TARGETS FOR COTTON TEXTILES

IN the fixation of targets for cotton textile industry in the third Plan, the leaders of mill industry, represented in the Indian Cotton Mills' Federation, have displayed striking signs of political maturity, in distressing contrast to the high sense of idealism that had characterised their approach to the subject in the second Plan. They seem to have been obsessed not by the needs of consumers but by the desires of politicians in power. This remark would appear to be strange to those who are not acquainted with the Indian political scene, for they may wonder how the politicians in a genuine democratic country could run counter to the wishes of consumers. But, in this country, the consumers do not yet count so much as the small sections of community that are compact, well organised and highly vocal. The numerically large number of handloom weavers and the equally large number of consumers of *khadi*—a symbol of sacrifice and piety—have greater pull with the policy-makers and planners than the mass of consumers or the rich tax gatherers for the Government. This minority of influential people has succeeded in securing for a couple of million handloom weavers and a few hundred thousand hand spinners a closed market at the expense of the dumb masses. Apparently, the millowners have realised that it is no use fighting for these masses, as it means incurring the displeasure of the political vested interests. This explains why, in their latest plan, they have lowered the target for *per capita* consumption of cloth. In 1955, they thought that 22 yards *per capita* should be the target to be reached in 1961. They gave many convincing reasons in support of their view and stuck to this figure even as late as 1958, when the cloth market was passing through one of its worst man-made depressions. But, subsequently, they began to waver and, by August 1959, they were ready to believe that even 20.3 yards would do for 1966. They have now gone still lower and think that a *per capita* consumption of 18.5 yards of cotton fabrics is all that would be possible in 1966, a figure which is only 2.5 yards higher than the average that obtained in this country during the depression years of the 'thirties and 1.5 yards more than the figure in 1948-59.

This is not all. The millowners have also come to believe that the politicians who demanded that a greater share of the cloth needed by the masses should be met by the costlier handloom products are, perhaps, right. Thus, in their Plan for the cotton textile industry for the second Plan period, they had set the overall production target at 10,000 million yards. Of this, they wanted 7,800 million yards (equal to 78 per cent. of the total) for the mill sector, leaving 2,000 million yards (20 per cent.) for the handloom sector and 200 million yards (2 per cent.) for the powerloom sector. This was to be the position in 1961. Now they say that, of the target of 9,500 million yards of cloth to be hit in 1966, it would be sufficient if the mills were given 6,200 million yards (equal to about 65.3 per cent. of the total) and that the handlooms and powerlooms could be given 2,800 million yards (about 29.5 per cent.) and 500 million yards (about 5.2 per cent.), respectively. Again, in their memorandum submitted to the Planning Commission in August 1955 and in the subsequent literature put out by them, they vigorously defended their case for the great bulk of production to be met by the mills. In contrast to this, in their memorandum to the same body four years later, they meekly observed that "it is not for the industry to determine how this extra production of 1,500 to 1,600 million yards) should be distributed between the two (the mill and handloom) sectors." They did, of course, try briefly; that, from the consumer's point of view, the mills were more economical than the handlooms. But their whole approach had changed, from that of a vigorous advocate with conviction in the justice of his case to that of a passive adviser. Their memorandum of August last gave one the impression that they wanted to be politically practical, that is, give the Planning Commission a plan which would appeal to it. The millowners' approach may be an admirable example of a desire to co-exist and co-operate with handlooms and powerlooms, but they are buying this peace at the expense of consumers in general. Instead of advocating a plan for plenty, and cheaper cloth, they have presented a plan which will perpetuate scarcity and make cloth even more costly.

It is true that, if one were to be guided by (*a*) the recent performance of the three sectors of the cotton textile industry and (*b*) by the availability of real resources (raw material, capital goods, and finance), one would be inclined to concede that the millowners' latest plan is quite realistic. Such a conclusion, however, would be superficial. It must be remembered, in this connection, that consumption of cloth has been artificially kept down by deliberate adoption of restrictive policies, such as high taxation on cloth, curbs on production of certain popular varieties in order to give protection to handlooms, and serious limitations on modernisation of plant and machinery to give peace of mind to the misguided workers. If today some of the bottlenecks appear to be serious and beyond speedy elimination, it is because of the lack of economic foresight and political courage on the part of the powers-that-be in the past. If these mistakes were repeated in the third Plan period also through a *status quo* in the textile policy, the bottlenecks would only grow in magnitude. And yet that is what the millowners and the planners are seeking to do. Unless a more forward-looking plan is adopted in regard to cloth from now on, there will be no incentive for the manufacturers of textile machinery, accessories, stores, etc., to plan in a manner that will comfortably take care of the mill industry's requirements in the coming years. As for raw cotton, the present shortage is a passing phase. Given a determined attempt by the agricultural and irrigation departments of State Governments, it should be possible to step up cotton production by a couple of million bales (over and above the normal crop of five million bales) in the next five years. The question is purely one of organisation and drive. As for finance, if a slight adjustment is made in the fiscal policy and if a textile policy which does not amount to penalising the efficient producer is pursued, it should not be difficult for a well-established industry like cotton textile to attract sufficient capital from investors.

One of the chief aims of planners should be to bring down the cost of living and raise the purchasing power of the rupee in the third Plan period. This would be possible only if the production of both food and cloth is raised to levels at which the supply is comfortable enough to prevent the operation of a sellers' market. An additional consideration so far as cloth is concerned is that it has to serve the important function of a foreign exchange earner. If the supply of cloth is maintained on a hand-to-mouth basis, as is the case now, the steadily expanding domestic demand will tend to keep up the prices above export parity and undermine the competitive capacity of Indian cotton manufactures in foreign markets. Surely, the planners cannot count on the present export incentive schemes being retained as a permanent feature of this country's export policy. Apart from the fact that these schemes are, in effect, not different from a multiple exchange rate system, they give a distorted picture of the country's economy and thereby encourage the adoption of wrong economic policies. Further, they are bound to be resented by other countries sooner or later.

If cloth is to become cheaper, it is obvious that more and more of it must be produced by the most efficient of the three sectors, that is, the mills. If mills are to reduce their costs, they should be encouraged to install up-to-date machines, capable of giving a high rate of production per worker. It is necessary to reconcile ourselves to the fact that, in this modern age, manufacture of cloth cannot be a labour-intensive industry. It cannot, if it is to be economic, provide direct employment to two to three million people in order to clothe 400 to 450 million people and to maintain an export market of the order of 800 to 1,000 million yards. It must also be borne in mind that India's aggressive neighbour, China, is rapidly stepping up its production of cotton textiles not by perpetuating its cottage industry but by taking to production on a mass scale through modern, highly automatic machines. At this rate, it will soon beat India not only in export markets but also by showing a larger *per capita* domestic consumption. If adequate recognition is given to all these considerations, it will be appreciated that the millowners' latest plan leaves much to be desired and that they will have done well to stick to their 1955 plan. There was no need for them to have been apologetic about that plan, for it was the Government that bungled by following unrealistic economic policies.

In advocating a bigger target for cotton textiles to be reached mainly through mills, we are not unaware of the fact (*a*) that even now the Planning Commission is keen on a target which is some 200 million yards less than that finally recommended by the millowners, and (*b*) that adequate allowance must be made for consumers' growing preference for rayon and synthetic fibres. There is, however, no great difference between the millowners and the Planning Commission and what little there is, is only over minor details. The most important point is that the millowners have compromised their stand by acquiescing with the Commission in regard to the role of handloom industry. The

country must be warned that this cottage sector is being given a bigger role than it can undertake and that larger sums will have to be spent by way of subsidy and cheap credit than has been the case in the second Plan period. As will be seen from the I.L.O. study of this textile sector, reviewed on page 12 of this issue, the lot of handloom weavers has hardly improved, despite all the assistance that has been given to them. The State Governments have miserably failed to prevent the mushroom growth of handlooms. It is a pious hope to assume, as the Indian Cotton Mills' Federation does, that the recommendations of the Kanungo Committee will be faithfully implemented and that an increase of 1,000 million yards in the production of handloom cloth will be achieved in the next five years without any addition to the number of persons and looms employed in this cottage sector and merely through the introduction of improved types of handlooms. The Government of Madras State, the largest producer of handloom cloth, has practically refused to implement the recommendations of the Kanungo Committee and Mr. Kanungo himself has not been able to do anything in this matter, even though he has been a minister of commerce in the Central Government. As far as the consumers' preference for newer fibres is concerned, it is easy to exaggerate this factor. In any case, their share in the clothing needs of common people will continue to be small for several years to come. Cotton fabrics will undoubtedly constitute their principal clothing requirement.

One redeeming feature of the plan for the development of cotton mill industry during the third Plan period, however, is that the Planning Commission itself is agreed that the addition to productive capacity should be brought about through automatic machines. We would even go a step further and suggest that the industry must draw up a plan for consolidating its position by eliminating the uneconomic units and by integrating the smaller units into big combines that can resort to mass production of cloth. Indeed, our suggestion for a bigger production target does not necessarily mean a proportionate increase in looms and spindles, but introduction of new types of machinery and new process of production, leading to better varieties of cloth at lower prices. The greatest defect in the present approach of millowners and the Planners alike is that they have tried to work out the target on the basis of what the people can afford to spend on cloth, instead of on the basis of minimum *per capita* needs of the people. Unless the latter basis is taken, the textile plans and policies will continue to be unrealistic.

COMMUNITY PROJECTS

IT is surprising that the National Conference on Community Development, which met at Srinagar last month, should have felt a certain sense of "unhappiness" over the seventh evaluation report on community development projects. Apparently, the delegates had lost all capacity for taking genuine criticism in good spirit, which is a fundamental prerequisite for national progress. It is true that the report does point to some defects in the organisation of community projects. But, then, it is not something which might not have occurred to other impartial observers. All that the report does is to give a statistical shape and a local colouring to a general impression. It is also true that the report deals with a very small sample of projects; 18 blocks were selected for special study. But this circumstance, as all students of statistical sampling methods know, cannot invalidate altogether the conclusions which otherwise stand the test of impartial scrutiny.

If the Conference expected to be presented with a flattering report, it could have undertaken the task itself; only, it would have meant a dangerous sense of complacency, not critical evaluation. Indeed, the delegates, one would have thought, would be happy to have the report, which, in its present form, is a safe guide to the solution of the chief problem to which the Conference addressed itself, namely, increase in agricultural production. The report throws much light on the shortcomings in the rural sector. In fact, this is a measure of its value. After all, if there are grave defects in agricultural organisation in community development areas which have received massive governmental aid, assistance and attention, the position should be much worse in regions not so happily placed. Having decided that increase in food production should get first priority in community projects, the Conference might, with advantage, have scanned the report for possible guidance.

What is the report's verdict on agricultural situation? It is an unvarnished account of lack of irrigation facilities, inadequate supply of essential materials and public apathy. The report notes that the lack of irrigation facilities is cited as a problem in the largest number of blocks, 14 blocks out of 18 blocks it studied. Extension of irrigation facilities has fallen short of anticipated levels. It is, however, recognised that the programme for irrigation is forging ahead in a few blocks. But pests and diseases and soil erosion are a serious problem in a few other blocks. Reviewing the adoption of improved cultural practices, such as line sowing, Japanese method of paddy cultivation, seed treatment and intensive manuring, the report observes that these practices "seem to be spreading very slowly, even if one notes only the number of blocks in which they have come into vogue." Shortages of fertilisers and of improved seeds and lack of adequate irrigation facilities have been cited as reasons for the slow pace of adoption of superior cultural practices. These defects deserve to be remedied early in the interests of rapid increase in agricultural output.

There is much scope for improving the machinery for the distribution of such essential articles as seeds, fertilisers, pesticides and agricultural implements. At present, the distribution centres are not always easily accessible to all villages. There have also been complaints of delay in the supply of material. The report observes that "the blocks have not yet been able to administer all the functions of supply and distribution, many of which are still in the hands of the departments of the State Governments; and, except in respect of fertilisers, the blocks have not yet fully succeeded in entrusting the job to co-operatives." Clearly, unless these defects are remedied through prompt attention to details of distribution of prerequisites of farm production, there can be no rapid improvement in agricultural output. The Conference did well to recommend that, during agricultural seasons, the *Gram Sevak* (the village level worker) should be relieved of all other duties, so that he devotes his undivided attention to agricultural programme. If he knows his job thoroughly, he should be able to function as an effective liaison officer between agriculturists and agencies for the distribution of fertilisers, pesticides and other essential means of stimulating agricultural production.

Two aspects of rural economic activity, cattle breeding and fisheries, have received special attention in the report. It would appear that, in several blocks, there is no definite programme for increasing the acreage under fodder crops. And yet, as the report itself warns, the "upgrading of breeds will fail to show significant results in the performance of animals, unless it is accompanied by necessary improvement in the quality and quantity of feeds supplied to them." As regards fisheries, the general picture, it is stated, is not a "particularly satisfactory one." The report observes: "In the older blocks, where schemes for the development of pisciculture had been undertaken in the initial period with great enthusiasm, the tempo of work slowed down perceptibly with the inauguration of the post-intensive phase or the Stage II." The result of this neglect is that the supply of spawn and fry has decreased in some areas; the tanks and ponds have not been kept under repair and renovation on a regular basis. The work in this field, according to the report, has also been hampered by conflicting claims of jurisdiction by different departments. Surely, pisciculture, which is an important adjunct to any food production drive, deserves better treatment.

In the ultimate analysis, community development projects depend for their success on the general attitude of the rural community towards measures designed to change their environment. The desire for improvement and co-operation and qualities of leadership are essential for progress. How do people react to community project administration? This is a vital question, on the right answer to which depends all social and economic progress. The question is not a purely academic one, for much store is set by rural industries, service co-operatives and co-operative farming. The Conference has approved of a scheme under which one industrial estate will be set up for every 15 development blocks by the end of the third Plan and one rural industrial centre for every five blocks if adequate finances are available, otherwise one centre for every ten blocks. The State Co-operative Ministers' Conference, which was also held in Srinagar last month, approved of a proposal for establishing 3,000 to 4,000 experimental co-operative farms. The objective seems to be the establishment of 20,000 joint co-operative farms, covering an area of two million acres, by the end of the third Plan. All this elaborate programme—apart from the wider question whether it is economically expedient to implement it—must come to a sorry end, if the general attitude of the community is one of apathy and indifference to developmental efforts. And, yet, the tragic fact seems to be that the rural community shows no signs of willingness to respond enthusiastically to governmental measures designed to change their life and environment.

The report does not present a flattering picture of public co-operation. The participation of *panchayats* in planning work is inadequate. The presidents of some *panchayats* are so powerful that they create a gulf between themselves and the people for whom they work. In many *panchayats*, meetings are seldom held to discuss public issues; in some of them, the only meetings that were held were those for electing office-bearers. Voluntary contributions have no doubt been made by the public. But they do not always represent genuine sacrifice; there have been cases "where buildings which are of no value to the donors have been presented for public purpose." There has also been a tendency to "inflate" public contribution through inclusion of irrelevant items, presumably in order to win official applause.

In many blocks, the general attitude of the people is that community development is a governmental affair; "since the Government is out to develop the rural areas, it should do everything without seeking any contribution from the people." In a few blocks, the majority of the people are not "convinced about the necessity and utility of the programme." It is true that there are blocks or groups of people in some blocks who have a healthy awareness of the importance of community development projects. But, on the whole, the people's attitude and reactions in most of the blocks are "not yet generally favourable to the success and growth of the C.D. programme." The basic philosophy and approach of the programme, it is stated, "are, therefore, inadequately subscribed to by the people in these areas." This is by no means a very encouraging picture. It suggests that much uphill work lies ahead of the administrators and rural reformers. The need for an intensive educational campaign is clearly indicated. There is no reason why the Programme Evaluation Organisation should not try to find out if at least the new generation, now at school, has a better appreciation of what is being done for the rural areas. Perhaps, such examination will also reveal the refinements that could be built into the system of rural education, with a view to instilling in the pupils a sense of constructive co-operation and leadership.

It is, however, pleasant to turn to the organisational study of nine successful *panchayat* and seven successful co-operative societies. Successful *panchayats* are found in prosperous villages; they are also lucky in respect of leadership. By far the most important reason why they are successful seems to be that they are "favourably situated in respect of communication and contact with towns"; "good roads and frequent bus service have brought the outside world nearer to them." This shows what efficient means of communication can do to community development. Successful co-operative societies also owe their success partly to the location in prosperous villages. Two other factors responsible for their success are: (1) services of trained or experienced secretary; (2) prompt arrangements for meeting the loan requirements of members; the secretary is empowered to give "hand loans" upto Rs. 50 recoverable in five monthly instalments against the personal security of the borrowing member and without reference to the managing committee. This indicates a promising line of reform of the rural co-operative structure, for it implies availability in adequate numbers of persons of honesty and social outlook to hold positions of administrative responsibility.

MARKET GOSSIP

IT is, perhaps, symptomatic of the malady afflicting general insurance in India that the number of companies closing down is on the increase. During the last two years, as many as seventeen companies, the majority of them foreign, have wound up their business. The decision of the Directors of the New Asiatic Insurance Company Ltd., one among the bigger general insurance companies of this country, to close down its business with effect from Friday, 1st July 1960, comes as a climax to the disquieting trend which has been in evidence for some time now.

It is stated that the Company will not do any fresh business except that of Birla Brothers, an allied concern. It will, however, continue to be responsible for policies and cover issued prior to that date and will continue to service them. The closure will be effected gradually by stages spread over a period extending more than one year. Initially, retrenchment notices will be issued to about 25 per cent. of the staff.

Unhealthy practices and unfair competition, which have rendered general insurance business unremunerative, are said to be the reason for the closure of the New Asiatic. It is noteworthy that, since 1955, the Company has not made any distribution to its shareholders. This explains why the Company's share of Rs. 5 paid-up is nominally quoted at only Rs. 2.76 on the Bombay Stock Exchange. There has been no business in this share since 26th February 1959. The Directors of the Company are understood to be planning to divert the Company's funds to some profitable channels which are not lacking these days. It is not known whether the demand of general insurance employees for nationalisation of their undertakings also has anything to do with this decision. But it will be only human nature, if this demand has created a sense of exasperation and disgust among employers.

One more major insurance company belonging to the Birla group and another outside this group are also understood to be planning to wind up their business, while many smaller units appear to be contemplating merger with bigger companies. These developments have caused considerable anxiety among employees too. Their representatives point out that about one-seventh of the general insurance employees in the country have already been thrown out of employment by the total and partial closure of over 40 units in the past few years.

Whatever the reasons for this trend, the very fact that even some of the bigger companies find it no longer worth their while to continue their business shows that there is something basically wrong with the way general insurance business is being carried on or controlled. That general insurance, which is directly connected with industrial and commercial progress, should stagnate and disintegrate when industrial development is gathering momentum is a strange paradox. Ever since the nationalisation of life insurance, which has been the mainstay of many units, insurance companies have become anæmic and general insurance has failed to keep pace with the increase in industrial production. Thus, while industrial production rose by 14 per cent. during the period 1955-58, the index of general insurance rose by only 8 per cent. The increase in industrial production in 1959 was even greater and the trend is buoyant. And, what is more, there is every reason to expect a more rapid economic growth in the next five years. It is surprising that, when new industries and new factories are springing up almost every day, general insurance, which should show a corresponding rise, should be in a despondent mood.

The consensus of opinion among insurers is that the present-day condition of the insurance market is due to unhealthy competition and many malpractices which, in spite of the Code of Conduct, continue to plague the trade. Insurers in this country, it is said, have yet to develop the fraternal spirit. Instead, suspicions and mutual distrust mark their relations. There is a virtual scramble for business, resulting in indiscriminate underwriting which leads to top-heavy acquisition costs, growing overhead expenses and increasing loss ratio, especially in the marine and accident departments.

There are undoubtedly too many general insurance companies in the country in relation to the size of the insurance market. The total direct gross annual premium of all the companies is only about Rs. 29 crores. This is small, as compared with other countries much smaller than ours. The volume of business available is directly dependent on the degree of industrialisation and, considering the pace of development in the country, it is not too much to hope that insurance business in India too will show substantial increase. As the country advances industrially, there will be plenty of scope for insurers covering new types of risks in such fields as machinery and employers' liability. But for this insurers must put their house in order first. It is no secret now that controls have failed to check malpractices. Twenty-two years of official regulations have not succeeded in achieving the desired objective. The entire question needs fresh thinking on the part of Government and insurers alike.

Sheet Glass Industry

With the increasing tempo of general construction programmes in the coming years, the demand for sheet glass is bound to be larger and larger. One estimate places the aggregate domestic requirements of sheet glass in 1963 at 171 million sq. ft., as against about 100 million sq. ft. in the current calendar year. The annual installed capacity actually existing at present is, however, put at not more than 107 million sq. ft. (on the basis of one shift working 300 days in a year), the number of units engaged in production being four (Hindusthan Pilkington Glass Works, Asansol, Seraikella Glass Works, Kandra, U.P. Glass Works, Bahjoi, and Indo-Asahi Glass Company, Bhurkunda). In view of the wide gap between current capacity and future demand thus, the Government of India has granted licences to two new units (Madras Glass Works and Indo-Belgian Glass Works, both of Madras) with an annual capacity of 18 million sq. ft. and 7.2 million sq. ft., respectively; these have not yet commenced production. Lately, the Government has approved of one more sheet glass manufacturing project, submitted by Mr. C. C. Desai on behalf of Cotton Agents, a Birla-managed concern. The project envisages the setting up of a 26.8 million sq. ft. capacity factory in the Saurashtra region of Gujarat State with the technical collaboration of Messrs. Komplex of Hungary. A welcome feature of the project is that it entails no immediate foreign exchange spending, since the Hungarian firm has agreed to supply the complete plant and other equipment worth Rs. 40 lakhs against payment in rupees. It is, however, not known how long Hungary will keep these rupees in India. If it is going to use the rupees for buying goods from India almost as soon as they are made available, then there will be very little net relief to the foreign exchange position of the country.

The Indian glass industry has been enjoying tariff protection since 1950, the rate of protective duty currently levied being 70 per cent. *ad valorem*. Thanks to protection and the efforts of manufacturers, the capacity of the industry has registered a notable rise, from a bare 20.4 million sq. ft. in 1950 to 106.56 million sq. ft. in January 1960. Following the expansion in capacity, production also has risen; it stood at 80.57 million sq. ft. in 1959, which compares favourably with 11.09 million sq. ft. in 1950. What is more, the range of products manufactured by this industry has, we are told, also widened and the quality of sheet glass has undergone considerable improvement, though there are some complaints about waviness, blisters, bubbles, scratches and uneven thickness.

Consequent on the notable rise in production as also due to heavy restrictions on imports (which, too, must have provided a stimulus to production), imports of sheet glass have declined perceptibly, from Rs. 143.43 lakhs (about 31 million sq. ft.) in 1951-52 to just Rs. 27.34 lakhs (5.79 million sq. ft.) in 1957, Rs. 3.58 lakhs (620,000 sq. ft.) in 1958 and Re. 1.8 lakh (200,000 sq. ft.) in 1959. Owing to heavy restrictions on imports, foreign competition, as Dr. S. K. Muranjan, Member, Tariff Commission, stated in the course of his speech at the public enquiry into the question of continuance of protection to the sheet glass industry, held at Bombay on Wednesday this week, has lost its force. Nevertheless, the industry has pleaded for continuing protection for a further period of five to six years. The plea is based on three grounds: (a) costs of raw materials (sand, soda ash, limestone and salt cake) are higher than those in foreign countries; (b) the domestic units, being small, cannot secure economies of large-scale production; and (c) productivity of labour in India is comparatively low.

Whatever may be the justification or otherwise for extending the period of protection—this question will be decided by the Tariff Commission—the sheet glass industry must endeavour to fulfil one of the obligations on the part of a protected industry, that is, reduction in the cost of production, accompanied by an improvement in quality comparable to that of imported variety, so that some relief is afforded to consumers at whose expense it enjoys protection. Dr. Muranjan did well to draw special attention to this obligation. In fact, he mentioned that, during the last two or three years, certain manufacturers had raised the selling prices of sheet glass.

Another I.F.C. Investment in India

Addressing the shareholders of Assam Sillimanite Ltd. at their annual meeting held in December last, Mr. S. M. Wahi, Chairman of the Company, disclosed that the refractory project of the Company had been sanctioned by the Government and that the International Finance Corporation had agreed to provide the foreign exchange component of the total cost of the project amounting to Rs. 1.55 crore. The International Finance Corporation has now officially announced its decision to invest $1,365,000 (equivalent of Rs. 65 lakhs) in the Company for expansion of operations to manufacture high-grade refractory bricks and shapes. The investment will be in U.S. dollar notes bearing interest at the rate of 6½ per cent. payable in dollars and maturing between 1965 and 1974. In addition, the I.F.C. will participate in the profits and receive an option on shares which are quoted on the Calcutta Stock Exchange.

Assam Sillimanite Ltd. is a young company, having been incorporated in 1951, and is engaged in mining and processing for export sillimanite, magnesite and kyanite, minerals used in high temperature furnaces employed by the steel, glass and ceramic industries. The Company's production is enjoying good demand and, in fact, last year it was not able to fulfil all the orders. The Company has now undertaken a refractory project and has obtained licence to produce 44,720 tons of refractories per annum. It has entered into a technical collaboration agreement with a West German firm. This project holds promise of a bright future, because there is good demand for refractories in this country. The present installed capacity of refractories in India is 444,000 tons per annum, while the requirements by the end of the second Plan itself are reckoned at one million tons, that is more than twice the installed capacity. Imports have recorded a steep rise from Rs. 30 lakhs in 1953 to Rs. 3.30 crores in 1959. There is thus an obvious necessity for augmenting the indigeneous production. The production by the Company's new plant will, therefore, fill a part of the industrial need for this high-temperature furnace material. All raw materials for this project are locally available. It is estimated that the first two years of full operation will bring about a net annual foreign exchange saving equivalent to the I.F.C.'s dollar investment.

The plant will be located at Ramgarh, Bihar State, which is very near the centre of an area of rapidly increasing industrialisation. It will provide employment for 560 persons, including 50 skilled and 35 technical and managerial employees. The construction will be financed in two stages. The first stage will be partly financed by the issue of additional shares and the second stage out of the retained earnings and issue of additional shares. The authorised capital of the Company has already been raised from Rs. 1 crore to Rs. 1.60 crore by the creation of 600,000 equity shares of Rs. 10 each to provide for the issue of additional capital. The present issued and paid-up capital is Rs. 30 lakhs.

The I.F.C.'s investment in Assam Sillimanite is its thirtieth investment, bringing the total to $30.5 million in projects located in 13 countries. When the news reached Calcutta, the shares of Assam Sillimanite gathered some strength and are being currently quoted at Rs. 12. The Company has yet to declare its maiden dividend.

Fresh Burden on Kerala Plantations

The latest modification of the Kerala Government's proposal to increase the land tax on plantation estates in the State does not mean any relief to planting companies. Presenting the State's budget on the 24th inst., the Finance Minister of Kerala announced a fivefold increase in the basic tax on land in respect of all plantation holdings—rubber, coffee, tea, cardamom, coconut, arecanut and pepper—having an area of five acres and above from Rs. 2 per acre to Rs. 10 per acre. The anticipated revenue from this increased levy was Rs. 80 lakhs. On Wednesday this week, the Finance Minister modified this proposal slightly, under which the first two acres of plantation holdings of five acres and above would be exempted from the increased rate of plantation tax. This would mean that, if a person has a holding of six acres, he would be required to pay a basic tax of Rs. 2 per acre on the first two acres and at Rs. 10 per acre on the remaining four acres, making a total land tax of Rs. 44 on his holding, whereas, under the earlier proposal, he would have paid Rs. 60. This modification is expected to reduce the yield by Rs. 10 lakhs. While the modification would mean some sizable relief to small holders, the big estates do not get a corresponding relief; it is almost negligible. For, irrespective of the extent of the holdings, the relief from the increased levy is only on two acres or Rs. 16.

The most disturbing feature of this increased levy is that it is payable not only on the actual area planted but even on the reserve lands. In most cases, the uncultivated area is twice as much as the actual planted area, so that the actual burden on the planted area is not Rs. 10 per acre, but Rs. 30 per planted acre. To the extent of this increase the earnings from the planted area will, therefore, be affected.

A more glaring anomaly of this levy is brought out in the case of tea. The impost works out to Rs. 3 per 100 lbs. of manufactured tea, which is 50 per cent. more than the cess on tea levied by the Tea Board. In the case of coffee and rubber, the enhanced levy will put up the cost by Rs. 5 per 100 lbs.

It may be argued that the total burden on the plantation industry under the modified proposal is only Rs. 70 lakhs and that it can well afford to bear this. In fact, the Kerala Finance Minister justified the levy saying that the yield from plantations being several times that from ordinary land, nobody would dispute the ability of plantation owners to contribute a greater share to the common pool of the Government's resources. The least that can be said about this argument is that it bears no relationship to reality. For this is not the only levy on the industry. It is the latest on a series of punitive imposts on plantations at the Centre and State levels. Tea estates, for instance, are taxed on 40 per cent. of their income by the Centre and the balance is taxed by the State. Rubber and coffee are exempt from Central income-tax, but the State Government levies agricultural income-tax on the entire income. All the three crops have, in addition, to bear land tax levied by State Governments, besides various other imposts. It may be noted, in this connection, that agricultural earnings from plantations in Kerala bear the highest tax per rupee. It is higher than that in any other State and for any other crop. Moreover, it was only three years ago that the Communist Government added to the industry's fiscal burdens by steeply increasing the rate of taxation on the larger properties.

Further, the additional land levy comes at a time when the industry is pleading for tax relief, in order that it may be able to implement its expansion and development schemes. For companies which have large developmental programmes and hold additional reserve land for this purpose, the increased land tax in Kerala would amount to payment on land which does not actually earn anything. It is said, in some cases, the additional burden would completely wipe out the tenuous surplus which the industry has been able to earn after the last increase in agricultural income-tax, super-tax and surcharge on super-tax. The enhanced land levy would, therefore, mean a heavy blow to the plantation companies. The need for raising production is great in rubber in particular. In the circumstances, unless the Kerala Government revises its proposal, planting companies may

(Continued on page 47)

EQUITIES FIRM

FURTHER RISE IN CASH SCRIPS

(From Our Own Correspondents)

BOMBAY, *30th June*

EQUITIES on the Stock Exchange presented a cheerful note during the week under review. While the boom in cash counters noted in the previous weeks continued, the speculative buying in the forward list once again revived, notwithstanding the addition of two more scrips to the list of shares which were subject to payment of special deposits at the last settlement. Tata Ordinaries, Centurys, Tata Locomotives, among the cleared securities, Alembic Chemicals, Anil Hardboards, Baroda Rayons, Colour Chems, Dhrangadhras, Greaves Cottons, Hind Cycles, Jyoti, New India Industries, Premier Tyres, Radio Lamps and Standard Batteries were among those in the cash list which were in the limelight and made impressive gains over the week. It is true that there was heavy profit-taking at the higher levels and the closing levels were well below the peak. Some of the prominent counters even suffered sizable losses over the week, but the underlying sentiment did not suffer any change for the worse, which indicates that the operators were not unduly perturbed by the widespread labour unrest in the country, particularly the threatened strike by the Central Government and the railway employees which would have a crippling effect on the economy if it were to materialise.

On Friday last, the President of the Stock Exchange fixed special deposit making-up prices for two more scrips, namely, Premier Construction and Tata Locomotive. The special deposit making-up prices for these were Rs. 340 and Rs. 235, respectively, while the usual making-up prices in the case of these two scrips were Rs. 360 and Rs. 255 and their closing prices on that day were Rs. 362 and Rs. 257. The special deposit making-up prices of the other five scrips fixed at the previous settlement were unchanged.

The latest making-up prices and closing prices for the last settlement of these scrips, as compared with the special deposit making-up prices, are as follows:

	Closing prices on 24-6-60	*Make-up prices*	*Special deposit making-up prices*
	Rs.	Rs.	Rs.
Khatau	480	480	370
Standard	1,720	1,720	1,325
Alcock	324	325	330
Telapur	368	370	330
Rayon	572	554x.d.	544.60x.d.

The Stock Exchange remained closed today [illegible]nt of half-yearly closing of accounts of [illegible]

Tata Ordinaries recorded a smart rise from [illegible]54.25 to Rs. 159.50 on Tuesday before heavy [illegible]laking brought them down to Rs. 157.75, [illegible]recording a net gain of Rs. 3.50 over the [illegible]. Indian Irons were pushed up early in the [illegible] of from Rs. 24.52 to Rs. 24.80, but the earlier [illegible]Srin[illegible] were more than wiped up when the scrips [illegible]ried yesterday at Rs. 24.32.

Textile shares were generally firm, despite the reaction during the last two days. Bombay Dyings closed with a gain of 60 nP at Rs. 67, after touching a high of Rs. 67.80. Centurys advanced from Rs. 509 to Rs. 534.50, before receding close at Rs. 516. Kohinoors moved between Rs. 354 and Rs. 342.50 and closed almost unchanged over the week at Rs. 344.50. Simplex finished at Rs. 180, after being marked up from Rs. 177 to Rs. 185. Central Indias gained Rs. 2 to Rs. 107 and Finlays Rs. 2 to Rs. 320. Khataus recorded a loss of Rs. 15 to Rs. 480, while Morarjees put on Rs. 5 to Rs. 335 and Mysore Spinnings Rs. 8.50 to Rs. 92.50. New Greats added Rs. 4 at Rs. 178, Podars Rs. 5 at Rs. 160 and Simplex Rs. 3 to Rs. 129. Standards provided a notable exception with a drop of Rs. 26 over the week to Rs. 1,700, the highest level touched being Rs. 1,885. In the cash section, Dawns recorded a rise of Rs. 7.50 to Rs. 122, while Mafatlal Fines shed Rs. 60 to Rs. 1,470 and Sassoon Spinnings Re. 1.70 to Rs. 68.30.

A marked rise of Rs. 5.80 in Ahmedabad Electrics to Rs. 89.50 was the highlight of trading in electricity shares, which ruled generally firm. Surat Electrics recorded a gain of Rs. 2 to Rs. 89. Tata Hydros improved by a rupee to Rs. 103.50, Andhra Valleys by Rs. 5 to Rs. 1,002.50 and Tata Powers by Rs. 5 to Rs. 1,030.

In the sugar group, Belapurs advanced from Rs. 373 to Rs. 376.50 before finishing at Rs. 375. Phaltans improved by Re. 1 to Rs. 194. While Walchandnagars were unchanged at Rs. 302.50, Maharashtra Sugars suffered a slight reaction to Rs. 243.50.

Digvijays continued to be a bright feature in an otherwise listless cement section. Maintaining the last week's upward trend, the shares scored a further 10 points to Rs. 168. Associated Cements moved narrowly between Rs. 144 and Rs. 141.50, while Orissa Cements were a shade quiet at Rs. 13.44. Ashoka Cements made a further gain of Re. 1 to Rs. 11.

Engineering shares presented a mixed trend. [illegible]uation of the previous week's downward [illegible]ock Ashdowns fell by Rs. 12 to Rs. 313, Locomotives rallied from Rs. 253 to before closing at Rs. 262. Premier recorded a fall of Rs. 12.50 to [illegible]s wiping out the previous week's gain. In sympathy, Indian Hume Pipes were marked down by Rs. 6 to Rs. 180. Cooper Engineerings were lifted up by Rs. 7 to Rs. 171, while Larsen and Toubros, after touching Rs. 45, shaded off to Rs. 43.75. Mahindras were steady at Rs. 23.76. Mukand Irons hardened by Re. 1.53 to Rs. 25.65.

Shipping shares continued to rule quiet, Scindias shaded off to Rs. 15.88 and Great Easterns to Rs. 17.92. Among automobiles, Hindustan Motors declined by 28 nP to Rs. 20.64, while Premier Automobiles looked up from Rs. 155.25 to Rs. 161 before closing at Rs. 157.

In the miscellaneous group, Bombay Burmahs gained strength from Rs. 595 to Rs. 610, but soon reacted to close at Rs. 598. National Rayons suffered a setback from Rs. 572 *cum-div.* to Rs. 539 *ex-div.*, which, on a *cum-div.* basis, showed a loss of Rs. 17.60 over the week, following the Chairman's disclosure at the annual general meeting on Thursday last week that the Company had no *intention of issuing right shares in the foreseeable* future. Gwalior Rayons, too, were marked down by Re. 1.25 to Rs. 42, while Baroda Rayons moved into the limelight with a spurt of Rs. 8 to Rs. 145. While Tata Chemicals were steady at Rs. 18.04, Tata Oils gave way to Rs. 85 from Rs. 88, to which level they had climbed up from last week's closing of Rs. 86.20, despite the increase in net dividend from Rs. 3.25 per share to Rs. 4.025 for the year ended 31st March 1960, in consonance with the encouraging results of the company for the year. Alembic Chemicals recorded a gain of Rs. 42 to Rs. 279, while Amar Dyes lost Rs. 30 to Rs. 470. Anil Hardboards picked up Rs. 25 to Rs. 405. Colour Chems gained Rs. 20 to Rs. 490 and Dhrangadhras Rs. 20 to Rs. 175. Indian Dyestuffs closed lower at Rs. 740 after being pushed up from Rs. 780 to Rs. 960, reflecting the market's disappointment over the announcement of a modest maiden dividend of 6 per cent., subject to tax, for the year to March 1960. While Ceat Tyres were lower by Rs. 10 at Rs. 275, Premier Tyres improved by Rs. 13 to Rs. 104. Voltas reacted to Rs. 262 after gaining ground from Rs. 273 to Rs 281. West Coast Papers gave way from Rs. 222 to Rs. 205.

Madras Stock Exchange

MADRAS, *29th June*

Fairly active conditions prevailed on the Madras Stock Exchange during the week under review, thanks mainly to sustained investment buying. The increase in the British bank rate by 1 per cent. to 6 per cent. did not have any effect on the behaviour of trading, in view of the announcement simultaneously made by the Reserve Bank of India that the Bank rate would remain unchanged at 4 per cent. Leading scrips in both the cleared and cash lists came in for good attention. Sugars were in the limelight. Teas were distinctly steady, notwithstanding the absence of any particularly encouraging advices from the auction centres. Coffees and rubbers, too, looked up. Textiles were well favoured, though there was an element of caution induced by the news that negotiations between the labour unions and management of textile mills in the region on the question of implementing the Textile Wage Board's recommendations had failed. Operators welcomed the move of the States' Minister for Industry and Labour to commence a conference of the interests concerned to discuss the issue. Barring cement shares, miscellaneous industrials ruled firm.

In the sugar section, United Breweries continued to elicit good enquiries and rose by Rs. 2.50 to Rs. 104. Cauverys advanced by Re. 1.75 to Rs. 142.75. East India Distilleries spurted by Re. 1.75 in the initial sessions of the week, but gave way subsequently and finished at Rs. 57.75. Indias closed higher by 50 nP at Rs. 12.10 *ex-div.* Travancores put on 10 nP to Rs. 11.80. Mysores, however, declined by 32 nP to Rs. 50.80. The pronounced rally in Deccans witnessed in the previous week was virtually arrested during the week under review. Actually, the quotation eased by 30 nP to Rs. 15.10.

Among teas, Coorg teas spurted by 40 nP to Rs. 5.80 *cum-div.* The Company has declared a dividend of 20 per cent. taxable (equivalent to 14 per cent. tax-free) for the year ended March 1960, as against 20 per cent. tax-free last year. Chembras hardened by 35 nP to Rs. 4.80, and their move to issue bonus shares at the rate of one share for every two shares held and following the decision of the Directors of the Company to pay a taxable dividend of 20 per cent. for the year ended March 1960 (equivalent to 14 per cent. tax-free), as against 15 per cent. tax-free for the previous year. Kil Kotagiris gained 30 nP to Rs. 5.65, Parksides 25 nP to Rs. 27 and Peermades 15 nP to Rs. 23. United Nilgiris gathered 10 nP to Rs. 22. Blue Mountains were better by 3 nP at Rs. 4.93. But Perikaramalais, which had gone up from Rs. 3.73 to Rs. 3.75 earlier in the week, closed a shade lower at Rs. 3.72, following the announcement by the Company a taxable dividend of 13¼ per cent. (equivalent to 9.45 per cent. tax-free) for the year ended March 1960, which compares unfavourably with 12½ per cent. tax-free for the previous year.

Coffee Lands provided a bright spot in the coffee section, the quotation advancing by 63 nP to Rs. 25.75. Consolidated Coffees scored a gain of 30 nP to Rs. 26.10. Ouchterlony Valleys moved up gradually by 5 nP to Rs. 4.98. Rajendras were maintained at Rs. 16.25, so also Balanoors at Rs. 17.75 and Cowcoodys at Rs. 6.05. Anaparals, however, were subdued at Rs. 4.78.

In the rubber group, Kallasas were marked up by 40 nP to Rs. 5.80. The Directors of the Company have declared a dividend of 22½ per cent. taxable (15.75 per cent. tax-free) for the year ended February 1960, as compared with 20 per cent. tax-free for the previous year. Pullangodes gathered 7 nP to Rs. 1.95. Cochin Malabars remained subdued for the major part of the week, but rose to Rs. 5.65 today, the net gain over the week being 5 nP. Thirumbadis put on 3 nP to Rs. 1.73. Midlands were fully steady at Rs. 12.65, Malankaras at Rs. 20.75 and Vaikundams at Rs. 30.25.

A *feature of trading* in the textile section was the revival of sizable buying enquiries for the newly quoted scrip, South India Viscoses, which had been distinctly easy in the previous week. The shares spurted by Rs. 8 to Rs. 153.50. Coimbatore Cottons strengthened by Rs. 6 to Rs 167. Venkateshas climbed up by Rs. 4 to Rs. 150 *cum-div.*, following the announcement of a dividend of 30 per cent. taxable (or 21 per cent. tax-free) for 1959, as against 16 per cent. tax-free for 1958. Rajalakshmis and Virudunagars improved by a rupee each to Rs. 79 and Rs. 47.50, respectively. Buckinghams hardened by 50 nP at Rs. 296 inspired by the announcement of an interim dividend of 3½ per cent. for the year 1960. Bangalore Woollens were steady at Rs. 195, Coimbatore Pioneers at Rs. 369 and Dhanalakshmis at Rs. 223. Premiers were done at Rs. 238, same as last week. The Company has announced a dividend of 18 per cent. taxable (or 12.6 per cent. tax-free) for the year ended March 1960, as compared with 12 per cent., tax-free for the previous year. Lakshmis fell by Rs. 3.25 to Rs. 162.75. Travancore Rayons closed lower by 48 nP at Rs. 37, after touching Rs. 37.75 in the beginning of the week. Maduras lost by 10 nP to Rs. 32.75.

In the miscellaneous section, Rallis staged a smart rally of Rs. 8 to Rs. 124 on enlarged support. Tube Investments continued to make headway, the quotation rising by Rs. 5 to Rs. 325 over the week. Textools moved up by Re. 1.50 to Rs. 173. Ashok Leylands gathered 39 nP to Rs. 8.95. Aluminium Industries, which had initially risen from Rs. 23.15 to Rs. 23.25, receded to the last week's level at the close. Among chemicals, Mettur Chemicals were higher by 35 nP at Rs. 12.70. Travancore Chemicals were pushed up by 10 nP to Rs. 15.50. F.A.C.Ts gained 5 nP to Rs. 10.50. Mysore Chemical Manufacturings and Mysore Fertilisers were firm, the former at Rs. 25 and the latter at Rs. 9.90. In the cement group, Orissas fell by 25 nP to Rs. 13.30, following the news regarding reduced dividend of 11 per cent. taxable (or 7.7 per cent. tax-free) for 1959, as against 15 per cent. tax-free for 1958. Andhra Cements dropped 15 nP to Rs. 11.10. India Cements declined from Rs. 6.90 to Rs. 6.83, before finishing at Rs. 6.87.

Calcutta Stock Exchange

CALCUTTA, *29th June*

Following a decline in buying interest, quiet conditions were again in evidence on the Calcutta Stock Exchange during the week under review. On selected attention, there were several features, but generally buying was cautious and the tendency for profit-taking more prevalent, following New Delhi's concern at the excessive speculation and at the rapid appreciation in the scrips of the new flotations, especially those with foreign collaboration. A point for particular attention in market circles was the reported New Delhi intention to expedite some of the new industrial projects in the private sector with foreign collaboration. However, the further upward revision in the U.K. Bank rate, it was thought, would lead to a similar step in India whenever anti-inflationary measures were being planned. Notwithstanding the fact that a huge block of shares in speculative Indian Irons have passed into hands with greater holding power, the scrip resumed the downtrend and this was an index that the realisation that prices had moved too high had *come to stay. The delay in the announcement* of the retention prices and the Government's desire to cost-examine accounts in the first instance were also factors that chilled enthusiasm in the leading counter. A review of the retention prices raised in November last by Rs. 5 a ton was due in April, and the delay and Government's desire to examine costs as late as now irritated market circles, as it was thought possible that this delay would in turn lead to delay in dividend announcement.

EASTERN BRANCHES OF LLOYDS AND NATIONAL AND GRINDLAYS TO MERGE

Negotiations are now in progress for the merger of the branches of Lloyds Bank Ltd. in India, Pakistan and Burma with National and Grindlays Bank Ltd. The Boards of Directors of the two banks consider that such a merger would be in the interests of both the banks. The aim is to make the merger effective from 1st January 1961 and a further statement will be issued as soon as possible.

Lloyds Bank has twenty-one branches in these three countries and the consideration for the merger of these will be the issue of shares of National and Grindlays to Lloyds Bank. Lloyds Bank will, however, maintain its interest in the banking business of the territories concerned, where it has long established and strong ties, through the medium of its shareholding and by representation on the Board of National and Grindlays. As the shares to be offered to Lloyds will constitute a substantial percentage of the capital of National and Grindlays, the Directors of the latter bank will submit the proposals for the approval of their shareholders before implementing the merger.

NEWS IN BRIEF

THE present trade agreement between India and Italy, which was due to expire at the end of last month, has been extended by one more year, that is, up to the end of June 1961.

Enfield India Ltd., Tiruvottiyur, Madras, has been licensed to produce 6,000 scooters a year from 1961. The Company, the only motor-cycle manufacturing unit in West and South-East Asia, is now producing about 5,000 motor cycles annually.

The Government of Orissa has decided to open fair-price shops for retail sale of life-saving drugs in rural areas. These shops, which will be attached to village hospitals, are expected to supply costly medicines to patients at cost price.

A four-man committee has been set up by the Government of India, under section 15 of the Industries (Development and Regulation) Act, to investigate into the affairs of the India Electric Works, Calcutta.

The Government of India has informed the Andhra Pradesh Government that the proposal to set up a newsprint factory at Bodhan in Nizamabad district is not technically feasible. The Government is, however, considering the possibility of setting up a paper plant at Bodhan.

A sum of Rs. 2 lakhs has been sanctioned by the Central Government for giving awards and financial assistance to artisans, technicians and others with inventive skill, in pursuance of the recommendation of the Invention Promotion Board. The Board was set up by the Ministry of Commerce and Industry some time back to encourage inventions in the sphere of small industries.

In order to provide incentives for promoting the use of cottonseed oil, the Government of India has decided to grant the manufacturers of vegetable products a rebate of 3 per cent. in the Central excise duty, if the proportion of cottonseed oil used in the production of such products is in excess of 10 per cent. If this proportion exceeds 10 per cent., a rebate of 5 per cent. will be given.

Sanction has been given by the Union Government for raising the annual capacity of the proposed coal mining plant, to be set up by the Heavy Engineering Corporation at Durgapur in the third Plan period, from 30,000 tons as originally envisaged to 45,000 tons. About 150 engineers and 50 semi-skilled workers are being sent to Russia for training in the working of such plants. The Durgapur plant is expected to go into production by the end of 1962.

A proposal to set up at Jamshedpur an alloy and special steel plant in the private sector has been submitted to the Government by the Tata Iron and Steel Company. The plant will have an initial capacity of 100,000 tons of ingots annually. This will be the second plant of its kind in the country, the first being proposed to be set up at Durgapur in the public sector, with an initial annual capacity of 80,000 ingot tons.

The establishment of the tonnage oxygen plant at the Rourkela steel factory has been completed, with the commissioning of the third unit of the plant last week. The oxygen plant, the first of its kind in India, will supply low-cost pure oxygen to the iron and steel plant for the manufacture of ingot steel by the L.D. process, apart from providing nitrogen to the fertiliser plant, now under construction. The present production capacity of the plant is about 300 tons of oxygen and 540 tons of nitrogen per day.

Well over 100,000 tons of pig iron has been sold by the Durgapur Steelworks since its blast furnace went into operation in December 1959. Out of the quantity sold, the steelworks despatched 105,496 tons of pig iron of different grades, valued at about Rs. 2.29 lakhs, up to 15th June. This is inclusive of 3,973 tons of pig iron exported to the U.K., earning a foreign exchange of £79,460. Despatches of billets from the steelworks are expected to start shortly.

The possibilities of producing liquid fuel from low-grade coals and blast furnace gases are now being investigated at the Indian Institute of Technology at Kharagpur. A 100-gallon-per-day capacity pilot plant for the production of synthetic fuel from coal has been designed and fabricated in the Department of Chemical Engineering of the Institute. Its working will provide data for the design, construction, operation and maintenance of a commercial plant.

A proposal to set up an atomic power station near Bina in Madhya Pradesh, as a joint venture of the M.P., U.P. and Rajasthan States, is being considered by the concerned Governments. The region, which this station is designed to serve, is expected to have a shortage of 400 m.w. of power by the end of the fourth Plan. The proposed atomic station, with two reactors of 150 m.w., capable of being doubled subsequently, is expected to meet this shortage. This system will be interconnected with the existing and proposed hydel systems in the region.

Durgapur in West Bengal State has been suggested as the most suitable site for locating the proposed first alloy and steel plant in the public sector, according to the engineering consultants, Messrs. Dastur & Co. The consultants had been asked to examine the suitability of four sites, namely, Bhilai, Rourkela, Durgapur, and Bhadravati in Mysore. The initial capacity of the proposed plant will be 80,000 tons ingots per annum, but will be expanded in two stages to have an ultimate capacity of 300,000 tons. The capital cost of the plant, expected to go into production by about 1963-64, is estimated at Rs. 35 crores, including the foreign exchange component of Rs. 20 to 25 crores.

The Government of India has wound up the Rehabilitation Finance Administration with effect from 30th June 1960. The Chief Administrator, Rehabilitation Finance Administration, has now been vested with all powers and duties of the Administration, including, in particular, the power to recover loans granted by the Administration in the same manner as hitherto. The Administration, set up in 1948 under an Act of Parliament, has been in existence for the last 12 years, giving loans to displaced persons from East and West Pakistan to enable them to settle in business or industry. The total amount advanced by the Administration to such displaced persons aggregated over Rs. 11 crores.

The Joint Select Committee of the Andhra Pradesh Legislative Council has recommended that acreage, and not income, should be the basis for the fixation of ceiling on land holdings. It has prescribed four-and-a-half times the "family holding" as the ceiling for a family of not more than five members. Every member in excess of five will entitle the family to have an additional family holding. The family holding has been fixed as six acres of the best land or 72 acres of the worst class. For the purposes of this Act, land in the State is classified into eight categories. The first four are wet lands, class V lands are areas depending on precarious sources or irrigated dry land, and the last three classes are dry lands. The family holding will be six acres of A class, eight acres of B class, ten acres of C class, 12 acres of D class, 24 acres of E class, 26 acres of F class, 48 acres of G class and 72 acres of H class. The ceiling on future acquisition is placed at three times the family holding.

The total increase in population in India between 1951 and 1976 will be 206 million (from 362 million to 568 million), as compared with an increase of 138 million, assumed in the beginning of the current Plan, according to the latest estimates of the Central Statistical Organisation. In the third, fourth and fifth Plans, the economy will have to provide for 23 million, 46 million and 63 million more people, respectively, than had been anticipated. According to the C.S.O., the population was 391 million in 1956 and would be 431 in 1961. The assumptions made in the current Plan for the corresponding years were 383, 408, 433 and 465 million. The growth rate is expected to go up from 15.8 per 1,000 per annum in the first Plan and 19.1 in the current Plan to 21.4 in the next Plan. Even in the fourth Plan, the rate will not be much less than the rate in the current Plan. In the fifth Plan, the rate is expected to decline sharply to 14.7. The marked increase in growth up to the end of the third Plan is attributed to the assumption that the death rate will decline more sharply than the birth rate.

The Attorney-General of India, Mr. M. C. Setalvad, is reported to have informed the Government of India that the draft Bill for the amalgamation of uneconomic collieries is constitutional. The Bill will be introduced in the next session of the Lok Sabha, which will begin on 1st August. There are now as many as 500 uneconomic collieries in India. More than three years ago, a committee, headed by Mr. Balvantray Mehta, M.P., recommended that these should be amalgamated into economic units, each with an output of at least 10,000 tons and an area of 100 acres. Since it has not been possible to bring about amalgamation on a voluntary basis—only 22 colliery owners volunteered for amalgamation—the Government has taken recourse to legislation. Under the draft Bill, a commission will be set up to draw up a detailed amalgamation plan and supervise its execution. Amalgamated collieries will be owned and managed by the proprietors of the constituent collieries and at no stage does the Government intend to take over the ownership. In case an owner of a colliery persists in his refusal to join an amalgam of other collieries, his colliery will be transferred to the "amalgamated colliery" on payment of a reasonable price.

A group of 11 senior Indian industrial executives and technicians connected with the sugar industry left New Delhi on 22nd June to study the latest developments in the production and marketing of sugar in the Philippines, Puerto Rico and the United States. The team, sponsored by the National Productivity Council, is undertaking the trip under the auspices of the U.S. Technical Co-operation Mission. Mr. D. R. Narang, Managing Director of Basti Sugar Mills of Uttar Pradesh, is the leader of the team which includes two representatives of sugar mill workers, the chief chemist of a co-operative sugar factory and the Director of the National Sugar Institute, Kanpur. Among the subjects to which the members of the team will pay particular attention during the course of their 50-day trip are modernisation in plants and processes used in the sugar industry, better methods of cultivating and harvesting sugarcane, utilisation of the by-products of the industry, including production of alcohol from molasses, and manufacture of sugar machinery.

From Abroad

A proposal to introduce decimal coinage in New Zealand is under the active consideration of the Government.

Of late, Switzerland has become the most important foreign industrial investor in Argentina, second only to the U.S., according to the Argentine President Frondizi, who is currently on a visit to Switzerland.

PERSONAL

MR. Jehangir J. Ghandy, Special Director of the Tata Iron and Steel Company Ltd., left for Geneva to attend the conference of the International Standardisation Organisation.

Mr. William T. Turner, who has retired from service as the U.S. Consul General in Bombay, a post which he had held for the last six years, left for Washington last week.

Mr. James Duncan Fraser, the newly-appointed Deputy High Commissioner for the U.K. in Bombay, will take charge of his assignment on the 8th inst. vice Mr. E. G. Norris, who left Bombay in March last.

Mr. Inderjit Singh, Joint Secretary, Special Reorganisation Unit of the Union Ministry of Finance and Secretary of the Committee of Plan Projects, has left for the U.S. to study organisation and methods work in that country.

Sir Matthew Slattery, who is now Chairman of Short Brothers and Harland Limited in the U.K. and Chairman of the Bristol Aircraft Company until recently, has been appointed a full-time Chairman of the British Overseas Airways Corporation, with effect from the 29th inst. He succeeds Sir Gerard d'Erlanger, who has resigned "because of business commitments." Sir Wilfred Neden, a member of the B.O.A.C. Board, has been appointed a part-time Deputy Chairman.

The Pakistan International Airways will buy four Boeing jets for its overseas service during the next five years. It also proposes to introduce a jet service between the East and West wings of Pakistan by next year.

The Eastman Kodak Company, New York, paid out last year $313,000 to its workers for adopted suggestions on how to improve products or manufacturing methods. About 40 per cent. of the 37,000 ideas submitted were accepted. About one-fourth of the employees submitted suggestions.

Two leading nuclear power groups in the U.K., the Atomic Power Constructions and the G.E.C.-Simon-Carves Atomic Energy Group, have announced their decision to form a combine. A new company is expected to be set up shortly; it will design and build nuclear stations in the U.K.

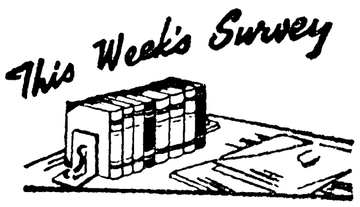
A leading Japanese shipping line, the Nippon Yusen Kaisha, has decided to open a new liner service between Indonesia and Western Europe from August next. The new service will replace the Dutch-owned ships which have been banned by the Government of Indonesia from calling at Indonesian ports.

The prices of most varieties of jute yarns in the U.K. have been reduced by about £5 per ton, following a decline in raw jute prices in Pakistan. The price of jute cloth has also been revised downward. In the past few months, it will be recalled, prices had moved up on account of dearer raw materials.

A seven-man delegation, representing the British Institute of Directors, which unites directors and managers of the largest industrial and financial companies in the U.K., has gone to Moscow to study the system of management and planning in Russia. The visit is at the invitation of the State Scientific and Technical Committee of the U.S.S.R. Council of Ministers. The delegation is led by Mr. Harold Drayton, a Director of the Midland Bank Ltd. and Treasurer of the Institute of Directors.

The Ceylon Tea Propaganda Board has recommended to the Government to agree to India's proposal that Ceylon should pay 53 per cent. and India 47 per cent. of the costs of the joint Indo-Ceylonese tea export promotion campaign in America. The expenses are now equally shared by the two countries. India proposed the revision on the plea that Ceylon teas were gaining ground in the U.S., while Indian teas were losing. It was India's view that contribution to the campaign fund should be related to the actual exports of each country. Originally, India had suggested that Ceylon pay 59 per cent. of the costs, but, as this was not acceptable to the Ceylonese Government, the compromise 53-47 formula was proposed. The Ceylon Tea Board considered the Indian request at its recent meeting and decided to recommend its acceptance by the Government.

The second Five-year Plan of Pakistan (1960-65), as was finally approved by the Economic Council on 21st June 1960, was launched on the 1st inst. The Plan entails a total outlay of Rs. 1,900 crores which represents a rise of Rs. 820 crores as compared with the first Plan outlay of Rs. 1,080 crores. It is proposed to set up two steel plants in Pakistan during the second Plan period. If the Plan is implemented successfully and fully, the national income of Pakistan is expected to increase by 20 per cent. in the next five years. After allowing for the rise in population, the improvement in the per capita income is estimated at 10 per cent. The Plan envisages achievement of self-sufficiency in food by augmenting the output by over 20 per cent. (from 13.2 million tons to 16.6 million tons), improvement in balance of payments by about Rs. 45 crores, creation of three million new job opportunities, acceleration of the economic growth of the relatively less developed areas, reorientation and expansion of education, health and social welfare facilities, and provision of better housing facilities, particularly for lower income groups.



WEST GERMAN AID

A WELCOME promise of fresh aid to India has been made by W. Germany. This is a sequel to the visit of the Union Finance Minister, Mr. Morarji Desai, who spent a week towards the close of last month discussing India's economic problems with the representatives of the W. German Government. An official *communique* issued from Bonn reveals that German assistance in the second and third Five-year Plans figured prominently in the discussions. The W. German Government has announced its readiness to make available, *on a multilateral basis*, credit to the tune of $30 million, in addition to the $70 million already provided in August last. This assistance will be of considerable help in bridging the gap in India's balance of payments. The Federal Government has also agreed to defer by four years, at the first instance, two-thirds of the liabilities under the Rourkela project maturing on 31st March 1961. It has also confirmed its readiness to assist in the expansion of the Rourkela steel works under the third Plan. It has further agreed to "secure for such orders larger than normal commercial terms of payment."

It is not clear whether the scope for participation of W. German industrial firms in India's expansion plans was specifically examined by the representatives of the two Governments. Recently, the Federal Minister for Economic Affairs, Dr. Erhard Ludwig, pointed out that some of the largest German enterprises, and what was no less important, many medium-sized firms had agreed to set up plants in India in partnership with Indian capital. He emphasised that what an underdeveloped country needed was the inflow of investments, technical knowledge and skill rather than mere aid. He, however, added that his Government could render only indirect assistance for the flow of German capital to India which would be determined by differential interest rates and other factors. Despite this obvious limitation, there is great scope for German participation in India's industrial programmes. Perhaps, the exploration of the possibility for such co-operation will yield encouraging results. But this is a sphere in which the representatives of India's private trade and industry should take the initiative, though the two Governments could do much to promote non-official co-operation between the two countries.

MAN-MADE FIBRES

The rapid development of man-made fibres the world over and the increasing popularity of these fibres in apparel-making as well as for industrial purposes were well brought out by Mr. D. N. Shroff, President of the Silk and Art Silk Mills' Research Association, in his speech at the tenth annual general meeting of the Association held at Bombay last week-end. The statistics quoted by Mr. Shroff reveal that there are 17 recognised classes of man-made fibres, of which some 30 to 40 modifications are being produced in perhaps 100-200 different varieties. The aggregate world consumption of such fibres in 1959 was over 14.21 million bales of 478 lbs. each, as against 9.44 million bales in 1953. The increasing uses to which man-made fibres are being put are clearly evident from the recent U.S. data furnished by Mr. Shroff. Man-made textiles, we are told, have found thousands of uses in apparel wear, home furnishings, and furnishing in cars, railway coaches and buses. The consumption of man-made fibres for men and boys' wear has increased fivefold in the last twenty years and that for industrial purposes by over 43 per cent. in the last ten years. Man-made fibres are used extensively for making motor tyres, filters, conveyor belts, driving belts, fire-hose, ropes, sails, fishing nets and other equipment, as well as in hospital and medical applications. Viewed thus, there is no exaggeration whatever in the statement of Mr. Shroff that persons who believe that man-made fibres are a luxury "are rather holding an obsolete and orthodox outlook in this nuclear age."

In keeping with the world trend, the man-made fibre industry in India, too, has expanded in recent years, though the pace of expansion has not been as fast as that elsewhere. The aggregate installed capacity of the industry in January 1960 stood at 101.20 million lbs. (viscose yarn, acetate and staple fibre combined) on the basis of one-shift working and 300 working days a year, as against just 30.06 million lbs. in 1955. Following the expansion in capacity, actual production has also risen from 27.98 million lbs. in 1955 to 82.92 million lbs. in 1959. Despite such a notable increase in output, the *per capita* consumption of man-made fibres continues to be low, being 0.4 lb. (1959), as compared with the *per capita* world consumption of 2.2 lbs. (1958). The coming years are, however, expected to witness a more significant expansion, according to Mr. Shroff. It may be noted here that the Government of India has approved of schemes for installing additional capacity to produce 78 million lbs. of yarn out of man-made fibres. The capacity includes 43 million lbs. of art silk yarn, 16 million lbs. of staple fibre yarn, 10 million lbs. of synthetic fibre yarn and 9 million lbs. of rayon tyre cord. The schemes are scheduled to materialise fully some time during the third Plan period. The Development Council for Art Silk Industry has recommended a production target of 325 million lbs. in the third Plan, of which filament yarn accounts for 184 million lbs. and staple fibre for 141 million lbs. The former consists of 140 million lbs. of viscose yarn, 24 million lbs. of acetate rayon, 10 million lbs. of cuprammonium and 10 million lbs. of synthetic fibres. The target for staple fibre comprises 130 million lbs. of viscose, 8 million lbs. of acetate and 3 million lbs. of cuprammonium.

When the man-made fibre industry is on the threshold of a new era of expansion and development thus, an association like the Silk and Art Silk Mills Research Association has certainly a notable part to play. It is, therefore, gratifying to learn from Mr. Shroff that the testing laboratories of the Research Institute run by the Association have already established a good record of service, in that they have tested more than 2,000 samples of textiles and issued 1,300 certificates on various aspects of testing. The laboratories are well equipped with up-to-date instruments. The Association has also undertaken to carry out the testing of art silk fabrics samples meant for export purposes. Further, the Association proposes to set up a technical institute for imparting training in the technology of silk and man-made textiles. Such an institute will doubtless help build up a cadre of competent technologists and technicians.

ONE MORE ENGINEERING UNIT EXPANDS

The progress of engineering concerns in recent years has been encouraging, despite the severe shortage of steel. With the completion of the expansion programmes of the two units in the private sector and the coming into production of the public sector units, the shortage of steel is slowly disappearing and this opens up a vista for the expansion of the old engineering units and the growth of new ones. Many of the old units are already thinking of diversifying their processing and fabricating activities. One of the latest entrants to this field is the Raymon Engineering Works Ltd., Calcutta. This Company was incorporated in November 1954 and received certificate for commencement of business in December 1955. It has been granted licence (this was in May 1959) to manufacture components for rolling stock, points and crossings, railway steel sleepers, pressed steel tanks, structural steelwork fabrication and cranes.

The manufacture of rolling stock and other equipments for the railway holds promise of a bright future, with the prospect of a sizable growth in railway traffic during the third Five-year Plan when the developmental programmes get into their stride. That the Raymon Engineering Works is well fitted to undertake the job is indicated by the fact that its factory at Santragachi, near Calcutta, is one of the most modern ones, with easy accessibility to raw materials and facilities for movement of finished goods from the factory. Power and water supply are assured. In fact, the Company has already an "educational order" from the railways for the supply of 250 freight wagons by the end of September 1960, of which 21 wagons have already been manufactured and delivered. The Company is assured of technical collaboration from the West German firm of Hoesch Export G.m.b.H. and its associates.

The production programme of the Company includes the manufacture of 1,000 wagons per annum, in the first instance, as against a licensed capacity of 14 wagons per day, production of rolling stock components, points and crossings at the rate of 900 tons per annum in the first two years, and the setting up of a pressed steel shop with a production target of 5,000 tons per annum of pressed fittings for rolling stock and pressed steel sleepers. It has a steel structural fabrication shop, with a capacity of 1,200 tons per annum and this will be expanded to a capacity of 4,500 tons per annum. The manufacture of cranes is also being taken up with a production target of 90 five-ton cranes per annum. It is also proposed to set up a grey iron foundry for the manufacture of cast iron sleepers with an initial target of 5,000 tons per annum. The Company's rolling stock section is already in production and, while the points and crossings shop is expected to commence production early in 1961, the pressed steel shop will be in operation within the next six months.

The capital outlay on the whole manufacturing programme is Rs. 1.30 crores. Of this, Rs. 1 crore will come from the issue of share capital and Rs. 30 lakhs will be provided as loan by the Industrial Finance Corporation of India. Of the issued capital of Rs. 1 crore, the managing agents, directors and friends have have already subscribed to Rs. 40.06 lakhs in ordinary shares of Rs. 10 each. The balance of Rs. 59.94 lakhs is now being offered to the public, made up of 399,400 ordinary shares of Rs. 10 each and 20,000, 6½ per cent. redeemable cumulative preference shares of Rs. 100 each. The preference shares will carry a dividend of 6½ per cent. after deduction of tax as prescribed from time to time. For full details of this issue *vide* pages i to iv of our last issue. The list for public subscription opened on 27th June and will close on 4th July 1960 or earlier at the discretion of the Directors. 50 per cent. of the paid-up value is payable on application for equity or preference shares and the balance on allotment. Part of the capital to be raised will be utilised to reduce the Company's present borrowings from banks.

Judging from the encouraging prospects for engineering units, in general, and the present investment climate, the Company's issue, which is only a small one, can be expected to be heavily oversubscribed. The Company has an influential board of directors and expects to receive large orders from the Railway Board for wagon manufacture on completion of the "ducational order" on hand. The Company can also expect to get large orders for rolling stock equipments, points and crossings, sleepers, etc., from the railways. On the basis of the existing trends, the Directors are of the opinion that, barring any unforeseen circumstances, the Company should be in a position to declare its maiden dividend on the equity shares in about 1962.

EXPORT PROMOTION

The need for diversifying the structure of India's foreign trade was emphasised by Mr. Y. B. Chavan, Chief Minister of Maharashtra, while inaugurating the annual general meeting of the All-India Exporters' Chamber in Bombay on the 28th inst. He pointed out that concerted efforts should be made to expand exports of finished goods. Larger imports of heavy machinery, industrial raw materials and food materials required for promoting the process of industrialisation, according to him, would not be possible, unless utmost attention was given to increase the volume of exports. Mr. Chavan made a fervent plea for close co-operation between the Government and the trade interests in attaining this objective.

Mr. N. L. Kara, President of the Chamber, in his address, generally welcomed the emphasis laid in the Government's policy on promoting the tempo of diversification of exports. He, however, struck a note of warning that, in the anxiety to diversify exports, the importance of increasing, or at least maintaining, the exports of traditional items should not be lost sight of. Outlining the problems facing the exports of traditional items, Mr. Kara observed:

"In the matter of tea, one is constrained to observe that we lag behind, amongst other things, in the matter of the right type of propaganda and publicity. Although this country is by far the largest exporter of tea, we have lost ground to our Southern neighbour and good quality tea is now associated with the name of that country. In cotton piecegoods, although our performance last year was satisfactory, we should consider ourselves fortunate if we succeed in reaching a figure of 600 million yards at the end of this year. The cause of this decline is the failure of the Indian cotton crop, depriving us of cheap raw material which was our strong point with regard to foreign competition. In jute goods and manufactures, it is imperative to find new uses of jute components by research or experiment and undertake demonstration of the superiority of this fibre over substitutes which are constantly springing up."

There is considerable truth in what Mr. Kara says, except his description of Indian Cotton. It is wrong to describe that cotton as "cheap." While it is essential not to concentrate the country's efforts on the export of a limited range of commodities—the fortunes of which are open to wide fluctuations in the world market—the traditional items are bound to have a major share in India's foreign trade, for a long time to come. Therefore, the country can ill-afford to forget the importance of such goods as tea, jute, cotton piecegoods, hides and skins, vegetable oils and oilseeds, for earning foreign exchange.

The Government has introduced a series of export promotion measures and incentive schemes with a view to boosting exports. Although Mr. Kara welcomed these measures in a general sense, he pointed out that, in many instances, they were "deficient and framed in a manner indicating lack of adequate knowledge of the mechanism of export trade." He complained that, in many cases, the total benefits of export promotion measures accrued to the manufacturer, who "is not the actual exporter of the goods, but only the supplier of goods for export," and, in other cases, it was provided that the export must be undertaken by the manufacturer himself, if the export promotion benefits were to be derived. He regretted that "no importance seems to be attached to the actual export performance undertaken by the exporter and which comprises a variety of activities, such as propaganda, publicity, market research and salesmanship." He added, "this methodology of leaving out the actual exporter of goods from the benefit of the incentives does not seem to have a parallel in any other country." Mr. Kara, however, did not elaborate the lines on which he would like to have the exporters associated with the incentive schemes.

Mr. Kara appeared to be in favour of the proposed scheme for the registration of exporters. He, however, wanted that, in the implementation of the scheme, "undue restrictions are not placed in the way of registration—in fact utmost freedom is necessary." He felt that the importance of this scheme lay not in the initial act of registration, but more in the subsequent act of de-registration adopted when the subscriber was found guilty of any malpractice. In other words, he wanted the authorities promptly to punish those found guilty of malpractices. This is, indeed, a sensible point. A regulation is useless, unless it is properly enforced. Mr. Kara was of the further opinion that, apart from exporters, the scheme of registration should also cover those engaged in the penultimate act of manufacturing goods for export." This, according to him, would impose a voluntary obligation of pre-inspection by the manufacturer himself at the production stage.

AN UNNECESSARY STRIKE

One wonders whether it was beyond the capacity of the Bombay Port Trust authorities and the B.P.T. General Workers' Union, which called the lightning strike of the Flotilla crew, paralysing shipping in the port for six days, to avert the strike. The Union Minister for Transport, Dr. P. Subbarayan, by whose intervention the strike was called off on Tuesday, apart from using his good offices, does not appear to have done anything which the parties themselves could not have done.

The strike was resorted to for the reinstatement of six workers suspended by the authorities and to get the 31 demands submitted by the Union conceded by the Port Trust authorities. Failing in its attempts to bring about a settlement, the Union Government referred the dispute to the Industrial Tribunal, Bombay, and prohibited the continuance of the strike. The situation took a serious turn, when the workers ignored the ban. It was thought that the Union Government would issue a declaration of emergency in the Port and prosecute the workers for defiance of the Government order. Such a necessity was happily averted by the intervention of the Union Minister for Transport. The strike has been called off on a partial fulfilment of the demands. It has been agreed that the six workers should be granted leave with full pay for such period till a committee set up to enquire into the charges made against them submitted its findings. It has also been agreed that, out of the 31 demands which the Union had submitted, those which the Port Trust had already accepted would be implemented forthwith and that the rest would be taken up for consideration on 1st July. The demands on which agreement could not be reached would be referred to adjudication.

Could not the parties themselves, through negotiation, have arrived at this understanding, which sounds a reasonable one, and thereby prevented the strike? The Union would appear to have been out for a show of strength, while the Port Trust authorities, in their anxiety not to submit to coercion, seem to have overlooked the intensity of feeling among the workers. The result is a heavy loss to the country. For six days, ships carrying foodgrains and fertilisers were stranded in mid-stream, and many ships were held up in the port. A strange feature of the present situation in the country is that no one misses a chance to emphasise the need for placing national interests above sectional interests. But it is always the former that go by default.

UNION RIVALRY IN THE SOUTH

The joint move of the All-India Trade Union Congress and the *Hind Mazdoor Sabha* to call out an indefinite strike by workers employed in the 80 cotton mills in Coimbatore district with effect from the 15th inst. is most deplorable. The provocation for the move might have come from the breakdown of talks held on 23rd June between the representatives of millowners and workers in the Madras State on the issue of implementing the Wage Board's recommendations. But the strike call is, as Mr. G. Ramanujam, Vice-President of the Indian Trade Union Congress, has rightly termed, premature and misconceived, revealing lack of appreciation of the latest position. This is especially so, as the Union Labour Minister has given a clear assurance that he would see to it that the recommendations were implemented and also as the Madras State Minister for Industries and Labour has proposed to convene shortly a fresh conference of the interests concerned to discuss the matters under dispute. It will be recalled that, when the I.N.T.U.C. served strike notice a few weeks ago, these two rival unions refused to join that move and boldly stated that they believed in the principle of negotiations and that a strike was unnecessary to settle the dispute with millowners. Why then do they think now that a strike is necessary, especially after Mr. Nanda's categorical assurance? The answer undoubtedly is inter-union rivalry. They apparently want to establish their hold over the workers in South India and cause discomfiture to the I.N.T.U.C. Here is a clear instance to show how innocent workers become the victims of power-politics, mere pawns in the hands of politicians.

The talks on the issues arising out of the Wage Board's award held at Coimbatore last week have, as already stated, failed, thanks to the divergence of opinion between the labour spokesmen and the millowners' representatives. The stand taken by labour was that the millowners must agree to pay an increase of Rs. 8 in wages with effect from 1st January 1960 and that the question of dearness allowance should be settled either by negotiation or through voluntary arbitration. The millowners, however, pleaded their inability to concede these demands, but agreed to pay the increase in wages with effect from 1st June 1960, provided there was an overall agreement on the other issues covered by the Wage Board award.

INDUSTRIAL IBCON CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

I.L.O. AND POPULATION EXPLOSION

MR. N. H. TATA HIGHLIGHTS THE PROBLEM

IN his speech at the forty-fourth session of the International Labour Conference, held at Geneva recently, Mr. Naval H. Tata, Indian employers' delegate, raised many issues of far-reaching importance to the future working of the I.L.O. In the context of the population explosion currently being experienced by many developing countries, threatening to depress further the already low living standards, the standard-setting activities of the I.L.O., Mr. Tata pointed out, lose their value and importance. If the population growth overtakes the rate of capital formation and production, he averred, no matter how much scrutiny is exercised by the I.L.O. in regard to the ratification of conventions, consumers in general and the working class in particular will face an era of diminishing standards of living. The I.L.O., Mr. Tata admitted, was not directly concerned with the population problem, but he felt that it was the duty of the organisation, devoted as it is to the promotion of workers' welfare throughout the world, to make them conscious of the impact of rising population on living standards. No amount of flogging, according to him, could make an employer pay better and higher wages, if the economic imbalances created by the pressure of population shook the very foundations of the national economy, making the value of money unreal in terms of its purchasing power. He urged the I.L.O. to undertake studies in the assessment of prospective wage structures in the light of estimates of population growth made by the U.N.

Mr. Naval Tata made out a convincing case for more attention being given to rural development by the developing countries. Many nations, according to him, have succumbed to the fascination for industrial expansion, ignoring entirely the need for developing the rural economy which, in most underdeveloped countries, has to sustain the bulk of the population. This has tended to make development lopsided. In the past, he pointed out, the I.L.O. had concentrated its attention more on the industrial worker, but it has now shown a lively interest in the welfare of the worker in rural areas. This interest should take concrete shape as a programme of rural development. Mr. Tata suggested that the starting point should be full-fledged and active collaboration between the I.L.O. and the F.A.O., as both of them were concerned with rural development. He made the following suggestions in this regard:

1. The I.L.O. should evolve a special rural development programme for a fairly long period of five to ten years.
2. The I.L.O. Conference should give its unqualified blessings to the programme by recommending the grant of necessary funds for the purpose.
3. A special effort should be made to allocate a substantial grant to finance this programme, far beyond the limits and resources available under the Expanded Programme of Technical Assistance.
4. A programme embracing vocational training, productivity, management development in cottage sector, research facilities, co-operatives and agricultural workers' education may be worked out for giving proper impetus to the movement.
5. A team of international experts should be invited to chalk out the programme of operational activities.

In the opinion of Mr. Naval Tata, no single action of the I.L.O. can do so much good for the happiness and well-being of the working classes as its complete identification with programmes of rural development. By so doing, the I.L.O., according to him, will also be able to widen its franchise to include a massive number of workers engaged in agriculture who have so far remained outside the sphere of its influence. Even if the process of launching vigorously the rural programme resulted in a slowing down of the standard-setting activities, he felt it was still worthwhile doing so in the interest of greater good of a larger number of rural workers.

Hours of Work

Regulation of hours of work has been a subject in which the I.L.O. has been interested from its very inception. Mr. Tata put the question of regulation of hours of work in the proper perspective when he said that, as far as the developing countries were concerned, the proposal for reducing working hours to 40 a week would result in neutralising the benefits of any improvement in productivity resulting from the current efforts, in this direction, of the I.L.O. and the member-countries. It will also take away from the worker a fruitful means of improving his pay packet through schemes of incentive payment related to productivity. It would be fatal, therefore, for the national well-being of underdeveloped countries to go in for a reduction in working hours at this juncture, when mounting population pressure called for the exploration of all avenues of higher production.

Besides, as he pointed out, if past experience is any guide, a reduction in working hours can hardly be achieved by means of an international instrument. Even the 48-hour week Convention adopted by the I.L.O., as early as 1919, has so far been ratified by no more than 27 countries while the 40-hour week Convention has received only four ratifications in the course of 25 years. It is, therefore, obvious that efforts to regulate hours of work by means of universally applicable instruments have not proved successful. In the face of these facts, a fresh attempt to have one more instrument on the subject would, according to Mr. Tata, only lower the prestige of I.L.O. Conventions. There is nothing to prevent an industry, if circumstances warrant it, from introducing shorter working hours through a process of collective bargaining.

Housing for Workers

Mr. Tata made some constructive suggestions regarding housing for workers, a subject in which the I.L.O. is deeply interested. In his opinion, housing is primarily a responsibility of either the Government or local authorities, as it concerns all sections of the people. Employers have only a limited obligation and they should be called upon to fulfil it in specific circumstances under which, in their own interest or in the interest of their workers, housing becomes an unavoidable responsibility. The slow progress of housing programme for workers in India and other developing countries is due, according to him, to two factors. First, construction of houses for workers is beyond the means of many employers. Second, it is not a remunerative investment proposition. While the claim of workers for the provision of housing is understandable, to ignore the needs of the other sections of the community, which are equally great, in preference to the industrial worker, is against the tenents of social justice. If, however, the Government wanted that the claims of industrial workers deserved special consideration, he suggested that it should give tax relief to industries, so as to enable them to divert some funds to housing or make special contributions towards a trust fund formed for the specific purpose of taking care of industrial housing.

The best approach to the problem of workers' housing, according to Mr. Tata, is for the Government and local authorities, and employers to a limited extent, to help workers to form co-operative housing societies for construction of houses suited to their requirements. These houses could, in course of time, become the property of the workers concerned. A great merit of this scheme is that it would give the worker freedom to own and live in the house built for him without being left to the mercy of an outside agency on termination of employment.

monetary machine working more slickly than it has done before, voices are being raised to ask whether the machine is not overdoing itself. Why should not production in essential sectors of the economy be allowed to rise when this particular extra output is wanted? It is a fair criticism and the gospel of the political opposition. But Mr. Amory will have to face those critics on his own side who ask why should not sterling obtain temporary relief through the International Monetary Fund to enable the U.K. to import the machine tools and other equipment needed to increase engineering exports—any measure in short, rather than this cutting down of an expanding economy the moment it begins to expand.—*All Rights Reserved.*

STORM AFTER WARNING

CREDIT SQUEEZE TIGHTENED

(From Our Own Correspondent)

LONDON, *24th June*

THE rise in the Bank Rate to 6 per cent. gave no one a shock, as the City had been waiting for at least a fortnight for a further tightening of the credit squeeze. But nobody had expected the tightening to be quite so severe as to include the addition of a further 1 per cent. call of special deposits from the clearing banks, particularly since the total of bank advances had at last stopped rising. But, of course, the Chancellor, who is firmly committed to the policy that a step taken in time is better than two steps taken too late, is not satisfied with holding advances at their present level. He is determined to drag them down.

LONDON LETTER

At the moment, there is a conflict between City philosophy which is quite prepared to accept restrictions when the need for them becomes patent and the Chancellor's new philosophy to introduce the restrictions before the need for them becomes evident and thereby hope to avoid any further inflation and shorten the period during which the restrictions may have to operate.

Highest in Western World

The United Kingdom now has a Bank rate higher than any other Western country: 1 per cent. higher than Germany, 2 per cent. higher than France and 2½ per cent. higher than the United States. The three months Treasury Bill rate here is nearly 4¾ per cent., and that compares with a rate in France of 3 per cent., in the United States of just over 2½ per cent. and in Western Germany of a fraction over 4¾ per cent. But there is no question now that London is becoming the Mecca for hot money. Sterling has shot up against all Continental currencies and against the dollar, and, with the added knowledge that gold is no longer flowing out of the country, the external state of sterling is as strong as it could be.

The Chancellor sees no ground for complacency in all this. He is aware of an acute shortage of labour, particularly in the southern part of Great Britain, and a spring reduction in unemployment substantially exceeding that of last year; he is aware of an inadequate labour supply in key industry after key industry; he is aware that the joint-stock banks under pressure to increase their special deposits with the Bank by £73 million by the middle of this month did so rather by the sale of securities than by the reduction of advances—and he is determined to try the force of the monetary weapon to the full. His new squeeze will not be operative for a month when half the deposits will be called, with the other half four weeks later. And given his analysis of the situation on the need to close down on all bank credit, his measures are not Draconian. He is giving the banks plenty of time to find their special deposits and, meanwhile, he is telling industry they must pay more for the luxury of borrowing.

Public Sector

Finally, to show the concern with which the Chancellor views the danger of rising costs, he is clamping down on the public sector of investment. Total investment in this sector for the current year 1960-61 is £1,700 million. The Chancellor's decision is that this same figure must remain the ceiling for next year, that is, 1961-62. Naturally, the Chancellor is open to criticism for attacking those branches of investment subject to public enterprise and leaving unchecked those branches where private decisions alone count—but the Chancellor's answer is that he will do the best he can where he can, with as little dislocation to the national economy as possible.

If the Treasury analysis is correct, then not only will inflation be forestalled but the balance of payments ought to become stronger, whether through some diminution of the growing tide of imports or increased selling pressure for exports, as a result of the restricted home market. Thus, the next trade figures—those for the second quarter of the year, are going to be studied with exceptional interest.

All this does not go on without controversy. Now that Mr. Heathcote Amory has got the

RELAXATION OF EXCHANGE RESTRICTIONS

FURTHER SUBSTANTIAL PROGRESS MADE IN MANY COUNTRIES

ARTICLE I of the Articles of Agreement of the International Monetary Fund had envisaged the prospect of the establishment of the multilateral system of current payments and the abolition of foreign exchange restrictions. The Fund is now happy to record, in its eleventh annual report on exchange restrictions released this week, that it is becoming increasingly possible for many of the Fund's members to visualise, in practical terms, the consummation of this hope. A large percentage of world trade and payments is now being carried out in accordance with the principles set forth in Article I and this percentage, the I.M.F. says, continues to grow. The I.M.F. report records with satisfaction the substantial progress made, during 1959 and the first four months of 1960, in reducing or eliminating exchange restrictions on a wide front. The beneficial effects of the widening scope of currency convertibility, the Fund's report says, have been felt in many areas. The evolution towards freer, more orderly, and less discriminatory trade and payments has been strongly supported by a high level of economic activity, expanding international trade and the general maintenance of monetary stability. It is heartening to find that this progress is not confined to highly industrialised countries alone. Many other member countries of the Fund have also taken active steps to achieve better trade and payments conditions. Recent developments in trade and payments have not merely reduced the scope of restrictions but also changed the nature of these restrictions. The aforesaid progress towards the establishment of the multilateral system of current payments has thus laid a firmer basis for a smoothly functioning international monetary system.

The most important step taken in this direction, which, as the I.M.F. describes it, is of key importance, was the introduction of external convertibility of currencies by several countries towards the end of 1958. Today, the currencies of about half of the Fund's members are convertible for virtually all non-residents. A number of countries, however, still have some restrictions on current payments, but these, according to the I.M.F., are of an insignificant nature and have also been simplified. The external convertibility has worked well without any setbacks. The rates of externally convertible currencies in exchange markets throughout the world have shown only minor fluctuations during the past twelve months. In fact, most of the Western European currencies have generally been strong in terms of the U.S. dollar. Late in 1959 and early in 1960, several Western European central banks raised their discount rates, thereby influencing not only their internal situation but also the international flow of funds through the exchange markets. An important consequence of the recent changes in the international monetary system, the I.M.F. says, is that international financial transactions and the rates in foreign exchange markets are again sensitive to relatively small changes in the major money markets.

Restrictive Systems Modified

Following the introduction of convertibility of currencies, most of the countries have also modified their restrictive systems further. These modifications were of a twofold nature, namely, (1) the systems of non-resident accounts and currency regulations have been simplified, as many of the rules governing these had become meaningless or redundant, and (2) discriminatory restrictions, initially based on the distinction between convertible and non-convertible exchange settlements, have been reduced substantially. The majority of the Fund members are now said to have achieved the elimination of dollar discrimination through liberalisation of dollar imports and several other members have announced steps that will lead to the final abolition of dollar discrimination during the current year.

Notwithstanding this very real progress, the I.M.F. says, discrimination, including that arising from bilateralism, "continues to play an important role in the import policies of many countries." In a few countries, it is maintained for balance of payments reasons, while in others, "protectionist considerations, especially in regard to agriculture, are now frequently hindering its elimination." The Fund has not relaxed its efforts in achieving the elimination of discrimination, when it is maintained for balance of payments reasons or when it is practised through the exchange system.

As a concomitant of the move to external convertibility, central banks in Western Europe have declared their readiness to guarantee, through official intervention, that the U.S. dollar quotations in their markets shall not exceed the officially established margins, most of which are about 0.75 per cent., leaving to arbitrage the task of ensuring orderly cross rates with other currencies. In accordance with these arrangements, other currencies, if they move in opposite directions in relation to the dollar, may fluctuate in terms of one another within the limits in excess of the margins set forth in Article IV, Section 3(i) of the Fund Agreement. This technical situation was regularised by the I.M.F. in July 1959, through its following decision:

"The Fund does not object to exchange rates which are within 2 per cent. parity for spot exchange transactions between a member's currency and the currencies of other members taking place within the member's territories, whenever such rates result from the maintenance of margins of no more than 1 per cent. from the parity for a convertible, including externally convertible, currency."

Multiple Currency Practices

As regards multiple currency practices, the I.M.F. reports that considerable progress has again been made during the last twelve months in eliminating and reducing the use of these practices. This has been achieved in two directions. In some countries, the complex multiple rate systems have been replaced by a single rate, while in others there has been a further simplification of the existing multiple rate systems. As a result of these changes and of the reforms made in earlier years, the number of complex multiple currency systems has been reduced substantially. Those countries which had in earlier years substituted single exchange rates for complex multiple rate systems, found their experiences with their new exchange systems during 1959 satisfactory and most of them were able to strengthen their internal reserves. There were, however, some exceptions to the general trend. For some countries, such as Cuba, Korea and the Philippines, introduced multiple currency practices. Commenting on the present trend in this regard, the I.M.F. observes:

"While resort to multiple currency practices has been greatly reduced in the last few years, restrictions have not yet been completely eliminated. In some countries, bilateral agreements and restrictions on trade and payments have been continued. In others, advance deposit requirements for imports have been imposed and export and import taxes have been introduced, in part as substitutes for multiple currency practices. Nevertheless, the exchange rates and more appropriate fiscal and monetary policies, give promise of further progress in limiting the use of exchange restrictions.

"In Latin America, where multiple rates were most common in the post-war period, the use of multiple currency practices has diminished greatly in the last few years, and complex systems now survive in only a few countries. Authorities in most Latin American countries that have had experience with multiple rate systems now regard them as unsatisfactory. On the other hand, a number of countries outside Latin America have, during the past few years, introduced multiple currency practices or made their existing systems more complex. Although these new practices may be intended as temporary measures designed to avoid the introduction, or even permit the relaxation, of trade and exchange restrictions, they involve the danger of proliferation of exchange rates, which, if allowed to go unchecked, may hamper economic development, create distortions within the economy, and hinder the balanced expansion of international trade."

Bilateral Payments

Another welcome development during the past twelve months and over was the persistent decline in the number of bilateral payments arrangements. As many as 53 bilateral payments arrangements are said to have been terminated by member-countries during the sixteen months ended April 1960. Of these, 37 were with other Fund members and 16 with non-member countries. At the same time, member countries introduced 15 fresh bilateral payments arrangements. In addition, six new bilateral payments arrangements were established by two countries for the channeling of payments related to specified sectors of their trade with certain other countries, although most of their trade continues to be settled on a convertible basis. The general liberalisation of international payments resulting from the introduction of external convertibility, the I.M.F. points out, has made it easier to dispense with bilateral payments arrangements. Nevertheless, it adds, Fund members still maintain some 260 bilateral payments agreements, of which 102 are with the other Fund members and 158 with non-member countries (mainly in the Eastern bloc). Though these arrangements may appear arithmetically large, they cover, according to the I.M.F., a relatively small proportion of the international payments of all but a few of those countries. In recent years, members of the Fund have been able to eliminate increasingly bilateral payments arrangements with State-trading countries. However, these arrangements frequently give rise to appreciable discrimination against Fund members and continue to be a source of concern to the Fund. The Fund has been sparing no efforts in bringing home to the members the need for reduction of bilateralism. It is noteworthy that, even where bilateral payments agreements have been eliminated, bilateral trade agreements have been generally maintained. In many countries, these trade agreements cover commodities not subject to import liberalisation. The I.M.F., therefore, emphasises that, as in other aspects of restrictions, it is important that "the gains to be derived from the establishment of a multilateral system of payments should not be frustrated by action in the trade field."

It will be recalled that the I.M.F. had, in its earlier reports, drawn attention to the growing practice of countries using advance deposits for imports as a prerequisite to obtaining import or exchange licences or to clearing goods through customs. While a significant use of this practice is at present followed in Chile, Colombia, Ethiopia, Greece, Israel, Nicaragua, Paraguay, the Philippines and Uruguay—in six of these countries, the advance deposits for some imports exceed 100 per cent. of the import value. The I.M.F. notes with satisfaction in its latest report that they were reduced or eliminated in some countries during the past twelve months. Drawing attention to the drawback of this practice, the I.M.F. says:

"Experience during the past few years has indicated that these devices are not very effective in reducing the demand for imports. The main reasons for this appears to be that the additional cost of importing which arises from the requirements is not very significant and that importers generally appear to have ready access to credit facilities to finance the deposits. As a method of monetary control, advance deposits for imports may be useful in absorbing liquidity from the economy for a short period after their introduction. Generally, however, they create a central bank liability in relation to importers, and therefore, once they have been imposed, it may be difficult to eliminate them without inflationary consequences. Moreover, the temporary absorption of funds resulting from advance import deposits may mislead Governments into believing either that the funds in question can be used for current spending or that the use of the regular fiscal and other monetary tools can be neglected."

Capital Payments

Over the past few years, several countries have liberalised payments of a capital nature and this trend has continued during the past twelve months also. Recording the steps taken in various countries in this direction during the year, the I.M.F. report observes:

"In Saudi Arabia, all limitations on the movement of capital by residents and non-residents were removed. Many countries which now maintain controls largely for the purpose of screening capital movements, and which have recently achieved considerable liberalisation of current transactions, also further liberalised capital transactions. In Austria, blocked balances as at the end of October 1959 belonging to residents of most countries were released, and many types of capital payments due to non-residents that were previously available only for credit to such accounts are now authorised freely for remittance abroad. Increased facilities were announced in Denmark for the repatriation of capital funds and balances held by non-residents, in addition to the facilities already available to foreign banks. In Finland, also facilities for the repatriation of blocked accounts held by non-residents have been extended. In Italy, Italian companies may now, subject to certain conditions, invest abroad. Regulations in the Netherlands governing transactions in securities have been liberalised, and other authorised capital transactions are now channelled through the official exchange market. In Sweden also, the regulations concerning transactions by residents in foreign securities have been liberalised. Similar measures had been taken earlier in other Western European countries. In a number of other Fund member countries, mostly outside Europe, capital movements may take place freely through free exchange markets."

In view of the progress made in the aforesaid directions, several member-countries of the I.M.F. which are at present availing themselves of Article XIV of the Articles of Agreement are in a better position to implement in full the obligations of Article VIII. Accordingly, the Fund is presently engaged in studying the various aspects of such a step and is looking forward to the formal acceptance of Article VIII status by a number of countries in the near future.

THE U.S. AND "THE SPLIT" IN WESTERN EUROPE

PROSPECT OF A SOLUTION NOT RULED OUT

[No solution has so far been found to the trade split between the Common Market countries and the "Outer Seven." But much hopes are being pinned on the G.A.T.T. which commenced its sittings in May last to bring about a solution under its framework. The following article taken from the "Report on Western Europe," prepared by the Economic Research Department of the Chase Manhattan Bank, before the G.A.T.T. negotiations started, provides an interesting account of the train of events leading to the above conclusion.—ED.]

RECENT events in Western Europe have made it clear that there will be no quick solution to the split between the Common Market "Six" and the "Outer Seven." They have also made it extremely unlikely, however, that there will be any serious tariff discrimination between the two groups this year.

The U.S. has emerged as the pivot point for negotiations between the "Six" and the "Seven." And the U.S. attitude hints that the solution, when it comes, will not be bounded by the limits of the European continent, nor even by the Atlantic Community, but will be hammered out under the global framework of the General Agreement on Tariffs and Trade (G.A.T.T.) and under the eyes of all 41 of its members.

The train of events that leads up to these conclusions began early in March, when Professor Walter Hallstein, President of the Common Market Commission, proposed that the "Six" accelerate their time-table of economic integration. Tariffs among the "Six" would be cut by 20 per cent. on 1st July 1960 instead of 10 per cent. At the same time, member countries would take the first step toward a common external tariff eighteen months ahead of schedule. These moves would introduce the first significant tariff discrimination against outsiders considerably earlier than had been expected.

As earnest of its liberal intent, the Common Market Commission included in the package an offer to cut the final common external tariff provisionally by 20 per cent. pending the results of the forthcoming G.A.T.T. negotiations.

Backing from Washington

The U.S. endorsed the speed-up proposal during Chancellor Adenauer's visit with President Eisenhower in March—before it had been approved by the Governments of the six Common Market countries. This touched off a sharp reaction from the "Seven," who opposed the speed-up. The envoys of the "Seven" and then Prime Minister Macmillan stated their opposition in Washington.

The "Seven" object to the Hallstein proposal, because they feel that the common external tariff, when it comes into force, will place them at a real trading disadvantage. For example, British automobiles entering Germany now face the same tariff as French autos—just under 13 per cent. By the end of the transition period, however, the tariff on British cars is slated to rise to 29 per cent., while the tariff on French cars will have disappeared entirely.

Although Britain now sells less than 15 per cent. of its exports to the "Six," British exporters have been counting on the continental market to absorb a larger share in the future.

Other members of the "Seven" depend still more on exports to the "Six." More than one-fourth of Austrian exports go to Germany alone, and Switzerland sends 39 per cent. of its exports to the Common Market.

The "Six" feel that the "Seven" tend to exaggerate the importance of tariffs as a determining factor in trade, and that the Common Market will expand trade far more than it will divert it.

