor Fanfani's and exults in the anticipated discomfiture of the state oil magnate Signor Mattei.

In theory a government supported by the Right should have some thirty votes to spare in the Chamber, but it will put a severe strain upon the unity of the Christian Democratic party which Signor Segni was called in by its leaders to preserve. The party's extreme Left, represented by Signor Granelli and two other deputies, have already declared themselves "in opposition" though they have promised, under pressure, to obey the whip. The Catholic

trade union leaders are seriously embarrassed and may not be fobbed off with a place or two in the government; widespread unrest has been caused by the labour redundancies which are becoming more and more frequent.

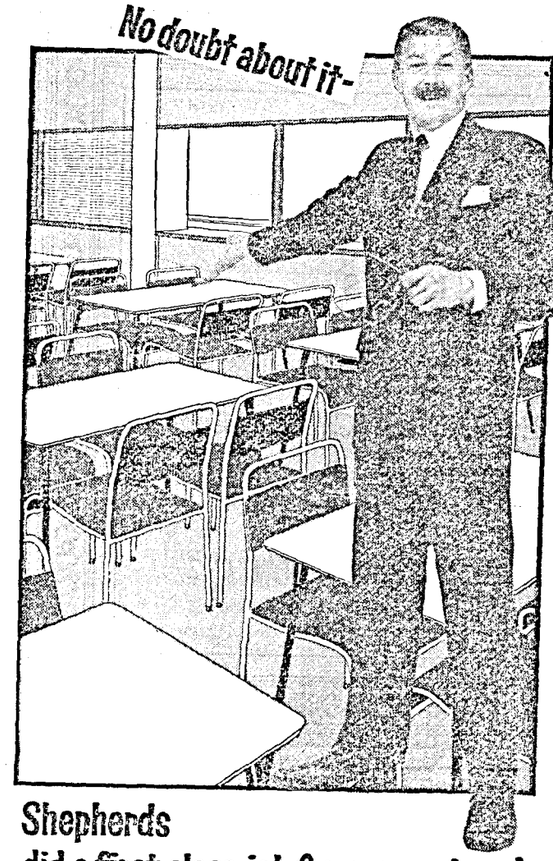
Signor Segni's main problem, however, is the attitude of the 94 Christian Democrat deputies who owe their seats and their careers to Signor Fanfani. No one knows as yet whether Signor Fanfani has retired from politics, or whether he means to come back and stand for leadership at the forthcoming party congress. It is estimated that 75 per cent of the votes would go to him should he decide to move quickly before his followers lose heart. Signor Segni will have to watch out for sharp-shooting from this group.

There is another unknown factor in the situation. How will President Gronchi react when Signor Segni presents him with a government supported by most, perhaps all, of the monarchists and the MSI? Constitutionally, the president could not object to a government which drew support from the Liberals and declared itself orientated toward the right; but this is not the case with Signor Segni, who was recommended by his own party as its nominee for a left centre government in which its trade union and other progressive elements were to be widely represented. The president might object that there are inherent contradictions between the government's programme, its composition and its parliamentary support. In the last analysis he could refuse to sign the decrees appointing each minister. He is not likely to go to such lengths, but it is certain that the conflict between the president and the Christian Democrat leaders is not resolved. Signor Segni may claim that the split in the Social Democrat party left him no choice.

Five of Signor Saragat's 22 deputies and about a third of his party have joined the independent "Movement of United Socialist Initiative" which is preparing to merge with the Nenni Socialists. Signor Saragat offered Signor Segni his remaining 17 votes on condition that his party should join the government as the sole partner of the Christian Democrats; but Signor Segni not unnaturally rejected these terms. The present state of confusion is grist to the communist mill, but the Socialist party is not anxious to find itself thrust into close contact with the Communists by the advent of a government which could not fail to be the cause of serious labour disputes. It is, however, still far from certain that Signor Segni will succeed in pulling off this latest feat of Christian Democrat *trasformismo*.

Bonn and Mr Dulles

FROM OUR BONN CORRESPONDENT

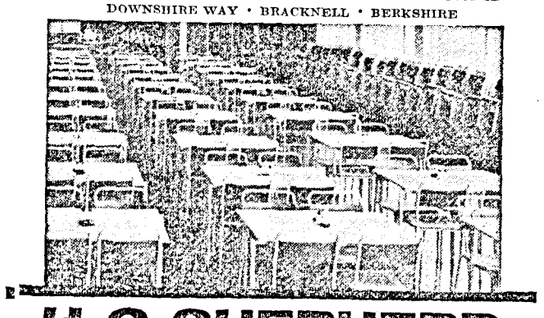


EAST GERMANY'S principal daily, *Neues Deutschland*, opened on February 4th with the news, spread across three columns, that forty British Labour MPs had tabled a motion recommending the Government to recognise the German Democratic Republic and to support the establishment of an all-German council with which the former allies might negotiate a peace treaty. Two days later the same paper led even more spaciously with Mr Khrushchev's reaffirmation before the Soviet party congress of the Soviet government's determination to preserve the communist achievements of the German Democratic Republic lock, stock, and barrel for ever. The editor cannot have hesitated for long before selecting either item for prominent display. For the proprietors (the Socialist Unity party), the theme transcends all others in importance. The opportunity to exploit it has since been grasped again in the handling of the news of the east German premier's return from abroad, with the promise of east German consulates-general opening in Cairo and Peking as the cockiest feather in his cap.

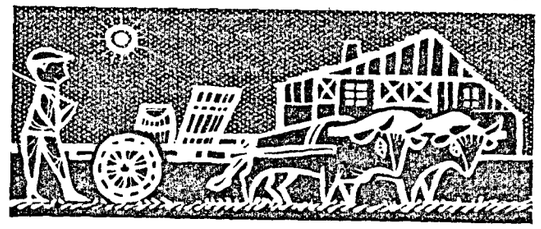
What would not Dr Adenauer give for a like instinctive certitude within the western camp! Disturbed by speculation in the western capitals, the canonical *Bulletin* of the federal government's press and information office, whose master is Herr von Eckardt, felt impelled to choose Saturday, the day of Mr Dulles's arrival from Washington, London, and Paris, to put and answer the question: "Why is confederation not the way to German unity?" In a prominently displayed meditation (printed in italics), the warning was given to all who might toy with the palliative of a provisional German confederation, that it would prove to be a deadly poison for west Germany, Europe, and the rest of the free world.

No names, no pack-drill. But Washington itself had been pressing Bonn for new ideas, and apparently at one point had suggested confederation, with appropriate safeguards, as a promising field for the west Germans to cultivate. Mr Dulles had announced he was bringing no proposals to Europe; he wanted to hear other people's views. Simultaneously Dr Adenauer had made it known he was not intending to put forward any new proposals to Mr Dulles. In short, it was clear from the outset that Dr Adenauer had not been relieved of any of his old misgivings, and was intending to rejustify them, if necessary, against a Dulles newly plagued with doubt. It does not seem to have been necessary. The official spokesmen afterwards indicated warily that there were certainly to be no concessions to Moscow without proportionate concessions in return. But nobody had supposed that there would. What, then, does the statement mean? To Dr Adenauer it means no retreat from Berlin, no confederation, and no sacrifice of the principle of free elections. To Mr Dulles, presumably, it means the same. It has also been indicated, however, that a field exists for study and exploration by the western powers.

The federal government may not be quite as inflexible and negative as it looks. There is still ground for manœuvre; and in response to the demand, both at home and abroad, for a reappraisal of policy, the federal Foreign Office has set a team of experts and planners threshing out ideas, the best of which are being pieced together in Washington to constitute the West's proposals for a European and long-term solution to the German problem. The high aim is to produce an alternative programme which by its initiative and reasonableness will satisfy Moscow and win the sympathy of the rest of the world.



Understandably, a great deal of secrecy surrounds this work at the present stage. The Social Democrats, increasingly impatient to know more, and disturbed by talk of "no concessions," are threatening to abandon the reserve they have been maintaining over the past few weeks. But there is little they can do at the moment other than press for a foreign affairs debate in the Bundestag, which they hope to achieve in mid-March. Their plan to send party representatives to sound opinion in Moscow, Warsaw, Prague, and Belgrade—a project welcomed by the government—has so far been frustrated for lack of response in the capitals concerned. The public as a whole is resigned to waiting.



Shepherds did a first-class job for our canteen!

There's more to furnishing a canteen than just installing tables and chairs. Planning of space is equally essential to its well-running. A sound reason for calling in Shepherds, the canteen planning experts. Advice is given free and without any obligation on your part. For the importance of efficient canteen facilities cannot be minimised; more often than not it's the governing factor in the successful relationship between management and staff. Remember too, Shepherds range of canteen furniture is exceptionally wide and economically varied, manufactured and delivered direct on customer's orders.

The canteen illustrated below was recently furnished for

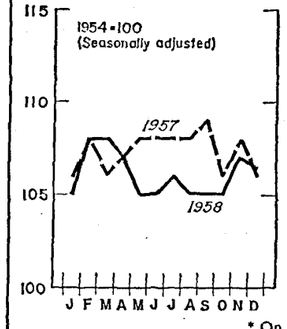
THE BUSINESS WORLD

Groundswell

DOLE queues on a cold winter's day in a recession, even a mild one from which the economy is emerging, provide a ticklish statistic for the Minister of Labour of any Government with an election not far off to handle. Mr Macleod, who had managed to give an indication of what was happening to unemployment in December by the 17th of the month, could not have done so as early in January; his department's formal count was not taken until January 13th, as against December 8th. Still, his political colleagues have been gossiping about "the bad January unemployment figures" for well over a fortnight, and vaguely rounded estimates were leaked into the press last week. This dribbling out of unpalatable news, compared with the prompt announcement of an apparently more favourable figure, has only contrived to make the January total that the minister announced this week, 621,000 unemployed, look rather worse than it is—which is in fact no more than he himself had forecast at the beginning of November, and rather better than most other people would then have guessed.



So far as ordinary seasonal influences go, this January figure should be about as bad as the minister will have to handle this winter: the peak of unemployment usually comes in January or February, with little between them. Mr Macleod has a fair chance that the February figure may be fractionally lower, and we should all be unlucky if the March figure does not show an improvement. The normal seasonal fall in unemployment alone—and it would perhaps be optimistic to expect much more—should by then begin to take some political sting out of the figures.

To guess that unemployment, seasonal changes apart, will not fall much in the next six months is not to discount the signs of growing activity elsewhere in the economy, which are persistent and multiply. Last October, according to the barometer of the Federation of British Industries, businessmen were more confident than, say, economists about an upturn, and they seem to have been right; today they seem slightly more confident than they were then. But over the four months to February a majority of these businessmen have reported higher output to back their confidence, and a rather higher rate of orders.

These extra orders have come from home customers. Export orders, on balance, seem to have declined. These

* On their experience over latest four months compared with the previous four.

THE LABOUR MARKET

businessmen have indeed reported to the FBI a continued fall in export deliveries during the past four months, which gybes a little oddly with official trade figures for the fourth quarter of 1958, and those for January published this week, which are all higher than those for the summer. Who else did the extra exporting?

Nor can one gauge from the FBI's sample (some 900 businessmen, with a 75 per cent response) how far the higher demand at home has come from the fillip to hire purchase of consumer goods, which from the January figures of hire purchase contracts has shown no signs of spending its force. The vehicle manufacturers, certainly, had better business and greater confidence to report than those in other industries; but the metals and engineering group of industries, which lumps together everything from refrigerators to steel rails, was worse off than the rest. This contrast indeed shows itself more clearly in the production figures that the steel industry itself has published this week; in January it was operating on the average at about 75 per cent of capacity, but the mills producing sheet and tinplate were still flat out, while output of heavy steel was as depressed as ever. The heavier half of steel demand depends upon investment; also, and particularly at the moment, upon stocks. These came down heavily in the fourth quarter of 1958, but not necessarily enough to make customers anxious yet about replenishing their supplies.

Public investment, the Chancellor said a week ago, is rising perhaps a little faster than his extra allocations to the investment programmes of the public departments and nationalised industries would have suggested. The fairest thing to say about private investment is that the indications are rather less pessimistic than they were. In the last quarter of 1958 capital expenditure in manufacturing appears to have been lower allowing for price changes than 12 months before, but not so much lower as it had been in the third quarter. Again, among the manufacturers reporting to the FBI who expect their capital expenditure to change there is still a majority expecting it to be less this year than in 1958, but this, too, has declined in each of the last three inquiries. That seems to fit figures of manufacturers' investment plans collected by the Board of Trade, which suggest that the falling off will not be as severe as was originally forecast. And the Government is reckoning upon an increase in investment in distribution and commerce that should roughly offset the decline in manufacturers' spending.

The resultant of these mixed intentions about investment this year is not yet showing in any substantial revival in demand for capital goods. Machinery manufacturers still seem to be working through their order books, with deliveries falling, but not as much as orders. There are indeed signs of a similar process in the wider cross-section of manufacturing covered by the FBI: output may have been rising more than incoming orders, with the consequence that order books are shortening while stocks of work in progress and finished goods are rising.

Just about as many of these members of the FBI reported that they were operating below capacity as had done so four months before; nor were indications that their output had increased matched by reports of taking on more workers. These are the main reasons why optimism about a continued, though probably still mild, improvement in output over the next few months carries no corollary assumptions that employment need rise or unemployment fall correspondingly. Workers have been considerably underemployed in many British factories for many months past, if not perhaps quite as much as machines have. It might be politically embarrassing if British industry manages to achieve a significant increase in its output before it needs to take on many extra men. But it will be economically scandalous if it cannot.

Shareholders and Directors

THE struggle for British Aluminium was won and lost a month ago. Every take-over fight awakens the old question of the relation between directors and equity shareholders, but no earlier battle was so big or so bitter. Never were City houses so openly committed and never, by their acts and words, had they demonstrated so clearly the need for new thinking about the management and ownership of companies. The one thing that rankled above all others in the British Aluminium fight was that the directors and the City houses who supported them automatically assumed by a kind of divine right that needed no proof that the shareholders should follow their line without question. The mutterings that had been heard a few months earlier about the Barclays Bank—United Dominions Trust deal (when the former bought 40 per cent of the equity of UDT right over the heads of existing shareholders) came to an angry climax. The shareholder may be supine, indifferent and even stupid in ninety-nine cases out of a hundred. British Aluminium tried his patience too far, and British company practice ought to profit by the experience.

The nexus between directors and shareholders is equivocal in law and tenuous in fact. British Aluminium's directors came under fire not because any question of good faith was involved but because at the moment of crisis they could not resolve a quite different question: to what or to whom does a board of directors owe its duty? Is it to that legal abstraction called "the company"? Or is it to the general body of shareholders? Does the fact that the latter have hitherto accepted what the board did and have taken no special

interest in the management of the company mean that tacit agreement with what the directors do is a valid assumption in all company affairs?

This is not the view of some important industrialists or of some important shareholders. Lord Chandos, of Associated Electrical Industries, has said that "proprietors are entitled to be consulted on major transactions . . . the risks of publicity will have to be run." The Association of Investment Trusts has made known this week a statement made by its chairman three months ago, long before the British Aluminium fight reached its pitch, that "it is wrong for the board of a company to permit any change in the control of the company or the nature of its business without referring to shareholders." For these statements there should be loud and deserved applause. But who are the proprietors of a company and what are their rights?

In theory the ownership of a company rests with those who bear the ultimate risk, the ordinary shareholders. But the trend of modern company law (in fact since the introduction of limited liability on the grand scale a century ago) is to distinguish sharply between the company and the holders of the equity in it. They have certain rights in the company—in particular, a residual share in its profits and a residual claim on its assets when it is wound up; but the company has a separate continuing entity, apart from its members, and they can be said to own it only in a limited special sense. The judgment of Lord Evershed in the Short Brothers case ten years ago put the point explicitly:

> Shareholders are not, in the eye of the law, part owners of the undertaking. The undertaking is something different from the totality of shareholdings.

In other words, an ordinary stockholder does not own an aliquot part of the company's assets. He is entitled to an aliquot part of the profits that the directors recommend for distribution (or a lesser sum, though not a greater one) and he can, in the last resort, challenge their administration of the company by refusing to re-elect them or by having their actions officially investigated.

On this reasoning, directors cannot be accurately described as the "trustees" or the "agents" of shareholders. That was the clear view of the law long before the short Brothers case. In *Percival v Wright* (1902), a director had prior knowledge of an arrangement to sell the company's business at a good price. He purchased shares from a member without disclosing this, but it was held that he had committed no misrepresentation, and the transaction could not be upset.

In law, the director owes a fiduciary duty not to shareholders but to the company and sometimes there may be a clash between them. The short-term interests of the shareholders—as they see them—may be inimical to the long-term interests of the company—as the directors see them. They may quite conscientiously form views about the direction and development of the company that are at odds with the views of a majority of shareholders. They are entitled, that is, to act as an organ of the company. By so acting in the best interests of the company (or what they honestly believe are those best interests) it does not follow that directors are necessarily acting in the evident interest of shareholders.

BUT although the law is to this extent clear, does it not leave the directors in an impossible position? Can they be expected invariably to divorce their own interests from their decisions? They may think, for instance, that a take-over bid is objectionable because it will frustrate their intentions about the future of the company. They would be superhuman if they were always ready to accept it as a protest against the manner in which they have conducted the company's affairs—which is largely what it is. How far they can go (legally as distinct from practically) in subordinating the interests of shareholders to those of the company is matter for dispute. In his report on the Savoy Hotel affair, Mr Milner Holland, QC, recognised that the directors behaved in good faith and in keeping with the company's articles of association. But he added:

> Power conferred by the shareholders on directors for the purpose of managing the business of the company cannot be used for the purpose of depriving those shareholders of such control as under the regulations of the company they may have over the company's assets.

That is an opinion of great authority, but it has never been put to the test in the Courts. Nor was the analogous case in Scottish Motor Traction; there an interim injunction was granted on the ground there was a case to be argued, but Mr Clore won the battle and the action was never tried.

In practice, too, it has to be recognised that directors are subject to other and often more potent pressures than those of shareholders. Employees, executives and the Government all make their weight felt and no board can ignore them, even though on occasion their demands may be clearly prejudicial to the interests of shareholders. In practice, too, directors become set in administrative procedures and ways of decision taking; they acquire habits, even rights, of tenure, and getting them out sometimes involves fancy "compensation for loss of office" which soft-hearted shareholders rarely refuse.

The check that prevents directors from securing absolute power is the annual general meeting. This fawning occasion is usually full of references to "your directors" and "your company," but these are not words empty of meaning. The shareholders can amend the articles of association (so as to take power away from the directors) and they can remove the directors (since the 1948 Act by a simple majority) and substitute others. Here lies their ultimate control. It is given through the vote, which indeed is not automatic but is a proprietary right established by the articles of association of the company and not by statute or by common law. In exercising that right of control through the vote, the shareholder is not necessarily concerned with the interests of the company (as a director *qua* director should be) but only with his own interests.

How effective is this control? Its exercise depends on the possession of a vote and not all ordinary shares carry voting rights. It is perfectly possible and quite legal for the owners of the minority of the stock but the majority of the votes (as in the Carreras case) to carry a resolution (including one transferring control over the company's assets) that may be in their own interests without being accountable to the owners of the bulk of the company's capital. Secondly, it depends on willingness to use the vote. Few shareholders turn up to meetings; those who do rubber-stamp the decisions of the directors, allowing them to continue in office or accepting their nominations for seats on the board. That is the normal case. But power in reserve is only one stage removed from power in use. Those with the most concentrated power—the institutional investors—are seen to use it only in extreme cases (as one did in the BSA argument), but there are many other occasions when their influence is consciously felt in board-rooms. It is equally true that splits and rows in the board-room do not always lead to splits and rows in the general meeting, and that a great deal of work and organised pressure is required to force criticisms on a board, let alone unseat it. The really big rows come only when the board's actions are wrong or gauche beyond doubt.

It is logical enough for shareholders not to interest themselves in the process of management and administration. That is not their job and they should not usurp the constitutional powers of the board by interfering with it. But they are interested not only in profits and dividends but also in the developing *ethos* of their company. That is why major upheavals usually occur only through outside intervention; only then do shareholders become aware that the actions of the board they have appointed have not produced the best result. The first case in which shareholders band together, first to reject a bid, then to dismiss the sitting board as unsatisfactory, and finally to appoint a new board to do more for them than either the old board or the bidder will be a great day in British company history.

Because most boards are self-perpetuating and most shareholders apathetic, it is easy for a board to forget that its freedom to go its own sweet way is permissive. The ultimate sanction is the vote in the shareholders' hands—or to be realistic in the hands of any block that owns between a quarter or a third of the voting stock and acts in concert. Directors govern by consent. They damage the concept of a property-owning democracy every time they disregard their silent supporters, every time they deny them information and fail to consult their wishes. After the British Aluminium affair, they will not offend so often—if only in the interest of their own peace and comfort. But they ought also to learn the positive lessons that this episode teaches.

BUSINESS NOTES

THE BUDGET

Rising Expenditure

THE expenditure side of the coming budget has taken shape this week, with the publication of the annual white paper on defence (discussed in detail on page 615) and the vote "on account" of civil expenditure in 1959-60. As the accompanying table shows, the net total estimated for supply services as a whole is £4,490 million, which is £230 million more than was estimated for 1958-59 at the corresponding time last year and £88 million more than the so-called "revised" estimate for that year. Neither of these comparisons, however, affords a clear indication of the extent to which expenditure is likely to rise. The "revised" estimate for 1958-59 is not a forecast of the year's actual expenditure: the "revisions" comprise only those supplementary estimates that it has been necessary to present to Parliament, and thus reflect over-spending while taking no account of savings under other votes. During the current year such savings are believed to have been substantial—thanks, in particular, to the rise in the prices received for agricultural produce, which has correspondingly reduced the Exchequer outgoings for grants and subsidies. Thus, the increase in prospective supply expenditure over the amount actually spent in 1958-59 is likely to be between the two extremes mentioned above—probably about half-way between them. The other main constituent of "ordinary" expenditure will probably show a reduction in 1959-60—both in comparison with the actual and the estimated expenditure for 1958-59. This other expenditure,

£ mn.

	1958-59 Original Estimate	1958-59 "Revised" Estimate	1959-60 Original Estimate
Supply Services :—			
Civil Expenditure (excluding Post Office but including Revenue Depts.)	2,841	2,954	2,988
Defence Expenditure, gross	1,465	1,465	1,514
Less receipts from Germany	47	17*	12
Net defence expenditure	1,418	1,448	1,502
	4,259	4,402	4,490
Consolidated Fund Services :—			
Debt service	733	—	?
Other	83	—	?
Total Ordinary Expenditure	5,075	...	...

* Actual receipts in the current year will be £12 million (as in 1959-60 also), but the Supplementary Estimate provided for a reduction of only £29½ million in the receipts originally estimated—on the assumption that the remaining £5½ million of the shortfall would be covered by countervailing savings.

known as the Consolidated Fund Services, the estimates for which are not disclosed until budget day, notably includes the interest on the national debt. The provision for this was sharply raised last April, because of the high level of interest rates then; a smaller provision seems likely for

1959-60, principally because of the steep reduction that has occurred in the Treasury bill rate.

The resultant net increase in prospective expenditure "above the line" will not, it should be noted, provide a full measure of the reflationary effort that is being imparted through additional Government spending. Much of this effort will be reflected in Exchequer advances—for example, to the nationalised industries—that are accounted "below the line." Partly for this reason, but also for much wider "policy" reasons, the prospective state of the conventional budget accounts is this year even less indicative than usual of the Chancellor's room for manœuvre when shaping his budget. It is relevant to note, even so, that the out-turn of the above-line account in this current year may not fall far short of the £364 million surplus for which Mr Amory budgeted. That estimated surplus was £59 million less than the realised surplus of 1957-58, whereas up to date there has been a decline of £70 million. Below the line the Chancellor forecast an improvement of £35 million (to a net deficit of £600 million); up to date there has been an improvement of £16 million.

DEFENCE PRODUCTION

A Sigh of Relief

WITH the research and production bill running at £585.5 million for the coming year, and accounting for a third of the defence budget, the defence industries are able to breathe freely again. If the white paper has given them almost no new orders, at least it has not cut those they already have. Most of the new orders mentioned in the white paper, for the RAF's Canberra replacement and its new short-range freighter, and for the Navy's new helicopter and guided missiles, have already been announced by the services. The exception was the decision to order the Britannic freighter from Short Brothers to do the Army's long-range trooping. This was only decided on Tuesday and announced by Mr Sandys on Wednesday, and it ends a long and hard-fought contest between Shorts, Vickers-Armstrongs, Handley Page and Blackburn for one of the few remaining contracts that held out the promise of government finance to aid the development of what was basically a civil aircraft. The Britannic uses the wings of the Bristol Britannia and many of its other components, the Rolls-Royce Tyne engines of the Vickers Vanguard and a fuselage that is entirely of Shorts' own designing. The deciding factor in placing the order with Shorts rather than any of the other three was that in the last resort its fuselage, the loads it could carry and the size of its doors matched up best with the Army's Argosy freighter, whose function it is to take the loads carried by the big freighter and deliver them to points where no big aircraft can penetrate, dropping them, if necessary, by parachute. The Britannic's other main function will be the ferrying of the 70 foot long Bluestreak missiles for test to Woomera. The order may relieve unemployment in Northern Ireland, but will aggravate it in other aircraft factories.

The rising production bills both of the Admiralty and of the RAF mark the crossover point where aircraft orders are being completed and missile deliveries beginning to get under way. The Navy has blown alternately hot and cold about the alternatives of converting existing ships to take guided missiles or laying down new guided missile ships; it now appears more disposed to accept conversion than a year or so ago. The RAF will still be taking delivery of some V-bombers during the coming year (though the order for Valiants was completed early last summer). But wherever this white paper refers to new weapons under development, those weapons are all missiles—though some, such as the successor to the de Havilland Firestreak, will need an aircraft to carry them part of the way to the target. This does not necessarily mean that the Ministry of Defence is retreating from its earlier decision to end the development of fast fighters. It does mean that the English Electric Lightning fighter is likely to have a longer service life than anyone would have been prepared to forecast for it a year or so ago.

Plans for Research

ALTHOUGH the white paper does not specifically say so, almost all the new missiles will be designed to take nuclear warheads. These are weapons for the kind of hot war in which the only chance of bringing down a supersonic nuclear bomber will be to blast it out of the skies with a nuclear-tipped anti-aircraft missile. The only indication of plans involving weapons designed for non-nuclear wars are the white paper's references to research to provide the army with new guns and tracked vehicles. Orders for the type of fighting vehicle put into production at the time of Korea, the armoured cars, scout cars and light lorries, are coming to an end; light tanks, anti-tank guns, carriers and wireless equipment are still needed. The white paper now specifically promises the Army a bigger cut of research expenditure in the form of new designs for weapons and trucks; the two new air freighters, the Argosy and the Britannic, might also be said to have been tailored specially for the Army's requirements.

This extra research and development looks, however, as if it is to be squeezed into the same-sized research budget as last year's. At £149 million, the Ministry of Supply's spending is estimated to be only fractionally higher than it will have been in 1958-59. The fact that the Ministry of Supply is expected to meet the increasing costs of developing the Bluestreak missile, several new Mark II missiles, the Lightning fighter, the new Canberra replacement, stand-off bombs, nuclear weapons of several varieties, nuclear submarines, helicopters, military transports, guns, trucks and electronics out of the same total expenditure, and have a margin in hand to continue pure aerodynamic research to aid civil aircraft development suggests that the Chancellor's axe must have fallen on a good many other research projects.

THE ECONOMY

Three Cures for Black Spots

THREE measures for dealing with local unemployment were announced in Parliament this week by Mr John Rodgers, Parliamentary Secretary to the Board of Trade, during Tuesday's labyrinthine debate on Supplementary Estimates for National Insurance and Family Allowances. The first of these is that tenants in factories in Development Areas will receive substantial rent concessions in the future. On leases expiring before January 31, 1960—which will be renewed at higher rents—the increases will be spread over a five-year period, so that the full new rent will not be paid until the sixth year; and successful applicants for vacant factories during the next twelve months will receive a flat rent abatement of 25 per cent for a period of five years.

The second step is that the Government will in future consider applications from local authorities in scheduled Development Areas for grants toward the clearing of derelict sites, with a view to their subsequent industrial use, or to improve the amenities of the neighbourhood. Third, the Ministry of Supply is withdrawing machine tools from its surplus sales during this month and next.

The last of these steps is admittedly directed at an industry rather than an area; this industry is widely scattered geographically, including some areas where unemployment is not particularly heavy. Machine tools probably accounted for about £1½ million out of an estimated total of about £40 million worth of Government surplus sales last year; it seems doubtful whether withholding this amount will bring any substantial benefits to the industry. But certainly the offering of surplus machine tools in an already depressed second-hand market might adversely affect demand for new tools, and there is no reason why the Government should not time its sales so as to interfere as little as possible with manufacturers. (Similarly, the Ministry of Supply has announced that it will sell a surplus of Army boots on the export market, but not at home.)

The land-clearance measures must remain something of a mystery for the present. Mr Rodgers stated that the Minister of Housing and the Secretary of State for Scotland will shortly inform the local authorities of the conditions on which grants will be made; they will be invited to submit schemes, which they must be able to complete by March, 1960. Free clearing of derelict sites would—as well as making a little work—make them more attractive for subsequent industrial development; but this may be of little use in the case of areas which are uneconomic anyhow, and the provision of "amenities"—a national park was suggested by one member—would appear to be less relevant to creating future employment in these near black spots.

Subsidising Employment

THE proposal to give rent concessions to companies in factories in Development Areas seems even more doubtful. Since the Report of the Select Committee on Estimates in 1955-56 on Development Areas, the Government's policy has been to charge full rents for factories in these areas which reflect current market values, as assessed by the district valuer. In the years 1951-56 most firms in these factories received a rent rebate beginning at 50 per cent, decreasing by ten per cent annually, for the first five years of their lease. Although these rebates were not granted on leases signed after 1956 (though some are still in effect on leases signed before then), all firms in Development Areas receive in addition a more or less permanent rent subsidy, since there is not—and, on the Board of Trade's word, has never been—any attempt to relate rentals to the cost of building a new factory in these areas. The Board regards its expenditure in Development Areas as social service, and in fact probably has no exact idea of the amount of effective subsidy which it gives its tenants at the present. The Select Committee discovered that the deficit on Development Area rentals was just over £2 millon, against rent receipts of £1.8 million, in 1954; a recent study* has placed the total subsidy actually received (compared with the rents which should have been charged if it had been intended to cover costs) at between three and four million pounds in that year. It has probably risen since then.

There are at present 1,100 government factories in Development Areas; 28 of these are now empty, of which 15 are located in Scotland. Increasing the present subsidy by means of either a partial rent holiday or a five-year breathing space may not only add to the present—and rather questionable—social expenditure; it may well not work. Furthermore, the high rate of subsidy offered on existing factories in certain areas is itself an admission that these areas are highly uneconomic locations; increasing the subsidies may distort investment even further. Admittedly, it is difficult to mislocate anything seriously on an island where one can never be more than 80 miles from the sea. But any inducements to make the location of industry more illogical ought to be carefully considered.

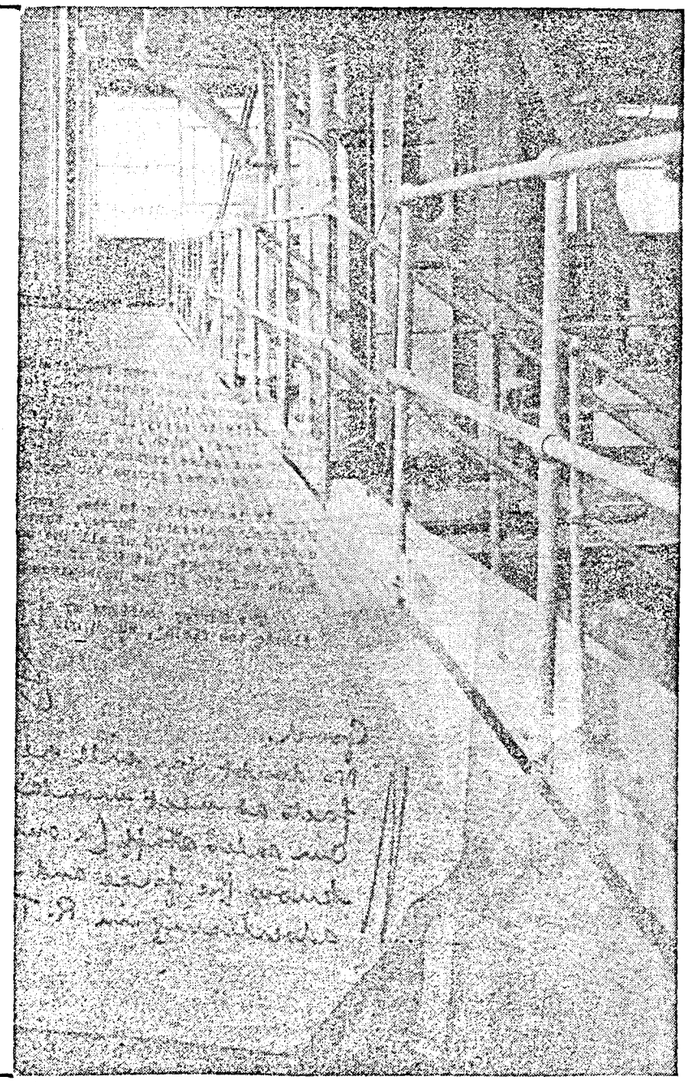
* A. J. Odber and P. J. Bowden, "Rent Subsidies in the Development Areas," Journal of Industrial Economics, October, 1958.

RAILWAY FREIGHT

As the Condor Flies

BRITISH Railways refer to the new "Condor" express freight service—which the London Midland Region will operate five nights a week between London and Glasgow beginning March 16th—as "a passenger service for freight." This description perhaps does the new train less than justice from the point of view of speed; the "Condor" will make the 400-mile journey non-stop in ten hours, at speeds up to 75 mph. Only container freight will be carried; the charges for shipment will be £16 for a container of 300 cubic feet capacity, and £18 for one of 700 cubic feet (both with a maximum weight of four tons) and will include collection and delivery within the Greater London and Glasgow areas. Thus goods may be picked up at the shipper's door in the late afternoon and delivered early the next morning; at present the rail journey alone takes twelve and a half hours.

This is not only much faster than shipment by road; it may be cheaper, too. Ordinary freight charges—both rail and road—depend to some extent on the nature of the goods carried; but for roughly comparable loads British Road Services now charge around £20. Private road hauliers' charges and ordinary rail freight rates vary widely; but the cost to a carrier using his own vehicle (with a "C" licence) would almost certainly be higher than that offered by the railway, if the vehicle had to return empty. Whether the charges for the "Condor" are not too low is another matter. The twin-diesel train will pull a maximum of 27 wagons, each carrying one of each type of container; the maximum receipts per train will thus be £918. But the "Condor" will operate as a scheduled train, running regardless of the traffic available, and in addition to the three freight services now operating between London and Glasgow, which—though slower than the "Condor"—are probably also cheaper.

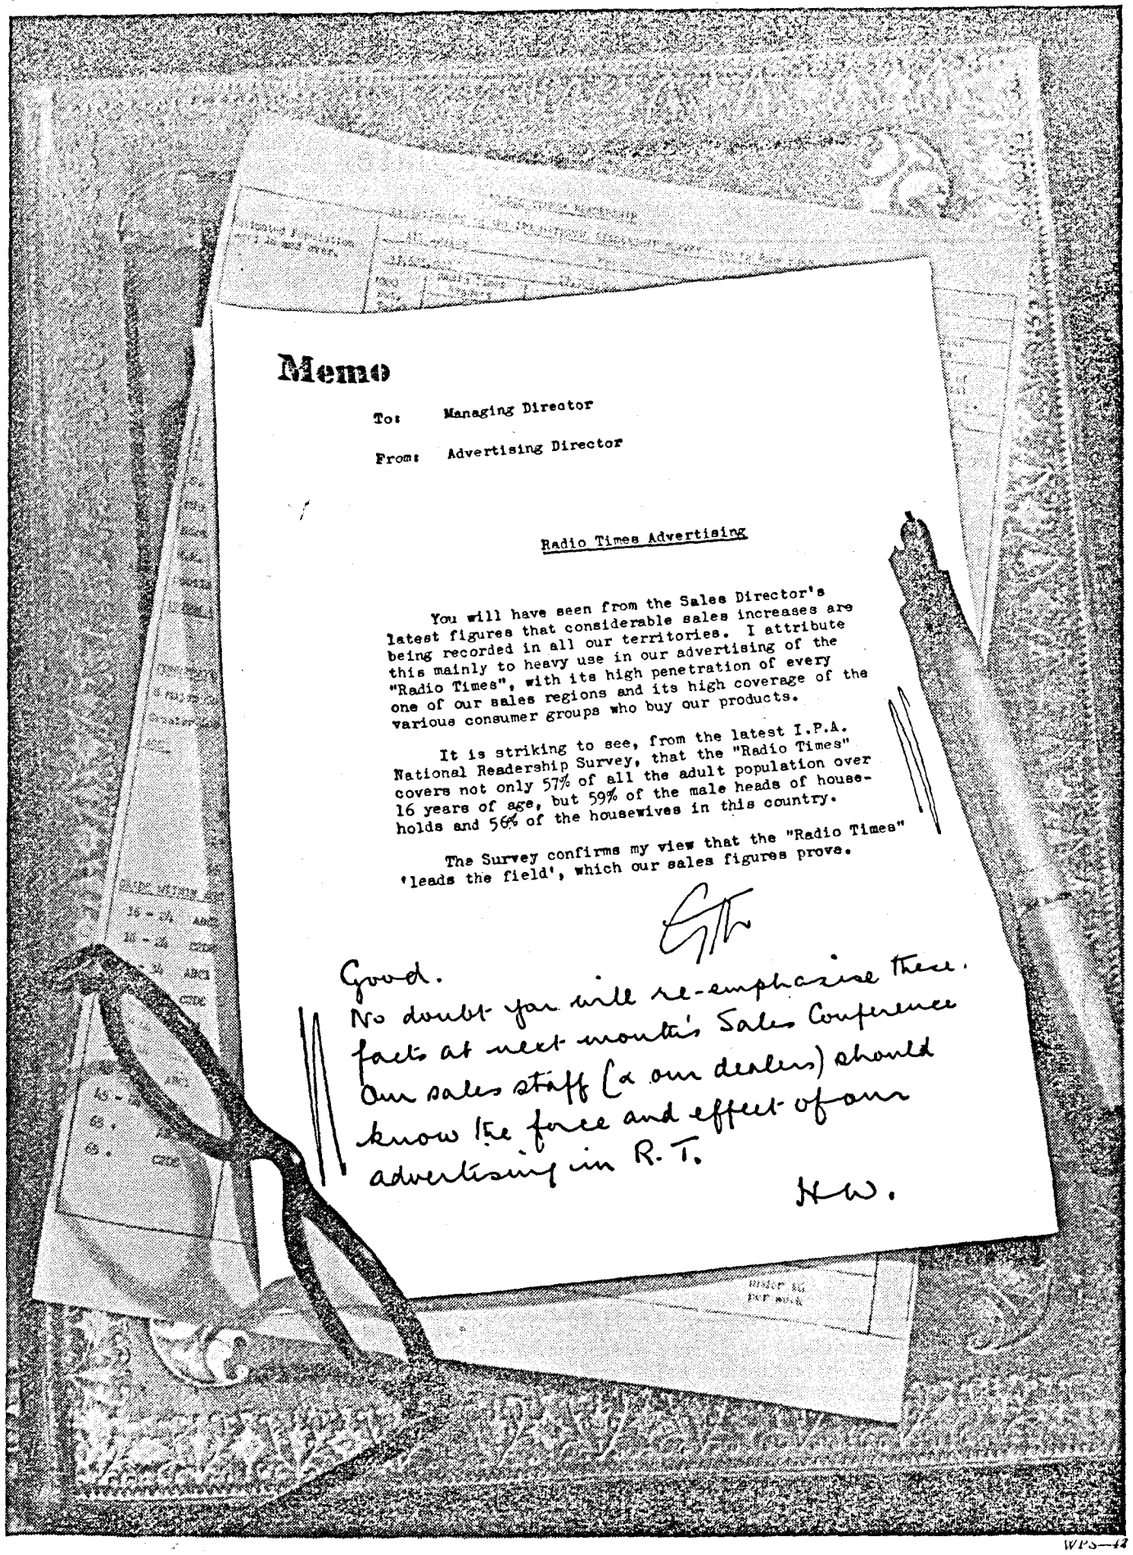


British Railways' freight receipts continued to feel the effects of lower business activity in the four weeks ended January 25th. Total freight receipts fell by nearly ten per cent, to £24 million, compared to the same period in 1958. Passenger receipts during the month increased slightly, as did revenue from parcels, but revenues from minerals, coal and coke and merchandise and livestock all were lower than a year before. Some seasonal decline is usually experienced in January by both the railways and road hauliers; this year it has been exaggerated by the recession, which has

BRITISH ALUMINIUM

P-G-P Treadplate

For a really hard-wearing, easily-cleaned, non-slip treadplate, there is nothing to match P-G-P. Further information about this versatile material, and samples of the three patterns (Heavy, Light, and Small), will be sent on request.



Right: Heavy Pattern P-G-P walkway at the Longbenton Research Headquarters of Thomas Hedley & Company Limited.

affected the railways' heavy traffic somewhat more than it has road haulage. Yet another factor may become more marked within the next month: retail and wholesale traders, hoping for a reduction of purchase tax, may increasingly hold back orders until after the Budget.

BANK CAPITAL

£4 million for the Midland

THE Midland Bank, as was to be expected, has got quickly off the mark in its approach to the newly freed capital market. The Midland is certainly not the only bank that wants to increase its capital by an issue for cash, but since it was the only one to have risked (and received) a rebuff to a formal application, it evidently had a good start on its competitors in the matter of completing the necessary formalities. The bank announced on Thursday an offer of 2,019,464 new £1 shares to existing shareholders (before allotment to them of the one-in-three scrip issue announced last December) at a price of 40s. and in the proportion of one new share for every eight now held. As the shares were quoted at Wednesday's close at 91s. 6d.—showing, incidentally, a sharp advance in the week since the news of decontrol made an early issue probable—the "rights" to the new issue are worth about 5s. 9d. a share. The bank had already announced that it expected to pay a dividend of 15 per cent for 1959 on the capital as increased by the one-in-three scrip issue, or the equivalent of 20 per cent, compared with 18 per cent for 1958, on the existing capital. It has now announced that the 15 per cent will likewise be paid on the shares issued for cash.

The existing paid-up capital of £16,156,000 will be raised by £5,385,000 by the scrip issue and by a further £2,020,000 by the cash issue, to £23,560,000. The first of these increments will involve, of course, a corresponding draft on published reserves, but this is to be made good by an equivalent transfer from inner reserves. The cash issue will then provide £2,020,000 for share premium account, so that after both operations the published reserves will have been raised from £16,156,000 to £18,175,000, and the aggregate disclosed capital resources, including the balance of profit and loss account, will be £42,650,000. The upshot will be to increase the ratio of the published resources to deposits from around 2¼ per cent to about 2¾ per cent. This is still, of course, a long way below the ratios that were customary before the war and postwar inflations of bank deposits; and in spite of the fact that the lower ratios have been well established and are obviously acceptable to public opinion, most banks are evidently anxious to raise them so far as this is feasible. One point in the Midland's proposal deserves comment. The bank will offer approximately 600,000 new £1 shares (identical in all respects to the new shares just described) to the staff "at a price to be determined by the board." Is it really desirable to allow staff to have privileged access to the equity, with the dilution of the existing shareholders' interest that this entails? Surely, if they are not to receive shares specially designed for staff holding, they ought to pay the same price that any outside investor must do.

THE EXCHANGES

Interest Rates and the Pound

FOLLOWING the drop in the Treasury Bill rate last week from £3 2s. 1.68d. to £3 0s. 0.22d., the lowest point for four years, sterling has come under selling pressure. This is because European dealers have become exceptionally conscious of interest rates and interpreted the cut in the Treasury Bill rate as the harbinger of a reduction in Bank rate—again belied by "no change" on Thursday. This preoccupation with interest differentials has not gone so far as to cause actual withdrawal of funds but the customary "leads and lags" are at work, postponing commercial demands for sterling and accelerating sales of sterling in anticipation of what a lower Bank rate might do to the exchange value of sterling.

Against the US dollar sterling has dropped this week to $2.80¾ after hovering around $2.81 a week ago. This movement is part of a general improvement in the dollar against most Continental currencies, though even now the dollar is still at the bottom of the foreign exchange "league table." At its head by a comfortable lead is the Swiss franc followed by the guilder, lira, French franc, Deutsche mark and the pound. Bottom but one is the Belgian franc, which is still suffering from the effects of the troubles in the Congo and heavy sales of Congolese securities by investors outside Belgium.

The French franc holds exceptionally firm against the dollar. Immediately after its devaluation the rate at which the Bank of France was prepared to sell francs against dollars was fixed at 490.60. This was soon moved to 490.50 and more recently to 490.40 and at this last figure the Bank of France is still reputed to be taking in dollars on a fair scale.

Evidence now coming to light of the extent to which the European Monetary Agreement was used in settling

Account. * Includes forthcoming scrip and rights issues. † On 12 per cent as forecast. ‡ On 20 per cent, i.e., the equivalent of the dividend of 15 per cent forecast for 1959 on capital as increased by the 33⅓ per cent scrip issue and by the rights issue. § On the "B" shares. †† Includes addition to share premium account as a result of the forthcoming rights issue.

intra-European payments for January, confirms the impression that the recourse to this mechanism will prove negligible. Some interim finance was provided between members of EMA but in all cases the advances were repaid before the end of the month. These facilities were used only by the so-called "peripheral" countries, Iceland, Greece and Turkey, which having no foreign exchange markets are more likely to use EMA facilities than the other members. Some balances were put into the EMA settlement at the end of the month. These came from bilateral agreements and were also those due from one or other of the peripheral countries.

FRANCE

Reforms for the Bourse

THE National Council of Credit agreed last week on the expected relaxations in credit policy. Bank rate is cut from 4½ to 4¼ per cent and more official finance will be available for medium-term credits. No change, however, is made in the general ceilings on rediscounts at the Bank of France; and the fact that Bank rate was cut by only ¼ per cent points to the limited significance of the relaxation. A gesture has been made to help industry at a time when all the omens point to recession. But the primary aim of official policy is still to achieve external and internal confidence in the franc. A good start has been made. The gain of gold and foreign exchange in January is described by the Bank of France on a "statistical" basis (that is, after allowing for the lag in the EPU settlement) as over $400 million; and there are reports that the total has now reached $450 million. The bulk of that gain represents a recovery of the December outflow: the Bank of France is now probing the books of the commercial banks to see how far they took part in that speculation. The next stage in external recovery, to attract foreign investment and encourage Frenchmen to part with their foreign securities and their gold, will be a longer and more difficult one. The French authorities consider that a basic need is to widen the market on the Paris Bourse and to spread the habit of investment in securities to new sections of the people.

An initial batch of reforms was announced together with the Bank rate decision. Quoted companies in France with balance-sheet totals of more than 1 billion francs must now inform their shareholders half-yearly of their balance sheets and profit and loss accounts; moreover, they must now publish details of their investment portfolios. Shareholders in *banques d'affaires* and financial companies will have a clearer view of what they are buying. At the same time, the authorities have conceded an abatement of the tax on profits from security dealings—which in a country where share prices have risen year by year with the depreciation in the value of money has encouraged a freezing of existing portfolios. Henceforth, tax will not be levied on sales of shares when the proceeds are reinvested in plant or equipment, in a subsidiary or in fixed interest securities—though the tax liability remains and will take effect in the event of sale of these assets or liquidation of the company. The investment community would like to see this liability abolished outright. Hopes are also placed on reduction in the tax on stock exchange dealings; and "structural" reforms on the Bourse are expected in due course. As an interim measure, the authorities have banned direct transfers of securities; the *banques d'affaires* and investment houses hope that brokers will now reduce their commissions on transfers where the client has already found his customer.

MARKETS AND ISSUES

Expectant and Cautious

TWO influences contend for paramountcy in the stock market. The first, a bull factor, is the decline in interest rates. Again that was not signalled by a reduction in Bank rate this week but the hope that it would be was enough to keep gilt edged prices reasonably firm in a quiet market. But, there, what will happen to the long end of the market if and when sales by the authorities of the 1982-84 stock come to an end is seen to be as important as a change in Bank rate. And, at the moment, the assumption is that the restricting hand of funding in the long dated stocks would not be immediately re-imposed. The other, a bear point, is the political uncertainty about Berlin and the election. This has restricted business in industrial equities and their prices have done little more than mark time.

This pause in the market is understandable on another count: the shortage in the supply of stock that characterised the closing months of last year has given way to a flow of new issues. On the equity side, the Midland Bank, Rediffusion and Dalgety are to make sizeable rights issues and Dalgety are to offer a debenture as well. In addition, the marketing for the first time of the ordinary shares of the News of the World is in preparation; most of those shares are tightly held by the Carr and Jackson family interests but, following a reorganisation of the ordinary capital, enough shares will be released, at a price of not less than 36s. per 5s. unit, to secure an official quotation. On the fixed interest side, the market digested easily the £15 million issue by Esso Petroleum of a 5½ per cent debenture (1979-83) at 98. The issue was heavily oversubscribed and will command a premium when dealings begin. There is still the Hawker Siddeley convertible debenture issue to come and it will be surprising if the authorities do not soon slip a trustee issue into the queue.

STEEL

Flaws in the Pattern?

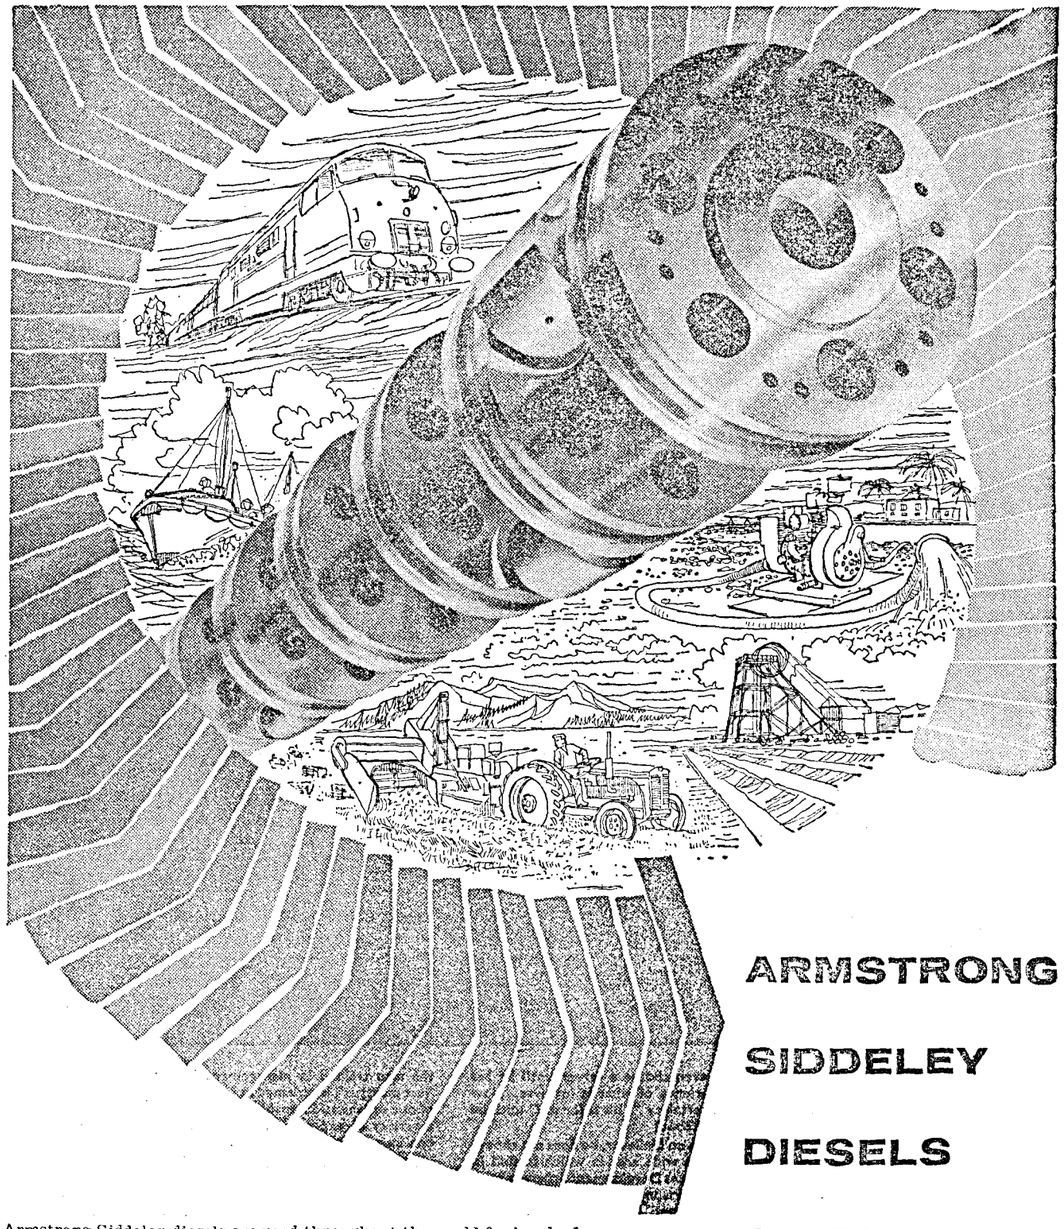
SEVERAL of the chairmen of Britain's steel companies have recently taken advantage of the fact that their annual meetings occur some weeks after their accounts are published to add a little more, at the meeting, to the statements they had circulated to shareholders. Most have said a little more about the threat of nationalisation, which is understandable; and about the state of trade, which is useful. Mr Clive Cookson of Consett said that there had not been much improvement in demand for the company's products, but there were signs that customers were using up their stocks and would soon be ordering steel again. Sir Ellis Hunter of Dorman Long could see no sign of improvement. Mr A. G. Stewart, of Stewarts and Lloyds, said this week that in the last three months of 1958 demand for pipes from the oil industry was more than 50 per cent down on the same period of 1958, though orders from other customers were rather better.

How, indeed? Or even choose a career until he has some practical experience of what it involves. How can a man say with certainty "This is for me" until he knows what it is all about?

When a man decides on Unilever, he does not choose a career: he chooses a wide area in which to find it. The Unilever Management Development Scheme allows a man to change direction as experience sharpens or develops his ambition. In fact, the diversity of Unilever demands that a man has breadth of outlook rather than a narrow knowledge of a particular job.

But the aim is specific. It is to develop men to the status of professionals in the art of management, men who can move easily from one particular sphere of activity to another with complete confidence in their ability to succeed in any of the 400 separate companies in Unilever. In short, they will be professional managers.

The confidence of a professional, which distinguishes the man trained in management from the man who 'just manages', is obtained in Unilever. The very scope of our organisation enables a man to advance through a variety of experience, instead of merely repeating one experience several times.



Arts man or scientist, the potential manager is the man who accepts the fact that the rewards in industry (and they are many) come to the man who is prepared to become a 'professional' at his job. In Unilever, that job is management.

* * * * *

"Six Men on Business" is a book which describes how the Unilever system of training for management works in practice. Perhaps it could help you decide on the next step towards a career. You are invited to write to the address below for a copy. If you are at a University your Appointments Board or Committee can provide one.

ARMSTRONG SIDDELEY DIESELS GIRDLE THE EARTH

Armstrong Siddeley diesels are used throughout the world for hundreds of different jobs. You will find them in Tierra del Fuego and the Belgian Congo, in Antarctica and Hong Kong. In ships Armstrong Siddeley diesels power stand-by generating sets and the pumps for deckwashing. On farms they drive electric light plants, irrigation systems, hydraulic pumps and agricultural machinery of all kinds. Armstrong Siddeley diesels range from giant marine and loco. engines, to be made under licence agreement with the famous firm of Maybach, to small stationary engines of 10, 20 and 30 horsepower. These are simple to install, economical to run, and easily maintained. They are the most adaptable, rugged and reliable engines in the world today.
If it's a job for a diesel engine, it's a job for Armstrong Siddeley.

ARMSTRONG SIDDELEY MOTORS Coventry, England. ENGINE BUILDERS TO THE WORLD
Member of the Hawker Siddeley Group.

Sir Andrew McCance, chairman of Colvilles, made some effective points in reply to critics of the decision that the new strip mill to be built at Ravenscraig should be semi-continuous (though he did not address himself to the question whether a strip mill should be located there at all). He made one interesting disclosure: that the project has not yet been submitted to the British Iron and Steel Federation and the Iron and Steel Board for their "consideration and approval" (which in this case will presumably be taken as read). Not the least significant aspect of this arrangement between the Government and Colvilles was that it cut right across the formal pattern of central co-ordination and supervision of capital investment of which the steel industry has long been so proud as a practical and successful alternative to nationalisation. Neither of the two central bodies played any major part in the firm's bargain with the Cabinet. The federation, in particular, has never been as formal and cold in its remarks about any other of its members' steel projects. This followed upon a period in which there had been sharp divisions of opinion within the industry about the most effective way to oppose nationalisation. Mr Colin Hurry's quiz, which has turned out to achieve more effective if more controversial publicity than any advertising campaign could, seems to have embarrassed Steel House: it may not be the only thing doing so.

OVERSEAS TRADE

A Satisfactory Month

OVERSEAS trade last month was satisfactory. Imports and exports remained at the higher levels established in the fourth quarter of last year and the visible trade deficit, though above the fourth quarter's average, gives no cause for concern. Some further growth in imports is to be expected (if it does not come the Government's reflationary plans will not have worked), and exports will be expected broadly to match that growth. Last month they totalled £270 million fob, some £4½ million higher than in December and within £2 million of the fourth quarter average. Imports were exceptionally high in December and last month they dropped by £23½ million to £328.7 million cif, a little above the average for the fourth quarter. With re-exports unchanged at £9.3 million the apparent deficit fell by £28 million to £49½ million, against the fourth quarter average of £45 million.

* Provisional.

Some small changes have been made in the coverage and arrangement of the Trade and Navigation Accounts. Trade between the United Kingdom and the Channel Islands no longer ranks as overseas trade, and trade between the Islands and other countries (about £2 million a year each way) will sensibly be included. The British whaling catch, which has mysteriously been treated as an import, is also excluded, and so is trade in second-hand aircraft, for the good reason that accurate figures of this trade cannot be obtained. Trade in second-hand ships and boats similarly defeated the customs authorities and was dropped some years ago. Following the entry into force of the new tariff list the description and placing of some items in the accounts have been changed; certain mixture yarns and fabrics, for example, have been moved from the wool to the man-made fibre division. The total value of trade now excluded amounted in 1958 to about £29 million in imports, £36½ million in exports and £6½ million in re-exports. When comparing the 1959 trade figures with those of earlier years the Board of Trade will as far as possible bring the old figures on to the 1959 basis, and the figures published in the table above are so revised.

ATOMIC ENERGY

On the Brink

WHILE the Atomic Energy Authority is completing plans for the second generation of nuclear power stations in this country, the Japanese government is blandly presiding over a Dutch auction to decide which of three competing British groups will build the first nuclear power station in the Far East. Tenders invited from Associated Electrical Industries, English Electric and the General Electric Company have all produced bids of about £31 million, with less than £250,000 difference between the three. The Japanese government is committed to spending no more than £30 million on the power station all told, and last week it invited representatives of each of the groups to go to Japan with the sole object of seeing which of them was prepared to knock £1 million off its tender.

