THE MONEY MARKET

THE discount market surprised outside tenderers by cutting its concerted bid for the £210 million of Treasury bills offered last week by a further 4d. to £99 3s. 5d. Its allotment at this price fell from the already low level of 38 per cent to 26 per cent, the lowest for nearly a year. Total applications have been falling in recent weeks, but the offers of new bills have been declining. This week's offer has been cut further to £190 million. The average rate of discount rose from £3 4s. 8.12d. per cent to £3 5s. 7.89d., but the market again obtained its share of the bills on much better terms than outside tenderers; the level of its concerted bid indicates a rate of about £3 6s. 2d.

New Treasury bills changed hands at a rate of $3\frac{7}{8}$ per cent last week, but after the tender the rate rose to $3\frac{1}{4}$ per cent, although it tended to ease this week. Credit remained generally comfortable. Short loans were in ample supply up to Saturday, fresh money becoming readily available at low rates towards the end of each session, and the authorities sold a moderate quantity of short-dated bills to take up a surplus at one point. The market was less comfortably placed this week and the cost of fresh money stayed above 3 per cent to the close on Wednesday.

(1) Retained imports. (2) Owing to changes in classification, 1959 figures are not strictly comparable with those for earlier years. (3) Average for fourth quarter. (4) Average for first quarter. (5) Annual figures include re-exports of second-hand aircraft and exposed cinematograph film.

Enjoying the fruits!

After years of the daily perusal of various financial columns, you may conclude, without much fear of contradiction, that "nothing succeeds like success". It seems logical, therefore, to ally yourself to organizations which have attained such an enviable reputation. Thus you too can enjoy a share of the fruits of success.

This is one very sound reason for insuring with the Legal & General.

But in addition to being one of the oldest and most successful assurance companies in the Commonwealth, it also prides itself on having never lost the personal touch. For anything insurable, from your wife's engagement ring to a pension scheme for the largest of firms, the Legal & General will be glad to help you.

PRESTCOLD DIVISION
PRESSED STEEL COMPANY LIMITED

wishes to appoint a

MARKET RESEARCH OFFICER

The successful applicant will be responsible to the Market Research Executive for economic forecasting in relation to the Domestic Appliance Market both in the United Kingdom and Overseas, and for all aspects of Export Market research. The appointment demands a thorough grasp of export marketing practice and theory.

Applications are invited from male graduates in the age group 25-35 with a good degree in economics plus a sound mathematical (particularly statistical) education, and at least two years' employment in the marketing branch of a company with international interests. A knowledge of at least one European language is desirable.

The successful candidate will be required to work initially in Oxford and transfer at a later date to a new factory in South Wales.

Conditions of employment accord with the best industrial practice.

Applications, in writing, giving full details of qualifications and experience, and stating age and present salary, should be addressed to:

Personnel Manager,
Prestcold Division,
Pressed Steel Company Ltd.,
Cowley,
Oxford

Please quote ref. E/0004.

THE BRITISH COTTON INDUSTRY RESEARCH ASSOCIATION

Applications are invited from graduate holders of good honours degrees, preferably in economics with statistics, for a post in the department concerned with operational research and the interactions of technology and economics. A logical and analytical mind, ability to write clearly and concisely, and an interest in the practical problems of industry are essential and some aptitude for mathematical methods is desirable. The person appointed will particularly interest himself in problems concerning costs, but will also participate in the other work of the department, which is non-routine and very varied. Applications will be considered from anyone who expects to be available before the end of 1959, including those doing National Service. Starting salaries of up to £750 will be paid to newly-qualified graduates, and up to £1,000 to more experienced applicants. A continuing and progressive career is offered, and the post carries superannuation benefits under F.S.S.U.—Apply, in writing, to The Director, The British Cotton Industry Research Association, Shirley Institute, Didsbury, Manchester 20.

CHIEF ACCOUNTANT required for Group of British Companies in Khartoum. Applicants should be aged 24-32, and have passed the finals examinations of a recognised Accounting body. Commencing salary from £S1,428, dependent age, experience, with annual increments plus furnished quarters. Kit allowance. Annual leave after two years, with free air passages. Provident scheme. There is no income tax in the Sudan at present.—Apply, with full details of qualifications, past service, and copy references, to Keymer, Son & Co. Ltd., Imperial House, Kingsway, London, W.C.2.

LONDON TRANSPORT require an Associate or Fellow of the Institute of Actuaries (or equivalent) for interesting and varied work connected with staff statistics, pensions, sick pay, friendly societies and other actuarial matters. Commencing salary would depend upon qualifications and experience but would not be less than £1,020 p.a. (Associate) or £1,150 p.a. (Fellow). Medical examination; contributory superannuation scheme after probation; free travel.—Please apply within seven days to Staff and Welfare Officer (F/EV 733/2), London Transport, 55 Broadway, S.W.1.

ECONOMIC Intelligence Department of Clearing Bank requires woman graduate of not more than 25 years of age. Applicants must be single and commencing annual remuneration would range from £535 to £580 according to experience.—Write Box No. 2512, c/o Charles Barker & Sons Ltd., Gateway House, London, E.C.4.

GILT EDGED DEPARTMENT. Minimum salary of £2,000 and appropriate share of profits offered to experienced technician for established Stock Exchange gilt-edged department.—Box 1164.

COLLEGE OF ARTS
UNIVERSITY OF BAGHDAD
IRAQ

Applications are invited for the following positions:—

(1) Professor of Economics. The applicant should be able to organise the curriculum in economics and to teach Economic Theory and International Economics and to supervise the work in Economic History. Teaching hours: eight per week.

(2) Assistant Professor or Lecturer, to teach Economic Statistics and if necessary some Economic Theory or Economic History.

Applicants should possess at least the degree of M.Sc. or M.A. Preference will be given to those who have taken first or second class Honours in the B.Sc. or B.A. Salary will be within the range of I.D. 120 to I.D. 200 per month (the Dinar is at par with sterling) and will be fixed according to qualifications and experience. F.S.S.U. Superannuation Fund, cost of living allowance. First-class travel for wife and two dependents. Contract for one year with option on both sides of renewal to three years.

Applications should be sent to the President, University of Baghdad.

BRITISH TRANSPORT COMMISSION requires Economist/Statistician. Candidates should have some years' experience as an economist in the business world and understanding of the problems of high level management in a large organisation, ability to write briefly and clearly in non-economic language, and a good knowledge of the structure of the economy and of sources of statistical information. Direct experience in inland transport is desirable, but not essential; good academic or professional qualification required. Starting salary according to qualifications and experience but will not be less than £1,400 per annum. Superannuation scheme. Certain free travel facilities. Medical examination.—Write, giving age and details of education and career, to Director of Establishment, British Transport Commission, 222 Marylebone Road, London, N.W.1, within 14 days. S.A.E. for acknowledgment.

QUALITY CONTROL MANAGER

A well-known American Company in Scotland has an important opening for a Quality Control Manager.

The man we are looking for will:

—be conversant with the most advanced quality control techniques;
—be a University graduate with a degree in statistics or equivalent academic background;
—have had some years' practical experience in a senior post in this field.

This opening has been created by expansion within the Company, and carries a four-figure salary. Prospects are excellent for the successful applicant who possesses the essential qualifications and experience, plus energy, drive, initiative and personality.

Applicants should forward full particulars (education, chronological break-down of career to date, age and salary required) within seven days of the appearance of this advertisement. All replies will be treated in the strictest confidence. —Box 1156.

UNIVERSITY OF ADELAIDE

Applications are invited for the following new appointments in the Faculty of Economics:

SENIOR LECTURER IN ACCOUNTING.
LECTURER IN ACCOUNTING.

An applicant for either of these appointments should have a special interest in management accounting or financial accounting.

LECTURER IN ECONOMICS

SALARY SCALES:

Senior Lecturer: £A2,100 — £A80 — £A2,500 p.a.
Lecturer: £A1,500 — £A80 — £A2,060 p.a.

with provision for superannuation on the F.S.S.U. basis. The initial salary is fixed within the scale in relation to the successful candidates' qualifications and experience.

GENERAL TERMS OF APPOINTMENT and statements about the posts may be had from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1. The University Calendar may be consulted in the Library of any University which is a member of the A.U.B.C., and further information about the University or about any post will gladly be supplied on request to the Registrar.

APPLICATIONS, in duplicate and giving the information specified in the last paragraph of the general terms of appointment, should reach the Registrar, University of Adelaide, Adelaide, South Australia, not later than May 31, 1959.

EXPERIENCED MAN required to organise Mark Survey Department for firm of specialised engine in Group of international repute. This is a Staff appoint ment and only candidates with previous experience will considered.—Write, giving full particulars, to Box 5 6 Aldford Street, London, W.1.

MSL have been retained to advise on the appointment of a

EUROPEAN REPRESENTATIVE (ENGINEERING)

for a British public company manufacturing equipment for the oil and chemical industries. He will report to the Sales Director and, although based in London, he will travel throughout the Common Market countries visiting agents and customers and appraising market trends.

Starting salary not less than £1,750, plus expenses: pension scheme.

Candidates should have an engineering background, some commercial experience of capital goods and, ideally, some knowledge of the oil industry. They should be aged 30-38, speak French or German and welcome the opportunity of extensive travel as the basis of a progressive career with a long-established engineering company.

Please send brief details in confidence, quoting reference S.1594, to R. A. Denerley. In no circumstances will a candidate's identity be disclosed to the company concerned unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED
17, Stratton Street, London, W.1.

CHARTERED ACCOUNTANT

Exceptional opening for man of outstanding personality, experience in industry and drive, with a large group in the light engineering field. The Group has a turnover of the order of £30,000,000 per annum and is organised on a basis of decentralisation. The Group also has manufacturing units overseas as well as in the U.K. There is a good supporting accountancy staff in the individual units of the Group but it lacks the necessary fusion and leadership to ensure that the Group acts as a single body on policy matters.

A successful applicant who proved that he could, in practice, carry this responsible post would find himself well remunerated, with the usual perquisites of high managerial office.

Letters of application, which will be treated in confidence, should contain full details of background, education and experience, and be sent to Box 1157.

HERTFORDSHIRE COUNTY COUNCIL

HATFIELD TECHNICAL COLLEGE

Principal: Dr. W. A. J. Chapman, M.Sc.(Eng.).

Applications are invited for the new post of LECTURER in ACCOUNTANCY in the Department of Commerce Social and Professional Studies, to begin on September 1 1959. Applicants should be qualified in Cost Accountancy and should be able to teach Management Accountancy They should also have considerable experience of industry Salary on the Lecturer Scale, £1,260 to £1,417 per annum point of entry depending on industrial status.

Details from the Registrar, to whom applications should be sent as soon as possible.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for a Lectureship or an Assistant Lectureship in Economics. Salary scale for Lectureship £900 x £50 — £1,350; then, subject to review, £1,425 x £75 — £1,650, plus £60 London Allowance; for Assistant Lectureship £700 x £50 — £850, plus £60 London Allowance; with superannuation benefits and family allowances in both cases. In assessing the starting salary due consideration will be given to age and experience. Candidates are invited to indicate their special interests in the field of Economics.

Applications, with the names of three referees, should be received not later than May 15, 1959, by the Secretary London School of Economics and Political Science, Houghton Street, London, W.C.2, from whom further particulars may be obtained.

SOLICITOR

required in Legal Department at the London Headquarters of a large industrial Corporation. The successful applicant will be engaged principally in common law and commercial work. Appointment superannuable, initial salary between £900 and £1,000, according to qualifications and experience. Good prospects for an able and energetic young man.—Write, giving particulars of age, education, qualifications and experience, to Box 1162 before May 12, 1959.

UNIVERSITY OF DUBLIN
TRINITY COLLEGE

Applications are invited for the post of Junior Lecturer in Economics. Preference will be given to candidates with a special interest in applied economics.

The salary will be in the range £570 to £760 per annum, with participation in a non-contributory superannuation and life assurance scheme.

Further particulars may be obtained from the Registrar, Trinity College, who will accept applications (three copies) until May 30, 1959.

GILT-EDGED. Statistician with experience in Gilt-Edged or young man, actuary or with economics degree, required by leading progressive firm of stockbrokers. Good salary, good prospects, pension scheme.—Box T.2343/2, c/o Foster Turner & Everetts Ltd., 11 Old Jewry, E.C.2.

AN FORAS TALÚNTAIS
(The Agricultural Institute, Dublin, Ireland)

RURAL ECONOMY DIVISION

Applications are invited for the following posts:—

NATIONAL IRANIAN OIL COMPANY

PRE-ANNOUNCEMENT NO. 228/7, MAY 2, 1959

In implementation of Article V of the petroleum Act of July 31, 1957, and by virtue of the powers vested in N.I.O.C. by the said Act, it is hereby announced that:

(1) With a view to carrying out the operations defined in the petroleum Act, District XIV of the petroleum districts of Iran, situated between the meridians of longitude of 49.0'0" and longitude of 54.0'0" east of Greenwich and the orbits of latitude of 34.0'0" and latitude of 42.0'0", shall be declared as "open" with effect from August 1, 1959.

(2) Any person or company desiring to carry out one or more of the authorised operations defined in the petroleum Act within the above mentioned open district may communicate, as from May 2, 1959, up to August 1, 1959, with the Chairman of the Board of Directors of N.I.O.C., Central Office, Tehran, Iran, applying for questionnaire which shall be sent to him/it, to be filled in and returned, in order to enable the N.I.O.C. to ascertain his/its technical and financial competence.

Note: For any person or company who has, in the case of previously opened districts, obtained, completed and returned the said questionnaire, and whose technical and financial competence has already been established, repetition of this procedure is unnecessary, and should only act according to the following sections of the Pre-Announcement.

(3) As soon as the applicant's competence shall have been established, this fact will be notified to him. He may thereafter, and as soon as the declaration referred to above shall have been issued, obtain from the N.I.O.C. (address as given above) against payment of the sum of Rls. 200,000 (two hundred thousand), a copy of the specifications booklet, as well as the specimen agreement forms together with such other supplementary information as may be required, to enable him to submit his written proposals to the N.I.O.C. in accordance with the provisions of the petroleum Act. No proposal received after October 1, 1959, shall be accepted.

(4) Any proposal received shall be examined within two months beginning from October 1, 1959, and the outcome shall be announced by the N.I.O.C. in due course.

(5) The submission of a proposal shall not create any right for the applicant, the N.I.O.C. being free to accept or reject, all or some of the proposals received.

NATIONAL IRANIAN OIL COMPANY.
A. Entezam,
Chairman of the Board of Directors.

FINANCIAL NOTICES

NORANDA MINES LIMITED

DIVIDEND NOTICE

Notice is hereby given that an Interim Dividend of Fifty Cents (50c) per share, Canadian funds, has been declared by the Directors of Noranda Mines, Limited, payable June 15, 1959, to shareholders of record May 15, 1959.

By Order of the Board,
C. H. WINDELER,
Secretary.

Toronto, Ontario,
April 24, 1959.

AVELING-BARFORD LTD.

Notice is hereby given that the Transfer Books of the 5½ per cent Cumulative Preference Stock, the 5 per cent Second Cumulative Preference Stock, the Ordinary Stock and the "A" Ordinary Stock will be closed from Monday, May 4, 1959, to Monday, May 18, 1959, both days inclusive.

By Order of the Board,
K. A. STONHAM,
Secretary.

Invicta Works,
Grantham,
April 27, 1959.

OTTOMAN BANK

(Incorporated in Turkey with Limited Liability)

NOTICE IS HEREBY GIVEN, that in accordance with Article 29 of the Statutes, the ANNUAL GENERAL MEETING of Shareholders will be held on Wednesday, May 27, 1959, at Winchester House, Old Broad Street, London, E.C.2, at 12.30 p.m., to receive a Report from the Committee with the Accounts for the year ending December 31, 1958; to propose a Dividend, and to elect Members of the General Committee.

By the 27th Article of the Statutes the General Meeting is composed of Shareholders possessing at least 30 shares, who to be entitled to form part of the Meeting, must deposit their shares at the chief office of the Company, Istanbul, or at any of the several branches or agencies abroad (in London at 18-22 Abchurch Lane, E.C.4, and in Paris at 7 rue Meyerbeer, Seine) 10 days at least before the day fixed for the Meeting.

J. VASSALL ADAMS,
Secretary to the Committee.

THE CUNARD STEAM-SHIP COMPANY LIMITED

NOTICE IS HEREBY GIVEN that the TRANSFER BOOKS for ORDINARY STOCK and PREFERENCE STOCKS will be closed from May 14th until May 27th, 1959, both dates inclusive.

By Order of the Board,
J. C. TOMLINSON,
Secretary.

Offices: Cunard Building, Liverpool.
April 30, 1959.

ROYAL DUTCH PETROLEUM COMPANY
(N.V. KONINKLIJKE NEDERLANDSCHE PETROLEUM MAATSCHAPPIJ)
established at The Hague

ANNUAL GENERAL MEETING OF SHAREHOLDERS

to be held on WEDNESDAY, MAY 20, 1959, at 11 a.m. at the Company's office at The Hague (entrance 23 Carel van Bylandtlaan).

AGENDA

1. Appointment of a Managing Director.
2. Appointment of a Director.
3. Appointment of a Director owing to retirement by rotation.
4. Annual Report for 1958.
5. Approval of the Balance Sheet and the Profit and Loss Account for 1958 and declaration of dividend for 1958.

This agenda, the nominations relating to items 1, 2 and 3 of the agenda, the documents named under items 4 and 5 of the agenda with the relevant notes in accordance with Article 42 of the Netherlands Commercial Code, and with the proposals submitted by the Board of Directors, together with the proposal regarding the dividend referred to under item 5 of the agenda, will be available for inspection from today until after the Meeting, and may be obtained by shareholders free of charge,

AT THE COMPANY'S OFFICE,

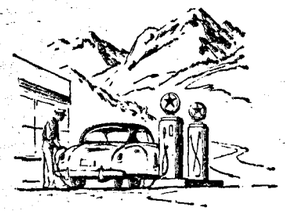
30 Carel van Bylandtlaan, The Hague, and at the offices specified below.

In order to attend and address the Meeting and to exercise voting rights thereat in person or by proxy:

(A) HOLDERS OF SHARE CERTIFICATES TO BEARER will be required to deposit against receipt *either* their share certificates
or evidence that their share certificates have been deposited in open custody with the Nederlandsche Bank
not later than Thursday, May 14, 1959, at one of the places mentioned below, viz.:

In the NETHERLANDS at the Nederlandsche Handel-Maatschappij, N.V., Amsterdam
at the Kas-Associatie N.V., Amsterdam
at the Amsterdamsche Bank N.V., Amsterdam
at the Banque de Paris et des Pays-Bas, Amsterdam
at Messrs. Hope & Co., Amsterdam
at Messrs. Pierson, Heldring & Pierson, Amsterdam
at the Rotterdamsche Bank N.V., Rotterdam
at the Twentsche Bank N.V., Amsterdam
at Messrs. Schill & Capadose, The Hague
at Messrs. Pierson, Heldring & Pierson, The Hague
at Messrs. Van der Hoop, Offers & Zoon, Rotterdam
at Messrs. R. Mees & Zoonen, Rotterdam
and at the branches and sub-branches of these banking houses in the Netherlands.

In addition
NEW YORK at The Chase Manhattan Bank
LONDON at Messrs. N. M. Rothschild & Sons
PARIS at M.M. Lazard Frères & Cie.
ZURICH at the Crédit Suisse
BRUSSELS at the Banque de la Société Générale de Belgique or
at the Crédit Lyonnais S.A.
and



(B) REGISTERED HOLDERS OF REGISTERED SHARES must make known to the Company in writing their desire to attend and address the Meeting and to exercise voting rights thereat by not later than Wednesday, May 13, 1959: (1) with respect to shares of New York registry, at the office of The Chase Manhattan Bank, Corporate Agency Department, 43 Exchange Place, New York 15, New York; (2) with respect to shares of Amsterdam registry at the Nederlandsche Handel-Maatschappij, N.V., Amsterdam; and (3) with respect to all other registered shares, at the office of the Company in The Hague or at any of the offices listed in Paragraph A above.

THE BOARD OF DIRECTORS.

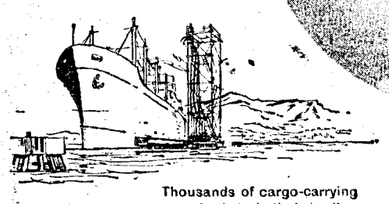
Countless homes and industries use Caltex petroleum products for clean, odor-free heat, power and for efficient lighting.



Motorists find that Caltex service stations offer the finest lubricants and fuels their cars can use.

Caltex fuels and lubricants for the farm have helped increase the effectiveness of mechanization.

Thousands of cargo-carrying vessels that ply their trade across the seven seas rely on extensive Caltex bunkering facilities.

Many rail and other transport systems depend on Caltex lubricants and fuels for swift, efficient motive power.

Serving the peoples of over 70 countries

In the search for oil... In refining... and in marketing a broad array of Caltex petroleum products, the Caltex trademark symbolizes the help and service this company provides the free peoples of many nations in the Eastern Hemisphere.

A major part of this service is the availability to local industry, agriculture and motorists of fuels, oils and lubricants of the finest quality that man has been able to create.

In these and in many other ways Caltex continues to serve nations, economies, individuals.

CALTEX

...in Great Britain, look for the familiar REGENT sign!

WORLD-WIDE EXPERIENCE

Nowhere on earth—and nowhere on the sea or in the air for that matter—can you be far from an S.T.C. installation! It's all in a day's work for S.T.C. to be called upon to establish telecommunication systems on a continental or intercontinental scale. Yet for all this experience in handling vast projects, S.T.C. have an unerring eye for detail too. That's why the smallest S.T.C. component is a masterpiece of manufacture . . . an object lesson in dependability. And remember, all this skill and experience are *yours* to enlist whenever there's a telecommunications problem on the agenda.

Centralized control system for heating and air conditioning plants

This centralized control system by Honeywell can detect, record and correct a mere ½ degree temperature change in a room 20 floors above. It also permits one person from one location to supervise all the components of even the largest air conditioning and heating system. Climate control by automation is one of the many trail-blazing ideas that challenge, stimulate and nourish the engineering mind at Honeywell . . . one of the world's most exciting companies. For help with any control problem, call or write to Honeywell.

RAYMOND INTERNATIONAL

To serve more efficiently the Commonwealth nations and the sterling areas, Raymond International has established a subsidiary with offices at Wingate House, 93/107 Shaftesbury Ave., London, W-1. The new London office is thoroughly equipped to undertake the complete construction of most types of civil works and processing facilities, from field surveys and soil investigations to completion.

For over half a century Raymond has been engaged in world-wide construction, so the name is already well known in many parts of the globe. Now, with the inauguration of Raymond International (U.K.) Ltd., we look forward to providing a wider range of services than ever before. If you are contemplating construction, we should like to discuss your requirements with you. Please write or telephone.

These are a few of the many types of RAYMOND CONSTRUCTION

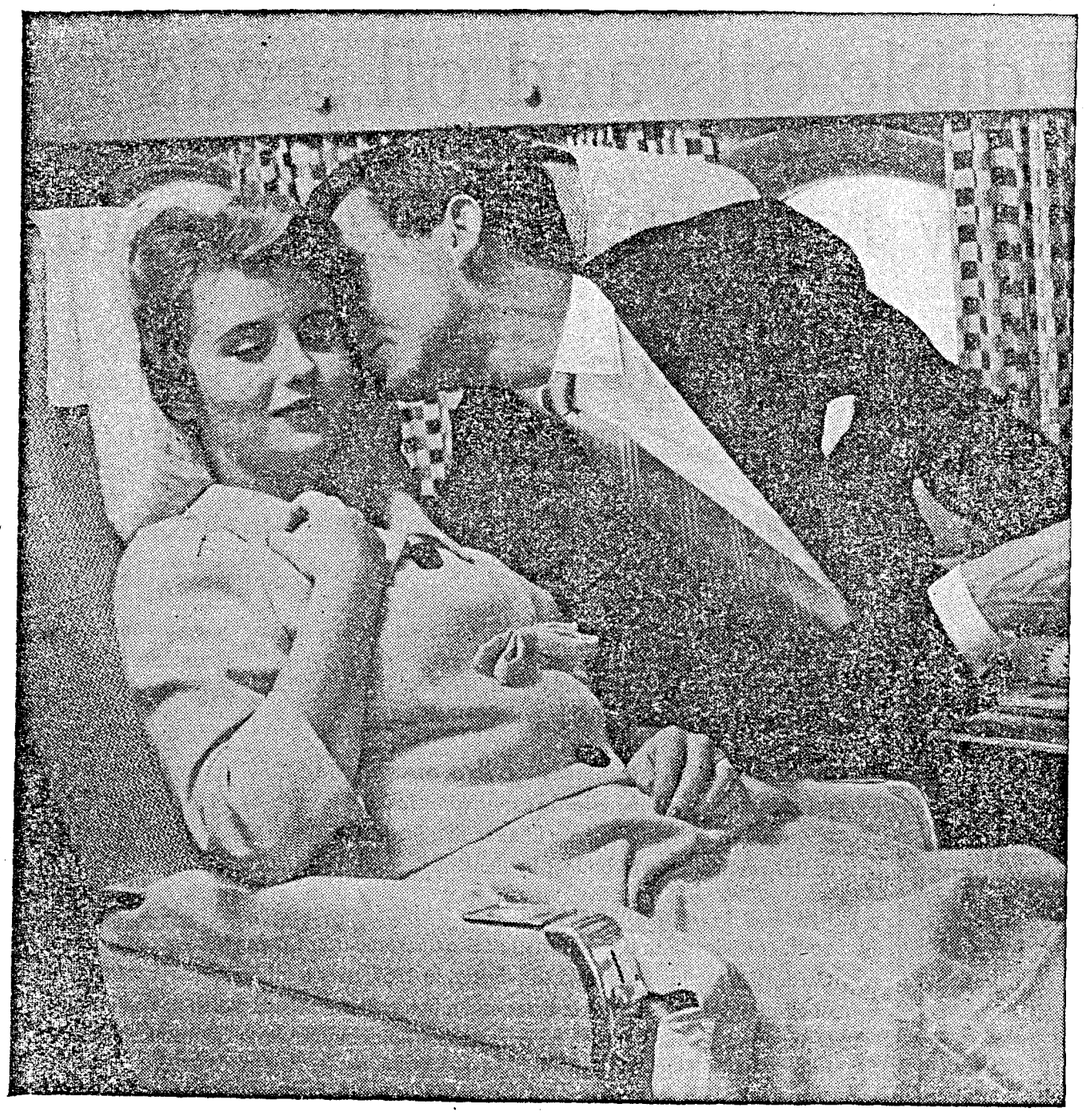
Edible oils and oil seeds now represent 43½% of total Nigerian export trade

NOTABLE ROLE OF BRITISH MARGARINE INDUSTRY IN MAINTAINING COMMONWEALTH PROSPERITY



Nigeria's export trade, and hence Nigeria's future, is significantly geared to her agricultural production of edible oils. In fact, edible palm oil, groundnuts and palm kernels and oils represent, according to the latest figures given by the Office of the Commissioner for Nigeria, 43·5% of her total trade.

A THIRTY-EIGHT MILLION POUND MARKET In 1957 (1958 figures are not yet generally available) Nigeria exported 615,000 tons of these oils and oil seeds to Great Britain, bringing her in a sterling income of some £38,000,000: about 40% of this production was bought by the British margarine industry.

RAISING LIVING STANDARDS This trade has substantially helped the legislatorial bodies of Nigeria in their efforts to raise the standard of living in the country. Great Britain alone exported to Nigeria, in 1957, over a million pounds worth of clothing, shoes, etc.; over three and a half million pounds worth of furniture, fittings and building materials; over five million pounds worth of chemicals (this includes medicinal preparations, cosmetics, paints and insecticides); nine million pounds worth of transport.

NEED FOR TRADE WITHIN THE COMMONWEALTH In the very near future Nigeria is scheduled to assume full self government. In these circumstances it is clearly extremely important to Britain that we can continue to count upon Nigeria, not only as an exporter of most necessary edible products to this country, but also as a settled import prospect for our own industrial output of exportable goods. The British margarine industry is playing a particularly useful role in the maintaining and furthering of this situation.

(All figures quoted are taken either from the Board of Trade, "Trade and Navigation Accounts", the "Nigerian Trade Summary", or have been obtained from the Office of the Commissioner for Nigeria)

It's no secret... well, not a secret *you* can't share ...

their pleasant discovery is the habit of travelling the world in real *comfort*. By BOAC, of course. To get in on the secret, just book yourself a BOAC ticket. The Brandenburg Gate

GENERAL CHUIKOV, then Soviet military governor in Germany, issued the orders to end the Berlin blockade just ten years ago, on May 9, 1949. The four foreign ministers, Mr Acheson, Mr Ernest Bevin, M. Robert Schuman and Mr Vyshinsky, met in Paris a fortnight later and failed to agree on any common political arrangements for all Germany ; it was in that summer that the west and east German states were set up. Both sides in central Europe have used the ten years since then diligently for economic construction and military organisation ; neither has used the time to equal effect in the pursuit of a durable political settlement for central Europe, and as a result it is hard to feel any conviction that the structures of 1949 will still exist ten years from now.

When Mr Herter, Mr Selwyn Lloyd, and M. Couve de Murville meet Mr Gromyko at Geneva on Monday, it will be the West that is insisting, and with truth, on the indissoluble connection between the government of Berlin and the unification of Germany ; while Mr Gromyko, if he follows the established Communist line reiterated from Warsaw only a few days ago by the foreign ministers of the Soviet block, will be insisting that German unity is nothing to do with the conference and "a matter for the Germans themselves." Mr Herter, if he wished, could reply by recalling what Stalin told Mr Bedell Smith during the Berlin blockade, that the Soviet action in closing the land approaches to Berlin had been made necessary by American, British, and French actions in west Germany—the decision to set up a government at Bonn, and the currency reform ; for, as a Soviet note told the western powers in July, 1948,

> the agreement concerning the four-power administration in Berlin is an inseparable component part of the agreement for the four-power administration of Germany as a whole.

However, the western foreign ministers cannot make too free with this history without embarrassment for themselves ; for the Russians could possibly recall in turn how the western ambassadors assured Stalin that the proposed Bonn government was not intended to be a government for all Germany, and its formation need not stand in the way of later agreement with the Russians to set up an all-German government. Circumstances since then have caused the western governments to recognise Bonn as the only government "legitimately entitled to speak for Germany . . . in international affairs." It is this obligation that ties their hands not only in dealing with the German question, but in manœuvring to keep their footing in Berlin as well.

That the western position in Berlin must be maintained is one point, at any rate, on which the three western foreign ministers at Geneva, together with the west German government which will be exercising its veto in the background, can stand totally firm and totally united. To that extent—while it is natural enough for the Russians to have picked on what is for them an exasperating anachronism as a place to probe

—Berlin is about as unpropitious a starting-point as could be chosen for an essay in diplomatic exploration between the two sides in the cold war. The Communists want the West out of Berlin. To create conditions in which the West could go, the future of Germany would have to be settled in a manner which restored a reunited Berlin to its place as capital of all Germany. As a possibility, this is remote. It is no use for the West to put on sackcloth and ashes unnecessarily: the Russians have at no time since 1945 shown any disposition in practice to allow Germany to be reunited. However, it remains true that the continued western occupation of west Berlin—whether " by right of conquest " as the western powers maintain, or, as the Russians maintain, by agreement with them for the purpose of forming an administration for all Germany—has no historical foundation and no future sense unless the unification of Germany is actively sought.

This is the dilemma which the western foreign ministers are taking with them to the four-power meeting. They cannot go to Geneva to talk nonsense; Moscow having demanded a change in the status of Berlin, they have to reply by proposing a change in the status of Germany. But they cannot go back to 1948 and behave as if the west German state did not exist or had not been given a part to play in western defence. Any new status they propose for Germany is unavoidably coloured by these facts, and, just as unavoidably, is unattractive to the Russians, who have their own side of the military balance, and their own political creation in east Germany, to think of. The details of the western " package " that was agreed on in Paris last week have not been disclosed; but the package evidently includes a set of European security guarantees to give the eastern Europeans some insurance against aggressive behaviour on the part of a Germany united on western lines, together with proposals for the inspection and—eventually, perhaps—the restriction of armaments in Central Europe, designed by reducing the military tension to make a political settlement thinkable.

These military proposals seem to have been severely thinned out since Mr Macmillan brought his idea of a zone of limited armaments back from Moscow a couple of months ago. They may not by now amount to enough to attract the Russians, even by themselves. If they are made conditional on Russian acceptance of the plan for German unity, they will look, to the Russians, less attractive still; but that is what is meant by Dr Adenauer's principle of no military concessions without political progress. So long as this principle is accepted by all the western powers, harmony among them (of the kind attained in Paris last week) seems assured—but at the expense, it may be, of any chance of agreement with the Russians.

Is the Geneva conference, then, hopeless from the start? In logic it is not hard to demonstrate that it is; but to do so is to assume what is in the last analysis absurd, that the leading power in each of the great blocks is willing to let its smaller allies dictate the limits within which it can negotiate with the other. Somewhere, at some point, that convention will sooner or later be broken. The chances are that it will not happen at Geneva in the next few weeks; what may happen, however, is that the American and the Russian there may succeed in conveying to each other that a real negotiation between their governments, one in which they would draw the limits of their field of manœuvre for themselves, is not impossible.

This is the precondition for a summit conference. Mr Khrushchev has managed to make his point that there will not be any real new departures in Soviet policy, and therefore any four-power agreement, at anything less. The summit conference would only be worth holding, for either side, if Mr Khrushchev were there prepared to make better proposals than are dictated by the inner politics of the Warsaw Pact and the convenience of keeping Herr Ulbricht in power; and, equally, if the United States government were prepared, when it came to the point, to decide for itself the crucial question: is the German question more likely to be settled in a period of mounting or declining tension?

Dr Adenauer's view of how to seek a solution of the German question has not always been as rigid, tactically speaking, as he manages to make it look. Nearly always, however, it has contained one consistent ingredient: the belief that the state of armed tension in Europe exists for a purpose, to keep life uncomfortable for the Russian rulers until they agree to a German settlement on lines acceptable to Bonn. The belief has some incidental disadvantages that are quite important; it is not only in Russia that life is made uncomfortable, but in most of central Europe. It is also historically wrong; the tension in Europe was not created against the Soviet Union for a purpose; it was created by the Soviet Union, whose actions eleven years ago forced the West to organise and arm itself.

The West has neither sought the tension nor given cause for it. But, having once established a state of armed and organised watchfulness, it has been cautious of risking its own cohesion by exploring beneath the surface changes of Russian political life to see whether, and where, a start can be made in bringing the tension to an end. Any such exploration by any alliance reveals conflicts of interest among its members, though these are not always as fundamental or as fatal as they look. After all that has happened since 1945, it is reasonable that the Russians should be asked for proof of their readiness to call a halt to the outward pressure which they take for granted as their Marxist birthright.

Mr Eisenhower's insistence on this requirement is no mere evasion. Behind it, however, there should be, and probably is, a perception that it is not necessary to make any and every amelioration in central Europe conditional on the settlement of its most intractable problem. Germany will be united after, not before, the two great powers have somehow derived some degree of reassurance about each other's intentions. This is a hard enough and long enough task to keep a string of conferences busy.

Facing Mount Kenya

The political development of East Africa has reached a moment of choice

SUDDENLY there is a mood of optimism about Kenya, prickliest of East African problems. Two weeks ago, the Colonial Secretary announced he would convene a round table conference on the colony's political development, and promised to produce the outside constitutional expert for whom the Africans have been clamouring. Last week, he heard the views of the delegation of African and Asian elected members of the legislature (their alliance includes one European, too); and they departed notably cheerful. This week, Mr Michael Blundell has arrived, in the role of a national leader, and has claimed that the proposals of the New Kenya Group which he has formed from moderates of all races can lead to Kenya's self-government; he comes fresh from his campaign in the settler districts, where the diehards who had gathered to decry him were shouted down on their own sacred farmland by other white men. The governor, Sir Evelyn Baring, is talking of an understanding between men of goodwill of all communities, and everyone is bowing in the direction of everybody else.

This is a very good thing, so far as it goes; a round of courtesies is an essential loosening-up process before any arduous diplomatic bargaining. It is particularly satisfactory that both Mr Oginga Odinga's delegation and Mr Blundell's group are declaring that Kenya's solution must be non-racial; that the Africans say Mr Lennox-Boyd has gone a long way to meet them; and that Mr Mboya and his colleagues have accordingly abandoned their boycott of the legislature. But it has to be faced that all this is only a beginning.

The Africans have not retreated one inch from the claims they staked out a year and more ago; if anything they have extended them. These claims, if conceded in full, would give Africans a majority in the legislature after the 1960 elections, a half-share in a ministry which they wish to be responsible to the chamber, and would fully recognise Kenya's destiny as an African state. The demand for a rapid evolution towards self-government and independence would inevitably follow.

Mr Blundell's non-racial approach is very different; it envisages Africans becoming gradually predominant during a period of unspecified length in which Britain, by retaining control, will provide the minority races with a security that would reconcile them to entrusting power to responsible Africans. The issue will be joined at this point. Nobody in Kenya now believes in "entrenched constitutional safeguards for minorities." Everybody remembers what Dr Nkrumah did to such things. The African leaders are praising the realism of the Indian settlers in Uganda who, after a boycott of their shops, have decided not to ask for these paper entries in a constitution (though they were promised them when the Colonial Secretary declared that Uganda would be a " predominantly African " country).

That being so, the question turns on how long Britain is to retain control, and how control is to be retained. Control implies that, if necessary, the constitution could be suspended, as was done in British Guiana. Under certain political conditions, usually in isolated or divided or politically unorganised territories, such reserve powers are feasible weapons. But the Africans are now calling for an end to the emergency regulations in Kenya, specifically in order to free themselves to organise Kenya-wide political parties. The chances are that this would mean a single monolithic nationalist movement crying for " freedom " and built up by African political methods, in which a degree of intimidation is a normal ingredient. At such a stage in Kenya affairs, and in the context of Africa as a whole, who can doubt that once such a disciplined movement was in existence, British control would in practice evaporate? A point would be reached in a very few years at which—whatever happened—it could not be reasserted.

THIS is the issue that ought to be faced now—before the round table conference meets. The critical decision has to be made. You can give the Africans freedom to organise; or you can organise safeguards. You cannot for long do both. If safeguards are to amount to no more than African goodwill, the minorities should know soon—because then they can decide to get on with Mr Mboya and his like (as many of them think they could) or get out. If there are to be safeguards, then the Africans have to be told bluntly that for a specified or an indefinite period they will not be given the keys of " the political kingdom "—which means, whatever the interim constitution, that there will be supervision of their political activities, and that an apparatus to use security forces in an extremity will be maintained.

Which choice should be made—to rely on African goodwill, or to try to impose restrictions? The choice cannot sensibly be discussed in isolation from Britain's wider intentions in British East Africa. A glance at the surrounding territories shows that British wishes are no longer the real arbiters of the local timetable. Internal (as well as external) forces are plainly setting the pace; and that pace is towards independence. In Somaliland a forced march to self-government has been imposed by the forthcoming independence of Somalia. In Tanganyika, the administration retains control, but the strength of the nationalist movement, TANU,

led by Mr Nyerere, means that the governor has either to guide Tanganyika to self-government by a series of compromises with TANU, or face bloodshed. In Uganda and Zanzibar, internal divisions have so far diverted local pressure from accelerating the pace to self-government; but it would be foolish to count on the pig-headedness of the Baganda or of the Arab minority in Zanzibar to provide an indefinite breathing-space to incubate a non-racial solution for Kenya. Mr Mboya used to talk of a ten-year period for transfer of power to an "undiluted self-governing parliamentary democracy." He will have to be asked if he still stands by it. Some of his followers are said to be still in no great hurry, but Mr Nyerere's victory, the Congo developments and the Accra conference seem likely to have changed Mr Mboya's own time scale.

Is not the logic of these considerations that the transitional period in Kenya, however Mr Blundell's group may see it, is measurably brief? And if it is brief, should not the opportunity be seized at once, without long protraction of the cold war in the colony, to prepare for the inevitable? Nobody should underestimate the international damage done by terrible incidents such as that at the Hola prison camp. It is a point worth making that Britain will in a few years run out of the goodwill engendered yearly by the emancipation of colonies, unless some territories in East Africa are got ready now to follow up the independence of Nigeria in 1960, and perhaps of Sierra Leone soon after. Otherwise a period might ensue in which Britain stood only for holding back African nationalism and aspirations, with perhaps Belgium or France earning the good marks.

Ironically enough, Kenya is the obvious colony to follow on, because it has a reservoir of sufficiently advanced black Kenyans who could act as the majority ministers in a new state, and a corps of sufficiently skilled Kenyans of all pigmentations who could help in running an efficient administration. If an African prime minister could be as colour-blind as Mr Mboya asks white Kenyans to be, he could run Kenya tomorrow as well as—perhaps rather better than—Dr Nkrumah runs Ghana today. The one condition is racial harmony. Of the four conditions set by the Colonial Secretary, it is the only vital one; and it is also the only vital condition in the New Kenya Group's policy. But if what is regarded as a sufficient degree of racial harmony cannot be reached at the coming conference, is there much hope that it could be reached later, within any period that fits any realistic assessment of African developments? Logic now seems to point to a leap in the dark, to the taking of risks that a few years ago were unthinkable. This is what a wise ascent of Mount Kenya will involve.

The One-Eyed Men

A week which has seen the start of the offensive against compulsory Latin at Oxford, and at Cambridge, as well as Sir Charles Snow's Rede lecture, the appointment of an ex-professor of Greek to be senior tutor of Churchill College, can be important for British education.

THE devil was sick, the devil a saint would be. Most of the pleas for what Sir Charles Snow in his Rede lecture at Cambridge on Thursday called "rethinking our education" are based upon the bluntest expediency. We must have more scientists and engineers and more people who understand what science is about in order to keep up with the Russians, to fortify our own precarious island affluence, and to help in lifting the indigence of most other countries, for our sake as well as theirs. We must look to our wits to survive.

This is the argument from necessity. It is a powerful argument. But it is not by itself "rethinking." It simply states the case for more of one sort of education and less of another. The crux of the matter, and of Sir Charles Snow's lecture, is different: it is that our education, and our culture, are split; the two nations in our society now, as Sir Charles sees them, are not the rich and the poor but the scientists and the rest, with a gulf of incomprehension between them. He calls them "the two cultures." But this is surely mistaken: as he says, each of the two groups is incomplete, intellectually and practically, without the other. A better description might be "the two illiteracies": those among the scientists who (though they cannot be as insulated from the ordinary man's world as the ordinary man is from science) can read only their own textbooks; and those many others who know nothing at all, and care no more, about science. At the most, because this is a time of unimagined scientific, technological and industrial change, the scientist can claim to be the one-eyed man in the country of the blind.

Are the rest so blind? Sir Charles's "two cultures" are the scientists and, arbitrarily, the "literary intellectuals." He makes too little of the men in between, the middle men. He admits their existence: the "non-scientists of strong down-to-earth interests," he calls them. They may even share the "scientific feeling." But they are outside his pale; they do not really understand. Yet, as things are, these are the men in business, in industry and in administration who, with the scientists and the engineers, get things done. "The industrial society of electronics, atomic energy, automation," Sir Charles rightly says, "is in cardinal respects different in kind from any that has gone before, and will change the world much more." The scientists and the engineers make it possible; even when they are not scientists or engineers themselves, it is the managers who make it work; they may be one-eyed, too, but they are certainly not blind. Beyond a point, as Professor Blackett once put it, all problems of scientific development are problems of investment—and, it may be added, of industrial and social organisation as well.

None of these riders of course, reduces the force of Sir Charles's plea for a new look at the shape and content of our education. We must try to educate our masters-to-be, managers and scientists alike, so that our society is no longer split between the two illiteracies. But, basically, the trouble about British education is still that we educate too few of our young people for too short a time. As a consequence, we pen the better ones too soon into corrals of specialised and exclusive study; communications are broken down far too early. The case for more science at a much earlier age is even stronger than the case for more scientists; the strongest case is for learning more widely for a longer time, before the best ones follow their bent. The remedy in fact, and the reply to those who protest that the curriculum is already too overcrowded, is more education for everybody. It is not just a question of the élite. The worst split in our education is between the one-eyed élite and the uneducated others—which is as crippling socially as it is hurtful culturally and economically.

WHAT significance in all this has the recommendation by Congregation at Oxford on Tuesday that Latin shall be optional instead of compulsory for entry to the university? By itself, perhaps, very little. If it means, as the movers of an unsuccessful amendment appeared to want it to mean, that scientists and mathematicians, but not others, should be able to contract out of the classics for good it would simply make the present fences higher. There is no virtue in not doing Latin. The real issue is whether there is any virtue in Latin, or indeed any other single subject, being compulsory for everybody; the test of any change is whether it will widen the schoolboy's range (as it should) or narrow it (as it should not). So far, it would seem, Oxford does not know precisely what it is now doing.

That indeed is the question which Sir Charles Snow has brusquely posed. Does Britain know where it is going in education—upon which everything else in its future depends? Sir Charles took his hearers on Thursday to the top of a high mountain and showed them the rich expanses that the scientific revolution puts within their grasp. "These two revolutions," he pointed out, "the agricultural and the industrial-scientific, are the only qualitative changes in social living that men have ever known." "It is technically possible," he declared, "to carry out the scientific revolution in India, Africa, South-east Asia, Latin America and the Middle East in fifty years." But is it economically possible? Sir Charles put a passing finger on the problem of capital aid to the poor billions who cannot accumulate their own until they have already risen on the curve of industrialisation. Is it politically possible?

Lord Keynes was as optimistic thirty years ago as Sir Charles Snow is now: the economic problem, the problem of material scarcity, could be solved in a century, given four conditions. The conditions were:

> our power to control populations; our determination to avoid wars and civil dissension; our willingness to entrust to science the direction of those matters which are properly the concern of science; and the rate of accumulation as fixed by the margin between our production and our consumption.

Everything that has happened in technology since the 1930s suggests that this strictly conditional optimism could be right. But, certainly, the challenge will not be met, or the task achieved, by one-eyed men of any sort.

The Shah's Task

Persia's future depends on its ability to concentrate on internal reforms before its enemies can exploit its present weaknesses.

AS he rode up the Mall on Tuesday with the Queen, the Shah of Persia looked far more like any other head of state than did his predecessor, Nasiredin Shah, when he rode into Windsor Castle on a June day in 1873. Nasiredin Shah, according to Queen Victoria's own account, wore a plain tunic covered with jewels, buttoned with large rubies. His sword-belt and epaulettes were entirely of diamonds and emeralds and he wore various other diamond decorations wherever space permitted. In his high black astrakhan hat was set an aigrette of diamonds. If any of the jewel-encrusted ornaments of Nasiredin Shah have survived the turmoil of the past eighty-six years they probably repose, in company with other of their kind, in the vaults of the National Bank in Teheran where they form part of the backing for the paper currency.

More has changed in Persia during the past century than the costume of its ruling monarch. The Qajar dynasty, to which Nasiredin belonged, crumbled and fell in 1923. When the present dynasty was founded by the Shah's father, Reza Shah, in 1925, the treasury was empty and the outlook gloomy; but Reza Shah set out to make Persia a modern nation in a few years. He did not succeed, and he made enemies for Persia and for himself; but for as long as Persia survives as a nation it will owe him a debt of gratitude. Statues of Reza Shah confront Persians whenever they move about any of the larger towns of the country. His most

enduring monument, however, is a lack of religious fanaticism and a freedom from the bonds of outmoded tradition that one finds, admittedly in varying degrees, throughout the country. His most practical monument is the railway from Khoramshahr, at the junction of the Shatt el-Arab and Karun rivers, to Teheran.

Before the present Shah left Teheran for London, he told members of the senate and the lower house that he was going away to work for Persia's interests abroad. He said, more hopefully than factually, that the old foreign interference in Persia had ceased to exist. But, more important than his other statements, he said that the foreign interference had arisen mostly from Persian weakness, feebleness and instability. It is refreshing for a monarch as nearly all-powerful as the Shah to admit that he and his people had ever been in the wrong at all.

Since he returned to Teheran from his brief exile in Rome in 1953, the Shah has achieved a measure of control over his country that he never enjoyed before. He has not seen fit to venture into the dangerous waters of democratic experiment. His hand-picked parliament is quick to do his bidding, his palace-created opposition has never dared to be other than abjectly loyal. On the surface the present arrangement is working reasonably well, but it does not provide an atmosphere encouraging to the growth and development of new talent in government. The old guard, representing a few hundred land-owning families, are depending on the Shah to maintain them in their positions, none of which, naturally, they want to surrender. The peasants also depend on the Shah to protect them ; but the protection they seek is from the very landlords who form the limited base on which his support rests.

Somewhere between the landlords and the peasants there is an increasing number of Persians who constitute the makings of an educated middle-class. It is among these that the Shah will find much of the disaffection for his kind of rule. It is these young men, many of whom have been educated abroad, who are potentially among Persia's most valuable assets today. What is happening to them ? They finish their education and then set out to be useful and to make a decent living. They soon find that opportunities are limited. Though they are impatient of the old ways, they probably end up with an appointment in some government department, where they sit idly behind a desk among others of their kind, slightly older than they are and considerably more disenchanted with life in their own country. They may hope to get something done, to make changes, but they are soon caught up in the tentacles of bureaucracy. To them Persia seems incurably backward.

For a while the Plan Organisation was an oasis in this desert. Protected by a dynamic managing director who kept them outside the circle of squabbling government departments, the engineers and economists were remarkably free to plan the future of the country's development. But even the Plan Organisation was not perfect. As all government projects, national and municipal, had to pass through it, it threatened to become a bottleneck. The director overlooked practical politics to concentrate on economic planning. The rest of the government took fright at the threat of an *imperium in imperio*. Now the demoralised organisation is left dangling between the prime minister's office and the government departments which hope to bite off bits of it until it no longer exists.

The Shah has more than enough internal problems without having to spend so much time as he has to on his foreign relations. He has, somehow, to find a way to broaden the basis of his support. This will not be easy for him when it can only be accomplished at the expense of those on whom he has leant so heavily in the past.

EXCEPT for a few colourful early embassies to the Safavid rulers, Persia was, until early in the nineteenth century, better known in the West as an historical fact than as an actual place full of living people. For centuries, western knowledge of Persia came through classical Greek and Hebrew sources: the Persians were the people who fought the Greeks and enslaved the Jews. Even now it is difficult for some westerners to approach Persia except under the influence of the *Arabian Nights* or of the barber of Isfahan, who emerged from the pages of James Morier's *Hajji Baba* over a century ago.

The geographical position of Persia, between Russia and British India, first pulled it, in 1807, into the maelstrom of European politics, from which it has never since escaped. Russian imperialism is nothing new to the Persians. Tsarist Russia annexed Georgia in 1801 and in 1828 took Erivan, Nakhichevan and a privileged position in Persia. Until the rise of communism the problem arose from the Russian dream of a warm-water port on the Persian Gulf, and from Britain's need to control the gulf for the security of India. Nowadays the causes of conflict have changed ; the problem, however, remains, though not, as is often claimed, simply with Washington substituted for London and Moscow for St Petersburg. The United States has no territorial interests in or around Persia ; its strategic interest is simply that Persia shall not be overrun by Russia and shall learn to stand on its own feet.

Since the war ended in 1945, the Russians have resorted first to occupation, and since then to frequent threats. It is not accurate to say that the United States has taken the place of Britain ; the prewar British position no longer exists. In Teheran it is possible for a British observer to discover as many anti-American Persians as there were formerly anti-British ones. If, however, the observer is not British but American he will find that the number of anti-British Persians has not diminished. Neither should put too much faith in his findings—the Persians are merely trying to be polite.

Persia will not be saved for the Persians or for the West by any grand gesture made by its western friends. Membership in the Baghdad Pact did not save Iraq for the West. The Eisenhower doctrine, especially tailored to comfort countries in danger from international communism, has saved nothing. Economic aid is useless unless skilfully applied. Military aid is wasteful if it only means keeping up with the neighbours' supplies of arms while the army remains untrained. At the Guildhall on Wednesday the Shah spoke of democracy, the rule of law, the love of freedom, and the resolution of his people to defend their way of life. The Shah has the difficult task of bringing his country up to the point where a majority of his countrymen believe themselves to possess all these good things that are worth defending. His friends in the West can only wish him well.

NOTES OF THE WEEK

LOCAL ELECTIONS

Bogey for Missing the Bus

THE most intriguing question at this year's local council elections is whether they will suggest that Mr Macmillan has missed the bus by not calling a May general election. The first three days of polling this week—in the smaller English and Welsh urban districts and the Scottish boroughs—showed the expected scattered net Labour losses, so far on a scale which is not inconsistent with the supposition that an early general election might have been near to a dead heat. But they do not provide a really adequate sample for analysis. A clearer picture should be available when the results come through of the borough elections in England and Wales, which were taking place on Thursday. It is worth drawing up a bogey scorecard for them.

In the provincial boroughs (i.e. boroughs outside London), one-third of the councillors submit themselves for re-election each year, so that over 3,300 seats are at stake annually. Labour's share of these seats since the war has never fallen below a quarter (even in its worst years of 1947 and 1951) nor risen much above half (even in its best years of 1945 and 1952). In 1955, two weeks before its defeat in the general election, Labour returned 1300 councillors. This figure was increased to 1550 in 1956 (and then to 1600 in each of the last two years). The councillors retiring this year were elected in 1956, at a time when Labour's lead on the Gallup poll was 3½ per cent ; at present the major parties are said by that poll to be running neck and neck. If Labour has avoided any net losses in these provincial borough elections, the inference will therefore be that it would probably have won any early general election. If Labour has suffered about 100 net losses, the chances are that a May election would have given a very evenly divided House of Commons. Above 100 net Labour losses, the pointer would begin to indicate that the Tories should have won a May election, with any figure above 150 making the pointer pretty clear. But only if Labour has suffered nearly 250 net losses in these provincial boroughs would the results indicate a full return to the Conservatives' comfortable majority of 1955.

In the twenty-eight metropolitan (i.e. London) boroughs, all the seats were at stake on Thursday ; these councils are now renewed completely every three years. Labour holds comfortable sway in London ; it has held seventeen of these boroughs at every postwar election, while five have remained solidly Conservative. The contest for control is thus really confined to the six boroughs which changed hands between 1945, when they were all Labour, and 1949, when the Conservatives won them all back. Labour regained St Pancras and Stoke Newington in 1953, and Lewisham in 1956 ; but Wandsworth, Paddington and Holborn remain in Tory hands. It would not necessarily be a significant national pointer if the Tories have recaptured St Pancras this year, because Labour has had some " little local difficulties " there, by the desertion of some of its left wing councillors to the communists. A more traditional guide to which party is best set to win a general election is which party captures Lewisham ; a recapture of this borough on Thursday would be a significant Tory success, especially as there is large scale Liberal intervention there.

UNITED NATIONS

Classified Ad

A COMMON belief persists that the United Nations is forbidden by its charter to deal with German questions. True, the victorious powers of 1945 wrote into the charter a clause—Article 107—which left them free to deal as they pleased with their vanquished enemies. But this in no way implies that the UN cannot be brought in to help operate agreed policies in regard to Germany, or be used as a forum within which those policies could be shaped. In his address to Danish students on May 2nd, Mr Hammarskjöld dwelt on both these possibilities.

The Secretary-General, who will be in Geneva on Monday to welcome the foreign ministers to the Palais des Nations, timed his remarks skilfully to draw general attention. But, as usual, his approach was more oblique than has been conveyed by the despairing attempts of headline-writers to break down his tortuous prose into monosyllables. Mr Hammarskjöld did not, in fact, " urge," " seek," " bid," " plead," or " stake out a claim " for the world organisation to be allotted a task in Berlin, or for the " summit " talks to be held within its framework. He recalled how last summer it was proposed to relate the summit to the Security Council, and discussed what would be involved if that idea was revived, and if the UN were called upon to help with " certain practical tasks in the field." However, to use some monosyllables which he would appreciate, a nod is as

good as a wink to a blind horse. He has in effect announced that the UN is still in the peace business, and advertised the services it could provide.

It is a characteristically cautious advertisement, largely made up of warnings. Mr Hammarskjöld points out—and this is timely, when the Prime Minister is developing his ideas about a long range of summits—that the corps of regular representatives at Turtle Bay is already "a kind of continuous diplomatic conference"; and that any conference held anywhere under even a rather notional UN umbrella implies an acceptance of the principles of the charter. Commenting on current speculation about a possible UN "presence," in Berlin or elsewhere, he expresses the view that even quasi-military functions would scarcely be practicable, and that the organisation cannot take on "administrative tasks which require political decisions." In more positive tones, he then points out that if and when a question is raised at a UN meeting, the governments involved "can only with difficulty avoid entering a reply"; and that, according to one view of secretary-generalship, it may be ("mind you, I've said nothing") his own duty to pronounce an "independent but positive evaluation" of a particular question. There is food for thought here, indigestible as it may look.

ICELAND

Steering for Trouble

The cod war off the Iceland coast has persisted since September without loss of life. It is a mark of restraint, good seamanship and—on the Icelandic side—intentionally poor gunnery. But there has had to be luck, too, and it must be doubted if this luck will hold much longer after the latest rows that seem to have shortened tempers all round. Britain's notes on Wednesday, protesting against the provocative actions of two Icelandic patrol vessels, certainly understate the trawlermen's feelings.

The British fishery industry has respected a four-mile limit off Iceland since 1956, and the "havens," in which the trawlers now fish under naval protection, extend from the twelve-mile to the four-mile line. But it is not always possible for trawler skippers to pick up their position with complete accuracy. There have been a number of disputes, most of them begun in all innocence, but enough to rouse Icelandic suspicions. The foreign affairs committee of the Althing, the Icelandic parliament, protested last month that British warships had used force "repeatedly" within the four-mile limit, and declared that these activities were "obviously intended to force the Icelandic people into submission." An earlier British note which reminded the Icelanders that the Foreign Office does not, in fact, recognise anything but a three-mile limit seems to have played its part in worsening relations.

The British trawler owners have tried to be conciliatory. Their skippers have had strict commands not to cross the four-mile line, and the skipper of the *Lord Montgomery*—redoubtable name—who did so last month was ordered, after much consultation, to accept arrest. The Icelandic court thereupon inflicted heavy penalties, not only for breaking the four-mile limit but for breaking the twelve-mile one as well. Now another trawler, the *Ashanti*, which the navy rescued near the four-mile line last week, has been ordered straight home. The owners seem to have thought twice about running the risk of double fines. Still, it might help in the future if they announced that they were ready to let the Royal Navy—which is on the spot—have the last word on whether one of its charges had crossed the line or not.

The bad feeling is likely to help the communists in the Icelandic elections next month. While no Iceland party could face the electorate without supporting the twelve-mile limit, the government is plainly anxious not to bring the Nato base at Keflavik into jeopardy. A fatal incident, arousing even stronger anti-British sentiment, could give the communists the clinching argument they need.

INDIA AND PAKISTAN

If Taken at the Flood . . .

Asia's great snow-fed rivers flood and then recede each year with troublesome swiftness. Chances of solving the problems that these rivers bring in their wake occur less often, and there is all the more need to catch them at the flood. Next week Mr Black and Mr Iliffe will be in Delhi and Karachi with the World Bank's latest proposals for settling the familiar but perilous dispute over the Punjab waters. The Bank now seems cautiously hopeful about the prospects of progress. The general approach is the same as before: according to the latest reports, it is proposed to build, over a period of years, a vast new system of link canals and reservoirs whose main function will be to bring water from the three westerly rivers across to Pakistani areas hitherto dependent on the other three, whose waters India plans to divert into new irrigation areas. But certain technical studies have yielded unexpectedly heartening results; and the present political conjuncture is about as propitious for a settlement as it is ever likely to be.

True, one cannot visualise India and Pakistan as being suddenly thrown into each other's arms by the shock waves from Tibet. On Monday Mr Nehru tartly rebuffed the suggestions made by President Ayub Khan and other Pakistanis about a joint defence of the sub-continent in the event of an external threat. But the brutal repression in Tibet, and China's campaign of abuse against India and against Mr Nehru, have left their mark—not only in India, but in the United States, where readiness to extend help to India was already growing. That is not unimportant, because the plan may cost nearly a billion dollars and will require large American help.

Finally, there is now a government in Karachi which could really get down to brass tacks on a settlement without fearing, as its predecessors feared, that any sign of reasonableness would be howled down by political rivals. Indians would be foolish if they let their understandable anxiety at having a military regime next door make them miss the opportunity it offers. If the Punjab waters dispute can be settled while Mr Nehru and General Ayub Khan both have the strength to steer a settlement through, it may yield a rich double dividend. As well as securing the economic future of a population far greater than that affected by, say, the Aswan high dam project, it would greatly improve the prospects of co-existence of the two neighbours.

PARLIAMENTARY QUESTION TIME

Counting the Prime Minister Out

Whatever happens to the rest of the recommendations of the Select Committee on the House of Commons's procedure—and now that the evidence is in print it is high time they were debated—one proposal should be adopted without delay. Twice a week the Prime Minister's questions should be reached at 3.15 p.m. instead of, as at present, whenever the Speaker is able to hustle the House on to question number 45. The present system was responsible for Tuesday's fiasco, when Mr Macmillan was prevented by the clock from answering more than one of a series of detailed questions on radioactive fall-out.

The cluster of questions arose from Mr Macmillan's statement last week, at the conclusion of which he prudently asked to be excused from tackling without notice supplementaries that required scientific answers. When the Prime Minister personally undertakes to account to the public for a matter that arouses such deep, natural anxieties—drawing up his answers, as he said on Tuesday, after several hours of briefing by the scientists—it is little short of grotesque that he should have to wait his turn until four minutes before the end of the question hour. It is not only Mr Macmillan's own convenience that is affected by this cavalier treatment, but, much more seriously, the public interest in obtaining coherent and consecutive treatment of such an important subject. It happens only too frequently that the clock frustrates the Prime Minister—or saves him, depending on the topic or the point of view. But it is an important constitutional practice that MPs should have a regular chance at getting a crack at the head of the Government.

No blame whatever can be attached to the Speaker, who was stricter than usual on Tuesday with supplementaries to earlier questions. The House is entitled to its fun with Scottish gin-traps and the replacement of Sir William Harcourt's statue by one of the Earl of Balfour—both subjects that kept Mr Macmillan and strontium 90 waiting in the wings. The rule is to blame. The rule should be changed.

LABOUR AND YOUTH

'No Kicks in Politics

A yawning challenge—"Why should we help Mr Gaitskell?"—is the latest expression of the long disenchantment of radical youth with the elderly Labour party. A forceful letter to *The Times* from Mr Dennis Potter, the retiring chairman of the Oxford University Labour Club (promptly repudiated, in the true tradition of undergraduate politics, by his successor), has started off a new round of self-analysis on the youthful left. It is not disillusionment with political activity about which the angry young socialists are complaining, but the missing of the prior thrill of illusionment, such as their lucky predecessors in the 'thirties enjoyed.

To judge from Mr Potter's letter and similar views expressed elsewhere, there are two causes of the complaint. First, the proletariat, on becoming richer, has proved to be just as greedy for material pleasures and as little concerned with disinterested social motives as the wicked capitalist. (Television is even more unsettling since it mirrors the harsh truth about mass tastes.) Secondly, events are nowadays so complicated, and loyalties so mixed, that it is no longer feasible to react to everything according to simple "emotive feelings of concern or guilt."

The Labour party is expected to do something about this, and is reproached when its glossy pamphlet fails to provide the answers. Both sides to this breach seem to be appallingly fainthearted. Anyone would think, to listen to some of the complaints, that the main purpose of political parties should be to give emotional thrills to the young. The exposure of the naiveté of some beliefs is no good reason for having none or for requiring that someone else supply a fresh set of naivetés on a platter.

On the other hand, instead of offering young socialists a framework within which to develop their own thoughts the Labour party has allowed itself to become unaccountably paralysed by fears of Trotskyite infiltration. Now, in the London area at least, official efforts are being made to breathe life into the party's constituency youth sections; and there is a Youth Committee reporting to the National Executive. But Mr Gaitskell will not get much youthful help unless his party is prepared to take the risk of riding its junior offshoots with as light a rein as the Tories use with the Bow Group or the Liberals with the authors of the "New Orbits" manifesto. Moreover, is it quite past the imagination of the political left to devise some way of harnessing the stunted idealism of the younger generation to some practical end? Could not a voluntary corps of young men and women of conscript age be formed to do service in underdeveloped countries?

APPRENTICESHIPS

Token Help Only?

Last week's announcement in the Commons that the Government will contribute £75,000 towards the cost of recruiting more officers to encourage apprentice training, as long as industry does the same, is a token gesture. It does not in any way conflict with the Government's general policy of non-interference in industrial training. The basis of this policy is that, in Mr Macleod's words, the Government "will not bribe industry to train the men it needs."

At first sight, this sounds sturdily sensible. Unfortunately, it may underestimate the difficulties ahead. The British Employers' Confederation is now very properly urging its members, in view of the coming bulge of school-leavers, to increase their places for apprentices by 20 per cent between 1961 and 1963; but it seems unlikely that this will come to much. Some of the craft unions that use apprenticeships as a means of limiting entry may raise objections; and many small employers and some large ones feel that, in their present form, apprenticeship schemes are just not worth running without substantial government help.

Unhappily, some of these latter reservations are justified. With the present high cost of juvenile labour, inflexible age qualifications and archaic methods of training and day release, it is now sometimes true that only a large firm dealing with a progressive trade union can afford apprenticeships on any scale; central training courses financed, as in France, by industry-wide contributions have found little favour here. The fact that Cardinal Godfrey, in his industrial sermon last Sunday, should have had to appeal that pupils who stay two extra years in a technical school should be allowed to count this as part of their apprenticeship course speaks for itself. The result of this inflexibility is that, in a recession, apprenticeship courses are one of the first things on which many firms economise; between 1957 and 1958, the number of lads entering apprenticeships fell slightly, from just over 95,000 to just over 93,000. Some firms which do run apprenticeship schemes complain that many of their young men, once trained, go off to take jobs with firms which undertake no training at all. As a result

of these difficulties, there is as yet no real sign that, as the bulge passes from the schools to employment, any major formal effort will be made to equip young workers with extra skills.

This may not be quite so tragic for Britain's industrial future as Mr Robens made out in the Commons debate, if only because some industrial skills can still be acquired in a rough and ready way as well as through a formal course. But Britain now has a system in which apprenticeship schemes vary widely—from some which are a restrictive practice, through some which are merely a waste, to some which are first-class educational schemes ; it faces a likely prospect of higher juvenile unemployment as the bulge age groups leave the schools ; and in these latter circumstances it is very probable that political pressure will grow for tax remissions to firms in respect of the number of their apprentices, or for capital grants from the Treasury for the establishment of joint training centres, or for other forms of government aid. It would be a mistake for the Ministry of Labour to get into a posture where it will at first resolutely turn down all these pleas, and then suddenly give way without preparations and in a panic ; what it should be doing instead is to get into a position where, if it does start eventually to pay part of the piper, it can also call part of the tune.

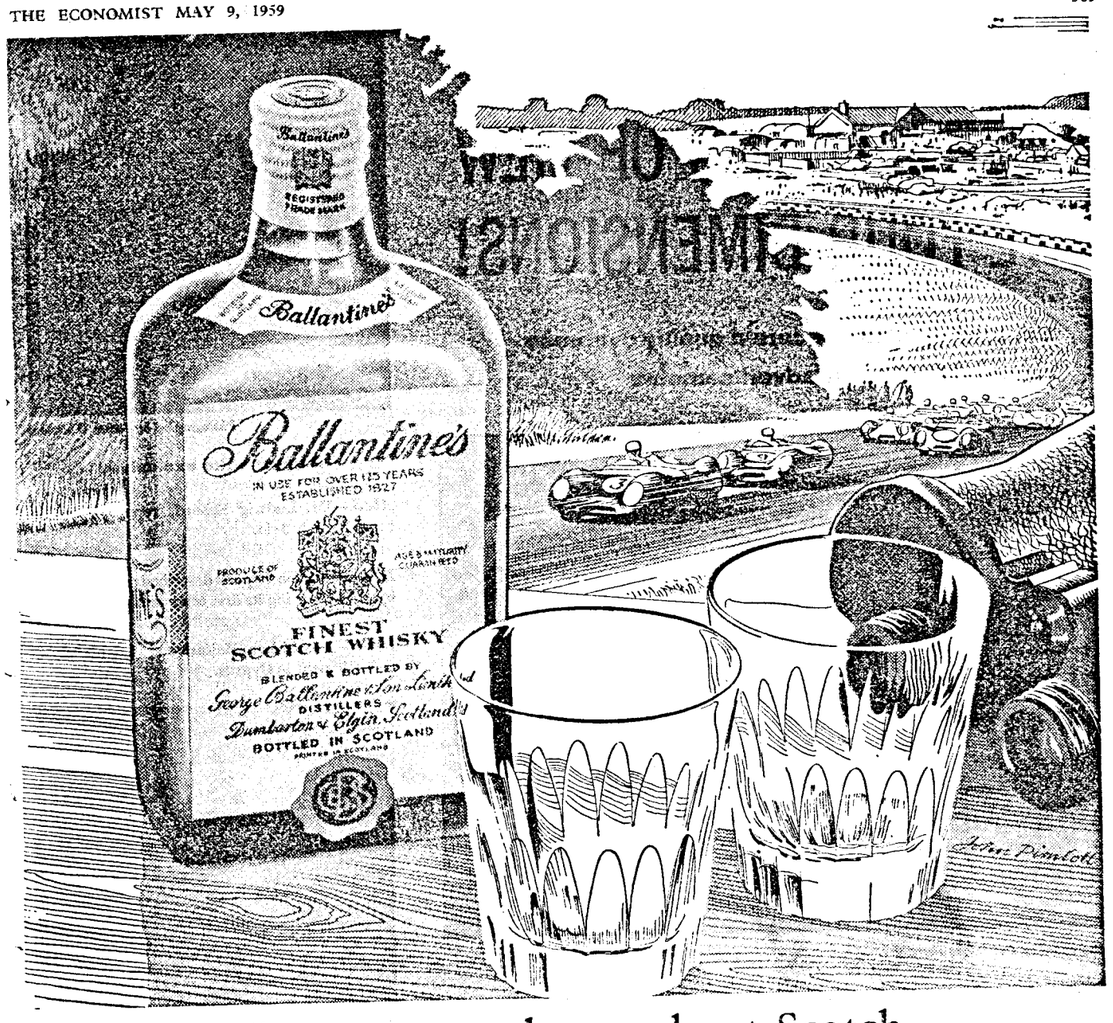
EUROPE

Short of Coppers

TWICE in the past fortnight Mr Maudling has uttered the public warning that if no new proposals for a European economic association came from the Six, countries outside the common market would have to try and expand their trade elsewhere. The prospects of getting new proposals from the Six are as dim as ever. Mr Maudling was evidently preparing the way for possible talks on a "little" free trade area between Britain, Scandinavia, and possibly Austria, Switzerland and Portugal. A Swedish draft scheme has now reached an advanced stage.

The reasoning behind it runs as follows. At the moment only the countries outside the common market have an incentive to get rid of "discrimination" ; the Six have none. Let the outsiders create such an incentive by forming an economic union of their own ; then there will be a willingness on both sides to come to terms. Study has confirmed that a "little" free trade area would have relatively little positive economic value in creating opportunities for higher productivity and a better division of labour ; but it would have considerable value as "retaliation." If the scheme were put into effect quickly, then, for a limited number of years, German exports to Sweden, in particular, might suffer more than British exports to the common market. In the language of the General Agreement on Tariffs and Trade, the little free trade area would divert a considerable quantity of trade, but create relatively little. It is intended as a means of pressure on the Six.

Pressure does have a part to play in diplomacy, especially in showing up the weak spots of the other side and encouraging it to negotiate. But when no acceptable alternative is offered, it merely creates bad feeling. The policy Mr Maudling has been discreetly foreshadowing is a continuation and elaboration of the policy Sir David Eccles voiced in his characteristically straightforward way in Paris last December. Like Sir David's plain words, it might force the Six to make defensive commercial concessions. It will not force them to swallow the free trade area. When a man is trying to make a fourpenny telephone call and has only put twopence in the slot, it is no use banging the box. He may jam the works, so that when he eventually fishes out two more coppers nothing happens at all. He may even cause expensive damage to the machine. One thing he will not do is get through to the number he wants. At best, a "little" free trade area may be irrelevant to the choices Britain has to make in Europe. At worst, it may deepen the division of Europe and make agreement later on impossible.

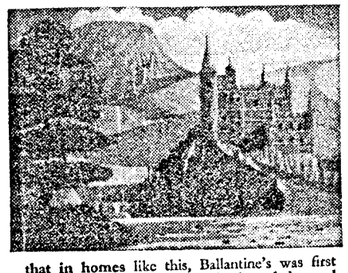


SPAIN

Still Unclubbable

ALTHOUGH General Franco has steadily won his way into the best international circles since the war—including a United Nations seat in 1955—the democratic warmth of a Nato welcome still eludes him. But Spain, it turns out, has two powerful sponsors currently at work. The affair has come to light rather curiously. On April 28th *Agence France Presse* reported that Spanish membership had been privately discussed at western conferences this year, particularly at the Nato meeting in Washington at the beginning of the month. If the question were taken further, the report said, the French government would strongly recommend Spain's admission, as it had already supported Spanish association with OEEC. No sooner was this news confirmed by the Quai d'Orsay than Dr Adenauer, interviewed on Italian television, gave the full story. He welcomed the French declaration, he said, and would be happy to see Spain in Nato. He had discussed the question recently in Paris—presumably at the meeting with General de Gaulle at the Chateau de Marly early in March—and it had been General de Gaulle who had raised it. Marly has been slow to give up its secrets: this is the first to get abroad.

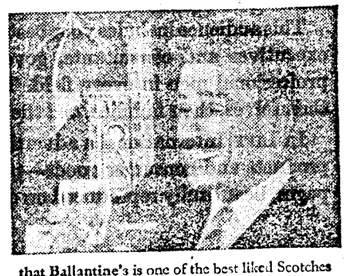
These revelations may mean that a sustained attempt to get Spain into Nato is under way. But they also suggest that Spanish membership has been turned down for the moment, and that General Franco's supporters, while professing their goodwill, are warning him not to risk a formal blackball. It is perfectly plain that a number of Nato members do not consider the general an engaging clubman. (Whether King Juan, or King Juan Carlos, would have a better reception is another matter.) These opponents—who are not confined to the two Scandinavian countries—still find some obvious aspects of Spanish political and religious life repugnant to a reasonable understanding of democratic freedom. It may be unfortunate that the division in Nato on this issue largely reflects the division between Protestants and Catholics. The fact remains that, in a war of ideals, General Franco's presence in Nato would weaken the alliance, not strengthen it. Militarily, the existing United States defence agreement with Spain takes adequate account of Spain's ability to share in the defence of western Europe.



General Franco has shown several signs of wanting to play a larger diplomatic part this year. Speculation on the formation of a Mediterranean community was set off by the visit of the Turkish prime minister, Mr Menderes, to Madrid last month. It would be unfortunate if the rejection of Spain's Nato ambitions were to prompt the worsening of its relations with any of the Nato countries.

The more you know about Scotch,
the more you like Ballantine's

THE SUPERB SCOTCH



Did you know, for example ? . . .

that in homes like this, Ballantine's was first drunk over a century ago. The knowledge and appreciation of really good Scotch has been handed down with the family escutcheon — the same famous names appear in the order books of to-day.

that **sparkling streams** bubbling down the heather-clad hills are used in the making of Ballantine's. Their crystal-clear waters impart their own unique character to the flavour of this fine Scotch.

that Ballantine's is one of the best liked Scotches in the world. In the United States, Sweden, France and many other countries, it is a top seller. The world over, when friends meet together, they naturally prefer the superb Scotch.

IN **LIFE**–POINTS OF VIEW HAVE FOUR DIMENSIONS!

Experts' opinions secure a quality overseas readership for your advertisements

Photographed by Dominique Berretty

LIFE International presents special reports by world-famous experts, expressing length, breadth, depth of experience and a sense of "history in the making." That is why it has a world-wide audience of over 2,500,000 people; an audience of people who appreciate LIFE's unique photo-journalism, its comprehensive examinations of topical events, its infinite variety of editorial material.

This audience includes your best overseas customers—business executives and consultants, government officials and leading professional men in every field. They are readers who buy for themselves, their families, *and* their firms.

In LIFE International's advertising pages they see industrial products and consumer goods—prominently displayed in large pages, beautifully reproduced on quality paper.

To promote *your* business overseas . . .

SOCIAL WORKERS

Only Part of the Picture

THE Mental Health Bill received its third reading in the House of Commons this week, and the Minister of Health is asking all local health authorities to see how their mental health services can be expanded to provide community care for large numbers of people outside the hospitals. Such an expansion will require a big increase in the number of social workers employed in the mental health services. The report of the working party on social workers in the health and welfare services (HMSO 15s.) has therefore appeared at an opportune moment.

Many of the social workers employed by local authorities have received no training other than that provided by years of experience on the job. This is particularly true of the "duly authorised officer," who has statutory duties connected with the removal of the insane to hospital. Other workers have piecemeal training: for instance, those working with the blind may be trained how to teach them braille and suitable crafts—though as most of their clients are elderly, they have little need to put this training into practice. Therefore the most valuable part of the working party's report is concerned with the rationalisation of training. It considers that there should be three grades of social worker: first, the highly trained, with a university degree or diploma, like the psychiatric social worker and the hospital almoner, who would undertake the difficult problems needing skilled casework, and have responsible posts in administration and supervision; secondly, people with a two years' general training in social work, which would be organised by a proposed National Council for Social Work Training, who would make up the bulk of the service; thirdly, welfare assistants, trained on the job, who would undertake the cases needing straightforward help and occasional visiting.

The working party realises that present salaries, which are a hangover from the days when social work was performed by charitable institutions, are far too low to attract enough of the right women and men. But, because of its terms of reference, it was not able to assess the effect of its recommendations on other bodies employing social workers. It is not only the local health and welfare services that badly need these workers. The hospitals need them; the prisons and the societies dealing with the after-care of prisoners need them; the children's departments need them. And they must all come from the same body of people from whom the teaching and nursing professions and the probation service are trying to add to their numbers. The extra recruits estimated by the working party to supply the health and welfare services seem modest enough: about 3,500 in all, spread over ten years. When all the needs are considered, these 3,500 may not be easy to find, even if salaries are made more attractive.

RACE RELATIONS

Notting Hill Blues

IT is good news that the proliferating local organisations of West Indians in London are to get together this Sunday, under the auspices of the West Indian Commissioner's office, with the intention of forming a Standing Conference. It is a facile assumption that after the stiff sentences passed by Mr Justice Salmon on the Notting Hill rioters the problem of integrating coloured immigrants simply evaporated. Reports from most areas are indeed fairly encouraging. But Notting Hill remains a black spot, about which it is as well not to have any illusions.

Of course the faults are not all on one side, and the coloured population is itself divided about some of the issues that cause friction. Some, for example, argue that the coloured night clubs which the LCC is trying to close down are essential if the West Indians are to be allowed to let off their natural high spirits harmlessly. Other West Indians favour banning the clubs, on the grounds that they are an unnecessary provocation of the whites. But, without lending currency to any of the specific allegations that one hears from West Indians (some of which are *sub judice* and others of which would be hard to substantiate), it should be said that there is obviously a strong sense of collective grievance in the Notting Hill area against landlords (mostly white, but a few coloured), some employers and even, unfortunately, some of the police.

What is needed—as Mr Herbert Hill, of the American National Association for the Advancement of Coloured People, who has been visiting Notting Hill unofficially, rightly pointed out—is a strong central protective organisation, with access to adequate legal talent. Individual West Indians brave enough to haul rack-renting landlords before courts and rent tribunals need to be fully briefed on how to conduct themselves, both in bringing forward their complaints and in responding to any intimidation. There is a serious danger that West Indians, who lose in court or who fail to catch the sympathetic ear of the police through ignorance of the necessary steps to back up their charges or of the proper limits of the police force's authority, may conclude mistakenly that the authorities are against them.

The new Standing Conference—which hopes to have a high-powered advisory committee—should provide this sort of leadership. It needs to get into the field quickly before Sir Oswald Mosley's independent candidature in North Kensington and the activities of the White Defence League make matters any worse.

TOWN PLANNING

High, Wide or Handsome?

WELL-ROOTED prejudices often defy statistics, and costly public policies sometimes ignore them. Yet how will the advocates of "building upwards" in the cities manage to get round the figures produced by Mr P. A. Stone of the Building Research Station?* Mr Stone's purpose was to bring together and compare all the costs (land, housing, public services, disturbance and removal costs, etc.) that are involved in different forms of urban development. His figures show conclusively that the cost of building upwards in blocks of flats outweighs the savings to be won from concentrating people in a smaller or more central area. It is cheaper to build a new town, complete with new services and after making allowance for removal costs, than it is to develop a central area with flats of five storeys or upwards. It is still cheaper to expand an existing town where some services already exist. To put the comparison another way, all the extra services required in new or expanded towns can be fully paid for out of the savings in constructional costs, especially if allowance is

* In a paper (The economics of housing and urban development) read to the Royal Statistical Society.

made for some "improvement value" to the community as a whole from the existence of new assets.

Naturally, in some ways this account is an over-simplification. The choice is not *between* central redevelopment schemes and new or expanded towns. Both things are necessary to tackle the problems of urban congestion. But it has now been demonstrated that it would be definitely cheaper to reduce public housing densities in the big cities and build more new communities beyond them—and there is every reason to believe that this is what the people concerned would themselves prefer. "Building upwards" in the big cities may look impressive (particularly to people who do not live in the tall new utopias), but it is certainly not economical—not even if the most outrageous values are placed on the small quantity of agricultural land which is thereby saved. As a fact, the tall residential projects which are transforming London and other big cities do not indicate a new zest for urban life (or care for green belts), but a lavish use of public subsidy. Local authorities favour such schemes, first because the Government pays most of the extra cost, and secondly because they increase rateable values (and the local authority's share of general Government grants) by keeping people within the city boundaries. But the Government itself, which pays the piper, ought to get the policy changed.

AFRICAN STATES

State of the Union

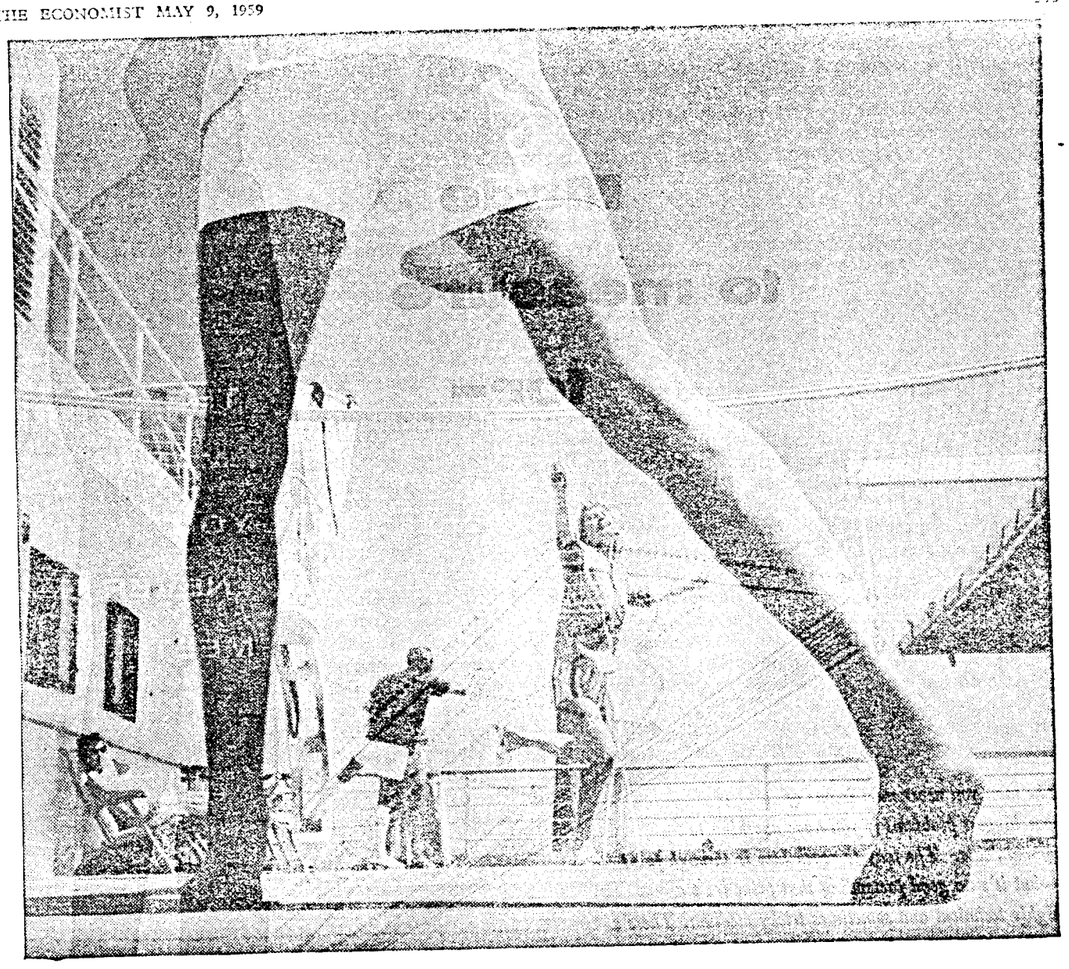
THE communiqué issued after the meeting of Dr Nkrumah and M. Sekou Touré at Conakry amounts to a tacit confession that the proposed union between Ghana and Guinea is not to take place. It is still proposed that there shall be a union, which will become more real as other independent African states join it; but meanwhile all that will actually take place is consultation, and arrangements that there shall be passport-free travel facilities. In real terms, almost as much could be said of Britain and Ireland, whose volume of travel is much greater. Apart from a mysterious suggestion for a "common bank of issue" there is not a word about true federal institutions, which are the mechanics of unions as opposed to alliances.

The truth is that, when they came to re-examine the first exciting idea of a union that should become the core of a United States of West Africa, Ghanaians and Guineans discovered that they still were respectively too English and too French in their ideas, institutions and attitudes to merge outright. The real equipment of their statehood they found to be specialised, not interchangeable; what was interchangeable—a general African understanding—was not the machinery of state imported from different parts of Europe. By all accounts Dr Nkrumah does not like M. Sekou Touré's brand of one-party state, and probably thinks that his switching of so much of Guinea's trade to iron curtain countries is unwise; yet despite making a raft of trade agreements with these countries, M. Sekou Touré sticks obstinately to the franc and refuses all blandishments to come into the sterling area under Dr Nkrumah's (perhaps unexpected) auspices. The common bank of issue will in some way have to issue both francs and Ghanaian pounds, unless Dr Nkrumah hopes to join the common market as a franc country.

Of course the two countries will continue to work together and maintain the unusual relationship of having each other's ambassador to sit in on cabinet meetings. They are, after all, still on their own in West Africa, apart from a firmly non-co-operating Liberia. But in the political reshufflings now being talked about it is not clear that M. Sekou Touré and Dr Nkrumah have identical interests. If they desire to head bigger states (perhaps to face the Nigerian Federation which will be independent in 1960) M. Sekou Touré would surely be better off if he could get hold of either Senegal or Ivory Coast; Dr Nkrumah's more logical next union is with Togoland. Like the situation halfway through the second volume of a Victorian novel, at the moment in West Africa everybody seems set to marry the wrong partner.

The Blockbusters

As luck would have it, the chief opponent of both the Ghana-Guinea coalition and the Mali federation, M. Houphouet-Boigny, is now revolving schemes of his own for a new west African group comprising the Ivory Coast—of which he is prime minister—Dahomey, High Volta and Niger. These ideas did not emerge into the open at the third meeting of the executive council of the French Community at the Elysée Palace on Monday, but they were aired at private talks at M. Houphouet-Boigny's Paris home. A full conference is to be arranged later, possibly with other west African states taking part. M. Houphouet-Boigny has no intention of creating a political block like Mali (now reduced to Senegal and Soudan), but having won two of the original Mali signatories to his side he has plainly had to do something for them. This will be along the lines, already discussed in separate negotiations with High Volta and Niger, of economic and social co-operation.



At the same time, M. Sekou Touré seems to have been trying to improve Guinea's relations with the Mali federation. Although both Senegal and Soudan are still reluctant

The Economist

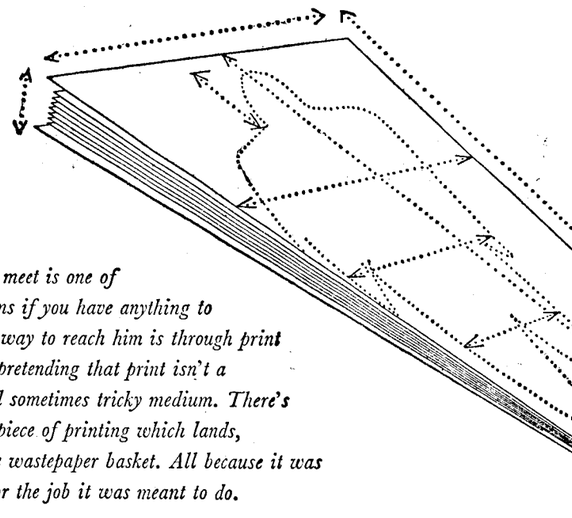
MAY 7, 1859

THE ITALIAN STRUGGLE

Italy has for centuries been the apple of discord as well as the battle-field of Europe. It must be so no longer. *We must absolutely refuse to be a party to any settlement that is not natural and just and self-sustaining,—because any other will be a mere short and hollow armistice.* It is certain that Italy never can be tranquil as long as foreigners govern or attempt to govern any part of it. The rule of Austria, therefore, over Lombardy and Venice must terminate for ever. A mere suzerainty might be suffered to exist, but far better not. Let the Italian provinces of Austria assume a fair proportion of the common debt,—and be henceforth *bonâ fide* and entirely independent. That is the first point. The second is that the other States be left to themselves, to choose their own government, and their own relative position. Any attempt at *forced* amalgamation would be a fatal blunder. Let Lombardy join Sardinia if she will. Let the Duchies unite with Tuscany if it so please them. Let Venice be Republican, Naples Monarchical, Florence Ducal, as each may severally please. All that concerns Europe is that such a Federation of States shall be formed as may enable Italy as a whole in future to maintain her own independence. When Austria is defeated, or when France and Austria are both exhausted, or weary of an equally balanced and ineffective strife, the other European Powers with England at their head may step in and secure these great and righteous aims.

Executive returning from £1m. Conference

He has earned his holiday. He *needs* the relaxation of Union-Castle travel home. No 'Executivitis' for him! In the second week, perhaps, he will open his brief-case and dictate a report or two to one of the ship's stenographers. But just now he is letting the sun coax the tensions out of his joints. And, after those Conference weeks of alternate sandwiches and banquets, he is letting Union-Castle chefs coax blissful sanity back to his digestion. He is *not* looking forward to wearing a stiff collar again. But when he does get his sun-tanned knees in their City trousers under a City desk again, he will romp through his work at a good rate of knots. *Mare*, as the doctors say, *nostrum*.



TO SOUTH AFRICA, TO EAST AFRICA AND ROUND AFRICA

the going's good by UNION-CASTLE

Every Thursday at 4 p.m. from Southampton for Cape Town. By certain sailings there are reductions in First Class return fares. About twice a month from London for the Round Africa trip. Chief Passenger Office, Dept. No. 5, Rotherwick House, 19-21 Old Bond Street, London, W.1. Tel. Hyde Park 8100 or Travel Agents.

Made to measure for—

The man you never meet is one of your biggest problems if you have anything to communicate. The way to reach him is through print —but it's no good pretending that print isn't a highly technical and sometimes tricky medium. There's many an expensive piece of printing which lands, unglanced at, in the wastepaper basket. All because it was wrongly designed for the job it was meant to do.

Getting value for money out of print

There's an entirely new development in the printing industry to help cope with every imaginable problem in the context of print and public relations. Greenaways, the printers, have been joined by a well-known public relations expert, Ian MacPhail. Mr. MacPhail has set up a new department to advise Greenaway clients about their relationship to their potential audience. This department sees to it that all print work done for a particular client reflects that client's personality and is unmistakably his. It advises on when to use print—and when *not* to use it, even if this means a job the less for Greenaways. It considers what form each job should take, and when this has been decided, sees it through the press. This is the most comprehensive service of its kind ever offered, and it is unique among printers.

A hundred-year tradition of fine printing

Daniel Greenaway & Sons Ltd., who have been printers in the City of London for three generations, already offer many specialist services to their clients. These include a day and night service and a dispatch-rider system—both of which contribute to a reputation for remarkable speed and punctuality joined to very high standards of quality. The new Greenaway Advisory Service will have the full backing of the considerable resources of the Greenaway Group.

Write now for descriptive booklet.

Greenaways THE PRINTERS

to cut themselves loose from French financial aid, the younger leaders may be tempted to follow Guinea's example one day. It was decided in Paris this week that Mali would not speak with one voice in the Community ; both partners will be represented. This seems to reduce the federation's prestige still further.

M. Sekou Touré, for his part, has been at pains to remove the impression that he is likely to become a willing communist satellite. In an interview with the *New York Times* last week he insisted that he asked for arms from Washington —although so unofficially that the Americans do not seem to have realised it—before accepting them from Czechoslovakia. The Americans' failure to respond was a disappointment, for which M. Sekou Touré is inclined to blame France's constant efforts to isolate Guinea, both politically and economically. The affairs of west Africa are becoming every bit as complex and devious as those of the Balkans before 1914. This seems to be exactly what some people in Paris want.

UNEMPLOYMENT

Woman's Reserve

IT is no bad thing that the public should be periodically reminded—as it was by a speaker at the recent TUC Women's Conference—that the official unemployment figures, which report the numbers registered as unemployed at labour exchanges, omit a quite considerable fringe of would-be workers who remain unregistered. Most of this fringe consists of married women who have opted against separate insurance, and consequently are not entitled to unemployment benefit. They may indeed register in the hopes of finding work, but if the prospects are notoriously dim they have no financial incentive to do so ; any increase in unemployment is consequently under-reported to the extent of their omission.

This encourages complacency among those who look no further than the official statistics, and calamity-howling among those who have a political interest in magnifying the discrepancy ; but nothing much can be done about it. Married women fit only very untidily into the classification of employment policy. It would be absurd to label as "unemployed" a contented homebody who long ago had a job, was more than half relieved when it folded up, and at most might just conceivably take another if it were urgently pressed upon her at a time of labour famine. But there is an unbroken gradation of psychology and circumstance from her case to the habitual joint breadwinner, to whom the loss of a job is hardly less dislocating than it would be to her husband. A complicating case is the frustrated woman worker, industrial or professional, who has had to accept full-time domesticity because there is no available alternative. (And what is "available"? How near home, demanding what hours, clashing how much or how little with family life, paying how adequately for the cost of child-minding by deputy or nursery ? How choosy can a woman get before ceasing to be properly classed as unemployed and joining, however blamelessly, the ranks of the unemployable ?)

If there is a practical moral to be drawn from these considerations, it is certainly not that the national demand for labour should be kept permanently at or near the famine level, which will draw back into employment every last housewife who has ever held a job. Nor is it that an impracticable refinement of the "take the work to the workers" policy should steer new enterprise specifically into areas where married women's unemployment is supposed to be serious. It is rather that special study should be devoted, and special care given, to identifying and publicising fresh opportunities for employing women in expanding industries, especially in areas such as the Lancashire cotton towns where traditional sources of employment for women are definitely drying up. Higher standards of realism about married women's requirements would, indeed, be the likeliest way of inducing "hidden unemployment" to come into the open, and so of making the official figures more realistic.

VIETNAM

Salvoes from Hanoi

THE temperature of the cold war between north and south Vietnam has noticeably risen in recent weeks. Most of the verbal bombardment has come from Hanoi, the capital of the communist north. In most cases, President Diem's government in Saigon has maintained a dignified but perhaps misguided silence. Hanoi's sustained campaign began last December with a charge that the southern government had massacred 1,000 prisoners in the detention camp of Phu Loi, about twenty miles from Saigon, by deliberately poisoning them ; that several thousand others had fallen ill ; that others who mutinied had been shot ; and that buildings in the camp had been set on fire. In January these allegations were officially addressed to the international commission charged with supervising the armistice arrangements in Vietnam, under the Geneva agreements of 1954. A fortnight later Saigon categorically denied them. In March, visiting British MPs were taken to Phu Loi, and one of them, Mr Harold Davies, said he had found the camp "well up to the Geneva Conventions" and had seen no evidence that buildings had been burned down. Indeed, Hanoi has produced no evidence in support of its charges ; nevertheless, President Diem would have been well advised to invite journalists and diplomats to visit Phu Loi at the time. This is the kind of case where publicity ought to be welcomed.

In the past two or three weeks, further salvoes have been fired. Saigon's controlled press reported that the Czech vessel *Lidice*—recently stopped by the French navy on the ground that it was carrying arms for the Algerian rebels—was really bound for north Vietnam. This Hanoi has denied. Now another northern note has been sent to the international commission, alleging that the south's air force and artillery had wiped out villages in the Ta Lai region, a former communist stronghold in the south.

Hanoi's tactics are clear. The communists are bent on maintaining a state of alert and preventing the final dismantling of the machinery set up at Geneva in 1954. In this lies their only hope, however tenuous, of ever reunifying Vietnam under communist rule.

LETTERS

St Lawrence Seaway

SIR—I think that there has been a tendency to exaggerate the extent to which the opening of the inland ports will affect the eastern seaboard ports. The well-informed *Baltimore Sun* has taken a conservative view on this matter and its estimates bear yours out.

I am informed from Baltimore that the Welland Canal may prove to be a bottleneck and that 50 million tons a year will be found to be about its capacity. The canal traverses the Niagara Peninsula between Lakes Ontario and Erie and intersects the Queen Elizabeth Highway. The highway can hardly be carried over the canal—it is a very important dual-lane motor road. But unless and until this is done ships using the canal will have to stop from time to time to let traffic across. Otherwise communications in that part of Canada will be subject to severe interruptions.—Yours faithfully,

House of Lords WINSTER

International Labour Organisation

SIR—In your issue of April 18 you wrote about the communist employers in the International Labour Organisation. You describe the new system which will allow the communist employers to appeal for instatement as voting members on the conference committees and at the same time give the aggrieved group the possibility of nullifying the votes so given to them. The article then says in regard to the proposals that "there are signs that if the conference approves them (as is very likely) the employers will quietly accept the verdict." These signs cannot have been gathered from employers' circles familiar with the ILO. It may interest you to know that the employers' members of the governing body of the ILO, who are mandated by employers from all over the world—and thus not only the western employers as incorrectly stated—have violently opposed this new system which upsets the tripartite structure of the conference at one group's expense and then expects this same group to redress the balance by denying the communist employers—as well as the other employers—the right which every full member of a committee has to express his vote freely and individually.

This procedure, as was amply said in the governing body, would amount to resorting to dictatorial methods similar to those in use in communist countries.

Whether the conference in June will adopt this new system is, of course, a matter for conjecture, but one thing certain is that it will not be adopted without all the employers of the free world vehemently opposing it as the beginning of the end of the ILO as a tripartite forum enjoying the support of employers and workers alike and where they can freely expound their own views without interference from their governments.—

Yours faithfully, PIERRE WALINE
International Organisation of Employers, Brussels

Gold and Silver

SIR—In the business note on "Gold and Silver" in your issue of March 14th, you say while referring to the line of demarcation between primitive hoarding and sophisticated investment, that "both usually involve speculation about the price of gold, but it is possible to distinguish between French and Indian peasants hedging against the instability of their own currency, and international investors hedging against a rise in the world price of gold." It is, however, equally important to draw a distinction between the French peasant's hoarding of bullion which, apart from being a tax evasion device, is a hedge against the chronic instability of the French currency arising from past experience of prolonged inflation, and the Indian peasant's hoarding which is not really, if at all, a hedge against the instability of the Indian currency, but largely a means of satisfying the traditional preference for gold in the form of ornaments on account of its psychic income being so highly esteemed, besides functioning as a precautionary reserve. In point of fact, the Indian currency has not only not been subject to the periodic bouts of inflation which have characterised many European currencies including the French franc, but has enjoyed a comparatively high degree of stability even with accelerated development expenditures in recent years. Besides, the Indian peasant is better cushioned against the impact of monetary instability relatively to his French counterpart in so far as a part of his real income is derived from the non-monetised sector of the economy. In the past there have been distress sales of hoarded gold by the Indian peasants particularly during the depression years to meet their fixed monetary commitments such as taxes, interest, etc., which could not be met out of current income.

It should also be borne in mind that hoarding in form of gold ornaments in India is not a perfect hedge against inflation because of a peculiarity of the ornaments market in the country, in as much as sale of ornaments by individuals for cash usually involves a capital loss in so far as the seller cannot get value for the cost of the workmanship. Thus the Indian peasants' hoarding of gold is explained by the high psychic income attached to ornaments and the operation of precautionary motives, but its role as a hedge against domestic currency instability is questionable.—Yours faithfully,

A. G. CHANDAVARKER
National Bank of Libya, Benghazi

Restrictive Practices Court

SIR—In the article "Court Report" published in your issue of April 25th, it is stated that Parliament decided to set up a court and a registrar with no discretionary power. If this is the right view of the law, as we believe it is, the question arises whether the registrar has a discretion to refrain from calling for registration in a case where persons affected by an agreement, but not being parties to it, have serious grounds for contending that it ought to be registered.

We have been referred to a case of this type relating to garage agreements in which we are advised that the restrictions may be registrable on the grounds that a marketing company concerned is a "trade association" within the meaning of Section 6(8) of the Restrictive Trade Practices Act, 1956 ("the Act"). We are informed that the Registrar has so far not called for registration of such agreements and so far as we can ascertain he has not made any application to the court in relation to them.

The intention of the Lord Chancellor was made clear in the House of Lords: that traders considering themselves to be the victim of a ring should not be turned away by the Registrar.

It would seem that the duty imposed by Section 9 of the Restrictive Trade Practices Act, 1956, to register an agreement subject to registration impliedly excludes, in a doubtful case or in a case where serious representations have been made, any exercise of discretion by the registrar whether an agreement ought or ought not to be registered. In cases which are plainly outside the scope of the Act the question would not arise. Accordingly, we suggest that where a responsible case is made out that there are registrable restrictions in any given agreement it is the duty of the registrar to call for registration and to leave the matter to be decided by the court under Section 13 of the Act. Alternatively it seems to us that the law should be amended so as to give to all persons affected by agreements containing relevant restrictions even though they are not parties a right to apply to the court for determination whether any particular agreement should or should not be registered.—Yours faithfully,

A. A. BILLS

BOOKS

"That's Funny"

The Life of Sir Alexander Fleming
By André Maurois.
Cape. 293 pages. 25s.

RESEARCH workers are not promising material for biography. Dedicated to the pursuit of knowledge, they spend their lives at the work-bench free, apparently, from the conflicts that a modern biographer, using psychological technique, can dig up and shape into a dramatic story. In the early chapters of this book, Alexander Fleming seems to be no exception, and the reader's interest is sustained by the account of the medical research that was going on rather than by the personality of the highly gifted but socially inept member of the Inoculation Department of St. Mary's Hospital. Dominated by the founder of the department, Almroth Wright—whom Shaw immortalised as Sir Colenso Ridgeon of *The Doctor's Dilemma*—Fleming seemed to be destined for a useful but unspectacular life with a microscope.

Yet he never allowed himself to be intellectually dominated. To Wright he owed the immense stimulus given to the study of bacteria and the inspiration and sense of devotion that enabled him and his fellow-workers to work into the small hours counting microbes. It was Wright also who insisted on his assistants continuing their clinical practice so that they did not lose themselves in ivory towers. But whereas Wright believed that any problem could be solved by the intellectual process, Fleming refused to accept a preconceived theory until it had been tested by observation. In his belief in the sacredness of observation he was in the true succession from William Harvey.

With the contrast between Wright and Fleming, M. Maurois begins to rouse the reader's interest in Fleming as a man, and from then on it does not flag, except perhaps towards the end when the shy research worker had been made into an international figure and the account of the series of public occasions for honouring him becomes somewhat repetitive. Even here, however, the wide acclaim given to Fleming in America and in Europe—and later in India—makes the reader speculate why the same general recognition was not accorded to him in England. He received a knighthood, and on his death he was buried in St. Paul's; but did any English university honour him with a doctorate? M. Maurois does not mention one, and one cannot help wondering whether the vast international publicity pressed on Fleming did not create distrust among those members of his profession, which has such a rooted dislike of publicity, who did not realise his essential modesty.

Was Fleming's international fame justified? Undoubtedly the most dramatic chapters of this book are those describing the discovery and development of penicillin. The early chapters are now seen in perspective, for they enable one to appreciate how peculiarly well fitted Fleming was, by nature and training, to seize the chance that floated in through his laboratory window from Praed Street. There was a time when Fleming's part in the discovery of penicillin tended to be played down. He was, it was said, merely lucky; all he did was to observe the effect of the mould on his colony of staphylococci, note it down and leave it at that. But how many research workers would, in fact, have made that historic observation? M. Maurois quotes, as Fleming himself was fond of quoting, Pasteur's dictum that fortune favours the prepared mind. And in any case Fleming was not content just to say "That's funny,"—a remark that must now rank as one of the world's greatest understatements. He followed up his observation by others; he wrote and spoke about it; he initiated attempts to extract, concentrate and purify penicillin. But a paper he read to the Medical Research Club in 1929 was received in icy silence; he had neither the funds nor the staff to persist with the experiments; Almroth Wright continued to decry chemotherapy in favour of immunisation; and it was not until some ten years after his original observation that the Oxford team under Sir Howard Florey, with Rockefeller funds, began the work that led to the production of penicillin as a therapeutic substance.

M. Maurois makes the story of penicillin, and of Fleming's other contributions to medicine, intelligible to the layman (though, on page 126, "certain microbes survived" should surely be "did not survive"). He has been excellently translated by Mr Gerard Hopkins, and the book remains equally readable whether it is describing the life of a lifesaving drug or of the man who discovered it.

Obsessed and Possessed

Orde Wingate
By Christopher Sykes.
Collins. 575 pages. 35s.

THE history of the British army is rich in eccentric puritans. Often they have leavened the lump of blinkered conformity. But their success as commanders, once they have risen to high rank in a profession that, as Lord Wavell said, does not attract the highest quality of brains, is not remarkable. What is remarkable is that an institution that cherishes the traditions of mediocrity should ever allow them to rise to the top at all and even give them a leg up. Unfitted to the mould of discipline though they may be, they possess two qualities all soldiers admire and envy: physical and moral courage and an implacable will. It may be out of sheer exasperation, not unclouded with resentment and rancour, that the less able and the less strong let them have their own way—knowing that their own unremembered toils made the transient glory possible. Doubtfully, they let Wingate have his own way and now, regretfully, some of them are measuring the consequences.

Once seized of a cause, Wingate set out on his own personal crusade, oblivious of the pain it brought to himself or others. Men and events bent, surprisingly, to his will to serve what to him was a righteous end. To Wingate, though he was by no means above lobbying, both the politics of the possible and the art of compromise were on the face of it detestable. He seemed, as a mystic does, possessed, ruthlessly driving himself and others for the satisfaction of something beyond mere personal ambition. He made many enemies. As Lord Mountbatten once retorted:

> Your astounding telegram has made me realise how you have achieved your amazing success in getting yourself disliked by people who are only too ready to be on your side.

Those in power—Lord Wavell, Lord Mountbatten and Sir Winston Churchill—did greatly further Wingate's career and ambitions, but it was not in his nature to be grateful for their support or to compromise his own plans for the sake of theirs. For a man so intolerant and so intolerable, he was remarkably lucky. It was his luck that the Second World War—and the British Prime Minister—put a premium on venturesome unorthodoxy, and Wingate, not afraid of closing with the enemy, loved the heretical adventure so long as he controlled it.

Yet, for all his brilliance and all his individuality, what did Wingate achieve? Palestine and Ethiopia are not the tests; Wingate's reputation must depend on the Chindit expeditions. These caught the imagination during the war, but now they can be seen to have had little effect on the Japanese plans. Their propaganda value was undeniable, but their real worth in bringing about victory in Burma is questionable. Scepticism, indeed, began in 1943—as the survivors of the first expedition limped back through the barbed wire perimeters at Imphal. Persistently and at length, Mr Sykes makes the case for the defence. It is not, for all his efforts, a convincing one. Were men and resources wasted, the reader still wonders as he sets this biography down, because one man was possessed of a ferocious daemon?

The biography is built up on a mass of assiduously collected detail. None of the facts, however tiny, has been missed. Often the biography recaptures the

moment of vivid intimacy as, for instance, when Wingate tried to commit suicide in Cairo. Vivid in its parts, the biography lacks cohesion in its whole. At the moments when Wingate has to be judged rather than seen, as, say, during the campaigns in Ethiopia and Burma, the reader is left confused; and as the biography progresses an impression of strain and tiredness becomes apparent. It is almost as if the respect and admiration Mr Sykes felt for Wingate at the outset dwindled as he learnt more about the man and what he really did. If Mr Sykes had allowed himself to be more critically detached he would, one feels, have written a still better book. Instead, he writes on the defensive and uses the plea of genius to counter the charge of misguided fanaticism, or even mania. Yet, to be fair to Mr Sykes, could anyone have performed better the task of pinning down so equivocal a personality? It is, after all, a charitable judgment to say that Wingate was obsessed and that, because of his obsessions, others as well as he suffered and died.

Rise and Fall

Men and Machines: *D. Napier and Son, 1808-1958*

By C. H. Wilson and W. J. Reader.
Weidenfeld and Nicolson. 187 pages. 35s.

NAPIER'S history contains many oddities. This small precision engineering concern became a leader of the British motor industry in the early 1900s. It began to make aero engines in the first world war, and gained leadership again with its Lion engine. But in each case the company failed to maintain its position; by 1928 it was reduced to engaging a consultant, F. B. Halford, as designer. After lean years in the 1930s, his designs produced large orders in the second war which the company lacked the mass-production experience to meet: absorption by English Electric was the result.

The authors do not explain these vicissitudes so clearly as they might. They blame the company's failures on the character of Montague Napier, sole shareholder until 1917 and chairman until his death in 1931. His consuming interest was quality engineering; he was averse from mass-production or high-pressure salesmanship. S. F. Edge provided the latter from 1899 to 1912, and he was the force behind Napier's success; but he and Napier quarrelled and separated in 1912. By then Napier's car sales were falling, but the authors do not explain whether this was a failure of Edge's salesmanship or of Napier's engineering. For whatever reason, Rolls Royce proved more successful in the luxury car market.

The decline of Napier as an aero-engine manufacturer can hardly be blamed on Montague Napier's interests, though his absence in Cannes from 1917 onwards owing to illness might help to explain it. This was a failure of technical policy and execution; none of the engines developed to follow the Lion succeeded, though the authors do not attempt to explain why. Napier built experimental engines only to Air Ministry order, and took no risks on private ventures; these circumstances were not conducive to a positive technical policy of its own. It was not that funds were lacking; the most intriguing fact to emerge in this book is that a profit of £167,000 to £201,000 could be made from the sale of some six hundred Lion engines a year, and that a reserve of nearly £1 million in gilt-edged securities had been accumulated by 1927. This may have saved the company from bankruptcy in the 1930s, but it represented an ultimate absurdity in profit retention.

This is a handsome and well illustrated book, but it would be more satisfying if the authors had delved deeper into the subject and had related it more closely to the industrial background.

Politics without Principles

The Road to Brighton Pier

By Leslie Hunter.
Arthur Barker. 224 pages. 16s.

LADY EDEN once said that the Suez Canal seemed to have been running through her drawing room. Mr. Hunter has written this book to show that many of the Labour party's internal struggles between 1951 and 1957 passed through his. During this period he was political correspondent of the *Daily Herald*, a frustrating position that gave him access to scoops his editors would not allow him to print. Being left with a collection of tangy stories in his notebook, Mr Hunter has now found a use for them to add sauce to this racy rewriting of his press cuttings.

Since he was writing a book the author felt himself released from the inhibitions which a lobby correspondent usually feels about revealing his sources.

The result is to add a few footnotes to a story that is already fairly well known—though some that can be quickly checked suggest that the historian would be unwise to take them all at face value—and to offer answers to some marginal questions. Has anyone, for example, been wondering all these years why it was that Mr Kenneth Younger did not become "shadow" Foreign Secretary? Mr Hunter supplies an answer. When Lord Attlee was casting around for a shadow, Mr Hunter reminded him that when Minister of State, Mr Younger had been patronisingly rebuked for immaturity by Ernest Bevin because he had suggested an imaginative response to the Schuman Plan.

There are some rather charming anecdotes—of Lady Attlee, for example, insisting that her husband retire because she was getting too old to go on driving him around the country and insisting also that he go into the Lords because she did not want him around the house all day long. Lord Attlee agreed to give up the leadership provided he could fit in a free trip to Vienna first. But for the most part it is cutlass and dagger all the way. Mr Hunter blames Lord Attlee severely for hanging on to the leadership too long simply in order to do Buggins Morrison out of his turn. He seems to think this was due principally to ancient rancour.

But one would need more reliable evidence before endorsing that verdict. It is not much more likely that Lord Attlee, with the party's future to think about, had good grounds for thinking that Mr Morrison was the wrong man for the job?

Mr Hunter's tale has one rather odd impact. He seems to take it for granted that Mr Bevan's actions were totally unprincipled; yet his version of the trade union bosses' decision to purge the left wing suggests that the Bevanites were far more sinned against than sinning. This, indeed, is a book on politics with all principles left out. According to Mr Hunter's lobby-eye view, issues are either vague sounds off-stage or mere instruments in the struggle for power. The Labour party's National Executive was sensible not to take the book too seriously and unlucky that someone leaked to Mr Hunter's *confrères* the word that the possibility of legal action had even been mentioned.

Crystal Gazing?

Economic Forecasts and Policy

By H. Theil.
North-Holland Publishing Company, Amsterdam. 562 pages. 100s.

PROFESSOR THEIL has been one of the distinguished official economic forecasters in Professor Tinbergen's not-so-small back room of the Central Planning Bureau of the Netherlands. Now in an academic research post, he has emerged from official anonymity to reflect on the achievements, the errors and the future possibilities of systematic economic analysis and prediction as a guide to economic policy.

Dutch law requires that each year "a well-balanced system of predictions . . . concerning the Dutch economy" shall be presented. Since 1947, the Central Planning Bureau has published a slim annual volume on the prospects for the coming year. Unlike the British Economic Surveys, these volumes combine a general review of the economy with very detailed projections for the principal items in the national accounts, based on an econometric model. They include no declarations of Government policy and no exhortations. It is, however, known that the analyses of the Central Planning Bureau have been extremely influential in determining policy, including the centralised bargaining over wage changes.

Dr Theil begins with a comparison of these official predictions for the years 1949 to 1955 with what actually happened. The basic treatment is a measurement of the regression of actual changes from year to year in 23 indices (production, exports, consumption, prices, etc.)

More fresh water for KUWAIT

The first British multi-stage vacuum flash evaporator, designed and built by Richardsons Westgarth, is now being operated by the Kuwait Oil Company and is producing 300,000 gallons of fresh water per day. During commissioning the plant exceeded its guaranteed performance in all respects.

Multi-stage vacuum flash evaporators, which reduce considerably the cost of producing fresh water from the sea, were pioneered in Great Britain by:—

Richardsons, Westgarth & Co. Ltd.

The controlling Company of THE RICHARDSONS WESTGARTH GROUP

RICHARDSONS WESTGARTH ATOMIC LTD.
ASSOCIATED COMPANY: ATOMIC POWER CONSTRUCTIONS LTD.

RICHARDSONS, WESTGARTH & CO. LTD. · WALLSEND · NORTHUMBERLAND and at 58 Victoria Street · London · SW1

on the predicted changes. Unfortunately, Dr Theil draws his main conclusions only from an aggregation of all the results, although he also presents a useful set of tables showing the projections and actual figures for each series. The most striking result is that although the bureau usually got the direction of change right (not too difficult with annual forecasts—nearly all the series were moving upwards during most of the period reviewed), they underestimated the extent of the changes, on an average of all series, by 30 per cent. The proportionate underestimation was greatest when the changes were greatest.

This unwillingness to predict large changes is a familiar forecasting bias in many fields, and there is no evidence that performance improved as time went on. Dr Theil shows a similar consistent error in Scandinavian official forecasts.

But he does not make it clear how far such errors are due to the underestimation of the exogenous variables, such as import prices or government expenditure, which are fed into the model, and how far to the internal imperfections of the model itself. Nor is it possible within his framework to assess forecasting accuracy in any but a statistical sense. For improvement of forecasting techniques it is equally important to know why forecasts go wrong; some are "right" for the wrong reasons, or "wrong" for the right reasons. The purely pragmatic test is not enough. An adequate assessment of methods, for the instruction of other forecasters, would require also a historical, perhaps even political, study of the development of the individual predictions.

Dr Theil provides, too, an instructive and lengthy analysis of forecasts collected from industrialists and traders by the IFO Business Test method. Again there is a tendency to underestimate changes; but performance at turning points is found to be quite good. Business forecasts of stock changes, incidentally, are found to be very poor.

Much of the work is devoted to rather a different topic—an analysis of the principles of decision-making in conditions of uncertainty, with special reference to the problems of economic policy decisions made with the help of uncertain forecasts. This part of the book is ingenious and original in its use of econometric instruments and an important addition to a growing literature on the general subject of decision-making, but it is not easy reading. The whole subject is on a high plane of abstraction, and is likely to remain so until governments, and business men, are able to state their preferences in more precise terms. When a Chancellor of the Exchequer is able to provide a schedule with figures showing, say, at what point an increase in unemployment is to be preferred to a worsening of the balance of payments, then the Treasury technicians, with the help of Dr Theil's algebraic formulations, may be able to calculate an optimal budget policy. Until then, trial and error will hold the day.

Poets without Poetry

Poets in Their Letters

By Cecil S. Emden.

Oxford University Press. 220 pages. 21s.

FOR every person who actually reads poetry for pleasure there must be hundreds who prefer biography and its offshoots—letters, journals, personal records of various kinds. Here is a collection of biographical character-sketches of nine English poets that makes practically no reference to their poetry at all. It is presumably meant for those who have not the time to browse for themselves in the collected editions of the letters on which the chapters are based. The extraordinary thing is that Mr Emden, in spite of wishing to increase our understanding of the personalities of these writers, has deliberately disregarded an indispensable part of the evidence. The most characteristic and revealing letter that Pope ever wrote was his "Epistle to Dr Arbuthnot." Wordsworth put little of himself into his letters, but in "The Prelude" he was attempting a spiritual autobiography on a vast scale. From Byron's racy letters we can see why his comic and satiric poems are superior to the highfalutin' romantic works. Certainly the letters of poets help us to discover what kind of men they were, and they may well—as with Keats—enormously reinforce the impressions created by the poems; but if they are considered in isolation from poetry, an idle kind of literary gossip may result.

Mr Emden might have been more congenially employed had he chosen another category of letter-writers—statesmen, travellers, adventurers. Life obviously interests him far more than literature, and he cannot refrain from passing moral judgments. His standpoint is always that of the ordinary sensible man, prepared to make a few allowances for highly-strung types with artistic temperaments, but strongly inclined to censure their deviations from conventionality. Coleridge tries his patience particularly hard; he had not the commonsense even to change his wet boots—if only he had taken a few leaves out of Southey's book. And Keats—if he had exercised better judgment, he might have set up a nice little home with Fanny Brawne. Gray and Cowper are handled with greater insight, and the chapter on Fitzgerald is entertaining, though one wonders what he is doing alongside the more distinguished octet.

This is a painstaking and by no means uninteresting book, written, however, in a pedantic style. Addisonian in intention, it sometimes has pompous lapses:

> In the main, the letters of poets are uniform in observing the distinction between prose and poetical diction; but sometimes, in writing letters, they are carried away by their subject, and break inadvertently into highly imaginative language.

Somewhat tiresome; or, as Mr Emden might put it (he uses the word just as an outraged Nanny does), "aggravating."

New Techniques in Development

Pilot Project, India

By A. Mayer, McKim Marriott and R. L. Park.

University of California Press. London: *Cambridge University Press.* 367 pages. 41s. 6d.

"PILOT PROJECT, INDIA" should be read by all planners in development. Dealing with the inception and multiplication of community projects in India it is a manual for action in planning, ably compiled by Professors Marriott and Park from the mass of documents put at their disposal by Albert Mayer.

Albert Mayer, an American town planner, came to America during the war, met and became friends with Mr Nehru. From this friendship emerged the scheme to build an ideal village. But before villagers could be interested in improved housing their basic needs had to be satisfied. So, instead of building the village of his dream, Albert Mayer devised a method for helping villagers to satisfy their needs, and the Etawah Pilot Project was born. Learning from trial and error, the Project became so successful that it gave the American government the basis for its Technical Co-operation Mission programme—so successful indeed that every representative began to clamour for a community project in his own constituency. The Government of India created a Ministry for Community Development and has committed itself to covering the whole of India with agricultural extension services, the diluted version of community projects, by the early sixties.

What the pilot project at Etawah and the community projects and the national extension services set out to do is not new; but the techniques used are new with their insistence on systematisation, on the creation of leadership from below, on satisfying only felt needs, on the elimination of individual factors and bureaucratic approaches to development. For the first time in such work, training, planning and evaluation have been carefully thought out, no detail being trivial enough to escape Albert Mayer's vigilance, whether it is the lighting in an adult literacy class or the seating of village workers during a meeting.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Foreign Aid's Nine Lives

WASHINGTON, DC

FORTUNATELY for those who believe that an American foreign aid programme is important for the maintenance of a reasonably stable world, the American government has got not one programme but nine. Thus, as Congress slashes heartily at one, another pops up to take its place. In spite of the wearisome repetition, year after year, about "foreign aid" being in more trouble than ever before, the last session of Congress ended, and the present one will end, by voting to transfer abroad a total of substantially more resources than any of their recent predecessors.

The proliferation of devices for aiding other countries has not in fact been machiavellian on the part of the Administration. It all happened more or less by chance. But the result is an extraordinary abundance of contrivances and confusion of the public mind. A $2 billion item for the Export-Import Bank whirled through Congress last year virtually without debate and without any notice in the newspapers at all, while headlines were made day after day late in the session by changes of a few tens of million dollars in various items of the "foreign aid" (mutual security) Bill. This year, the vote of $1.4 billion to the International Monetary Fund would have gone almost entirely without publicity but for a meaningless fuss about the fiscal year to which the expenditure would be attributed; yet already a change of $125 million in the Development Loan Fund has produced major political excitement and a special presidential statement.

Later this year Congress will approve a minimum authority to give away ("sell for local currencies") $1.5 billion worth of surplus agricultural commodities paid for by American taxpayers, and this will be hailed by liberals and conservatives alike, or at least by those few who are aware of the Bill, without the slightest suggestion that it is tainted with "foreign aid." With the same exuberance Congress is likely to push through nearly $500 million for a new Inter-American Development Bank, just negotiated, with plaudits from all sides. The Secretary of the Treasury is continuing to persuade, and nearly bludgeon, the conservative financial men of western Europe into accepting the new International Development Association, which could involve another $1 billion or so of American funds and which may well go through Congress with equal ease. And all the while the "foreign aid" Bill will be "in trouble."

The battle over the Bill itself, of course, is far from inconsequential. Included within its complex and widely misunderstood provisions are four of the nine foreign aid programmes—each as different from the other, certainly in theory and substantially in fact, as the Ex-Imbank is different from the farm surplus disposal operation, or the Monetary Fund from the IDA. The most important of the four, in the sense that its abolition or severe reduction would cause the most immediate damage, is, ironically, both the least understood and the least susceptible to congressional emasculation. It is a programme of direct subsidy, in the form of cash or commodity grants, to about fifteen countries around the world, of which at least ten would probably have gone under without this aid. It is a programme of averting chaos, not of improving standards of living; of subsidy of the unviable, not of economic development; and it has worked exceptionally well. Without it Jordan, Libya, south Korea, south Vietnam, Turkey, Greece, Pakistan, Formosa, Bolivia, Morocco, Tunisia, Laos and Cambodia would almost surely be quite different today. Called "defence support" or "special assistance" (depending on whether or not the aided nation belongs to an American-backed defence alliance), this programme is so overwhelmingly necessary that Congress has never failed to support it with at least an essential minimum of appropriations; the same, fortunately, will probably be true again this year and, as a result, the maps will remain the same—for another year.

BUT none of the debate will be about this obvious, if negative, success story. There will be great, and sincere, dispute about the military aid programme which, being the biggest in amount, will probably suffer the largest dollar cut—to the dismay of the allied commanders in Europe but of very few others. There will be loud praise, and appropriations happily granted, for technical assistance, which occupies three out of every four Americans employed on foreign aid abroad but uses less than five per cent of the funds. And, with the President in the thick of the fight, there will be a battle to the end over the fourth programme, the Development Loan Fund, which is the one instrument in this Bill aimed at actually meeting the "revolution of rising expectations" in the under-developed countries and whose objectives and techniques really symbolise "foreign aid" to Americans.

Few members of Congress, whether among those who have always disapproved of foreign aid or those who have supported it, are aware that this fund has in fact become a device for increasing the total programme: for the next few years its gradually rising expenditures will almost exactly offset a decline which is at last occurring in military aid from cuts in appropriations in earlier years. In short, any appropriations for the DLF are "pure gravy" for foreign countries in a world in which Europe now needs no help, in which military aid is falling off, in which the number of countries on the dole is at least not increasing much and in which the Brazil or Indonesia, Thailand or Argentina, Burma or Ghana, which fails to find dollars at the DLF has at least the option of trying the World Bank, the Monetary Fund, the Ex-Imbank or the Department of Agriculture. If it is not precisely true that "a bank a day keeps the Russians away," at least the present profusion makes employment for foreigners seeking dollars and Americans trying to offer them.

There remains, however, the question of whether enough is being provided, apart from the straightforward subsidies, and whether the liberals in this Congress will take out on foreign aid their frustration at their failure to dominate domestic spending. Assuming that aid in the form of subsidies will be continued as in the past with a cut of 20 per cent at most, and that there will be the usual support for technical assistance and the usual reduction in military aid, and allowing for the easy passage of the Bills dealing with the Monetary Fund, farm surpluses and the Latin-American Bank, the issue comes down to the Development Loan Fund.

The early omens are neither good nor bad. The House Appropriations Committee, under the singularly unenlightened guidance of Mr Otto Passman of Louisiana, showed its feelings by a reduction from $225 million to nothing of a request for a supplemental appropriation for this year. The leaders of both parties rallied and the House, in a rare move, restored the cut of $100 million. The Senate committee, following past custom, raised the amount to $200 million and was sustained by 54-24 in a floor vote. The final amount will almost surely be $150 million for this item, and then the regular appropriation, for which the Administration has asked $700 million, will go through much the same process, with perhaps $500 million being provided in the end. The foreign aid Bill as a whole has been cut almost exactly 20 per cent in every year since the end of the Korean war, and there is so far little reason to expect that the result will be much different this time.

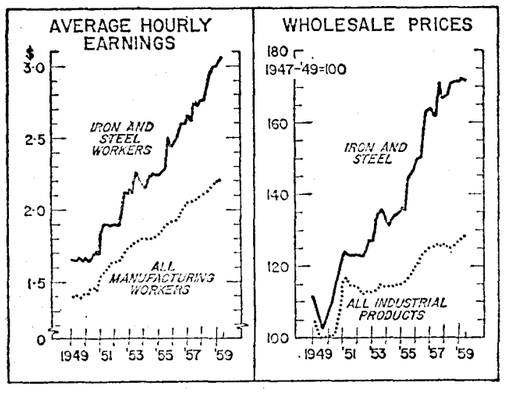
But to some, like Senator Fulbright and Representative Chester Bowles, this is not good enough. They have accepted the challenge of the "revolution of rising expectations" and have a strong, if somewhat vague, conviction that the "Soviet economic offensive" will soon win converts if the Americans do not respond. Thus Senator Fulbright has proposed formal amendments to the foreign aid Bill which would grant the Development Loan Fund $1.5 billion a year for five years and by-pass the appropriations process altogether at the same time. Senator Kennedy has taken the same line and so has Senator Humphrey, another Democratic presidential candidate. None of this, of course, has shaken Mr Passman, but it signifies a counter attack against whatever unusual sentiment may exist this year for reductions in "foreign aid." This is all the more reason to expect an outcome in line with those of the recent past—and the world will still be getting a transfer of official funds whose magnitude is far greater than even the most apoplectic foe of foreign aid realises.

King Veto Still Rules

By four votes in the House Congress failed last week to over-ride the President's first veto of the session. The big Democratic majorities elected last autumn are not quite big enough, it appears, to overwhelm the President when he puts real pressure on the Republican minority to stand by him. Mr Eisenhower's record of never having a veto overturned is still intact. The Bill in question was not one of the social spending measures which form the real battlefield on which a President determined to balance the Budget confronts an opposition anxious to stimulate economic growth and extend the government's responsibilities for welfare. It was, in effect, a Bill to censure Mr Benson, the Secretary of Agriculture whom the farmers hate, by depriving him of his control over loans made by the Rural Electrification Administration to co-operatives providing electricity and telephone service to farms. The Bill consequently appealed to Republicans from the Middle West and in the House sixteen Republicans voted for it the first time round. Six defied the White House and refused to change their votes the second time.

Mr Eisenhower vetoed the Bill on the ground that it would be bad administrative practice to make a subordinate independent of his superior—and no doubt out of loyalty to Mr Benson as well. The REA, a New Deal agency, has been part of the Department of Agriculture for twenty years and six years ago the Secretary was given authority over its loans. He has rejected none and during those years REA has made loans totalling $1 billion—over a quarter of the $3.8 billion of loans it has extended in all. Practically every farm now has electricity compared with 11 per cent in 1935. The real quarrel of the powerful electrical co-operatives is with the President's view that they are strong enough now to do without a subsidised 2 per cent interest rate on the money they borrow.

Some Democrats are consoling themselves for their failure to pass a relatively trivial Bill by the thought that they have won a useful issue in the farm states. Others, such as Mr Johnson, the Democratic leader in the Senate, who instinctively clings to the middle of the road, think that co-operating with the President to get something done is a surer road to the voters' hearts. For such Democrats the failure to over-ride the President is the final proof that moderation must be the watchword of legislation. On REA the Democrats could present almost a united front and pick up a few Republican votes too. They cannot expect to do even as well if they support measures calling for heavy spending which will cost them the votes of conservatives in their own party.



Steel Lines Up

As they gather round the bargaining tables in New York this week, both sides in the steel wage negotiations have taken a more specific and intransigent line and with more publicity than has been usual at this stage in the past. And since the two lines diverge completely prophecies of a strike in the steel mills when the current contract expires at the end of June are becoming firmer. At his press conference this week President Eisenhower again emphasised the public interest in what happens in this basic industry, suggesting that if both management and trade union do not act with statesmanship, then the government may be forced to intervene. In 1956 it did intervene, behind the scenes, to encourage an agreement which has meant a pay increase of about 63 cents an hour and has been partly responsible for a price increase of $24.50 a ton over the past three years. But this year it is not a strike which the President fears so much as an inflationary settlement which would push wages and prices up again, not only in this but in other secondary industries.

Both company officials and trade union leaders are anxious to avoid the stigma of having contributed to renewed inflation—or rather to pin the stigma on the opposite side of the bargaining table. This explains the lengthy statements, full of carefully chosen and contradictory statistics, with

which the news columns and advertisement pages have been flooded. The steel firms contend that they are not prepared even to consider a rise in prices, but that without one they cannot afford a rise in wages. Their only proposal has been that wages should be frozen for a year. The union spokesmen responded by suggesting that prices should be frozen for three years. This would not, however, prevent wages going up, according to the union, since they had lagged behind recent increases in productivity; the companies could share the benefits of this improvement with the workers without having to put up prices. In this argument the labour leaders are naturally making much of the industry's recent record profits.

The union leaders have not specified how big an increase in the wage bill would in their view be justified by the

increase in productivity but they say they are demanding more than ever before—higher pay, shorter hours, more holidays and better pensions and insurance benefits. Various surveys of the union's members, many of whom have just got back to work after being unemployed most of last year, suggest that they would rather have improved welfare payments than higher wages and that they do not want anything enough to strike for it. But no one doubts that in the end the steel workers will do what their leaders ask.

Affairs of State

Mr Herter, the new Secretary of State, flew back to Washington last weekend to report on the success of his first international conference as Secretary of State. His conciliatory diplomacy—so different from that of Mr Dulles—seems to have won, like the "package" agreement reached in Paris with the other western foreign ministers, a suspended verdict of "so far so good—but what will happen when he is up against the Russians?" Mr Herter went at once to Gettysburg to see the President; he has had an off-the-record conference with the Senate Foreign Relations Committee; and, before he flies off again to Geneva, he will make his first full-dress appearance on television as Secretary of State. Mr Herter has also found time to pay a thoughtful visit to Mr Dulles at Walter Reed Hospital. When Mr Dulles was sworn in as special consultant on foreign policy to the President, he warned Mr Herter to tolerate no "interlopers" between himself and the President; Mr Dulles also promised that he would never seek to press any advice on the President or Mr Herter.

The rival the new Secretary of State may have better cause to fear is the Vice President, who has ambitions to shine in a high diplomatic line. But at a recent press conference Mr Eisenhower went out of his way to emphasise that, if there is a summit meeting and Mr Nixon attends, it will be only as a stand-in if the President is recalled to Washington, not as an adviser. Mr Herter's advancement means a step up, in turn, for his immediate subordinates at the State Department. Mr Dillon now becomes the second in command as Under Secretary, although he will continue to concentrate on economic affairs and, if Congress agrees, to act as chairman and director of the Development Loan Fund. Mr Murphy moves up to third place as Under Secretary for Political Affairs.

It is also said that the Administration has chosen a career diplomat, Mr Cabot, now the Ambassador to Colombia, to replace Mrs Luce, who resigned as Ambassador to Brazil before she had even taken the oath of office. Mrs Luce probably judged correctly that her bad relations with the Senate and in particular with Senator Morse, the chairman of a special committee on Latin America, would make a difficult mission impossible. Brazil had high hopes (which were quite unfounded) that Mrs Luce would be able to persuade Washington to advance large new loans to cover the trade deficit which Brazil is running this year. A political miracle will not be expected of a career diplomat; and in Washington such a choice would help to soothe the ruffled feelings of the Senate Foreign Relations Committee and induce it to treat more sympathetically other proposals of the Administration, such as the foreign aid Bill.

Treasury's Surprise Package

The one bright spot in this week's government cash and refunding operation, the last that will be needed in this fiscal year, is that the Treasury requested rather less new money than had been expected—only $800 million instead of about $2 billion. This is because the government's cash balance has been helped by loan repayments from Britain and West Germany and by better tax receipts than had been forecast. It does not mean that the deficit is likely to be below the estimated $13 billion when the fiscal year ends on June 30th. This deficit and the possibility of another, smaller, one next year is the basic cause of the Treasury's difficulties: indirectly, because the prospect of inflation lessens the attractiveness of long-term government securities and drives up the interest rate on them; directly, because it can only be financed by government borrowing. The high interest rate means that this can only be done with short-term issues, so that visits to the money market recur constantly.

There was no possibility of offering a long-term security last week because yields on such government bonds, at record highs, were above the 4.25 per cent which is the legal limit on Treasury obligations of five years or more. While the Treasury itself is undecided, the experts feel that it will be forced to ask Congress to raise this limit before the next government borrowing in July, in order to resuscitate the long-term market. However, such a request might only unsettle the market even more without winning the

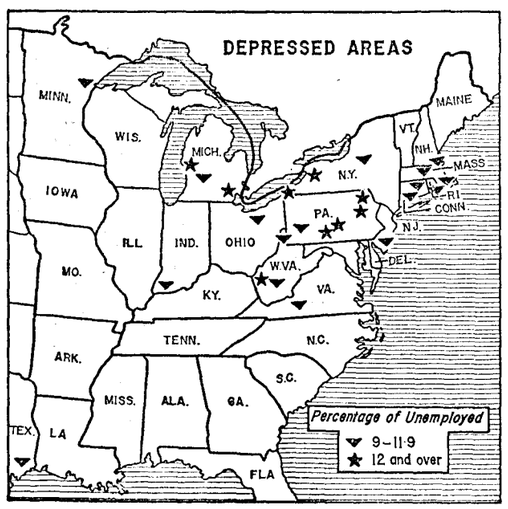
Benefits Out of Date

FROM A CORRESPONDENT IN WASHINGTON, DC

THE House Ways and Means Committee has just finished its hearings on more than forty proposals to change the unemployment insurance system. This is not because it functioned so badly during the recession; on the contrary, there is widespread appreciation of the part it played in sustaining incomes and demand. But the recession showed up the weak spots that have developed in a social security measure now nearly twenty-five years old. And, although unemployment has fallen to 5.8 per cent of the labour force, it is still severe enough in certain areas for Mr Lyndon Johnson, the politically sensitive Democratic leader in the Senate, to have proposed a special commission to look into its causes and cures, and for the Senate to have endorsed the idea unanimously.

When unemployment compensation was introduced as part of the Social Security Act of 1935, the aim of the federal government was to spur the states to take action. This was done by requiring employers to pay a federal tax on payrolls, but forgiving 90 per cent of this if the state in which an employer did business set up an unemployment insurance programme of its own. The federal tax is theoretically 3 per cent of the first $3,000 earned by each worker whose employer has four or more people on his payroll during twenty weeks in the year. But because all the states, Hawaii and the District of Columbia now have unemployment schemes, only one-tenth of the federal tax is actually collected.



Most of this money goes back to the states in the form of federal grants to ensure that the administration of the unemployment insurance system is uniform throughout the country, whatever the resources of the individual states. The federal government also administers the Unemployment Trust Fund, in which the states deposit, in separate accounts, the money collected under their individual unemployment insurance acts; this limits the amount which each state can withdraw to pay benefits.

Each state determines for itself how many of its employees shall be covered, the level of benefits, and how long they may be paid. The minimum may be as short as five weeks of benefit or as long as thirty; and the minimum benefit itself ranges from $3 a week to $17. Such differences in the laws of the states reflect their varying economic circumstances, the balance between industry and agriculture in each state, and the relative strength of management and the trade unions.

During the past twenty years the level of wages and prices has risen much more rapidly than the level of benefits. In December, 1939, the maximum benefit amounted everywhere to at least half of the average weekly wage and in 15 cases it came to 71 per cent or more. By June, 1955, the weekly maximum amounted to half or more of the average wage in only seven of the states and territories, with Hawaii the highest at 60 per cent. Between 1939 and 1954, average weekly benefits rose from $10.66 to about $25, but the ratio of average benefits to average wages fell from 41 per cent to 34 per cent.

Since the purposes of unemployment insurance are to make it unnecessary for the unemployed to resort to public assistance, to prevent economic disruption of the communities in which they live, and to underpin the economy as a whole, the present ratio is regarded as seriously inadequate. The reformers propose that the states should be required to pay benefits equal to at least half and perhaps to three-quarters of a worker's usual wage; some feel that benefits should be related to the average wage in the state, not to an individual's former earnings. There is also support for extending the payment of supplementary benefits to unemployed persons who have dependents.

Recent experience has also shown that, while the states with the best insurance laws pay benefits for long enough to tide workers over a brief dip in economic activity, the system is not adequate for a prolonged country-wide recession or to protect workers in a depressed area. So many people exhausted their benefits during 1957-58 that a one-year emergency measure was adopted. The federal government offered to advance money to the states to help them pay benefits for a longer period; this programme, in a reduced form, has just been extended for another three months. Some who favour federal standards argue that the states should be required to pay benefits for as long as 39 weeks.

A third weakness in the state programmes is their failure to cover all workers. Since 1938 the number of insured has risen from 19.9 million to 44 million, but there are over 68 million in the civilian labour force. The Administration advocates bringing in 3.2 million more, partly by including those who work for non-profit-making institutions and partly by extending the federal tax to employers of one or more workers.

The maintenance of minimum standards has been a condition of federal help for a number of state social security programmes. But the thought of uniform standards for unemployment benefits touches off a sharp controversy between the already industrialised states and those which hope to attract industry by keeping their taxes low. The dispute has also split the Administration. The Secretary of Labour, Mr Mitchell, who may have hopes of a vice-presidential nomination, favours federal standards. But the President has adopted the position of the upholders of states' rights, even though not one state has responded to his appeals during the last five years to raise benefits to what he considers a desirable level. Before he made up his mind the President invited the Executive Committee of the Council of State Governors to the White House to discuss the matter; but, since eight of the nine Governors who came represent small states, and only two come from ones which are predominantly industrial, it is not surprising that they urged that unemployment insurance be left to the states.

The House Ways and Means Committee has voted, by 14 to 11, against the imposition of federal standards. But it is being pressed by Mr Rayburn, the Democratic leader, to reconsider the matter and not to dismiss out of hand a reform favoured by many of the big industrial states and by the trade unions.

Original and Provocative Investment Letters From America

The Monthly Letters published by J. R. Williston & Beane have proved to be of interest and investment benefit to serious investors around the world. These original and stimulating essays are prepared by the partner in charge of our Research Department. They attempt to define current business and economic trends and estimate their probable effect on the stock market and specific issues.

The following headlines illustrate the wide range of subjects dealt with in our most recent Monthly Letters:

"Is It Too Late To Protect Yourself Against Inflation?" . . ."Does Pan Arabism Make It Dangerous To Own Mid-East Oils?". . ."Is Moscow Determining Your Investment Future?". . ."Your Basic 1959 Investment Policy"

If you would care to receive a current copy of this unusual investment publication, without cost or obligation, write to Mr. H. Thomas Osborne, Foreign Department.

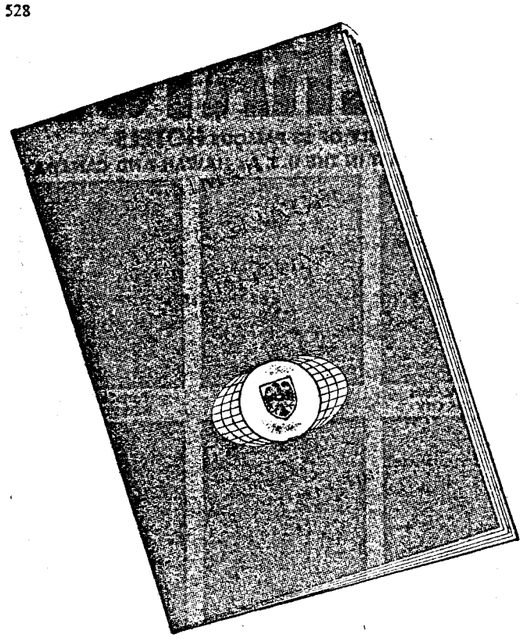
SHERATON
A FAMILY OF 53 FAMOUS HOTELS
COAST TO COAST IN THE U. S. A., HAWAII AND CANADA

AMERICA'S WELCOME TO THE WORLD



Sheraton Hotels have become first choice of International visitors, as well as Americans, for many reasons. Here are a few:

- Reservations held if ship or plane delayed
- Facilities for banquets, business meetings and conventions
- Sheraton's family plan (*no room charge for children under 14 in same room with adult except in Syracuse, French Lick and Austin*)

For reservations see your travel agent, or write Mr. Albert de Leon, Director, International Department, Sheraton Hotels, Sheraton-McAlpin, Broadway and 34th Street, New York 1, N. Y., U. S. A.

THE WELCOME IS WONDERFUL AT

A new guide to foreign exchange

Our 'Summary of Exchange Conditions', which has just been re-issued, gives in convenient form an outline of financial conditions in seventy countries as they affect United Kingdom exporters. The booklet can be obtained through any of our 2,200 branches or direct from our Intelligence Department.

Barclays Bank Limited

Intelligence Department: 54 Lombard Street, E.C.3

First in world-wide banking

At important points around the globe (shown here in the unorthodox Dymaxion projection, which minimizes distortion) First National City gives helpful service to British exporters.

77 branches in 26 countries

Why The First National City Bank can do more for you overseas

WORLD-WIDE COVERAGE. First National City spans the globe, with 77 branches in 26 countries, equipped to handle personal and business accounts, loans, advances and securities.

LARGE STAFF. 6,300 skilled personnel overseas and 9,200 in New York are ready to help in every way.

PERSONAL SERVICES. We will be pleased to give our business friends a letter of introduction to any of our branches to ensure for them a warm welcome and personal attention.

FACTS QUICKLY AVAILABLE. Up-to-date credit and economic information are readily available through our world-wide branch system.

LOCAL INFORMATION. First National City can also call on many thousands of knowledgeable banking correspondents in every important centre of commerce. Their exact information about local conditions can make all the difference to your business.

Call on us at either of our two London branches, and find out for yourself how much we can help you.

necessary authority from Congress. Whether or not it is made presumably depends on whether or not the Treasury wants to put out a long-term bond in July. At the moment conditions are not thought to be suitable for this, whatever the rate of interest.

Meanwhile the Treasury resorted to a surprise package this week to refund $4.5 billion of maturing debt and to raise the $800 million in cash. While *The Economist* is in the press, bills of varying maturities, all under a year, to a value of $3.5 billion are being sold at auction to the highest bidder. When the going price is known the Treasury will set the interest rate on the final item, a one-year certificate to refund $1.8 billion of certificates falling due next week. The market reacted favourably to this unorthodox approach. Luckily private corporations, after their profitable first quarter, have plenty of money available for such short-term lending. What will happen later in the year, when they are likely to start investing on their own behalf in new equipment and facilities, is another matter.

Throwback to Lynch Law

THE main reason why a band of masked men was able to drag a Negro charged with rape out of his prison cell at Poplarville, Mississippi, a fortnight ago and murder him is, paradoxically, that lynching has nearly died out. No one expected violence, so no precautions against it were taken. From 1882 to 1947, no year passed without a lynching and Mississippi, a poor and backward state, was the worst offender. In all, 4,733 people, including 1,293 whites, have lost their lives at the hands of mobs. But since 1950 there have been only five such crimes, including the present one; three took place in 1955 and one in 1951. As the South has become less isolated and more prosperous, it has become more civilised. Violence against Negroes may take new forms, such as the bombing of their homes and churches, but little life is lost. Southern officials, sensitive about the region's good name, and anxious for the racial peace which is necessary for economic growth, have insisted that lynch-mobs must be punished.

The outrage at Poplarville was a shock to many Southerners, particularly since it came just as Congress is considering the need for new legislation to buttress Negro rights. One perennial proposal is to make lynching a federal crime. The Southerners contend that this is unnecessary and in the Poplarville case the state authorities are making every effort to find the guilty men; Governor Coleman called in the Federal Bureau of Investigation at once. Four years ago, however, the murderers of Emmett Till went unpunished in Mississippi.

In an interesting article in the *New York Times* Mr Anthony Lewis points out that the South's own systematic official discrimination against the Negro is one of the causes of the lynchings which most Southerners deplore. Even if Parker, the murdered Negro, had been properly tried and convicted, he might have escaped punishment because the regular exclusion of Negroes from juries in a community is constitutional ground for overturning a conviction. In Mississippi jurors are chosen from the lists of voters and there are no Negroes on the voting lists in the county where Parker was to be tried. The possibility that his conviction might be reversed was well known in Poplarville.

Oil Between Neighbours

SINCE little Mexican oil is exported to the United States, Canada is the chief beneficiary of the change exempting oil which enters the United States by land routes from the mandatory quotas recently imposed on imports of oil. Since the theoretical objection to imports in what was considered to be excessive amounts was that they discouraged the development of domestic sources of oil and thus reduced the supply that would be available in a national emergency, the exemption of imports which come overland from Canadian oil wells is only logical; these would be as accessible as wells in the United States would be if the continent were cut off from overseas suppliers in time of war. The exemption is equally logical in the light of the practical objection to imports; unlike the cheap oil produced in the Middle East, Canadian oil costs about the same as does that produced in the United States and therefore will not undermine domestic prices.

In fact the price of Canadian oil is so high, particularly when transported by road or rail (it takes time to build new pipelines), that it is doubtful how much effect the relaxation of the restrictions will actually have on Canadian exports of oil to the United States. About 67,000 barrels a day were already exempt from the quotas, under special provisions made for refiners in the central states along the Canadian border who have no suitable domestic source of supply. Another 22,000 barrels a day have been going to consumers in the Pacific Northwest from the oilfields in the western provinces of Canada. At one time this region imported as much as 90,000 barrels a day from Canada and the removal of the quota means that the Canadians are now free to develop this potential demand if they can. The change also constitutes some sort of an admission that Canadian oil should be allowed to seek its natural markets even if these lie across national borders.

Even if the relaxation is not of much practical importance to the Canadian oil industry it will certainly benefit political relations between Canada and the United States. For it provides concrete evidence, of which there has been all too little lately, that the United States is prepared to co-operate with Canada as a working and equal partner, at least where the defence of the North American continent is concerned.

On the Wagon

NEW YORK

THAT insidious English habit of interrupting the working day for a cup that refreshes has, since the war, taken a firm grip on American factories and offices alike although such elevenses appear between 9 and 10.30 a.m. Today the average employee is said to spend the equivalent of two weeks of his working year simply sipping coffee and other beverages. Apparently, at least three-quarters of all employers make provisions for coffee-drinking in the mornings, and a large proportion of them give a second coffee break in the afternoon.

In manufacturing plants this coffee is supplied either in the firm's canteen or from automatic "vending" machines. But among office-workers, herded into towering skyscrapers with (in most cases) no internal catering facilities, the coffee-drinking habit proved a greater menace to efficiency; mass

migrations to nearby coffee bars jammed lift services, and left behind them batteries of unmanned telephones. Disturbed by this daily spectacle of deserted offices, a large insurance company called in Schrafft's, a chain of restaurants and sweet shops, to operate an office coffee service on wheels.

Employers were quick to see the advantages of thus bringing refreshment to the desk-side, and today—only eight years later—Schrafft's sends its trolleys and waitresses through 800 companies each morning, with a second afternoon visit to a third of them. Last year its wagon services sold 30 million cups of coffee, one million cups of tea and one million bottles of soft drinks. Other large caterers have joined in the business, but as yet Schrafft's has a big lead. Some employers subsidise this service, either in whole or in part, but most of them let the customer pay the full cost. For a cup of coffee from a Schrafft's trolley this is 13 cents, which is less than the 15 cents charged in a Schrafft's restaurant but more than the 10 cents customarily charged in drug stores and cafes.

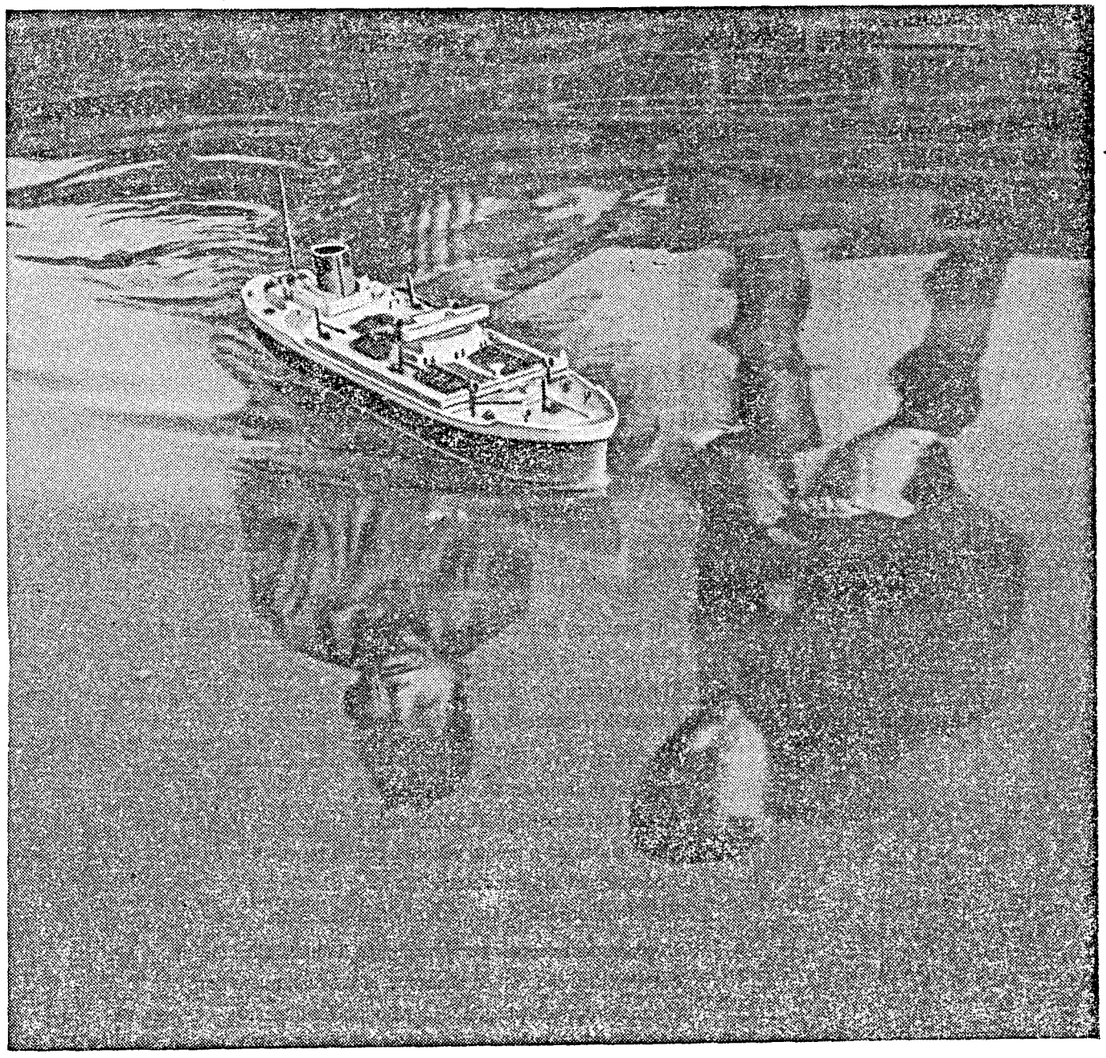
Virtually unknown before the war, the "coffee break" was first introduced into munitions factories to attract scarce workers and to administer intermittent boosts to their flagging energies. But the practice proved habit-forming, and its spread was aided by the fact that New York and other states insist that every employee be given a ten-minute rest from his labours both in the morning and in the afternoon. Today the coffee break has joined the swollen ranks of "fringe benefits" and is an item in many a wage contract. On one occasion the National Labour Relations Board labelled as an "unfair labour practice" an employer's attempt to put a stop to the institution.

In the Swim

FROM A CORRESPONDENT IN LOS ANGELES

At the end of last year Mr Fred Cole of California, one of the leading manufacturers of women's swim-wear in the United States, returned from a highly successful business trip to Europe, during which he made plans for producing his swim-suits under licence in Britain and Holland and for extending his sales territory to all of the British Isles and the Continent. Already Cole swim-suits were being made and sold in Italy and Austria, and in Canada, New Zealand, Australia and South Africa. Such world-wide aggressiveness is typical of the swim-suit industry on the west coast. Jantzen, originally of Portland, Oregon, has long been known in Britain and its products are now being made in all countries where living standards are high enough to permit women to buy swim-suits. Last year nearly one-third of the company's profits, of about $1.3 million, came from foreign royalties, an increase of 17 per cent over the previous year. Rose Marie Reid, Catalina and other Californian manufacturers are spreading equally far afield. Soon the world market for swim-suits may be dominated by these west coast producers as the American market already is.

The supremacy of California has been achieved largely by high fashion styling, by taking advantage of the American woman's desire to keep up with the latest in bathing suits as in ball gowns; the desire extends to many who will never own a ball gown but probably do own several swim-suits, all new this year. They are built with the care of a corset and with the design of a smart dress, and are sold off the peg in a wide range of sizes and fittings. They are not designed so much for swimming—many may never be wetted in sea or pool—as for the display of the feminine figure and must be freshly styled each season. Women who fall under the Californian influence are encouraged to own a minimum of three swim-suits—one for bathing, one for sunning, one for "psychology." They are tempted with whole wardrobes, playsuits, beach skirts, sun hats and other accessories, to match their basic costume.



This policy has paid off in substantial growth for the west coast manufacturers. Between 1947 and 1957, sales of women's and misses' swim-suits in the United States increased by about 70 per cent, from nearly 7 million to nearly 12 million annually. Including play suits and accessories, today's sales are valued at about $150 million a year. This growth has been encouraged by the increase in the number of people who own boats or have bathing pools in their gardens—almost universal in the warmer parts of the country where more and more people now live—and by the recent popularity of winter holidays and cruises. All of this makes the swim-suit almost a year-round garment. Moreover, today's teenage girls, the large crop of war babies now growing up, have more leisure, spend more time in and on the water and are more conscious of fashion than were their predecessors. At the present time they buy about a quarter of all the swim-wear sold in the United States, and the proportion is expected to rise to 35 per cent by 1965.

In time, the Californian industry hopes, the conditions which have been helping it in America will spread to other countries. Foreign women are thought to be as susceptible basically as are American women to the appeal of style, fashion and design in the garments which they wear on the beach or at swimming pools. In a number of countries, especially in Britain, the British Commonwealth and on the continent of Europe, there has been a great expansion in recent years both in leisure and in the amount women have to spend. Accordingly they ought to buy more swim-suits.

AIR SUBSCRIPTIONS TO *THE ECONOMIST*
22 Ryder Street, London, SW1

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

Beside the ship canal...

In the year 1887, to the peninsula of the Wirral, in Cheshire, came excavation and construction gangs . . . and the lonely peace of the marshes vanished for ever.

Seven years later – on May 21st, 1894, to be precise – the Manchester Ship Canal was formally opened by Queen Victoria.

Today, on the banks of the Ship Canal, stand two of the largest centres of chemical production in Europe – the chemical plants at Carrington and Stanlow. At Carrington, outstanding developments include the production of new and important plastics; from Stanlow comes 'Teepol', the first synthetic detergent produced in Great Britain on a large scale, also high-purity solvents, 'Epikote' resins and other products.

From Carrington, Stanlow and Shell Haven, Shell serve all fields of commerce in which chemicals play a productive part. If you have any problems concerning the use of chemicals, industrial or agricultural, Shell may well be able to help. It's easy to get in touch with us.

Write to the Sales Promotion Manager, Shell Chemical Company Limited, Marlborough House, 15-17, Gt. Marlborough Street, London, W.1.

YOU CAN BE SURE OF SHELL CHEMICALS SHELL

what GSIP mean

by 'guaranteed accuracy'

The accuracy of a Jig Boring Machine expressed in terms of a single figure can be misleading.

The accuracy guaranteed by GSIP is a three-fold concept, which includes:

Accuracy of reading The value of the smallest division on drum and vernier.

Accuracy of setting The tolerance within which co-ordinate settings can be repeated.

Accuracy of displacement The error of length measurement between any two positions.

Displacement accuracy embracing, as it must, both reading and setting accuracy, is the final guarantor of precision work with GSIP Jig Boring Machines. It is always specified as the maximum error for all displacements of the worktable and spindle head. GSIP do not disguise this error or overstate the precision of their machines by quoting a plus or minus figure of half the real displacement error.

THE WORLD OVERSEAS

Two May Days in Berlin

5 MAY 1959

FROM OUR SPECIAL CORRESPONDENT

From the district railway trains that impartially serve both Berlins the passengers can see pile after pile of coal stacked on derelict spaces in the western sectors. Much of it has accumulated since November 27th when Mr Khrushchev sounded at first as though he was going to try to prise out the western garrisons within a year. Covered by tarpaulin or matting to keep out the rain, these serried ranks of twelve months' fuel for factories and homes have the abandoned yet menacing air of an ammunition depôt in peacetime.

It seems now that the tarpaulins will not be lifted this summer. Mr Khrushchev's original time-limit for transforming west Berlin into a "free city," virtually under east German auspices, expires on May 27th, but it looks as though the withdrawal of Russian forces from east Berlin, and from the posts controlling the western approaches to Berlin, has been postponed pending the international negotiations that are about to open at Geneva. West Berlin's two and a quarter million inhabitants, however, are not cheating themselves with hopes of a tolerable future secured by perpetuating today's unnatural economic and military buttresses.

The awkward circumstances have not mellowed with the passing of fourteen years. West Berlin has to import some 600,000 tons of goods monthly from west Germany, from which it (and the token allied forces holding it) are separated by 125 miles of territory controlled by troops of the Soviet army and the People's Army of east Germany. In the years from 1953 to 1958 alone, west Berlin's crippled economy was boosted from outside by 5,160 million marks, partly in outright grants and partly in loans. A total of DM 3,827 million has gone into west Berlin from the counterpart funds of the European recovery programme. Additional help is being given by means of special tax concessions, the annual average value of which is expected to reach DM 409 million this year. West Berlin's budget for 1958, totalling DM 2,800 million, included some DM 1,100 million of west German government funds.

This benevolent dispensation cannot last for ever, and the west Berliners know well enough that sooner or later there must be a radical change in their way of living. Indeed, they sense the spectre of change already in the air, and they are waiting with understandable disquiet to see what identifiable shape it may assume at the forthcoming conferences. They feel—and they are—most dangerously exposed. They take it unanimously for granted that the life of a "free city of west Berlin," as originally proposed by Mr Khrushchev, would be, if not brutish and nasty, certainly short. Some other arrangement, then, roping in the United Nations as watchdog of political freedom? It all depends. There are immense misgivings at the prospect of any step being taken that would extend the authority of the east German Democratic Republic.

It was in this mood that on May 1st some 500,000 west Berliners—roughly one out of every four—rallied in the Tiergarten to reaffirm the opinion they recorded unequivocally at their city elections on December 7th (when, ten days after Mr Khrushchev's new bid for a Berlin settlement, only 1.8 per cent of the 90 per cent who went to the poll voted communist). Assembled near the ruins of the old Reichstag, within sight of the red flag on the Brandenburger Tor, the May Day demonstrators heard their popular Chief Burgomaster, Herr Willy Brandt, assure them that he had returned from his talks in Washington and London convinced that the western allies not only would stay in Berlin, but also would never agree to any change in Berlin's status that would put them at the mercy of the communist world around them. From a lofty scaffolding the May Day slogan proclaimed for all to see : "Berlin remains FREE." Brave words for a brave people. Yet they cannot have dispelled for many the uneasiness caused by the unrelenting dilemma: that west Berlin must sooner or later atrophy if no change is made in its present living arrangements ; and that, if any changes are made, they will entail considerable risk of opening the gate to communist domination.

Unhappily, the grim communist May Day frolics in Unter den Linden (which your correspondent watched) confirmed the west Berliners' fears of what the presence of an east German delegation at Geneva may mean. The air in east Berlin was loud with an uncompromising and intimidating militancy. Tanks and self-propelled guns of Soviet design, followed by detachments of infantry and armed workers, clattered past vast placards calling "for a demilitarised free city of west Berlin." As in Hitler's day, Unter den Linden reverberated with the tramp of uniformed youngsters bearing crude slogans. Every one of the sightseers crowding the pavements wore a badge inscribed : "May 1959—for a peace treaty ! "—the treaty with two German states for which the Russians will be pressing at Geneva and on the summit. Plastered here and there on the walls elsewhere in east Berlin were maps showing the disposition of Nazi concentration camps, with portaits of Dr Adenauer and his defence minister, Herr Franz-Josef Strauss, on either side of each map, accompanied by a footnote to the effect that the men who were responsible for the concentration camps were back in power in western Germany. In short, the foreign observer wandering through east Berlin on May Day was struck everywhere by the evidence of a community being spurred into total political warfare, even to the point of readiness to assist a revolutionary coup in west Berlin should its leaders ever consider the moment to be ripe.

These are discouraging observations on the eve of new negotiations affecting the future of Germany. But perhaps the communist block's demands will yet be tempered by doubts concerning the efficacy of their missionary work among the Germans. They have genuinely converted relatively few minds, and still fewer hearts. Assured that the western negotiators will watch loyally over their political interests, the west Berliners are waiting stoically to see what happens. They are prepared, if necessary, to undergo further discomforts for the sake of living in a more or less free society. And they know that, whatever happens, they will be involved in a tough political struggle for many years to come. Happily, they are deservedly famous for their good humour and their strong nerves.

The Gaullist Consulate

FROM OUR PARIS CORRESPONDENT

THE Fifth Republic does not blush about its origins. Its birth certificate bears the date of September 28th, when its constitution was overwhelmingly endorsed by the French electors. But it really began in May of last year, when the tottering Fourth Republic collapsed under mere threats from Algiers ; and those May days will be officially commemorated next week on both sides of the Mediterranean. A year ago, when the Paris government, after two years of humiliating concessions, was forced into a trial of strength with the Algiers settlers and the army, General de Gaulle decided to leave his retreat. The appearance of this national figure had a double effect: it encouraged Algiers to resist ; and it offered the trembling government and quaking deputies a visible alternative. Parliament bowed to General de Gaulle. President Coty opened the doors of the Elysée. The whole transfer took place without a shot. The general was granted exceptional powers. Four months later the people, as they usually do, triumphantly approved the successful take-over. And they subsequently endorsed this choice by electing a neo-gaullist chamber. The election of General de Gaulle to the Presidency of the Republic completed the change.

One of General de Gaulle's first moves was an attempt to save the French empire from being submerged by the nationalist wave that was surging through Asia and Africa. In the September referendum, African and other French territories were offered the alternative of independence without French financial aid or limited powers within a French Community. The first results of this bold gamble looked extremely encouraging: M. Sekou Touré's Guinea was the only country to opt for independence. Since then there have been signs that the new structure is not as solid as it appeared. It must take account of the Ghana-Guinea partnership and of other African states reaching independent statehood. Within the Community itself, the federalists who are behind the Mali scheme do not hide the fact that, in their view, the present stage is only provisional. How lasting the success of this attempt to keep control over a large part of Africa will be must depend on the general evolution of the continent, but the gaullist scheme was undoubtedly a skilful effort to keep abreast of the times.

Algeria was not offered a similar choice. The new Republic is still saddled with the war which brought about its predecessor's downfall. True, once back in power, General de Gaulle proved sensibly ungrateful to his Algerian sponsors. The extremist settler leaders have been snubbed. Many officers, who had taken an active part in the May *putsch,* were kicked upstairs and replaced by more faithful gaullists. Yet it is one thing to call undisciplined colonels to order, quite another to face an open clash with the army if it is determined to stay on in Algeria. General de Gaulle, who once wrote that the army "is the deepest expression of a country's spirit," wants to avoid such a conflict.

Compromises, however, often bring strange results. Last October, for instance, the general ordered officers to leave Algerian politics so that elections would produce representative Moslems with whom he could, in his own phrase, "do the rest." The officers obeyed, but their influence was still great enough to ensure that Algeria produced a useless contingent of *mal-élus.* Indeed, despite his unprecedented power and prestige, General de Gaulle has been reduced to a broad policy not unlike that of his predecessors: the economic transformation of Algeria (through the Constantine plan) which may pave the way for a political solution. Last week the president was even led to express himself in favour of "integration." The rebels can come to Paris for ceasefire talks but not for political negotiations. And after a year of his rule the war still goes on.

The war, however, is no longer to be financed by the printing press. His special powers enabled General de Gaulle to carry out important financial reforms (the inauguration of the European common market was an additional incentive to disinflation). Last December France not only devalued and joined in the concerted European move to partial convertibility ; at the same time, chiefly through cuts in subsidies and in the bill for the welfare state, the government reduced the overall budget deficit to a size which can be easily covered by borrowing. The general's advisers, seeking financial stability through cuts in consumption, were lucky in their timing. The political setback to trade unionism and the first signs of recession had a moderating effect on wage claims. After the devaluation, prices did not rise more than had been officially expected. The foreign currency reserves have increased. If there is no counter-offensive by the wage-earners in the autumn, the experts will be able to claim success in the first stage of their operation. The price of it has been the disappearance of that popular belief in miracles which had helped the gaullists at the polls.

ONE result of the financial reform was that France entered the common market without invoking any provisions for special treatment. General de Gaulle, once the legendary "anti-European," thus did for Little Europe more than could probably have been achieved by any of its warmest supporters. This does not mean that he has been converted to their views. His own words and the speeches of his ministers show that in European politics, as well as in the military affairs of Nato, the gaullist preference is for national coalitions, not for integrated systems. The general's vision, as far as it can be pieced together, is of a continental block dominated by France and Germany as the senior partners ; with France deriving additional strength and status as an African power.

The German alliance has its immediate consequences. Any fear of General de Gaulle making a new Franco-Soviet deal has vanished. In its relations with Moscow, France is acting as an orthodox champion of western virtue. Paris echoes Bonn faithfully on the German question. One does not know yet where the gaullist vision of French greatness may one day lead the Atlantic alliance. For the time being, the general is realistic enough to grasp that France's strength, sapped by the Algerian war, enables him to wage only minor skirmishes—over the Mediterranean fleet, missile sites, or the unified air command. In time he will go further than that, but—it now seems certain—he will not go to Moscow to win his points.

Ultimately, the strength of the regime will be measured at home. Here the gaullist experience runs true to the model of a successful coup. The barometer, as read in the municipal elections of last March, shows that the political weather has returned to normal. The only possible difference is that, for lack of any other coherent opposition, the Communists are the main beneficiaries of popular disappointment and just now would probably poll more votes than ever before. But there will be no more electoral tests for years to come. And before the pointer had returned to normal, new institutions were rapidly set up, closely modelled on the pattern that the general advocated as long ago as his Bayeux speech in 1946. The executive branch dominates the legislative, and is itself effectively run by a president who is not responsible to parliament. The president rules, directly by his own staff, and indirectly through a prime minister and government of his choosing. Parliament hardly matters. The personality of General de Gaulle, and the knowledge of the UNR (neo-gaullist) deputies that there will be no second miracle at the polls, make the system even more authoritarian than the constitution itself provides.

A system in which the powers of decision rest with one man may sometimes prove more efficient than parliamentary rule. But the parliament of the previous regime, in spite of its antics, did provide the opportunity for peaceful change. The new system, more rigid and without real parliamentary safety valves, will run a greater risk of explosion. Much will depend on economic developments. If President de Gaulle makes peace in Algeria, while a western recovery helps France to emerge rapidly from its recession and to resume its unprecedented expansion of recent years, he should be able to consolidate his reign without taking off the velvet glove. If not ? The Fourth Republic collapsed when it was deprived of its instruments of coercion: last year the army was on the other side and the police deserted the sinking ship. But the general, for all his dissensions with reluctant colonels, can rely on the army and on France's numerous police forces. None of this may be required. Yet it is impossible to assert that the clash, side-stepped adroitly a year ago under the general's guidance, has been averted for ever. M. François Mauriac, the man of letters and self-proclaimed devotee of France's man of destiny, has described this year as the first of General de Gaulle's consulate. By French precedent, a consulate is a period of transition.

Lebanon One Year After

FROM OUR MIDDLE EAST CORRESPONDENT

A YEAR ago this weekend civil strife erupted in Lebanon, with shooting in Tripoli and bombs in Beirut. What seemed at first a temporary aberration from the easy-going, if noisy, approach of the Lebanese to politics soon became a long-drawn-out struggle of attrition. The struggle lasted more than five months, and was brought to a conclusion in two stages: the first was the assumption of the Presidency by General Fuad Chehab, the commander-in-chief, on September 23rd ; the second the formation of the compromise government of Rashid Karami on October 14th.

The compromise was effected under the slogan "neither victors nor vanquished." But for all that it left bitterness which has not yet wholly died down. From the very early days of the revolution against Mr Chamoun, the opposition had pressed the candidacy of General Chehab ; they could fairly claim that he was their nominee. Mr Karami, the leader of the revolution in Tripoli, had become prime minister and, together with another prominent opponent of Mr Chamoun, Hajj Hussein Oweini, held the portfolios of defence, economy, finance, foreign affairs, justice and planning. Small wonder that many Chamounists returned sulking to their tents.

Yet even in those October days of high rancour, there were gleams of hope. Pierre Gemayel, the founder and leader of the Phalange, which provided Mr Chamoun with his most solid support in the days of trouble, consented to serve under Mr Karami as minister of agriculture, education, health and public works. It must have been a difficult decision for him, and he deserves all credit for having made it. The key ministry of the interior was entrusted to Raymond Edde, the bearer of a respected name, who had taken no active part in the conflict, using his influence rather to bring both sides together. It would have been surprising, with such a government, if no friction had arisen between ministers. But both Mr Karami and Mr Gemayel seem anxious to belie the label of extremism which their opponents pinned on them during the struggle. They have had the sense and the patriotism to compose their differences before reaching the point of rupture.

IT is hard to see how any Lebanese government, now or in the future, can be a strong government. Strength implies a disposition and ability to use force in the last resort ; and if last year's disturbances proved anything, they proved that the Lebanese army will not, cannot, intervene actively in civil conflict dividing the nation. The most it can do is to hold the ring and prevent the contending parties from flying at each other's throats. In the circumstances, the Karami government, left with so tricky a legacy, can only proceed slowly, dealing by compromise with the many problems that confront it.

The most important of these problems is the disarmament of the civilian population. No significant progress has yet been made towards a solution. In the first place, it is physically impossible to search every house and every mountain, even if the security forces were much bigger than they are. In the second place, any attempt to effect disarmament by force would certainly lead to bloodshed, and might well start last year's troubles off again. In short, disarmament can be achieved only by agreement with the various groups and parties holding unauthorised arms. Of this, there is no sign. Each group and party will disarm only if it is convinced of the good faith of its rivals ; even so, many of the rank and file would probably disobey their leaders.

Next, there is the thorny problem of administrative reform. This reform was a leading demand of the opposition during last year's conflict, and any government headed by Mr Karami would have great difficulty in shelving it. Certainly, the administration needs an overhaul ; what

administration does not? But in the special case of Lebanon, with its multitude of particularist groupings, any project for reform must arouse suspicion among such groupings that the balance in the administration is being upset to their prejudice. Furthermore, reform would cost money, and this is a year of financial stringency. It is reported that this year's budget is balanced only by the expedient of including over £2 million on account of oil revenue, which is more than the government will get unless it brings the long-drawn negotiations with the Iraq Petroleum Company and Tapline to a successful conclusion.

The Karami government is ruling by decree, having been voted special powers for six months by a bare majority of the Chamber. Those powers expire on June 12th, and the deputies and parties are beginning to stir again. Many leaders of the National Front, which grouped together most of the leading opponents of Mr Chamoun last year, are calling for amendment of the electoral law, dissolution of the Chamber, and new elections (the present Chamber was elected under the Chamoun regime in the summer of 1957, and is almost certainly unrepresentative of public opinion today). Mr Edde has set himself against elections on the reasonable grounds that he cannot guarantee law and order if the country is plunged into election fever while the population remains armed. Mr Chamoun has pronounced himself firmly against dissolution—a pronouncement that will presumably provoke his opponents to still louder clamour for it.

In fact, all these problems—disarmament, administrative reform and the fate of the Chamber—are closely interconnected; not one of them can be approached without reference to the others. What Lebanon needs most is time and patience: time to heal the bitter wounds inflicted last year, patience to unravel the tangled skein of conflicting interests without damaging the threads. It may soon be necessary to enlarge the freakish-looking four-man government now in office. If the operation can be performed without friction, and the new government can carry on the good work of the present one, Lebanon may soon return to the normal conditions of democratic life that prevailed until May of last year.

Indonesia's Achilles Tendon

FROM A DUTCH CORRESPONDENT

A GERMAN court is discussing the wholesale nationalisation of Dutch-owned enterprises in Indonesia which were valued at about £550 million when the Indonesian government took control of them in December, 1957. Two Dutch companies, the United Deli and the Senembah, are contesting the right of the Indonesian government to sell in the Bremen market, through the newly established "German-Indonesian Tobacco Association," consignments of tobacco grown on their estates in Sumatra; those estates were nationalised early this year.

The arguments used in court have already been uncompromisingly set forth in a Dutch Note of protest sent to the Indonesian government last month. This said that the nationalisation of Dutch enterprises in the archipelago, being discriminatory, was contrary to international law. Only Dutch enterprises—and all of them, including even barbers' and haberdashers' shops and beauty-parlours—are affected. Indonesia rejected the protest on the ground that it was an unacceptable interference in its sovereign rights.

This reply has caused surprise in the Hague, not so much because of its rejection of the Dutch protest, but because it makes no attempt to counter the accusation of discrimination. Dutch officials and jurists feel that this question of discrimination is the strongest point in their legal fight against the Indonesian measures. The only internationally accepted rule governing the complex and tricky matter of expropriation of foreign property by sovereign states, is that such expropriation may not be discriminatory in its nature or in its effect. The Dutch have also protested against the Indonesian government's statement that it will suspend payments of compensation until its claim on the Dutch possession of West New Guinea has been settled in Indonesia's favour: thus the "prompt" compensation, prescribed by international law, will not be forthcoming. And, in any case, after the government's emphatic statements in the Indonesian parliament that "the payments of compensation will be made in such a way that they will not burden the state finances and not result in a flight of capital," it seems doubtful whether the compensation, if and when it is eventually paid, will in fact be "adequate."

For all these reasons the Dutch are confident that they have a strong legal case. But they feel that their moral case is still stronger. The vehemently anti-Dutch campaign for the "Liberation of West Irian" in December, 1957, which culminated in the takeover of all Dutch undertakings in Indonesia, was primarily aimed at putting pressure on the Dutch government to hand over West New Guinea. On the eve of the United Nations debate on West New Guinea in 1957, President Sukarno announced that Indonesia would "startle the world" should the General Assembly again fail to find a solution that satisfied Indonesia. The Assembly did fail, and the president's threat was duly carried out. Official "West Irian" committees instructed the population of Javanese cities to boycott Dutch residents, to deny them food and cut their water supply. Dutch houses and Dutch-owned cars were daubed with such slogans as: "Kill the Dutch." The government even ordered a 24-hour general strike against Dutch enterprises, at the same time instructing the Dutch managers to pay normal wages for that day. The Dutch in Indonesia went back to Holland *en masse*. Of the group of executives, including planters, engineers and factory experts, who together with their families were estimated at 25,000 in 1957, barely 300 are left today.

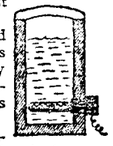
Electrical Aids in Industry. *Data Sheet* **No. 5**

Resistance Heating—2

Electric resistance heating elements have been briefly described in Data Sheet No. 4, with two examples (in furnaces and ovens) of their application in industry. This sheet lists some of the further applications which can be effectively dealt with by resistance heating.

Soft Metal Melting

Electric resistance melting is most commonly used for lead, tin, zinc, antimony, aluminium and their alloys – in processes such as tinning, type-casting, die-casting and lining bearings – at temperatures of up to around 800°C.

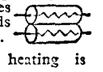


In most cases, sheathed elements are immersed directly in the metal, a *more efficient method than* applying heat to the outside of the containing vessel or pot. Immersion heating simplifies the application of lagging to the outside of the vessel, reducing heat losses and current consumption to a minimum.

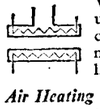
In all cases, the precise temperature control that is so essential in soft metal processes is readily achieved by the use of electricity, and electric heating also leads to a reduction of casting rejects and metal wastage and a marked improvement in working conditions.

Liquid Heating

Electricity provides the ideal method of heating liquids such as water, oils, varnishes, plating, photographic and other solutions, and of melting and heating waxes and compounds, glues and pastes, tars and bitumen. Again, immersion heating is the method most commonly employed.



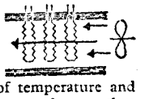
Fire hazards associated with inflammable liquids are invariably reduced by electric heating, particularly if immersion heaters are used.



It is usually possible without difficulty to apply electric heaters, either immersion or external, to existing vessels.

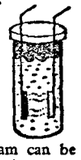
Platen, Press and Roll Heating

Electricity offers the simplest and most convenient method of heating platens, dies and rolls. It gives the precise temperature-control characteristic of electric heating systems, with lower maintenance costs.



Moreover, the relatively high temperatures required in some processes for maximum working speeds are reached without difficulty.

When electric heating is used, one or more presses can be operated without the necessity of keeping a boiler-house staff at work.



Air Heating

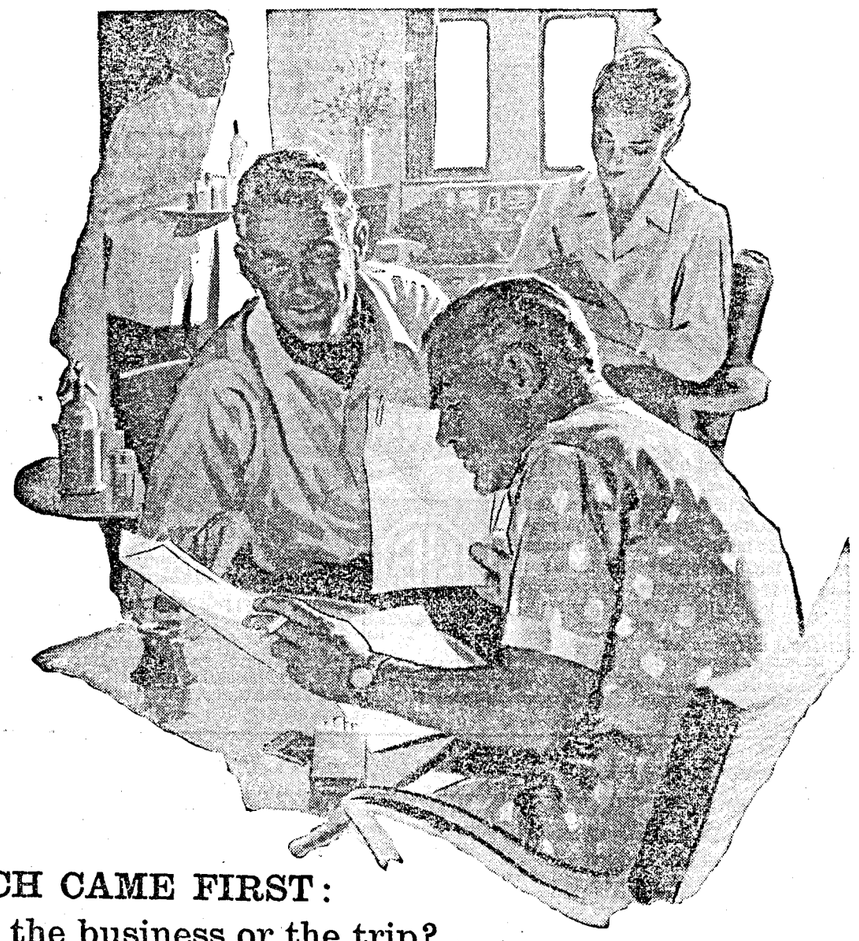
Streams of air, and of many other gases, can be heated most efficiently by electric resistance elements. Heat is generated only inside the duct, and none is carried away through exhaust flues or pipes. Quick rise of temperature and precise temperature control are thus assured.