The Paris Meeting

In this atmosphere, on 29th March representatives of 18 European nations, as well as the U.S., Canada, and the Common Market met in Paris to discuss ways of mending the split. The "Seven" proposed reciprocal tariff concessions. The "Six" remained aloof, pending ratification of the speed-up by all member governments. The U.S. suggested further study of the effects of the speed-up, and the meeting adjourned to reconvene within two months.

Less than a week later the German Government decided to delay approval of the Hallstein proposal, taking the view that it was more important to achieve a basis for negotiating with the "Seven" than to speed up the Common Market.

This made it impossible to meet the 1st July deadline and took some of the pressure off the "Seven," who had until then drawn little encouragement from Washington or Paris.

In both cities the U.S had affirmed its neutrality, but continued support for the Common Market's speed-up proposal made the U.S. appear to have lined up behind the "Six."

A Neutral Policy

Actually, the U.S. policy cuts deeper than that. With its world-wide commitments, the U.S. cannot afford to take sides—neither between the "Six" and the "Seven" nor between Europe and the rest of the free world.

Nations outside of Europe want to avoid any European or "Atlantic" solution to the split which leaves them on the outside. Australia wants no new machinery set up that might detract from G.A.T.T. New Zealand, too, wants any tariff concessions exchanged among the Atlantic powers to be passed along through G.A.T.T. Argentina has insisted on representation at future talks.

An important related issue, aid to underdeveloped areas, has already been put into a wider framework. The eight original members of the Development Assistance Group were joined by a ninth—Japan—when they met in Washington recently to plan the first steps toward a global approach to aid.

A G.A.T.T. Solution

All this makes it quite unlikely that any solution to European trade problems will be forthcoming when the 21 members of the North Atlantic community meet again in May to resume talks about resolving the split, and suggests that the most productive meeting ground for the "Six" and the "Seven" may be the G.A.T.T. negotiations which will start this fall and continue through 1961.

The Germans have ruled out any move by the Common Market toward a common external tariff this summer, and this not only allows more time for all concerned to study the issue of "Sixes" and "Sevens," but also gives the "Six" a priority issue to work out among themselves.

The Hallstein acceleration plan is far from a dead issue. In the first place it goes beyond tariff fixing, including proposals for greater coordination of social, agricultural, and trade policy as well. In the second place, Europeans are generally convinced that the start on the dismantling of trade barriers inside the Common Market has already proved beneficial to all six members; and this sentiment clearly favours further tariff liberalisation.

It is important to remember that it was not protectionist influence that stalled the Hallstein proposals, but just the opposite—the distaste of some members who would have had to raise their tariffs.

This is particularly true of the Germans. Like the Benelux countries, Germany generally will have to raise tariffs to reach the Common Market average. Unlike Benelux, however, Germany cut most of its tariffs by 25 per cent. after the Rome Treaty was signed; and these 25 per cent. cuts will have to be restored when the first step is made towards the common external tariff. This could result in significant tariff increases for a country already beset with worries over inflation.

The first weeks of spring have brought forth no solution to the trade split between the "Six" and the "Seven." But they have not been entirely barren. Events have drawn attention to the possibility of a world solution to the problem of "Sixes" and "Sevens," rather than a European or an Atlantic solution. Even more important, they have shown that both the "Six" and the "Seven" still place Western unity ahead of trade differences.

HANDLOOM INDUSTRY IN INDIA

I.L.O. REVIEWS RECENT TRENDS AND PROBLEMS

THE Indian Branch of the International Labour Office deserves to be complimented on its painstaking study of the handloom weaving industry in India, with special reference to Madras State. The study is not only timely but also highly useful, now that the question of apportioning the prospective rise in demand for cloth during the third Plan period among the mills, handlooms and powerlooms is being considered by the planners. The study is quite comprehensive in coverage, in that it (a) gives a historical sketch of the recent developments in the industry; (b) examines the series of problems confronting it in the fields of production, marketing, credit, organisation and socio-economic conditions of weavers; (c) analyses the measures taken in recent years to assist the industry, especially since the inauguration of Five-year Plans and the setting up of the Cess Fund (in 1953); and (d) assesses the progress achieved as a result of these measures. This factual and objective review of the I.L.O., it is to be hoped, will greatly facilitate the task of assigning a proper role to the handloom sector of India's textile industry.

The survey of the position of handloom industry clearly underlines the fact that the preservation and improvement of this industry will be conducive to the general economic development of the country. For one thing, the industry is highly labour-intensive in character, providing as it does employment for about 1.5 million weavers (at the rate of 1.25 worker per loom for 1.2 million active handlooms out of the 2,674,900 looms registered in 1959); the total population depending on the industry is placed at 10 million (August 1958). For another, the industry fulfils a felt need in the Indian economy, its current annual output rate of 1,800 million yards being sufficient to meet over 28 per cent. of the estimated domestic cloth offtake of 6,400 million yards. It may be noted here that, in certain specialised fields such as carpets, silk *saris*, solid-bordered *dhotis* and *angavastrams*, coloured *saris* from medium yarn, double-yarn towels, *lungis* and Madras handkerchiefs, the handlooms will always have a place, even if the present policy of State protection is withdrawn and the industry is left to the free play of competition with mills and powerlooms. And what is more, the industry has shown, according to the I.L.O. Study, remarkable adaptability to the challenge of the times, in production techniques (throw-shuttle to fly-shuttle and more recently towards still improved types of looms), the variety in production catering even to foreign consumers, and its methods of organisation.

State Aid

Nevertheless, the progress in the development of the handloom industry has not been as rapid or as steady as it ought to have been and much of what has been achieved is as a result of State initiative and provision of a closed market for the handlooms. The I.L.O. has done well to highlight this aspect. The State has been assisting the development of handloom industry through reservation of spheres of production, a ceiling on the capacity of the mill sector, imposition of a cess on mill-made piecegoods on top of a heavy excise duty from which handloom goods are exempt, arrangements for the supply of raw materials, co-ordination of research, training, etc., grant of loans and subsidies, remission of all direct and indirect taxes, and rebate on sales of handloom cloth. The total expenditure on handlooms met out of the Cess Fund (by way of loans and grants) in the more important States during the period 1953-54 to 1957-58 is given below:

(In lakhs of Rs.)

Andhra Pradesh 417.9; Assam 31.7; Bihar 132.2; Bombay 198.5; Kerala 75.1; Madras 636.7; Madhya Pradesh 104.7; Mysore 118.8; Orissa 70.8; Punjab 22.1; Rajasthan 26.4; West Bengal 104.5; Uttar Pradesh 191.0.

N.B.—The scheme of grants is mainly intended for development, training, research and marketing activities, while loans are meant for working capital and commercial operations.

The I.L.O. Study also supports the well-known criticism that the stability of handloom industry has been established at the cost of consumers. To quote it:

"It is well recognised that the prices of handloom fabrics are higher than those of mill products. In other words, the same varieties could be produced at cheaper rates by mills. There is a limit to increasing the productivity of handlooms and lowering the cost of their end-products, and no amount of improvement will make the handloom goods cheaper than mill goods. The incidence of reservation of spheres of production, the rebate scheme and the excise duty on mill cloth is ultimately borne by the consumer."

The I.L.O. further points out that the large weaving population dependent upon the handloom industry is, at the same time, the *raison d'etre* for a State policy of protecting and fostering this industry and an impediment to a quick solution of the problem of handlooms. It no doubt feels that extensive subsidising of the industry and the population dependent upon it would seem to be called for till a time comes when employment opportunities in other fields expand to such an extent as to drain away considerable numbers off depressed industries like the handlooms, agriculture and several handicrafts. But it emphasises the need for a comprehensive long-term plan aimed at freezing the looms at their present strength, improving productivity and thus freeing the underemployed and "sweated" women and children among weavers, and introducing power in the industry in stages when cloth consumption in the country begins to rise in future years.

Solutions To Problems

The Indian Branch of the I.L.O. has offered solutions to some of the pressing problems confronting the handloom industry. On the organisational side, it does not seem to be satisfied merely with the present official policy of encouraging and assisting the substitution of middlemen by co-operative weavers' societies. It advocates assistance to looms outside the co-operative fold also. In its considered opinion, apart from purchase and sale depots and financial aid through finance corporations, the formation of joint-stock companies of master weavers and a separate co-operative marketing organisation for these looms will be useful. As regards production, the I.L.O. Study makes the following suggestions:

Yarn supply: The problem has been tided over due to improvement in the general situation. So far as disparity in yarn prices is concerned, the policy of setting up co-operative spinning mills may alleviate the situation, but caution should be exercised to ensure that there is no oversupply of yarn in the market. In regard to Madras State, the complementary character of the spinning mill industry may be utilised in obtaining collective contracts for the supply of yarn for the handlooms. An ideal solution would be to allot a definite number of spinning units to the handlooms as part of future textile policies.

Techniques of production: A general conclusion is that, in spite of the impressive advance made in introduction of improved methods and appliances, there is still considerable scope in this direction. Higher productivity is a must if the industry is to stand on its own feet. To reduce the quantum of work on preliminary processing, it has been suggested that centralised warping and sizing sheds should be set up. The possibility of weaving sheds where handloom weaving can be carried on also might be explored, especially in view of the fact that, under the conditions obtaining in industrial co-operatives and master weavers' *karkhanas*, the per-loom production is higher.

Power and automatic processes: The use of these, suggested by the Textile Enquiry Committee, has raised controversy in recent years, mainly due to the fear that such a change will lead to unemployment. Even though in the short run these fears may be genuine, it is at the same time true that, in the long run, only these methods will enable the industry to prosper. There are several inherent characteristics of the weaving population which inhibit a change-over to power and automatic processes. These are, briefly, the size of the population involved, the limited market and the family-nature of the occupation. But these difficulties may become less acute in the future due to growing population and increase in cloth consumption.

The I.L.O. considers that the existing financial assistance to handlooms is inadequate. It wants an upward revision in the limit for granting working capital loan from Rs. 300 per loom (in the co-operative sector) to Rs. 500, the establishment of a co-operative financing agency (as separate from a finance corporation for looms outside the co-operative field), and a strengthening of the resources of the apex societies in their marketing and purchase activities.

Economic Conditions of Weavers

A brief reference is made in the I.L.O. Study to the economic conditions of weavers. While employment has been extended and underemployment reduced, there has not been any increase in the weavers' standard of living, because there has not been any substantial rise in real earnings mainly on account of a rise in the price level. The following statement shows the percentage of weavers belonging to various monthly earning groups in April 1956 and December 1958:

Earning group (Rs.)	April, 1956	December, 1958
0-10	5.9	4.8
11-20	13.0	9.0
21-30	17.5	11.5
31-40	17.1	12.4
41-50	12.2	13.3
51-60	10.9	12.8
61-70	6.6	8.3
71-80	5.9	6.6
81-90	3.9	5.1
91-100	2.8	4.7
Over 100	4.8	11.5

Characterising the continued low level of wages as a serious problem, the I.L.O. says that it "becomes all the more complex, because of the fact that any increase in wages will go towards increasing the price of handloom cloth which will adversely affect its competitive position *vis-a-vis* mills; this is the crux of the problem concerning weavers' earnings." Elucidating this point, it observes:

"Much leeway still remains to be made in regard to economic conditions of weavers. Data regarding their family budgets reveal the grim fact that, even for their subsistence, they have to borrow. In a much truer sense, the possibility of a better life for the weaver is intimately bound up with the prosperity of the industry and it would seem that the weavers' low standard of living will have to continue for some time to come. The only palliative measure adopted so far is the housing colonies. Even here, the repayment of instalments due on houses were found to be in arrears, in view of the low earnings of the weavers. In this connection, it may be worthwhile to consider giving these houses on a low rental basis. Another measure to assist the weaver might be the adoption of the thrift fund (contributed on a yardage basis) scheme, in force in Madras State, in other States also. It has been seen that the weavers in the industrial co-operatives and handloom factories represent the loomless weavers. At present, these weavers are not admitted to weavers' co-operative societies, since possession of a loom is an essential prerequisite and in view of the State policy of not encouraging an increase in handlooms. Setting up industrial co-operatives has been the only measure adopted so far for these weavers. Besides, the erection of weaving sheds attached to weavers' societies from surplus looms has also been suggested."

The I.L.O. is quite correct when it says that the significant improvement in the sales of handloom cloth in recent years has been due, to a pre-eminent extent, to three factors, namely, excise duty on mill cloth, reservation of spheres of production and rebate on sale of handloom cloth. It seems to suggest that these measures should be continued for some time to come. Supporting, in particular, the rebate on sale of handloom cloth, the I.L.O. recalls the view of the Handloom Seminar held at Madras in June last year that even a reduction in the rate of rebate has had very adverse effects on the quantum of sales. It also feels that the continuance of the rebate would seem essential from another viewpoint also, this being that even a short-term slump in the industry will lead to a worsening of the conditions of weavers, neutralise the progress made so far and widen the handicap that the industry has *vis-a-vis* the mills and the powerlooms.

The need for adopting measures designed to give a certain amount of support to handloom weavers cannot be disputed, but only it should not be at the expense of either the more efficient mills or the consumer. It is certainly not economics to penalise one sector for the sake of benefiting another sector, especially when that sector is capable of delivering goods to the community at a much cheaper cost. If this cottage industry is not to be condemned to the status of a relic of primitive economy or as a symbol of sweated labour with a miserably low standard of living, it has no alternative but to shrink in size by the adoption of improved methods of production. Palliatives or such short-cut remedies as those designed to promote sales of cloth will only perpetuate the present uneconomic character of the industry.

LABOUR DISPUTE IN MADRAS

Following the strike notices served by the Coimbatore District Textile Workers' Union on the managements of 80 mills in that region with effect from the 15th inst., the Madurai Textile Workers' Union have also served similar notices on 23 mills in the area, to be effective from the same date, if the Wage Board's recommendations are not implemented. The Madras Labour Union has also served a notice of strike on the management of the Buckingham and Carnatic Mills. The Union claims a membership of 12,500 out of the total 14,500 workers employed.

All clerical staff unions in Madras have been asked by the Tamilnad Textile Staff Co-ordination Committee to serve strike notices on their employers. Further, they have been asked to make "effective preparations" for conducting the strike from the 15th inst.

STILL MORE SCRAPPING OF MACHINERY

CONTROVERSY OVER MARKING OF IMPORTS

From Our Special Correspondent

MANCHESTER, 21*st June*

MANCHESTER LETTER

ANYONE who assumed that the current reorganisation scheme in the Lancashire cotton and allied industries would mark the end of scrapping of machinery was answered by Mr. S. L. Mason, Chairman of the Rayon Weaving Association, at what will probably be the last annual meeting of this organisation. "The phase of scrapping looms is by no means completed," he declared. "We must have the most up-to-date equipment; new looms, both automatic and *non-automatic*, must run on shifts; so must automatic looms already installed; but if this must inevitably result once again in overproduction, large-scale investment in re-equipment will be approached with little enthusiasm."

Planning to avoid overproduction was the answer, he asserted, and year by year old looms and other machinery would need to be scrapped. As the new plant was installed and output increased by the extension of shift-working, the old machines should be thrown out on becoming redundant.

Raising another vital point, Mr. Mason discussed the amalgamations now taking place in the industry, both in firms and associations. The industrial and commercial pattern in the whole country, he said, was changing rapidly and in every industry power was becoming concentrated more and more in the larger groups. The weaving section, he urged, by strengthening its links vertically, must get closer to its suppliers and its customers and by organising itself into larger weaving units, combine flexibility with mass production.

Future of the Board

A draft scheme for the merging of the functions of the Rayon Weaving Association with the Cotton Spinners' and Manufacturers' Association will soon be ready, he confirmed. The vital interests of the man-made fibre weavers would be preserved, while there is apparently wholehearted support for the amalgamation within the membership of both organisations.

It is somewhat strange that one of the first salvos to be fired against the Cotton Board, now that the time is approaching for the regular five-yearly review of its activities, should have come from the man-made fibres section. The annual report of the Rayon Weaving Association referred to the much greater impact which the Cotton Board was likely to have on this branch as the various sectors of the textile trade are drawn closer together.

Without quite putting into words a suggestion that the Board shoud be radically overhauled, if not abandoned in its present forms, the Association said: "There may be no advantage in the future in having interposed between the industry and the Government a body on the lines of the Cotton Board." On occasions there could even be disadvantages from the industry's viewpoint, the report added, as it could be a channel into which the Government could steer matters when it wished to avoid dealing directly with the industry itself.

Showing the Origin

Marking of imported textiles is a topic on which considerably divergent views are being expressed within the industry. Many traders feel that some indication should be given to the ultimate consumer of the origin of the goods available, so that an opportunity is presented to differentiate between purchases. Others contend that the buyer is not really interested in this aspect of the garment and that, in any case, it is virtually impossible to mark the majority of goods effectively.

Among those who take the latter view is the Cotton and Rayon Merchants' Association, which has submitted a detailed memorandum on the matter to the Committee on Consumer Protection. This document sets out the function of the converter, emphasising that to him grey cloth is just as much a raw material as cotton is to the spinner and yarn to the weaver. The conversion of cloth, in fact, is entirely in the hands of such traders, who specify or select the construction of the fabric and the nature of the finish to be given to it.

The Association boldly asserts that it has no evidence of any complaint on the part of either the consuming public or retailers of inferior quality due to the use of imported grey cloth. "Nor," it adds, "has it any evidence of any true consumer interest in the origin of grey cloth."

The major argument presented by the Merchants' Association in their case is that the marking of products with their grey cloth origin would be administratively cumbersome and impossible to police. Pointing out that tens of thousands of manufacturers make finished cloth into countless types of consumer goods, the Association observes that there are many accessories in garments which often have different origins in themselves, while several types of cloth are often used in the same garment and these again may have different origins. The cost of marking would be immense and the difficulty of detecting offenders would be equally complicated.

American Imports Threat

A new threat to British textile weavers—this time from the United States—is disclosed in the annual report of the Rayon Weaving Association. It describes "a tremendous growth" in imports of American man-made filament fabrics in the early months of this year, following the relaxation of dollar restrictions.

Up to November last, arrivals of United States cloth were negligible, amounting to only 156,000 yards in the first eleven months of 1959. In the following three months, the report reveals, imports aggregated 1,743,000 yards, and if maintained at the February level, would reach an annual rate of 10½ million yards—nearly double the volume of all retained filament fabric imports in 1959.

"This development constitutes a serious menace to British filament weavers," comments the Association.

Most of the imports are understood to be lightweight nylon fabrics. Ways and means of meeting the threat have already been discussed with representatives of British Nylon Spinners Ltd.

Retained imports of spun rayon fabrics have been steadily increasing over the last few years. In 1959, the rise was mainly due to a large increase in arrivals from Italy, coupled with smaller increases from Western Germany and Spain.

In Ten Years' Time

Few other industries have been so frequently investigated as the cotton mills of Lancashire. The latest in a long line of surveys has been prepared by the Research Department of a London merchant banking organisation. With considerable daring, the authors seek to estimate the future economic size of the industry, forecasting cloth production of cotton and man-made fibres by 1970 at approximately 2,440 million square yards which represents a rise of about 16 per cent. from the 1958 level.

On the apparel side, demand during the next decade should be affected by the anticipated rise in population of about 5 per cent. In this connection, it is important to remember that, in the 20 to 35 age group, the population should increase by nearly 12 per cent. By 1970, disposable consumer income could reach a figure of nearly £18,000 million—roughly 35 per cent. higher than in 1958. Expenditure on clothing, on the same ratio, could rise by some 27 per cent., from 950 million square yards in 1958 to 1,200 million square yards in 1970.

The demand for household fabrics is also likely to increase in accordance with the growth in population. The survey forecasts that, by 1970, a rise of over 6 per cent. above the 1958 level may take place, representing 560 million square yards, as against 525 million square yards.

In the industrial category, demand should rise in line with industrial production by just over 3 per cent. per annum, so that in this section usage of cloth is likely to increase from 625 million square yards to around 900 million square yards.

"Future prospects for exports do not look favourable at all" is the comment of the authors of the report on the overseas trade position, stressing that competition from Japan is becoming more intense. This is already strongly evident in Australia, while in Britain's second largest market, West Africa, not only is there mounting Japanese competition but India has also increased its shares of the available business. Chinese rivalry may also be encountered in the decade ahead.

In 1958, Lancashire's exports of cotton goods amounted to about 25 per cent. of its production, but the world figure was nearer 12 per cent. By 1970, the authors forecast, exports of cotton and synthetic fabrics are liable to be running at between 250 million and 350 million square yards annually.—*All Rights Reserved.*

PRICE CONTROL ON COTTON HAS ALWAYS BEEN INEFFECTIVE

NOMINEE SYSTEM WILL ONLY MAKE MATTERS WORSE

By N. Chakravarty

PRICE control on cotton was imposed in 1943 as a corollary to a similar measure on cloth introduced in the same year. Control on cloth was finally lifted in 1953, but that on cotton was retained for the reason that, when supply was short, mills must be helped to get the raw material at lower rates to enable them to hold the price line of cloth and that cotton should not be allowed to compete with food crops for the limited supply of land available for cultivation. But, controls notwithstanding, prices of Jarilla and Vijay—two principal varieties of Indian cotton—crossed their respective ceilings by Rs. 100 to 175 in 1948, 1949, 1950 and 1951 when availability was insufficient. While Jarilla prices remained lower thereafter due to higher production, Vijay again pierced the ceiling by Rs. 60 in 1956. This year the rates of these and several other varieties have ruled Rs. 150 to 175 over the ceilings due to a major crop failure. The forces of supply and demand have determined the prices. The statutory ceilings have not, in any way, checked the rising prices when cotton has been in short supply.

The reason for this failure is not far to seek. Of several stages through which cotton passes, the primary one is *kapas* (unginned cotton), the second is ginned cotton and finally yarn and cloth. The present control order applies only to the second stage and the two outer ends remain free from any price restrictions. As *kapas* is out of control, its prices must necessarily fluctuate by the supply and demand position. Cloth prices have, therefore, to be based on purchases of cotton, which is dependent on *kapas* rates and these rates may have no relation with official ceilings on cotton. The mills have to respect the ruling rates and adjust accordingly. The prices of coarse and lower medium cloths have risen by 25 to 30 per cent. over the last eleven years. The cotton control policy has proved to be basically unrealistic and redundant. It has not been able to play the role for which it was designed. The cotton trade is concerned with the controlled stage—ginned cotton—and is responsible for storage and distribution of the entire cotton crop of the country. It is the vital link between the grower and the manufacturer. The mills are prohibited from purchasing *kapas*. The trader is expected to buy it at whatever rate the grower demands, do the ginning and deliver the cotton to mills at officially fixed rates which may be lower than the *kapas* purchase parity. As a result, the trader becomes the victim of an extremely perilous position.

Implications

Thus, the actual implications of the present control policy are: (*a*) The grower shall not be concerned with the control prices of cotton; he is free to dictate the price of *kapas*. (*b*) The mills readily pay the prices of cotton based on *kapas* rates. In the absence of price control on yarn and cloth, the prices of these are safely raised and the consumer ultimately pays all increases in the prices of cloth. It is, therefore, a pertinent question to ask: For whose benefit is the Government so vigorously pursuing the illogical policy of price control? The situation, therefore, requires to be reviewed from the true perspective. Evidently, as no section of our people derives any real benefits from this policy, price control on cotton should be abolished immediately. The present system of quota allocation to mills, however, may be retained, in order to regulate purchases by them and help in the equitable distribution of cotton among the mills. This measure, coupled with a judicious import and export policy, is sufficient to hold the prices of indigenous cotton at reasonable levels.

It is said that there is a possibility of stricter controls by introducing the "nominee system" through which all Indian cotton would be distributed to the mills. Apparently, the authorities want to tighten the controls further and plug the loopholes in a desperate attempt to enforce the ceilings. But more and more controls are no answer to the problem created by an acute shortage of cotton. So long as prices of *kapas* on the one side, and yarn and cloth, on the other, are allowed to be determined by their supply and demand position, the prices of ginned cotton cannot be successfully controlled. If pre-sale survey of ginned cotton which is a part of the "nominee system" is enforced, then, as soon as *kapas* prices tend to rise beyond the ceiling parity of cotton, widespread mixings will be resorted to in a bid to keep the rates of cotton within the fixed schedule. The adverse effects of this scheme, if put into action, will be far too many. In the first place, as *Commerce* pointed out a few weeks ago, the admirable efforts of the Indian Central Cotton Committee in the direction of purifying seeds and maintaining the improvement in quality of cotton will be nullified. Secondly, a discrimination against cotton will have been made in relation to all other agricultural commodities and this will act as a marked disincentive for its intensive cultivation and higher production. Thirdly, cotton trade all over the country will come to a standstill; this will result in great unemployment, affecting numerous people. And, fourthly, the mills would have to accept cotton the quality of which cannot be selected by them. This situation will be wholly abhorrent to the manufacturers, since they will then be compelled to utilise unsuitable cotton which, in turn, will disrupt production and lead to lower efficiency, thereby resulting in increased costs. It is imperative for the mills to have the freedom to procure the right type of cotton of their own choice in order to ensure sustained quality production.

Increase in Ceilings

An increase in ceilings is another alternative that is being suggested as a solution to the present situation. Reports from New Delhi suggest that the authorities prefer this course, evidently on the score that it is the lesser of the two evils. If a general rise in ceilings of cotton is granted to recognise the fact that the present prices which are above the ceilings are legitimate, then the very purpose of the control policy stands defeated. If, again, in future, supply falls short of demand and prices pierce the revised ceilings, the new prices would have to be given due official recognition. This sort of action is only a palliative and not a cure. Ultimately, it may render the problem a vicious and chronic one.

The impracticability of successfully enforcing price control on cotton will be very clear from the table below. Besides, the utility of such modes of restrictions on price of cotton has long outlived itself. At the last meeting of the Cotton Advisory Board, while stray suggestions were advanced for an upward revision of floors and ceilings, the majority in the Board, including the Indian Cotton Mills Federation, the Ahmedabad Millowners' Association and the Cotton Buyers' Association, was in favour of decontrol of prices. It is to be hoped that the Government will take prompt steps in this direction and, without hesitation, do away with the price control on cotton.

EGYPTIAN COTTON

Reports from Bonn state that an Egyptian delegation will visit West Germany in search of official long-term commitments to buy Egyptian cotton at guaranteed prices. Such an arrangement, it is pointed out, although in line with Egypt's State-controlled system of handling bilateral trade, would be strictly opposed to Germany's free trade system under which private importers buy cotton customs-free from any source, in any amount, and at any price they care to agree to. German trade quarters believe that the Egyptian system, although it accounts for 70 per cent. of Egypt's exports, will not replace the system by which Germany imported $14 million worth of Egyptian cotton in 1959, out of total German imports from Egypt worth $22 million. Egypt seems to be seeking guaranteed cotton markets in the free world, because it has found that Russia and its satellites are no longer satisfactory outlets.

Barter deals have enabled Russia and satellites to take excessive amount of Egyptian cotton which they have used to dump on free world markets at less than the purchase price, thus underselling Egypt. This narrowed free world markets for cotton sold by Egypt and depreciated the value of Egyptian currency abroad. Further barter deals with individual countries of the free world are said to have been impaired by the Communist resale price pressure.

(*Continued on page 37*)

Table showing availability of Indian cotton to mills from current crop and consumption, as well as actual prices prevailing in the Bombay Ready Market

Year	Availability to mills from current crop	Consumption by mills	Actual prices in Bombay		Statutory ceilings of	
	(In thousand bales of 392 lbs.)		*Jarilla*	*Vijay*	*Jarilla*	*Vijay*
			Rs.	Rs.	Rs.	Rs.
1947-48	..	2,863	673 to 752	748 to 925	530	..
1948-49	1,429	3,125	660 to 705	810	620	690

SUGAR CO-OPERATIVES IN BOMBAY

THEIR PRESENT POSITION AND FUTURE DEVELOPMENT

A MOST striking feature of development in the Indian sugar industry in recent years has been the setting up of a large number of factories by cane growers on co-operative basis. This is the result of Government's policy of giving high priority to co-operatives in preference to joint-stock companies and providing enormous financial assistance, as well as managerial personnel. Actually, during the 1958-59 season, 21 co-operative factories were in the stage of production, though the total quantity of sugar manufactured was no more than 9.3 per cent. (179,000 tons, to be precise) of the aggregate sugar output of 1,904,000 tons, according to the latest annual Administration report of the Bombay State Co-operative Bank Ltd. The number is expected to increase to 31 by the end of the current Plan period (March 1961), the estimated daily cane-crushing capacity and actual annual rate of sugar output being 31,000 tons and 420,000 tons, respectively. Out of these, the erstwhile Bombay State alone will account for 21 units, including the 14 mills which were in production during 1958-59.

The progress in the establishment of co-operative sugar mills is thus quite notable, but, as mentioned at the outset, it must be attributed largely to official patronage and spoon-feeding. A very large part of the funds required for starting the sugar co-operatives has been met by the State, partly through direct contribution to the equity capital by the State Governments concerned and partly through loans granted by the State-owned and State-controlled Industrial Finance Corporation (I.F.C.), as well as other financing agencies. This aspect is clearly borne out by the following table which relates to the 17 units registered in the last year of the first Plan (this number excludes one factory which was registered but had not received factory licence) during 1958-59:

(In lakhs of rupees)

Owned resources—		
Government		178.00
Members		349.61
Funds		216.93
Deposits		91.68
	Total	836.22
Borrowings—		
I. F. C.		579.26
C. F. A.		585.12
	Total	1,164.38
Working capital		2,088.91†
Fixed capital expenditure		1,697.17
Cane purchased		529.98
Manufacturing expenses		74.42
Profit earned		6.05*
Total daily cane-crushing capacity	(tons)	15,300
Sugar output	(tons)	136,079

I.F.C.—Industrial Finance Corporation of India.
C.F.A.—Central Financing Agencies.
* Out of the 17 units, 11 factories earned a total profit of Rs. 20.68 lakhs, while 5 units incurred a loss of Rs. 14.63 lakhs and one unit neither made profit nor incurred loss.
† Most of this is provided by co-operative banks.

Bombay State

In the Bombay State, the 14 co-operative sugar mills working during 1958-59 together produced 134,000 tons of sugar, that is, 74.9 per cent. of the output in the co-operative sector of the country, and 42.0 per cent. of production (319,000 tons) in the State. One factory completed the erection of machinery but could not commence operation, two received factory licences but only one placed orders for equipment during 1958-59, and one unit had to wait for the licence. After the close of the year, proposals were submitted to the Central Government for licensing four societies, including the one which had been on the waiting list since October 1956. Out of the 18 societies presently registered in the old Bombay State, 12 were financed by the Apex Co-operative Bank, two by Central Co-operative Banks and one by a commercial bank, while, in the case of the remaining societies, the financing agency will be decided after the licence is obtained.

Although the number of co-operative sugar mills engaged in production in Bombay State during 1958-59 was larger at 14, as against 9 in the previous season, and the installed capacity was augmented by a little over 50 per cent. from 1,315,000 tons of cane to 2,010,000 tons of cane, the quantity of cane actually crushed rose only by 24.2 per cent., from 962,000 tons to 1,195,000 tons. This was due to three factors. First, four factories financed by the Apex Bank were suffering from teething troubles. Secondly, the oldest factory experienced shortage of cane on account of inadequate water-supply. Thirdly, the cane supply in Ahmednagar and Nasik districts was adversely affected by disease. Nevertheless, the sugar output was higher by 30.8 per cent. at 1,349,377 bags, thanks to the improvement in the percentage recovery of sugar from 10.83 to 11.41.

Heavy Borrowings

The co-operative sugar mills rely exclusively on their financing agencies for working capital requirements, but they are expected to raise, over a period, their own capital resources and reduce their dependence on outside borrowings for financing capital expenditure. Justifying such an expectation, the Report observes:

"The factories are expected to raise share capital from their members at the rate of Rs. 1,000 per acre and are assured of a contribution to their share capital of Rs. 19 lakhs by the Government. In addition to the contribution to the share capital, the members are expected to place at the disposal of their factories compulsory non-refundable deposits at a rate fixed by the Board of each factory for each year. The deposit money fixed per ton of cane crushed is deducted by each factory out of the price payable for cane to the member. Each factory is also expected to build up reserves and other funds out of profits. Thus, over a period, the sugar co-operative factories are expected to rely on their own resources for financing capital expenditure. In the initial stage, however, the pace of capital formation is inevitably slow on account of difficulties experienced by cultivator-members in squeezing savings out of modest earnings for fully paying for the shares and by the factories in acquiring deposits from their members and ploughing back funds out of profits on account of teething troubles in connection with the operation of their plants. On the other hand, the rise in capital investment during the past three years has necessitated capital resources of a high order. The main source of bridging the gap is, therefore, the Industrial Finance Corporation which sanctions loans to each factory against the security of fixed assets and the guarantees of the Central and State Governments."

repetition confirms confidence

The greatest indication of a customer's confidence in a product is his repeat order for it. Mysore Kirloskar Lathes bought one after the other by factories and workshops all over the country are an expression not only of satisfaction with but also of continued confidence in the sterling qualities of these machine tools made by the pioneers in this industry in India.

MK 360

The working of five units (Pravara, Rahuri, Ashok, Ganesh and Shri Ram) which can be said to have attained normal operational efficiency, the Administration Report points out, justified expectations. During 1958-59, we are told, these factories augmented their own resources by Rs. 128.50 lakhs to Rs. 372.67 lakhs, whereas, at the close of 1955-56, the total was Rs. 166.06 lakhs only. Their net investment at the close of 1958-59 was Rs. 598.19 lakhs, of which 62.37 per cent. was financed by the factories themselves. In the case of six factories (Girna, Bhogawati, Shetkari, Kodinar, Warna and Panchganga) which were expected to have trial runs in 1958-59 and of which one could not, the main sources of capital formation were the share capital and the reserves, deposits constituting a fraction of their own resources. The aggregate owned resources of these factories, therefore, amounted to Rs. 171.34 lakhs only, as compared with their net capital expenditure of Rs. 473 lakhs.

The aggregate loans sanctioned by the I.F.C. to the five factories mentioned earlier till the end of 1958-59 amounted to Rs. 231.50 lakhs, of which Rs. 210.50 lakhs were drawn, while the outstandings at the close of the year were Rs. 195.03 lakhs. The remaining six factories were sanctioned loans by the I.F.C. to the extent of Rs. 335 lakhs. It was also expected that additional loans for Rs. 50 lakhs would be sanctioned by the I.F.C. in view of the rise in capital investment. Out of the sanctioned limits, the factories drew Rs. 274 lakhs. The gap between the resources made up of owned funds and loans from the I.F.C. and the capital investment was bridged by the Bombay State Co-operative Bank.

B.S.C.B's Role

The role of the Bombay State Co-operative Bank in financing the capital expenditure of the aforesaid 11 factories continued to be dynamic during 1958-59, inasmuch as it provided funds pending receipt of loans sanctioned by the I.F.C. and also medium-term loans for amounts left uncovered by owned resources and the I.F.C's lendings. The Bank also granted cash credit even when a loan application was under the consideration of the I.F.C., the whole object being to ensure that finance should not be a bottleneck and that the erection of the plant should not be delayed. On their part, the factories ensured that the available capital expenditure was postponed. The total amount outstanding on account of loans sanctioned pending receipt of money from the I.F.C. was Rs. 114.78 lakhs as on 30th June 1959, while that on account of medium-term loans against Government guarantee aggregated Rs. 200.90 lakhs (including Rs. 29.40 lakhs allowed for payment of deferred instalments).

Further, the Bank also provided working capital to sugar co-operatives. The total loans sanctioned to the five factories in Group A amounted to Rs. 313 lakhs, made up of Rs. 35 lakhs pledge credit, against which the outstandings as on 30th June 1959 were Rs. 156.57 lakhs made up of Rs. 27,000 under clean, Rs. 1.07 lakh under hypothecation and Rs. 155.23 lakhs under pledge credit. Out of the six factories in Group B, which were expected to be in production for the first time during the year under review, one did not and two had only a very short season, and the remaining three had a trial season full of teething troubles. Credit sanctioned amounted to Rs. 251 lakhs, that is, clean credit Rs. 21 lakhs, hypothecation credit Rs. 45 lakhs and pledge credit Rs. 185 lakhs; but the utilisation was poor and the outstandings on the last day of 1958-59 were Rs. 10.57 lakhs, Rs. 14.52 lakhs and Rs. 25.34 lakhs, respectively, making a total of Rs. 50.43 lakhs only.

The credit limits sanctioned by the State Co-operative Bank reached a new massive level of Rs. 12.73 crores in 1958-59, as compared with Rs. 9.13 crores in 1957-58, while outstandings at the close of the year were of the order of Rs. 5.23 crores, as against Rs. 4.45 crores a year before. The exact position is summarised below:

(In lakhs of rupees)

	Sanctioned limits for		Outstandings on	
	1958-59	1957-58	30-6-59	30-6-58
For capital expenditure :				
Cash credit pending receipt of I.F.C. loans	385.00	362.25	114.78	186.97
Fixed loans against Government guarantees	...	137.50	...	2.63
Special loans without Government guarantees	...	19.69	...	20.28
Medium-term loans against Government guarantees	323.07	59.44	200.90	58.74
Total	708.07	578.88	315.68	268.62
For working capital	564.00	334.00	207.00	176.09
Grand total	1,272.07	912.88	522.68	444.71

New frontiers

From the beginning of time human eyes have looked up into space and wondered, and wondering, desired to possess the moon.

Today, man has travelled far on the road of knowledge; today he is about to inherit the moon.

We may not yet know all the details of that first flight which will send him hurtling through space. But of this we are sure, he will need Oxygen to sustain him. And of this too we are sure, that Oxygen will have helped to cut or weld his space-ship and its equipment.

THE BUSINESSMAN AND GOVERNMENT IN THE UNITED STATES

By Clarence B. Randall

[While Chairman of the Board of Directors of the Inland Steel Company, Chicago, Mr. Randall served as Chairman in 1953-54 of the Commission on Foreign Economic Policy (the so-called Randall Commission) which made recommendations to the President in the field of foreign economic policy. Subsequently, he served as Special Consultant to the President (1954-56) and, upon his retirement from business in 1956, he became Special Assistant to the President and Chairman of the Executive Branch's Council on Foreign Economic Policy.]

IN order to understand the contribution which a businessman can make to our (that is, the U.S.) Government, and the close relationship that must always exist between our Government and our economy, one must understand the American business system itself. Let me review some of the salient principles of our programmes of production as I see them.

Different people use different terms for describing private capitalism as practised in the United States. For myself, I like to call it a system of private opportunity and private responsibility. This private responsibility must be linked with public responsibility. A nation cannot retain its integrity, if private business does not have a sense of public consciousness which it shows by paying taxes honestly, by participating in public affairs, and by serving the Government when called.

Our way of life is based upon the proposition that, so far as possible, decisions that affect the economy should be taken by individual citizens, and not by the Government. We believe that each citizen should have freedom of choice in all matters that affect his own economic welfare, and to the maximum extent compatible with our collective security, that of the nation. The worker, for example, may select the position which he likes best from all those available, while the employer may select for a particular job any worker he prefers from all those who ask to be employed. Either the worker or the employer may terminate the relationship at any time.

Competitive Efforts

Carrying forward this principle of free choice by the individual, we believe in the free market. Each citizen may make his own decision as to what he will buy and when he will buy it. The sum total of all such decisions by all of the people when taken together determines the goals for industry, and establishes the rate of production. To protect his own interest, the manufacturer must, therefore, endeavour at all times to produce the highest quality of goods at the lowest possible prices. Competitive efforts by others who have similar products compel him steadily to improve his operating practices.

The capital required for the building of a plant and the purchase of equipment, as well as for the carrying on of production is secured from the public, and not from the Government. Shares of stock in the enterprise are offered for sale to the people, and here again there is complete freedom of choice. One man may decide to spend at once all that he earns, while another may decide to set aside prudently a certain part of what he earns as savings for the future. From such savings he may buy shares of stock in a particular enterprise if he has confidence in the management and believes that the venture will succeed. On the contrary, he may refuse to buy if he believes that the project will fail.

More Stockholders Than Employees

From this it follows that good management will succeed, and bad management fail. That this system is effective and that good management does attract the savings of the multitude of investors is proven by the fact that today many of our large companies have more stockholders than employees.

Carrying forward this principle of the free market, under which each person may buy the goods of his choice whenever and wherever he wishes, the United States has moved steadily ahead on opening its markets to the goods of other nations by the reduction of trade barriers. We favour the gradual reduction of tariffs and the relaxation of quotas. We believe that the consumer who buys needs protection from inefficiency at home, and we want him to be able to buy goods from abroad if they are better and cheaper. I would be the first to admit that not all businessmen have been happy about this programme, but it is now, in my opinion, firmly established in the national policy of the United States. From this it will be seen how closely the welfare of business and the welfare of the nation are interwoven.

Our Government does not have a direct part in either the ownership or the control of production. Its role is solely to guard by every means in its power freedom of choice for the individual citizen and the privilege of personal decision. We abhor the use of Government funds to subsidise business. We believe that no private industry which must have public support is entitled to survive, but, on the other hand, we abhor monopoly just as vigorously. We look to the Government to make sure by law that no person or group shall by private action interfere with freedom of choice by others. In other words, our Government is the servant of industry, but never the master.

Our Government does, however, have one special responsibility towards the economy and towards business, and that is the task of preserving the financial integrity of our country. A sound fiscal policy must at all times be pursued. Confidence in the stability of the dollar is the very bedrock upon which the expansion of our economy through private effort must for ever rest. In addition to this, our Government has the responsibility of guaranteeing and distributing to the industrial community the statistics about the economy which are so vital in all forward planning.

Government's Responsibility

Quite properly, our Government does take particular pains to stimulate the beginnings of new enterprises, those which have good ideas but small capital. For that reason, it maintains competent staffs of technical advisers, and, under certain circumstances, offers moderate-sized loans. Many a young man returning from military service at the close of the war owes his start in civilian life to the help he thus obtained.

The Government also has a vital interest in the development of our foreign trade. For those businessmen who are prepared to extend their operations into other countries, either by investing their capital overseas or by exporting their products, the Government makes available guarantees against such risks as war, expropriation, and the convertibility of currencies, and extends modest credits to those who are exporting their commodities. We must not forget, moreover, that the Government is itself the largest single customer of industry. Each year, it purchases enormous quantities of goods on the basis of awarding the orders to those who make the lowest bids.

All of this brings it to pass that businessmen are constantly visiting Washington, and Government officials are constantly visiting factories. This in itself has been a valuable medium for the interchange of thought between officials and businessmen, with a resultant benefit in the forming of policy. This closely interlocked relationship between day-to-day operation of the economy and the day-to-day administration of the Government has expedited the process of causing business executives to close their desks and enter Government itself, thus sharing the responsibility for taking the decisions that affect the entire economy.

Businessman's Contribution

Let me suggest, therefore, the values, in my judgment, which a businessman may contribute to Government. First of all, he brings with him his own expert knowledge of just how the economy functions, and of what activities of Government are appropriate in dealing with industry. He is apt to hold strong convictions on this subject based upon his own experience, but he is also apt to change some of those opinions after he has once participated in Government and faced the problems from the other side of the relationship. He is a much better man in Government, in my opinion, because of having had a part in the industrial regime himself.

In addition to this knowledge and experience, he brings skill in management. Just as a general must know military science, and an admiral naval science, so the officer who is to take heavy responsibility in the expenditure of large sums of public moneys requires a talent for, and special training in, administration. Not all men are born possessing this gift, and not all those who have it receive an opportunity to test their talent in the stress of practical experience. Business is such a testing ground. Private enterprise to survive must choose wisely men who are qualified to become administrators, must give them the required training, and must prove their skills in the daily competitive struggle. It is reasonable to expect, therefore, that those who have demonstrated outstanding capacity for administration in the business world will be able to adapt their skills to the discharge of similar responsibilities in Government.

Let me repeat that I do not mean for a moment that a man whose whole career has been spent in Government may not come to possess these same qualities in high degree, but a Government facing great tasks must seek this talent and experience wherever it may best be found.

Blending of Qualities

I hold the view that the unique strength of our administrative staff at this time in the United States lies in the fact that we rely upon a team of officials which is made up in part of career men, and in part of those drawn into Government from other careers. I like the blending of the qualities provided by the businessman with those possessed by the career professionals.

In a typical staff within one of our important departments, the two types of individuals will be found working side by side in a spirit of cordial friendship and mutual respect. Together they make a strong team. The businessman contributes knowledge of industry and the habits and skills of administration, while the career officer contributes knowledge of Government practices, warm perception of human values and political relationships, and great singlemindedness of purpose. Together they make a combination that results in better effort than would be true if either group were called upon to provide the entire staff.

Direct participation in Government in Washington in the forming of public policy is not, however, the only important field in which businessmen are called upon for service these days. They are also invited to accept positions of responsibility in representing our country abroad. But this is not all. Businessmen are often requested by Government to undertake short-term assignments and to serve as consultants on special problems, while still continuing their activities with their own enterprises. This is a practice which has been adopted by nearly all of the departments that are represented in the President's Cabinet.

High Level Commissions

The President also from time to time establishes high level commissions drawn from industry and other segments of the general public to make recommendations to him on specific matters. This programme which I have outlined, where businessmen take an active part in forming Government economic policy and participate in carrying out our important international commitments, has one weakness. We are all aware of it and know that steps must be taken to set it right. It is this. The businessman tends to give too short a time to his public service. Torn in his loyalty between his responsibility to his company and his desire to serve his country, he adopts too often the compromise of entering Government and leaving again before he has fully mastered his new duties and discharged his new responsibilities. This must be corrected. The environment of Government differs in many ways from that of industry. A substantial period of time is required to absorb the new subject matter, to learn the new administrative procedures, and to acquire confidence in the discharge of the new duties. Executives who thus volunteer their services must be persuaded to accept appointments for longer periods than has been the current practice. In my opinion, two years is the absolute minimum

PROGRESS OF U.K. STEEL INDUSTRY

COMPETITIVE CONDITIONS FORESEEN IN SIXTIES

TRUE to its rich historic traditions, the British steel industry is preparing itself to meet the competitive conditions which it feels will develop in the current decade. In his foreword to the annual report (for 1959) of the British Iron and Steel Federation, the President, Mr. Richard Summers, avers that the "sixties will bring a much more competitive steel market." He feels that, as technical progress speeds up, steel will face a widening range of substitute materials, such as concrete, plastics and aluminium. But the British steel industry, according to him, is confident that "it can expand its markets in the face of this challenge."

Reviewing the developments in British steel industry in 1959, the report notes that the industry produced 20.18 million tons (ingot), as against 19.57 million tons in 1958. The total output of pig iron was 12.58 million tons, as compared with 12.97 million tons in 1958, which was, for statistical purposes, a 53-week year. In the current year, crude steel production is expected to reach and even exceed 24 million tons and pig iron production 16 million tons. Despite the impact of recession in 1958-59, when the domestic use of steel declined, the industry maintained the development programme at a very high rate. In each of the years, capital expenditure was running at a rate of about £100 million. In the current year, it is expected to spend £120 million. The industry, says Mr. Summers, is "committed in the most direct way possible to the belief in Britain's expanding economy."

Transport

Expansion of steel industry implies, as is well known, increased transport capacity. The report records that, during 1959, a number of wagons for the carriage of steel and raw materials were built and further attention was paid to the future building programme. For raw materials traffic, the current building programme is influenced by changes in companies' requirements. For some years past, it is stated, there has been an increasing use of tippler wagons for iron ore, resulting in a shortage of this type and in supplies of hopper wagons. To meet the changed circumstances, consideration is now being given to the use of tippler wagons of 33-35 tons carrying capacity. The British Transport Commission continued its development work on an automatic coupling to meet all operating requirements.

Over the year as a whole, cost changes were not appreciable. There were some increases in the cost of wages and of purchased materials and services. At the same time, certain cost savings accrued to companies from reductions in the price of ferro-manganese and a reduction in the ingot levy used to finance the operations of the Industry Fund. The main purposes of the Industry Fund are: (1) to bear the losses involved in the sale to the industry at home trade prices of higher cost imports of pig iron, scrap and semi-finished steel; (2) to carry temporary or abnormal elements in the cost of imported ore so as to ensure reasonable stability of selling prices; (3) to provide funds for central research, training, accident prevention and other appropriate common services; (4) to provide assistance on marginal high cost transaction when this can be justified in relation to the demand situation, the comparative cost of imports, and the need to make the best use of production capacity, and (5) to provide finance for investment in ore shipping and overseas ore field companies. It is noteworthy that the use of the Fund for these purposes is subject to the general principle that the Fund is not designed to subsidise high cost producers at the expense of low cost producers, or to distort long-term economic forces.

Iron and Steel Board

The way in which the British iron and steel industry functions today illustrates an example of a combination of private initiative and public control. Although the steel industry has been denationalised, the Iron and Steel Act, 1953, which provided for such denationalisation, has established the Iron and Steel Board with the duty of "exercising a general supervision over the industry, with a view to promoting the efficient, economic and adequate supply under competitive conditions of iron and steel produced." The Board, however, is not a branch of the Government. It does not own the industry either. It is an independent statutory authority, with specific responsibilities and the powers necessary for their discharge. The members of the Board are appointed by the Minister for Power for a specified period. Describing the functions of the Board, in an article in the *Manchester Guardian*, Sir Cyril Musgrave, Chairman of the Board, observes that, in the first place, the Board ensures that the scale of development is adequate to meet national requirements. From time to time, it submits to the Minister special reports on the subject. It is ready at any time to take action for seeking additional production facilities if it thinks them necessary. The Board's second responsibility for development arises from its duty to promote efficient and economic production. This requires an examination of individual development projects. The rule is that all capital projects costing more than £100,000 need the Board's consent, which can be withheld if the project seems likely to prejudice seriously the efficient and economic development of the industry. The Board's other functions include keeping prices under constant review. So far, this has been discharged by the exercise of its statutory right to fix maximum prices in the home market. The Board's aim is to fix prices that are appropriate to conditions of maximum efficiency.

Research

To revert to the Federation's annual report. The report refers to the research and manpower problems in the industry. It notes that research and development work continued on a wide variety of projects, the activities of individual companies being assisted and supplemented by the work performed centrally by the British Iron and Steel Research Association. Last year, the Association extended the study of the problems of automatic control in rolling and forging operations, the control of combustion in the open hearth furnace and the control of electric power in ore furnaces. A pilot plant was commissioned for research into the behaviour of blast furnace changes and more work was carried out on the direct reduction of ore and the pre-refining of blast furnace metal.

Reviewing the manpower problems, the report notes that industrial relations remained good throughout the year. Over the year 1959, the number of workers increased by 9,800 to 308,700 and average weekly earnings by £1 8*s.* to £14 16*s.* Training problems continue to receive increasing attention. The report records that the scheme for training Indian members of the staff of the British-built steel works at Durgapur is the largest single project undertaken under the Colombo Plan. Already, 150 Indians have received training; another 200 are expected to be trained in the U.K. The Federation is also arranging to give assistance in starting up production at the Durgapur works. Companies are releasing members of their staff for service at the Durgapur works for periods ranging from six months to two years. Over 50 men from Britain were working at Durgapur by the end of 1959 and more are being seconded in the current year.

Industry's Attitude

The industry recognises that competition, both from other producing nations and from materials other than steel, is likely to be more severe in the future. In the next few years, this competition seems likely to influence some sections of the industry more than others, but, in the longer term, the probability is that all steel products will be affected, as world supply is brought into balance with demand and technical progress increases the availability of substitutes. Attention is being devoted to problems of market development in the light of these circumstances. The report observes that it would, however, be wrong to suggest that the industry's attitude to market development is simply defensive. Steel, according to it, is very much on the offensive in many markets and is making considerable inroads into fields hitherto dominated by other materials.

INDIAN SHIPPING

In the course of his speech at the annual meeting of the Indian National Shipowners' Association last week, the Union Minister for Transport and Communications, Dr. P. Subbarayan, revealed that the Government had accepted the recommendation of the National Shipping Board, namely, that tankers should be acquired exclusively for the public sector. The acceptance of this recommendation, according to the Minister, closely follows the refinery agreements with oil companies which provide that the companies should utilise Indian flag tankers owned either by the Government or by the public sector companies. He added: "Even otherwise, the tanker trade is a tricky one, because one side of the voyage is always in ballast and it not only requires large capital but also a regular tie up with oil companies who control the cargoes exclusiveiy. Because of these handicaps, the Government of India agree with the Board that the development of tanker trade should be left to the public sector exclusively."

The Minister agreed that the opportunity for carrying American foodgrains to India "comes to us in a big way." Accordingly, he urged the shipowners to acquire as many ships as they could for lifting the cargo. He did not rule out the possibility of time-charter for transport of the cargo, but felt that the opportunity should be utilised to augment Indian tonnage. As regards freight rates to be paid by Government departments, he said that they could not pay a rate higher than the world rates. In this connection, he paid a tribute to Indian shipping companies which generally agreed to carry cargo at competitive freight rates. It was only on this basis, he added, that the Government could answer possible allegations of flag discrimination.

PIPELINE IN SAHARA

An oil pipeline, which stretches for almost 500 miles across the barren Sahara desert, is rapidly nearing completion and is expected to begin operation this year. Current estimates are that within three to four years it will be supplying nearly 20 per cent. of France's domestic petroleum requirements. An important step in the construction of the line will be completed soon with the installation of five Worthington Corporation main line pumps in the pipeline's first collecting station at In Amenas, close to the Libyan border. The 24" pipeline will have a capacity of 150,000 barrels of crude oil per day. The pumps are made by the same company, Societe Worthington of Paris, France, which manufactured a large number of pumps and compressors for the Campo Duran-San Lorenzo pipeline in Argentina. The pumps for the North African pipeline are the largest ever made by the company. Societe Worthington is the French associate of Worthington Corporation (U.S.A.). French contractors are building the pipeline under the supervision of Bechtel Mediterraneenne. European subsidiary of the Bechtel Corporation of the U.S. Construction has involved serious technical problems such as laying pipes across shifting sand dunes. Problems such as these have been compounded by lack of water, shortage of local labour, sand storms and transportation difficulties. The 485-mile long pipeline will terminate at La Skhirra on the Tunisian coast. From there, the crude oil will go by tanker to refineries in France.

NEW MINING MACHINES

Mining engineers in the U.K. are working on the possibility of all work on coal faces being done by machines, Mr. B. L. Metcalf, a past President, told the Association of Mining, Electrical and Mechanical Engineers at its annual convention held recently at Blackpool, England. The completely mechanised face has long attracted the mining engineer. Mr. Metcalf said one of the most difficult problems was to get a power-loading machine to steer itself. The Coal Board's mining research establishment had devised a coal-sensing probe, using measurement of the intensity of gamma rays, to determine the thickness of coal left on the floor by the machine. It was possible that geophysical methods would play an increasing part in the siting of new collieries and in the development of existing ones. In Cannock Chase, a survey had accurately mapped a subterranean valley filled with heavily waterlogged pebble beds. It was shown to be deeper than expected, and its finding, confirmed by a bore hole, may have averted a costly and dangerous situation. It was also probable that electrical or seismic methods would be developed for relatively short-range prospecting underground. A nucleonic probe, based on the gamma-ray technique, had been devised by the Coal Board's research establishment to locate the position of coal seams in a bore hole.

LARGEST BRIDGE

Work is to start shortly in the U.K. on a concrete bridge with the largest pre-stressed clear span in the world. It will carry a motor road over the River Medway in south-east England. Built to a design accepted by the Royal Fine Art Commission, the bridge will be of light and graceful appearance. Construction will take about two and a half years. The bridge, with its approach viaducts and their abutments, will be nearly two-thirds of a mile long, with a central span of 500 ft. The span will be 100 ft. above water. Two additional river spans—one on each side of the centre span—will give the bridge itself a total length of 1,125 ft. In addition to the motorways and two carriageways, the bridge will also have separate cycle tracks and footways. The bridge itself will be an outstanding example of pre-stressed concrete engineering. Compared with its main span of 500 ft., the next largest in the world is the Coblenz Bridge over the Moselle, which has a main span of 403 ft.

BHILAI'S LIMESTONE MINES

Mechanisation of limestone mines of the Bhilai Steel Project at Nandini has been completed. Mechanised mines went into operation on 23rd June in presence of senior officers of the Bhilai project including, among others, Mr. Suku Sen, General Superintendent, Mr. P. P. Dani, Indian Chief Engineer, Mr. N. V. Goldin, Soviet Chief Engineer, Mr. R. M. Ray, Senior Deputy General Manager, and others. After mechanical blasting of quarry, big boulders were lifted up by power shovels, loaded into wagons and transported to crushing plant where the boulders were crushed to different sizes in two crushers and conveyed to a huge storage yard by rubber conveyor belts. Nandini is situated 14 miles north of the steel works and is already connected by rail. Mechanised mines will supply 750,000 tons of limestone annually to the steel works. Limestone is an important raw material for production of pig iron and steel.

NEW PRODUCTS AND PROCESSES

Liquid Fuel From Coal

THE possibilities of producing liquid fuel from low-grade coals and blast furnace gases are now being investigated at the Indian Institute of Technology, Kharagpur. A 100-gallon-per-day capacity pilot plant for the production of synthetic fuel from coal has been designed and fabricated in the Department of Chemical Engineering of the Institute. Its working will provide data for the design, construction, operation and maintenance of a commercial plant. The design features of the pilot plant and results obtained, during its initial operations, have been published in the latest issue of *Research and Industry*, a monthly journal published by the Council of Scientific and Industrial Research, New Delhi.

The Fischer-Tropsch process is used in the pilot plant for converting coal into liquid fuel. Flexibility with respect to formation of different products is the characteristic of this process. In this process, coal is gasified to produce water gas, a mixture of carbon monoxide and hydrogen, and the mixture reacted to produce liquid fuel along with a range of oxygenated compounds (alcohols, aldehydes, acids, ketones, etc.).

The use of blast furnace gas for synthetic oil production is another possibility of considerable economic importance. The gas contains about 30 per cent. carbon monoxide. Experts at the Institute of Technology have estimated that if only 20 per cent. of the blast furnace gas produced in a one-million-ton steel plant is used it would be possible to obtain about 40,000 tons of liquid fuel at one-third the cost incurred in the process using coal. With steel production reaching six million tons by 1960-61, this source can yield more than 240,000 tons of liquid fuel. Since Independence the consumption of petroleum products has trebled to six million tons in 1959. At present, different types of crude oil are imported into the country at an annual cost of Rs. 100 crores. By 1967, it is estimated that the country's oil requirements would reach 14 million tons.

Freeze-drying

A new system of desiccation by means of congelation has now been in use, for a short time in Switzerland by a big firm of manufacturers of concentrated soups. Through the action of freezing, the cells of the vegetables open and the extraction of water can take place more easily and without drying up the produce. As a result of this protective process of drying, it is possible to obtain a product that needs only to be cooked for four or five minutes, and which resembles, as closely as is possible, a fresh vegetable that one has just cooked. The colour of the product does not change, nor does its consistency, and the vitamins and other oligo-elements are preserved. Furthermore, it is not necessary to cook such products that have been dried by means of congelation for any length of time, whereas those vegetables which are preserved in accordance with the drying methods in use upto the present required to be cooked for 15 or 20 minutes. For this reason, the concentrated sauces launched on the market a few months ago by the firm are claimed to have obtained great success.

Metal Polish

The life of the abrasive heads of polishing mops and bobs—the traditional tools of the metal-finishing industry for producing high-grade surface finishes—can be greatly extended, it is claimed, by bonding abrasive powder to them with a new kind of cement. In addition to prolonging the life of the polishing mops, the new product is claimed to produce a surface finish so fine that the time for subsequent finishing operations, and thus the costs, are considerably reduced.

It is understood that the method of applying the cement to the mop is similar to that used for other cold cements. No priming coat is necessary, the material being simply applied to the mop surface by brush, the edges being treated to about half an inch down the sides. The coated mop is then rolled in an abrasive powder and stoved for about four hours. Both the cement and the special abrasive supplied with it is to be marketed under the name Nupol.

Alloy for Furniture Manufacture

A new extrusion alloy developed by the Aluminum Company of Canada, Ltd., expressly for use in furniture manufacturing, has produced highly satisfactory results. The new alloy, called Tube-Alloy, makes it possible to extrude aluminium tubing easily and economically in an almost limitless variety of shapes—square, triangular, octagonal and asymmetrical designs. In addition, the tubing can be heat-treated to strength levels equalling those of extruded and drawn tubing alloys. This development puts at the disposal of furniture manufacturers an alloy which is not only economical but provides designers with much more latitude in achieving appealing styles.

Miniature Oil Refinery Developed

A miniature oil refinery, which can be carried on a truck and backed up to a well or crude oil pipeline, has been designed by an engineering company at Kansas, U.S.A. The refinery has a capacity of about 200 barrels of oil a day, operates with electric motors and dispenses with water as cooling is done by air. The total plant weighs only about 15 tons. Use of the refinery is envisioned in areas where lack of transportation prevents economical movement of oil to large refiners.

INDIA SUGARS AND REFINERIES LTD.

CHAIRMAN'S SPEECH AT THE ANNUAL GENERAL MEETING

PRESIDING over the Twenty-sixth Annual General Meeting of the shareholders of the India Sugars and Refineries Ltd., held at the Registered Office of the Company at No. 5, Deenadayalu Street, Madras-17, on Monday, 20th June 1960, the Chairman, Rukn-ul-Mulk S. Abdul Wajid, gave a brief resume of the activities of the Company during the year ended 30th September 1959.

The following is the text of the Chairman's speech:

"FELLOW MEMBERS,

"On behalf of the Directors and management of the Company and myself, I have great pleasure in welcoming you all to this, the twenty-sixth annual general meeting of the Company. The Directors' report and the audited accounts for the year ended 30th September 1959 have been in your hands for some time past and, with your permission, I shall take them as read.

Record Output

"From the accounts you would no doubt realise that this has been another year of steady progress and continued prosperity under the present management. The factory produced 176,470 bags of sugar during the year, an all-time record in the history of your Company. As against this record, the production of sugar, when the present Managing Agents took over, was less than 65,000 bags.

"From the point of view of profits also, this has been a very satisfactory year. As against a profit of rupees five lakhs and odd for the previous year, this year the Company made a net profit of Rs. 16,82,632. This has been thus one of the best years for the Company from the point of view of earnings also. I must say that this commendable result is not a little due to the ability, efficiency and business acumen of the management, especially of Mr. Mahavirprasad Morarka, to whom our deep thanks are due in no small measure.

"Another point about the progress which I wish to mention, which you must have already noted in the Directors' report, is that the Salar Jung Sugar Mills Ltd., a subsidiary of your Company, has been rehabilitated, its production has increased and it has started making some profit in its working.

Capacity to be Raised

"Apart from these, I am glad to inform you that your Directors and Managing Agents have decided to expand the productive capacity of the factory still further and for that purpose, necessary application for Central Government's approval has been made. When that is sanctioned, we might have to come before you with our detailed proposals and may have to ask your sanction for further capital increase.

"I am also glad to inform you that during the year, your Company has won the three writ petitions filed in the Mysore High Court against certain levy of cane cess. The Mysore Government afterwards enacted further legislation to give validity to their action. Now the matter is pending before the Courts for further adjudication.

"I am sure you would all agree with me that our management deserves congratulations for all their efforts and industry. I would be failing in my duty if I were not to mention about the co-operation your Company has received from the cane growers, merchants, its staff and labour.

"Now, gentlemen, permit me to refer briefly to some of the points raised by one of our shareholders, Shri R. Sundram Iyer, who has sent you a circular letter dated 4th June 1960. It is true that the Company had received those three letters from him and had also given him the reply to those points. In fairness to everyone, it would have been better if our reply was also circulated among the shareholders. Since that has not been done, I would briefly explain the position.

"The first point raised therein is about the power-of-attorney given by the Managing Agents to the Superintendent of the factory, Mr. C. D. Choudhary. It has been alleged that since he has been given complete powers of management, he is a 'manager' within the meaning of Section 2(24) of the Companies Act, 1956, and thereby a change must be deemed to have occurred in the constitution of the Managing Agents which require Government's approval and since no such approval was obtained, the Managing Agents ceased to exist. Therefore, he says that the Managing Agency commission debited to the profit and loss account was not in order.

Answers to Charges

"The answer to this is that Shri C. D. Choudhary is not given and does not possess complete power of management and he is not a manager within the meaning of Section 2(24) of the Companies Act, 1956. Mr. C. D. Choudhary is only a constituted attorney who has been delegated limited powers to look after the affairs of the Company on behalf of the Managing Agents. He is not having management of the whole, or substantially the whole, of the affairs of the India Sugar Agencies Private Ltd. Your Directors have also taken legal opinion on this subject and they are advised that there has been no change in the constitution of the Managing Agents as envisaged by Section 346 of the Companies Act, 1956, and as such the question of Government sanction does not arise. Since there is no change in the constitution of the Managing Agents, the Managing Agents have not ceased to be as such and they rightly continue as Managing Agents of the Company. In these circumstances, the commission debited to the profit and loss account for the year under report is in order.

"The second point is about our investment in the shares of Messrs. Gannon Dunkerley & Co. Ltd. This investment was made on 13th April 1951, that is about 10 years back. A sum of Rs. 9 lakhs and odd is shown as fully paid shares of Messrs. Gannon Dunkerley & Co., Ltd. These were bought by us on the strength of an auditor's certification of their proper value. I have long back dealt with this subject in my speech at the general body meeting held in March 1954. The transaction was disclosed to you in our balance-sheet for the year ended 1951 and your specific approval was sought by a special resolution to give your Directors powers to invest moneys of our Company in shares and debentures of other companies. We have been receiving dividends on our investment and the shares are considered to be a valuable investment. This point too has been referred to the legal adviser and the Directors are advised that none of the provisions of the Companies Act and Articles of Association of the Company have been contravened, as alleged.

Selling Agency Agreement

"The third point raised in the letters is about the cancellation of the selling agency agreement.

"The Company has a binding agreement with our selling agents for a definite period of time duly approved at an extraordinary general meeting of the shareholders held on 9th September 1957. The Company is not competent to vary or terminate an agreement validly entered into unilaterally, though it may be of financial advantage to the Company.

"With regard to the provision for taxation, I may mention that keeping in view the carried forward losses of the year 1956-57, the provision made is adequate.

"I now thank you all for patiently hearing me and, with your permission, I now formally move the adoption of the Directors' report and audited accounts for the year ended 30th September 1959."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

STATE REGULATION OF INSURANCE

U.S. SENATE'S ENQUIRY

INSURERS in the U.S. are anxiously awaiting the findings and recommendations of the Senate enquiry into the insurance industry. The enquiry, which was conducted by the sub-committee on anti-trust and monopoly of the Committee on the Judiciary of the U.S. Senate (Upper House), is of more than national importance. For, although it concerns itself with the relations between the insurance industry and the State in America, the enquiry is of interest to insurers throughout the world. Underlining the importance of this enquiry, *The Review*, the well-known insurance magazine in the U.K., for instance, comments: "It does not need emphasis how important are these proceedings to the world of insurance and how vital it is, particularly, to the American insurance market.... The interests of the insurance world as a whole are bound up almost as much as those of the American market with the outcome of the enquiry."

Insurance occupies a commanding position in the trade and industry of the U.S. Having had its origin in the sale of contracts of indemnity, insurance has now grown into one of the largest and most important branches of commerce in the U.S. Perhaps, no modern commercial enterprise directly affects so many persons in all walks of life as does insurance. It affects the home, the family, the occupation or business of almost every person in the U.S.

Even more important is the relative position of insurance in the national economy of the U.S. In 1958, insurance premiums were equal to over eight per cent. of the national income and over 40 per cent. of the estimated Federal revenues. The total assets of U.S. life insurance companies alone exceeded $106 billions which were equal to nearly half the assets held by all manufacturing industries in 1957. In fact, the impact of investments of insurance companies is felt throughout the economy. Many States have, therefore, set limits on such investments. In the State of New York, for insurance, the law prohibits investments by any insurer in the bonds of any one institution in exceeding five per cent. of the total admitted assets of the insurer. Life insurers must not invest over 3 per cent. of their admitted assets in common stock and must limit investments in common shares of any one company to two per cent. of that concern's outstanding stocks.

Both the Administration and the public in the U.S. have been ever vigilant against monopolistic tendencies developing in any branch of the U.S. economy. Anti-Trusts Laws are the statutory instrument invoked for curbing monopolistic trends. Anti-Trust Laws is a description commonly applied to a group of statutes comprising the Sherman Act, the Clayton Act, the Robinson Patman Act and the Federal Trade Commission Act. These play a crucial role in prohibiting price-fixing agreements and controlling competition, monopolies, unfair trade practices and unfair discrimination between consumers.

Insurance and Anti-Trust Laws

Prior to June 1944, the U.S. Courts had held that insurance was not commerce and was, therefore, not subject to these laws, except where they were violated by agreements to "boycott, coerce or intimidate." The insurance practice of establishing rates, policy forms, maximum commission scales and agency limitations was not challenged as a violation of the Anti-Trust Laws until November 1942, when the Attorney General secured an indictment against the members of the South-Eastern Underwriters' Association. In August 1943, the Federal District Court dismissed the indictment on the ground that the business of insurance was not trade or commerce within the meaning of the Sherman Act and that the Courts therefore had no jurisdiction over it. On appeal, the U.S. Supreme Court reversed the decision of the District Court and reinstated the indictment, thereby holding that the business of insurance was commerce within the meaning of the Sherman Act.

The Supreme Court decision produced great confusion in insurance circles where it was felt that a literal compliance with the Anti-Trust Laws would destroy co-operation in insurance business and that competitive rate wars would be forced on them.

The Congress, however, favoured exemption of insurance from Anti-Trust Laws and it passed legislation to that effect. The Administration was, on the other hand, opposed to blanket exemption. After considerable debate, the McCarran Act—Public Law 15—was passed and received the President's approval in March 1945. In substance, this law granted insurance companies exemption from the application of the Sherman Act and other Anti-Trust Laws until 1st January 1948, except in the case of agreements to "boycott, coerce or intimidate."

Public Law 15 explicitly stated that, after 1st January 1948, the Anti-Trust Laws would be applicable to the business of insurance to the extent that such business was not regulated by State laws. This has been interpreted in the past to mean that, if the States were to regulate and supervise the business of insurance within their respective borders in the public interest, their actions would not be construed as violation of the Anti-Trust Laws. Insurers in the U.S., however, closely examined the far-reaching effects of the Anti-Trust Laws when applied to their business and, in due course, drafted various model statutes designed to provide the States with adequate powers to regulate insurance rates after 1st January 1948. In many directions, constructive alterations were made in the practice of insurance following the passage of Public Law 15.

Aim of Enquiry

The present enquiry is a factual one. One of its principal aims is to determine whether the existing system of dual Federal and State supervision of the insurance industry serves the public interest best. It will also examine whether the McCarran Act—Public Law 15—has fulfilled its purpose. When the Act was passed in 1945, Congress had expressed the desire that a review should be undertaken, after a reasonable period of time, to determine whether the Act has proved effective in protecting the public interest in the field of insurance. The enquiry is in pursuance of this wish of the Congress.

Several important issues have come up for examination. In the first place, is there competition in the industry? Secondly, are rates realistically responsive to competition or arbitrarily maintained through the medium of rating bureaus? Thirdly, are companies, which desire to deviate by offering lower rates than bureau rates approved by the State Insurance Department, hindered by restraints imposed by the States or the industry? Fourthly, what is the extent of State regulation of insurance advertising? Finally, does the Federal Trade Commission consider State regulation adequate to protect the public interest in the business of insurance or does it advocate fresh Federal legislation for regulation of the insurance industry?

Representatives of almost every section of the insurance industry gave evidence before the Committee. The case for marine insurance was submitted by Mr. Miles F. York, President of the American Institute of Marine Underwriters. Mr. John W. Gwynne, Chairman of the Federal Trade Commission and Mr. Robert A. Bicks of the Anti-Trust Division, Department of Justice, also gave evidence on behalf of the Commission and the Division.

The primary object of insurance legislation anywhere is to ensure security of the companies which is the best way of safeguarding the public (policyholders') interest. For this purpose, the premium rates must be maintained at reasonable levels, so as to protect insurance companies against disastrous losses, leading, perhaps, to significant insolvencies with consequent loss to policyholders. The underlying object of insurance regulation is to help companies maintain an appropriate rate level and yet leave freedom to compete. Insurers the world over are watching with closest interest how the U.S. Congress proposes to bring these apparently conflicting concepts into harmony. In a way, the future of insurance, in general, all over the world, is involved in the resolution of this problem.

LIFE INSURANCE FOR WOMEN

Women, despite their longer life expectancy, have not been a favourite of life insurance companies. This is because of the fear, which statistics have proved to be unfounded, that, being weaker than their male partners and exposed to the additional hazard of child-birth, the risk in the case of female lives is greater. Consequently, policies on female lives usually carry higher premium rates. The fact that most women do not have independent incomes and are not in need of insurance protection is also responsible for the comparatively low coverage of women.

Recent trends in life insurance in advanced countries, however, indicate a distinct change in insurance thinking regarding life cover for women. In Britain for instance, many insurance companies had reduced premium rates for female lives last year. Further reductions have been announced in the past few weeks. This is evidence not only of the actuarial acceptance of the fact that women have longer life expectancy but also a reflection of the change in economic and social conditions. Particularly, the modern tendency for both husbands and wives to pursue careers is stimulating demand for life insurance for women.

Commenting on the trend of life insurance for women, the Insurance Correspondent of the *Financial Times*, London, observes:

"The primary purpose of life assurance is to make provision for dependants in the event of the death of the breadwinner. Life policies are used to a great extent also as a means of saving. When both husband and wife work, commitments are entered into which depend for their fulfilment on the joint financial resources. This is one reason why many more policies are being effected by married women. However, there is a distinct indication that many of the policies taken out by wives on their own lives are aimed at the accumulation of savings.

"It is not only the married woman for whom life assurance is proving attractive. Several insurance companies have devised policies of particular interest to the young unmarried woman. These usually consist of an endowment assurance which will normally mature after a fixed term of years, but which contains a number of attractive and interesting options. One of these options permits the policyholder to continue the assurance in force after the fixed period expires, in order to provide an increased cash sum or annuity at age 55 or 60.

"These policies issued to single women do not overlook the fact that most young persons will marry before the policy has been in force for many years. Policies include options which are exercisable on marriage. Provided that the policy has been in force for a minimum of two years, marriage during the original period attracts the payment of a cash bonus. This bonus is calculated at a fixed amount for each year for which premiums have been paid up to the time of the marriage.

"Another important marriage option permits a policy on the husband's life to be substituted for the original contract. The substituted policy is issued for the absolute benefit of the wife, and without evidence of the husband's health at the time."

Both ordinary whole-life and endowment assurances, with or without profits, are available to women in Britain. As the number of women employed increases and their earnings rise to become a substantial part of the family income, life insurance policies on female lives in India will increase both in number and the amount covered. Policies on female lives are, therefore, certain to provide a large field for insurance sales in future.

GENERAL INSURANCE IN 1959

The year 1959 has not proved very bright for general insurers in India. Preliminary estimates indicate that their premium collection will be higher by about Rs. 1.25 crores, but expenses too have gone up by about 10 per cent. This suggests that most insurers will not be able to show higher profits for the year.

Although the quantum of risks has been higher, thanks to about 20,000 more trucks and cars having come to the market during the year, the experience of the motor department has, in many cases, proved to be very disappointing. The claims ratio has gone up considerably in respect of comprehensive and third-party cases with the result that the accident department has not proved remunerative to many insurers, particularly to smaller units. The comprehensive rates were raised two years ago by about 40 per cent. only in the Bombay City and Delhi regions.

The fire department has again proved to be the major source of income, thanks to low claims and more business coming from the Pool. The returns from the miscellaneous department continue to be unsatisfactory. Although some units are reported to have secured more reinsurance business from the London market, the overall picture continues to be gloomy. Despite the code of conduct, the unofficial rebating system continued unabated.

The outlook for 1960 is also not very encouraging. The fire rates have been reduced by about 10 per cent from this year. With four Government companies competing successfully in the general and reinsurance business, insurers fear that they will have to pass through another difficult year.

AIR TRANSPORT IN COMMERCE

PROSPECTS FOR AIR-LIFTING CARGO BRIGHT

By Wing Commander R. Vaughan-Fowler, R.A.F. (Retd.)

FOR those in industry and commerce the only interest in air transport is how can it serve their particular transport requirement. It is contended that the air transport carriers have lamentably failed to bring the real services of air transport to the notice of industry and commerce. This may, at first sight, appear to be a sweeping statement. If it is analysed it will be found that practically the whole of the air transport industry propaganda is directed to capture passenger traffic, in particular in the luxury class. Occasionally there are references to cargo such as "We Fly It—They Buy It". Catch phrases are not likely to impress any solid business organisation.

Air transport has three distinct services to offer, the first and at present most important is that for passengers. Approximately 90 per cent. of the air service operators' income comes from the passengers. Naturally, these services are of tremendous value to industry and commerce, as they enable executives and salesmen to move quickly around the world to attend to important business matters. Secondly, there are the air mails which have come to be taken for granted, so that they are seldom appreciated in these days. The fact that letters can be delivered half-way round the world within forty-eight hours of being written, is undoubtedly helping to speed the progress of business as well as increase the flow of industrial production. If the best use is made of air mail services is a debatable point, they are certainly not given the publicity they deserve, few are aware as to how they can be used to the best advantage.

Thirdly, there is cargo carriage by air which should be divided into two distinct classes. Cargo at present carried is really practically "Express Freight" and is mostly booked as "fill-up" load in the passenger airliners. Commercial cargo loads, which means bulk shipments of manufactured products or consumable goods, including fresh food, are handled, but not in any thing like the quantity they should be. There are a few special cargo services also. One or two operators are all cargo carriers. But cargo the world over is mostly carried as secondary load in passenger airliners. For the majority in industry and commerce, the idea of sending their products by air is either disregarded, because the mechanics of it are not understood, or it is deemed to be far too costly. Decisions not to send by air are frequently taken without any deep study to analyse the facts.

The First Years

Air transport started on 1st March 1919, as a Royal Air Force operation, carrying air mail and newspapers between Folkestone in England and Cologne in Germany, where the British Army of Occupation had its headquarters. This was a daily service and was flown by R.A.F. serving personnel using de Havilland DH9A aircraft. On 11th November 1919, civil air services were started, with a service from Paris to London operated by Aircraft Transport and Travel Limited. Shortly afterwards, other services connected London with Brussels and Amsterdam; several operators were then in competition.

From these early beginnings up to 1945, air transport progressed comparatively slowly and, although the British did pioneer international air routes to Australia and South Africa, the services offered were flown in short stages with several night stops *en route*. Aircraft of those days had extremely short range. Also, their payload was so small it was virtually impossible to operate at a profit. The aerodrome and air route facilities were very primitive. Mechanical reliability was fair but not good, navigational aids hardly existed, and a very great deal depended entirely on the skill of the pilot. Travel by air was an adventure and the time-saving, although considerable over long distance as compared to sea journeys, was not so remarkable as to make the adventure attractive.

Second World War

The Second World War demanded of the aircraft industries that air transport must be developed, so that the maximum military loads could be carried. In addition, with vast oceans between countries and areas of land impassable due to enemy occupation, air transports had to be given tremendous range, whilst, at the same time, lifting loads previously regarded as beyond the ability of aircraft. Naturally, Governments poured millions of treasure into research and development, the cost not being the important factor in time of war when the achievement of the objective is all that matters. Industry and commerce have, therefore, to thank the last war for the magnificent air transports that are with us today. Also the whole conception of airlift changed completely during the years 1939-45.

Before the war, who would have thought that air transports would be crossing and re-crossing the North Atlantic every day in such number, that they actually carry more passengers across the "Duck Pond" than the great ships that have for a hundred years and more had the privilege of carrying all the travellers? Today, the air services between Europe and America carry more passengers than the ships. Likewise, even in 1946, had anybody told us that a flight would be made from London to Bombay non-stop in 8 hours and 5 minutes in an aircraft capable of carrying at least 30,000 lbs. of payload, we would have laughed at them. Nevertheless, this flight has already been achieved by Air-India International with their first Boeing 707 powered by Rolls-Royce 'Conway' engines. Admittedly, the actual payload was not carried for cash as the flight was for delivery of the aircraft, but this does not alter the fact that it could have carried a paying load.

Air Cargo Tomorrow

Air cargo has never received any serious attention either from the airline operators or from the manufacturers of aircraft. Cargo has been regarded as a secondary load, convenient as a fill-up for passenger airline services. In some cases, when all cargo movement has been planned or considered, passenger aircraft have been stripped of their internal fittings and converted for use as all cargo air transports. This approach is completely wrong, because cargo requires special handling and it is not economical to use converted aircraft.

The first and most important feature in a cargo aircraft is ease of loading. This can only be achieved by loading at either the front or the rear end or at both ends. Side loading restricts the size of the package and requires that it shall be inserted into the hold and then have its direction of movement changed 90° to position it in the hold. This is a complicated movement, requiring quite a number of skilled loaders as well as mechanical aids both outside and inside the aircraft. Time and money are wasted.

During last year, the manufacturers have realised the need for an all cargo commercial aircraft, and several are being designed and built. Stress is laid on the word "commercial," because, if a military air transport is considered, its specification will be entirely different from that of a commercial vehicle. The military require higher speed, stronger structure to carry exceptionally heavy concentrated loads, also a variety of aircraft performance needs none of which a commercial operator could possibly use or require. To build these into the aircraft is costly and increases the capital value as well as increasing the operational cost per hour for every hour the aircraft flies. So why carry them around?

As we know air cargo today, the average cheapest rate is about 14 cents per ton-mile. At this rate, only a very limited range of commercial goods can stand the cost of air carriage in their ultimate sale price.

At present, there are two or three cargo aircraft under development. One of these is of particular interest, as it will carry a payload of 100,000 lbs. for a range of 3,000 miles at a cruising speed close on 600 m.p.h. 9,000 cubic ft. of cargo hold is available with rear loading. A well organised load can be loaded or unloaded in under ten minutes by a small team of loaders!

Large Cut in Rates Possible

The direct operating costs of this aircraft which include all items of expenditure concerned with the actual flight are estimated to amount to 3 cents per ton-mile, a ton-mile being the carriage of one ton for a distance of one mile. The normal practice is to double the direct cost to cover overheads and all indirect expenses of operation. This would mean adding another 3 cents, but, to be on the safe side, it is suggested this overhead figure shall be increased by 33⅓ per cent., that is one more cent, making a grand total of 7 cents per ton mile.

This is a 50 per cent. cut in the air cargo rates. When these cargo aircraft are delivered in 1961 onwards, this will bring airlift within the financial reach of a large range of industrial products. Those operators who have made a special study of air cargo estimate that, if the present air cargo rate is cut by 40 per cent., their cargo traffic would be increased by 300 per cent. One operator of all cargo services, who is probably best qualified to judge, is confident that the increase of cargo moving by air would amount to 500 per cent. If this is achieved, then air cargo, as a source of income for air transport, will be as important as passengers.

As more and more industrialists and business organisations become accustomed to the use of airlift, air cargo will become by far the larger source of income. This will probably take five years from the introduction of the new all cargo air transports.

To ensure air cargo success, it is necessary for the operators to study the needs of the shippers. They must employ special research experts to go into the problems of airlift for different kinds of goods. A great deal of research work is necessary on both sides.

Here it is relevant to relate the experience of one manufacturer in the United States. The idea of making use of air transport was discarded, because of the cost. Thereafter, one of the directors who was not convinced that the Board had reached the correct answer, made a personal study lasting two years. He discovered that the company's sales organisation and distribution had been planned more than fifty years before and was based on the railway system, which did not coincide with their largest sales areas as they exist today. By replanning the sales structure of the company, he was able to reduce distribution costs by millions of dollars per annum. Enormous base distributing centres were found to be unnecessary, their elimination saved millions of dollars in locked up capital. The company's output is now distributed by air cargo service. Admittedly, the products concerned are highly specialised as well as costly—instruments of all kinds for industry, including optical goods. But the example conclusively proves the sort of thing that research can bring to light and how it can pay big dividends.

Advantages of Airlift

One of the stock advantages of air transport is summed up in the word 'speed.' The real importance of speed in respect of cargo is that the goods can be delivered in days instead of months or weeks. Goods in transit represent locked up capital. Retailers are faced with holding large stocks, but they can reduce stocks to suffice for one week's requirement, provided replenishments can be delivered in three or four days.

Perishable goods are natural cargo for airlift also, their producers can extend their market area by thousands of square miles by using airlift. In India, we have the example of the mango which without airlift could never be sold in the capitals of Europe and America. This is, of course, a luxury item, but it is also an important product of the country, and can become a valuable foreign exchange earner. Transportation of mangoes during the season means substantial loads for the air carriers. It is sound business for them to encourage this class of traffic.

The world over, there are products in the seasonal or perishable class. It requires co-operation between the air carriers and the producers to present these perishable goods for sale in all the markets of the world.

Those who produce delicate instruments or equipment that requires expensive packing to protect it in transit will find that by intelligent use of airlift they can adopt light packing. There are substantial cash savings to be made in the packing costs which will probably more than offset the cost of the air freight. Some products can be sent by airlift without any packing.

Recently, a manufacturer explained how difficult it is to ensure safe delivery of radio equipment. Frequently the packing cases are damaged in rail transit so the retailer becomes involved in essential repairs to the sets before they can be sold and delivered to the customers. Here is a case for airlift which would entirely eliminate the damage factor in the sales problem. It is quite certain that, in practice, the radio manufacturer would find it far cheaper to use airlift. Naturally, the ins and outs of the airlift have got to be carefully explained to the shipper, together with the detailed cost

NATIONAL RAYON CORPORATION LIMITED

CHAIRMAN DRAWS ATTENTION TO DELAY IN DISTRIBUTION OF RAYON YARN QUOTAS

TIRE CORD SCHEME WELL UNDER WAY

ADDRESSING the Thirteenth Annual General Meeting of the shareholders of the National Rayon Corporation Ltd., held at Bombay on Thursday 23rd June, 1960, Mr. Kasturbhai Lalbhai, Chairman, observed that, although the price and distribution controls of rayon yarn were equitable and fair and in the larger interests of the weaving industry, the considerable delay in the distribution of quota certificates and cards, apart from necessitating the holding of large stocks by producers, was causing much hardship to consumers of yarn. He urged that the Government offices entrusted with the task of issuing quota certificates and cards should be adequately staffed, so as to facilitate quick distribution of yarns to intending consumers.

The following is the full text of Mr. Kasturbhai Lalbhai's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you this evening and to place before you for adoption the 13th annual report of the Directors and the statements of accounts for the year ended the 31st December, 1959. These were circulated and have been in your hands for over a month now and if you will permit me, they may be taken as read.

"The report covers all the salient points regarding the working of the Company during the year. The accounts also give the figures of the preceding year for comparison and I will, therefore, confine myself only to making a few general observations by way of further elucidation.

"The higher turnover this year amounting to about Rs. 90 lakhs was principally due to the increase in production as already reported. A sizable portion of the increase, however, pertains to the additional excise duty due to increase in its rates and also due to lower stocks of yarn at the close of the year.

"The figure of cost of raw materials consumed appears lower than that of the preceding year in spite of increased production and requires some explanation. As you are perhaps aware, caustic soda is one of the principal raw materials required for the manufacture of rayon yarn. The Company's caustic plant having worked at its full capacity during the accounting year, the Company had not to use any imported caustic soda. Under the item of cost of raw materials consumed, the figure of the preceding year includes the cost of imported caustic soda, whereas, for the accounting year, only the cost of salt, the raw material required for the manufacture of caustic soda, has figured, the other items of operating costs having been debited to respective heads of accounts. This, combined with a few other factors, accounts for the lower figure of cost of raw materials though there has been all-round increase in the production of different products during the year.

Operating Costs

"The slight increase that you find in the 'operating' costs and 'other' expenses are in proportion to the increased production all round.

"You will have also observed from the report that we have recommended payment of dividend on the preference shares at Rs. 5 per share, subject to deduction of tax at the rate of 30 nP. in a rupee as prescribed under Section 18(3) (d) of the Indian Income-tax Act. The Board had to consider the new system of deduction of tax from dividends (as introduced by the Finance Act, 1959, and being amended by the Finance Bill, 1960) so far as it affects the rights of dividends of preference shareholders. Though different interpretations are possible, the Board hold the view that the preference shareholders should continue to receive the same gross amount per share as they used to receive under the old system of taxation. The Company has declared dividends on preference shares accordingly and you are hereby requested to confirm the same.

"You must be aware that the price and distribution of rayon yarn are practically controlled due to shortage of this material in the country. It appears this position will continue for quite a few years to come. While we have nothing to say about the price and distribution control of yarn which is quite equitable and fair and in the larger interests of the weaving industry. I wish the Government offices entrusted with the issue of necessary quota certificates and cards are adequately staffed with a view to facilitating quick distribution of yarn to intending consumers. As it is, even though the scheme of controlled distribution has been in operation for over a period of two and a half to three years, the office entrusted with the work still takes about two to three months to distribute necessary cards to the consumers thereby necessitating holding of large stocks in the godowns of the Company to the considerable detriment of the genuine consumers concerned. Incidentally, I may add that we are strictly adhering to the selling rates which were approved by the Government and which are in vogue for the last three years.

Tire Cord Scheme

"As already reported, the tire cord scheme which unfortunately was delayed for about a year and a half for reasons beyond our control, is now well under way and we hope to be in production sometime in the second half of 1961. You must have already observed from the reports appearing in the newspapers that the tyre manufacturing industry is growing at a fast rate in the country and by the time we are in production, we believe the country's requirement of tire cord yarn would be much more than what we had anticipated when we embarked upon this scheme. We do not, therefore, expect difficulty in marketing the product.

"The full utilisation of chlorine, co-product in caustic soda chlorine plant, is still an unsolved problem, because we have not on hand sufficient numbers of cylinders and containers for filling in the liquid chlorine for supplying it to users all over the country. Their turnround from the moment they leave our factory till the empties are back with us is not as fast as we wish, and this serves as a handicap to clear the chlorine stocks that accumulate on production. Efforts to get more containers are being made and also to try to utilise chlorine for manufacturing different allied chlorine compounds for marketing them on a commercial scale, but the stage is not yet ready beyond research on pilot plant level.

"As regards raw materials position, I may say that in spite of the tight foreign exchange, the Government has adopted a policy which ensures reasonable supplies of all the important raw materials required by the industry and this has enabled us to maintain a fair inventory of raw materials like pulp, sulphur and other processing chemicals. The prices of raw materials were fairly well maintained during the report year. There was a slight decrease in the price of sulphur but this reduction has been offset by the increase in price of coal and more recently by levy of a surcharge on railway freight on coal.

Managing Agents' Remuneration

"The Central Government have accorded their approval to the reappointment of Messrs. Chinai and Company Private Ltd., as Managing Agents of the Company but have reduced the tenure of their office from 10 to 5 years and have fixed the following sliding scale of remuneration subject to a minimum of Rs. 50,000 per year in the event of absence or inadequacy of profits in any one year:

10 per cent on the first Rs. 10 lakhs or fraction thereof,
9 per cent on the next Rs. 10 lakhs or fraction thereof,
8 per cent on the next Rs. 10 lakhs or fraction thereof,
7 per cent on the next Rs. 10 lakhs or fraction thereof,
6 per cent on the next Rs. 10 lakhs or fraction thereof,
5½ per cent on the next Rs. 25 lakhs or fraction thereof.
5 per cent on the next Rs. 25 lakhs or fraction thereof, and
4 per cent on any sum over one crore of rupees.

Your Board, at their meeting held on the 12th May, 1960, have approved of these modifications and have executed a new Managing Agency agreement. Very shortly, a circular letter will be issued to all the shareholders embodying the details of the executed agreement.

"The workers of your Company have recently presented us with a 'charter of demands' asking for substantial increase in the scales of their wages and for further concessions in the conditions of service. The emoluments now being paid to our workers and the service conditions they have been enjoying are not only fair and better than those prevailing in the industries operating in the vicinity of our factory but compare very favourably with the emoluments paid by many of the progressive and leading industrial units in the country. I only hope that at the time of negotiations better counsels will prevail and that a settlement satisfactory to all the interests concerned would be reached to usher in a fairly long period of industrial peace and harmony in the industry.

Incorrect Rumours

"I am sorry to state that some interested parties have been spreading rumours about the activities of the Company which are incorrect. It is quite true that the Company is investigating the project for the manufacture of rayon grade pulp but it is still in its exploratory stage and even if the Company ultimately decided to go in for one, it is unlikely that the pulp to be manufactured here will be cheaper than the imported pulp. The main objective for going in for manufacturing of pulp is to make the industry, as far as possible, self-sufficient in respect of its main raw materials.

"About the persistent rumours for the issue of fresh capital, I may assure the shareholders that no such issue is under contemplation at present.

"Before I conclude, I must say a word or two about the workers and the staff whose efficient work, I must admit, has been largely responsible for the smooth running of the whole plant and satisfactory working of the organisation.

"With these few words, I commend the report and the statements of accounts for adoption and propose the following resolution:

"The Thirteenth Annual Report and the Statements of Accounts for the year ended the 31st December, 1959, be and they are hereby adopted."

"Thank you, gentlemen."

Note: *This does not purport to be a report of the proceedings of the annual general meeting.*

INTERNATIONAL SYMPOSIUM ON POLYMERS

The latest trends, and discoveries, in synthetics were discussed at an international symposium on macromolecular chemistry—the science of polymers—held recently at Moscow University. Among 1,500 scientists from 26 countries who took part in the six-day session were 62 leading specialists from the U.K. They included Sir Harry Melville, Secretary of the Department of Scientific and Industrial Research, and representatives from universities, research institutes and leading concerns engaged in plastics and synthetic fibre manufacture. Other specialists included 84 from the U.S.A., 56 from France. There were big delegations from all other leading industrial countries.

The reports were grouped under three heads: synthesis of polymers, polymerisation and polycondensation processes, and chemical transformation in polymer chains. Under the latter the question of polymers with semi-conductor qualities were discussed.

Soviet papers on this subject aroused exceptional interest as their claim to have developed such polymers at the Soviet Institute of Oil-Chemical Synthesis had aroused much interest in the West. A report on this was presented by a group of six Soviet scientists headed by Alexander Topchiev, Vice-President of the Soviet Academy of Science.

NUCLEAR POWER FOR ANTARCTICA

The U.S. plans to have a nuclear power plant operating in the Antarctica early in 1962. The Atomic Energy Commission has issued an invitation for design, fabrication, and on-site testing of the proposed portable 1,500 kilowatt reactor. It will be located in the Mcmurdo Sound area. The reactor will be moderated and cooled with light water, and will be of the pressurised or boiling water type. It is expected to replace diesel engines in the production of electricity, thus easing the problem involved in transporting diesel fuel to the remote region.

KAMANI ENGINEERING CORPORATION LTD.

CHAIRMAN, MR. R. H. KAMANI ENVISAGES A BRIGHT FUTURE

AN all-time record production, technical collaboration for railway electrification work and further development in the manufacture of Mark II "Tractamount" road rollers with latest improvements were some of the highlights of the progress made by Kamani Engineering Corporation Ltd., to which particular attention was drawn by Mr. R. H. Kamani, Chairman of the Corporation, in his speech at the Fourteenth Annual General Meeting held in Bombay on 24th June 1960. The rising trend in earnings, he said, was maintained this year also.

The following are extracts from Mr. Kamani's speech:

"It is encouraging to note that the gross profit made by your Company during the year under review has reached a record figure of Rs. 19.49 lakhs. This has successively gone up from a figure of Rs. 4.59 lakhs for the year 1955-56, which means that there has been more than a fourfold improvement in three years.

Record Production

"In keeping with the trend of progress, your factory achieved another record monthly production of 1,601 tons during the month of December 1958, against the earlier record of 1,000 tons achieved in May 1958. The high production achieved during the year under review is maintained and still being improved upon, as is evident from the working of the past eight months of the year 1959-60, and this is actually about 20 per cent. higher than the corresponding period of the year under review. Efforts are being made to increase the production still further, as due to continued improvements in process and methods we have ample capacity for producing more with the existing plant and facilities.

"Having presented to you a brief picture of the financial and production achievements of the year under review and the production trends of the current year, I would like to take this opportunity of conveying to you the highlights of important events of the current year. In doing so I am limiting myself only to the achievement during the current year, as the important achievements for the year under review have already been included in the Directors' report.

Foreign Technical Collaboration

"You will be glad to know that your Company has been successful in securing foreign technical collaboration with a Belgian firm and, with their technical assistance, your Company has been the first Indian company to secure a contract for supply and erection of traction overhead equipment for electrification of railway lines. The first contract received by your Company is for supply and installation of 25 kV A.C. traction overhead equipment over the Kharagpur-Tatanagar section of the South-Eastern Railway at an approximate value of Rs. 56 lakhs. I am hopeful that this will open a completely new field of activity to be pursued by your Company in future to participate in the larger railway electrification projects of the Indian railways, especially in the third Plan.

Export Drive

"The Export Sales Department which was established only last year for exporting the products of your Company has achieved encouraging results. Considerable sales promotion work has been done and some of the most difficult obstacles, in the way of export of Indian heavy engineering goods abroad, in the face of very acute international competition have been studied and partly overcome. The Export Promotion Directorate and the Engineering Export Promotion Council, set up by the Government of India, have both given us considerable help and I have every hope that the remaining obstacles and difficulties will be solved soon. These efforts have resulted in securing the first order for export of our galvanised structures, which has been successfully executed to Thailand.