The British companies are arguing that the extra costs of the special civil engineering work required for Japanese conditions might be slipped under some different head of expenditure: how firmly they will hold to this argument in the bargaining remains to be seen. Of the three, GEC is bidding in association with a Japanese engineering group; the other two are making "package bids" with the consortiums formed to build power stations in Britain. The AEI consortium, in building its station in Britain, has elected to use a much simpler method of construction than the other nuclear engineering teams, and this could be significant in the Japanese context. It has dispensed with the huge Goliath crane, which looks like a bridge on rails and can cost as much as £400,000, and is building each of its reactors at the Berkeley site with a pair of 15-ton cranes no bigger than are found on many big building sites. The group argues that nuclear power stations are likely to be built in countries where the skilled and specialised labour needed to erect a Goliath is not available. The soundness of the method will be shown when the first of the two Berkeley pressure vessels goes on test in a week or so.

If the Atomic Energy Authority's plans for substantially increasing the operating temperature of these Calder Hall type reactors prove successful, it may not be necessary to build such huge and cumbersome pressure vessels in future, which should reduce the complexity of building nuclear power stations. The prototype of this next generation of "advanced gas cooled reactors" will be built at Windscale, but before its design is finally settled, the AEA intends to

experiment with different arrangements of fuel and graphite in a small "Hero" reactor to be built alongside the bigger prototype. There is no longer any room at Harwell to put up these small experimental reactors; they are being divided between Windscale and the AEA's new research station at Winfrith Heath, in which OEEC countries are taking a direct interest. In spite of the decision not to send thermo-nuclear research to Winfrith Heath, because it is too far from university laboratories, the new station is expected to house between 2,000 and 3,000 people, twice the number originally expected.

RETAIL TRADE

Prices Slightly Softer

ALTHOUGH the overall index of retail prices continued to rise during 1958, it rose more slowly than it had for some years; prices of some goods, in fact, remained virtually stable. Throughout the year, selective price-cutting by retailers took some of the edge off the general rise, and resale price maintenance was increasily frequently ignored. These trends appear to have become more marked in the opening weeks of this year; in addition, there are indications that concealed price-cutting—by trade-ins, hidden discounts, and the like—is becoming more widespread. Thus the general effect, though perhaps not a discernible one from official figures, has been that seasonal increases in some items, such as meat and fuel, have been at least partly offset by "bargains" in other lines.

Not all the price-cutting has been of the concealed variety: Marks and Spencer last week announced price reductions of 7½ to 10 per cent on a wide range of clothing, which constitutes about one-fourth of the company's turnover. These were made possible, the company explained, chiefly by lower prices for raw materials, including wool, and by increased selling efficiency (although Marks and Spencer do not make use of self-service selling in their stores, and do not intend to introduce it). This is probably the first concrete evidence of lower prices for raw materials working their way through to the consumer; the fall in cotton yarn prices following the Restrictive Practices Court's recent decision should also have this effect in the future. Possibly another indication of the increasing competition in retailing was the decision taken this week by Woolworth's to advertise in the newspapers; no new price cuts were announced, however.

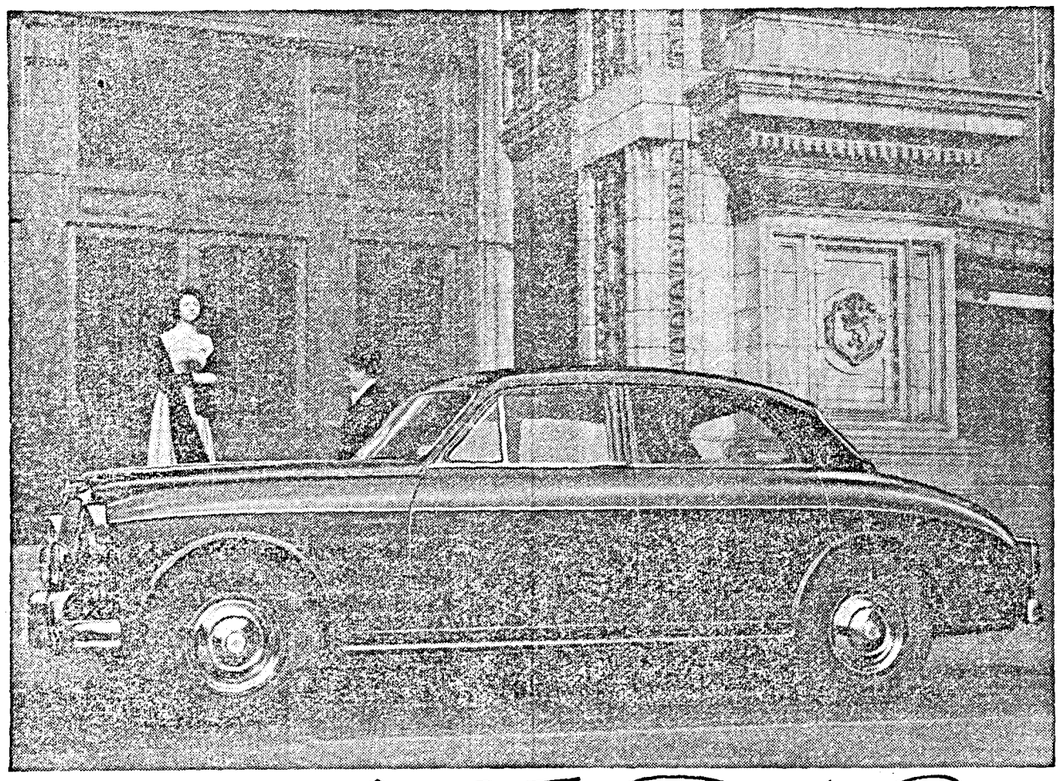
There is some evidence that the traditional January sales are lasting rather longer this year than they have in the past; and retailers, having once originated "white sales" to bolster a seasonally slack period, are now finding that housewives defer an increasing part of their purchases of bedding until the sales. Supermarkets continue to lead the way in cutting prices of food items, although other shops—including some co-ops—have also followed suit to some degree. Here, too, consumer resistance poses a problem: items once offered as "loss leaders" are difficult to sell afterwards at their former prices. Thus margins on some items have been cut severely: it is reported that in some areas Nescafé instant coffee advertised by the manufacturer at 3s. 6d. a tin is being sold for as little as 2s. 9d. a tin, producing a profit for the retailer of something under 2d. a tin. However, this has meant higher mark-ups on other items, with the net result that supermarkets' overall rates of profit have probably risen slightly in recent months.

UNIT TRUSTS

Trusts in Unison?

PREWAR attempts to form a strong and united association of unit trust managers foundered on disagreements between the managers on how the trusts should be run. Now, after informal discussions between some of the leading groups, there is a good chance that an association will be formed, for on Wednesday, the representatives of the managing companies agreed to set up a committee that will consider the creation of a managers' association. Whether or not any association born out of discussions within this committee will be strong enough to establish minimum standards of conduct remains to be seen. But an association of unit trusts in which there is some measure of agreement would be opportune: it would strengthen the movement's hand in negotiations with the Government and enhance its standing with investors.

On the eve of this meeting the managers of "Scotbits," who are making a block issue of one million units at 16s. 3d. each, announced a revision of their method of appropriating securities into the trust. The aim in the future will be to ensure that any profits or losses on the purchase of underlying securities (which in the past have accrued to the managers' own account) will accrue to the trust itself. The new mechanics of operation suggest that while the managers of "Scotbits" will be principals in the creation of units they will act as agents in security dealings.



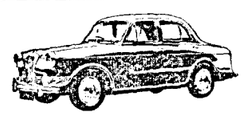
RAW COTTON

The American Dilemma

THE United States is the largest producer of raw cotton. The crop is well graded, it can be shipped quickly to the main importing countries, and export prices can be made attractive by drawing subsidies from the richest Treasury in the world. Why then does America find it so difficult to sell more cotton abroad? This season's exports are expected to be about 3½ million bales, compared with 5.7 million bales last season and a so-called "traditional" market of about 5 million bales. The reason is that American exports are largely determined by the crops in other exporting countries. They cannot afford to hold off the market, and they undercut the United States, which is left in the ignominious role of residual supplier. If the United States increases its export subsidy, other countries cut their prices further and the United States sells no more. The only practicable course is for the United States gradually to reduce the export price in the hope of so discouraging cotton production abroad that it will eventually be left with a larger (but still residual) market.

Changes in export programmes announced last week by the American government take this policy a step further. From August 1st, when the new season begins, cotton will be exported only by the payment-in-kind system. Exporters buy cotton in the domestic market and sell it at the lower export price, the difference being compensated by a claim on the government's cotton stocks of equivalent value. This system has the merit of turning export business back into normal trade channels, and has been used for some

One of the most advanced cars you can buy to-day!



THE BRILLIANT Riley Two-Point-Six *with Automatic Transmission*

There's no mistaking the air of distinction about the Riley Two-Point-Six, the long, low build and the whisper-quiet 6 cylinder engine. But you respect it most of all when you feel the sparkling acceleration, the wonderful cornering and power-assisted brakes. Like its forerunners, the Riley Two-Point-Six is built by enthusiasts for enthusiasts. And what spacious luxury it offers: real leather upholstery, polished walnut finish, two-tone styling and many other Riley refinements.

£940 *plus* £471.7s. P.T.

See and try the Riley Two-Point-Six at your nearest Riley Dealer's showrooms. Available with overdrive or completely automatic transmission as optional extras.

The lively Riley One-Point-Five. This is the compact four seater Riley with the big performance and low running cost.
£575 *plus* £288.17s. P.T.

Riley for Magnificent Motoring

time for wheat and other grains. For cotton it has taken second place to the direct sales programme, under which the government has invited exporters to bid for its stocks (at prices that have been about 6½ cents a lb below the farmers' support price). Direct sales will cease at the end of this season, but may be resumed if the expanded payment-in-kind system does not fulfil the Department of Agriculture's hopes.

The subsidy under the payment-in-kind system next season will initially be increased from 6½ to 8 cents a lb, and may be raised further. As the effective support price will drop sharply next season to 31.30 cents a lb for middling-inch staple, cotton for export will cost about 23.30 cents a lb, which is equivalent to roughly 23½ a lb cif Liverpool. In fact American cotton is obtainable in Liverpool now at about this price, because some distressed exporters have been forced to meet keen competition from other exporting countries. The possibility of a further increase in export subsidy is doubtless intended to scare foreign producers before they plant the new crops. Unhappily it is also scaring buyers of cotton ; thus the prospect is for continued lack of confidence in prices, hand-to-mouth buying, and continued discount on futures in Liverpool.

CANADIAN WHEAT

Impact of the Seaway

To many grain traders the opening of the St. Lawrence seaway this spring seemed to present a welcome opportunity to clip the monopolistic wings of the Canadian Wheat Board. For wheat that is to be shipped through eastern ports the board has up to now based its price on Fort William/Port Arthur (on the north-western edge of Lake Superior), and then added a fixed charge to cover the cost of shipment by lake vessels through the Great Lakes to the elevators at St. Lawrence or Atlantic ports. Buyers could take delivery only at these ports. With the opening of the seaway buyers will want to buy some wheat for delivery at Fort William, and charter ocean-going vessels to take it direct from the lakehead to European and other ports. Fluctuations in ocean freight rates will affect the lake shippers' rates, and make it awkward for the board to maintain true parity between its prices at Fort William and St. Lawrence and Atlantic ports. Grain traders argued that the simple solution was for the board to sell wheat through the Winnipeg futures market, as it now sells coarse grains, for delivery at Fort William. Buyers could then arrange their own freight as they pleased—by ocean-going vessels or by lake vessels to the St. Lawrence and ocean vessels thereafter—and the Winnipeg futures market would be given a fresh lease of life.

The trade's brave hopes have been dashed, at least for the present. The board is not going to use the futures market. It will sell wheat at Fort William for direct shipment abroad. It will no longer establish a fixed charge (formerly 22 cents a bushel) for moving wheat from lakehead to St Lawrence or Atlantic ports but will quote daily prices at these ports. All prices will change as freight rates change. Its deferred pricing arrangements, which enable the buyer to fix his purchase at the ruling price within a certain period after shipment, have been adjusted. The period now ranges from 14 days for shipment from Fort William to eight days from St. Lawrence and Atlantic ports. With a surprising pretension to accuracy the board has estimated that the seaway will cut freight costs generally by 5½ cents a bushel, and it is raising its Fort William price by this amount to ensure that the farmer gets the benefit of this saving. No. 1 Northern Manitoba wheat thus becomes 171 cents a bushel. The board may be wise in taking one step at a time. No one can foresee all the changes that the seaway will bring about. As they become clearer the board may well have to think again about its selling policy.

RAW WOOL

A Less Free Market?

As commodity markets go in the postwar world, the raw wool market is relatively free. Sales of wool in Argentina and Uruguay are apt to be disrupted by changes in government policy, but these countries are relatively small suppliers. And though the woolgrowers' organisations in South Africa and New Zealand support the market by buying in wool at their reserve prices, these prices have been set at a modestly low level. So far Australia, the largest producing country, has stuck to a free market—and is receiving an uncovenanted benefit from the schemes operated by its Commonwealth cousins, at their expense. But with merino prices having fallen recently to their lowest level for nine years, and crossbreds to their lowest level for six years, many Australian farmers have begun to question the virtues of a free market. Representatives of most of the woolgrowers' organisations now appear to be in favour of a reserve price scheme, the major exception being the Woolgrowers' Council, which represents the big growers.

Enthusiasm for a scheme may diminish if the modest recovery in wool prices continues. In the last two weeks the average price of merino 64's, for example, rose by fourpence to 77d. a lb. This week, although offerings at the Australian auctions are the heaviest of the season, prices rose a little higher and then held firm, and the trade is now beginning to feel more confident. If the experience of British wool textile industry is any guide, the recent improvement in wool consumption is being maintained. In December the rate of consumption, though slightly lower than in the previous month, was 15 per cent higher than in December 1957, with the worsted side of the industry faring best: the rate of consumption in topmaking

RUBBER TRENDS

is our new quarterly bulletin for producers, manufacturers or dealers concerned with rubber. It gives the results of research, not available elsewhere, into the longer term trends affecting rubber, including :

Regularly	Periodically
The world balance	Trends in rubber-using industries
Price outlook	Rubber consumption in the U.S.S.R.
Trends in consuming countries	Technical developments
Market reports	Trends in synthetic rubber
General notes	The effect of planting programmes
Statistics

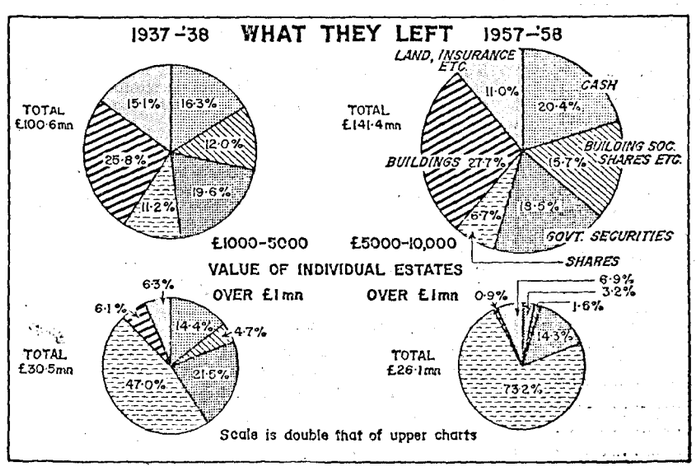
was one per cent higher than in November and 19 per cent higher than a year ago, whereas woollen consumption was 5 per cent lower than in November and 7 per cent higher than a year ago. It will be just as well if events in the wool market allow Australian growers to weigh more calmly the merits of a support scheme. Wool has to compete with other fibres and a free market has not served Australia badly in the past.

TELEVISION

Rank Buys a Pipe

RELAY television, in which subscribers have their programme "piped" over a cable circuit from a central receiving station, started slowly in Britain; the first service began operations in 1951, but subscribers did not pass 50,000 until December, 1956. Numbers doubled during 1957, reaching 108,000 by December, and it seems that this rate of growth was maintained in 1958. The end of controls on hiring and relay charges last autumn stimulated demand, and a period of vigorous expansion is expected. Large capital resources will be needed for this; the Rank Organisation, in a complicated deal, has offered to buy half the share capital of Regency Holdings, and will lend the company £250,000 if the offer is accepted. The Rank group already owns a share in Viewline (Oxford) Ltd., which is about to start operations there, and Regency will give them access to Brighton, Hove and Eastbourne. The purchase of more small regional companies would be a logical method of expansion.

For the operator, relay television has the advantage over set rental that the receiver costs 25 per cent less, and the cost of maintenance is lower. For the consumer, rentals are normally about the same, but there is less interference and the reception is better, especially where signals are normally weak. No aerial is required, which to the consumer may seems dubious benefit where social prestige is concerned. One potential advantage is its suitability for subscription television systems; Rediffusion Ltd, the largest company in the business, announced in 1955 that their equipment was adaptable to subscription systems. Rediffusion is one of several firms that make their own equipment; another large company, British Relay Wireless and Television Ltd, is associated with Pye Ltd, and Murphy Radio Ltd.



The capital cost of starting a relay television system is naturally greater than beginning to rent out sets, but there are much greater savings as subscribers multiply. This growth should mean increasing profits; but the Post Office licences are non-exclusive, so expansion will bring more competitors in.

Top Incomes and Estates

THE one hundred and first report of the Commissioners of the Inland Revenue (Cmd. 628), published recently, again provides detailed information of earnings and saving habits in the top income brackets. During 1956-57, the latest year for which surtax figures are available, the number of payers was 296,000, or 30,000 fewer than in the previous year—but that was the result of the concessions in the 1957 budget, which released 45,000 persons in the over £2,000 income group from paying surtax. Forty-five incomes were recorded over £100,000, compared with forty-nine in the previous year; this decline in numbers, however, was common to all the higher income groups, with 38, or 3 per cent, fewer persons receiving over £25,000. Of the total income of surtax payers last year, 61 per cent was earned and 39 per cent was investment income; in the over £20,000 class, investment income accounted for two-thirds of the total.

The total capital value of estates valued at over £1 million on which death duties were paid in 1957-58 was £26 million; this was made up mainly of a few large properties valued at over £2 million. Because of the small numbers involved, it is impossible to draw any hard and fast conclusions about the investment habits of millionaires, but nearly 75 per cent of these particular estates were in the form of equity holdings and a further 14 per cent were in Government securities. However, in the previous year industrial shares accounted for less than half the total and the distribution was not dissimilar to prewar experience illustrated in the chart.

The suggestion that investment habits have not altered greatly over the last twenty years is also borne out at the other end of the scale. Making some allowance for the changing value of property, the chart compares the distribution of the smaller estates. A somewhat higher proportion of those in 1957-58 was held in cash and invested in building societies at the expense of land, insurance policies and equities. These estates, valued at £5,000-£10,000, accounted for one-sixth of the total gross capital value of £812 million on which duty was paid last year.

STERLING AREA EXPORTS

Pointers to Recovery

THE trade figures of the overseas sterling countries are of no less interest to Britain than its own. These countries take about 45 per cent of Britain's exports. Their purchasing power is a function of the quantity of raw materials and food that Britain and other industrial countries buy from them, and the prices paid. The American recession, and the subsequent levelling-off in industrial production in Europe, caused the overseas sterling countries' exports to fall in volume and value, and that, in turn, obliged these countries to buy less abroad. With the American recovery now nine months old, and with signs of improvement in Europe, some response in the overseas sterling countries' exports was to be expected. Figures published in the *Board of Trade Journal* last week point to it. In the first nine months of 1958 exports from overseas sterling countries totalled £2,673 million, 12 per cent less than in the same period of 1957. In the third quarter alone the rate of decline slackened to about 10 per cent, and in the fourth quarter "the trend appears to have improved considerably." Export prices in the first half of the year were about 11 per cent lower than a year earlier, and changed little in the third quarter. Market prices, which have a delayed effect on the value of recorded exports, "probably turned upwards in the fourth quarter." But it is unlikely that they rose very far. Taking *The Economist* indicator as a guide, commodity prices rose by 6 per cent between the beginning of October and late November; the indicator has since slipped back and is now only about 2½ per cent above the October trough.

SHORTER NOTES

Mr Jonathan Guinness has withdrawn his proposal for a Board of Trade inquiry into the affairs of the Granada Group following the revision of the plan for the issue of deferred shares.

* * *

Shell Chemical Company have announced that they will build a large-scale polyolefin plant at the Partington works of their subsidiary, Petrochemicals, Ltd, near Manchester. The new plant, which is expected to be in production in 1961, will have an initial output of 30,000 tons a year of polyethylenes and polypropylenes, including high-density polyethylene manufactured by the Ziegler process, for which Shell Chemicals hold an exclusive licence in Britain. Total capacity of the plant is expected to reach 45,000-50,000 tons a year, of all materials.

* * *

The directors of Gillett Brothers, the discount house, have recommended an increase in the total ordinary dividend for the year to January 31st from 11¼ per cent to 12½ per cent. After a transfer to contingencies reserve, the disclosed profit was £203,344, against £85,777 in 1957-58, after charging certain realised losses to investment reserve.

* * *

The directors of "Shell" Transport have proposed that the rate of dividend on the first preference stock should be increased from 5 to 5½ per cent in return for the loss of the right of holders of the stock to authorise the issue of loan stock by the company. There are no present plans for any issue of loan capital.

* * *

The directors of Camp Bird have suggested that the Board of Trade should inquire into the company's affairs. A few days before, a group of shareholders had presented a requisition for an extraordinary meeting to consider the setting up of a shareholders' committee.

* * *

Planned industrial building fell in the fourth quarter of 1958; Industrial Development certificates were issued during the quarter for a total of 11.2 million square feet, compared with 12.3 million square feet in the third quarter and 13.8 million square feet in the fourth quarter of 1957. Industrial building schemes approved during the year totalled 46.1 million square feet, against 63.6 million the year before; this was the lowest figure for any year since 1953.

COMPANY MEETINGS

STEWARTS AND LLOYDS LIMITED

NATIONALISATION: THE BEGINNING OF THE END OF FREE ENTERPRISE

STEEL INDUSTRY'S ACHIEVEMENTS: NO CASE FOR STATE-OWNERSHIP

BALD FACTS REFUTE ARGUMENTS IN FAVOUR

NATIONALISATION—"NO WARM COAT TO PROTECT WORKER AGAINST ECONOMIC CHILL WINDS"

MR A. G. STEWART ON "WILLING SERVANTS OF THE STATE"

The Sixty-ninth Annual General Meeting of Stewarts and Lloyds Limited was held on Tuesday, February 10, 1959, in the Merchants' Hall, 30 George Square, Glasgow.

The Chairman, Mr A. G. Stewart, presided and said:

Ladies and Gentlemen, it gives me much pleasure to address this, the Sixty-ninth Annual General Meeting of the Company. As in the past, I assume you will take the Notice of the Meeting as read, and I will, therefore, ask the Secretary to read the Auditors' Report.

After the Auditors' Report had been read the Chairman continued:

A copy of the Directors' Report was contained in the copy of the Accounts circulated to each shareholder on January 15th. My Statement was also included with the Accounts. I assume you will take all these as read.

CURRENT YEAR'S TRADING

The Statement with the Accounts nowadays virtually takes the place of a Speech. You will, however, expect me to give you some information as to how the trading and earnings position has developed since that Statement was prepared in December last.

So far as the trading position is concerned, despatches of steel tubes and pipes, to other than the Oil Industry, in the first quarter of the current Financial Year were slightly higher than those for the corresponding quarter of the previous Financial Year, but despatches to the Oil Industry showed a substantial decline of rather over 50 per cent.

Despatches of Stanton products were also somewhat lower than in the first quarter of the Financial Year 1958.

Unfortunately, demand from the Oil Industry still shows no immediate indications of revival from the present very low level and it would be wise, therefore, to anticipate that overall earnings during this year will be below those of 1958.

I would like, however, to repeat what I said in my Statement which was circulated to shareholders, that in the long run your Directors are satisfied that the capacity which we have created, and are still in the process of creating, will be fully required.

I am now going to propose the resolution to adopt the Report and Accounts. If you have any questions arising out of the Accounts, would you ask these immediately after the resolution has been proposed and seconded. I mentioned in my Statement that I proposed to deal with the subject of nationalisation fully in my address at the Annual General Meeting. This I shall do at the end of the ordinary business of this Meeting. I suggest, therefore, that any questions you have on this subject might well be raised at that stage in the proceedings.

The Report and Accounts having been adopted, the dividend and the usual resolutions approved, the Chairman continued:

NATIONALISATION

I now turn to the subject of nationalisation.

Last year you gave us a go-ahead signal to fight the threat of nationalisation. The resolution confirming the power of the Board to take such steps as they considered necessary, and approving the Board's actions in so doing, was carried by an overwhelming majority.

You have seen, and heard, for yourselves evidence of our activities. We have advertised in the national and provincial press and shall continue to do so. We have published booklets and procured their wide distribution.

Our illustrated booklet, "20 Questioners," though intended primarily for circulation within the Company, has had a good reception and has provoked wide discussion and comment. It answers many of the questions which people have been asking about the nationalisation of steel.

We have shown the achievements of our Company under free enterprise, provided facts and general information about ourselves and our Industry, and have challenged the advocates of nationalisation to show that their system could have achieved more.

One reason given for nationalising the Industry is that it is inefficient; another is that it has not expanded quickly enough. The first has been contradicted by a prominent Socialist MP speaking in this City of Glasgow almost exactly a year ago. He said: No-one is making a case for the public ownership (of steel) on the basis that it is an inefficient industry. We have never said that.

The second argument is completely refuted by bald figures. Steel production has consistently exceeded the official targets set by Government or the Iron and Steel Board. Today, as everyone knows, there is spare capacity. The Industry has, in fact, increased its capacity by over two-thirds since the end of the war, and has planned to increase it further within the next five years by another 5 million tons per annum. This will mean an expansion since the end of the war of more than 100 per cent.

OVERWHELMING CASE AGAINST STATE-OWNERSHIP

There has been no effective answer to our arguments, and no evidence whatever has been produced to show that the record would have been better if the Industry had been state-owned. Nor is that surprising: there is no case for state-ownership: there is an overwhelming case against it. This is becoming increasingly appreciated. During the past year there has been growing criticism not only of the steel nationalisation proposal but of the whole futile theory and sorry practice of state-ownership.

The belief has been held, in some quarters, that state-ownership is a safeguard against unemployment, but recent events have unfortunately shown that it provides no warm coat to protect the worker against economic chill winds.

It is absurd to suppose that the Industry itself can create the demand for its products. This can only come about when national and world economic conditions permit, stimulated so far as possible by Government action.

There are positive reasons why nationalisation is not only no benefit but is, in fact, dangerously harmful. It is already difficult to run efficiently large organisations of any kind. And steel firms are large: they have to be. If the Industry is nationalised, control will be in the hands of men who know nothing of steel making, marketing, or usage. Their duty will be to control. All major decisions and many smaller ones will be delayed.

BANEFUL EFFECTS

The Industry is already supervised in the interests of the nation and the steel-users; detailed control by men without experience would be fatal. The result would be frustration and slackness all down the line. There would be disruption of relations between management and men, and a feeling of hopeless resignation among the staff. It is hardly possible to exaggerate these baneful effects. They are inevitable, not just vague possibilities.

We know, too, that many of our customers, both at home and abroad, are greatly perturbed at the prospect of state-ownership of steel. Many of them are asking themselves how they would like to deal with a state department, instead of with an individual firm or its representatives.

Customers over the years come to rely on the integrity of individual firms and the men in them, whom they have known over a long period. It is a cherished Company tradition, which state-ownership would inevitably swamp.

It must never be forgotten that industry depends as much on the faith of those who buy as on the skill of those who make, and that the prosperity of this country is dependent on its export trade. So far as our customers at home are concerned, sadly enough, they would have no option but to deal with a state-controlled steel industry. Overseas buyers, on the other hand, cannot be compelled to buy steel from Britain. They may prefer, when the time comes, to buy from a free enterprise industry elsewhere.

"OUR DUTY TO DEFEND OURSELVES"

We have emphasised from the beginning that we do not wish to take part in politics. The threat of nationalisation, however, is a matter of concern to the shareholders, to the Industry, to the nation and to our employees. So long as the threat hangs over us it is our duty to defend ourselves.

Our quarrel with the Labour Party is confined to this one issue. Many of us have said in the past few years that we hoped that wiser counsels might still prevail, but there is, unfortunately, little sign of a change of attitude on the part of the advocates of state-ownership.

It is a matter for concern that apathy is being shown by some other industries in making their views known on the threats of further nationalisation of many sections of industry. The damage which would be suffered by these industries would be as grave as it would be to the Steel Industry. Those who hang back, thinking, perhaps: Let the other fellow carry on the struggle, are deluding themselves. If Steel goes under the grip of the State, I believe that it would be the beginning of the end of Free Enterprise in this Country. Many industries would find their supplies controlled and their destinies ruled by officials. Whether it be pots and pans, bicycles or bull-dozers, it would soon be officials who would say who could make what and how many they might be permitted to produce. When you take account, too, of the proposals for "backdoor nationalisation" by the acquisition of shares, it is not difficult to see how Free Enterprise, through which this country has grown to its present prosperity, would be stifled and suppressed.

Surely we must all do everything we can to seek to ensure that we do not all become slaves of the State, but that we remain willing servants of the State. (Applause.)

The proceedings terminated with a vote of thanks to the Chairman and the Board for their conduct of the Company's affairs during the past twelve months, and with a full endorsement by the shareholders present of the Board's actions in fighting the threat of nationalisation.

HUDSON'S BAY OIL AND GAS COMPANY LIMITED

The following announcement is made by Mr R. C. Brown, President of Hudson's Bay Oil and Gas Company Limited:

Hudson's Bay Oil and Gas Company Limited and its Subsidiaries had an estimated net operating income of $1,316,000 or 7 cents per share for 1958. Net operating income for 1957 was $3,073,000 or 17 cents per share.

Today's announcement stated that quoted earnings figures are after charges for depreciation and depletion of $5,616,000 in 1958 and $5,340,000 in 1957. Non-recurring gains raised net income to $3,788,000 for 1958 and to $7,815,000 for the previous year.

Mr R. C. Brown, president, said that the Company's 1958 output of crude oil was 20,100 barrels daily 9.7 per cent below the 1957 mark. Crude oil production by the entire petroleum industry in Western Canada declined 9.1 per cent in 1958 but in Alberta where most of the Company's production is located the decline was 17.7 per cent.

Although the Company's sales of natural gas increased to 45 million cubic feet daily at year end resulting from the completion of the TransCanada Gas Pipe Line it still has large shut-in natural gas reserves.

F. W. WOOLWORTH & CO.

NEW SALES RECORD

The annual general meeting of F. W. Woolworth & Co., Ltd., will be held on March 6th in London.

The following are extracts from the Statement of the chairman, Mr R. J. Berridge, circulated with the report and accounts for 1958:

Trade was anything but encouraging during the early months of last year, but the better economic climate in the autumn brought about a very welcome improvement.

1958 provides an excellent illustration of how misleading a half-year's statement of profits would have been to investors in your Company, as at that time profits barely showed an increase. Conversely a good first six months could be equally misleading if it were followed by less satisfactory results during July to December, bearing in mind that the latter part of the year, particularly the month of December, contributes so substantially to the profits of the year.

Companies engaged in the retail trade have not the same means of guidance as have industrial concerns, who from their order books have some indication at the half-way stage as to what the situation is likely to be during the latter half of each financial year and are therefore in a better position to issue half-yearly statements with appropriate qualifications.

The increase in turnover was greater during last year than for 1957, so that a new high record of sales was achieved. I commented last year that there seemed to be no likelihood of any change in the pattern of expenses increasing at a greater rate than turnover—particularly wages and salaries. This proved to be your Company's experience in 1958.

STORE EXPANSION

The building progress during 1958 resulted in the total number of stores in the British Isles being raised to 1,012. Many letters and comments of a most complimentary nature have been received, expressing the satisfaction that the new, extended and modernised stores have given to members of the public. These modern stores emphasise that in so many others the same high standards have yet to be achieved. I assure stockholders whose neighbouring stores are still of pre-war vintage that the Company's development programme is proceeding with all speed but that it will be some years yet before every store needing this attention has been brought up to date.

Self-service stores increased during the year from 46 to 56, either in entirely new areas or after conversion from conventional service. I am glad to say that last year's experience of this mode of selling is more assuring.

The three stores in operation in the West Indies Federation at June 30, 1958, contributed a total profit of £136,538 before taxation, compared with £97,794 for the previous year. This is excellent progress.

Since then three new stores have been opened in the West Indies, at Crossroads, Kingston, Jamaica; at Montego Bay, Jamaica; and San Fernando, Trinidad; so that the Company now has a total of six stores functioning in the West Indies Federation. Initial experience in the three new stores is satisfactory.

At Salisbury, Southern Rhodesia, the building has now been completed and present indications are that the store will open for business during March this year.

SUPPLIERS OF THE GOODS ON THE COUNTERS

The following table shows the very considerable periods during which many of our regular suppliers have been associated with the Company, and demonstrates how well your Company has been served by its suppliers and what confidence has been engendered between buyer and seller.

Number of Suppliers	Period of Association
113	40/50 years
292	30/40 years
494	20/30 years
360	10/20 years

CONSOLIDATED PROFIT AND LOSS AND APPROPRIATION ACCOUNT

Excluding the income from Rents Charged to Stores' Trading Accounts, which as advised last year is now shown as a separate item in order to give a more realistic trading profit, this trading profit proper for 1958 amounted to £23,586,872 compared with £21,906,164. The increase of £1,680,708 or 7.67 per cent is considered very satisfactory.

Net profit before taxation amounted to £25,597,085 compared with £24,071,753 for 1957, an increase of £1,525,332 or 6.34 per cent. Income Tax, Profits Tax and Overseas Taxation on profits for 1958 are estimated at £13,561,840 compared with £12,838,552 for 1957, an increase of £723,288.

The resulting net profit after taxation for 1958 is £12,035,245 compared with £11,233,201 for 1957, or 47.02 per cent of net profit before taxation, so that the Government still claims the lion's share of 52.98 per cent of net profit before taxation. The proposed appropriation to General Reserve is again £2 million.

Final dividend proposed on Ordinary Stock at 1s. 4d. per unit, plus 8d. per unit interim dividend paid in August last, repeats the total distribution of 2s. per unit on the Ordinary capital for 1957.

However, as already announced, it is the intention of the Board to mark the Company's Golden Jubilee, which falls on July 23, 1959, by declaring a special cash bonus of 4d. per 5s. unit of Ordinary Stock (less income tax) payable on August 15, 1959, with the interim dividend. This will cost £1,293,750 on the basis of income tax being deducted at the current standard rate.

THE YEAR 1959

For some months now it has been refreshing to learn of the upward trend in the country's economic outlook, so that from this aspect no pronouncement of mine is necessary.

The prospects for the current year, viewed against the background of 1959 being the Company's Golden Jubilee Year, are promising too. Extensive advertising plans have been laid, covering most months of the year, to support special features and culminating in the Golden Jubilee Sale from Friday, April 24th to Saturday, May 2nd. By these means it is hoped that demand for your Company's merchandise will be stimulated still further.

1959 could well be an outstanding year for your Company, but only time will tell whether this hope, reasonable as it seems at present, will be realised.

WATNEY MANN LIMITED

MR S. H. COMBE'S STATEMENT

The annual general meeting of Watney Mann Limited, was held on January 30th in London, Mr S. H. Combe, MC, chairman, presiding.

The following is an extract from his statement for the year to September 30, 1958:

In the early part of 1958 we arrived at an agreement with Mann, Crossman & Paulin, Limited, to purchase the assets of their Company in exchange for Ordinary Stock in the proportion of £110 Watney Stock for £100 Mann, Crossman & Paulin Stock. The Company's name was then changed to Watney Mann Limited. Negotiations for this amalgamation had been going on for some considerable time and were the direct result of the threat to Watneys of losing the site of our Stag Brewery at Victoria.

The main advantage of this fusion can be summarised in one sentence. With the disappearance of the Stag Brewery the greater part of the output of Watney Mann can be concentrated in two breweries, Mortlake and Whitechapel, instead of in three. This, of course, cannot be achieved without very heavy expenditure in adapting both Mortlake and Whitechapel; indeed, a sum of about £1½ million will have to be spent at Mortlake alone, which will make that brewery one of the most up to date in this country.

RECIPROCAL TRADING AGREEMENT

Watney Mann Limited and Bass, Ratcliff & Gretton Limited have entered into a reciprocal trading agreement whereby each brewery undertakes to stock certain of the other's beers.

FINANCE: The Group trading profit amounts to £3,373,743, a decrease of £221,907 on the previous year. The profits, after taxation and excluding outside interests, are less than the previous year by £66,964.

The Board recommend that £150,000 be appropriated to the Properties and Plant and Contingencies Reserve, and that a final dividend of 7½ per cent and a bonus dividend of 6 per cent be paid on Deferred Ordinary Stock, making 21 per cent for the year.

TRADE AND TAXATION

The trade showed a slight decrease last year. A not surprising result in view of last summer's weather conditions.

The Beer Duty works out at just under 13 pence per fluid ounce alcohol. The Wine Duty, on the same basis, is little over 7 pence. Broadly speaking, therefore, British beer pays twice as much in taxation, in proportion to strength, as imported light wine. The tax on British beer is about five times as high as it was in 1939. The tax on light foreign wine at its most usual strength is little more than three times as high.

This inequality in the taxes on beer and wine has persisted since the Budget of 1950, when the Beer Duty was last readjusted. It is, I believe, an anomaly without precedent. Certainly, I have never heard of another example of a nation raising a tariff wall against one of its own products to the advantage of a foreign competing product.

Again, it should be remembered that beer is made almost entirely with home-grown materials. No sensible person would like to see any increase in the Customs Duty on wines; that would be a thoroughly retrograde step. I feel, however, that we now have an unanswerable case for redress in the shape of a Beer Duty reduction.

The report and accounts were adopted.

TRINIDAD SUGAR ESTATES

The 36th annual ordinary general meeting of Trinidad Sugar Estates Limited was held on February 5th in London, Mr E. Cassleton Elliott, CBE, FCA (the chairman) presiding.

The following is an extract from his circulated statement:

The Crop was again a disappointing one being only four tons more than in 1957. Unfortunately, exceptionally wet weather conditions were experienced during the latter part of the grinding season.

The average price realised for sugars including by-products was £49 10s. compared with £48 7s. in 1957. The cost of production in Trinidad was a little lower and as a result the profit in Trinidad rose to £3 13s. 1d. per ton compared with £1 18s. 10d. in 1957. The financial position continues to be satisfactory—the surplus of current assets over current liabilities and provisions being £197,364.

The profit shows an increase of £14,383 and consequently the Directors recommend a dividend of 10 per cent for the year.

With regard to the prospects for 1959 Crop, if weather conditions from now up to the commencement of grinding and during the grinding period are normal we should obtain a reasonable production of sugar.

The price under the Commonwealth Sugar Agreement for the part of the sugar sold at the Negotiated Price has been increased from £43 16s. 8d. to £45 2s. per ton. I am also pleased to be able to say that owing to increase in consumption in the United Kingdom the quantity of sugar being purchased at the Negotiated Price has been slightly increased. The report was adopted.

This announcement is neither an offer to sell nor a solicitation of an offer to buy these securities. The offer is made only by the Prospectus.

ILLINGWORTH, MORRIS & COMPANY

(Worsted Spinners)

DIFFICULT TRADING CONDITIONS

The 39th annual general meeting of Illingworth, Morris & Company, Limited was held on February 5th at Bradford, The Right Honourable Lord Wilmot of Selmeston, PC, JP (the chairman), presiding.

The following is an extract from his circulated statement:

The Accounts show the increase from £1 million to £2 million in Ordinary Capital, following the Capitalisation of Reserves in December, 1957.

The net profit of the Group for the year after taxation is £178,173 and, after adding £227,031 which represents the balance of £327,031 brought forward from last year less £100,000 capitalised as part of the bonus issue referred to above, there is a Group total available for appropriation of £405,204. Of this, £103,500 has been used by the payment of dividends on the Preference Stocks and by an interim dividend of 2½ per cent less Income Tax paid on the Ordinary Stock last July; £23,000 has been transferred to General Reserve, leaving £278,704 to be carried forward.

The Directors do not recommend a final dividend for the year ended September 30, 1958. They do, however, propose the payment on February 6, 1959, of a special Interim Dividend of 5 per cent less Income Tax, for the year ending September 30, 1959.

The Group Current Assets now amount to £3,909,801, showing an excess of £3,170,996 over Current Liabilities, and the Group Revenue Reserves are now shown at £603,704.

The year under review was one of very difficult trading conditions throughout the whole Wool Textile Industry. The first signs of an American recession were beginning to show at the start of our financial year and with the tightening of credit and the raising of the bank rate, the fall in wool prices continued. This fall in prices was almost continuous throughout the year and amounted to about 30 per cent during the period.

More serious was the difficulty in obtaining orders for several months. This affected most sections of the industry, but more particularly Worsted Spinning. As a result there was a good deal of short time running in your Company's mills and such business as was available had to be taken on a less profitable basis. It is not surprising, therefore, that the profits for the year have fallen sharply.

INDUSTRY'S SOUNDER POSITION

It would appear that the trade was heavily overstocked in piece goods and yarns. This is shown by the length of time many manufacturers were able to keep their factories running full time without ordering further yarns; it is doubtful whether these stocks have yet been entirely used. But it is felt that with the liquidation of stocks, both of cloth and yarn, the industry is in a sounder position. For the time being delivery dates are shorter and manufacturers do not need to buy our products merely to keep in the queue. Let us hope that, with a healthier stock position, shorter delivery time and reasonable prices, we may look for a steadier flow of orders.

Fortunately, as I write this statement, there are signs of some revival in the volume of business. The American trade for the autumn season has been good—better than expected—and should the Home and European trades follow the same course, your mills may revert to full production.

Since the close of the financial year, your Company has increased its investment in Salts (Saltaire) Limited and is now the majority shareholder.

The report was adopted.

SECOND BRITISH ASSETS TRUST

RECORD INVESTMENT VALUATION

MR A. C. BLAIR ON BOARD'S POLICY

The Eightieth Annual General Meeting of Second British Assets Trust Limited will be held on March 5, 1959, at the registered office of the Company, 9 Charlotte Square, Edinburgh.

The following is the review by the Chairman, Mr Alastair C. Blair, CVO, WS, which has been circulated with the Report and Accounts for the year ended December 31, 1958:

The year 1958 has been a year of surprises and when I wrote my last review I did not anticipate that we should end the year with a record valuation of £7,800,000 which is an increase of some 35 per cent over the figure of a year ago. Fluctuations of this size make it difficult to assess the true worth of securities and some of our investments are now at prices that by previous yardsticks appear to discount several years' growth ahead. However share prices last year had been depressed by the run on sterling and by the news of the American recession. Both these crises were successfully overcome during 1958 and in spite of the present slight recession in the United Kingdom, the prospects for 1959 look reasonably hopeful.

In comparison with the rapid recovery of our valuation, our income performance was relatively disappointing. This was mainly due to the effects of the American recession on commodity prices and on Company profits and dividends. Even allowing for the help we have received from the reduction in Profits Tax our net income for 1958 only shows a small increase compared with the previous year. We have however felt sufficiently confident of the outlook to recommend a small increase in the dividend and we anticipate that as a result of some investment changes we have made income will be somewhat higher this year although we cannot expect a large increase since world trading conditions are still difficult. Owing to the revision of the form of Profits Tax as from last April we expect that in future years we shall not have to make any provision for this tax, as our liabilities will be offset by various reliefs.

INVESTMENT DISTRIBUTION

On page 11 of the Report we have given a table showing the number and size of our investments and their spread between different industries. It may interest you to know that of our total equity holdings 63 were in the USA, 17 in Canada and the remaining 92 in the Sterling area. Of the 20 largest holdings 5 were American companies, 1 Canadian and 14 British. You will see that while we have a comparatively short list of investments not all are large holdings and we are quite prepared to invest in smaller Companies provided that we can get information and co-operation on matters which concern us.

May I take this opportunity of thanking the Managements of these Companies which have been visited by our Directors or by our Staff during the past year. We have had many happy and interesting visits and we are finding increasing understanding and co-operation from those visited.

KULIM RUBBER PLANTATIONS LIMITED

MR P. B. L. COGHLAN'S REVIEW

The Twenty-fifth Annual General Meeting of Kulim Rubber Plantations Limited will be held on February 24th at the Rubber Growers' Association (Inc), 19 Fenchurch Street, London, E.C.3.

In his circulated review, the chairman, Mr P. B. L. Coghlan, refers to the company's overall progress. Annual production now totalled over 1 million lb more than the levels of 10 years ago and was still increasing. Also, rapid progress was being made in planting up some 1,000 acres of new land. It was particularly pleasing that notwithstanding the financing of this and other valuable additions to the Company's assets out of profits, it had been possible to maintain satisfactory rates of dividend.

Shareholders will no doubt have read in the Press that the Malayan Government has seen fit to increase the rate of company tax from 30 per cent to 40 per cent with effect from January 1, 1959, and this will, of course, apply to all overseas trading companies operating in Malaya. I must protest against this additional burden which has been imposed on the rubber industry in Malaya. It appears to have been overlooked entirely that rubber producers already make substantial contributions, by way of export duty, to the revenue of the country and it seems unreasonable that an industry which has contributed so much to the prosperity and development of the country should suffer more in comparison with other companies and undertakings who derive considerable benefit from the rubber industry and commercial enterprises more recently introduced. It is fully realised that the Federation badly requires this additional revenue, but all that is asked is that the burden of producing that revenue should be more evenly distributed.

The Federal Government are anxious to encourage replanting and new planting of rubber land and in recent years have increased the rate of export duty applicable at certain price levels to enable them to pay planting grants to those companies carrying out new planting and replanting. Unfortunately, these grants are taxable in the hands of the recipients and now, with the increased rate of company tax, no less than 40 per cent of the value of the grants has to be repaid to the Government. This means, of course, to that extent there will be less money available for this important work. Surely this is not the best way to encourage the modernisation of the rubber industry in Malaya. In view of the increased rate of company tax now to be levied, it should be possible for the Malayan Government to allow some refund in export duty to those who pay this heavy rate of company tax or, with a view to giving further encouragement to new planting and replanting, allow the grants paid for this work to be free of tax. It is still vitally important for Malaya to attract further foreign capital and, in doing so, she must remember that the penalties, in the form of taxation imposed on that capital, must not be out of line with other countries in a similar position. While appreciating the difficulties of raising internal revenue, she must not overlook the advantages of attracting external capital on which to a great extent her future prosperity will depend and from which the major part of her revenue will be forthcoming.

COMPANY AFFAIRS

IMPERIAL TOBACCO

ALL the guesses were right, except one. A full year of higher cigarette prices lifted Imperial Tobacco's profits in the year to October 31st; these profits and bigger dividends on Imperial Tobacco's shareholdings in BAT and Gallaher improved equity earnings; and the ordinary dividend has been restored to 21 per cent, from which it was cut to 20 per cent in 1956-57. The guess that was wrong was that Imperial Tobacco had maintained its share of the cigarette market. Cigarette consumption was again up last year, but the directors of "Imps" refer to "a slight decrease in total sales."

As the directors also speak of another rise in manufacturing and selling costs, the advance in the trading profit of the parent (that is purely the tobacco side of the business) by £2,904,646 to £21,107,120 must have stemmed almost entirely from higher prices. The group's trading profit is only £2,738,501 higher at £24,293,066, suggesting that the profits earned from the paper and carton side of the business were lower. But dividend income rose from £5,252,375 to £5,492,924, and the total net income after tax from £12,006,911 to £14,326,283. Earnings on the ordinary dividend have risen from about 33 to nearly 40 per cent. The obvious inference from these preliminary results and the directors' comments is that, while higher cigarette prices gave profits a shot in the arm last year, another advance of the same order cannot be expected this year. The past results justify the recent strength of "Imps," but a sober assessment does not seem to offer much immediate scope for what is essentially an income stock, priced at 58s. 9d. and yielding 7.1 per cent.

REDIFFUSION

ONE company to step forward now that the home activities of the Capital Issues Committee have lapsed is Rediffusion. It proposes to make a rights issue of ordinary shares to raise the large sum of £4,250,000. That issue is simply subject to the approval of the Bank of England on its timing. The company, which last made a rights issue, raising £1,350,000, in 1956, has an issued capital of £5,497,247; the 5s. units are quoted at 37s. 6d. (to yield 2.9 per cent on the tax free dividend of 12½ per cent). Piping radio and television programmes into customers' homes involves high capital costs and CIC controls and credit restrictions have borne heavily on both the relaying and the renting sides of Rediffusion's business. At the moment, the relay business seems to be growing faster.

Rediffusion and British Electric Traction are partners in Associated-Rediffusion. That television programme contractor has made quick progress, in common with other contractors, and it has been able to repay large advances made by BET and Rediffusion and to pay its first dividend. Its directors have now revealed that they expect the company to make a profit of not less than £7 million in the year to April 30th next, compared with £5.1 million in 1957-58, and a loss of £626,228 in 1956-57. Profits in 1959-60 are expected to be no lower than in 1958-59. Rediffusion's interest in commercial television is the magnet that will attract investors to the new issue.

Radio Rentals had to obtain CIC consent for its one for five rights issue at 15s. per share, raising £1,178,000. The directors now say that trading results so far in the current year to August 31st have been satisfactory, and they expect to pay an effectively unchanged dividend of 20 per cent on the larger capital. At the current price of 31s. 7½d. xr the 5s. units yield 3.2 per cent.

COPPER PROFITS

SIR RONALD PRAIN, the chairman of Rhodesian Selection Trust, stole his own thunder when he disclosed last month that the mining companies suffered only "very small" losses from the 52-day strike on the copperbelt in the last quarter of 1958. The recovery in profits shown in the quarterly statements of Roan Antelope and Mufulira therefore comes as no surprise. By running down their stocks during the strike these mines were able to sell almost as much copper as in the third quarter, and as the realised price was at least £30 a ton higher—partly owing to the strike—profits rose sharply. Estimated profits before tax of Roan rose to £997,000 in the fourth quarter from £813,000 in the third, and for the first half of the 1958-59 financial year these profits amounted to £1,810,000 (against £1,486,000 in the first half of 1957-58). Mufulira's profits advanced to £1,500,000 in the fourth quarter from £1,193,000 in the third, and in the first half of the year they came to £2,693,000 (against £2,422,000 in 1957-58).

	Roan Antelope		Mufulira	
Six months to Dec. 31	1957	1958	1957	1958
Output (long tons) ..	39,815	29,112	47,052	33,263
Sales (long tons).....	38,793	38,670	45,059	43,373
Sales Revenue (£'000s)	7,283	8,009	8,944	9,493
Gross income (£'000s)	1,486	1,810	2,422	2,693

But Chibuluma spoils this tale of recovery, as this new mine had no stocks to fall back on and in the first half of 1958-59 its estimated profit before tax slumped to £140,000 from £640,000 in the first half of 1957-58. This accounts for the decline from £1,943,000 to £1,758,000 in the profits of Rhodesian Selection Trust, the parent company of Mufulira and Chibuluma.

Unless the mines run into unforeseen difficulties this year's results will be distinctly better, for the average price for copper should be appreciably higher. Barring further labour troubles copper is unlikely to regain during the next few months the peak of £260 a ton reached during the strike, but it is also unlikely to sink much below the existing level of about £230 a ton. The next question in shareholders' minds must be whether the production targets are to be raised next year. Though the group has been working at full capacity since the strike it has not formally abandoned the policy of restricting output.

BRITISH SOUTH AFRICA COMPANY

ALTHOUGH the directors of the British South Africa Company have left the ordinary dividend for the year to September 30th unchanged at 30 per cent, they will pay a special "profits tax" interim dividend for 1958-59 of 5 per cent, effectively restoring the total dividend to 35 per cent (from which it was cut to 30 per cent in 1956-57 following the fall in the price of copper and hence in Chartered's royalty payments). The recovery in the price of copper must be one reason for restoring the dividend.

But there are others. First, though the major proportion of the company's portfolio is in the shares of the copper producers, "Chartered" has become an important investor in Kaffir shares. The income from these shares is now growing quickly. Secondly, 'Chartered" has qualified as an OTC, relieving its undistributed royalty income from British tax. In 1957-58 this led to a considerable saving, for though total gross income dropped from £10,918,141 to £7,971,197 (because of lower copper royalties and dividends), the tax charge also fell sharply from £6,087,141 to £3,607,980 so that the net income was only £467,279 lower at £4,363,217. The 15s. shares at 79s. 6d. xd. yield 6.6 per cent.

BRITISH HOME STORES

IN a year in which retail trade expanded by 3 per cent, British Home Stores, one of the smallest chain store groups, has reported a small decline in its trading profits from £1,686,997 to £1,640,140. Its net profits in the year to January 3rd were a mere £2,288 higher at £718,465 and this was simply the result of a smaller charge for profits tax. Thus it seems that the group's policy of modernising and developing its 80 odd stores is barely keeping pace with the erosion of margins under the pressure of rising costs and price-cutting competition.

In the past British Home Stores has been the subject of take-over rumours.

The directors have now raised the ordinary dividend from 4½d. to 5d. per 1s. unit and they also propose a 10 per cent scrip issue. On the new dividend the 1s. units at 8s. 7½d. yield 4.4 per cent; on the assumption that the payment will be maintained on the enlarged capital the yield is nearly 5½ per cent.

WAGON FINANCE

WAGON FINANCE is one of the few hire purchase finance houses that is not linked with a commercial bank. In 1957, the directors made a final call of 16s. per share on the company's £1 ordinary shares, eliminating the uncalled liability and raising the paid up capital from £250,000 to £1,250,000. Much of the new capital was put to work before the end of 1957. But as hire purchase agreements run for up to two years profits did not receive a substantial boost until 1958: gross profits in that year jumped by 29 per cent, from £414,931 to £533,948. In 1957 a final payment of 7½ per cent was made on the fully paid up ordinary capital; taken with the 3⅛ per cent interim dividend on the partly paid capital, this represented an effective annual rate of 15 per cent. For 1958, the dividend has been raised to 17½ per cent. This dividend absorbs £125,781 from a net profit that is £64,837 higher at £244,954.

Wagon Finance had capital resources of £870,000 on December 31st, 1956, and this helped to support £3,190,000 in hire purchase paper. A year later its capital resources had risen to £1,973,000 and £4,187,000 was held in hire purchase paper. Presumably there was another increase in business last year, especially in the last two months after the lifting of HP controls. The yield of 4.4 per cent on the £1 ordinary shares at the current price of 80s. looks forward to further growth, but it is higher than the yields offered by the shares in those HP finance houses that are now associated with the joint stock banks.

LIEBIG'S

PROFITS of Liebig's Extract of Meat have been disappointing in recent years, but those investors who held on to their shares are now rewarded, for the advance in gross profits from £1,168,376 to £2,022,101 in the year to August 31st more than regains the ground lost in the three preceding years. This recovery is marked not only by the transfer of £624,002 (against £36,954) to subsidiaries' reserves but also by an effective increase in the ordinary dividend. A "profits tax" interim of 2 per cent, tax free, for 1958 has been declared in addition to the ordinary dividend of 11 per cent, tax free, which was paid in the last three financial years. The market in the £1 shares has not been very active and after the announcement the shares were at once marked up by 7s. 9d. to 66s. 9d. xd., to yield 6½ per cent.

It looks as if the reorganisation of the group and its capital development programme has put its affairs on the right road again. Following the net exchange loss of £181,000 in 1956, as a result of the depreciation of Argentinian and Paraguayan currencies, profit margins in 1957 were squeezed by the pressure of rising costs on a static turnover, substantial spending on advertising and sales promotion, and a drastic writing down of stocks following the closing of the Sudan factory. But the chairman was able to tell shareholders last February, when five months of the financial year had passed, that remedial measures had already been taken. The price of "Oxo" was raised in September 1957, marketing expenses were curbed, the sales division reorganised, and the medical side of the business streamlined. Mr Carlisle also said that the adoption of modern productive techniques was producing results.

INVERESK PAPER

TRADE in the paper manufacturing industry began to pick up in the second half of 1958 after two years of recession, but by then a good deal of new productive capacity had been installed and some of it was still not being fully utilised. And in September the directors of Inveresk Paper said that profits for the full year to September 30th would be little different from those of 1956-57. They then left the interim ordinary dividend unchanged at 1½ per cent, tax free. But the preliminary statement now shows that in fact gross profits went up by 11 per cent, from £2,720,141 to £3,012,268.

Like the other paper manufacturers, Inveresk has been a big investor in new plant and machinery and this has enabled it to hold its own in the competitive struggle. Now the directors say that they have set aside £700,000 too much in depreciation since 1947 and they have this year transferred this sum to capital general reserve. On the new basis for depreciation they have allocated £482,064, that is £122,043 less than in 1956-57. Thus the group's net profits have risen from £790,623 to £1,022,872. But the total ordinary dividend is left unchanged at 8 per cent, tax free. The decision to plough all the additional profit back into the business will have helped to cover capital expenditure last year. The 6s. ordinary shares at 13s. yield 6.4 per cent.

JAGUAR CARS

THE patience of ordinary shareholders in Jaguar Cars has been rewarded. Following the doubling of its net profits in the year to July 31st (from £315,321 to £624,337), the ordinary dividend has been raised from 12½ to 17½ per cent and, in addition, a special interim of 12½ per cent for 1958-59 will be paid. Moreover, there is to be a two for one scrip issue. This was the self-financing company *par excellence*, and the news of its more liberal policy was greeted by a strong advance of 5s. 4½d. in the 5s. ordinary units (which at 55s. 4½d. yield 2.7 per cent) and in the "A" units (which at 50s 9d. yield just under 3 per cent).

London Stock Exchange

FIRST DEALINGS:	Jan. 28	Feb. 11	Feb. 25
LAST DEALINGS:	Feb. 10	Feb. 24	Mar. 10
ACCOUNT DAY:	Feb. 17	Mar. 3	Mar. 17

TURNOVER in gilt edged stocks had contracted by Friday's close although short-dated issues remained firm on the fall in the Treasury bill Rate to 3 per cent. But revived hopes of a cut in Bank rate and some investment buying led to widespread gains by Wednesday's close. The *Financial Times* index of Government Securities rose fractionally over the week from 86.96 to 87.04.

Industrials fell at first on end-account profit taking and the setback on Wall Street, but the market went ahead again on Wednesday following the start of the new account. Unit trust buying was again evident and sentiment was helped by the recovery on Wall Street. *The Economist* Indicator gained 1.6 to 249.9 over the week. Among miscellaneous issues, Glaxo rose by 4s. 9d. to 45s. 6d. and Hoover by 3s. 6d. to 61s. 3d. Gestetner "A" were 1s. higher at 24s. and Metal Box 6d. better at 70s. 9d. But Unilever NV lost 2s. 6d. to 106s. 6d. and Limited 1s. 9d. to 92s. 3d. There were some good rises in engineering issues, TI gaining 4s. 3d. to 83s. and Davy and United 2s. 9d. to 92s. Among electricals, Phillips lost 2s. to 99s. 3d., but "Emmies" rose by 2s. 4½d. to 55s. 4½d. In an otherwise quiet building section Associated Portland Cement rose by 9d. to 52s. 9d. and Goodlass Wall by the same amount to 30s. In textiles, Lister regained an earlier loss of 10½d. on the passing of the dividend, to close unchanged on Wednesday at 10s. 10½d. Food shares were firm; United Dairies jumped by 4s. 3d. to 69s. in advance of the interim dividend announcement. Gorringe were outstanding in stores shares on take over rumours, advancing by 7s. 3d. to 53s. 9d. GUS, which have attracted some American interest, rose by 3s. 3d. to 38s. 9d., but the "A" shares gained only 4½d. to 33s. 9d. HP and Bank shares held their earlier rises following the lifting of CIC restrictions; UDT gained 4s. to a fresh peak of 13s. 6d. National Provincial was 3s. higher at 93s. 6d., Royal Bank of Scotland 1s. 9d. better at 69s. 3d. and Westminster "B" 2s. 6d. higher at 55s. 9d.