Electric Steam Boilers and Steam Raising

There are many cases when the use of electricity for steam raising is fully justified on economic grounds.

The means employed for bringing steam from a boiler-house to the point of usage are often extremely wasteful. The efficiency of the electric boiler normally exceeds 96% and is practically constant at all loads.

Plant requiring process steam can be equipped with its own electric steam boiler, freeing the working space of steam mains just as individual electric motor drives free the factory of masses of shafting and belt drives.



Even where boilerhouse steam is still used, it is sometimes desirable for best results to boost the steam temperature at the point of usage, to make up for transmission heat losses or to increase the superheat, and this function is most conveniently performed by an electric resistance heater inserted in the steam line.

For further information get in touch with your Electricity Board or write direct to the:

Electrical Development Association,
2 Savoy Hill, W.C.2. Tel. TEM 9434.

Excellent reference books on electricity and productivity (8/6 each, or 9/- post free) are available – "Resistance Heating" is an example; "Induction and Dielectric Heating" is another.

E.D.A. also have available on free loan a series of films on the industrial use of electricity. Ask for a catalogue.

WHICH CAME FIRST:
the business or the trip?

A fortnight ago the gentleman on the right was happily combining a visit to his overseas agents with the first real holiday in years. Now he is eagerly planning a new factory in Australia and a totally new export programme. Unusual? Not at all. For this is the P & O First Class Service to Australia. Here in one of the mighty ships of the P & O fleet the British businessman gets a *personal* picture of Australia and the East.

It's inevitable. Out of some six hundred and fifty fellow passengers travelling first-class *nearly half will be people with similar or connecting interests in the same territory as yourself.* A high percentage of *those* will be people from the very area you are visiting. *They'll* give you the lie of the land you're visiting as none else can. Conditions are ideal. On P. & O both the sun and the service wear a smile. You have time to know people, to pursue ideas without interruption, to rest properly. You do more constructive work in four weeks at sea than you do in four months at home. Yet you arrive back fresher than when you left!

If you have interests in Aden, India, Pakistan, Ceylon, Malaya, the Pacific or 'Down Under'—it *pays* to travel *all or part way* by P & O First Class Service to Australia (or the Far East). Special seasonal terms and Executive Tickets are available. Ask someone to check *now* with your Travel Agent or with P & O direct. 14/16 Cockspur St., S.W.1. Tel: WHI 4444 or 122 Leadenhall St., E.C.3. Tel: AVE 8000.

P&O First Class to Australia is an investment

When President Sukarno announced that his country would startle the world, he also said that Indonesia could "compel the Dutch to comply with our justified demand by hitting them on their Achilles tendon: their economic interests in our country." The Dutch guilder, however, has retained its value. Holland is still among the prosperous countries of Europe. The minister of finance has estimated the financial burden of the Indonesian tragedy at £30 million for last year—not an impossible sum for the present Dutch budget to bear. But the West Irian campaign and the consequent expropriation of Dutch enterprises in Indonesia have, most certainly, ruined the careers of some thousands of individual Dutchmen and brought poverty to many families who had invested their capital in the former colony.

The revolt in Sumatra and Celebes, by making matters even worse, has covered up the consequences for the Indonesians of their anti-Dutch measures. The export of agricultural produce dropped last year by about 30 per cent, but it is impossible to discover how much this was due to the revolt and how much to the transfer of the management of Dutch enterprises to Indonesian officials. But the quality of the exports declined, no doubt in part because the Dutch experts had gone. The deficit on last year's budget was 9.7 billion Rupiahs, but a former vice-president, Mohammad Hatta, has estimated it at 12 billion. The deficit for the current year has been put at 8 billion but may prove to be more. Currency in circulation rose by 50 per cent in one year to the unprecedented total of 34 billion Rupiahs. Imports have been cut so drastically that many industries have had to close down for lack of raw materials. The cost of living rose for middle-class officials by 80 per cent in 1958, and it is still rising.

INDONESIAN newspapers which staunchly support the government have recently been speaking even more plainly than these figures. According to the nationalist *Indonesian Observer*:

> If shortly after the West Irian action, during the early part of 1958, people willingly sacrificed luxuries for the national cause, nowadays almost everything has become a "luxury." . . . Home produced bathsoap is no longer within the reach of the lower paid groups. . . . A city worker who only makes Rp.6.50 daily can never afford a litre of rice as this commodity is only available at 8 Rupiahs a litre. He therefore cannot even support a family on the wages he earns. . . . This cannot go on much longer.

And the leftist *Berita Indonesia* added:

> The sufferings of the people have become unbearable; their stomachs cannot wait until a solution has been found for political controversies or until the implementation of (President Sukarno's scheme for) guided democracy.

Few Dutch people find any satisfaction in such reports from their former colony. Most of them have written off Indonesia as a closed chapter in Dutch history. They deplore the ending of the story but they accept the fact that it has ended. They do, however, stand on their rights, and the proceedings in the Bremen court are being followed with widespread interest in Holland. There is, too, a not unimportant group of Dutchmen who maintain that politics and business should be separated. They hope that Indonesia will gradually realise that the former Dutch interests in Indonesia represent Indonesia's, rather than Holland's, Achilles tendon; and that Indonesia's leaders will draw the necessary conclusions.

Austria's Coalition on Trial

FROM A CORRESPONDENT

HERR RAAB'S proposal to alter the structure of the coalition has become one of the main talking points of the Austrian electoral campaign that culminates in the elections this Sunday. The Austrian Chancellor has said that in order to end the creeping paralysis afflicting the legislature, the coalition pact between the People's party and the Socialists should be restricted to foreign affairs, finance policy and defence. In the event of stalemate, decisions should be taken by means of a vote in Parliament. This not very revolutionary proposal may cause surprise abroad, but it must be remembered that in Austria decisions are reached, not by a vote in Parliament, but by collective bargaining. If one party wishes to put a penny on the price of milk, or amend the rent act, it must work out the *quid pro quo* with care. Neither of the main parties can carry through legislation without the consent, however grudging, of the other, and one is well used to the spectacle of ministers raging in public against measures to which they have agreed within the coalition consortium.

Before the first postwar elections in 1945 the parties agreed that Austria should have a coalition government whatever the results. So long as this contract stands the coalition should continue. Of course, in theory, the voter can do away with it. But in practice this is not so easy. The leaders of both main parties have repeatedly said that the votes given to their parties in the last general election were in effect given to a continuation of the coalition. If this were not the will of the people, so the argument runs, the voters would have gone over to the Freedom party in droves. But people who have voted conservative or socialist all their lives must be desperate indeed before they vote for a party which is little more than a kind of voluntary cattle pound for dissidents of all kinds, including the ex-Nazis. Only a plebiscite can decide the matter, and although the right to hold plebiscites is laid down by the Constitution, no enabling machinery has been legalised by act of Parliament. Herr Raab's suggestion finds no favour with the Socialists, who see themselves being voted down by both the People's party and the Freedom party.

AT present the Socialists find themselves at a disadvantage. It is clearly not easy to play the part of the weaker member in a coalition, to be the government from Monday to Friday, and the opposition at the weekend. The double function involved gives an impression of collective insincerity which one would be far from attributing to individuals. This trouble began to develop when Austria regained its independence, and became acute when the Socialist candidate, Dr Schärf, was elected to the Presidency in May, 1957. The Socialists maintained that this event proved a swing to the left entitling them to equality of bargaining power, and they have stonewalled ever since. The Socialist party scene suddenly looks very bare now that Oscar Helmer (minister of the interior), Johann Bohm (president of the trades unions and vice-president of Parliament), Karl Maisel, Marianne Pollak and others have decided not to stand for re-election. Dr Pittermann, the party leader, has strengthened his position by disposing of the old guard, but too many of the new entry come from the ranks of industrial managers and party officials. Worst of all, Herr Raab has

chosen this moment to make public the government commission's report on VÖEST, the nationalised united iron and steel company. The commission has found misappropriation of funds, such as can hardly increase the voters' confidence in nationalisation. Herr Raab has been skilful in avoiding putting full responsibility on the minister concerned, Herr Waldbrunner, or on other individuals ; he has said that the trouble lies in a type of administration which allows a system of rake-offs to gain such a hold.

The People's party are relying on the economic stability of the country and on the popularity of the Chancellor and Herr Kamitz, the minister of finance, to maintain or increase their majority, and Herr Raab has remained deaf to all demands for party reorganisation. In civic and trade union elections the Freedom Party has shown signs of a small resurgence of popularity. With the Communists, it forms the Opposition ; here, of course, the resemblance ends. No lover of the coalition, the Freedom party is now critical of the Chancellor's reform programme ; but the fact remains that in a free vote it will tend, having registered its formal protest, to march with the Right. If the parties are returned much as they stand today, there will presumably be nothing to prevent Herr Raab from reforming the coalition.

The Arab South—II

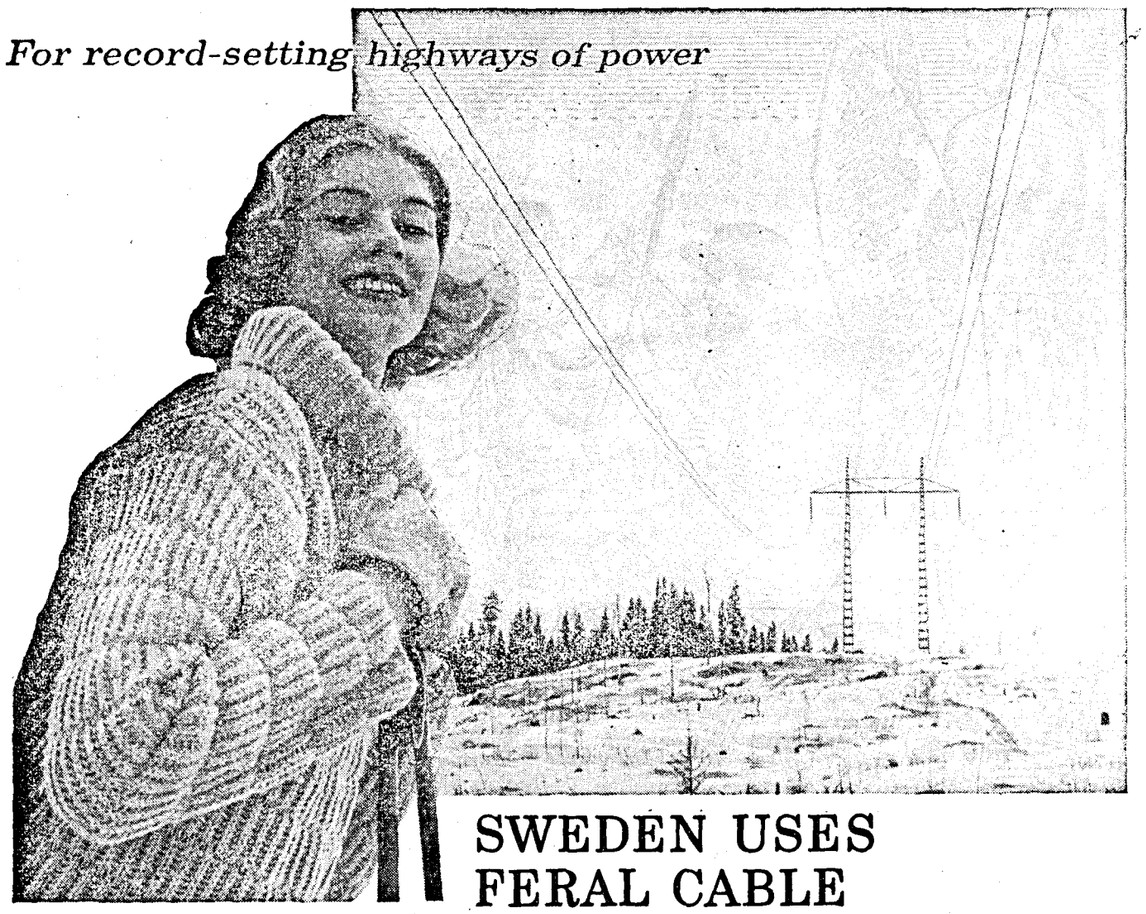
FROM A SPECIAL CORRESPONDENT

AMONG Yemenis in Aden there is much criticism, often violently expressed, of the existing regime in the Yemen, particularly among those who belong to the Shafai persuasion, as opposed to the ruling Zeidis. Many Arab nationalists will also complain, at least in private, of the backwardness and "feudal" character of the present Yemeni government and express their hope for a radical change in the near future. Nevertheless, the United Arab Republic has formed a union of Arab states with the Yemen and is committed to support the present regime and to treat Yemeni methods of furthering their claims to Aden and the protectorate as legitimate expressions of Arab nationalism. Educated Arabs in this region are thus often made indignant by the "Voice of the Arabs" describing acts of plain banditry as praiseworthy nationalist activity.

Physical insecurity in the protectorate has indeed been mainly due to the action of lawless men who can always be trusted to make trouble in return for gifts of arms or money. It would, however, be wrong to deduce from this that there does not exist a strong undercurrent of Arab nationalist sentiment, however vague and unorganised, which is ready to crystallise the moment conditions are favourable. Of this feeling President Nasser is the symbol ; and his reputation has been enhanced by his denunciation of the communist threat in Iraq. The traveller notices abundant signs of this, quite apart from the photos of Colonel Nasser in the shops. In the remote cities of the Hadramaut little children in the streets begin to chant "Long live Gamal Abdel Nasser" on the rare occasions when an Englishman passes by. Audhali tribesmen on the Yemeni border can be seen sporting caps with "Long Live Gamal" elegantly embroidered on them.

The repercussions of the Suez expedition are discreetly suggested in the triennial report (1955-1957) of the department of education: "A premature but happily temporary departure of the Sudanese teachers . . . coinciding with events in the Middle East that caused a certain amount of distraction among the students, led to a stoppage of normal progress." Such evidence is not controverted by the fact that similar manifestations in Lahej ceased when a sultan sympathetic to nationalism was replaced by one willing to co-operate with the British authorities. It is only the backward character of the area that renders these manifestations for the moment ineffective.

It is thus from Aden Colony itself that the nationalist impulse is most likely to come. Development during the last five years has been immense. The colony budget is nearing £4 million, as compared with £500,000 for the whole protectorate. If entrepôt trade has decayed, bunkering facilities attract an average of eighteen ships daily. Education and medical services have leapt ahead. Fresh life has been brought by the Little Aden refinery, and a new element is being added by the choice of Bir Ahmed, a minute independent enclave between Aden and Lahej, as the meeting place for the Federal Councils. Social and economic progress is bringing political change with it. The beginning of self-government has called attention to problems which could previously be ignored. Thus, it is becoming difficult to deny the large working-class population of Yemenis the same rights of citizenship as are allowed to Commonwealth residents of Indian or Pakistani origin who play a preponderant part in trade, particularly as the Yemenis provide a large proportion of the membership of the trade unions. Although these Yemenis are in the nature of refugees from the social and political conditions of the Yemen, the authorities regard them as a potential fifth column—if not on behalf of the Imam's government, at least for Arab nationalism in one form or another.



THE "adenisation" of Aden tends to bring about the "adenisation" of the protectorate also. As Arabs fill responsible posts in the administration of the colony, they automatically begin to replace Englishmen as advisers and technicians in the protectorate. In fact the distinction between colony and protectorate becomes increasingly artificial and difficult to maintain. Both have the same governor. Protectorate communications lead from and to Aden as if to a capital city. The headquarters of the western protectorate administration is in Aden and its new capital adjoins it.

The main inducement to retain the British connection is fear that the withdrawal of the British would reduce the city to what it was before they occupied it—an insignificant fishing village. But even this assumption is likely to be queried by Arab nationalists. They will say that bunkering facilities will still be required, whoever rules in Aden, and that the refinery will remain a paying proposition. Everything would depend on efficient management ; and Egyptian leaders with the experience of taking over the Suez Canal behind them are likely to claim that an Arab government under their auspices could take on the commitment.

The position can be held for the moment without too great difficulty, but matters will be very different as soon as an organised nationalist party with a programme and a leader appears. Oddly enough, the character of the present anti-British regime in the Yemen is a principal factor in delaying this development ; while British plans for federation and for social progress in the protectorate are a principal factor favouring it.

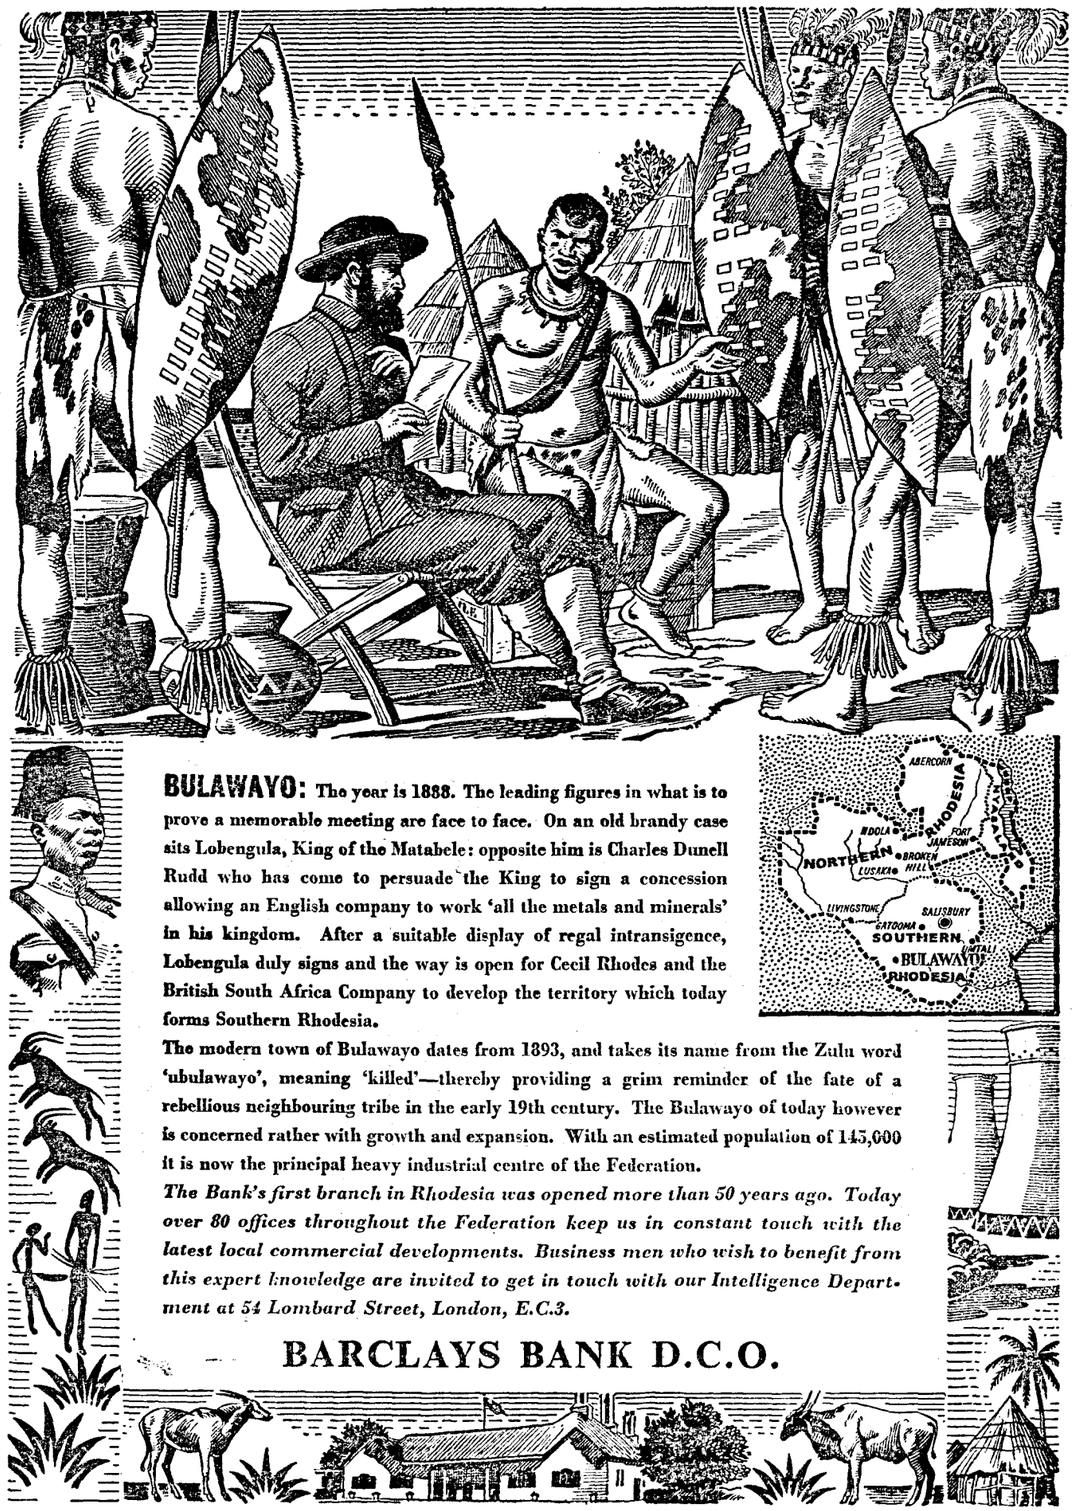
For record-setting highways of power

SWEDEN USES FERAL CABLE

Forests, covering half the country, are Sweden's chief single source of wealth. Also contributing to the country's rapid economic growth has been an abundance of relatively cheap hydroelectric power. But the remaining water power resources are nearly all in the north, far from the main consuming areas. To transmit power economically over distances up to 1,000 miles, Swedish engineers therefore developed the record 380,000-volt system. With more than three times the transmission capacity of the previous 220,000-volt system, fewer power lines are needed —thus saving thousands of acres of forest—and transmission costs are appreciably lower. The conductors used in this remarkable system are Feral Cable—*reliable* Swedish ACSR.



To help you in selecting conductors, the know-how of men who helped design and build Sweden's power transmission system is available in *"Electrical Data for High Tension Power Lines"*. Write for a free copy today!

When planning power lines, consult

BULAWAYO: The year is 1888. The leading figures in what is to prove a memorable meeting are face to face. On an old brandy case sits Lobengula, King of the Matabele: opposite him is Charles Dunell Rudd who has come to persuade the King to sign a concession allowing an English company to work 'all the metals and minerals' in his kingdom. After a suitable display of regal intransigence, Lobengula duly signs and the way is open for Cecil Rhodes and the British South Africa Company to develop the territory which today forms Southern Rhodesia.

The modern town of Bulawayo dates from 1893, and takes its name from the Zulu word 'ubulawayo', meaning 'killed'—thereby providing a grim reminder of the fate of a rebellious neighbouring tribe in the early 19th century. The Bulawayo of today however is concerned rather with growth and expansion. With an estimated population of 145,000 it is now the principal heavy industrial centre of the Federation.

The Bank's first branch in Rhodesia was opened more than 50 years ago. Today over 80 offices throughout the Federation keep us in constant touch with the latest local commercial developments. Business men who wish to benefit from this expert knowledge are invited to get in touch with our Intelligence Department at 54 Lombard Street, London, E.C.3.

BARCLAYS BANK D.C.O.

THE BUSINESS WORLD

Can Nuclear Power Compete?

CHAPEL Cross, on the edge of the Solway Firth, is the second nuclear power station opened in this country and the fifth in the world. Since Calder Hall became the world's first full-sized nuclear power station to generate electricity for commercial sale, the Americans have commissioned a nuclear power station at Shippingport, the Russians have one in Siberia, and the French are generating atomic electricity at Marcoule in Avignon. These five nuclear power stations all sell electricity but none is in fact a commercial installation. The American plant at Shippingport is an outsized submarine reactor with no pretence of generating electricity at commercial prices. The French and Russian stations and the two British nuclear stations at Calder Hall and Chapel Cross were built primarily to make plutonium for bombs: they generate electricity as a by-product simply because the reactors in which this fissile material is produced have to be cooled down to a tolerable temperature. The Atomic Energy Authority sells the electricity from Calder Hall and Chapel Cross to the electricity generating authorities in England and Scotland for the best price that it can negotiate. This is modest, because the power output is interrupted whenever a reactor is shut down for the removal of plutonium.

The power station at Chapel Cross looks more functional and less experimental than that at Calder Hall because it was planned from the outset as a single unit. Its four reactors straddle the site in a straight line, the four cooling towers attend like flunkeys behind them ; the single low turbine house lies in front. The plant cost £34 millions, or roughly £185 per kilowatt of installed generating capacity. That is much the same cost per kilowatt of capacity as for Calder Hall, and it is roughly 50 per cent higher than the electricity authorities expect to pay for commercial nuclear power stations operating on the same basic principles but primarily designed to produce electricity. Neither Chapel Cross nor Calder Hall can provide answers to the questions that continue to be vital to a proper assessment of atomic power—how much it will cost and whether that price will be competitive with other fuel during the station's working life.

THIS country is committed to a nuclear power programme of 6,000 megawatts to be completed by 1967 when atomic stations will generate about 25 per cent of the country's electricity. That programme can be accelerated or decelerated within broad limits. Recently it has been decelerated ; there will be a gap of two years between the start of work on the Central Electricity Generating Board's nuclear power station at Hinkley Point and on its next station in Wales. When the nuclear power programme was drafted in 1955, and trebled in size early in 1957, it was expected that the generating costs in thermal stations would rise while nuclear power would cost less. For a variety of reasons, however, nuclear costs are not falling as fast as was thought, while the costs of thermal power have come down in a manner totally unexpected then.

There have been two major increases in the cost of constructing nuclear plants. First, the long-term interest rates applied have risen from 4 to between 5 and 6 per cent. Secondly, since the Windscale fire, more elaborate and expensive precautions have had to be taken to eliminate any risk of similar accidents in a power station. These increases have added perhaps 20 per cent to the net cost of generating nuclear electricity and have offset the possibility of dramatic economies on the civil engineering side, where the designers have obtained big increases in electricity output for quite modest increases in size and cost. The Chapel Cross and Calder Hall reactors, which are identical, are the smallest that could work on natural uranium fuel ; each reactor generates 46 megawatts of electricity at a capital cost of £185 per kilowatt. The Hinkley Point power station is the largest so far begun. Its reactors will give 250 megawatts apiece for a capital cost of £108.

These economies of scale are approaching their limits. The next nuclear power station, in Wales, where the reactors will generate 300 megawatts each, will still

cost as much as Hinkley Point because of peculiarities of the site. It may be possible to reduce the capital cost of future stations by a further £10 per kilowatt, to a little below £100. When these Mark I stations begin to be followed in the second half of the 1960s by Mark II versions using mildly enriched fuel and much higher gas temperatures, capital costs may be reduced to between £80 and £90 a kilowatt, but not appreciably lower. There seems to be little scope for a really drastic reduction in the high capital cost of nuclear power stations built to the British pattern until the physical size of the reactors shrinks to more manageable proportions. Small size means highly enriched fuel, and neither cheap enriched fuel nor the reactors to use it will be available much before 1970. This capital intensity confines nuclear power stations to fairly continuous operation on base load. But used as such they will generate a high proportion of Britain's power, and their costs will be an important factor in the future level of electricity prices across the country.

After adding 10 per cent to capital costs to cover contingencies and such items as access roads and site preparation, the British and Scottish electricity boards estimate that nuclear power from the first, medium-sized nuclear power stations burning natural uranium only will cost anything between 0.7 and 0.8 pence per unit, falling to perhaps 0.6 pence for the slightly larger stations but not declining much below this. The Mark II stations operating towards 1970 on mildly enriched fuel may bring the figure down to a halfpenny a unit or slightly lower. These are notional figures but they suggest that nuclear power stations coming in during the next decade are going to produce electricity costing 20 per cent more than that from the best type of thermal station, which is the only plant with which they can be properly compared. A modern thermal station built on the coalfields can generate electricity now for a good deal less than 0.6 pence per unit when it pays the equivalent of 73 shillings a ton for its coal. With the shadow of atomic energy lying across the pits, there is no reason to think that the generating board need tolerate a continued rise in the prices it pays for power station coal—of which there is a mounting surplus. If the Coal Board's prices are not competitive, those of fuel oil or American coal will be.

Coal prices for this customer, if no other, certainly need not rise more than prices in general. Moreover, there has been a spectacular fall in the construction costs of new thermal power stations, from an average of £70-£75 a kilowatt when the atomic energy programme was first considered to a level for stations planned now much nearer £40 a kilowatt. This reduction is not wholly due to technical improvements that have taken place in the design of generating plant: the British electrical industry at the moment is indeed having to play rather safe on new technical developments in coal stations, because of the expensive experiments in nuclear generation to which it is committed. It is mainly a matter of economies of scale in building larger stations. But the arrival of atomic energy and a pause in economic growth have brought a frosty nip of competition into the fuel industries.

There is little that atomic constructors can do to cut prices in the face of this competition, for they are already losing money on their first nuclear power station contracts. A sharp fall in the price of the natural uranium used in these stations as fuel is, however, more than likely. Uranium costs at present around £10,000-£11,000 a ton, supplied on long-term fixed price contracts that expire during the next three or four years. These contracts, entered into at scarcity prices, were designed to encourage the opening of new mines. On their expiry, uranium in a free market is expected to halve in price to £5,000-£6,000 a ton, which will cut the price of the processed fuel elements for the first nuclear power stations by 25 per cent. The Atomic Energy Authority charges about £20,000 a ton for manufactured fuel elements, £10,000 for the uranium they contain and £10,000 for the cost of fabrication, more if the design is complex. A reduction of £5,000 a ton on the initial charge of a power station requiring between 800 and 1,000 tons of fuel, as the large ones do, would represent a considerable saving. It would also represent a reduction of £20 million a year in the cost of providing the 4,000 tons of fuel that will be required annually when all 6,000 megawatts of nuclear plant are installed and working. Fuel replacement costs are estimated to make up about 25 per cent of the net cost of atomic electricity. But it is difficult to calculate how much this would change total generating costs, since the price that AEA is prepared to pay the power stations for spent fuel containing low-grade plutonium—which stands now at £5,000 a ton—is linked to the price of natural uranium and must fall along with natural uranium prices. This "buy-back" price now reduces the calculated cost of atomic electricity by 10 per cent, but electricity producers would much prefer a lower fuel bill to high plutonium credit.

One of the first decisions that will face the new chairman of the AEA when he takes over from Lord Plowden at the end of the year is whether the Authority should alter its published fuel prices now, to take account of uranium price reductions that will certainly be in force by the time any fuel ordered is due for delivery. This applies particularly to export orders for foreign customers, most of whom must pay more for their capital than their British counterparts, and who are harder hit by the high capital cost of investing in nuclear energy.

The fall in uranium prices alone cannot close the gap between conventional and nuclear electricity costs. Unless the present downward trend in world coal and fuel oil prices is reversed—and the threat of atomic competition, among other influences, may prevent this from happening for quite a long time—it is beginning to look as if the Mark I Calder Hall type of power station running on natural uranium will suffer a permanent cost disadvantage of perhaps 10 to 20 per cent compared with the best type of thermal generating plant. This does not mean that the British nuclear power programme was either misjudged or ill-timed, but it could saddle the British electricity system with a basic supply of rather high-cost electricity for the next 20 to 30 years. In the long run nuclear costs will probably come down or remain level, whereas costs of coal, and even oil are likely to rise—though this run looks much longer than it did when the nuclear programme was trebled. But the only circumstances in which one might expect any drastic revision of the programme would be a long, continued period without economic growth, when atomic scientists and miners would come into direct conflict as political lobbyists.

The nuclear network to be built between now and 1967, the first units of which will save a million tons of coal a year each, was designed only partly to relieve the pressure on conventional fuels that then seemed likely: it was also partly an investment in the development of technique and resources for more compact and cheaper nuclear plants to follow these first ones. These improvements depend primarily on richer nuclear fuels, of which the only one that can be produced at commercial prices on this side of the Atlantic is a mixture of natural uranium and low-grade power station plutonium. Scientists are only half way to solving the technical problems of burning plutonium. But on their progress during the next five years the commercial future for nuclear power largely depends.

Aluminium's Long Pull

Producers of aluminium believe that they need a surplus to help them to win larger markets. They now have a bigger surplus than they bargained for.

Aluminium is a young metal compared with its old-established competitors copper and steel. Yet it has grown fast. It now rivals copper for second place, after steel, in total output and its long-term prospects are bright. But the short-term outlook is not. During the last two years, after a long period of buoyant demand, sales have fallen off. The biggest decline came in the United States, the major consuming country, where the effects of recession were aggravated by the sharp decline in defence demands. And as luck would have it the recession hit producers just as they were completing the third postwar round of expansion. Consumption of aluminium in the free world dropped by three per cent in 1957 and again by three per cent last year, to about 3 million long tons. Production capacity was then about 3.6 million tons of metal, and although demand started to revive towards the end of last year producers are still working well below capacity.

For the first time for many years prices went down, not up. The North American producers cut their prices by 2 cents to 24 cents a lb in the spring. They recovered 0.7 cents of this cut in August following a wage increase, though Aluminium Limited, the Canadian producer, kept its European price at £180 a ton (delivered U.K.). Keener competition also forced some concessions in pricing policy.

Falling demand and lower margins hurt all the major producers except Reynolds Metals, which last year managed to maintain its sales and its net profits. Sales by Aluminum Company of America (Alcoa), the largest producer, dropped from $875½ million to $758 million, and net profits fell sharply from $75½ million to $43 million; Aluminium Limited's sales fell less sharply from $453½ million to $423 million, but net profits dropped from $44.7 million to only $26 million. British Aluminium does not publish sales; gross profits dropped from £3 million to £2.1 million, but an increase in investment income and lower bank and interest charges cushioned the decline in net profits from £1,247,000 to £1,030,000.

Plans for further expansion in aluminium have not been abandoned, but they are being stretched out. Aluminium requires bauxite and cheap power. It takes longer to convert water power to electricity, and to build plants for refining bauxite into alumina, than it does to build smelting plant to convert alumina into aluminium metal. So Aluminium Limited, to take one example, has held up the construction of new smelting facilities, stretched out completion dates for two new alumina plants in Jamaica and British Guiana, and has kept to its original schedule for building additional power facilities in Canada; when demand warrants, it will have enough power to support a total output of 890,000 tons of aluminium, compared with its present capacity of 690,000 tons.

Recession at home quickened the American companies' interest in opportunities for expansion across the Atlantic. Alcoa and Reynolds, its up and coming rival, became parties to the biggest share battle in London for years. Reynolds, in partnership with Tube Investments, fought its way through to control of British Aluminium, thrusting aside BA's chosen partner Alcoa. This changed the structure of the industry. Reynold's association with British Aluminium makes it nearly as big a producer of aluminium as Aluminium Limited, and a rival of that company in world markets. Hitherto the big integrated American companies have concentrated on making semi-fabricated products for their home market, leaving Aluminium Limited, which has the advantage in low-cost resources of power, to meet their residual needs of primary metal. In turn

Aluminium Limited, which enjoys no advantage in fabrication and has only a small domestic market in Canada, has concentrated on producing ingot. About 40 per cent of its total sales go to the United States, with Britain taking another 30 per cent, and Canada and other countries the rest. Though it expects to raise its own fabricating capacity to about 360,000 tons by 1960, this would still employ less than half of its capacity for producing metal. Its largest single interest in fabricating is in Northern Aluminium in this country, which has 100,000 tons; Canada comes next with about 90,000 tons, and the rest is spread through a score of countries in Europe, Asia and in Australia.

Ownership of British Aluminium gave Reynolds-TI a controlling interest in Canadian British Aluminium, which has primary facilities of 80,000 tons of ingot in Quebec (to be doubled in time) and another 30,000 tons in Scotland. BA also has potentially important interests in bauxite and power in West Africa and Australia. It has capacity for fabricating about 85,000 tons a year in Britain, and smaller plants in India and Australia.

To the producers the present surplus is not wholly unwelcome. They are certain that their markets would have grown even faster since the war if customers could always have been assured of plentiful supplies. With that assurance now behind them, the producers are bending their efforts to expand established markets—transport of all kinds, construction, transmission lines and other electrical equipment—and the newer markets like foil, containers and packaging, pipe and tubes. A big new outlet—motor car engine blocks—may soon be within their grasp. General Motors is reported to be using an aluminium engine block in the new smaller car it is launching in the United States this autumn.

Moving into world markets, the American aluminium companies see opportunities for an even faster rate of growth than in their home market. Between 1946 and 1957 American consumption rose nearly 2½ times to 1.7 million tons while consumption in the rest of the world increased over 3½ times to 1.4 million tons. Yet consumption per head in Europe is still far below the 23 lb per head of the United States. In Britain, Germany, Sweden and France it ranges from 9 to 12 lb per head, and the average for Europe is about 6 lb. Though other countries are unlikely to catch up with the American consumption it should be possible to narrow the gap. All the major producers are now expanding their fabricating plants abroad or establishing new ones. Aluminium Limited, for example, is raising the capacity of its British plants from 100,000 to 130,000 tons, constructing additional sheet-rolling capacity and a foil mill in Australia, and erecting plants in New Zealand, Nigeria and Ghana.

But however promising the future may be, the present has still to be reckoned with. The president of Aluminium Limited expects that even with a recovery of world consumption, the surplus will last for the next few years. He told stockholders recently that despite a continuing rise in sales to independent and associated fabricators, sales and earnings would probably be lower this year than last. Net income in the first quarter of 1959 is estimated at only $2.3 million, compared with $5.3 million a year ago. Sir Ivan Stedeford, the new chairman of British Aluminium, has reminded shareholders that the increase of 5½ to 17½ per cent in the ordinary dividend, which absorbed the whole of the available trading profits, was unjustified and had been paid only to conform to the conditional undertaking made by the old board. He adds that it is highly improbable that this rate of dividend can be repeated this year, and impossible to forecast when it might be justified.

In the aluminium industry, like others which need years to bring in new capacity, it is never easy to keep expansion in step with demand. In most of the postwar years there was too little metal rather than too much. In the long run it may be possible to achieve a faster, if not more profitable, rate of growth by carrying spare capacity. The industry has always claimed that it needed a surplus. Now it has one.

BUSINESS NOTES

IN THE MARKETS

Equities Go Ahead

The London equity market has had another strong and active week. Gilt-edged have been dull; the market has had to absorb appreciable further bank selling, and the bad taste of the LCC issue is still not quite gone. But the *Financial Times* index of industrial ordinary shares has crept up day by day in lively markets; in the week to Wednesday, *The Economist* indicator shows a rise of 3.7 to a new peak of 267.0 (1953=100). Biggest interest has been in hire purchase houses and Kaffirs. In the hire purchase group United Dominions Trust touched 160s. on Tuesday, up 15s. on the week, and other big finance houses shared in the rise. The figures released by Hire Purchase Information confirmed that the budget boost had carried sales of cars on hire purchase to record levels; thus the big increase in hire purchase activity set off by decontrol last autumn is being maintained. This must mean a good year for finance houses; but the latest spurt in share prices, which follows a major spurt in the first half of last year in anticipation of easier credit, has carried prices to dizzy peaks—up to three times the height of prices at the nadir in February, 1958. And against the rise in volume of HP business may have to be set a paring of margins, and perhaps tougher competition from the bank affiliated units. In this climate, there is an obvious premium for the remaining independents on size and established strength.

* Adjusted for scrip issues. † Not quoted.

The quickening of interest in Kaffirs has stemmed mainly from renewed talk about the dollar and the gold price. Probably a majority of thinking observers of international finance still see little likelihood of America agreeing to such a move, and still less likelihood of it being forced into it. But the renewed outflow of gold from the United States, and some speeches at the conference of International Chambers of Commerce in Washington—including the bolt from the blue from Sir Jeremy Raisman, deputy chairman of Lloyds Bank, advocating a doubling in the gold price—have given new heart to speculators. Most of the buying in London has come from professional dealers on the Cape and the Continent; there has been some United States buying, but it has been smaller than at the end of March. Interest has again been concentrated on the new mines in the Orange Free State. There has been no general revival in shares of the older mines, which is perhaps a sign that the speculators are not pitching hopes too high.

CARS AND THE HP BOOM

Spurred by the budget, HP contracts for new and secondhand cars reached a record 92,309 in April—15 per cent more than in March, when motor business accounted for most of the increase of £28 million in total HP debt.

THE ECONOMY

A Glance at the Orderbook

This week, for the first time, the Board of Trade has published some general statistics of orders on hand in the engineering industry, to supplement the fragmentary detailed statistics already published (for machine tools, shipbuilding and petroleum equipment). What the board is now offering, as a new facet of its revised and improved production statistics for engineering, is an index measuring the total value of orderbooks for home and export in engineering at the end of each month, expressed in constant prices, taking orders at the end of January, 1958, as 100. This index does not show, nor apparently does the board obtain from engineering firms, the rate at which new orders are being booked, as the few existing statistics of orders do.

Nor can one readily gain any reliable indication of the rate of ordering by comparing the new index with the volume of production over the same period. Britain's official production index, necessarily, is a measure of the "value added" in industry's operations, attempting to exclude double counting. The total value of orders on hand in engineering at any one time, however, must contain double counting, because an order placed with a main contractor generates other orders upon a range of component suppliers, apart from sub-contracting. One would need a measure of the volume of "final output," such as for example can be drawn from the annual censuses of production, to make useful comparisons with the value of orderbooks—and also actual money figures for the January value of stocks here used as a base. But statistics of individual orderbooks are obtained in confidence from industry, which has still some reluctance regarding disclosure even in aggregate form, and the official statisticians may well in any case have their own reservations about the quality of the figuring so far.

But the new index does show that total orderbooks stopped growing in 1956, the home market being affected before the export market. Since September 1, 1957, orders on hand for both markets have fallen considerably and the total volume of orders on hand at the end of February this year was indeed some 10 per cent less than at the end of 1954. In its discussion of the new index the *Board of Trade*

Journal adds some glosses upon the different courses of production of capital and consumer durable goods; its new statistics of engineering clearly make it possible to separate out these categories rather more confidently. It may be that some separation of the index of engineering production into

capital goods, consumer goods, and intermediate engineering would be practicable from these figures. As and when the figures and their suppliers allow, moreover, the board ought to work towards indices of orders for capital and other goods in engineering, such as have long been available in Germany.

STERLING

Spring Tide

STERLING is still doing very well—probably better than the authorities had expected. In April the central gold and dollar reserves rose by £40 million, or $112 million; this raised the total to $3,251 million, a new peak. Thus the gains of the past four months have more than covered the end-year payments of $196 million on North American loans and the $200 million repaid to the International Monetary Fund in March. That is no mean achievement. Admittedly, the early months of the year are the flush season for sales of primary produce by overseas sterling countries; and the reserves have also benefited (by about $42 million in the past six months) from the recent American activity in company take-overs. But the underlying demand for sterling on commercial account has been strong; and more financial business has been attracted to London. The establishment of convertibility for non-residents since the end of 1958 has brought a substantial boon.

The reserves last month benefited from no known receipts of a special character. The £12 million expected from Germany for this year's support costs will not be received until this month, and then it will be paid into an account at the Bundesbank and will have no sudden effect on the London reserves. There was one special payment in April, of $11 million in connection with the settlement of debts in the winding up of the European Payments Union. Details of this settlement are expected later this month.

* Adjusting for one month lag in EPU settlements, for small receipts of US aid and $97 million from Germany in March; and for special payments, including $196 million in December on North American debt and $200 million in March to IMF. December figures slightly distorted by inclusion for first time of non-dollar currencies now convertible.

Gold and the Dollar

THE main feature of the exchange markets this week has been the weakness of the dollar. This was due partly to reports of a further outflow of gold from the United States (reports that at first greatly overstated one week's loss). Dealers are now anticipating the demands that will be faced by the American authorities in coming months for the gold portion of the increases in countries' quotas at the International Monetary Fund. These increases total around $5.8 billion, so that just under $1½ billion will have to be found in gold. In practice there are only three sources—newly mined gold from South Africa and other producers, the vast gold stock of the United States; and the vast gold stock of the Soviet Union. The demands made by IMF members on their US dollar balances in coming months will depend to an important degree on how much gold is sold by the Russians.

In the London market this week the dollar price of gold climbed to $35.12-14, compared with $35.09 (allowing for ¼ per cent commission) at which central banks can buy from the Federal Reserve in New York. The differential is not large enough to encourage physical arbitrage of gold between the two centres—for that the London price would have to reach about $35.25—but it would pay central banks to buy gold from the Federal Reserve System and sell from existing stocks in London. Most central banks, however, appear to regard this turn as insufficient to risk incurring the displeasure of the American authorities. There has been little forward dealing in gold in London under the new facilities, though there has been some in Zurich this week.

Dots in the Foreign Exchanges

THE London foreign exchange market decimalised itself at the beginning of this week. Until then most rates were quoted in fractions—such as $2.81⅝-11/16 for US dollars, or Frs. 12.18⅜-½ for Swiss francs. Dealers are now free to quote and deal on whatever base they like to choose. For inter-market dealings they have switched to decimal quotations, which have long been the standard in Continental markets. For the time being the banks are adhering to fractions in their quotations to their clients, and published rates are still on this basis.

The switch to decimal quotations has led to a noticeable narrowing of dealing rates within the London market. In

Each child born this year in the United States will need, on average, 15 tons of paper during its lifetime.

During the next 20 years this figure, it is estimated, will rise to 25 tons. Certainly the trend is clear. The world is going to need more paper and more things made from paper. Bowaters are deploying their wide-spread and diversified resources in line with this trend.
In North America as well as in Britain, mills and factories are ready, or being made ready, to follow the indicator of rising demand.

THE BOWATER ORGANISATION

GREAT BRITAIN UNITED STATES OF AMERICA CANADA AUSTRALIA SOUTH AFRICA REPUBLIC OF IRELAND NORWAY SWEDEN

the case of the US dollar, for example, inter-market dealings have this week been conducted on a two-point spread, such as $2.8166-68, i.e. with a margin of 1/50th of a cent, compared with the normal 1/16th and occasional 1/32nd margins that were previously used. This narrowing of margins was advocated by many London brokers themselves, for since the widening of the official exchange market in the convertibility moves many London banks were obtaining their requirements direct in Continental centres rather than from London brokers, who should now regain business. For their clients, London banks have always quoted very fine rates, and commission at ⅛ per cent with a maximum on any deal of £6 5s.

As a matter of general principle, banks dealing for clients reckon to give them the market rate, though this is more often than not shaded slightly in the bank's favour. The shading may become somewhat more pronounced as a result of the difference in the method of quotation—fractional for clients, decimal for the market. But important clients such as the oil companies are so conversant with what is going on from hour to hour in the market and so consistently plied with competitive quotations for the business they have to entrust to the market, that they, too, should derive appreciable benefits from these improved arrangements for dealing.

ANGLO-FRENCH TRADE

Pact, But No Particulars

THE Board of Trade has not published details of the new trade agreement with France that was signed in Paris last week. The new French import quotas have to be given to the British trade associations concerned, and will in time appear in the trade press, so that a diligent student will eventually be able to put all the pieces together even without the benefit of the Board of Trade's help in a matter of much public interest. The negotiations followed the French-inspired refusal of the common market countries to accept Britain's proposal that all the OEEC countries should reciprocally make the same increase in quotas that the common market countries were required to make among themselves. (Each member of the common market undertook to convert its bilateral quotas with other members into one quota open to all, and to increase the total value of all quotas by 20 per cent. Quotas for individual items had to be raised by at least 10 per cent, and any nil or negligible quotas had to be raised to, or opened at, a level equivalent to three per cent of domestic production of that item.)

As the common market countries decided that each member should negotiate bilaterally with outsiders, Britain had to seek the best bargain it could. Despite liberalisation roughly one-third of French imports of industrial products from Britain are still restricted, whereas nearly all Britain's imports from France are free. As France promised to increase the ordinary quotas by at least ten per cent, Britain sought the largest possible increase in items covered by the "three per cent" rule, where France had no intention of giving equality of treatment. Britain has not fared badly. It is understood that France has raised the total value of its quotas for Britain by rather more than 20 per cent to about £15 million. On the ordinary items, covering a wide range of engineering goods, tractors, and wool textiles, the increases granted are generally not more than ten per cent, except for whisky, machine tools and chemicals. The quota for whisky has been more than doubled, from £140,000 to £300,000 (the figures have appeared in the French press). The quota for motor cars, a "three per cent item," for Metropolitan France and Algeria, has been raised from £800,000 to £1,460,000, the increase of over 80 per cent being not far short of that given to common market countries. The new quota also covers commercial vehicles, for which no quota existed before, so that any sales of commercial vehicles may have to be at the expense of motor cars. "Substantial" increases are said to have been obtained for other three per cent items, such as confectionery and biscuits, clothing, synthetic yarns and fibres, refrigeration equipment, and toys. Britain has increased its quotas for French goods by 20 per cent, to just under £4 million.

SHIPPING

What Cunard Wants

IN the statement to stockholders that Colonel D. H. Bates of the Cunard Steamship Company circulated this week he strongly hinted—without actually saying it—that the company will be asking the Government for a subsidy to build replacements for its two transatlantic *Queen* liners, rather than for loans to assist their building, of the kind that Cunard has received before. He pointed out that the American Government in 1952 built the *United States* for £27 million and sold her to United States Lines for £12 million, and now plans to build a sister ship for about £46½ million, which it will sell to the line for £16½ million; the French and Italian governments are also giving their liners subsidies.

> Faced with the overwhelming odds of ever-increasing governmental subsidies to our competitors on the score of national prestige, your board have decided it is impossible to continue under such unequal and unfair competition to free enterprise. We have, therefore, laid the whole position before HM Government. . . .

Under the special exemption for shipping companies, Cunard does not disclose the total of its accumulated provision for depreciation. Colonel Bates said that the group had endeavoured to plough back more than the normal provision at historic costs, but had never managed to fill the gap. Last year the order to replace the *Britannic*, already deferred in 1957, was finally cancelled, together with reservations for three dry cargo ships. Investment allowances, he said, did not become operative in time for Cunard; from 1957 onward its profits have been insufficient for it to take full advantage of the 40 per cent allowance, and £2,450,000 of capital allowances remain "unabsorbed." The group, which includes Port Line and Brocklebank as well as Cunard Steamship, has in quick assets some £25 million; this might ease its general replacement problems, but could not cover the *Queens*.

Depreciation at historical cost of the two *Queens* would provide only about £10 million of the £45-50 million that might be required today to replace them with two vessels of about 50,000 tons gross. Cunard and their chosen shipbuilders, John Brown of Clydebank, reckon that with increased knowledge of light alloys and more economical methods of construction lighter ships can be built to carry the same number of passengers on the same gruelling service—weekly sailings both ways, which on the Southampton-New York run require sea speeds averaging at least 28½ knots. The company does not appear to be

attracted by the possibilities of nuclear propulsion that have been mentioned as another of the elements of British prestige for which the Government might be inclined to provide a subsidy. The *Queen Mary* at least will need a replacement in six years' time, and any nuclear propulsion system available by then would probably still be so uneconomic as to require a subsidy for operation as well as for building.

Telescope to a Blind Eye

THE unexpectedly lyrical language ("a big step forward . . . a full sense of urgency") in which the Admiralty this week recorded the submission of eight separate schemes for nuclear shipping tends to give an exaggerated impression of the progress actually made in this, one of the most difficult fields of nuclear design. Only one of the eight systems submitted, which is based on a pressurised water reactor, actually exists. All America's nuclear submarines and the Soviet Union's recently launched atomic icebreaker are driven by reactors of this type: the best estimate of their costs made so far puts these ten times higher than those of conventional marine propulsion machinery. The other seven are all technically interesting schemes but relate to reactor systems that exist only on paper or in the form of small research-scale experiments producing no significant power.

Like all other forms of nuclear power, reactors for ship propulsion are handicapped by high capital cost and to a lesser extent by huge size and weight. The Atomic Energy Authority has some hopes that the prototype advanced gas cooled reactor—the Mark II Calder Hall—being built now at Windscale may have low enough costs to suit shipping, but this is a pious hope rather than a proven fact and the same applies to any cost calculations about the other paper studies sent to the Admiralty. The Admiralty says its goal is "the economic nuclear merchant ship." Not so long ago Sir John Cockcroft said it would take about five years to know whether such a vessel could be built.

BANKERS' CONFERENCES

London's Distinguished Gathering

THE City of London this week has been the scene of the annual conference of the American Bankers' Association—the first such conference to be held outside the United States; and by chance this has coincided with a congress in London of the international "Forex" club, at which foreign exchange dealers meet face to face their counterparts whose voices they know so well over the telephone. The bankers' conference at Fishmongers Hall is a distinguished gathering, including chairmen and chief executives of leading American banks, Mr William Martin of the Federal Reserve, Mr Black of the World Bank, and Mr Jacobsson of the International Monetary Fund. Bankers from the Continent have also been present, and the welcoming address was given by Sir Oliver Franks, chairman of Lloyds Bank.

The proceedings at the conference, which have been concerned mainly with international questions, have been held in strict privacy. The one exception was an address on Thursday by Mr Heathcoat Amory. The Chancellor recalled how the fears of a year ago have proved unfounded, thanks to the quick recovery in America's economy and its tolerance of continued outflows of gold, which are in large part the result of large injections of capital to countries that have suffered from the fall in commodity prices. Mr Amory expects the deterioration in Britain's external balance from the swollen surplus of 1958 to be offset by bigger sales, at higher prices, by primary producers in the overseas sterling area; so that the sterling area as a whole "should be in much the same underlying position as last year." It is not clear whether in this expectation he is counting on a repetition of the very large inflow of outside capital to the overseas sterling area last year.

INDIA

The Gold Smuggling Circuit

THE Reserve Bank of India has begun to issue special rupee notes for circulation outside India. It is doing so in an attempt to check the unauthorised import of gold into India, which has recently been costing the exiguous Indian official reserves between £30 million and £40 million a year. Most of the clandestine gold reaches India from the sheikdoms of the Persian Gulf, mainly from Kuwait, and makes its unauthorised way to India by various means, including dhows and aeroplanes. The costs of this smuggling traffic, including occasional discovery and sequestration, are considerable; they can be met out of a lush profit margin since gold has recently been quoted in the Indian markets at nearly double the world price.

The Gulf territories have long used Indian rupees as part of their mixed currency. They began to do so when the rupee was a full weight silver coin which circulated side by side with the Maria Therese dollar, the Arabian rial and golden sovereign. The use of Indian currency persisted after the rupee became a token coin and even when it took the form of paper currency. And the rupee circulation in the Gulf States has provided one of the main links in the chain of gold smuggling operations with India. The merchant in Kuwait begins a series of operations with sterling, which he converts into dollars, with which he buys gold, usually in Beirut. The gold is then smuggled into India and paid for in rupee notes smuggled out of India to Kuwait. Here they have been put in circulation and ultimately collected by one of the banks which, by official arrangement, could ship them back to India for payment in sterling, thus completing the circle of operations.

By making a special issue of external rupee notes to circulate outside, the Indian authorities hope to break this circuit. Since domestic rupee notes will no longer be accepted for encashment by the Reserve Bank of India if they are brought in from abroad, other methods of payment for gold smuggled into India will have to be devised. Ingenuity in finding these other means will be stimulated by the further rise in the Indian price of gold that is almost certain to follow the check to gold smuggling now being administered. One other consequence of India's initiative may be to hasten the creation of a domestic currency in the Persian Gulf states.

FUEL

Coal Without Protection

PROTECTION for European coal industries was discussed on both sides of the Channel this week; more practically in Luxemburg than at Westminster, but equally with no result. The council of ministers of the European Coal and Steel Community reconsidered the High Authority's amended plan to deal with the community's coal crisis, which would set quotas for production as well as imports and set levels beyond which producers would not be allowed to increase their unsold stocks. After apparently heated exchanges between the experts of the high authority and the Germans, who would like restrictions on a national rather than a community basis, the council adjourned the matter for another ten days. Germany has already restricted its imports by a prohibitive duty over and above certain quotas for its foreign suppliers; the basis it would like to adopt for further import quotas would penalise British coal as against American. In the Commons, Sir Ian Horobin mentioned that the Ministry of Power was "having to" (or trying to ?) put pressure on the Germans, and in the midst of "extremely difficult negotiations" with the ECSC high authority. Britain is not yet quite out of the coal export business; protection cuts two ways.

In the Commons, indeed, suggestions that the Ministry or the National Coal Board should increase coal exports by cutting prices more than they have already were more frequent than specific appeals for protection against the import of competitive fuels, though this was the tenour of much of the Opposition argument. Mining MPs may have borne in mind that coal has some effective protection already in that the only buyer likely to get a licence to import cheap American coal would be the Coal Board itself. Mr Maudling was entitled to make his speech largely a string of questions asking just what Mr Robens actually thought ought to be done to help the coal industry, as distinct from complaining about what was not being done. But his expressed confidence, along with an unchanged forecast of demand for 300 million tons of "coal equivalent" fuels in 1965 that the "Coal Board should be able to carve out for itself a larger total demand" sounded rather odd. Sir Ian later said the Ministry's best informed guess suggested that "something not very different from present production—and it is likely to be slightly higher rather than lower—would be a fair picture of the likely production and demand in 1965."

The possibilities of importing large volumes of liquid methane, which would replace gas coal to a far greater extent than other kinds of petroleum are doing already, was mentioned by many speakers: Sir Ian said that even allowing for this, it was not expected that more than 10 per cent of primary fuels that the gas industry is likely to use by 1965 will be petroleum.

Investing in Television

PUBLIC interest in commercial television shares is high. The established companies have absorbed their initial losses and in the last two years their profits have soared ahead. Another sudden expansion in profits may be unlikely but earnings at present levels provide handsome cover on the dividends that have been declared or projected. Public investment in television shares is small, for the original risk-takers in the industry are not anxious to part with their golden equity. Thus, the Granada Group, which controls Granada TV, has secured a full stock exchange quotation for its "A" non-voting shares this week but has placed only 150,000 shares (out of 1,400,000 in issue) at 70s. and of these only 100,000 were available through the market. The jobbers left their books open for a day to receive applications and then balloted the shares in parcels of one hundred. Dealings began well above the placing price, at 79s.-80s., and after a fair turnover the price settled at 79s. Dealings in the voting shares are also possible under rule 163(2) and these shares are now quoted at 90s.

The main interests in the commercial television companies are shown in the table. Some other groups not listed there include Scottish Television, Anglia Television and Tyne-Tees Television, and Ulster Television and South Western Television are being formed. All the groups have attracted money from the entertainment and newspaper industries and they are very much private domains. The easiest way to secure an interest in commercial television is to buy the shares of the public companies that have interests in it. But it is possible to bid a high price for the few shares, mainly non-voting, that become available.

The *Daily Mirror*, following its acquisition of Amalgamated Press, has to sell its one third interest in Southern Television, which has a capital of only £100,000. The price it is said to be asking for the £1 stock units is £45 each, and among those who are interested in buying them are Rank Organisation and Associated Newspapers (which each have a third interest already) and W. H. Smith, Odhams Press and Portsmouth and Sunderland Newspapers (which have not). The *Daily Mirror* and the *Sunday Pictorial* each have a 9.3 per cent interest in Associated TeleVision.

INSURANCE

Cautious Reappraisal

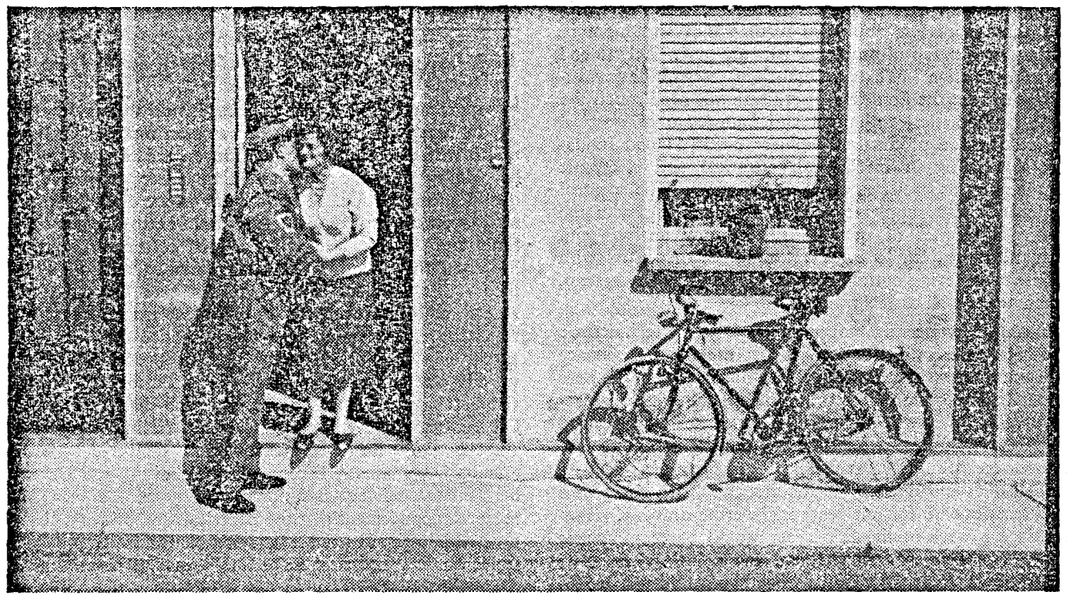
BUOYANT income from the investments in their non-life funds explains why nearly all the composite insurance companies have increased their dividends. Of these offices the Royal and the Commercial Union are the largest. After covering overheads and tax, the Royal's underwriting loss on its fire, accident and marine business was £628,000 last year, compared with a net underwriting loss of £295,000 in 1957; the Royal's non-life premium income in 1957 was £131½ million and £130¾ million in 1958. Net interest income on the non-life funds rose, however, from £3,400,000 to £3,900,000 and the dividend has been raised from 76⅔ per cent to 78⅓ per cent. On non-life premiums of £69 million, the Commercial Union lost £800,000 after overheads and tax last year, compared with £432,000 in 1957 on premiums of £64 million; but net interest income jumped from £2,400,000 to £2,900,000, partly as a result of the inclusion of the figures of a new subsidiary, and the dividend is up from 36⅔ per cent to 40 per cent.

In 1957 the Royal and the Commercial Union between them accounted for 40 per cent of the total United States business of the British insurance companies. The Royal seems to have been pruning its American account fairly drastically, and its United States premium income fell last year by $10 million to $222 million. On the other hand, the American premium income of the Commercial Union rose last year from $68 million to $70 million in spite of a more restrictive underwriting policy. The chairman of the Royal, Mr T. H. Naylor, is confident that in time "the American insurance market must inevitably be restored to a prosperous level" and certainly prospects for 1959 look brighter than they did twelve months ago. Lieutenant-Colonel Leslie, the chairman of the Commercial Union, who is retiring this year, is less forthcoming; the fire department loss ratio has improved as a result of restrictive measures in the United States but he is "afraid that some further time must elapse" before the American accident account becomes profitable. Mr Cyril Kleinwort, the chairman of North British and Mercantile which plans to merge with Commercial Union, is equally cautious. Last year, largely because of the unsatisfactory business in the United States, North British made a net underwriting loss on fire, accident and marine insurance of £1,048,000, after overheads and tax, compared with £1,496,000. The net loss in the fire department of £26,000 compares favourably with the loss of £889,000 in 1957 but Mr Kleinwort says the development of casualty business in the United States "must continue to proceed with much circumspection until there are more significant signs of a general improvement in results." North British is one of the few composite offices that has left its dividend unchanged—at 45 per cent.

DSIR

Alms for Industry?

THE reorganised Department of Scientific and Industrial Research promises to be a much richer body than its predecessor, with a grant of £61 million for the five year period starting this year compared with only £36 million for 1954-59. No one who has watched the DSIR trying to run its network of research stations on little more than a pittance will grudge its new-found affluence and in general the policy outlined for the coming five years is a sound and sensible one. The chairman has said flatly that DSIR does not intend to work to a rigid five-year programme. Its plans are made for the coming year; they spill over in part into the second year but not beyond. The board is reserving the right to make up its mind according to circumstances which can change with bewildering rapidity over the field of science. An organisation whose main object could crudely be described as scientific pump-priming should have the greatest possible freedom of action, and the decision to sponsor more research at the universities greatly increases the number and variety of pumps available for priming, as the astonishing list of research projects included in the DSIR's annual report can testify.



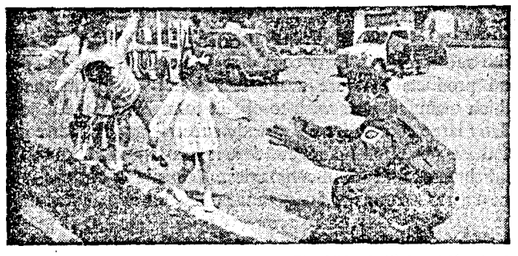
But this process can be carried too far. This year, for the first time, DSIR is starting an experiment already partly covered by another government body, the National Research Development Corporation. "We believe," says the DSIR's report, "that valuable ideas exist in some of the smaller industrial concerns of the country which they themselves cannot afford to investigate," and it adds that there may be some projects too big for even the biggest giants of industry. DSIR is ready to vet such projects and advise whether they "would be appropriate subjects for government backing." This seems a rather naive view to take in view of the longer experience of NRDC, which has tried to give just this kind of financial encouragement to new projects with commercial possibilities and found pretty few worth support. Why the DSIR thinks it will have better luck, whether it has something different in mind, or how it even considers this kind of industrial alms-giving comes within its terms of reference are points not fully explained.

TECHNOLOGY

Training for Control

CLAIMS that some kind of engineering specialism should be separated out as a distinct and independent technological discipline in its own right, followed closely by calculations of the number of these beings that Britain vitally needs to have in some years' time and hence should be training now if it is to keep up with the United States and the Soviet Union, have come fairly often in recent years. Those made for "control engineering" by successive presidents of the Society of Instrument Technology, Sir Harold Hartley last year and Mr J. F. Coales this week, are perhaps more justified than claims for other kinds of engineering about which more is heard. The analysis of operating systems and the design of techniques for controlling them can fairly be argued to be both a distinct specialism and one broadly applicable throughout a wide and extending range of technology. Mr Coales's calculations about the numbers Britain ought to be training, in his presidential address to the society this week, were no more and no less convincing than most quasi-statistical statements of educational claim of this kind. But his discussion of the scope of training required for a control engineer, and of the society's proposed syllabuses for ordinary and higher national certificates in instrument technology, was more impressive.

Students at engineering colleges, he argued, instead of having to choose at an early stage between civil, mechanical, electrical and chemical engineering, might better be divided



Renato Raggi of Melzo says goodbye to his pretty wife Luciana as he leaves for work. Upstairs Roberto, aged five, is still in bed.

For Renato Raggi life has changed

AT SIX-THIRTY A.M. A FEW DAYS AGO SIGNOR RENATO RAGGI OF MELZO IN ITALY BEGAN A NEW LIFE.

Six-thirty is the time he gets up and starts work in this little town near Milan. His routine is a simple one. A quick cup of coffee and then he sets off on his bicycle to cover the quarter-of-a-mile that separates his flat from the smart petrol station on the main road to Monza. Already the morning sun is breaking through as he does it.

But that morning was different. That morning his garage opened in different colours. Green-and-yellow. That morning he began selling different products. British products. BP products – the identical BP products that you buy from your garage in Britain.

550 Italian petrol stations have gone BP now. The children? All the neighbourhood kids had to see Renato Raggi in his new uniform.

AT 550 PETROL STATIONS

For BP has come to Italy. At nearly 550 petrol stations along the roads of this sunny land the familiar BP Shields are on view this week – and 1,500 stations will have changed to BP by the end of the year. It's one more tremendous step forward in the expansion of this dynamic company.

Already British Petroleum markets its high-grade fuels and oils in 31 other countries besides Britain. In Canada and in Sweden. In Nigeria and in Australia. In Morocco and in Austria – to mention only a few. And all the time BP is growing stronger. Growing stronger because of the terrific *demand* for its products.

A WORLD-WIDE SERVICE

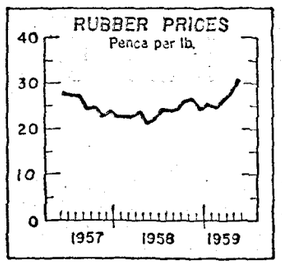
What does this mean to you, the motorist in Britain?

First it means that the local BP station to which you take your car for petrol, oil and service is part of a go-ahead and internationally minded organisation. An organisation that can put world-wide experience and strength at your disposal.

Second, it means that when you bring your car to Italy – or almost any country in Western Europe – you can continue to rely on BP products and service. (And the BP Touring Service is in action in all these countries to make your holiday more enjoyable – ask about it at your BP garage.)

Yes. From now on Renato Raggi – the BP man – is at your service, British Motorist!

BP BRITISH PETROLEUM



into those with an aptitude for mathematics and research, and those with less ability in mathematics and more in dealing with practical problems, who are more likely to end up in production. Whatever branch of research he eventually goes into, the first kind of student will need much the same mathematical technique and knowledge of classical physics; and a production engineer needs a good fundamental training in mechanical, electrical and electronic engineering as well as applied physics. The control engineer would supplement this broad training with the newer techniques of quantitative dynamic analysis and systems design, employing the techniques of control with a view to achieving optimum performance from any system, economic as well as technical.

Control engineering covers a variety of techniques: existing courses in instrument manufacture and maintenance turn out craftsmen, but hardly the technicians who will have to deal with a wide range of measuring and control instruments. The society's draft syllabus for an ordinary national certificate would combine most of its applied physics into courses on "Structure and properties of matter" and on "Mechanics and Energy" in the first two years, along with mathematics and, for one year, engineering drawing. Two evenings a week in the third year would cover geometric optics, electricity and magnetism, and a little chemistry; the third evening a week in the second and third year would be devoted to applied physics, particularly measurement and control. "It is to be hoped," observed Mr Coales, "that eventually we may have an ordinary national certificate which is common to all technologies . . . a better understanding of the fundamental concepts of mathematics, physics and mechanics is more important than particular knowledge of a special technology."

NATURAL RUBBER

Sharp Rise in Prices

NATURAL rubber continues to rise. On Thursday spot rubber closed in London at 31d. a lb, a gain of nearly 2½d. on the week, and the premium for the nearby delivery months has increased. Natural rubber is now 6½d. a lb dearer than at the beginning of the year and over 40 per cent dearer than synthetic rubber, which may not help it in the long run. But this latest rise in a free market reflects a growing tightness of supplies, with world consumption rising and an unusually severe seasonal fall in production. This week China bought several thousand tons of rubber in Singapore, for the first time, it is believed, since the Malayan authorities closed down the Bank of China towards the end of last year. Chinese buying helped to push prices higher, and may have encouraged some speculative buying besides. Production should soon begin to recover, and higher prices should stimulate output by smallholders. Whether supplies will remain tight depends mainly on demand from the communist countries. So far they have been buying more heavily than last year.

RAW COTTON

More Business at Higher Prices

THE recovery in raw cotton prices is now well under way. In Liverpool recently there has been much more business in actual cotton and cotton futures, and as spot supplies have fallen spinners are not finding it easy to obtain the qualities they require. The discount on the distant delivery months on the futures market has been narrowing for some time, and American middling 1-inch cotton on the spot has risen this month by nearly ½d. to 23.10d. a lb. In theory this grade of cotton from the new crop will cost 23.40d. a lb cif Liverpool for shipment from August 1st, when the effective American support price drops and the export subsidy is raised by 1½ cents to 8 cents a lb. The subsidy can be increased if necessary to meet competition, and not long ago it was widely expected that it would be. On February 18th this grade was quoted in Liverpool at 18.60d. a lb for December-January delivery. Market opinion has gradually become less pessimistic, and December-January delivery has now risen by 2¾d. a lb. The recent announcement that the American authorities will add to the basic export price a carrying charge for each month from October onwards helped this change in sentiment. And with buyers of cotton textiles deciding that the time had come to build up stocks, spinners have had to buy more cotton.

The advance has also been assisted by the recovery in Sudan cotton. The protracted decline in the longer-stapled Sudan cottons had brought prices to a level at which they had lost their premium over shorter stapled cotton and were holding down prices of these growths. But the Gezira Board's decision to abolish the practice of fixing reserve prices at auction is now bringing results. Since the change of policy at the end of January the board has sold nearly 300,000 bales, and has recently been able to raise prices. In the last two months Lambert No. 6 cotton for July-August delivery in Liverpool has risen by 4¼d. to 26¼d. a lb. So the prospect for the Sudan is much brighter than it was—provided that the American export subsidy is not increased further. Cotton is the mainspring of the Sudan's economy, and the government will pray that the American authorities do not undo by their cotton policy the help they are extending to the Sudan by a substantial programme of economic aid.

TECHNICAL INFORMATION

Inventions for Sale

A PERIODICAL called *Lapis* (standing for "licences, agents, patents, and inventions"), which was founded last October, has taken a practical step to improve the highly imperfect market in inventions. Published monthly and with subscribers in forty countries, it offers a list of patents and products that are available for licensing, and those which manufacturers wish to obtain to make under licence. Many large companies are already subscribers, and for each of these the publishers state that it has two medium-sized and three or four small companies. *Lapis* is useful to them not only as a means of finding inventions for sale or wanted; the announcements that a company puts in (free) are a guide to its plans, more direct than the indications one can often glean from the advertisements it places for new staff. So far as the individual inventor is concerned, it provides a unique opportunity to advertise his wares, which should do something to lessen the disabilities under which he labours; in such cases, where an invention does not come from an established institution, some attempt is made to vet its feasibility before insertion.

STEEL

A New Process from Brymbo

IT was at Brymbo, a small steelworks near Wrexham owned by Guest Keen and Nettlefolds, that the first basic openhearth furnace in Britain ever made steel, in 1884: the works had been making iron for nearly 90 years before that. Brymbo has had since then a number of other technical developments to its credit; at the end of last month it released details of another. This is a method of pre-refining molten iron from the blast furnace with oxygen before charging it to the three 40-ton electric furnaces in its new melting shop. Ordinary electric furnaces only use scrap because they are essentially sealed bowls, with no outlets for impurities or slag from the hot metal to be tapped off during the heat. One can use hot-metal in them by "duplexing," blowing the hot iron in a Bessemer convertor to remove silicon and phosphorous before feeding it into the arc furnace, but the iron from Brymbo's small blast furnace was not suitable for this process.

Brymbo's solution is to pre-refine the metal in a special furnace with limestone and iron oxide—and oxygen injected through a "lance"—in order to remove the silicon and phosphorus from its iron. The pre-refining furnace is fitted for the slag, which absorbs the impurities from the metal, to be tapped off before transferring the metal to the arc furnaces. This is a steelworks producing special and alloy steels; in Britain electric furnaces are largely confined to these, though in some other countries they are beginning to be employed as a way of making common steel. But the process could have quite a wide application in steelmaking: the openhearth furnace could benefit from a cheap form of pre-refining hot metal.

Brymbo's does seem to be a cheap process. The three arc furnaces, a hot metal receiver and the pre-refining furnace in a complete new melting shop with a tonnage oxygen plant and all ancillary services, have cost £2 million, a modest sum as steel capital expenditure goes. The whole development scheme was begun in 1956: its civil engineering was complicated by the fact that the disused slag tip that offered the only suitable site turned out to have a core of smouldering producer ash. MacAlpines had to damp this down with thousands of gallons of water, then excavate about 80,000 cubic yards of the redhot ash in the process of removing and levelling the ash-tip. The three 40-ton furnaces in the new melting shop, fed from the 150-ton hot metal receiver and the 20-ton pre-refining furnace, are at present giving the works an output of some 15,000 ingot tons a week.

FINANCE HOUSES

A European Association

HIRE purchase has grown rapidly in recent years on the Continent as well as in Britain; and arrangements are now being made for a formal European representative organisation. The older established institutions of the financial world all have their international links, which on the whole serve rather for personal contacts and exchange of information than for practical business purposes. The finance houses seem to have the same broad aims in mind; but some of them at present appear to be thinking in terms of participation in the business of other European countries. A number of British houses have developed business in the Commonwealth; but operations outside the sterling area would need the approval of the exchange control.

The first step in the European project was taken last week when representatives of finance houses in Britain, Germany, France, Holland, Belgium, Switzerland and Austria met for one day in Bonn. Britain was represented by officers of the Finance Houses Association and the Industrial Bankers Association (who were thus preparing for a common European organisation before they had agreed on one for themselves). The brief meeting had its intended result. It was agreed that the inaugural conference of European instalment credit companies and organisations should meet on November 5th and 6th in Amsterdam. An international committee has been appointed to decide who should be invited and what should be discussed.

BELGIUM

Both Lender and Borrower

BELGIAN investors are subscribing to the first issue of Belgian franc bonds of the World Bank; the offer is equivalent to $10 million and is in 5 per cent bonds repayable within ten years. At the same time, the Belgian government is borrowing $22 million on the New York market. It is intriguing that the two flows of money should be proceeding in opposite directions at the same time. The explanation for Belgium's New York borrowing seems to lie in the peculiar difficulties of the Belgian Treasury, which has no magic influence with the central bank and is chronically short of funds. This is not the first time that the Belgian government has borrowed abroad to meet a deficiency not of foreign exchange but of Belgian francs. The conjuncture is a rare one in the modern world—and not entirely displeasing to the old guard of sound money men.

OIL

Growth in Refining

OIL refinery capacity in Britain has experienced roughly a seven-fold growth in the past ten years; along with ancillary industries such as petrochemicals, refining has been one of the fastest-growing industries of the postwar period. The most rapid period of growth ended in 1954, after a capital investment of about £200 million; but total capacity has continued to increase since then, and major expansions in the past year at refineries in Britain have produced an annual throughput capacity of over 41 million tons, the largest of any country in the free world excluding the United States. Caltex has now withdrawn its application for permission to build a new £20 million refinery at Hook, on the east side of Southampton Water, in the face of strong local opposition, though this project, which would have added 2-3 million tons a year, has not been finally abandoned; but the planned expansion of existing refinery

capacity and the commissioning of plants now under construction will still bring the total capacity of the industry to over 46 million tons within a year's time.

Shell, with a total throughput capacity of 15 million tons a year, has now the largest refining capacity in Britain; a new distillation unit early this year at Shell Haven brought capacity up to eight million tons a year. In addition, Shell are at present enlarging port facilities at Tranmere, which serves the company's Stanlow refinery, including the construction of two floating stages capable of accommodating tankers of up to 65,000 tons dead weight. British Petroleum's refining capacity in Britain is now about 13½ million tons a year; construction on the company's refinery at the Isle of Grain in Kent, completed at the end of last year, brought it to 7.2 million tons, and the addition of a new distillation unit at Grangemouth, together with ancillary plant, has raised capacity there to 3.2 million tons a year. Work is also proceeding on BP's Angle Bay terminal at Milford Haven, which is expected to be delivering crude oil to the company's Llandarcy refinery by the middle of 1960.

The addition of a new pipe still at Esso's Fawley refinery has brought capacity there to 10.5 million tons a year; in addition the company's refinery at Milford Haven, which will have a capacity of 4.5 million tons a year, will come on stream during 1960. Mobil Oil's refinery at Coryton, with a capacity of 2 million tons a year, accounts for the remainder of the industry's capacity in Britain. The two million ton refinery at Whitegate Bay, County Cork, which is jointly owned by Shell-Mex and BP, Esso and Caltex, is scheduled to come on stream in the near future, having already received its first cargo of crude oil.

PERSIA

New Banking Consortium

An international banking consortium is being formed to co-operate with the Persian government in the establishment of a new development bank. The project has been in the offing for some time. The initiative stemmed from the Chase Manhattan group and Lazard Frères of New York. Their negotiations with the Persian government became bogged down; meanwhile, two British banks moved into partnership with Persian interests in conformity with the requirement that banks must be majority owned within the country. The first move was made by the Chartered, breaking new ground, and it was followed by the British Bank of the Middle East—the old Imperial Bank of Persia, which was edged out in 1952.

The New York bankers apparently decided that their own project, which is for a fund to extend medium term credit for the purchase of capital equipment rather than a deposit bank, would stand a better chance with a more international flavour. This it now has. Three-fifths of the capital of the development bank is to be owned by the Persian Government. Of the remainder, equivalent to about $2 million, the Chase and Lazard Frères will hold one-third, and groups in Britain and five Continental countries will each hold one-tenth. The British participants include besides Lazards, the Midland and Lloyds, as well as English Electric and Simon-Carves. Participation in financing of this sort is not usual for English clearing banks; but the amounts involved are small—the whole British subscription to the capital will be $200,000-$250,000—and they can be regarded primarily as tokens of good will. The World Bank is to do its part by contributing loan capital.

STAMP DUTY

The Archaic Tax

The main outlines of the stamp duty, the Colwyn Committee noted in 1927, remain as they were in 1694. They remain so today, though the revenue continues to be a diminishing portion of the budget total—about one per cent today, compared with ten per cent at the beginning of the nineteenth century. An interesting factual survey in the *Midland Bank Review* points to the striking increase in the contribution of duty on transactions in securities; these now provide two-fifths of total stamp duties. House buyers have been given relief in recent budgets, and bills of exchange, despite the revival of the City's international business, are now much less important. The 2d. on cheques brings in £6 million—half as much again as the 2d. on receipts. The levy on the cheque has as little logic as any stamp duty; but it hardly seems realistic to cite this duty as a critical obstacle to the wider use of cheques by wage earners. For most people it comprises a fifth or less of the total average cost of drawing a cheque.

COMPANY MEETINGS

DE HAVILLAND HOLDINGS LIMITED

ANNUAL REVIEW OF WORLD-WIDE GROUP OF COMPANIES

REPORT BY THE CHAIRMAN, MR W. E. NIXON

The Thirty-Ninth Annual General Meeting of de Havilland Holdings Limited will be held on May 29th at Hatfield Aerodrome, Hatfield, Hertfordshire. The following is the statement by Mr W. E. Nixon, the Chairman, which has been circulated with the Directors' Report and Accounts for the year ended September 30, 1958:

Last year, when presenting the Annual Accounts to you, I considered it necessary to sound a warning about the probable downward trend of profits. This has unfortunately proved to be the case, and in consequence I have regretfully to report a fall of £486,000 in the net surplus for the year.

The development, tooling and preparation of the Comet 4 for service have involved us in an expenditure of many millions of pounds. We certainly received a contribution towards this from the Government, but it amounted to only a small fraction of the cost. While we are confident that the Comet 4 is a first-class and completely reliable airliner, we have felt it essential to take a prudent assessment of the investment in this project and, apart from the tooling expenditure covered by existing orders, we have again this year felt obliged to absorb the balance of the initial expenditure as it is not possible at this point of time to guarantee its recovery in future additional sales. These heavy charges have in consequence had to be met from what would otherwise have been profits of the year.

Another factor adversely affecting our trading results is that the Defence policy adopted by this country in 1957, which placed emphasis on guided weapons almost to the exclusion of military aircraft, has led to a substantial reduction of orders from our own Government for new aircraft. This, in turn, has meant that we have had no aircraft suitable for sale to other countries. Such sales had previously formed a large part of our total business and had thus contributed to our trading profits.

Following the change of Government policy, we now have in all our Companies to bear heavy costs in developing civil aircraft, engines and propellers for sale in the markets of the world, to take the place of that part of our business previously engaged on Government orders. Here again these costs have had to be met out of the surplus on our general trading.

On the whole, our turnover has continued at a reasonably satisfactory level, but this abnormally heavy development expenditure in our various companies has had to be absorbed by them. Subject to what I have to say later regarding the difficulties of the market for airliners, this expenditure is, we believe, wisely investing in the future.

Since it will be obvious that our trading results in this and previous years have been largely affected by expenditure incurred in launching our Comet airliners, you will expect me to devote some part of my address to this important side of our business.

AIRLINER POLICY

It has, I think, been generally accepted that the success of the original Comets had a stimulating effect upon our national morale at a time when it was vitally needed and that the benefit of this was not entirely lost by its unfortunately tragic sequel. The whole of the world's aircraft industry too has undoubtedly profited from our experience, and the lessons learnt from it, and although neither of these factors can be valued and written into our Company's Accounts, I venture to suggest that they should not be lost sight of in appraising our present position.

When we decided to go ahead with the Comet 4 we recognised that the task would be a difficult one, particularly in view of the time lost and the competition which was developing in other countries, but we were convinced that the pure jet airliner would be adopted for general use and, in view of our experience (dearly bought, as it was) we felt that we would be able to obtain a sufficient share of the foreseeable world market for this type of aircraft.

On the technical side, I believe that the successful operation of the Comet 4 in the past six months by British Overseas Airways Corporation has vindicated the decision we then took, but in spite of our very concentrated sales efforts we have as yet been unable to achieve the volume of orders necessary to make the project as a whole a remunerative one. In particular, we have so far been unable to effect any sales in America, which represents over 70 per cent of the total world market for airliners of this size. We believe that the Comet 4 could serve many sectors of this market better than any similar aircraft, but it does not appear likely under present circumstances, that a non-American company can achieve any substantial success in selling to operators in the United States.

Notwithstanding these disappointments, we decided with our associates in the Aircraft Manufacturing Company to undertake the design and construction of the Airco D.H. 121 jet airliner for British European Airways destined to enter airline operation in 1963. This aircraft is a logical development of the Comet, but on the basis of the numbers so far ordered by the Corporation and in view of the absence of any kind of Government support, the terms of this contract are more onerous than any we have previously undertaken. However, we have great confidence in the Airco D.H.121 design and discussions with a large number of airlines throughout the world show that this aircraft has a wide potential market, but such prospects are always subject to political and economic considerations within the country with which we are seeking to do business.

I should like to say here how much we have valued the friendship and practical assistance of Hunting Aircraft and The Fairey Company in establishing the Aircraft Manufacturing Company to undertake this project. We believe that this association will be a source of strength to all of us and may well permit a more efficient use of the many resources available to the three Companies.

These big airliner projects of course are by no means the only activities of our Group and they must be considered in relation to the successful work of our Canadian Company in short take-off aircraft and of our home Companies in Naval fighter aircraft, engines, propellers, air-to-air missiles, and the ballistic missile known as Blue Streak. Some of these projects are of course still in the development stages so that substantial production cannot be expected in the immediate future.

Our manufacturing companies in Canada, Australia and the United Kingdom are fortunate in having much military as well as civil work to do, but, as I have already said, all are having to spend increasing sums of money on the development of new projects to ensure their future trading position and we believe that they will achieve this objective. The rapidly changing pattern of aviation business has, however, laid a heavy strain upon our financial resources and technical organisation, whilst increasing materially the time needed to bring a profitable reward.

NEED FOR HOME MARKET

The question may well be asked whether the manufacture of airliners can of itself provide a reasonable return instead of absorbing the profits of our other products. Our experience has demonstrated very clearly the fierce competition which we have to face from manufacturers mainly in the United States, but also now in France. Russia, too, may soon enter this market. The manufacturers of large transport aircraft in all these countries are materially assisted by orders from their governments. Our main competitors in the United States have in most cases been able to cover their investment on civil aircraft by large military orders of similar types in addition to the very large home market which they have available to them. Further, they have the benefit of a highly flexible system for extending credit to purchasers, and to keep their facilities fully employed they are using every financial means to obtain orders for their aircraft. In addition, the effects of the European Common Market are bound to be felt upon this industry as on others in Britain, since it seems likely that the Common Market countries will tend to look within themselves to meet their needs.

Our main competitors, therefore, have a vital basis for projects involving the expenditure on initial development and tooling of many millions of pounds, that is a reasonable prospect of sufficient home orders at the inception of a major project. This puts them in a strong position in the other markets of the world. The problem for us is whether a basis can be provided which would enable manufacturers in this country also to continue to compete for the export business which is so vital to our success. An efficient world-wide transport system has always been the backbone of Britain's international trade and the Government's encouragement of civil air transport is, in our view, essential to this aspect of our economic life. With the necessity for Britain to move its people and merchandise quickly about the world, the need to meet the potential demand for transporta-

tion in and out of this country is vitally important. It has for several years been the British Government's policy to maintain for itself a near monopoly in civil air transport, rather than to leave it to the free play of private enterprise. The Government has thereby accepted the continuing duty to ensure that all the possibilities of civil aviation are being exploited in the best interests of an expanding economy.

In addition the modern conception of Defence is to have a small, well trained and highly mobile Army and Air Force equipped to move rapidly about the world. We believe it is essential, not only for this industry but for the country as a whole, that those who have the power to make the aviation policies of this country should now work out how this resourceful industry can best help the modernising of the commercial and military effort of the nation. The complexities of world trade in general and of international aviation in particular certainly make this a difficult task and it is possible that this country cannot on its own achieve the full development of these needs which may well require closer links between British aviation interests and those in other parts of the world.

The aircraft industry in this country is in the midst of a world struggle for survival. The British companies concerned can only hope to stand up to the competition from other countries if Government policy stimulates a demand for a sufficient number of transport aircraft to justify the expenditure of many millions of pounds of private money on such ventures.

Given such a policy, we believe that we can then compete successfully in the uncommitted markets of the world. It is, however, idle to pretend that the British aircraft companies can finance from their own resources highly expensive new projects without a basic minimum of orders and still compete successfully with the other manufacturers of the world who have sufficient government orders or subsidies, or both.

For these reasons it is essential in order to manufacture civil aircraft with the maximum economy that the Services and National Corporations have a concerted buying policy which has some regard to the manufacturers' need to obtain a reasonable return on their heavy investment in one type of aircraft before orders are given for a replacement.

Unless we have backing on a scale which bears some comparison with that afforded to our competitors, this country's aviation exports, currently amounting to over £150 million a year, must decline and the triple advantage to the nation of high technical achievement, mobility and a high rate of exports will be lost.

From all that I have said you will not be surprised that your Directors have not been able to recommend the payment of a dividend in respect of the year just past. It will, I am sure, be appreciated that in the present circumstances it is essential to apply our resources to safeguarding our future trading position. I do, nevertheless, feel that despite present uncertainties, we have a sound chance of emerging in due course as one of the few really successful aviation companies of the world. Needless to say, our policies will remain under continuous review since we are acutely aware that our judgment must keep in step with changing circumstances.

THE ACCOUNTS

You will wish me to make some comment upon the figures appearing in the Accounts, but since these follow the same pattern as in previous years and as any changes are readily compared with the figures of the year before, I will refer only to items which are of especial significance.

The Consolidated Balance Sheet shows that the value of Fixed Assets has decreased by £1,141,696. This has arisen as a result of the transfer to the Government of a factory temporarily financed by one of our companies and of the normal charges for depreciation. There are outstanding commitments for Capital Expenditure of £275,000 compared with last year's figure of £1,040,000. This confirms the hope expressed in my last address that it would be possible to reduce the volume of such expenditure.

Trade Investments are unchanged; it will be remembered that this represents principally our shareholding in Saunders-Roe Limited, who have continued to trade on a profitable basis albeit at a reduced rate.

The value of Stock and Work-in-Progress after deduction of Progress Payments has increased by the substantial amount of £7,882,875 compared with 1957 and has been financed in the main by an increase in Bank Loans of £2,413,093 and an increase in Customers' Deposits and Advances of £5,139,667. The amount of the Customers' Deposits and Advances is £18,331,997 and is an indication of the orders being worked upon for future delivery. The outcome is that Net Current Assets at £11,858,491 show an increase of £921,273 over the previous year. The total net assets representing the capital and reserves of the Group at £19,204,234 are virtually unchanged.

Mainly on account of the continued heavy private venture expenditure to which I have already referred, there is a reduction of some £940,000 in the Net Trading Revenue shown in the Consolidated Profit and Loss Account after crediting provisions of £530,860 no longer required, and a fall in the Net Surplus attributable to the Group from £619,611 to £133,606, after taking into account a lower tax liability and other charges and credits.

The Profit and Loss Appropriation Account shows that after the appropriations for Preference Dividends and with the amount brought forward from the previous year, the sum of £438,537 remains to be carried forward to next year.

The remaining financial statement is the Balance Sheet of the Holding Company which shows that the value of Shares in Subsidiary Companies has increased by a small amount. This is caused by the purchase of a few shares in our Canadian Company, which came on offer and the subscription for shares in the Aircraft Manufacturing Company Limited. Loans to and from Subsidiary Companies of course fluctuate as their needs dictate.

Before mentioning changes in the Boards of the Subsidiary Companies, I must refer to the knighthood bestowed upon our Deputy Chairman in the New Year's Honours. You will, I am sure, all share the pleasure we felt at this mark of appreciation of Sir Aubrey Burke's work in our Group and in the Society of British Aircraft Constructors, of which he is currently the President.

One of our oldest colleagues, Mr Harry Povey, retired at the beginning of the year from the Board of the Aircraft Company, to which he has given unstinted service for over 35 years.

Mr John Cunningham, the Chief Test Pilot, and Mr C. T. Wilkins, the Chief Designer, of the Aircraft Company, have joined the Board of that Company.

Mr W. F. Shaylor has joined the Engine Company Board as Sales Director, and Professor A. D. Baxter has been appointed Director in charge of the Company's rocket propulsion and nuclear work.

It is with great sadness that I have to report the sudden death of Mr J. L. P. Brodie, the Chief Engineer and a Director of the Engine Company since 1944, who was associated with the Company for 36 years. His loss will be keenly felt not only in his own sphere but in the many other activities of the Group in which he took a leading part.

WIDE SPAN OF COMPANIES' ACTIVITIES

To deal now in a little more detail with the activities of our various companies, it is encouraging to be able to report that, subject to the provisos I have already made, the Group is at present busy and the turnover continues at a satisfactory level. Our estimates of the current year's trading lead us to hope that this should prove to be a somewhat better year, although our Canadian Company is still having to spend large sums on the development of its new aircraft, the Caribou. We are also dependent on selling more Comets particularly as, in order to be able to offer deliveries demanded by potential operators, we are having to manufacture a number additional to those at present on order. When dealing in units of over £1m. each, it is evident that the group's profitability will be materially affected by the success of our sales efforts.

Our Aircraft Company delivered their first two Comet 4's to British Overseas Airways Corporation before the close of the financial year, ahead of contract dates. This enabled the Corporation to become the first airline to run a jet passenger service across the North Atlantic. The steady flow of our deliveries also enabled them to open Comet services between London and the Far East in April this year and they expect to put Comets on the Australian and South African routes towards the end of 1959. Meanwhile we have been able to start Comet deliveries to South America within twelve months of receiving an order from Aerolineas Argentinas for six aircraft. East African Airways also have ordered two Comets and negotiations have continued with other airlines.

Production of the Sea Vixen naval fighter represents a very important side of our aircraft business and occupies a large part of our resources. Deliveries have begun in preparation for entry into squadron operation upon the completion of final Service trials. This aircraft which has been ordered in quantity will succeed the de Havilland Sea Venom, as the Navy's front-line all-weather fighter.

Production of Doves, Herons and Vampires also has continued in our aircraft factories. Demand for these aircraft is sustained, albeit on a modest scale, from countries to which they are particularly suited. The Dove and Heron are giving good service as executive aircraft and in light commercial work in many countries, and may be expected to do so for some time to come.

This year has been a period of intense development activity for our Engine Company on a diversity of projects, the production benefits of which will not be apparent for some little while, but looking ahead there are good prospects here. Of these, the two most important are firstly the Gyron Junior, scheduled for the Blackburn N.A.39 and for a supersonic research aeroplane still on the secret list, and secondly the Gnome, for which there is a steadily increasing world-wide interest. Both these engines will come into quantity production during 1960.

A pre-production batch of the helicopter version of the Gnome is already well under way, and deliveries will commence shortly. Interest in the propeller version is also encouraging.

Rocket development and initial production proceeds to plan on both the Super Sprite and Spectre take-off units for "V"-bombers, and also of the Double Spectre designed for interceptor or missile propulsion. The Rocket Division is in the final stages of developing certain auxiliary power units operating with hydrogen peroxide.

We have also been actively exploring some industrial aspects of nuclear power, for which several important, but at present relatively small, contracts have been received.

Whilst these new projects are taking shape the production of our older type engines continues in the form of complete engines and considerable spares business.

Our Propeller Company similarly has been busily engaged with products covering a wide range. Deliveries of the Firestreak air-to-air missile to the Royal Air Force and the Royal Navy have begun, and last autumn the Navy in their first practice shoot against target aircraft, achieved complete success with 80 per cent of the missiles they fired. Our northern manufacturing group are well equipped to handle the full flow of production. Overseas governments have been impressed by the efficiency of the Firestreak missile, but I have no export sales to announce yet. An advanced version of this missile is being actively developed for the British Forces.

We continue to manufacture in considerable numbers a wide range of propellers and are studying the requirements for a number of projected aircraft. Early this year the Vickers Vanguard airliner, which is fitted with our propellers, commenced flight trials. This propeller is the most advanced that we have yet made, having a number of new operating and safety features, and it called for the largest propeller development programme that we have ever undertaken.

Our air-conditioning equipment is in production for several types of civil and military aircraft and our alternators are standard in most of the guided missiles made in this country. Our airborne scanner unit has entered service and is working well. Among new projects is a fuel control system for the Gnome turbine engine. We are exploring opportunities to develop products for markets outside the aircraft industry.

THE BRITISH BALLISTIC MISSILE

During 1958 we were permitted to announce that de Havilland Propellers had been selected as the prime contractors and the co-ordinating authority for the design and construction of the British Long Range Ballistic Missile, Blue Streak. The Aircraft company is also taking an important part in this work. Even though we realise that we cannot immediately expect great financial rewards, we are naturally proud to have been selected to play our part in this project to which we are devoting a large part of our technical resources and which represents in this age of space exploration something more than just a defence project.

In Canada our Company has continued to produce Beaver and Otter transport aircraft for military and civil orders. Production of the CS2F aircraft for the Royal Canadian Navy also has continued at the Toronto factory. It is of interest to note that as a result of the excellent service given by Beaver aircraft used in Antarctica for the International Geophysical Year, there is now a Beaver Lake, a Beaver Glacier and a Beaver Island. As I have mentioned, the Canadian Company has a major development project in the Caribou transport aircraft, on which it has been hard at work since 1957. The first aircraft made its maiden flight at Toronto in July last year and deliveries are shortly to start under contracts for the Canadian and United States Governments.

Our Australian Company has been building Vampire Trainers for the Australian Forces and, like our South African, New Zealand and United States Companies, has continued to distribute and service all de Havilland products and the products of the other companies with which we are associated.

I have endeavoured to give you some idea of the activities on which our various companies are now engaged, in the hope that you may be able to consider our future prospects in these directions in relation to the more complex problems referred to in my earlier remarks. The possibilities of diversification of our business also continue to receive our close attention and our Companies are making a start in various directions where our resources and experience can best be applied. At the same time we must exploit to the full the knowledge and highly developed facilities which we have been at such pains to acquire. Needless to say, all these problems are having the constant care and attention of your Board.

I should like to close by expressing my thanks and those of my fellow directors to all in our organisation who have served us so well in what has been in some respects a difficult period. I am sure that what success we have achieved has been due to their continued loyalty, courage and application. I pay this tribute with greater warmth since this is the last opportunity I shall have of thanking them through this means. I have passed the normal retiring age and I have asked the Board to appoint my successor. They have invited our Deputy Chairman, Sir Aubrey Burke, who has very wide and well proved experience in this industry, to become Chairman and Managing Director of this Company and Chairman of the home subsidiary companies; he has agreed to assume these responsibilities from July 1st. In my thirty-nine years' service with the Company I have seen it grow from something very small to something quite big. I shall hand over my duties confident that the Company is fundamentally sound and in good hands.

The Subsidiary and Associated Companies of de Havilland Holdings Limited are:

The de Havilland Aircraft Company Limited
The de Havilland Engine Company Limited
de Havilland Propellers Limited
Aircraft Manufacturing Company Limited
Saunders-Roe Limited
The de Havilland Aircraft of Canada Limited
De Havilland Aircraft Proprietary Limited (Australia)
The de Havilland Aircraft Company of South Africa (Proprietary) Limited
The de Havilland Aircraft Company (Rhodesia) Limited
The de Havilland Aircraft Company of New Zealand Limited
de Havilland Aircraft Inc. (USA)

BRITISH ROPES

The World's largest manufacturers of wire, rope and cordage

The following are extracts from the Report and Accounts for 1958 and from Mr. Harry Smith's statement to the stockholders.

	1958	1957	1956
		£ thousands	
Issued Capital	4,599	4,599	4,599
Group Net Assets	13,840	13,374	12,556
Group Profit—gross	2,015	2,566	2,369
Profit after Tax	912	1,152	1,036
Dividends	393	374	374

TRADING CONDITIONS. The Parent Company has been able to maintain its total turnover at the 1957 level: the 10 per cent reduction in rope demand, resulting from the recession in world shipping and the reduced level of purchasing by the National Coal Board, has been offset by increases in Agricultural Twines and Wire, but the general effect has been to reduce the average margin of profit.

EXPORTS. Competition has been increasingly severe and price levels have deteriorated, but our overall Export trade increased slightly compared with 1957. The Company's comprehensive programme of re-equipment and rehabilitation is now to a large extent complete, and we are well placed to meet competition.

STEEL CORDS LIMITED, in which we hold a 20 per cent interest, is a joint venture with Courtaulds Limited in the production of steel cord for tyre manufacture. This new company expects to be able to meet the growing demands of the Tyre manufacturers in this country and also obtain an additional outlet overseas.

CABLES MEXICANOS is a new wire rope manufacturing subsidiary of your Company in which there is a substantial Mexican interest. The demand for wire rope generally is increasing in Mexico, and steps have already been taken to increase the productive machinery of this plant.

HOOD HAGGIE & SON LIMITED. Both Companies can benefit materially from amalgamation, although some time must elapse before the full advantages of the association can be achieved.

The Directors' Report and Accounts are obtainable from:

The Secretary, British Ropes Ltd., Doncaster, England.

ROYAL EXCHANGE ASSURANCE

239TH ANNUAL REPORT

RESULTS AGAIN SATISFACTORY

PROPOSED ISSUE OF CAPITAL

LORD KINDERSLEY'S REVIEW OF OPERATIONS

The Annual General Court of the Royal Exchange Assurance will be held at the office of the Corporation at the Royal Exchange, London, E.C.3, on May 27th.

The following is the statement of the Governor, The Right Honourable Lord Kindersley, CBE, MC, which has been circulated with the report and accounts:

At the commencement of this review of the Corporation's activities during the year 1958 I should like to refer to two new members of the Court of Directors who have joined us during the past twelve months.

Field Marshal Sir Gerald Templer, GCB, GCMG, KBE, DSO, who retired last year as Chief of the Imperial General Staff is of course well known for his distinguished services to this country and to the Commonwealth. Major General Sir Charles Dunphie, CB, CBE, DSO, following a notable record of military service, has held an important position in industry for the last ten years. We are very glad indeed to have them with us and to be able to draw upon their wide experience.

The executive at head office has been strengthened by the appointment of Mr R. W. Peattie to the position of Assistant Manager. Mr Peattie was previously the manager of our Glasgow Branch and he has been succeeded there by Mr W. J. Renfrew, formerly manager at Belfast.

It is with regret that I have to record the death in October last of Mr Alexander MacDonald, CBE. He was General Manager of the Corporation from 1931 to 1945 and thereafter was on the board of a number of our associated offices. His wise counsel will be much missed by his colleagues.

On several occasions during the past few years I have drawn your attention to the great difficulties which we have encountered in the United States of America and you may have seen an announcement in the press towards the end of last year to the effect that we had entered into an agreement with the Atlas Assurance Company Limited and the Sun Insurance Office Limited to place under common management in the United States the affairs of the three offices and their subsidiaries. This arrangement took effect on January 1st this year and Mr G. Leycester Parker, United States Manager of the "Sun" was placed in charge of the joint organisation. We welcome Mr Parker to the "Royal Exchange" group and, conscious of the heavy task which he has undertaken, we wish him every success.

It would be quite wrong for me to encourage you to think that what we have just done will by itself restore our fortunes in the United States. The fundamental difficulties of intense competition and low rates are still with us. What we believe is that the new arrangement will place us in a better position to grapple with the problems associated with the United States insurance market, and more quickly to take advantage of such improvements as may occur in the future. I can, however, say that we are already encouraged by signs of a reduction in operating costs and that we expect further economies as the organisation settles down.

Reference to this matter would not be complete without mention of Mr H. C. Pitot who has been our United States Manager for the past eight years. In order to make possible the steps which we have now taken he agreed to retire from our service at a rather earlier age than he would otherwise have done, and it would be fair to say that but for the reorganisation which he carried out during the very difficult time when he was in charge of our affairs we would have been ill-equipped to participate in this new venture. We wish him every happiness in the future.

THE YEAR UNDER REVIEW

The period covered by these accounts saw some exceptional economic and financial changes in many of the territories in which we operate. Especially was it true of the United Kingdom and the United States of America in which countries a large part of our investment portfolio is concentrated.

At home the discipline of a very high bank rate and the severe credit restrictions in the early part of last year were gradually relaxed and with a stable cost of living index I would expect a brighter economic outlook for the United Kingdom. It should not be supposed that this welcome situation results solely from the harsh financial restraints which were called for by conditions in 1957 and 1958. Rather, in my view, does it point to the wisdom of the consistent and resolute policies of our monetary authorities over a long period.

Contrary to the experience in Britain the trade recession of 1958 did not significantly abate inflation in the United States. The wage cost spiral is deeply entrenched in the American economy, and with the current business recovery the stage there seems set for a further bout of inflation.

THE GROUP'S INVESTMENTS

On account of the need to provide the several funds with the kind of reserves appropriate to the liabilities which they assume, the investments of a composite insurance office are inevitably of a highly diverse character so that the worldwide postwar political and economic developments, some of which were almost impossible to predict, have imposed a heavy burden upon our Treasury Committee.

Nevertheless I can assure you that ample, and in some cases relatively large, favourable margins exist between the total book values and market values of our separately invested funds. The interest income derived from these funds has continued buoyant, and as examples of this, during 1958 the gross average yield upon the Life Fund was raised from £5 17s. 3d. per cent to £6 3s. 2d. per cent, while the consolidated interest income of our general funds was raised by £144,000, or over 8 per cent, to £1,842,368.

LIFE DEPARTMENT

Year	Nett new sums assured £	Premiums £	Fund at end of year £
1955 ..	9,559,132	2,730,200	25,550,794
1956 ..	9,536,520	2,917,615	26,869,624
1957 ..	10,956,434	3,094,497	28,214,241
1958 ..	11,191,381	3,267,598	29,823,064

The year under review is the first of the current triennium and the foregoing figures briefly summarise the progress made in 1958 in relation to that of the preceding triennium. Claims by death were substantially higher than in 1957, but the total cost was well within the expectation, while payments in respect of surrenders fell considerably and to a relatively low level. Investment income again increased materially as you would expect from my earlier reference to the investment portfolio of the fund.

It was recently decided that on participating life policies in the United Kingdom and in certain overseas territories the rate of interim bonus in respect of premiums due and paid in 1959 should be raised from £2 10s. 0d. per cent to £2 15s. 0d. per cent. That this step could be taken so early in the present triennium is an encouraging indication of the inherent strength of this old-established fund.

Both the general and pension sections of our annuity fund also enjoyed healthy progress and show a growth of 17½ per cent during the year.

FIRE DEPARTMENT

Year	Nett Premiums £	Surplus transferred to Profit and Loss Account £	Ratio %
1954	9,763,652	700,944	7·2
1955	9,597,570	998,408	10·4
1956	10,831,189	305,924	2·8
1957	10,907,781	383,011	3·5
1958	11,054,883	658,097	6·0

I am glad to be able to say that 1958 saw another fall in the United Kingdom fire wastage, although the total figure of more than £24 million published in *The Times* is still a formidable one.

I believe that the fire insurance offices are entitled to take a substantial measure of credit for this improvement; our staff of surveyors is constantly engaged in testing sprinkler and fire alarm systems and other equipment; they advise on methods of construction and heating, and much attention is devoted to promoting fire safety in industrial processes and storage arrangements. In addition to this the insurance offices own and operate the London Salvage Corps; they largely finance the Fire Protection Association of the Fire Offices' Committee, and they share with the Government the cost of maintaining the Joint Fire Research Organisation of the Department of Scientific and Industrial Research.

As their names imply, these bodies work in different but complementary fields, although they have the same object in view, namely to reduce the heavy bill which the nation pays each year for fire losses. Industrialists, architects and others concerned in the building and layout of new premises or in alterations to existing plants can, with benefit to themselves, make a contribution to this work by consulting their insurers in the planning stage and not after the work has been completed.

In addition to paying for the material fire damage our fire department caters for loss of profits insurances and the need for this form of cover is becoming increasingly recognised. We also write in this account what we call special perils business, giving protection against a large variety of misfortunes. Damage arising from riot and earthquake are just two examples.

Disturbed political conditions and some slackening in trade in a number of countries affected our operations abroad so that we had to be content with a rather modest increase in our premium income. The year did not fail to produce, both at home and abroad, the usual crop of problems inseparable from a department providing insurance cover for such a wide variety of risks, ranging, for instance, from a village store in Central Africa to a vast industrial undertaking in North America; from a cotton mill in Lancashire to an oil refinery in the Middle East. There is little sign that these problems will diminish in the immediate future, especially with the peaceful uses of atomic energy no longer confined to a few highly industrialised countries.

MARINE DEPARTMENT

Year	Nett Premiums £	Surplus transferred to Profit and Loss Account £	Fund at 31st December £	Ratio to nett Premiums %
1954	1,766,950	289,548	3,771,715	213·5
1955	1,829,182	275,091	3,775,030	206·4
1956	1,836,829	233,375	3,761,856	204·8
1957	1,969,971	274,213	3,727,972	189·2
1958	1,846,082	218,976	3,635,235	196·9

Although the out-turn was less favourable than that of the previous few years the 1956 underwriting account which we are now considering may be regarded as reasonably satisfactory but, as I mentioned to you last year, we seem to have returned to what may be described as a more normal experience of total losses. This trend which became apparent towards the end of 1957 continued during 1958 when some casualties of considerable magnitude occurred, notably the loss by explosion of the tanker "Mirador." It is also evident from the number of radar fitted ships which have been involved in collisions at sea during the past few years that this device is by no means the complete answer to the problem.

For the first time in the postwar years there was a strengthening in the rating of certain classes of hull risks which had been underwritten too cheaply for too long and had involved insurers in considerable losses. Leading underwriters in the market were consequently able to insist on a higher rating structure for fleets with bad records and this was certainly overdue as the influence of the London international marine market very quickly finds its echo in markets abroad. The year was marked by the laying up of much old tonnage and this should result in some benefit to the market, as without doubt many of these vessels have outlived their usefulness and are expensive from an insurance point of view.

The cargo side of our account continues to be extremely competitive with the result that the level of rating still tends to be too low under the conditions prevailing today in many parts of the world. It can perhaps be said that some improvement took place during 1958, but much more needs to be done before this side of the business is placed on a satisfactory basis.

ACCIDENT DEPARTMENT

Year	Nett Premiums £	Surplus £	Ratio %
1954	14,485,940	867,910	6·0
1955	15,749,862	611,786	3·9
1956	17,996,035	−57,468	−0·3
1957	19,749,462	456,676	2·3
1958	21,088,791	493,954	2·3

We passed another milestone in this department in 1958 when for the first time the group premiums exceeded £20 million. The additional income is in part due to revisions in motor premiums in a number of territories to which I referred last year, but in the main it reflects the ever increasing use made by the insuring public all over the world of the services we have to offer.

Insurances against material loss provide a substantial part of our accident portfolio, but the bulk of the income is derived from protecting policyholders against their liability at law to pay compensation for death or personal injury and for damage to the property of others. The facilities we offer cover a wide field. A jay walking pedestrian, for example, may cause a serious accident, but he can buy protection for a few shillings, while at the other end of the scale a large civil engineering contract involving a heavy risk potential demands a substantial premium. What is not always appreciated is that, in this department particularly, we cannot satisfy the public unless we provide an efficient worldwide service to go with the policies which we sell. Not only must good advice be available at the time an insurance is effected, but we must have in addition a widely spread staff capable of giving prompt claims service. It is costly but essential.

The continued expansion of the account has entailed a further large addition to the reserve for unexpired risks and the surplus, representing 2.3 per cent of the premiums, is surely a modest return bearing in mind the varied nature of the risks undertaken and the substantial service element involved.

TRUSTEE AND EXECUTOR DEPARTMENT

The activities of this department have been well maintained. The sum of £2,226 has been transferred to the profit and loss account, but this does not really represent the full benefit to the stockholders, nor does it adequately reflect the value of services rendered to the public or of the goodwill created in the City and elsewhere.

The debenture and loan capital alone with which the Corporation is concerned as trustee exceeds £300 million and in addition substantial sums are administered as trustee of Unit Trusts, Pension Funds, Wills and Settlements of one kind or another. A wide variety of other personal financial services is also provided by the trustee department.

CONSOLIDATED ACCOUNTS

On the revenue side of these accounts the principal items are £1,842,368 investment income, £1,373,253 being the total of the transfers from the departmental revenue accounts and also the first instalment of the Proprietors' share of the 1955-57 life valuation surplus.

On the expenditure side taxation accounts for £1,310,683 and after the usual pension fund transfers there emerges a balance of £1,767,249.

In the appropriation account we are able to take credit for £236,000 out of the sum of £460,800 which we applied in reduction of the book values of investments of subsidiary companies in the rather exceptional conditions existing at the end of 1957. When allowance is made for the 1957 carry forward there is a disposable sum of £5,032,289.

Finally, after making provision for the interim dividend, the recommended final dividend and certain additional transfers to the group pension funds, the sum of £3,965,277 remains to be carried to the balance sheet.

DIVIDEND

You will know that the nett surplus derived from our underwriting accounts is traditionally, and in my view prudently, not distributed in dividends to the stockholders but is accumulated to build up reserves for the future protection of our policyholders. In the last ten years the interest income from our general funds has increased more than threefold and it is from this branch of our activities that the Proprietors derive their dividends.

The rate of dividend was last effectively raised to 16 per cent upon the increased capital in respect of the year 1956, when our interest income totalled £1,541,917. With interest earnings of £1,842,368 in 1958 the Court has come to the conclusion that another increase in the dividend is now warranted and has recommended that it be raised to 18 per cent for the year.

CAPITAL

It is now five years since we made an issue of stock for cash and during this period the premium income of the group has risen by nearly one-third. This welcome expansion in our activities has inevitably involved us in capital commitments, not only in this country but in the many overseas territories in which we operate, and the Court of Directors consider it is desirable to add materially to our resources.

The Annual General Court will have before it a proposal to increase the authorised capital of the Corporation to £12 million. If this resolution is passed it is the intention of the Court to issue for cash, by way of rights to the existing Proprietors, 3,800,000 shares of £1 each at a price of 30s. per share payable in two instalments of 15s. each in the ratio of two shares for each £3 of Capital Stock held on May 26, 1959.

The new shares will not participate in the interim dividend expected to be declared in October, 1959. The Court anticipate that this interim dividend will be at the rate of 8 per cent payable on the present capital stock of £5,700,000 and, in the absence of unforeseen circumstances, that they will be able to recommend a final dividend of 8 per cent on the increased capital of £9,500,000.

GROUP AFFAIRS

I should here like to refer briefly to the valuable results which we have had from our staff training programme. Originally introduced in 1955 for outdoor officials of the parent office only, the courses have since been diversified and extended to embrace clerical staff and candidates for our overseas branches, and our associated offices now participate in the scheme as well. The standard of attainment necessary to qualify for admission to these courses has recently been raised, and the whole project is geared to produce men

capable of taking responsibility at an early age. All the tuition is undertaken by our own senior officials and once again I would like to thank them for their valuable contribution. On this occasion I want to mention in particular Mr J. W. Aris who has acted as warden from the commencement and who will shortly be retiring.

Since I addressed you last year the work of more closely integrating the business of the offices comprising the "Royal Exchange" group has continued to go forward. One effect has been to produce some temporary distortion in the results of individual subsidiaries, but every member of the family has made its contribution to the year's results. More remains to be done in this field before we can be satisfied that we are using our resources to the best advantage and further substantial progress may be expected in 1959, but it is not a task which can be unduly hurried if we are to preserve the goodwill which all the members of the group have built up over many years.

The work of modernising and refurnishing our quarters in the Royal Exchange was completed during the year and the results have been favourably received, not only by members of the public who visit the offices but by those who work in them. We also continued with our programme of reconstruction and modernisation at the home branches and some notable improvements have been made, especially at our offices in Newcastle, Southampton and the West End of London. A number of new sub-offices were opened and some of the larger district offices are now in process of being converted into full branches.

The development of our site in Sydney, Australia, is well advanced and we expect to have the new building ready for occupation some time next year. Many of our overseas branches received visits during the course of the year from senior head office officials and the General Manager has recently returned from a tour of the Union of South Africa and the Central African Federation. I regard it as vital that this regular contact between the executive in this country and our managers abroad should be maintained, as only in this way can all concerned appreciate the needs of the many territories in which we operate and decide how we can best meet them; and I know that our overseas managers greatly welcome these visits.

TRIBUTE TO OFFICIALS AND STAFF

It affords me much pleasure to give the stockholders such a satisfactory report about the Corporation's affairs and while a measure of good fortune is indispensable to a business such as ours it cannot alone produce the consistently good results which we have enjoyed in recent years. Wide experience, sound judgment and harmonious working at all levels are vital ingredients of success in our business. I am therefore sure that the stockholders will wish me, on their behalf, to acknowledge the wise leadership of our General Manager, Mr H. A. Walters, the skill of the officials responsible for the underwriting and of those concerned with the investment of our funds, to which must be added the energy and loyalty displayed by our branch managers and all the staff at home and abroad throughout the group. By their combined efforts we enhance our already fine reputation and make new friends as the years go by.

I also want to send a message to our local boards of directors, advisory committees and agents and thank them for their valuable support. Finally I must express my personal appreciation to the Sub-Governor, the Deputy-Governor and all the members of the Court for their help throughout the year.

BIRMINGHAM SOUND REPRODUCERS LIMITED

Monarch

Record Changer

RESULTS REACH NEW PEAK

BENEFITS ENVISAGED FROM NEW PRODUCTS

DR. D. M. McDONALD ON IMPORTANCE OF RESEARCH AND DEVELOPMENT

The twenty-third Annual General Meeting of Birmingham Sound Reproducers Limited will be held on May 28th at the Savoy Hotel, Strand, London, WC2.

The following is the statement by the Chairman, Dr. D. M. McDonald, B.Sc., M.B., CH.B., which has been circulated with the report and accounts for the year ended December 31, 1958:

This time last year, I reported on the great expansion which had taken place in the Company's business during 1957. I am now able to report that as a result of a further increase in production and sales, the profits for the year ended December 31, 1958, have reached a new record of £1,538,341 before tax which compares with £1,352,538 for the year ended December 31, 1957. I should like to take this opportunity of expressing my great appreciation of the outstanding work that has been done by the Company's officials and work-people in achieving this result.

Sales.—Our main product, the UA8 model "Monarch" record changer, has moved from success to success both at home and overseas. A new changer, the UA12, is now being produced in increasing quantities and this model is proving equally profitable. The TU9 single player turntable unit has enjoyed steady sales during the period.

Last year I referred to the work of our research and development department at Old Hill. As a result of their efforts, a tape deck to be used in tape recorders has been successfully developed and is now in production. The enquiries and orders received up to the present time indicate the existence of a large market which we are confident will continue to expand. Our own unit will make possible the production and sale of reliable and attractive tape recorders at a low price which should widen the market still further.

Expansion.—Substantial factory extensions at Lone Moor, Londonderry, and at Old Hill, Staffordshire, have now been completed. The plant and machinery at Old Hill has been fully installed and we are now moving into the extension at Lone Moor. The floor space available at Londonderry is now in excess of 130,000 square feet, which compares with 80,000 square feet 3 years ago. The floor space available at Old Hill is now 150,000 square feet, as compared with 85,000 square feet at that time.

Capital Expenditure.—The completion of the extensions to which I have referred has involved the investment, during the year, of some £220,000 in new plant and buildings, which, once again, has been provided out of retained profits and depreciation provisions which for the year under review amounted to £477,701 and £89,880 respectively.

Overseas Companies.—In the United States of America we have taken new and larger premises to assist us in dealing with the increasing volume of business. We feel confident that we shall succeed in increasing our hold on the market and the long-term prospects are good.

In Canada, we believe that we have approximately 60 per cent of the total market.

Our Australian subsidiary has continued to make good progress. The advent of television in this market produced a new source of competition in the home entertainment field, but this year the indications are that the trend in sales of record players is, again, upwards.

Issued Capital.—In view of the sums retained out of past profits and used to provide additional fixed and working capital, the issued capital was increased during the year to £1 million in ordinary shares of 5s. each.

Future Prospects.—The current financial year has still eight months to run and it is, therefore, too early to foresee the results to be expected for the whole year. I hope to make some further comment at the Annual General Meeting on May 28th and again when we make our interim dividend announcement in October next. We have abounding faith in the future of the record players and the tape deck, but we realise that the methods we have used can be applied to the mass production of other products. Our research and development department is actively assessing and exploring the possibility of mass production of other items for which there is a foreseeable mass market.

For some time now we have been studying the possibility of entering the field of refrigeration. We have reached the conclusion that the mass production techniques which we have developed in our factories can also be applied to the production of sealed compressor units for refrigeration equipment, which would command a mass market at home and more particularly overseas. Plans are in hand for extending the factory space available and production will start as soon as possible. It must, however, be appreciated that it will take time before large scale output can be achieved.

In the light of the results for the year ended December 31, 1958, your directors have decided to recommend a final ordinary dividend of 32½ per cent less tax on the increased capital, and you will be asked to approve this at the meeting.

TAYLOR WOODROW LIMITED

ANOTHER YEAR OF PROGRESS

The Twenty-fourth Annual General Meeting of Taylor Woodrow Limited will be held on May 29th in London.

The following is an extract from the review by Mr Frank Taylor, the Chairman, which has been circulated to Shareholders with the Directors' Report and Accounts for 1958:

The progress of your Company during the year under review has been not unsatisfactory and evidence of this is reflected in the Accounts for the year ended December 31, 1958.

The Profits for the year have been announced at £538,761, but the figures now submitted take into account the proposed reduction in the rate of Income Tax from 8s. 6d. to 7s. 9d. Consequently, the Profits for the year after Taxation are shown at £573,761 as compared with £525,062 for the previous year.

Your Directors are recommending that the final dividend for the year shall be 7½d. per share (less tax), which is the same amount per share as for 1957, but for 1958 it is on 9 million Ordinary Shares which includes the 3 million Ordinary Shares which were issued out of Reserves in November, 1958.

The turnover, including Subsidiary Companies but not Associated Companies, for 1958 was £27 million, an increase of 20 per cent compared with the 1957 total of £22½ million.

I would again stress that in a business such as ours where contracts take several years to complete the results should be judged over a number of years rather than one year.

Building and Civil Engineering.—This year has been one of great activity and increased turnover despite competitive conditions in the industry.

Hinkley Point Atomic Power Station, upon the design and construction of which we are engaged in association with The English Electric Company Limited and Babcock & Wilcox Limited, continues to attract the widest interest.

During 1958 the second atomic power station at Calder Hall and the conventional power station at Castle Donington were both successfully commissioned. Our work upon other stations at High Marnham and Northfleet is progressing well.

Arcon Export and Home.—As with many other Companies supplying capital goods to Overseas markets, during 1958 Taylor Woodrow (Building Exports) Limited felt the repercussions of a trade recession in which a major contributory factor was the world-wide fall in commodity prices, and corresponding reduction in purchasing power and demand by many hitherto fruitful territories. At Home, too, credit control and other factors restricted the volume of orders to a certain extent, but recent relaxations have brought signs of a modest revival.

After reviewing overseas activities the Chairman stated:

During the year a number of leaders of Industry have publicly declared their views on Nationalisation. Under free enterprise great progress has been made by Industries generally, and in my view it is essential for the well-being of the nation as a whole that control of Industry be left in the hands of those with the necessary experience who have proved themselves capable of running it.

COMMERCIAL UNION ASSURANCE

CONTINUED EXPANSION

The annual general meeting of the Commercial Union Assurance Company Limited, will be held on May 25th in London.

The following are extracts from the circulated review by the chairman, Lieutenant-Colonel John Leslie, of the report and accounts for the year 1958:

Broadly speaking, the trend which has been with us in recent years continued and in 1958 we were faced with many of the same problems which aggravated the market in 1957. Conditions governing the tempo of trade and commerce throughout the world have not been wholly unfavourable and in a business climate which can be regarded as temperate our premium income for Fire, Accident and Marine insurance has once again expanded and we have achieved another record year in our Life department.

I am pleased to say that the underwriting profit from the Fire department shows an improvement upon 1957 but the rapid increase in premium through the Accident department has again turned a trading profit into an underwriting loss, after making provision for the unearned premium reserve. The transfer from the Marine department in respect of the closed year 1956 is lower and, on balance, there is an all over underwriting profit of £639,550. It is the out-turn from the Casualty portfolio in the United States of America which is primarily responsible for the underwriting loss in the Accident department; this state of affairs has caused much anxiety to the insurance industry as a whole on both sides of the Atlantic and I am afraid some further time must elapse before we see satisfactory results from this quarter.

DEPARTMENTAL FIGURES

Fire Department.—Net Premium Income 1958 £25,698,771 (1957 £24,870,686). Increase £828,085.

After adjustment of the reserve for unexpired risks there was an underwriting profit of £1,374,585 (5.35 per cent), of which £1,200,000 has been transferred to Profit and Loss Account. The Fire Fund now amounts to £22,643,800, or 88.11 per cent of the premium income.

Accident Department.—Net Premium Income 1958 £40,371,927 (1957 £36,066,629). Increase £4,305,298.

After adjustment of the reserve for unexpired risks there remained an underwriting loss of £835,035, or 2.07 per cent of the premium income. The sum of £900,000 has been transferred from Profit and Loss Account and the Accident Fund now amounts to £24,381,173, or 60.39 per cent of the premium income. Business at home has increased but there has been a slackening in the tempo seen in postwar years.

Marine Department.—Net Premium Income 1958 £3,069,603 (1957 £3,155,498). Decrease £85,895.

The claims paid, after deduction of reinsurance and salvage, amounted to £2,449,497, and, out of the surplus of the 1956 underwriting year and previous years now closed, the sum of £100,000 has been transferred to Profit and Loss Account. The Marine Fund now stands at £4,292,244, which is 139.83 per cent of the premium income.

Life Department.—New Life Assurances 1958 13,377. Net sum assured £28,897,395 (1957 12,521, £24,148,629). New Annuities 1958 3,133. Amount per annum £1,005,981 (1957 5,315, £1,509,184).

The 1958 figure for new Life Assurance sums assured, after adjustment for reassurances ceded, represents a new record both as to amount and to the increase over the preceding year. During the year the Life Fund increased by £5,273,102 to £65,471,585.

PROFIT AND LOSS ACCOUNT AND BALANCE SHEET

Gross Interest, Dividends and Rents amount to £4,740,331, an increase of £636,129, part to which is due to the investment of the new capital raised towards the end of 1957 and part of the inclusion for the first time of the figures of the Anglo-Elementar, our Austrian subsidiary. The transfers from the Fire and Marine departments are well within the amounts available, and the transfer of £900,000 to the Accident department more than replaces the loss on that account.

An amount of £200,000 has been transferred to the Contingencies and Taxation Reserve, and the Profit and Loss Appropriations Account closes with a balance of £837,172, against £851,520 a year ago.

The Directors recommend a final dividend of 1s. 1d. per 5s. share, making, with the interim dividend of 11d. paid in November last, a total of 2s. per 5s. share. Our revenue from Interest, Dividends and Rents, together with the Shareholders' Life Profits, is more than sufficient to meet all taxation thereon and the net cost of the dividends paid and recommended together with the special profits tax attributable thereto.

The total dividend for 1957 was equivalent to 1s. 10d. per share on the present capital, and shareholders will remember that, when the interim dividend of 11d. was declared last November, they were advised that this should not be taken as implying any increase in the total distribution for 1958, but as an equalisation of the interim and final payments. The underwriting results have, however, proved to be much better than seemed likely earlier in the year, and, as the investment income continues to be buoyant, your Directors are of the opinion that shareholders should now receive an increased payment—the first increase since 1955.

The continued expansion of our business and the inclusion of the figures of the Anglo-Elementar are reflected in the increase in our assets and liabilities. The paid-up capital now amounts to £7,788,000 as a result of the capitalisation of the Share Premium Account and a portion of the Contingencies and Taxation Reserve. There was a recovery during the year in Stock Exchange prices, and the aggregate market values of our securities exceed the book values by a very substantial amount.

I have decided to relinquish the position of Chairman. I have held this office since 1948 and I feel the time has arrived when I should begin to curtail my activities. I am happy to be able to tell you that the directors have elected Mr Ronald C. Brooks to occupy this important post. Mr Brooks has been a director since 1946; he became a Deputy Chairman in 1955 and has been Vice-Chairman since 1956. I am confident that the Company will continue to move forward from strength to strength under his leadership.

Babcock Group keyed to meet world competition

Mr. W. Lionel Fraser, Chairman, reviews the world-wide activities of Babcock & Wilcox, Limited

The 60th Annual General Meeting of Babcock & Wilcox, Limited will be held on 28th May, 1959, at Church House, Dean's Yard, Westminster, S.W.1.

The following are extracts from the circulated statement of the Chairman, Mr. W. Lionel Fraser:

Thanks to Staff and Operatives

During the past year heavy calls have been made upon all employees and your Directors are most grateful for their loyal and generous response. Specialised knowledge and experience acquired by the staff through many years of service with the Group are not only particularly valuable at the present time but are a strong safeguard for the future.

Finance

The profits of the Group, subject to United Kingdom taxation but after setting aside the sum of £1,360,367 for depreciation were £3,277,626. After providing for United Kingdom taxation and additional depreciation towards replacement values of fixed assets, and also making other necessary adjustments, the balance standing to the credit of the Consolidated Profit and Loss Account is £1,761,400.

Your Directors recommend a Final Dividend of 7 per cent., less tax, on the Ordinary Stock, making 13 per cent. for the year on the Ordinary Stock Capital of £9,405,497.

It is also recommended that £216,917 be transferred to General Reserve, raising that Reserve to £8,341,296.

Current Trading Conditions

At the beginning of last year heavy engineering had to bear a major share of the setback in general industrial expansion. The boilermaking industry's outlook was, however, affected even more by the curtailment of the Central Electricity Generating Board's plans for installing conventional power plant. In addition, rapid technological development has enabled the total steam capacity required for a given electrical output to be reduced substantially, and boilers are now built as much larger units.

This trend towards bigger units did not come as any surprise to your Company. Indeed, it was one of the main reasons prompting us to take a particular interest in the facilities of the Royal Ordnance Factory at Dalmuir. It had been apparent for some time that amongst the urgent requirements at our Renfrew Works were additional shops having bays of wide span, great height and with heavy crane installations for the production of large welded drums and pressure vessels, as well as for the assembly and testing of heavy cranes. In addition, we had in prospect the fabrication of the large vessels and equipment for the Hinkley Point Power Station. These needs have been completely met at Dalmuir, and I should add that there are also other valuable facilities complementary to those at Renfrew, which will enable the Company to develop ranges of engineering products not previously manufactured.

Atomic Energy

Many difficulties have had to be overcome in the construction of the Hinkley Point nuclear power station in Somerset but, despite these, considerable progress has been made. In addition, your Company has been active, in partnership with The English Electric Company Limited and Taylor Woodrow Limited, in formulating designs for the installation of atomic power stations abroad. Your Company is also participating in nuclear designs for marine propulsion.

Export and Overseas Interests

Owing to the state of the home market, orders in overseas markets have become more vital than ever. But of course these markets too have their problems. Even so, the proportion of work undertaken for export has been at a high level. Important installations as far afield as New Zealand, Trinidad, Iraq and Nigeria are under construction by the Parent Company. At the same time our Companies in Australia and Africa are engaged upon the construction of steam plant for large generating stations.

In Brazil and Mexico our Companies are gradually establishing themselves and the Babcock Companies associated with us in the Continent of Europe, as well as our Licensees in Europe and the Far East, are playing an energetic part in meeting the demands for power in their respective spheres.

General Review and Prospects

In my last two or three Annual Statements I have been at some pains to indicate that the maintenance of profits at the rate previously earned was unlikely. Your Board realised that in the good years all necessary steps must be taken to ensure that the whole organisation of the Babcock Group, especially the manufacturing and research facilities, is brought to a pitch of the highest efficiency, not only at home but in all the many countries of the world in which the Group carries on its business. I do not hesitate to give assurance that the entire Group is keyed to meet with confidence and energy the many problems with which it is confronted. For a period business may prove to be less profitable and even less plentiful. Despite these possibilities, I am of the opinion that over the years ahead the carefully planned preparations, reinforced as they are by unique skill and experience, will bring their reward and will uphold your Company's position in the forefront of British industry.

Babcock & Wilcox

COMPLETE STEAM-RAISING PLANTS OF EVERY DESCRIPTION

NORTH BRITISH & MERCANTILE INSURANCE

GRATIFYING GROWTH OF NEW LIFE BUSINESS

The annual general meeting of North British & Mercantile Insurance Company Limited will be held on May 28th in Edinburgh.

The following is an extract from the circulated statement of the Chairman, Mr Cyril H. Kleinwort:

Fire Department.—Our Fire premiums show a reduction of some £400,000 which arises entirely from the steps we have taken to prune our business in the United States of America, which have reduced our premiums from that territory by about £800,000.

Losses, are lower by £433,458 and we have succeeded in reducing expenses by £270,596.

The loss ratio amounted to 54.9 per cent for last year as against 55.9 per cent in 1957.

The loss of £26,180 compares favourably with the figure of £889,435 (4.6 per cent) last year.

Casualty Department.—Total Casualty premiums were £11,895,342, an increase of £1,125,389 over the 1957 figure. Total claims incurred were £7,063,859 against £5,882,767, the percentage of claims to premiums being 59.4 per cent compared with 54.6 per cent for 1957.

Commission, Expenses of Management and Overseas Taxes other than taxes on profits totalled £5,064,530 compared with £4,776,688 for the previous year, the respective ratios to premiums being 42.6 per cent for 1958 and 44.4 per cent for 1957.

There is an underwriting loss of £683,203, 5.7 per cent of premiums, compared with an underwriting loss of £426,044, 4 per cent of premiums for 1957.

Marine Department.—Our Marine underwriting was, with the exception of the United States of America, again satisfactory, but the increase in claim settlements which I mentioned to you last year continued, with the result that the profit from the 1956 and 1957 Accounts is likely to be less than the average of previous years.

Life Department.—It is gratifying once again, to be able to report record figures for new Life business. The new sums assured for 1958, after deduction of reassurances, amounted to over £18,400,000 against a little under £16 million in 1957. Both the Ordinary and Group sections showed advances over the previous year.

We have now entered upon the final year of our Valuation quinquennium at the end of which we anticipate being in a position to declare a satisfactory rate of bonus. The Directors decided to make a further increase in the rate of interim bonus payable on claims arising on and after January 1, 1959, and until further notice. The new rate is 45s. per cent per annum compound (an increase of 3s.) and is payable in respect of each annual premium paid since the last distribution of surplus.

Consolidated Profit and Loss Account.—Net Interest on Investments shows an increase of £49,136 over the previous year at £1,277,535. The operations in the Fire, Accident and Marine departments during the year resulted in a net loss of £350,748 as against a loss of £980,830 for 1957.

It is proposed to maintain the dividend at 2s. 3d. per share of which 1s. 2d. is being paid as an interim dividend. The total dividend of 2s. 3d. per share plus the dividend on the Preference Stock will take £798,219.

THE CUNARD STEAM-SHIP COMPANY LIMITED

FUTURE OF THE BRITISH WEEKLY EXPRESS SERVICE

Colonel Denis H. Bates, Chairman of the Company, in a statement to stockholders for submission at the Eighty-Second Annual Meeting to be held on May 28th says:

The "moderate optimism" I expressed a year ago in expectation of some resilience in our passenger trade countering prospective reductions in cargo earnings, I regret has not been justified. Though the passenger ships have responded well, it was not anticipated that freight rates and volume of cargoes would fall with such speed. Our Atlantic and Indian cargo services, particularly vulnerable to world tramp competition, are £1¼ million below 1957. We have striven to offset these effects of the financial cyclone raging throughout the industry, but operating surplus at £5,670,919 is £559,111 below 1957. In October, after consideration of estimates of the year's surplus we decided that no interim dividend be paid, but the actual figures proved better than anticipated and a dividend of 8 per cent is recommended.

Throughout the years of "plenty" from 1947 to 1956 depreciation allowances based on historic cost were insufficient for ship replacement at current building costs. Each year we have endeavoured to plough back, but with penal taxation the gap has never been filled and the Company's lifeblood was slowly being drained away. Unfortunately, extra relief under investment allowance, which requires annual profits to be effective, came too late, for in 1957 the prosperous era ended abruptly.

CONSERVING EXISTING RESOURCES

With 1958 another "lean" year, and to conserve existing resources the order to replace the *Britannic*, deferred in 1957, has been cancelled together with reservations within the Group for three cargo ships, and overall planning for replacement has been completely reviewed.

During the shipping slump of the 1930s HM Government became well aware of the position even then arising on the North Atlantic through foreign governments subsidising shipping services for national prestige. Arrangements with HM Government were concluded which rendered possible, on a strictly commercial basis, the completion of the *Queen Mary* and *Queen Elizabeth*, which proved to be entirely justified. It was then said that on Cunard would rest not only responsibilities to shareholders "but a new responsibility to the Nation to conduct its only representation on the North Atlantic." Though the second world war prevented these two ships from fulfilling their commercial role until 1947, it is undeniable that the brilliant conception of the "Queens" by the Board of the day repaired the ravages in the Company's finances from the shipping slump of the 1930s, and mainly provided the profits which allowed ordinary dividends to be resumed in 1943 and to reach 11 per cent in 1956.

Cunard can indeed be said to have carried out triumphantly the trust placed in them by HM Government. During the war the "Queens" carried 1,622,054 passengers and steamed 1,150,406 miles. In peacetime from 1947 onwards the Cunard Company has operated on the Atlantic as before without any subsidy, and has continued to carry more than double the passengers of any North Atlantic Conference line.

In 1932 it was warned that if Britain built two express vessels it was conceivable the US Government would decide national prestige demanded similar action. That warning is now becoming fact because the US Government, which in 1952 built the *United States* at a cost of £27 million and sold her to United States Lines for £12 million, has now passed a bill to build a sister ship at an estimated cost of £46½ million, undertaking to sell the ship to United States Lines for £16½ million. The French Government is also subsidising the construction of the *France* for their national prestige in the North Atlantic and the Italian Government has acted similarly.

BRITISH PRESTIGE UPHELD

For many years the Cunard Company has upheld British prestige in the Atlantic passenger trade against all comers without any charge on the Nation's economy, and not without success to stockholders. It is a proud record of service; but faced with the overwhelming odds of ever-increasing Governmental subsidies to our competitors on the score of national prestige, your Board have decided it is impossible to continue under such unequal and unfair competition to free enterprise. We have, therefore, laid the whole position before HM Government, and the Minister of Transport, who is actively considering the matter, made a statement in the House of Commons on April 8th. A further communication to stockholders will be made as soon as practicable. With the concurrence of the Minister the technical teams of Cunard and John Brown of Clydebank, who built the "Queens," are working on the specification of their replacements and whilst I cannot now go into particulars, general remarks may be of interest.

In 1930 naval architecture and marine engineering made possible, where previously three ships had been needed, weekly sailings from Southampton and New York maintained by only two ships, entailing a minimum average sea speed of 28½ knots. North Atlantic weather makes the length of a ship at this speed an important factor. Carrying capacity is a compromise between conflicting requirements. It has to be as big as possible but the space per passenger has to be attractive and if dimensions become excessive, the added displacement increases the engine power and fuel required for the same speed, again adding to displacement, and a stage is reached where draught, which affects also the power needed, limits freedom of operation in ports. At 39 feet for the *Queen Mary* the limitations are severe but at the time it was the best compromise available in view of her light-weight and the weight of stores, fuel and water required. Truly she was "the smallest and slowest ship which could do the job and pay"—that she still pays is no small tribute to her design, and I can say the same of the *Queen Elizabeth*.

Today there is increased knowledge of materials, especially in light alloys and in methods of construction which enable a lighter ship to be built for the same duties; in machinery also much has been done to save weight and improve efficiency. In our four recent Canadian service ships many experiments have been made towards savings in weight.

"GETTING THERE IS HALF THE FUN"

Contemplation as to how the world will be travelling in the future is fascinating. Many

say air and sea are in competition; whilst that may be so on many travel routes it is unwise to generalise. The route between America and Europe has characteristics very different from others. It is comparatively short—a long week-end by express ships, by air 6½ hours, shortly to be 3½ hours. Secondly, 70 per cent of our clients cross on holiday—as we put it "Getting There is Half the Fun" by sea. Is it not true there is nothing in air travel except speed for anyone and far less for women than for men? The next largest category comprises business travel and if current medical opinion is correct there is a danger that modern air speed has outstepped the capacity of man to adapt himself to its stress and he needs at least to go one way by sea to give himself time to recuperate.

The air has taken enormous strides very quickly in speed and on the Atlantic, by its own statistics for 1957/58, has increased its passenger numbers by 26 per cent mainly through the introduction of economy class, achieved largely at the expense of Tourist Class and by an increase in cost of 100 per cent in the number of flights. Sea carryings in the same period were reduced by 4¼ per cent in 832 sailings—35 fewer than the previous year.

Cunard philosophy has always been that air and sea are complementary rather than competitive on the North Atlantic. Twenty-one years ago the Cunard Chairman said "I firmly believe that an air service across the Atlantic will provide its own traffic as a net addition to sea traffic." Today Cunard are still carrying their quota and air traffic has in the main proved that net addition. It has been said that the introduction of economy class air fares on the North Atlantic—now the largest single class travelling—has demonstrated that one of the largest untapped sources of airline revenue lies in the field of lower fares. That in my view is all to the good: massive advertising campaigns in the USA in favour of jet travel will also increase the general travel "lust" from which sea as well as air will profit.

Just so long as sea travel provides "the holiday at sea" through its services, food, entertainments and other comforts in comparison to the '34-inch seat' by air, I should expect it to persist, for not everyone is in a hurry. Total passengers carried by sea and air represents a small percentage of the American population and with the desire to travel increasing there is an enormous potential still available.

As Chairman, no-one is more sensible than myself of the splendid team spirit which exists throughout the Group, and no-one is more grateful for the loyalty and keenness of our staffs afloat and ashore, at home and overseas.

THE ROYAL LONDON MUTUAL INSURANCE SOCIETY LIMITED

INCREASED INDUSTRIAL BRANCH BONUS

The 98th Annual General Meeting of The Royal London Mutual Insurance Society Limited was held on April 28th at the Chartered Insurance Institute, 20 Aldermanbury, London, E.C.

Mr E. H. Haynes, FIA, Chairman and Joint Managing Director, who presided, said:

I would like to refer in detail to the position of each of the Society's branches.

ORDINARY BRANCH

The premium income in the Ordinary Branch (including consideration for annuities granted) amounted to £4,363,000, an increase of £157,000 over the previous year. The Fund at the end of the year amounted to £39,389,000, an increase of £1,818,000. The rate of interest earned (excluding the Auxiliary Life Fund), after deduction of income tax, was £4 5s. 0d. per cent, an increase of 2s. 10d.

The amount paid by way of claims and surrenders during the year was £3,405,000.

I am very happy to report that the amount of new Ordinary Branch business written in 1958 showed an increase for the fifth year in succession. During the year 18,400 policies for the amount of £14,274,000 were issued, this being an increase of £1,189,000 over the figures for the previous year, and, as I have indicated, a record for the Society.

The Society announced last October the arrival of a newcomer to our Ordinary Branch prospectus, the "Carefree Policy." This policy offers the alternative of a cash sum or a valuable pension option to be taken at age 60 or 65, the normal pension ages.

In January this year the scale of premiums for the Mortgage Cover Policy was substantially improved.

On with-profit policies becoming claims, etc., during the current year the Interim Bonus will be at the rate of Two Pounds per cent in respect of each of the years 1956 and 1957 and Two Pounds Four Shillings per cent per annum in respect of the years 1958 and 1959.

INDUSTRIAL BRANCH

In the Industrial Branch the premium income for the year amounted to £10,614,000, an increase of £380,000 over the previous year. Claims and surrenders amounted to £5,921,000. The Fund at the end of the year amounted to £90,823,000, an increase during the year of £5,470,000. The rate of interest earned, after deduction of income tax, was £5 8s. 1d. per cent, an increase of 5s. 4d.

The sum assured on new policies issued in the Industrial Branch has shown an increase for the eighth year in succession. In 1958 new sums assured increased by £1,555,000 to the figure of £23,025,000.

On this occasion it gives me the greatest pleasure to announce an improvement in the rate of Industrial Branch bonus from 23/-d to 30/-d per cent per annum. Those of our policyholders who prefer to have their premiums collected weekly or monthly at their homes must be happy to see the amounts assured by their policies growing at this rate.

This Interim Bonus applies only to premium paying policies, under tables which participate at the full rate, becoming claims, etc., during the ensuing year.

GENERAL BRANCH

The premium income for this Branch in 1958 was £962,000, an increase of £81,000.

The year 1958 has shown yet further substantial growth in the activities of this Society. The total income of the Society during the year was £22,284,000, while benefits paid to policyholders amounted to £9,326,000. The total payments to policyholders since the inception of the Society amount to more than £167 million.

The report and accounts were unanimously adopted.

INSTITUTE OF CHARTERED ACCOUNTANTS

ANNUAL MEETING

The seventy-eighth annual meeting of the Institute of Chartered Accountants in England and Wales was held on May 6th in London. Mr W. L. Barrows, the President, in the course of his address said:

MEMBERSHIP

On January 1, 1959, the total membership was well over 31,000 and we have since passed the 32,000 mark, following the admission of successful finalists in the November, 1958 examinations. Thirty years ago the total was 8,500 and sixty years ago only 2,500.

VALUATION OF STOCK-IN-TRADE

One of the most difficult and controversial items with which we have to deal in the course of our daily work is the valuation of stock-in-trade and work in progress. Over a long period of years in the life of a business it may not be of great importance but in presenting the results for a particular year and in showing the trend of results over a period of years it is usually of the highest importance.

I do, however, wish to suggest that under conditions now prevailing in industry we need to consider carefully whether stock is overvalued and even, in some extreme cases, whether we are putting it on the correct side of the balance sheet. It is customary to regard stock as an asset but it is certainly within my experience that it can also be a liability. Over-production or ill-timed production or bad buying or fortuitous circumstances beyond the control of a business can each result in the holding of stocks which are grossly in excess of requirements or out of balance or obsolete or for other reasons can be disposed of only by scrapping or by sale at a loss.

In my view a situation of this kind calls for drastic writing-off, or substantial provision for diminution in value, in order to avoid an overstatement of the stock in the balance sheet. The balance sheet is required to show a true and fair view and it cannot be fair if it includes stock at a figure which is not arrived at after a realistic review of abnormal and obsolete stocks and the prospects of early disposal in the ordinary course of business.

Let no one suppose that what I have just said is intended to give encouragement to the inclusion of stock-in-trade at an amount which is neither true nor fair. A valuation of stock-in-trade must be an honest valuation supported by the facts and it is up to all of us to see that this is so, whether we are acting as directors or officers responsible for the valuation or as auditors responsible for expressing our opinion on the truth and fairness of the accounts. My remarks about over valuation are intended only to emphasize that we must be vigilant in both directions so that the valuation will be realistic as well as honest.

Orders and copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to: The Company Meetings Department, The Economist, 22 Ryder Street, S.W.1.

POLLARD BALL AND ROLLER BEARING COMPANY

(Formerly Ferrybridge Industries Ltd.)

CONTINUED EXPANSION

SCRIP ISSUE APPROVED

The annual general meeting of Pollard Ball and Roller Bearing Company Limited was held on May 1st in London, Mr F. C. T. Lane, FCA (the chairman), presiding.

The following is an extract from his circulated statement:

I am pleased to be able to report that the trading results of your Group for the Calendar Year 1958 again show a substantial improvement as forecast in the interim statement issued by your Board in October last. The net profit (after making provision for all charges including depreciation) and subject only to taxation is £371,121 as compared with £250,361 for 1957. In arriving at this result a full year's profit is brought in from Pollard Bearings (Northampton) Limited, as compared with only six months for the previous year.

The volume of sales of the Group has expanded still further and as an indication of the advance you may find it helpful if I repeat the short table which was included in my statement last year and add to it the figures for 1958 as follows:

Taking 1953 as equal to a unit of £100 the corresponding figures for the succeeding years are:

1954	£131	1956	£222
1955	£198	1957	£300
		1958	£392

STEPS TO INCREASE EXPORT SALES

Our export sales have not increased in the same ratio as home sales and your Board are taking steps which they hope will help to rectify this situation. Our Sales Manager is at the present time engaged in an extended tour which commenced at Singapore and by the time he returns will have taken him throughout Australia and New Zealand, parts of the United States of America and Canada. We are hopeful that this will have the effect of cementing more firmly our relationships with existing customers and agents on his route and of making many new ones.

In Europe, too, our representatives have been and will continue to be busy and it is hoped that some tangible results will begin to be seen during the current year.

Our order book is perhaps not quite so large in some respects as it was a year ago and this is in some measure due to improvements in output which are having the much desired effect of cutting delivery times and does not, in fact, reflect a falling off in orders. Our sales during the opening months of 1959 have increased over the corresponding months of 1958 and, so far as can be foreseen, your Board have no reason at this juncture to believe that this position will not be maintained.

ACQUISITION OF ADJOINING PREMISES

Towards the end of 1958, we were fortunate enough to be able to secure the freehold premises immediately adjoining our Northampton works thus providing much needed additional floor space which will be invaluable to us in improving our production layout as well as giving us increased capacity and no time has been lost in bringing this new space into productive use. Apart from the contribution the Northampton Company makes to the Group's profits in the manufacture of bearings, it also has a department manufacturing ancillary equipment which is developing very well.

Substantial improvements both in the manufacturing and marketing of Philidas Lock Nuts have been effected during 1958. Profits were well maintained and given reasonable stability in the motor car industry this section should continue to make a satisfactory contribution to the profits of the Group.

Our experience in Canada has been less happy and although the volume of sales has been maintained we have again to report a loss for the year, full provision for which has been made in the Accounts before you. Canada is a vast and thinly populated country and because of the distances involved, selling is a somewhat expensive matter, in addition to which there is no doubt that during 1958 Canada suffered to some degree from the economic depression which for part of the year appears to have prevailed in the United States of America. We are satisfied, however, that the policy of building up a Subsidiary in that country is a correct one and we feel we are making progress albeit somewhat slowly, and our confidence in eventual success remains undiminished.

DIVIDEND AND SCRIP ISSUE

In view of the year's results your Directors are proposing a dividend at the rate of 22½ per cent per annum for the year of which 5 per cent has already been paid as an interim distribution. If approved, warrants for the balance of this dividend will be posted immediately after the Annual Meeting.

Your Directors feel that some part of the "Share Premium" Account should be capitalised and it is proposed to make an issue of fully paid ordinary shares of 4s. each to holders of ordinary shares in the proportion of 1 new share for every 4 shares held at the close of business on April 16, 1959. In making this issue it is anticipated, so far as can be foreseen, that a continuance of the rate of dividend (viz., 22½ per cent) will be possible in respect of the current financial year.

Although our trade continues to show signs of expansion, it should not be thought it has been easy of achievement. Competition still remains somewhat intensive, with prices becoming ever more keen. We are constantly adding modern units to our plant and with our technical department developing new designs and with the application of improved techniques we have been able to secure a growing participation in the Bearings Industry. Given stability in the industrial field, the year 1959 should bring results which will, we hope, continue to show progression.

The Company's position and its future still depend primarily on the work done by Management, Staff and Employees and I would like to conclude this Statement by expressing our thanks to each and everyone of them at home and abroad for their loyalty, untiring effort and enthusiasm which has contributed so much to the results now before you.

The report and accounts were adopted and the proposed scrip issue approved. Because the main centre of the Company's activities has moved from London to the North of England, Messrs Hogg, Bullimore & Company, of London, were not re-appointed joint auditors and the Chairman expressed on behalf of the Company appreciation of their past services.

PARKINSON COWAN LIMITED

MR HUGH P. BARKER'S REVIEW

The fifty-ninth Annual General Meeting of Parkinson Cowan Limited was held on May 4th in London.

The following is an extract from the statement by the Chairman, Mr Hugh P. Barker:

The consolidated net surplus of £199,502 included £38,883 of profit on sale of Investment. After paying our Preference dividends (£19,571 net) the balance for the year available for disposal is £179,931. The Board recommends the payment of two concurrent dividends on the Ordinary Stock, firstly, 9 per cent absorbing £38,780 net, leaving £141,151 available for allocation to reserves and, secondly, a Special 1959 Interim Dividend at the rate of 3½ per cent requiring £15,082 net.

We have this year created a Dividend Equalisation Reserve. This reflects a considered policy of your Board which needs explanation. Our business is, as you know, light engineering and a substantial proportion of our turnover is in the domestic appliance field. I must say frankly that, although the outlook for the domestic appliance industry is a very promising one, it has become the habit of Governments in the past to use this adaptable and growing industry for steering the whole economy. We are therefore by no means the masters of our own fate in a year to year sense. Every manufacturer of domestic equipment is in the same situation.

Our business in domestic appliances, which started 1958 rather poorly, has accelerated rapidly since hire purchase restrictions were removed. We believe that the excellence of our products does not require a boom condition to keep our plant operating at a steady and profitable level. All this said, the business remains an extremely exacting one.

Our business in meters is in a basically healthy state, but in this field we suffer the disability that we cannot by our own efforts increase the total market; we can only fight for a larger share of markets determined by facts outside our control. In the gas industry, for example, it seems likely that the home market for meters will be smaller this year. The water meter market leans heavily on export and there is clearly some world excess of manufacturing capacity in this commodity.

Two of our Divisions, Measurement Limited and Parkinson Cowan Instruments, are involved in the manufacture of hydraulic, electro mechanical and electronic apparatus for liquid process control and for diverse applications in the gas, water and electricity supply industries. In these fields we are making solid progress. Our clients include world famous companies in the chemical, oil and food manufacturing industries, in addition to the public utility concerns with whom we have been doing business for so many years.

The year has started well. Unless the business climate changes I think that this will be a good year.

The Report and Accounts were adopted.

BRITISH ALUMINIUM COMPANY

IMPRESSIVE OPPORTUNITIES FOR EXPANSION

The Annual General Meeting of The British Aluminium Company Limited will be held on May 26th in London.

The following is an extract from the statement by the Chairman, Sir Ivan A. R. Stedeford, KBE, circulated to the shareholders with the report and accounts for 1958:

The year 1958 was generally a difficult one for the aluminium industry everywhere, and not only for companies engaged in it in the United Kingdom.

Competition, always keen in this industry, intensified as demand weakened during a period when new and additional capacity was coming into production.

These adverse trading conditions, as might be expected, are clearly reflected in our own results. The consolidated trading profit of the company, after depreciation at normal rates and transferring £120,000 (1957—£200,000) to plant replacements reserve, was £2,105,394 (£3,020,706), a reduction of £915,312, or over 30 per cent.

The severity of this decline in trading profits was, however, softened to some extent by an increase in investment income of £141,178, and lower bank and interest charges of £119,666. The total net income for the year, before providing for taxation, was therefore £2,210,266, a reduction of £654,468.

In the difficult trading conditions I have mentioned, and judged by the experiences of other large companies engaged in similar activities, the profits for the year can be regarded as not unsatisfactory. This does not alter the fact, however, that we have had a poor year and that it is with less satisfaction that we have paid a total ordinary dividend of 17½ per cent, an increase over last year of 5½ per cent.

To pay a dividend at this rate, absorbing as it does the whole of the year's available trading profits, is, in my view, unjustified. We have done so for this year only to conform with the conditional undertaking given by the Board last December in respect of this dividend.

IMPORTANCE OF SURPLUS CAPACITY

I am addressing you at a time when the world is talking about a surplus of aluminium, but we must be careful we do not look at this situation from the wrong end of the telescope. What is really happening now is that, for the first time in a generation, the world has an abundant supply of the metal, with still more capacity planned, in construction, and coming into production.

Whilst, therefore, the phase of metal shortages has now passed, the industry is nevertheless planning further increases in production in order to ensure keeping a step or two ahead of future demand. Whilst from an earnings point of view this policy, in the short term, has its disadvantages, it makes certain that for the future, aluminium will be able to compete with other metals for about the first time on its merits.

This is a glowing long-term prospect which The British Aluminium Company's newly acquired resources in all fields will permit it vigorously to exploit. It is in this general context that I look ahead with confidence.

ROYAL INSURANCE COMPANY LIMITED

POSITION IN USA

MODEST INCREASE IN CONSOLIDATED PROFIT

EXCELLENT LIFE RESULTS

MR T. H. NAYLOR'S STATEMENT

The Annual General Meeting of the Royal Insurance Company Limited will be held on Wednesday, May 27th, in Liverpool.

A statement by the Chairman, Mr T. H. Naylor, from which the following are extracts, has been sent to stockholders with the 113th Annual Report and Accounts.

THE YEAR 1958

Once again our underwriting results have been dominated by an unfavourable experience in the United States. Elsewhere premiums and underwriting profit showed a healthy increase. But the necessary pruning of our business in the United States brought about a slight reduction in our overall premiums to just under £131 million; and the underwriting profit at about £¾ million was the lowest in amount since 1932.

The contribution from the Life Department showed a useful increase and net interest earnings at £3.9 million were higher by £531,344. In consequence our consolidated profit, after providing for pension fund contributions and UK taxation, was slightly higher at £3,517,643 than in the previous year, and your Directors felt it appropriate to recommend a modest increase in the final dividend from 1s. 11d. to 2s., making the total dividend for the year 3s. 11d. per 5s. unit. We are carrying forward unappropriated rather more than £¾ million thereby increasing the balance of the Profit & Loss Account from £9.9 million to £10.7 million.

OVERSEAS

The improvement in our American results, for which I had hoped last year, did not materialise, and for the third year in succession we have to report an unfavourable experience.

Prospects for the current year do look brighter than they did 12 months ago, but I would not wish to be prematurely optimistic and we may need to reconcile ourselves to further underwriting losses in 1959, although, I hope, of lesser degree.

Since 1851 our business has developed and flourished in the United States sharing in the less prosperous years as well as the more favourable ones and averaging over the years a reasonable margin of profit. As I see it, the American Insurance market must inevitably be restored to a prosperous level and I am sure that over the years our portfolio will serve us well as it has done in the past.

I must stress that our underwriting loss in the United States last year was more than offset by the interest earnings on our substantial portfolio of dollar assets so that our total operations in the United States produced an overall dollar surplus.

Elsewhere overseas the year has been one of steady expansion in both Fire and Accident Departments. Premium income has been buoyant and in most territories we can record a satisfactory contribution to our trading surplus.

FIRE DEPARTMENT

	Net premiums	Underwriting surplus	Percentage of premiums
	£	£	%
1958 ...	53,905,306	1,120,521	2·1
1957 ...	55,128,645	1,509,070	2·7

The reduction in premium income and in underwriting surplus is to a large extent a reflection of our experience in the United States and calls for little further comment.

Trading conditions in Great Britain have not been altogether propitious for an expansion in income in 1958 and keener competition has resulted in a tendency for Fire rates to be lowered. Nevertheless our Fire business at home pursued its steady course and once again I can report a modest growth in premiums and a satisfactory underwriting surplus.

ACCIDENT DEPARTMENT

	Net premiums	Underwriting results	Percentage of premiums
	£	£	%
1958 ...	70,613,785	−602,005	−0·9
1957 ...	69,618,767	−291,848	−0·4

Generally speaking our Accident business showed vigorous development in 1958. The unfavourable results in the United States have had their obvious effect on the overall figures but most of the major territories in which we operate produced a reasonably satisfactory result.

It is in the Motor section of the Account that our principal difficulties arise everywhere. At home the continuing problem is emphasised by the official figures of road accident frequency. In essence this is not an insurance problem but a social problem of national importance; I regret that too often its growing gravity is obscured by facile criticism of insurance practice.

MARINE DEPARTMENT

	Net premiums	Fund as at 31st December	Percentage of premiums
	£	£	%
1958 ...	6,237,355	14,190,170	227·5
1957 ...	6,681,038	14,013,980	209·8

In the shipping world the past year has been one of depression, and lower ship values have resulted in a reduced premium income on our hull business.

Cargo premiums have also fallen off, reflecting the material shrinkage in the volume of world trade.

In 1958 we closed our 1956 underwriting account with a transfer to Profit and Loss Account of just over £200,000—not much more than half of the previous year's transfer. This, however, may be regarded as a reasonably satisfactory result from a year in which there were a number of major marine casualties.

LIFE DEPARTMENT

	New sums assured	New annuities (per annum)	Claims by death	Matured endowment assurances
	£	£	£	£
1958	46,068,189	1,739,407	1,617,060	2,484,879
1957	41,407,585	2,164,924	1,392,179	2,276,177

It has become commonplace to report each year that our new Life business has exceeded that written in previous years; and I am happy to say that in 1958 the new sums assured once again constituted a record.

Following a valuation of Life and Annuity business as at December 31, 1958, a substantially increased bonus rate of 55s. per cent per annum has been declared on all policies entitled to participate. This rate of bonus is a reflection of the benefit which our policyholders obtain not only from our improved interest earnings but also from our modest expense ratio and our favourable mortality experience. It has been fully earned without any weakening of the traditional strength of our valuation standards for we have thought it prudent to transfer the reserves released by an increase in the Life valuation rate of interest to the Department's investment reserves.

INVESTMENT DEPARTMENT

	Invested Funds	
	General Funds	Life Funds
	£	£
1958 ..	190,908,369	86,346,243
1957 ..	184,930,907	81,494,372

Despite successive reductions in the bank rate from 7 per cent to 4 per cent long term interest rates in the UK remained high. In the USA long term rates were not only maintained but went higher, so that in the two main centres of our investment activities we continued to be able to invest our funds on favourable terms.

In most parts of the world, markets in ordinary shares have been very active with prices rising to new record levels. Largely as a result of this our investment portfolio shows a substantial appreciation in value and I am happy to report a very comfortable margin in the market valuation of our securities over the values shown in the balance sheet.

MANAGEMENT, STAFF AND AGENTS

During this year of varied fortunes, as in other years, the loyalty of our staff has been constant. Whilst this characteristic has become an accepted and natural one, it is a quality in our officials which we value highly. To all our Managers and Staff at home and overseas we extend our thanks for their unflagging and devoted efforts in the furtherance of our interests during 1958.

TAYLOR, WALKER AND COMPANY

A DIFFICULT TRADING YEAR

BUDGET ENCOURAGEMENT—A LONG OVERDUE MEASURE

LT COL W. H. KINGSMILL ON GROUP'S ACTIVITIES

The fifty-second annual general meeting of Taylor, Walker and Company Limited will be held on May 21st in London.

The following is the statement by the Chairman and Managing Director, Lieutenant Colonel W. H. Kingsmill, DSO, MC, which has been circulated with the report and accounts for the year ended December 31, 1958:

Ladies and Gentlemen,

The trading year under review proved to be a difficult one, with rising overheads and the trade showing a diminishing tendency in the country as a whole, as is shown by the official returns. This was undoubtedly due mainly to the poor summer which was certainly one of the worst within recent memory, and further aggravated by bus and dock strikes which affected the East End of London in particular. Money was not too free either and later in the year when the tight control of spending was lifted, the trade did not benefit as might have been expected as the public by and large increased their commitments in the hire purchase market.

The 2d. off the pint mentioned in the Chancellor's Budget Speech gives rise to the hope that the trade in 1959 will show a resurgence, and it was indeed a long desired and long overdue reduction. I do feel, however, that a word of warning should be given here against anticipating a big rise in consumption as in my opinion the sale of beer is no longer governed by the pocket but is affected by the swing which has been going on for several years towards wines and spirits. However, if the summer this year is a more normal one there is little doubt that the Chancellor's concession will improve the trade and this should be reflected in the 1959 results.

It is interesting to note that during the past 12 months there has been a definite sign that the public preference is swinging slightly to draught as against bottled beer, but how far this trend will continue it is difficult to say.

I am very glad to be able to state that our country brewed Best Bitter which we put on the market in 1957 continues to make very considerable headway and seems to be universally popular with our customers.

CANNON BREWERY

I told you in my last statement of the alterations which were being made to convert the Cannon Brewery into a distillery, a bonded warehouse and bonded bottle store. These alterations unfortunately are still not absolutely complete due to further work insisted upon by various local authorities, but the Still House has been in operation since the summer of last year and has proved to be capable of producing gin more economically than either Messrs Nicholson or the Curtis Distillery had been able to do in the past. The bonded warehouse came into operation during the winter and it is hoped that all the alterations will be finished by the date of the Annual General Meeting, enabling us to do our wine and spirit bottling in bond. This should show a considerable saving in production costs as any breakages will not bear duty.

During the past year we closed down two breweries, one at Chesham belonging to the Chesham and Brackley Breweries and the other at Foxearth in Suffolk belonging to Ward and Son Limited. The closure of these two breweries is already showing advantages and in a full year will show substantial savings.

In addition, during the past year the Victoria Wine Company has bought a wine and spirit business in Cardiff which in the opinion of the Directors of that company is capable of considerable future development. Already we have been fortunate enough at the annual licensing sessions in obtaining a beer licence for several shops which previously only had wine and spirit licences.

Our export trade remains satisfactory both from the point of view of our beer and our wines and spirits departments. This is of course a highly competitive market and in so far as beer is concerned profit margins are small.

THE ACCOUNTS

Turning to our accounts, it will be observed that alterations have taken place in the Group's Fixed Assets brought about mainly by the considerable reconstruction work at the Cannon Brewery and by investment in Curtis Nicholson Limited. Part of the cost of construction will ultimately be recovered in cash and will be an addition to our current assets.

The current assets at December 31, 1957, included stock and debtors relating to The Curtis Distillery Company Limited which company after re-organisation and change of name became an associated company and hence the figures do not require to be consolidated.

The item "Associated Company at cost" refers to the Curtis Nicholson Company.

FUTURE OUTLOOK

What can we look to in the future as a Group? My own opinion is, as I have said before, that the complete reconstruction of the Cannon Brewery premises coupled with the amalgamation between Messrs Nicholson and the Curtis Distillery and with 2d. off the pint we can reasonably anticipate more satisfactory results next year, though it must be remembered that more and more money has to be spent every year in the constant endeavour to improve the standard of our houses.

As you know our Group is concerned with the production of beer at three breweries, in Limehouse, Westerham and Brackley, a substantial bottling establishment at Alperton, a gin distillation organisation at Clerkenwell, two mineral water factories and a catering company, all covering a wide area of the home counties. There is therefore much scope for continuing to examine every way in which economy with increased efficiency can be made.

DIRECTORATE, STAFF AND EMPLOYEES

During the course of last year we lost the services of Mr R. E. Bradshaw who died together with his wife in a tragic motor accident. Our sympathy goes out to their two children.

Subsequently Mr A. R. Motion was invited to join the Board and I am quite certain the company will benefit by his advice both now and in the future.

Lastly I would like on your behalf to thank the staff and employees of the Group for the hard work they have put in over the past year. In many cases they have been working under very difficult conditions due to the alterations I have already mentioned but they cheerfully continued their daily tasks without complaint and overcame all the difficulties as they arose.

ALBRIGHT & WILSON
LIMITED

The following is a digest of information appearing in the Annual Report for 1958, posted to stockholders on 5th May. The Secretary will be glad to supply copies of the Report on request.

	1958	1957
	£	£
Group sales	32,200,000	30,400,000
Group trading profit	5,388,000	4,754,000
Depreciation	2,059,000	1,847,000
Taxation	1,542,000	1,295,000
Minority Interests	71,000	59,000
Net profit	1,716,000	1,553,000
Dividends	645,000	585,000
Retained profit	1,071,000	968,000
Group net assets	26,989,000	25,961,000
Ordinary dividend—rate	17%	20%
—times covered	2.8	2.8

The issued ordinary capital was increased during 1957 by one-for-four issue of fully-paid stock. The dividend of 20% paid for 1957 on the smaller capital is equivalent to 16% on the capital after this issue.

Turnover and profit in 1958 were the highest the Group has recorded, despite irregular and often disappointing trading conditions in the United Kingdom, Canada and Australia, the countries where the Group's manufacturing units are located.

UNITED KINGDOM In the United Kingdom all companies contributed to the increase in sales and profits. Further steps were taken in the replanning of phosphorus and tripolyphosphate production to make the best use of the Group's manufacturing resources. Capital expenditure in this country totalled £1,200,000. New plants for phosphorus pentasulphide and for several organic phosphorus compounds were completed and further extensions were made to oil additives production capacity, while work commenced on new pilot plant facilities for Midland Silicones Limited at Barry and on an enlargement of the research laboratories at Oldbury.

OVERSEAS Substantially greater sales and profits were achieved in 1958 by Electric Reduction Company of Canada Limited. Its much enlarged sodium chlorate plant at Buckingham, Quebec, was used to maximum capacity after mid-year completion. Of the £3,100,000 total capital expenditure of the Group in 1958, more than half was spent in Canada. Albright & Wilson (Australia) Proprietary Limited continued its growth last year. While sodium tripolyphosphate sales in particular were buoyant certain other products experienced a slackening in demand which is, however, believed to be temporary. A new phosphorus furnace was brought into operation during the year, and a plant was built to make sulphonates that we had previously been supplying from England.

PROSPECTS FOR 1959 In 1959 general expectations are that the Group will experience some increase in total sales and profits. It will also be a year of considerable capital investment at home and overseas. Projects already announced are the extension by Solway Chemicals Limited of its sulphuric acid and cement plants, and the major developments by Electric Reduction Company of Canada Limited at its new site at Port Maitland, Ontario.

The Sixty-seventh Annual General Meeting of Albright & Wilson Limited will be held at the Company's office at 1, Knightsbridge Green, London, S.W.1, on 28th May, 1959, at 12 noon.

THE HOFFMANN MANUFACTURING COMPANY

MR J. W. GARTON ON MORE HEALTHY AND REALISTIC ORDER POSITION

The annual general meeting of The Hoffmann Manufacturing Company Limited was held on April 30th in London, Mr J. W. Garton, JP (chairman and managing director) presiding. The following is an extract from his circulated statement:

I pointed out in my general remarks last year that although we had a substantial order book we were already experiencing a falling off in the order intake. The order book continued to contract during 1958 and one of the more important reasons was the cut in the Defence Programme, and also there was a large liquidation by customers of stocks, which resulted in a reduced demand for special bearings. We found it necessary and unavoidable for a limited period to resort to some short time working in the earlier half of the year as well as having to make some adjustment to our labour force. Through this effort and reorganisation to meet the lowering and changing demand, we were quickly able to adjust ourselves, and since then we have been reasonably fully employed, but this is not to say that work is easy to get unless it is at the right price and the right quality and particularly with quick delivery. We have a more healthy and realistic order position and look to the future for the demand for our products with confidence.

The profit of the Hoffmann Group for 1958, before taxation, but after all other charges, including Debenture Interest, amounts to £1,206,476 and compares with £1,291,746 for the previous year. The net profit of the Group after taxation is £625,002 and compares with £647,026 for 1957.

The Directors recommend a Final Dividend of 24½ per cent, less tax, which with the Interim Dividend of 6½ per cent, less tax, makes a total of 31 per cent, less tax. The Directors have decided to mark the Sixtieth Anniversary of the Company, which took place during the year under review, by paying a Special Sixtieth Anniversary Cash Bonus of 5 per cent, less tax.

CAPITAL EXPENDITURE

Orders for Capital Commitments at December 31, 1958, amounted to £669,749. I have referred on a number of occasions to the Board's policy of continually keeping production plant up to date by purchase of the most modern machine tools and essential maintenance plant. The large automatics mentioned last year have been installed, are in production and are enabling us to increase our output, reduce costs and secure orders in very competitive circumstances.

SUBSIDIARY AND ASSOCIATED COMPANIES

Hoffmann Gloucester Limited has again made a most useful contribution to the Group turnover and has had a successful year.

Hoffmann Tweedales Limited experienced very adverse trading conditions and the low demand for its products reflected the very difficult conditions now obtaining in the textile machinery trade at home and abroad. Every effort is being made to help the position by extending the range of the Company's products.

The report and accounts were adopted.

HAMBROS BANK LIMITED

RESTORATION OF FREEDOM WELCOMED

MR R. OLAF HAMBRO'S STATEMENT

The Forty-Seventh Annual General meeting of Hambros Bank Limited will be held on Thursday, May 28th, at the offices of the Bank, 41 Bishopsgate, London, E.C.2.

The following is the Statement of the Chairman, Mr R. Olaf Hambro, circulated with the Report and Accounts for the year to March 31, 1959:

It has been, generally speaking, my practice in issuing this Statement with the Accounts of the Bank to confine my remarks to explaining the figures and the business in which we are engaged, but it is sometimes necessary to point out, as I did last year, certain political aspects of the situation under which we were somewhat restricted in our activities. I am glad to say that for some months of the year under review we have been restored to freedom and allowed once again to conduct our business in the way we wish. It is also very satisfactory to find that, as a result of wise handling of the national finances, Sterling is again, to all intents and purposes, a free currency. This, I think, has been a factor in the overall increase in our business.

EXPANSION IN NEARLY EVERY ITEM

The Balance Sheet shows expansion in nearly every item. The Deposits have increased by over £9 million and the Acceptances by nearly £2 million. With regard to the former, March 31st this year fell on the day after the Easter Bank Holiday and the turnover on that day was exceptionally large and may have accounted for part of the rise, but Deposits during the year have been well above the average of the previous year.

On the other side Cash and Bills of Exchange, well over half of the latter being Treasury Bills, stand at £48 million, and with the Gilt-edged holdings, create a very liquid position. The ratio of Loans and Advances to Deposits is approximately 25 per cent.

The Profit and Loss Account is satisfactory and, as stated in the Report, the Directors propose a final dividend at the same rate as last year. The cost of the gross dividends for the year is slightly greater this time as the additional capital raised in 1957 was entitled this year to both the interim and final dividends.

SUBSIDIARY COMPANIES

Turning now to the subsidiary companies which we have named for the first time, the most important is, of course, Hambros Investment Trust Limited; the value of our investment in that Company has increased during the year by about £1,700,000. Opportunity has again been taken to value very conservatively the unquoted securities. Mocatta & Goldsmid Limited have had a successful year with a largely increased turnover.

We have been interested in the Hire Purchase business for many years and have now taken the opportunity to extend our connections in this field with Western Credit Limited and Belmont Industrial Finance Limited. Mr J. H. Hambro has been appointed Chairman of Western Credit Limited.

COMMERCIAL CREDIT OPERATIONS

The main and most important business of the Bank remains its commercial credit operations which are largely conducted with Norway, Sweden, Denmark and Finland. For many years we have been financing Norwegian shipbuilding and shipping and, although there is a slight falling off in this business owing to the fall in Freights, all our clients, old and new, continue to prosper. The very old connection which we have had with Italy since the days of Cavour continues to be very active and our connections with the Banks there are spread throughout the country.

In Zurich we have had an interest for many years in the firm of Paul Kern A.G. which keeps us in touch with our Swiss banking friends and with international business in that place. Our business in America, which is engaged in the sale of the British Motor Corporation's cars there, has gone from record to record, and the sales during this financial year have exceeded $53 million in value.

Once again, on behalf of myself and all the members of the Board, I would like to express our grateful thanks to the executives and members of the staff for all their loyalty and devotion to the Bank.

HAMBROS BANK LIMITED
Head Office: 41 Bishopsgate, E.C.2
STATEMENT OF ACCOUNTS AT 31st MARCH, 1959

LIABILITIES

	£
Current, Deposit and other Accounts	66,625,422
Acceptances	21,631,680
Paid up Capital	3,500,000
Reserve	3,500,000

ASSETS

Cash in Hand, at Bankers and at Call	34,754,433
Bills of Exchange	13,475,140
British Government Securities	5,827,187

Liabilities of Customers for Acceptances	21,631,680

HUDSON'S BAY COMPANY

GOOD TRADING YEAR

The 290th annual general Court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held on May 1st in London, Mr W. J. Keswick, the Governor, presiding.

The following is an extract from his circulated statement for the year to January 31, 1959:

The Company had another good trading year, with a profit before taxes of £4,896,000 after charging depreciation of £1,204,000 and a net profit after taxes of £2,637,000 against £2,312,000 last year. The net profit was 9s. 5d. per share, compared with 8s. 3d. Trading dividends paid and proposed total 24 per cent compared with 20 per cent last year, which is a payment of 4s. 9¼d. per share gross or 2s. 9d. net after United Kingdom tax. The payments to be made in May will be 20 per cent less tax from Trading and 5¾ per cent from the Land Account.

The sales pattern of the Retail Stores was slightly better than that in Canada generally and for the year were up 6.1 per cent to a new high of £49,700,000. Fur Auction Houses in London, New York and Montreal sold by auction a record total of ranched furs. The Wholesale Department had a more difficult time in maintaining its volume of sales in a period of receding trade, and the results were satisfactory. Hudson's Bay Oil and Gas Company Limited experienced a difficult year; however, the result in no way diminishes the faith of your Board in the future benefits and advantages from this investment.

The report and accounts were adopted.

THE RIO DE JANEIRO FLOUR MILLS & GRANARIES

The Seventy-third Ordinary Annual General Meeting of The Rio de Janeiro Flour Mills & Granaries Limited was held on April 30th in London.

The Chairman, Mr J. H. Hansard, in his statement said that members would have seen that the Company made a loss in cruzeiros of 69 million, against a profit last year of 211 million. Some indication of the trend of profits had been given a year ago by his predecessor when it was reported that profit margins in flour milling were likely to be small.

Urgent measures had been put in hand by the Board to cut operating costs, improve the internal organisation in Brazil and to increase the profitability of those parts of the business not so completely price-controlled as the flour milling activities.

The Chairman stated that he was pleased to report that the Company had been operating at a profit in Brazil since the end of the Company's year. Since the increase in the price of flour in October 1958 another upward revision had been allowed by the Brazilian Government. He thought it was fair to say that there was now a greater understanding of the need to allow a reasonable margin between costs and selling prices. It was early to say how the results for the present year would turn out but present indications were that the flour milling operations would be profitable and that the course of cruzeiro profits was comparable with that for the year to September 1957.

The report and accounts were adopted.

RIO TINTO

DIVERSE MINERAL INTERESTS

PROSPECTS OF URANIUM FOR PEACEFUL PURPOSES

The eighty-sixth Annual General Meeting of The Rio Tinto Company Limited will be held on June 4th at Barrington House, 59, Gresham Street, London, E.C.2.

The following is an extract from the statement by the chairman, Mr Gerald Coke, which has been circulated with the report and accounts for the year 1958 :

The Company's percentage interests in the various minerals are approximately as follows, based on the values ruling at the end of the year 1958:

Copper	30 per cent
Uranium:	
Equity	20 per cent
Loans, etc	16 per cent
Oil	18 per cent
Other minerals	16 per cent
	100 per cent

After reviewing the Company's interests in Spain, Australia and Canada, Mr Coke, commenting on the uranium position, said that Rio Tinto were at present producing over 15 per cent of the free world's output of uranium. He added: Conclusions reached in 1956 were that the demand for military purposes might be assessed at between 10,000 and 15,000 tons of uranium metal a year and that the civilian demand for the initial outfit of new reactors might require a further 10,000 tons a year by 1975. It would now appear that both these estimates were on the conservative side.

The present level of requirements of uranium for military purposes is now above that estimated in 1956 and, unless complete nuclear disarmament were to become accepted policy, it could well increase.

The prospects for a greater civilian requirement for the metal are good. In 1956 it was estimated that there would be an annual increase in the free world's nuclear power capacity of 10,000 megawatts by 1975; this figure now looks modest. By about 1965, however, the experimental phase of nuclear power generation will have ended and thereafter the rate of installation is likely to be determined by purely economic considerations. The prospects for cost reductions are good, both through progressive refinements in design and by the introduction of more advanced reactor systems. In general, cost parity with coal-fired stations should be achieved between 1963 and 1973, depending upon the particular circumstances, and the rate of installation of nuclear stations should increase in the late sixties and early seventies.

It was estimated three years ago that this programme would require about one ton of uranium per megawatt of capacity; since then various reactors have been designed offering greater output per ton of uranium than this. However, these are still at the experimental stage and discovery of further sources of supply has made it less necessary to conserve what was then thought to be a scarce metal and work on breeder reactors and other means of economising its use has been slowed down. In the light of this reassessment of the supply position the annual requirement for initial charges might be estimated at a figure of 15,000 tons a year by 1975 on the basis of an increase of capacity in megawatts of about the same figure. If to this is added the annual refuelling charges of about an equivalent tonnage, it would seem that there will be a total annual requirement of uranium for nuclear power purposes alone of 30,000 tons a year by about 1975.

It should not be forgotten that, in addition to the use of nuclear energy for the generation of power for general purposes, there are several possible industrial applications.

To meet these potential demands the output of the free world in 1958 was about 30,000 tons of uranium in concentrates. During 1959 the figure will increase to about 35,000 tons. There should, thereafter, be a small annual growth in output over the next few years, but unless additional sources are discovered and developed, there will be a fall in output towards the end of the 1960s—or even before that date if some producers are unable to weather the cold blast of fully competitive conditions. Although the expansion of production which has taken place in the United States has probably been no more than sufficient to take care of the increased requirements of that country, the present position is that more uranium is produced than is currently required for consumption. It would appear, however, that by about 1970 demand will have overtaken the accumulated excess of supply and thereafter —depending on a number of imponderables —there may be a shortage of the metal in the free world.

On the commercial side Rio Tinto have been active during the year. Valuable contacts have been established with agencies responsible for nuclear power programmes, both in the Euratom group and outside it. We believe that the Rio Tinto mines can produce an oxide which will be competitive within the free world and that the commercial side of our organisation can compete fully with the civilian requirements of uranium in any country, so that if the matter rested solely in our hands an optimistic view can be taken, both of the future of uranium as a fuel and of Rio Tinto's capacity to play their part as the largest producer in the British Commonwealth.

Unfortunately it does not rest solely in our hands. Bilateral agreements are still obligatory in the case of exports from Canada and the United States, but are not being observed by some other countries. The United States, however, have not only entered into bilateral agreements with all likely customers, but have also protected their domestic producers by granting contracts through to 1966, whereas no such security exists in the case of the Canadian producers beyond 1962 or 1963, since the United States have given no indication as to whether they will exercise the options they hold on the Canadian production beyond those dates. This leaves the Canadian producers without the security granted to the American producers; nor are they free to compete with countries which sell without bilateral agreements. Since the tonnages of uranium being sold outside the large premium contracts are at present extremely small, this might not appear to be a matter of importance, but unless some early and positive action is taken by the Canadian Government the consumers in the free world will become accustomed to purchasing uranium oxide from suppliers other than Canadian. This would be a serious matter for Canada as uranium is one of their largest foreign exchange earners.