New Model "Tractamount" Road Rollers

"Figures for the tentative allocations for the expenditure during the third Five-year Plan for 'road development,' reveal that an amount of Rs. 250 crores has been set aside under this head which coupled with the estimated requirements for the 20-year development plan for roads, is very encouraging. In the light of this, our new Mark II Kamani-Twose Tractamount Road Roller, which has been successfully developed and will be taken for production soon, is expected to be very popular and useful in supplying the necessary machinery not only at a fraction of the cost of imported road rollers but also in saving considerable foreign exchange.

Improvement in Production Technique

"The research and development department of your Company has been actively working on the improvements in the process and methods of production, product improvement and new product development. As a result of their studies it has become possible to improve quality, increase production and at the same time achieve economy by using the existing plant and personnel facilities. It is further hoped that by introducing diversification and increasing the present production level, further economy in our costs would be achieved by utilising our surplus capacity to the full, without increasing any major capital expenditure. In this way, your Company is getting ready for taking care of the increased requirements of development in the third Five-year Plan period. It is gratifying to note that the technical excellence and know-how attained by your Company in the field of transmission line engineering has attracted some enquiries from foreign countries for getting our technical know-how and collaboration to start similar manufacturing activities there. These proposals are under active consideration of your Company. Side by side, your Company is actively pursuing and negotiating with some foreign manufacturers of world-wide reputation, for technical collaboration and 'know-how' to develop further industrial activity in line with your Company's present activities.

Imports

"In spite of the acute shortage of foreign exchange and import restrictions, as you may have already observed from the Directors' report, your Company during the year under review has secured import orders of almost double the value as compared to the previous year. However, you will be glad to know that in the present year also this rising trend has been maintained and an import order for one of our foreign principals at a value of Rs. 7 crores has been secured from an important national project.

Contribution to the Plan

"As the second Five-year Plan is nearing completion, the achievement made by the nation proves the soundness and the foresight of our planners, in so far as most of the targets set for the Plan have been completed in time. It is specially noteworthy to observe that such huge projects like Bhilai Steel Plant, were completed in time and that your Company in its own turn contributed towards the early completion of this project of great national importance, for which it received due appreciation for its efforts from the Government. The tentative targets set for the third Five-year Plan, have now been acclaimed by several world authorities to be achievable by our nation specially in light of our previous performance.

Encouraging Future

"The third Five-year Plan target of increasing the installed capacity for electric power generation by 6 million kilo-watts indicates a very encouraging future for the activities of your Company. In fact, the full impact of the industrial revolution in our country will be felt during the third Five-year Plan period and all efforts will be made by your Company to actively participate in it.

"This encouraging record of achievements in the past and hopes for a bright future, are a proof positive of the good efforts and co-operation of the workers and the staff of your Company, and the backing and support that your Company has received from all of you from time to time."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

LIGHT ENGINEERING MANUFACTURE TO BE TAKEN UP

CHAIRMAN, MR. ABHIJIT SEN, REVIEWS PROGRESS

THE Tenth Annual General Meeting of Sen-Raleigh Industries of India Ltd. was held at Calcutta on 23rd June 1960. Addressing the shareholders on the occasion, Mr. Abhijit Sen, Chairman of the Company, said that the time had come for the Company to diversify its manufacturing activities by taking to such allied lines of light engineering as were considered essential to the development of the country and where capacities were granted more easily and fed to the fullest extent by release of raw materials. He, however, assured the shareholders that bicycle manufacture would continue to be the main line of the Company's activity.

The following is the full text of Mr. Sen's speech:

"It is with pleasure tinged with sorrow that I welcome you to the tenth annual general meeting of the Company. It gives me pleasure to report that the Company's operations once again show a satisfactory trend, but it is with the deepest regret that I have to record that the hand that guided the destinies of the Company to this stage is no longer at the helm of our affairs. The sudden loss of the Chairman and founder of this Company has removed from the scene an almost legendary figure in the annals of the bicycle trade and industry in the Indian sub-continent. He entered the bicycle trade at the turn of the century, when the bicycle was considered a luxury, and after devoting his whole life to the pursuit of popularising the bicycle as the only means of personal transport for the people of this country, he left the world satisfied in the knowledge that his efforts had not been in vain and independent India had recognised the need for bringing cycling to the masses. It was not for nothing that he was acclaimed as the father of the Indian bicycle trade and industry by the admiring trade of the country.

"The Directors' report and accounts of the Company for the period ended 30th September 1959, have been circulated and, with your approval, I shall take these as read. You will find that, with an improvement in the level of production—largely of complete bicycles—there has been a corresponding improvement in the trading results of the Company and this has allowed your Directors to recommend a higher rate of dividends for ordinary shares.

"A matter, I am sure, that has been engaging the minds of all members is the effect on this Company of the merger in the U.K. of the bicycle and moped interests of our Associates—Raleigh Industries Ltd. and Tube Investments Ltd. The merger does not affect the separate identity of this Company and your Company will continue to manufacture and market bicycles and freewheels under the Raleigh concessions granted to them exactly as it has been doing in the past.

A Record Year

"Once again the year 1959 was a record year for the bicycle industry in India, and it is a happy thought that, whilst the overall increase in production of the industry over the previous year (including the performance of the small-scale sector) was of the order of 30 per cent. for bicycles, your Company was able to achieve an expansion of approximately 50 per cent. in its production and sales of bicycles over its 1958 figures, although the import level of materials was not substantially in excess of 1957 levels.

"No little part in the improved working was played by a more consistent import licensing policy—a consequence of the assurance held out by the Minister for Industries to the Cycle Manufacturers' Association of India in March 1959 that simpler and more effective import licensing procedures were on the way. We are grateful to the Commerce and Industries Ministry for moving with the times and introducing a rational import licensing policy which has remained with us now for over a year and has helped considerably in fostering expansion of industries.

"The demand for bicycles and particularly for the products of your Company shows no sign of slackening. If retail margins are any guide to consumer preferences, the past financial year must have seen an unprecedented demand for our products, for, in spite of the fact that much larger deliveries were effected during the period, the retail margins maintained a uniformly high average throughout the year. This demand has continued into the present year which also opened on a note of high optimism and not even the imposition of an excise duty on various bicycle components—notably Rs. 2 per freewheel and Rs. 4 per rim with an overall impact of Rs. 10 on a complete bicycle—has resulted in a slackening of demand for bicycles, in spite of the fact that most manufacturers took this opportunity to adjust their prices to counter rising costs as well as excise levies. In line with other manufacturers, prices of our products were also adjusted.

Future Activities

"Your Company's future activities are necessarily linked partly with the present industrial policy followed by the Government of India, and partly with the development of the third Five-year Plan which is now gradually taking shape. Very recently the Government have issued various notifications on the revised procedures relating to industrial licensing which, for the first time in many years, give a fairly clear picture of what industries Government feel would require immediate development and what industries are now considered by the Government to be so developed that issue of industrial licences should be restricted. The bicycle industry falls within the latter category where applications for expansions or for new capacity may be rejected for the time being without reference to the Licensing Committee.

"In view of this, it is time to think along lines of branching out into such allied lines of light engineering manufacture as are considered more essential to the development of the country by the Government of India at the moment, and where capacities are granted more easily and fed to the fullest extent by release of raw materials. Our reputation for quality and for technical ability in developing light engineering production would stand us in good stead to obtain industrial licenses and capacities in such lines and would allow a fuller utilisation of our resources.

"Diversification into new lines of manufacture is expected to help turnover considerably and reduce overheads, as there is better scope for obtaining material requirements in these lines and production could grow. Diversification would not mean a shift from our main line of activity which is and will remain the manufacture of bicycles and its components and accessories—and first call on the resources of the Company would always be for expansion in the bicycle industry, provided capacities were available and could be fed adequately with material.

Long-term Outlook for Bicycles

"Whilst the immediate prospects of bicycle expansions are clouded, it is only right to mention that the long-term prospects of obtaining further capacities in this industry appear brighter. From information available, the targets for the third Five-year Plan period for bicycles are expected to be double those of the present Plan period. In planning for our future full consideration is being given to doubling our own capacities wherever practicable, should industrial sanctions for such capacities be forthcoming.

"A new development in the Indian bicycle scene has been the successful operation of a bicycle export pool organised by the Cycle Manufacturers' Association of India which in its first year of operation came very near to reaching a self-imposed target of export for complete bicycles. It is a pleasure to be able to report that your Company played a prominent part in helping to achieve the export target and its share of India's bicycle export business in 1959 was nearly 70 per cent. In general, there was appreciation of the quality of your Company's products in the markets where these were introduced.

Agreement With Labour

"On the labour front, a three-year agreement was concluded with the recognised union in August 1959 and the effects of this agreement will be evident in the next few years. Whilst the Company's own relations with its workers were generally satisfactory, intra-union and inter-union strife for leadership continued, and on more than one occasion in the year under review and even as recently as last month, smooth operation of the factory was marred by violent clashes and unbridled rowdyism. It is unfortunate that different shades of political opinion or different views on trade unionism can so far affect workers that forgetting the basic tenet of the solidarity of the worker, there are these outbursts of violence which can neither benefit the worker individually or collectively nor the company where they serve. It is hoped that good sense will prevail amongst the different sections of workers and that the quieter conditions that have followed the immediate disturbances at Asansol have come to stay with us for good. Workers should realise that violence cannot effect a reconciliation between divergent shades of opinion—far less can violence ever completely annihilate a divergent point of view.

"I have to report the retirement of Mr. L. C. Clarkson, who as Works Director of Raleigh Industries Ltd., had been one of the first people concerned with the planning of the Indian factory. His place is filled on our Board by Mr. L. L. Roberts who is the present Works Director of Raleigh Industries Ltd., in-charge of home and overseas factories.

Whole-time Director

"With the expansion of activities of the Company, it has been considered necessary by your Board to appoint a whole-time Director, and the Company has been very fortunate in obtaining the consent of Mr. D. Chakraverti to join its Board. He joins this firm after a distinguished career in civil aviation both in India and abroad. He brings to the Company an administrative and technical experience which will benefit the Company greatly in its development schemes.

"Before I close, it is my pleasant duty to thank my colleagues, the staff and the workers of the Company, our foreign associates and our dealers for another year of unfailing support to the Company."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

NEW PUBLICATIONS

Indian Capital Market. General Editor: K. C. Lalwani. Published by Artha Vanijya Gabesana Mandir, 12, Duff Street, Calcutta-6. Pages: 159. Price: Rs. 5.00.

THIS is both a descriptive and critical account of the Indian capital market. The general editor, K. C. Lalwani, has given a readable account of the major developments in the capital market, with special reference to post-war period. The institutional structure of the market, specialised financial institutions, investment climate, monetary policy, and developmental planning are among the subjects which have been treated in the book in so far as they impinge upon the growth of the capital market. He describes how an unfortunate development in post-war years has been the steady growth of a climate which has been adverse to private investment activities. He notes that, in post-war years, a widespread feeling has developed that private enterprise is tolerated rather than accepted as an instrument of development. There is no doubt there is much truth in his observation. The fact that the capital market has shown some signs of revival in recent months should not blind one to the defects in general economic policies. Indeed, if the climate were more favourable, the capital market would be in a much better shape today.

A notable observation made by the editor is in respect of a proposal for fixing a ceiling on personal incomes. Although the matter is not seriously debated now, it does come up occasionally in the meetings of leftist parties. In this connection, the author says: "The suggestion for fixing a ceiling on personal incomes will undoubtedly damp private initiative, and tax concessions, however great and elaborate, will hardly be adequate to maintain it. If incentive is to be maintained and yet funds are to be diverted into investment channel, both private and public, mere reliance on tax programme will not do. It will have to be supplemented by physical checks on the consumption of non-essentials, supplemented by a reasonable reward for investment." Again, referring to deficit financing, the editor warns that such financing will increase the cost of planning and introduce serious economic instabilities. He rightly feels that what is needed is the creation of necessary conditions in the private sector which will induce people to save and invest more and more.

The Investor's India Year-Book 1960. Compiled by Messrs. Place, Siddons, and Gough (Private) Ltd., Stock and Share Brokers, Calcutta. Published by Orient Longmans Private Ltd., Calcutta. Price: Rs. 20.

The spiralling of equity prices on the various stock exchanges in India during the last few months, in which almost every equity on the joint-stock list, has taken part, has baffled many an investor. The shares of the most prosperous units in various industries, the back-benchers with disappointing performances, and even of those which will take a few years to commence production have all forged ahead, with the result that an ordinary investor, much less the uninitiated, is hardly able to discriminate and choose a suitable investment. It is in such circumstances that publications of the kind under review can be of help to discriminating investors who wish to consult the past performance of scrips and ascertain their intrinsic merits.

The Investor's India Year Book, now in its forty-sixth edition, has a unique place in this field. While there is a growing tendency on the part of compilers of year-books to cover every possible joint stock company, the *Investor's India Year-book* has always been selective in the choice of companies for coverage, while giving at the same time a wide variety of them and enlarging the list year after year, so that it makes the job of the investor a little easier. The latest edition provides within its 400 pages the statistical data, capital history, board of directors, objects and activities, etc., of over 550 companies, the shares of which are quoted on the principal stock exchanges of India. The data in most cases are as up-to-date as possible.

Another main feature of the publication is the illuminating review of the progress of the economy in general and of the leading industries in particular, which adds to its utility to the investor. Besides, it contains the terms of business of brokers in Calcutta, list of trustee investments, definition of approved investments, and list of Government of India, State Government, Corporation and port trust loans. In short, the publication continues to hold its position as one of the most authentic and useful compendium on the subject. The printing and get-up of the publication leave nothing to be desired. It is moderately priced considering the high cost of paper and printing.

Practical Problems in Advanced Accountancy, Parts I and II. By K. S. Gadre. Published by Panchsheel Prakashan, 'Krishna Niwas,' 281, Frere Road, Bombay-1. Pages: 832 (both parts together). Price: Part I Rs. 10; Part II Rs. 7.50.

Students of advanced accounting, costing, etc., definitely require the assistance of key books and solved papers. The books under review (bound separately) make a happy departure from all other guides for they not only solve the problems but also enable the students to make a correct approach to their subject.

In Part I of the book, the author, Mr. K. S. Gadre, has solved, among other things, questions on receipts and payments, depreciation, repair, reserves, etc.; final accounts of cinema theatres, farmer's flock, criticism of accounts on sale or return, investment, voyage; single entry; departmental and branch accounts; self-balancing of ledgers; hire purchase accounts and some important theoretical problems.

Solutions for problems under royalty accounts, insolvency, partnership and liquidator's accounts form part of the second part. The author has worked out problems in all the sections of a partnership account, such as admission, retirement and dissolution of partners, piecemeal distribution of cash, division of profits and final accounts.

The books are primarily intended for B.Com. students. But they will also be of use to the Intermediate students of Chartered Accountants' course and other diploma examinations of B.Com. standard.

Controls on Company Finance. By B. J. Sims. Published by Sweet and Maxwell Ltd., 2 and 3 Chancery Lane, London. Agents in India: N. M. Tripathi Private Ltd., Princess Street, Bombay-2. Pages: 144. Price: 25s.

In all democratic countries, Governmental control of joint-stock companies has been steadily increasing. A great deal of financial control is exercised by the Governments through regulations of capital issues and borrowings by joint-stock enterprises. Mr. B. J. Sims, the author of the book under review has explained the general principle and controls exercised by the United Kingdom Government on joint-stock companies. Since Indian regulations are also based on similar procedure in the U.K., the book must have a certain appeal to Indian readers too. Mr. Sims has described the capital issues control, general extent of control, general exemptions and procedure and enforcements. The last part of the book must be of interest to those British companies which want to invest their funds abroad, for it deals with exchange control and transfer of companies abroad. The appendices of the book give the relevant statutes, orders, and forms of applications to the authorities administering Capital Issues Control. The book is a good guide to those who are in charge of the finances of joint-stock companies."

Industrial Organization. By Bimal C. Ghose. Published by the Oxford University Press, Oxford House, Apollo Bunder, Bombay-1. Pages: 305. Price: Rs. 8.00.

This little book has a twofold objective; one, to help students taking up a course of study in industrial organisation to have an insight into the problems and the factors bearing on the structure of modern industries; two, to enable the general reader to get acquainted with the problems of industrial structure and development.

It falls into two parts. The first deals with the general structure of industries and the second with the growth of industries in India in general and six major industries, namely, cotton, textiles, jute, sugar, iron and steel, coal and tea, in particular.

The book is meant to be an introductory one. The author has succeeded in compressing, in the short compass of 300 pages, a good deal of information. It should prove useful to both students and the general reading public.

Purchase Tax. By A. T. Grieve. Published by Sweet and Maxwell Ltd., 2 and 3 Chancery Lane, London. Agents in India: N. M. Tripathi Private Ltd., Princess Street, Bombay-2. Pages: 208. Price: 25s.

Students of taxation will find the book under review an illuminating guide to the working of purchase tax in the United Kingdom. Although purchase tax, in the form in which it is found in the United Kingdom, does not prevail in this country, the book is bound to be read with interest by students of comparative fiscal systems. The author describes the administration of the tax, registration and accountability of assessees, calculations of tax, legal provisions relating to sales, accounting arrangements and general aspects of purchase tax affecting a trader. As the author himself pointed out, it is not a legal textbook, though it will be of assistance to lawyers and accountants. For people in this country, its appeal is somewhat academic. Interested students will find in the book material that will help them understand the system of taxation which has been in operation in the U.K. for nearly 20 years now.

Journal of the Institution of Engineers (India) Monthly. Editor: B. Seshadri. Published by the Institution, 8, Gokhale Road, Calcutta. Price: Rs. 2.50.

This monthly journal contains articles of highly technical nature. Under three broad sections, namely, mechanical, electrical and general engineering, technical problems are discussed by experts in the field. In the February 1960 issue there is an interesting article on "Philosophy of Engineering" by Mr. Baleshwar Nath. In his article, the author discusses the general nature of engineers and their ingenuity and the need for their multi-faced training. The journal will help engineers keep abreast of latest developments in their field and stimulate research effort.

India and Disputes in the United Nations. By B. V. Govinda Raj. Published by Vora & Co. Publishers Private Ltd., 3, Round Building, Bombay-2. Pages: 280. Price: Rs. 12.00.

If for no other reason, this publication should be welcomed on the score that it brings together, under a single cover, the basic facts about the international disputes brought before the U.N. in which India has been vitally interested. The author has tried to investigate the basis, the purpose, applicability and consistency of India's foreign policy with reference to the settlement of international disputes. He has also tried to evaluate India's contribution towards the growth of the U.N.O. and international law.

City Merchants' Letter-Writer. By C. H. Hamilton. Published by the Author, P. O. Box No. 1706, Dar-es-Salaam, British East Africa. Agents in India: New Book Co. Private Ltd., Dadabhoy Naoroji Road, Bombay, 1. Pages: 208. Price: Rs. 5.

The book under notice contains as many as 290 business letters written specially for the benefit of city merchants. It includes, among others, correspondence with banks and other merchants. This small book of letters will be of immense help to the average merchant. It will also serve as a good guide to those who wish to improve their trade correspondence.

Outline of Exchange Control in India

The Reserve Bank of India has just published a brochure entitled the *Outline of Exchange Control in India* which replaces the earlier publication *Summary of Foreign Exchange Regulations*, issued in 1946 and revised in 1951. The *Outline* brings the regulations up-to-date and presents them against a wider setting.

The booklet is divided into ten chapters. The opening chapter deals with the functions of exchange control, its evolution since its introduction in 1939 and its purpose in the context of the Five-year Plans. This is followed by a chapter on the constitution and the organisation of the control, including machinery for dealing with breaches of regulations. There are separate chapters setting out detailed aspects of the control as applied to imports and exports of merchandise, various private and business payments abroad including facilities available for foreign travel, imports and exports of gold, silver, jewellery, precious stones, carpets, curios and currency notes (Indian and foreign). Of special interest to investors is the chapter on foreign investment in India where the policy in regard to admission of foreign capital and the facilities available for capital repatriation and transfer of profits from India are referred to.

The outline is intended not only for the general public within the country but also those outside who would like to have an idea, however brief, of the basis, the nature and the broad contents of the Indian Exchange Control.

The handbook is priced at Re. 0.50 and can be had from the Administrative Officer, Economic Department, Reserve Bank of India, Bombay-1.

INDIA'S FOREIGN TRADE IN THE FIRST QUARTER

A COMMODITY-WISE ANALYSIS

THERE was no appreciable change in the structure and pattern of India's foreign trade in the first quarter of 1960, as compared with either the previous or the corresponding quarter of 1959, although there were considerable variations in the value of trade. The data, analysed here, are based on figures published by the Department of Commercial Intelligence and Statistics, Calcutta. The two tables on this page show at a glance the trend of trade in the first quarter of the current year, as against that in the previous quarter and in the corresponding quarter of 1959. The total earnings from exports amounted to Rs. 153 crores during January-March 1960, which were Rs. 20 crores higher than those in the corresponding quarter of 1959, but Rs. 36 crores lower, as compared with the previous quarter, namely, October-December 1959. Similarly, imports at Rs. 209 crores were Rs. 14 crores higher than those in January-March 1959, but lower by about a similar amount, as compared with the previous quarter. In other words, both exports and imports in the quarter under review were greater than in the same period of 1959, but smaller than in the last three months of that year. As usual, the imports were considerably in excess of exports, with the result that the balance of trade was adverse to the tune of Rs. 56 crores.

Among exports, groups of commodities comprising "manufactures," "food," "crude materials" (including metallic ores) and "oils and fats" showed some improvement in relation to their performance in the corresponding quarter of 1959, although they were well below the levels reached in the final quarter of 1959. Exports of mineral fuels, chemicals and machinery items were considerably higher than in the previous and corresponding quarters. In the sphere of imports, the food group registered a sizable decline, followed by manufactures. Imports of manufactures as well as machinery and transport equipment were greater than in the corresponding quarter, but they could not maintain the tempo registered in the previous quarter. Imports of crude materials (including petroleum and metallic ores), chemicals, oils and fats were distinctly higher than in the previous and corresponding quarters, thanks to some liberalisation in import restrictions.

In the field of exports, the total earnings from foodstuffs and tobacco amounted to Rs. 50 crores in round sum, as against Rs. 41 crores in the first quarter of 1959 and Rs. 70 crores in the previous quarter. Tea, India's major foreign exchange earner, fetched Rs. 23 crores, which was higher by Rs. 3 crores, as compared with the first quarter of the previous year. This, however, indicated a fall of over 50 per cent. from the previous quarter, when tea exports touched about Rs. 50 crores. Exports of coffee were higher at Rs. 141 lakhs, as against Rs. 133 lakhs and Rs. 109 lakhs, in the corresponding quarter and the previous quarter, respectively. Shipments of cashew kernels rose to Rs. 434 lakhs, from Rs. 347 lakhs in January-March 1959 and Rs. 339 lakhs in October-December 1959 and spices to Rs. 634 lakhs, from Rs. 203 lakhs and Rs. 410 lakhs, respectively. Overseas sales of tobacco went up to Rs. 534 lakhs, from Rs. 466 lakhs and Rs. 83 lakhs.

Exports of manufactured goods aggregated Rs. 61 crores in the first quarter of the current year, as against Rs. 55 crores in the first quarter of 1959 and as much as Rs. 74 crores in the previous quarter. Earnings from jute goods exports improved to Rs. 33 crores, from Rs. 31 crores and Rs. 30 crores in the first and last quarters of 1959, respectively. Exports of cotton fabrics amounted to Rs. 15 crores. These were higher by Rs. 2.5 crores, as compared with the corresponding quarter of 1959, but Rs. 6 crores lower than in the previous quarter. The total exports of silk and woollen fabrics were lower at Rs. 22 lakhs, as against Rs. 26 lakhs and Rs. 29 lakhs, respectively, in the two quarters taken, as mentioned above, for comparison.

In the group of crude materials, exports of raw cotton showed a fall from Rs. 479 lakhs in the corresponding quarter to Rs. 292 lakhs, but were more or less the same as in the previous quarter. Exports of manganese ore declined from Rs. 337 lakhs in January-March last year to Rs. 260 lakhs, but they too were a shade higher by Rs. 11 lakhs, as compared with the previous quarter. Iron ore fared better at Rs. 441 lakhs (as against Rs. 250 lakhs and Rs. 342 lakhs) and so also hides and skins at Rs. 329 lakhs (as against Rs. 275 lakhs and Rs. 318 lakhs). Sales of mica moved down from Rs. 242 lakhs and Rs. 264 lakhs to Rs. 215 lakhs and so also wool and other animal hair.

Among mineral fuels, exports of petroleum products staged a smart rally to Rs. 130 lakhs, from Rs. 90 lakhs in January-March 1959 and Rs. 71 lakhs in October-December 1959. Shipments of coal at Rs. 125 lakhs were lower by Rs. 11 lakhs but higher by Rs. 14 lakhs, as compared with the corresponding quarter last year and the previous quarter, respectively. Among vegetable oils, exports of castor oil rose perceptibly to Rs. 188 lakhs, from no more than Rs. 21 lakhs and Rs. 146 lakhs, respectively; whereas those of groundnut oil and linseed oil suffered a considerable setback.

A notable improvement was recorded in the exports of engineering goods and machinery, which amounted to Rs. 378 lakhs, as against a mere Rs. 51 lakhs in the corresponding quarter of last year and Rs. 277 lakhs in the previous quarter. The most outstanding item in this group were power-generating machines (including re-exports) which fetched Rs. 245 lakhs, as against Rs. 3 lakhs only and Rs. 99 lakhs in the respective comparable periods. There was a marked increase in the exports of electric fans also. Exports of textile machinery and sewing machines were also well maintained.

A significant feature of import trade was the sharp decline in food materials from Rs. 32 crores in the first quarter of 1959 and Rs. 33 crores in the previous quarter to Rs. 22 crores. This fall was mainly due to smaller intake of wheat, though rice imports were higher.

In the sphere of imports of machinery, mining, construction and other industrial machinery accounted for Rs. 22 crores, as against Rs. 19 crores in corresponding quarter last year and as much as Rs. 25 crores in the previous quarter. Imports of metal working machinery at Rs. 836 lakhs were considerably higher than those in the first quarter 1959 (Rs. 671 lakhs), but lower, as compared with those in the previous quarter. The total intake of power generating machines was lower at Rs. 557 lakhs, as against Rs. 708 lakhs and Rs. 632 lakhs. Imports of manufactures (including iron and steel, non-ferrous metals and textile fabrics) which went up from Rs. 48 crores in the first quarter of 1959 to Rs. 50 crores in the last quarter of that year, declined to Rs. 47 crores in the quarter under review. There was a distinct increase in imports of raw materials (including cotton, jute, metal ores and scrap, and petroleum); they rose to Rs. 54 crores, from Rs. 35 crores in the first quarter of 1959. Imports of chemicals as well as oils and fats also registered handsome improvements.

TABLE—I

Exports (including re-exports)

(Value in lakhs of rupees)

	1960 first quarter	1959 final quarter	1959 first quarter
Manufactures	61,06	73,68	55,48
Of which :			
Leather	7,08	8,25	5,24
Cotton yarns	1,22	1,50	1,28
Cotton fabrics	15,45	21,26	12,51
Jute goods	33,31	30,00	31,25
Silk and woollen fabrics	22	29	26
Cement	21	21	33
Iron and steel	41	80	54
Footwear	87	80	86
Machinery, etc.	3,78	2,77	51
Of which :			
Textile machinery	4	4	5
Diesel engines	3	5	3
Sewing machines	15	16	6
Electric fans	29	10	9
Furniture	9	10	10
Power—generators (non-electric)	2,45	99	3
Food and tobacco	50,40	70,35	40,94
Of which :			
Tea	23,22	49,75	20,11
Coffee	1,41	1,09	1,33
Oilseed cake, etc.	5,60	7,11	4,34
Cashew kernel	4,34	3,30	3,47
Spices	6,34	4,10	2,03
Tobacco	5,34	83	4,66
Tobacco manufactured	23	28	14
Crude materials	29,80	30,47	29,06
Of which :			
Hides and skins	3,29	3,18	2,75
Wool, etc.	2,65	3,86	2,66
Raw cotton	2,92	2,91	4,79
Oilseeds	1,33	44	1,01
Wood	60	66	60
Mica	2,15	2,64	2,42
Iron ore	4,41	3,42	2,50

INDO-HUNGARIAN TRADE

A new trade and payments agreement between India and Hungary, which was signed in New Delhi last week, came into force with effect from the 1st inst. The new agreement, which replaced the one originally signed in 1954, and later extended upto the end of last month, will remain valid for three and a half years. Under the agreement, all transactions between the two countries of both commercial and non-commercial nature will be financed in non-convertible Indian rupees. Trade between the two countries will thus be on a balanced basis.

The important items of exports to Hungary will be tea, coffee, tobacco, vegetable oils, mica, shellac, oilseeds, jute and coir products, iron ore and steel billets, de-oiled meals, semi-tanned and processed skins, leather, cotton, woollen and silk fabrics, handloom and handicraft products, sports goods, shoes, light engineering goods, railway equipment, textile machinery and veneers.

Imports from Hungary will mainly consist of various types of capital goods and machinery for small-scale industries, heavy electric generating sets, photographic sensitised materials, tools such as pneumatic tools, precision tools, etc., components of electric supply meters, pharmaceuticals and drugs in bulk, material testing instruments, garage tools, machine tools, refractory bricks, radio transmitting and receiving tubes and radio parts.

It may be noted that, in 1959, India had an adverse balance in its trade with Hungary, amounting to Rs. 166 lakhs, thanks mainly to a sharp increase in the imports (of machinery and manufactures of metals, etc.) from that country. The trend of imports from and exports to Hungary during the last four years is given in the following table:

(Value in lakhs of Rs.)

	1959	1958	1957	1956
Imports	239	62	77	78
Exports	73	61	30	51
Balance of trade	—166	—1	—47	—27

The new trade and payments agreement is designed to increase and diversify India's trade with Hungary to the advantage of both.

The Government of India has decided to participate in the International Autumn Trade Fair at Vienna, scheduled to be held from 4th to 11th September next. The object of the participation is to help build not only the demand for traditional Indian exports, but also to publicise our growing export potential in regard to manufactured goods. Vienna, being centrally located in Europe, the Fair, it is hoped, would provide an excellent opportunity for creating the much-needed awareness about India's exportable products. Besides, Austria is a member of the European Free Trade Association (E.F.T.A.) and participation in the Vienna Fair has thus acquired added importance. Manufacturers and exporters who like to take part in organising the India Pavilion at this Fair, may send their list of exhibits to the Director of Exhibitions in the Union Ministry of Commerce and Industry, New Delhi, for approval, latest by the 25th inst.

ORISSA CEMENT LIMITED

RAJGANGPUR

NOTICE IS HEREBY GIVEN THAT THE Tenth Annual General Meeting of the Members of the Company will be held at the registered Office of the Company at Rajgangpur, on Friday the 2nd September, 1960, at 3 p.m., to transact the following business:

1. To receive and adopt the audited Balance Sheet and Profit and Loss Account for the year 1959 and the Report of the Directors and Auditors thereon.
2. To declare a dividend. (The dividend as declared would be payable to all the shareholders registered in the books of the Company as on 10th September, 1960.)
3. To elect a Director in place of retiring Director, Shri Kamalnayan Bajaj.
4. To elect a Director in place of retiring Director, Shri J. Dalmia.
5. To appoint Auditors for the current year and to fix their remuneration.
6. To consider and pass the following Special Resolution with or without modification as thought fit (Explanatory Note attached).

   "RESOLVED by way of Special Resolution that the rental with effect from 1st March, 1959 of 20 single-room quarters belonging to Kalinga Textiles Private Ltd. an Associate of the Managing Agents of the Company, at the monthly rental of Rs. 10 per quarter be and is hereby ratified and approved. Further RESOLVED that the Directors be and are hereby authorised to rent and continue to rent such number of quarters belonging to Messrs. Kalinga Textiles Private Ltd., as are required and for such period as considered necessary on monthly rental not exceeding Rs. 10 per quarter."
7. To consider and pass the following Special Resolution with or without modification as thought fit (Explanatory Note attached).

   "RESOLVED by way of Special Resolution that Article 118 of the Articles of Association of the Company be and is hereby amended as follows:

   '118(*a*) The seal on share certificates shall be affixed in presence of such persons as are authorised from time to time to sign the share certificates in accordance with the provisions of The Companies (Issue of Share Certificates) Rules, in force for the time being.

   (b) On instruments other than share certificates the seal shall not be affixed except in presence of a Director or any other person or persons authorised in that behalf by the Board, who shall sign every instrument to which the seal shall be affixed'."
8. To consider and pass the following Special Resolution with or without modification as thought fit (Explanatory Note attached).

   "RESOLVED by way of Special Resolution that, in addition to transactions already authorised, approval be and is hereby accorded to transactions being made with Hind Ceramics Limited, an Associate of Dalmia Agencies Private Ltd., Managing Agents of the Company, in regard to the following:

   (i) Purchase by the Company from the said Hind Ceramics Limited, of Sanitarywares, Pipes, Fittings and other goods manufactured by the latter Company at the prevailing market rates; and gypsum moulds usable as gypsum in the Cement Works at prices not exceeding those at which gypsum is purchased from other sources.

   (ii) Sale to or purchase from the said Hind Ceramics Limited, of spare parts, equipments, store materials or other articles required by one and available with the other; and

   (iii) Deputation to or from the said Hind Ceramics Ltd. of any personnel including foreign technicians, when required.

   PROVIDED that payment for all goods and services of personnel shall be made within one month of the date of supply or sale of the goods and in case of personnel within the month following the month or part thereof for which remuneration may be payable."

The Share Transfer Book of the Company will remain closed for 27 days from 15th August to 10th September, 1960 both days inclusive.

Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a Shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 42 hours before the commencement of the meeting.

By Order of the Board,
For ORISSA CEMENT LIMITED,
For DALMIA AGENCIES PRIVATE LIMITED,
J. DALMIA,
Director,
Managing Agents.

Dated 24th June, 1960.

ORISSA CEMENT LIMITED

Explanatory Notes regarding Special Items 6, 7 and 8 of the Agenda of Annual General Meeting

Item 6: Section 360 of the Companies Act, 1956 provides that the approval of the Shareholders should be taken before entering into contract for the sale, purchase or supply of any property to an Associate of the Managing Agents. The Company has taken 20 Nos. of single-room quarter on rent at Rs. 10 per month per quarter from Messrs. Kalinga Textiles Private Ltd., an Associate of the Managing Agents, with effect from March, 1959, as this Company urgently required quarters for the accommodation of its workers and shall be requiring till the Company constructs its own quarters or makes any suitable arrangements. Approval of the shareholders is sought for payment of rent of the above 20 Nos. of quarters from March, 1959 till date and continuation of the above arrangement for payment of rent on quarters belonging to Messrs. Kalinga Textiles Private Ltd., for the Company's use for such periods as Directors deem fit.

The Managing Agents of the Company are interested in Messrs. Kalinga Textiles Private Ltd., as the above Company is an Associate to them. Shri V. H. Dalmia, Director, is also interested in the above Company as first Jointholder of 1,000 Preference Shares of Kalinga Textiles Private Ltd. though the shares are held by him on behalf of Dalmia Jain Trust in the capacity of Managing Trustee. Shri J. Dalmia, Director, is also indirectly interested as his relatives hold shares in the above Company.

Item 7: Under the Companies (Issue of Share Certificates) Rules, 1960, the common seal of the Company has to be affixed on every share certificate in the presence of two Directors or persons acting on behalf of the Directors, who are required to put their signatures on the share certificates. Under the Articles of Association of the Company, at present, one Director must sign every document on which the seal of the Company is affixed. It is proposed to amend the Article 118 of the Articles of Association of the Company so that the seal can be affixed in the presence of all persons other than Directors, who are authorised for this purpose by the Board. This would facilitate the prompt issue of share certificates.

Item No. 8: The Company is building quarters and one more septic tank to cope with the expansion of the colony. For this purpose, sanitary fittings and stoneware pipes for underground drainage will be required which are manufactured by Hind Ceramics Ltd. Similarly, Hind Ceramics Ltd. want to purchase firebricks, etc., from the Company. Hind Ceramics Ltd. have got similar type of Gas Producer as that of the Company. They have also installed tunnel kilns working practically on the same principle as those installed at Rajgangpur by the Company. Therefore, it may become necessary from time to time to have purchase and sale transactions with each other for supply of spare parts and other materials in case of emergencies and also deputation of personnel between each other when required. For this purpose, sanction of the shareholders is necessary by way of Special Resolution.

Hind Ceramics Ltd. being an Associate to the Managing Agents of the Company, Sarvashri J. Dalmia and V. H. Dalmia are interested, they being Directors of Managing Agents. Further, Shri V. H. Dalmia is also interested as a joint holder of 2,000 Preference Shares of Hind Ceramics Ltd. as one of the Trustees of Dalmia Jain Trust.

By Order of the Board,
For ORISSA CEMENT LIMITED,
For DALMIA AGENCIES PRIVATE LIMITED,
J. DALMIA,
Director,
Managing Agents.

BURN AND COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Sixty-sixth Ordinary General Meeting) of the Company will be held on Friday, the 29th July, 1960, at 11 a.m., at the Registered Office, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th April, 1960, and the Directors' and Auditors' Reports thereon.
2. To declare a dividend on the ordinary shares. The dividend, if declared, will be paid on or after the 4th August 1960 to the Shareholders whose names are on the Company's Register on the 29th July, 1960, or to their mandatees.
3. To appoint a Director in place of the retiring Director.
4. To appoint Auditors and fix their remuneration.

The Ordinary Share Register of the Company will be closed from the 21st July, 1960 to the 29th July, 1960, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

CALCUTTA, *1st July, 1960.*

THE TRAVANCORE RUBBER AND TEA COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THIS Company will pay on the 15th July 1960 to the registered shareholders as at that date, half-yearly interest due on the Preference Shares at the rate of 6 per cent. per annum.

Preference Share Transfer Books will be closed from 11th July to 15th July 1960, both days inclusive.

By Order of the Board,
ASPINWALL & CO. (TRAVANCORE) LTD.,
Managing Agents.

ALLEPPEY, *24th June,* 1960.

THE STANDARD COAL CO., LTD.

F. W. HEILGERS & CO. (PRIVATE) LTD.
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA, *24th June* 1960.

LARSEN AND TOUBRO WELL MAINTAINS PROGRESS

MARKED RISE IN EARNINGS—OUTLOOK BRIGHT

THE substantial progress made by Larsen and Toubro Ltd. (Managing Agents: L. & T. (Management) Private Ltd., Bombay) in the past few years has not only been maintained during the year ended 31st March 1960 but the pace of increase in earnings has actually gathered momentum. The gross profit, for instance, which had steadily grown from Rs. 15.96 lakhs (1953-54) to Rs. 36.06 lakhs in 1958-59, has shot up to Rs. 49.05 lakhs, representing an increase of Rs. 12.99 lakhs or 36 per cent. over that for the previous year. This sharp rise in profit during the year under review is due to the marked expansion of Rs. 42.40 lakhs in sales and services, in refreshing contrast to the decline of Rs. 1.15 crores noted in 1958-59, and a sizable increase of Rs. 3.84 lakhs in "other income."

The improvement in sales and services has been achieved as a result of the completion of large contracts together with a further increase in production and servicing activities. The performance of the Company would have been far more encouraging but for the fact that import restrictions continued to make it difficult to develop further the sales of imported machinery. The Company, however, continued developing its manufacturing, workshops and servicing facilities at Powai and, during the year under review, there was an encouraging increase in the output from these production centres. "Having adapted itself to meeting the demands from industrial enterprises in India, both in the matter of supply of plant and machinery, partly or wholly of indigenous make, and in the matter of erection and service of such equipment," the Directors observe in their report, "the Company has been able to employ fully its various engineering facilities with satisfactory results to the Company."

After making a larger provision of Rs. 4.17 lakhs for managing agency commission, as against Rs. 3.10 lakhs in respect of the previous year, and of Rs. 7.09 lakhs (Rs. 5.10 lakhs) towards depreciation, and setting aside Rs. 16 lakhs for taxation, as compared with Rs. 16.60 lakhs a year ago, the net profit amounts to Rs. 21.78 lakhs, which is nearly double that (Rs. 11.26 lakhs) for the previous year. As much as Rs. 8.07 lakhs, or 37 per cent. of the net profit, have been added to the reserves. This amount consists of Rs. 2.50 lakhs to the general reserve, Rs. 1 lakh to the dividend equalisation reserve and as much as Rs. 4.57 lakhs to the development rebate reserve. A dividend of 18 per cent. on the 600,000 old ordinary shares of Rs. 10 each, coupled with a proportionate dividend at the same rate for a period of six months on the 200,000 new shares issued in August 1959, both subject to deduction of tax, has been recommended by the Directors. On a tax-free basis, this is equivalent to 12.6 per cent. and is more or less the same as that paid for 1958-59 on a lower capital. Last year, it may be noted, a dividend of 12.5 per cent. was paid on 500,000 old shares and a proportionate dividend for four months on the 100,000 shares issued in December 1958. The Directors have also recommended a gross dividend of 7.15 per cent. on the 5 per cent. tax-free preference shares, so that, after deduction of tax at source, the shareholders may get the same net dividend of 5 per cent. as before. The Directors feel that "it is reasonable that preference shareholders should be placed in such a position that the Company should bear the deduction made compulsory by Section 18(3D) of the Income-tax Act and those shareholders should receive the fixed percentage of dividend, namely, 5 per cent, as before." A resolution to that effect will be placed before the shareholders at the forthcoming annual general meeting to be held on 22nd July, for their approval. The dividends on preference and ordinary shares together absorb Rs. 6.25 lakhs more than in the previous year, as will be evident from the comparative table at the foot of column 1.

By resorting to gradual development of manufacturing, workshop and servicing facilities, in keeping with the country's desire and determination to place itself on the world industrial map, instead of strictly confining itself to whatever import business in machinery that could be had, the Company has been able to improve its profit-margin in the past few years. In other words, the rise in profit is a hard-won achievement and not the result of any speculative enterprise, in which money is made quickly or lost equally quickly. L. and T. is an admirable example of how a small company could and should grow into a large company, without upsetting the interests of its shareholders even for a period of a few years.

The ratio of the Company's gross profit to sales and services which had stood at 6 per cent. in 1956-57, had gone up to a high of 15.3 per cent. in 1959-60.

The Company acquired further shares during the year under review in its four associated companies, namely, Alu Capsules Private Ltd., Engineering Construction Corporation Private Ltd., India Crown Cork Company Private Ltd. and Viking Transport Private Ltd., following which these companies became its subsidiaries. The dividends received from these subsidiaries during the year amounted to Rs. 2.26 lakhs. The Company also acquired during the year a substantial shareholding in Messrs. Willcox (Buckwell-India) Private Ltd., New Delhi, the authorised dealers in North India for Caterpillar Tractor Company, Peoria, U.S.A. Together with Tractors (India) Ltd., Calcutta, the Company now holds a controlling interest in Messrs. Willcox (Buckwell-India) Private Ltd.

Consequent on the issue of 200,000 new ordinary shares of Rs. 10 each in August 1959, the paid-up capital of the Company has gone up to Rs. 95 lakhs, as against which the reserves and surplus aggregate Rs. 27.62 lakhs. Borrowings from banks and others stand at Rs. 55.12 lakhs and other current liabilities and provisions at Rs. 211.33 lakhs. The borrowings and other current liabilities are more than adequately covered by current assets at Rs. 332.21 lakhs. There has been an addition of Rs. 25.57 lakhs to the gross block during the year under review; this is on top of Rs. 13.82 lakhs added in 1958-59. This has raised the value of gross block to Rs. 78.02 lakhs. This has been written down to Rs. 49.49 lakhs. Besides, capital work-in-progress amounts to Rs. 7.88 lakhs.

The outlook for the Company is promising. With the further development of industries in India, as envisaged in the third Five-year Plan, the Directors confidently expect that the Company's engineering facilities will continue to be required and are hopeful that the Company will continue to show satisfactory results.

The Rs. 10 fully paid-up ordinary shares of the Company have been a bright feature of the Bombay share market and are presently being quoted at Rs. 43 *cum-div.* On an *ex-div.* basis and at the current rate of dividend, the yield on them is 3 per cent. per annum, free of tax.

SHAW WALLACE EARNS RECORD PROFIT

NET DIVIDEND SHADE HIGHER

THE year ended 31st December 1959 has turned out to be the most successful for Messrs. Shaw Wallace and Company Ltd. (Chairman, Board of Directors: Mr. S. M. Smith, Calcutta). Its sales have increased over the year by Rs. 91 lakhs to a peak of Rs. 6.38 crores, income from agency and other commissions and allowances by Rs. 7.06 lakhs to Rs. 51.69 lakhs and other income, such as dividends from subsidiaries, income from trade investments, etc. by Rs. 1.91 lakhs to Rs. 19.74 lakhs. Though the larger turnover is accompanied by an all-round increase in expenses of over Rs. 36 lakhs to Rs. 6.44 crores, the gross profit is substantially higher at Rs. 65.22 lakhs, representing a rise of Rs. 13.73 lakhs over that for 1958. This, in fact, is a record profit earned by the Company so far.

After making a larger provision of Rs. 8.56 lakhs for depreciation (as against Rs. 7.04 lakhs a year ago) and of Rs. 22.32 lakhs for taxation (as against Rs. 21.75 lakhs in respect of 1958), the net profit amounts to Rs. 34.34 lakhs, which compares very favourably with Rs. 22.70 lakhs earned in 1958. "While the Company is expanding satisfactorily," the Chairman, Mr. S. M. Smith, stresses in his review appended to the Directors' report, "prudence demands that amounts should be set aside to finance this expansion." Accordingly, the Directors have set aside Rs. 10 lakhs to the general reserve, which had received Rs. 7.50 lakhs a year before, besides raising the allocation to the development rebate reserve from Rs. 1.62 lakh to Rs. 5.32 lakhs and utilising a larger sum of Rs. 3 lakhs to write off investments (as against Rs. 2 lakhs used for this purpose last year). Even after such a large conservation, the Directors have been able to recommend an increased dividend of 15 per cent., subject to deduction of tax, on ordinary shares, as compared with 10 per cent., free of tax, for the previous year. On a tax-free basis, this dividend at 10.5 per cent. compares a little favourably with that for 1958. The ordinary dividend absorbs Rs. 11.25 lakhs, as against Rs. 7.50 lakhs a year ago, and the dividend on the 6 per cent. taxable preference shares Rs. 4.50 lakhs, leaving a surplus of Rs. 5.15 lakhs to be carried over, including Rs. 4.87 lakhs brought in from 1958.

The dividend on preference shares needs some explanation, in view of the differing views on deduction of tax, particularly on taxable preference shares. The Directors have declared a dividend of 6 per cent., subject to deduction of tax, as provided in Section 18(3D) of the Income Tax Act. No income-tax payable by the Company has been deducted. Explaining their decision, the Directors observe:

"Eminent Calcutta counsel has given it as his opinion that only one deduction on account of income-tax should be made from the gross preference dividends. The Company's solicitors share this view and they advise that the Articles of Association of your Company provide that only one deduction of tax should be made at one of the varying rates, applicable to the shareholders according to his or its status, under Section 18(3)(D) of the Income-tax Act 1922, the tax so deducted to be paid to the Government by virtue of the changes in legislation. Your Board have accepted the advice of the Company's solicitors, but the Company's auditors hold a different opinion and have consequently qualified their report."

The auditors' (Messrs. Lovelock and Lewes) views on the provision for preference dividend in the accounts, given in their report, are:

"The Directors have paid the preference dividend for the half-year ended 31st December 1959 and have made provision in these accounts for the payment of the preference dividend for the half-year ended 31st December 1959. The dividends so paid and provided for amount to Rs. 4,50,000, being six per cent. on the paid-up preference share capital of the Company. In our opinion, the amount payable in terms of Article 4 of the Articles of Association is Rs. 3,60,000, being six per cent. on the paid-up preference share capital less Indian income-tax at the current rate."

In other words, the Auditors are of the view that the taxable preference dividends should be subjected to two deductions, namely, (1) Company's own income-tax and (2) the tax payable by shareholders on the dividend at source. This opinion had already been corroborated by Mr. R. K. Dalal, the well-known auditor and chartered accountant of Bombay.

The Company, as readers may already be aware, has widespread interests, and there has been a sizable progress in most of the fields. The extensions to the Company's fertiliser factory in Madras were completed in October 1959 and the new acid plant has been in production since then. The production of both superphosphates and sulphuric acid was higher at 26,849 tons and 9,459 tons, respectively, as compared with 23,839 tons and 7,396 tons in 1958, despite the fact that only a few weeks' production was obtained from the new plant. It is expected that, with both units working to capacity, the production of superphosphates will exceed 70,000 tons. Sales of insecticides and fungicides, manufactured by Sandoz Products and Tata Fison, has increased by 50 per cent. The production of glue has considerably risen from 12,495 cwts. in 1958 to 20,124 cwts. in 1959. The Company has plans to expand its activity into the synthetic branch and to erect a plant to manufacture urea formaldehyde, which is particularly useful in the plywood trade. The tea companies under the Company's management have had a successful year and income from this source shows an appreciable improvement.

The Tinplate Company of India Private Ltd., of which Shaw Wallace and Company are the Managing Agents, has raised its output from 57,877 tons (in 1958) to 67,900 tons, notwithstanding the fact that its difficulties have not been resolved. Nevertheless, plans for expansion of the Company's Golmuri Works are under scrutiny, but the Chairman says that it is too early to give an indication of the final outcome.

The raisings of coal by the collieries under the Company's management have gone up slightly, from 1,896,923 tons to 1,912,949 tons, but despatches have dwindled from 1,853,957 tons to 1,849,610 tons.

The two flour mills under its management have had a successful year. Their production and sales of wheat products were a record. Thanks to the slight recovery in shipping during 1959, the Company's income from this source has gone up by 30 per cent. The Company's import business has, however, been affected by the continued restrictions on imports.

The outlook for the Company, so far as the current year is concerned, is reasonably satisfactory and, according to the Chairman, the results of the first half of the current year have been satisfactory.

There has been an addition of Rs. 35.70 lakhs to the Company's block account during the year, bringing the total cost thereof to Rs. 118.31 lakhs. This has been written down to Rs. 92.25 lakhs. The investments (at or below cost) stand at Rs. 181.15 lakhs, of which quoted investments account for Rs. 105.93 lakhs and unquoted investments for Rs. 75.22 lakhs. The market value of the quoted investments is Rs. 96.04 lakhs. The depreciation is more than covered by an investment reserve of Rs. 16 lakhs. The other current assets aggregate Rs. 366.46 lakhs. The total assets thus amount to Rs. 643.37 lakhs, as against which borrowings from banks and others and other current liabilities are of the order of Rs. 442.78 lakhs. These leave a net asset of Rs. 200.59 lakhs, represented by a paid-up capital of Rs. 150 lakhs and reserves and surplus of Rs. 50.59 lakhs.

At the current market value of Rs. 25 *cum-div.*, the Rs. 10 paid-up ordinary shares of the Company give a yield of 4.39 per cent. per annum, free of tax.

DAMODAR VALLEY CORPORATION

A sum of over Rs. 605 lakhs was earned as revenue by the Damodar Valley Corporation from the sale of power produced by its network of power houses, in the year 1959-60. The cumulative sale of power during this period was about 1,312.5 million kw.h. In 1958-59, the quantity of power sold was lower at about 1,080.8 million kw.h. and the revenue earned Rs. 476.7 lakhs. The D.V.C. power system at present consists of four power houses—one thermal and three hydel stations. The Bokaro thermal power station has an installed capacity of 150,000 kw., which will increase to 225,000 kw., when the fourth unit is commissioned this year. The hydel stations at Tilaiya, Maithon and Panchet have an installed capacity of 104,000 kw. The total ultimate installed capacity of D.V.C. power houses, including the Chandrapura and Durgapur thermal power stations, at present under construction, will be 729,000 kw.

ALCAN ENFIELD ALLOYS LTD.

Aluminium Limited of Canada and Enfield Rolling Mills Ltd., announce the joint formation of a new company to acquire the secondary aluminium smelter at Bradford, Yorkshire, presently operated by Enfield Rolling Mills (Aluminium) Ltd. The new company, to be known as Alcan Enfield Alloys Ltd., will have an issued capital of £500,000, of which 50 per cent. will be owned by Enfield Rolling Mills Limited, and will produce from scrap and primary aluminium a large range of foundry alloys not normally produced at the primary aluminium smelters of Aluminium Company of Canada Limited, the principal subsidiary of Aluminium Limited.

Alcanuk Limited, the fully owned subsidiary of Aluminium Limited responsible for the distribution of Alcan primary aluminium and various other materials in the United Kingdom, will market the alloys produced by the new company. No change is anticipated in the existing management and personnel of the Secondary Smelter Organisation which will transfer to the new company. The Managing Director of Alcan Enfield Alloys Limited will be Mr. W. W. Kee.

Kamani Bros. Private Ltd., has obtained a licence from the Government of India to set up a plant for the manufacture of reclaimed rubber. It is learnt, A new company will be formed shortly to undertake this project. The factory will be located at Kurla, near Bombay. The plant, which will produce reclaimed rubber from rubber waste, will have an annual capacity of 5,000 tons. The promoters expect the plant to go into production in 1961. The authorised capital of the new company will be Rs. 50 lakhs and the issued capital Rs. 30 lakhs. The Company is expected to enter the capital market next September. Efforts are under way to secure foreign collaboration for the venture. Kamani Bros. Private Ltd., will be managing agents of the proposed company.

BUMPER RESULTS BY CALICO MILLS

GROSS PROFIT EXCEEDS RS. 2 CRORES

THE working of the Ahmedabad Manufacturing and Calico Printing Company Ltd., popularly known as Calico Mills (Managing Agents: Messrs. Karamchand Premchand Private Ltd., Ahmedabad), during the year ended 31st March 1960 has proved to be the most encouraging in the last many years, despite the high prices of both Indian and foreign cotton, the higher wage bill and the increase in the overall cost of production. This has been due to the pick-up in the offtake of cloth since August 1959, the larger exports, and modernisation of plant and machinery. The sales of the Company reached almost Rs. 10 crores, representing an increase of Rs. 84 lakhs over the previous year, and its gross profit crossed, probably for the first time in its 80-year history, the 2-crore mark to Rs. 2.04 crores, a rise of Rs. 45 lakhs over that for 1958-59. The net profit, too, at Rs. 104.42 lakhs, shows a marked rise of Rs. 37.08 lakhs over the year.

In consonance with the encouraging results, the Directors have raised the distribution to ordinary shareholders to a gross dividend of Rs. 31 per share of Rs. 125 each or 24.8 per cent., from Rs. 22 per share or 17.6 per cent. paid for the previous year. In view, however, of the statutory obligation to deduct tax at source under the Finance Act 1959, the net dividend works out to only 17.36 per cent., which is a fraction less than that for 1958-59. The dividend for the year under review includes a distribution of Re. 1 per share to be paid out of the tax-exempt dividend reserve created out of the past year's profit. The dividend on the 4½ per cent. tax-free first preference shares has been grossed, so that after deduction of tax, it would give the same net return as before, while those on the 4½ per cent. taxable second and third preference shares are subject to deduction of income-tax. The ordinary and preference dividends together require Rs. 52.51 lakhs, that is, Rs. 14.89 lakhs more than last year, while the net amount conserved to the reserves (after taking into account the withdrawals from reserves) is sizably lower at Rs. 8.23 lakhs, as against Rs. 14.60 lakhs last year. But, after these appropriations, there is still a large surplus of as much as Rs. 21.89 lakhs, as against only Rs. 3.14 lakhs brought in. This shows that the Directors could have easily raised the net dividend on ordinary shares if they had wanted to.

The progress of the Company since 1956-57 is well brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957

* Subject to deduction of tax

The larger sales during the year under review reflect in part the successful efforts of the Company in the export field. In a bid to capture the export markets, the Company's sales staff made a study of the markets in the East and the West. On the basis of this study, the Company created distinctive designs to suit the tastes of foreign consumers. The results achieved during the last six months of the year are said to be satisfactory, especially in view of the fact that a proportion of the exports consisted of superior varieties of cloth dyed and printed with special wash and wear and other finishes.

With a view to increasing exports, the Company purchased a textile mill in Kalol, namely, Kalol Mills Private Ltd., having 16,824 spindles and 320 looms. The entire production of this mill was earmarked for export. Unfortunately, however, the export prices were substantially lower than the domestic prices even after allowing for export incentives. Further, the production of export varieties had to be curtailed on account of the cut in quota of Indian cotton to this mill. The Directors fear that cloth exports may have to be reduced further and the foothold established in foreign markets may be lost. This would be a tragedy, having regard to the fact that the country is badly in need of larger exports.

There is a growing demand in this country and abroad for pre-shrunk, crease-resisting and other chemically processed cloths. The Directors were of the view that it would be advantageous to the Company to utilise its experience in cloth processing and special finishing of grey cloth produced by hand and power loom industry, by having a separate unit for such purpose. With this object in view, the Company has purchased the entire shares of Rajindra Dyeing and Printing Mills Private Ltd., which has a small processing unit at Ahmedabad. It will be necessary to re-equip the unit in order to make it an efficient and modern independent cloth processing plant.

The buildings for the Company's polyvinyl chloride and calcium carbide plants have been completed and erection of machinery is proceeding satisfactorily. The plants are expected to go into production during 1960-61. The Company issued during the year under review 7 per cent. first mortgage debentures for the amount of loan (in foreign currencies) taken from the I.C.I.C.I. to provide a part of the finance required for this project. The outstanding amount of loan from the I.C.I.C.I. as at the end of the year is equivalent to Rs. 47.17 lakhs. The Company has been given permission to issue debentures of the second series for Rs. 1.48 crores for the purpose of borrowing from banks against the security of these debentures.

The Company's financial position is quite impressive. The paid-up capital of Rs. 2.36 crores is supplemented by reserves and surplus aggregating Rs. 3.13 crores. The borrowings and other current liabilities and provisions, at Rs. 4.58 crores, are more than adequately covered by current assets amounting to Rs. 5.32 crores. The gross block of the value of Rs. 8.05 crores, including an addition of Rs. 1.23 crores during the year, has been well written down to Rs. 4.75 crores.

The Rs. 125 fully paid-up ordinary shares are being currently quoted at Rs. 978 *cum-final div.*, as against Rs. 593 *cum-div.* a year ago. On an *ex-div.* basis, the shares offer a yield of 2.2 per cent. per annum, free of tax.

THE BUSINESSMAN AND GOVERNMENT IN THE UNITED STATES

(*Concluded from page 18*)

for such a tour of duty, and four to eight years highly desirable.

If I were asked to offer a permanent solution to this problem, it would be this. I would hope that Government would invite business organisations to select each year a substantial number of young men who would be loaned to Government for training. They would be placed throughout all of the various departments and would be assigned to older men as assistants. Here they would be taught the procedures and traditions of our form of government and would devote two years of their lives to this civilian service. We have no hesitancy in asking young men to make a similar sacrifice for training in military preparedness, and it seems to me high time that we should recognise that serving one's country in time of peace is equally as important, and equally as noble, as serving it in war.

After two years of Government apprenticeship, the young men would return to their companies. There they would go forward with their personal development and, in due course acquire experience in management and other industrial skills. Eventually, at middle life those who had successfully demonstrated superior ability would be available on demand to fill important administrative posts for our country and, upon their return to Government their early training would make them ready for immediate service. Broad partnership between business and Government makes inevitably for a more stable economy and a stronger nation. Industry requires a wise Government, and, in the administration of its public affairs, the nation needs a strong industrial base. The drawing into parallel of these two forces is desirable from every point of view. The process has begun auspiciously in the United States. There will be no turning back. The participation of businessmen in the forming of public policies in the administration of public affairs has come to stay in our country.

SYNOPSES OF COMPANY REPORTS

Belsund Sugar Co., Ltd.

THE directors of the above Company (*Managing* Agents: Messrs. Bangur Brothers Ltd., Calcutta) present the audited accounts of the Company for the year ended 30th September 1959.

After providing Rs. 1,88,809 (Rs. 68,489) for depreciation the accounts reveal a profit of Rs. 6,63,224 (Rs. 7,13,756). To this has been added the amount transferred from development reserve of Rs. 1,00,000 (*nil*), unclaimed dividends forfeited Rs. 9,791 (*nil*) and the amount brought forward from the previous year of Rs. 66,832 (Rs. 74,946) making a total of Rs. 8,39,847 (Rs. 7,88,702). Out of this sum, *provision for* taxation absorbs Rs. 2,06,000 (Rs. 4,12,000) leaving a balance of Rs. 6,33,847 (Rs. 3,76,702) at the credit of profit and loss account. This amount the directors recommend should be appropriated as under:—

To transfer to development rebate reserve Rs. 1,78,726 (*nil*), to transfer to general reserve Rs. 50,000 (Rs. 50,000) and to pay a dividend at Re. 1.40 (Re. 1.00 per share, free of tax) per share, subject to deduction of tax, for the year ended 30th September 1959 absorbing Rs. 3,63,818 (Rs. 2,59,870) leaving to be carried forward to next year Rs. 41,303 (Rs. 66,832).

The factory commenced crushing on the 8th December, 1958 and concluded on the 4th May, 1959 with a total crush of 31,20,771 mds. of cane as compared to 24,91,495 mds. of cane in the previous year. The quality of cane available was normal and the recovery was 10.15 per cent., as compared to 10.47 per cent. in the previous year.

The minimum cane price was Re. 1.44 per maund at the factory gate and Re. 1.31 per maund at outstations. Cane cess was levied at 19 nP per maund and Cane Co-operative Societies commission was 5 nP per maund of cane.

The extension of factory increasing the crushing capacity to 1,200 tons per day is practically completed and it is expected that 1960-61 season shall be started with full extended capacity.

Season 1959-60: Due to shortage of sugar in the country, the Government of India announced incentive by way of granting rebate on early cane crush and as such the crushing for the season 1959-60 started earlier in November, 1959 and the Company's factory has concluded the season with a higher crush at 35 lakh maunds.

Saran Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co. Private Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 31st March 1960.

The results for the year, after providing for all charges, including provisions for taxation and depreciation and adjustments, show a surplus of Rs. 2,48,587 (Rs. 1,25,490). From this amount the directors have transferred to rehabilitation reserve Rs. 2,00,000 (Rs. 87,800) leaving a balance of Rs. 48,587 (Rs. 37,690). With the balance brought forward from the previous year of Rs. 21,828 (Rs. 21,638) there is an available balance of Rs. 70,415 (Rs. 59,328). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend of 35 (25 nP per share, free of income-tax) nP per share, subject to deduction of tax, for the year ended 31st March 1960, absorbing Rs. 52,500 (Rs. 37,500) leaving to be carried forward Rs. 17,915 (Rs. 21,828).

Since the directors' last report, the supply position of pig iron and steel *Roller Shafts* has improved and this has made a significant contribution to the improvement in trading results of the year under report. The Company has, however, not been successful in obtaining cast iron *Roller Shells* at competitive rates from outside. These are still being cast in the Company's foundry, and the production has been fully maintained.

Radha Krishna Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. A. G. Guruswamy Naidu and Co., Peelamedu, Coimbatore) present the audited accounts of the Company for the year ended 31st December 1959.

The year's trading has resulted in a profit of Rs. 16,99,089 (Rs. 9,28,908). Out of this the following amounts have been paid or provided for: Bonus to staff and operatives for 1959 and part payment of arrears of dearness allowance to staff Rs. 1,36,716 (*nil*), to wealth-tax for the year 1958 Rs. 30,548 (Rs. 49,147), to managing agency remuneration at 10 per cent. on the net profits of the Company Rs. 1,19,117 (Rs. 54,121) and to depreciation on the fixed assets of the Company Rs. 3,78,602 (Rs. 3,87,701) which leaves a balance of Rs. 10,34,106 (Rs. 4,87,086). Adding to this the previous year's balance brought forward of Rs. 3,407 (Rs. 3,877) the total amount available for distribution is Rs. 10,37,513 (Rs. 4,90,963). The directors recommend to dispose of this amount as follows:—

To transfer to contingency reserve Rs. 2,60,000 (Rs. 1,76,366), to transfer to development rebate reserve Rs. 1,07,447 (*nil*) and to pay a dividend at the rate of 9 (6 per cent. tax-free) per cent. subject to deduction of income-tax, on the paid-up capital of the Company as at 31st December 1959, absorbing Rs. 5,67,405 (Rs. 3,11,190) leaving to be carried forward to next year Rs. 2,661 (Rs. 3,407).

The directors wish to report that trade conditions which were depressing till the middle of the year under review *improved* considerably thereafter making it possible for the Mills *to turn* the corner and show satisfactory results in its working. In respect of cotton, the most important raw material for the Mills, scarcity conditions prevailed during the year with the *attendant* consequence of increased prices and the position has still not eased and continues to cause anxiety to the mills. Sales of yarn and cloth for export are much larger this year, since considerable attention was paid for placing our products in foreign markets with a view to build up and develop export business, although the margin of profit was low. However, this has been off-set to a certain extent by the premium received on exports under the Export Incentive Scheme initiated by the Central Government. Although, there was no power cut during the year under review, the mills had to foot a heavier electricity bill on account of an increase in the rates.

The directors are glad to inform that the South India Viscose Limited is expected to go into production by 1961 and this Company's heavy investments in the shares of that Company will begin to bear fruit and yield its benefits in the coming years.

The directors inform that the Central Government has been pleased to approve the re-appointment of Messrs. A. G. Guruswamy Naidu and Co., as the managing agents of the Company for a further period of 5 years from the 16th August 1960.

Coimbatore Pioneer Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. T. R. Narayanaswami Naidu & Co., Peelamedu, Coimbatore) present the audited accounts of the Company for the twenty-fifth financial year ended on 31st December 1959.

The year's working has resulted in a gross profit of Rs. 25,00,000 (Rs. 18,83,614) after charging all the working expenses, bonus to employees and workmen, interest on borrowed capital, but before charging managing agent's commission on net profit and depreciation. After providing for managing agent's commission on net profit Rs. 2,09,808 (Rs. 1,47,867), for normal and shift depreciations Rs. 5,36,752 (Rs. 5,05,293) and for development rebate, and reserve on new machinery installed during the year Rs. 2,53,440 (Rs. 1,41,775), the net profit for the year is Rs. 15,00,000 (Rs. 10,88,679) only. Adding to this the amount brought forward from the previous year of Rs. 7,779 (Rs. 599), there is a sum of Rs. 15,07,779 (Rs. 10,89,279) available for distribution, which the directors recommend to be disposed of as under:—

To provision for taxes Rs. 8,45,000 (Rs. 6,75,000), to provision for Silver Jubilee expenses Rs. 25,000 (*nil*), to payment of a dividend of 6½ (6½ per cent. free of tax) per cent. free of tax *on cumulative* preference shares absorbing Rs. 9,286 (Rs. 6,500) and to payment of a dividend on equity shares at 25 (20 per cent. free of tax) per cent. subject to deduction of tax *absorbing* Rs. 5,00,000 (Rs. 4,00,000) leaving a balance to be carried forward to next year of Rs. 1,28,493 (Rs. 7,779).

The directors are glad to report that the mills worked in full complement of the *installed* capacity without any break.

The mills at Peelamedu worked for 304 days, spinning cotton yarn of counts 40s to 100s and the mills at Perianaickenpalayam worked for 305 days, spinning 20s to 40s yarn.

Quota for import of foreign cotton was granted by the Textile Commissioner in accordance with the policy of Government of India in regard to allocations on the basis of past consumption during the basic year and under the Export Incentive Scheme. Towards the latter part of the year, restrictions were imposed *on* the purchase of Indian cotton in view of poor crop. Although the parity in price between cotton and yarn was narrow during the first half year, the margin improved in latter part of the year. The working of the Company shows the business accumen and the foresightedness of the personnel in charge of the management of the Company.

This Company was incorporated on 21st March, 1935 and the certificate of business was obtained on 1st August, 1935. The Company has so far convened 24 annual general meetings. The directors now present the 25th year's annual accounts. They desire to celebrate the Silver Jubilee of the Company during August, 1960.

The Company was incorporated with an initial capital of Rs. 5,00,000 constituting Rs. 4,00,000 equity capital and Rs. 1,00,000 preference capital. Without calling for any public subscription, the equity capital was increased to Rs. 20,00,000 by capitalising reserves and issuing bonus shares at the rate of 4 bonus shares of Rs. 100 each to each of the equity shares of Rs. 100 each *held by* its members.

The installed capacity of the Company to start with was 6,000 spindles and the same has been raised to 27,226 spindles at Peelamedu and 12,320 spindles at Periamaickenpalayam.

Licence has been obtained under expansion schemes for a further installation of 10,000 spindles at 'B' mills. The machineries for the above have been ordered and the construction of buildings for housing the above installation is in progress.

All the frames at the Peelamedu *mills have* been modernised with latest equipments and foreign manufacturers of machinery and technical personnel have visited the mills and have recorded their appreciation of the *mills* and its efficient maintenance.

Successful arrangements have been made for purchasing on deferred payment basis, machineries for both the mills under the expansion scheme and latest auxiliary machineries for the production of high quality yarn in the mills. The estimated cost will be about to Rs. 45 lakhs.

The Company has acquired lands *adjoining* the mills at Peelamedu—both for expansion of the mills and for constructing houses under the housing scheme, for the employees of the mills.

Accounts in brief are as under:—

Raja Bahadur Motilal Poona Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Mukundlal Bansilal & Sons, Bombay) present the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year after deducting managing agents commission Rs. 74,318 (Rs. 50,000), depreciation *on* fixed assets Rs. 5,61,587 (Rs. 2,73,000) and development rebate reserve Rs. 1,59,968 (Rs. 1,03,953), amounts to Rs. 5,21,741 (Rs. 238). With the balance brought forward from the previous year of Rs. 10,581 (Rs. 10,343) there is a total amount of Rs. 5,32,322 (Rs. 10,581). Out of this amount, the directors have appropriated to arrears of depreciation on fixed assets in respect of previous years Rs. 5,31,036 (*nil*) leaving a balance of Rs. 1,286 (Rs. 10,581) to *be carried* forward to the next year.

The programme of rehabilitation is in progress and a sum of Rs. 26,35,846 was spent in construction of buildings and installation of new *machinery*.

In reference to the application made by the Company to the Government of India for the approval of the reappointment of Messrs. Mukundlal Bansilal & Sons as managing agents of the *Company*, the Government suggested certain modifications in the proposed agreement, viz., reduction of the period of reappointment to five years, and payment of *managing agency commission* at the rate of 10 per cent. on its first profit of Rs. 10,00,000 and scaled down thereafter as per the Government Press Note No. 20.3 of 23rd October 1959 subject to a minimum *remuneration of* 50,000 in the event of absence or inadequacy of profits in any one year. Their appointment as managing agents was approved by the Government with effect from 16th *August* 1960 and the managing agency agreement has been executed on the said modified terms.

Travancore Cements Ltd.

The directors of the above Company (Managing Agents: Essel Private Ltd., Kottayam, Kerala State) present the audited accounts of the Company for the year ended 31st December 1959.

The working of the Company for the year has resulted in a net loss of Rs. 88,787 (profit of Rs. 5,83,192) after charging Rs. 5,61,497 (Rs. 4,11,686) on account of depreciation on the fixed assets and transferring a sum of Rs. 3,85,937 (Rs. 1,423) by way of reserve for development rebate with a view to have the benefit of the development rebate of Rs. 5,14,583 in the Income-tax assessment. The profit before deducting the development rebate is Rs. 2,97,150 as against the profit of Rs. 7,34,615 of last year.

The lower profit of the year was mainly due to the following circumstances:—

The *White Cement Plant* was installed and commissioned during the period under report. During the period of installation, the production of cement had to be stopped from the end of February 1959 to the beginning of May 1959, and the capacity production of *White Cement* could be *obtained* only by the middle of July. The marketing of the Company's *White Cement* naturally took some time, though the quality is admitted to *be* the best. The entire production could not be sold during the year and considerable stocks are on hand.

During the year the Company had to provide Rs. 50,000 by way of gratuity fund to its employees and also had to incur higher expenditure on account of interest payments, medical expenses to employees and advertisement charges.

The profit and loss account of the Company shows a net loss of Rs. 88,787 (Rs. 5,83,192). After deducting this from the balance of profit brought forward from 1958 of Rs. 2,67,873 (Rs. 3,24,681) there is available balance of Rs. 1,79,086 (Rs. 9,07,873). The directors propose to transfer from deferred taxation reserve Rs. 1,50,000 (*nil*) making up a total of Rs. 3,29,086 (Rs. 9,07,873).

Out of this amount, the directors recommend payment of a dividend at 6 (6 per cent. free of income-tax) per cent. per annum, subject to deduction of tax, for the year 1959 absorbing Rs. 3,00,000 (Rs. 3,00,000) leaving a balance of Rs. 29,086 (Rs. 2,67,873) after providing Rs. 3,00,000 for taxation and Rs. 40,000 for reserve for contingencies.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	50,00,000	Gross block	1,37,88,664
Reserves ...	11,77,360	*Less*—Depreciation ...	57,99,082
Liabilities ...	62,04,297		
Profit and loss account (surplus)	29,086	Net block ...	79,89,582
		Stock-in-trade	17,16,569
		Stores, tools, etc. ...	22,39,957
		Book debts ...	3,96,850
		Investments	48,948
		Cash ...	18,837
Rs.	1,24,10,743	Rs.	1,24,10,743

Manar Estates Ltd.

The directors of the above Company (Managing Agents: Vasantha & Co. (Trichy) Private Ltd., Thillainagar, Tiruchirapalli) submit the audited accounts of the Company for the year ended 31st March 1960.

Tea: A crop of 1,35,236 (1,52,175) lbs. of green tea leaves was harvested and delivered to Messrs. National Tea Plantations (Private) Limited. Koderi, Katary P.O. (Nilgiris), for the year ended 31st March 1960 against an estimate of 1,30,000 (1,25,000) lbs. for the year.

Coffee: The coffee crop harvested during the year was about 51 (5) tons against an estimate of 45 (3) tons. This is a record crop for the Company since its inception.

The Company earned a net profit of Rs. 96,108 (net loss of Rs. 28,759) for the year under review. This together with the balance brought from the previous year of Rs. 896 (Rs. 13,446) amounts to Rs. 97,004. A final available balance of Rs. 18,396 after transferring Rs. 40,000 from general reserve, Rs. 10,000 from emergency and contingency reserve and Rs. 10,000 from dividend equalisation reserve. The directors now recommend to appropriate this amount as under:—

To payment of bonus relating to earlier years Rs. 4,159 (*nil*), to transfer to general reserve Rs. 10,000 (*nil*), to transfer to provision for taxes Rs. 30,000 (*nil*) and to pay a dividend of 10 (5 per cent. free of tax) per cent. subject to tax absorbing Rs. 35,000 (Rs. 17,500) leaving to be carried forward to next year Rs. 17,845 (Rs. 896).

Estimate for 1960-61: It is estimated that the coffee crop will be about 15 tons and tea crop about 1,35,000 lbs. of green tea leaves. The fall in estimate of coffee crop is due to the poor blossom the estates had this year, after the harvest of bumper crop during last year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,50,000	Gross block	3,43,044
Reserves ...	26,500	*Less*—Depreciation ...	21,726
Provision for taxation ...	30,670		
Liabilities ...	52,702	Net block ...	3,21,318
Profit and loss account (surplus) ...	17,845	Stock-in-trade	1,17,721
		Loose tools, etc. ...	1,938
		Book debts ...	4,978
		Investments	6,000
		Cash ...	25,762
Rs.	4,77,717	Rs.	4,77,717

Mim Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit, after charging all expenses and crediting the amount of a claim under the hail insurance policy, of Rs. 23,040 (Rs. 30,079). With the balance brought forward from last year of Rs. 5,657 (debit of Rs. 27,148) there is a total amount available for appropriation, of Rs. 28,697 (Rs. 2,931). The directors have transferred to development rebate reserve Rs. 372 (Rs. 761) leaving a balance of Rs. 28,325 (Rs. 5,657 including Rs. 3,487 being forfeited unclaimed dividends). The directors now recommend that a dividend of Rs. 10.00 (*nil*) per share subject to tax be paid absorbing Rs. 15,900 (*nil*) leaving a balance to be carried forward, of Rs. 12,425 (Rs. 5,657). The West Bengal Entry Tax levied during the year amounted to Rs. 7,292.

A record crop of 2,493 (1,978) maunds was secured, which was particularly satisfactory in view of the hail damage, assessed at 1,24,5500 maunds, which was sustained early in the year. The market for Darjeeling teas was considerably less favourable than in the previous year and the crop sold at an average price of Rs. 3.46 nP per lb., compared with the average price of Rs. 3.93 nP per lb. received for the 1958 crop.

An increase in the minimum wage became effective on 28th September 1959, male and female labourers and minors receiving increases of 8 nP, 9 nP and 5 nP per day, respectively.

Estimates for the current season have been framed for a crop of 2,500 maunds to cost Rs. 6,25,758 and it is hoped that this figure will, in fact, be exceeded. By the 15th May 1960, 33,333 Kgs. (919 maunds) had been harvested compared with 28,612 Kgs. (788 maunds) to the same date last year.

On 19th December, 1959 the Company became a subsidiary of Andrew Yule & Co., Ltd. Andrew Yule & Co., Ltd. will cease to act as managing agents of the Company with effect from 15th August, 1960 and the proposal to appoint them as secretaries and treasurers of the Company for a period of 5 years from that date has been approved by the Central Government.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,000	Gross block	5,41,385
Reserves ...	3,51,372	*Less*—Depreciation ...	2,25,783
Provision for taxation ...	468		
Liabilities ...	2,98,181	Net block ...	3,15,597
Profit and loss account (surplus) ...	12,425	Stock of tea	1,70,348
		Stores, tools, etc., ...	90,058
		Book debts ...	1,80,638
		Investments	2,147
		Cash ...	62,658
Rs.	8,21,446	Rs.	8,21,446

Tezpore Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1959.

The Company's profit for the year is Rs. 10,71,325 (Rs. 6,18,720). After providing for taxation on profits of the year Rs. 4,38,529 (Rs. 2,58,214) there remains a balance of Rs. 6,32,796 (Rs. 3,60,506).) To this is added the *amount brought forward* from the previous year of Rs. 40,539 (Rs. 36,041) and provision for taxation no longer required of Rs. 12,895 (*nil*) making a profit available for appropriation of Rs. 6,86,230 (Rs. 3,96,547). Out of this the following appropriations have been made or are *recommended by* the directors:—

To amount transferred to general reserve Rs. 2,00,000 (Rs. 75,000), to amount transferred to development rebate reserve Rs. 19,370 (Rs. 16,708), to payment of dividend at 20 (12½ per cent. free of tax) per cent. on the ordinary shares subject to income-tax absorbing Rs. 3,96,576 (Rs. 2,47,860) and to payment of dividend at 8 (8 per cent. free of tax) per cent. on the cumulative preference shares subject to income-tax absorbing Rs. 16,440 (Rs. 16,440) leaving to be carried forward a balance of Rs. 53,844 (Rs. 40,539).

The total crop produced by the Company was once again a record one and it is satisfactory to note that a record was also achieved by each of the three divisions. Despite a very discriminatory market throughout the season it is gratifying to be able to record that the Company showed a satisfactory increase, as compared with 1958, in the average prices obtained over the season for its teas.

The buyers continue to be very selective in their purchases and the Company therefore pursues year by year a policy of trying to raise the standard of its manufacture still further, whilst at the same time effecting economies in expenditure wherever these can be made without adverse effect on quality.

Crop.—The final 1959 outturns were:— Bahipookri division 20,317 (19,062) maunds, Orang division 10,105 (10,043) maunds and New Purupbari division 6,268 (5,918) maunds.

The average sale price realised for season 1959 was Rs. 2.13 per lb. compared with the 1958 average of Rs. 1.92 per lb.

The estimates for season 1960 provide for the production of a crop of 33,000 maunds at a total cost on revenue account of Rs. 46,34,830. Capital expenditure for 1960 is estimated at Rs. 2,16,490.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,88,380	Gross block ...	51,14,115
Reserves ...	15,86,078	*Less*—Depreciation ...	22,83,115
Provision for taxation ...	7,07,000		
Liabilities ...	17,57,675	Net block ...	28,31,000
Profit and loss account (surplus) ...	53,844	Stock of tea	19,14,800
		Stores ...	5,94,635
		Book debts ...	7,38,191
		Investments	82,501
		Cash ...	1,31,850
Rs.	62,92,977	Rs.	62,92,977

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

NEW BELBHOOMI COAL CO., LTD. Annual General Meeting, Calcutta, 4th July 1960. Dividend: Re. 1.50 per share (includes interim dividend of Re. 0.55 per share), subject to deduction of tax. Transfer books remain closed from 17th June to 4th July 1960, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, *24th June,* 1960.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, *29th June*

Conditions in the short-term money market have once again become very stringent. While the bulk of the banks' funds is still locked up in industrial advances and the pace of return of money from agricultural centres is slow, banks' own requirements for window-dressing purposes at the half-yearly closing of accounts have caused a severe pull on the market this week. Consequently, interest rates are being held firm at the ceilings. Inter-bank call money is unchanged at 3½ per cent. and house money at seven days' notice at 3¼-3½ per cent. Short-term deposits for one to six months are being offered the self-same rate of 3¼-3½ per cent. The 91-day Treasury Bill rate, too, is being maintained at 2.745 per cent. per annum, for the ninth week in succession.

Tenders for Rs. 2 crores of Treasury Bills at yesterday's sales aggregated no more than Rs. 2 crores and these represented only renewals. Tenders for a further sum of Rs. 2 crores have been invited for next week. Intermediate Treasury Bills sold between 22nd and 25th June amounted to Rs. 7 lakhs, the same as in the corresponding period of the previous week, and at the same discount rate of 2.696 per cent. per annum. These are being offered this week also.

The Reserve Bank of India statement for the week ended 24th June 1960 discloses a further contraction of Rs. 23.20 crores. This is on top of a decline of Rs. 21.53 crores in the previous week. Notes held in the Banking Department are higher by Rs. 5.23 crores, so that the fall in total notes issued is of the order of Rs. 17.98 crores. This is covered by a decline of Rs. 5 crores in foreign securities and of Rs. 15 crores in rupee securities and a rise of Rs. 2.02 crores in rupee coin. The drop in foreign securities is offset fractionally by the rise of Rs. 71 lakhs in balances held abroad, so that the net fall in total foreign assets has brought them down to Rs. 157.48 crores, while a year ago they stood at Rs. 192.56 crores. Deposits of the Central Government have dwindled by Rs. 30.01 crores, while deposits of other Governments and banks have gone up by Rs. 9.13 crores and Rs. 7.16 crores, respectively. Loans and advances to Governments show a drop of Rs. 6.37 crores and other loans and advances Rs. 43 lakhs. Investments are higher by Rs. 10.36 crores, while holdings of Government Treasury Bills have declined by Rs. 17.37 crores.

A decline of Rs. 11 crores in demand deposits and an increase of Rs. 2.13 crores in time deposits is shown by the Scheduled banks' statement for the week ended 17th June 1960. Almost the whole of the net fall of Rs. 8.87 crores is accounted for by banks other than the State Bank of India. Inter-bank borrowings are lower by Rs. 2.34 crores and borrowings from the Reserve Bank by Rs. 6.13 crores. A fractional increase of Rs. 36 lakhs is noted in advances and even this is mainly due to the rise of Rs. 1.12 crores on State Bank's account. Investments are practically unchanged, while cash balances are lower by Rs. 1.20 crores, consequent on the decline of Rs. 4.84 crores in the State Bank's portfolio.

The Gilt-edged market continues to be listless, due to persistent stringency in the short-term money market. 3 per cent. 1986 Conversion Loan has, however, staged a spurt of 55 nP to Rs. 73.70 and 3 per cent. 1970-75 has hardened by 5 nP to Rs. 90.90. Following the suspension of sales by the Reserve Bank last week, due to proximity of half-yearly interest payment, 4 per cent. 1979 has improved by 10 nP to Rs. 100.30. Other counters show no change. State loans too are devoid of any interest.

The rupee continues to maintain its hardening tendency in terms of the U.S. dollar, in sympathy with the further recovery in sterling abroad. Banks' selling rate for U.S. T.T. (ready) has declined from Rs. 477.50 to Rs. 477 and their buying rate from Rs. 474.25 to Rs. 473.75 per $100. In New York, spot sterling has improved from 280.29-280.32 cents to 280.56-280.59 cents, while three months' forward has declined from 279.56-279.59 cents to 279.33-279.36 cents.

ELECTROLYTIC ZINC RALLIES

(From Our Own Correspondent)

CALCUTTA, *28th June*

The feature in the metal market during the week under review was the abrupt upward trend in electrolytic zinc. While shortage was acute, there was a spontaneous increase in demand, as the issue of permits for virgin copper led to more enquiries for zinc for making brass. Demand from bucket galvanisers was also moderate. The local quotation steadily rose from Rs. 154 to Rs. 160 a cwt. and, in Bombay, the price was even higher at Rs. 162. The Government was also in the market with two enquiries aggregating 1,325 tons. On the London Metal Exchange, the price hardened from £90⅜ to £91⅜ a ton but closed at £90⅜.

Demand for copper scrap was at a low ebb here, in view of further releases of permits for the virgin metal. Berry quality scrap declined to Rs. 216 a cwt. from Rs. 220, and utensil scrap was unchanged at Rs. 200 a cwt. Copper scrap importers were concerned in that permit-holders were not lifting their quotas. There was a similar situation in regard to brass scrap imports and the need for Government to give up control over distribution of copper and brass scrap was being voiced.

Tin was steady here throughout the week at Rs. 544 a cwt. Demand was fair, and there were further arrivals. In London, the price closed at £795 a ton, after being higher at £797 and opening at £796.

Lead here was quiet at Rs. 66 a cwt. Demand was *nil*, but stocks were good.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, *29th June*

A distinctly firm trend was in evidence in the bullion market during the week under review. Silver took the lead in reviving the upward trend. Early in the week, there were reports of formation of a bull syndicate at Calcutta and, as the week progressed, this syndicate was said to have tightened its hold on silver. There were also some short-covering and buying against option deals in the local market. The failure of disarmament talks at Geneva on Monday was also interpreted bullishly. In sympathy with the white metal and induced by the reported purchase of a large quantity by a prominent spot house, gold also moved up. Even reports of a sale of 10,000 tolas by a Madras operator yesterday and rumours of large contraband arrivals failed to have any effect.

Reflecting good demand for gold, the average daily offtake during the week was higher at 5,000 tolas, as against 3,000 tolas in the previous week, while arrivals were smaller, being 3,250 tolas, as against 4,000 tolas. The floating stocks of gold are estimated at 30,000 tolas. In silver, the daily average offtake was 12 bars, that in the past week being 45 bars, whereas arrivals were of the order of 22 bars, as against 10 bars. The floating stocks are reported to be around 500 bars.

In the gold section, *Ashad* (July) settlement began the week at Rs. 126.12, as against the previous close of Rs. 126.25, and firmed up on good support to touch a high of Rs. 127.50 today before finishing 25 nP lower. The net rise over the week was Re. 1. Since the quotation for this settlement was above Rs. 127 yesterday and today, the bulls were required to pay a margin of Rs. 60 per tola on their net long positions. *Shravan* (August) settlement advanced in the course of the week from Rs. 126.65 to Rs. 127.75 and wound up the week at Rs. 127.50. The rate for transferring commitment from *Ashad* to *Shravan* settlement, which had widened in favour of bears from 40 nP on Wednesday last to 47 nP on Monday this week, declined to 22 nP yesterday. It was, however, slightly higher at 25 nP today.

Ready gold, which had been quoted at a discount under the *Ashad* settlement since 16th June, came to command a premium this week which was about 38 nP towards the close. The actual closing rate for the metal was Rs. 127.62, as against Rs. 125.87 a week before.

Ashad settlement in silver evoked good buying enquiry and moved up from Rs. 214.12 to Rs. 216.56 today. The closing was a shade lower at Rs. 216.12. During the week, *Shravan* settlement rose from Rs. 214.37 to Rs. 216.37 and *Bhadrabad* settlement from Rs. 215.12 to Rs. 217.31. Both these settlements touched the highest levels for the week today, namely, Rs. 216.75 and Rs. 217.56, respectively. The carry-forward rate for *Ashad* settlement was unchanged at 25 nP, while that for *Shravan* settlement widened from 75 nP to 94 nP.

Induced by buying orders, ready silver firmed up from Rs. 215.62 on Wednesday last week to Rs. 216.31 today. Towards the close, however, the metal encountered some selling and finished lower at Rs. 215.87. The net rise over the week was Rs. 2.62.

Both ready and forward silver in the London bullion market continued to remain unchanged during the week under review also, the former at 79½d. and the latter at 79d. Silver in New York, too, was unaltered at 91.375 cents. Ready gold in London eased from 250s. 6d. to 250s. 2½d., owing to the firmness of the pound sterling *vis-a-vis* the dollar. The latest available world price for gold is $35.08½-$35.10½, as against $35.08-$35.10 a week before.

The following table shows the trend of the market during the week under review:

	20-6-60 (closing)	High	Low	22-6-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	127.62	127.87	125.50	125.87

SLOW TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, *27th June*

There was no change in the kip market during the week under review. Trading was slow and importers were trying to force down prices. Top class tanners were not willing to reduce prices, but may have to, in view of other tanners accepting lower prices for their production partly due to financial reasons. Demand for buff calf from the U.S.A. was not sustained. Buff hides ruled steady, while cow calf was weak.

Shipment business in tanned skins was small. Prices ruled nominally unchanged.

COTTON FUTURES TOUCH STATUTORY CEILING

(From Our Own Correspondent)

BOMBAY, *29th June*

Official trading in cotton futures continued to be suspended during the week under review also. In private trading, the price trend was mainly influenced by rumours as to when exactly the announcement raising the ceiling price for cotton would be made. On Saturday, reports that the announcement would be made touched off a wave of selling and the Jarilla August Contract rallied to touch the statutory ceiling of Rs. 820. This level, however, attracted profit-taking and the contract receded to Rs. 815. It fluctuated between Rs. 815 and Rs. 818 in subsequent sessions.

Traders are greatly disappointed over the delay in the announcement of the ceiling prices. It is considered that once the ceiling is raised the problem of permitting hedge trading in new crop would be rendered easy. It would also obviate the necessity of appointing Government nominees for marketing the next season's crop.

Business in the spot market continued to be active. In fact, the spurt in futures price led to a rally in ready prices too. In spite of this, mill buying was extensive. Spinners were selective in buying. They were keen to purchase good quality cotton even at advancing prices, lest they should have to purchase cotton of indifferent quality after 1st August. Ready lots of Vijay, Digvijay, Co2, Surti, Laxmi, Jaydhar, etc., met with ready absorption. Wagad and Kalyan were also well favoured.

Among foreign cotton, Sudans, East African B.P. 52 and Mwanza new crop and U.S. styles came in for business. The export front was quiet.

Cotton sowings are reported to have commenced in some regions. While in some others, notably Punjab, sowing has been almost completed. In the Punjab, farmers are reported to have sowed more of 320F and L.S.S. and less of LL. 54. The general condition of plants is said to be satisfactory. More rains are needed in Vidarbha, Moglai and areas for sowing operations to commence.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Hubli Laxmi 1,095; Jaydhar 1.045; Co2 1,112; Sudan XG3S 1,950; B.P. 52 1.395; September shipment Mwanza 1,168; c.i.f. September shipment.

The Karachi cotton futures market remained subdued during the week under review. Values receded on speculative selling prompted by reports of good weather favouring larger sowings. The slackness of export demand too acted as a damper. N.T.R.G. July contract receded from Rs. 68 last week-end to Rs. 67-9. The January Contract was quoted 6 annas less at Rs. 68-4.

In contrast to the easy trend noted last week, Alexandria cotton futures market ruled firm during the week under review. The main influencing factor was reports of renewed demand from Communist countries. The expectation of better demand from the free-world countries also imparted strength to the market. In the spot market, premiums hardened on good export enquiries.

Weather reports were generally favourable but the crop is about two weeks late, as compared with last year. Leaf worm has made its appearance but adequate measures are said to be being taken to combat it.

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: July 78.40; November 76.27; January 75.85.

Ashmouni: June 65.80; August 65.80; October 65.10.

Cotton futures in Liverpool made handsome gains during the week. Early in the week, the nearby July position came under pressure, thanks to liquidation. Later, however, trade covering and fresh buying on American account in new crop imparted strength to the market. The earlier losses were more than made good and the market closed with most positions showing gains, as compared with the previous week-end quotations. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being the last week-end quotations:

American cotton one inch staple contract: July 22.65 (22.25); October 22.35 (22.30).

Sudan: July, September, November 35.50.

Quiet conditions prevailed in the New York cotton futures market during the week. Trading was dull and was mainly in the nature of squaring up operations in the maturing July Contract. The undertone was, however, fairly steady. Crop reports indicated generally satisfactory conditions for the growing plants except in Oklahoma and north-western Texas.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	28-6-60	21-6-60	14-6-60
Spot	34.25	34.25	34.25
July	32.85	32.90	32.82
October	31.07	31.09	31.09
December	31.18	31.13	31.13

BEMBERG YARN FORGES AHEAD

(From Our Own Correspondent)

BOMBAY, *29th June*

A sharp rise in prices of Cupressa Bemberg yarn was the feature of trading in the yarn market during the week under review. The rise followed short-covering on fears that some operators were determined to take delivery of ready stocks tendered against the maturing June contract. There was also strong bull support induced by fears of reduced imports from abroad consequent on the dock labour strike and the reported large sale by a leading foreign producer to Continental

countries. Thanks to short-covering and strong bull hold, the *badli* payable by bears to bulls for transferring commitment from June delivery to August position widened considerably from Rs. 87 to Rs. 121 on Monday, so that the Board of the Bombay Yarn Merchants Association and Exchange had to arrange for a special clearing at the rate of Rs. 2,948 on Monday. The *badli* widened further in the subsequent sessions also and stood at Rs. 143 today. In sympathy with Bemberg yarn, indigenous art silk yarn prices, too, recorded an improvement. Staple fibre yarns were well maintained on encouraging advices from consuming countries. Cotton yarns were fully steady.

Cupressa Bemberg yarn (60×1) June delivery forged ahead from Rs. 2,020 to Rs. 2,090. August contract spurted by Rs. 14 to Rs. 1,947. Spot Cupressa picked up 31 nP to Rs. 9.37. 120 Japan was firm at Rs. 5.65, as also 150 Japan at Rs. 5.78. 120 Italy at Rs. 6 and 150 Italy at Rs. 6.06. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade advanced by 31 nP to Rs. 5.06. 120 Bt. cones 1st grade put on 16 nP to Rs. 6.16.

Staple fibre yarn (60×1) August contract met with good support and rose from Rs. 719 to Rs. 734. June position gained a rupee to Rs. 715. Spot Centurys gathered 6 nP to Rs. 3.66 and Citys 3 nP to Rs. 3.78. 80×2 *Paramounts (imported)* were fully steady at Rs. 12.25.

In the cotton yarn section, ten counts Gokaks were firm at Rs. 19. Twenty counts Moderns recorded a rise of 50 nP to Rs. 23.50. Gokaks improved by 25 nP to Rs. 23.25. Forty counts Minaxis advanced by 37 nP to Rs. 30.37 and Maduras by 25 nP to Rs. 31.50. Sixty counts were unchanged, Raghuvamshis being quoted at Rs. 56.50 and Finlays at Rs. 58.50. Among 80s, Finlays and Mahendras were done at Rs. 82.82 and Rs. 73.75, respectively, same as last week.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago.

	29-6-1960	22-6-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 Kg.)		
June	2,090	2,020
August	1,947	1,933

80s Modern	75 59	70.00

CASTOR BUOYANT

(From Our Own Correspondent)

BOMBAY, 29th *June*

Virtually buoyant conditions prevailed in the oilseeds market during the week under review. Castorseeds forged ahead on reports of substantial U.S. enquiries for castor oil. The rally was, however, arrested today, on rumours that Brazil has re-entered the American market for castor oil. Groundnuts moved up in view of the tight statistical position and sustained support extended by both local and upcountry interests. The section, however, wound up the week on a subdued note on account of some profit-taking. Linseed made handsome gains, thanks mainly to better season advices. Cottonseeds also were pushed up in sympathy with the trend in other seeds.

The bullish trend witnessed in the previous week gathered further momentum in the castorseed section on fresh bear covering, during the week under review. The distinct improvement in the castor oil exports to the U.S. during the half-year ended June 1960 (estimated unofficially at about 30,000 tons, a record level) led the trade to take a highly optimistic view of the export position in the next few months. In these conditions the pressure of floating supplies of the old crop did not make any impression. Castorseed September contract spurted from Rs. 176.25 to Rs. 180.25 by yesterday; it, however, receded to Rs. 178.50 today, albeit at a net gain of Rs. 2.25 over the week. Ready Madras rose gradually from Rs. 34 to Rs. 35 by yesterday, but lost ground later to close the week at Rs. 34.87. Oil commercial advanced from Rs. 18.25 to Rs. 18.69 initially but moved down to wind up the week at Rs. 18.56.