Oil shares were weak at first on the setback on Wall Street and renewed Middle Eastern fears, and the subsequent rally failed to recover all the ground lost. Ultramar's fall of 3s. 9d. to 57s. 3d. was particularly sharp.

Kaffirs closed quietly on Friday after their strong rise and encountered some selling at the end of the old account. But Wednesday's rally was strong and widespread as American buyers reentered a market short of stock. OFS issues forged ahead, FS Geduld gaining 1s. 10½d. to 148s. 1½d. and Western Holding 3s. 1½d. to 138s. 1½d.

THE MONEY MARKET

ENCOURAGED by the large amount of help given by the authorities last week the discount houses sharply raised their common bid for Treasury bills—by 7d. to £99 5s. per cent—at last week's tender in the hope of securing a higher allotment. The offering was, however, under-allotted; the authorities allotted only £190 million of the £210 million. This reinforced the impact on the average rate, which fell from £3 2s. 1.68d. per cent to £3 0s. 0.22d. The discount market secured 45 per cent of its applications at the common price, compared with 31 per cent at the previous tender. "Hot" bills commanded a rate of 2⅛ per cent after the tender and the market cut its buying rates for fine paper by ⅛ per cent.

The authorities gave some assistance, both directly and indirectly, but credit has remained in keen demand and as much as 3⅛ per cent has been willingly conceded for overnight loans. Two or three houses took seven-day loans at 4 per cent from the Bank of England on Monday and Tuesday.

The average rate at which the US Treasury sold its latest issue of three month bills rose, from 2.721 per cent to 2.810 per cent, and the rate for six month bills rose from 3.107 per cent to 3.326 per cent.

Membership of F.S.S.U. and Children's Allowance Scheme.—Applications must be sent not later than March 15, 1959, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF EDINBURGH

DEPARTMENT OF POLITICAL ECONOMY

Applications are invited for the post of Assistant in Economics in the above Department. Salary Scale £700 x £50 to £850 per annum, with superannuation benefit, and family allowance where applicable. Application will be considered from students who expect to graduate with Honours in Economics at the end of the present academic year. The successful applicant will be expected to take up duty on October 1, 1959.

Further particulars may be obtained from the undersigned, with whom applications, giving the names of two referees, should be lodged not later than March 7, 1959.

CHARLES H. STEWART,
Secretary to the University.

COUNCIL OF EUROPE

COMPETITION IN ADVANCED EUROPEAN RESEARCH

A competition will be held every two years under the auspices of the Council of Europe. Candidates will be required to write a work on a given subject relating to a question of European importance.

The subject of the competition for 1960 is:

"Consequences of the use of nuclear energy for the European mode of life."

Works must be of a high academic standard. They must not have been previously published, and must represent an original contribution on the subject set. They may be written in any one of the following languages: Dutch, English, French, German, Italian, Spanish.

The amount of the prize will be one million francs. The Council of Europe will be responsible, in agreement with the author, for the publication of the winning thesis. Candidates should submit six typewritten copies of their work to the Secretariat of the Council of Europe, Strasbourg, France, before December 31, 1960. The Secretariat-General will arrange for the work to be transmitted to an international jury specially appointed to award the prize.

Further information may be obtained from the Secretariat of the Council of Europe.

B.B.C. requires Economics Correspondent, News Division, who will be the Corporation's economic and financial specialist and will be required to gather and prepare news of economic and financial interest in a form suitable for use in news bulletins and to broadcast his own brief reports and talks and to conduct interviews in newsreels and other topical programmes in Sound and Television. He will work to Head of News Talks, and as necessary in co-operation with producers in the current affairs field. Candidates should combine specialist qualifications in the financial or economic field with first-rate journalistic ability and experience. News sense and a flair for brief and simple exposition are essential. Candidates who reach the final short-list will undergo screen and microphone tests. Salary £1,725, rising by seven annual increments to £2,345 p.a. max. Requests for application forms (enclosing addressed envelope and quoting reference G.999 (E)) should be made to Appointments Officer, Broadcasting House, London, W.1, within five days.

ASSISTANT AGRICULTURAL ECONOMIST: DEPARTMENT of AGRICULTURE for SCOTLAND. Pensionable post in Edinburgh for man or woman, aged at least 21 and under 28, on 1.1.59 (with extension for regular Forces Service and Overseas Civil Service), with 1st or 2nd Class honours degree in agriculture, economics or related subject, or other high academic qualifications in appropriate subjects. Duties include investigation of changes in economic conditions of agricultural industry and factors affecting agricultural output, analysis of farm accounting data and agricultural statistics. Men's salary scale: £635-£1,120. Starting salary above minimum in certain circumstances. Promotion prospects to £2,070 and higher.—Write Civil Service Commission, Burlington Gardens, London, W.1, for application form, quoting 4910/59. Closing date March 4, 1959.

AMERICAN COMMUNICATION CONCERN in Tripoli, Libya, requires the services of a QUALIFIED ACCOUNTANT. Must have at least 5 years' commercial experience. Salary commensurate with experience plus $4.00 daily cost-of-living allowance.—Airmail replies to Hycon-Page, P.O. Box 666, Tripoli, Libya, giving full details of personal history, previous employment, and salaries received.

A SOLICITOR, aged about 30, is required for employment in the Secretariat of a leading Company in the pharmaceutical industry. The duties include assisting the Secretary of the Company with legal, general secretarial, and administrative work. The appointment is likely to appeal to a young Solicitor who wishes to make a career in industry not exclusively on the legal side. Previous experience of work of a similar kind would be an advantage. A good salary is offered and there is a contributory pension fund in operation.—Applications, giving age, details of education and experience, should be forwarded to the Personnel Department (Reference H.M.J.), The Wellcome Foundation Limited, The Wellcome Building, Euston Road, London, N.W.1.

THE UNIVERSITY OF NEW SOUTH WALES

LECTURER IN HISTORY

The University invites applications for appointment to the position of LECTURER IN HISTORY, SCHOOL OF HUMANITIES AND SOCIAL SCIENCES.

Salary: £A1,508 rising £A2,108 per annum. Commencing salary according to qualifications and experience.

Applicants should possess a degree in History, with honours or equivalent qualifications.

First-class ship fares to Sydney of appointee and his family will be paid.

Subject to passing a medical examination, successful applicant will be eligible to contribute to the State Superannuation Fund.

Four copies of applications, including the names of two referees should be forwarded to the Agent General for New South Wales, 56-57, Strand, London, W.C.2, and a copy forwarded by airmail in an envelope marked "University Appointment" to the Bursar, Box 1, Post Office, Kensington, New South Wales, Australia, by 7th March, 1959.

UNIVERSITY COLLEGE, IBADAN, NIGERIA

Applications are invited for two posts, one in Economics and one in Sociology. Initial appointments (three years commencing October 1, 1959) on one of the following salary scales according to qualifications and experience.

Senior Lecturer: £1,700 x £75—£1,925 per annum.
Lecturer (Grade I): £1,400 x £50 — £1,650 per annum.
Lecturer (Grade II): £1,000 x £50 — £1,300 per annum.
Assistant Lecturer: £800 x £50 — £900 per annum.

Passages paid for appointee, wife, and three children under 11 years, on appointment, overseas leave and termination. Children's, car, and outfit allowances. F.S.S.U. Part-Furnished accommodation. Detailed applications (six copies), naming three referees, by March 26, 1959, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

UNIVERSITY OF DUBLIN

TRINITY COLLEGE

Applications are invited for appointment as Assistant in Economics and Statistics. The salary will be £400.

Further particulars may be obtained from the Registrar, Trinity College, who will accept applications (three copies) until March 14, 1959.

UNIVERSITY OF ABERDEEN

Applications are invited for an ASSISTANT IN POLITICAL ECONOMY. Salary scale £700 to £850 with appropriate placing. F.S.S.U. and child allowance.

Particulars from the Secretary, The University, Aberdeen, with whom applications (two copies) should be lodged by February 28, 1959.

APPOINTMENTS REQUIRED

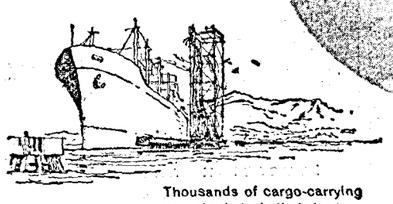
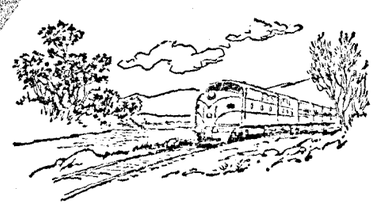
Countless homes and industries use Caltex *petroleum products* for clean, odor-free heat, power and for efficient lighting.



Motorists find that Caltex service stations offer the finest lubricants and *fuels* their *cars* can use.



Caltex fuels and lubricants for the farm have helped increase the effectiveness of mechanization.

Thousands of cargo-carrying vessels that ply their trade across the seven seas rely on extensive *Caltex* bunkering facilities.

Many rail and other transport systems depend on Caltex lubricants and fuels for swift, efficient motive power.

Serving the peoples of over 70 countries

In the search for oil... in refining... and in marketing a broad array of Caltex petroleum products, the Caltex trademark symbolizes the help and service this company provides the free peoples of many nations in the Eastern Hemisphere.

A major part of this service is the availability to local industry, agriculture and motorists of fuels, oils and lubricants of the finest quality that man has been able to create.

In these and in many other ways Caltex continues to serve nations, economies, individuals.

ANNUS MIRABILIS

In 1836 Callan, inspired by the work of Faraday, invented the induction coil, ancestor of the transformer of today. His instrument consisted of two separate windings on an iron core, and by means of an interrupter he induced a current of very high e.m.f. in the secondary circuit. Callan paid great attention to insulation, using a paste made from wax and gutta percha.

Shock Tactics

Insulation was a major problem of the early pioneers, and one that persisted until recent years. The introduction of Araldite (regd) made available an insulating material combining resistance to corrosion, durability, immunity from the effects of humidity and temperature changes, toughness combined with flexibility—in addition to excellent electrical properties.

Transformers potted in Araldite casting resin by A. Reyrolle & Co. Ltd.

60 VICKERS TRACTORS TO JOIN THE ARMY

No wonder the Army chose the Vickers Vigor tractor

1. 180 Belt horse-power.
2. Rolls-Royce six cylinder supercharged diesel engine.
3. Direct Drive, six - speed gearbox, constant mesh gears provide "on the move" gear changing.
4. 2.18 to 9.73 miles per hour.
5. Three reverse speeds.
6. Clutch and brake steering.
7. Powerful hydraulic steering clutch release.
8. Comfortable bucket seat.
9. Unit assemblies for easy maintenance.
10. Articulating suspension with large diameter road wheels.
11. Contour clinging oil-sealed tracks.
12. Full electrical equipment including electric starting.

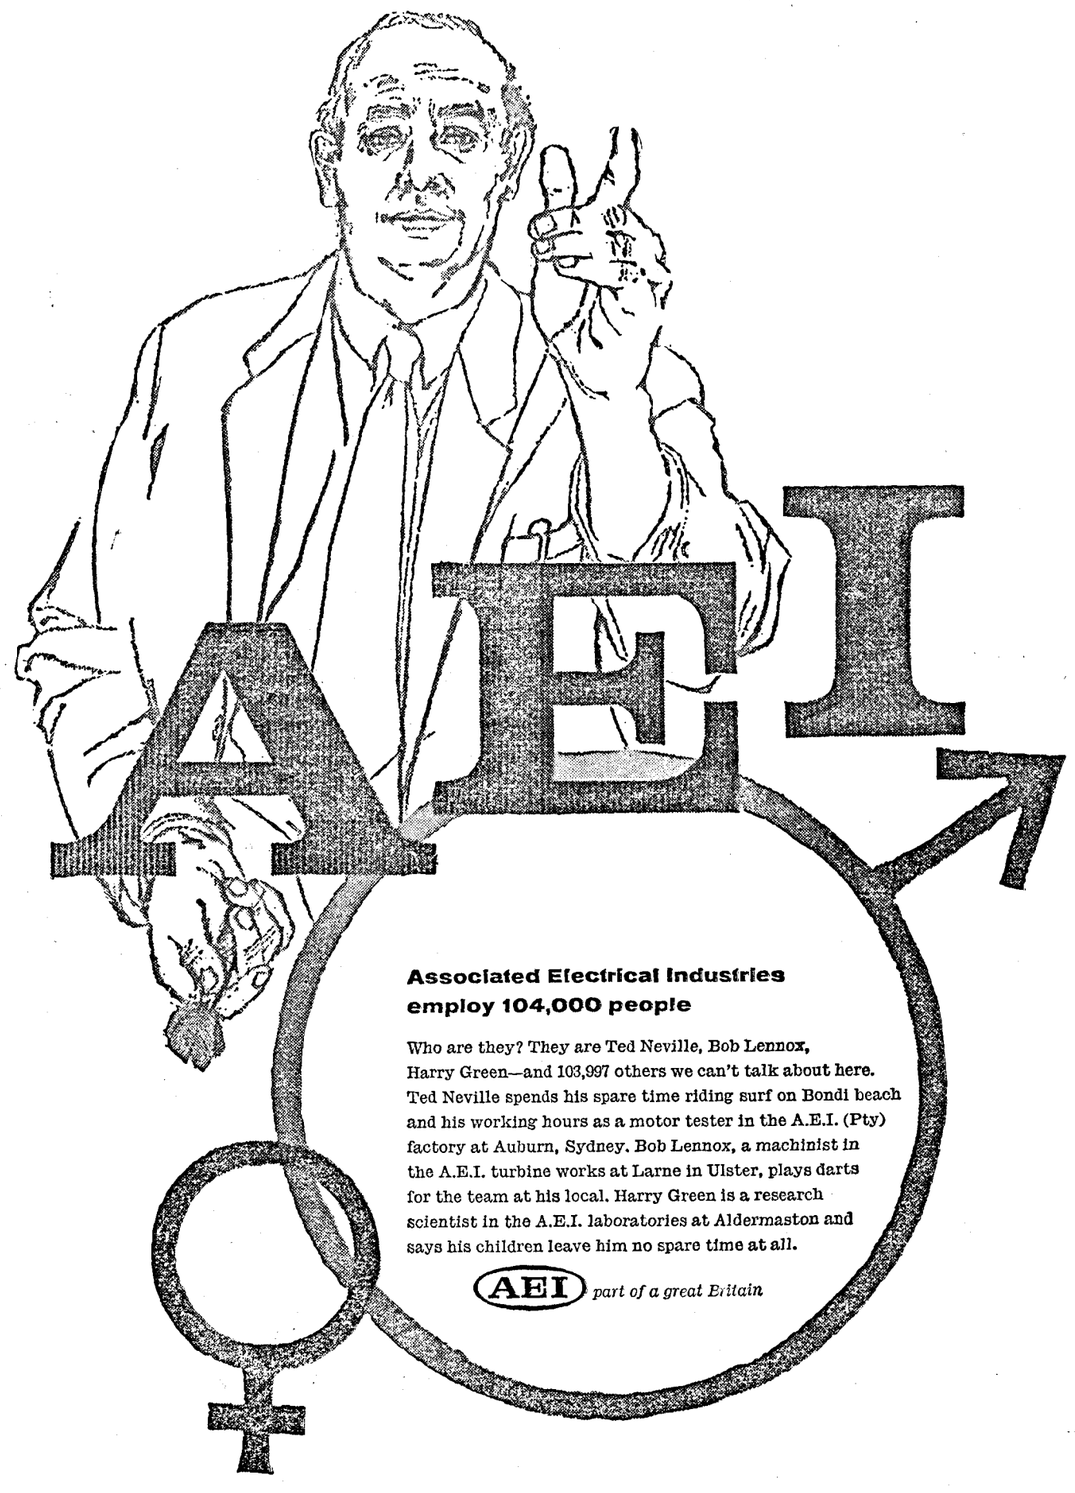
One of the biggest orders for heavy crawler earthmoving equipment ever placed by British Army

Month in, month out the British Army has been putting Vickers earthmoving tractors through the toughest tests in the world. Now as a result of these gruelling trials the Army has chosen Vickers tractors, and chosen them in a big way.

Contracts just placed by the Ministry of Supply for 60 Vickers Vigor tractors and related equipment are worth in the region of three quarters of a million pounds. They make up the biggest order ever placed for British-built heavy crawler earthmoving equipment.



The Vickers Vigor tractor is the fastest and most efficient heavy tractor ever built. Together with Vickers Onions earthmoving equipment it has been proved in big jobs all over the world.

A dealer organisation has been built up so that operators of Vickers tractors in Britain and in over 50 other countries can rely upon quick and efficient service and spares supply at all times.

Vickers leads in faster earthmoving

You never boil over with fury when your electric cooker is fitted with a Simmerstat. It's a kind of electric tap that keeps everything under control, gives the exact heat you want on boiling plates and grill.

Associated Electrical Industries Limited

Oh, the little more, and how much it is...

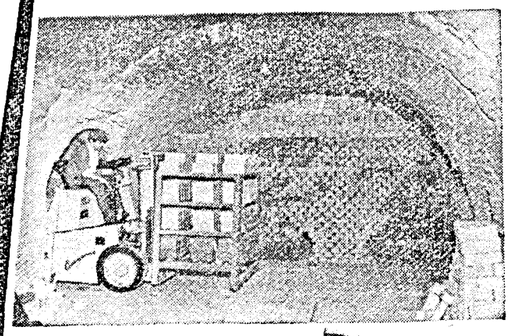
WHAT IS THIS 'PEAK'? To Londoners going to and from their work, it means the half hours in the morning and evening when the Underground is most congested and the buses, entangled in traffic, move slowly along with full loads of passengers.

Custom apparently dictates that everyone who can shall work from 9 to 5.30. So 145,000 people flood into the Central Area of London by Underground between 8.45 and 9.15 a.m.; 155,000 go out in the evening between 5.15 and 5.45 p.m. No less than 89,000 crowd into the stations in a single quarter of an hour between 5.30 and 5.45 – 5,000 of them into Oxford Circus alone. On the buses, 56,000 people are picked up in thirty minutes between 5.45 and 6.15.

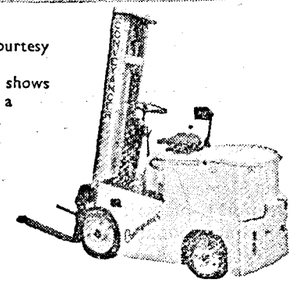
If enough employers and their staffs would move their starting and finishing times *by only a quarter of an hour*, all would benefit immeasurably, because travel would be more comfortable. Excessive congestion would disappear from the stations and the trains; the bus queues would dwindle. Can it be done? London Transport believes it can.

Those who have adopted staggered working hours have never regretted it. The Traffic Development Officer, London Transport, 55 Broadway, S.W.1, will be glad to advise anyone who is thinking of moving out of the peaks, for the problem grows more serious every month. Write to him, please.

...the little less, and what worlds away!



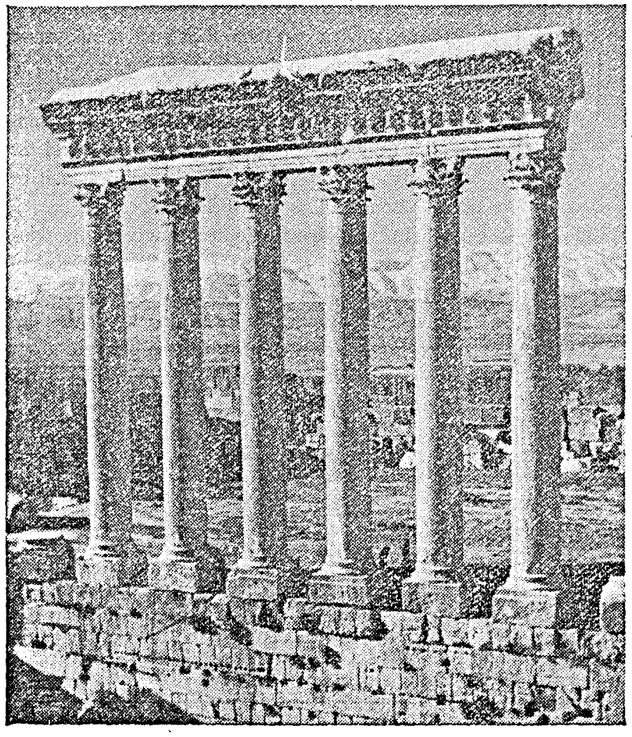
talking about Conveyancer



The Tushingham Metallic Brick Co. of Whiston in Lancs. is an old-established company founded in 1863 by the grandfather of the present Managing Director. The company owes its continuous success largely to the enterprise and foresight of successive generations of the Tushingham family.

The company's first Conveyancer was purchased on 6th May, 1955, since when a further two machines have been installed. The machines are used for handling unit loads of bricks in the yards and in the Hoffman and Transverse Kilns.

When bricks are placed to stock, the overall handling cost is reduced by 80 per cent., and many other less tangible advantages have resulted from the introduction of Conveyancers.



Photograph, by courtesy of the Tushingham Metallic Brick Co., shows the E4-20 entering a kiln with unit load bricks.

THERMOTANK IN SOUTH AFRICA

Now they can give of their best

at a Johannesburg Building Society

Staff in the new headquarters of the United Building Society, the largest in South Africa, are continents away from the heat or chill of the nearby Johannesburg streets. Thermotank air conditioning provides perfect comfort in this ten-storey building, one of a series of the Society's offices throughout the Union which have Thermotank installations. Other Thermotank contracts in South Africa include the head office of the national power authority, the Electricity Supply Commission; the air conditioning of seven department stores; brewery plant, hospitals, and fan equipment for gold mines.

Thermotank can plan, design and install air conditioning equipment for any requirement in any part of the world.

A WORLD OF BETTER CLIMATES WITH THERMOTANK

Here are a few more examples of world-wide service from Thermotank:
BRITAIN Conversion of the liner s.s. 'ORCADES' to be carried out, providing an installation with a capacity of 14,000,000 B.T.U's per hour.
UNITED STATES Contracts for Texas Instruments, Standard Oil, American Telephone and Telegraph Company, John Hopkins University, Ford Motor Company and General Motors.
MIDDLE EAST Installations include the Fao Port Control and Wireless Station Building on the Persian Gulf and the Iraq Spinning and Weaving Company's mills near Baghdad.
AUSTRALIA Full air conditioning for the Melbourne office of Bank of Australia and New Zealand. Also hospitals, hotels, schools, laboratories and current shipping including two 19,000-ton vessels.

AROUND THE WORLD IN HALF AN HOUR

YOUR TRAVEL AGENT
CAN BOOK YOU SAS FROM
ANYWHERE TO ANYWHERE
IN THAT TIME

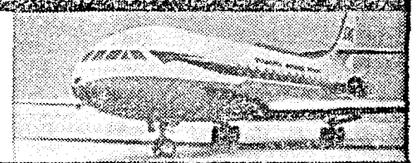
For example, over the Pole to Tokyo This famous SAS short-cut saves you many hours. But you find that SAS time-saving starts at your travel agent. Within half an hour the SAS world electronic reservation system has been in touch with Tokyo and your booking has been made and checked back all along the route. SAS moves fast—even on the ground.

YOU FEEL
LIKE A GUEST
WITH SAS

A guest. That's how you feel when you fly SAS—a personal guest of the Scandinavians.
Your flight to Tokyo shows you what Scandinavian hospitality means...

A face in the crowd

London Airport. Nice to see the friendly face of the SAS man who smooths your way through the crowd and on board your aircraft. SAS men are on the job right round the world at 85 airports.

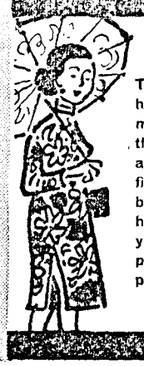


Copenhagen here I come!

A trans-polar DC-7C awaits you at Kastrup Airport. The flight from London takes 2 hours 50 minutes. Time enough to enjoy a first-class meal and a fat cigar. The smoke won't bother your neighbours because the air in the cabin is changed once a minute.

CARAVELLE AT KASTRUP

Look!—there's a Caravelle carrying the SAS colours. She's one of sixteen due for service on their European and Middle-East routes. This new all-jet airliner has twin Rolls-Royce engines so powerful that one alone can power her from take-off to touch-down. Yet the Caravelle has the world's quietest cabin.



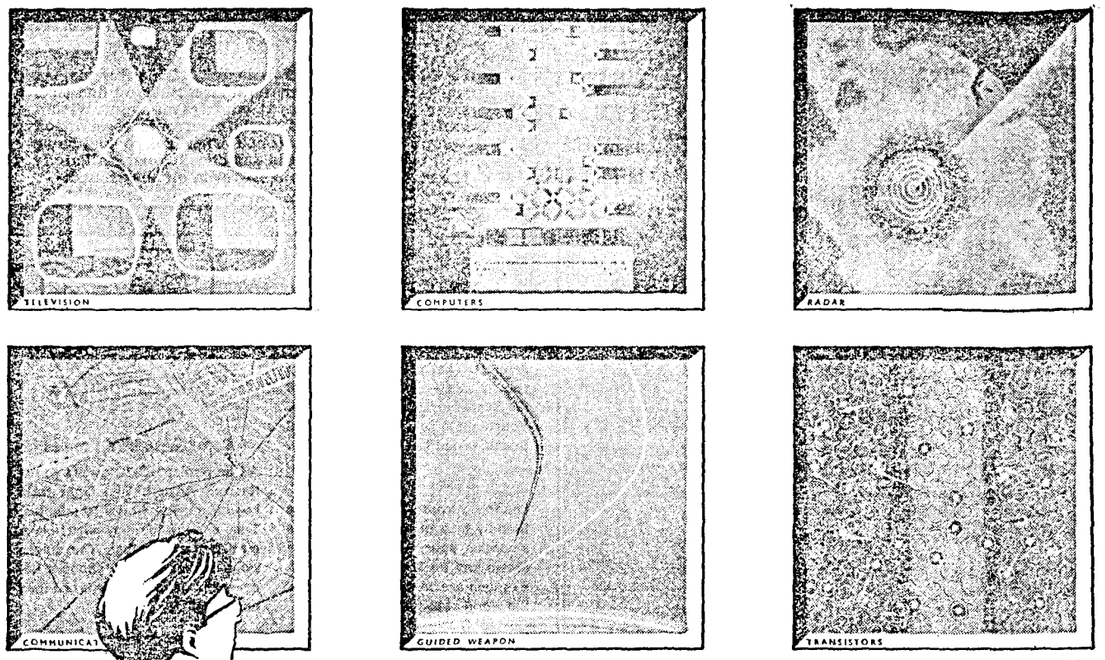
HAUTE CUISINE

You're aboard the giant DC-7C—relaxed in the seat you expressed a preference for when you booked. You think again of food. Your table is set with Danish China, Norwegian Linen, Swedish Crystal... and time flows by unnoticed as you surrender completely to the magic of SAS chefs... caviar, pâté de foie gras, filet de boeuf, sauce Moulin Rouge, French cheeses, Danish pastry, succulent fruits, wines, champagnes, liqueurs! Your dinner on this DC-7C is one you'll always remember.

YOUR CAPTAIN If he is Hedall Hansen, he will be the man who was Chief Pilot on the historic SAS inauguration flight over the North Pole, from Copenhagen to Tokyo in 1956. He is proud that SAS was first over the Pole. The DC-7C he commands is the world's longest range airliner (about 4,500 miles) built in a special SAS version for Polar navigation. You cross the Pole, above the weather, at 20,000 feet. You feel on top of the world—with a Polar Cocktail in your hand!

Gateway to the East

Touch-down in Tokyo—only 35 hours from London by SAS. Within minutes you're in a car speeding to the town centre. SAS have looked after everything for you—even confirmed your hotel bookings and business appointments. In your hand, the SAS "Gateway Pass" gets you the best service at Tokyo eating places and nightclubs. SAS is the perfect host.



ASK YOUR TRAVEL AGENT, HE KNOWS

SAS

Services between London and Scandinavia are in pool with BEA

Working with us

If you were a science graduate working with us, you would find yourself at the very hub of a virile and expanding industry. For ours is an organisation which is making a unique contribution to progress in electronics.

In the seven Mullard research, development and applications laboratories, scientists are engaged on a diversity of projects which include electronic valves and semiconductors, radar and telecommunications, radio and television, automatic control devices and computer memories, *particle accelerators and ultrasonics.*

In sixteen modern factories, they are making an important contribution to the production of valves, tubes, transistors and components (which flow from these plants in their millions) and specialised electronic equipment.

This is the stimulating environment in which you would find unusual opportunities for advancement, satisfying work and very good conditions of employment.

Would you like to work with us? There are openings for graduate mechanical and electrical engineers, physicists, chemists and metallurgists. Why not ask for a copy of our book 'Opportunities in Electronics' which is obtainable through your University Appointments Board?

Mr Macmillan's Task

MR DULLES'S renewed and grave illness has made Mr Macmillan's trip to Russia both more necessary and more difficult. Just how important was Mr Dulles's work of harnessing and concentrating western policy towards the communist alliance becomes fully apparent now when he has been obliged to lay it down. Such a work necessarily involves tacking and compromising between different allied interests and attitudes, and often when Mr Dulles laid himself open to criticism it was out of deference to an attitude which, with his own consistent—and uncommon—intellectual tenacity, he would not, left to himself, have shared.

The latest crisis in east-west relations, which concerns Berlin, has been gathering for three months; there are three more to go before it comes to a head. Berlin must necessarily bulk large in Mr Macmillan's talks in Moscow; it is not much use making sensible arrangements for trade and cultural exchanges if they are all to be brought to nothing by a head-on clash in Germany. Three months ought not to have been too long for the West to arrive at a reasonably co-ordinated attitude if consultation between governments had been all that was needed. In fact, however, the different attitudes to be reconciled have so far been less between the western capitals than within some of the governments themselves (particularly the American and west German), which have not yet been able to make up their own minds at what point the risks of flexibility begin to exceed the risks of immobility. (The course this debate is taking in Washington, including Senator Mansfield's unorthodox contribution to it, is more fully discussed on page 685.) They are agreed, as the western notes to Moscow showed on Monday, on their refusal to budge from Berlin and on their readiness to discuss in a conference of foreign ministers "the problem of Germany in all its aspects."

Both these attitudes are altogether sound. But, taken together, they do not go very far. The offer to have a conference is something short of a negotiating position. How much is still undecided can be guessed from the implied refusal in the western notes to accept the east German state as custodian of the approaches to Berlin, together with the implied offer to invite east German representatives to the foreign ministers' conference on the same footing as west Germans—that is, as "advisers" with the right to be consulted.

A basis of logic can be found for this distinction. But the Russians, as conquerors, can assert as much right to transfer sovereignty to a government in east Berlin as the western powers, as conquerors, can claim to transfer sovereignty to a government in Bonn; and if the western powers had been ready to recognise east Berlin, as the Russians recognise Bonn, the possibility that the Russians might also devolve responsibility for the Berlin road on the east Germans would not have caused an international crisis. The western governments have not yet in fact resolved for themselves the key question, which is not what they will do if they are stopped, but what they will do if they are confronted with authorities

whom they do not recognise, ready to let them through. Will they refuse to be waved through the road crossing-point, and given the all-clear on the railway and the air routes, by east German instead of Soviet officials? If they refuse, what will they do instead?

The east Germans, if they handle themselves cleverly, can make it impossible for the West to stick to its present theory of total non-recognition without giving the East a clear opportunity to get them on the wrong foot. Wednesday's exchange between Mr Khrushchev and President Eisenhower showed how concerned each side is to put the onus of resorting to force on the other. Thus an armoured thrust along the autobahn is not really an answer, as Mr Macmillan, and evidently also Mr Dulles, knows. The alternative, and perhaps more serious piece of western planning against a Berlin incident in May seems to be concerned with the possibility of a renewed airlift—not, it seems, to keep the economy of west Berlin going, but simply to supply the garrison, it being assumed that west German civil traffic could continue to flow to and from Berlin under east German control as it does at present. As is obvious, the assumptions and the planning are still hypothetical. It is, however, possible to see what anomalies the western allies may get into in their anxiety to plan some course of action, while respecting each other's taboos.

BUT what is started in Berlin this summer may have to last for many years, not just a few months. It is to be hoped that the three western powers with occupation responsibilities in Berlin will take time between now and May 27th to consider what their position would be, not merely if an effort of this kind broke down, but if it worked. The United States, Britain and France would then have conferred on Bonn a monopoly of future western dealings with the east German regime, while retaining for themselves only the burdens and the risks of maintaining a garrison deep in east German territory. The Russians would have handed over their formal powers in east Germany to the communist regime there, but they would retain their effective power to intervene and their treaty right to keep troops on east German soil; and they, unlike the western powers, would have full relations with both German capitals. The United States, Britain, and France would be committed to maintain forces in Berlin by air, possibly for ever, while the Russians, the east Germans, and the west Germans between them controlled the land between Berlin and the North Sea. The three-power position in Berlin could be made intolerable.

A *de facto* recognition of the east German regime might easily be preferable to this unappetising prospect. But the western governments feel, understandably, that if they are passive and give way on this point, it will not be long before they are under pressure on another. No doubt they are right. Slowly and ponderously, the Russians have made up their minds that the present position of Berlin is to their disadvantage, a survival from a time when the balance of power was more heavily against them than it is now; while to the communist rulers of east Germany, free Berlin has been a humiliation and an irritant from the start. Both will sap and mine at Berlin whenever opportunity offers. In standing its ground, however, as indeed it must, the West has to choose means that will not land it in a worse position than it is in already. It has not done more than grope after such means yet.

HERE is Mr Macmillan's difficulty. He has called his trip to Moscow a "reconnaissance," and indeed he cannot commit the Americans, French and west German governments in advance of their meetings in March and April. The Russians, however, would not be interested in having their position reconnoitred by somebody who could not be usefully reconnoitred himself; they will not reveal their mind, beyond the flinty cranium they have already presented, unless they can get a look into the Prime Minister's, and through it a look into the minds of the western powers. To what extent can Mr Macmillan try out ideas in Moscow on behalf of his colleagues in the western alliance? The dome of General de Gaulle's head is as flinty just now as Mr Khrushchev's own; no encouragement to Mr Macmillan in his venture has come from Paris. Counsels in Bonn have been divided ever since Mr Khrushchev set the Berlin crisis in motion; there has been a marked lack of the accustomed certitude that the Chancellor knows best, and it is just possible that Dr Adenauer himself may be privately aware that the German cause is in sore need of any helpful ideas that Mr Macmillan can produce for it. Washington, finally and most important, is tragically deprived for the moment of a man of its own who can take the initiative.

Very much, in these circumstances, will be left to the Prime Minister's own sense of what he can usefully attempt. He cannot at this stage expect to carry his colleagues of the alliance far along any new path. Certainly he will not wish to tread new paths himself unless he finds in Moscow an attitude that makes innovation hopeful. But without some new departure in German policy, the two sides in Germany are steering towards at worst a violent clash, at best a prolonged and somewhat ridiculous campaign of attrition.

No self-evident alternative course is available ready-made, even if Mr Macmillan decides that the state of the western alliance would permit him to try it if there were. There has, however, been enough discussion in these past few months to make it plain that the only hopeful compromise would be one that combined an immediate arrangement to avoid tension in Berlin and its approaches with a longer-term plan, spread in stages over several years, to make the foreign occupation of Berlin unnecessary in the only possible way, by reuniting Germany. The Russians have still to be persuaded that such a programme could be better for them than the indefinite use of Germany as a theatre of the cold war; but then, so have the western governments.

Farm Policy for Cynics

This year's review of agricultural prices started last week. This article examines how far there is any logical case for any agricultural support in Britain at all. An article next week will discuss how it should be directed.

THE cynical view of agricultural policy is that—beneath a camouflage of strategic, social and economic arguments—Britain is unfortunately stuck with a purely political necessity to sweeten farmers. The only open question—admittedly one capable of keeping the most cynical economists long and usefully occupied—is how to sweeten them with least damage to everyone else.

To reject the cynical view entirely would be starry-eyed indeed. But there are practical disadvantages in resting content with it. Correctly or not, the cynic gets the reputation—as *The Economist* certainly does—of being blindly and cussedly anti-farmer. Moreover it does not necessarily follow that arguments used as camouflage, however speciously, have in fact no substance. What follows is an exercise by cynics, for realists, in camouflage-probing. Is there any real case for saying that agriculture should be supported more forcefully than any other industry? If so, (this will be examined in a second article) how should any such support be given?

PERHAPS the most popular argument for artificially boosting farm production is the strategic one. In two World Wars, starvation nearly beat us: therefore the more home-grown food, the safer. In its extreme form—and it is often stated so—this has always been manifest nonsense. A Britain committed to maximum self-support, and to the necessary dismantling of industry for the benefit of food production, would give an aggressor little more trouble than Denmark gave to Hitler in 1940. At the other extreme, however, a Britain peopled entirely by industrial producers (plus a few National Park wardens), and feeding exclusively on imports, would have been equally vulnerable—at least in the sorts of war history has known hitherto.

It is terribly difficult to say how far this has been changed by the nuclear revolution: by the fact that the fall out from two or three H-bombs over the closely packed fields of Britain might make it unsafe to eat a large part of Britain's home-grown food for years to come. But four hundred Russian submarines are four hundred plausible arguments against dismissing the strategy of siege as totally irrelevant even in a nuclear age. There is at least a case for saying that parts of the strategic argument still stand.

But this emphatically does not mean paying for a wartime volume of production, any more than for a wartime army, in time of peace. It means, in the one case as in the other, ensuring an adequate reserve, capable of being readily expanded in emergency. Seen thus, the question of agricultural support is very largely a technical one. Technical considerations do nothing to support the view that an emergency is best confronted with an intensive agriculture in full swing. The emergency need is for stored and readily available fertility, for farms and farmers as reservists—rather like the territorial army. How to achieve this end? What sorts of land deteriorate with disuse—into bracken and scrub, or sand-dune, or sour marsh? Which actually benefit by under-use, and what kinds of aid favour the maintenance, as a readily usable reserve, of each? What investment in equipment and stock makes the best sense in terms of wartime potential? The genuine strategic argument, in fact, has little in common with the camouflage version. And it has never been soberly worked out.

MUCH the same can be said of the economic argument concerning the terms of trade and the balance of payments. The short-term balance-of-payments argument—which implies that £1,400 million of home food production represents £1,400 million of gross saving in food imports, and thus saves the balance of payments from being in £1,400 million worth of mess—is terribly feeble; its survival even as camouflage is a discredit to the national intelligence. To turn a pound's worth of imported feeding-stuffs and domestic labour and capital into ten shillings worth of milk, eggs or bacon, burdening the export industries to meet the difference and hurting their customers at the same time, may in very special circumstances be a necessary counsel of despair. It cannot possibly be a sound permanent policy.

The long-run terms-of-trade version deserves more attention. The extreme version of this argument, which deduces the prospect of near-famine food prices from the Malthusian arithmetic of world acreage and world numbers, has taken a fearful beating since its heyday just after the war. The terms of trade have obstinately refused to conform to Malthusian logic. Most people would agree that there have been three reasons:

(1) Hunger in Asia or elsewhere may well trouble our conscience and our peace, but if the hungry have no means of raising their bid for food their need cannot in itself swing food prices aaginst us.

(2) For political reasons, governments in every advanced country have kept more farmers on the land than are economically needed, thus artificially boosting the supply (and depressing the price) of food available on world markets.

(3) Better techniques—in the shape of improved fertilisers, pesticides, food strains, agricultural husbandry—have increased potential yields per acre everywhere, and in at least some areas hitherto backward farmers have recently been much more ready to improve their efficiency than the pessimists had expected.

One must expect that the educational revolution among backward farmers (and the invention of remarkable new fertilisers) will go on; indeed it could conceivably go on at a pace which would override even the gloomiest Malthusian calculations of the growth of world population to be expected in this century.

Hope, however, is not certainty. Also, the extreme subsidising of agriculture in the advanced countries now shows some small signs of diminution. Also, the poorer countries can be expected to eat more as they get richer; a major question here will be at what stage Asian countries will turn over to becoming major consumers of livestock products, especially meat (even Japan has not done so yet). Finally, many underdeveloped countries, whether getting richer or not, are bent on industrialisation; and success in this policy is liable (as, for example, in the case of Argentine beef) to affect world production from the side of supply as well as that of demand. All told there is, therefore, a reasonable case for arguing that in twenty or thirty years' time world food prices might be considerably higher relative to industrial prices, than they are now.

But although this prospect, like the chance of war, may be held to justify a "retainer" to the home producers—who, however badly their skill and equipment may be needed later, cannot wait indefinitely for the upswing—it is far from justifying indiscriminate support to high-cost high farming. For one thing, such support does everything to prod into equally high-cost industrialisation even those primary producing countries which have natural advantages as agricultural producers; it may be sensible to support British farms on the assumption that some much less economic American farms may eventually be allowed to die, but it cannot be wise to support them to an extent which causes much more efficient New Zealand farms to be squeezed out of production. For another, if British farmers are forced also to be keen businessmen, with abilities whetted by competition, they will be much more capable of responding to a shift of commercial advantage, if and when it comes, than would economic automatons who had been insulated from every vicissitude except the weather.

A VERY different kind of camouflage is the argument from social and aesthetic values. Among these imponderables, economic calculation finds no sure foothold. Still, one may start from the fairly safe proposition that most citizens, urban as well as rural, value the countryside. How far their attachment is a picture-postcard sentimentality, how far the expression of an Antaeus-like human need for contact (even at one remove) with the earth and its processes, how far a mere straightforward liking for elbow-room and clean air, need not be discussed. But it would be unrealistic to deny its existence merely because it cannot be gratified by purchases across a counter at a price reckoned in the gross national product. From concern with the countryside to solicitude for farmers is regarded by some people as a short and natural step. The farmer's activities have made, shaped and still sustain rural Britain. He is its custodian, worthy of his hire; if the hire is insufficient and the custody fails, it will perish.

This is extremely thin. Apart from the fact that intensively farmed land yields much less freedom and breathing space (and, many people would say, less beauty) than rough pasture, downland or wilderness, support for farming does little to prevent subtopian and industrial encroachment; when any farmer, whose land is handy to a town and suitable for building, finds it profitable to sell out, he does so. Any permanent safeguard must be sought right outside the market, in town and country planning—which, so far from raising the farmer's income, freezes one of his assets.

THE last camouflage-screen is the most nebulous of all; it is the social argument for preserving not the land but the farmer himself, and especially the small farmer. In its crudest form, this is simply the claim to that Right to Stay Put which is invoked at one time or another by practically every occupational group. "It is morally wrong that we should have to move, and if any of us are in fact moving (if there is a 'drift from the land') this proves that we are being badly treated." Except for believers in a system of hereditary castes this outright *immobilisme* condemns itself.

Nevertheless, realism does demand that the farmer be recognised as something of a special case. It genuinely is harder for him to "move"—not only economically out of his occupation but physically out of his home and socially into a radically different environment—than for an industrial worker or manager to change his trade. This recognition does not involve accepting such unverifiable judgments as that a "healthy" society needs a large number of farmers, or that there is a mystical superiority about the farmer's way of life, entitling him to preservation on the same footing as a religious foundation or a national monument. It does demand, in a society having some sense of mutual responsibility, that by one shock-absorbing device or another this especially difficult transition should be made as little disruptive as possible.

The cynic-proof residue of justifiable aid to agriculture thus reduces itself to two main kinds

(a) a retainer, suitable in total and in kind, to the farmer as reservist; and

(b) a measure of relief to the farmer as victim of his particularly intimate commitment to a particular livelihood.

An article next week will examine the present volume and types of aid and consider how economists—if not politicians up against the realities of the electoral bargain—might wish to modify them.

TOWARDS THE NINETEEN-SIXTIES—V

China Stands Up

In the decade since the communists took control China's aspirations to become a world power have grown rapidly towards reality. The fifth article in this series on the international outlook assesses the Chinese advance and the further tensions it is likely to create.

CHINA is a restless, dissatisfied and aspiring power; it is not yet a great and independent one. The tensions and inhibitions that China now causes in international politics belong to the existing struggle between the Soviet Union and the United States, in which Chinese policy cannot pretend to be decisive. China can pull the two world powers into the hostile postures of a major crisis, as it did in August by reopening the bombardment of Quemoy. But it is not strong enough to ensure that these crises can be exploited to the full Chinese advantage or even conducted on the communist side as China itself wishes.

Despite the Quemoy emergency, China does not yet seem to have wormed nuclear weapons out of Mr Khrushchev; Mr Khrushchev prefers to speak of a zone free of nuclear weapons in the eastern Pacific. Nor has Chinese pressure evidently reduced the United States political commitment to General Chiang Kai-shek on Formosa. China can no more act alone in the world than Britain, the power it is already specifically trying to overtake in heavy industrial capacity. Both have weighty claims to allied consultation; both have independent failures to record. But the China of 650 millions is an emergent power, developing at an unparalleled pace. In a decade it may have the strength to prosecute its own policy within the existing international system. In another two, depending on United States and Soviet progress, it may be able to upset the system altogether.

Since the consummation of its communist revolution in 1949, China has fought a United Nations coalition to a standstill in Korea. Its revolutionary pressure has been felt increasingly throughout South East Asia, compelling the creation of a nebulous western-sponsored defence system under the Manila treaty and more purposeful western action locally, principally in hastening independence for Malaya. It has, in two major crises, squared up to the United States aero-naval strength in the Formosa Strait. The Chinese strategists have not convinced Asian opinion that the United States is a paper tiger; yet they have seemed to defy American power and get away with it.

China, even the backward China of the nineteen-fifties, has presented the cold-war world with a more determined and sustained challenge to its immobility than the two great powers' own confrontations over Germany and the Middle East have so far done. But China has not done this entirely by, or for, itself. Its strength still depends on Soviet assistance. Its rulers' differences with the Soviet leadership have been more than comradely tiffs, and with each year that passes the quarrels are likely to deepen into distrust; yet within the present international system their significance is minimal. It did not need Mr Chou En-lai's address to the 21st Soviet party congress to show the west that if Sino-Soviet relations have their nuances they are based on a self-evident solidarity. This has been emphasised this month by a new economic agreement increasing Soviet aid to Chinese industry for the next eight years.

CHINA'S major preoccupation is to hoist itself, in the shortest time, into the seats of the mighty, to possess the heavy industry, the nuclear potential and the military strength of a world power. To do this it requires, simply and urgently, the cold war to continue, the tensions to persist, the crises to drag on, so that the Soviet Union will instinctively be aware of China, instinctively need it and answer its demands on Soviet capital and production. It is conceivable that, pushed to the wall, China would even prefer the disaster of a general nuclear war, which part of its vast population could hope to survive, to the ending of the present east-west rivalry. It would, its leaders reckon, have less to lose from the catastrophe than any other state.

For Peking—as for the present governments in Paris and Bonn—the most dangerous diplomatic development of all would be the start of straight horse-trading between the United States and the Soviet Union, after which Mr Khrushchev could really go in for consumer goods. If there is a long-term plan in Peking it is to delay the unlikely rapprochement between its great ally and enemy until Chinese power is sufficient to stand up to both.

There is still a very long way to go before China can do this. Had it not been for last year's spurt in steel and coal production, concentrated in the last, hectic five months, and the bumper grain harvest, China's bootstrap effort would have seemed to have been a task of generations. The new statistical crop allows, and is certainly meant to inspire, more optimism; perhaps Chinese statistics are still in the state Mr Khrushchev says the Soviet ones were in in 1952. Even so, the exertions have been herculean, and the present planned progress "by leaps and bounds" calls for still more. Steel production is to rise from 11 million tons last year to 18 million this year, within striking distance of Britain's current output of 19.6 million at less than full capacity. Coal production has soared past Britain's to 270 million tons, double the 1957 output, and is to be stepped up to 380 million this year. China's cotton

textile output also overtook Britain's last year. The rate of advance is impressive, even if, for a nation of 650 million, British production is not, in absolute terms, an enviable standard.

But the noise of gongs and firecrackers, with which last year's successes were officially greeted, has been understandably swelled by popular enthusiasm. China has even begun to build its own aircraft and steamships; and its first atomic reactor and cyclotron, installed by Soviet experts, started up in September. These are international status symbols. But the effort has left the economy strained and gasping for breath. There are signs of transport dislocation which threatened the cities with food shortages at the end of the year. Chinese exports have been below standard, badly packed and shipped after contract dates. The coal drive has been followed by strict warnings against neglected maintenance work in the pits. Even the steel triumph, four-fifths of which is attributed to the big enterprises, has ended in admissions that steel-rolling capacity has failed to cope with the rate of smelting.

THE countryside and its 500 million peasants have a basic part to play. Last year's grain harvest of 375 million tons was good enough to allow the regime to claim that China had at last broken out of the iron law under which crop yields would be gobbled up by population increases. The new belief is that "the soil will yield in proportion to man's audacity." This year the grain harvest is to be boosted to 525 million tons. Improved techniques like deep ploughing, formidable use of fertilisers and new seed strains are said to have done the trick. Intensive cultivation under official urgings to "turn the whole land into a garden" is now acclaimed as China's alternative to farm mechanisation. At the same time, the rationalisation of peasant plots and work teams has released manpower for local industries, particularly for the iron and steel drives in the countryside. Although this rural steel output can rarely be a finished product, it is good enough for turning out the farm implements that otherwise would have added to the burdens of the iron and steel industry and the transport system.

Central control over the peasant masses, allowing flexibility in local switches from the land to light industry and back again at harvest, is based on the commune system. Although there are indications that the popular growth of the communes, which were only started experimentally last April, may have caught the regime partially unprepared, the idea serves its purposes admirably. The transfer to the communes of the local credit and commercial bodies in the countryside is meant to "result in the strengthening of planned control and control of the market by the state." The population drift to the towns is being stemmed. Discipline is reinforced by the mass militia movement.

It may not have been by chance that the bombardment of Quemoy began in the month that the formation of communes was at its peak. It is admitted that the communes have needed widespread readjustment and reorganisation this winter; praise for the local blast furnaces is dying away. The regime has insisted on the development of the wages system in the countryside, playing down the food distribution idea; it has spoken reassuringly of the retention of such personal belongings, including savings deposits and remittances sent by relatives overseas, as a middle or poor peasant is ever likely to have had. Above all, the commune has been presented as the means of women's final emancipation from their age-old domestic servitude. For them the "great collective family" with its canteens and creches has its own advantages.

But the party has got itself into an ideological muddle over the communes, which does not yet seem to be fully resolved. There is still much to be learned about the central committee session at Wuhan from November 28th to December 10th last year. The details that have come out are intriguing. Left-wing elements, unnamed, were rebuked in Stalin's words as "dizzy with success." Some had contended that under the commune system the party itself could wither away; some, apparently, wanted to give the militias a political part to play. The commune idea, which had been boosted in September as bringing full communism much closer than the "remote future," was devalued into a necessary stage in building socialism. The party has stopped talking, if not thinking, of heady political theory. It now seems to accept the Russian standpoint that communism will not be possible without a sound industrial base and an abundance of goods.

The responsibility of Chairman Mao Tse-tung and Mr Liu Shao-chi for all this is impossible to assess. So is that of Mr Khrushchev. What emerged from the Soviet party congress—at which Mr Khrushchev criticised those who "hurriedly and rashly carry out what is immature"—is that the Chinese have fallen into line, but that they are to be allowed some deviations in method. These are the opposite of the capitalist deviations of the Jugoslavs; Moscow and Peking are at one in castigating Marshal Tito. Since the shocks of the "blooming and contending" period the Chinese have appeared as the sternest opponents of east European revisionism.

CHINA'S first concern is at home, and its foreign policy, particularly the pressure it exerts against Formosa and in South East Asia, may be expected to reflect its internal strains and difficulties—to which Tibetan nationalism still adds its problems. China believes that Formosa must eventually be pulled into its orbit, as the island has responded to the mainland's attraction in the past. In the meantime, Peking will take advantage of the exposed American position and of western uncertainties whenever it sees fit. Its commercial influence in southern Asia is now strictly limited, but it will grow. It sees the overseas Chinese communities as a future trump card in the politics of Malaya and Siam. Its present quest for world status has led it to claim consideration in discussing Germany's future (China is associated with the Warsaw pact) and it already has trade ties with Middle East countries like Egypt, Iraq and Yemen. Its stake in the cold war may have prompted the recognition of the Algerian government-in-exile, which the Soviet Union has refused to do.

These signs of independence will grow. The choice before the West may be whether it should try, within the strict limits it has for manoeuvre, to reduce China's diplomatic reliance on Moscow by such steps as admitting it to the United Nations, or whether its best course, in the long run, is to attempt some *modus vivendi* with Mr Khrushchev whereby the Soviet interest in restraining the Chinese mammoth is reinforced. The choice is still theoretical and hypothetical. Yet, as China comes to stand on its own feet, the moment of decision draws nearer.

NOTES OF THE WEEK

Cyprus Agreement Signed

THE smiling faces that emerged from Lancaster House late on Thursday afternoon announced that the work that the Greeks and Turks began in Zurich last week had ended in success. Although Cyprus itself—and the silent Colonel Grivas—has still to uphold the terms to which Archbishop Makarios and Dr Kutchuk have agreed, hopes that the dust has at last settled seem to be justified. The participants in the London talks have taken the sensible line that the Zurich compromise could not be upset; if Archbishop Makarios had his doubts at one stage he has professed himself to be happy at the outcome. The courage shown by the Greek government delegates has plainly contributed greatly to the result. British concern to secure continued safe and guaranteed control over this country's bases in Cyprus has been fully recognised.

The detailed terms of the settlement will not be known until Monday, but Sir Hugh Foot—who has special reason for personal satisfaction with this success—now has a directive for putting the island's affairs in order and taking the first steps in what may still prove to be the difficult task of persuading Greek and Turkish Cypriots to live in amity while personal memories of terrorism are still strong. Archbishop Makarios himself has been apparently not so concerned about the position of the British bases as about the rights of all three protecting powers, Greece, Turkey and Britain, to interfere in the island's affairs, and about various provisions designed to protect the rights and position of the Turkish minority. But he and his advisers have realised that peace and stability are what the ordinary Cypriot wants above all else.

Tories Make Peace

THROUGHOUT this week most Tory MPs seem to have been deciding to accept any agreement on Cyprus with slightly disguised relief. Right-wing Tory opinion, which characterises any settlement reached after a period of force as a "scuttle," is something which most Tory backbenchers do not share but of which, since the Suez episode, they have been vaguely afraid; it is often not clear, even to themselves, whether they are afraid of having some Major Grant run after them in their constituencies or whether they are shying away from some more personal fear of showing "softness." The agreement between Greeks and Turks at Zurich had followed closely on Mr Macmillan's decision to go on the electorally popular visit to Moscow, which some backbenchers secretly suspect might also be "rather soft." The first orthodox Conservative back bench reaction was therefore to pay genuine respect to the efforts of the Greek and Turkish prime ministers, but to mutter cautiously for the record that a "firm line" would have to be maintained by Britain. Lobby correspondents took note of these mutterings listened to the louder complaints of the handful of real right-wingers, and wrote (probably wrongly) that a major "Tory revolt" seemed to be brewing.

In fact, most Tories at this time seemed to be seeking for some vague portmanteau phrase about which to make a mild demonstration—and then to be reassured about it. The phrase which was eventually accepted as satisfactory was "sovereignty over the base," a term to which probably not one out of ten Tory members could originally give any clear meaning (although genuine right-wingers have since sought to define and re-define it). On Thursday of last week, in response to a prepared question, Mr Selwyn Lloyd said that this sovereignty would certainly be maintained, and loud rang the Tory cheers. Admittedly, nobody had told the Tories at this time that the negotiations would involve a visit to London by Archbishop Makarios. The archbishop's attitude from the beginning was undoubtedly very hard to bear. Carrying his gold-topped mace, he told the airport crowd on his arrival that he was seeking a settlement under God; this last was blasphemy, for every right-wing Tory knows that the only deity who plays any part in colonial affairs is the one invented by Kipling.

It says a great deal for the present triumph of sense over sensitiveness in the Tory party that no backbencher's speech over the weekend hit out at the Makarios visit. As Thursday's debate in the Commons opened, it was inevitable that some bitter words would be spoken, but it was not clear where any revolting Tories could find a leader. So far, even Lord Salisbury has been turning over quite silently in his political grave.

MISSION TO MOSCOW

Tables and Bears

FIRST reports of the arrangements for the Prime Minister's ten days in Russia gave the impression that less than two days would be available for any serious discussion. The Soviet government seemed more concerned to whisk its visitor round an impressive array of sights and demonstrations than to talk to him. It suggested trips to Stalingrad, Leningrad and Kiev and to institutions in and around Moscow, banquets, parades and theatre galas ; there was even talk of a bear hunt. But the British officials involved in shaping the programme argued politely but firmly that Mr Macmillan was less interested in bagging a bearskin than in getting his feet under a table for talks. After the hard haggling that seems inevitable in all such dealings with the Russians, it now seems that Stalingrad and the bears are both off the menu, and that the provincial tour will occupy at most four days. About four days should be available for formal and informal talks in various guises ; and the Foreign Office team that is accompanying the Prime Minister to Moscow is evidently capable of manning a whole set of specialist sub-committees on topics ranging from disarmament to educational exchanges, if the Russians prove co-operative.

It remains to be seen how far the Soviet government will go towards allowing any real lowering of mental barriers. Personal representations by Mr Selwyn Lloyd were needed to get the Russians to issue, at the last moment, visas for the press correspondents (who seem to number 70 or 80) going from London to Moscow for the visit. The Soviet censorship of outgoing news is reported to be temporarily lifted, but it is hard to say in advance what this will mean in practice, as the Soviet authorities never actually admit that any censorship exists. And one is inclined to doubt whether the Soviet press will give the Prime Minister's statements during his visit the kind of unexpurgated coverage that Mr Mikoyan recently got in the American press. There are hopes, however, that Mr Macmillan will be able to speak to a Soviet television and radio audience. If he does, it will be a pity if he is allowed only a set speech. The cut and thrust of an interview, or a televised press conference, would be more illuminating—and would be vastly appreciated by the Russian public, which has never been allowed anything of the kind.

TRADE WITH RUSSIA

No Mammoths in Sight

ALTHOUGH the Board of Trade will be represented in the party that is accompanying the Prime Minister to Russia, hopes of any considerable increase in the scale of Russo-British trade are not exactly high. During their visits to this country in 1956, Mr Malenkov, Mr Bulganin and Mr Khrushchev successively dangled long shopping lists in front of British noses, and then snatched them away, saying that Britain must first of all lift governmental control over trade with the Soviet block. An analysis of the list showed that a good half of the items allegedly wanted by Russia were not in fact embargoed under the western allies' agreements at that time ; and since then the controls have been greatly eased, but no mammoth orders have come crashing in from Moscow. There is some doubt about how, if they did come in, they would be paid for by the Russians, who have lately been inquiring for credits. In recent years they have held down the total of their direct purchases from Britain to well below the level of their own earnings from direct sales to this country.