If you are interested in obtaining a copy of the full Report and Accounts write to: The Registrar, The Rio Tinto Company Limited, Barrington House, (Room No. 64), 59, Gresham Street, London, E.C.2.

CREDITO DI VENEZIA E DEL RIO DE LA PLATA S. p. Az.

Capital : Lit. 1,000m.—Reserves : Lit. 310m.

Registered Office in Milan—Head Office in Rome.

Branches in Milan, Genoa, Naples, Rome and Venice.

The Annual General Meeting of Credito di Venezia e del Rio de la Plata was held on March 21 at the Company's Registered Office, Via Manzoni 3, Milan, under the chairmanship of Mr. Alberto d'Agostino, Chairman of the Board of Directors.

In the course of the meeting the shareholders adopted the Balance Sheet and the Profit and Loss Account for the 40th year of the Bank's activity, which closed on December 31, 1958, and the figures are summarised as follows :—

Assets	Lit. 40,915,359,584	
Liabilities		Lit. 39,469,673,723
Capital Funds		„ 1,250,000,000
Profit for the financial year 1958 and profit balances brought forward from previous years		„ 195,685,861
		Lit. 40,915,359,584
Income	Lit. 1,878,253,300	
Expenditure	„ 1,686,787,158	
Profit for the financial year 1958	Lit. 191,466,142	

Deposits represented a total of Lit. 34,825m. and thus showed an increase of Lit. 8,641m., or 33 per cent, compared with December 31, 1957. Securities and Bonds in deposit, which are included in the Contra Accounts, reached Lit. 21,740m. and thus showed an increase of 15 per cent.

The Meeting also unanimously approved the distribution of profits proposed by the Board of Directors. After effecting a statutory allocation of Lit. 19,146,614, and a supplementary one of Lit. 40,853,386, to the Ordinary Reserve, which was thus raised to a total of Lit. 310,000,000, it was decided to pay, in respect of each of the Bank's 500,000 shares, a dividend of Lit. 240, equivalent to 12 per cent of the face value, as against 10 per cent paid in the previous financial year.

SUN INSURANCE OFFICE LIMITED

EXPANSION CONTINUED

FIRE PROFIT LARGEST RECORDED

MR C. G. RANDOLPH'S STATEMENT

In his statement to Shareholders the Chairman, Mr C. G. Randolph, mentioned that there had been no changes in the Board. They had learnt with great regret of the death of Mr J. A. Miller who had been seriously ill for much of the time since his retirement from the position of General Manager in June 1954.

He mentioned the agreement with the Atlas Assurance Company Limited and the Royal Exchange Assurance Corporation entered into towards the end of 1958 by which in the United States the affairs of the three Offices were placed under common management from January 1, 1959. This move had already reduced operating costs but the fundamental problems of operating profitably in the United States remained.

Owing to inability to obtain free transfer of funds from Indonesia it had been decided that it would be misleading to include the figures for three subsidiary companies operating in that country.

There had been a substantial increase in premium income, the total having risen from £20,669,283 in 1957 to £22,541,492 in 1958. The book value of investments had increased by £2,041,970 during the year to £26,306,269.

FIRE ACCOUNT

The increase of £916,498 compared with one of £791,869 in 1957. The comparative figures were:

	1957	1958
Premiums	£9,233,208	£10,149,706
Claims	4,349,160	4,694,574
Profit	777,758	1,054,237
Ratio of Profit	8.42%	10.39%

In the United Kingdom the ratio of claims was not unsatisfactory and it had been a profitable year overseas with the exception of North America. In Canada the business showed some improvement but the United States had again proved difficult. Competition had been severe and the satisfactory results in the account as a whole were partly due to the fact that there had not been any exceptional losses from windstorm, earthquake or other widespread catastrophe.

The ratio of operating expenses had been reduced.

ACCIDENT ACCOUNT

The premium income had again risen sharply but the expansion of £1,101,937 was somewhat below the exceptional increase of £1,619,306 recorded in 1957. The outcome of the operations had been an underwriting loss which, although comparatively small, was a disappointing return for the effort given.

The comparative figures were:

	1957	1958
Premiums ...	£10,095,639	£11,197,576
Claims ...	5,552,805	6,967,958
Profit ...	310,148	—94,619
Ratio of Profit	3.07%	—0.84%

Motor business was now the largest section of the Accident account and they could never look for more than a very narrow margin of profit on this class. In 1958 the motor results were highly unfavourable in various countries, especially the United States of America. Insurance was a long range business and they as a company were not unduly influenced by results over a relatively short period. They had, therefore, supported their agents and insured by continuing to expand the motor business in spite of adverse results but if justifiable rate increases were not obtained reasonably promptly it seemed that they had no alternative in those areas but to reduce commitments.

But for the adverse motor results the Accident operations would have been reasonably profitable for most other classes had shown expansion and some margin of profit.

In this Department too some reduction in the ratio of expenses had been obtained.

MARINE ACCOUNT

The fall of £146,226 in premiums was partly due to the elimination of the Indonesian business to which reference had been made. The comparative figures were:

	1957	1958
Premiums ...	£1,340,436	£1,194,210
Fund at the end of the year ...	2,330,396	2,065,821

Marine business in 1958 had been more difficult than in any of the postwar years. The level of casualties had been high and falling values had affected hull and cargo business. There was, however, some prospect of a trend to more selective underwriting in some markets.

After transferring £100,000 to the Profit and Loss Account the balance of the Marine Fund was equivalent to 172.99 per cent of the premiums.

PROFIT AND LOSS ACCOUNT

The net transfer from the Revenue accounts totalled £1,059,618 and the income from Interest, Dividends and Rents had increased to £1,370,871 before deduction of tax.

The Directors recommended a final dividend of 4s. 6d. per share less tax, making a total of 7s. per share for the year against 6s. 9d. for 1957.

The Chairman concluded by thanking the staff, Advisory Committees, Local Directors and representatives of the Office at home and overseas for all that they had done during the year.

BAKELITE LIMITED

RECORD SALES FOR 1958

MR STANLEY ADAMS' REVIEW

The Thirty-third Annual General Meeting of Bakelite Limited was held on April 30th at the Hyde Park Hotel, London, S.W.

Mr Stanley Adams, the chairman, in the course of his speech, said : At the annual general meeting last year Mr H. V. Potter, who had been chairman or managing director for 31 successive years, announced his intention to retire from the chair at the end of 1958. This decision was received by your board with much regret, but we are very pleased to inform you that Mr Potter is still to remain a director.

Your board invited me to be the new chairman, an honour that I had much pleasure in accepting with a deep sense of responsibility.

The trading profit for 1958 before taxation was £538,458 (£431,022). The proposed final dividend of 10 per cent, together with the interim dividend of 5 per cent already paid, makes a total of 15 per cent, less tax, for the year, which is the same as for the previous year.

TRADE REVIEW

The total sales during the year, both by weight and value, were higher than in any previous year.

The marketing of BAKELITE polyethylene manufactured by Union Carbide Limited has been most successful. This material is produced in a wide range of grades to meet specialised demands for production of packaging film with the added advantage of high clarity, cable insulation, moulded housewares, piping, and many other applications.

A noteworthy increase in the volume of sales of our PVC products was effected, but a highly competitive situation arose during the year mainly due to imports into this country of very low priced Japanese resin.

In the thermosetting field the Company continued to expand. Sales of polyester resins for use in glass fibre reinforced structures increased noticeably, and more uses are being found by our customers for our epoxide resins. We have maintained our position as the largest suppliers of phenolic moulding materials.

The use by the radio, television, and electronic industries of our copper-clad laminated sheet for printed circuits increased considerably during the year and in spite of increased competition we maintained our position in the forefront of suppliers of laminated industrial sheet.

The demand for WARERITE decorative laminates continued to grow as the utilitarian as well as the aesthetic value of this material is now readily accepted by the public. We extended our business with the ship building industry and orders from the railway carriage and wagon builders were well maintained. Among the notable contracts completed were those for the supply of materials for the Union Castle liner "Pendennis Castle." WARERITE wallboard, which we introduced last year, continues to have a good reception amongst builders and shop fitters. It is also an ideal material for the home handyman and retailers have been appointed throughout the country.

Our overseas trade in 1958 showed considerable improvement on the previous year, but because of the strong competitive conditions the profits derived, while higher than 1957, were not commensurate with the increase in sales.

Both our subsidiary and associated companies in India enjoyed a successful trading year and have made a contribution to the Company's profits.

Work on new and better materials by our research and development staff continues with the objective of adding to our range and providing products for new end uses. We continue to maintain a well organised and efficient technical staff which is available to provide service to our customers.

Relations between the Company and its employees have continued on the same high level of satisfaction to both parties.

CURRENT TRADING POSITION

The Company's sales for the first four months of the current year show an increase over the comparative figures of the previous year and profit margins have also been more than maintained on a similar comparative basis.

The report and accounts were adopted.

UNITED BISCUITS LIMITED

SALES AGAIN A RECORD

INCREASED GROUP PROFIT AND DIVIDEND

MR P. G. MACDONALD'S STATEMENT

The annual general meeting of United Biscuits Limited will be held on May 28th in Edinburgh.

The following is the statement of the chairman, Mr P. G. Macdonald, WS, JP, circulated with the report and accounts:

Our sales in 1958 at £18,200,000 showed an increase of £900,000 on the record figure of 1957. This rate of increase shows some slowing down compared with the figures of the past few years but is satisfactory none the less in the more difficult conditions which have prevailed during the year. During 1958 there was no general increase in the price of biscuits and inevitably, as wages and other costs of manufacture have continued to rise, the margin of profit has slightly contracted.

CAPITALISATION ISSUE

In November, 1958, we carried through a capitalisation issue of one ordinary share for every two shares then held, thereby increasing the issued ordinary capital from £3 million to £4,500,000. Shareholders will recall that a capitalisation issue was also effected in May, 1955, so that as a result of these two operations the original ordinary capital of £2 million has been more than doubled, and makes the original investment of £1 5s. for one ordinary share worth £8 6s. at the current market price of about 74s.

GROUP ACCOUNTS

The group profit for the past year after charging depreciation, Directors' remuneration, provision for pensions and auditors' fees, amounts to £2,542,275 as against £2,510,069 in 1957. Income tax and profits tax absorbed £1,302,402 (£1,329,049), and there remains after taxation a balance of £1,239,873 (£1,181,020).

The preference dividend for the year, together with an interim dividend of 5 per cent, less tax, on the ordinary shares paid in October, 1958, on the then issued capital of £3 million required £120,750, and your Directors recommend that the final dividend on the ordinary shares be at the rate of 10 per cent, less tax (at 7s. 9d. in the £) on the increased capital of £4,500,000, requiring £275,625. The total dividend for the year on the ordinary shares is equivalent to a rate of 13¾ per cent on the Ordinary share capital of £4,500,000 now in issue and compares with an equivalent effective rate of 11½ per cent on the increased capital for 1957. After meeting the expenses of the increase in the share capital and transferring £750,000 to general reserve, the balance carried forward on profit and loss account amounts to £524,536 (£448,178).

I would now draw your attention to the consolidated balance sheet from which you will see that there has again been a substantial increase in the fixed assets. Over £900,000 was expended during the year on additions and improvements to our factories and plant. It has always been the policy of our group to plough back into the business of our subsidiary companies a considerable part of each year's profit to finance such improvements. Only by keeping our factories on the most modern lines, and indeed by pioneering new methods of production, have we been able to reach our present status in the industry and to maintain stability in our prices.

It is our object to supply the purchaser, i.e. the housewife, with the highest quality biscuits in the best possible condition at the lowest economic prices. That we have had some measure of success with this policy will be realised from the fact that we have increased our sales fourfold in the past decade.

EXPORT

I am again glad to be able to report further increases in our export sales.

THE FUTURE

As I have said in the past, the prosperity of the biscuit industry is directly linked with the economic prosperity of the country as a whole, and we, in common with all others, must feel encouraged for the future by the budget recently announced by the Chancellor. He has sought to grant concessions where they can be most effective in stimulating industrial expansion and in easing to some extent the burden of taxation where for years it has been pressing most heavily.

MANAGEMENT AND STAFF

The year 1958 was not a particularly easy one for industry in general and no more so for the biscuit manufacturer, and I personally am very conscious of the debt of gratitude which we owe to all those who have contributed towards making it a successful one so far as we are concerned. I would like to thank the management and staff and all employees in the group for their loyalty and support to me, and I know that the shareholders would wish to be associated with these remarks.

THE BRITISH WAGON COMPANY LIMITED

AN EVENTFUL YEAR

The Annual General Meeting of The British Wagon Company Limited was held on April 30th at the Company's Offices, 23 Moorgate, Rotherham, Mr R. A. Dyson (the Chairman) presiding.

The following is an extract from his circulated statement:

Last year I stated that 1958 had started well; the improvement continued throughout the year, which from the Directors' Report you will see revealed a substantial increase both in business transacted and profits earned. There is also a useful increase in deferred income from £1,190,195 to £1,534,432, which is a solid basis on which to start 1959.

The Profit of the Company and its Subsidiaries after providing for Taxation and Minority Shareholders amounted to £261,118 (1957—£180,083).

This has been a year of many changes, perhaps the most noteworthy event being the direct interest taken by the Banks in hire-purchase.

Following the Extraordinary General Meeting held in Rotherham during September, The Royal Bank of Scotland, together with their Associates, Williams Deacon's Bank Ltd. and Glyn, Mills & Co., acquired an interest in your Company. I am happy to have this more permanent link with our Bankers.

During the past 18 months ten of our Branches have been accommodated in new and better offices. During this spring additional Branches are being opened at Guildford, Ayr and Croydon; further Branches in England and Scotland are under consideration.

Your Subsidiary Companies, Oil Road Rollers and Palmers, have, I am glad to say, had a more prosperous year; with the increased road making programme now under way it seems clear that these two Companies can look forward to a period of increasing activity.

BW Trade Facilities has been of great help to the Parent Company during the past year and I anticipate that this very valuable assistance will continue. The British Railway Traffic and Electric Company again shows a reasonable return on the money invested.

Your Canadian Subsidiary, Ross Finance Company, has had difficult conditions to contend with during the year; nevertheless it has made a satisfactory contribution to the Company's income.

The report and accounts were adopted and resolutions were passed increasing the Nominal Capital by £850,000 to £3,400,000; capitalising £850,000 of the Share Premium Account to be utilised in paying up in full 850,000 new £1 shares fully paid to be allotted on the basis of one new share for every £1 share at present held, and utilising £425,000 of the General Reserve in paying up a further £5 in respect of each £20 share at present £5 paid, and sub-dividing each £20 share into ten shares of £2, £1 paid.

Times Furnishing

RECORD HP TRADE

The Eleventh Ordinary General Meeting of The Times Furnishing (Holdings) Limited was held on May 1st in London, Mr Henry Jacobs (the Chairman) presiding.

The following are extracts from his circulated Statement:

The Directors recommend an increased final Dividend of 15% less tax—a total of 22½% for 1958 (20% for 1957).

TIMES FURNISHING—Turnover was by far the highest in its history.

Relaxation of HP restrictions in September, 1958 resulted in a very considerable increase in trade, but profits on HP transactions are not immediately realised and outstanding HP Accounts rose from £2,598,701 in 1957 to £3,845,567 in 1958.

WILLERBYS—Turnover of the Tailoring Co. was maintained, despite difficult conditions in the clothing industry during the year.

The opening of two new Furnishing Stores, the rebuilding of TIMES FURNISHING in Manchester, and important new Furnishing Stores being erected on freehold sites in Wolverhampton and Richmond, reflect the policy of steady expansion.

The substantially higher level of turnover of the Furnishing Co. has been maintained during 1959. The Directors see no reason why this tendency should not continue throughout the year.

The Company supply goods of high quality at competitive prices and the facility of very advantageous Easy Terms. The ample proof that such a policy is appreciated generally is further evidenced by the large proportion of business with old customers and those they recommend.

ABERDARE HOLDINGS LIMITED

The twenty-third ordinary general meeting of Aberdare Holdings Limited was held on May 4th in London, Sir John Pascoe (the Chairman) presiding.

After reviewing the financial results, the Chairman said: Our dividend has been maintained at 17½ per cent over the past five years and this has meant that the Group has increased its ability to withstand the greater competition which we are expecting in certain fields, and its ability to take immediate advantage of the general revival in trade as the Country climbs out of the slight recession of the past year.

Aberdare Cables Limited.—During the past six months, our turnover has been well maintained. I feel that we have every hope of maintaining our shares of the business placed.

Aberdare Engineering Limited.—The difficulties experienced in the engineering industry during the year were apparent in our own factory but a satisfactory level of output was achieved.

South Wales Switchgear Limited.—The rate of increase of the turnover of this company has been well maintained and plans are now well advanced for expansion of our facilities at Pontllanfraith, a gratifying feature of the increased turnover being the amount obtained for export, equipment having been delivered to a very wide range of importing countries throughout the world. With the capital expenditure we have in view for this company, we look for increased expansion of its activities over the years.

The report was adopted.

JOSIAH PARKES & SONS

(Manufacturers of Union Locks and Brassfoundry)

The Ordinary Annual General Meeting of Josiah Parkes & Sons Limited was held on April 30th at Willenhall, Mr C. W. Parkes, JP (chairman and joint managing director), presiding.

The following is an extract from his circulated statement:

The group has again had a very satisfactory year. Turnover was rather higher than in the previous year and group trading profit before tax is 13 per cent up on 1957. This is a reflection of a general increase in efficiency since it has been achieved despite a rise in wage costs and a slight fall in average selling prices.

The trading profit of £295,007 is £34,531 higher than in 1957, an increase of 13 per cent. The net available profit is £27,161 higher at £160,268.

The Consolidated Balance Sheet shows a strong position with a liquid surplus of £757,521 compared with £655,949 a year ago. The total of Capital and Reserves invested in the business has increased by £122,211 in the year, now standing at £1,301,164.

Your directors have recognised for some time that the market for the company's shares on the Birmingham Exchange was very limited, and an application to the London Exchange for a quotation in respect of the whole of the issued capital was approved as from February 26, 1959.

At the moment all our factories are fully employed and we have a satisfactory order book.

The report was adopted and the total dividend of 11¼ per cent approved.

GILBEYS LIMITED

(Wine Merchants and Distillers)

YEAR OF FURTHER PROGRESS

The annual general meeting of Gilbeys Limited was held on April 30th in London, Mr R. D. Gilbey (the chairman) presiding.

The following is an extract from his statement: I am pleased to report a further increase in the Trading Profit of the Group. The Group Profit, before providing for taxation, shows an increase of £170,000. The Group Net Profit is almost the same as last year.

Very near the end of 1958 we made a Rights Issue to our shareholders which was a resounding success. The Board feel justified in maintaining the same rate of final dividend on the capital as increased by this issue.

Our Canadian subsidiary had a record year, the sales in almost every line handled exceeding the forecast. A necessary increase in productive capacity has, therefore, been authorised.

Our Branches in Australia and New Zealand both contributed very materially to the overall results. Our South African distillery also enjoyed a record year.

In the USA Gilbeys Gin continued to hold its position, although in the early part of the year sales were affected by competition from low-priced gins. Gilbeys Vodka, however, scored a strong gain, with the result that the combined royalties on these brands were maintained.

The Home Trade, although hit by the bad summer and by the lifting of the restrictions upon hire purchase which led to spending of money in other directions, has not been unsatisfactory. We have been particularly pleased to note how well our Spey Royal Whisky is thought of—and particularly in Scotland where good whisky is appreciated, perhaps more than elsewhere.

For some years now I have been able to record that we have accepted appointments as agents for several American, Continental and other lines of high prestige. We are setting up an Agency Division which will give these well-known products the particular attention which their principals require. The lines to be handled by this new organisation, in addition to those to which I referred last year, are Courvoisier brandy, Crofts Port and Catto's De-Luxe Scotch Whisky. Negotiations for other lines of equal distinction are proceeding.

The report was adopted.

APPOINTMENTS

THE POLYTECHNIC
309 REGENT STREET, W.1
SCHOOL OF COMMERCE

Applications are invited for two full-time appointments as Grade B teachers, duties to commence on September 1st next.

(1) To teach History or Government or Sociology as main subject to final B.Sc.(Econ.) level and one of the other two as subsidiary subject.

(2) To teach Pitman's Shorthand and Typewriting to full-time Secretarial Students (post G.C.E. ordinary level), ability to teach book-keeping would be an additional recommendation.

The salary scale for a graduate rises to £1,155 (or for a non-graduate for post 2 to £1,076 5s.) per annum, plus London allowance of £37 16s. or £50 8s. Additional allowances are payable for a good honours degree and training where appropriate. The commencing salary will depend upon qualifications and experience and may include up to twelve increments in respect of industrial experience. The posts are subject to superannuation and some concession in this respect may be made for previous industrial employment.

Application forms, to be returned within one week of the publication of this advertisement, may be obtained by sending a stamped addressed foolscap envelope to the undersigned.

J. E. RICHARDSON,
Director of Education.

BRITISH TRANSPORT COMMISSION requires Economist/Statistician. Candidates should have some years' experience as an economist in the business world and understanding of the problems of high level management in a large organisation, ability to write briefly and clearly in non-economic language, and a good knowledge of the structure of the economy and of sources of statistical information. Direct experience in inland transport is desirable, but not essential; good academic or professional qualification required. Starting salary according to qualifications and experience but will not be less than £1,400 per annum. Superannuation scheme. Certain free travel facilities. Medical examination.—Write, giving age and details of education and career, to Director of Establishment, British Transport Commission, 222 Marylebone Road, London, N.W.1, within 14 days. S.A.E. for acknowledgment.

UNIVERSITY COLLEGE, LONDON (Gower Street, W.C.1) requires RESEARCH ASSISTANT in Department of POLITICAL ECONOMY. Duties to commence October 1, 1959. Salary £700, plus £60 London allowance. Qua.—Applications, to be received by June 8, 1959, should be sent to the Secretary, from whom further particulars may be obtained.

UNIVERSITY COLLEGE OF WALES
ABERYSTWYTH

Applications are invited for the following posts in the Department of Economics and Political Science:
(a) Assistant Lecturer or Lecturer.
(b) Temporary Assistant Lecturer for Session 1959-60 only.

Further particulars can be obtained from the Registrar, to whom applications should be sent not later than June 5, 1959.

For further appointments see page 587

CANBERRA UNIVERSITY COLLEGE
AUSTRALIA

LECTURER IN ECONOMICS

Applications are invited for appointment to the above post. Preference will be given to candidates with special interest in agricultural economics or mathematical economics.

Salary range: £A1,463-£A2,063 per annum. Annual increments of £A75. Commencing salary will be in accordance with qualifications and experience.

Further information and the summary forms which must accompany an application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London on July 4, 1959.

CENTRAL OFFICE OF INFORMATION invites applications for the following posts:

P.E. 994—Senior Information Officer. Responsible for reporting on current Commonwealth developments and writing explanatory items and articles on Commonwealth topics. Correspondent will require keen understanding of economic and constitutional subjects. Candidates must be experienced journalists whose work has called for wide knowledge of affairs within the Commonwealth as a whole. Personal acquaintance with one or more of the member States of the Commonwealth (apart from the United Kingdom) desirable. *Salary:* £1,395 to £1,600 (men); £1,345 to £1,600 (women).

P.E. 995—Information Officer. To assist in production of a daily wireless press service for use by United Kingdom information posts in East Africa. Candidates must have had good journalistic experience, gained on the editorial staff of a newspaper, news agency or broadcasting organisation. Wide knowledge of current affairs, including constitutional and economic developments in Africa, is a necessity. Also desirable that they should be personally acquainted with one or more of the territories of the area, preferably gained in the course of journalistic or information work. *Salary:* £1,050 to £1,330 (men); £1,102 to £1,280 (women).

P.E. 996—Information Officer. To take a major part in production of a daily wireless press service for use by United Kingdom information posts in Pakistan, India and Ceylon. Candidates must have had good journalistic experience, gained on editorial staff of a newspaper, news agency or broadcasting organisation. Wide knowledge of current affairs, including political and economic conditions in the countries of Asia particularly concerned, is a necessity. Also desirable that they should be personally acquainted with one or more of the territories of the area, preferably gained in the course of journalistic or information work. *Salary:* £1,150 to £1,330 (men); £1,102 to £1,280 (women).

P.E. 997—Information Officer. To assist in production of a daily wireless press service for use by the United Kingdom information posts in South East Asia. Candidates must have had good journalistic experience, gained on editorial staff of a newspaper, news agency or broadcasting organisation. Wide knowledge of current affairs, including political and economic conditions in South East Asia and the Far East, is a necessity. Also desirable that they should be personally acquainted with one or more of the territories of the area, preferably gained in the course of journalistic or information work. *Salary:* £1,150 to £1,330 (men); £1,102 to £1,280 (women).

Write to the Ministry of Labour and National Service, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4, quoting relevant P.E. number and give age and full details of qualifications and experience. Only those applicants selected for interview will be advised.

ACTUARY with experience of insured or self-administered pension schemes required in rapidly expanding consulting practice. Salary according to age and experience but not less than £1,500. Early prospect of partnership—Hoskins, 11-12 Finsbury Square, E.C.2.

UNIVERSITY OF EDINBURGH
DEPARTMENT OF SOCIAL STUDY

EDINBURGH COMMUNITY RESEARCH AND DEVELOPMENT STUDIES

Applications are invited from Sociologists with experience of urban research for the post of Director of a research programme in a large housing estate in Edinburgh.

The programme will extend over a period of five years and will be concerned with (a) the development of the characteristic social institutions of the area, their variations and their effect upon individuals, and (b) the nature and causes of the social and psychological pathology appearing in the population. The programme will therefore combine research with social casework and social development activities of an experimental kind. Staffing will be adequate for these purposes. The successful applicant will have responsibility for the whole programme, for continuity and for administration.

Salary Scale £1,100 by £50 to £1,300 per annum, together with superannuation benefit.

Further particulars may be obtained from the undersigned, with whom applications, together with the names of three referees, should be lodged not later than May 30, 1959.

CHARLES H. STEWART,
Secretary to the University.

April, 1959.

COMPANY AFFAIRS

VICKERS

As was to be expected with the run-down in the defence programme, the difficulties in the civil aircraft industry, the lack of new orders for ships and the decline in activity in the capital goods industries, the full report of Vickers for 1958 bears many signs of contraction. Excluding in both years the figures for Power-Samas, sales fell last year from £196.3 million to £176.9 million, the order book declined from £376 million to £312 million, the gross value of stocks fell from £141 million to £128 million and trading profits contracted from £13.5 million to £12.3 million. Indeed, one of the few signs of expansion is the growth in liquid funds from £5.8 million to £14.1 million, reflecting the final calls on Vickers' twin issue of debenture stock and ordinary shares. But that, at least, means that Vickers is spared an immediate financing problem.

How far will Vickers be able to pick up new business in some of its divisions, especially steel and engineering, to offset the decline in the shipbuilding divisions and, possibly, in the aircraft division? How much further, indeed, will its total business contract? These are questions that ordinary shareholders, who have again received a 10 per cent dividend, must ask themselves when they note that the rate of return on capital employed over the last four years has fallen from 13.5 per cent, through 13.0 per cent and 12.5 per cent, to 10.4 per cent.

In aircraft, new orders for the successful Viscounts are tailing off and for the moment Vickers must pin its hopes on selling more than the 40 Vanguards which are now on order. The directors, arguing the case for cheaper air fares, seem confident that the orders will come and meantime they have written down expenditure on the Vanguards heavily. Further in the future, and thus more problematical, are the VC 10 for the civil market and the TSR 2 for the RAF. In shipbuilding, Vickers still has 29 ships on order. But what happens when these orders are worked off, as they will be in the next two or three years? In steel, the English Steel Company has at the moment only enough orders to employ two-thirds of its capacity. In Metropolitan-Cammell Carriage, the ending of British Railways' buying programme for new wagons has coincided with a decline in enquiries from abroad.

All this points to further contraction. But Vickers' general engineering divisions should benefit from any recovery in capital investment, as should its steel division, and it has a big stake in a growing industry through its 38 per cent equity interest in ICT (the product of the merger between Power-Samas and British Tabulating Machine). And on aircraft, which represents about 30 per cent of total sales, it has scored a notable success with the Viscount (on which spares will bring further profits) and it is certainly as strong as any other British aircraft company. Whether or not Vickers £1 ordinary shares, yielding 6 per cent at 33s. 4½d. xd, are still full of growth, they are certainly full of quality.

DE HAVILLAND

The present plight of the British aircraft industry, with the defence programme pared down and Government support withdrawn from the development of civil aircraft, is crystallised in two sentences in Mr W. E. Nixon's statement to de Havilland shareholders:

> It is idle to pretend that the British aircraft companies can finance from their own resources highly expensive new projects without a basic minimum of orders and still compete successfully with the other manufacturers of the world who have sufficient government orders or subsidies, or both.
>
> The rapidly changing pattern of aviation business has laid a heavy strain upon our financial resources and technical organisation, whilst increasing materially the time needed to bring a profitable reward.

De Havilland is heavily committed in the Comet IV and with Fairey and Hunting is busy on the development of the DH 121. More Comets are being made than have been ordered. It is only too evident, as Mr Nixon says, that "when dealing in units of over £1 million each it is the group's profitability that will be materially affected by the success of sales efforts."

Yet, though de Havilland's turnover is being maintained at a "satisfactory" level (thanks in part to the defence order for Sea Vixens) profits have taken a severe jolting and future earnings must be regarded as problematical. In the year to September 30th, trading profits excluding a special credit of £530,860, fell from £3,546,701 to £2,074,364 and the net surplus dropped from £619,611 to £133,606. Small wonder, then, that there is no ordinary dividend. The main reason why de Havilland's profits have been so drastically cut is that the directors have again written off the tooling expenditure on existing orders for this aircraft and the initial expenditure on those now in production for which no orders have been placed. This is only prudent, for it is not certain that this expenditure can be recovered from future additional sales.

De Havilland's resources are now under considerable strain. Stocks and work-in-progress have risen from £23,711,265 to £31,594,140, financed by a rise in bank overdrafts from £242,262 to £2,655,355 and in deposits and advances from customers from £13,192,330 to £18,331,997. This is not a report to gladden the heart of any holder of de Havilland £1 ordinary shares, now quoted at 15s. 3d., even though it contains some reference to the possibilities of diversification and to the fact of de Havilland's contract for the 2,500 mile range "Blue Streak."

RIO TINTO

Rio Tinto's main source of income at present is from investments in Rhodesian copper. They paid less last year and reduced Rio Tinto's gross profits from £3,900,000 to £3,157,000, causing a reduction in its ordinary dividend from 26 to 20 per cent. So far, Rio Tinto's extensive and expensive exploration programme has produced little, but the company has acquired Kern Oil and it now intends to invest £450,000 in the exploitation of lead/zinc deposits in India. Its future is still bound up in its big investments in uranium. From the viewpoint of the shareholder in Rio Tinto the coming into production of the Mary Kathleen mine in Australia is of more immediate significance than the Canadian uranium mines, from which Rio Tinto cannot receive dividends until much of their debenture debt is cleared.

Rio Tinto provides about 15 per cent of the free world's uranium output and the chairman Mr Gerald Coke, devotes much of his statement to examining the prospects for the metal. Currently, it is in surplus and some deliveries are going straight into the United States stockpile. No fresh government contracts have been placed or are likely to be placed for the next few years but Mr Coke estimates that by 1970 demand will overtake "the accumulated excess of supply" and thereafter there may be a shortage of uranium. This is a long range forecast, and for Rio Tinto the inescapable fact is that its contracts run out in 1962 or 1963. By then the cost of the mines will have been amortised but it hardly seems possible that uranium will then command a price of $10 a lb. Rio Tinto has thus to be prepared to sell freely in a commercial market, subject to security safeguards. It is prepared for this but it seems to be urging the Canadian government to follow the example of the United States administration, and make bilateral arrangements on exports with a larger number of countries and to extend the present contracts until 1966. That would put Rio Tinto's Canadian mines on an equal footing with American producers and for this Rio Tinto presumably would be willing to accept a lower price. But the yield of 3¾ per cent on the 10s. ordinary shares at 53s. 1½d. xd. shows that much is in the hazard.

DUNLOP RUBBER

Dunlop's dependence on the British motor industry can easily be overemphasised, for over half of the group's fixed assets stand on overseas soil and in 1957 70 per cent of its total sales (including indirect exports) were made in overseas markets. Last year, when the motor industry was booming, Dunlop Rubber's gross profits fell by £100,000 to £19,760,000. As the directors warned shareholders six months ago, profits in the last six months of the year were not so high as the peak level reached in the corresponding period of 1957, but the fall is no more than £310,000 to £10,130,000 and compares with a rise of £210,000 in the first half of the year. The directors then said that profits from overseas activities were being well maintained. It may therefore be that lower prices and rising costs in the United Kingdom, to which the directors also alluded in the interim statement, had, at least up to the end of the calendar year, offset the benefit accruing from the motor industry's high output.

The ordinary dividend, previously restored from 10 to 14 per cent in 1957, has now been raised to 16¼ per cent and the directors propose to make a 25 per cent scrip issue. This must be taken as a sign of confidence. The reduction in taxation from £7,458,000 to £6,360,000 is reflected in the advance in net profits from £5,026,000 to £5,797,000. The stock market was pleased with the dividend and the company's 10s. ordinary units gained another 1s. 7½d., to reach a new "high" for the year of 29s. 7½d. and to offer a yield of 5½ per cent.

BABCOCK AND WILCOX

Although the total sales of Babcock and Wilcox fell by only 2½ per cent, from £35,851,000 to £34,902,000, last year its trading profits were nearly 19 per cent down, from £5,885,100 to £4,803,805, reflecting a reduction in profit margins on the orders received in the past few years. Clearly the general recession in heavy engineering was partly to blame, but the chairman, Mr W. Lionel Fraser, says that as the Central Electricity Generating Board has revised its plans for installing conventional power plant the total number of boilers it is now likely to require in any one year is only one-quarter of the number it ordered a few years ago. In addition "many difficulties" were encountered in building the nuclear power station at Hinkley Point. In anticipation of the trend toward bigger boilers the directors acquired the lease of a Royal Ordnance factory at Dalmuir, where the company will also be able to develop new ranges of engineering products, and it is going ahead with a big programme of capital development. Thanks, however, to the injection of £2 million from the new 6 per cent debenture the group was able to cut its bank overdrafts from £4,023,248 to £1,443,253. But the directors have already sanctioned further spending of £1,787,000 on capital account this year. Mr Fraser has in the past warned shareholders that it would be difficult to maintain profits at the level reached in the boom years and he now says that "for a period business may be less profitable and even less plentiful."

On a 13 per cent dividend, covered about twice by earnings, the £1 ordinary shares yield 5½ per cent at 48s. 6d.

UNITED SUA BETONG

As expected, the preliminary profit figures of United Sua Betong for 1958 show a drop in earnings. At the beginning of 1957 the price of spot rubber was 2s. 6d. per pound but then declined steadily throughout the rest of the year; in 1958 the price was fairly stable at a little below 2s. per pound. United Sua Betong's gross profits last year fell from £841,236 to £713,055 and its net profits from £509,236 to £413,055. But the ordinary dividend has been maintained at 50 per cent, and a one for three scrip issue will be made to mark the company's jubilee.

The £1 ordinary shares of United Sua Betong have risen steeply over the last six months; at the beginning of November they stood at 60s. and they are now 86s. 6d., against a low point of 46s. last year. Recent buying in the rubber share market has been stimulated by more than the sharp and somewhat disconcerting rise in the price of the commodity which is now back to 2s. 6d. per pound. High yields obtainable on the stocks of many soundly based companies have attracted investors, and even at 86s. 6d. "Suas" offer a yield of 11.6 per cent on the dividend paid for last year. Clearly the rubber plantations are now earning good profits, but though trading in rubber shares has been maintained at a high level the advance in share prices has become more sedate, although the commodity has been rising quickly.

JOHN SUMMERS

The trading profits of John Summers at £6,900,000 were running at roughly the same level in the first half of the current financial year as they were in the same period in 1957-58 when they amounted to £6,880,000. The directors say that the Shotton works could not fully meet the demand for sheet and light plates and that orders to date are sufficient to keep the plant fully employed for the rest of the financial year. The interim ordinary dividend is maintained at 6 per cent and the directors propose to make a 50 per cent scrip issue. They expect to pay something slightly better than 6⅔ per cent as a final dividend on the enlarged capital. That rate is equivalent to the 10 per cent paid as a final on the present capital in 1957-58.

RICHARD COSTAIN

When the directors of Richard Costain introduced their share purchase scheme for senior staff to ordinary shareholders last January they took another step forward along the road to more liberal dividends by indicating that the ordinary payment for 1958 would be 15 per cent. In earlier years shareholders patiently waited while the company grew hand over fist, fed by the retention of the bulk of its net profits. Although a tax-free payment of 3 per cent from capital reserves was added to the basic dividend of 10 per cent in 1953, the first real break with conservatism since the end of the war came in 1957, when the dividend was advanced to 17½ per cent and a 100 per cent scrip issue was announced. Greater liberality, it will be recalled, followed on a bout of speculative activity in the Costain shares.

The rise from £521,501 to £609,761 in gross profits comes up to expectations and as forecast the ordinary dividend has been raised to 15 per cent and the tax-free payment dropped. Shareholders, though they must feel a little disappointed with the decision to retain the whole of the proceeds of the sale of Dolphin Square, have thus had their dividends doubled in the last two years.

The gross profit for 1957 has been adjusted to take account of this sale, and 1958 profits include the earnings of Costain (West Africa) in which Richard Costain now owns the bulk of the ordinary capital. Hence, though tax fell by £22,152 to £232,600, net profits are only £54,605 higher at £320,915, as minority interests and pre-acquisition profits have risen. Earnings still cover the ordinary dividend three times and the yield of 4 per cent offered by the £1 units at 76s. cannot be regarded as unduly low.

GALLAHER

Since January turnover of Gallaher's has continued to expand, though at a slower rate than last year when sales rose by 20 per cent, from £204 million to a new peak of £244 million, and trading profits rose 18 per cent from £6,562,896 to £7,754,578. But shareholders must note the warning made by the chairman, Sir Edward de Stein, that profit margins may be squeezed this year by the increase in selling and advertising costs, by the higher average cost of leaf stocks, and by the heavier depreciation charges Gallaher will incur as additional factories and machinery are brought into use. On the 25 per cent dividend forecast on the capital as increased by the recent rights issue the 10s. ordinary shares at 46s. 9d. xd yield 5.3 per cent.

MERCHANT BANKS

Hambros, one of the few merchant banks that is a public company, shows a large increase in deposits in its year to March 31st—by £9 million to £65.7 million. But perhaps half of this reflects the swelling of deposits this year immediately after Easter. The true increase is attributable largely to increased foreign business. The chairman, Mr R. Olaf Hambro, says that there has been a remarkable increase in foreign exchange business since the currency freeings. Acceptances, too, are up, from £19.9 million to £21.6 million. Hambros has increased its stake in two hire purchase companies, Western Credit and Belmont Finance, though the chairman emphasises that it will keep participation in this sphere within due bounds. The main business of the bank

continues to be financing of trade with Scandinavia and of Norwegian shipping and shipbuilding, though lower freight rates have caused some decline here. One most flourishing side of the business now is the group's agency for the sale of BMC cars in the United States.

Rea Brothers, a vigorous banking house outside the club of the Accepting Houses Committee, shows further expansion in its year to end-December. Deposits are up by just over £1 million to £7.2 million—compared with £3.9 million two years ago. Acceptances are slightly down, at £1¼ million. The bank is now very liquid—cash and bankers' balances stand at more than half the liabilities for deposits.

PRESSED STEEL

THE last two years have been favourable for Pressed Steel. Every recognisable pointer suggests that 1959 will also be most satisfactory. Motor bodies are now being produced at an unprecedented rate and Mr A. Abel Smith, the chairman of Pressed Steel, also expects record sales of refrigerators this year. The group is expanding to meet the bigger demand and has the money to do so. A 6 per cent debenture has brought in £3½ million and this is reflected in the increase in cash from £1 million to £4½ million. Last year's increased investment in net fixed assets, from £8 million to £10 million, was financed in effect from profit retentions.

The revival in the motor industry late in 1957 pushed the group's trading profit up by £1½ million and the continuing boom in the motor industry, coupled with the halving of purchase tax on domestic appliances and the abolition of hire purchase controls, resulted in a further rise of £1 million to just under £6 million last year. The ordinary dividend, which was raised from 15 to 20 per cent in 1957, has now been increased to 25 per cent and even that payment is covered three times by earnings. At 26s. 1½d. xd the 5s. units yield 4.8 per cent.

CAMMELL LAIRD

THE unchanged ordinary dividend of 15 per cent paid by Cammell Laird for 1958 is now only 1.7 times covered by earnings. And these may fall this year. The chairman, Mr J. C. Mather, tells shareholders that the outlook for shipbuilding is "not good," for though orders in hand will keep most sections of the shipbuilding subsidiary busy for some time, the longer term prospect depends on the receipt of further orders—and these are indeed scarce. Moreover, new orders received by the English Steel Corporation will not occupy more than two-thirds of its capacity and though the order books of Metropolitan-Cammell Carriage & Wagon are at a high level, the paucity of new orders for wagons (for which British Railways is an important customer) is "causing some anxiety."

Cammell Laird still has quite a big capital development programme on its hands and though it raised a further £3,777,698 in loans last year the increase in fixed assets by £5,165,682 to £11,233,980 reduced its liquid holdings from £4,941,523 to £2,495,984. These may fall even further as the group still has capital commitments of £4,347,464. The 5s. ordinary shares have fallen by 7½d. to 7s. 10½d. since the preliminary figures were issued and now yield nearly 9½ per cent.

HUDSON'S BAY

PROPRIETORS in Hudson's Bay who have seen the price of their £1 shares rise from 210s. to 231s. 3d. since the accounts were issued a month ago will be cheered by the additional remarks that the chairman, Mr W. J. Keswick, made at the annual general meeting. Following the increase in the ordinary dividend from trading from 20 per cent to 24 per cent and in the tax free distribution from land account from 2½ per cent to 7 per cent Mr Keswick says that the directors intend to reduce the disparity between the interim and final payments from both sources, beginning in November with an interim dividend of 10 per cent from trading and a tax free payment from the land account of 2½ per cent. He said that this decision does not imply any increase in the total distribution as it is still the directors' policy to plough back profits to finance expansion. But he did forecast a tax free annual payment of 5 per cent from land account for the next six years and its replacement "wholly or in part" from other sources after that. Presumably this is a reference both to profits from the company's expanding retail trade (which rose sharply in the last three months of 1958) and to the dividend income it may eventually receive from its 22.6 per cent holding in Hudson's Bay Oil and Gas. But Mr Keswick still admits that it is impossible to predict when, in fact, a maiden dividend from this source will be received. On a gross dividend of 32.2 per cent, which includes the payment from the land account, the yield is 2¾ per cent.

BORAX

FOLLOWING an improvement in the net income of US Borax in the last quarter of 1958, its directors have now reported a net income of $1,546,065 in the quarter ended March 31st (compared with $743,309 in the same period last year). The market was pleased with this result and the 5s. units of Borax (Holdings) rose by 2s. 6d. to 23s. 9d., at which they yield a bare 2 per cent on the 8¾ per cent ordinary dividend paid last year from the reserves of the parent. The advance in net income reflects not only a strong demand for borax as business recovers in the United States and a healthy demand from overseas, but also a better showing than had been expected from the potash division. The directors say that the tonnage of potash sold was indeed lower in the three months to end-March, but they add that over the six months from last October sales were actually higher and a better potash season than the last is now expected.

London Stock Exchange

FIRST DEALINGS:	Apr. 29	May 20	June 3
LAST DEALINGS:	May 19	June 2	June 16
ACCOUNT DAY:	May 26	June 9	June 23

GILT edged stocks remained dull in the week to Wednesday's close, the gold and foreign exchange figures having little effect on prices. On Wednesday there were widespread falls ranging up to ¼. Among short dated issues, Funding 2½ per cent 1956-61 lost 1⅛ to 97½ on switching into Exchequer 2½ per cent 1963-64 which gained ⅛ to 92⅞.

Leading industrials closed firmly at the end of last week, in which 87,283 bargains were marked compared with the previous record of 86,926 in the week to June 24, 1955. Markets were cheered by the better employment and output figures and prices rose in a market short of stock. But activity slackened later and profits were taken on settlement day. In the week to Wednesday's close, *The Economist* Indicator rose by 3.3 to 267.0. Albright and Wilson rose by 2s. 1½d. to 45s. 4½d., following the chairman's forecast of higher sales and profits. Motor and kindred shares were once more active and Rover gained 2s. to 27s. 6d. while Standard lost 4½d. to 10s. 9¾d. Ford gained 2s. 4½d. to 63s. 4½d., but Jaguar ordinary lost 3s. 1½d. to 58s. 9d. Raleigh rose by 5s. 6d. to 30s. 7½d. on the interim statement. Roadmaking and building shares were also strong; Amalgamated Roadstone gained 4s. to 43s., and Tarmac 3s. 9d. to 103s. 9d. following the negotiations for a merger. But Val de Travers lost 5s. 3d. to 32s. 6d. on the dividend cut and fall in profits. Tobacco shares rose after their recent dullness; following the completion of a large selling order in "Imps" and "Bats" the former gained 2s. 3d. to 58s. 9d. and the latter 2s. 4½d. to 55s. 4½d. Textiles were strong, Horrockses rising by 1s. to 32s. 6d. and Lancashire Cotton by 1s. 7½d. to 45s. 3d. Courtaulds gained 3s. 9d. to 35s. following the £15 million order from Russia for a man made fibre plant.

HP shares again went ahead, and UDT jumped by 11s. 6d. to 158s. 6d. Insurances remained active, with Legal and General gaining 1⅛ to 13⅞. Bank shares were better, Midland gaining 2s. 6d. to 68s. 9d. and Barclays 3s. 3d. to 66s.

Leading oil shares were dull though Anglo-Ecuadorian rose by 3s. to 17s. 3d. and Lobitos by 6d. to 15s. Shell Trinidad on US buying rose by 8s. 9d. to 136s. 3d. Kaffirs advanced on renewed hopes of an increase in the price of gold; among finance houses Johnnies gained 2s. 3d. to 68s. 9d., and Anglo-American 6s. 3d. to 176s. 10½d., and among the older dividend payers in the Central Rand, City Deep rose by 1s. 9d. to 19s. 6d. and Randfontein Estates by 1s. to 23s. 6d. The newer mines were strong following the April returns and President Brand reached a fresh peak of 71s. 7½d. a gain of 2s. 6d. on the week. In diamonds De Beers gained 9s. 4½d. to 138s. 9d.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended May 2, 1959, there was an "above-the-line" surplus (after allowing for Sinking Funds) of £9,461,000 compared with a deficit of £23,981,000 in the previous week and a surplus of £20,332,000 in the corresponding period of last year. There was a net expenditure "below-line" of £13,048,000 giving a total deficit of £43,826,000 compared with £91,488,000 in 1958-59.

THE MONEY MARKET

DESPITE its low allotment at the previous week's Treasury bill tender, the discount houses left their concerted bid for the 91-day bills offered last week unchanged at £99 3s. 5d. The tender was split due to the incidence of the Bank holiday in three months' time. For the less marketable 92-day bills the market bid £99 3s. 3d. and received allotment in full; but at its basic price the market received a bare 11 per cent of its application for the 91-day bills. The market's total allotment at its minimum price was about 20 per cent. The average rate of discount for the 91-day bills rose by 4d. per cent to £3 6s. 0.14d. per cent.

The announcement of the United States Treasury's refunding operation caused a reversal in the previous week's fall in the bill rate. The rate on 91-day bills rose from 2.831 per cent to 2.935 per cent.

Money has been tight in Lombard Street. Stringency encountered at the end of the month recurred sporadically this week and the authorities have given a small amount of assistance on several occasions. The market has avoided recourse to the Bank but the cost of fresh loans has been generally high.

The latest Bank return shows a fall in discounts and advances from £28.5 million to £24.3 million.

APPOINTMENTS

MERCHANT BANKING ORGANISATION in South Africa

invites applications to fill the following vacancies carrying excellent opportunities for advancement.

1. ECONOMIST.—Qualifications: Economics degree at recognised University together with *some experience* in commerce or industry.
2. EXECUTIVE BRANCH.—Qualifications: Experience in merchant banking or credit work and *preferably* University degree.

Age required in each case 25-32 but older man with special qualifications might be considered.

Initial salary would be related to experience and responsibility but appreciably in excess of comparable rates in *United Kingdom.*

Applications, which will be treated in confidence, to:

The Appointments Officer,
ANGLO AMERICAN CORPORATION OF SOUTH AFRICA, LIMITED,
40 HOLBORN VIADUCT, LONDON, E.C.1.

BROWN & POLSON GROUP require for their Finance and Administration Division, a young man 23-28 with an Accountancy or Cost and Works Accounting qualification. Experience in an industrial concern would be an advantage but applicants with solely commercial or auditing experience should not hesitate to apply. Experience within the Company will not be confined to its London headquarters but will include periods at the Manchester and Paisley Works. Salary, Profit Payment, Life Assurance and Pension Schemes are good and the Company is progressive in outlook and expanding.—Replies to Group Personnel Manager, Brown & Polson Ltd., 125-130 Strand, London, W.C.2.

STATISTICIAN required by Associated TeleVision Ltd. for training as sales research executive. Applicants should be between 25 and 27 years of age, have a *university degree and some commercial experience,* preferably in advertising or market research. Good salary and prospects.—Write, giving full personal details, to Personnel Manager, Associated TeleVision Ltd., Television House, Kingsway, W.C.2.

THOMAS TILLING LIMITED

A young Economist is required by this Company in their group Headquarters in Mayfair. This is a comparatively new appointment, and the work, which will be concerned with Economic Trends and Statistics, will offer considerable scope.

Applicants should be Graduates who have taken *Statistics as a subject.* Salary according to age and experience.

Reply in writing, with full details, to the Assistant Secretary, Crewe House, Curzon Street, London, W.1.

WORKERS' EDUCATIONAL ASSOCIATION

WEST MIDLAND DISTRICT

Applications are invited from graduates for the post of Staff Tutor in Trade Union Studies. Salary: £1,050-£1,200. Details and application forms (s.a.e.) from R. P. B. Davies, M.A., District Secretary, 19 Calthorpe Road, Birmingham, 15.

UNIVERSITY OF LONDON

Readership in Economics (with special reference to Money and Banking) tenable at the London School of Economics.

The Senate invite applications for the Readership in Economics (with special reference to Money and Banking) tenable at the London School of Economics (salary £1,475-£1,775-£2,150 a year plus £80 London Allowance).—Applications (10 copies) must be received not later than June 5, 1959, by the Academic Registrar, University of London, Senate House, W.C.1, from whom further particulars may be obtained.

ACCOUNTS DEPARTMENT of a large electrical engineering company within the A.E.I. group has vacancies for two or three young men, preferably aged 22-32 and suitably qualified, to be based at main factories in S.E. London and Brimsdown, Middlesex, to assist in investigating existing accounting methods throughout the group, and to form a nucleus of new internal audit section. Knowledge and experience of production costing methods essential plus a good standard of report writing. Some *U.K. travelling required. Progressive* salaries and prospects. Staff pension scheme.—Brief written applications to Staff Officer, Reference 744/53, Siemens Edison Swan Ltd., London, S.E.18.

SCHOOL OF ORIENTAL AND AFRICAN STUDIES

UNIVERSITY OF LONDON, W.C.1

Applications are invited for a RESEARCH FELLOWSHIP in the *Economic History of East and South-East Asia.* The Fellow will be required to carry out individual research within a co-operative Anglo-American project. Appointment will be until December 31, 1961, with possibility of extension or of transfer, to a permanent post at the School. Candidates must be graduates with high honours and preferably with a higher degree in history or economics and *Specialised knowledge of the area is not* essential, but candidates should be prepared to develop an interest in Western activities in Asia, and have conducted research in their own field. If necessary training in an Oriental language will be provided, and the scheme envisages that part of the Fellowship may be spent at an appropriate research centre in the United States.

Salary will be within the range £1,050-£1,600 according to qualifications and experience.—Applications, stating age, qualifications, experience and the names of three referees, should reach the Secretary of the school by May 16, 1959.

THE RUBBER RESEARCH INSTITUTE OF MALAYA
KUALA LUMPUR, FEDERATION OF MALAYA

VACANCY FOR STATISTICIAN

The Board of the Rubber Research Institute of Malaya invites applications for the post of the Head of the Statistics Section of the Institute at Kuala Lumpur, Malaya.

Applicants should have high academic qualifications and considerable statistical research experience. The duties will include design of field and laboratory experiments and the conduct of research in statistical matters relating to all branches of the Institute's work.

The appointment will be made on the Research Officers' scale, the point of entry being according to age, qualifications and experience. A suitable candidate with the required qualifications will be appointed in the upper half of the salary scale, which is:

Time scale: Basic salary, £1,400-£2,660 per annum, with annual increments of £70.

Super scale (by selection): Basic salary £2,870-£3,080-£3,290 per annum.

Fixed allowances, £630 per annum; additional allowance per child, £140 per annum; salaries and allowances are paid in Malayan currency.

Quarters with heavy furniture, medical attention and passages for wife and two children under 18 years of *age are provided.*

Application forms and more detailed information may be obtained from the Secretary, London Advisory Committee for Rubber Research (Ceylon and Malaya), Commonwealth Institute, Imperial Institute Road, London, S.W.7, to whom completed applications should be sent by June 6, 1959.

WORKS STUDY

Well-known American Manufacturing Organisation requires a Works Study Engineer. A successful applicant should have extensive experience of time and method study technique, cost control and incentive scheme. Experience in Textile Industry though not essential would be an advantage. Desirable educational standard: degree or equivalent qualifications. This is a rapidly expanding organisation offering excellent prospects, and demanding that successful applicants should be capable of handling increasing responsibility.

Applications to The Personnel Officer, giving full details of experience, salary required, etc.

INTERNATIONAL LATEN CORPORATION,
INDUSTRIAL ESTATE,
PORT GLASGOW.

NORTHAMPTON COLLEGE OF ADVANCED TECHNOLOGY, LONDON

The College is one of the eight Colleges of Advanced Technology. It is concerned with full-time Degree, Sandwich Diploma in Technology and *Advanced courses in* engineering and applied science.

Applications are invited for an Assistant Lecturer, Grade B, preferably with a degree in Sociology, who will take part in the development of LIBERAL STUDIES activity within the college. Candidates should offer two of the following subjects: Social Policy and Administration, Social Institutions, *Social Psychology, Theories and* Methods of Sociology, Social History.

The initial salary will be determined by qualifications *and experience.* Salary scale: £825 to £1,230 per annum.

Further particulars and forms of application obtainable from the Secretary, Northampton College of Advanced Technology, St. John Street, London, E.C.1.

STATISTICIAN (Assistant Planning Officer (Research)—A.P.T. *Special Grade* (£750-£1,030) for County Borough of Southampton, Borough Architect's Department. Duties: Research: Compilation of *planning* statistics; Direction of survey work on population, employment, etc., in connection with review of Development Plan. Qualifications: University Degree in economics or other appropriate subject, with special reference to statistics. Commencing salary according to experience. Candidates should state housing *requirements.*—Application Forms from the Borough Architect, Civic Centre, Southampton, returnable by May 25, 1959.

ECONOMIST PLUS

Courtaulds invites applications for an appointment within the small group responsible for carrying out the Company's diversification policy. The work includes special industry studies, assessment of individual firms, and detailed examination of commercial policies. *In addition* to a good Honours degree in Economics and a few years industrial experience, the position calls for a man capable of taking part in discussions at senior levels, and making critical investigations in different fields. For the right man, aged 25 to 35, the long term prospects would be excellent.

Candidates should write, giving full details of age, education, *qualifications and experience, to the Director of* Personnel, Courtaulds Limited, 16 St. Martin's-le-Grand, London, E.C.1, quoting reference number G.91.

For other appointments see page 577

THE UNIVERSITY OF LEEDS

DEPARTMENT OF SOCIAL STUDIES

DEFENCE BONDS

pay 5%

with 3% tax-free bonus after 7 years

Defence Bonds are a safe and extremely profitable way of saving. As well as the attractive interest of 5% per annum, the Bonds are repayable after 7 years at the rate of £103 for each £100 invested—and this 3% Bonus is U.K. income tax free. The bonds may, of course, be encashed before maturity. The interest, payable half yearly, is not exempt from tax, but tax is not deducted at source. You can have up to £2000 of these Bonds exclusive of holdings of earlier issues. Bonds inherited from a deceased holder or acquired by conversion of earlier issues can be held in addition. *On sale in £5 units. Buy all you can afford.*

IN SEVEN YEARS

5% Defence Bonds yield the equivalent of

£5.12.6

per cent (gross), per annum if you pay tax at the present standard rate of 7/9.

Full information on Defence Bonds from your stockbroker, banker or other professional adviser, and from your local Savings Committee, Savings Centre, Post Office or Trustee Savings Bank.

THERMOTANK IN SOUTH AFRICA

Now they can give of their best

at a Johannesburg Building Society

Staff in the new headquarters of the United Building Society, the largest in South Africa, are continents away from the heat or chill of the nearby Johannesburg streets. Thermotank air conditioning provides perfect comfort in this ten-storey building, one of a series of the Society's offices throughout the Union which have Thermotank installations. Other Thermotank contracts in South Africa include the head office of the national power authority, the Electricity Supply Commission; the air conditioning of seven department stores; brewery plant, hospitals, and fan equipment for gold mines.

Thermotank can plan, design and install air conditioning equipment for any requirement in any part of the world.

A WORLD OF BETTER CLIMATES WITH THERMOTANK

Here are a few more examples of world-wide service from Thermotank:

BRITAIN Conversion of the liner s.s. 'ORCADES' to be carried out, providing an installation with a capacity of 14,000,000 B.T.U's per hour.

UNITED STATES Contracts for Texas Instruments, Standard Oil, American Telephone and Telegraph Company, John Hopkins University, Ford Motor Company and General Motors.

MIDDLE EAST Installations include the Fao Port Control and Wireless Station Building on the Persian Gulf and the Iraq Spinning and Weaving Company's mills near Baghdad.

AUSTRALIA Full air conditioning for the Melbourne office of Bank of Australia and New Zealand. Also hospitals, hotels, schools, laboratories and current shipping including two 19,000-ton vessels.

Tests at Allied Chemical's National Aniline laboratories prove permanence of new textile finish.

Now—a **permanent** polyethylene softener for all your fabrics

A-C *Polyethylene, another new Allied Chemical product, means good news for both consumers and textile manufacturers.*

For consumers, it means fabrics with the soft, pleasant feel you like . . . quality you can't wash out.

Wash-and-wear finishes containing emulsifiable A-C Polyethylene can be applied to *any* fabric—cotton, wool, silk, synthetics, blends. And there's no limitation on color either. They're going into ladies' dresses, sportswear, housecoats, suits . . . men's suits, slacks, shirts.

Emulsifiable A-C Polyethylene for wash-and-wear fabrics isn't the only Allied Chemical product for the textile industry. NATIONAL ANILINE dyes have been world-famous since 1879. Our new polyamid fibre, CAPROLAN, is already widely used in rugs, rope and auto tires.

For more information about A-C Polyethylene or our chemicals for the textile and other industries, write the nearest office of Allied Chemical International.

TR
SERVICES

provide more than Centralograph

MACHINE CONTROL

For instance they provide a Staff Location Service—by internal broadcasting or by light signals, which in common with all TR Services has one basic function—Serving! Centralograph Machine Control saves machines from working production time by revealing those not producing to capacity, *and* showing up the reason. Internal Telephones save by enabling information to be passed and instructions given much more quickly. Synchronised Clocks, Automatic Time Signals and Attendance Recorders all save countless minutes by encouraging a better sense of time and its value. In these and many other ways TR Services are helping thousands of business organisations to increase efficiency—and that is their true value . . . Ask for more information about TR Services *on rental* and let them help reduce overheads in your business.

TR Services include: Internal Telephones, Internal Broadcasting, Staff Location, Time Control, Centralograph Production Control, Watchman Protection, Fire Alarms.

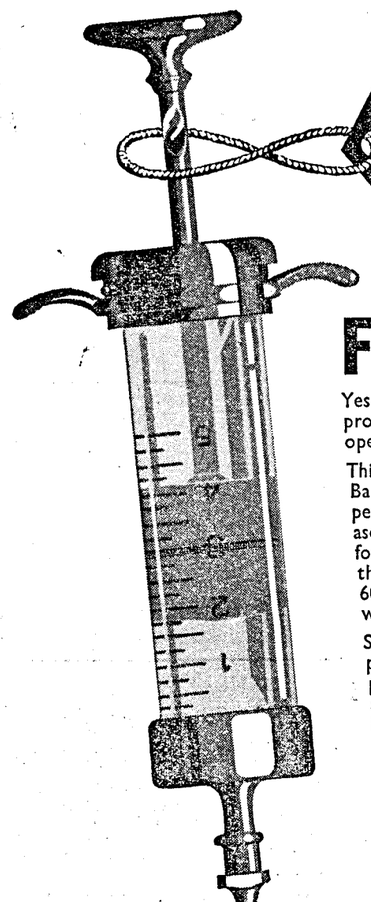
CHAPELCROSS
NUCLEAR POWER STATION

TODAY'S PROJECTS (LIKE CHAPELCROSS) NEED NEWALLS INSULATION

NEWALLS INSULATION



Over 300,000 square feet of INSULATED SURFACES

Throughout the years Newalls have built an enviable reputation in the insulation of conventional power stations. This specialised experience is now being drawn upon on an ever growing scale in solving the complex insulation problems in Nuclear Power Development.

At CHAPELCROSS — U.K.A.E.A NUCLEAR POWER STATION for example; under contract to Babcock & Wilcox Ltd., Newalls are carrying out the insulation of the 16 steam raising units and integral piping. The insulation of turbines, blowers, associated auxiliary equipment and piping is being carried out under contract to C. A. Parsons & Co Ltd.

The principal insulants employed are Newalls own products, 85% MAGNESIA and NEWTEMPHEIT, and all the application work is being carried out by the Newalls contractual organisation. The latest addition to the Newalls range NEWTHERM Calcium Silicate Insulation, has also been applied for the first time on a nuclear power station.

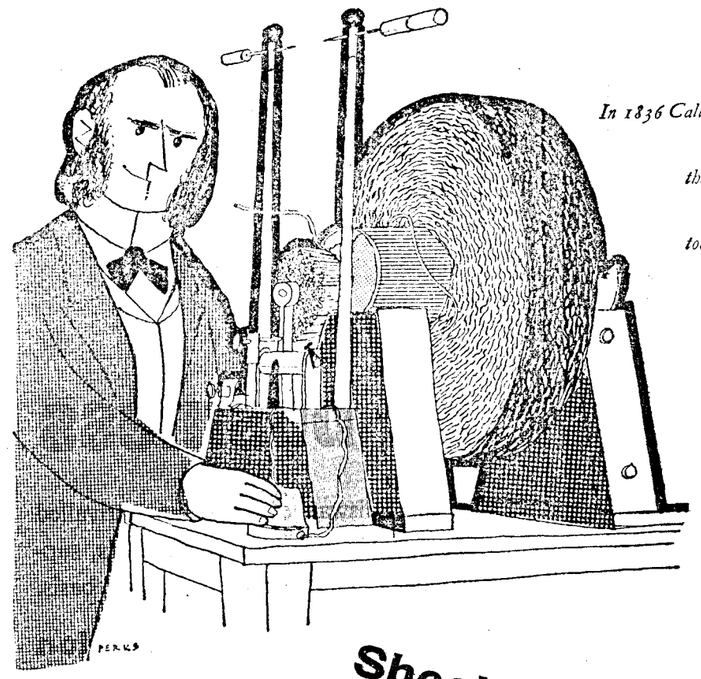
PENICILLIN

FROM COUNTY DURHAM

Yes . . . the county which is probably best known for its coal, steel and ships, provided the base for Britain's first major penicillin producing unit—the factory operated by Glaxo Laboratories Ltd., at Barnard Castle.



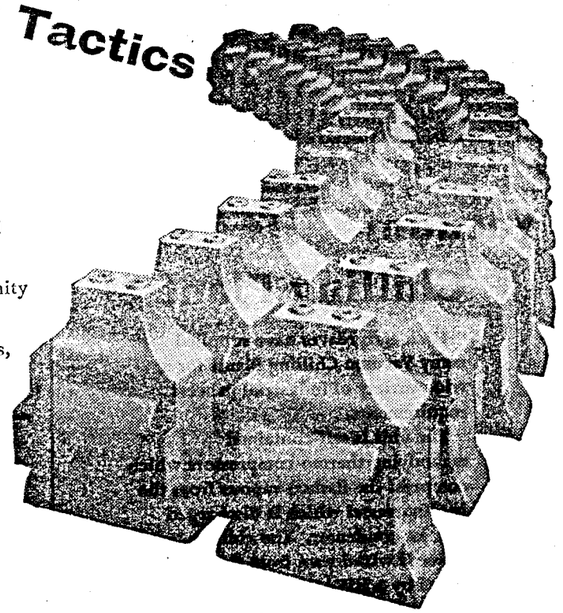
This world famous company began operations in Durham in 1945 and found that Barnard Castle had much to offer their industry. The production of drugs like pencillin, Involves processes which must be carried out under sterile and aseptic conditions, and it was, therefore, helpful to have clean air. Glaxo also found that local men and women were quick to learn the skills necessary for this new Industry—new not only to Durham, but to the world. Today some 600 people are employed by the company and a high proportion of their workers have been with them since they opened at Barnard Castle 13 years ago.

Soon after the opening, extensions were under way, and a secondary production plant was established to handle the packing and filling of penicillin and other Glaxo products. This plant is today one of the most advanced units of its kind, with every operation highly mechanised. Penicillin is no longer produced at Barnard Castle, but the position of the factory had considerable bearing on the siting of Glaxo's new production unit at Ulverston, in Lancashire. Easily reached by road from Durham, penicillin from Ulverston comes to Barnard Castle for packing before being sent on to Glaxo's headquarters at Greenford, Middlesex, using the excellent road and rail links between County Durham and London.

Many Industrial discoveries and achievements of past centuries have been centred on Durham. The new discoveries of science are now being made available to the world through companies such as Glaxo Laboratories Ltd., who have found that County Durham still has much to offer.

SITE VACANCIES

The experience of Glaxo Laboratories Ltd., in County Durham, is like that of many companies who have found the county to their liking. Labour is available, transport facilities are excellent, the essential services are plentiful and cheap, while the amenities are second to none. Many first class Industrial sites are available and complete Information, Including details on factories for rent, will be readily supplied by the County Planning Officer, Durham County Council, 10 Church Street, Durham.

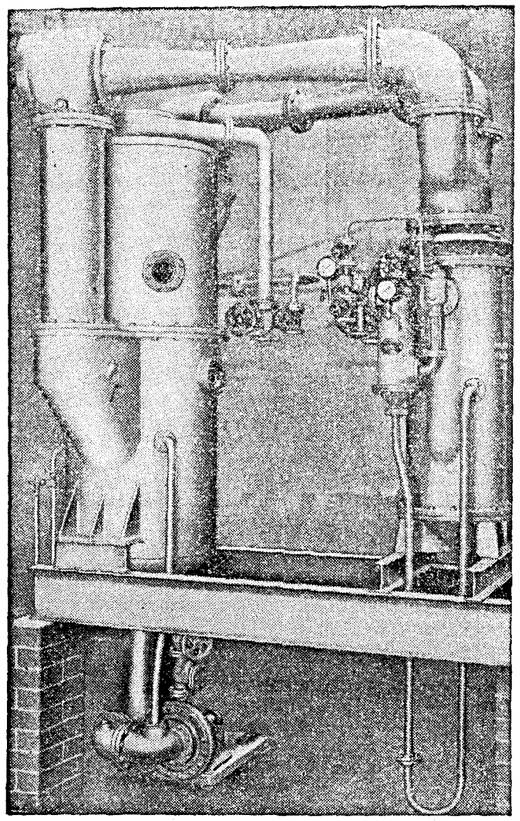


ANNUS MIRABILIS

In 1836 Callan, inspired by the work of Faraday, invented the induction coil, ancestor of the transformer of today. His instrument consisted of two separate windings on an iron core, and by means of an interrupter he induced a current of very high e.m.f. in the secondary circuit. Callan paid great attention to insulation, using a paste made from wax and gutta percha.

Shock Tactics

Insulation was a major problem of the early pioneers, and one that persisted until recent years. The introduction of Araldite (regd) made available an insulating material combining resistance to corrosion, durability, immunity from the effects of humidity and temperature changes, toughness combined with flexibility—in addition to excellent electrical properties.



Transformers potted in Araldite casting resin by A. Reyrolle & Co. Ltd.

Rude-sell

The latest thing but one in advertising was mood-sell. You didn't try very hard to sell your stuff, but evoked a mood in which people would buy it. The latest thing of all, according to one expert, is rude-sell, which means roundly abusing anyone who doesn't buy your product.

In writing rude-sell you must have a very clear picture of the person you are abusing and what their reaction will be to each lash of the whip. Supposing you write: '*Do you use I.C.I. Silicones? If not, why not? Everyone else does.*' The victim, a woman, exclaims mentally: 'I know—I'm thoroughly ashamed of myself. I suppose I'm just old-fashioned'. You go on: 'Old-fashioned nothing—you're a disgrace to the community. How are you going to keep the rain off your silly back if you don't have a raincoat proofed with I.C.I. Silicones? Eh? And how are you going to make those expensive aeroplane trips if you haven't got a gadget made of I.C.I. Silicone Rubber to keep ice off the wings? And how are you going to cut down the foam on your fermentation process without I.C.I. Silicone Fluids?'

Now shame-faced, now defiant, she eventually tries a smart-Alec rejoinder: 'But I haven't got a fermentation process, and even if I had I wouldn't know where to buy I.C.I. Silicones—unless you can get them at Harrods.' Witheringly, you reply: 'My dear madam, you can't buy them over the counter, but...

The Unproletarian Society

IN normal circumstances, after eight years of Conservative rule, the ruminative and radical British elector should now be inclined to vote for allowing the other Buggins to have his turn. The Tories have pretty well completed the programme of social reform which they worked out, largely thanks to the imaginative drive of Mr Butler, during their last period in opposition from 1945 to 1951; since 1951 their top leaders have not had much time to think. If only Labour had used the time since then to do some radical and modern thinking of its own, there would now be a great deal to be said for throwing the Tories back for another period into the wilderness, in order to chew over some more cud.

Unfortunately Labour's new thinking certainly cannot be called radical and modern. The main hope for progressive government in this country for the next five years is therefore that the Tories might use these last five to twelve months before the election in order to think up a forward-looking programme of their own. An article in *The Economist* three weeks ago proffered some specific suggestions for one part of that programme, the part that should be concerned with providing a safety net for the unlucky. What suggestions, now, for the second part of their domestic programme, which should be concerned with enlarging the prospect for the successful?

There is really not much doubt what the progressive theme should be. The slogan for the 1960s—more exciting perhaps than euphonic—should be to deproletarianise British society, both materially and psychologically. The aim is to make that last upward push which will lift the mass of the population out of the cramped mode of living that has bred the mentality of class war. By one's reaction to this theme can be judged where one really stands in political instinct today, to the right or to the left. The old-fashioned Conservative is one who looks out at the consumer comforts made achievable by rising incomes and the hire purchase revolution, and who feels vaguely that the workers are unfairly luckier than he was as a boy—that they are getting above their station. The modern Conservative should be one who looks up at the television aerials sprouting above the working class homes of England, who looks down on the housewives' tight slacks on the back of the motor bicycles and family sidecars on the summer road to Brighton, and who sees a great poetry in them. For this is what the deproletarianisation of British society means; and the changes in social and industrial attitudes of mind which it could bring with it are immense.

It is quite possible, it ought to be perfectly attainable, for the majority of industrial workers who are also heads of families to be earning over £15 a week in terms of today's pounds and prices by the end of the next Parliament. This provides the opportunity for giving the children of Britain a much fuller family life in their formative years than has ever been dreamed of in this country before. A principal task of a pro-

gressive government should be to get its own activities and imposts out of the way from blocking this advance. First, the Tories should determine that it will be one of their positive objectives of policy, if they are returned to power, to keep on reducing the sweep and impact of income tax on earned incomes, especially where there is only one breadwinner in the family. The ultimate aim should be to restore income tax to not much more than its part in the prewar scheme of things. In 1938, there were only 3.8 million income taxpayers in Britain against 18 million today. The social importance of what can be called the "deproletarianisable" income group also means, quite specifically, that the Conservatives should never again consider imposing restrictive controls on hire purchase.

One of the most troublesome questions of an advancing and socially mobile society is the part that it is logical for trade unions to play in it. A part that cannot be logical is to allow shop stewards to continue to terrorise individuals who do not agree with their views. At the very least, the Conservatives' next manifesto ought to contain a specific promise that they will set up a royal commission to inquire into abuses of power against individuals by trade unions; the radical thing to do would be to go further, and promise to introduce legislation that would regulate the activities of trade unions no less—though also no more—sternly than the Companies Acts regulate the activities of manufacturers and business men.

There is also one new regulation which should be introduced to trim the activities of business men themselves. If the Tories are to rely less on high taxation and hire purchase controls in order to combat balance of payments crises and inflation, they must rely more on other weapons, and the most obvious anti-inflationary step of all is to encourage competitive price-cutting. The right decision for the Tories here would be to include in their manifesto a promise to repeal the mistake they made three years ago, when they undesirably strengthened the legal sanctions available to manufacturers who want to enforce individual resale price maintenance.

ONE difficulty about a society that is being deproletarianised is that tastes are unlikely to be raised as quickly as are incomes; in consequence some top people are likely to feel that the amenities which they at present enjoy are being spoilt by barbarian standards of mass consumption. A balance needs to be struck here, but the Conservatives should be very careful to see that it is not always struck in favour of top people. This means that they should have a new look at the way in which some planning powers, which are said to be needed to prevent a "spread of subtopia," are apt to be badly misused; they are sometimes reactionary weapons for preventing rising members of the working class from being able to enjoy the sort of out-of-town commuters' life which better off people have been enjoying for many years. A progressive Conservative party ought to be willing to designate some beauty spots where further housing or other development will be forbidden, but to aim to allow much greater freedom elsewhere. There may well be a case for using market forces to prevent large individual pre-emptions of the green fields of England (e.g. a reform of the rating system, which would surcharge building plots above a certain size on an ascending scale). But the general aim should be to make more room for workers who want to move out to rent or buy small houses in suburbia or the country.

Repeat, to rent or buy. A deproletarianised society is not the same thing as a property-owning democracy, and it would be a great mistake for the Conservatives to suppose that they could advance the former ideal merely by persuading people to purchase particular sorts of property like houses or ordinary shares. In general, one would guess, a family is more likely to be deproletarianised if it buys a car even at the expense of having to continue to rent its house; while the urge to dragoon workers into buying risk-bearing stock exchange shares (whether in the company that employs them or in any others) seems to be a simple muddle of the undeniable desirability of encouraging people to lay up more savings, of any sort, behind them. If the Conservatives could devise any scheme whereby a man who saved a certain part of his income, through whatever medium, had that part of his income freed from liability to tax, this would be in accordance with the philosophy recommended in this article.

FINALLY, the Conservatives should pledge themselves to sweep away many of the impediments to Britons' freedom that were born out of the Victorian nonconformist conscience. They should promise to reform the gambling laws, to scrap many of the regulations about drink licensing hours, to liberalise the Sunday observance laws and so on. In many cases these are nasty class restrictions—favouring the punter who has sufficient social standing to attract credit facilities, the man who drinks from his own cellar as against the man who drinks in a pub, the man who has greater entertainment facilities in his own home as against the man who seeks mass amusements.

This would not be a complete programme of reform. For example, nothing has been said about educational reform (which should obviously have a central place in any plan for deproletarianising society) and little about changes in Britain's financial mechanism (which might well be desirable to face the challenge of the 1960s); it so happens, however, that committee reports on these matters are due to be published this summer, and suggestions in these fields can best be postponed until after their appearance. This article and that on April 25 have been concerned merely to present a framework of some proposals based on one overriding belief. That belief is that this is an age of change in which politics ought to be challenging and exciting. The old society of class war is dying on its feet.

Algerian Anniversary

General de Gaulle has steadily asserted his authority in Algiers, as in Paris. But the hardest tests in Algeria lie ahead.

IT is a year since Cincinnatus was summoned back from Colombey—summoned, on the balcony in Algiers, by a halting General Salan, who now has his reward. The anniversary must be remarked, but what anniversary should it properly be? Is it the celebration of the Gaullist return as M. Malraux must see it, of the vision become reality, the miraculous call heard again and answered? Is it to be thought of simply as a year since parliamentary government died, the awkward recollection of the republic that no one cared to prop up any longer? Or is it—as observed by MM. Lagaillarde, de Sérigny and others in Algiers—the tragi-celebration of that saving of *l'Algérie française* which has now passed into the limbo of Gaullist ambiguity? Frenchmen agree on significant dates in their history, but not on what makes them significant. Each to his own May 13th.

It is the fact of General de Gaulle's presence at the head of affairs that matters now. In the year since Algiers rebelled against Paris the worst has not happened. France has not dissolved in civil war. It has not given itself up to military rule. It has not atrophied into Iberian dictatorship. These things were possible on the morrow of May 13th: they are still not impossible now. So long as General de Gaulle remains in power in the Elysée they are, at any rate, unlikely.

IN this the general has excelled expectation. The immediate fears inspired by the manner of his return from Colombey have not been realised. Slowly and perseveringly he has paid off his camp-followers. The political generals, save two, have been promoted out of Algeria. M. Soustelle was first silenced by cabinet membership, and since his defeat in the municipal elections at Lyons has been lying low. The committees of public safety have been manœuvred into dissidence and, more important, isolated from the army. This was made quite clear by the relatively small number of Europeans who turned out for the official, army-sponsored celebration in Algiers on Wednesday. The process has been cumulative and politically adroit.

But this has not removed the sources of potential revolt. It has not deprived the *ultras* of their ability to act again in Algiers if they see fit. It has not visibly altered the army's sense of administrative vocation in Algeria. But these things could never have been done by the stroke of a pen in Paris. General de Gaulle has had to feel his way forward, always carefully, sometimes painfully. He has had his commands in Algeria disobeyed and ignored. He seems to have been kept ignorant of some police actions in Paris—seizing newspapers critical of present policy in Algeria—until it was too late. There have plainly been orders he has not dared to give.

These are all signs of weakness, but not of too apparent weakness. Authority is put to the test piecemeal. The general's oracular conversation with M. Laffont, published in *l'Echo d'Oran* on April 30th, in which he denied any significance in his constant refusal to use the word "integration," was a patent attempt to remove any excuse for militant demonstrations this week. But it was accompanied by the scathing, and final, dismissal of the Algeria "of papa's day." There is a progression in the liberties the general allows himself.

The reality of the presidential authority in deciding policy is unequivocally plain in Paris. The Elysée is all: the Matignon merely its annexe. This state of affairs is implicit in the constitution of the Fifth Republic. It has become fact, almost to exaggeration, in the relationship between General de Gaulle and M. Debré. This is important. The purpose of M. Debré is very clearly to permit the general to dissociate himself from MM. Soustelle and Chalandon, to allow the

LAST WEEK'S ISSUE

ON Wednesday last week the press on which *The Economist* has been printed since May, 1941, succumbed to the weight of advancing years and the strains of a busy life which began back in 1929. Production could have been continued only at an impossibly slow rate. St. Clements Press, faced with this crisis at the moment when the successive printing of three periodicals was about to start, decided to bring into immediate operation a new press which was not due to begin printing *The Economist* until early June.

Many readers of last week's issue must have observed imperfections in printing (more noticeable in some copies than in others). But, in view of the fact that the new press had only just been assembled and that trials had barely begun, the miracle is that the paper was printed at all. That this was possible, and that there was no serious interference with the schedule, was due to the exceptional efforts of our printers, both management and men. A word of thanks and congratulation is very much their due.

The new press should, before very long, enable us to print the paper rather faster than hitherto, and will also give us an opportunity to enliven its appearance by a judicious use of colour.

initiative in government to remain in the Elysée, not to slip into the party offices of the UNR. At the same time, the Assembly—where the UNR extremists have already voiced opinions on Algeria that are repugnant to the general—seems in practice to exercise less influence over either government or public than even the constitution left to it.

When the triumphant Right arrived in Paris after the November elections General de Gaulle made it clear that any attempt to unseat the government would bring an immediate dissolution. This was partly bluff. But now the local and senatorial elections, showing a return to the old political balance of the Fourth Republic, have given the general his freedom from Gaullist parliamentary pressure if he wants to use it. Governmental stability seems assured for the next five years.

It is on this stability that the political programme of the regime is now being developed. Already the centralisation of power has played its part in permitting the financial austerity of December's budget. It allowed the overhaul of many institutions and practices in last winter's decrees. It has helped the general to bring the French African community into being. His personal control over foreign policy remains unchallenged. All this, in his own words at Bourges last week, is the result of "clarity, authority and continuity" in government.

THE claim is true everywhere, except in Algiers. Yet, if it does not eventually become true there as well, it must become meaningless elsewhere again. Nothing permanent can be done in France if Algeria does not respond to authority. This is a truism. But, in a very real sense, all that General de Gaulle has done in France, each political success, each addition to prestige, each demonstration of power, is directed toward Algeria. Even the assertion of French independence in Nato may help. It is as though Algeria, European and Moslem, were to be mesmerised into obedience by the visible restoration of self-respect within the government itself.

General de Gaulle's freedom of action has increased in steady, if often almost imperceptible, stages. This is likely to continue. The general's policy is to assist the evolution of the Algerian situation, drawing what benefit he can from gradual military success and unexpected political change—such as the disruptions within the *ultra* committees. Very occasionally, he forces the pace, as in continuing to release Moslem prisoners last month despite the outcry at new rebel atrocities. This is a studied line, not a series of expedients. As the Moslem rebels are hard pressed in the countryside—bringing word of differences between the rebel authorities in Algeria and those outside it—so the physical fact of the war becomes less evident and less important in Algeria. M. Ferhat Abbas's last statement may have brought the prospect of negotiations a step nearer. If military success—which the general now openly visualises—actually comes about, the importance of the army should diminish. In fact, the general has deliberately reminded the army that pacification is only part of the answer.

HE plainly wishes to use as many forces in attaining a final settlement as he can. He wants a strong Moslem administration to emerge locally; hence the pressure to secure the election of a Moslem mayor of Algiers. This may help to offset the power of the FLN —whom he is still ready to embrace, on his own terms —at the conference table. He wants the economic prestige of the French civil administration, expressed in the Constantine plan, to be felt. This may partially reduce the influence of the army and its ideas. But he needs the army's help if he is to hold the settlers in check. Beyond and above, he wants to remove Algeria from its self-inflicted misery and division by drawing into the discussion the wider ideas of North Africa's future association with France and the French community. The King of Morocco and M. Bourguiba seem ready to take part. Even the deliberate attention drawn to the political principles of the Cyprus settlement belongs to a developing educative process within France.

This search for a balanced and interlocking Algerian solution is staggering in its complexity, and in the very demands that General de Gaulle must make on his own authority—and political agility—without seeking explicit backing from liberal opinion in France itself. But the liberals are still ostracised. They are perhaps too committed, and too weak. General de Gaulle is alone, and by the fact of his loneliness is the symbol of France's continuing weakness and disunity. He faces in Algeria a Moslem nationalist revolt, hardened and embittered by years of war—and he can act in Algeria only with his army's approval. This dilemma of authority has been evident all the year. It persists. But since last May 13th the rebels have been perceptibly weakened; and the army, almost as perceptibly, has been purged of its political generals and divided from the settlers. It is a beginning. How much it means now is uncertain. The year ahead will see Gaullist attrition put to still harder tests.

AIR SUBSCRIPTIONS TO *THE ECONOMIST*
22, Ryder St., London, S.W.1

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

	Airmail	Air Freight

The Office Boom

The many new office blocks in the centre of British cities, particularly London, are good business if often bad architecture.

"WELL, some people talk of morality and some of religion, but give me a snug little property," said Maria Edgeworth in 1812. At first sight, it might seem odd that anybody should echo her remark today, when rents from real property still take up only a little over half as much of the national income as they did before the war. But there is one class of property investment which has proved very good business in postwar Britain. The building of offices (and, in a few cases, shops) in the big cities—and especially in central London—has provided affluence for quite a number of people and millions for a select few. As so often where profits per transaction have become exceptionally large, the creaminess of the market has been created largely by the operation of well-meant planning controls.

The heavy demand for office space in central London —fed by the general expansion of business, the workings of Parkinson's Law, and the need to be near Government departments in these days of a planned economy—has run its head hard up against a supply of office space which has been restricted partly by sheer physical shortage of space, and partly by artificial restrictions. The biggest restriction is the great difficulty of obtaining suitable planning permission for constructing office blocks. Until 1954 there were also the limitations imposed by the building licence system. Under these conditions of inflated demand and restricted supply, the rent that can be charged for offices in central London has risen at its highest to over £2 per square foot per year. That is much more than one could expect to earn from building a new hotel or flats.

The type of principal in this part of the property business is now changing fast. At the end of the war, office development tended to be in the hands of the private speculator, equipped with an ordnance survey map, a bit of money, a nose for sites and some useful contacts with the planning authorities. In the ten years before 1955, many individual fortunes were made by buying sites, running up a building and then selling it off quickly to occupiers in this way. But since building licences were removed five years ago, competition has sharpened, and very much bigger projects have been started. An assortment of millionaires, insurance companies, and enterprising contractors has thus been tempted into the field. A company such as Laing, with its development, contracting, building and investment departments, probably represents the ultimate here. There are now perhaps twenty-five such big operators in London, of whom about one-third would be interested in any particular site.

Basically, the job that these developers undertake is no different from that performed by the thousands of small-time property improvers all over the country; they take over, build and sell (even if only into their own portfolio) for a capital profit. They differ only in scale, and in the amount of capital required. This requirement is large and increasing, for owners of land on which building or rebuilding is permitted have naturally joined in reaping the profits. In some districts owners have been much luckier than in others. Owners of sites in Marylebone Road, Oxford Street, Knightsbridge and St. James's have all done exceptionally well recently; those in Holborn and Bond Street (the latter the victim of income redistribution) have done badly. Even in the best areas land values may vary remarkably within a distance of as little as twenty-five yards.

The first step in a typical transaction is usually that a developer hears, either through a surveyor, an estate agent or his own contacts, that a site is coming on to the market. It does not matter whether there is a building on the site, since demolition will cost virtually nothing; indeed it often pays for itself once the copper pipes and lead off the roof have been sold. The number of interested developers of any site ten years ago might have been only two or three, but today there would probably be seven or even ten.

Of all the factors a bidder has to weigh, planning permission is usually the most crucial. For a number of eminently sound social and economic reasons (such as their desire to reduce traffic congestion), the Ministry of Housing and the London County Council have a general policy of restricting office building in central London. They have zoned some areas previously used for offices as utilisable only for residential or mixed development; and sometimes, when permission for offices has been granted, they have allowed only a smaller (though more flexibly laid out) ratio of office space to site area than in the past. The situation which arises when permission to build an extra floor—and thus to add perhaps £100,000 to the value of a building —can be granted with a stroke of an official pen, leads to a temptation too obvious to need mentioning. In some cities and some cases, it is darkly alleged, the temptation has also been too obvious to resist. The innuendo is never proved.

ONCE a site has been acquired and satisfactory planning permission obtained, the vital thing for a developer is to keep down costs. He knows with reasonable certainty what the revenue from his building will be, since this is only a matter of multiplying the projected area of floor space by the prevailing rents in the neighbourhood. (This calculation can be made the more accurately now that greater co-operation between contractors and architects has at last, in many

cases, reduced by half the previous average of three to four years taken to design and construct a sizeable office block.) Say, and this is not a hypothetical example, that the expected income from a West End office building of 35,000 square feet is £67,500 per annum. This income is equivalent, if the building is sold into an investment portfolio on a fourteen year basis, to a capital sum of about £940,000. Once the money for the site has been paid, every extra pound spent on the building is a pound off the profits that this £940,000 will provide.

In the example given in the previous paragraph, the site cost roughly £450,000 ; building and all other costs, at £6 a square foot, amounted to roughly £210,000 ; and the profit on the development was thus a handsome £280,000, or 30 per cent reaped in a single year before the whole project was sold off into an investment portfolio. This was by no means exceptional ; indeed, until recently, it was almost the minimum development profit expected. Other examples selected at random might include £350,000 made on a £650,000 purchase of a gigantic office block on the Great West Road, or £35,000 on a small £120,000 block built in the City. The examples could go on indefinitely but, apart from making many people feel that for some time they have been in the wrong business, their only purpose would be to show how relative is all the talk at present of greater competition in development. Even now, to make less than £200,000 on a £1 million speculation is considered unsatisfactory.

It would be pompous to draw determined conclusions for public policy as a result of what may be a bubble boom, and pernicious to say that, because some people are making large profits out of building offices for which there is a buoyant demand, these offices should not be allowed to be built. Perhaps the proper political moral for people on the left is that the combined effect of planning controls and rent restriction on dwellings has been to make it profitable for some capitalists to build offices for other capitalists, and not to build houses or hotels for the people. On the other side of the political fence, it can be argued that, so long as planning controls do exist, there may be a better case for a capital gains tax on profits arising from sales of property or land than from sales of other investments.

But surely the real object of public disquiet should be that, despite the boom, and despite the planning restrictions and advice given by the LCC's architectural staff, so many of the offices that have been built in London have been so very ugly. Anyone who looks at these buildings, designed either strictly on a neo-Georgian pattern, or—most popular at the moment—in the shape of an up-ended beer crate, cannot fail to be impressed by their unoriginal architecture and apparently outdated construction methods. America and most of Europe are far ahead of Britain here.

There is one central reason for this. In England, as opposed to the United States, there is not a sufficient body of informed opinion about good architecture to enable new ideas to be accepted. Young and able architects blame this on the conservatism of British opinion ; others, thinking of the way in which modern painters have forced the public to accept new styles, might blame the architects for not working hard enough to educate their clients. Architects do, certainly, face three major difficulties not altogether shared by the painter. First, they have always to design with an eye to commercial needs ; secondly, many of the really influential architects, who might create a climate favourable to new ideas, have the least ideas of all ; and thirdly, architecture, being in its own way big business, is wide open to the design tycoon whose long experience is sufficient for him to design quickly and badly a building that gives a maximum revenue at a minimum cost. But even so, the present state of architectural paralysis in this country is startling.

Nor does the outlook for the future seem much more hopeful. As competition increases and central congestion gets worse, speculators are likely at last to burn their fingers; the signs are in Holborn and parts of the City that they will soon do so. Occupiers, on the other hand, will become more selective, and, if rents go on rising, the trend to move their offices into the suburbs and beyond is likely to grow ; this movement has already started, though as yet only on a small scale. But of new life in the architect's office, and of a greater acceptance in the boardroom that new designs are worth searching for, there is as yet little sign. The real complaint against the office builders of the 1950s is not that they have been making money, but that they are in danger of turning central London into a lavish but lifeless office suburbia.

The Economist

MAY 14, 1859

WILD JUSTICE

The trial of Mr Sickles at Washington for the murder of his wife's seducer has come to an issue that will seem as melancholy to the politician as its origin was mournful. When the mere impulses of multitudes, however largely mixed with just feeling, begin to sway the tribunals of justice,—when the administration of the law follows the ebb and flow of popular sympathies,—when the judge and the jury, instead of standing high above the feeling of the moment, become the mere organs of temporary emotion, and forget the past and the future, the sacredness of law, and the fearful consequences of absolving individual offenders, however deep their injuries, who take the law into their own hands,—then, we say, the highest function of the State is abdicated. Under the sanction of a popular opinion, which is little less and often far more unsafe and partial a judge of human guilt than the individual conscience itself, we are brought back to that "wild justice" which it is the first boast of civilisation to amend and purify. . . . Wild justice may be noble in savages—it is shameful in a civilised State. . . . Justice in civilised communities usually implies, and ought always to imply, a scrupulous apportionment of punishment,—a *refusal* to surrender to the strongest bias. A hasty and impulsive administration of justice has a great tendency to grow on a democracy . . . . Once accustomed to influence the judgment-seat directly, the people find it a far more interesting task than any influence they can exert over the Legislature.

NOTES OF THE WEEK

LOCAL ELECTIONS

Inquest on a Missed Bus

Labour has suffered a sharp defeat in the municipal elections. With 200 losses in the provincial English and Welsh boroughs, it has lost all its gains of three years ago, and fallen back to below its strength of May, 1953—when the Conservatives enjoyed a comfortable lead on the Gallup poll (indeed they were in that very month increasing their then parliamentary majority of 17 with a victory in the South Sunderland by-election). In all, Labour elected only 1,309 councillors last week, out of a total of some 3,300 ; this is a mere 34 more than in 1955, when parliamentary defeat followed only two weeks after the boroughs polled. If these municipal elections are an accurate guide, a May general election would have returned Mr Macmillan to power with only a relatively small dent—of between about ten and twenty—in his present majority.

Detailed scrutiny of the results brings no comfort to the Labour party. Hitherto, ever since the war, changes in public opinion have been remarkably uniform throughout the country. But lately it has become fashionable to claim that this situation is changing: the prosperous south might still be Tory, it was argued, but unemployment in the north was swinging voters there the other way. The borough results give no support whatever to this theory. Compared with a year ago the swing to the Conservatives has gone smoothly forward in the north as well as the south, in Labour strongholds as well as Tory ones, even in depressed Scotland. There was only one type of town where Labour improved on last year's record : the resorts and spas. In three regions Labour did even worse than in 1955—the west riding of Yorkshire, the northern counties and the south-west of England.

In London, in defiance of the forecasts of some public opinion polls, the swing against Labour since 1956 was actually slightly lower than in most other parts of the country. In part, this was because a relatively small Labour advance here in 1956 was matched by a correspondingly small decline this time ; but it remains a fact that the metropolitan boroughs were one of the few places where the Conservatives failed to improve at all on their 1953 strength. The Tories did, however, regain an elected majority in Lewisham, although only by the narrowest possible margin (one vote in one ward put in the odd councillor who gave them their majority). As expected, they also recovered St Pancras, where Labour had expelled its leader and several other councillors. The latter, standing as Communists and Independent Labour, polled only 200 or 300 votes each. So much for the argument that what Labour voters really want is a more militantly left-wing image.

Who Goes Home?

The turn-out in the local elections does not seem to have risen much ; it improved in several northern towns, but often declined in the Midlands. Looking down the list of shaky Tory parliamentary seats, one can find only about eight cases where Conservative MPs may have some reason to feel glad that Mr Macmillan did not call a May election. Compared with 1955, more Labour councillors were elected this year in three Tory marginals in Lancashire (Oldham, Preston and Bolton) and also in Doncaster, Halifax, Hull, Nottingham and Southampton. But in the equally marginal Tory areas of Plymouth, York and Great Yarmouth, the Labour representation was smaller than in 1955. Moreover, the big swings to the right in Bristol and Reading (Mr Mikardo's constituency) suggest that some Labour seats might have been in danger at a May election. Labour also lost control of the council at Keighley, where a Labour MP held the parliamentary seat on a minority vote in 1955 because of intervention by the Liberals. In London the scattered Conservative successes came largely in useful places like Battersea, Wandsworth and Woolwich, well watered with their marginal seats, while Labour's compensating gains in the capital were wasted on the barren deserts of tory Westminster and socialist Stoke Newington.

The Liberals made little impact last week. They gained a few seats over the whole country, but did badly where they made the most effort, failing to win a seat either at Hampstead or at West Ham (where they fought every ward) and losing four at Blackpool. The Communists, too, did poorly, often dropping below even their tiny polls of last year. Whatever the deficiencies of the major parties, there was no indication that the electorate had any interest in the available alternatives.

TELEVISION AND ELECTIONS

Bristol Fashion

There is one footnote to the local elections which is worth rubbing home. On Wednesday of last week the Labour party devoted its national party political telecast to the achievements of its councillors at Bristol ; the local Tories at first said that this was very unfair. In Thursday's elections half of the 18 sitting Labour councillors who were defending their seats at Bristol were hurled by the voters off the council, in a swing far larger than the national average—indeed, in the biggest Labour debacle in the country. The councillor who was given the longest interview on television suffered one of the sharpest defeats of all. Perhaps both political parties can now become less neurotic about the supposedly unfair advantage accruing to candidates who make any personal appearance on the screen ?

IRAQ

Arms for Qasim

President Nasser's excuse for dealing with the Russians was that he could get arms from the eastern block when the West refused to furnish them. General Qasim, already heavily involved with the Russians, is apparently to be denied that excuse. On May 11th it was announced in

parliament that the British Government had approved the sale of arms to Iraq. The Government hoped that if it went on selling arms to Qasim he could more easily maintain an independent line *vis à vis* both the Russians and the Iraqi Communists. Before the members gathered in Westminster on Monday the alarm had already been sounded in Cairo. To President Nasser's radio and press this was only further evidence of an unnatural alliance between western imperialism and international communism especially designed to keep Iraq separated from the true, or Egyptian, brand of Arab nationalism. Cairo, as usual, overstated its case, but the lengths to which the British Government went to explain its action showed that it was not entirely happy about the decision.

Perhaps General Qasim only asked for British arms because he thought he would be refused them. He threatened to finish with the West and turn to Russia if he did not get arms ; but the docks at Basrah are already busy with the unloading of Russian arms. The whole orientation of Iraqi policy since the revolution last July has been towards Russia and the east. The traffic in cultural, economic and military missions has been moving only between Baghdad and eastern capitals. Russian officers cruise around Baghdad in jeeps provided for the Iraqi army by the United States.

For practical reasons the Russians may not want Iraq as a fully-fledged satellite. It would provoke hostility in the Arab and Asian world and it would be difficult to support without a land link. If the Iraqis were practical they would consider the economic implications of cutting themselves off completely from their oil customers in the West. It is far more likely, however, that Iraq's future will be determined by politics and emotions and not by economics.

The arms promised to General Qasim will not seriously increase his power to threaten his neighbours. None of them has joined in President Nasser's hysterical attack on Britain and Iraq. On Tuesday, in London, the Shah of Persia said that Iraq, as an independent country, had every right to buy arms wherever it could. Detailed negotiations will delay delivery of the tanks and aircraft for at least twelve months. There may be time to find out whether the Government's confidence in General Qasim's ability to remain independent is justified.

NUCLEAR TESTS

Something for the Summit?

TACTFULLY bowing themselves off-stage as the foreign ministers began their turn, the three nuclear test negotiators at Geneva decided on Tuesday to adjourn until June 8th. This should free their table for use elsewhere. The nuclear talks are now at their trickiest stage and Mr Tsarapkin, Mr Wadsworth and Sir Michael Wright have a good deal to mull over by themselves. In the meantime, three of the foreign ministers—perhaps thinking the going easier—met on Thursday to see if technical discussions should now begin. (France, which is not participating in the nuclear test talks, was not represented.)

Although the Russians have taken up the idea of a limited number of veto-free inspections, based on monitoring evidence, each year, the full technical implications still need to be studied. Mr Macmillan's letter to Mr Khrushchev on May 6th pressed for the Soviet delegation at Geneva to be authorised to discuss such scientific matters. The British point is that some scientific basis must underlie any agreement on the number of inspections that would be adequate to discourage the idea of clandestine tests by either side. At the same time, President Eisenhower has urged Mr Khrushchev to accept the limited American plan to prevent fall-out by confining tests to those underground or in outer space.

The latest Russian proposal to launch an international sputnik force for monitoring work at high altitudes deserves to be taken seriously. It suggests that there is at least one form of effective inspection that Mr Khrushchev is ready to accept. It could lead to others. The western experts have time to go into the idea fully before the talks resume. For the moment, hopes are higher again that the nuclear negotiators at least may have something useful to pass up to the summit later in the summer.

BERLIN

Ten Years After

LAST Tuesday Berliners commemorated the lifting of the Russian blockade ten years ago. The epic of the airlift, which achieved that success and which forged such remarkable bonds of comradeship between the Berliners and the western allies in the city, is indeed memorable. It was a turning point, not only in the life of the city and in the evolution of the western alliance, but in Germany's postwar spiritual and political progress. Few cities in Germany, or, for that matter, in Europe, have so deep an attachment to the free way of life as has Berlin. Indeed, there is perhaps no other German city where non-Germans have, since 1949, felt so much at home.

Today, however, the people of Berlin face a different problem, perhaps an even more difficult one. The principal threat to the city is not blockade or war, which can be answered by fortitude or counter-threats, but the prospect of years of insular existence in an alien land which can subject it to countless forms of economic and political pressure. Hitherto, the Berliners' morale has been sustained by two constructive feelings: the knowledge that their liberty kept alive the hopes of the people in eastern Germany, and the hope, so often expressed, of German unity in freedom which could restore a normal life to their city. Today, though the mass of east Germans remain hostile to the regime, the German Democratic Republic is tending more and more to become an established state. And since Russian economic policy began in 1953 to help eastern Germany instead of bleeding it, its diligent people have made it a viable economic enterprise. Since Berlin's problem can be solved in the long run only if it becomes the capital of a reunited Germany, the western powers are answering Mr Khrushchev's Berlin demands with proposals for Germany as a whole. But it may be many years before Germany is reunited. In the meantime, both the Berliners and western diplomats face the problem of keeping west Berlin alive in a context that has changed a lot since 1949.

PARTY POLITICS

Ride the Six Hundred

IN its glossy policy statement last November the Labour party repeated some of its now conventional dark complaints that "fewer than six hundred giant privately owned firms" dominate the British economy ; and added grandiloquently that "Labour believes the time has come when public control must be extended, so as to ensure that the decisions of these boards . . . are in line with the nation's interests." This latter statement, in its finally distilled form, was recognised by all serious Labour leaders to be almost completely meaningless, but it was thought to be good misinterpretable material for use in speeches to local party zealots who wanted more red-blooded socialism.

Now, however, every Conservative candidate and MP up and down the country has seized joyously on a new propaganda tactic: the ploy is to look up which of the 600 biggest firms provide employment in one's own constituency, and to mutter darkly that one hopes that Labour controllers and nationalisers do not intend to interfere with local voters' jobs. The Tories are being aided (?) in this campaign by the Institute of Directors, which has published a list of the 512 largest firms in Britain and is undertaking a commercial advertising programme ; the institute's ploy is to ask whether some of the very left wing "explanations" of the policy statements made by certain Labour leaders to their constituency militants represent the party's real intentions, and to say quite truthfully that the British economy would face a frightening prospect under a Labour government if they did.

Are (*a*) the Tories and (*b*) the institute justified in laying so much emphasis on this bogy—assuming for the moment that one can credit them as having sufficient intelligence to realise that they are really merely ragging Labour, rather than pointing out a genuinely serious issue before the country? The Tories surely are justified. One of the principal tests of any potential government is whether it will be brave enough to do what it knows to be needed, even when this means that it must face up to embarrassing ructions with people whom it would like personally to placate. The Labour party knows quite well that it would be advantageous to leave out of its programme any hints about wholesale nationalisation, but it keeps on trying to pretend to its militants that they are still in. This is a major weakness, and it is right to rub the party's nose into it.

As for the institute, it presumably has as much right to play politics as any trade union, especially as most of its members seem to be hugely enjoying the whole affair. What is not so certain is whether those members are wise to enjoy it ; that depends on whether one envisages the institute as a professional organisation rather than a knockabout political turn, and whether one thinks that it might one day have to hold technical conversations (e.g., about the taxation of director-controlled companies) with a Labour government.

CAPITAL PUNISHMENT

The Case for Total Abolition

IT was only to be expected, after the Homicide Act of 1957 became law, that from time to time one of the few executions it allowed would arouse outbursts of public emotion. Nearly two years ago, last-minute efforts were made to obtain a reprieve for Vickers, who had killed in the course of committing a theft ; there was some legal logic in those efforts, for it was argued that the judges had interpreted the new law, which had abolished the doctrine of constructive malice, too strictly. But pleas for the reprieve of Ronald Marwood, executed last week for the murder of a policeman, were purely emotional. Here, it was said, was a nice young man, happily married, who was not an habitual criminal, who had joined in a gang fight in the heat of the moment, and after drinking, and had killed without premeditation.

No Home Secretary can ever listen to the cries of the populace when administering the prerogative of mercy. That Mr Butler does, in fact, administer it liberally is shown by the reprieves he has recommended in cases where the issue has turned on the murderer's sanity or "diminished responsibility." What needs to be debated anew is not the Home Secretary's use of his agonising prerogative, but the law itself. While one can recognise that the murder of a policeman carrying out his duty represents the Home Office's last ditch in the battle over capital punishment, every thoughtful MP should also be reflecting on the effect of an execution like Marwood's on the public's state of mind. The hysteria that led to the revolting demonstrations at Pentonville last week outweighs any usefulness capital punishment has as a deterrent. Mr Butler has given figures showing no significant increase in the murder rate since the partial abolition of the death penalty. The only way to stop a repetition of these incidents, and of the corruptingly morbid interest that such a case arouses, is for Parliament to abolish the penalty altogether.

ANGLO-GERMAN RELATIONS

Ministerial Visitors

BONN is still worried by the state of Anglo-German relations and by the feeling that there is a widespread hostility towards Germany in Britain. Perhaps the fear is somewhat exaggerated. Though the British do not love the Germans, they do, apart from an atavistic minority, accept the necessity to work with them on a friendly basis. A great deal more could, however, be done to co-ordinate the policies of the two countries and create working personal relationships between ministers. Sir David Eccles made a start when he visited Bonn last month. He got on well with Dr Erhard and the two men reached agreement on a wide range of subjects. This week's visit to London by Herr Strauss, the west German minister of defence, was arranged some time ago, but it fits into the same pattern.

Herr Strauss's visit has been less concerned with current orders and production arrangements than with co-operation for the future. Despite periodic ministerial efforts and public announcements, the practical achievements of the Nato countries in the field of standardising arms and common production have been small. One main topic in this week's talks between Herr Strauss and Mr Sandys has been the attempt to agree on a common tank suited to the requirements of atomic war. The problem is not new. For some years national armies have been looking for a new type of vehicle for this purpose and allied commanders have been telling them to get together on the problem. But in practice Britain, the United States and west Germany have each gone their separate ways. If Herr Strauss and Mr Sandys can reach agreement on this they will have done well. They may perhaps find it easier to make progress on a common development effort in the missile field, where past decisions are less inhibiting.

Next month another distinguished west German visitor is to come to London—Herr Etzel, the minister of finance.

Herr Etzel is anxious to develop a close co-ordination of financial policies with Britain, parallel to the close working relationship that already exists between Germany and France. Since Herr Etzel is one of the possible candidates for the German chancellorship, that wish is obviously encouraging. But ministerial goodwill will not, by itself, bridge the political gulf between London and Bonn. The principal source of this gulf today lies in the separation between Britain and the community of Six.

CENTRAL AFRICA

Missionaries Under Fire

LORD SALISBURY believes that the communist hand is the cause of the trouble in Africa. It has emerged this week that some Rhodesians prefer to blame the Church of Scotland. The church's missions have been in central Africa since Livingstone's day. Many Africans in Nyasaland belong to the church and were taught in its schools. Dr Banda himself was once an elder in Edinburgh. The missionaries in Nyasaland have criticised the Federation since its inception. It may not have been wholly by chance that mission students fell foul of the police during the recent disturbances. Now the Federation's high commissioner in London, Sir Gilbert Rennie—also a former elder of the kirk—has taken a Church of Scotland committee to task for its report on conditions in central Africa.

His counterblast, entitled "Why Not Be Fair?", will be in the hands of as many fathers and brethren as he can reach before the church's General Assembly meets this month. It is a lucid presentation of the federal case, exactly the type of pamphlet that should raise the level of discussion of central African affairs in this country. Even so, it remains indefinite on certain important points, like the consultation of African opinion before the Federation achieves dominion status—about which church, and liberal, opinion has been justifiably concerned.

Sir Gilbert implied deliberate misrepresentation of events in the Federation by the missionaries, when he answered questions on his pamphlet on Monday. He said the Dutch Reformed Church was much better behaved. The *Central African Examiner* has just gone even further. It relates the Church of Scotland's decision to close two hospitals in Northern Rhodesia to the openly political activities of its missionaries. Ministers of the church, it claims, have been preaching African nationalism. These are serious charges—as serious to those who make them as to those whom they accuse. The General Assembly of the Church of Scotland must now do its utmost to get to the bottom of the matter.

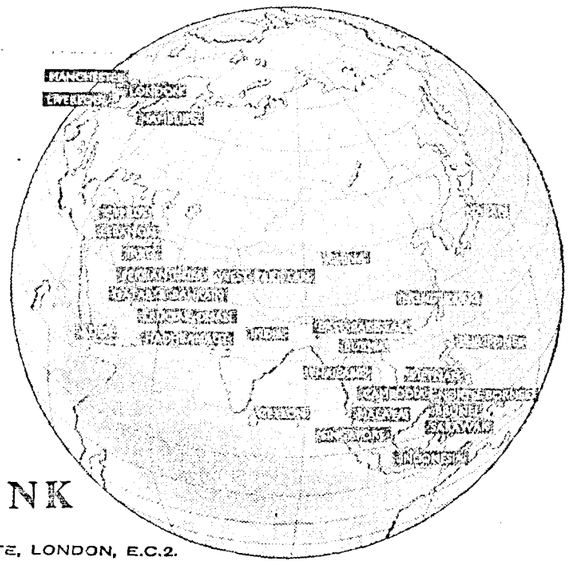
THE DRUGS BILL

No Drastic Prescription

THE steady rise in the cost of the national health service's drugs bill has been blamed in turn on the importunate patient, the unscrupulous doctor and on sales pushing by the drug firms. The Hinchliffe Committee on the cost of prescribing, whose final report was published this week (HMSO 6s.), agrees that all these factors play a part in the rise, but thinks that in no case is it a large part. To counter them it suggests only minor changes such as a stricter disciplining of doctors who prescribe noticeably more than the average for their area, and a voluntary agreement among the drug firms to limit the more extreme forms of advertising.

But the committee emphasises that there is nothing unexpected about the rise in the drugs bill in a "free" health service; other countries that have some sort of public provision of drugs have experienced it as well. There are also more people to be provided for, especially of the old and the young. In addition, in the last ten years many new drugs have been introduced, some of which are necessarily expensive. The important thing is not to check the development of the drug industry, which has undoubtedly benefited the patient, restored him to working capacity earlier and produced savings in other branches of the health service; it is to help the doctor to distinguish the new drugs that are of proved value from those that are no more effective—though more expensive—than existing ones. The Hinchliffe Committee recommends the establishment, perhaps with financial backing from the Ministry of Health, of an independent publication, produced by the appropriate professional bodies, which would give doctors up-to-date information about new drugs and the results of clinical trials. It also recommends the setting up of a clinical trials committee, which would again be the responsibility of the medical profession and independent of the drugs industry, to organise trials of new products on behalf of the drug firms. Firms wanting to conduct their own trials should be allowed to; the important thing is that all trials should be properly evaluated.

So far the Government has mainly relied on the prescriptions charge to check the rise in the drugs bill. Especially in its present form of a shilling per item, the charge has not yielded the expected revenue and has led to the prescribing of unnecessarily large quantities. Before this habit becomes ingrained, the Hinchliffe Committee therefore suggests a voluntary limitation on the prescription of drugs to one week's supply or less, according to the disease. (There would be exceptions in cases of chronic illness.) But the committee also points out that its investigations as a whole were hampered by lack of the necessary data, and it recommends the setting up of a permanent, expert, business-minded, body to advise the Minister on matters affecting the cost of drugs. This follows up the proposal of the Guillebaud committee, and more recently of the Acton Society Trust, that the Ministry of Health badly needs an effective intelligence and statistics department.

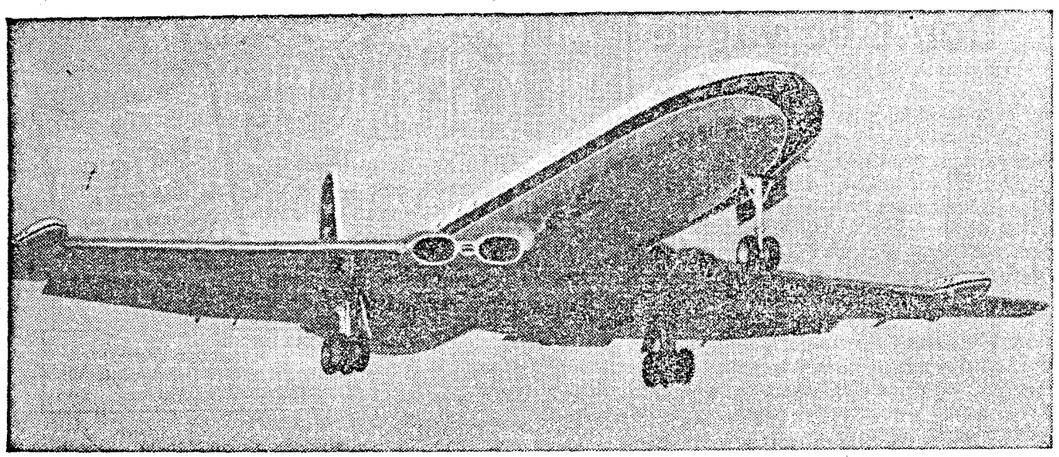


TRADE UNIONS

Ruffled Calm

A YEAR ago this week the 3 per cent settlement on the railways was bringing the 1958 wages battle to its relatively gentle crunch, and Mr Cousins was just about to make his historic mistake of continuing with the bus stoppage. The trade union movement has uncelebrated the anniversary in an air of somewhat ruffled calm. On the one hand, thanks largely to Mr Cousins's ham-handedness in antagonising the public last year, no really major annual wage claim is yet making its way towards the arbitrator's desk; even the 1959 claim of the National Union of Railwaymen is likely to remain rather in the air until the Guillebaud report on railway wages gives the union's negotiators something to bite on. On the other hand, officials in several unions are making discreetly pacifying noises towards their more restive militants. In one of the

British Banking in Asia



These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. In London an effective credit information service and skilled assistance and advice are available to merchants and manufacturers seeking new business connexions in Asian markets.

THE CHARTERED BANK
(Incorporated by Royal Charter 1853)
HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2.
Branches in the United Kingdom at Manchester and Liverpool. Agencies at New York and Hamburg.

THE EASTERN BANK LIMITED
Head Office: 2 and 3 Crosby Square, London, E.C.3.

M2B

country's perennial troublespots, the Merseyside shipyards, 1,750 boilermakers have been on strike for the last fortnight on a demarcation issue without opposition from union officials. In another, the British Motor Corporation, 500 men went on strike over the provision of new sorts of lockers for their tools, again without incurring official comment. The militants in the National Union of Railwaymen have marked the anniversary of their settlement-with-strings by forcing their general secretary to withdraw from the industry's consultation machinery which was supposed to discuss those strings ; and the militants in the Amalgamated Engineering Union have seemed, in terms of paper resolutions, to carry all before them in the union's fortnight stay at Eastbourne. Even the TUC itself is being quite ridiculously reticent, in its ponderously critical monthly letters, over the shoddy happenings in the Electrical Trades Union.

The TUC may not feel that it has been helped in these exchanges by a new sort of challenge to the ETU's communist bosses which has come from inside the union. It concerns the red-hot subject of expenses. A large London branch has accused the ETU executive of lavish spending on entertaining itself and its guests (such as the £865 paid for travel and hospitality to a Japanese fraternal delegate). This sort of thing is not the real gravamen of the charges against the autocratic practices of the ETU leadership. The complaints may, however, be sufficiently detailed to rouse more non-communists to vote against Mr Haxell, the general secretary, Mr Foulkes, the president, and the other communist members of the executive council when they all come up for re-election in a few months' time. The good name of British trade unionism in 1959 is going to depend largely on whether there is a satisfactory system for ensuring complete honesty when those votes are counted, and on how the TUC itself reacts if there is not.

GREECE AND TURKEY

Mr Karamanlis in Ankara

FEW would have been rash enough to prophesy, six months ago, that by the middle of May the Greek prime minister would be receiving a cordial welcome in Ankara and Istanbul. The remarkable reconciliation between Greece and Turkey may as yet be little more than politician-deep. But the chief thing at the moment is that both Mr Karamanlis and Mr Menderes are determined not to leave unfinished the task that they began together in Zurich three months ago. Mr Karamanlis is no doubt strengthened in his resolve by the results of the Greek municipal elections last month which suggest that his popular backing has increased since the Cyprus settlement was signed ; while the growth of communist influence in Iraq must have underlined for Mr Menderes the importance of permanently patching up the quarrel with Turkey's western ally.

The talks between the Greek and Turkish prime ministers should prove most immediately beneficial in Cyprus. The task of spelling out the London agreement in detail is running into various, no doubt inevitable, difficulties—for instance, over the control of municipalities. The knowledge that Greece and Turkey are united in their determination to press on with the implementation of the London agreement should stimulate the negotiators in Cyprus to sink their differences. As a tangible proof of their loyalty to the London settlement, the Greek and Turkish governments have agreed to construct jointly a major public utility—probably a harbour scheme—in the island.

No attempt was made to work out detailed solutions of other Greco-Turkish issues which between them have caused a great deal of bad blood ; these include the Turkish minority in Western Thrace, the Greek minority in Istanbul, the Orthodox Patriarchate, and the vexed question of fishing rights off the Turkish coast. The two prime ministers apparently discussed these matters in principle and appointed personal representatives to work out detailed solutions within two months. It is reasonable to hope that what might in some circumstances be merely a device for shelving contentious issues, may in the present state of Greco-Turkish relations prove to be a real attempt to solve the two countries' differences.

AUSTRIA

Quiet Flows the Danube

NOTHING unexpected came out of the Austrian general elections last Sunday. After a brief election campaign, some four and a half million Austrians—as much as 94 per cent of the electorate—cast their votes: the political shifts that resulted were only slight, but they may prove significant in the long run. The two government parties, the Socialists and the People's party, remain by far the most powerful organisations in Austrian politics: the Socialists will now send 78 instead of 74 deputies to parliament ; the People's party has lost three seats, and now has 79 representatives. The Freedom party, after a gain of two seats, will still have only eight deputies. The Communists, handicapped by the Austrian people's remembrance of the Hungarian October rising, lost their three seats and are no longer represented in parliament.

Last Sunday's heavy poll was, in fact, a vote of confidence in the coalition. The Socialist party's moderate success is due to the fact that it has entirely rid itself of its Marxist inheritance ; it has not suffered from so many local scandals as has the organisation of the People's party ; it has also proved more restrained in its efforts to impress on the electorate that it could run the country on its own. The Socialists will demand bigger representation in the government: to judge by the past form of collective bargaining, new ministries will have to be created to accommodate them.

The nearly exact balance between the two major parties may intensify the present deadlock on a number of economic disputes, among them the new rent act, the building programme, and policy on agricultural prices. Indeed, friction in the economic field may increase: up to now, the People's party has been used to getting its own way here, but recently the Socialists have shown signs of wanting to formulate their own economic programme.

Although the Austrians are badly provided for should they feel like condemning the coalition system, the very moderate success of the Freedom party in the elections suggests that not many of them are in fact moved by such a desire. The Communists, on the other hand, will have to try to survive in the trade unions if they want to be in a position to make capital out of any trouble that may arise. The coalition has been given a new lease of life ; but if its leaders want to make the most of this, they will have to consider doing something to make the coalition system more effective.

PUBLIC SERVICE PENSIONERS

The State's Obligation

THE Government's Pensions (Increase) Bill for retired public servants turns out to be a slightly less generous measure than had been generally expected. About half a million retired public servants and members of the armed forces will share an additional £11 million a year, which works out at an average of just over £20 a year for each man. In fact, however, the increases are designed to give most—an extra 12 per cent—to those who retired before March 31, 1952, and least—an extra 2 per cent—to those who retired in the twelve months ending March 31, 1957. The more recently retired get nothing at all.

The strong moral case for this bill is that the state, when it contracts to provide a pension for an employee, has a responsibility to see that this is not subsequently entirely eaten away by inflation; it cannot, however, be expected to guarantee that there will be no erosion at all except possibly at the bottom of the scale. How "fairly" have these pensioners been treated? A postman who retired in 1939 after forty years' service was given a pension of £91; today this would need to have been increased to £250 to give him the same purchasing power as twenty years ago. As a result of the new bill, and of four other rises during the last fifteen years, this man (now presumably in his mid-eighties) will in fact receive £182; the postman who retired in 1946 (and is now presumably in his late seventies) will be very slightly better off with £197. But both men are less well off than their 65-year-old counterparts who retire today with £235 from the Post Office.

The same principle has been followed throughout the whole public service. These new proposals will iron out much of the difference between pensioners in any one grade, except for the most recently retired who do better in all cases. Thus a principal in the administrative class of the civil service will receive a pension which will vary only between £774 and £814 if he retired at any time between 1939 and 1956; since then it has been put up to £861. Here and there are some rather curious anomalies. A civil service clerical officer who retired in 1946 should soon receive a pension of £307—£18 more than one who retired five years later; but again the new pensioner does slightly better with £316.

LONDON TRAFFIC

Jams Tomorrow

LAST week's Parliamentary debate on urban traffic congestion showed, as usual, a good deal of confusion about the economics of a very tricky and many-sided problem. Urban traffic jams look at first sight like no more than an especially acute symptom of the national lack of balance between private investment in cars and public investment in the roads to carry them. Had the Road Fund been used for its proper purpose, so that every additional car automatically paid for additional road capacity, the national picture would indeed look very different. But the specific big-city-problem would remain. Obviously, greater investment in skilled road engineering and better direction of traffic flows can increase the capacity of a neglected urban network. Equally obviously, however, any such increase has limits. Two solid bodies cannot occupy the same space at the same time, and cities must have buildings as well as roads. Every car travelling over—or *à fortiori* parked on—an urban road surface is in effect using a commodity not only scarce, like road space in general, but also physically incapable of being made plentiful.

That is the economic crux of the matter. Proposals for resolving it on the one hand by providing, partly or wholly at public expense, enormous subterranean or multi-storeyed car parks, or on the other by banning private cars altogether from central London (and presumably other equally congested centres) really will not do. The first proposal would involve an open-ended commitment to shield private motorists indefinitely from the economic facts of life; the second would be an extremely drastic interference with individual freedom. The parking meter scheme (over which the motoring organisations elected to make themselves look very silly) is a step in the right direction, for which Mr Watkinson deserves full credit. It should be extended, not only for its direct convenience to short-term parkers, but also for the pressure which it exerts on longer-term parkers to use—at the full economic price—off-street parking facilities, and thus to make the provision of these commercially worthwhile. Such pressure is far more effective than the off-chance of a fine for parking illegally on an otherwise attractively cost-free piece of empty kerb.

It may be that a vigorous extension of the parking meter system, together with an improvement in road engineering, would keep pace with the growth of London's traffic problem for a while. But probably not for ever. The time may therefore be ripe to start thinking about a more thoroughgoing resort to the price system. Perhaps the best solution, eventually, might be the imposition of a stiffish licence fee (periodical or occasional at the owner's option) for the right to bring a vehicle into central London. Any such scheme would admittedly raise some difficulties of administration, equity, and the practical marrying of private and public transport—e.g., at a ring of suburban car parks doubling as distribution centres for one-day licence stickers. But such difficulties might be less intrinsically impossible to overcome than those arising from the present attempt to reconcile an unlimited growth of road traffic with the inexorably limiting facts of plans and solid geometry.

With low-rent Factories, substantial Capital Grants and a Government eager to help

YOU CAN CUT OUT A LOT OF WORRIES

When you Expand in Northern Ireland

When you plan expansion or the production of a new line in Northern Ireland you can *cut* the cost of factory building, *cut* the cost of new and second-hand machinery, *cut* the cost of training labour and *cut out* costly delays because . . .

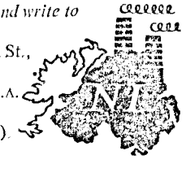
. . . Northern Ireland is building standard factories of from 2,000 to 70,000 sq. ft. to rent from as little as 9d. per sq. ft. and may also build one for you on a site of your own choosing or provide a special purpose factory on a long term repayment basis.

. . . legislation in Northern Ireland makes it possible for financial assistance to be tailor-made to speed the establishment of worth-while projects, particularly those that employ men. Financial aid can include substantial capital grants toward the cost of new and second-hand plant and machinery; grants for the removal of plant and the training of work-people and loans.

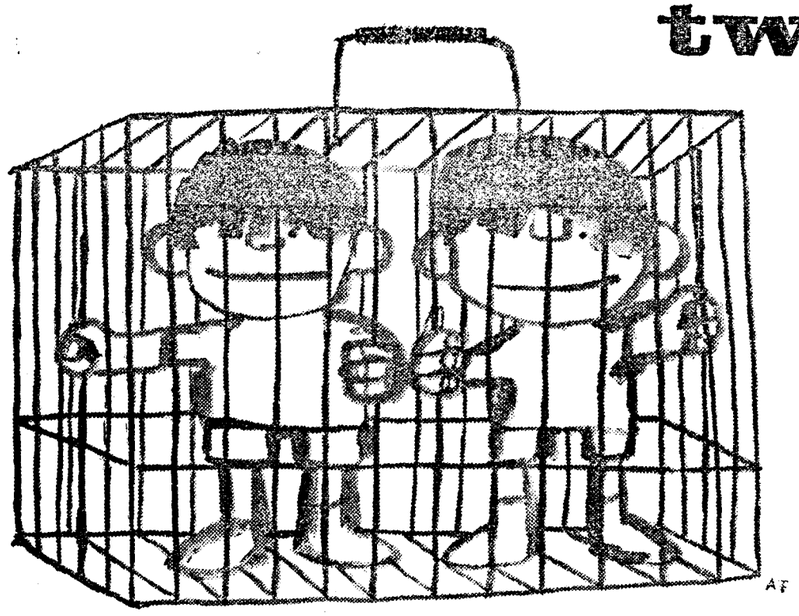
. . . in Northern Ireland you have the wholehearted backing of Ministers, Government departments, local authorities and people—they all want you to get into production quickly.

Since 1945 Northern Ireland has proved successful for over 130 new firms.

Left: This 600,000 sq. ft. turbine works of A.E.I. cost £4¾ million and was built by the Northern Ireland Government. It was completed nearly four months ahead of schedule.



Above: The second Government-built factory to be occupied by Taylor-Woods Limited since 1949. Products—nylon stockings and lingerie. Mr. M. B. Hughes, Managing Director, says: "Our success since the war is primarily due to the ability of the workers in Enniskillen to learn very skilled and complicated production methods which were completely new to them".



Mr. H. E. Collins, Director of Hughes Tool Company, says: "We came to Belfast because we were offered a factory to rent and the opportunity to get into production quickly. We are well satisfied. We started to produce oil-well drill bits ten months ahead of schedule and we have just recently completed our second expansion".

GO TO NORTHERN IRELAND—AND GROW

You take twins,

Summer. Fitful sunshine. Birds, butterflies.
Drive to Whapsnade? . . . Wondermere? . . . Weston-Super-Mare?
Why, sure. Makes nice change.

George take Mirabelle, Granny, Mrs. Bagstraw, Dr. Jameson, little Bernie, little Hilda, groundsheet, lilo, sandwiches, dogs, parrot, pushchair.
Why, sure, you take twins . . .

Hey, No! Hang it. Take twins? Born twiddlers.
Tweak hair, ears. Twist ashtray. Drop toffee.
Wind window-winder. *Turn door handles.* Madness!
Mind boggles. Not on.

Ah, but . . . your car has safety handles! New fitted. Twiddle proof.
Wilmot Breeden. So okay, okay.

For this relief, much. Wilmot thrice blessed Breeden.
Children's safety handles (to fit). Children's safety catches (as fitted).
Handle won't unlock door, door won't open.
Door won't open, twins won't bounce. Simple as.

Virtually every British car roads today some components Wilmot Breeden.
Mind at ease. Unboggle.

WILMOT BREEDEN are at Birmingham: *also at London, Manchester, Bridgwater, Glasgow, Melbourne, Toronto.*

JORDAN

Cat-calls from Cairo

THE simultaneous absence from Amman during March and April of King Hussein and his prime minister, Mr Samir el-Rifai, was taken as a deliberate demonstration of the regime's stability ; it now appears that although they could be away together, they have decided, at any rate for the time being, to stop working together at home. Mr el-Rifai, who resigned on May 5th, is a tough, clever politician who has been in power on and off since King Abdullah appointed him prime minister in 1944. King Hussein turned to him after the attempted coup d'état in April 1957, and, first as foreign minister and then as prime minister as well, he steered Jordan—on a very tight rein—away from the nationalist policies of the former (elected) government towards the western fold. At one time the principal target of Cairo's hostility, he survived even his over-hasty decision to call in British troops after the Iraqi revolution last July. Now, it seems, the king feels able to carry on by himself.

While travelling around America and Britain, King Hussein had fun patronising the United Arab Republic's belated anti-communism, and he may have now decided that the time has come to resume the diplomatic relations that were broken off two years ago. But if he decided that this would be easier to do with a new prime minister, he chose the wrong man. The appointment of Mr Hazza Majali, who in 1955 led—for a few days—a cabinet that supported the British attempt to bring Jordan into the Baghdad pact, has brought Amman again into range of Cairo's guns. According to the Egyptian press, the only difference between the old and the new prime minister is that one was an agent of the Americans and the other is an agent of the British ; cat-calls about the Baghdad pact have driven Mr Majali to deny that he intends to bring Jordan into any military pact with the West.

Jordan is an anomaly but a persistent one; it has outlived all the auguries that would have had it swallowed up by, say, Syria or Israel. Without doubt, a lot of the credit for this goes to the courageous and personally attractive young king. But he has taken no risks. From 1957 until a few months ago the country was under strict martial rule, with the leaders of nationalist and left-wing parties either in hiding or locked up in prison. More important, Jordan's neighbours, and particularly the UAR, would now think twice before trying to unseat the king. Not only is there the question of replacing the American money that pays for the Jordanian army (half the country's budget goes on defence) ; there is also Israel's thinly veiled warning about what it might or might not do if Jordan's regime were to be changed from the outside.

SOVIET UNION

Missing Millions

SOVIET wartime losses were even more terrible than was once thought. This is the most striking conclusion to be drawn from the preliminary results of the Soviet census which were published in *Pravda* last Sunday. The Soviet population last January amounted to 208.8 million. Twenty years ago, when the last census was taken, it was estimated at 170.6 million. Taking into account the increase in population due to territorial changes (about 20 million) and projecting previous rates of growth, the total population now should be at least 30 million higher than it is. The difference shows the price in military casualties, civilian victims and reduced births due to wartime separation that Russia had to pay for victory. The tragic extent of the losses is confirmed by the fact that there are now twenty million more women than men in the Soviet Union and that this discrepancy only applies to generations which were adult at the end of the conflict.

For a long time Soviet leaders did not want to reveal the extent of their losses, fearing that these would not arouse sympathy, but would merely be interpreted as a sign of weakness. But now the Soviet Union's vital statistics have again become very impressive. The death rate has been reduced to 7.5 per 1,000 ; with a marriage rate (12 per 1,000) that is reputed to be the highest in the world and a birth rate of 25 per 1,000, the Soviet population should now be increasing by about 3.5 million every year.

Another interesting feature of the report is the rapid development of the eastern regions of the country—the Urals, Siberia, the Far East and Central Asia, areas where many mushroom towns have sprung up. In the Soviet Union as a whole the urban population has risen from 60 million on the eve of the war to 99.8 million, and it now accounts for 47.8 per cent of the total. But it is generally admitted that migration from the countryside can no longer proceed at the same pace. At the same time, the postwar bulge has not yet quite reached working age. A pledge to reduce working hours makes it the more necessary to increase the productivity of the available labour force. Modernisation of production will, in fact, be the main topic when the party leaders meet next.

The central committee of the Communist party of the Soviet Union has in fact been summoned for June 24th. On its agenda are such subjects as automation, the drive to develop the chemical industry and the modernisation of methods in agriculture. The meeting may also discuss items not on its agenda, such as the state of foreign relations during (or after) the Geneva conference. The extraordinary thing, however, is that for the first time since the war the date and programme have been published in advance. Mr Khrushchev clearly wants to give a more democratic appearance to his regime through greater publicity for its proceedings. He should, however, proceed with caution. Prodded in this way, the central committee may one day take its leading role in earnest.

SHORTER NOTE

Mr Christopher Mayhew has this week introduced his private member's bill to limit advertising on commercial television. Like other salvoes fired in his doughty campaign against this target, it is singularly unlikely to succeed. But it is depressing that so few MPs have grasped the one overpowering reason why it should not do so. The control over any medium of communication, even the lowest, which many people think advertising is, is a power that a free society should never be willing to entrust to its politicians.

LETTERS

Kenya

SIR—In your article "Facing Mount Kenya" on May 9th you write in conclusion "Logic now seems to point to a leap in the dark, to the taking of risks that a few years ago were unthinkable."

I am not attacking your conclusion, though not necessarily accepting it. But I am alarmed at the two bases in fact from which you apparently deduce your conclusion: "a reservoir of sufficiently advanced black Kenyans who could act as the majority ministers in a new state, and a corps of sufficiently skilled Kenyans of all pigmentations who could help in running an efficient administration." My experience of Kenya, admittedly ending in 1954, compels me to query the validity of either assertion. Opinions may differ about whether there would be sufficient numbers of Africans to fill the ministerial posts, but the existence of a reservoir into which to dip and select is quite another matter.

As regards a civil administration most critics agree that in Kenya it is top heavy, with insufficient indigenous manpower, whether white, brown or black. The situation may have changed in five years, but for my part I would assert that in respect of both civil and administrative "black" personnel Kenya is at a disadvantage compared with both Uganda and Tanganyika, having had briefer contact with organised government.—Yours faithfully,

A. P. LE MESURIER

Tonbridge, Kent

Persian Railways

SIR—In your issue of May 9th you wrote of Reza Shah, the present Shah's father, "His most practical monument is the railway from Khoramshahr, at the junction of the Shatt el-Arab and Karun rivers, to Teheran."

This statement is not quite correct. The southern terminus of the railway in 1941 was Ahwaz not Khoramshahr. There was a branch line from Ahwaz to Bandar Shahpur, the port on the Persian Gulf. This line was used for freight only. There was neither rail nor road connection between Ahwaz and Khoramshahr, when we entered Persia for the four day hostilities.

It was not until late 1942 that the railway was extended to Khoramshahr. The Americans took over the control of all Persian railways about June, 1943. The rolling stock on Persian railways in 1941 was negligible. There was only one rate of passenger coaches for use between Teheran and Ahwaz. The journey was done at night and took between 12 to 14 hours. Trains ran only on alternate nights, i.e. three up and three down, with no train Sunday night.

When we entered Persia there was only one short length of jetty at the port of Bandar Shahpur. Messrs Braithwaite & Co., constructional engineers, were given the contract for the construction of a second jetty with extra lighter wharves. As Deputy Commander Royal Engineers with a Royal Indian Engineer unit I had a watching brief for this work.—Yours faithfully,

G. F. HAMMOND, LT.-COL. (Rtd.)

Southwick, Sussex

Chemical Research

SIR—I wish to draw your attention to two errors in your article "Farming Out Research" of the May 2nd issue. Both occur in the last paragraph and the second of them has, I submit, resulted in the drawing of a wrong conclusion.

The report now made public is not on research work carried out. It is a series of recommendations on the lines upon which any research undertaken should be directed.

The phrase, "the cost of the work in distillation—a total of £10,000, etc." should be £10,000 per year for three years, or a total of £30,000. As your article indicates, this figure applies to one research topic only and a second panel is already at work in the field of liquid/solid separation with further panels to follow. The important factor is not the amount of but the manner in which the money is being spent.

At the same time with a current overall research expenditure of £9 million per annum for the chemical industry alone, it would indeed be unfair were your article to have given your readers the impression that any necessary research was being held back through lack of financial support by either of the two trade associations collaborating in the present scheme.—Yours faithfully,

GEORGE BREARLEY

The Association of British Chemical Manufacturers,
London, W.C.2

Iraqi Students

SIR—The majority of Iraqi students in this country consider the "Iraqi Students' Society" a communist front organisation. A great number of them withdrew from it on account of its intolerable atmosphere and formed their new and free organisation "The Iraqi Republic Students' Society." We applied to join the Arab Students' Union which elected a neutral committee to investigate the dispute. But we were deeply shocked by the unwarranted interference of the Government of Iraq, through its London embassy, in what is purely a students' affair, and without even waiting to know the findings of the investigation. However, our membership increased to more than 200 and new branches were established in many parts of this country. The other society began to suffer collective resignations.

The Iraqi government then launched a campaign of intimidation against our society and its members, which culminated in the ultimatum of Ibrahim Kubbah, the Minister of Economics. This stated that any student who fails to withdraw from our society within a period of eight days ending on April 16th, by a signed statement submitted to the embassy, would be subject to the termination of his scholarship.

We hereby appeal to all men and women of good will in this country to voice their protests against these deplorable measures.—Yours faithfully,

HAZIM T. MUSHTAK

Merton College,
Oxford

Vietnam

SIR—Whatever may, or may not, have been said by Mr Harold Davies in relation to the detention camp of Phu Loi in South Vietnam—and your quotation of him omits that he pointed out that he was visiting it three months after some mysterious deaths there, and that "prearrangements" had been made for his visit—his remark that the camp is "well up to the Geneva Convention" is in itself a condemnation. For the Geneva Convention applies to camps for prisoners of war, the existence of which, on either side of the 17th parallel, is prohibited by the terms of the Geneva Agreement, to which our country, among many others, subscribed. The fact that no buildings have been burned down there, even if true, means nothing, since the effects of botulinus toxin are dissipated by oxidation within a matter of hours.

Since you refer to "the machinery set up at Geneva in 1954," it may be useful to recall that this machinery was set up for the purpose, primarily, of enabling the French to make an orderly and face-saving withdrawal from Indo-China, after a resounding defeat which put the Vietnamese in a position to be much more exacting than they were. The 17th parallel, accepted as a convenient "military demarcation line" for the purposes of that withdrawal, was expressly described as "provisional" and as "not in any way to be interpreted as constituting a political or territorial boundary" within Vietnam, of which each member of the Geneva Conference undertook "to respect the sovereignty, independence, unity and territorial integrity."

If we think back to the tense international atmosphere of five years ago, which was relieved by the Geneva agreement, we should be thankful that the government of the Democratic Republic of Vietnam has not lost patience. It still has hope of reunifying Vietnam in accordance with the provisions of that agreement, however tenuous that may seem, in view of our country's prolonged tolerance of gross infringements of those terms, and even endorsement of them, e.g., by the recognition of a government of South Vietnam.—Yours faithfully,

London, W.1 EDGAR P. YOUNG

BOOKS

From Hoover to Eisenhower

Arms and the State: *Civil-Military Elements in National Policy*

By Walter Millis, with Harvey C. Mansfield and Harold Stein.

The Twentieth Century Fund. New York, 1958. 436 pages. $4.00.

IT must be said at once that this is an unsuccessful book. Its authors are well-informed, balanced in their judgments and mercifully lucid in their style; but the task that they were set by the Twentieth Century Fund—to analyse the nature of civil-military relations in the United States during the past forty years—is a remarkably fruitless one. In general the problem of relations between the civil and the military powers in a state is important to the point of urgency; but nowhere is this less true than in the United States, with its unbroken tradition of civil domination and the absence of a military caste with any specific ideological orientation.

Among the problems of the formation of military policy in the United States during the current century, purely civil-military tension has been negligible. "The real issue," as Mr Millis himself puts it, "was not between the civilian and the military. It was how to balance a proper combination of the non-strategic or non-violent with the strategic or violent components of national policy"; and in the quarrels that arose over this issue civilians were often the most passionate partisans of either side and the services were divided among and within themselves. As a survey of the formation—or non-formation—of American military policy from Hoover to Eisenhower this is a work of great importance; but it would have been clearer in presentation and easier to follow if the authors did not feel it necessary constantly to justify their studies in terms basically irrelevant to their subject.

The real problems are interesting and important enough in themselves. There was the prewar impotence of American policy, arising from the doctrinaire refusal of the State Department under Cordell Hull to consult with the services about the possible military implications. There was the gradual creation of an effective mechanism for inter-service and civil-military planning and co-operation, broadening out from the limited consultations on hemisphere defence to the protean congeries of wartime agencies, boards and committees, prolifically spawned and ruthlessly suppressed by the President, in constant mutual friction and working together only thanks to the personal lubrication provided by such "operators" as Harry Hopkins and General Groves. There was the broadening of the military task to include such problems as the political aspects of grand strategy, relations with allies and occupied territories, and the partition and settlement of Germany; and there was the attempt, at the end of the war, to create machinery adequate to the task of handling such intractable questions as the control of atomic energy, the planning of the structure of the armed forces within strict budgetary limitations, the evolution of an economical but effective weapons-system, and the conduct both of limited and of cold war.

Mr Mansfield provides a clear and useful guide through the jungle of American wartime administration, but it is Mr Millis's account of postwar military policy that will be of most interest to British readers. His sympathies are unconcealed, and make it difficult for him to deal dispassionately with such figures as General MacArthur, Louis Johnson and the Congressional critics of President Truman's policies; but they add zest to his account of the controversies that accompanied—indeed constituted—the formation of military policy between 1945 and 1955. He lucidly explains the intentions of the National Security Act of 1947, and shows equally clearly why it failed; not, in his view, because of any mechanical faults in the relationship constructed between the Department of Defence, the President, the National Security Council and the Joint Chiefs of Staff, but simply because the organisation was asked to do too much. "In our difficult and fluid world the very concept of a long-range, fixed 'National Policy' is defective" he states wisely, "and it is impossible to arrive at policy determinations (or predictions) capable of providing a firm foundation for continuing military policy and military preparation." And, he points out, the sort of questions on which the Joint Chiefs of Staff were required to pronounce were

> inherently unanswerable. There is no way of knowing how much should be given to preparation against a peril which can never be estimated with precision and may never appear at all. And there is no way of deciding finally between weapon systems for each of which there are compelling arguments, none of which can be put to practical test, and all of which are highly uncertain in their probable effects.

It was not surprising that inter-service disputes should have arisen over the limited budget allocations, that they should have been conducted by propaganda and settled by compromise. Nor was it surprising that the National Security Council should have failed to provide a workable policy over the most difficult issue that confronted it—that of Nationalist China. What was surprising

was the relative efficiency with which a policy was formulated over Korea, in spite of the obstacles put in its way by General MacArthur. It is perhaps this inherent scepticism rather than Democratic prejudice that makes Mr Millis regard with something less than enthusiasm the overhaul of the defence organisation carried out by President Eisenhower, involving as it does the strengthening of the powers of the civilian Secretary of Defence, the appointment of chiefs of staff likely to support the Administration's policy and their relegation to a position purely of planning and advice. "Some will feel," he writes,

> that it has made significant reassertions of "civilian control" and in so doing has drawn a fair middle line between the demands of economy and preparedness. To others it will seem that the administration has evaded rather than faced most of the basic issues of military policy—that at most it has put only a new and somewhat propagandist gloss upon methods, ideas and approaches differing in no essential from that of its predecessors.

Mr Millis leaves us in no doubt about what his own feelings are.

Prospects for Freedom

The Economy, Liberty and the State

By Calvin B. Hoover.
Twentieth Century Fund. 445 pages. $5.00.

THIS meaty, wide-ranging, liberal-minded book seeks the answer to two related questions: what prospects are there for the revival of freedom under communism and for its survival under the evolving, constantly modified economic systems of the West? Behind this inquiry, another less overt aim is pursued: that of dismantling stereotypes, rehabilitating words that have become mere reflex twitches on the part of their users. "Capitalism" or "private enterprise" means something quite different today, not only in terms of social consequences but also in terms of inner mechanism, from what it did in the nineteenth century; "communism" as practised in Russia bears little resemblance to the "communism" of Lenin; the "liberty" circumscribed by state intervention differs substantially from the "liberty" encroached upon by private power.

None of this is perhaps very new; though certain sectors of American opinion may find it so. It is in width rather than in depth that "The Economy, Liberty and the State" is most valuable. It is part economic analysis, tracing and evaluating, in the capitalist world, the evolution from competitive to "organisational" price-setting as shaped by various national circumstances, and in the communist world the fluctuation between arbitrary and (in intention) economic solutions to the problem of allocating resources. It is part political history, the relevant episodes and developments of the last half-century being narrated in terms of personalities and power-groups. And it is part speculation, an attempt to discover the critical point—if any such can be isolated from the surrounding political and social conditions—where the state's intervention in economic matters begins to constitute a significant net encroachment on liberty, diminishing the individual's freedom vis-à-vis itself and its representatives more than it increases his freedom vis-à-vis his potentially oppressive, richer and more powerful fellow-citizens. This speculation has something of the character of a polemic on two fronts. Dr Hoover aims his arguments on the one hand at the conservative American opinion that equates all economic intervention by the state with socialism, and socialism with tyranny; and on the other (with a severely controlled but perceptible contempt and disgust) at the fellow-traveller whom no experience can disabuse of a blind belief in the liberating effects of communism.

His conclusions—that the "welfare capitalism" and the "mixed economies" of the West represent no threat to liberty, that the prospects of a new birth of freedom in any communist state (except just possibly Poland and Jugoslavia) are depressingly small—merit the respect due to close and prolonged first-hand study of the observable facts. Beside the works of Professor Popper, M. de Jouvenel, Mr Arthur Koestler, Professor Röpke, even Mr Michael Young—to select at random a handful of other writers who have cultivated segments of this particular politico-economic borderland — "The Economy, Liberty and the State" is plodding and undistinguished stuff. But it provides a useful specific against snap judgments, a corrective for prejudice, a sensible framework of historical perspective, and from time to time—as in its account of the role of the intellectual—a psychological perspective more persuasive than much brilliance.

Battle of Leyte Gulf

History of United States Naval Operations in World War II: *Volume 12, Leyte*

By Samuel Eliot Morison.
Oxford University Press. 470 pages. 45s.

IT was the Battle of Midway, fought on June 4, 1942, that decisively checked the tide of the Japanese offensive, and after that victory the Americans never gave their enemy the chance to regain the initiative. But until the battle of Leyte Gulf in October, 1944, the Japanese navy, though much weakened since the days of its greatest successes, and desperately short of the carrier aircrews who had been wasted with such foolish profligacy, was still powerful enough to encourage the belief that it might yet fight a victorious fleet action. The invasion of the Philippines provided the opportunity for the challenge, and the Japanese threw in every ship they could muster. Their plan was a clever one—to draw off the greater part of Halsey's gigantic Third Fleet, while two separate forces converged on the scene of the American landings by way of the passages through the Philippine Islands north and south of Leyte Gulf—and it very nearly came off. True, the southern force was virtually annihilated by Kinkaid's Seventh Fleet in the Surigao Strait; but Kurita's northern force, though heavily attacked from the air in the Sibuyan Sea, broke successfully out by the San Bernadino Strait, and early on October 25th seemed to have the invasion shipping in Leyte Gulf at its mercy; for Halsey had taken the Fast Carrier Task Force and all the Third Fleet battleships away to the north in pursuit of Ozawa's decoy squadron—exactly as the Japanese intended. The situation was saved by the gallantry of the escort carriers and light forces, which were all that stood between Kurita and the achievement of his purpose—and by the Japanese Admiral's extraordinary failure to seize a heaven-sent opportunity. The price exacted for Halsey's impetuosity and misjudgment was thus only a tiny fraction of what it might have been.

Professor Morison, unlike Admiral Nimitz shortly after the event, acquits Kinkaid on the score of failure to use his reconnaissance planes to keep track of Kurita's ships; but he is severe in his conclusions on Halsey's actions. "The reason," he writes, "why Kurita was able to sortie from San Bernadino Strait and steam toward Leyte Gulf for about seven hours, completely undetected, was a series of faulty assumptions on the part of his enemies." Nevertheless, the battles fought on October 24-25, 1944, were as decisive as Midway; for not only did they make the recapture of the Philippine Island certain, but the losses suffered by the Japanese navy were so heavy that never again was it able to offer a serious challenge.

Professor Morison, back on his home ground after his account of the invasion of Normandy in the preceding volume, tells the story of Leyte Gulf with gripping enthusiasm, and with justifiable pride in the American navy's accomplishments. While the general reader will not find a dull moment in this latest addition to this remarkable history, the expert will be absorbed by the tactical and strategical issues, which are discussed with admirable fairness and clarity.

Metaphysics Revived

Individuals

By P. F. Strawson.
Methuen. 255 pages. 25s.

WHENEVER metaphysics has been kicked out of the front door it has tended to return by the back. In recent years, it has, at the most, been allowed to use the servants' entrance, but it is now acquiring a new respectability. Metaphysics is no longer the queen of the sciences, no longer even a priestess of the cult of a reality different from the one that we all know, but a decent middle-class woman with her feet planted firmly on this earth.

Mr Strawson subtitles his book "An Essay in Descriptive Metaphysics," and he distinguishes his aims from those of perhaps the majority of metaphysicians by saying that while they attempted to revise the fundamental conceptual apparatus that we employ in thinking about the world, his concern is only to describe it. He likens his programme to that of Kant, though, unlike Kant perhaps, he thinks that other conceptual schemes than the one which we do in fact use are possible. The book possesses the hallmark of philosophical thinking in the highest sense. It is thorough and rigorous—and immensely difficult.

Mr Strawson uses the term "individuals" in a very wide sense, which may be familiar to philosophers but not to others. It covers all those things which are capable of being logical subjects of propositions, and which are thus referred to in our speech and presupposed in our thinking about the world. The aim of the first part of the book is to show that the categories of material objects and persons comprise the basic individuals in this sense. An individual is thus basically a particular thing, and the aim of the second part of the book is to explain why such particulars are the paradigm cases of logical subjects.

Much of this is for specialists only, but the part that will perhaps have the widest interest is that in which Mr Strawson deals with the concept of a person. He shows that this concept is logically primitive, in the sense that we cannot have the concepts of bodies or states of consciousness without first having the concept of a person. It is thus impossible to reduce the concept of a person to that of a body or of a mind. This has important ramifications within the field of psychology, since upon this point depends an understanding of what it is to ascribe actions and intentions to people.

It may seem to some people that if metaphysics has regained her respectability, she has not acquired a new usefulness. But appearances may be deceptive. At all events Mr Strawson's work is a paradigm of rigorous philosophical thinking.

Both Sides of the Atlantic

Reflections on Britain and the United States

By E. Lipson.
Pall Mall Press. 105 pages. 12s. 6d.

IN the vast field of economic history, few have failed to hear cited at some time or another the seminal work of Lipson: his economic history of England came out as long ago as 1915, and learned periodicals the world over testify to his many-sidedness and scholarship. Now, as he tells us in his preface to this latest helping of *multum in parvo*, he has reached the psalmist's allotted span; and to mark it, as a happy traveller with a heavy load of learning carried so lightly, he wrote this 100-page comparison and contrast of the United Kingdom with the United States. Dr Lipson is long familiar with both countries. The resulting book is an ideal gift for anyone about to go to the United States. It is remarkable what its author has been able to distil within its slim compass; but, then, he has seen the "great revolutions of the world" in his own lifetime, and much of the distillation is within his own competence as an expert.

Here is wisdom interpreting many facts. Here are mature judgments tempering contemporary excitements. Those who know "the everyday business of life" on both sides of the Atlantic better than he does will pardon the obviousnesses here and there; for on both sides ignorance continues as a lion in the path to Anglo-American understanding. Dr Lipson points out what benefits Britain's colonies got before 1776, how Britain abolished its tobacco-growing (a prosperous crop) to help the colonies, what Britain's sacrifice of the Japanese alliance meant after 1918, how different are British and American psychological climates, and how complex are all economic phenomena in all lands. He makes the point—constantly overlooked, played down, or ignored in Britain—that redistribution of wealth can only really raise the standards of life of the masses if it is "accompanied by an adequate production of wealth." He errs in putting the American population at 150 million; it is over 175 million; and the United Kingdom's home market is only one-sixth (even less) of that of the United States (not one-third, as he says) owing to the doubled output per head in America and a population over thrice ours. But these slips can easily be righted in the further editions which this mature, urbane and above all ideally objective little work merits.

Barrister's Clerk

Lord Goddard: *My Years with the Lord Chief Justice*

By Arthur Smith.
Weidenfeld and Nicolson. 208 pages. 21s.

THE author of this book has spent the whole of his working life (apart from his war service) as a barrister's or judge's clerk; and for a large part of his career was clerk to Lord Goddard, who is his hero. The relationship of barristers and judges to their clerks is rather puzzling to laymen, and the best parts of this book are those in which Mr Smith describes his day's work in London and on circuit. But there is still room for a book on the subject that will appeal to laymen and give them a chance to decide for themselves whether it is the clerk that makes the barrister's career or the barrister that makes the clerk's. And is the clerk's livelihood really as precarious as it sometimes appears to be?

Mr Smith is a disjointed and rather rambling writer, and reading his book one is never quite sure whether it is an autobiography, or a life of Lord Goddard, or a collection of famous trials, or a study in penology. In a span of 208 pages he switches frequently from one phase to another and back again, and the net result is a little confusing. Lord Goddard himself (so we are told in the preface) would take no part in the book, and in that refusal he seems to have shown his customary good sense.

Mr Smith started as a boy in 1903 as junior clerk to Clavell Salter and those who shared his chambers. The youngest of the learned counsel in those chambers was Mr Goddard, who won the boy clerk's heart at once by standing him a fortnight's holiday at the sea during his first long vacation. A few months later the boy saw, or now believes that he saw, Whitaker Wright die in the Law Courts building. The generally accepted view is that Wright, after being sentenced to seven years' imprisonment, swallowed cyanide in a consultation room in the presence of his solicitor; but if Mr Smith saw him die, that belief must be incorrect. A boy clerk could not have been present at a consultation between solicitor and client, and in any case Mr Smith is certain that the suicide took place in the corridor. Whichever version is correct the discrepancy shows how misleading contemporary evidence can be.

After Mr Smith had been two years in Salter's chambers Mr Goddard left them, and to Mr Smith "it seemed as though the bottom had fallen out of my world." He had found his hero and asked only that he should be allowed to go on serving him. But they were separated till 1932, and then Mr Smith joined his hero again and became a judge's clerk. He went with the judge on circuit and obviously enjoyed the journeys he made. He gives us glimpses of circuit life as seen by a judge's clerk and confidant, and we could have done with a fuller description of that strange system of justice. The impression he manages to convey (though not intentionally) is that the whole business, with its pomp and dressing up, its etiquette, and its elaborate arrangements for his Lordship's comfort, is rather ridiculous. But everybody except the man in the dock appears to have a good time; and the author would probably be heart-broken if these theatrical progresses gave way to a more modern system of administering the law.

Well Delved Era

Stalin's Failure in China 1924-27

By C. Brandt.
Harvard University Press. London: *Oxford University Press.* 226 pages. 25s.

AT the beginning of the twenties, when the Comintern first began to take an active interest in the revolutionary movement in China, the Chinese Communist party was a small and loosely organised coterie, dominated by intellectuals, feeble in numbers and insignificant in power. Thus, although the ultimate object of the organisation remained the triumph of this party, the first aim was the victory of the revolu-

tionary, anti-imperialist force represented by the government of Sun Yat-sen in Canton, which alone seemed to enjoy any immediate prospect of conquering China. In due course it should be possible for the CCP to secure the hegemony within the coalition that was to be created, and so assume the leadership of the revolutionary movement in China.

There was only one flaw in this plan. It assumed that the CCP's partners in the alliance would willingly co-operate in the programme of absorption, and ultimate annihilation, that was laid down for them. But Chiang Kai-shek quickly revealed that he had no inclination to play the role of the lady of Riga opposite the Communist tiger. By his coup of March, 1926, through which the power of the Communists within the alliance was drastically restricted, and by the brutal massacre of party functionaries and their supporters in Shanghai in April, 1927, he showed himself ready to make use of the most ruthless methods to control, and ultimately to eliminate, Communist influence within the regime he was establishing. While the opposition in Russia were able to point to these events as evidence of the failure of Stalin's policy, there is no evidence that Trotsky's own recipe, for a more independent and revolutionary programme, would have had any greater chance of success—indeed Trotsky himself raised no objection to the policy of alliance until its failure had already been made manifest. In fact every available Comintern policy in China at this time ran headlong into one ugly but decisive fact: the monopoly of military power in the hands of the Kuomintang. Given the willingness of the Kuomintang leadership to make use of this, there was no course of action open to the Communists that must not equally have led in the final resort to failure in China.

Mr Brandt retells this story with elegance and erudition. His account is better documented than earlier works on the subject and benefits in particular from the use he has been able to make of the Trotsky archives and of information obtained from Chang Kuo-tao, a member of the inner circle of Chinese Communist leaders during the period. The presentation is skilful, and the judgments are balanced. The book is well produced, with a useful bibliography and an adequate index.

One cannot help regretting nevertheless that the scholarship here displayed should have been devoted to burrowing yet once more in this already much dug territory. In his foreword, Mr Brandt claims that there is no obscurer period in the recent past of any large country than that of the 1920s in China. The greater part of the history of China during the first half of the present century is indeed obscure, and much wrapped still in almost total blackness; but, within all that span, there is no single period on which so much has been written as the three years with which this book is concerned. Could not the expertise of which the Harvard school of China research disposes now be directed to throwing its searching light on to some other, even darker, age of China's recent past?

Hard Fibre

An Economic Survey of the Sisal Industry of Tanganyika

By C. W. Guillebaud.
Nisbet. 136 pages. 15s.

MANY will know what sisal is used for: it is spun, for the most part, into agricultural twines and other cordage. Some may know where and how it is grown: indigenous to Central and South America, it is cultivated chiefly on highly capitalised estates in tropical Africa. But few will have any inkling of the extraordinary history of sisal production—in 1892 a German doctor smuggled a handful of bulbs from Florida to Africa in his umbrella—or of its peculiar economics. This useful little book discusses all this, and much else.

Although its main theme is the development of sisal growing in Tanganyika, the world's largest producer, it is not solely concerned with conditions in that territory. The general reader, with or without a smattering of economics, will be interested not only in the contrast between the astonishingly rapid expansion of world sisal production and the unimpressive output record of other hard fibres, like manila and henequen, but also in the tendency for sisal prices nevertheless to follow fairly closely the trend of competing fibres and of commodities in general—although the industry's spokesmen would not agree that sisal was now fairly valued against manila, and one can disagree with the view that one of the main causes of the recent depression of sisal prices has been "weak" selling by Brazil.

The social and political student, with his eye on neighbouring Nyasaland, will find food for thought in the description of the far-flung system of recruitment of African workers, of their "primitive" attitude to work, and of their nevertheless not complete indifference to their conditions of employment. Finally, the investor, enlightened by the detailed analysis of the industry's profitability, will be able to evaluate the recent rise in the price of the commodity in terms of hard cash.

With Rod and Gun

Not in the Limelight

By Ronald Wingate.
Hutchinson. 232 pages. 25s.

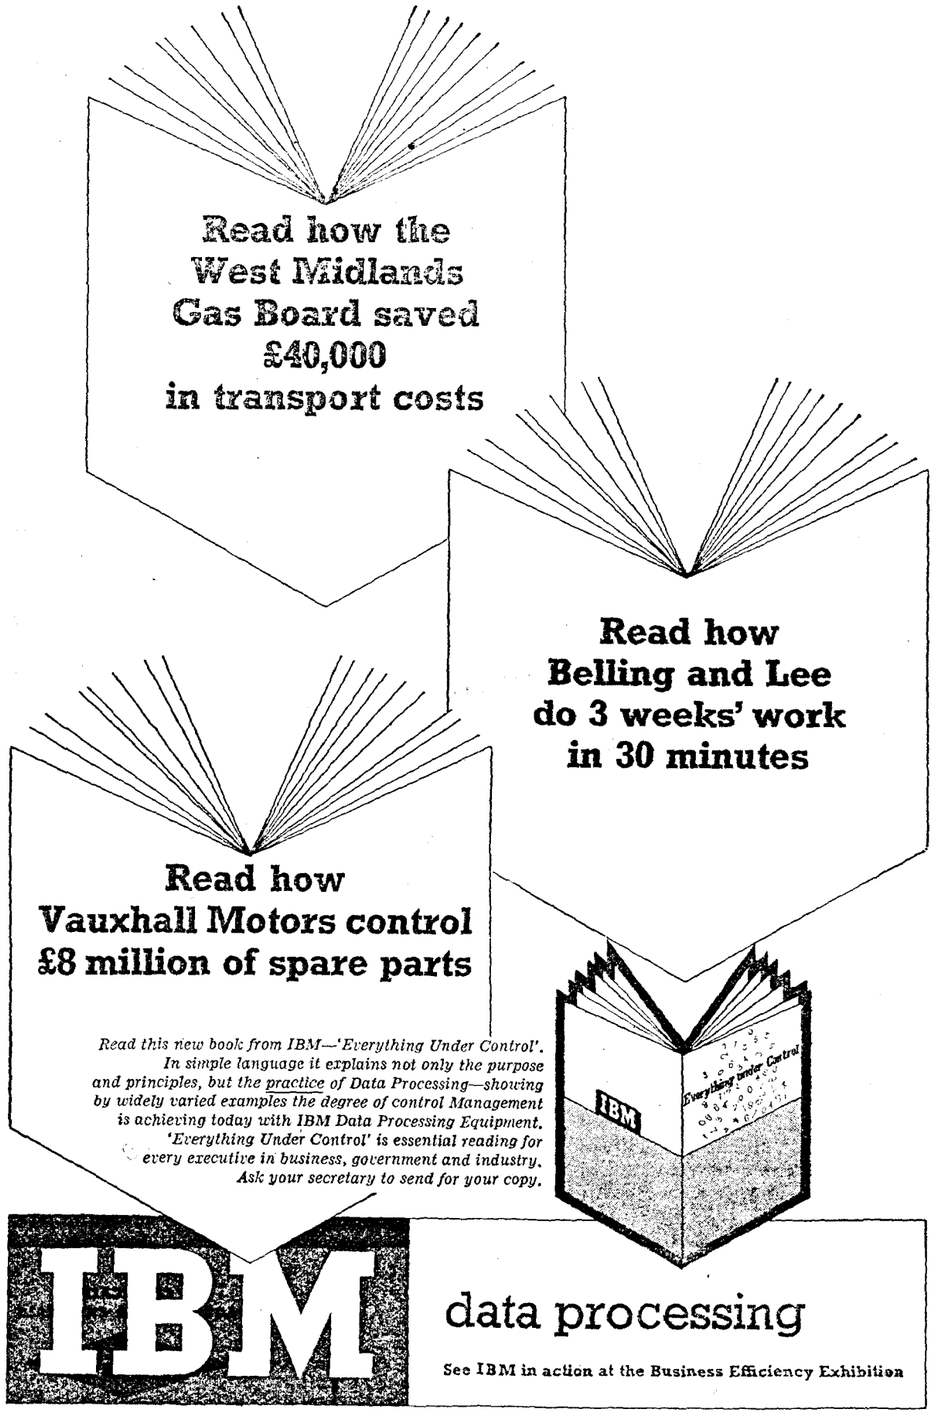
SIR RONALD WINGATE was born with a stainless steel spoon in his mouth. His father was immensely distinguished; he was brought up an Arabic speaker and among brilliant people; and he had no private means. Natural intelligence and a good upbringing led him, through Oxford, to the Indian Civil Service; his background took him in the first war to Mesopotamia and after it to Muscat; then, till his retirement, he was in the Indian States, Quetta and Delhi. Soon afterwards the second war broke out: he spent it first with the Free French and then with the "Joint Planners," specialising in deception. He ended his long career with a spell in an international agency in Brussels.

His amusing autobiography is all the more worth reading because it fits into a known pattern that will not be repeated: intelligence, the habit of command, adaptability, sense, and a strong taste for sport, which gets its due mention everywhere—a generation ago, those who governed also caught *mahseer* and shot *chikor*. Nowadays problems are not so easily isolated and sport comes more expensive—all the more reason to read, for example, how peace could be brought about, over forty years ago, between the Sultan of Muscat and the Imam of Oman when no one interfered from outside. Those days are gone.

OTHER BOOKS

THE VINTAGE MOTOR CAR POCKETBOOK. By Cecil Clutton, Paul Bird and Anthony Harding. *Batsford.* 256 pages. 8s. 6d.

"Vintage" cars (e.g. the bull-nose Morris, the Bentley Speed Six) are those produced during the 1920s. They should not be confused with the pre-1904 "veterans" (e.g. "Genevieve") or with the "Edwardians" (e.g. the Rolls-Royce "Ghost") of 1905-1915. This handbook gives particulars of every vintage model and photographs of most; obviously invaluable to connoisseurs, it affords nostalgic browsing-matter for anyone over forty-five.



STATISTICAL YEARBOOK 1958. *United Nations.* 612 pages. Paperbound 46s., clothbound 57s.

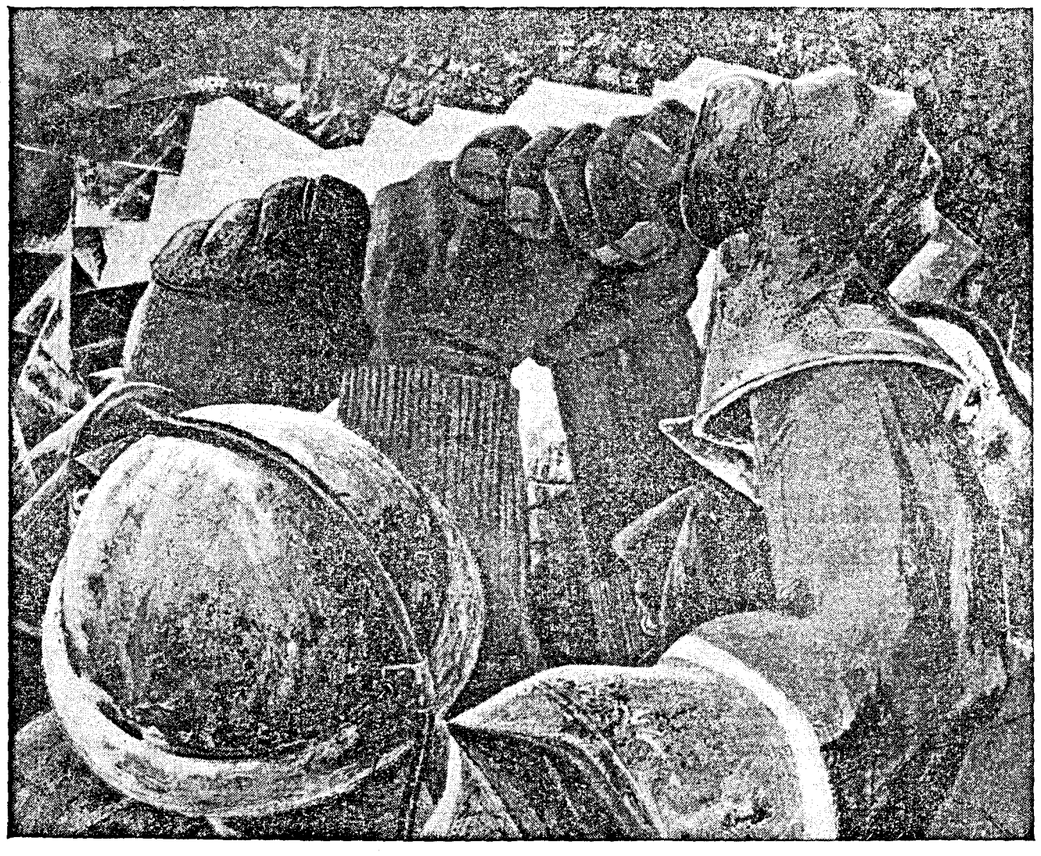
The tenth issue of this yearbook contains several improvements and some new features. Among the latter is a table comparing the pattern of industrial production in different parts of the world and another showing the geographical network of world exports.

A PSYCHOLOGICAL STUDY OF TYPOGRAPHY. By Cyril Burt. With an introduction by Stanley Morison. *Cambridge University Press.* 87 pages. 15s.

What makes a printed page easy to read? Sir Cyril Burt, Emeritus Professor of Psychology at the University of London, has been experimenting with the effects of various styles of printing on both children and adults, and this book gives his findings. He has considered length of line, size of type, interlinear spacing, kind of paper, quality of presswork and imposition, and also the reader's personal and emotional reactions to the various type faces. His findings are interesting and useful, particularly for anybody who has anything to do with advertising. Why, however, do scientists with fascinating facts have such a weakness for indigestible prose; for instance, things like "devoid of statistical significance"? Mr Stanley Morison, in a substantial introduction, comments on Sir Cyril Burt's findings from the point of view of the designer of type faces, the printer, the historian, and the theorist of printing. It is interesting how often science and art back each other up. Tape-measure and stop-watch prove the artist right. The book itself is handsome and exemplary.

GIANT IN THE SUN: The Story of Northern Nigeria. *Northern Nigerian Information Service.* 64 pages.

IBM UNITED KINGDOM LIMITED, 101 WIGMORE STREET, LONDON W1. TELEPHONE WELbeck 6600



DOW CHEMICALS *and mining*

FROM DEEP IN THE EARTH, man's brawn brings forth precious ore to feed industry's ovens. Wresting metal and minerals from the ore's stubborn grasp is a task for machines, chemicals and skills of many types.

Specialized Dow mining chemicals help do the job, speeding processes and lowering costs. Several of these chemical tools were developed as part of a continuing Dow research program on mining operations. One, for example, Separan* NP10, saves countless hours in separating uranium from raw ore. Dow works with mining operators throughout the world, assisting them to make the most efficient and profitable application of Dow mining chemicals in their operations.

Your Dow representative or branch office will welcome your inquiry regarding Dow mining chemicals.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

President on his Own

NEW YORK

ONE by one, time is pulling the iron men out of Mr Eisenhower's Administration. Mr Donald Quarles, who died in his sleep last week, held the comparatively modest rank of Deputy Secretary of Defence. But his influence was much greater than his rank. It was he who, in most people's opinion, convinced the President and the Secretary of Defence, Mr McElroy, that their critics were exaggerating the dangers of the "missile gap"; the United States could safely rely on manned bombers to preserve its deterrent strength until it could stock its missile armoury with better weapons than the Atlas and the Titan. Now Mr Quarles follows Mr Dulles, Mr Sherman Adams and Mr George Humphrey out of the President's service, all men of conviction and decision, whatever history may say in the end about their policies. Most of the survivors are competent administrators of departments rather than men likely to initiate new approaches. At the same time a fractious Senate is exercising its right to supervise the President's appointments with more pernickety zeal than it has shown in a third of a century. It is not surprising that unkind critics are asking whether *rigor mortis* is setting in long before the Administration is legally supposed to die.

Some of the arguments used by the critics are unfair to the President. The trouble he is having in getting the Senate to approve his choice of officials is due largely to an unlucky combination of circumstances. Mr Eisenhower has been no more lavish than other Presidents, and perhaps more careful than most, about distributing ambassadorships to political amateurs. But it happens that Senator Fulbright, who wants to restrict the practice still further, succeeded to the chairmanship of the Foreign Relations Committee shortly before Mrs Luce and Mr Ogden Reid, two appointees whose competence for these posts is less open to criticism than is their political background, came before it for consideration. That Mr Lewis Strauss, the old bugbear of the Democratic atomic experts in Congress, had to seek approval of his nomination to the Department of Commerce at the same time is one of those coincidences that turn Presidents' hair grey.

In fact, the Administration is faring better in its struggle with the Democratic majorities in Congress than most people would have thought possible last November. The recent declaration by Mr Johnson, the Democrat's leader in the Senate, that Congress will appropriate less than the President asked for this year seems to mark the surrender of a legislature which once seemed likely to challenge the President's conservatism successfully. If Senator Johnson's prophecy is correct—and if Congress votes substantially more than the President asked on defence, as looks almost certain—the amount of extra spending on social legislation in the coming fiscal year will be severely limited. Even the measures which have completed part of their journey through Congress, like the Bills on housing and depressed areas, face a darker future than they did at Easter. The fate of the minor measure on loans for rural electrification suggests that it will be practically impossible to over-rule Mr Eisenhower's veto on more controversial subjects.

It is difficult to resist the conclusion that those who complain of the President's indecision are in part troubled by the very decisiveness of his stand on budgetary policy. The critics, both in America and abroad, who have talked as if the Bureau of the Budget had "run wild" in the last year, pruning departmental expenditures to its private idea of their proper size, underestimate the extent of Mr Eisenhower's commitment to the concept of a balanced Budget. To most liberals the decision he has taken—that the danger of inflation precludes any major increase in federal spending—is wholly unacceptable; but ruefully they must admire the zest with which he has spread his gospel. The access of energy which has enabled him to confront the press so much more frequently since Mr Dulles's illness has been largely devoted to stating what is now his favourite theme. To judge from the reaction of the Democratic moderates, he has been surprisingly successful. It is open to the liberals to say that, if this is decisiveness, it is a purely negative variety; but their criticism is then of the President's policies rather than of his application to his job.

THUS the facts hardly support the notion of an entirely rudderless Administration at the mercy of congressional squalls. Nevertheless, there remains some sting in the accusation of those who say that the Administration is failing to measure up to the military and economic challenge of the Russians. This has lately been the theme of two speeches by Senator Henry Jackson, a reflective young member of Congress who likes to peer inside the works of government. He suspects that, quite apart from the voluntary restraints on action imposed by fiscal scruples, a number of fundamental questions have been virtually ignored by the Administration because it is nobody's business to discuss them. It is doubtful, for instance, whether anyone has yet presented the President with the full case for and against a more rapid expansion of the economy, or whether he has asked himself how much expansion is worth how much inflation. The Administration's resolve not to spend any more money on defence would be more impressive were it not so visibly and trustfully touching wood.

The National Security Council, which consists of the heads of those departments and agencies chiefly concerned with problems of security, is the proper body to debate such issues; but it fails to do so in Senator Jackson's view, because these issues are hopelessly blurred before they reach it. Under the present system, the papers which the council's planning staff lays before the great men are already the result of interdepartmental compromises worked out by their seconds-in-command. To restore the bite of controversy, Senator Jackson would order the planning staff to present the

council with a statement of alternatives on each issue.

To help the council's busy members to distinguish the wood from the trees, he would also set up an Academy of National Policy, composed of private citizens but with access to the government's sources of information, which would submit regular reports on the long-term problems facing the country. A similar desire to get the ideas flowing is embodied in a suggestion made by the ever-resourceful Senator Humphrey ; he wants the two Houses of Congress to establish a joint committee which would survey the same range of subjects as the National Security Council.

There are merits in both proposals, but it is doubtful whether they would get down to the heart of the problem. The whole idea of a compromise, of an agreed plan worked out among the staff officers before they proffer it to the Commander-in-Chief, is dear to General Eisenhower's heart. It may be his dubious distinction to have transplanted the concept of the consensus, which has an honourable history in the American legislature, into the operations of the executive branch. Thus, even if the President did not demand a compromise before an issue reached the Security Council, he might demand it from the council itself ; and the bold and distinctive policies which Senator Jackson seeks might still go begging. Similarly, an Academy of National Policy would be effective only if it caught the President's ear ; and in present circumstances it might prove to be no more than another loudspeaker for the Administration's critics in Congress.

Whatever machinery is devised to aid him, a President must be able to pay detailed and lively attention to the problems of the day and must enjoy giving orders to his subordinates ; if he is such a man, that machinery becomes relatively unimportant. Such strength as Mr Eisenhower's successive illnesses have left him is now devoted largely to proclaiming one very general proposition: that the stability of the dollar is more important than almost anything else. The critics are entitled to retort that, whether or not this is so, he is still ignoring many of the problems to which he should be applying himself. A good many people are coming to suspect that there is no substitute for a healthy President who enjoys his work.

Democratic Fortune Hunters

With the spring the Democratic hopefuls have been going west to seek their fortunes in the states where their party has recently won its more sensational victories. Senator Kennedy of Massachusetts, the current hero of the pollsters and of most of the political commentators, began by exploring Wisconsin, where on April 5, 1960, the first important Democratic primary election will be held. Eventually he must decide whether or not to enter this popularity contest, in which the local Democrats choose their favourite among their party's presidential possibilities. Wisconsin offers Mr Kennedy a chance of showing that he can attract middle western farmers and, as a Roman Catholic, he should do well in this state. But he is certain to be opposed there, and might be defeated, by his closest current rival for the nomination, Senator Humphrey from the neighbouring state of Minnesota.

California, where the Democratic convention is to be held and which sends 76 delegates to it, more than any other state except New York, will have a primary which both Mr Kennedy and Mr Humphrey would like to enter. But the state's successful new Democratic Governor, Mr Pat Brown, has entered himself and is sure to win. He has, so he says, no intention of seeking the presidential nomination seriously but wants to have complete control of how the Californian delegation votes at the convention. Clearly any candidate who wants his support would be ill-advised to oppose him in the primary, Whom he will support is not known ; he welcomes all the Democratic fortune hunters who are touring the state with equally warm hospitality.

"If He Ain't Running, He's Sure Doing Some Fancy Riding"

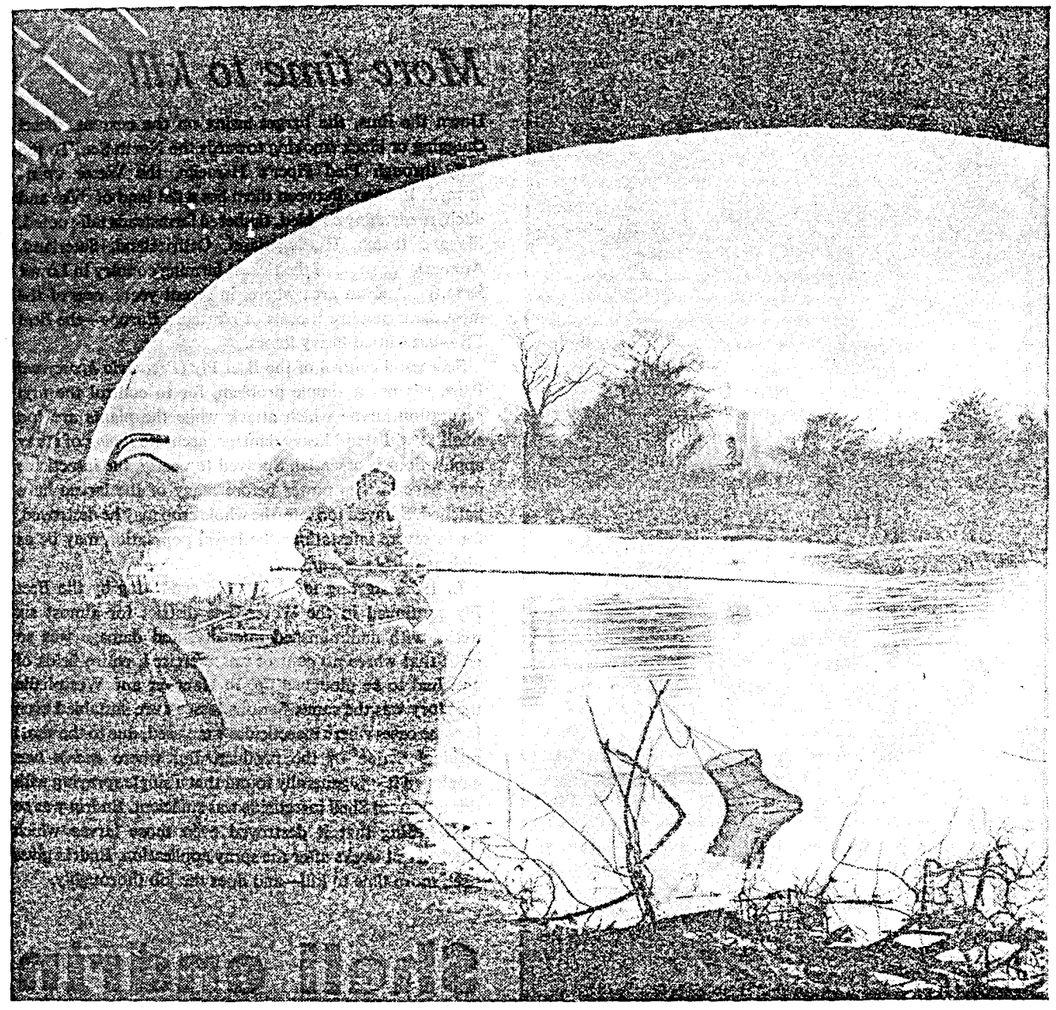
Mr Humphrey, who is preferred by the local party officials, is thought to be too left-wing for Mr Brown. Senator Symington of Missouri is the choice not only of Mr Truman but of Mr Ed Pauley, the Los Angeles businessman who has promised to finance the convention provided he gets 5,000 of the 7,000 seats in the public gallieries for his friends; they, it is presumed, would drown all other nominations with their shouts for Mr Symington. But in California, as in many other places, there is underlying sympathy for Mr Stevenson and from this Mr Kennedy, also an attractive, intellectual moderate, hopes to profit. So does Mr Humphrey, who is closest to the liberals who are close to Mr Stevenson.

But when the convention meets in fourteen months' time possibly Mr Stevenson himself may profit. Neither Mr Kennedy nor Mr Humphrey admits to being a candidate but both of them are already working full-time at winning the nomination. By next July neither may have knocked the other out, but both will surely have lost the freshness which is now much of their charm. Then Senator Symington, so far keeping slightly more in the background, hopes to step in ; then Mr Stevenson may be pushed in. Or Senator Lyndon Johnson may be induced to carry his success

More time to kill

Down the Ems, the barges swing on the current, diesel chugging or black smoking towards the North Sea. To the east, through Pied Piper's Hamelin, the Weser swirls towards Bremen. Between them lies a flat land of dyke and ditch, roads shiny cobbled, timbered farmsteads tall-roofed, tile and thatch. Harlingerland, Ostfriesland, Saterland, Ammerland: some of the richest farming country in Lower Saxony. And an area where, in recent years, one of the most damaging insect pests of Northern Europe—the Beet Fly—has caused heavy losses.

Successful control of the Beet Fly (*Pegomyia hyoscyami* Panz.) is not a simple problem, for to control the first generation larvae which attack while the plants are too small to withstand heavy damage, accurate *timing* of spray applications is essential. Sprayed too early, the insecticide may have lost its power before many of the larvae have hatched. Sprayed too late, the whole crop may be destroyed, for in severe infestations the larval population may be as high as thirty *per leaf*.



In 1956, starting in early May, egg-laying by the Beet Fly continued in the Weser-Ems district for almost six weeks with undiminished intensity, and damage was so great that where no control was exercised, entire fields of beet had to be ploughed up. In Hanover and Westphalia the story was the same. Serious losses were sustained even in some cases where insecticides were used, due to the short residual action of the product. But where *endrin* was employed it was generally found that a single spraying with this advanced Shell insecticide was sufficient. Endrin was so long lasting that it destroyed even those larvae which hatched out weeks after the spray application. Endrin gives itself more time to kill—and does the job thoroughly.