Pronounced scarcity of spot supplies was the major factor behind the bullish trend in the groundnut section. Crushers and *vanaspati* manufacturers were keen buyers. Oil prices also touched new high levels on sustained support by North Indian operators. At the close of the week, the forward contract tended to drift to lower levels, but the spot section in seeds and oils continued to present a firm front. August 1960 contract, which had wound up last week at Rs. 215.75, rose gradually to touch Rs. 220.25 by Tuesday. It, however, fell to Rs. 219.25 today. Nizam bold strengthened steadily from Rs. 46.12 to Rs. 47.50. Oil ex-mill improved by 62 nP to Rs. 24.37, after moving in a narrow range over the week. Railway receipts closed higher by 50 nP at Rs. 24.

Notwithstanding the absence of any fresh overseas enquiries for linseed oil, the linseed section witnessed firm conditions. Linseed September 1960 contract, which had wound up at Rs. 33.94 last week-end, advanced to Rs. 34.69, before closing at Rs. 34.59. Linseed Bold ready put on 62 nP to Rs. 33.87. *Linseed oil rose by 19 nP to* Rs. 16.94.

The uptrend in other seeds and also in raw cotton market induced some enthusiasm in the cottonseed section. Cottonseed 25 oil mill 1960 contract rallied to Rs. 15 per khandi the week at Rs. 162.

The following table shows the closing prices of arrivals and today's compared with those of the two previous weeks:

	29-6-1960	22-6-1960	15-6-1960
	Rs.	Rs.	Rs.
Groundnut			
August 1960	219 25	216 75	216.50

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are in terms of candy, except linseed which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

FOODGRAINS MOVE UP

(From Our Own Correspondent)

HAPUR, 27th *June*

Under the lead given by gram on continued firm advices from the Punjab and peas and *arhar* on good outside buying support, all grains evidenced a distinctly steadier to firm trend during the week under review. Arrivals of wheat and coarse grains in the local market were still small and, contrary to earlier feelings that the cultivators were retaining their produce, it was gathered that the Meerut region had now become deficit in wheat and other grains.

Wheat at Hapur registered modest gains towards the week-end to be quoted on Monday at Rs. 15.62 a maund for average quality and upto Rs. 17 for superior farm produce, as against Rs. 18 and Rs. 19.50, respectively, on the corresponding date last year. Daily arrivals of wheat were about 500 maunds which were all lifted by consumers at the aforesaid prices and, as the prevailing prices were still higher than the procurement prices (Rs. 13-Rs. 15) fixed by the Government, no Government purchases were possible here during the week. The wheat purchased by the State Government in the Kanpur region is, however, reaching here for reserve and such stocks here have mounted to 30,000 maunds. The supply position of rice was reported to be satisfactory, stocks with trade and Government being pretty heavy. The week-end prices were:—*sela basmati* Rs. 31 to Rs. 35; *mainpuri* Rs. 23; *ramajwayan* Rs. 24.50; *raimunia* Rs. 25.50.

Gram recorded further fractional gains during the week to Rs. 14.62 a maund on firm Punjab advices, although the local stock of gram with trade increased to 35,000 maunds, due to continued arrivals from outside and the State Government's reserve of gram was also heavy at 1.1 lakh maunds. Corresponding prices of gram last year were Rs. 13.25 a maund. Barley recorded modest gains to Rs. 11.87 and *bejhar* to Rs. 11.12 to Rs. 11.75 a maund and arrivals of these grains at Rs. 75 maunds daily average were small. *Jowar* white continued steady at Rs. 14 to Rs. 15. Some rains in week-end have helped *sawani* sowings which includes that of maize, *bajra* and *jowar*.

Continued buying enquiry from east U.P. and Bihar accounted for further gains in peas prices which now ruled Rs. 11.25 for *dara* quality and Rs. 11.87 to Rs. 12.25 for superior white quality. Peas *dal* was quoted at Rs. 13.25 a maund. Daily arrivals of peas were about 700 maunds and local stock mounted to 93 *khatties* of about (800 maunds each), as against 42 *khatties* on the corresponding date last year when peas *dara* was quoted at Rs. 13 a maund. *Arhar* registered a sharp gain of about Re. 1 a maund on support from grinders and, with arrivals of about 200 maunds, local *arhar* stock was put at 26 *khatties*. *Arhar* was quoted at Rs. 14 a maund, as against Rs. 17.62 a year before when *arhar* stock was 27 *khatties*. Total arrivals of peas in the current season were 98,000 maunds and that of *arhar* 21,000 maunds, the corresponding figures last year being 106,000 maunds and 27,500 maunds respectively. Other pulses also sought higher levels in sympathy with peas and *arhar* and were now quoted at:—*urd* Rs. 18.75 to Rs. 19.50; *moong* Rs. 19.75 to Rs. 21.75; *massoor* Rs. 14 to Rs. 18 a maund.

EXPORTERS EVINCE MORE INTEREST IN TEA

(Messrs. Forbes, Ewart and Figgis Private Ltd.)

COCHIN, 21st *June*

Sale No. 24:—A smaller quantity consisting of 1.5 million pounds was offered in Sale No. 24 held on Tuesday, 21st June 1960. Although a number of rush teas were still catalogued, later invoices showed an improvement in quality. There was a better general demand than last week and exporters showed more interest. There was a useful support for plain and low medium descriptions which are quoted steady. However, towards the close of the sale these descriptions were irregularly easier. Mediums, particularly those with improved quality, met with keen interest and sold at firm to dearer rates. Better quality highgrowns sold well and advanced in prices. Below best quality were still difficult to sell and often easier. Black leaf brokens and fannings were in good demand and occasionally dearer. C.T.C. types and legg-cut teas continued to sell at firm rates. Whole leaf grades tended slightly easier. The following are the quotations.

	1960 Rs.	1959 Rs.
Low medium	1.55-1.60	1.50-1.58
Medium	1.65-1.75	1.55-1.65
Good medium	1.75-1.85	1.75-2.05
Quality	1.85-2.50	1.85-2.48

The average price realised in Sale No. 24 was Re. 1.73 per lb., the same as in the previous sale, and compared a little favourably with Re. 1.71 fetched in the corresponding sale of last year.

Export Quota:—At present, there are sellers at 2 nP per kilo with probable buyers, last business being registered at 2 nP per kilo.

Dust Sale 'X':—Sale No. X held on Thursday, 23rd June 1960, totalled 600,000 pounds. The market met with a fair general demand and prices were generally easier for all descriptions. Plainer and low mediums met with fair enquiry and eased by 10 nP to 15 nP, whilst colourey mediums were easier by 5 nP to 10 nP. There was fair support for highgrowns which were irregularly 10 nP to 15 nP easier. There was useful enquiry for C.T.C. types and legg-cut teas, although these sold at slightly lower rates than last. There was less demand for black grainy descriptions which also shared in the decline.

The average price realised in Dust Sale 'X' was Re. 1.70 per lb., as against Re. 1.77 in the previous sale and Re. 1.55 in the corresponding sale of 1959.

Colombo:—Just over 7 million pounds were offered and met with a good demand. Highgrowns and mediums opened irregularly easier, but firmed up as the sale progressed and at the close were firm on last week's rates. Lowgrowns and plainest kinds advanced 5 to 10 cents.

London: North Indian and other growth:—In Monday's sale, there was a good demand and the few best new season's Dooars sold were at fully firm to dearer rates. African teas were steady, except the poorest sorts.

Ceylon and South Indians:—In Tuesday's sale, there were 31,353 packages, catalogued and 7,445 of these were from South India. The market met with a good demand and prices were fully firm.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd., wire:

"*Sale* 25:—1.8 million lbs. Good demand for plain and low medium brokens, which are about steady. Similar fannings 5 to 10 easier. Medium and good medium steady. Highgrown brokens neglected. Fannings restricted enquiry."

GENERAL DEMAND FOR TEA GOOD

(From Our Own Correspondent)

CALCUTTA, 28th *June*

Good general demand was in evidence during the export sale held yesterday and prices advanced. The very steady conditions during yesterday's sales in London, where Dooars tea of the new season provided the strongest feature, were noted with enthusiasm.

Yesterday's export offerings here amounted to 35,276 packages, of which only 70 chests were of old manufacture and the balance represented new season's teas. Teas from Assam were better in quality and, therefore, attracted particular attention. Keen competition met C.T.C. Assams with improved quality. These lots contained a few bright liquorings. Fannings teas were in good demand and prices improved. Prices of whole leaf grades added some gains, and tippy teas were well supported at firm rates. Cachar and Dooars brokens and fannings were fully steady with small addition to prices here and there. O.Fs received more attention. Excepting the brighter liquoring teas which were about firm, other orthodox B.O.Ps were irregular. Flavoury Darjeelings met with good attention, but others in Darjeelings were subjected to withdrawals on lack of adequate attention. Legg-cut teas were also withdrawn, as although there was greater demand, prices declined. The quotations per kg., inclusive of excise duty, were: clean black pekoe Rs. 5.00 to Rs. 5.20, plain fannings Rs. 4.20 to Rs. 4.40, and plain B.P. Rs. 4.30 to Rs. 4.50. Quotations were limited to these three categories, as other representative teas were not significant.

Export quota changed hands at 2¼ nP per kg. However, when sellers raised the price to 2¼ nP per kg., there were no buyers.

JUTE GOODS REACT

(From Our Own Correspondent)

CALCUTTA, 28th *June*

A corrective reaction was in evidence in prices of both jute goods and fibre during the week under review and, although the fluctuations were narrow, closing levels were lower on balance. Even at the decline, overseas buyers of goods did not rush in to buy, and that was an index to show that prices must come down further before overseas buyers could be attracted to enter into larger commitments against replenishment of stocks. Australia again showed interest in cornsacks, and at one time covering business in heavy goods was swift. A fair quantity of heavy goods was also bought for internal consumption. Cuban buyers accepted a substantial quantity in heavy cees for delivery between August and October. Nominal interest was continued to be shown by U.S. buyers. Advices from the U.S. burlap market were quiet, and it was reported from New York that the downtrend was kept in check by the release of higher burlap consumption figure for the month of May. Heavy 40" 10 oz. hessian gradually moved down to 11.50 cents a yard (including duty) from 12.00 cents. At 8.75 cents a yard, the lighter hessian recorded a fall of 0.25 cent.

More interest was shown by mills in new crop against early delivery. Reports of damage to crop as a result of heavy rains in some districts aided discounting. Rains during the week were fairly widespread, and these resulted in rumours that damage to standing crops was anticipated. However, mills were not worried about these rumours. It was noted that Pakistan proposed to increase fibre production from 250,000 tons to 380,000 tons a year and raise the loomage of mills to 12,000 from 8,040 as at present during the second Plan period commencing on 1st July 1960.

Some covering business was reported in heavy goods on Tuesday last, but this was not sufficient to maintain prices. Therefore, ready B. twills moved down to Rs. 133.15 from the previous day's level of Rs. 134 and hessian 40" 10 oz. to Rs. 47.50 from Rs. 48. On the following day, business was done in cornsacks with Australia for delivery before September. The futures market was bearish and, as a result, ready B. twills sagged to Rs. 132 and hessian 40" 10 oz. to Rs. 47. Selling pressure soon followed and, despite the report of good business with Cuba in heavy cees, prices moved down on Thursday. B. twills were thus quoted at Rs. 131.25 and hessian 40" 10 oz. at Rs. 46.75. On Friday, although business passing was small, prices hardened on account of the gain in fibre prices on that day. Accordingly, ready B. twills were pushed up to Rs. 132.35 and ready hessian 40" 10 oz. to Rs. 46.65. The hardening tendency was only a temporary feature and during the week-end, B. twills closed lower at Rs. 132 and hessian 40" 10 oz. at Rs. 46.50. Yesterday, prices eased further. Business passing was limited and enquiries were few and far between, B. twills fell to Rs. 129.75 and hessian 40" 10 oz. to Rs. 45.90.

As stated, mills showed fair interest in new crop, and were not eager to buy old crop. A feature in some of the deals was the guaranteed shipment clause. June-July Assam bottoms opened at Rs. 42.50 (old crop) and, after moving down to Rs. 39.50, closed at Rs. 40. Northern bottoms closed lower on balance at Rs. 40 after moving down to Rs. 39.00 from Rs. 41.50. The latest quotations for the outstanding 1959-60 crop against June-July delivery as compared with those of a week ago in brackets, are:

	Middles Rs.	Bottome Rs.
White:		
Selected Assam	42.50 (47.00)	40.00 (44.50)
Ordinary Assam	42.00 (46.50)	39.50 (44.00)
Northern	41.50 (46.00)	39.00 (43.50)
Dosal (.. ..	41.00 (45.00)	38.50 (43.00)
Cuttack	43.00 (48.00)	40.50 (45.50)
Murshidabad	40.00 (44.50)	37.50 (42.00)
Bihar, Jungli and U.P. ..	39.50 (44.00)	37.00 (41.50)
Tossa:		
Ordinary Daisee	43.50 (47.50)	41.00 (45.00)

Bimli f.a.q.	Rs. 38.00 (42.50)	
Pucca bales: 1st marks ..	Rs. 245.00 (260.00) per bale ready.	

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 27th *June*

Quiet to steady trend prevailed in the sugar market during the past week. The week-end prevailing prices were Rs. 115.50 per bag and retail Re. 1.19 per seer in the open market. There are reports that the Government of India had almost decided not to decontrol sugar at present. Trade circles are very critical of this decision which, it is said, has absolutely no justification, as production this year has been in excess of requirements. The sugar merchants have been appealed to observe a token strike on 7th July as a mark of protest to the Government's failure to decontrol the commodity.

After early gains of about Rs. 3 to Rs. 4 a bag, sugar declined to Rs. 116 to Rs. 116.50 per bag towards the week-end in the Muzaffarnagar market. In retail, it was quoted at Re. 1.19 to Re. 1.25 per seer in open market, as against the controlled price of Re. 1.04. A substantial quantity of sugar out of the last two months' release has not been lifted.

Sugar also continued steady around Rs. 117 per bag in the Kanpur market during the week.

Khandsari improved by a rupee per maund during the week on good buying enquiry from Saurashtra and Kutch. The Punjab, too, was interested in inferior quality. Loading, however, was restricted to Gujarat. The week-end prevailing prices in the Muzaffarnagar market were: *khandsari* inferior Rs. 28 to Rs. 30; superior Rs. 31 *khandsari* Rs. 32; crystal *khandsari* Rs. 36 to Rs. 40.50; and crystal *boora* Rs. 44 a maund.

Ready *gur* recorded a hardening trend during the week on good outside demand, despite restricted loading facilities. Fresh demand was reported from Punjab besides support from consuming areas of the South. Daily arrivals averaged about 250 maunds from rural areas which were of dry quality and were readily lifted. Local stock, however, is stationary around 21,000 maunds, as against 60,000 maunds on the corresponding date last year when *gur* was quoted at Rs. 21.50. Prevailing prices were: dry *gur* Rs. 15.75; *kotha* dry-wet Rs. 15.25; *shakker* Rs. 18 a maund.

Good demand from Punjab and Gujarat accounted for a sharp rise in *gur* prices in the Muzaffarnagar market during the week. Daily arrivals of *gur* and *shakker* were about 1,500 maunds and stock was put at 1.5 lakh maunds, the corresponding figure last year being heavy at 2.25 lakh maunds. The week-end prevailing prices were: *Chaku* ready Rs. 17.75; *khurpa* Rs. 7 to Rs. 9; *bana minja* Rs. 16.50 to Rs. 18.50 per maund.

Future *gur* ruled bullish during the week in line with ready prices. *Fagun* opened at Rs. 13.25 last Monday and was quoted today at Rs. 13.43, having touched the highest at Rs. 13.45.

ATUL PRODUCTS LIMITED

HEAVY CAPITAL OUTLAY PROPOSED, SAYS CHAIRMAN

ADDRESSING the shareholders of The Atul Products Limited at their Twelfth Annual General Meeting held at Ahmedabad on 25th June 1960, Mr. Kasturbhai Lalbhai, Chairman of the Company, indicated that the proposed expansion programmes would involve a capital outlay of Rs. 6 crores and that the completion of these plans would place the Company on a sound footing.

The following is the full text of Mr. Kasturbhai's speech:

"GENTLEMEN,

"The Directors' report, the statement of accounts and other papers relating to the working of the Company during the year 1959 have been circulated to you and they have been in your hands for some time. If you will, therefore, kindly agree, we will take them as read for the purpose of this meeting.

"You will please see from the statement of accounts that the Company has been able to maintain its progress. As against the sales of Rs. 2,89,51,998 for the year 1958, this year the sales stand at Rs. 3,53,81,501. The profits for the year, subject to depreciation, stand at Rs. 1,01,56,503. Out of this, the Board has made a provision of Rs. 19,71,626 for depreciation for the year, of Rs. 3,00,000 for development rebate reserve and of Rs. 45,00,000 for income-tax for the years 1958 and 1959. The Board has also transferred a sum of Rs. 9,50,000 to the depreciation reserve fund. This leaves a balance of Rs. 24,72,946, including the carry forward of the last year, and the Board has recommended that Rs. 24,00,000 be utilised in paying a dividend of Rs. 12 per share (subject to deduction of tax), and Rs. 72,946 be carried forward to the next year's accounts.

Stable Prices

"I had referred last year to our policy that, as far as possible, we should maintain a stable level of prices for the products that we sell. In consonance with this policy, except for some minor changes, this year also we have maintained these prices at the level of previous years. However, we have been fortunate this year in realising a substantial increase in the quantum of production and sales, with a corresponding rise in the profits. You will be glad to know that the plants are so satisfactorily organised now, that I am confident that we will be able to maintain this level of production and go even further, if the Government would find it possible to enable us to obtain sufficient raw materials for this purpose. However, the uncertainty in this matter, to which I had referred last year, still continues and hampers our efforts.

"We had several schemes last year, either under consideration or in hand. Among them, a sulfuric acid plant is now ready and will get into production this July. A small nitric acid plant is in the process of erection. Foundations are being laid for buildings for the BON acid plant and the caustic soda plant and the equipment is due to be received before the end of the current year. As far as schemes for the manufacture of intermediates and fast colour bases are concerned, we have been granted manufacturing licences for them only recently. Fortunately, we had already started work on these schemes and, therefore, we are fairly well advanced for their implementation. Even then, I am afraid, that these plants will not be ready before the end of 1962.

Heavy Investment

"You will be glad to know that along with them, we propose to put up a second plant for production of Azo dyes. I may mention that all these programmes would involve an investment of nearly Rs. 6 crores. However, when they are completed, they will place our Company on a sound footing and would also help us to increase the quantity and the range of production.

"In the course of the next year, we may require some additional investment for Atic Industries Private Limited also. The Board of that Company has decided to go in for a plant for the manufacture of Benzanthrone, an important raw material required in the manufacture of Vat dyes.

"I had referred last year to certain other developments. The construction of a new dam is in hand, and the Central Water and Power Commission has sanctioned the scheme for a second power house. I should say in this connection that these days the provision of a power house is rather costly, but there is such an acute shortage of power from public supplies that even with a risk of some disadvantage in return on the investment, your Board is inclined to increase our own facilities for power. At the same time, we have also contracted to purchase 4000 kw. power from the Utran power station.

"The development of the village attached to the factory is also proceeding as planned. Our aim is to make it a model village, with all the requisite facilities. You will be glad to know that the visitors to Atul are impressed with what we have done in this direction.

Gujarat State

"In the end, I would like to refer to the creation of the new State of Gujarat. Some of us did not want to have it, and some of us did. But, now, it is there, and we have to make the best of the situation. We have started with a number of serious handicaps. We have a deficit on the revenue side and do not have sufficient irrigation facilities, sufficient power and sufficient roads. We have, therefore, to have a huge capital expenditure. But these handicaps or obligations should not deter us. We should remember that whatever Gujarat has achieved in the past, was done against odds which were heavier than the present ones. Also, today the State itself is interested in the economic well-being of the people and is prepared to go a long way in helping them to improve their conditions. It is possible, of course, that everyone may not agree with the details of the blue-print adopted by the State, and some of us might even be dissatisfied with the ways in which they are being implemented. However, we have to think of the people as a whole and, if need, be prepared to suffer inconveniences or make sacrifices for the attainment of our objective. Many of us have been thinking of entering into new business or manufacturing lines. Now is the time to get into these fields; now is also the time to make investments in or for the activities that the State may undertake, because it is for us to see that the new State gets as much support as we can give it. It is certainly true that Gujarat is not rich in natural economic resources as some of the other States are. But that is all the more reason that we should utilise all other resources to the best advantage."

COTTON

(Concluded from page 14)

Recent Egyptian efforts to break the vicious circle have been threefold: (1) User-country certificates to prevent Russian and satellite re-exports were introduced. (2) External value of the Egyptian pound was improved by reducing the discount on the "cotton" pounds from 23 per cent. to 13 per cent., and by reducing the surcharge on Egyptian resident purchase of foreign exchange for paying import duty from 27.5 per cent. to 20 per cent. (3) Restrictions on barter deals were introduced to increase Egypt's direct cotton sales to user-countries.

Egypt's cotton policies in the past two seasons have led to a decline in the free world's share in its exports and a corresponding increase in the share of communist countries. For instance, last year, the U.S. took only 1.5 per cent. of total Egyptian exports while Russia accounted for 25 per cent. and other communist countries for 20 per cent. Increased Egyptian cotton sales to the free world could remedy the situation. The forthcoming approach to Germany is one of Egypt's efforts in that direction.

Commenting on this, the *Cotton Trade Journal*, of Memphis, U.S.A., observes: "Increased German purchases of Egyptian cotton depend on German needs for Egyptian cotton, competitiveness in price and terms of trade. This means German private trade has to be prompted, pleased and pampered. Bonn, although sympathetic toward Egyptian cotton selling, can help little."

An agreement providing for the implementation of the Wage Board's recommendations has been signed by the Delhi Cloth Mills and the *Swatantra Bharat Mills* with the Textile *Mazdoor Sangh* affiliated to the Indian Trade Union Congress. Under the agreement, the workers of the two mills will get an increase of Rs. 8 per month in their basic wage with effect from 1st January 1960. The back-pay for the first six months aggregating Rs. 7 lakhs, will be disbursed shortly. Besides this increase in basic wage, a part of the dearness allowance of Rs. 51 will also be merged with the basic pay of workers.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. P.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i.—Interim Dividend. f.—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have for excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figure, except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for quotation of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(Concluded from page 3)

be compelled to curtail their development programmes. It is quite obvious that the increase in levy is aimed at reducing the earnings of large holdings. But the Kerala Finance Minister seems to have overlooked the fact that it is the large plantations which are more economic and provide gainful employment for a vast number of his State's population. Any additional burden on the already overburdened big estates only invites the risk of making them uneconomic and driving capital out of the industry and, perhaps, the State as well.

Tin Agreement

The prolonged uncertainty about the future of the International Tin Agreement has now been set at rest. After deliberating secretly for a month at New York, the United Nations Tin Conference unanimously approved on Friday last week the draft of a new Agreement which will run for five years, that is, from 1st July 1961 to 30th June 1966. Before it comes into force, the new Agreement has, of course, to be ratified by at least fifteen member-countries, including not less than nine consumer-nations. But such ratification is taken for granted. It is stated that Japan and West Germany, which do not belong to the existing Agreement, have decided to join the new one, while the U.S. and Soviet Russia will continue to remain outside.

Two important changes have been incorporated in the new Agreement. First, the Buffer Stock's maximum size is to be reduced from 25,000 to 20,000 tons. There is, however, no change in the provision laying down that export controls are to be imposed only when the Buffer Stock contains at least 10,000 tons of tin. At the end of 1959, the latest date for which figures are available, the Stock amounted to 10,650 tons. Secondly, the percentages of the total export quota allotted to each of the producing countries are revised. Thus, Bolivia's share is reduced from 19.4 to 18.0 per cent., while the shares of all others are slightly raised.

Besides the aforesaid changes, the new Tin Agreement is believed to contain several clauses

APPROACH TO THIRD PLAN PRAGMATIC

THE third Plan has had considerable advance publicity almost in all its details, thereby robbing its Draft Outline, officially made public this week, of its freshness. The objectives, the investment targets, the shares of the public and private sectors, employment prospects and sources of finance have all been referred to in the Press from time to time and fairly well commented upon. They have also been discussed by foreign observers, including the three financial experts deputed by the World Bank. For the Government, this is a distinct advantage, as the gains are greater than the losses. While the Draft Outline may make stale reading to many and is certainly devoid of the surprise element, the public has been spared of shocks. The widespread discussion that has taken place in the past eighteen months or so has prepared the public in this country as well as the leaders in friendly foreign countries for a ready acceptance of the large magnitude of the third Plan. Two years ago, the very mention of Rs. 10,000 crores as the probable size of the third Plan led to a violent shaking of heads and drew the retort that it would be far more overambitious than the second Plan, even though this figure was not very much above the one mentioned in the introductory chapter to the second Plan containing a *discussion of the long-term goal of* doubling India's *per capita* national income (at constant 1950-51 level of prices) by 1973-74. To a very large extent, this reaction was the outcome of the serious foreign exchange crisis of 1957 and 1958, the violent changes in fiscal policy, the failure of foodcrops for three successive years and the consequent rise in domestic price levels. Today, however, the size of the third Plan (Rs. 10,200 crores) does not evoke much criticism. Most people have reconciled themselves to it as something inevitable and necessary although its successful implementation depends, to a greater extent than the second Plan, on the availability of foreign aid and the domestic price level is 20 per cent. higher than about five years ago, carrying a clear warning that the scope for deficit financing is severely restricted.

What is this transformation in public sentiment due to? In the first place, the Government, particularly Prime Minister Nehru, has been successful in moulding public opinion to receive a plan of this magnitude by frequently emphasising that, unless there was an investment of Rs. 10,000 crores in the third Plan, the country would be overwhelmed by its rapidly expanding population. Secondly, the skilful softening of the harsh features of taxation, a somewhat friendly approach to the private sector and the widening of investment opportunities as the second Plan gathered momentum, have gone a long way towards winning the support of the vast majority of business men for a bigger plan. Thirdly, China's "leap forward" and its aggressive designs towards India have opened the eyes of the public as a whole to the urgency of rapid development of the Indian economy. There is no exaggeration in saying that the Chinese danger has won more supporters to the heavy industry complex of the third Plan than all the other arguments put forward by the Prime Minister and other planners. The powers-that-be will, of course, deny and demur at this explanation. Nevertheless, there is a lot of truth in it. And, fourthly, a feeling has come to prevail that India's friends abroad, especially in the Western world, are willing to help it in its attempts at becoming economically strong through democratic means. There is no doubt that, unlike in the case of the second Plan in its early stages, the authorities of this country have striven hard to obtain the co-operation of the developed countries for the third Plan. It is also true to say that the latter countries themselves, for political, social and economic reasons, have been taking keener interest in India's third Plan. The current international political situation has highlighted the importance of India—a poor, young democratic country—succeeding in its plans for economic development.

India badly needs large investments of the order contemplated in the third Plan, if it is to break the vicious circle of poverty and population. The growth of population has turned out to be significantly greater than was envisaged at the time the second Plan was drawn up. The *following figures* graphically bring out the change that has taken place and the projection into the future on the basis of the revised estimates prepared by the Central Statistical Organisation:

(In millions)

	1951	1956	1961	1966	1971	1976
Second Plan estimates	362	384	408	434	465	500
C.S.O. estimates	362	391	431	480	528	568

The aforesaid projections of the Central Statistical Organisation, which are necessarily very tentative, are based on the following view of trends of birth, death and growth rates:

(Per 1,000 per annum)

| Rate | 1951-56 | 1956-61 | 1961-66 | 1966-71 | 1971-76 |
|---

has four other aims which are summed up elsewhere in this issue. One of them is to achieve self-sufficiency in foodgrains and an increase in production of other agricultural commodities sufficient to meet the requirements of domestic industries and exports. There can be no disagreement on this view. Another aim is to expand basic industries like steel, fuel and power and establish machine-building capacity, so that the requirements of further industrialisation can be met within a period of 10 years or so mainly from the country's own resources. In other words, the third Plan seeks to place the country firmly on the road to self-sustained growth. There can be no quarrel with this general objective also; only, it should be sought to be realised in a practical manner. The attainment of this objective depends, to a very large extent, on the willing and wholehearted co-operation of the developed countries and the readiness with which the Government of India is willing to adapt its economic policies to facilitate such co-operation. Although the supply of entrepreneurial, managerial and technical personnel in the country has increased in recent years, it is insufficient both qualitatively and quantitatively. Similarly, the country is still heavily dependent on foreign sources for know-how and plant and machinery required for the establishment of heavy industries. There seems to be only a partial recognition of this crucial dependence on foreign countries in the Draft Outline. In trying to obtain foreign help, the authorities in this country must be careful to see that they do not, even unwittingly, get entangled in the cold war between the two power blocs in the developed areas of the world. Russia and Eastern Europe would appear to be trying to exploit the keenness of our public sector to enter the sphere of heavy industries in a big way. The Government of India must guard itself against leaning too heavily on these countries to the political ideologies of which it does not subscribe. At the same time, the democratic countries in the West will do well to appreciate the peculiar circumstances in which only the public sector in this country can establish certain heavy industries. Consequently, the Governments of these countries must think of breaking new ground in their attitudes and policies, in order to be able to render effective help to our public sector to fulfil its industrial programme. The Government of India, too, must explore the possibilities of taking as its partners the big industrial companies in the U.K., the U.S., West Germany and other free countries and these companies in turn must readily extend their co-operation. There is nothing new in this suggestion. There are already a few instances of such co-operation, as, for instance, the Bhopal Heavy Electrical project and the Industrial Explosives project in Bihar. One would like to see more such arrangements in regard to the industrial projects earmarked for the public sector.

The fourth aim of the third Plan is "to utilise to the fullest extent possible the manpower resources of the country and to ensure a substantial expansion in employment opportunities." As a general objective, this, too, is not objectionable. But this must be subject to three important qualifications. One, its realisation should not hamper export industries, as they have to compete in world markets which are being increasingly filled with goods turned out on the basis of highest possible productivity per worker. Two, it should not interfere with efficient production of such essential articles of consumption as cloth and sugar, inasmuch as they enter into the cost of living of people. If these items cost more as a result of the adoption of labour-intensive principle, then they will, in course of time, raise the cost of living to such an extent as to result in inflationary complications. This is true also of basic industries. Third, it should not stand in the way of efficient utilisation of raw materials and processing of food as, for instance, crushing of sugarcane, oilseeds and hulling of paddy. Although the Planning Commission has acknowledged the need for reconciling the claim for extensive employment with the necessity for efficient production, it has not actually done so in its programme for industrialisation. To give an instance. In spite of all the overwhelming evidence of wastage of resources in the cotton textile industry, it has continued to give prominence to handlooms and *Ambar Charka*. This is one of the few distressing aspects of the third Plan, where the lessons of the first two Plans have not been learnt.

The fifth and the last aim of the third Plan is "to bring about a reduction of inequalities in income and wealth and a more even distribution of economic power." On this objective, the approach is more realistic than in the second Plan as well as in some of the proposals that were contemplated by the Congress Party some time ago. From a description of the meaning of socialist pattern of society—this is a notable feature of the Draft Outline—as well as of the various measures already introduced to give effect to this old social objective and those that still remain to be taken, one gets the impression that the Planning Commission (of which the Prime Minister is the Chairman) is not in favour of any more radical measures in the sphere of either fiscal policy or private ownership. It has, of course, expressed itself in favour of co-operatives, small and medium enterprises wherever possible, but, at the same time, it has not ruled out the establishment of big industries in the private sector. On the whole, the Planning Commission's approach to, and perspective of, the third Plan is pragmatic, though much will depend on the emphasis placed in actual practice on the qualifications it has made to its observations.

GOVERNMENT EMPLOYEES

BARRING some fortunate development this week-end, the public will face a strike by public servants. This is an unprecedented situation in the country. A strike of this kind might have been expected in 1931 or 1942. But it did not take place. And that is a sad reflection on human nature. What all the political urge of finer patriotic emotion failed to bring about in those hectic years, the more mundane economic urge, reinforced by the demagogic skill of a few political leaders, is about to accomplish. A strike by Government employees is, however, too serious an issue to be discussed in purely economic terms, for it cuts at the root of all national existence. And yet, the stage is now all set for throwing the country's constitutionally constituted Government out of gear, thereby paving the way for the emergence of the conditions which have marred national life in many Asian countries.

It is easy to set down the events which have been largely responsible for the psychological climate for the Government employees' strike. No one now doubts that the Government has raised more hopes than it can reasonably fulfil. Determined to implement, at first, its concept of a "Welfare State," then of a socialist pattern of society, the Government has taken upon itself a wide range of functions which it might have done well to let severely alone for others to perform. The result is a proliferation of the ranks of Government employees and quasi-Government employees. Between March 1951 and March 1959, the number of civilians (excluding the personnel employed in the railways and a few other sections of the Government) increased from 580,000 to 719,000. Again, between 1948 and 1957, the number of Central Government employees (including railway personnel) has increased from 1.44 million to 1.77 million; inclusive of several quasi-Governmental employees, the number is probably close to, or will even exceed, two million. In other words, notwithstanding partition which, by itself, could have been expected to reduce the ranks of Government employees, the number of civil servants has moved up sizably. Indeed, impartial observers, who include public servants with over two decades of service under different regimes, feel that many Government departments are overstaffed.

A deplorable feature of the situation is that, whereas civil expenditure has increased steeply, thereby imposing a heavy burden on the taxpayer, the employees are not happy over their position or prospects. Excluding the railways, the administrative expenditure met from revenue has increased from Rs. 109 crores in 1955-56 to Rs. 185 crores in 1960-61; the overall increase in the 1956-61 period is of the order of Rs. 200 crores. And yet, the fact remains that the salaries of Government employees, especially of the lower ranks, suffer by comparison with those of, say, banks or certain insurance offices or leading industrial establishments. It is true that the conditions of service in the public sector and in the private sector are not strictly comparable, inasmuch as Government servants have a great deal of security which, despite all industrial legislation, is not available to employees in private offices. Nevertheless, their incomes are low and, what is more to the point, have been rendered lower still in real terms through increase in living costs. This gives the economic explanation for the present discontentment. But that does not constitute a justification for the strike.

The Government has been rightly accused of creating conditions which permit unfavourable comparisons to be made between the public and private sectors in the matter of emoluments to employees. By queering the pitch of welfare amenities, by insisting that fair wages must be paid, irrespective of whether the private employers (or the consumers) have the capacity to pay them or not, and by laying down that bonus payments are not an ex-gratia payment but a factor that neutralises high living costs, the Government and industrial tribunals have been largely responsible for the relatively high level of wages unrelated to productivity in the private sector. It is a pardonable human frailty, if public servants cast envious glances at the higher incomes in the private sector. And what is, perhaps, equally understandable is that they should reach the conclusion that the strike weapon, which has brought such benefits to private employees, would be no less effective in their case.

The mystical phrase "need-based" wage—this is computed at Rs. 125, as against Rs. 80 conceded by the Central Pay Commission—has caught the imagination of the public employees. A resolution, emphasising the social urgency of a need-based minimum remuneration, adopted by the fifteenth Indian Labour Conference, is now cited as scriptural authority for the demand. But it may be wondered whether a resolution adopted by the Conference tantamounts to its virtual acceptance by the Government. Generally speaking, the proceedings of these labour conferences are in the nature of broad lines of policy, rather than an obligatory decision for immediate implementation. Apart from this consideration, there is the more important question of the cost of implementing this minimum wage formula, as well as of the other demand for automatic adjustments for rise in living costs. The Pay Commission computed that the cost of implementing the demand for "need-based" wage (Rs. 125) and of other consequential changes in salaries would be of the order of Rs. 84 crores per year. Taking into account the increase in staff which has taken place since the period for which the Commission collected its data, the cost of acceptance of the demand is now placed at Rs. 100 crores per annum. There will also be inevitable repercussions in the sphere of civil expenditure at the State level, which will go up by another Rs. 100 crores. Nor will the chain reaction stop at the State level. Municipalities, quasi-governmental organisations and enterprises, as well as even some industrial managements may have to give suitable increments in salaries. All this, according to some estimates, will add another Rs. 200 crores to the wage bill. In all, it may go up by Rs. 400 crores or Rs. 2,000 crores over the next five-year period. This will mean about 25 per cent. cut in the real achievements of the third Plan. Thus, the consequences of the acceptance of the need-based wage formula could well-nigh mean a brake on national economic progress.

While urging the Government to review the demands of its employees in as sympathetic a light as possible, we wish to emphasise strongly that it should not, in the wider national interests, surrender to the threat. A strike by public employees will bring to a halt the machinery of the Government to which they have sworn loyalty. The nation will stand by the Government in its attempts to ensure that the public are not held to ransom by its servants who, led by their silver-tongued leaders, are taking the country to the precipice of national downfall. In no country, whether democratic or totalitarian, will a similar strike be tolerated. The U.S. Public Law 330, for instance, declares that no person shall hold office in the Government or Government-owned corporation, if he participates in a strike or asserts the right to strike. In his letter to the National Federation of Federal Employees, commending the constitution of the Federation which provides that it shall not take part in or support strikes against the Government, President Roosevelt said: "Upon employees in the Federal service rests the obligation to serve the whole people, whose interests and welfare require orderliness and continuity in the conduct of Government activities. This obligation is paramount. Since their own services have to do with the functioning of the Government, a strike of public employees manifests nothing less than an interest on their part to prevent or obstruct the operations of the Government until their demands are satisfied. Such action looking towards the paralysis of Government by those who have sworn to support it is unthinkable and intolerable." This is precisely the position which the country expects the Union Government to adopt towards its misguided workers.

MARKET GOSSIP

THE publication of the Draft Outline of the third Plan this week has had no perceptible effect on share markets. These are no doubt depicting a quiet trend now, with almost all market leaders well below the peak levels touched in recent days. But this is primarily due to the impending indefinite strike by Central Government employees. Hitherto, the operators thought that the strike might not materialise and that somehow it would be averted. This hope, however, has now receded. They have now begun to worry about its repercussions on the business in their markets. The prospect of no means of communications at all between one centre and another or of very considerably delayed communication is surely not a very pleasant one for them. "No letters! No telegrams! No telephones! No trains! Then, how are we to do business!" Thus, exclaimed one of the brokers. There would be a serious dislocation of business on stock exchanges if the strike were to materialise, for neither remittances nor delivery of shares from upcountry clients and *vice versa* would be possible. Inter-market business also will come to a standstill. Trade and industry will be seriously handicapped, as movement of raw materials and finished goods, not to mention food, will come to a halt. There will be a rise in the cost of living of people in the cities and towns, as prices of essentials will shoot up. Already several parts of the country are suffering from scarcity of coal and, if the strike turns out to be a prolonged one, production would fall, resulting in a heavy loss to the community in general. Still, the equities have not gone down appreciably, apparently because there are many even now who are not taking the prospects of strike seriously. Further, the investors are in no hurry to book their profit.

Following the decision of the postal authorities to suspend acceptance of registered letters from Friday the 8th inst., the Bombay Stock Exchange has advised its members to carry forward the business of their upcountry clients in the next settlement. In the case of cash shares, the date for delivery will be extended on merits of individual cases.

Last week, a leading speculator tried to boost the shares of Tata Steels. He had spread a rumour that an increase in steel retention prices was imminent. The Company's proposal to put up a plant for the manufacture of stainless steel was also suitably played up. The shares, once again, crossed the Rs. 160-mark only to come down during yesterday and today. The production performance of the Company in recent months has not been as encouraging as was expected. This is attributed mainly to shortage of coking coal of the requisite quality. There may also be other factors responsible for production not coming up to the level based on the Company's doubling of productive capacity. One would soon know about them when the Directors' report and statement of accounts of the Company for 1959-60 are published. Secondly, the Government is unduly holding up its verdict on the retention prices. And, thirdly, there are reports of persistent attempts on the part of leftists to break the unity of workers in Jamshedpur. A few days ago, the I.N.T.U.C.'s leadership was challenged by the rival union leader under the Industrial Disputes Act. This was, however, not upheld by the authorities of the Bihar State Government. Nevertheless, he is still trying his best to break the hold of the I.N.T.U.C. through its well-known leader, Mr. Michael John.

Indian Irons, too, have been losing ground, for the first two reasons mentioned above.

Third Plan and Share Markets

There is no reason to believe that the Draft Outline of the third Plan has any new bearish implications to the share markets. The expansionary character of the Plan, in terms of investments and opportunities for the private sector, has already been the prime force of the sharp rise in equity values in recent months. There is nothing in the Draft Outline to detract the markets from this line. True, the provision for deficit financing is only Rs. 500 crores, as against Rs. 1,200 crores estimated to have been incurred in the second Plan. But this is not a bearish point for more reasons than one. First of all, it is too early to gauge the size of deficit financing that will be required, for it will depend upon a number of factors, more especially on the success achieved in agricultural and industrial production. The original estimate of deficit financing in the second Plan was Rs. 800 crores, but it has now turned out to be 50 per cent. higher. Secondly, less deficit financing need not necessarily lead to lower equity prices, as it would mean a sounder economy and better margin of profits for a variety of industries. And, thirdly, even the authors of the Plan have not proceeded on the assumption that there would be a fall in price levels during the third Plan period. Indeed, their concern is to prevent a further rise in prices.

On the whole subject of price policy, the Draft Outline has only made some cursory observations, the substance of which is that every effort should be made to hold the price line by a combination of methods, despite the upward pressure that would be exerted, in the ordinary course, by the progressive step up in investment which the Plan envisages. The conclusion of the Commission on this question is this:

"Price policy as well as the techniques of price regulation raise complex issues. They involve a balancing of several conflicting claims. Prices, incomes and costs are closely inter-related. It is essential, therefore, to ensure that the regulatory devices adopted function effectively and in a co-ordinated way. There is scope within limits for varying the techniques that might be used for securing the right relationship between prices, but Government must be in a position to exercise control effectively at all strategic points, should the situation so warrant."

More will be heard on this subject when the Committee of the National Development Council which is examining this problem submits its views. These may have some repercussions on equities.

The interpretation of socialist pattern of society in the Draft Outline carries no new terrors to the share markets. Although the Planning Commission says that "the basic criterion in determining social policies and the lines of economic advance should be not private profit or the interests of a few but the good of the community as a whole, it also concedes that "a socialist pattern of society has to be based on increased production, realised through the use of modern science and technology and on equitable distribution of income and wealth." A perusal of the Commission's discourse on reducing disparities in income and wealth shows that it appreciates that the more important aspect of this problem "is represented by the need to create conditions under which rapid growth can be achieved alongside a marked reduction in economic and social inequalities." In fine, the Commission is prepared to recognise the value of incentives for increasing savings and production.

The next important aspect of the Plan pertains to taxation. The Draft Outline gives no room for hoping for any relief in taxation. On the contrary, it has provided for an additional taxation target of Rs. 1,650 crores which will involve considerable effort on the part of the Central and State Governments to broaden their tax structure. Of this target, the share of State Governments is placed at Rs. 550 crores. The stress is, however, on indirect taxation and not on direct taxation, as will be seen from the following extract:

"The limits of taxation over a particular period cannot, obviously, be decided upon only in terms of the requirements by way of investment and other developmental outlays. On the other hand, a plan of the dimensions envisaged cannot be put through without an adequate tax effort. The two aspects of the problem, namely, needs and practical possibilities, have to be viewed together. It is essential, in this context, to consider and balance economic as well as other considerations. On the whole, the additional tax target of Rs. 1,650 crores is within the limits of practicability, in view of the expected increases in national income, and especially in food production. It is also the minimum required, considering that every source of finance has to be fully drawn upon for carrying through the accepted programmes of development.

"The details of tax measures to be adopted will have to be decided upon in the light of the emerging economic situation. It is clear, however, that the third Plan will necessitate increases both in direct and in indirect taxation, as also measures to raise the surpluses of public enterprises.

"As regards income and corporation taxes, further increases in yields will have to be sought mainly through a tightening of tax administration, watch on expense accounts of companies, and other measures to check tax evasion. Indirect taxes and increases in the prices of products of public enterprises will, it must be recognised, tend to raise prices and costs, but this is part of the calculated sacrifices that have to be made."

Indirect taxation, too, will, in certain cases, tend to restrict the profit-margins of industries. And, when it does, it will adversely affect the equities of the industries concerned. But the hope, nay, expectation, is that, in most cases, it will be passed on to consumers. The planners themselves expect that to be done, as they want consumption to be restrained. Further, where the turnover of industries expands, as it generally will in a rapidly growing economy, the higher indirect taxation on them and the resultant contraction of profit-margin, if any, may be neutralised by the increase in business.

On the question of credit creation, however, the Planning Commission is in favour of strict control. Emphasising that inflationary financing of public outlays must be kept down to the barest minimum, it adds:

"It should be noted, in this connection, that it is not sufficient to keep down budgetary deficits; what is essential is to ensure that credit creation in the aggregate, both for the public and for the private sector, is limited to what the economy can absorb at a fairly stable level of prices."

Accordingly, operators in share markets must be prepared for continuance of tight credit restrictions in the coming years.

Coal in Third Plan

Investors in coal shares, who scan the Draft Outline of the third Plan, are not likely to find it rewarding. Beyond emphasising the need for a higher target for coal than in the second Plan, the Outline gives no indication of how it will be achieved, or what is in store for the private collieries. The demand for coal by the end of the third Plan, it is stated, will be of the order of 97 million tons. It is admitted that the target of 60 million tons, fixed under the second Plan, will not be reached, though the "necessary investment required for attaining production of this order will have been made by then." The report points out that, while in the second Plan a sizable contribution towards the additional production required could be obtained from existing workings, mostly in the private sector, the order of increase indicated in the third Plan will call for the opening of a number of new mines in virgin areas and this will entail a great deal of effort and capital investment. No decision, however, has been taken as to the distribution of the target as between the public and the private sectors. The whole question, it is stated, is "under examination; its distribution field-wise and grade-wise has also to be gone into in detail." Clearly, much will depend on a realistic decision on this issue, considering that it is the absence of such decision and the heavy weightage given to the public sector that was largely responsible for the non-fulfilment of targets in the second Plan. Be that as it may, for the present, a provision of Rs. 128 crores has been made for the coal programme in the public sector. In addition, some provision for raising coal is included in the allocation of Rs. 200 crores for the Bokaro steel plant and its ancillary facilities.

Appropriately enough, the report has emphasised that the "most important" objective of the coal programme in the third Plan should be to ensure adequate supplies of coking coal required for the steel industry and of high grade non-coking coal required for railways and certain other industries. The exact requirements of the steel industry, the sources of supply and the steps to be taken to ensure their full availability, it is stated, are now being gone into by a special committee. The additional requirements of coking coal for this industry during the third Plan are, however, estimated at 11 million tons, while the additional requirements of high grade non-coking coal are placed at 10 million tons. These are expected to come mainly from the Jharia and Raniganj coalfields, which are at present wholly in the private sector. It is recalled that, during the second Plan, the private sector was allowed to raise an additional 10 million tons from existing mines and immediately contiguous areas.

The contribution which the private sector could make during the third Plan, it is stated, is under examination. After scrutiny of the expansion proposals put forward by individual collieries in the private sector, a phased programme for achieving additional production will be made. It is tentatively assumed that the private sector could raise about 16 million tons. As regards other grades of coal, they will have to come largely from outlying coalfields like Karanpura in Bihar and the coalfields in M.P., Orissa and Andhra Pradesh. The precise demand for inferior grades cannot be foreseen. In any case, their production could be easily stepped up; transport rather than ability to increase raisings is likely to be the limiting factor.

Central Government's New Loans

As was anticipated in these columns a fortnight ago, the Central Government has just come out with its borrowing programme for the current year. It knows full well that the money market is still tight and that the banks do not have much surplus funds. If, nevertheless, it has invited subscriptions to two new loans for an aggregate amount of Rs. 175 crores, it is because it is not unduly worried whether or not the market's response is poor or generous and also because it has to redeem the two maturing loans, of which one of them, the 2½ per cent. 1960, falls due on the 15th inst., besides one of the former Hyderabad Government loans. All the three loans—2½ per cent. 1960, 4 per cent. 1960-70 and 2½ per cent. Hyerabad 1955-60—are tenderable for conversion into any one of the two new loans that are now offered, namely, 3½ per cent. 1966 bonds and 4 per cent. 1980 loan.

Contrary to our expectations, the issue price of both the loans are below par. The six-year 3½ per cent. bond is being offered at a discount of 25 nP and the 20-year 4 per cent. loan at a discount of 10 nP. On this basis, the yields on these loans are as follows:

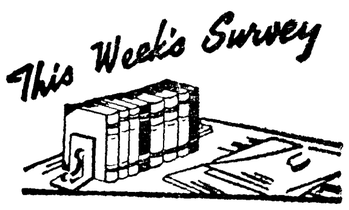
	Current yields	*Redemption yield*
3½ per cent. 1966	3.51	3.55
4 per cent. 1980	4.00	4.01

These yields are slightly more favourable to investors than those available on the comparable existing loans. It is surprising that the Reserve Bank did not care to pull up the Gilt-edged market even slightly before announcing the new loans, so that it could keep the issue prices in the round figure of par. It may be noted here that, last year, the terms of the loans were more favourable to the Government. The rate of 3½ per cent. was offered for a 10-year loan and the issue price was Rs. 99.85. Similarly, the 4 per cent. 20-year loan was issued only at par. All these factors go to suggest that the monetary authorities are not in favour of artificially keeping down the rates of interest. Some in market circles even go to the extent of interpreting this as an indicator of a probable increase in the Bank rate in the forthcoming busy season. This inference is apparently drawn on the ground that, as the Bank could not rule out the necessity for a higher Bank rate either late this year or early next year, it did not want to be accused by investors, in such an event, that it deliberately misled them by keeping down the interest rates through open market operations

(Continued on page 88)

A CORRECTION

Apropos our reference to general insurance companies in these columns last week, we have been informed by the authorities of the Ruby General Insurance Company, Ltd. that it is not correct to say that one more major insurance company, belonging to the Birla Group is planning to wind-up its business. The only other insurance company of this group is the Ruby and we are assured that this company has no such intention.



CYCLE INDUSTRY

IN terms of both quantum of output and quality of its products, the cycle industry has reason to be proud of its achievements. The industry's output is now running at an annual rate of some 1.2 million, including 200,000 cycles in the unorganised small-scale sector, as against a mere 500,000 in 1955. There has been a substantial increase in the indigenous content of the vehicles; the import pack value is only about Rs. 2 to Rs. 5 per vehicle, as against Rs. 80 a few years ago. The industry is well set on its way to reaching the target of 1.25 million under the second Plan. Provisional estimates place the target for the cycle industry in the third Plan at 2.5 million. Given the necessary raw material and other essential conditions, the industry should be able to give in the third Plan as good an account as it has done in the second.

The cycle is becoming a chief means of personal travel not only in towns but in rural areas. It is, therefore, of the utmost importance that the pipeline between the manufacturers and the numerous consumers of this product is well fed with equipment that will prevent a cycle from remaining idle for want of necessary repairs. Appropriately enough, in his presidential address at the annual meeting of the Cycle Manufacturers' Association of India, held at New Delhi this week, Mr. Bishamber Das Kapur emphasised that increased production of cycles implied larger requirements of components, spares and replacements. The industry, on its part, according to Mr. Kapur, is fully alive to its responsibility in the matter of supply of spare parts. It is actively engaged in the development of ancillary industries to which it imparts its technical know-how and guarantees the purchase of their products. All this is in keeping with the Government's economic policy of encouraging small-scale units. In implementing this policy, the large-scale industry, which provides the nucleus round which the small-scale units are organised, should not lose sight of the importance of quality of equipment. After all, the cycle is essentially a poor man's vehicle. And any decline in its quality will mean a loss which he can ill-afford to bear.

A notable feature of the industry is that it was able to build up a modest export trade last year by sending out about 7,500 cycles. This year, a target of 10,000 cycles has been fixed. Mr. Kapur acknowledged the assistance rendered by the Government in the shape of drawback in import duty and rebate in railway freight, etc. It would, however, appear that there are considerable difficulties in getting the refunds to which exporters are entitled. The Government will do well to streamline the administrative procedure concerned. A prosperous export trade, however, can be built up only on the basis of quality and competitive prices. From this point of view, it is doubtful if the existence of too many units is conducive to economic production. Mr. Kapur complained that newcomers were being encouraged by the Government although existing manufacturers could implement expansion programme in a short time; the latter were also in a position to expand tool-making capacity. The industry cannot, of course, ask for a blanket ban on entry of new units into its fold. But, at the same time, there is no point in allowing more manufacturers to be established, when the number of existing producers is large enough to prevent development of monopolistic tendencies. The most important aim should be to ensure conditions for production of cycles at prices which will compete in world markets. Accordingly, there is justification for the demand that existing manufacturers must be given the first choice of expanding their production facilities. Further, the Government should ensure that the industry has easy access to its raw material requirements. Steel, of course, should not cause much difficulty, though, even here, some planning by the chief steel works in the production of the specialised equipment the cycle industry requires for its production will be helpful. Considerable difficulty, according to Mr. Kapur, is experienced in obtaining such consumable stores as electro-plating salts, nickel anodes and polishing belts. These specific disabilities deserve the Government's attention, so that they could be removed and the industry enabled to increase its output.

PAKISTAN'S FINANCES

In their report to the Work Bank President, the "Three Wise Men" (Sir Oliver Franks, Mr. Hermann J. Abs and Mr. Allan Sproul) stated that they were impressed by the determination with which Pakistan's Finance Minister, Mr. M. Shoaib, was approaching the fiscal problem. A further proof of this statement is provided by the Pakistan Government budget for the current fiscal year (July 1960-June 1961), announced by Mr. Shoaib through a broadcast from the Rawalpindi station of Radio Pakistan on Thursday, 30th June. Thus, despite the continued mounting burden of defence expenditure and the pressing need for meeting large-scale capital expenditure, the Finance Minister of Pakistan has endeavoured to provide greater attraction than was afforded in 1959-60 to investors to participate in the economic build-up of the country. He has also sought to check expenditure on luxury and non-essential articles by enhancing taxes on such goods; incidentally, such increases, together with a few other new taxation measures, are expected to yield an additional net annual income of Rs. 9.90 crores. Further, he has announced the introduction of prize bond scheme as an encouragement to saving, with the ultimate object of bolstering the resources for financing the second Five-year Plan.

Five substantial fiscal concessions have been accorded to industrial and commercial firms. First, the period of tax holiday for new companies using mainly indigenous raw materials and investing 50 per cent. of their profits in expansion of plant facilities is extended from two to four years, generally, and to six years in the case of units set up in East Pakistan as well as in certain other undeveloped areas of West Pakistan. Second, the companies (both domestic and foreign) which receive dividends from companies enjoying tax holiday will have to pay only a super-tax on their dividend income at the rate of 15 per cent. and will no longer pay income-tax; the rate is to be reduced further for companies resident in countries with which Pakistan has tax treaties. Third, the tax payable by companies is reduced from 55 to 50 per cent. and, in respect of those companies which do not declare dividends in Pakistan also, the rate of tax is lowered from 60 to 55 per cent. Fourth, the varying rates of corporate tax (15 to 20 per cent.) are done away with and, instead, a uniform rate of 16 per cent. is to be levied. Fifth, the reorientation of company tax includes a 5 to 10 per cent. cut in tax payable by industrial and commercial concerns started after the partition and replacement of the complicated system of dividend taxation by a system which adds all dividends to income and brings them to taxation in the normal course. In order to avoid the hardship to small investors as a result of the latter measure, the first Rs. 1,000 of dividend income are to be exempted from taxation. Besides these concessions to companies, the middle class investors are afforded relief, in that the investment allowance for the purpose of calculating tax-free income is stepped up from Rs. 8,000 to Rs. 12,000.

While all these measures will doubtless give a fresh boost to economic activity, the financial position of Pakistan will continue to be pretty strained. For the high level of expenditure on defence persists. Such expenditure, it is common knowledge, is largely unproductive and so inhibits the economic progress of Pakistan. Out of every Rs. 10 that the Government of Pakistan gets as revenue (excluding that from its railways), as much as Rs. 5.70 are earmarked for defence. The actual provision in the 1960-61 budget is Rs. 98.59 crores out of the anticipated aggregate revenue receipts of Rs. 171.37 crores. A cut in defence spending will release more funds for economic programmes. The Finance Minister has not been able to bridge the yawning gap between the estimated Plan outlay of Rs. 172 crores in the current year and the available resources amounting to a bare Rs. 63 crores or a deficit of Rs. 109 crores. The whole of this deficit is expected to be met by way of foreign assistance. It is, however, doubtful whether this expectation will be fulfilled.

The Pakistan Government's budget for 1960-61 discloses a nominal revenue surplus of Rs. 1.51 crores, with estimates of receipts and expenditure placed at Rs. 171.37 crores and Rs. 169.76 crores, respectively. The surplus would have been in the nature of Rs. 7.64 crores but for the transfer of Rs. 6.13 crores earned by the Railways to a separate railway fund consequent on the constitution of the Railway Board following the eventual separation of the Railway budget from the Central budget. The capital budget reveals a deficit of Rs. 14 crores, with receipts (including foreign assistance) estimated at Rs. 165 crores and outlay at Rs. 179 crores. Setting off the revenue surplus of Rs. 1.51 crores, the overall deficit in the budget for the current year comes to Rs. 12.50 crores. The major part of this deficit, to the extent of Rs. 9.90 crores, is to be covered from the additional tax measures, the balance of Rs. 2.60 crores being met out of the previous year's cash balance.

INDO-U.S. TAX CONVENTION

It is now reasonable to assume that the Indo-U.S. tax convention which seeks to eliminate double taxation and to promote the flow of private investment from the U.S. to India will soon become effective. On Tuesday last week, the U.S. Under-Secretary of State, Mr. Douglas Dillon, most emphatically urged the ratification of the convention. Testifying before the Senate Committee on Foreign Relations, Mr. Dillon sought to stress that the convention would make an important contribution to sound economic relationship between the two countries. India, he declared, was one of the few less developed countries in which conditions were particularly favourable for economic growth. Emphasising that the success of the Indian experiment towards economic progress was of vital concern to the Americans, he said: "One of the ways in which we hope to support the endeavour of the Indian Government to attract more private capital is by concluding the tax convention which is now before your Committee." Many months have elapsed since the Governments of the two countries reached an agreement on the draft of the tax convention, and it is to be hoped that Mr. Dillon's forceful plea will move the U.S. Congress to give speedy action to the approval of the convention.

Although the U.S. has concluded tax treaties with quite a number of countries—the treaties are, of course, with the more fully developed countries with only two exceptions—the one negotiated with India is unique, in that it provides for a U.S. credit to tax incentives accorded by the Indian Government to attract new capital. Under existing U.S. laws, a credit is granted against income-tax only to taxes actually paid to the country where the income is earned. If a foreign country gives tax exemption to encourage new investments, no credit is allowed against U.S. tax liability. The Indo-U.S. convention, however, allows a credit against U.S. tax even for the exemption from tax granted by India. Explaining the importance of the provision, Mr. Dillon observed:

"The main corrective in the new tax-sharing provision is the policy of granting credit for foreign taxes, a policy by which we give foreign tax authorities a first claim on income arising under their jurisdiction. By the tax-sharing principle, we concede to them the further power not only to tax but to forgo taxes. The credit for tax exemption leaves the foreign tax authorities free to exempt new investments from taxation, secure in the knowledge that these exemptions will not be nullified by the operation of the U.S. tax credit mechanism."

The Indo-U.S. tax convention, with its tax-sharing principle, will surely go a long way towards generating interest in private investment opportunities in India. But the actual extent to which U.S. private investment supplements India's own resources in its developmental effort will depend entirely on the steps that the powers-that-be in this country will take to improve the investment climate for both domestic and foreign private enterprise.

PRODUCTIVITY DRIVE

The Regional Productivity Conference held at Madras, under the auspices of the Madras Productivity Council on 28th June, should serve to promote productivity consciousness in Southern India. The Conference, which was inaugurated by Mr. V. V. Giri, was attended by nearly 350 delegates from the four Southern States of Madras, Andhra, Mysore and Kerala. Thanks to the vigorous efforts of the National Productivity Council (N.P.C.), there has, of late, been a new-found interest in productivity. Politicians and administrators, industrialists and trade union leaders, have all been freely using the jargon of productivity experts. To the extent this is an indication of the grad

realisation that, in the final analysis, it is the level of productivity which influences and determines the national wealth, *per capita* income and standards of living, it is a welcome development.

But recognition of the importance of higher productivity is only the first step in increasing productivity which is the aim of the productivity drive launched by the N.P.C. Its success pre-supposes active co-operation between workers, management and the Government. In spite of the vigorous propaganda undertaken by the N.P.C., there are still workers and their unions who look upon the productivity movement with suspicion as something which will rob them of their job or force more work out of them without any additional monetary benefit. Among managements, too, there are a few who think that productivity improvement calls for heavy investment in new machinery. Both these views are wholly erroneous.

The best way to convince workers and management is to demonstrate by experiments conducted at the unit level that productivity improvement does not necessarily lead to unemployment, nor call for larger investment. The suggestion made by Mr. Manubhai Shah, Union Minister for Industry, who also attended the Conference, that some 30 industrial units of Madras City should be selected for the application of productivity methods is worth trying. The drive for educating and training every section in the several fields of industry, including inter-plant studies and field work, contemplated by the Regional Council, will surely give a fillip to the movement in the South.

The N.P.C. is thinking in terms of expanding the technical services offered by it. It is proposed to have eight regions, instead of five as at present, each region having an exclusive directorate. The question of establishing an all-India Institute for training industrial engineers is also being actively considered. It is to be hoped that the Council will decide in favour of setting up such an institute, as it has a very important role to play in ensuring the success of the productivity movement. For higher productivity is largely a function of better organisation of work, which involves the application of the latest techniques in industrial engineering and management. An all-India institute which imparts training in the application of these techniques can do much to improve the quality and effectiveness of productivity methods adopted in industrial units in the country.

CANADA-INDIA REACTOR

The Canada-India reactor (C.I.R.) at Trombay, which is expected to reach criticality any time this or next week, is an outstanding example of co-operation between any two friendly countries. Built on the model of the NRX reactor on the Chalk river in Canada, the C.I.R. project is expected to provide most of India's requirements for isotopes and a powerful facility for physical and engineering research. The reactor is a concrete symbol of the Canadian Government's genuine interest in India's economic progress. Besides the fact that it has agreed to finance 50 per cent. of the cost of this Rs. 10-crore project, Canada has made available to this country its own nuclear technical know-how and also trained 45 Indian scientists at the Chalk river reactor, thereby creating a body of skilled nuclear physicists in this country.

The reactor is fuelled with natural uranium in the form of long rods sheathed in aluminium. In common with NRX, it is moderated with heavy water and cooled with ordinary fresh water. The reactor is housed inside a large steel rotunda, 120 ft. in diameter and 133 ft. in height. Auxiliary equipment for the reactor, the control room, etc., are housed in a building surrounding the rotunda which is so designed as to contain any escape of radioactivity into the outside atmosphere in case of any accident. The core of the reactor is an aluminium tank, with about 200 tubes going through for fuel elements. Some of these positions can be used for isotope production, irradiation of materials, etc. The reactor has a maximum heat output of 40 megawatts. A maximum thermal flux of above 6×10^{13} neutrons/cm²/sec can be obtained at the reactor core, and about 1.5×10^{13} neutrons/cm²/sec at the beam holes.

The C.I. reactor will be the second reactor to reach criticality in Trombay. It may be recalled that Apsara, India's first reactor, attained criticality on 4th August 1956. The latter is designed to operate at a maximum power level of 1,000 kw.; its thermal flux is about 3×10^{13} neutrons/cm²/sec. A third reactor, called Zerlina or zero energy reactor, which has maximum power level of 100 kw. is also coming up at Trombay. This is designed for lattice investigations and new assemblies; it is also expected to reach criticality shortly. By far the most powerful of the three reactors is, of course, the Canada-India reactor which will enable the Atomic Energy Establishments staff to carry out experiments to study the effects of high neutron flux and temperatures on the properties of the fuel elements, moderators and the materials used in the construction of power reactors. It will also enable fuel elements of new design to be tested in the actual conditions of neutron flux available in a power reactor. Thus, it will provide India the facility necessary for designing and building its own nuclear power reactors. Experiments for breeding thorium into U233 have been planned. These are of great importance inasmuch as India's atomic energy programme is based on thorium, of which the country has abundant supply. The reactor is one of the most powerful radio-isotope producers in the world. It will not only make India self-sufficient in all reactor-produced radio-isotopes but also make it possible for this country to export them.

E.F.T.A. COMES EFFECTIVELY INTO BEING

The European Free Trade Association (E.F.T.A.) came effectively into being on 1st July 1960, when the first reduction, one of 20 per cent., in the Customs tariffs on industrial products traded between members came into force. E.F.T.A.—sometimes referred to as "the Seven"—consists of seven nations: Austria, Denmark, Norway, Portugal, Sweden, Switzerland, and the United Kingdom. The convention establishing E.F.T.A. was initialled in Stockholm in November 1959 and came into force on 3rd May 1960, when member-Governments deposited their instruments of ratification. Its headquarters are in Geneva.

The aims and purposes of E.F.T.A. are economic expansion, full employment, the rational use of resources, financial stability, and a higher standard of living. Starting on 1st July with the first tariff cuts of 20 per cent., the Stockholm convention will progressively establish a free market between the members of the association. This will be achieved by the abolition of tariffs and other obstacles to trade in the industrial products of members over a period of 10 years, or earlier, if so decided (there are special provisions for trade in agricultural produce and fish). In so far as the member States still have import restrictions, these quotas will also be relaxed. But each country will be free to decide its own external tariffs.

The Government of India has announced the rules providing for nomination facilities to holders of national savings certificates and depositors in the post office savings bank, involving amounts exceeding Rs. 5,000. The rules will come into force on 1st August 1960. Under the rules, holders of 12-year, 7-year and 5-year national savings certificates, 10-year national plan certificates and depositors in the post office savings bank and the cumulative time deposit scheme will be entitled to nominate a person or persons to receive the amounts due to them, in the event of the death of the former without the production of legal proof of title and to the exclusion of the rights of all other persons. The right of nomination, however, is being given only to individual holders/depositors, including minors who purchase certificates or have an account in their own names. The facility will not be available to the holders of certificates purchased by two persons jointly or by institutions or by a person on behalf of a minor.

LONDON LETTER

(From Our Own Correspondent)

LONDON, 30*th June*

CONTRARY to many reports that have appeared in the Press recently, the British Government is not considering abandoning its objections to the Common Market and entering the European Commodity unconditionally. The Minister of State at the Board of Trade, Mr. Erroll, has spent several days in Western Germany on a goodwill mission to develop Anglo-German trade. But the real purpose of the visit has been to see whether, in private negotiations, it is possible to move faster and further to resolving the impasse created by the co-existence of the Six and Seven.

For the British Government accepts that both the European Community (the Six) and the European Free Trade Association (the Seven) have come to stay. They have given up the hope of fusing one with the other, following on the failure of the Trade Committee in Paris to reach an agreement. All that came out of that Committee was a decision to set up a study group to examine various devices for relieving the immediate difficulties which the various countries will have as a result of the tariff programmes of the Six and the Seven, and to examine possibilities of reciprocal tariff concessions in the forthcoming G.A.T.T. tariff negotiations. For the British Government, the failure of the Committee to reach a settlement of the long-term problem was crucial. Now the Government is going out of its way to emphasise that it is not against the Common Market. "We welcome it," said Mr. Erroll, "because of the increase in prosperity it will bring and because of its unifying political effects." But the Government has noted that, in the last two years, the trade of Germany with other members of the Six has increased much more than the trade with any member of the Seven, and, indeed, in the first three months of this year, German imports from other Common Market countries have increased by 45 per cent. And, when the Minister of State began to illustrate various problems which would affect Anglo-German trade, he revealed the concern which the Government has about letting things take their course. The Germans have been warned that Common Market tariff reduction is a two-edged weapon, and that there are several items of German production which will feel greater competition through the reduction of tariffs within the Six without countervailing advantages of a reduction of tariffs with the Seven —e.g., the motor car industry. But it is no use drawing attention to this sort of difficulty, for it has already been accepted by the Common Market countries. Nor, really, is it any use explaining to the West European countries of the Six that we have different methods of protecting our agriculture from those used on the Continent, that we have problems of Commonwealth relations and so on. The truth of the matter is that the Government is disturbed about the division of Europe and has got no immediate answer.

The Common Market countries have 160 million customers. The E.F.T.A. have 90 million customers. But the Government is now determined to make the best it can of its 90 million and to seek by one means or another to get the best terms for these 90 million with the other 160 million. It has now declared, to silence rumours to the contrary, that the U.K. will not abandon its agreement with the other members of the E.F.T.A. and the Commonwealth.

It has thus been established both that the British Government is upset about the failure to obtain a long-term agreement with the European Economic Community and that it does not intend to try to save itself by entering that Community with or without the other members of the Seven. The intention now is to regard the new series of Trade Committee meetings as small beginnings to bridge the gap between the two. Nor is time on the side of the U.K., for, with every six months that passes, the Six are being drawn closer together by the schedule of tariff reductions. For the time being, Britain must abide by the G.A.T.T., and the Government sees, in the forthcoming meetings of the G.A.T.T., an opportunity for the negotiation of substantial reductions in tariffs. That is the one gleam of light at the moment. "We shall be ready" the Government has declared, "to accept important tariff reductions over a wide range of our imports for comparable reductions in tariffs against our exports." So there for the moment the division of Europe rests.—*All Rights Reserved.*

U.K.'S NEW LOAN TO INDIA

Britain has offered India a loan of £10,000,000. Announcing this, in a written reply in the House of Commons on 30th June, the Minister of State for Commonwealth Relations, Mr. C. J. M. Alport, said: "The United Kingdom have offered a loan of £10,000,000 to the Government of India, to be made under Section 3 of the Export Guarantees Act. The intention is that India should be able to draw on this loan to make payment for a broad range of her imports from the United Kingdom. The loan is being offered in response to an approach by the Government of India to the United Kingdom for early assistance in meeting India's foreign-exchange requirements for 1960-61, the final year of the second Five-year Plan. In addition, the United Kingdom will later join in consideration of India's need for assistance during the current year with the consortium (United States, Canada, Japan, and Federal Republic of Germany, in addition to Britain) which met under the aegis of the International Bank to concert assistance to India in 1958 and 1959."

This new loan of £10,000,000 (Rs. 13.33 crores) is in addition to previous measures since 1958 of general balance-of-payments help. Like these previous loans, it is not tied to new projects. The earlier loans were £28,500,000 (Rs. 38 crores) in December 1958 and £19,000,000 (Rs. 25.33 crores) in November 1959, bringing the total of British aid of this kind to £57,500,000 (Rs. 76.67 crores) in two years.

In addition, the United Kingdom Government has lent £15,000,000 (Rs. 20 crores) specifically towards the cost of the Durgapur steelworks (1958) and £3,000,000 (Rs. 4 crores) towards the Assam pipeline (1959)—in each case supplementing private finance from the United Kingdom for these projects—giving a grand total of £75,500,000 (Rs. 100.67 crores).

The most valuable aspect of the new loan is that it can be used quickly by India to pay for general imports from the United Kingdom.

Of loans totalling just over £100,000,000 (Rs. 133.33 crores) made to independent Commonwealth countries under the Export Guarantees Act during the last two years, £75,500,000, or three-quarters, has been authorised for India. Approximately 1¼ per cent. of the national income of the United Kingdom already goes to benefit the less-developed countries by means of public lending and private capital investment.

SURPLUS ON U.K. BALANCE OF PAYMENTS

The United Kingdom earned a surplus on its current balance of payments in the first quarter of this year of £46,000,000. This compares with a surplus of £19,000,000 a year ago and a deficit of £18,000,000 in the fourth quarter of last year. The surplus on visible trade—or the excess of exports over imports—in the first quarter of this year was £3,000,000, as compared with deficits of £17,000,000 in the first and fourth quarters of last year.

Government net expenditure on invisibles—that is, on items other than those entering into physical trade—was £19,000,000 greater than a year earlier, but the net surplus on other invisible items was £26,000,000 higher. Overall net invisible income, therefore, increased in the first quarter of this year by £7,000,000 as compared with a year earlier.

RETAIL SALES AT RECORD HIGH LEVELS

MR. ROCKEFELLER *VERSUS* MR. NIXON

From Our Special Correspondent

NEW YORK, 30*th June*

THERE were no economic repercussions to the snub President Eisenhower received when his visit to Tokyo was called off. However, it did leave a black mark and the opposition party is trying to make the most of it. The stock market which is supposed to be a barometer of business to come, did not behave too badly. The general conception was that that the traditional "summer rally" was at hand. The first half-year on the New York Stock Exchange saw nothing but a record of losses. Prices since 31st December were off by about $15,000 million. Oils, rails and steels experienced their greatest losses in this period.

But there are many bright spots. Retail sales rose to a record high during the first five months of the year. The total volume of $87,240 million exceeded the similar 1959 figure by 3.2 per cent. All major retail classifications exceeded the 1959 figures. The only exceptions were dealers in lumber, building materials and hardware, but this decline was small.

Price Level

The consumer price index rose again in May. This makes 11 increases in 14 months. The small increase in May resulted largely from rising food prices and from the continual gain in prices for services, such as hospitalisation insurance and physicians' visits. Price analysts remain confident of relative stability ahead.

The investing U.S. public, both private and institutional, did not do too badly. Dividends paid by publicly-owned corporations in the first five months of the year were $4,600 million, or 7 per cent. above the same 1959 period. May, typically, is a month of small dividend disbursements. Yet payments were $355 million, as compared with $330 million in May 1959. It indicates a better industrial climate.

Business in general is good, but, at this mid-year term, it has not come up to previous expectations. There are vague suggestions that the situation will improve within the next two or three months, but the experts do not say how or why. No fault can be found with the overall level of industrial production, employment, personal income, consumer spending and capital spending.

Yet, there are definite soft spots, such as inventories, manufacturers' new orders and construction. There has been a considerable slump in residential building, as compared with 1959. Previous tight money policy may have had a good deal to do with this and easier money, as of recently, has not had a chance to assert itself in the mortgage markets. There is a fair chance that some improvement in the housing picture should show up in the next few months. This area is a mainstay of U.S. economic activity and it is very important as a barometer.

Presidential Campaign

The Presidential campaign is now in full swing. Vice-President Richard M. Nixon is competing with New York Governor Nelson Rockefeller for the Republican Presidential nomination. Mr. Nixon has been speaking of sound economic growth and has been attacking Governor Rockefeller on addition to "growthmanship" which means Government action to stimulate the nation's growth rate. Mr. Nixon is charging that critics of the present rate of increase in gross national product are "playing what is rapidly becoming the most fashionable political parlour game of our time—growthmanship."

This is a very interesting development. Vice-President Nixon is presented favourably by President Eisenhower as his natural successor and he hopes to have him nominated as the Presidential candidate at the forthcoming convention of the Republican Party. Mr. Nixon believes and insists that U.S. industrial and economic growth would develop faster and more effectively with a minimum of Government intervention. The Vice-President has no private fortune to speak of.

By contrast, Governor Nelson Rockefeller of New York is a member of one of the richest families in the United States. Unlike his father and grandfather, Mr. Rockefeller is a spender who believes in Government interference in a big way. He raised New York State taxes and by this and other policies he has antagonised the majority of the New York State Legislature. He seems to have no conception of money.

I knew Mr. Rockefeller years ago when he started his Latin-American development programme. He made sense then up to a point, but all his projects revolve round spending money without too much regard for what that is going to do in the long run. He and his charming wife still spend a good deal of time on their farm in Venezuela.

Mr. Nixon's proposals for promoting U.S. economic expansion were viewed by most observers as "middle-of-the-road." Once defence needs are met, the Vice-President said, reform of the Federal tax structure to stimulate private enterprise "must be the first order of business for a new Administration." He also calls for growth but not inflation, if possible.—*All Rights Reserved.*

MORE AGREEMENTS WITH D.L.F.

The U.S. Development Loan Fund simultaneously signed seven loan agreements on 30th June 1960, covering loans aggregating $89.2 million (Rs. 42.4 crores) for enterprises in India. Five loans are for power generating facilities, one is to a development bank (the I.F.C.) and one is for the importation of American-made jeep and truck parts. Approval of all these loans, except the one for auto parts, had previously been announced.

Under past agreements between the Governments of India and the United States, a total of Rs. 42.1 crore in Indian currency also has been made available to four of the power projects and the Development Bank. These rupees are derived from the sale proceeds of U.S. agricultural products supplied to India under Public Law 480.

The road transport loan is for $13.1 million (Rs. 6.2 crores). This loan will enable private manufacturing firms in India to procure American-made auto parts to be assembled into jeeps and trucks in India. Firms will receive licences from the Government enabling them to import components and pay U.S. suppliers with dollars provided by the D.L.F. Auto components to be imported will consist mainly of frames, axles, transmissions, differentials and wheels. These will be combined with other components manufactured in India to produce 5,000 jeeps, 800 jeep station wagons, 800 jeep trucks, 800 Dodge one-ton trucks and 6,000 Dodge 3-ton trucks.

CHEMICAL COMPANY OFFERS STOCK TO EMPLOYEES

The Monsanto Chemical Company, St. Louis, is joining the ranks of American business concerns which make their shares available for purchase by their employees. The firm, one of the largest in the industry, will offer 450,000 shares of its common stock. Each employee will be able to subscribe for shares equal to 30 per cent. of his annual earnings. In order to build up funds for purchasing the stock, employees may make deposits with the Company over a three-year period and receive interest at the rate of four per cent. Directors and officers of the firm are, however, not eligible to participate in the plan.

UNDERSEA OIL STORAGE

An underwater oil storage system which may some day make possible fuelling stations at various points for navy ships, submarines and aircraft is being pioneered by the U.S. Navy. In the first experiment to be undertaken, a rubber container capable of holding 1,200 barrels of oil was towed into the Gulf of Mexico off Louisiana and anchored on the sea floor 52 feet below the surface. The 50,080-gallon container is 22 feet wide and 70 feet long. It is held to the ocean floor by a tubular steel frame and nylon harness.

BARGES

built by Mazagon Dock...

help save foreign exchange!

Mazagon Dock have built for Indian ports, steel water barges, self-propelled water barges, steel cargo barges, ammunition barges and other types of barges. These and other types of vessels, such as tugs, dredgers, fire floats and launches, built by Mazagon Dock are playing a vital part in the expansion of India's ports.

Ship building and repairing experience of Mazagon Dock help India improve her foreign exchange position. Mazagon Dock helps save foreign exchange by building and repairing ships in India. Repairs to vessels, owned by foreign shipping firms, at Mazagon Dock, helps earn foreign exchange.

INDIA'S NATIONAL INCOME UP BY 42 PER CENT. IN TEN YEARS

PROGRESS UNDER FIRST AND SECOND PLANS

[Elsewhere in this issue appears a detailed summary of the draft outline of the Third Five-year Plan. We are publishing on this page extracts from an official survey of the progress achieved in different sectors of the economy during the first and second Plans, so that readers may have the necessary background against which they can view the draft Third Plan.—ED.]

THE total investment in the economy during the first two Plans will be a little over Rs. 10,000 crores. Outlay in the public sector will amount to about Rs. 6,560 crores. The details are given below:

Outlay and investment in first and second Plans:

(Rs. crores)

	First Plan 1951-56	Second Plan 1956-61 (anticipated)	Total 1951-61
Public Sector outlay	1,960	4,600	6,560
Public Sector investment .. .	1,560	3,650	5,210
Private Sector investment ..	1,800*	3,100*	4,900
Total Investment	3,360	6,750	10,110

* These are estimates revised in the light of fuller information and are in lieu of the estimates of Rs. 1,600 crores in the First Plan and of Rs. 2,400 crores in the Second Plan and are exclusive of transfer from the public sector.

These figures do not include investments financed out of resources transferred from the public sector.

Increase in National Income

During the first Plan, owing largely to the progress recorded by agricultural production, the national income increased by 18 per cent. The second Plan represented a larger and a more broadbased effort than the first. The benefits of a number of projects undertaken during this period will be realised in the early stages of the third Plan. Foreign exchange difficulties experienced in the second year of the Plan led to its reappraisal in 1958-59, the revised outlay in the public sector being Rs. 4,500 crores in place of Rs. 4,800 crores. The outlay likely to be achieved by the end of the Plan is Rs. 4,600 crores. The increase in national income over the second Plan period is expected to be about 20 per cent. Over the ten years, 1951-61, national income (at constant prices) will have increased by about 42 per cent., *per capita* income by about 20 per cent. and *per capita* consumption by about 16 per cent. The infrastructure of the economy has been strengthened considerably, creating conditions for more rapid development in future.

Agriculture

Agricultural production trends since 1949-50 are summarised in the following table:

Index of Agricultural Production

(1949-50=100)

	1950-51	1955-56	1958-59	1960-61 (expected)
All commodities ..	95.6	116.9	132.0	135.0
Food crops	90.5	115.3	130.0	131.0
Other crops	105.9	120.1	136.0	143.0

The table shows that there is a rising trend, with agricultural production going up by about 40 per cent. between 1950-51 and 1960-61. But variations from year to year have been considerable. The increase in the production of major agricultural commodities has been as follows:

Commodity	Unit	1950-51	1960-61 (likely achievement)
Foodgrains—			
Cereals and pulses ..	Million tons	52.2*	75.0
Oilseeds	Million tons	5.1	7.2
Sugarcane—*gur*	Million tons	5.6	7.2
Cotton	Million bales	2.9	5.4
Jute	Million bales	3.3	5.5

* Estimates of production adjusted for changes in statistical coverage, etc., up to 1956-57.

A wide range of agricultural programmes has been implemented. The most significant decision taken under the first Five-year Plan was to introduce extension services throughout the country as an integral part of the community development movement. By the end of the first Plan, these services were established in 1,064 community development blocks, comprising 150,000 villages and a population of about 30 million. At the end of the second Plan, the community development movement will have spread to about 3,100 development blocks, comprising nearly 400,000 villages and a population of about 200 million. The programme will extend to all rural areas in the country by October 1963. At the end of the second Plan, the extension organisation at the block and village level will consist of about 31,000 village level workers and about 28,000 extension officers at the block level for agriculture, animal husbandry and other fields of development.

The expansion of the co-operative movement is illustrated by the increase in the number of primary agricultural societies from about 105,000 in 1951 to about 183,000 in 1958-59. During this period, the total membership of these societies increased from 4.4 million to 12 million. The number of village *panchayats* increased from about 83,000 to about 178,000.

The total irrigated area will increase from 51.5 million acres in 1950-51 to 70 million acres in 1960-61. About 4,000 seed farms are being established during the second Plan, as part of a programme for covering the entire cultivated area with improved seeds. The consumption of nitrogenous fertilisers will increase from 55,000 tons (in terms of nitrogen) in 1950-51 to 360,000 tons in 1960-61. Among other agricultural programmes in which there has been progress, reference may be made to the reclamation of 3.9 million acres of waste land, extension of green manuring to 22 million acres and soil conservation programmes extending to 2.7 million acres. Considerable progress has been made under the composting programme in urban and rural areas, as also in carrying out programmes of development for livestock, fisheries, milk supply, vegetable and fruit cultivation, forests and agricultural and animal husbandry research.

Industry and Minerals

The growth of industrial production since 1951 is shown in the following table:

Index of Industrial Production

	1951	1955	1956	1959
All commodities ..	100	122.4	132.6	151.1
Cotton textiles	100	111.9	117.5	111.5
Iron and steel	100	113.3	119.4	163.1
Machinery	100	163.9	215.0	424.3
Chemicals	100	159.0	171.1	214.0

Among the features of industrial development during the past decade which may be noted are the progress made in basic capital and producer goods industries, especially machinery and engineering industries. With the completion of three new steel plants in the public sector, the total finished steel capacity created will increase to 4.5 million tons, as compared with one million tons at the beginning of the first Plan, and 1.3 million tons at the beginning of the second Plan. There has been considerable increase in the production of essential industrial materials like cement, coal, aluminium, etc. The country is now producing steadily increasing quantities of machine tools and machinery for use in agriculture and for cotton textile, jute, cement, tea, sugar and vegetable oil industries. By the end of the second Plan, much of the equipment required by the railways will be available from indigenous production. The aggregate value of all kinds of industrial machinery produced in the country has risen from Rs. 11 crores in 1951 to about Rs. 79 crores in 1958. The corresponding figures for electrical equipment are Rs. 20 crores and Rs. 71 crores, respectively. A beginning has been made in the production of heavy electrical equipment. Chemical industries, including heavy chemicals, drugs and pharmaceuticals, fertilisers, etc., have also recorded progress. Under the second Plan, programmes for the modernisation of the jute and cotton textile industries have been undertaken. In a number of industries, the import component has been materially reduced.

Some idea of the progress likely to be achieved in 1960-61 in the production of important producer goods may be obtained from the following table:

Producer Goods

Commodity	Unit	1950-51	1960-61 (likely production)
Finished steel	Million tons	1.0	2.6
Aluminium	'000 tons	3.7	17
Diesel engines	Thousands	5.5	33
Electric cables (ACSR) conductors	Tons	1,674	18,000
Nitrogenous fertilisers (N) ..	'000 tons	9	210
Sulphuric acid	,,	99	400
Cement	Million tons	2.7	8.8
Coal	,,	32	53
Iron ore	,,	3	12

The increase in production in certain important consumer goods industries is shown in the table below:

Consumer Goods

Commodity	Unit	1950-51	1960-61 (likely production)
Cotton textile—mill cloth ..	Million yards	3,720	6,000
Sugar	Million tons	1.10	2.25
Paper and paperboard	'000 tons	114	320
Bicycles (organised sector only) ..	Thousands	101	1,050
Automobiles	Number	16,500	53,500

The manufacture of a number of new products was established in the country for the first time, e.g., industrial boilers, milling machines and other types of machine tools, diesel road rollers, industrial explosives, sulpha and antibiotic drugs, D.D.T., newsprint, etc. Overall industrial production is expected to record an increase of about 120 per cent. between 1950-51 and 1960-61.

Along with large and medium-sized industries, there has been considerable development in the field of village and small industries for the promotion of which special measures were initiated in the first and second Plans. Between 1950-51 and 1960-61, the production of handloom cloth will have increased from about 742 million to about 2,125 million yards, of *khadi* from over 7 million to about 80 million yards, and of raw silk from about 2 million to about 3.7 million lbs. Production of a number of small-scale industries like builders' hardware, hand tools, sewing machines, electric fans and bicycles also registered sizable increases. Small Industries Service Institutes have been set up in all States. In addition, 42 extension centres have been established in association with these industries. About 60 industrial estates, comprising 700 small factories, will have been set up by the end of the second Plan.

Power

The installed generating capacity will increase from 2.3 million kw. in 1950-51 to 5.8 million kw. by the end of 1960-61. The number of towns and villages electrified will have increased from 3,687 in 1950-51 to 19,000 by 1960-61.

Transport and Communications

The decade 1951-61 has been a period of considerable expansion in transport. The rehabilitation of the railways, which had suffered much damage on account of the war and the partition, was the main objective during the first Plan. During the second Plan, the railways have undertaken extensive development associated with the building up of basic industries like steel, coal and cement. From 91 million tons in 1950-51, the total freight traffic originating on the railways is expected to increase to 162 million tons by the end of the second Plan. About 1,200 miles of new railway lines are likely to be added, 1,300 miles of railway track doubled and 880 miles electrified by 1960-61. The number of locomotives is expected to increase from 8,200 in 1950-51 to 10,600 by the end of 1960-61, coaches from 19,200 to 28,900 and wagons from 199,000 to 354,100.

There has also been appreciable progress in road development. The mileage of surfaced roads will increase from 97,500 miles in 1950-51 to 144,000 miles in 1960-61. The number of commercial vehicles in the country will have nearly doubled during the period, the estimated number in 1960-61 being about 200,000, as against 116,000 in 1950-51. The shipping tonnage will increase during the period from 390,000 g.r.t. to about 900,000 g.r.t.

The expansion of communication services during the first two Plans is illustrated by the increase between 1950-51 and 1960-61 in the number of post offices from 36,000 to 75,000, of telegraph offices from 3,600 to 6,300 and of telephone connections from 168,000 to 475,000. Notable advances have also been made in the development of the telephone industry, meteorology and overseas communications services.

I.M.F. GIVES CREDIT TO GUATEMALA

The Government of Guatemala has entered into a one-year stand-by arrangement with the International Monetary Fund which authorises drawings up to $15 million in support of the country's currency. The Guatemalan currency unit is fully convertible under Article VIII of the Fund Agreement. The member has a quota of $15 million, and has not previously drawn upon the Fund's resources.

The Guatemalan quetzal has been at parity with the United States dollar since 1924, without restrictions on its exchange. For the past three years, the freedom and stability of Guatemala's exchange system has been maintained, despite a considerable decline in the country's foreign exchange income. The reduction in Guatemala's receipts from abroad stems primarily from a substantial drop in the price of coffee, the country's principal export product, from 1957 through 1959. During the same period, there was a marked decline in United States grants of assistance and in the inflow of foreign capital to Guatemala. Domestic financial policies were not fully adjusted to lower exchange receipts, and a balance of payments deficit ensued.

In November 1959, the Guatemalan Government undertook certain measures to strengthen the country's reserve position, and these have recently been reinforced. The reserve requirements against bank deposits have been increased and limitations on central bank rediscounts have been established. The Guatemalan Government aims at a balanced budget in fiscal 1960-61 by means of revenue measures and a further reduction of expenditures. The stand-by arrangement with the Fund will help Guatemala maintain the traditional stability of the quetzal by providing a second line of reserves, while the stabilization measures are taking effect.

SIEMENS
INDIA

TROPODUR cables in rational metric sizes for service voltages upto 1.1 kV

- High electrical and mechanical strength
- Flame retardant
- Corrosion proof
- No indoor cable-end boxes required
- Easy to install
- Conform to ISS 1554/60 (under print) for PVC heavy duty power and control cables

PROGRESS OF SERICULTURE INDUSTRY

RAW SILK OUTPUT RISES, BUT SHORTAGE PERSISTS AND PRICES RULE HIGH

IT is surprising that, although more than six months have elapsed since the Working Group on Sericulture Industry submitted its report to the Government of India (in December 1959), it has still not been released for publication. The Group, it will be recalled, was set up in April last year, with Mr. H. C. Dasappa, M.P., as Chairman, to evaluate the progress made so far under the second Five-year Plan and to suggest the target for the third Plan. The Group consisted of eight members representing Parliament and silk industry. The Government might not have found the time for studying the report carefully, but it could at least have made available to the public a summary of the important recommendations made by the Group and the new schemes formulated by it.

While one has to await the publication of the Working Group's report for a comprehensive account of the progress made in the implementation of the development programme for the sericulture industry, a brief reference may be made of the broad trends in this sector in recent years. Although the production of raw silk has expanded under the two Plans, the pace of expansion has slowed down since the second Plan began. The average annual rate of increase in output during the first four years of the second Plan (1955-59) was just 52,425 lbs., as against 130,877 lbs. recorded in the preceding four years (1951-55). The quantity of silk (mulberry and non-mulberry) actually produced during the calendar year 1959 was 3,366,840 lbs., as against 3,395,434 lbs. in 1958, 3,157,140 lbs. in 1955 and 2,533,633 lbs. in 1951. The net rise in production over the period 1951-59 was thus 833,207 lbs. The rise is accounted for by both mulberry silk and non-mulberry silk. The output of the former has increased from 1,952,822 lbs. in 1951 to 2,427,056 lbs. in 1955, 2,534,173 lbs. in 1958 and 2,534,692 lbs. in 1959. The production of non-mulberry silk went up from 580,811 lbs. in 1951 to 730,084 lbs. in 1955 and 861,261 lbs. in 1958, but declined to 832,148 lbs. in 1959.

Trend of Silk Output

The following table gives the breakdown figures relating to the output of the different kinds of silk during the year 1959, as compared with what was produced in 1958, 1955 and 1951:

(In lbs.)

	1959	1958	1955	1951
Mulberry silk:				
Filature	280,313	291,095	319,224	249,714
Charka	1,986,450	2,036,828	2,107,832	1,703,108
Cottage basin ..	197,376	137,579	..	..
Duplon	70,053	68,671	..	..
Total ..	2,534,692	2,534,173	2,427,056	1,952,822
Non-mulberry silk:				
Tassar	360,559	354,190	307,340	254,030
Eri	285,189	300,033	295,068	226,281
Muga	186,400	207,038	157,670	100,500
Total ..	832,148	861,261	730,084	580,811
Grand total ..	3,366,840	3,395,434	3,157,140	2,533,633
Silk waste:				
Mulberry	1,197,156	1,293,332	1,137,935	1,024,264
Non-mulberry ..	443,327	861,361	730,084	580,811
Total ..	1,640,483	2,154,693	1,868,019	1,605,075

Various schemes for the improvement and development of the sericulture industry were in operation during the first Plan period, but it is since the commencement of the second Plan in April 1956 that a larger effort in all directions has been made. But, despite these efforts, the rate of increase in raw silk output has slowed down, as mentioned earlier. Under the Plan, more than 300 schemes, envisaging a total outlay of Rs. 4 crores, are being implemented by the State Governments in co-operation with the Central Silk Board. The schemes cover establishment of mulberry graft nurseries, demonstration farms and basic seed stations for both foreign and indigenous races, as well as expansion of the existing ones; provision of loans and subsidies to rearers for improving irrigation facilities through sinking wells; installation of cold storage plants and incubation chambers; introduction of improved mountages; setting up of production-cum-training centres for reeling and spinning; replacement of *charkas* by cottage basins; modernisation of filature machinery; development of silk conditioning and testing houses at Bangalore and Calcutta; opening of training institutes, introduction of sericulture as a basic craft in schools and inter-State study tour for both rearers and students; establishment of voluntary cocoon markets, silk marketing co-operative and rearers societies, and sericulture research stations. The objective of all these schemes is to make quantitative and qualitative improvement in the production of raw silk which primarily depends upon the improvement in food plants, rearing, seed production, reeling and spinning.

Notwithstanding the implementation of the various development schemes under the second Plan, the actual extent of the rise in silk production has not been much, so that the leeway to be made up is still quite considerable. Thus, as against the targets fixed for 1960-61, namely, three million lbs. for mulberry silk and one million lbs. for non-mulberry silk, the actual output in 1959 was, as already stated, 2,534,692 lbs. and 832,148 lbs., respectively, the shortfall to be covered in the current year alone being 465,308 lbs. of mulberry silk and 167,852 lbs. of non-mulberry silk.

Productivity Declines

It may be noted here that the increase in the production of mulberry silk since the commencement of the first Plan has not been commensurate with the expansion in acreage under mulberry cultivation, as is evident from the figures given below:

	1950	1958	Percentage rise
Area under mulberry cultivation (acres) ..	114,994	185,515	60.8
Production of mulberry silk (lbs.)	2,127,148	2,534,173	19.1

The foregoing figures reveal that the productivity of mulberry silk industry has declined. Explaining the reasons for the decline, the *Silk Newsletter*, published by the Central Silk Board, observed sometime ago:

"The decline in the productivity as revealed by the data is evidently due to the fact that area under mulberry cultivation has increased far more in proportion to the increase in production. It has, however, to be remembered here that, ordinarily, an increase in area under cultivation occurs as a result of diversion of marginal lands and lands without adequate irrigation and other facilities. This is bound to result in lower productivity in yield. Though no data is available to show whether there has been an increase in irrigated area under mulberry cultivation, it could be safely stated that irrigated area under mulberry cultivation is practically negligible as compared to the total area. Secondly, production of raw silk depends as much on the area under mulberry crops as on successful rearing of mulberry silkworms under climatically favourable conditions. Incomes available from other crops under given local conditions also influence the area to be brought under cultivation. This could be judged to some extent by the market trend of prices. As regards mulberry silk, the bulk production is on *charkas*.

"... the index of prices showed an increase of 38 per cent. in case of *charka* raw silk in Bangalore silk market in 1958-59 as compared to 1952-53. The index of prices of other commodities, however, increased by 11.7 per cent. as a group and individually by 12.7 per cent. in the case of food articles and 15.9 per cent. in the case of industrial raw materials. This shows that production of mulberry silk could not take advantage of higher prices available to rise up in supply as compared to increase in area under mulberry cultivation. No data is available to suggest whether the supply of reeling cocoons or reeling facilities were inadequate to step up production of raw silk. However, it is clear from the data that an integrated approach is necessary for the development of silk at its various levels of production."

The decline in the productivity of the mulberry silk industry may also be attributed partly to the poor progress made in the sphere of silkworm seed output. As against the estimated annual requirements of over one million ounces, the actual production of examined seeds during 1958 was no more than 474,000 ounces, or 47.4 per cent. of the total requirements. Similarly, the actual output of non-mulberry seed was just 25 per cent. of the annual demand. The requirements and actual output, respectively, of the different kinds of non-mulberry seed during 1958 were: *Tassar* seed: 495,500 ozs. and 8,630 ozs.; *eri* seed: 44,000 ozs. and 9,100 ozs.; *muga* seed: 30 million ozs. and 7.5 million ozs. Viewed thus, the Central Silk Board has done well to set up a Central Silkworm Seed Station at Srinagar to preserve stock races and to evolve new races of silkworms meant for P_2 (grandparent). The hill-rearing stations at Coonoor, Kalimpong, B.R. Hills and K.R. Hills are also striving to produce disease-free layings and maintain good races.