The Soviet preference for keeping individual foreign trade accounts balanced as tidily as possible (which in part simply reflects over-rigid departmental bureaucracy) is a damper on hopes of any considerable trade expansion, for Soviet agencies have been finding it hard to offer British customers goods of competitive quality and price. On the British side, a further obstacle is the understandable reluctance of manufacturers to sell small numbers of machines and devices which, bitter experience has taught them, are liable to be shamelessly copied by the Russians and never bought again. Finally, there is Moscow's insistence on bottlenecking all contact through its heavily clogged and often obstructive " chief administrations " ; for a British salesman to get through direct to a Soviet concern which actually has a use for his product is usually as difficult as it is fruitful. Mr Macmillan and his party may bag the odd bear or two during their reconnaissance of trading prospects, but they could hunt deep into Siberia without ever getting a commercial mammoth in their sights.

THE WATERS CASE

Unavoidable Tribunal

DESPITE Mr Reginald Paget's pungently expressed misgivings about the recourse to a tribunal in the Waters case it is hard to disagree with Mr Leslie Hale, another old foe of tribunals, that the Prime Minister had no other choice. The two policemen in Thurso, who are alleged to have beaten up the fifteen-year-old John Waters, have in fact been " charged at the bar of public opinion." It can be a desperately unfair bar, and nobody suggests that they should be prosecuted simply because of a public outcry which is based on incomplete knowledge of the facts ; given this, a tribunal offers the best chance still open to the policemen to clear their names. A select committee of the House of Commons would be a much less desirable court, as some people's experience before the select committee on privileges has shown.

The Prime Minister has very properly agreed that a lawyer other than the Lord Advocate (the Scottish equivalent of the Attorney General) should present the evidence. What is not so certain is whether he has asked the tribunal the right questions. It is to inquire into the allegation that Waters was assaulted and into the action taken by the Caithness police. But in Scotland it is the Procurator Fiscal who, rather like the old grand jury, decides whether to bring a prosecution, not the police. Surely the tribunal should be asked to find out why the Procurator Fiscal decided not to prosecute the policemen and why, when the local MP, Sir David Robertson, raised the matter with the Lord Advocate he confirmed that decision? Admittedly the Prime Minister has a strong point when he argues that a Law Officer ought not normally to be expected to justify in detail the use of his quasi-judicial functions. Everybody must hope that the evidence before the tribunal will show that the Lord Advocate's decision was right. But, now that these allega-

Supreme jet comfort all over the world

ONLY BOAC offers you the wonderful speed and comfort of jet travel to destinations all over the world!

BOAC's incomparable *Comet 4* jetliners are already in regular service between London and the U.S.A. and Canada. Very soon they will also be flying between Britain and the Far East. BOAC's magnificent jet-prop *Britannias* serve major destinations on all 6 continents. Soon these *Britannia* routes will be extended across the Pacific between Tokyo and San Francisco . . . thus offering you round-the-world jet travel by BOAC!

Wherever *your* destination, you'll be treated to that blend of comfort, good food and *personal* service for which BOAC is world-famous. *No other airline offers you value such as this.* Book BOAC every time!

For full details of BOAC's world-wide routes and de Luxe, First Class, Tourist and Economy Class services, consult your local BOAC Appointed Travel Agent or any BOAC office.

M6R

tions have been sent flying about, by far the most dangerous of them is the suggestion that authority may have covered up for the policemen ; to probe that shadowy allegation is nationally much more important than to inquire whether the local policemen were rough. It is to be hoped that the tribunal will interpret its mandate sufficiently broadly to provide the country and the House with the opportunity to pass informed judgment on the official conduct of the Lord Advocate, not only on that of the Caithness police.

RATING REVALUATION

An Unwise Reprieve

THE Government's decision to postpone from 1961 to 1963 the next valuation of property for rating carries a definite whiff of political cowardice. At present houses are assessed for rates on 1939 rental values, although commercial and industrial properties are already assessed at current (or rather 1956) values. The main purpose of the new valuation would be to rate houses according to current rental values as well. To be ready on time (i.e., by 1961), the business of revaluation would need to be started this year. The Minister has now stated that this year is too soon after the decontrol of several hundred thousand houses under the Rent Act to get a fair picture of current house rents. One trouble about this argument is that it might be extended indefinitely. More than four million working class houses still remain controlled. Although it hates to be reminded of the fact, the Government (if it stays in office) should certainly be hoping to decontrol a further batch of these houses in the next few years. That could provide an occasion or pretext for further delay in rating revaluation. The cynical may also reflect that if valuers can still perform the contortions necessary to refer everything to a 1939 basis, they could surely apply equal ingenuity to the detection of current values.

Before the war, rating valuations were continually being twisted and shelved because of political fears that their results would be unpopular ; these distortions and delays had serious effects on local government finance and efficiency. It happens that the process of valuation was due to begin this year at a time when there is heavy political pressure on the Government to " encourage " houseownership (for a comment on the current campaign to " abolish the Schedule A " tax, see page 713). There is a great deal of muddle about how far rating revaluation would in fact penalise householders. It is true that the new valuations would double or treble the rateable value of most dwellings, but of course it would not lead to a doubling or trebling of the rates which houseowners have to pay ; all that would happen would be a small shift in the burden to them from the shoulders of owners of commercial and industrial properties, which are assessed at current values already. Moreover the effects even of this change could (and should) be substantially offset by withdrawing the 50 per cent and 20 per cent rating rebates which industrialists and shopkeepers at present enjoy. The net effect for householders as a class would probably be a modest rather than a large increase in their share of the rate load.

Is this prospect too frightening for the Government to contemplate ? If so, it ought to revamp the whole basis of local taxation so that it becomes more acceptable and elastic. For this course there is much to be said, and Mr Brooke has some expert suggestions to hand to help him. But there is nothing whatever to be said for announcing a plan for making rating as consistent and rational as its present basis permits, and then running away from it.

NUCLEAR TESTS

Murky Patches

MR ORMSBY-GORE'S statements in the Commons on Wednesday showed how little ground the Russians have yielded since the Geneva talks about halting nuclear tests began nearly four months ago. On the crucial question of the staffing of control posts and investigating missions, Mr Tsarapkin is still insisting that the actual staff must consist of nationals of the country concerned. In other words, " effective international inspection " of any suspicious signs that Russia might be secretly testing nuclear weapons would be left to the Russians themselves. Mr Tsarapkin has now, reluctantly and after weeks of hard going, been kind enough to concede that up to five foreign " observers " might be attached to each monitoring post, provided they do not have any part in its work. This is obviously sheer moonshine. Equally obviously, the Russians are taking care to keep the door ever so slightly ajar.

Mr Ormsby-Gore and his American colleague at Geneva, Mr Wadsworth, have been as patient as they have been persevering. Their present proposal about staffing posts and missions is that each should be manned half by " the other side " (i.e. Americans and British at posts in Russia, and vice versa) and half by nationals of signatory countries other than the three nuclear powers, and that the host nation could attach as many of its own observers as it likes. Thus the participation of, say, Indians and Swedes would guarantee Russia against the highly hypothetical risk of British or American staff raising false alarms—a risk which Mr Tsarapkin has very belatedly discovered, and which is now his sole flimsy excuse for rejecting effective international staffing. The real reason for this rejection is evidently instinctive Russian horror at the idea of submitting to any inspection at all, despite Mr Khrushchev's repeated promises to do so.

This is one shadowy, and self-contradictory, corner of the Soviet mind on which Mr Macmillan's trip to Moscow may shed a little more useful light. Other murky patches in the field of disarmament which call for inquiry and illumination were discussed in *The Economist* of January 3rd. Does Mr Khrushchev stand by his demand for total destruction of stocks of nuclear weapons, or by his admission (repeated as recently as last December, in his interview with the Noel-Bakers) that this is not possible ? And, in the light of the Geneva talks, what sort of " effective international inspection " have the Russians in mind for more general disarmament programmes—or, for that matter, for the new version of the Rapacki plan ?

TUNISIA

Shades of Sakiet

TUNISIA'S new quarrel with France (described in a despatch from Tunis on page 695) has produced a curious offer from President Bourguiba. He said on Tuesday that France could retain its naval base at Bizerta if, in return, it agreed to give the Algerian people their freedom.

M. Bourguiba cannot entertain the idea that his offer will find any takers in Paris. What remains to be seen is whether he seriously means to push his claim to Bizerta and to a frontier rectification in the south as part and parcel of the present crisis. So far he has been sensibly restrained, and M. Debré, too, free from parliamentary pressure, has been coolheaded. But Tunisian assertions of machine-gunning by French planes, and French disquiet at the suicide of one of the French officials held by the Tunisian police on a spying charge, have added to the existing tension. In such an atmosphere it seems unlikely that M. Bourguiba's earlier suggestion of a personal meeting with President de Gaulle can be realised.

Bad relations between Tunis and Paris have been exploited by the Algerian rebels in the past, and Algerian demands caused by the lack of equipment now being felt by the FLN forces in the field—which has already prompted the latest assaults on the Morice line by Algerian rebels from Tunisia—could conceivably push M. Bourguiba into an unpleasant choice between France and the rebels. At the same time, M. Bidault and the right-wing press in Paris seem to have been encouraged—as before the Sakiet bombing last year—to talk loudly once more of teaching the Tunisians a lesson. The turn of events after the momentary relaxation of tension caused by General de Gaulle's agreement to withdraw French troops from Tunisia last June has become increasingly dangerous. These crises are likely to continue as long as the Algerian war drags on.

NIGHT BAKING

A Crust for the Small Baker

MR GOODHART'S private member's bill to amend the 1954 Baking Industry (Hours of Work) Act, 1954, got through its second reading only after a mauling. The trade union MPs turned out in force to fight on an issue which they felt (in Mr Pannell's words) had "something of the mystique associated with the Truck Acts, some of the mystique associated with child labour in the Industrial Revolution." Indeed, some of them are no doubt displeased that so many of their colleagues took their usual Friday holiday from the House, so that only 114 Labour MPs mustered to vote against the bill, while 125 Tories were there to vote for it.

The 1954 Baking Act required a bakery either to operate a shift system that would enable workers to alternate between night and day shifts (which a big firm can easily do) or to decide to become solely a day bakery (in which case bread must be baked either after 5 a.m. on the day of delivery or before 10 p.m. on the previous evening). From this act, hardship arises in two ways: there is the small master baker who cannot do all the night work himself and wants a man to do night work with him, and the small master baker who can manage even under the act most of the year, but not during a rush period (e.g. in the holiday season at a seaside resort). The bill proposes that in such special circumstances small bakers, employing five or fewer workers, could ask the minister to grant exemption from these provisions of the act.

The trade union argument, shorn of rhodomontade, is twofold. First, the 1954 Act provided a four-year stay of execution during which bakers were to make arrangements to meet its provisions (for example by training confectioners to become bakers); their failure to do so, say the unions, is no reason to go back on the act after 14 months' working. The second (and more important) argument is that Section 9 of the 1954 Act did lay down a procedure under which bakers could get exemptions: if a blanket agreement could be reached between the bakery workers union and the master bakers' association, then the union could negotiate with individual employers about possible exemptions, and the minister could approve these. In Scotland a blanket agreement of this sort is in operation, but in England and Wales the union and the small master bakers (as distinct from the big plant bakers) have failed to agree; the union says that this is all the master bakers' fault, and that to pass Mr Goodhart's bill would be to go behind the back of the trade union movement. Their point is somewhat weakened by Mr Goodhart's statistic that only 10 per cent of the operatives in the small bakeries belong to the union anyway, while the association of small master bakers, on its side, is not (thank goodness) "exactly a monolithic pillar of strength." Although the Government itself is plainly not too keen on annoying the trade union movement on this relatively minor matter, Mr Goodhart should persevere with his bill.

CIVIL SERVICE SALARIES

Equating with the Outside World

WHEN the Royal Commission drew up salary scales for the civil service in July, 1955, it proposed that the guiding rule from then on should be fair comparison with remuneration in comparable outside jobs. Not surprisingly this principle, sound enough in theory, has been none too easy to interpret in practice. Since then the bulk of civil servants, up to and including principals in the administrative class, have received three general pay awards which have brought their present salaries 14 to 15 per cent above the 1955 scales. Outside these central settlements, the pay of the top civil servants is reviewed by an advisory committee under the chairmanship of Lord Coleraine; up till last week this committee had effected only relatively small adjustments since 1955, giving at the most to some an extra £200 but nothing at all to those in posts above £3,600 a year. Now this committee recommends, as from February 1st, all-round increases for higher civil servants ranging from £200 to £1,000 a year.

EXAMPLES OF PROPOSED CHANGES IN SCALES

(London rates)

	Current	Proposed
Administrative Class:	£	£
Permanent Secretary to Treasury..	6,500*	7,500*
Permanent Secretary.....	6,000	7,000
Deputy Secretary.....	4,250	5,000
Under Secretary	3,400	3,800
Assistant Secretary	2,200–2,700	2,400–3,000
Other Classes:		
Principal Executive	2,400	2,700
Chief Scientific Officer (and higher posts).....	3,150–5,000	3,500–5,800
Principal Medical Officer	3,000	3,300

* If two posts, as at present. For a single post the current rate is £7,000, proposed rate is £8,000.

Right at the top of the hierarchy the two permanent secretaries to the Treasury will, if the recommendations are accepted, each receive £7,500 a year—the same as a full-time member of one of the major public boards (the chairman of such a board receives £10,000). It is hard to believe that this is flying the flag too high. The total cost of the proposals, together with their effect on comparable grades outside the committee's scope, will be £1,500,000 a year. Admittedly they would raise the 1955 scales by some 14 to 20 per cent, rather more—before tax—than the rise in the rest of the service. But the Coleraine committee considers that a further review will be "unnecessary for some time to come."

The dignified infrequency of adjustments in top pay causes the committee to comment that they should not set the pace for salary increases elsewhere. Since, however, these salaries are among the few, at this level, that are fixed and made public, this advice has not much hope of being followed. At the other end of the civil service ladder, the principle of "equating with outside pay" has recently been put to the test in the clerical grades, after wrangles over the interpretation of the findings of the Civil Service Pay Research Unit. The tribunal awarded increases for the 175,000 staff concerned of up to 17 per cent—at a cost to the Treasury of about £7½ million, instead of the £3 million it originally offered. A male clerical officer can now earn up to £786; the Treasury's offer would have put the ceiling at £750, the staff side's claim at £880.

PERSIA

One for the West

PLAIN pro-western words have become rare in the Middle East. So entangled in the claims and counter-claims of the cold war are most of the peoples of the area that a clear statement of intention comes as a shock, bearing with it refreshing memories of happier days.

On February 16th, the Persian foreign minister, Mr Ali Ashgar Hekmat, announced that his government would sign a bilateral defence agreement with the United States before the Persian New Year, March 21st. This agreement has been in the diplomatic mill since last July when, in London, Mr Dulles all but joined the Baghdad Pact. It was not completed earlier because the Persian government demanded wider guarantees than the Americans were prepared to give—against trouble from unneighbourly neighbours other than Russia, and from internal upheaval.

While the Persians and the Americans were ironing out their differences, the Persians had a go at mending their northern fences. A Soviet deputy foreign minister arrived at Teheran on January 29th to discuss a treaty of non-aggression and co-operation. But the Russians' price for friendship was too high. They demanded Persia's withdrawal from the Baghdad Pact and in return apparently offered little more than a decent burial for the Soviet-Persian treaty of 1921. When the negotiations ended the Russians went away muttering about their rights, under the 1921 treaty, to move troops into Persia if the forces of a hostile third party should enter that country. The Russians prefer to overlook the fact that before the treaty was signed the Persians received a note from the Russian diplomatic representative at Teheran explaining that the articles pertaining to Russian intervention in Persia concerned only cases of danger to Russia from partisans of the Tsarist regime. It is now some 37 years since the workers and peasants of Russia ceased to be in danger from Tsarists hiding in Persia. The 1921 treaty served the purpose for which it was made. There is no connection between that purpose and the one the Russians claim for it now.

Pravda has been roused to predict that the Persian government will come to a bad end—look what happened in Iraq, it says. The familiar charges of a government's acting against the wishes of the governed are being heard once again. The Shah and his government have risked their future on alignment with the West. They will also have to gamble on broadening the basis of their support inside Persia at the expense of the vested interests on which they have hitherto relied. It may be easier to get arms and money from the West than to convince twenty million Persians that the new dawn will appear in that direction.

JAPAN AND KOREA

Who Goes Home?

THE Japanese and South Koreans, although still breathing heavily after last week's slanging match, have thought better of coming to blows over the repatriation of some of the 600,000 Koreans in Japan. Mr Kishi's government is anxious to get rid of a body of undesirable aliens, as it now calls the Koreans who arrived in Japan in imperial days and who, since the war, have found it hard to make a living there. Because many of the Koreans have fallen into indigence and crime, and have failed to take the legal steps that would have given them permanent residence, the idea of sending them home has been taken up with President Rhee in the past, without success. Now an unknown number of them—variously put at between 20,000 and 117,000—are said to be ready to go to North Korea, where the communist government, ready to pick up a trick, has promised them jobs. When it became plain that the Japanese, who all the while have professed humanitarian motives, were in earnest about the return, President Rhee promptly went for them.

On February 12th the South Koreans called off the present talks with the Japanese on establishing diplomatic relations, severed trade relations and declared that they would not release 160 Japanese fishermen now held at Pusan for having violated the extensive fishing limits known as the Rhee line. Although there was talk of South Korean naval vessels being ordered to intercept any Japanese repatriation ships going to North Korea, it has so far remained just talk. The Japanese have tried to pacify President Rhee by asking the International Red Cross to help in screening the Koreans to ensure that they do not apply for repatriation to the North under duress. American diplomacy, alerted and alarmed, is strenuously holding the two sides apart. Although the crisis looks like blowing over safely, things are still breezy in Seoul.

IRAQ

Qasim's New Ministers

GENERAL QASIM'S cabinet reshuffle on February 7th narrowed the basis of the Baghdad revolutionary government by eliminating ministers representing the Baath (socialist) and Istiqlal (conservative) parties. It can be argued, however, that party politics never meant much in Iraq, where the parties have never been well organised and have spent large parts of their lives underground. Their fortunes depended more on the influence of a few individuals than on broad support from a large number of voters. Since the revolution of last July, all parties have been

relegated to the limbo of a national front which they were ordered to join to prepare for the pure democracy promised once the transitional revolutionary period had passed. The reconstruction of the cabinet does not necessarily, therefore, have the significance in Iraq that it might have in a country where political institutions are more established.

Eight new ministers were appointed, four of them army officers who are probably as non-partisan as General Qasim proclaims himself to be. But the four new civilian ministers are men of proved ability who are moderate nationalists and more anti-communist than their predecessors. All of them held important government positions before the revolution.

Hussein Jamil, the new minister of propaganda, once accepted the post of minister of justice under Nuri es-Said against the wishes of his party, the National Democrats. Many people believe that his was the guiding hand of the revolution in its early days, but he soon withdrew from the scene to become ambassador to India. The new foreign minister, Hussein Jawad, was chief of the Iraqi delegation to the United Nations before the revolution. He was recalled by Nuri for having voted for Greece and against Turkey, Iraq's Baghdad Pact partner, on the Cyprus question. Hassan Talabani, a member of the Kurdish aristocracy, is the new minister of communications and public works. He is said to have governed more provinces of Iraq than any other person. Talat Shaibani was director general of the federation of industries under the old regime; he is now minister of development. It is too soon to say that the communists have been routed in Iraq, but the new appointments must give heart to the great majority of Iraqis who are not members of that party.

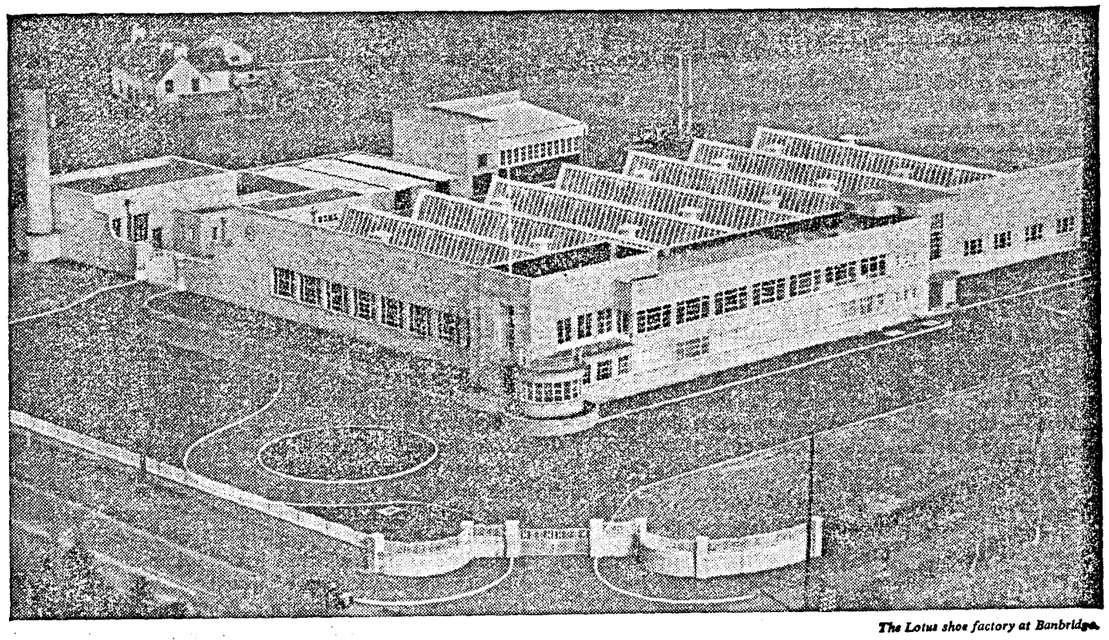
Baghdad and Cairo radios have, for the moment, stopped saying rude things about each other. The initial reaction from Cairo to the Iraqi offer of a truce was not encouraging but, having got in the last word, the Egyptians have turned their attention to the dangers of federation in south Arabia and to increased Jewish immigration into Israel. President Nasser may discover, after all, that the Iraqis are as Arab as he is, even if they insist on being Arab in their own way.

SCOTTISH TEACHERS

Only Graduates Wanted?

SCOTLAND suffers from a shortage of teachers in the same way as England and Wales; there are 1,850 unfilled vacancies in its state schools at the moment, and the shortfall is expected to be around 3,200 by 1961. A special Scottish committee has just issued its recommendations (Cmnd. 644) on what should be done about it. The committee consisted almost entirely of members of the teaching profession, and it is not surprising therefore that, while it made many sensible recommendations of a minor sort, its major recommendations are quite simply that, to meet the shortage: (*a*) pay should be put up; and (*b*) no teachers of lower academic qualifications should be taken on.

It is not easy to make direct comparisons between Scottish and English conditions. The Scots have a series of basic scales with relatively few special allowances, while in England there is one basic scale with many special allowances; moreover Scotland boasts of its rule that all male teachers in secondary schools (other than technical schools) must be graduates, whereas in England there is no such rule and the proportion varies from 80 per cent in grammar schools to half in other secondary schools. The essence of the Scottish committee's proposals, however, is that, in order to attract all the graduate teachers needed, there should be a general increase in teachers' pay and a sharp increase in differentials. These should be achieved by adding over £100 a year to the graduate scale, by vastly increasing the (few) Scottish special allowances, and, most important of all, by shortening the period in which a teacher reaches the top of the scale from about 17 to 10 years. This latter change would ultimately cost over £2,500,000 in Scotland (and probably £20 million in England).



This is not quite all that the National Union of Teachers is demanding in England, but it would begin to approach it; and teacher for teacher the tendency is for Scottish and English pay to approximate. English teachers will therefore be watching closely what the Government does about the Scottish recommendations. On the Scottish committee only one of the local authority representatives ventured to dissent; in a reservation Miss Anderson, from Stirling, bluntly declared that higher pay would not bring in all the graduates needed, and that the right thing to do was to close a temporary gap with non-graduates of suitable character and maturity. To the outsider, the idea of encouraging higher differentials seems to be wise, the refusal to countenance any dilution by non-graduates (where graduates are not available) to be pigheaded, and the general increase proposed in the report to be very expensive; the Scottish Office should think twice before wearing all parts of the report.

CENTRAL AFRICA

Rhodesian Liberals Re-form

THE liberal forces in Southern and Northern Rhodesia have now rallied their scattered forces, and formed a new Central Africa Party which will fight the Northern Rhodesian territorial elections in less than three weeks' time. Sir John Moffat has resigned his seat as chairman of the African Affairs Board in the federal legislature in order to join in this venture with Mr Garfield Todd, who lost both his premiership and his seat in Southern Rhodesia last summer. The new party is dedicated to the propositions that future policy must remove from each race the fear that any single race may dominate the others and that every citizen must have the right to progress politically, economically and socially, according to his abilities without distinction of colour.

The party may, with luck, win four seats; in a divided house this might make it important. Its formation is a significant development for several reasons. It seems to unite all the liberal groups—the Capricornists, the former Toddites, and the Federal liberals. It aims to make an appeal to moderate Africans—both those who have the vote under Northern Rhodesia's incredibly complicated (and controversial) new franchise and those who may be elected or nominated on other tickets. It suggests that its leaders still hope that enough liberalism may survive the growth of extremism among black Rhodesians as well as white to make such a non-racial party possible. Finally, it clearly amounts to a vote by these liberal elements of no confidence in Sir Roy Welensky. When Sir Roy won his great victory in the federal elections last autumn, the liberals (and particularly Mr Todd) decided to hold their hands. They indicated that they were waiting to see if the prime minister, now assured of overwhelming support, would stop bidding

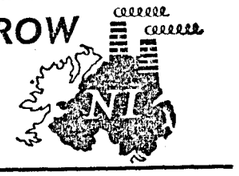
The Lotus shoe factory at Banbridge

You can rent a NEW factory FROM 9D PER SQUARE FOOT

and get the benefit of

33⅓% GRANTS towards CAPITAL OUTLAY

Premises . . . New modern factories are under construction with all services laid on; or can be built to order on a site of your own choosing. Sizes range from 2,000 to 73,000 sq. ft. Rents from 9d. per sq. ft. for the first ten years. Special-purpose factories of unlimited size can be financed on long repayment terms.



Labour . . . Three-shift working is possible and labour turnover and absenteeism are low.

Finance . . . Assistance includes an automatic annual grant toward the cost of new and second-hand equipment and of new buildings. The Minister of Commerce announced on February 12 that the grant rate was being increased from 25% to 33⅓%. The present maximum grant is £150,000 p.a. Alternatively, loans and larger grants are available for special projects.

Success . . . Over 130 British and American firms have set up in Northern Ireland since 1945; and many have expanded two and three times.

GO TO NORTHERN IRELAND — AND GROW

For full details of factories available now, and of the Factory Building Service as a whole, write to
DEPT. E8, NORTHERN IRELAND DEVELOPMENT COUNCIL (CHAIRMAN, THE VISCOUNT CHANDOS),
13 Lower Regent Street, London, S.W.1 (*Tel.: WHItehall* 0651)
or: 99 Park Avenue (7th Floor), New York 16, N.Y., U.S.A.
or, if you prefer, to: THE MINISTRY OF COMMERCE, BELFAST (*Tel.:* 28271).

against his right-wing opposition, the Dominion Party, and return to liberal policies. Evidently they feel that he has not done so.

A grim outlook faces the little band of liberals. Sir Roy has the big white battalions, the power and the press behind him. The African nationalists are reacting by becoming more extremist every day. In Northern Rhodesia the Kaunda party is gaining power in the African Congress and is seeking to break Mr Nkumbula (who wants Africans to vote in their largest possible force in the coming elections, instead of relying mainly on action outside the legislature). In Nyasaland the African Congress is increasingly determined on secession and on a racial "showdown with Welensky." The new party's problem is therefore to get enough support to force Sir Roy and the African Nationalists to listen to its counsels of reason. Since these counsels are the only real hope for the survival of the Federation or the principle of partnership on which it was founded, it must be hoped—though it cannot be expected—that they will succeed better than third parties usually do.

ITALY

Signor Segni's Experiment

MOST Italian governments since the war have been further to the right than the majority of Italians would like. Signor Fanfani's coalition of Christian Democrats and Social Democrats was an exception, but it lasted only seven months, and after a longish interregnum it has only been possible to find a successor by making a definite shift to the right.

Signor Segni, who announced his minority Christian Democrat cabinet last Sunday, does not, it is true, himself belong to the right-wing of his party; indeed, he has been associated with progressive ideas, and in De Gasperi's day played an important part in pushing forward agrarian reform—at the expense, incidentally, of his own Sardinian estates. When Signor Fanfani resigned, the Christian Democrat leaders suggested to the president that Signor Segni should be asked to head a left-centre minority government supported by the Social Democrats and the Republicans. But in the event, Signor Segni finds himself at the head of a right-centre government, dependent for his parliamentary majority on the votes of the Liberals and the Monarchists. (But he does not have to count on those of the neo-fascist MSI—which will, no doubt, nevertheless embarrass him with its support.) His programme, although allegedly based on Signor Fanfani's, has been greeted with approval by the right-wing press. And although—paradoxically—his cabinet is largely a reshuffle of old faces (among them left-wingers like Signor Pastore, Signor Tambroni and Signor Gonella) it contains in Signor Pella a notable accession of right-wing strength; Signor Pella as foreign minister is likely to eschew the Arab flirtations of his predecessor.

Signor Segni has yet to win his vote of confidence in the Chamber. He will probably succeed, if only because the contending politicians know that if this respected, though ageing, figure does not succeed, no one else is likely to, and few would welcome the hazards—and expense—of another election. Last time Signor Segni was made prime minister, in July, 1955, he confounded the Cassandras by staying in office for two years. It is doubtful if he can confound them a second time. The recent political crisis, which it is hardly an exaggeration to call a crisis of the parliamentary regime, has not had any salutary cathartic effect upon the Christian Democrats; the warring factions show no sign of sheathing their weapons for good.

EUROPEAN COAL

Barricades in Belgium

BELGIUM'S miners—many of them Italians—who are out on strike, cutting railway lines into France and barricading roads, are calling attention not only to their own plight but to the difficulties now besetting the Coal and Steel Community as a whole. Coal stocks at the pitheads of western Europe have been mounting for months, while demand has fallen seriously with the end of the boom. The community's high authority, in its latest report, puts the fall in apparent consumption in 1958 at 35 million tons, but since consumers have been deliberately running down their own stocks—built up in 1957—the real fall is closer to 15 million tons. Belgium and west Germany have been particularly badly hit. Beginning this week, when the high authority's earlier palliatives had failed to cope with the situation, the Germans have imposed a duty on coal imports from outside the community. Since the community has been embarrassed for some time by existing contracts, signed while expansion was at its peak, to import American coal, the high authority has been demanding a common import and stocking policy. Although appeals were made to the Americans not to stand on the letter of their contracts, they met with little response, and the German coal duty has made the whole matter more acrimonious than ever.

The Belgian difficulties are even more acute because of local failure to tackle them in the past. Since the transitional compensation payments ended in February last year the high-cost Belgian mines have found it hard to meet competition from the rest of the community. Rationalisation has become a necessity, but the miners have stubbornly resisted the closing of uneconomic pits. There were strikes against shut-downs in the Liège coalfield last June. The Borinage coalfield, in the south, where the present troubles began, has had uneconomic pits in production since before the last war. The stern measures—amounting to a cut of one-sixth in total Belgian production—announced on Wednesday are overdue, but the Belgian miners are inclined to blame the high authority's policy of continuing to encourage output during the last two years, despite the signs of recession, for some of their present difficulties.

EUROPE IN PARLIAMENT

The Commons and the Common Market

THE interesting feature of Mr Maudling's postmortem on the negotiations for a free trade area in the Commons on February 12th was his preoccupation with the idea, advocated in the debate only by the Liberals, that Britain should consider joining the common market. His discussion of it was remarkable both as a demonstration that nobody has yet thought of any other feasible alternative to the free trade area, and as proof again that the arguments against joining the common market, though formidable, are still far from conclusive. Mr Maudling stressed, naturally but unspecifically, the problems posed by the Commonwealth connection; and insisted, with the eager endorsement of Labour spokesmen, that public opinion is not presently prepared for the ultimate political consequences of the common market. The fact is, of course, that whether or not British membership could be achieved compatibly with its special interests and obligations cannot be decided until a genuine attempt to join has been made. This process of trial is the way in which the free trade area project was pursued and found—by the Europeans—wanting.

Mr Maudling's conclusion from his survey of the stricken field was that the idea of a free trade area was still the best—which might well have been true if things in Europe had been different—and that the "compulsion on European statesmen" to find a solution would drive them back to it in the end. It is hard to see his grounds for this hope. It suggests once again that the continental Europeans and their British allies are still living in two different worlds.

The case for joining the common market was put moderately and well by Mr Bonham Carter, and was vigorously supported by one Labour backbencher. The Labour party, understandably in view of its own record in European policy, had little that was constructive to suggest. But Mr Harold Wilson's friendly references to the common market's plans for harmonisation of social laws and for European investment suggest that he at least has realised that M. Monnet's technocrats are the Labour party's natural allies. If this rather elementary thought had struck the party nine or ten years ago, Europe would have been spared many of its present pains.

WAGES IN TELEVISION

Too Kind

THE spectacle of a trade union leader sputtering with indignation because his members are being paid more money, and announcing that "this practice must stop," has an Alice-in-Wonderland charm. Like so many other Wonderland phenomena, however, it turns out when closely examined to have in certain circumstances a logic of its own. Sir Tom O'Brien, MP, secretary of the National Association of Theatre and Kine Employees, is exercised because the commercial television programme contractors, flush with profits and capital gains, have spontaneously given their employees higher wages without so much as a by-your-leave gesture to NATKE. He has said that this is "a dangerous innovation in British industry."

It is not in fact an innovation; in many other industries prosperous employers pay wages consistently above union minimum rates. But one sees Sir Tom's point. If unions are to be taken seriously by their members, if their leaders are to enjoy prestige and command loyalty, they must be able to claim with some colour of verisimilitude that only their constant vigilance and militancy protect the workers from exploitation. The decent course, from the union official's point of view, is that employers should eschew spontaneous wage offers and participate at stated intervals in an agreed *pas de deux* of claim, rejection, counter-offer, rejection, strike threat, and abject surrender. Sir Tom must envy those American union leaders who were, some years ago, able actually to obtain an injunction against an employer who announced a wage increase before they had claimed it, on the ground that he had infringed that provision of the Wagner Act which forbids activities aimed at undermining union authority.

Sir Tom's policy now is to seek a meeting with the commercial television companies to ensure that they will "consolidate" the new rates in a final union agreement; he is concerned that now "you have two scales of pay operating in television, and the process could be a progressive one with a trade union agreement laying down rates of pay which mean nothing at all with the higher rate established by the employer." But is this not precisely the case against consolidation? If each NATKE member is to get a "consolidated" rate for the job, that rate will tend to be lower than the best that could be paid by the commercial companies—since the BBC is in no position to match these; and the beneficiaries of the commercial companies' openhandedness will not be pleased. If the differential established *de facto* between BBC and commercial rates is given official, and presumably permanent, NATKE sanction, then the BBC's employees will be (in Dr Wodehouse's phrase) if not disgruntled, still far from actually gruntled. Sir Tom, in fact, is in a cleft stick. He may not like the implied reflection on his union's importance. But it would seem to be wiser for him to lump it.

The Economist

FEBRUARY 19, 1859

TOWARDS THE WELFARE STATE

One of the most satisfactory symptoms of the age is the growing interest manifested in the condition of the great mass of the industrial population by the classes whom fortune or merit, personal or ancestral, have placed in a higher station, and endowed with leisure to think of something else than the daily provision of daily bread for themselves and their families. Agitators may rant, and narrow men may lament from a narrow point of view, over the selfishness of the rich; but it is a truth of no small importance to those who believe in social progress, that year by year the sympathies of the higher orders for those below them are more and more vividly called forth by the industry which brings to light what was before "out of sight and out of mind"; it has been seen but recently how fast money pours in for charitable purposes, when once the purpose and the necessity are brought to the notice of those who have the money to give; and it is evident from the publications of the day that many thoughtful and earnest minds are busy in the study of all questions that relate to the destinies, the wants, the prospects of the poor—and that the results of their study command wide interest and general attention. This is a happy sign of the times; an omen of cheering augury for the future. True, that many of these students have studied to little purpose, and under no wholesome guidance, and, therefore, produce schemes devised in utter disregard of practicability and common sense; true, also, that many of them indulge in vituperation sufficient to supply their lack of argument. Nevertheless, the subject constantly attracts greater attention, and acquires greater distinctness; higher and broader views of social duty become prevalent; and the prospect of improvement, where improvement is most needed, grows nearer and more promising.

The Anatomy of British Trade Unions

A Special Survey in Two Parts

Last February, "The Economist" published three articles on trade unions and the law. Two articles this week examine the character of the unions and their role in the postwar economy. The structure and internal politics of the unions will be discussed next week.

The Men Who Matter

BRITISH trade unions today are ponderously powerful bodies. Their negotiations on behalf of their ten million members effectively determine the wages and conditions of most workers in industry; they are represented in politics by over one hundred members of parliament; they straddle the country's wage fixing and consultation machinery from the factory floor to the civil servants' office; and they play an integral—if passive—part in the social horizons of the British worker. Recently, they have also, through their wage claims, seemed to do the country a good deal of harm. But the unions themselves, like any social organism, are far more human and far less desiccated than the outward appearance of their wage claims alone would suggest.

The unions no longer contain as much of the humanity and moral fervour as was needed to bring them through their early struggles. To some extent, they are now just a trained (not always a particularly skilfully trained) corps of bargainers, whose say has been increased, but whose spirit has been eroded, by the power and security that full employment brings. But not by any means entirely. For in spite of the television that diffuses its middle-class values in the average working-class home, the union spirit still remains. Its strength varies from dominance in the crafts and in the oldest industries (such as mining, the railways and steel), to casual acceptance in many branches of light engineering, in shops and in the rather self-conscious white-collar unions. These feelings are not often lucidly expressed. But when they are put to the test, by seeing whether the average worker will accept any change in his working methods without his union's sanction and whether any workers will blackleg on a strike (even an obviously unprofitable one), the same resolutely negative answer nearly always emerges. To the adult worker, solidarity with his mates still matters.

For the general ignorance that exists of the unions as a living institution rather than as an economic embarrassment, the unions themselves are much to blame. They still think of themselves as private fraternities, whose dealings with outsiders need to be cloaked in the same secrecy as necessarily surrounds their dealings with employers. Their idea of public relations tends to be to issue polysyllabic obscurantisms when they have a bad case—and much the same polysyllabic obscurantisms when they have a good one. The result is that the public image that the unions have created—or failed to dispel—among all save their most devoted sympathisers is of the poorest. It is compounded of visions of apathy, of communist infiltration, of disputes and of minimal attendance at branch meetings. But some of these rather depressing facts—and especially the apathy—are common to all democratic institutions. They do not contradict the fact that a man will trust his union as much as he trusts anything. Admittedly, this trust does not extend to paying the union very much money. Dues and the salaries of most trade union officials are now kept so low by the votes of union members themselves (much lower in real terms than before the war) as seriously to prejudice both the quality of service that the unions offer and their staying power in disputes.

1. The Character of the Unions

WHAT then are the outstanding characteristics of most of the men who do the real work in running the British unions—the sort of men who eventually fill about three-quarters of the places on the TUC's general council, and perhaps a rather smaller proportion of the most important branch jobs in the meanwhile? The first impression is that they are devoted to keeping their organisations very much alive, but in a way almost exactly opposite to that suggested by the prodigality of their wage demands. Life as this type of keen unionist sees it tends to be a serious business. He has hard work to do for his union and his district—and also, unless he is a full-time official (there are only 3,000 of these), for his employer. Quite often he is concerned with committee work on his town's government and local authority agencies (such as those dealing with national assistance and unemployment), and with local Labour party work as well. The rather solemn—though by no means humourless—frame of mind that this hard work engenders is often reinforced by two other factors. The first is the low church beliefs of many union officials, which

are still reflected in their rule of widely addressing each other as "brother." The second is the almost universal — and distinctly hidebound — belief amongst unionists in the sober traditions of the past. Evolution and not revolution, the philosophy of the early craft leaders, is still the keynote of most of British trade unionism today. There is little liking here for syndicalist ideas, nor for the trade union capitalism of the United States (which leads union leaders there to claim that they should match their opposite numbers in business in the sumptuousness of their living). Instead, the average British union leader is orthodox labour in politics, modest in person, and highly conservative in opinion.

Nothing shows the conservative and non-revolutionary character of this type of union leader more clearly than his attitude towards education. Education is the key to advancement in society as it stands: the unions' almost mystical belief in education is the touchstone of their belief in society as a whole. Almost all unions maintain a thriving education department, and union publications are stuffed with (often poorly organised) information and statistics. Moreover, to judge by the number of leaflets enclosed in union magazines, commercial publishers find in unionists a ready market for encyclopædias, dictionaries and maps. But even in trade union education (and especially at the labour colleges like Ruskin) the old-fashioned socialist morality persists. This morality shows itself in many forms, but in none more clearly than in the traditional union claim that a fair day's work, in whatever job and whatever the value of the goods produced, deserves not less than a fair day's pay.

2. The Doctrine of Fair Wages

THIS concept of a fair price is basic to union thought—and to too much of business thought as well. Its application in practice by the unions is bedevilled by intense and persistent disagreement between craft and general unions about what is a fair demarcation or a fair differential for skill. But in wage bargaining fairness has its own particular logical danger. For when a typical union and employer sit down to discuss a wage claim, they tend to talk at cross-purposes. The union justifies its claim by last year's profits in the industry or by the rise in the cost of living since the last award, both of which are irrelevant to the employer who is planning for the future; and the employer replies by stressing the dangers that any award will have on future prospects which—being largely a matter of general trade conditions and outside the hands of the individual worker—are considered to be irrelevant by the union. The result, in conditions of inflation, has often been a "fair" increase, a more or less half-way increase at arbitration or a similar compromise. In settlement after settlement during recent years, especially in the nationalised industries, wage increases have been determined in this way, instead of on the principle that workers should be attracted out of less productive jobs into more productive ones.

This has been a hell of a way to run a railroad, let alone a great national economy. The major economic problem of this country in the next few years is clearly going to be to escape to a system in which market forces, rather than abstract concepts of fairness, will determine the price of labour, as well as the price of everything else. But the feeling that wages are a matter of social justice rather than mainly a function of customers' demand is now very deeply ingrained. Anybody who supposes that a return to a policy of economic determination of wages can be quickly and easily secured by political intervention—for example by hammering out an agreement between even the most right wing trade union leaders and a Government with which they are in political sympathy—is almost certainly wrong.

3. Restrictive Practices

TO some extent the same is true of the other escape that is so obviously necessary—away from trade unions' instinctive caution when dealing with changes in industrial techniques. All union leaders insist that it is one of their main duties to examine the impact of new methods on their members' livelihood and where possible to resist redundancy (which means, at times of slack working, getting a shorter working week rather than negotiating redundancy agreements, which are only acceptable at times of booming trade). When this examination becomes slow or hostile, restrictive practices emerge. These restrictive practices are, to many businessmen, the most irritating of all aspects of unionism—and rightly so. Their cost in terms of economic progress forgone, as in the docks or the shipyards, is enormous; and the shop-steward bosses, who often impose these restrictions, are a grave industrial problem in themselves. Brakes on production are also rife among the demarcation-conscious—and often declining—craft unions. But it would be a mistake to be too pessimistic on all scores. The problem of restrictive practices is especially acute in the declining industries; many have grown up in an atmosphere in which declining firms have been protecting themselves by market sharing agreements as well, and against those government policy is now having some success. Usually—though not always—when a union in an expanding trade remains completely opposed to new methods or spends years in an inter-union dispute as to who should use them, management is also at fault. Good companies rarely have this trouble. The unions, like anyone else, respond badly to bad handling; and personnel management, being often used just as a shield between the real management and the unions, has hitherto got neither the men nor the respect in Britain that it deserves. Moreover, it is only the cases of restriction that get publicity. The unions also help to raise productivity through bodies ranging from the British Productivity Council (which the TUC helped to set up and to which it contributes £2,500 a year) down to the numerous productivity committees and works groups on the shop floor. It is surprising how often one meets a union official who spends most of his time arguing with his members—or more often with local shop stewards—in favour of management schemes for introducing piecework, streamlining production and the like.

4. The Union Official

THIS, however, immediately raises the question for how how long this type of hard working official is likely to remain in abundant supply and in even half-effective control. One of the major problems here—the rise of a totally different and highly damaging ethic in some sections of the shop-steward movement—will be discussed next week. This is not—despite isolated examples, such as that of the communist ETU—an immediate threat in the top places of British trade unionism. Usually, for reasons that will be discussed later, the top union leaders can in effect designate their own successors, and they naturally choose men of their own kind. But a major problem is how long there will be many men of their own kind available.

The average, old-fashioned union official is not in the job

for the money—he would resign office at once if he were. He has deliberately accepted, as a matter of principle, much less power than is commonly credited to him in the day to day affairs of his union. The unions dislike all aggregations of power and wealth, including those in their own organisation ; and their rule books see to it that officials have as few privileges has possible. One result of this has been that too few able men have recently been seeking union office. Older men prefer to stick to their jobs ; young men, who might in the past have taken a job before they were fifteen and later made a career in the unions and risen to leadership, are now creamed off into the universities, management, and the Tory suburbs. Moreover, the chance that a mass of outsiders (such as working-class intellectuals in the back rooms of the TUC) will ever get into the main stream of union office is remote ; in general, life service on the job is still a must. Thus the next generation of union leaders will have to come through the secondary modern schools and apprenticeship courses, at a time when neither is geared to the needs of the really able child. Prospects for future leadership are thus not bright. It is in the light of this that all the problems set by and for trade unionism need to be considered, beginning with wages policy.

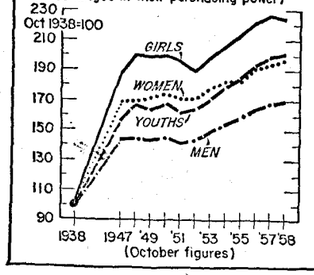
The Wage Drift

THE rise in wages since the war has been persistent but by no means uniform, either between different years, different industries or different groups of workers. Very broadly, three phases can be distinguished *since 1946:*

(1) **In the five years before 1951,** increases were held back by the wage freeze policy of the unions themselves, with the result that the standard of living of those union members who were paid no more than agreed industry rates actually fell during the period. There was, however, a compensating rise in earnings for many workers ; this is considered below.

(2) **Between 1951 and 1955,** wage rates rose steadily and fast ; but they tended to rise fastest of all for pieceworkers and for those whose rates were fixed on the work floor and were thus not subject to the institutional delays of national bargaining or wages council machinery. (Indeed, by about 1954 some advertisements of jobs vacant would boast "not union rates," meaning "higher than average wages paid"). Another change in this period was in the form of nationally negotiated wage advances, which switched from a general basis of equal cash increases to one of equal percentage increases.

(3) **After 1955,** wage increases became more seasonal, grouping themselves closely round the settlement of one or two major claims in such industries as the railways or engineering. And since early 1957, the whole pace of advance has slowed considerably. In 1958, the average increase in rates was close to 4 per cent and the average time between increases was stretched to 14 months ; this compares with an advance of 10.5 per cent in 1951. But since 1955, of course, production has stopped rising too.



5. *Earnings and Differentials*

During the first two of these periods, and to some extent until 1957, there was a significantly greater rise in earnings than in wage rates. This rise had several causes, of which three can be singled out as most important. The first was the spread of piecework during the war and in the first postwar decade ; in 1938 piecework agreements covered only 33 per cent of manufacturing industry, by 1955 they covered 40 per cent. (This trend has since been slightly reversed.) The second reason for the rise in earnings has been the increase in overtime worked since 1938 ; this has been effected by working hours remaining constant at roughly 46½ (although, once again, with a slight fall since 1957) while the standard working week has been progressively reduced. The third important reason for the rise in earnings has been payments by employers above agreed industry rates. These plus payments are particularly common in engineering (where they have led to considerable friction between the employers associations and individual firms, and even, as in the case of the Standard Motor Company, to the firm temporarily leaving the association), but almost non-existent in building, agriculture, and public employment generally. In 1957, earnings reached a peak of 41 per cent above wage rates ; since then however—and particularly with the spread of short-time working—this margin has declined.

Another trend in wages since the war—although, again, especially in the pre-1955 boom period—has been a narrowing of differentials. This has been true of all types of differentials, between skilled and unskilled, between young and old, between workers in London and those in the provinces and between blackcoated and manual workers. The trend was particularly marked before 1951. The narrowing of differentials was, in part, the logical outcome of changing techniques in industry (which made greater use than before of unskilled and semi-skilled labour) and of the end of the scarcity value of literacy ; craft unions naturally

also lay some blame for it on the growth of general unionism and the decline of craft unionism. But much of the great "levelling process" of the immediate postwar years seems to have been the product of demand inflation. It is noteworthy that after 1951, when demand inflation tapered-off slightly, equal percentage rather than equal cash increases became the common feature of most union claims, so that the closing of differentials was slowed ; and recently, with demand inflation all but gone, some differentials have actually widened. Clerks' wages have risen more than those of manual workers in the last two years, and top workers like senior civil servants are getting increasing sympathy and money. It remains to be seen whether the previous trend towards a narrowing of differentials will be resumed when the economy starts expanding again.

6. *The Causes of Rising Wages*

THESE are the facts of the postwar wage rise ; to explain them adequately is harder than might appear. For there have been three different—but interdependent—causes. The first has been the general overfull state of employment, which has meant that (until recently) demand for labour has outstripped supply. The second has been the rise in manufacturers' prices—partly because of market shortages and rises in import prices, but also because of the effect on prices of wage increases in the previous year. (By the canons of fair wages, these price increases, however induced, have generally been taken as sufficient grounds for yet another wage rise). The third cause has been a greater or lesser degree of trade union pushfulness, within Britain's peculiar institutional, and particularly arbitrational, structure. Each argument has its own supporters ; indeed, it has lately become an academic fashion to try to give statistical weights to each. But, once again, a fairly clear distinction can surely be drawn between experience before 1955 and experience since then. Until 1955 the main impulses behind wage inflation were undoubtedly the excess demand for labour and increases in the retail price index (including increases caused by higher import costs). Since 1955 demand for labour, as for other productive resources, has slackened somewhat, while import prices have fallen ; and institutional factors have played a much bigger part in allowing wages to rise.

It is usual, especially among foreign holders of sterling, to regard the strength of the trade union movement as the most important of these institutional factors. But it does not square very well with the fact that the few major strikes for higher wage rates in this period have almost all been lost. A much better case can be made for saying that the real trouble lies elsewhere : that in the boardrooms of the nationalised industries, in the arbitration courts and in the Minister of Labour's *ad hoc* courts of inquiry the non-economic doctrine of the "fair" wage increase (discussed in the previous article) has been raised to the status of a national principle. One prominent arbitrator has privately but candidly described his system of arbitration as follows :

> Find out the amount that the union is really aiming to get (this is usually a lower figure than its published claim) and the amount that the employer is really resigned to have to pay. Often there is hardly any difference between the figures, and then the arbitrator's task is easy. When there is a difference you usually have to split it, but preferably you should never split it exactly fifty-fifty or you will cause an awkward precedent for next time.

In nationalised industries which are allowed to operate in deficit, and are therefore divorced from some of the ordinary disciplines of the market, employers have no objective means of working out what they "are really resigned to pay"; they have therefore often let their offer drift up to equal what the union bargaining with them "is really aiming to get." This system, of course, does not operate in a vacuum. Arbitrators' attitudes towards claims are liable to change with the general climate of opinion and of economic circumstance ; they, like the employers, were notably severer last year than at any time since the war. But this cursory review of experience before and after 1955 carries some important implications for policy.

7. *Conditions for Price Stability*

THE conditions for breaking the wage spiral in Britain seem to be three. First, because a rise in retail prices always exerts some upward pull on wage rates, it is necessary to win a breathing space in which there is stability in the cost of living. There is at least some hope that such a breathing space has been won now, partly because of last year's lucky fall in import prices and partly because a fortuitous political circumstance may offset the likely tendency for import prices to rise again this year. The trade unions are not at this moment inclined to push hard on their own section of the wage-price spiral, for fear of embarrassing the Labour party by a show of unpopular militancy just before the general election. Transport House now recognises that the main swing of floating opinion back to the Conservatives last year occurred during the London bus strike.

Secondly, grievously though politicians hate the thought, it is almost certainly going to be necessary to accept, as a permanent feature of our economy, a slightly higher level of unemployment than was tolerated in the boom years up to 1955. There are signs that this trend, too, may now be in train. Even if production rises again in the next three quarters of this year, recent experience in America and in our own motor industry suggests that unemployment may fall less than proportionately. Considerable economies in the use of labour have been put into effect in many factories during the recession.

Thirdly—although this is another point to which there is strong political resistance—some changes are going to be needed in the methods of wage arbitration. The abolition of the Industrial Disputes Tribunal is a forward step here, but, if Britain intends really to stop inflation, it is unlikely to be sufficient. An overhaul is also going to be needed of the wage policies of nationalised industries that are in deficit. In years in which other industries are granting wage increases it will probably never be regarded as politically possible (or socially "fair") to insist on a complete wage freeze for them alone. But at the very most, nationalised industries in deficit should never be allowed to do more than follow the pattern set by other industries ; they should never be allowed to set the inflationary pattern at the very beginning of a wage bargaining season.

Those seem to be the preconditions for avoiding wage inflation, while allowing the economy at last to start expanding again. They present some political nettles, but they are not impossible ones to grasp. They certainly do not involve anything so illiberal as a legislative showdown with free trade unions ; it is not in their wage bargaining power that the latter have become "overmighty subjects." Trade union forcefulness *per se* has probably not played a decisive part in post war wage inflation ; their depleted strike funds in any case have not allowed it.

LETTERS

Shareholders and Directors

SIR—The concept of a property owning democracy when applied to the rights of equity shareholders is meaningless. In the large majority of cases they are investors purely and simply, seeking the best return on their capital. They are not interested in the running of a company nor indeed have the moral right to such an interest.

A board of directors should give prior notice to its shareholders of their intention to transfer the control of the company, but only for the same reason that parents make public the forthcoming marriage of their children. Many more vital decisions are of necessity taken from day to day affecting the prosperity and the very existence of the company, on which it is impossible and impracticable to consult shareholders.

The overworn attempt to establish the moral right of equity shareholders to a say in the affairs of the company stems from an unnecessary sense of shame at the vital part that private investment and unearned income plays in the system under which we live. We feel compelled to justify morally, and thus legally, the power that money can buy.

We must once and for all accept the relationship of equity shareholder to company for no more than it is—the same as that of punter to racehorse.—Yours faithfully, D. B. SWIFT
Paula Works, Liverpool

★

SIR—May I emphasize two points: the importance of some "personality" holding sufficient shares to give control if the company is threatened with nationalisation; and the proprietary rights of the corpus of shareholders as opposed to those of "fragmentary" shareholdings?

In the Court of Appeal in 1947, Lord Justice Evershed in the Short Bros. case was giving judgment in the application of para (5) of Regulation 78 (Defence (General) Regulations 1939) and was concerned only with "the value to the shareholder of his individual holding." When the case went to the House of Lords in 1948 Lord Porter said:

> As to the alternative argument that the value of the business as a going concern should first be ascertained, and then that global sum should be divided in due proportion between the different classes of shareholders, no doubt if the regulation had stated that the shareholders were to receive the value of their shares calculated on their value on the sale of their business as a going concern the appellants' claim would be correct.

Lord Uthwatt said:

> If some one shareholder held a number of shares sufficient to carry control of the company, it might well be that the value proper to be attributed to his holding under the regulations was greater than the sum of the values that would be attributed to the shares comprised in that holding, if they were split between the various persons. The reason is that he has something to sell—control—which the others considered separately have not.

There is no doubt that the corpus of shareholders have certain proprietary rights which may have to be tested in the courts. In the meantime is it not incumbent on boards acting in the interests of their companies to assist the organisation of shareholders so that it is possible for them to act in concert?—Yours faithfully, H. A. FAGAN
Liverpool, 3

Potatoes

SIR—In your issue of February 14th you say the Potato Marketing Board ". . . clearly means to play extra safe by restricting supplies. . . . if the board's policy of restriction should lead to a potato shortage later in the year . . . the public revolt against the board could become a major affair indeed."

Potatoes are a guaranteed crop under the Agriculture Acts and the Government, who may have to pay the piper, have stated the tune as follows:—"The present acreage is sufficient in years of normal yield to meet all our requirements of maincrop potatoes. The yield per acre varies so greatly from year to year that an acreage which would supply all our needs in years of low yield would involve excessive Exchequer liability in years of average or high yields." (*Hansard*, August 1, 1958: col. 208.)

When that statement was made last August the area planted by registered producers was 670,000 acres. The board's quota decision for 1959 is 60,000 acres more than this; it will be almost, if not quite, equal to what was planted by registered producers in 1956 when, owing to a high yield, there was a surplus of over a million tons, of which over 300,000 tons could not be used even for stockfeed at a give-away price.—Yours faithfully, ROSCOE HERBERT, General Manager
Potato Marketing Board,
London, S.W.1

The Supply of Teachers

SIR—You conclude that another 100,000 teachers would have to be trained in order to achieve the Labour party's objectives of reducing all classes to a maximum of thirty and of raising the school leaving age by a year. This conclusion ignores the existence of a reservoir of teachers who are already trained—namely, married women who could work part-time but who are not able to take on full time jobs. Many of these women would be glad to teach either in the mornings or in the afternoons, but there is little opportunity for them to do so. Few part-time teaching posts are available except in grammar schools, and even these are mainly for scientists and mathematicians.

No one would deny that the employment of part-time teachers would—as in the case of part-time nurses—present problems of organisation and staff management. But if the use of qualified and experienced married women in a part-time capacity would permit classes to be made smaller, surely the head-teachers would, in the interest of the children, find ways of overcoming the difficulties.—Yours faithfully,
London, W.11 JENNIFER JENKINS

Walter Bagehot

SIR—May I ask, apropos your reviewer's discerning notice on Mr St. John-Stevas's new book on Bagehot, that any readers of *The Economist*, whereof he was the great formative editor, should communicate to you any remembrances or documents concerning him? The forthcoming volume on him*, which many of us warmly await, will help in his overdue appreciation by an age he faintly foresaw. Yet as your reviewer said last week, time and mischance—especially, in the case of *The Economist's* files, enemy action—have dealt shabbily with his literary remains, records and remembrances. When I first had the good fortune to serve on the staff of your paper twenty-six years ago, I remember the death of Mrs Russell Barrington at an advanced age; she was Bagehot's sister-in-law and the last of "the old ladies" who were once the young daughters of James Wilson, founder of *The Economist* and Bagehot's father-in-law and tutor-editor. It would be a service to this great editor's memory, and to posterity, if you, Sir, could assemble from many parts whatever material about him and his work may remain.

May I add that twenty-six years ago the late Mrs St. Loe Strachey—Nassau Senior's grand-daughter who died in her nineties in 1957—told me that she remembered Bagehot calling on her mother about her father's (Mr Simpson's) illness, she being a girl of ten. She said he was by far the most handsome man she had seen, and that in an age innocent of analgesics he had said "Pain is the very worst thing in life!" (How that dates as Victorian today.) She also told me that it was Bagehot who wrote the perceptive obituary in *The Economist* of 1864 on her grandfather entitled "Mr Senior." These trivia may be worth recording.—Yours faithfully, GRAHAM HUTTON
London, W.1

BOOKS

Banking Partners

Benjamin Strong: *Central Banker*
By Lester V. Chandler.
The Brookings Institution, Washington. London: *Faber.* 495 pages. 43s.