Shell endrin

Sugar beet in Germany, cotton in Venezuela, rice in the Philippines, coffee in the Belgian Congo. Shell endrin protects crops of many kinds in many parts of the world. But this important foliage insecticide is only one of the Shell pesticides for world-wide use. Between them, endrin, aldrin, dieldrin and Phosdrin, together with the soil fumigants D-D and Nemagon, control almost every significant world pest. ***Whatever Shell does, Shell does well.***

as leader of his party in Congress into the White House; publicly indignant at any suggestion that he might be a candidate, behind the scenes he is quietly removing any obstacles in his way.

More Trade or Less Gold

THERE is a suspicion in New York that the recent loss of gold by the United States has been played up by international speculators in order that the price of gold might be driven up by doubts about the soundness of the dollar. Certainly the fact that lately gold in London has been higher than the $35 an ounce at which it is pegged in New York has had something to do with the resumption during the last few weeks of 1958's sharp fall in American stocks of gold; $2.3 billion was lost in that year, only $92 million in the first quarter of this and $186 million since the first of April; but the government still holds over $20 billion, far more than is needed to back the currency. Actually the factors underlying the loss of gold seem never really to have changed; they were only masked because Great Britain was using its dollar earnings to cover its debt of $200 million to the International Monetary Fund. Now that this has been paid Britain is once more buying gold.

The US Treasury is losing gold just because many foreign countries now have all the dollars they need and are therefore buying gold for reserve. They have the dollars because they are selling more than ever before to the United States and buying less than they have been from it. Imports reached the record high of $1.3 billion in March while exports, at $1.4 billion, are the only important sector of the economy which shows no sign of recovering from last year's recession. This is partly because other countries have not yet recovered fully from their own somewhat later recessions and partly because they are now able to produce goods which compete with American products both in their own and other foreign markets. Some American businessmen argue that this is the result of high costs, particularly for wages, in the United States which are pricing its goods out of world markets. Government officials in the Department of Commerce and elsewhere contend that this excuse has not so far been valid, although they admit that any further rise in American prices is undesirable and that the need to encourage exports is one of the main reasons for fighting inflation at home.

Attempts to check inflation by making money dearer could have an immediate bearing on the gold position; if interest rates go up in New York foreigners will invest their money there in short-term securities instead of in gold. But basically the loss of gold is a well-established trend which is expected to continue as long as the international balance of payments of the United States remains in deficit, as it has since 1949. The Treasury is not yet worried by the loss of gold in itself, although it is perturbed by the psychological encouragement which this gives to doubts about the dollar. There is no intention of asking Congress to raise the price of gold, nor is there the slightest chance that Congress would do so on its own. But the Administration is becoming concerned about the eventual effect of this persistent deficit. The only satisfactory way of dealing with it is by a general rise in the level of American exports. Already businessmen are becoming the target of one of those official export drives with which their competitors are so familiar.

Forces Out of Balance

IN the House committee work on the new defence budget is practically complete and committee hearings are well advanced in the Senate. After all the alarm early in the year about the "missile gap" Congress and the public are now hearing the other side: that the country is spending not too little but too much on great weapons of nuclear destruction. Last week Mr Gates, the Secretary of the Navy, made a speech in Philadelphia arguing that some of the preparations for a nuclear war that probably will never take place should be eliminated to provide more money to meet local challenges with conventional weapons. And it now appears that both General Taylor, the Army's Chief of Staff and Admiral Burke, the Navy's spokesman, told the House committee in February that the United States was grossly over-provided with nuclear retaliatory capacity if the arms of all the services are considered as a whole. These men speak for the services that are cramped by the growth of the Air Force missile programme, but Mr Gates and General Taylor command attention since it is felt that they can afford to be forthright because they are both retiring.

The Joint Chiefs of Staff are said to be considering how much truth there may be in this argument. But Mr Gates is not the only one to cast some doubt on this group's ability to reach rapid decisions untrammelled by considerations of service rivalry. Mr McElroy, the Secretary of Defence, himself recently complained to Congress about the Joint Chiefs' failure to decide between two defensive weapons, the Air Force's Bomarc and the Army's Nike-Hercules, and said he would not be sorry if Congress should "hold our feet to the fire." But Congress is less able than the Joint Chiefs to make highly technical decisions which damage powerful vested interests in industry and the services. It has not even been able to prevent the President from cutting the manpower of the Army and the Marines, though the Senate is making a new attempt to do so by adding riders to their supplementary appropriation Bills.

Such questions and the duplication of weapons systems, which the President admitted this week to be a real and difficult problem, involve hard decisions for the executive and the man who has been making them and making them stick was Mr Quarles, the Deputy Secretary of Defence, who has just died. With all the services making it abundantly clear to Congress that their devotion to a balanced Budget is only skin-deep he will be sadly missed by the President even if Mr McElroy reconsiders his own decision to leave Washington before the end of the year. For Congress, bewildered by conflicting testimony, is likely to vote the President more money than he requested all round—and leave him with the responsibility of not spending it.

Capital Spending—New Style

FROM A CORRESPONDENT IN NEW YORK

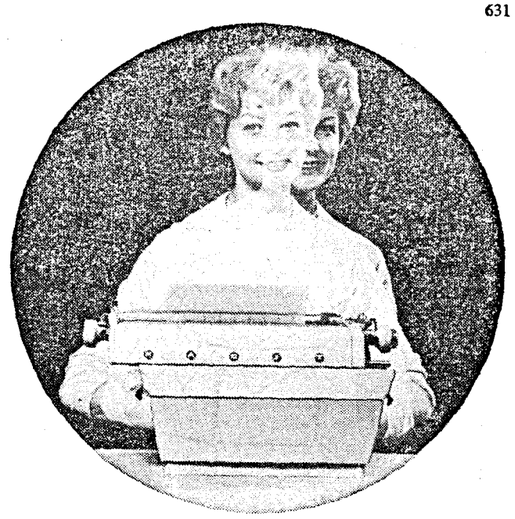
ALWAYS last to come out of a recession, the capital goods industries are now entering a period of expansion that may well match the investment boom of 1955-57. Earlier this year, a joint survey by the Department of Commerce and the Securities and Exchange Commission showed that business was then planning to increase its capital expenditure by 4 per cent from 1958 to 1959. But more recently, a survey by the McGraw-Hill Publishing Company puts the increase at 7 per cent, suggesting that the uptrend is gathering momentum. Moreover, the McGraw-Hill survey, which extends to the three subsequent years, suggests that there will be considerable further gains in 1960, 1961 and 1962. Estimates so far ahead are obviously very tentative but already about as much expenditure is in the planning stage, for each of these future years, as is under way in 1959. If the volume of sales continues to go up, the actual rate of capital investment may be as much as 20 per cent, or 25 per cent above the 1958 level by 1960 or 1961. In percentage terms this is a little less than the climb during the 1955-57 cycle but in terms of dollars it would match the 1957 peak.

However, this new round of capital spending is very different in nature from the last expansion. While the earlier cycle was primarily the result of a rush by manufacturers to expand their capacity, the present upswing is concentrated on the modernisation of existing facilities. In most cases capacity is now adequate ; according to the McGraw-Hill survey, manufacturing companies are operating at an average of a little over 80 per cent of capacity. But the huge backlog of older equipment that has been made obsolete by the past decade of technical advance presents a vital opportunity for cutting costs. Consequently, two-thirds of the capital spending planned by manufacturing companies for 1959-1962 is for modernisation. This year the overwhelming share of this expenditure (77 per cent) is for new machinery, another 2 per cent for new motor vehicles and only 21 per cent for new buildings.

A boom of this kind will have very different effects on the economy from those of a boom which centres on the construction of completely new plants. Its most obvious effect is that local chambers of commerce who have been hoping for a new plant in their towns will be disappointed. Although some new building is still going on, particularly in the fast-growing chemical and electronics industries, and although these growth industries still seem to be moving south and west, the bulk of the capital investment planned for 1959 is in the older industrial regions—the north-east and the mid-west. Since these areas have the largest existing concentrations of plant and equipment, they have the most to modernise, and companies intent on replacement will spend most of their money on these older facilities. It is becoming painfully clear that the recent industrialisation of the south and far west depends to a major extent on rapid growth in the national economy and rapid expansion in the total need for industrial capacity.

Perhaps more important in the national picture is the effect on employment. The capital goods industries are powerful levers here, for they do not rely much on automation and a boom requires large additions to their work forces. Also, when new plants are built, new employees must be recruited. But in the current picture, this second need plays little part since few completely new plants are involved. Instead, the modernisation of existing facilities will enable most companies to raise output sharply without adding many more workers.

Thus, in the McGraw-Hill survey, manufacturing companies, on the average, expect to increase the volume of sales by 9 per cent in 1959 and by another 18 per cent by 1962. But they plan to increase employment less than half as rapidly; except for a recovery in the motor industry and in some primary metal plants, only the machinery industries look for really large gains in employment. Other industries are clearly counting on higher productivity for a large part of their future increases in output. For manufacturing as a whole, the estimated increase in output a worker—based on the McGraw-Hill data—would be about 6 per cent in 1959 and 3 per cent a year in 1959-1962.



Consequently, the new surge of capital investment is not likely to wash away unemployment as rapidly as it did in 1955-57. In fact, it seems unlikely that it will create employment rapidly enough to reduce the number of unemployed much below 3.5 million during 1959. The average, for the year as a whole, may be nearer to 3.7 million ; after the sharp fall in April 3.6 million people were still out of work. In 1960-1961 unemployment may be down to about 3 million, assuming fairly large additions to the labour force and something like the estimated rate of

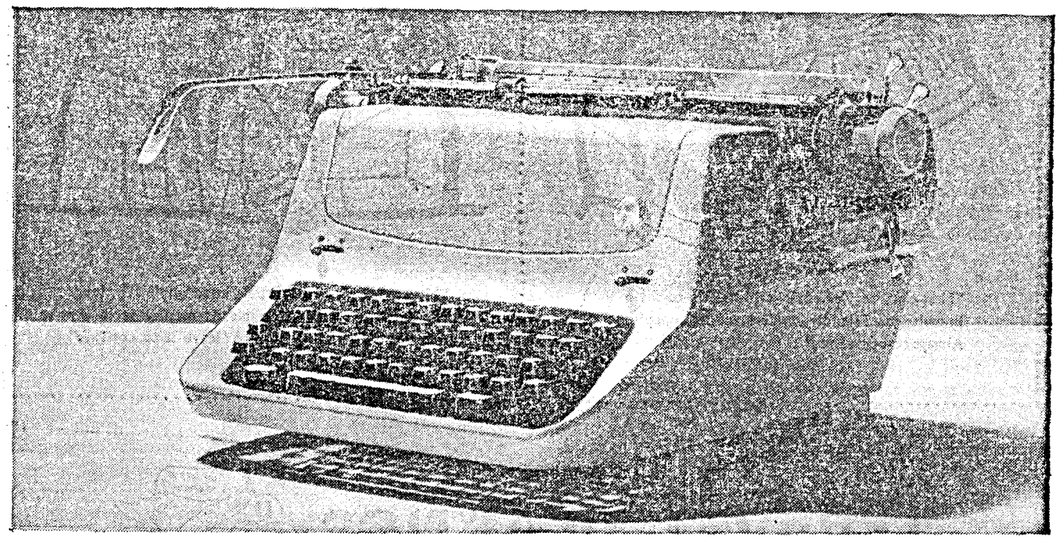
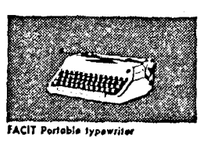
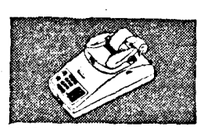
turn your typist into twins





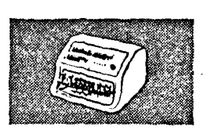
give her a FACIT T1

Aren't there times when you wish your secretary had a twin sister in the office? Another girl of her efficiency and accuracy to lend a hand when typing jobs of various kinds start piling up? • Most likely your secretary has no twin, but the FACIT T 1 typewriter *does* have a "twin tabulator" to help you out. The T 1's unique "mechanical memory" actually "remembers" the standard forms of your letters and invoices, while the regular tabulator takes care of the jobs in-between.

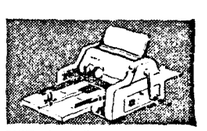


Calculators, adding machines, electronic computors, typewriters, duplicators.

Factories in Sweden and West Germany. Literature from nearest local agent or Åtvidabergs, Stockholm, Sweden.

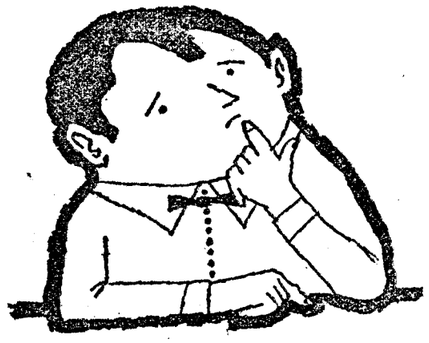


FACIT Portable typewriter



FACIT adding machine

FACIT fully automatic calculator



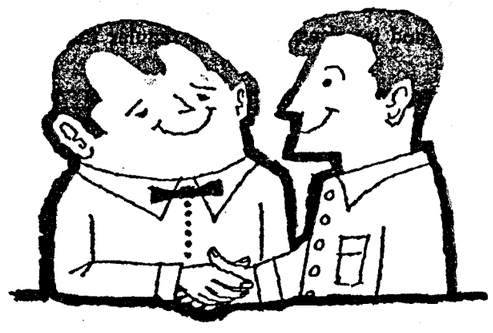
FACIT manual calculator

FACIT spirit duplicator

CONSIDERATION

"Intricate product. Needs precision manufacture. Needs a good colour finish. Needs a highly resistant material. Needs . . . *PLASTICS*, of course!"

COMMUNICATION

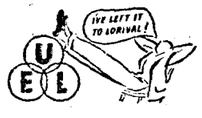


"It's just the job for the 'Lively Lads at Lorival'. They know plastics like no-one else. Get their advice right away."

CO-OPERATION

"First-class service. Bright ideas. Up-to-the-minute knowledge. Friendly, understanding people, too. Always co-operative."

CONGRATULATIONS



"Never thought plastics could be so helpful. For long-running, mass-production plastic mouldings in any material—it certainly pays to 'leave it to Lorival'."

gain in productivity. But even so the labour market would not be as tight as in 1955-57 when there were only about 2.8 million unemployed, although it would be a great improvement over recent conditions.

This time the cost of capital goods will not be climbing as rapidly as it did in the previous boom. In spite of the strong demand for machinery, prices are likely to be restrained by the existence of fairly ample capacity to meet such demands. Small price increases, reflecting the increased quality and complexity of new machinery, would be a very different matter from the rise of 10 to 15 per cent in machinery prices during the last cycle.

Finally, corporations—and particularly manufacturing firms—are not likely to resort to the markets for nearly as much money as was sought to finance new plants and equipment in 1955-57. Depreciation allowances have increased very rapidly, under the more liberal tax rulings in effect since 1954 ; by 1960 the flow of funds from these allowances will be $24 billion, up 50 per cent since 1955. Together, depreciation and retained earnings now promise to provide all of the money business will need for investment in both capital goods and stocks during 1959, and nearly all that will be needed in 1960—even if capital expenditure goes up again. Unless there is a new and unexpectedly severe wave of price inflation, corporations will have to borrow relatively little. This is just as well. For, with a huge demand for mortgages, and the federal, state and local governments all in the market for increasing amounts of money, the lending institutions are not in a good position to meet a new wave of business borrowing. Even a modest increase could easily force interest rates up another notch.

TVA in Bonds

EVEN to a moderate Republican like the President the Tennessee Valley Authority, that great achievement of the New Deal, represents "creeping socialism." To make certain that this does not turn into the galloping variety, no new appropriations for expansion of its electricity generating capacity have been voted by Congress since 1952 although more than half the power the TVA produces is sold to the government, chiefly for the atomic plants in the region. The tripling of the TVA's facilities which has taken place since 1951 has been financed from earlier appropriations and from current earnings. These no longer suffice to keep up with a demand for electric power which is increasing by more than 10 per cent a year and for some time the Administration, to relieve the Budget, has favoured allowing the TVA to issue bonds for sale to the public. Last year the Senate approved this proposal, but the Bill died in the reactionary House Rules Committee. This year Mr Rayburn, the Speaker of the House, promised a chance to vote on it. Last week it was passed by 245 votes to 170 on fairly strict party lines ; only 7 Republicans voted for it.

Rejoicing would be premature, however, in the seven states which the TVA provides with electricity at half the average cost in the country. Even if the Senate repasses the Bill, Mr Eisenhower is thought almost certain to veto it and the majority in the House was 32 votes short of the two-thirds necessary to override the President. In the Administration's view, the Bill gives the TVA too much liberty ; the agency has to lay its plans before Congress but Committee hearings and approval by the Budget Bureau are not required. One condition laid down by the White House has been met: the TVA is not to expand outside the 80,000 square mile area which it now serves. But even so private companies on the fringe of the region fear that its cheap power will inhibit their own growth.

The deadlock in this struggle between public and private generation of electricity in the southeast seems likely to last until after the 1960 elections. The appointment of Mr Brooks Hays, a Democrat, to be one of the three directors of the TVA will not alter the political balance on the board, since he succeeds a Democrat and the other two directors are both Republicans. Mr Hays is an excellent choice, but the appointment seems to be a graceful consolation prize to a man who lost his seat in the House because his moderation on racial questions made him vulnerable, rather than an effort to use his well-known talents as a conciliator to blunt the edge of one of the sharpest differences between Republicans and Democrats.

They Love Lucy

FROM A CORRESPONDENT IN HOLLYWOOD

QUITE a number of American investors must be saying "I Love Lucy" these days, with a conviction only remotely connected with the television series popular on both sides of the Atlantic. This is a relatively new affection, the result of having bought last autumn some of the 525,000 shares offered to the public in Desilu Productions—the vehicle by which Miss Lucille Ball and Mr Desi Arnaz, her husband, conduct their corporate affairs. Shares bought then at $10 each can be sold today for nearly $20, a capital gain of almost 100 per cent in less than six months. In addition, in the first half of 1959 they will have paid two dividends of 15 cents each.

Miss Ball had clowned her way through a number of Hollywood movies without attracting exceptional attention until 1950 when Desilu Productions, Incorporated, was set up with a capital of $5,000 to sell the idea of the "I Love Lucy" series to a television network. The Columbia Broadcasting System bought the series for the 1951-52 viewing season, and it was an immediate hit. Lucy rapidly endeared herself to women as the housewife addicted to lying and other forms of minor deception to get her own way with her husband, and to men for the way in which she bungled her efforts. In addition, Miss Ball won high marks by her readiness to roll in the mud, fall in a swimming pool and—in one classic episode—engage in a grape-slinging contest while trampling grapes barefoot in an Italian wine vat ; that was a time when most actresses on television relied on glamour and grooming. "I Love Lucy" rapidly went to the top of the ratings, and stayed there for seven years.

If Lucy should be loved for this, Desi—the straight man of the comedy team—deserves regard for his business acumen. In his original negotiations with CBS he sacrificed immediate income in order to retain ownership of the series and control of its production, with CBS putting up the money. There was no clowning about this. In the autumn of 1956 CBS paid $4.3 million to Desilu Productions for the rights of 153 episodes filmed up to that time. The money is being paid over a period of years ending in October, 1961.

New, original episodes of "I Love Lucy" are no longer

to be seen on American television screens at the familiar time of 9 pm on Mondays. Miss Ball is committed to appear in only five hour-long special shows each season. Many viewers, however, prefer the old, half-hour episodes, which are still being shown, as re-runs, and still enjoy high ratings. Nowadays instead of paddling about barefoot in grape juice, Lucy can afford to do it in money.

The old Lucy is no longer needed, anyway. In another shrewd move, her husband, having established his control over production, decided to film the episodes of the Lucy show. This was revolutionary in the era of all-live shows. But producers and sponsors were soon impressed by the technical improvement made possible by the editing of film, and wanted other shows filmed. They went to the only source of experience, Desilu. As a result, in the 1958-59 viewing season, nineteen series of half-hour shows, with a total of 500 episodes, all filmed by Desilu, have been appearing on the television networks. The company owned an interest in nine of these series. But all are sources of income; so are earlier films in which Desilu has some share, which are now being re-run.

In the fiscal year that ended last spring, some $8.1 million in revenues came from series filmed for others on a cost-plus-fee basis; and about $6.4 million from new shows in which the company had an interest. But the sale or licensing for re-runs of partially-owned series from previous years is by far the chief source of profits. New shows which the company owns have to cover their costs of production, including a contribution toward the substantial costs of studios and other properties; since early in 1958 Desilu has owned the former RKO studios in Hollywood and Culver City. Income from re-runs is pure profit.

Earnings, which were some $140,000 for the 40 weeks to February 7, 1959, are expected to grow as more and more residual income becomes available. Investors feel all the more warmly toward Desilu because Miss Ball and Mr Arnaz are foregoing, for the time being, dividends on the 565,000 Class B shares they own on a 50-50 basis, though by next January they will have the right to begin to convert these into dividend-paying common shares. It is understandable that the pair should not be particularly interested in dividends. They are in a high bracket for income tax purposes because of the $180,989 a year they each receive for acting and as directors of the company. Moreover, of the 525,000 shares offered publicly at the end of last year, 275,000 were for their personal account. Mr and Mrs Arnaz received $2.75 million before payment of capital gains tax. As the Lucy of the series might say: "No kidding."

Taking Stock off Credit

NEW YORK

WALL STREET was stimulated by the announcement on Tuesday that the Federal Reserve Board will introduce on June 15th more stringent regulations on the use of credit for purchases of securities; the fact that the new regulations, which had been expected in any case, were not clamped on overnight was psychologically reassuring and prices on Wednesday registered their sharpest gains in some time. But the volume of trading declined and may go lower after the new regulations take effect.

There is no change in the amount of cash which must be put down when equities are bought; this was raised from 70 to 90 per cent of the total value last October. But owners of "restricted" accounts—those who purchased their stocks when these margin requirements were more liberal—will have to devote 50 per cent of the proceeds of the sale of any stock, instead of the present 10 per cent, towards building up the 90 per cent margin in their account. While this may tend to "lock in" many traders with their present holdings, much of the sting of the new ruling has been removed by the important supplementary rider which waives the regulations if traders use the proceeds of a sale to buy new holdings of equities on the same day. But the current popularity of convertible bonds, which can now be had for a downpayment of as little as 10 per cent, will certainly be reduced by the decision to require 90 per cent in cash when these are converted into equities.

The board's second main objective is to discipline the "non-purpose" loans extended by banks. By requiring signatures and declarations of purpose when these are made it hopes to end the practice by which securities are presented as collateral for loans which are in turn used for the purchase of more securities. Although the stock market has not registered any dismay, the new regulations are bound to have some long-term effect on the supply of credit.

SHORTER NOTES

At last the Senate has confirmed the nomination of Justice Potter Stewart, who was appointed to the Supreme Court last October when Congress was in recess. The delay, and the questionable questioning to which he was subjected in the Senate Judiciary Committee before it recommended his confirmation, were both the fault of the southern Democrats who nowadays lose no opportunity of underlining their dislike of the Supreme Court's attitude on racial matters. They had no personal objection to Mr Stewart, whose legal ability and integrity they praised, but they complained that recess appointments such as his robbed the Senate of some of its powers.

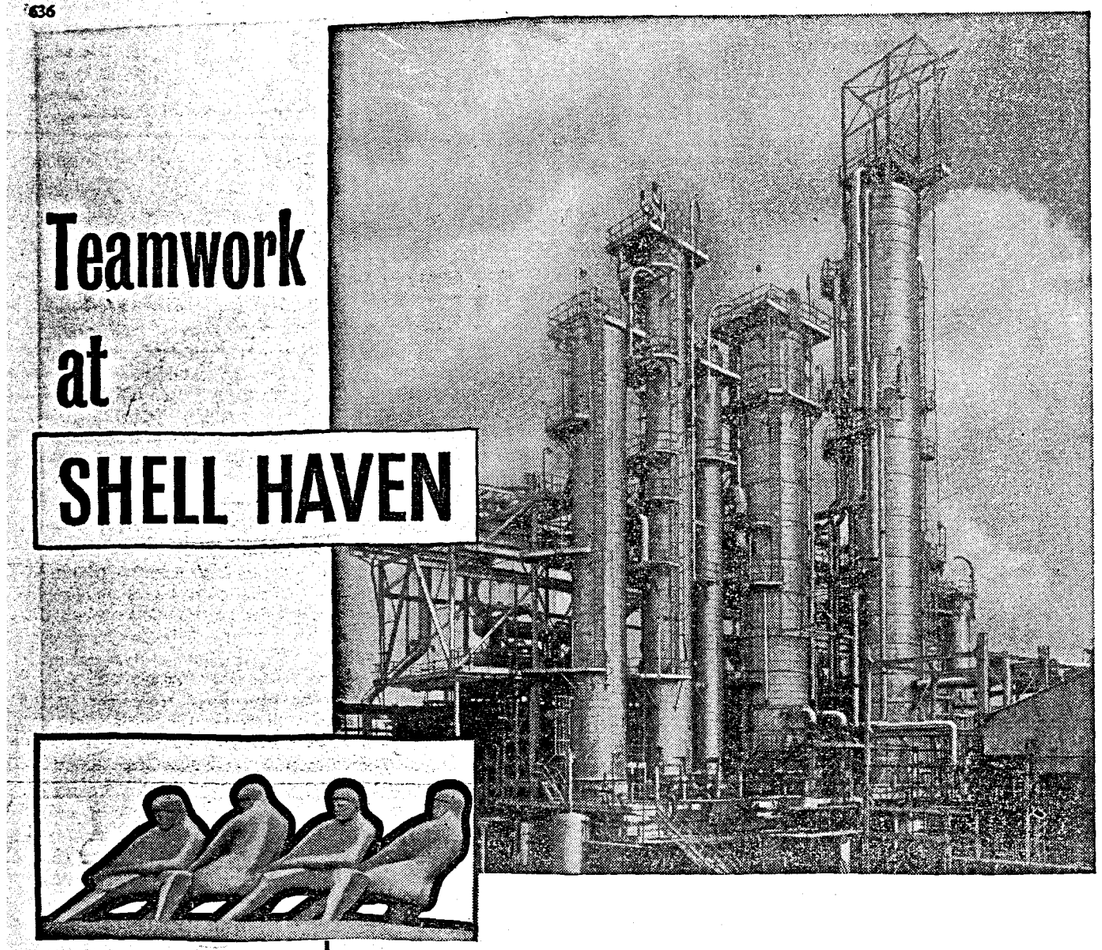
* * *

The Federal Communications Commission has at last persuaded the House Commerce Committee to agree to a limited trial of the rival systems of broadcasting pay-as-you-watch television over the airwaves. Because of the opposition of conventional television, which is supported by advertising, and of the owners of theatres and cinemas, the committee has insisted that each of the five systems be confined to one of the twenty suitable urban areas. The FCC has not yet set the starting date, but the tests may go on for as long as three years. Until one or more of the rival systems is approved, the promoters will have to provide any special equipment needed by the owners of sets to enable them to receive the programmes.

* * *

California is finally abolishing its unique cross-filing system, introduced in 1913, under which candidates in the primary elections, in which the parties choose their nominees, could enter both the Republican and Democratic contests, until 1952 without even stating their party affiliations. This meant that political issues were blurred as candidates tried to get the nomination of both parties and thus avoid a general election; both Governor Warren and Senator Knowland succeeded in doing this on occasion.

bracing as river breezes!



One man and a boat and a bracing river breeze—that's how to feel carefree, confident, king of the universe . . . that's the exhilaration you'll get from your new Zodiac Convertible, now lower, sleeker, all-new inside! With flexible Ford power you paddle gently through traffic, produce a speed-burst at will, always feel as fresh as you started . . . and you've space for six plus every all-weather comfort. Chase away those cobwebs—Zodiac style! See your Ford Dealer about this superb Convertible today. Price £873 plus £364.17.6 P.T. = £1,237.17.6

THE WORLD OVERSEAS

Lakeside Manoeuvres

FROM OUR SPECIAL CORRESPONDENT IN GENEVA

Wednesday

THE morning after the Foreign Ministers' conference began, the *Journal de Genève* reported under the heading "Movement Rather than Engagement," that "a deliberately vague initial situation had given the chiefs on each side considerable liberty." Referring to an "energetic thrust," it commented, "taken by surprise the others changed their plans several times."

All this of course referred to Swiss army manœuvres which began on the same day along the hills above Geneva. Down by the lake things were very different. For the foreign ministers the initial situation was only too painfully clear. Clinched together like heavyweight boxers, they had been left with scant room for manœuvre, let alone for surprise. Mr Gromyko's immediate attempt to push the east Germans into a front seat as full participants in a conference of six was as predictable as western reiteration of the view that at this gathering Germans have only an advisory role. The only momentary uncertainty was whether this long expected first conflict would prevent the conference from starting on the appointed day. It was clearly not possible even for Mr Hammarskjöld to say a few words of welcome at the Palais des Nations until his audience had managed to sit down, and the argument was over precisely who should sit down and how.

The only thing that seemed agreed from the beginning of this conference, which after several days' work is still without an agenda or an agreement about its potential membership and looks as if it will stay that way, was the need to keep the Secretary-General himself at arm's length. Mr Hammarskjöld has no divisions but the ministers, presumably suspecting him of a desire to wield something like papal authority over them, kept his part in the visible proceedings down to the minimum, and seemed to breathe easier once he was safely in the air on his way to South America. Even then other shadowy figures hovered in the wings—a Chinese deputy foreign minister was glimpsed flitting by, naturally by pure coincidence, while the West German foreign minister, Herr von Brentano, had arrived only to retire discreetly to a villa, whence he sallied forth wrapped in the same veil of discretion even when paying a visit to Mr Gromyko.

Dr Bolz from East Berlin, on the other hand, had taken pains to arrive before anybody else and to make the most of this first appearance of his government on a primarily western stage. However, as the Russians naturally did not want the odium of delaying the actual starting date, their attempt to get him into a seat of honour was foredoomed to failure. They accepted the western offer of "separate tables" for the two German teams just in time for the conference to sit down for its first formalities on Monday evening. With the Germans settled like two sputniks in orbit outside the round table of the four convening powers, interest shifted to the question how soon Dr Bolz would start trying to emit loud bleeps, and there were conflicting interpretations of what was called a "gentleman's agreement" between the four not to block any reasonable request to speak from the side tables. It is generally assumed that a gentleman's agreement dissolves the moment anybody ceases to act like a gentleman—which is liable to happen at any time.

Although the substance of an East German presence at the conference had been conceded long ago—and Dr Bolz, if silenced in the conference room, obviously has other means of projecting his statements from Geneva to the world through the massive concentration of correspondents assembled here—there was naturally great jubilation in the communist camp after the battle of the tables, which was claimed as a famous victory. The communist press being what it is, most of its organs passed over the fact that Mr Gromyko had not got what he asked for—a conference of six equals. The East Germans, however, equally naturally took their own particular tack. "Bonn betrays Germany" was the heading of *Neues Deutschland's* leading article—a phrase which itself betrays East Berlin's eagerness to corner patriotic sentiment. A similar desire to show that it was East Berlin and Moscow who were fighting to win Germany its due place in the sun has inspired allegations, apparently unfounded, that the West Germans had opposed a proposal to make German one of the conference's official languages.

Up in the hills with the Swiss soldiery, Tuesday, it was reported, was a day of slower tempo: "Red" forces were awaiting reinforcements: the infantry were getting steadier in the face of tank assaults: while one unit of "silent and mobile cyclists" had managed to disengage under cover of night, skilful delaying action by a force from Geneva held others pinned in position. Down in the Palais des Nations things were by then beginning to develop along much the same lines. Already the pace had slackened. Mr Gromyko was seeking to bring up "Red" reinforcements in the shape of Czechs and Poles: but this second Soviet diplomatic panzer onrush was met by well-prepared infantry, whose nerves were unshaken even when a Soviet big gun, Mr Zorin, was trundled out at the routine evening press conference instead of the normal spokesman and in effect got in an extra Soviet speech. It was a tougher one than that delivered on the same theme in the Palais by Mr Gromyko, who by Wednesday was apparently content merely to keep the Czech-Polish issue going with a brief statement best described as a pot boiler.

After that, the conference found itself actually launched upon the open sea of a general discussion—without any agenda or attempt to draw up an agenda, with the Poles and

Czechs left dangling in mid-air, with the Germans still silent at their little tables, and with practically nothing in sight that would stave off the moment when the rival formulations of proposals for Germany would be definitely presented and once again rejected. Wednesday afternoon's exchanges pointed the way to the clash to come: Mr Gromyko's objection to the West tying its proposals together in the famous "package" was countered by Mr Selwyn Lloyd's rejoinder that the problems themselves were connected ones. Mr Lloyd went on to reject the conception of two sovereign German states and to argue that the problem of reunification had to be tackled before a peace treaty could be signed.

Meanwhile "silent and mobile cyclists" had turned up as early as Tuesday in the shape of an advance party of five Czech diplomats, who had managed to get into the press building—less jealously guarded than the Palais itself, where eminent journalists had on Monday been subjected to a frisking—and spread the word that their full delegation was standing by in Prague with bags packed, waiting for the first whistle. This was at least a diversion for some of the hungry mass of correspondents who, unlike the Swiss troops up on the mountains, were not equipped with television "to observe at a comfortable distance and with a rare precision." The press is enduring the daily agony of six simultaneous press conferences held in widely separated rooms: the best one can say about this appalling system is that, in contrast to the similar arrangements at the earlier Geneva gathering, nobody has yet been seriously injured in the rush for the stairs.

A peculiarly horrible show window on a main street here is full of little wigwagging clocks like the twitching damned in some Hieronymus Bosch hell. It is fairly symbolic of the state of mind of some observers of this inchoate and unpromising conference. It is also a reminder that Geneva is not just an enchanting summery setting for a disenchanting assemblage: it is also the city of Jean Calvin, stern apostle of predestination. From the beginning of this conference, a sense of fatalism has hung heavily in the bright air over the lake. Everything that has happened so far was only to be expected. The imprisoned souls may go on twitching for several weeks, but it is hard to see how the present pains and postures can greatly affect the outcome.

Danger Signals for New Zealand's Socialists

FROM OUR CORRESPONDENT IN WELLINGTON

ALTHOUGH New Zealand does not run to nationally organised public opinion polls and similar methods of regular pulse-taking, it had the political thermometer thrust under its tongue on May 2nd when the first by-election since Mr Walter Nash's Labour government took office at the end of 1957 saw the Opposition National party candidate returned with an increase of more than six per cent in his vote. The by-election was for the Hamilton seat made vacant by the death earlier this year of Dame Hilda Ross, a minister in the former National party administration.

Dame Hilda, who had a considerable personal following outside strictly political alignments, held the seat at the previous general election by a majority of only 1,110. The National party candidate on May 2nd, Mr Adams-Schneider, who had previously stood against the prime minister, Mr Nash, in Mr Nash's own constituency, increased this majority, on the preliminary count, to 2,470 and could emerge with a majority very close to 3,000 by the time absentee votes are counted. As at the general election in 1957, it was a three-cornered contest with a Social Credit candidate providing the third corner. The Social Credit vote remained stationary.

The most Mr Nash was prepared to admit was that he was "surprised" by the result. The leader of the National party, Mr Holyoake, of course admitted no surprise at all, but called on the government to resign on the ground that it had plainly lost the confidence of the country. Mr Holyoake, an experienced politician, is unlikely to be surprised if Mr Nash takes no notice of this challenge.

IN the normal course of events one by-election victory does not make an Opposition summer, but the situation in New Zealand is hardly politically normal. Mr Nash's government is in office with a majority of two, one of whom is the Speaker. The six per cent swing recorded in the typically urban constituency of Hamilton, if repeated right through the country, would give the Opposition a majority of eight to ten seats. If all Mr Nash's parliamentary supporters remain hale and hearty, and none of them lose their seats at any further by-elections, his government is eighteen months and two budgets away from the next general election. But the omens for his future are not, at the moment, propitious.

New Zealand's first Labour government remained in power from 1935 until 1949. During that period it put most of its socialist ideals into legislative form, so that by the time it went out of office its principal concern was how to stay in power. The chief claim of the Nationalists, who remained in office until 1957, to a different label was their professed belief that private enterprise should be given more elbow room. They did something to provide for this, but at the same time they stayed on the welfare state toboggan. They lost the 1957 elections partly because they fell behind the Labour party's blatant election bidding; partly because they were showing an increasing tendency to self-complacency, which some of the electors felt bound to disturb; partly because their then leader, Sir Sidney Holland, had become sporadically unpopular with the waverers and with sections of his own party; and partly because, after eight years in office, the pendulum was swinging against them anyway.

The Labour party bid very high in the 1957 election. The estimated total cost of its offerings, which included various pensions benefits and a direct income tax rebate, was over £41 million. But, unfortunately for Mr Nash, when he came to power New Zealand was facing serious balance of payments difficulties. He immediately applied the classic Labour corrective, import controls, and was able to make out a pretty good case for doing so. But the drain on the exchequer created by fulfilling election promises was so great that for a brief period £10 million had to be borrowed from the Social Security Fund. Later, the government had to borrow £29 million abroad to keep its overseas balances from being totally exhausted, brought in a swingeing budget which increased taxation by £20 million and did such politically unpopular things as increasing the price of beer, tobacco and cigarettes, petrol and new motor cars.

During the election Mr Nash had promised that the basis of taxation would not be changed. When it *was* changed a few months later, he said that the promise had been conditional on the phrase "given normal circumstances" and claimed that present circumstances were not normal. The gloss was not well received. The government has also had to accept the blame for the irritations caused by the changeover from the former system of direct tax collection to pay-as-you-earn, although both parties were in fact committed to this change. The irritations caused by the heavy consumer tax increases were further accentuated by company and dividends tax measures which upset the commercial community, and later by arguments with the farming community over the guaranteed butter price, town milk supplies and cheese payments.

Against this background, the Hamilton by-election was bound to arouse particular interest. This was stimulated by the government's announcement, on the eve of the election, of its approval of certain local—and expensive—projects which were likely to influence local opinion. The swing away from the government appears to indicate that the baits were either not sufficient or were not taken. This is a development which may well cause some major reorganisation of New Zealand political thinking.

Comecon Progress Report

THE tenth birthday of the Council of Mutual Economic Aid (Comecon) came very soon after that of Nato. Like Nato, it is a product of the cold war. It was the Soviet reply to the Marshall plan, formed at a time when Moscow had decided to tighten its grip on eastern and central Europe. The first members of the organisation were the European countries of the Soviet block, headed by the Soviet Union; and they remain the only ones entitled to full membership. Asian communist countries, led by China, are only associate members.

During the first years of its existence, Comecon made very little progress with the co-ordination of economic policies and international division of labour that were its official objectives. Stalin, dizzy with success at home, considered that every communist country, down to little Albania, ought to be a smaller edition of the Soviet original, with its own heavy industry and with self-sufficiency as the goal. By 1950, international tension prompted Moscow to impose throughout the block much faster rates of growth in fuel and power, engineering and arms production. This breakneck pace, determined without due allowance for consumer needs, probably did more damage to member countries than the arbitrary fixing of prices for exchanges with the Soviet Union.

Stalin's successors realised that specialisation could hasten the economic development of the block. But no sooner had the first blueprints for a greater division of labour been drawn up than the whole organisation was shaken by the events of 1956. Hungary became an invalid, while Poland, glancing wistfully westwards, thought mainly of its living standards. Elsewhere, too, political relaxation was possible only if accompanied by some concessions to consumers. From an asset, Comecon turned into a liability for the Russians. Only in the last year or so have efforts at economic co-ordination been resumed. The drafting of new long-term plans for each country and several meetings of the Council (in Moscow last May, in Prague later in the year) made it possible to elaborate some common programmes. These were naturally paraded at the time of the tenth anniversary and their more interesting features can now be summarised.

Fuel resources are very unevenly divided in the area. Poland is, next to the Soviet Union, the main coal producer. Polish Upper Silesia is also apparently the most profitable place for new capital investments. Czechoslovakia and eastern Germany have offered credits to Poland for setting up new mines; the German credits are to be used for brown coal which will serve as fuel for power stations. There is already some co-operation over electric power. Most countries of the block have some common transmission lines with their neighbours. But special efforts will now be made to increase electric power exchanges between Poland, Czechoslovakia and eastern Germany. Plans have also been drawn up for atomic energy. The first nuclear station generating electricity is to begin operations in northern Germany in 1961. By 1965 Czechoslovakia should also have a similar station in operation and a couple under construction. Poland, too, has an atomic programme.

The shortage of oil and natural gas is growing acute in most countries of the block. Only Rumania, which exports three to four million tons of petroleum products to its communist neighbours, and Albania, can do without Soviet aid. Moscow has promised to increase its exports rapidly: eastern Germany is to get 4.8 million tons of Soviet crude oil in 1965 (compared with 1 million tons in 1957); Czechoslovakia is to get 5 million tons. The construction of pipelines linking these countries, as well as Poland and Hungary, with their Soviet sources of supply is among the Comecon's major projects.

STEEL output in eastern Europe is largely dependent on Soviet supplies of iron ore and these will have to be stepped up considerably if the planned targets are to be reached (Czechoslovakia, for instance, is scheduled to produce about 9.5 million tons of crude steel in 1965 and Poland 9 million tons). The Russians claim to have taken this into account in the development plans for their western ore deposits. Thus, Czechoslovakia will get over 10 million tons of Soviet iron ore in 1965, which is thrice its present volume of imports. As regards other metals, Hungary is to increase its shipments of bauxite, Poland is to supply more zinc, and Bulgaria more copper and lead, while China should gain in importance as a source of tungsten, molybdenum and tin.

Co-ordination is no longer to be limited chiefly to the exchange of raw materials. There is, for instance, to be a concerted drive to expand chemical production, with a specially important part allotted to eastern Germany. In engineering, all member countries have already agreed to reduce the number of different types of machine tools that they produce. In general, each country is being urged to concentrate on those branches of engineering for which it is most suited: eastern Germany on precision instruments and electrical equipment; Czechoslovakia on various forms of heavy engineering; Poland on mining equipment, railway stock and shipbuilding; Hungary on aluminium plants; Rumania on oil equipment and so on. The Soviet engineering industry will, naturally, remain the most diversified.

The existence of all these blueprints does not mean that integration has gone very far in the communist common market. On the contrary, the combined foreign trade turnover of member countries (including their trade with non-

communist states) accounts for only one-tenth of the foreign trade turnover of the world. Indeed, Russian commentators, conscious that previous Soviet bullying tactics have left a bitter taste, now insist that co-operation is more beneficial to other countries than to the Soviet Union, which is fairly self-sufficient. They also emphasise that the Comecon is no "supranational" planning body but merely a co-ordinating organisation based on the principle of unanimity.

Soviet writers also admit that the organisation is not yet very effective. Although it has committees dealing with most branches of economic life, agreements are still usually reached by individual countries among themselves. Barter deals, backed by bilateral credits, remain the rule. The Comecon has not yet evolved an efficient system of multilateral payments. Nor have the planners solved the problem of how to determine the efficiency of investments between countries with differing price structures, when there is no free flow of resources across national frontiers. As to the prices obtaining in this communist market, it is argued in the same breath that they both correspond to world prices and avoid world fluctuations through long-term contracts.

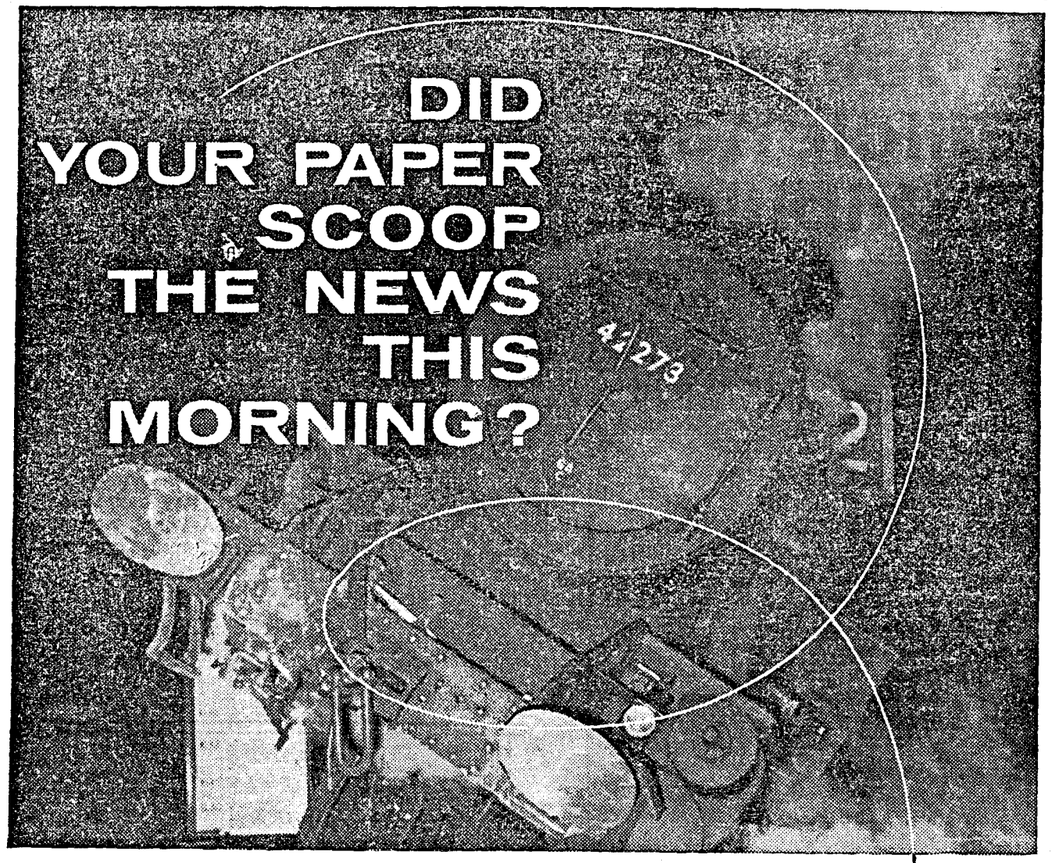
This is not Comecon's only ambiguity. It is claimed that increased collaboration should enable the block to increase its exports, particularly its aid to backward countries. But who will determine what proportion of the common resources should be devoted to aid for communist China or for the under-developed countries of Asia and the Middle East? Who will decide the rate of growth or the share of investment in the national incomes or the amount of trade with the capitalist world? Hopes are now pinned on the new method of long-term perspective planning (10 to 15 years) which should make it easier for individual countries to co-ordinate their policies.

By its tenth birthday, indeed, Camecon has only taken its first tentative steps. It is not yet what it is supposed to be. Yet it should not be underestimated. In comparing Soviet economic potential with that of the western powers, it will be increasingly important to take into account the rest of the communist third of the world. Economic ties also have their political consequences. If the communist common market should make faster progress towards integration during its second decade, it will be extremely difficult by 1970 to dissociate the countries of eastern and central Europe from their Soviet partner. This factor is overlooked in most controversies about the merits and timing of "disengagement."

French Spas in Decline

FROM A CORRESPONDENT IN THE PYRENEES

A LONELY fountain played for the delectation of a dozen fat goldfish. The tepid waters of the *Source Romaine*, reputed to cure a list of ailments as long as a Yorkshireman's arm, splashed into an ornate basin inhabited by a colony of superbly healthy newts. The thermal establishment ("an elegant neo-Hellenic construction," the guidebook said, "built in 1906") was overgrown with roses. A faded notice warned: "*Fermeture le 12 septembre.*" But this was May and in France the thermal season begins on May 15th or, at the latest, June 1st. The man at the Mairie shrugged sadly when asked when the local season began. Was it possible to visit the thermal establishment? He shook his head, and then, eyeing your correspondent's Harris Tweed jacket, said eagerly: "Unless, of course, you're thinking of buying it. . . ."



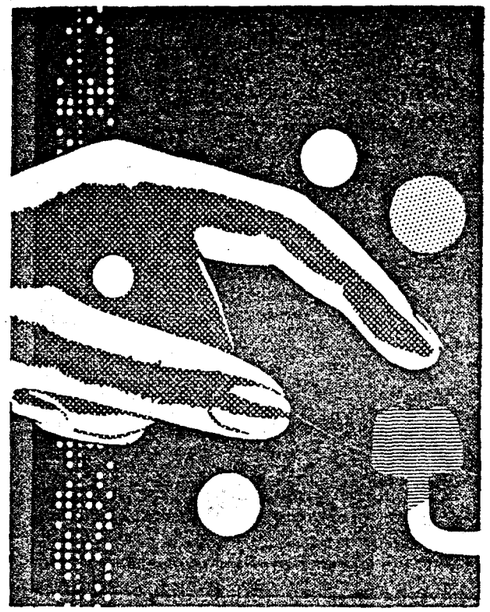
Taking the waters first became a vogue during Roman times. The fashion was revived by returned Crusader knights in search of cures for the numerous skin diseases they had contracted. One of the Counts of Toulouse, for example, was told by his doctor that he could be cured by washing in the urine of a virtuous married lady. His wife's urine having failed him, he divorced her and tried that of every noblewoman in his county. He was finally cured by his gardener's wife, fortified for the occasion with onion soup made with the water of a local sulphurous spring. Logical skin-sufferers soon dispensed with the onion-soup stage and plunged directly into the waters of what is now Ax-les-Thermes.

From the end of the seventeenth century France's health resorts attracted aristocrats, artists and churchmen as much for the opportunities they offered of hunting, feasting and flirting as by their curative claims. The remoter Pyrenean spas were greatly favoured, and everyone who was anyone seems to have had at least one *cure and* at least one *affaire* there. (Even Bismark fell in love in the Pyrenees.) Until the late nineteenth century the plumbing tended to be primitive. In 1787 Arthur Young noted that the baths at Luchon were "horrible holes . . . which must cause as many illnesses as they cure." At some resorts grass-snakes were apt to slither into one's bath down the pipe which brought the water from open springs. When this happened to the Duchesse de Berry at Saint-Sauveur in 1828 she fled into a courtyard crowded with notables; so tactful—or so spellbound—were they that it was some time before the attractive duchess realised that she had forgotten to dress.

AN American businessman once made a handsome profit by shipping coal to Newcastle (during a colliery strike). The ocean resort of Biarritz created for its Edwardian clientèle a thermal establishment into which salt water was piped from saline springs fifteen miles away—such was the social superiority of spa-water to sea-water. As recently as 1936 it was still considered more *chic* to take the waters in a spa than to wallow in them on a beach. But the postwar Frenchman, perhaps in reaction against political frustration, developed an escapist passion for sport and the sea. And the 1952-58 inflationary boom funnelled an unprecedented supply of capital into real estate. Bright new boulevards thrust out like tendrils from a score of coastal resorts. It became fashionable to build a villa by the sea for one's holidays now and retirement in due course. For the first time, spa-going was *vieux jeu*.

Scenic beauty, constant publicity and an established reputation for catering for *touristes* as well as *curistes* have enabled a few spas, like Vichy and Evian, to hold their own. But the majority have grown more and more somnolent from year to year. The prewar bourgeoisie is dying off, and the French health service has never really taken to the idea of creating a new clientèle for the spas by subsidising their treatment: such subsidies as the thermal lobby extracted from the Fourth Republic have been slashed by the Fifth. There are fewer colonial officials with long leaves and outsize livers; and the foreigners with money are now sun-loving Scandinavians and Germans whose wives

Continued on page 643



In the newspaper world the outlook has changed considerably over the last few years. Nowadays it's not so much news as features; features or comment; the news-room scoop is almost a thing of the past – an exciting aspect of newspaper life remembered only by the journalist whose career began in the heady Fleet Street days before the war. Today, alas, the scoop has become the prerogative of ITN or the BBC.

What then does today's reader require from his newspaper? Entertainment and an easily digested interpretation of the day's events? Confirmation of opinions and systems to which he has clung faithfully all his life? There are a number of newspapers which can do this for him admirably.

But a growing section of the community want more: they want comment that doesn't merely emphasize but guides; they want intelligent, well balanced leaders; reliable, corroborated information on world affairs. That is why so many are changing to *The Scotsman*; not only for its refreshing impartiality, but also for the stimulating articles on sport, farming, the arts, women's features, and almost every other topic known to Man.

Business Efficiency Exhibition

New Ideas in Office and Industry

Here is a gathering of ways and means to the complete efficiency of every business concern. Men and machines here present their case for progress—progress in cutting costs, saving time, work and money. The modern office and factory demand the economy of first-class, up-to-date equipment—everything from loose-leaf binders to electronic computers. You will find them all here, designed to give *you* perfect service.

are more interested in displaying their contours on a beach than in nursing their colons in a *buvette*. There is also the small matter of radioactivity. The French do not share the British public's concern over strontium 90 and luminous wristwatches, but spa publicists who advertise the radioactivity of their waters are occasionally asked awkward questions: one, who used to claim that his mineral water retained its radioactivity for eight months after being bottled, now says nothing for fear grocers will refuse to stock it.

And so paintwork has flaked, sheepbells sometimes tinkle where teacups once clattered, and the neo-Hellenic architecture is acquiring an Arcadian air. At least one medicinal spring has been diverted into the water-supply of a distant town—with consequences that may startle passing tourists if its diuretic qualities assert themselves. But the scenery is still there, the cooking is still good, and many visitors may well prefer the new atmosphere—and prices.

Homo Sovieticus

BY A CORRESPONDENT

WESTERN commentators on the Soviet Union veer towards one of two poles. Christians of the older generation such as Dr Adenauer and Mr Dulles maintain that the Soviet tyranny, with its theology of dialectical materialism, aims at the destruction of human personality and individual responsibility on earth and their replacement by *homo sovieticus*, a new and catastrophic anthropoid. The threat to Christian and classical values explicit in the early Bolshevism is, for these critics, still greater in the empire of Khrushchev. A government which for forty years has dispensed with religion, logic and law cannot be expected to abandon nihilism now. It is absurd, the argument runs, to suppose that a revolutionary movement will suddenly stop moving and the country which is its seat crystallise into a settled society. Only further revolutions can break Bolshevism, and it is for these that we must patiently wait. This pessimistic view receives much support from historians of Russia who point to the failure of Russian Orthodoxy to establish a Russian ethos capable of sustaining the individual; to the social and intellectual disasters of the epoch of St Petersburg, and to the fantastic sectarian Messianism of 1917. The Russian past does indeed suggest that the Russian nation is virtually incapable of taking what we call shape.

The opposite school of which Mr Kennan—and, presumably, Mr Macmillan—is a member, is in the first place sceptical of the permanence of any anti-personal system. Marxism-Leninism, it further holds, has destroyed a world but is itself impotent when it comes to building a new one. This is already known to Soviet scientists and technicians who, while they can well dispense with democracy, cannot be much longer denied the freedom to deal rationally with the economic problems of Russia. Therefore the party must gradually give ground to the men who are competent to provide the actual goods and services necessary to the welfare of Russia. The demand of the elite will prove irresistible because it corresponds exactly with the desire of the mass: that terror and the "industrial nomadism" of Stalin should give place finally and for ever to a genuine citizens' republic and a settled style of life.

The "pessimists" demand an implacable hostility to the Kremlin; the "optimists" adopt a more relaxed attitude in the hope that both the Soviet government and people may be influenced by their meetings with westerners. Herr Klaus Mehnert* inclines towards the hope of evolution from the present type of collectivism; but he qualifies it, at least for the reader, with a wealth of anecdotes demonstrating the congenital Russian addiction to a kind of masochistic inferiority in personal life. Herr Mehnert's work is extraordinarily authoritative; the author is tied to Russia by a family association which dates from 1828, the year in which his great-grandfather left Germany to take up the position of *Kammermusikus* in the Bolshoi Theatre in Moscow. The Mehnerts never married Russians and, as *Reichsdeutsche*, returned to Germany in 1914. The author's father was killed in Flanders and his two brothers lost their lives in Hitler's Russian campaign. An *émigré* in Nazi times, Klaus Mehnert is a middle-aged intellectual journalist who writes with great knowledge and detachment. His opinions, derived from twelve Russian journeys between 1929 and 1957, have real weight. His book altogether lacks the equivocal tones of the retired middle-European revolutionary turned sovietician, or the sub-hysteria of some western enthusiasts for whom Russia to be enjoyable must remain an impenetrable mystery.

"Der Sowjet-Mensch," the author claims, is the work of a general practitioner and so eschews all specialised diagnosis. It tackles the central problem of racial character. Herr Mehnert advances the equation: Soviet Russian = pre-1917 Russian minus X plus Y. He believes that the Kremlin has failed to break the family, but will continue to try to do so; that there is little respect in the Soviet Union for public property; that the elite of state-capitalism has much the same harassed existence as the first Puritan capitalists of the 17th century; that Mr Khrushchev, whose popularity depends on his championship of the little man, nevertheless hesitates to approve of attacks on party careerists; that the critical habits of thought indispensable to material progress cannot but extend to the sphere of politics; that Russians are demanding a religious outlet more and more. At the same time they remain faithful to the early Bolshevik myth of the sanctity of technical development; this *Aufbaudynamik* derived from the economic *tabula rasa* of 1920 was stimulated by the destruction of the last war, and now gives drive to Soviet imperialism in which it is allied to the Russian sense of mission to humanity.

HERR MEHNERT is most telling in his description of Soviet patriotism. This survives the discontent of almost all classes of the population. A Harvard study group decided that about three-fifths of the privileged class was content. The *Oberschicht* inevitably considers that the Soviet state is *its* state; but nobody else does. The Soviet factory worker is praised to the skies, knows that he is being cheated, but is still proud of his official prestige. Student youth is mad keen to know "the other world," more than suspects its superiority, but at the same time adheres to the official view that the West is degenerate, viewing it as a kind of Hellenistic world to be subjected to its Rome. Even the deprived peasant shares this inert patriotism.

Klaus Mehnert's examples indeed give the impression of

* "Der Sowjet-Mensch." Deutsche Verlags-Anstalt, Stuttgart. 1958.

an intellectual and emotional Bedlam, which goes far towards destroying his own contention that Bolshevism has added anything permanent or positive to Russian nature, whatever it may have subtracted from it. The Y of his equation apparently boils down to the acquired familiarity with organised industry. He greatly helps us to understand the mental confusion of Russians and to respond to his final appeal for tolerance and good-will in our relations with the Soviet Union. But the West is entitled to ask how it can usefully deal with a people whose nature is so broad that it embraces all conceivable contradictions of thought and feeling. The Dostoevskyan chaos that delighted the Bloomsbury of 1900 is no joke when it threatens whole continents. Westerners can, it seems, only hope that the Soviet elite will, miraculously, adopt an alien aspiration: the quest of truth, justice and individuality. This still half-educated group might well remember the judgment of a great nineteenth-century Russian philosopher, Vladimir Solovyov:

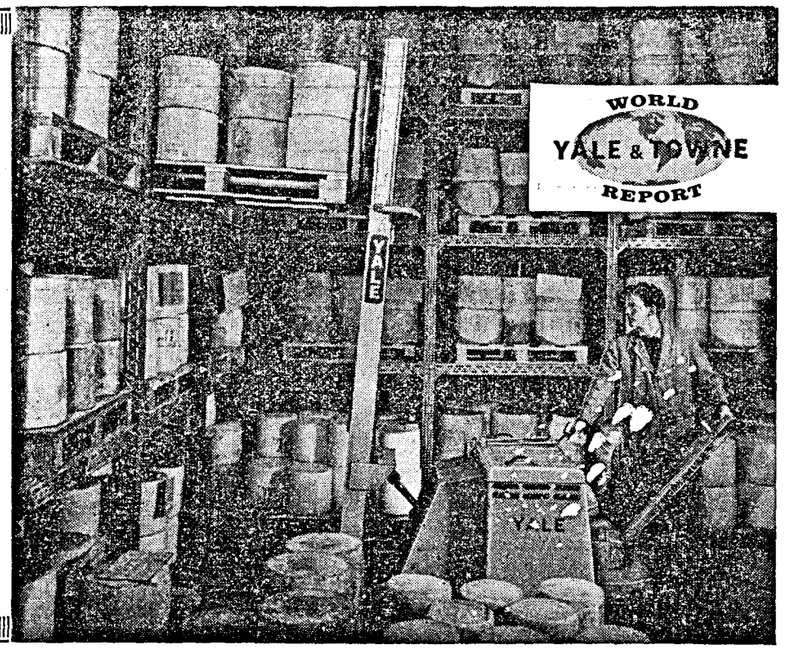
> The Russian people have some important virtues in relation to the western races. They are the virtues we have in common with our neighbour, Asia: contemplation, patience, obedience. It was through such virtues that our spiritual metropolis, Byzantium, lasted so long, but they were not able to save it. Which means that those eastern virtues and characteristics are not sufficient in themselves. They can only protect a great nation if they are joined by another element, an element which is not foreign to Russia but which, as a result of historical conditions, has only been able to develop feebly among us: I mean the unconditional awareness of human dignity, the fundamental idea of an independent and personally active personality.

Gatt's Controversial Bag

FROM A CORRESPONDENT IN GENEVA

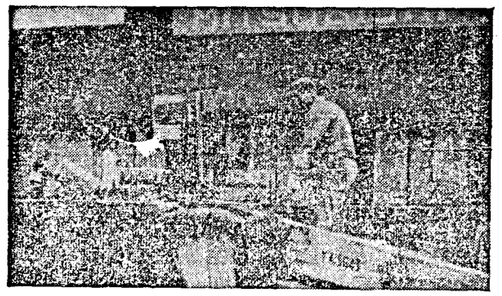
THE General Agreement on Tariffs and Trade began its 14th Session in Geneva this week with a bag of controversial subjects. At the opening meeting Canada and the United States pointed out that external convertibility showed the strength of the balance of payments of countries which had made the move. This was evidence that dollar discrimination for domestic buyers, too, was no longer justified; they therefore hoped that consultations with France, New Zealand, South Africa and Britain would lead to rapid and far-reaching import liberalisation for dollar goods. The representative of the International Monetary Fund took care not to commit the fund and stated that the effects and consequences of non-resident convertibility were still being studied. Under the IMF rules, some time is likely to elapse before a *de jure* situation of discrimination arises.

No less controversial are the issues still to be discussed at this Gatt session. Past experience has shown that the articles of agreement are full of loopholes; in particular, it is possible to nullify tariff concessions by other sorts of action. A preparatory committee which met in March accepted a British proposal that regular consultations and confrontations might take the place of missing rules. Each country, it is suggested, is to present itself in turn in order to explain, and if possible justify, its protectionist measures. This combination of self-criticism and confrontation is designed to shame sinners into reformers. Discussions are to concentrate on items which are important in international trade and particularly on the effects of agricultural policies on international trade and expansion. Should these confrontations prove ineffective, they will at least have served to collect relevant information on protectionist measures other than tariffs; Gatt may then use this knowledge to examine what other steps might be taken. The agricultural countries have won a partial victory at least in the committee stage, by Gatt's decision to tackle the problem and not to give in to those countries—mainly Germany—who wish to alter Gatt rules in favour of agricultural protectionism.



The meeting will also discuss German import restrictions on agricultural and industrial goods, the latter mostly optical and photographic items on which discrimination is mainly against Japan. The gravity of this problem has at last penetrated to ministerial level in Bonn, where a decision has been taken that may be acceptable to Gatt. Should Germany leave the dock chastened, other countries that have introduced external convertibility, but still maintain import restrictions, will have a tough time.

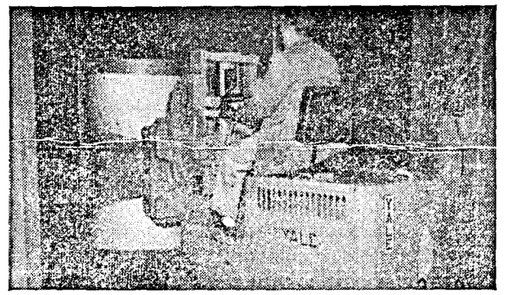
THE slow wheels of international collaboration have now also reached the problem of falling exports from the underdeveloped countries. Something is being done to overcome their feeling that Gatt is a rich man's club. It has been suggested that these countries should submit detailed complaint lists about hindrances to their trade and that Gatt should search for ways of expanding existing industries or starting new ones where these countries can be economically efficient producers.



As if this were not a full enough programme, this session is also discussing the problem of membership of state trading countries; a form of association for Jugoslavia will be proposed and probably accepted. Poland's application for full membership is less likely to be accepted. Poland has not even got a tariff, though it is willing to produce one as an entrance fee. The difficulty is that tariffs in state trading countries are meaningless; so, therefore, are tariff concessions. It has been suggested that Poland may make other trading concessions to balance trade and tariff advantages gained from the other members of Gatt. But if a state trading country is allowed to barter non-tariff concessions, why should not others do the same? This would bring a new principle into Gatt negotiations and will need careful consideration before it is adopted.

Serious difficulties have arisen among the contracting parties over their principal business—further tariff negotiations. The American offer of a general round of negotiations, which should have been music in many ears, had been given the cold shoulder by some countries. The Six, and particularly Germany, seem to make further concessions to the United States in their own markets at a time when they are doing quite well in the American market. The common market tariff, which must be presented to Gatt and negotiated with it before 1962, is also creating difficulties. The Six have not yet agreed on it fully themselves. On May 5th, however, the Six agreed to press forward both with the negotiation of their own tariff and with negotiations with the United States. A last-minute attempt was made to present the conference with a detailed time table and tariff negotiations with the common market countries are now scheduled for September, 1960; if they are concluded in time, a general round of tariff negotiations, including the United States, is to begin in January, 1961.

YALE LIFT TRUCK SPEEDS CROWDED AREA STACKING



KIRKBY, ENG. – These zesty cheddar cheeses go through the factory untouched by human hands. Yale Worksavers help maintain this hygienic standard as part of a day's work. These clean, fumeless electric trucks bring raw materials to storage – stack ageing cheeses on racks – speed finished products to market. What Yale Worksavers do for cheeses, they can do for practically any product in loads up to 7500 lbs. Worksavers are light and compact – can manœuvre in crowded, narrow areas – on ramps or low-load floors. Yet they have the power and durability you expect from heavier trucks. Complete line includes fork, pallet, platform and tractor models.

YALE PETROL TRUCKS MOVE THE GOODS THAT MOVE WORLD TRADE

YOKOHAMA, JAPAN – Bales of raw silk are sped from warehouse to quay by this Yale petrol truck. From warehouse to quay – from quay to ship – it's the same the world over as Yale trucks expedite goods in world trade. In factories, too, durable Yale petrol trucks save costs, time, space and labour as they move loads ranging from 2000 to 20,000 lbs.

YALE ELECTRIC TRUCKS HANDLE UP TO 200,000 LBS.

CHICAGO, U.S.A. – Stacking and lowering giant rolls of newsprint are easy tasks for this mighty Yale electric truck. With capacities ranging from 2000 to 200,000 lbs., Yale trucks have a wide range of handling applications. Specify Yale electric trucks where cleanliness and economy of operation and maintenance are paramount.

• Yale makes the world's most complete line of Petrol, LP-Gas, Electric and Hand Lift Trucks.

• All Yale Industrial Lift Trucks are uniformly high in quality, wherever manufactured.

• All Yale equipment available in currencies of the free world.

• For further information contact your Yale Sales and Service Representative—located in Principal Cities of the World.

THE BUSINESS WORLD

Capital Questions

PUBLIC anxiety that British industry is being sold out to Wall Street is nothing new. In the late twenties, when American investors developed an interest in European securities that they were to regret for many years afterwards, a number of important British firms restricted foreign residents from holding their shares. Today, American capital is once more being attracted to Europe, on seemingly more solid considerations than a generation ago. And a mild financial xenophobia is being whipped up again; British financiers are bad enough, but American money is surely beyond the pale.

The economic issues in these "buying in" or "take-over" situations rarely get a look in. The fact that an increasing flow of American capital, apart from benefiting particular industries, has done much and could do more to ease the strain on Britain's external payments since the war is pretty well ignored by those who criticise it. The question raised by the recent acceleration of American investment in Britain is not how it should be checked but what new horizons it can open up for us.

The Government's stand against agitation by a strange combination of Labour MPs and some City interests has so far been commendable. Here the economic issues have carried the day. But the economic issues should not invariably be treated as paramount. Suppose a transatlantic bid was made, say, for the British Motor Corporation. Should that secure official approval, given the question of prestige (not itself unimportant) and the possibly damaging effects on British car exports and research? On past experience, American controlled firms export at least as much as British firms and probably draw on better research facilities. But the research is usually done in America, and although this may not be so important in the established light industries, it would be a different matter if American capital were to take over a big proportion of such new fields as electronics and nuclear power. Again, the effect of American control in British industry upon future export performance might become very different if control extended to major units in certain industries; but without believing in the unlimited application of *laisser faire*, one can argue that so far American investment in British industry attracted by the pull of the market is more likely to be desirable than not.

That, broadly, seems to be the attitude of the Government, which actively welcomes the establishment of new enterprises by American firms and keeps a discriminating eye on take-overs. Britain has succeeded in attracting a very large share of American direct investment in Europe. The European common market may already be making it more difficult for this country to maintain its attraction—but as a trading and manufacturing location Britain retains some advantages, and for some industries preferential access to markets in the Commonwealth and sterling area is still important. Official attitudes to portfolio investment by non-residents are rather more lukewarm; the buying of existing shares by Americans on the London market injects no new technique into British industry and creates no new employment opportunities; officials also tend to be obsessed by the fear of sudden withdrawal. Yet capital inflows of this nature ought to be equally welcome.

In recent years Britain has undertaken overseas investment of around £200 million a year by private firms and individuals. These private exports of capital could not easily be cut down; they consist largely of the ploughing back of overseas earnings, and the great bulk of the investment is in the overseas sterling area (with Canada as the main exception), free of all official restrictions. In addition, the government has to pay off the postwar North American loans, and last summer it took on new obligations to lend to the Commonwealth. Finally, Britain has always to be prepared to meet drawings on the accumulated sterling balances. All these heavy commitments on capital account call for a substantial surplus of current earnings to prevent a strain on sterling. But the capital burdens are not a kind of deadweight; they help the export trade, and they build up future assets, or reduce liabilities. Foreign capital thus reduces the net export of capital without

disturbing the established flow of investment overseas.

Two questions of policy therefore arise. What steps can be taken to encourage more foreign investment? And would more capital coming in make it easier for British residents to move their capital around the world? The Government may feel that it can do little specifically to attract more foreign capital, since it has virtually no barriers to take down. The one important discouragement to the foreigner—apart from high taxation—is that he has no automatic right to repatriate his capital through the official market. At present the rate for security sterling in the unofficial market is very close to the official rate for external sterling. But foreign investors cannot count on this and Treasury ministers have made it clear that the merging of security sterling with external sterling does not stand high in present policy. Other things come first—including greater freedom of current payments, particularly for dollar imports. It is difficult to quarrel with that order of priorities.

One form of external disinvestment gives no such hostages to the future, and that is borrowing abroad by British firms or institutions. The authorities do seem to have undergone a change of attitude on this matter since the end of the credit squeeze at home; one sign of this was the recent Swiss issue by British Petroleum, and another was that the Government would have permitted the London County Council to borrow its £25 million abroad rather than in London. The LCC felt unable to accept the exchange risk, as would most organisations that do not earn income abroad. But those who can go overseas when credit conditions are propitious should be free to do so.

Can British residents be permitted to invest freely abroad, rather than being confined to the existing book of foreign securities in London or having to run the gauntlet of exchange control for projects of direct investment outside the sterling area? One increasing pressure in this direction may be exerted from Europe. The six countries of the common market have been quick to organise co-operation between banks and stock exchanges; the capital markets of the Continent will undoubtedly draw closer together. Many people in the City feel that Britain should not be left out. But the authorities probably see two basic difficulties. The first is that a general freeing on capital account, affecting either British residents or foreign residents, could not be limited to transactions with Europe alone; an open door here would quickly open routes to the dollar area. Secondly, even if interest rates in London were kept high in relation to leading Continental centres, London's more organised capital market would inevitably promote a net outflow of funds.

For these reasons, even a government with ideas of economic freedom close to its heart is likely to decide that export of capital must remain controlled—even though more applications can be let through. The considerations would presumably be transformed if the relations of the dollar and European economies were to undergo a permanent change—so that in the years ahead the net pull of market and political forces moved capital from America to Europe and not the other way. Time is needed to show whether the recent eastward movement across the Atlantic is a change in the long-term trend. Even if the inflow of American and other capital to Britain should reach substantial proportions, the central exchange reserves must have their full share; they are still below the level that would give British economic policy effective freedom of manœuvre. But the underlying approach to international movements of capital should always be a liberal one, so that more can come in and more can go out.

No Gear Lever

Smallish British cars will be on sale with automatic transmission this year. For the enthusiast, the systems on offer are outlined technically; the ordinary motorist is given an idea of the price.

WHEN the Dutch baby DAF car went into production last month it brought automatic transmission for the first time on a low-priced European car. Two British cars and one Continental in the 1-1½ litre group are expected to appear with automatic transmissions this year, employing systems designed in Britain—the Hobbs "Mecha-matic," the Smith's "Autoselectric," and a version of the Ferguson transmission. Designers are hoping to put automatic transmission into cars as small as one litre; cars of one to two litres totalled over 2 million of the 3¾ million produced in Europe in 1958.

Automatic transmissions available on British cars in recent years are American designs, unsuitable for cars smaller than 2-2½ litres. The General Motors-designed "Hydramatic" is made by Rolls-Royce for their own use. Since 1956 Borg-Warner have made their automatic transmission in Britain as an optional extra to most cars of over two litres capacity and their output has been rising by 50 per cent annually in the last few years. About a fifth of some popular models are equipped with automatic transmissions.

Most European motor manufacturers seem now to have decided that they ought fairly soon to be ready to introduce automatic transmissions on their small cars. The recent success of car exports to the United States, where sales are greatly helped by automatic transmission, and the certainty that new American small cars will have this extra facility, have perhaps influenced their attitude. Semi-automatic transmission, as introduced a year or two ago, seems broadly to have failed to attract the public.

It is much more difficult to make an automatic transmission for a small car than for a large one. It has to achieve a greater degree of torque multiplication than is needed on a large car because the small one has less power to spare; yet it must also be lighter. The American transmissions, based on torque converters or hydraulic couplings, are too heavy, and not efficient enough. A torque converter transmits the drive by pumping the oil with which it is filled from the impeller, connected to the engine, to the turbine, connected to the back wheels. Two different courses have been followed by those developing automatic transmissions for small cars. Some have sought to improve the efficiency and reduce the weight and cost of the torque converter: others have sought different means of making transmission automatic. The Ferguson transmission is an example of the former approach; those made by DAF, Hobbs and Smiths are examples of the latter.

The **Ferguson transmission** employs the basic designs of Count Giri de Teramala. It relies on a torque converter alone for all normal driving; but an epicyclic reduction gear under the driver's control is interposed between the engine and the converter to be brought in when exceptional performance is required. It overcomes one of the basic limitations of the torque converter: that it normally restricts the engine to about half its maximum speed. The Ferguson converter alone gives a range from direct drive to the axle to three times the axle ratio—equivalent to say a "top gear" of 4 to 1 and a "bottom gear" of 12 to 1. The extra gear increases this maximum "torque multiplication" to nearly 4 to 1, giving a "bottom gear" of say 16 to 1, i.e. a range of ratios comparable to that provided by a normal gearbox but with infinite graduations. The efficiency of this torque converter at twice the axle ratio—one often used, roughly comparable to second gear—is about 70 per cent; with the extra performance gear in use the efficiency at this ratio is over 80 per cent. And efficiency in "top gear," when the converter acts as a hydraulic coupling, is 95-96 per cent. The company claims that "fuel consumption is virtually the same as with a normal gearbox, and if the 'performance gear' is used performance, too, can equal that obtainable by an expert driver from a normal gearbox." The torque converter is simple in design, and weighs little more than that of the components it replaces. It can be applied in principle to any size of car.

The transmission fitted to the 600 cc Dutch DAF car was described in detail in *The Economist* of October 25, 1958. Though completely different in design from the Ferguson, the **DAF transmission** does resemble it in giving a stepless drive. It uses drive by two belts with variable-diameter pulleys to give changes in reduction ratio between a top gear of 4.4: 1 and a lower limit of 20: 1. On the DAF the front pulley diameter is controlled by road speed, through centrifugal weights, and by throttle opening, through variations in inlet manifold vacuum. The DAF transmission is even lighter than a conventional gearbox, but it may be restricted to small cars.

The British **Hobbs transmission,** like the DAF, is suitable for small cars, but can be used on cars of the biggest size. It comprises a compact three-speed epicyclic gear train, the gears of which are engaged by three plate brakes, with two more plate clutches mounted on the flywheel. The first transmits power from the engine to the indirect gears and takes up the drive from rest; both clutches are engaged for the fourth, top gear, when the engine is connected direct to the propeller shaft. The second clutch operates alone for reverse. The engagement of all the clutches and brakes, and so of the gears, is carried out automatically by hydraulic pressure; gear changes occur at pre-determined road speeds, chosen to give a smooth and economical performance. But if the driver uses full throttle, the gear changes will be delayed until the engine is near its peak speed. In addition, the driver can override the control unit if he wishes to remain in one gear. This transmission weighs little more than a normal four-speed gearbox and it involves no loss of efficiency. The makers claim that acceleration may even be improved and fuel consumption reduced.

Smiths Motor Accessories' transmission, is based on the use of two of the magnetic particle clutches invented some years ago by Jacob Rabinow in America and developed by Smiths in this country. These clutches work on the fact that a special metallic powder "freezes" solid when an electric current is passed through it. Thus the clutches can be arranged to take up the drive when current is supplied to them. The two clutches are arranged so that one takes up the drive from rest and transmits power to the indirect gears, and the other provides a direct drive for top gear. The gearbox is basically a normal three-speed synchromesh box but with constant mesh gears. Control over gear-changing is by an electric system, influenced in the normal manner by changes in road speed and throttle opening but giving the driver an overriding control to keep second engaged. Performance is comparable with a normal three-speed gearbox, but the weight is 60 to 70 pounds greater.

The fourth automatic transmission being developed in Britain for small cars is that of the **Motor Industry Research Association.** In this a rotary displacement hydraulic pump and motor replace the impeller and turbine of the normal torque converter. To increase efficiency only a part of the power is transmitted through the hydraulic system; the remainder is transmitted through epicyclic gearing. In the lowest and highest ratios, all power is transmitted mechanically. This transmission thus gives a high efficiency; it is also compact and should be little heavier than a normal gearbox.

THESE are some of the transmissions now available to the motor industry. How much will they cost? Most of them will inevitably be more expensive than simpler transmissions but cost should fall as production rises, and heavy development costs are paid off. The Borg-Warner adds about £110 to the basic price of a 2½-litre British car; in the United States, with much longer production runs, it adds about £70. All the small new transmissions ought to be cheaper to produce in comparable quantities than the Borg-Warner. Economies of scale in production cost would probably

be greatest with a torque converter, which can be most cheaply made from sheet metal pressings. Fergusons believe that if production could reach hundreds of thousands annually, the cost of their transmission should be little more than that of a normal transmission: but initially, produced in relatively small volume, it might add £50-£60 to the price of the car.

The Hobbs and the Smiths transmissions should be simple to tool. Tooling costs for the Hobbs compare with those of a normal gearbox; produced in normal quantities it should cost less than twice what a gearbox for a 1½-litre car costs, which is about £30. The Smiths transmission may gain some benefit in production cost from having only three speeds and using normal synchromesh gearing; but it contains more metal.

The DAF should be cheaper than a normal gearbox. Tooling costs for pulleys and belts present no problem; the attractions of this system for a company entering car production are obviously great. Its advantage would be smaller for an established producer who would have to change the design of his car to use it, but it may well gain imitators—after they have seen how it works.

It should thus become possible straight away to buy a small car with an automatic transmission based on belt drives for no extra cost, and eventually, if the volume of sales became very high indeed, to buy a 1-1½-litre car with other kinds of automatic transmission for little additional outlay. But initially the car manufacturers are likely to charge an extra £75-£100 for an automatic gearbox and £50-£60 for a torque converter, until production reaches satisfactory levels. How soon the extra price will be reduced will depend on demand; and this will depend not only on whether individual drivers like automatic transmission, but on whether business buyers consider that the reduction in maintenance costs will more than offset the increased capital outlay. This point has led the taxi owners to choose it for the new London taxis. Something depends, too, on how far these extras are reflected in trade-in values.

But the optimism of the makers of these new transmissions rests on their belief that once a driver has become accustomed to automatic transmission, he—and more especially she—will not willingly return to changing gears. They thus expect a cumulative rate of growth in the market towards the 80 per cent of total sales achieved in the USA. Part of this growth should be in exports; this is one of the few fields in automobile engineering where Britain is ahead, and it is not surprising that many Continental manufacturers are showing interest in these new British systems.

BUSINESS NOTES

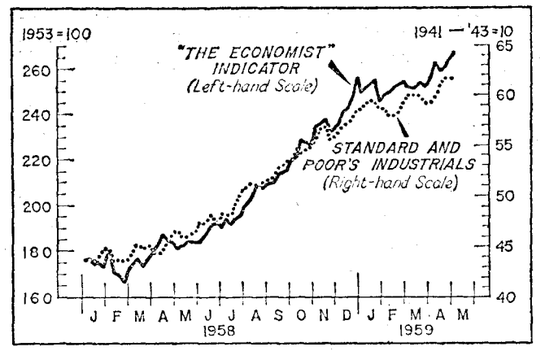
THE ECONOMY

The Chancellor's Hopes

"WE are at present well below the level of demand," said Mr Heathcoat Amory last week to the American bankers, "which would ensure a satisfactory high level of employment of labour and of utilisation of the national productive capacity." He added—to the bankers and later to the industrialists and trade unionists of the National Production Advisory Council for industry, in speeches that bore some marks of personal cerebration rather than Treasury briefing—that the Government had no intention of restoring the pressure of demand that was experienced in the boom. But he did not exaggerate the importance of the control of demand, "if the competitive process by which wages and other incomes are raised continues completely unrestrained." People nowadays, and in his view reasonably, expect governments to maintain a high and stable level of employment: "Avoiding boom levels of demand is one thing: accepting heavy unemployment would be quite another."

This acknowledgment of the process of cost inflation, which his predecessor was committed not to recognise, led the Chancellor to orthodox conclusions:

> The vital need is to introduce into the process of wage negotiations a fuller appreciation of the broad social and economic consequences to the nation of decisions taken in a particular industrial sector.



Mr Amory accepted the likelihood of an increase both in the volume and the price of imports before there occurs a corresponding gain in increased exports. But he felt that last year's fall in import prices could be replaced by an increase in output per man: even the short rise in output of last autumn had increased labour productivity by about 2-3 per cent in industry, and outside industry the output of services was going on rising. This could help hold costs stable. "Where unused capacity has been putting up costs, its fuller use will now reduce them. This year, in fact, presents industry with a remarkably good opportunity to get prices down."

IN THE MARKETS

The Two Streets

SINCE the budget the main prop sustaining industrial equity prices has been the more liberal distribution policy of many of Britain's leading companies. That liberality is as much the product of the introduction of a flat rate of profits tax more than a year ago as of the recent reduction in income tax. Its effect on share prices can be illustrated by the movement of *The Economist* indicator over the week, during which, after some earlier speculative exuberance, the market paused for breath. Even so, the indicator edged up to a new peak, from 267.0 to 267.8, but the average yield offered by the underlying securities also

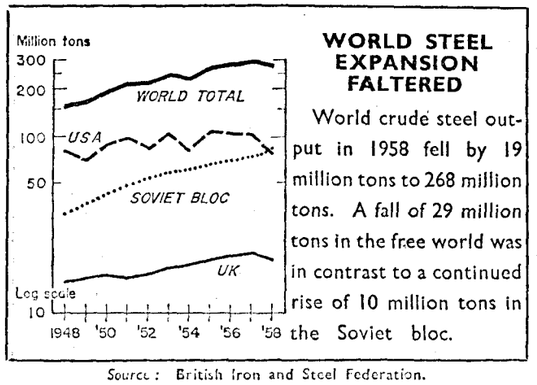
rose—from 4.93 to 4.97 per cent—because of the higher dividends just declared. Thus the floor beneath a market in which not much stock is coming on offer is sound. Investors are turning their attention towards the equities of the second, though not much less solid, rank behind the front rank of blue chips.

Wall Street, too, paused and when American investors reassessed the prospects for electronic stocks, in which there has been much heady speculation, the Dow Jones average dropped back to 615.64. But here, as in Throgmorton Street, buying is not restrained for long and when the Federal Reserve Board's new rules on the use of credit for stock market trading proved to be milder than had been expected, steel and motor stocks led a strong rally that carried the Dow Jones average up to yet another peak, of 633.05. That sent British stock prices up again on Thursday. At the moment each street seems to be gaining confidence from the behaviour of the other.

BUILDING SOCIETIES

The Rates Come Down

THE Building Societies' Association has not waited long before recommending that its members should reduce their rates on mortgages and shares. A month's test of the reactions of investors to the possibility of a reduction has been enough, and it has now firmly recommended a reduction of the rate on new mortgages advances from 6 to 5½ per cent "not later than July 1st," with a corresponding reduction on existing mortgages as soon as practicable after that date. The net rate paid on shares should be reduced from 3½ to 3¼ per cent as soon after June 30th as each member society finds it "desirable and practicable."



BUILDING SOCIETY TRENDS	BSA MEMBERS: Fourth quarter, 1958 (£,000s)	BSA MEMBERS: First quarter, 1959 (£,000s)	HALIFAX: Three months to Jan. 31, 1959 (£,000s)	HALIFAX: Three months to Apr. 30, 1959 (£,000s)
Shares and deposits received	107,122	117,792	21,980	23,290
Shares and deposits withdrawn	51,292	56,919	14,720	18,310
Net investment	55,730	60,873	7,260	4,980
Advances made	74,912	68,528	16,720	17,990
Advances repaid (with interest)	75,985	68,296	13,720	13,260
Cash and securities	311,066	336,696	71,900	67,910
Total assets	1,956,979*	2,046,869*	389,860	395,110

* Representing about 75 per cent of the assets of all building societies.

Three factors have prompted this decision. First, the inflow of funds, which as the table shows was very high in the first quarter, continued satisfactorily in April after the warning about a probable reduction in rates. The money coming in to some of the bigger societies has been almost embarrassingly big and they have become increasingly anxious to advance more on mortgages to earn a satisfactory margin for reserve appropriation. Secondly, the House Purchase and Housing Bill will soon receive the Royal Assent and the Government scheme to inject money into the movement for mortgages on older properties may become operative by the end of June. Thirdly, the composite rate of tax paid by the societies on behalf of their members has come down, following the reduction in the standard rate, from 5s. 7d. to 5s. 1½d. in the £—a bigger drop than had been expected, which appreciably helps the margins available for reserve appropriation.

The flow of new funds to the small local societies has been less strong, and they have not been anxious to reduce their rates. The association gives them some latitude (which the bigger ones may ignore) in deciding when to bring down their rate on shares. They could, if their reserves are strong enough, bring down their mortgage rate on July 1st and then wait for a few months before reducing that rate.

The Halifax, which is not a member of the association and which has been charging 5½ per cent on mortgages and paying 3¼ net on shares since December, will no longer be out of step. It has suffered little from its independent stand and, indeed, since the association indicated that a reduction in rates was probable the flow of money into its shares has been particularly strong. The Halifax is back in the race as a formidable competitor and it can come into the Government scheme unprejudiced.

WORLD STEEL EXPANSION FALTERED

World crude steel output in 1958 fell by 19 million tons to 268 million tons. A fall of 29 million tons in the free world was in contrast to a continued rise of 10 million tons in the Soviet bloc.

Source: British Iron and Steel Federation.

STEEL

Output Improves

DURING the first quarter of this year merchants and consumers continued to reduce their stocks of steel, but not by as much as they had done in the three months before; actual consumption of steel was a little higher too; so customers therefore bought about 8 per cent more steel. This improved level of delivery was however still 17 per cent below the high rate reached at the beginning of 1958. So far as production was concerned, the slight improvement that began in March continued last month, with crude steel output averaging 387,300 tons a week, only about 5 per

cent below the level of April last year. Demand remains strong for sheet and tinplate, and is improving for most light steel products and some heavy sections; but plate demand is as slack as ever.

HOW STEEL STOCKS HAVE FALLEN

	Finished tons	Finished tons
Consumers' and Merchants' stocks at March, 1958		4,641,000
Reduction 2nd quarter, 1958	80,000	
,, 3rd ,, 1958	260,000	
,, 4th ,, 1958	325,000	
,, 1st ,, 1959	200,000*	
		865,000
Stocks at March, 1959		3,776,000

* Provisional.

The Iron and Steel Board's preliminary estimate that stocks of steel fell by another 200,000 tons would still leave merchants and consumers with 3,776,000 tons of finished steel in hand. This still represents perhaps 15 weeks consumption at the recent rate of use of steel, but the actual amount in stock is now lower than since mid-1956, and certain consumers at any rate have clearly now decided to reduce their holdings no further. This comparison of stocks against weekly consumption admittedly covers a vast variety of kinds of consumer, and of different qualities and sizes of steel. Even so, one meets steel merchants and small-scale consumers who are simply incredulous when one talks of three months' steel in the average consumer's hands, since they have recently been relying on deliveries in about a fortnight or so. Clearly, among large-scale users of steel there must be many who hold vast tonnages and have not allowed disinflation to change their habits.

Competition Abroad

THIS moderate but firm recovery in steel orders at home has been paralleled by some improvement in export orders. The main flow of American buying in the world market, to forestall a steel strike in the United States, has now subsided, but the business done then is now beginning to show in figures of export deliveries. Britain's deliveries in March rose somewhat, though Continental exporters probably had the main benefit from this special transatlantic buying. Their quotations have risen by about 10 per cent in the last few months, though they remain sharply competitive with British export prices, which were not reduced nearly as far last year.

STEEL EXPORT PERFORMANCE

(Monthly averages: '000 Metric Tons)

	1956	1957	1958
Britain	245·2	279·0	239·9
Benelux	510·0	499·1	506·5†
France-Saar	429·8	408·1	407·8
Western Germany	353·9	472·4	432·6
USA	365·7	491·5	242·7

† 11 months only.

At the end of last year, allowing for the difference between Thomas and open-hearth steel, steel exporters on the Continent were quoting prices £10 a ton or more below Britain's,

Cutting Lancashire Down to Size

THE White Paper* on the reorganisation of the cotton industry provides a more detailed—but necessarily still incomplete—picture of what the Government and the industry are aiming at. The background to the scheme was discussed in an article in *The Economist* of May 2nd. The white paper states that the principal **spinning** section believes that about 12 million spindles are surplus, or half the total. The doublers put their own surplus capacity at 1.2 million spindles, or 60 per cent, while spinners of condenser yarns put theirs at 10 per cent. The **weavers** aim to scrap at least 70,000 looms, or 30 per cent of the total, and the **finishers** (printers, bleachers, piece dyers and yarn dyers) estimate that 25 to 40 per cent of the machinery is surplus.

Re-equipment: if all the excess capacity is eliminated, the cost of re-equipping and modernising the rest is put at about £40 million for spinning, £8 million for doubling, and £30-£45 million for weaving. These are only first estimates, the white paper points out, and may well be rather high. The finishers state that their problem is primarily one of scrapping and re-organisation, rather than re-equipment.

The Government will pay two-thirds of the cost of scrapping machinery, and if it is satisfied that enough will be scrapped, it will pay one-third of the cost of modernisation and re-equipment. Its proposals are open to the whole industry, including firms that use man-made fibres, and the total cost to public funds might be of the order of £30 million over five years.

Administration: the Cotton Board is to be responsible for the administration of the reorganisation schemes and for the arrangements for financial assistance on modernisation. It will collect the compulsory levies to finance the industry's share of the cost of scrapping machinery, and will make the payments; if the various sections wish, the board will also make on their behalf the compulsory levies to compensate displaced workers. As it would be inappropriate that schemes involving payments from public funds should be administered by members of the board who have a direct interest in the industry, a special committee for this purpose is to be formed, consisting of the three independent members plus another two independent persons, one a businessman and one a trade unionist. A committee drawn from all sections of the industry will advise on technical questions.

Preparation: the special committee's first task is to complete the reorganisation schemes in consultation with the industry. Each scheme will indicate the amount of machinery to be scrapped, the timetable, the terms of eligibility for compensation, the payments to be made and the method of calculating them, and the arrangements for the compulsory levies. A senior partner in a firm of chartered accountants has been appointed to advise the government.

Procedure: each scheme will be submitted to the Board of Trade for confirmation by Order, and the Order will be submitted to Parliament for approval. The closing date for applications for compensation for scrapping machinery will be short, perhaps one month, and the period for scrapping will also be short but may be extended in exceptional circumstances. Grants for modernisation will be available for three years after the Act comes into force, and modernisation must be completed within five years, save in exceptional circumstances. Machinery scrapped or ordered after April 23rd, when the Government briefly announced its proposals, may qualify.

The bill will have its second reading on June 4th, and should become law before the end of July.

* Cmnd. 744.

YOU

MR. POLICYHOLDER *have a hand in prosperity*

It's pretty certain that you decided on a life assurance policy for purely personal reasons—because you wanted to save, because you think a bit of capital or some extra income will come in handy when you retire, and because you want to be prepared for any eventuality. You sleep easier thanks to Life Assurance—and you value the feeling of independence it gives you.

Yet, though your reasons for taking out a policy may have been personal, it's worth remembering what an important part Life Assurance plays in helping to keep Britain prosperous. As the nation's most important form of personal saving, it plays a big part in the fight against inflation. And money put into Life Assurance provides finance for the industrial expansion on which our future depends.

Through **LIFE ASSURANCE**

a better life for you and for everyone

Issued by The Life Offices' Association, London, and Associated Scottish Life Offices, Edinburgh

It's only natural, when you engage a new employee, or contract a new supplier, to want to know his 'references'. Is he giving satisfaction? And are the people he's working for qualified as judges? I.S.R. is supplying rubber to many of Britain's leading rubber users —leaders in some cases because of their great size, leaders in other cases because of their specialised rubber knowledge and needs. These firms, who are most exacting in their demand for high, consistent quality, and who have the technical background to make sure they're getting it, are now taking the greatest part of their SB Rubber supply from I.S.R.

Moreover, they are calling upon us for technical services, for recipes and tests and recommendations. They rely upon us, not only for the rubber itself, but for additional 'know-how' to combine with their own. Some, as we said, are large buyers, some are small, taking only a few tons of 'Intol' a year. They all receive, we think, the same first-class attention. They are our 'references'. We always welcome additions to the list. We'd like to have *you* on it. Like our present customers, you'll find that you can rely on I.S.R.

* * *

(What do our customers like about us? We're always interested to know, and you might be, too. We keep hearing about several good points. That we're dependable: in particular, that we maintain our grading rigidly, and that we keep our delivery promises. That our facilities are large and up to date. That we're here in Britain—not a matter of sentiment but of practical convenience. That we're helpful; but we can't expand on that one without blushing, because, you know, with it all, we're very modest, too).

Five types of 'Intol' are in production, covering the full range of SB Rubber uses. Write for details.

YOU CAN RELY ON I.S.R. **The International Synthetic Rubber Co. Ltd.**

and their exports held up much better through the recession. Few British companies, even when output was at its lowest, were ready to quote below the price levels recommended by the industry's various associations and conferences concerned with export; for certain steel products indeed these associations normally quote collectively and allocate the orders obtained. There have been signs of growing independence among certain of the companies into getting their own orders, though not in quoting lower prices. A little steel, moreover, is said to have come out of British mills for sale abroad at prices competitive with continental —as a result of arrangements for melting and rolling scrap on behalf of merchants who are not parties to gentlemen's agreements about export prices.

BRITISH EXPORTS

Almost a Record

After lagging earlier this year British exports shot ahead last month, rising by no less than £25½ million to over £296 million fob, the highest total since the peak of £303 million in May, 1957. This brought the average for the first four months one per cent higher than a year ago. Because of Easter, some shipping documents for exports and imports may have swollen the April total at the expense of March. But taking March and April together, the turn-round is still remarkably sharp. Exports in January and February were three per cent less than a year ago, but the March-April average is 5½ per cent higher than a year ago. Such a big improvement does not necessarily mean that shipments to the primary producing countries (largely the sterling area) are recovering at last. Two-thirds of the increase between March and April reflected the big jump in exports to North America, which reached a new peak, and the detailed returns may show that the other third reflected a further rise in exports to other industrial countries.

UNITED KINGDOM TRADE
(£ million—monthly averages or calendar months)

		Imports cif	Exports fob	Re-exports fob	Apparent deficit	Exports to North America
Year 1958		312·5	264·3	11·7	36·5	38·3
1958	1st quarter	309·4	271·0	13·2	25·2	34·5
	2nd "	300·0	255·8	11·1	33·1	39·1
	3rd "	312·5	258·6	11·4	42·5	37·1
	4th "	328·2	271·8	11·2	45·2	42·6
1959	1st quarter	313·6	263·8	10·8	39·0	39·7

1959	Jan.–April *	321·7	271·9	10·9	38·9	44·1

* Provisional.

Imports last month also rose sharply by £23½ million to £346 million cif, and the average value in the first four months was four per cent more than a year ago. Taking March and April together imports were seven per cent higher than a year ago, whereas in January and February they were only 1½ per cent higher. Re-exports fell by £1½ million to £11.3 million, and in the first four months were 14 per cent smaller than a year ago, owing mainly to the decline in re-exports of rubber to Russia. The apparent trade deficit, at £38½ million, was almost the same as in March, and the average for the first four months was £39 million, £12 million higher than a year ago.

Shipments to the United States last month jumped up by £9½ million to £35.9 million, and were £8 million above the previous peak in January. In the first four months shipments were as much as 38 per cent higher than a year ago. Shipments to Canada, at £21.2 million, were £6½ million higher than in March, and in the first four months were eight per cent higher than a year ago.

RAILWAY FARES

Finding for Delay

The British Transport Commission early last September lodged with the Transport Tribunal a scheme for giving it greater "headroom" for selective increases in passenger charges by train and London Transport services. After an interval of eight months which included twenty-one days of hearings, the Transport Tribunal has this week rejected this scheme "as lodged." Its judgment on the application, indeed, is of a most perplexing kind and it involves at this moment only one certain result—that any practicable increases in charges that the commission could make will now be delayed. Mr Watkinson constantly adjures the Commission to make ends meet (it being a mere £80 million or so in the red and miserable about losing heavy traffic); the tribunal, grinding exceeding slow and small, adds another element of delay and frustration to the process of getting railway charges closer to railway costs.

The tribunal is prepared to give the commission the increase in standard (or maximum) rates from 2d. to 3d. a mile second class and from 3d. to 4½d. first class. It has also decided that early morning (so-called workmen's) fare concessions should cease—but not when or to what extent. It has cut by about half the surplus which the scheme would have provided for London Transport—to outward appearance not an excessive one—and it seems to be inviting the commission to go for half the increase it had sought for season tickets.

These crude words of summary deal a bit roughly with the involutions of the tribunal's findings. But it implies no disrespect for the tribunal to say that the quasi-judicial procedures which it follows as a matter of statutory duty do seem to have become less and less relevant to a public transport industry that is hard against the halter of competition. No sensible person would argue that the one independent body that regularly examines the affairs of a nationalised industry should lightly be discarded. But the purpose it serves in an increasingly competitive situation is becoming more difficult to see—and is certainly being obscured by decisions that to the laity carry some impression of fabian expediency.

GEORGE NEWNES

Raising the Ante

Even before the directors of George Newnes had rejected the cash bid by the News of the World of 110s. for each £1 ordinary share as inadequate, the market passed its own judgment by putting up the shares to 115s. The directors of Newnes then raised the dividend and the two for five scrip issue, announced before the News of the World bid, was carried through. That made the bid worth 78s. 6d. per share and the market price, ex scrip, settled down at 82s. On Thursday the News of the World, acting through

Hambros Bank, improved on its original offer, by bidding 90s. for Newnes shares and extending the date until June 1st. In all, the offer is worth £11,103,750, compared with £9,693,750 for the first bid. The market price of the shares was immediately marked up to 86s. 6d.

Evidently the News of the World, in answer to the greater concentration of the periodical press brought about by the Daily Mirror's acquisition of Amalgamated Press and Odham's purchase of the Hulton Press, is anxious to get George Newnes under its wing. Its offer was a long time in coming and in the meantime Newnes shares continued to rise. The problem for the News of the World was how it was to find the cash to make the purchase ; the directors are now seeking an extension of their borrowing powers and the necessary financial arrangements to cover the cost of the bid have been made—presumably with the assistance of Hambros Bank.

SPACE RESEARCH

Into Orbit

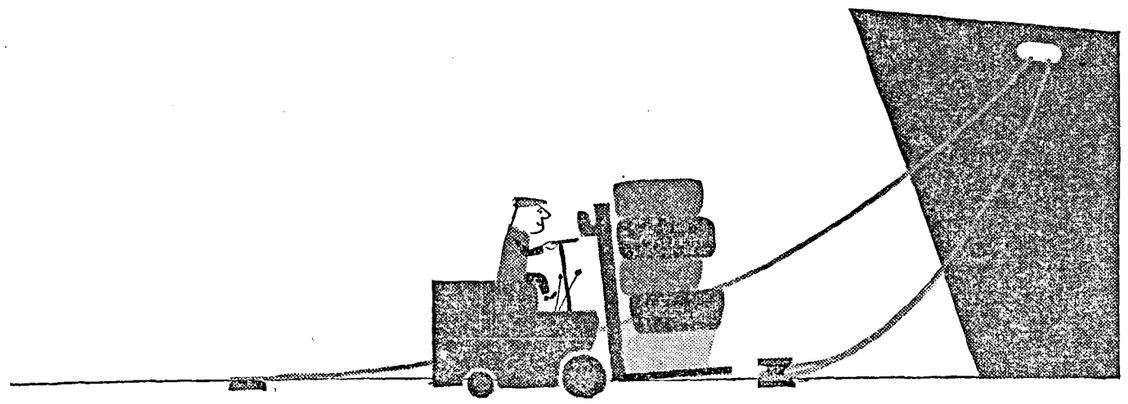
THE programme of space research announced by the Prime Minister on Tuesday keeps clear of the obvious pitfalls into which misguided enthusiasm might easily have steered it. Its outlines are clear, but the details have been left deliberately vague for the very good reason that it is not possible for anyone to say with certainty at this stage what size, shape or weight a Royal Society satellite would have nor how and from where it would be launched. What does emerge from the announcement and from the subsequent explanations given by the Lord President of the Council, who will be responsible for administering the programme, is that the Government is prepared to finance the launching of perhaps eight to ten very large satellites.

These satellites, which might weight up to half a ton apiece, would provide semi-permanent points of vantage circling a few hundred miles from the earth on the fringes of the atmosphere carrying instruments for studying this unknown and highly intriguing region on the edge of space, including the radiations that reach out to it from the earth and those that reach it across great distances from the sun and stars. This type of fundamental research has been going on for years in British universities and one of the world's greatest living experts on cosmic radiation is Professor Powell of Bristol. What is new is the opportunity provided by satellites for using instruments in space to record these phenomena more accurately. Were it not for the vast cost of launching satellites into orbit, the British space programme could fairly be described as the logical extension of work that has been going on in this country for years.

Development of the satellites and their instruments need not cost more, according to Lord Hailsham, than some hundreds of thousands of pounds. But launching them will cost millions—at a rough guess perhaps £10 to £15 million for the whole programme. Last winter, the United States made a vaguely worded offer to launch satellites for other countries. Scientists are going to America to find precisely what this involves and whether it offers a short cut into space that will save the time and expense involved in constructing a satellite launching rocket out of the ballistic missiles now being built in this country. Although Lord Hailsham was careful not to commit himself, the impression remains that British hopes of this short-cut do not run particularly high : but the decision cannot be taken one way or the other until the facts become available. The most encouraging part of this week's announcement was not that the Government had decided to go into space, since this has not seriously been in doubt, but that it appeared to take the decision with a fairly convincing air of scientific detachment. And this, considering the highly partisan nature of the advice that it was and still is being given, is certainly commendable.

Dial MOON

WHILE Lord Hailsham was going into orbit, Professor Bernard Lovell at Jodrell Bank had gone one step further and was teaching the Man in the Moon how to operate a transatlantic telephone exchange. The possibility of using the moon to reflect radio signals has been suspected for some time but never actually proved. By the end of this week, radio signals sent up from the Jodrell Bank radio telescope were reflected off the moon 250,000 miles away and picked up by American Air Force scientists near Boston. Of the two types of signal used, a steady sound, and human speech, the former came through the more clearly, probably because the power being used was not adequate to carry all the modulations used in the human voice.

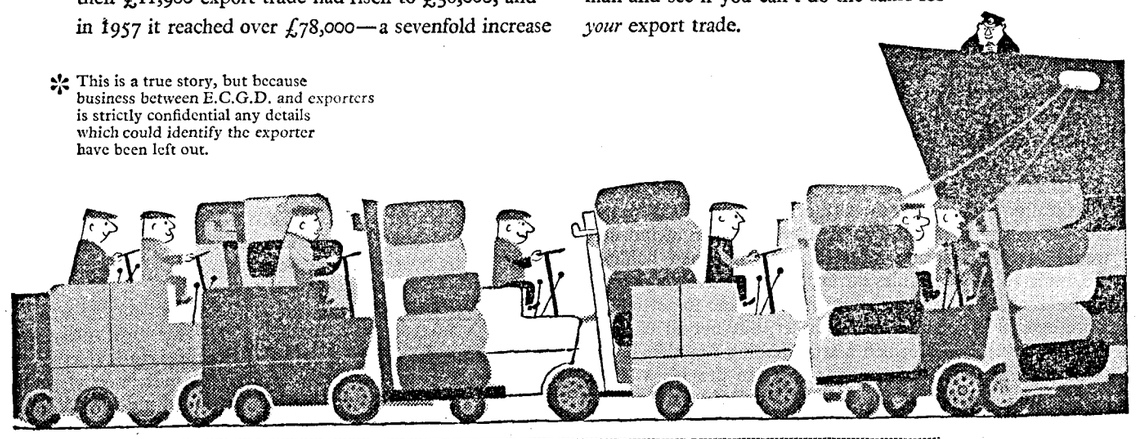


The implications of this experiment for radio and telephone communication over long distances are immense. Radio communication is at all times cheaper than the laying of long-distance cables, and a radio signal of a frequency high enough to penetrate through the reflecting layers of the atmosphere to reach the moon—200 megacycles was used for the experiment—should be completely free from the fading, the distortions, and the interference that make normal radio communication unreliable and sometimes impossible. The only special equipment required is a radio telescope at either end of the circuit, but it need not be a giant the size of Jodrell Bank, which measures 250 feet across. Professor Lovell thinks that the 80 foot " dish " being used by the American Air Force to receive his signals would be quite large enough for routine use.

Those who think that outer space is merely a playground for academic scientists might ponder the fact that the initiative for the experiments came from a radio manufacturer, Pye Limited, which was sufficiently intrigued by the sound of Professor Lovell bouncing his own voice off the moon during last autumn's BBC Reith lectures to suspect that it had distinct commercial possibilities. The equipment used for the present series of experiments was ordinary commercial apparatus. Now that the idea has been proved feasible, opening up the prospect of direct and interference-free radio and telephone links between points where it is not practical to lay cables or provide an adequate number of channels, the next step will be experiments with special aerials to improve the quality of the voice transmission.

ATOMIC AGREEMENT

A Fair Swap



THE amended Anglo-American agreement on nuclear weapons that was signed early in May and published last weekend is one of the first fruits of the policy of " interdependence " in defence promulgated by Mr Sandys. Although it mentions an exchange of nuclear weapon components (or more precisely, " non-nuclear parts of atomic weapons ") the main burden of the agreement is the pro-

Woollen mill builds 7 times bigger export trade in 2 years!*

Only three years ago a Yorkshire woollen mill shipped 84% of their exports to one market, the U.S.A. But see what happened when they talked to ECGD about insuring the rest of their business. Suddenly they were in a strong financial position to give credit to buyers in *other* countries. By 1956 their £11,900 export trade had risen to £36,000, and in 1957 it reached over £78,000—a sevenfold increase in just two years! By now 89% of their exports went *outside* the single U.S. market. The cost to the exporter was only 9/3d. for every £100 insured with ECGD. By vetting your prospective buyer and by seeing that you get paid, ECGD enables you to expand overseas free from credit worries. Have a talk with your ECGD man and see if you can't do the same for *your* export trade.

* This is a true story, but because business between E.C.G.D. and exporters is strictly confidential any details which could identify the exporter have been left out.

motion of a two-way traffic between British-made plutonium and American-made uranium 235. Britain, which has a painfully inadequate supply of uranium 235 from the small diffusion plant at Capenhurst, will draw for its weapon programme on some of the huge stocks that have accumulated in the United States, exchanging it against weapon-grade plutonium produced in its eight reactors at Calder Hall and Chapel Cross.

The scarcity of plutonium in the United States is indicated in the high price of $30 a gram that it is paying to Britain compared with the figure of rather less than $20 a gram that it is charging for the uranium 235 sold in return. The exchange saves each country a considerable investment in plant extensions; even so, the United States has recently approved plans to build at least one additional reactor for the production of weapon-grade plutonium. It is possible that output in the Soviet Union is also increasing rapidly. Last September the Russians showed films of the first unit in what was said to be a 6-reactor nuclear power station, the design of which indicated strongly that, like Calder Hall, its main purpose was production of weapon-grade plutonium with electricity as a by-product.

BOND MARKET

New Money for Lombard Street?

WILL the discount houses follow the big banks in seeking additional capital? Such a suggestion is made by Sir John Musker in his annual statement as chairman of Cater, Brightwen & Co. He "suspects" that his company, and other discount houses, may in the "not too far distant" future need to increase their capital in order to extend their activities as jobbers in the short bond market. Admittedly there has been some narrowing of this market in recent years, and admittedly it is desirable that it should be as flexible as possible; but it is by no means sure that a general increase in the capital resources of Lombard Street would achieve this objective.

The last increase of that kind, which took place under the Chancellorship of Dr Dalton in 1946-47, was indeed specifically permitted by the authorities to serve that aim—since it was clear that the postwar reconversion of industry would involve a steady liquidation of the bond holdings accumulated by companies during the war. That expansion of the discount houses certainly enabled them to participate more extensively in the bond market, but not all of them have consistently performed a true jobbing function in the sense of being willing to operate so as to provide a shock absorbing mechanism. In recent years of sharply fluctuating rates some of the smaller houses tended to withdraw from the bond market when bond risks looked high while the chances of profits from bills looked good; and some larger houses, having suffered severe depreciation, were obliged to sit on their portfolios instead of actively jobbing.

The recovery in bond prices has removed that particular difficulty, while the fall in bill rates has likewise ended the exceptional profitability of bill dealing. The attractions of bond dealing are therefore much greater now than they seemed a short while ago, and bond portfolios have been substantially increased. An increase in capital might permit a further increase in these portfolios (though in the market as a whole they have not by any means yet reached the practicable limits of what is reasonable), but it would not necessarily increase jobbing activity correspondingly. Indeed, the better the running profits obtainable from bonds, the less is it likely that houses that have not been consistently active as dealers will change their habits in this way.

LEAD AND ZINC

Squeezing the Surplus

THE United Nations conference on lead and zinc ended in New York last week without an inter-governmental agreement to restrict supplies, and that should be all to the good. A few producing companies had already announced further cuts in output before the conference opened, and the discussions encouraged others to play their part in reducing the surplus. The companies acted voluntarily in their own interest; there was no bargaining between governments or compulsion by them. The big international companies, in particular, realised that any positive action they took would also help the American Administration to resist efforts to intensify the import quotas on lead and zinc and extend them to their products. The conference recorded the concern of a number of governments to see those import quotas removed. In the end the restriction of supplies embraced producers in the United States, certain European countries and Russia as well as traditional exporters.

After noting the restrictions announced before and during the meetings, the conference concluded that the surplus of lead metal should fall from its original estimate of 150,000 metric tons this year to an annual rate of 59,000 tons in the second half; and that the surplus of zinc should drop from the original estimate of 120,000 tons for the year to an annual rate of only 16,000 tons in the second half. On the face of it the apparent excess of zinc is no surplus at all in relation to world consumption, and the surplus of lead should not be burdensome. But it would be foolish to overlook the margin of error in these estimates, or the risk—recognised by the conference—that some other countries might seize the opportunity of increasing their output. Prices in London had crept up in anticipation of a favourable outcome—helped by the further rise of half a cent to 12 cents a lb in the American price of lead—and have risen further since the conference ended. Forward lead has gained nearly £2 to £72 a ton since the end of April and forward zinc has risen by over £2 to £76 a ton.

BULLION MARKET

Easier Gold Dealings

NEW facilities for transactions in gold have been introduced in the London and Canadian bullion markets. Samuel Montagu & Company, the London bullion merchants, in co-operation with the Bank of Nova Scotia, have made arrangements to issue negotiable and conditionally transferable gold certificates, representing stated amounts of gold and encashable in gold bars in London or Toronto. The buyer of a London certificate will be entitled to demand payment in gold in London or to exchange it for a Toronto certificate against payment (or receipt) of the difference between the prices of gold in the two centres. The Bank of Nova Scotia has already been issuing gold certificates in Canada and these can now be exchanged for the new interchangeable ones. The practice of Samuel Montagu will be to buy and hold gold against the certificates issued by them but not to earmark specific bars against the certificates in

issue. This will provide flexibility in dealings, making it possible for Samuel Montagu to forgo any safekeeping charges for the gold held on behalf of the certificate holders. The price charged to the buyers will be the London selling price and will include the customary commission.

These facilities are reserved strictly for non-residents. Exchange control regulations make it impossible for the certificates to be held by residents of the sterling area and they have to be paid for in "external account sterling" or any other convertible currency. They will, however, represent the cheapest and most convenient way of investing in gold and their availability should attract to the London market a great deal of the devaluation-hedge business which during the past year has become a sizeable factor in the international gold market.

POTASH LOANS

Early Redemption

ACCELERATED sinking fund purchases have kept the market prices of the three tranches of the German Potash Syndicate loan close to their true value, taking into account the clause in the debt settlement that enables their owners to continue to claim interest in US dollars at $4.86 to the £. The Potash Syndicate itself has long been a mere shell, but the gold clause and the pre-emption of the proceeds of potash exports to the service of the debt have given its loans pride of place among German bonds. The decision, announced through the principal paying agents, J. Henry Schroder, to redeem the outstanding bonds before the final date in 1973 has had no appreciable effect on market prices.

Of the three series of bonds, two carrying a coupon of 5¼ per cent and one of 4⅞ per cent, a nominal amount of £4,755,000 is outstanding, of which a fair proportion is held in Switzerland. These bonds are to be redeemed in June at £173 11s. 5.15d. for each £100 nominal. The total disbursement, allowing for the dollar option, will be £8,253,000. Most of the bonds are quoted in an "assented" form, but those British subjects who have held on to "non-assented" bonds for surtax purposes will have to sell to foreign residents to avoid tax on the accrued interest that becomes payable once assent to the debt settlement is given.

The West German potash producers describe the gold clause and the other terms on the bonds as "onerous" and to secure early redemption they have raised the money in Germany by public loans on the capital market and by private loans from the German banks and investment houses, with the result that an international loan, based on the price of gold, is to be turned into long and medium term internal debts, based on the German mark.

KITCHEN EQUIPMENT

Room for More

DOMESTIC appliance sales have been running at record levels ever since the restrictions on hire-purchase sales were ended last autumn. Sales of refrigerators through the Area Electricity Boards in March were 134 per cent above those in March 1958; those of washing machines were 89.6 per cent up, and those of cookers 38.3 per cent up. The purchase tax reductions have not had a large effect; but there is always a considerable weight of buying released by the ending of uncertainty. Superimposed on an already booming industry and the peak buying season for refrigerators, this has produced a situation where some makers are having difficulty in meeting their orders. Television and radio sales have also been running at record levels since the ending of hire purchase restrictions, compared with the poor sales during the first two-thirds of last year.

ELECTRIC APPLIANCES IN THE HOME

Appliance	Housewives owning one Sept.–Nov., 1958, per cent	Housewives who bought one in the last five years, Sept.–Nov., 1958, per cent
Electric cooker	22·0	9·4
Washing machine	28·4	16·6
Refrigerator	10·2	5·3
Vacuum cleaner	64·9	27·9
Television set	62·3	45·2
Radio set	78·1	20·3
Electric sewing machine	9·2	4·5
Food mixer	2·1	1·4

Source: Odhams Press, Ltd.

The refrigerator boom may be filling up one of the vacant corners of the typical British kitchen; but this item of home equipment is taking longer to translate itself from luxury to conventional necesity here than others have done. The latest survey of equipment in the home, published by Odhams Press this week, still shows only 10.2 of all British housewives possessing one. This is a slightly lower figure than has been estimated by other market researchers, but in theory, at least, Odhams were asking only about electric refrigerators. More than three-quarters of housewives, again, had still to acquire washing machines; while the more esoteric items of the mechanised American kitchen such as the food mixer still seem to have reached only a tiny proportion of British homes. This survey apparently did not consider the dishwashing machine—one among these impedimenta which to a husband seems likely to save more labour than it creates—frequent enough even to be worth asking about.

THE STOCK EXCHANGE

Out of the Red

LAST year the Council of the Stock Exchange took the first steps in setting its finances right towards providing for the eventual cost of rebuilding the "house." Both subscription and quotation fees were raised and this has had an appreciable effect on the revenue for the year to March 24th. Subscriptions and entrance fees were £89,243 higher at £515,352 and quotation fees £126,768 higher at £262,271, so that the total gross revenue went up from £732,516 to £956,206. Members no doubt found the increase in fees tolerable as the turnover in the market remained at a high level. But even in such an active year, the number of members went up by only two, to 3,432, which suggests that the trend towards smaller membership has not been halted.

On the expenditure side, the two big items are the transfer of £65,201 to the compensation fund (raising it to £175,000) and the first transfer, amounting to £119,305, to the special fund for the redemption of debentures and the rebuilding of the stock exchange. Another noticeable item in expenses is the increase in the charge for publicity from £9,402 to £21,091 in which, presumably, the cost of the film shown to visitors is included. Whether this is a sufficient provision for

educating the public about the affairs of the City is very doubtful. But the Stock Exchange has not a lot of money to spare: last year's increase in fees succeeded only in turning a net deficit of £5,108 into a net surplus of only £11,574.

INLAND WATERWAYS

Cruising Down the Canals

ALTHOUGH their commercial value has declined, Britain's 1,600 miles of canals continue to be used extensively—and increasingly—for pleasure boating. There are about 400 boats now offered on hire on canals by private companies, most of which are small firms owning about ten boats of varying sizes; in addition, a few enthusiasts own their own boats. Their number is estimated to be increasing by as much as ten per cent a year; cruises on the waterways are advertised as far abroad as America, and appear to be unaffected by British summer weather. Among the most popular canals are those which, though still navigable by small boats, no longer carry much commercial traffic; it is probable that pleasure boats constitute the greater part of the traffic on some of these aged backwaters. Now British Waterways, the Transport Commission's canal management division, has entered the pleasure boating business in a substantial way; and at an exhibition held recently at "Little Venice," near Paddington—itself appropriately an aged backwater—displayed some of the pleasure craft that it will have available for charter during the coming season.

Two five-day all-in cruises will be available, in 75-foot sixteen-passenger luxury boats; one, between Oxford and Birmingham, will include meals and lodging ashore in first-class hotels, plus side trips by motor coach to such places as Stratford-on-Avon, for a fare of £27 10s. per person. The other trip, between Boston and Nottingham, will cost up to £30 per person; passengers will sleep on board the boat, but eat some meals ashore. In addition, British Waterways have a fleet of about 35 smaller boats which the more adventurous or egregious may charter, at rates ranging from £12 a week for a 19-foot, two-berth boat powered by an outboard motor up to £42 a week, during the peak of the season, for a 41-foot, six-berth cruiser. These craft, with the exception of the two-berth models, have been converted from cargo boats and the Commission plans to increase the fleet, as demand warrants, in the future.

Revenue from last year's more limited hiring of pleasure boats was around £4,000; while they expect a much greater revenue—and an overall profit—from this year's activities in this line, the Commission admit that pleasure boating will never produce sufficient revenue to warrant keeping open an otherwise uneconomic canal. The Commission's ardent and highly vocal opponent, the Inland Waterways Association, which numbers among its members several firms chartering canal boats and offering cruises, complains that the revenue from the Commission's pleasure craft cannot possibly cover the costs, which include an extensive advertising campaign, and that they would substantially undercut private charter firms. But one apparent effect of the Commission's activities would presumably be to increase total traffic on the canals beyond what could economically be justified: one had always assumed that this was the association's main purpose in life.

SHORTER NOTES

The District Bank has decided to follow the lead of most of the other clearing banks in raising new capital by a rights issue of its ordinary stock. The details of the issue will be announced later.

* * *

Ind Coope this week introduced a new brand of lager beer called Skol, taking account of the rapid growth in sales of lager, largely imported, in the British market over the last few years. The company says that this is one of the few kinds of beer with a definite attraction for young people. It has installed complete Swedish-style brewhouses at Alloa and Wrexham for this beer; lager's main difference from other light bottled beers is that it is stored and conditioned for some time before sale under temperatures close to freezing.

* * *

Employment in manufacturing fell by only 12,000 in March whereas normally a fall of some 26,000 might be expected. Although the manufacturing industries were employing 71,000 fewer people at the end of March than at the end of November this shrinkage is no more than is usual seasonally. Outside manufacturing, an extra 21,000 building workers were taken on, but there was an unexpected decline in agricultural employment. Altogether the total number in civil employment rose by 1,000 in March to 22,798,000—a modest improvement in the labour situation since a decline of the order of 18,000 is more usual in this month.

* * *

The terms of the public issue of ordinary shares by the Charterhouse Group have now been fixed. Four million £1 shares will be issued at 28s. per share. At the issue price, they yield just under 5½ per cent on the projected ordinary dividend of 7½ per cent. As the issue will raise about £5.6 million it will more than cover the £4 million in bank loans that Charterhouse at present owes.

COMPANY MEETINGS

CANADIAN PACIFIC RAILWAY COMPANY

(Incorporated in Canada with Limited Liability)

DEEP SIGNIFICANCE OF DEVELOPMENTS AT HOME AND ABROAD

EVER-INCREASING EFFICIENCY ESSENTIAL TO MEET NEW ERA OF INTENSIFIED COMPETITION

1959 DESTINED TO BE A LANDMARK IN HISTORY OF CANADIAN TRANSPORTATION

PRIVATE ENTERPRISE THE MAINSPRING OF ECONOMIC GROWTH

NEED FOR EQUALITY OF OPPORTUNITY IN REGULATION AFFECTING COMPETITION WITH PUBLIC ENTERPRISE

MR N. R. CRUMP ON PRINCIPLES UNDERLYING COMPANY'S POLICIES

The 78th Annual General meeting of the Canadian Pacific Railway Company was held on May 6th in Montreal, Mr W. A. Mather, the chairman, presiding.

The President, Mr N. R. Crump, addressing the meeting, said:

All of us know that 1958 was a year in which the steady pace of Canadian growth was interrupted by developments at home and abroad which adversely affected your Company in common with other segments of the economy. The Annual Report for 1958, distributed to you early last month, records the problems faced by your Company during the year and the success achieved in meeting them. The creditable results portrayed in the Report reflect the spur to efficiency and prudence which is ever present when management is answerable to private owners of capital. Before telling you in more specific terms of the progress made and of plans now in hand for your Company, however, I would like to comment briefly on certain developments at home and abroad which have deep significance both for Canada and for the transportation industry.

DEVELOPMENTS ABROAD

As for developments abroad, there are a number of factors at work which are likely to influence business conditions in Canada for a considerable time to come.

One of these factors is the intensified competition in world trade arising from the increased productive output of the expanding and efficient industrial complex of the United Kingdom and Western Europe. No longer can it be taken for granted that demand stemming from the era of postwar austerity in these Countries will continue to provide a dynamic stimulus to Canadian trade. Instead, the United Kingdom and the Countries of Western Europe have once again emerged as vigorous competitors for world markets.

Another factor, the full impact of which can as yet neither be felt nor fully assessed, is the European common market. In time, perhaps, the economic expansion forecast for Western Europe as a result of the common market may stimulate demand for the products of Canada's great resource industries. It will only do so, however, provided wages and other production costs in Canada are such that the products of those industries remain competitive. The more immediate effect of the common market is likely to be increased competition in international trade resulting from the greater industrial efficiency which European economic integration is expected to achieve.

I draw these developments to your attention because I believe that they bear directly not only on the future of the Canadian economy but on the affairs of your Company as well. If Canada is to grow and prosper in the face of this new era of intensive competition from abroad both for markets and for investment capital, then here at home industry, labour and Government alike must work together to achieve ever increasing efficiency in the production of goods and services at competitive prices.

DEVELOPMENTS AT HOME

Developments at home to which I should like to draw your attention have a special and immediate significance for your Company. There are four matters to which I particularly refer—all of them bearing directly on transportation. First, another Royal Commission is to be appointed to study the problems of railway transport. Second, the Government has announced a "freeze" on freight rates pending the report and recommendations of the Royal Commission.

Third, the St Lawrence Seaway is now open to traffic, affording oceangoing vessels a vastly improved water highway leading some 2,000 miles from the sea to the heart of the Continent.

Finally, with the inauguration of service last Monday by Canadian Pacific Airlines, your Company is now permitted to provide competitive trans-continental air travel in domestic civil aviation, albeit on a limited scale.

THE POSITION OF PRIVATE ENTERPRISE

These four developments suggest that 1959 is destined to be a landmark in the history of Canadian transportation. This being so, I think it is highly appropriate at this time that the whole position of private enterprise as it bears upon the future of transportation in Canada be reviewed. In particular, we must seek to establish clearly in the minds of all Canadians the fact that this Country's transportation needs cannot adequately be served if the economic aspects of transportation are disregarded in the realm of public policy.

The mainspring of economic growth and rising living standards in Canada has always been private enterprise. This is a fundamental economic fact which can no more be ignored in the realm of transportation than in any other business endeavour. The rate of private capital formation and the volume of goods and services absorbed in consumer markets remain the principal criteria of national progress.

All the more important in any consideration of the future of Canadian transportation is the fact that a substantial segment of the Country's transportation industry is state-owned. In no other Country in the World do you find a comparable situation, where railway transport services are about equally divided between private enterprise and public ownership.

The circumstances of history more than anything else account for this fact. The Canadian people as a whole have never consciously or deliberately sought socialist answers to their problems in transportation or in any other field. However, the role of enterprise, whether it be privately or publicly owned, should be essentially the same. In transportation, as in other industries, the guiding principle of management must be to produce necessary services at prices which consumers are able and willing to pay, and to do so at a cost consistent with reasonable reward to investors and employees alike. This is the very essence of the enterprise economy, in which ultimate control lies in the free choice of consumers, workers, and owners of capital.

If public enterprise were subject to the same ground rules, including penalty for failure in meeting the test of the market place, then competition with private enterprise would be possible without prejudice to the principles of the market mechanism. But if public enterprise has access to capital without regard to cost, then sound economic principles governing growth and progress are jeopardised and an added burden is imposed on the taxpayer

I do not question the fact that, historically, justification may be found for public policies in transportation which, so far as the railways were concerned, subordinated to political considerations these tried and tested economic criteria which I have just described. Those public policies, however, were established to meet conditions which no longer exist. The survival of Canada as a Nation is no longer in doubt. Our Country is now securely linked, not only by rail but also by air, water, highway and pipeline, and in the field of

communication, not only by mail and telegraph, but also by telephone, radio and television. With all these choices available to the users of transportation and communication, and with ever-widening scope for the allocation of capital made possible by technological advance and improved management techniques, the time has now arrived to bring national transportation policy up to date and base it firmly on sound economic principles which will assure the most efficient use of our resources.

ROYAL COMMISSION

No industry in Canada has been examined more frequently by Royal Commissions than the railways—a fact which reflects the political atmosphere in which the railways, historically, have operated. I hope that the Commission in its recommendations will recognise the changed conditions in transportation which favour greater reliance upon economic forces and less reliance upon rigid regulation as means of promoting a healthy transportation industry in our growing Country. To the extent that regulation is required, it should bear evenly and in a uniform manner on all forms of transportation which are in competition with each other.

Now is the time to remove anachronisms affecting rail transport. The oldest and most onerous of these is found in the statutory rates on grain and grain products. Here we have 19th century prices trying to live with 20th century costs resulting, as so often has been said, in harmful distortions in the railway freight rate structure. These distortions work to the detriment of shippers, consumers and railway owners alike. It is to be hoped that the problem of statutory rates will receive the full attention it requires and that steps may be taken leading to a solution consistent with the public interest in efficient rail transport and at the same time taking into account the problems of western agriculture.

FREIGHT RATE "FREEZE"

You will have observed that the Government has announced that no further general increase in freight rates will be allowed until the Royal Commission has made its report. The effect of this decision by the Government places your Company's rail enterprise in the unenviable position, unique in the realm of private enterprise in Canada today, of being subject to a "freeze" on the pricing of its services. I need hardly point out that no comparable official ceiling has been set on railways costs. Indeed, the Government's announcement of increased taxes followed hard upon its decision to "freeze" freight rates. These further erosions of earnings are in the face of a level of rail income of your Company substantially below that established as fair and reasonable by the Board of Transport Commissioners.

ST LAWRENCE SEAWAY

The St Lawrence Seaway, which was opened for use only two weeks ago, represents the allocation by the Government of Canada of about $350 million of capital in transportation facilities, not including the original cost of $132 million for the Welland Ship Canal, a vital link in the route, which was opened in 1932. In addition, there is the cost of harbour improvements at various ports on the seaway route and the cost of dredging existing lake and river channels. Parliament has wisely decided that the cost of the seaway facilities should be self-liquidating.

The tolls to be charged for the use of the canals are required to cover current operating and maintenance costs, as well as interest and amortization of capital over the next fifty years, including the $131 million expended by the Government of the United States. Any departure from this principle would result in unfair and uneconomic competition to the detriment of other forms of transportation.

Even under the toll system, our traffic officers estimate that approximately two million tons of your railway's freight, having a revenue value in excess of $38 million, annually, will be exposed to seaway competition. It is to be hoped that over the long term, industrial development along the seaway may offset in some measure this more immediate adverse effect.

TRANSCONTINENTAL AIR SERVICE

Your Company has always been alert to changes and developments affecting travel habits of the public. In fulfilling its function as a transportation enterprise in the broadest sense it has sought to expand its airline services in domestic and international routes and to keep abreast of rapid development in civil aviation. Here also your officers believe that private enterprise should be given an opportunity to participate on even terms with Government enterprise and that the same economic discipline should apply to both.

Your Company applied for licences to operate mainline East-West Air routes in Canada. The Government has approved the granting of a licence to operate only one flight per day each way between Montreal, Toronto, Winnipeg and Vancouver. This decision was a disappointing one since the frequency authorised severely limits the growth which might otherwise have been expected in the volume of air traffic to be carried. The first run of the new service was made two days ago, with turbo-prop Bristol Britannia aircraft. These are the largest and fastest commercial aircraft in service in Canada and provide Tourist as well as First-Class accommodation.

In keeping with the theme of its promotion of "Land, Sea and Air" travel, your Company is integrating its selling agencies so that rail, air and steamship tickets can all be purchased at one location. These offices are now able to offer a complete travel service including accommodation at your Company's fifteen hotels throughout Canada, as well as the related services of your Express Company and your extensive communications facilities.

I now turn briefly to some of the specific steps aimed at increased efficiency and economy to which I referred earlier in this address.

THE DIESELISATION PROGRAMME

Diesel power is now performing over 90 per cent of your railway services. The cost of your Company's Diesel programme to the end of 1958 is nearly $200 million. The results of this allocation of Capital have been most gratifying. It is estimated that savings in excess of $40 million per annum are now being realised in transportation expenses, and a reduction of nearly $9 million is being effected in current maintenance expenses.

In terms of efficiency, the results are equally impressive, even though factors other than dieselisation have contributed in part toward the achievements. The average freight train load has been increased by 500 gross tons or 31 per cent, since 1947, when conversion to Diesels was just getting under way. Average freight train speed has been increased by 26 per cent. The composite measure of gross ton miles per freight train hour thus shows an improvement of 65 per cent in this period. Such figures suggest the extent to which Diesel power has contributed to the ability of your Railway to offer to shippers the fast regular service which modern industry demands. It is not too much to say that without this improvement in competitive position and the savings in expenses for which the Diesels are responsible, the postwar earnings picture would have been bleak indeed. The savings, large as they have been, have not kept pace with inflated postwar wage and material costs.

PASSENGER TRAIN SERVICE

Progress has been made over the past few years in cutting down unprofitable passenger train services. Since 1950, passenger train miles have been reduced by 17 per cent. Encouraging results have been achieved through the substitution of rail Diesel cars for conventional locomotive-hauled trains. A total of 55 rail Diesel cars, involving an expenditure of $11 million, provided 3.5 million of the 16 million passenger train miles run on your system last year. These units are more economical to operate and the resulting savings in expenses are part of the total savings attributable to Diesel operations.

PIGGYBACK SERVICES

Your Piggyback services have enjoyed rapid growth. The speed, the reliability and the economies that are characteristic of operation with Diesel power have contributed to giving Piggyback its advantages over inter-city highway movement. The measure of the success of the new services is that they have been continuously extended to meet the demands for them. Common carrier piggyback service is available now on 6,000 miles of your railway between 21 cities. Some 540 roller-bearing equipped special flat cars are in use and 300 more are on order. Specially designed new terminals have been created to permit the most expeditious handling of trailers. Notwithstanding the remarkable progress made in a relatively short time, it is considered that only a start has been made in developing the potentialities of the idea of a container carried on a railway car.

MERCHANDISE SERVICES

In view of the prospects opened up by piggyback service a review is under way of the whole range of less-than-carload merchandise services provided by your Company. As a result, the handling and despatch of less-than-carload rail, express and truck traffic on Vancouver Island and at Vancouver are to be co-ordinated as the first stage of an integration programme. The objective is to have one set of pick-up and delivery operations and centralised terminal and despatching facilities for handling all merchandise traffic. A start on the plan for the Vancouver area is expected to be made during the coming Summer and Autumn. Terminal construction is proceeding at Port Alberni, Nanaimo and Victoria, and a contract has been awarded for the work required in Vancouver. Subsequently, the plan will be extended for the entire Pacific region, and ultimately it is expected to embrace merchandise services on all regions.

HIGHWAY TRANSPORT

With the acquisition last year of the controlling interest in Smithsons Holdings Limited, your Company greatly enlarged the scope of its highway freight services. Your owned and controlled highway operations now extend from coast to coast and involve a fleet of 3,860 tractors, trailers, and other vehicles. Co-ordination of rail and highway services offers great possibilities of savings and improved service with corresponding benefits to shippers. Now that extensive road

transport facilities have been made available, still further advances in that direction may be expected.

TERMINAL OPERATIONS

After long and careful field studies, followed by pilot operations in selected yards, new methods of communication, supervision and control have been adopted in your Winnipeg terminal leading to more expeditious movement of freight cars, better service and higher utilisation of equipment and staff. Good economies have been shown. Plans are in hand for the implementation of these methods in other large freight terminals.

ORGANISATION CHANGES—RAILWAY OPERATION AND MAINTENANCE

In order to obtain maximum benefits from modern methods, communications, and newly developed equipment, your officers are continually reviewing various aspects of organisation and administration.

Included recently in this review was the railway regional and district organisation. As a result, it has been decided, effective July 1st this year, to eliminate the eight districts through which your railway is presently administered and to add one additional regional headquarters, making four altogether, from which the divisional organisations of the entire system will be directly administered. It is expected that economies and greater efficiency in administration will flow from these changes.

SUMMARY

May I summarise in the light of the foregoing your Company's position as it faces the future.

Canadian Pacific has no quarrel with its publicly-owned competitors in the realm of transportation. We recognise the circumstances which brought them into being and we salute the many Canadians of high purpose and integrity who serve in their management. We ask only for equality of opportunity in regulation affecting competition. This embraces recognition of the fact that capital, whether it be public money or private, should be entitled to earn a fair return for its investors.

In the past ten years your Company has financed out of its own resources or on its own credit, and at no cost to the taxpayers of Canada, a programme of railway improvements costing in excess of $780 million. Over the next ten years it will be necessary to spend about $900 million on replacements and improvements of rail properties. Your Company asks only that these very substantial transportation resources be given a fair chance to earn their own way by producing a reasonable return on investment.

Let me conclude by stating here, as I have done elsewhere, the principles which underlie the policies of your Company.

First, we accept the challenge of competition, asking only that it be fair competition. Second, we do not seek to restore monopoly conditions in Canadian transportation. Third, we strive to use any or all tools of transportation so that we may be able to offer our customers a complete transportation service. Fourth, we endeavour to keep abreast of technological changes and to make the most efficient use of men, machines, methods, material and money.

In carrying out these policies we do not hide the fact, nor do we apologise for the fact that we are trying to make profits and earn dividends. We believe that in so doing we are acting in the best interests not only of the shareholders, but also of our employees and customers. Our objective is to earn a return on investment that will attract capital as and when it is needed for transportation to serve the growing demands of Canada and the Commonwealth. We believe that private enterprise holds the most promise for keeping Canada in the vanguard of transportation progress—on land, sea and in the air.

The report and accounts were adopted.

Frankfurt (Main), April 1959

The Board of General Managers

THE BURMAH OIL COMPANY LIMITED

EXPANSION OF TRADE IN ALL COUNTRIES WITHIN THE GROUP

INCREASED PROFIT DESPITE HEAVY COST OF EXPLORATION PROGRAMMES

MR W. E. EADIE'S STATEMENT

The fifty-seventh Annual General Meeting of The Burmah Oil Company Limited, will be held on Friday, June 5, 1959, in the Merchant's Hall, 30 George Square, Glasgow.

The following statement by the Chairman, Mr W. E. Eadie, has been circulated with the directors' report and accounts for the year ended December 31, 1958:

ACCOUNTS

There was a further expansion in trade in the countries in which the Group operates and it is with satisfaction that I am able to report Group Profit on Trading of £6,778,505 in 1958, after charging the cost of extensive exploration programmes, an increase of £537,094 on 1957.

Depreciation at £1,190,804 is less than that for 1957 due mainly to decreased initial allowances on lower capital expenditure and reduced fiscal allowances given on such expenditure in India.

Dividends from Trade Investments, which form part of our trading income, are brought into account as and when they are received and in 1958, at £2,478,945, are slightly lower than in 1957.

Other Dividends and Interest received during 1958 amounting to £8,425,363 are also lower than for the previous year when, it will be recalled, three dividends were received instead of the usual two on our holding in The "Shell" Transport and Trading Company Limited.

It is of interest to record that the first dividend was received in 1958 from our investment in Sui Gas Transmission Company Limited.

The Inland Revenue authorities accepted the Company's claim that our wholly-owned Subsidiary Companies trading overseas are Overseas Trade Corporations and provision for taxation has been made on this basis.

The profit for the year after charging taxation is £7,506,141 compared with £7,056,056 in 1957, an increase of £450,085. Including the balance of £671,055 brought forward from 1957, there is available for appropriation £8,177,196 from which has to be deducted the Preference Stock dividends for the year and the Ordinary Stock interim dividend of 1s. per £1 unit of Ordinary Stock free of income tax which was paid on December 19, 1958. From £5,944,219 remaining for disposal your Board have appropriated £1,500,000 to General Reserve and recommend that an Ordinary Stock final dividend of 1s. 9d. free of income tax should be paid on June 12, 1959. This, if approved, will absorb £3,605,835 and leave a balance of unappropriated profit of £838,384 to be carried forward to 1959.

ASSAM OIL CAPITAL

In order to reflect more closely the value of the assets permanently employed, the share capital of Assam Oil Company Limited was increased during the year by appropriating reserves in that Company. This is reflected in the increase in the Capital Reserve and in the cost of Subsidiary Companies' shares appearing in the Parent Company's Balance Sheet and in the Capital and Revenue Reserves in the Consolidated Balance Sheet.

During the year we received a free issue of £26,714,925 British Petroleum Company Ordinary Stock.

The increase in Other Investments is the result of taking up our allotment of 303,600 "Shell" Ordinary Shares to which I referred last year.

In the Parent Company's Balance Sheet net advances to Subsidiary Companies are down by some £5 million while British Government and Corporation Securities show an increase of this amount. These funds will be required for group purposes in the near future.

It will be seen from the Consolidated Balance Sheet that Stocks of Oil and Products and also Debtors have been reduced considerably. This is due to the easing of the supply position enabling lower stocks of products to be carried and also to a welcome reduction in debts due for supplies to Government Departments.

I informed you last year that our share of capital expenditure for 1958 of our Subsidiary Companies and the Burmah-Shell refining and distributing companies in India and Pakistan was estimated to amount to about £2 million, whereas actual expenditure was about £1.3 million. Including the firm commitments of £236,000 mentioned in Note 6 on the Accounts, our share of capital expenditure in 1959 is presently estimated at approximately £3 million, inclusive of our share in Oil India Private Limited capital expenditure which may amount to some £2 million.

OIL INDIA PRIVATE LIMITED

At our Annual Meeting last year I said that I expected this Company to be incorporated within a month or two. This took longer than anticipated and the Company was not incorporated until February 18th this year.

In the meantime, however, operations in the oilfields continued at the pace required to reach the production target by the time the two refineries of the Government of India are due to come on stream. We are informed by the Government of India that these refineries, one of which will be at Gauhati in Assam and the other at Barauni in North Bihar, will be ready to receive crude oil in April 1961 and April 1962 respectively.

The construction of the pipeline from the oilfields to these refineries has not yet started. Discussions are taking place with the Government of India regarding the provision of finance for that purpose. Under the Agreement concluded with the Government of India, to which I made reference last year, your Company has undertaken to arrange to provide up to £10 million for the construction of the pipeline. I hope to be in a position at the Meeting in June to report progress on these discussions regarding further finance.

TRADING

The trade in Burma increased by 8.5 per cent. The requirements of all major petroleum products in Burma, with the exception of aviation gasoline, were met from indigenous crude oil refined at the Syriam and Chauk refineries of The Burma Oil Company (1954) Limited.

The development programme for the improvement of Burma's economy is concentrated on agriculture. The rice crop has been satisfactory and it is estimated there will be an increase of about one million tons in the quantity available for export. The success which has attended the new jute and tobacco crop ventures should also lead to additional sources of exports and to a consequent improvement in the country's foreign exchange balances.

Our sales in Pakistan through our Subsidiary and Associated Companies were 2.5 per cent greater than in 1957. This increase was achieved despite insufficiency of transport and shortage of tinplate for packing kerosine in East Pakistan. Moreover, there were difficulties in obtaining import licences due to Pakistan's shortage of foreign exchange.

Sales of gas by Sui Gas Transmission Company Limited continued to expand during 1958, the increase being 24.5 per cent. During the year this company completed the laying of a pipeline for the Pakistan Industrial Development Corporation from Sui to Multan, a distance of 217 miles. The pipeline was handed over on August 5, 1958. Deliveries of gas through this pipeline are small at present but are expected to reach a substantial volume towards the end of this year. Supplies of gas by Pakistan Petroleum Limited to Sui Gas Transmission Company Limited for the Sui-Karachi line and to Pakistan Industrial Development Corporation for the Sui-Multan line totalled 12,800 millions of cubic feet during 1958. In terms of fuel oil this volume of gas is the equivalent of about 300,000 tons. The saving in foreign exchange in terms of fuel oil or coal which would otherwise have had to be imported was of the order of £2 million.

Sales of petroleum products through our Subsidiary and Associated Companies in India were overall 4.5 per cent greater than in the previous year despite a reduction in the trade in kerosine and motor spirit. One of the measures taken by the Government of India to conserve the country's foreign exchange was the imposition of restrictions on the sale of kerosine towards the latter part of the year when despatches were limited to 95 per cent of deliveries during the corresponding period in 1957. These restrictions have now been removed. Motor spirit trade in India continues to decline due to the increasing use of diesel-engined vehicles. The market was unable to absorb all the motor spirit produced at the Bombay refinery of Burmah-Shell and one cargo of this product had to be exported from India towards the end of the year. Because of the trend towards a policy of self-sufficiency in refining capacity in many countries it is becoming increasingly difficult to find markets for the export of surplus motor spirit.

Discussions started last year in India between Government and the Marketing Companies regarding the prices of petroleum products. These discussions are still in progress.

OILFIELD OPERATIONS

Burma.—The Oil Companies and their Government Partner in The Burma Oil Company (1954) Limited successfully worked together in close co-operation.

Drilling and production at Chauk and Lanywa fields proceeded normally throughout the year.

Pakistan.—The Balkassar field of Pakistan Petroleum Limited continued to maintain its small but steady production of crude oil. The production of gas was raised substantially to meet the increasing demand to which I have referred elsewhere in this statement.

The well at Karsal in the Western Punjab which I mentioned last year as being drilled jointly by Pakistan Petroleum Limited and Pakistan Oilfields Limited (a subsidiary of The Attock Oil Company Limited) unfortunately failed to find oil in commercial quantities. Whilst the results here continue to indicate oil in the structure the difficulty is to locate wells where fissures capable of giving good sustained production exist. Preparations for a third well in this structure are in hand.

India.—The efforts to find fresh reserves in the Digboi field have so far met with no success.

In the Nahorkatiya, Hugrijan and Moran areas, development proceeded successfully. Of the twelve wells drilled ten were oil producers, one a gas producer and one a dry hole. Up to the end of the year the number of wells drilled in these areas was forty-eight, of which thirty-six were oil producers, four gas producers, and eight dry holes. The estimates of reserves continue to indicate a production potential of 2½ million tons of crude oil per annum from these three areas.

Excellent drilling speeds are being maintained, Nahorkatiya Well No. 38 being completed at 10,335 feet in just over eighteen days.

PROSPECTING

Burma.—Following on the grant by the Government of Burma of the Irrawaddy Delta exploration licence and of satisfactory taxation allowances for prospecting expenditure, steps were taken to expand the prospecting effort of The Burma Oil Company (1954) Limited. In the Delta, after completion of the first phase of the seismic survey, a test well was drilled at Kyaiklat. This well commenced drilling within 27 days of the drilling outfit arriving by sea in Rangoon—a notable achievement—and reached 12,000 feet. Testing is now in progress. A further site in the Delta near Dedaye is being prepared for drilling.

At Ondwe, some 30 miles south of the old Yenangyaung field, signs of gas in the first well led to the drilling of a second but so far tests have not been encouraging. Steps are now being taken to test by the drill another structure 20 miles east of Yenangyaung.

Pakistan.—The vigorous programme referred to last year was continued but so far without further success. Deep wells at Lalmai in East Pakistan and at Bannh in West Pakistan were unproductive as also were two medium depth wells at Jacobabad in West Pakistan. While these results are disappointing, as is also the experience where our competitors have been drilling, there still remain large areas of unexplored territory in the country.

India.—The situation remains unchanged. No further licences having been granted to Assam Oil Company Limited, no work was undertaken.

REFINERIES

Burma.—The refineries of The Burma Oil Company (1954) Limited at Syriam, near Rangoon, and at the oilfield at Chauk worked to capacity and operated successfully throughout the year.

India.—The rail communications between Assam and the rest of India were again free from major interruptions with the result that Assam Oil Company's refinery at Digboi was fully employed.

At Bombay the Burmah-Shell refinery processed 2.3 million tons of crude oil.

PUBLIC SECTOR DEVELOPMENTS

Prospecting and exploration by the Government of India is carried on through its Oil & Natural Gas Commission. Drilling has been undertaken in several areas, notably at Jawalamukhi and Cambay. Gas has been found at Jawalamukhi but whether this is in commercial quantities has not yet been established. At Cambay, oil has been discovered and first reports indicate that it is likely to be of commercial importance.

A company whose shares are held entirely by the Government has been incorporated to own and operate the Government refineries at Gauhati and Barauni.

Announcements have been made by the Government in Parliament in Delhi of its intention to distribute and market the products from the Government-owned refineries.

TANKERS

Our small fleet continued to operate satisfactorily and without incident throughout the year.

STAFF AND LABOUR

Personnel Training.—The training schemes for nationals of the Asian countries in which we operate are showing satisfying results. We are indebted to the various firms and organisations who, in the face of increasing demands from other quarters, continue to afford facilities for the training of our men.

Increasing attention has been paid to widening the experience of our Eastern staff by visits to operations in other parts of the world and by training in this country. By means of induction courses provided partly within and partly outside our own organisation, new expatriate recruits are given some insight into the social and cultural backgrounds of the Eastern countries in which they are to work.

Labour.—The maintenance of good relations with labour continues to occupy much of the time and care of our local managements and the comparatively trouble-free record of 1958 is mainly due to their sustained efforts over a very considerable period.

Staff.—It is with pleasure that I express the Board's appreciation of another year's good service given by the management and staff of all Group Companies at home, overseas and afloat.

THE SCOTTISH UNION AND NATIONAL INSURANCE COMPANY

RECORD LIFE BUSINESS

INCREASED FIRE, ACCIDENT AND MARINE PREMIUMS

SATISFACTORY INVESTMENT POSITION

MR JAMES A. LUMSDEN'S REVIEW

The one hundred and thirty-fourth Annual General Meeting of The Scottish Union and National Insurance Company will be held in Edinburgh, on May 27, 1959.

The following is a summary of the Statement by the Chairman, Mr James A. Lumsden, MBE, circulated with the Report and Accounts for the year 1958:

The new life business completed, after deduction of reassurances, was more than £8,386,000 which constituted a record for the Company. In addition a substantial sum was received by way of consideration for annuities. The Life and Annuity Funds have increased during the year by £2,770,009 and now amount to £28,161,326.

The net premium income in the Fire Department amounted to £5,614,248, an increase of £228,257 compared with 1957. The premium income continued to advance in Great Britain and in overseas territories and there was a slight improvement in the results compared with the previous year. Trading conditions in North America continued difficult and whilst there was a distinct improvement in our Canadian results the losses in the USA were again heavy. The account produced a trading surplus but after adding 50 per cent of the increase in premiums to the provision for unexpired risks there was an underwriting loss of £20,740, which was met by a transfer from the Profit and Loss Account.

The net premium income in the Accident and General Account increased by £226,798 to a total of £2,634,680. Despite heavy claims, especially in the overseas field, the Miscellaneous section of the account produced a profit, whilst a small profit was earned in the Motor section, the results of our automobile business in Canada showing particular improvement. The account as a whole produced a trading surplus of £121,718 but after adding 50 per cent of the increase in premiums to the provision for unexpired risks, the underwriting profit of £8,510 was transferred to the Profit and Loss Account.

In the Marine Department an increase took place in the premium income but underwriting conditions continued to be difficult with heavy claim settlements and no transfer was made to the Profit and Loss Account.

The past year has been marked by a further increase in interest rates and the gross yield from the Life Fund investments was £5 18s. 2d. per cent, which is more than 3s. per cent higher than in the previous year. Higher interest rates were also obtained on the General Fund investments. Increased amounts were invested in British Government securities, industrial loan stocks and ordinary shares and a substantial sum was advanced on mortgages secured largely on dwelling-houses with endowment assurances issued by the Company as collateral security. As a result of the considerable improvement in the market prices of Stock Exchange securities, particularly of ordinary shares, the market value of the Company's investments exceeded the book value by a substantial amount.

The Directors recommend a dividend of 2s. on the "A" shares and 4s. on the Ordinary shares, the same as for the previous year.

The Chairman paid tribute to all the officials and members of the staff at home and overseas who have given wholehearted service to the Company during the past year and to all members of local boards and agents at home and abroad who have continued to give the Company their valuable support.

MR CHARLES CLORE'S REVIEW

The following is an abridged version of the statement by the Chairman, Mr Charles Clore, circulated with the report and accounts for the year ended December 31, 1958:

When I wrote my review twelve months ago I described conditions at that time as an "atmosphere of uncertainty and increased *restriction on policies of expansion.*" That was in April, 1958, and it was not until much later in the year that the removal of credit restrictions became possible, culminating early this year with the virtual disappearance of the Capital Issues Committee, coupled with greater financial freedom than we have known since the war. It is as well to bear in mind these big changes in so short a time when reviewing the affairs of the Sears Group for the past twelve months.

TRADING RESULTS FOR 1958

Despite the credit restrictions and other anxieties of the greater part of 1958, I am glad to be able to report an increase in the trading profits of all the principal undertakings which comprise the Sears Group. A summarised analysis of the trading profits for 1958 (with corresponding figures for the four preceding years and other statistics which show the progress of the Group) is shown above and I feel that I am fully justified in claiming that the figures provide adequate evidence of the success of the policy of the Sears Group. As there have been no major acquisitions during the past two years, the figures for these years are closely comparable and the improvements reflect the progress of the individual Groups and Companies.

After tax we are left with profits of £2,918,000 (compared with £2,250,000 in 1957) available for ordinary dividends or to be retained in the business. As a result of the incidence of profits tax we have decided *that it would be in the best interests of the* Company to recommend a dividend for 1958 of 7½ per cent only, on the Ordinary and "A" Ordinary capital, but to declare also a special interim dividend for 1959 of 17½ per cent, payable at the same time as the dividend for 1958. Thus the total dividend which will be dispatched on June 4th will be equivalent to a dividend of 25 per cent compared with 22½ per cent in 1957. The special interim will not be taken into account when we come to consider the final dividend for 1959 and should not be regarded as a departure from *our normal practice of recommending* only one dividend each year. The proposed Ordinary dividend for 1958, together with the special interim dividend for 1959, are covered 2.2 times by the net earnings for 1958.

PROPOSED SCRIP ISSUE

Since the beginning of 1956, when your Directors last recommended that a part of the Reserves should be applied to the allotment of fully paid shares, the total amount of the retained profits, excluding Capital Reserves, has increased by over £3 million. It is, therefore, proposed to recognise this fact by recommending another scrip issue of fully paid shares, which will be allotted in the ratio of one new "A" Ordinary share in respect of each four Ordinary or "A" Ordinary shares held at the close of business on April 17, 1959. This will absorb a total of £2,137,805 which will be taken from the Share Premium Account.

Looking ahead, I would like to repeat what I have said on previous occasions, it is the policy of your Directors to recommend the payment by way of dividend of a fair proportion of the profits earned in each year. The amount of the dividend can, therefore, only be decided when the results for the previous year are known.

THE BRITISH SHOE CORPORATION GROUP

There have been no major changes in the footwear Group during 1958. Your Company's large Group of nearly 1,500 retail shops found it difficult in the early months of the year, due to the pattern of the national trade, to show its customary increases in sales. In the latter part of the year, however, conditions improved and, by the end of December, we had, once again, exceeded all previous records.

Our footwear manufacturing side has *undergone special study during 1958* and during 1959 certain important changes will be carried out. Apart from increased efficiencies, we believe that these changes will enable our shops to offer even better value than heretofore, particularly in the middle and cheaper ranges of men's shoes.

During 1958 a number of new branches were opened. The total capital expenditure incurred during 1958 in respect of new branches and the modernisation of existing branches was in excess of £1 million. Whilst we anticipate that this large sum is more than the average expenditure which we expect to incur in future years, we are satisfied that well chosen expenditure of this kind brings a satisfactory reward.

So far the year has begun well and if the national prosperity is maintained, we have no doubt that our organisation and the excellent merchandise which it has to offer will attract a full share of customers so that our profits should continue to increase.

THE BENTLEY ENGINEERING GROUP

Group sales of hosiery knitting machines during 1958 once again exceeded those of the previous year and, therefore, constituted an all-time record. Furthermore, the order book

at December 31st last was at a very satisfactory level.

During 1958 the Bentley Group continued to improve and develop various models of the diverse kinds of knitting machinery which they manufacture and their range is now more comprehensive than ever before.

A very large proportion of the production of the Group continues to be sold to overseas markets. We have recently received substantial orders from the USSR and, quite recently, the largest single order ever received by the Company for one type of machine came from the USA.

Viewing the Bentley Group as a whole, the state of the order book is such that it is possible to forecast with some confidence that the year 1959 should be satisfactory.

OTHER INTERESTS

(a) The Furness Group

Whilst it has become customary for me to refer first to the Furness Group when reviewing the affairs of our "Other Interests," I mentioned last year that shipbuilding itself contributes only a minor proportion of the total profits of these other interests. The larger proportion comes from diverse sources, including electrical equipment, motor vehicle sales and service, structural steel and so on.

During 1958 the Furness shipyard launched six vessels *totalling 89,000 gross tons*, compared with 86,000 tons in 1957. The launching of a 32,000-ton tanker on December 11, 1958, marked the attainment of over 2 million gross tons of shipping launched by the yard since the inception of the Furness Shipbuilding Company Limited some forty years earlier. Half of this tonnage has been produced in the last twelve years.

The yard was fully occupied throughout the year and profits were, in consequence, satisfactory. Owing to the continued low level of freight rates, enquiries for new tonnage have been very limited and even when shipping conditions improve the competition from foreign builders will be severe. We are, therefore, continuing our efforts to improve efficiency in the shipyard and are still spending substantial sums on modernisation and improvements, so that the long-term outlook for Furness can be viewed with confidence.

Within the Furness Group are Shaw and McInnes Limited, with its pipe foundry in Glasgow, and Peter Johnston and Company Limited, fabricators and fitters of all kinds of pipework for ships and for land installations. Shaw and McInnes have experienced a difficult year owing to the effects of the credit squeeze, but they have enjoyed a reasonable intake of orders and the results for 1958 must be regarded as satisfactory under the circumstances. Peter Johnston *have more than fulfilled* our expectations of them with record profits.

(b) Parmeko

The profits of Parmeko Limited showed a decline compared with the previous year. This is due to the changed trading conditions compared with a few years ago, as a result of which the demand for the components for which Parmeko is best known has been less than the United Kingdom capacity to produce. Already, however, whilst sales of transformers, the Company's principal product, have declined, sales of magnetic amplifiers and other more recent products have increased. The Company is continuing to explore new avenues to extend the range of its products.

(c) Scottish Motor Traction

The increasing prosperity of the motor trade as credit restrictions were eased has been given much publicity. The Scottish Motor Traction Group have shared in this prosperity in that their turnover has increased. Profits have, however, been little more than maintained; this is because a considerable part of our increased turnover has come from the sale of used vehicles on which the rate of gross profit is small and also because the larger turnover could only be achieved with an increase in overhead expenses. Generally there seems good reason for confidence that prosperity in the motor trade will continue and with an improved range of products we are confident that we shall now enjoy the greater profitability which many other dealers have already achieved.

(d) Alexander Findlay

Findlays have had a very good year. At the present time they have adequate work in hand (although most of their large contracts are well advanced) and they are better placed than the majority of firms engaged in the structural steel business, where there is now a relative shortage of orders.

PROSPECTS OF GROUP

On balance, we do not feel anxieties so far as the future can be foreseen. Those members of the Group engaged in trades where orders are at present scarce are small compared with those who do not have these problems and even in their cases there are adequate reasons for hoping that more work will become available in their traditional trades or in newer activities, before it becomes necessary to cut down production. I am confident that if the prosperity of the consumer is maintained, then the shareholders of Sears Holdings Limited will continue to be satisfied with the results which we are able to show to them.

EXPANSION POLICY

Although our Balance Sheet shows that we are in a strong position to make additions to the Group, it is against the background of the existing business that any such additions have to be considered. During the past twelve months we have devoted much time and effort to the study of new propositions, but have not, however, found anything either here or in North America, which we felt would form a suitable addition to the Sears family. Firstly any additions must be either capable of improvement and expansion or such that they can be properly integrated with one or other of our existing "Divisions." Secondly, we are not prepared to pay a price which discounts the future too fully and which does not take into account the time and effort which will be necessary before the future benefits accrue. Nevertheless, we remain confident that with patience we shall be able to add to the Sears Group.

STAFF

Once again I am glad to express the very sincere thanks of my colleagues and myself to the large number of employees of the many Companies in the Group for their loyal support, their hard work and their enthusiasm. The relations between labour and management throughout the Group remain excellent and I am confident that the understanding between us deepens as the years go by.

BANCO DI ROMA

Paid up Capital : Lit. 1,000,000,000

Reserve : „ 5,000,000,000

The Ordinary and Extraordinary Meeting of the Shareholders of Banco di Roma, held on April 21, 1959 under the chairmanship of H. E. Professor Costantino Bresciani Turroni, approved the Balance Sheet, Profit and Loss Account, and the allocation of the profit for the financial year 1958.

The available funds of the Bank, increased during the year to about 92,000 million lire, together with the balance of the circular cheques, amount to about 723,000 million lire, whereas investments rose to 408,000 million lire.

The net profit balance for the year, of over 849 million lire, has made it possible to distribute a dividend of 10 per cent, and to allocate 750 million lire to reserve, which thus reaches 5,000 million lire.

At the Extraordinary Meeting, the Assembly resolved, after merging the present shares of Lit. 100 in shares of Lit. 5,000, to increase the capital from Lit. 1,000,000,000 to Lit. 12,500,000,000.

All the members of the Board have been re-elected; Professor Costantino Bresciani Turroni has been nominated Honorary Chairman, Mr. Ugo Foscolo Chairman, Professor Francesco Mario Oddasso and Dr. Massimo Spada Vice-Chairmen, Messrs. Raffaele Mancinelli and Achille Ruta Managing Directors.

THE NORTHERN ASSURANCE GROUP

CONTINUED GROWTH IN LIFE BUSINESS

TOTAL RESOURCES NOW ALMOST £95 MILLION

LORD GLENCONNER'S STATEMENT

The one hundred and twenty-third Annual General Meeting of The Northern Assurance Company Limited will be held on June 3rd at Aberdeen.

The following is an extract from the statement by the Right Honourable Lord Glenconner, the Chairman, which has been circulated with the report and accounts :

Continued progress is evident in the accounts and directors' report. Perhaps the best single measure of the further advance made by the Northern Assurance Group in 1958 is the growth of the total resources it administers from just under £87 million to nearly £95 million; these resources have in fact grown by more than 50 per cent in the last four years.

Further progress has been made on reorganisation at home with the opening of Western and Eastern Regional Offices and of group branches at Liverpool and Nottingham. A claims department has also been set up to handle accident claims arising under the policies of the companies in the Northern Assurance Group. These innovations, we hope, will improve still further our service to policyholders.

NEW RECORD IN LIFE ASSURANCE

Once again, our life assurance department has set up a record for new business. Net new sums assured (after deduction of reassurances) were nearly 20 per cent higher at £38,108,795 compared with the 1957 figure of £31,984,424. In this connection it is of interest to compare the corresponding net new sums assured as recently as 1952 of £13,032,774. Our Birmingham branch contributed over £2 million of new business towards this outstanding result and our Aberdeen head office and five branches each contributed over £1 million.

The Northern Assurance Group appears to have broken new ground in this country by securing two large temporary assurances, each for £1,650,000, which were effected to cover liability for estate duty. A large part of each policy was, of course, reassured and the year's new business figures mentioned above include only our own retentions under these policies. We are gratified to be entrusted with the placing of such large assurances and it speaks well for the facilities that we are able to offer that the major part of the necessary reassurances were placed on the market within a week. An increasing number of large proposals of this type are being received and they find their reflection in the group's figure of £46,745,497 for gross new sums assured last year, before reassurances.

Our life business abroad continues its satisfactory expansion. A marked increase was recorded by our South and Central African offices, whose combined new business rose by more than half from just over £5 million to nearly £8 million. Much credit is due to the actuary and the staffs in South and Central Africa for their achievement. It has added distinction to last year's celebrations of the Northern's centenary in South Africa, which were attended by the deputy general manager, Mr F. B. Joule.

FORMATION OF NEW LIFE COMPANY

Another centenary was celebrated last year, in Australia; this was marked by a visit by Mr J. C. Duffus, one of our Deputy Chairmen, accompanied by the general manager, Mr T. W. Haynes. It was marked, too, during the year by the incorporation of the Northern Life Assurance Company of Australia. This new company, to which I referred in my last statement, started to underwrite life business on January 1st and we are confident that it has a bright future. We have also recently appointed an actuary for Canada and during this year the London & Scottish will resume the writing of life business there.

VARIABLE ANNUITY PLAN

Last year, some £186,500 of new annual premiums were received in respect of individual retirement annuities for self-employed persons and those in non-pensionable employment, to whom the 1956 Finance Act affords relief from income tax and surtax on the premiums paid. Our variable annuity plan, which I briefly described a year ago, made its debut early in 1958, and during this first year premiums of approximately £55,000 were received. This alternative method of provision for retirement based on ordinary shares is intended to have a specialist appeal and is described in detail in the report.

FIRE AND ACCIDENT BUSINESS

Conditions in fire and accident business throughout the world have been far from satisfactory in recent years for almost all insurers. Last year, there were some welcome indications of an improvement in the results of insurance business generally in Canada, but the improvement is not yet sufficiently established to justify optimism. Our business in the North American continent still causes us concern, and we are continuing our efforts to improve the situation.

Fire and accident premiums for the Northern Assurance Group last year were £10,403,924 and £14,832,934 respectively; together they totalled £25,236,858, which represents an increase of slightly less than 4 per cent over the 1957 total. Unremunerative underwriting conditions in North America have fortunately been offset to some extent by further progress in other important areas. One of these is Australia, where our substantial business continues to run satisfactorily; our long term plans in the Commonwealth have been furthered in the past year by the opening of our new building in Sydney and we are encouraged by the trend of our underwriting profit in this growing market.

UNDERWRITING RESULTS

The outcome of the group underwriting last year as a whole reflects an improvement in trend, though the accounts were not restored to a profit. On the fire account, last year's loss was £130,038, against £175,195 in 1957, while the loss on the accident account was cut to £17,041 compared with £170,060 in the previous year. Marine underwriting remained extremely difficult. Premiums increased from £6,252,433 to £6,605,087, but there is a long "run-off" in a marine account and our major consideration under present conditions must be the strength of the marine fund. With this policy in mind, therefore, we have transferred the sum of only £58,489 from the marine account to profit and loss, compared with £163,278 for 1957. As a result, the fund has been further strengthened from £8,924,563 to £9,185,406. Following the heavy settlements made last year on claims arising from accounts of earlier years, marine underwriters have taken remedial measures by demanding higher penalty increases in premiums on accounts showing adverse results, but the benefit of this action must remain to be seen in future years.

The balance of last year's overall underwriting results in a loss of £88,590, which has been transferred to profit and loss account, against the much heavier loss of £181,977 in 1957.

INVESTMENT INCOME

A substantial increase is recorded in gross earnings on the investments held in the shareholders' funds. This increase from £1,532,030 to £1,641,622 can be attributed partly to the employment of the new funds raised in 1957 when the Northern's capital was increased, but the skill of our investment department has played an important part in achieving such an excellent result.

Further devaluations occurred last year in France and in South America which resulted in a loss on exchange in our profit and loss account of £196,850, against £274,486 in 1957.

In the outcome, the group's gross trading profit has advanced from £1,121,101 to £1,401,806. There has been no relief from the burden of taxation at home and overseas, which has increased slightly from £855,041 to £858,463, and it absorbs the still heavy proportion of 61 per cent of this year's profit, compared with 76 per cent a year earlier. Net profit amounts to £543,343, against £266,060, and it is proposed to set aside £25,000 to contingency reserve.

It is proposed to pay a final dividend of 10 per cent on the share capital, making a total of 15 per cent with the interim of 5 per cent paid in November, 1958. The total dividend will require £553,638 after deducting income tax, compared with £495,204.

GROWTH OF FUNDS

With the rapid growth in our life and non-life funds, our investment responsibilities grow correspondingly each year. The total book value of the stocks and shares held in these funds increased last year by more than 10 per cent from £60,093,856 to £66,588,333. Easier credit conditions and a continued active demand for ordinary shares resulted in a significant recovery in market values during 1958; gilt-edged securities were over 10 per cent up, industrial debentures rather less than 10 per cent and industrial ordinary shares 33 per cent higher, according to the Actuaries Investment Index. In terms of market values, therefore, our investment portfolios have benefited from the marked improvement in the economic strength of the country, but our investment operations look beyond short-term market conditions and towards long-term security, backed by adequate investment reserves.

PETROFINA

Société Anonyme Brussels Belgium

DIFFICULT YEAR FOR OIL INDUSTRY BUT GROUP'S SALES UP 42 PER CENT

The Annual General Meeting of Petrofina SA was held in Brussels on May 8th, and the following are extracts from the Board of Directors' report:

GENERAL SURVEY OF THE OIL MARKET

The year 1958 was a difficult one for our industry. The cause of the trouble from which it has suffered lies much more in the policy of looking for individual short term advantage than in the economic recession.

The margin between the prices of crude oils and the prices of finished products was still further reduced and local competition in the consuming markets became even keener, no account being taken of what the products cost. This situation does serious harm to the general interest and to the interests of millions of oil company shareholders.

Companies with secure outlets are in a much less vulnerable position than non-integrated producers, and this fully justifies the policy of increasing the number of our outlets, which we have followed since the war.

With regard to long term developments, nothing has happened to modify our industry's optimistic forecasts. The inevitable increase in consumption will, in the long run, absorb all the oil available in the world.

The forecasts of the increased needs for power in the world, the limited possibilities for expansion of the production of coal, the long time that it will take nuclear power to make a perceptible contribution, mean that oil will have to meet a growing proportion of the world's power needs, without however encroaching on the other sources of power.

Consequently, the competition of fuel oil with coal which has occurred in many countries is quite unjustifiable. The prices at which fuel oil has been, and is still being, sold in certain European markets result in the oil companies sustaining losses out of all proportion to the possible increase of their outlets. This policy provokes the natural reaction from the governments and from the coal industry in the countries where it has been followed. To sell below cost is always a bad practice, but its consequences are particularly harmful in the quite unjustified fight between fuel oil and coal. It must be stressed that in Europe fuel oil cannot be regarded as a residual product, because it represents the greater part of the oil consumed, and it is anticipated that the requirements for it will increase more rapidly than those for other products.

The conditions which we have described have aggravated the basic problem of our industry, namely to find the capital necessary for the increased investment which is called for because of the growing need for oil. It is becoming more and more apparent in every country that, without a substantial ploughing back of profits, this capital simply cannot be found. This fact seems to have been accepted by all parties concerned and we believe that the lesson of last year's experience will not have been without effect, which leads us to expect a gradual restoration of a normal situation and the return of our industry to its traditional good sense.

SALIENT FEATURES OF THE YEAR

Despite unfavourable conditions in the various markets, sales of the group companies increased by 42 per cent over the previous year, chiefly because of the development of our outlets in new markets and the acquisition of existing companies. Our sales could have been appreciably higher if we had followed the very low prices at which fuel oil was sold in certain countries.

We are consolidating our position still further by continuing methodically the expansion of our distribution networks.

With the object of standardisation we have decided gradually to replace the trademark "PURFINA," under which the products of the group are sold in continental Europe, by the trademark "FINA," used in the Anglo-Saxon countries. We are in the process of effecting this change and many of our service stations are already displaying the new sign, which has the particular advantage of being more easily seen.

The continual strengthening of our position in the industry, the increase in our refining capacity, the steps which we have taken towards rationalisation made possible by the increase in the volume of our sales, the conditions of our supply arrangements—as well as an improvement in the statistical situation and a better maintenance of prices—justify our taking an optimistic view of even the immediate future of our company.

CONSUMPTION

Sales of the group and of the companies in which we have a shareholding reached the equivalent of 10,300,000 tons, made up of 7,200,000 tons of finished products, 2,500,000 tons of crude and 19,000 million cubic feet of gas.

PRODUCTION

For our group, in the sphere of exploration and production, we would say:

In the UNITED STATES, the acquisition of the assets of PETRO-ATLAS considerably increased the reserves and production of AMERICAN PETROFINA.

In CANADA, important discoveries contributed to the increase in the reserves of CALVAN and WESTERN LEASEHOLDS.

In MEXICO, the construction of the pipeline to carry gas to Mexico City has been definitely decided on and its financing settled. This allows us to consider an early commercial development of the large reserves of gas which we have at Xicalango.

In EGYPT, production of the COMPAGNIE ORIENTALE DES PETROLES D'EGYPTE, of which 51 per cent is held by the INTERNATIONAL EGYPTIAN OIL COMPANY (in which we share control equally with the Italian E.N.I. Group), reached 1,800,000 tons, against 760,000 tons in 1957.

In ANGOLA, a new discovery was made at Cacuaco, the importance of which cannot yet be estimated.

In VENEZUELA, PETROBELGE and AMERICAN PETROFINA have a small share in the working of a concession on Lake Maracaibo, where 12 good wells were drilled during the year.

REFINING

The refining capacity of our group was increased to 7½ million tons, an increase of 1½ million tons over the preceding year.

In BELGIUM, at the Antwerp refinery, in which we have an equal shareholding with the British Petroleum Company, the catalytic reforming and desulphurisation units were put into operation and worked normally. The refinery operated very satisfactorily and treated 3,654,000 tons.

In CANADA, the capacity of the Montreal refinery was increased to 1½ million tons, the work being completed during the second half of the year. It treated 1,060,000 tons in 1958 and the increased refining capacity will give us an appreciable reduction in cost per unit of output.

In the UNITED STATES, the Mount Pleasant refinery's catalytic reforming and alkylation plants were completed and a catalytic reformer was put into service at the Eldorado refinery. The three AMERICAN PETROFINA refineries together operated at 80 per cent of their total capacity.

In ITALY, a proposal for building a new refinery near Rome is being examined. The existing refineries worked normally but margins between costs and selling prices remained quite inadequate.

In GERMANY, the building of the Duisburg refinery continues normally and its opening is expected in the last quarter of this year. The Mulheim refinery is undergoing alterations in order to provide for the production of asphalt from this month.

In ANGOLA, the Loanda topping plant was put into service in the spring of 1958 and is working normally.

TRANSPORT

During the course of the year, two new units arrived to reinforce our fleet: the "PURFINA ALLEMAGNE" of 19,300 tons and the "FINA AMERICA" of 33,400 tons, both under the Belgian flag. The "PURFINA ANGOLA" of 33,400 tons, under the French flag, was launched and will go into service this spring.

We would mention the opening in Germany of the Nord West Oelleitung, a pipeline in which we have a financial interest and which links our refinery at Duisburg with the port of Wilhelmshaven.

We have taken a share in a company examining the possibilities of a pipeline from the Mediterranean to Strasbourg.

DISTRIBUTION

Our network comprises about 12,200 selling points. The increase is chiefly due to the acquisition of the network of PETRO-ATLAS and its subsidiaries in the United States and to the opening up of the DEUTSCHE PURFINA chain of stations. Elsewhere progress has been slow, but particular attention has been paid to the modernisation and rationalisation of existing stations.

RESEARCH

The group has devoted increasing amounts to the work of scientific research, which, although its precise value is difficult to assess, is of vital importance.

We have been pleased to note that the Government has given the development of scientific research in Belgium all the recognition that it deserves.

FINANCE

Profit for the year ended December 31, 1958, amounted to 492,408,906 Belgian francs (approximately £3,517,000), including the balance brought forward from the previous year of 80,769,854 Belgian francs (approximately £577,000). This profit has been arrived at after charging the Profit and Loss Account with 281,696,693 Belgian francs (approximately £2,012,000), for depreciation, exploration expenses, research and decreases in the value of assets. This amount is less than we would have charged under these headings in normal times but, having regard to the fact that the real value of a number of items is considerably above the balance sheet figures, we have thought that the interests of the shareholders called on us to give them a satisfactory return on the capital invested, notwithstanding the less favourable results due to the temporary uncertainties of our industry.

In making this decision, we have followed our invariable policy of paying shareholders as high a dividend as is possible.

We propose that the profit should be appropriated as follows:

	Belgian francs	Approx. £
To legal reserve.....	25,000,000	178,500
Dividend of 75 Belgian francs on 5,100,000 shares.....	382,500,000	2,732,000
To directors' remuneration, according to the Articles of Association.....	28,790,321	206,000
To be carried forward.	56,118,585	401,000
	492,408,906	

The report, the accounts and the proposals put forward by the Board were adopted.

NATIONAL BANK OF PAKISTAN

CONTINUED PROGRESS

The tenth Annual General Meeting of the National Bank of Pakistan was held on May 7th at Karachi.

Mr Hoshang N. E. Dinshaw (the President) presided and, in the course of his speech, said:

You will notice from the Bank's Balance Sheet that the Bank has continued to move forward and has greatly extended its field of operation. With the expansion in its activities it has further enlarged its contribution to the national economy, one of its major objectives.

During the course of the year the Bank's total deposits reached the peak figure of Rs. 73.98 crores, indicating a rise of 16.08 per cent over the highest level of Rs. 63.73 crores in the previous year. The Bank's total advances, which reached a peak figure of Rs. 43.93 crores in 1957, rose further to Rs. 59.93 crores in 1958, an increase of 36.42 per cent. The corresponding increase in the previous year was 14.85 per cent.

I am pleased to report that the profits earned by the Bank, amounting to Rs. 94.53 lakhs, showed a further increase over the record figure of Rs. 92.66 lakhs in the previous year. The Reserve Fund has been further strengthened by an allocation of Rs. 25 lakhs and now aggregates Rs. 1.35 crores, which represents 90 per cent of our Paid-up Capital. The dividend remains unchanged at 5 per cent.

GENERAL ECONOMIC SURVEY

The strains in our economy, to which I made reference in my last speech, were intensified during the year. The world economic scene was overshadowed by the recession in the USA. This was associated with a marked slowing down of business activity and a falling trend in international trade. With the continued fall in the demand for primary commodities in the major industrial centres in the world the downward trend in World Commodity prices further deepened. This decline greatly affected countries such as Pakistan, which are dependent on the export of raw materials. The position was made worse by the continued high prices of imports comprising, chiefly, manufactured goods. The catastrophic fall in the prices of commodities has hit the producing countries very hard and has shaken the very foundations of their economies. The most regrettable feature is that, whilst industrially advanced countries are well cushioned to bear the brunt of the shock, agricultural countries have no such resources and have suffered untold harm, and a vast proportion of the people engaged in agriculture have been pauperised. What the latter have lost has been gained by industrialised countries, who have taken full advantage in regard to the purchase of their elementary requirements at prices dictated by them. Of course, there is the other man-made cause too, i.e. the massive growth in population; it is a social economic problem and requires to be dealt with very firmly before the mischief goes further. It is no use having well planned schemes of expansion when their utility is negatived by increased demand from the rising tide of new generations. I am glad to see that all sensible minded people are now taking an interest in the solution of this thorny problem.

The report was adopted.

BANCO DI SANTO SPIRITO

ROME

Established 1605

THE ANNUAL GENERAL SHAREHOLDERS' MEETING was held in Rome on April 23, 1959, the Marchese Giovanni Battista Sacchetti being in the chair. In the ordinary course of the meeting the following Balance Sheet was approved :—

Balance Sheet at December 31, 1958

It was further resolved to transfer Lit. 350,000,000 to reserves and to distribute a dividend of Lit. 50 (10%) per share.
In the extraordinary course of the meeting it was further resolved to increase capital to Lit. 3,000,000,000 by means of :—
a gratuitous allotment of shares to shareholders, available on reserves, for an amount of Lit. 250,000,000 ;
an issue of new shares, payable half in 1959 and half in 1960, for an amount of Lit. 2,000,000,000.

COSTAIN'S contribution to Britain's first essential . . . export market

PROPORTION OF OVERSEAS WORK NOW 65% — GROUP'S WIDESPREAD RAMIFICATIONS

'Trading profits in 1958 are highest in Company's history . . .'

Sir Richard Costain, C.B.E., Chairman

THE ANNUAL GENERAL MEETING of Richard Costain Limited will be held on June 4 in London.

In the course of his circulated statement reviewing the year 1958, Sir Richard Costain, C.B.E. (Chairman and Joint Managing Director), said he was glad to be able to report that the group earnings for 1958, excluding Dolphin Square and allowing for pre-acquisition profits and minority interests in subsidiary companies, showed a satisfactory increase.

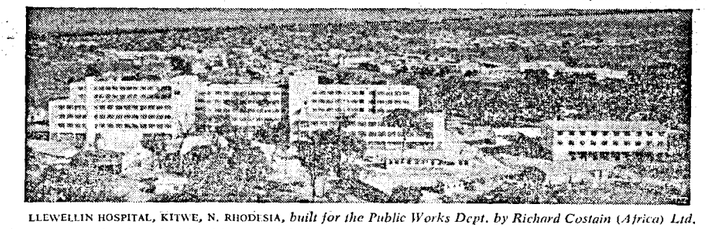
The sale of Dolphin Square had improved the liquid position of the group and the reinvestment of those funds would, in a year or so, add to the group earnings.

Sir Richard added: Taking these factors and the current prospects into account your Board have felt justified in recommending a final ordinary dividend of 10% making 15% in all for 1958 on the Ordinary capital as increased by the 100% free bonus issue.

Reviewing the group's activities, the statement continued:

CONTRACTING :

Our order book at the end of 1958 was approximately the same as at the end of 1957, but during the first months of this year there has been a substantial increase, particularly in Civil Engineering. The proportion of work carried out abroad has increased once more and is now about 65%.



We have expanded our interests in Nigeria by the purchase of a controlling interest in Costain (West Africa) Ltd. where work in progress is at a high level and we are confident about this [illegible] with its thirty million people and great natural resources will have under self-government a stable and prosperous future.

SPECIALIST SERVICES :

During the year we purchased the Share Capital of Piling and Construction Co. Ltd., a company specialising in bored piling, and in addition we formed a new Subsidiary Company, Foundation Engineering Ltd., from our existing department which deals with foundation problems. These two subsidiaries are complementary to each other and add to the volume of specialist work which is making an increasing contribution to group earnings.

ABROAD :

The Civil Engineering Division have commenced work on the £4 m. boat harbour and jetty at Kharg Island in the Persian Gulf for the Iranian Oil Consortium. Operations have been started on the £4.5 m. oil terminal at Khor-al-Amaya for a subsidiary of the Iraq Petroleum Company and recently we were awarded the £8 m. breakwater at Escravos Bar, Nigeria, which is one of the largest civil engineering contracts awarded in the Commonwealth. We are associated with the American Company, Raymond International in all three contracts. In Nigeria Costain (West Africa) Ltd. continue to be heavily engaged in road work and bridges, some of which are in very difficult country. Our large contracts in Barbados and the Maldive Islands are progressing satisfactorily. The Rhodesian subsidiary is building the Salisbury headquarters of the Rhodesian Selection Trust, which will certainly be the most spectacular building in Central Africa, and is also engaged in several other important office buildings in Salisbury. In Iran we have completed the first major housing contract at Gach Saran and have on hand there further housing and an airfield; we also have housing contracts and a hospital in Abadan. We have recently been awarded a contract for the development of a £6 m. Township in Kuwait.