In the sphere of raw silk reeling, efforts are being made to replace primitive *charka* with the improved cottage basins. In 1959, the newly introduced cottage basins produced a total of 197,376 lbs. of raw silk, as against 137,579 lbs. in 1958 and 122,494 lbs. in 1957. With regard to the reeling of non-mulberry silk, the programme for replacing crude contrivances like *natwa* and *bhir* with improved ones are under way. The All-India Sericulture Training Institute and the three regional institutes are doing good work in imparting training to sericulture candidates. There are at present three research institutes (at Berhampore in West Bengal, Channapatna in Mysore and Titabar in Assam) which are engaged in the task of evolving new and improved silkworm races, so that the yield and quality of reeling cocoons show significant improvement. In order to modernise the sericulture industry on scientific lines, the Silk Board has been sponsoring visits of sericulture experts from foreign countries, particularly Japan, and sending out Indians for study in the two premier silk producing countries, namely, Japan and China. Efforts are also being made by the Board to drive home the concept of better sericulture among silkworm rearers and reelers through the publication of a quarterly journal, issue of scientific and informative brochures for dissemination of scientific literature, and distribution of illustrated releases.

Trend of Prices

Despite the improvement since 1951, the production of raw silk (both mulberry and non-mulberry) falls short not only of the targets but also of the estimated domestic requirements of about 4.00 million lbs. Consequently, sizable quantities of raw silk continue to be imported from abroad. The imports during 1959 aggregated 341,997 lbs. valued at Rs. 61.45 lakhs. They are, of course, higher than the quantity imported in the previous year (124,047 lbs. worth Rs. 24.81 lakhs) but are much below the high level of imports in 1951, namely, 1.21 million lbs. worth Rs. 2.60 crores. In view of the deficit in supplies, the prices of raw silk produced within the country continue to be markedly higher than those imported from abroad. The latest available quotation for filature raw silk in the Bangalore silk market is as high as Rs. 40-Rs. 42 per lb., as against the f.o.b. value of Rs. 20.28 (landed cost with duty is Rs. 32.45) for the Japanese 20/22 A grade silk.

The sericulture development schemes, as already stated, are being implemented by the State Governments in co-operation with the Central Silk Board. In order to meet the financial outlay on these schemes, the Union Government gives loans and grants as is indicated below:

(In lakhs of rupees)

	Grants	Loans	Total
1956-57	33.35	27.27	60.62
1957-58	32.77	22.47	55.24
1958-59	41.87	24.37	66.24
1959-60	40.00	11.36	51.36
1960-61 (Budget)	40.00	21.36	61.36
Tota ..	187.99	106.83	294.82

While the grants and loans made available by the Centre to the States for the development of sericulture industry have been on a liberal scale, the expenditure actually incurred by the State Governments is low. During the first three years of the second Plan, as against the total amount of Rs. 182.10 lakhs sanctioned, the amount spent was only Rs. 78.58 lakhs. It would be interesting to know the reasons for the inability of the States to utilise fully the assistance received from the Centre.

MADRAS AND U.P. MILLS TO IMPLEMENT WAGE BOARD AWARD

Thanks to the efforts of Mr. R. Venkataraman, Minister for Labour and Industries, Government of Madras, agreement has at last been reached between the management and labour in the State's textile industry on the issue of implementing the recommendations of the Wage Board. The agreement was signed on 30th June after four days of negotiations. The terms of the agreement, which, it is said, will be in full discharge of the liabilities and obligations arising out of the Wage Board's award, are as follows:

A flat increase of Rs. 8 in basic wage will be implemented in full effect from 1st January 1960, at least three-fourths of arrears being paid before *Deepavali* in October next. The other flat increase of Rs. 2 is to be paid by 1st January 1962.

Three-fourths of the dearness allowance, which at present amounts to about Rs. 45, will be merged with basic pay.

Dearness allowance in future will be regulated for the excess points over 340 at the following rates in nP per point: From 1st June 1960: 21; 1st June 1961: 23; 1st June 1962: 24; 1st January 1963: 26. The present D.A. is 19 nP per point.

The new mills will also pay the aforesaid increases over and above the existing wages and

(*Continued on page 83*)

REDUNDANCY IN TEXTILE FINISHING SECTOR TO BE TACKLED

TRADING PROFITS OF MILLS IMPROVE

From Our Special Correspondent

MANCHESTER, *28th June*

MANCHESTER LETTER

A SCHEME to deal with plant redundancy in the textile finishing trade has been completed, according to informed sources within the Lancashire cotton industry. An official statement is likely this week. In his review accompanying the full accounts of the Bleachers' Association, Mr. Philip L. Wright (Chairman) said that, despite all the complex difficulties involved, a "workable scheme" was being evolved.

Efforts to evolve a redundancy scheme for the various sections of the textile finishing trade have been going on for nearly 12 months. When details of the machinery scrapping programmes in spinning and weaving were announced last summer, it was stated that a complementary plan for finishing would follow—probably in the autumn. During subsequent negotiations, it became apparent that a similar scheme based on compensation for dismantled plant presented major difficulties. Those involved could not produce a formula offering a simple system of payment for machines on the basis of the earlier project. No basic plant such as spindles and looms could be brought into the programme. But it appears that an arrangement has been reached satisfying all branches.

During the months of planning, numerous talks have taken place within the various sections and at Government level. A final hitch can yet delay an announcement, but the sponsors of the scheme are anxious to declare their intentions as soon as possible. There have been complaints from companies engaged in printing, bleaching and dyeing that the impact of reorganisation in spinning and weaving has put them at a disadvantage and the sooner redundancy is dealt with the better.

Seasonal Business

Among the problems encountered in drawing up proposals have been the varying types of machinery used in the separate sections of textile finishing, and the seasonal nature of much of the business, which makes plant redundant at some periods of the year and in short supply at others. From all accounts, however, the "skeleton in the cupboard," as it was described last week by Mr. George Spencer, Chairman of the British Cotton and Wool Dyers' Association, is to be dragged out of hiding within the next few days. The success of the reorganisation plan in the earlier processes of spinning and weaving makes it more vital than ever that obsolete machinery in finishing should be scrapped and the whole chain of production, from raw materials to finished articles, streamlined to meet the requirements of modern textile trading.

Those whose daily task is to sift the financial results of industrial companies have lately become accustomed to expect encouraging reports from concerns predominantly connected with cotton. The recent revival in activity in the Lancashire industry and the better margins which have been available since the final quarter of last year are now being fully reflected in the returns coming to hand. Even these observers, however, lifted their eyebrows last week when the statements by several important companies were received. The sunshine certainly glowed from these accounts, which did no more than justify the frequent predictions of good tidings to come, which had been widely made in the earlier months of the year.

The following table contrasts the recent experience of these particular companies showing the trading profits earned, before taxation, during the past three years:

	1959-60	1958-59	1957-58
	£	£	£
Porritts and Spencer	1,227,981	912,454	846,564
Taylor and Hartley	204,639	105,837	244,703
Bleachers' Association ..	946,429	520,059	662,962
Fine Spinners	1,917,064	770,813	2,108,659
Lancashire Cotton Corporation.	*1,946,818	2,076,271	3,229,921

* Half-year only.

It should be emphasised that the figures for the Lancashire Cotton Corporation represent only six months' trading and indicate very clearly the substantial gains made by this group, which has for long been among the leaders of British industry, let alone the textile section. Already confident forecasts are being made as to the size of annual profit figures still to come and, if current order lists can be trusted, there is no reason to suppose that subsequent business will be any less remunerative than that secured in the past nine months or so.

That the Government chose the same day to reveal its plans to cope with inflation must have been disappointing to those investors who were counting on capital gains from their textile holdings. Despite the overwhelmingly successful results shown, prices of the shares were marked down in sympathy with the uncertain tone of stock markets as a whole.

Manpower Surprise

Now that the holiday season has arrived, its usual impact on output has to be faced. On this occasion, the effect of whole districts being idle is of more consequence than sometimes in the past, particularly as there is such constant pressure for supplies. The implications of shift-working, now being used on a wider scale, also have to be borne in mind in discussing the outlook.

The more significant aspect of the situation was the rise of more than a thousand in the number of operatives available for employment in the spinning and weaving branches. To some extent, this may have been a reaction after the sharp decline of nearly 4,000 in the labour force in the previous month, but, as the increase followed the final completion of the scrapping programmes, it created a good deal of local discussion.

Manpower figures are invariably influenced by the seasonal holidays and a decline has been generally anticipated during the summer months. The position will undoubtedly be carefully watched this year in the light of the changed circumstances and the widespread efforts being made to expand the rate of output per worker. As compared with April 1959, the total manpower is about 17,500 down, but, in both waste spinning and doubling, the numbers employed are slightly higher than twelve months ago.

Cotton Research Policy

An assurance that there was no bar against the employment of African scientists on the staff of the Empire Cotton Growing Corporation was given at the annual meeting in Manchester by Lord Derby, President of the Corporation. He told the meeting that the policy of the organisation was to have Africans working for it. One was already employed in research work and he hoped that more would follow. The statement was made after Sir Geoffrey Nye, Agricultural Adviser to the Secretary of State for the Colonies, had said that it would be fatal for the Corporation if it were to be looked upon as a "closed shop" for expatriates.

Lord Derby commented on the increase in output of raw cotton during the past year in the eight territories administered by the Corporation. Production, he said, had increased by nearly 50 per cent. on the previous year and had reached a record of over 1,500,000 bales. This was nearly 250,000 bales more than the total quantity of cotton used annually by British spinners.

New Merger Move

Two textile giants are involved in a £2 250,000 merger announced this week which, if accepted, will give J. and N. Philips Ltd., the Manchester drapery group, control over Horrockses, Crewdson and Co. Ltd., the Preston spinning and weaving firm, whose fabrics are world-famous. This follows a move to co-ordinate the activities of the companies announced in March. The current bid offers one new ordinary share of 5*s.* 0*d.* in Philips and 32*s.* 6*d.* in cash for each £1 ordinary stock in Horrockses. The statement indicated that acceptances representing 36 per cent. of Horrockses' capital are already assured, together with the £168,950 of Horrockses' £1,000,000 ordinary stock already held by Philips, so that voting control is certain.

In the six months to the end of February, Horrockses report a small loss on trading, but the Philips group announces that turnover in the current trading period is higher than a year ago and forecast that profits should justify a 7½ per cent. dividend on capital as increased by the issue to Horrockses' stockholders.

Little Export Variation

Output per worker in the Lancashire cotton industry may be running at a higher level as a result of the changes brought about by the redundancy schemes, but nothing seems to jolt the overseas trading position out of its rut. After five months of 1960, exports are just about holding their own, but arrivals of foreign cloth and yarn are still mounting. The May returns shows no appreciable variation from recent trends. Shipments of woven fabrics dwindled a little to below 30,000,000 square yards and over the five months aggregated 146,836,000 square yards. This compared with 143,928,000 square yards last year.

A significant change has lately taken place in yarn exports. Those of cotton fibres are generally around the 2,000,000 lbs. mark monthly, while shipments of man-made fibre yarns amounted to 4,866,000 lbs. in May and 4,651,000 lbs. in April.

Imports of cotton grey cloth alone again exceeded 50 million square yards last month and total cloth arrivals were 61,742,000 square yards. This brought the five-month aggregate of all types of fabrics imported to 297,230,000 square yards, as against 196,603.000 square yards last year, of which grey cloth amounted to 243,837,000 yards, as against 167,656,000 yards.

Arrivals of finished cotton goods so far this year are not far short of double last year's quantity, being 53,393.000 square yards. Cotton yarn imports have also shown a marked expansion from 9,609,000 lbs. to 16,648,000 lbs. In the man-made fibres branch, yarn arrivals have gone up from 1,273,000 lbs. to 4,757,000 lbs. and cloth imports have risen from 13,815,000 square yards to 22,981,000 square yards.—*All Rights Reserved.*

1959-60—A SEASON OF RECORDS FOR WORLD COTTON

OUTLOOK FOR NEXT YEAR REASONABLY OPTIMISTIC

THE 1959-60 world cotton season, which will end on 31st July, will go down in the annals of the fibre as a season of records. Production, consumption and trade during the season are all expected to be at peak levels. Surplus there still is—in the United States—but, even so, the excess of disappearance over production during the last four seasons has enabled the U.S. to reduce its holdings to more manageable proportions. The latest estimates of U.S. stocks at the end of the present season place them at a little more than half the peak witnessed in 1956. What is even more important, this reduction has not been accompanied by any heavy build-up of stocks in other producing countries.

The reduction in cotton surplus in recent years can be attributed to numerous factors but, according to the annual review of the world cotton situation published by the International Cotton Advisory Committee, Washington, and published in its bulletin *Cotton* for April-May 1960, it has been made possible, in large part, by curtailment of production, a high level of exports to communist countries and a marked increase in consumption in several parts of the world. At the beginning of the season, now fast drawing to a close, stocks were down by more than a million bales, as compared with a year ago and about five million bales below the 1956 peak of 22.30 million bales (each bale—478 lbs. net weight) and lower than at any time since 1953. The following table indicates the supply and disappearance of cotton during the three seasons, namely, 1957-58, 1958-59 and 1959-60, the figures for the last mentioned season being preliminary:

Supply and Distribution

(In million bales)

	1959-60 (Preliminary)	1958-59	1957-58
Opening Stocks			
United States	8.9	8.7	11.4
Other net exporters	3.4	3.9	3.0
Net importers	5.2	6.1	6.2
Total	17.5	18.7	20.6
Production			
United States	14.6	11.5	11.0
Other countries	16.5	17.6	16.9
Total supply	31.1	29.1	27.9
	48.6	47.8	48.5
Consumption			
United States	9.1	8.7	8.9
Other countries	21.7	20.4	20.5
Total	30.8	29.1	28.5
Net exports to Communist countries	1.2	1.2	1.3
Destroyed	0.1	0.1	0.1
Total disappearance	32.1	30.4	29.9
Ending stocks	16.5	17.5	18.7
Exports			
United States	6.5	2.8	5.7
Other countries	8.0	8.7	6.9
Total	14.5	11.5	12.6

Maldistribution of Production

Much has been said of the chronic tendency towards surplus but there is an equally important aspect to this problem, namely, the maldistribution of productive resources. Production during the season was the highest ever. Yet there is scarcity in the midst of plenty and some countries are currently experiencing difficulties in obtaining sufficient cotton to meet the needs of their domestic textile industries. India is the classic example where, due to inordinately low yields, resort has had to be taken to large-scale purchases abroad. In such countries the need to step up production becomes imperative if dislocation of the domestic textile industry is to be averted.

Efforts to stimulate production, in the context of world surplus situation, are justified, in some instances, on the ground that increased domestic consumption has been at the expense of exports which many countries still consider vital to their overall economies. Pakistan and Brazil fall into this category. On the other hand, some countries are still restricting production in the interests of maintaining equilibrium both at home and abroad. The typical example here is the U.S.

In some countries, notably Mexico and the Central American republics, cotton cultivation was affected by the collapse in cotton prices at planting time and apprehension over future trend. In others—India, Pakistan and Uganda, for example, production suffered due to adverse weather. Only in a few instances have there been any real increases—in Brazil, the Sudan, Egypt, Colombia and Spain and on balance, production in the free world outside the U.S. is lower by over a million bales from last season and at the lowest point for several years. The maintenance of record high yields and a marked expansion in acreage accounts for the increase of over three million bales in the U.S. crop which has more than offset the fall in output in other countries, resulted in a net increase in total production by some two million bales to 31 million bales.

Upsurge in Consumption

An encouraging aspect of the cotton situation this season is the upsurge in consumption. This is a welcome trend, as the ultimate solution of the surplus problem lies in increasing consumption. Total free world consumption during the current season is estimated to aggregate 30.8 million bales, as compared with 29.1 million bales in 1958-59, the largest single increase in any one season since the Korean crisis.

The rise in consumption is the result of many factors of which two deserve special mention. The first is a broadening of demand for textile in many countries at the retail level, consequent on their movement to a high level of economic activity. Secondly, in several countries, textile manufacturers had cut their stocks of cotton to low levels due to the depression in their industry for two consecutive years. Consequently, when the demand for textiles picked up unexpectedly, there was a perceptible rise in the offtake and consumption of cotton. In fact, the improvement in consumption has been almost universal.

The upswing in the United States came much earlier than in other countries, with the main increase taking place last season. Although, on a seasonally adjusted basis, the daily rate seems to have levelled off recently, consumption is estimated to exceed 9 million bales, as compared with 8.7 million in 1958-59.

Western Europe is enjoying a textile boom and, with consumption at peak levels in many countries, aggregate consumption should be around 7.5 million bales—an increase of about 10 per cent. In the United Kingdom, despite the contraction in the labour force, cotton yarn output is substantially higher mainly on account of the elimination of short-time working and an increase in productivity. On the Continent, the real upswing dates from the end of last season. A contributing factor here has been the marked increase in cotton textile exports but rising imports are a source of concern in some countries.

Yarn production curtailments have been progressively relaxed in Japan and cotton consumption is now almost back to its pre-recession level. However, in view of rising inventories and the weakness in textile prices recently, present optimism is tempered by some apprehension over the future and leaders of cotton industry have renewed their warnings against the dangers of overproduction. In India, the sharp reduction in mill stocks of cotton cloth put the industry in a strong position and, although the situation is now obscured by the acute shortage of indigenous cotton, on all other counts, the situation appears favourable.

International Trade

Not only production and consumption but also the international trade has been at record level. Exports are expected to be round 14.5 million bales. These are three million bales higher than the performance in 1958-59. The main reasons for the rise in exports are lower price, higher consumption and the crop failure in India. With the prospect of lower price, imports by most countries were held to the minimum in the last season, with the excess of consumption over imports, amounting to 800,000 bales, having been met by drawing on stocks. In order to maintain even the recession level, therefore, imports had to increase by this amount. But consumption in net importing countries was also up by a million bales or more and imports had to increase accordingly. The shortfall in production in India means that its imports will be about double the normal level, thus adding about half-a-million bales to exports from other countries. It is also probable that the present price situation may induce importers to carry higher stocks resulting in a further addition to exports this season.

The impressive increase in U.S. exports this season was inevitable, owing to reduced availabilities in other countries, but price developments have also been important. Exports from the U.S. this season are expected to exceed 6.5 million bales which will result in a further liquidation of stocks in that country. Aggregate exports of other countries are expected to be slightly lower in the neighbourhood of 8 million bales, as against 8.7 million bales in 1958-59. The reason for this decline is not lack of demand. Either due to smaller crops or lower opening carryover stocks or both, many exporting countries could not match last season's exports. Mexico, the Central American countries, Peru, Pakistan, Greece and Uganda are typical examples. In others, exports could only be maintained at last season's level by reducing stocks to the point where the interests of domestic textile industries might be impaired. In some countries, particularly Egypt, Turkey and Syria, however, larger crop and the availability of stocks from last season's crop, hold out the probability that exports will increase.

Trade With Red Bloc

Exports to the communist countries, amounting now to about 1.5 million bales annually, have been of mutual benefit to participating countries and a major factor in the reduction in the world cotton surplus. Nevertheless, it introduces a further element of uncertainty into any realistic appraisal of cotton's future. The development of trade with these countries seems to have been related to the tendency for consumption to exceed production in recent years and, ignoring others, perhaps equally important but less tangible influences, the same is likely to be true for the period immediately ahead. This is but one reason why the situation in these countries warrants, according to the I.C.A.C., continued vigilance by the rest of the free world. Proceeding, the review draws attention to the less favourable aspect of trading relationship with the communist countries, namely, the competition in the field of cotton textiles. Exports of cotton textiles from Mainland China, after successive gains upto 1958, have currently fallen off; but there are reports that the U.S.S.R. is more actively engaged in Far Eastern markets. The unknown factors, however, are, as the review rightly says, whether and when China will eventually reassert in the export market and what ambitions the U.S.S.R. and Eastern Europe have towards an expanded market for cotton textiles.

Future Prospects

Discussing the prospects for the next season, the authors of the annual review of cotton for the International Cotton Advisory Committee make the following points in regard to production, consumption, trade and price:

"*Production*: Acreage in many countries is likely to increase this year, that is 1960-61 which, other things being equal, should result in a larger world crop. In the U.S., the maximum acreage which can be planted to cotton remains virtually unchanged but underplantings are expected to be less this year. Using the same yield as in the last two seasons, production would come out at roughly 15 million bales. Elsewhere, improved cotton prices and a ready offtake would seem to argue for some increase in cotton acreage this year and recent reports confirm this in many countries. A key factor in the production outlook is India where the target for 1960-61 under the second Five-year Plan is for a crop of about 5 million bales. However, based on normal plantings of some 20 million acres and average yields, the potential seems to be somewhat less than this but still around a million bales more than what was harvested during the present season.

"*Consumption*: In the U.S., most observers are of the opinion that consumption may have temporarily reached its peak.

"Western Europe is proceeding apace with programme for the rationalisation of the textile industry designed to make the industry more competitive. At the other end of the line, there is almost universal recognition of the importance attached to promotion in developing cotton's potential market. Cotton Council International's programmes are currently in operation in eleven countries. Although such developments, allied to the economic integration of Western Europe within the framework of the Common Market and the Free Trade Area, will be potent influences on the long-term outlook for cotton textiles, they may not be without significance even in the short run. Demand next season will be governed by the economic climate generally on which opinion seems to be reasonably optimistic, at least for 1960. If this is the case, then, on balance, the facts seem to point to a continuing high level of consumption during the rest of this year.

"In Japan, the reappearance of a surplus and consequently little chance of any further relaxation of production controls, are in sharp contrast to the situation earlier in the season and caution against any undue optimism is warranted in speculating upon the industry's future. In India, everything hinges on a return to more normal cotton production, in which case, the future becomes

TOKEN STRIKE BY SUGAR DEALERS

IMMEDIATE ABOLITION OF CONTROLS URGED

UGAR merchants, agents and brokers in the different parts of India will have observed, the time these lines appear in print, a one-y token strike to protest against the Govern-ent's failure to lift controls on sugar. ne objective of the strike is twofold: draw the attention of the authorities to the nsiderable hardship caused by controls to the numerable persons who were formerly depend-ig mainly on sugar trade for their living; and highlight the fact that the continuance of ntrols has not only not been benefiting the nsumer but actually been working against his terest. Addressing a Press conference in mbay on 30th June, Mr. Parsram Parumal, resident of the Bombay Sugar Merchants' sociation, observed as follows:

"With the imposition of controls on sugar, the ntire normal channel of distribution, namely, the ade, has been eliminated, with very serious con-equences of maldistribution and unemployment. ecause of the defective distribution system under ontrols, sugar does not reach the rural areas in equired quantities, with the result that a large ajority of consumers in interior areas have to pay igher prices in black market, as much as Rs. 150 o Rs. 200 per bag (the officially fixed wholesale ssue price for D29 grade sugar in Greater Bombay s Rs. 116.08 for bag). The maldistribution inher-nt in controls on a commodity like sugar has given scope for anti-social elements to exploit the con-umers. What has happened is that, apart from a ew big cities, the general consumer has not bene-fited at all by the controls."

Reiterating the plea for removal of controls on sugar, Mr. Parsram Parumal said:

"It is rather inexplicable why the Central Government is deferring abolishing present controls. Some State Governments like Gujarat have rightly realised the abnormality of controls in the present context and are understood to have approached the Centre for taking necessary steps to effect decontrol .... Controls on sugar should be removed forth-with. If decontrol is effected, consumers through-out the country will get sugar at a fair, normal price. Thousands of traders and a vast number of dependents such as brokers, *mucadams* and labourers will get employment, which, in reality, is a fundamental obligation of our democratic Government."

Output Rises Markedly

The plea for decontrol of sugar may appear to be justified, but it is doubtful whether the present time is opportune for giving effect to it. The statistical position of sugar has, of course, improved perceptibly. The production perform-ance of mills in the current season has been much better than expected in the beginning of the season. The quantity of sugar actually pro-duced upto 4th June 1960 amounted to 2,404,000 tons, as against 1,918,197 tons in the correspond-ing period of 1958-59. As on this date, four mills were still crushing. The aggregate output for the whole season is estimated at 2,410,000 tons, representing a rise of 491,803 tons as compared with the last season's total. It may be recalled that Mr. S. K. Patil, Union Minister for Food and Agriculture, stated in Parliament in March last that the sugar output would be higher by just 200,000 tons. The increase has actually turned out to be double this figure. The all-India first estimate of production made by the Directorate of Economics and Statistics also placed the net rice at no more than 300,000 tons.

The improvement in sugar production is more than the shrinkage in the opening stocks with mills, so that the total available supply is larger than that in the previous season, as is indicated below:

(In thousand tons)

	1959-60	1958-59
Open stocks	174	336
Production	2,410	1,918
Total supplies ...	2,584	2,254
Exports	*Nil*	19
Supplies available for domestic consumption ...	2,584	2,235
Per capita availability (lbs.) ...	14.39	12.57
Population (in million)	403	398

Stocks Large

As against the total available sugar supply of 2,584,000 tons in the current season, the consumption requirements are placed at 2,050,000 tons on the basis of actual despatches upto 31st May which aggregated 1,123,000 tons, as against 1,229,000 tons in the same period during the 1958-59 season. The closing stocks at the end of the current season (31st October 1960) are, there-fore, expected to be of the order of 534,000 tons. These are about 360,000 tons more than those on 1st November 1959 and 198,000 tons more as com-pared with the stocks held on 1st November 1958. It may be noted here that the closing stocks of sugar on 31st May 1959 stood at 1,412,000 tons, as against 1,006,000 tons a year before. Even after meeting the requirements of the 250,000-ton buffer-stock which Mr. Patil has been wanting to build, there will still be left a siz-able opening balance of 284,000 tons when the new season begins on 1st November.

Despite the highly encouraging sugar sup-ply position thus, some sugar circles feel that a sudden plunge towards decontrol would not be desirable during the off season, more especially now because of two considerations. One, free movement of sugar is often interrupted by heavy rains. Two, it is too early to say anything about the size of the sugarcane crop that will be har-vested in the ensuing season. It would, there-fore, be better if the decision to decontrol sugar is postponed till the commencement of the next season when a clear picture of the cane crop position can be had.

Other Points to be Noted

There are also a few more points to be noted in this connection. In comparing the pro-duction this year with the previous year, one must remember that the 1958-59 season was a poor one. There are hardly any stocks of sugar in the pipeline now and it is a moot point whe-ther the stocks available after the provision for buffer-stock will be sufficient to take care of the normal stocking requirements of the trade. Again, the population to be served and the pur-chasing power in the hands of people are greater than two or three years ago. Having regard to all these factors, the risk involved in decontrol should be taken only when it can serve as an effective stimulus to increased production. Mr. Patil has made it abundantly clear that, when the time comes, controls on sugar will not re-main for 24 hours. The sugar industry and trade can accordingly proceed on the assumption that sugar will be free of all controls very soon after the beginning of next season, provided, of course, the cane crop position promises to be satisfactory.

There is no doubt that the abolition of con-trols on sugar at the right time will lead to en-larged availability of sugar for consumption. For the sugar mills will then be in a position to take full advantage of the freedom to buy cane in competition with *gur* and *khandsari* manu-facturers. This assumption will be true only if the Government does not fetter the hands of in-dustry by insisting on gentleman's agreements in regard to prices. It may be that prices of sugar will tend to rise immediately after decontrol is announced, but the authorities should not get perturbed. On the contrary, they should have the patience to wait for some rea-sonable time for the free market forces to func-tion and bring about equilibrium between sup-ply and demand. For, once production goes up markedly, prices will definitely come down and stand at reasonable levels. What is more, the very building up of a buffer-stock of 250,000 tons as proposed by Mr. Patil, together with the free movement of the commodity from one place to another, can be expected to impart stability to the sugar market. Another important assump-tion here is that neither the authorities nor the industry should talk about, let alone act, ex-porting sugar. India has no real surplus of sugar for export. Nor will it have any for some years to come. The aim should be to bring down the price of sugar for the domestic consumer by establishing a sustained comfortable supply position. Let it be remembered that India has to implement a third Five-year Plan, involving a huge investment of Rs. 10,000 crores to Rs. 11,000 crores. There must be an adequate supply of food and consumer goods to meet the purchasing power generated by an investment expenditure of this magnitude. Sugar belongs to the category of both.

"KHANDSARI" MANUFACTURE

The U.P. State Planning Research and Action Institute has designed, in collaboration with the National Institute of Sugar Technology, Kanpur, a new device which, it is claimed, will augment re-covery of *khandsari* sugar from cane from the usual level of 5.5 per cent. to 7.5 per cent.; the recovery is expected to be raised further to 8 per cent. on the basis of experiments now being conducted. The device is the introduction of an improved six-roller crushing unit with hydraulic pressure attachment. The design of the unit has already been released to machine manufacturers for producing it on a com-mercial scale.

Another improvement effected in the process of *khandsari* manufacture is the introduction of a wet bagasse furnace designed by the Kanpur Institute. This device burns wet bagasse directly without getting it dried and can be usefully adopted in open pan sugar factories. It is said to have a positive advantage over the conventional furnace in effecting saving in drying cost, as well as in overall economy by keeping the unit in operation non-stop.

A NEW TYPE OF SUGAR

A new type of sugar that prevents dental cavities has been developed by a French dental expert, Dr. Dubois Prevost, chief of the laboratory at the Bichat Hospital in Paris. The type is pro-duced by just adding a little egg white to sugar. Normally, sugar, Dr. Dubois Prevost says, is responsible for dental cavities which affect about 15 per cent. of children from 3 to 6 years, 61 per cent. from 7 to 15 years and 90 per cent. of adults. According to him, the natural product "Lysozyme," found largely in egg white, is a more powerful bactericide than antibiotics and kills the microbes which cause cavity-producing acids.

EMPLOYMENT AND WAGE STATISTICS

SOME SERIOUS DEFICIENCIES IN THE EXISTING SYSTEM OF COLLECTION

By A Statistician

MOST of the economic statistics in India are a by-product of administration and originate in the very process of implementing certain laws, rules and regulations, or in discharging functions assigned to executive agencies. Very few statistical series are ordered with the sole purpose of meeting the statistical needs and, even here, the data collected may not conform on all fours to the conceptual framework. Adoption of existing concepts, definitions, and distinctions may vitiate the results of such enquiries and investigations, as the empirical equivalents of the terms and definitions may be at variance with the theoretical concepts. The existing concepts, definitions and distinctions are usually employed as a compromise, partly because of lack of any other alternative definitions and concepts and partly because they may have become familiar and acceptable by usage, custom and convention.

Quality of data, therefore, depends on how far the data conform to the conceptual framework and the accuracy and precision with which they are collected and observed. This is true in both the situations—whether a separate and direct enquiry is conducted or the information originates as a by-product of administration. It will thus be seen that quality of data cannot be guaranteed, unless it is ensured that the various concepts, definitions and terms employed conform to the theoretical framework in their empirical equivalents and utmost care is exercised to ensure accuracy and completeness in collection and observation. Such a thing hardly exist even in a fully developed statistical system and hence all information collected is subject to varying degrees of errors arising out of non-conformity with the theoretical framework and inaccuracies in observation. In what follows an attempt has been made to examine the employment and wage statistics, the two important statistical series, in India.

Employment Statistics

Statistics of employment in factories are collected as a by-product of administration and enforcement of the Factories Act, 1948 and the Rules framed thereunder. These employment statistics are collected on the principle of "at work" in respect of all persons coming within the definition of a "worker" as defined in Section 2(1) of the Factories Act, 1948. The Factories Act, 1948 is primarily a social legislation, designed to regulate the conditions of work and service and to provide certain basic welfare facilities and, in order that the benefits of its various provisions may accrue to as many persons as possible, the term "worker" has been so defined that any "person employed, directly or through any agency, whether for wages or not, in any manufacturing process, or in cleaning any part of the machinery or premises used for a manufacturing process, or in any other kind of work incidental to, or connected with the manufacturing process, or the subject of the manufacturing process," is a worker within the meaning of the Factories Act, 1948.

The definition, as can be seen, is comprehensive and flexible and any person, irrespective of the nature of work performed by him, can be brought within the ambit of the definition, provided it can be proved to the satisfaction of the executive and judicial authorities that the person was employed on any kind of work "incidental to or connected with the subject of manufacturing process." This comprehensiveness and flexibility in practice mean unfettered freedom to the factory-owners to include persons who cannot be strictly called "operatives" as understood in common parlance. There would be little harm if all the factory owners include uniformly the same categories of personnel, but, in the absence of any definite guidance provided by the Act or the Rules in the matter, the factory owners include all those persons whom they consider as "workers" within the definition of the Act. In some establishments, clerical, watch and ward staff and directional and supervisory personnel are included, while they are excluded in others. There is no uniform practice and hence the statistics of employment in factories do not precisely relate to the employment of skilled and unskilled operatives as is commonly believed. It is a mixed bag and no one knows the relative proportions of various categories of personnel included. Incidentally, it may be mentioned that, at a recent conference of Chief Inspectors of Factories held at Ranchi, a decision was taken to expand the scope of the definition of "worker" under the Factories Act so as to cover maximum number of employees, some of whom are excluded at present from the purview of the Act.

These employment statistics are collected according to the principle "at work." According to this principle, the average employment per day is calculated by dividing the aggregate number of attendances on all working days by the number of working days in the year. Partial attendances for less than half a shift of working day are neglected for calculating the average daily employment, while partial attendances for half or more than half a shift are counted.[1] It is not clear how partial attendances for less than half a shift can be neglected, because "attendance" is a characteristic which cannot be neglected, excluded, or divided. Either it is there or it is not there. Apart from causing diminution in the total employment figures, such exclusion of partial attendance is not tenable on conceptual grounds.

"At Work" Principle

Employment statistics computed according to the principle "at work" are not useful in gauging the employment situation or indicating the trends of employment, as these statistics are always on the lower side and hence fail to reflect correctly the changing employment position. These may be useful for calculating "average earnings" and "productivity per manhour" but these are certainly not relevant for measuring employment position. When employment statistics are used for measuring the employment situation, the presumptions are that so many persons are attached to a particular industry from which they derive their livelihood and hence are not available for employment. It is these presumptions implicit in the use of employment statistics for measuring employment situation that render the data collected according to the principle "at work" useless for economic analysis. The International Labour Office, in its publication *Employment, Unemployment and Labour Force Statistics* has made the following observations:

> "It is recommended that the statistics of employment in establishments should include all persons attached to the establishments, regardless of age, and regardless of whether or not these persons are actually at work on the date to which the statistics relate." (Chapter VI, page 50.)

In order to collect statistics of employment in factories according to the concept of "employment" enunciated by the I.L.O., it is necessary to collect data with reference to a point of time and not a period of time. The establishments should be asked to report the total number of persons on roll *as on* a particular date/day whether (a) at work, (b) on paid or unpaid sick, holiday or vacation leave, (c) on temporary layoff due to lack of work or lockout, (d) on temporary furlough due to stoppage of work because of sudden breakdown of machinery, fire, civil commotion, epidemics or shortage of raw materials and fuels, (e) on strike. In order to get an idea of the seasonal change in employment, the figures may be collected *as on* the last working day of each quarter of the year instead of collecting two figures of average daily employment—one six-monthly and one-yearly average—based on the concept of "at work." Moreover, from the standpoint of reportability it is easier to report the number of persons on roll *as on* any specified date than to calculate the average daily employment by aggregating total attendances and dividing these by the total number of working days in a period.

It is more than a decade since the Factories Act was amended to give statutory recognition to the principle of leave with wages, but this improvement in the conditions of service does not find its reflection in statistics of employment collected under the Factories Act and the Rules framed thereunder. The other industrial matters such as abolition and reduction of posts; and suspension, dismissal, termination and retrenchment due to lockout, strike, lack of work or any other reason have been regularised by the provisions contained in various State and Central Labour laws such as Industrial Disputes Acts, Industrial Relations Acts, Industrial Employment (Standing Orders) Act, 1946, Minimum Wages Act, etc. All these developments mean that, if a worker is "not at work," it does not necessarily imply that he is not "employed" or attached to the industry or is available for employment elsewhere.

Statistics of employment in mines are also collected according to the principle "at work" under the provisions of the Indian Mines Act, 1952 and the Rules framed thereunder and the above remarks equally apply to the data relating to employment in mines. However, in the Censuses of Government Employees conducted by the Central and State Governments, the concept of employment adopted is more in conformity with the I.L.O. recommendations. The data collected refer to the number of persons holding the posts as on a particular date whether at work, on leave, deputation, etc.

The importance of employment statistics in a developing economy like India where large expansion of employment opportunities is one of the objectives of development, hardly needs special emphasis. These employment statistics are being increasingly used for the formulation of programmes and their evaluation. There is an urgent need to change the basis of collection, if the series of employment statistics has to be more meaningful and useful.

Statistics of wages paid to workers employed in factories, railways, tramways, motor omnibus services, docks, wharves, jetties, inland steam vessels, mines, quarries, oilfields, plantations, and workshops[2] are collected as a by-product of administration of Payment of Wages Act, 1936, the various provisions of which are mainly designed to ensure prompt payment of wages and regulate deductions and fines to the workers or persons employed in the industrial establishment mentioned above. The Act covers all the workers employed in the "Industrial establishments" as defined in Section 2 (ii) drawing wages or salaries not exceeding Rs. 400 per month.[3] Here exclusion or inclusion of any class or category of workers is not based on any principle or criterion as is provided under the Factories Act, 1948, but on the amount of wages or salaries drawn for a particular wage period. No distinction is made between manual and non-manual workers. En passant, it may be noted that there is no correspondence between the number of workers included for calculating average daily employment under the Factories Act, 1948 and the number of workers for which wage statistics are computed and compiled under the Payment of Wages Act, 1936. The implications of these divergences will presently be commented upon.

Term "Wages" Defined

The term "wages" has been defined in clause (vi) of Section 2 of the Act and, according to this definition, "wages" include "all remuneration, capable of being expressed in terms of money" and "any bonus or other additional remuneration of the nature aforesaid which would be so payable and any sum payable to such person by reason of his termination of his employment, but does not include—

(a) the value of any house accommodation, supply of light, water, medical attendance or other amenity, or any other service excluded by general or special order of the State Government;

(b) any contribution paid by the employer to any pension fund; or provident fund;

(c) Any travelling allowances or the value of any travelling concession;

(d) any sum paid to the person employed to defray special expenses entailed on him by the nature of his employment; or

(e) any gratuity payable on discharge."

Section 7 of the Act authorises certain permissible deductions from wages and such deductions may be made on account of—

(a) Fines.

(b) Absence from duty.

[1] In some of the States like Madhya Pradesh, Bombay, etc.

[2] The appropriate Governments (Central and State) have extended the provisions of the Act to factories, industrial establishments and plantations as defined in clauses (i) to (iii) of Section 2 of the Act, in accordance with the threefold classification of subject fields provided in the Constitution and the existence of particular economic activities.

[3] Prior to 1st April 1958, the limit was Rs. 200 per month.

(c) Damage to or loss of goods, expressly entrusted to the employed person, for custody; or for loss of money for which he is required to account.

(d) Housing accommodation supplied by the employer.

(e) Amenities and services supplied by the employer, excluding the tools and raw materials required for the purpose of employment.

(f) Recovery of advances or adjustments of overpayments.

(g) Income-tax payable by the employed persons.

(h) Decree passed by the order of a competent court or other competent authority.

(i) Subscriptions to and for repayment of advances from any provident fund to which the Provident Fund Acts, 1925 applies or any recognised provident fund as defined in Section 58A of the Indian Income-tax Act, 1922 or any other provident fund approved by the State Government.

(j) Payments to co-operative societies approved by the State Government or to a scheme of insurance maintained by the Indian Post Office; and

(k) Contributions to War Savings Scheme approved by the State Government or purchase of securities of the Government of India.

The purpose of mentioning all these legal provisions *in extenso* is to give an idea of the nature and scope of "wage statistics" collected under the Payment of Wages Act, 1936. Clause (vi) of Section 2, read with Section 7 of the Act, defines the scope of wage statistics as collected under the Payment of Wages Act, 1936. The annual return prescribed under the Act and Rules framed thereunder provides for the collection of following data:

(a) Number of days worked during the year

(b) Average number of persons employed daily during the year classified by sex and "age group" categories adopted under the Factories Act, i.e., adults, adolescents and children

(c) Gross amount paid as remuneration to these persons including deductions under Section 7(2).....of which the amount due to bonus is.....and that due to money value of concession is.....

(d) Total wages paid including deductions under Section 7(2) on following accounts, viz.,

(i) Basic wages including bonus

(ii) Dearness and other allowances in cash

(iii) Arrears of wages in respect of the previous years paid during the year.

(e) Number of cases and amount realised as,

(i) Fines

(ii) Deductions for damage or loss

(iii) Deductions for breach of contract

(f) Disbursement from fines fund.

Independent Estimates

From the above data collected in these returns, independent estimates of following statistics can be framed on the presumption that all the deductions made under Section 7(2) of the Act have been included in basic wages and overtime payments:

(a) Basic wages including overtime payments.

(b) Dearness and other allowances in cash.

(c) Arrears of wages in respect of the previous years paid during the year,

(d) Bonus, and

(e) Money value of concessions.

The expressions "basic wage" and "concessions" have not been defined anywhere in the Act, Rules or form of return and, in the absence of any precise definitions, these are to be understood and interpreted in their usual meanings and connotations. It is not clear whether,

(i) the "basic wage" is computed according to the definitions of "wages" given in Section 2(vi) of the Act, and,

(ii) the exceptions or exclusions specified in the provisions (a) to (e) of Section 2(vi) have been taken into account while computing "gross amount paid" along with the deductions under Section 7(2) of the Act.

It will thus be seen that from the data collected, no estimates of wages conforming to the definition of "wages" as given in Section 2(vi) can be framed, as the "basic wages and overtime payments" reported are inclusive of following two deductions which are excluded from the definition of "wages" as given in Section 2(vi):

(i) deductions for house accommodation supplied by the employer; and,

(ii) deductions for such amenities and services supplied by the employer.

As the data are collected on paid and not payable basis (received and not-accrual), the "wages" reported as paid do not relate to the period for which the return is submitted. For example, bonus paid during the year may relate to any of the previous years. Similarly, when there are industrial disputes with regard to wages, overtime payments, etc., the amount paid out as wages during the year may not reflect what actually accrued.

Estimates of Wages

In the absence of clear instructions and directions, the factory owners and employers furnish the returns according to the interpretations which they place on these various concepts, definitions and expressions used in the form of return. It is common knowledge that, even when elaborate instructions are issued for filling up mailed questionnaires, the respondents in a majority of cases do not fill in the forms strictly in accordance with these instructions, with the result that the information that one gets in these returns is of doubtful validity. Be that as it may, on the basis of provisions in the Act, Rules and the design of the form, the following estimates of wages can be built up:

(i) Gross *real* earnings received, the time of accrual being immaterial; and,

(ii) Gross *money* earnings received, the time of accrual being immaterial.

These two estimates are no doubt useful to know the total gross receipts either in real or monetary terms of labour employed, but the information collected does not help in building up the following estimates of wages which are more significant from the standpoint of economic analysis:

(i) Gross *real* earnings accrued, the time of receipt being immaterial;

(ii) Gross *money* earnings accrued, the time of receipt being immaterial;

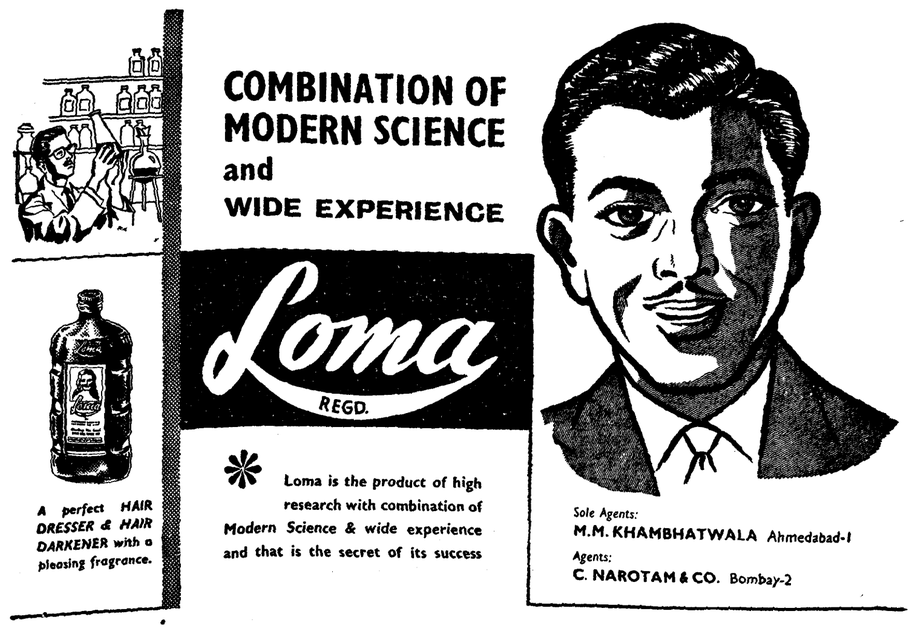
(iii) Net disposable income or money earnings; and

(iv) Average money income or earnings.

As the data are collected on paid and not payable basis and as no independent and separate estimates of *all* deductions made on account of various items listed in Section 7(2) of the Act excepting for three items, i.e., fines, damage and breach of contract, it is not possible to build up these estimates. The estimates of "net disposable income or earnings" and "average money earnings" are important and significant from the standpoint of economic analysis and particularly national income. They can be put to wide variety of uses.

As stated earlier, the statistics under the *Payment of Wages Act, 1936 relate only to those* workers or employees who receive less than Rs. 400 per month and not to all "workers" as defined and covered under the Factories Act, 1948. Though the instructions in the revised forms clearly state that the "average number of various categories of workers" to be reported in the return under the Payment of Wages Act, 1936 should relate to those for whom wage statistics are reported (those receiving less than Rs. 400 p.m.), generally the factory owners or employers report the same average number as given in the annual return under the Factories Act, 1948. This lack of correspondence was more pronounced when the upper limit was Rs. 200 p.m. and it still continues, of course, on a lesser scale, under the present limit of Rs. 400 p.m. This limitation of data precludes calculation of gross real or money earnings. In the past, a number of important studies were conducted to measure earnings and real earnings of workers in specified employments (factories, mines, workshops, etc.) on the basis of data collected under the *Payment of Wages Act, 1936* and conclusions were drawn and recommendations were made. In view of the several limitations of wage statistics discussed above, the conclusions and recommendations hardly need any comments. There is an imperative need to have an independent and separate series of wage statistics free from non-statistical considerations. In the context of economic planning and development, the need for such a series hardly requires any special emphasis. The Central Government has already brought into force the Collection of Statistics Act, 1953, which empowers both Central and State Governments to collect various types of labour statistics. With these statutory powers, the Central and State Governments should evolve an integrated programme for the collection of labour statistics which would be more in conformity with the conceptual framework.

[1] In some of the States like Bombay, Uttar Pradesh, etc.



THIS IS AN ANNOUNCEMENT AND NOT AN OFFICIAL COPY OF THE PROSPECTUS

1. Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

2. A Licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The Subscription List will open at 10 a.m. on 18th July 1960 and will close at 2-30 p.m. on 25th July 1960 or earlier at the discretion of the Directors, but not before the close of banking hours on 23rd July 1960.

JAYANT PAPER MILLS LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956)

The Company was incorporated on 29th April 1960.

It has obtained a certificate to commence business on 23rd June, 1960.

AUTHORISED CAPITAL .. .. Rs. 1,00,00,000

Divided into 1,00,000 Equity Shares of Rs. 100 each.

ISSUED CAPITAL .. .. Rs. 25,00,000

Divided into 25,000 Equity Shares of Rs. 100 each, out of which :

(1) 3,850 Equity Shares of Rs. 100 each have already been subscribed by the Promoters, Directors and their friends and associates.

(2) 8,650 Equity Shares of Rs. 100 each have been agreed to be subscribed by the Promoters, Directors and their friends and associates.

(3) The balance of 12,500 Equity Shares of Rs. 100 each are offered for public subscription.

The amount payable in respect of the Shares is as follows :—

Rs. 25 with application per share, Rs. 25 within one month from the date of allotment, and the balance of Rs. 50 in such calls as may be determined by the Directors, provided that no call shall exceed Rs. 25 and that there shall be an interval of at least three months between any two calls.

The whole of the said issue of 12,500 Equity Shares has been underwritten as stated below.

DIRECTORS

1. MR. MULRAJ KERSONDAS, Merchant, Kamani Chambers, Ballard Estate, Bombay.
2. MR. CHANDRAKANT MULRAJ KHATAU, Industrialist, Laxmi Building, Ballard Estate, Bombay.
3. MR. MANEKLAL CHUNILAL, Merchant, Little Gibbs Road, Malabar Hill, Bombay 6.
4. H.H. BHAGWATSINGHJI OF UDAIPUR, Maharaja of Udaipur, Shambu Vilas Palace, Udaipur.

   MR. HIRALAL NANABHAI SHROFF, Alternate Director for H.H. Bhagwatsinghji of Udaipur, Solicitor, Lentin Chambers, Dalal Street, Fort, Bombay.
5. MR. DHIRAJLAL MAGANLAL, Share-broker, 71, Giri Kunj, Marine Drive, Bombay.
6. MR. HARGOVINDAS RAMJIBHAI MEHTA, Industrialist, c/o Jayant Paper Box Factory, Khorshed Building, Sir P. M. Road, Bombay 1.
7. MR. BHAGWANDAS POPATLAL SHAH, Industrialist, c/o Jayant Paper Box Factory, Khorshed Building, Sir P. M. Road, Bombay 1.
8. MR. RAVINDRA MULRAJ, Merchant, 9, Babulnath Road, Bombay 7.
9. MR. CHANDRAKANT NANDLAL KOTHARI, Industrialist, c/o Jayant Paper Box Factory, Khorshed Building, Sir P. M. Road, Bombay 1.

BANKERS

1. THE UNITED COMMERCIAL BANK LTD., Dr. Dadabhoy Naoroji Road, Bombay 1.
2. THE BANK OF BARODA LTD., Apollo, Street, Fort, Bombay 1.
3. THE CENTRAL BANK OF INDIA LTD., Mahatma Gandhi Road, Fort, Bombay 1.

MANAGING BROKERS TO THE ISSUE:

MESSRS. DHIRAJLAL MAGANLAL PURSHOTTAMDAS, Stock Exchange Building, Apollo Street, Fort, Bombay 1.

BROKERS TO THE ISSUE

1. MESSRS. VALJI DHANJI, 19, Stock Exchange Building, Apollo Street, Fort, Bombay 1.
2. MESSRS. CHIMANLAL J. DALAL & CO., 107, Stock Exchange New Building, Dalal Street, Bombay 1.
3. MESSRS. KANTILAL PURTAPSHI, 97, Stock Exchange Building, Apollo Street, Fort, Bombay 1.
4. MESSRS. GIRDHARLAL K. FOZDAR, 85, Stock Exchange Building, Apollo Street, Fort, Bombay 1.
5. MESSRS. ISHWARLAL KANTILAL & CO., Stock Exchange Annexe Building, Dalal Street, Fort, Bombay 1.
6. MESSRS. JAMNADAS KHUSHALDAS & CO., Stock Exchange Building, Apollo Street, Fort, Bombay 1.
7. MESSRS. RAMANBHAI LALBHAI SHETH, 5, Stock Exchange New Building, Apollo Street, Fort, Bombay 1.
8. MR. INDRALAL MADANLAL JHUNJHUNWALLA, Agakhan Building, Dalal Street, Fort, Bombay 1.

SOLICITORS

MESSRS. HIRALAL SHROFF & CO., Lentin Chambers, Dalal Street, Fort, Bombay 1.

AUDITORS

MESSRS. J. L. BHATT & CO. (Chartered Accountants), Yusuf Building, Veer Nariman Road, Fort, Bombay 1.

REGISTERED OFFICE

HARIPURA, OPP. JAIN TEMPLE, SURAT.

1. OBJECTS OF THE COMPANY

The Company has been formed for carrying on, *inter alia*, the business of manufacture of straw paper, Kraft Liner and base paper for Textile Tubes and Cones.

2. PROSPECTS

On the basis of figures of production and imports during the last five years, the consumption of papers and boards in the country has increased at the rate of approximately 14 per cent. on an average every year. At this rate, the consumption is expected to be of the order of 4,50,000 tons by the end of the Second Plan period. With the installed capacity of 2,66,800 tons, the production in 1958 amounted to 2,53,011 tons. It is expected that with the installation of new units and expansion of the existing units in the country, it will be possible to achieve the target of 3,50,000 tons by 1960-61 period. If the increase in the consumption continues to be maintained at the present rate by the end of the Third Plan period, the annual demand may be as much as 7,00,000 tons. For production of this order, the installed capacity should be raised to 9,00,000 tons during the Third Plan period. Against these requirements, licences have been granted to increase the capacity, but inspite of it, it is expected that there would be a shortfall of about 90,000 tons in the expected installed capacity of 4,50,000 tons to be achieved during the Second Plan period. It will, therefore, be necessary to create new capacity of 5,40,000 tons during the Third Plan period. The installed capacity of the proposed plant to be established by the Company will be 15 tons per day (24 hours) and it is proposed to manufacture 3,600 tons of paper per annum.

3. MACHINERY AND PLANT

The Government of India has kindly granted Import Licence No. 998973/YEN/HQ dated 28th January 1959, valued at Rs. 8,50,000 under the Japanese Yen Credit Programme for the import of the plant and machinery. The said licence has been issued in favour of Messrs. Jayant Paper Box Factory, the promoters of the Company. Pursuant to the said licence an order has been placed with Messrs. Futami Trading Co. Ltd., Osaka, Japan, for the supply of the plant and machinery manufactured by Messrs. Saito Iron Works Ltd., Yoshihara, Sizuka, Japan, and the said order has been confirmed and accepted under Contract Note No. 5047 dated 13th February, 1960. As per the said contract shipment of the plant and machinery will be effected after eight months, and if the shipments are made in time, the plant and machinery are expected to reach at the site of the Company's proposed factory at Utran during March 1961, and according to the present expectations, the Company's plant is proposed to go into production from the third quarter of 1961.

4. MINIMUM SUBSCRIPTION

The minimum amount, which in the opinion of the Directors must be raised by the issue of shares in order to provide the sums required to be provided as per paragraph 5 of Schedule II to the Companies Act, 1956, and upon which the Directors will proceed to allot shares is Rs. 12,50,000 being the whole amount of the public issue.

5. RESOURCES AND DISBURSEMENTS

The total funds available with the Company will be as follows:—

	Rs.
Share capital already subscribed by the Directors, Promoters and their friends and associates	3,85,000
Share capital agreed to be subscribed by the Directors, Promoters and their friends and associates ...	8,65,000
Share capital of the issue to the public	12,50,000
Total Rs.	25,00,000

This amount of Rs. 25,00,000 will be utilised approximately as under:—

	Rs.
Main plant and accessories from Japan with freight, insurance, etc.	10,00,000
Purchase of land and construction of the factory, godowns, offices, etc.	7,00,000
Electric installation	1,00,000
Water treatment plant and tube-wells	2,00,000
Boiler and steam piping	1,00,000
Preliminary expenses (inclusive of expenses of this issue)	1,00,000
Working capital	3,00,000
Total Rs.	25,00,000

Additional finances, if any, required for working capital when the factory goes into production will be available by way of loans from Banks or other sources.

6. PRELIMINARY EXPENSES

The estimated preliminary expenses (inclusive of expenses of this issue estimated at Rs. 50,000) are Rs. 1,00,000.

7. PURCHASE OF LAND

A suitable site for the factory at Utran near Surat admeasuring 30 Acres and 2 Gunthas has been agreed to be sold to the Company by Messrs. Western India Industrial Agencies Private Ltd. at or for the sum of Rs. 91,000 under an Agreement dated 2nd June 1960.

8. ELECTRICITY, POWER AND WATER

The Promoters of the Company have been assured of supply of required electric power for the Company's factory from the South Grid Utran Power Station at Utran. The Company will have also adequate water-supply facilities from the river Tapti, which is close by the site of the Company's proposed factory.

9. MANAGING AGENTS

By a resolution dated 26th May 1960 the Company has been authorised to appoint, subject to the approval of the Central Government, the said Western India Industrial Agencies Private Ltd. as the Managing Agents of the Company for a period of fifteen years and at the rate of commission of ten per cent. per annum on the annual net profits of the Company with a minimum remuneration of Rs. 36,000 per year. The requisite application for the approval of the Central Government has been forwarded. The subscribed capital of the said Company is Rs. 10,000 divided into 100 shares of Rs. 100 each, and Mr. Mulraj Kersondas, Mr. Ravindra Mulraj, Mr. H. B. Ajmera and Mr. C. R. Mehta are the Directors of the said Company.

10. DIRECTORS

By the Articles of Association, the number of shares fixed as qualification of a Director is holding of Shares of at least Rs. 5,000 in the Company.

11. REMUNERATION OF DIRECTORS

The remuneration of a Director for his services rendered shall be such amount not exceeding Rs. 200 as the Directors may fix, for every meeting of the Board attended by him.

12. VOTING RIGHTS

The Equity Shareholders when present in person shall have one vote on a show of hands and on poll, when present in person or by proxy, shall have one vote per share held by him.

13. PROFITS

On the basis of the existing prices and after allowing costs, overheads, depreciation and other foreseeable contingencies, in so far as these items can at present be estimated, the Directors expect that in the absence of any unforeseen circumstances, the Company should be in a position to pay reasonable dividends on the issued equity shares of the Company. The Company will get the benefit of the development rebate and exemption from tax under Section 15C of the Indian Income-tax Act.

14. UNDERWRITING AND BROKERAGE

The whole of the present public issue of Rs. 12,50,000 consisting of 12,500 Equity Shares has been underwritten, the names of the Underwriters and the amount of the shares underwritten by them being as stated below:—

		Amount underwritten in lacs of Rupees
1.	Messrs. Dhirajlal Maganlal Purshottamdas ...	2.5
2.	Messrs. Valji Dhunji ...	1.0
3.	Messrs. Chimanlal J. Dalal & Co.	1.5
4.	Messrs. Kantilal Purtapshi	1.0
5.	Messrs. Girdharlal K. Fozdar	1.5
6.	Messrs. Sterling Investment Corporation ...	1.0
7.	Messrs. Ishwarlal Kantilal & Co.	1.5
8.	Messrs. Jamnadas Khushaldas & Co. ...	1.0
9.	Messrs. Ramanbhai Lalbhai Sheth	1.0
10.	Indralal Madanlal Jhunjhunwala	0.5
		12.5

and underwriting commission at the rate of 1½ per cent. of the nominal value of 12,500 Equity Shares underwritten is payable to the said Underwriters. In the opinion of the Directors, the resources of the Underwriters are sufficient to discharge the underwriting obligations. Brokerage will be paid by the Company to the Underwriters, to the members of the recognised Stock Exchanges and to Banks at the rate of 1 per cent. of the nominal value of the aforesaid 12,500 Equity Shares allotted in respect of applications bearing their stamp in the space provided therefor in the application form. Brokerage will also be paid by the Company to the Managing Brokers at the rate of 50 nP per share on all the said 12,500 Equity Shares offered to the public and actually allotted.

15. INSPECTION OF DOCUMENTS

The consent of the Central Government under the Capital Issues (Control) Act, 1947, the Licence referred to above, the Agreement dated 2nd June 1960 in respect of the said land, the said Contract Note No. 5047 dated 13th February, 1960, as also the Agreements with the abovementioned Underwriters can be inspected at the Registered Office of the Company during the hours of 11-30 a.m. and 2-30 p.m. on working days

16. No amount of shares have been issued or agreed to be issued as fully or partly paid up otherwise than in cash.

17. No payment is to be made to Messrs. Jayant Paper Box Factory, the promoters of the Company, except for reimbursement of actual preliminary expenses incurred by them, and no profit or benefit has been given to any other person or promoters of the Company.

18. INTEREST OF DIRECTORS

Mr. Mulraj Kersondas and Mr. Ravindra Mulraj, who are Directors of the Company, are also Directors and members of the said Western India Industrial Agencies Private Ltd., who are proposed to be appointed the Managing Agents of the Company and from whom the Company has agreed to purchase the said land at Utran, and are accordingly interested.

Mr. Hargovindas Ramjibhai Shah, Mr. Bhagwandas Popatlal Shah and Mr. Chandrakant Nandlal Kothari, Directors of the Company, are partners of Messrs. Jayant Paper Box Factory, who are to be paid the amount of preliminary expenses incurred by Messrs. Jayant Paper Box Factory, and they are accordingly interested.

Mr. Dhirajlal Maganlal, a Director of the Company, is a partner of Messrs. Dhirajlal Maganlal Purshottamdas, who have underwritten Equity Shares of the Company of the nominal value of Rs. 2,50,000 and who are also the Managing Brokers to the present issue, and he is accordingly interested.

Mr. Hiralal Nanabhai Shroff, Alternate Director for H.H. Bhagwatsinghji of Udaipur, a Director of the Company, is the proprietor of Messrs. Hiralal Shroff & Co., Attorneys for the Company, and is accordingly interested.

19. APPLICATION FOR SHARES

All applications must be for a minimum of five shares or a multiple thereof. Applications for shares shall be made on the application form attached to the Prospectus (or on a printed copy thereof) and delivered, accompanied with proper payment, before the close of the subscription list to any of the Company's Bankers at their Head Offices or any of their Branch Offices mentioned on the application forms between 10-30 a.m. and 2-30 p.m. on working days. Further copies of the prospectus and application forms will be available during office hours on working days from the Managing Brokers and the Underwriters and Brokers to this issue mentioned above.

20. AUDITORS' REPORT

The Company's Auditors have on 25th June 1960 made a Report stating that no accounts of the Company have been made up in respect of any period since the incorporation of the Company.

Dated, 30th June 1960.

BIRDS cover a wide field

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—iron ore, coal, manganese ore, limestone, dolomite, refractories... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

CUBA TAKES OVER THREE FOREIGN OIL REFINERIES

BACKGROUND TO PRESENT CONFLICT

*[The seizure of the American-owned Esso and Texaco oil refineries and the British-controlled Shell refinery by the Cuban Government, last week, is, perhaps, the most serious international development of its kind in recent years. This is a sequel to the alleged refusal of the three refineries to process Russian crude oil which Cuba has contracted to import in exchange for Cuban sugar. A less known fact in this part of the world is that the three refineries have to receive from the Cuban Government some $60 billion being arrears of foreign exchange in respect of their crude oil imports into Cuba in recent months. Reprisals by the U.S., in the shape of a cut in the import of sugar which it buys from Cuba under a quota system have been the subject of speculation. The Cuban Prime Minister, Dr. F. Castro, has, however, warned that any such action would be followed by confiscation of American-owned 36 sugar mills of the total value of $100 million; the overall American investment in Cuba is placed at $850 million. Against this background, the following account of the Cuban oil crisis, which appears in the July issue of the Petroleum Press Service, will be read with interest.—*ED.]

FOLLOWING their refusal to handle Russian crude oil in their Cuban refineries, the republic's three main oil refiners and distributors, whose three refineries have a combined capacity of over 80,000 b/d, have been threatened by the revolutionary Government of Dr. Fidel Castro with confiscation of their properties. (They have now been taken over by the Cuban Government, as mentioned in the introduction—ED.) This threat heightens the tension between the Government (which came into power at the beginning of 1959) and the oil industry generally which has existed since November 1959 when the Government seized company records and announced a new oil law which brought oil exploration to a halt and gave the Government powers to impose quotas on refinery production and prices. The Government's strong nationalism and hostility to U.S. capital, and its predilection for trading with the Communist bloc, have led it to adopt policies which will, unless modified, not merely cripple the existing Cuban oil industry, but also intensify the country's various economic difficulties.

Russian Crude

The present crisis stems directly from the Government's request in May to the three main refiners to take about 300,000 tons, or, say, 11,000 b/d, each of Russian crude for the last six months of this year—a total amount equivalent to about one half of their combined present rate of throughput. The companies concerned are Jersey Standard's Panama associate, Esso Standard Oil SA with a 35,000 b/d plant near Havana, Royal Dutch/Shell's Cuban associate, Cia Petrolera Shell de Cuba with a 27,000 b/d plant also near Havana, and the Texas Group's associate, Texas Co. (W.I.) Ltd. with a 20,000 b/d plant at Santiago de Cuba. Texas' plant was completed only in 1957, the Shell one started operation early in 1957 and Jersey Standards' was increased in capacity from 9,000 b/d in 1957, their building and extension being induced by the favourable terms of the Refinery Law of 1954 supplemented by further decrees in 1955. Together the three refineries produce a volume of products roughly equivalent to local demand but the output does not coincide with the pattern of local trade and there are therefore imports and exports amounting to about 5 million barrels a year each. Domestic crude production is insignificant (less than 1,000 b/d) and imports of crude of about 25 million barrels a year come almost entirely from Venezuela where affiliates of all three companies have substantial production, including appreciable shut-in capacity. (Sinclair also markets but does not refine in Cuba.)

The companies have, not surprisingly, insisted on their right to continue to choose their own sources of crude supply on the basis of normal commercial considerations. This decision rests on a principle and has been taken despite the fact that the companies have, for many months now, been shipping supplies without receiving payment. In effect, they have been extending the Government a credit in foreign exchange which has already reached a total of about $60 million. After the extension of this facility the request to handle Russian oil could hardly be received sympathetically even though the Government's present lack of foreign exchange was a primary reason why the request was made.

Confiscation

Dr. Castro has reacted to the companies' stand by declaring that, if they will not take the Russian oil, not only will the dollar credits not be repaid, but the refineries, whose value is estimated at about $75 million, may be confiscated by the Government. Dr. Castro claims that the Russian oil is to be available to the Government at prices below world market levels, and without any [illegible] as a result of the trade concluded between Cuba [illegible]

LALBHAI SHETH, Building, Apollo Street,

ary. Oil is by far the most important item to be supplied by the U.S.S.R. against deliveries of Cuban sugar, but is not specified as one of the categories of goods to be supplied against the 12-year line of credits of up to $100 million to be granted at 2½ per cent. interest. Russian crude supplies have already begun to arrive in Cuba.

If the refineries are nationalised they will presumably be administered by the Cuban Petroleum Institute, whose President is Señor Gutierrez, a Mexican geologist. The Institute is a Government organisation set up last November under the Institute of Agrarian Reform with very wide but ill-defined functions, which include not only exploration for and production of crude, but also regulation of and participation in refining and distribution. It is already operating the 2,500 b/d Cabaiguan refinery (reported to have been increased to 6,000 b/d capacity under certain conditions) and the 500 b/d Bacuranao plant, each confiscated from supporters of the previous regime. The Institute is using the small marketing organisations of these two expropriated concerns to sell gasoline imported from Russia under the February trade agreement. Additional outlets for Russian products are also expected to become available to the Institute as a result of a recent decree cancelling restrictive selling agreements between the oil companies and their dealers/distributors or direct consumers, on settlement of dealers' outstanding debts.

As already indicated, the Government's threat to the oil marketing and refining companies follows its action under the new oil law promulgated last November which has halted all exploration by private companies. Oil production in Cuba goes back as far as 1864, when the Bacuranao field in Havana province was discovered, but has risen only slowly and unevenly to a peak of 544,000 barrels in 1957, since when it has declined to 344,000 barrels in 1958 and about 190,000 barrels in 1959. Production is mostly from structures less than 2,000 ft. below the surface, which give only a small yield per well and tend to become exhausted rapidly. Present production comes mainly from the Jatibonico field in Camaguey province, discovered in 1954, which has recently been yielding about 400 b/d of 14° A.P.I. gravity crude from a depth of about 1,100 ft., and unless new fields are discovered production seems certain to decline.

Drilling

With today's knowledge and techniques, Cuba has hitherto been regarded as moderately promising geologically and, apart from its domestic market of over three million tons a year and a small ocean bunkering trade, it would be well situated—only about 1,500 miles from New York—for supplying part of the U.S. East Coast market. Consequently the passage of a more favourable mineral law in 1938 encouraged greatly increased exploration in the early post-war years, followed by a further wave of activity after the discovery of the Jatibonico field and the granting of additional incentives to exploration in 1954. Altogether, by the end of 1958, over $50 million had been spent in exploration and drilling in Cuba (and also offshore) by a large number of companies, including affiliates of Atlantic, Gulf, Jersey Standard, Royal Dutch/Shell, Standard of Indiana, Standard of California, and Texaco, as well as several small independents. Results, however, were disappointing, and the failure to make any commercial discoveries at all in 1958 and 1959 was already leading to a sharp scaling down of exploration expenditure when work was halted almost completely as a result of Law 635 of November, 1959.

Internal consumption of petroleum products, estimated at 3.28 million metric tons in 1959, has risen by an average of nearly five per cent. a year over the past five years. That it has not risen faster is largely the result of the country's economic difficulties. Cuba is the world's largest sugar exporter, and depends on sugar for more than three-quarters of its total export earnings. In consequence its economy has suffered from the low prices that have, on the whole, prevailed in recent years. Moreover, Cuba's economic difficulties have in the past two years been compounded by political factors. While the agreement concluded with Russia in

Estimated Inland Consumption of Petroleum Products

('000 metric tons)

	1955	1956	1957	1958	1959	% Increase 1954-59
Motor Gasoline	600	650	700	700	770	+28
Kerosine	100	100	110	120	110	+10
Gas/diesel oil	300	350	390	390	420	+68
Fuel oil	1,500	1,550	1,750	1,840	1,810	+17
Other products	100	150	100	140	140	+40
Total	2,600	2,800	3,050	3,190	3,280	+26
% Increase over previous year	0	+7.7	+8.9	+4.6	+2.8	

February to sell one million tons of sugar a year for five years to 1964 at world prices has helped dispose of actual and prospective sugar surpluses, the anti-American attitude of the Government has generated resentment in the United States, where the Administration has been under increasing pressure to cut Cuba's quota in the protected U.S. market, which normally takes more than half of Cuba's exports. As U.S. sugar prices are substantially above world free market levels, Cuba's large quota amounts to the equivalent of a subsidy of over $100 million a year, and any withdrawal of its quota rights would gravely complicate its already serious balance of payments problems. But the closer linking-up with Communist countries with all its consequences in a territory at the heart of the Western Hemisphere and only 100 miles from Florida can only increase provocation towards such a step.

Economic Policy

The Government's attempts to reduce its dependence on sugar by diversifying the economy and building up exports of other products has hardly had time to bear fruit but this has been made doubly difficult by the Government's frequently expressed dislike of U.S. commercial interests which has dried up the flow of new foreign investment capital and brought to a halt several schemes already in progress, including important projects for developing the island's iron, nickel and cobalt resources. At the same time, publicity about political tension has crippled the hitherto rapidly expanding tourist traffic.

Thus, during 1959, gold and foreign exchange reserves declined at a dangerous rate and made necessary the introduction at the beginning of this year of drastic licensing restrictions on imports, together with the imposition of surcharges of up to 100 per cent., and, as already indicated, delays of several months in the payment of remittances abroad. A new state foreign trade bank has been set up to promote exports and to provide facilities for essential imports, and the commercial banks have had to impose severe credit restrictions. These measures have been to a certain extent effective, and the balance of payments position has improved a little this year, although the problems of high unemployment and inflation are still far from solution.

Nevertheless, the Government is pressing on with heavy expenditure on social services, building and armaments, with the result that the budget for 1960 totals 600 million pesos (1 peso: $), 100 million more than last year's record. The Government is also pursuing a radical land reform programme, and has ambitious plans for the establishhent of state owned industries, assisted by credits for equipment of $100 million equivalent from Russia, $20 million equivalent from Czechoslovakia and $60 million equivalent from Continental Import-Export Co. N.V., a Dutch financial group. The Government is also setting up a Central Planning Board to regulate existing Cuban manufacturing industries, which have geen enjoying a boom owing to the restrictions on imports.

Cuba's revolutionary Government is not faced with an easy task. It has inherited a legacy of past corruption, with some hostile neighbours and a basically weak economy heavily dependent on foreign capital and an annual sugar crop. While some of its stern measures have doubtless been inevitable in the circumstances, others have clearly been misjudged—notably the arrangements for nationalisation of some mainly U.S. owned properties. Its harsh attitude to the oil industry is certainly misconceived, and if pushed to extremes is bound to further complicate its economic difficulties.

Notices

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

Extension of date for submission of coupons and applications in respect of "A" Second Preference shares and new Ordinary shares.

NOTICE IS HEREBY GIVEN THAT THE extended period for submission of *coupons* in respect of the "A" Second Preference shares and the new Ordinary shares in terms of the Company's Circular dated the 12th October 1959 expires on the 30th June 1960. As some shareholders have not yet exercised their right to obtain shares by submitting the requisite coupons, the Directors have extended the period for submission of coupons to 29th July 1960, and the Company's bankers have accordingly been authorised to receive applications on and after the 1st July 1960 upto but not later than the 29th July 1960 in respect of such coupons. Provided that along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9 per cent. per annum (which the Directors have decided to charge) shall be paid to the Company's bankers as under:—

(i) For applications with coupons from *resident* shareholders from 16th December 1959 to the date of payment; and

(ii) For applications with coupons in the case of *non-resident* shareholders from 1st June 1960 to the date of payment.

The Directors have also resolved that the last date for receiving applications in respect of "A" Second Preference *shares* and new Ordinary *shares* from the *non*-resident shareholders which was 30th June 1960 be extended upto 29th July 1960 provided that along with each such application and the moneys to be received with such application interest at the rate of 9 per cent. per annum thereon (which the Directors have decided to charge) from 1st day of April 1960 to the date of payment shall be paid to the Company's bankers.

No application in respect of coupons received from resident shareholders on and after the 16th December 1959 and from non-resident shareholders on and after the 1st June 1960 and no application in respect of right "A" Second Preference shares and new Ordinary shares received from non-resident shareholders on and after the 1st April 1960 will be entertained by the Directors unless interest is paid as aforesaid. No such application will be entertained after the 29th July 1960.

Dated at Bombay this 29th day of June 1960.

By Order of the Directors
For and on behalf of
THE TATA IRON AND STEEL COMPANY LIMITED,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
By their Constituted Attorney,
V. G. MOKASHI.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD.

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the Seventy-sixth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, the 22nd July, 1960, at noon, to consider the Accounts of the Company for the year ended 31st December, 1959, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 8th July 1960 to 22nd July, 1960, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co. LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *21st June*, 1960.

Note:—A member entitled to attend and [illegible]e at this meeting is entitled to appoint a [illegible]xy to attend and vote in his stead. Such [illegible]y need not be a member of the Company.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

TENDER NO. S-8

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to purchase from established and reliable producers, a quantity of about 75,000 tons of Steel Materials such as Plates, Sheets, etc.

The tender documents can be had on payment of Rs. 15 per copy (or equivalent) from any of the following offices during working hours on or after July 1, 1960.

1. The Director, Railway Stores, Ministry of Railways (Railway Board), State Entry Road, New Delhi.
2. The Director General, India Stores Department, Government Buildings, Bromyard Avenue, Acton, London W-3.
3. The Director, India Supply Mission, 2536, Massachusetts Avenue, N.W., Washington 8, D.C.

Tenders will be received by the undersigned upto 12.00 hours on the 16th August, 1960 and opened in the office of the Railway Board on State Entry Road, New Delhi, on the same day.

QURBAN SINGH,
Director, Railway Stores,
Railway Board, State Entry Road,
New Delhi.

NEW DELHI, *23rd June* 1960.

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD.
TIRUCHIRAPALLI

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Twentieth Annual General Body Meeting of the shareholders of the Company will be held at the Registered Office of the Company, Tennur, Tiruchirapalli, on Saturday, the 27th August 1960, at 4 p.m., to transact the usual business and special business as per notice individually posted to the shareholders.

The Register of Members and the transfer books of the Company will be closed from 2nd August 1960 to 27th August 1960 (both days inclusive).

The Directors at their meeting held on 30th June 1960 have recommended the payment of the following dividends to the members for the year ended 31st March 1960.

4½% less tax final dividend on 5,60,000 old equity shares which with the 4½% less tax interim dividend already paid makes a total dividend of 9% and *pro rata* dividend @ 9% per annum less tax on 1,39,968 new equity shares;

2¾% less tax final dividend on first and second preference shares which together with the 2¾% free of tax interim dividend makes a total dividend of 5½%, besides relevant tax refund certificates.

STATE BANK OF TRAVANCORE

(Subsidiary of the State Bank of India)

Now offers, with the co-operation of the State Bank of India, complete Banking services in connection with the trade and commerce of the industrially fast developing State of Kerala.

CURRENT ACCOUNTS AND SAVINGS BANK ACCOUNTS opened and FIXED DEPOSITS AND SHORT-TERM DEPOSITS received on attractive terms.

THREE-YEAR AND FIVE-YEAR CASH CERTIFICATES are issued at 4% and 4½% compound interest respectively.

All types of Internal and International Banking Business transacted.

For further particulars, please apply to nearest Branch or Head Office.

Branches at Bombay and all important commercial centres in South India.

The dividends when declared will be made payable on and after 27th August 1960 to the shareholders whose names stand on the Register of Members on 27th August 1960 or to holders of dividend mandates. Members are requested to intimate change of address, if any.

Members are requested to attend the meeting in person or by proxy. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(By Order of the Board of Directors),
SESHASAYEE BROTHERS (PRIVATE) LIMITED,
Manging Agents & Chief Engineers.

TIRUCHIRAPALLI, *30th June* 1960.

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE TWENTY-EIGHTH ANNUAL GENERAL MEETING of the Members of Jessop & Co., Ltd., will be held at the Registered Office of the Company on Friday, the 29th July, 1960, at 3 p.m., for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Board of Management and Auditors, for the year ended 31st October, 1959.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business of an Ordinary General Meeting.

AS A SPECIAL BUSINESS

5. To appoint Joint Auditors of the Company for the year ending 31st October 1960.

Explanatory Statement

A notice has been received under Section 190(1) of the Companies Act 1956 from a Member proposing that Messrs. Lodha & Co., Chartered Accountants, be appointed as Joint Auditors of the Company for the year ending 31st October 1960, with Messrs. Lovelock & Lewes.

Similar notices have also been received from some other members proposing that Messrs. G. Basu & Co., Chartered Accountants, be appointed as Joint Auditors of the Company for the year ending 31st October 1960, with Messrs. Lovelock & Lewes.

The Ordinary Share Transfer Registers of the Company will be closed from 15th July to 29th July, 1960, both days inclusive.

By Order of the Board,
A. K. THAKUR,
Acting Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *2nd July*, 1960.

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Management has sanctioned the payment of an interim dividend on 5 per cent. Cumulative Preference Shares for the half-year ended 30th April 1960 subject to the deduction of Income Tax at prescribed rates in accordance with the provisions of the Finance Act 1960.

Preference Transfer Register will be closed from 15th July to 29th July 1960, both days inclusive.

Dividends will be paid only to the registered Shareholders or their mandatees.

By Order of the Board,
A. K. THAKUR,
Acting Secretary.

63, NETAJI SUBHAS R[illegible]
CALCUTTA, *2nd July* 1.

SCIENTIFIC RESEARCH IN W. EUROPE

COUNTRIES URGED TO CO-OPERATE FOR MUTUAL BENEFIT

AN eminently readable report on the problems of scientific co-operation in W. Europe with many valuable suggestions for improving scientific research and its application to industry, has been presented to the Organisation for European Economic Co-operation (O.E.E.C.) by Mr. D. Wilgress, a former head of the Canadian delegation to the O.E.E.C. Historically speaking, Europe, particularly W. Europe, is the original home of scientific advancement. But it now runs the risk of being left behind in the scientific race in which the U.S. and the U.S.S.R. are ahead of it. The problem is not only one of increasing research effort but of translating the results from the laboratory into the workshop in the factory. In varying degrees, this sums up the problem in all countries, whether they belong to the group of industrially advanced countries or to the underdeveloped regions. Although Mr. Wilgress's report deals specifically with Europe, it is not without its significance to underdeveloped countries like India, where the problem is also one of extending scientific research and bringing the benefits of such research to agriculture and industry.

Russia

Mr. Wilgress, whose report is based on his findings in France, the Netherlands, Denmark, Sweden, Norway, Switzerland, Italy, Belgium, W. Germany, the U.K. and Ireland and also Yugoslavia, Greece, Turkey, Austria, Portugal and Spain, found that "in the last three years, there has come about an increasing awareness of the need for greater activity in science and technology." Mr. Wilgress, however, found that, apart from notable exceptions, "there is comparatively little co-operation between Governments in relation to science and technology." He warns that this is an attitude which European countries can no longer afford to adopt. He argues that, if Europe admires the mass production techniques in the U.S., it should also appreciate the fact that those techniques are the result of vast achievements in applied research on which the U.S. is spending some $9,000 million every year. Referring to the scientific progress in Russia and China, he observes:

"For a long time the great number of scientists and engineers being produced each year in Russia were discounted on the grounds that their quality could not be high. The "sputnik" demonstrated two years ago that there was quality as well as quantity in the Russian effort. Since then, we have had other evidence of Russian advances, such as the offer of a civilian transport aircraft to European airlines and reports from visitors to the Soviet Union of solid achievements in other technical fields. Among such achievements there may be mentioned a continuous casting process for steel, a whole series of electronic devices, a novel and highly economical method of producing gears, new methods of welding, electronic spark machining, the development of advanced turbines, a new material for turbine blades, very thin glass-insulated copper wire, refrigerators and cooling units operating on a new principle, small-sized thermo-electric generators, advanced power transmission techniques, and new machines for the cultivation of cotton and tobacco. These examples are sufficient to indicate that it may not be very long before the Soviet Union commences to invade the markets of the world with advanced technical appliances and machines as well as possibly with some special types of consumer goods. Hitherto, Soviet exports have disturbed the markets for certain primary products, such as grain, aluminium and tin, and hence have affected adversely those countries depending largely on the export of these primary commodities. When the Soviet Union commences to ship abroad finished goods, these exports will come into direct competition with the products of European industry. It is a possibility to which the European countries cannot remain indifferent.

"China also is on the threshold of great achievements in science. They are putting into force a beautifully phased programme which commences with those now attending the secondary schools. These will be followed through by an expansion of the institutions for teaching science and technology until China is producing more scientists and engineers than Russia. In twenty-five years from now such a programme is bound to show results. They are likely to make China a first-class economic power."

Reviewing the educational problems in Europe, Mr. Wilgress notes that, throughout Europe, he found a marked shortage of secondary school teachers for science and mathematics. Again, many countries were producing only half the number of engineers required and most were taking steps to double the output in the next ten years. Only in Germany, the overall shortage was not so acute as in other countries. A notable experiment in the field, according to Mr. Wilgress, is the upgrading of eight technical colleges to near University standard in the U.K., the main feature of education being the "sandwich" system, whereby studies are interspersed with practical work in factories. In Central and Northern Europe, the German system of technological institutes is well entrenched. The drawback of this system is the length of time required to produce highly qualified engineers. It is "becoming increasingly realised that something in between these university trained engineers and the graduates of technical schools is required." Industry is also asking for men younger than those now completing the university courses. Information from Russia, it is stated, is tending to confirm that only one-third of the 60,000 engineers being produced annually are of the European standard; the rest taper off to something in between university and technical school standard. European countries should, the author says, learn from one another as to the best means whereby the need for technical men, lower than the university graduates but higher than those trained by technical schools, could be met.

Europe

Throughout Europe, pride of place is being given to fundamental research. Mr. Wilgress has no quarrel with that. Only, he would like to see more contract or sponsored research of the type that is undertaken in N. America, where some research in universities takes place as a result of contract with certain private sponsoring bodies which agree to pay for it. He concedes that it is important to preserve the absolute priority of fundamental research and to uphold the freedom of the universities. But, consistent with these two basic principles, he feels, "sponsored research by university professors should be encouraged throughout Europe." Each professor and each university can decide "how far to allow sponsored research to go before it begins to interfere with the primary aim of a university which is to pass on existing knowledge to succeeding generations and to unearth new knowledge." In many cases, it would be worthwhile to appoint a research secretary in the university. He could handle enquiries from private firms and put them in touch with the individual professors.

Unlike in the U.S., a feature of research activity in Europe is the organisation of research associations among firms in the same branch of industry to undertake research on a co-operative basis. The process has been carried furthest in the U.K., where there are now 46 such research associations organised and supported by the Department of Scientific and Industrial Research. In Germany and the Netherlands, too, many research associations have been sponsored. Mr. Wilgress feels that, in those countries where only a few research associations have been set up, the Governments should take the initiative in organising such associations on the British model. At the same time, he observes that there are obvious limitations on the extent to which research associations can do sponsored research. By their very nature, the research associations are the negation of the competitive spirit—the main feature of the North American economy. They foster that "cartel" spirit, which is a feature of the European economy. They are apt to lead the members to conclude that all that is possible is being done for them in the way of research. Canadian experience has shown that whenever there is a close connection between a private firm and a particular research project, no difficulty arises in exploiting the results of the research which the firm regards as being due to their own initiative. Hence the importance of efforts to promote the more widespread use of contract or sponsored research by concerns unable to afford research establishments of their own.

Sponsored Research

Gradually there are springing up in Europe facilities for contract or sponsored research outside of the universities. The most notable example is the Norwegian Central Institute for Industrial Research, where contract research is done for industry in addition to background research paid for by the Government. This is the best example for other small countries to follow but would not be suitable for larger countries. Here, besides the universities, reliance must be placed on the facilities provided by the laboratories of the research associations or by the private institutions that are slowly establishing themselves in Europe. The Battelle Memorial Institute of Columbus, Ohio, have now a laboratory at Geneva, Switzerland, for undertaking contract research in fundamental science, and another at Frankfurt, Germany, for contract research in applied science. The latter was established with the active help of the German authorities and its annual turnover is said to have reached 4,000,000 Deutschemarks. Arthur D. Little, Inc., have opened a laboratory in Scotland. Other sponsored research institutes in the United Kingdom are the Fulmer Research Institute and the Sondes Place Research Institute.

The main work of applied research—apart from specialised defence and other establishments maintained by Governments—will always be carried on in the laboratories of the large industrial concerns. Many of these concerns in Europe are spending over one million dollars a year on research. The first thing that each country should do, according to Mr. Wilgress, is to draw up a national science policy. Again, a proper balance should be maintained between fundamental and applied research. The ideal line of progress in respect of applied research by private firms is (1) membership of a research association; (2) sponsored or contract research in a laboratory; (3) establishment of a research laboratory by the firm itself. So far as the O.E.E.C. is concerned, he avers that it is primarily an economic organisation and should confine itself to economic issues. Nevertheless, it could do much to promote co-operation in science. Thus, there are several topics worthy of discussion either in the Committee for Scientific Research or in *ad hoc* conferences arranged by the Committee for the purpose. One such question is the means whereby medium and small-sized manufacturing enterprises can be made more research-minded. The Governing Committee for Scientific and Technical Personnel should continue the valuable work of improving the quality and quantity of scientists and engineers. Until the Committee for Scientific and Technical Personnel and the Committee for Applied Research are merged, there should be a scientific advisory committee, a purely advisory body.

Emphasising the importance of selecting the right type of men for positions of responsibility in research institutions, Mr. Wilgress observes that "it requires a touch of genius to be a good research leader." He adds:

"Initiative, energy, and imagination are prerequisites. The same qualities are demanded of those placed in charge of the leading scientific institutions. In addition, they must possess administrative ability and a sound basic knowledge of science. After this it is essential that they be given proper scope. Throughout my travels, I found, on the one hand, active men in charge of scientific institutions who were impatient only because they could not get things done quickly enough. On the other hand, I found men of the right type frustrated by the hampering effects of bureaucratic control and the lack of a clear line of authority."

As Mr. Wilgress rightly observes, science is a field in which the "driving type" of men should be allowed to flourish within the limits of the results the sponsors wish them to achieve. In his experience, he has found a "number of examples of splendid work resulting from "the right man being given plenty of rope." He also found "examples of stultified growth due to too much tocing the line of Government rules and regulations." Appropriately enough, he urges governments to recognise that expenditure on science is a form of national investment and that the best returns will come if financial and bureaucratic controls are not allowed to hamper those responsible for the execution of scientific policy.

RECLAIMING WASTE WATER

Seventy million Americans already are using second-hand water for domestic purposes and engineers and public health officials are now exploring the possibilities of salvaging greater amounts of water discharged by municipal and industrial treatment plants. This was revealed in a report released by the Senate Select Committee on National Water Resources, which cited the necessity for improving techniques both for combating stream pollution and for the salvage and reuse of waste water as demands on limited water supplies increase. The report by a group of internationally-known sanitary engineers pointed out that while no U.S. city is yet salvaging water directly from its waste outlets, the prospects of such a practice will increase when natural water sources become more difficult to find, or expensive to develop. The report cites that treated effluent is frequently as good and sometimes of better quality than other raw water supplies available to a community.

Industry already is using salvaged water where it is cheaper than to develop water from a natural source. For example, the Bethlehem Steel Company is now salvaging 110 million gallons of water per day from the sewers of Baltimore for industrial cooling use in a nearby plant. Agriculture is already using water salvaged from 125 municipal treatment plants throughout the country, though none of it goes for irrigating crops directly used for human food. The report states that recent experiments at Los Angeles show great promise for using highly treated effluent to recharge ground water sources when these are depleted by overdraft. The process embraces alternative means of recharge either by spreading treated effluent in shallow ponds from which it soaks into the ground or through injecting it directly into groundwater strata via wells. Percolation through the ground strata helps to complete the purification process. There are still problems which must be worked out before the process can be adopted for use. While bacteria travel not more than 100 feet from the point of recharge, chemical pollutants from industrial wastes move long distances underground. Also, much has yet to be learned about the degradation of the quality of the quality of the water from repeated reuse.

The Los Angeles experiments indicate that water can be salvaged by this method at a cost of less than half the $40 per acre-foot Los Angeles is paying for the importation of water from the Colorado River, some 200 miles away.

HEAVY ENGINEERING CORPORATION

The first annual meeting of the Heavy Engineering Corporation, set up by the Government to develop heavy engineering projects in the public sector, which was held in New Delhi on 28th June, under the chairmanship of Mr. A. Nagaraja Rao, Chairman of the Corporation, reviewed the progress made so far in setting up the foundry forge and heavy machine building plants at Hatia, near Ranchi and the coal mining machinery plant at Durgapur. It was disclosed that all preliminary arrangements for setting up these factories, such as acquisition of land, levelling of sites, building of residential and office accommodation, godowns, etc., were well under way. Besides processing negotiations for securing detailed working drawings for the heavy machine building and coal mining machinery projects and the purchase of equipment required for the first stage of these projects from the U.S.S.R., the Corporation has also made necessary arrangements for local constructions and for receiving the plant and equipment for these projects as well as for the foundry forge project which is being undertaken in collaboration with Czechoslovakia.

The three projects are designed to manufacture items of heavy machinery for the iron and steel industry, mineral oil industry, general engineering items like heavy cranes, excavators, grinding equipment and press and forging equipment and coal mining machinery. They will also undertake to meet some of the requirements of heavy castings and forgings for others. A total investment of about Rs. 150 crores (excluding the cost of townships and working capital) would be required for the three projects.

NAHORKATIYA

In the Nahorkatiya area, one of the two areas of Oil India Private Ltd. in Upper Assam, 63 wells have been drilled so far by the Assam Oil Company's drillers. Many of these wells have been completed in record time. Thus, one well, 9,050 ft. deep, was drilled in less than nine days. Construction of the Oil India township, Zaloni, is progressing steadily. It will have the first gas turbine power station in India. The largest crude oil pipeline in India, which connects Upper Assam oilfields and the proposed public sector refineries at Nunmati (Assam) and Barauni (Bihar), begins from a place near this township. Extending over an area of 825 acres, Zaloni is divided into two major sectors—an industrial area (300 acres) and housing area (525 acres). One of the highlights of the housing area is that all houses, including labour quarters, are provided with electric lights, gas-cooking *chulas*, water tap, built-in cupboards and sanitary w.c. There is a good drainage system for both the areas.

NEW PRODUCTS AND PROCESSES

New Teleprinter

A NEW high-performance teleprinter claimed to be smaller and lighter than any other commercially available today, has been displayed at the British Exhibition in New York recently. A radio-version of this machine was the first to be used on board a commercial airliner on a scheduled passenger flight because it is so reliable in non-level positions. The new teleprinter was seen in operation in the official British Government exhibit. Occupying the ground floor rotunda in the Coliseum building this was a central prestige display reserved for outstanding examples of British scientific and engineering equipment. Space in this exclusive section could not be bought by individual manufacturers—all exhibits were selected on their merits alone. A striking feature of the new machine is said to be its size—15 in. wide, 13 in. deep and 11 in. high—the same size as an ordinary typewriter, and the weight is 55 lbs., about half that of earlier machines. Speeds of 100 words a minute can be transmitted, but a simple gear change will adapt it to the more commonly used speeds of 60, 66 or 75 words a minute. Attention has been paid to reducing maintenance costs and lubricating intervals have been extended by the use of self-lubricating bearings in the machine. Another major feature is the exceptional versatility. Incorporating numerous technical innovations the machine provides facilities which are of special interest in processing data.

Push-button Biscuit-making

Think of a recipe for a biscuit. Press a few buttons—and soon hundreds of thousands of the biscuits are dropping into their packing cases ready for despatch to countries all over the world.

The technique of push-button biscuit making was shown recently in the English cathedral city of Carlisle by a family firm who pioneered biscuit making by machine in 1831. Then the founder of the firm, Jonathan Dodgson Carr, "printed" biscuits on a kind of hand printing press. It cut out many biscuits from one square of dough instead of each having to be cut by hand. That was the beginning of modern biscuit making. Now, in what is claimed to be the most modern biscuit-making plant of its kind anywhere, Carrs have introduced automation right from the start of manufacture. One man in the main control room can now select any one of at present 80 recipes—later on a limitless number—and electronic controls then do the rest. The recipe on a punched card is fed into a system of electronic controls which "order" all ingredients such as flour, sugar, glucose, fats and water. Exact amounts are fed into mixers in any predetermined order. Automatic control from mixers onwards through such processes as baking and packing and labelling have been general in this factory for some years. Automation in the initial stages of manufacture has recently been introduced.

Electronic Moisture Meter Designed

An electronic moisture meter has been designed at the Shri Ram Institute for Industrial Research, Delhi, which enables accurate determination of the moisture content of different materials and there is no drift in the meter readings even after prolonged use. A special advantage of the S.R.I. moisture meter is that, by suitably modifying the plates of the electrodes, it can be used for determining the moisture content of materials like carboxy methyl cellulose, pulp, soil, grain, etc., in bulk. The residual moisture content in textiles, paper and other similar materials has an important bearing on their physical characteristics such as elasticity, rigidity and swelling. The measurement and control of moisture content at different stages during manufacture are, therefore, of great importance in textile, paper and other similar industries and moisture meters are usually installed at different stages. Thus, in textile industry the moisture content is determined for warp yarn, before embossing and resin treatment and after the resin-treated fabric has been dried. Moisture meters are also installed on textile slashers, tenter frames and pickers. Factory trials with the instrument are said to have shown it to be comparable to imported moisture meters.

Automatic Copying Machine

The first fully automatic copying machine which produces high-quality copies on ordinary plain paper by automatic xerography—electrical photography—was recently demonstrated in London. Designed as the latest form of equipment for the modern office, it requires no exposure setting. It will copy from anything written, typed, printed or drawn and also produces, in black and white, from all colours, including reds and blues. Xerography is a completely dry process and the prints emerge six a minute ready for use. As the operator does not handle the copy paper or re-handle the original for multiple copies the machine is similar in principle to a short run duplicator which needs no special master copy or stencil. The original can be anything from a letter to a bound book. All that the operator does is to lay the document on a recessed glass plate, dial the number of copies required and push a button. When the machine has made the ordered number of copies it automatically shuts itself off. The machine is not intended to be for casual use and is, therefore, not in direct competition with small desk-top copiers. It was shown at the Hanover Fair held in April where two units were sold to German banks and it will be on display at the Business Efficiency Exhibition in London in October.

Anti-corrosion Compound

A new liquid zinc anti-corrosive compound for use on iron and steel and other metal surfaces is stated to have chlorinated rubber and zinc dust of extremely small particle size as its base. One of the more important advantages claimed for it is freedom from settling out; it requires no more than normal stirring, before use.

The manufacturers, MacCleaster Chemical Company, London, state that it can be applied by brush, spraying or dropping and that it can be applied to rusted surfaces and even to surfaces which have previously been painted provided that they have been subjected to scraping or wire-brushing. The manufacturer also claims that the compound has above-average flexibility and abrasion resistance and although not designed to be specifically heat-resistant will withstand a dry temperature of 200 degrees Centigrade and a wet temperature of 120 degrees Centigrade. Fire retardant properties are said to be good. It is stated that the compound is equally efficient as a single coat system or as a primer and gives a good "key" for the top decorative finish. Particularly suitable for structural steelwork, the compound can also be used for marine applications and since the dried film is non-toxic it can be used for the protection of water tanks.