BENJAMIN STRONG, first Governor of the Federal Reserve Bank of New York, is chiefly remembered in this country as the staunch friend and colleague of Montagu Norman. Strong was born in 1872, a year after Norman, and he died in 1928, twenty-one years before Norman. They first met in 1916, so that their association was confined to about a dozen years and, as Norman did not become Governor of the Bank of England until 1920, their active collaboration as heads of the two leading central banks of the world to only eight years. It was in this brief period (during a substantial part of which he was incapacitated by illness) that Strong performed his life work as

> together with Montagu Norman . . . a principal architect of world monetary reconstruction after World War I and a leader in an unprecedented development of international central bank co-operation.

Before the opportunity for international financial co-operation arose, Strong had played a leading part in transforming the Federal Reserve System from the blue print sketched out by the Federal Reserve Act of 1913 into a live and viable working organisation. From the start, says his biographer, Strong dominated the Federal Reserve system. He conceived its position as that of master, not servant, of the banking system. "It had to have power, prestige and dignity; its position should be comparable to that of the Bank of England." If Strong had not had these ideals for the Federal Reserve System, if he had not had the will and power to get them accepted, the New York Reserve Bank would never have been in a position to co-operate effectively with the Bank of England or any other central bank.

Mr Chandler's life of Governor Strong is the counterpart of Henry Clay's life of Governor Norman. Both of them are largely devoted to tracing the part played by their heroes in the intricate web of domestic and international financial events of the times. The events are now of only limited interest. The specialist may still find it worthwhile to compare the accounts given by the two biographers of the evolution of the German reparations problem, the return of sterling to gold in 1925 and the help given by Britain and the United States towards the stabilisation of the franc, the lira, the zloty and the leu. The "general reader" is more likely to dip into Mr Chandler's book with the limited objective of discovering whether it gives a more ample and human account of the now legendary friendship of the central banking Nisus and Euryalus. For the most part, Mr Chandler's account, like Sir Henry Clay's, is from this point of view rather disappointing. Norman and Strong "liked each other immediately." They agreed on many general principles: that central banks should be independent of political control; that they should not deal with foreign governments but only with foreign central banks; and that international co-operation on monetary matters should be entrusted mainly to central banks. They saw eye to eye on most practical issues. And so on.

In the end, nevertheless, we discover that, like other close friends, they could on occasion quarrel. And from Norman's last letter to Strong, quoted by Mr Chandler, we get a glimpse of the strong emotional content of the friendship.

The quarrel—both men were ill at the time—was, of all improbable things, about a proposal to give help to the Roumanian leu. It took place at the last meeting between them, and it stung Strong to remark in a letter to Governor Moreau of the Bank of France that, though he had a deep affection for Norman, the latter had certain personal qualities of which he heartily disapproved.

Norman's last letter, written on learning of Strong's decision to resign and only a month before his death, begins, "Dear old friend, how hard and cruel life is." It remarks that with Strong's resignation "the curtain will be rung down on *our* stage." Then comes this revealing passage:

> But what a stage ours has been over these ten or twelve years! Unique, imaginative, far-sighted. Your early dreams set a goal before a world which was then so distracted as to be blind and credulous. Now that goal has been pretty well reached little by little and your dreams have come true over the years and I have watched the process (as no one else has done) with affection and pride.

Strong died in October, 1928. He died before the financial crash that began a year later, the crash that drove America to national and Britain to international bankruptcy. It is of course visionary to suppose that the continuance of the Norman-Strong partnership could have prevented those events and so, very possibly, the Second World War. Even so, one can surely now agree that their goal of international financial co-operation, which after Strong's death receded so far into the distance, has now again been "pretty well reached" and that the Norman-Strong partnership was not altogether in vain.

God's Lonely Man

The Individual and the Universe: *BBC Reith Lectures 1958*
By A. C. B. Lovell.
Oxford University Press. 111 pages. 10s. 6d.

NOTHING man has achieved has so upset hallowed, traditional, doctrinal and prevalent views of the universe as the curious probings of astronomers. There were just as old, hallowed, doctrinal views of what happened in men's bodies. Yet the probings of the anatomists, or the analyses of the biochemists, did not kick up half the dust. Darwin and Lyell, late in the arena where the scientific and the religious proponents clashed, certainly had a *succès de scandale* for a little over half a century. But by and large, from ancient Greece (and for all we know, Mexico, Egypt and Peru) to the western Renaissance and Enlightenment, the astronomers have been knocking one accepted cosmology, one "cosmoscope," one view of our universe down after another; and, which is saying a lot, their disputes today seem wider and wilder in speculative range than those of the economists. In the period in which the Russians got the sputnik up and got within snook-cocking distance of the moon, it was a happy thought to invite the director of the world's largest radio telescope at Jodrell Bank, the Professor of Radio Astronomy in the University of Manchester, to give the Reith lectures on the BBC. He has made of it an elegant, humble, tentative, yet factual and authoritative job. The resultant book contains passages which the exigencies of broadcasting time had to excise, and the author appends a brief foreword. One only regrets that there is no equally brief bibliography and index, for in this vast sandwich there is an awful lot of meat and very little bread.

Dr Lovell's first lecture, called "Astronomy Breaks Free," is a masterpiece of exposition about comparative magnitudes. If anyone, young or old, spent their half-guinea for this alone, they would have their money's worth and their mind's fill. He shows that our newest probes of the universe—whether farther by radio or nearer by optical telescopes—take us "farther" than ever, but *farther into the past* whence the faint lights of outer space began scores, hundreds, thousands, millions, and even hundreds of millions of years ago. The eye of the present glued to the eyepiece seizes the gleam of a little candle, travelling since long before Magdalenian or Aurignacian man. "Beyond the utmost bound of human thought" (Tennyson), or "As far as thought can reach" (Shaw), or "Mind at the end of its tether" (Wells)—these half-poetic statements reflect more accurately today the problem posed by astronomers. We already know that in so vast, and randomly moving, a universe, we and other stars are rushing "outwards" at prodigious paces. Some stars we once saw have already gone, their brief candle out as far as our eyes can see, though we may yet trace their presence by radio

waves: a quaint conceit today by contrast with the ancients' "music of the spheres."

> We may therefore be near the limit of our scientific knowledge of the universe as regards its extent in time and space and the cosmological implications of the observations now in progress have assumed an unparalleled significance.

What happens, then, to our existing theologies, dogmas and philosophies—socio-political as well as religious, collective as well as individual—when the astronomers (as they may well soon do) provide a literal meta-physics, a system of thought and logic about "things," functions and happenings "known" to exist, but beyond any physical measurement, observation and explanation? What happens when they establish that human measurement of time cannot hold for this meta-physical universe lying so "far" in space-time "behind" our living observers in observatories? What *happens if, soon,* they find out that galaxies, indeed universes, are being created and uncreated all the time; that "the expanding universe" is not infinite; or that it works like an accordion; or that everything is random and sporadic once you get the scale vast enough? What will church and state say then, and to whom? How will it affect the little man?

Professor Lovell thinks that of recent years the agelong cosmological issue "has crystallised into a conflict between these evolutionary and steady-state theories of the origin of the universe." He also thinks that we are on the verge of settling whether our universe started from a single act of creation and has ever since been "expanding down" or "down-and-out" (if you like), or whether it is ever-recreating itself. "Only the materialist can turn aside unmoved by the prospect." Yet "any cosmology must eventually move over into metaphysics *for reasons which are inherent in modern scientific theory*" (reviewer's italics). As that is where modern scientific theory has arrived since the challenges of *Galileo and* Darwin, Bruno and Lyell, the ordinary man—looking up on a clear November night at the just visible nebula in Andromeda, light from which takes two million years to reach him—may well conclude that it is better to travel hopefully than to arrive. It is enough that the butcher and baker and milkman keep to their daily orbits, and that Big Ben is "on time." Life must be lived in the little things, on the small scale, for brief pygmies on one of the smallest stars in an insignificant galaxy. Humility is not always the hallmark of scientists. But it is of Dr Lovell, and his lectures bequeath much of it to his readers.

Response to Disturbance

The Strategy of Economic Development

By Albert O. Hirschman.
Yale University Press. 231 pages. $4.50.

REFLECTING in tranquillity, as a research professor at Yale, on his extended experience of Colombian economic development, Mr Hirschman has written a cogent and wise book on the early stages of economic development.

His thesis is, essentially, this: the transformation of a relatively stagnant *traditional society into* one which has learned how to grow is likely to come about through a series of constructive responses to the pressure and tension that upset its equilibrium. The strategy of economic development, therefore, is to bring about these challenges, selectively, and then to ensure that the responses to them are sufficiently constructive.

Mr Hirschman does not agree either with those who believe that a neatly balanced growth is a possible objective of policy; or with those who contend that brutal dictatorship is the essential condition for overcoming the resistances of a traditional society to self-sustained growth. He starts by examining the insufficiency of two familiar bodies of thought about economic growth.

First, he looks at the doctrine that the prime mover in growth is to be found in a shift of psychological attitude from fatalism to an individual striving for material objectives. With his knowledge of Latin American experience, he suggests that economic growth requires the pursuit of both individual and group objectives; growth can be obstructed as well as helped by the pursuit of individual advantage alone. Thus a first requirement is to bring about a setting which offers incentives for an appropriate mixture of private and communal enterprise, of innovation and consolidation.

Those who argue for balanced growth, centrally planned and devised, misunderstand the living process by which growth proceeds. "Invention is the mother of necessity," he argues; it is the disturbing and unbalancing process of innovation, setting up chains of response, direct and indirect, which is the essence of the transition of the traditional society into regular growth.

This process of unbalanced growth—rooted in the creative disturbances of innovation—is then systematically examined according to the key decisions that have to be made: the apportioning of investment between social overhead capital and directly productive activities; the interdependence of developments within the industrial sector; the extent to which inflation, balance of payments pressure, and population pressure can be either creative or frustrating in their consequences; and the dynamic effects upon growth of interregional and international impulses.

In the end the goal of public policy is balance. But it is a balance achieved by harnessing and leading a living process, creating tension, while keeping this tension within reasonable bounds. With admirable perspective, Mr Hirschman brings his argument back to the mainstream of economic thought by linking this theory of creative disequilibrium to the conventional notion that investment is a response to the "outcropping of profitable opportunities."

There is one major gap in his analysis —as there is in the analysis of other economists who have lately widened their horizons to deal with economic growth. This is the lack of any serious analysis of the role of politics in this transition from traditional status to a state of growth. Leadership is required at every level to transform a traditional into a growing society. That leadership most come, essentially, from a thin and literate elite; and its direction will be substantially determined by the objectives of those who hold political power. Only a glance over the southern half of the globe will show that the modernisation of the economy is not the only possible objective of governments in transitional societies. An effective programme for economic development requires that economists shall absorb not merely the insights of the sociologist, psychologist, and anthropologist, but also the still older insights of the political scientist and diplomatist as well.

Bloknot Agitatora

The Third World War: *Trade and Industry. The New Battleground*

By Harry Welton.
Pall Mall Press. 336 pages. 21s.

THERE is a Russian journal with the title of this review, which even the linguistically unqualified should be able to translate. And here is its English-language counterpart: hard-hitting, passionate (which the Soviet Agitator's Notebook is not), but ill-arranged, one-sided, shy of basic issues.

Thus the book ranges widely over all aspects of communism, and Poland is mentioned twenty-eight times. There is much stress on the Lodz strike and the Poznan riots, but not one word on the changes that came after October, 1956; we are not even told to shrug them off as temporary—for the author they do not exist. Or, again, chapter 7, of twenty-one pages, is devoted to communist intrigue in the Middle East; the Suez affair is not mentioned once. Clearly the author, who is also throughout most *polite to the trade unions and Labour* movement, wants to avoid controversy; but only a very ill-informed reader will retain his confidence after such an omission.

In a short book about almost everything any reviewer can pick out inaccuracies. But here are some very odd statements (our italics):

> "Syria, *now with Soviet approval* joined with Egypt and the Yemen as the United Arab Republic . . ."; "Why did Russia deal so ruthlessly with strikers in East Germany, Hungary *and Poland. . .* ?"
>
> On page 286 the Soviet index of pre-war industrial production is apparently accepted as true;

And such errors are by no means peripheral, but basic to the themes the author has chosen. Moreover the basic theme of all, that communist economic imperialism is now the main threat, is extremely doubtful (for instance the author seems quite unaware of the statistical insignificance of Soviet foreign aid); yet he nowhere tries to prove it.

It is easy to sneer, but the thing could surely have been better done. "To arouse the apathetic, to shame the lazy and to encourage and arm with facts those already engaged in the struggle"—these are worthy aims, but to carry conviction one must be scrupulously accurate, willing to admit one's own faults, and sensitive to changes in the mood and style of one's opponent. Few of the readers for whom this book is intended will know exactly where it offends against these canons, but nearly all will infer from its tone that it does. Popularisation, one is forced to conclude, demands greater genius, greater pains and greater scholarship than any mere original research.

Determined Environmentalist

Journeyman Taylor

By Griffith Taylor. Edited by A. A. MacGregor.
Hale. 352 pages. 25s.

PROFESSOR Griffith Taylor is the most controversial figure that geography has produced in this century, at least in the English-speaking lands. His views on the part taken by the physical environment in determining man's activities would be accepted by few academic geographers today, yet they have been widely diffused by his many books and by the original, idiosyncratic and unforgettable maps and diagrams that are their characteristic feature.

Oddly and appropriately enough, there could scarcely be a better example of environmental control than the development of Professor Taylor's ideas, as outlined in this book. His years of battling to make Australian politicians adjust grandiose land-settlement projects to the stark and simple realities of their arid environment would have made a determinist of almost any geographer. It is no wonder that, assailed by cries of "slanderer, traitor, Jeremiah and Counsel for the Yellow Peril" for daring to point out that Australia had deserts, he emphasised a simple and direct control of nature over man with a vigour embarrassing to his colleagues working in older and more complex societies. Clearly his years in Canada, another country with a pioneer fringe still battling with a difficult environment, gave him no cause to modify his opinions.

But as its title suggests, this book is concerned less with ideas and their development than with journeys. The lengthy accounts of Professor Taylor's travels are unfortunately not much more than bare notes from a diary, spattered with rather technical references to phenomena of geological or geographical interest. Yet the reader is left at the end with respect for a man of courage, who sailed on Scott's last voyage, who never feared to maintain unpopular opinions, and who did not turn aside from the opportunities that life offered him.

Spain, Christian and Muslim

A History of Spain

By Harold Livermore.
Allen and Unwin. 478 pages. 30s.

Andalus: *Spain Under the Muslims*

By Edwyn Hole.
Hale. 189 pages. 18s.

PROFESSOR LIVERMORE, of the University of British Columbia, offers us the whole history of Spain in a volume of 450 pages. He begins with the climatic conditions of the Iberian peninsula more than twenty millennia ago and ends with the assumption by General Franco in 1948 of power to grant titles. The task of selection and compression has been competently performed. The author has the necessary knowledge, and possesses the gift of summing up the characteristics of a period in a few clear and striking phrases. But extreme compression has its drawbacks. When the author writes with regard to General Primo de Rivera's seizure of power in 1923 that "it was generally supposed that the chief object of the coup was to prevent the publication of the report on the disaster of Anual," the reader is given no means of judging whether he is to consider this uncharitable judgment as justified or not. Nor on such a vast canvas can occasional slips be avoided. The Almohads of Morocco drew their strength not from the tribes of the plain but from mountaineers who had to fight for years before they could descend from the Atlas. General Silvestre's ill-fated advance of 1921 was surely directed towards Alhucemas, westwards, not towards the east.

Nor is the statement on the dustjacket that the book is particularly suitable for students really justified. The beginner requires something simpler and more schematic; the advanced student much more detail. The work will be most appreciated by those who already have a general knowledge of Spain and its history and are glad to see how their own fragment of the jigsaw fits into the whole picture. For this purpose the book is excellently adapted, making a general impression of completeness and dependability. If not so "immensely readable" as the publishers suggest, the narrative is agreeable, though not always very easy.

Mr Hole deals only with the little known period during which Spain was as much Muslim as Christian. After a long career in the Levant Consular Service, he profited from five years as honorary Vice-Consul in Malaga to study the writings of a number of scholars, mostly Spanish though some French, dealing with Muslim Spain. Realising the importance and interest of their researches, he set out to make them known to English readers who are not familiar with the language of the originals. His method is to concentrate on the picturesque, presenting it some-

KNOW YOUR MINISTRY

A DESCRIPTION of Government Departments whose operations affect the conduct of business. The articles which provide the substance of this book originally appeared in THE MIDLAND BANK REVIEW. They have now been revised and brought up to date for publication in book-form.

An essential source of reference for businessmen and all who wish to understand the scope, functions and organisation of the various Ministries and the ways in which they affect the activities of the business world. Fully indexed.

Foreword by
The Right Hon. The Viscount Monckton of Brenchley,
P.C., K.C.M.G., K.C.V.O., M.C., Q.C.

248 pages

EUROPA PUBLICATIONS LIMITED
56 Bloomsbury Street,
London, W.C. 1

times in his own language and sometimes in that of earlier narrators. The result is a scrapbook, based on such themes as the People, Administration, Love, Poetry, Fun and Games. The style sometimes descends to the lower levels of journalese—for instance, when, apropos of Arab poetesses, the author remarks that "a few blue-stockings comet across the firmament." Erudition occasionally stumbles as well. On one page it is said that the dynasty of the Ziris in Granada held out till the end, namely till 1492, while three pages later we are informed (correctly) that the last Ziri sultan composed his memoirs in 1090, nearly four hundred years before the end. The Mozarabe rite is not Arabic, but Latin; it is in fact the old Spanish rite of Visigothic Spain, preserved by the Arabised Christians in the south after it had been displaced by the Roman rite in the north. The thanks of readers of English are, all the same, due to Mr Hole for introducing them, in a very lively manner, to an unfamiliar world about which a journey in southern Spain gives nearly all travellers a desire to learn more.

An Unorthodox Textbook

Concepts and Cases in Economic Analysis

By Aaron W. Warner and Victor B. Fuchs.
Harcourt, Brace & Co. 353 pages. $2.75.

THIS is an extremely interesting experiment in economic teaching. It is less a textbook in the usual sense than a teacher's aid or study-group manual. Its method is well indicated by its title. The student is in effect introduced to a bag of conceptual and practical tools—beginning with the notion of functional relationships between variables, such elementary terms as "demand" and "cost," such devices as charts—and immediately given the chance to use each on particular cases (some invented but mostly drawn from news reports or current controversy) chosen for their clear illustration of the point under discussion. This "use" sometimes means finding an answer to a practical problem; more often, it means sorting out a semantic ambiguity, spotting a fallacy, or merely distinguishing the economic from the non-economic elements in the situation presented. Towards the end of the book, when macroeconomics raises its ugly head, the method works less well, the "cases" being mostly themselves theoretical statements and the practical instances being unmanageably complex. But even here the habit of exactly weighing meanings is usefully exercised.

A separate "instructor's key" is provided, giving answers to the several hundred questions in the book. On the whole, the obvious danger of cut-and-dried dogmatism or superficiality attaching to this device has been avoided; though a teacher who invariably rejected as "wrong" any answer differing from that in the "key" would give his students a shockingly erroneous idea of what economics can do. Often the answers are themselves questions, isolated and re-phrased so as to elicit a key point for class discussion.

There is no descriptive, institutional or historic matter; unlike so many writers of American economic textbooks, the authors attribute to their readers the capacity to digest more than one book per course. Surprisingly, they give no suggestions for such concurrent reading. This is the more a pity since their book may well have an extra, and entirely legitimate, attraction for the inexperienced teacher, pulled into economics from some related field, who would need and welcome guidance. The standard of *difficulty* is variable but not severely taxing. What does get taxed is the reader's willingness to use initiative and give close attention. The best of traditional textbooks can be abused by passive assimilation and regurgitation. With "Concepts and Cases" this is impossible, and to have made it so is a real achievement.

Marxism in Russia

Soviet Marxism: *A Critical Analysis*

By Herbert Marcuse.
Routledge and Kegan Paul. 271 pages. 28s.

THIS book is the result of research undertaken at two distinguished American centres for Russian studies, the Russian Institute at Columbia University and the Russian Research Centre at Harvard University. Like all the products of these institutions, this is a thoughtful, scholarly and interesting work. Mr Marcuse has set himself the task of discovering the function which Marxism, as a body of doctrine, occupies in Soviet society including the influence that it exercises on that society's future development. The method employed is that of "*immanent* critique." This means using for the analysis of Marxism its own conceptual instruments.

The method has obvious advantages if it can be made to demonstrate, as Mr Marcuse succeeds in doing, some at least of the inherent contradictions to which, in the best Marxist tradition, Soviet society with its Marxist ideology is subject. But it does not make for easy reading. Anyone, unused to the Marxist terminology which so easily degenerates into jargon, will find this book hard going. It is, however, on the whole an effort worth making even though no very clear-cut conclusions are reached at the end.

The book is divided into two parts. The first and considerably longer one deals with the basic conception of Soviet Marxism as a unified theory of contemporary history and society. The second part deals with Soviet ethical philosophy in order to analyse the reaction of the "human material" to the tenets of Soviet Marxian theory and to the goals set by it which "Soviet man" is supposed to attain.

Briefly, what Mr Marcuse tries to demonstrate in his first part is that the specific forms which Marxism has assumed in the Soviet scheme of things —"Soviet Marxism"—are ultimately determined by the objectives of industrialisation and the conditions under which it is carried out, above all by the basic circumstances of antagonistic competition with the West. Mr Marcuse finds some interesting parallels in the consequences which total industrialisation has called forth in the two systems. He has much to say on the similarity of the resulting patterns of attitude and organisation: the political and cultural centralisation which is promoted by highly rationalised and centralised businesslike management. He believes that in the West this has meant "a corrosion of the humanistic liberal ethics," centred on the idea of the rights of the individual (the old system of values surviving none the less, though in contradiction to prevailing practice). Liberal ethics had no place in the Soviet state; therefore, that state had to create its own system of values concurrently with the process of total industrialisation.

The high degree of similarity between the "featured values" of Soviet ethics and "bourgeois" ethics is further examined in the second part. Mr Marcuse concludes that there are serious contradictions between the moral and ethical system established in Soviet society and the reality of the political system. This, he believes, carries potential dangers for the Soviet rulers, since both technical-economic pressure and ideological pressure work in the same direction—toward the relaxation of repression.

Legal Jungle

The International Law of Art

By Barnett Hollander.
Bowes and Bowes. 363 pages. 63s.

THERE is room for an authoritative book explaining the regulations and summarising the case law of civilised countries in respect of works of art. Mr Hollander's chapter headings suggest that, despite his title (there is no *international* law in art matters), this was what he set out to provide. In particular, such subjects as the copyright in pictorial art, a painter's rights in his work regardless of its ownership, auction sales and warranty, the position of professional experts, fakes and forgeries, "slander of property," and trade practices—all these aspects of the art world abound in dubieties on which a clear, informed legal lens could throw a very welcome light.

Mr Hollander's near-400 pages contain a good deal of instructive browsing for professionals, whose ears twitch agreeably as old scandals and skulduggeries come up for mention. But even they, let alone laymen seeking not entertainment but enlightenment, will be maddened by the repetitions, the inaccuracies, the lacunae and the imprecisions which disfigure this rambling book; and they will be disappointed of any clear-cut summaries of what the law is (even in England) on these various difficult points—though they might think themselves entitled to expect these from an author who describes himself on the title-page as "of the New York Bar" and dates his preface from Lincoln's Inn.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Mr Dulles in the Background

WASHINGTON, DC

MR DULLES has been carried off the bridge just as American foreign policy has begun to feel the tide tugging at its moorings. His second attack of cancer comes when there are signs of a rising willingness, both within the Administration and among the Democrats in Congress, to look afresh at the whole German problem. Having concluded last week, when it was hoped that his illness was not serious, that Mr Dulles was virtually irreplaceable, as indeed he is, the Americans are now having to ask whether they will not after all have to replace him. In spite of the brave assertion of his doctors that he has a "fighting chance" of resuming at least part-time duties, and the stiff-lipped refusal of the President to talk about a successor at his press conference on Wednesday, three of the half-dozen most influential newspapers in the country have said this week that Mr Dulles should hand over his duties as Secretary of State and the *New York Times* has suggested that his advice may be more important than his physical presence.

Most doctors agree that, even if the radiation treatment works well, Mr Dulles will be unable to pick up again all the threads of detail which he loves to run through his fingers. Those who want him to resign argue that it will not suit his style simply to exercise a general supervision over major decisions of policy; his strength has always lain in an ability to base his judgment on a mass of details acquired by grinding hard work. There is also a half-spoken suspicion that the judgment of even the granite Mr Dulles cannot be wholly unaffected by the pain, the private distress and the need for constant treatment that go with his condition. In about a month's time someone has to represent the United States at the meeting of the four main western foreign ministers due to be held before the North Atlantic Pact gathering on April 2nd. This meeting will have the delicate task, on the basis of the tidings Mr Macmillan brings back from Moscow, of putting a batting-order on the various possible proposals for reunifying Germany which have just been catalogued by a "working party" of the four nations. It is believed that the State Department would like to delay the meeting as long as possible and to shift it from Paris to Washington; even so, it might still have to refer to Mr Dulles's convalescent room.

If Mr Dulles does uproot himself, the gap he leaves will be a measure of his real and remarkable stature. Dr Adenauer is only one of the crusty old allies of America—Dr Rhee and Marshal Chiang are others—who seem to soften, if at all, solely to his touch. The icy displeasure with which Bonn greeted even Mr Dulles's minor heresy about dealing with the East Germans as "agents" of the Soviet Union bodes ill for any tyro, like Mr Herter or Mr Dillon, the present Under Secretaries, who tries to move away from the conditions laid down by the West in 1955 for the reunification of Germany.

Even more important is Mr Dulles's enormous—and consistent—influence on President Eisenhower, himself ailing and weary. It has been cogently argued by Mr Joseph Alsop that the chief need for Mr Dulles in the next few months might well be to screw up the President's nerve to take a momentous decision; the decision might be either to order the tanks through the road-barrier to Berlin, or to abandon the old formula for reunifying Germany. There is reason to believe that Mr Dulles has sided with the British as a moderating influence on the question of access to Berlin. So far he has over-ruled the chairman of the Joint Chiefs of Staff, General Twining, who has been voicing a far more bellicose readiness to seize upon a blockade as an excuse for a showdown. Even if Mr Dulles gave up the Secretaryship, he would still be available for consultation as an elder statesman. But the President, ever the proper soldier, likes to work through channels; it is impossible to believe that Mr Dulles's authority would be undiminished.

Left to himself, Mr Eisenhower would not necessarily grow more intransigent. There have been a few minor crises, as at Little Rock and when Mr Nixon was mobbed in Venezuela, when he has hotly ordered out the troops; but twice in 1954 he over-rode recommendations which might have led to war with Communist China. Nevertheless, in the vacuum that would follow Mr Dulles's retirement, the voices of others would certainly be heard more loudly. General Twining's is one. Another, probably more pacific, is that of Mr Nixon, whose presidential ambitions make him eager to play a larger role in policy-making and to earn a reputation as a man of peace.

IT is small wonder that the inhabitants of the State Department feel rather like the ark without Noah; not even the hope that Mr Macmillan may now bear back an olive twig from Moscow in his beak removes the feeling that the waters are rising. Last week Senator Mansfield, the Democratic second-in-command in the Senate, broke the ranks of bipartisanship in a speech which said that free all-German elections were an "unrealisable slogan," urged the two halves of Germany to discuss the "harmonising" of their systems, and called for an unspecified amount of disengagement.

Although Senator Johnson, the Democrats' leader, described it as a "great speech," and Senator Clark went so far as to claim that a majority of Senators were ready to consider disengagement, this does not quite amount to the emergence of an opposition policy for Europe. Mr Dean Acheson, the Democratic ex-Secretary of State, would

certainly not agree with it; Mr Paul Nitze, the former State Department officer who is another of the Democrats' leading spokesmen on foreign affairs, has his reservations. But Senator Fulbright, now chairman of the Senate Foreign Relations Committee, has already said that disengagement should be at least discussed with the Russians; in Congress pressure on the Administration is likely to mount.

And the Administration itself is far from single-minded. The uncertainty extends beyond the problem of access to Berlin, in which the reported differences between the British and Americans seem to have cloaked a disagreement among the Americans themselves. Some time ago Mr Dulles called on the State Department to produce all the new ideas on German reunification it could think of, and at least some of these are now contained in the working party's list which the allied foreign ministers will brood upon next month. Some press reports have suggested that the department is looking most favourably on ideas—such as the thinning out of forces in Germany, and a promise to keep western troops out of the east zone altogether—which would simply sweeten the pill of free elections in the hope that the Russians may yet swallow it. But probably the list also includes more radical ideas for an alternative road to reunion if the Russians continue to block free elections. Until the allied ministers meet, it is hardly possible that a decision can be taken on whether or not to embody these in western policy.

It is the more important that the United States should be effectively represented at this meeting. The State Department reasonably says that little more can now be done until Mr Macmillan finds out whether the Russians seriously wish to negotiate about Germany as a whole. But then two great decisions may have to be taken. If the Russians refuse to talk about Germany, and simply press their demands on Berlin, the western ministers will have to decide whether the appearance of East Germans at the checkpoints is really to be met by the threat of force. If the Russians agree to talk about Germany, but not about free elections, the question will be whether (in Senator Mansfield's phrase) there are acceptable ways of starting to "harmonise" the regimes of the two halves of Germany. The ideas circulating in Washington suggest that these would have to include, at least, an independent all-German judiciary and some kind of guarantee of free speech for the East Germans. Long and complex negotiations would then be required. If so, and if Mr Dulles has to retire, his diamond-like mind will be sorely missed.

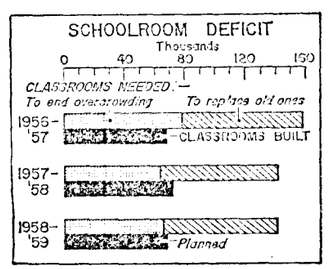
Aide for Aid

THE appointment of Mr James Riddleberger to head the International Co-operation Administration, the agency which handles the economic side of foreign aid, means that an experienced career diplomat has been conscripted into a post which is well known in Washington for being hard to fill—and hard to keep filled. No one seems able to stand more than two rounds of the annual struggle with the stingy congressional committees which dole out the financial life blood for what the Administration considers to be almost the most vital part of its work abroad. Mr Riddleberger, as a devoted government servant, presumably had no choice but to accept the job, and the Senate Foreign Relations Committee will presumably have no choice but to confirm his appointment, since its new chairman, Mr Fulbright, has recently been insisting on the necessity of nominating only fully-qualified candidates for diplomatic posts.

Most of Mr Riddleberger's career has centred round Germany, but he had some knowledge of economic affairs even before he went to Jugoslavia as Ambassador in 1953; for the last year he has been Ambassador to Greece. Economic assistance plays a large part in America's relations with both countries. Whether or not Mr Riddleberger will be as good at his new job as would have been the man who was supposed to get it is another matter. Ever since it has been known that Mr James Smith was to leave the ICA at the end of January, it has also been known that the State Department, and particularly Mr Dillon, who is in charge of economic matters there, wanted the new head of the ICA to be Mr Henry Labouisse. Mr Labouisse, a foreign service officer with special experience of foreign aid before he transferred to the United Nations, retired last year after directing the Relief and Works Agency for Refugees from Palestine since 1954, a thankless task for which he nevertheless has received many well-earned thanks and which has taught him how to do a great deal with little money and how to deal with trying people.

But unfortunately nearly twenty years ago Mr Labouisse registered as a Democrat and, even more unfortunately, he lives in Connecticut, the home state of Mr Alcorn, the chairman of the Republican party organisation. Since Mr Alcorn's influence over Republican supporters—and over their pockets—depends upon his power to promise them good jobs, he apparently regarded the proposed appointment of Mr Labouisse as a personal affront which he could not allow. President Eisenhower maintains that no one has the right to veto his selections, but in fact he did not select Mr Labouisse—although he did not select a Republican either. Mr Riddleberger's appointment is non-political but, at a time when the Democrats are waving the axe over foreign aid, a political appointment—of a fully qualified Democrat—might have been more helpful.

Music from the Underworld



THE juke-box, the big coin-operated gramophone, is standard equipment in most American bars, cafés and restaurants. But it does not usually belong to the proprietor. He leases it from an operator who services the machine and collects the takings. Juke-boxes alone are estimated to bring in $300 million a year; gambling machines and innocent ones, for amusement only, take the total up to about three-quarters of a billion dollars a year. So lucrative a cash transaction has an understandable allure for gangsters who can use it to conceal their revenues from prostitution, dope peddling and gambling. Moreover, ownership of a string of juke-boxes provides regular contact with a host of small businessmen through whom other activities can be run. When the McClellan Committee on Improper Activities in the Labour or Management Field lifted the lid off the juke-box in its hearings last week, it revealed a perfect Social Register of eminent thugs, many of them Italians alleged to be members of the shadowy Mafia.

In this industry labour relations surely are at their most improper. Trade union branches are created by gangsters and their henchmen, witnesses admitted, purely to police the proprietors of "locations"; if businessmen lease their music from a competitor, a picket line usually brings them to heel with its threat of early bankruptcy. If not, strong-arm men are available to settle the matter. Collusion between labour and management is general. The former sales head of one of the big companies manufacturing juke-boxes told the committee that, to sell his wares, he had to deal with gangsters and that violence—distasteful as it might be—was part of the trade. The underworld, however, has its own rough justice. According to the police, the famous mass meeting of well-known gangsters which they broke up at Apalachin, New York, in 1957 was for the purpose of dealing with a colleague who had been sentenced to death for breaking rules in the juke-box industry. This Supreme Court of the underworld reprieved him, on payment of a $10,000 fine.

With such revelations continuing to mount, the public will find it hard to understand—and to forgive—if Congress, for the second year, adjourns without passing a labour reform Bill. Senator Kennedy and Mr Mitchell, the Secretary of Labour, both of them politically ambitious, recognise this and are moving to adjust their differences over the Bill. But between them businessmen and right-wing Republicans, who want to restrict the bargaining power of the trade unions, and the trade unionists, who demand favourable changes in the Taft-Hartley Act as the price of their support, may once more frustrate much-needed reforms when the Bill reaches the House.

Blackboard Problems

LAST week the Administration submitted to Congress its solution of a difficult exercise: how to help communities build the new schools which are needed without unbalancing the Budget in the financial year which begins next July. Although the states and their school districts are spending more than ever on buildings, the tax-supported schools are crammed with 2 million more children than they were meant to hold and another 2 million are taught in obsolete schools. Even if the building boom continues—which is unlikely without federal help—the continued rise in the number of children will frustrate the effort to give them all adequate schools.

The Administration's proposal is, roughly, that it should help really needy school districts, which are already doing all they can, by paying half the annual charges for principal and interest on new school bonds, if the state, in each case, will pay the other half. As it takes time for school plans to be drawn and bonds to be floated, the federal government would not be called upon to pay anything until the fiscal year which begins in July, 1960, although over 25 years the bill would amount to about $2 billion for Washington and $2 billion for the states. It is estimated that this should buy about $3 billion worth of new schools during the next five "emergency" years. There is a somewhat similar plan to help colleges to expand.

This ingenious but over-complicated scheme is far less generous than the proposals the Administration advanced in 1955, in 1956 and 1957, but none of these came to anything. If the poorer states cannot find their share, the plan will be even more modest than it looks and Democrats keen to help the schools have cold-shouldered it. But their big schemes for direct grants to the states lack the support to overcome a presidential veto even if they can be blasted out of the parsimonious House Rules Committee.

The Education Act passed last year in the glare of the sputnik is also suffering from budget cramps. Congress authorised over $183 million for the first year, but the Administration is asking for only $115 million. Some of the programmes—for grants to improve the quality of teaching, counselling and testing—are unavoidably slow to launch. But the loans to needy college students have proved unexpectedly popular; colleges and universities have submitted requests for $62 million for this year, twice the $31 million allowed for in the Budget. The requests would have been even higher if a number of colleges had not refused to take part because students accepting loans must take a loyalty oath—an offensive and useless vestige of McCarthyism.

New Eye on the Weather

FROM A CORRESPONDENT IN COLORADO

WHEN in 1743 Benjamin Franklin deduced that a storm which had visited Philadelphia was the one which hit Boston a day later his observation was of solely scientific interest, since at that time such a storm would arrive far ahead of any warning of its coming. The modern forecaster can outrace the weather by telegraph, telephone and wireless. But to make his forecast he still has to go outdoors, look at the sky and read instruments, before putting the results on the teletype machine. At the central weather bureau hundreds of such messages are assembled into a national map, which is then transmitted by facsimile back to local stations. Working from this and from their own more recent observations, these then prepare local forecasts.

But by the time the average citizen hears them on the wireless or reads them in the evening newspaper, the forecasts reflect weather conditions which may be nearly twenty-four hours old. Thus the forecaster is often caught out by changes which are too fast for a system which remains relatively slow because it still depends on man to link together its electronic equipment. Moreover, this absorbs so much of the attention of the men concerned that they have no time left for the task which only they can perform—to bring their judgment and foresight to bear on the weather problem.

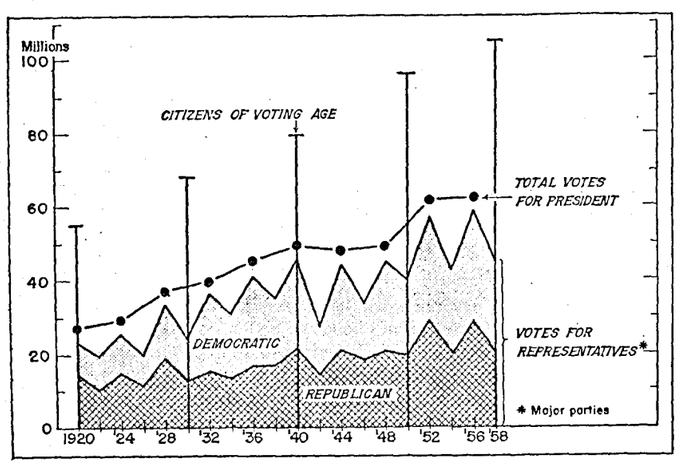
The Air Force therefore proposes, when it has enough money, to set up a completely automatic system to cover the whole country; all the necessary machinery is already available and a preliminary trial linking five to seven stations between Boston and Washington is definitely in the planning stage. Much of the weather research in the United States is now done by the armed services because they find it easier than does the Weather Bureau to get money from Congress; in any case, accurate and immediate weather observations are of increasing importance in modern war.

Under this future automatic system of weather forecasting, hundreds of units exactly alike will keep a continuous local check on such data as temperature, dewpoint and direction and velocity of winds; a human forecaster will, however, still be needed to report on visual conditions, such as cloud-cover. At a given signal, all this information will pour into a central network in a few seconds and will then flow steadily into one or more electronic computers. These will assess in a matter of minutes data which it now takes many hours to collate, and report continuously to the central weather bureau, where the results will be shown on an ever-changing weather map. This map will appear, like a television picture, on large screens at all the hundreds of local stations. A forecaster will only need to glance up to assess the weather of the whole continent, as it was an hour or so ago at most; from this and from his own immediate observations, he will make his local prediction.

Such a system may also help to solve the next problem in the general weather picture, one which today is of as much importance to many industries as it has always been to agriculture: How far ahead can the weather be forecast with enough accuracy to be useful? There are two sharply divided schools of thought on this: one believes that Nature does nothing by chance, that all natural developments flow out of previous ones and that therefore when man becomes clever enough he can deduce what is coming next; the other argues that the whole picture is so complex that "Nature herself doesn't know what the weather is going to do beyond the next few days, so how can we find out?"

The official view on this is a study, made during the last war on long-range forecasting for military purposes, which concluded gloomily that a reasonably accurate forecast for three or four days ahead was about all that could be hoped for, except in those regions where the weather remains the same for months on end. But many experts insist that

Republicans in the Depths



As the final results and assessments of last November's elections have been collated in Washington, it has become clear that the Republicans are in an even worse position than was realised at the time. In Congress they now have 34 Senators to the Democrats' 64 and no hope of winning a majority in 1960; of the 33 seats which will be at stake in that year, there are only 12 that the Republicans have any chance of winning—and they need at least 16. They hold 153 seats in the House of Representatives to the Democrats' 283; 61 of the Republican seats are in the doubtful class—that is, were won by majorities of less than 5 per cent of the total vote—while only 42 Democratic seats are in this group. Moreover, nearly all of these Democratic "doubtfuls" are districts where the Democratic share of the vote has been increasing; in over two-thirds of the Republican "doubtfuls" the trend is in the opposite direction.

Turning to state governments, which are in the long run more important, since it is here that a party builds up its strength for national elections, the picture is even darker. Only 14 of the 49 Governors are Republicans, compared with 19 in 1956, and the party controls only 7 State Legislatures, compared with 17 two years ago. There are 591 Republican State Senators and 1,939 Republican members of lower houses, while the Democrats have 1,166 and 3,721 respectively. Of the 50 largest cities in the United States, only 10 have Republican Mayors.

While the South is still solidly Democratic there is no longer any region of the country on which the Republicans can rely. In the old House of Representatives they held 18 of the 28 New England seats; now they have only 9 and their majority of 400,000 votes in the 1956 congressional elections in this area has been taken over by the Democrats. This party now holds 67 of the 128 seats in the Middle West, compared with only 46 two years ago, and it collected 1,120,000 more votes than did the Republicans in this region last November; in 1956 the Republican majority there was just over 1 million. And in both the Rocky Mountain and Pacific Coast states the Democrats increased their 1956 majorities in 1958.

Nor, according to an analysis conducted by the American Institute of Public Opinion, can the Republicans rely any longer on the support of those groups of voters who have usually been regarded as safely theirs. More than half of the people over 50 years old, of the professional, business and white collar workers and of the farmers, voted Democratic last autumn and in all these cases this represented a shift of 10 per cent or more since 1954, the last non-presidential election year. The only place in which the Democratic share of the vote fell, according to this survey, was among Negroes—but they remain predominantly Democratic nevertheless.

Only twice since 1930 have the Republicans received more than 50 per cent of the total votes cast for the House of Representatives and this year the party's candidates for the House were given the same number of votes, just under 20 million, as in 1950, while the Democratic total, almost exactly equal in that year, has gone up to 25,600,000. It is no wonder that the Republicans are beginning to fear that they may be permanently in a legislative minority. Obviously it will take something of the order of a miracle to win them a congressional victory in 1960; their only chance seems to be a presidential candidate able to pull in even more votes for his followers than did Mr Eisenhower along with his personal 35 million in 1956.

the state of knowledge about the weather has changed almost beyond recognition since this study was made fifteen years ago and that a new assessment is badly needed.

Meanwhile some private forecasters are already making a business of providing general predictions for years ahead and one now offers long-term forecasts which, he claims, are almost as accurate as for twenty-four hours. Some of the largest and most conservative industrial firms in the United States patronise these experts and some, particularly in the oil industry, have set up their own forecasting departments. The implication is that the official Weather Bureau and the more orthodox weathermen are behind the times and as a result the dispute between the two schools has become acrimonious.

In addition to fast electronic weather reports and to reports from those parts of the earth from which none are now received—incidentally, the Russians are said to be very co-operative—some experts have been looking forward with special eagerness to the launching of a satellite "weather eye" which will circle the globe continuously and report on conditions beyond the atmosphere. The Vanguard satellite which went into orbit successfully on Tuesday will provide a first instalment, although the instruments transmitting information from it are expected to function for only a few weeks. The purpose of this experiment is to measure the distribution and movement of cloud cover beneath the satellite's orbit and relate it to the general meteorology of the earth. The different intensities of sunlight reflected from cloud, sea and land masses will be translated into electrical signals which will be transmitted to ground tracking stations.

Such knowledge of cloud cover will be of great assistance to the long-term forecasters. But eventually it is hoped that the satellite eyes will help the weather experts in other, even more important, ways, particularly perhaps by providing information about the precise amount and type of radiation which the sun, the prime factor which determines the weather, is casting on the earth at any given moment.

Cut in Cloth?

THE talks which Mr Kearns, the Assistant Secretary of Commerce for International Affairs, is having with textile exporters in Hongkong is the first official effort to relieve pressure on a particularly sore point, one which is a factor in driving the domestic textile industry to seek a general cut in imports. Textile producers are slowly and uncertainly emerging from a sharp two-year recession and a report of the Senate Commerce Committee, reflecting the views of Senator Pastore, who represents the textile state of Rhode Island, recently recommended the imposition of general quotas. It also asked for the end of agricultural policies which enable foreign producers to buy American cotton at a price 20 per cent lower than the American producers pay and objected to the use of foreign aid funds to establish new textile capacity in the under-developed countries.

The industry has received little encouragement from the Administration so far on wider restriction of imports (the only existing ones are the voluntary quota accepted by Japan and the wool tariff quota). In Hongkong Mr Kearns has been discussing, not a general voluntary reduction in exports to the United States, but diversification of them, and he seems to have been impressed with the argument that this rests with importers in the United States, not with exporters in Hongkong. Moreover, he apparently found no confirmation of the allegations of American manufacturers that the Hongkong label covers a multitude of Chinese Communist exports. At home, the Office of Civil and Defence Mobilisation has disappointed the textile interests by refusing to declare that textile imports in general jeopardise the national security.

If the industry is to secure more protection, it will have to bring pressure to bear on Congress. Such pressure will be all the more vigorous because at last wages and prices in the industry are moving up. Several of the large producers in the South have announced that they are raising minimum wages in their mills from about $1.12 to $1.25 an hour and giving higher-paid workers an additional 10 cents an hour. In part this is an effort to forestall a new drive by the Textile Workers Union in the South, where most of the factory hands are unorganised; the companies want them to remain so. But the industry also recognises that it must pay more if it is not to lose its best workers to other manufacturing industries where the average wage is $2.19 an hour; it is only about $1.40 in the textile mills. The industry feels that it is caught between the devil of foreign competition and the deep blue sea of the high-wage American economy.

Justice for the Indian

FROM A CORRESPONDENT IN OREGON

THE facetious American expression, "Give the country back to the Indians," offers no hint of the difficulties which Congress has encountered in its efforts to emancipate the 2,133 members of the Klamath Tribe in Oregon and to "give" to each of them his share of the value of the million acre Klamath Reservation. As part of a programme to end the system under which Indians have been wards of the government, Congress four years ago approved Public Law 587. This provides for the sale of all communal property in the Klamath Reservation and for distribution of the proceeds among the members of the tribe. But it soon became apparent that emancipation was fraught with more hazards than any Congressman had imagined. The vast reservation, lying north-east of Klamath Lake, the biggest in Oregon, includes some of the richest virgin pine forests in the Cascade Mountains. Its marshes are valuable nesting and feeding grounds for migratory wildfowl. The law specified that enough of these and other properties should be sold by August, 1960, to pay in cash the shares of all the Klamaths who want to withdraw from the tribal organisation and go their ways as independent citizens.

In 1864, when the government and the Klamath Tribe agreed to the establishment of the reservation, neither could have foreseen how valuable this wilderness would become. Just as the Indians of Oklahoma found themselves enriched by oil discovered on reservation land, the Klamath Indians came into the heritage of some four billion board feet of timber. Its value is estimated at about $90 million or more than $45,000 a head. The question was who could be found to pay such a sum? And, if purchasers could be found, what would be the economic effect of the precipitate sale of this timber?

Last year the vexing problem of the Klamaths was put back on Congress's calendar, with a virtually unanimous

demand from Oregonians, including the leaders of the tribe, that the inflexible terms of Public Law 587 should be altered to prevent a "fire-sale" liquidation of timber on the reservation and uncontrolled exploitation of both timber and marsh lands by private interests. Meanwhile, a plebiscite disclosed that 1,649 Klamaths, or 77.3 per cent of the total, would choose to take their shares in cash. In all, this would amount to about $70 million.

In the closing days of the session, Congress finally revised the Klamath Termination Act. In brief, it now authorises the government to spend up to $90 million to meet the claims for cash if private buyers for the Indians' assets cannot be found. Senator Neuberger of Oregon, who guided the Bill through Congress, feels that it achieved its three main aims: to do justice to the Indians themselves; to keep the lumber market in Oregon from being broken wide open by a bargain-basement sale of four billion feet of timber; and to save the Klamath timber, watershed and wild life for future generations.

THE significance of the Act is not limited to the interests of the Klamath Reservation and its 2,133 owners, many of whom live in other states. It provides a standard of justice for other American Indians who are still wards of the government, and it establishes the precedent that conservation of natural resources must be considered when Indian reservations are broken up. All American Indians are not so fortunate as to have a claim on rich timberlands. But all can now expect to receive a fair share of their communal property without any short-sighted forced sale.

A vital provision of the Act concerns restrictions on the harvesting of timber by any private purchaser. The National Lumber Manufacturers' Association and other spokesmen of the lumber industry hoped that the Act would contain no reference to harvesting of timber on a "sustained yield" basis, which would limit cutting to an amount no greater than the regular increment from growth. But the final version provides that any purchaser must agree to manage the forest lands, as far as practicable, with sustained-yield procedures, to furnish a continuous supply of timber.

In the short run, this insistence on conservation of a great resource will prove expensive, for it means that only a few small tracts will be sold to private bidders. It has been estimated that no private lumber company could afford to pay more than about half the appraised price for timber that would have to be harvested on terms of sustained yield. The prospect, consequently, is that in the next few years the Treasury will pay into the hands of Klamath Indians much of the $90 million authorised by the Klamath Termination Act. An average family of five Klamaths will come into possession of nearly a quarter of a million dollars—a far cry from the trinkets for which Manhattan Island was sold to the Dutch in the seventeenth century.

RUBBER TRENDS

is our new quarterly bulletin for producers, manufacturers or dealers concerned with rubber. It gives the results of research, not available elsewhere, into the longer term trends affecting rubber, including:

Regularly	Periodically
The world balance	Trends in rubber-using industries
Price outlook	Rubber consumption in the U.S.S.R.
Trends in consuming countries	Technical developments
Market reports	Trends in synthetic rubber
General notes	The effect of planting programmes

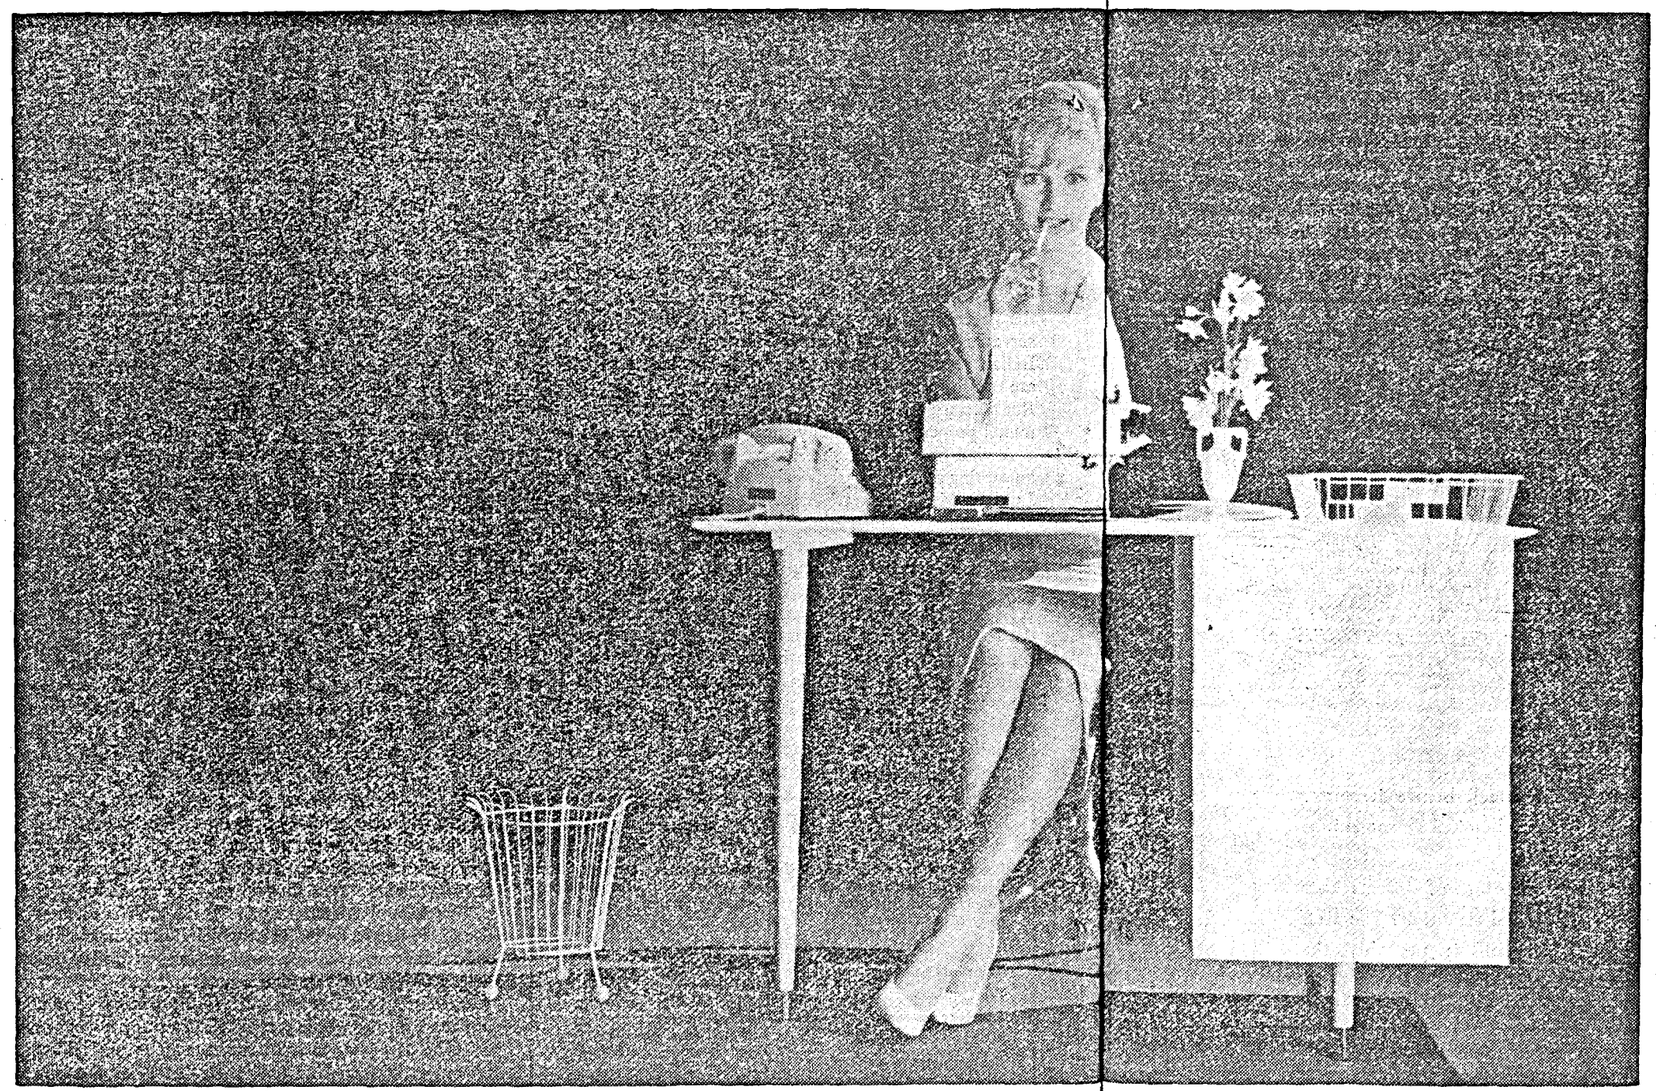
Oiling Texan Finances

FROM A CORRESPONDENT IN DALLAS

IF the coming replacement of voluntary restrictions on imports of petroleum by mandatory ones succeeds in stemming last year's downward drift in the output and price of crude oil in the United States, as the independent domestic companies believe it will, then the people who live in oil-producing states, and particularly the 9 million in Texas, will have good reason to rejoice. Texas produces far more oil than any other state and some 50 per cent of the state's annual revenue of about $1 billion comes, directly or indirectly, from the petroleum industry. The state tax on oil output alone brings in $150 million or more a year and as a result Texas is one of the few states which has neither a general sales tax nor a state income tax.

But now the State Legislature is being forced to consider imposing such taxes, even though they would be generally unpopular. This is because the last fiscal year ended on August 31st with a deficit of $65 million, almost entirely as the result of the weakness in the petroleum market. Under the state constitution Texas operates on a "pay-as-you-go" basis and a balanced Budget is obligatory. At the beginning of each fiscal year the State Comptroller estimates the revenue that will come in; if the Legislature appropriates more than this, the excess is nullified. But last year the Legislature held appropriations within the estimate and it was an unexpected drop in revenues, mainly from oil, which caused the deficit.



The effects of the slump in the oil industry upon the incomes of local governments in Texas will be even greater. There are in the state 254 counties and more than 3,000 school districts and other forms of subdivisions which levy taxes. Ninety-two per cent of this local revenue, amounting to about $595 million a year, comes from *ad valorem* taxes, mainly on real property. Of the 254 counties, 185 produce oil and the taxable value of the land in them depends largely on this oil production. The industry is now restricted in Texas to the equivalent of eleven days' output a month and many wells have been shut down by independent producers.

The federal government in Washington is also facing a decline in the $2 billion or so which Texans normally pay in federal income taxes. Personal incomes in Texas, estimated at $14 billion last year, have quadrupled in the last twenty years. Part of the increase is the result of inflation, of course, but there has also been a rapid rise in real income; most of this has been earned from the expanding oil industry and related activities. The total net value of all manufactured products in Texas, according to the last federal census, was $1.73 billion, of which about half was contributed by petroleum refining and allied industries. Comparable figures are found in Oklahoma, Louisiana and other oil-producing states. Moreover, oil has done much to give economic stability to these states which used to depend mainly upon farming with its widely fluctuating production and prices.

Monsanto

Through creative chemistry, Monsanto turns yesterday's dreams into present-day realities

Fire-resistant chemal keeps typists clean

"No Carbon Required" papers, invented, developed and patented by the National Cash Register Company, are marketed by the Wiggins Ty

NCR PAPERS give clear, smudge-proof copies without the use of carbons. Multiple sets of business forms need no carbon interleaving; typing, too, is quicker and cleaner.

A special emulsion, coated on NCR papers, does the work of the carbons—and gives perfect copies. One of the chemicals used in this emulsion is from Monsanto's series of fire-resistant chlorinated diphenyls—the Aroclors.

The Aroclors are important in industry too. In the electrical field, the Aroclors are widely used as an alternative to mineral oil, because they are excellent insulators, fire-resistant and chemically stable. These and other qualities also make the Aroclors of great value as plasticizers for P.V.C.; as plasticizers and resin extenders in paints and inks; as heat transfer fluids; and as fire-retarders for polyester and epoxide resins. These varied applications show the striking versatility of Monsanto's chlorinated diphenyls. Both commerce and industry benefit from the increased efficiency made possible by the Aroclors.

Here is another vivid example of Monsanto bringing a better future closer!

Aroclor is a Registered Trade Mark

If you, as a manufacturer, are interested in chemicals or plastics, it will pay you to get in touch with Monsanto.