LLEWELLIN HOSPITAL, KITWE, N. RHODESIA, *built for the Public Works Dept. by Richard Costain (Africa) Ltd.*

AT HOME :

For various unrelated reasons our building operations in the United Kingdom were at a slightly lower level in 1958, but our order book is fuller than it was a year ago and enquiries are coming in at a higher rate. Among the major contracts completed during the year were the new buildings for the Royal Naval Engineering College near Plymouth and an office block for the Legal and General Assurance at Kingswood in Surrey.

The Civil Engineering Division have completed the £1½ m. Beckton Outfall Diffused Air Plant for the L.C.C. and are fully engaged on the Maidstone By-Pass, although last winter's weather retarded progress.

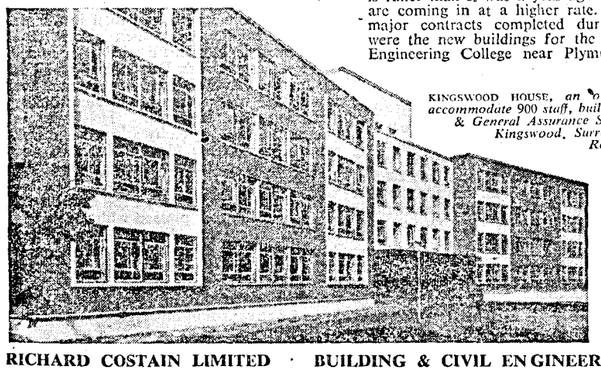
COSTAIN CONCRETE CO. LTD.

The company has had another satisfactory year and the prospects are promising for all products including railway sleepers and Stahlton floors. For some time this company has been investigating the Swedish lightweight concrete known as Siporex and we have now signed an agreement with Siporex Internationella AB giving us exclusive rights of manufacture in this country and options on several countries overseas. This product has a high thermal insulating value, is made to precise measurement, is light, easy to handle, and quick to erect and it can be reinforced and used structurally as roof, floor and wall units. In some uses the cost ex-works is cheaper than existing materials and in the great majority of uses the erected cost is appreciably cheaper. We expect that this will make some contribution to the reduction of building costs in this country. The first factory near Glasgow is due to start production early in 1960.

HOUSING :

In the United Kingdom 1958 was a good year and demand and availability of mortgages will probably increase turnover in 1959. The company has enough land for the present rate of building and providing there is no change in the national housing policy, the outlook for the division should be promising.

FUTURE PROSPECTS :



The trading profits for 1958 show a further increase, quite apart from the special capital profit made on the sale of Dolphin Square, and are the highest in the Company's history. The widespread and varied nature of the group's activities must be of great advantage in cushioning the effect of any recessions that may occur in any particular field of our operations.

It must be borne in mind that 65% of our business is carried out abroad, and a substantial proportion on the African continent and in the Middle East; in these areas many political changes are taking place which may reduce the amount of work that we carry out. Several years ago, owing to a political disturbance in a country abroad, work ceased completely on one of our contracts, several hundred employees were thrown out of work, and a considerable anticipated profit was lost; it is possible, but I hope not probable, that this could happen again. We feel, however, that these risks are warrantable not only from your Company's point of view, but also in making a contribution to Britain's first essential—the Export Market.

Your Board feels that the prospects for 1959 can be viewed with confidence and, subject to unforeseen circumstances, the profits for that year should not be less than in 1958. We should benefit in the future from the Board's reinvestment policy, and from the long term view, I see no reason why the Company's development should not continue as in the past, subject to the outside economic and political influences which must affect a business of our nature.

STAFF :

We have with your approval, instituted the staff shareholding scheme. 90% of the shares (totalling 47,431) available to those who were eligible have been taken up and this initial success makes me more confident that this scheme will help to attract and retain the right personnel.

G. & J. WEIR HOLDINGS LIMITED

INCREASED OUTPUT AND EARNINGS

THE HONOURABLE J. KENNETH WEIR'S REVIEW

The annual general meeting of G. & J. Weir Holdings Limited will be held on June 3rd at Glasgow.

The following is an extract from the circulated statement of the chairman, The Honourable J. Kenneth Weir, CBE, BA:

I have to record a good year's trading by your Group, which has resulted in an improvement in earnings compared with 1957. The year 1958 marks the end of a period during which your Company functioned in the dual capacity of a holding and a trading concern. From 1959 on, therefore, your Board will be concerned entirely with the functions of a holding company.

THE ACCOUNTS

The Consolidated Profit and Loss Account shows a trading balance for the year of £2,994,708, being an increase of £252,331 compared with the previous year. This is an encouraging improvement, resulting from an increase in output from the Group. In turn, this was made possible by the strong order book position built up during the latter part of 1956 and during the first nine months of 1957. Increased costs of manufacture have, however, reacted somewhat unfavourably against this improved volume of output. Net profit amounts to £1,123,173, compared with £981,204.

Turning now to the dividend distribution, your Board have already increased the interim to 4 per cent from 3¾ per cent in 1957. Having regard to the improvement in earnings compared with 1957, they now feel justified in proposing a further increase in the distribution to stockholders, and accordingly recommend a final dividend of 13 per cent for the year, making 17 per cent total against 16 per cent for 1957.

The main feature to which I would draw your attention in the Consolidated Balance Sheet is the very satisfactory relationship between Current Assets and Current Liabilities, the latter being covered almost three times.

Weir-Catton Limited.—Stockholders have already received, through the Press and by circular letter of December 31, 1958, notification of the change which has taken place in our foundry interests. Your Company now holds 50 per cent of the Issued Capital of Weir-Catton Limited, a holding company with two wholly-owned operating subsidiaries, Weir Foundries Limited (formerly The Argus Foundry Limited) and Catton and Company Limited, Leeds.

SURVEY OF PERFORMANCE

In many respects 1958 was the converse of 1957. During 1958 output performance was good, but as a result of the recession conditions generally and in the shipbuilding industry particularly, orders for new work fell sharply and price margins were reduced, although there were certain exceptions in the Group. In contrast, 1957 was a good year for input, but output performance was less satisfactory. The good output and lower input of 1958 has resulted in a contraction in the overall order book position, but there is still plenty of work available for 1959.

G. and J. Weir Limited.—Output for the year was very good, exceeding the past year's performance by a substantial margin.

In contrast to the performance in output, orders for new work, both at home and abroad, were disappointingly low. This was a reflection of the general contraction in trading and, in particular, the depressed conditions in world shipbuilding, where orders for new tonnage sank to a low level. The sharp decline in export orders reflected not only the small amount of work available, but also the emergence of strong local competition in Holland and West Germany. Nevertheless, some good contracts were secured on the land side of the business.

Drysdale & Company Limited.—Output at Yoker was not only well maintained but actually bettered the previous year's figure. Both marine and land sides made very satisfactory contributions to the result, the balance of work being well spread. The order book is in a position to ensure that, subject to unforeseen contingencies, the year 1959 should make a satisfactory showing.

Weir Foundries Limited.—The former Argus Foundry Limited had a year of low output, resulting in the company trading at a loss.

Zwicky Limited.—During the year under review there was a substantial intake of new work, reflecting the progress anticipated in broadening sales. On the other hand, output did not come up to expectations, due mainly to a particular supply hold-up. While 1959 may be a difficult year, the order book is substantial and it is anticipated that good progress will be made.

Weir Housing Corporation Limited.—Both output and earnings for 1958 were much better than was expected. The orders received over the period were substantially higher than in the previous year. Prospects for the coming year are brighter than they have been for some time and with due reservation a successful year's trading is anticipated.

Weir Valves Limited.—This company has experienced, in line with other engineering concerns, the effects of the general recession, but the year has been marked with considerable progress in the successful launching of new products.

Wm. Simons & Company Limited.—The two diesel electric paddle tugs for the Admiralty were launched, completed and delivered during the year. They have been specially designed to assist HM Aircraft Carriers in harbour. Substantial progress was also made on the two fish factory vessels on order for Messrs Chr. Salvesen of Leith.

The volume of work in the Engine Works and Boiler Shops, particularly contracts placed by G. & J. Weir Limited, has ensured that these departments have been fully occupied throughout the year, and a number of orders for replacement parts for vessels has also been received. Irritating labour troubles continued and promised delivery dates were affected as a result.

Peacock Brothers Limited.—This company has felt the effects of the recession that Canadian business experienced throughout 1958, both orders and output showing reductions. Despite these conditions the results can be considered as satisfactory.

W. R. Skinner Limited.—Both in output and in earnings this small company had a successful year and has good prospects for the future.

GENERAL ACCIDENT FIRE AND LIFE ASSURANCE CORPORATION, LIMITED

SIR STANLEY NORIE-MILLER ON 1958 ACHIEVEMENTS

The seventy-third Annual General Meeting will be held on May 27th at Perth. The following is an extract from the circulated address of the Chairman, Sir Stanley Norie-Miller, Bt, M.C., D.L., J.P.:

The adverse trend in underwriting results in the Accident Department, mentioned in my two previous Addresses, persisted throughout 1958. I am glad to say that the results in our Fire Department in 1958 were well up to our usual standard and net premium income increased by nearly £1 million to reach £6,033,802.

Life Department premium income amounted to £3,773,012, an increase of £328,233. Expenses of Management and Commission were lower by approximately 1 per cent.

The business of the Group again showed remarkable expansion, income from all sources rising to the record total of £71,360,397, an increase of nearly £8 million during the year. Gross Interest and Dividends exceeded £3 million for the first time and transfers from the Underwriting Accounts were higher by £85,622.

The Revenue Balance for the year was £2,391,312 (an increase of £440,427) which, added to the amount brought forward from 1957, makes available for appropriation the sum of £3,526,621. Out of this, £499,321 has been allocated to Staff and Widows Pension Funds, £600,000 to Additional Reserve in the Accident and General Account, and £500,000 to Additional Provision and Reserve in the Fire Account.

An Interim Dividend of 6d. per 5s. Unit of Ordinary Stock was paid last December, and your Directors recommend a Final Dividend of 10½d. per Unit, making a total distribution of 1s. 4½d. The comparable distribution for the previous year was 1s. 3d. If the recommendation is approved, the balance to be carried forward will be £1,178,784, an increase of £43,475.

Our assets increased to a total just short of £112 million, of which £95,527,162 represented investments carried at or under cost less Reserves. At December 31st, 1958, the market value of those investments was appreciably higher than book values before deduction of Reserves. Holdings in Ordinary Stocks, carefully selected and well spread both in the United Kingdom and Overseas, represented 24.17 per cent of the portfolio.

In all the circumstances I feel sure Stockholders can be well pleased with the results disclosed by the Annual Report and Accounts. Considerable credit must go to our Executives, Managements and Staffs all over the world who, actuated by determination to keep the "General Accident" Group in its front rank position, have given service of the highest standard.

THE LITTLEWOODS ORGANISATION

BIG INCREASE IN TURNOVER

MR JOHN MOORES ON CHANGING PATTERN OF TRADE

I am happy to report that the Littlewoods Organisation has again enjoyed a very successful year. Apart altogether from the Pools, the turnover rose to approximately £60 million which, compared with £53 million for the previous year, represents an increase of approximately 14 per cent.

This very satisfactory result reflects the success of our efforts to improve the organisation itself and it provides very gratifying evidence of the continuing confidence of our growing number of patrons.

During the earlier part of the period the economic climate in the country as a whole was still one of restraint imposed by official monetary policy. Although we are less subject than most organisations to the effects of such a policy in so far as we are dealing in commodities that are in every-day demand, there is no doubt that the atmosphere of restriction was reflected throughout all levels of business activity.

I welcome wholeheartedly therefore the transition from restraint to expansion, now in progress in the national economy, and which was strikingly illustrated by the Budget last month. I must confess to some disappointment that the reductions in Purchase Tax do not apply to more of the items of merchandise with which we are concerned. Nevertheless, the reductions cover a wide field and at considerable cost to ourselves we immediately passed on the benefit to the customer.

It has been our consistent policy to keep prices down to a minimum and during the past year a further improvement in buying methods, and the streamlining of the organisation as a whole, has enabled us again to reduce prices over a wide range of merchandise. We feel that we owe it to our growing community of loyal customers to continue this policy with the utmost vigour.

HIGHER STANDARDS

In the last few years it has become evident that the public is demanding goods in the lower-price range which do not differ too greatly from the better-class types of merchandise formerly considered the prerogative of the higher-income groups. The days have gone when the housewife made purchases "to last a lifetime"; when goods were chosen for their durability rather than appearance and the important factor about clothes was their ability to stand up to hard wear regardless of whether they were designed with an eye to current fashion or not. That is what the housewife meant by "value for money" a decade ago. Today, style and good taste are equally essential ingredients.

To keep abreast of this trend we have established infinitely higher standards for the wide variety of goods in which we trade and efforts for still further improvement go on continuously. In the process the one-time popular image of the Chain Store has changed from that of the cheap bazaar to that of the modern department store but without sacrificing the economy factor in any degree. This in turn has broadened the income range from which our customers are drawn and it is true to say, I believe, that class-consciousness has all but disappeared from chain store shopping.

Another important factor is the growing significance of the requirements of teenagers. Since the war we have seen the development of a generation of young people who, with comparatively high incomes soon after leaving school, are no longer content to leave the buying of clothes to their parents. The chain store is ideally suited to the requirements of these lively young people and I consider their patronage to be one of the most gratifying developments of recent years.

The good name of the Littlewoods Organisation is the responsibility of every single one of the more than 20,000 men and women who work with me. It is their organisation as well as mine and the successes we have achieved are their successes also. I count myself very fortunate in the loyalty and co-operation of all my colleagues in the Littlewoods Organisation and I know that together we can go forward to even bigger things.

I would also like to pay particular tribute to the manufacturers to whom we look for supplies and upon whose co-operation we depend so much to carry out our trading policy. They have had a very difficult year, particularly in the textiles trades, but they have given us really excellent service at all times. We make very heavy demands on them in our constant search for quality with economy and it is only with their co-operation that we are able to offer merchandise of such high quality, and of such a high standard of design, at such modest prices.

LITTLEWOODS POOLS LIMITED

In my last annual report I mentioned our endeavours to offer to our big winners every possible service to assist them with their newly acquired wealth. In my opinion this service has now become even more important due to the increasing popularity of our football pools. The top dividend figure in the treble chance pool alone has gone well over £250,000 and on one occasion last season the total sum paid to one single winner was £300,684. Accordingly I have had the staff of our Winners' Advisory Department considerably enlarged. More and more Advisory Committees, which they control, have been set up in association not only with our own Bankers but with other Banking Houses who have readily offered the services of their organisations to give our winners the most experienced advice. Over the past year twenty Winners' Advisory Committees have been set up in England and two in Northern Ireland.

On these Committees sit Bank Executives and Trustee Experts with leading Lawyers and Stockbrokers, my brother Mr Cecil Moores, and senior executives of the Littlewoods Organisation.

Because of the overwhelming success which these Advisory Committees have had with their responsibilities it would be wrong if I did not acknowledge here the excellent co-operation that we have received from such concerns as Grenfell and Company, stockbrokers; Northcote and Company, stockbrokers; Martins Bank Limited; Midland Bank Limited; Westminster Bank Limited and the Northern Bank Limited, Belfast.

To those of our critics who say that football pool winnings have no economic value to the country I would like to record that some of our major winners last year invested over £850,000 in Ordinary Stocks and Shares and over £490,000 in Government and Corporation Stocks, Debenture and Loan Stocks, quite apart from their purchases in Government Savings and Bonds. These figures represent a very sizeable contribution to Britain's industrial and commercial development. And as a tail piece, by way of Direct Pools Tax, my Company this year, again will be paying the Chancellor of the Exchequer 30 per cent of our gross stakes.

MAIL ORDER

There was a considerable increase during 1958 in the Volume of our Mail Order trade. Every year sees the Home Shopping Service more firmly established, and I am proud of the tradition of trust and confidence in this method of shopping that we have built up in such a comparatively short space of time. We owe a great debt of gratitude to our Club Organisers who are the backbone of this service. We now have the highest number of Organisers in the history of our Mail Order Service, and more and more people are discovering the profit and the pleasure in shopping from our catalogue.

In Mail Order trading as practised by the Littlewoods Organisation there is something more than simply buying and selling. There is an element of good-neighbourliness which is of great importance, and for this reason customer goodwill and trust is essential. We guard most jealously the reputation that we have established in this respect.

I have already commented in general on our constant concern to improve style as well as quality, and this is reflected most strongly in the more fashion-conscious catalogue that we have now produced and which, with its 540 beautifully coloured illustrated pages, is such an attractive and highly-prized feature of shopping at home.

CHAIN STORES

Last year, in every department of our chain stores, we served more customers than ever before and the sales total reached a record high level. I am particularly pleased about this because it indicates the confidence of the shopping public in the quality of our merchandise and the standard of the service we provide. I like to think that quite apart from actually buying goods, customers find that a visit to a Littlewoods store is a pleasant experience; that they like the freedom with which they can examine the openly-displayed merchandise before making a purchase and that they like the friendly courtesy which we encourage from every member of the staff.

Prospects of future development are considerably improved with the ending of the credit squeeze and we are now hoping to make better progress than has been possible to date with the various schemes that we have in hand for expansion, and for the improvement of existing stores.

In general we can look back with satisfaction at a successful year but we must remember that the future is becoming even more challenging. We do not intend to stand still. Our patrons will judge us not on the past but on our present and future ability to meet their requirements. They are the final arbiters of our success and we must always keep in the forefront of our minds the old trading principle that the customer is always right.

STOREY BROTHERS AND COMPANY LIMITED

MR J. H. STOREY'S STATEMENT

The Sixty-third Annual General Meeting of Storey Brothers and Company Limited was held on May 14th in Lancaster.

The following is an extract from the circulated statement of the Chairman, Mr J. H. Storey.

In presenting the Accounts for 1958 it is a matter of regret that, whilst our net profit is the second largest we have ever recorded, it has not reached the record figure of 1957, but against the background of the year, I feel that this should not come as a surprise to anyone, because the results conform very closely to the forecasts which have been made.

Trade in the last two months of 1957 was somewhat disappointing, and with Bank Rate continuing at 7 per cent up to March, 1958, together with other adverse factors affecting industry generally at that time, business continued at a reduced level in the first few months of 1958. As would be expected from these adverse economic conditions, there was a lower demand for our well established products in the first half of the year. Under these conditions competitive pressures developed and we were compelled to reduce significantly the prices of some of our lines. Our export trade was subject to similar pressures, but, in addition, severe import restrictions were imposed in New Zealand, India and Indonesia. In most other countries, despite the difficult conditions, trading continued at a satisfactory level.

Fortunately sales rose satisfactorily during the second half of the year and, in fact, were the highest for the July to December period in the history of your Company. At the same time some noticeable benefits in the cost of manufacture have resulted from the development of improved manufacturing techniques, and although there have been higher charges in the shape of wage and salary increases and overheads generally, some compensating advantages have been gained from slight falls in certain raw material prices.

We have continued, and intensified, our efforts to improve the merchandising of those of our products which are sold without further conversion direct to the public. This has entailed considerably increased expenditure on our sales force and advertising, and particularly on point-of-sale promotion. This policy has been successful in that, on the whole, increased sales of these products have resulted and, in particular, our sales of Con-Tact have achieved a very major increase during the year.

It is against this background that our trading profit, in spite of sales being greater, declined from £869,709 to £786,941.

The net profit for the year, before taxation, amounts to £641,762, a decrease of £49,248, and after taxation is £311,537, compared with £341,010 for 1957.

The dividends paid by your Company in the past have always been on a very conservative basis, but your Board feels that the time has now come when the dividend should be more closely related to the results, year by year. Taking into account the profit, and the fact that the second half year showed an improvement over the first half year in both sales and profit, and that the Order Book at the beginning of the current year, as compared with a year ago, was encouraging, your Board feels that a substantially higher dividend should now be paid, and consequently will recommend the payment of a Final Dividend of 16¼ per cent, less tax which, with the Interim Dividend paid in October, makes a distribution of 20 per cent for the year, and this is covered more than two and a half times.

It is also the intention of your Board to bring the Interim and Final Dividends into closer relationship, the one with the other, and so, subject to trading remaining satisfactory, and in the absence of any unforeseen adverse circumstances, it is their intention to pay in November next an Interim Dividend of 6 per cent. I mention this now so that no other interpretation may be placed by anyone on the payment of an increased Interim Dividend.

Although our cash resources, including Tax Reserve Certificates, at the end of the year showed an improvement of £140,934, your Board felt it desirable to take up the option —which was exercisable up to January 26, 1959—to borrow a further £150,000 on our Mortgage Debenture on terms which are very advantageous to your Company, and this sum was received early in 1959. Apart from capital expenditure of a normal type, the programme of further expansion and modernisation now in hand will require the expenditure of approximately £200,000.

Under conditions prevailing at the present time there is a tendency, to be seen in many industries, for the return on capital invested to fall, and it is probable that expenditure on new equipment, necessary to maintain production efficiencies in a rapidly moving industry such as ours, will not always produce proportionately as great an improvement in profit as in the past.

To try and foretell the future under prevailing circumstances is little more than crystal gazing, and particularly so when the level of trading is so dependent on which markets are open and which are closed. Further, there is the extent of competition both at home and overseas to be taken into account. However, the present year has begun satisfactorily, and given reasonably stable trading conditions I am confident that the goods we have to offer are very acceptable and we look forward to doing an increasing business and giving a satisfactory service to all our customers throughout the world. I can assure you that we are very well placed to meet any future expansion in demand for our materials.

From a long term point of view there are problems arising from the creation of the Common Market, where at the moment we have not had sufficient experience to assess the impact. Unfortunately, the possibility of a Free Trade Area being created does not seem to be very hopeful. Your Board would welcome the creation of this Area, with the immense opportunities it would give to your Company's products in the countries concerned and, equally, are rather fearful of what may be the position if this Area does not come into being.

BROWN BAYLEY LIMITED

SUBSTANTIALLY INCREASED MARKET VALUE OF INVESTMENTS

MR J. W. GARTON'S STATEMENT

The third annual general meeting of Brown Bayley Limited was on May 8th at Attercliffe, Sheffield, Mr J. W. Garton, JP (the chairman) presiding.

The following is the statement by the Chairman which had been circulated with the report and accounts :

The Accounts now presented cover the year ended December 31, 1958. Comparative figures are included for the five months' period ended December 31, 1957. This year the Accounts show a full year's dividends paid and recommended by the two Subsidiaries, whereas for the period ended December 31, 1957, a full year's dividends were shown for The Hoffmann Manufacturing Company Limited and fifteen months dividends for Brown Bayley Steels Limited.

The Profit and Loss Account shows a balance, after tax, of £160,264, compared with £151,842 for the period ended December 31, 1957. The increase is accounted for by the Sixtieth Anniversary Special Cash Bonus recommended by The Hoffmann Manufacturing Company Limited.

As the Accounts include the Interim Dividends already paid by the Subsidiaries and the Final Dividends recommended by them, together with the Special Sixtieth Anniversary Cash Bonus recommended by The Hoffmann Manufacturing Company Limited, your Directors have pleasure in recommending a Final Dividend of 8¾ per cent, less tax. This, together with the Interim Dividend of 2¼ per cent, less tax, makes a total for the year of 11 per cent, less tax, compared with 10 per cent less tax, distributed for the period ended December 31, 1957.

This leaves a balance undistributed of £8,464, which added to the undistributed profit brought forward from last year makes the total carried forward on Profit and Loss Account £22,306.

The Balance Sheet does not show any significant change compared with 1957. The market value of your investments in the Subsidiaries has substantially increased. The Hoffmann Manufacturing Company Limited shares have risen from £2,460,000 to £4,200,000 and the Brown Bayley Steels Limited shares from £585,975 to £833,887.

SUBSIDIARY COMPANIES

The Hoffmann Manufacturing Company Limited.—This Company has had a reasonably successful year particularly in view of the fact that there has been a considerable contraction in the order position. A certain amount of part-time working was necessary in the middle of the year and certain adjustments were then made due to the changed circumstances. The present position is that the Company has a very healthy and realistic order book, but the capacity is not fully utilised. Although the order intake is steady there are as yet no signs that this position will quickly be altered.

The Accounts of this Company for the year ended December 31, 1958, are published as part of the Directors' Report and show a profit before tax but after all other charges of £1,206,476 and compares with £1,291,746 for the previous year. Income Tax and Profits Tax absorbs £581,474 against £644,720 in 1957. The net profit of the Group for the year 1958, after taxation, is therefore £625,002 compared with £647,026 for 1957.

The amount distributed in dividends for the year is £178,250 and substantially the same as the total distributed in the previous year which amounted to £175,000 net. The Directors decided to mark the Sixtieth Anniversary of the Company which took place during the year under review by paying a Special Sixtieth Anniversary Cash Bonus of 5 per cent, less tax.

Brown Bayley Steels Limited.—This Company started the year with a good order book but the intake, month by month, fell to such an extent that the outstanding order position at the present time is much below our capacity to supply. We feel, however, that we are getting a fair share of the market and every effort is being made, both at home and abroad, to obtain additional outlets for our products. It is extremely unlikely that the profit for last year will be maintained in the current year, but the first few months of 1959 has shown a slight increase in the order intake which is a healthy sign.

I should like to refer to the retirement of the Managing Director of the Company, Mr G. H. Bull. He has been with this Company for many years and will reach retirement age on April 30, 1959, and will be resigning then as Managing Director.

Mr R. Barnaby, who has been the Assistant Managing Director for the last four years, will be appointed Managing Director from May 1, 1959.

The Accounts are also published as part of the Directors' Report and are for the year ended December 31, 1958. The comparative figures cover the fifteen months' period to December 31, 1957. The Accounts show a gross profit after all charges of £557,624 compared with £809,594 for the fifteen months' period ended December 31, 1957. The profit available for distribution is £328,674, of which £75,900 is being distributed by way of dividend. The rate of dividend for the full year ended December 31, 1958, is 11 per cent, less tax, and is equivalent to the dividend of 13¾ per cent, less tax, paid for the fifteen months' period ended December 31, 1957.

The Farnley Housing Association Limited.—The interest free loan to the Association has been reduced by £200 and the balance of this loan now outstanding is £4,400.

The report and accounts were adopted.

ASSOCIATED FISHERIES LIMITED

MR W. A. BENNETT'S REVIEW

At the General Meeting held on May 14th in London, Mr W. A. Bennett reported that during the calendar year 1958 the whole Distant Water fleet on the Humber landed 337,980 tons of fish, that quantity being slightly less than the 1957 total, notwithstanding a small increase in the aggregate days at sea. During the winter months severe weather conditions, coupled with a great scarcity of fish, were the order of the day, but that was followed by an unusually prolific period in the spring and early summer which completely changed the rather depressing outlook referred to in his last statement.

Consumer demand had been maintained at approximately the same level as in 1957 although the quantity of fish landed was slightly less. The average price realised for our catch was somewhat higher but in spite of decreased oil fuel price, catching costs increased by 7½ per cent due to reduced catches.

The total turnover of the Group increased by 9 per cent to a record total in excess of £12,900,000. After covering all costs and Depreciation, the profit remaining out of every 20s. of turnover was about 10d. of which Taxation absorbed 5½d. The Net Dividends accounted for a further 2d. leaving 2½d. retained to meet increasing costs of replacement and development.

The development of production and marketing of "ESKIMO" Brand of quick Frozen Foods was continuing according to plan.

Keeping in mind that during the first half of the financial year the returns from their trawling fleet were running at a very low level the final results of the year's working could be considered as quite satisfactory.

THE MANGANESE BRONZE AND BRASS COMPANY

INCREASED PROFIT

DEVELOPMENT AND EXPANSION CONTINUED

MR J. C. COLQUHOUN ON GROUP'S PROGRESS

The sixtieth ordinary annual general meeting of The Manganese Bronze and Brass Company Limited was held on May 8th in London, Mr J. C. Colquhoun, MBE (the chairman), presiding.

The following is an extract from the chairman's circulated statement:

The group accounts for the year ended December 31, 1958, show a profit before tax of £673,722 against £615,347 for the year 1957. This was after charging for Depreciation £111,688 (£92,158). Provision for taxation is slightly lower at £344,904 (£348,713) and there remains, therefore, available for distribution and surplus £328,818 (£266,634).

DIVIDEND DISTRIBUTION

Your directors recommend that a final dividend for the year of 8d. per share be paid on the Ordinary shares, making 1s. 0½d. per share for the year, compared with the equivalent of 9¾d. on the present capital for the previous year. If approved, the surplus remaining out of the year's profit after payment of all dividends will amount to £193,873 (£160,897).

Turning to the balance sheet, you will notice that Net Fixed Assets have passed the £2 million mark for the first time and show an increase of £151,008. Net current Assets at £1,472,005 are up by £45,158.

WORKS' REPORTS

Your executives have given considerable thought during the year to the co-ordination of your various Works in such matters as sales, production, terms of service and other integrating subjects. Appreciable progress has already been made towards uniformity throughout the group, which should result in improved efficiency and economies of operation.

At Birkenhead Works, which concentrates almost entirely on the design and manufacture of marine propellers, the most noticeable trend in recent years has been the ever-increasing number of very large propellers required mainly for large tankers. This trend was anticipated and has influenced and added very considerably to the cost of the development and expansion programme at Birkenhead. For the year under review the output of ships' propellers, measured in tons, was the highest yet achieved and 10 per cent up on the previous year. More than half of this output went abroad to foreign shipyards. The intake of fresh orders by home shipyards was of course very disappointing.

Additional equipment at Birkenhead of special interest in the form of normal frequency electric furnaces and a propeller profiling machine should be operating at an early date.

The first order for a controllable pitch propeller was accepted during the year and it was tested in December at the Works, prior to delivery early in the new year. Additional orders have since been received.

In conjunction with the Glasgow Works of Steven & Struthers Limited, the manufacture of tail shaft liners for marine purposes has been commenced at Birkenhead on sizes in excess of the Glasgow Works capacity.

The production of wrought metals at the Handford Works, although slightly lower than in the previous year, nevertheless exceeded expectations, but the forward order book has been appreciably lowered and customers continue to be inclined to operate with reduced stocks and to limit purchases to their day-to-day requirements.

During the year schemes were prepared to improve production in both the extrusion mill and the rolling mill, the first part of which should become effective from June, 1959.

The results at Elton Park Works from the production of your "Oilite" products were substantially the same as in the previous year, despite the increase in the number of firms now engaged in the manufacture of products from metal powders. The technical staff continued to develop new fields of application involving the use of an increasing range of basic powders. Tests of production equipment operating at higher speeds have been completed and as a result new plant has been installed which should add to the efficiency of the Works.

The main interest of Lightalloys Limited continues to be the production of cast aluminium doors largely for British Railways, but development of fabricated doors referred to in my previous report has continued successfully and these will undoubtedly be used extensively in shipbuilding and other fields in addition to railway work.

The purchase of the Caplin Engineering Company Limited producing quartz cutting and polishing machines, precision grinders and concrete testing equipment has proved a valuable asset.

At Glasgow at the Works of Steven & Struthers Limited considerable reorganisation proved necessary. Work is now being produced in conjunction with facilities at Birkenhead and the range of products is being widened—some progress had already been made in this respect by the end of the year.

FUTURE PROSPECTS

At the present time, there are no signs of a general improvement in home trading conditions and shipyards are still not attracting new orders. Like shipyards, however, we will still have a good volume of work for 1959 although some reduction compared with 1958 must be expected so far as we can see at the moment. I am confident that the efficiency of our plant and the excellent support we receive from our employees will ensure that, until trading conditions improve, we shall be able to obtain a fair share of the business and that we are in a good position to meet increased demand when it comes.

The report and accounts were adopted.

ÖSTERREICHISCHE LÄNDERBANK AG.

(Vienna, Austria)

The Annual General Meeting of Österreichische Länderbank was held in Vienna on April 22, 1959, and the following are details of the report presented by the Board of Directors:

The course of the Österreichische Länderbank's business during 1958 was again extremely gratifying, in spite of the world-wide recession which also affected economic growth in Austria. The profit for the year, before allocations to Reserves, rose by 55 per cent from S65 million to S101 million. The Profit before taxes was S209 million as compared with S186 million a year previously. The favourable results which have been obtained are due to a further expansion of the bank's business in general (the Balance Sheet total rose by S1,134 million or 20.3 per cent), and to the employment on the most favourable possible terms of the outside parties' resources entrusted to the bank in particular.

In the year under review, Österreichische Länderbank also played a leading part in the security issues offered in Austria. It succeeded in placing 24.9 per cent of a total of S1,926 million nominal amount of bonded loans, exceeding its own quota by 18 per cent.

The proportion of Österreichische Länderbank's foreign currency turnover to Austria's total foreign trade remained unchanged at 38 per cent as compared to 1957.

The Balance Sheet total was S6,727 million on December 31, 1958. In the case of creditors, additional funds received from outside sources amounted to S963 million or 26.6 per cent, while Savings Deposits showed an increase of S262 million or 27.7 per cent (the average increase in Savings Deposits at all joint stock banks was 25.3 per cent), bringing the combined total of creditors and savings deposits up to S5,779 million. This development in deposits can certainly be regarded as clear evidence of the population's confidence in the prudent conduct of the bank's business.

COMMERCIAL LENDINGS INCREASE

Commercial lendings (Bills of Exchange, Promissory Notes and Debtors) rose by S768 million to S4,638 million as compared with the previous year, while the total volume of credits, including ERP loans, of which 41.6 per cent were made available through Österreichische Länderbank, reached S7,600 million. There was a noticeable rise in their holding of Federal Treasury Bonds, which were acquired to the extent of a further S205 million, bringing the total up to S509 million.

At the date of the Balance Sheet, the first-grade liquidity ratio was 21.8 per cent as compared with a required ratio of 15 per cent; on the same date, the ratio representing first- and second-grade liquid assets together was 61.5 per cent (required ratio 40 per cent).

Out of the Net Profit for 1958 S84 million were allocated to the Reserves (S47.7 million in 1957). Thus the published Capital and Reserves reached S684 million (S600 million in 1957) or 11.7 per cent of the liabilities.

The Net Profit for 1958 (including the balance brought forward from 1957) amounts to S18.9 million and the Board of Management has recommended an Ordinary Dividend of 7 per cent as in the previous year. The report, the accounts and the proposals put forward by the Board of Management were adopted.

EAGLE STAR INSURANCE

PROGRESS MAINTAINED

The Annual General Meeting will be held in London on June 4, 1959. The following is a summary of the Statement by the Chairman, Sir Brian Mountain, Bart.

In the Life Department another new record has been attained at home and business recommenced in South Africa has made a good start. The quinquennial valuations at December 31, 1958, of the Star and Sceptre Closed Life Funds resulted in bonuses declared being at the highest rates so far. The English and Scottish Fund has been merged with the Current Funds and the total transfers to the Profit and Loss Account from all Life Department Funds amount to £204,884.

In the Fire Department premiums have increased by over 12 per cent to nearly £5 million and £200,000 has been transferred to the Profit and Loss Account.

In the Accident Department premiums exceeded £10 million and a transfer of £117,860 has been made to Profit and Loss. Improvements have been made in the Engineering organisation and in the handling of specialist classes of business such as Bloodstock and Pedigree Cattle insurance. In the Pluvious section, drought conditions in Australia and elsewhere offset the unfavourable experience nearer home.

In the Marine and Aviation account profits have again been retained in the Fund.

Proposed Ordinary dividend totals 3s. 9d. per share (3s. 3d. for 1957).

The balance carried forward in the Profit and Loss Account has increased by more than £240,000.

THE PYRENE COMPANY LIMITED

THE NEW "PYRENE" HOME FIRE EXTINGUISHER

The Forty-fifth Annual General Meeting of The Pyrene Company Limited will be held on June 2nd in London. The following is an extract from the circulated Statement of the Chairman and Managing Director, Mr Francis A. J. Harrison, for the year 1958:

The increase in the interim dividend last December and the forecast given at the time of the Company's rights issue will have led you to expect a good report on the year 1958. I am happy to believe that the results now reported will not disappoint you. In fact your Company has made remarkable progress in Sales and Profits, both of which achieved records. There is also considerable improvement in the cash position. Quite apart from the results, I am able to announce the most outstanding development for many years—a revolutionary new product. The Pyrene Home Fire Extinguisher. Its introduction has inspired a new Crusade against fire dangers in the home.

HIGHER TRADING PROFIT

The Group Trading Profit is £277,104 higher than that of 1957. When investment income is added and deductions made for depreciation and interest on debenture stock the 1958 consolidated profit before tax becomes £757,031, showing an increase of £235,220. Taxation takes £388,622 and leaves Group profit after tax at £368,409. This compares with £216,285 for 1957, a gain of £152,124.

The Parent Company's sales in 1958 were 20 per cent higher than those of the previous year. Substantial increases were achieved in all of the three main Divisions of the business—i.e., Fire Equipment, Metal Finishing and Bumper Division.

The Parent Company's combined direct and indirect exports comprised 49 per cent of the total turnover and in value showed an increase of 22 per cent over 1957.

HOME FIRE SAFETY CRUSADE

In my opening remarks I referred to this Crusade and the revolutionary new Pyrene Home Fire Extinguisher which has inspired it. Such a Crusade has not been possible before because to cover the various classes of fire risks in the average home two or three different types of larger and more expensive extinguishers have been necessary. The new Pyrene Home Fire Extinguisher revolutionises all that. It provides in one small, easily operated, attractive extinguisher an entirely new non-toxic "general-purpose" powder which deals effectively and safely with all classes of fire risks—and at a price every householder can afford.

Once you realise that the Country's Fire Brigades have to attend over 200 fires a day in private residences and that over 700 lives were claimed in a single year by such fires, I believe you will feel impelled to take an active part in this Crusade.

In this belief, your directors have decided to send one of these new Extinguishers to Ordinary shareholders together with the Government publication "Fire Precautions in the Home," which in future we shall provide free to all purchasers as part of the Crusade.

The Parent Company's operating profit for the first three months of 1959 is almost identical with that of the first quarter of last year, and we expect this rate to be maintained.

WHATLINGS LIMITED

(Civil Engineering and Building Contractors)

LEVEL OF ORDERS MAINTAINED

The Annual General Meeting of Whatlings Limited was held on May 7th in London.

Mr D. A. Perrin Hill, ACA, the chairman, presided and, in the course of his speech, said: The trading profit at £249,539 again shows an increase over the previous year's figure in spite of the increased competition to which I made reference last year. The net profit at £130,262 shows an increase of £10,006 over last year. The Board have provided for a final dividend of 12½ per cent on the Ordinary share capital of £250,000. By being able to pay a total dividend of 20 per cent on the increased capital your Directors are fulfilling the indication given when you were invited to take up the last rights issue in November, 1957.

Turning now to the Balance-Sheet, you will see that our capital structure is now in the simplest form with accumulated reserves, excluding the reserve for future taxation, just over 100 per cent of the subscribed share capital. This feature in conjunction with the sharp improvement in the balance of the net current assets, adds up to what, I am certain you will agree, is a highly satisfactory balance-sheet.

We have maintained our long association with Hydro-Electric Developments, and I am also proud to be able to report that in the new field of atomic power we have moved from Dounreay in Caithness, after its successful completion, to the most recent Atomic Project at Windscale in Cumberland where we are engaged in constructing the Advanced Gas Cooled Reactor.

Our Opencast Coal Contracts for the last fourteen years have made a substantial contribution to the Company's earnings, but it is now clear from official statements in Parliament that Opencast Coal Production will be progressively scaled down. As a result of this, we may find for a short period at least, some difficulty in keeping our heavy excavating plant in full production.

Our foreign contracts have progressed well. In view of our expanding interests abroad, your board have established a wholly owned subsidiary, which will be known as Whatlings (Overseas) Limited. Two other subsidiaries are being formed—Whatlings (Plant) Limited will administer the ever growing investment in plant and vehicles, and Whatlings (Foundations) Limited will look after our two newest departments—the Piling Department and its associated Soil Mechanics and Testing Laboratories.

It is usual for me to say a few words on future prospects. There must, of necessity, be a considerable period in time between the point when the original decision to proceed with capital works is made at Government level and the letting of contracts. While I welcomed the relaxing of the controls on capital investment last Autumn, it is only now, some six months later, that the effect of the Government's decision is being felt with new work beginning to flow into the market. In spite of heavy competition which maintained throughout the whole of 1958, and into the first quarter of 1959, we have maintained the level of orders on hand. This has only been possible by taking contracts at keener prices, and the effect may be reflected in the profits for the current year.

The report and accounts were adopted.

RAND MINES, LIMITED

FIAT S.p.A.

TURIN, ITALY

(Motorcars, Aircraft, etc.)

SHAREHOLDERS' MEETING

The annual general meeting of Fiat shareholders, which was held in Turin on April 30th under the chairmanship of Prof. Dr. Vittorio Valletta, Chairman and Managing Director, unanimously approved the Directors' report and balance sheet for the year 1958. The surplus on the assets side was 16,631,218,276 lire. A dividend of 80 lire per share was declared.

The chief items in Fiat's increased 1958 production are:

— total sales 373,000 million lire (23,000 million more than in 1957).

— 341,252 cars and commercial vehicles (315,029 cars) produced; 35,132 more than in 1957.

— 16,315 farm and industrial tractors turned out, half of which were exported.

— 650,000 tons of ingot steel produced.

— total value of exports 113,000 million lire (18,000 million more than in 1957). 145,500 cars exported (an increase of 34,000 over the preceding year) to 112 markets in every continent.

— Fiat employs at present 80,000 people, including 61,512 factory workers.

The production of Fiat cars is at a high European level, at present about 1,600 units a day. Sales of Fiat models 500-600-1100-1200 are steadily growing in Italy and abroad; great immediate success of the new 1800 (also available with a 2100 c.c. engine) introduced at the Geneva Motor Show.

Fiat's aviation production is developing under the sign of the success of the "G 91" jet aeroplane, winner of the NATO competition.

The Fiat report again expresses full confidence in the gradual bringing into full effect of the Common European Market and voices the hope that international situations will tend—with the solidarity of the Atlantic Alliance—towards a real relaxation of the tension between the two opposed blocs and lead to the peaceful solution of the most acute problems in the interests and for the greater well-being of the whole of mankind.

BANK LEUMI LE-ISRAEL B.M.

DR Y. FOERDER'S REVIEW OF COUNTRY'S ECONOMIC PROBLEMS

The ordinary general meeting of the Bank was held in Tel Aviv on April 19th and Dr Y. Foerder, the Chairman, presided. In the course of his address he said:

The 1958 figures are a source of satisfaction. The Bank's uninterrupted development over a long period has continued. Total resources reached IL444 million, being IL51 million, or 12.8 per cent more than last year and the consolidated total resources amounted to IL570 million—a figure 16 per cent above last year's total.

The profit and loss figures also show satisfactory results and the dividend is being maintained at 12½ per cent. The Reserve Fund is increased by IL250,000 and IL200,000 appropriated to Contingencies Reserve after the usual allocations for contingencies which we were able to increase appreciably.

IMPORTANCE OF PLANNING

In Israel there is a somewhat strange phenomenon. On the one hand, we hear official statements on our exceptional achievements in the economic and development spheres. On the other hand, there are assertions of no progress whatsoever, of having followed a wrong course and that, under the present regime our economic difficulties cannot possibly be overcome.

In our endeavour to steer the right course towards a healthy economy it is, to my mind, essential to devote a larger measure of attention to planning, but not at the expense of freedom.

I know full well that there are weighty arguments against planning. In economics, just as in the life of the individual, there exists the element of surprise which is liable to upset any forecast. In general it is difficult to plan in detail and to foresee developments. We must differentiate between planning in outline, within which freedom is left to the individual, and total planning both of the framework and of the details of execution.

I consider the demand today for complete liberalisation as unrealistic, having regard especially to the economic and social conditions obtaining in Israel. Instead, I would make a plea for "more planning and more freedom." An overall framework must be established, and an order of priorities fixed. Government interference in execution should, however, be limited to encouragement of such activities as favourably influence the economy and to discouragement, or even obstruction, of any adverse or undesirable activities.

NEED TO ATTRACT FOREIGN CAPITAL

There can hardly be, today, any difference of opinion as to the need for large-scale investments from abroad. In the specific conditions obtaining in Israel I consider the following to be very important pre-requisites for the attraction of private capital from abroad: political stability and security—monetary stability and reasonable profitability of enterprises.

Another factor which, though it may not yet be of great consequence, is likely to grow immensely important in the near future. We have of late witnessed an attempt to reorganise economic entities, and enormous economic blocs are emerging. This movement is based on a recognition of the undeniable fact that small nations cannot stand up in present conditions to international competition.

One of our main problems is difficulty in finding additional capital required for the country's development. It is a fallacy only to think that our main problem is the redistribution of the national income. In this connection savings, both public and private, are of vital importance. Saving is the backbone of every healthy investment policy.

CAPITAL MARKET

Another possibility of mobilising capital would be rapid development of our capital market. In this field, too, we have marked progress. During 1958 alone issues were made of IL60 million for various purposes.

The public must understand that our Stock Exchange—still in its early stages but functioning quite well—is not an undesirable thing. A stock exchange is not a place for speculation but an institution for development of a capital market. The securities officially quoted on the Exchange is now nearing IL300 million, and every assistance should be given to further its development.

I would like to point to two problems, for which solutions can and must be found. We have not succeeded in developing a share market. No new shares have been issued for some time. But we cannot develop our industry unless we find capital to finance it. Our present system whereby most of the finance comes from Development Budget loans is unsatisfactory. There can be no full industrial development so long as sound undertakings cannot obtain funds from the market, i.e. from the public.

What can we do? Government must grant to shareholders the same privileges, especially as to taxation, as given to debenture holders. In view of the existing privileges for debentures, shares cannot be issued on the securities market. Altogether it is necessary to create conditions which make for better profit earnings by industrial enterprises.

There is a further suggestion with the hope that it may help to improve the securities market and to attract capital from abroad. We must enable foreign investors who acquire Israel securities with foreign currency that whenever they feel inclined to sell, the proceeds should be available for transfer in foreign currency.

In most advanced countries there exists, in addition to the capital market, a money market—i.e. a market for short-term credit. This usually takes the form of Treasury Bills and other short-term obligations. The money market first beginnings exist and I strongly advocate its development.

FOREIGN EXCHANGE CONTROL

Lately the demand for abolition of foreign exchange control is being voiced as a radical solution to our economic problems. Foreign Exchange Control is itself not an aim, and its burden should be lightened where possible. We must realise, however, that a successful monetary policy—important though it may be—is itself insufficient. First and foremost, we need basic reforms in our economic policy. So long as we have not reached economic stability, and there are serious current account difficulties in the balance of payments, so long as we have not succeeded in truly balancing our budget, it would be irresponsible to demand the abolition of foreign exchange control.

We must differentiate between total abolition of exchange control (which has not yet been done even in England and France) and its abolition in relation to foreign residents, which is desirable for the encouragement of foreign investment and at which we should aim in the near future. I admit that this problem needs careful examination, and I suggest that the Government invite a small committee of international experts to examine the position and to advise what can be done now to ease controls, what transition period is required, and at what point of time thereafter we might face full convertibility hazards.

ZANDPAN GOLD MINING COMPANY LIMITED

(Inc. in the Union of South Africa)

FINANCING MINE'S DEVELOPMENT

MR B. L. BERNSTEIN ON INITIAL PROGRAMME

The fourth annual general meeting of Zandpan Gold Mining Company Limited will be held on May 18th in Johannesburg.

The following is the circulated review of the chairman, Mr B. L. Bernstein:

The offer of shares made at the end of last year provided your company with funds amounting to £2,600,000. This amount, together with the further issue of four million shares to be made in November 1960 at 12s. 6d. per share and the loan facilities of £2 million which have been arranged, will result in your company having at its disposal a total of £7,100,000. This sum should be sufficient to complete the first phase of opening up the Zandpan mine, which consists of the completion of No. 1 shaft system, the provision of the necessary services and facilities, and the carrying out of a certain amount of underground development.

Work on the property commenced in October 1958. The collar of No. 1 shaft has been completed and the shaft was sunk to a depth of 198 feet below surface. Sinking has been stopped temporarily while the permanent concrete headgear is being cast and equipped, and surface installations completed. It is hoped to commence full-scale shaft sinking by June 1959.

No. 1 shaft, which is circular and 26 feet in diameter, will be provided with a brattice wall to give both upcast and downcast ventilation. It was intended that this shaft would be sunk from surface to a depth of approximately 5,000 feet and that a sub-vertical shaft would then be sunk to a final depth of approximately 7,500 feet below surface. To enable exploratory development to be commenced at an earlier date than would otherwise have been the case, we now intend to sink the surface shaft to the reef horizon, which is estimated to be about 7,000 feet from surface.

When the initial programme has been completed it will be necessary to raise further capital to sink a second shaft from surface, to construct a reduction plant and to provide the housing, services and facilities required to bring the mine to initial production.

At present, in the interests of speed and economy, arrangements have been made for operations at the mine to be under the control of the manager of the Hartebeestfontein Mine. I desire to place on record your board's appreciation of the services that have been rendered by the management and staff of the Hartebeestfontein Mine, and by the staffs at both the head office and the London office of the company.

UNITED PREMIER OIL AND CAKE COMPANY

SIR ERIC MIÉVILLE ON TREND OF CURRENT TRADING

The 40th Annual General Meeting of the United Premier Oil and Cake Company Limited was held on May 13th in London, Sir Eric Miéville, GCIE, KCVO, CSI, CMG (the Chairman), presiding.

The following is an extract from his circulated review:

The year 1958 has been a difficult one for your Company, again due partly to falls in and uncertainty regarding commodity prices.

On the seed-crushing side of our business the throughput was considerably reduced, due firstly to a lack of demand for edible oils and, secondly, increased competition from imported oils. Our position in technical oils, however, was well maintained. Towards the end of the year the trade began to turn in our favour, but not soon enough to have a great effect on the final figures.

On the Oleine and Stearine side we benefited from the installation of the Hydrogenation Plant mentioned in my report for 1957; but, although production figures were maintained, the margin of profit was unsatisfactory owing to severe competition.

The gross trading profits of the group amounted to £283,357, a decrease of £81,844 compared with the previous year. After all charges, including interest on Debenture Stock, taxation, special adjustment of taxation reserve, and the dividend of the 7 per cent Preference Stock, the balance of the year's profits available for the Ordinary dividend is £37,419.

We have already paid an interim dividend of 1½d. per Ordinary Stock unit (less Income Tax at 8s. 6d. in the £), which was one half of the amount paid in the previous year. We now recommend a final dividend of 4½d. (less Income Tax at 7s. 9d. in the £), which amount, before deduction of tax, is also one half of last year's payment. Your directors do not feel that a higher rate of dividend would be justified by the immediate prospects facing the Group, or by its cash position. The two payments will absorb £24,125, leaving £13,294 to be retained in the business.

Owing to the cumulative effect of initial allowances and a scale of allowances for wear and tear of the fixed assets of the Group allowed in the taxation computations, which differs from the Company's own calculation of depreciation, taxes now payable are reduced at the expense of future years. We have accordingly thought it desirable to add to the charge for taxation an amount of £25,000, which has been taken to Reserve for Future Taxation in the Consolidated Balance Sheet. The charge in the Profit and Loss Account of £63,398 is a more accurate measure of the taxes chargeable at current rates on the profits for the year.

From the Consolidated Balance Sheet it will be seen that the current assets, less current liabilities, amount to £1,172,793. The same document shows that the Ordinary Capital of £400,000 is supported by Reserves of over £1 million.

The improvement on the crushing side of our business, which was noticeable at the end of 1958, has continued, and deliveries of animal feeding stuffs have increased. Competition is still severe in connection with Oleines and Stearines where production is being maintained.

The report was adopted.

EQUITABLE LIFE ASSURANCE SOCIETY

ANOTHER YEAR OF EXPANSION

The one hundred and ninety-seventh annual general meeting of The Equitable Life Assurance Society was held on May 13th in London.

The following are extracts from the speech of the President, Mr John H. Bevan:

The Report and Accounts circulated to members point to another year of expansion in the business of the Society.

By the end of the year, the funds had risen by over £2 million to £33½ million.

Claims in respect of policies sharing in profits, as the bulk of them did, have produced some remarkable results; you will see from the Directors' Report that each £1,000 of original assurance under whole life major profit contracts was on the average increased to £3,233, allowing for bonuses previously commuted.

Expenses of management show a fall in the ratio of expenses to premium revenue, from 7.4 per cent to 7.1 per cent.

The expenses are at a low rate because the Society has never paid commission for the introduction of business. We are materially helped by introductions from our own members, a form of mutual help which I commend to all those who are assured with this Society. It is good to plan ahead in life assurance as in other matters. However, impaired health may intervene to disrupt the planned assurances.

We are preparing a new type of contract which will enable the member to plan ahead, in the certainty that he will be able to secure the planned assurances at the normal premiums, whatever his state of health may be at the time. This type of contract seems to us to meet a real need. The total new sums assured rose for the first time to over £8 million. In addition a substantial amount of new business was written in the annuity class which does not carry a sum assured.

The Report and Accounts were adopted.

CROFTS ENGINEERS

POWER TRANSMISSION ENGINEERS

Essential machinery for world's vital industries

Summarised Consolidated Balance Sheet as at 31st December, 1958

	£		£	£
Issued Capital	2,500,000	Fixed Assets	3,965,272	
Reserves and Surplus	2,114,544	*Less:* Accumulated Depreciation	1,261,080	2,704,192
Future Income Tax	571,030			
Liabilities	1,329,786	Trade Investments		16,853
		Current Assets		3,794,315
	£6,515,360			£6,515,360

Summarised Profit and Loss Account For the year ended 31st December, 1958

	£	£
Profit for the year before Taxation	1,290,556	
Less: Provision for Taxation	671,785	618,771
Net Distribution for the year to Shareholders		186,875
Retained in the business		£431,896

EXTRACTS FROM CHAIRMAN'S STATEMENT:

I hope that our shareholders will be satisfied with the results shown. The reduction in net profit is very small in view of the altered trading conditions which have affected almost all countries of the world. We have maintained our position by increased sales pressure and by reducing manufacturing costs at a time when salaries and wages have increased, these increases having been absorbed in our costs to the advantage of our customers.

OVERSEAS TRADING: We are opening up new areas throughout the world and we can expect to get better results from overseas in spite of the present trade recession. As soon as both Home and Overseas Trade opens up again we should feel the benefit of all the spade work now being done.

PROSPECTS: Due to the general drop in trade, orders have been lower than they should be for a Group with our production potential, but I am pleased to report that the Order Book is maintaining a fairly constant level, with some signs of improvement, and every effort is being made to increase sales.

As our new products are becoming known, sales are developing and we are expecting in time they will make up for the slight fall in business, which at present is on a lower level than normal. When trade revives, as appears likely, we should benefit greatly by the introduction of these products and the increased capacity of our modern works and plant.

CROFTS ENGINEERS (HOLDINGS) LIMITED

Empire Works, Thornbury, Bradford, 3

Subsidiaries and Representation throughout the world

RICHARD CRITTALL

HEATING, VENTILATING, AIR CONDITIONING, ELECTRICAL AND MARINE ENGINEERS

Main points from the Directors' Report and Statement by the Chairman, Mr. Geoffrey C. R. Eley, C.B.E., *to the Annual General Meeting on 8th May,* 1959.

	1958 £	1957 £
Issued Capital	525,000	350,000
Group Profit before Tax	222,829	185,093
Taxation	82,422	37,378
Dividends (net)	52,828	45,281
Net Current Assets	929,846	865,681

TAXATION. Our favourable position for tax purposes came to an end during 1958, so that the larger part of our profit for the year under review had to bear tax in the normal manner.

INCREASED TURNOVER. In spite of the more difficult trading conditions and the slight general recession, we achieved an increase in both turnover and in orders received. The purchase, in the early part of the year, of the business of Thomas McDowell Limited, to which I referred in my last statement, has proved satisfactory, and we have, in fact, just completed an extension to its works to increase their productive capacity. We are constantly on the look-out for opportunities for further expansion to add to the profitability of the Group. At the moment we are taking steps to establish a new branch of Richard Crittall & Co. Ltd. in South Wales.

SYNTERPIEZ. We are introducing into this country a low pressure hot-water heating system known as Synterpiez, which has been used successfully on the Continent and provides central heating for multi-storey buildings at a much lower capital cost than has been possible in the past. This system is attracting considerable interest amongst those concerned with the design and erection of high blocks of flats.

PROSPECTS. 'Since the close of our financial year trading conditions have continued to be far from easy, and there is intense competition in the heating and ventilating industry. However, we are reasonably confident that we may again be able to show satisfactory results at the end of the current year.

Copies of the full Report and Accounts may be obtained from: The Secretary, Richard Crittall & Co. Ltd., 151, *Great Portland Street, London, W.*1.

TIMOTHY WHITES & TAYLORS LTD.

922 BRANCHES THROUGHOUT GREAT BRITAIN

Extracts from Mr. G. I. RUSHTON'S STATEMENT AT ANNUAL GENERAL MEETING, 7TH MAY, 1959

SUBSTANTIAL INCREASE IN PROFITS. Although conditions were not easy, the turnover was substantially increased over the previous year.

Trading profit of the Group amounted to £1,859,573 in 1958 compared with £1,745,362 in 1957.

PURCHASE TAX ALTERATIONS. £116,000 lost as result of the Budget in 1958, when Government reduced Purchase Tax on articles on which tax already paid. £116,000 transferred from Stock-in-Trade Reserve to cover reductions charged in arriving at trading profits.

TRANSFERS TO RESERVES. £250,000 to General Reserve, making £850,000 in the Company's Balance Sheet and £983,628 in the Consolidated Balance Sheet. £125,000 to Development Reserve to cover the amount of £122,758 written off against this Reserve during 1958.

INCREASED FINAL DIVIDEND. Final dividend on the Ordinary Shares of 13¾ per cent less tax, making 20 per cent less tax for the year, compared with 16¼ per cent less tax paid in the previous year.

EXPANSION PROGRAMME. During 1958 Company opened at Reading its largest store and four other branches. Further stores will be established at Glasgow, Middlesbrough, Ipswich and Liverpool.

REVALUATION OF PROPERTIES. Instructions are being given for the valuation of all properties of the Company and its subsidiaries.

PROSPECTS FOR CURRENT YEAR. Up to the present there has been an overall increase in turnover, although in some areas improvement in business is not being experienced.

APPOINTMENTS

BRITISH INSTITUTE OF MANAGEMENT requires a man (30-35) to take charge of the Institute's advisory services on accounting and statistical planning and control information derived therefrom of relevance to management. He will be the Secretary of a high level advisory Committee which will guide and assist him in his work. The selected candidate should, in addition to having a thorough knowledge of his subject, be able to produce new ideas, and have an analytical and logical approach to the solution of business problems. He should be able to secure acceptance of his advice and suggestions at senior management level. He should also be able to deal with questions of Organisation and Method. Applications are invited from qualified accountants and graduates in economics and accounting who have had first hand industrial experience at an appropriate level. Initial salary within the range of £1,000 to £1,200 per annum. Applications should be addressed to the General Secretary, B.I.M., 80 Fetter Lane, London, E.C.4.

A LEADING BRITISH OIL COMPANY requires at its Head Office in London (a) A SENIOR ASSISTANT, age not over 35, for a responsible post in the Economics Section, and (b) an ASSISTANT, aged not over 30, for the same section. Applicants should have experience in applied economics and a good knowledge of business statistics. Non-contributory pension fund, housing scheme. Removal expenses and settling-in-allowance payable in certain cases. Luncheon club.—Write, giving full details, quoting reference H.4450, to Box 6070, c/o 191 Gresham House, E.C.2.

MASS-OBSERVATION is looking for

(i) A market research executive who would undertake final responsibility for a continuous consumer survey (including client contact);

(ii) A market research officer or a research assistant.

Write giving age, qualifications and expected salary range to 148 Cromwell Road, S.W.7.

INTERNATIONAL TRADE INFORMATION requires Economist. At least two years' experience in industrial market research essential.—Write I.T.I. Ltd., 185 Piccadilly, W.1.

CENTRAL OFFICE OF INFORMATION: Applications are invited for a post of Information Officer (unestablished). Duties involve study of economic, social and political developments in the Commonwealth, particularly in the U.K. dependencies, and the selection and presentation in the form of reference papers of factual information. A university degree, a good knowledge of relevant sources of information, and experience in preparing basic material to serve information purposes (e.g. factual articles, reports, lectures or broadcasts) are desirable qualifications. Salary £1,150 to £1,330 (men); £1,102 to £1,260 (women). Write giving age, experience and qualifications to Manager (P.E. 1055), Ministry of Labour and National Service, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Only persons selected for interview will be advised.

UNIVERSITY COLLEGE OF WALES
ABERYSTWYTH

Applications are invited for the following posts in the Department of Economics and Political Science:

(a) Assistant Lecturer or Lecturer.

(b) Temporary Assistant Lecturer for Session 1959-60 only.

Further particulars can be obtained from the Registrar, to whom applications should be sent not later than June 5, 1959.

UNIVERSITY OF READING
DEPARTMENT OF AGRICULTURAL ECONOMICS

Applications are invited for the post of FARM MANAGEMENT LIAISON OFFICER in the Provincial Agricultural Economics Service, to take up duty on January 1, 1960. Salary scale: Grade II (£900 x £50—£1,300) or Grade I (£1,300 x £50—£1,350 x £75—£1,650) with family allowance and membership of F.S.S.U. Applications should be submitted by June 6 to The Registrar (Room 22, O.R.B.), The University, Reading, from whom further particulars may be obtained.

For other appointments see page 691

THE UNIVERSITY OF MANCHESTER
RESEARCH STUDENTSHIPS AND RESEARCH GRANTS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above studentships and grants for research in Economics, Economic Statistics, Government, Social Administration, Social Anthropology or Sociology, tenable for one year in the first instance, and renewable for a further period not exceeding two years. The studentships are normally of the value of £350 or £400. They are offered to candidates who have obtained the degree of Bachelor or Master in this or any other approved University, and applications are acceptable from students who expect to graduate this summer.—Applications should be sent, not later than July 1, 1959, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF MANCHESTER
WARBURTON SCHOLARSHIP IN LOCAL GOVERNMENT

Applications are invited for the above Scholarship for research in local government, the law relating to local government, or comparative local government. The Scholarship is tenable for one year and is of the value of £400. It is open to graduates of this or any other approved University, and applications are acceptable from students who expect to graduate this summer.—Applications should be sent not later than July 1, 1959, to the Registrar, The University, Manchester 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the full-time posts of ASSISTANT in the Research Section of the Faculty of Economic and Social Studies. The successful candidates will be expected to pursue research in ECONOMICS, ECONOMIC STATISTICS, POLITICAL THEORY AND INSTITUTIONS, SOCIAL ADMINISTRATION, SOCIAL ANTHROPOLOGY or SOCIOLOGY and should be graduates in any of these subjects or in Modern History or Economic History. There are vacancies in both Grade II (which carries the status of Assistant Lecturer) and Grade III. The salary scales are as follows: Grade II —£700 to £850 per annum; Grade III—£600 to £650 per annum. Applications should be sent not later than June 1, 1959, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

COMPANY AFFAIRS

DUNLOP RUBBER

A YEAR ago the 10s. ordinary shares of Dunlop Rubber stood at 17s. 3d., to offer 8⅛ per cent on a 14 per cent dividend. They are now 28s. 9d., and yield 5⅔ per cent on a 16¼ per cent dividend, with a 25 per cent scrip issue in the offing. The difference in yields partly reflects the boom in industrial equities and, in particular, the investment attractions of the continuing boom in the British motor industry, to which Dunlop is a major supplier of tyres and components. But it also implies that investors have come to take, over the last twelve months, a different and more favourable long term view about Dunlop's growth potential.

If so, they can now test their views against the hard facts of the full report. It reveals that over the year trading profits declined slightly, from £19,860,000 to £19,761,000, that gross profit margins on sales fell from 5.4 to 5 per cent and that gross profits on net capital employed fell from 12 to 11.4 per cent. Those figures do not argue strongly for growth. Nor do the statistics that show an increase in sales volume of 7 per cent but of sales value by only 5 per cent. To sell more, Dunlop had to charge less—including less for tyres in this country. Some of the directors' comments do not point to unimpeded growth. They speak of "increasing severe competition" and of lower profits from operations in the United Kingdom, for although there was a general increase in turnover of 7 per cent and an increase in total tyre sales in the domestic market of the order of 5 per cent, prices had to be reduced and money had to be spent on the development and initial production of new products.

	1956 (£'000s)	1957 (£'000s)	1958 (£'000s)
Earnings:			
Sales	224,000	231,090	243,000
Trading profit	*15,094*	*19,860*	*19,761*
Depreciation	6,195	6,490	6,530
Interest paid	1,005	1,013	1,044
Taxation	4,489	7,458	6,360
Net profit	*3,535*	*5,026*	*5,797*
Ordinary dividend	1,109	1,559	1,995
Ordinary dividend (per cent)	*10*	*14*	*16½*
Retained profits	1,174	2,135	2,306
Cons. balance sheet:			
Net fixed assets	45,499	47,475	54,037
Net current assets	57,082	60,111	55,292
Stocks	*63,449*	*64,929*	*61,327*
Debtors	36,923	37,027	36,738
Cash	6,614	5,843	5,982
Bank loans and bills payable	21,058	17,428	16,165
Reserves	35,033	37,393	40,139
Ordinary capital	19,281	19,361	20,361

But the coin has another face. Profits from overseas activities, including exports, were higher than in 1957 despite "*difficult economic conditions*" in some countries and the exchange losses on French and Brazilian currencies. Turnover from these overseas operations was about 4 per cent higher, but earnings from them contributed the greater part of the total profit—something over two-thirds—and the proportionate contribution they made was greater than in 1957.

If investors are looking for growth from Dunlop, these overseas markets seem to hold the key, as the Dunlop management evidently recognise. Last year, out of total capital expenditure of £13 million, £9 million was spent by overseas subsidiaries. The greater part of this was spent on new factories in France, India and Rhodesia and on the new rubber estates in Nigeria, where yields are expected to be high. Moreover the increase in trade investments from £2.7 million to £3.3 million mainly reflects further investment in synthetic rubber plants in France and Japan by overseas subsidiaries. These new factories should begin to contribute to earnings this year. It is upon these factories, forming an important part of Dunlop's overseas developments, and upon the progress made in bringing such new developments as disc brakes and pneumatic suspension systems to the market that investors should fix their eyes. They can do so in the almost certain knowledge that Dunlop will not be appealing for new money for expansion or for funding its current short-term debt.

BOWATER PAPER

How long the present surplus of newsprint and paper making capacity throughout the world will persist is uncertain. But it is certain that for this year at least a surplus will continue. The cautious view of the directors of Bowater Paper is that "if the present level of costs and operations can be held it is not unreasonable to expect that the results for the current year might well approximate to those for 1958" (when trading profits advanced slightly from £17.1 million to £18.1 million). What are investors to make of these hypotheticals and double negatives? The £1 ordinary stock units now stand at 48s. 6d. xd. which leaves little advantage for the holders of the convertible loan stock, offering 5¾ per cent on their price of 108, to convert at a price equivalent to 47s. 6d.

For the equity stockholder the prospect is less clear. The current yield on the maintained dividend of 12½ per cent is 5.2 per cent, and in commenting on this payment the directors say that the moment has not yet arrived for recommending an increase. How far would a bigger payment from the parent depend upon the receipt of a maiden equity dividend from Bowaters Southern, Tennessee? Those paper mills were largely financed by prior charge loans and not until that debt is further reduced can an equity dividend be paid to the North American Corporation. The directors now say that unless market conditions deteriorate it should be possible to make a first payment in respect of 1959.

	1957 (£'000s)	1958 (£'000s)
Consolidated earnings:		
Trading profit	17,152	18,145
Depreciation	4,741	5,247
Loan interest (subsidiaries)	1,609	1,696
Minority interest	862	1,119
Tax	4,624	4,258
Net profit	*5,316*	*5,825*
Loan interest (parent)	470	732
Ordinary dividend	1,402	1,460
Ordinary div. (per cent)	12½	12½
Retained earnings	3,214	3,399
Cons. balance sheet:		
Net fixed assets	117,977	136,080
Stocks	29,384	26,458
Debtors	13,869	14,259
Liquid assets	10,386	8,871
Net current assets	25,704	22,514
Reserves	38,009	43,219
Ordinary capital	19,500	19,500

Newsprint production has been cut back in Tennessee, as it has at Corner Brook in Newfoundland. But there has been no significant weakening in prices and though there will continue to be surplus capacity in the North American mills it is not easy to envisage another big fall in production now the American economy is recovering. Similarly, following the recent fall in demand for newsprint in this country a further decline seems less likely—though there is little reason to expect an increase. Bowater has turned some of its surplus newsprint capacity to making other types of paper, where profit margins are higher and where older machines, already heavily written down in the books, have been put to better use. But this, too, is a highly competitive market, especially in packaging papers, and recently there has been a marked reduction in profit margins; if Bowater Eburite is to achieve another increase in sales volume it may again have to be at the expense of these margins.

Thus, highly geared as the Bowater equity is, there is no immediate sign of growth. This suggests that American investors, who already own about 21 per cent of the ordinary capital, will not be such eager buyers of the stock as they were two years or so ago. Nevertheless, Bowater Paper has so far come through a recession in the industry in a better shape than it was at one time reasonable to expect.

MARKS AND SPENCER

As a pacemaker among the cash multiple retailers, Marks and Spencer has few rivals within challenging distance. Its watchword last year was lower prices, and lower prices have not meant a drop in the value of merchandise turned over or in profit margins. Last year, sales rose by £4 million to £134 million; gross profits

jumped from £16,109,709 to £17,053,107; and the margin of profit increased from 12.4 to 12.7 per cent. This vindicates those who have maintained that Marks and Spencer's 5s. ordinary shares are gowth equities. Their yield reflects this status: the ordinary dividend has been raised from 32½ to 37½ per cent, yet on the new dividend the non-voting 5s. "A" ordinary units yield a mere 2.9 per cent.

Marks and Spencer's net profits have risen sharply, thanks to the changes in profits tax last year and in income tax this year. The total tax bill is down from £7,950,000 to £7,350,000 and as depreciation and the provision for repairs are scarcely altered, net profits have jumped from £6,192,665 to £7,708,715. The net ordinary dividend absorbs £4,071,142, but it is still covered 1½ times by earnings. Yet another scrip issue in "A" ordinary shares—this time in the ratio of one for five—is on its way and as they have done in practically every year since the war investors are anticipating a still bigger effective dividend.

BOOTS PURE DRUG

THE ordinary dividend of Boots Pure Drug is a little disappointing. There had been hopes that the directors would maintain the 1957-58 rate of 18 per cent on the capital as increased by the 25 per cent scrip issue—although they had clearly said that the bigger interim payments were designed simply to reduce the disparity between the interim and final dividends. A final dividend of 10 per cent for the year to March 31st sets the full year's distribution at 16 per cent, against the equivalent of 14.4 per cent. On this dividend the 5s. ordinary units at 23s. 9d. yield 3.4 per cent.

This puts the shares in the same class as Marks and Spencer, with growth in cash trading, in profits and dividends being valued as an almost automatic assumption by investors. Perhaps the latest results from Boots lend a little less strength to that assumption than Marks and Spencer's. Boots' profits before tax have fallen from £5,057,350 to £4,997,839, and even though this can be entirely attributed to stock losses of £350,000 from the reductions in purchase tax in 1958, it does point the moral that cash trading carries a comparative low margin of profit and that it costs money to expand sales. For the equity shareholder the reduction in tax by virtue of which net profits have increased from £2,095,176 to £2,442,241 is very welcome, for it leaves the dividend covered nearly twice by earnings.

ROLLS-ROYCE

IT was the 100 per cent scrip issue proposed by the directors of Rolls-Royce rather than the 1958 profit figures and the repetition of the 20 per cent ordinary dividend that caught the investors' fancy this week. The directors made a strong disclaimer on the dividend implications of the scrip issue and they made it clear that the increase in the authorised capital did not presage a cash issue. The excitement in the market seems to have been overdone, for the cover on the ordinary dividend, after research and development expenditure has been written down, is now slender. Surely investors must realise that any scope for further increases in the dividend is limited by the fact that Rolls-Royce will have to continue to write big sums off its privately financed developments.

The preliminary report for 1958 makes it clear that it was research expenditure and a higher charge for depreciation that stood between the company and the achievement of a higher level of profits. Sales rose by about £4½ million to £96¼ million, but an extra £500,000 for depreciation and the switch in emphasis from military to civil aero engines, upon which the future prosperity of this division obviously rests, that is reflected in the increase in development expenditure from £4,631,414 to £5,836,724, brought profits down by £233,354 to £2,086,980.

There are two ways of looking at this research expenditure. Ordinary accounting procedure suggests that it should be written off as it is incurred against currently earned profits. But investors may feel that given Rolls-Royce's record of achievements in engine design and production in the past, it in a sense guarantees future profitability. That assumption and the prospect that the market price will be less "heavy" was reflected in the jump of 3s. 9d. to 101s. 3d. in the £1 ordinary units. The yield is now only 3.9 per cent.

BRISTOL AEROPLANE

THE fall from £806,000 to £614,000 in the net profits of Bristol Aeroplane last year has brought the earnings cover on the unchanged ordinary dividend of 10 per cent down to under 1½ times. But shareholders may perhaps feel relieved that profits have not declined even more sharply, as last November the company gave a warning about redundancy and only last week another aircraft company, de Havilland, passed its dividend. Presumably Bristol's profits are still being underpinned by its aero engine and missile interests, and last year its trading income was barely 3½ per cent down at £2,488,000 (against £2,581,000). But the rise in depreciation and in interest charges more than offset the saving in tax. This must reflect Bristol's reliance on overdraft facilities to finance its working capital commitments. The 10s. shares hardened on the results and now stand at par. But Bristol has a massive financial problem on its hands as well as a commercial problem of selling more Britannias.

ASSOCIATED PORTLAND CEMENT

FOLLOWING the higher profits of Rugby Portland Cement the advance in trading profits now reported by Associated Portland Cement—the "Blue Circle" group—will occasion little surprise. Last year Associated Portland's trading profits rose by 3 per cent from £14,627,419 to £15,069,644 but its net profits declined slightly from £4,653,136 to £4,593,309. But the trading profits of the subsidiary, British Portland, were nearly 12 per cent higher at £4,309,784 (against £3,852,877) and net profits advanced from £1,246,209 to £1,386,060. The decision to raise Associated Portland's ordinary dividend from 9 per cent to 12 per cent is justified by these results. The directors also intend to make a 25 per cent scrip issue. This announcement is accompanied by the usual warning about drawing any implications about future dividends, but shareholders will note that the dividends on the larger capital equivalent to the current rate is 9 3/5 per cent and in view of the earnings cover of 3½ times there should be no difficulty in rounding this payment up to a higher figure. That possibility is well discounted in the yield of 3.7 per cent offered by the £1 ordinary shares of Associated Portland Cement at the current price of 65s.

THE RANK ORGANISATION

GAUMONT-BRITISH is a subsidiary of the Rank Organisation. Since 1948 both companies have been members of the Circuits Management Association scheme, which pooled profits from the Gaumont and Odeon cinema circuits and divided them 58.23 per cent to Rank Organisation and 41.77 per cent to Gaumont-British. A large number of cinemas in both circuits are for sale, and so the scheme has been extended (for 50 years) and the profit-sharing arrangements revised. The new scheme gives 56½ per cent of the cinema profits to the Rank Organisation and 43½ per cent to Gaumont-British, irrespective of the number of cinemas closed by each circuit. This treats the group's cinema interests as essentially indivisible: rationalisation that cuts out unprofitable halls means more profit for all that are left, GB or Odeon. So it leaves the division of cinema revenue practically where it was.

In addition, the two companies will in future share in the group's other interests —commercial television, manufacture of equipment, gramophone records, relay wireless and relay television—in the same 56½/43½ ratio. The investments of the two companies will be redistributed at current values to fit this new formula. Thus, Gaumont-British will have a 43½ per cent interest in the shareholding in Southern Television. To facilitate this arrangement, the ordinary capital of British and Dominions Film, previously owned as to 74 per cent by the Rank Organisation and 26 per cent by Gaumont-British, will be rearranged in the 56½/43½ ratio and that subsidiary will acquire the two companies' present interests in Southern Television.

With cinemas becoming less and less profitable and the group's other interests becoming of growing importance, some rational scheme to share investments and earnings was desirable. How far an internal reorganisation scheme of this kind affects one partner *vis à vis* the other is not clear. On the face of it, the minority shareholders in Gaumont-British do not appear to be the losers. The market's reaction was to leave Rank Organisation 5s. ordinary shares a mere 1½d. lower at 12s. 9d. and to mark up Gaumont-British 10s. units by 9d. to 14s. 10½d.

GUEST, KEEN AND NETTLEFOLDS

WITHOUT the inclusion of John Lysaght's Scunthorpe Works, bought back from ISHRA at the end of 1955, the trading profits of Guest, Keen and Nettlefolds group would have contracted in 1958 from the record level reached in the previous year. Financial stringency in 1957 prevented the funding of this subsidiary's large outstanding debts to ISHRA and no plans for funding them have yet been brought forward. But the directors have gone ahead with a big development plan. This programme is in its early stages, but John Lysaght's latest results, which show that trading profits in the year to January 3rd jumped by £1,196,225 to £4,716,986, are encouraging. The trading profits of the GKN group as a whole rose by £454,779 to £31,019,363, so that the profits of members of the group other than John Lysaght's fell—but, in view of the recession in the economy that is not surprising.

A rise in investment income, a fall in interest disbursements and a reduction of £438,235 to £12,817,339 in tax have resulted in a sharp rise in net profits from £10,199,747 to £11,243,342. Allowing for the three for ten scrip issue, the ordinary dividend has effectively been raised from 11½ per cent to 13 per cent, and it is covered three times by earnings. The dividend is certainly conservative, but big profit retentions are still the order of the day for steel and allied concerns. At 62s. 1½d. the £1 ordinary units yield 4¼ per cent.

SEARS HOLDINGS

AS controller and manager of an industrial empire embracing more than twenty companies, Mr Charles Clore, chairman of Sears Holdings has been intent on consolidating the businesses and interests he acquired as a financier rather than on buying new ones. In his statement with the full accounts of Sears for 1958 he says that he does not intend to pay a price for new interests "which discounts the future too fully." Over the past twelve months he and his colleagues have studied "numerous propositions" both here and in America, but none of them had been found really suitable. Mr Clore now appears to be looking for businesses that will easily knit in with those he already possesses. Sears has been husbanding its liquid resources by ploughing back profits, by selling some of its less profitable retail shops, and by keeping a tight control on stocks; despite an outlay of £2 million on fixed assets last year, it added another £2,500,000 to its liquid holdings, which now stand at nearly £8 million. Mr Clore points out that Sears is strongly placed to acquire new businesses and it looks as if his thoughts are turning towards straightforward cash offers rather than bids through the offer of Sears "A" shares.

	1957	1958
Gross profits:	£	£
British Shoe	3,086,000	3,208,000
Bentley Group	2,087,000	2,228,000
Other interests	1,536,000	1,688,000
Total	*6,709,000*	*7,124,000*

The Sears business in its present form continues to expand and last year its net profits rose from £2,635,127 to £3,323,773. The ordinary dividend, increased from 22½ per cent to 25 per cent, is covered over twice and shareholders no doubt have noticed that the announcement of a 25 per cent scrip issue has not been accompanied by the usual dividend disclaimer. Sales of the British Shoe Corporation, which contributed 45 per cent of Sears' total profits, reached a new peak last year; it increased its share of the market; and its profits are expected to advance again this year. Bentley Engineering, which contributed 31 per cent of total profits, achieved record sales of hosiery machinery last year and its order books are such that Mr Clore is able to forecast another satisfactory year with some confidence. The Furness group has received few orders for new ships, but shipbuilding itself contributes a small proportion of the profits of this section of the business, the bulk coming from sales of electrical equipment, motor vehicles and structural steel. The 5s. "A" non-voting shares, having enjoyed a strong rise in recent months, stand at 20s. and yield 6¼ per cent.

WIGGINS TEAPE

LAST year the consolidated trading profits of Wiggins Teape fell by only £185,979 to £3,187,576. That is in line with the directors' forecast last November that profits would not be much less than in 1957. In the first half of 1958, profits fell from £2,112,079 to £1,930,567 as profit margins had narrowed—as they have throughout the paper industry—and as losses had been incurred on the starting up of new plant. But the fall in profits in the second half of the year of only £4,467 to £1,257,009 clearly supports the directors' assurance that these losses (amounting in all to £300,000 last year) are not now being made "in the aggregate." Net profits have gone up from £1,949,724 to £1,955,896, as tax has fallen sharply, by £394,090 to £1,299,853, so that the earnings cover on the unchanged ordinary dividend of 17½ per cent has improved to 1¾ times. But the yield of 6 per cent on the £1 ordinary units at 58s. shows that investors are still rightly taking a cautious view of the prospects of an industry that has capacity to share and in which profit margins are vulnerable.

RICHARD COSTAIN

RICHARD COSTAIN, the contractors, have announced an increase in profits and an effective increase in the ordinary dividend for the second year in succession. Gross profits at £609,761 for 1958, despite a doubled charge for depreciation, compare with £521,501 for 1957 and £425,509 for 1956. By comparison, Taylor Woodrow reported a slight fall in gross profits from £1,284,673 to £1,199,135, and George Wimpey one from £2,409,947 to £2,328,028. Costain's dividend on the capital as increased by the 100 per cent scrip issue is 15 per cent; the equivalent dividend last year was 11¼ per cent, and in 1956 7½ per cent. Thus the directors seem to be following a noticeably more liberal dividend policy; the present dividend is still covered over three times, and at 74s. 6d. the £1 ordinary units yield 4 per cent.

About 65 per cent of Richard Costain's work was abroad in 1958—much of it in Africa. One immediate benefit of this shown in the accounts is the reduction in the tax charge by £20,000. Moreover, profit margins on work done abroad are rather higher than those at home—some compensation for the greater risks involved. Iraq has reminded British companies of the political risks in some foreign contracts and Costain has had to write off its investments there. At home, it and the other big contractors have been little harmed by the recession. There has been a decline in orders for new factories, but the long interval between placing an order and completing the contract prevents that decline from having any immediate effect on profits, while the continued high level of house building—despite some shortage of mortgage funds last year—has helped to balance the fall in factory building. The road building programme, though not a source of much profit to most contractors, has helped to keep their labour force employed, though many of the contractors believe that they have the resources to maintain a larger programme than the present one. The National Coal Board's decision to limit the output of opencast coal has meant that these contracts no longer seem likely to offer satisfactory profits and Costain has had to allow for an expected loss on its Acorn Bank opencast contract.

BURMAH OIL

BURMAH OIL gives a widespread interest across the oil industry. It offers an indirect participation in the Royal Dutch/Shell group and an even bigger one in British Petroleum. Much of the figuring of the worth of Burmah's £1 ordinary units begins with a valuation at market prices of these two investments, but in the Far East Burmah's own marketing operations are of growing importance. Out of a gross income of £16,492,009 in 1958 (against £15,780,504 in 1957) trading profits after depreciation amounted to £5,587,701 and trade investments produced a further £2,478,945. Turnover rose in India by 4½ per cent, and in Burma by 8½ per cent. Shortages of tinplate for packing kerosene, exchange difficulties and transport problems limited the rise in turnover to 2½ per cent in Pakistan.

** Yields based on assumed dividends:—British Motor, 20½%. E.M.I., 20%. Land Securities, 6%. London & County, 62½%. Joseph Lucas, 10%. Midland, 15%. National Provincial, 12%. Steel Co. of Wales, 9%. Triplex, 27½%. Unigate, 10%.

THE ACTUARIES' INVESTM

The tax free ordinary dividend has been raised from 2s. 7d. to 2s. 9d. per share, absorbing £5,666,312 from a net profit of £7,506,141. A one for one scrip issue has been proposed, following the writing up of the value of the company's holding of British Petroleum stock from 10s. to 20s. per share. At the current price of 80s. the £1 ordinary shares yield 5.6 per cent. There is still a major capital commitment hanging over Burmah Oil: under its agreement with the Indian Government it has agreed to provide up to £10 million towards the cost of a new pipeline and the chairman, Mr W. E. Eadie, hopes to be able to report progress on the discussions about this finance at the general meeting.

BRITISH MOTOR

At least 10 per cent is the BMC directors' forecast of the final dividend on the ordinary capital as increased by the three for ten scrip issue. That means that the total ordinary dividend for 1958-59 will be raised from an effective 13.46 per cent to at least 15.77 per cent on the new capital. That in itself is not a prospect for investors to become excited about, for last year's dividend was covered nearly three times by earnings, and the boom in the motor industry is now adding to profits. But the announcement certainly leaves room for a higher final dividend than 10 per cent in November. After a further small improvemeat to 16s. 10½d., the 5s. ordinary units yield 6.1 per cent.

ROWNTREE

A YEAR ago the chairman of Rowntree and Company, Mr L. Owen, told shareholders that the sharp rise in the price of cocoa had cut into profit margins, but that earnings in the first few months of last year were not discouraging. The spot price of cocoa rose from £303¾ at the beginning of January to a peak of £403¾ at the end of May before falling to £334½ by the end of December, and over the year to December 31st Rowntree's trading profits were only £103,597 lower at £3,970,295. The ordinary dividend of 13 per cent (against 11½ per cent) absorbs a mere £195,313 out of a net profit of £1,296,299. That payment may seem to the directors to be in line with the earlier statement that, although the weight of capital spending would lighten following the completion of the factory at Fawdon, the expansion of the business and the renewal of plant would continue to require "considerable" outlays, but it sadly disappointed the stock market. The £1 shares were marked down by 4s. 7½d. to 90s. 7½d., to yield a bare 3 per cent.

LISTER AND COMPANY

THE process towards greater concentration in the woollen industry has been enlivened by a series of competing bids for the 1,425,000 ordinary shares of £1 each in Lister and Company, which spins silk and artificial silk as well as woollens. West Riding Worsted and Woollen was the first bidder, offering an exchange of shares. That offer was withdrawn after Homfray and Company made a bid of 19s. in cash for each of the ordinary shares. That offer, too, was withdrawn and the field has at the moment been left open to Mr I. E. Kornberg and Mr J. Segal, who own a substantial group of textile manufacturing companies in Yorkshire. Through S. G. Warburg, they are offering 21s. in cash for each of the ordinary shares. Since this bout of bid and counter bid began, the market price of the Lister shares has risen from 13s. 4½d. to 18s. 9d.

UNITED SUA BETONG

IN their jubilee review the directors of United Sua Betong take a cautiously optimistic view of the outlook for the natural rubber industry, pointing out that the economic recovery in Europe and the pursuit of full employment policies has led to the absorption of all the natural and synthetic rubber that could be produced. They note, too, that the science of genetics has helped to raise yields on natural rubber and that its processing has markedly improved.

United Sua Betong, under its chairman, Sir John Hay, has been pressing ahead with a big planting programme, and last year its planted acreage went up by 604 acres to 37,461 acres and this year's plan is to clear and to plant a further 568 acres. Last year 1,049 acres were replanted and 500 acres of young rubber trees brought into tapping. Yields per acre have been rising sharply —from 735 lb in 1956 through 827 lb in 1957 to 845 lb last year and the total rubber crop rose from 22,760,000 lb to a fresh peak of 22,777,500 lb. The directors, however, estimate that only 22 million lb will be harvested this year. The tea plantations did not fare so well; there were long periods of drought and output fell from 2,154,500 lb to 1,827,000 lb, but a slightly higher crop is forecast this year. In all, the immediate prospect seems favourable. The rise in rubber shares has carried the £1 ordinary units up to 88s. 3d., bringing the yield on the maintained dividend of 50 per cent down to 11½ per cent.

UNIT TRUSTS

TWO unit trusts have announced block offers of one million units. The managers of the Bank Insurance group offered and secured subscriptions for one million units in Investment-Trust-Units at 14s. 3d. xd. This trust invests in the equities of British investment trusts and has an exceptional record of growth, which partly derives from the gearing of the underlying securities. At the offer price the yield is only £3 9s. per cent.

The Atomic, Electronic and General Unit Trust has an appeal all of its own for the managers have carried the search for capital gain to its logical conclusion, investing in "growth" shares with slender yields. The trust itself re-invests all the net dividends which it receives. If the dividends were distributed, they would give a yield of 3⅛ per cent on the offer price of 12s. 8d.

London Stock Exchange

FIRST DEALINGS:	Apr. 29	May 20	June 3
LAST DEALINGS:	May 19	June 2	June 16
ACCOUNT DAY:	May 26	June 9	June 23

GILT edged stocks were dull at first and when selling increased on Monday losses ranging up to ¼ were recorded. But selling died away and the market staged a minor rally on Wednesday. Thus Funding 3½ per cent 1999-2004 having lost 1⅛ to 72⅛ by Tuesday rallied to 72⅞ on that day.

Demand for leading industrials became more selective on Monday, but buying picked up on Wednesday as the market was cheered by the continued flow of good company news and the April trade figures. *The Economist* Indicator rose fractionally by 0.8 to a fresh peak of 267.8 over the week to Wednesday's close. Individual sectors of the market were strong and steel shares advanced on the municipal election results. John Summers, following its interim report, gained 4½d. to 48s. 9d. Colvilles rose by 1s. 4½d. to 32s. 9d. and United Steel by 1s. 7½d. to 31s. 7½d.

In motor and allied shares, Automotive Products jumped by as much as 14s. 3d. to 78s. 6d. following the higher dividend and scrip issue. ACV rose by 2s. 9d. to 48s. 6d. on the dividend forecast with the interim statement, and Armstrong Shock Absorbers gained 1s. 1½d. to 14s. 1½d. But Rover lost 6d. to 27s. on the denial of an agreement in the merger negotiations. Electrical shares were rather irregular; Automatic Telephone lost 5s. 9d. to 76s. 9d. following the results and "Emmies" dropped by 1s. 10½d. to 54s. 7½d. But Ever Ready rose by 4s. 4½d. to 32s. 9d. following the higher payment and the proposed scrip issue. Store shares were firm following Marks and Spencer's results, and GUS "A" gained 1s. to 38s. 1½d. and Gamage 3s. to 78s. Dealings began on Wednesday in the new Debenhams debenture issued at 97½ (£25 paid). The stock opened at ⅜ premium and closed at ½ premium. Among food shares, Bovril rose by 4s. 9d. to 74s. and Allied Bakeries "B" by 9d. to 31s.

Insurances were still active, but Atlas slumped by 4s. to 90s. on Wednesday following the capital plans and dividend forecast. Banking shares remained firm and District rose by 4s. 6d. to a 1959 peak of 87s. 6d. on the announcement of a pending "rights" issue. Westminster "B" advanced by 2s. 3d. to 70s. 3d. and Midland by 2s. 9d. to 70s. 6d.

Little interest was shown in oil shares and Shell Trinidad lost 2s. 6d. to 133s. 9d. Kaffirs were irregular and F.S. Geduld lost 3s. 1½d. to 175s. 7½d. In the OFS group Loraine lost 7½d. to 31s. despite Anglo-American's decision to acquire shares through a loan conversion. Anglo-American itself gained 8s. 9d. on the week to 181s. 3d.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended May 9, 1959, there was an "above-line" surplus (after allowing for Sinking Funds) of £62,615,000 compared with a surplus of £9,461,000 in the previous week and a surplus of £53,725,000 in the corresponding period of last year. There was a net expenditure "below-line" of £15,510,000 leaving a total surplus of £3,279,000 compared with a deficit of £3,332,000 in 1958-59.

THE MONEY MARKET

THE market encountered a persistent shortage of funds this week. Fresh credit did not become available to offset the calling of the clearing banks and overnight money was hard to find. On Thursday and Friday of last week, and again on Monday one or two houses had to borrow a very small amount from the Bank of England. The authorities entered the market to provide a small amount of assistance last Friday and continued to give a small amount of help through to Wednesday. Fresh money commanded a rate in excess of 3⅛ per cent for much of this period and more than 3½ per cent has been conceded to avoid recourse to the Bank.

At last week's Treasury bill tender, the discount market left its concerted bid unchanged at £99 3s. 5d., but obtained an allotment of 33 per cent at this price compared with an allotment of about 20 per cent at the previous tender. The average rate of discount was almost unaltered at £3 6s. 1.22d. per cent. Total applications fell by about £22 million although the offer was raised by £10 million to £200 million of 91-day bills.

Recent funding operations in the United States resulted in a rise in the average rate of allotment of 182-day bills from 3.316 per cent to 3.408 per cent.

(1) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (4) Surveys made twice a year; annual figures relate to October survey. (5) Revised figures for April 7th were: all items, 89; food, 85·3; fibres, 79·3; other items, 123·2. (6) In general males under 21 and females under 18 years of age. (7) Certain changes have been made in the classification and coverage of the Board of Trade's index numbers in this section. (8) The series for "all items" and "other items" have been revised throughout; quotations for Middle East and Venezuelan crude oil now replace the previous quotation for gasolene.

Keep up to date . . .

with the help of either of these two informative monthly publications. *Trade Trends* summarises the latest state of trade throughout South, Central and East Africa; *The Standard Bank Review* gives a detailed survey of economic, commercial and industrial conditions in those territories. If you have business interests there, we invite you to apply to the Secretary for free copies.

ROYAL INSURANCE COMPANY LIMITED

APPOINTMENTS

BRITISH OXYGEN COMPANY LIMITED
ECONOMICS AND STATISTICS SECTION
require
at Head Office in the West-End young

Economic Statistician

to join a small team responsible for research in a wide field. Emphasis is on questions of financial policy rather than market research. Some experience is desirable, though it may be related only distantly to this kind of work. Salary will be in accordance with age, qualifications and experience and the Company operates a contributory pension scheme.

Applications to:
THE STAFF OFFICER,
British Oxygen Company Limited,
Bridgewater House, Cleveland Row,
St. James's, London, S.W.1

ECONOMIST PLUS

Courtaulds invites applications for an appointment within the small group responsible for carrying out the Company's diversification policy. The work includes special industry studies, assessment of individual firms, and detailed examination of commercial policies. In addition to a good Honours degree in Economics and a few years industrial experience, the position calls for a man capable of taking part in discussions at senior levels, and making critical investigations in different fields. For the right man, aged 25 to 35, the long term prospects would be excellent.

Candidates should write, giving full details of age, education, qualifications and experience, to the Director of Personnel, Courtaulds Limited, 16 St. Martin's-le-Grand, London, E.C.1, quoting reference number G.91.

TROPICAL PRODUCTS INSTITUTE (D.S.I.R.) invites applications for Scientific Officer post, in London. Candidates should be of B.Sc. 1st or 2nd Class standard, with Honours Degree in Economics. Preferably with research or industrial experience. Duties will include inquiries into costs of various technical processes to assess possibilities of development on commercial scale, market investigations and surveys, compilation of economic data, etc. May involve visits to territories concerned. Salary: Scale £555 to £1,150 per annum.

Application forms from Ministry of Labour and National Service (PE. 1044), Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4 Closing date for receipt of applications June 5, 1959.

WEST MIDLANDS GAS BOARD

AREA HEADQUARTERS

VACANCY FOR ASSISTANT STATISTICS OFFICER

Applications are invited for the above post on the Area Headquarters staff at Birmingham.

The duties include assisting the Statistics Officer in the preparation of reports for management; the compilation, interpretation and dissemination of routine statistics, and special investigational work for which some knowledge of market research and sampling techniques is required.

Candidates should hold a university degree in Economics or be an associate member of the Association of Incorporated Statisticians, and possess practical experience of statistical work.

The appointment, which is pensionable and subject to medical examination, carries a salary within Grade APT, 8 (£773-£853 per annum) of the National Salary Scales for Gas Staffs.

Applications, stating age, qualifications and experience, together with the names of two referees, should be addressed to the Industrial Relations Officer, West Midlands Gas Board, 6 Augustus Road, Edgbaston, Birmingham, 15, *to reach him not later than May 25. 1959.*

J. SWAN,
Secretary to the Board.

FORD

ECONOMIST

Ford Motor Company Limited have a vacancy for an Economist, aged 25-35, with a sound knowledge of statistics and market analysis. A degree in economics and several years' experience in Market Research are essential. The position is progressive and pensionable.—Applications, stating age, qualifications and experience, should be forwarded to Training and Recruitment Department, Ford Motor Company Limited,, Dagenham, Essex, quoting reference SMA.

STATISTICIAN

Applications are invited to fill a vacancy in the Statistics Unit of the Unilever Food Research Department. The person appointed will be required to do research on statistical problems arising from experiments in horticulture, animal nutrition, bacteriology, etc., and to design and analyse such experiments. Applicants should possess a good degree in Statistics or Mathematics. In the latter case they should possess a post-graduate diploma in Statistics. Applications from persons at present at University will be considered. Salary will be in accordance with age and experience and there is a comprehensive superannuation scheme.

Applications should be made to: The Staff Officer (Ref. IDM.67), Unilever Limited, Colwerth House, Sharnbrook, Bedford.

COLONIAL OFFICE (Overseas Geological Surveys), London. The Mineral Resources Division of the Overseas Geological Surveys requires a SENIOR SCIENTIFIC OFFICER to take charge of Statistical Section concerned with the compilation and interpretation of statistical information on production, consumption and trade in mineral and mineral products throughout the world. He will be required to study the mineral industry statistically and advise upon trends and future outlook. *Qualifications:* Good degree in Economics with sound knowledge of statistics. *Experience:* Some experience of applied statistics desirable and applicants who have had some contact with the mineral industry preferred. Working knowledge of one or more foreign languages an advantage. Salary within scale £1,233 to £1,400 (men). Hours 42 weekly five-day week. Civil Service Superannuation for a candidate successful in C.S. Commission Open Competition; alternatively F.S.S.U. Application form to be obtained from Ministry of Labour and National Service, PE.10, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Closing date for receipt of completed applications May 30, 1959.

ACUARY with experience of insured or self-administered pension schemes required in rapidly expanding consulting practice. Salary according to age and experience but not less than £1,500. Early prospect of partnership—Hosking, 11-12 Finsbury Square, E.C.2.

ACTUARIAL STUDENT required in consulting practice, preferably passed Part I.—Apply, stating age and present salary, to Hosking, 11-12 Finsbury Square, E.C.

ECONOMIST (ASSISTANT EXPERIMENTAL OFFICER GRADE) REQUIRED BY BUILDING RESEARCH STATION (D.S.I.R.), INITIALLY AT CRAWFORD STREET, LONDON, W.1, SUBSEQUENTLY AT GARSTON, NR. WATFORD, HERTS. Research into economic problems of building industry. Work includes economics of mechanisation, organisation, urban development, and relation between design and planning costs. Candidates should generally have a Pass degree in Economics, with special emphasis on statistics. Starting salary range £530 (at age 22)—£670 (age 26 or over) according to age. Application forms obtainable from Ministry of Labour and National Service, P. & E. Register (PE. 1021), Atlantic House, Farringdon Street, London, E.C.4.

INVESTMENT ANALYST. Merchant Bank requires experienced analyst for investment department, preferably with knowledge of North American markets. Experience of portfolio management would be an additional advantage. Salary in accordance with qualifications and experience.—Write Box MY/35, c/o 95 Bishopsgate, E.C.2.

For further appointments see page 693

COUNTY COUNCIL OF ESSEX

COUNTY PLANNING DEPARTMENT

Applications are invited for post of Planning Assistant, A.P.T. Grade I (£610 —£765) plus London Weighting at Wanstead.

Applicants should have had some experience in a Planning Office particularly in respect of research into and analysis of population trends and records, industrial location and records, and the preparation of statistical tables for land use areas, education requirements, etc.

Applicants should possess a University Degree in either Geography or Economics and consideration will also be given to Graduates who possess such a degree, but have not had the necessary planning experience, with a view to training for this work.

All reasonable facilities, including day release, will be given to enable the successful candidate to complete an *approved course of studies* to obtain Corporate Membership of the Town Planning Institute.

Five-day week; medical examination; superannuation.

Application forms from County Planning Adviser, Broomfield Place, Broomfield, Essex, to whom they should be returned by June 2, 1959.

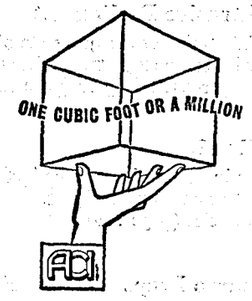
TIME WAS when the problems of defence were the concern only of the experts. But in the age of nuclear stalemate they affect everyone — tinker and tailor as much as soldier and sailor.

Survival has been launched to assist intelligent people to keep abreast of the great controversies that the problems of defence, strategy and disarmament now raise. Published six times a year, it reprints and condenses the most challenging or significant statements of policy and opinion in this field throughout the world — including the Soviet Union.



SURVIVAL

Whatever your business...whatever its size...Burroughs build equipment to meet your every data processing requirement!

The reason Burroughs can meet your every data processing requirement is this: Burroughs produce the widest range of business machines in the world.

In adding machines, Burroughs offer you a choice of full-keyboard and multiple-total models. It's the same with accounting machines—you have a choice with Burroughs. To name three: new low-cost, fully automatic Director accounting machine... Sensimatic, with unlimited programming flexibility... Sensitronic, for automatic electronic accounting. In electronic computing equipment, too, Burroughs can virtually custom-fit a machine to your job. For business computations it's the new Burroughs F2000 ...for more complex, medium-range computing, the new desk-size E101... and for large-scale computing, the new Burroughs 220.

No problem is too small ... no application is too big for Burroughs data processing equipment. And the beauty of it is, a Burroughs machine will pay for itself in savings, over and over again.

Brunswick

a name established on customer confidence

The Brunswick trade-mark has earned customer confidence since 1845. It appears on products of unequaled performance for use in recreation and education. Today these products, constantly improved by research and development, are available on a world-wide basis through Brunswick International C. A.*

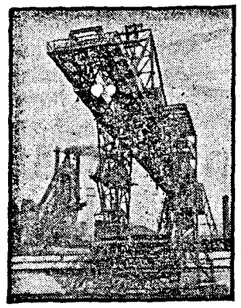
BOWLING: As an investor or proprietor, you are offered the equipment and assistance necessary for successful operation of bowling establishments around the world. As a bowler, you can choose your equipment from the world's most famous and complete line.

BILLIARDS: Both players and billiard room owners look to Brunswick for all the equipment they need, from one reliable source.

SCHOOL FURNITURE: Movable furniture and fold-away gymnasium equipment of advanced design increase the learning and recreational activities available to today's students.

GOLF AND ATHLETIC EQUIPMENT: Under the name MacGregor, "the choice of those who play the game" for more than 80 years, Brunswick offers you a quality line of athletic equipment for individual and group use.

Here are a few of the famous trade-marks of products of The Brunswick-Balke-Collender Company:



BOWLING • *Black Beauty* bowling balls • *Fireball* bowling balls • *Dura-King* bowling pins • *Red Crown* bowling pins • *Tel-E-Score* projectors • *Crown Imperial* bowling equipment • **BILLIARDS** • *Monarch* cloth and cushions • *Centennial* balls • *Challenger* cues • *Anniversary* tables • **FURNITURE** • Brunswick school and office furniture • Brunswick gymnasium equipment • **MacGREGOR** • *Tourney* golf balls • *Jack Burke* irons • *X10L official* basketball • *Official 97* baseballs

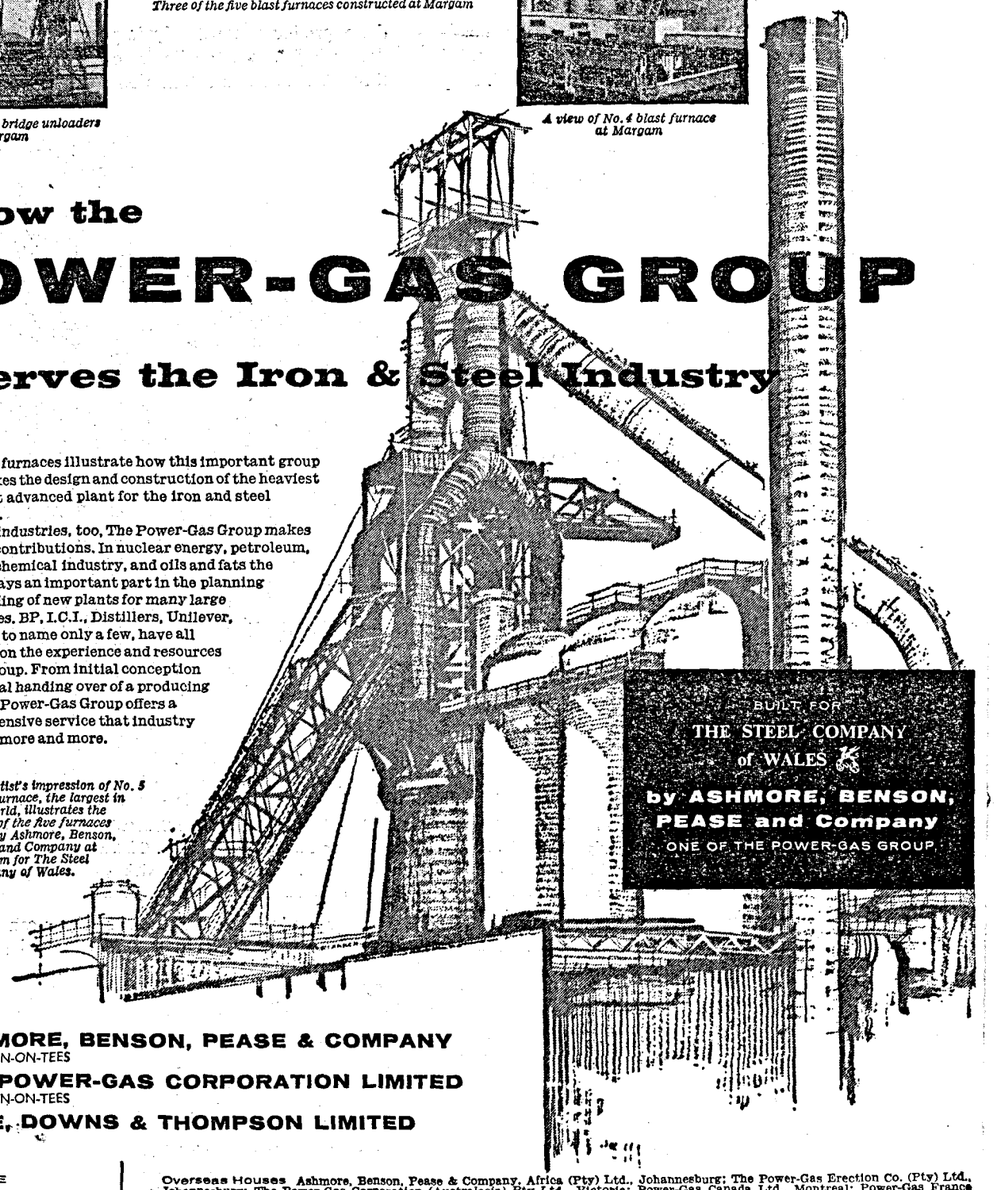
One of the five ore bridge unloaders at Margam



Three of the five blast furnaces constructed at Margam

A view of No. 4 blast furnace at Margam

how the POWER-GAS GROUP serves the Iron & Steel Industry

These furnaces illustrate how this important group undertakes the design and construction of the heaviest and most advanced plant for the iron and steel industry.
In other industries, too, The Power-Gas Group makes notable contributions. In nuclear energy, petroleum, gas, the chemical industry, and oils and fats the Group plays an important part in the planning and building of new plants for many large companies. BP, I.C.I., Distillers, Unilever, Laporte, to name only a few, have all called upon the experience and resources of the Group. From initial conception to the final handing over of a producing unit The Power-Gas Group offers a comprehensive service that industry relies on more and more.

The artist's impression of No. 5 blast furnace, the largest in the world, illustrates the latest of the five furnaces built by Ashmore, Benson, Pease and Company at Margam for The Steel Company of Wales.

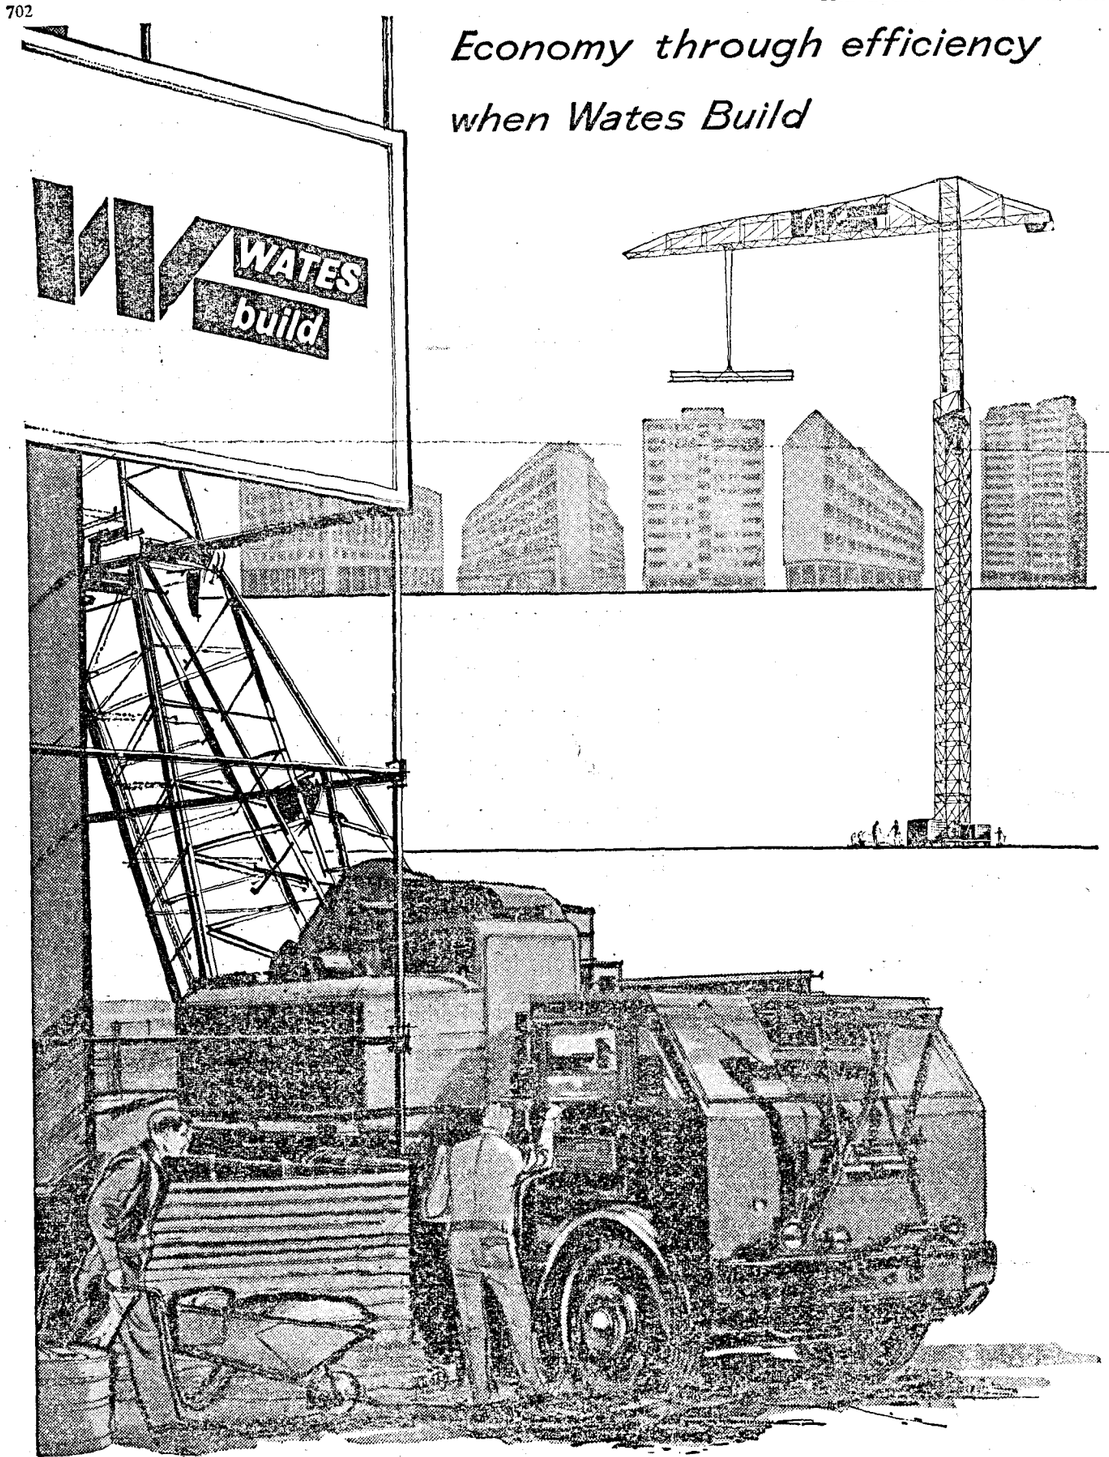
Subsidiaries and distributors in most countries throughout the world



This is Honeywell's sub-subminiature switch—the smallest precision electrical switch in the world. It weighs about 1/28 oz. and is so small that ten switches will fit in an area of 1 square inch. Yet its electrical rating of 5 amperes is equal to that of switches twice its size. This engineering accomplishment of Honeywell's MICRO SWITCH division helps solve critical problems of space and weight, opening new horizons for design engineers in the aircraft and missile fields. Perhaps such experience and ingenuity can help solve problems in your business. For full details, write to Honeywell.

PLUG IN **K.I.C.** FOR

ECONOMICAL PROCESS PLANT EXPANSION PROGRAMMES

Organised to serve the process industries, Kellogg International Corporation can strengthen the process engineering departments of most companies during their expansion programmes.

When faced with the problems of executing both large and small capital expenditures, many companies have found that plugging in the Kellogg engineering staff to supplement their own engineering facilities results in optimum capital investments for new plants.

KIC is equipped to deliver engineering manpower at any point in the planning of a new plant—from the early development of a new process through the pilot plant stage, to the design of the commercial plant, to the procurement of equipment and materials, the construction of the complete facilities, and finally to placing the plant in operation.

The broad experience of KIC, plus the constant flow of advanced technical data from Kellogg's Research Laboratories in the United States, has been used by many firms to make objective economic analyses of process schemes, as well as to help hurdle specific road blocks in the development of new processes.

Optimum *over-all* economies in plant expansion are obtained by assigning full responsibility to Kellogg for *all* necessary services. In this way, Kellogg can complete any new plant at a pre-determined cost.

Inquiries are cordially invited concerning KIC's co-ordinated engineering, procurement, and construction service.

YOU FEEL LIKE A GUEST WHEN YOU FLY SAS

Fly SAS and you're welcomed as a guest—a guest of the Scandinavians. You're looked after, entertained, wined and dined in the way that only Scandinavians know. Wherever in the world you go, nothing is too good for you. *You're a guest of* SAS.

Never keep a guest waiting

A teleprinter clacks in London—a message appears in Los Angeles. In minutes your SAS flight is booked from anywhere to anywhere and back again. It's all done by electronics. The SAS reservation system is the most modern and far-reaching in the world.

SMOOTHING YOUR PATH on the ground

A handshake. A smile. A SAS representative to see you through the formalities. At any one of the 85 airports, there's an experienced SAS man to look after you. Even on the ground you're a guest of SAS.

SMOOTHING YOUR PATH in the air

Here comes the Caravelle—newest addition to the SAS fleet. This glamorous pure-jet is powered by Rolls Royce engines. Swiftly, smoothly, she pampers 70 SAS guests to their destinations. In the jet race, SAS have a winner with the Caravelle. The benefit is yours.

2,000 kinds of hors d'oeuvre

Nothing's too good for a guest of SAS. Their chefs make millions of mouths water all over the world with fabulous dinners—there are more than 2,000 different kinds of hors d'oeuvre alone! And SAS cellars offer the very finest wines, spirits and liqueurs.

Your Hostess. She's Scandinavian. Almost certain to be blonde. But never, never dumb. She speaks from three to five languages. Her training took her to Switzerland and Germany to learn about all aspects of Continental catering. She is your hostess. You are her guest.

YOUR CAR SIR one of 9,200

At your disposal as a guest of SAS—the finest world Car-Hire Service imaginable. 9,200 cars to take you almost anywhere on wheels.

SAS holiday idea saves you money

Fly to Scandinavia at special all-in holiday rates, e.g. Norway for a fortnight for as little as £130 all-in for a family of four! Your travel agent can arrange it all—hotels, plane reservations, everything! Write to us today for full details of fares, and address of your local SAS Travel Agent.

The case of the contented customer

When *protection* is needed for the goods you buy or sell, Reed can solve all your problems! Inexpensive corrugated fibreboard cases, light in weight yet enormously strong, can be tailored-to-measure for products of all shapes and sizes. Here is one of the great variety of cases made by Reed Group companies—and made *better* because of *4 extra assets* held in common by each individual company in the Group.

THE FOUR EXTRA ASSETS ARE THESE:—

REED EXPERIENCE The know-how of men who have pioneered many of the great advances of modern paper making . . . who today make a vast range of paper and paperboard products, from wrapping papers to fibreboard cases, printing papers to pitch-fibre piping, horticultural packs to laminated plastics, paper sacks to all types of cartons.

REED RESEARCH Exhaustive market and scientific research both at Group and company levels.

REED RESOURCES The great modern machines and abundant raw materials which make it possible to standardise quality and "deliver the goods" in *any* quantity.

REED INITIATIVE Each Reed company is free to think and act for itself and for *you* the customer.

Reed

Steady As You Go

A POINT of familiar danger has been reached at the foreign ministers' conference at Geneva. After the brisk skirmishes on preliminary points, the tempo has slowed down. Interest is shifting away from the formalities of the conference room to intimations of more discreet exchanges elsewhere (on page 747 our special correspondent summarises the latest news). The western governments have expounded a set of proposals for a central European settlement which, while not new in essence, introduce half a dozen concessions ingeniously designed to meet earlier Soviet objections; Mr Gromyko has put forward the formula that Russia offered in January, unchanged. Each party has already stated at some length the arguments it wished to place on record. Each has explained why it finds the other's terms unacceptable. The headlines speak of "digging in at Geneva."

Some impatient voices react to the sight of apparent deadlock by urging that the whole costly farce should be abandoned. Others, equally impatient, ask why the West has wasted time putting up proposals known to be unacceptable to Russia, and (without stopping to wonder why Russia has thought it worthwhile to put up proposals known to be unacceptable to the West) call for immediate, sweeping, and unilateral concessions to be made to Moscow. A terse American phrase, which may be commended to British readers, sums up both these reactions: "fish or cut bait."

There is nothing attractive about the prospect of yet another long-drawn-out diplomatic endurance test, another Palais Rose or Panmunjom. Yet the need for steadiness, and the risks involved in making any convulsive leap either forward or back, are plain to see—particularly in the circumstances of this negotiation. The Russians have, from the outset, made it quite clear that they have no intention of seeking any sort of settlement at the foreign ministers' conference. Mr Gromyko has not concealed the fact that his mandate is to keep the atmosphere at Geneva just cordial enough—and, presumably, the tension over Berlin just low enough—to make possible a meeting of heads of governments. And it would be absurd to suppose that the "summit" meeting itself, which by its very nature can last only for a few days, will yield a definitive settlement for Germany, or even for Berlin; the Berlin problem cannot be definitively solved except in a wider German setting. In these circumstances, negotiation cannot help being a long-drawn-out business, as Mr Macmillan, it should be said, has always insisted.

According to the classical theory of postwar dealing with Russia, this kind of situation puts the West at a grievous disadvantage. Moscow's gambit is to state a set of maximum demands and then sit pat. Democratic governments have to take into account a public opinion impatient for results. As the desired results may differ from country to country, they are naturally reluctant to sit long at the conference table, while the limelight plays on even the smallest divergence between them. Because of their critics and rivals at home, they are equally loth to come away

empty handed. But three other major points need to be made.

One is that in free societies political discussion is inevitably and automatically focused on controversial points, while the elements of fundamental unity, being generally regarded as boring, may sink so far out of sight that the onlooker fails to notice that they are still there—and that all else rests on them. This is a point that particularly needs to be made to the Russians, lest they fall into an error which would be quite as dangerous to them as to others. They are men trained in preserving the outward form of "monolithic" solidarity. Their system cannot stand the strain of letting any rift become public knowledge (not until the losers in some secret Byzantine disputation have been decisively outmanœuvred and silenced). It cannot be easy for them to understand how, in the democratic world, a rock of basic unity can underlie the foam of spirited controversy on the surface. Other confident totalitarian rulers have been wrecked on this concealed rock before now.

SECONDLY, monoliths themselves are not always as solid as they look. The Geneva proceedings are already yielding evidence of this. Mr Gromyko has not exactly strained every muscle to secure the participation of the Poles and Czechs ; and the Poles are not exactly pleased at the way they have been dragged into the doorway and left there in an undignified posture on one foot. (The Czechs, as usual, are more docile.) While the Soviet reaction to the new western plan is that it still gives German reunification too high a priority, east German commentators have complained that it means postponing reunification. The Soviet project for a separate peace treaty with east Berlin makes no appeal to Warsaw or Prague ; nor does the prospect of an upsetting of the Berlin apple cart, which scarcely fits into the general idea of freezing the *status quo*. According to the Russians, western policy is dictated from Bonn ; according to the east German rulers, Bonn is a mere puppet, betraying the German national cause at the behest of its foreign masters. "Inner contradictions" are evidently no monopoly of the West.

Thirdly, while recognising the compelling arguments for caution in dealing with Russia, need one take them to be arguments against negotiation itself—even apart from the fact that the Berlin "crisis" made some sort of negotiation only commonsense ? Most of these arguments apply whether negotiation is actually in hand or not. In some respects, a democratic government that refuses to embark on negotiation, or pulls back at the first sign of deadlock, makes itself more, not less, vulnerable to domestic critics. A direct confrontation, such as is now in progress at Geneva, gives public opinion a better chance to judge for itself who is being unreasonable. The way Mr Gromyko has been playing his hand at Geneva, where all the new proposals have come from the western side so far, is a case in point. And the more frequent and lengthy the negotiation, the less is the element of high drama involved: the less, therefore, the democratic statesman's sense of an obligation to bring home some sort of triumph.

The modern art of negotiation is admittedly a painful one—not least to the fretting journalists who find themselves cooling their heels outside a conference room from which nothing of front-page value may emerge for weeks on end. To come down to fundamentals, it is largely the art of outsitting. At nineteenth-century conferences, statesmen conducted psychological warfare against each other by abruptly ordering their carriages, or even their trains. At Geneva this week, the Russians have let it be known that they are extending their delegation's facilities for a further month ; Mr Herter phlegmatically calls in a local tailor and has himself measured for new suits—with, one hopes, extra pairs of trousers. The Wadsworth manner, if one may so describe the steady calm with which the western delegates have handled the six months of talks on suspending nuclear tests, is in vogue. Calm is the only sensible response to the situation. This is no moment either to stamp out of the room in a huff, or to throw away the game—which is still largely a waiting game.

The Unobtrusive Parliament

The advantages—and dangers—of the present tactical repose at Westminster.

PARLIAMENT broke up for its fortnight-long Whitsun recess with public interest in politics (as evidenced by the turn-out at recent local election polls) at least ordinarily high, but with most MPs themselves sunk in enervating boredom. The basic reason for this is that any Government coming towards the end of its term, and finding to its delighted surprise that the public still does not seem to have accumulated sufficient resentments to want to hurl it out of office, naturally has an inclination to ride cautiously on its luck and to keep politics quiet. Conversely any Opposition at this stage of a Parliament ought to have a great incentive to kick up hell. But Labour is unwilling to kick up hell because it is afraid of letting loose excesses from some of its own hell-raisers. Mr Gaitskell and his more intimate colleagues have a well-founded fear of turning towards the electorate what they believe to be Labour's most damaging face, namely that of the "irresponsible" party.

In the very short term, this tactical torpor has probably been of actual advantage to the country. The battle against inflation has gained from the urgent political hints which Labour has been addressing to the trade union leaders that they should not attract unfavourable publicity to themselves by blatant lack of restraint. The Government's legislative programme is passing through the House ahead of schedule, aided on its way by unusually intelligent technical debate and unusually little political attitude-striking ; there might now even be time to introduce some additional useful and uncontroversial measures this session if the authorities bestirred themselves with their draftsmanship. The atmosphere of ennui at Westminster is less worrying to the man in the street than it is to the ordinary MP or the average parliamentary journalist, who is cross at being short of exciting copy. Moreover, the period of political near-disengagement can be made more palatable even to some MPs simply by the Whips becoming a little less insistent on obedience to their summons to the House ; there is already some sign of this development.

The real questions, however, are whether this situation can last, and whether it would eventually do damage to the fibre of British government if it did. A minor thing that could break it up is Satan finding work for idle and extremist politicians to do. He is rumbling into action in the bored smoking rooms already: *vide* the backbench Tories' motion demanding more hanging, and the decision of a small group of left wing Labour MPs to send two indecipherably weird letters to *The Times* this week. They called for more nationalisation on Monday, and intimated that everybody was insane who did not agree to an abandonment of Nato on Tuesday. But perhaps *The Times* showed the proper attitude of august indifference by putting the second of these letters at the bottom of its correspondence column. A more momentous danger has always been that the Labour leadership itself, hunting around for issues new, might stumble into irresponsibility. Labour has been forced to conclude from the local election results that the unemployment issue may be dying. It cannot expect to win votes by calling for more talks with the Russians, because Mr Selwyn Lloyd is busy holding them. Some Labour members (with good liberal excuse) would now like to make a major issue of demanding a more constructive attitude to colour problems in Notting Hill and Africa, but the Labour leadership doubts if that would win votes. So the obvious temptation could be for Labour to fall back on two lines of political talk which it thinks might be popular : to spout just a little more anti-Americanism and to make its policy of opposing nuclear tests sound just a little more pacifist than it really is.

A few weeks ago both Mr Gaitskell and Mr Bevan seemed to be testing out these lines of attack, but to their credit both have so far shown themselves too politically honest to enjoy or extend them. The danger of the current Westminster torpids may therefore not be so much that of thwarted men eventually rocking the boats. It may be rather that the tactical repose will unexcitingly continue, and that the next election, when it comes, will be a battle between two major parties which both want to be given a mandate from the voters to administer this country, but which have abnegated the imaginative urge to want to do very much else. And that, in an age of great opportunities for social and industrial change, would be a considerable misfortune.

A Guide to Smuggling

Behind the arrests that are occasionally reported of ships sailing under the British flag inside, and sometimes well outside, territorial waters in the Mediterranean and elsewhere, lies a complex web of economics and politics

AS usual one must start with the economics. When a state maintains scarcity of something that people desire and can pay for, their demand is met by smuggling. These conditions are generally the consequence of import restrictions imposed by governments with the object of protecting either the currency or a domestic industry. Sometimes, however, they are also designed to protect a monopoly, either exercised by the government itself, or farmed out. In some special cases, like heroin, they are intended to protect people from themselves.

Perhaps the best example is tobacco. Some governments stop imports of, for instance, American cigarettes because they cannot afford the dollars. Others may even be so short of all foreign currencies that they try to make their people smoke only what the country can grow itself. Some are not merely short of foreign exchange, but are plain hard up as well. For them, a tobacco monopoly can kill two birds with one stone. They may operate it themselves or, for a consideration or for services rendered, a man or a company will be given the exclusive right to import and to sell tobacco. Like an iceberg, the consideration may have been larger under the surface than above it. The monopoly sets out to get its money back and if possible a great deal more ; the odds are, then, that the cigarettes and tobacco it offers are either poor in quality or high in price. An intelligent monopolist will realise that his public activities leave specialised and additional demands unsatisfied, and that if he does not arrange for these to be met himself, some outsider will.

He may suggest to a hard-up government that it is cheaper if the monopoly takes over the job of preventing

smuggling itself. Control of the land frontiers, where smuggling is usually on a small scale, is probably left to the Customs and the police, and the monopoly will concentrate on the sea-coasts, which it will patrol with fast armed boats. The way is now clear for the monopoly to allow, and if necessary to organise, the smuggling of tobacco from outside in such a way that it can both control the volume and collect the profit itself.

As a general rule little large-scale smuggling takes place without some degree of co-operation or knowledge on the part of some of the authorities in the receiving country. This does not mean that there are no risks. There are always risks: honest officials who will not co-operate, and others whose co-operation has not been sought, or who do not think they have been adequately persuaded. The most an experienced operator can do is to reduce the risk. Setting to work against this background, the smuggler needs four things before he can start: a suitable boat, a base, a crew and a cargo.

His boat must be fast in order to evade the patrol vessels used by the governments and the monopolies concerned. It needs a tough skin, as the patrol vessels have a habit of firing on boats that disobey a summons to stop. It needs radar, both for navigation on moonless nights, and for early warning of the approach of the control boats. It needs wireless to keep in touch both with the owner at his base, and with the people who are waiting to receive the cargo. Among the most popular models are the MLs and MFVs used by the Royal Navy, numbers of which were and still are being sold as surplus. An MFV would cost about £3,500, an ML about £5,000. The new owner would probably only have to spend another thousand pounds or so to equip them for their new assignment.

For his base, first he requires either a free port or a port with bonded stores, so that the goods he deals in can be purchased and stored without payment of duty. Next, he will look out for a base where registration will entitle his vessels and its crew to some protection and help if they get caught. The most valuable and popular form of protection is unfortunately British. Any ship can be registered at a British port, provided that it can be shown to be wholly owned by a British subject; the master is British; and it is seaworthy. A local man of straw will be nominated as "owner," and though the authorities may have their doubts about a carpenter earning seven or eight pounds a week being the real owner of a vessel costing £5,000, faced with a bill of sale there is little they can do in practice to dispute or disprove his ownership. As regards the master, if a vessel is trading within what are called home limits (a range of something like 300 miles), it is not necessary under British law for him to have any special qualifications beyond a British passport. Another man of straw will therefore be nominated as master. The nominal master must, of course, be carried, but he may spend his time playing poker.

For a vessel to operate outside home limits the master must have a British certificate. Such a master is harder to find and much more expensive. Many owners therefore register their vessels just for home limits, and if they are picked up off the coast eight hundred miles from their base they blame "stress of weather" or faulty engines for having driven them off course.

Once a vessel has been registered in a British port its owner and crew are entitled to apply to any British consul for help should they get into trouble. This does not mean that they need habitually use that port, or in fact ever see it again. Many vessels registered at Gibraltar have not been seen there for years. In these circumstances it is naturally irritating to the British consul and to the authorities of the port of registration if it gets caught for smuggling by a foreign power, when they know perfectly well but cannot prove that the real owner and the real master are aliens. In fact, they may even be nationals of the very country which catches them and which protests indignantly about "British" smugglers.

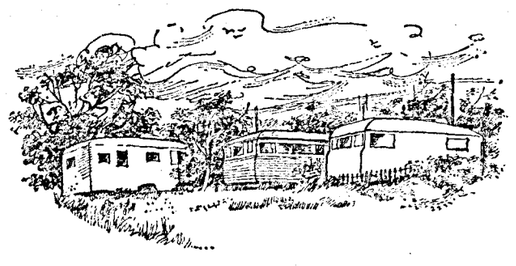
Hiring a crew presents only minor difficulties. They must, of course, be tough, prepared to go to jail now and then and sometimes even to fight with guns or knives or both. But they are well paid, the work is regarded in many places as both glamorous and honourable, and few owners have any difficulty in getting the men they want.

The choice of a cargo requires skilled judgment and is impossible to generalise about. Cigarettes, coffee, penicillin and pepper have in recent years been among the more regular and reliable subjects of straightforward smuggling. Narcotics and small arms are for specialists who generally keep clear of British ports. Where goods are to be smuggled with the co-operation either of a monopoly or of the Customs authorities (or both) in the receiving country, it is often convenient to mix contraband with a legitimate cargo so that (preferably by arrangement, of course) it can be landed openly on the quay. A popular mixture at the moment in some parts of the Mediterranean is metal scrap, in most places a legitimate cargo; but included in it will be complete second-hand, or even new, mechanical units.

Profits on contraband are usually very high. Thus, American cigarettes, whose value in a bonded store is about 9d. a packet, will sell in the black market in Spain or Italy for the equivalent of about 3s. As a normal cargo will be anything between fifty thousand and a million packets, the gross profit on one run can be between £50,000 and £100,000. The difference between the cost of loose tobacco in bond and the price at which it is sold in Spain is about 2s. 6d. a pound. Coffee shows a margin of 4s. a pound. As an ML will carry between 15 and 20 tons, this leaves room for smaller but not unattractive profits of between £5,000 and £10,000 a trip. These can be supplemented by carrying whisky, at a profit of at least £1 a bottle.

After a few trips, the original outlay on the boat and the other expenses will have been fully covered and the owners, go-betweens and reception committees will all have made a very handsome profit. Often the authorities in the receiving country will have known about these operations; sometimes they will have been active partners. It is now their turn. On the fourth or fifth trip the ship will be arrested. The owner may even know that this is going to happen, and an experienced and trusted crew may also be let into the secret so that they can facilitate their own arrest and avoid any unpleasant incidents. A case will be taken. The owner (who probably lives in comfort in some cosmopolitan centre, perhaps nowhere near the sea) is fined a fantastic sum which nobody has any intention of paying or receiving, and after a more or less decent interval the vessel and cargo are confiscated in default and sold. Percentages of the proceeds will go to the zealous Customs chief and to the captain and crew of the control boat that made the arrest. The master and the crew will probably spend a few weeks or months in jail; but they will be generously compensated when they get out.

Smuggling is for the professional. Amateurs do try their hand at it; and there are some who have done reasonably well. Their technique is usually to take the cargo to a pre-arranged spot off the coast and then to transfer it to small fishing boats. Unless the co-operation of the local authorities has been secured, the risks of getting caught are great and penalties (for the amateur) severe. After the war in particular, enthusiasts who found the routine and the rewards of civil life in Britain too humdrum tried to enter the field via Tangier. Most of them burnt their fingers.



A common method of dealing with these amateur interlopers, who came out with their own vessels and crew, was for a professional to lay up his own boat and employ them to carry his cargo instead. The first trip would go off according to plan, and the newcomer might find himself the richer by some ten or fifteen thousand pounds. When the established professional was satisfied that after a few operations of this kind the newcomer had accumulated enough capital, a hitch would be arranged. The professional would explain with regret that although there were 50,000 cases of cigarettes in the bonded store, he was short of funds to pay for them. The amateur would be invited to put up the money himself with the prospect of an enormous profit once he delivered the goods. The professional would then tip off the Customs or the monopoly at the other end. The vessel would be picked up and confiscated with its cargo. The amateur and his crew would spend several uncomfortable months in jail; the professional would collect a share of the proceeds, and everybody, except of course the amateur, would be the happier and the richer.

Off the Road

Thanks to restrictive official policy, only just over one per cent of British families own caravans. But many more would like to.

The scene is open land near the Thames in one of the best residential areas of Surrey. There are two caravan sites side by side. The first is set well back from the road in a wood, and the discretion of its layout is truly suburban. Each caravan is carefully screened from the next by a privet hedge and is

surrounded by a well-kept garden. The caravans themselves, costing on average about £1,000 each, are clean and television-decked, and the site as a whole is one that even a fastidious town dweller would not despise. The adjoining site is in complete contrast. It has been run up by a pushful salesman ("your home for £10 down and five years to pay"), is overcrowded and without amenities, and has dogs and children scavenging among the overflowing garbage cans. This is a modern shanty town, a new slum. Most local councillors have made up their prejudices about Britain's caravan problem after looking at this sort of site, and not at the other. The result is that all sorts of mistakes are being made in public policy towards what, as the best available figures show, is a growth industry *par excellence*.

In 1948, according to the Board of Trade, only 3,618 caravans were made in Britain (with 10 per cent going, then as now, to export). In 1957, the number had risen to 25,000 and last year the National Caravan Council's figure for production topped 36,000—a tenfold increase in a decade. It is likely that demand would double again in the next two years if sufficient sites were available. There are now in all about 180,000 caravans in use in Britain, 90,000 of which are used by 200,000 people purely for residential purposes; and there has

recently been a great proliferation of caravan organisations, clubs, rallies, conventions and the like. The *Caravan*, one of the trade's two major magazines, sells 60,000 copies a month.

This tremendous demand for caravans comes from four main types of people. The first, made up quite largely of retired couples, spinsters and manual workers whose jobs take them round the country (such as building contractors and servicemen), use a caravan to live in and prefer it. Their sites are really an extension of Main Street. The second group also lives in a caravan, but would prefer to move into a proper house. These people, who form the bulk of the shanty towns, are mostly young married couples, often with children, who have moved out of town to get jobs, but then have found nowhere to live. Especially in the Green Belt area round London, where many more factories have been built than houses to accommodate the workers, this predicament is common. The third source of demand comes from businesses running seaside caravan sites for holidaymakers. Some of these sites—notably in Devon, Cornwall and Wales—are over 1,000 strong and equipped with supermarkets, clubs, restaurants, dance halls and other amenities. The fourth customer, well known to every motorist, is the man who takes the polythene wrapper off his small caravan each August and on a few warm summer weekends, and trundles off to the coast for a family holiday.

It need hardly be said after this that caravan manufacturing is generally a booming business. The makers do face problems ; since all but one are relatively small concerns and cannot afford large stocks, the seasonal nature of the trade means rushed production in the summer months. But almost all the models, retailing at anything from £200 to £2,000, are well received without manufacturers doing any expensive advertising at all ; and most models, though rather ugly outside, are well appointed within. The trend (in spite of official restrictions limiting the size of a caravan to 22 ft by 7 ft 6 in) is towards longer and lower models though there is as yet little here to match the 40- and 50-foot monsters of America. But here, as in so many other places, caravanning is bursting through the obsolete legislation and planning framework originally drawn up to restrict the activities of the gypsies. Since a 22-foot caravan is not really big enough to live in, it is now a common practice to make two units that can then be fitted together on a site into a 36-foot home or more.

NOTHING could be in greater contrast to this sunny picture of easy affluence than the fate of many people who have bought caravans and start looking for a decent site. For in many areas, owing to local restriction, sites just do not exist. A proposed caravan site in an area will usually bring a host of protests from local residents, and strong objections from local planning and public health authorities. In some counties where the problem is most acute, notably Surrey and Middlesex, a large part of many councillors' energies is spent in a somewhat hysterical effort to keep people for whom there are jobs but no houses from living in caravans.

Needless to say, there is some substance in these objections to caravans. They are not sightly at the best of times ; they do not fit easily into an administrative pattern (though the normal charge that they pay no rates is untrue) ; and they do pose important—but not intractable—problems of public health. But the councils' attitudes have led to anomalies as stupid as they are unfair.

Of all counties, Surrey probably shows these anomalies most clearly. First, since the county council almost invariably refuses all applications for authorised sites in the first instance (thus forcing an appeal to the Minister of Housing in every case), even a fortunate site owner who finally gets planning permission has often had to wait from one to three years for it. Secondly, since permission is only given for a maximum of five-or seven-years, real site improvements are seldom worth while even with rents of £1 a week or more per caravan. But while the council may refuse permission for ten extra caravans on a good and well-prepared authorised site, unauthorised sites, whose conditions are disgraceful, spring up apace. In the last six years Surrey's caravan population has roughly doubled and almost half of all its caravans are now on unauthorised sites.

THESE sites are usually a speculative venture undertaken by an operator working hand in hand with a dealer in third-rate and third-hand caravans. They are the natural consequence of demand exceeding legitimate supply—a black market. The operator buys a field and one night, before the authorities can do anything about it, he fills the field up with the old caravans, which are then advertised to let. Even if a council notice declaring the site to be unauthorised is stuck up at the entrance, customers are readily available and people bringing their own caravans are charged up to £50 key money.

On a shrewd reckoning the people who ignore these notices are not so silly as they seem. In theory it takes over a year of "notices to quit" and appeals before the caravans can be forcibly moved (and the validity of these legal processes is increasingly open to doubt) ; and, more important, the social consequences of evicting anybody who has nowhere else to go ensures that forcible eviction is seldom carried out. If it is, as happened last autumn at Egham, the most embarrassing public outcry can follow. This aversion to strong-arm methods, though good in itself, is unfortunate because it encourages yet further the expansion of unauthorised sites, and it is no solution to the problem of improving caravan sites generally. For so long as county councils refuse to accept caravans, and to allow good sites to be built, they can never turn people off the bad ones.

There are, however, several welcome signs that the caravanners' position is beginning to improve. The National Caravan Council, the trade association representing all sectors of the industry, is at the moment conducting a vigorous public relations campaign to educate the public into accepting and providing for caravans ; it reports some success. Among caravanners, there is a growing awareness of the need to raise standards and to landscape a site so that it is less of an eyesore than many are at present. Among county officials—though more, perhaps, among the professional planning officers than among local councillors—caravanners' needs are receiving slightly more sympathy than before. More data are being collected about caravan conditions ; most public health problems have been solved, on paper at least ; and more permanent sites—though still nothing like enough—are being allowed.

In view of the prejudices that surround caravans and their sudden impact since the war, this is not a bad start. The impetus towards acceptance should be helped when Sir Arton Wilson's fact-finding report on residential caravans (commissioned by the Government after the Egham affair) appears towards the end of this year. Much is still needed. Many local authorities excuse their restrictive policies by saying that "the slightest encouraging noise on our part would precipitate a caravan invasion"—and do not seem to realise that the bigger the demand, the less democratic justification have they for blocking it. But it is something that the ball is now rolling in the right direction at all.

NOTES OF THE WEEK

EUROPE

A Little Free Trade Area?

THE idea of a little free trade area between Britain, the Scandinavian countries, and possibly Austria, Switzerland and Portugal is now being bruited about in London with surprising vigour. The scheme has had an airing in the press ; the Federation of British Industries has been asked for support. No cabinet decision has yet been taken on the matter, but the scheme has now gathered sufficient way to deserve serious consideration.

The little free trade area plainly does not compare in economic value with a grouping embracing all western Europe, and is not a substitute for it. The new competition, the opportunities for a better international division of labour, and the stimuli to more productive investment would be incomparably smaller. But those who put forward the scheme seem in part to appreciate its limitations. Few of them see it as a permanent arrangement. They simply hope to give the countries outside the common market a certain compensation for the losses they are suffering from its creation, and at the same time to provide an additional spur towards the broader agreement that must remain the overriding objective of British policy.

It is here, however, that the conception of the little free trade area seems somewhat confused. If such a scheme is to contribute towards a broader agreement in Europe, it will do so by exerting pressure on the six common market countries to accept one. The pressure would be mainly felt by German exporters in Scandinavian markets, who would then presumably put further pressure on the French. But all the evidence of the negotiations hitherto suggests that this pressure is unlikely to be effective. The political necessity which compels Germany to maintain its links with France sets a very clear limit on the effectiveness of German pressure. The French remain in a position to block any schemes which do not fit in with the common market system.

By itself, the fact that the little free trade area will not bring agreement with the Six any nearer is no argument against it ; any freeing of trade is, in itself, good. But the danger is that it may push the day of agreement with the Six further away. The creation of a second economic grouping, however tactfully it is framed, runs the risk, as things are, of deepening and completing the division within Europe, so apparent since the common market itself was formed. It would be one more misfortune for British policy if another well-intentioned economic scheme were to contribute to the lasting political estrangement which has been possible ever since the project for a wider free trade area failed.

Setback for Luxemburg

GOOD Europeans should make no mistake. The rejection of the coal proposals put forward by the High Authority of the Coal and Steel Community to the Community's council of ministers last week was a real setback for economic and political integration in Europe. The surplus of coal has been troubling the community for some time. In time of boom west Germany and Italy began to import coal from America on a large scale. In time of recession the competition of such imports has aggravated the problems of domestic mines, particularly in Germany and Belgium. Governments have been meeting the problem with a variety of mainly national solutions ; the Germans, for example, have imposed a tariff quota on imports and restrictions on shift working. To replace these *ad hoc* national devices, the High Authority asked for powers which would enable it to restrict both imports and production on the basis of a common plan. The three major nations in the six-member community have now turned its proposals down.

It is important to be clear about the background. The High Authority has left its proposals till very late in the day, so late that the ministers have been able to justify their negative decision by pointing out that the temporary difficulties will be over soon and that it seems imprudent to change the balance of the arrangements they have made on a national basis at this stage. The separate reasons that have inspired the three governments to say No are familiar enough. The Italians want to go on importing American coal as they please ; the Germans dislike the whole economic

conception of direct controls on production ; the French have little enthusiasm today for supranational powers.

The fact remains that the High Authority, taking its stand on two clauses in the community treaty which gave considerable support to its interpretation of the situation, has been defeated. That defeat does not herald the demise of the communities of Six, but it does reflect a new situation in which governments are reluctant to go beyond the letter of their treaty obligations, and prefer to do business by agreement with one another instead of by obeying a supranational body. It also rubs home the fact that the main political effort of the Six has shifted from Luxemburg to Brussels. The coal and steel community may well be approaching the end of its useful life as an entity distinct from the broader common market.

RACIAL TENSION

Notting Hill Again

It is at least possible, as Scotland Yard has averred, that the Notting Hill murder last Sunday was not primarily "racial." If the hoodlums concerned were after money, the fact that the victim was alone and temporarily incapacitated might well have been a more important attraction than his colour—though the kind of nastiness which picks out for assault a man with his hand in plaster is only too likely to be allied to the kind which "homes" like a guided missile, on a dark skin. But whether or not the murder was a direct result of present racial tension, that tension exists ; and the crime itself can be expected to cause more. Notting Hill is, once again, simmering.

Of the various suggested ways of dealing with the trouble, the worst possible is the project of one left-wing organisation for volunteer vigilante bands of "anti-fascists" on the streets. It is indeed much harder to credit the sponsors of this project with a genuine desire to protect the oppressed than to suspect them of welcoming, for purposes quite unconnected with racial harmony, the chance to organise a para-military nucleus of troublemakers. Even if this suspicion is quite unjustified, the appearance of such amateur squads would certainly provoke more disorder than it prevented. More responsibly, two changes in the law have been proposed. The first would make it illegal for anybody offering commercial amenities for sale or hire to discriminate against Negro customers as such ; the idea is that this might have some marginal effect in making it easier for Negroes to settle outside the areas where they are now disproportionately concentrated, and thus reduce the tension arising from that concentration and from the overcrowding which accompanies it. This proposal has been turned down before now, mostly on the grounds that it is not really enforceable ; but such laws have done some good in several states of America, and there is an increasingly strong case for making use of them here.

The second suggested change—that racialist propaganda should be made a legal offence—would be a bad thing. It is flatly contrary to the principle of free speech. While there are extreme circumstances in which free speech has to be abrogated, those of Notting Hill do not yet qualify. There is no evidence that rabble rousers have caused the wave of trouble there ; they look more like jetsam floating about on top of it. All that is needed in this field at present is an exemplary enforcement of the existing law concerning insulting words and behaviour whereby a breach of the peace might be occasioned.

What Goes On?

There is one footnote to the Notting Hill story which should not escape comment, even though it has no direct relevance to the racial tension there. Obviously the proper concern of every citizen is that the murderer of this West Indian, like every other murderer, should be arrested and charged without delay. But this does not justify the detention, without charge, of two young men for questioning for nearly two days before they were allowed to go home. Complaints about police methods of questioning people who are thought "to be able to help in the inquiries," and of securing "confessions" from those who have been charged, are becoming too frequent for the ordinary citizen's peace of mind.

LOCAL ELECTIONS

The Lewisham Gerrymander

When Labour was beaten by 28 seats to 27 at the recent local elections at Lewisham (one of the Tories winning his seat by a single vote), it was naturally presumed that the Tories had regained control of the borough council. This week, however, by a procedural manœuvre which in most other places would be banned by gentlemen's agreement, the Labour aldermen from the old council helped to vote into office a Labour mayor who was not an elected councillor. That made the voting strength on the council for the new aldermanic elections 28 to 28 ; the artificially elected mayor then voted twice in these aldermanic elections, the second time wielding the power of a casting vote, and a new gaggle of Labour aldermen were voted into the town hall in order to ensure that Labour would retain control. This dodge is not without approximate precedents elsewhere. If it is a piece of chicane, it is a relatively small one. Explosions of righteous wrath would be out of place. Nevertheless, the first question which the manœuvre raises in the mind of the not too moralistically minded onlooker is: why on earth do it ?

The metropolitan borough councillors of London, under the dominating shadow of the LCC, have precious little power, whichever their party, to embody in practical action their particular ideas of service to the community. Their consequently dreadfully dull job carries no pay ; and their prestige is as nearly nil as no matter. To anybody who is not almost diseasedly infected with a party political virus, the importation or maintenance of party ardours, divisions and discipline, to the point of incurring the kind of odium (not to mention social awkwardness) engendered by the Lewisham tactic, must seem singularly un-worthwhile. And to anybody who does regard his party's advantage as a principal objective of all his actions, the Lewisham tactic ought to seem logically self-contradictory. The spectacle of democratic machinery, which is supposed to register popular choices however narrowly arrived at, being fiddled into registering the opposite of such a choice, is bound to be bad for the popular image of the party responsible for the fiddling. If the ingenious Lewisham councillors carried a label all their own—the Anti-Poodle-Faking Party, the Adullamites, or what not—their cynicism about voters' instructions might be less chuckle-headed. But they are the Labour party ; their manœuvre is presumably intended to serve the Labour cause and be justified by its needs. Neither national Labour leaders nor Labour supporters at large can feel very happy at getting tarred with the Lewisham brush ; Conservatives, on the other hand, must feel very happy indeed at being given it to wield.

NYASALAND

Contempt of Justice

Without waiting for the Devlin Commission to report, or even to finish its investigations, the Nyasaland government has announced that it intends to keep leaders of the Nyasaland African National Congress in prison indefinitely. These men, and many others, were rounded up in March for security reasons—fears of an impending massacre—which Mr Justice Devlin and his three colleagues have been charged to investigate. But now, in an official information bulletin circulated among Africans, the governor has prejudged the case against the imprisoned leaders.

He is also encouraging systematic peaching by urging Africans to report neighbours whom they believe to be members of Congress and troublemakers. Many readers of the bulletin will no doubt take this as an invitation to work off old scores. The arrests of the past two months have been made on the basis of informers' reports, whose trustworthiness is by their very nature suspect. The government's newly professed aim is to secure peace by "cleaning the country of Congress." This is to repeat in Nyasaland the basic mistake that has been made in other territories: the assumption that new and more "sensible" leaders will appear if only a few "extremists" can be put out of the way.

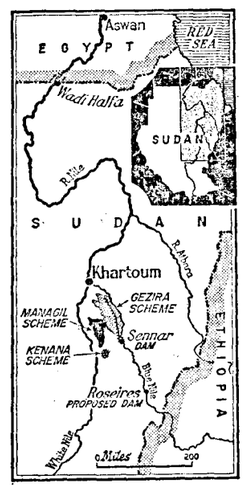
This is not the end of the disturbing news from Nyasaland. With the disgrace of the beastly killings at the Hola detention camp in Kenya freshly in mind, it is ominous to hear from several sources (and mentioned by Mr Fenner Brockway in the adjournment debate on May 15th) disquieting reports about conditions and behaviour in the Nyasaland detention camps.

SAUDI ARABIA

Two-way Relations

Diplomatic relations between Saudi Arabia and Britain were suddenly broken off by King Saud on November 2, 1956. Two days earlier the king had said that he had no intention of breaking off relations with Britain or France because of what was then going on around the Suez canal. Egyptian and domestic pressure, however, forced him to change his mind. The sale of Saudi-produced oil to Britain and France was forbidden, and a number of President Nasser's Russian jets were given safe harbour at Jiddah airport.

It appears to have been forgotten that Saudi-British relations, admittedly already under a considerable amount of strain, were broken off because of events in Egypt. The old squabble over ownership of the Buraimi oasis has become a convenient stumbling block whenever the subject has been mentioned. Privately, Saudi authorities say there is no reason why relations cannot be re-established, but they have not taken the first step to bring about this solution. They have not informed the Pakistani government, acting for Britain in Saudi Arabia, of their desire to resume relations.



The Saudis appear to regard the resumption of diplomatic relations as a way of extorting concessions from Britain, as if only the British had anything to gain. They should not forget that diplomatic representation works both ways. The Arabs have as much to gain by being properly represented in London as the British Government has in Jiddah, or Cairo. The use of mediators, self-appointed or chosen by either side, is not the same thing and offers none of the advantages of normal diplomatic channels.

In the confusion of 1956, Yemen never got around to breaking off diplomatic relations with Britain ; but relations have been badly strained because of the border troubles between Yemen and the Aden protectorate. This week a delegation of Yemenis is in Aden to discuss outstanding differences with British officials. A few months ago nobody would have expected the Imam's government to take such a step. Can it be that the Yemenis have a more realistic view of international relations than their richer and more powerful neighbours to the north ?

NILE WATERS

Pushing On Regardless

Nile waters flow more steadily, or at least more predictably, than the course of negotiations about their distribution. Despite sporadic and rather half-hearted attempts, Egypt and Sudan have not been able to agree on the terms of a convention to embrace their several irrigation schemes and to replace the 1929 agreement between Egypt and the tutelary British power in Sudan. But the Sudanese government is now under pressure because without agreement it is the harder for it to get money from outside for its development projects ; Egypt, apparently unhampered by this prerequisite, has been promised Russian money for its Aswan high dam. This dilemma has been brought home by the coincidence last week of Egyptian negotiations in Moscow with a visit to Khartoum of Mr Rucinski, the director of the World Bank's Middle East operations: the Egyptian mission is said to have arranged for work to begin on the dam in October when the floods are over, but Mr Rucinski has left Khartoum without any money being pledged for the Sudanese schemes.

Sudan is now working on the second of the four phases of the Managil irrigation project, itself an extension of the Gezira cotton scheme. The Managil area lies to the south-west of Gezira, and its irrigation will eventually more than double the present Gezira cotton yield. At the same time the Sudanese government wants to start the construction of a dam at Roseires, 165 miles upstream on the Blue Nile from the Sennar dam, partly in connection with the Managil scheme and partly in preparation for the next irrigation project at Kenana.

The Gezira canal and the Sennar reservoir already draw

off all the water allotted to Sudan under the 1929 agreement (there is no limit on pumped water) and this leaves no treaty water for the proposed Managil canal—which will have even greater capacity than the Gezira canal. If it proceeds with its plan without a new agreement, Sudan will be breaking the 1929 agreement in a matter of weeks. This, from the political point of view, is an uneasy prospect, impelling Sudan to reopen negotiations. Egypt is under less compulsion, but it too needs agreement before progress on the high dam leads to the flooding of Wadi Halfa. Both sides have an interest in reaching some kind of interim arrangement on work in progress.

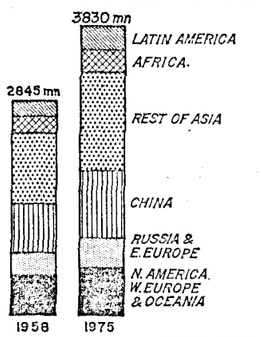
CHURCHES

No Bishops in the Kirk

UNLESS there is some last-minute change of heart, the General Assembly of the Church of Scotland is likely next week to declare that the long-debated proposals for closer unity with the Anglican churches are unacceptable in their present form. This is a legitimate matter for lay comment; an advance towards fuller communion between the established churches in the north and south of Britain has always been a matter of importance to many devout citizens. Throughout the controversy about the so-called "Bishops' Report" of 1957, there have been parts—but parts only—of the cases put forward by the dignitaries of both churches with which the reasonably undogmatic outsider could feel a real and instinctive sympathy. For the Presbyterians the proposals of 1957—that their kirk should include bishops of a sort—represented a massive recommended change in their terminology, even if not necessarily in their method of organisation. On the Anglican side, the argument which most obviously deserved to command understanding was their conscientious belief that the celebrant of the Eucharist when Anglicans participate should have been ordained by a bishop who had been consecrated in the historic succession, by a laying-on of hands by church leaders stretching back to the Apostles.

For people used to diplomatic negotiations outside the churches, however, it was not easy to see why these natural emotions should create an unbridgeable gap. Outsiders hoped that Anglican statesmen would go out of their way to ease difficulties in terminology for the Presbyterians, and to emphasise that no departure from the Presbyterians' tradition of more democratic church organisation was intended. They also could not conceive—on the simplest level of lay comment—why some Presbyterian dignitaries should not amicably agree to a ceremonial laying-on of hands by Anglican bishops, if that would facilitate fuller communion between the churches.

The discussions have not been carried on in this way. The senior dignitaries of both churches have expressed Christian feelings of brotherhood with each other. But again and again, in statements by bishops, there has been emphasis on the ordinal of the Church of England that the order of bishops should be reverently used and esteemed; again and again, in statements by some Presbyterians, it has been implied that to accept the Anglican view on ordainment within the historical succession would in some way cast an aspersion on the spiritual status of the Church of Scotland's orders. There is no doubt that the eminent disputants sincerely feel that the failure of the recent discussions has been due to deep differences in religious outlook and not to overemphasis on particular grades or types of clergymen's *amour propre*. But they now have a major propagandist task on their hands if they are to persuade some bodies of outside opinion that the latter factor has played no part at all in the breakdown.



CO-OPERATIVES

Burying the Gaitskell Plan

THE reformers have bitten the dust, and are now putting on the best face they can about having done so. That seems to be the depressing conclusion to come out of this week's co-operative congress. From the first, it had seemed almost too good to be true that last November's special congress had voted by a narrow majority in favour of the Gaitskell Commission's reforms; in the event, it turned out that the co-operative diehards ("whatever happens, we must preserve co-operation as a way of life") had procedural reserves to enable them to fight back. The main challenge, over the running of an independent and well-financed retail society to develop co-operative chain stores, was countered earlier this year by the Co-operative Wholesale Society, which issued a glossy booklet urging that they, and not outside professionals, should do the development. The reformers opposed this but, owing to a change of sides by the London society, the CWS proposals gained a majority in the movement. During the present conference, the reformers ducked the new challenge; they agreed that the whole question of the development society should continue to be neatly shunted away in a sub-committee, where the last nails on its coffin seem likely to be hammered in.

This looks like the end of a sorry tale of missed opportunity. Without a development society to inject new ideas and money into their chain stores (especially into those dealing in dry goods), the co-operatives will be worse placed than ever to attract customers from the multiples in the retailing revolution now in progress. Some societies, it is true, have risen to the occasion and run supermarkets that are among the most efficient in the country; more than one half of all self-service stores and nearly as high a proportion of supermarkets are still co-operative run. But these proportions are falling and, generally, the movement's disappointing sales figures look like the writing on the retail

WORLD POPULATION PROSPECT

Demographers now think that the world's population will grow even faster than they had forecast a short time ago. By the turn of this century there may be 6,000 or 7,000 million people compared with about 2,850 million today.

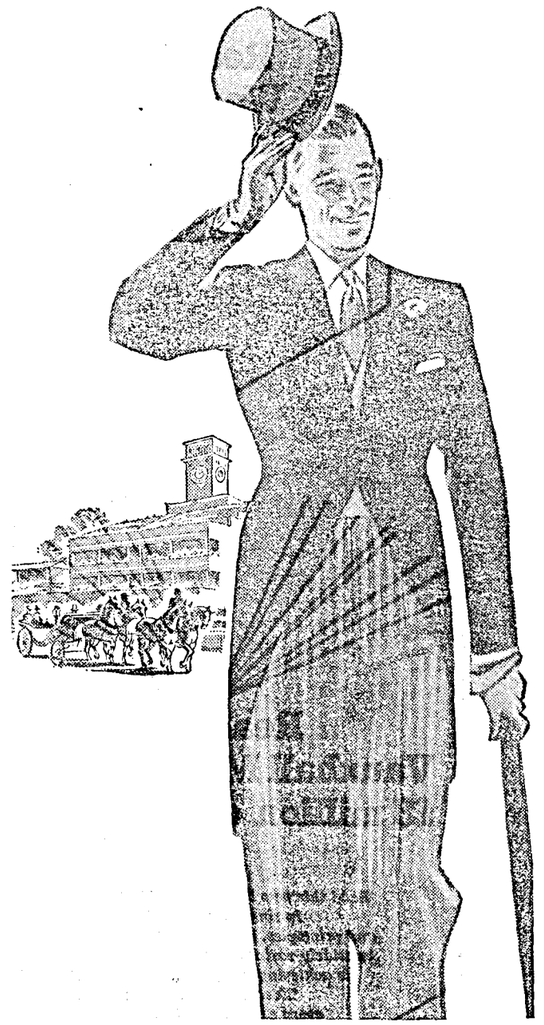
Uncle George gave them 'the very thing'

(THOUGH HE DIDN'T KNOW WHAT THEY WANTED)

It was the dinner service of their dreams. The one thing they needed to make their new home complete. Not that Uncle George had to work that one out. He sent them a Midland Bank Gift Cheque—the perfect solution to that tricky present problem. For when you give a Midland Bank Gift Cheque you give money with a difference. You give it in a permanent and a gracious way. A Midland Bank Gift Cheque is colourful, it's gay, it can be for any amount, and those up to £10 can be cashed on sight at any branch.

Anyone can give—and cash—

MIDLAND BANK



Gift Cheques

Also available: Gift Cheques for Birthdays, Christmas and general purposes.

wall. Moreover in the wider field of consumer protection (such as in the testing of goods carried out by the authors of "Which" and "Shoppers Guide") the co-operatives do not figure at all; and some delegates this week clearly had mixed feelings about cut-price wars in the shops. One cannot but feel that the Rochdale pioneers must be turning in their graves.

COMMONWEALTH

. . . But Once a Year

TOMORROW, May 24th, will be the first Commonwealth Day. The Prime Minister's announcement of the renaming of the former Empire Day came too late to enable the publishers of 1959 diaries to correct their entries, but just in time for *The Economist*, in its last Christmas issue, to make a little play with the notion of an annual feast of Cwthmas (the abbreviated form, with the w pronounced as in cwm, seems to have been forgiven us). What is the state of the Commonwealth games today?

As usual, good Cwthmen are to be observed in amiably assorted attitudes wherever their never-setting but sometimes fitful sun shines. The Duke of Gloucester has just presented an unsuspecting young Nigerian with Lord Montgomery's memoirs. The Duke of Edinburgh has completed a second circumnavigation of the globe, receiving a rapturous welcome in republican India and Pakistan, and narrowly missing Dame Margot Fonteyn in the Panama Canal on his way home. The first Ghanaian has just been given a post at Court, in preparation for the royal visit to his country later this year. Royalist and republican North America are about to join hands across the Seaway. The *Daily Express* promises to distribute two million buttonhole Union Jacks on the occasion of what, in its lovably retarded way, it is still calling Empire Day. Somebody in Australia's Papuan territory has apparently eaten a policeman.

It is hard enough for Cwthmen themselves to make head or tail of it all. Small wonder that when Mr Macmillan tried to explain the Commonwealth to a Moscow television audience in March, the Soviet press on the following morning was content to cover this, and much else, with Tass's cryptic summary: "The Prime Minister also spoke about life in England." With Mr Bandaranaike audibly yearning for a return to Ceylon's pre-independence forms of government, and Lord Salisbury assuring his fellow peers that white Rhodesians are supremely devoted to every ideal that Britain stands for and must therefore be allowed to do just as they please without any nagging from Mother, and Mr Mintoff appealing to the Caesars of Geneva—the thing defies analysis. Still, Cwthmas comes but once a year.

SOVIET UNION

Policemen's Happy Lot

SENIOR officers of the political police met in Moscow last week and convinced themselves that there was still plenty for them to do. They listened to a report by their new chief, Mr Shelepin, who had run the Komsomol, the communist youth organisation, before his appointment last year to the chairmanship of the State Security Committee; and they sent a message to the central committee in which they pledged themselves to deliver "strenuous counter-blows" against the agents of "aggressive imperialist states." While taking note that a certain "restriction of repression" had occurred in the Soviet Union, the political policemen expressed a pious hope that this did not necessarily imply that there would be "less work for us."

In the same message, they thanked Mr Khrushchev for the special care he had taken of them, pledged their loyalty to him, and condemned the activities of Beria, their erstwhile leader. This is a new departure. Soviet security organs have never made a practice of indulging in public pronouncements, or of condemning their former bosses. Mr Khrushchev has clearly completed the reorganisation of the political police. Under Beria it was a state within a state; its members jealously guarded their privileges, and virtually complete anonymity was one of them. Under General Serov, some of these characteristics remained unchanged: this was, perhaps, the main reason for the general's dismissal. Now the party is keeping the security organs under careful control. Mr Shelepin is a comparatively young man, and he owes his career to the premier. Soviet lawyers had also been interested, for different reasons from those of the party, in a more precise definition of the functions of the security organs; the presence of the president of the supreme court at the meeting last weeks suggests that their interest has been recognised as legitimate.

RUSSIA AND FINLAND

Assurances of Friendship

THOUGH the Russian pressure on Finland has somewhat subsided since President Kekkonen's meeting with Mr Khrushchev in February, the Soviet premier continues to fire occasional salvoes in the direction of Helsinki. The recipients, in this case the right-wing Social Democrats, led by Mr Tanner and Mr Leskinen, waste no time in retaliating. On May 8th, *Pravda* helpfully invited Mr Khrushchev to comment on recent speeches by these Finnish party leaders; he obliged, and said that certain imperialist circles intended to use Finland for their aggressive purposes, and that the Social Democrats were the exponents of such interests. Mr Khrushchev conceded that: "Of course, the opponents of Soviet-Finnish friendship do not now venture openly to urge accession to anti-Soviet military alignments"; but, he said, "seeking to sow distrust of the Soviet Union and of its policy towards Finland, they slander it by alleging that it intervenes in the internal affairs of the country."

Four days later, the executive of the Social Democrat party met to answer these accusations. Although they politely acknowledged Mr Khrushchev's assurances of respect for Finnish sovereignty, and assured him, in their turn, that they would do nothing to harm friendship between the two countries, they had an additional point to make. They argued that the Soviet leader's professed policy obliged him to respect the choice of the Finnish people and to maintain friendly relations with the government in Helsinki, whatever its composition. After the fall of the Fagerholm government last winter, it is not only the Social Democrats who suspect that the main element in the Soviet attitude to Finland is preference for a particular type of pliable government.

IMPORTED CATTLE

Sacred British Bulls?

HOME beef production is growing in volume, value and importance. This development is doubly welcome. It does something to correct the expensively dairy-biased structure of British livestock farming, and something to compensate for the decline in beef exports from Argentina. The further this development goes, however, the more it matters that British stock raising should be a highly efficient industry, and in particular that every genetic resource should be exploited to produce the most economical type of cattle.

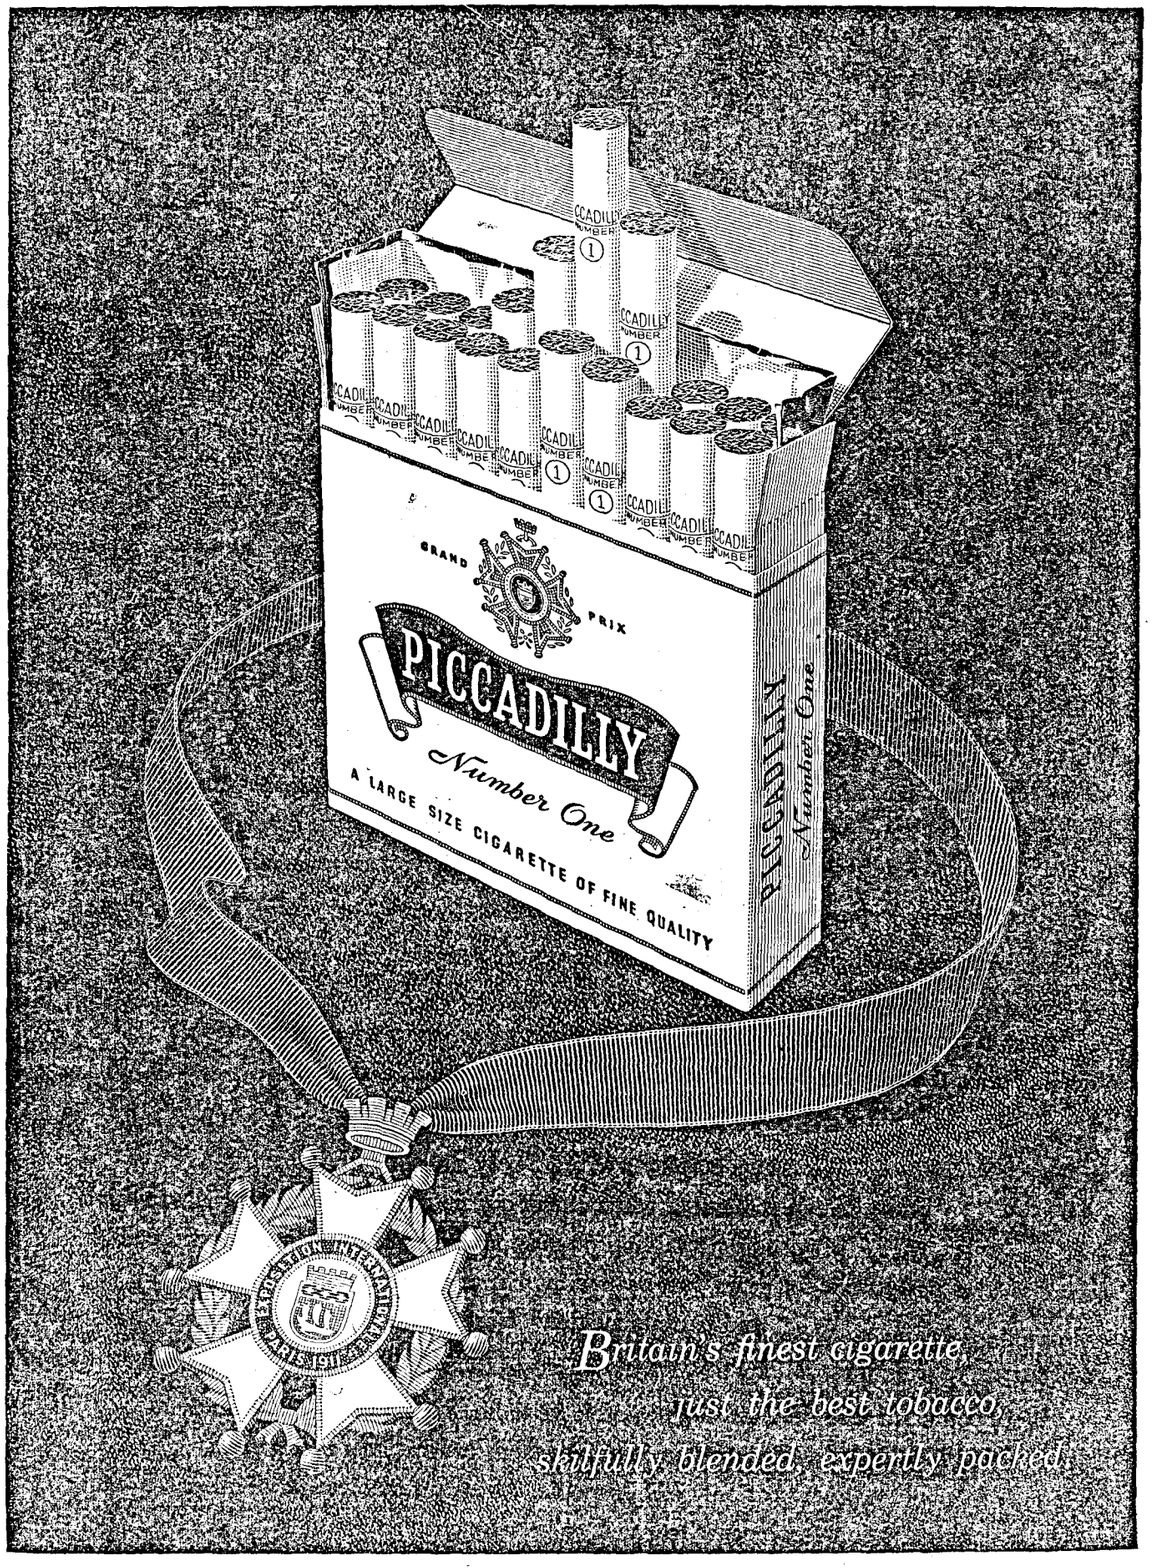
It is this consideration which gives importance to the squabble now going on between the National Cattle Breeders' Association, representing 23 pedigree breed societies, and the would-be importers for experimental breeding of Charollais cattle from France—a squabble on which the Minister of Agriculture is shortly to adjudicate. The Charollais, in their native land, are famous beef producers. Crossed with other breeds, they are largely responsible for the excellence of French veal. It is argued by the NCBA that their qualities are less relevant to the English than to the French market. The association says that the pure-bred Charollais is a high-farming speciality whose performance owes more to better handling and pasture than to innate superiority. It also argues—and here the cloven hoof begins to show—that any importation, however experimental, of a foreign breed would signal to the world a national lack of faith in British cattle, and so damage Britain's export trade in pedigree beasts; the association even fears that imports of the Charollais would lead eventually to a massive inflow of foreign cattle which would cause British pedigree breeding to "wither and die." Another alleged consequence would be a disastrous threat—actual or at least so regarded overseas—of foot and mouth disease. (Illogically enough for the purpose of this argument, an NCBA spokesman has pointed out that North American opinion already regards Britain as a continental European country where foot and mouth *is endemic.*)

Obviously, quarantine regulations for imports of foreign cattle need to be rigorous; and it is to everyone's advantage that the testing of any Charollais imports and their progeny should be carried out *pari passu* with similar tests of British breeds. But the NCBA case in general could hardly be feebler. It epitomises what is wrong with British farming. It betrays—and must betray to that very overseas opinion which it invokes—less confidence in the superiority of British breeds than terror lest it prove illusory when challenged. It represents the typically unblushing resolve of a typical vested interest to insulate itself from competition. The last word was surely said by Dr J. Edwards, of the Milk Marketing Board, in answer to a protest at a recent meeting by a breeder of pedigree Friesians. He reminded the speaker, tersely, where Friesians came from.

TRADES UNION CONGRESS

Progress Report

WHAT do the general council of the Trades Union Congress, and the permanent backroom staff which they have been accumulating at Congress House, do with their time? Many people—perhaps trade unionists particularly—who have asked themselves this question during the past year will be interested in a document "What the TUC is Doing" put out by congress this week. The document, whose heavy print on poor quality paper carries just a whiff of the old working class pamphlet, creates a generally favourable impression: congress, conservative by most standards but the brightest light in the trade union world, has several achievements to its credit in the past year. These have little to do with the TUC's occasional sallies of protest to Downing Street over issues like Quemoy or unemployment. Instead they concern the more prosaic subjects of industrial health and safety, work study, training for trade unionists, and, most recently, methods of wage payment. (Trade union agreement to a change in the Truck Act would have been unthinkable a few years ago.) Improvements in all these important fields are going forward steadily, and the TUC can take as much credit for this as anyone.



On the wider front, however, the TUC's policies come up hard against economic realities; on the whole it is the realities that then go to the wall. Their general prescriptions, of course, are the same as the Labour party's, with only very slight differences of emphasis—perhaps a little more concentration on demands for protecting declining industries, perhaps even greater eagerness for increases in government expenditure, plus the usual call for economic re-expansion but with the distinction of not even mentioning the associated problem of wage inflation at all. Only when dealing with education, where the TUC have accepted the principle of full grants to all students, does the pamphlet stray from the expected left wing approach. But for that very reason, this suggestion may not find too much favour with the annual conference this autumn.

The Economist

MAY 21, 1859

ANTI-GALLICANISM

¶ We have never affected to repose any trust in the public assurances given by the Emperor of the French; we have never wished to conceal the painful impression which the windings of his diplomacy, the acts of his political instruments, and his personal disavowal of those instruments whenever they became inconvenient or unpopular, have produced on our minds. We may, therefore, the better hope to receive a candid hearing for the views we now wish to submit to the deliberate consideration of the English public. There is, we cannot doubt, real reason to fear that the dangerous panic concerning Louis Napoleon which is now rising in some of the minor States of Germany to a pitch of senseless frenzy may extend to England, and hurry us into an attitude that will soon render it impossible to maintain the neutrality to which the country is at present pledged. Influential parties in England, influential organs of the English press, are doing all in their power to rouse the hatred against Napoleon into all its former vigour. Let us concede entirely the existence of an ambition in Louis Napoleon's breast which taken alone might urge him into a policy as fatal to the peace of Europe as that of his uncle, supposing all other conditions favourable to such a career. . . . He probably will not be *able to renew that policy*; nothing but military genius of the highest order could give a chance of it. Even if he have the power, it is far from probable that, with his profound dread of the secret combinations of Carbonari, and his cool long-headed sagacity, he will think it *wise*. On the other hand, we know well what we have to fear from the complete success of Austria,—the repeated renewal of all the horrors, all the anxieties, all the fruitless revolutions, all the foreign interventions, all the innumerable disturbances caused by the reactionary character of Austrian despotism in Italy during the last forty years,—a new and indefinite lease of misery to that unhappy country,—and in all probability the annihilation or complete subjection of Piedmont.

the things they say!

The trouble with the workers is—they don't work hard enough!

Hold on! Some of them are having to work too hard for the results that they achieve.

That's odd, coming from you. *Haven't you made a great thing of Work Study in I.C.I.?*

Yes, we aim to help everyone work more effectively, by studying the jobs they are doing. We try to discover unnecessary drudgery or strain, frustrating time spent waiting for instructions, tools, materials and so on.

You make it sound quite pleasant . . . But what about the old stopwatch?

Well, we use it for measuring time—just as we use weighing machines to measure quantities and rulers to measure lengths. We don't guess a ton of salt for a customer, and we don't guess times when we're dealing with the way the other fellow does his job—it wouldn't be fair.

And it pays?

Would we employ a Work Study staff of 1,400 if it didn't? I can remember when one of our manufacturing Divisions was thinking of spending a million pounds on a new factory, but they were able to postpone it for years, just by making better use of the machines and equipment they already had.

Pity more people don't use Work Study, considering our economic position. Why don't people face the facts?

Well, you can't face the facts unless you have them. That's what Work Study provides. More and more people are learning to face facts each year. And not only I.C.I. people. Already 1,600 leaders of other organisations have come to I.C.I. to hear how we go about this Work Study business—and we in turn are learning from them.

I.C.I.

BOOKS

Empire in Spate

The Empire-Commonwealth.
Volume III of The Cambridge History of the British Empire
Edited by the late E. A. Benians, J. R. M. Butler and C. E. Carrington.
Cambridge University Press. 969 pages. 100s.

IT is thirty years since the Cambridge History of the British Empire began to appear; some volumes are already superseded as histories of the places with which they are concerned. The work was conceived as comprising three volumes of general history of the Empire from its beginnings to 1919, two on India, one on Canada and Newfoundland, one on Australia and New Zealand, and one on South Africa. The present volume, the last to appear, is the third of the general histories. It runs from about 1870 to 1919, giving the general story of the Empire's growth between those dates, and covering those territories which are not the subject of special volumes. The explanation of its late appearance lies partly in the war, and partly in the death in 1952 of Mr E. A. Benians, the editor mainly responsible for it. The remaining editors' preface suggests that, although Mr Benians left behind some chapters of his own and the plans for others, a good deal has had to be changed since 1952 or has originated since. One chapter, perhaps the most original and impressive in the book, is said to have been undertaken "at very short notice," in spite of the long gestation of the volume as a whole.

There are nineteen chapters by fifteen authors. Four main matters receive comprehensive treament: these are imperial questions in the British parliament, international politics, economics and defence. In addition, six special topics are dealt with in single chapters: the opening of Africa; the Empire and the United States; the Imperial Conference; the Peace Treaties of 1919; international law; and the Colonial Office. Much of the space devoted to international politics seems wasted, in spite of the editors' statement that colonial issues were subordinated to foreign policy for much of this period: there are, in fact, many pages that have no connection with colonial affairs at all. Similarly, the chapter on international law is very largely devoted to the general British approach to the subject, without specific reference to the Empire. Again, while some imperial matters are treated repetitively, others are hardly considered. The chapter on the Imperial Conference is almost superfluous, since the deliberations of the various conferences are discussed in other chapters. In spite of the existence of a separate volume on South Africa, much of this one is devoted to it too—though this can hardly be cavilled at, since South Africa remained the most contentious imperial issue for thirty years.

Where the volume falls down most obviously is in its lack of treatment of the internal growth of the dependencies. They are shown being acquired, they are seen in relation to general imperial issues, and they are mentioned in contexts in which they were matters of controversy; but they do not get the generous treatment which the general editorial plan seems to have envisaged for them. The West Indies, in particular, can complain that their history is largely ignored. And there is almost nothing about the business of colonial administration on the spot, apart from some references to the system of indirect rule. This is a most serious shortcoming. The period covered was the heyday of Mr Commissioner Sanders, yet there is little or nothing about the principles under which he operated and the circumstances that he had to overcome.

However, the book has many virtues. Mr Tunstall's chapters on defence are models of clarity and sensible comment; Mr Pugh's on the Colonial Office imparts an authentic atmosphere; Mr Madden's on the period of New Imperialism is ambitiously and successfully creative. Urbanity, sobriety and a proper respect for a clear narrative are shown by Professor Simmons on the opening of Africa, Mr Wheare on the Peace Treaties, Dr Steel on the United States, and Sir James Butler on imperial issues in the 1870s. The changing economic position is competently explained. Some vestigial political passions are displayed—Messrs Tunstall and Madden have quite different visions of Campbell-Bannerman, for example—but the picture is much the same to all contributors. Between 1870 and 1919 the colonies of settlement achieved full self-government without difficulty, but nobody of consequence thought that self-government could be made to work in the tropical colonies of exploitation. Self-government for Britons overseas, and protection for indigenous natives against cruelty and fraud, were the twin doctrines of the Colonial Office. Mostly they could be pursued in harmony. But in South Africa and Rhodesia they clashed; and they are still doing so.

Primer of Modesty

The Business of Criticism
By Helen Gardner.
Oxford University Press. 157 pages. 15s.

IN the twentieth century it is not easy for an honest man to be a literary critic. There are so many more urgent things to be done. The reader who is prepared to spend time over an essay on Dryden's poetics or D. H. Lawrence's narrative practice is presumably the kind of man who is also willing to read Dryden or Lawrence for himself. Otherwise he is a rather special kind of illiterate, belonging to the tribe that reads reviews but not books. With him no real critic should entertain commerce. But not only is criticism a marginal craft: it is also built on quicksand. We have long since abandoned the Platonic vision of æsthetic certitude. A critic is by definition subjective. He argues his own feelings and intuitions. He has no "proofs" at his command. How can we possibly demonstrate, in any rational manner, that Dr Johnson was in error about Lycidas or that T. S. Eliot has written nonsense concerning Hamlet? In the last analysis, one man's opinion is as inherently plausible as another's. The difference lies in the degree of persuasion that the critic can give to his judgment or impressions. From Aristotle to Eliot, criticism has lived not because it was right or in any sense final, but because it was well written. Good criticism becomes itself a part of literature.