Dip Pumps

An Austrian firm, specialising in the manufacture of up-to-date pump plants, has developed a dip pump which, it is claimed, is not affected by sand and can therefore be used for the transport of water from wells and boreholes, if the distance between the water surface and the ground is above 7.5 m. The pump consists of an underwater motor and a directly connected vertical rotary pump above it. The unit is suspended freely within the well or the borehole on the bottom end of the pressure conduit. The motor is of the "semi-wet system", i.e., with a dry stator and a wet rotor, separated by a multi-layer casing. In normal type motors for an output upto 10 h.p. the weight of the rotor and the residual longitudinal thrust of the pump are supported by a grease encased cup and cone bearing; for higher outputs an auxiliary pump with relieving plate is foreseen. The new pump has given excellent results in automatic and continuous operation, even if the water conveyed has a high sand content. Such pumps are mainly used in waterworks, for the lowering of the phreatic water level in deep-drilling operation and mining, etc.

Novel Refrigerator

Plastic foam which entraps an insulating gas, instead of air, in its tiny bubbles is claimed to be twice as efficient as previous foams. The first use of the gas-filled foam, in a new home refrigerator, increased interior storage space by 21 per cent. without changing external dimensions. A plastic resin and an isocyanate are mixed in the presence of a catalyst and freon. The first two react and the heat of their reaction vaporises the freon, the inert gas familiar from its use in many household fridges. The freon converts the mixture into foam and is itself trapped in the bubbles.

The refrigerator, made in the U.S. is claimed to be the first "no frost" gas mechanism. It eliminates frost in the cold compartments by cooling air outside them and extracting the moisture. The cooled, dried air then circulates within the refrigerator. The mechanism halts periodically to permit the moisture on the outside cooling coils to melt and evaporate.

JUST OUT! *JUST OUT!*

LAW RELATING TO DISMISSAL, DISCHARGE & PUNISHMENT

In the Private Sector

By D. N. Vohra, M.A., LL.B., Labour Law Adviser.

TO maintain discipline in staff or establishment, it is now very essential that an employer must have a correct knowledge of how to proceed and when to proceed to take disciplinary action against an employee. This book explains the latest position of the law relating to dismissal, discharge and all other types of punishments in the light of latest Supreme Court and High Courts' decisions and labour legislations today. Entire procedure has been explained step by step, even draft notices and orders have been given in the appendix which if properly followed are sure to help an employer in avoiding interference by Labour authorities. (Over 300 pages. Printed on offset paper. A 'must' for all Employers and Labour Officers and Advisers.)

Price **Rs. 15** No postage (otherwise Rs. 1.50) extra if order placed before 31st July 1960.

GROUP INCENTIVE BONUS SCHEME

ENFIELD INDIA'S COMMENDABLE EFFORT

ALTHOUGH the principle that wages should be related to productivity has been generally accepted as sound, most of the industrial undertakings in the country have yet to adopt the system of remuneration which links wages to productivity. Enfield India Ltd., Madras, the one and only unit in India manufacturing motor cycles, is one of the few firms which have introduced an incentive bonus scheme. Though young in years—it was established late in 1955—Enfield India has already earned a reputation for efficiency, and cordial labour-management relations.

At present, the firm gives employment to 1,200 workmen, including the sales and service staff. With the implementation of the expansion programme, which the Company has planned, another 1,000 persons will be provided with jobs. Enfield India Ltd. has a licensed capacity of 5,000 motor cycles per annum. The present production, which averages over 400 vehicles per month, is close to this figure. The Company hopes to step up production to about 7,000 motor cycles per annum from next year.

The management of the Company believes that these expansion programmes could not be implemented without the full and willing co-operation of the workers. It has, therefore, endeavoured to do whatever is within its capacity to increase the material welfare of workers. It is said that, from 1st January 1959, the management had agreed to pay wages and dearness allowance on a scale which compares favourably with that prevalent in other well-established industries. Besides, the Company also pays other allowances and amenities such as a 25 per cent. extra payment on the basic wage for night shift, attendance incentive, additional leave with wages for festival holidays and sickness at rates higher than what the law provides. In addition, milk and eggs are supplied to workers engaged in arduous jobs. Uniforms and boots are given to certain categories of employees. The Company also advances loans to the co-operative canteen and credit society of the employees. The incentive bonus scheme, which was formally inaugurated by Mr. K. Kamraj, Chief Minister of Madras, on 24th June, is the latest in the series of measures taken by the Company to promote the productivity and welfare of its workers.

Prepared by Experts

The incentive scheme has been scientifically evolved, after an intensive work study spreading over a period of eighteen months, by Messrs. Ibcon (Private) Ltd., the well-known firm of industrial consultants. The Group Incentive Bonus Scheme, as the name suggests, applies to groups of men working together on different manufacturing, assembling, etc., operations. The number of workmen in each group is determined by the volume and type of work. Each individual member of a group works for the common good of the group. The scheme is being introduced group by group as the preliminary arrangements pertaining to each group get completed. Initially, the scheme covers only daily-rated employees. Later on, monthly-rated employees, including supervisory and executive staff, will also be included.

The improvement in efforts put in is measured by the standards of performance for various operations established by time study. By measuring with a stop watch the actual time taken by the normal workers and adding to these normal (actual) times allowances for factors which affect work such as rest and relaxation for fatigue, personal needs, unavoidable delays, etc., standard performance or standard man-hours are fixed. These standards, which are established under a specific set of conditions existing at the time the study is undertaken, are kept unchanged as long as the conditions prevail. But, if any technical changes affecting materials, tools, equipment, methods, specifications, etc., occur, the operations will be restudied and new standards established to reflect the change.

Standard Defined

Standard performance is defined as something which is within the normal capacity of the average workman, if motivated, to achieve. However, it is common knowledge that, in this country, the average actual performance in engineering industries is as low as 40 to 50 per cent. of this standard. In Enfield India Ltd., it is claimed that it has been about 55 per cent.

According to the scheme, every workman in an incentive group will get 2 per cent. of his basic earnings for the month as incentive bonus for every 1 per cent. increase in the productivity of the group in which he works. There will be some workmen who are not directly engaged in production, but engaged in indirect work. Indirect groups will be formed of such workmen and a workman in an indirect group will be eligible for the same percentage of bonus as that of the direct group to which his indirect group is attached.

Performance Index

The output of a group is measured in terms of standard man-hours by applying standards of performance to the production of the group. The input, expressed in terms of actual man-hours, is measured by the number of men in the group and the number of hours each has worked in the group. Performance of each group is obtained by comparison between the output and input of the group. The performance index of the group is obtained as follows:

$$\frac{\text{Output in standard man-hours}}{\text{Input in actual man-hours}} \times 100$$

To illustrate, when the production of a group is 40 units of a given item, whose standard of performance is two standard man-hours per unit and the actual man-hours put in for the production by the group is 100 man-hours, then the group output is $40 \times 2 = 80$ standard man-hours and group performance index is $\frac{80}{100} \times 100 = 80$ per cent.

Bonus per cent. is related to the performance index. Although, from the definition of standards of performance, it is evident that 100 per cent. performance index is what is attainable by normal workmen, the management has decided to give incentive bonus for any improvement above the level of 55 per cent. performance index. The maximum bonus of 90 per cent. of the basic wage will be given for the standard performance, namely, 100 per cent. performance index. A linear scale has been adopted for working out bonus per cent. at different performance levels above the 55 per cent. index.

For the purpose of working out bonus per cent., performance of groups will be calculated for a period of one calendar month. Output of the group will be calculated by applying standards of performance to the certified production. Input of each group will be worked out from the "attendance and group disposition" reports submitted by section supervisors.

The performance index of the group will be obtained by dividing the total output of the group in standard man-hours for the month by the total input of the group in actual man-hours attendance for the month and multiplying it by 100. The bonus per cent. applicable to the group is determined from a "Bonus per cent. and Performance Chart."

For Individual Members

The bonus earnings of individual members in a group is calculated as follows: If the output of a group for a particular month is 500 standard man-hours and the input is 625 man-hours the performance index works out to $\frac{500}{625} \times 100 = 80$ per cent. Assuming that the bonus per cent. applicable to 80 per cent. performance index is 50 per cent., the workers in the group will get 50 per cent. of their basic wages as incentive bonus.

As considerable preliminary arrangements have to be made, the scheme is being introduced section by section. Initially, it has been introduced in the tinkering and polishing sections and it is expected that, before the end of the year, the majority of workmen would be brought under the incentive scheme.

The results of the working of the scheme in the sections where it was introduced have been very encouraging. Within a short period of one month, productivity in the section increased from 55 per cent. to 88 per cent. The workmen in the group got for the month of May an incentive bonus equivalent to 66 per cent. of their basic wages. This certainly is an indication of the remarkable results which the scheme is capable of yielding in future.

By introducing the scheme, the management of Enfield India Ltd. can legitimately claim credit for having taken a major step towards achieving more production, higher productivity and better rewards for labour. While the workers get immediate cash benefit for better efforts, the Company and the country benefit by higher productivity and lower costs. The success of the scheme depends on mutual effort and understanding between the management and workers. It is to be hoped that these will be forthcoming in abundant measure from both parties to make the scheme a complete success and an example worthy of emulation by other industrial undertakings.

"RECREATION"—THE FASTEST GROWING INDUSTRY IN THE U.S.

It may be news to many that the fastest growing industry in the U.S. today is that which caters to the leisure and recreation of the 66 million Americans at present gainfully employed and their families. According to a study made by the firm of Francis I. DuPont and Company, one of the U.S.'s leading investment companies, "leisure spending" by Americans will reach the record total of $43,000 million this year, which is $2,000 million higher than last year's spending. The figure is expected to rise continuously and reach $50,000 million mark before the end of the 1960s.

The American labour force is constantly growing. More than 66 million persons now are gainfully employed, all of whom, without exception, enjoy paid vacations each year. In addition, in nearly all industries, the basic, 40-hour, five-day work-week, prevails. On top of this, Americans enjoy high pay scales and living standards—which all adds up to ample leisure time and enough money to spend.

The DuPont study revealed that there is a clear trend toward active leisure in sports as well as in other pastimes. The fastest growing sports in the U.S. today are hunting, fishing, archery and skiing. Golfing and bowling also are on the increase. Water sports such as skindiving, swimming and boating, show signs of increasing popularity.

With the growth of active sports, a relative decline in "spectator" sports such as baseball and boxing has occurred. With television available at home, attendance at motion picture houses also is falling off. Even so, the study shows, "spectator" activities still hold a high place in American leisure-time habits.

An interesting trend brought to light by the study is that the increasing stress on "participation sports" has not dimmed interest in cultural pursuits. There has been a noticeable increase in book reading, for instance, as well as in spending for records, phonographs and similar equipment. More time is also being devoted to the theatres, the opera and concerts; outlays for these purposes last year were nearly double what they were a dozen years ago. And photography, long a hobby with many Americans, still ranks as a major leisure pursuit.

The growth of the "recreation" industry, the study points out, is furthered also by a shift in the public attitude with regard to financing leisure activities. With high employment and income, people seem to have little reluctance to finance their recreation through credit.

The breakdown of America's principal leisure-time outlays is as follows: gardening and other home, "do-it-yourself" projects, $12,000 million; travel $10,400 million; television, radio, phonographs and records $3,800 million; reading material $3,300 million; fishing $2,600 million; boating $2,500 million; spectator amusements $2,200 million; swimming and other aquatic equipment and activities $1,300 million; 'dining out' for pleasure $1,100 million; hunting $1,000 million; bowling $1,000 million; golf $800 million; and photography $700 million.

The study points to some possible changes ahead in American recreational activities. New leisure pursuits could come to the fore as time goes by. Recreational standards and interests are bound to be influenced by continuing social and economic progress.

LAC EXPORTS PICKING UP

TRADE WANTS BUFFER STOCK FOR STABILISING INTERNAL PRICES

THERE are unmistakable signs of an improvement in production and exports of lac of late. The *baisakhi* lac crop of the current year—the official revised estimates for which were announced last month—shows a perceptible increase, from 650,000 maunds in the 1959 season to 800,000 maunds, or by about 23 per cent. Production in all the major producing States rose substantially, Bihar accounting for 398,000 maunds (as against 334,000 maunds), Madhya Pradesh for 230,000 maunds (204,000 maunds), West Bengal for 105,000 maunds (66,000 maunds) and Maharashtra for 40,000 maunds (16,000 maunds). In terms of value, the exports of lac amounted to Rs. 6.29 crores in 1959-60, as against Rs. 5.70 crores in 1958-59. This is particularly encouraging, when viewed against the background of growing competition from Thailand, apart from the impact of synthetic substitutes being developed in industrially advanced countries.

There is no denying the fact that the recent signs of improvement in the lac industry and trade owes its origin to the efforts being made by the Indian Lac Exporters' Association, ever since its inception in May 1958. The Association, it may be recalled, came into being at a time when the lac trade was caught in a virtual debacle. There had been wide fluctuations in the price of lac, with prices gradually drifting to lower levels. Shellac prices declined sharply from the year 1954: the highest Calcutta prices of T. N. shellac recorded during each of the years from 1954-55 to 1958-59 were, respectively, Rs. 177, Rs. 163, Rs. 130, Rs. 90 and Rs. 75, and the lowest prices during these years were Rs. 105, Rs. 145, Rs. 111, Rs. 80 and Rs. 55, respectively. When the Association was formed in 1958, prices had reached rockbottom, and the prospects were that they would decline further. The formation of the Association, it is claimed, had itself a heartening effect on the market, and prices rose immediately. Soon after its formation, the Association fixed minimum export prices, and adopted steps necessary for securing their adherence by all concerned. Export prices, therefore became stabilised and predictable to a certain extent. The chief drawback of shellac from the point of view of the industrialist, namely, violent price fluctuations, was sought to be thus remedied.

Synthetic Substitutes

As Mr. C. R. B. Menon, President of the Indian Lac Exporters' Association, pointed out, while addressing the second annual general meeting of the Association held at Calcutta last week, the principal reason why the consumption of shellac had declined was that it had been ousted from many industries and uses by the innumerable synthetic resins, especially plastics, which had been developed in foreign laboratories in recent years. These synthetic resins offered several advantages, such as stable prices, consistency of quality and adequate and regular supply. But they would not have so easily displaced shellac in many countries, Mr. Menon observed, but for the violent prices fluctuations to which shellac was subject as a result, primarily of speculative activity. He claimed that the efforts of the Association for ensuring stable export prices for lac enabled many factories, which had previously abandoned shellac, to resume its use. Mr. Menon disclosed that the Association's efforts in this direction were greatly assisted by the Government of India which gave export licences only to those who obtained a "price scrutiny slip" from the Association. This compulsion enabled it to keep a close watch on the quality and price of each and every consignment exported and to make its regulatory measures effective. The Association also received the co-operation of importers' organisations—especially in the U.S. and the U.K., in return for which it gave anxious consideration to the views they had to express from time to time.

Another important step taken by the Association is the establishment of a fund for financing research in discovering new uses of lac and giving publicity to them. A sum of Rs. 10 lakhs has been collected for this purpose. A part of it will be utilised for subsidising publicity and research in the U.S., part for the grant of scholarships in the U.K., and part for financing research in India.

Price Disparity

Mr. Menon stressed that an important problem which the Association had to face during the major part of its existence had been the disparity between the minimum export prices and the internal prices of lac. This divergence, he said, had in some months been of the order of 10 to 15 per cent. to the disadvantage of importers in foreign countries. He realised that this had been a source of understandable concern for manufacturers abroad, who consumed shellac. He disclosed that, in order to eliminate this divergence, the Association drew up a comprehensive scheme for maintaining a buffer stock designed to stabilise internal prices. Although the scheme was submitted to the Government of India in 1958, it had not yet made any progress. Mr. Menon urged the Government of India to give early and serious consideration to the proposed scheme. Meanwhile, the Association itself has established a separate fund for the purpose of the buffer stock. Contributions to this fund are being met from a fluctuating levy imposed on exports. The accumulations so far have amounted to Rs. 5 lakhs. It would only be legitimate to expect that the Government would not cold-shoulder a scheme drawn up at the initiative of the exporters themselves.

Although the Association has been successful in imparting a certain amount of stability to prices, it cannot be claimed that the problem has been completely solved. For, in the last few weeks, prices have tended to move down. Currently, the pure T.N. shellac is quoted at about Rs. 69, as against about Rs. 78 in the beginning of the year. Commenting on this trend, Mr. H. P. Lohia, Vice-President of the Association, stated that this phenomenon was largely of a seasonal character. The floating stocks had started accumulating in the wake of a bumper *baisakhi* crop. Mr. Lohia, however, observed that a large part of the bumper crop had been absorbed without creating serious disequilibrium. He endorsed the plea made by Mr. Menon for the establishment of a buffer stock to check wide fluctuations in lac prices.

Mr. Lohia felt optimistic about the prospects for exports of lac in the current year. He was of the opinion that the export target of Rs. 7 crores per year laid down in the second Plan would be fulfilled in time. The trend of export sales so far has been satisfactory. During the first five months of 1960, the total quantity of lac exports improved from 157,231 packages in the corresponding period in 1959 to 186,134 packages.

Research Schemes

Details of some of the schemes for research, sponsored by the Association, were given by Mr. Lohia. One of them seeks to find out through research in the U.K. the possibilities of producing useful combinations of lac which will extend the use of lac in conjunction with synthetic resins, rather than in competition with them. A similar project is proposed to be introduced in West Germany, through the good offices of Dr. Kalkhof-Rose, who, besides being the most important customer of Indian lac, is himself an

...chemist and plastics chemist. In India itself, the Association proposes to set up a Shellac Information Bureau, with Dr. B. L. Manjunath as Director. The Bureau is expected to popularise the use of lac as a raw material in indigenous industries, besides disseminating information on new applications of shellac in the field of lamination, adhesives, paints, etc. It is also likely to assist materially in the Association's research work by preparing digests and abstracts of past research and maintaining a reference library. The organisation of the proposed Research and Testing Laboratory of the Association may also be entrusted to the Bureau.

The Indian Lac Cess Committee, too, has been co-operating with the Association in organising some useful schemes. These include the establishment of a Research Co-ordinating Committee. Arrangements are also being made for annual inspection of the activities of the Indian Lac Research Institute by Dr. L. A. Jordan, the Technical Adviser to the Association. Besides, the Committee has decided to organise, in collaboration with the Association, a study into the cost of production of lac, improved crop forecasts and the plantation of *kusmi* trees in certain selected areas in the country.

BUILDERS HARDWARE INDUSTRY

A plea to permit actual users in the builders hardware industry to import their raw materials, until the new steel plants, particularly the Rourkela factory, which would supply flat products, came into full operation, was made by Mr. Ajoyendu Paul, Chairman of the Builders Hardware Industries Association, in his address to the sixth annual general meeting of the Association held at Calcutta on the 1st inst. The industry, like other steel fabricating industries, he added, was a victim of acute shortage of raw materials. At present, the industry got its quota either from the Development Wing or from the State Governments. According to Mr. Paul, the current allotment was hardly sufficient to meet even 50 per cent. of the consuming capacity of the industry. Some relief was obtained now and then, he pointed out, by securing some industrial scrap, imported by commercial importers, but, at times, at a heavy cost. Apart from increasing the general supply position, Mr. Paul wanted to make efforts simultaneously to ensure that indents of fabricators were expeditiously supplied by the producers. Though there was an overall shortage, he suggested that each factory should get some material every month on a regular basis, with a view to ensuring continued production and employment.

At present, there are 60 factories engaged in the manufacture of builders' hardware items and employing on an average about 15,000 workers. The industry, Mr. Paul claimed, was in a position to meet the country's entire demand in respect of all the items of builders' hardware and fittings, such as hinges, padlocks, padbolts, tower-bolts, etc. While this may be so, it is necessary to point out that the quality of these products is still not upto the mark. This is particularly true of hinges which wear off much sooner than the imported ones. Mr. Paul must, therefore, impress upon his colleagues in the industry to take appropriate measures for improving the durability, fineness and finish of their products.

Mr. Paul stressed that the industry should now concentrate its efforts to diversify its production pattern, particularly in view of the national building programme envisaged for the third Plan and the export promotion drive. He suggested that manufacturers should take up new items, such as hydraulic door closure, superior types of butt hinges, cabinet hardware and mortise locks as well as other door and window fittings required for modern house construction.

There has of late been some increase in the exports of builders' hardware. The following table shows at a glance the trend of exports since 1956:

Year	(Lakhs of Rs.)
1956	19.05
1957	20.97
1958	20.90
1959	24.60
1960 (first 5 months)	8.22

The exports have been mainly to countries in South-East Asia, West Asia, Africa, Europe, West Indies and Cyprus. Mr. Paul held the view that prospects for further expansion of exports of builders hardware were promising, provided the industry was given, in addition to the existing export promotional facilities, adequate supply of steel. He also wanted that the steel consumed for export products should be supplied at retention prices. This, in our view, is quite a reasonable demand.

GHANA REMOVES IMPORT RESTRICTIONS

The Government of Ghana has removed the import restrictions previously imposed for balance-of-payments reasons. Ghana is the second Contracting Party of the G.A.T.T. among the less-developed countries to renounce the use of such restrictions, the first being the Federation of Malaya, which had announced its decision a few weeks ago. Under the provisions of the G.A.T.T., Contracting Parties are allowed to restrict imports in order to safeguard their balance of payments and monetary reserves. The Agreement, however, requires that such restrictions should be progressively relaxed as conditions improve and should be eliminated when conditions no longer justify their maintenance.

FOR RAIL PASSENGERS
DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES"?
If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/- you should
(1) declare their value in writing at the time of booking, and
(2) pay a percentage on the value so declared over and above the normal freight charges,
failing which the Railways will not accept liability for the loss, destruction, deterioration of or damage to such articles. The articles named above and many others you will find listed as "Excepted Articles" in the Indian Railways Conference Association Coaching Tariff No. 17.
The Station Master of the nearest station will give you detailed information if you contact him.
WESTERN AND CENTRAL RAILWAYS

DRAFT OUTLINE OF THE THIRD PLAN

SALIENT FEATURES SUMMARISED

A TOTAL investment of Rs. 10,200 crores in the economy—Rs. 6,200 crores in the public sector and Rs. 4,000 crores in the private sector; a Plan outlay of Rs. 7,250 crores in the public sector; a rise of national income of over 5 per cent. per annum; a production of 100 to 105 million tons of foodgrains and a capacity target of 10 million tons of steel ingots; an increase in the total generating capacity of power from 5.8 million kw. to 11.8 million kw.; creation of additional employment for 13.5 million people; extension of the community projects and co-operative movements to cover all the villages in the country; free and compulsory education for all children in the 6-11 years age group and the provision of minimum amenities to all rural areas including drinking water, roads linking each village to the nearest main road or railway station and a village school building, which may also serve as a community centre and provide facilities for the village library, are some of the goals which the Planning Commission have set before the country in the draft outline of India's Third Plan released to the Press this week. The following is an official summary of the Draft outline:

A Tentative Framework

The Outline presents the third Plan in its broad framework. It takes into consideration the present needs of the national economy, progress realised since independence and the perspective of development during the next 15 years or so.

The Outline, it is explained, has a twofold purpose. It is intended to serve as a basis for consideration by Parliament and State Legislatures and all sections of public opinion of the objectives and priorities of the third Plan and the targets to be achieved in different fields of development, and also to give an indication of the magnitude of the national effort needed in the coming years. It is also intended to assist the Central Ministries and the State Governments in working out their more detailed proposals for the final version of the third Plan to be submitted to Parliament early next year. All estimates in the Outline are necessarily tentative and will be reviewed in the next few months in the light of further discussions and comments.

The First and Second Plans

Over the past decade, through the Five-year Plans, India has endeavoured to harness her natural resources and energies of her people to the tasks of national development. From the beginning, it has been stressed that the objective of planned development was not only to increase production and attain higher levels of living, but also to secure a social and economic order based on the values of freedom and democracy in which "justice, social, economic and political, shall inform all the institutions of the national life." The first and second Five-year Plans which were formulated with these objectives in view marked the first phase in this endeavour.

The first Plan sought to strengthen the economy at the base, by repairing the damage caused by the war and the partition and by establishing the basic social and economic policies for economic development according to the Directive Principles of State Policy laid down in the Constitution. Among the important steps initiated in this Plan, the community development movement and the programmes for land reform deserve special notice. In continuing and further developing the approach set out in the first Plan, the second Plan aimed at a larger increase in production, in investment and in employment. It placed emphasis on accelerating the rate of growth of the national economy, building up basic industries, increasing employment opportunities, reducing the disparities in income and wealth and preventing the concentration of economic power. The national income increased by 3½ per cent. per annum in the first Plan and 4 per cent. per annum in the second Plan.

Aims of the Third Plan

The third Plan represents another important phase in the development of the country's economy. Its broad aims are:

(i) to secure during the next five-year period a rise in national income of over 5 per cent. per annum, the pattern of investment being designed also to sustain this rate of growth during subsequent Plan periods;

(ii) to achieve self-sufficiency in foodgrains and increase agricultural production to meet the requirements of industry and exports;

(iii) to expand basic industries like steel, fuel and power and establish machine-building capacity, so that the requirements of further industrialisation can be met within a period of 10 years or so mainly from the country's own resources;

(iv) to utilise, to the fullest extent possible, the manpower resources of the country and to ensure a substantial expansion in employment opportunities; and

(v) to bring about a reduction of inequalities in income and wealth and a more even distribution of economic power.

Self-sustaining Growth

One of the principal objectives of the third Plan is to secure a marked advance towards self-sustaining growth. Basically, self-sustaining growth implies that savings and investment in the economy rise sufficiently to secure a high rate of growth of income on a continuing basis. An important aspect of this problem, however, is that of creating within the country the capacity to produce the capital goods and equipment necessary to support the scale of investment proposed. In determining the pattern of investment in the third Plan, this consideration has been kept in mind.

Self-sustaining growth can only be achieved by balanced development both in agriculture and industry. Incomes and employment cannot rise sufficiently without industrialisation. On the other hand, an industrial revolution cannot be achieved without a radical improvement in agricultural productivity. The third Plan calls for effort both to enlarge the capital base and to raise the output of food and raw materials.

In a country in which there is under-utilisation of manpower, expansion of employment opportunities becomes an important objective in itself. Increased production itself is to some extent dependent upon a better utilisation of the available manpower. Considerable emphasis is, therefore, given in the Plan to increasing employment opportunities.

Socialist Pattern

Another important objective of the Plan is to devise means for reducing inequalities in incomes and wealth, the aim being to bring a "socialist pattern of society" in which all citizens will have the fullest opportunity for a rich and diverse life and for the development of their full potentialities. The term "socialist pattern of society" implies that the basic criterion in determining social policies and the lines of the economic advance should be not private profit or the interests of a few but the good of the community as a whole. Reduction in inequalities in income and wealth has to be achieved through a large variety of measures and institutional changes undertaken as part of the Plan. The pattern of investment, the direction to economic activity given by State action, the impact of fiscal devices used for mobilising resources, the expansion of social services, the institutional changes in the sphere of land ownership and management, and growth of the co-operative sector under State sponsorship—all these determine the points at which new incomes will be generated and the manner of their distribution. It is the essence of a planned approach that all these measures are harmonised and brought to a focus in a manner that would ensure an enlargement of incomes and opportunities at the lower end and a reduction of wealth and privilege at the upper end.

Population Problem

According to latest estimates, the population in 1966 will be 480 million, instead of 434 million assumed in the Second Plan Report. In an economy with low levels of income and consumption, high rates of population growth severely limit the pace of economic development. It is essential, therefore, to stabilise the population. The accelerated growth of population also emphasises the urgency of more rapid economic development.

Priority for Agriculture

The Plan emphasises that, in the scheme of development, the first priority necessarily belongs to agriculture. The importance of achieving self-sufficiency in foodgrains and meeting the requirements of industry and export is one of the major aims of the third Plan. Agricultural production has to be increased to the highest levels feasible, so that the incomes and levels of living, as the rural population rises, should keep pace with incomes in other sectors.

The Plan provides for an outlay in the public sector of Rs. 1,025 crores for agriculture and community development and Rs. 650 crores for major and medium irrigation. Investment by the private sector (exclusive of assistance received from the public sector) is estimated to be of the order of Rs. 800 crores. As the Plan proceeds, if larger resources are needed for assuring a more rapid advance within the rural economy, specially through the fuller use of manpower, these will be made available.

Agricultural production is to be stepped up by 30 to 33 per cent., depending upon the targets which may be finally decided as a result of work on area agricultural plans. The targets of production proposed for some of the important agricultural commodities are as follows:

Commodity			Annual production 1960-61 (Expected)	Annual production 1965-66 (Target)
Foodgrains	..	.. (million tons)	75.0	100-105
Oilseeds	..	.. (million tons)	7.2	9.2-9.5
Sugarcane (in terms of gur)	..	.. (million tons)	7.2	9.6-9.2
Cotton	..	.. (million bales)	5.4	7.2
Jute	..	.. (million bales)	5.5	6.5

In addition, measures will be taken to increase the production of food articles like fruits and vegetables, milk, fish, meat, eggs, as also of other commodities like coconut, arecanut, cashewnuts, pepper, cardamom, tobacco, lac and timber.

The target proposed for foodgrains would allow for consumption of about 15 ozs. of cereals and 3 ozs. of pulses per capita per day, besides providing some margin against emergencies. The target for raw cotton is expected to be sufficient to provide about 17.5 yards of cotton textile per annum per capita and in addition, allow for some exports.

The net irrigated area is proposed to be expanded to about 90 million acres by the end of the third Plan, as against 70 million acres expected at the end of the second Plan. About 40 million acres will be covered by dry farming techniques. Soil conservation measures are to be extended to an additional area of 13 million acres. The consumption of nitrogenous fertiliser is to be increased from 360,000 tons in terms of nitrogen in 1960-61 to one million tons in 1965-66. Plant protection measures will be extended to 75 million acres. The community development programme will be extended to the entire rural area by October 1963: the programme of co-operative development will be intensified and finance through co-operative agencies is expected to play a considerable part in increasing agricultural production.

Large-scale Industry

A high priority is also being given to industry, power and transport because development in these fields is vital for lifting the economy to a higher level and for its accelerated growth. Beyond a stage, the growth of agriculture and the development of human resources alike hinge upon advances made in industry. Public sector outlay in large-scale industry and mineral development will be Rs. 1,500 crores and private sector investment (exclusive of assistance from the public sector) is expected to be Rs. 1,000 crores.

Special emphasis is placed on heavy industries which will help make the economy self-sustaining, namely, steel and machine building and the manufacture of producer goods. Necessary measures are also proposed to be taken to expand the production of consumer goods.

Steel

Developments in iron and steel are linked with the capacity target of 10.2 million tons in terms of steel ingots and 1.5 million tons of pig iron for sale. The additional capacity and output in this field are expected to be realised almost entirely in the public sector. The Bhilai, Rourkela and Durgapur steel plants are proposed to be expanded, contributing jointly 5.5 million tons of steel ingots. The Plan also provides for a fourth steel plant in the public sector to be started at Bokaro.

Machine Building

Proposals for machinery and engineering industries during the third Plan include heavy machine building plant, foundry forge, coal mining machinery plant, heavy machine tool factory, doubling of the output of Hindustan Machine Tools, Bangalore, expansion of the Heavy Electrical Project in Bhopal, two additional heavy electrical projects and scheme for the production of high pressure boilers and precision instruments. Machinery manufacturing programmes in the private sector are expected to supplement considerably the efforts of the public sector. Near self-sufficiency is expected in regard to textile, sugar, cement and paper machinery.

Fertilisers

The production of nitrogenous fertilisers is to be stepped up from 210 thousand tons of nitrogen at the end of the second Plan to one million tons at the end of the third Plan and of phosphatic fertilisers from 70 thousand tons to 400-500 thousand tons in terms of P.O.

Coal

Production of coal is to be increased to 97 million tons at the end of the third Plan, as against the target of 60 million tons at the end of the second Plan.

Oil

On the basis of the present proved reserves, the Naharkatiya area is expected to produce 2.75 million tons of crude oil per year. Provision has been made both for the completion of refineries at Nunmati and Barauni for processing the Naharkatiya crude oil and also for further exploration, with a view to obtaining additional production of crude oil from Cambay and other areas where prospects appear to be favourable.

Among the other important industrial targets which have been proposed are:

		Annual production 1960-61	Annual production 1965-66
Aluminium	(thousand tons)	17.0	75.0
Cement	.. (million tons)	8.8	13.0
Paper	(thousand tons)	320.0	700.0
Sulphuric acid ..	(thousand tons)	400.0	1,250.0
Caustic soda	(thousand tons)	125.0	340.0
Sugar	.. (million tons)	2.5	3.0
Cotton textiles (mill cloth)	.. (million yards)	5,000.0	5,800.0
Bicycles (organised sector)	(thousand Nos.)	1,650.0	2,000.0
Sewing machines ..	(thousand Nos.)	300.0	450.0
Automobiles	.. (Nos.)	53,500.0	100,000.0

Village and Small Industries

There is considerable emphasis on the development of village and small industries. Provision has been made for positive forms of assistance like facilities for training, technical know-how, supply of credit and raw materials, etc. Production of cloth in the decentralised sector is proposed to be increased from about 2,600 million yards in 1960-61 to 3,500 million yards in 1965-66. The number of industrial estates is expected to increase from 60 in the second Plan to 360 in the third Plan. In the programmes for small-scale industries, the emphasis will be on promoting their development in small towns and rural areas and on linking them up more closely with large-scale industries as ancilliary or feeder units.

Power

As regards power, it is proposed to increase the total generating capacity from 5.8 million kw. at the end of the second Plan to 11.8 million kw. at the end of the third Plan. The programme for power includes a project for nuclear power generation of 300 thousand kw. It is expected that 15,000 additional towns and villages will be electrified during the third Plan bringing the total to 34,000.

Transport and Communications

It is expected that the railways will be able to carry goods traffic to the extent of about 235 million tons in 1965-66 as against 162 million tons in 1960-61. One thousand two hundred miles of new railway lines will be constructed. Under the road development programme, it is proposed to expand surfaced roads from 144,000 miles in 1960-61 to 164,000 miles in 1965-66. The expansion of road transport will be mainly in the private sector. It is estimated that the number of commercial vehicles will go up from about 200,000 to about 300,000. The shipping target proposes to add about 200,000 g.r.t. to the tonnage of 900,000 g.r.t. expected to be achieved at the end of the second Plan.

Social Services

It is proposed to provide for free and compulsory primary education in the age group 6-11 years. Making allowance for slow progress in women's education in certain backward areas, it is estimated that the proportion of pupils to the number of children will go up from 60 to 80 per cent. in age group 6-11, from 23 to 30 per cent. in the age group 11-14 and from 12 to 15 per cent. in the age group 14-17. The total number of students in schools will go up from 41 million in 1960-61 to 60 million in 1965-66.

Scientific and technical education will be given increasing support. The intake capacity of engineering colleges and polytechnics will increase from 37,200 at the end of the second Plan to 53,500 at the end of the third Plan.

The number of registered doctors will increase from 84,000 to 103,000, of hospitals and dispensaries from 12,600 to 14,600 and of primary health centres from 2,800 to 5,000. The number of family planning centres will increase from 1,800 to 8,200.

Low-income Group Housing

Programmes for low-income group housing, housing for industrial workers, slum clearance and slum improvement and acquisition and development of land for housing will be expanded and housing finance for housing will be provided through Housing Finance Corporations.

Local Development Works

The third Plan includes a programme of local development works for enabling all rural areas to provide themselves with certain minimum amenities. These are (a) adequate supply of drinking water, (b) roads linking each village to the nearest main road or railway station, and (c) village school building which may also serve as a community centre and village library.

Outlay and Investment

For achieving the above targets, the Draft Outline envisages a total investment of Rs. 10,200 crores in the economy during the third Plan period. Of this amount, Rs. 6,200 crores will be in the public sector and Rs. 4,000 crores in the private sector. The total outlay in the public sector will be Rs. 7,250 crores. A sum of Rs. 200 crores is expected to be transferred from the public sector for capital formation in the private sector. In the following table, the total outlay and investment in the third Plan are compared with those of the second:

(Rs. crores)

	Public sector: Plan outlay	Public sector: Current outlay	Public sector: Investment	Pr vate sector	Total investment
Second Plan ..	4,600	950	3,650	3,100*	6,750
Third Plan	7,250	1,050	6,200	4,000*	10,200

* Exclusive of Rs. 200 crores of assistance transferred from public sector.

Note: Two expressions in common use may be briefly explained:

(1) *Investment* is expenditure on the creation of physical assets (e.g., buildings, and plant and equipment), including expenditure on personnel required for putting up these assets. The expression corresponds broadly to expenditure on *capital account*.

(2) *Current outlay* corresponds broadly to expenditure on revenue account on plan schemes; it is expenditure other than that classified as 'investment'.

The general pattern of investment in the second Plan is being continued in the third. But, in the public sector, there is greater emphasis on agriculture, industry and power and on certain aspects of social services. The distribution of plan outlay in the public sector in the second and third Plans is given in the following table:

(Rs. crores)

	Outlay: Second Plan	Outlay: Third Plan	Percentage: Second Plan	Percentage: Third Plan
(1) Agriculture and minor irrigation ..	320	625	6.9	8.6
(2) Community development and co-operation ..	210	400	4.6	5.5
(3) Major and medium irrigation	450	650	9.8	9.0
(4) Total (1), (2) and (3) ..	980	1,675	21.3	23.1
(5) Power	410	925	8.9	12.8
(6) Village and small industries	180	250	3.9	3.4
(7) Industry and minerals ..	880	1,500	19.1	20.7
(8) Transport and communications	1,290	1,450	28.1	20.0
(9) Total (5-8) ..	2,760	4,125	60.0	56.9
(10) Social services	860	1,250	18.7	17.2
(11) Inventories	..	200	..	2.8
(12) Grand total ..	4,600	7,250	100	100

The allocation proposed at present is necessarily provisional. They are intended to assist the Central and State Governments in undertaking detailed studies of their programmes and projects and in establishing priorities within each sector. It is stated that for approved programmes and targets under agriculture, village and small industries, primary education, technical education, special works programmes for utilising manpower resources, etc., additional domestic resources will be made available, if found necessary, after examination by States and Ministries.

In respect of approved projects for which substantial external finance is required, once the necessary foreign exchange in found, every effort will be made to find the requisite internal resources. Out of the total outlay in the public sector of Rs. 7,250 crores, Rs. 3,600 crores will be in the Centre and Rs. 3,650 crores in the States. Central assistance to States is estimated at Rs. 2,500 crores.

Resources for the Plan

The step-up in investment from a total of Rs. 6,750 crores in the second Plan to a total of Rs. 10,200 crores for the third Plan will call for a large effort for mobilising domestic resources. National income is expected to increase during the third Plan period at a rate of over 5 per cent. per annum. It is from this source that the additional demands for investment and for consumption have to be met.

The Plan aims at raising the level of investment in the economy from about 11 per cent. of national income by the end of the second Plan to about 14 per cent. by the end of the third Plan. The rate of savings in the economy is at present about 8 per cent. of national income. This has to be raised to about 11 per cent. by the end of the third Plan, the balance representing inflow of resources from abroad.

The third Plan starts, unlike the first two, with a low level of foreign exchange reserves. There is no further scope for drawing on these reserves. Moreover, the level of prices now is more than 20 per cent. above the level at the beginning of the second Plan. Both these considerations demand that inflationary financing of public outlays must be kept down to the barest minimum.

On the other hand, the situation now is in several respects more favourable than in the earlier plans. There has been a substantial step-up in investment over the last 10 years. There has been substantial progress in irrigation, power and transport.

While in the second Plan most of the public sector projects were in the construction stage, in the third Plan they will be functioning and will yield surpluses. These surpluses can and must be drawn upon for financing further investment. The enlargement of educational and training facilities that has already taken place and will proceed further in the third Plan will yield increasing returns in the years to come. The supply of entrepreneurial talent, managerial experience and skills is also on the increase.

It is emphasised that the problem of finding resources for a plan is not to be viewed as one of drawing upon some fixed or static pool. To an extent, resources grow as the economy develops. Despite the stresses and strains of the last few years, the progress that has been achieved provides the basis for a larger effort in the coming years. The vicious circle of poverty and low levels of saving and investment can be broken only by more effective mobilisation of potential resources and by a continuous channelling of the consequential gains in production into investment.

The Scheme of Financing

The scheme of financing the third Plan outlay in the public sector is given in the table below:

(Rs. crores)

	Second Plan	Third Plan
(1) Balance from revenues on the basis of existing taxation	(—) 100	350
(2) Contribution of the Railways on the existing basis	150*	150
(3) Surpluses of other public enterprises on the existing basis	†	440
(4) Loans from the public	800	850
(5) Small savings	380	550
(6) Provident funds, betterment levies, steel equalisation fund and miscellaneous capital receipts	213	510
(7) Additional taxation, including measures to increase the surpluses of public enterprises.	1,000	1,650
(8) Budgetary receipts corresponding to external assistance	982	2,200
(9) Deficit financing	1,175	550
Total ..	4,600	7,250

* Inclusive of increased fares and freights.
† Included in (1) above.

Additional Taxation

The fulfilment of the additional taxation target of Rs. 1,650 crores over the five year period is vital for the successful implementation of the Plan. Tax revenues in India now total about 8.5 per cent. of national income. With the normal increases in tax yields and with the additional taxation proposed for the third Plan, the proportion should go up to about 11 per cent. This cannot be considered an excessive increase in the tax burden when the developmental activities of Government are being rapidly accelerated. Nevertheless, an additional target of Rs. 1,650 crores will involve considerable tax effort on the part of the Central and State Governments, the share of the States being about one-third of the total.

The third Plan will necessitate increases both in direct and in indirect taxation, as also measures to raise the surpluses of public enterprises. As regards income and corporation taxes, further increases in yields will have to be sought mainly through a tightening of tax administration, watch on expense accounts of companies and other measures to check tax evasion. Indirect taxes and increases in the prices of products of public enterprises will no doubt tend to raise prices and cost to some extent, but this is part of the calculated sacrifices that have to be made.

Deficit Financing

A distinction is, however, made between the effect of indirect taxes as compared to that of deficit financing on prices. Indirect taxation "works off" the inflation potential by raising prices, deficit financing builds up the inflation potential further. Deficit financing is, therefore, proposed to be limited to Rs. 550 crores in the third Plan as against Rs. 1,175 crores in the second.

Foreign Exchange

The third Plan, with its emphasis on rapid industrialisation, would involve a considerable amount of foreign exchange expenditure. It is estimated that the direct foreign exchange component of the Plan will be of the order of Rs. 1,900 crores. In addition, it will be essential to provide for imports of about Rs. 200 crores worth of components, balancing equipment, etc., needed to increase the production of capital goods within the country. Thus, for the Plan and for imports of components, etc., foreign exchange of the order of Rs. 2,100 crores is needed.

The estimates made at this stage show that, even if the Plan requirements are not taken into account, the balance of payments position, because of the repayments of capital and payment of interest due in the third Plan period, would show a deficit of Rs. 500 crores. The requirements of foreign exchange in the third Plan period would thus come to Rs. 2,600 crores. To this total of Rs. 2,600 crores have to be added the estimated receipts of Rs. 600 crores by way of P.L. 480 commodity assistance from the U.S.A. On this basis, the total balance of payments deficit for the third Plan would come to about Rs. 3,200 crores.

As to the prospects of securing external assistance of the order required, no prediction can be made. The Plan will have to be flexible and the commitments in regard to foreign exchange expenditure will have to be made only on the basis of external resources that are clearly in sight. The fact that the commencement and execution of projects both in the public and private sectors will depend upon the external assistance that is forthcoming highlights the need for keeping ready, well in advance, a sufficient number of projects that can be executed as soon as the necessary foreign exchange has been secured. Any delay in utilising the external assistance offered cannot but upset the schedule for increased production during and by the end of the third Plan period.

The balance of payments difficulties the country is facing are not a temporary or fortuitous phenomenon. They are part and parcel of the process of development. For a period, the excess import requirements have to be met from external assistance. But it is important to aim at a progressive reduction in the imbalance, so as to eliminate it within a foreseeable period. This is not to suggest that no inflow of resources from abroad would be desirable after this period. Commercial capital inflows can and should continue, but the reliance on special aid programmes has to

GOVERNMENT OF INDIA

3½ PER CENT. BONDS 1966

ISSUE PRICE RS. 99.75 PER RS. 100 (NOMINAL). REPAYABLE ON 18th JULY 1966.

4 PER CENT. LOAN 1980

ISSUE PRICE RS. 99.90 PER RS. 100 (NOMINAL). REPAYABLE ON 18th JULY 1980.

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 175 crores (approximately). Subscriptions may be in the form of (i) cash/cheque or (ii) securities of the 2½ per cent. Loan 1960 or 4 per cent. Loan 1960-70 or 2¼ per cent. Hyderabad Loan 1955-60, which will be accepted for conversion at the following rates :—

2½ per cent. Loan 1960 .. .. *Rs. 100 for Rs. 100 (Nominal)*
4 per cent. Loan 1960-70 .. .. Rs. 100.30 for Rs. 100 (Nominal)
2¼ per cent. Hyderabad Loan 1955-60 .. .. .. Rs. 84.75 for Rs. 85.71 or O.S. Rs. 100 (Nominal)

Interest will be paid on the 2½ per cent. Loan 1960, 4 per cent. Loan 1960-70 and 2¼ per cent. Hyderabad Loan 1955-60 tendered for conversion up to 17th July 1960 inclusive.

The new bonds and loan will bear interest from 18th July 1960. Interest will be payable half-yearly on 18th January and 18th July.

Subscription lists will open on 18th July 1960 and close on 20th July 1960 or earlier without notice.

Applications for the bonds and loan will be received at:—

(a) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
(b) Branches of the State Bank of Hyderabad conducting Government business and those at Mancherial, Nagarjunasagar, Purli Vaijnath and Sailu;
(c) Branches of the State Bank of Mysore in the State of Mysore except at Bangalore, Mangalore and Gulbarga; and
(d) Branches of the State Bank of India at Mangalore and in other places in India, except at the places mentioned in (a), (b) and (c) above.

For full particulars apply to any of these offices or branches or treasuries.

THE MYSORE SUGAR COMPANY, LTD.

SPEECH OF CHAIRMAN, MR. B. M. KRISHNAN, AT ANNUAL GENERAL MEETING

ADEQUATE REHABILITATION ALLOWANCE FOR SUGAR INDUSTRY URGED

THE Twenty-sixth Annual General Meeting of the Mysore Sugar Company, Limited, was held at the Registered Office of the Company at Bangalore on Tuesday, 28th June 1960, under the chairmanship of Mr. B. M. Krishnan, I.A.S. (Retd.), Chairman and Managing Director of the Company. Moving the adoption of the report and the accounts, the Chairman made the following speech at the meeting:

"GENTLEMEN,

"It gives me great pleasure to welcome you to this the twenty-sixth annual general meeting of the shareholders of the Mysore Sugar Company, Limited. Copies of the Directors' report and the audited statements of accounts for the year ended 30th June 1959 have already been circulated to you in advance and I shall, with your permission, take them as read. You will notice that the pattern of presentation of accounts has been slightly modified so as to show separately and at a glance the financial results of working of the different lines of activities of the Company.

"A word of explanation is perhaps due for the delay in convening this meeting which should, in the ordinary course, have been held before 31st March 1960. This has been due to reasons beyond the control of your Directors. The audit of the Company's accounts by the officers of the Commercial Audit Department took more time than was anticipated and the final comments of the Comptroller and Auditor-General on our accounts, which a Government company is required to publish along with its accounts, were received only in the middle of May 1960. The meeting could not, therefore, be convened earlier. Since the audit comments are published, your Directors have thought it advisable to publish their replies also for the information of shareholders.

Sugar Stocks Decline

"The downward trend in the country's sugar production, which set in during the 1957-58 season, continued during 1958-59 also, and production declined to 19.18 lakh tons, in spite of an increase in the number of factories. In the face of the increasing demand for sugar, the unsatisfactory production, which was mainly due to inadequacy of cane supplies to factories, led to a tightening of control measures. The result is that the responsibility for distribution of sugar and for regulating its price at various levels has once again passed on to the State Governments. With the fall in production, the programme for export of sugar for earning foreign exchange received a setback and the original export quota of 1,00,000 tons had to be drastically cut to a nominal 12,500 tons. How precarious the position was could be gauged from the fact that the carryover stock at the end of the 1958-59 season had come down to about 1½ lakh tons, as against 4 to 5 lakh tons usually held by factories at the end of every season.

"As against the above discouraging picture, it is gratifying to note that the performance of the industry during the current season has shown a remarkable improvement, with production reaching 24 lakh tons, which is nearly 5 lakh tons more than what it was in the previous year. This has been possible largely because of the incentives given to the industry in the new sugar policy announced by the Government of India on 25th October 1959. Under this new policy, the price of sugarcane has been raised by three annas a maund and factories which show an increased production are given a rebate of 50 per cent. in the basic excise duty on that part of the production which is in excess of the average of the preceding two seasons. The higher production has enabled the authorities to raise the level of monthly release for consumption and, consequently, the supply position is now eased. The country can now be said to have turned the corner in regard to its sugar position in respect of production and, given the proper incentives, there is no doubt that production will rise further in the coming season and thus pave the way for an early decontrol of sugar.

"The target of 22½ lakh tons of sugar fixed for the second Five-year Plan has been proved to be not too ambitious under the conditions now obtaining and a much higher target of 30 lakh tons has been envisaged for the third Plan. In order to achieve this, the Government of India propose licensing additional capacity. This opportunity has been seized by us to revive the pending expansion programme of our factory at Mandya. After a thorough examination of the cane potential of the Mandya area and taking into consideration the several advantages we already possess, your Directors have formulated a scheme for achieving an overall crushing capacity of 4,000 tons of cane per day. This scheme envisages stepping up the capacity of the Mandya factory to 3,000 tons, partly by rehabilitation and partly by expansion, and transferring the remaining capacity of 1,000 tons to a branch unit to be set up in the Maddur region. Necessary applications for licences under the Industries (Development and Regulation) Act have been submitted to the Government of India and the matter is under their active consideration. In regard to Mandya unit, we have already been asked by them to formulate definite proposals to procure the units necessary for expansion from manufacturing sources available in India and the matter is receiving urgent attention.

"With its existing seven factories, Mysore is currently self-sufficient in sugar on the basis of the present controlled system of distribution. According to my information, at least two factories, including our own, wish to expand and about half a dozen new factories are also likely to come up in the co-operative sector. When all these factories go into production before the end of the third Plan, Mysore State will not only become fully self-sufficient but may well be faced with a surplus, the disposal of which is likely to create a problem, especially when every other State in South India has plans for starting new factories. In these circumstances, it becomes necessary to guard against an uncoordinated overall expansion of the sugar industry in South India, which may soon cease to be a deficit region.

Tariff Commission's Report

"A matter of significance to the industry has been the publication recently of the report of the Tariff Commission which had gone into the cost structure of sugar and the claim of the industry for a suitable allowance in the sugar price on account of rehabilitation of plant and machinery. The main recommendations of the Commission, which have been accepted by the Government, fall short of expectations and have naturally given cause for concern. A return of 12 per cent. on capital employed, to meet a variety of commitments like bonus and gratuity to workers, directors' remuneration, interest on borrowed capital, taxation, and, finally, dividend to shareholders, can hardly be considered adequate in the sugar industry. On the burning question of rehabilitation allowance, the Commission has expressed itself against inclusion of any element of rehabilitation allowance in sugar price on a uniform basis. In my address to you last year I had stated at length the problem of rehabilitation of sugar plant, which is of recent origin so far as our industry is concerned, and I do not wish to cover the same ground again. Suffice it to say that the need for rehabilitation has now been well recognised and has also received judicial support. It is too late in the day to argue that rehabilitation should be met from normal depreciation or other extraneous sources. This is a matter which is of vital importance to the future of sugar industry and calls for reconsideration, especially as it has a vital bearing on the price linking formula. On the question of the share of the cane growers in the price of sugar, for purposes of application of the price linking formula prescribed by the Government of India for the 1958-59 season, which was the origin of the reference to the Tariff Commission, the Commission has not thrown any light. Our plea has been that the percentage share of sugar price to be passed on to growers under the formula needs to be revised after giving credit for adequate rehabilitation allowance in the sugar cost. It now remains to be seen in what way the formula will be modified having regard to the ever-expanding needs of the industry.

Company's Working

"I shall now deal with the working of your Company. From the report and accounts in your hands, you would have seen that the Company had another year of successful working. Production of sugar in our Mandya factory during 1958-59 came to 35,771 tons which is 3,749 tons less than the peak production of 39,520 tons recorded in the previous year. The quantity of cane actually crushed was 3,48,814 tons, while the percentage of sugar recovery was 10.24. The corresponding figures for the previous season were 3,79,545 tons and 10.40 per cent., respectively. The duration of the season was also shorter, being 217 days, as against 239 days for which the factory worked in 1957-58. The fall under these heads accounts for the drop in production. However, the quantity of sugar sold was more than that in any previous year and the total value realised was also the highest.

"As in previous years, the statutory price of sugarcane continued to be Re. 1.44 per maund (Rs. 39.20 per ton) for delivery at the factory gate. Over and above this price, suppliers are eligible for a deferred price calculated according to the price linking formula. Although the 1958-59 season closed a year ago, the decisive 'X' factor in the formula is yet to be announced in its final form. Consequently, it was a problem how to close our financial accounts for the relevant year. Pending assessment of the exact liability on this account, an assumed figure, based on a rough calculation, has been provided for and debited in the accounts, which will admit of payment of additional price upto about Rs. 5 per ton. The additional price of Rs. 3 per ton paid for the previous year's supplies did not satisfy the cane growers and, after reconsideration, a further payment of Re. 1.20 per ton was made in June 1959, raising the additional price from Rs. 3 to Rs. 4.20 per ton. The cost of this extra payment amounting to Rs. 4,50,890 has been absorbed in the accounts of the year under review.

Financial Results

"The financial results of the year's operations have resulted in a net profit of Rs. 6,54,699 after making adequate provisions for depreciation and development rebate, taxation and rehabilitation. This is almost on par with the net profit of Rs. 6,87,575 reported in the previous year, although there has been a sizable drop in the gross profits from Rs. 45,70,846 to Rs. 31,89,054. The decline in earnings is to be attributed mainly to the rise in sugar manufacturing costs, resulting from lower percentage of sugar recovery, and increased costs on account of items like additional cane price, salaries and wages. Another important factor that is responsible for the fall in profits is that, against the year's profit, a loss of Rs. 3,37,688 had to be set off incurred on the disposal, during the year under review, of our export quota of 1,000.3 tons of sugar released out of the 1957-58 season's production, in terms of the Sugar Export Promotion Act, 1958.

"As shareholders are aware, the procedure relating to payment of dividend has been radically altered by the Finance Act, 1959, under which income-tax is to be deducted at source out of the dividend declared and the system of grossing up of dividend by shareholders is discontinued. In the altered circumstances, it has become necessary to make a departure from our normal practice of declaring a 20 per cent. dividend—a practice which your Company has consistently followed during the last two decades. After careful consideration, your Directors have decided to raise the dividend for 1958-59 to 30 per cent., subject to deduction of tax, so that shareholders may be compensated for the loss arising from the abolition of grossing and may receive a net return which is a little more than what they have been accustomed to get in the past. Consequent on the unavoidable delay that has occurred in convening the General Meeting, your Directors have, in anticipation of your approval, already paid the dividend recommended by them, treating it as an interim dividend. This will now have to be confirmed as the final dividend for the year.

Amenities to Labour

"Efforts in the direction of affording greater amenities to labour and of promoting better labour-relationship continue to be made by your Company. During the year under report, the second phase of the Swarnasandra housing colony was completed by the Labour Housing Board under which 116 tenements were made available for occupation, in addition to the 496 houses built under the first phase a few years ago. Another block of 184 houses is nearing completion. Our employees pay only 50 per cent. of the prescribed rent for these houses, the remaining 50 per cent. being met by the Company as a subsidy. The policy of issue of foodgrains on subsidised basis is also being continued. The Company's high school, where free education is imparted to the children of employees and cane growers, is being steadily expanded and a new high school building at a cost of nearly Rs. 3 lakhs is now under construction.

"The agitation for additional bonus, which has now become an annual feature, was repeated in respect of the year 1957-58. Contrary to the accepted principle of settling industrial disputes by arbitration, the management's offer to refer the issue to arbitration was turned down by labour which persisted in its demand and threatened a strike. Your Directors finally agreed to grant an additional bonus of two months' pay as Silver Jubilee bonus, over and above the bonus of four months' pay already paid. The problem of bonus to employees in the sugar industry is somewhat complicated. Here, the cane growers, who constitute an integral part of the industry, also come in for a share of profits and the usual bonus formula for determining the surplus profit available for grant of bonus to workers cannot be automatically applied in our case. There is as yet no authoritative formula for determining the relative claims of cane growers and workers for bonus and we look forward to some guidance, on this important issue, from the Central Wage Board for the Sugar Industry which is examining the question of the principles on which bonus is to be granted in the sugar industry.

"The proposal for utilisation of bagasse obtained in our sugar factory for the manufacture of superior quality paper under the auspices of the Mandya National Paper Mills Ltd. has materialised and it is expected that the Paper Mills would go into production by about the middle of next year. Under a thirty-three year agreement entered into between your Company and the Mandya National Paper Mills Limited on 21st September 1959, we have agreed to release our bagasse for paper manufacture in exchange for coal of equivalent calorific value to be supplied by the Paper Mills for being used as substitute fuel in our factory boilers, in addition to royalty. In pursuance of this understanding, action is being taken to install a large multi-fuel boiler in our factory at a cost of nearly Rs. 18 lakhs, of which a small portion amounting to about 10 per cent. will be contributed by the Paper Mills. As a gesture of our goodwill towards the new undertaking, your Company has subscribed for shares of the value of about Rs. 4 lakhs in the Paper Mills and the latter has reciprocated by providing a place for one of our nominees on its directorate.

Cellulose Acetate Project

"You may recall that, in my speech last year, I had referred to the problem of our large alcohol potential and had posed the question why we should not embark on some useful and remunerative schemes of development which would solve our alcohol problem, on the lines indicated in the report of the Alcohol Committee. I am very happy to announce that your Directors have now under active consideration a scheme for the establishment of a new industry at Mandya designed to manufacture cellulose acetate flakes and moulding powders. They are advised that this is a promising line of manufacture, for which there is bound to be great demand from the growing plastics and raw film industry in our country. The Government of India have promised to grant a licence, provided certain conditions are fulfilled, and we are almost at the stage of finalising our efforts very early when we will be moving the Central Government for the final licence. This will be a major project involving heavy capital outlay and calling for foreign collaboration, both on the financial and technical sides. Negotiations with certain foreign firms who have taken a lively interest in the proposal are in progress and there is every possibility of our being able to secure excellent foreign collaboration for this new venture.

"Let me also mention another line of development that is finalised. We have a well-equipped workshop attached to our factory and its present operations are confined to maintaining the sugar machinery in an efficient condition. We are advised that it has potentialities to do something more and, therefore, we have obtained from the Government of India a licence to work it as a unit for manufacturing chemical plant and machinery. We hope to reorganise the workshop as a manufacturing unit very early.

"Golden Syrup"

"There is yet another line of expansion which I should place before you, though it may appear to be inconsequential against the background of our activities connected with the manufacture of sugar and alcohol. I refer to our excellent product which is already familiar to you all in the name of 'Golden Syrup'. It has all along been a showpiece and presentation article. With the stoppage of imports, it has assumed significance in the consumers' market. Negotiations have, therefore, been completed to put it on the all-India market through the good offices of Messrs. Spencer & Co. Ltd. A resolution to approve the deal is before you. May I add that this may, though in a small way, be a product that could be exported to earn foreign exchange which the country is in dire need at present.

"From what I have already said, you will appreciate that we are on the eve of embarking upon a number of development schemes calculated to achieve a many-sided expansion of our activities which will put Mandya prominently on the industrial map of India. In the first place, there is the proposal for expansion of our sugar plant and for starting a branch factory designed to secure an overall crushing capacity of 4,000 tons of cane per day and double the present production by nearly 35,000 tons of sugar. The scheme for conversion of our bagasse into paper is well under way and, though this industry is not sponsored and run by us, we will still be closely associated with it. By far the most important scheme which we have under consideration is the project for manufacture of cellulose acetate based on our alcohol. Detailed project report for the scheme is now under preparation by experts. Closely allied to this project is a proposal for further expansion of our distillery so as not only to take care of the anticipated increased production of molasses but also to provide the basic raw material for the proposed new industry.

Financial Resources

"The implementation of the above schemes of expansion and new projects naturally call for large financial resources. While your Company undoubtedly enjoys high credit and can raise funds by borrowing, the magnitude of the capital that would be needed for the cellulose acetate project would necessitate our going to the capital market for raising fresh capital. Details in regard to this matter are yet to be finalised and I am, therefore, not in a position to say anything at this stage. There is also the pending question of reorganisation of the capital structure. Certain definite proposals in this behalf have been submitted by your Directors to the Government of Mysore who hold majority share interests in our Company and, if these are concurred in by them, action will be taken to implement them as soon as possible.

"In my speech last year, I referred to the proposal for celebrating the Silver Jubilee of the Company. A committee consisting of all interests connected with the Company has since made certain proposals calculated to benefit not only the employees of the Company but also the shareholders and cane growers. The proposals cover a wide range of schemes of a beneficial nature such as construction of hospital, maternity home, high schools and a community hall and grant of weightage increments to employees, institution of Silver Jubilee gold medals under the auspices of the Mysore University, issue of bonus shares and grant of token bonus to the large body of cane growers. Your Directors have generally accepted the proposals and the question of implementing the same in a phased manner, consistent with the financial resources of the Company, is now under the consideration of your Directors. In fact, some items in the proposed programme have already been covered, like grant of Silver Jubilee bonus to staff and employees and presentation of Silver Jubilee wallets to shareholders and others connected with the working of the Company.

"Before I conclude, it is my pleasant duty to acknowledge the valuable assistance and co-operation received by me from my colleagues on the Board. The employees of the Company, from the General Manager downwards, have all continued to serve the Company loyally and efficiently and thanks of the management are due to them. The Company is also thankful to the large body of cane growers from whom it has received unstinted co-operation. Above all, the Company is grateful to the Government of Mysore for their continued solicitude towards it."

The report and accounts for the year 1958-59 were adopted and the interim dividend of 30 per cent., subject to tax, already paid, was confirmed as the final dividend for the year. The retiring Directors, Mr. H. K. Veeranna Gowdh and Mr. L. Siddappa, were re-elected unopposed. The meeting also accorded its consent to the appointment of Messrs. Spencer & Co. Ltd., Madras, as sole agents for the sale of Golden Syrup for a period of three years.

With a vote of thanks to the chair, the meeting terminated.

H. MAHARUDRIAH,
Secretary.

BANGALORE, *Dated 29th June* 1960.

Notices

THE TATA OIL MILLS COMPANY LIMITED, BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FORTY-SECOND ANNUAL GENERAL MEETING of THE TATA OIL MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay, on Tuesday, the 2nd August, 1960 at 4-30 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and audited Profit and Loss Account and Balance Sheet for the year ended 31st March 1960.

(2) To declare dividends on Preference and Ordinary Shares.

(3) To appoint a Director in place of Mr. A. D. Shroff who retires by rotation and is eligible for re-appointment, and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto, as prescribed by Section 173 of the said Act;

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. A. D. Shroff who retires by rotation and is eligible for re-appointment, and who is a director, officer, member and an associate of Tata Industries Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint an ex-officio and a special director to the Board) be and is hereby re-appointed a Director of the Company."

The reasons which make the above resolution necessary are more fully set out in the Explanatory Statement referred to above which Explanatory Statement for the purpose of Section 261 shall be deemed to be incorporated in this Notice.

(4) To appoint a Director in place of Mr. F. H. Kemple who retires by rotation under Article 151 of the Company's Articles of Association and is eligible for re-appointment.

(5) To appoint Auditors and to fix their remuneration.

Notes:—(a) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under item No. 3 set out above, is annexed hereto.

(b) *A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.*

(c) The Transfer Books of the Company will be closed from Monday, the 20th June 1960 to Friday, the 15th July 1960, both days inclusive.

(d) If dividends on shares as recommended by the Directors are passed at the meeting, payment of such dividends will be made at the State Bank of India, on and after 3rd August 1960, to those members whose names are on the Company's register on 15th July 1960.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
P. A. NARIELWALA,
Director.

BOMBAY, *27th June*, 1960.

Explanatory Statement as required by Section 173 of the Companies Act, 1956

The following Explanatory Statement as required by Section 173 of the Companies Act, 1956, sets out all material facts relating to the special business under item No. 3 mentioned in the Notice dated 27th June 1960:

Mr. A. D. Shroff is a Director of the Company who retires by rotation and is eligible for re-appointment. A special notice has been received from some members as required by Sections 190 and 261 of the Companies Act, 1956, proposing the re-appointment of Mr. A. D. Shroff as a Director in accordance with the provisions of Section 261. As set out in the special notice received by the Company, the reasons which make the above resolution necessary are as follows:—

The Managing Agents of the Company, Tata Industries Private Ltd., are authorised by the Articles of Association and the Managing Agency Agreement to appoint an ex-officio and a special director to the Board. Since Mr. A. D. Shroff is a director, officer, member and an associate of the Managing Agents, his appointment as a Director of the Company, who retires by rotation, can be made only by a Special Resolution of the Company in terms of Section 261 of the Companies Act, 1956. Mr. A. D. Shroff joined the Board on 18th March 1938 and has for the last several years been associated, as one of the Directors of the Managing Agents, with the management of the affairs of the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a Member of the Board, it is desirable that he be re-appointed a Director.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
P. A. NARIELWALA,
Director.

BOMBAY, *27th June*, 1960.

BHARTIA ELECTRIC STEEL COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-first Annual General Meeting of the Shareholders of Bhartia Electric Steel Company, Ltd., will be held on Tuesday, the 26th July, 1960, at 4 p.m. at the registered office of the Company at 4 Old Court House Street, Calcutta-1, to transact the following businesses:—

1. To receive, consider and adopt Directors' Report and the Audited Profit and Loss Account of the Company for the year ended 31st December, 1959 and the Balance Sheet as on that date and the Auditors' Report thereon.
2. To declare dividend.
3. To appoint Directors in place of Shri R. L. Bhartia and Shri P. R. Bagri, who being longest in office retire by rotation but being eligible for re-appointment, offer themselves for re-appointment.
4. To appoint Auditors for the year 1960 and to fix their remuneration.
5. To consider re-appointment of Shri R. L. Tantia who, having been appointed in the course of the year, ceases to be a Director as per Section 260 of the Companies Act, 1956.
6. To consider and, if thought fit, to pass with or without modification the following resolutions:—

As Special Resolutions:

(1) "Resolved that the words 'ordinary share' wherever appearing in the Memorandum, Articles of Association, Share Certificates issued by the Company or elsewhere be and are hereby substituted by the words 'equity share.'"

(2) "Resolved that the name of Shri Rameshwar Lal Tantia which was omitted due to inadvertence, be inserted after the name of Shri Prem Ratna Bagri in Article 90 of the Articles of Association of the Company, as adopted by special resolution on 30th November, 1959, and it be deemed that the name of Shri R. L. Tantia was there on the date of adoption of the said Articles."

EXPLANATORY STATEMENT

Item No. 6(1)

The Companies Act, 1956 as stated in Section 85 thereof provides for only two kinds of share capital, viz. preference share capital and equity share capital. The ordinary shares of the Company are the equity shares and it is therefore necessary to term the ordinary shares in accordance with the provisions of the Companies Act. It is proposed to replace the word 'ordinary' by the word 'equity' in the Memorandum of Association, Articles of Association of the Company and also in the Share Certificates of the Company or elsewhere wherever it appears.

Item No. 6(2)

Shri R. L. Tantia has been appointed an additional Director of the Company with effect from 12th November, 1959. But in the Articles of Association of the Company adopted by the shareholders by a special resolution passed on the 30th November, 1959, the name of Shri Rameshwar Lal Tantia was inadvertently omitted while printing from Article 90. It is necessary that the said printing mistake be corrected.

Directors' Interest

The Directors of the Company have no interest in the aforesaid resolutions except as will appear from the said resolutions.

Note:—1. The Regiser of Members and Share Transfer Books of the Company will be closed from 12th July to 26th July, 1960, both days inclusive.

2. A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER OF THE COMPANY.

By Order of the Board,
N. K. SARAF,
Secretary.

4, OLD COURT HOUSE STREET, CALCUTTA-1,
Dated the 21st June, 1960.

THE BENGAL PAPER MILL CO., LTD.

NOTICE

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the one hundred and thirty-sixth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, the 28th July 1960, at noon, to consider the Accounts of the Company for the year ended 31st December, 1959 and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 11th July 1960 to 28th July 1960, both days inclusive.

By Order of the Board,

THE BENGAL PAPER MILL CO., LTD.,
H. P. DHANUKA,
Director.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *4th July* 1960.

Note.—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

To

THE SHAREHOLDERS.

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the shareholders of the Company will be held on Saturday, the 6th August 1960, at 4 p.m. at the Factory of the Company at Hospet to consider, and if thought fit, to pass the following Resolutions, with or without modifications:—

As Ordinary Resolution:

RESOLVED that the draft of the proposed Agreement with the Managing Agents approved by the Central Government (Ministry of Commerce and Industry, Department of Company Law Administration, Government of India), New Delhi, in its letter No. 9 (227)-C. III/59, dated 11th April 1960 now placed before the meeting and signed by the Chairman for purposes of identification be and is hereby approved and RESOLVED FURTHER that the Directors be and are hereby authorised to have the said Agreement duly executed for and on behalf of the Company.

As Special Resolutions:

1. RESOLVED as a Special Resolution that the Memorandum of Association of the Company be and is hereby altered as follows:—

   In place of the existing clause 2 of the Memorandum of Association of the Company the following clause be and is hereby substituted:—

   "The Registered Office of the Company will be situated in the Mysore State."

2. RESOLVED as a Special Resolution that the Registered Office of the Company now situated in the City of Madras in Madras State shall stand removed to Bangalore City in Mysore State.

You are requested to attend the meeting in person or by proxy. You may appoint one or more proxies and your proxy need not be a member of the Company. Forms appointing proxies may be filed with the Company at its Registered Office by 4 p.m. on the 4th August 1960.

By Order of the Board,

FOR THE INDIA SUGARS AND REFINERIES LTD.,
S. ABDUL WAJID,
Chairman.

MADRAS. *Dated 20th June* 1960.

THE INDIA SUGARS AND REFINERIES LIMITED

5, DEENADAYALU STREET, MADRAS-17.

To

THE SHAREHOLDERS.

DEAR SIR/MADAM,

Extraordinary General Meeting to be Held on Saturday the 6th August 1960.
Explanatory Note in Accordance With Section 173 of the Companies Act, 1956

ORDINARY RESOLUTION

At the Extraordinary General Meeting of the shareholders of the Company held on 9th January 1960, the members accorded their consent to the reappointment of the India Sugar Agencies Private Ltd., as Managing Agents, subject to the approval being obtained from the Central Government. It was then explained to the members that Resolution 2 given notice of for that meeting, authorising the Directors to execute the Managing Agency Agreement be deferred, pending receipt of the sanction of the Central Government.

We have now received sanction of the Central Government for the reappointment of the Managing Agents, the India Sugar Agencies Private Ltd., and the principal terms of the draft Agreement to be entered into with them are enumerated below:

(i) *Period of appointment*: Five years from the 16th August, 1960.

(ii) *Remuneration*: The remuneration payable to the Managing Agents will be in accordance with following scale of commission on the net profits of our Company computed in the manner laid down in Sections 349 to 351 of the Companies Act, 1956, subject to a minimum remuneration of Rs. 30,000 per annum (Rupees Thirty thousand only per annum) in the event of absence or inadequacy of profits in any one year, namely:—

(a) 10 per cent on the first Rs. 10 lakhs or fraction thereof;

(b) 9 per cent on the next Rs. 10 lakhs or fraction thereof;

(c) 8 per cent on the next Rs. 10 lakhs or fraction thereof;

(d) 7 per cent on the next Rs. 10 lakhs or fraction thereof;

(e) 6 per cent on the next Rs. 10 lakhs or fraction thereof;

(f) 5½ per cent on the next Rs. 25 lakhs or fraction thereof;

(g) 5 per cent on the next Rs. 25 lakhs or fraction thereof;

(h) 4 per cent on any sum over one crore of rupees.

As required by Section 302 of the Companies Act, 1956, an abstract of the proposed agreement and memorandum specifying the concern and interest of Directors has been sent to members.

Sri M. R. Morarka, Director of the Company, is interested, being the Managing Director and member of the India Sugar Agencies Private Ltd. Out of the total of 15,000 Equity shares of Rs. 10 each of the India Sugar Agencies Private Ltd., Sri M. R. Morarka holds 750 shares.

Sri Ratanlal Morarka is interested, being the Director and member of the India Sugar Agencies Private Ltd. Out of the total of 15,000 Equity shares of Rs. 10 each, Sri Ratanlal Morarka holds 600 shares.

A copy of the draft Managing Agency Agreement is available for inspection at the Registered Office of the Company and at the Factory at Hospet on all working days other than Saturdays between the hours 3 p.m. and 5 p.m. and between the hours 10 a.m. and 12 noon on Saturdays.

SPECIAL RESOLUTIONS 1 AND 2.

After the reorganisation of the States, Hospet Town, where the Company's Factory is situated, has come within the territorial jurisdiction of Mysore State. Consequently the larger part of Company's work with the Government Departments will be with the Mysore State Government at Bangalore. It is considered advantageous to locate the Registered Office of the Company also at Bangalore in Mysore State so that closer contact can be had with the Factory and also for efficient and economic administration of the Company's affairs. Hence these two Special Resolutions are placed before the Company in General Meeting.

The first Special Resolution will require confirmation of Court before it becomes effective as it involves an alteration of the Memorandum of Association of the Company. The second Special Resolution, if passed, can therefore be given effect to only after such confirmation is obtained.

By Order of the Board,

FOR THE INDIA SUGARS AND REFINERIES LTD.,
S. ABDUL WAJID,
Chairman.

MADRAS, *Dated 20th June* 1960.

DRAFT OUTLINE OF THE THIRD PLAN

(*Concluded from page 79*)

be steadily reduced and after a period of years dispensed with.

Private Investment

Investment in the private sector covers not only organised industry, mining, electricity and transport, but also large and dispersed fields like agriculture, village and small industries, rural and urban housing, etc. The following table sets out the likely levels of investment in the private sector in the second and third Plans:

(Rs. crores)

	*Second Plan**	*Third Plan**
Agriculture (including irrigation)	675	850
Power	40	50
Transport	135	200
Village and small industries	225	325
Large and medium industry and minerals ..	700	1,050
Housing and other construction	1,000	1,125
Inventories	525	600
Total ..	3,300*	4,200*

* Inclusive of Rs. 200 crores transferred from the public sector by way of assistance.

The third Plan envisages a substantial step up in private investment mainly in the field of large and medium industries—from Rs. 700 crores in the second Plan to Rs. 1,050 crores in the third Plan. Increased investments in the other sectors are relatively small and it is assumed that they be financed from their normal sources which include savings by agriculturists, by those engaged in arts and crafts and in trade in small industries.

Under the Plan, there is a considerable scope for the private sector in the industrial sphere. This is due in the main to the wide opportunities provided by the expansion of the economy under the impact of successive Five-year Plans. One of the main objectives of policy is that the opportunities which thus arise for private enterprise should be availed of by a large number of comparatively small and middle *entrepreneurs* and that possible trends towards concentration of economic power should be checked in the early stages.

TEXTILES

(*Concluded from page 60*)

D.A. as provided for by the Coimbatore New Mills Award. The new mills are defined as mills covered by the Ramaswami Gownder State Tribunal's Award and such other mills as have accepted that Award in regard to wages and D.A. which are paid on a phased programme.

Questions connected with rationalisation, as well as the basis for distribution of gains of rationalisation, as recommended by the Wage Board, will be referred to three regional bipartite committees for Madras, Coimbatore and Madurai regions.

The above agreement is expected to benefit over 105,000 workers out of the 120,000 workers employed in about 130 mills in Madras State. It has been roughly computed that the immediate liability to the textile industry in the State as a result of the agreement will be an expenditure of Rs. 48 lakhs towards arrears of basic wages and a recurring additional monthly liability of Rs. 10 lakhs.

The Buckingham and Carnatic Mills, which employs about 15,000 workers, has, however, expressed its inability to accept the terms of the agreement. The management of the mills wants that the extra allowance which it has been paying over and above other mills should be set off in the increase now envisaged, while the spokesmen for labour say that the workers are entitled to the increase in addition to the existing privileges.

In view of the agreement thus reached, the contemplated strike by workers from the 15th inst. will not materialise. The strike call, it will be recalled, had been given by the All-India Trade Union Congress (Communists) and the *Hind Mazdoor Sabha* (Socialists).

Three days after the above agreement was signed, the Uttar Pradesh Labour Tripartite Conference, held at Naini Tal on the 3rd inst., unanimously agreed to grant a wage increase of Rs. 6 per month in Kanpur and Saharanpur and Rs. 8 in Modinagar with retrospective effect from 1st January 1960. The increased wages from January to June are to be paid in monthly instalments spread over the remaining six months. The total additional annual liability is put at Rs. 40 lakhs. The issue of wage increase in the other non-Kanpur mills, the question of rationalisation and other allied matters have been referred to the U.P. Chief Minister, Dr. Sampurnanand, for arbitration.

COTTON TEXTILE INCENTIVE SCHEME

The Cotton Textile Incentive Scheme has been extended upto 31st March 1961. The Scheme was introduced in October 1958 and provides for the grant of licences for the import of coal-tar dyes, textile chemicals and gums against the exports of cotton textiles and handloom fabrics by mills and handloom co-operatives.

As a measure of further incentive to export promotion, the rate of import entitlements in the case of exported handloom and hand printed fabrics have been raised with effect from 1st April this year—from Rs. 10 to Rs. 15 for every one hundred yards of handloom and hand printed fabrics exported. As regards exports by weight, the rise will be from Rs. 7.50 to Rs. 10 per pound. In the case of mills earning import entitlements under the Incentive Scheme, the Government has decided to relax on merits the face value and other restrictions in regard to import of certain types of dyes. While applying to the Textile Commissioner for import entitlements, the mills should specifically state what relaxations are required by them. The relaxation will not, however, apply to dyes which are now banned for import and will be subject to the condition that the dyes and chemicals so imported shall be utilised by the mills only for their own consumption and not sold to anybody else.

The basic period for calculating the import entitlements of mills, which have newly entered the export field, has been fixed as 1st July 1959—30th June 1960, or Rs. 2,000 per loom, whichever is higher.

The Government of India has decided to extend to screen printed furnishing fabrics, the procedure under Rule 191-A of the Central Excise Rules, 1944, for export out of India of articles under claims for rebate of duty on the excisable goods used in their manufacture. This procedure is already applicable to ready-made apparel, tents, sugar products, cotton bags, umbrellas, chaddars, pillow cases, table covers and several other articles. The Government has also decided to permit the manufacture in bond of screen printed furnishing fabrics for the purpose of export, under Rule 191-B of the abovementioned rules. For further information, the manufacturers of these fabrics who wish to export them out of India under these procedures are required to contact the Collectors of Central Excise in whose jurisdiction their factory is situated.

MONEY STILL IN GOOD DEMAND

(From Our Own Correspondent)

BOMBAY, 6th *July*

Stringency in the short-term money market continues. One thought that after the turn of the half-year at least there would be some signs of the customary slack season. But this has not materialised. Although a few banks say that some money is returning from the mofussil centres, the momentum of such influx is not large enough to make any significant impression on the state of the market. Most of the banks are still short of funds in relation to the current demand for credit. Further, a feeling is growing among them that the next busy season would witness extremely tight conditions. Accordingly, none of them is eager to lower the rates of interest on deposits, not even for such extremely short-term deposits as one week house money or one month's deposit. Even inter-bank call money is unchanged at 2¾ per cent., not to mention the other rates, which are all at the ceiling under the inter-bank agreement on deposits. Thus, house-money at seven days' notice is quoted at 3¼-3½ per cent. and one to six months deposits at 3¼ to 3½ per cent.

The 91-day Treasury Bill rate, too, is unaltered at 2.745 per cent. per annum—a rate that has stayed put since 3rd May 1960. The invitation was for Rs. 2 crores and the amount offered also was exactly the same, suggesting that these Bills are being supported only by special sources. There were no sales of 91-days intermediate Treasury Bills during the period from 29th June to 2nd July 1960. Although the Central Government's new loans have been announced, the authorities have not thought it necessary to discontinue the sale of Treasury Bills, both the intermediates and those under weekly tenders.

There has been a further, albeit small, fall in notes in circulation. The Reserve Bank's statement for the week ended 1st July 1960 shows a decline of Rs. 1.47 crores, as against Rs. 23.20 crores in the previous week. As this has been accompanied by a fall of Rs. 8.11 crores in notes held in the Banking Department, the total notes issued show a fall of Rs. 9.57 crores during the week under review. This decline has been balanced on the assets side by a cancellation of Rs. 10 crores in rupee securities, against which there has been a rise of Rs. 42.40 lakhs in rupee coin. There is no change in foreign securities, but since the balances held abroad in the Banking Department show a small fall of Rs. 88.00 lakhs, the total of foreign assets is down at Rs. 156.59 crores. There is a sizable fall of Rs. 7.74 crores in the deposits of the Central Government, but those of other Governments, banks and "others" have gone up by Rs. 9.13 crores, Rs. 7.16 crores and Rs. 42.13 crores, respectively. Other liabilities, however, have gone down by Rs. 51.88 crores. Loans and advances to Governments stand reduced by Rs. 11.70 crores, while other loans and advances have gone up by Rs. 8.50 crores. The advances to Scheduled banks against usance bills still stand at a sizable figure of Rs. 13.01 crores; this is included in the total of other loans and advances amounting to Rs. 130.06 crores. While there is a reduction of Rs. 16.95 crores in Government Treasury Bills, there is an increase of Rs. 26.52 crores in investments. A notable feature of the Reserve Bank's weekly statement under review is the addition of Rs. 10 crores to the National Agricultural (Long-term Operations) Fund, which now stands at Rs. 40 crores.

The latest available statement of scheduled banks is for the week ended 24th June 1960. This statement, as compared with that for the previous week, shows a marked rise of Rs. 16.26 crores in time deposits but a fall of Rs. 9.89 crores in demand deposits, resulting in a net rise of Rs. 6.37 crores in total deposits. Of this increase, the share of the State Bank of India is Rs. 2.36 crores. Borrowings from the Reserve Bank have gone down by Rs. 4.83 crores to Rs. 40.25 crores and those from the State Bank are also down by Rs. 24.12 lakhs. Both advances and bills purchased and discounted have declined, the former by Rs. 3.68 crores and the latter by Rs. 4.28 crores, making a total decline of Rs. 7.96 crores in bank credit. The share of the State Bank in this decline is of the order of Rs. 1.98 crores. Investments show a minor fall of Rs. 70 lakhs and so also money at call and short notice of Rs. 76 lakhs. Total cash is better by Rs. 2.70 crores. Since the cash balances of the State Bank alone are higher by Rs. 3.52 crores. This means that there must have been a decline in the cash position of the other scheduled banks.

The most important development of the week, so far as the Gilt-edged market goes, is the announcement of the Central Government's borrowing programme. As the terms and other conditions of the new loans are analysed in our "Market Gossip" section, it is not proposed to make any comments on them here. We, however, reproduce below the official notification for purposes of record:

"The Government of India has announced the simultaneous issue of the following two new loans for a total sum of Rs. 175 crores: (A) 3½ per cent. bonds 1966—issue price Rs. 99.75 per cent. and repayable at par on the 18th of July 1966; and (B) 4 per cent. loan 1980—issue price Rs. 99.90 per cent. and repayable at par on the 18th of July 1980.

"Interest on the new loans is payable half-yearly on the 18th of January and the 18th of July and will be liable to tax under the Indian Income-tax Act, 1922.

"Subscription lists will open on 18th of July 1960 and close on the 20th of July 1960, but may be closed earlier without notice as soon as the total subscriptions to the bonds and loan amount to Rs. 175 crores approximately. Government reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

"Subscriptions may be in the form of cash/cheque for securities of the 2½ per cent. loan 1960 or 4 per cent. loan 1960-70 or 2½ per cent. Hyderabad loan 1955-60 (H.E.H. the Nizam's Government 2½ per cent. O.S. rupee loan 1365-70F.) which will be accepted for conversion at Rs. 100 (nominal), Rs. 100.30 per 100 (nominal) and Rs. 84.75 per Rs. 85.71 or O.S. Rs. 100 (nominal) respectively."

The announcement of the new loans has not had any perceptible effect either way on the Gilt-edged market, which continues to be dull with a limited turnover. There has been a rise of 10 nP in 3 per cent. 1963-65 to Rs. 98.05 and of 5 nP in 3½ per cent. 1963 to Rs. 100. A fall of 5 nP in 3½ per cent. 1965 and 4 per cent. 1979 to Rs. 99.85 and Rs. 100.25, respectively, is noted. Another loan to record a fall is 3½ per cent. 1969 which at Rs. 99.10 shows a loss of 10nP. No change is noticed in State Government loans.

The pound sterling in the New York market showed a slight improvement both in the spot and three months' forward. The rate for spot sterling has improved from 280.56-280.59 cents to 280.78-280.81 cents. Similarly, three months forward has risen from 0.19 cents to stand at 279.52-279.55 cents. In sympathy with this trend, the rupee, too, has strengthened slightly in terms of U.S. dollars. Thus, although there is no change in the banks' buying rate for U.S. dollars in India, which stays put at Rs. 473.75 per $100 for ready T.T., their selling rate, is Re. 0.25 lower at Rs. 476.75.

BULLION PRICES SAG AFTER INITIAL RISE

(From Our Own Correspondent)

BOMBAY, 6th *July*

The bullion market ruled firm during the first four sessions of the week, but developed a sagging tendency yesterday which persisted today too. In the earlier sessions, both gold and silver met with excellent support induced by reports of Chinese incursion into Nepalese territory. The support came chiefly from Delhi and Calcutta operators, while fresh offerings were limited. Even the warning given on Friday the 1st inst., by the President of the Bullion Association that the Government of Maharashtra was viewing with concern the recent firmness of bullion and that it might levy margin in *Bhadrapad* (September) settlement on both the metals failed to have any significant effect. Consequently, prices of gold and silver registered a handsome improvement. Yesterday, however, the market staged a retreat on apprehensions that the present margin in silver *Shravan* (August) settlement would be made stringent by making it operate on *ex-parte* basis. The apprehensions led some operators to apply put options as well as to effect sales in silver with the object of rebuying at lower prices. Gold also encountered selling. Values, a result, declined. Today, silver continued to rule easy, while gold was steady. The closing rates for the two metals were higher than those at the end of last week.

Both daily average arrivals and offtake of gold during the week were smaller than those in the previous week; they amounted to 2,000 tolas and 3,170 tolas, as against 3,250 tolas and 5,000 tolas, respectively. The floating stocks of gold are estimated at 25,000 tolas. Similarly, in the case of silver, the daily average arrivals and offtake were smaller, being 16 bars and 7 bars, as against 22 bars and 12 bars. The floating stocks of silver are reported to be around 500 bars.

Ashad settlement in gold moved up from Rs. 127.25 to Rs. 129.53 on Monday the 4th inst., but tended to recede thereafter and touched Rs. 128.56 yesterday. Today, however, it recovered to Rs. 128.97 before finishing at Rs. 128.84. *Shravan* settlement fluctuated between Rs. 127.50 and Rs. 129.22 and wound up the week at Rs. 128.59. A striking feature of trading in the two contracts was that the rate for transferring commitments from *Ashad* to *Shravan* settlement, which was hitherto in favour of bears, turned against them from Friday onwards. The actual rate today was 25 nP.

Ready gold began the week at Rs. 128.06, as against the previous closing of Rs. 127.62, and, after advancing to Rs. 129.84 on the 4th inst., eased to Rs. 128.94 yesterday. Today, it improved to Rs. 129.28 but closed lower at Rs. 129.15. The net gain over the week was Re. 1.53.

In the silver section, *Ashad* settlement moved up from Rs. 216.12 to Rs. 217.75 on Monday but declined subsequently and stood at Rs. 216.71 today. *Shravan* and *Bhadrapad* settlements finished today at Rs. 216.97 and Rs. 217.59, respectively, as against Rs. 216.37 and Rs. 217.31 on Wednesday last. The highest levels touched were Rs. 218.06 and Rs. 218.75.

Ready silver was well supported in the earlier sessions, the quotation rallying from Rs. 215.87 to Rs. 217.56. It, however, started declining yesterday and touched a low of Rs. 216.56 today. The closing rate was 19 nP higher.

The following table shows the trend of the market during the week under review:

	6-7-60 (closing)	High	Low	29-6-60 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD

NEW SEASON'S COTTON POLICY EAGERLY AWAITED

(From Our Own Correspondent)

BOMBAY, 6th *July*

For the sixth week in succession, official trading in the cotton futures market remained suspended. Unofficially, some transactions were of course, put through. The quotation for the Jarilla August contract hovered around Rs. 818-819, as against the statutory ceiling of Rs. 790.

Cotton circles are eagerly awaiting New Delhi's announcement of the cotton policy for the next season which is expected in about five or seven days. Meanwhile, there are various rumours of what the new policy would be. Some feel that the Government will concede the trade demand for an upward revision in the ceiling prices of cotton. Mr. Madan Mohan Ruia, President of the East India Cotton Association, who had been to New Delhi last week to hold talks with the officials concerned, is reported to have emphasised the need for broadening the new crop hedge contract and making the basic staple length, 13/16" instead of 25/32" as at present. The view is supported on the ground that a major portion of the Jarilla crop is of staple length 13/16" and, if the basis of a contract is a variety which is grown in large quantity, then it is bound to give a correct idea of the price. For broadening the contract, Mr. Ruia says, "We will have to raise the 'on' allowance and make it more than 25/32" which is at present allowed."

Meanwhile, the Government of India has extended the cotton textile export incentive scheme up to the end of March 1961. It has also raised, with effect from 1st April last, the rate of import entitlements (coal-tar dyes, chemicals and gums) in the case of exported handloom and hand-printed fabrics from Rs. 10 to Rs. 15 for every 100 yards exported. In the case of exports by weight, the rise is from Rs. 7.50 to Rs. 10 per 25 lbs. No mention is made of the mill interests' plea for enhancing the percentage of import entitlement from 66⅔ to 75 per cent.

The spot market continued to be quite active. Some mills which had not yet fully utilised their quotas were interested in buying Kalyan, Co2, Surti, L147 and other varieties. A few mills were reported to have bought choice cotton in upcountry centres, in view of the non-availability of good quality cotton in the local market. Among foreign cottons, there was demand for Sudan, B.P. 52, Mwanza (new crop) and African U.N.U.G. American and Egyptian cottons, however, were quiet.

Recent reports from the cotton growing tracts suggest that the crop in the Punjab is progressing well, thanks to timely rains. Sowing operations in Khandesh, Vidarbha and Broach regions are proceeding satisfactorily on account of good rains and now a few days' break is required to complete sowings. Sowings on a small scale have just begun in the Ujjain district.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets giving last week's rates:

Hubli Laxmi 1,120 (1,095); Jaydhar 1,025 (1,045); Co2 1,140 (1,112); Sudan XG3S 1,875 (1,950); B.P. 52 1,400 (1,395); September shipment Mwanza 1,170 (1,168).

A firm trend was in evidence in the Karachi cotton futures market during the week under review. The firmness was engendered by hopes of excellent demand from the domestic textile industry, expecially from mills set up lately, in view of the tax concessions accorded by the Finance Minister in the Pakistan Government budget for 1960-61. Enquiries from overseas countries were also expected to broaden in the coming weeks. Consequently, cotton prices registered an improvement. N.T.R.G. July contract, which had receded from Rs. 68 to Rs. 67-9 last week, moved up and touched a high of Rs. 70-4 on Monday this week. The January contract advanced by Rs. 11 to Rs. 68-15. The following are the latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 91; Punjab *Deshi* 87-8; 4F Punjab R.G. 80-2; N.T.R.G. 82-2; S.G. 87-2; 289F Punjab R.G. 90-2; S.G. 96-2; A.C. 139; R.G. 91-2; S.G. 97-2; Lassini R.G. 96-2; S.G. 101-2.

The Alexandria cotton futures market ruled easy during the week on reports that the progress of the new crop continued to be excellent in both upper and lower Egypt. Export business was a bit slack, as the West European and Indian interests were buying only small quantities of cotton. The export discount rate for old crop cottons was lowered from 11½ to 11 per cent., while that for new season's crop continued to remain unchanged at 6 per cent. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: July 78.42; November 75.70; January 75.45.

Ashmouni: August 65.50; October 64.43; December 64.40.

Cotton futures at Liverpool continued to maintain a steady trend during the week under review also. There was some trade covering against commission house liquidation. The absence of hedging also imparted strength. Even the termination of the Liverpool dock strike failed to have any effect. Early in the week, there were scattered attempts at inter-month switchings between the intermediate deliveries, but they were unsuccessful. The latest available quotations—in pence per lb.—from Liverpool are given below:

American cotton one inch staple contract: July 22.65; October 22.50.

Sudan: July 35.50.

Values tended to move up in the New York cotton futures market during the week under review. New crop cotton met with some trade demand. Forward deliveries elicited enquiries from commission houses, while offerings were small. Cotton exports from the U.S., up to 21st June aggregated 6,305,685 bales, as against 2,588,901 bales in the corresponding period of 1958-59. The U.S. Commodity Credit Corporation has reported that the total entries into the 1959 cotton loan choice B programme as on 24th June were 334,946 bales, while repossessions were 288,245 bales, so that the net loan stocks amounted to 46,701 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	5-7-60	28-6-60	21-6-60
Spot	34.25	34.25	34.25
July	32.94	32.85	32.90
October	31.09	31.07	31.09
December	31.21	31.18	31.13

BEMBERG YARN EASY

(From Our Own Correspondent)

BOMBAY, 6th *July*

The pronounced rally in Cupressa Bemberg yarn prices noted last week was arrested during the week under review. In fact, there was a setback. This followed sales by those who had previously bought large quantities at high prices. Indigenous yarns, however, were steady on reports of shortage of supplies. Staple fibre yarns tended to move up, thanks to some overseas enquiries for staple linen cloth. Cotton yarns were well maintained, with selective buying in some counts from local and upcountry consumers.

The Government of India has announced that the allocation of indigenous art silk yarn to the powerloom weaving units for the July-September 1960 quarter will be made on the basis of the number of loom-shifts worked by the units during the October-December 1959 quarter on art silk yarn. The basic period for loom-shift purpose for allocation of yarn during the July-September period has not been changed; it has been kept the same as was considered during the April-June 1960 period. In the case of units which are submitting monthly returns in the prescribed form regularly to the office of the Textile Commissioner, the rate of allocation will be two lbs. per loom per shift while the units which are not submitting such returns will get 0.9 lb. per loom per shift, provided they submit the returns in the prescribed WAS-1 form along with their applications. The allocation will only be made to such units as are holding valid installation permit and/or registration certificate from the Office of the Textile Commissioner, Bombay, to work powerlooms on art silk/staple fibre yarn. Card holders for the July-September quarter who are unable to procure the supplies directly from indigenous manufacturers are required to approach the Honorary Secretary, Association of Man-made Fibre Industry, Ewart House, Bruce Street, Fort, Bombay, before 31st August 1960 for supply of yarn against the allocation cards issued to them.

Cupressa Bemberg yarn (60 x 1) August contract fell by Rs. 10 to Rs. 1,937. June delivery went off the board at Rs. 2,150, as against Rs. 2,090. Spot Cupressa lost 12 nP to Rs. 9.25. 120 Japan was a shade lower at Rs. 5.64. 150 Japan dropped 9 nP to Rs. 5.69. 120 Italy, however, rose by 6 nP to Rs. 6.06, and 150 Italy by 13 nP to Rs. 6.19. Among indigenous yarns, 120 Bt. cones 1st grade put on National Rayons 150 Bt. cones 1st grade put on 10 nP to Rs. 5.16. But 120 Bt. cones 1st grade shed 4 nP to Rs. 6.12.

Staple fibre yarn (60 x 1) August contract attracted good attention and improved by Rs. 6 to Rs. 740. Spot Centurys hardened by 5 nP to Rs. 3.71. Spot Citys and Kohinoors were firm at Rs. 3.78 and Rs. 3.84, respectively.

In the cotton yarn section, 10 counts Gokaks were unaltered at Rs. 19. 20 counts Gokaks rose by 75 nP to Rs. 24. 40 counts Minaxis advanced by 7 nP to Rs. 30.44. 60 counts Raghuvamshis were steady at Rs. 56.50, as also Finlays at Rs. 58. Eighty counts Moderns changed hands at Rs. 75.50, same as last week. Finlays were firm at Rs. 82.82 and Mahendras at Rs. 73.75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	6-7-1960	29-6-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 Kg.)