THE LABOURS OF HERCULES

THE FOURTH LABOUR

THE ERYMANTHIAN BOAR

To borrow a phrase, he bestrode the world like a Colossus, this Hercules of the ancient world. Nothing to him that the populace around Mount Erymanthus lived in mortal fear of the wildest and hugest of boars. As the legend reminds us, Hercules all unconcerned drove the creature headlong into a snowdrift and promptly snaffled it with chains.

It sounds so simple . . . But the Hercules answer to problems usually *is* simple. Today's chemical company bearing the old name claims no elaborate magic. Your problem may be attack by insects, for example, or attack by oxygen, or attack by water; and Hercules' solution is to stop the attack before it starts. With the proper chemical weapons it is as simple as that.

Was it the mention of insects that caught your special attention? The stuff to keep them off is probably the chemical meta-Delphene.

THE WORLD OVERSEAS

North African Tensions

FROM A TUNISIAN CORRESPONDENT

A FRENCH expert, recently in Tunisia for financial talks, left with this summing-up: "Between France and Tunisia it's a divorce by mutual consent, with wrongs on both sides." The divorce is real enough, and it widens every day. In December the Tunisian President, M. Bourguiba, announced that all land belonging to foreigners would be bought by the Tunisian government in three months' time. This meant that some 3,000 settlers, owning 700,000 hectares of the best farmland and forming the very core of the continuing *présence française*, would have to leave with their families. The settlers' departure, coming after that of the colonial officials and the army, constitutes the uprooting of French influence in Tunisia, carried out as deliberately as its planting, but far more speedily.

Only a few days after this decision, another worsened the split. On December 27th France devalued the franc, but Tunisia and Morocco, dissatisfied at having once again been presented with a *fait accompli*, decided not to follow suit and kept their currencies at the old rate. The monetary difference between closely connected and interdependent economies—two-thirds of Tunisia's trade is with France—has led to disturbances and an exodus of Tunisian capital great enough to compel the swift imposition of controls. A month and a half after the French devaluation Tunisia and, to a lesser extent, Morocco, already have one foot outside the franc zone.

A third crisis which has just begun in Tunis, and which will doubtless have its parallel in Rabat, seems all too likely to give the final blow to what trust remained between France and its former protectorates. The Tunisian police have uncovered a spy network organised by the French embassy itself. Consular officials have been arrested, the French military attaché has been told to leave the country, and ten Frenchmen, employed as technical assistants in the Tunisian Post Office, have been arrested and charged. The post office men had installed a listening system that allowed the French embassy to watch closely over—and record—all conversations that interested it, particularly those of the Algerian FLN and the Tunisian army. What has most shocked the Tunisian authorities is that the French officials, on their own admission, had been selected for this work in Paris. Thus, at a stroke, all French technical aid is called in question and the 2,000 officials that have been requested from France are regarded as spies.

All this comes on top of the bad relations now persisting between Presidents de Gaulle and Bourguiba. Several of M. Bourguiba's appeals have passed hardly remarked in France, and the last message to be handed over by the Tunisian ambassador in Paris, M. Bourguiba's son, was only done so through the mediation of M. Couve de Murville.

If Morocco's relations with France are better, the political situation there is much more serious. The young government of M. Abdallah Ibrahim is fighting desperately on several fronts. M. Ben Barka's revolt against the "old buddhas" of his own party—MM. Allal El-Fassi and Balafrej—broke out prematurely and more for personal than ideological reasons. Inside the Istiqlal, M. Allal El-Fassi has already won the day. But the party, which did not manage to impose its views on the King even when it was united, is going through a time of confusion and personal rivalry and will probably end by splitting like the Egyptian Independence party—as the Neo-Destour will do in the future without M. Bourguiba. The parties are paying for having had no other purpose than to be the instruments of political independence.

But Morocco's most serious problem is in the Riff, where any outside intervention is less important than the Moroccan authorities claim. It is a matter, observers say, of a genuine rebellion against the central power by tribes which are semi-independent and which no one knows how to administer. The news from the Riff has greatly surprised the FLN authorities. The reports—from western journalists—do, in fact, have a nightmarish sound to North African ears. The observers speak of rocket bombardments, troops of prisoners in detention camps, nests of rebels destroyed, and scenes of rallying in which Moroccan officers—in French parachutist uniforms—harangue the poor devils in native robes squatting before them before sending them back to their mountains.

Hands Across the Timor Sea

FROM OUR CORRESPONDENT IN AUSTRALIA

THE joint statement issued at the end of Dr Subandrio's visit to Australia has been received with jubilation in Jakarta and with some dislike here. On the one hand, the Indonesian papers exult over the doctor's success in allegedly changing Australian policy. On the other hand, the powerful Australian returned servicemen's league (remembering what New Guinea cost in Australian lives) is angrily demanding clarification; the *Sydney Morning Herald* proclaims the give-away of a vital Australian interest; and the Australian Labour party, strange bedfellow of a right-wing paper, attacks the communiqué for forgetting the poor Papuans.

Are these assessments valid? What, if anything, has Dr Subandrio gained and Australia given away? The communiqué contains soothing words about extended co-operation under the Colombo Plan (communiquese for more Australian aid) and so forth. But the important clause from the Indonesian point of view is the following:

> There was a full explanation of the considerations which have led each country to a different view over West New

Guinea (West Irian), with Australia recognising Netherlands sovereignty and recognising the principle of self-determination. This difference remains, but the position was clarified by an explanation from Australian ministers that it followed from their position of respect for agreements on rights of sovereignty, that if any agreement were reached between the Netherlands and Indonesia as parties principal, arrived at by peaceful processes and in accordance with internationally accepted principles, Australia would not oppose such an agreement.

The curious wording of the final sentence (by Asian subtlety out of plain English) is worthy of study. Apparently Dr Subandrio set great store by this assurance. But can he really have thought that if Holland and Indonesia had come to an agreement, Australia would or could oppose it? Or was he really thinking how well it would look in Indonesian newspapers that Australia, since his visit, no longer opposed an agreed transfer of sovereignty?

Now what has Australia given away? To recognise Holland's sovereignty, the verbiage struggles to say, is to recognise Holland's right to sign away that sovereignty if it chooses so to do. The Australian Labour party says that this legalistic attitude disregards the welfare of the peoples of New Guinea who would undoubtedly be worse off under Indonesian rule than under Dutch; if the Dutch are handing over to anyone, let it be to the Australians, who should administer all New Guinea on behalf of the United Nations. But Labour's new-style imperialists talk as if the Australian government had said that it would welcome or encourage an agreed transfer of power. It said only that it would not oppose this once agreement were reached.

THAT might seem a fairly safe undertaking in view of the fact that the Dutch show no signs whatever of agreeing to discussions about their sovereignty over New Guinea. A recent report that they would do so has been strongly denied. Most Dutchmen would regard it as wrong to trade 800,000 Papuans for compensation for property confiscated in Indonesia, and no political party other than the communists favours handing them over to the Indonesians, who are not even of the same race—though the white man's burden is at present costing Holland some 80 million guilders a year. The Dutch government may feel cynical about the communiqué, but it does not seem to regard itself as thereby weakened. It can still rely on Australian support if Indonesia should once again try its luck at the United Nations.

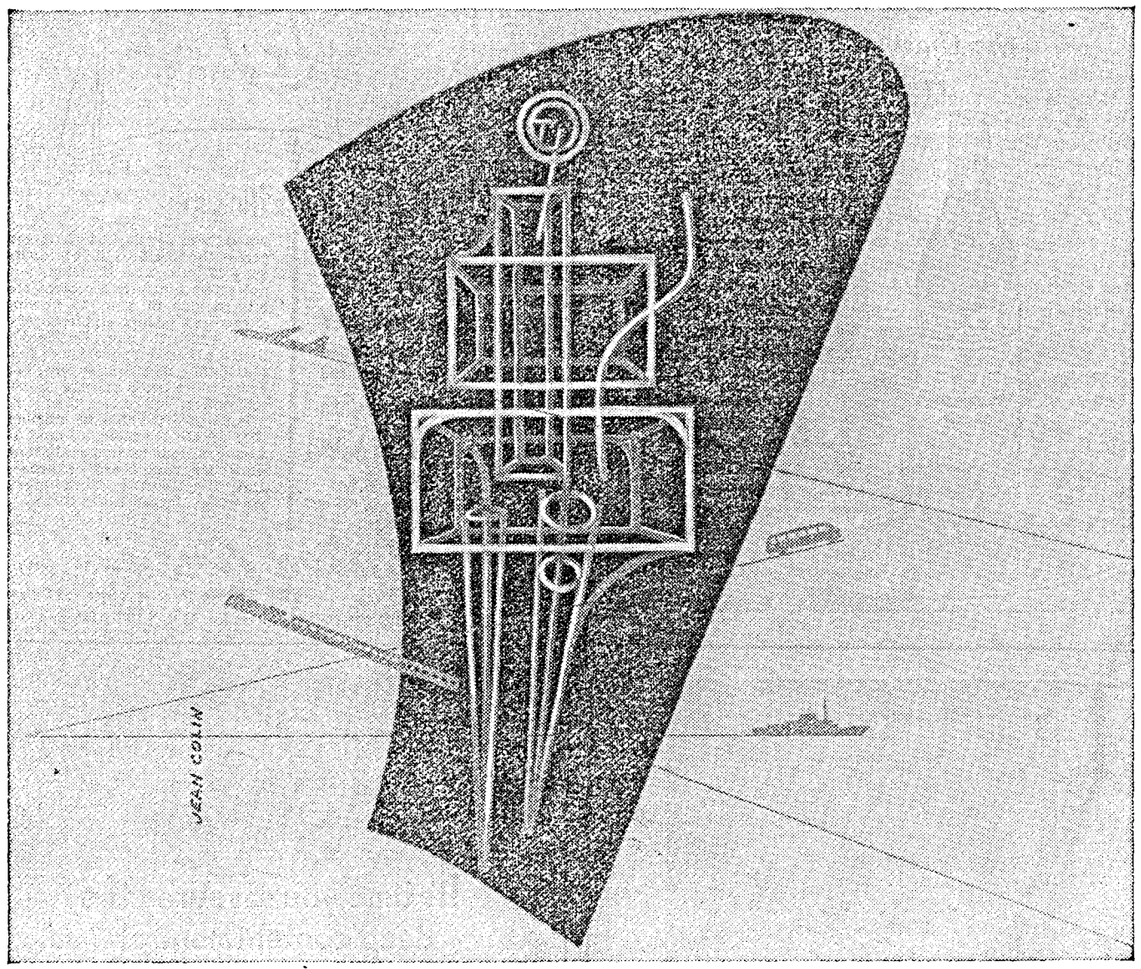
So perhaps Australia has conceded nothing after all. What has it gained? First, it is argued in Canberra that it is all to the good if Dr Soekarno's government has its reputation enhanced at home, for there is no one else in sight who seems likely to provide stable government in Indonesia—and Australia's interest is simply that the governments to its near north should be stable and anti-communist. Secondly, Mr Casey and his colleagues are pleased to have got Dr Subandrio's agreement in writing that the New Guinea question is "one to be resolved by peaceful means and that they were in accord that force should not be used by the parties concerned in the settlement of territorial differences." One cannot be starry-eyed about this, especially as the main danger is not of large-scale invasion but of incidents for which the Indonesian government could disclaim responsibility—small landings and guerrilla warfare which could keep the country on the boil as Malaya has been kept. Still, a public renunciation of force is better than nothing.

Finally, Australian-Indonesian relations are the better for Dr Subandrio's visit. He was liked and respected, the discussions were friendly, the entertainment good. There is a definite détente. One must hope that the politicians, by insisting on too precise interpretations and telling too many home truths, do not dispel the rosy glow.

Eastern Approaches

FROM A CORRESPONDENT IN CENTRAL EUROPE

THE Berlin crisis underlines the extent to which the German question continues to dominate political thinking in eastern Europe. In certain respects, Czech and Polish reactions to it do not coincide. But in both Prague and Warsaw some merit is seen in Soviet proposals for a free city and for a loose confederation between the two Germanies.



The argument, as one hears it in Prague, is essentially economic. Closely familiar with material conditions in east Germany, the Czechs believe that some solution must be found for the chronic imbalance between the two German states. They suspect that the Soviet Union has neither the will nor the capital to render Herr Ulbricht's regime viable in the face of the economic magnetism of the Federal Republic, and indeed that Russian interests in the long view lie in the contrary direction: Moscow is seeking disengagement from the tawdry morass of its east German commitments in order to develop political and commercial relations with Bonn. Seeing a good many Chinese buyers and delegates, some Czechs take rather seriously the classic vision of German investment and technology allied to Russia's industrial power and the vast China market. But Russia cannot purchase disengagement at the price of free elections and German reunification on western lines. Instead, it is banking on the fact of Dr Adenauer's mortality and on the suspicion that his successors will be weary of the stalemate and anxious to work out their own mode of co-existence with the east. The Czechs feel that the recent Berlin elections give a measure of support to the Russian analysis; they interpret the vote as a denial of the Adenauer policy no less than of communism.

As seen from Prague, the western position is sterile and ultimately self-defeating: sooner or later, post-Adenauer Germany will either negotiate with Moscow (on terms increasingly unfavourable to its Atlantic allies), or it will grow exasperated and provoke a violent situation. The latter could lead to irretrievable disaster. Would it not be preferable, ask the Czechs, to seek a gradual rapprochement between Bonn and east Berlin with a view to normalising relations throughout the whole of the European heartland?

Western objections to this view are recognised in Czechoslovakia, but they are not regarded as conclusive. The Czechs are contemptuous of the argument that western policy is designed not primarily to rearm the Wehrmacht but rather to attach the future of Germany to that of western Europe. They believe that that is putting the tiger before the cage. Citing the grievous errors committed in 1938 and 1945, the Czechs are certain that English and American diplomacy will once again fall into a trap of its own contriving. When the Federal Republic is strong and rearmed, it will go its own imperious way— against the West if need be. Many Czechs are baffled by what they take to be Mr Dulles's blindness to this danger. They discern in the Russian plan for confederation one final attempt to neutralise

As I see TI...

The French designer, Jean Colin—asked to give his impressions of Tube Investments Ltd.—sees TI primarily as part of the restless world of movement.

Wings for all Mechanical Things

A world on the road, in the sky, on the sea, and under it . . . a world where strength and lightness count. Many of TI's fifty companies in England serve transport. From TI come boiler tubes and engine components for ships and locomotives . . . creative designs of railcoaches, and prefabricated buses, the parts to build them from, and their luxury seating. TI supplies components for aircraft and cars; parts for submarines, and mechanical conveyors to ease movement in factories. TI is one of the largest producers of bicycles in the world. It also makes mopeds, scooters and light motorcycles . . . and traffic signs to guide road transport.

FLAKE OR RUBBED OUT

Germany's resurgent ambitions and to make both the United States and the Soviet Union guarantors of German good conduct. Mr Dulles's contention that one cannot neutralise so dynamic a race as the Germans rings somewhat hollow in eastern Europe.

THE Polish view is rather more emotional. German irredentism is seen not as a potential threat but as a present danger. It is difficult to exaggerate the role of the Oder-Neisse question in Polish thinking. Though Polish dislike of the east German regime is perfectly obvious, the Poles nevertheless consider the mere existence of the German Democratic Republic to be a partial assurance of their own territorial integrity. But that existence remains precarious so long as the western powers have not come to terms with east Germany, and so long as they allow Dr Adenauer to throw doubt on the permanence of the present frontiers in eastern Europe.

Commentators in Warsaw reject with some bitterness Czech suggestions that Russia may be seeking to liquidate its east German holdings. They point out that it is the geographical vice formed by the Soviet Union and the German Democratic Republic that holds Poland in place. They are, however, inclined to feel that Russia genuinely seeks a lowering of tension in Europe and that it is prepared to make certain immediate strategic withdrawals toward that end. This feeling appears to arise from two sources. Theorising about Sino-Soviet relations is Warsaw's favourite parlour game. A number of Polish experts are convinced that there are severe tensions between Mr Khrushchev and Mr Mao Tse-tung and that these tensions are reflected by conflicts within the Kremlin. It follows on this conjecture that the Soviet Union is anxious to put its position in Europe on a stable basis. Secondly, the Poles have a proprietary interest in the Rapacki plan. They resent any implication that it is a front for Soviet diplomacy. By virtue of arguments, not all of which are very clear, the Poles defend the view that Russian proposals on Germany are a natural extension of the Rapacki idea. Both, they say, would lead to a mutual withdrawal of opposing forces and both would prevent the armament of the new Wehrmacht with nuclear weapons.

To the Poles, whether they are communists or not, the latter is an intolerable prospect. A characteristic Polish poster reproduces two brief texts: a recent statement by Dr Adenauer questioning the permanence of the Oder-Neisse line, and a Reuters' message concerning the delivery of rockets with atomic warheads to the German contingent of Nato. No additional comment is deemed necessary.

The Poles are too clear-sighted not to realise that the present division of Germany is a threat to peace. What they do feel is that western policies aggravate this threat, whereas the various disengagement plans, whatever their imperfections, might yield some positive results. By its very nature, the Polish position on the German problem cannot be wholly consistent. On the one hand, the Poles fear German resurgence and are persuaded, as are the Czechs, that the sorcerer's apprentices in Bonn will soon escape the benevolent control of their American master. On the other hand, Warsaw knows that it cannot look to much independence so long as east Germany retains its present political complexion. This ambiguity is the specific mark of Poland's distress and the Poles admire Mr Gomulka because he seems so acutely responsive to the conflicting demands of his role. They seem to believe that a loose confederation between two partially disarmed Germanies would, in some measure, lessen the sharp contrariety of their own position.

Such speculations in Prague and Warsaw point the larger moral. The German problem dominates the eastern European horizon. The Russians have no more effective ally than Czech and Polish fears of Germany's re-awakening ambitions. Profoundly influenced by the events of the late 1930s, neither the Czechs nor the Poles appear to have much confidence in Anglo-American ability to gauge the German temper. The Poles, moreover, are certain that the West has never cared to apprehend the grossness of their suffering at the hands of the Germans. That suffering is too great to have been forgotten and the anguish of it seems more vivid than that caused by Russian domination. As one Polish scholar put it: "Soviet preponderance is a fact of life, it is the air one breathes. Sometimes the air thickens and one chokes. Sometimes it clears a bit and one breathes easily. But it is ubiquitous and it is foolish to argue about it. The German question, on the contrary, is a cancer in the body politic. One must try and deal with it if one is to have any chance of survival." To the Poles the Russian proposals, whatever their exact motives, do constitute such an attempt.

There may be sound reasons for not agreeing with these views. But a refusal to acknowledge their prevalence in eastern Europe would play directly into Soviet hands. Fear of Germany and of west German rearmament is the cement that holds the satellite edifice together (the military potential of the east German state is generally ridiculed). Any Russian endeavour, even by blackmail, to keep atomic weapons out of Mr Strauss's grasp will find a good deal of support among eastern Europeans. The West has a few friends in Prague and very many in Warsaw; both groups seem to feel that western diplomacy has failed to take eastern European feelings into account.

A Weapon for Uno

THE scare about bacteriological warfare set off by Sir Robert Watson Watt, the radar expert, and Dr Brock Chisholm, the Canadian psychiatrist who was director-general of the World Health Organisation, is calculated to do more harm in the cold war than the weapons themselves would ever do in a hot one. It may be true that 8½ lb of botulinus could wipe out humanity if it queued up for injections. But the practical difficulties of delivering and disseminating these agents of genocide remain as intractable as ever, while the "dirty" H-bomb promises to do everything that they, on paper, could do, but very much more effectively and poisonously. Accordingly, since the arrival of the H-bomb deterrent, chemical and bacteriological warfare departments have become the Cinderellas of most defence ministries, and are kept going—this is certainly true in Britain—as a minimum insurance. Botulinus, and deadlier substances, are made simply in order to try out antidotes. The Americans are said to have a rather more ambitious chemical and bacteriological budget, but even that is trifling compared with what is spent on nuclear research. But the Russians and Chinese have always made good use in Asia of science fiction stories about western plans to deal with Asia's teeming millions by billions of teeming bacteria.

Presumably the whole issue would become more alive

if control and inspection of atomic weapons were achieved; and it may be noted that the practical difficulties of enforcing chemical and bacteriological disarmament are probably far greater. The disincentive to developing germ and gas warfare in fact is that any nuclear power attacked with such weapons would reply with nuclear weapons, which would be much worse for the attacker. It is true that some tactical theorists have played with the idea of humane nerve gases which would paralyse attacking troops so that they could be disarmed and interned. If the practical difficulties could be overcome this certainly seems the ideal weapon of a UN police force, called in to separate combatants by a Security Council order. But it seems all too probable that aggressor, victim (whichever was which) and UN policemen would all fall into the common coma.

Austria's Pre-election Problems

Not many subjects can disturb the usually placid waters of Austrian politics: the practice of coalition government and the Habsburg problem are two such questions. The controversy over the Habsburgs began in November, when it became known that Archduke Otto von Habsburg, the successor to the defunct throne of Austria- Hungary, had written to Herr Raab, the Chancellor, enquiring about the possibility of return to his native country. He would not be the first member of the former ruling house to return. Shortly after the first world war, Archduke Eugene recognised the Habsburg law of April 3, 1919, and became a loyal, and resident, citizen of the Federal Republic; since then a number of other members of the family have left their places of exile for Austria. Although Archduke Otto showed his willingness to accept the Habsburg law, Herr Raab's reply was cautious: he pointed at the difficulties lying ahead, and at the likely reactions of the neighbouring communist countries in particular. Now, the matter is still pending; the Chancellor's office in the Ballhausplatz is reported to be working, in close co-operation with the Foreign Ministry, on the final text that would prove acceptable to the Austrian Parliament and thus allow Dr Habsburg to return.

In the meantime, the affair has become an object of intense controversy. The arguments in favour of the archduke's return seem to outweigh those against it; in the government, Otto's supporters maintain that his return would strengthen, not weaken, the second republic; in the press, human rights are invoked. However, the opposition cuts across customary political divisions. Austria's relations with the successor states of the Habsburg monarchy, now all governed by communist regimes, are bad, and the men in the Foreign Ministry in Vienna are naturally reluctant to increase their neighbours' suspicions.

Secondly, some Austrians have once again become sensitive to the monarchist threat: this is largely caused by the activities of the most vociferous supporters of Archduke Otto's return. These congregate in a body known as the Monarchist Movement of Austria, which describes itself as being "above political parties" and which derives most of its support from the remaining pillars of the Habsburg nobility, the civil service and the army. It is a movement of the older generation, which feels most strongly about the cause of the present dispute. The more imaginary than real "monarchist threat" is further complicated by another issue. The Monarchist Movement frequently indulges in descriptions, in its periodical, *Die Krone,* of the "glory that was the Empire"; it also supports the idea of a south-east European federation within the framework of a "larger Europe." But the majority of Austrians are quite happy with small, neutral Austria; they are liable to question any development that might involve their country in over-ambitious projects, and now some of them argue that Archduke Otto's return may, in certain political circumstances, do exactly this.

Although such unfounded fears are now widespread in Austria, the government will probably invite the archduke to return all the same. If it does, the extremely complex problems of the Habsburg property would have to be settled. A useful distinction can be made between the "crown property" and the Habsburg family trust fund, instituted by Maria Theresa in 1765. Since the crown property includes the Viennese Imperial castle, the residences in Innsbruck and Salzburg and other historic buildings, it is unlikely to be considered for restitution; some of the trust fund property, however, was returned to the family by Dr Schuschnigg's regime in 1937, and later impounded and administered by the Germans and, after 1945, by the Russians; the lawyers in Vienna may now explore these possibilities.

At the same time, another, and perhaps more important disturbance in Austrian political life is taking place. This is the discussion, which began in January and is still going strong, on the working of the coalition government. The joint rule of the Popular and the Socialist parties, which together represent some 85 per cent of the Austrian electorate, holds the local record for longevity: it has lasted fourteen years, and it is commonly accepted as something inevitable and often beyond criticism. Recalling the years between the two wars, disturbed by civil war and haunted by economic crisis, the Austrians have been willing to pay a high price for political stability. Some dissatisfaction with the coalition has, however, lately become apparent, notably in a vitriolic criticism of the present system of government, which came from Fritz Molden, the influential proprietor of a number of Viennese newspapers. In a leading article in *Die Presse* on January 18th, Herr Molden argued that the coalition was out of date, that it was not the only form of government acceptable under the present constitution, and that Austria deserved something better. He argued that a temporary arrangement, however necessary after the war, has been elevated into a rigid system, which is now wasteful and corrupt.

Some of Herr Molden's criticisms were certainly not without foundation. The coalition has indeed become an ossified structure; there are important differences between the two parties on the financial administration of nationalised industries, which are glossed over for fear discussion of them might disrupt the coalition. The most wasteful practice is that described by the term *Proporz*—the equal representation of the two major parties on the boards of nationalised industries and other state institutions; this ridiculous practice has led to a vast and unnecessary proliferation of personnel.

The possibility of an early general election is being discussed in Vienna; the present discussion indicates the

lines on which the pre-election arguments may well move. If the Habsburg question is not settled first, it may further complicate the election campaign. Although there is plenty of scope for criticism and reform, it is doubtful whether the present political arrangement between the Socialists and the Popular party, a compromise of long standing between democracy and the inheritance from a succession of totalitarian regimes, will be seriously disturbed.

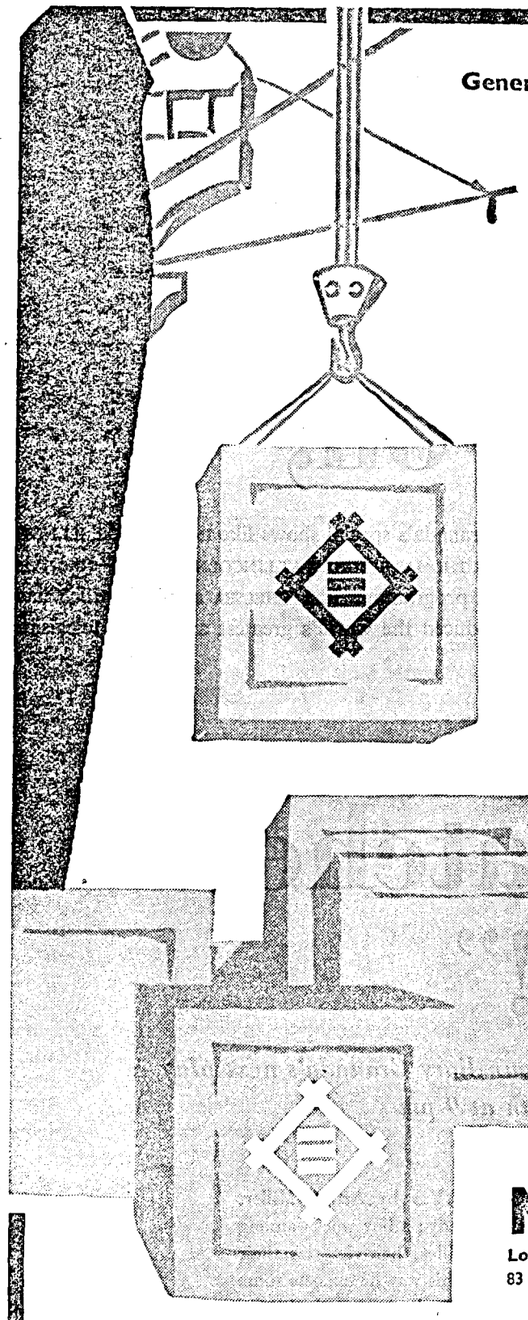
The Six at Work

BY OUR SPECIAL CORRESPONDENT

THE common market of France, Germany, Italy and Benelux began life on January 1st in a slightly more liberal spirit than many people feared. Nine months of doubt about Gaullism and older doubts about France's ability to face competition have been lulled by the new economic policy which enabled France to fulfil its obligations on New Year's Day. Not only in this major matter, but in small ones as well, France has been fulfilling the letter of the treaty. How long its economic fortune will last no one can tell. But the first hurdle is past, and for the moment the community basks in the light of the new Paris-Bonn *entente*.

It is hard to believe that only two years ago the men in the big buildings in Brussels were still battling away in the *chateau* outside the city, quite uncertain that their treaty would be signed at all ; now day by day, despite the vacillations of governments, its effects are felt more deeply in the life of Europe. More and more civil servants from the member countries pass through Brussels, taking away with them something of the new European doctrine. The parliament, the court of justice and the investment banks have been set up. The customs officials of six countries are now imposing lower tariffs on each other's goods than on other people's, using a certificate of origin *à six* (for the common market is no more than a free trade area for the first twelve years). And many agreements between French and German firms mark radical changes in business habits.

The body which executes the treaty day by day is the European commission, now just a year old. Some of its members, who perhaps cherished visions of supra-national powers, regret that another group of men, the permanent delegates from the member countries, is also playing a large part in the community at Brussels, helping to mould policies for the ministers to cast. But in fact the partnership between commission and national delegations is a natural way to form a common view.



Some critics feel that the commission is something of a Johnny Head-in-Air. Important details sometimes get lower priority than speeches. Instead of getting proposals ready on time to carry out the road transport arrangements in the treaty, the commission has been proposing a policy for air transport—which is not in the treaty at all. There is a certain Carolingian atmosphere abroad in the fine steel and glass building in the Avenue de la Joyeuse Entrée ; political dreams cohabit with a somewhat feudal administrative confusion. But the administrative upsets of the first crowded year have been mainly growing pains. And the political dream of a united Europe is, after all, what brought the whole business about.

It has not been wholly the commission's fault, either, if grand problems of policy have preoccupied it, for the biggest of all its worries has inevitably been the free trade area. Because the Six were so divided, the British scheme has been a great strain on the community ; so the commission has to search for means of reaching an agreement. But it also wants to preserve the community intact ; and that—though nobody said so until late in the day—means trade "discrimination." The commission has also been well aware that the creation of other looser institutions in Paris, doing some of the same jobs as itself, would weaken its own powers. With the Six still blowing from all points of the compass, the commission's chance of setting a helpful new course cannot be rated high.

Depressed by all this, your correspondent impudently asked: "What if Britain should apply to join ?" At first he met incredulity, mistrust, the belief that the insular animal could never change its spots. But once the idea was accepted as a serious proposition, there was a serious response. If Britain really committed itself to Europe, then a great many of these men who have struggled for the European idea would welcome it. Technical problems, such as are raised by the Commonwealth—the outer tariff, agriculture—were discussed in a wholly new and more constructive frame of mind. Of course there are "little Europeans" who want to keep their jobs intact, and some who would prefer to rush for federation in the group of Six rather than test the community on a larger scale. For the "Europeans" British membership would all be rather like winning something in the pools ; there would be problems of adaptation to the new life, but one would not turn it down on that account. The Dutch government, for one, which has always struggled valiantly to get the British in, is now convinced that full membership is the sole solution.

THE men in Brussels make it clear, however, that there can be no half-measures—no Treaty of Rome and water, as in the free trade area. The Treaty of Rome began by removing tariffs and quotas but went on to deal with many of the implications of free trade—the structural changes in industry and trade—as common problems. It proposes to use the instruments of the modern state—investment and unemployment aids, with the rich areas helping the weak—on a European scale. The sense of common purpose not only brought hard bargaining and a new balance of interests, but a mutual trust that members were prepared to help each other ; not merely observing the letter of the treaties but being prepared to change their policies, in any unforeseen economic problems that their venture might create. Many people on the Continent still do not believe that Britain was prepared to do this in the free trade area.

If the institutions of the community stand for all these things, the commission is also a refreshing influence for free trade. Under its guidance, it has been agreed that the rules of competition in the treaty have immediate force of law. In its world-wide approach to freeing trade, which was described on page 470 of *The Economist* of February 7th, the commission has also taken a fresh line. Politically, that approach is perhaps a final blow to the free trade area, and one suspects that it may even have been intended as such. It does, however, also reflect a realisation that the common market has a responsible part to play in improving the world trading climate and has great power to do so. In that way the ideas that are now beginning to activate the Six may prove to have a merit of their own.

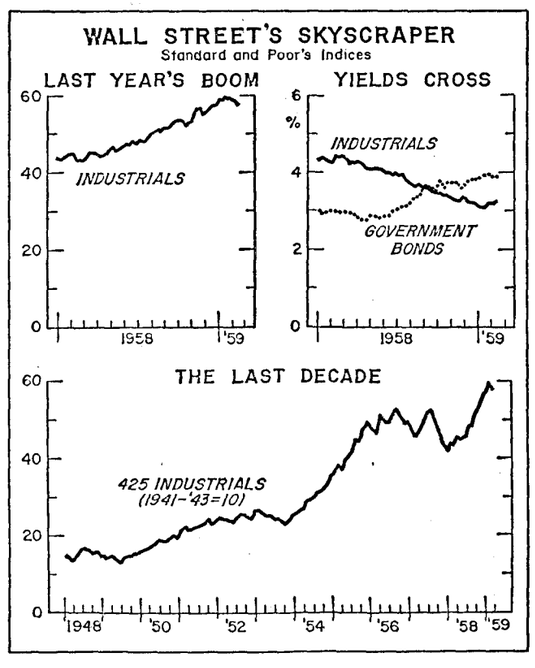
"If I'd only known it was on,

You have probably said that at one time or another. Perhaps it was when you read the reviews of Granada's plays, like DEATH OF A SALESMAN, NO FIXED ABODE, THE IRON HARP or THE STRONG ARE LONELY; or after one of Granada's special shows like INSANITY OR ILLNESS? or SIR THOMAS BEECHAM AT LINCOLN'S INN or—entertainment programmes like 'CHELSEA at nine', which have introduced the world's greatest artistes to television.

I'd have watched it!"

Might we suggest you enter in your diary Granada's next play February 27th at 9 pm

A MEMORY OF TWO MONDAYS by Arthur Miller. Miller says of this play: it is a pathetic comedy; a boy works among people for a couple of years, shares their troubles, their victories, their hopes, and when it is time for him to be on his way he expects some memorable moment, some sign from them that he has touched them and been touched by them. They barely note his departure. I wrote it, I suppose, in part out of a desire to relive a sort of reality where necessity was open and bare; I hoped to define for myself the value of hope, why it must arise, as well as the heroism of those who know, at least, how to endure its absence.



GRANADA TV

THE BUSINESS WORLD

How High is High?

ONCE or twice in the last fortnight, Wall Street has seemed a little dizzy. It is hardly surprising that after eleven successive months of rising share prices, the most common expectation in Wall Street is of a modest decline. But there is a rider attached : the decline, if and when it comes, is expected to be followed by a climb to a new peak. Ever since last summer, a decline has been predicted and is now long overdue; but the belief that prices are destined for new heights is more recent. Indeed, when equity prices first began climbing last year, many Wall Street operators were sceptical about the rise. Their doubts were not universal; if they had been, the advance of share prices would certainly have been slowed, if not arrested. Their warnings were really a rationalisation of their concern to avoid full commitments until they were certain that the economic upturn was genuine and not a false dawn. The public appeared confident enough about equities from the early stages of the rise; it was the professionals who needed persuading. What has happened in the past fortnight suggests a market waiting for new stimulus and some anxiety to have business recovery confirmed in terms of first quarter earnings.

Equity prices, as measured by the Dow-Jones industrial average, advanced about 35 per cent last year to a new high some 11 per cent above the peak of the 1956-57 boom. Prices advanced slightly in January, twice threatening to push the average above the 600 mark; it is now ten points lower. Yet in contrast to last year, when the rise in the average above 450 evoked professional concern as well as heavy short selling, there is now a firm conviction that the average will break through 650 this year. There is nothing cavalier in this prophecy. Analysts acknowledge that many issues are fully valued and some are over-valued, so that the market is vulnerable to technical corrections; but largely because of the improving economic outlook, the danger of a collapse is considered much less probable now than when stock prices were 30 per cent lower. Caution has not been banished, but it now emerges in the notion that a rifle rather than a shotgun is needed for selecting stocks, and that a decline will bring new buying opportunities. Both the public and the professionals are now in the same camp.

A few institutional investors are doing some selling, however, and others have curtailed their purchases. These few have not lost faith in equities, although they believe that their future rise will be slower. Some of them explain that they prefer to lighten their portfolios on a rising market, while others are seeking a more

even balance in their holdings by buying tax-exempt bonds with high yields. Last summer, when bond prices were falling drastically, many institutional investors felt that they had no alternative to purchasing equities. Now that yields on tax-exempt securities are well above those on taxed securities, there is a certain amount of shifting to fixed income obligations.

But this shift is not extensive, and it does not reflect more than a slight lowering of bull market fever. After all, faith in equities has been a long time in the making and it is unlikely to be eroded overnight. Last year provided a dramatic demonstration of this confidence, for in the face of falling earnings, investors bid up prices in active competition for shares. Inflationary fears, encouraged by the relaxations of credit, spurred demand. But equities have retained a considerable degree of prestige for another reason. Before the war cyclical declines in corporate earnings were common, but they have become less marked, in degree and duration, since 1945 with the increasing stability of the economy. This is the foundation for the enhanced investment status of corporate equities. The recuperative powers displayed by the American economy in 1958 corroborated this enhanced status and encouraged a further advance of share prices.

By every technical yardstick, prices today are uncomfortably high. Yields on common stocks average just over 3 per cent, compared with 4 per cent on long-term US Treasury bonds; in 1949, equities were yielding over 7 per cent and government bonds less than 3 per cent; and even in 1953, yields were 6 per cent on equities and 3 per cent on governments. Shares are now selling at an average of more than twenty times the depressed earnings recorded in 1958, and about seventeen times estimated 1959 earnings; some of the more popular growth issues — International Business Machines, General Electric, Minnesota Mining and Manufacturing—are priced at over thirty times earnings and offer exiguous yields. It is unusual for equities to yield less than bonds, and extremely rare, except in the depths of an economic decline, for shares to sell at such high multiples of earnings. Yet most analysts do not take this to mean that a fall is inevitable.

On the contrary, Wall Street is citing evidence to support the prospect of still higher prices. A recent study by Dr Geoffrey Moore of the National Bureau of Economic Research shows that the stock market's rebound is always much swifter after a mild and short recession than after a severe and prolonged slump. By this measure, the recovery to date is not exceptional, although the rise was resumed from a relatively higher plane than in any previous recession, and has somewhat further to go. Moreover, there have been periods in the past when equity yields fell below bond yields without being followed by a sharp and immediate break. The abnormal yield relation that now exists between stocks and bonds may continue because it is based not merely on the threat of inflationary pressure but also on a preference for capital gains to current income. Furthermore, if business continues to improve, then corporate earnings are bound to increase, so that shares can sell at higher prices but at a lower multiple of earnings

Earnings reported for the fourth quarter of 1958 were remarkably good, and gave useful support to the present level of prices. But a new advance in prices seems to be dependent on a continued improvement in corporate earnings and dividends. Some analysts, however, believe that investors may safely continue to bid up prices on the argument that the market is finding a new and higher permanent norm of price-earnings ratios. Given the economy's greater resistance to cyclical setbacks, and its bias towards inflationary growth, it is argued that shares should sell at higher "times earnings" multiples, and the process of revising these is now going on.

Market technicians, indeed, are themselves not proof against the influence of bull market psychology, but their new thinking about the foundations of equity values explains why there is little fear as yet that investors are engaging in a total flight from reality, as they did in 1929. Investors are in anything but a sober mood, yet they do not appear wholly reckless—despite the comment of one observer who describes the stock market as being "in orbit," released from the gravitational pull of the bond market. When business activity was slackening last year, a policy of buying equities seemed risky; today, prices cannot be called cheap, but investors who stood on the sidelines then are apparently willing to pay higher prices now. If economic conditions suddenly changed, or if sentiment was disturbed by some external political crisis, then serious trouble might occur. But though Wall Street has no defence against external crisis, it does feel secure against the threat of a business decline. It may well be that investors will grow more cautious as credit tightens or if inventories begin to rise faster than sales, but these are symptoms of boom conditions which have yet to emerge. Any increase in profits is sure to provoke increased wage demands, which may induce a change in sentiment, but wage demands have often been taken as an inflationary, and therefore bullish, sign in the past.

There is much more danger that if a new boom in business develops, which would make many current prices appear cheap, investors will accelerate their equity purchases. This is not a clear and present danger but it is a threat that is inherent in the rapid advance both of the market and of the economy. Many observers would like to see something more than a moderate correction on the ground that it might prevent a runaway boom. In the last eleven months, the market has experienced only occasional retreats, the largest amounting to 4 per cent. Some analysts think that a 10 per cent fall is a possibility, but so far at least new investment demand has been stimulated by price corrections of a much more modest order than this. Managers of institutional funds, who do not like to chase up prices, report that investment demand is far from

exhausted; at best, they expect a pause as investors await new evidence before stepping up their purchases. But because the majority of investors are long term holders, it would take a sizeable shift in their attitude to bring about a large scale decline.

Although a general shift from equities can be considered remote, there is bound to be heightened selectivity in buying individual shares. As the prices of more and more issues go up and stay up, the search for relatively undervalued shares grows more intense. Speculative activity in low priced shares has increased, evidently in the belief that what is cheap is underpriced, and issues that are still below their former highs are natural targets for renewed attention. There may also be periods of relative stability in prices, which will mask active shifting between groups. But as long as the economic climate gives promise of continued improvement, so long is the demand for equities as the favoured medium for participation in prosperity likely to be maintained. The very height of share prices has become one of the major factors in convincing investors that they will go still higher.

Methane Sails to Market

One experimental tanker, offering Britain's gas industry a new primary fuel, could unlock a world market for a petroleum product that up to now has not travelled by sea.

Barring fog delays or accident—and an accident could be peculiarly calamitous—a small converted tanker formerly called the *Normarti* was due to dock at a jetty belonging to the Regent Oil Company at Canvey Island on the Thames Estuary during Friday morning with a cargo the like of which had never before arrived, after a lengthy sea voyage, anywhere else in the world. This vessel of 5,000 tons dw has been renamed *Methane Pioneer*: it is carrying from the Texas Gulf just under a million therms of natural gas, frozen down into about 2,000 tons of liquid at minus 258 degrees fahrenheit, which occupies five heavily insulated tanks fitted inside its hull.

There is nothing very new about liquefying natural gas (which in this case is at least 70 per cent methane, the gas that miners encounter as "fire-damp"): the gas comes down to 1/600th of its gaseous volume, which can make the process a worthwhile form of storage. What is new is to transport it, in liquid form and at this remarkably low temperature, in an insulated tanker. If the series of experimental shipments of which this is the first, organised by a company owned jointly by Britain's Gas Council and an American company, the Constock Methane Corporation, should prove that this kind of ocean transport is a practical proposition economically as well as technically, it will offer more than a new competitive source of gas for this country. It may open a world market for natural gas, which today can move only overland: where it cannot be used locally or piped to other regions, it has to be pumped back down the wells, or burned or blown to waste.

Transport of liquefied gas by water was first proposed in an American patent of 1915. People in the oil industry have talked on and off ever since the war about moving it from the Middle East or Venezuela by ocean tanker. The Gas Council said it was interested several years ago; but not until it encountered Constock, a company owned by the United Stock Yard and Transit Corporation of Chicago and the Continental Oil Company, did it find any experts prepared to take the technical plunge.

Liquefaction of natural gas had lagged in development in the United States, partly through a devastating fire when a tank of liquid gas failed in Cleveland in 1944 but mainly because the booming natural gas industry developed underground storage to handle its peak load problems. The Russians have one liquefication and liquid storage plant (supplied from America, in 1947, on Lend-Lease) operating successfully in Moscow. But the Chicago stockyard company had been using liquefied gas on a small scale since the early fifties; it had also become interested in plans to carry this gas in barges using aluminium alloy tanks insulated with balsa wood inside an outer steel shell (steel, in contact with so cold a liquid, would become too brittle). It joined forces with the oil company in Constock Methane; engineers of the North Thames Gas Board visited them, made tentative economic studies of a scheme to import gas to Britain, and recommended the Gas Council to take a half-share—which meant spending perhaps £750,000—in the experimental tanker.

On this side of the project, the North Thames Gas Board has built two insulated storage tanks at Canvey to store the liquid gas, to be filled from the tanker through pipes with insulated walls six inches thick; this installation has cost something over £400,000. From these tanks the gas will for the moment be vaporised in heat exchangers, then pumped to Romford gas works where it will be "re-formed" into town gas. As imported the methane is too rich, with a calorific value of about 1,000 BThU per cubic foot: town gas here is distributed at 500 BThU per cubic foot. This liquid, moreover, is a source of heat into which a large "tonnage" of cold has been introduced; elaborated plans would provide eventually for some by-product use of this cold, for refrigeration or, say, production of liquid oxygen in the process of turning the liquid back into a gas. There are also plans to use the gas that has to be allowed to boil off the ships' insulated tanks during the voyage as fuel for its motors.

Nobody yet knows what this gas will cost to bring to Britain : nor can one voyage by the *Methane Pioneer* establish a figure. Purchase and conversion of this vessel are said to have cost $4 million ; but its costs are not directly relevant to those of the full-scale natural gas tankers now contemplated, for which 15,000 to 30,000 tons are the sizes usually quoted. In 1956 spokesmen of the North Thames Gas Board spoke of a capital cost per million therms of gas annually, of £20-£25,000 for pre-treatment and liquefaction and of £42,000 for tankers (twice what oil tankers cost). A complete installation from liquefaction to re-forming, using four 15,000-ton tankers regularly to supply London with 10 million therms of Venezuelan gas a day, was then calculated to cost some £40 million, which would compare fairly well with the investment required for conventional carbonising equipment to make the same amount of gas. Since then capital costs may have risen, but for chemical plant and tankers possibly less than for carbonisation plant.

The North Thames Gas Board was then reckoning on total processing and transport costs of perhaps 4d. to 4½d. a therm, plus whatever they had to pay for gas at the wellhead. Casinghead gas produced along with oil has no ascertainable "cost": but when it acquires a market it begins to command a price. In the United States, where some 70 per cent of the gas used now comes from wells that produce gas alone, but where admittedly state regulations hold prices down, the wellhead price of gas is now about 1d.-1½d. a therm (in heat content, only a fifth of the price of crude oil). Continental Oil, one of the Gas Council's partners, is said to have options on a substantial volume of Venezuelan gas at about a quarter of the price ruling in United States gas fields. Inside the gas industry here people are talking about 6d. to 8d. a therm for the town gas delivered into gasholder, compared with say 10d.-1s. for gas carbonised from coal.

THAT hoped-for price would be at the bottom of the range of gas-making costs at which this industry is aiming in its new high pressure coal gasification processes—for plants sited on the coalfields feeding into a high-pressure national grid—though capital costs for the coal processes might turn out cheaper. But it would be only about half of what it costs the North Thames or the Southern Gas Boards today to make gas in carbonisation plant—for raw gas coal, by the time it reaches these regions remote from the mines, itself costs the equivalent of 6d. a therm. Broadly speaking, investment in new carbonising plant offers the Boards no chance of reducing its current average manufacturing cost of gas—some just over 1s. a therm. The choice for the future may lie between importing gas from gasification plants on the Midland coalfields, importing gas, oil—or coal—from abroad, or some combination of these expedients. This choice is far wider than the British gas industry appeared to have a few years ago ; but it is proper to add that the industry's competitive situation now looks to be becoming more parlous than it appeared then too.

The first object of the experimental shipments by *Methane Pioneer* is to establish the technique of ocean transport and to get some reality into those bewitching paper figures of costs. One will have to consider possible variants : would it be more economic, for example, to carry the oil as a part cargo in tanks within a tanker carrying crude than to build all-gas tankers ? The liquid is only at atmospheric pressure, but at normal temperatures it would expand to 600 times the volume: in these days when ships can collide even with the benefit of radar, this might have its dangers, though it is only fair to add that Lloyds has quoted a normal tanker insurance rate for the *Methane Pioneer*. Would the butane and propane fractions of natural gas—present in much smaller proportions in American and Venezuelan gas, but easy to take out with much less costly liquefaction and refrigeration in ships and storage—be cheaper to move by sea ? Some natural gases in the Middle East contain more of the butane/propane fractions than they do of methane/ethane. What chances are there of underground storage here, for example in the Portsdown anticline ? Such storage might well be essential if imported gas were ever to supply more than the all-year-round base load ?

ONLY after these technical and economic studies are complete will the Gas Council and area boards be able to consider what part, if any, liquid natural gas should play in the drastic changes that the gas industry will have to undergo in the next decade or so if it is to survive. Certainly there would, in the initial stages, be chances of fairly long term contracts for natural gas at attractive prices for early venturers into this nascent market. On the other hand, gas will probably always cost more than oil to transport, so that its economics depend on a price differential ; at the moment the cheapest fuel to import is perhaps American and Polish coal.

If ocean transport of gas becomes an economic proposition, there will be other potential suppliers—and other customers on both sides of the Atlantic—in the market. The ultimate supplier, again, is the oil industry, which has seen what it would consider the "natural" growth of oil demand in the United States moderated by the sale of gas at an artificially regulated price. The oil industry in Britain already sells fuel oil in competition with the gas industry, sells it oil to make gas, sells it refinery tail gases, and has recently talked of actually selling it standard town gas. So the factors in the price formation of natural gas, if it now emerges into a world market, will be many and complex. Those factors determining its implications in Britain's total fuel picture may be even more so. But *Methane Pioneer*, whatever the implications of its voyage, deserves at least one cheer as an adventurous but well-worthwhile piece of technical and commercial research. And it is seldom enough that one finds a British nationalised industry involved in any of that.

BUSINESS NOTES

STOCK MARKETS

Stagless Success

THE stock markets have continued generally firm this week ; and the overhanging political uncertainties, to which is now added Mr Dulles's illness, continue to prevent any break out into buoyancy. The gilt-edged market has shown further signs of its underlying strength. The authorities have this week arranged a £10 million issue to Rhodesia. The coupon is 6 per cent, the maturity 1979-81 and the price 99. This gives a gross redemption yield of £6 1s. 8d. per cent. Rhodesia thus borrows more than ¼ per cent cheaper than it did in its issue for a similar amount in January, 1958 ; this 1976-79 stock, allowing for accrued interest, stood about 10s. higher than the new offer. This was successful on Thursday ; it was oversubscribed, though as was to be expected it was not stagged. Applications for up to £100,000 were allotted in full, and larger applicants got 73 per cent.

The £15 million Esso debenture, by contrast, attracted over 53,000 applications (perhaps that is not really the word) for £185 million. The flood of small applications for £100 and £200 were dealt with by ballot, the lucky ones being allowed to subscribe for £100. Dealings started on Wednesday with a premium of £1. A number of other small and medium sized new issues are in prospect, including a rights issue for £1.8 million by British Relay Wireless. It may be assumed that this is one of the releases through the raised barrier of the Capital Issues Committee. The most important result expected of the relaxation is a crop of rights issues by banks. So far only the Midland has made an issue ; at the end of last week Sir Oliver Franks told shareholders that the board of Lloyds is considering the question and may propose an issue in the next two or three months. The bank's shares, and also those of other banks, have risen further in consequence.

FOREIGN CREDITS AND EXCHANGE CONTROL

Bull Points for Sterling

BECAUSE of the strengthening of sterling the Government has decided not to renew the remaining facility of $250 million available under the line of credit of $500 million established with the Export-Import Bank early in 1957. This credit was put at Britain's disposal to finance purchases of oil and other dollar imports at the time of the Suez crisis. One half of the credit was drawn in October, 1957, on the aftermath of the summer crisis of confidence. It is due to be repaid with interest at 4½ per cent between 1960 and 1965.

Two concessions in exchange control have been made for non-residents ; these add their testimony to the strength of the currency, but are really a logical move following the grant of convertibility for sterling currently earned by non-residents. The first is the removal of all restrictions on the transfer of legacies from this country to beneficiaries in Canada and the former American account area. The new freedom applies to any legacies remaining in blocked accounts since 1951 and still in the hands of their original owners. Since 1949 remittances to dollar countries have been restricted to the first £500 of each legacy. The second concession increases the "settling in" allowance for emigrants to the United States and Canada from £2,000 per family to £5,000—the limit that has been applied to all other non-sterling countries. Neither of these concessions should involve any significant exchange strain. Legatees or emigrants whose assets have been in excess of the limits previously prescribed have been able to sell their security sterling to other non-residents in the free markets. The rate for such sterling is now almost at parity with the official rate and no sacrifice has had to be made by those who have taken the whole of their mistermed blocked sterling out of the country.

In the exchange market this week sterling has lived up to these tokens of confidence. It has been firm against US dollars, strengthening to $2.80⅞ while the dollar itself has been gaining ground against most Continental currencies and particularly against guilders and D-marks. There have been violent movements in the Canadian dollar, which has fluctuated in London this week between the extremes of $2.73⅝ and $2.74½. There is a large bear position in Canadian dollars but speculators ran to cover on Tuesday following the announcement of a $200 million Canadian Government bond issue which is to be tax-free to non-residents. It is expected to attract appreciable support from institutional investors in the United States.

NATIONALISED INDUSTRIES

A Clip on the Purse

NO industry as heavily capitalised and expanding as fast as electricity supply can avoid planning its fixed investment several years ahead, particularly in a period when its suppliers are having to learn how to build an entirely new and developing kind of power station for it along with the old. But can Parliament, on the other hand, be expected to commit itself to massive expenditure of public money, without any automatic check, over whatever planning period happens to suit electricity ? This is one facet of the continuing problem of securing accountability of the nationalised industries: it has been met in different ways for different public industries. In surrendering to pressure from its back-bench Tory fuel and power group and limiting the amount and period of borrowing powers allowed the supply industry in the Electricity (Borrowing Powers) Bill now before Parliament, the Government has not laid upon electricity the annual limit with which the coal industry has to live. It has cut the extension of borrowing powers from £900 million to £400 million, which means effectively until about 1961-62 ; borrowing powers for the remaining £500 million, or however much the Government of the day

wishes to grant, will then have to be approved by Parliament.

Mr Maudling and Sir Ian Horobin had a slightly uncomfortable couple of hours in the Commons this week explaining why the Government had changed its mind over this issue, and the Opposition had its legitimate play with their embarrassment: it was perhaps not surprising that the phrase "if I were the Minister" escaped Mr Nabarro's lips during the debate. Nobody could pretend that the device would greatly strengthen accountability to Parliament, or significantly hamper the industry from investing what it intended: as Sir Ian put it with characteristic felicity,

> It will, in fact, get the money, but it will have to come to Parliament to justify it, as I am sure it will be able to, but if it cannot, then Parliament will have a duty to take very necessary steps.

Worse things could happen to a nationalised industry than this. It might, after all, at some time be asked to earn a going industrial rate on its new capital.

WORLD CAPITAL MARKET

Active Lending

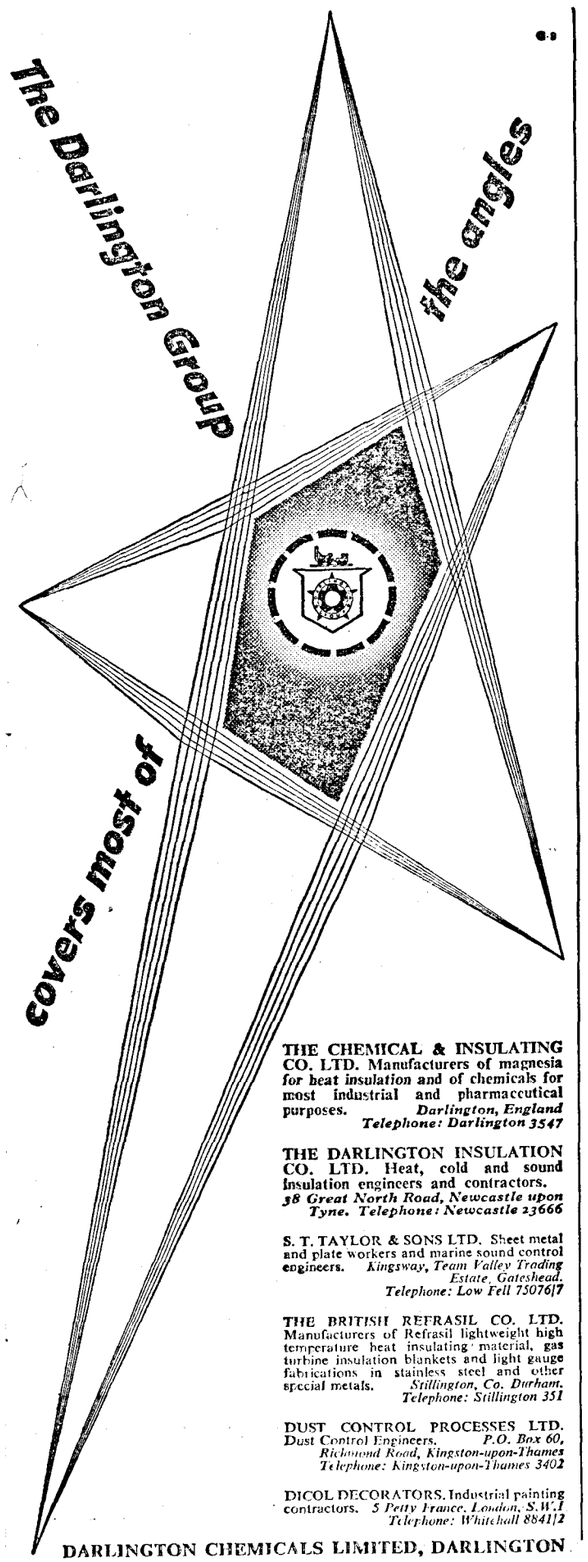
ANOTHER string of international loans has been announced in the past week. Public issues are being made by two foreign countries in New York, flanked by loans from the World Bank. Denmark is borrowing a total of $40 million, of which the public part is an issue of $20 million of 5½ per cent bonds redeemable in 1974 at 97½, offered by an investment banking group. Swiss and other Continental investors with dollar funds are expected to show their usual interest. The proceeds are for general purposes of investment. The $20 million from the World Bank are being granted on the same yield basis of 5¾ per cent; this money will provide the foreign exchange costs of expanding the electric power supply.

The dollar loans to Japan are also to finance electric power. One public issue is of $15 million 15-year bonds at 98 carrying a 5½ per cent coupon; a tranche of $3 million is being taken up by a consortium of German banks. A further $15 million is being raised in three, four and five year bonds with coupons of 4½ per cent. The World Bank is adding $10 million, for 25 years, for the Mirobo power project. The bank has also announced a small loan of $3½ million to the central bank of Costa Rica, which will pass on the money to agriculture and light industry. The World Bank is considering making a second loan of this type to the Investment Credit Corporation of Austria, to which it has already lent $10¾ million. The pace of the bank's lending is not letting up. In the second half of 1958 loans reached $431 million, a rate well above the record $711 million in the year to mid-1958.

In a different category, Scandinavian Airlines System has arranged to borrow $49 million from American financial institutions to finance its re-equipment with American-built DC-8 jet airliners. A group of American banks headed by the First National City Bank is putting up $33 million, and the balance is being provided by two insurance companies. The terms of the credit are not yet known.

Finally, the first credits have been granted by the European Fund, which stands ready to give credits up to two years to worthy borrowers, to replace the automatic facilities under the monthly settlements in the European Payments Union. Turkey has been granted a gold credit of $21½ million and Greece $15 million. Turkey's credit replaces the special facility made available by EPU in association with individual European creditors last summer, for a total sum of $100 million; all these facilities are being continued. The credit to Greece, in contrast, replaces simply the unused portion of its basic quota in EPU, and may be considered as a new facility. These credits are repayable in two years; they bear interest at 3½ per cent and carry a service charge of ¼ per cent on the undrawn portion.