From these perplexities derives the split in modern criticism. On the one hand there are critics who establish their vision on some exterior foundation such as ethics, politics or metaphysics (Edmund Wilson, F. R. Leavis, Georg Lukács, Sartre). On the other hand there are "pure" critics attempting to isolate literature so as to make of their craft something more than an adjunct to the history of ideas. Among the latter group flourish the "New Critics" with their jargon and côterie tastes. Firmly between both stands Helen Gardner. To her criticism is something less than art but higher than technique, not an act of judgment but an instrument of perception. To use her own image: the true critic does not extend a sceptre over the poet; he raises a torch to illumine the poem. What light he can throw on the actual work of art is the subject of Miss Gardner's volume of essays (would that it had included her distinguished introduction to metaphysical poetry).

Criticism is an exercise of the historical imagination. It stands at the reader's elbow, keeping his responses alive and precise. It endeavours to furnish his sensibility with that minimum of historical and textual information without which the work of literature cannot be properly read. It suggests to him what he must know of the Elizabethan view of revenge if he is to grasp the dilemma confronted by Hamlet. It reminds him of the mutability of convention by showing him how a given motif (for example, the drunkenness of Noah) changes in meaning and symbolic content from the time of Origen to that of Simone Weil. Criticism should not impose judgment; it should discipline

and rationalise the conditions of judgment.

It is a business at once difficult and modest. And that is precisely Miss Gardner's lesson. Her whole book is a primer of modesty, her constant aim being "the recognition of the poem's intention, which leaves me free to enjoy the poem." It is refreshing to find such beliefs associated with the English faculty of Oxford. Together with the late Humphry House, Miss Gardner has resolutely exemplified the two principal qualities of good criticism: humaneness of tone and awareness of life.

The Woburn Story

A Silver-Plated Spoon.

By John, Duke of Bedford.
Cassell. 237 pages. 21s.

IN this entertaining, savage and rather pathetic autobiography the Duke of Bedford makes his personal apologia and pays off, with evident satisfaction, a long string of old scores. In content if not in quality "A Silver-Plated Spoon" ranks with that classic of mis-education Samuel Butler's "Way of All Flesh." Indeed it is rather a shock to recognise in this century a father-son relationship (doubled by a grandfather-grandson relationship of equally glacial quality) at once so entirely negative and so actively poisonous. There are occasional hints in "A Silver-Plated Spoon" that its author recognises, through the distorting lens of his resentment, a tragic figure in his impossible father; but if he is not the man to write another "Way of All Flesh," still less is he the man to write another "Father and Son."

He is, in fact, a competent, thoroughly readable, Beaverbrook-trained journalist in whom the desire to make good publicity for his roaringly successful Stately Home business runs, at the least, a very good second to the desire to get his miserable youth off his chest. The chapter headings—e.g. The Indiscreet Parlourmaid, Parrots and Plain Living, Dukes Merry and Otherwise, The Streaming Cold Guardsman, Sèvres in the Sink—have the right eye-catching quality for the first aim; so have the *anecdotes of high society*; so—in the happy last chapter—has the account of the ardours, endurances and humours of Woburn Abbey showmanship. But interwoven with this slickly presented magazine stuff is the material of a *Bildungsroman*, a story of self-discovery, self-development and liberation, demanding an entirely different response from the reader. Much of the interest of an often irritating but undoubtedly fascinating book lies in the interweaving of these two elements.

". . . I love Woburn more than anything else in the world . . ." the Duke writes, and "I find myself trying to perpetuate the heritage of the family, to which I did not even know I belonged until I was in my 'teens, and accepting responsibilities which my grandfather and father were careful to prevent my assuming until I was in my late thirties." If he suspects, as the reader must do, that his father and grandfather would rather have seen Woburn Abbey razed to the ground than turned into a raree-show and fun-fair, that suspicion must assuredly add zest to his activities. It is a lucky man who can satisfy, in one course of action, his deepest pieties and his most vengeful and iconoclastic desires.

Speeding Iraq's Plough

The Reconstruction of Iraq: 1950-57

By Fahim I. Qubain. Foreign Policy Research Series No. 6: University of Pennsylvania.
London: *Atlantic Books.* 291 pages. 35s.

BEFORE the revolution in Iraq, the Development Board was one of the chief targets for criticism by the people who are now running the country. If it spent on agriculture, they said its foreign advisers were plotting to keep them backward, and they railed at its neglect of industry, by which they meant spindles and turbines, but not the plough. Now that they are in office, they are finding that the old Board did more than they thought, and that, no matter how much they rechristen it, they have got to keep going at the same old works. Iraq is still Iraq, and, though Mr Qubain was unfortunate in finishing a major *piece of research just before a revolution* that invalidates some of his tenses, nothing can date the bulk of his material.

Praeger was his American publisher and is, in co-operation with a new institute embodied in the University of Pennsylvania, doing some interesting work. The method here chosen is to employ an Arab writer for the research and field work (Mr Qubain is, or was, Palestinian) and to subject his draft to discussion and editing by the institute's associates. This group method is, as Chatham House well knows, inclined to rob a book of its spice; anecdotes get pruned, and compromise reigns. But it has the advantage, in this case, that the Iraqi scene is judged with the eye of an Arab who has talked to people most western inquirers do not meet, and that it is both accurate and written with the best kind of western polish. It is the most interesting document on Iraq to be published since the Salter report of April, 1955.

Of course the two pieces of work are different in kind. It was Lord Salter's business not merely to describe what had happened but also to say what ought to happen next. Mr Qubain writes as a historian, and gives advice on the future chiefly by implication. But his hope, in his closing paragraphs, that his work will be useful in other underdeveloped countries would have been more likely of fulfilment if he had ventured on a few more specific recipes.

Sometimes Mr Qubain writes too rosily—too like a government handout. Why claim that teachers' training has "kept abreast" of needs when there were several hundred Egyptian teachers in the country until Qassim sacked them the other day, and when they have been impossible to replace at the quality? And why omit to mention that the *ancien régime's* decision to use the water from the new storage works for establishing new smallholders only on government land, and letting the large estates collapse by degrees for lack of workers, added up to hideously expensive farming on second-rate land, since the big landlords had all the best? Maybe the new regime, being more ruthless with the rich, will do better in this line, but what with its purges and its disregard for continuity, it is for some time bound to do less well in others.

Wisely, Mr Qubain steers clear of *politics all he can, though he feels bound* to point out, writing in the spring of last year, that revolution is "a very real possibility." Steering clear is justified because, revolution or no revolution, Iraq was and is becoming dependent on a lot of very complex works and machines, and these are creating a market for skills; this is a sure way to raise the living standards of a whole society no matter what the colour of the government.

Both Points of View

India and America: *A Study of Their Relations*

By Sundar Lal Poplai and Phillips Talbot.
Oxford University Press. 200 pages. 22s.

ONE of the barriers to international understanding so often encountered by those who want to understand the problems of the day is that the more controversial the problem, the more likely is it to be the subject of expositions which state the writer's side fully and his opponent's inadequately; thus, when the student has struggled through books from both sides, he often puts them down with the frustrated feeling that they have evaded many important questions. The policies of the United States (and its allies) and of India towards, for instance, the South East Asia Treaty Organisation, Kashmir, the Baghdad Pact, or the "colonialism" of Soviet Russia, provoke exasperation in the free West and in India, and the many books about them leave the supporters of both sides embattled in their settled convictions, suspicions and scorns. For example, Western writers assert that peace is more likely to be maintained *if armed strength* is ensured to protect it; Indians retort that peace is not maintained by security but security by peace, yet see nothing contradictory in the allocation of 35 per cent of the Indian budget to defence in order to maintain their security against Pakistan. Again, when Indians proclaim the effectiveness of the *Pancha Shil* (co-existence) pact with China in deterring aggression or subversion, the West *ripostes* by citing the failure of the Yalta and Potsdam agreements to assure the independence of Eastern Europe; it also points out that, *Pancha Shil* or *no Pancha Shil*, India is taking no chances in the (independent) state of Nepal, to

which, despite pressing needs at home, it has sent Indian experts to train the army and civil service, and Indian soldiers to help build roads, and in which it continues to spend vast sums to strengthen the regime in such a way that it will look to India for protection against aggression.

This book, the joint work of an Indian and an American, makes an outstanding contribution to Indo-Western understanding by setting forth, fully and fairly, Indian and Western policies; by facing squarely the awkward points from which the polemical writer usually runs away; and, above all, by explaining the respective national needs, and experiences, which have led to the formulation of opposing national policies. It will, one hopes, be read in those circles in India, and in the West, responsible for forming both public opinion and national policy. If its careful historical research, and its lucid exposition, cool yet sympathetic, leave existing prejudices and misunderstandings intact—if, in short, reason has no powers of penetration—then India and the free West deserve all that will come to them from the unreasoning dialectical materialists.

Conferences, 1919-20

Documents on British Foreign Policy, 1919-1939

Edited by Rohan Butler and J. P. T. Bury. First Series, Volume 8. 1920.
HM Stationery Office. 923 pages. 80s.

THIS volume completes the publication of the British minutes of the international conferences and discussions held during 1919 and 1920. With few exceptions these minutes are here printed for the first time; they deal with matters of high policy; and, like the contents of the previous volumes in this "First series," they form an indispensable introduction to British policy between the wars.

In the period covered, April to December, 1920, conferences remained numerous for obvious reasons. Lloyd George favoured the system of personal consultation. More important, it was only by frequent personal consultation that statesmen could hope to deal with those urgent, intricate and interlocked problems created by the simultaneous dissolution of the Turkish, German and Russian empires, which were the subject of all these meetings. As Mr Butler points out, a comparable system of lesser congresses had been a necessary sequel of the peace settlements of Utrecht in the eighteenth century and of Vienna in the nineteenth.

It is, however, the differences and not the similarities between the eighteenth and nineteenth centuries on the one hand and the twentieth century on the other that strike the reader. Two of these differences, however obvious, were especially important. The collapse of order and authority was far more complete and extensive after the first world war than on those earlier occasions; and when new authorities established themselves in the areas of near-chaos the relations between them and the so-called victor powers was far more bitter than anything the eighteenth or nineteenth centuries had experienced. For these reasons the Western powers were faced with a wellnigh impossible task; and it is not surprising that they were so much at the mercy of events or that, with the French and British in particular, their policies began to diverge.

One Anglo-French quarrel began when all the arrangements for a treaty of peace with the broken Ottoman Empire, as made at the San Remo, third Hythe and second London conferences and in other Anglo-French-Italian discussions, were largely vitiated by the unexpected rise of the Turkish national revival movement under Atatürk. Several of the other conferences failed to heal an earlier breach between France and Great Britain on the subject of policy towards Germany. This had been *triggered off when the* German Government moved forces into the Ruhr, in contravention of the Treaty of Versailles, for the suppression of a left-wing rising. In a third area events forced the two powers together. Faced with the advance of the Red Army upon Warsaw, they sent to Poland the military missions that helped to repel Russia in what has been called the eighteenth decisive battle of the world. But there was a divergence of policy between Britain and France with regard to Russia that persisted despite this collaboration, Lloyd George continuing to lean towards commercial relations with, and subsequently the political recognition of, the Soviet regime, as he had leaned against harshness to Germany.

Next to the complexity of the situation and the beginnings of the Anglo-French divergence, the most important feature of the period is one that distinguishes it from the post-1945 settlement rather than from earlier centuries. The United States, one of the victor powers, was represented by an observer at some of the San Remo meetings and at one committee meeting at Spa but otherwise took no part in these many discussions, let alone in the decisions and actions that resulted.

New Zealanders

New Zealand in the Making

By J. B. Condliffe.
Allen and Unwin. 316 pages. 30s.

The Welfare State in New Zealand

By J. B. Condliffe.
Allen and Unwin. 396 pages. 35s.

"NEW ZEALAND IN THE MAKING" is a history with a history. It was first published in 1930, when the author had already left the New Zealand in which he had been an infant academic prodigy. Basically an economic history of the country, it also contained material on the defects of the New Zealand university system and the problems of its mandate in Samoa. The book was widely acclaimed as an accomplished performance. It was influential in making many New Zealanders realise that their high standard of living was not due primarily to action by governments, but to the high prices that they received for their primary products. Since 1930 Professor Condliffe has not lived in New Zealand, but he has made many visits there, particularly as a consultant to the Reserve Bank, and has maintained his interest in the country. Now at last he has revised "New Zealand in the Making," and the revision has spilled over into an even longer book, "The Welfare State in New Zealand."

The result is, in effect, one book for the price of two. Many people will be chary of paying 65s. for a history of New Zealand, *especially when they can* get Keith Sinclair's Pelican "History of New Zealand" for 3s. 6d. Mr Sinclair deals with social and artistic matters that Professor Condliffe touches only lightly; the Pelican is a complete history, whereas the other is very largely economic. The choice is made more difficult by the fact that, although the division between Professor Condliffe's two volumes is roughly that "New Zealand in the Making" stops at 1935, with the advent of the Labour government, while "The Welfare State in New Zealand" deals with matters since then, this division is not maintained. In the first volume the reader will find the story of Maori economic life carried down to the present time, while he has to wait for the second volume to get the early history of state regulation of wages and New Zealand's relations with the outside world.

For a complete economic picture, then, one must read both Professor Condliffe's volumes. In spite of some repetition, it is an ample, generous, understanding and illuminating picture. The writing is simple, clear and concrete. The connections between the different sections of the economy, and between New Zealand and *the world, are shown in great detail.* The author has plainly left his heart in the country of his first adoption, though his later experiences in Britain, Europe and the United States have enabled him to understand how New Zealand's actions look to other people. He comments and criticises in addition to describing economic policy and institutions; but the criticism is fair and humane.

New Zealanders emerge as a highly pragmatic people, seen at their best when they have to tackle a new job that demands new methods. Whether it is workers' co-operative gangs to build tunnels, or farmers' butter factories, or the creation of special firms to take over long-range bond investments in New Zealand forests, the emphasis on successful practicality is plain. The country is still heavily dependent on its grassland economy. Efforts to develop substantial secondary industries are still uncertain, on account of the smallness of the home market. Professor Condliffe offers a number of criteria that suitable manufacturers would have to satisfy, and there is little doubt that any government whose hands were free would adopt something like these in choosing the industries to nourish. But one of the less fortunate results of New Zealanders' practicality in the war and postwar years has been

the emergence of a great many small manufacturers, providing employment but producing at prices that would be uneconomic if they did not receive protection against competition from overseas. The existence of these men and their workers is likely to tie the hands of a government of either party. Still, New Zealand has done wonders before, as Professor Condliffe shows in much detail; and he gives good reason for believing that it will do wonders again.

The Supply of Brains

Educational Guidance and the Pool of Ability

By Douglas M. McIntosh.

University of London Press. 199 pages. 21s.

DR MCINTOSH is one of the ablest administrators in Scottish education. In this book he describes an inquiry into "educational guidance" in Fife—educational guidance being the term used for a long period of observation and testing of children to determine their suitability for secondary courses of various kinds. The results are heartening and enlightening. In Fife a combination of teachers' reports on English and arithmetic, two intelligence tests, and tests in English and arithmetic is used at the age of about 11, with no allowance for age. This is found to be a very accurate predictor; the English tests are best mainly for the literary courses and the arithmetic tests for the practical courses, with the proviso that "mechanical" arithmetic is of little help. The tests show whether a child can succeed or not in a course; failure at the end of a course is mainly due to lack of encouragement at home. (On the other hand, an enthusiastic home is no substitute for ability.) A number of children leave high schools early because they are bored by them; Scottish education is too literary for them and new courses, particularly in science, are needed. Dr McIntosh hints that the technical colleges are probably beginning to fulfil this need, which confirms an impression that for many children the free atmosphere of a college is a welcome alternative to school.

Even with so good a system as in Fife, however, only 28 per cent go to high school, only 10 per cent stay to the end of the course, and about a third of these fail the group leaving certificate. Thus only 6 per cent of an age group gain the leaving certificate. This suggests that the courses are too inflexible, and also that the examining for the leaving certificate is extremely capricious. The inquiry also suggests, however, that at present only about 11 per cent of the children in an age-group have enough native ability for high school (=advanced grammar school) courses even if all the conditions at home and at school are favourable. (An earlier estimate suggested 16 per cent.) This is an important conclusion, given that there is a great shortage of highly educated people, because it means that the number of passes in the leaving certificate could probably be doubled if the motivation of a sizeable number of clever children could be intensified, if their parents' support could be mobilised, and if the schools rearranged their courses to arouse their interest. As Dr McIntosh points out this leaves unanswered the further question: how much more educated ability is needed by our society beyond that which the 11 per cent can provide, and how can the less able be more successfully trained to do intellectually difficult work? In the United States the Fund for the Advancement of Education is beginning to ask just this question; Dr McIntosh's learned and well-written book will encourage such work here.

Among the Gonds

Leaves from the Jungle: *Life in a Gond Village*

By Verrier Elwin.

Oxford University Press. 194 pages. 16s.

MR ELWIN won the confidence of the remote Gond tribes by having the determination and courage to do without the comforts of his own civilisation; he lived among them as one of themselves. He became intimate with their medicine men, minstrels, ordinary men and women, thieves and lepers. The conversations that he reports have the ring of truth, and the poetry of the legends that he retells has the beauty of the genuinely primitive. Mr Elwin has a deserved reputation as a distinguished authority on Indian anthropology, but he is also an affectionate observer of indigenous life, who has the gift of describing what he sees, with charm, sensitivity and, not least, a sense of farce. In fact, many pages of this book reveal Mr Elwin capable of the same kind of rollicking anthropology that the late Somerville and Ross displayed in their "Reminiscences of an Irish R.M." As for example:

> March 7. Two large parcels of medicines delivered . . . containing . . . and a bottle of small white pills labelled "For All Diseases." May 2. Exciting wedding in the village. . . . In middle of proceedings which even normally bear a closer resemblance to an OUDS Smoker than anything else, four celebrants become possessed of the spirit of tiger. . . . November 15. While carrying a cup of tea through ashram, tread on very poisonous snake, but to my great pride neither get bitten nor spill tea.

Among the questions that Mr Elwin set candidates for the post of village teacher was: "Have you educated your own wife and daughters?" to which one candidate replied: "Certainly not, for then they would be able to write love letters," and "How would you deal with an outbreak of cholera in the village?" to which the same candidate replied: "I would apply for leave and get away as soon as possible." Another candidate "brings in a testimonial from Jail Superintendent to say that as prisoner was 'convicted only under Sec. 302 of the Indian Penal Code, he will be suitable for school work, etc.' We get out our copy of the IPC and discover that Sec. 302 is 'Murder.' Then why 'only'?" Mr Elwin's washerman having been arrested, he visits him in gaol, where the washerman tells him that the charge has been trumped up "because he refused to iron the Sub Inspector's uniform free of charge." As Sec. 457 IPC (under which the washerman is charged) "is non-compoundable and non-bailable, I return home, and develop fever." That "—and develop fever" recalls the Pepysian finality of "—and so to bed."

British Columbian Canadians

British Columbia: *A History*

By Margaret A. Ormsby.

Macmillan. 534 pages. 30s.

"DISTANT from travelled sea-lanes and girdled by mountains, British Columbia stood apart from the civilised world until late in the eighteenth century." Then it became the focus of conflicting imperial ambitions—Spanish, Russian and British. Fifty years later it stood as the surviving British bastion against American expansion on the Pacific coast, a vital link in a possible all-British route to the far east. In 1871, when British Columbia relinquished its cherished status as a separate colony in direct touch with the imperial authorities, to become a Canadian province, it became the far western pivot of the new Canadian nation. For many years still its people remained in spirit citizens of a separate community, but at last, by the middle of the twentieth century, they have come to feel themselves Canadians, notwithstanding the sea of mountains that walls them in and divides them from their fellow-citizens.

This monumental volume tells the story of this development with a wealth of local colour and human interest. It throws light on a complex and little understood province that has been much in the news of late, in such connections as the Wenner Green projects and the controversy over Columbia river power. British Columbia is a province of extravagant natural riches and of equally extravagant difficulties of access and communication. Through its history run two linked themes: the provision of essential means of transportation and the proper policy for the disposal and development of natural resources. Since the placer miner with his pan and shovel disappeared, massive capital has been necessary to bring its minerals, forests and water powers into use. The great industries of the province have produced great fortunes and countervailing labour problems. Class divisions and regional divisions—rivalry between Vancouver Island and the mainland, Vancouver's metropolitan ambitions and the contrasting and diverse interests of the hinterland—have found expression in lively political activity. Domination by personal coteries has given way, first to conventional party divisions and then to the contemporary situation with a Social

Credit government and the left wing CCF as the major opposition.

This history is a fine product of co-operation between a university scholar assisted by a group of students and the provincial and national archives. It is also a notable piece of book making. The dust cover, typography and illustrations, ranging from old prints to modern political cartoons, are imaginative and elegant. On the other hand, the maps leave a good deal to be desired. They are useful as far as they go, but without a really good contour map the reader cannot fully understand a story in which the central role is played by an "obstinate topography."

The third edition of this valuable work takes in the changes caused by Section 38 of the Finance Act, 1957, dealing with Estate Duty on gifts within five years of death and Sections 20 to 22 of the Finance Act, 1958, which introduced extensive changes in the tax treatment of settled funds.

SURVEYS OF INDIAN INDUSTRIES. Vol. II. By B. S. Rao. *Oxford University Press.* 315 pages. 35s.

This second volume compiled by the Assistant Editor of *The Statesman*, Calcutta and Delhi, deals with Indian industries based on agriculture and others of a more general character including cement, ceramics, shipbuilding, shipping and films.

LETTERS

What Cunard Wants

SIR—In your issue of May 9th you state that the Cunard company may be asking the Government for a subsidy to build replacements of the two Queen liners. The shipping correspondent of *The Times* writes on May 15th that a decision has been taken "that a pair of Queens would be a sound proposition provided Cunard were not too heavily burdened in the way of capital cost." He goes on to say that Colonel Bates is well content to let the jet air liners tap the new market in utility travel at economy fares. He believes that even when the 3½ hour jet air liners are operating, as they will be in a few years' time, there will still be passengers willing to pay more to travel for 4½ days in a steamer.

Colonel Bates is entitled to this belief, but I suggest that a very close examination should be made before public funds are invested to back it. Passenger liners are unlikely to be of use in a future war, so the argument for Government help must rest on the "prestige" value of Atlantic liner operation. When "utility" passengers are crossing the Atlantic in about the time it now takes to travel from London to Manchester by train, it is, I suggest, reasonable to doubt whether there will be so much prestige in operating floating hotels. It might prove more profitable to the community to subsidise the construction of land based hotels to deal with the influx of visitors.

If it were left to the Cunard shareholders to carry the risk unaided is it not likely they would decide to extend the life of the present Queens for some years? At a written-down value they should continue to earn good profits for their owners for a decade. It is possible that the somewhat period atmosphere of the ships would be an attraction to the type of custom which the Cunard company are seeking. With the possibilities of rapid and exciting progress in transport ahead it is important that a false analogy with the '30s, or sentimental attachment to the past, should not lead us into an unwise investment of public money.

The fact that the French and American Governments are likely to increase their subsidies for transatlantic liners underlines the need for caution.—Yours faithfully,

WILFRID DIMSDALE

Ilford Limited

Facing Mount Kenya

SIR—In an article which you printed on May 9th, you mentioned, in passing, "the pig-headedness of the Baganda. . . ." In the context, it seems that you think the Baganda's attitude is in the way of Uganda's achievement of self-government.

In most cases it is the other fellow who is pig-headed. Uganda is divided up into four provinces. Buganda is one of these. It is the only one with a provincial government of which the Kabaka is the constitutional head. The other three provinces are divided up into a dozen districts each of which is a unit of local government. These other provinces have no provincial councils equivalent to the Lukiko. The three kings, apart from the Kabaka, have their kingdoms in the western province, and each of these kingdoms is a district.

History and HM Government have combined to allow Buganda to develop on different lines from those followed elsewhere in Uganda. Politically and otherwise, Buganda is the most advanced province and the Baganda are very proud and jealous of their achievements. They see that their hard won prestige can only be safeguarded within a federal constitution. So far HM Government's declared policy is that Uganda will develop as a unitary state. The mere fact that Buganda now is a predominantly self-governing province, unlike the others, rules out the idea of a unitary state. If HMG's policy continues unchanged the Baganda will refrain from playing an effective part in the attainment of self-government for Uganda. It would be too much to ask of the Baganda that for the price of Uganda's independence they should abandon their rights and prestige.

The effect of a federal constitution would mean four provinces of equal political prestige. On top of these would be the Legislative Council to act as a federal government. On the other hand, a unitary constitution would necessitate a steam-roller system whereby Buganda would be reduced to the lowest common denominator: the Lukiko would be dismantled and Buganda would be divided up into units of local government.

In those circumstances it would be unfair to say that the Baganda were "pig-headed." They are not necessarily reactionary in trying to press for their rights.—Yours faithfully,

London, W8 A. FRED MPANGA

The Unproletarian Society

SIR—It may be of interest to your readers to know how many of the suggestions made in this article have already appeared in Liberal party publications.

The recently published Liberal Ownership for All report includes among its recommendations schemes for tax concessions for small savings; for the removal of legal sanctions against individual resale price maintenance; for adjustments of taxation in the interest of families; for facilities to assist home ownership, where it is desired. The need for legal safeguards against abuses of power by trade unions against individuals has long been an article of Liberal party policy, and the young Liberals' recent statement in *New Orbits*, though not in itself a part of the party's policy, has proposed the liberalisation of laws governing entertainment along the lines you have indicated.

Accustomed as Liberals are to *The Economist's* preference for pretending the Liberal party does not exist, we are scarcely surprised at the omission of all reference to our policies and publications. We believe, however, that some of your readers may agree with us in thinking you are entirely fanciful in asking the Conservatives to adopt this programme, and will recognise that if they want legislation along these lines they must turn to the Liberal party, the party which is already committed to this policy.—Yours faithfully,

NANCY SEEAR
Chairman, Liberal Party Ownership for All Committee

London, SW1

The Liberal Vote

SIR—In your issue of May 16th you comment on the local election results at Keighley "where a Labour MP held the parliamentary seat on a minority vote because of the intervention of the Liberals."

The Liberals fought Keighley in 1950 and 1955 but not in 1951. The voting figures were:

	1950	1951	1955
Labour	21,833	23,743	19,414
Conservative	16,252	21,295	16,011
Liberal	6,962		6,310

These do not support your suggestion that the Conservatives would have won Keighley in 1955 in a straight fight.

In these circumstances experience in 1951 indicates that at least a quarter of the Liberal vote would have gone to Labour. Not enough would have voted Conservative.

Keighley is one of those many seats which cannot be fitted neatly into the pattern of a two-party system. Neither of the two larger parties is supported by a majority. The most that can be said is that the voters appear to be more anti-Tory than they are anti-Socialist.—Yours faithfully,

JOHN G. WALKER
Prospective Liberal candidate

Sowerby

Apprenticeships

SIR—In your comment on apprentice training in your issue of May 9th you observe that "firms who do run apprenticeship schemes complain that many of their young men, once trained, go off to take jobs with firms which undertake no training at all."

In one sphere at least the Government exercises its "general policy of non-interference in industrial training" to the extent of not troubling to recruit and train apprentices for skilled trades employed in its own departments. The General Post Office vehicle repair shops in this part of the country do not train apprentice motor vehicle mechanics, but prefer to rely on the trained products of local firms who do. Yet the GPO shops are large by average motor trade garage standards. The same situation no doubt obtains in respect of other trades employed as direct labour by local authorities.

The Government should take steps to remove its own departments from the ranks of the predators and at the same time see to it that local government departments make plans to assist in accommodating the bulge.—Yours faithfully,

R. P. F. DONALD

Inverness

London Traffic

SIR—You reject the proposal for solving the traffic problem by banning private cars from central London and other congested areas on the grounds that it would be "an extremely drastic interference with individual freedom."

By individual freedom you presumably mean the freedom of the motorist, not that of the pedestrian. There was a time within memory when strolling through central London on a bright day was a pleasant experience. Today, with endless lanes of traffic smothering the pedestrian in dust, litter, and petrol fumes, it is nearer to an ordeal.

Nor need one imagine that the motorist much enjoys the freedom of the city centre. Every other motorist is an actual or potential obstacle and is regarded as such. Each new motorist on the road is an additional hindrance to his freedom and, consequently, an additional strain on his nerves, a blight on his temper, and a cramp on his digestion.

Why, then, does a man continue to drive a private car in the centre of London? Perhaps because being a pedestrian, or a passenger in a bus continually bogged down in traffic, is still worse. He takes to his car in self-defence—and will be wise to do so until traffic is reduced to near immobility or, better, until private cars are banned from city centres.—Yours faithfully,

Tolworth E. J. MISHAM

Mental Health Bill

SIR—Your comment "Only Part of the Picture" (May 9th) made interesting reading and I wholeheartedly agree that unless viewed from a long-term policy, staffing problems will seriously impede the successful carrying out of social work in this country.

I feel that part of the social work could be efficiently undertaken by the careful selection of prewar police officers who are now retiring on completion of their pensionable service. These officers were the *aides-de-camp* in such cases in former days, and the majority were and are still respected for their humanitarian demeanour towards any member of the public who was in need of assistance and advice before the many guidance and welfare committees came into force.

These officers, by their general knowledge and understanding of the complex issues involved, would make ideal persons to be entrusted with the sympathetic carrying out of the Bill's provisions.—Yours faithfully,

F. GOODWIN

Nottingham

The One-Eyed Men

SIR—Do you really believe that Britain's technological success vis-a-vis Russia depends on the fate of Latin in a handful of independent schools, or that there really is a disabling division between arts and science men? The actual division in English education today is between those who have paid fees for their schooling and those who have not. This remains true, even if Labour policy-makers in "Learning to Live" have been bamboozled to discriminate rather between those who have passed the 11+ and those who have not. Whenever the National Union of Teachers, or others interested in the education of the whole nation, have asked for money to staff and equip the nation's schools, you have been the first to oppose and scorn. But the independent schools are too few to go it alone. A successful technological revolution cannot be had on the cheap, or from teacher-less schools, Latin or no Latin.—Your faithfully,

More and more companies are using the 'VERIFAX' for more and more copying jobs

Large and small companies everywhere are turning to the 'Verifax' for more efficient office copying. The 'Verifax' copies anything written, typed, printed or drawn. It leaves nothing out. The copies never need checking and never deteriorate. They are cheap copies, too, because the 'Verifax' uses ordinary, inexpensive paper. Anyone, including the office junior, can learn to use the 'Verifax' in a matter of minutes.

Think how much time and money the 'Verifax' could save in *your* office. It takes hardly more space than a typewriter. Write for more details today to the address below. Models available from **£69.**

Be sure to see the 'Verifax' Copier on the Kodak Stand No. 55/56 at the

Business Efficiency Exhibition

Olympia, May 25th—June 4th

Republican Rivals

WASHINGTON, DC

WHEN the Vice President, Mr Nixon, addressed the Academy of Political Science in New York last month on the part to be played by the World Court in settling disputes arising from the cold war, he had a specific and immediately practical goal in mind as well as that of bringing nearer the reign of law in international affairs. The speech was his first in New York since last November when the state's voters, in the midst of a national disaster for the Republican party, elected Mr Nelson Rockefeller to the Governorship. Overnight, Mr Rockefeller became a major candidate for the party's presidential nomination in 1960; this had previously seemed certain to fall to the Vice President. The widely expected struggle between them for the Republican nomination has captured the popular imagination and is now in the forefront of all political speculation.

In these circumstances, Mr Nixon's speech was a foray into enemy territory. He laboured over it with care and was rewarded with a uniformly favourable, if somewhat tepid, press. His political objective was to sustain the image of himself as a moderate, responsible, internationally-minded figure, the so-called "new Nixon" as contrasted with the calculated and bitter partisanship of the earlier, brasher Nixon. The Republican party has repeatedly demonstrated that, whatever the preferences of its mid-western old guard, it will not nominate any candidate branded as an isolationist or a reactionary. If Mr Nixon is to escape the frustrating fate of the late Senator Taft, he must underline his views periodically, particularly on international questions.

The success of his speech was part of a recent marked revival in Mr Nixon's political fortunes. After the Republican defeat in a campaign in which the Vice President had been his party's leading speaker, there was a strong tendency to write down his prospects. Governor Rockefeller was a dazzling new figure; Mr Nixon seemed a trifle shopworn. It appeared that in Mr Rockefeller the Republicans had found a new star to replace the fading one of President Eisenhower.

Governor Rockefeller has remained non-committal, but observers are overwhelmingly of the opinion that he will decide to seek the nomination. His first few months in office have been successful. He has carried most of his legislative programme, including a big budget and a substantial increase in taxes, through a customarily conservative and recalcitrant State Legislature. All sections of the press have supported him, in some cases ecstatically. The usually restrained *New York Times* has led the applause. For example, after the Legislature passed the Rockefeller tax programme the *Times* wrote:

> a political victory of impressive magnitude . . . a triumph of principle over expediency, of fiscal courage over a temporising drift into debt . . . an example of strong leadership.

Not for many years has any public figure been the recipient of such consistently glowing words from the *Times*. It is worth noting that, unlike Mr Harriman, his harassed Democratic predecessor, Mr Rockefeller has a top-heavy majority in both houses of the Legislature and that, as a lively presidential prospect, he has about him "the sweet smell of success" which always tends to make lesser politicians more compliant, particularly at the outset of a new administration.

Austerity may be praiseworthy but it is never popular. In spite of his success with the Legislature and his favourable press, Mr Rockefeller's popularity has sagged. The sharpest reaction has come from Republican voters in the middle and upper income groups and from conservative Democrats who crossed party lines to vote for him. These people have traditionally identified higher spending and higher taxes with the Democrats and thought of the Republicans as the party of retrenchment and tax reduction. Mr Rockefeller's very liberal brand of Republicanism has been a distinct shock to them. If this disillusionment persists and hardens, it may be a considerable political handicap to the Governor in seeking the presidential nomination of his party. Presumably this accounts for the marked decline in his popularity in the latest Gallup Poll, which shows Mr Nixon widening his lead over the Governor among Republican voters and well ahead of him as the choice of independents. Observers sympathetic to a Rockefeller candidacy are convinced that this decline is ephemeral.

Of greater interest is a recent poll of Republican county chairmen and other local leaders of the party, which shows that three-quarters of them favour the Vice President. This is a measure of Mr Nixon's solid strength in the party organisations throughout the country and of the serious obstacles which a Rockefeller candidacy would face. Mr Nixon has made a country-wide campaign tour every two years since 1952. He is on first-name terms with the strategic party leaders in every state and locality and has kept up a correspondence with the more important of them. Party workers admire him and are grateful to him for doing the hard political work for an Administration whose chief, Mr Eisenhower, rejects the normal responsibilities of party leadership. Moreover, although Mr Nixon is too agile and modern-minded to be a real old guardsman, he is generally accepted by the conservatives in the party as the best available heir to the mantle of the late Senator Taft.

In addition to the support of the party organisation, which in 1952 was almost enough to force the nomination of Senator Taft in spite of the immense popularity of Mr

Eisenhower, Mr Nixon has advantages which Senator Taft never enjoyed. One is the support of the large delegation from California, the Vice President's home state. Another is some support among the Negroes because of his efforts as chairman of a presidential committee to end racial discrimination in work done for the government by private contractors. To broaden his appeal to housewives, pensioners and those living on fixed incomes, he has agreed to be chairman of the new Committee on Price Stability for Economic Growth. This group is expected to provide him with a useful forum to defend the Administration's fight for a balanced Budget by linking budgetary deficits with rising prices. His trip to Moscow in July to open the American Exhibition there will enhance his stature as an international figure and keep him in the limelight.

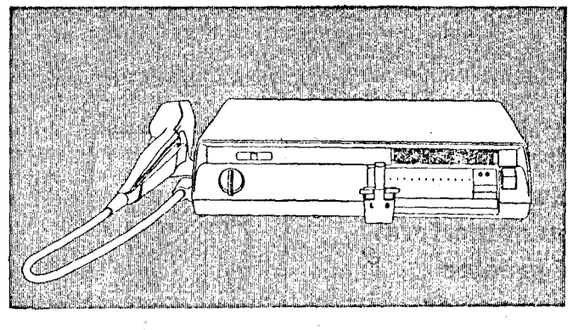
Those who expect Mr Rockefeller to carry off the prize in spite of all Mr Nixon's solid advantages recall the "blitz" campaign of the late Wendell Willkie who, in April, 1940, was almost unknown, and three months later was the Republican nominee. They also point to General Eisenhower's nomination in 1952. But Willkie triumphed over a divided field of candidates, not over one formidable opponent, and the Eisenhower victory was the result of three years of elaborate ground work by Mr Dewey, the former Governor of New York, and Mr Herbert Brownell, who was to become Attorney General.

There is still time for another such campaign, but as yet there is no sign that Mr Dewey and Mr Brownell, now both engrossed in lucrative law practices, are prepared to put their skills and their network of allies and acquaintances fully at Mr Rockefeller's disposal. Mr Nixon has gone to great efforts to cultivate their goodwill and that of the bankers and businessmen allied with them in the more progressively-minded, internationalist wing of the party. Moreover, the President's precarious health makes politicians reluctant to commit themselves to Mr Rockefeller too soon. If the President were to die, Vice President Nixon would succeed him and would be renominated almost as a matter of course.

Congress Called to Task

THE President sent an unusually sharp message to Congress last week, all but accusing it of neglecting its job and telling it to make haste if it did not want the building of houses and highways to be checked and the whole system of agricultural price supports to collapse under a cataract of wheat. Deadlines are indeed approaching, but the President's intervention was prompted not so much by fear that Congress would not meet them as by signs that, after marking time since Easter, it is at last moving—but in ways that will unbalance the Budget. Mr Eisenhower had hardly spoken before the Agriculture Committees of both houses defied him and the housing Bill which Mr Rayburn finally forced out of the Rules Committee of the House last week is little more to the President's taste. The fading of the recession and the revival of the coalition between Republicans and conservative Democrats has taken a good deal of the gusto out of the challenge which a strongly Democratic Congress was expected to offer to the President's insistence on a balanced Budget. By restating his own proposals, Mr Eisenhower hopes to put even more heart into the conservatives.

A housing Bill is urgent to increase the authority of the Federal Housing Administration to insure private mortgages; this is the backbone of the present boom in house building which this year is exceeding previous peaks. The FHA has already made more promises to insure than it can redeem without the $6 billion additional authority the President has requested. This programme costs the government practically nothing but until Mr Rayburn, the Democratic leader, put pressure on the two conservative Democrats on the Rules Committee, they had joined with the Republicans in refusing to release the Bill because it also provides more money for urban renewal and public housing than the President wants to spend. They surrendered last week, but only on condition that the House, when it debated housing this week, should have a chance to vote for a truly conservative Bill which provides even less money than the President suggested.



On the highways the President's well-founded fear is that neither party has any intention of raising the federal tax on petrol, as he asked, to replenish the trust fund set up to finance the 90 per cent federal share of the Interstate Highway scheme. The fund's revenues are inadequate because costs have risen and Congress has enlarged the scheme. In theory, this is a pay-as-you-go measure and if Congress fails to act, the states, some of which have exhausted their funds, will have to curtail their programmes. But not a single Republican has sponsored a Bill to raise the petrol tax and Congress, which has already waived the pay-as-you-go requirement for two years, may well do so again. This would mean that the Treasury must shoulder a burden which the President feels it should be spared—at least in times of prosperity.

Engulfed by Wheat

THE President can be—and is—criticised for his insistence on balancing the Budget at the relatively low level of $77 billion by postponing spending on schools, urban development and other projects which a growing population needs. But this postponement would be unnecessary if only the Budget could be relieved of the over $5 billion a year being spent to keep up agricultural prices, restrict production, and dispose of surpluses. Agriculture is the costliest item in the Budget, except for national security and interest on the public debt. Wheat is the worst culprit of all; as the President pointed out, in his renewed demand for legislation to avert "impending disaster," surplus stocks are already two and half times as much as is used for food each year, and by July 1, 1960, about $3.5 billion will be invested in wheat, accounting for more than a third of the total of over $10 billion expected to be invested in surpluses by that time. Storage of wheat alone is costing $500 million a year.

Nibbles at the support price and at plantings have failed, as the chart shows, to offset the great surge in productivity. Even some representatives of the wheat belt realise that there will be a taxpayers' and consumers' revolt if this monstrosity is not eliminated. Unable to agree on what should be done, Congress has postponed, until June 1st, the statutory date by which Mr Benson, the Secretary of Agriculture, must announce the support price for wheat during the coming crop year. But this fortnight's grace seems unlikely to produce the "realistic and constructive" legis-

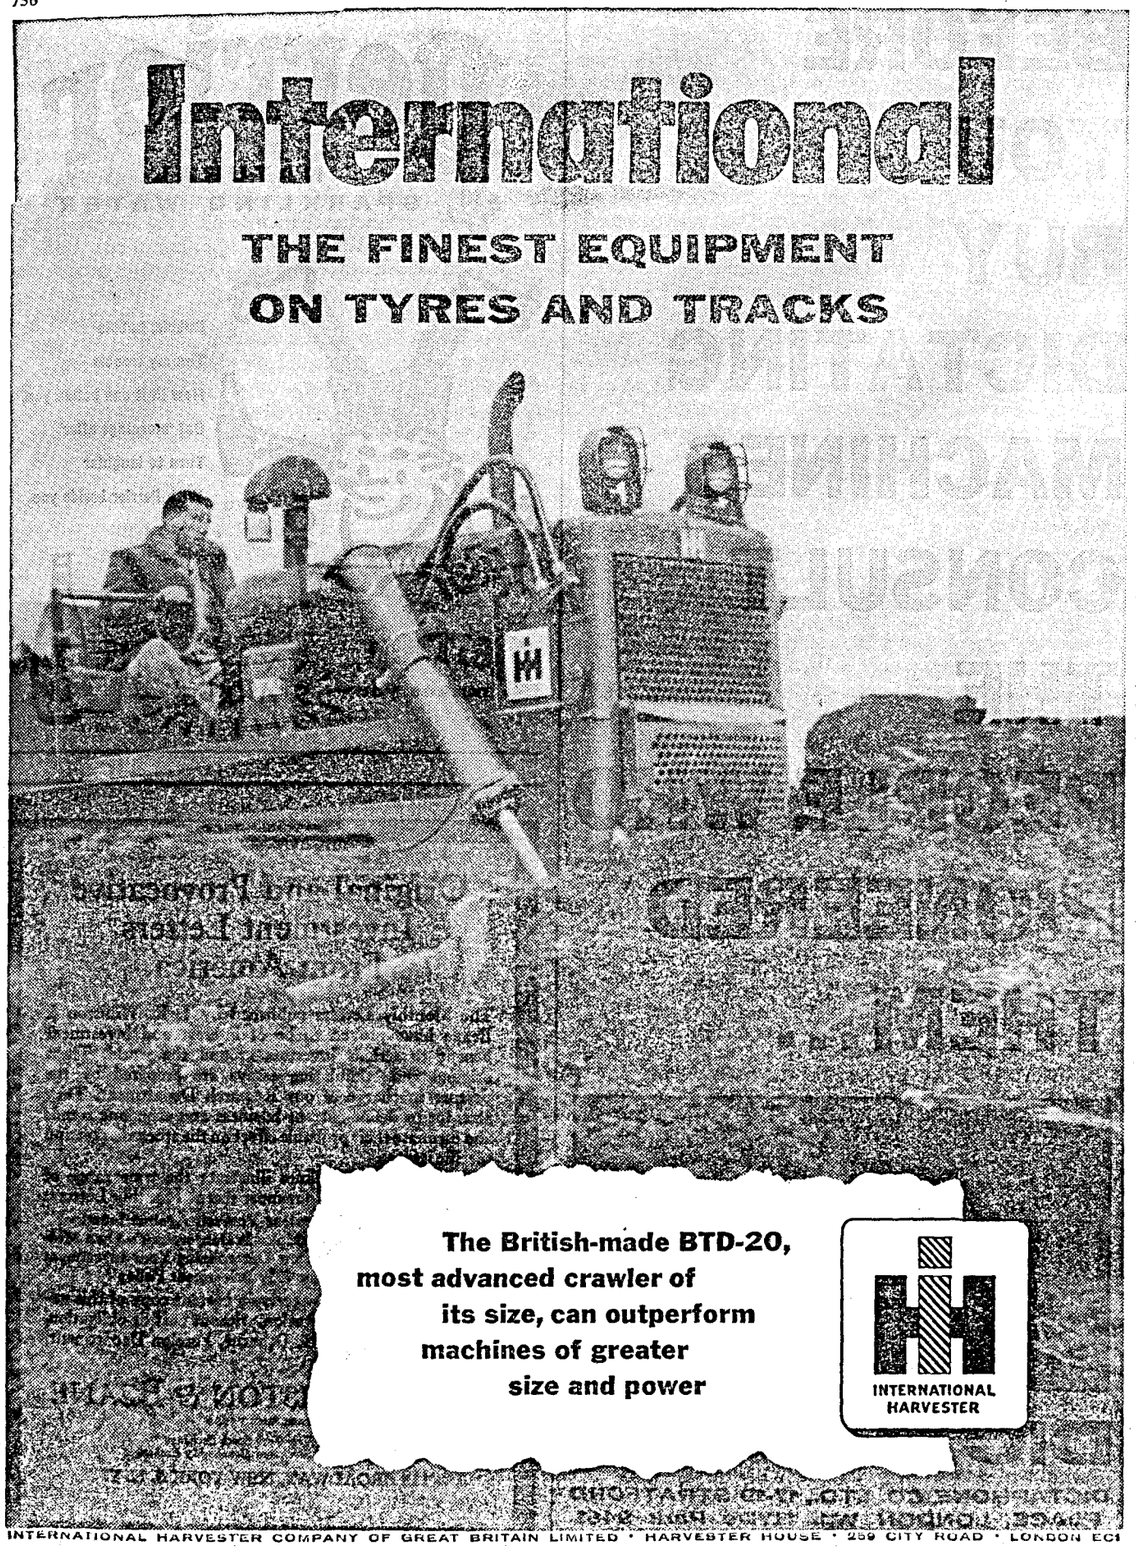
Original and Provocative Investment Letters From America



The Monthly Letters published by J. R. Williston & Beane have proved to be of interest and investment benefit to serious investors around the world. These original and stimulating essays are prepared by the partner in charge of our Research Department. They attempt to define current business and economic trends and estimate their probable effect on the stock market and specific issues.

The following headlines illustrate the wide range of subjects dealt with in our most recent Monthly Letters:

"Is It Too Late To Protect Yourself Against Inflation?" ..."Does Pan Arabism Make It Dangerous To Own Mid-East Oils?"..."Is Moscow Determining Your Investment Future?"..."Your Basic 1959 Investment Policy"

If you would care to receive a current copy of this unusual investment publication, without cost or obligation, write to Mr. H. Thomas Osborne, Foreign Department.

lation needed, which to Mr Benson means sharply lowered support prices, preferably based on a three-year moving average of market prices, and an end of the production controls which productivity has rendered useless. The Democratic majority on the House Agriculture Committee has voted to cut plantings by 30 per cent but, to sustain farmers' income, to raise price supports back to the levels which existed when the Eisenhower Administration came into power. This would be worse, Mr Benson says, than no legislation at all.

The Senate Agriculture Committee has approved a different and, to the Administration, slightly more palatable mixture, by providing that farmers who agree to a 20 per

cent cut in their plantings should receive slightly higher price supports than at present, but that those who refuse shall have their support prices cut by about 12 per cent. Faced by an almost certain presidential veto if it votes to raise the price supports which are such an incentive to increased production, the House shows signs of watering down its prescription. But it seems all too probable that Congress and the President will be unable to agree on any reform this year and that the Budget and America's relations with other wheat-producing countries will continue to suffer.

Booming Interest

THIS year's rising trend in interest rates is being given another upward twist by the increase, all across the country, from 4 to 4½ per cent in the prime rate, the interest charged by leading banks to their biggest and safest borrowers; all bank lending charges are based on this rate. Moreover, this increase will probably be followed almost immediately by another, in the discount rate (3 per cent at present), the interest charged by Federal Reserve Banks on loans to their member banks. A wide difference between the two rates seldom persists for long, since it makes it profitable for banks to borrow money from the Federal Reserve System to lend to business customers. The Federal Reserve Board itself, extremely anti-inflation-minded, would surely be glad to see the discount rate return to 3½ per cent, the level during the last boom period at the end of 1957, since the industrial production index, higher than ever before, at 149 of the 1947-49 average, has just announced the approach of a new boom.

In fact it is the Federal Reserve Board itself which is largely responsible for the rise in the prime rate. Until the last couple of weeks it has been keeping commercial banks increasingly short of credit in the face of an unseasonably high demand from borrowers. Normally, during the first half of the year, bank loans to business decline substantially, turning up again in June. So far this year the total has gone down by only $34 million, compared with $2.1 billion during the same period last year, admittedly a time of recession; business loans by banks outside New York City have actually gone up this year. In the two weeks which ended as the rise in the prime rate began in New York, loans went up even in that city, suggesting that corporations were no longer able to satisfy their credit needs in their own home towns and were having to resort to the banking capital of the country. At least until recently, however, the increased borrowing has come from smaller companies, less well supplied with cash at the moment than are the large firms.

The Federal Reserve Board has also refused so far to allow New York banks to add to their supply of funds by paying more than 3 per cent interest on foreign time deposits. These are normally a source of loanable money but, with higher interest rates available on other short-term investments, foreign depositors are moving their money out of the banks and into these. Normally banks would add to their lendable funds by selling their holdings of government securities but, with the Treasury bond market in its present depressed state, this can only be done at a serious loss. The higher prime rate will, however, compensate for this by enabling the banks to earn more on their loans.

Empire Built on Beans

PITTSBURGH

THE American firm which introduced the baked bean to England—the H. J. Heinz Company—is about to open its third manufacturing plant in the United Kingdom, at Kitt Green near Wigan, in order to meet the demands of a local market which has doubled every four years since the war. Today the British consumer eats more tins of baked beans than the average American and, in all, about twice the quantity of Heinz products. Indeed, wherever British stock has gone, the "57 varieties" have followed. The Canadians are running neck and neck with the British as Heinz fans, and the Australians, after a later start, are rapidly catching up in terms of consumption a head. Both are supplied by domestic subsidiaries.

In these three countries, Heinz products occupy a leading position in their field. On its home ground, however, the company's profit margins have been progressively clipped by intense competition from other major producers. Half of its total output—worth in all about $300 million—is sold in the United States, but over 80 per cent of its net earnings now come from abroad. Some of the company's domestic competitors are making vigorous attempts to invade its foreign preserves, but so far, particularly in Britain, faith in the Heinz label is standing up well.

The operations of the H. J. Heinz Company started with the sale, in the eighteen-sixties, of bottled horseradish sauce; its export trade dates from 1886 when Fortnum and Mason's bought pickles from Mr Heinz. Today the company, with 11 factories in the United States as well as those abroad, is the largest processor of tomatoes and the largest distiller of

vinegars in the world. To preserve the legend of "57 varieties" now requires ingenious grouping; there are in fact 200 or more. A Heinz product is not—with one exception—rigidly uniform in flavour from country to country. The exception is tomato ketchup which symbolises the unifying crown of the Heinz empire; and to produce this uniformity the recipe has to be modified to offset local differences in ingredients.

Elsewhere flavour varies both according to recipe—tomato soup is quite distinct on the two sides of the Atlantic—and according to the quality of the indigenous raw materials; English strained carrots (for babies) are said to be second to none. Moreover, while Heinz of Australia has been experimenting with kangaroo-tail soup, Heinz of Great Britain runs off five "varieties" not manufactured in the United States: mango chutney, treacle pudding, pickled walnuts, vegetable salad and salad cream. The latter (which is much sharper than an equivalent American dressing) has found favour with visiting Americans and the chefs at Pittsburgh have been trying to reproduce it; but, although the recipe and, for a second trial, all the ingredients were flown in from England, the precise flavour has so far eluded them.

While still controlled and managed by the Heinz family, the company was made a public one in 1946 in order to raise additional capital. The Canadian and Australian concerns are wholly owned subsidiaries; the British company is independent, although the parent company owns 91 per cent of its shares. The three subsidiaries have secured a large measure of self-determination, but the headquarters at Pittsburgh remains the hub. Here the extensive manufacturing operations are housed in a cluster of large, red-brick Victorian buildings flanking on either side the modern $8 million Heinz Research Centre, opened last year, which provides a "House and Garden" background for the labours alike of executives, scientists and experimental chefs. In seven laboratories the contents, consistency and general characteristics of all Heinz products (and those of its main competitors) are subject to constant supervision.

While Heinz products are shipped all over the world—the English company has the largest export trade—subsidiaries have been restricted, up to now, to English-speaking countries. But like many other American companies, Heinz has its eye on the European common market, and last August it bought up a Dutch concern—Taminiau Conservenfabrieken—which will gradually introduce Heinz products, while continuing, for the time being, its established lines of jams, jellies and (an unexpected item to emerge from a Heinz factory) wine. This venture does not, however, satisfy the company's territorial ambitions on the continent, and it is now looking towards western Germany. Although they expect rather more resistance in France and Italy, Heinz executives are confidently awaiting the day when the continental housewife, weaned at last from long hours in the kitchen, will proudly dish up a quick serving of Chicken Noodle Dinner!

Unhealthy Hospitals

THE six New York hospitals, variously called private, non-profit or voluntary, against which the National Drug Employees' Union called a strike two weeks ago, have only themselves to blame for the dissatisfaction of their non-professional employees—porters, cleaners, kitchen staff, laboratory technicians, nurses' aides. Many of these workers have been paid as little as $35 for a forty-hour week, compared with an average of $58 for the same work in the city's tax-supported hospitals. A charwoman in private service earns $1.25 an hour; the union wants a rate of $1 an hour in all hospitals. This is the minimum wage under federal law, which does not apply to non-profit institutions. The New York hospitals plead the shaky financial position of all charitable organisations, but in effect they seem to have been forcing their staff to subsidise their good works. Moreover, some 80 per cent of the non-professional employees are Negroes or Puerto Ricans, so that there is a suggestion of racial discrimination and exploitation of cheap labour about these low wages.

The six hospitals against which the strike is directed—it may be extended to others—have an average of 490 beds each and were chosen out of the 81 non-profit hospitals in the city because the union thought it had signed up enough of their employees—it claims 3,625 out of a total of 4,500—to make a strike effective. How far this has been achieved is a matter of argument: the hospitals say only a thousand or so are staying away; the union figure is over 3,000. For the present, at least, volunteers, and nurses and doctors doing extra duty, seem to be filling the gaps adequately. If the teamsters—lorry and van drivers—were to support the striking union, the hospitals would be unable to hold out for long. But the teamsters, who also have ideas about organising hospital workers, are remaining aloof in the hope, perhaps, that this rival effort will fail.

The hospitals have already offered to improve wages and working conditions gradually and the basic issue in the strike is whether they will recognise the right of the trade union to negotiate on behalf of their non-professional workers. If this right is accepted the union is prepared to agree not to call a strike in the future, in view of the danger to the lives of patients which this might involve. Non-profit hospitals are exempt from the law which requires employers to bargain collectively with their employees and this seems to have gone to the heads of some of the hospital governors—often wealthy businessmen who are opposed to trade unions in principle. They defend their refusal to compromise by arguing that, if the union were recognised, it might interfere with the treatment of patients and that standards of care might deteriorate as a result.

Pax McConica

PITY Mr Lewis Strauss, the former head of the Atomic Energy Commission who is trying to get the Senate to approve his new appointment as Secretary of Commerce. Because of the enmities he made in his old job, he squeaked through the committee stage of his confirmation this week only by the hair's breadth margin of 9 votes to 8; and now he has the extra grief of watching his opponents make peace with his successor at the AEC, Mr John McCone. With a minimum of fuss, Mr McCone has come to terms with the Joint Atomic Energy Committee of Congress on the AEC's budget for the coming year. This used to be the occasion of a bitter quarrel each spring between Mr Strauss and his Democratic critics, who wanted the federal government to spend much more money on nuclear-powered generators instead of leaving the task to private enterprise. For a

WHY

RIDDLE airlines

CHOSE THE ARGOSY

More air freight is carried in the United States than in the rest of the world combined — so it is no wonder that the U.S. operators are more cost-conscious. That is one of the reasons why Riddle Airlines Inc. have placed a provisional order for the Armstrong Whitworth 650 Argosy. This major break-through in the dollar market is a tribute to the economics of this new British aircraft — the world's first pressurised turboprop freightercoach.

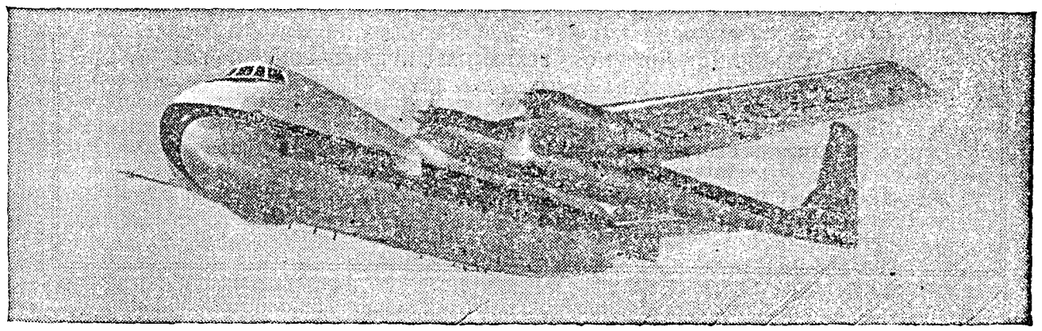
Mr. George L. Giles, President of Riddle Airlines, comments: "Apart from its lower direct operating cost, the Argosy will benefit the indirect expenses, due to lower handling costs . . . The AW.650 is the first aircraft to be designed and produced with this in view. With minimum reorganisation, the Argosy's quick loading and turn-round will save us at least 20 per cent on handling alone".

The Armstrong Whitworth Argosy offers cheaper freight rates because:

1 It is 30 per cent cheaper to operate than Riddle's existing twin-engined freighters.

2 The refined loading systems available with the aircraft, together with a full-width freight door at both ends of the fuselage, give rapid turn-round and help to reduce indirect costs to a minimum.

3 The Argosy is extremely simple to service — accessibility has been built in to the design — and it can operate from semi-prepared strips.



4 An extensive service organisation for many of the components — chosen for proven reliability — already exists in most parts of the world.

5 Coast-to-coast operation in the United States is possible within 24 hours, with only one traffic stop or as many as four.

THE ARGOSY BRINGS THE COST OF AIR FREIGHT DOWN TO EARTH

HAWKER SIDDELEY AVIATION LTD

Richmond Road, Kingston-upon-Thames. *International Sales Office*, Duke's Court, St. James's, London, S.W.1.

HIGHEST SPEED and efficiency in construction work today is possible only if the collaboration between *all* parties concerned—owner, architect, consulting engineer, quantity surveyor and *contractor*—starts at the planning stage.

It is only logical that the practical experience of construction men should be available to designers at that time. An efficient contractor's knowledge of comparative building methods and costs, his ability to advise on new materials and techniques and the use of specialised plant are *too* valuable to be passed over at the stage when possible construction problems might be anticipated and solved most economically.

Building as a Team

The success of many contracts completed by John Laing and Son Limited both in Britain and overseas has been achieved by this close co-operation with the owner's architects and consulting engineers—and without loss of the benefits of competitive tendering.

The services of the Company's Development and Planning Division are available to all architects and consulting engineers, and include the carrying out of full scale tests and demonstrations on their behalf. Use of these services at the design stage of a project will ensure for the client an economic scheme backed by a workable, co-ordinated building programme. This is his best guarantee of completion on time.

time this year, early in the committee's hearings, it looked as if Mr McCone would inherit the feud; but now he has persuaded the Democrats to keep their additions to the budget within limits he finds acceptable.

In the core of the atomic budget—the programme for civilian reactors—Mr McCone had asked for federal funds to be allotted to five new power plants. The committee has won his blessing for three more than that, including one that may be used by a public electricity authority; but by trimming the Administration's proposals it has added less than a quarter to this part of the budget. It has also written in new funds elsewhere, the largest item being $18½ million sought by the controversial Admiral Rickover for a new kind of nuclear power plant for warships. However, partly by dint of halving the amount allocated to aid for Euratom next year, the committee's version is only a comparatively modest $48 million above Mr McCone's original request for $178 million.

One or two of the Democrats on the committee wanted to add more. The restraint of the majority, apart from being a tribute to the diplomatic Mr McCone, is yet another sign of President Eisenhower's extraordinary success in persuading Congress to increase his Budget less than almost everybody expected. In return, the President dipped a knee to the opposition last week by approving a plan, put forward by an advisory committee of scientists, to spend at least $100 million in the next six years on building a new accelerator, or "atom-smasher," in California. This will be a plant two miles long and, when it is working at full stretch, it will be the most powerful machine in the world for investigating the nucleus of the atom. The committee also urged that total expenditure on this line of research be more than doubled in the next four years; but on this the President cautiously refrained from committing himself.

Prejudicing Southern Progress

FROM A CORRESPONDENT RECENTLY IN ARKANSAS

ONE of the arguments advanced by political scientists, sociologists and others for ending racial segregation in the South has been that it is uneconomic. Not only is there needless expense involved in maintaining dual school systems and other separate facilities for Negroes and whites, but also, so long as the economic advancement of a large segment of the population is hindered, the growth of the entire region is retarded. Privately, many southern business leaders have been willing to concede the point. Yet when in 1954 the Supreme Court outlawed segregation in state-financed schools, businessmen did not receive the decision with any enthusiasm. In their view, it would take a long time for any economic benefits to develop from desegregation; the immediate prospect was for violence on a massive scale that would paralyse business and industrial growth.

The five years that have passed since the court's ruling have been marked by widely publicised racial violence at Little Rock in Arkansas and at other places and have given some opportunity of assessing the extent to which the fears of southern businessmen were justified. The evidence seems to indicate that no single regional pattern has developed. Little Rock has manifestly suffered. But Florida, which has still had no integration in its schools and therefore no racial trouble, continues to be one of the fastest-growing states in the country. The attitude toward the South of businessmen in other areas is mixed. Some have said that increased racial tensions have caused them to postpone plans for establishing factories in the South. Others seem not at all concerned by the racial question.

The matter of industrialisation is, of course, all-important. Throughout its history the South, anchored to an agricultural economy, has lagged behind the rest of the country in economic development and has seen its population dwindle as people have gone elsewhere to seek work. The increasing mechanisation on the farms in recent years has displaced thousands of workers and for a time it speeded up the migration. But the South went to work to redress the balance. Since industries were interested in decentralising their facilities the South drew attention to the fact that its displaced agricultural workers constituted a pool of abundant, and cheap, labour. Southern workers, it was pointed out, have traditionally been hostile to the trade union movement, regarding it as something alien and perhaps subversive. Hence, industry could pay low wages in the South and enjoy relative freedom from threats of strikes. And the South offered vast, untapped natural resources.

The southern states set up new agencies to attract business and began vying with each other in offering industry huge tax concessions and free factory sites and buildings. The result has been that in recent years many southern states have grown at a rate far faster than has the country as a whole. In fact, the first three years following the Supreme Court's ruling on segregation were three of the most prosperous years the South has ever enjoyed. So many industries have come south from New England that it has caused real hardship in that area.

But in late 1957 and early 1958 there was a slight, but perceptible, slowing down in the boom. This followed the kindling at Little Rock of racial tension which spread throughout the South, but it also corresponded with the beginning of a country-wide recession. The South, largely because of the diversification of its economy, was not as badly crippled by the recession as some other areas. At least four states—Mississippi, North Carolina, Alabama and Georgia—expanded last year at a rate which exceeded 1957, and of these, only North Carolina has attempted any integration in its schools. The rest of the southern states just held their own economically or fell back. Since some industrialists have stated that they have postponed setting up plants in the South because of racial tension, it is clear that the loss in 1958 is not entirely attributable to the recession. But it seems impossible to decide conclusively how great a part is played by the racial issue, at least until the 1959 figures show whether or not the South has kept up with the pace of the national recovery. If not, the failure will probably indicate that the lingering racial ferment has had more than a temporary effect.

ARKANSAS gained some new industries in 1958 and others expanded, but still the state lost ground. The assistant director of its industrial programme became convinced from his contacts with industrial leaders that friction between whites and Negroes was the principal factor which was keeping industry out of Arkansas, and resigned in frustration. In the twenty months since the schools of Little Rock became the focal point of resistance to the Supreme Court's order, the city has not acquired a single new industry. And Chamber of Commerce officials have admitted receiving

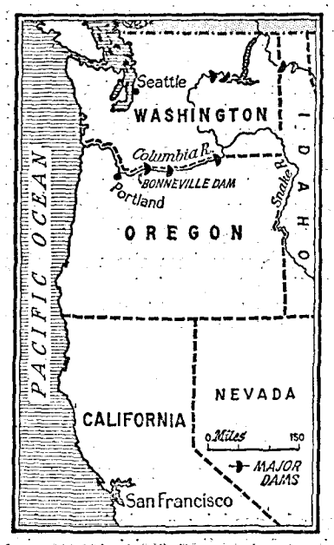
confidential letters from the presidents of several firms stating that the racial trouble is responsible. Virginia did acquire some new factories in 1958 but since others closed it finally wound up with a net loss in manufacturing employment.

The actual closing of schools to forestall integration at Little Rock, and briefly in some Virginia towns, may turn out to be far more damaging than mere violence. A recent survey has shown that a majority of Little Rock businessmen feel that the school situation has hurt the town economically. Families have been leaving in such numbers that the moving business alone has been able to report a significant increase in activity. At the same time, there has been a sharp slump in sales of home property.

These school difficulties have come just when the South has been trying to diversify its economy further by attracting industries in such fields as electronics, chemicals and nuclear energy—all of which require trained technical workers. Some states, including Arkansas, have set up graduate schools of technology to provide advanced training for such workers as one means of luring industry. And while the unskilled factory hand may be content to see the state schools closed, the man whose work requires a high level of intelligence is not. He owes his position in the social and economic strata to his education ; he wants his children to have the same opportunities and, since he can easily get a job, there is no need for him to bring his children into a community in which public education is regarded as dispensable.

In 1956, long before there was a hint of racial trouble at Little Rock, the representative of a large electronics firm told city officials that his firm was not concerned so much with tax concessions or with getting a free site for a factory. Rather, he said, since the firm employed so many skilled engineers, it was interested primarily in what the town had to offer in the way of good schools, cultural activities, recreation and the other amenities that make for good living. Recently, Little Rock lost an electronics plant which would have employed 1,000 persons.

The experience of the South since the trouble at Little Rock seems to demonstrate that, while the advantages the region has to offer to industry may be more than enough to offset racial discord in some circumstances, there is a point at which the balance can be tipped and industry frightened away. Undoubtedly, this lesson is being studied particularly in those states whose leaders have promised to go to any length to avoid integration. The Attorney General of the United States recently warned the South that the closing of schools could mean the loss of federal installations. Southern leaders may accuse him of trying to coerce them, but they are not likely to pass off such a warning as an idle threat.

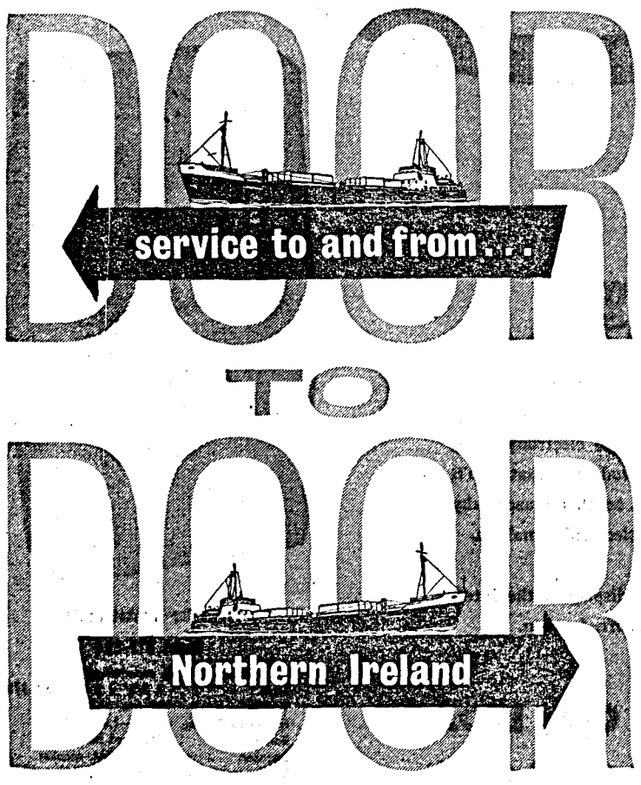


Pacific Power Pool

FROM A CORRESPONDENT IN OREGON

MANY members of Congress are puzzled by the proposal that the federal government should provide about $50 million to construct a high-voltage electrical transmission line linking the three Pacific coast states, Washington, Oregon and California. Why, if the states of the Pacific Northwest are so short of hydro-electric power (as they are) is there a movement to sell their "surplus" to California ? The paradoxical answer is that electricity is both in long and in short supply in the Columbia River Basin. Its big dams cannot meet the demand by industry for year-round, "firm" supplies of electricity. But in the high water periods of the summer months, they can produce much more energy than can be sold ; it is this electricity that is "surplus" and that is coveted by the booming industries of California.

The Bonneville Power Administration, which markets all federally-produced electricity in the Columbia Basin, has made a practice of selling this seasonal surplus as "interruptible power," that is, electricity which may be cut off in periods of low water. It is extremely cheap, but local industries have been reluctant to expand their facilities to use it as long as the supply is not certain all the year round. In California, however, much of the electricity is now obtained from thermal plants fired by oil, and its cost is substantially higher than that generated on the Columbia.



The proposal is that the federal government should finance a Pacific Coast Inter-tie permitting the transmission of electricity between California and the Columbia Basin system. This would allow cheap Columbia River electricity to be "wheeled" south in high water periods instead of permitting the water to run wastefully to the sea. And, in periods of low water, energy from California's steam plants could be sent north into Oregon and Washington, enabling the Bonneville Power Administration to sell much more electricity on a year-round, "firm" basis.

The Bonneville Power Administration has itself initiated a plan to sell some of its surplus energy to California, through a long-term contract with the Pacific Gas & Electric Company, the major private supplier in the San Francisco area. Bonneville officials want the money to help to offset a $3 million deficit, the first in the 20-year history of Bonneville. The alternative is an increase in Bonneville's fabulously low wholesale rate—$17.50 a kilowatt-year. But this deal is a small one compared to the Pacific Coast Inter-tie ; moreover, it does not contemplate any considerable flow of California power northward to firm up supplies of electricity from the Columbia River over the twelve-month cycle.

For that very reason, those who favour the larger project are inclined to oppose the smaller one—and *vice versa*. All three Pacific Coast states have appropriated money to study the feasibility of the Inter-tie. But officials of the State of Washington are inclined to look with some suspicion on it because most of the electricity from federal dams on the Columbia River now goes to consumers in Washington, and their representatives are afraid they may go short if California is allowed to share it. Last month a Senate subcommittee, after hearing testimony on both projects, asked for a delay of six months in order to permit study of the plans.

Two modern ships, specially designed and built for door-to-door railway container traffic, are now in regular service between Heysham and Belfast. They have clear deck space from bridge to forecastle and sliding hatches, so that containers can be loaded and discharged with less handling and much greater speed.

BRITISH RAILWAYS

M.V. Container Enterprise and M.V. Container Venturer

have speeded up and still further improved British Railways door-to-door freight services between Great Britain and Northern Ireland. There are 18 scheduled sailings each week.

THE WORLD OVERSEAS

Northern Nigeria's Holy War

FROM OUR SPECIAL CORRESPONDENT IN KADUNA

THE Northern Region of Nigeria has celebrated its arrival at regional self-government with a splendour which one is tempted to read as a declaration of intent. The durbar, the three thousand horsemen, the rites and the royalty, even the exhibition of industry and agriculture and the art, beauty and dramatic contests, all seem to have scooped the Federation's independence celebrations which are due in October, 1960; these will presumably have to be a humdrum affair of foreign emissaries and flag-raising. The North is also first with its flag; the knotted cord on its green Islamic background already flutters from every official car, before the Federation has even got to work on a design. Not only has Northern Nigeria been put on the map; the world has been given a broad hint that the North practically *is* Nigeria. The northerners doubtless aim to follow up this hint by electing so many Northern Peoples Party (NPC) candidates in the federal elections next December that the North will virtually rule the Federation.

It remains, however, to make a success of regional self-government. It is not only in the hearts of British officials that doubts lurk. Not a few eminent northern Nigerians wish that the pace of events in the southern regions had not forced the north to move so precipitately to "SG." Consciously or unconsciously, the durbar seems to have been designed to reassure these fainthearts in a burst of national pride and fervour.

The region became completely self-governing on March 15th. But already there are hints of the way in which its government is developing—a purely African cabinet, an almost wholly European higher civil service, a junior service still mainly in the hands of southerners (mostly Ibos and Yorubas) and in power in the legislature a party controlled by the emirs who govern their own emirates largely in their own way. For they are still autocrats, even though there are elected councils in the emirates (in Kano, the Northern Elements Progressive party (NEPU), bitterly anti-emir, runs the town). Northern Nigeria has the full apparatus of ministries and departmental administration, on the Whitehall model. But does anyone, except the Europeans, of whom a third or more will leave within three years, understand it?

The premier, Sir Ahmadu Bello, Sardauna of Sokoto, has long been the region's dominant personality. He is brilliant, tenacious, devoted, and he works unbelievably hard. It was inevitable that a region so backward in education (for which it blames, but unfairly, the British) would depend heavily on a few men, as elsewhere in Africa. There are other competent ministers, but nobody would deny that the premier takes most of the strain—and most of the decisions—in every department. One asset which the people of the northern emirates have is a tradition, fostered by Lugard, of administration. But it was based on personal rule; there was little true delegation, little distinction between policy and its execution, little teamwork—the prime, and saving, principle was that the ruler should be accessible to his people. Today in Kaduna every minister's house, but especially the premier's, is besieged by delegations and petitioners almost all of whom he sees.

But Northern Nigeria is a region containing 18 million people; the largest emirate contains under two million people. Its government deals, of course, with vastly more complex matters than those handled by the Native Authorities. Yet ministers must deal with—and usually take to the premier first—the pettiest establishment and local matters. It must be gratifying to the premier to know he is indispensable; but he must live; he should, too, have time to think ahead. It is a frightening thought that after independence he might feel he had to take a constant hand in federal matters too (unless he goes to the federal house himself). Yet it will all too easily be found that the issues there are as vital, and as demanding of Sir Ahmadu's advice, as any in the region. No human being can do all Sir Ahmadu may be asked to do, unless he draws some lines—ruthlessly. If the British have not bequeathed to Nigeria the art of decentralisation they have bequeathed little.

A mile or two beyond the crumbling red walls of Zaria, the holy city, stand the two quadrangles and the battery of students' hostels which comprise the Institute of Administration. This is the key factor in the holy war of "northernisation." It was started by the premier in 1952 when he was minister of works; and Dr Nkrumah is openly envious of it. It is, perhaps, a crammer's establishment for turning those who have failed university entrance, and some who have failed school certificate, into district officers; but these are proving better in practice than the British expected. The North, however, is not content merely to replace its expatriate higher administration; it is determined to replace southerners at all levels. The institute's courses range from the training of district officers to that of clerks, typists and palantypists; it grounds them in government regulations, accounts, office management and current affairs; and it has done work good enough to be reflected in a general raising of standards in local government. Its target is to train 10,000 by 1970; it has trained nearly 4,000; and as those who obtain its certificate get pensionable posts, everyone not actually taking a degree is eager to get in.

The institute makes some sense of the North's ambition to northernise its lower grades of government service by 1975; but what of the senior posts? In 1959, some 190 secondary school leavers are expected to do well enough in school certificate to be regarded as capable of taking a degree. The number is rising; even so, by 1972 only 1,680 graduates will have been produced, and a like number of technologists. To replace the expatriates, the region will need 1,250 administrative officers and another 1,250 technologists, making no allowance for expansion (which is continuous) or

current under-establishment (which is great). To these needs must be added a quota of army officers, say 100, and at least as many police; in addition, there is the whole federal service to consider. A reasonable northern contribution to this would be 2,000 more officers. Thus, if the region northernises itself, almost the entire federal and diplomatic services will be staffed by southerners; an awkward situation for northern federal ministers.

Perhaps, after all, the holy war should have limited objectives. As it is, "northernisation" largely means using the pagans and Christians of the "middle belt"—the North's southern provinces—because they have accepted the mission education which Islam rejected. What is the reality of a federation if the weakest unit cannot use those resources which the stronger can spare—which in Nigeria means not money, but educated citizens?

The Kangaroo Leaps a Depression—I

FROM OUR CORRESPONDENT IN AUSTRALIA

THE annual economic survey of Australia, published at the end of last week, is a success story indeed. It tells, in beautifully plain English, how in face of the big drop in export prices and other trading difficulties the Australian economy never faltered but went serenely on with its business of expansion.

Twelve months ago even the most optimistic observer could hardly have foreseen the speed and success with which the dangers have been avoided. The drop in wool prices was expected to reduce farmers' incomes by £A180 million, which the rise in urban incomes could not be expected to offset. Wool, moreover, is still so important a contributor to export earnings (bringing in 40 per cent or so of the total) that a continued slump would have brought a reduction in imports, already tightly controlled by licensing at a total of £A800 million. As four-fifths of imports are producers' goods, any cut in imports could hardly have been confined to "inessentials." And to cut producers' goods would have involved far more than immediate falls in production and employment. In Australia the task is not merely to maintain the level of activity; it is also to keep up the rate of progress. A sudden braking would have brought a downward revision of thousands of individual development plans and lasting damage to the confidence of those, both at home and abroad, who are putting their money on the growth of the Australian economy.

These gloomy possibilities have been avoided, thanks to a mixture of good management and luck, and to the general confidence in Australia. The government and its advisers gave a firm lead by proclaiming that the import ceiling would not be lowered nor immigration reduced, and that the reserves (built up in 1956-57 and standing at £A525 million last June) were strong enough to withstand a fairly prolonged strain. At the same time they cautiously (some thought too cautiously) administered some stimulus to the economy. Australia has no Bank Rate, but some £A75 million was released during 1957-58 from the Special Accounts which the trading banks are required to keep with the Central Bank, thus offsetting the fall in their liquidity and enabling them to lend stronger support to the economy. Public expenditure was increased, and two loans, brought around £A30 million from overseas. Finally, the budget for 1958-59 provided for a deficit of £A110 million—which has not in fact materialised because things have turned out so unexpectedly well.

As far as the internal situation is concerned, the surprise is that farm incomes, far from being lower than last year's, are likely to be higher. Wool prices continued to sag until recently, but the size of the wool clip was greater. Many farmers, despairing of wool, had turned some of their land over to wheat, for which at least they could be certain of an interim cash payment from the Wheat Board at the railhead; and wheat and other grains have flourished in an ideal season. For the farmers, moreover, there was the consolation of paying less in taxation—for they always pay tax on the previous year's earnings. Finally, all but the most improvident or the latest comers to the industry had put by some money for bad times, and the fall in their incomes probably affected their saving more than their spending. Meanwhile industry and investors had refused to panic. Immigrant workers have been absorbed, and unemployment, in spite of the wishful lamenting of the opposition, seems not to have risen above about 2 per cent of the labour force. Output of manufactures has risen almost everywhere (the most significant exception being textiles) and private capital expenditure still goes ahead.

In the external accounts, the surprise is the high rate of capital inflow. Including the official borrowing overseas and the undistributed income of overseas companies operating in Australia, this inflow may approach £A200 million, compared with £A136 million in 1957-58. It is true that this rough estimate includes an item of about £A20 million which is merely the rectification of a little muddle about the valuation of imports of petrol from Indonesia; and that no one yet knows whence the money came and what use it was put to; but it is nevertheless apparent that during the period of doubt and depression elsewhere, investors were still prepared—more than ever prepared—to send their money to Australia.

EXPORTS too have been rather higher than was expected. Twelve months ago the estimate for the current year was £A750 million, but that had been slipping towards £A700 million as export prices still fell. But now it seems likely that they will reach at least £A780 million. Not only has the greater quantity of wool been sold (higher prices will hardly be reflected in this year's returns), but beef has been fetching higher prices in the British market and the cheaper cuts have been selling like hot hamburgers in the United States. Butter has been a less uneconomic export since European competitors were persuaded not to dump it in Britain. Even metal exports, despite the cut of 10 per cent in American imports, have done better than was expected. Imports, meanwhile, have continued to press against the ceiling of £A800 million.

The net result of all this is that if the reserves have fallen at all they will not have fallen more than about £A50 million, which is little more than the amount by which they fell last year. But the latest reports are that the capital inflow has so increased in recent weeks that the final result for the year ending in June will show them at hardly less than the figure of £A525 million with which the year began—the very figure that was proclaimed as being capable of withstanding a siege. Australians can now look forward to a kindly budget and to a more liberal policy for imports.

This is a triumph, but as they themselves are the first to acknowledge it is a triumph with an element of luck in it. The possibilities for the future—which has considerable risks—will be discussed in a second article.

(To be Concluded)

Package and Postures

FROM OUR SPECIAL CORRESPONDENT IN GENEVA

Wednesday

At Christmas time the excitement of a package lies in the unpacking. In springtime by Lake Leman, the operation is more difficult and less rewarding. The packers keep reminding one that their package must remain complete—there must be no running away into corners to eat unpacked sweets—and the entangling strings hinder both movement and enjoyment. The foreign ministers' proceedings have been compared to a ballet and to a minuet; but this suggestion of graceful fluidity ill befits a performance that more closely resembles a children's game of "playing at statues." The assumption of postures, one of the major diplomatic activities of our age, has here been brought to a perfection of grotesque immobility.

As the second week of set speeches draws on, the most agonising question is whether there must be a third week before the conferees go into the kind of private huddles that promise action. True, there have already been huddles—at lunches, dinners and morning visits—but so far they have yielded nothing constructive. On the western side, reluctance to make the first move towards asking Mr Gromyko point blank to show his hand is still fairly strong. Mr Selwyn Lloyd is unwilling to take an initiative that would appear to confirm the persistent charges that the British delegation is anxious to sell the pass. M. Couve de Murville rests firmly on the Cartesian argument that, since it is the Russians who have caused all the bother, they must be the ones to make the serious proposals. As for Mr Herter, he is clearly reluctant to take a step which the Russians might interpret as a sign that the West is angling for an opportunity to make concessions. He may well, therefore, be hoping that Mr Gromyko will relieve him of the necessity by making the first move towards secret sessions.

The one element of interest in the conference now is this: what price will Russia pay to secure a "summit" meeting which the Americans will not attend for nothing? Conversely, what is the minimum price that Mr Herter would accept? Since only Mr Gromyko can answer the first question, his speeches and reported remarks have been scanned for clues that might resemble a price ticket. During the week it has become apparent that he is playing his hand at two levels—that there is a plot and a sub-plot. The main plot is the foreign ministers' conference; the sub-plot is the conference on nuclear tests, which is now theoretically adjourned until not later than June 8th. In fact, and doubtless because of Mr Gromyko's efforts to merge the two, the chief delegates at the nuclear conference have deferred their projected departures.

Mr Gromyko has played the sub-plot with some determination. Mr Herter and Mr Lloyd have, however, given him his cue, for last week they suggested to him that as a means of speeding up the nuclear tests conference, experts could usefully meet during the recess to discuss outstanding technical problems. The use the Russians intended to make of this opening was soon apparent. From Moscow, on May 15th, Mr Khrushchev wrote to Mr Macmillan and Mr Eisenhower, saying that the Russians were prepared to take part in technical talks on high altitude test controls (but not, by implication, on other outstanding technical problems). In Geneva, Mr Gromyko proposed that the ministers should forthwith sign a blank treaty on test cessation, leaving the details to be filled in later. The western delegations saw this as, firstly, an attempt to split the western ministers (since the French are not participating in the nuclear conference) and secondly, as a bid for a summit at a cut price. The argument was heard that the Russians, unwilling to budge from their dug-in positions on the subjects before the main conference, would like to get quick results on the nuclear side, thus demonstrating that the foreign ministers—minus one—had made sufficient "progress" to justify a summit meeting. The western ministers promptly countered with the suggestion that nuclear questions should be left to their experts while the foreign ministers themselves got on with the business of the conference: Germany, Berlin, and related matters. Simultaneously, American spokesmen let it be known that progress towards a nuclear test agreement would not by itself justify a summit meeting—while tactfully refraining from indicating what would. Western unity was thus preserved, and Mr Gromyko was challenged once again to produce a cat from his voluminous bag.

THIS, however, he was in no hurry to do. He clearly felt he had not yet exhausted the tactical possibilities of another gambit, labelled "the British are our only friends." The Russians evidently hold that the "spirit of Moscow" is still alive in the corridors of the Palais des Nations—to the embarrassment of British delegates who find themselves singled out for winning smiles and slaps on the back. They keep emphasising how relatively understanding Mr Lloyd has been in tearing the Soviet proposals to pieces. Meanwhile, in the mysterious way of that gigantic rumour factory, the Maison de la Presse, the sinister phrase "a Gromyko-Lloyd axis" had been coined, and hardened British diplomatic correspondents, who ought to have known better, were asking the British spokesman what substance there was in it. Most of the correspondents retailing anti-British rumours were, however, Americans; and when pressed, they usually said they had had their information from French sources. Was this, then, a subtle manifestation of a less unreal "axis" linking Paris and Bonn? Apparently not, for west German delegates were busily telling the British press how reassuring and satisfying they had found Mr Lloyd's attitude.

A few things were clear. Mr Gromyko, while attacking the western package, had publicly conceded that it contained three points that might be worthy of separate discussion: the proposed non-aggression declaration, the creation of a zone of limited armaments in Europe, and the proposed mixed German committee to discuss reunification. On their side, the western ministers had presented a package which, as packages go, was better than most. M. Couve de Murville, in particular, had demolished Mr Gromyko's arguments with exquisite Gallic precision. And Mr Herter and Mr Lloyd had made a point always worth making—that the only conceivable future for Berlin was as the capital of a

Chef shouting C'est magnifique has just seen La Carte des Caoutchoucs Shell. Incidentally, he himself is made from the Cariflex latex produced by Shell for the manufacture of foam rubber. The Cariflex range covers virtually every need of manufacturers using general purpose rubbers.

Shell spreads its service to another industrial field.

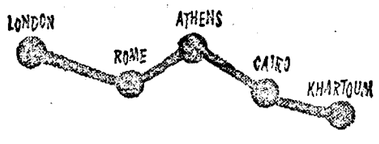
For the world's rubber industry which can now no longer meet its requirements from natural resources, Shell introduces **Cariflex,** Shell-made rubber. **Cariflex** is general purpose styrene-butadiene rubber with the extra stamp of quality intrinsic in all things Shell. It is now available in twenty different types of dry rubber and latex: hot and cold polymers, oil masterbatches, carbon black masterbatches and hot and cold latices. The Cariflex range covers applications varying from tyres to floor tiles, from foam to footwear.

Ask your Shell Company for details of Cariflex *Shell*-made rubber.

Cariflex TRADE MARK

SHELL MADE RUBBER

Issued by the Shell International Chemical Company Limited and the Bataafse Internationale Chemie Mij. N.V. For further information consult your Shell Company (in the U.K., apply to Shell Chemical Company Limited).



EVERY MONDAY from June 8, a VISCOUNT 831 of Sudan Airways (maintained and crewed by Airwork) will fly from London to the Sudan. **This will be the only air service to cater specially for the Sudan.** Passengers who wish to break their journey at Rome, Athens, or Cairo may do so and continue their journey by the next plane at *no* extra cost. The return flight from Khartoum will be on Thursdays.

VISCOUNT comfort . . . Rolls-Royce speed

The latest Viscount—the 831—is larger, much faster and even more luxurious than its predecessors. In a perfectly relaxed atmosphere, you can eat and drink, read and talk (nearly everyone on board will have a common interest in the Sudan) or simply sleep, lulled by the soothing hum of the four Rolls-Royce jet engines. An unusual feature of this flight will be a Free Information Service on all matters relating to Sudanese business, political, and social life. This will be very helpful to newcomers and to those returning after a long leave of absence. If you have business in the Sudan, ask your travel agent about the new Blue Nile Viscount.

Starting on JUNE the EIGHTH

united Germany; hence any other "solution" was bound to be temporary.

As the week wore on, western delegates were working out possible permutations on given themes: statement of the western case, destruction of the Russian case, reply to Russian criticism. With three western players and one reserve, this seems to promise considerable repetition if the conference goes into a third week of public speeches.

Towards Iraqisation

FROM OUR CORRESPONDENT IN THE MIDDLE EAST

THE nationalist pressures released by the revolution in Iraq last July are having far-reaching effects on the economy of the country. General Qasim's government is moving towards the "Iraqisation" of industry and trade. The movement is slow, and has been effected so far by administrative action rather than by legislation. Some such tendency was to be expected and, if that were all, there would be nothing much to worry about. Unhappily, the transition period has been marked by labour unrest and violence which has seriously lowered productivity. The result is a rise in costs which threatens to upset contractual arrangements. Some companies are calculating whether they would lose more by staying or by getting out. On the whole, the present bias is towards staying.

The government itself is the largest employer of labour in Iraq, and has nothing to gain by labour indiscipline. It is freely admitted that both Iraqi and foreign firms tendering for government contracts are putting up their prices to reinsure themselves against unrest. Officials pin their faith on the development of trade union organisation, and hope (with what foundation it is impossible to guess) that the training now being given to the Popular Resistance Forces will produce a reliable guardian of public order.

"Iraqisation" has many facets. It aims at a system in which "no job is done by a foreigner if an Iraqi can do it as well." It seeks to secure, wherever possible, majority capital holdings in Iraqi hands. One official, hazarding a random definition, suggested "a minimum of 51 per cent Iraqi participation in capital and a maximum of 10 per cent foreign staff." The emphasis differs, of course, with individuals. Some would like to see foreigners briskly eliminated from trades which Iraqis can handle; others would be content to let them remain provided some such conditions as those described above were fulfilled. Responsible opinion in the ministries principally concerned is certainly in favour of soothing foreign fears. It is the opportunists, many of whom have manœuvred themselves into General Qasim's confidence, who obstruct policy by administrative harassment. But Iraqi businessmen also suffer from that pest.

Iraqi trade is being increasingly subjected to government guidance, and Dr Ibrahim Kubba has said flatly that Iraq cannot progress fast enough by capitalist methods. The import of 46 articles, ranging from luxury goods like motor-cars to goods of which home supplies are considered adequate, is banned altogether. Another 81 articles, mostly consumer goods, are allowed in only against licence. The import of machinery and industrial equipment is free, but precious little is coming in; labour unrest does not encourage capital investment.

The import of capital goods provided for in the Iraqi-Soviet agreement is not expected to become significant before next year. Of the 25 agreed projects, seven are surveys, the remaining eighteen involving the erection of factories. These include one steel factory; the rest fall into the category of light industry, such as fertilisers, pharmaceuticals, electrical goods and a cannery. In any case, the agreement is on a small scale: £50 million spread over seven years. Russian technicians are already on the ground. Russian oil experts are beginning to displace the Americans from the government refinery at Daura.

It is common to hear talk in Baghdad of the "ostrich policy of the Iraq Petroleum Company." The company, according to its critics, is determined at all costs to see no evil, hear no evil and speak no evil, in a vain attempt to wish away future difficulties. The criticism is neither fair nor factual. Some of the company's public pronouncements may have been unduly anodyne; but its officials are far too experienced and knowledgeable to be unaware of the rocks ahead. The size of the rocks is still unknown, but it seems reasonably certain—at the moment—that they do not include nationalisation or any drastic change in the company's status.

SEVERAL statements have been made recently by Dr Ibrahim Kubba, the Iraqi minister of economy, who has so far been in charge of oil negotiations on the Iraqi side. Certain passages in them are obscure, others show differences of opinion or interpretation between the company and the government. The obscurities and differences are inherent in Dr Kubba's position. On the one hand, he needs the oil revenue. On the other, there is strong nationalist pressure from quarters that have been taught for years to regard IPC as part and parcel of the apparatus of imperialism. Dr Kubba, therefore, is steering a careful course. For the benefit of the company, he insists that the Iraqi government has no intention of going back on basic agreements. For the benefit of nationalist opinion, he says that the basic agreements contain vague provisions, even dead letters, which the company has hitherto interpreted in its favour; in future, these will be interpreted in favour of Iraq. Any disputes, he added, will be referred to arbitration or the courts.

In a sense, it is a conflict between expediency and principle. The conflict is not necessarily irreconcilable; whether it beomes so or not depends on the future attitudes of the IPC and the Iraqi government and on whether both sides recognise the facts of the new situation.

Dr Kubba's statements focus attention on several specific points, though he has given little inkling of the government's intentions in detail. He has said that the Persian agreement with the Italian state-owned oil concern, ENI, and the Saudi agreement with Japanese interests might provide the basis for an Iraqi claim to revise the 50-50 profit-sharing arrangement. He has said that the government proposes to take advantage of the provision in the agreements with IPC for the appointment of an Iraqi director to the company's board, with power to look into all IPC activities, "including accounts." He wants changes in the application of the agreements in respect of workers' welfare and public relations. Dr Kubba has also spoken of doubling the company's "production" in the next two years; but, although an ambitious programme of expansion is under way, the company is thinking in terms of "capa-

city." Actual output in any one year must depend on market conditions.

More controversial still (because they present more technical difficulties) are Dr Kubba's proposals for price-fixing, export and more refineries. He wants sales prices to be fixed in future, "not by IPC alone, but jointly with the Iraqi government," the object being "to eliminate sales at reduced prices." This carries a hint of interference with the famous price-structure of the industry.

The same difficulties are likely to arise in the building of additional refineries and in the export of Iraqi oil products as well as crude oil. But the fact is that the Iraqis are determined to have their own oil industry, and to sell its products abroad. For one thing, the price per unit on refined products is higher. But the most compelling reason is largely political. The new oil industry is to form an integral part of the general programme of industrialisation, without which, in the view of the present Iraqi government, the independence of the country cannot be fully guaranteed. The Russians have undertaken to carry out seismological surveys of the Khanaqin and offshore areas which have been handed back to the Iraqi government. There will soon arise the problem of surveying other areas of unexploited territory which IPC has agreed in principle to return likewise. One high official described these areas as "another potential field for collaboration with IPC"—that is, if the company is prepared to help in its exploitation on behalf of a fully "Iraqised" industry. If the company should refuse, the Iraqis will certainly look for aid elsewhere.

Cyprus in Transition

FROM OUR CORRESPONDENT IN NICOSIA

After months of wearisome controversy a solution to the municipalities question seems at last in sight, despite vigorous last-ditch opposition from the Greek mayors to certain features of Archbishop Makarios's latest "compromise" proposals, and the insistence of the Turks that the Zurich agreement implies the physical partition of the main towns and not merely their administrative division. The significance of the dispute lies less in the actual technical details than in the way it has revealed the real atmosphere in the island, and the bitter acrimony which still lurks beneath the impressive facade of post-Zurich accord. The inordinate capacity of the Cypriots—Greek and Turk alike—to get worked up about who disposes of the refuse in some dreary side street in the shabby no man's land of old Nicosia—which is what the municipalities dispute has often boiled down to—hardly augurs well for the new Republic. This is neither to disparage nor discourage the efforts of many patriotic citizens of each community to give the new state the most propitious start possible.

In the process of transition, Archbishop Makarios has emerged a more moderate and more statesmanlike figure than many people thought possible only a few months ago; and the degree of professional working accord which he and Dr Kutchuk have established is, in its way, a minor miracle. But amongst his own community, though his ascendancy is still exceptional, a process of taking the Ethnarch off his pedestal has begun. This week the volatile and irascible Mayor of Nicosia, Dr Dervis, roundly condemned Archbishop Makarios, the Greek government and the whole Zurich agreement, in a fashion unthinkable only a few weeks ago. Already, the Zurich settlement has been under fire both from the extreme Left, and from the ultra-right pro-Enosis faction led by the Bishop of Kyrenia; but this was the first time that any of the archbishop's more orthodox supporters had spoken their minds.

Dr Dervis's personal influence should not, however, be exaggerated; the most important issue is Archbishop Makarios's relations with the Communists. For four years Moscow's strategists have barely intervened directly in the Cyprus situation—because Eoka and the Nationalists have been doing the job for them. But now the Left is adapting its strategy to the altered situation, and a familiar pattern is emerging. A "democratic" left-wing youth party has been founded; workers' delegations have gone to Moscow and Peking; leading doctors—including Dr Dervis—are shortly off to Russia to see the advances of Soviet medical science; Cypriots are being invited to the Vienna Youth Festival; and there are moves to hold a parallel festival in Cyprus.

Though the left wing party, Akel, is still in theory banned, the Communist line is still to support the archbishop officially as long as his policy does not run counter to the interests of the Left. Whether Archbishop Makarios himself genuinely believes that he can keep the Communists within the fold is doubtful. There have been repeated calls from him and other right wing spokesmen for the "dropping of ideological differences." At the same time, the archbishop's total exclusion of the Left from the first Cypriot ministry has inevitably deepened the Communists' hostility. The wisdom of this tactic (which many people believe was dictated by Grivas) remains open to question; some quarters argue that the archbishop would have been wiser to include a non-communist representative of the Left, to give the first ministry a more genuinely national character.

As it is, the provisional government is one of the extreme right, moulded from the heat of the Eoka struggle; youthful, idealistic, deeply patriotic but lacking any constructive ideology—other than a fervent nationalism. Amongst the old guard of Cypriot politicians there has been clandestine criticism (some of it unfair) of the inexperience of the young ministers, who include two of Grivas's closest lieutenants. If any of the ministers fail to make the grade there will be no shortage of aspirants to take their place. The same qualities are reflected in the new political party, Edma, which is basically Eoka in a political form. To its supporters, Edma is a national front, a movement of the masses; to the Communists it is a party of the extreme Right in the fascist pattern. On balance, Edma has probably more affinities with the latter than the former, although many able men of moderate right wing views at present support it.

When the first elections take place (presumably around the end of the year) Edma men, still riding the wave of

nationalist fervour, are likely to be in the majority in the national parliament. The conflict then between Right and Left seems bound to enter a new and sharper phase, despite the current assurances of the Left that they are prepared to go on backing Archbishop Makarios if his policy does not discriminate against them. In Cyprus politics seem fated to be polarised for some time to come, with all right of centre following the lead of Edma and those left of centre apparently willing to be used by the Communists ; though there are many liberal men of the centre who hanker after a middle party, there is no sign of any effective action to bring one into existence.

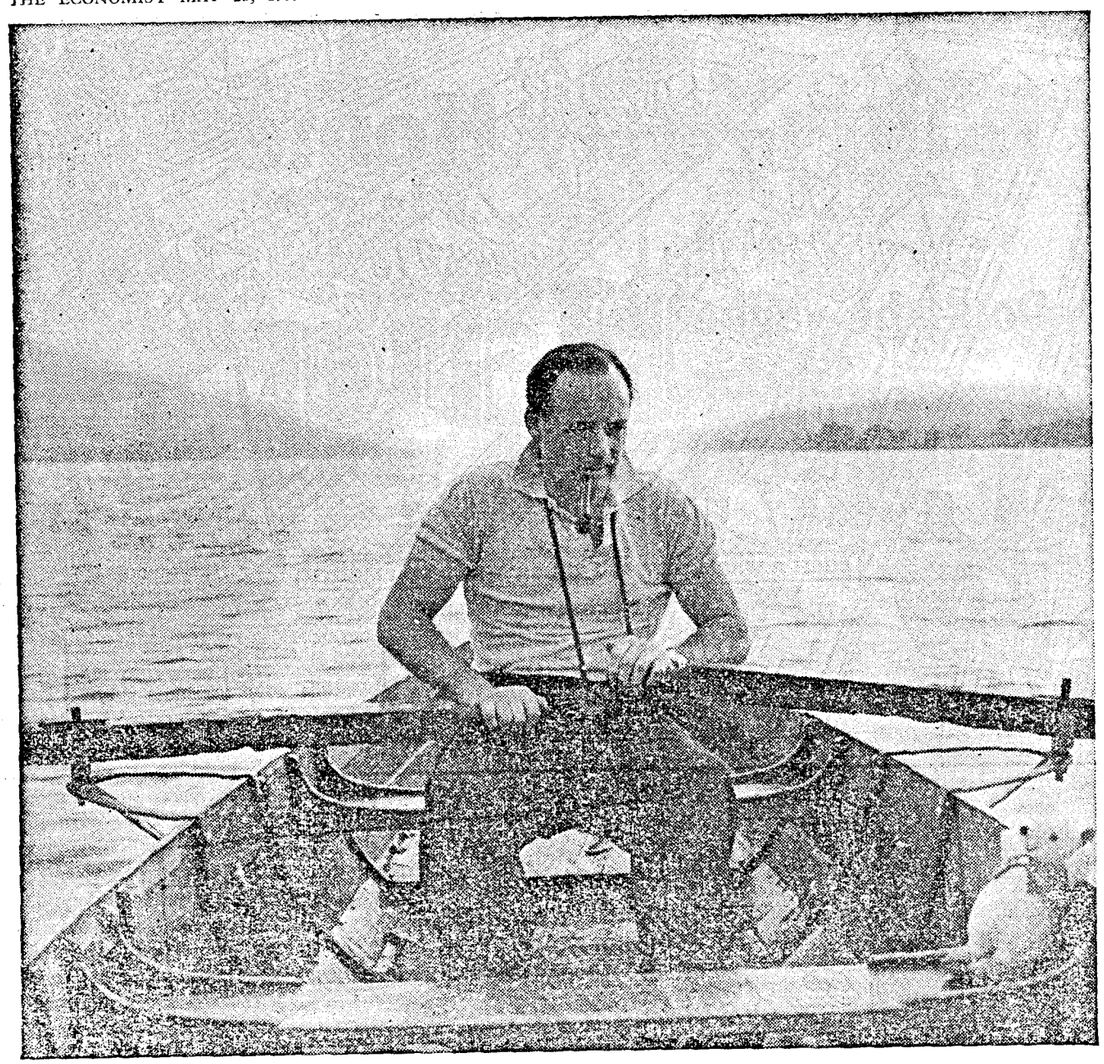
There are still in Cyprus too many people who privately believe that if one has a particularly difficult political adversary, a club on the head or a bullet in the back will always get rid of him. It is along these lines that many members of Edma believe that they can answer communism. Archbishop Makarios and the wiser elements of the Right doubtless realise this can only be done by providing a superior programme ; and (in default of any centre party) the crucial issue for Cyprus in the months ahead may be whether the right wing can find it.

Kuwait Keeps Calm

BY OUR CORRESPONDENT LATELY IN KUWAIT

ALONG the shores of Kuwait's sheltered bay, in sight of the gilded town palaces of some of the ruling sheikhs, Kuwaitis are still engaged in the old craft of building sea-going wooden ships. When completed, these ships will ply the age-old trade routes down the Persian Gulf to India and East Africa. They are one of the few reminders of Kuwait's sea-going past, a past hardly a decade away from the rich and bustling present. The money that has come to the tiny state from oil has changed it beyond recognition, and with money has come increasing attention from the neighbours. The last time Kuwait was attacked was in 1919, when a force from what is now Saudi Arabia was defeated on the outskirts of the town. The townsfolk then threw up a protecting mud wall around the land side of the town. The wall has recently been torn down to make way for a boulevard ; mud can no longer protect the people of Kuwait.

There is now no danger from the marauding fanatics of Saudi Arabia ; their religious fervour has been dampened by oil revenues. But to the north lies Iraq, in the hands of revolutionaries who seem unable, or unwilling, to stop the disintegration of their state. Every night in Kuwait people listen in fascinated horror to the Baghdad trials, the biggest radio show in the Middle East. But they are not favourably impressed ; they get their Arab political opinions from Cairo radio and they depend—as do a surprisingly large number of other Arabs in time of crisis—on the BBC or Radio Israel for straight news.



Kuwait's other external problem is its relationship to the United Arab Republic. Colonel Nasser's most ardent admirers in Kuwait include scions of leading, if not princely, families. They need not consider that President Nasser's kind of revolution has, so far, brought little comfort to the workers and peasants of Egypt and Syria. They know only that in Kuwait there is a ruling family whose members are richer than anyone else and whose position, they believe, is maintained by an out-moded arrangement with the British Government. The Kuwaiti reformists, however, can offer no substitute for the ruling family except themselves. The people of Kuwait are a privileged few. There is no need for agrarian reform, for there is no arable land and there are no peasants. There is a shortage of Kuwaiti workers ; labourers are imported, or drift in, from Iraq and Persia. So far, the state has been able to absorb the growing numbers of its own educated young men. There is no need for industrialisation, and Kuwait is probably the only country in the Middle East that does not feel that its national dignity requires the building of a steel mill.

February 1st was the first anniversary of the union of Syria and Egypt. The Kuwaiti reformists and Arab nationalists staged a celebration at which the people were urged to revolt by President Nasser's chief radio commentator, who was especially imported for the occasion. Kuwait, he found, was not ripe for rebellion. His passport was torn up and he was put on the first plane out of the country. The government apologised to Cairo for destroying the passport, but the incident was never reported in UAR newspapers or on Cairo radio. The two Kuwait newspapers, *al-Fajr* and *al-Shaab,* were suspended, the local clubs (subsidised by the ruler, who regarded them as safe places for letting off nationalist steam) were closed until further notice. In March, the editor of one paper spent a few days in gaol for sending President Nasser a telegram congratulating him on his anti-Qasim speeches. The editor was not gaoled for his attitude towards Nasser, and certainly not for being anti-Qasim, but for presuming to speak for the people of Kuwait, in whose name he sent the message to Cairo. Only the ruler may speak for the people of Kuwait.

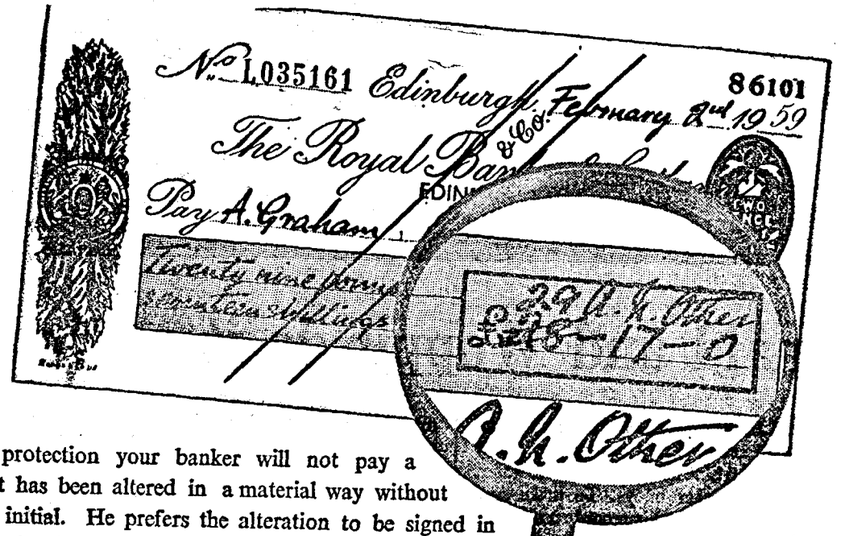
THE ruler spends much time abroad. During a recent crisis he hastened away to supervise the planting of cherry trees on his estates near Shtoura, in Lebanon. This was explained as being a most necessary trip because the income from the Lebanese estates pays for His Highness's holidays there. No need, then, to touch the £300-odd million safely tucked away in gilt-edges and blue chips in London. In the ruler's absence Kuwait is ruled by his cousin, Sheikh Abdullah Mubarek, but a group of ten other relatives, mostly heads of government departments, known as the supreme council, is becoming more active.

This week Sheikh Abdullah Mubarek's security forces set out to tidy up the state administration by arresting about two hundred people. They were said to be communists, a convenient label for anyone regarded as being dangerous to the security of the state. Presumably those who are foreign Arabs will be returned to their native countries—Iraq, Egypt, Syria or Jordan. Perhaps the answer to the political leanings of the group will be found when the stateless Palestinians make their choice between Iraq and the United Arab Republic. Of more lasting benefit to the state than getting rid of troublesome employees may be the resignation of Sheikh Fahad al-Salim, formerly head of public works and the Kuwait municipality. Sheikh Fahad's greedy ways have long been an embarrassment to the Kuwait authorities.

Whenever anything at all happens in Kuwait the outside world, grown accustomed to violent or frequent changes in Middle Eastern governments, expects the worst. So far, nothing very alarming has happened. The Kuwaiti authorities seem determined that it shall not.

Donald and Woppit do it again

CONISTON. In the hush of a May calm. Donald Campbell sculls gently out on the glassy surface of the deep blue lake. To check the water. To inspect the marker buoys. To make sure everything is tee'd up for his record run.



With him goes Woppit. The fastest water-borne bear in the world. Standing just 8 inches high, with brilliant green ears and feet and sporting a startling red waistcoat, Woppit is Campbell's mascot. A good luck charm that goes everywhere with him. A good luck charm that helped him, on November 10th last year, set a new world's speed record.

Now Donald and Woppit have done it again. and BP – who supplied the fuel and lubricants for Bluebird's record breaking run both last year and this – congratulate Campbell on a very fine achievement.

ENERGY TO SPARE—I

Europe's Manifest Opportunity

No mining industry in Western Europe nowadays can stand up to the competition of American coal landed for $12-14 a ton without giving ground. The British mining industry has never had to try, and the members of the European Coal-Steel Community are anxious not to have to try again. The prolonged debate in the Community this spring was not whether coal imports should be restricted but how they should be restricted, and by whom. Only Italy, which depends on coal from abroad, really objected to shutting out cheap imports. The others, being producers, were as one on this main issue, though uneasily aware that they could not as readily shut out competition from cheap oil. It was over restrictions on their own coal output, and stocks as well as on imports, and over who should ultimately control the whole arrangement, that the ECSC High Authority's plan to deal with a "manifest crisis" was turned down by its Council of Ministers in Strasbourg last week.

This decision was in one sense a refusal by France and Germany to accept the principle of "supra-national" control to which they have put their signatures so often during recent years. The political consequences of all this are discussed in a note on page 715. Economically, however, the Strasbourg decision may simply mean that the Italian market, save for friendly gestures, will be lost to Community coal sooner rather than later. Italy's coal-producing partners were already contriving to stem further inroads of this cheap American coal into their own home markets at today's recession prices. But once the present recession—or "downward fluctuation from the expansionary trend"—is past, they will have to consider, as Britain will, the prices at which imported fuels are likely to be landed even in "more normal times of expansion." Temporary protection for high-cost domestic producers against a large volume of imports on firm contracts is one thing during a passing recession in demand. But whether, as a continuing policy, Europe would give preference to domestically-mined coal at more than the "long-term price" at which it may be able to buy American coal is another.

The prices at which coal has been landed in Europe during the past winter—some shipments as cheap as $11-12 a ton—have been depressed by recession both in American coal demand and in world freight rates. Yet it is not at all sure that a viable level of price, over some years of resumed expansion, need be very much higher. It is true that with Atlantic freights round about $3 a ton, small ships landing the coal have been covering little more than their running costs, earning neither a commercial return nor even full depreciation. But if there were an assured volume of coal trade to Europe to justify building "super-colliers" of 20,000-30,000 tons for time charter, the economics of coal shipping could be drastically altered.

There is not much doubt that American coalowners would be prepared to offer Europe long-term contracts for very large tonnages at little above their recent fob export prices. The low price of American coal is not simply the result of the far greater advance in mining productivity achieved there, or of America's shallower seams and its much higher proportion of opencast coal. It reflects, primarily, the cost at which it is worthwhile mining coal in order to compete in America's own market—where the basic price of primary fuels is set mainly by the exceedingly low (and incidentally State-regulated) wellhead price of natural gas.

The American coal industry is already working far below capacity. American mines found it worthwhile to produce only 368 million tons of coal last year, against nearly 473 million tons as recently as 1956. This is, in fact, a coal industry that has already been through the wringer. The painful retreat from

high-cost seams and mines upon which the British and Belgian coal industries have now begun lies far behind; it has spare capacity from which big tonnages of extra exports could be readily produced at little more than today's costs. Experts in ECSC and OEEC have recently been assessing as carefully as they can the possible range of landed prices at which, under conditions of economic expansion, Europe might expect to import American coal until the late sixties. They put this range at perhaps $15-18 a ton.

EVEN more germane, perhaps, is what one reckons may happen to oil prices over the next few years: for in Western Europe today, oil is to be had at big enough discounts to undersell even American coal. One can construct reasonable arguments, certainly, for a rising trend in oil prices: the oil industry needs wider profit margins; host governments want a larger slice of the oil cake; and if European consumers want more black oils to gasoline than other continents do, black oil prices might have to rise more than those of other products. But the balance of the market—with surplus crude capacity in Venezuela and the Middle East, more coming in, and firm commitments to increase the off-take from many areas, plus tankers galore—seems to be hard against these reasonable arguments. The United States will not be importing more oil at least for some years to come; and a trickle of Russian crude and products, which could swell, is keeping the European market soft. In such circumstances, the oil industry might find it difficult to turn the trend of oil prices upwards for several years, however hard the sheikhs may press them for more. Moreover, the competition for coal may not come simply from the black oils.

There are chances, at least, that during the sixties substantial extra supplies of cheap energy, in oil and natural gas, may become available to Western Europe. Saharan oil may still mean no more at that time than an additional potentially vast source of crude capable of diversifying and further reinsuring the security of world sources of supply, and casting its shadow across world oil prices. But natural gas from France's own Lacq, and (once the transport problems are solved) gas from the Sahara, Venezuela, or the Middle East, could promise Europe vastly larger supplies of a new, cheap primary fuel. Transport of gas by tanker has already been achieved by Anglo-American enterprise, in experimental quantities. This could bring such great economic advantages that it comes into the category of technical problems that compel their own commercial solution in not too long a time. A technical breakthrough that would make large-scale transport of liquid gas economic before the middle sixties could happen; if it were to occur it could upset any shaky equilibrium that European coal may be able to achieve after the present crisis passes. Natural gas, ultimately, is just another version of competition from oil. It was with these possibilities in mind that one European fuel expert said wryly some weeks ago: "The main strength, if you like to call it that, of the coal position in Europe may lie in the reluctance of the big oil companies to deal it really crippling blows."

American coal at about $16 a ton landed may not necessarily be the sharpest competition, therefore, that European coalmining has to face over the next decade. But even at that price imported energy would be cheaper than many European mines could stand. Unless total demand for energy rises much more sharply than was assumed even in the fuel forecasts of a few years ago, it will be hard to justify investment in any mining capacity from which coal would be much above the likely price of imported energy; and one has to reckon that manpower costs in mining, at least, are likely to go on rising. Belgium's is the weakest industry; but the others could hardly avoid cutting back some of their own high-cost production. It may not be impossible for some coalmining to match the increases in productivity that other industries achieve; but to do this almost certainly requires concentration of its capacity.

ONCE one assumes that there may be energy to spare over the practical "planning period," forecasts of Europe's likely total demand for fuel over the next decade or so become less important. If there is enough energy for consumers to choose, the important thing is to guess how much of each different kind may be sold. But while spectators may be glad to let the market decide, producers cannot avoid taking a view. Looking to specific sectors of demand, European coal producers today can see a sheltered and expanding market for metallurgical coking, if not for other forms of coal carbonisation. Direct reduction of iron by other fuels may well supplement the blast furnace in 10 to 15 years' time, but will hardly begin to replace it until years later. Electricity generation is not in the same sense a protected market, but coal has at least no technical disadvantages there. Provided that it can meet imported fuels on price, European coal should find a market in the power stations until nuclear generation offers chances of being genuinely cheaper—which Europeans recognise may be a long time. Coal may reasonably be preferred to oil for power while the prices are comparable, though lignite and some other low-cost fuels, including in the initial stages natural gas, will compete with it in power generation. Coal's future for carbonisation into manufactured gas does not look promising; total gasification processes offer better chances, though commercial imports of natural gas would delay their development. In industrial and domestic markets, future demand for coal will depend largely upon its ability to compete in price effectively enough to offset prejudices against dirty and inconvenient fuels, though other fuels may come in mainly to supplement its basic heating job.

Though they have been rather more bluntly prepared than Britain has been to talk about protecting domestic coal against temporary crises, "manifest" or not, the countries of Western Europe are now looking forward more cold-bloodedly than Britain is to a period in which their mines will be able to sell only as much coal as can match the price of imported energy. They are less deeply committed to prestige investment in expensive forms of nuclear generation, and they will be glad to gain more time for trying out prototypes. The coal lobbies of Western Europe are not necessarily less potent—and they have a broader political base—than in Britain; their nuclear lobbies are younger but no less organised. But the prospect of a levelling off in coal production and perhaps a clear decline by the end of the sixties is merely one side of the penny for these countries; the other is the chance not only of cheap energy from the world market, but also cheap energy within their own borders or in nearby territories—if they are still under their control. The Sahara could still prove a mirage politically, but it no longer seems to be one economically. This prospect of fuel in plenty seems to the French at least to be their own plenty. Europe can look towards energy to spare in the medium run with much less mixed feelings than this awkward fact may arouse in Britain.

Machines for Lancashire

If the Government has given the millowners the will to re-equip along with some of the wherewithal, the tools will be readily forthcoming for the job

CAUTION and scepticism are the reigning moods in Lancashire about the chance that re-equipment on a really substantial scale will result from the Government's help for reorganisation of the cotton industry. The spinners and weavers who would have to put £3 of their own money alongside every pound from the Government are cautious; and the textile machinery makers are sceptical about the published estimates of investment, in terms of extra demand for their products. These machinery manufacturers have lived with Lancashire cotton for many years: they remember other plans to increase investment. Sir Stafford Cripps's subsidies for re-equipment in the industry applied only to the spinning section, where it had some effect. The weavers have had no previous aid; British Northrop, the main producer of automatic looms in Britain, followed official advice to expand its capacity after the war, but the increase in home sales did not come. Textile Machinery Makers, who have a virtual monopoly of the manufacture of spinning machinery in Britain, were exporting about 90 per cent. of their output in 1947. For ten years after that they managed to sell 25 per cent at home; last year they were again exporting 90 per cent, with some short-time working and redundancy.

Last week's white paper estimated that roughly £48 million might be needed to modernise the spinning and doubling capacity that Lancashire expects to be able to keep in being. Such an investment would buy 3½ million new ring spindles plus some ancillary equipment: this is the number that the spinners regard as the total they need. With 3¼ million ring spindles already installed since the war and 7½ million as the total capacity required, most of the plant would then be postwar. The figure of £48 million would be about half as much again as their average yearly investment between 1950 and 1957, but the Government would pay most of the difference. During that period about half the total expenditure went on spindles. The spinners think that in future a higher proportion can be spent on spindles, they feel that card-room and blowing-room machinery needs little modernisation—though some machinery makers argue that the spinners' failure to gain much in productivity from their postwar investment is partly through lack of attention to this section. Few expect the whole 3½ million spindles to be installed in the five years the Government has in mind. Some in the machinery industry doubt whether the rate of installation of spindles achieved in the 1950s will be much exceeded; this would mean little more than 1½ million spindles in five years.

The weavers estimate, even more roughly, that they may need £30-45 million. By putting a rather larger proportion into actual looms than they did in the ten years after the war, they think they could get about 40,000 automatic looms for this investment, conversion of existing looms, and ancillary equipment. Here again, the machinery makers consider that, to make the best use of the automatics, much expenditure would also be needed on preparatory machinery and on the modernisation of the mills—by such improvements as the installation of air-conditioning plant. But even 40,000 more automatic looms would bring the score up to no more than 80,000-90,000, out of an estimated total, after scrapping, of 170,000 looms of all types. In the United States all looms are already automatic; in France over 50 per cent, and in Italy over 65 per cent. But the weavers' investment has been limited mainly by lack of financial resources, for they have been squeezed between more powerfully organised suppliers and customers. In the finishing section, the white paper states, there is little need for re-equipment.

Technical development in textile machinery stopped during the war. Today, for the first time since then,

there are a number of promising innovations available, but hardly ready for general adoption. The Government re-equipment programme is embarrassingly timed for these developments. These include the spinning of yarn direct from the sliver, cutting out several preparatory processes; the Shirley automatic loom for fine fabrics, developed at the Cotton Industry Research Association, and now being put into production by Wilson and Longbottom; the Draper shuttleless loom, an American development of the Sulzer shuttleless loom which promises to be more flexible; and the use of chloride in bleaching processes. All these could reduce cotton production costs, but it would be a bold step to base a re-equipment programme on their use. One technical advantage of large-scale re-equipment, as part of a deliberate rethinking of the industry's role, is that Lancashire's future market will remain domestic: it must buy equipment with that basic market in mind. Modern textile machinery is far more efficient, but also somewhat less flexible, than the old.

How well equipped is Britain's textile machinery industry to meet this Government-generated increase in demand for its products? The two principal companies, TMM and British Northrop, both have some surplus capacity today and consider that they can meet any likely demand. Their doubt is rather whether the scheme will really produce any substantial increase in expenditure on plant. The TMM combine was capable of producing about 1.2 million spindles and ancillary equipment a year in 1946, and despite considerable concentration, involving the closing of several factories and the rebuilding of others, its present capacity has not been significantly reduced. If the most optimistic suggestions, of orders for 3½ million new spindles in the next five years, were fulfilled then TMM's capacity might be strained. No one seriously expects this, but TMM would be embarrassed by a sudden bunching of orders from all companies at once, as soon as the scheme comes into effect. Unless, by then, Hong Kong were persuaded to impose restriction on its exports of yarn to Britain to put heart into Lancashire, this is not likely to happen; and if it did TMM could always lengthen its delivery dates and take on some extra labour.

British Northrop has greatly expanded its capacity since the war. Today it could build about 8,000 to 10,000 looms a year, but is believed recently to have been producing no more than 2,000 to 3,000, some being for wool. Cotton has taken fewer than 2,000 looms a year since the end of the war. This firm has therefore been forced to diversify its output to occupy its expanded factory. In the unlikely event that 40,000 new looms actually were required in the next five years its capacity might be strained. But the company would have no difficulty in meeting the more probable estimates that Lancashire may order about 20,000 to 25,000 looms—which sound optimistic.

Some of the machinery will be bought abroad: rightly, imported machinery will qualify equally for the government grant. Most machinery now imported is of types used to prepare the spun yarn for weaving; American and Swiss equipment is among the best in this class. It can be imported duty-free if it can be shown that no British equivalent is available, though recently the Board of Trade has shown itself hard to convince on this point. Perhaps because of its predominantly horizontal structure, the British cotton industry has tended to neglect the gains in productivity that automatic preparatory equipment can give; lack of demand at home seems the main reason why British preparatory machinery is less advanced than foreign.

In general, British textile machinery seems comparable to that of foreign machinery makers in technical qualities and price; the market for textile machinery is international, and though one company may get ahead in one direction for a while, other companies cannot remain in the market if they do not catch up. The British machinery makers may suffer from a small and largely undiscriminating home market, which gives less incentive to technical progress than some of their rivals enjoy; but their large export sales show that they remain broadly competitive.

An increase in the size of that home market is one thing that the machinery industry hopes will result from the reorganisation plan; knowing how Lancashire's foreign rivals operate, it realises how much would have to be done to bring the home industry level in equipment. But there are few companies in Lancashire that appear capable of employing modern equipment to best advantage: doubts are bound to remain whether the most far-reaching programme of re-equipment will inevitably revive this industry. It needs keener technical management as well as new hardware.

THE MAGAZINE FIGHT

Struggle for George Newnes

It now seems that the News of the World has missed the chance of securing control of George Newnes, the magazine group, for this week a formidable competitor, Odhams Press, has entered the lists with a better bid. The last act of the News of the World (through Hambros Bank which has not been too lucky in recent take-over struggles) was to raise its cash bid by 11s. 6d. to 90s. for every Newnes ordinary share; the directors said that this was their "last word" and that they did not intend to improve upon it. The directors of George Newnes, who own a good number of the shares themselves, turned the original bid from the News of the World down flat. They promised to brood on the second offer; then Odhams came in and now they recommend shareholders to accept the Odhams bid.

The News of the World bid in cash was worth just over £11 million for a group whose gross profits are of the order of £1,600,000. The Odhams bid is equivalent to £12,700,000, but it is partly in shares and partly in cash, with two 10s. ordinary shares in Odhams plus 45s. in cash for every £1 Newnes ordinary share. On the eve of the bid, Odhams shares stood at 27s. 6d., making the bid worth 100s. a share. On the intimation that another bid was coming, Newnes shares had already gained 6s. 9d. to 94s. 3d. and when the details were made known they went up to 95s. but the Odhams shares weakened to 26s. 3d.

To acquire all the 2,467,500 shares in Newnes would involve creating nearly 5 million new Odhams shares—a large addition to the 6,897,142 shares in issue; but the directors say that they would expect to be able to maintain the dividend at 17½ per cent on the enlarged capital. Like the *News of the World*, Odhams itself does not command the liquid resources to provide for the £5½ million cash element of its bid, but presumably Odhams will have no difficulty in securing temporary finance and if its bid succeeds its capital problem should be less formidable than the problem that would face the News of the World if it secured control. Odhams is now bound to make the running: its offer remains open longer than that of the News of the World and it calls for a 75 per cent acceptance whereas the News of the World adopted the more usual formula of 90 per cent, or less at the directors' discretion.

Two Heavyweights

If Odhams secures control of Newnes it will be by far the biggest of the magazine groups. Its directors, indeed, have had expansion in mind for some months. They were on the point of making a counter-bid for Amalgamated Press when the Daily Mirror sought control of that group, and the Daily Mirror had to improve on its original offer to gain the day. A few months later Odhams made a successful bid for the Hulton Press. This concentration of the magazine industry can perhaps be seen as the answer to the competition of television for the public's attention and as an advertising medium. Odhams must prudently expect much more aggressive competition from Amalgamated Press, and the merger with their most powerful existing competitor may in some degree be defensive. But it will hardly make economic sense for the group to grow so big unless it can achieve a corresponding internal concentration of its energies on the big circulation magazines, and that may involve some sacrifice among the less successful ones.

MOTORS

The Marriage Will Not Take Place

For the second time in five years, Standard and Rover "have been unable to reach agreement as to the merger terms which they could recommend their shareholders to accept; negotiations have, therefore, been discontinued." On the other hand, Standard announced this week, good progress is being made in the negotiations for the sale of Standard's tractor producing assets to Massey-Ferguson, for which they now produce Ferguson tractors under contract, and a further announcement will be made as soon as possible. Standard 5s. ordinary shares fell from 11s. 6d. to 10s. 6d. on the announcement that the deal with Rover had fallen through.

With the tractor deal, no doubt, largely in mind, Standard this week also formally separated its car and tractor manufacturing interests, by forming two further wholly owned subsidiary companies, Standard Motor Company (1959) Ltd and Standard Tractor Company (1959) Ltd "for the purpose of taking over and operating as separate organisations" its existing car and the tractor divisions. The original company will continue as a holding company. The announcement says this separation is in line with the "policy of decentralisation" which the directors have been considering for some time as a result of the expansion of its car manufacturing organisation; it may indicate some continued interest in the tractor field.

Standard, in these new circumstances, may receive a substantial cash payment from Massey-Harris for its tractor facilities for the remainder of its contract; presumably the large Massey-Ferguson holding of Standard shares will be dealt with at the same time. Lord Tedder has said that

a small cash distribution will probably be made: but that the money will mainly be used to build up car production. The failure of negotiations with Rover has again frustrated for the time being what would have been a most interesting merger between an efficient medium-sized producer of popular cars in fairly direct competition with the biggest mass producers in the business, and a firm with an exceptional engineering reputation producing a highly saleable overland vehicle plus cars designed and priced for the professional middle classes. On its own, Standard is hoping to increase its car and commercial vehicle production to 175,000 a year by the end of 1960.

BANKING CONTROL

Tasks for Lord Radcliffe

FOUR questions of banking control that are doubtless receiving the attention of the Radcliffe Committee were raised this week by Lord Monckton, chairman of the Midland Bank, in his presidential address to the Institute of Bankers. The lifting of the credit squeeze last year had led him to wonder whether a new chapter was opening in banking history; but he is sure that the relaxation then granted "does not mean that the banks have been permanently liberated from official direction as to their lending operations." On the contrary, they "may have to become accustomed to restraints" that "would have been bitterly resented by our forebears."

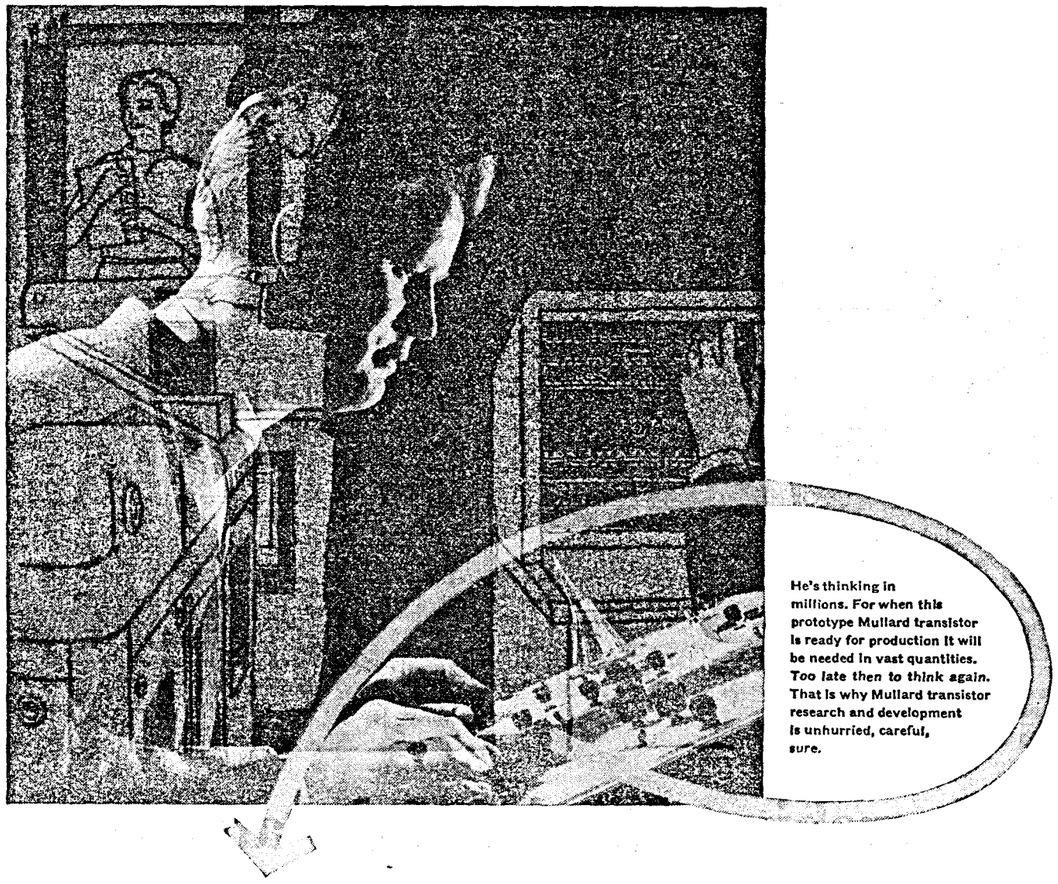
Lord Monckton expresses no opinion upon what form of control may be desirable, but he seems to assume that some supplementation of the "old-style monetary instruments" is necessary. On that assumption, he agrees with most other bankers that there is need to find a method that will not, as did the recent direct controls over bank advances, "have the disadvantage of stultifying inter-bank competition and individual banking enterprise." That is the first problem; the second one, which likewise emerges from recent experience, is to find a way of restricting bank credit that is not liable to be frustrated in some degree by diversions of business into channels not readily susceptible to control. The third problem is to harmonise the workings of all the instruments of economic control, and the fourth is to demonstrate, by appropriate "public relations," the "objectivity" with which the instruments are used. From this analysis of difficulties an evident moral emerges, but Lord Monckton omitted to point it. The more the chosen instruments of monetary control are "market" instruments, the less significant will most of these difficulties be.

BUILDING AND CONSTRUCTION

Signs of Spring

THE volume of building and construction work in Britain fell slightly during 1958, compared with the previous year; total value increased, owing to a rise in overall building costs, to £2,168 million, of which £1,405 million was new work. There are some indications that this performance was matched, if not slightly bettered, during the first quarter of this year. Total new housing starts in the first quarter rose to 71,292, compared with 56,825 a year earlier; while public authorities increased their housebuilding programmes by more than a quarter over the previous period, private housebuilding showed an even greater rise. Houses under construction at the end of the period totalled 239,196, with the biggest increase again recorded in the private sector. However, building employment was lower in both January and February, and was only slightly higher in March, than a year earlier.

The Government's invitation to local authorities to step up their building programmes during this year should mean a rise in this spending of perhaps £50 million, of which rather more than a third will be accounted for by housing. Private industrial building, on the other hand, declined last year, and there is little indication yet that it has turned the corner. Applications for industrial building schemes, however, showed a sharp rise during the first quarter; schemes totalling 15.6 million square feet were approved in that period, an increase of 36 per cent over the first quarter of 1958. This was the highest figure for a year and a half; while many of these schemes are abandoned after receiving approval, individual projects can make a big difference to the figures, so large an increase may indicate that industrialists' expectations have become more optimistic than they were at the end of last year.



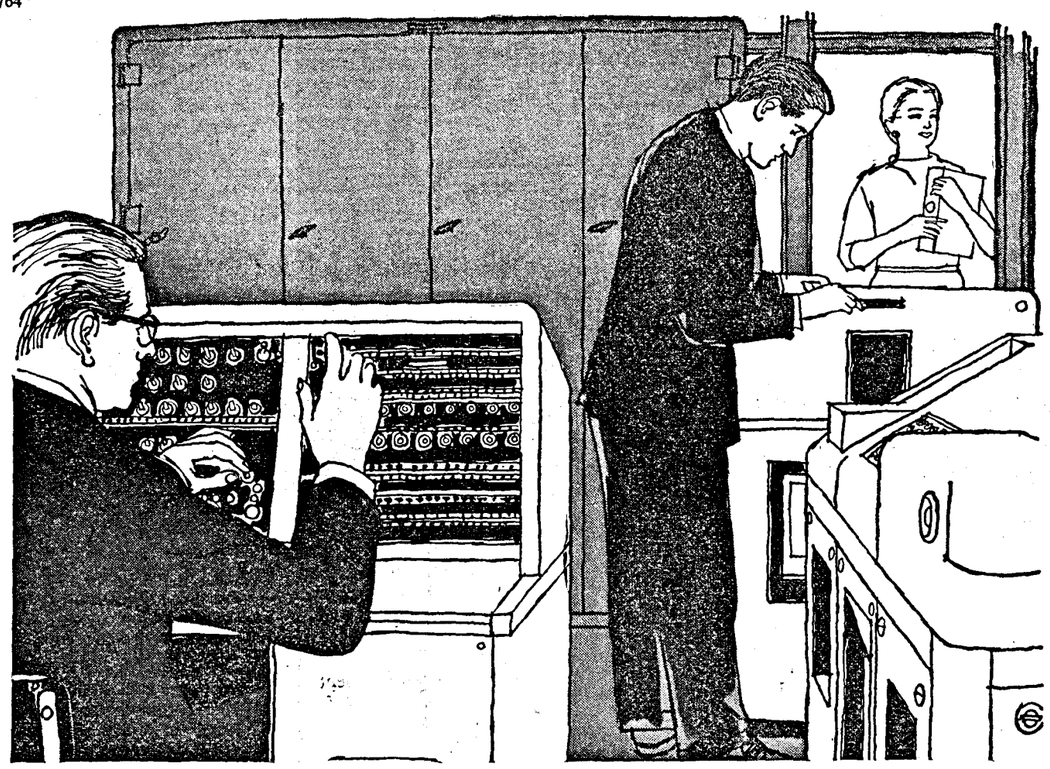
Some indication of present and future activity in the building industry can be had from the demand for building materials, and here also the picture looks brighter. Deliveries of finished steel for building and constructional engineering averaged 23,400 tons a week during the first quarter, which was about ten per cent higher than in the preceding three months, though still substantially below the same period a year earlier. Concrete and cement producers report that demand has been steadily rising during each of the first four months of this year, and has exceeded the same period a year earlier. This may indicate an increase in commercial building, where concrete has probably gained in recent years at the expense of steel; steel, on the other hand, continues to be the most important material in industrial building, which may explain its relatively smaller rise in demand. The increase in housebuilding has been reflected in a sharp upturn in demand for bricks, resulting in deliveries well above last year's level during the first quarter, and particularly the past two months.

BARCLAYS BANK

Too Great Expectations

THE market, having noted the terms on which the other clearing banks have raised new capital, took an optimistic view of the terms at which Barclays Bank would make its rights issue of ordinary stock. Before the details of the issue were announced the shares had been bid up to 66s., to yield 3.64 per cent on a 12 per cent dividend. This, it turns out, will be a one for five rights issue at 40s. per share, to be followed by a scrip issue in the same proportion on the enlarged capital. For 1959 the directors intend to pay a 6 per cent interim dividend on the existing capital and a final dividend of 5 per cent on the capital as increased by the rights and scrip issues, equivalent to 12 per cent on the existing capital plus the rights issue.

These terms came as something of a disappointment. With the shares at 66s., the rights would have been worth 4s. 6d.; but in initial dealings ex rights the price of the old shares was marked down from the equivalent price of 61s. 7½d. to 57s. 9d., putting a premium of 17s. 9d. on the new shares. The price of the existing shares was thus adjusted to a yield basis of 4.15 per cent, which is in line



GOOD FOR A MILLION

In a few short years the whole science of electronics has been transformed by the invention of the transistor, the tiny device that performs a similar function to a radio valve but has the added advantages of small size, low current consumption and almost unlimited life. Transistors are used extensively in a great variety of applications, from hearing aids and pocket radios to computers and guided missiles. Their rapid adoption by equipment manufacturers in Britain is due in no small measure to the Mullard Design Philosophy. From its conception in the laboratory, every Mullard silicon or germanium transistor is realistically designed for large scale production thus giving the equipment manufacturer the assurance of consistent quality and performance, ample and continuous supplies, and low cost.
In this way industry is able to apply the benefits of transistor research quickly, safely and economically.

Searching for the right answer

Data processing continues to play an increasingly important role in the conduct of modern business. Punched card equipment, electronic calculators and computers provide more business information in less time than any other form of office machinery. Users of these methods have always known most about their business soonest.

The widened range of equipment of I·C·T, and its integrated technical development, is rapidly opening up new fields of application. Choice of I·C·T equipment ranges through punched card machines using 21, 40, 80 and 160 column cards—to small, medium and large electronic computers, employing combinations of punched cards, paper tapes and magnetic tapes.

Determining the optimum method of employing data processing equipment is a highly skilled task. I·C·T staff are experienced in these matters; their knowledge and experience have proved valuable to enterprises of widely divergent character and size, from firms employing under 20 people to corporations of international repute, local authorities and nationalised industries. They can help you.

If you think your research, production, marketing or financial affairs are capable of improvement there are well established reasons for believing that the combination of I·C·T staff, equipment and training will provide you with the right answer. We suggest you get in touch with us.

with the yields obtainable on other bank shares. After the rights issue (which will raise £11,123,828) and the scrip issue, Barclays' share capital will rise from £28,576,617 to £40,812,828 and its published reserves will fall from £21,000,000 to £19,887,617. Thus the ratio that capital and reserves bear to the latest available figure for deposits will rise from 3.32 to 4.06 per cent.

ADVERTISING

Commercials Cover the World

TEN years ago one could advertise one's goods over television only in the United States, Brazil, Cuba and Mexico; today, according to a new international directory* of commercial television published this week, the advertiser can reach 240 million people in 32 countries, and its authors reckon that in ten years the viewing audience for commercials may reach 360 million. Outside the United States and Britain, coverage is often restricted to regions surrounding the capital city; but from the point of view of hard selling, this may not matter, because that is where the buying power is concentrated, too. The price varies immensely; a half-minute "spot" reaching 300,000 sets at peak hours costs from £550 in one country to £20 in another. But the nature of the commercial announcements offered varies too: in Germany, for example, the state broadcasting chain sells advertising time, but packs it in between 7.25 pm and 8 pm every day (though a second television network, which may be run by commercial companies, is being considered).

Few other countries, as yet, seem to take commercial television with the elaborate seriousness that British companies have borrowed from the United States: not many, for example, have set up the complex audience measurement systems such as are conducted by Intam Ltd, one of the publishers of this new directory. And where television time is cheap, few advertisers bother to produce the expensive announcements used in this country, where about £800 may be spent on a 30-second live motion film, roughly as much as it costs to transmit it once at peak hours from London. In Latin America, at the other extreme, the low price of broadcasting time is often matched by inexpensive production of announcements, which may be no more than a jingle borrowed from commercial radio and sung in front of a stage backcloth.

COTTON INDUSTRY

Compensation for Workers

THE cotton spinning and weaving unions have now reached agreement with the employers on the broad terms of compensation for workers who lose their jobs when mills are shut down under the government-assisted reorganisation scheme. The government made its offer of help conditional upon the employers undertaking to compensate displaced workers. Such schemes exist in other industries, such as coal mining, but none have been worked out in similar circumstances. In cotton, entitlement to compensation will be graduated according to age, on the assumption that this is a reasonable guide to length of service since full records are not available.

The scale of payments, given in detail in the table, provides eleven weeks' wages for workers aged 45, 17 weeks' wages for workers aged 55, and a maximum of 30 weeks for workers aged 65 and over. Unemployment will be heaviest in mule spinning, where the work is done by men and the average age is higher than in ring spinning, where women are employed. Taking as a guide the average weekly wage of about £13 in mule spinning, a 55-year-old worker would receive £221 in compensation, and a 65-year-old worker £390. The average weekly wage in ring spinning is about £8 and in weaving nearly £11. The money will be paid by instalments; if a worker obtains another job at the same wage compensation will cease, and if the new job pays less than the old one the difference will be made good during the remaining weeks of compensation. Full details have still to be worked out. It is assumed that compensation will not affect entitlement to unemployment relief, and though payments will not be made in a lump sum it is understood that they will not be liable to tax.

Age	Week's wages due	Age	Week's wages due
21–23	1	51–52	15
24–26	2	53–54	16
27–29	3	55	17
30–32	4	56	18
33–35	5	57	19
36–38	6	58	20
39–40	7	59	21
41–42	8	60	22
43	9	61	23
44	10	62	24
45	11	63	26
46	12	64	28
47–48	13	65 and over	30
49–50	14		

The scheme raises two questions. Should compensation cease or be reduced when a worker gets another job? The treatment of labour should be on the same footing as capital. Shareholders in mills that are compensated for closing down will be able to put their capital to work elsewhere, and an executive is compensated for loss of office irrespective of subsequent employment. A worker who subsequently obtains the same kind of job—sometimes in the same firm—may suffer no loss of expectation, but people who have to take different jobs will. This scheme confuses a severance payment of compensation with a kind of supplementary maintenance provision during unemployment: the two should be kept separate. Secondly, it seems inequitable that a 50-year-old worker should receive less than half as much compensation as one of 65. The latter's expectations are much shorter, and his domestic commitments probably smaller, than those of a man of 50.

NEW IMF QUOTAS

Britain's Subscription

THE gold and convertible currency reserves will be drawn down this month by £58 million to meet the gold portion of the increased British quota to the International Monetary Fund. Britain's contribution to this increased quota, in addition to the £58 million in gold, will amount to £174 million in sterling, which will be held in the United Kingdom in the form of interest free notes. The result will be to give the United Kingdom a new quota with the IMF of $1,950 million, 50 per cent above the present figure of $1,300 million.

Although the gold portion will come out of the reserve it will be automatically and unconditionally available to the United Kingdom if it wishes to draw it from the fund in whatever currency it chooses. The IMF rule is that within its gold tranche a member has the right to draw currencies from the Fund without question. The gold will thus be available at one remove and the transfer, which probably

* *The Intam Data Book on International Commercial Television.* Prepared by Intam Ltd in association with LPE Television Ltd.

involves no physical move of metal, will involve no weakening of the reserve behind sterling. Indeed, since the increased quota beyond the amount of the gold tranche will in due course be available to Britain, it can be looked upon as a source of strength.

The increase in IMF subscriptions is also likely to involve a further withdrawal of gold from the published UK reserve when other members of the sterling area pay their increased subscriptions. The precise amount of the transfer has yet to be calculated, but the Chancellor of the Exchequer in his budget speech estimated that these payments by other sterling area countries might involve a further £40 million from the published gold reserve.

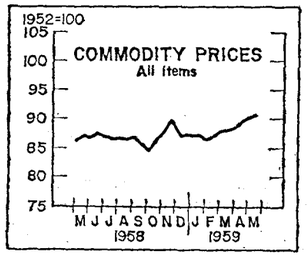
OIL

Secure Supplies, Insecure Prices

"POTENTIAL oil supplies from various areas, including entirely new areas, have never in the history of the industry been at a higher level than at present, and the surplus world tanker capacity in spite of the financial problems to which it gives rise, does provide a considerably greater flexibility in supply and transportation than has ever existed before." Summing up the state of the world oil business at present, Lord Godber could in his remarks at the annual meeting of "Shell" Transport & Trading, point out that the world oil surplus, which had to some extent been brought about by a deliberate diversification of supplies following the Suez incident, should answer most questions about security of future oil supplies to Europe. Mr Nickerson of Socony Mobil Inc. had made much the same point in New York this week, when he noted that demand for oil in the free world had almost doubled between 1948, but potential supply had increased two-and-a-half times. This had had a depressing effect on prices, but the fact that two-thirds of the free world's known oil reserves were concentrated in the Middle East made it "prudent and desirable" for oil men to go on finding alternative reserves.

Security of supply through the development of new sources, however, means pressures on the industry's profit margins, even though demand for oil is now recovering its accustomed rate of advance. Lord Godber said that the volume of Shell group sales in the first quarter of this year had been substantially higher than in the corresponding months of 1958 (when recession was already affecting sales); but "strong competition for markets continues to prevail."

COMMODITIES



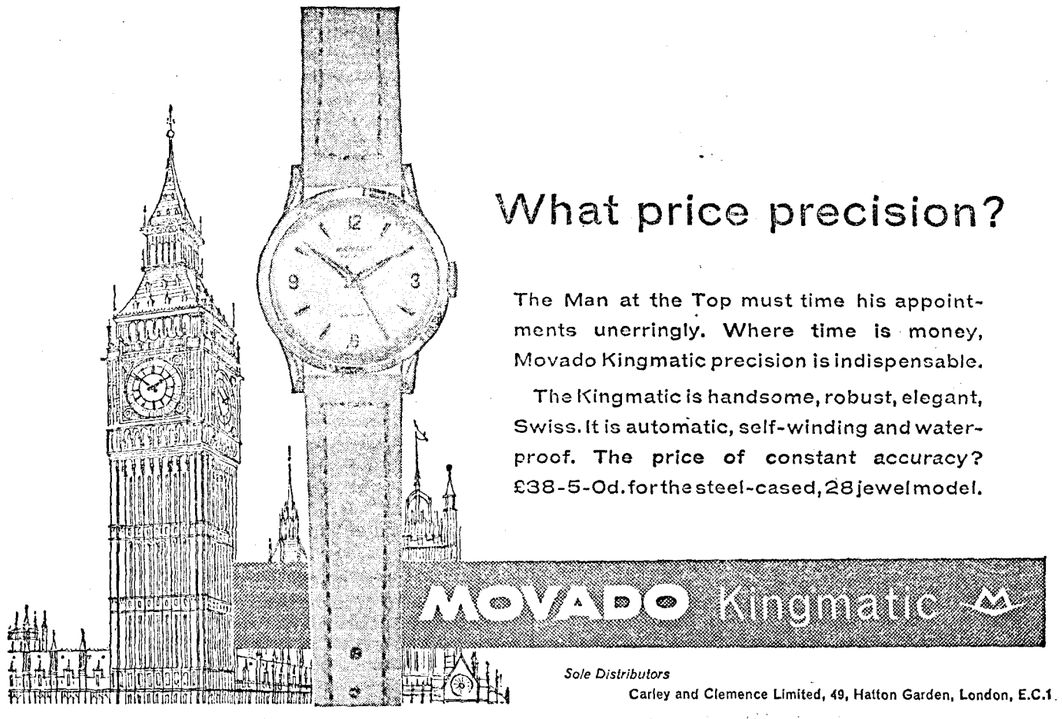
Recovery on a Broad Front

COMMODITY prices are still creeping up on a broad front. *The Economist* commodity indicator now stands at 91 (1952=100), four per cent higher than at the beginning of the year and eight per cent above the October trough, its lowest point for over nine years. Five items are mainly responsible for the recovery. Sisal and copra have risen by 40 per cent and 35 per cent respectively since the beginning of October; rubber has risen by over one-quarter and wool by one-fifth. Zinc is 15 per cent higher, tin and copper are dearer on balance, while lead is almost unchanged. Cotton prices have rallied recently and jute is up. Among the grains, maize has become dearer, while wheat and barley show little change. Tea and cocoa are higher, but coffee is down. Sugar, after a brief rally, has fallen back.

HOW PRICES HAVE MOVED

	Oct. 7	Jan. 2	May 20		Oct. 7	Jan. 2	May 20
	£ per ton				d. per lb.		
Copper...	220	220	237	Rubber ..	24½	24½	30
Lead	72	72¾	71	Cotton ..	25¼	23¾	23¼
Zinc	66¾	75	78	Wooltops	90	90	108
Wheat ...	27½	28¼	27½		s. per cwt.		
Maize	19½	21¼	21	Cocoa ...	275	306	295
Sisal	72	80	100	Sugar....	30¾	32	26¾

With the prospect of further industrial expansion in the United States and Europe commodities may continue to rise. But any further advance may be modest and on a narrower front. In all the major non-ferrous metals there is still a surplus of production capacity if not of current supplies. The surplus of copper in the United States has been absorbed because consumers have been buying in anticipation of a strike in the mining industries, but in the rest of the world producers' stocks have risen. Supplies of some agricultural products, especially wheat and maize, coffee and sugar are far in excess of requirements, and prices are held up by government action. Supplies of wool, in contrast, seem in reasonable balance with consumption and copra is short. The strength of rubber prices reflects the increase in free world consumption and heavier buying by the Communist countries. Prices of both rubber and copper have recently been affected by reports of possible sales from the United States strategic stock, though it now seems clear that nothing will be offered for sale this year.



SHIPPING

Freight Rates Flat

ALTHOUGH the Chamber of Shipping index of tramp voyage rates for April at 68.6 (1952=100) showed an increase of 3.5 points over the previous month, it is still below the level of January and the last quarter of 1958. The same is true of the time charter index, which declined by 0.8 points in April. In the first two weeks of May rates again hardened slightly, but this may be due partly to pre-Whitsun holiday activity and partly to a growing preference for shipowners to lay their ships up rather than to continue accepting rates that show no profit. A determined effort on the part of tramp shipowners to do this would certainly accentuate the effect, but owners would probably come rushing back to the market immediately rates became profitable. There has been discussion of stabilising the market by means of a compensation scheme for laid-up tonnage, but so far this appears to have defeated all attempts to introduce one.

Tanker markets have been following much the same pattern. Charterers are beginning to find that owners are no longer prepared to accept cut-price figures for prompt fixtures and would rather withdraw their ships from the market. Alternatively, quite a number of tankers have found employment in the grain trades, in which they can seriously

WE'RE USING WOMEN'S WEEKLIES THIS YEAR, BUT FIRST ON OUR LIST IS THE RADIO TIMES

Whatever other media we decide to use we always head our list of publications with the RADIO TIMES.

Our product is for the housewife. By advertising in 23 women's weekly publications we can reach, without duplication, approximately 68% of them. But the Radio Times alone covers 55% of all housewives in the country—a far greater proportion than any other single publication.

Obviously the Radio Times must come first on our list. With Radio Times and even only two women's magazines, we reach 74% of the country's housewives.

* *Figures based on a special tabulation carried out by the I.P.A. fieldwork period—January-December, 1958.*

undercut dry-cargo tramps while still showing a profit on operating costs. This is a further factor that helps to undermine dry-cargo tramp freight rates. Unless there should develop a totally unexpected increase in demand for oil, ores and other commodities, it seems that it will be a long time before the overall surplus of tonnage, both dry-cargo and tanker, can be absorbed. The tonnage on offer is still being continually swelled by new deliveries from the shipyards, although these may soon begin to tail off for dry-cargo ships.

INSURANCE

End of the Season

With the publication of the accounts of the London Assurance and the Guardian, the 1958 results of all the major insurance companies are now known. The London Assurance has made a good recovery from the heavy underwriting losses which it suffered on fire and accident business in North America in the previous two years. This loss fell sharply from £1,644,000 in 1957 to £383,000 last year and after charging overhead expenses and allowing for tax credits, the non-life business virtually broke even. The dividend, which has been maintained at 45 per cent, is well covered by non-life interest income. The Guardian converted a fire and accident underwriting loss of £95,000 in 1957 into a profit of £661,000, but there was again an overall loss on non-life business after charging overheads and taxes. Net non-life interest income rose from £1,187,000 to £1,445,000 and covered the dividend, which has been stepped up from 45 per cent to 52½ per cent, with enough margin to increase the carry forward by £362,000 after meeting the net underwriting loss.

Last year's fire and accident business of the twenty-three leading groups of British insurance companies brought in premiums of £646 million, an increase of £30 million on 1957. Underwriting profits in the fire departments, before charging overheads and tax, were £7.2 million, compared with £2.5 million in 1957, and accident insurance showed a loss of £2.2 million, compared with £3.5 million in the previous year. The cautious comments of the chairmen of the insurance companies suggest that there may be a further modest improvement this year.

PORTS AND TRANSPORT

Moving into Consolidation

The take-over bid recently made for Bristol Industries by the Transport Development Group, if accepted, will make Transport Development, a holding company, one of the largest private entities in the combined businesses of transport, lighterage and warehousing in Britain. The terms of the formal offer, which is expected to be made in the near future, include cash and Transport Development shares worth a total of £913,000 in exchange for the 880,000 ordinary shares of Bristol Industries; success of the offer would add net assets attributable to the equity of around £750,000 to the £1¼ million worth now owned by Transport Development. In addition it would mean that the company is represented in virtually every area of England, and in every major port, in the fields of haulage, storage or lighterage. In recent years this group has grown considerably through acquiring operating companies in these fields; its net assets have more than doubled in the past five years, and it now includes 21 companies—22 if the Bristol bid is accepted—in England and Wales. All are wholly owned, and all but two have been private companies; they have continued to operate under their own names since their acquisition, although there has been some revision of management, in addition to the supplying of new capital and the introduction of some economies of scale by Transport Development.

This bid underlines a tendency which has been more or less noticeable in all three fields—haulage, lighterage and storage—in recent years: the small, often "one-man" companies in these industries are slowly being replaced by larger concerns. Many of these smaller firms, one suspects, sold out at a time when they were threatened by death duties or otherwise ready to go out of business anyway, so that the net size of the industries remains almost unchanged. Transport Development now operate something less than 1,000 road vehicles, which is small compared to the 16,000 owned by British Road Services but is nonetheless roughly twice the size of its nearest private competitor. The private independent hauliers' biggest competition, however, comes from "C" licensed vehicles, which now number about 1,100,000, and are still the fastest-growing section of the industry.

In lighterage and storage at Britain's ports, the picture is the same: 5-6,000 lighterage craft operating at the Port of London, which account for about three-quarters of the total in Britain, are increasingly owned by big companies such as Corey's, who handle mainly "rough goods" such as coal, and Transport Development, who are one of the contractors for general lighterage to the Port of London. Small firms or individual operators do not seem able to meet the increasingly heavy capital costs of replacement and expansion; there seems little reason to doubt that such consolidation will continue.

ELECTRONICS

Semi-Conductors Grow Up

Semi-conductors are a group of materials, notable among them high-purity germanium and silicon, which can be used to amplify or rectify electric currents, as ordinary electronic valves can be. The transistor, best known of the "solid-state" devices that employ these materials, can do most of the jobs of a valve while taking far less space, less power, and without becoming hot while working; it is also far more robust. Over recent years (it was invented only in 1948) it has steadily been taking over from valves in a growing range of electronic equipment; its development was signalled this week by an International Transistor Exhibition in London. Many companies in the electrical industry have by now followed the valve and radio makers, who were the first in the field; they are generally more interested in rectifiers and other semi-conductor devices of this type than in transistors themselves: Associated Electrical Industries, English Electric, Lucas and Plessey are among the companies involved.

Another reinforcement to production here has come from the establishment of companies that either use American experience, or are the subsidiaries of American companies; International Rectifier and Texas Instruments are recent additions to this class. Semi-conductors are one of the few products on which imports from the dollar area are

still subject to import licensing ; as a licence is only granted if there is no British equivalent available, only those few types in which the Americans are ahead of British makers can be imported. There are now altogether nineteen companies making semi-conductors in Britain, of which only eleven make transistors themselves. World production is growing fast and is expected to reach 100 million transistors alone this year. About a quarter will be made in Britain ; some 60 per cent of these will go into radio sets and hearing aids, and the remainder into varied industrial uses, of which military equipment is one of the most important. Computers are expected to use many transistors in the future, because of the great saving in power and heat they offer ; industrial uses in general are those expected to grow fastest in the future. Reliability and long life are more important in industrial uses than in the home ; hence it is better to use a new device in the latter until its reliability is proved.

The production costs of transistors have fallen by over 50 per cent in the last five years, and some further fall is expected in the future. The main factor preventing a further fall in production costs is the manual labour involved in assembly, so its mechanisation should make for a considerable reduction of cost, as the mechanisation of earlier stages in the production process has done. But the rapid technical development of the product makes elaborate tooling uneconomic. The semi-conductor makers find themselves in the position of other manufacturers in technically-advancing industries, who have to use relatively primitive production methods because the product is constantly changing ; and because they are using these production methods they cannot reduce the cost of the product as much as they otherwise could.

World Nitrogen Surveyed

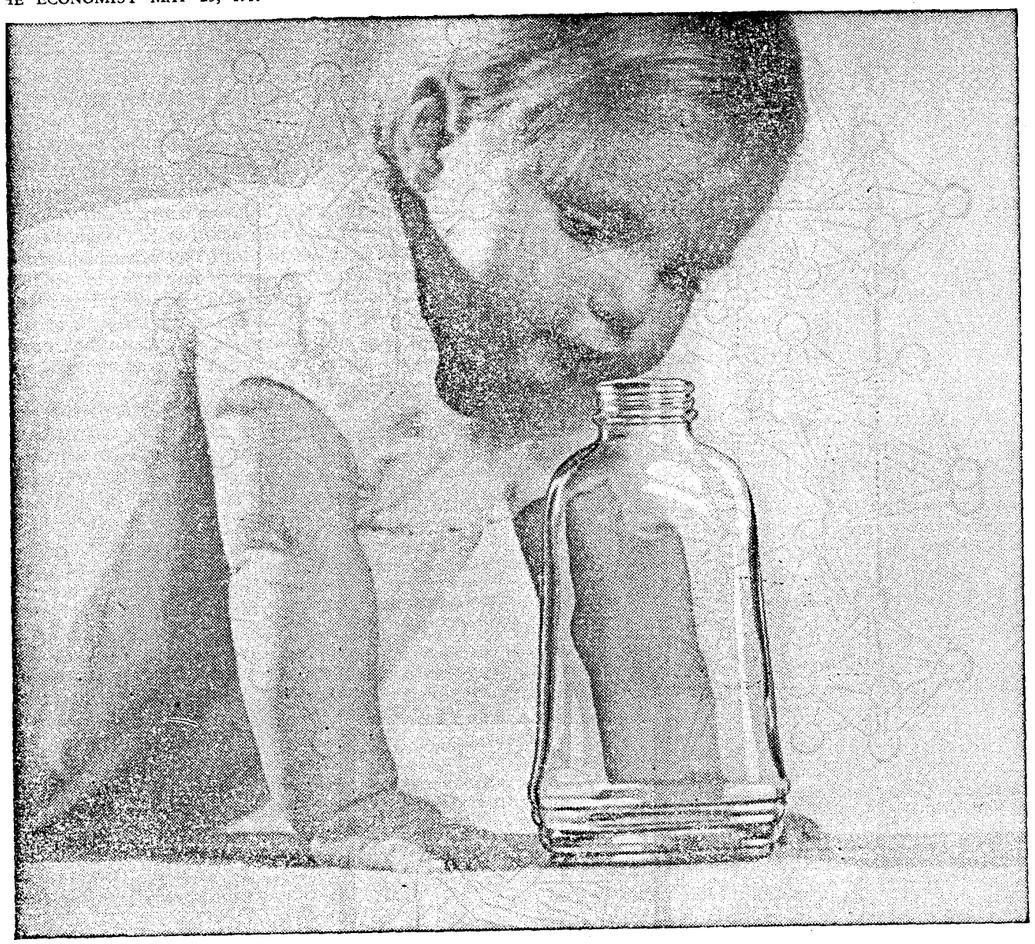
THE world's nitrogen industry today represents a total capital investment of about £1,000 million, with a total annual production capacity of some 11 million tons, from which about 9 million tons a year are at present being produced : five-sixths of this is used in the form of nitrogenous fertilisers, while the remainder comprises a rapidly growing range of industrial uses. The past twenty years—an outstanding period in the industry's growth—have been marked by two features. First, North America, where production has grown five-fold, has emerged as an exporter of considerable size (although still ranking second to Europe in both production and consumption) ; second, the growth of capacity and economics of ammonia manufacture have brought a shift from coal and coke as source materials towards fuel oil, refinery gases, and natural gas.

Ammonia synthesis is the principal method of manufacture today, and about 350 synthesis plants in operation account for about 80 per cent of world capacity, the rest coming from calcium cyanide, Chilean nitrates, and by-product facilities. Prior to 1939, over 90 per cent of the world's ammonia synthesis capacity was based on coal and coke; today, according to *Nitrogen*, an informative new quarterly review of the industry published by the British Sulphur Corporation, it is based as follows :

	Per cent
Natural Gas	31
Fuel Oil	15
Refinery Gases	9
Coal and Coke	40
Other	5
	100

This technological change, freeing the industry from a necessary dependence on economic supplies of coal and coke, has made it possible to locate plants in countries which, though having a large demand for nitrogen and its products, were previously forced to import them. Total demand has risen simultaneously, however, with the result that world trade in nitrogen has increased to about 2 million tons a year, roughly 2½ times the prewar level.

What the industry calls the "nutrient ratio" for fertiliser materials has moved in favour of nitrogen in recent years, bringing its share up towards parity with phosphates and potash, though this trend has been less marked in Western Europe than elsewhere. Ammonium sulphate now accounts for 30 per cent of world consumption of nitrogenous fertilisers, but ammonium nitrate is now being used in increasing quantities : these two between them account for over half of the total. In addition, ammonia is applied directly to the soil, either in anhydrous form or mixed with water, although this usage is still mainly confined to the United States.



Consumption of nitrogenous fertilisers has doubled in Western Europe since before the war, owing to an increase in agricultural production per unit of land and government policies of fertiliser subsidies. Europe still produces, uses, and exports more nitrogenous materials than any other area, though the American industry has been expanding more rapidly. In spite of remarkable progress in Asia in recent years, it is estimated that 96 per cent of the arable land in China is now deficient in nitrogen, and "potential demand" is at least as great in India, where prejudice against the use of organic manures makes the use of synthetic materials all the more important. At present there is a surplus of capacity in the West ; the reverse is true in Asia and the Communist block.

Industrial uses account for about one-sixth of total world consumption of nitrogen, chiefly as ammonia, nitric acid, urea and ammonium nitrate. The largest tonnage of ammonia used in industry is consumed in processing of paper pulp, though it is also finding considerable application in the oil industry, where it is used in the making of catalysts and in neutralising the acid content of crude oil. Explosives remain another important outlet, particularly for ammonium nitrate and nitric acid, and urea is becoming more widely used in industry, especially in the manufacture of plastics.

Although Western Germany is still the biggest producer and consumer of nitrogen in Europe, demand has risen rapidly in Britain in the years since the war, and is now about five times as great as in 1939 ; the chief producer in Britain is ICI's Billingham Division. Shell Chemicals' new plant at Stanford-le-Hope, on the Thames Estuary, which was opened this week, will produce 75,000 tons of anhydrous ammonia, as well as nitric acid and Shell's ammonium nitrate/chalk fertiliser "Nitra-Shell." Another date of at least potential importance is set for the British industry sometime this summer : chemical fertilisers are to be the subject of a forthcoming report of the Monopolies Commission.

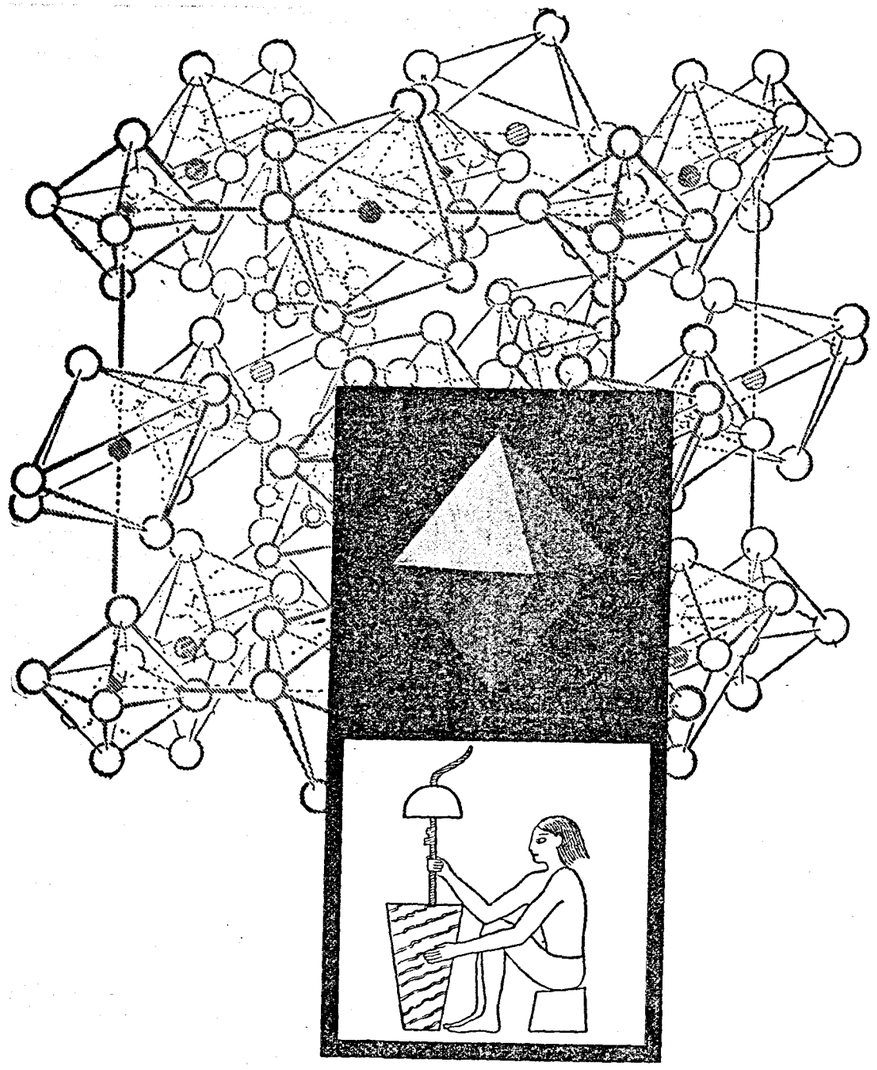
Is your baby discovering the glass age?

TODAY'S BABY grows up in a world of glass. Many of his foods, drinks and medicines come in it. No wonder! Only glass is pure enough – and mothers know it. Glass never affects what's in it. It's clean – and you can *see* it's clean. It makes the most hygienic containers of all.



More manufacturers are choosing glass

Manufacturers of all kinds of products – for grown-ups as well as babies – are using glass containers more and more. United Glass Ltd. give them the service they need. Their facilities now include the Glass Packaging Advisory Bureau, set up to solve the manufacturer's problems and to develop new packaging for him. If you could use glass in your packaging, please get in touch.

UNITED GLASS

Britain's leading makers of glass containers

United Glass Ltd., 8 Leicester Street, London, W.C.2. Telephone : GERrard 8611. Telegrams : Glaspak, Lesquare, London

The earliest chemical industry

Naturally occurring alum has been used by mankind for over 4,000 years. The ancient Egyptians used alum for fixing dyes or mordanting, but this was only the first of many applications. Later it found use in medicines, in tanning, and in the treatment of parchment. Eventually it was realised that such treatment of parchment facilitated the application of ink and pigment, anticipating the present-day use of alum in the sizing of paper.

ASHDOWN INVESTMENT TRUST

New Wine in an Old Bottle

THE Ashdown Investment Trust, under the chairmanship of Mr C. H. Villiers, a managing director of Helbert, Wagg and Company, plans to make offers of its ordinary shares to the public, with the object of combining the advantages of an orthodox investment trust with the marketability of a unit trust. It is hoped that this move will help to provide the ordinary investor with easier access to the restricted market in investment trust equities. To be fair to the existing shareholders in Ashdown Investment Trust and to make the issues acceptable to new investors, the directors have evolved a new formula for calculating the issue price. This will be based, as in a unit trust, on the market value of the underlying securities, after allowance for the trust's own prior charge capital and also for the dealing cost of investing the new money in securities.

As at May 1st, this calculation would have put a price of 16s. 7½d. on the Ashdown 5s. ordinary shares, compared with a net asset value of 15s. per share and a slightly lower market price. The ordinary dividend is being raised from 12 to 13 per cent, which will raise the level of distribution to 90 per cent of available income ; the prospective yield on the calculated price is accordingly 3.9 per cent.

As the Ashdown Investment Trust will be run in the normal way, the investor will continue to enjoy the advantages offered by gearing, the retention of some earnings and a widespread portfolio. The real innovation of this scheme, provided that the first offer of between two and three million shares proves a success when it is made in June, is that further offers (these will be broadly equivalent to a unit trust block issue) will be made from time to time. New investors will be asked to pay a premium over break up values, but it is hoped that the easier marketability of the Ashdown units will give them some incentive to do so.

TEA PRICES AND SHARES

Advance Peters Out

THE recent advance in tea and tea shares has petered out. In the London auctions this month prices of all but the best qualities of tea first fell by a penny or two and then held steady. There was less competition for plain tea, and the quality of the medium grade Assam teas had declined. Nearly all the tea offered in London from the 1958 crop in Assam and other districts in North India has now been sold. Despite the recent rise in prices, most producers have not fared so well as in the previous season. For North India, the largest tea-growing region, the average price realised in London so far this season is just over 4s. 8d. a lb, nearly 3½d. a lb below the 1957-58 average. Owing mainly to less favourable weather the quality of the crop was not quite as good as before ; output was somewhat higher, and buyers had little difficulty in covering their needs. Producers of plain tea in North India, already working on exiguous margins, have been further squeezed. The average price realised in London by producers in the Dooars this season is 3s. 9½d. a lb, over 1d. a lb below the average for 1957-58, and the average for Cachar, another plain tea district, is 3s. 4½d. a lb, 1½d. a lb below the 1957-58 average.

The plight of the plain tea producers is illustrated by the 1958 results of the Aitheel Tea Company in Western Dooars. While production rose by 108,000 lb to 1,273,000 lb and sales proceeds by £20,500 to £187,000, costs increased and the company made a loss of £20,352, compared with a loss of £1,615 in 1957. The *Financial Times* index of tea shares, which opened the year at 87.2 and reached 99.3 on May 6th, has since dropped to 97.1.

CIBA (ARL) LTD

How to Run a Glue Factory

IT is not uncommon for a company to begin doing one thing, and to find itself eventually doing something quite different. But the transition from doing sponsored research in aircraft and aeronautics to manufacturing synthetic resins, adhesives, and aluminium honeycomb is perhaps a bigger one than most: this has been the history of Ciba (ARL) Ltd, which celebrated its 25th anniversary this week. The company was founded in 1934 by Dr N. A. de Bruyne, and was originally called Aero Research Limited ; its association with Ciba of Basle began in 1947, when the Swiss company bought control of Aero Research, and the present name was adopted last year. But the company's entry into the glue business had come ten years earlier, when it had been the first company to make and sell urea-formaldehyde adhesives in Britain. At this time Dr de Bruyne had decided that Aero Research needed some kind of (literally) pot-boiling activity to give some financial stability to its research activities. The company had done research for both De Havilland and the Air Ministry before the war ; but by 1941 it had become evident that if it was to survive as a purely research organisation either Government control or a profitable sideline would be necessary. Dr de Bruyne chose the latter, and from that time on Aero Research was primarily in the glue business.

It seems fair to say that Aero Research's progress has been due at least in part to remarkable serendipity: its site near Duxford was found as a result of a careful search of the "For Sale" columns of the Cambridge *Daily News* by Dr de Bruyne, who was in fact looking for a bandsaw. He bought the land because it was "flat, cheap, near Cam-

bridge, with ample water underground and electric wires" —although the electric wires were a nuisance, since he wanted the land for an aerodrome (the company's first articles of association empowered it, *inter alia*, to operate dirigibles). Experiments with reinforced plastics and synthetic adhesives ultimately produced "Aerolite" urea-formaldehyde glue, the "Redux" process of metal-to-metal glueing, and "Gordon Aerolite," a flax-reinforced resin plastic, used in several aircraft.

After the alliance with Ciba, Aero Research began production of "Araldite" epoxy resins, which had been originally developed by Ciba, and continued to make the urea and melamine resins it had developed before the war, including "Aerolite" and "Redux." In 1954 the company began making aluminium honeycomb core material, which is widely used in a number of aircraft, including the Avro Vulcan. The total capital invested in Ciba (ARL) now exceeds £1 million; this week the company formally opened a new plant for the production of "Araldite" epoxy resins, a new research block for fundamental research, and an extension to its sales offices at Duxford.

SHORTER NOTES

Retail sales in April, stimulated by the budget, rose 6 per cent above their value a year before, and since prices are hardly changed, the volume of goods sold went up roughly as much. April 1958 included the post-Easter week, which is bad for trading, but even so there was clearly a genuine and marked upturn in sales—which in March and April had been little better than a year before.

* * *

Hire purchase and other instalment debt for durable goods is estimated by the Board of Trade to have risen by £27 million in March to a total of £671 million. Finance houses accounted for £23 million of the total, shops for only £4 million. Seasonal buying of cars accounted for much of the rise; thus the increase should be even greater in April when record sales of cars on hire purchase were recorded.

Trading profits of £5,747,000, dividend and interest income of £1,324,300, and consolidated net profits of £3,789,700 are announced by Daily Mirror Newspapers for the year to February 28th. Trading profits of the parent company rose strongly from £1,438,000 to £2,252,300, while income from dividends and interest was £192,700 higher at £1,075,200. As the directors announced when they made their formal offer for Amalgamated Press last December, the new shares then issued do not rank for the final ordinary dividend of 15 per cent. The total ordinary dividend, as was then forecast, is 25 per cent, against 19¼ per cent in 1957-58.

* * *

A widening scheme costing £3 million was completed this week on the Eastern Region of British Railways, removing what had previously been a serious bottleneck on the Great Northern Line. The work involved the construction of three new tunnels near Hadley and Potters Bar, and the rebuilding of two stations on the line with four tracks instead of two, as had previously existed. An immediate improvement in journey times on this line is promised by British Railways; when electrification is completed in the (unspecified) future, it promises commuters using this line "the fastest suburban service in the world."

* * *

The net revenue of the Estate Duties Investment Trust rose from £101,731 to £115,027 in the year to March 31st but the chairman, Lord Piercy, says that this advance would have been greater had it not been for lower rates of interest on short term deposits. However, the revenue on certain investments particularly in textile companies, declined and in a few cases losses were recorded. Textiles represent 16.6 per cent (against 15.8 per cent) of the portfolio, investments in engineering, shipbuilding and electricals 16.7 per cent (against 18.9 per cent) and in distribution 16.2 per cent (against 10.7 per cent). The trust now has 83 investments, largely in private companies. Edith's ordinary dividend is left unchanged at 7½ per cent.

* * *

British Titan Products has completed a £2 million extension to its titanium pigment plant at Grimsby, which will bring total capacity up to 70,000 tons of titanium dioxide a year. This white pigment, which has exceptional covering power and durability, is the main tonnage user of titanium ores such as ilmenite and rutile: its cousin the light metal has more fame but so far earns less money.

* * *

Marshal Zhigarev, head of the Russian airline Aeroflot, who visited Britain this week, confirmed that his line is interested in the Decca short-range navigational aid fitted to a large number of British aircraft. He was also expected to see a demonstration of the automatic landing system developed by the Blind Landing Experimental Unit of the Royal Aircraft Establishment at Bedford.

ABRIDGED PARTICULARS.

Application has been made to the Council of The Stock Exchange, London, for permission to deal in and for quotation for the whole of the issued ordinary share capital of the Company.

THE CHARTERHOUSE GROUP LIMITED

(Incorporated under the Companies Act, 1929)

SHARE CAPITAL

Authorised :		Issued or being issued :
£1,000,000	in 4¼ per cent. Cumulative First Preference Shares of £1 each ...	£1,000,000
£4,000,000	in 6 per cent. Cumulative Second Preference Shares of £1 each	£1,500,000
£10,000,000	in Ordinary Shares of £1 each	£6,089,000
£15,000,000		£8,589,000

OFFER FOR SALE
of
4,000,000 Ordinary Shares of £1 each at 28s. per share
by The Charterhouse Investment Trust, Limited
PAYABLE IN FULL ON APPLICATION

The List of Applications will open at 10 a.m. on Friday, 22nd May, 1959, and will close on the same day.

The Offer for Sale shows, *inter alia*, that :—

1. Although the Company's issued capital has been increased from time to time since its incorporation in 1934, only the Second Preference Shares have so far been quoted on The Stock Exchange, London.
2. Since the end of the last war several new activities have been added to the Company's original one of providing capital out of its own resources for industrial concerns in need of development finance. The company is now in course of becoming a holding company controlling seven direct subsidiaries :
   Charterhouse Industrial Holdings Limited to hold controlling interests (in addition to prior charges) in nine industrial and commercial subsidiaries.
   Charterhouse Industrial Development Company Limited to hold minority equity interests and/or prior charges in 72 industrial and commercial companies.
   Charterhouse Finance Corporation Limited, established as an issuing house in 1938.
   S. Japhet & Co. Limited, established in 1896, provides a comprehensive merchant banking service.
   Glanvill, Enthoven & Co. Ltd., insurance brokers, founded in 1902.
   Charterhouse Canada Limited carrying on in Canada business similar to that of Charterhouse Industrial Development Company Limited.
   Holcan Estates Limited owns houses rented to directors and members of the Staff.
3. The shares in this offer comprise 3,000,000 new shares which The Charterhouse Investment Trust, Limited has contracted to subscribe and 1,000,000 old shares constituting part of the Trust's equity holding which will, as a result, be reduced to 560,000 Ordinary Shares. The present intention of the Trust is to retain a holding of not less than 500,000 Ordinary shares.
   Net proceeds of the issue will provide £4,050,000 which will repay present indebtedness to the Company's bankers with whom arrangements have been made to provide further overdraft facilities to enable the established policy of development to continue.
4. For the current financial year consolidated profits after all charges except bank interest and taxation, and excluding profits retained by S. Japhet & Co. Limited, should be not less that those for the year ended 11th November, 1958, namely £1,309,358. In this event the Directors would recommend a dividend (payable in April, 1960) of 7½ per cent. on the enlarged Ordinary Share Capital. The Directors feel confident that so long as trading conditions generally do not deteriorate, the Company's growth should continue.

Copies of the Offer for Sale, on the terms of which alone applications will be considered, and Forms of Application are obtainable from :—

Lloyds Bank Limited, Issue Department, 72, Lombard Street, London, E.C.3, and Branches.
Midland Bank Limited, 5, Princes Street, London, E.C.2, and Branches.

COMPANY MEETINGS

THE PRUDENTIAL ASSURANCE COMPANY LIMITED

CONTRIBUTION TO PERSONAL SAVINGS

PROGRESS AT HOME AND ABROAD

In the course of his remarks at the Annual General Meeting held on May 14, 1959, at 142 Holborn Bars, London, EC1, Sir Frank Morgan, MC, Chairman of the Company, said:

Last year the funds of our Life Branches increased by £55 million, of which £45 million was attributable to the United Kingdom and £10 million to our overseas business. I mention these figures, not only as an indication of the progress of our business, but also because they provide a broad measure of the net contribution made by means of Prudential policies to total personal savings. With the many and increasing inducements to spend, it seems to me more than ever important that institutions such as ours should do everything possible to promote the habit of regular saving. The service we provide makes it easy—or at any rate as easy as possible—to acquire this habit and at the same time to secure the immediate and continuing protection of life assurance.

ORDINARY BRANCH

The new premium income in the Ordinary Branch—home and overseas—exceeded £9,800,000, securing sums assured of £259 million and annuities of £13 million per annum. Whilst the new sums assured were somewhat greater the new premium income was £500,000 less than in 1957; the new premiums of that year, however, were increased by the initial demand for the new class of retirement annuity policy and by an unusually large group pension and life assurance scheme.

For individual assurances issued in the United Kingdom the new premium income was £250,000 more than in 1957. There was an increase in the average premium per policy and a relatively larger increase in the average sum assured. This latter feature reflects the increasing proportion of business written under contracts which provide a larger element of life cover, such as whole-life and longer-term endowment assurances and policies providing income benefits.

Our overseas business continues to play an important part in the development of the Ordinary Branch. It accounts for over a quarter of the total premium income of this Branch and for nearly 30 per cent of the new premiums of last year. Record amounts of new premiums were secured in 1958 in South Africa, the Rhodesias, East Africa and New Zealand.

Group pension business secured overseas continues to expand. Over three-quarters of it is written on a with-profit basis.

No developments occurred in Egypt during 1958 in connection with our life and non-life business, which was Egyptianised, but now that the Anglo-Egyptian financial agreement has been signed we hope to receive compensation.

INDUSTRIAL BRANCH

Steady progress continues to be made in this Branch and last year a record amount of new premium income was obtained. A notable feature here is the popularity of endowment assurances. The reason for this is not hard to find; despite other available means of regular saving of small sums, industrial assurance is unique in providing a combination of saving and life assurance allied with the convenience of a home service.