80s Modern	75.50	75 50

CASTOR FIRM

(From Our Own Correspondent)

BOMBAY, *6th July*

Distinctly firm conditions continued to prevail in the oilseeds market during the week under review. The rally in castorseeds, witnessed last week, remained unabated till close of the week, when values tended to drift downwards owing mainly to pressure of floating supplies. Groundnuts, which were buoyant in the previous week, lost some ground in the middle of the week, but they recovered subsequently, thanks mainly to the pronounced scarcity of spot supplies. Linseed were also cheerful for most part of the week. But they came in for some selling at the close. Cottonseeds spurted to new high levels in view of the tight statistical position.

Recent trends in the world supply position of vegetable oils have been given in the 1960 issue of the Commonwealth Economic Committee's annual review, *Vegetable Oils and Oilseeds*. According to this publication, total world supply of vegetable oils rose by 4 per cent. to last annual peak in 1959, as compared with 1958. Of this, Commonwealth countries accounted for 23 per cent. The world output of edible oils, particularly soya-bean oil, continued to rise, but the production of palm crops (edible industrial oils) had declined since 1956, following the fall in world copra harvests. Output of industrial oils—of which linseed was by far the most important—staged a recovery in 1959. Besides, world production of all the main edible oilseed crops, except olive oil and sesame, reached new record level during the year 1958-59.

To revert to the market trend. There were encouraging reports of foreign enquiries for castor oil, particularly from the U.S., the U.K., and some countries of the Commonist bloc. Shippers continued to extend good support, in view of their belief that Brazil will not be able to offer any sizable supplies in the American market for castor oil at least for another two months. The sharp increase in prices of seeds and oils was arrested, however, at the close of the week, mainly on account of enlarged arrivals from Gujarat and Bihar. There was some profit-taking, too. In these conditions, castorseed September 1960 contract, which had closed last week at Rs. 178.50, rose gradually to Rs. 183.50 by Friday, but tended to move down later on to close at Rs. 181.12, with a net gain of Rs. 2.62. Ready Madras improved by 50 nP to Rs. 35.37. Oil commercial hardened from Rs. 18.56 to Rs. 19, before winding up the week at Rs. 18.81.

The major factor behind the strength in groundnuts is the relatively low arrivals. Crushers and *vanaspathi* manufacturers were keen buyers even at high levels. Spot section in seeds and oils, which had maintained a firm front in the previous week, however, came in for selling pressure, although the general undertone was distinctly bullish. This was due mainly to some slackness in the export enquiries for seeds, oils and oilcakes. Groundnut August 1960 contract, which had wound up last week on a strong note at Rs. 219.25, after an initial rally, came down to Rs. 217.50 by Saturday. The trend was, however, reversed subsequently to close higher at Rs. 219.25. Nizam bold closed at Rs. 47, as against Rs. 47.50 last week-end. Oil ex-mill lost 37 nP to close at Rs. 24.

There was no fresh development in the linseed section. But it was generally well maintained, thanks to the pronounced strength in other sections. Export front for linseed oil continued to be dull, in view of the disparity between domestic and world prices for linseed oil. Linseed September 1960 contract improved initially from Rs. 34.59 to Rs. 34.81, but closed today on a subdued note at Rs. 34.47. Bold ready rose from Rs. 33.87 to Rs. 34, but gave way subsequently to finish the week at Rs. 33.50. Linseed oil closed 7 nP lower at Rs. 16.87, after touching Rs. 17.

Cotton seeds made headway from Rs. 163 to Rs. 163.50 on sustained speculative support and in sympathy with the trend in the raw cotton market.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	6-7-1960	29-6-1960	22-6-1960
Groundnut	Rs.	Rs.	Rs.
August 1960	219 75	219 25	215 75
Nizam bold	47 00	47 50	46 12
Coron andol ready	47 25	47 75	46 75

September 1960	163 50	163 00	157.50
Niger seed	37.50	37 25	37 00
Kardi seed	25.00	24 75	24.00

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are in terms of candy, except linseed which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

TEAS WELL SUPPORTED

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 28th *June*

Approximately 1,840,000 lbs. were offered in Sale No. 25 held on Tuesday, 28th June 1960. The quality of highgrown and good medium descriptions showed an improvement, while from other districts, it continued to be of a "rush" description. There was good general demand.

Highgrowns met with only fair support and were irregularly easier by 10 nP, with light liquoring sorts in this category neglected. Fannings received better support. Improved quality good mediums and mediums were the strongest feature of the sale and sold at fully firm to dearer rates, while plainer kinds in this category were taken up at prices which were barely steady. Plain and low medium brokens were absorbed readily at about last rates, but similar fannings declined. Black leaf brokens were in demand at occasionally lower rates, with similar fannings tending easier.

CTC. types and legg-cuts came to a slightly lower market. Orange pekoes were barely steady, but F.Ps and pekoes eased by 10 nP to 15 nP. The quotations were:

	1960	1959
	Rs.	Rs.
Low mediums	1.55-1.60	1.45-1.55
Mediums	1.65-1.75	1.55-1.70
Good mediums	1.75-1.90	1.75-2.05
Quality	1.80-2.55	1.85-2.58

Substantial business in export quota has been done at 2 nP per kilo.

A total of 762,000 lbs. was offered in Sale "Y" held on Thursday, 30th June 1960. There was good general demand at easier rates. Highgrowns came to an irregular market, but those with improved quality were sold well. Coloury good mediums received active support at a drop of 5 nP, the plainer kinds in this category taking a bigger drop. Mediums and low mediums declined by 5 nP-15 nP, but these descriptions strengthened as the sale progressed and at the close were easier by 5 nP-10 nP. Residuals shared in this decline. CTCs legg-cut teas and similar types were in demand, with the cleanly sorted grades selling at last rates. Those with fibre generally eased in price.

The forthcoming auctions are: Export Sale No. 26—Tuesday 5th July 1960—1,772,000 lbs.; Dust Sale "Z"—Thursday 7th July 1960—708,000 lbs.; Export Sale No. 27—Tuesday 12th July 1960—1,662,460 lbs.; Export Sale No. 28—Tuesday 19th July 1960—1,675,000 lbs.

In sale No. 2 held at Calcutta, 35,276 packages were offered. They met with good demand. Commons were firm to dearer, whilst bright liquoring sorts were well supported. C.T.Cs with improved quality were considerably dearer. Darjeelings met with selective enquiry. In the dust sale, 13,763 packages were offered and these met with good demand. Darjeelings and C.T.C. teas were very strong, but others came to a slightly weaker market.

Approximately 7 million pounds were offered at Colombo. There was strong demand. Dimbulas were irregular and mainly lower following quality, whilst mediums eased by 2/5 cents but their fannings were stronger. Lowgrowns were irregularly easier. Improved quality Uvas were dearer, particularly those offered ex-estate, whilst their fannings met with keen competition and were appreciably higher.

In Monday's auction in North Indian and other growths held at London, there was active demand for the new season's Dooars at higher rates. Best Africans were dearer, while others were about steady.

In Tuesday's sale, 5,847 packages of South Indian teas were on offer. With buyers following quality closely, prices were unchanged on last week's rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"In Sale No. 26 held on Tuesday the 5th inst., 1.75 million lbs. were offered. There was useful demand, particularly for low medium brokens which were firm. Other brokens were easier by 5 nP to 10 nP. Fannings were the weakest feature, while improved quality was dearer."

RAW JUTE AND JUTE GOODS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, 5th *July*

Quiet conditions were in evidence in the jute markets during the week under review. As buyers were reserved, both jute goods and raw jute recorded sizable falls. Continuous rains fell in several jute districts, including 24 Parganas, during the week, but these subsequently encouraged sellers to refrain from discounting quotations further, as, although damage as a result of floods have not so far been received, it was feared that some damages should have been caused. Mills did not display interest in the old crop and the assumption that mills had enough raw jute in order to carry on production up to the new crop was deduced in market circles. In fact, from the nature of the quantity on offer during the week, it was believed that a good portion of the old crop still remained to be marketed, but that mills reduced production only in an attempt to lower prices of fibre, since it was becoming no longer profitable to produce goods by purchasing fibre from the present bullish market. It was these factors, as well as the mills' preference to do business in early new crop rather than ready old crop, that induced this week's fall and it would appear that the stage has been reached for fibre prices to come down to more realistic levels.

Reports from Assam showed that prospects for the new crop had considerably improved, following bright sunshine earlier in the week. This had done immense benefit to the standing crop, as sunshine was required after the recent heavy showers. The mills desired to enter into commitments in the new crop business in northern quality for delivery in August, in view of the fact that good commitments in Assam jute had already been made. However, sellers of Northern fibre were few and far between, since it is usual for despatches from northern districts earlier in the season being affected and delayed by floods. The main transport from northern districts to mills' stations is the railways, whereas Assam jute would move by riverine transport. On the other hand, not all offers for delivery commencing from October met with response. This was so because of the expectation that prices for these deliveries would come down further.

During the week, business that passed in goods with foreign buyers was little. Corncacks

tinued to attract Australian interest. It was not anticipated that the higher trend of burlap consumption in May would be repeated in June, as this period was usually slack in that country. This anticipation followed the not-too-heavy volume of business put through with U.S. buyers during this month. In the market, stocks had been built following news of higher consumption in May in anticipation of more interest from American buyers. China was in the market for small quantities of heavy goods now and then. The London report that following the recession in fibre prices in Pakistan, it was proposed to reduce most jute yarn prices by £5 a ton, was in keeping with the present sentiment in the fibre market.

On Tuesday last, in the goods market, buyers were reserved. As a result, ready hessian 40" 10 oz. fell from Rs. 45.90 to Rs. 45.50. Cornsacks were bought by Australia and in B. twills internal buyers were active. Ready B. twills, therefore, hardened from Rs. 129.75 to Rs. 131. On the following day, there was little or no buying interest, and selling pressure soon set in. As a result, B. twills declined to Rs. 127.75 and hessian 40" 10 oz. to Rs. 45.15. The market was closed on Thursday, being a bank holiday, but, by the time the market reopened on Friday, fair enquiries from overseas markets had been received. Soon covering business followed and interest in ready and near goods was greater than in extended delivery goods. Ready B. twills rose to Rs. 130.75 and hessian 40" 10 oz. to Rs. 45.65. Towards the week-end, covering business continued and hessian 40" 10 oz. was better at Rs. 45.75. However, B. twills were fractionally lower but steady at Rs. 130.50. Conditions were quieter yesterday, in view of a weaker fibre market. B. twills eased to Rs. 129.25 and hessian 40" 10 oz. to Rs. 45.50. The markets are closed today on account of the *Id* holiday.

On reports of good rains in jute districts, fibre prices fell. Old crop jute was neglected and in new crop early delivery jute was favoured. The latest quotations for the new crop (1960-61) per 100 kgs. for delivery periods as marked hereunder are:

	Middles	*Bottoms*	*Shipment*
White:	Rs.	Rs.	
Assam selected	106.00	99.25	Aug.-Sept.
Ordinary Assam ..	104.50	97.75	"

1st Mark	..	..	Rs. 230.00 per bale ready.

SELECTIVE BUYING IN TEAS

(From Our Own Correspondent)

CALCUTTA, *5th July*

In the tea sale for domestic consumption held here last week, dusts on offer aggregated 13,763 chests of new season's teas, in addition to 750 chests of the last season's. Conditions were mixed. Although there was fairly good demand, attention was selective. Thus, while C.T.C.s met with keen competition and recorded handsome addition to prices, orthodox teas were sold at prices below brokers' valuations. The smaller stronger liquoring teas also eased, as were Legg-Cut Dooars teas. The latter teas were difficult to sell towards the close. There was good demand for Darjeelings, prices of which hardened. The quotations per kg. inclusive of excise duty were: medium Assam C.T.C. Rs. 5.20 to Rs. 6.00 and medium Dooars Rs. 4.10 to Rs. 4.30 Best Assam C.T.C. and medium Assams were unquoted.

Leaf on offer, amounting to 205 chests of new season's teas and 113 chests of last season's, eased, although demand was good.

Good note was taken of the steadier conditions in auctions in Mincing Lane held last week. The new season's offerings in London attracted good attention and New Dooars crossed brokers' valuations. Ceylonese and South India teas in London also attracted good buying. This was not surprising, since U.K. stocks of tea were only 140.9 million lbs. in the week ended 24th June, as against 143.7 million lbs. in the previous week.

That the tea crop in North India and East Pakistan in the year 1960-61 would show a marked decline in view of the unusually drought conditions in the months of April, May and earlier part of June has not been in doubt. According to a recent estimate from Dacca, output in East Pakistan would be 10 million lbs. lower as compared with the actual output of 65.8 million lbs. in 1959-60.

BASE METALS FIRM AGAIN

(From Our Own Correspondent)

CALCUTTA, *5th July*

Base metals recorded further addition during the week, following good demand and shortage of ready supplies. The highest addition to price was recorded in electrolytic zinc which closed at Rs. 171 a cwt., as against the opening of Rs. 160.50. The Bombay quotation was even higher at Rs. 177. Local demand was higher than supply. The Government was in the market for a small tonnage, but what added significance was the fall in the number of offers and the quantity offered from abroad for shipment to India. Reports from abroad indicated that the U.S. proposal to raise import duties on zinc and lead had not yet affected the market trend. On the London Metal Exchange, zinc closed fractionally higher at £90¾ a ton, as against the opening of £90½. In New York, the quotation was fractionally higher.

In London, electrolytic copper opened at £258 a ton and gave way to close at £254. The recession followed the termination of the port strike at Liverpool and of the recession of the strike threat in other British ports. Locally, demand for copper scrap was insignificant. Copper scrap prices at Rs. 216 for the berry quality and Rs. 200 a cwt. for utensil scrap remained unchanged.

Tin opened at Rs. 544 a cwt. and gained to close at Rs. 548, although the supply position had improved consequent on recent receipts at ports. The upward trend closely followed the London Metal Exchange where tin closed substantially higher at £808, after opening at £798.

In line with the general trend, virgin lead here was also firm. It advanced from Rs. 65 to Rs. 68 a cwt.

KIPS DULL

(From Our Own Correspondent)

MADRAS, *4th July*

The kip market remained dull during the week, because export trading was selective and small. A few isolated sales of f.a.q. cow calf at very low prices to the U.K. upset the market, and importers lost confidence in the prices at origin which, it was felt, would result in lower prices for some more time. Buff hides ruled steady and demand for buff calf was poor. Enquiries for low grade cow hides for inland trade were good except on light weights.

Though there was some demand for tanned goat light weights, shipment business was poor, as the importers were bidding reduced prices without booking orders. The tanned sheep market was quiet for semi-prime class and weak for middle class.

Shipments during June were: 2,690 bales tanned cow hides, 199 cow calf, 67 buffs, 203 buff calf, 548 goat and 352 sheep to the U.K.; 96 cow, 97 cow calf, 65 buff calf, 460 goat and 381 sheep to the Continent; 66 buffs, 96 buff calf and 152 goat to the U.S.A.; 1 goat and 68 sheep to Japan.

The next tanned skins public sale in the U.K. has been postponed to 17th August. Some importers in Germany have arranged to have periodical tanned skins public sales in Hamburg, and the first of the series will take place on 5th September 1960.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *4th July*

Sugar prices ruled quiet during the week, thanks to easy supply position and slack demand, and prices eased by about Re. 1.25 per bag to Rs. 115 per bag and in retail sugar was being quoted at Re. 1.15 per seer. In view of marked increase in sugar production, trade circles have once again started clamouring for decontrol of the commodity. These circles point out that with sugar production in the current season at about 24.10 lakh tons and with last year's carryover of about 1.7 lakh tons, the total availability will be over 25.17 lakh tons. Total consumption is likely to be 20.50 lakh tons and a surplus of 5.33 lakh tons is expected.

Weak tendency was witnessed in sugar prices during the week under review and prices eased by Re. 1 per bag to Rs. 116 per bag against controlled prices of Rs. 112.50 per bag. A further quota of 2 lakh tons has been released by the Government. Trade circles were of the view that decontrol of sugar would bring down sugar prices further. Sugar prices also ruled quiet in the Kanpur market at almost unchanged price levels.

Despite slack demand and loading restrictions, *khandsari* prices improved by about Rs. 2 per maund and *khandsari* crystal was quoted still higher. Stocks of *khandsari* in the Muzaffarnagar market were put at about 70,000 maunds and week-end prevailing prices were: inferior Rs. 30 to Rs. 32, superior Rs. 33 to Rs. 39, crystal *khandsari* Rs. 38 to Rs. 41, *boora* from crystal Rs. 44.50 a maund.

Ready *gur* prices sought lower levels as demand has subsided due to loading restrictions. Daily arrivals in the market are poor at an average of 100 maunds mostly of dry quality which are being lifted by Punjab through road. Local stock of *gur* of *kotha* dry-wet quality is almost stationary at 21,000 maunds. There was heavy rainfall in the region and the cane crop has benefited much. Prevailing prices were: dry Rs. 15.19, *kotha* dry-wet Rs. 15, *shakker* Rs. 17.75 a maund.

Gur prices ruled steady at Muzaffarnagar due to support from Gujerat for *Chaku* quality, while Minja was in request from east U.P. and South. *Shakker* attracted demand from the South and Rajasthan and *dara* quality was quoted at Rs. 19 to Rs. 21, and *masala* at Rs. 21 to Rs. 22 a maund.

Forward *gur* prices were bullish during the week on support from speculators of Kasgunj and Narlea. Opening at Rs. 13.43, *gur fagun* touched the highest of the session at Rs. 13.81 and is presently quoted at Rs. 13.75.

* * * *

The Government of India has released 200,000 tons of sugar. There will be no release for free sale from factories in Uttar Pradesh, Bihar and Punjab except a small quantity which will be released to each factory for sale to its employees. Allotments of sugar to Madhya Pradesh, Rajasthan, Uttar Pradesh, Bihar, West Bengal, Orissa, Madras, Kerala, Maharashtra, Gujerat, Himachal Pradesh, Assam, Manipur and Tripura, from factories in the controlled region, will be made only to nominees of the State Governments. In the case of Punjab and Jammu and Kashmir, allotments will be made direct to the State Governments or to their nominees. Allotments to Delhi will continue to be made on the existing basis. Allotments will be made at prices fixed. The controlled ex-factory price for U.P. and North Bihar factories is Rs. 37.85 per maund and for factories in Punjab and South Bihar Rs. 38.35 per maund for ISS D-29 grade with the prescribed price differentials for other grades. The fixed f.o.r. destination prices in respect of allotments made to Kanpur and Calcutta will be Rs. 38.60 and Rs. 39.85 per maund respectively for sugar of ISS D-29 grade.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, *4th July*

Firm conditions continued in the foodgrain market during the week ending 4th July, on lower arrivals of *rabi* grains and better demand from east and north U.P. Firm trend in gram prices in Punjab also acted as a bullish factor. Fairly heavy rains were received in the week-end which would benefit already sown *kharif* crops and would enable large scale *sawani* sowings. Wheat prices at Hapur recorded gains of about Re. 1 per maund to be quoted on Monday at Rs. 17 a maund for average quality and upto Rs. 18.25 for superior farm produce. Daily arrivals of wheat were small at about 200 maunds and arrivals were further hampered by rains. Arrivals were hardly sufficient to meet local needs and as prevailing prices were much higher than controlled Government procurement prices at Rs. 13 to Rs. 15 a maund, Government purchases were not possible. However, wheat purchased in other regions is reaching here for storage on Government account.

Rice prices also recorded modest gains during the week in line with general bullish trend in grain prices. Supply position of rice was satisfactory and stock with trade was put at 21,000 maunds. Prevailing week-end prices were: *sela basmati* Rs. 32 to Rs. 36, *mainpuri* Rs. 24, *ramajwayan* Rs. 25, *raimunia* Rs. 26 and *gadda* Rs. 21 a maund. Gram prices registered further sharp gains of about Re. 1 per maund on firm advices from Punjab. It is understood that the State Government in order to check this rising trend in gram prices has offered to sell one lakh maunds of gram stocked here. Local stock of gram with trade was put at 35,000 maunds. Barley prices improved 63 nP per maund. *Bejhar* prices sought lower levels during the week. Arrivals of these grains were poor in the market. Sowings of maize and other *sawani* crops were in full swing and week-end prevailing prices were: gram Rs. 15.19, barley Rs. 12.75, *bejhar* Rs. 11.75 to Rs. 12.75, *jowar* Rs. 14.25 to Rs. 16, *guwar* Rs. 13 to Rs. 13.25 a maund.

Good outside demand and firm advices from other centres accounted for further hardening trend in peas which is now quoted at Rs. 12.25 a maund for average quality, Rs. 13.12 for superior farm quality and Rs. 14 for peas *dal*. Daily arrivals of peas have dropped to about 500 maunds and local stock in the week-end was put at 93 *khatties* of about 800 maunds each. *Arhar* prices also improved fractionally to Rs. 14 a maund and with daily arrivals at an average of 100 to 150 maunds, *arhar* stock mounted to about 26 *khatties*. While average quality of *arhar* is attracting outside support, superior quality is being lifted by grinders for *dal*. Prices of other pulses also improved due to paucity of local stocks and in sympathy with bullish trend in peas and *arhar* prices and prevailing prices on Monday were: *urd* Rs. 19 to Rs. 20, *moong* Rs. 20 to Rs. 22.25, *massoor* Rs. 15 to Rs. 18 a maund.

COTTON

(Concluded from page 62)

more reassuring. Elsewhere, although the rate of increase has slowed down perceptibly in most countries, there are few signs that output has yet reached its optimum.

"*Trade*: Any increase in aggregate production next season must be set against the much reduced carryover so that, as things stand at the moment, no drastic change in export availabilities is contemplated. The prime determinant of actual exports will be consumption. Assuming continuation of the present rate of consumption and a return to more normal net imports by India, it is calculated that exports next season would be something over 12 million bales to which must be added net shipments to the communist countries which have averaged about 1.2 million bales in the last three years. All things considered, therefore, prospects seem to be for a relatively high level of cotton trade though, no doubt, below the present record.

"**Price**: The key factor in the price outlook is demand. Given the maintenance of the present level of consumption and continued active interest on the part of the communist countries, the price outlook is far from discouraging.

"Governmental actions will continue to influence the price trend. Cotton price supports in the United States will be lower. The export subsidy will be cut from 8 to 6 cents per pound which, together with the lower level of price supports, is expected to make U.S. cotton available in world markets at prices near those prevailing this year. The minimum resale price for old crop cotton will be raised to 115 per cent. which is likely to strengthen the market early in the season until the new crop is available in quantity. From October, carrying charges will be increased to 20 cent points per month from the 15 cent points in operation this season. Looking further ahead, under present legislation, the choice A and B programmes will no longer be in effect for the 1961-62 season and cotton price supports will be at not less than 70 per cent. nor more than 90 per cent. at the Secretary's discretion. However, in view of the impending elections next November and for other reasons, it is impossible to say what will be the likely effect of these provisions on the cotton market."

The review concludes that, on the whole, the outlook for the next season seems to be a reasonably optimistic one.

PUBLIC SECTOR INDUSTRIAL AND MINERAL PROJECTS

THE following is a list of industrial and mineral projects which the Public Sector proposes to carry out/or take up in the Third Plan, according to the *Draft Outline* published this week:

A. Projects Under execution and carried over from the Second Plan

(i) *Industry:*
- Completion of the three steel plants (Bhilai, Rourkela and Durgapur).
- Rourkela Fertiliser Factory.
- Heavy Machinery Plant at Hatia, Ranchi.
- Foundry Forge Shop at Hatia, Ranchi.
- Mining Machinery Plant at Durgapur.
- Heavy Electrical Project, Bhopal.
- Drug Projects:—Synthetic Drugs Plant at Sanatnagar; Antibiotic plant near Rishikesh; Phyto-chemicals in Kerala; Surgical Instruments Plant near Guindy.
- Organic Intermediates Plant near Panvel.
- Expansion of Hindustan Antibiotics.
- Trombay Fertiliser Project.
- Andhra Fertiliser Project near Kothagudium.
- Naharkatiya Fertiliser Project.

(ii) *Coal:*
- Coal Programmes of the National Coal Development Corporation.
- Washeries at Bhojudih and Patardih.

(iii) *Minerals:*
- Neiveli Lignite Project.
- (*a*) Fertiliser Plant.
- (*b*) Briquetting and Carbonisation Plant.
- (*c*) Thermal Power Plant.
- Kiriburu Iron Ore Project.

(iv) *Oil:*
- Oil India-Crude Oil Pipeline.
- Refineries at Numati and Barauni.

B. New Projects for which external credits are already assured.
- Expansion of Heavy Machinery Plant.
- Expansion of Mining Machinery Plant.
- Second and Third Heavy Electrical Projects.
- Expansion of Foundry Forge at Hatia.
- Expansion of Bhilai Steel Works.
- Heavy Machine Tool Project.
- Precision Instruments Project.
- Raw Film Project, Nilgiris.
- Projects for the manufacture of watches.

C. New Projects included in the Plan for which foreign credits have not yet been arranged.

(i) *Steel:*
- (*a*) Expansion of Rourkela Steel Plant.
- (*b*) Expansion of Durgapur Steel Plant.
- (*c*) Alloy and Tool Steels Plant.
- (*d*) Bokaro Steel Plant.
- (*e*) Ancillary facilities (coal, other mineral raw materials, power and transport) linked with (d) above.

(ii) *Other Industries:*
- Heavy Structurals Project.
- Heavy Plate and Vessel Works.
- Expansion of Hindustan Machine Tools, Jalahalli.
- Expansion of Heavy Electrical Project, Bhopal—Second and Third Phases.
- Additional capacity for fertilisers.
- Expansion of Visakhapatnam Shipyard and construction of Dry Dock.
- Security Paper Mill at Hosingabad.
- Expansion of Hindustan Cables, Rupnarainpur.
- Second Shipyard at Cochin.

(iii) *Coal:*
- New Programme of the National Coal Development Corporation.
- Expansion of Singareni Collieries.
- Central Workshop for Repairs and Maintenance.
- Central Ropeway schemes.
- Additional Washing capacity for coking coal.
- Expansion of Neiveli Mine output.

(iv) *Other Minerals:*
- Project for Sulphur from Pyrites.
- Balladila Iron Ore Project.
- Exploitation of Sikkim Copper deposits.
- Exploitation of Khetri and Daribo Copper deposits.
- Exploitation of Panna Diamonds.
- Beneficiation Programmes for Manganese Ores.
- Expansion of Geological Survey of India.
- Expansion of Indian Bureau of Mines.

(v) *Oil:*
- Oil Exploration and distribution programmes.

(vi) *Other Schemes:*
- State Government projects, e.g., expansion of Mysore Iron and Steel Works, Praga Tools, Nepa Mills, Durgapur Coke Ovens and expansion of Kolar Gold Mining undertakings.
- Loan assistance to Plantation Industries.
- Introduction of Metric System.
- Programmes of National Industrial Development Corporation, National Productivity Council and Indian Standards Institution.
- Loans to Institutional Financing Corporations.
- Industrial Townships.

(Continued on next page)

PRODUCTION OF MAJOR ORGANISED INDUSTRIES AND MINERALS

PROGRESS AND TARGETS

Name of Industry	Unit	1950-51 production	1955-56 production	1960-61 Estimated capacity	1960-61 Estimated production	Targets for 1965-66 Capacity	Targets for 1965-66 Production

* Organised sector only. † Relates to calendar year. ‡ Relates to the five-year period.
(*a*) Inclusive of metal for castings. (*b*) Except in the case of cotton textile machinery, the capacity and production under this head are related to the demands for original equipment. (*c*) Actual production will be linked, by and large, with the programme for expansion of steel capacity. (*d*) By working the capacity on three shifts. (*e*) Additional 0.5 million bicycles are expected to be produced in the small-scale sector. (*f*) Another 150,000 sewing machines will be produced in the small-scale sector. (*g*) These figures are for 300 h.p. and below.
N.B.—Capacity for engineering industries is estimated on the basis of double-shift operation.

U.S. BUSINESS PLANS RECORD OUTLAYS

U.S. business has been steadily increasing capital outlay plans for this year to a record high, with the emphasis heavily on modernisation for greater efficiency rather than on expansion of output. Manufacturers are planning to expand capacity by about 5 per cent this year, and contemplate further slow expansion for the next few years. This was reported recently by the economic staff of McGraw-Hill Publishing Company, New York, on the basis of a survey conducted in late March and early April.

Sharp competition from imported products and in the world markets and high and rising labour costs are among the reasons given for the emphasis in business spending, particularly in the manufacturing industries, on replacement and modernisation rather than on expansion.

All industry plans to spend 70 per cent. on machinery and equipment but only 30 per cent. on buildings. Manufacturers, however, plan to spend an even higher percentage—80 per cent.—on machinery and equipment and only 20 per cent. on buildings. A break-down of the planned new plant and equipment expenditures of all manufacturing concerns revealed that 65 per cent. of the planned spending would go for replacement and modernisation and only 35 per cent. for expansion.

All major lines of manufacturing, the survey found, expect a physical expansion in sales this year, with the average for all lines estimated at 8 per cent. Estimates of increased sales ranged, by industry, all the way from a 4 per cent. increase for petroleum refining to 22 per cent. for iron and steel.

All U.S. business, the McGraw-Hill report said, plans to spend $37.868 million this year on new plant and equipment. This represents a 16.4 per cent. increase over the 1959 actual total of $32 543. It is also $852 million higher than was reported in an earlier Government survey made in late January and February. The previous record high for capital outlays was $36,960 million in 1957. Of the total anticipated capital outlays of $37,868 million for 1960, all manufacturing accounts for $15,243 million. The manufacturing companies' planned outlays are 26 per cent. more than actually spent last year.

Actual new plant and equipment expenditures during the first quarter of this year were at the seasonally adjusted annual rate of $35,300 million. They were expected to rise in the second quarter to an annual rate of $36,900 million, according to a Government analysis. If the target reported by the McGraw-Hill survey is to be fulfilled, the annual rate of business spending in the fourth quarter would have to rise to a record high of nearly $39,000 million.

Already U.S. business has big capital expenditures programmed for the next few years, according to the McGraw-Hill survey. Scheduled thus far was $34,763 million for 1961, $32,828 million for 1962, and $33,330 million for 1963.

One good guide for the longer-term future of the capital spending sector of the economy, the survey points out, lies in the plans that corporations have for their research spending. This year, all U.S. industries have budgeted more than $9,500 million for research and development, a boost of 6 per cent. over last year. Of the total research spending this year, manufacturing industries will spend $9,139 million and non-manufacturing industries $415 million. By 1963, industry expects to be spending $10,226 million. These figures are exclusive of spending for research facilities, which are expected to run to some $682 million this year.

U.S. manufacturers as a whole, the report said, estimate that about 12 per cent. of their 1963 sales will be of new products—goods not manufactured last year. Machinery makers, for example, estimate that at least one-quarter of their 1963 sales will be of new products.

MARKET GOSSIP

(*Concluded from page 51*)

on the eve of the new loans of the Central and State Governments.

Whatever may be the merits of this speculation, the response to the new loans is bound to be only modest, for reasons already mentioned. Even the State Bank may not be very enthusiastic about investing in these loans, as the P.L. 480 funds are no longer being kept with it. Banking circles feel that, apart from conversions, their cash subscriptions, which will be almost wholly for the short-medium-dated six-year loan, may not exceed **Rs. 15 crores. The L.I.C., Provident Funds and other investors may take up a sizable amount of** the 29-year loan. Nevertheless, the share that would have to be absorbed by the Reserve Bank to make up the total of Rs. 175 crores would be quite large. This the Bank is in a good position to do, for, apart from the P.L. 480 funds and the special deposits of banks of 10 per cent, it had calculated in 1956 and 1959 a very large part of its portfolio of Government loans.

Cuban-U.S. Economic War!

It looks as though a virtual economic war between Cuba and the U.S. has now been touched off, following the Cuban Government's seizure on Friday, 1st July, of the American-owned Esso and Texaco refineries, as also the British-owned Royal Dutch-Shell Refinery, under the pretext that the refineries had refused to refine Russian crude oil. The seizure violates Cuba's own decrees of 2nd November 1954, establishing a 20-year operational period for the refineries and affording them freedom to supply and refine their own crude oil. Just five days after this move—on Wednesday the 6th inst.,—the Cuban Government approved of a law authorising the appropriation of all property owned by American firms or citizens in Cuba. This law, it is said, can be put into effect whenever deemed necessary in the national interest. Under the law, the property expropriated will, of course, be paid for but only in bonds carrying interest at not less than 2 per cent. per annum and redeemable in not less than 30 years.

Justifying the above law, the Cuban Government has accused the U.S. "of constant aggression with political aims against the fundamental interests of the Cuban economy." As an instance of such aggression, it points to the latest move of the U.S. Congress to authorise the President to adjust, until 31st March next, sugar import quotas in order to assure an adequate supply in case Cuba cannot fulfil its quota or if the U.S. imports from that country are cut off or reduced. The U.S. President is now empowered to reduce Cuba's sugar quota and to compensate for the reduction by enhancing imports from other countries under the quota arrangement, with preference given to the five smallest suppliers: Haiti, Panama, Costa Rica, the Netherlands and Formosa.

The accusation of constant aggression hurled against the U.S. by Cuba is, to say the least, baseless. It was Cuba itself, under the leadership of Dr. Fidel Castro, which first drove a wedge into the long and historic cordial relationship with the U.S. Apart from openly denouncing the U.S. as supporting Cuban counter-revolutionaries and threatening to nationalise U.S. investments, Cuba concluded an agreement with Soviet Russia under which Russia is committed to buy large quantities of Cuban sugar at a low price and accepted a credit of $100 million for the purchase of machinery and equipment, as well as provision of technical assistance.

The present Cuban Government is not at all justified in criticising the U.S. move to cut its sugar quota. Why should the U.S. continue to pay a heavy subsidy of as much as $100 million a year to Cuba on its purchases of Cuban sugar when the officials and the Press in Cuba go on vilifying the U.S. and moving closer economically and politically to the Soviet Union? It may be noted here that the price at which Russia buys Cuban sugar, namely, 2.78 cents per lb., is not only less than the world price and the cost of producing it in Cuba (4.00 cents per lb.) but also ludicrously low as compared with the high subsidised price of 5.25 cents paid by the U.S. It may also be noted that Cuba's one-third share of the U.S. sugar market, which is worth about $450 million a year, is its principal source of overseas earnings.

An important question that is now posed before sugar circles is as what would happen to the world sugar market if the American President has exercised his authority and cut Cuba's sugar quota for 1960 by 700,000 tons. Some fear that Cuba will turn out to be a more aggressive seller. But, despite such sales, sugar prices may not suffer a setback. For Cuba has already announced a minimum selling price of 3.00 cents per lb. Moreover, to the extent the U.S. increases its intake of sugar from the aforesaid five smallest suppliers, as well as the Philippines, the quantity available in the "free" sugar market will be reduced.

PUBLIC SECTOR PROJECTS

(*Concluded from previous page*)

D. Projects on which preparatory work should continue with a view to decisions in due course.

(i) *Industry*:

Heavy Compressors and Pumps Projects.
Basic refractories project.
Ball and Roller Bearings Project.
Additional capacity for Machine Tools.
Second Heavy Structurals Project.
Second Plate and Vessel Works.
Marine Diesel Engine Project.

(ii) *Minerals*:

Products Pipelines for Mineral Oils.
Lubricating Oils Project.
Coal Washeries for non-coking coal.
Low temperature Carbonisation Plants for soft coke.
Neiveli Lignite high temperature carbonisation plant and connected facilities for pig iron production.

E. Projects of a contingent nature

New refinery for fresh Oil findings.
Crude Oil Pipelines.
Government participation in Indo-Stanvac project for oil Exploration and in Oil India's programmes for Expansion of Oil Production.
Piping of Naharkatiya Natural Gas.

William Blake.

VOL. CI. No. 2572 BOMBAY, 16th JULY 1960 PRICE Rs. 2

RESOURCES FOR THE THIRD PLAN

THE Draft Outline of the third Plan is a masterpiece of economic writing on the problems of development of an underdeveloped economy managed by a Government with a distinctly socialist outlook. For it fully observes the first dictum taught to students of economics that, as their subject belongs to social science, they should not be dogmatic in their observations and that they should take care to qualify them suitably for all possible contingencies. Whichever chapter of the Draft Outline is taken for study, one finds it replete with hedges and qualifications, so much so that the impression that one gets is that its authors have taken particular note of the various criticisms levelled against their previous efforts, particularly the second Plan, and tried to safeguard themselves this time. Another impression that one gets is that the Plan is very tentative, especially in regard to the resources aspect. It is essentially a plan based on the minimum needs of the country rather than on firm estimates of the resources available. The assumptions made in the chapter on resources for the Plan are extremely nebulous and are liable to prove to be wide of the mark as the Plan is actually worked. There is a frank admission of this lacuna by the authors themselves. Indeed, in one place, namely, about the resources for the private sector side of the Plan, they candidly observe that "it is not possible, with the data available, to present a meaningful scheme of financing" development in this sector and that "considerable guesswork is involved" particularly in regard to the finances required for the investment programmes covering the large and medium industries, which, in our opinion, constitute the core of the private sector. This is no criticism of the Plan, for, after all, the country has to be pushed forward on the road of economic progress at a pace fast enough to overtake the growth of population. "The inadequacy of resources relatively to needs," as the Draft Outline aptly remarks, "is inherent in the fact of underdevelopment and effective mobilisation and use of the resources available are the very basis of development." It is on this basic assumption that the third Plan has been drafted and the object of discussing the resources for the Plan in a special chapter is only to indicate the broad lines along which they could be raised. Every effort has to be made by the Government to secure the funds along those lines.

Obviously, stung by the criticism that practically the entire amount of additional taxation raised during the second Plan period has been swallowed up by the enormous growth of non-Plan expenditure, the planners have made a separate provision for such expenditure under the heading "current outlay," as distinct from "investment outlay." For the benefit of those who might have missed this distinction, clearly brought out in the summary of the Plan published in our last issue, it may be added that, while "investment" means expenditure on the creation of physical assets, including expenditure on personnel required for putting up these assets, "current outlay" corresponds to expenditure on revenue account on plan schemes. They have reminded their critics through this innovation that the latter did not make any allowance in their criticisms for the inevitable expansion in administrative and other incidental expenditure when the public sector takes up such a large investment programme of Rs. 4,000 to Rs. 5,000 crores. It must be admitted that this contention is partially true, but the fault was that of the planners and the Government, for they did not stress this point effectively. While they seem to have learned from experience now, they seem to be making another mistake. They are not stressing the point that the Plan prepared by them is, in fact, a (Rs.) 11,250-crore plan and not a (Rs.) 10,200-crore Plan. The sum of Rs. 1,050 crores described as "current outlay" has, after all, to be found and is provided for in the resources budget. Surely, the authorities themselves are to be blamed, if, later on, they are accused of misleading the public by disguising this fact by making such a fine distinction between "current outlay" and "investment." Another important point to be made, in this connection, is that no such distinction has been made in regard to the private sector investments and only one figure of Rs. 4,000 crores is shown. Can it be seriously contended that the Plan expenditure in this sector, too, will not have the equivalent of "current outlay" as defined above? It is necessary to draw attention to this question even at this stage, lest the private sector should be blamed of having made off with the cream in case its expenditure turned out to be more than the share allotted in the Plan.

The formidable nature of the task set by the third Plan is vividly brought out when one looks at it from the resources angle. Broadly speaking, the resources aspect falls into two divisions, the internal and external. Both suffer from quite a few imponderables, which the authors of the Plan themselves have acknowledged. There has to be a rise of nearly 40 per cent. in the rate of domestic savings, assuming that about 21.5 per cent. of the investment contemplated will be met by external assistance. In order to bring about such a sharp rise in savings, there will have to be considerable restraint on consumption. This will be possible, only if the wholehearted co-operation of the public, especially industrial and agricultural workers, is forthcoming in a spirit of understanding and appreciation. There are, however, serious limitations to the fulfilment of this criterion in a young democracy with an adult franchise and with scores of leftist politicians out to exploit the discontentment among the people to realise their ambitions for power. The feeling of restlessness that we now see among the middle class and working class is a grim pointer which cannot be overlooked or lightly dismissed as a temporary aberration. Realism, therefore, demands that adequate provision is made in the Plan for plentiful supply of food, sugar, cloth and housing at prices which will not add any further to the cost of living. This is an essential prerequisite for the "take-off stage" for a democratic economy. Unfortunately, there are no indications in the Draft Outline that the planners are fully aware of it. There is undoubtedly full emphasis on agricultural production, particularly in regard to foodgrains, but the same cannot be said of the other necessities of life.

The scheme for financing the third Plan calls for careful scrutiny. While reserving this for a subsequent article, one preliminary observation may be made here. The first impression that one gets is that the planners have made liberal provisions under almost each heading pertaining to internal resources. This is particularly true of surpluses to be obtained from public sector enterprises on the existing basis and of additional taxation. If the Draft Outline had given at least an approximate idea of how as large a sum as Rs. 2,090 crores can be found under these heads, it would have been easier to examine the practicability or otherwise of the proposition. As it is, it seems to us that it would be a Herculean task to raise as much as Rs. 1,650 crores in five years, or Rs. 330 crores per annum, by way of additional taxes and additional surpluses from the public sector enterprises, without aggravating inflationary pressures and after leaving sufficient resources for the private sector to fulfil the targets set for it. These additional taxes, etc., it must be borne in mind, are to be on top of those that have been imposed in the second Plan. Since this is a highly exaggerated picture of feasible new taxation and capacity to squeeze the public through the public sector enterprises, deficit financing will have to be far more than the sum of Rs. 550 crores mentioned in the Plan.

Foreign assistance to the third Plan is of crucial importance. It is estimated that such assistance will have to be of the order of Rs. 3,200 crores. This total, which is roughly equal to one-third of the total cost of the third Plan, is made up of Rs. 500 crores required to pay for the obligations falling due during the third Plan period, Rs. 1,900 crores for covering the cost of machinery and equipment for projects included in the Plan, Rs. 200 crores for buying components, intermediate products and balancing equipment necessary to increase the production of capital goods within the country and Rs. 600 crores for buying foodgrains partly for consumption and partly for building up buffer stock. The last mentioned amount has been secured, thanks to the generosity of the United States. It has been assumed that exports and invisible incomes will be sufficient to take care of the imports needed for maintaining the economy on the basis of investments upto the end of the second Plan period. This assumption is not unrealistic. But one does not know how the figure of Rs. 1,900 crores mentioned above has been arrived at. It is to be hoped that there has been no underestimation of the foreign exchange cost of the various projects included in the Plan.

What are the prospects of getting foreign assistance of the size mentioned above? The Draft Outline is non-committal. It clearly says that "no prediction can be made." Proceeding, it observes;

> "The Plan will have to be flexible and the commitments in regard to foreign exchange expenditure will have to be made only on the basis of external resources that are clearly in sight. The fact that the commencement and execution of projects both in the public and private sectors will depend upon external assistance that is forthcoming highlights the need for keeping ready, well

advance, a sufficient number of projects that can be executed as soon as the necessary foreign exchange has been secured. Any delay in utilising the external assistance offered cannot but upset the schedule for increased production during and by the end of the third Plan period."

The planners, of course, cannot say how much foreign assistance will be forthcoming. They can only indicate the quantum of aid required to fulfil the Plan. It is for the Government of India to explore the ways and means of finding the foreign exchange. In recent months, the leaders of friendly foreign countries have expressed a keen desire to see India go forward economically as a democratic nation. Several missions, consisting of administrators, economists, financiers and business men, have visited this country and spoken highly of India's attempts to raise its living standards and break the vicious circle of poverty and low levels of saving and investment. They have raised high hopes among the people of this country that they can expect sizable assistance from their countries. India has now placed before them sufficiently in advance the draft of its third Plan indicating its requirements, so that they may not complain of having been caught unawares, a grievance for which there was some justification so far as the second Plan went. It is now up to them to respond readily and generously.

ROAD TRANSPORT

THE large increases in agricultural and industrial production which are expected to take place in the period of the third Five-year Plan naturally imply that corresponding facilities for their movement should be created. In the period of the second Plan, some pockets of acute shortage of transport developed, with the result the authorities as well as the public became more than ever convinced that any neglect of this vital sphere would inevitably mean a slowing down of the tempo of economic progress. Another notable lesson of the second Plan is that road transport could be a valuable adjunct to rail transport. Indeed, in the latter half of the second Plan, the climate of opinion underwent a marked change in favour of road transport which won some deserved concessions from the Government. It was also a source of not inconsiderable gratification that the country could exceed the targets for roads fixed under the Nagpur plan.

To those who expected that these notable achievements would be improved upon in the third Plan, the proposed allocation for roads will come as a serious disappointment. The allotment for roads has been merely maintained at Rs. 250 crores (exclusive of local road development programmes) which is the same as that provided under the second Plan. But this is much less than what the country would need, in order to implement what has now come to be known as the chief engineers' plan for roads. This plan seeks to consolidate and extend the achievements under the Nagpur plan which contemplated construction of 123,000 miles of surfaced roads and 208,000 miles of unsurfaced roads; by the end of the second Plan, achievement will have exceeded these targets, inasmuch as 144,000 miles of surfaced roads and 250,000 miles of unsurfaced roads will have been constructed. The chief engineers' plan, which is a projection of the road programme into the next 20-year period (1961-81), contemplates targets of 252,000 miles of surfaced roads and 405,000 miles of unsurfaced roads, the cost of the entire programme being Rs. 5,200 crores. Lest anyone should think that it is an ambitious plan, it is necessary to point out that, even after it is implemented in its entirety, many villages will still be four miles from a metalled road and 1½ miles from any road and it will take much larger effort to bring a road to every village.

Be that as it may, assuming that only one-fourth of the 20-year plan could be implemented in the third Plan period, the allotment for roads should be Rs. 1,300 crores. As against this sum, the actual allotment, as stated already, is only Rs. 250 crores. This is expected to raise the surfaced roads, including the national highways, by only 20,000 miles to 164,000 miles. This is actually less than the increase of 22,000 miles in the second Plan and 24,500 miles in the first Plan at the commencement of which the road mileage stood at 97,500. It will thus be noted that, in physical terms, the construction of roads is expected to be smaller than in either of the first two Plans. This is unfortunate as road-building has a large employment potential, besides being a first class national investment. It has been computed that investment on roads yields a return of 8 to 12 per cent., so that they could quickly yield the surplus necessary for further investment. Clearly, a substantial increase in the present allotment to roads is both necessary and justified. It may be pertinent to add here that road mileage in India is dismally low, being only 82 per 100,000 of our population, as against 115 in Ceylon, 384 in the U.K., 1,502 in France and 1,834 in the U.S.

Next to road-building, the aim should be the creation of the appropriate climate in which road transport can come into its own. The Draft Outline has fixed modest targets for the manufacture of different varieties of automobiles. The targets for 1965-66 are 30,000 passenger cars, 60,000 commercial vehicles (inclusive of 4,000 units by ordnance factories), 10,000 jeeps and station wagons, 48,000 motor vehicles, scooters and 3-wheelers, as against an estimated production of 20,000, 28,000, 5,500 and 16,000 units, respectively, in 1960-61. If full allowance is made for replacement of existing vehicles, the bulk of which are overaged and deserve to be treated as scrap, and for the growth in road traffic, these targets are on the low side. But what is even more important is that the fixation of targets must be followed by adequate foreign exchange allocations, in order to ensure that the capacity in the industry is fully utilised. Further, a steady offtake of motor vehicles implies facilities for economic operation of motor transport. There is no doubt that the scope for the expansion of motor transport is particularly large in a country of India's size and population. It has been estimated that, by the end of the third Plan, after making allowance for the transport of about 80 million tons of goods traffic by bullock carts and 18 million tons by water transport, there will be a balance of about 300 million tons of traffic to be handled by rail and road transport. Estimates of what the railways could be expected to carry vary. The Draft Outline places it at 235 million tons, whereas non-official estimates put it at about 220 million tons. The balance will have to be carried by road transport, besides some 220-235 million tons of feeder traffic to railways and 18 million tons of feeder traffic to water heads. It is, therefore, imperative that road transport should be upgraded to a level, at which it is able to move the large volume of traffic that will fall to its lot.

Although several measures have been adopted in recent years in order to improve the climate for the development of road transport, much still remains to be done. Restrictions on the movement of road transport which have been imposed by executive order should be removed. The Inter-State Transport Commission should be given more powers, so that it could be an effective instrument for the development of inter-State transport. Above all, the tax burden on road transport should be reduced. Indeed, no other country in the world taxes motor vehicles more heavily than India; the overall tax burden works out to about 7.25 nP per ton-mile for petrol-driven trucks and 4.28 nP per ton-mile for diesel trucks which cost approximately twice as much as the former. Over the ten-year period ending 1960-61, the revenue from taxation of motor vehicles has gone up from Rs. 47.37 crores (Centre Rs. 34.82 crores and State Governments Rs. 12.55 crores) to Rs. 143.00 crores (Centre Rs. 102.00 crores and State Governments Rs. 41 crores). Motor transport is a veritable milch-cow for the Exchequer. But what the authorities have failed to realise is that they could get a larger revenue through a reduction in tax burden which would give a fillip to automobile transport.

There is a growing section of non-official opinion in the country which feels that the Government is partial to the Railways in the matter of capacity allotment under the plans and of allocation of available foreign exchange. There is no doubt that the Railways are the single largest national undertaking and, by reason of the fact that they render in some ways a unique form of service, they deserve to be developed. But one wonders whether the scope for economy was fully examined before the Commission made its provisional allotment of Rs. 1,220 crores to the Railways. The more important point, however, is that, in arriving at any decision on the question of conflict between the interests of road and rail transport, no attempt should be made to support one at the expense of the other. The Government should decide the issue purely by economic considerations. It must be remembered that road transport is as much a national asset as the Railways. Further, its capacity to provide employment is very large. In its memorandum submitted to the Neogy Committee, the Council of the Indian Roads and Transport Association has adduced evidence to show that, for every 1,000 million ton-miles of traffic, the employment potential in road transport is seven times what it is in rail transport and that the net return to the State is three times larger. An additional advantage of encouraging road transport, assuming that it will be allowed to stay in the private sector, is that the Government's goal of "a more even distribution of economic power" and "diversification of the occupational structure" in the country will be effectively served. These facts show that road transport deserves all the attention and assistance the Government can give it.

The point has been made often enough that, in respect of some goods and over certain routes, there is now a pronounced preference by the public for road transport. It was neatly brought home by Mr. S. H. Turner, Chairman of Hindustan Lever, in the course of his speech at the last annual meeting of the Company. He no doubt acknowledged the improvement that had taken place in the service rendered by the Railways. But the chief point he made is perhaps typical of the experience of many manufacturers. Whereas, in 1950, the Company's normal method of despatch of finished goods was by rail, last year, 50 per cent. of its despatches were made by road; this had cut the average transit time from 21 days to 5 days. Explaining the economics of this change, he said:

"It was common experience in those days that, for several days, we got no wagons and then had sixteen in one day. We also had to tie up a good deal of our dealers' capital. The man in a small town, who had to take full wagon-load of *vanaspati*, might well find himself with four or five months' requirements on his hands at once; and for this tying up of our dealers' capital, of course, we had to pay either in bigger discounts or in letting them make larger profits on stocks in their hands whenever we had to raise our prices. Road journeys normally involve no transhipment, whereas rail transport involves transhipment whenever there is a break of gauge; and road journeys are door to door, whereas with rail, even though we have sidings, our dealers do not, so that there is always an extra handling at their railway station. Finally, with road contractors we are usually able at a price to get them to accept responsibility for damage; the railways are very chary of accepting responsibility, and their employees are correspondingly careless. When we make a claim on our road carriers, it is settled within days, and usually in full. When we claim on the railways, it takes an average of six months before a decision is obtained and we do not recover more than half our losses."

Experience of other countries also suggests that road transport is preferred to rail transport. In the U.K., between 1938 and 1959, total goods transport (by road and rail) increased from 24-26 million ton-miles to 42.3 million ton-miles; the share of road transport increased from 8-10 million ton-miles to 24.6 million ton-miles. This means that, whereas in 1938, road transport accounted for only about 33 per cent. of the total traffic, its share jumped to 56 per cent in 1959. In the U.S., which is a better comparison with India because of its size, highways carried about 1,650 million tons in 1954, as against 1,228 million tons carried by Railways. The share of road transport was thus larger. A similar trend should be expected in this country, too, in the coming years. Nor need such a trend be deplored, for it will ensure better and more economic distribution of goods, as well as larger employment opportunities. While the Railways will always remain an important segment of transport economy, it is economically indefensible that road transport should be penalised by heavy taxation and other restrictions and the user denied access to the prompt and efficient service that it can render.

MARKET GOSSIP

THE best development of the week is the failure of the strike of Government employees and railway workers to assume any serious proportions. It is, indeed, gratifying to find that the vast majority of public servants have refused to respond to the call of strike and chosen to remain loyal to the Government. Even among those who have stayed away from work, a substantial number must have been influenced by the fear of intimidation by the militant minority among them. All sections of public opinion have condemned the strike as unwarranted. The lack of public support and sympathy for the strikers was clearly evident in Bombay City on Thursday when the general strike, carefully organised by all the leftist trade unions, turned out to be a big flop. They had promised to paralyse all activity in the City, but nothing of that sort happened.

Ever since the strike began, postal services, however, have been seriously disorganised. This is so, at least in Bombay City. We have not been able to get any of our regular weekly letters or the newspapers that come by post. Consequently, we could not include in this issue our customary London Letter and upcountry market reviews. The posting of this number itself has been held up by a day.

Although people all over India have had to put up with some minor inconveniences and the strike has not been peaceful in several parts of the country, the consensus of opinion is that the strike is a failure and that the Government has shown both courage and firmness in facing the threat held out by the combined might of the Socialist and Communist Parties. Now that it is as clear as daylight that the public is opposed to the strike, the minority of workers who are still staying away from their places of duty will do well to return to work without any further delay. By staying at home, they are doing a disservice to themselves more than to the public.

Equities Firm

In the share markets, those bulls who did not get frightened last week by the call for an indefinite strike of Government employees must be a happy lot now. Equities have, once again, resumed their upward trend on a fairly wide front. Not only the "growth shares" such as chemicals and engineerings have been moving forward but also the old industrials, namely, textiles, cements, sugars, plantings and steels which were generally sticky all along. Chartists predict that, unless the Government makes any harsh moves against the share markets or the private sector in general, the upsurge noted this week might well be the beginning of a new bull phase for most of the scrips. The fact, however, is that, in the vast majority of cases, equities are overvalued and highly vulnerable to any adverse developments that may occur. The current values provide no cushion in yields for unforeseeable contingencies. To assume that, between now and the next four years, when a number of new industrial concerns that have been formed in the last 10 or 12 months will be in a position to pay their maiden dividends, everything will be smooth sailing is to take a good deal for granted. In this connection, the following quotation from the latest issue of the *Share Market Report* of Messrs. Maconochie & Co., Madras, is worth pondering:

"The full force of the bull community's fervour has been diverted to the cash scrips, perhaps mainly on account of the fact that they are free from the vexatious inhibitions of the forward market. This apart, the technical position has also been favourable—perhaps directly responsible—for such diversions. At times like the present, when confidence in the future of equities reigns supreme, it would be idle to anticipate disinvestment selling, not to speak of bear sales. Holders have come to treasure their investments with such concern that they can hardly think of parting with them for any price. It is exactly this situation that the bull community has exploited. However, it is an open question whether anyone, apart from the professional jobbers, have benefited by the heady rise that has been seen in the past few weeks and further whether an indefinite continuation of this state of affairs is healthy.

"While we can understand the rise in the value of shares of the old well-established companies, we see no rhyme or reason for the precipitous rise in that of the new issues. Under the best of circumstances, not one of them can come into the production stage in the next year or two, nor can a return be expected for at least three to four years from now. To discount the future so far ahead, especially with the mercurial national and international situation, can only be possible under conditions bordering on insanity. No doubt, the rich speculators are playing for big stakes and can probably pull off a few fast ones. But it remains to be seen whether the ordinary investor will stand to derive any benefit from the continuance of the present state of affairs. For a large part, few of them have really benefited and therefore much of the current excitment on stock markets is empty effervescence. Restoration of sobriety, which seems almost impossible now, is an urgent necessity, if the faith of the investor in stock exchanges, is to be fostered.

"It might be argued that, in a fast developing economy, with inflation as its central axis, such a state of affairs is inevitable. May be so; but one would have thought things will be different under a 'regulated' economy. Perhaps, in the near future, several factors will emerge which will correct the market vision. Until then, we would advise our clients to be highly selective and to take profit on their holding of new issues. In September, several new issues are expected and there can come a time when the glut of such issues would act as the much needed deterrent to further price pushing."

Synthetics and Chemicals

The investing public is eagerly awaiting the results of its application for the shares of Synthetics and Chemicals Ltd. It is now more than 40 days since the list closed on 4th June 1960. The Company has issued no official communication to the Press about the exact number of applications, the total number of shares asked for and the amount received by them. But we reliably learn that the total applications alone are in the neighbourhood of 260,000. as against only 165,500 shares offered to the public, that more than half the applications are small ones and that the total amount of application money is of the order of Rs. 24 crores.

In view of the continued high level of premium still obtaining in the market, it is but natural if every one who has applied for this share wants to know where he stands and count his book profit at least. But, in view of the heavy applications, the management of the Company can well claim that it is almost impossible to come to a decision so quickly as all that. Quite a few smaller companies than Synthetics and Chemicals and many established companies that offered new shares to the public have, of course, taken as long as 2½ to 3 months to announce the allotment results and issue refund orders. But Kilachands and Firestones will rise in the esteem of the public further, if they can somehow expedite the procedure of allotment and the refund of excess money. Here is a chance for them to establish another record in the history of new capital issues.

Because of the long time taken by company managements in this respect, an impression has come to prevail that they are deliberately delaying action, so that they could earn the benefit of interest which is by no means negligible. In the case of the Company under reference, the income by way of interest could well be Rs. 30 lakhs, if all the application money were to be retained for three months.

As usual, some are even suggesting that the Government should do something to stop this "exploitation" by company promoters of the "get-rich-quick" mentality of investors. These persons do not, of course, see the other side of the picture and fail to realise the difficulties confronting company managements. The tabulation of applications and the decision on the basis of equitable allocation in consultation with the Stock Exchange authorities, which will strain the best of brains in an issue like that of Synthetics and Chemicals, are a time-consuming process. Then, the preparation of hundreds of thousands of refund orders alone will take several weeks, even assuming that the companies concerned employ temporary hands or ask their staff to work overtime. Then, the post office has to handle all the letters which have to be sent by registered post—surely a source of windfall to Dr. Subbaroyan's Ministry. The post office, too, has its limitations and accepts, so we are told, only a specified number of registered letters per day per office, as decided by previous arrangement. The other side of the picture is thus by no means so simple as is assumed by the critics. Nevertheless, if the Directors of Synthetics and Chemicals manage to overcome all these difficulties and expeditiously dispose off the applications, they will have set an excellent example for others.

Cotton Ceilings

It is common knowledge now that the delay in the announcement of the new floor and ceiling prices for raw cotton for the new season commencing 1st September next has caused considerable disappointment to both traders and farmers. They have been anxiously awaiting the Government's decision for too long and it is quite understandable that they have begun to be despondent. The delay is attributed to Mr. Morarji Desai's absence from the country. Now that the Finance Minister has returned, an announcement can be expected soon but perhaps not until the present emergency situation created by the strike of Government employees comes to an end.

Very few people doubt the possibility of an upward revision in floor and ceilings. Those who favour higher floor and ceiling prices argue that the present rates, which were fixed when the crop situation and the general economic and agricultural conditions were quite different from what they are now, have become unrealistic. If the Government is not willing to agree to the suggestion that price control should be abolished, it should at least be prepared to modify the ceilings substantially. The failure of the Government to enforce price controls effectively—it has never succeeded in doing so—is evident from the well-known fact that spot prices are not only above but substantially higher than the ceilings. The following table gives an idea of the disparity between the ceilings and the actual prices paid by buyers:

(In rupees per candy of 784 lbs.)

Quality		Ceiling	Market price*	Difference
Jarilla	Fine 25/32"	820	950	+130
Vijay	,, 27/32"	970	1,100	+130
Kalyan	,, 25/32"	870	975	+105
Dhollera	,, 3/4"	780	940	+160
Laxmi	,, 7/8"	1,045	1,120	+ 75
Jaydhar	,, 27/32"	975	1,060	+ 85
Surti	,, 7/8"	1,020	1,120	+100
Western Farm	,, 13/16"	890	1,020	+130

*Unofficial.

The high prices paid by consumers of cotton only indicate that official fiats cannot for long prevent the inexorable law of supply and demand from reasserting itself.

If the ceilings cannot be enforced, it is argued, the next best thing to do is to raise their levels so as to legalise the transactions that are going on in spite of the ceilings. Further, it is pointed out that the raising of the floor and ceiling prices would also give an inducement for farmers to produce more cotton. In fact, this is said to be the only method of stimulating cotton production and relieving the acute shortage in cotton. A leading firm of cotton merchants puts the case for higher ceiling prices thus:

"The crying need of the day is to create a favourable climate for a substantial increase in production and for that the first step in the right direction would be to assure the farmers of an equitable return. Since there is very little scope to increase the acreage under cotton—in view of the country's food requirements—all efforts should be aimed at increasing the yield. Intensified cultivation costs more and, unless the farmer sees a possibility of recovering the additional expenses, he will not make any special effort. Hence a substantial increase in present prices is imperative."

Although it is expected that the Government would not ignore the convincing case for a substantial rise in floor and ceiling prices, expectations of the probable range of increase vary. One source is of the opinion that the floor and ceiling prices of Fine Jarilla 25/32"—the basis of the hedge contract—would be raised by Rs. 55 and Rs. 80 per candy to Rs. 550 and Rs. 900, respectively. Corresponding changes in the floor and ceiling of other varieties are also expected.

Aid for Developing Nations

India and other underdeveloped countries must certainly be thankful to Mr. Douglas Dillon, U.S. Under-Secretary of State, for having vigorously urged the economically advanced nations to supply "plenty of capital" to assist the less-developed areas. Addressing the special ministerial meeting of the United Nations Economic and Social Council at Geneva on Monday this week, Mr. Dillon declared that the future economic growth of the free industrialised countries would be high enough "not only to enable the underdeveloped countries to continue increasing their own standards of living while maintaining adequate security and financial stability but also to provide the substantial volume of outside capital, both private and public, which developing countries can effectively use to supplement their own resources." Indeed, he was confident that the capacity to assist as well as the will to assist would be there and, so, the difficulties in obtaining external capital for sound development would not be a significant limiting factor to the progress of the less-developed areas in the years ahead. It is to be hoped that events will bear out this robust optimism of Mr. Dillon.

It must be noted that mere capital cannot accelerate the tempo of economic activity in these areas. For there are several other limitations which threaten to thwart progress, unless energetic action is taken on a global scale. Special mention may be made here of the problems of preparing and implementing technically sound and economically feasible development projects, improving Government administration, training manpower in industrial skills, and achieving higher health and education standards. Mr. Dillion did well to draw attention to this aspect and to call upon the United Nations, with its special fund aid programme for operational and executive personnel, the expanded programme of technical assistance, the specialised agencies and other international institutions, to be of great help. "These activities," to quote him, "all form part of an international partnership for economic growth to which the United States is dedicated."

Whatever may be the scale of economic assistance rendered by the capital-exporting countries and the world organisations, it will simply be of no avail if the Governments of the nations receiving such aid fail to view the economic problems in their correct perspective without importing into them political considerations. Dogmatic economic planning, as Mr. Dillon very pertinently warned, overcontrols national economics. To quote him: "Economic goals can illuminate the road to progress, so long as they leave ample freedom to productive economic forces and sufficient scope for flexible and indirect instruments of economic policy." Mr. Dillon also endorsed the emphasis of the 1959 *U.N. World Economic Survey* on the need for sound monetary and fiscal policies as a prerequisite for economic growth in all countries, as well as the view that, in the less-developed areas, these policies should be reinforced by adequate access to external resources to help economic development proceed without serious limitations or unmanageable pressures on balance of payments.

A Unique Venture

India, which is fortunate to have got quite a few friendly foreign countries to build steel plants in this country, has reason to feel gratified that the idea of international participation in the industrialisation of developing countries is catching up. The decision of a group of British and West German firms jointly to build a steel works at Azna in Northern Iran goes a step further, in that there is no precedent for such co-operation between British and German manufacturers. An Anglo-German consortium has already been formed to build the steel works in Iran which will have an annual production capacity of 300,000 tons of steel. An agreement involving DM. 800 million (about £70 million) has also been signed. The British partners in the joint venture are headed by the Metallurgical Equipment Export Company [M.E.E.Co.]. Other participating members are

EQUITIES SURGE FORWARD

STEELS AND TEXTILES WELL SUPPORTED

(From Our Own Correspondents)

BOMBAY, 14*th July*

THE share market, which was in a vacillating mood last week, put on a distinctly cheerful appearance during the week under review, with most equities surging forward. Operators would appear to have taken an optimistic view of the outlook for industries in the next few years. This view is apparently based on the expanding nature of investments and opportunities for private sector as envisaged in the Draft Outline of the Third Plan. Operators were also inclined to discount any possibility of a rise in Bank rate as was feared by many immediately after the British Bank rate was stepped up three weeks ago. Expectations of the Central Government employees' strike fizzling out, encouraging bank results for the first half of 1960, rumours of a rise in the dividend of Tata Steel, persistently high offtake of textiles, reports regarding the steadily increasing trend of production in engineering industries and hopes of higher earnings of electricity companies as revealed by the Tata Group of companies, all contributed to the firmness of the share market. Bargain hunting by investors, short-covering and fresh bull support to selected counters were quite conspicuous. Turnover, as a consequence, was large, with most equities, as already stated, registering gains.

The settlement business on Friday the 8th inst. disclosed a fall in the *budla* charges for practically all the leading counters as compared with those at the close of the previous settlement. The reduction in *budla* rates, together with the removal of one more scrip (National Rayons) from the special deposit list by the Stock Exchange authorities, was interpreted by some to mean that the bull position was getting liquidated. Meanwhile, the attention of the market is focussed on the forthcoming meeting of the L.D.C. Investment Committee at Bombay scheduled for Monday the 18th inst.

Among steels, Tata Ordinaries attracted good support induced by rumours of a higher net dividend of about Rs. 7 (gross dividend of Rs. 10) for the year 1959-60, as against Rs. 6.80 paid in 1958-59 and by reports that the Company had obtained official sanction for the Rs. 6-crore stainless steel project which, it was said, would be made a subsidiary of the main Company by issuing shares to the existing shareholders. The quotation for Ordinaries jumped up from Rs. 156.50 to Rs. 162.25 today before finishing at Rs. 161.75. The net gain over the week was Rs. 5.25. In sympathy with Tata Steels, Indian Irons hardened in the course of the week from Rs. 23.60 to Rs. 24.32, though the closing was a shade lower at Rs. 24.12.

Textiles were very active and handsome gains were recorded. *Standard Mills were particularly* sought after and forged ahead from Rs. 1,662 to Rs. 1,840 today before finishing at Rs. 1,832, or a net advance of Rs. 170 over the week. Kohinoors strengthened by Rs. 23.75 to Rs. 370; at one time today, they were higher still at Rs. 372. Central Indias scored a gain of Rs. 21, today's closing rate being Rs. 133. Shree Niwas hardened by Rs. 19 to Rs. 280. Ahmedabad Advances by Rs. 16.25 to to Rs. 181.25, Indores by Rs. 15.90 to Rs. 133 *ex-div.*, Centurys by Rs. 13.50 to Rs. 529, Svadeshis by Rs. 12 to Rs. 258 and Gokaks by Rs. 8 to Rs. 149. Simplex put on Rs. 7 to Rs. 186, reflecting the market's satisfaction at the dividend of Rs. 7.50 (taxable) per share on the increased capital for the year ended March 1960. In the previous year, it will be recalled, a dividend of Rs. 5 had been paid out of the reserves. Finlays and Osmanshahis gathered Rs. 6 each to Rs. 330 and Rs. 60, respectively. Swans rose by Rs. 5 to Rs. 490, Podars by Rs. 4 to Rs. 162, Mysores by Rs. 3.50 to Rs. 87.50 and Tata Mills by Rs. 3 to Rs. 48. Bombay Dyeings began the week at Rs. 67.90, as against the previous close of Rs. 67.80, and gradually moved up to touch Rs. 70.40 today. Modern Mills jumped up by Rs. 14 to Rs. 103, following the latest move of Sirur group to establish a bemberg yarn manufacturing unit in the Mysore State.

Sugar and cement shares elicited good enquiries. Among the former, Belapurs rallied from Rs. 369.50 to Rs. 373, after being lower at Rs. 367 on the opening day of the week. Walchandnagars moved up from Rs. 305 to Rs. 312.50 today before closing at Rs. 310. Phaltans spurted by Rs. 3 to Rs. 193. Bhopals improved by 65 nP to Rs. 26.75 and Changdeos by 14 nP to Rs. 33.60. Among cements, Digvijays increased by Rs. 8.50 to Rs. 177.50. Associated Cements rose from Rs. 143 to Rs. 148 today. Towards the close, however, they were a shade easy at Rs. 147.50. Orissas gained 75 nP to Rs. 14.08.

Under the impetus of better working results, ata Powers in the electricity section firmed up by .s. 33.75 to Rs. 1,076.25 and Hydros by Re. 1.50 to :s. 107.50. Andhra Valleys were steady at Rs. 1,000. The total revenue from power supply of the three companies during the year ended March 1960 was nigher at Rs. 3.53 crores, Rs. 1.58 crore and Rs. 1.97 crore, as against Rs. 3.21 crores, Rs. 1.53 crore and Rs. 1.90 crore, respectively, in 1958-59. Bombay Suburbans found buyers at Rs. 89.50, as against Rs. 86.70.

Engineering shares were well fancied. Alcock Ashdowns climbed up by Rs. 30 to Rs. 320. Jaipur Metals spurted by Rs. 16 to Rs. 131. Tata Locomotives advanced by Rs. 10.50 to Rs. 277 and Premier Constructions by Rs. 6.50 to Rs. 365. Larsen and Toubros registered a rise of Rs. 3 to Rs. 46. Kamanis gathered Rs. 2.18 to Rs. 20.12 *ex-div.* and Mahindras 76 nP to Rs. 23.24.

In the shipping group, Scindias gained 28 nP to Rs. 15.72, but Great Easterns softened by 20 nP to Rs. 17.88. Among automobiles, Premier Automobiles elicited excellent support and hardened by Rs. 11 to Rs. 173.50. Hindustan Motors picked up 72 nP to Rs. 21.28.

A sharp rise of Rs. 105 to Rs. 835 in the quotation for Indian Dyestuffs characterised the trading in the miscellaneous section. Amar Dyes jumped up by Rs. 57 to Rs. 495 *ex-div.*, following the optimistic note struck by the Chairman on the Company's expansion plans and outlook. Bombay Burmahs continued to be well supported, today's closing rate of Rs. 649 being higher by as much as Rs. 41.50 as compared with that prevailing on Thursday last week. Anil Hardboards advanced by Rs. 42.50 to Rs. 420, Colour-Chems by Rs. 40 to Rs. 485, Poly-Chems by Rs. 35 to Rs. 305, West Coast Papers by Rs 20 to Rs. 220, Alembics by Rs. 17.50 to Rs. 495 *ex-div.*, National Rayons by Rs. 16.50 to Rs 565.50 and Dhrangadhra Chemicals by Rs. 13.50 to Rs. 173.50. Voltas improved by Rs. 12.50 to Rs. 276. Wimcos rose by Rs. 6 to Rs. 249. Tata Oils gained Rs. 2.50 to Rs. 285 and Tata Chemicals 68 nP to Rs. 18.84. *Gwalior Rayons* were better by 75 nP at Rs. 42. Two new shares were included in the list of the Stock Exchange this week—Philips Carbon on Friday at Rs. 18.76 and Dalmia Irons on Wednesday at Rs. 10.76. Today's closing rates for these two scrips were Rs. 20.48 and Rs. 11.72, respectively.

* * * *

Madras Stock Exchange

MADRAS, 12*th July*

The Madras Stock Exchange ruled easy in the earlier sessions of the week under review but picked up some strength subsequently. The earlier easiness followed the suspension of all deliveries by the Exchange with effect from the 7th inst. on account of curtailment of postal services. It was feared that the strike might upset economic activity at least for some time. Consequently, some selling ensued and shares tended to move down. In the later sessions, however, the stern attitude adopted by the Government and the lack of good response for the strike call in many parts of the country led to some revival of buying which pushed up prices, though the volume of transactions actually put through was limited. Sugars were held firm. Coffees and rubbers were steady. Tea shares, however, were generally subdued, notwithstanding reports of good export enquiries for tea. Textiles were well sustained on good investment support. Several miscellaneous industrials made handsome gains.

A feature of trading in the sugar section was the rally in India Distilleries from Rs. 58.25 to Rs. 61.50 on reports of a right issue. In a circular distributed to shareholders, the Company states that negotiations for arranging the required loan capital to construct the new fertiliser factory at Ennore are proceeding satisfactorily and that the consent for the issue of new capital and the licences for that part of the plant and machinery which has to be imported have been already obtained. Cauvery s were maintained at Rs. 143.50, as also Indias at Rs. 12.65, Travancores at Rs. 11.80 and United Breweries at Rs. 104. Mysores were fully steady at Rs. 56.80, on rumours of a right issue, following the statement of the Company's Chairman regarding expansion plans and reorganisation of capital structure. Deccans elicited good attention during the major part of the week, thanks to reports that the Company had received an offer for the purchase of its Samalkot factory at Rs. 36 lakhs, as against the book value of Rs. 31.

In the tea section, Devsholas suffered a loss of 50 nP to Rs. 31.50. Kil Kotagiris fell by 20 nP to Rs. 5.45. *United Nilgiris* eased by 8 nP to Rs. 21.87. Chembras shed 5 nP to Rs. 5.55 and Waterfalls 3 nP to Rs. 4.17. Blue Mountains dropped 2 nP to Rs. 4.95, after remaining steady in the initial sessions.

Among coffees, Balanoors moved down by 55 nP to Rs. 15.70 *ex-div.* Consolidated Coffees receded by 10 nP to Rs. 26. Coweoodys and Rajendras were quiet at Rs. 6.05 and Rs. 16, respectively. Coffee Lands, however, picked up 2 nP to Rs. 25.79. Ouchterlony Valleys were a shade better at Rs. 5.06.

Cochin Malabars, in the rubber group, encountered some selling and fell by 23 nP to Rs. 8.25. The directors of the Company have declared a final dividend of 10 per cent. (taxable), making a total of 17½ per cent. (taxable), (equivalent to 12.25 per cent. tax-free) for the year ended February 1960, as against 15 per cent. (tax-free) for the previous year. Malankaras were neglected at Rs. 20.50. Midlands at Rs. 12.65 and Vaikundams at Rs. 39.20.

Among textiles, Coimbatore Cottons were marked up by Rs. 3 to Rs. 170 on hopes of higher dividend. Bangalore Woollens strengthened by a rupee to Rs. 197. Lakshmis gathered 50 nP to Rs. 163. Premiers rose by a like amount to Rs. 238.50. Maduras scored a gain of 25 nP to Rs. 32.90. Travancore Rayons put on 15 nP to Rs. 37.25. Metturs changed hands at Rs. 429. Pankajas at Rs. 60 and Cannanores Rs. 161. South Indias, which were firm in the previous week, lost a rupee to Rs. 157. Buckinghams declined by a similar amount to Rs. 205. Loyals shed 50 nP to Rs. 34.

In the miscellaneous section, F.A.C.Ts gathered 3 nP to Rs. 10.65 mainly in view of the proposal to expand the installed capacity of the Company. Metur Chemicals were held steady at Rs. 12.75, as also Mysore Fertilisers at Rs. 9.90, and Mysore Chemicals at Rs. 25. Textools spurted by Rs. 6.50 to Rs. 179.50. Spencers hardened by 50 nP to Rs. 21.25. Tube Investments were fully steady at Rs. 325, Standard Motors at Rs. 16.70, Western India Plywoods at Rs. 303 and Mysore Papers at Rs. 24.50.

THE CENTRAL BANK OF INDIA, LIMITED

Profits for the half-year ended 30th June, 1960

The Net Profit of the Central Bank of India, Limited, for the half-year ended 30th June, 1960, subject to audit, including the sum of Rs. 18,82,560.07 brought forward from the last year's account, amounts to Rs. 83,87,334.74 which the Directors have resolved to dispose of as follows:

To pay an *ad-interim* dividend at the rate of Rs. 2·10 per share, subject to tax, for the half-year ended 30th June, 1960, as against Rs. 1.90 per share (subject to tax) paid for the corresponding period last year	Rs. 26,46,000.00
To carry forward to next half-year's account subject to provision for taxation	Rs. 57,41,334.74
	Rs. 83,87,334.74

JAYANT PAPER MILLS

In the context of the rapidly expanding production of corrugated containers, cartons and various packing materials, there is great need for manufacturing in India the raw materials that are used to make these products. The three important raw materials are kraft liner for corrugated boards, sack paper bags for packing fertilisers, chemicals, cement, milk powder, etc., base paper for textile tubes and cones, and straw paper. Practically the entire requirements of the packing industry, excepting some quantity of straw paper produced by a Bhopal firm, are being met from imports. The aggregate annual demand for the aforesaid three raw materials is now estimated at about 15,000 tons which is expected to rise to as much as 50,000 tons by the end of the third Plan (1965-66). Viewed thus, the project for setting up a factory at Utran near Surat in Gujarat State to manufacture kraft liner, straw paper, and base paper for textile tubes and cones is, indeed, well conceived. The factory will be put up by the Jayant Paper Mills Ltd., incorporated on 29th April 1960. Mr. Mulraj Kersondas is its Chairman.

The authorised capital of the Company is Rs. 1.00 crore and issued capital is Rs. 25 lakhs, divided into 25,000 shares of Rs. 100 each. Of this amount, the promoters, directors, and their friends and associates have already subscribed Rs. 3.85 lakhs and also agreed to subscribe another Rs. 8.65 lakhs, or a total of Rs. 12.50 lakhs. The balance of Rs. 12.50 lakhs is proposed to be offered for public subscription. The subscription list will open on Monday the 18th inst. For more details, one may refer to pages 68 and 69 of our last issue.

The aggregate capital outlay of the factory is Rs. 25 lakhs, of which Rs. 10 lakhs represent the cost of the main plant and accessories (as well as freight, insurance, etc.) which will be supplied by Messrs. Futami Trading Company, Osaka, Japan. The manufacturing firm is Messrs. Saito Iron Works Ltd., Yoshihara, Sizuka, Japan. Out of the Rs. 10 lakhs, a sum of Rs. 8.50 lakhs has been advanced by the Central Government under the Japanese yen credit programme and this is to be repaid as soon as the capital is subscribed.

The Chairman of the Company disclosed at a Press conference on Tuesday this week that the factory was scheduled to commence production from September 1961. Initially, the installed capacity of the factory is 4,500 tons of kraft liner, base paper and straw paper, but suitable provision is made to permit doubling of the capacity later, as the demand grows. The rate of actual output in the initial stages will be 3,600 tons per annum.

The chief raw material required to manufacture kraft liner, straw paper, and base paper for textile tubes and cones is kraft pulp, which accounts for 50 per cent. of the total consumption. This will be imported. The other raw materials are straw, waste paper and sugarcane bagasse. All these are available within the country.

In view of the excellent demand—current and future—for the Jayant Paper Mills' products and considering that the Company has already plans to expand the present capacity and to install machinery to produce other types of paper, the capital issue of the Company will doubtless meet with overwhelming success.

NEWS IN BRIEF

A PINE oil factory, the first of its kind in India, has been set up at Hoshiarpur. Pine oil is at present being imported.

The thirteenth All-India Plastics Manufacturers' Conference, scheduled to be held in Bombay on the 15th and 16th inst., has been postponed due to unavoidable circumstances.

The Government of Madras proposes to establish five more co-operative sugar mills in the different parts of the State during the third Plan period, in addition to the existing three such units.

A synthetic drug plant will be set up at Hyderabad, with the collaboration of the Soviet Government. This was disclosed by Mr. D. Sanjeevayya, Chief Minister of Andhra Pradesh, in the Legislative Assembly this week.

The Government of Maharashtra has constituted a committee with the State Minister for Revenue as Chairman, to examine the desirability of implementing a scheme for democratic decentralisation in the sphere of rural administration.

Negotiations between the Governments of India and Russia for the import of Soviet petroleum products have reached an advanced stage and an agreement is expected to be signed shortly. Meanwhile, foreign oil refineries in India have decided not to refine Soviet crude oil.

A Calcutta firm, Messrs. Blackwoods India Ltd., belonging to the group of the J. and K. Organisation, has commenced the manufacture of portable typewriters, costing Rs. 600 each—a brief reference to which was made in these columns in the issue dated 25th June 1960. The plant has a production capacity of 12,000 typewriters per annum. These typewriters, it is claimed, contain only nine per cent. of foreign components.

A negotiating committee has been set up by the Madras Government with Mr. T. N. Lakshminarayanan, Labour Commissioner, as Chairman, to evolve a formula "linked to price and yield" in solving the labour dispute in the plantation industry in the State over the question of granting bonus for 1959. The spokesmen of both labour and plantation owners will be represented in the Committee. The Committee is expected to submit its report to the Government by the end of this month.

A proposal to relax taxes and duties at least for a period of ten years in the case of industries to be set up in the proposed Kandla free-trade zone has been made by the Jaipur Chamber of Commerce and Industry. This is one of the many suggestions received by the Government on the question of setting up the Kandla free-trade zone. The Vijaya Chamber of Commerce, Virudhunagar, has suggested the processing of food products and iron and steel in the zone.

The number of automobiles, including motor cycles, manufactured in India rose by over 50 per cent. to 32,247 during January-June 1960, as compared with the corresponding period of 1959. Of this, the output of cars at 9,218 was almost double that during the first half of last year. The production of commercial vehicles moved up by 50 per cent. to 12,213. Scooter production amounted to 5,838, as against only 2,008. The production of jeeps and motor cycles also was much higher at 3,045 and 1,933, respectively, as against 2,628 and 1,363 last year.

The Government of India has assumed control of the India Electric Works Limited, Calcutta, under Section 18A of the Industries (Development and Regulation) Act, and has appointed Mr. S. C. Banerji, Development Officer, Ministry of Commerce and Industry, to take over the management of the undertaking. This action has been taken on the recommendation of the four-man Committee of Enquiry set up last month to investigate into the affairs of the Company. Of late, there has been a steady fall in production and the workers have gone on a stay-in strike from 10th June. The Committee of Enquiry recommended that, in the interest of the Company and its employees and to maintain production, the Government should immediately assume control of the undertaking.

The Andhra Legislative Assembly has passed the Ceiling on Agricultural Holdings Bill. The Bill fixes a ceiling at four and a half times the family holding. The extent of family holding ranges from six acres of land in Class A to 72 acres in Class H. The exemptions include efficiently managed farms, consisting of compact blocks, lands held by religious, charitable and educational institutions, co-operative farming societies approved by the Government and other co-operative societies including land mortgage banks, orchards, tea, coffee or rubber plantations and sugarcane farms maintained and operated by sugar factories. Compensation has been provided for in the case of lands taken over by the Government, as five times the gross income for the first four-and-a-half family holdings in excess of the ceiling, four times the gross income for the next four-and-a-half family holdings and three times the gross income for the balance of the holdings.

The Government of India has statutorily fixed maximum prices for the different categories of woollen worsted yarn under the provisions of the Industries (Development and Regulation) Act, 1951. The prices fixed for worsted hosiery yarn of counts range from 2/12s to 2/48s spun from various grades of wool tops from 48/50s to 70s. These prices will be effective from 2nd July 1960. During the recent past, the manufacturers of woollen hosiery have been experiencing considerable difficulties in securing adequate supply of hosiery yarn at reasonable prices. This question has been under Government's consideration for some time now and the present step of fixing statutory prices has been taken to help the manufacturers of woollen hosiery. Towards the end of last month, the Government had announced their decision to grant *ad hoc* additional licences for import of raw wool and wool tops to manufacturers of woollen hosiery yarn.

* * * *

From Abroad

The United Arab Republic has decided to import 53,000 tons of sugar from Cuba.

The Government of Malaya has decided to ban imports of South African goods from next month onwards.

Indonesia will launch next year a seven-year plan for economic development with an aggregate capital outlay of $3,000 million.

The next session of the Colombo Plan Conference will be held at Tokyo from 31st October to 17th November 1960.

Norwegian shipowners have so far turned down all the recent offers of Sovfracht, the Russian chartering agency, to charter tankers for Cuba or any other destination.

The largest engineering company in Holland, Vereenigde Machine Fabrieken NV, has secured a big order from East Pakistan for the supply of a complete sugar factory with an ultimate daily cane-crushing capacity of 1,500 tons.

Four out of ten West German earners, that is, 8.9 million persons, pay no income-tax this year, as against 10.3 million last year. The reduction is not due to tax increase, but rather to increased earnings, which put 1.4 million earners into higher —and taxable—income brackets.

Total exports (f.o.b.) from Japan rose by 20 per cent. to $1,842 million (about £658 million) during the first six months of the current year, as compared with the corresponding period of 1959. Imports (c.i.f.) were higher by 29 per cent. at $2,243 million (£800 million).

A three-year trade agreement has been signed between Russia and Indonesia, under which Indonesia will buy Soviet road-building and agricultural machinery, tractors, machine tools, ferrous rolled goods, newsprint, chemical and oil products. Russia will buy from Indonesia rubber, raw hides, vegetable oils, spices, coffee and other traditional Indonesian exports.

A textiles finish which prevents ink, milk, coffee, fruit juices, and other watery liquids from penetrating into the fabric has been developed by a West German chemical company. The liquids remain on the surface and can be eliminated with tissue paper, blotting paper, or a rag. The new finish also protects the textiles to a certain extent against oily liquids, fat, or other dirt.

The West German Government has decided to present, in the next session of Parliament, a Bill which seeks to enable it to set up a DM. 1,500-million fund for helping the underdeveloped countries. One-third of the total resources is expected to be raised from the sale of Volkswagen shares and the remainder from the five years' interest on European Recovery Programme counterpart funds.

A £3½-million scheme for the development of sugar planting at Kemenda in Ghana has been launched jointly by the Industrial Development Corporation and the Agricultural Development Corporation. To begin with, eight varieties of sugarcane have been planted. A new factory, with a capacity to produce 20,000 tons of sugar annually, will also be established. The current rate of sugar consumption in Ghana is about 40,000 tons a year.

The Standard Oil Company of New Jersey in the U.S. has decided to take into consideration, when dealing with tanker owners and brokers, whether they have chartered ships to Communist countries. The move, it is said, will place difficulties in the way of Cuban imports of Soviet oil, besides affecting brokers in the U.K. and Norway who are at present handling charters for shipping Soviet oil to Japan and other countries.

Strict controls over prices and distribution of tea have been enforced in Pakistan, under an ordinance promulgated last week. Accordingly, all forms of forward speculative transactions in tea at the internal auctions have been banned. Any forward transaction outstanding immediately before the promulgation of the ordinance would be considered void. The ordinance empowers the Controller-General of Prices to maintain separate registers for the registration of bidders, importers, wholesalers and retailers of tea. It also authorises him to fix maximum prices of tea at all stages.

The U.S. Export-Import Bank has granted Japan two loans aggregating $52 million. Of this, $40 million will be used to purchase 250,000 bales of cotton from the U.S. This quantity represents one-fifth of the total purchases of 1,250,000 bales proposed to be made by Japan from the U.S. during 1960-61, the remaining one million bales being financed by private sources in the U.S. and Japan. The second loan of $12 million will be given to the Toyoto Motor Car Company for financing the purchase, in the U.S., of machine tools, lathes, forging machines, and other equipment. This loan is repayable in instalments over a period of ten years.

The amalgamation of the world-wide organisations of the Peninsular and Oriental Steam Navigation Company and Orient Lines has been taken a stage further by the formation of a new company in Australia—P. and O.-Orient Lines of Australia Pty. Arrangements have been made for the P. and O. to buy the share capital of its former agents in Australia, Macdonald Hamilton & Co., Pty., and the management and staff of that Company hitherto engaged on P. and O. group business, together with the Australian management and staff of the Orient Company, will join the new organisation. Mr. A. J. M. M. Crichton and Mr. F. I. Geddes, both of whom are Directors of P. and O. and of Orient Lines, who are responsible for completing the integration plans and final details, are now in Australia.

A total of 68,579,000 Americans had jobs in June—an all-time high employment level. This figure was 1,371,000 higher than May's. Record numbers of teen-age and college-age youths, their current school terms over, joined the labour force in June seeking summer jobs. Most of these young people found such work, swelling the employment totals. Labour Department experts, in announcing the employment figures this week, called America's greatly expanding teen-age population a harbinger of a changing pattern for the next decade which will see youthful predominance in the labour force. So substantial was the upsurge in the number of youthful job applicants, these experts said, that the effect was to increase the overall unemployment as well as employment totals. While more than half of the summer job seekers found work, to bring total employment up, the remainder caused the unemployment total to rise. The June unemployment figure was about 4.4 million. The Labour Department gave the following additional information: about one million of the June increase in jobs was in agriculture. The average factory work-week in June was 40 hours. Average weekly earnings of factory production workers was up about 23 cents from May, to a total of $91.60.

PERSONAL

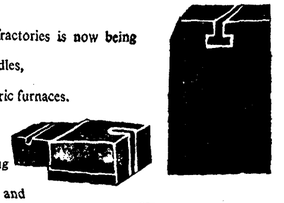
MR. Morarji Desai, Union Finance Minister, has returned after a five-week tour of Yugoslavia, Poland, Czechoslovakia, West Germany, Russia and the United Arab Republic.

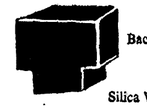
Mr. B. C. Shroff has been elected President of the All-India Exporters' Chamber for 1960-61. Mr. Chinoobhai C. Javeri has been elected Vice-President, and Mr. K. K. Sheth and Mr. Jayant M. Shah Honorary Secretaries.

Mr. R. S. Mani, at present Ambassador to Chile, has been appointed Ambassador to Burma. He will take over charge of his new assignment in October next.

Refractories for all purposes...

The Kumardhubi range of refractories is now being increasingly used for boilers, coke ovens, ladles, high temperature fire furnaces and electric furnaces.





Backed by over 50 years of manufacturing experience, Kumardhubi Fireclay and Silica Works contribute a vital operational requirement in a number of industries.

TARGET FOR SHIPPING

FOR all the brave talk in early post-independence years, elaborate resolutions adopted by the Government, solemn promises made by official spokesmen and eloquent reports submitted by special committees, Indian shipping is likely to make only a poor show in the third Plan. It was once believed that shipping would form part of the "hard core" of the Plan and thereby receive not only generous allocation but high priority. Indian shipping, which expanded by about 89,000 tons to 480,000 g.r.t. in the first Plan and is expected to improve by 420,000 tons to 900,000 g.r.t. in the second Plan, will move up by only 200,000 tons (after meeting replacement requirements placed at 170,000 tons) to 1,100,000 g.r.t. in the third Plan. If this is all the increase that is foreshadowed for a vital national industry, such as shipping, it is certainly a most disappointing target. There is a touch of understandable bitterness, if not righteous indignation, in the statement issued by Mrs. Sumati Morarjee, ex-President, Indian National Steamship Owners' Association, who declared that "viewed in the background of the ultimate objective of two million g.r.t., as recommended by the Shipping Policy Sub-Committee over 13 years ago, the attainment of the target of 1.1 million tons, that is, about half that figure, after nearly twenty years of independence, would be most disappointing to all those who have interest in one of India's foremost industries, viz., shipping." And yet, that is the target which the Draft Outline of the third Plan, with 50 per cent. larger overall outlay than its predecessor, has vouchsafed for Indian shipping.

In terms of financial provision, shipping gets an allotment of Rs. 55 crores (exclusive of Rs. 4 crores expected to be available from Shipping Development Fund and Rs. 7 crores from shipping companies); in the current plan, about Rs. 54 crores will be spent on shipping, as against Rs. 18.7 crores spent on it in the first Plan. The proposed target of expenditure is about 50 per cent. of the Rs. 119 crores (inclusive of Rs. 14 crores by shipping companies) which the National Shipping Board had deemed necessary for reaching a target of 1.42 million tons. The Board's modest target has now been scaled down, both in terms of tonnage and finances. Mrs. Sumati Morarjee's concern is that the lower target now accepted by the Planning Commission, "would automatically rule out any acquisition of tonnage for participation in the foodgrain deal, not to mention the fact that there could be no question of augmenting the liner tonnage." Clearly, in the absence of larger allotment, the target for shipping cannot be stepped up. The Draft Outline, however, ends its note on shipping with the remark that "the question of making an additional allotment for shipping will be considered before the Plan is finalised." Here lies some glimmer of hope, for it suggests that the last word has not been said on the programme for shipping. The Government, it is to be hoped, will see its way to accepting at least the modest target recommended by the National Shipping Board.

TAX LAW

Some relevant issues have been raised by the Committee of the Indian Merchants' Chamber in its representation to the Government on the provisions of Taxation Laws (Amendment) Bill 1960. Based on the recommendations of the Direct Taxes Administration Enquiry Committee (Chairman: Mr. Mahavir Tyagi), the Bill seeks to tighten the provisions of the income and other fiscal laws and also to soften the rigour of the secrecy provisions which now govern the relations between an assessee and the taxing departments. Exception has been rightly taken by the Committee to the practice whereby the reports of imporant committees like the Tyagi Committee, are being implemented in a piece-meal fashion. Not infrequently, as soon as a committee submits its report, the Government seizes upon the recommendations which find favour with it and proceeds to implement them without realising that they may be part of a wider reform the committee may have suggested. This certainly is true of the way the Government implemented the Taxation Commission's report and this is what it is apparently doing in respect of the Tyagi Committee's recommendations.

Two specific points to which the Committee has drawn attention deserve notice. In the first place, the Committee has taken exception to the proposal to disallow development rebate to road transport vehicles and office appliances. The proposal is presumably intended to supersede the decisions of the Bombay and Kerala High Courts upholding the claims of assessees for development rebate for these two items. Apart from the wider question whether the Government should choose to amend the law over minor issues in which judicial verdict has gone against it, there is the relevant point whether it is right to deny the fiscal concession to these two important items—motor vehicles and office appliances. Both of them are in the nature of capital assets, and, while motor vehicles speed up transport at a time when it is so important to economic progress, office appliances help promote expeditious execution of routine work. Secondly, although the Bill has rightly enlarged the list of the industries to which the benefit of Section 56A applies, it has excluded viscose rayon from the list. The Committee points out that, if the benefit were extended to viscose rayon, it would go a long way towards obtaining foreign collaboration for this industry. In particular, it has urged the inclusion within the list of electrical, electrotechnical and electronic industries. These industries, many branches of which are still in their infancy in India, deserve all the assistance the Government can give them.

The Committee's chief criticism is, however, directed against the virtual abandonment of the secrecy provisions in the Bill. It recalls how the Income-tax Investigation Commission held that the proposal to invest the Department with power to give publicity to the cases of assessees guilty of understatement of their incomes should be dropped, because such power "may possibly be used in some cases unjustifiably to the detriment of the credit of the person concerned." The Committee doubts whether any "useful purpose" will be served by giving publicity to persons on whom a penalty has been imposed for fiscal offences. It says: "It may also be mentioned that penalty may be imposed even in cases of failure to comply with the provisions of the Act, which may not be wilful, deliberate or fraudulent." In many cases, the assessees, in order to avoid litigation and mounting costs, may not resort to the procedure of appeals to the higher tribunal. In the case of such assessees, the publication of their names, as the Committee points out, would "not only be detrimental to their interests but amount to an infliction of a further punishment." As regards the provision for making available the information regarding assessments to third parties, the Committee fails to see how it can help detect concealed income; "on the other hand, the information so available would only encourage business rivals and disgruntled employees or ex-employees to make use of such information to the detriment of the assessee concerned." Other countries like the U.K., W. Germany and Japan do not have a provision of this kind on the statute book, though the problem of tax evasion and tax avoidance is not unknown in these countries. By abandoning the time-honoured secrecy provisions in fiscal law, the Government would be creating needless opportunities for public prying into private secrets, which is neither conducive to public morality nor beneficial to public revenues.

SUGAR IN THIRD PLAN

The production target of three million tons of white sugar fixed in the Draft Outline of the third Five-year Plan is a conservative one for three important reasons. First, the target does not take into account the nutritional requirement of sugar which is estimated by experts at nearly 23.00 lbs. per capita, as against 13.87 lbs., assumed by the Planning Commission. Secondly, no allowance is made for a possible increase in consumption of sugar, if its price is brought down to a reasonable level, as, indeed, it must be. Finally, provision is not made for earmarking a portion of sugar output for purposes of buffer stock. The production target for sugar seems to have been just based on the Development Council's estimate of sugar consumption made in February last on the assumption that 2,506,000 tons of sugar would be required for a population of 480 million at the existing rate of consumption, 214,000 tons required to cover increase due to changes in dietary habits, and 251,000 tons needed to meet the demand due to increase in the purchasing power of the people. In other words, the Planning Commission has ruled out the question of sugar export.