More Flexibility for IFC



THE International Finance Corporation has announced its first investment in India. It is lending $1½ million to the Republic Forge Company, a new Indian-owned company, for a steel forging plant, which should reduce India's dependence on imported forgings. The loan marks the fruition of long and delicate discussions between IFC and the Indian authorities. The corporation has to take commercial considerations into account, and in the nature of its operations in small and medium scale private manufacturing enterprises it has to make provision for a share in profits once the investment has paid off. The money for the steel forging plant is in dollar notes bearing interest at 7 per cent, maturing between 1966 and 1971 and redeemable at any time. After four years, IFC will receive contingent interest dependent on the amount of the earnings, and it will have an option to subscribe at par for ordinary shares of Republic Forge. IFC is not empowered to invest in equities, but its practice is to seek such options with a view to reselling them to private investors who can take them up.

This statutory limitation on IFC is an anomolous one, and it must have been a hindrance in its operations. Many demands for loan capital cannot be granted because they would create an undesirably heavy burden of fixed charges in relation to the equity. The Commonwealth Development Finance Company of London faces the same problem. So far IFC has committed no more than $13½ million of its total capital funds of $93 million. Another handicap is the provision that all loans must be made and repaid in dollars. Mr John G. Beevor, vice-president of the corporation, who passed through London this week after an exploratory visit to six countries in east and southern Africa, intimated that the corporation is seeking greater flexibility in this matter. External convertibility of European currencies ought to be a help—though it may be recalled that the IMF is arguing the other way, that the right of convertibility into dollars means that countries do not have to worry about obligations to repay in dollars. Mr Beevor also suggested that IFC would be prepared to be more open minded about the size of loans when confronted with a good proposition. In fact the broad upper limit of $2 million has already been exceeded.

CURRENCY HEDGING

From Dollars into Gold

THE shift from dollars into gold continues at a modest pace and is holding the dollar price of the metal well above the parity of $35 an ounce. In the new market in Toronto the buying has been almost solely of United States origin. The gold sold in this market is domestic metal but since Canadian gold has recently been sold in the London market it may be deduced that the volume of buying in

the Toronto market has been insufficient to absorb current Canadian production. The price being paid for small bars in Toronto has recently been around $35.15. Some long term forward purchases of gold have been arranged in this market on private US account. The rates quoted are based on the cash price plus a generous rate of interest. The turnover in the Toronto market has disappointed some of the hopes that were framed when it was opened, at a time when expectations of an increase in the dollar price of gold appeared to be running high.

Leading bankers throughout the world still distrust the dollar. A number of central banks are switching dollars into gold; recent examples include Japan and Austria. Buying on behalf of central banks has been the main contribution to activity in the London gold market. This steady stream of buying is keeping the sterling price of gold at a dollar equivalent of about $35.06-07 an ounce. The fears that the disappearance of the settlement in the European Payments Union based on parity and not on market rates would deprive the London bullion market of much of the central banking business that has dominated it for some time have so far proved groundless. Because of the relative favour in which gold is held, the turnover remains fairly active. The market has for some days past been deprived of any offers of Russian metal. But Russia is now selling in London rather than Zurich, where it previously sold for dollars, which it then converted into transferable sterling at a discount. The Swiss authorities, who have no liking for dealing with the Soviet block do not regret the switch.

JET FARES

Canutes in Paris

It would be difficult to imagine anything better calculated to discredit the airlines' international rate-fixing machinery than the present meeting of the International Air Transport Association that has been going on in Paris behind closed doors since last Monday. Far from having cooled, the tempers aroused during last autumn's strenuous efforts by one group of airlines to force another group to charge higher than standard fares for their jet services seem to have become, on one side at least, hotter and even less rational than at the earlier meeting held at Cannes.

Airlines with jet aircraft either in or coming into service have since been under great pressure to make some gesture of compromise even though it might mean pricing themselves part of the way out of the market to save the bacon of their non-jet competitors. So they have offered this week to put a token surcharge on their jet tickets ranging from £5 to £6 on a de luxe ticket costing £331 17s. return to £3 on a third class ticket costing £162. This gesture seems to have been a tactical mistake since it immediately compromised the jet operators' refusal to charge higher fares than they found necessary on commercial grounds, and it gained them nothing in return. It was in fact interpreted as a sign of weakness and answered by demands for surcharges amounting to as much as £30, or more than 18 per cent, on the return third class trip by jet—which would make it only a few pounds less expensive than the standard tourist, or second class, fare on the North Atlantic.

Before they met in Paris, the airlines agreed that there was no point in re-opening discussions about fares until private talks had shown that the deadlock could be broken. The deadlock remains. Had the airlines without jets offered to charge cheaper fares on their propellor-driven aircraft, instead of demanding higher fares for the jets of their competitors they might have had some public sympathy.

PROMPTING THE CHANCELLOR

Away with Schedule A?

At this time of year a Chancellor does not lack advice about his budget, but it is remarkable for him to receive widespread representations that he should abolish a whole segment of the income tax. The tax on owner occupied properties under Schedule A has long been part of the scheme of things, and although its relative importance has greatly declined since the war (largely because it is still based on pre-1939 rental values in the majority of cases) its net yield is still of the order of £25 million. The attack is four pronged: that notional income is not a fit subject for taxation; that if it was there are many other forms of property which go scot free; that if all property owners knew and made use of maintenance claims the yield would be reduced to a trickle; and that its administration is cumbersome and expensive. The first argument was considered by the Royal Commission, which was satisfied that it ignored the principle that taxation should be adjusted to the relative capacity to pay of different taxpayers and that there can be taxable income which is not received in cash. Money rents are certainly taxable and the occupation of a house by the owner can be regarded as money's worth because his right could be made to produce a money income if he let the property: his taxable capacity is to that extent greater than that of someone with a like cash income but no right of occupation.

It is true that on logical grounds the enjoyment of other forms of property such as the possession of the contents of the house, or cars, or rare pictures, might equally be deemed to produce a notional income which ought to be taxed. But to tax chattels in this way is clearly an administrative impossibility, and if logic is to be followed it should be recognised that if an owner occupier is to have a tax free roof over his head then a tenant should be allowed to pay his rent out of gross, rather than out of net, income. Then the flood gates would be wide open. There is more point about the loss of revenue that would result if maintenance claims were to be submitted by all who are entitled to them. The fact that only one owner out of ten makes a claim can only be due to ignorance: the average expenditure on repairs, measured in postwar pounds, must greatly exceed the statutory repairs allowance based on the prewar assessment. A typical house with a net Schedule A valuation of £60, worth between £4,000 and £5,000, would have an automatic repairs allowance of £15. The average cost of repairs, redecorations, maintenance and insurance must greatly exceed that sum. Many owners may erroneously believe that they are not liable for Schedule A because their assessment is covered by the mortgage interest they pay; this is to ignore the fact that if a maintenance claim was made the interest would be set free for offset against other income. The arguments based on administrative grounds, too, are strong and the cost of collecting Schedule A tax must be high compared with other schedules. But (*pace* our own plea last week for relief for charitable subscriptions) Mr Amory should beware of frittering away his largesse on minor reliefs. This is the year for a frontal attack on the standard rate and its associated reduced rates.

HIRE PURCHASE AND RETAIL TRADE

The Boom Analysed

THE impact of the removal in October of restrictions on hire purchase transactions is clearly shown by the analysis of hire purchase and other instalment debt published this week by the Board of Trade. Instalment debt for durable goods rose by about £120 million during 1958, to a total of about £604 million at the end of the year; nearly two-thirds of this increase came in the last two months. The rise in debt was roughly the same in both months—£38 million in November and £39 million in December—although hire purchase sales declined slightly in December and the Board of Trade interpreted this as a slackening of the special impetus. Of the total of £604 million, £271 million is owed directly to household goods shops and £333 million directly to finance houses.

The board also publishes an analysis by commodities of hire purchase debt, based on information supplied by several finance houses. This shows that furniture and fittings account for about £166 million of the total owing; hardware, radio and electrical equipment and cycles are the next largest group, at £133 million. Outstanding debt on new cars reached £56 million during 1958; on used cars £131 million. The board estimates that about £500 million is owed by families or other non-business buyers, and the remainder by businesses. The total value of durable goods bought on hire purchase in 1958 (as distinct from the debt owed on them at the end of it) is estimated at £870 million, up from £750 million in 1957.

Total retail sales of all kinds during 1958 are estimated by the Board of Trade to have been five per cent higher than in 1957; the increase in the fourth quarter is put at five per cent. While trade in January showed its usual seasonal decline from the Christmas peak, sales during the month are provisionally estimated to have been six per cent higher than in January, 1958. Only about one-third of the increases in the fourth quarter and in January is attributed to higher prices; higher volume accounts for the remainder. Durable goods shops are doing much better than a year ago, but it is probable that trade in January also received a considerable impetus from the "white sales" and other special price-cutting events which have now become so permanent a feature of retail trade.

ATOMIC ENERGY

Co-operation at Winfrith Heath

THE prolonged negotiations that preceded the signing of an agreement between the Atomic Energy Authority and the OEEC countries to build an experimental power-producing reactor at the AEA's new research centre in Dorset have demonstrated the gulf that separates the British from the Western European approach to nuclear power. This country is interested only in reactors that have a chance of producing electricity at commercial prices, and the AEA's research programme has no place for experiments whose primary object is to advance knowledge of nuclear engineering.

The Western European atomic energy authorities, and especially Euratom, place the greater emphasis on acquiring knowledge and gaining experience across a broad front. This is a sensible attitude when Mark I commercial nuclear power stations of several shapes and sizes can be bought off the shelf from British and American manufacturers, but one that makes it difficult for them to meet the AEA on common ground. When Britain first suggested that the OEEC's atomic energy organisation might take a part in some of the reactor experiments to be carried out at Winfrith Heath, just as it has already taken part in trials of a Norwegian reactor, the design discussed was that of a homogeneous reactor.

Half-way through the negotiations, this design was dropped from the AEA's programme because its commercial prospects looked poor. OEEC was offered in its place a share in the development of the high-temperature gas-cooled reactor to which the future UK atomic energy programme is now firmly committed. This is a smaller, hotter version of the basic Calder Hall reactor, a race-horse rather than a draught horse which it is hoped will retain most of Calder Hall's virtues while eliminating its objectionable features. Experimental reactors of this type would have been built in this country with or without the co-operation of OEEC; the first small "zero energy" version, giving no heat at all, has just been completed at Winfrith Heath. The next stage, to which OEEC and Euratom are now to contribute £5.7 million of the total cost of £13.6 millions, is the construction of a larger, power producing version that will remain UK property after the experiments have been completed.

This type of reactor is not entirely an AEA development; a great deal of work has been done on it by the General Electric Company, which actually built the zero energy reactor at Winfrith Heath. But GEC has withdrawn from the longer-term project because to remain in it would have jeopardised the company's right to patent its developments. This question of commercial patent rights will become increasingly important as industry accumulates knowledge of nuclear engineering—and it is the iceberg that might well rip the bottom out of international co-operation in nuclear power.

TELEVISION TUBES

Room at the Bottom?

A NEW competitive breeze has begun to blow in the replacement market for television tubes. A small Scottish firm, John Brennan Ltd., started producing 17-inch replacement tubes a year ago; these sell for £10 17s. 6d., including purchase tax. The cheapest 17-inch tube from a large manufacturer is made by Mullard; its price was reduced to £17 5s. 4d. from £20 2s. 11d. on February 9th. Even the Mullard reconditioned 17-inch tube, which first became available this month, costs £11 10s., though it is free of purchase tax. At present Brennans are producing only about a thousand tubes a week, but this seems to have been enough to make a significant impression on the market. Their tubes, known as "Truvu," are guaranteed for a year, compared with the normal six months, and are distributed nationally by Bryterlite Ltd.

Brennans have recently been granted a non-exclusive licence by the Radio Corporation of America to its patents and "know-how" on television tube manufacture. Up to now Brennans have imported from America the "electron gun," which is one of the basic components of a television

The last ten years have seen the new industry of petroleum chemicals well and truly established on Scottish soil. This great new enterprise owes its origin and development to the foresight, capital resources, scientific skill and management of two leading companies—The British Petroleum Company Limited and The Distillers Company Limited. The organisation jointly formed by them to produce basic raw materials for industry—British Hydrocarbon Chemicals Limited—has already successfully accomplished a major programme of expansion, extending both its output and the diversity of its products. Today petroleum chemicals produced at Grangemouth are basic raw materials in scores of products ranging from drugs to dye-stuffs, fabrics to footwear, paints to plastics . . . assisting industrial development in many fields, and helping everyone to achieve higher standards both in work and in leisure.

B. H. C. Products . . . . . and some of their end uses

Ethylene Styrene monomer and Polystyrene (Synthetic rubbers and rubber-like plastics; electrical equipment; toys; piping). Polyethylene.

Ethyl Alcohol Raw materials for textiles; synthetic fibres; plastics; paper; leather and food processing industries; pharmaceuticals and fine chemicals. Solvent for industrial finishes. Methylated spirits.

Diethyl Ether Solvent for extraction of oils and alkaloids in the pharmaceutical industry. Anaesthetics.

Isopropyl Alcohol Acetone (solvent for rayon, explosives, lacquers, aircraft dopes, and adhesives.) Intermediate for pharmaceuticals and other fine chemicals.

Tetrapropylene Household and industrial synthetic detergents.

Butadiene Synthetic rubbers and rubber-like plastics. Boot and shoe soles.

***Polyethylene** Sheet, film and monofilaments; household, medical and laboratory articles.

***Cumene/Phenol** Phenol (resins; insecticides; herbicides; synthetic fibres; lubricating oil additives). Intermediate for dye-stuffs, pharmaceuticals and other fine chemicals.

tube. The other is the glass tube itself. For the last ten months the glass tubes have been bought from the English company which supplies other television tube makers. Brennan's work has thus been largely confined to assembly; the RCA agreement will enable them to begin manufacture of "electron guns" and to expand the scale of their operations.

It can be crudely estimated from conventional mark-ups that the manufacturer's price to the wholesaler for a seventeen-inch Brennan tube is about £5, while that of a Mullard is £7 13s. The comparable price for an American tube seems to be about £6. The Monopolies Commission reported that Mullard gave their manufacturing cost for a 17-inch tube as £7 10s. 4d. in December, 1954, and their profit as £4 5s. 1d., making the price to the wholesaler £11 15s. 5d., so they have reduced one or both since then. Does this mean that television tubes can be made more cheaply by a small company than a large company, and more cheaply in Scotland than in America? The difficulty of mechanising the assembly of such components and the lower overheads of a small company could affect both comparisons; so far as the second is concerned, girl labour certainly costs less in Scotland than in America.

BUILDING SOCIETIES

Thinking Ahead

LOOKING back over 1958 the building societies can say with relief that it could have been much worse. So much is apparent from the figures just published by the Building Societies Association. These cover about 75 per cent of the total assets of the movement; the really big absentee is the Halifax society. They show that as interest rates came down and as the screws on credit were relaxed, money began to flow at an increasing rate into the building societies' share and deposit accounts. The flow was especially strong in the last quarter. Exactly how strong it is impossible to gauge, for the 1958 figures include an unknown amount for interest credited to investors' accounts, while the 1957 figures do not. But a broad guess would suggest that actual gross receipts in the last quarter were about £90 million and net receipts about £36 million. The flow was big enough to encourage the societies to advance a little more on new mortgages. But they still cannot meet the demand for mortgages in full and most of them have been carefully nursing their liquidity ratios, with the result that at book values the average ratio rose during 1958 from 14.4 per cent to 15.9 per cent.

Looking ahead, the building societies have to think out their policies in terms of the new Housing bill and trustee status. A new era may have dawned for the societies, but they are moving into it cautiously. In particular they are anxious to maintain or to reinforce their reserve ratios. Some of them frown on mergers between societies that dissipate those reserves and almost all of them are unwilling to contemplate a change in their borrowing and lending rates that would cut into their margins. This desire for consolidation is measured by a proposal to be put to the members of the association in June for a compulsory reserve ratio (taking investments at market value) of 2½ per cent. That is the ultimate ratio required for trustee status by the Government, and while the association's proposals give more time to reach the minimum limit than does the Housing bill, it is apparent that membership of the association will eventually depend on fulfilling all the trustee requirements, except that relating to size.

The societies, in fact, have to look to their reserve ratios now and that is one reason why the council of the association has decided yet again against a change in its recommended rates. It is not a further cut in the Bank rate that may bring these rates down so much as what the next budget contains. A reduction in the standard rate of income tax, for instance, would ultimately benefit the societies' margins, while a new issue of national savings certificates at a lower rate of interest would enhance the competitive attractions of the societies' shares and deposits.

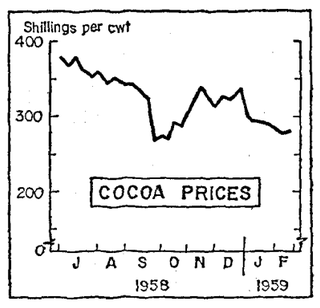
RAW SUGAR

Propping up the Price

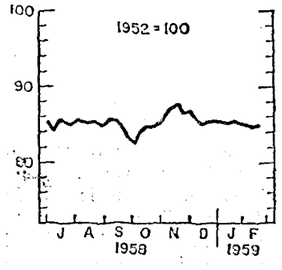
THE new International Sugar Agreement, which on paper is a more effective prop to the "free" world market than its predecessors, is already in trouble. The ending of the civil war in Cuba brought back the prospect of surplus, and prices of raw sugar have fallen by over half a cent to 3.10 cents a lb fob Cuba. When the Sugar Council met in London at the end of January it estimated the minimum net requirements of the free market this year at 5.4 million metric tons, and set export quotas provisionally at the same level as the basic export tonnages, namely 6.4 million tons, thus leaving an apparent surplus of over 1 million tons. The council justified its decision by pointing to the uncertainty about supplies, to the fact that export quotas will have to be considered again on March 19th, and to the automatic mechanism for cutting quotas when prices fall to a certain level. If the average market price over seventeen consecutive trading days is less than 3.25 cents a lb and is below that figure for twelve days, export quotas are automatically cut by 2½ per cent.



That cut is certain to be announced over the weekend. Raw sugar fell below 3.25 cents a lb on January 28th, and has remained below it ever since. In the last few days the market has been a little steadier, partly, perhaps, in anticipation of a cut in exports, and partly because production in Cuba, the largest producing country, is still suffering from labour troubles. Within one week of the automatic cut in quotas the council must meet to decide what further action should be taken, and if it cannot agree

the quotas must be cut by another 2½ per cent. As long as the average price is not below 3.15 cents a lb for seventeen market days export quotas cannot be reduced by more than 10 per cent of the basic tonnages; if the average is lower the quotas can be cut by the maximum of 20 per cent. Even if it were possible to cut quotas by the maximum the council is unlikely to do so, for it would then have exhausted its defensive powers. Clearly, the sugar scheme still has one weakness: the basic export tonnages are too high.

RAW COCOA



The Prophets Confounded

WORLD production of cocoa this season has confounded the prophets. Nearly all estimates of the crop in Ghana, the largest producing country, have been proved fanciful—and painful to many. On October 23rd the international cocoa study group estimated world production in 1958-59 at 820,000 metric tons; as it could hardly ignore Ghana's own estimate the group put the total crop in Ghana at 235,000 tons, though most experts doubted if it would exceed 200,000 tons. World consumption in 1959 was estimated at 846,000 tons, leaving an apparent deficit of 26,000 tons. While many traders had reservations about the size of the deficit there was general agreement that supplies might be tight. As stocks in consuming countries had already been run down prices were expected to remain high, or rise still further. Between October 23rd and mid-November prompt cocoa rose sharply by about 67s. to 356s. a cwt, and commanded a sizeable premium over forward delivery months.

Then the Brazilian marketing agency began selling cocoa at less than its minimum export price of 44 cents a lb fob (equal to about 370s. a cwt cif Europe), and the market weakened. In January when it became apparent that the Ghana crop was going to be much larger than had been expected, prices dropped more rapidly and the premium for prompt cocoa narrowed. By the time Brazil cut its minimum price to 34 cents a lb (or about 295s. a cwt cif Europe), the market had already fallen below that level. Last week prompt cocoa touched 268s. a cwt, and has since rallied to about 280s. a cwt, owing mainly to speculative covering in New York. The prospect now is for a surplus. The crop in Ghana should reach 235,000 tons, and with further gains in the Nigerian and Brazilian crops the study group now puts world production at 850,000 tons, 75,000 tons more than in 1957-58. World consumption, which has been declining unexpectedly sharply in the face of the high prices of last year, is now put at 826,000 tons in 1959, only slightly higher than last year. So the latest official forecast is a surplus about as large as the deficit that was forecast four months ago.

COMMODITIES FALL BACK

After rising by six per cent between October and November, *The Economist* commodity indicator is now only 2½ per cent above the October trough (its lowest point for nine years).

SECONDHAND JEWELLERY

Taxing the Just and Unjust

NEW jewellery is subject to purchase tax, but secondhand jewellery has hitherto not been taxed. The manufacture and sale of pseudo-secondhand articles has long been an open business in the trade. With purchase tax now at 30 per cent of the wholesale value the illegal gains are still worth while, though not as lush as they were when the tax was 60 per cent (before the last Budget) and 100 per cent (before the 1953 Budget). Detection of evasion is difficult, partly because the tax returns are made after the goods have passed into other hands, and partly because new and modern secondhand articles are often hard to distinguish after treatment by skilled hands.

About a year ago some members of the trade whose business was being injured by the traffic in "secondhand" articles vented their grievances publicly, and questions in Parliament followed. Thus bestirred, the customs authorities started a large-scale investigation. They found—contrary to earlier official statements—that evasion of purchase tax was widespread. As a first step about a dozen traders were told last month that they would henceforth be liable for tax on secondhand goods. Last week, having decided that urgent action against the trade as a whole was needed, the customs announced that trade in secondhand goods generally would be liable to tax as from March 1st. (Exemption has been an administrative concession; there is no exemption under the law.) While the customs presumably are too worldly wise to suppose that everyone will now play the game, defaulters should be less difficult to track down.

The decision may seem to be the only practicable one in the view of the Customs. But it is justice of a distinctly rougher sort which would bear most harshly on reputable dealers. Purchase tax is paid by wholesalers; it is not paid by retailers when they buy from the public and resell the same article to the public. In buying from private people, direct or through auctions or other disposals of private estates, the retailer would therefore be able to outbid any dealer whose trade was made subject to tax. Though the function of dealers would still be needed, retailers would bypass his services whenever possible. Is there no way of removing this discrimination? Dealers in special items are also complaining about the short period of notice. The sale of a piece valued at several hundred pounds may be difficult to negotiate in a fortnight. If their stocks cannot be sold before March 1st, dealers are faced with loss of profit or even actual loss.

WATER

No Shortage

THE two committees set up in 1955 to inquire into the future of Britain's water resources have both come up with a broadly favourable verdict; by 1965, they find, supplies of water generally should still be well ahead of demand. On the one hand, water demand since the war has risen by about 2 per cent a year and this trend should continue until 1965 with a greater increase expected from industrial water users (such as the Central Electricity Generating Board which by then will require 10,000 million gallons of cooling water a day) than from private consumers. Planned increases in supplies, however, were found in all areas to be sufficient to meet these needs, though with only a small margin to spare in East Anglia, Kent, Sussex and parts of the West Country. Moreover, sufficient capital for construction programmes—cuts in which have been at the root of most postwar water problems—is now forthcoming. The position has thus been reached where total water supplies in the future present little problem and where water experts are concentrating increasingly on the rather more intractable problems of sewage disposal, effluents and river flow generally.

In a sense, however, neither of the two reports meets the original criticism of water undertakings that led to the committee first being set up. This criticism arose from the severe water shortages that some areas suffered during the dry summer of 1955, and may indeed suffer again this year if the present winter drought continues. The public had an understandable feeling that, with a climate as generally rainy as the British, these shortages could only be the result of gross administrative inefficiency. The report to some extent bears out these criticisms. Even allowing for differences in demand, in costs and in geography, the variations in the proportion of available water collected, ranging from 2 per cent in Cornwall and 5 per cent in East Anglia to 36 per cent in Essex and 40 per cent in London, are excessive; Durham's difficulties in particular are notorious. Within most broad areas, there will also be a number of small local water undertakings which are much less efficient than the average. The Ministry of Housing can now compulsorily amalgamate these small undertakings if necessary and nine such orders have so far been made. These—though none is fully effective—have already had the welcome result of making recalcitrant local water boards do some joint planning; and this, given the satisfactory general picture should now be the first priority for water policy.

TRUSTEE SAVINGS BANKS

Competition by Cheque?

THE total funds deposited with the trustee savings banks at the end of their financial year on November 20th last was a record £1,313 million; the year was nonetheless something of a disappointment. While small investors have poured their money into the high yielding savings certificates and defence bonds and into premium bonds, deposits in trustee savings banks have actually fallen a little in the fiscal year since April. The trustee banks are alive to the increasing competition, not only from other forms of official savings media but from the commercial banks with their new facilities for small customers. Consent to any change in the business of the trustee savings banks must be obtained from the National Debt Office, through which the banks are answerable to the Treasury. The National Debt Office has to sanction the facilities that these banks offer to their depositors, and it controls the establishment of offices and

French Atom Fuel Lead

IT was almost certainly no co-incidence that the French atomic energy commission decided within a day or so of the UK Atomic Energy Authority holding an open day at its Springfields uranium processing plant, to allow visitors into the newest of the French fuel manufacturing plants, the biggest of its kind in the world. Although this plant has been working since last spring, its existence has been kept a close secret. The fuel it manufactures is in many ways an advance on the uranium metal produced by the Atomic Energy Authority since it is not in metal but in ceramic form, giving it certain important properties not possessed by the metallic fuel.

The Atomic Energy Authority in Britain has consistently wooed the goodwill of foreign countries by representing itself as the only bulk supplier and processor of nuclear fuels outside the United States, and the only one in the world prepared to sell fuel that carries no hidden political strings to it. The recent UK agreement with Euratom provided for the sale of fuel whether or not it was intended for use in reactors bought from Britain. The new French plant now appears as a definite challenge to that claim.

Although building was ordered and its cost met by the nationalised atomic energy commission this new fuel plant (which is just across the road from the research establishment at Saclay outside Paris, which ranks as the French Harwell), has been designed, built and run by the radio manufacturers, *Compagnie Générale de Télégraphie Sans Fil*, which is also responsible for designing France's new gaseous diffusion plant. It was rushed up in less than six months and is loosely described as a pilot plant, although it produces 25 tons of reactor fuel a year. This represents the initial fuel charge for one large experimental reactor; preparations have already been made for a much bigger factory should French scientists decide to standardise for the future on ceramic fuels.

The process of manufacturing small pellets of sintered reactor fuel, looking remarkably like half-inch lengths cut off a black pencil, follow the normal practice of the ceramics industry fairly faithfully. The powdered oxide is sifted, compressed in dies, fired in ovens; dimensional accuracy is carefully controlled because the mildly enriched American-imported oxide being handled at the present time is too valuable to be machined off as waste.

Reactor fuel in this form has two great advantages over metallic uranium; it does not bend and deform under intense radiation or temperatures of less than 2,500 deg. C and secondly, it does not oxidise as easily as metallic uranium, especially not in water. These two properties open up the possibility of reactors running at exceptionally high temperatures without fear of damage to the fuel and reactors in which water can be used in direct contact with the fuel.

These possibilities have already been considered in this country, and the Mark II Calder Hall, the experimental advanced gas cooled reactor being built at Windscale, as well as the Mark III Calder Hall being designed at Winfrith Heath, will use ceramic fuels. But the AEA is nowhere near producing these fuels, even for experimental purposes, in the tonnages in which they are being turned out in France. French metallurgists think they will need two years to test the merits of ceramic fuels, their present scale of production gives them a head start over the Atomic Energy Authority. The rapid progress of French nuclear engineering tends on occasions to be seriously underestimated in this country.

the rate of interest paid. It handles investment of funds in the "ordinary" departments, though the individual banks have limited freedom in investing funds in their special investment departments (and in paying higher rates on deposits in these departments).

The trustee banks are now pressing for permission to allow withdrawal by cheque. At the moment the only facilities for withdrawal are cash over the counter or an arrangement similar to, and as cumbrous as, the warrants obtainable by depositors in the Post Office Savings Bank. This is presumably not the only suggestion that the banks have followed up; their counterparts on the continent offer a service to both depositors and to borrowers that is much more far-reaching. Cheque accounts should prove extremely attractive even if the rate of interest allowed on such deposits is reduced. But this change might have wider implications, perhaps involving the designation of a third class of deposits. Neither of the two present departments has full trustee status.

THE TIN SCHEME

Shortage Amid Plenty

THE tin market is short of tin, producers are being forced to operate far below capacity, and the buffer stock of the International Tin Agreement has too much tin. No quick remedy to this paradoxical disparity is in sight. The manager of the buffer stock holds at least 23,300 tons that was provided, in cash or in kind, by the ordinary contributions of the producing members, and also holds several thousand tons bought with the producers' special fund (the whole of the special fund, and a portion of the ordinary fund, was used up in buying what was in effect Russian metal in the desperate attempt to support the market last year). There are no formal restraints on the disposal of tin from the special stock, and the manager has been letting it trickle out in the last few weeks. This can be inferred from the fact that prices this year have risen by only about £27 to £773 a ton, despite severe curbs on exports and the increasing demand from the United States.

After the special stock is sold the manager can then start to sell from the ordinary stock, as long as the price is above £780 a ton. Export restriction can bring prices up; the question before the tin council this week is whether producers should be allowed to export more tin. There is some scope for increasing exports without having to stop sales from the buffer stock. If exports remained at the existing rate of 20,000 tons a quarter throughout 1959, the free world would need all the tin in the ordinary and special stocks—and supplies would still be short by roughly 10,000 tons. But as the manager must keep some metal in his stock, so that he can sell as well as buy, the theoretical deficit is larger still. At the time that *The Economist* went to press the council's decision had not been announced.

HEAVY TRACTORS

Vickers' Hard-Bought Experience

THE announcement that the Ministry of Supply has ordered sixty Vickers Vigor tractors for use by the Army is a reminder that Vickers are now established in the heavy tractor market. Their entry into it seven years ago was inauspicious; the tractors, based more on military than civil standards of construction, proved insufficiently durable for civil needs and all had to be bought back. Four years and much money was lost before a revised model was introduced, incorporating the lessons so hardly won by this experience. This is the "Vigor" now ordered for the Army after three years' testing, with which Vickers have been winning their way back into the market. Fitted with a 200 bhp Rolls-Royce diesel engine, it is a heavy caterpillar-tracked vehicle of the type previously built chiefly in America.

These are bought in relatively small numbers; Vickers capacity is 1½ a day, and their production rather less than this. They are used almost exclusively by civil engineering contractors, to push bull dozer blades or pull scrapers on projects that involve shifting large quantities of soil or stones. Such conditions are more often met abroad than at home, where the chief use for these tractors is on opencast coal sites. Even the motorways do not demand many; it is only where the country is less favourable for such construction work that heavy tractors are required in numbers, and this is chiefly abroad. Vickers' civil sales reflect this; at present 92 per cent are for export. Vickers are thus managing to win their way into markets formerly dominated by the longer-established American makers; they have found competition noticeably stiffer since the American recession cut domestic sales.

High initial cost and long life are two characteristics of the heavy tractor. A Vickers tractor with its associated equipment will cost around £12,000, and is likely to have a working life of between ten and twenty years; 5,000 hours operation between major overhauls is the standard that the manufacturers aim at, though under many conditions the track will need replacing sooner. The need for durability under arduous conditions explains the high cost of the tractor; it also explains the initial troubles that Vickers experienced because of their lack of experience in this market. Just as civil aircraft must last longer than military machines, and this involves a different approach to design, so Vickers have learnt that a tractor needs different design methods from the tank it superficially resembles.

MOVING ENERGY

Pipelines for Britain

THERE are nearly 700,000 miles of pipelines in use in the world, four-fifths of the total mileage being in the United States, which moves at least a quarter of its oil and all its natural gas through them. Certain oil and natural gas pipelines exist in Western Europe, and more are projected: Britain has practically none apart from its still fairly localised gas distribution grids. Sir Harold Hartley, speaking to the

All clear on U.S. 17

South from Jacksonville. To Orlando in Orange County: to Kissimmee and Haines City and Winter Haven: through a land of lakes and winter-blooming flowers, of camphor trees and coral flame vines and—citrus. Above all, citrus. Mile after mile in Florida, U.S. Highway 17 is a cutting in a wall of evergreen leaf and wax-white blossom and yellow-gold fruit, where in spring the air is sweet with the fragrance of a world of wedding days, from groves stretching unbroken to the horizon.

Yet thirty years ago U.S. 17 was a forbidden route. Road blocks halted all traffic. Loads were stripped and searched. Ton after ton of fruit—oranges, grapefruits, tangerines, mandarins—was condemned and destroyed. In the groves themselves thousands of trees were uprooted and burnt—victims of infestation by the Mediterranean Fruit Fly (*Ceratitis capitata*) scourge of citrus and other fruit crops throughout the warm world. Only after eighteen months of the most drastic 'scorched earth' policy by a field force of over 6000 men could the all-clear be given. And Florida's citrus growers breathed again.

In 1956 the dreaded fly struck afresh, appearing first in small plantings in Miami and spreading swiftly to 28 counties. The road blocks reappeared; groves were sprayed; thousands of bait traps set; harvested crops fumigated. But this time, eradication came more easily, and with a field force of under 800. For with *dieldrin* granules to supplement bait sprays, control was swifter *and longer lasting*. To-day, Florida, which crops a quarter of all the world's citrus, is entirely clear of 'Medfly'. *Shell dieldrin—powerful, persistent and outstandingly effective even in low concentrations—has many other uses just as impressive as the help it gave in saving the 'golden' crop along U.S. 17.*

dieldrin

dieldrin, endrin, aldrin, D-D and Nemagon are SHELL *pesticides for world-wide use*

For further information apply to your Shell Company.

Issued by The Shell Petroleum Company Limited, London, E.C.3, England

Pipeline Industries Guild last week, advocated the laying of pipelines here on a wider scale: not only for crude oil, refined petroleum products and, on a national scale employing high pressure, for gas, but also for coal, pumped hydraulically as a slurry to steelworks and power stations.

Britain has at present crude pipelines from ocean terminals to Grangemouth and Llandarcy. Mr Christopher Brunner, as well as Sir Harold, has recently suggested that the volume of products to be distributed will possibly soon justify products pipelines though he added that to move fuel oil, the petroleum product for which demand here is rising fastest, a pipeline has to be lagged and heating supplied. A pipeline can move products, according to American estimates, for perhaps a twelfth of the cost of a road tank lorry: on the other hand 65 per cent of its costs are fixed charges, so that high volume and steadiness for its throughput are vital to its economics. Sir Harold quoted as a possibility a products line from Llandarcy to Birmingham, possibly using wayleaves along railway lines: he put the cost at about 1¼d. a ton mile for an annual throughput of 700,000 tons at 80 per cent load factor. In the field of gas distribution, there are one or two high-pressure gas pipelines already in use, as from Shellhaven to Romford: this link will be used not only for refinery gas but for the methane that is being imported liquid in experimental quantities under the scheme described in an article on page 707.

Coal has been transported hydraulically in Ohio now for about a year along a 110-mile pipeline from a mine of Pittsburgh Consolidated to a power station in Cleveland: about 1¼ million tons a year is transported, at present for about $2.55 a ton against $3.30 a ton by rail (this is using the line to less than full capacity, and assuming a 7 per cent net yield on the investment). Sir Harold compared this cost—say, 2d. a ton mile—with Britain's average rate per ton mile for coal—"which I believe is in the neighbourhood of 5d." Experiments in pumping coal as a slurry have indeed already been carried out here—but only, so far, from the pit bottom to the top of the shaft.

SHORTER NOTES

Philip Hill, Higginson and Company is arranging the sale of 2,400,000 5s. ordinary units (out of a total issue of eight million units) at 16s. each in Showerings Limited, the Somerset business which manufactures "Babycham" champagne perry. Gross profits have risen steeply in recent years and exceeded £2 million in the year to October 31st last.

* * *

The Guaranty Trust Company of New York has announced in London that it is willing to accept deposits of Tube Investments "old" and "new" shares against the issue of American depositary receipts in New York, enabling "over the counter" dealings in TI to take place on Wall Street.

* * *

The chairman, Lord Portal, and the deputy chairman, Mr Geoffrey Cunliffe, of British Aluminium have resigned. Sir Ivan Stedeford, the chairman of Tube Investments, replaces Lord Portal and Mr R. S. Reynolds, of Reynolds Metals, has joined the British Aluminium board.

A Business Note titled "Kings Go Forth" in *The Economist* of February 7th stated that British cigarette manufacturers refrain from using the word "filter" in their advertising of tipped cigarettes. Rothmans of Pall Mall, however, advertise their product as "Rothmans King Size Filter" cigarettes, and have promoted the filter extensively in their advertising. Rothmans King Size Filter cigarettes are made in Britain by Rothmans of Pall Mall, which is owned by Rembrandt Tobacco Corporation of South Africa.

COMPANY MEETINGS

THE LANCASHIRE STEEL CORPORATION LIMITED

CHANGE OF STATUS TO HOLDING COMPANY

INCREASED PROFITS EMPHASISE GREATER OPERATIONAL EFFICIENCY RESULTING FROM PAST CAPITAL EXPENDITURE

SIR JOHN JAMES ON RENATIONALISATION—SUBJECTING A BASIC INDUSTRY TO "SWINGS AND ROUNDABOUTS" OF POLITICS

The twenty-ninth annual general meeting of The Lancashire Steel Corporation Limited was held on February 12th at the Masonic Hall, Winmarleigh Street, Warrington.

Sir John James, Chairman, who presided, said:

Ladies and Gentlemen, I have great pleasure in presenting to you the Directors' Report and Accounts for the year ended September 27, 1958, and in moving their adoption of reviewing the year's working and the present position and prospects of your Company and the steel industry in general.

CHANGE IN STATUS OF THE LANCASHIRE STEEL CORPORATION LIMITED

Before reviewing the profit for the year I think I should first explain the change, which you will have noted in the Directors' Report, in the Corporation's status to that of a Holding Company only. As from March 31, 1958, all the steel-making activities carried on at the Corporation's Irlam and Warrington Works were transferred to a new Company, Lancashire Steel Manufacturing Company Limited, and the structural and general engineering activities which had been operated as a department of the Corporation were transferred at that date to The Pearson & Knowles Engineering Company Limited.

This change will ensure greater efficiency in the management of the various activities previously carried on by the Corporation. It is expected that this will result in several ways:

(a) It enables the Directors of the Corporation to delegate the day-to-day management of the Corporation's manufacturing activities to full-time executives who have been appointed to the Boards of the respective Companies, thus enabling the Holding Company's Directors to devote more attention to matters of principle arising in all Companies of the Group.

(b) By segregating activities into separate Subsidiary Companies it afforded the chance of appointing full-time executives to the Boards of those Companies and thus gave them a greater sense of responsibility and enhanced status, which is very valuable in dealing with the affairs and customers of the respective Companies.

(c) By interlocking the leading members of the Boards of all Companies in the Group it gives the opportunity of very close co-operation on all matters affecting the interests of two or more Companies, and thus achieves the maximum co-operation between them.

These results have already, in the short time since the change was made, shown their value, and I am hopeful will continue to do so in even greater measure in the difficult times ahead.

In connection with these arrangements, you will be interested to know that the Company formed to take over the steel-making activities, Lancashire Steel Manufacturing Company Limited, was formed with a Fully-paid Capital of £16 million issued to your Corporation in satisfaction of the purchase price of the Assets of the Irlam and Warrington Works, less the Liabilities appropriate thereto. The Fixed Assets were transferred at historical cost less depreciation, and the Current Assets at cost or market value in accordance with our usual methods of valuation.

No writing up or revaluation of any kind took place in the case of the Assets transferred, and £16 million thus represents the value, on the basis I have described, of the Corporation's steel-making activities. Replacement cost at today's prices would, of course, be immeasurably greater, and so would any value based on a fair measure of the profit-earning capacity of the Company.

REVIEW OF PROFITS

I am glad to be able to report a considerable improvement in the manufacturing and trading profit for the 52 weeks ended September 27, 1958, of over £1 million compared with that for the preceding year. The previous year, of course, suffered from two special causes beyond our control, and which I explained fully last year. This year we have not suffered from the disruption of a strike, and as from July, 1957, the margins for our products fixed by the Iron and Steel Board have been on a more satisfactory basis. On the other hand, as you know, the last six months of the year under review was an extremely difficult period as the effect of the Government's anti-inflationary measures and the general fall in world demand made itself felt in this country. The steel industry as one of the most important primary producers suffered particularly from these effects, and this Company was by no means immune therefrom; in fact, during the six months in question the Company was working considerably below its full capacity.

In these circumstances, the recovery in profits to a level only some £90,000 below the previous record profits of the year ended September 29, 1956, must be regarded, in my view, as extremely satisfactory. It undoubtedly emphasises the greater efficiency at which the Group is now operating and which has resulted from our Capital Expenditure over the last ten years.

Income from Trade Investments shows a sharp increase compared with the preceding year, due to the receipt of a Special Dividend from a Company in which we have an interest. This Dividend must be regarded as exceptional, but the cancellation of Distributed Profits Tax will result in freeing profits from Associated Companies, and I think our income from these sources will in consequence be at a higher level than in past years.

I have referred in past years to the appallingly high rate of taxation. This year, of course, taxation shows a sharp increase compared with the previous year as a result of the increased profits. It absorbs no less than £1,750,000 or more than 50 per cent of the Corporation's earnings.

Despite this heavy charge the increased profits have enabled us to place £720,000, as against £400,000 in the previous year, to General Reserve and still slightly increase the balance carried forward.

Out of these profits your Directors have recommended a Final Dividend of 8 per cent, making 12 per cent for the year as for 1957. They have, in addition, declared a Special Interim Dividend of 2 per cent, less Income Tax, for the financial year 1958-59. This Special Interim Dividend will be paid on February 17, 1959, with the recommended Final Dividend for the year under review, but will not be taken into account when consideration is given to payment of further Dividends for 1958-59. This treatment, of course, arises from the recent change in Profits Tax legislation, and in effect means that the Corporation is, at the present time, paying an effective rate of 14 per cent on the Ordinary Shares.

CONSOLIDATED BALANCE SHEET

Once again I am able to report that the Consolidated Balance Sheet shows a very strong financial position, Current Assets exceeding Liabilities by more than £6 million.

This is actually an increase of nearly £500,000 compared with the excess a year ago, and taking into account the fact that during the year Capital Expenditure amounted to more than £2 million must be regarded as extremely satisfactory.

Outstanding contracts for Capital Expenditure at September 27, 1958, amounted to £1,135,000, and I am confident that we shall be able to meet these obligations without difficulty.

FUTURE DEVELOPMENT

It is expected that the new mechanical cooling bed in the Rod and Bar Mill at the Warrington Works will come into operation during the current year. This will enable us to spread our products into Ferro Concrete and other markets in which there appears to be a steady demand. This will undoubtedly

strengthen our position and, I hope, will result in increased use of our capacity.

On the other hand, the prospects for installing a Light Plate Mill, to which I referred last year, are not now so attractive, as the recession in the industry has resulted in light plates being available in excess of current demand. In these circumstances, and as research is being carried on which may considerably reduce the cost of such an installation your Directors think it wise to await future developments before embarking upon this expenditure.

We now have under consideration the installation of an electric furnace at the Irlam Works. Developments in the wire industry continually call for higher qualities of steel, and such a furnace, together with our existing open hearth furnaces, would enable us to meet this demand. I cannot overstate the value which we place upon our connection with the wire industry, not only through our own Subsidiary Companies, Rylands Brothers and Whitecross, but also with the independent Wiredrawers who favour us with a large and growing volume of orders. The installation of this furnace should, I believe, enable us to supply their requirements for almost every quality they use and is a measure of our desire to serve them efficiently and to the best of our ability in every way.

DEVELOPMENTS ABROAD

During the year further progress was made in the reconstruction and expansion of the Rhodesian Iron and Steel Company Limited in which your Company is playing an important part. Rhodesia, however, is at the present time suffering from a severe trade recession; in consequence there has been a sharp fall in the demand for steel products. We are confident, however, that this is only of a temporary nature, and that in a very short time the situation will improve and the Rhodesian Iron and Steel Company play a great part in the economic development of the Federation.

Our own Subsidiary Company in Rhodesia, Lancashire Steel (Rhodesia) (Private) Limited, has also made progress during the year and is now in production, although as yet only at a modest level. It will, in fact, not commence to operate on a large and efficient scale until supplies of wire quality billets are available from the Rhodesian Iron and Steel Company. When they are available our Subsidiary, with its modern machinery, should be able to produce wire and wire products at extremely competitive prices, and we hope, not only supply the Federation's requirements, but also export from that country.

Consideration is being given to the installation of a Wiredrawing Plant in Auckland, New Zealand, where we already have an established plant manufacturing wire products, for which we believe there is a growing demand in that country. The new Wiredrawing Plant would enable us to supply not only our own requirements, but also those of other wire users in New Zealand.

PRESENT POSITION AND PROSPECTS

As I have already indicated, the present position is full of difficulties and our capacity is not being fully employed. The fall in demand has not, however, in the case of our Group been so severe as we had feared.

In this connection it is encouraging to note the growing demand for wire for road making and bridge building, which I have no doubt will expand in view of the accelerated road programme essential to meet the needs of modern transport. This, together with the recent relaxation of credit and other controls by the Government will, I hope, lead to a revival of demand for our products.

NATIONALISATION

On the question of renationalisation which the Socialist Party still threaten to carry out, I must reiterate that I am utterly opposed to the principle of further nationalisation and deplore subjecting such a basic industry as Iron and Steel to the "swings and roundabouts" of politics.

Your Company is endeavouring to let this threat interfere as little as possible with their business. But it is idle to contend that the threat is having no effect on the industry and the Companies concerned therein. For example, it has often been pointed out that the share prices of Steel Companies are unbelievably low compared with other Companies of comparable standing, merely as a result of the threat of renationalisation. Faced as the industry is with a very considerable capital expenditure running into some hundreds of millions of pounds, this has inevitably involved great difficulties in raising the necessary money.

A further disadvantage is the unsettlement caused amongst our staff, who do not know what their fate may be. For example, only the other day we saw a reference to the fact that some of the Union representatives of the Socialist Party Executive are demanding that on renationalisation "the existing Company structure must be scrapped." How can senior Executives, under such a threat, give of their best when they may be moved like pawns from the Companies to which they have given their lives to remote organisations which they have never heard of or envisaged. Again, it is difficult for Steel Companies to engage the best talent amongst the young men, who, in our experience, inquire as to the prospects of nationalisation and usually decline an appointment offered to them, saying specifically that they do not wish to work for a nationalised industry.

I have said before, and repeat again with all the emphasis at my command, that further nationalisation is not only unnecessary but would be a disaster for the industry and for the country. In my opinion, the present organisation of the industry is entirely satisfactory, as it provides for continuous supervision by the Government through the Iron and Steel Board whilst, at the same time, allowing the individual Companies the necessary freedom and elasticity to cope with their own special problems and requirements. I cannot better the views expressed so recently as January 29th by that great and independent newspaper *The Manchester Guardian*—"Labour has failed to provide a single valid reason why the steel industry should be subjected to a fresh political upheaval. . . . Possibly the powers of the Iron and Steel Board still need to be tightened in some directions. In that case Labour should see about it. What is pointless is to embark on another great switch of ownership."

In the meantime, I would emphasise that your Directors are doing everything within their power to protect your interests and to counter the threat of renationalisation.

STAFF

In conclusion I must again pay my own and the Directors' tributes to the efforts of all employees of the Companies in the Group. The fall in trade has made 1958 a most difficult year, but the results I have had the pleasure of reviewing demonstrate the efficient and loyal way in which the problems have been dealt with by all concerned.

The Report and Accounts were adopted.

J. SAMUEL WHITE AND COMPANY

(Shipbuilders and Engineers)

HIGH LEVEL OF PRODUCTION

The sixty-first ordinary general meeting of J. Samuel White and Company Limited was held on February 18th in London, Sir James A. Milne, CBE (Chairman and Managing Director), presiding.

The following is an extract from his circulated address:

On this occasion of the sixty-first Annual General Meeting of the Company I am glad to present such a satisfactory report.

Since the end of the financial year we have received an order from the Ministry of Supply for two wood 63-ft. Pinnaces and orders completed were Aircraft Lighter RN Air 52 and HMS Charity which, when finally handed over to the Pakistan Navy was renamed Shah Jahan.

Although the Shipbuilding and Engineering Departments have employment for the next two to three years, the Boatbuilding Department has only employment for a reducing number of men for upwards of nine months. Our position can be considered good when compared with shipbuilders in the United Kingdom who have building capacity similar to ours. It must not be forgotten, however, that in industries such as this one should look further ahead than two years and, at the moment, inquiries indicating the possibility of receiving an order are not as many as one would like, particularly in connection with merchant ships. I can assure you that every inquiry is given full consideration and actively pursued.

In the Boatbuilding Department the last two Inshore Minesweepers are almost complete and it has not been possible to maintain the labour force we had twelve months ago, so much so, that we have found it more economic to close down part of the Department and use the available space for Shipbuilding purposes. A high proportion of the boatbuilding labour has also been absorbed on shipbuilding. Your Board have under consideration various products to make use of the remaining Boatbuilding premises should no further work be forthcoming.

Somerton Works had a most successful year. The new products and designs developed earlier in the year have found a ready market.

Generally production has been at a high level. Little delay has occurred due to material shortages and we must consider ourselves fortunate that no serious inconvenience has been experienced as in the past due to materials not being available in the right sequence.

After reviewing the activities of the subsidiaries, the statement continued:

Turning to the Consolidated Balance Sheet, our overall liquid position has improved, but with more commercial work on hand we shall need to draw heavily on our cash reserve to finance day-to-day work in progress in the months ahead.

The Trading Surplus of £263,112 compares with £262,915 for last year (which also included £46,903 not relevant to that particular year).

Your Board recommend a final dividend of 15 per cent, which, together with the 5 per cent Interim, make a total dividend for the year of 20 per cent, similar to last year.

The report and accounts were unanimously adopted.

THE NATIONAL BANK LIMITED

A RECORD YEAR

LORD PAKENHAM'S ADDRESS TO THE SHAREHOLDERS

The one hundred and twenty-fourth Annual General Meeting of the Proprietors was held at 34/35 College Green, Dublin, on February 12, 1959.

The Lord Pakenham, PC, Chairman, began his Speech by referring to the Balance Sheet which reflected the substantial progress made by the Bank in the past year. Current, Deposit and other Accounts had increased by 4.8 per cent, and at £93,658,000 constituted a new record. The number of new accounts opened with the Bank showed a 50 per cent increase on the 1957 figures, and this was regarded as particularly significant. The rise of almost 11 per cent in Advances to customers reflected both easier credit conditions in the United Kingdom, where the Bank introduced the Personal Loans Scheme, and more hopeful signs in Ireland, where the Bank has taken the lead in giving new forms of assistance to farmers.

ENTRY INTO THE HIRE PURCHASE FIELD

The Chairman continued: "By reason of our decision to enter the Hire Purchase field we have acquired substantial holdings in Bowmaker (Ireland) Limited, one of the Republic's foremost Hire Purchase companies, and St. Margaret's Trust Limited in England—a company whose high quality has long been known to us as their Bankers."

FURTHER EXPANSION

The advance in the Bank Premises figure to £609,000 was due to some substantial improvements at existing Offices and to the opening of new Branches at Croydon and Birmingham. Lord Pakenham announced that another new Branch will be opened at Reading shortly and, in a reference to Northern Ireland, he declared, "Our policy there is henceforth a policy of expansion. . . . A Bank should be reluctant to represent itself as a benevolent institution, but we sincerely believe that we can make a much larger contribution than at present to the prosperity of Northern Ireland."

AN INCREASED PROFIT AND DIVIDEND

In turning to the Profit and Loss Account, the Chairman drew attention to the very satisfactory increase in the Profit of some £40,000 to £268,000—a rise of 17½ per cent. "Indeed 1958 was a record year both in the amount of business done and the Profit earned," he added.

An increase in the dividend from 12 per cent to 14 per cent was declared and some £9,000 was added to the balance of the Profit and Loss Account carried forward.

IRELAND AND ENGLAND COMPARED

Lord Pakenham then gave a review of the current position of Agriculture and Industry in the Republic of Ireland and Northern Ireland and went on to compare banking and economic trends in England and Ireland. He welcomed publication of the Irish Government's White Paper, "Programme for Economic Expansion." "The Programme is widely recognised as being completely realistic in its approach to the country's economic problems and in the targets it sets for development within the next five years," he said.

A "NEW BREEZE" IN BANKING

The Chairman continued, "In England a new breeze has swept through Banking with the end of the 'credit squeeze,' the introduction of Personal or Instalment Loans and the entry of Banks into Hire Purchase in a big way. We have kept well abreast of these events."

Lord Pakenham drew attention to the fact that The National Bank is the only Bank having a system of Branches in England, Wales, the Republic of Ireland and Northern Ireland. He added, "We can play a unique part as one of the most effective links, constructive but completely non-political, between Ireland and the United Kingdom."

SPEED OF DECISION

"I am often asked whether we can make any contribution in Britain which the largest Banks could not make equally well or better. I return an increasingly confident answer. Personal service is provided at a high level in all the leading Banks, but it should lie within our power to render a more personal service than larger institutions. We attempt to do this, though whether in fact we usually succeed only our customers can judge. Speed of decision is, however, easier to assess. At a Dinner last year I ventured to indicate 'speedy decisions' to those who put the question 'Why go to The National Bank?' Next morning a gentleman was on the doorstep of one of our Branches saying he had come to test my words with the request for a Loan. He was accommodated within a few minutes."

A SPLENDID STAFF

Lord Pakenham referred to the high enthusiasm of the Staff evident during visits to Branches and at Conferences. He concluded, "We have a splendid Staff and the Directors are deeply grateful to them as we move forward from strength to strength and as our old traditions seem likely to be enhanced in the future."

MILLS & ROCKLEYS LIMITED

(Outdoor Advertising in more than 200 towns throughout the Midlands, South West, East and North East England)

REVALUATION OF PROPERTIES

The thirtieth annual general meeting of Mills & Rockleys Limited, will be held on March 13th in Nottingham.

The following is an extract from the statement by the Chairman, Mr George T. Mills:

The profit, after provision for taxation, is lower at £70,826 compared with the record amount of £90,931 last year. Your Directors propose a transfer of £25,000 to General Reserve and the payment again of a similar dividend to that of recent years of 1s. 3d. per ten shilling ordinary share, leaving a "carry forward" of £42,693 compared with £41,087 a year ago.

As I stated a year ago, a professional valuation was being carried out of all the Freehold and Leasehold properties owned by your Company. They comprise upwards of 650 separate lots. Of these all but seven are freehold. They comprise a very wide range of properties including almost all the main and branch offices used by the Company, its screen printing works, some 100 dwelling houses, a number of petrol filling stations and a wide range of other property. The valuation of these properties represents the Valuer's estimate of the open market value. This valuation shows a very handsome appreciation of £274,336 over the net figures based on valuations made many years ago, less sales and depreciation but with additions at cost. That substantial sum has been added to Capital Reserve. Your Directors have decided that there is now an opportunity to deal with the item of goodwill amounting to £411,585. They have therefore transferred £211,585 from Capital Reserve together with £200,000 from General Reserve in order to eliminate goodwill from the accounts completely.

You may recollect that my last statement envisaged a temporary drop in the volume of sales, due to the impact of commercial television and the credit squeeze. This forecast proved correct and the volume of sales in the four months up to February, 1959, is somewhat lower than in the corresponding period a year ago. However, the improvement in the National financial position is likely in my opinion to lead to a renewed growth in advertising appropriations. Furthermore, users of commercial television are beginning to realise that poster advertising does a vital job in an advertising campaign. The prospects of our sales of space for the summer period beginning April are more favourable than they were a year ago.

The new factory in Coventry for screen printing is now in occupation and is expected will prove an earning asset of real value. The works at Ipswich have materially improved their technique and output. At the same time, cautious steps are being taken to widen the base of the production business at Coventry by developing the manufacture of printed electrical circuits.

JUTE INDUSTRIES LIMITED

A DIFFICULT YEAR

IMMEDIATE FUTURE MORE ENCOURAGING

MR W. G. N. WALKER'S STATEMENT

The thirty-eighth annual general meeting of Jute Industries Limited was held on February 16th, at Meadow Place Buildings, Dundee, Mr W. G. N. Walker (chairman and joint managing director) presiding.

The Secretary (Mr W. A. Jeffray, CA), read the notice convening the meeting and the report of the auditors.

Addressing the meeting, the Chairman said: With your permission I will take the accounts and the report of the directors as read. (Agreed).

A preliminary statement by the Chairman circulated with the Accounts read as follows:

As before, I intend to make an up-to-date statement on general lines at the Annual General Meeting.

In my interim statement this time last year I warned stockholders that profits for the current year might show a further decline. Events have proved this warning to be well-founded, and the trading surplus of the Group, having met all expenses including depreciation, has fallen by £365,156 to £412,976. When I made my forecast last year I anticipated the fall in earnings caused by the aftermath of the Board of Trade's action in July, 1957, and also the setback that the weaving section of our business would sustain as a result of stock losses and difficult trading conditions in the USA market. I had not, however, anticipated the additional handicap that we would have to bear as a result of the recession during May, June, July, 1958, when our production fell to 20 per cent below the level achieved during the same period in 1957. The results were also affected by a falling raw jute market which bottomed within a day or two of September 30th, the end of our financial year.

I am glad to be able to state that the situation has improved markedly since the Summer, and that there has been a general upsurge in business in the home trade and in exports. Raw jute price levels have risen and our spinning and weaving sections are today operating at a high level of activity. As I told you two years ago, we are large suppliers to the floorcovering industries; it is to the increased demands from these industries that our improved activity is mainly due.

Steps have been taken to concentrate production in our cheaper producing units by making the greatest possible use of multiple shift working. Our Belmont Works, which has been used as a machinery store since the war, has been sold and another of our Works now empty is awaiting a possible purchaser. The floor area in the remainder of our establishments is either being fully utilised or is earmarked for productive purposes.

I hesitate to make any forecast as to the level of profits that may be earned over the current financial year, because of uncertainty, firstly, as to the Board of Trade's attitude to the safeguarding of the jute industry, and secondly, as to Pakistan's intentions, in her economic plight, regarding raw jute availability and price levels. Were it not for these imponderables I could not fail to be optimistic.

At the meeting the Chairman said:

I assume you have read my preliminary statement that accompanied the Accounts. It is the last paragraph of that statement that I am sure you would wish me to elaborate upon.

The situation today as far as protection is concerned is the same as it was this time last year. In the interval the Board of Trade has made no further reduction in the mark-up on imported Asian goods, nor has it given any assurances that would clear up the uncertainty as to the future; endeavours continue to be made to explore the possibility of a more stable long-term arrangement.

The European Free Trade Area did not come into being on January 1, 1959, but negotiations are still going on with the Common Market countries in the hope that some compromise arrangement can be reached in the not too distant future. Jute may be of little moment in the wider realm of European affairs, but nevertheless the jute industries in the Common Market countries are taking a close interest in the actions of our Board of Trade. The Continental countries are acutely aware of the long-term dangers that increased imports of Asian goods into the United Kingdom market might cause them.

PAKISTAN AND RAW JUTE

Availability and price of raw jute are, of course, closely related. In recent years small carry-overs of crop from one season to another have tended to increase fluctuations in price and, in addition, have meant much too high prices at times. This state of affairs has done much damage to the industry and Pakistan's artificial restriction of crops has largely been the cause.