Though premature discontinuances of policies shewed some increase over those of the previous year they were still at a low level. The increase was due to economic causes and not to any relaxation of the efforts of our field staff to secure the maintenance of policies. The proportion of new policies which lapsed within one year after issue was a little over one-tenth. Of the policies on which premiums had been paid for a year or longer, less than 3½ per cent were discontinued last year, and for all of these either a free policy or a cash surrender value was given.

The changes in the structure of remuneration of our field staff in this country, to which I referred last year, have, as I then indicated, resulted in a marked immediate increase in the rate of expense. We expect a gradual return to a more normal level, though progress in this direction must to a large extent be governed by the rate of growth of the premium income.

BONUS DECLARATIONS

Details of our bonus declarations have already appeared in the Directors' Report, from which it can be seen that increased rates of reversionary bonus have been declared for assurance policies issued in this country and in some overseas territories. We have, in both Life Branches, again declared special bonuses applying, as hitherto, only to policies issued in the United Kingdom prior to January 1, 1954, which become claims during the current year. The rates of these bonuses also have been increased.

It may be well, particularly as special bonuses of a similar character have not become common in the life assurance world, to remind you why, three years ago, we introduced them. There had been an exceptional increase in the dividends from our holdings of ordinary shares in this country and our view was that, since these increases arose largely from investments made in the past, the older policyholders had a prior claim to benefit from them. Similar considerations to those which led to their introduction have justified the further special bonus declarations which we have since made.

I gave you an example last year of the effect of the special bonuses in the case of a typical Ordinary Branch claim which we had recently paid. The facts of another such claim, paid last month, may be of interest. The policy was a 25-year endowment assurance for £1,000 taken out in 1934 when the policyholder was aged 36. Over the 25 years he had paid £1,034 in premiums, but income tax rebate had reduced this outlay to an appreciably lower figure. Throughout the period he had been covered against death for £1,000 with bonus additions. Now that the policy has matured he has received this sum assured of £1,000, normal reversionary bonuses of £393 and the special bonuses which amounted to £120, making a total of £1,513. I feel sure that this policyholder, who may indeed read these remarks, would agree that this was an eminently satisfactory outcome and, furthermore, that the security provided by his policy during those 25 years had been very well worth having.

PENSIONS

Since our last meeting the Government has presented to Parliament the National Insurance Bill, containing proposals to extend the State scheme by the introduction of a graduated pension based on contributions graduated according to income.

We naturally welcome the intention of the Government that an employer with a private scheme should be able to contract out of the proposed State scheme in respect of the graduated pensions for some or all of his employees. The subject is, however, beset with difficulties and it is to be regretted that the interval for consideration between the White Paper in October and the issue of the Bill in December was so short. If contracting out of the State pension scheme is to be a permanent and satisfactory feature of pension arrangements in this country it is important that the system should be established on firm principles. There are features in the Government proposals which, though they be workable for the scheme as it now stands, would not generally be practicable in other circumstances. I refer in particular to the charging of a flat contribution for contracted-out employees and the obligation to provide a pension equivalent to the maximum graduated pension under the State scheme whatever the earnings of the individual. There are a number of issues of a similar nature which are, at least in part, outside the scope of politics, and it is much to be hoped that before long the parties will come to some agreement to take such issues out of the political arena.

During the past year our pension scheme business has continued to develop satisfactorily. Although the introduction of the new State scheme may lead to some existing pension schemes being curtailed or even terminated we feel that there is still a wide-

spread need for the development of occupational pension schemes.

GENERAL BRANCH

In the General Branch the premium income for 1958 together with that of our American subsidiary increased by £1,800,000 to £18,700,000. Nearly half of this total arose from overseas sources. Gross interest earnings have increased very substantially.

The underwriting experience for 1958 showed a smaller overall profit than in the previous year, although there was a marked improvement over 1956. The overseas experience, particularly in Canada where some premium rates have been increased, improved considerably over that of 1957 but still resulted in a loss, while our home experience was less profitable than in the previous year. The sickness and accident account remained satisfactory and the fire account showed a considerable improvement. In the miscellaneous account, however, there was a reduced margin of profit on home business, due in part to losses from the storm and flood damage of last autumn. These losses mainly related to private dwellings and small shop premises and it is a source of satisfaction to us that we were again able by a prompt settlement of claims to mitigate the effects of the losses and bring relief to our policyholders. Motor insurance business also adversely affected our home results, showing a small loss notwithstanding the increase in motor rates which became operative in July, 1957.

Our marine insurance business continues to be satisfactory, although there has been a decrease in premium income owing to a depreciation in values and an increase in tonnage laid up. From this account we have released into profit the sum of £50,000, which broadly covers the taxation incurred.

The figures of our American subsidiary, The Prudential Insurance Company of Great Britain, are annexed to the accounts before you. An underwriting profit of £19,000 has emerged, which although small is most satisfactory bearing in mind the currently difficult underwriting position in the United States. A dividend of 7½ per cent has again been declared on the capital of $1,500,000.

DIVIDENDS

The increases in the distributable surpluses in the Life Branches have again enabled the Directors both to improve the proportion of these surpluses allocated to the policyholders and to increase the amount allocated to the A shareholders. In each of the Life Branches the policyholders' allocation is now 93.16 per cent of the distributable surplus, compared with 92.84 per cent for the previous year. The distributable surplus in the Ordinary Branch was, for the first time in the last 35 years, greater than that in the Industrial Branch, and in consequence rather more than half of the amount allocated to the shareholders from the Life Branches was derived from the Ordinary Branch.

The net dividend declared on the A shares is 6s. 6d. per 4s. share, and this year no transfer has been made to the Dividend Reserve Fund. For the previous year the net dividend declared was 29s. 6d. per £1 share and an amount representing 6d. per share was transferred to the Dividend Reserve Fund. Thus on the basis of the new share denomination the declared dividend is 7.2d. per share greater, and the total allocation is 6d. greater, than a year ago.

The net dividend declared on the B shares is 1s. 1d. per 5s. share, compared with 3s. 9d. per £1 share a year ago. On the basis of the new share denomination this represents an increase of 1¾d. per share. The allocations to shareholders from the General Branch are again more than covered by the interest earnings of the General Branch funds after deduction of the relevant taxes.

INVESTMENTS

The measures taken by the Government in September, 1957, to halt the flight from sterling were successful, but it was inevitable that they should put a brake on home consumption and thereby on industrial production and expansion. Investment in 1958 proceeded therefore against a background of continued recovery in the strength of sterling accompanied by some reduction in the use of our productive resources.

With confidence in sterling restored, the Government have been able gradually to relax the restrictions. Bank rate has been successively reduced from 7 per cent to 4 per cent and long-term rates of interest have declined, though to a much less extent. The directive to the trading banks has been withdrawn, the control over hire-purchase and similar transactions has been removed and early in 1959 the operations of the Capital Issues Committee were suspended. The removal of these restrictions, supported by the tax reductions and other measures in the Budget, should stimulate a significant improvement in economic activity during the current year.

In view of the conditions ruling in 1958 it was only to be expected that there would be a reduction in the level of new industrial issues. Any rise in production which occurs during 1959 must in the first place absorb the existing surplus of productive capacity and it is therefore unlikely that there will be any substantial increase in the near future in the demand for industrial financing for the expansion of manufacturing capacity. We spread our new investments, however, over a wide field and do not anticipate any difficulty in continuing to find outlets for our funds on attractive terms, although probably at somewhat lower rates of interest than a year ago.

During 1958 our funds increased by £58 million, in addition to which there were the amounts arising from sales and redemptions. In all we invested a total £80 million, distributed as follows: ordinary stocks and shares £21 million, property and ground rents £19 million, debentures £16 million, mortgages £11 million, Commonwealth Government and Municipal securities £7 million and other groups £6 million. Compared with 1957 we have invested a greater proportion of our accruing funds in ordinary shares and property. Nevertheless we still regard long-term fixed-interest investments as a valuable outlet for our funds.

During the year a number of the banks decided to take a more direct interest in the provision of hire-purchase finance and we received an approach in regard to the controlling interest which we had held for many years in the North Central Wagon & Finance Company. Over a long period it has been our policy to avoid acquiring a large proportion of the capital of any one company and we decided, after a satisfactory offer had been made to all shareholders, to dispose of our holding. We now have no United Kingdom subsidiary companies apart from the wholly-owned Prudential Nominees, Limited, which exists in the main for the purpose of holding the investments of our trustee and executor business and of our own staff pension funds.

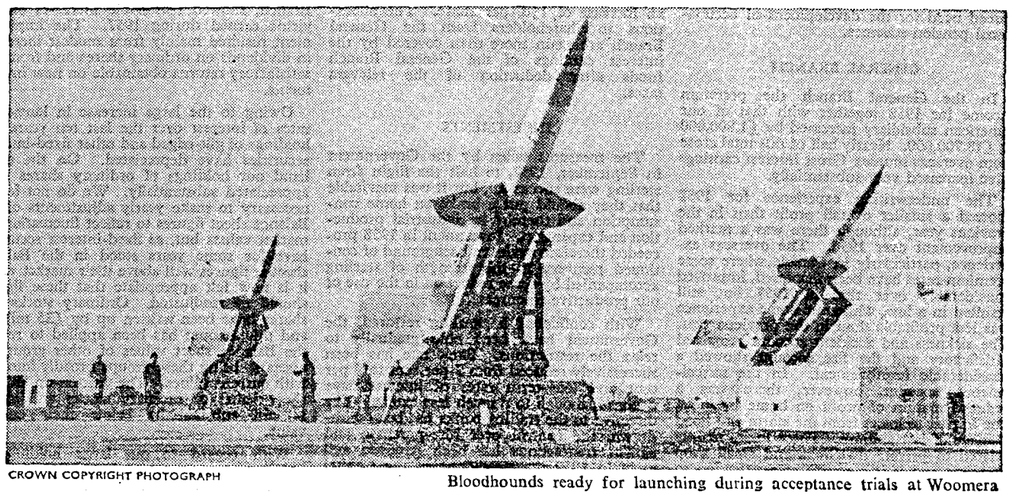
The gross yields earned on our Life funds, £5 16s. 3d. per cent in the Ordinary Branch and £6 0s. 1d. per cent in the Industrial Branch, showed reasonable increases on the yields earned during 1957. The improvement resulted mainly from modest increases in dividends on ordinary shares and from the satisfactory returns obtainable on new investments.

Owing to the large increase in long-term rates of interest over the last ten years our holdings of gilt-edged and other fixed-interest securities have depreciated. On the other hand our holdings of ordinary shares have appreciated substantially. We do not feel it necessary to make yearly adjustments of the Balance sheet figures to reflect fluctuations in market values but, as fixed-interest securities have for some years stood in the Balance sheet at figures well above their market value, it is now felt appropriate that these figures should be readjusted. Ordinary stocks and shares have been written up by £35 million, and this amount has been applied to reduce the Balance sheet values of other groups of assets to bring these groups broadly into line with current values. The written-up Balance sheet value of ordinary stocks and shares is still substantially below their current value.

With regard to our large holdings of ordinary shares, we are long-term investors and normally expect to continue to hold our investments, looking for a steady and, we hope, expanding income. We endeavour to discharge the responsibilities which such ownership entails in as fair and unbiased a manner as we possibly can. We do not regard it as proper for us as shareholders to interfere in the day-to-day management of the companies in which we have taken an interest. There are, however, certain broad issues of policy on which we feel shareholders have a right to be consulted. We appreciate that such issues cannot always be precisely defined and this must be left to the common-sense and good judgment of the directors concerned. In this context we welcome statements made in recent months by the chairmen of a number of important companies to the effect that they have no intention of issuing large blocks of equity capital in a way which might materially affect the control of the company or radically alter the nature of its business, without the consent of the shareholders.

RETIREMENT

Mr N. P. Harris, one of our agency managers, retired at the end of 1958, after 45 years' service. His wide knowledge of field staff affairs and problems has been of great value to the Company.



APPOINTMENT

Since our last meeting the Directors have appointed Mr F. Pearson, formerly a senior member of our field staff, to be an agency manager in the United Kingdom.

STAFF

I come finally to my comments on the staff, and I invite you to think of their work in terms of service: service to the insuring public and service to the Company which employs them. The work of the field staff and that of the clerical staff are complementary to each other, and the service we render to the community at large is the product of their combined efforts.

The results about which I have been speaking to you today again clearly demonstrate the ability and enterprise displayed by all ranks, and we express to them our warm appreciation and cordial thanks for another year of outstanding achievement.

CROWN COPYRIGHT PHOTOGRAPH

Bloodhounds ready for launching during acceptance trials at Woomera

THE CHAIRMAN OF THE BRISTOL AEROPLANE COMPANY GROUP REVIEWS PROGRESS

During 1958 The Bristol Aeroplane Group achieved a record level of sales—an increase of 33 per cent over 1957—of which 28 per cent were overseas; reduced profit margins and increased outlays on research and development led to a reduction of 23 per cent in the net profit before taxation. Deliveries during 1958 were worth £76 million, orders received were £47 million; and orders in hand at December 31, 1958, were £96 million.

Bristol ramjets for Bloodhound missiles came into production during the year. Further developments will extend their range for missiles and make them suitable for supersonic manned aircraft.

With the support of the Mutual Weapons Development Programme, a turbo-fan engine is being developed for short take-off aircraft, leading on to a new generation of ducted fan engines.

Aircraft

Fifty-one Britannias had been delivered by the end of 1958; although sales on the scale for which we had hoped and planned have so far eluded our most determined efforts, further negotiations are in progress. Two Britannia derivatives, the Canadair Argus and CL-44, are being produced under licence for the Royal Canadian Air Force, whilst the RAF has adopted another, the Britannic strategic transport.

An all-steel supersonic research aircraft being developed under contract from the Ministry of Supply will put us in a strong position in this field.

A medium-range jet airliner, the Bristol Type 205, is being discussed with airlines.

The production and development of Bristol helicopters continue.

Missiles

Service trials of the Bloodhound missile have proceeded very well. An order placed by the Royal Swedish Air Force is the first export order of its kind. It was announced in the 1959 Defence White Paper that a more advanced weapon was to be introduced; this is to be a Bloodhound derivative.

Engines

The activities of Bristol Aero-Engines, Armstrong Siddeley Motors and Bristol Cars have all been transferred to Bristol Siddeley Engines—an associated company in which Bristol Aeroplane and Hawker Siddeley Group Limited each hold a 50 per cent interest.

Bristol Proteus turboprop engines used in Britannias are also finding promising new applications both for propulsion of naval craft and for electricity generation.

Sales of the Orpheus lightweight turbojet are encouraging. The Olympus turbojet has been gaining an extremely good name in service with RAF Vulcans and the new Tactical-Strike-Reconnaissance aircraft is to be powered by the Olympus: this is a great opportunity.

Overseas Companies

Our associated companies overseas had a generally successful year, the Canadian group achieving a record turnover and our workshops in Australia obtaining satisfactory business in difficult trading conditions.

Prospects

The aircraft industry has always been subject to large fluctuations in the level of employment and in the Bristol Aeroplane Group the upward trend was reversed last year. The point when it will level off depends on prospects for the next generation of civil aircraft and aero engines, the scale of the defence programme, and our own success in increasing our share of the market.

The aircraft industry makes a great contribution to exports, to prestige and to technological progress. Many great opportunities lie ahead, but a national programme on an adequate scale needs consistent backing by the Government. We confidently believe that we have a contribution to make which will be both valuable to the nation's defence and export trade, and profitable to our business.

THE BRISTOL AEROPLANE COMPANY LIMITED · FILTON · ENGLAND

ALUMINIUM-INDUSTRIE-AKTIEN-GESELLSCHAFT CHIPPIS (SCHWEIZ)

ZURICH, SWITZERLAND

FURTHER IMPROVEMENT IN POWER SUPPLIES

PRICE STABILITY MAINTAINED

The seventieth Annual General Meeting of Aluminium-Industrie-Aktien-Gesellschaft Chippis was held in Zurich on April 24th, and the following is a summary of the report presented by the Directors:

REVIEW

In the autumn of 1956 the aluminium industry felt the first signs of a recession which began in North America. The trend continued during 1957 and during the past year, when it affected the aluminium industries of different countries to a varying extent.

At the present moment the productive capacity of the different plants in the United States and Canada still exceeds current demand although the surplus is gradually growing smaller.

In Europe, the tendency was for excess production to be offered to export markets, which led to greatly increased competition not only as regards virgin aluminium but also in the case of semi-finished products. Except for Austria, total output of aluminium in the four countries where the Company was active did not meet, or barely met, the individual country's requirements. As a result the need to export aluminium occurred only in a few instances.

World production of virgin aluminium in 1958 is estimated at 3.55 million tons, some 150,000 tons more than in 1957. The most important producing countries are still the United States, with 1.42 million tons, Canada with 586,000 tons, Europe with 657,000 tons, Russia and the Eastern countries with 735,000 tons approximately, and Japan with 85,000 tons, with the remaining 67,000 tons being accounted for by various other countries.

Whilst for some time metal prices were rather unstable in Canada, the United States, Italy, Germany and France, the prices of metal smelted in Switzerland remained stable throughout the year. Since current prices have been in effect during the last two and a half years the traditional stability of Swiss aluminium prices has once again been effectively demonstrated.

The Company's output of virgin aluminium, not counting that of *Mosjöen Aluminium A/S*, did not quite reach the total of the previous year. This slight setback was due to a reduction of 30 per cent in the output of the Rheinfelden works during the last 3 months of the year. The three other plants for which sufficient hydro-electric power was available operated at full capacity. The sales department of the Company's central administration dealt not only with sales to buyers but also with supplies to affiliated companies and the export of available metal. On the whole the Company's plants manufacturing semi-finished products increased their output and this was also the case with production of foil. Sales of Raffinal were maintained at the usual level while sales of Gallium increased further.

SWISS INTERESTS

The Mörel and Ernen power stations of *Rhonewerke AG* produced a total of 421 million kWh, an increase of 26 million kWh over the previous year.

Output of power at the *Illsee-Turtmann AG* plant at Oberems was slightly superior to that of 1957 and reached 106.6 million kWh.

The Company has an 80 per cent interest in *Centrale des Chutes du Rhin de Neuhausen SA* at Neuhausen, which recorded a normal output of 40 million kWh.

During the year ended September 30 *Usine Electrique de Rheinau SA*, produced 218 million kWh representing an increase of 18 million kWh over the first year's output.

Facilities at the Sierre hydro-electric plant of *Forces Motrices de la Gougra SA* are being improved, and it is expected that the reserve dam at Moiry can be filled during the coming summer. Output during the winter of 1958-59 amounted to 104 million kWh.

Unlike the previous year, 1958 proved to be favourable for the production of aluminium, thanks to higher rainfalls. Not only was it possible for the plants in the Valais region to be active throughout the year, but there was also a certain amount of surplus power which was made available to the Rheinfelden plant. The goal which the Company has striven to reach for so many years, and which consists in avoiding a reduction in the level of output during the winter, now seems well within reach. As a result of increasing rationalisation and improved working methods all the plants were able to reduce power consumption in relation to the amount of aluminium produced. These improvements have led to a saving of almost 20 per cent in electric power during the course of the last few years.

The Mosjöen plant, in which the Company has a ½ interest, was put into service during the spring of 1958. Output from this plant is shortly expected to run at an annual rate of 32,000 tons and as a general rule sales of metal will be made by Chippis.

The planning of the new plant at Steg in the Valais continues, and the roads leading to the site will be completed during the next few months.

The *Robert Victor Neher SA* plant at Kreuzlingen which produces foil increased its activity during the second part of the year and returned satisfactory results.

FOREIGN INTERESTS

Officially authorised selling prices in France did not always permit the *SA des Bauxites de France* to show an operating profit, but it is hoped that recent developments will lead to more favourable working conditions. In Italy the exploitation of the Company's own deposits was intensified. At Cologne and Porto-Marghera the Company processed bauxite imported from Yugoslavia, Greece, Indonesia and Guinea and also made some trial runs with bauxite imported from India.

As in the previous year, the Company's three alumina plants—*Martinswerk G.m.b.H.* at Bergheim-Cologne, *Società Alluminio Veneto p.A.* at Porto-Marghera and the *Société Française pour l'Industrie de l'Aluminium* at Marseilles—operated at full capacity. Supplies of alumina to the new aluminium works at Mosjöen in Norway are assured by the Company's own plants.

In Guinea the construction of the alumina plant for *FRIA—Compagnie Internationale pour la Production de l'Alumine*—in which the Company has a 10 per cent interest, continues according to schedule. The plant is expected to begin partial production in 1960.

A further increase in the already considerable output of *Aluminium-Walzwerke Singen G.m.b.H.*, at Singen, was recorded. The expanded rolling facilities are already being fully utilised.

In Italy, whilst Lavorazione Leghe Leggere S.p.A. at Porto-Marghera was still not working at full capacity as a result of difficulties in obtaining orders, the other Italian affiliated company, *Laminal Rusconi Fraschini* which produces foil at Nembro near Bergamo was fully occupied throughout the year.

The *Star Aluminium Company Limited*, which operates plants at Wolverhampton and Bridgnorth, recorded a new satisfactory turnover and plans to expand productive capacity are under consideration.

In spite of increasing competition, *Aluminium Foils Inc.* of Jackson, Tennessee in the United States, once again increased sales of foil, strip and Raffinal.

The first stage in the expansion of capacity at *Aluminium Belge S.A.* in Liège, comprising a rolling mill and foil plant, should be completed towards the end of 1959. The commissioning of a new extrusion plant in the State of Sao Paulo in Brazil is also expected at the end of this year.

PROFITS

The profit and loss account showed a net profit of Sfrs.15,879,359.77 which, together with Sfrs.1,916,193.49 brought forward from the previous year, produced a total of Sfrs. 17,795,553.26 available for distribution. It was proposed to allocate this sum as follows:

to distribute a gross dividend of Sfrs. 120 (1957 Sfrs. 100) to each share of Sfrs. 1,000;

to allocate Sfrs. 1.5 million to the special reserve fund;

to allocate Sfrs. 2 million to depreciation reserves;

to transfer Sfrs. 1 million to the provident fund;

to carry forward the resulting balance of Sfrs.1,812,791.26.

Shares issued in connection with the Sfrs. 10 million capital increase voted on January 29, 1959, will be eligible for dividend in respect of the year 1959.

The report, the accounts, and the proposals put forward by the Board were adopted.

HUMPHREYS LIMITED

(Building & Civil Engineering Contractors)

LARGE VOLUME OF WORK ON HAND

EXPANSION RESULTING FROM REORGANISATION ENVISAGED

SIR AYNSLEY BRIDGLAND'S STATEMENT

The sixty-seventh annual general meeting of Humphreys Limited will be held on June 9th at Winchester House, Old Broad Street, London, E.C.2.

The following is the statement by the chairman, Sir Aynsley Bridgland, CBE, which has been circulated with the report and accounts:

The Trading Profit for the year was £81,493 as against £132,935 for the previous year. This sharp diminution of £51,442 was due to several causes, but the credit squeeze initiated by the Government was particularly unfortunate from our point of view, since it coincided with the conclusion of large contracts before work on new ones could be started. The effect was sharply to diminish our turnover without a corresponding lessening of overheads, and I must warn shareholders that the commencement of new work after this credit squeeze will not be in time to restore the position in the current year.

It must be remembered that when the rhythm of the business is sharply curtailed, as has happened in our case, it takes far longer to achieve normal output again than the time lost as the result of a partial cessation of work.

We may regard this as one of the chief causes of the recession in our profits, but during this difficult period we have been able to prepare for the starting of new contracts by reviewing plans and amending them so as to meet fresh ideas of building owners.

Although the work on hand is large and the prospects of additional work are good we must possess ourselves in patience, but I see no reason for pessimism and indeed look forward to the expansion of our business as the result of careful reorganisation. The period of lowered turnover due to the credit squeeze gave us an opportunity to do this and I think it will be found to be profitable as well as enlarging the scope of our activities.

DIRECTORATE

After 40 years' service Mr David Thomson will shortly reach retiring age under the Company's Pension Scheme. Consequently he has now given up executive control, and, pending retirement, he will continue to serve the Company in a consultative capacity and retains his seat on the Board. Mr D. J. Olliver, MInstCE, has been appointed to succeed Mr Thomson as General Manager, and the Board feel that in him they have an enthusiastic and able Chief Executive.

Sir Tom Hickinbotham, KCMG, KCVO, CIE, OBE, joined our Board during the year and he has lost no time in becoming fully acquainted with the affairs of the Company, which should undoubtedly benefit from this appointment.

THE ACCOUNTS

Items in our Profit and Loss Account show a reduction in Bank charges from £13,460 to £5,629, a fall of £7,831, and also a drop in taxation from £62,400 to £38,500. On the other side, £2,400 additional interest on loans is made available, but our dividends from our South African subsidiaries are reduced by £2,400. The net profit for the year after tax is £34,656 as against £55,427, a drop of £20,771.

The Board recommend a final dividend on the Ordinary shares of 9 per cent, the same as last year. The carry forward will then be £55,391 as compared with £46,304 last year.

Dealing with our Balance Sheet, Current Liabilities have also fallen from £1,008,050 to £559,201, a reduction of £448,849, whilst our Current Assets have also been reduced from £1,283,951 to £776,383, a fall of £507,568. The surplus of Current Assets over Liabilities is £217,182.

The only other item in the Assets calling for comment is the increase of £125,034 in our investment in R. H. Morris (Pty) Limited from £84,760 to £209,794, whilst our Loan Account with this Company has been reduced to £17,549. This I foreshadowed in my Statement last year.

SOUTH AFRICAN INVESTMENTS

It is opportune for me to report here on our South African investments. The Quarries are paying us 25 per cent dividends and are flourishing. The demand for stone is increasing and this Company has the necessary liquid assets to purchase and instal new machinery necessary to increase output. I told you last year that a closure order had been served on the Company by the Administrator of the Cape Province, but I am glad to say that the Company has managed to get this stayed for some ten years so that it is now fully justified in incurring this expenditure. On the present indications, therefore, the Quarries have proved a very satisfactory investment.

The investment in R. H. Morris (Pty) Limited has so far not proved very lucrative. The prime difficulty in rebuilding a business overseas is the question of staff, but I am glad to say that this has now been overcome. Some idea of how this business is progressing can be indicated by reporting that the orders in hand in February 1959 exceeded £3 million, and what to my mind is most gratifying is the way the whole of the staff and the Board there are working. The profits arising from this increased business should be very satisfactory, and should be reflected in the course of time in our own Accounts.

The business of R. H. Morris (Pty) Limited consists mainly of contracting but there is also a factory which has concentrated on joinery work. For many years they have manufactured for the Provincial Governments concerned furniture for their schools, but recently this business has been diverted from the Company in certain areas to Sheltered Employment organisations. These employ people who have become disabled due to the war and by other causes and the Union Government has decided that a considerable amount of this work must be done by these partly incapacitated citizens. The result has been that in the year under review the factory has not been fully employed and the management have had to seek new channels of business. In this they have been successful so that in the current year I hope that there will be a material improvement in the results.

THE CURRENT YEAR

With this situation in hand, and with the knowledge of the large amount of work on the books of the Company, there is also the comforting assurance that fresh business is offering. A large building contract has recently been obtained in Port Elizabeth with the prospect of an even larger contract in view in the new year. Financial arrangements for all this business have been assured, so that with an adequate and highly experienced staff in control we will be sadly disappointed if this current year does not ensure us adequate compensation for the efforts which have been made to re-establish this business, the oldest of its kind in Cape Province, and thereby prove that our decision to invest in South Africa was a correct one.

The London Clinic still enhances its international reputation and its results for last year were satisfactory. It continues to reduce the loans it has from its bankers.

1958 has been a difficult year for the building industry and it is disappointing to find that our profits, which have steadily increased over the past years, have had a setback but the Board's confidence as to the future is expressed by the continuance of the existing dividends. It may be of interest to shareholders to know that this present year is the 125th anniversary of the founding of the business.

I should like to close by expressing on behalf of my colleagues and myself, my thanks to all our staff for the loyal way in which they have undertaken their work for the Company.

CROSSE & BLACKWELL (HOLDINGS) LIMITED

RECORD SALES OF "TEN O'CLOCK TESTED" FOODS

The annual general meeting was held on May 20th in London, Mr H. L. Roy Matthews, CBE, the Chairman, presiding.

The following is an extract from his circulated statement:

The aggregate Sales figures of the Group are once again in excess of all previous years and thus constitute another record. In my Statement last year I drew attention to the increased competition at home and as regards our exports the severe effect of restrictions imposed by many countries. Both these circumstances have continued and have indeed intensified.

After reviewing the Group's world-wide activities, the Chairman said: Despite the satisfactory outlook in the long term, the immediate present and future is one of great challenge to the manufacturer. One thing is certain everything will continue to be done, despite austere profit margins, to maintain and even improve the quality of our products and to bring these to the notice of our constantly increasing number of consumers by means of public advertisement, a feature of which continues to be the "Ten O'Clock Tested" theme.

Your Board are constantly examining possibilities of further developing your company's interests at home as well as abroad. The great strength of your Company's Balance Sheet will prove of value should it be desirable to obtain further finance at the appropriate time.

The report was adopted and a total dividend of 12½ per cent plus a tax free capital distribution of 3d. per Stock Unit were approved.

IMPERIAL CHEMICAL INDUSTRIES

FACTORS AFFECTING PROFITS

The thirty-second Annual General Meeting of Imperial Chemical Industries, Limited, was held on May 14th in London.

Sir Alexander Fleck, KBE, FRS, chairman, in the course of his speech, said: By comparison with 1957 the results for 1958 were disappointing; the gross sales of the Group were unchanged, but trading profits before taxation were £10 million less, and after taxation they were £5 million less. It has been explained in the Annual Report that part of the reduction in profits can be attributed to increased costs, due to the operation below full capacity of a number of plants, some of recent construction and some recently extended. In addition to this, competition—particularly in overseas markets—has led to reduction in the prices of some of our products in order to maintain the volume of business. A further factor accounting for about £2 million of the reduction in gross profit is the additional depreciation charged as a result of the revaluation of assets at the beginning of 1958, which is explained in some detail in the Annual Report.

NO REASON TO BE DISCOURAGED

I have said that the results are disappointing, but we should not be discouraged. It is natural in any manufacturing industry which has to invest very large sums in plant and machinery that a failure of turnover to rise should result in a decline in profits, particularly when the capital invested is large in relation to turnover, as it is in our case. The converse, however, is also likely to be true; if the profits are sensitive to turnover then an upward movement of turnover is likely to be reflected in a more than proportional increase in profits. For many of our products there has been a steady upward trend of demand over the years. We are confident that with our continuing efforts to keep up the quality of the Company's products and to develop sales in export markets all over the world, plants which in 1958 were not fully occupied will, as and when demand expands, be working at or near full capacity with a favourable effect upon profits.

The amount spent by the Company on new plant and machinery in 1958 at £45 million was some £5 million less than in 1957. To some extent this represents a slowing down of capital expenditure while demand is catching up to existing productive capacity. The amount of new capital expenditure already sanctioned but not actually spent at the end of the year, at £50 million, was somewhat less than in earlier years.

LOAN STOCK CONVERSION

The 5½ per cent Loan Stock which was issued in January 1957 was convertible into Ordinary Stock at the option of the holder during any one of three periods: July 1958, July 1959 and July 1960, the terms of conversion varying according to the period chosen. Over £24 million of the £40 million Loan Stock was converted in 1958, and this has increased the Ordinary Stock of the Company by approximately £17½ million. May I remind you that the right of converting the remainder can be exercised this year, that is in July 1959, when 34½ units of Ordinary Stock can be obtained for every £50 of Loan Stock held. The final period of option will be July 1960 when 33 units of Ordinary Stock can be obtained for each £50 of Loan Stock held.

In future, and starting with the Interim Dividend for the year 1959, the form of declaration will be shillings and pence for each £1 unit of Ordinary Stock. The figure given will be the gross amount payable before deduction of British tax. We shall continue our practice of showing on each dividend warrant the amount of gross dividend, the tax deducted, and the net payment.

PROSPECTS FOR 1959

I now turn to our prospects for 1959. First of all, let me say how much we welcome the tax reductions which have been announced by the Chancellor of the Exchequer. Even after this reduction our tax burdens remain among the heaviest in the world, and we hope that we can regard the 1959 reduction as just one step towards bringing them down to levels nearer to those of some of our competitors in Continental Europe. The immediate cash advantage of the reduction of 9d. in the £ on income tax goes at once to Stockholders in the lower amount of tax deducted from dividends payable after April 1959. In the long run, however, the Company will gain materially both from this reduction and from the conversion of a substantial proportion of the initial allowance into investment allowance. The direct advantage to the Company is important, but so also will be the indirect advantage which the extra purchasing power will give to the buyers of the Company's products, who will not only benefit themselves but we hope will be stimulated to expand their activities to take up some of the slack in the economy, and help to bring more employment in those areas which have been the worst hit by the recession of 1958.

It is too early to forecast with confidence the likely outcome for 1959. Some industries which are our customers remain rather depressed; others are more buoyant. Up to the present, turnover in 1959, in both home and export markets, has been somewhat above that for 1958, but it would be wise to await the announcement of the results of the first half year, instead of drawing any conclusions from an early and tentative statement such as this.

GOOD PROGRESS ENVISAGED

So far as exports are concerned some markets remain difficult, but others have been rather more open than they were in 1958. An interesting development has been a substantial expansion in what has been and still is a modest amount of trade with the countries of Eastern Europe. Taking a long view, these countries should become valuable additional markets for a growing range of our products.

Keen competition will continue to be met in 1959, but I have no doubt that we shall continue to make good progress in the months and years that lie ahead.

Our employees of all grades have continued to support the Company most loyally, and have shown their faith in the Company's future. I would like on your behalf to express our thanks to them all.

The report was adopted.

SPICERS LIMITED

(Paper Makers, Paper Merchants and Manufacturing Stationers)

TREND OF TRADING AND PROSPECTS

The Seventy-first Annual General Meeting of Spicers Limited will be held on June 17, 1959, in London. The following is an extract from the statement by the Chairman, Mr Lancelot Spicer, DSO, MC, which has been circulated with the Report and Accounts:

Following our practice in October of last year when paying our interim dividend, we gave our figures for the first half to June 30, 1958. For the second half year to December 31st, our profits were £348,230 (1957 £321,968) making for the full year £656,230 (£672,968). Your Directors recommend a final dividend of 5 per cent making for the full year a total of 8 per cent (8 per cent).

It will be seen that the results are very similar to those for last year. Trade generally in 1958 was not buoyant. Throughout the world the productive capacity of the paper trade is still greater than the rate of consumption, and no change in the situation can be foreseen for at least another 12 months. Whilst it is difficult to forecast the future trend of prices, as long as world productive capacity exceeds demand, a general reduction in price levels is not unlikely.

As I have said before, the merchanting trade is the foundation of our business. In years gone by I have reported improvements in our warehouses and offices to provide better stocking and distribution facilities. In the past ten years London, Birmingham, Cardiff, Leeds, Leicester and Sheffield have been dealt with. Continuing this policy, we have recently opened a new warehouse on the outskirts of Manchester, where adequate space will allow us to hold and deliver promptly the large and varied stock which is required to meet the needs of our Lancashire customers. The printing trade, which is for us an extremely important outlet, is directly affected by the state of general trade. During the past year conditions have been no more than steady. Printers are not adding to their stocks, and as a result we have been handling a larger number of small orders from our stock. This is our proper function, but at the same time the cost of stocking and distribution increases when the orders are small and numerous.

As in many other industries today, scientific research is making its impact on the paper trade. Methods of control are continually being improved, and technical improvements are enabling the paper-maker to find new uses for his products. Whilst the present state of the paper trade is far from exciting, I still continue to be reasonably optimistic as to the long-term future.

The mills with which we are co-operating in the distribution of certain of their products all had new machines which came into operation in the latter half of 1957. Thanks to an active staff, we have been able to keep all the machines running full time.

Last year there was a notable rise in the productivity of our Stationery Factory, and this was accompanied by an increase in the sale of our stationery goods. We have recently investigated the advantages of amalgamating certain of our conversion interests with those of some other companies engaged in similar production. We hope shortly to announce the result of these investigations which we believe will be to the mutual benefit of all concerned. These arrangements when concluded will not in any way affect the independence of Spicers Limited.

VIGZOL OIL COMPANY LIMITED

40 YEARS OF PROGRESS

The thirtieth annual general meeting of The Vigzol Oil Company Limited, was held on May 19th in London, Mr R. E. Rhodes presiding in the absence of Mr Percy Bilton, FInstPet, MSAE, chairman and managing director.

The following are extracts from the chairman's circulated statement:

Forty years ago in 1919 I founded The Vigzol Oil Refining Company at Ormskirk, Lancashire, and through 40 of the most difficult and hazardous years in history, Vigzol has shown continuous progress, and it now gives me great satisfaction to report to Shareholders that sales, gallonage and group profits of the Company for 1958 constitute a record. This gratifying outcome is the result of the expansion and substantial progress which has been made in every sphere of your Company's activities—OILS, CHEMICALS, SPRAYING MACHINES and EXPORTS—accompanied by satisfactory results from our subsidiaries.

Lubricating Oils.—Home sales for 1958 showed an encouraging increase over the previous year and our Tractor Oils still keep their lead as the premier oils in this field. With regard to Motor Oil sales, I am glad to report that we are making steady progress and notwithstanding the fierce competition encountered, our sales show a considerable increase over last year.

We have recently introduced a new product, VITASUL Diesel Fuel Additive. This product is exclusive to Vigzol and has the advantage of completely eliminating the obnoxious odours of diesel fuels, in addition to decreasing the fuel consumption. Your Board hope that this and other new products will have a materially beneficial effect on the profits for the current year.

Our Export Department has achieved record sales during 1958 and sales to date are slightly up on this time last year.

Agricultural Chemicals.—Our sales during 1958 showed a substantial increase in both turnover and gallonage, largely as a result of the introduction of our new foliar nutrient, NATURFEED. Our MCPA Weedkiller Sales also showed an increase.

Spraying Machines.—Our sales of Spraying Machines continue to expand, and during 1958 we introduced a further model "The Everyman" to complete our range, and sales of all models, i.e. Medium Volume, Low Volume and the Everyman, are very satisfactory indeed.

Field Sales Force.—It was decided in the last months of 1957 to increase our sales representation. To this end we appointed a Sales Training Officer and organised our own sales training school.

General.—Our expanding turnover and interests have thrown a heavy burden on our liquid resources, and consequently your Board feel that we should continue to follow a conservative policy and recommend a Final Dividend of 20 per cent as in previous years. However, your Board would like to mark the Fortieth Anniversary of Vigzol's foundation, and they have therefore declared a non-recurring Interim Dividend of 7½ per cent Actual, less Tax, for the year 1959.

With regard to the current year, trading has continued to increase during the first quarter, and if the rate of progress is maintained, your Board look forward with complete confidence to another successful year's trading.

The report and accounts were adopted.

LONDON AND MANCHESTER ASSURANCE COMPANY LIMITED

RECORD RESULTS ACHIEVED

BONUS DISTRIBUTIONS INCREASED

LORD GRANTCHESTER'S TRIBUTE TO THE STAFF

The Ninetieth Annual General Meeting of London and Manchester Assurance Company Limited was held on May 14th in London.

The Right Honourable Lord Grantchester, OBE, the chairman, who presided, said:

It is customary for a chairman's speech to end with an expression of thanks to the staff for their work during the year under review. On this occasion, as I shall be mentioning records achieved all round, I should like to start with a reference of gratitude to the management and staff in all grades.

RECORDS IN ALL BRANCHES

I should like to enumerate the records to which I have referred:

Industrial Life Branch:		
New sums assured ...	...	£6,886,000
Cost of bonus ...	...	£731,000
Ordinary Life Branch:		
New sums assured ...	...	£6,180,000
Rate of bonus ...	...	£2 5s. 0d.%
Fire and General Branch:		
Premium income ...	...	£407,000
Rate of Interest earned on funds, gross ...	...	£6 1s. 6d.%

It is of interest to note that the total capital and funds, which at the date of the balance sheet amounted to £64,463,000, has increased in the last five years by £17¼ million, and interest, dividends and rents gross by over £1½ million.

INVESTMENTS

There have been no major changes in the distribution of the investment portfolio to which I need draw your attention. There is an increase of some £1¾ million in British Government securities and an increase in loans on rates of over £1 million.

Last year I was able to tell you that, in spite of the low level of stock exchange prices, the market value of our assets exceeded, by a reasonably comfortable margin, the balance sheet value less the investments reserve fund. The substantial recovery in prices during 1958 has, of course, benefited the market value of our investments and at the end of the year it was substantially in excess of the balance sheet figure. We have taken the opportunity to increase the investments reserve fund to £4 million.

What, however, is of particular importance is the interest income. As I have already mentioned, the gross rate of interest earned on the funds has improved to £6 1s. 6d. per cent, an increase of 6s. per cent over the corresponding rate for the preceding year. We are thus reaping the fruits of the considerable changes in our investment portfolio made during the past few years. It is our belief that these higher rates of interest at least can be maintained.

INCREASED BONUS DISTRIBUTIONS

One of the results of the higher earnings on the funds is that all profit-sharing policies, whether by contract as in the ordinary branch or by special declaration as in the industrial branch, benefit this year from increased bonus distributions.

REDUCED NON-PROFIT RATES

Non-profit rates have been reduced and our non-profit whole life and endowment rates are particularly attractive.

We are therefore offering better value than ever all round.

INVESTMENT TRUST RETIREMENT ANNUITIES

This unique type of contract has again proved popular among professional men. Although the premiums received during 1958 are slightly lower than in 1957, it should be borne in mind that, during the first year of the working of the retirement pension facilities under the Finance Act 1956, one year's premium could be paid retrospectively and accordingly the premium income for 1957 included in many cases two years' premiums.

The contributions and benefits under this contract are expressed in terms of Investment-Trust-Units, which have a daily quotation. Since the launching of the scheme the price of these units has naturally undergone fluctuations, but the present price is now more than 60 per cent higher than the price when the scheme was inaugurated.

If you turn to the revenue account you will notice an item of £177,376, being "adjustment of book value of investments to year-end market value." This derives from the fact that the investments representing this fund have to be valued on the basis of their market price at the date of the balance-sheet. The liabilities are correspondingly valued on the basis of the market price of the units, which at the date of the balance-sheet stood at 12s. 1¼d. compared with the equivalent of 8s. 6½d. at the beginning of 1958.

CONVENTIONAL RETIREMENT ANNUITIES

In our prospectus for Investment Trust Retirement Annuities we recommend that unless the proposer will, at retirement, enjoy a substantial income from other sources, he should protect himself against possible adverse fluctuations in the price of the Investment-Trust-Units by restricting the proportion of the available premium to, say, one-half, applying the balance to the purchase of a retirement annuity of the conventional type.

During last year, taking advantage of the higher interest rates prevailing at the time, we launched a sterling single premium retirement annuity at most attractive rates and we have written a satisfactory amount of this business.

FIRE AND GENERAL BRANCH

In the fire and general branch, rather contrary to the general experience, our claims experience was not unfavourable.

Our thanks are once again due to the directors, management and staff of the County Fire Office for their courtesy and assistance in this branch.

ASSISTANCE AT HOME AND ABROAD

I should like to express our thanks also to all those who in their professional capacities have given us their advice and assistance: our bankers, solicitors, stockbrokers and insurance brokers, and to add a special word of appreciation to the directors and officials of the Bank of Montreal for the help they have given us in Canada and the United States in connection with our investments in those countries.

IMPORTANCE OF SAVING

We welcome the reliefs to the taxpayer in the current Budget. The Chancellor of the Exchequer has left himself the task of finding during the year, otherwise than by taxation, £721 million. If this is not matched by increased saving we shall find ourselves again in the throes of inflation caused by an increase in the money supply by the Government. Our role as an institution which attracts and encourages saving is extremely important to the economy as well as to the sense of security of our policy-holder customers.

LATENT DANGERS

Unfortunately, in the event of a change of Government as a result of the approaching general election, we should apparently have to face interference with what we consider sound principles of investment as well as other more vaguely expressed threats in a new assault to concentrate more power in the hands of Government. We are warned in "The future Labour offers you," their recently issued pamphlet that "through the budget and key controls, Labour will ensure that this vital expansion programme is not held up by lack of money and equipment, or by any timidity on the part of managers or investors." We are concerned that the funds and their management in which our policy-holders are vitally interested should not be put in jeopardy by experiments which, in our view, could not be more ill-advised. We should not be doing our duty to those whom we serve if we did not refer to this danger.

The depreciation which has been suffered by investors in Government securities compared with the rise in the value of investments in privately managed industries should serve as a warning. Nor has any satisfactory system of accountability been devised in the nationalised industries comparable to that of shareholder control in private industry.

INTERIM DIVIDEND

The interim dividend is now somewhat out of line with the final dividend. In order to lessen the disparity it is our intention this year to pay an interim dividend of 2s. per share on November 30th next.

The report and accounts were adopted.

THE CAPE ASBESTOS COMPANY LIMITED

INCREASED SALES

ANOTHER GOOD YEAR

MR GILES NEWTON'S REVIEW

The sixty-sixth annual general meeting of The Cape Asbestos Company Limited will be held on June 12th in London.

The following is an extract from the statement by the Chairman, Mr Giles Newton, MBE, which has been circulated with the report and accounts for the year ended December 31, 1958:

Our trading profit came very close to the record figure for 1957, and indeed, the Group net profit after all charges, including taxation, exceeded that of 1957.

Although trading conditions have not been easy, the turnover of the Group increased by approximately 8 per cent. MARINITE, ASBESTOLUX and ROCKSIL were prominent in their contributions to this increase.

In South Africa, while sales of asbestos exceeded those of the previous year, the profitability of our mining operations still leaves scope for improvement.

After reviewing the accounts the statement continued:

I am sure you will agree that with the fresh capital introduced early in 1959, your balance sheet is one of considerable strength.

SOUTH AFRICAN SUBSIDIARIES

It is disappointing that in South Africa the earnings of our mining companies have been somewhat lower than those of the previous year. While they make a substantial contribution, the profit margin is not yet, in our view, adequate to the effort in terms of finance and personnel which is necessitated. The principal reduction in revenue has occurred in the Blue mines, where exceptional measures to improve quality still further were taken during the year, resulting in a reduction of the output of saleable fibre per ton of rock broken. This has naturally brought a consequential reduction in the margin of profit. It is to be hoped that margins will be capable of improvement during 1959.

During the year, the whole of the share capital of the Consolidated Blue Asbestos Corporation (Pty) Limited was acquired, and your Company has secured here a valuable addition to its long term reserves of raw material.

On the Amosite fields, while this year's financial results approximate closely to those of the previous year, the mining and technical difficulties continue to cause us some concern. As I have repeatedly said, the transition to deep mining continues to present problems which require the investment of substantial sums of capital in order to maintain the quantity and quality of our products at the present level. Here, as in the case of our Blue mines, ore reserves have been substantially increased, but the development so far achieved, indicates that while the mine is on a solid foundation there is no prospect of easy mining ahead, and it would be unwise to predict, at the present time, that the profit earning capacity of the Amosite mines is likely to show an early or marked improvement.

Cape Asbestos Insulations (Pty) Limited had a very satisfactory year and made a notably greater profit than in 1957.

OTHER SUBSIDIARIES

The North American Asbestos Corporation had a successful year and much of the year's profit was devoted to the sales promotion campaign for ASBESTOLUX.

Cape Asbestos (Canada) Limited, operated on a limited scale, mainly due to the slowing down of trade activity in Canada.

We have reached agreement with two well-established firms in the Argentine, and with our friends the Johns-Manville Corporation, to participate in the manufacture of asbestos products in that country.

In Italy, Capamianto S.p.A. showed a welcome improvement in turnover and profit in the face of fierce competition.

In the United Kingdom, Marinite Limited has had an excellent year.

Andersons Insulation Co., Ltd., continued to encounter strong competition but succeeded in producing a satisfactory contribution to our revenue.

Cape Building Products Ltd. also has had a most successful year. While brick sales have been most difficult, a notable further increase in the distribution of ASBESTOLUX has been achieved, with gratifying results.

The Weaver Manufacturing & Engineering Co., Ltd., is another branch with whose progress we can be well satisfied, and prospects are bright. Since the end of the year, the whole of the share capital of William Turner (Kismet) Ltd. has been acquired. This latter Company, which manufactures garage equipment and motor accessories, should blend admirably with the Weaver organisation, which, with Fairway Service Stations Ltd. is steadily increasing its influence.

OUTLOOK

Trading conditions during recent months have remained somewhat restricted and though a gradual improvement is generally anticipated, present indications lead me to view the prospects for the current year with some degree of caution.

The foundation of our business rests primarily upon the Blue and Amosite Asbestos which we ourselves mine in South Africa. Quite apart from the wide distribution of our Amosite to manufacturers throughout the world, a very considerable proportion of this material is used in our own factories and, therefore, the successful outcome of our exertions at Penge is clearly of great importance to the Group.

We have, in any case, a great source of strength in the widely varied scope of our manufacturing activities, and there is every reason to expect that many of our operations will continue their steady and remunerative expansion.

In certain instances, and the sphere of industrial construction is one, the retraction in capital spending consequent on the Government's steps during the financial crisis at the end of 1957, is only now affecting our industry and it may be a little time before the subsequent actions of the Government to reverse the economic machine, and foster another period of expansion, are fully felt. Such expansion when it does come should bring an increased demand for the services and goods which your Company can provide.

MAPLE & COMPANY LIMITED

STEADY AND SUSTAINED RISE IN TURNOVER

The sixty-ninth annual general meeting of Maple & Company Limited was held on May 14th in London. Mr H. Stanley Wharton, President of the Company, presided.

The following is an extract from his circulated statement:

The hope that trade would be stimulated by the reduction in the Bank Rate which I expressed last year was not as quickly fulfilled as one could have wished; although the Bank Rate was progressively reduced, credit and hire purchase restrictions still persisted for many months. It was, therefore, a great relief to everyone when the Chancellor saw fit to ease the credit and also the hire purchase restrictions in the early autumn, and I am glad to say trade responded favourably, which has enabled us to place a result before you on this occasion, a little in advance of that of last year.

This result has been directly achieved by an increase in turnover. Despite the strictest control, increases in overhead expenses have occurred and in an expanding national economy will no doubt continue so to do in one form or another. Clearly, the only sure rejoinder to such a situation is a steady and sustained rise in volume of sales. Such has occurred in the year under review and your Board will spare no effort to maintain its impetus.

REBUILDING AND REAL ESTATE

We can now confidently expect the early completion of the main premises rebuilding scheme, when we will have, without doubt, the finest furnishing establishment in the world. In regard to the rehabilitation of our new Store in Tottenham Court Road, additional expenditure of over £300,000 will have to be met by your Company in excess of the war damage payments received.

In my statements of the two previous years, I have emphasised the importance which your directors attach to your Company's real estate asset. Last year, I indicated that I anticipated there would be some surplus property when the main premises in Tottenham Court Road were fully rebuilt. Contracts were exchanged on January 29th last which provided for the sale by your Company of some 70 per cent of the area of freehold available for disposal, having a frontage to Euston Road and to Gower Street. The contract provides for the payment of a total sum of £900,000, but by its terms, payment of the purchase moneys will be spread over a period of several months.

Your directors have given much thought as to the best manner of utilising the funds released by the sale of your Company's real estate assets. It is their considered opinion that the first call must be for the purposes of the overall expansion of your business. However, your directors recommend that a part of the surplus realised during the year shall be distributed as a tax-free capital payment.

The overall effect of the Budget proposals will, I feel, produce a favourable climate for Retail trade, and I consider that our group turnover should show an increase unless political and international events adversely affect our trade in the course of the year.

The report was adopted and a final dividend of 10 per cent, making 12½ per cent, less tax for the year and tax-free Capital Bonus of 6d. per £1 Unit of Stock were approved.

MONTECATINI

SOCIETÀ GENERALE PER L'INDUSTRIA MINERARIA E CHIMICA

MILANO, ITALY

On April 28th there took place in Milan the Ordinary and Extraordinary General Meeting of the Società Montecatini, under the chairmanship of Cav. del Lav. Dr Carlo Faina, the Chairman and Managing Director of the Company.

After giving a brief sketch of both the Italian economic situation and the international situation during 1958 and having examined the repercussions of both of these on the activities of the Montecatini Group, Dr Faina declared that the Company has developed and will in the future continue to develop that branch of chemical industry which goes under the name of "petrochemistry," as this field, which requires large resources of capital, long-term specialisation and considerable organisational capacity, represents an ideal sphere for the activities of the Group. The Company's plants for petrochemical products either already in operation or under construction number seven in all, and recently the first stone was laid of the large works at Brindisi which will be built in a little less than three years and will contribute to the economic development of the southern regions of Italy.

After this Dr Faina went on to deal one at a time with the various branches of the Group's activities.

In 1958 the mining production of the Group progressed according to plan. A point worthy of special mention is the level achieved in the production of pyrites (1,364,000 tons). The production of sulphur decreased, whilst the production of bauxite was satisfactory. The production of blende and galena was hampered by the economic situation, whilst the production of marble was good. Prospecting work continued in the field of liquid and gaseous hydrocarbons, and the prospects in regard to potassium salts were quite promising and work on the equipment of the mine was progressing rapidly so as to be in a position to produce the mineral at the beginning of 1960.

The development of the chemical industry of the Group showed various trends. Sulphuric acid and phosphate fertilisers showed a setback; the production of "Aspor" fungicides and copper sulphate was quite satisfactory and good results were also obtained with the insecticides "Fac" and "Rogor." The various nitrogen plants belonging to the Company ran at their maximum capacity despite the situation created on both the international and home nitrogen markets. In fact, whilst the Italian productive capacity in this field is estimated in 750,000 tons of nitrogen, the home consumption was 300,000 tons and exports accounted for something in the region of 160,000 tons only. At Campo Franco in Sicily a plant is being erected for the production of potassium salts which will make it possible to place on the market at the beginning of 1960 an appreciable tonnage of fertilisers of the types for which there is a demand. During the year also the equipment for the production of complex fertilisers has been substantially improved.

In the field of organic and inorganic chemicals, satisfactory production and sales figures were obtained both for organic and inorganic acids and for inorganic pigments. At the present moment arrangements are being made for an increase in the productive capacity of formaldehyde, by the construction of a new and imposing plant at Castellanza. There will also be an increase in the productive capacity of ethylene derivatives thereby adding numerous new products to the already extensive productions of the Group. A feature of special interest is the development of plastics, which showed good results in all fields. Special mention should be made of the Montecatini-Natta inventions which offer very promising prospects for future development. Polypropylene, known on the market under the name of "Moplen," is becoming ever more firmly established. At Ferrara the production installations are at present being extended and a second polypropylene plant will be erected at the new works at Brindisi. The new productions will not stop at "Moplen." Special grades of polypropylene will be employed for a new synthetic fibre; other polymers and co-polymers of olefins and diolefins will also be produced, with a wide range of different combinations and offering interesting applications.

Continuing his survey of the chemical industry, Dr Faina spoke of paints and intermediates for paints and varnishes; of coal derivatives; explosives, intermediates and dyestuffs, in respect of which the ACNA Company has improved its positions both on the home market and on markets abroad; of pharmaceutical products which the Farmitalia Company is producing with satisfactory results and for which it is carrying out a vast productive programme, and of synthetic fibres. As regards the latter, the Rhodiatoce Company obtained good results in the field of "Nailon" and "Terital," and the Polymer Company, which produces "Movil," is at present carrying out a vast industrial programme for making use of Polypropylene, with a view to manufacturing a synthetic fibre of special interest.

New successes have been recorded during the past year in regard to installations abroad; the number of Montecatini-Fauser plants in the world rose to 241 and the industrial valorisation of the Montecatini-Natta inventions is progressing most satisfactorily.

After reviewing the results of the electrical industry, the metallurgical industry and commenting on studies and research work and other subsidiary activities, Dr Faina concluded his Report with some announcements regarding workers and welfare.

The balance sheet of the Montecatini as at December 31, 1958, closed with a net profit of 10,347,738,689 lire. The employees severance Pay Fund was increased by more than 1,365,000,000 lire.

At the Extraordinary Session of the Meeting Dr Faina, after stating that the large petrochemical plant at Brindisi, the enlargement of the plant at Ferrara and other smaller plant had called for and were calling for financial investments amounting to several tens of thousands of millions of lire, submitted for the approval of the Meeting the proposals of the Board of Directors to issue a debenture loan of 30,000 million lire, at the rate of 5½ per cent, on the Italian market, and a 20-year debenture loan of 10 million USA dollars, at a rate not higher than 5½ per cent, on the American market.

After the Auditors' Report there was a lively discussion in which numerous shareholders took part. The Chairman and Managing Director of the Company, Dr Carlo Faina, replied exhaustively to all questions.

The Meeting then unanimously adopted the Report of the Board and the Balance Sheet. Furthermore, the Meeting confirmed by acclamation the appointment of the new directors, Avv. Dionigi Pavesi and Marchese Giovanni Battista Sacchetti. The Meeting also approved the issue of the debentures as set out above.

The dividend for the trading year 1958 of 115 lire per share is payable from Monday, May 4, 1959, at the usual institutions entrusted with this task, upon surrender of voucher No. 7.

THE ANGLO-PORTUGUESE TELEPHONE COMPANY

SATISFACTORY PROGRESS MAINTAINED

SIR ALEXANDER ROGER ON COMPANY'S SUCCESSFUL EXPANSION

The seventy-second annual general meeting of The Anglo-Portuguese Telephone Company, Limited will be held on June 10th at Strowger House, 8 Arundel Street, London, W.C.2.

The following is an extract from the statement by the Chairman and Managing Director, Sir Alexander Roger, KCIE, which has been circulated with the Report and Accounts:

ACCOUNTS

The Accounts for the year to December 31, 1958, clearly show that the satisfactory progress of your Company has been maintained.

Total Revenue at £3,098,118 is £264,596 higher than in 1957.

Total Revenue expenses amount to £2,498,878, an increase of £253,440. These figures include Royalties paid to the Portuguese Government, Renewals, Depreciation, Taxation, Interest on Loans and Debentures and Sinking Fund Instalments.

The Net Profit of £599,240 is £46,408 higher than in 1957. Your Directors recommend and the Accounts provide for a final dividend of 6 per cent on the £5,810,000 issued Ordinary Capital which, together with the interim dividend of 3 per cent paid in November last, makes 9 per cent on the £4,810,000 Ordinary Stock issued prior to November last and 6 per cent on the 1 million Ordinary Shares of £1 each issued during that month and since converted into Stock. A dividend of 9 per cent on the "A" Ordinary Stock is also proposed.

These dividends and dividend on the Preference Stock require £336,690 and, after transferring £250,000 to General Reserve Carry Forward is increased by £12,550 to £261,862.

Towards the end of November last the Company made the "Rights" issue to which I have already referred. The issue was of 1 million Ordinary Shares of £1 each which were offered to existing Stockholders at 24s. per share. Over 97½ per cent of the "Rights" were taken up and applications for excess shares greatly exceeded the number available.

This issue was preceded by the successful issue in Portugal of a further 80,000 Obligations of Esc. 1,000 each equal to approximately £994,000 Sterling.

These issues enabled the Company to repay the outstanding temporary borrowings from our associated company Telephone and General Trust Limited and left a balance available for the purchase of additional plant and equipment with which to continue the development of the Company.

EFFECT OF DECREE LAW

In December last, a Decree Law was published in Portugal revising, as from January 1, 1959, the conditions of payment of State employees including Post Office staff.

Under the terms of an agreement made in 1952, with the approval of the Portuguese Government, between the Company and the relevant Trade Unions to which the staff belong, the Company is committed to make to the majority of its employees similar adjustments in salaries and wages to those granted by the Government to the Post Office employees.

The effect of this is that, as from January 1, 1959, the Company is having to meet a substantial increase in its salaries and wages bill.

In consequence, we have been obliged to invoke the appropriate clause in the Company's Contract and to petition the Government to authorise an adjustment of the telephone rates to help the Company to meet the additional expense.

The petition was submitted to the appropriate authority of the Government during February of this year and is receiving their consideration. It is hoped that the Government will give a favourable decision to our case without undue delay.

HIGH RATE OF APPLICATIONS

In my statement last year I referred to the steady rise, during recent years, in the already high rate of applications for telephone service which your Company received in its two concession areas, Lisbon and Oporto.

During 1958 this trend continued, the average rate of applications being 1,825 per month. Saturation point is rarely reached in telephone service and your Company can confidently look forward to continued increases in the number of subscribers, requiring additional new capital in one form or another.

At December 31st last, the total number of stations was 229,891, a net increase of 20,398 stations during the year. Our successful efforts in meeting demand have enabled us in less than eight years to double the number of telephones connected to our system.

The fact that we have been able to meet the heavy demands upon us, while at the same time reducing our waiting list at date to a figure slightly below 6,000, says much for the effectiveness of our advance surveys and planning in ensuring that, so far as possible, we have the necessary spare plant available in the right places when required.

The engineering work carried out during the year followed the customary pattern of equipping new exchanges, adding extensions to existing exchanges, preparing for future development and maintaining the existing plant and equipment in first-class condition.

Our relations with the Portuguese Government and Municipal Authorities continue to be maintained in a spirit of goodwill and mutual co-operation.

VINE PRODUCTS LIMITED

WINE SALES EXPANDING

The thirty-third annual general meeting of Vine Products Limited, was held on May 14th at Surbiton.

The Viscount Marchwood, MBE, chairman and managing director, in the course of his speech, said: Although it was not possible to show yet another increase in the trading profits of the Group, nevertheless, sales of our wines are still expanding.

The reduction in duty on High Strength wines enacted by the 1958 Finance Act, remedied to a great extent the fiscal advantage which Commonwealth wines had previously enjoyed at the expense of the home product. However, the reduction in duty involved the Parent Company in a loss of some £16,176 on wines on which duty had already been paid. The Subsidiary companies suffered similar losses totalling over £12,000.

The raw material position was, as always, the subject of some concern and had it not been for certain advantageous purchases in the latter part of 1957, the position might have been appreciably more difficult. Again the Dock Strikes in June of last year proved very costly. Drums of grape juice had to be diverted to Holland, increasing our freight rate by as much as £5 per ton.

The results of the subsidiary companies dealing with wines and spirits were less favourable and were due to an experience which has been only too common of late—increased sales failing to offset lower profit margins and increased costs. Sales of our new lines have, however, met with a satisfactory response, particularly RSVP, which has proved extremely popular with trade and public alike.

The Australian wines in our Commonwealth range also got off to a good start and we hope to increase the scope of this range in the near future.

PRE-EMINENT POSITION MAINTAINED

The turnover in sales of BritviC Limited suffered some decline, this being particularly marked during the summer months. BritviC sells considerably more fruit juice in bottle than any of its competitors and, for this reason, any general decline in sales has a proportionately greater effect on their results. During the current year BritviC has introduced two new lines under the names "Cherry B" and "Hawaiian Punch." Initial orders have been encouraging but it is, as yet, to early to forecast their future.

In regard to the BritviC range of canned fruits, upwards of ten million cans of first quality fruit have been put into circulation since their sale began.

The consolidated profit and loss account shows a decrease of profit before taxation of £119,653. Net profit after taxation shows a reduction of £25,779.

At this stage it is impossible to give an accurate forecast of the current year's trading, in view of the seasonal nature of our trade.

There is, however, no doubt that in both British Wines and pure Fruit Juices, your company continues to maintain its pre-eminent position and I feel confident that it will continue to do so. Nevertheless, it is obvious that increased competition is bound to have an effect on profit margins which can only be offset by even higher sales and reduced costs.

The report was adopted and the proposed dividend of 25 per cent, less tax, on the Ordinary stock was approved.

DE BEERS CONSOLIDATED MINES LIMITED

(Incorporated in the Union of South Africa)

PROSPECTS OF HIGHER DIAMOND SALES THIS YEAR

GROUP'S NON-DIAMOND ASSETS EXCEED £100 MILLION

The following are extracts from the statement by the chairman, Mr H. F. Oppenheimer, which has been circulated with the report and accounts for 1958:

The sales effected by the Central Selling Organisation in 1958 amounted to £65,543,387, of which £49,420,696 were gems and £16,122,691 were industrials. This compares with a total of £76,772,112 for 1957, divided as to £52,818,096 of gems and £23,954,016 of industrials. This shows that there was a very substantial falling-off in sales and it is therefore very satisfactory that our company was able to maintain its dividend and further strengthen its overall position.

At December 31st the net cash assets of the Group totalled £35,884,735, which is only £571,404 less than at the end of the previous year.

While the policy of investing considerable sums outside the diamond industry was continued during the year, there was also a very substantial appreciation in the market value of the investments already made. The Group's non-diamond investments valued at market price in the case of quoted investments and book value in the case of unquoted investments amounted to £64,551,421, an increase of £12,205,595 over the previous year. The total of the Group's non-diamond investments and of its net cash assets amounted to £100,436,156.

WILLIAMSON MINE

The most important development in our business during 1958 was our purchase jointly with the Government of Tanganyika of the entire share capital of Williamson Diamonds, Limited. The Williamson Mine is an important one, and may be expected to produce about £3 million to £3,500,000 of diamonds per annum.

The arrangements concluded in regard to Williamson Diamonds represent an important strengthening of the structure of the trade. We particularly welcome our partnership with the Tanganyika Government, and are convinced that it is in the interests both of the territory and of the diamond trade as a whole.

I referred last year to the large uncontrolled production by African diamond diggers in Sierra Leone. The large purchases made by The Diamond Corporation Sierra Leone, Limited, had the effect of keeping the market price of these diamonds steady in spite of the serious recession of the trade in the first half of the year. Our agreement with the Sierra Leone Government proved itself in this way of great benefit to the territory, and at the same time was an important factor in maintaining the stability of the industry as a whole.

We have, however, long felt that it was desirable to put the arrangements for the marketing of this production on a more permanent and stable basis and one which would be fully acceptable to the individual African diggers. We therefore initiated negotiations with the Government which are still proceeding.

It is proposed to set up a Government Diamond Office through which the whole of this African production will be marketed.

SYNTHETIC DIAMONDS

Last year I mentioned that our diamond research laboratory was embarking on large scale tests of natural and synthetic diamond grit in various diamond grinding operations. These tests have shown that natural diamond grit is greatly superior to the synthetic product in metallic bonded grinding wheels, and also in the cutting discs which are now being used in the large concrete road and airfield programmes in the United States. It is claimed that synthetic grits are more effective than natural diamonds in resinoid bonded wheels. There must, however, be doubt about the significance of such claims on account of widely differing results obtained under varying conditions.

We will shortly be in a position to market a new diamond grit specially prepared for resinoid bonded wheels.

At the present time the demand for diamonds, both gem and industrial, is at a satisfactory level. In the industrial field, however, this is due to a considerable extent to the effect of Government stockpiling. The production of industrial diamonds is, generally speaking, in excess of what is required for current consumption.

One of our associated companies has recently formed a small company in Canada jointly with Engelhard Industries Limited with the object of expanding the use of crushing boart especially in the field of glass-grinding. Our laboratories are also busy on a number of projects designed to increase the demand for other types of industrial stones. We are hopeful that from all this work significant results will be achieved.

The United States continues to consume the greater part of all diamonds which we sell, but there has been a tendency lately for the proportion consumed in other countries to increase. Taking all facts into consideration, it appears probable that sales in 1959 will be substantially higher than in 1958, and that our company will have a prosperous year.

CITY DEEP LIMITED

MR P. H. ANDERSON'S STATEMENT

The Fifty-eighth Ordinary General Meeting of shareholders will be held in Johannesburg on May 25, 1959. The following is an extract from the circulated statement by the Chairman, Mr P. H. Anderson, dated May 15, 1959:

WORKING RESULTS

During 1958, 1,511,000 tons of ore were milled at an average yield of 3.972 dwt per ton resulting in a recovery of 300,102 ounces of fine gold. The relative figures for the previous year were 1,780,000 tons milled with an average yield of 3.909 dwt and a recovery of 347,907 ounces.

Working costs for 1958 were £551,291 lower than the previous year, but working revenue decreased by £608,588, resulting in a net decrease in working profit of £57,297 to £139,189.

These comparisons must be viewed in the light of the reorganisation of the mine and the reduction in the scale of operations which became effective in June, 1958. In this process the major portion of the Nourse Section of the mine was closed down and thus the milling rate was reduced from 148,000 tons per month in May to 113,000 tons per month at the end of the year.

As a result of these changes the mine is now on a sounder basis of more concentrated work and accordingly it has been decided to attempt to increase still further the rate of shaft sinking which has as its objective an improvement in the ore reserve position.

ACCOUNTS

To the working profit was added a credit adjustment of £19,589 in respect of pneumoconiosis, interest received amounting to £29,852 and £4,631 being the difference between sundry items detailed in the Income and Expenditure Account, making a total profit for the year, before taxation, of £193,261. This, together with the unappropriated balance of £780,456 brought forward from the previous year, gave a total of £973,717, which was dealt with as follows:

	£
Dividends Nos. 74 and 75 of 6d. and 7½d. per share respectively totalled	114,009
Provision for taxation amounted to	6,408
Transfer to Capital Reserve in respect of net expenditure on mining assets *less* realisation of trade investments, absorbed ...	14,170
making a total of	134,587
and leaving an unappropriated balance to be carried forward to the current year's accounts of ...	839,130
	£973,717

The unappropriated balance, together with Retiring Gratuities and Abnormal Costs Reserves, was represented by net current assets totalling £1,033,217 as detailed in the Balance Sheet.

PNEUMOCONIOSIS

The annual levy paid during the year ended March 31, 1959, by Group A controlled mines amounted to £2,467,500. The levy for the current year has been fixed by the Pneumoconiosis Board at a net amount of £800,000. This substantial reduction in the levy is due in the main to a decrease in the number of new cases of pneumoconiosis and tuberculosis amongst mine employees. Moreover, it is expected that this liability will be reduced further because of a surplus existing in the Controlled Mines' Compensation Fund as disclosed in a recent valuation of the Fund carried out in terms of the Pneumoconiosis Act.

OPERATIONS AT THE MINE

In the area below K1 Incline Shaft and south of the Vierfontein dyke where the Main Reef Leader was intersected towards the end of 1958, disclosures on this reef at the end of April totalled 830 feet of an average value of 18.0 dwt over 22 inches, equal to 397 inch-dwt. Sinking operations have been resumed in both K1 and K2 Incline Shafts which are now being advanced through the dyke.

PROVINCIAL INSURANCE COMPANY LIMITED

The Fifty-fifth Annual General Meeting of the Provincial Insurance Company was held at Stramongate, Kendal, on May 22nd. The following are extracts from the statement of the Chairman, Mr Peter F. Scott:

In 1958 the Company continued to expand, both at home and overseas, the premium income increasing by £936,000 to £8,705,000. Our underwriting experience, however, was generally less favourable. At home our hard-won profits were more than offset by a loss on our overseas business leaving a total underwriting loss of £84,000.

The short-term outlook is not encouraging. The post-war scramble for business has forced rates down to a point where profit margins are in danger of disappearing altogether, and it will take time for the effects of this excessive competition to wear off and wiser counsels to prevail. Even if a dramatic recovery in Canada enabled us to make a start this year on the long uphill fight to regain the ground lost since 1956, we should still need time in which to consolidate our gains in other countries since 1953: in Southern Africa, where we have opened offices in Port Elizabeth and Salisbury; in Australia, where we have made encouraging headway since we began to operate on our own two years ago; and in Nigeria, where last year we formed a subsidiary company with local capital represented on the board.

My Board is under no illusions about the problems implicit in the development of a robust and profitable overseas business. We recognise that this is a long-term policy, and we regard its pursuit almost as an act of faith. In a company of our size and character, we feel it to be essential that our horizons should be as wide as possible and we welcome opportunities for younger men to get abroad and gain experience in areas where exceptional initiative and a fresh approach are needed.

To return to events nearer home. In 1958 we found it even harder than in 1956 and 1957 to maintain the tradition of profitable underwriting which has been associated with our fire department for so many years. The mild recession in trade, the curb on hire purchase, and the brake on public investment during the early part of the year, were alone sufficient to make any marked increase in income highly improbable, and the combined effect of these restrictions was magnified by the relentless pressure for lower rates to which all insurers are subject at the present time.

In spite of the continued improvement in employers' liability business, there was a comparable fall in the underwriting profit earned by the home accident department, the reasons for which are not far to seek. Irresponsible competition has pushed rates in many classes of accident business down to uneconomic levels; crime figures have risen notoriously.

It is much the same story with our considerable home motor account where the outlook is not very promising. Again it is a question of rates. Not only is there a very noticeable and natural tendency for third party awards to reflect more fully the diminished value of money, but since 1956—the year before rates were last increased—the cost of our claims for damage to vehicles in the United Kingdom (after adjustment for the increase in the volume of business on the books) has risen substantially. The great majority of motorists require full comprehensive cover, and insurers are willing, and indeed anxious, to meet the demand; but the price must be paid, and unless the trend of claims costs can be reversed a further rise in premium rates will be inevitable before very long.

Regarding the investment side of our business, our gross interest earnings increased to £621,421 and the directors feel justified in recommending a small increase in dividend on the ordinary shares. It is also satisfactory to report that the appreciation on our investments has been substantial during the past year, their total market value considerably exceeding the book figure.

The continued progress of our investment income has encouraged my Board in an enterprise long cherished by both sides of my family—that of devising a scheme whereby a large number of employees would be enabled to participate in the overall results of the Company's operations through the acquisition of shares on favourable terms. I am glad indeed to announce that, with a first application date in June, an employees' shareholding scheme has been worked out and has been discussed with the Inland Revenue. Full details will be in the hands of our staff at home and overseas, and of our pensioners, in a matter of days. The scheme is subject to the approval of the shareholders who will receive full details along with a notice of the general meeting which will be necessary. My Board and I feel this line of development is most appropriate for a company such as the *Provincial* and in keeping with its character and traditions.

One change of practice affecting our pension fund should be mentioned. Since inception the fund has been on loan to the Company and at December 31, 1958, the loan had reached a total of £1,604,096 as shown in the balance sheet. As from January 1, 1959, however, all additions to the fund are being invested by the trustees in suitable securities and this balance sheet item will be static in future.

Finally, I want on behalf of directors and shareholders to thank our management and staff who are putting so much energy and enthusiasm into the Company's business at this difficult moment in its history; in this connection I would specially mention our General Manager, Mr John Henderson, who shoulders so much of the responsibility for the execution of the policy of the board.

RELAY EXCHANGES

CONTINUED EXPANSION

The Fourteenth Annual General Meeting of Relay Exchanges Limited was held on Thursday last at the Connaught Rooms, London, W.C.2, being presided over by the Chairman, the Right Honourable Sir Walter J. Womersley, Bart. The following is extracted from his statement which had been circulated with the report and accounts:

The Directors recommended a final dividend of 12½ per cent, which with the interim dividend of 7½ per cent already paid makes a total dividend for the year of 20 per cent. They had also declared a special interim dividend of 2½ per cent which would be paid at the same time as the Final Dividend for 1958. The profit on Trading has increased from £1,503,670 in 1957 to £2,317,155 for 1958. There has been set aside for depreciation and replacement out of this profit £1,450,847 compared with £958,272 for 1957. This provision amounts to about 62.6 per cent of the profit earned. The net profit before taxation is £866,308, whereas for 1957 it was £545,398 and in 1956 £478,546.

The provision for taxation which appears as £475,032 includes £290,674 as an addition to reserve for equalisation of taxation which now stands at £879,565. After providing for taxation the profit for the year is £391,276. To this has been added the balance brought forward of £147,393, which makes a total of £538,669. Out of this sum the Directors proposed that £60,000 be transferred to General Reserve, so building that Reserve up to £400,000, and to the Reserve for equalisation of maintenance charge a sum of £15,000, bringing the total of that reserve up to £100,000.

After meeting the dividend mentioned earlier the total dividend charge for the year will absorb £202,107 and there will be left to carry forward £261,562. The special interim dividend of 2½ per cent will be charged in the 1959 Accounts and will require £25,113.

Reference was made by Sir Walter Womersley to the acquisition during the year of Goodmans Industries, Limited, a well known Company manufacturing Loudspeakers, electronic equipment and vibrators.

FINANCE

The Chairman commented upon the excellent reception that had been given to the financing operation that took place in March, 1959, when an issue of £1,250,000 6½ per cent Loan Stock was fully subscribed and a "Rights Issue" to the Shareholders of 1,746,995 shares of 5s. each at 20s. per share was taken up by them to the extent of over 99½ per cent of the shares provisionally allotted.

The Directors propose to go on developing the existing business while suitable areas and opportunities offer. In 1958 a new Rentaset showroom was opened every fourteen days, and this rate of expansion is being exceeded so far in 1959. It does not appear that saturation point is near. The Board is proceeding with some diversification of trading interests where it promises to be profitable to the Company.

Appreciation was expressed by the Chairman of the very loyal service rendered by all members of the staff who by their tactful treatment of Subscribers have contributed much to the ever growing good name of "RENTASET."

The Accounts were adopted, the proposed Dividend confirmed, and the retiring Directors re-elected.

A vote of thanks to the Chairman concluded the Meeting.

"SHELL" TRANSPORT & TRADING

HIGHER VOLUME OF SALES

The Annual General Meeting of The "Shell" Transport & Trading Company Limited was held on May 20th in London.

The Right Honorable Lord Godber, chairman, in the course of his speech, said:

It is usual for me at the Annual General Meeting to supplement my written Statement, which has already been circulated to shareholders, with some comments on the most recent trading conditions, and on any major new developments over the past few weeks affecting the Royal Dutch/Shell Group of Companies.

In the first quarter of this year the volume of Group sales has been substantially higher than in the corresponding quarter of last year, but strong competition for markets continues to prevail, and this is reflected in prices and freights, which are constantly under pressure. We are not yet in a position to announce the financial results for the first quarter, but do expect to be able to publish them before the end of this month.

FUTURE SECURITY OF OIL SUPPLIES

The future security of oil supplies has been questioned from time to time, not only in so far as the energy needs of this country are concerned, but also in regard to Europe and elsewhere. The maintenance of a steady flow of oil is at least as much in the interest of the producing as it is of the consuming countries. One cannot and should not be dogmatic on this question, but I feel confident that it is reasonable to assume that the oil industry will be able to meet the continuing requirements of the market without undue difficulty. In this connection it is reassuring that potential supplies from various areas, including entirely new areas, have never in the history of the industry been at a higher level than at present, and that the surplus world tanker capacity, in spite of the financial problems to which it gives rise, does provide a considerably greater flexibility in supply and transportation than has ever existed before.

OFFER FOR CANADIAN EAGLE

You will doubtless have read of the proposal which your Company has made, in conjunction with Royal Dutch Petroleum Co., to acquire the assets and business of Canadian Eagle. If the offer is accepted, it will involve the distribution by Shell Transport of 5,956,518 fully-paid ordinary shares to Canadian Eagle shareholders. The issue of these shares is within the total amount of shares authorised, and the necessary official permits have been obtained.

The Eagle Group of Companies had its beginnings in 1901, when Weetman Pearson, later Lord Cowdray, secured oil concessions in Mexico, which he subsequently developed into the operations of Mexican Eagle. A close association between the Eagle companies and the Royal Dutch/Shell Group of companies began some 40 years ago, when the two enterprises joined forces in operations in the United Kingdom, and subsequently in South America. It is in these areas that the association of the two enterprises continues to this day, and it is my view that, if this amalgamation of interests is accomplished, all concerned should benefit. It should add strength to the international operations of the Group; at the same time those who are now Canadian Eagle shareholders will, by means of the transaction, widen the sphere of their participation in the international oil industry.

The report and accounts were adopted.

YORKSHIRE INSURANCE COMPANY

The annual general meeting of The Yorkshire Insurance Company Ltd. was held on May 20th at York.

The Right Honourable Lord Middleton, KG, MC, LLD, the chairman, in the course of his speech, said:

Two special features mark our operations in 1958. The first is the record achievement of our Life Department in completing well over £33 million of new Life business in the year. In the last five years we have more than doubled our intake of new Life business, and in the last ten years have increased it by over 600 per cent.. In 1958 our rate of growth was again a record.

The second special feature relates to our Non-Life operations. The Directors, in the light of a number of years of unprofitable results in the United States of America, and being unable to take the view that the situation was likely to improve in the early future, decided that the best interests of shareholders would be served by closing our account in that territory.

Turning to the Fire and Accident field, there has been a marked betterment in our overall experience.

The Directors, in the light of all relevant circumstances, recommend that the final dividend for the year should be 14s. 6d. as compared with 13s., making for the year 21s., as compared with 19s. 6d. in 1957.

The capital proposals are designed to bring our capital structure more into line with the present size and prestige of the Company, and also to simplify it.

The report was adopted.

CRUSADER INSURANCE COMPANY LIMITED

CHAIRMAN'S SPEECH

In his annual statement, the Chairman of the Crusader Insurance Company Limited, Mr Harvey Bowring, said that net premium income in 1958 exceeded £2¼ million (£1 million, for the first time, from non-life business). New Life Assurances at £14,247,495 were more than double those for 1957. Reduced expense ratios were shown in all departments.

Improved bonus declarations were made in respect of "With Profits" Endowment and Whole Life Assurances (45s. per cent and 50s. per cent, respectively), and for "Self-Employed" Deferred Annuities (35s. per cent, with a special final bonus of £7 10s. per £100 of pension).

The number of Group schemes in operation (now nearly 900) had doubled during the past five years.

In referring to the Company's approaching Diamond Jubilee, the Chairman affirmed the Directors' awareness of the fact that people were the main assets of the Company and that in the Staff they had a first-class team. It was tremendously encouraging to know that nearly 25 per cent of the 580 full-time Staff had given more than 20 years' service.

Referring to the Company's connections he said it was very encouraging to find we were receiving increasing support from Brokers and other friends and connections. This support was due in no small measure to the steps taken in recent years to provide them with prompt and efficient service from our City and Provincial Offices. He also expressed his thanks to the many Insurance Offices whose support we were privileged to enjoy, particularly those with whom we had treaty arrangements in force.

ROSS GROUP LIMITED

The following are salient features of the Accounts for the year ended 30th September, 1958, and of the report by the Chairman, Mr. J. Carl Ross, to the Annual General Meeting on 20th May, 1959.

"It is gratifying to report another successful year's trading by our Group. In recent years we have been planning and carrying out a programme of modernisation, expansion and diversification and as a result the record profits reported last year have been eclipsed."

PROFITS

Trading Profits, including income from trade investments, amounted to £678,854 (£577,028). The Group Net Profit after Taxation is £194,870 (£140,923).

TRAWLING

Your Directors are of the opinion that, despite all its trials and tribulations, there are and must be good prospects for investment in the British Trawling Industry provided modern vessels are available to attract the best men to operate them. Fifteen new vessels have been delivered in the past three years.

ROSS FROZEN FOODS

A major policy decision has been taken recently in connection with marketing operations. "ROSS" is now to be the name under which the Company's Sea Foods and Frozen Fruits and Vegetables will be sold, for example: "Ross" SeaSparkle Haddock, "Ross" Westwick Garden Peas.

FURTHER PROGRESS ANTICIPATED

Today we are ideally placed for future and possibly remarkable expansion. Impressive progress has been made during the past five years.

Continued progress has been made since the last financial year ended. Negotiations have been completed in regard to the purchase of certain further businesses, including YOUNGS (whose Potted Shrimps and Scampi are particularly well known), which in all will involve as consideration the issue of approximately 1,200,000 stock units of 5/- each and £20,000 in cash. Estimated annual Profits of the Companies acquired, subject to tax, are £125,000.

CURRENT TRADING

Known benefits during the current year are: a reduction in Profits Tax, a reduction in Bank Interest Charges, a more efficient Trawler Fleet, and Lower Fuel Oil Costs. These have contributed to the improved trading experienced to date.

Copies of the Annual Report are available from the Secretary,
1, HUTTON ROAD, GRIMSBY.

UNITED MOLASSES

RESULTS BETTER THAN ANTICIPATED

The Thirty-Third Annual General Meeting of The United Molasses Company Limited will be held on June 9th in London.

The following is an extract from the circulated statement of the Executive Chairman, Mr G. W. Scott, CBE:

Last year I forecast that the Group profits for 1958 would show a considerable fall over those for the previous year and might not, in themselves, cover the payment of dividends at the same rate as for 1957. Although the gross profits do, in fact, show a substantial reduction from £6,573,322 to £5,112,271, the net profits are only approximately £150,000 less than those for 1957. These results are much better than had been anticipated and not only justify dividends at a slightly higher rate than last year but also enable the Directors to transfer £1 million to General Reserve and still leave the carry forward at a higher figure than that brought in. In addition, it is again recommended that there be paid a Special Cash Distribution not subject to Income Tax, out of the Capital Reserve.

The principal contribution to our earnings arises from trading in molasses and shipping. The volume of molasses deliveries for animal feed continues to increase, but prospects for shipping continue to be depressing and there appears no likelihood of any early material improvement in either dry cargo or tanker freights.

Present indications are that the earnings for the Group for 1959 will show a fall over those for the previous year, due entirely to the continued depression in shipping.

McINTYRE & SONS LIMITED

WELL EQUIPPED TO MEET KEEN COMPETITION

The sixth annual general meeting of McIntyre & Sons Limited was held on May 15th in London, Lieutenant-Colonel W. D. Gibbs (the chairman) presiding.

The following is his circulated statement:

I am pleased to report that the Net Profit of your Company (last year £40,543) has been maintained and is shown at £40,625 for the year under review. Taxation absorbs the sum of £18,606 leaving a Net Profit after Taxation of £22,019.

As already announced, it is proposed to recommend the payment of a dividend of 15 per cent less tax (which is the same rate as last year) on the increased capital of £100,000.

Since the close of the year Mr Douglas S. Grave, who has been closely associated with your Company for many years, was invited to join the Board, and you will be asked to confirm his appointment and to re-elect him for the coming year.

Capital Expenditure has been incurred of some £15,000 which was for additional Plant and Machinery (including a Mobile Crane) and for a special heavy transport vehicle, and your Company is accordingly well equipped to meet the keen competition to secure the new building work which should be released shortly.

In conclusion, I wish to thank my colleagues on the Board and also the staff and employees of the Company for their continued co-operation and support.

The report and accounts were adopted.

THE LONDON ASSURANCE

CONSIDERABLY IMPROVED EXPERIENCE IN N. AMERICA

The Annual General Court of The London Assurance will be held on June 10th in London.

The following is an extract from the circulated statement of the Governor, Mr R. Olaf Hambro:

Two years ago I said that "Over all, the year has been a bad one," and last year in quoting this remark I had to comment on figures for the year 1957 which were, on the whole, much worse than those for 1956. I am glad to say that though the difficulties of underwriting a satisfactory Fire and Accident Account in the United States have only slightly lessened, our underwriting results for the year do show a very considerable measure of improvement, and taking everything into account, they may be said to be not unsatisfactory. As in 1957, the Marine Department has done well, and the Life Department has moved from strength to strength. The Accident Department, which fared particularly badly in 1957, seems to have turned the corner especially in the United States, and brings out a small transfer to Profit and Loss Account. In the Fire Department, by contrast, the business of the year has resulted in an underwriting loss due primarily to our experience in the United States, where we have had serious difficulty since 1956. Last year there was only a slight improvement in the experience of Fire and Accident underwriters generally in this territory. There has, however, been a big improvement in our own relative position.

Life Account.—1958 has been a year of notable progress in the Life Department. The premium income has increased during the year by £190,000, and now exceeds £2,700,000. The premium income on new Life Assurance business was nearly £400,000, securing sums assured of nearly £12,500,000, the figures for the previous year being £300,000 and £10 million respectively. The gross rate of interest earned increased by 7s. 4d. per cent to £5 17s. 3d. per cent and the net yield was £4 8s. 11d.

Fire Account.—The fire premium income for the year amounted to £8,738,520, an increase of just under £500,000 when compared with the previous year. The claims cost at £4,510,641 represented 51.6 per cent of the premiums, and an underwriting loss of £453,251 or 5.2 per cent of the premium income, has been met by a transfer from Profit and Loss Account.

Marine Account.—The Marine premiums for the year amounted to £3,769,158, an increase of about £140,000 when compared with the previous year. After providing for expenses and overseas taxation, the transfer to Profit and Loss Account was £400,000, leaving the Fund at £5,429,461. The ratio of the Fund to the premiums is 144 per cent and shows great strength.

Accident Account.—Premium income increased by £820,000 to £13,069,833. A substantial improvement in the claims cost, which was reduced to 61.7 per cent for the year, has brought out a small profit amounting to £69,503 or 0.5 per cent of the premium income, and this has been transferred to Profit and Loss Account.

Profit and Loss Account.—Receipts from interest, dividends and rents show a further increase to £1,314,095. After providing for UK taxation and other expenses and provisions there is a profit of £828,643. Provision has been made for a final dividend of 1s. 3d. per share less income tax, payable on July 1st, making the total distribution for the year 2s. 3d. per share, the same as last year. The balance of the carry-forward in the Profit and Loss Account has been increased by £363,000 to £2,685,104.

AMBER CHEMICAL INDUSTRIES

The Eleventh Annual General Meeting of Amber Chemical Industries Limited was held on May 14th in London, Mr D. G. N. Lloyd-Lowles (chairman) presiding.

The following is an extract from his circulated statement:

Having regard to the generally depressed state of industry throughout 1958, it will come less as a surprise than as a disappointment that our profits have fallen to just short of £8,000.

There were several factors which contributed particularly to this, one being the reversal of the CEGB programme for conversion of Power Stations from solid fuel to oil. We had every right to expect a much increased consumption of our Powdered Additives and Fuel Improvers by the Board, but in the circumstances it has not come about. The sale of our Liquid Additives to ordinary industrial users, Shipping Lines, etc., has justified its early promise and the number of our customers has multiplied considerably.

The contraction of the oil industry throughout the world also affected the sale of our Causeway Products, expenditure by the major oil companies having been greatly curtailed. I cannot, however, consider the results of that Company as unsatisfactory, having regard to the circumstances.

The application of Causeway Products to users outside the oil industry, especially in mining, has been extended and we are now taking active steps towards the further exploitation of the North American market.

Amber Oils Limited, which specialises in "Tailor-made" cutting and soluble oils mainly for the engineering industry, was of course affected by the general recession in engineering, but nevertheless has shown us a good profit.

So far as the current year is concerned, a higher level of activity in all sections is now being experienced and a general movement towards better prices should help us to achieve better results at the end of 1959.

The report and accounts were adopted.

COMPANY AFFAIRS

BEECHAM GROUP

THROUGHOUT the boom in industrial equities, the 5s. ordinary shares of the Beecham Group have enjoyed the favour of investors. The group has been expanding: it has advertised its own proprietary drugs, foods and toilet preparations extensively and it has added to its interests by acquiring other businesses. Its most important acquisition last year was Thomas and Evans, the makers of "Corona" mineral waters, and only six months after the protracted take-over struggle for that concern it was the successful bidder for the share capital of James Pascall, the sweet manufacturers.

Seven months' earnings of Thomas and Evans, though none from James Pascall, are included in the group's profits for the year to March 31, 1959. These show that the total sales rose over the year from £34.1 million to £40.4 million, that gross profits before tax advanced from £5,995,000 to £6,435,000 and net profits, after a smaller tax charge, from £2,511,000 to £3,196,000. But before they get wildly excited about this evidence of growth, investors should look at the trend in profit margins over the last two years. In six monthly periods (of which the last includes the trading of Thomas and Evans) the trend in gross margins has been: 19.4 per cent, 15.6 per cent, 17.5 per cent and 14.6 per cent. The trend in net profit margins has been a little more reassuring because of the lower incidence of tax: 8.7 per cent, 6.2 per cent, 7.8 per cent and 8.6 per cent. The figures, in fact, suggest that the Beecham Group certainly has made gains in sales, but that the gains it can secure in profits are proportionately less. That is the point that investors have to bear in mind in looking at the present yield. The recent dividend record of the company has been progressive and now, in effect, the ordinary dividend has been raised from 20 to 24 per cent—17 per cent being payable on the capital issued to shareholders in Thomas and Evans. On this dividend, covered about twice by earnings, the yield is 3½ per cent at the current price of 34s. 4½d. for the 5s. units. It was right to discount growth in the Beecham Group eighteen months or so ago. Is it rather generously discounted now?

BRISTOL AEROPLANE

THAT part of the statement of Sir Reginald Verdon Smith, the chairman of Bristol Aeroplane, which is devoted to "future prospects" boils down to a plea for Government support for the British aircraft industry. That has been a common theme in the statements of the spokesmen of the aircraft industry this year, for they cannot be expected to smile at the prospect of contraction nor at the uncertainties of providing finance for developing new aircraft for the civil market. Bristol Aeroplane developed the turboprop, the Britannia, and it has failed to sell enough of them to make the development a commercial success. Sir Reginald says: "Sales on the scale for which we had hoped and planned, and upon which the financial success of the project will in the end depend, have so far eluded the company's most determined efforts." How much so is reflected in the decline in the value of orders on hand within twelve months from £125 million to £96 million. That decline is much more important to stockholders than the increase in sales last year, reflecting the delivery of Britannias, from £57 million to nearly £76 million.

Bristol Aeroplane is continuing to run its business on the base of a big bank overdraft. At the end of last year this amounted to over £14½ million and the receipt since then of £1¾ million arising from the sale of its interest in Rotol to the Dowty Group cannot have made any really significant difference. At one time, Bristol Aeroplane seemed to be hoping to fund some of its bank debt, but now Sir Reginald says that the changes in the structure of the group (which include the pooling arrangements with Hawker Siddeley on the development of aircraft engines) have altered the character of the problem and for the time being a move of this kind is inappropriate. In view of the contraction of the aircraft industry, does this provide any consolation for the ordinary shareholders, who again have received a dividend of 10 per cent and whose 10s. shares at 9s. xd. yield £11 2s. per cent?

DE BEERS

MUCH of the money that De Beers earned in the past from diamonds was canalised into other mining ventures in Southern Africa, notably into the development of the goldfields of the Orange Free State. No wonder then that whatever happens to diamond sales the £1 ordinary stock units of De Beers, whose balance sheet at the end of last December included, at market values, non-diamond investments and net cash assets worth more than £85 million net, rank as income stocks. Currently at 14½s. 3d. they yield 7.1 per cent on a maintained dividend of 200 per cent.

The directors had no difficulty in again maintaining that payment even though sales of diamonds through the Central Selling Organisation last year fell from £76.7 million to £65.5 million, and De Beers' own revenue from the diamond account fell from £33.3 million to £26.9 million and its gross income before tax from £31.6 million to £26.2 million. The dividend in fact was perfectly safe in a year which the chairman of De Beers, Mr Harry Oppenheimer, describes as a difficult one for the diamond industry.

	1957	1958
	(£'000s)	
Profits and Dividends:		
Diamond sales	33,304	26,885
Investment income and royalties	8,447	8,540
Group profit	31,613	26,210
Taxation	8,339	6,079
Net profit	20,501	17,739
Deferred dividend	8,168	8,168
Deferred dividend (per cent)	200	200
Retained profits	10,559	8,782
Consol. balance sheet:		
Net *fixed assets*	29,431	35,000
Net *current assets*	44,502	41,685
Diamond stocks	8,793	13,397
Investments	40,059	42,558
Reserves	116,366	124,018
Deferred capital	4,084	4,084

This year should be much less difficult. Demand for diamonds at the moment is "satisfactory" though for industrial stones this is due to stockpile buying. Indeed, Mr Oppenheimer says that in general the production of industrial diamonds is in excess of what is required for current consumption. It is in this market that the diamond syndicate has to compete with the synthetic stones produced by General Electric of the United States, and De Beers is now to market a new diamond grit specially prepared for resinoid bonded wheels. In gem stones, despite the "illicit" trade, the syndicate has an equally dominant hold but now there are signs that De Beers is prepared to spend money on publicising them in areas other than the United States. In all, Mr Oppenheimer expects diamond sales to be higher and that De Beers will enjoy a "prosperous" year.

UNITED DRAPERY STORES

"WE have continued to expand our existing business and anticipate that this expansion will continue in the current year." In these words, Sir Brian Mountain explains, in his valedictory statement, why the time is ripe for United Drapery Stores to make a one for ten rights issue of 5s. ordinary shares. The shares are being issued at 20s., compared with the current price of 41s. 1½d., and on a prospective dividend for the year to January 31, 1960, of not less than 35 per cent. Thus, ex rights, the yield is 4½ per cent on a dividend that is likely to be covered not less than twice.

Expansion has two meanings for UDS. It can mean the acquisition of new subsidiaries. Last year UDS acquired Allders of Croydon (against an issue of £1,300,000 6 per cent unsecured loan stock), John Farnon of Newcastle-upon-Tyne, and the credit business of Pooles Central Warehouse (the badly battered concern that was the principal subsidiary of Canadian and English Stores). Presumably, it is still in the market for other stores. The other sense of expansion is the building up of sales and here UDS will certainly be active this year. Sir Brian says that the increase in turnover gathered momentum after the lifting of the HP restrictions in October; the appearance of the provision of £503,832 (against only £72,579 in 1957-58) against unearned profits on HP outstanding certainly supports this view. These additional sales helped to add £321,000 to trading profits, and the remaining £460,000 of the total increase of £781,000 to £7,913,000 came from the consolidation of the earnings of the newly acquired businesses. Since the end of January, sales have shown another "satisfactory improvement," though in some areas trade is still affected by unemployment or under-employment. Additional sales in 1958-59 are reflected in the rise from £6,796,000 to £9,027,018 in debtors after deducting the provision for unearned profits (which itself has risen from £1,458,000 to £2,485,000). The £3 million of new money from the rights issue added to the £1,700,000 already held in cash will give UDS ample resources to finance further growth.

IMPERIAL CHEMICAL INDUSTRIES

SIR ALEXANDER FLECK, the chairman of ICI, comments that the static sales and falling profits of the group last year were disappointing but not discouraging. He adds: "It is natural in any manufacturing industry which has to invest very large sums in plant and machinery, that a failure of turnover to rise should result in a decline in profits particularly when the capital invested is large in relation to turnover . . . the converse, however, is also likely to be true; if the profits are sensitive to turnover then an upward movement in turnover is likely to be reflected in a more than proportional increase in profits." This is wise—though it does not answer the question when will the ICI plants that were under-employed last year be working again at or close to full capacity?

Sir Alexander says it is too early to predict with confidence the likely outcome for 1959: some industries which are ICI's customers remain "rather depressed," others were "more buoyant." But sales so far this year both in domestic and foreign markets are higher than they were twelve months ago and some of the export markets (to which ICI increased the volume of its sales last year) are more "open" than they were. In particular, Sir Alexander notes "a substantial expansion in what has been and still is a modest amount of trade with countries of Eastern Europe."

As the supplier of basic raw materials to many industries, ICI's sales and profits can hardly fail to rise as trade expands again. Last year, the ordinary dividend at 8 per cent was effectively the same as that paid for 1957. In the future, following a suggestion made by a stockholder, the dividend will be expressed in shillings and pence. On a 8 per cent dividend, the £1 stock units at 34s. 9d. yield £4 12s. per cent. The 8 per cent dividend, however, is equal to the awkward sum of 1s. 7.2d. in the £. Something will have to be done to that clumsy figure.

ALBERT E. REED

FOLLOWING the increase of 6.5 per cent in sales in 1957-58, the turnover of Albert E. Reed rose by a further 6.3 per cent in the year to March 31st, from £62.3 million to £66.2 million, but trading profits edged forward by only £236,172 to £6,000,922 (after falling by nearly £1 million in the previous financial year). The pressure of rising costs on margins in a fiercely competitive market was thus made manifest. As a proportion of sales, trading profits fell slightly from 9.3 per cent to about 9 per cent. Yet another increase in depreciation—this time from £1,263,794 to £1,723,252—which reflects the installation of modern paper-making machinery brought down gross profits before tax from £4,500,956 to £4,277,670, and the margin on sales from 7.2 per cent to 6.5 per cent. The ordinary dividend has been left unchanged at 14 per cent, to which it was cut from 16 per cent in 1957-58. The directors say that competition continues to be severe in both the paper manufacturing and the converting industries where supply continues to exceed demand. Last November the directors indicated that there were signs of improvement and the half-yearly figures certainly make a slightly better showing: sales at £34,500,000 in the second half of the year compare with £31,700,000 and net profits of £1,567,000 with £948,000. Nor do investors lack confidence, for the £1 ordinary shares were going up before the preliminary statement was published, and at 51s. 9d. yield just under 5½ per cent.

UNITED MOLASSES AND FRANCE, FENWICK

ONCE again the ordinary dividend of **United Molasses** is placed out of danger, for the chairman, Mr G. W. Scott, says that the directors intend to leave it unchanged at 1s. 6d. per 10s. share tax free (or 24.93 per cent gross) this year even if this means drawing on the carry forward. Shareholders will welcome this reassurance, as the chairman predicts a further fall in the profits, which, reflecting the continued depression in shipping freights, fell last year from £5,806,787 to £4,299,101. The fall this year could be even sharper, for the long-term charters of four tankers run out this year. United Molasses may before the year is out have to lay up some of its ships and in the next two years or so it will have to take delivery of new vessels. Moreover, though sales of molasses for animal feedingstuffs are again expected to increase, the demand for molasses for fermentation into alcohol and manufacture into solvents will remain at a low level as many synthetic alcohol plants are now in production.

United Molasses' free reserves are massive at £13,748,802, and the group holds as much as £6,397,508 in cash or its equivalent and £8,016,335 in gilt-edged and other securities, so that the payment of the dividend will impose no great strain. Mr Scott does not say whether the directors will again make a tax free capital distribution, following the 3¾ per cent payment they made last year. This cost £329,822 and absorbed less than half the capital profits of £842,339 from the sale of the group's majority share holding in Olympic Cement and of other securities. On the ordinary dividend alone the 10s. ordinary units at 32s. 9d. yield 7⅝ per cent.

This is higher than the yield of 7½ per cent on the £1 ordinary shares of **France, Fenwick** now at 26s. 6d., and carrying a normal dividend of 10 per cent cut from 15 per cent on the fall in net profits from £416,110 to £292,760. It is covered nearly four times by earnings, but Mr Kenneth Pelly warns shareholders that the decline in profits does not reflect the full impact of the depression in the shipping industry. As well as cutting the trading dividend, the directors have reduced the tax free capital distribution from 3 to 2 per cent in view of "the present state of trade." With long-term charters coming to an end, Mr Pelly describes the outlook as bleak; he says that this year is likely to be an "outstandingly bad" one for tramp shipping and that prospects are unlikely to improve "until new tonnage ceases to be produced and old tonnage scrapped wholesale."

BRITISH COTTON AND WOOL DYERS

SHAREHOLDERS in British Cotton and Wool Dyers' Association were disappointed with the sharp fall of over 40 per cent in trading profits and the reduction in their dividend from 8⅓ per cent to 5 per cent and on the results the 5s. units fell 4½d. to 3s. 4½d., to yield 7.4 per cent. A ray of light can be found, however, in the revival of business in the latter months of the year to March 31, 1959, and the statement by the chairman, Mr Edgar Isles, of a continued improvement in the first few weeks of the current year.

The group's trading profit fell from £385,396 to £209,052, and though tax was down from £125,314 to £32,239,

depreciation was some £8,500 higher at £144,366 as a result of heavy capital expenditure in the previous year; net profits thus amounted to only £14,755, against £107,023, and the payment of 5 per cent was made possible only by drawing upon the carry forward.

"Slubbers," like other textile companies, has sought to diversify its activities. Two of its subsidiaries are engaged in the catering trade; a third—Ashley Associates, specialising in staff selection in the north of England—has now been added. At the moment these subsidiaries have accumulated a loss of over £25,000, but Mr Isles explains that instead of purchasing an established business "Slubbers" has started "from scratch" in the catering trade and that initial losses are inevitable. If the development of these new interests really helps to cushion the worst effects of fluctuations in the textile industry, small initial losses (on which tax relief is obtainable) are bearable—though only for a short while.

WILMOT-BREEDEN

FOR the sixth successive year the profits of Wilmot-Breeden (Holdings), an important supplier of components to the motor industry, have increased—last year by 12 per cent from £1,699,205 to £1,903,689. This may seem a little disappointing in view of the boom in the motor industry, but it has to be remembered that in the earlier recession when the profits of nearly every other manufacturer of motor components were sharply reduced Wilmot-Breeden managed to achieve a slight increase in its earnings—reflecting, in part, a policy of diversification. The directors are sticking to this policy and recently Wilmot-Breeden secured a stake in the electronics industry through the acquisition of controlling interests in Wright and Weaire (now renamed Ferrograph), manufacturers of electronic components and tape recorders, and Wayne Kerr, which specialises in electronic measuring instruments.

Nevertheless the custom of the motor industry still accounts for by far the major part of Wilmot-Breeden's turnover and Mr D. L. Breeden, the chairman, says that towards the end of 1958 activity declined because of changes in car models and of the need to introduce a large number of component changes. Output however is now rising rapidly and is likely "shortly to reach a new record level."

Despite this decline at the end of the year, sales of motor components constituted a record—a feat made possible only by heavy capital expenditure in recent years. With quick resources of £1,098,360, to which must be added the £520,000 resulting from the issue of preference shares last January, Wilmot-Breeden appear well able to finance further expansion. The balance sheet shows stocks substantially higher at £2,475,894, against £1,940,937, reflecting the belief of the directors that considerable economies can be achieved by the holding of larger stocks of finished goods, so as to meet fluctuations in demand and to complete orders for replacement parts promptly.

An ordinary dividend of not less than 12½ per cent was forecast last October but in fact it has been set at 13 per cent, compared with 9 per cent in 1957. The bigger dividend is still covered 2½ times by earnings and at the current price of 13s. 7½d. the 5s. shares yield 4.8 per cent.

WHITBREAD

LAST November shareholders in Whitbread and Company received a 50 per cent scrip issue in six per cent third preference stock, but that hardly tempers their disappointment, when other brewing companies have announced higher profits and dividends, with the unchanged ordinary dividend of 25 per cent and the slight fall in profits that the directors report for 1958. Beer consumption declined by just under 3 per cent last year but Whitbread's gross profits fell by over 5 per cent, from £2,958,782 to £2,802,099, and it was only thanks to a lower rate of profits tax that net profits were £60,780 higher at £1,369,367. The £1 "A" ordinary shares fell by 1s. to 115s. after the dividend announcement, but even at this level they yield barely 4½ per cent. Brewing, where the decline in consumption has not really been arrested, remains a highly competitive industry in which Whitbread, though it may have been one of the first to do so, is not alone in seeking a profitable policy of rationalisation and development.

INVESTORS MUTUAL OF CANADA

DEALINGS in the shares of Investors Mutual of Canada, began very quietly this week on the London stock exchange under rule 163 (1). This is the biggest of the Canadian mutual funds, with big holdings in Canadian common stocks. It distributes the income on the portfolio in full but usually holds back part of realised capital gains to provide for further growth. Since it started in 1950 the total net assets of Investors Mutual have risen to $162,300,000 and the number of its shares now in issue is 15,200,000, on which 32 cents was paid in 1958.

The interest that British investors are at present willing to take in Canadian securities is perhaps a little chastened but this mutual fund provides a good spread of risks and high-class management. To secure a stake in it, British investors pay the net asset value plus a loading charge of 2½ per cent, and of this 1½ per cent goes back to the fund, one half of one per cent goes to the jobbers so that they can make a market and another one half of one per cent goes to Cazenove and Company which in effect acts between the jobbers and the fund much as an odd lot dealer in Wall Street. The buyer has to pay the broker a commission for executing any deal. On this basis, dealings, based on the Canadian price of $11.77, began in London at 85s. 8d.-87s. 10d. to offer a gross yield to British investors of just over 2¼ per cent.

London Stock Exchange

FIRST DEALINGS:	Apr. 29	May 20	June 3
LAST DEALINGS:	May 19	June 2	June 16
ACCOUNT DAY:	May 26	June 9	June 23

GILT-EDGED stocks remained firm and after the week-end prices quickly responded to investment buying. On Wednesday price movements were rather more irregular. But over the week to Wednesday's close numerous gains were scored, Gas 4 per cent 1969-72 rising by ⅝ to 90 in the medium dated stocks and Electricity 3½ per cent 1976-79 by ¾ to 79 in long dated issues. Among the irredeemables War Loan 3½ per cent advanced by ½ to 66¼. Home Corporation loans were firm in line with Government Funds, and the discount on the new LCC 5 per cent stock 1980-83 narrowed by ¼ to ⅛. Among foreign bonds, Greek issues were again in demand in active dealings, the 7 per cent stock jumping by 4 to 38½ on debt settlement hopes.

Leading industrial equities continued to advance in almost every sector at the end of the three weekly account. On Wednesday they continued to forge ahead following the overnight recovery on Wall Street and the publication of the April retail trade figures. *The Economist* Indicator gained a further 4.5 to a fresh peak of 272.3. ICT advanced by 4s. 6d. to 78s. 3d. on the bigger interim dividend and British Oxygen by 5s. 9d. to 63s. 9d. on the prospect of increased American interest in the stock. Motor and kindred shares were again strong in active dealings. Ford rose by 2s. to 65s. 6d. and Rolls-Royce by 2s. 6d. to 77s. Brewery shares were again in demand but Watney Mann were outstanding with a jump of 7s. 9d. to 105s. 6d. Store issues were also strong, and Harrods shot up by 4s. 3d. to 87s. 3d. on speculative demand in a market short of stock, while Montague Burton on the increased interim gained 2s. 10½d. to 32s. 10½d. TV relay shares once more sprang into prominence, with British Relay gaining 3s. 3d. to 35s., while among electrical shares Ever Ready rose by 6s. 4½d. to 39s. 3d. and Decca gained 1s. 3d. to 41s. 3d. xd. HP shares were duller and UDT lost 3s. to 150s. 6d.

Leading oil stocks joined in the general rise on Wednesday, led by Shell which gained 3s. 9d. to 136s. 3d. Burmah went up by 3s. 6d. to 83s. 6d. and BP by 1s. 3d. to 52s. C. C. Wakefield gained 1s. 6d. to 43s. on the higher dividend and profits. Kaffirs were dull at first but they went ahead on Tuesday on American buying through Johannesburg, and the *Financial Times* Gold Mines Index rose by 0.9 to a 1959 peak of 91.4, only just short of the all time "high" of 91.8 touched on February 22, 1956. FS Geduld gained 5s. to 180s. 7½d. and St. Helena 3s. 1½d. to 59s. 4½d. Rubber shares were firm on the strength of the commodity, US Betong gaining 1s. 3d. to 89s. 6d.

THE MONEY MARKET

THE spell of persistent stringency encountered by the market came to an end unexpectedly on Thursday of last week. Government disbursements and light calling by the banks turned what was expected to be a difficult session into a comfortable one without further intervention by the authorities. The rate for fresh overnight loans declined from 3⅛ or 3¼ per cent to the banks' minimum lending rate, and the easier conditions continued up to the start of the holiday. But after the holiday, some houses found difficulty in meeting their requirements. On Tuesday one or two houses had to borrow a small amount at the Bank of England, although most houses had balanced their books by mid-day.

The average rate of discount rose by 1½d. to £3 6s. 2.7d. per cent at last week's tender. Applications for the £190 million of bills offered increased by £15 million to £358 million. The syndicate again left its concerted bid unchanged at £99 3s. 5d. and the proportion allotted at this price fell from 33 per cent to 25 per cent. At recent tenders, the market's allotment has been consistently low, but this week the tender has been raised to £230 million.

Labour Force to Grow 80%

National Income to Triple

Per Capita Income May Double

We all know just how rapidly Canada is growing, but the Gordon Royal Commission was the first to make any studied forecasts of that development. The growth predicted by 1980 will mean constant changes in Canada's economy. Through our more than 500 branches of the Toronto-Dominion and by our close participation in that economy, we're right at the centre of all Canadian business activity . . . able to assist any manufacturer planning market expansion in prosperous Canada by supplying such information as:

- **market statistics** • **corporation procedure**
- **information on plant sites** • **advice on customs problems**
- **data on market distribution** • **incorporation procedure**

"In my view, Sir, the fact that they are but recently established should not dissuade us from availing ourselves of a service which, to my knowledge, is unique—even in 1859."

"I must admit that this idea of the insurance and inspection of boilers being administered by one company is an extremely modern one. Nonetheless, admirable: and doubtless, here to stay. Inform me again of their name."

"The Steam Boiler Assurance Company."*

"And my Board meets tomorrow. Excellent."

***A CENTURY LATER,** and since 1896 known as The Vulcan Boiler and General Insurance Company Limited, we have a century's experience behind us—and every day are learning more. Our clients are now numbered in tens of thousands. The expert specialist inspection *and* insurance of industrial machinery—boilers included—still makes our services exceptional: even in 1959.*

APPOINTMENTS

MSL have been retained to advise on the appointment of a

MARKETING MANAGER

for

PARKINSON'S BISCUITS LIMITED

This company established in 1884 was almost out of business for two years following a fire in 1955. It now employs approximately 450 and has virtually regained its lost markets. The Marketing Manager will be responsible to the Managing Director for developing and implementing marketing plans to increase turnover; he will have the support of sound products, and a modern efficient factory, and will belong to a new and lively executive team.

Candidates should have had management experience in marketing in a company selling consumer products preferably through the grocery trade. Age should not exceed 35.

Initial salary about £2,000 plus benefits.

Please send brief details in confidence, quoting reference S.1680, to T. E. Watson. In no circumstances will a candidate's identity be disclosed to a company unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED
17, Stratton Street, London, W.1.

COUNTY COUNCIL OF ESSEX
COUNTY PLANNING DEPARTMENT

Applications are invited for post of Planning Assistant, A.P.T. Grade I (£610 — £765) plus London Weighting at Wanstead.

Applicants should have had some experience in a Planning Office particularly in respect of research into and analysis of population trends and records, industrial location and records, and the preparation of statistical tables for land use areas, education requirements, etc.

Applicants should possess a University Degree in either Geography or Economics and consideration will also be given to Graduates who possess such a degree, but have not had the necessary planning experience, with a view to training for this work.

All reasonable facilities, including day release, will be given to enable the successful candidate to complete an approved course of studies to obtain Corporate Membership of the Town Planning Institute.

Five-day week; medical examination; superannuation.

Application form from County Planning Adviser, Broomfield Place, Broomfield, Essex, to whom they should be returned by June 2, 1959.

May 12, 1959.

PHARMACEUTICAL EXPORTS

First-class Administrator required by leading international manufacturers of medicines to take charge of Export Department, with full responsibility to Export Director. Essential qualifications: organising ability, knowledge shipping and export procedure, cost-consciousness, accountancy, budgetary control, production planning, ability to get things done efficiently and economically. Age 35-40. Marketing, selling or advertising experience an advantage, preferably overseas in export business. The position is a responsible and well paid one and only applicants who are earning at least £1,500 will be considered. Possibility some overseas travel. Pension scheme.—Applications in considerable detail to Box 1170.

UNIVERSITY OF NEW ENGLAND
AUSTRALIA

SENIOR LECTURER OR LECTURER IN ECONOMICS

Applications are invited for the above position. Duties will include both internal and external teaching. Grants to assist research are available.

Commencing salary will be fixed according to qualifications and experience within the range of £A2,200 x £A80 — £A2,600 (Senior Lecturer), or £A1,500 x £A90 — £A2,100 (Lecturer). In addition a cost of living allowance is payable. Provision is made for superannuation, travel and removal expenses, assistance in buying or building a house.

Further information and the conditions of appointment may be obtained from the Registrar, University of New England, Armidale, N.S.W., Australia, or from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London on July 6, 1959.

ACTUARIAL OPPORTUNITIES IN AUSTRALIA

Universal Flexible Trusts Limited (Victoria), Universal Flexible Investments (N.S.W.) Pty. Limited, and the Consulting Actuarial Practice of A. M. Parker, F.I.A., F.S.S., offer attractive actuarial opportunities at all levels of Institute and Faculty qualifications, for men who want an interesting and lucrative career in a country with one of the best climates in the world and where the standard of living at all cultural, material and political levels is excellent.

Salary offered for Fellows between the ages of 25 and 35 is £2,000 to £2,500 (Australian) per annum with excellent prospects. Salary offered for non-Fellows is comparable. Under a generous contributory pension scheme there is a retirement pension of 50 per cent average of highest five years' salary, and a widow's pension of half of this amount on death during service or after retirement, plus children's pensions on death. A bonus is payable, depending on profits, and this has always been generous. Transfer cost to Australia will be paid on appointment.

Both the Unit Trust companies and the Actuarial Practice are large and rapidly expanding. Amounts invested in the Unit Trusts are currently approaching £2 million per annum and the Actuarial Practice is the largest in Australia with leading British/Australian companies included in its clients.

Men interested should write or 'phone to Mr. A. M. Parker, F.I.A., F.S.S. at 3 Chester Row, Belgravia, London, S.W.1 ('phone Sloane 6508) from May 26, 1959, when a personal interview can be arranged.

A LEADING FIRM OF STOCKBROKERS which is developing foreign business has a vacancy for an Accountant with Continental experience and good knowledge of languages. Age not exceeding 35. Initial salary according to experience but not less than £1,000 per annum with participation in a bonus scheme. Prospects for suitable man.—Write Box 1167.

BBC requires Programme Assistant (male) in the Bulgarian Section. Requirements include Bulgarian as mother tongue and good knowledge of English, ability to translate accurately and rapidly from each language to the other, to read fluently in Bulgarian at the microphone and to write original material. Candidates should have interest in international affairs and good knowledge of contemporary conditions in Bulgaria. Journalistic or radio experience an advantage. Shortlisted candidates will be required to take voice and written tests. Appointment normally for three years with possibility of extension. Salary £960 per annum with prospects of promotion during engagement.—Detailed applications, giving full particulars of education, career, etc., to Appointments Officer, Broadcasting House, London, W.1, within seven days, marked G.1056 Ect. Please enclose addressed envelope for notice of result.

UNIVERSITY OF LONDON

Chair of Economics (with special reference to Under-developed Countries and Economic Development) tenable at the London School of Economics.

The Senate invite applications for the Chair of Economics (with special reference to Under-developed Countries and Economic Development) tenable at the London School of Economics and Political Science (salary not less than £2,300 a year plus £100 London Allowance). —Applications (10 copies) must be received not later than June 22, 1959, by the Academic Registrar, University of London, Senate House, W.C.1, from whom further particulars may be obtained.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for a Research Assistant in the Government Research Division to work on administrative tribunals. Legal qualifications would be an advantage. Salary scale £450 x £25 — £525 a year. Starting salary according to age and qualifications.—Applications, including a statement of the candidate's field of interest, should be received by the Secretary, Government Research Division, London School of Economics and Political Science, Houghton Street, London, W.C.2, not later than June 3, 1959.

CITY OF OXFORD EDUCATION COMMITTEE
COLLEGE OF TECHNOLOGY

LECTURER in ECONOMICS required for September for G.C.E. "A" level, professional and B.Sc. (Econ.) Part I courses. A good degree in Economics or Commerce required and some business and/or teaching experience an advantage. Salary in accordance with the Burnham Technical Report, viz.: £1,260 by £31 10s. to £1,417 10s.; industrial experience in a senior post may be specially recognised in fixing the starting salary.

Further information may be obtained from the Principal, College of Technology, Headington Road, Oxford, to whom applications should be returned as soon as possible.

COLOMBO PLAN

Applications are invited for an appointment as PROFESSOR or SENIOR LECTURER in ECONOMICS at the University College, Colombo, under the Technical Cooperation Scheme of the Colombo Plan. Would be required to organise the department and set up research section and to lecture to students preparing for London B.Sc. Should hold good Honours degree in Economics, a research degree and have at least five years' university teaching experience. Specialised knowledge of Economic Theory, Banking and Accounting particularly useful. Salary, £2,000 per annum (subject to U.K. income-tax), plus tax-free overseas allowance of £1,175 per annum (married) and £675 per annum (single), plus other allowances. Duration two years with possibility of renewal. Contract with United Kingdom Government.—For further information and application forms, write Ministry of Labour and National Service (E.9), 26-28 King Street, S.W.1, quoting E9/71/TCS/CEY.

ASSISTANT STATISTICIAN required for Circulation Department of Tothill Press Ltd. Work is varied but mainly concerned with interpretation of readership surveys. Experience not essential but must be able to interpret statistics and report coherently. Statistical work is expanding and offers good prospects to a young graduate —early twenties preferred—male or female.—Apply Cohen, Tothill Press Ltd., 33 Tothill Street, London, S.W.1. (WHitehall 9233.)

ACTUARY with experience of insured or self-administered pension schemes required in rapidly expanding consulting practice. Salary according to age and experience but not less than £1,500. Early prospect of partnership.—Hosking, 11-12 Finsbury Square, E.C.2.

ACTUARIAL STUDENT required in consulting practice, preferably passed Part I.—Apply, stating age and present salary, to Hosking, 11-12 Finsbury Square, E.C.2.

OXFORD UNIVERSITY INSTITUTE OF STATISTICS

Applications are invited for junior research posts in applied economics. Candidates should have a good degree in economics or statistics. The salary will be according to age and qualifications in the range £700-£1,100 per annum. Posts are superannuable and an allowance of £50 per child is paid.—Application forms may be obtained from the Secretary of the Institute, St. Cross Road, Oxford. Closing date June 13, 1959.

A LEADING FIRM OF STOCKBROKERS has vacancies for Chartered Accountants, or Graduate Economists with industrial experience, to undertake investment studies of particular companies and industries. Age under 30. Prospects for men with suitable personality. Initial salary £1,000 per annum with participation in a bonus scheme.—Write Box 1168.

UNIVERSITY OF BELFAST

The Queen's University of Belfast invites applications for two Temporary Lectureships or Assistant Lectureships in Economics for the year from October 1, 1959. Salaries in the range (a) for lecturers £900 — £1,650; (b) for assistant lecturers £700 — £850 plus F.S.S.U. if appropriate. Applications (one copy) should be submitted by June 10, 1959.—Further information may be obtained from G. R. Cowie, M.A., LL.B., J.P., Secretary.

APPOINTMENTS REQUIRED

FINANCIAL NOTICE

ROYAL DUTCH PETROLEUM COMPANY

N. M. Rothschild & Sons ANNOUNCE that the General Meeting of Shareholders of the Royal Dutch Petroleum Company on May 20, 1959, have decided to declare a total dividend in cash of fls. 5.— per share in respect of the financial year 1958 to be paid on each of the 68,420,565 ordinary shares outstanding at December 31, 1958. The amount of fls. 5.— includes an interim dividend of fls. 1.50 which was made payable in October, 1958.

The dividend now becoming payable amounts to fls. 175.— per bearer certificate for 50 shares, fls. 17.50 per bearer certificate for five shares and fls. 3.50 per registered share respectively.

A. *On the bearer shares:*

This dividend will be payable against surrender of Coupon No. 117 on or after May 22, 1959, at the office of N. M. Rothschild & Sons on business days, Saturdays excepted, between the hours of 11 a.m. and 2 p.m.

Payment will be made in sterling at the buying rate of exchange on Amsterdam current at 2 p.m. on the date on which the coupons are so surrendered. In view of the fact that guilder funds are being provided by the Company for payment of this dividend the usual foreign exchange commission will be deducted from the sterling proceeds.

Coupons must be accompanied by a declaration in triplicate signed by an Authorised Depositary reading:

"We declare under our responsibility that sufficient evidence has been submitted to us that the securities from which the coupons enumerated below have been detached are provided with red export certificates issued by De Nederlandsche Bank."

From the gross dividend the Netherlands dividend tax of 15 per cent is to be deducted (i.e. there will be paid on Coupon No. 117 a net amount of fls. 148.75 per certificate for 50 shares and fls. 14.87½ per certificate for five shares), except in the case of coupons presented on behalf of (i) residents in the United Kingdom, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 V.K." in duplicate; (ii) residents in the U.S.A. provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 V.S." in duplicate, together with a single affidavit form "Inkomstenbelasting No. 92a V.S."; (iii) residents in Sweden, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 ZWE" duly completed by the Swedish tax authorities; (iv) residents in Finland, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 FIN" duly completed by the Finnish tax authorities; (v) residents in Denmark, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 DEN" duly completed by the Danish tax authorities, and (vi) residents in France, in which case either a French declaration model A signed by the shareholder with the certificate on the back duly completed by the appropriate French Inspector of Taxes or a French declaration model B in duplicate duly completed and signed by an authorised French bank must be provided.

As regards holders resident in France, attention is drawn to the fact that the regulations giving effect to the Franco-Netherlands Tax Convention provide that unless the model A or model B declaration referred to above is lodged when dividends are collected, dividend tax will be deducted and there will be no possibility whatever of reclaiming this tax.

In cases (ii), (iii), (iv), (v) and (vi) above the usual affidavit certifying non-residence in the United Kingdom will still be required if payment is to be made without deduction of United Kingdom income tax.

Coupons must be left for an appropriate period for examination and must be handed in personally. Coupons cannot be paid through the post.

Coupons must be listed *in triplicate* on special forms, embodying the declaration referred to above, which can be obtained on application.

B. *On the registered shares:*

As to the shares registered in the United Kingdom section of the Netherlands register, N. M. Rothschild & Sons are authorised to announce that the following arrangements have been made for the payment of the dividend amounting to fls. 3.50 per registered share (nominal value fls. 20).

May 20, 1959, is the date for the fixing of the Sterling amount of the dividend on the basis of the Sterling/Guilder rate of exchange current in Amsterdam on that date.

May 27, 1959, will be the record date. Shareholders registered at the close of business on that date will be entitled to receive the dividend.

On or before June 19, 1959, dividend warrants will be posted by the transfer agents, Nederlandsche Handel-Maatschappij, to shareholders registered in their books on the record date.

A further announcement will be made as soon as possible giving the rate of exchange, the amount of the dividend in Sterling per share and the amount of the 15 per cent Netherlands dividend tax in Sterling per share.

New Court, St. Swithin's Lane, London, E.C.4.

May 21, 1959.

WOOLWICH POLYTECHNIC
LONDON, S.E.18

SANDWICH COURSE IN BUSINESS ADMINISTRATION

Commencing date: October 5, 1959.
Closing date for applications: August 31, 1959.
THIS FOUR YEAR SANDWICH COURSE will provide comprehensive instruction in BUSINESS SUBJECTS during the period October to April and practical training in BUSINESS METHODS during the period May to September.
STUDENTS—will normally be sent to the Polytechnic by their employers under Commercial Apprenticeship Schemes (Industry-based students) but a limited number of private students (College-based students) may be accepted for the Course.
ENTRY QUALIFICATIONS—at least three G.C.E./Ordinary Level subjects (to include English and Mathematics) AND two G.C.E./Advanced Level subjects OR a good Ordinary National Certificate in Commerce, Science or Engineering.
STANDARD—the standard of the Final Year will be equivalent to a GOOD HONOURS DEGREE.
EXEMPTIONS—a number of Professional Bodies have already agreed to grant successful students exemptions from their intermediate and most of their final examinations.
WRITE for further details and Application Form to Ref. DS/CLW, Woolwich Polytechnic, S.E.18.
The Woolwich Polytechnic has long-established Sandwich Courses in Electrical and Mechanical Engineering for the Diploma in Technology, and full-time internal Degree Courses for the University of London B.Sc. Engineering and B.Sc. Specials in Chemistry, Mathematics, Physics and B.Sc. General; also evening course for B.Sc. (Econ.).

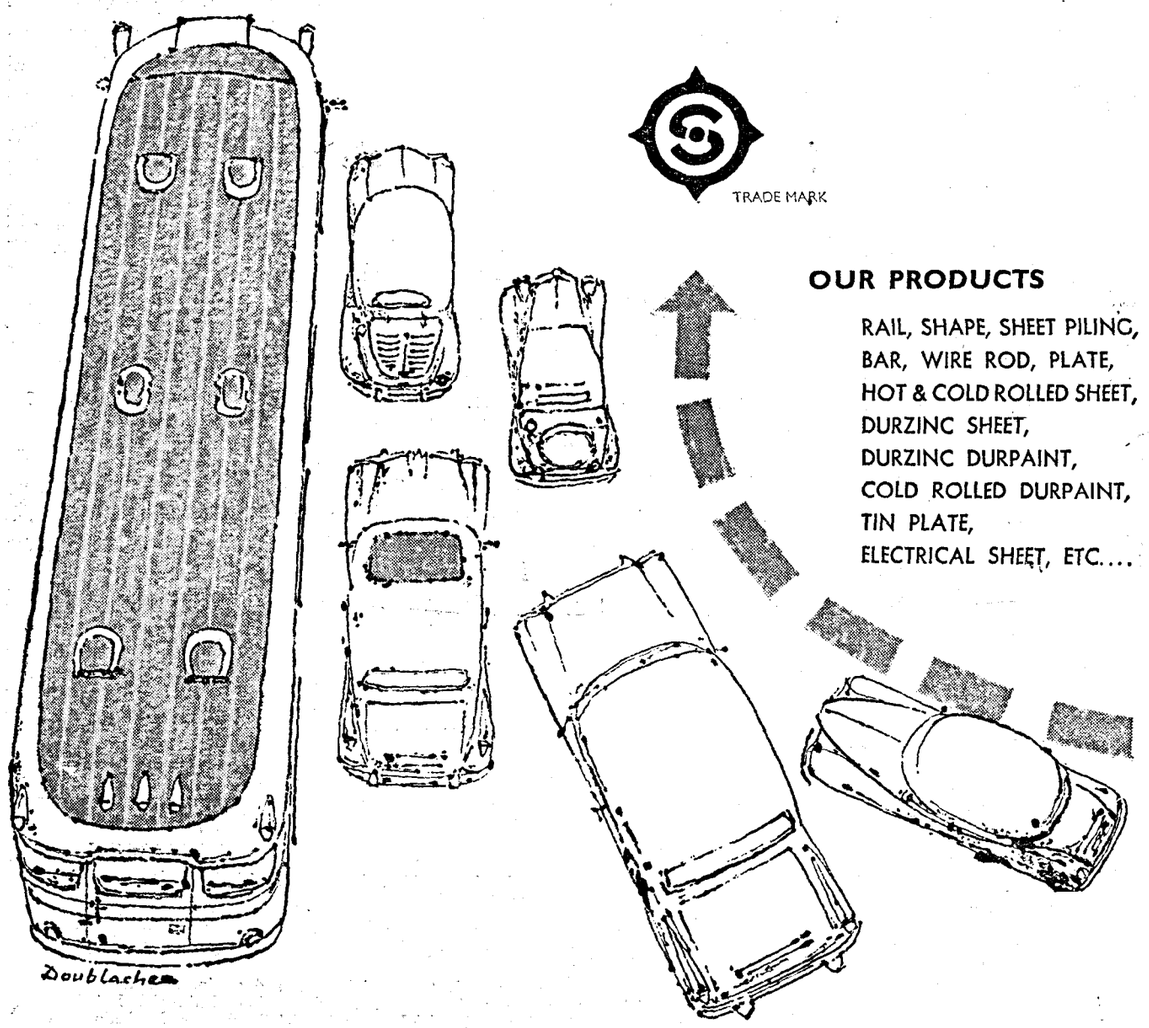
UNIVERSITY OF GLASGOW
BUSINESS AND INDUSTRIAL ADMINISTRATION

The full-time course for the *Certificate in Industrial Administration* commences on Thursday, October 8, 1959. The course prepares men for professional qualification in industrial administration, and is open to those holding junior managerial posts who can be released by their firms for nine months, as well as to recent university graduates. Demobilised officers from the Services may also be accepted.

In the first two terms students attend lectures and seminars on Economics, Industrial Accountancy and Finance, Administration, Industrial Relations, Production Engineering, Industrial Law, Industrial Psychology, Marketing and Distribution, and Statistics. There are also factory visits and talks by visiting business men. In the third term each student undertakes a detailed study of an industrial or administrative problem and prepares a report of a kind suitable for consideration by a board of directors.

A written examination is held at the end of the second term, and, if the result of this and the quality of the report are satisfactory, a *Certificate* is awarded.

The course is an exacting one and only a limited number of candidates of proved ability and established promise will be admitted.



The fee for the course is £35 and in addition there is a matriculation fee of £3 3s. The closing date for application is June 30, 1959. Applications should be made on the appropriate form to be obtained from the Registrar, The University, Glasgow, W.2, who will supply further details on request.

ROBT. T. HUTCHESON, Registrar.

PRECISION AT LARGE

The GKN Group is big—in size, in operations and in ideas. But it has room—plenty of it—for those to whom a hairsbreadth is all the space in the world.

Take a brief look, for instance, at B.R.D. Co. Ltd., one of the largest manufacturers of turbine and compressor blades in the country. A single B.R.D. blade may undergo more than forty separate operations, yet each must be accurate to within micro-inches. Inspection is carried out at every manufacturing stage; additional percentage checks by precision instruments are made hourly; and all finished blades are examined on machines capable of checking simultaneously twenty-six separate dimensions.

Similar standards of accuracy cover all B.R.D. products—for instance their Crankshafts, 'Bermuda' Outboard and Inboard Marine Engines, 'Polar' Hydraulic Yielding Pit Props, and Constant Velocity Joints. Yet—and this applies to every GKN Company—micrometer-mindedness is not small mindedness. If it were, then B.R.D. would not have progressed so far and so fast; nor would the Group as a whole offer the outstanding opportunities that it does to men who can think big—whether on a small scale or not.

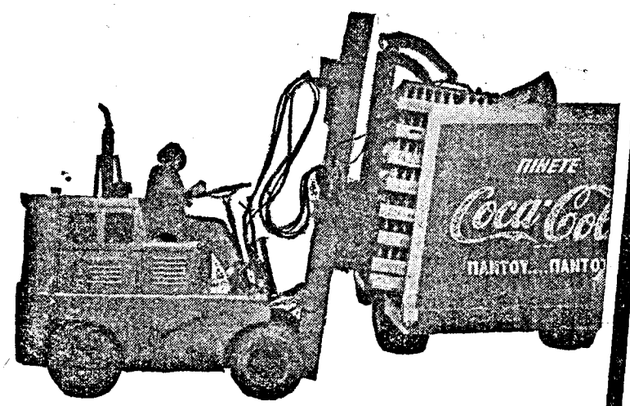
Newalls INSULATION

Over 300,000 square feet of INSULATED SURFACES



Throughout the years Newalls have built an enviable reputation in the insulation of conventional power stations. This specialised experience is now being drawn upon on an ever growing scale in solving the complex insulation problems in Nuclear Power Development.

At CHAPELCROSS—U.K.A.E.A. NUCLEAR POWER STATION for example, under contract to Babcock & Wilcox Ltd., Newalls are carrying out the insulation of the 16 steam rising units and integral piping. The insulation of turbines, blowers, associated auxiliary equipment and piping is being carried out under contract to C. A. Parsons & Co. Ltd.

The principal insulants employed are Newalls own products, 85% MAGNESIA and NEVTEMPHEIT, and all the application work is being carried out by the Newalls contractual organisation. The latest addition to the Newalls range NEVTHERM Calcium Silicate Insulation, has also been applied for the first time on a nuclear power station.

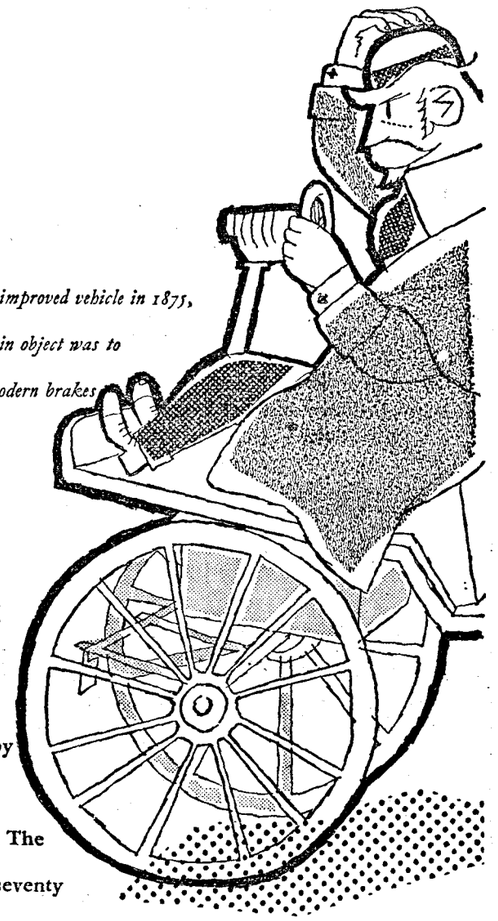
Conveyancer and CYPRUS

Conveyancer T.C.4 Fork Trucks are engaged in the daily loading and unloading of the 80 vehicles used in the distribution of Coca-Cola in Cyprus. In addition, they feed bottles to the washing and filling machines as well as into store.

Fitted with torque converter drive, eliminating clutch and gear change, the Conveyancer Fork Trucks have proved ideal for the local drivers and the high speed production required.

Important factors which contribute to the efficient handling provided by Conveyancer trucks are the side shift units for accurate positioning of the load on the vehicles and 10° forward tilt masts with stabilising clamps to present the loads at the same angle as the load bays on the vehicles.



Free illustrated literature is available on request, giving full details of the Conveyancer range of Electric, Diesel and Petrol models with capacities from 2000 to 8000 lb.

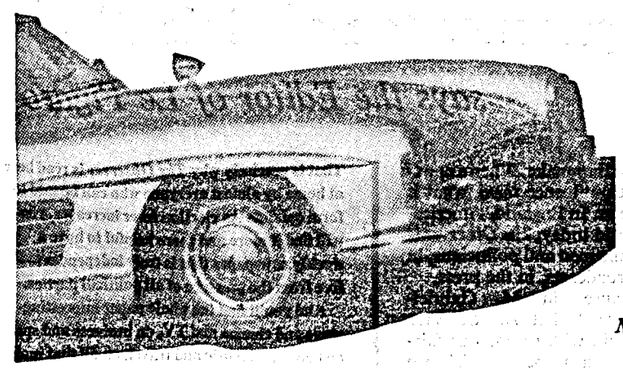
ANNUS MIRABILIS



start....

Siegfried Marcus took the first motor ride in 1865. He built a much improved vehicle in 1875, which is preserved in the Vienna Technical Museum. In those days, the main object was to make the car go. Nowadays it is equally important to make it stop, and modern brakes must be capable of dealing with increased loads, higher speeds, frequent use.

and stop....

Some of the world's most advanced motor vehicle designs use brakes in which the linings or pads are attached to the shoes by Redux adhesives. Longer life, greater efficiency, freedom from chatter and from scoring are a few of the resulting advantages. The same method is used for bonding the structures of more than seventy types of aircraft. Redux, developed by CIBA (A.R.L.) LTD., is one of a range of structural adhesives used throughout industry for bonding metals, glass, ceramics, plastics, wood, rubber and many other materials.

M. Gabriel-Robinet, editor of the famous Paris daily Le Figaro, *on the balcony of the newspaper's offices on the Champs-Elysées. Below, he gives some reasons why* The Observer *is respected by influential people in France.*

"Political leaders in France attach great importance to its opinion"

says the Editor of Le Figaro

"*The Observer* is a newspaper with which journalists and political leaders in France are very much at home," says Monsieur Louis Gabriel-Robinet. "If they do not always see eye-to-eye with it—particularly where the problems of their own country are concerned—they attach great importance to its opinions."

"*Ils attachent un grand prix à son opinion.*" The people he refers to are those who influence or control events at all levels . . . much of the future depends on the decisions they make. When a newspaper is able to influence *them*, what it says is itself news. In England, America, all over the world today, *The Observer* is quoted by public men and politicians, in speeches, in broadcasts, in the press.

Why? Because, in M. Gabriel-Robinet's words, "what *The Observer* has to say is said with scrupulous fairness; and with a respect, which we share, for the traditions of a free society."

That is precisely why *The Observer* is read here at home by almost everyone who can be said to form opinion. As election fever increases, *you* will find it more and more helpful to have a weekly newspaper that is truly independent—free from the pressure of all political parties.

And you'll find the whole paper interesting—on stage and cinema and TV, on business and sport, on books and music and travel, on all that makes life worth while. Give your newsagent an order for *The Observer*—in time for this Sunday!

THE OBSERVER EVERY SUNDAY

from plantation to product

. . . between the tree and the tyre, the many processes that transform raw latex into a vital part of daily life are accomplished on Shaw machinery. Since its infancy, the rubber industry has relied on Francis Shaw to fulfil its requirements for the complete range of processing plant.

The Shaw-McNeil "Bag-o-matic" speedily and automatically cures all tyres from cycle to giant truck sizes. Supplied ready for coupling to supply lines. Steam-air or hot water curing as required.

Does your wife see red?

Every Ego or Id must influence, to a greater or lesser degree, the behaviour pattern of mankind. So *your* book-habits, which you no doubt fondly believe are your own business, are not a purely domestic matter. If you throw your books around like confetti at a wedding, or if your wife has frequent crying fits after dusting your collected works, it's time you faced the truth — that your book-habits may well start a revolution and bring 1984 and Newspeak closer than is comfortable.

Fortunately, there is always a solution. Minty have specialised for years in making bookcases that house your books behind glass and keep them dust-free. They give your books an elegant, well-tailored home, and leave you more room to walk around in. They allow you to go on reading and buying—for Minty bookcases are *sectional* and may be started for as little as £9.2.0—on deferred terms if you prefer. Only at Minty showrooms can you see and buy Minty bookcases (and furniture); only by this *direct* selling from Minty to *you* can Minty offer you such fine furniture at such moderate prices. There are seven Minty showrooms each within reasonably easy reach of most people, but if for any reason you can't call, Minty will be glad to send you a catalogue and particulars of post-ordering. Write to Dept. E. 3 Minty Ltd., 44-45 High Street, Oxford.

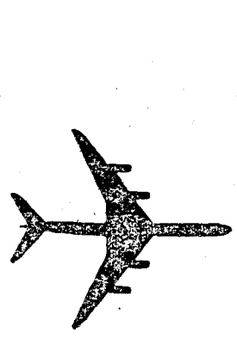
ANNOUNCING THE KLM *Golden Circle Service*

FAST TO THE FAR EAST AND BACK



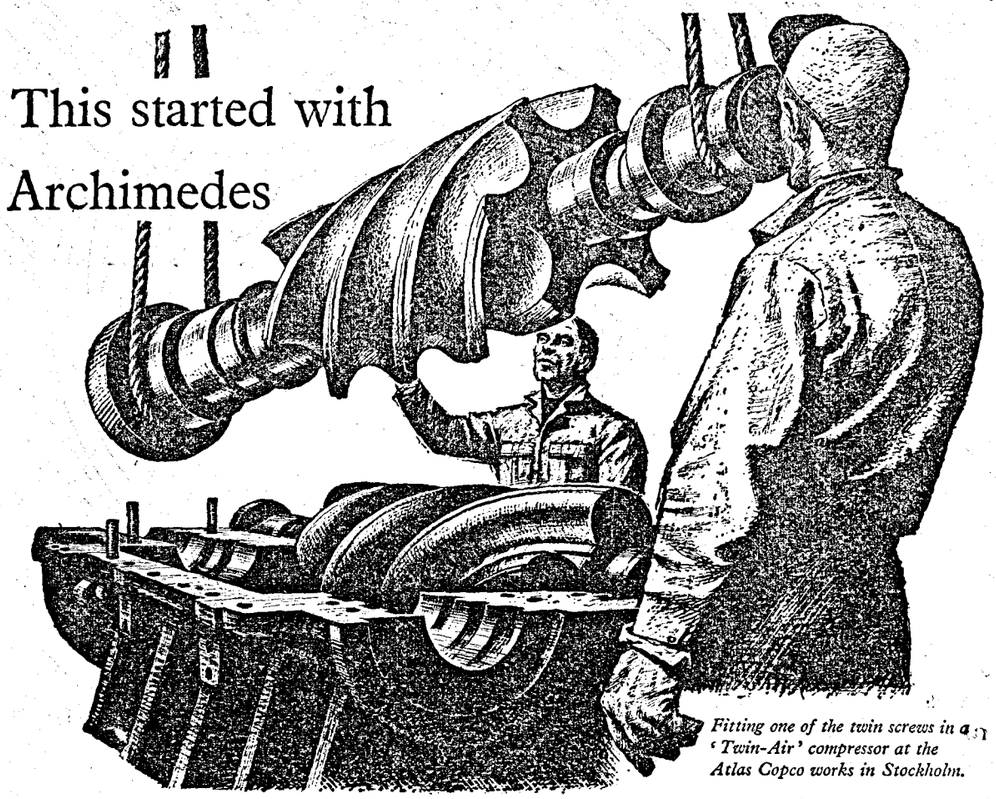
KLM's new Golden Circle service combines the familiar South-East Asia route with the short, smooth Polar Route. There are stops at all the most important cities.
The aircraft on the Golden Circle fly fast; they fly frequently; above all, they fly you in supreme comfort.

...IN SUPREME COMFORT

The Golden Circle service puts the accent on the service. The food is superb—a choice of two gourmet menus; seats and berths are roomy and relaxing; the atmosphere is friendly and the attention outstanding—even by KLM standards. Here is the world's most luxurious air travel. And at no extra cost!

...AT NO EXTRA COST

The Golden Circle service is full of 'extras'—but not where cost is concerned. You pay no more than the standard fares. When you're heading East, ask your Travel Agent to book you on the KLM Golden Circle. First Class or Tourist, this is more than a new service, it's a new experience.



THE WORLD OVER
KLM

for the atmosphere

Book through your usual Travel Agent, or KLM Royal Dutch Airlines, Time & Life Building, New Bond Street, W.1. Telephone: MAY 8803, and at Birmingham, Manchester, Glasgow and Dublin.

This started with Archimedes

Fitting one of the twin screws in a 'Twin-Air' compressor at the Atlas Copco works in Stockholm.

One of the most famous inventions of the great mathematician Archimedes (287-212 B.C.) was the Archimedean Screw, which he first demonstrated by removing water from a ship's hold. For centuries it was used for irrigating fields in Egypt. One form consisted of a helix or screw revolving in a fixed cylinder. As the screw was turned, the water was carried to the surface.

John Erikson's adaptation of this idea in modern times gave us the propeller, one of the outstanding inventions of civilisation.

The same principle was used by another Swede, Professor Alf Lysholm, when he invented the rotary screw compressor in 1934. As a result Atlas Copco have developed this rotary screw machine, in which air is compressed by the action of two intermeshing rotors, *which never actually touch.* There is no friction, no need for lubrication, and very little maintenance is necessary.

Atlas Copco 'Twin-Air' rotary screw compressors have already proved their worth in the Arctic Circle area of Sweden, where they have been running for two years under full operating conditions in the world's largest underground iron ore mine.

Air and antibiotics

Compressed air is versatile. Atlas Copco provides the means for all its many applications. At the Løvens Kemiske Fabrik in Copenhagen, one of the biggest chemical works in Europe, large quantities of sterile oil-free air are required for the production of penicillin and streptomycin. Because of their reliability, 8 Atlas Copco compressors are used for this vital supply of air to the cultivation tanks.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

The Mediterranean

GENEVA is not the only place where the diplomats and the politicians are working overtime. At many points around the shores of the Mediterranean as well, top people of various sorts are fully occupied. This week Mr Khrushchev has begun a fortnight's visit to Albania where the party leaders have done their best to make up for their country's lack of size and weight by the warmth, not to say adulation, of their welcome. Last week the state visit of the King and Queen of the Hellenes to Rome set a formal seal on the reconciliation between the two countries after the Fascist attack on Greece in 1940. (King Paul also paid an official visit to the Vatican, the first Greek sovereign to do so since the Byzantine emperor John VIII Paleologus came to Rome in 1439.)

Mr Sandys has been quietly talking defence and inspecting ruins in Turkey and in Greece; while Mr Petar Stambolitch, speaker of the Jugoslav parliament, has been conferring with his opposite number in Athens. Earlier this month the Greek and Turkish premiers and foreign ministers continued in Ankara the work of reconciliation that they began a few months ago in Zurich and London. The Turkish leaders themselves visited the western Mediterranean in April and, after Mr Zorlu had had friendly talks in Rome, he joined Mr Menderes in Madrid, where they signed a treaty of friendship with General Franco.

No tidy pattern emerges from this spate of activity by peripatetic politicians and discreet diplomats. Nor is it likely that it would. For the Mediterranean countries are distinguished by their diversity—ranging from Albania, dominated and controlled by Soviet Russia, to General Franco's extreme right-wing dictatorship; from staunch members of Nato like Italy, Greece and Turkey to fervent exponents of neutrality, like the United Arab Republic and Jugoslavia. Most of them attach a different significance to the Mediterranean. For Soviet Russia (as formerly for the Tsars) it is a warm sea, tantalisingly just out of reach, where it would be very desirable to be established. To the Nato countries it is both the right flank of their defensive system and a vital means of communication, westward to the Atlantic, eastward to the Middle Eastern oilfields. To many Frenchmen it is a bridge between metropolitan France and France in Africa. To many North Africans, it is a barrier to keep the thrusting French back where they belong. Spaniards see it, perhaps, as a way to the friendship and alliances for which they hanker after more than twenty years of virtual isolation.

Many guesses have been made about Mr Khrushchev's motive in choosing this particular moment to descend upon the Albanians. All may contain some part of the truth; and by the time Mr Khrushchev flies away again, having no doubt performed a generous stint of self-expression, it may be easier to see which guess is the best. It is an incidental advantage of this well-publicised and protracted absence from Moscow that it makes clear in Geneva, Berlin and the western capitals

that Mr Khrushchev wanted to let May 27th come and go without making an immediate issue of Berlin. No doubt there is a more direct purpose. Mr Khrushchev may very well want to find out for himself why it is that the Albanians persist in carrying their vendetta against Marshal Tito further than the Russians do themselves; he may suspect, such are the byzantine intricacies of the internal communist struggle for power, that they are being encouraged in this by some of his own colleagues —who might become his opponents—in Moscow. Mr Khrushchev's cordial birthday greeting to Marshal Tito during his flight over Jugoslavia suggests that he may at any rate be concerned to make the Albanians moderate their anti-Jugoslav outbursts.

It requires the eye of faith to subscribe to the Albanian party paper's hopeful declaration that Mr Khrushchev's visit will "consolidate the international position of the Albanian people's republic as a citadel of peace and socialism on the Adriatic coast." But it does seem likely that Mr Khrushchev considers this a suitable moment to underline the fact that Russia does possess a foothold (complete with submarine pens) on the Mediterranean shore. In recent years the Russians could sit back and contemplate with satisfaction the disarray into which Nato's eastern Mediterranean defence arrangements had fallen through the Greco-Turkish quarrel over Cyprus. But now the Greeks and the Turks are quickly putting their relations in order. Two Mediterranean countries, Italy and Turkey, have already agreed to the installation of rocket launching sites on their territory, and another, Greece, is considering the matter. By a powerful press and diplomatic barrage the Soviet block is doing its best to frighten the Greeks into a refusal. Russian notes to Athens and Rome have given warning of the dangers of atomic retaliation if either country accepts rocket bases; Mr Khrushchev added a threat on Wednesday to put missile bases in his Adriatic outpost; Albania and Bulgaria have also made their displeasure known in Athens. These protests, and the boost which Mr Khrushchev's lengthy visit will give to the Albanian government's self-esteem, are no doubt partly a result of Russia's genuine fear of encirclement by Nato bases; but they are also provoked by a desire to prevent the western powers from extending their hold over an area into which Russia will no doubt always aspire to penetrate.

FOR the non-communist powers in the Mediterranean this happens to be a favourable conjuncture not only for completing and overhauling their defence arrangements, but also for settling differences and improving friendships generally. Apart from the facts of geography and the common fear of domination by outsiders from the north, the Mediterranean countries since the dissolution of the Arab and Roman empires have seldom for long found much to bring them together, but always plenty to divide them. From time to time something happens to create an opportunity for something better.

In the years after the Treaty of Lausanne, for instance, Venizelos signed a series of pacts of friendship, with Italy in 1928, with Jugoslavia in 1929, with Turkey in 1930. The opportunities for turning over new leaves that the end of the last war should have provided were largely lost (except for the virtually stillborn tripartite Balkan pact) because of quarrels and disturbances, national and ideological. For a time Greece's civil war engrossed its energies and embittered its relations with Jugoslavia, while Jugoslavia and Italy fell out over Trieste. Next, the fragile friendship of Greece and Turkey was broken by the Cyprus quarrel; and at the other end of the Mediterranean, France's Algerian war alienated (and still alienates) the newly independent Arab countries of North Africa.

TODAY these once insoluble problems, with the big exception of Algeria, have been settled; and if it would be an exaggeration to say that the goodwill engendered by the Cyprus settlement is flooding into every Mediterranean inlet, the removal of this formerly intractable problem may well have helped to send the statesmen on their travels imbued with a desire to make hay while the sun shines. In this atmosphere it was perhaps inevitable that the proposal for a Mediterranean pact, to include eventually the Nato Mediterranean countries, Spain, and some of the Arab countries of North Africa, should make one of its periodic appearances. For the Spaniards, who are believed to have had much to do with bringing the idea forward again, it has obvious attractions as a possible side-door into Nato. But in fact, in the eyes of most of the potential members, such a pact has in present circumstances little to recommend it, and last week in Rome (where the present government is a good deal less Mediterranean-conscious than its predecessor was) the Greek and Italian foreign ministers firmly said so. Those Mediterranean countries that are prepared to co-operate in defence are doing so already through Nato or through such collateral arrangements as the Spanish-American bases agreement; while the Arab countries are not in any case prepared to be associated closely with the western powers in defence or any other arrangements.

Perhaps a more hopeful, if less spectacular, way of developing the present favourable atmosphere in the Mediterranean can be found in Greek plans to expand "the zone of peace stabilisation" created by the Cyprus settlement. Exactly what this involves is not yet very clear. But it seems that the Greeks hope to make use of the methods that brought about the Cyprus settlement to heal the differences and remove the misunderstandings and suspicions (for example between Jugoslavia and Turkey, and between Turkey and the United Arab Republic) that continue, for most of the time, to bedevil the relations of Mediterranean countries. The Cyprus settlement was the outcome of old-fashioned dogged diplomacy plus a mutual determination to succeed and a mutual readiness to compromise. Unfortunately it is not within Mr Karamanlis's power to make sure that these three qualities are brought to bear on other problems in which Greece is not directly an interested party. Still, these countries do have strong common interests, not least that of self-preservation. An attempt to establish a system of regional friendships among them might not be labour wasted now that, for the moment, most of the quarrels that have divided them have lost their heat. It must be feared that the attempt will not get very far until something can also be done to break down the barrier of suspicion and resentment that separates the Arab countries of the southern from the Europeans of the northern shore. It is still in North Africa that political opportunity beckons for Mr Khrushchev. The unsolved North African problem remains the obstacle to any ambitious effort by the Mediterranean countries to close their ranks, and until it is solved there will probably never be a moment when they can afford to regard incursions into the Adriatic by Mr Khrushchev, or his successors, with equanimity. In the meantime, there is useful diplomatic groundwork that they can do among themselves.

No First Rise of Summer

The opportunity of stopping wage and price inflation is now greater than it has been at any time since the war

INFLATIONARY cares infest this epoch and they are unlikely silently to steal away. But a significant event occurred on Thursday of last week, which has attracted surprisingly little notice. The Industrial Court then handed down its recommendations on the first big annual wage claim for 1959. In almost every other year the first award in a major industry in the annual wage contest has made headline news. This time the claim that happened to be first in the queue was from the building workers, for a substantial rise. The court has awarded them nothing. So there is no pacemaker for wage inflation in 1959.

Admittedly, certain special features attached to this building claim, and these explain why the trade unions themselves were unhappy that accident should have cast building wages in the pacemaking role. Building workers' wages are adjusted automatically every February to compensate for increases in the cost of living during the preceding year; in accordance with this, builders got a rise of 1d. an hour less than five months ago. It is not absolutely without precedent for a year to pass in which the builders fail to secure any extra increase over and above their usual "cost of living increase"; the same thing happened in 1953. Nevertheless, their history since of uninterrupted annual additional increases had caused the builders to claim, as a main argument before the court, that these additional increases had become an established custom.

It is true, too, that the building unions were not in a good position to wax very militant when the arbitrators turned them down; their members are scattered among nearly 100,000 small employers; many of them are itinerant Irish labourers, and their tradition of union solidarity is not very strong; and bonus and incentive schemes are often more important to them as a source of extra money than increases in nominal time rates. The relatively calm acceptance of their disappointment is no necessary test of what may happen in the case of unions that have the advantage of confronting a single employer in some nationalised industry, and that have the reputation of being able to make Cabinets and Ministers of Labour quake. Cautious anti-inflationists will also remember that a sort of Gresham's law operates in arbitration tribunals, and that awards by the Industrial Court have on previous occasions been driven out of circulation by more timid bodies following after them. The notorious Cameron award to the dockers last year showed how swiftly canons of restraint can be overthrown by a single court of inquiry which believes that almost any settlement is less damaging to the economy than any strike.

When all this has been said, however, the building judgment still confirms how great is the current opportunity to shake this country free from the twenty-year-long cycle of inflation; it is an opportunity immensely greater than seemed likely to be forged only fifteen months ago. At that time it was easy to state—but not so easy to foresee the satisfaction of—two prerequisites before Britain could escape from the burden of perpetual wage inflation. The first was a breathing space of one year of approximately stable prices. All through the period when prices were rising by 4 per cent or so per annum, arbitrators felt themselves obliged to give wage increases of at least the same size in compensation; these increases in turn made inevitable another increase in prices in the ensuing year, which in its turn was held to justify another at least equivalent compensatory increase in wages, and so ad infinitum. In 1958-59 the breathing space in prices has been achieved—by a mixture of good luck (in particular the fall in import prices) and good management (especially last year's decision to stand up to the London bus strike). The cost of living index for April, published last week, stood at 109.5, compared with 109.6 in April, 1958.

Once this breathing space had been achieved, the

second prerequisite for avoiding cost inflation was that other wage increases (i.e. those that had nothing to do with compensating for price rises) should not exceed the expected average increase in annual productivity per head; in the long term this is unlikely to exceed about 2 per cent. In the atmosphere engendered in industrial relations up to 1958, it had seemed likely that wage increases of the order of 2 per cent per annum would be angrily rejected by the unions as being tantamount to tipping with coppers. The refusal of a building wage increase in 1959 has shown the way out of this tunnel. It looks as if the period between one "respectable-looking" increase and the next might be spun out to more than a year—either by particular groups being obliged to accept no increase at all in some years, or by informal delays in the presentation of claims, or by specific agreements about the interval before the presentation of any new claim being written into the terms of wage settlements.

It is in these directions that the country could be moving now. Nothing is more important than that, in the next few months, action by arbitrators, timid Government departments, or divided groups of employers should not throw that prospect away.

Nationalist or Man of Straw?

In the contest for leadership of the Arab world General Qasim has fallen into dependence on Moscow; President Nasser may yet be able to get what he wants from both East and West

THE struggle for the Middle East has developed into a battle between champions. President Nasser of the United Arab Republic believes that his mission is to unite the Arabs. General Qasim, the prime minister of Iraq, has been dubbed "sole leader" by his supporters but, so far, he has had to confine his leadership to Iraq.

In Iraq the communist party has withdrawn its demands for the establishment of political parties and for participation in General Qasim's government. This has been widely interpreted as a triumph for the prime minister over the communists and as proof that he is still able to pursue a course of independent action. It is more likely, however, that the demands were originally made by Iraqi communists pursuing a course of independent action from which they have been turned on orders from outside Iraq. The members of the National Democratic party, the only political party that has kept a footing in Qasim's government, represent all shades of political beliefs from those who only opposed the domestic policies of Nuri es-Said to those who would happily see Iraq become a fully fledged democratic people's republic; others, probably the majority, are Iraqis who, in the best Arab tradition, are trimmers. Long before the Iraqi revolution last July there were Arabs who felt that the cold war and Middle Eastern successes of the Soviet Union meant only one thing—that the Middle East would be under communist control within the foreseeable future. They wanted to be on the winning side and made their plans accordingly.

By the beginning of 1956 it was becoming un-Arab and unpatriotic in the Middle East for anyone to be openly pro-western. By the end of that year the Egyptian radio and press had adopted all the clichés of radio Moscow and had set the tone throughout the area. Newspapers in such unlikely places as Mecca and Kuwait fell into line. Western imperialism was blamed for all the misfortunes of the Arabs since the days of the crusades. The operation was carried out in the name of Arab unity and Arab nationalism alone, and there was little need for the Russians to do much about it. Their work was being done for them by countless agents, most of whom knew nothing of Russians and little of communism.

Last July the Iraqi revolution was hailed as a further manifestation of Arab nationalism. There is no doubt that the Iraqis themselves believed this as sincerely as did the rest of the Arab world. But those few Iraqis who had overthrown the monarchy soon found that to revolt was easier than to govern. The only political group with any useful amount of organisation and discipline were the communists, few as they were.

As crisis after crisis developed in Iraq, General Qasim called the communists to his rescue. It was they who controlled the mobs in Rashid Street and the children in the schools. Now it looks as if they control General Qasim as well. The few anti-communist straws that he has cast upon the waters of the Tigris have been snatched at eagerly by western observers in a desperate effort to prove that Qasim is not a communist and that Iraq is not lost to the West. They point out that the Iraqis will not be so foolish as to jeopardise their oil income by becoming an outright satellite of the Soviet Union, and that they will not tolerate the shoddy merchandise of eastern Europe and Russia in place of the better things they are used to from the West. For reasons best known to himself, General Qasim has not given in to some of the more drastic communist demands. But he has withdrawn from the Baghdad Pact, he has armed the communist-led popular resistance forces, and every day there are reports of further involvements with the Soviet block. Iraqis outside the government dare not talk to westerners, and indeed give the impression that they would rather not talk to other Iraqis; nobody knows who will be betrayed next. It does not seem to matter whether Qasim is a communist or not; he may be merely a woolly idealist with a vague notion of helping the downtrodden. But it does matter if he is controlled by communists who, sooner or later, get their orders from outside the country.

LAST March the abortive Shawwaf revolt in Mosul set off a slugging match between Cairo and Baghdad which is still going full blast in spite of reports of attempted reconciliations and occasional honeyed words. The Mosul revolt received more attention than it deserved. Wishful thinking on the part of Nasser's Syrian henchmen gave it dimensions it never should have attained. When, after a few brief hours, the revolt died down, Nasser had to continue the myth that a widespread, popular movement had failed only because of communist strength in the Baghdad government. For Qasim the revolt meant that the communists had another opportunity to purge the army and the civil administration of their enemies.

Having spent three years building up sympathy for the Russians, Nasser has not found it easy to quarrel with his communist benefactors. But, unlike Qasim, he has made it clear that he is determined to go his own independent way. He has not flung himself headlong into western arms, and the West has wisely not opened its arms too wide. But it is respectable once more to be a Briton or an American in Cairo, as it is not in Baghdad.

The Russians have treated Nasser with the long-suffering attitude of a parent whose adolescent child has gone astray but has not yet been picked up by the police. They have not fallen into the trap of withdrawing military or technical aid from Nasser. In appearance, their aid remains the aid without strings that it was claimed to be from the beginning. There are, however, suggestions that the Russian-proposed modifications of the Aswan high dam plans are delaying tactics. Even if they are, they look better than the over-dramatic western withdrawal of money for the high dam project in the summer of 1956. In dealing with Iraq the Russians have a different sort of problem. There they have to contend with a government that may already lean on them a bit too heavily for their own comfort.

All the bitter words exchanged during the past two months have done nothing to settle the immediate problems of the Middle East. The Arab world is divided against itself more than it ever was in the days when Egypt, Syria and Saudi Arabia formed one side against the Hashemites in Iraq and Jordan. The Saudis have withdrawn from the battle in order to put their own house in order. Jordan's enemies are divided between those who hope King Hussein will fall, and those who are afraid of the consequences if he does. The quarrel between Nasser and Qasim may at least have given Arabs outside Iraq and Egypt a chance to pause and think more realistically about their future.

As the Arabs take another look at politics in their part of the world they may find that, thanks to Nasser, it is no longer such a foregone conclusion that the communists will rule all the Middle East in the near future. But they may also question the wisdom of depending on a leader in Cairo who has manœuvred himself into a position almost as isolated as that occupied by Nuri a year ago. Then it was the western position in the Middle East that seemed to depend on the survival of one man. Can it now be said that the Arabs' hope of saving the Middle East for themselves and from communism rests upon the person of Gamal Abd al-Nasser? If this is true, and there is no other obvious candidate, then the West will have to accept Nasser as the kind of Arab leader with whom it has to work. It will have to bear with hard words and the inanities of Cairo radio. Deprived of the power to direct the course of events in the Middle East, it will have to be content with such advantages as it can make for itself and hold in day-to-day dealings. These may be small, but they can also be more real than systematic plans, pacts or doctrines. The West has never found it a joy to do business with Nasser; but it is better to deal with a perverse nationalist who knows what he wants than with a man of straw who does not.

The Economist

MAY 28, 1859

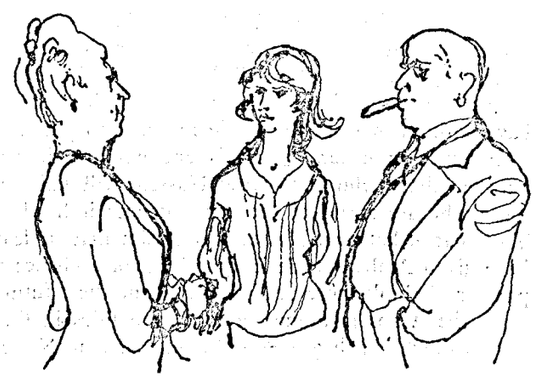
THE ROYAL ACADEMY

NOTES ON SOME OF THE PRINCIPAL PICTURES EXHIBITED IN THE ROOMS OF THE ROYAL ACADEMY, No. V, 1859. By JOHN RUSKIN, M.A.

Mr Ruskin's Notes for this season display their usual amount of usefulness and interest. His criticisms are as searching, his remarks as acute and happy as ever . . . It may not be Mr Ruskin's object to furnish the public with a guide, but a large number of people will always use his Notes as such, and therefore in justice to the painters, and for the artistic training of his readers, a certain amount of completeness must always be desirable. The influence of these criticisms on the artists themselves is very perceptible, of course more immediately on the Pre-Raphaelites, but also through them on the other exhibitors. In his Notes of last year, Mr Ruskin pointed out the beauty of the delicate pink apple-blossom against the soft clear blue of a spring sky, and expressed his surprise that among all the modest and gentle beauties of nature which the new school have particularly made it their study to express, none of them should have chosen this. Three distinguished artists have set themselves the task in consequence, and we have Mr Millais' "Spring," Mr Horsley's "Blossom-Time," and Mr Hughes' "King's Orchard." . . . Mr Hughes' orchard is alone perfectly successful. Nothing can exceed the beauty of his colouring, both in blossom and sky, and the soft texture and delicate rounding of the former are given with unrivalled grace. It seems strange that with merits such as these, the picture in question should be one of the most disagreeably startling of all the Pre-Raphaelite productions of the year. "He has been allowing himself to go astray," says Mr Ruskin, "by indulging too much in his chief delight of colour; and this picture, which was quite lovely when I saw it last year incomplete, is now throughout too gay, and wanting in sweetness of shade." This fault, added to the provoking Pre-Raphaelite habit of choosing the most uninteresting countenances, and giving to the human form all the stiffness and angularity of which it is susceptible, makes this picture simply unsightly at first, and it is only after recovering from the first painful shock that the spectator can discover its real beauties and merits.

The Finished Product

"Finishing schools" for the seventeen-year-old daughters of the well-to-do are changing intelligently with the times



FIFTEEN years ago many people assumed that post-war levels of surtax would kill stone dead those expensive girls' academies known to the public as finishing schools. The resilience of British upper-class society, and the desire of some people overseas to imitate it, has proved them wrong. The vogue for egalitarianism has hardly affected the well-dressed groups of young girls who are often to be seen with their chaperone in the front seats at Covent Garden or the Festival Hall; nor has the demise of the debs diminished the demand for training in "social graces, etiquette, conversation and poise." In London, Paris, Brussels, Florence and among the Swiss mountains, these schools are now flourishing as gaily as anyone in the profession (it is rude to call it a business) can ever remember.

Not, of course, that these finishing schools now form a large part of the English educational establishment; they never did. If one excludes, on the one hand, the schools for domestic science (whose tone is more serious) and, on the other, the many language schools (some very chic) now proliferating all over the country, one is left with not more than twenty finishing schools proper in England and roughly the same number with a predominantly English tone abroad. They are not easy to track down since they are not included in the published list of efficient schools recognised by the Ministry of Education. Contact can be made through those two splendidly named scholastic agencies, Gabbitas Thring and Truman and Knightley, and also through the advertisement columns of the society magazines; but the most common recommendation is by word of mouth. From all these sources it emerges that of the twenty English schools about four are in London and the rest are in the south, mostly in the home counties. (The north, whether because of its meteorological or social climate, boasts none at all.) Of the schools abroad, Paris attracts the greatest number. Since the average school has around forty pupils, and keeps them for nine months, the total output of "finished" girls per year amounts to approximately 1,500.

By no means all of these girls are English. In many schools at least half the pupils are from overseas. Increasingly, wealthy families from the Commonwealth, Europe, South America and the East are hoping to instil into their daughters some of the virtues of the English milady, at a time when social reformers had supposed that the species ought to be dying out at home. This is one basic change—and for the schools' owners a most fortunate one—in the clientele of finishing schools since before the war. Another is the much higher proportion of fathers in the business world, and much smaller proportion of landed aristocrats, than in the thirties. Although unwelcome to a few diehards as lowering tone, this is accepted as inevitable by most headmistresses. (American businessmen, however, do not on the whole send their daughters to be finished, since their girls mostly go on to university anyway.) Thus, finishing schools are no longer the playground of the daughters of England's upper crust only; but they are still, for two reasons, overwhelmingly English institutions.

THE first reason lies in the British class structure, still unique in the western world. For these finishing schools, with their strong snob value, appeal to the class-conscious as well as the education-conscious parent, in an intermingling of parental emotions which foreign educational systems usually have no tradition of satisfying. Even in Italy, hardly a great egalitarian country, all children go to state schools. Thus, a blush of near-Victorian snobbery still deliberately suffuses some—though not all—of the finishing schools. Others, with their "meet-the-people" tours of factories and shipyards, are self-consciously coming to grips with modern society; and in a few, the old-fashioned veneration for the duchess's daughter has widened out into a genuinely more liberal spirit. But parents may well not wish that this goes too far. The demand is for upper class establishments and that is what these schools essentially are.

The second reason for the popularity of finishing schools lies deep in the structure of British education. After a girl at a private school has passed her GCE at 16, she may well not want to continue her pinafored life into the sixth form. Moreover, unless she looks like being among the top one per cent in intellectual brilliance who might eventually win one of the scarce women's places at Oxford or Cambridge, some upper

class parents may not want her to acquire academic aspirations; she would have to satisfy them at Redbrick, which is said to be full of dangerously angry young men. So, rather than let her become a blue stocking, or remain for too long a hockey-playing English schoolgirl type, they snatch her away from segregation in the catty atmosphere of manless teenage girls. In the old days their aim might have been that she should meet and marry a suitable young man at an early date; but this aura of an adolescent marriage market is dying fast. Instead, finishing schools are now being transmuted into "continuation colleges" with the emphasis on beginning rather than finishing. In many cases this continuation provides a genuinely widening course of study, a real apprenticeship course for upper class society misses.

THE subjects studied—sometimes, though not always, under rather fuddy-duddy teachers— can be wide ranging and indeed often useful. At Cygnets House, a leading London school, a girl can study languages, the history of art, dressmaking, cooking and even journalism. At Hartwell House, an efficient course in good citizenship includes all the normal subjects which that rather repellent title suggests—with public speaking, essay writing and international affairs to boot. In Switzerland a girl who goes to a serious school can learn French perfectly and can also have a superb time skiing, swimming and riding, for nine months—at a price. In England, the cost of a normal year's course would be around 135 guineas basic a term and extras would bring this to around 150 guineas; in Switzerland it would be rather more, probably 200 guineas a term all in. But parents would be well advised, especially for schools abroad, to check on the extras. For some schools, these can add up to a high proportion of the basic fee.

The major problem these schools face—apart from the inevitable financial instability of any small enterprise—is boys. These probably cause more headaches to most headmistresses than anything else. On the one hand, the girls naturally want to go out and have a good time with members of the opposite sex, and their parents want them to; on the other, mothers and mistresses must not feel that the girls are ever getting out of hand. The result tends to be an uneasy compromise of chaperoned lunches and dances, of "approved" restaurants and young men, and of ceaseless detective work into possible burgeoning *mésalliances* and—abroad—hidden bottles of wine. Experience at one good Swiss school shows that, of all nationalities, English girls are hardest to control; they easily run amok and lose their sense of proportion. The Americans are better since, although they can be wild, they have already, at 17, several years of dating experience behind them and know roughly how to cope with men. The Germans are best, since they tend not to go out but rather to stay in and study. But the feeling between the various nationalities is reported generally to be excellent.

The picture that thus emerges is not quite the cockshy for social critics that might be expected. The schools abroad, in particular, seem to be excellent places for a girl to have a really good time. Even at home, the continued leavening of students with foreign girls and the greater (but not too pedantic) attention to study are surely trends in the right direction. One of the great mysteries of British upper and middle class life has always been the way in which it keeps many schoolgirls such repellently awkward grubs up to the age of about fifteen or sixteen, and then suddenly transforms many of them into quite presentable butterflies a year or two later. The finishing schools are places where this transition can take place probably as smoothly as, and often more enjoyably than, anywhere else, so long as the parent can afford them.

NOTES OF THE WEEK

DOLLAR IMPORTS

Setting the Consumer Free

THE liberation of dollar imports announced on Thursday is a major and very welcome move. It is also an eminently logical one. Ever since the achievement of technical convertibility for sterling, there has been no lasting economic reason for discrimination between dollar imports and any other sorts of imports; it could therefore be regarded as a bit absurd that up to this week quota restrictions were still maintained on 27 per cent of our imports from the dollar area (including virtually all consumer goods), while only 5 per cent of our imports from most non-dollar countries (other than the Soviet block and Japan) were so restricted, and all our imports from the sterling area were quota-free. But the British consumer has been cut off from an opportunity to buy American domestic appliances and other consumer goods for nearly twenty years; nobody can be quite sure how excitedly he will rear when he smells some of the oats of freedom, and it was not expected that the Government would have the courage to make a nearly clean sweep of discrimination at one swoop.

In the event, however, it has very nearly done so. From now on most goods that have hitherto been allowed in freely from non-dollar countries can be freely imported from North

America as well. The exceptions include textiles, pharmaceutical products, cheap literature, meat, fish, citrus and other fruit—a curious list in whose compilation political fears (and political tenderness for Commonwealth countries, including the West Indies) have evidently played a larger part than timidity about the balance of payments. For the 5 per cent of goods of which imports from non-dollar countries have always been restricted—again mainly for protectionist rather than balance of payments reasons—the Government has adopted two different courses; in some cases (e.g. clocks and sports goods) it is increasing the present global quotas and making them general so that dollar suppliers will be able to compete with everybody else; in other cases (e.g., motor cars) it is increasing the dollar quota itself.

The example of motor cars will be quoted by many people to suggest that these steps could have been made long ago. In the days when everybody talked of dollar shortage, it was widely believed that British consumers were pining to buy American cars. In fact, however, last year 150 thousand Americans chose to buy British cars instead, and only 200 American cars were imported here (less than the quota would have allowed). For such obvious consumer needs as cars, British manufacturers, aided by the lower wages they have to pay, have learned to be fully competitive. Where these liberalisations may be surprisingly effective is in revealing a popular taste in Britain for certain subsidiary sorts of American gadgetry which British manufacturers had not previously suspected. The new freedom is unlikely to have any seriously adverse effect on the British balance of payments, but it may well waft in more competition than is generally expected for some British and foreign industries that have previously enjoyed a sheltered market here. Three cheers for that.

EUROPE

The Other Union

THE scheme for a little free trade area between Britain, the Scandinavian countries, Austria, Switzerland and Portugal has now gathered sufficient momentum to have a fair chance of being put into practice. Officials have had a number of talks on the subject since the beginning of this year. Some of them have felt, ever since the original free trade area plan failed, that the best thing to do was to make a start with those countries which could agree. Ministers have hesitated because such a scheme would get no nearer to answering the political questions about Britain's future position in Europe and the world which have been posed by the creation of the common market. Now, apparently, the tendency is to set those doubts aside. Final decisions have not been made by the governments involved. But announcements in London and Stockholm have blessed a further meeting of officials, which will discuss the scheme further in Stockholm on Monday.

If hopes are fulfilled, these talks would be the first of a series, designed to bring the scheme to completion within a few months. There has never been much doubt that the seven countries involved could agree on the institutional and technical aspects of such a scheme. They, after all, were the principal backers for a broader free trade area. It is the Six they have been unable to agree with, and whom they will presumably still have to seek agreement with one day. There still are, however, uncertainties about the likely membership of the proposed area, doubts which arise from the fact that the member countries trade more with the community of Six than with each other. Further details of this trade pattern are discussed in Business Notes.

For a while Austria and Switzerland seemed to present the most difficult problems. But their position is probably less embarrassing than that of Denmark. Discussions so far have been conducted on the assumption that the scheme would be a free trade area for industrial goods alone. But Denmark naturally wants something for its farmers too. It has also been torn by the anxiety not to get on bad terms with the Six, whose agricultural policies will affect Denmark's interests deeply. Denmark, indeed, would certainly join the common market if its Scandinavian neighbours would do the same; but if they will not, then a strong political loyalty holds it back.

In the end, if Britain puts all its political weight behind the little free trade area, it will not be easy for the Danes to stay outside. They, perhaps more than anyone, will therefore welcome the emphasis that the British government is laying on the need to come to terms with the Six in the end. That statement seems a little academic at the moment. If a new group is formed in Europe it seems likely to occupy the energies of officials and industrialists for a while. Nor is it likely to accelerate the re-examination of assumptions that seems necessary if agreement is to be reached with the Six. But the dangers would at least be reduced if the timing and institutions of the new scheme were designed to facilitate a later merger.

BERLIN AND GENEVA

The Day Passes

ON May 27th, the day which Mr Khrushchev (gazing, as he later said, at the ceiling) had appointed six months ago as Berlin's date with destiny, the British garrison there did indeed go down to ignominious defeat—but at the hands of a visiting Australian cricket eleven. Mayor Brandt's forecast of a quiet day on the Spree proved justified. Mr Khrushchev himself was in Albania. Mr Gromyko was in Washington with the other foreign ministers, attending the funeral of Mr Dulles: the same Mr Dulles whom Monday's East Berlin newspapers described as an accomplice of Hitler; the same Mr Dulles of whom Mr Mikoyan, also on Monday, spoke with warm admiration, adding that "we prefer strong men to those who are conciliatory but unintelligent"—a remark likely to raise diplomatic eyebrows in many a capital along the borders of the communist empire.

On Thursday, while Mr Eisenhower spent the morning closeted with the four foreign ministers, who were later to experiment with talks at a very high level indeed by flying back to Geneva in the same aircraft, word came from several different delegations in the conference city of a possible bid to get new Soviet assurances about West Berlin in exchange for some token reduction of the allied garrison there—a garrison which, at its present strength of 11,000, is itself no more than a token.

Canards in Flight

WHEN they return to Geneva after paying their last respects to Mr Dulles, the four foreign ministers are to take their long awaited step into the relative privacy of "off the record" meetings.

Mr Gromyko has evidently agreed to leave Dr Bolz, of East Germany, outside the door. Whether or not this change in procedure yields any tangible results, it is bound to be a change for the better. Hitherto the conference arrangements have combined the worst of both worlds. The press, while excluded from the ministers' meetings, has been given a full nightly report on them, often including verbatim accounts of speeches, by six official spokesmen, holding forth simultaneously in six different rooms in one building. If the press had been allowed in the gallery during the actual meetings, it would have learnt nothing that was intended to be kept secret; journalists would have had more time to prepare and check their reports; there would have been no opportunity for the less scrupulous of the delegation spokesmen to distort their versions of the day's proceedings; and there might not have been such a proliferation of malicious rumours among the hundreds of correspondents gathered in Geneva if they had not been milling around most of the day with little hope of a story before suppertime.

Already there has been a sizeable journalistic disengagement from Geneva—and the flights of canards have simultaneously dwindled, though this also fortunately reflects a certain increase in mutual confidence between the western delegations and an enhanced resistance to "stories," planted either by communist publicists or by other zealous individuals, about both British "appeasement" and west German "revanchism." On Tuesday Herr von Brentano assured his parliamentary colleagues in Bonn that he found the British at Geneva fully as co-operative as the other western partners; and this after it had become clear that the main object of going into secret conclave there was to permit the discussion of separate items from the famous "package." But there is an important distinction between discussing items separately, which is mere commonsense, and letting Mr Gromyko take his pick among the West's various offers, ignoring what he does not fancy. More will undoubtedly be heard of this in the next few days. Not even secret sessions are likely to prove all that secret.

PARLIAMENT IN RECESS

Political Caravan

THERE has been no rest for some politicians during the Whitsun recess. Mr Gaitskell has been enthusiastically peripatetic, having "interesting and serious discussions" with Mr Nkrumah in Ghana last week and "meeting the people" in East Anglia this week. Mr Butler has been devotedly busy with press interviews and speeches, and has managed to reveal part of the Conservative manifesto for the next election in the process. It will include a promise to legislate for betting reform, so that the country will have "bookmakers and their shops and the Tote and its shops"; there may also be a promise to ease the strictness of present drink licensing arrangements, but there is to be nothing doing yet awhile about liberalising the Sunday observance laws, changing the system of theatre censorship, or making private homosexual acts no longer a crime.

The Chancellor of the Exchequer has been greeted at a west country garden party by a sea of pamphlets calling for abolition of the entertainments duty on cinemas. *Post hoc*, though certainly not *propter hoc*, there have been strong rumours that he will in fact accept a backbench Tory amendment to the Finance Bill that would bring some relief to smaller cinemas in particular. It is clear that the cinema duty is now gradually going the way of other forms of entertainment duty; it is being cut down until it yields well under £10 million a year, and then it will eventually be abolished altogether. When it is abolished, uneconomic cinemas will still go on closing as now.

Meanwhile, the Prime Minister has spent this Geneva-time playing golf in Scotland, and has no doubt been reflecting on the virtues of the legend of unflappability while doing so. Mr Macmillan on the links does not nowadays risk comparison with President Eisenhower; he invites it with Drake. For backbench MPs the problem this summer is not how to snatch a holiday but how to fill in parliamentary time. On its re-assembly next week, as well as giving second readings to the Government's new bills to aid civil service pensioners and the cotton industry, Parliament is to have one supply day; it is being devoted to Scotland, in accordance with Labour's present rather desperate "sectional tactic" of propaganda, which consists of complaining that every section of the country and of the community in turn is being treated unfairly compared with everywhere and everybody else. It is only in such minutiæ as this that electioneering cramp has yet really set in at Westminster, but the main topic of conversation among politicians is still when the election will be. One of Mr Butler's speeches during the holiday could be interpreted as implying that he personally would originally have preferred the election to be postponed until February of next year, but is now inclined to favour an autumn election instead; so certainly, after Tory successes in the recent local elections, do the majority of the Conservative party in Parliament.