The average price of Mill Lightnings and the fluctuations between the top and the bottom of the market during the past three jute years (July-June) have, taking prices at the 1st of each month for shipment during that month, been:

	Average monthly price	High (per ton)	Low
	£	£	£
1955/1956	85	93	80
1956/1957	100	116	84
1957/1958	100	112	95

In July, 1958, the price of Mill Lightnings stood at approximately £101, falling to £85 at the end of September and recovering again to £90 in the third week of October, where it has remained within very small limits. This fall is most welcome in spite of it necessitating a write-down in our stocks at the end of September.

This year's crop is a large one, but the percentage of higher grades—the ones we use—is very much below the average, thus resulting in large quantities of low grades which the Pakistan authorities are finding it difficult to dispose of. It is likely, therefore, that the carry-over into the next crop will be considerable, possibly in the region of 2 million bales, and also that it will be of little use to most overseas markets. With this in view, the Pakistan authorities have announced that they intend to restrict the next crop by prohibiting the cultivation of jute in border areas where the main crops were of low quality. They also have in mind that, by so doing, they will limit smuggling of the fibre into India, increase food crops and thus reduce their food grain imports and generally help them in their balance of payments crisis.

This is an admirable ideal, provided that by so doing they neither reduce the production of high-grade fibre nor, through shortage, raise its price level and so do further damage to their customers overseas. Their "golden fibre" is already losing its gilt, and they should take note of the increasing alternative sources of supply that are becoming available to their customers. Burma and Brazil are producing fibre of above-average quality, and China, Siam and certain other countries are increasing their growings of medium and lower grades. India is also re-entering the export market. With the distinct possibility of Pakistan losing ground, her new government composed of military and official personnel must give very careful consideration to its actions, lest unwittingly it loses its traditional markets for quality fibre in the Western countries of the world.

LONGTOWN WORKS

Negotiations for the disposal of Longtown works are nearing completion. The closure of this Works does not imply any reduction in the output of the products concerned, as arrangements have been made for their manufacture in certain of the Company's other units.

SPECIALISED PRODUCTS

As indicated in my preliminary statement, your Board is concentrating on the expansion of sales to the floorcovering and other consuming industries who use specialised jute products. In the development of these specialised sales, our research and development facilities have been augmented over the past few years and are proving most beneficial.

MANAGEMENT

We have had a difficult year, and much time and thought has had to be devoted to adjusting ourselves to changing circumstances. During this period your Board has received the utmost co-operation from a loyal and hard-working management team. To them and to all employees we offer our most sincere thanks and appreciation. Let us hope that today's improved conditions will be maintained.

LLOYDS BANK LIMITED

ANNUAL GENERAL MEETING

The Annual General Meeting of Lloyds Bank Limited was held on February 13th at the Head Office, 71 Lombard Street, London, E.C.

The Right Honourable Sir Oliver Franks, GCMG, KCB, CBE, the Chairman, presided.

With the concurrence of the members present the report and accounts and the statement by the Chairman, all of which had been previously circulated, were taken as read.

The report and accounts were adopted and the other ordinary business was transacted.

Votes of thanks were passed to the Chairman and Directors and to the staff.

UNITED KINGDOM PROVIDENT INSTITUTION

A YEAR OF RECORD BUSINESS

INCREASED INTERIM BONUS

SIR JOHN BENN'S STATEMENT

The one-hundred-and-eighteenth Annual General Meeting of the United Kingdom Provident Institution will be held at its Head Office, 33-36 Gracechurch Street, London, E.C.3, on Wednesday, March 18, 1959. The following statement by the chairman and managing director, Sir John Benn, Bart, is being circulated to policyholders with the notice of the meeting:

It will be seen from our latest Report and Accounts that 1958 proved to be an eventful year for the United Kingdom Provident Institution as well as for the City of London. Further expansion of our life assurance and pensions business coincided with an easing of financial restrictions by the Government. Various steps to extend credit were taken by the banks, and among other developments our Institution was quick to offer a new Credit Policy to provide cover for hire purchase transactions.

For the first time in our history the published value of the funds now exceeds £50 million. New business amounting to £12,859,000 sums assured net was also a record, representing an increase of 9.5 per cent on the figure for 1957 and happily nearly all our branches shared in this improvement. Payments made to members during 1958 amounted to £2,702,000. Sums paid under policies sharing in profits included bonuses of £758,000, which added an average of 54 per cent to the original sum assured, providing further evidence of our Institution's unrivalled bonus record. Interest earned on the funds was at the rate of £6 17s. 1d. per cent gross, or £5 1s. 1d. after deduction of tax The excellent yields from our property investments helped to account for the very satisfactory rates just mentioned. As usual, these rates are calculated on the balance sheet value of the assets, which is considerably less than their market value, and the Institution's "inner reserves" represented by the difference between these values are stronger than ever.

INCREASED INTERIM BONUS

In these circumstances, of which I propose to say more at our annual meeting next month, the directors have accepted the Actuary's recommendation to increase the interim bonus on all with-profit policies which become claims from February 16 to December 31, 1959, from 45s. 0d. to 48s. 0d. per cent per annum compound in the General Section and from 46s. 0d. to 49s. 0d. per cent in the Temperance Section. This is, of course, the Institution's bonus year and the rates to be allotted to all with-profit policies on our books at the end of the year in respect of this Triennium will be declared early in 1960.

THE NATIONAL INSURANCE BILL

The National Insurance Bill, now reaching the Committee stage in the House of Commons, calls for comment in view of its wide repercussions. The urgent need to stem the mounting deficit on the present National Insurance scheme is recognised by all political parties and is of the first importance to a life office, whose business depends so much on sound public finance. To the extent that the new Bill has this essential object, it has our full support. But having said this, I must add that the provisions of the Bill appear to be unnecessarily complicated and that unless these are drastically amended, its implementation will impose an intolerable strain on our pensions staffs, on the personnel officers of business and industry, and on the government departments concerned.

Many people, irrespective of their political affiliations, will regret that the constructive report just published by the Liberal Party Pensions Committee was not issued sooner, as its influence when the Bill was being drawn up might have been considerable.

PAST AND FUTURE

All these comments serve to underline the strength of pension schemes provided by the United Kingdom Provident Institution. Such schemes are eligible for tax relief on the same principle that Parliament has allowed relief on life premiums ever since the first Income Tax Act was introduced in 1799 but they involve no direct subsidies from the Exchequer. Their other merits include a fixed scale of premiums. In the case of a group scheme this may provide for variations to meet a change in the number of employees covered, but the business is based on a firm contract made at the outset and all concerned know exactly where they stand. Hitherto, all pensions contracts have been carried out to the letter by life offices and, provided that Parliament continues to uphold our traditional liberties, I have every confidence that the schemes we are now writing will be fulfilled in every detail in future as they have been in the past.

THE ATLAS STONE COMPANY

CONTINUANCE OF PROGRESSIVE POLICY

The Twenty-Eighth Annual General Meeting of The Atlas Stone Company Limited was held on February 17th in London, Mr Bernard Davis, chairman and managing director, presiding.

The following is an extract from his circulated statement:

Trading profit for the year amounted to £192,175 compared with £116,164. The profit this year, added to the amount of £77,175 brought forward, gives a total of £269,350. After all outgoings, there remains a net available balance of £87,163, out of which your directors recommend a dividend on the Ordinary shares of 15 per cent, less tax.

As a result of the improved financial position your directors recommend the distribution of 146,667 fully paid up 5s. Ordinary shares free to shareholders in the ratio of one new share for every five held as at the close of business on February 17, 1959.

Whilst every effort will be made to maintain and improve upon these results in the future, the possibility of being unable to continue this trend indefinitely should not be entirely disregarded.

The improvement in profit is, to some extent, the harvest reaped from the substantial sums spent in recent years upon capital equipment. With this encouragement we propose to continue our policy of modernising buildings, plant and methods in order to improve efficiency still further and to make the best use of labour and materials.

LIEBIG'S EXTRACT OF MEAT COMPANY

A SUCCESSFUL YEAR'S TRADING

The ninety-fourth annual general meeting of Liebig's Extract of Meat Company Limited, will be held on March 12th in London. The following is an extract from the circulated statement of the chairman, Mr K. R. M. Carlisle:

The accounts reflect a successful year's trading (Group Profit less Losses before Taxation £2,022,101 compared with £1,168,376) and fully confirm the expectation of improved results expressed last year. The improvement has been achieved largely through the restoration of profit margins of the Group's branded products, an increased sales turnover, larger-scale operations in Paraguay and the elimination of losses in certain overseas subsidiaries. On the other hand, the overall results from the African subsidiaries covering the year ended December 31, 1957, were again unsatisfactory.

Your Directors recommend a Final Ordinary Dividend for 1957-58 of 7 per cent, tax free, and have declared a Special Interim Ordinary Dividend of 2 per cent, tax free, for 1958-59.

It will be noted that it is proposed to retain in Subsidiaries the sum of £599,000 and to transfer a further £50,000 to General Reserve of the Parent Company. This is felt to be desirable in view of the present need to improve our liquid resources and to provide for future development.

OXO LIMITED

The Oxo Company had another year of great activity and increased substantially its turnover and its profits. Sales of the Oxo Cube were buoyant. Success in the sales of canned meat products under the Fray Bentos brand was resounding. Record turnover of Fray Bentos and Beefex Corned Beef was achieved and also in Fray Bentos canned meats manufactured in the United Kingdom.

Continent of Europe.—Competition remained keen on the Continent and in some countries there was a tendency for profits to decline further. Vigorous action is being planned to halt and reverse this trend, and the advent of the European Common Market is being borne well in mind in the formulation of such plans, as are the negotiations for some sort of Free Trade Area.

In this movement towards freer trade in Western Europe, the Liebig Group is not unfavourably placed to take advantage of developments, owing to its widely distributed sales and manufacturing companies on the Continent.

After a detailed review of the Group's world-wide activities, the statement concluded: In general, there is no present reason to suppose that the current year will prove less satisfactory than its predecessor. I must, however, remind you that we are engaged in an increasingly competitive business which, because of the wide geographical spread of its operations, is also particularly exposed to climatic, economic and political hazards over which we can have no control.

Reorganisation of your Company throughout the world is steadily continuing and every effort will be made to ensure that the fruits of this long term operation will be gathered in due course. Meanwhile a welcome and commendable trend towards a freer economy is developing in several countries in which we operate, notably Argentina and France, and this should eventually be of assistance to us in our activities.

TEACHER *(DISTILLERS)* LIMITED

CONTINUED DEVELOPMENT AND EXPANSION

The tenth Annual General Meeting of Teacher (Distillers) Limited was held on February 17th in Glasgow.

In the course of his speech to shareholders, Mr R. M. Teacher, the Chairman, said that in the past few years the development required to meet the steady expansion of both production and sales had been financed from earnings. It was now felt that the time had come when the Issued Share Capital should be brought more into line with the Capital employed in the business by the capitalisation of reserves and issued to the Ordinary Shareholders. At the same time, in order to continue needed expansion, and in view of the nature of it, the Board believed the most suitable method would be by the issue of Unsecured Loan Stock.

The Chairman continued: The results of the past year's trading have been satisfactory from the point of view of sales both at home and in most export markets.

Export Markets: Sales to the United States of America continue to increase. In Canada, the changes in legislation as to price discrimination and freedom of restrictions on the methods of distribution and consumption, have helped in the maintenance of this market, against, as in the USA, more competition. New Zealand introduced legislation of a very adverse nature in the restriction of imports of Scotch Whisky to 40 per cent of 1956. This substantial reduction is a severe setback in such a good market. A good deal has been published on the restrictions on imports into France, and I can only express the view that the singling out of Scotch Whisky is complete discrimination against our Industry of a product which cannot be produced anywhere in the world other than Scotland. Conditions in other markets have shown little change, apart from continued expansion where possible.

Your Board are confident that the developments undertaken and to be undertaken will strengthen and permit us to maintain the high quality of HIGHLAND CREAM, the brand of Scotch Whisky which we produce, and will allow your Company to meet the competitive trend that is developing which we will be ready to deal with both at Home and in the Export Trade. Apart from legislative restrictions, the greatest competitor of all in any industry, I do not see any reason which would warrant us going forward other than confidently.

The report and accounts were adopted.

At a subsequent separate class meeting of Preference Shareholders and Extraordinary General Meeting, the Board's proposals to issue £1 million Unsecured Loan Stock, 1979-1984, to increase the authorised share capital from £2 million to £3 million, to make a scrip issue of one new Ordinary share of 10s. for every two Ordinary shares held on January 23rd, to increase the Preference Share interest from 4½ per cent to 4¾ per cent and to alter the Articles of Association for this purpose and in connection with increasing the Board's borrowing powers, were approved.

APPOINTMENTS

UNIVERSITY OF LONDON
INSTITUTE OF COMMONWEALTH STUDIES
RESEARCH FELLOWSHIPS

Applications invited for (i) *Leverhulme Research Fellowship* for research in some aspect of the recent economic history or applied economics of any of the tropical areas of the Commonwealth (other than S. Africa); and (ii) *Institute Research Fellowship* for research on a topic relating to social, economic or political problems or recent history of the Commonwealth (or any part of it). Salary of each will be within the range £900 to £1,500 plus London allowance, family allowances and F.S.S.U., tenable for three years from October 1, 1959. Applications, six copies, not later than April 15, 1959, to the Secretary of the Institute (from whom further particulars may be obtained), 27 Russell Square, London, W.C.1.

UNIVERSITY OF NOTTINGHAM

Applications are invited for the appointments of ASSISTANT LECTURER IN ECONOMICS and ASSISTANT LECTURER IN POLITICS. Salary scale £700 x £50 to £850, with membership of the Universities Superannuation Scheme and children's allowances. Conditions of appointment and form of application, which should be returned by March 14, 1959, from the Registrar.

UNIVERSITY OF EXETER

Applications are invited for the post of Assistant Lecturer or Lecturer in Economic and Social Statistics. Salary scale: Lecturers £900 - £1,650 (with efficiency bar at £1,300). Assistant Lecturers £700 - £850. Further particulars may be obtained from the Secretary of the University.
Closing date for applications, April 11, 1959.

UNILEVER LIMITED require an Economic Statistician for their Economics and Statistics Department at Head Office in London. The work requires the application and development of a statistical approach to management decisions at various levels within the firm. It calls for a familiarity with and a critical appreciation of economics and of mathematical statistics. There is a strong preference for those applicants whose initial interest was in economics. Candidates should be at least 28. The starting salary will be from £1,350 to £1,500 with a maximum of well over £2,000. Applications in writing to Personnel Division (ES/1), Unilever Limited, Unilever House, Blackfriars, London, E.C.4.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of ASSISTANT LECTURER IN ECONOMIC STATISTICS. Duties to commence on October 1, 1959. The salary scale is as follows:—£700 x £50 to £850 per annum. Membership of the F.S.S.U. and Children's Allowance Scheme.—Applications must be sent not later than March 15, 1959, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

THE DURHAM COLLEGES
In the UNIVERSITY OF DURHAM

Applications are invited for the post of LECTURER IN SOCIAL ADMINISTRATION in the Department of Social Studies from October 1, 1959. The salary scale attaching to the appointment will be £900-£1,650 a year. Applications (three copies), together with the names of three referees, should be sent not later than March 9, 1959, to the Secretary, 38 North Bailey, Durham, from whom further particulars may be obtained.

UNIVERSITY OF BIRMINGHAM
FACULTY OF COMMERCE AND SOCIAL SCIENCE

Applications are invited for the post of TEMPORARY LECTURER or ASSISTANT LECTURER IN ECONOMICS, salary within the range £700 to £1,450 with F.S.S.U. and family allowances.
Applications (three copies), with the names of two referees, should be sent by April 11, 1959, to the Registrar, The University, Birmingham, 15, from whom further particulars can be obtained.

For further appointments and other classified advertisements see page 739

THE UNIVERSITY OF NEW SOUTH WALES
FOUNDATION CHAIR IN BUSINESS ADMINISTRATION

The University of New South Wales invites applications for appointment to the Foundation Chair of Business Administration within the University.
Applicants must be persons of good academic qualifications in an appropriate field of study and, in addition, should be of such standing in the field of management, either in public or private enterprise, as to attract the support of the business community.
The successful applicant will be expected to establish a School of Business Administration, operating primarily at the graduate level within the University, to develop courses of executive leadership and training, to collaborate with the Schools of Economics and Accountancy, and to stimulate research in his chosen field.
The salary of the Foundation Chair will be £A3,758 per annum.
Subject to the consent of the Council of the University, Professors may engage in a limited amount of higher consultative work.
The successful applicant, subject to a satisfactory medical examination, will be eligible to join the State Superannuation Scheme providing a pension of £A1,638 per annum.
Professors are eligible for six months study leave on full salary after three years of service or twelve months after six years of service.
The University reserves the right to fill the Chair by invitation.
First-class ship fare to Sydney of appointee and family will be paid.
Four copies of applications and supporting documents (including the names of three referees) should be forwarded to the Agent General for New South Wales, 56 Strand, London, W.C.2, and a copy forwarded by Air Mail in an envelope marked "University Appointments" to the Bursar, Box 1, Post Office, Kensington, New South Wales, Australia, not later than *March* 31, 1959.

COMPANY AFFAIRS

BRITISH-AMERICAN TOBACCO

SHAREHOLDERS in British-American Tobacco have some reason for feeling a little perplexed. The latest dividend is well up to market expectations, but the profits figures are something of a disappointment—a reversal of the situation a year ago when there was some disappointment with the virtually unchanged dividend when profits had risen substantially. The final ordinary dividend for the year to September 30th last is 7d., tax free, per 10s. unit but a "profits tax" interim dividend for 1958-59 of 2d., tax free, has also been declared. This makes the effective tax free annual rate 1s. 9d. compared with 1s. 7½d. for the previous year. The first interim dividend for 1958-59 is left unchanged at 6d., tax free.

	Years to Sept. 30, 1957	1958
Consolidated Earnings:	£	£
Gross trading profits	*57,285,037*	*55,789,393*
Taxation—		
United Kingdom	7,389,867	6,263,625
Overseas	20,663,819	21,365,488
Minority interests	*2,917,602*	*2,687,258*
Net profits	*26,313,749*	*25,473,022*
Replacement reserve	6,000,000	4,900,000
General reserve	—	750,000
Ordinary dividend	7,622,282	*7,523,291

*Excludes special interim payment

No reason is given in the preliminary statement for the fall of 2.7 per cent in group profits before tax from £57,285,037 to £55,789,393. But there is a possible clue in the statistics of tobacco consumption in the USA; these show that, while sales of cigarettes rose in 1958 by 5 per cent to about 430,000 million, the output of BAT's wholly owned subsidiary, Brown & Williamson, fell from 49,000 million to 48,000 million cigarettes. This decline is surprising, for sales of filter tip cigarettes continued to rise steeply and accounted for 46 per cent of total sales in the USA and it was in this field that Brown & Williamson was a pioneer with its successful "Viceroy" brand. But the decline in profits may also suggest that sales in other overseas markets have not advanced so rapidly this year, as a result of the effect of the fall in commodity prices on purchasing power in primary producing countries. Since this preliminary report the 10s. units, which recently have enjoyed a strong advance, have fallen by 3s. 9d. to 55s. They yield 5.5 per cent, looking forward to the long term growth prospect.

ENGLISH ELECTRIC

WHEN the directors of English Electric announced the ordinary "rights" and debenture issues, raising about £10½ million, they said that profits for 1958 would be no lower than those in 1957, and that the ordinary dividend of 14 per cent would be maintained not only for 1958 but also in 1959 on the capital as increased by the rights issue. The preliminary statement, however, has turned out to be something more than a formal statement of profits earned last year for it unexpectedly includes the announcement of a 50 per cent scrip issue. An ordinary dividend of 14 per cent on the capital as increased by the rights issue is equivalent to 9¾ per cent on the capital as increased by the scrip issue. The fact that the £1 shares have been once marked up by 3s. to 63s., yielding only 4.4 per cent on a 14 per cent dividend, suggests that investors are in a bullish mood and are hoping for something better—perhaps that the board will round off the dividend to, say, 10 per cent.

English Electric will have to service an increased capital again this year but the preliminary profit figures are good enough to encourage some of the more optimistic investors to believe that the future dividend policy may be more liberal. Gross profits before tax were only one per cent higher at £7,017,638 (against £6,961,578) but this was due simply to the rise of over 13 per cent in depreciation (from £2,775,985 to £3,137,609). And as the tax charge fell by nearly 25 per cent (from £3,635,455 to £2,919,414) the group's net profits have advanced strongly from £3,326,123 to £4,098,224. These results once again suggest that the group's sound management record and its wide spread of interests, stretching from heavy electrical equipment to aircraft and consumer durables, have enabled the group to come to terms with the erosion of profit margins rather more successfully than some of its competitors. But the current price is asking a lot of the future.

BRITISH OXYGEN

IN the boom in industrial equities the £1 ordinary shares of British Oxygen have risen from 36s. 3d. last July, when the interim report was issued, to the current price of 54s. 9d. Thus the effective increase in the dividend from 10 per cent to 12 per cent just announced by the directors for the year to September 30th has been largely discounted. On the new dividend the £1 shares now yield 4.4 per cent. In their interim report the directors not only said that profits for the first six months of the financial year were encouraging but also that at the end of the year they would carefully consider the possibility of raising the dividend.

The decision to declare a "profits tax" interim of 2 per cent in addition to the maintained dividend of 10 per cent is amply justified by the 2½ times cover that net profits provide. The group's trading profits, having risen by 18 per cent in 1956-57, advanced by another 23 per cent in 1957-58—from £9,181,548 to a new peak of £11,319,153. Despite an increase of £877,190 to £4,094,653 in depreciation (reflecting past capital spending) and an increase in tax from £3,215,099 to £3,890,438, net profits are still 18 per cent higher at £2,876,208 (against £2,440,245). These figures make cheerful reading, especially when they are set against the background of recession in the steel and heavy engineering industries, which take such a large proportion of British Oxygen's industrial gas. Acting virtually as a single supplier in this country, British Oxygen has been able to maintain its margins of gross profit; indeed its turnover, which rose by 14.7 per cent in 1956-57 and by 15.7 per cent in 1957-58, has been rising less quickly than its trading profits. But this expansion has been made possible by the huge investment programme of recent years and the directors now say specifically that major installations recently completed are paying off in greater efficiency and increased output. The break with the conservative dividend policy is therefore opportune.

LINEN THREAD

BY negotiating the sale of its American business, the directors of Linen Thread dropped the curtain on an unhappy tale of trading in the United States covering half a century. Shareholders will have few regrets. As a result of this sale, they will receive a capital distribution of 10s. for each £1 of stock held. Moreover, although the group suffered a loss in the year to September 30th, they will also receive an unchanged total ordinary dividend of 6 per cent, including a special interim payment of 3 per cent. Shareholders will hardly cavil at the sale for £4¼ million of assets valued in the books at possibly over £6 million, for the sale absolves the company from the necessity of nursing the American business through a further period of losses. But they may well ask to what use the £2½ million not earmarked for distribution will be put. An indication of what the directors may have in mind may be inferred from their statement that the proceeds of the sale reinforce the liquid assets of the group "at an opportune moment, as diversification projects are presently under examination." The group already has a small interest in engineering and it may be willing to follow the example of other textile concerns in extending its interests outside its own industry. At bottom it is up to shareholders in Linen Thread—and for that matter in other textile companies that possess big liquid balances—to decide whether the directors should invest the surplus funds for them or whether they should do the investing for themselves by asking for a bigger capital distribution.

Excluding the losses of the American subsidiary, the group's gross trading profits in 1957-58 are seen to have fallen from £709,672 to £510,079. After depreciation of £263,241 (against £312,107) and tax of £155,730 (against

£279,651 net profits declined from £165,141 to £146,123; to maintain the ordinary distribution at 6 per cent requires £113,850 net. In the present circumstances these are the important figures. The fact that the American subsidiary lost £510,079 following a profit of £216,553) is past history, especially as a substantial part of this loss was incurred in closing-down operations. It is what will happen to the group ex-American Thread that now becomes of prime interest. As substantial reorganisation expenses were incurred by the group's other subsidiaries, there may be some improvement in the current year's profit. At 27s. 10½d. the £1 shares allowing for the distribution of 10s. per share yield 6½ per cent, on a 6 per cent dividend.

DOWTY GROUP

BEFORE the Capital Issues Committee's control over new issues was put into cold storage, the directors of the Dowty Group had obtained its permission for an issue larger than they now deem necessary. The immediate cause of the issue by the Dowty Group was the opportunity to buy from Rolls-Royce and Bristol Aeroplane the whole of the issued share capital of Rotol Limited, whose business is complementary to Dowty's production of aeroplane accessories and with which the group already possessed strong trading links. At March 31, 1958, the Dowty Group held cash assets of £211,000 but had bank overdrafts amounting to £409,000. The sale was therefore conditional on Dowty raising £3½ million with which to buy the share capital and pay back loans from the vendors. At the beginning of this month Rotol had a bank overdraft of £1¼ million and the Dowty directors said they intended to offer 2,400,000 10s. ordinary shares in a one for two rights issue, but they did not then specify the price. They have now said—only a fortnight later—that the issue will be of 1,920,000 shares in the proportion two new shares for every five held. They have still to announce at what price the issue will be made but they have said that the decision to reduce the number of shares offered follows a review of "the financial position of the group and of Rotol Limited, and having regard to the increased liquidity of the group and the fact that the Rotol overdraft has now been appreciably reduced." The issue will be made against the background of an unchanged dividend. A second interim ordinary dividend has been declared in lieu of a final dividend, but as this is at the same rate as the final dividend for 1957-58, the year's payment is left unchanged at 11½ per cent, tax free. The current price of the 10s. units is 45s. 3d. and the yield is 4¾ per cent.

BRITISH RELAY WIRELESS

THE Capital Issues Committee was as heavy handed with "piped" radio and television companies as it was with HP and renting companies. As a result these companies have been among the first to take advantage of the new freedom to approach the capital market directly. Among them British Relay Wireless and Television proposes to raise £1.8 million by a rights issue of ordinary shares in the ratio of two 5s units for five held at 20s each. This issue, like that of Rediffusion, is relatively large. Last May the group acquired Sysbine Limited, a shell company whose sole asset was £1 million in cash, and recently it has made two further small acquisitions. Before these acquisitions the group possessed net assets worth £3¼ million at book values. The holders of the £500,000 7 per cent convertible loan stock issued in connection with the acquisition of Sysbine Limited have the right to apply for the new issue, on which at the current price of 27s 6d for the 5s ordinary units the rights are worth about 2s 1½d.

ANTOFAGASTA

FEW of the world's railways operate on a comfortable margin of profit, but no privately owned corporation could continue to suffer for long the sort of losses that Antofagasta (Chili) and Bolivia Railway has been incurring on its lines in Bolivia. The loss is estimated at £500,000 for 1958 and the railways faced a prospective loss of not less than £750,000 in 1959. In the face of this combination of miseries the directors have taken the only course for stopping the rot: to suspend operations in Bolivia. Despite repeated representations the Bolivian government had not taken the steps necessary to permit the railway to break even in its operations; in particular it has ignored requests by the company for higher tariffs and for relief from certain onerous labour and welfare obligations. In the last resort the company offered to sell the railway to the government. That offer has not been accepted and now the company has withdrawn from Bolivia, accepting the risk that it may lose some of its assets in that country without compensation. The Bolivian government has now taken over the administration of the railways. But for debenture holders and stockholders in "Fags" it may seem more unreasonable to continue operations that promise only losses. The group's rail and subsidiary interests in Chile seem to offer a better prospect. The consolidated ordinary stock in issue amounts to £6,415,344 and after a quarter of a century without remuneration dividends of 4 per cent were paid on this stock (quoted at £13½ per £100 nominal) for 1955 and 1956. Payment on the £2 million cumulative preference stock (quoted at £26 per £100 nominal) was deferred last May and no dividend was declared on the ordinary stock last November in respect of 1957.

HADFIELDS

THE steel and engineering business of Hadfields was denationalised in July, 1955, and in 1956 the directors raised the total ordinary dividend from 7½ per cent to 9 per cent in accordance with their declared policy of adjusting the ordinary dividend as profits rose or fell. Profits contracted in 1957 but the nine per cent dividend was maintained. The interim dividend for 1958 was maintained last June, but was accompanied by a strong warning that the final dividend might have to be reduced, as orders were falling off. The preliminary results for the year to September 27th show that the contraction in business has been so severe that gross profits have slumped from £1,131,734 to £609,005. The final dividend has been cut from 5 per cent to 2 per cent, reducing the total payment to 6 per cent. Net profits from trading fell from £420,187 to £158,329, of which the dividend of 6 per cent absorbs £127,091 net. Hadfields £1 units fell 2s. to 17s. 3d. on this announcement and they now offer a yield of nearly 7 per cent.

BORAX (HOLDINGS)

IN his statement accompanying the full accounts of Borax (Holdings) for the year to September 30th the chairman, Lord Clitheroe, strikes a note of cautious optimism. He looks ahead to a steady improvement rather than a spectacular increase in earnings. On this news the 5s. ordinary shares were marked up by 1s. 7½d. to 18s. 7½d., which brings the yield below 2½ per cent on the dividend of 8¾ per cent. The price of Borax has always been underpinned by the discount that Wall Street applies to the growth of the US subsidiary, US Borax and Chemical, in which the English parent has a 74¼ per cent interest. This was based first on the group's reorganisation in 1956 and the tax savings that were expected to accrue, and secondly, on the starting up of the new plant at Boron. Later the investor's eye was caught by the possible uses of boron in making synthetic diamonds and as an aircraft fuel. But the new plant at Boron ran into difficulties and in 1957-58 gross trading profits slumped from £2,970,780 to £1,624,997.

The maintained ordinary dividend of 8¾ per cent is paid out of the accumulated reserves of the parent company and, at the moment, shareholders cannot expect any immediate payment from US Borax and Chemical to the parent. The teething troubles at Boron are now past history but earnings from the potash side of the business are falling quite sharply. Potash prices have fallen as production has run ahead of demand and very rich beds of potash discovered in Saskatchewan may soon be adding to supplies.

ILFORD

THE fall in Ilford's gross profits from the peak of £1,794,496 to £1,671,152 in the year to October 31st is in line with the cautious comments made by the directors last September when the details of the agreement with ICI, which will eventually result in that company owning 32 per cent of the Ilford equity, were announced. Through this agreement Ilford acquires all ICI's assets and know-how pertaining to colour photography, and while in effect ICI in return for certain royalties will finance further research and development in colour photography the money coming from the deal will enable Ilford to pursue its own programme of development in black and white photography. The importance of this link in the long term is evident, for Ilford will be backed by ICI in the rapidly expanding but competitive world market for colour film. Ilford is strongly established in the market for black and white film and in 1957 exported half Britain's output of sensitised materials. Last year, however, costs continued to rise and though sales were slightly higher profits fell. The fall in the group's net profits from £813,748 to £788,994 slightly reduced the cover on the maintained ordinary dividend of 16 per cent to 2½ times. This will not really worry shareholders, but they presumably would like to know what dividend policy will be pursued now that ICI has come into the picture and has relieved Ilford of its immediate financial problems. At 17s. 1½d. the 5s. units in Ilford yield 4½ per cent.

METAL INDUSTRIES

PURSUING the policy of diversification outlined by Sir Charles Westlake in his statement last July, the directors of Metal Industries are offering shareholders in Avo either 10s. cash for every one 2s. share or one £1 share in MI for every four in Avo, which has 2,500,000 shares in issue. Avo's directors have accepted this bid in principle, but presumably to clinch the deal, Avo holders are now told that the new MI shares to be issued will rank for the 10 per cent final dividend. The MI shares have eased by 1s. to 42s. 6d. and those of Avo by 10½d. to 10s. 6d. Avo shareholders are being offered twice as much as the issue price when the units were marketed in July, 1957. Presumably, MI is interested in the big orders that Avo may garner from nuclear power stations for its instruments and components.

CAMP BIRD

SINCE he became chairman of Camp Bird in 1955, Mr John Dalgleish has assiduously cultivated good relations with the shareholders. Now a group of shareholders is pressing for the formation of a shareholders' committee on grounds that suggest almost complete disapproval of the policies which the directors have implemented. In particular, these shareholders disapprove of the sale of nearly all the company's portfolio of gold shares and of the re-investment of its funds in a diversity of projects. They doubt the value of some of the expenditure on development, especially at the Camp Bird mine in Colorado and on a cold steel forging process. They are worried about the cover on the ordinary dividend and they deplore the Ghana Minerals episode. The directors have answered these criticisms in a circular to shareholders and have disclosed that group profits for the six months to October 31st and the parent company's profits for the nine months to January 31st show some slight improvement over the previous year's figures. An extraordinary general meeting has been convened for March 9th at which an ordinary resolution calling for the establishment of a shareholders' committee will be put to the vote as requested by the critics of the board. But the directors have tabled a special resolution of their own, calling for a Board of Trade investigation into the affairs of the company. For the directors of a company to suggest a Board of Trade inquiry is certainly unusual. The question for shareholders is whether an inquiry of this nature is relevant.

ALFRED HERBERT

THE contraction in machine tool deliveries in 1958 has given Alfred Herbert a severe jolt. Gross trading profit for the year to October 31st tumbled from £3,666,922 to £2,251,984 and net profits from £1,821,311 to £1,417,975. Alfred Herbert made exceptional progress after 1950 but until 1957 it maintained a conservative dividend policy. The directors then raised the ordinary dividend from 7½ per cent to 12 per cent, tax free. This was followed by a one for one scrip issue last April; and last August the directors stated that despite unfavourable trading conditions, they considered that they would be justified in maintaining the distribution at its higher level. Although the fall in profits turns out to be far more severe than most investors had foreseen the dividend has been kept effectively unchanged at 6 per cent, tax free. Orders in the first few months of the current year have not been good enough to allow maximum production. But although the directors expect a further reduction in profits in the current year they do not expect any reduction in the dividend for 1959.

AIR SUBSCRIPTIONS TO THE ECONOMIST
22, Ryder St., London, S.W.1

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

	Airmail	Air Freight

London Stock Exchange

FIRST DEALINGS:	Feb. 11	Feb. 25	Mar. 11
LAST DEALINGS:	Feb. 24	Mar. 10	Mar. 31
ACCOUNT DAY:	Mar. 3	Mar. 17	Apr. 7

GILT edged stocks and corporation loans eased on the announcement of a £10 million loan for Rhodesia and Nyasaland. But prices recovered on Tuesday and Wednesday, the *Financial Times* index of Government securities rising fractionally over the week from 86.96 to 87.05. German bonds were strong and Hungarian 4½ per cent rose by 1¾ to 10½.

Industrials were quiet up to the close of last week but buyers reappeared on Monday and good gains were made particularly in leading stocks favoured by unit trusts and American investors. Over the week *The Economist* indicator rose from 249.9 to 252.4 Dunlop gained 2s. 3d. to 25s. 9d., Glaxo 5s. 6d. to 51s. EMI rose by 1s. 10½d. to 57s. 3d. Electrical shares were particularly strong, Vactric gaining 3s. 6d. to 36s. 9d., Lancashire Dynamo 3s. to 46s. 9d., and Thorn Electrical 2s. 3d. to 32s. De Havilland was helped by the reference to its "Blue Streak" missiles in the White Paper on defence and gained 3s. 3d. to 20s. 7½d. Jaguar rose to a peak of 56s. 6d. following the results. Raleigh rose sharply from 22s. 1½d. to 26s. 9d. Among engineering shares Davy and United rose by 2s. to 94s. but George Cohen fell by 1s. to 10s. 7½d. on the interim statement. Tobacco shares were dull following a further report from the United States on the effects of cigarette smoking, Gallaher weakening by 6d. to 42s. Stores were strong; Woolworth gained 3s. 1½d. to 52s. 1½d. and Gamage 1s. 6d. to 64s. However, Gorringe fell 5s. 7½d. to 48s. 1½d. after the recent rise on rumours of a bid.

Bank shares advanced following expectations of impending rights issues: Midland rose by 2s. 6d. and Lloyds by 4s. to 51s. 3d. But National and Grindlays dropped 3s. to 30s. following the announcement of an unchanged dividend and the omission of a capitalisation. Hire purchase shares were strengthened following the announcement of the sharp rise in the hire purchase debt at the end of 1958, United Dominions Trust gaining 2s. at 132s. 6d. British Wagon advanced by 7s. 6d. to 117s.

Oil shares weakened on the announcement of sharp cuts in Middle East prices by British Petroleum. BP fell by 1s. to 51s. 3d. and Shell by 1s. 6d. to 140s., but Ultramar jumped by 10s. 6d. to 68s. 9d. Among Kaffirs, Orange Free State mines encountered profit-taking after this recent rise but on Wednesday regained earlier losses. Coppers were irregular despite the firmness of the metal but Chartered rose by 4s. to 83s. 6d. while Bancroft gained 1s. 4½d. to 28s. 9d. Rubbers were, in demand, Indonesian issues being unaffected by the Sumatran nationalisation moves.

Money and Exchanges

THE MONEY MARKET

OFFICIAL disbursements caused a brief surplus of credit at the start of this week. The authorities reversed engines and sold a fairly large amount of bills on Monday and a moderate amount on Tuesday. The clearing banks withdrew funds on Wednesday in the course of making up their monthly statements, and credit became short. The authorities did not intervene and the rate for overnight loans rose once more to 3-3⅛ per cent, the rate ruling at the close of last week. Two or three houses borrowed a very small amount from the Bank of England.

The market left its concerted bid unchanged at £99 5s. for the 91-day bills at last week's tender. It tendered at £99 4s. 11d. for the issue of 92-day bills arising from the incidence of Whit Monday and received full allotment at that rate. The average rate of discount fell about 1½d. to £2 19s. 10.89d. and the syndicate received an average allotment of about 35 per cent, compared with 45 per cent the week before. At this week's tender the offer has been raised by £10 million to £200 million, but maturities next week amount to £260 million.

Last week's rise in the average rate at which the US Treasury sold its three month bills has been reversed: the rate this week fell from 2.810 per cent to 2.726 per cent.

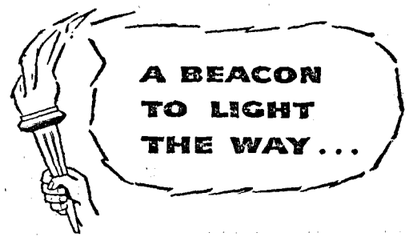
If she suddenly became the bread-winner...

Life's busy enough now for your wife—looking after you and the children, managing the home.

But think of that other, lonely life if you weren't there: the job-hunting, the strenuous work with strict hours, and then the housework to do in the evening. No time for fun and playing with the children. It's a barren existence for a mother, but that is what might face your wife.



What have you done about it? Adequate life assurance is the answer. Talk it over with the man from the Prudential. He will suggest a policy to fit your individual needs.

Ask the man from the

APPOINTMENTS

Vacant 9/- a line; Required 6/- a line.

INDUSTRIAL RESEARCH

Applications to fill vacancies in this expanding division of The Wallace Attwood Company are invited from men aged 25 to 35, preferably with good Honours degrees in Economics or Social Science. Industrial Research, a specialised branch of Market Research, measures home and overseas demand in industry, public bodies, etc., for specified products. Existing vacancies are:

A. SENIOR RESEARCHER, who should have had at least two years' experience in market research or ancillary work. Proven ability to undertake research projects, up to and including presentation and submission of client reports, is necessary.

B. STAFF RESEARCHERS. Preference will be given to those with some experience in market research or similar work.

Ability to express themselves clearly and succinctly, both verbal and in writing, is essential to all engaged in this operation. Applications will only be considered when full details are given, age, education, qualifications, experience.

THE WALLACE ATTWOOD COMPANY,
Management Consultants,
Chantrey House, Eccleston Street, London, S.W.1.

ASSISTANT STATISTICIAN, graduate, required for the Circulation Department of TOTHILL PRESS LTD. Ability interpret statistics and make coherent reports for management essential: some experience surveys desirable. Salary according to age and qualifications. Good prospects.—Ring Mr. Cohen for appointment (WHitehall 9233), or write Tothill Press Ltd., 33 Tothill Street, London, S.W.1.

NATIONAL daily newspaper has a vacancy on its editorial staff for a writer on scientific and allied subjects. Consideration will be given only to applicants with the highest qualifications. Applicants are asked to send details of their qualifications, experience, and salary requirements, to Box No. 1128.

AMERICAN COMMUNICATION CONCERN in Tripoli, Libya, requires the services of a QUALIFIED ACCOUNTANT. Must have at least 5 years' commercial experience. Salary commensurate with experience plus $4.00 daily cost-of-living allowance.—Air-mail replies to Hycon-Page, P.O. Box 666, Tripoli, Libya, giving full details of personal history, previous employment, and salaries received.

NOTTINGHAM AND DISTRICT TECHNICAL COLLEGE

BURTON STREET, NOTTINGHAM

Principal: D. A. R. Clark, M.Sc.(Tech.), M.I.Mech.E.

A vacancy exists for the following post, the successful candidate to take up duties on September 1, 1959.

DEPARTMENT OF ARTS & COMMERCE

LECTURER IN ECONOMICS, able to assist in the teaching of either Geography or Commercial subjects.

Full-time staff are given full facilities for research work for Higher Degrees or publications.

Salary in accordance with the Burnham Technical Scale as follows: £1,200 plus 5 per cent rising by annual increments of £30 to £1,350 plus 5 per cent per annum. A salary above the minimum will be paid in approved cases.

Further particulars and form of application may be obtained from the Principal, to whom completed forms should be returned not later than March 6, 1959.

For other appointments see page 728

POLITICAL EDUCATION OFFICER required for provincial area of political party organisation. Applicants should be University graduates, preferably between 25 and 45. Commencing salary according to experience and qualifications, not less than £750.—Write to Conservative Political Centre, 32 Smith Square, London, S.W.1.

OXO LIMITED

require a

WORK STUDY OFFICER

Applications invited for the post of Work Study Officer. Candidates should be about 35 years of age and possess a Higher National Certificate or similar qualification. At least 4 years' experience in Work Study and its application is essential, preferably in the Food Industry, and a knowledge of Budgetary Control and Standard Costing is desirable.

An excellent starting salary will be paid to applicants with the necessary qualifications and experience, and there is ample scope for progress within the Company. The post is Superannuated and there are the usual sports and social club facilities.

Please write with full details of age, qualifications and experience to the Personnel Manager, Oxo Factory, Southwark Bridge, London, S.E.1. Mark envelope W.S.1.

HEAD of Language Department. Teaching and Administrative post in large London College. Secretarial and Interpreter's experience an advantage in addition to good university background. Box No. 1129.

CYANAMID OF GREAT BRITAIN LIMITED

require

(a) STATISTICIAN

to lead a department responsible for all Statistics and Market Survey, in an expanding worldwide organisation. Background for this replacement appointment should include Economics degree, plus minimum 4 years' business statistics and related experience. Commencing salary around £1,400 p.a.

(b) MARKET RESEARCH OFFICER

responsible, within the Statistics department, for research and information on markets for the Company's general chemicals. Background for this new appointment should include Chemistry degree or professional qualification, plus sales or market research experience and aptitude. Commencing salary around £1,000 p.a.

Employee benefits include contributory Pension/Life Assurance Scheme. Applications, which will be acknowledged, should be addressed, in complete confidence, to:

Personnel Manager,
CYANAMID OF GREAT BRITAIN LIMITED,
Bush House, Aldwych,
London, W.C.2.

PRIVATE American organisation in Germany requires expert in public opinion and audience research. Applicant must have at least a master's degree or its equivalent in sociology or social psychology and adequate knowledge of general statistics, sampling methods, research design and processing of questionnaires. Salary in $4,200 to $4,500 range plus housing, transportation, medical insurance and other benefits. Reply in confidence to Box 1131.

INTERNATIONAL OIL MONTHLY, published in London, has a staff vacancy for an editorial assistant, able to interpret, for the layman, significant technical developments in the oil and related industries, and to assess the economic implications. Engineering or science degree, and writing experience, essential. Pension fund. Write Box FE/45, c/o 95 Bishopsgate, London, E.C.2.

UNIVERSITY OF EDINBURGH

DEPARTMENT OF POLITICAL ECONOMY

Applications are invited for the post of Assistant in Economics in the above Department. Salary Scale £700 x £50 to £850 per annum, with superannuation benefit and family allowance where applicable. Applications will be considered from students who expect to graduate with Honours in Economics at the end of the present academic year. The successful applicant will be expected to take up duty on October 1, 1959.

Further particulars may be obtained from the undersigned, with whom applications, giving the names of two referees, should be lodged not later than March 7, 1959.

CHARLES H. STEWART,
Secretary to the University.

February, 1959.

THE UNIVERSITY OF LEEDS

THE FACULTIES OF ARTS, ECONOMIC AND SOCIAL STUDIES AND LAW

POSTGRADUATE SCHOLARSHIPS

Applications are invited for not more than three Postgraduate Research Scholarships tenable at the University of Leeds by graduates of other Universities. These Scholarships, each of the value of £300 a year plus fees, will be tenable from October 1, 1959, for advanced study or research in the Faculties of Arts, Economics and Social Studies, and Law, and will be renewable annually. Maximum tenure three years. Applications (including those of students who will graduate in June, 1959) should be submitted on forms obtainable from The Registrar, The University, Leeds, 2. Closing date May 1, 1959.

BROWN & POLSON GROUP require for their Finance and Administration Division, a young man 23-28 with an Accountancy or Cost & Works Accounting Qualification. Experience in an industrial concern would be an advantage but applicants with solely commercial or auditing experience should not hesitate to apply. Experience within the Company will not be confined to its London headquarters but will include periods at the Manchester and Paisley Works. Salary, Profit Payment, Life Assurance and Pension schemes are good and the Company is progressive in outlook and expanding. Replies to Group Personnel Manager, Brown & Polson Limited, 125/130 Strand, London, W.C.2.

STATISTICIAN. A Statistician is required for Ekco Sales Department. Essential requirements are a critical, penetrating mind, coupled with drive, imagination and enthusiasm. The job entails analysis and presentation of sales information, and the compiling of essential statistical information for use in the formulation of sales policy. Age approximately 30. Pension scheme. Write giving full details of experience, salary required, age, etc., to R. Wrathall, E. K. Cole Limited, Southend-on-Sea, Essex.

AUSTRALIA

UNIVERSITY OF MELBOURNE

DEPARTMENT OF PSYCHOLOGY
RESEARCH OFFICER

Applications are invited for the above position. Preference will be given to a qualified psychologist who has had experience of research in Social Psychology or who has worked in industry. The person appointed will be a member of a research team and will be mainly responsible for conducting research into Labour-Management relations and allied problems in one of the largest industries in Australia. The full co-operation of both Management and Union representatives has already been obtained and the work promises to be of a significant character.

This is a unique opportunity for someone who wishes to obtain further experience and to make a reputation in this field.

The appointment will be for three years. Salary will be within the range of £A1,450 to £A2,100 according to qualifications and experience. Like all research workers in this Department, the appointee will also have some academic teaching duties.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London on March 31, 1959.

THE UNIVERSITY OF MANCHESTER

HALLSWORTH RESEARCH FELLOWSHIPS

Applications are invited for the above Research Fellowships for advanced work in the field of Political Economy and Political Science. The value of the Fellowships will normally be within the range of £900-£1,800 per annum, according to experience and qualifications. Regulations governing the award of the Fellowships may be obtained from the Registrar, The University, Manchester, 13, to whom applications should be sent not later than March 15th, 1959.

CAMBRIDGE UNIVERSITY

HAROLD SAMUEL STUDENTSHIPS

Studentships, value £400 per annum, tenable from October 1, 1959, are offered for research in economic, legal, or social matters relating to the use, tenure or development of land. Applications must reach the Registrary, The Old Schools, Cambridge, not later than March 15, 1959. Further particulars may be obtained from the Secretary, Board of Estate Management, 74 Trumpington Street, Cambridge.

APPOINTMENT REQUIRED

RETIRED but still very much alive; extensive and illuminating experience of politics, international affairs and social, personal and educational problems of industry; objective, analytical and untrammelled mind; ready to offer advice where all or any of the above likely to be profitable and/or to prepare reports and historical studies; wary of public relations but willing advise on its more rarified levels; fees dependent on results but not inconsiderable; everything completely in confidence. Box 1132.

BUSINESS AND PERSONAL

9/- a line.

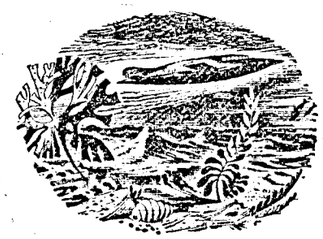
The Company of Adventurers . . .

RITCHIE CALDER, the science writer, describes how atomic freighters could travel under the icebound seas of the Arctic throughout the year

THE OFFICER'S MESS at Fort Churchill on Hudson Bay is a bus-ride from the cinema. But there is no bus. Instead one walks through centrally heated corridors, built-in streets, buried beneath the snow, which link the living quarters with the cinema, the school, the shops and other civic amenities. In the winter the average temperature outside is 20° below zero FAHR.

This is the Frozen North. Yet this Canadian base and port is no further north than Oslo, Stockholm or Leningrad. Beyond it lie The Barrens, the snow deserts of the wandering Eskimos, before it Hudson Bay, which extends as far south as most of England yet is frozen solid for seven months of the year.



ATOMIC AGE MINERALS

Today, on the Bay at Churchill, stand the great grain silos. The port handles over eleven million bushels of grain every year. Across the Bay is Ungava, a region of great mineral resources, including some of the biggest iron deposits in the world. To the north of Churchill is Keewatin, that region where geologists and prospectors are discovering the minerals of the Atomic Age.

Access to new agricultural and mineral wealth of the mid-west and north of Canada depends on Hudson Bay, yet it is ice-locked for the greater part of the year, with deep water channels navigable only from August till early October.

Hudson Bay owed its discovery to the quest for the North West Passage, and its development to King Charles II's "Company of Adventurers". The successful navigation of that Passage by mid-20th century adventurers, may well provide the means of liberating the Bay from its ice-bondage.

U.S. atomic submarines, the Nautilus and the Skate, have navigated under the Arctic ice and opened the passage from west to east and east to west. Similarly, submarine atomic freighters could travel under the ice of Hudson Bay, throughout the year. Atomic heat could keep Churchill and other harbours open, like seals' breathing holes in the ice, for all-the-year handling of freight and so revolutionise not only the port itself, but the economy of half a continent.

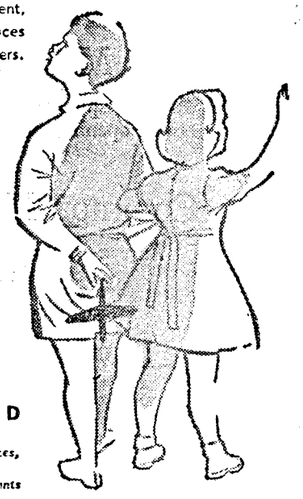
VOLUME CXC · NUMBER 6027

Oh, the little more, and how much it is...

WHAT IS THIS 'PEAK'? To Londoners going to and from their work, it means the half hours in the morning and evening when the Underground is most congested and the buses, entangled in traffic, move slowly along with full loads of passengers.

Custom apparently dictates that everyone who can shall work from 9 to 5.30. So 145,000 people flood into the Central Area of London by Underground between 8.45 and 9.15 a.m.; 155,000 go out in the evening between 5.15 and 5.45 p.m. No less than 89,000 crowd into the stations in a single quarter of an hour between 5.30 and 5.45 – 5,000 of them into Oxford Circus alone. On the buses, 56,000 people are picked up in thirty minutes between 5.45 and 6.15.

If enough employers and their staffs would move their starting and finishing times *by only a quarter of an hour*, all would benefit immeasurably, because travel would be more comfortable. Excessive congestion would disappear from the stations and the trains; the bus queues would dwindle. Can it be done? London Transport believes it can.



Those who have adopted staggered working hours have never regretted it. The Traffic Development Officer, London Transport, 55 Broadway, S.W.1, will be glad to advise anyone who is thinking of moving out of the peaks, for the problem grows more serious every month. Write to him, please.

...the little less, and what worlds away!

Birlec and the barrier

The embryo engineer or scientist, at the threshold of industry, will always find Birlec equipment and experience keeping pace with his expanding vision.

Gas turbine blades, gearing and ducting; airframe structural sections and sheets; undercarriage wheels, tyres and brakes; engine starting and flight control equipment; altitude test chambers and wind tunnels — all these depend, at some vital stage of production or development, on Birlec furnaces or adsorption driers.

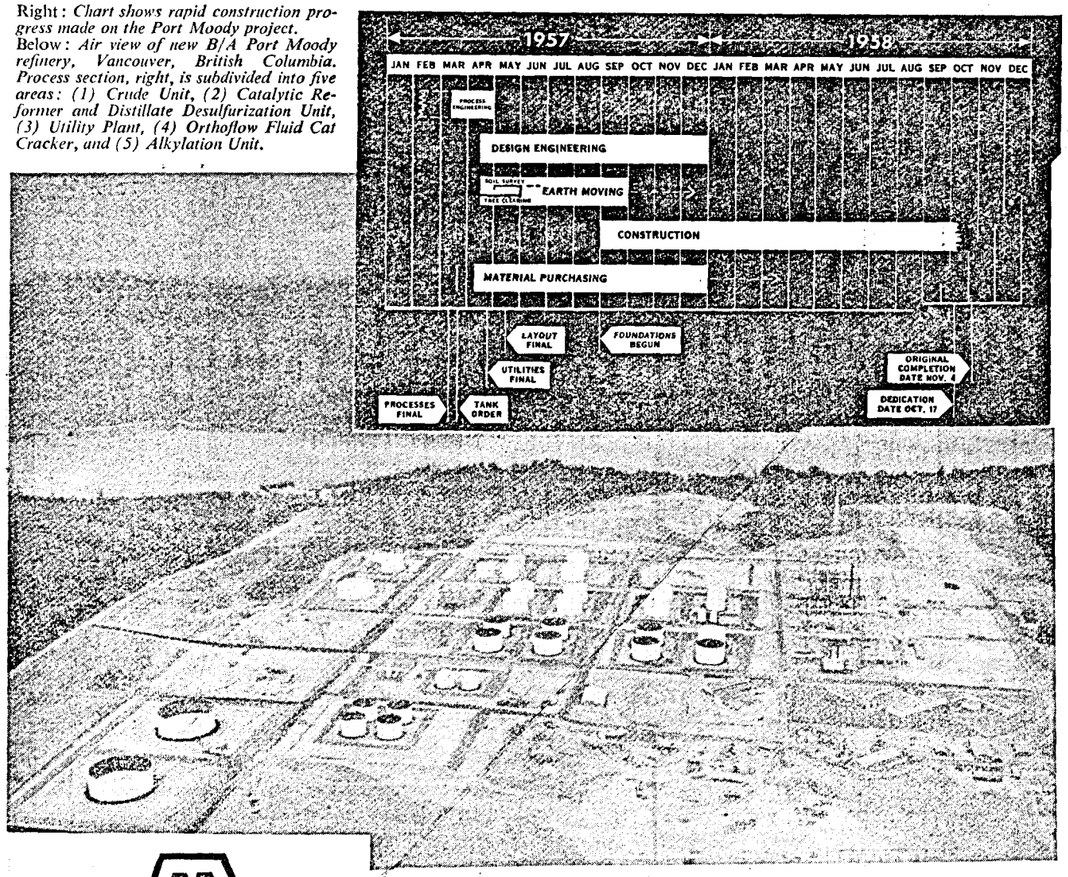
Canada's Newest Refinery



Planned and Built in Record Time

Anticipating rapid changes in the marketing conditions of Western Canada the British American Oil Co. Ltd., decided early in 1957 that a new "grass roots" refinery would be required in the Vancouver area by the winter of 1958. A site was selected for the refinery at Port Moody, a suburb of Vancouver. A little over a year and a half is a short time to plan and execute a refinery project. The accomplishment of this unusual speed record by the Kellogg organization is a testimony to both the Kellogg and the British American organizations.

From the start of the early planning to the completion of construction the co-operative spirit of the Kellogg and B/A engineers pushed the job ahead of schedule. Of course, B/A and Kellogg have worked together in the past. The decision to assign Kellogg this project was based mainly on past performance... this move in itself saved time and money normally spent preparing and analyzing engineering and construction proposals.

The combination of co-operation, sound engineering and efficient construction have made the investment per barrel of capacity at the new B/A refinery at British Columbia relatively very low. The single outstanding factor that contributed to the rapid completion of this project at an economic cost was the mutual respect between client and contractor.

Right: *Chart shows rapid construction progress made on the Port Moody project.*
Below: *Air view of new B/A Port Moody refinery, Vancouver, British Columbia. Process section, right, is subdivided into five areas: (1) Crude Unit, (2) Catalytic Reformer and Distillate Desulfurization Unit, (3) Utility Plant, (4) Orthoflow Fluid Cat Cracker, and (5) Alkylation Unit.*

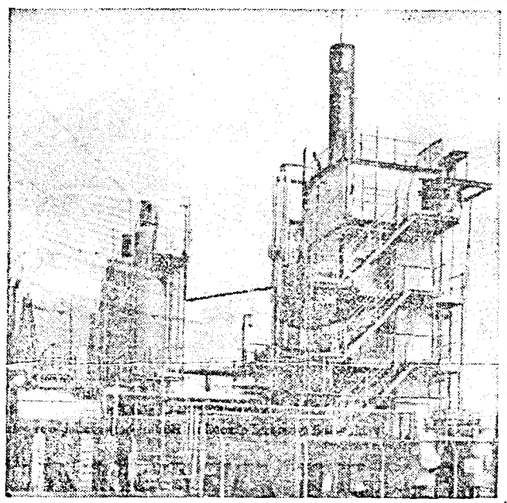
Effortless figuring

With a Monroe 8N-213 you get all the advantages of a fully automatic adding-calculator. Drudgery disappears from routine figure work and even the most complex calculations become merely a matter of feeding figures and pressing easy-to-select keys. Exclusive Monro-Matic features mean that there is less to remember, less to do, less possibility of human error. Here is a machine that cuts costs and saves time in every department where figure work counts.



Monroe Calculators range from simple hand-operated models to the world's most advanced machines. With Monroe you can bank on the best advice on choosing and using your machine and the most efficient and reliable after-sales service.

how the POWER-GAS GROUP serves the chemical industry

This hydrogen plant built by The Power-Gas Group for Laporte Chemicals at Warrington illustrates how The Power-Gas Group undertakes the design and construction of the most advanced plants for the chemical industry.

In other industries, too, The Power-Gas Group makes notable contributions. In nuclear energy, petroleum, iron-making, gas, and oils and fats the Group plays an important part in the planning and building of new plants for many large companies. BP, I.C.I., Distillers, Unilever, The Steel Company of Wales, to name only a few, have all called upon the experience and resources of The Power-Gas Group. From initial conception to the final handing over of a producing unit The Power-Gas Group offers a comprehensive service that industry relies on more and more.

Cyprus

THE Cyprus agreement removes—it is hoped—a problem that had tragically been allowed to grow far beyond its proper size, turning allies into enemies and drawing Britain into a self-defeating policy of repression. How a classical colonial problem was allowed to get off the rails in this way, in the same decade in which British power was withdrawn relatively smoothly from vast areas of Asia and Africa, has been a puzzle. In the later stages Britain had become a helpless object of a train of events in which Greece and Turkey were making the running. Earlier, however, it was a British failure to see the problem of this Mediterranean island in real terms that set the chain of events moving.