ACTUARIES AND PENSIONS

Pensions Out of Politics?

THE learned bodies representing actuaries in England and Scotland have this week performed a "professional duty" by ruffling the nation's conscience about the long-term mess into which party debates about pensions are launching this country. Their figures are depressingly cogent. At present the cost of state old age pensions absorbs about 5 per cent of the national income. Under the Government's present Pensions Bill, that cost would eventually (about the turn of the century) rise to 9½ per cent of the national income; under Labour's proposals it would eventually rise to 15 per cent of it. The actuaries roundly condemn as "facile" the common view that an increasing national income will in some way cut these proportions; that would only happen if, as national income rose, it was decided that the standard of living of pensioners should fall relatively to the rest of the community. Neither party says that it stands for that. Anybody in this generation who votes for the Labour party's present pension proposals is therefore voting that our children and grandchildren should pay away three times as much of their incomes for our pensions as we are willing to pay to our own parents now; the Tories are slightly more moderate because they are saying only that our children should bear only twice as heavy a burden as we do.

No reasonable person who reads this pamphlet*—however many marginally different guesses he might make

* National Pensions—An Appeal to Statesmanship. By the Councils of the Institute of Actuaries and the Faculty of Actuaries in Scotland.

about some of the detailed calculations—can doubt that some time in the next twenty years the present vote-catching approach to pensions policy is going to have to be unpopularly reformed; eventually existing workers are going to have to be told to save more directly for their own pensions (probably through an extension of private superannuation schemes), increases in state pensions are going to have to be paid out only on proof of need, and the age at which one qualifies for a pension will have to be raised. The actuaries do not, in this week's pamphlet, make any of these politically contentious proposals; they are concerned only with a mechanistic device which might bring the day of reform nearer. They urge that, with the mutual consent of all political parties, a permanent "authoritative and independent body" should be established with "the duty of keeping national pensions under review and the responsibility of making recommendations." The idea is, of course, that this National Pensions Council would then say the things that politicians do not dare to say at present, but which eventually they will have to do.

The Tactics of Reform

WOULD this tactic really work? If a Conservative government were to set up this proposed National Pensions Council in the near future, one very much doubts it. Labour would howl that the authority was usurping the authority of Parliament; the council's recommendations would no more be "taken out of politics" than were the recommendations of that ill-fated analogous mistake, the three wise men. So long as the Tories are in office the best hope—and it is not a forlorn one—is that they may eventually move directly towards doing the things that need to be done.

If the Labour party were returned at the next election, the tactical situation might be different. The next Labour government may well run into an early pensions crisis, as it finds out that some of its pre-election promises are unattainable; the formation of a National Pensions Council to make alternative practical proposals might be a useful device to enable it to get out from under. One fear about the actuaries' suggestion is in fact that, by being presented while Labour is in opposition, it may prove to be unluckily timed; if it becomes a matter of acute political controversy at this early stage, Labour zealots may feel tempted to cry stinking fish upon what could be a potentially useful escape route from a future Labour government's mess.

BELGIUM

A Monarchy in Trouble

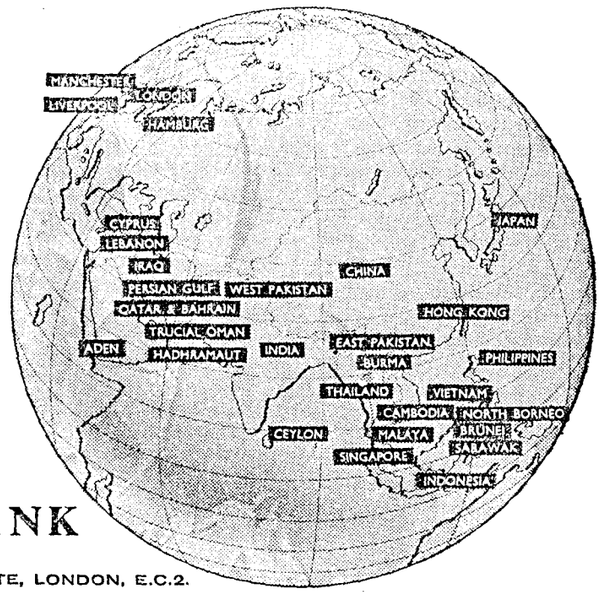
TO the British observer, used to the strict conventions that govern the British monarchy's relationship with its governments, the strains that arise between the Belgian court and the political parties are not always easy to understand. The present Belgian government, which took office last July, has a good record. An agreement between the parties in November put an end to a long and bitter struggle over the lay or religious control of schools. When the troubles arose in the Congo earlier this year, the Belgian government met the situation with a creditably swift advance towards the idea of eventual independence. It may, however, not be entirely free of blame for the clouds that have now gathered. In a number of matters, it seems to have failed to insist on being consulted, either by the King or by his family and advisers.

The first was either a court intervention, or at least a very active court interest in Congolese affairs. When the government's new programme for the Congo was announced, it wished to replace the present Governor, M. Cornelis; but he was kept in office at the instigation, as it was believed, of the palace. Next came the arrangements for the marriage of Prince Albert of Liège, the heir-presumptive to the throne. The Prince is to be married by the Pope in the Vatican, where, naturally, the Pope wields temporal authority. In the view of the Vatican and of the Belgian court, this rules out the civil marriage which Belgian law normally requires; but many Belgians dislike seeing their law circumvented in this way. It is all very embarrassing to a government of liberals and Christian socialists who are disposed to support church and monarchy alike.

What is unhappy is that disputes of this kind in Belgium bring to the surface an undercurrent of rancour against the royal house which has never ceased to flow from the events of the last war. King Baudouin's father, the former King Leopold, because he was at the centre of those events and because he has never seemed to detach himself from his son's affairs, is once more being attacked. Perhaps to disarm popular resentment, but not without a suggestion of resentment on his own part, King Leopold has now proposed to take up a separate residence from his son. Unfortunately the solution, if it is a solution, has not come until feelings had already been allowed to run high.

NETHERLANDS

Labour in Opposition



THE government whose policy Professor de Quay outlined in the States General on Tuesday is the first in postwar Holland in which the Socialists have not taken part. Confessional politics have long kept the Dutch Right divided between the Catholic People's party, two Protestant groups —the Christian Historical and Anti-Revolutionary parties— and the lay Liberals. One or more of these has hitherto proved willing to go along with Labour in a succession of coalitions.

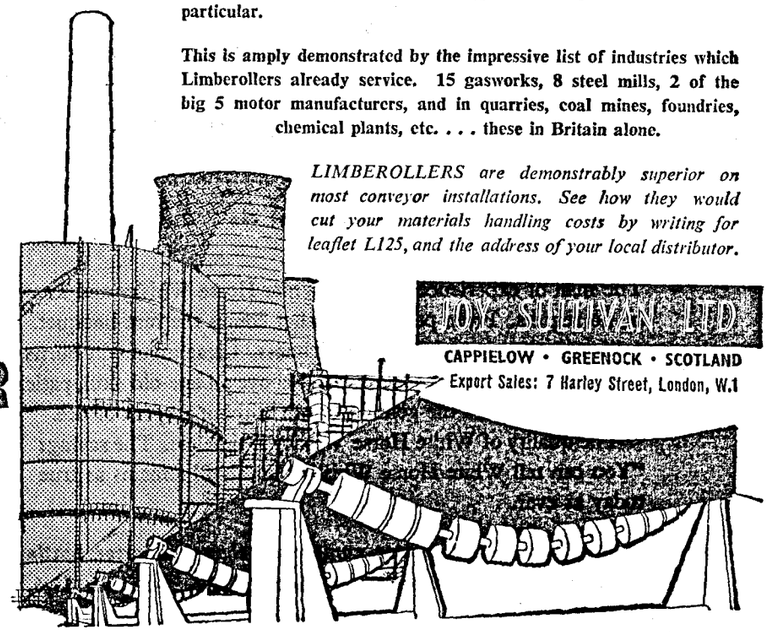
However, in the course of the long interregnum since the March elections, the anti-socialist parties have managed to sink their differences. The main architect of the new coalition is Professor Beel, who is not a member of the cabinet but surveys it benignly from his seat in the Council of State. His own Catholics, who in March nosed ahead of the Socialists to become the largest single party by a margin of one parliamentary seat, provide the prime minister and five other members of the new cabinet; the Liberals have three ministers, the Protestant parties two each.

The de Quay government has a comfortable majority, if it holds together. The prime minister indicated on Tuesday that one of its main adhesives is abhorrence of what its members regard as the Socialists' indecent eagerness to get rid of Dutch New Guinea. Another, and perhaps a more dependable one at a time of pretty general prosperity, is a common impatience with the economic controls and subsidies that have survived from the Dutch plunge into planning after the war. Continuity in foreign policy as a whole is symbolised by the retention of Dr Luns as foreign minister.

British Banking in Asia

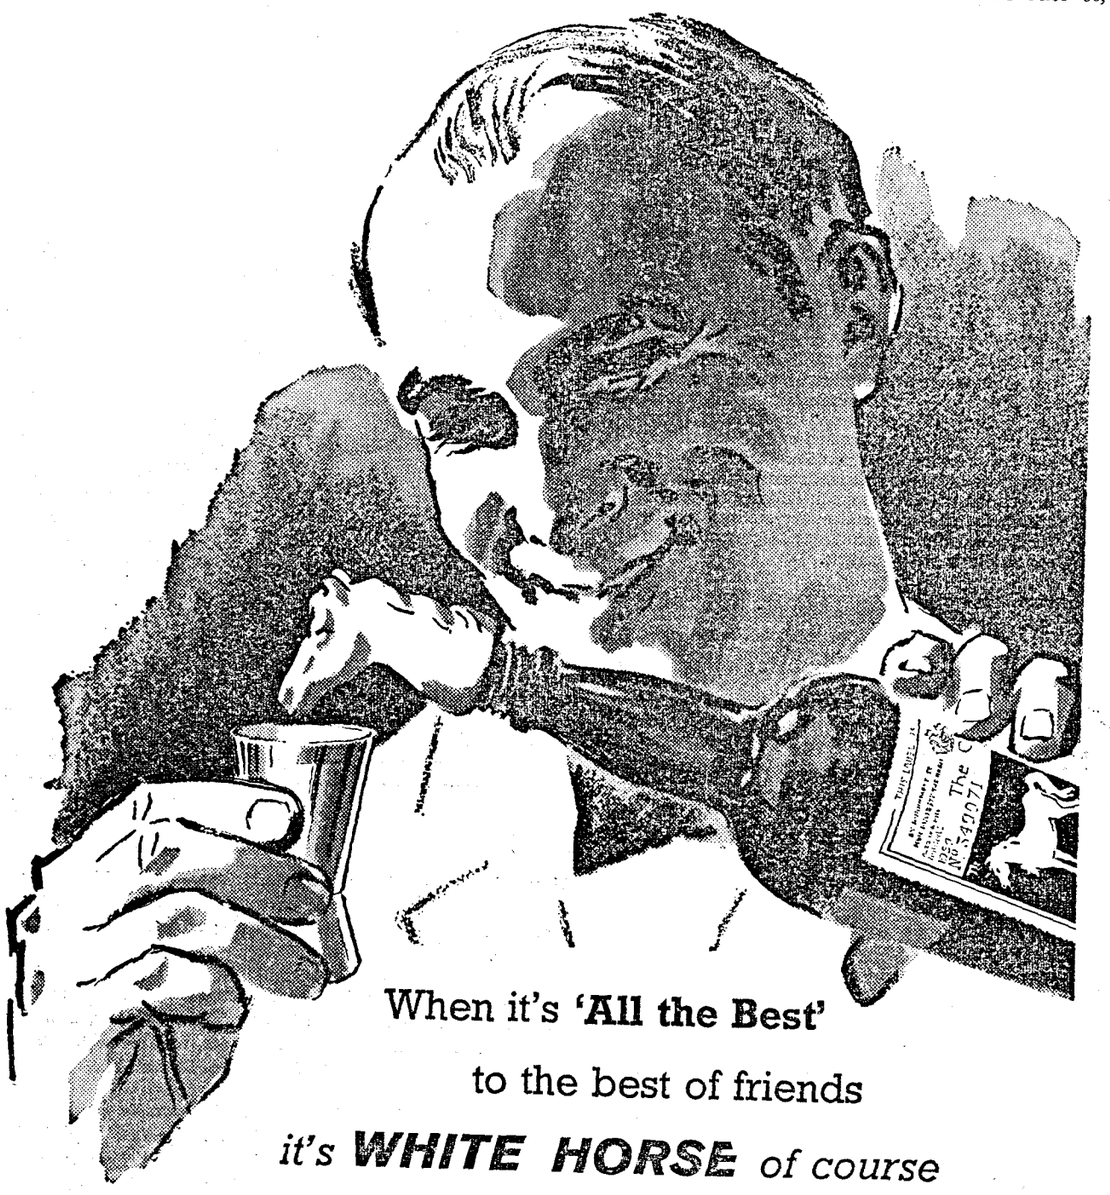
These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. In London an effective credit information service and skilled assistance and advice are available to merchants and manufacturers seeking new business connexions in Asian markets.

THE CHARTERED BANK
(*Incorporated by Royal Charter 1853*)
HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2.
Branches in the United Kingdom at Manchester and Liverpool. Agencies at New York and Hamburg.



THE EASTERN BANK LIMITED
Head Office: 2 and 3 Crosby Square, London, E.C.3.

EUROPE'S BIGGEST GASWORKS SPECIFY JOY LIMBEROLLER CONVEYOR IDLERS



Many industries have taken kindly to the revolutionary Limberoller. Offering several advantages over conventional idlers in general, they have exclusive operating features appealing to specific industries in particular.

This is amply demonstrated by the impressive list of industries which Limberollers already service. 15 gasworks, 8 steel mills, 2 of the big 5 motor manufacturers, and in quarries, coal mines, foundries, chemical plants, etc. . . . these in Britain alone.

LIMBEROLLERS are demonstrably superior on most conveyor installations. See how they would cut your materials handling costs by writing for leaflet L125, and the address of your local distributor.

Export Sales: 7 Harley Street, London, W.1

When it's **'All the Best'**

to the best of friends

it's **WHITE HORSE** *of course*

The man of experience sticks to White Horse Whisky and knows there will be no regrets. From peat and heather comes the rare bouquet. Good ripe, golden barley gives the mellow richness. Clear mountain burns softer than dew bring the gentle softness. And above all age-old skill, patient and unhurried, confers the genial warmth without a spark of fire.

The quality of White Horse Whisky is timeless. The saying: "You can tell White Horse Whisky blindfold" remains as true today as ever.

A day in the open—what better companion than a quarter bottle of White Horse—10/-. Other prices, bottles 37/6, ½-bottles 19/6, miniatures 3/10.

CAREERS

What Teenagers Do

PROBABLY no two problems cause more heart-searching in life than choosing a wife or husband and choosing a career ; with the coming bulge in school-leavers, the choice of a career at least is bound to become harder still. The enterprising careers exhibition, organised this week by the National Union of Teachers, has thus come at an appropriate time ; under the cavernous glass roof of Olympia, it sets out a large selection of possible jobs open to boys and girls. Among the crowd of teenagers, some using the machinery provided on the industry stands, some just gaping and a few surreptitiously smoking in corners, much interest was certainly being created this week.

WHERE TEENAGERS GO
(Per cent)

	Boys	Girls
Into employment :—		
At age 15	67·4	66·0
„ 16	10·6	9·6
„ 17	2·9	3·3
Total obtaining work at age 15–17	80·9	78·9
Continuing full-time "further education"	7·1	11·2
(*Of which at university*)	(3·7)	(1·6)
Others*	12·0*	9·9*
Totals	100·0	100·0
Of those at work by 17 :—		
Apprentices	29·9	4·7
Professional	0·8	0·8
Clerical	6·5	26·8
Other (mainly unskilled)	43·7	46·6
Totals	80·9	78·9

* Still at school, doing national service or unemployed.

What employment opportunities have been offered to British boys and girls as they have reached school-leaving age in recent years, and how is the situation likely to be changed now the bulge years are upon us ? The accompanying table shows what happened, then and subsequently, to children reaching the age of 15 in 1955. It will be seen that approximately two-thirds of both boys and girls then left school at the earliest possible opportunity, at age 15 ; by age 17 approximately 80 per cent were in employment. As the last section of the table shows, just under 30 per cent of the boys, but less than 5 per cent of the girls, took up apprenticeships. However, just under 27 per cent of the girls (against 6½ per cent of the boys) entered clerical work ; the proportion of girls taking up "other (mainly unskilled)" jobs was therefore not very much higher than the 43.7 per cent of boys who did so.

Unfortunately, it is this last figure which seems certain to grow in the next few years. Since 1955 the total number of children aged 15 has increased from 634,000 to 744,000, but the number of apprenticeships available, despite all the efforts of the Carr committee, has actually fallen.

CRIME AND CRIMINALS

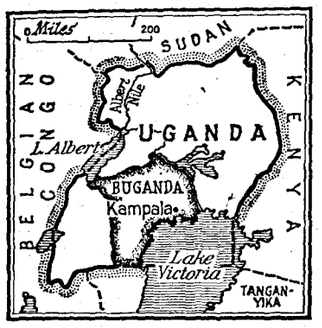
A Way through the Maze

IT would be interesting, if it were possible, to see the effect on the criminal statistics of a complete ban on all public discussion of crime and its causes, particularly youthful crime, for a period of, say, six months or a year. The ban would include, besides newspaper reporting of crime, the earnest unsensational documentary depicting the background, conversation and pursuits of teenagers. When the ban was lifted, one could well expect to see a marked fall in the criminal statistics. Crime would have dropped out of the news, and some of the kick in committing it, and in reporting it, would consequently have gone as well. For this suggestion of a ban is based on the theory that some crime is fashionable, that some people, at some ages, have as much difficulty in resisting it as in resisting, say, the hula-hoop. It is a theory which is at least as soundly based as the view that crime is the result of a broken home, of poverty, of "maternal deprivation," or of any other environmental stress that most people, including the law-abiding, are likely, at one time or another, to meet.

A sceptical attitude to what may be called the stress theories of crime pervaded Lady Wootton's stimulating Clarke Hall lecture to the Magistrates' Association last week. First of all she is sceptical, as others—Home Office officials among them—have been, about how far the criminal statistics are reliable indicators of the amount of crime in general and of particular types of it. Quite apart from the fact that they are seriously affected by local variations in policy and practice in collecting them, they do not show whether the increase that they record is the result of more people committing one crime or the same number of people committing more crimes. Secondly, she points out that the attitude to crime differs from one section of society to another. Conviction of a motoring offence, even a serious motoring offence, does not carry with it, among the motor-owning classes, the social stigma, the sense of moral turpitude, of a conviction for stealing, even though it shows a reckless disregard of life and property. In another class, different conventions apply, and no stigma is attached to stealing. Why should the motoring community be shocked at this ?

Would the establishment of a classless society alter these conventions and make stealing less fashionable ? Lady Wootton seems to think it would, though here, as in one or two other places in her lecture, her left-wing heart seems to have overcome her customary critical detachment. But it is a joy to watch her cutting through the maze of sociological obscurity that surrounds all discussion of crime, its causes and treatment. And, now, what about that ban ?

UGANDA



Sledgehammer to Nut

UGANDA is the latest addition to the list of African territories where the British Government has felt itself compelled to resort to emergency measures. In order to crush the activities of the Uganda National Movement, the governor, Sir Frederick Crawford, has not only banned the party but has declared the whole of the Buganda kingdom a "disturbed area." This enables him to restrict the movements of party leaders, break up political gatherings, and use the threat of press censorship.

The Uganda National Movement was formed about three months ago in Buganda from an assortment of personalities and groups. Its membership cuts across the division between traditionalists and nationalists and includes some diehard supporters of tribal institutions, as well as men like Mr Musazi, formerly president of the Uganda National Congress. The movement attracted considerable support,

but from the start it antagonised the authorities by its demagogic tactics. Calling for self-government next year, it instigated, with the help of threats, a boycott of non-African goods and services. The party's chairman, Mr Kamya, is now serving an 18 months' prison sentence for having threatened to burn down a bar unless its owner stopped selling European beer.

This appeal to the worst communal feelings is all the more depressing since Uganda, which has few settlers, has been spared the white-against-black conflicts of its neighbours, and its sizable Indian minority has shown itself ready to fit into an African state without demanding the special minority safeguards that the Protectorate government is busy devising. Unpleasant though the party's activities have been, it is still a sign of weakness that the Government has felt forced to reply by general repressive measures.

The disorders and the emergency powers are so far confined to Buganda. Centrally placed and far more influential than the other tribes and kingdoms, Buganda is the crux of the Uganda problem: it can either dominate the state or, by walking out, disrupt it—as the dominant traditionalist faction talks of doing. In 1953 the Kabaka of Buganda was deported for refusing to co-operate with the central government; two years later he was allowed back on a promise that he would mend his ways. But the Buganda government decided not to participate in last October's elections and has since refused to nominate members to the central legislature. When this attitude was ruled to be a breach of the 1955 agreement, the Buganda government petitioned the Queen for independence, both of the rest of the Protectorate and of the Crown. There will shortly be a conference in London to discuss Buganda's constitutional position, but it will be hard to find a formula that satisfies both nationalists and traditionalists, who at present agree on little except their dislike of British rule.

FRANCE

Algeria in Parliament

THE fighting in Algeria has not died down after all. The rebels have replied to the French Army's regional offensives by, apparently, splitting up their troops into smaller units, and simultaneously by reviving terrorist activity in the towns, including Algiers itself. Periodic rumours of negotiations are regularly followed by denials. At the same time the series of elections set in motion by General de Gaulle goes on. Having sent its deputies to the French chamber, and having chosen its local councillors, Algeria elects this weekend its contingent to the French senate. There will be 32 Algerian senators altogether; 22 of them must be Moslems. The voting cannot do much more than reflect the results of the local elections that have been held already; the question of interest is whether the moderates, who accept General de Gaulle's policy, or the frustrated extremists will get more seats. The candidates include such well known figures as M. de Sérigny, director of the *Echo d'Alger*, and M. Morice, the former minister of defence, who, defeated in France, is trying his luck in Algeria.

Algeria is on next week's agenda for the National Assembly. This debate can hardly be a great parliamentary occasion, yet it will be watched carefully for nuances in the official statement of policy. No compromise solution for the conflict can be expected to emerge from the present assembly—which is more likely, if anything, to act as a brake if and when the government shows any sign of moving towards a compromise.

The point was driven home again last week. Rumour had it that a bargain might be struck with the FLN (Algerian rebels) on the basis of autonomy for Algeria for a period of five years, which would be followed by a referendum on its future status. The report was naturally denied. Yet it may have been to counter tendencies of this sort that the Algerian deputies chose last week to publish the Lauriol report, in which they put forward proposals for strengthening "unity on both sides of the Mediterranean"—the new formula which has replaced the now unfashionable "integration." The key feature of the Lauriol report was the emphatic exclusion of any autonomy for Algeria. It remains to be seen whether M. Debré will do anything to reassure the Algerian group in the Assembly. The rumours of peace talks are, in any case, drowned by the continuing military activity and the generals' loud prophecies of almost imminent victory.

TRADE UNIONS

Sea Breezes

PIES in the sky are the order of the day at this peak period of trade union conferences, but this year they have not been such large pies as usual. Of the 75 or so union conferences held during the year at convenient seaside resorts, a third take place in May. The unions participating in the past month have varied from the 2,600-strong National Union of Scalemakers to the giant Amalgamated Engineers Union with its 860,000 members (but with only 52 delegates attending). There has been a particular rush of conferences in the last week, and some straws can be discerned in the sea breezes.

The most general conclusion is that union executives seem to have been even more eager than usual to prevent their hands from being tied in future negotiations with the employers, until they see how the land lies for bargaining. The most awkward and exceptional militancy, from the point of view of industrial relations, looks like being the large wage demand formulated by the South Wales coalminers and the aggressive speech of Mr Will Paynter, the new communist general secretary of the National Union of Mineworkers, about the need to keep up employment in the pits regardless of economic costs. The Coal Board might now have to count on a deterioration of relations in its industry, at least at the highest level. This apart, the resolutions so far have been relatively dulcet. Reduced hours of work have been a constant theme, even though the pay claim formulated by the engineers a fortnight ago looks like swallowing all this up later in the year. The civil servants want a quicker bargaining procedure, the builders want more employment opportunities for juveniles, and the Transport and Salaried Staffs Association, which does not approve of the National Union of Railwaymen's premature

wage claim, has demanded a quick report from the Guillebaud Commission. The shipwrights' union has renounced its present arbitration agreement about demarcation disputes with the boilermakers' union; this could mean even more strikes in the shipyards about which workers do which jobs—but the old agreement was not an unmitigated blessing for employers because, while disputes were being settled under it, it was the tradition for nobody to do the particular jobs in dispute at all. There seems some peck of potential trouble, but little industrial dynamite, in all this so far.

SHOPS ACT

More Half-Cooked Tripe?

THE British Travel and Holidays Association has returned to its attack, which was repulsed some months ago, on central London's shopping restrictions. Holiday resorts enjoy under the Shops Act certain limited dispensations during the holiday season: retailers offering holiday requisites are allowed to stay open outside normally permitted trading hours. Let central London be recognised by the LCC as a holiday resort—which, among other things, it undoubtedly is; the appropriate relaxation be granted; and the tourist trade, said the BTHA, would prosper to everyone's benefit. The LCC rejected this proposal on the grounds that London does not, like a seaside resort, have a short annual season during which all available hay must be made; and that the class of seaside holiday requisites clearly identifiable as such—shrimping nets, swimsuits, and Presents from Muddlecombe-on-Ooze—has no readily recognisable counterpart in W.1. A loophole, however, remained. If inquiry into tourists' spending could reveal such a class of goods, a dispensation might be considered; and the inquiry, due to yield some weeks hence a report to the LCC, is in fact being undertaken.

Its prospects are doubtful. Tweeds and bone china, cashmere and bespoke shirts, souvenir brass ashtrays ornamented with Big Ben in relief, have—except perhaps for the last item—no less appeal for the local than for the visiting population; they differ considerably from the tin spades and bathing caps seasonally provided at Muddlecombe-on-Ooze. From its very beginnings, the postwar tourist drive has run up against essentially the same difficulty; it is almost impossible to prevent the home consumer from benefiting, in the teeth alike of planning considerations and of social justice, from any relaxations of austerity and discipline designed to make Britain less repulsive to auriferous visitors. Also, of course, any special treatment of "tourist goods" exerts an insidious under-the-counter influence on trade in general. The Muddlecombe-on-Ooze shopkeeper who stays open to sell beach balls will generally, if asked nicely, also sell anything else, however flagrantly irrelevant to holidays, that he has in stock. It would be easier, no doubt, to prevent such immorality in a department store when all but the appropriate department could be shrouded and roped off; but hardly elsewhere. One must hope that these difficulties will be overcome. Half a slice is better than no bread. One might hope, too, that as anomalies, absurdities and evasions mulitply the whole silly business might be sufficiently discredited to the point of collapse. But, on past experience of the strength of the shopworkers' union lobby, that hope is very slim. A quarter-century after the delicate distinction was first drawn, it is still lawful to sell half-cooked tripe after hours but not—heaven and Mr Walter Padley forbid!— tripe in the raw.

LAOS

A War of Nerves

THE continuing pressure on Laos from Peking and Hanoi amounts to a war of nerves. The latest blast has been fired from Peking in a note to the British and Soviet foreign ministers, received on Monday, alleging "serious violations" of the 1954 Geneva agreements by the Laotian government. The two foreign ministers were joint chairmen of the Far Eastern conference at Geneva, which brought the Indo-China war to an end, and which remains the only high-level gathering of the great powers in which communist China has participated. Partly for this reason, partly because China's satellite, north Vietnam, has a continuing interest in preserving the armistice machinery set up by the conference, Peking has continued to intervene in all qustions that threaten communist interests in Indo-China. The Chinese now allege that the Laotian government's latest attempts to "integrate" two battalions of communist-led Pathet Lao troops into the national army constitute violations of the Geneva agreements.

The Pathet Lao troops were originally part of a communist army set up by the north Vietnamese in the two north-eastern provinces of Laos, Sam Neua and Phong Saly. The Geneva agreements provided for the return of the provinces to central rule, but the communists blocked a settlement until November, 1957, when a formal agreement between the central government and the Pathet Lao was signed. Some of the Pathet Lao troops have since been absorbed into the national army and others have been demobilised, but two battalions resisted integration. After an ultimatum had been ignored, the army last week surrounded these battalions and prepared to force them to submit.

It is hard to see how otherwise the Laotian government could have acted, or how it has violated the Geneva agreements. Those agreements recognised the unity and independence of Laos, and its government can hardly be expected to tolerate a communist state within the state. And it is doubtful whether any useful purpose would be served by reconvening the Geneva truce commission for Laos, which was disbanded last year at the request of the Laotian government.

GERMANY

The Bonn Succession

THE tussle over the succession to Dr Adenauer entered a new phase with the Chancellor's return to Bonn from his Alpine holiday. For Dr Erhard the honeymoon period, when he appeared, in the public eye at least, as the obvious favourite, is over. Dr Adenauer is fighting stubbornly for the candidate of his choice, Herr Etzel. With its eyes on the 1961 elections, the bulk of the Christian Democratic party still appears to favour the vote-catching figure of Dr Erhard. A smaller group of influential men backs the Chancellor in what has now become open and heated debate within the party. To and fro the battle goes,

with press reports tipping Dr Erhard one day, Dr Etzel the next. He would be a rash man who would today lay more than even money either way.

The decisive factor that has influenced Dr Adenauer to take so firm a stand appears to be his feeling that Herr Etzel is better qualified to carry on his foreign policy, based on close links with France within the community of Six. In practice, however, the policy of the future German government is unlikely to be very different, whoever wins the succession. Whoever wins will recognise the political necessities of the close relationship with France, and will try to reconcile it with liberal economic policies as far as that is possible. In the minds of a good many people in Bonn the choice is one of personalities, not principles, between the skilled administrator and party politician, Herr Etzel, and the public figure, Dr Erhard. Dr Erhard is better known not only at home but also in Britain and the United States. In France he has just received a timely boost in the form of a long and favourable review of his book "Prosperity through Competition" by M. Rueff, the father of France's recent economic reforms.

The Chancellor still has a good deal of time. It has been alleged—and denied—that Dr Adenauer has sought to further his candidate with the threat of going back on his own decision to stand for the presidency. If he did, the Christian Democrats would face the problem of finding another presidential candidate from their ranks. They might have been spared some of this summer's difficulties, present and to come, if they had not resolved to capture the presidential office for their party in addition to the chancellorship. Professor Carlo Schmid, the Social Democrat candidate, would have made an excellent president, and democratic government in Germany would have been the better for a division of honours.

THE MENTAL HEALTH BILL

Handicapped Children

THE Mental Health Bill, which is due to have its second reading in the House of Lords next week, seeks to go far towards breaking down the barriers between the mental health and the rest of the health services. But whether it will be entirely successful will depend, to a great extent, on how the local authorities carry out the provisions for community care.

It is the mentally handicapped rather than the mentally ill who will be most affected, for good or for bad, by the standard of this care, for they need a long period of training, starting soon after birth, and supervision that may last all their lives. The National Association for Mentally Handicapped Children is therefore disturbed that the new Bill does not impose an obligation on local authorities to provide the care and training facilities that are needed. It points out that parents are to be compelled to send a handicapped child to a training centre (just as they have to send a normal child to school), but local authorities are not being compelled to provide such centres—as they are to provide schools for the normal. It also points out that even if local authorities are willing, they will not have enough money to carry out these provisions of the Bill. About £6 million is all that the Government envisages being spent on all the local mental health services (for the mentally ill as well as the handicapped) in 1960-61. This would be less than a tenth of all local health expenditure in 1958-59, although the incidence of mental defect is far greater than that of any other handicap—8 to 10 of every thousand children born are mentally retarded, and at least 180,000 defectives in England and Wales are unable to lead independent lives. It is the size of the problem that has prompted the third main plea put forward by the association: the grant of far more money for research into the pathological causes of mental defect.

It is a moot point whether a statutory obligation would carry more weight with local authorities than the administrative direction which the Minister is to give them when the Bill becomes law. But it cannot be doubted at all that this is a service on which far more money needs to be spent—and quickly. The mentally handicapped have been hidden out of the community's sight and mind for far too long.

ISRAEL

Curtain Raiser

AFTER a vituperative election campaign, the results of the elections for the Histadrut (general federation of labour) executive on May 17th left the relative positions of the labour parties in Israel more or less unchanged. Nearly a third of Israel's population belongs to Histadrut; about three-quarters of them voted. Mapai, the moderate labour party that leads the government coalition, dropped 2 per cent, but has again got a small majority over all other parties on the Histadrut council. Ahdut Ha'avoda, one of the two left-wing labour parties, gained slightly; the Communists, whose support was already very weak, lost a few votes despite the fact that the Arabs (to many of whom the Communist party provides an outlet for national dissatisfaction) were for the first time voting as Histadrut members.

The great stream of new immigrants did little to upset the traditional political pattern. About a quarter of the voters were going to the polls for the first time in Israel—many, indeed, for the first time in their lives; but the parties seem each to hold their own, broadly speaking, by recruiting supporters among the immigrants in rough proportion to the existing distribution of party strengths.

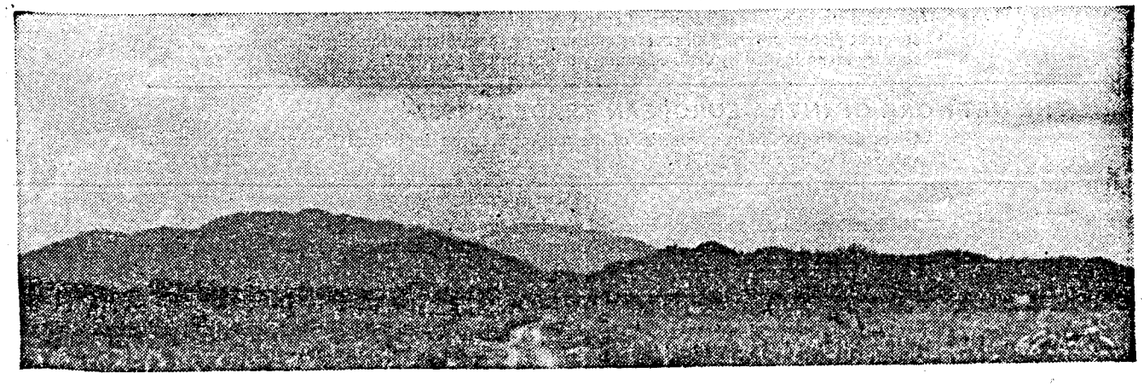
As a curtain-raiser for the general elections in November, the Histadrut vote was further evidence of the inevitability of coalition government in Israel. Although Mapai brought all its big guns to bear, it barely managed to maintain its majority. And in the general elections, by contrast to the Histadrut elections, it will have to face the strong right-wing

ROSTOW ON GROWTH

A Non-Communist Manifesto

In the next two issues, *The Economist* will devote sixteen pages to an abridged version of Professor W. W. Rostow's recent lectures. These offer an outstandingly revealing analysis of the sweep of modern history and they carry clear, practical and encouraging implications for this and other countries.

If I did not work, these worlds would perish . . .



BHAGAVAD-GITA

In the hills of Malaya, an old man listens for a new sound; a sound as hopeful as a heartbeat—the hum of electric generators which will bring new productivity to his ancient land. For the expanding populations of the East, electrification is vital to survival. It means work, food and shelter, and the promise of a more bountiful life for millions. The supply of power equipment for new developments abroad is a job of the Hawker Siddeley Industrial Division. Work has begun on an order for free piston gas turbo-electric generating sets which will give new and increased power in the Federation of Malaya. Other contracts worth millions of pounds are in hand for projects in Finland, Canada and the Argentine. Hawker Siddeley is in the business of Power—from small motors to comprehensive schemes for the generation and distribution of electric power. We have representatives all over the world. If you have a power problem, we will be glad to send our engineers to study and recommend its solution.

BASIC EUROPEAN STATISTICS

The Organisation for European Economic Co-operation provides a unique statistical service covering the main fields of Europe's economic activity. The use of common standards ensures close comparability between the data for different countries. The six Common Market countries are treated both separately and as a whole to facilitate rapid consultation. Data are also given for the U.S.A. and Canada.

INDUSTRIAL STATISTICS 1900-1957

One hundred and forty tables giving, industry by industry, the most important data on production, foreign trade, employment, etc. 180 pp. 14s.

AGRICULTURAL AND FOOD STATISTICS

The most important aspects of the agricultural and food situation: pre-war and for each year from 1947-48 to 1957-58. 130 pp. 12s.

BASIC STATISTICS OF ENERGY FOR O.E.E.C. COUNTRIES

Detailed statistics of each source of energy for the O.E.E.C. area, presented so as to fit into a coherent picture covering all sources and showing their interrelationship. The position of each country is spotlighted by detailed country tables for the year 1957. 56 pp. 7s.

THE NETWORK OF INTRA-EUROPEAN TRADE IN 1957

Gives details for 207 commodities of the market between individual European countries in value and volume during 1957. 218 pp. 15s.

These reference books are supplemented and kept up-to-date by the two-monthly "Bulletin of General Statistics" and "Foreign Trade Statistics". Details of these periodicals and specimen copies will be supplied by the Publications Service of O.E.E.C., 2 rue Andre-Pascal, Paris 16e, France.

opposition of Herut, now working at full pressure to win the support of the under-privileged and odd-men-out among the new immigrants. The general guess is that the November elections will leave things much as they are with perhaps a small drop in the vote for Mapai and a slight increase for Herut. Mr Ben-Gurion's ambition of a two-party system remains remote.

LONDON'S GOVERNMENT

Chasing their Tails

THE Royal Commission on local government in Greater London has now heard evidence from both the Association of Municipal Boroughs and the County Councils Association. It is no surprise to find that the former believes in more county boroughs and fewer counties, while the latter favours precisely the opposite. What is startling is the procrustean way in which both bodies apply their dogmas to the special facts of London. The AMC wants London to be governed by a long line of boroughs, with no counties above them, but with a minimum population of 100,000. This would mean carving London up among 50 or more independent local authorities, and relying for co-operation between them upon joint boards or committees. Even in theory this would call for an awful lot of co-operation; it would need to extend to all the main services from education and welfare to highways and main drainage. In practice, such a network of joint bodies would prove maddeningly complicated or patently insufficient—probably both.

The County Councils Association did not manage much better. The LCC, Middlesex, Essex, Kent, and the other counties partly in Greater London are all fairly wealthy and fairly competent bodies. So much is in their favour. But why should their particular areas be sacrosanct? Why continue to have some counties which are half in and half out of London? And why, above all, divide functions between the counties and 100 other local authorities? The CCA did not know or even try to find the answers to these questions; its unreasoned adherence to the *status quo* made its evidence practically worthless.

London plainly needs fairly large local authorities. Such genuine local communities as still exist among its 8½ million people are too small to be local government units, unless perhaps constituted as "urban" parish councils with the function (by no means a pointless one) of putting pressure upon superior bodies. But, above this level, the mobility of Londoners makes narrow administrative boundaries unnecessary and frustrating. London ought to be able to lead the country in the range and variety of its local educational, health, welfare, and cultural services. Equally its own special problems of traffic, smog, housing congestion, and so on, can only be tackled on a fairly comprehensive scale. To think big is often a facile formula. This, however, is precisely what the local authority associations have failed to do—and what the Royal Commission needs to.

SOVIET UNION

Urbanising the Countryside?

ARCHITECTURAL tastes are changing in Russia. Stalin's successors, anxious to cut costs, soon decided that they could not go on erecting the ornate façades their master liked. In the name of low costs they also dropped the idea of urban expansion upward, through sky-scrapers. It now looks possible that they may alter the rural landscape by turning collective farms into small towns with multi-storied buildings. Such a conclusion might be drawn from Mr Khrushchev's advice to the farmers, in his Kiev speech on May 11th, that they should follow the urban example in tackling their housing problems.

An acute housing shortage is a general feature of Soviet life. The worst hit by it are probably the dwellers in towns, because of the massive influx of population during the years of industrial revolution. But conditions in the countryside—where initial standards were low, war damage severe, and there has been relatively little new building—are not much better. To make up for it, seven million dwellings are to be built in the countryside during the current plan, which implies a rate of construction of about a million dwellings a year. The architects' plans so far, however, are too dear. They are designing houses of three to four rooms, with bathroom, hot water and other comforts; but the estimated cost tends to be more than 25,000 roubles a house. While town housing is provided by the state, in the country the collective farms, or the farmers themselves, have to find the money. Too high costs would render difficult the fulfilment of the plan.

Mr Khrushchev has now suggested that farmers should change their habits and live in houses of four to six storeys, like townspeople. This, in his opinion, would not only cut costs but would make it easier to fit in the shops, cinemas and other communal services which are intended to form part of future rural life. In a way, Mr Khrushchev seems to be reviving an old project of his own. It will be recalled that it was he who, in Stalin's day, launched the idea of "agrotowns" as a first step in eliminating the differences between town and country. The plan had to be dropped because the peasants saw in it a threat to their last vestiges of property—their small private plots. In recent years Mr Khrushchev has followed a policy of concessions to the peasants and appeals to their property instinct. Yet the old dream may now be resurrected in a watered-down form. Lower houses in towns and higher in the countryside would bridge at least the architectural gap between the two. It remains to be seen if the farmers will follow Mr Khrushchev's—this time, relatively gentle—hint.

LETTERS

The Unproletarian Society

SIR—Despite the cumbrousness of the word, you have in "deproletarianisation" an idea which could prove to be a political winner.

However, the signs of deproletarianisation are as yet few and far between, and in recent years we have done a good deal to extend proletarian status more widely, not to contract it. A "deproletarianised" family will surely expect to pay an economic price or rent for its house, not to have a council house provided for it. It will expect to pay its own doctor's and chemist's bills, relying on insurance for prolonged or unusual illness. It will expect to provide for old age and widowhood through its own savings and superannuation, not through State pensions. It may even (dare I mention this?) expect to pay for its children's education.

To make such things possible will call for more than a change of outlook. It will require two concrete acts on the Government's part. Most of the taxation which now falls upon the manual workers and their families (over £1 per person per week), and upon the lower salaried workers, will have to be remitted. And the currency will have to be made rock-hard, so that a man who saves £1 now can be as confident as is ever possible in human affairs of getting back £1's worth of purchasing power, plus interest, thirty years hence.

Are you, Sir, altogether happy about our present level of taxation, the slowness of the rise of productivity per man-hour, and the rapidity of the rise of costs, and do you not think that there might be some connection between them? *The Economist* has a fine tradition of courageous and independent thought: it does not have to worry about what is going to happen in some marginal constituencies: why then do you approach these questions as coyly as Mr Butskell himself (or Miss Seear)?—Yours faithfully, COLIN CLARK

Agricultural Economics Research Institute, Oxford

Passports

SIR—Absence from home prevented my seeing your note on "Passports: Out for a Pound" in *The Economist* of April 25th until today.

You refer to "Britain's own illiberal laws about them," but the Government stated recently in the House of Commons that passports are not required for British subjects leaving the country: it is only the regulations of foreign countries which make them necessary. This statement contrasts strikingly with the present practice of subjecting British subjects leaving the country to a double check at ports—immigration officer and security officer—and with the fuss and elaborate precautions concerning "no passport trips" to France where forms and photographs are required in triplicate and where steps are taken to check that British subjects who take advantage of this "concession" do return to the UK. (The press recorded some time ago that the police had visited the homes of persons leaving on "no passport" papers who apparently had not returned. A new offence has now been created: that of leaving the country without a passport and without the intention of returning). They manage these things better on the continent where between many European countries, only an identity paper is now required and, in practice, is asked for only on entering the country.

I do not understand your statement that the "real total costs" (of passports) involve "the cost of that part of Britain's overseas consular and diplomatic establishment which would not be required but for the need to stand ready to help British travellers abroad." This "need to stand ready" was exactly the same before August 1914, when passports were not required, as it is today, and would remain the same were passports abolished tomorrow.—Yours faithfully, J. W. NIXON

Geneva

Church Unity

SIR—"Clergymen's *amour propre*," in your phrase, can scarcely be said to have been the chief obstacle on the Church of Scotland's side to the acceptance of the "Bishop's Report" plan for closer unity with the Anglicans. Feeling among the mass of churchmen has had much more to do with it. The average Scot believes that no good reason has been shown why his national church should change its nature.

Communion with (and in) the Church of Scotland is open not only to Anglicans but to all Christians who wish for it. If Anglicans feel that a church without bishops is almost untouchable they may comfort themselves with the thought that the Kirk has some thousands of bishops in the scriptural sense of the word—perhaps some tens of thousands, since it would be easy to argue that all ruling elders as well as all ministers have episcopal functions. All elders, as well as all ministers, are also presbyters and many of them are deacons too, so that the three orders for which the Archbishop of Canterbury is concerned are well represented in Scotland.

What the Church of Scotland has not and cannot have is the sacrificing priest who is supposed, through some quasi-magic involving the laying on of hands, to have the unique power of celebrating a valid sacrament *ex opere operato*. It is a Reformed church in which there is no place for priesthood of this sort. Scots Presbyterians, who are aware that they have placed no barrier between Anglicans and themselves, and who feel that the introduction of bishops would compromise their Reformed status—though they may not know exactly how—will expect to learn that the Church of England is fully Protestant before any new move towards "closer unity" can be expected from them.—Yours faithfully, J. M. REID

Glasgow

Canal Boating

SIR—The comments in your issue of May 16th on the subject of pleasure craft operated on inland waterways by the British Transport Commission misunderstand our complaint. In our view, it is by no means the case that the new services will "increase total traffic on the canals beyond what could economically be justified" (which is not in itself precisely what we advocate). On the contrary, they are operated on a basis so completely uneconomic as to be likely to result in a reduction of traffic: because, first, they will drive private enterprise hirers out of business, or at least discourage them from extending; and, second, they are certain to be withdrawn in the end because they do not pay.

The commission first proclaimed, over years, that there was no revenue to be got from pleasure traffic. Against the most discouraging possible background, many of our members none the less risked their savings, and proved the commission wrong. Now the commission is ruining them by offering uneconomic competition in all departments. For example, Mr John James has run pleasure trips in London on the Regent's Canal since 1951, and made them almost a national institution. Mr James having taken all the risks, the commission is this year muscling in with an hourly service at what amounts to a cut rate. None the less, we could not object were it not that the new service is, as we believe, basically uneconomic.

You describe our membership as including "several firms chartering canal boats and offering cruises." In fact, it includes the great majority of such firms on all the waterways, nationalised and otherwise, excepting only the Thames and the Broads, where the industry antedated our foundation.—Yours faithfully, ROBERT AICKMAN

Inland Waterways Association, WC1

The Liberal Vote

SIR—Mr J. G. Walker is scarcely fair when he says that the most that can be said (from his Keighley election figures) is that the voters appear to be more anti-Tory than they are anti-Socialist. Surely the most that can be said is that the voters are definitely anti-Liberal—always more than five to one against.—Yours faithfully, G. W. HORNER

Keighley Conservative Association, Keighley

BOOKS

Eyewitnesses in Palestine

The Seat of Pilate: *An Account of the Palestine Mandate*
By John Marlowe.
Cresset Press. 300 pages. 30s.

Britain and the Arabs, 1908-1958
By John Bagot Glubb.
Hodder and Stoughton. 496 pages. 30s.

IF the history of British relations with the Arabic-speaking peoples in the present century were set out as a graph, it would run somewhat as follows: starting at a low but steady level in Egypt, it would climb steeply between 1917 and 1920; then, from 1922, it would enter on a long slow decline, lasting until the second world war. During the war, it would perk up again, marking support from Whitehall for the notion of an Arab League, limitation of Jewish immigration to Palestine, and victory in Africa. But from the end of the war it would plunge downhill, arrested only for a few months by the new treaty with Egypt in October 1954. The Baghdad Pact (1955) would be more than offset by worsening relations with Egypt. The Suez adventure and the Iraqi revolution would drive it right off the paper; there it remains so long as there is no diplomatic contact with Syria or Saudi Arabia, and a British mission has to do its business from rooms in a suburb of Cairo.

For centuries to come, historians will argue whether this course of events was the result of bad policy, including bad Palestine policy, or whether of factors which no policy, however good, could alter. Among the last must be numbered net loss of strength as a result of exhaustion in two world wars; the arrival of other and greater powers into an area long free from any such competition; the coming-of-age of an Arab generation educated along lines that lead every young man to want his own latch-key. Which of these factors counted for most? Some of the contentions will gain certainty as the Foreign Office, operating its fifty-year rule, disgorges the archives. But meanwhile we have an advantage over the twenty-first century in that we can question living witnesses on what happened. Though memory is frail, and necessarily coloured by personal experience, these recollections are irreplaceable. Here are two books that have that irreplaceable quality.

Mr Marlowe's, while covering less ground, is infinitely the better book. Technically, it is impeccable, both in arrangement and in its disciplined omission of detail in order to direct attention to the grand lines of the story. It shows the implications of acts and decisions that, at the time, were drowned in cant about "being agreeable to both communities" or "co-operating with the British authorities." Each analysis is so clear and concise that it forces the reader either to agree, or else to think out his own alternative interpretation. This is high praise. In the matter of planning, it could have been improved only had it broken at least one piece of new ground and devoted a whole chapter to the means and stages by which the other Arab states began to take a hand in the Palestine affair.

The story is dispassionately told. Thereafter, it tends to ascribe British failure to execute a policy too much to Mr Bevin's heed of advisers who banked on an Arab victory, and too little to a factor that it mentions, but underemphasises. This factor was the British public's, and British War Office's, desire to get out of a hole to which no bottom was visible, and which contained no British blood-tie (cf Kenya) or British investment (cf Malaya). The title is apt in that for the second time a foreign administrator in Palestine did what he knew to be shoddy rather than call out the guard to quell determined Jews.

Sir John Glubb is much too ambitious. There is not room, even in 496 pages, to mention which regiments surrendered at Kut, tell how Ibn Saud rose to power, follow the strands of British policy, and insert theoretical essays on race relations, the class struggle, the duty of leadership, and the excellence of democracy provided it favours the right set. ("Britain could have no objection to the independence of the Arab countries provided they did not introduce the Germans or the Russians.") All told, the book leaves the reader with an incomplete picture of the scene outside the small theatre that the author knew so well. Notably, this did not include Egypt, and there is too little acknowledgment that certain social solutions which worked in Jordan might cease to do so if ever it caught up the social lap it lay behind its neighbours.

At points, memory or information falters, and the two books conflict. They do so sharply over whether or no the Arab armies planned for the Palestine war with British connivance. Mr Marlowe says yes, and Sir John that there was no planning whatsoever. This is a topic on which, to the best of this reviewer's knowledge, anti-Bevin bias colours the better book. But the Glubb one is not free from bias elsewhere. Indeed it is one glorious piece of bias in favour of British leadership and the good old days of "gallant enthusiasm," as opposed to the bad new ones of "mendacious propaganda." It admits that we have to live in these, but, for doing so, proffers too many panaceas that annul one another. Its injunctions would work only if the world were a checkerboard on which British leaders alone moved the pieces.

Love and Politics

Mistress to an Age
By J. Christopher Herold.
Hamish Hamilton. 496 pages. 21s.

MADAME DE STAËL falls into no obvious classification. The daughter of Necker, she was a Swiss French protestant by origin, but passionately a Parisian. In Byron's words, "she thinks like a man, but alas! she feels like a woman." She stood for liberalism, for intellect and for enthusiasm. She was ridiculous, ugly and demanding; yet all her life men fell in love with her. With her droves of hangers-on lovers and ex-lovers she was a figure of fun; yet she was so formidable an influence that Napoleon treated her seriously as an opponent and followed her movements from all over Europe. She always stood by her principles, but she was ready to make unexpected concessions to achieve the two ambitions in which Napoleon thwarted her for years: the right to return to Paris and the repayment of two million francs which the French Government owed to her father.

Few people were so intensely alive; and consequently few people suffer so much from being dead. She lived for the hour: her loves of the moment, the political struggles of the day, the books into which she poured her feelings and thoughts about both. For a generation after her death people could remember her with every variety of feeling and were influenced by her political inspiration. But then she died for good, and became a purely historical figure. One sees the coarse features in the portraits; one cannot see the lively eyes or hear the brilliant talk that fascinated so many men of the first order; and the evidence of her success shows that, on top of all her infuriating characteristics, there was a tremendous charm of personality which no dead records can revive. Her writings have not lasted—they too were of the moment—and it is a trifle unfair that the far less admirable Constant should have pilloried her (and himself) in one of the best of all short novels.

Even her intellectual and political influence is a little hard to grasp at this distance. In detail, her achievements in either field do not seem impressive. But she struck the tone of the moment; and, what is far more important, she was consistently against tyranny and in favour of freedom. In those simple terms it was a great gain to Europe that a notable figure, a Frenchwoman of outstanding character and a popular author should be ready to give constant testimony.

Mr Herold has grappled nobly with a fantastic amount of material. Madame de Staël's life was so rich and odd that it is almost impossible to systematise; love and politics are intermingled at all

stages; she lived in a herd; and such extraordinary men were mixed up intimately in her life—intimately in every sense of the word—that it is not one but many biographies. Mr Herold has dealt clearly with a fascinating, if often repulsive, story. His only fault is a certain crudity of taste when he comments on the often absurd, but usually pathetic, aspects of the strange characters whom he deploys. But this largely disappears in the final episodes, where opera bouffe plays a smaller part in the succession of spectacles.

Hurrah for Capitalism

The Roots of Capitalism

By John Chamberlain.

Van Norstrand. 228 pages. 41s. 6d.

IT is tempting, but not quite fair, to [illegible] (first of a projected "Library of American Capitalism") as a Poor Man's Mises and leave it at that. It is tempting, because this apologia for unreconstructed free enterprise, based on some odd economic history and odder political theory, has much in common with the exemplar; it is unfair, because Mr Chamberlain, unlike Professor von Mises, does realise that other elements than a rationally directed acquisitive drive go to make a good society.

Mr Chamberlain has—and good luck to him—a "mature preference for the uncoerced man." But he recognises only one kind of coercion: that of the state and the state-encouraged monopoly. The state has been responsible for whatever ill-effects have been erroneously attributed to the workings of free capitalism, from the distresses of the Industrial Revolution (entirely due to the Corn Laws, paper money, high taxes, the Speenhamland system—here presented as a piece of George III's benevolent central planning—and "the failure of the British state to end the repressive laws that kept the new productivity from spreading into the fields of housing and sanitation") to the Great Depression (entirely due, apparently, to the Reparations clauses of the Treaty of Versailles). The coercion that goes with grossly unequal bargaining power troubles him not at all; the more abstruse notion that individual liberties may sometimes be mutually destructive unless mediated by authority does not seem to have occurred to him; from several passages in "The Roots of Capitalism", the only strictly logical conclusion is in favour of pure anarchy; of the essentially collective activities which even the classics assigned to the state, Mr Chamberlain approves only defence and justice. Welfare should be a matter of voluntary co-operation and private insurance; town-planning and amenity can be trusted to the enlightened policy of proprietors; hard money, with no Keynesian nonsense about it, should take care of the trade cycle—all this in a light-hearted final page and a half. Education is not mentioned at all, nor Factory Acts, nor Pure Food Acts, nor child labour laws, nor common services; the reader may find scattered indications that Mr Chamberlain would not, like Professor von Mises, actually scrap the lot, but there is no coherent attempt to establish the rôle of the state as a liberal sees it. Capitalism is freedom, collectivism is slavery; on the one hand lies Runnymede, on the other Vorkuta; in the middle, poor "grey, apathetic" England, too decent to slide all the way to tyranny, offers a realistically awful example of what America might become by further backsliding.

Lively and often telling as it is, this is really pretty poor stuff. On two counts, however, Mr Chamberlain earns good marks: first, for putting his finger squarely on what is surely the most impregnable political argument for preferring the market check on business men's power to the democratic check on state power—"The average human being, who wants to do his job by day and relax after dinner, just can't keep tabs on the natural-born politician who loves the game of power for its own sake"; secondly, for doing what Cambridge has so long and regrettably failed to do, and making Mrs Joan Robinson a professor.

Early Hitler

Documents on German Foreign Policy, 1918-1945 Series C. Vol. II

The Third Reich: *First Phase, October 15, 1933—June 13, 1934*

Her Majesty's Stationery Office. 1,000 pages. 47s. 6d.

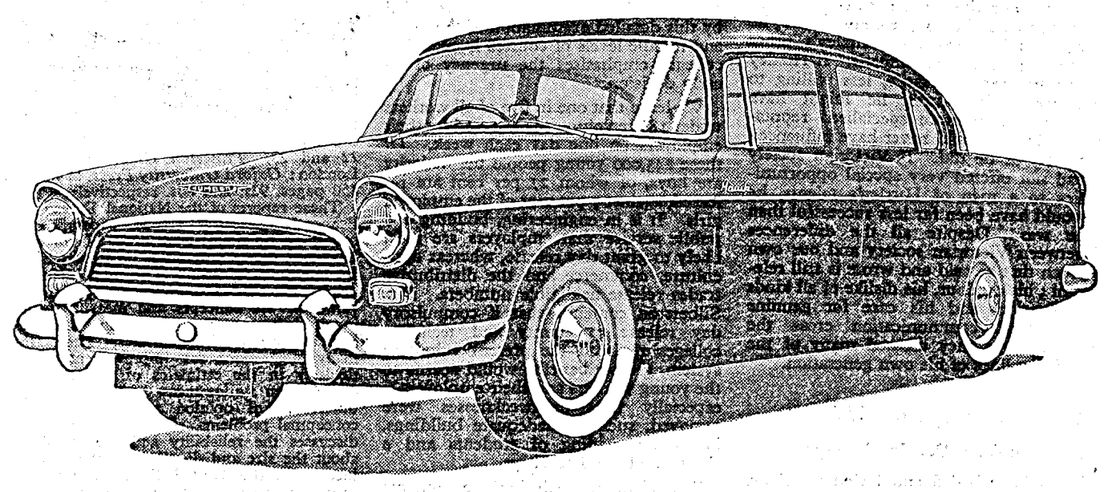
THIS volume of German documents covers the period from mid-October, 1933, to mid-June, 1934; during these months the dominant theme in Europe was the Austrian Question, or, more precisely, the menace which Hitler presented to the already insecure government in Vienna. At the instigation of Mussolini, Dollfuss, the Austrian Chancellor, provoked an armed conflict with the Socialists in February, 1934, which led to the suppression of the Austrian Socialist party. The idea had been to show that Dollfuss could stamp upon Marxists as effectively as Hitler, and various documents in this collection show the surprise which was felt by many people that the Austrian Nazis did not force an alliance upon Dollfuss in order to share the credit for the defeat of the "Austro-Marxists." Instead, the Nazi press in Germany expressed sympathy for the workers whom Dollfuss had crushed so "brutally" at a time when many German Socialists were in the merciless hands of the SA and SS in the Nazi concentration camps. This was an early example of Hitler's sure instinct, and brought him the passive, if not the active, support of many of the Austrian Socialist rank and file.

The second volume in Series C covers the months during which France, in its alarm over Hitler, made certain advances to Soviet Russia: the Fuehrer's reply was the Declaration of Non-aggression and Understanding between Germany and Poland announced on January 26, 1934. This inevitably increased Russian distrust of Nazi Germany; the distrust had been generously nourished by the writings of Hitler and Rosenberg, which advocated the disintegration of Russia, and by the activities of the Nazis in the Baltic states (Radek had complained of these to a German journalist as reported from Moscow on January 10th), quite apart from the persecution of the Communists in Germany. Nadolny, who was sent as German ambassador to Moscow in November, believed he could have got over all this with the help of the old-boy feeling that survived between the Red Army and the Reichswehr; this sentiment is plentifully illustrated in the volume under review, for instance in the account of Twardowski's conversation with Tukachevsky on November 5, 1933. But according to Nadolny's account in his book *Mein Beitrag*, when he saw Hitler just before Whitsun, 1934, the Fuehrer vetoed any resumption of Rapallo attitudes, saying that he wished to have nothing to do with the Russians: after this Nadolny resigned. The documents show us the same thing happening in China; its links with the Reichswehr failed to restrain Hitler's attraction to Japan, to whom alone he remained faithful to the end.

Victorian Scientist

T. H. Huxley: *Scientist, Humanist and Educator.*

By Cyril Bibby.



Watts. 330 pages. 25s.

THIS is not a conventional biography of Huxley that starts with his birth and ends with his death. It divides his life into segments and concentrates not so much on science as on education. This approach is both interesting and refreshing. So many of the episodes in Huxley's life have become hackneyed in recent years that there is little point in once more describing them in detail. His love of controversy is well known: what Darwin shunned he welcomed. His role as Darwin's unflinching champion has been both wittily and painstakingly examined. There are, however, other neglected aspects of Huxley's work and influence that are less familiar but in some respects more illuminating: his advocacy of the claims of art as well as of science, his quest for a "culture adequate to the age," his vigour and effectiveness as an initiator of new ideas and institutions. His work as a scientist needs to be considered in its full social perspective.

The professional scientist became an important social phenomenon only during Huxley's adult years, and he himself helped to establish the image. Dr Bibby rightly concentrates on this important theme. Huxley himself interpreted science very broadly—this in itself led him into many controversies—and once told Charles Kingsley that he meant by it "not mere physical science but all the results of exact methods of

thought whatever be the subject matter to which they were applied." He was interested in many different kinds of subject matter, and his intellect, in words he used in one of his lay sermons, was always "ready like a steam engine, to be turned to any kind of work, and spin the gossamers as well as forge the anchors of the mind." His main enemy was not religion but uncritical reliance on authority or "authorities," in science itself as much as outside it. Indeed, he gave a warning that in the twentieth century there might well be a danger of people accepting established scientific doctrines with as little reflection and perhaps as little justification as the doctrines had been rejected when they first appeared before the world in the shape of dangerous theories.

In retrospect, Huxley's many-sidedness had a marked mid-Victorian tinge and the attitudes which he shared with his contemporaries are sometimes as significant as his demonstrations of dissent. Neither he nor his opponents really won half the battles in which they were so strenuously engaged. Uneasy truces were patched up and apathy was a more deadly enemy of both sides than continued militant hostility. The unconscious historical irony of some of Huxley's utterances (and occasionally more precise placing of them) deserve more attention than Dr Bibby gives them. For the most part, however, in this book, as in his previous articles, he deepens knowledge of Huxley's times as well as of Huxley himself. If Huxley had been less versatile, less willing to disperse his efforts, he might have established a more specialised reputation, but he could never have influenced society as he did. If Victorian society had not offered very special opportunities to a man of Huxley's talents, he would have been far less successful than he was. Despite all the differences between Victorian society and our own much that he said and wrote is still relevant; his candour, his dislike of all kinds of evasion, and his care for genuine intellectual communication cross the centuries as they crossed many of the dividing lines of his own generation.

Shortcomings of Aid

Reveille for a Persian Village

By Najmeh Najafi and Helen Hinckley. *Gollancz.* 273 pages. 21s.

FROM time to time, every British or American hot-gospeller on the shortcomings of western aid in the Middle East needs evidence that so much money has gone down so many drains because the approach was too grand, or else too massive, or else too sudden, to be understood. Here is the ammunition. Miss Najafi is an American-educated Persian girl bent on bringing better conditions to villages, and her message is that the only method with Persian peasants will, for years to come, be to start in a small way and let example spread the message. This she has done, and describes. The job takes time and patience and longer spells of hardship than most western workers, other than missionaries, are prepared to contemplate. Her second book is, like her first, a little lush, and not in the class of a comparable book on a Turkish village by a dourer but equally sturdy pioneer. But she shows up, chiefly by implication, the shortcomings of aid dispensed from comfortable motor-cars and air-conditioned offices.

Day Release

Youth in a Technical Age: *A Study of Day Release.*

By D. M. Silberston.

Max Parrish. 221 pages. 21s.

THE Education Act of 1944 left open the timing and sequence of a number of specified reforms and this book assumes that the next advance will be either the raising of the statutory leaving age to 16 or the implementation of the "county college" sections of the Act. Without necessarily agreeing with her, one can concede that the author has an arguable case in contending that county colleges should have priority. She describes the current system of part-time day-release in technical colleges and colleges of further education and discusses the respective merits of vocational and general courses. The facts revealed by this detailed examination of the lower and middle levels of courses in technical colleges emphasises the urgency of an early decision.

We learn that one in five of all workers under 18 are voluntarily released by their employers on one day each week. Of these 245,000 young people the majority are boys, of whom 27 per cent are released, against 7 per cent of the employed girls. It is in engineering, building and public service that employers are most likely to grant day release, whereas agriculture, commerce and the distributive trades release negligible numbers. Mrs Silberston contends that if compulsory day release to county and technical colleges replaced the present voluntary system, greater benefits would accrue to the young workers and their employers—especially if some weaknesses were removed, such as inadequate buildings, inaccurate grading of students and a shortage of good teachers.

The chapters analysing the contents of the courses deserve careful study. The arguments for and against vocational and general courses throw into relief a number of conflicting interests. Thus most employers and those students keen to improve their qualifications and technical skills will tend to favour vocational courses, but if compulsory day-release is introduced, the real challenges will be set by the general course and the unskilled type of worker.

Mrs Silberston has a comprehensive and accurate knowledge of technical and further education, and her awareness of the problems that face colleges, employers and students make her reappraisal a valuable one.

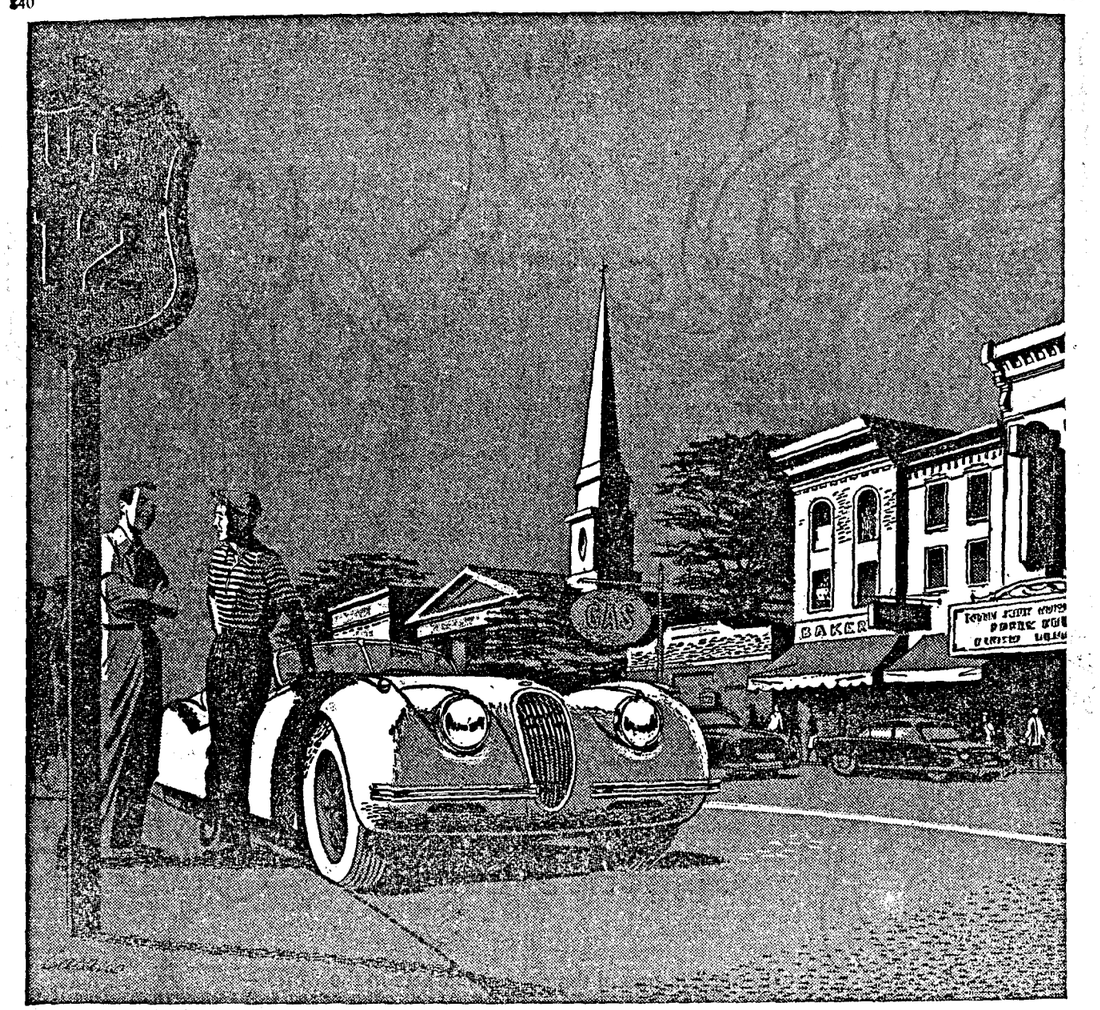
A CRITIQUE OF THE UNITED STATES NATIONAL INCOME AND PRODUCT ACCOUNTS. AN APPRAISAL OF THE 1950 CENSUS INCOME DATA.
Studies in Income and Wealth. Volumes 22 and 23. *Princeton University Press.* London: *Oxford University Press.* 589 and 450 pages. 92s. and 80s. respectively.

These reports of the National Bureau of Economic Research record papers (and comments on them) were prepared for the 1955 and 1956 Conferences on Research in Income and Wealth. The first volume brings together a number of specialists' views on the concepts and measurements involved in forming the national income estimates of the United States. There are many suggestions for improvement, particularly in the estimates of savings and depreciation allowances. Some sharp differences of opinion are expressed on conceptual problems. The second volume discusses the reliability and uses of data about the size and distribution of personal income in the United States, comparing results from surveys, tax returns and social security records with those obtained from the last decennial census of population. A considerable amount of statistical material is included.

FAMILY PROBLEMS AND THE LAW. By Robert S. W. Pollard. *Delisle.* 105 pages. 2s. 6d.

This is a popular guide to the laws affecting the family. They are considered under various sections: marriage (including engagements, property, unmarried couples living as man and wife); birth (including adoption and illegitimacy); divorce and separation; magistrates' orders; death and wills. The author has taken into account changes in the law made by seven Acts passed last year, and has covered a great deal of ground briefly but intelligibly. There are, however, too many misprints.



Objective-London

London is one of the richest markets in the world — a vital sales objective for manufacturers of consumer goods. It is a market that can be most effectively attacked through the powerful medium of television advertising. By advertising on Associated-Rediffusion you can reach an audience of over 7 million people — at a cost of only a few shillings per thousand.

ASSOCIATED-REDIFFUSION

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

No Caviar for the Generals

WASHINGTON, DC

IF Congress remembers its philosophy, it must be haunted by the thought of Buridan's ass, which starved to death because it stood exactly half way between two equally tempting bundles of hay. The President's defence budget for the coming fiscal year, which he submitted last January, has just completed the first stage of its journey through Congress amid loud demands that it be increased in two quite different ways. Little trace now remains of the brief unanimity into which Mr Eisenhower drilled the officers of the various services last January. The commanders of the Army and the Navy have told the questioning Congressmen that the United States is spending too much money on the nuclear deterrent and not enough on forces that can wage conventional war; the head of the Strategic Air Command has retorted that, if anything, even more ought to be spent on missiles and nuclear bombers. As a result, the defence appropriations sub-committee of the House of Representatives, poised between these equal and opposite attractions, seems to have been frozen into immobility.

Instead of adding fairly substantial sums for both purposes, as had been prophesied, the sub-committee is reported to have left the budget at roughly the same figure—itself unexpectedly low—as the President originally asked for. Mr Eisenhower wants to spend just under $41 billion next year, which is only the thinnest whisker above this year's total and, in view of the rise in industrial prices, will almost certainly buy less. Since this was nearly a billion dollars below the amount which the Secretary of Defence, Mr McElroy, at first planned to spend, and $2¼ billion less than the services asked for, there was little surprise when the chairman of the sub-committee—Mr Mahon, a ruminative Texan who wastes no words—"guessed" last February that Congress would add about $700 million. Other Democrats, notably Mr Dean Acheson, the former Secretary of State, have urged increases up to seven times this amount.

In fact, all Mr Mahon's group seems to have done, to judge from the unofficial reports now circulating in Washington, is to cut out an aircraft carrier costing a quarter of a billion dollars and share the saving among three other items: a little extra for missiles, a little extra for anti-submarine equipment for the Navy, and something to keep the Army's reserve forces at their present level. But this is small beer. The entire $260 million would buy only about twenty Atlas missiles (they cost, at the most optimistic recent estimate, $10 million apiece) or less than a quarter of the additional anti-submarine equipment which the Navy says it needs. The militants who believe that the Soviet challenge calls for something bolder than this are now looking to the rest of the debate in the House and, more hopefully, to the Senate; there the omnipotent Senator Lyndon Johnson and even some of the senior Republicans hinted at increases for defence not long ago.

Mr Mahon's committee, though influential, is often more cautious than Congress as a whole. But, quite apart from the mesmerised stupor to which Congress now seems to have been reduced by the President's homilies on thrift, it is plainly at a loss how to force any radical change of defence policy on the Administration. It is doubtful whether Congress can compel the President to spend money which he has not asked for, unless it goes to the desperate extreme of making its grant of other funds conditional on this: Congressmen are likely to be chary of invoking such a weapon of chaos. Worse still, when Congress calls evidence, it finds that the closer its witnesses are to the centre of power the less they diverge from the President's position. Those warriors who want to spend vastly more on defence are mostly either bowler-hatted or arm-chairborne.

Thus even the two senior officers who told Mr Mahon that it might be necessary to strengthen the nuclear deterrent—General Power of the Strategic Air Command and General Norstad of the North Atlantic Treaty Organisation—did not suggest that the "missile gap" would be a danger for the next year or two. General Norstad, moreover, relied on the curious argument that the United States ought to overtake the Russians' lead in missile production "from the psychological standpoint"; this ignores the fact that if their lead turns out to be militarily irrelevant—because the Americans still have the power to wreak unacceptable devastation on Russia—its psychological effect is also likely to be negligible. Plainly the committee found the "missile gap" less frightening than it expected; apparently it did not even insist on providing funds once again for the extra Polaris missile-launching submarines which Congress vainly tried to force the President to build last year.

THE Administration shows signs of making two small obeisances in this field which may disarm its critics still further. It is reported to be pondering a fairly modest increase in the output of Atlas missiles, from nine to about sixteen squadrons, in the next two or three years. An air force general also claims that the main technical difficulty in the way of getting a nuclear-powered bomber into the air—the problem of shielding the crew from radiation—has been solved. If Mr McElroy speeds up work on both these items, and perhaps agrees to spend a little more on the first components of the Nike-Zeus, that much-prayed-for anti-missile missile, he may silence many of the remaining malcontents in Congress.

But when it comes to preparations for limited war the President's refusal to spend any more money rests on far shakier grounds. The United States Army may soon

find it difficult to perform any function beyond a police action (preferably, as in Lebanon, without actually drawing its batons) or being the burglar alarm which calls out the atom bombers. Mr Eisenhower, ignoring the attempt which Congress made last year to restrain him, is now in the process of reducing the Army to 870,000 men and the Marines to 175,000—levels at which their commanders say they cannot carry out even their present limited tasks properly. The funds allotted for equipping this force, according to the Army's Chief of Staff, are not even enough to replace losses caused by wear and tear, let alone to make the Army modern and mobile enough for the kind of medium-sized wars which many observers think it may have to fight in the future. The extra money which Mr Mahon's committee has given to the reserve forces has more to do with politics than military necessity ; the National Guard, powerful though it is in the lobbies of Congress, has a limited value in the quick-flaring wars of the present day.

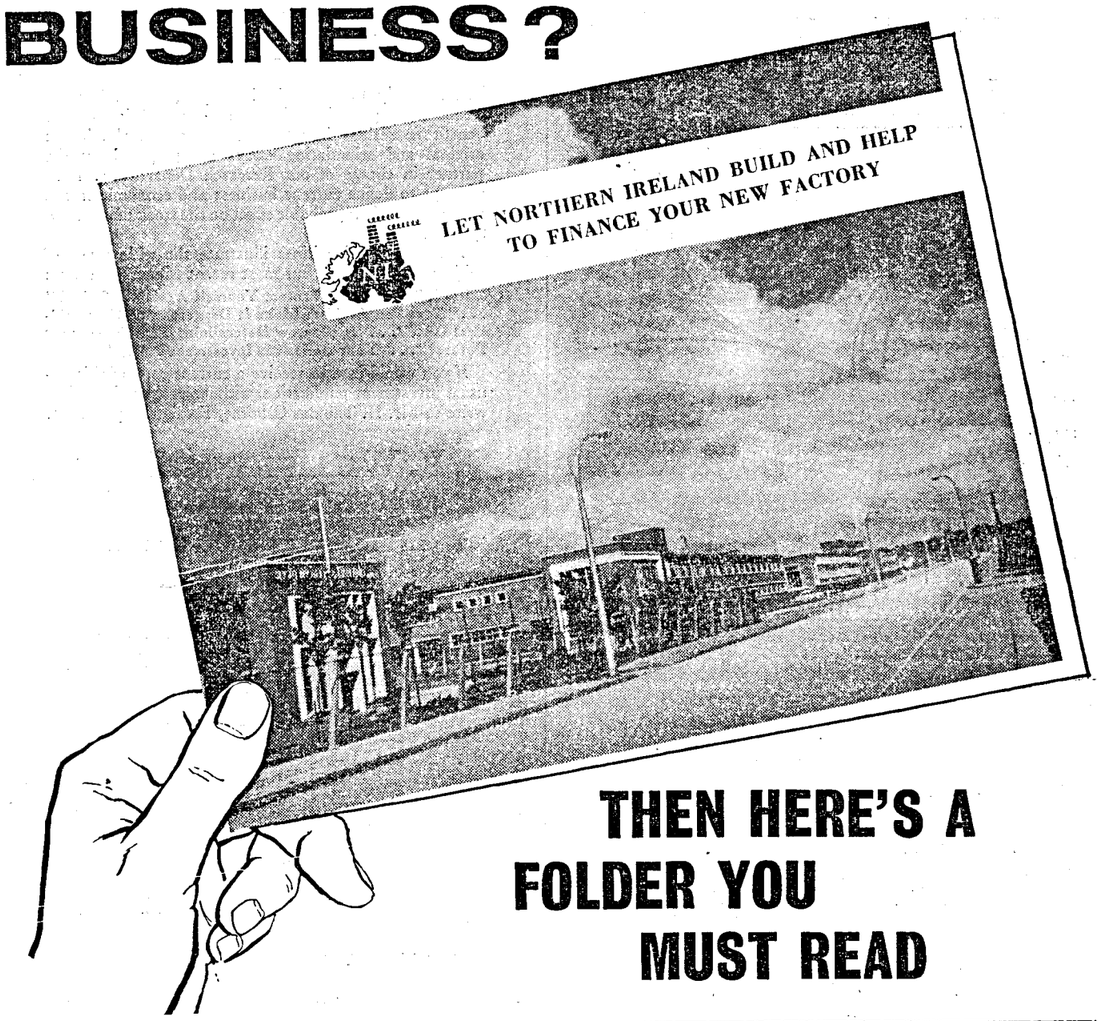
Unfortunately, the most vigorous champions of a stronger Army are no longer near the levers of power. General Ridgway, the former Chief of Staff who wants a million men, is now in mufti ; so is General Gavin, the imaginative ex-paratrooper who thinks that the Army needs twice as many divisions as it has. General Taylor, the present Chief of Staff, who has done his quiet—but unsuccessful—best to hold the line at 925,000 men, follows them into the limbo of veterans this summer, though he will loose a Parthian shot in the shape of a book setting out his views. The argument now before Congress concerns only some marginal variations in the size which Mr Eisenhower thinks enough for the Army. To judge from the first response of Congress, the President looks like making his ideas of strategy stick ; any new thinking will have to wait for a new Administration in 1961. Who says that America pays too much attention to its generals ?

United on Housing

The American people had their first real sight of the liberal Congress they voted for seven months ago when last week a genuinely progressive housing Bill was approved in the House of Representatives by a majority of over a hundred votes. The liberals achieved this triumph because they had the Speaker of the House, Mr Rayburn, on their side and he brought with him a number of moderate Democrats who might otherwise have voted with the coalition of reactionaries and Republicans against the Bill. A dramatic demonstration of liberal unity came when the defeat of an amendment prohibiting racial discrimination in public housing was assured by the four Negro Congressmen who led the procession to vote "No"; the inclusion of such an amendment would have driven all Southerners into opposing the Bill. Needed southern support was also obtained by accepting an amendment which would force officials to go to Congress each year for funds for public housing and slum clearance instead of getting the money automatically from the Treasury.

This requirement would bring an unsatisfactory element of uncertainty into long-term planning for urban redevelopment and may be eliminated in the conference which must now reconcile the House's Bill with the Senate's slightly less generous one. In fact the final version may be even less generous than either, as the result of a calculated attempt by the Democratic leaders to give the President an excuse for not vetoing the Bill ; its Republican opponents have been insisting that he will. Nor will the conferees be in any hurry to produce their compromise: the longer they delay, the greater will be the pressure from the housing industry upon the President to sign the Bill. It adds $6 billion to the total amount of mortgages which the government can insure ; existing authority is practically exhausted and the programme is an essential stimulus to building activity.

The sections of the Bill to which the President does object are those providing for $1.5 billion to be spent on slum clearance over the next three years, instead of being spread out over six years, and for 35,000 housing units to be built annually by public authorities for several years. The Administration thinks more public housing unnecessary, but in fact it is an essential part of much-needed urban renewal to build houses into which slum dwellers can be moved when their homes are pulled down. This is the answer to the President's basic objection to the housing Bill—that it would be a "budget buster." Moreover, it would add only a little to the Budget—next year, at least.



Bill of Wrongs?

Next week Mr Meany, the president of the American Federation of Labour and Congress of Industrial Organisations, will ask the House Labour Committee to eliminate parts of the labour Bill passed by the Senate which, according to the federation's executive council, transform it into a measure "no trade union official can support." These amendments and particularly the Bill of Rights for individual members of trade unions, which were added on the Senate floor to stiffen the committee's Bill, place the leaders of the AFL-CIO in an awkward dilemma. For over a year they have conceded that legislation is needed to stamp out abuses shown to exist in a number of trade unions. But they fear that the Bill of Rights, with its invitation to litigation, will hamper honest officials in well-run unions more than it will embarrass the corrupt ones that the AFL-CIO wants to dislodge.

What may have been equally important in leading the AFL-CIO to oppose the amended Bill, instead of swallowing it for fear of worse medicine, is Mr Hoffa's charge that the federation is delivering labour over to its enemies. Mr Hoffa is the apparently uncrushable leader of the teamsters, the big lorry-drivers' union which tucks many other trades under its ambitious wing and which was expelled by the federation for sins that are largely responsible for the present demand for reform. Mr Hoffa opposed even the mild Kennedy Bill in its original form as "punitive." And he is trying now to undermine Mr Meany's leadership by warning AFL-CIO unions that the proposed ban on "hot cargo" clauses in the teamsters' contracts, written in on the Senate floor, will prevent them from helping unions on strike, by refusing, as they have in the past, to make deliveries across picket lines.

Mr Meany will have a sympathetic audience in the House Committee, which may well decide to tone down the Senate Bill before sending it to the House floor. But there the conservatives, like the Administration, feel that the Senate Bill is, if anything, too weak, and their resolve to strengthen it

IS YOURS A GROWING BUSINESS?

THEN HERE'S A FOLDER YOU MUST READ

It tells how you can rent a modern factory or how the Government might build one for you. It tells about special low rentals, of repayment terms and about grants toward plant and machinery, buildings and the training of labour. In fact, this booklet is the first step toward an expansion project tailored to suit you.

there's nothing like a long Martell

THE LONG DRINK WITH GINGER ALE OR SODA

Make friends with MARTELL

COGNAC BRANDY AT ITS BEST

has been fortified by Mr Hoffa's ill-timed and gratuitous references to a general strike. He was reported—though he denies it—as saying that this should be labour's answer if Congress makes the trade unions subject to the anti-trust laws. Senator McClellan would like to apply the anti-trust laws to the transport unions—that is, to Mr Hoffa—but no one expects Congress to do so. Mr Hoffa's own lieutenants in Washington, who have been busy giving breakfast to Congressmen willing to listen to arguments against a restrictive labour Bill, are said to be wringing their hands. Mr Meany no doubt would prefer to wring Mr Hoffa's neck.

Tremor at Little Rock

THIS month is the fifth anniversary of the Supreme Court's famous and bitterly contested decision that racial segregation is unconstitutional in tax-supported schools. Progress has been slow and uneven but, with the collapse of massive resistance in Virginia and the willingness of Miami to lower the colour bar next September, if it is not frustrated by the Florida Legislature, only five states have made no move at all to recognise the new order: Mississippi, South Carolina, Louisiana, Alabama and Georgia. It would be a happy coincidence if Governor Faubus's rebuff at a special election prompted a retreat in Little Rock, Arkansas, where open defiance of the Supreme Court has been carried to the lengths of keeping the city's four high schools shut for a year. The vote to "recall"—that is to discharge—the three Faubus-supported members of the elected school board and to retain the three moderates was not, however, a direct referendum on racial segregation and private polls suggest that many white parents still oppose it.

The protest was against the lengths to which the segregationists were prepared to go: in this case, the sacking of 44 teachers and administrators who were not considered to be "sound" on desegregation. The purge was carried out by the three pro-Faubus members after the moderates had walked out, taking a quorum with them. Within less than a week nearly 10,000 signatures had been collected, 3,000 more than were needed to demand a special election; by a pleasant irony, this procedure was authorised under a law hurried through by the Governor last year to intimidate members of the board. Power to fill the three vacancies by appointment rests with the county school board, which is an unknown quantity, and in any case it is the Governor who sets policy. But the blow to Mr Faubus's prestige may set him to thinking more seriously about his lines of retreat. Last month he suggested that the schools might reopen next autumn with a limited amount of desegregation.

Segregationists in Georgia may also have over-reached themselves by detecting the sinister hand of racial miscegenation in an insipid tale for five-year-olds about the love of a black rabbit for a white one. Politicians in the state are committed to shut the schools if there is no other way to prevent Negro children mingling with white ones. But in Atlanta an organisation to save public education has been organised and the city is sufficiently civilised to have just abolished the colour bar in its public libraries. It will not take kindly to being made a laughing-stock.

California's Oil Rush

FROM A CORRESPONDENT IN LOS ANGELES

AT the end of last year the Standard Oil Company of California began to supplement the crude petroleum supplied to its refinery at El Segundo, outside Los Angeles, from a new and novel source, a well drilled from a platform 2.2 miles out to sea off Summerland, near Santa Barbara. The well is producing at a rate of only about 400 barrels of crude a day and this contributes a mere trickle to the total volume processed at El Segundo. But it is significant as the first oil well off the shore of California.

One well does not always make an oilfield, but a number of companies are betting heavily on the development of an important new field off this coast. When the State of California invited bids for leases on parcels of off-shore acreage last summer, some new records were set. A total of $55.5 million was bid for the five parcels of 3,840 acres each, by far the largest sum ever paid at such a sale in the United States. Another record for off-shore leasing was set by a group consisting of the Texas, Monterey and Newmont Oil companies, which paid $23.7 million for rights on one parcel.

The lease covering the first producing well was granted jointly to Standard of California and the Humble Oil and Refining Company in January, 1957, on a bid of $7.25 million, plus a royalty of 12½ per cent on the value of any oil produced. But after selling this single lease the State of California suspended the granting of additional ones while it adjusted the terms more favourably to its own interests. Receipts from the leasing of off-shore acreages are earmarked for the improvement of parks and beaches, partly to offset some of the disfigurement caused by drilling operations. Since off-shore leasing was resumed last year, the Socal-Humble interests have drilled a second well near Gaviota, to the north of Santa Barbara, secured for a bid of $12.4 million, which has shown some encouraging results. Nearby the Texas-Monterey-Newmont consortium is drilling on its record-breaking lease and another group is carrying out exploratory work in the same general area.

To develop an off-shore oilfield, similar to those in the Gulf of Mexico, would be of great value to oil interests on the West Coast for, to an increasing extent, they find themselves unable to cope with the demand for petroleum products in California and the six other states traditionally supplied by them: Oregon, Washington, Idaho, Nevada, Utah and Arizona. Until 1950, Californian oilfields were able to meet the needs of the whole area. Now, with production of some 950,000 barrels daily, the state is just about filling its own requirements and the balance has to be shipped in, either by pipeline from other parts of the United States or by tanker from abroad. This is the fastest growing section of the country economically and within the next few years the pressure of demand on supply is expected to increase still more. It is estimated that by 1961 the Far West will consume some 1.6 million barrels of oil a day altogether, of which California will produce only about one million, or considerably less than its own needs.

No important new field has been discovered on land in California for several years and technological developments, such as deeper drilling and secondary recovery, in existing fields are helping to keep production from falling off, rather than adding to it. Off-shore oil, therefore, is urgently needed to increase supplies, as well as to insure against any breakdown in imports from foreign sources; it is estimated that some 4 billion barrels of oil lie under the sea off the Californian coast.

THE rush to find oil under the sea would undoubtedly have started long ago, if the oil companies had had their way. Prospecting for oil off the coast of California began in the nineteen-twenties, but it was halted by law in 1929. Not until 1938 was a States Lands Commission appointed to handle the leasing of off-shore acreage, and then leases were granted only where on-shore wells threatened to drain the tidelands. Moreover, the regulations restricted drilling to the mainland, filled land, or piers attached to the shore. Drilling from barges or platforms out in the sea was forbidden.

The state's policy was dictated by strong opposition from groups which feared that the waters would be polluted, the fish poisoned and the view desecrated. Off-shore wells have to be drilled from an elevated platform which stands out on the horizon even after the drilling derrick has been taken down. The publicity about the successful Summerland well stressed that great care was taken to keep the platform as inconspicious as possible; it was, however, clearly visible from the beach. The sensitivity of the oil companies about the possible public reaction to off-shore drilling is further illustrated by the Spanish-style architecture, in keeping with the local fashion, which is used to camouflage the structure being put up at Santa Barbara to handle and store the oil from the Summerland well. Californian law requires drilling platforms to be at least a mile off the coast; since the seabed drops very steeply there, instead of sloping off gently as it does in the Gulf of Mexica, and since drilling costs increase sharply as the water becomes deeper, off-shore wells are an expensive proposition in California. The aesthetic objections to such wells have been overcome to some extent in recent years, possibly by the decision to allocate state income from the off-shore lands to parks and beaches. But a new form of opposition has arisen, from groups charging that the state is "giving away" these lands to the oil companies.

The opposition was strong enough to halt the implementation of the Cunningham-Shell Act of 1955, which finally approved off-shore exploration, and under which Standard of California and Humble obtained their original lease. To meet "give-away" complaints the Act was amended to substitute for the original fixed royalty of 12½ per cent a sliding scale from a minimum of 16⅔ per cent on wells producing 100 barrels a day or less to a maximum of 50 per cent where the yield is 500 barrels or more; the State Legislature is now being pressed to raise this maximum to 60 per cent. The oil companies have swallowed the terms, and others which they consider onerous, such as the requirement that in return for permits for geological and geophysical exploration—before ever a lease is sought—the companies must turn over the data they collect to the state; presumably this would give it a good idea of where possible fields might turn up. But the sums which the oil companies bid for the first leases is the measure of what they hope eventually to get from the Californian tidelands.

Small Cars—King Size

AS warily as men opening a Pandora's box, the three big car manufacturers have now officially disclosed—what was common knowledge three months ago—that they will have smaller models on sale by the end of the year. The names they have chosen are neither as inventively sonorous as Thunderbird, Firesweep and LeSabre, nor as bluntly familiar as Edsel. The General Motors Corporation will offer a Corvair (by Corvette, out of Bel Air) which is said to have its engine in the rear; the Ford Company beat the Chrysler Corporation to the registration desk by 20 minutes for the name of Falcon, so Chrysler—whose car will not appear until December, two months behind the others—has had to make do with Valiant. The cars themselves, like their names, have an in-between quality. Although the companies are trying to keep the details secret, it is generally believed that they will have a wheel base of about 106 inches, half way between the 94½ inches of the Volkswagen—one of the imported babies with which they will be competing—and the 119 inches of the smallest domestic dinosaurs.

The price is expected to be about $2,000, only $200-odd less than the simplest existing Fords, Chevrolets and Plymouths, but substantially more than many of the imports. The Big Three are undisguisedly worried about the prospects of these not-so-small models. They have been pushed into making them by the competition of small foreign cars and of the home-bred Rambler and Lark (which account for 10 per cent of American production at the moment) just when sales of what they plainly prefer to think of as "normal" cars are beginning to turn upwards. This spring, for the first time in two years, the monthly sales of new cars have topped the half-million mark, and for the first time in four years April was a better month than March. It now seems likely that the goal of getting six million new cars into American garages in 1959 will be achieved.

In part, this revival is due to the fact that customers have been simultaneously stimulated by the end of a dismal winter and the vanishing of the last traces of the recession. But the manufacturers are haunted by the fear that the new small models will be spurned in favour of gleaming old loves; or, almost as bad, that they will simply replace the bigger models and leave the more distinctive foreign cars, a *tertium gaudens,* unscathed. Estimates of what the three companies are spending on their small models range up to $250 million. The awkward fact remains that they have not produced a car that competes directly with the product of their foreign rivals; and the latter, trusting in their craftsmanship and lower labour costs, doubt if they can. The pessimists who say that there is only a limited market for a hybrid in America are waiting to see if their gloom is justified.

Sugar Goes Sour

NOT only has Señor Castro apparently given up his hope of inducing the United States to increase the amount of sugar which Cuba is permitted to sell in the American market, but he also seems to be doing his best to get Cuba's share of that market reduced. It is understandable that he wants to break up Cuba's huge estates, but his land reform law falls heavily on the American companies which are

MAKING THE BEST OF IT

Gladstone was Prime Minister when Simon-Carves built Britain's first by-product coke ovens in 1882. Simon-Carves have since become leading international coke oven builders and have immensely extended their connections with coal. Today Simon-Carves build collieries: they build plants to wash as well as carbonise coal *(to make steel and gas and smokeless solid fuel)* and to recover and refine coal by-products *(used in dozens of industries in hundreds of ways)*. They build great water-tube boilers at power stations and collieries and factories and so forth *(coal into steam and electricity)* and plants to prevent chimney gases polluting the air with dust and grit and chemicals *(cleaner towns, less smog, fewer coughs)*. Total gasification, briquetting of non-coking coals and other look-to-the-future coal processes are right up their street. Simon-Carves do these things in a big way all over the world.

COAL?

Simon-Carves have been learning to make the best of it ever since Gladstone was Prime Minister.

responsible for about a third of Cuba's output of sugar. They will no longer be able to own the plantations of sugar cane, running to well over a million acres, which provide their mills with a guaranteed supply and, if the law is put into effect as it stands, they will be expropriated with very inadequate compensation. Much resentment will naturally be felt in the United States—comparisons are being drawn with the Mexican expropriation of the oil companies in the nineteen-thirties—and the effect might be unfortunate when Congress revises the sugar legislation. The existing Sugar Act runs out at the end of 1960 and was to have been renewed in good time at this session of Congress. But the Bill has been postponed, perhaps until next year, in the

hope that by then suggestions that the Cuban quota might be cut may have been forgotten.

Whether or not the countries which would like an increased quota themselves will allow these suggestions to be forgotten is another matter. For Cuba supplies far more of the sugar consumed in the United States than does any other foreign country; if anyone else is to be given a bigger quota, in practice it can only be at Cuba's expense, since domestic producers are unlikely to agree to a reduction in their share. In particular the Philippine Islands are demanding more, on the grounds that when the Act was last renewed President Eisenhower promised that a change in their favour would be considered when it was next before Congress. The Philippines argue that the 1956 Act discriminated against them, since they received a fixed annual quota of 980,000 tons while all other suppliers, whether domestic or foreign, are entitled to share in meeting any increase in American demand.

This is estimated at the beginning of each year and the amount that can be sold is fixed on a basis designed to ensure that prices remain stable and reasonable. If demand turns out to be greater than expected or prices tend to rise for any reason, the quota is increased; this happened four times during 1958. This year's initial total, at 9.2 million tons, was unusually high to allow for possible difficulties arising out of the Cuban revolt; the chart shows how the total is divided up among the various producing areas. American growers are then given acreage allotments, to ensure that they do not produce more than can be sold; if they limit their plantings in this way they receive "programme payments" of 30 to 80 cents a hundred pounds of sugar. This cost the government $65 million in 1957 but $86 million was brought in by the excise tax of 50 cents on every hundred pounds of sugar marketed.

Skid Row

In the Senate recently time has come to a stop; gravity has been defied; and liberal Democrats have urged Congress to spend less money. The cause of these portents is the new Senate Office Building, a construction in what Mr Osbert Lancaster might call the electronic-Roman style of architecture, which was opened last January at a cost of $21-odd million. Designed to ensure that Senators, hitherto "packed like sardines" into the old office building with only three rooms each, should have five offices and three lavatories apiece, the new building is decked with bronze and marble in a manner proper to senatorial *gravitas*. Unfortunately, it does not work. Clocks were fitted with hands too heavy to move; bronze torch-holders in the committee rooms emitted an electric glow too dim for witnesses to plead the Fifth Amendment by; massive walnut-and-bronze doors leaked Senators' confidences to those waiting outside. Letters first refused to fall down the mail chutes and then got sucked down so fast that they bounced off the conveyor belt at the bottom. Automatic lifts, ignoring urgent calls, had to be restored to human control. Public address systems spoke without being spoken to.

The revolt of the liberals came when the official known as the Architect of the Capitol (who is not an architect) asked for an extra million dollars to put some of these things right. This included $150,000 for carpets to cover the supposedly skid-proof tile floors—"installed," says their manufacturer, "with the exquisite craftsmanship of a master gem-setter"—from which two employees have already been carried to hospital. Senators Douglas and Proxmire, in an effort to prove this spending unnecessary, were photographed polishing the floor with an English-made wax to make the skid-proof more unskiddable. However, the Senate has outvoted Mr Douglas and his friends. The extra money has been granted, even though it turns out that 600 doors will have to be altered to let them open over the carpets. So has another $4 million for extending the subway that runs between the office buildings and the Capitol, thus saving Senators fifty paces a journey.

Congress is in an expansive mood. The total cost of the new building under way—which includes a third office block for the House of Representatives and the extension of the front of the Capitol—will be about $110 million. This is $200,000 for each elected representative, and would buy three Polaris submarines. There was some criticism of the bell-tower on the slope of Capitol Hill which was recently dedicated to the memory of Senator Taft. Congress, reading what the American press has to say about the money it is spending for the convenience of the living, might well wonder for whom the bells toll.

Wyoming's Stamp Act

FROM A CORRESPONDENT IN COLORADO

After next month retail traders in Wyoming will no longer be able to give their customers trading stamps, the little bits of coloured paper which housewives can redeem, when they have enough, for luxuries which they want but feel that they cannot afford to buy. The Governor, who had his doubts about the Bill, let it become law without

his signature, but the trading stamp companies are hoping to have it declared unconstitutional by the courts.

Wyoming is the first state to forbid the use of trading stamps, although several tax them heavily and they are under fire elsewhere. Yet as recently as January the Department of Agriculture published a special report which concludes that housewives who collect stamps actually do benefit a little—if the trouble and time this takes is disregarded. They pay about 0.6 per cent more for food bought at supermarkets which give away stamps—retail food shops are the main source of them—but the value of the stamps amounts to about 2 per cent of the money spent at such supermarkets. The companies which sell stamps to the retailers and provide the "premiums" have always claimed that trading stamps are more than a mere promotional device paid for, in the end, by the unwary customer, but this has been hotly disputed.

Wyoming's crusade against the stamps was set in motion about three years ago when Safeway Stores, the second largest chain of supermarkets and one which is especially strong in the West, surrendered to them. Wyoming is a state where independent traders are still strong and they besieged the Legislature. Housewives rallied to the defence of trading stamps, but not in time. In other states they may be more forehanded. In Colorado a proposal to tax the stamps brought battalions of housewives to the state capital. One of its original sponsors changed his mind when his own mother threatened to campaign against his re-election if he did not alter his stand. The newest twist to the trading stamp story is that they can now be exchanged, in the East, for a theatre seat, even, after July 12th, for one for "My Fair Lady." This will take, however, the stamps accumulated on nearly $700 worth of purchases—about what it costs to feed a family for five months.

Farming in the Suburbs

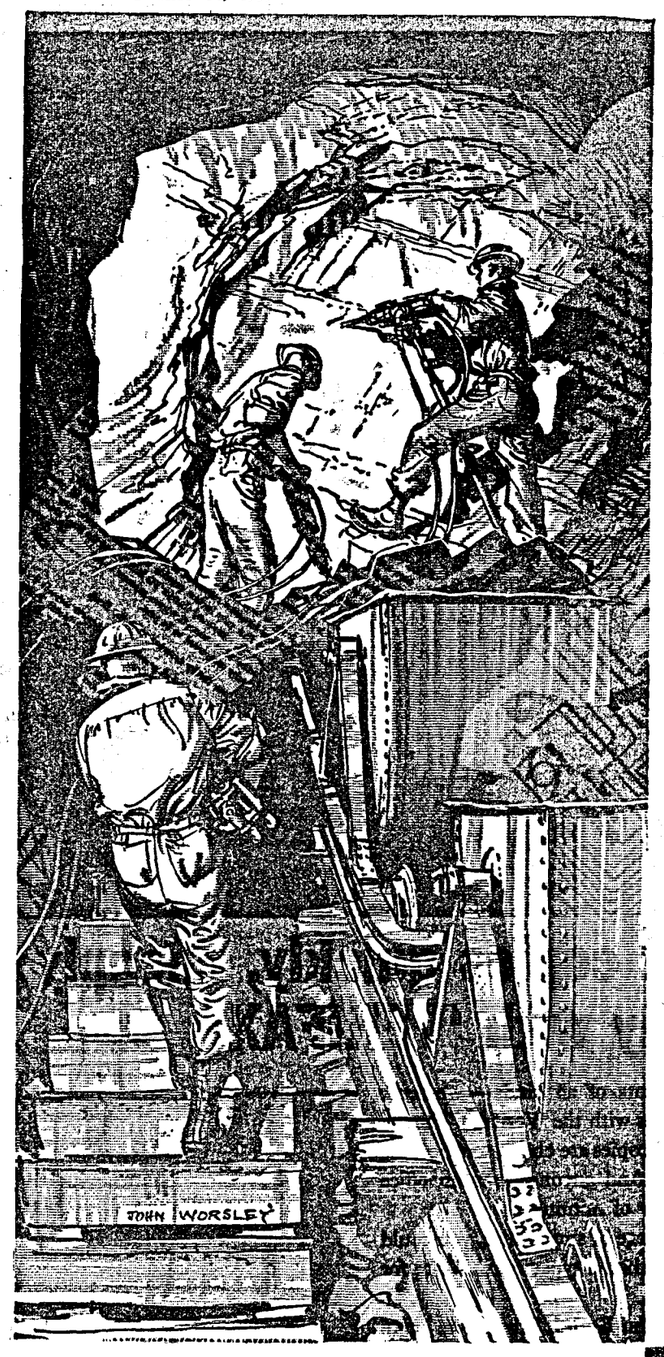
FROM A SPECIAL CORRESPONDENT

ONLY one American in eight now lives in really rural surroundings and earns his living from agriculture; even so he derives more than a third of his income from non-farm sources. But millions of city dwellers have swarmed into the countryside to set a new and increasingly widespread pattern of life which is sometimes called "rurbanisation," sometimes "urbiculture." Many families acquire only a small piece of land, but the more ambitious undertake "moonlight farming," that is, growing crops for market at weekends and after the day's work in office or factory is done. Almost imperceptibly, the needs and pressures of these invaders have created new problems of soil conservation, cultivation and economics.

For example, the country's lawns, if put together in one vast green carpet, would cover at least 5 million acres. The cost of sowing them is estimated to have been $10 to $15 billion and they cost over $3 billion a year to maintain. When the comparable figures for shrubs, trees and flower and vegetable gardens is added on, urban agriculture reaches an enormous total. And many "rurbanites" are new at the job and need help and expert advice at least as badly as the commercial farmers.

Soil conservation, on which such devotion and so many millions of dollars have been lavished, is directly affected when millions of acres are surfaced and drained for housing estates, airports and roads. This has fundamentally altered the nature and problems of every drainage basin and particularly concerns farmers downstream. Change is also coming to the whole massive, intricate system of scientific research and advice for farmers which operates through the land-grant colleges and the Department of Agriculture.

These services have always been run for the benefit of commercial farmers. Their interests are well looked after, both in Congress and in the State Legislatures, largely because of the over-representation of rural areas and the under-representation of the cities. Naturally, the commercial farmer is scornful of suburban agriculture and feels that it is wasteful to spend money on the hobbies of emigrants from the cities. The result is that about 99 per cent of the funds of the Department of Agriculture are still spent on the commercial farmer, first on showing him how to increase his output and then on piling it up in government storage-bins.



But this is beginning to change, as most county agents report that they are asked more questions today about the care of lawns, fruit-trees and vegetable gardens than about traditional farm problems. Recently both the Soil Conservation Service and the National Association of Soil Conservation Districts (which is the public relations arm of the farmers who enjoy conservation services) decided to make at least a little room for suburban agriculture. The SCS ruled that local districts might enlist its expert services on behalf of suburban farmers, though only with the approval of local boards which are dominated by commercial interests. The association endorsed government planning of the great semi-rural outskirts of the cities and advised local conservation boards to work closely with the governments of towns and cities, zoning boards and housing commissions—but with the proviso that where possible good farm land should be kept for agricultural use.

SHORTER NOTES

Agents of the Federal Bureau of Investigation have been withdrawn from Mississippi because they have failed to uncover evidence that a federal—as distinct from a state—crime was committed when a mob dragged out of jail a Negro accused of raping a white woman, and murdered him. There was no proof, for example, that Parker had been carried across a state line or that state officials connived in the lynching. The evidence collected by the FBI will be handed over to the Governor, but will not be placed before a grand jury until November—a dilatoriness which has strengthened long-standing demands of liberal members of Congress that lynching should be made a federal crime.

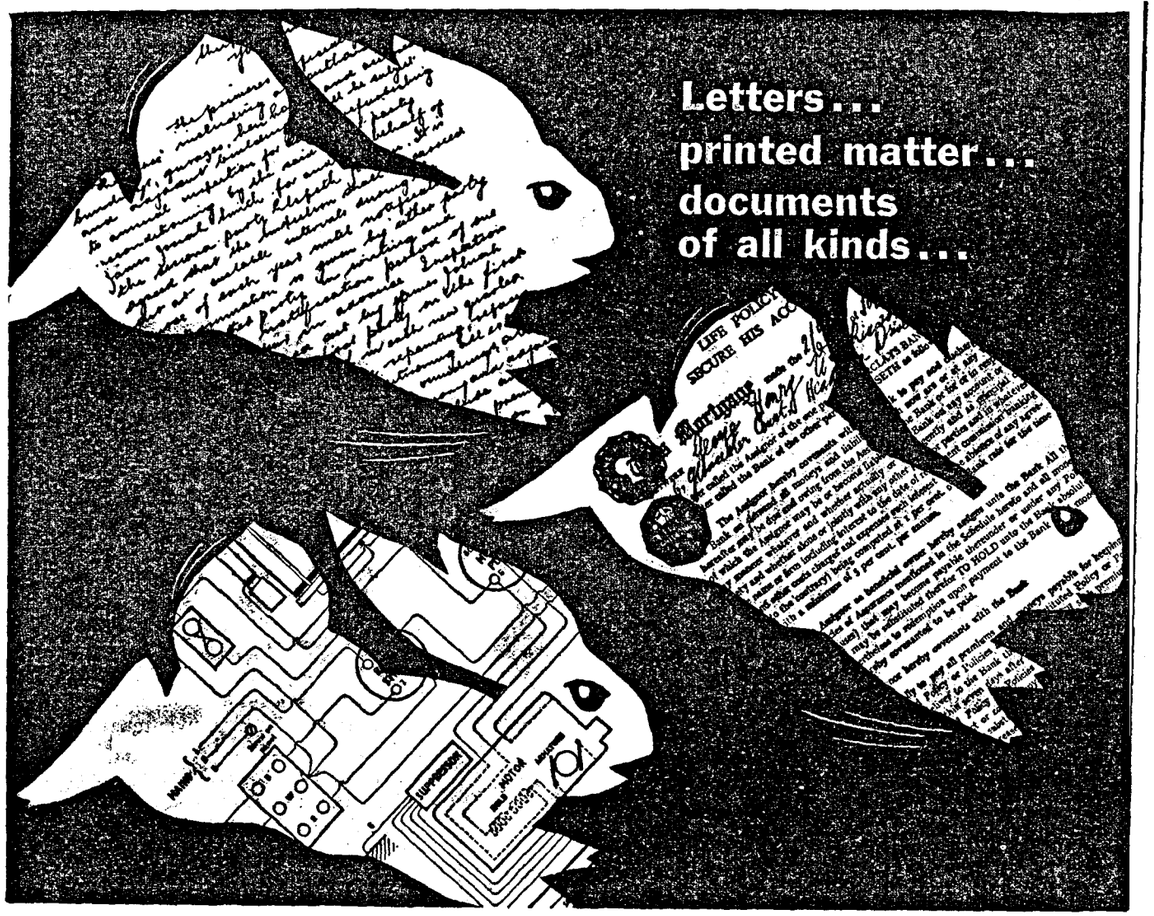
* * *

A commission has been appointed by Mr Wagner, the Mayor of New York City, to determine the facts and mediate in the three-week old strike of non-professional workers against non-profit hospitals, whom they accuse of grossly underpaying them. Meanwhile, the hospitals in Manhattan have secured a court injunction against the union, ordering it to end the strike and not to call out workers at other hospitals. The head of the union and his assistant, who disobeyed a similar injunction in Brooklyn, have been sentenced to 15 days in jail and a $250 fine each.

Why Norway chose Holman

Reliability pays on the Upper Vinstra

Mica schist is tough—really tough. And through it, over 18,000 metres of tunnel will have been driven before the massive Upper Vinstra hydro-electric project is completed. For this gruelling task, Thor Furuholmen of Oslo, the contracting engineers, chose Holman. The contractors have standardised on Holman T60R compressors and Holman Silver Three Rock Drills, using tungsten-carbide tipped steels.



A reliable compressed air supply and reliable drills; these together are taking all the demands of punishing work and a tight time schedule without faltering. As a result, the work is being accomplished at high speed, and the tunnelling is now nearing completion—and, in fact, the Norwegian tunnelling record was broken with this combination.

In major projects all over the world, Holman units are proving their reputation over and over again. For sheer reliability and low running cost, you can't beat Holman.

THE WORLD OVERSEAS

President Kekkonen

From the Finland Station

BY OUR SPECIAL CORRESPONDENT

Mr Khrushchev

EVERY Finn is a realist. He insists on it, as upon a point of honour. This profession of a cold, clear faith precedes any discussion of Finno-Soviet relations. There are Finns who belittle every government crisis and even deny that last winter's row with the Russians was out of the normal run. Others wonder what normality really is. Some Finns are sure that only Finns know the Russians and how to handle them. Others say that Finns do not know the Russians at all, that when a Finn shows he can get the most out of trade talks the Russians will never deal with him again. Some think President Kekkonen is right and patriotic in satisfying Russian susceptibilities. Others think he is dangerously wrong, but still a patriot. All are realists: they insist on it.

Finnish realism means, simply and anxiously, the need to get along with the Russians, the "big neighbour," but to get along neither too well nor too badly. It means to trade with the Russians, but not too much. It means to stand up to them, but not to be Winter War heroes again. The West is too far away for that. "In 1939 you sent us sympathy and old clothes." That Finland has survived as it has since 1939 is something to be wondered at. It received the same ultimatum that Stalin sent to the Baltic states. And after Germany's defeat it was treated as the Balkan allies of Germany were treated. Simply to have come through at all, not by luck alone, but by blood and political agility, is the best argument that realism has.

The Finns are not conceited, as some neutrals are, about their enforced neutrality. Their sympathies are with the West, but their long eastern border is with the Soviet Union. They have learned to pay attention to Russia's reasonable needs. Even Marshal Mannerheim advised some frontier concessions in Karelia before the Winter War began. Just now, unless Mr Khrushchev decides he needs some extra protection against Nato submarines in the Baltic, the Soviet Union's main interest is in trade. Finland—in the most familiar image in Helsinki—is a shopwindow, as west Berlin is, and Mr Khrushchev wants to see more of his goods there, whether they are hard to sell or not.

This can be a tricky business, and the Finnish negotiators who soon have to settle the next five-year agreement with the Russians will have some hard talking to do. Every kind of car in the world seems to be parked in Helsinki, but there are not as many Volgas and Moskvitches as Mr Khrushchev would probably like. "They are good enough cars," Finns say, "but somehow I'm not happy in the driving seat. Now, if the price were down it might be different." If the Russians insist on the Finns taking more of their cars, as a prestige point, the showrooms may have trouble in disposing of them. Big concerns can absorb some as office cars, and they make good, stout taxis. But only western models are psychologically comfortable.

Finland's trade with the Soviet Union is growing. The Russians provided more imports (18 per cent) last year than Britain, and came second (17.3 per cent) to Britain in taking exports. The trend is worrying, even if it is not dangerous yet. After the war, the Russians demanded reparations in kind, and to make them the Finns had to set up new metal industries. These industries now find it hard to sell elsewhere, and since the Russians are not interested in Finland's woodworking products the share of the shipbuilding and machine industries in what the Finns call "the eastern trade" is growing appreciably. What the Finns want to avoid is utter dependence on Soviet orders to maintain employment in the metal industries. The political lever this would offer Mr Khrushchev might be disastrous, and Russian encouragement to build a totally uneconomic steel mill in the north has aroused further suspicion. It is quite clear that even an occasional western order for an icebreaker could help the Finns over some bad patches.

The last bad spell was during last winter, when the Russians refused trade talks and rumours swirled round Helsinki that the president was thinking of taking two Communists into the government. In fact, the Russians did not ask for this cabinet representation, and Mr Khrushchev was at his brightest when he met President Kekkonen in Leningrad in January and intimated that co-existence would be resumed. The Finnish parties—the parliament is almost evenly quartered between Communists, Social Democrats, Agrarians, and the "bourgeois" Right—are highly liable to talk themselves into governmental crises. But the Russians, though they maintain an imposing embassy, cannot really depend on playing the party game to ensure that Finland remains strictly neutral. The key post for them, as in Paasikivi's day, is the presidency, which is the one source of continuity in foreign policy. Mr Khrushchev expressed his satisfaction with

President Kekkonen's policy in January, and however much this may rile the president's conservative and social democratic critics, it clearly strengthens his claim to future re-election as the indispensable man.

Although Stockholm correspondents are loth to believe it, few Finns consider Mr Khrushchev to be quite as old-fashioned as he was made out in the last crisis. True enough, the old Finnish communist leader, Mr Kuusinen, is a senator in Mr Khrushchev's presidium in Moscow, and is still thought to dream of entering into his heritage as Messrs Grotewohl and Pieck have done. Mrs Herta Kuusinen, the daughter, who leads the Finnish party in parliament, is a communist power in her own right. But for the Russians to have forced Communists into the cabinet would have been crude in the extreme. The Finns prevented any attempt at a Prague coup in 1948 when, forewarned by the Czech experience, the president ordered the Communists to resign, and what was left of the Finnish navy appeared in Helsinki harbour to make sure there was no trouble. Finland had its civil war between Whites and Reds when it won its independence in 1917. Some memories of it remain at the roots of Finnish communism, particularly among the hard core of 40,000 party members who can be relied upon for strike or other action.

The Russians are bitterly distrustful of Finland's right-wing Social Democrats, whose older leaders accepted German help during the last war. But the middle-of-the-road Agrarians, who form the present minority government, are not markedly disturbed by evidence of petty Russian spite against the Social Democrat, Mr Leskinen, whose presence in the cabinet last autumn so annoyed the Kremlin. The Agrarians tend to think of a more benevolent Russia, which even in the nineteenth century respected Finland's character, if not its national rights. Even Stalin, they say, was reluctant to start the war in 1939. These small farmers are not looking for trouble in the east. It may explain their realism. And, after all, as Mr Khrushchev said in Leningrad, Russia has enough rough grazing and forest of its own already.

In the last resort, the Finns know that they will owe their existence and independence not merely to neutrality—even of the Swedish kind—or to diplomatic ability, but to their own efforts to build a modern state that will be every bit as prosperous, and much more free, than any eastern European satellite of the "big neighbour." Since the war ended, the Finns have done some remarkable work. They had to pay off the Russian reparations, rebuild Lapland (which the Germans had devastated), and resettle every man, woman and child that once lived in the Russian-occupied territories to the east. This has been carried out, as punctiliously as the loan repayments between the wars that made Finland the United States' best debtor. Helsinki now looks a boom town, its white, spreading suburbs of high flats a world apart from the dull, provincial town which the heavy buildings surviving from Russian days suggest.

The Finns are proud of their famous literacy (one Helsinki store has the largest bookshop in, it is said, the whole of Europe), of their multiplicity of newspapers and theatres, and of their two television channels (17,000 sets so far). Yet their capital is still a market town: the stalls go up in the morning beside the harbour in full view of the presidential palace. The fishermen stand in their boats with their catch in their arms. These simple virtues would be nothing without the self-confidence the Finns still have in ordering their affairs, not always wisely, but seldom less than well in the end. Their cold war is a hard one, hardest of all because, for the Finns, there can never be any claims of victory. There is always another round with the Russians coming. But still the sky has not fallen. Still, the Finns believe, it never will, if they are realists.

The Kangaroo Leaps a Depression—II

FROM OUR CORRESPONDENT IN AUSTRALIA

THE first of these two articles about the Australian economy began as a chant of victory and ended by quietly touching wood. Australia has come through the rough and tumble of the past two years looking poised and sleek—very unlike the battered wreck that emerged from the slump of the early thirties. But luck has played a large part in this result; as the economic survey says, it was lucky that an exceptionally good year before the recession had built up the reserves; it was lucky that the world recession did not last until these reserves were badly run down; it was lucky that Britain had a surplus for overseas investment; it was lucky that the latest season in Australia has been such a good one—indeed, that there has been such a run of good seasons since the war. Equally, however, there could be a run of bad luck.

A rapidly rising population and developing industry need rapidly rising imports, and rapidly rising exports to pay for them. The big question mark overhanging the Australian economy is whether the recovery in wool will go far enough to finance development at an unchecked rate and, if not, what other exports could fill the gap. At present wool is still the mainstay of the export returns, although a diminishing one. In 1957-58 it brought in almost half the total export earnings, and in the first eight months of the current year two-fifths (for the full year the proportion will be higher because of the recent price rise). But at this month's wool sales prices still averaged only about half the top prices reached two years ago. Failing a further rise in prices, could there be a big increase in the quantity of wool sold? The world's need for wool will certainly rise with its population, but the ability to pay for it will not rise to anything like the same extent; and there is always the fear of a fresh encroachment by synthetics, and the nightmare about a new one which, as well as being permanently pleated and drip-dry, would peg itself out on the line and be proofed against atomic fall-out.

Meat, which is Australia's second largest export, has been selling very well. But it would be too much to hope that Australia will for long be able to fill the American hamburger with its lower grade beef and (hush, not a word to the Press) with Northern Territory buffalo. American producers are sure to put a stop to this trade as soon as they are doing less well themselves. Britain is of course the main market for meat, taking the bulk of the export surplus under long-term agreement. But Britain is not an expanding market, and if it eventually had to join the common market, Australia would lose the preferences on meat. (The same would apply to dairy produce, but that would be more of a blow to New Zealand than to Australia, which has small hopes of its dairy industry as a whole except for making the home consumer pay dearly for his coronary.) European food production seems likely to become more efficient as a result of integration, so the prospects of selling much more Australian foodstuffs there seem dim.

Could wheat fill the bill? It should be able to on the standard of the product and the efficiency of production—as well as the increasing millions of potentially reformed rice-eaters—but its present and future are threatened by American surplus disposals, lately rechristened "Food for Peace." Australia's former customers in Asia say quite frankly that they will not buy Australian wheat so long as there is a prospect of getting it free or on "P.L.480" terms (Public law 480 of the United States means that you pay for American surpluses in your own currency and probably even get that back as a loan). To give one example, India in recent years had been buying an average of 37 million bushels of Australian wheat a year, but last year bought only half a million. The minister for trade believes that this year's sales to India would have been nil had he not met the Indian finance minister at Montreal and persuaded him to take some for old times' sake. Since some genius thought of a new name for it, it is difficult to say a word against the surplus disposals policy. Mr McEwen, however, explained some of its side effects when he visited Washington recently, and received an unsolicited assurance that the practice would not be extended. But it would perhaps be a mistake to be too sanguine now that philanthropy and prosperity in the Middle West are linked.

SOME Australians are so carried away by the progress of secondary industry that they talk almost as if they could now dispense with the exports of primary products on which the economy is still based. Exports of manufactures have reached the surprisingly high proportion of 14 per cent of total export value, the principal market being New Zealand. But it is not realistic to see Australia as the workshop of Asia. Behind the double wall of tariffs and import duties, nurtured by high wages, by a 40-hour week and unavoidably short production runs, Australian industry can flourish in the home market in spite of high costs; but a great export future is just not in sight.

A conference of chambers of commerce recently demanded an inquiry into the effects of tariffs, and it might do some good if suitable people could be found to conduct it—anything that would secure a more selective development in Australia should be welcomed, however difficult politically it might be. Steel exports should be an exception to these discouraging thoughts, since this industry, for the types of steel in which it specialises, is a low-cost producer. But in general it is to minerals, not to manufactures, that Australia must look for a significant contribution to higher export earnings. They should have a great future—if they are spared too many catastrophes like the recent slashing of lead and zinc imports into the United States.

Thus Australian development is still dependent on the weather, on a handful of products, on a single big market and on the inflow of capital. Whether that development can continue unchecked depends partly on trading conditions beyond Australia's control and partly on its own resolution in reducing costs. At all events it has emerged stronger and more confident from its latest trial.

(*Concluded*)

Bishops' War in Sicily

FROM OUR CORRESPONDENT IN ROME

RARELY in Italy have local elections aroused such general interest and probably unwarranted apprehension as the forthcoming regional elections in Sicily. On June 7th some three million Sicilian voters will return the ninety members to their regional assembly for its fourth legislative term since Sicily obtained Home Rule. The event is an important test for the Christian Democrat party which lost control of the regional government last October. Should the Christian Democrats continue to lose influence in Sicily they will need to revise their central policy at the party congress next autumn and the repercussions will be felt by the government in Rome. More important, in the long run, are the conclusions which will be drawn in the Vatican. The Sicilian elections will show in a better context than did those in Val d'Aosta on May 17th whether the higher clergy have misjudged the effect of reviving religious sanctions to influence the voting at elections. Finally, and this is perhaps the most serious cause for alarm to those who now hold political, religious and economic power in Italy, the Sicilian elections may well confirm a dawning suspicion that local interests and local feeling are a more vital and imponderable element in Italian politics than stereotyped ideological divisions or party discipline.

Eight months ago Sicilian affairs caused the first serious crisis in the Christian Democrat party. The crisis culminated in the expulsion of the chief minister, Silvio Milazzo, and several other Christian Democrats who chose to remain in a "Junta" composed, in addition to themselves, of Socialists, one Communist sympathiser, Monarchists and neo-fascists. This freak government has succeeded in maintaining its popularity as an act of protest against "continental" interference, but the circumstances which helped its formation have changed. Last October Signor Fanfani was prime minister in Rome at the head of a leftish coalition with the Social Democrats. In Palermo Monarchists and neo-fascists joined Signor Milazzo to annoy Signor Fanfani. Today Signor Segni leads an all-Christian Democrat government supported by the extreme Right and there is a reasonable chance that a similar alliance could be formed in Sicily after the election. The Christian Democrats, who obtained thirty-seven seats in the assembly in 1955, stand to lose a few of these to Signor Milazzo and to the Monarchists (now re-united in a single party), but they would still be able to form a Junta with the Right. In that case, however, the party leaders would find it hard to persuade the country—and the forthcoming party congress—that such right-wing alliances are "accidental" and do not imply a radical change of the official party line which still claims to follow de Gasperi's definition of Christian Democracy as "a Centre Party moving to the Left."

Some observers think that Signor Milazzo himself would be ready to join such an alliance. They point out that the split in the Catholic party in Sicily did not occur on a Left *versus* Right basis, but as a regional protest against interference from the party's central executive, controlled at the time by Signor Fanfani. But although in Sicily all political issues are confused, it seems likely that the regional platform on which Signor Milazzo stands or falls will force him willy-nilly to the Left. Belatedly, the Socialists and Communists

have embraced the cause of regional autonomy which the right-wing parties are dropping. Fourteen years ago the Sicilian separatists were reactionaries defending the interests of an old ruling class against the presumed socialising trends of the new Italian Republic. The present upsurge of quasi-separatist feeling stems from disappointment at the slow rate of economic progress in the island compared to the rapid development of the North. It is aimed partly against the political parties whose centralised control thwarts local initiative and regional institutions, but it is also directed against the central government in so far as this is believed to favour northern interests.

Signor Milazzo himself came into power on the crest of a wave of resentment against certain big industries in the North which appeared to be gaining the monopoly of Sicilian credit. Signor Milazzo wrested the two main financial holdings in Sicily (IRFIS and SOFIS) from "continental" influence and the control of these bodies, or rather the prospect of controlling them (for SOFIS is at present headless) is the mainspring of his power. He would lose all influence were he to join a government which favoured northern industrial interests in Sicily, as a rightwing Junta probably would.

This explains why Signor Milazzo and his friends, even at the cost of finding themselves in opposition, are likely to keep Left. They are fighting the election as the newly constituted Christian Social Movement and it is significant that the new party was registered after and not before the Holy Office decree of April 4th forbidding Catholics to vote for parties or candidates who may profess themselves Christian but are allied to, or assist, the Communists by their course of conduct. No one doubts that the decree was timed and drafted at the instigation of the Archbishop of Palermo, Cardinal Ruffini. From the outset the Cardinal rallied the bishops against Signor Milazzo. They have altered the wording of the Holy Office decree in its application to Sicily in order to fit his case more aptly. In Sicily the ruling covers past as well as present conduct and is extended from the Communists to the Socialists. The archbishop has since thrown subtlety to the winds. In an interview with *La Stampa* he declared roundly that he hopes to see a right-wing Junta in Palermo and wishes Italians would consider the example of Spain. They are still reeling under the shock of this broadside which turns the Sicilian elections, like the recent Aosta contest, into a Bishops' War.

Singapore's Two Mr Lees

FROM OUR SPECIAL CORRESPONDENT

May 25th

By any standards, the extreme-left People's Action party deserves to win Saturday's elections for the first government of the new State of Singapore. It is well organised and well led. It has the only real party machine, the only formulated and united policy, and the only followers in the streets. Above all, it has been directed vigorously and skilfully by the young but formidable Mr Lee Kuan Yew, Cambridge double first and mob orator, who is able to address his crowded and lively audiences in English, Mandarin and Malay, and whose occasional impulsive errors—such as his brash, irresponsible threats to the press—have never lost him a single popular vote.

There are two Mr Lees: the public and the private. The first is the shirt-sleeved, race-conscious son of the people, denouncing colonial iniquity, upholding the inherent dignity of his bare-footed supporters, insulting magistrates and bullying witnesses at official inquiries, brooding over the baneful effects of subtle Cambridge brain-washing on his simple Asian mind. The second Mr Lee is the wealthy, laughing sceptic, jollying his colonial friends in private, indulging his golf, driving in his opulent Mercedes, enjoying a gourmet's tastes, planning to send his son to Cambridge.

Mr Lee—as either Dr Jekyll or Mr Hyde—is not a communist nor a vindictive man. But now he has his tiger by the tail. If—as seemed probable when this was being written—he becomes prime minister presumptive on May 30th, he will be the captive of his pledges and threats and of the extremists—communist or not—in his rampaging and turbulent party. If—by some miracle— the weak and divided "moderate" groups, despite their follies, nose him out, he will still dominate the new parliament and may indeed be a more explosive figure in opposition.

There are those who contend that, just as Mr Bevan may prove more orthodox in the Foreign Office than in opposition, so Mr Lee would prove more respectable as prime minister than as the bully boy of the hustings. But how can he persuade mainland Malaya to put its trust in such a transformation or to accept his assurances of firm and enduring control of the openly extremist and disguised communist elements in his party?

Singapore's only hope for prosperous and peaceful survival is admittance as the twelfth State of the Federation of Malaya. No one—to be fair—knows this better than Mr Lee. But if he wins the election, Malaya will be fearful even of his fair promises. And if he loses, he will be compelled to denounce the weak victors in terms which can only foment alarm and despondency on the mainland and weaken any overtures in that direction by an anti-PAP government of Singapore. The liberal western excitement and protests over Mr Lee's recent ill-considered and disturbing threats to the local "foreign" press were edifying and encouraging. But this is relatively a minor issue in the aftermath of the elections. The fate of the thirty-odd "subversive" prisoners—especially the seven who were connected with the People's Action party—has, for example, far more important and urgent significance. It would have been smart, many objective westerners here think, for the authorities to have quietly released these prisoners before the elections. Everyone believes that the hard-core group who are known to be communists are still helping to shape policy from inside Changi prison, whose stone walls have not prevented their communication with the outside world through intermediaries.

Nor have the elections provided any clue to a solution of the unemployment problem. Singapore has a relatively high standard of living and a social welfare programme which is a tribute to its wicked colonial background. But there are at least 50,000 unemployed and many more distressingly under-employed. The local schools are turning out 10,000 aspirants for white-collar jobs each year; in five years, the total will be 20,000 to 30,000.

To replace the flight of alarmed local capital to Malaya, Mr Lee, if he becomes prime minister, can only soak the rich (there are at least thirty Chinese millionaires in Singapore) and draw on dollar reserves in the Bank of England held as currency backing. To placate Malayan fears, he has offered, as secretary-general of the People's Action party, to "malayanise" Singapore's million Chinese, to cease teaching Chinese in the Singapore schools and to accept Malay as the island's official language. But no one believes that there was, or will be, any enthusiasm or even backing for this proposal among PAP supporters or Singapore's nationalist Chinese generally. Indeed, the offer was never emphasised in the electioneering; it will be remarkable if it becomes an early policy innovation by a PAP government.

In essence, there is no real basic conflict between the People's Action party and its divided opponents. Both sides knew that alliance with Malaya and employment prospects were the only issues. Neither attacked communism openly. Each was non-communist rather than anti-communist. Both knew that, as the People's Action party has continually said, anti-communist sentiments would be interpreted as anti-Peking, which is to say anti-Chinese, sentiments.

The odds are that Mr Lee will win power but will be unable to do anything except live from hand to mouth for a tense period of fund-forcing, tax extortion and conflict with the extremist elements in his party. If the voters unexpectedly deny him power, he will be able to impose similar frustration on his divided opponents. In either event, the stone causeway between the island and Malaya must remain, despite the earnest and sincere aspirations of both the public Mr Lee and the private Mr Lee, a frontier rather than a link.

Mr Bandaranaike Loses His Left Wing

FROM A CORRESPONDENT IN COLOMBO

After three years of stress and strain, Mr Bandaranaike's coalition broke up last week when the food minister, Mr Philip Gunawardena, and the minister for industries, Mr William de Silva, resigned. With them into opposition went the three other members of the Trotskyist splinter group which had helped the prime minister's own Freedom party to form the coalition government in 1956. Their resignation was quickly followed by the defection of seven Freedom party members. In an effort to end the crisis precipitated in early May when ten Freedom party ministers demanded that he should choose between "Philip or us," Mr Bandaranaike had re-allocated departments. He himself took over the important food and co-operative departments from Mr Gunawardena, offering him instead the department of fisheries, which had earlier belonged to Mr de Silva. These two ministers promptly threatened to resign; and the premier accepted their resignations.

The parting of the ways was perhaps inevitable. The milk-and-water socialism of the Freedom party, whose main popular appeal was really its nationalist and communal policies, had never mixed well with Mr Gunawardena's blood red Marxism. Though weak in numerical strength (with only 2 out of 15 seats in the Cabinet, and 5 out of 55 in the parliamentary coalition), Mr Gunawardena's group made up for lack of numbers by single-mindedness of purpose, mass appeal and sheer drive. In pushing the coalition faster and further left than most of its members were prepared to go, the food minister had two big advantages. His opponents lacked his experience, stature and dynamism, and some of them were constantly under fire for inefficiency and corruption. Further, he always enjoyed at critical moments, the support of the prime minister.

After his success with last year's Paddy Lands Bill, when he rammed through a highly radical measure in the face of strong right-wing hostility, the food minister stepped up the pressure. In the government parliamentary group he accused his colleagues of being false to the coalition's election pledges, and appealed directly to impressionable backbenchers. At rural rallies, co-operative meetings and other public functions, he castigated his cabinet colleagues with volcanic venom, calling them "toothless degenerates," "one-legged reactionaries" and "half-blind lackeys." And at decisive moments he reinforced this double pressure by manipulating his party-controlled trade unions.

It was his Co-operative Development Bank Bill which finally set in motion the events that culminated in last week's collapse of the coalition. The Freedom party ministers, increasingly apprehensive of his growing strength among the rural masses, criticised the proposed new bank, whose functions would extend to commercial banking, as a calculated encroachment on the functions of other ministers, and described the Bill as "totalitarian." Mr Bandaranaike hastily undertook to take into his own hands both the handling of the Bill and the eventual control of the new bank; and Mr Gunawardena, who obviously trusted the prime minister to work the scheme as he had conceived it, readily acquiesced.

Nevertheless, he continued to hurl abuse at the "reactionary Right" from public platforms, and on May Day he reiterated his old demand for the dismissal of the deputy inspector-general of police, Mr Sydney de Zoysa, whom he had accused a few months ago of being Ceylon's potential Ayub Khan. Mr de Zoysa's brother, the finance minister, Mr Stanley de Zoysa, had been assaulted at a public meeting a few days earlier, and the right wingers were convinced that this incident, too, was inspired by Mr Gunawardena's partisans. They banded themselves into a self-styled "socialist group" and demanded the food minister's blood. Meanwhile, the attorney-general gave Mr Sydney de Zoysa permission to sue him for criminal defamation.

At this stage, Mr Bandaranaike, who had hitherto continued to back Mr Gunawardena, switched tactics suddenly. Ceylon's leading newspaper called it "the great betrayal." What prompted him to do what he did? One common conjecture was that his virtual expulsion of the Marxists and his subsequent denunciation of communism at his party's annual conference was an attempt to create a congenial climate for more American aid. (The economic prospects are far from bright, and the budget is due in July.) But the true explanation probably involves a whole host of factors, both personal and political. This time, a movement to the left would have meant an even bigger loss of support in parliament. And Mr Bandaranaike would undoubtedly have been influenced by the growing suspicion in the Freedom party ranks that Mr Gunawardena was using his ministerial powers to build up his own party organisation in the rural areas, and at the next elections would be a strong challenge to his own leadership. Besides this, to back the Left in this conflict might have made the prime minister its prisoner for good, and he has always been touchy about the frequent suggestion that Mr Gunawardena was the real boss of the coalition.

Today he commands only 47 votes, against a total parliamentary opposition of 52 (a few opposition members have now crossed over to the government). But there is no immediate fear of the government falling. Various opposition groups and independent members have pledged their support to it on important specific issues. There is also the general dislike of any early dissolution of parliament. The main opposition party, Dr Pereira's Trotskyists, would prefer elections after the present delimitation commission finishes its work, and after the voting age has been lowered to 18. Mr Bandaranaike can probably limp along for some time yet.

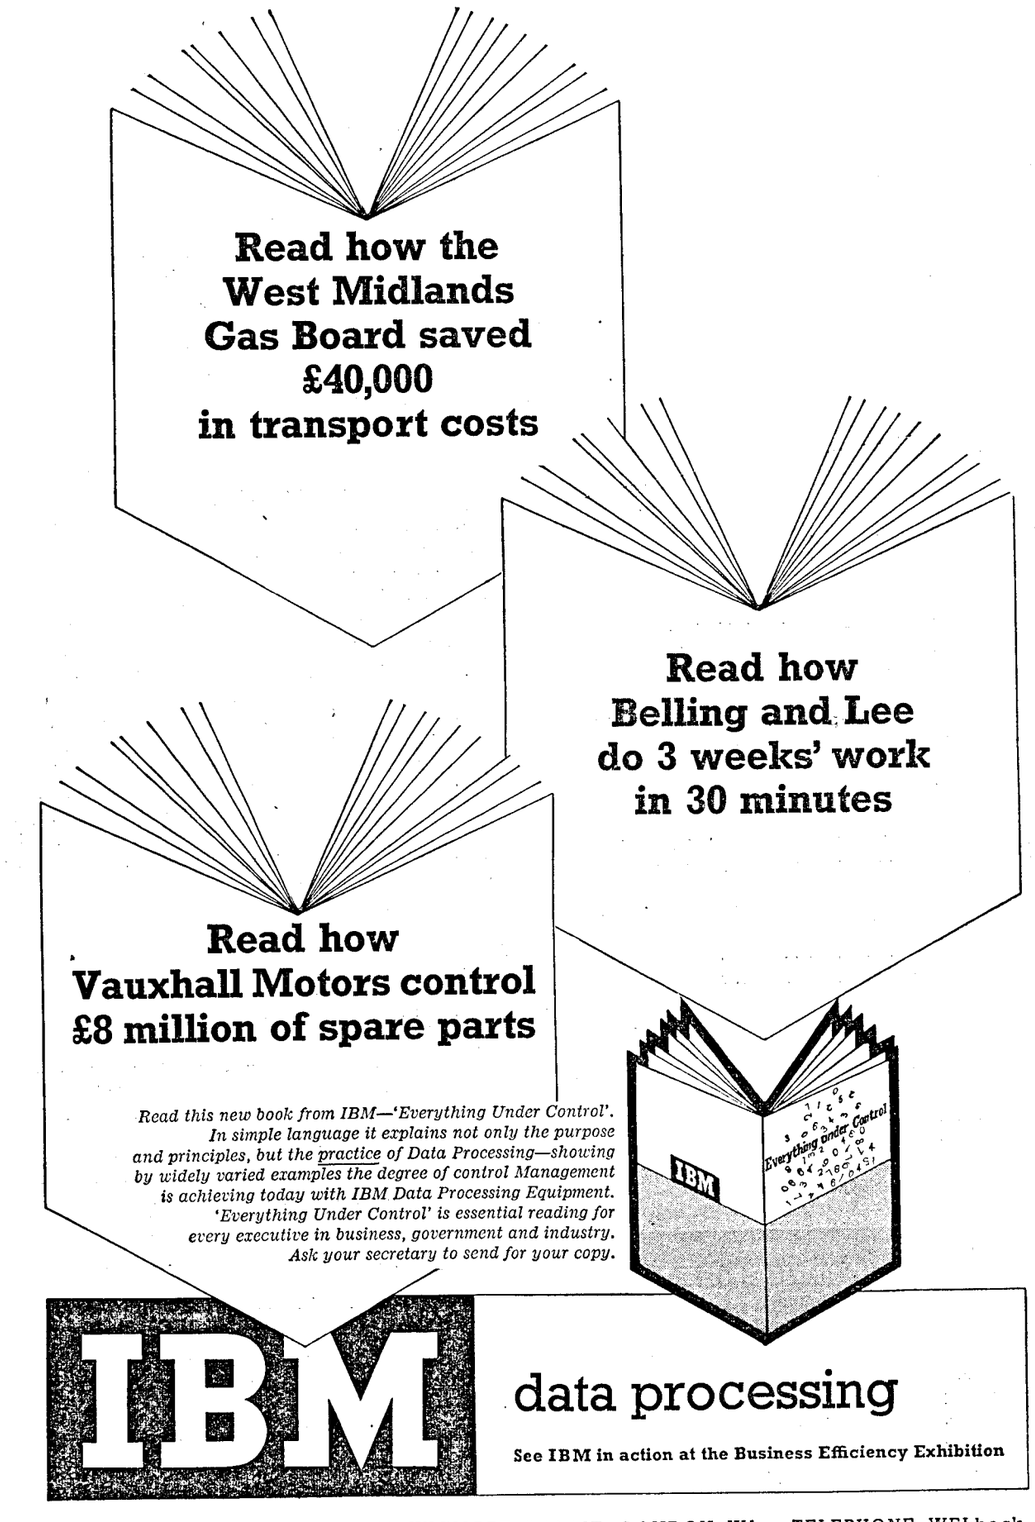
Khrushchev on Literature

How to reconcile artistic vision with the party line? How to get books that are sufficiently true to life to capture the attention of readers and yet do not give a picture of Soviet reality which is too true to life for the taste of the leadership? These questions have been the unspoken refrain at the third congress of Soviet writers. They were also at the heart of Mr Khrushchev's long and lively improvisation on literature which he delivered on May 22nd and which was the showpiece of the congress.

The dilemma is not new, but the spread of education in Russia has made it acute. As long as the bulk of the population was semi-illiterate, readers could be made to believe almost anything. The emergence of millions of educated people, brought up on the masterpieces of Russian and world literature, blunted the weapons of crude propaganda; the stalinist arsenal became obsolete. Even before Stalin's death, at the party's 19th congress in 1952, Mr Malenkov had to exhort writers to show a more critical spirit, to give a truer picture of life. Knowing from bitter experience what a price one could pay for being carried away by the artistic vision, the writers remained cautious. Only when they saw other signs of relaxation, after Stalin's death, did they respond to the prompting.

The period that followed, between 1954 and 1957, is best known to outsiders through the symbolic titles of two novels: Mr Ehrenburg's "Thaw" and Mr Dudintsev's "Not By Bread Alone." There were, however, more interesting writings than these being published in Russia at that time. Critics, beginning with Mr Lifshyts and Mr Pomerantsev, made devastating fun of previous novels written to measure. They ridiculed books in which lovers tenderly exchange pledges about the overfulfilment of norms or in which the tractor is psychologically the most interesting character. At the same time, contributors to several reviews, particularly to the short-lived magazine *Literary Moscow,* demonstrated that the traditions of Gogol and Chekhov were not dead and that satire had a place in the Soviet environment.

The leaders had not bargained for so much, particularly as this revival coincided with the Hungarian upheaval and with unrest throughout the Soviet block. The Russian writers were included in the attacks on revisionism. In the middle of 1957 Mr Khrushchev himself joined in the attack at a dramatic writers' meeting in Moscow. The warning was enough to drive some authors back to their prettyfying brushes, while others sought refuge in historical writing or in the silence of ivory towers. The Pasternak affair was an unconnected epilogue to this drama.



All was quiet again on the literary front. The only trouble was that there was no new writing worth speaking of. The purpose of the present congress was partly to remedy this state of things. True, most of the speakers went on thanking the party for its advice, insisted on the importance of "positive" heroes and condemned revisionist trends. Many speakers, however, also deplored the drabness and greyness of Soviet letters, the lack of original contributions, the rule of the stereotyped and the hackneyed.

Mr Khrushchev chose the part of peacemaker. His chief message to the congress was that bygones should be bygones. The opponent had been "ideologically" defeated and one should not hit people when they are down. On the contrary, comrades should be helped to move from wrong to correct positions, without being reminded of the past. He even had a nice word for Dudintsev, whose book Mr Mikoyan had advised him to read, and he regretted that other business had prevented him from talking things over with him. The trouble with all the so-called debunkers, in Mr Khrushchev's opinion, was that, preoccupied with dung heaps, they could not see the greatness of the growing communist society.

The Soviet leader was in a particularly genial mood. He interspersed his speech with anecdotes, and apologised for speaking impromptu. He modestly proclaimed several times that he was no literary critic. Nevertheless, he was obviously on the side of the party priests and not on that of the debunkers. Writers must strive to depict the beauty and greatness of the struggle for the establishment of communism. The party leadership could not be accused of fearing criticism. Did it not give proofs to the contrary by indicting past errors at the 20th party congress? Mr Khrushchev was thus directly referring to his "secret" speech in February, 1956. Communists are familiar with the idea of "committed" literature, but many of them may ponder why a writer should not be allowed to extend his criticism beyond the frontiers prescribed at the last party assizes.

All the doubts left in the Russian mind in spite of all Mr Khrushchev's pleading were summarised in advance by a Soviet author. Writing on the eve of the congress in *Literaturnaya Gazeta,* Mr Paustovsky bluntly described the mass of Soviet books in which the proportion of bright and dark colours is carefully mixed so that the bright should prevail; he thanked fate that Tolstoy had written "Anna Karenina" before the emergence of this convention. He even asked at one stage "whether we are not talking so much and so loudly about truth because we are lacking in it?"; and damned the writers "who are playing with truth guided by motives that have nothing to do with literature."

The dilemma persists. If he wants masterpieces, Mr Khrushchev cannot keep writers on a leash. His soothing words at the congress will probably be taken as a new sign of relaxation. Even the replacement of Mr Surkov, who was chairman of the Writers' Union at the time of the squeeze, by the less committed Mr Fedin, will be interpreted in the same way. But if they write more freely, the writers are bound to cause new scandals. In one of his many metaphors Mr Khrushchev referred to them as the Soviet Union's artillery. As the Soviet infantry surges forward, Mr Khrushchev will have new troubles with his gunners.

A tale of Twenty-two Cities

From Tunisia to India, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today. Tunisia, Libya, Lebanon, The United Arab Republic, Syrian Region, Abu Dhabi, Iraq, Jordan, Saudi Arabia, Kuwait, Bahrain, Qatar, Muscat and Oman, Dubai and Sharjah, Aden and India: these are the territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BUSINESS WORLD

ENERGY TO SPARE—II

Can Coal Compete?

At the pithead, British coal still averages the cheapest in Western Europe, and over the last twelve months the National Coal Board has managed to bring its costs down slightly. Its European competitors would argue that its advantage is partly due to artificial elements in its methods of costing—the facts that it gets its capital at a low rate of interest and anyway fails to break even, and has some of its "fringe payments" carried through the national budget while paying relatively little tax. These arguments, effectively, are beside the point, which is that a significant amount of British coal, cheap or not, is today staying at the pithead.

For the reduced costs of the Coal Board's reduced output are not low enough to compete with oil, which is now being sold down to £7 a ton or less. Last year, Britain used in all only about 1 million tons more "coal equivalent" than in 1957, but oil increased its share by the equivalent of about 10 million tons of coal. The biggest element here was in oil supplies to the power stations, under contracts that call for a rise in oil burning up to 1960-61. This year's increase in oil for the power stations will not be quite as large, and next year, reaching the peak, it may not displace much more than a further half a million tons of coal. Nevertheless, the total use of oil in the economy may well rise this year by 7 million tons or more of "coal equivalent" and in 1960 by say 5-6 million tons. Prospects for coal demand in the immediate future therefore depend on whether Britain's total fuel requirements this year and next rise more than the increases that occur in oil consumption. This year there is no chance of that happening, and next year probably not much.

If Labour were to win the next election, sheer dead weight of mining MPs would probably mean protection against oil in one form or another. If the Tories remain, the most that can be expected may be a little more consultation with the oil companies on an old boy basis about not hitting coal too hard while it is down. The Coal Board and the miners would be unwise to bank on the first possibility. The alternative of "free competition in fuel" to which the government is committed may not bear too rigorous an examination; it does not apply to Russian oil nor to American coal, and certain tender nuclear plants are to be protected at all costs from the cold winds of commercial competition. However, there is nothing to be gained for the Coal Board from pushing that analysis too far.

As things look now, since it does not propose to cut output more than it has already planned, the Coal Board will probably have to put 7-8 million tons more of coal into stock over this year. It will presumably end the year with about 30 million tons of coal on the ground (piled 12 feet high, these stocks would cover about 1,500 acres). In 1960, unless it cuts output a good deal more, it will probably have to stock another 4 million tons. By 1961, perhaps, its output should be down to about the amount that it can sell. But stocks of perhaps 30-35 million tons are going to take years to clear.

Lying on the books at a "conservative" valuation that must steadily be written down by the rent and interest that it costs to hold them, plus possible long-term physical degradation, those stocks will overhang the Board's finances for many years. At the same time, they do offer it some margin for selective marketing manœuvres. To maintain coal in markets that would otherwise be lost now but where in future the industry hopes it may have a fighting chance, it would be worth taking some loss on stocks that would otherwise remain on the ground for years. This implies possibly offering longer term contracts than it has ever dared before, and cutting prices against oil to win particular customers

in the home market, and against American and East European coal abroad. Timidity about the "prohibition of statutory undue preference or discrimination" should not inhibit the board too much here. It is selling a wide variety of types of coal from 800 mines to a myriad of customers scattered all over the country; if it finds some customer complaining that his neighbour is getting undue preference on identical quantities of identical coal on identical periods of contract, it should either offer him equally good terms or let him go to court. Cutting prices across the Board, or to customers in secure markets where one would not sell an extra ton of coal, would not be sensible. But in markets that the board thinks it might retain, it should not allow its lack of reserves and its accumulated deficits (which are partly the result of policies imposed on it by successive governments) from acting as a commercial business would act in similar straits.

THE key question, obviously, is how much coal and in what markets this industry can hope to keep on selling in the competitive markets of the sixties while there is energy to spare. After "four years flat"—in 1958 Britain used little more fuel of all kinds than in 1954—forecasters must be somewhat chastened. The effects on fuel consumption when economic growth levelled off after 1955, and the access of fuel economy after Suez, have emphasised the limitations of conventional methods of "global" and "sector" forecasting. But fuel industries in which investment takes a long time cannot avoid making such forecasts, and the chastening interregnum has thrown up no new ways of doing so.

The Ministry of Power has not yet formally retreated from the estimates of total fuel consumption in Britain in 1965 to which Mr Maudling publicly committed it in April, 1957, since it was never considered convenient to admit that even in recession Britain had ceased doubling its standard of living. But privately the arithmetic is being revised, in Whitehall as elsewhere, and the answers can hardly differ much. If one assumes that recovery has already begun this year, and that national income may rise 3 per cent annually until 1965 (which would not put the economy fully "back on trend," but is fairly optimistic over six years steadily) one might revise the government's last public guess that Britain will use about 300 million tons of coal equivalent by 1965 down to a little over 280 million tons. Of that, the government is committed to supplying, in 1965, perhaps 8-12 million "tons C.E." from nuclear generating stations. The oil industry reckons that it can sell in British fuel markets perhaps 45 million tons of oil, or just over 75 million tons C.E.—and who is to stop it?

That would leave the coal industry with a home market in 1965 for something over 190 million tons; allowing a margin for exports and bunkers, perhaps 195-200 million tons of coal. Since one has to consider its huge stocks, it may be worth adding that this crude arithmetic suggests home demand will hardly exceed 195 million tons in any of the years from now until 1965. What this means, broadly, is that by 1965 the Coal Board may have a market for about as much coal as it may be producing say next year: but that to reduce its stocks substantially it would need, for a time, to cut output below consumption.

The Coal Board's marketing department has to back such global guesswork by reckoning where it can sell all this coal. The Central Electricity Generating Board says that by 1965 the power stations will take 55 million tons a year; coal is pretty secure here against oil, economically as well as politically. After 1965, it will be competing in the power market against further nuclear generation. Here the balance of political lobbying will probably not be on coal's side, but there is a growing realisation that for quite some years more the economics may be. The coke ovens are an even more secure market. By 1965 they may want about 35 million tons of coking coal; and unless the British steel industry goes in vigorously for hydrogen reduction of iron, demand for metallurgical coke should rise thereafter. The gas industry has irritated the Coal Board by cutting back its estimates of the amount of carbonisation coal that it will require in the future. But those original estimates were hopelessly optimistic: if it were to stick to carbonisation, the gas industry would never be able to hold the share of the market on which it counted. If gas from oil and liquid methane can save this industry's markets, with possible reinforcements later from total gasification of low rank coals—all producing no coke—coal should not grumble: the gas industry will still probably be buying over 20 million tons of coal in 1965. Industry in general is at present switching more and more to oil, mainly for good economic reasons but also through desire to be in the fashion; but the Coal Board, if it begins using its stocks for a positive marketing policy as expansion mounts again, may at least be able to maintain its absolute sales there, though accepting a shrinking share of the growing market. The same applies to domestic fuel consumption. More convenient secondary fuels will provide almost the whole of the increase in the heating standards of British homes that has now clearly begun, but the actual tonnage of solid fuels used for basic heating need not drop much. And if coal-based electricity were to capture the market now supplied by large coal burned in open fires, would that be a bad thing for mining?

MAKING ready to provide for sales in the home market and abroad of the order of 200 million tons by 1965 is a different proposition from planning to provide 240 million tons from mines and opencast sites at that time, as the Board planned to in its last

investment programme. The end of Saturday working has already reduced the eventual total by about 12 million tons a year. Opencast output is already being cut well below the figure planned for 1965, and the Board's decision not to let any further new contracts means that this output will run down fairly rapidly to quite a low figure. The board, equally, is not starting on any further major reconstructions in the mines: of the 247 major schemes approved since vesting date, 79 have been substantially completed (covering about 17 per cent of 1958 output) and on the rest, due to cost some £600 million, about £200 million has already been spent. Output from the new and reconstructed collieries, even last year, was about 20 per cent more than in 1952. One would expect that as others "in the pipeline" are completed over the next five years or so, some of the industry's long-latent "forces of increase" should push up output across the remaining slice of capacity under reconstruction (which last year represented another 40 per cent of total output). The industry is already finding it difficult to bring 1959 output down as much as it planned to. Running down an upward escalator exercises a different set of muscles.

The Board's immediate problem, merging into longer-term revision of its plans, will be how to offset this growth of primary capacity among mines that are even now producing 60 per cent of national output by contraction elsewhere. If an attempt is made to reduce stocks by cutting output below likely consumption for a few years, this problem would be exacerbated. Socially, it will be a bitter process anyway. The crude array of costs is revealed by the table, which sets out divisional profit and loss accounts (before allowing for about 3s. a ton in interest charges), and indicates the range of profitability between areas. This exaggerates matters, since most areas contain some good pits and some bad; even so, it is clear that unprofitability is a strongly localised phenomenon in British coal, and localised in "unemployment places." If the industry is to compete economically it will be mostly in these regions that mining capacity will have to be cut, as all the Board's successive plans have recognised. But acceleration of the process, beyond a certain rate, would be immensely troublesome in an industry that depends so much upon human effort and the co-operation of the remaining labour that it hopes will become much more productive. These declining areas will need as special treatment as say cotton towns; many of the miners who will become redundant will be too old, with too heavy family commitments, to leave their own areas, even though there may be little alternative employment there for them. In the short term, it seems doubtful whether the board is allowing "natural wastage" to clear enough men out of the industry generally; it is still recruiting adults on quite a substantial scale.

PROFITS AND LOSSES IN THE COLLIERIES, 1958

Division	Profit or Loss* per ton (s. d.)	Range of Profitability between Areas of Division (s. d. per ton)	Output in 1958 (m. tons)	Change from 1957 (%)
Scottish	−14 5½	− 3/11¼ to −28/3¼	19·5	− 8·8

*Before charging interest on NCB capital—£32·1 million in 1958 or roughly 3s 2½d. a ton.

AN industry producing 190-200 million tons a year, of which quite three-quarters should come from pits sunk or wholly reconstructed since the war, with a markedly higher labour productivity, should be in a healthier condition to compete. Internal reorganisation to make fuller use of the existing capacity, and the process of concentration of working that has already begun, should strengthen its efficiency and moderate its inflexibility. On the marketing side, the burden of coal stocks should also give it the opportunity to offer longish contracts at fixed prices where markets can be kept. It no doubt embarrasses the Coal Board that the customer most interested in long-term contracts is its largest, the electricity industry. It might be reasonable to offer contracts at a fixed price or a "fuel oil parity price" to get a marginal power station or two switched back. But across the whole tonnage of coal used for electricity, the Coal Board could not afford this: it is not likely to be the highest-cost supplier of primary fuel for electricity. It is most unlikely that upward revision of the guesses about nuclear generating costs (while the costs of other fuels remain stable) will cause much revision of the huge investment in Mark I nuclear stations; the atomic knights, having securely involved the politicians in the enlarged programme, may well reflect that nothing succeeds like excess. But elsewhere in its markets the Coal Board may be able to hold ground by guaranteeing steady supplies and qualities, and by developing technical services for the industrialist comparable to those he gets from oil or gas.

With no more than the present degree of protection of its home market for fuel (which is not important since American coal and Russian oil both effect oil prices here), the prospect of energy to spare should therefore not prove too frightening for Britain's "indigenous" coal industries. A substantial proportion of Britain's present coal output should be able to compete in the sixties; and nuclear engineering is assured of a much larger niche than commercial considerations alone would give it. Greater prescience than any of us possess could undoubtedly have given Britain the fuel we need by 1965 at a considerably lower cost in capital investment: but the going price of energy in the sixties may still be lower than we used to fear.

Mr Clore and the Brewers

The brewers, who do not mind mergers among themselves, seem particularly to resent Mr Charles Clore's bid for Watney Mann.

FUSES lit by Mr Charles Clore have usually produced shattering explosions (and only a rare damp squib) in the past, but none has gone off with such a resounding bang as his cash bid for Watney Mann, the London brewers. The bid has excited the man with the pint in the public bar just as it has inspired the best of Mr Osbert Lancaster's wit; the brewers, if they have made any comment at all, have deplored the prospect of Mr Clore coming into the industry—it would indeed be a phenomenon in this clubby business; and brewery shares have never been so excited as these were on Tuesday. The evening before Mr Clore went to a party and said not a word; he left the talking to his solicitor, Mr Leonard Sainer.

For two years Mr Charles Clore has been resting on his hard won laurels, garlanded together in Sears Holdings, and has not made any bids. This may have been a little hard for him; at any rate, a month ago he referred to the £8 million that Sears holds in cash, with a clear indication that he might not remain quiet for ever. Hitherto, Mr Clore has offered non-voting "A" shares in Sears in his bids. For the 9,047,620 ordinary shares of Watney Mann, however, he is offering cash—45s. a share and when the offer becomes unconditional and the shares are split into 5s. units, one out of every four to be returned to the acceptors. So, in effect, the offer puts a value of 60s. on Watney Mann shares, compared with the pre-bid market price of 51s. 3d. Mr Clore thus puts, in this first foray, a value of over £27 million on the ordinary capital of a company whose net book assets at the end of September stood at £37.8 million, and with a net worth attributable to the equity of £18.3 million. The real (as distinct from book) value of these assets must be much higher—as, no doubt, the revaluation already set in train by the Watney Mann directors will reveal. For these assets, which brought in £1.3 million of net profits in 1957-58, Mr Clore is prepared to put down £20.3 million in cash.

That is his opening bid. Whether he will be prepared to go higher is another matter. He can count on the opposition of the sitting board of directors; and that may be backed not merely by the weight of opinion in the brewing industry, but by support of a more tangible kind. Beer is thicker than water. In past struggles Mr Clore often raised his own ante. But a month ago he said he was not prepared "to pay a price which discounts the future too fully and which does not take into account the time and effort which will be necessary before the future benefits accrue."

To make economic sense, his bid must show that under his ownership Watney Mann, with its chain of 3,670 licensed premises, will be more profitable than at present. The indication of his intentions is not particularly precise nor clear cut, nor breathtakingly new. Unprofitable public houses will be sold for their site value or their sites will be re-developed, a shop or an office replacing the pub. Others will be modernised in some cases with only a lounge or a bar; catering facilities will be provided; and off-licences with a good delivery service will be developed. No doubt Mr Clore and his associates have the energy and the skill to carry out these plans jumping the hurdles of the licensing laws and the traditions of the trade. But Mr Clore is not offering anything new. When he acquired Sears (True-Form) he injected a new dynamic into the retail shoe trade; for brewing and public houses, his recipe amounts to rather more of what the trade has been trying in its own plodding way to do for some years, to offset the declining trend in beer consumption. Amalgamations have been common; reciprocal trading agreements have spread; economies in production (not mentioned by Mr Clore) and distribution have been secured; unprofitable pubs have been closed and others modernised. So far, all that has resulted has been a modest increase in profits of the bigger and better managed breweries. In an industry that is highly competitive and is probably still on the decline, Mr Clore is promising to do the same things as the brewers—only better.

DEVELOPMENT costs money and if Mr Clore secures control of Watney Mann, he would have to find cash over and above the £20 million used in making the bid. The sale of some public houses would provide some. But would it be possible to sell the freeholds and take back the leaseholds on others? The most obvious source of new money is the sale of the site of Watney's Stag Brewery in Pimlico. Last month, the directors of Watney Mann said that a contract had been "concluded" with City of London Real Property for a sale of a major part of this site. The price was not disclosed because it apparently depends upon the form of planning permission which is given for redevelopment. But the chairman of Watney Mann, Mr Simon Combe, made it clear that none of the proceeds of the sale would be distributed to shareholders. Instead the money is to be used to repay bank overdrafts raised to finance the extensions to the Watney brewery at Mortlake and the Mann brewery at Whitechapel (designed to make good the loss of

capacity at Pimlico) and to modernise the group's licensed premises. These developments are needed and the board has done its duty in holding back this capital sum to finance them. But here they helped Mr Clore, for their decision not to make a capital distribution put a restraint on the market price of the shares, giving him a good opportunity to buy and accumulate ammunition for fixing his bid.

The course of a take-over struggle is generally predictable: the initial offer, a promise of a bigger dividend or better behaviour from the directors and then an improved offer from the original bidder. There are many possible variations on this theme, but it was the notes of a familiar melody that dealers and investors in the Watney Mann shares heard, or thought they heard, on Tuesday: the shares were marked up to 72s. 6d., came back to 67s. 6d. and then went up again on Thursday to 75s. There were some reports that Mr Clore was selling some of his shares in an attempt to keep the price down—bidders make things awkward for themselves sometimes. To buy at this price might be foolhardy; to sell foolish. But there is certainly no point in accepting Mr Clore's bid at once. Other brewing shares, whose prices have already had a good rise and which discount earnings and dividends quite fully, have been active.

This excitement may herald the biggest and hardest fought take-over battle since the struggle for British Aluminium. It remains to be seen if the Watney Mann directors have an effective counter-plan; they should not have been caught entirely napping by Mr Clore, although by their words they seemed to be. It must be a good plan. Expostulation, appeals to national interest, or the closing of the club ranks to come to the aid of an embarrassed member simply will not do. And, equally, a lot depends on Mr Clore. The bidder always has the initiative and if he is in earnest he will not surrender it lightly. But he is always free to withdraw—with a capital profit on any Watney Mann shares he holds. Shareholders must wait at least until they can gauge Mr Clore's reactions to the counterblast to the bid promised by the Watney Mann directors. While they do so they might clear their minds of cant. Mr Clore has as much right to bid for the Watney Mann shares as he has for the shares in any other industry: heated statements describing the bid as "preposterous and deplorable" come a little oddly from an industry that has seen many a merger and from a company that is the product of more than one amalgamation. The purpose of an agreed merger or a take-over bid is the same: to employ resources more efficiently and to conduct the management of the concern in the best interests of its shareholders. That is its economic justification. In his earlier bids Mr Clore proved to the satisfaction of shareholders that they would gain under his management. He deserves the victories he then won. If the directors of Watney Mann prove to the satisfaction of the shareholders that they will gain more by going along with their policies than by selling three-quarters of their equity to Mr Clore, then they will deserve to beat him. Indeed, if they do, they probably will.

BUSINESS NOTES

THE ECONOMY

Expansion Under Way

LAST month's total of people unemployed included an unusually high proportion of youths and girls, because the count happened to be taken closer than usual to the time when children leaving school at Easter think about taking jobs. By May it was to be expected that most of these school leavers would have found jobs, so that the drop in the total out of work would be greater than usual for this time of year. The fall actually recorded—50,000, bringing the total unemployed down to 481,000, of whom 444,000 were wholly unemployed—was, however, larger than either normal seasonal factors or this exceptional one would explain: the real improvement has certainly continued. Allowing as far as possible for seasonal factors, one can say that the numbers wholly unemployed in the middle of this month were 13,000 fewer than in March and some 40,000 fewer than at the peak in January and February.

More evidence of the quickening in economic activity in Britain came this week from a source few people would have expected to show much improvement as early as the first quarter of this year: orders for machine tools, for the first time in many months, exceeded the industry's volume of deliveries which has now come down considerably. Orders reported in February reached £4½ million, the highest total for any month since March last year; and export orders rose too. The industry's order-book, which now represents 13 months' deliveries, is still far below that of a year ago, and it appears uncertain whether the improvement in orders continued in March. Nevertheless, this is the first cheering indication from this particular index of decisions about business capital investment that has been forthcoming for some time.

It takes no refined analysis to sense the upward trend in British business today; but the National Institute of Economic and Social Research, in its latest *Economic Review*, is prepared to put a figure to the rate of re-expansion. It believes that by the end of this year industrial production may have been 4-5 per cent above its level in December, and that the gross national product may be about 3 per cent higher. These figures would imply smaller increases for the average of 1959 over 1958—say 3 per cent

in industrial output and 2 per cent in GDP. Even so, they represent a pretty rapid build-up during the current three quarters of the year.

IN THE MARKETS

The Charge of the Stags

THE fever of speculation was not confined to brewing shares this week, for the stags made sure that two public offers of ordinary shares scored a fantastic success. The offer by the Charterhouse Group of 4 million ordinary shares of £1 each at 28s. attracted applications for over 25 million shares. Existing shareholders in the Charterhouse Group were given preferential treatment but their applications were scaled down and applications from other investors went to ballot. In active dealings, the price touched 34s. 6d. before settling back at 33s. 3d. The other offer, from the London property company, Calgary and Edmonton Land, was much smaller but no less successful. The stock exchange council, after the Lintang episode, has frowned upon placings of property shares, and Calgary and Edmonton had to make a public offer of 250,000 ordinary shares of 1s. 6d. each at 10s. 6d. It resulted in a ballot for the smaller applicants instead of a queue of brokers, as the issue was oversubscribed 48 times. But the ballot did not prevent a substantial premium emerging over the issue price: dealings began at 16s. 3d. and on Thursday the price touched at 26s. 9d. Within three days of the start of dealings, the directors announced that new properties were to be acquired by the issue of 275,875 ordinary shares at 27s. 6d. each and that the interim dividend, forecast in the prospectus at 25 per cent, is to be 50 per cent. This puts Calgary and Edmonton in a different light to that revealed in the prospectus.

Apart from these patches of excitement, industrial equities were little more than steady, and *The Economist* indicator (which does not include Watney Mann) merely edged up from 272.3 to 272.4. The gilt-edged market was uneasy about trends in short term interest rates and the jobbers marked prices down in the face of a small spate of selling orders. It was upon this slack tide that the cash-cum-conversion offer by the Union of South Africa was launched. To replace £4,090,147 of the maturing 3½ per cent inscribed stock (1954-59) the South African government is offering £5 million of a 5½ per cent registered stock (1974-76) at 97. Those who convert will receive the £3 which represents the difference between the issue price of the new stock and the redemption price of the old. The new stock is offered at a flat yield of £5 13s. 5d. per cent and a redemption yield to the latest date of £5 15s. 7d. per cent. These are finely drawn terms and it would not be untypical of the present state of the markets if this issue fails to attract investors who in anything but gilt-edged issues are prepared to be stags.

STEEL

A Pound Off Most Tons

THE latest "determination" of the Iron and Steel Board means quite a substantial reduction in steel prices—about £1 a ton across the main bulk of the industry's tonnage, with reductions for individual products ranging from 15s. a ton up to several pounds a ton for expensive alloy steels. Its form is somewhat unusual; it is a reduction of maximum prices for steel in quantities of 10 tons and upwards (larger quantities for certain products) "to one specification for one delivery to one destination," and not a general reduction for all steel. But by far the majority of all orders for steel are already ordered in these quantities, so that for most steel customers this implies a cut in price of some 2 per cent.

The Board says it has reduced prices in this way because it believes that savings could be achieved both in mill rolling programmes and in the transport of steel if the size of individual orders were increased. There was on balance no other major reason to cut prices, on its ordinary basis of setting them according to costs. There have been various reductions in import costs—7s. 6d. a ton off imported iron ore, for example—totalling perhaps £10 million a year; but these have been nearly offset by increases in home costs such as railway rates, wages, and the re-rating of industrial premises. Some advances in productivity, such as a reduction in fuel consumption per ton, have been achieved; the board has apparently disregarded what on its own basis of costing might be regarded as an offset to this, the fact that when demand drops the lower rate of capacity utilisation raises unit overheads.

The form of this change, however, emphasises the rather special concept of "maximum prices" in the minds of this board, a body appointed by the State to supervise the operations of this industry "under competitive conditions." It does not regard itself as setting ceiling prices, but as setting the actual prices that will be charged (and in practice, in British steel, the maximum certainly means the minimum, too). Thus it seems perfectly natural to the board that it should alter the pattern of rebates for large quantities that steel companies give for something it believes will be commercially convenient to them, or at least to the more efficient plants among them.

Some steelmakers at least have had to be persuaded to offer these discounts that are said to be to their advantage, and those who were already convinced and willing have waited to be ordered to do what is presumably in their own commercial interest. Adjustments to suit the commercial circumstances of particular works almost never enter the picture, even during a year of recession such as British steel has just passed through. It may be argued that one either follows a policy of stable pricing or one of complete flexibility, and that there is nothing in between. But such real illustrations of how this industry operates commercially makes the oddest contrast with the continued discussion of steel de-nationalisation by one side in terms of planning and by the other in terms of competitive free enterprise (renewed this week). The continued domination of myth in British political argument and of non-competitiveness in commercial practice is only too clear.

DOLLAR TRADE

More Imports Freed

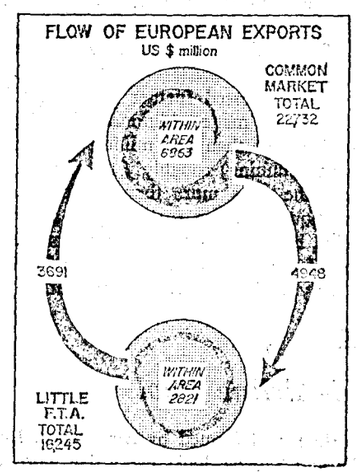
THE latest move towards liberalising imports from the dollar area falls into three parts. The first frees from next Monday imports of a wide range of mainly consumer goods which already enter freely from Western Europe. They include:

> Domestic appliances, radio, television and radar apparatus (but not valves), aero engines, ships, boats, railway vehicles and light aircraft, motor cycles and bicycles, rubber manufactures, including tyres and tubes, certain scientific and optical instruments, fiction books and periodicals of a landed value of 3s. 6d. or more, sound reproducing apparatus and gramophone records, domestic furniture and glassware, travel goods, manufactures of plastic, paints, toilet preparations, detergents, building materials and hardware, floor covering, shoes, and a variety of food items.

The second frees at the same time imports of a few items, including leather, slide fasteners and sporting weapons, both from the dollar area and Western Europe. Thirdly, exporters in the dollar area will share in the "global" quotas for certain items which have hitherto been open only to Western Europe and certain other countries. This is to take effect at the beginning of the next quota year, generally January 1st, and the quotas are to be increased. The affected items include:

> Stockings and socks, sports goods and toys, stationery, cutlery, imitation jewellery and fancy goods, paper manufactures, clocks and watches, binoculars costing over £7 10s., and fresh pears and canned and bottled apples.

Finally, the dollar quota for motor cars this year is being raised from £600,000 to £1½ million, and the quotas for dried fruit, fresh citrus and certain canned fruit are raised by a total of £1½ million to £7.7 million.



Discriminatory restrictions against the dollar area thus remain on only a few consumer goods. In some cases, such as textiles and clothing, other canned fruit, citrus and bananas, the restrictions are plainly protective, and on cheap literature protective in a different sense. For those on pharmaceutical products, raw meat and fish, the reason is probably that Britain cannot do everything at once. There also remains the rump of machinery which, while freed from Western Europe, is licensed from the dollar area only if buyers can show that alternative equipment is not available elsewhere. It includes equipment for the oil, construction and building industries.

Surplus with United States

THE latest move was foreshadowed by the President of the Board of Trade last September, when he announced at the Montreal conference the removal of import controls from most kinds of machinery and chemicals from the dollar area. Since then Britain's trade balance with the United States and Canada has improved. For the first time for nearly one hundred years Britain has a trade surplus with the United States. And it is not adventitious, as it was during the last years of the American civil war, when shipments of cotton from the Confederacy stopped. This year

At Sixes and Sevens

THE little free trade area now under discussion bears only one resemblance to the European common market: both aim at freeing trade by eventually eliminating tariffs and quotas within their own areas. But while the common market countries will have a common tariff against the outside world, members of the little FTA would keep their own tariffs against outsiders. Unlike the common market countries, they do not form a natural economic group. Trade within the little FTA is only some 40 per cent as large as trade within the common market, and Britain's share of that trade is relatively higher than Germany's share of trade within the common market. The absolute value of British trade with the little FTA, however, is only 70 per cent of that with the common market.

The biggest flow of trade is not within the little FTA, but between it and the common market, and this flow naturally offers the biggest prospects of growth. The possibility of diverting some of this natural trade flow to the members of the little FTA is real, and some people hope that the threatened or actual diversion of trade might force the common market to come to terms. Germany would be the main loser, in the Scandinavian markets particularly, and Britain the main beneficiary. But Britain would pay a price. The tariffs of most other candidates for the little FTA are appreciably lower than the British tariff, so Britain would make the biggest concessions. If the original European free trade area had come into existence the tariff reductions made by Britain would have been set against reductions in the high tariffs of France and Italy. It is impossible to know how many countries really will join the little FTA.

exports to the United States have shot up, while imports from the United States have held steady. In April alone British exports to the United States rose sharply by £9½ million, compared with the first quarter average, to £35.9 million fob. Cars, and a large shipment of submarine cable accounted for half of that increase, but the remainder was widely spread. Imports, at £26.9 million cif, were no higher than the average in the first quarter, leaving a visible surplus (excluding re-exports) of £9 million. For the first four months of the year the surplus came to nearly £6 million, and on a true payments basis (reckoning imports and exports fob) it was larger. While this is the most dramatic—and unexpected—improvement in British trade this year it is part of a general pattern of recovery in exports to industrial countries unaccompanied, as yet, by substantial increase in imports from them.

ANGLO-SOVIET TRADE

Opening the Door

THE real value of the new Anglo-Soviet trade agreement will not be known for several years. Britain does not seem to have given anything away, and the Russians now have a formal agreement for what it is worth. The 1947 agreement expired long ago, but there has been nothing—finance apart—to stop Russia buying what it wants in Britain, and practically no restrictions on its sales here. After making repeated requests for a British government loan, both in London and again when the British negotiators arrived in Moscow, Russia eventually accepted Britain's refusal to grant one. Was it needed more for political than trade reasons? The Russians apparently have not said that they will have to obtain longer credit terms than hitherto. The facilities of the Export Credits Guarantee Department are available to insure the banks' credits to Russia's suppliers, and though Russia is regarded as a good risk there is a limit to what the banks can extend. If Russia is going to buy much more than it sells the extra sterling will have to be earned by bigger sales to other countries or bigger sales of gold.

The communiqué released in Moscow gave details of the five year agreement, the text of which is to be published as a white paper next week. The two governments, it is stated, look forward to a substantial increase in trade in both directions. Sir David Eccles, President of the Board of Trade, expects Russian exports to Britain to rise by roughly £20 million to £80 million this year, mainly from raw materials such as timber, grain and metals, and without disrupting existing markets. Provision is made for substantial imports of Russian machinery. He did not say by how much he expected Britain's exports to increase. Russian orders for British capital goods this year already amount to over £20 million, and further orders are to be placed, over the period, for

> equipment for the manufacture of synthetic fibres and other chemicals, the food, pulp and paper and building industries, for forging, stamping and casting, machine tools, the "electro-technical" and cable industry, automation equipment and instruments, and pumping, compression and refrigeration equipment.

Trade in consumer goods hitherto has been limited to a few items and arranged *ad hoc*, with Britain agreeing to open a quota for, say, Russian matches if Russia opened one for British wool textiles. Now each country is opening a quota for such goods to the value of £2 million in the first year. This is the first time, it is believed, that a western nation has obtained such access to the Russian market. The Russians are to buy

> cars and trucks, textiles, clothing, knitwear, hosiery, footwear, carpets, leather goods, photographic materials, medicines, sports goods, musical instruments, toys and fish.

and will seek to sell in Britain similar goods:

> cars, cameras, watches, musical instruments, "hand-knotted" carpets, medicines, handicrafts, toys, tinned crab, matches, spirits and wines.

The Russians know that it will not be easy for them to open up markets here, but if their sales lag they will not necessarily reduce Britain's quotas next year; they will buy what suits them. The potential Russian market for consumer goods and the equipment to make them is vast. This agreement does no more than open a door; it will be interesting to see how much is let in.

BANK ADVANCES

The Rise Goes On

THE extraordinary rise in bank advances touched off by the ending of the squeeze last summer still shows no sign of coming to an end. The several make-up statements of the "Big Seven" banks covering the five weeks to May 20 disclose a further aggregate rise of some £57 million, or only slightly less than the increase reported in April—when, however, the make-up period was one of four weeks. Thus, although there has been a substantial slackening from the peak rate of growth experienced during the main tax season in February and March—when total clearing bank advances, excluding loans to the nationalised industries, were rising at about £22-27 million a week, the expansion is still much above the normal rate. Once again, all the big banks shared in this movement, the largest increases being those experienced by Barclays (nearly £19 million), Midland (£10½ million) and National Provincial (£9 million).

This increased lending pressed further upon liquidity, so that several of the banks made additional sales of gilt-edged. Barclays sold no less than £28 million and Lloyds (for the second month running) roughly £15 million. In both these instances the sales more than offset the rise in advances, so that liquidity ratios rose (to 31.5 and 30.9 per cent respectively), but most of the other banks offered a further tightening of their ratios. Those of the Midland and Martins were only slightly above 30 per cent.

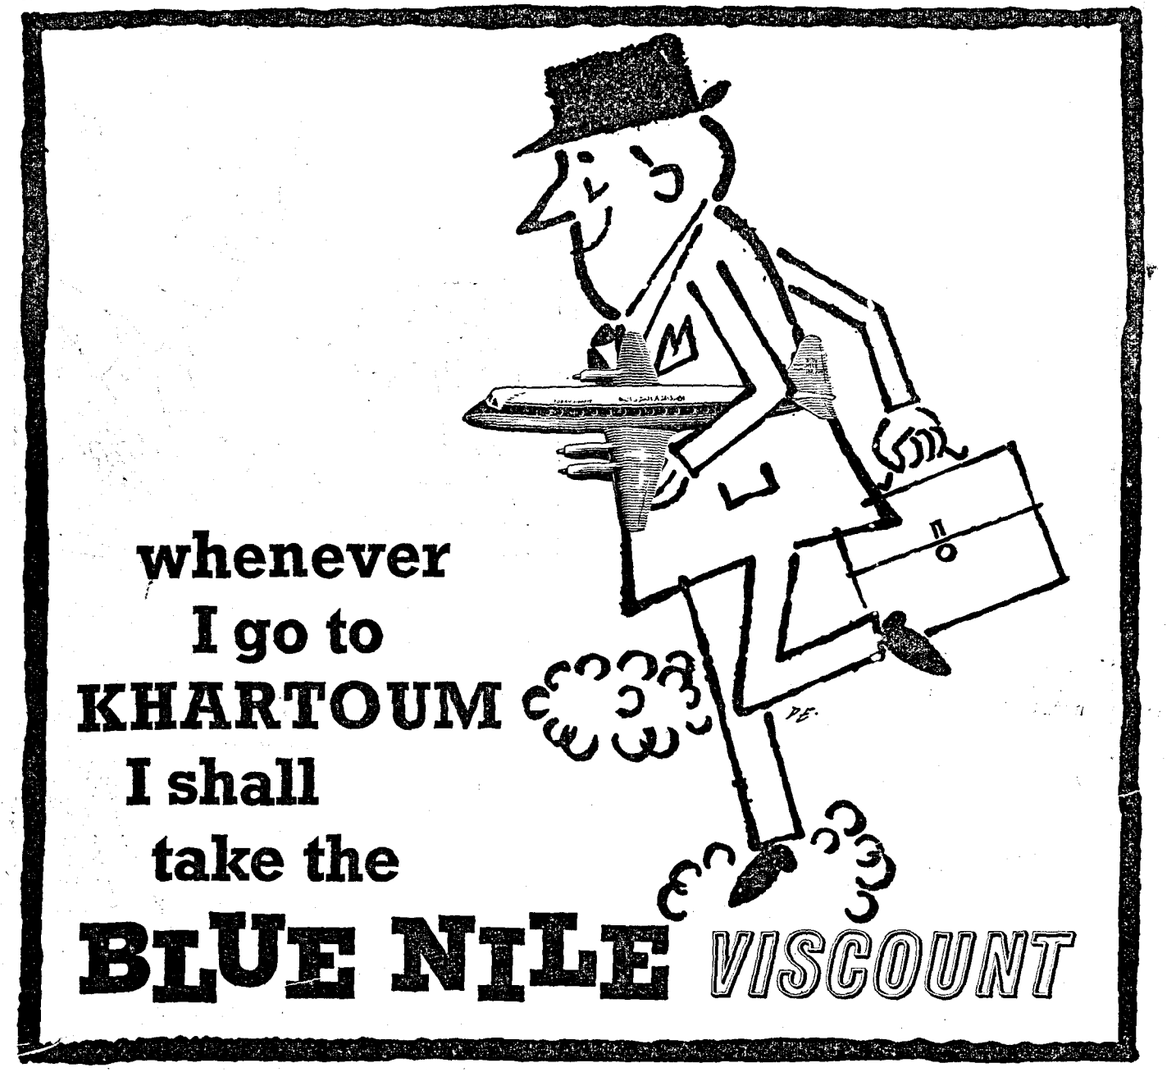
AIR TRANSPORT

4-Airline Pool

AIRUNION, the airline pool formed by Air France, Lufthansa, Alitalia and Sabena, looks every day more and more like the standard restrictive traffic pool that has per-

Better work in comfort

Imagine your office redesigned to make full use of your executive talents. An office carefully planned to put you and your visitors completely at ease. An office which says something positive about your personality, your work and the organisation you serve.



This short flight of imagination is the first step towards such an office. Next, contact Heal's Contracts and ask them to furnish you with their very latest ideas on making working conditions more efficient and more comfortable. Or alternatively, come and see the office furniture on show on Heal's third floor.