The target of three million tons fixed in the third Plan is, of course, shown as representing a rise of 33 per cent. as compared with the anticipated output of 2.25 million tons in the last year of the second Plan, that is, 1960-61. But this figure of 2.25 million tons is clearly out of date. For the quantity of sugar actually produced in the current season (1959-60) is estimated at 2.41 million tons and some in the sugar trade expect the output in the ensuing season (1960-61) to be still higher at 2.60 million tons. If this expectation were to prove correct—reports from the cane growing tracts indicate that it may well do so—the net addition to sugar production in the third Plan period would be no more than 400,000 tons.

The production target of 9.20 million tons (in terms of raw sugar or *gur*) fixed for sugarcane is also a conservative one. Expressed in terms of actual cane, the target comes to about 91.08 million tons, taking a recovery of 10.1 per cent. This figure is substantially lower than the target of 100 million tons suggested by the Indian Central Sugarcane Committee in March 1959. Even this target itself was an underestimate, because it estimated the cane requirements for seed, chewing and other purposes at only 10 per cent. or 10 million tons, as against the actual requirement of 18 to 19 per cent. of the crop harvested all these years. Making allowance for this requirement, the Planning Commission's target of 91.08 million tons of cane leaves, in fact, just 75 million tons for making both white sugar and brown sugar (*gur* and *khandsari*). Will this quantity be sufficient to fulfil the output targets of the finished products of cane, that is, three million tons of white sugar and five million tons of *gur* and *khandsari*, by the last year of the third Plan? We wonder. No estimate of capital expenditure to be incurred for reaching the aforesaid targets is given in the Draft Outline. Indeed, there are far too many gaps and loose ends in the Draft Plan so far as this important industry is concerned.

The Draft Outline also makes a brief reference to sugar machinery industry. It envisages an expansion in the production of sugar machinery, in terms of value, from Rs. 4.4 crores in 1960-61 to Rs. 10.0 crores in 1965-66. The bulk of this expansion will be met by the capacity already licensed which is estimated to reach Rs. 10.50 crores as at the end of 1960-61. The capacity target for 1965-66 is Rs. 11 crores. In other words, no significant increase in investment in this branch of capital goods industry is envisaged in the third Plan period. The targets, it is said, are related to the demands for original equipment. As a sizable part of existing sugar mills will need renewals and replacement, it is a moot point whether this capacity will be sufficient to take care of the country's total requirements of sugar machinery in the next Plan period. It is for the sugar industry now to examine the provisions made in the third Plan critically and bring to light their shortcomings.

FINANCES OF MAHARASHTRA

The financial position of the new State of Maharashtra is quite sound, despite the initial strain of reorganisation. This is the impression one gets from the perusal of the Government's budget estimates for the current year (1960-61), presented by Mr. S. K. Wankhede, Finance Minister, to the first session of the Legislative Assembly on Monday the 11th inst. The estimates disclose a nominal deficit of Rs. 16 lakhs, with revenue receipts placed at Rs. 100.97 crores and expenditure at Rs. 101.13 crores. The deficit is certainly negligible, considering the rising tempo of expenditure on Plan schemes, the mounting debt charges and the normal growth in administrative expenses. These factors have necessitated a high level of revenue expenditure for 1960-61, namely, Rs. 101.13 crores, as against Rs. 82.20 crores in 1958-59 (Report of the Finance Committee). As compared with the marked rise in expenditure, the revenue receipts of the Government have increased by just Rs. 1.91 crores, from Rs. 99.06 crores in 1958-59 to Rs. 100.97 crores (estimated) in 1960-61.

The revenue deficit in the 1960-61 budget may, however, actually turn out to be larger than anticipated (Rs. 16 lakhs), following the proposed upward revision in the dearness allowance of Government servants drawing a monthly salary up to Rs. 300 with retrospective effect from 1st May 1960. The Finance Minister has not proposed any additional tax measures to cover the deficit and expand the revenue.

The capital expenditure for the current year is estimated at Rs. 59 crores (including the expenditure met from the State Road Fund, as well as that on loans and advances sanctioned by the State Government). The major portion of this expenditure, to the tune of Rs. 44.30 crores, will be financed from the State's share in small savings collections (Rs. 13 crores), loans from the Central Government and other bodies like the Reserve Bank (Rs. 18.30 crores), and Bombay State road, milk and provident funds, recoveries of loans and advances, and other capital receipts (Rs. 13 crores). The deficit on capital account thus comes to Rs. 14.70 crores. This is proposed to be met by open market borrowing and withdrawal from reserves.

The Maharashtra Government had a cash balance of Rs. 7.34 crores as its share on 1st May 1960, out of the erstwhile Bombay State's total cash balance of Rs. 11.80 crores. The public debt liability out of the composite State's total of Rs. 258 crores (end of February 1960) is quite heavy, being Rs. 160.04 crores. Nevertheless, Mr. Wankhede is confident that Maharashtra "will come to enjoy the same financial strength and resilience as its predecessor, the composite Bombay State, after it has overcome the initial strain of reorganisation." This confidence is, perhaps, based on the ground that the economy of the State is strong and buoyant. The review made by Mr. Wankhede reveals that Maharashtra is a highly urbanised and industrial State, with over 8,000 registered factories employing about 700,000 daily workers and 4,000 joint-stock companies with a total paid-up capital of Rs. 314 crores. It is also favourably placed in regard to industrial raw materials such as cotton, oilseeds and salt, as well as in minerals like manganese, coal, bauxite, and iron.

In his speech, Mr. Wankhede declared that the State of Maharashtra was set fair to achieving 100 per cent. performance in respect of the second Plan targets. The Plan expenditure actually incurred during the first four years of the Plan is put at Rs. 147.27 crores which, together with the budget estimate of Rs. 66.77 crores for 1960-61, brings the total anticipated outlay for the whole Plan period to Rs. 214.04 crores. This represents a rise of Rs. 9.63 crores as compared with the allocation of Rs. 204.41 crores. The third Plan outlay is expected to be larger than this figure. The Government of Maharashtra, Mr. Wankhede said, would implement a bigger and better third Plan for the welfare of the people. The draft outline of the Plan, we are told, is to be submitted to the Planning Commission before the end of next month.

GOVERNMENT EMPLOYEES' STRIKE

Even the last-minute bid to avert the strike having failed, the Central Government servants, the largest single bloc of employees in the country, went on strike with effect from midnight on Monday as scheduled. The promulgation of the Essential Services Maintenance Ordinance, which declared the strike illegal, did not deter them from stopping work. The Prime Minister's broadcast went unheeded. Neither appeals to patriotism nor awareness of the grave economic consequences of the strike prevented them from taking the unprecedented step they did. Throwing discretion and good sense to the winds and disregarding the national interest, the Central Government employees and Railway workers invoked the strike weapon to get their demands conceded.

While the strike is certainly ill-advised, considering the irreparable damage it does to the national economy, it is not correct to dub the strike as merely political and to view it as a bid to upset the Government. The issues involved must be seen clearly and in the proper light. It is true that the agitation has been spearheaded by political parties which are rivals to the one in power. But it is directed against not the Government as legally constituted authority but the Government as employer. In essence, it is, therefore, a dispute between employer and employee. But the fact that the employer is the Government and the employees are public servants invests the dispute with features which ordinary industrial disputes do not have.

Nowhere in the world public servants enjoy the right to strike. As a result of the Government's venturing into commercial and industrial fields, its employees now fall into two broad categories; those who serve in Government departments, and those who work in industrial and commercial establishments owned by the Government. While the former cannot claim to have the right to strike, as they form part of the machinery which governs the country, there is no reason why the latter category of employees should not be treated on a par with workers in the private sector. Even here a distinction should be drawn between undertakings like the Post and Telegraphs, which offer service for which no alternatives are available, and whose employees should not be allowed to strike, and undertakings, like railways for whose services substitutes are available in the form of road and air transport and whose employees should not, therefore, be denied the privilege of using the strike weapon even as a last resort.

All those who fall under the category of Government servants as defined above have got to realise that the strike is a right they have to forgo in return for the privileges associated with Government service. At the same time, the Government, too, should reconcile itself to the fact that the expansion of public ownership inevitably involves some limitation of its arbitrary powers in relation to its employees.

The issues involved in the present strike are now well known. While the Government's case for not conceding the demands of the employees is strong enough, equally forceful is the case of the employees who, along with all those whose incomes are fixed, have to struggle hard to strike a balance between sluggish incomes and soaring living costs. Nevertheless, there was still room for compromise and both parties should share the blame for precipitating the chaotic situation which now obtains.

But one cannot help feeling that the Government has to thank only itself for its employees turning to the war-path. For the discontent among its employees is not a spontaneous overnight eruption; it has been brewing for more than a decade. A proper machinery for dealing with the grievances of Government employees was a long-felt need. The Second Pay Commission had recommended for this purpose a machinery similar to the Whitley Council in the U.K. Since matters have come to a head now, the Government is reported to be actively considering the proposal. The Government has also been slow and tardy in implementing the recommendations of the Pay Commission. If it had promptly given at least such of those concessions which it has now offered, it could have averted the unpleasant developments that have now arisen. No wonder the impression that it is difficult to get things done by the Government unless its hands are forced is growing from strength to strength.

Even the worst developments have some good in them. The present conflict has highlighted the confused areas of Governmental thinking and functioning and, as Mr. Asoka Mehta pointed out, to push it back into darkness without clearing the confusion will be storing trouble for the future. But the first step in that direction has to come from those who called the strike. They must call it off unconditionally without any further delay. The Government has already conferred several benefits on its employees as well as those of the railways.

INDIA'S FOREIGN TRADE

The value of India's foreign trade was at a higher level in the first five-month period in the current year than in the corresponding period of 1959, thanks to an improvement in exports. During the five months ended May 1960, exports aggregated Rs. 256 crores which compare favourably with Rs. 223 crores in the same period of the previous year. Imports, however, declined from Rs. 390 crores to Rs. 372 crores. As a result mainly of the expansion of exports (by Rs. 33 crores) and a simultaneous reduction in imports, albeit to a smaller extent (that is, by Rs. 18 crores), the adverse balance of trade fell from Rs. 167 crores to Rs. 117 crores.

It is particularly gratifying to note that exports have started picking up. During the

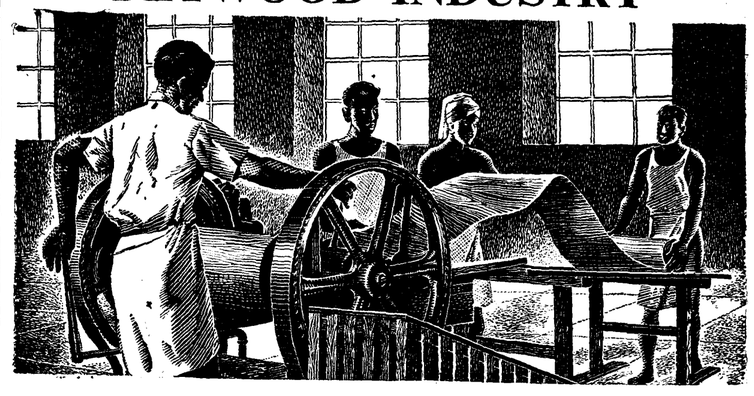
How banking serves the PLYWOOD INDUSTRY



TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dups in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

ECONOMIC REALITIES IN U.S.-CUBAN RELATIONS

CHARGE OF U.S. AGGRESSION BASELESS

By A Special Correspondent

OLD myths die hard, and logic too often is ignored when it comes to assessing international relations that have become charged with such emotional overtones as allegations of economic aggression or imperialism. It would be difficult to find a situation which more clearly bears these unfortunate truths than the one that concerns Cuba and the United States today. If ever there was a situation that called for clear thinking and a proper appreciation of the economic realities involved, it is this one. Relations between Cubans and North Americans, from which both have benefited, have been too friendly too long to be allowed to be obscured by clouds of invective or semantic misunderstandings.

Let us note, first of all, that Cuba historically has enjoyed one of the highest standards of living in Latin America. Indeed, Cuba's annual *per capita* income of more than $300 has compared favourably with that of most countries around the world, including more than a few in Europe. For the years 1956-57, Cuba's annual rate of economic growth was in the neighbourhood of six per cent., one of the highest in the world. If the dislocations of revolution, followed by the policies of the present Cuban Government, have tended to reduce both the *per capita* income and the growth rate in the past year, the United States can hardly be blamed for this.

As a matter of fact, the record shows that American public policy has consistently favoured Cuba, and American private investments have contributed markedly to Cuba's economic progress. As far back as 1934, for instance, when the United States was setting up its quota system on sugar imports, President Roosevelt urged a system that "would contribute to the economic rehabilitation of Cuba." This is a policy which has been continued under every U.S. President since. From 1933 to 1959, Cuba's annual sugar sales to the United States more than doubled—from 1,573,000 tons to 3,215,000 tons. This was the largest increase achieved by any single producer, domestic or foreign.

Under the favourable quota, Cuba has consistently furnished more than one-third of the annual U.S. sugar supply, and at prices notably higher than the going world quotations. Under its quota arrangements, the United States was taking about half of Cuba's annual sugar production at a price that meant an extra $100 million or so a year for Cuban coffers. When the United States cut the Cuban quota last week, and announced projected import increases from other producers, it was thus acting to protect its supplies, which have been so largely bound up with Cuban production.

U.S. Property Expropriated

Here, we come up against the nub of the present situation. For it was the Cuban Government which had embarked on what some have likened to a programme of "economic aggression" against the United States. American investments worth some $500 million had already been expropriated with little or no prospect of adequate compensation, or had been "intervened"—which is much the same thing in that it means a management take-over by Cuban authorities. What is more, Cuban officials had been continually threatening a continued take-over of American properties, including sugar lands and mills.

Meanwhile, the Cuban Government was negotiating trade agreements with the Soviet Union and other Communist lands which threatened to bring into the Western Hemisphere the influences of an aggressive and expansionist international Communist movement —hardly a situation calculated to instil U.S. confidence in Cuban actions or intentions. It is pertinent to remember, in this connection, that the intervention and expropriation of U.S. private investment by their very nature have effectively stopped any further flow of U.S. private capital to Cuba. And Mr. Castro's anti-U.S. moves and tirades have virtually killed the once-thriving U.S. tourist trade, historically a top dollar earner for Cuba.

In addition, the Cuban Government has imposed severe import restrictions which have been strangling Cuban trade with the United States. Cuban imports from the United States, which averaged $50 million a month in 1958, have dropped to $23 million a month, and few U.S. exporters have been paid for even this amount.

Now, no one—least of all the U.S. Government or people—quarrels with Cuba's or any nation's right to try to raise its standard of living. When the Castro regime took over, it found abundant sympathy in the United States for its avowed aims. When the Castro Government started to attack the United States and U.S. investments, it not only started to vitiate this sympathy, but it also flew in the face of the facts.

Extent of U.S. Investments

U.S. investments have done much to help Cuba advance. If the $1,000 million in private U.S. investments in Cuba had been raised through taxes, it would have required $150 from each of Cuba's 6.5 million citizens. According to a 1959 survey, U.S. companies in Cuba provided jobs for 87,500 Cubans. Including the families of these employees, this meant that nearly 500,000 people gained their livelihood, in effect, from U.S. investments. U.S. firms in Cuba paid their workers an average yearly salary of $2,000—well above the Cuban national average.

Only about 320 positions in U.S. companies in Cuba—less than half of one per cent.—were held by employees sent from the United States. Indeed, Cubans held more than 90 per cent. of the supervisory, professional and technical positions in these companies. And all of this still does not take into account the housing facilities, schools, medical care, vacations, pension plans, insurance and other benefits accruing to Cuban employees of U.S.-owned or backed companies. Nor does it take into account the expansion of internal Cuban business made possible by the very presence in Cuba of the U.S. enterprises.

In 1955, the last year for which complete figures are available, U.S. companies in Cuba spent $451 million—equivalent to $70 for each Cuban. This figure represents one-quarter of Cuba's national income that year. A good part of the $451 million—some $64 million of it, equivalent to $10 for each and every Cuban—went directly to the Cuban Government as taxes. The tax payments of U.S. companies represented 20 per cent. of the total tax revenue at the disposal of the Cuban Government. And this obviously meant that more money was available in Cuba for schools, hospitals, roads and other public services and facilities.

Profits Ploughed Back

Of course, U.S. companies profited from their investments in Cuba. If they had not, they would not have been there. It is significant, however, that, in 1955, U.S. investors sent back to the United States the relatively meagre total of $21 million, including not only profits and dividends, but also interest payments, fees and royalties. This total represented but three per cent. of the total U.S. investment in Cuba. The larger portion of U.S. earnings remained in Cuba, to the further benefit of the Cuban economy.

It also should be noted that the U.S. investments in Cuba have not been concentrated in just one or two industries, but have been diversified and expanded over the years to more fully meet Cuban needs. Even in the well-publicised case of sugar, about 75 per cent. of all Cuban land planted to sugarcane has been owned by Cubans, as has 60 per cent. of the milling capacity. Chargeable largely to the Cubans themselves, they found sugar a highly profitable cash crop, responsible for 75 per cent. of Cuban export earnings.

Not in Sugar Alone

U.S. investments, however, have increasingly gone into other Cuban industries and economic sectors. In the period 1929-59, U.S. investments in Cuban agriculture actually decreased by 50 per cent., while U.S. investments in Cuban manufacturing doubled. In 1929, U.S. investments in mining and petroleum was almost non-existent, but in 1959, it amounted to $270 million.

U.S. investment in Cuba has resulted in a wide variety of locally made consumer items, from pencils to building materials, and including tyres, bottles, wire, cement, light bulbs and others. In addition, the U.S. Government was working toward helping the Cubans establish a bagasse paper industry and a kenaf fibre industry.

All of this indicates the diversification that U.S. investments and public policy have helped bring to the Cuban economy. It should also be noted that these investments helped to reduce Cuban dependence on imports, and to increase the Cuban export potential. They thus helped build up foreign exchange for Cuba and helped lead to a favourable Cuban trade balance. Today, again, through no fault of the United States but largely because of the Cuban Government's actions, Cuban foreign exchange reserves are down to an estimated $40 million or less—and Cuba is said to owe that much and more in foreign trade debts.

The importance of private investment as an economic stimulant has been too well documented and is too widely recognised, in principle, to need further elaboration here. One need only note at this point that it is recognised even by such an inter-governmental lending agency as the United Nations World Bank, whose affiliate, the International Finance Corporation, is dedicated to the task of promoting the flow of constructive private investments to developing lands.

U.S. Policy

As far as U.S. public policy is concerned, it has manifested itself just in the past year or so in the wholehearted support given the Inter-American Development Bank, to which the U.S. would be the largest contributor, and through which it would co-operate with its American friends to the south for the acceleration of Latin American development. This, of course, is in addition to the loans made available to Latin America over a period of many years by such U.S. agencies as the Export-Import Bank, and the continuing U.S. co-operation with the technical assistance and other economic programmes of the Organisation of American States.

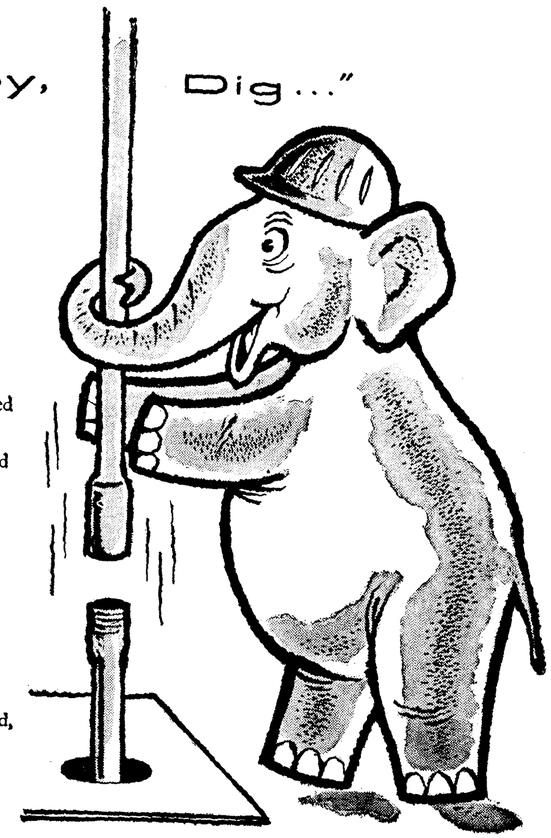
One can hardly claim, on the basis of this record, that the United States has been insensitive to the economic needs or desires of its Latin American neighbours, the Cubans included. After all, entirely apart from public policy or political aims, North Americans remember that, throughout the nineteenth century, foreign capital poured into the United States and helped build manufacturing plants, develop oil and mineral resources, expand transportation systems, and, generally, strengthen the U.S. economy. Between 1800 and the present time, direct foreign investment in the United States has grown from $60 million to $15,000 million—and it continues to increase even today.

By trading and instinct, the people of the United States desire to co-operate with all other nations in the achievement of political, economic and social amity and progress around the world. Doing this does not necessarily imply universal agreement on all things or on all policies; but it does require a reciprocal understanding among nations.

It is to be hoped that this understanding will soon be forthcoming from the Cuban Government, and that the longstanding friendship of the peoples of Cuba and the United States, which has never wavered as far as the U.S. is concerned, will once again become the dominant element in the U.S.-Cuban relations.

Memoirs of an Elephant—2

"Dig Boy, Dig..."



As I told you before—in the 1880s
I made a great discovery by
stepping into a pool of oil. Soon,
these human beings started
drilling holes into the earth to try
and find more of this precious fluid.
Very hardworking men they were.
All the time, day and night, they used
to be at this drilling job. When
the first well was being drilled I used
to see one Willie Leova Lake
stand at the well site and shout
"Dig Boy, Dig"—I think he was
trying to encourage the workmen.
"Dig Boy, Dig" became such
a familiar phrase in the locality,
that I believe the place eventually
came to be known as "Digboi".
Work on this first oil well was started,
I remember, in 1889. When
they completed it they had taken
14 months—and they had drilled
to a depth of 662 feet. Today,
things have changed completely. The AOC
can drill a 10,000-foot well in less than 10 days. When I asked
one of the AOC men how they are able to do this he tells me it is "experience",
"know-how", "technical development" and a few other things.
One thing more. I think the AOC took the clue from the words
"Dig Boy, Dig" because they have been digging ever since.
Today, about 1000 wells have been drilled by
them in this area—all, they say, to unearth that
precious fluid oil for the Nation's use.

RESERVE BANK'S OPEN MARKET POLICY

OBJECTIVES, PROCEDURES AND OPERATIVE TECHNIQUES

THE tempo of economic activity in India will be greatly accelerated in the next five years, what with a total investment of Rs. 10,200 crores envisaged in the Draft Outline of the third Plan. Inherent in such a situation is considerable inflationary potential, which, if it is not held in check, is bound to jeopardise the functioning and progress of essential productive sectors of the economy. It is this consideration that invests the open market operations of the Reserve Bank of India with special significance. For the operations play the important role of a full-fledged credit instrument for influencing the availability and cost of credit. Moreover, they assist the Governments—Central and State—in their financing operations and, to this end, maintain an orderly market for Government securities. These are the two broad objectives of the open market operations. How far and to what extent the two objectives have been achieved since the Reserve Bank began open market operations soon after it was set up in 1935 are detailed in a comprehensive article published in the June issue of the *Reserve Bank of India Bulletin*.

The Reserve Bank's review reveals that the objectives of the open market policy have varied from time to time, conditioned, obviously, by the changing economic situation and the trends in the money and capital markets. Broadly speaking, the operations have not been designed to suit the role of a full-fledged instrument of credit policy, inasmuch as they have been used mainly to assist the commercial banks to tide over seasonal monetary stringency and, only on rare occasions, they have been used deliberately for the purpose of restraining credit. The Bank has sought to restrict credit when necessary through other monetary measures, including selective credit controls. In other words, open market operations have been more for the purpose of assisting the Government in its borrowing operations, as well as for maintaining orderly conditions in the Government securities market, than for influencing the availability and cost of credit. The objectives of what is called "grooming" the market (such as acquisition of securities nearing maturity in order to facilitate redemption) and of making available on tap a variety of loans to broaden the gilt-edged market have been more prominent.

In Line with Monetary Policy

Nevertheless, the Reserve Bank claims that the open market operations have been generally in line with its monetary policy. To quote it:

"The operations have tended to affect the volume of securities available for trading and thereby influenced directly the prices and yields of the particular issues that were bought or sold and indirectly also those of all the maturity groups. On the whole, the Bank has succeeded in avoiding violent fluctuations in gilt-edged prices. Further, these operations have had the general effect of keeping the Bank in closest touch with the market and of being able to fill the gaps in supply and demand, with a view to broadening the market."

The two tables at the bottom of the page give statistical data relating to the Reserve Bank's open market operations during the sixteen-year period 1944-45 to 1959-60 and their effect on the trends in prices of and yields on representative Government securities since 1946. Statistics relating to the years preceding 1944-45 have not been given, because the open market operations assumed significant dimensions only from that year. In the earlier years of the Bank's existence, the open market operations were undertaken on a very restricted scale and were mainly in the nature of seasonal open market purchases to relieve the pressure on the money market. Table I shows that, during the period 1944-45 to 1959-60, the Reserve Bank's purchases and sales of Central Government securities aggregated Rs. 927 crores and Rs. 897 crores, respectively, resulting in a net purchase of Rs. 30 crores. During the first Plan period and the first four years of the second Plan, the Bank made *net* sales of securities worth Rs. 251 crores, the total purchases and total sales being Rs. 309 crores and Rs. 560 crores, respectively. In view of the heavy sales thus, the prices of Government securities moved down, though a recovery was in evidence during the years 1959 and 1960, as Table II indicates.

During the war and post-war years, open market operations in India were geared, as in several foreign countries, to the pursuit of cheap money policy and to raise maximum amounts through borrowings with the objective of assisting in the financing of the war. Thus, the operations in the war period were mainly in the nature of 'tap' sales of Government loans and, during post-war years, the operations resulted in large purchases of Government securities, especially in busy seasons, in a process of monetisation of the bank-held Government debt for releasing funds to meet the pent-up demand of trade and industry. The operations had inflationary consequences, particularly in the period following the Korean war, though, in some years, there was the neutralising effect of the balance of payments deficit. The credit expansion during the 1950-51 busy season was so large that the Reserve Bank had to announce, simultaneously with the raising of the Bank rate in November 1951, a change in its open market policy whereby seasonal finance was to be provided to banks not by making purchases of Government securities outright but by granting temporary accommodation against the collateral of Government securities. This constituted a fundamental change in the Bank's policy of open market operations, as it "restored to the Bank the initiative in regard to the open market operations which it had lost in the post-war years."

More Flexible and Meaningful

Since the above change, the open market operations of the Reserve Bank have been more flexible and meaningful. The Bank says:

"In general, the Bank has sought to maintain orderly conditions in the gilt-edged market with a minimum of buying and selling and has operated on a large scale only in the event of a serious imbalance between demand and supply. It has not been the Bank's policy normally to lend support to prices of loans, either of the Central or State Governments, and, by and large, Government securities have been allowed to find their own levels. Even the new flotations were generally allowed to quote below their issue prices. Broadly, the Bank follows the market trends and, though it is able to influence them in the desired direction, it does not try to swim against the market currents. Since November 1951, the Bank's purchases of securities have been mostly switches, which are operations involving purchase of one security against sale of another, as distinct from outright purchase or sale of a security. These switch transactions are generally done with the Bank's brokers. Whatever support was given was more or less of a 'discriminating' nature and of a temporary duration. The operations were directed mainly to meet the requirements of the market of particular loans or to enable banks and other institutional investors to adjust their investment portfolios.

"....to an important extent, the Bank's open market operations have been used as a means of creating the necessary market conditions for the flotation of new loans. Through open market operations, the Bank facilitates the repayment of a maturing loan by acquiring sufficient quantities of the loan through purchases spread over a fairly long period before the repayment date. The object of such purchases is to facilitate redemption of the loan and to ensure the success of the new loan flotations. In order to avoid an undue efflux of cash, such purchases are usually made against contra-sales of other suitable securities. Some purchases (or sales) of a 'grooming' nature are also undertaken in the case of loans of corresponding maturities to bring the yields thereon in line with those on the new loans. Through a judicious handling of the gilt-edged market, the Bank has enabled the Government to raise the period of maturity of the new flotations in recent years.

"In a developing economy, with a series of plans, there has been little scope for open market operations of an anti-cyclical character. Besides, the greater part of the Bank's comparatively short period of working has coincided with abnormal periods such as the war, post-war transition and the partition. Consequently, anti-cyclical policies have not been significant in the conduct of open market operations by the Reserve Bank, although the need to correct inflationary and deflationary tendencies has certainly influenced the Bank's open market policies throughout."

Conditions Favourable

The Reserve Bank is inclined to feel that the legal and institutional setting for the conduct of open market operations in India is on the whole favourable. There are at present no restrictions on either the quantity or the maturity of Government securities which the Bank can buy, and the Bank enjoys full discretion in this respect. Section 17(8) of the Reserve Bank of India Act authorises the Bank to engage in the purchase and sale of securities of the Central Government or of a State Government of any maturity, or of such securities of a local authority as may be specified by the Central Government on the recommendations of the Central Board. While the Bank has no power to deal in shares, it can buy and sell shares of the State Bank or of any other bank, or financial institution notified by the Central Government. By and large, the operations have been undertaken in Central Government securities and, to a very limited extent, in State Government securities. The Bank's capacity to conduct open market operations was greatly augmented after the war as a result of the increase in the volume and varieties of securities following the vast growth of public debt. This process was further aided by the large-scale Government borrowing undertaken to finance the development programmes under the Five-year Plans. At the end of March 1960, the Bank had an investment portfolio (exclusive of *ad hoc* Treasury Bills and non-marketable securities) of about Rs. 350 crores, the bulk of which was in the form of Central Government securities.

With respect to the institutional setting also, the present conditions in India are considered to be "generally suitable" for the conduct of open market operations. Thus, the financial markets in India—at Bombay, Calcutta and Madras—though they are not so well developed and closely integrated as those in Britain and the U.S., are sufficiently broad and active to enable the Reserve Bank to buy and sell Government securities in appropriate amounts without wide price fluctuations. Again, the purchase and holding of Government securities are fairly widespread, albeit largely confined to institutional investors such as banks, the Life Insurance Corporation, charitable trusts, joint-stock companies, and provident and pension funds. The banks (including the State Bank of India) are the most important. The money

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A copy of the Prospectus having attached to it the documents required by section 60 of the Companies Act, 1956, has been delivered for registration to Registrar of Companies, Kerala, Ernakulam.

The subscription list will open at 10 a.m. on the 25th of July 1960, and will remain open at least for 15 days and thereafter will be closed at the discretion of the Directors.

The Shares of the Company previously issued are dealt in and officially quoted on the Madras Stock Exchange. Application will be made forthwith to the Madras Stock Exchange to include the shares of the present issue also for being dealt in and officially quoted on the Madras Stock Exchange.

RUBY RUBBER WORKS LIMITED

CHANGANACHERRY

(INCORPORATED ON 7TH SEPTEMBER, 1955 UNDER THE COMPANIES ACT, 1913)

CAPITAL PREVIOUSLY PAID-UP .. .. Rs. 11,42,855

PRESENT ISSUE Rs. 2,50,000 Divided into 25,000—10 per cent. (subject to deduction of income-tax) Cumulative Preference Shares of Rs. 10.00 each.

The amount payable in respect of each share is Rs. 5.00 on application and Rs. 5.00 on allotment.

The present issue of 10 per cent. Preference Shares were first offered to the existing Equity shareholders in proportion to their current holdings, i.e., 10 Preference Shares for every 36 Equity Shares and applications in terms of the Prospectus are now invited from the public for shares not taken up by the existing shareholders.

RUBYNAGAR POST, CHANGANACHERRY, KERALA STATE.

OBJECTS, HISTORY AND BUSINESS

The Company was incorporated on 7th September 1955 to acquire and take over the lands, buildings, machinery, equipments, etc., of the Concern known as "RUBY RUBBER WORKS" situated at Changanacherry with its goodwill and the various sales depots situated throughout India. The Company obtained its Certificate of Commencement of Business on 9th January 1956 and acquired the above-mentioned "RUBY RUBBER WORKS" and has been carrying on the business of manufacturers of rubber goods and selling the same directly and through various depots. The Factory is at present producing cycle tyres and tubes, tyre retreading materials, hose pipes of all varieties (plain, delivery, armoured suction pressure, pneumatic, tool hoses, etc.) industrial sheetings, car materials, automobile parts, cycle rubber parts, all varieties of moulded goods required for various industries, rice polishers, ebonite goods, all varieties of extruded goods, etc. Ruby's extruded quality tread rubber (tyre retreading compound) enjoys a wide popularity throughout India among retreaders. The Company has been registered as a supplier to the Director General Supplies and Disposal, Delhi, and is supplying various rubber products to various Government Departments, Central as well as States, various Railways, semi-Government Firms and automobile and cycle manufacturers throughout India.

EXPANSION

With a view to more efficiently serve the large volume of customers in the States of Mysore and Andhra and in view of the steady rise in the demand for the rubber goods being manufactured by the Company, the Board of Directors of the Company have decided to establish and operate a branch factory at Bangalore. Sanction has been received from the Government of India as per Licence No. L/30-4/N-23/60 of 24th February 1960, authorising the Company to produce at the Bangalore Factory 9,00,000 lbs. of tyre retreading materials like tread rubber, camel back, cushion compound, etc. The requisite land for the Bangalore Factory measuring 8 acres has been purchased for Rs. 20,000 and is situated on the Bangalore-Bannerghatta Road about 1½ miles outside the city boundary. Construction of office premises costing about Rs. 25,000 is nearing completion and the factory buildings and godowns to be constructed are estimated to cost about Rs. 75,000. For the requisite machinery, viz., two mixing mills, two extruders, one small size Three-Bowl Calender Machine and one Solution Mill orders have already been placed with Fabricators in India and together with other machinery under fabrication in the Company's Workshop at Changanacherry, the total cost of machinery for the Bangalore Factory is estimated to cost round about Rs. 75,000.

OBJECTS OF THE ISSUE

To meet the cost of the machinery, buildings and land referred to above, estimated to cost in the aggregate Rs. 2,00,000 and to provide for a portion of the working capital required to the extent of Rs. 50,000, the present issue is made. For further working capital estimated at Rs. 1,00,000, the same could be covered by borrowing facilities from Commercial Banks.

Prospectus copies may be had from the Registered Office or from the Managing Brokers.

TEXTILE EXPORTS UNDER THE THIRD PLAN

CERTAIN PREREQUISITES FOR THEIR SUCCESS

By A Special Correspondent

INDIA'S emergence as a leading exporter of cotton textiles is of recent years. It happened under the fortuitous circumstances of the last war when it moved into the international market vacated temporarily by major textile exporting countries like Japan and Britain due to their preoccupations with the war. There was, in fact, a rapid increase in India's export of cotton piecegoods during the war years and, for some time, it became necessary for the Government to regulate the sendings as a safeguard against domestic scarcity. The tempo of Indian exports reached the peak in 1950 when as much as 1,072 million yards of cloth was sold abroad. This record had not been attained before nor has it been realised in the subsequent years.

Exports of Indian cloth during the period of the world conflict were essentially a windfall, but, today, they constitute a vital support to the national economy. The partition of the country in 1947 forced both the industry and the economic policy-makers to strive for an alternative outlet for 800 million to 1,000 million yards of cloth annually. Perhaps, even more decisive than this consideration is the need to use cotton textiles as prolific earners of foreign exchange for financing development schemes involving a huge outlay on imported capital equipment. The Planning Commission has provided for the earning of external resources during the current Plan period at the average rate of Rs. 75 crores a year through exports of cotton manufactures. The performance of the industry in this respect since the beginning of the present Plan is indicated below:—

Year	*Earnings* (Rs. crores)
1956	48
1957	59
1958	40
1959	54

World Market

In the light of these disappointing figures, it would be most pertinent to consider how best the planners' targets relating to exports and external earnings can be realised. Before proceeding to examine this issue further, it is, however, necessary to make a brief study of the prospects for cotton textiles in the world market. Since the end of the last war, there has been a remarkable change both in the volume and the pattern of the international trade in cloth. Many countries that had long been content to import their clothing requirements have set up their own textile mills, with some of them actually entering the world market as competitors of older exporters. The tendency to establish the textile industry, while it is most pronounced in cotton-growing countries, is becoming almost universal. Supply of home-grown cotton is no longer considered an indispensable pre-condition for starting such an enterprise. Generous help is being given by the textile machinery producers of different countries for making such undertakings possible.

In the result, the total volume of cloth entering the world market is steadily on the decline, as the following figures bear out:

Year	(*Million yds./sq. yds.*)
1937-39 (average)	6,407
1950	5,512
1951	5,673
1952	4,603
1953	4,596
1954	5,209
1955	4,681
1956	4,570
1957	5,002
1958 (estimated)	4,855
1959 (provisional)	5,232

Since pre-war, the decline in the volume of cloth exports is nearly 1,500 million yards a year—a large figure indeed taking into account the fact that the world population during this period has increased considerably. It has risen from 2,151 million in 1938 to 2,795 million in 1957—the year for which the latest figures are available. At the same time, the total volume of cloth produced by different countries has increased a good deal. "World production of cotton cloth," wrote a competent authority a few years ago, "has increased more than threefold since the years 1882-84 and, including cloth woven from man-made fibres, has increased fourfold. The total figure amounted in 1955 to approximately 50 milliard square yards. During the same period the population of the world, roughly calculated, has only doubled. It is only possible to sell the increased production because the consumption per head has risen."

The scale of increase in the output of (*a*) cotton piecegoods and (*b*) of cloth produced from man-made fibres is shown below:—

Production of Cotton Piecegoods

(*1,000 metric tons*)

	1956	1957	1958	1959
Non-Communist world ..	4,110	4,180	3,940	4,040
Communist countries ..	1,580	1,520	1,640	1,910
World total ..	5,690	5,700	5,580	5,950

Production of Rayon Piecegoods

(*1,000 metric tons*)

	1956	1957	1958	1959
Non-Communist world ..	900	900	875	875
Communist bloc ..	107	113	120	125
World total ..	1,007	1,013	995	1,000
Grand total ..	6,697	6,713	6,575	6,950

The various figures so far quoted lead us to certain significant conclusions. First, although the activity of the world textile industry is on the increase consequent on the rise in the rate of consumption, this is not reflected in the world trade in textiles. In fact, the tendency is the other way round, with the possibility of the decline becoming increasingly pronounced with the passage of years. This, as has already been observed, is due to an increasing number of countries starting their own textile industries as the first step towards their industrialisation and protecting their nascent enterprises with high tariffs and stringent import restrictions. The progress made by some of the Communist countries in this direction is conspicuous, as the following figures relating to the production of cotton piecegoods bear out:

(In million yards)

	1955	1956	1957	1958	1959
China	3,816	5,040	5,524	7,008	8,968
U.S.S.R.	6,456	5,964	6,120	6,332	6,332

The phenomenal rise in China's production in recent years has relegated India to the fourth position among the major producers of cotton textiles. Both these Communist countries are fast developing into formidable exporters of cloth, their competition threatening to become almost irresistible since they appear to be uninfluenced by considerations of profit and loss.

Change in Varieties

We are thus presented with the spectacle of more and more countries making a desperate bid to annex for themselves as big a share of the declining world market for textiles as they can. In this scramble, only the fittest can hope to survive. As in our own country, there is a gradual change in consumer taste abroad and the scope for the export of coarse grey goods is likely to narrow down in the coming years. Finer fabrics produced in the colours and designs fancied by the overseas buyers alone can secure ready and assured sales. Market research is thus essential if India's export trade in cloth is to achieve any measure of stability at a relatively high level. It goes without saying that the prices of our products should also be competitive.

Secondly, we should take into account the astonishing rise in the popularity of the piecegoods of man-made fibres. Although the primacy of King Cotton is still absolute, it is no longer possible to ignore the capacity of artificial fibres to contribute to the clothing requirements of man. It is pointed out that the proportion of cotton piecegoods entering the world market has declined from 24 per cent. in the pre-war period to about 18 per cent. of the world production, while the international trade in non-cotton fabrics has been expanding since 1952 at an annual rate of 15 per cent. Countries like Japan, which do not grow their own cotton, have taken full advantage of the man-made fibres in maintaining their textile output.

These facts must be borne in mind when drawing up export programmes for textiles under the third Plan. The export target of 1,000 million yards of mill cloth *per annum* has persistently remained elusive and it would be a misplaced optimism to expect that the situation will be any better in the coming years. The following figures show India's export performance since the first Plan period in cotton mill cloth:

1951, 732 million yards; 1952, 543 million yards; 1953, 593 million yards; 1954, 804 million yards; 1955, 692 million yards; 1956, 684 million yards; 1957, 839 million yards; 1958, 581 million yards; 1959, 810 million yards; and 1960 (January-March) 185 million yards.

These figures indicate that even an export target of 800 million yards *per annum* under the next Plan will be sufficiently ambitious and will call for the utmost exertion for realising it.

The Government of India has shown its earnestness about promoting the export of textiles by granting various incentives. But the problem is essentially one of achieving efficient and economical production, so that Indian textiles abroad might stand competition both in price and quality. Modernisation of the productive equipment thus acquires considerable importance. Sanction has been accorded for installing 3,000 automatic looms in the mills to facilitate cloth exports and this number is likely to be acquired by the end of the current Plan. Permission given to mills some time ago to install 2,500 automatic looms a year for three years as a step towards the replacement of the existing looms is certainly most welcome. Equal attention should be paid to the production of a bigger volume of superior quality cloth in required colours and patterns in order to meet the changing tastes of the overseas customers. Exporting countries like Japan are able to maintain their lead in the world market largely on account of their ability to please their foreign buyers in every way.

Resilience in Cost

Price is another decisive factor and the Indian exporter cannot gain any advantage in this respect unless the industry is able to achieve a great measure of resilience in its cost structure. The persistent shortage of home-grown cotton and the consequent need for imports of foreign cottons at high prices greatly limit the scope for keeping costs at a reasonable level. Shortages of Indian cotton have led to a fantastic rise in prices which have often gone out of world parity, thus saddling the industry with a heavy financial burden. Self-sufficiency in cotton is thus one of the major factors that will greatly help the country's efforts to secure a bigger share in the world trade in cloth.

Similarly, the tendency to inflate the wage bill without linking productivity to wages is hardly consistent with the plea for a more vigorous export drive. It is the right of labour, as indeed it is the right of every member of the community, to secure a reasonable standard of living. Great progress has been made by the cotton mill workers in this direction and the fact that the wage increase recommended by the Central Wage Board has been readily endorsed and implemented in most of the textile centres, with the City of Bombay giving the lead, is an unmistakable indication that labour has been receiving a fair deal from the employers. It, therefore, behoves the workers to co-operate with the management in implementing the Central Wage Board's other vital recommendation, namely, rationalisation. It is only through the introduction of improved methods and techniques of working that the cost of labour can be kept at a reasonable level.

To conclude, although the picture presented by the international trade in textiles is by no means bright, it is quite possible for India to achieve an export target of 800 million yards of cloth annually during the third Plan period, if full advantage is taken of the conditions favourable to the industry. Far greater attention will have to be given to the supply of cotton if the export promotion schemes are to yield the desired results. Similarly, machinery modernisation and rationalisation should be undertaken with vigour, in order to secure the twofold benefit of efficiency and economy in production. At the same time, greater attention should be given to the changing tastes of the consumers abroad and exports adjusted accordingly. More and more branches of the Cotton Textiles Export Promotion Council should be established in different parts of the world where textiles are imported. The Indian offices should hold frequent shows of Indian fabrics and adopt all the well-known methods of publicity with a view to popularising them. All this will need more money which should be made readily available. Only then can we expect to realise the export target and retain it over a period of years.

MORE ON REORGANISATION SCHEME FOR TEXTILE FINISHING

NO GOVERNMENT AID UNLESS MINIMUM TARGETS ARE REACHED

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 5*th July*

AFTER ten months of intensive effort, the sponsors of reorganisation in the Lancashire cotton textile finishing trade have finally satisfied both the Government and the industry by producing proposals to cope with redundancy. Those who complained that the earlier schemes in the spinning, doubling and weaving sections were complicated will find the new document even more problematical. This is by no means the fault of its authors, but is mainly because no basic unit of machinery such as a spindle or loom exists in finishing.

This particular aspect was the stumbling block from the beginning and it has taken much time and trouble to evolve a satisfactory alternative. There are, moreover, several important variations in these proposals compared with the schemes drawn up for the producing sections. Although Mr. A. G. B. Burney, the Cotton Board's Reorganisation Director, pooh-poohed the idea that the changes were the result of experience gained in the former plan, it is significant that certain revised methods would seem to answer some of the criticisms aimed against the earlier arrangements. For instance, the Cotton Board has been given power to reject applications to scrap machinery if it is felt that the balance of the section concerned might be prejudiced if they were accepted. This was one of the aspects of the original schemes which provoked opposition, particularly among merchants who have complained that the unrestricted disposal of machinery has created artificial shortages in particular branches, especially in the weaving of speciality cloths.

Other ways in which the new scheme differs from its predecessors include the scrapping of complete production units only, as opposed to partial dismantling, and the "package system" of collecting all applications to scrap and then assessing the situation at the end of three months. The initial "participation period" will start when the schemes are confirmed by the Board of Trade, probably about the beginning of August. On this assumption the Cotton Board will notify acceptances early in November and will then decide whether a further opportunity to scrap should be provided.

No Aid, Unless . . .

The most vital factor of all concerns the reaching of minimum targets for scrapping. In the spinning, doubling and weaving schemes, basic targets were set and, until these were reached, no sectional plan could be put into operation. In finishing, the trade is faced with a different challenge. No Government aid will be given unless the target is attained. Nor can any firm, once it has registered its plant for scrapping, withdraw from the scheme. If the minimum is not secured, the trade itself will bear the whole cost of disposing of its redundant machinery.

When the Cotton Board distributed circulars in February, calling for returns on which to base its estimates for these schemes, the figures disclosed surplus capacity of approximately 30 per cent. The minimum scrapping terms have been set at about 20 per cent. In the woven cloth section, the aim is to scrap machinery capable of finishing 534.5 million linear yards annually; in the yarn processing section, the minimum is 25,200,000 lbs. Within the main figure in the cloth finishing branch, sub-sectional targets have been fixed, comprising 68.2 million yards in bleaching, 284.2 million yards in dyeing, raising and finishing, and 88.8 million yards in machine printing. The difference between these sectional totals and the overall minimum, amounting to 93.3 million yards, may be found from any sub-section. It is important to realise that the cost of each individual scheme will have to be borne by the firms remaining in the sub-section, if it does not attain its own minimum target, irrespective of the fact that the overall minimum for the woven cloth section is reached.

Compensation payable to owners of production units which are closed down and whose machinery is scrapped will amount to half the written-down value of the plant used in the finishing activities of the unit on the effective date of the earlier schemes, that is, 24th April 1959, plus 3*s.* per £1 of the turnover of the unit during its last complete financial year, ending not later than 31st October 1959 less the cost of direct materials.

In contrast to the earlier phase of cotton reorganisation, the finishing branches will have to wait longer to find whether any re-equipment subsidy will follow their redundancy arrangements. Again, perhaps the Government is being wary, after being accused of handing out vast sums of money to the producing sections.

Not only is the Treasury making sure that an adequate minimum of plant will be dismantled before announcing its readiness to contribute two-thirds of the cost, but the current schemes do not include any provision for modernisation grants. The Board of Trade is standing on the side-lines to watch the response to the redundancy projects before deciding whether similar subsidies should be offered to the finishers as in the case of spinning, doubling and weaving.

Owners of finishing plant will be place in the particular sub-section in which they hold most capacity. For example, a production unit consisting of 30 per cent. bleaching and 70 per cent. dyeing will be placed in the dyeing sub-section. A unit employing 45 per cent. printing, 30 per cent. dyeing and 25 per cent. bleaching will go in the printing category.

Final Closing Dates

The scheme provides that production units must be closed down by the last day of the sixth month following acceptance of scrapping applications. This means that those who register their production units for closing in the initial participation period will have, up to the end of May 1961, to effect their closure. Whether a subsequent participation period, which will be for a maximum of three months for any section or sub-section, will be authorised by the Cotton Board depends on the first response. In any case, the final scrapping programme must be completed by the end of 1961.

The sponsors of the redundancy arrangements are keen to ensure secrecy about the progress of the scheme. Unlike the weekly bulletins which were issued last August, intimating the volume of plant submitted for scrapping in the producing sections, there will be no official pronouncement until the targets are reached and the full details will not be available until at least early November.

Even the agreement between the employers and trade unions on the question of compensation for displaced workers shows a marked difference from the pact in the spinning and weaving sections. Men with three years' service in the industry will get a minimum payment of £10 and women £6. Graded rates of compensation will then apply according to length of service in the trade, reaching a maximum of £4 10*s.* per year for men and £2 15*s.* per year for women with thirty years' service and over.

How the Snowball Grew

While the "new" reorganisation scheme—that dealing with textile finishing—is the affair of the moment, information is still coming to hand about the effect of the redundancy arrangements in the producing branches. It is just a year since Mr. W. T. Winterbottom began the "snowball" of scrapping in spinning when he announced that the Fine Spinners and Doublers group intended to register at least a million spindles for disposal under the scheme. His statement with this year's accounts gives the full story.

Final scrapping figures for the combine were 1,494,000 mule equivalent spindles, 146,000 doubling spindles and 1,007 looms, involving the complete closure of 15 spinning units and seven doubling units. The percentage of spindles and looms scrapped was 57 in spinning, 65 in doubling and 36 in weaving, as compared with the group's capacity before the launching of the schemes. On the re-equipment side, Mr. Winterbottom discloses that decisions already taken by the group involve the addition of 130,000 ring spinning spindles, 6,500 doubling spindles and 650 automatic looms to its streamlined capacity. Installation of new plant during the next five years, he says, will be accompanied by still further scrapping.

Compensation for dismantling machinery under the scheme will aggregate £1,138,000 and the group should also receive more than 15 per cent. of that figure in sales of scrap. Offset against these receipts are the levies to be paid on running mills, but the final outcome of the transactions should provide a cash gain to aid the modernisation plans already under review.

On the value of the reorganisation schemes as a whole, Mr. Winterbottom says: "I am firmly convinced that an assessment at the present time is the only one that really matters. Whether they are to prove worth while depends more than anything on the initiative and enterprise of those left in the industry." The schemes, he adds, are bold and imaginative, giving a solid hope of building the industry into a sound commercial enterprise with adequate rewards for all engaged in it.—*All Rights Reserved.*

COTTON PRODUCTION IN THIRD PLAN

WAYS AND MEANS OF IMPROVING YIELD

THE draft third Five-year Plan has fixed the target for raw cotton at 7.2 million bales (of 400 lbs. each) to be achieved by the end of 1965-66. As compared with the original proposal of 7.8 million to 8 million bales put forward by the National Development Council, this may appear to be more realistic, although neither past experience nor future prospects suggest that it will be easy of achievement. Of course, one should not judge the target in the Draft Outline from the production of about 3.8 million bales in the current season, as it is an abnormally low one caused by extremely disappointing weather conditions. But assuming that the normal crop is about 5.2 million bales, the Plan aims at a 40 per cent. increase in the production of cotton during the five-year period. Since the possibility of expansion of area under cotton is limited, the increase has mainly to come through improvement in the yield per acre.

It may be noted here that the figure of 7.2 million bales is the same as that recommended by the Central Cotton Committee at its meeting on 26th September 1959 and compares with the target of 6.5 million bales fixed in the second Plan. There is, of course, no prospect of this target being reached by 1960-61, when the second Plan period comes to an end.

An account of how cotton production is proposed to be stepped up in the third Plan period is given in an article entitled "Planning of Cotton Production in India" by Dr. B. L. Sethi, Secretary, Indian Central Cotton Committee, contained in the latest issue of the *Indian Cotton Growing Review*, published by the Committee. The Plan target is sought to be achieved both by the expansion of acreage under cotton cultivation, mostly in project areas, and by intensive cultivation. Expansion of area is expected to result in an increase in production of 500,000 bales, provision of extra irrigation facilities is expected to yield another 700,000 bales. Application of fertilisers will give another 400,000 bales. Use of improved seeds, plant protection, improved cultural practices and contour bunding are expected to result in an increase in production of 100.000 bales each. It is fully realised that better seeds, manure, plant protection facilities, improved agricultural implements and adequate, cheap credit should be made available to the growers if cotton production is to increase. For the provision of better seed, the Indian Central Cotton Committee had recommended a scheme, whereby the various cotton tracts are to be covered in five or six stages by suitable, improved seed sold in sealed bags. This would also ensure purity and quality of the crop. The application of fertilisers to cotton has great possibilities for improving yield, by as much as 25 to 30 lbs. per acre, according to the author of the article.

Shortage of Fertilisers

The use of fertilisers is increasingly becoming popular now, but it is limited by the paucity of supplies available after meeting the needs of food crop. The question of establishing a large number of factories producing chemical fertilisers is under consideration. Simultaneously, the use of manure and compost in larger measure is sought to be encouraged. In dry areas, where the yield of cotton is poor, contour bunding is to be undertaken on a larger scale. The bunds would not only prevent soil erosion but also conserve moisture. The experience of cotton farmers in Texas (U.S.) shows that rotation of crops results in high yield. These methods deserve closer study in India because, in this country, too, large areas are cultivated under dry conditions.

Dr. Sethi is of the view that, if seasonal conditions are normal and the abovementioned measures are taken, even as high a target as 7.8 million bales can be reached. The 'if' here must be given a capital 'I,' for, it is well known that weather has always been the most unpredictable factor in the Indian agriculture situation and it continues to remain so. In fact, the influence of weather in the case of a sensitive crop like cotton is so decisive that adverse weather can negative all the gains in production made through other ways. The adverse effect of inclement weather on the size and quality of the crop can, however, be mitigated, to some extent, by increasing the percentage of irrigated lands in the total cultivated area. But, a serious limitation here is that foodcrops have to be accorded first priority in new areas brought under irrigation. The possibility of increasing production, therefore, depends largely on the adoption of intensive cultivation, better farming methods, increased use of manures, chemical fertilisers and better seeds. If these are not given the attention they deserve, the third Plan target for cotton will continue to remain as elusive as it has been in the second Plan.

Not only quantitatively but qualitatively also it is possible, according to Dr. Sethi, to achieve self-sufficiency in cotton. In fact, according to him, the prospects of producing within the country all the cotton required for the manufacture of fine and superfine fabrics, which are at present imported, are bright and promising. For the results of breeding new strains comparable to foreign cotton have been quite encouraging. Strains with a staple length up to 1¼" have been successfully evolved. Notable among them are the Indo-American strains 170 Co.2 and 134 Co.2-M in Gujarat, M.C. U.1 and M.C. U.2 in Madras State, M.A. 5 in Mysore State and L.L. 54 in the Punjab. The production of these varieties almost doubled during the four years 1954-55 to 1957-58, as the following table reveals:

(In thousand bales of 392 lbs. each)

	1954-55	1955-56	1956-57	1957-58
Indo-Americans:				
170—Co. 2 ..	28	61	75	89
134—Co. 2-M ..	12	58	56	55
Madras Cambodia:				
M.C. U. 1 ..	119	156	150	121
M.C. U. 2 ..	4	14	32	56
M.A. 5	11	16	16	17
Total ..	174	305	329	338

While on the basis of staple length these cottons are considered comparable to those imported from the U.S. and East Africa, they cannot completely replace imported cottons for spinning fine fabrics since they lack in yarn strength. But, says Dr. Sethi, experiments conducted at the Committee's technological laboratory showed that, by combing to the extent of 20 per cent., by using efficient high draft system with double roving and by spraying with Syton emulsion, it is possible to upgrade the spinning performance by 25 per cent. It is, however, too early to say whether this will be an economic proposition, for, as the author himself points out, the processing of the aforesaid varieties will require considerable capital investment. It is said that, for 400,000 bales, the provision of combers and high draft equipment will cost some Rs. 11 crores. Be that as it may, further breeding for the evolution of strains with the desired fibre length has resulted in the isolation of highly promising strains such as I.S.C.67 and 9030G which will replace 170 Co.2 and M.C. U.1, respectively. With a view to encouraging their production, these cottons were exempted from price control upto 1958-59, but they were brought under price control in 1959-60. The Working Group set up by the Ministry of Commerce and Industry to examine the question of stepping up the production of these cottons during the third Plan period was of the view that output of these cottons could be raised to 340,000 bales from the present level of 310,000 bales.

As regards the possibility of replacement of 1.3/16" staple cotton imported from Egypt and Sudan for the manufacture of superfine fabrics, the Sea Island Andrews cotton acclimatised to the conditions in Kerala is said to be of a quality comparable to Egyptian Karnak. As the cultivation of cotton is new in the high rainfall areas of Mysore and Kerala States, the problem is one of extending its cultivation under proper supervision. The development of this cotton is at present being carried out under the Sea Island Cotton Development Scheme. This cotton covered an area of 3,900 acres in the current season. The Third Plan production target for it is fixed at 225,000 bales to be raised from an area of 450,000 acres. This target is not difficult to achieve, says Dr. Sethi, provided suitable areas are demarcated and careful attention is devoted from the stage of land preparation to the harvesting of the crop.

U.S. COTTON ACREAGE

The U.S. Department of Agriculture has estimated the area planted for the next season's American cotton crop at 16,306,000 acres, as against 15,690 000 acres in the current season. This confirms the widely held view that raw cotton would be planted under the programme which permits farmers to extend their acreage beyond the basic allotment, provided they are prepared to accept lower price supports.

According to the latest estimates, world stocks of raw cotton at the end of the current month, which completes the 1959-60 season, would be around 16.5 million bales—a reduction of rather more than 1 million bales compared with a year ago. Stocks will then represent about six months' supply—rather lower than normal.

The cotton surplus has been reduced by nearly 6 million bales in the past four years, mainly as a result of curtailment of output in the U.S. Controls have been introduced to restrain farmers from growing unlimited crops, while in several other countries there has been a marked decline in output, due to the lower prices ruling.

The acreage due to be planted in many areas is expected to increase this year, and that, combined with improved harvesting methods, should bring larger crops.

Acreage in Mexico is expected to exceed 2 million, an increase of about 24 per cent. compared with last year. Similar expansions may occur in Central American countries. Although planting control is being maintained in Egypt, some increase in production of Karnak and medium staples is anticipated.

COTTON ANNUAL

The latest issue of the *Bombay Cotton Annual*, covering the cotton season 1958-59, published by the East India Cotton Association, maintains the high standard of the previous editions. In fact, the *Annual*—the latest one is the fortieth in the series—has already been recognised as an authoritative compendium of all matters relating to every branch of the cotton trade. It contains, as usual, statistical tables pertaining to crop, exports, imports, stocks, consumption etc. It is undoubtedly the most comprehensive reference manual on cotton and is a *must* for every one who has anything to do with cotton.

The only drawback of the publication is that it covers a period which is twelve months behind the running season. Perhaps, the range and exhaustiveness of the contents preclude publication of the Annual earlier. Nevertheless, one would wish that the gap between the date of publication and the period covered were smaller than it is at present.

SUGAR INDUSTRY IN BIHAR

THIRTEEN-MAN COMMITTEE TO DEAL WITH PROBLEMS

IT is reported that the Government of Bihar has constituted a special committee to enquire into the conditions of the sugar industry in the State, including cane cultivation. This action has come several months after the decision was taken, early in February, to be precise. The Committee consists of thirteen members, including the representatives of sugar mill-owners and cane growers. Its Chairman is Mr. L. P. Sahi, State's Deputy Minister for Industries. The Committee has been asked to examine and advise on the measures necessary for (*a*) raising the yield of sugarcane per acre and (*b*) improving the recovery of sugar. It has also been asked to study the issues relating to irrigation, manuring, establishment of seed nurseries, improvement of communications, provision of cheap and timely credit facilities, and co-ordination among cane growers, sugar factories and the Government agencies concerned.

Press reports do not indicate as to when the Committee is expected to complete its findings and submit the report. It would be very desirable if the Committee were to expedite its work, so that, on the basis of its recommendations, the Bihar Government can formulate the development programme for the third Five-year Plan.

The Bihar Government's decision to appoint the aforesaid committee was evidently prompted by its anxiety to check the declining importance of the sugar industry in the State. Despite all the loud talk of development and expansion, the production in sugar in the State has not only not registered any rise but actually tended to recede, though the trend of output was upward in the current and previous seasons. The quantity of sugar actually produced in 1939-40 was as much as 322,100 tons, a level never touched again since then. The following table indicates the trend of output during the first and second Plan periods:

Season	*Output* (Tons)
1950-51 (base year of the First Plan) ..	225,147
1951-52	223,078
1952-53	272,759
1953-54	145,842
1954-55	225,086
1955-56	319,202
1956-57	311,515
1957-58	274,550
1958-59	310,647
1959-60	308,103*

* Up to 15th April 1960 only.

It is true that the rate of sugar production in Bihar has gone up as compared with the base year of the first Plan, but it has been much slower than that noted in other States. This is evident from the fact that the percentage share of Bihar in the aggregate sugar production of the country has moved down from more than 20.4 in 1950-51 to a low of 13.4 in 1959-60, while that of several other States has increased, as, for example, from 11.0 to 17.1 in the case of Bombay and from 1.0 to 3.9 of the Punjab. In the past few years, two sugar mills have completely closed down in Bihar and two more units have shifted to centres outside the State. There are at present 28 sugar mills in the State.

Many sugar factories in Bihar are said to be working at a very low margin of profit or even losses. This is due largely to the heavy incidence of cane cost, which, in turn, must be attributed to the high minimum price fixed for cane and the poor quality of the crop. The average recovery of sugar per cent. in cane has suffered a distinct setback, notwithstanding the implementation of intensive cane development schemes during the last few years. Every 100 tons of cane crushed in factories in 1958-59 yielded no more than 9.79 tons of sugar, as against 9.91 tons obtained in 1957-58, 10.32 tons in 1950-51, and as high as 10.92 tons in 1942-43. The average recovery of 9.79 per cent. in 1958-59 was lower than the all-India average of 9.84 per cent. as well as 11.46 per cent. in Bombay, 10.36 per cent. in Mysore and 10.27 per cent. in West Bengal.

Thanks to the declining importance of sugar industry in Bihar, the production of cane has declined, from 5.17 million tons in 1940-41 to 4.50 million tons in 1957-58. Although it was higher at 6.04 million tons in 1958-59, the share of Bihar in the total cane crop of India was lower at 8.5 per cent., as against 10.2 per cent. in 1940-41. The decline in cane output has followed the reduction in the area sown to the crop, from 508,000 acres in 1940-41 to 376,000 acres in 1957-58; it was, however, larger at 405,000 acres in 1958-59. The average yield of cane per acre has, of course, recorded a rise from about 10.18 tons in 1940-41 to 14.9 tons in 1958-59; but the figure is lower than what is obtained in some other States, as, for example, 28.75 tons in Andhra Pradesh, 25.5 tons in Bombay, 24.7 tons in Mysore, and 24.3 tons in Madras. Even the per-acre yield obtained in the development zones in Bihar is lower than elsewhere, as the following table shows:

	Average yield per acre achieved in development zones during 1958-59	Average per-acre yield in whole State during 1958-59
	Tons	Tons
Bihar	14.9	19.4
Bombay	42.5*	25.5
Andhra Pradesh ..	33.4	28.8†

* Deccan canal zone. ‡ Factory area.
† Old development area.

A brief reference to the sugarcane development work in Bihar during the season 1958-59 may be made here. Sugarcane seed nurseries in the State, we are told, continued to supply certified seed of improved varieties. About 3,936,847 maunds of seed were distributed through factory nurseries and registered growers and village seedmen, in addition to 20,264 maunds supplied by the Central nurseries at Patna and Pusa. The number of village seedmen set up last year was 6,195, and the total of seed advances granted by sugar mills and unions was Rs. 56.39 lakhs. The cane development work also comprised top-dressing of cane in 79,377 acres with 73,202 maunds of ammonium sulphate, manurial demonstrations, intensive compost drive, distribution of better agricultural implements and provision of irrigation facilities. Out of a total area of 400,000 acres under sugarcane in 1958-59, 113,094 acres received proper irrigation. All the 300 State tube-wells in North Bihar were energised, but lack of *pucca* channels stood in the way of full utilisation of available facilities. Moreover, various cultivation practices such as autumn planting, pre-treatment of setts, planting in adequate soil moisture, eye-to-eye planting, early (mid-May) earthing and stubble harvest were being increasingly incorporated in the cultivation schedule of the farming community. Incorporation of trash with ammonium sulphate, press-mud, green and green manuring with *moong* type I and *rahar*-groundnut-cane rotation was getting popular.

U.S. CUTS CUBAN SUGAR QUOTA

As was anticipated, President Eisenhower has cut the import quota for Cuban sugar for the current calendar year by 700 000 short tons, that is, from the original figure of 3,119,655 tons to 2,419,655 tons. The cut has been enforced under the powers recently vested in him by the U.S. Congress. Out of the original quota, Cuba has already shipped or certified for shipment 2,379,903 tons of sugar, so that the quantity that can be exported from Cuba to the U.S. in the remaining months of 1960 is only 39,752 tons. As a result of the cut in the Cuban quota, the supply of sugar available for domestic consumption in the U.S. during 1960 will be smaller. This deficit is proposed to be filled by purchases from other free world suppliers. The reasons which led the U.S. Congress to authorise the President to readjust sugar import quotas and the Executive to take this action are explained by President Eisenhower as follows:

"Normally about one-third of our total sugar supply comes from Cuba. Despite every effort on our part to maintain traditionally friendly relations, the Government of Cuba is now following a course which raises serious questions as to whether the United States can, in the long run, continue to rely upon that country for such large quantities of sugar. I believe that we would fail in our obligations to our people, if we did not take steps to reduce our reliance for a major food product upon a nation which has embarked upon a deliberate policy of hostility towards the United States.

"The Government of Cuba has committed itself to purchase substantial quantities of goods from the Soviet Union under barter arrangements. It has chosen to undertake to pay for these goods with sugar—traded at prices well below those which it has obtained in the United States. The inescapable conclusion is that Cuba has embarked on a course of action to commit steadily increasing amounts of its sugar crop to trade with the Communist bloc, thus making its future ability to fill the sugar needs of the U.S. ever more uncertain.

"It has been with the most genuine regret that this Government has been compelled to alter the heretofore mutually beneficial sugar trade between the United States and Cuba. Under the system which has existed up to this time, the people of Cuba, particularly those who labour in the cane fields and in the mills, have benefited from the maintenance of an assured market in the United States, where Cuban sugar commands a price well above that which could be obtained in the world market. These benefits also reached many others whose livelihood was related to the sugar industry on the island.

"The American people will always maintain their friendly feelings for the people of Cuba. We look forward to the day when the Cuban Government will once again allow this friendship to be fully expressed in the relations between our two countries."

CASHEWNUT PRODUCTION TO BE DOUBLED

KERNEL EXPORTS IMPROVE

INDIA has the distinction of being the largest supplier of cashew kernels in the world, accounting as it does for over 90 per cent. of the total world trade in this commodity. Although East Africa and, to a lesser extent, Brazil cultivate cashewnut trees and collect raw nuts on a commercial scale, the processing industry is concentrated mainly in India. The production of cashewnuts in this country is not sufficient to feed the existing cashewnuts factories. Consequently, Indian processers of cashew kernels have to depend on imports of nuts, mainly from East Africa, to a much greater extent than the total domestic production. Of late, however, the producing countries have been making efforts to establish their own processing units. This is bound to reduce the raw material supplies to the domestic cashewnut industry in course of time, which will, in turn, affect exports of one of the important dollar-earning commodities. The Spices Enquiry Committee (1953), which made a detailed study of the problems of, and prospects for, cashew industry, made it sufficiently clear that the immediate problem of the industry was to reduce India's dependence on foreign imports of nuts in shell by taking early steps to increase the domestic production of cashewnuts.

Trend in Production

There has been a marked increase in the output of raw nuts in the country during the last few years. The actual output of cashewnuts (in shell) aggregated 69,000 tons in 1958-59 and is expected to go up to 73,000 tons by the end of 1960-61, the final year of the current Plan. The production in the beginning of the second Plan was about 60,000 tons. Although there has thus been an increase in production, it has fallen far short of the second Plan target (revised) of 106,000 tons. In the third Plan, it may be noted, the total production is planned to be raised by as much as 106 per cent. to 150,000 tons. If the third Plan target is achieved, a major part of the requirements of the domestic cashewnut industry will be met, thereby relieving it of its dependence on foreign countries for the supply of raw nuts. This is particularly welcome, in view of the growing competition from the other producing countries in the processing field.

These targets are, however, of little significance, unless the State Governments make earnest efforts to promote the development of cashewnuts planting, as also organised marketing, on the lines suggested by the Spices Enquiry Committee. At present about 70 per cent. of cashewnuts are grown mainly in the west coast, the major areas being Kerala, South and North Kanara in Mysore, and Ratnagiri in Maharashtra. The rest is grown mainly in some regions on the east coast of Madras. The Spices Enquiry Committee drew pointed attention to the possibility of extending cashewnuts cultivation to Madhya Pradesh, Mysore, Andhra, Orissa, West Bengal and Andamans. Some of the State Governments have no doubt done something to encourage the cultivation of cashewnuts—which, incidentally, does not make any inroads into the area under food crops. But from the actual production results, it can be stated that what they have done is either inadequate or belated. In any case, details of the results of their efforts are not available.

The following table shows the recent trends in production and the target in the third Plan, as mentioned in the Draft Outline:

	(In tons)
1951-52*	60,100
1956-57	55,000
1957-58	60,000
1958-59	69,000
1960-61 (expected)	73 000
1965-66 (target)	150,000

*Estimated by the Spices Enquiry Committee. The other figures are from the Planning Commission.

Imports of Raw Nuts

Although India is by far the largest producer of cashewnuts, substantial quantities of raw nuts are, as already stated, being imported every year. In 1958, imports were of the order of as much as 120,000 tons (valued at about Rs 7 47 crores). This is equal to about double the domestic production. In the following year, however, they fell to 90 000 tons, valued at Rs. 6 07 crores, thanks mainly to the expansion in domestic production. Mozambique is the largest supplier of nuts to India, accounting for over 60 per cent. of our total imports. The other major suppliers are Tanganyika and Kenya. The following table shows the trend of imports during the last few years:

	Quantity (In tons)	*Value* (Rs. lakhs)
1950-51	54,000	285
1954-55	85,812	425
1957	95,000	737
1958	120,000	747
1959	90,000	607

As was mentioned at the outset, India leads the rest of the world in cashew processing. There are about 210 cashewnut factories in India, over 150 of them being concentrated in the Kerala State. Over 100 units are located in and around one town in Kerala, namely, Quilon, a port town. This is attributed mainly to easy accessibility to imports and ready availability of cheap and skilled female labour in that area. The industry employs about 80,000 workers.

In the course of processing, the nuts yield cashew oil; the total production of oil amounts to about 9,000 tons annually. The oil is directly used as a preservative in the painting of boats, fishing-nets, etc., and as a water-proofing agent. The oil and its distilled products are also used in the manufacture of insulating varnishes, adhesive ingredients, pigments for gums, inks, paints, varnishes and enamels. Export of this oil fetched Rs. 40 lakhs in 1959.

Rise in Exports

Exports of cashew kernels have been making steady progress in recent years. They fetched foreign exchange earnings to the tune of Rs. 15 crores annually during the last three years, as against Rs. 12 crores annually during 1952-56 and Rs. 10 crores in 1951. It may be noted, in this connection, that the increase in the output of almonds in Spain, as also other edible nuts elsewhere, last year, affected somewhat the price level of this commodity. Another disquieting feature of exports is the declining trend in the offtake by the U.K., Canada and Australia. The Cashew and Pepper Export Promotion Council, ever since its inception in 1955, has been making efforts to promote shipments of cashew kernels to foreign countries. Apart from the work normally dealt with, the Council has been operating an export promotion scheme, whereby exporters of kernels are assisted in securing allocations of tin-plates for fabrication of tins in which this commodity is exported, on the basis of their export performance. The scope of the scheme was widened last year to include box strappings and raw cashewnuts. The Council proposes to introduce a voluntary quality control scheme. The following table shows at a glance the recent trends in exports of cashew kernels to the major countries:

(Value in lakhs of rupees)

	1959	1958	1957
U.S.	1,060	1,094	1,096
U.S.S.R.	183	201	93
U.K.	78	94	115
Canada	55	56	61
West Germany	35	22	21
Australia	27	28	34
East Germany	23	2	17
France	11	3	..
Total (including others) ..	1,518	1,547	1,473

As the above table shows, the U.S. is the major buyer of cashew kernels from India Of late, the U.S.S.R. has also started buying sizable quantities. The exports of kernels are now confined to few markets. In fact, the need for diversifying the market for cashew kernels was particularly stressed by the Export Promotion Committee in its Report in 1957. There is reason to feel that the scope for expanding their exports, particularly to countries with high standards of living, is good. Cashew kernels, it may be noted, are being increasingly used in advanced countries for flavouring sweetmeats and cakes and in the preparation of chocolates. It may be recalled that the Indian Government trade delegation (leader: Mr. K. B. Lall), which recently visited Western Europe, disclosed that cashewnuts were becoming increasingly popular for cocktail parties and had been introduced for retail consumption with encouraging results by departmental stores in Switzerland. The delegation stressed that a substantial market for this commodity could be expected, if arrangements were made for export of cashewnut kernels in airtight packages and containers through departmental stores and import houses specialising in foodstuffs. Exports of cashew kernels from India to the European Common Market countries (West Germany, France, Italy and Benelux countries), no doubt, rose from Rs. 23 lakhs in 1957 and Rs. 38 lakhs in 1958 to Rs. 46 lakhs last year. But they are still small.

Survey of Belgian Market

In this context, mention may be made of a supplement, *Market Survey on Cashewnuts in Belgium*, brought out by the *Journal of Industry and Trade*, published by the Ministry of Commerce and Industry, Government of India. India's exports of cashewnuts to Belgium rose from Rs 1 lakh in 1957 to Rs. 3 lakhs in 1958, but they fell last year to Rs. 2 lakhs. The survey covers only upto 1958, but it is still useful in finding out the major trends in consumption of this commodity in Belgium. The survey has also analysed the price structure of the various types of kernels in the Belgian market, apart from briefly examining such related questions as packing and marking, distribution and marketing methods as well as import and other restrictions. According to this survey, the Belgian market for cashewnuts is totally supplied by imports—virtually all of Indian origin. The major portion of imports is used by chocolate manufacturers in the production of marzipan, and the rest for private consumption, usually in the form of roasted or salted nuts. Cashewnut is substituted for almond nut when manufacturers of marzipans consider the latter's price to be prohibitive. It is pointed out, however, that "the more reputable chocolate manufacturers never use cashewnuts in place of almonds, because, in their estimation, where taste and delicacy are concerned, these two kinds of nuts do not bear comparison."

On the question of packing, the survey observes:

"As the method of packing employed is considered perfectly suitable by those in the trade, there would seem to be no need for modifying it. There is, however, one point of some importance which should be raised. The exporter should always pay very close attention to the sealing of the tins, ensuring that they are absolutely airtight, for the least penetration of air would give rise to the hatching of tiny maggots in the cashew nuts which then become unsaleable. It has proved very difficult to discover those little leakages when the goods enter the country. When they do arise, the merchandise is apt to putrify and, as it cannot generally be declared damaged, no claim for loss can be made."

Apart from the questioning of packing and marking, the exporter should, the survey emphasises, devote particular attention to respect the time of delivery arranged by the buyer, "for their non-observance can cause considerable difficulty to the importer during certain festive seasons such as Christmas and New Year."

Future Demand

Commenting on the trend of future demand for cashewnuts in Belgium, the survey says as follows:

"It is very difficult, if not impossible, to make even an approximate estimation of the future sales of cashewnuts because the quantities imported will doubtless continue to depend to a very large extent on the fluctuation in the price of almond nuts. On the other hand, in view of the quality attributes of almonds, to which high-class marzipan manufacturers seem to attach much importance, it is uncertain whether an increased price differential between cashewnuts and almonds, made possible, say, by a cut in the price of cashewnuts, would positively help to expand sales for marzipan production. A small reduction in price might have little effect on sales; a larger reduction might give rise to retaliatory action by suppliers of almonds.

"It is equally uncertain whether a reduction in the price of roasted or salted cashewnuts would promote sales in this direction, in spite of the stimulus to demand by classifying them as a luxury item. In this instance, it would seem that the operative factor in expanding the volume of cashewnuts sold is an increase in the public taste for cocktails and other alcoholic drinks—a matter which lies outside the scope of this report."

It must, however, be pointed out that the so-called "public taste" can be stimulated only by ensuring greater and more effective publicity and propaganda. Therefore, one fails to understand why the survey holds the view that "publicity would not really serve any useful purpose." In respect of import and other restrictions, the survey points out that cashewnut imports are totally free from restrictions of any kind and the position is not likely to be changed in the foreseeable future. It, however, does not seem to have taken into consideration the probability of Belgium having to raise its import duty on kernels from the existing 5 per cent. to 7½ per cent., the level proposed for all the Common Market countries.

ENGINEERING INDUSTRIES GET RS. 1,200 CRORES

PROGRAMMES UNDER THIRD PLAN

EXPANSION and diversification of capacity of the heavy engineering and machine building industries and increased production of steel, aluminium, mineral oils and other goods are among the objectives of the third Five-year Plan for engineering industries. The overall outlay envisaged for industrial and mineral programmes in the Draft Outline of the Plan is about Rs. 2,500 crores (net)—Rs. 1,500 crores in the public sector and Rs. 1,000 crores in the private sector. Of this total, the share of the metallurgical and engineering industries alone is Rs. 1,200 crores, while minerals receive Rs. 405 crores.

The development programmes for steel cover expansion of capacity for mild steel (rolled), for alloy, tool and special steels, including stainless steels (rolled), and for pig iron for sale. The requirements of finished steel and of pig iron for sale by 1965-66 are estimated at 7.3 million tons and 1.5 million tons respectively; the overall demand for alloy, tool and special steels is placed at 200,000 tons. The programmes, now included in the third Plan, envisage a capacity target of 10.2 million tons of mild steel ingots, 1.5 million tons of pig iron for sale and 200,000 tons of alloy tool and special steels (130,000 tons in the public sector and 70,000 tons in the private sector.

The contribution of the private sector towards the increased production of mild steel and pig iron for sale is expected to be relatively small. The principal contribution to be made by the private sector is in the sphere of scrap-based steel billets in electric furnaces. The additional output to be obtained in this manner is about 200,000 tons. A pig iron plant based on low shaft blast furnace techniques and use of coke from Neiveli lignite is also included in the Plan. Preparatory work on this scheme will continue, pending firm decisions to be reached in due course. This means that no provision has been made in the Plan for the expansion of either the T.I.S.Co. or the I.I.S.Co. Inclusive of the capacity of the main producers in the private sector (3 million tons) and small-scale electrical furnaces, the overall capacity as stated at the outset, is expected to be 10.2 million tons of steel ingots. The target capacity for steel ingots and free pig iron in the public sector is:

(In million tons)

Bhilai—steel ingots 2.5 and free pig iron 0.3; Durgapur—steel ingots 1.6 and free pig iron 0.3; Rourkela—steel ingots 1.8; Mysore Iron and Steel Works—steel ingots 0.1; Bokaro steel plant (new)—steel ingots 1.0; free pig iron 0.35. Total—steel ingots 7.0 and free pig iron 0.95.

Having regard to the limitations for the end-products planned for production in Bhilai, namely, rails and heavy structurals and also to the time lag normally allowed for reaching full output, the production of finished steel in 1965-66 is expected to be of the order of 6.9 million tons, though ingot production might be some 9.5 million tons. The overall investment outlay on main steel plants and ancillary facilities is placed at Rs. 571 crores. The provision actually made at present is Rs. 506 crores, which is expected to be supplemented by additional funds from the allocation for industrial townships separately made. Even so, there would be a marginal shortfall in relation to investment requirements mainly in respect of ancillary facilities. If required, upward adjustments would have to be made in respect of this Plan provision in due course.

Industrial Machinery

Much new capacity for industrial machinery, particularly foundry-forge capacity, is expected to be established in the public sector. Capacity for 45,000 tons of steel castings, 30,000 tons of grey iron castings and about 70,000 tons of steel forgings will be created at Ranchi. Further capacity will become available from foundries attached to the steel plants at Durgapur, Bhilai and Rourkela, to the Heavy Electrical Project, Bhopal, to the Mining Machinery Project, Durgapur and to Hindustan Machine Tools. A foundry is under construction in Chittaranjan Locomotive Works, too. The total capacity will reach 135,000 tons of grey iron castings, 73,000 tons of steel castings and 76,700 tons of steel forgings.

The Heavy Machinery Plant at Ranchi will, on its expansion to 80,000 tons output per year, be able to supply the bulk of the equipment required for adding to steel-making capacity at the rate of about one million tons annually. The mining machinery project at Durgapur will have an annual output of 45,000 tons of equipment. The programme for heavy electrical equipment envisages production of a wide range of electrical equipment sufficient to enable power generation to be increased at an annual rate of 2 million kw. from 1971 onwards. It is designed to produce heavy motors, rectifiers and control equipment; it will also produce high pressure boilers for thermal power plants, with an annual capacity of 19,000 tons. The production pattern in Chittaranjan will be diversified so as to produce electric locomotives, pressure vessels and allied equipment for fertiliser and chemical plants, components of heavy structurals and cranes.

Machine Tools

The demand for machine tools is expected to go up from the current level of Rs. 20 crores to Rs. 50 crores by 1965-66. Provision has been made for the expansion of Hindustan Machine Tools and Praga Tools and for the establishment of a new heavy machine tool unit. The combined output of these works and the ordnance factories will be Rs. 11 crores. The difference between this level of output and the target of Rs. 30 crores by the end of the third Plan will be left to be covered by the private sector. Among other programmes in the third Plan, mention may be made of a proposal for the manufacture of control instruments with an ultimate turnover of Rs. 20 crores, manufacture of optical glass and expansion of designs organisations in Hindustan Steel Ltd., and Sindri Chemicals and Fertilisers Ltd. In terms of value, the total output of machinery in the public sector is expected to go up to Rs. 200 crores per annum by 1965-66.

Oil

By the end of the third Plan, the demand for petroleum products, it is estimated, will go up to 10 million tons, as compared with 6.28 million tons in 1959. Oil India Ltd., which is exploiting the reserves in Assam, will achieve an annual production of 2.75 million tons of crude oil. The allocations suggested for the third Plan provide Rs. 115 crores for further exploration, with a view to establishing additional production. The Government of India has decided to invite foreign oil explorers to join the quest for oil in India, subject to mutually acceptable terms. Offers, it is stated, have been received in response to this invitation; they are under examination. Meanwhile, a provision of Rs. 5 crores has been made for oil distribution in the public sector.

Early in 1962, the State will be entering the field of petroleum refining. With the completion of the Nunmati and Barauni refineries, the share of the Government in indigenous refining capacity will be 34 per cent. of the total. The expected production from all refineries (including public sector refineries) by 1965 is 7.05 million tons, whereas estimated requirement by that year will be 9.96 million tons; there will thus be a deficit of 2.91 million tons. The chief products in expected production (in thousand tons) with figures in brackets indicating estimated requirements of these products in 1965 are: kerosene 1,100 (2,200); high speed diesel oil 1,300 (1,800); motor spirit 1,700 (1,300); aviation turbine fuel (300); aviation spirit 100 (60); furnace oil 1,700 (2,200); light diesel oil 500 (700); bitumen 400 (700); jute batching oil 100 (100); vaporising oil, mineral turpentine, solvent oil and paraffin wax 50 (100) and lubricants 100 (500). These figures suggest that, whereas there will be surplus in some products, there will be deficit in certain others. It is proposed to adopt technological and fiscal measures, in order to provide some solution for the problem of imbalance in the supply and demand for different petroleum products.

Private Sector

In the private sector, large-scale developments are proposed in respect of a wide range of engineering equipment. Targets have been proposed for agricultural machinery, construction equipment, electrical and transport machinery. It is emphasised that the targets for 1965-66 "should be achieved as quickly as possible on the basis of maximum indigenous content specified in each case." The "consortium approach" for manufacture of machinery, which has been adopted in respect of sugar mill machinery, may facilitate a speedy advance in these fields. Standard sizes are contemplated for machinery. Thus, the programme envisages 6 to 7 plants for cement mill machinery, with capacity for 500 tons per day, 4 large plants for paper mill machinery with 50 tons capacity per day, 4 small plants with 10 tons per day, 14 plants for sugar mill machinery capable of crushing 1,000 to 1,200 tons of sugarcane. The targets for the value of production by 1965-66 are: Rs. 4 to Rs. 5 crores for cement mill machinery, Rs. 6 to Rs. 7 crores for paper mill machinery and Rs. 10 crores for sugar mill machinery. For automobiles, the targets for 1965-66, with estimated production in 1960-61 in brackets, are: passenger cars 30,000 (20,000); commercial vehicles 60,000 (28,000); jeeps and station wagons 10,000 (5,500); motor cycles scooters and three-wheelers 48,000 (16,000). The target for commercial vehicles includes 4,000 units expected to be supplied by the Ordnance establishments.

Non-ferrous Metals

In the field of non-ferrous metals, aluminium is expected to continue to retain its dominant position in the third Plan. The target of 82,500 tons to be hit by 1965-66 is expected to be reached as a result of the projects already recommended for implementation, namely, (1) expansion of Indian Aluminium Company's plant at Hirakud by 10,000 tons per year; (2) establishment of a smelter at Rihand of 20,000 tons per year; (3) a smelter at Salem with a capacity of 10,000 tons; (4) a smelter at Koyna with a capacity of 20,000 tons; (5) expansion of the plant of the Aluminium Corporation of India by 5,000 tons per year. Among other non-ferrous metals, the production of zinc is expected to be achieved for the first time in India by the middle of the third Plan period. By then, the zinc smelter based on zinc concentrates from the Zawar mines is expected to be commissioned; its annual capacity will be 15,000 tons. Along with the increase in the mining of the lead-zinc ores for maintaining the zinc smelter in full operation, additional output of lead is envisaged. The zinc smelter is also being equipped to operate a by-product sulphuric acid plant based on smelter gases which will be used for the manufacture of phosphatic fertilisers. Finally, the production of electrolytic copper is also expected to commence in the early years of the third Plan period, with the commissioning of the unit at Ghatsila by the Indian Copper Corporation.

29 MILLION TONS OF CRUDE PROVED IN ASSAM'S NEW AREAS

An independent firm of internationally-known geological consultants, DeGolyer and MacNaughton, has confirmed that the recoverable crude oil reserves amounting to 29 million tons have so far been proved to exist in the Upper Assam areas to be developed by Oil India Private Limited. The estimate is based on the latest appraisal of potential production data obtained from Nahorkatiya and Moran oilfields. The additional reserves indicated, but not confirmed by testing hitherto, have been appraised at approximately 13 million tons. In addition, it is hoped that the further drilling planned will establish the presence of a further 20 million tons of recoverable reserves, and that together these reserves will enable the combined oilfields to produce at a maximum rate of three million tons per annum for an estimated minimum period of 15 years. The maintenance of this rate of production will, however, depend on the continued success of the drilling still to be carried out. It has been arranged that DeGolyer and MacNaughton will re-appraise the reserves at six-monthly intervals.

CALTEX REFINERY

A sizable decline of Rs. 16.47 lakhs to Rs. 1.55 crores in the profit (after provding for depreciation) of Caltex Refining (India) Ltd., (Managing Director: Mr. J. R. Price, Bombay) is reflected in the report and accounts of the Company for the year ended 31st December, 1959, notwithstanding the fact that there was a substantial increase in the total crude processed during the year; the throughput of 6.20 million barrels of crude resulted in 6.03 million barrels of refined products, as against 5.48 million barrels and 5.30 million barrels, respectively, in 1958. Out of this profit, the Directors have transferred Rs. 62.18 lakhs to tax equalisation reserve and Rs. 4.48 lakhs to development rebate reserve, leaving a balance of Rs. 88.79 lakhs to be carried forward to next year. In effect, no dividends are declared for last year.

This "less favourable" financial result is attributed to two factors. In the first place, the Directors decided, with effect from 1st October 1959, to surrender to the Government the Company's right to duty protection on motor spirit which represents As. 2 per gallon. It is pointed out that the effect of this surrender will "bear more heavily on future years." Secondly, the Government of India, it is stated, issued an order limiting the incidence of duty protection accorded by the Letter of Agreement governing operations of the refinery, to the estimated production figures referred to in the Letter of Agreement. For the purpose of applying this ceiling, the excise authorities include quantities that are exported from India under bond, and on which duty protection would not in any case have been received. The Directors do not agree that the order imposed reflects the meaning of the Letter of Agreement, nor that the method of implementing the order, as it affects exports under bond, is equitable. It would appear that "representations expressing these views have been made through the proper channels without success to date."

The balance-sheet total of the Company has increased from Rs. 14.80 crores to Rs. 16.32 crores. Besides ordinary capital of Rs. 4.50 crores, the Company has reserves and surplus aggregating Rs. 4.10 crores, debenture-stock (5½ per cent. 1966-70) of Rs. 2.0 crores, unsecured loans and other liabilities of Rs. 5.72 crores. Assets include fixed capital expenditure of Rs. 12.35 crores net after depreciation (Rs. 2.20 crores), book debts Rs. 2.43 crores and stores and stocks of Rs. 81.22 lakhs. The Company is still awaiting the sanction of the Controller of Capital Issues for the issue of Rs. 1.50 crores of preference capital designed to implement the agreement executed with the Government of India regarding the establishment of the refinery. It made the application to the Government as long ago as November 1958.

The Directors point out that the training of Indian employees to replace overseas personnel continued satisfactorily during the year and is reflected by the decrease in the number of overseas personnel from 47 at the start of the year to 30 as on December 1959. The high level of employee response to the numerous training and development programmes provided by the Company may be visualised by the fact that the refinery maintenance and repair work, carried out during a complete plant shutdown towards the end of 1959, was planned, scheduled and accomplished entirely by Indian staff. The "shutdown work," it is stated, was completed with an excellent standard of efficiency in two weeks' time.

ASIAN HIGHWAY MEETING

Another important step towards the eventual completion of an Asian Highway was taken in Bangkok this week when the Expert Working Group of the Economic Commission for Asia and the Far East on International Highways met at Bangkok from 4th to 6th July. This meeting of Zone I of the Asian Highway brought to an end the second series of such zonal meetings, which have been held in Bangkok, Dacca and Karachi. At the meeting just ended, experts from Burma, Cambodia, Laos, Federation of Malaya, Thailand and Viet-Nam reached final agreement on the routes to be included in their portion of the proposed Asian Highway network, and established certain priorities, e.g. for connecting adjoining countries and upgrading substandard routes. They also made a number of recommendations concerning uniform road signs and signals and provisions governing motor vehicles in international traffic. In reviewing the progress already made in the implementation of the project, the Working Group emphasised the tourist potential of the highway, and recommended that tourist officials be associated with Government experts in the development of international highways, particularly when dealing with such aspects as passports and frontier formalities.

The Expert Group spelled out the external aid which would be required for the development of the proposed routes, including equipment, construction materials and expert technical advice. It requested E.C.A.F.E. to use its good offices to obtain fellowships from international and other sources in order to enable engineers in direct charge of the international highways to visit Europe and America and observe current methods of operating international highways in those areas. A code on a uniform system of road signs and signals in the E.C.A.F.E. region was adopted, and the Expert Group further recommended the adoption of certain provisions applicable to motor vehicles in international traffic, including regulations concerning registration numbers, identification marks, and dimensions and weights of vehicles on international highways.

C.I. REACTOR

The Canada-India reactor reached criticality on 10th July. Announcing this at the Press conference in Bombay last week, Dr. H. J. Bhabha said that, in the next few weeks, various circuits would be tested, minor faults in instrumentation removed and the reactor power gradually raised to the maximum rated capacity of 40,000 kw.

Dr. Bhabha also announced that Bombay would soon have an "atomic garden" where radiation effects on plants and seeds will be studied on an experimental scale; it would be the second garden of its kind in the country, the first being in New Delhi. He said that, if each plant in this garden was grown separately and seeds and plants were mutated with radiation, they would be able not only to conduct experiments on plants and seeds, but would also be able to produce new species. In the New Delhi garden, they had already succeeded in producing new strains of wheat and rice. Radiation, he said, had enormous possibilities in such fields as sterilisation and food preservation. Among other things, it could help prevent the sprouting of potatoes kept in cold storage. Experiments in preserving mangoes had been in progress. If they succeeded, it would be a great boon to mango-growers. They would then be able to supply the fruit out of season and also export it. It would appear that experiments on silk cocoons, similar to those carried out in the U.S.S.R., would be undertaken. Through radiation, Russians were able to produce a better variety of silk within a shorter time.

EMPLOYERS' LIABILITY ASSURANCE CORPORATION LTD.

RECORD RESULTS ACHIEVED IN 1959

IN the course of his statement circulated along with the report and accounts of the Employers' Liability Assurance Corporation Ltd., for the year ended 31st December 1959, the Chairman points to the many advantages that will flow from the merger of the Corporation with the Northern Assurance Company Ltd. The benefits are ideal geographical distribution of business, balanced portfolio, the great financial strength of a joint undertaking and economics available to large units. Referring to the results for 1959, he says that the underwriting profit of £1.53 million and the total profit after taxation of £1.19 million are "the best results we have ever shown, the total profit being a record one."

The following are extracts from the Chairman's statement:

"First I must refer to the merger of the Corporation with the Northern Assurance Company Limited, which became effective last month. Your Board is very gratified that by it we—and we believe also our new partners—will obtain the following advantages which we consider to be of cardinal importance. First, the merged organisation will have an almost ideal geographical distribution of business. Secondly, its portfolio will be balanced satisfactorily as between Life, Fire, Accident and Marine insurance. Thirdly, there is the great financial strength of the joint undertaking. Fourthly, there are the economies, available only to really large units, that are bound to result from the combination of two organisations which in many parts of the world, and notably in the United Kingdom, can eventually operate with branch offices under one management and one roof.

Merger

"I want to say a little more about this aspect of the merger, as I think it right that you, as well as the staff of the Corporation, should be clear as to what policy is going to be followed. We and the Northern have stated that the interests of all members of the staff of each company will be fully protected. The Boards of both Companies are agreed that the first steps towards integration are to be considered without delay and are to be implemented as suitable occasions for joining forces present themselves from now on, but that no action shall be taken to this end without regard to the special circumstances of each territory and the rights and interests of the employees there of each of the two Companies. Any consolidation of management or reduction in staff numbers due to co-ordination of the two companies will be effected primarily by not filling vacancies caused by retirement or normal wastage. There may, however, turn out to be exceptional cases where two branches can be combined, without waiting for appointments to become vacant, but these will be on such terms as to take care of the interests of all concerned. It follows that we expect integration, though it is to begin as soon as practicable, to be a gradual but continuing process. It cannot, of course, be completed for a number of years. Without integration, the merger can only be partly successful. With it, essential economies are possible, but the protection of staff interests will always be our aim, and there is no doubt that those who are at present young in our service can look forward to the prospect that there will be many responsible positions to aim at in the much larger and expanding organisation.

"We are confident that our union with the Northern is going to be welcomed by the brokers and agents of both companies. They are in a position to appreciate the advantages of it that I have listed above. It is quite certain, moreover, that integration will have a very beneficial effect on the service which we can provide for them.

Results for 1959

"It gives me great pleasure to be able to report that the Corporation and its subsidiary companies earned for 1959 an underwriting profit of £1,530,398, and a total profit after taxation of £1,194,572. These are the best results that we have ever shown, the total profit being a record one. As was forecast in my letter to shareholders of the 22nd January, 1960, a second interim dividend (in lieu of a final dividend) has been declared for 1959 by your Directors, making with the first interim dividend of 2s. 6d. per share a total of 7s. per share, or 35 per cent., an increase of 1s. 6d. per share on the total paid for 1958. After provision for the net cost, £428,750, of this increased dividend, and placing £250,000 to contingencies account, the carry forward of our consolidated profit and loss account amounts to £1,806,199. £515,822 more than at the end of 1958.

Premium Income

"The total premium income of our Group increased by £2,559,619, or 6 per cent., to £44,515,855. Though much of this increase was in the United States, all major branches contributed to it, and there was an increase of over £650,000 in Fire premiums, which have more than doubled in volume in the past five years. Thus our management has most sucessfully carried out the policy laid down for it some years ago, that of developing our Fire account as rapidly as was consistent with sound underwriting. In considering 1959's results, the return to profitability of our Fire account should be set against the background of this resolute development, and the total underwriting profit for the year against the background of our steady all-round growth.

"Of the underwriting profit for 1959 the major part was earned in the United States of America. Many factors account for our success there, but I would like to call your attention especially to two important ones. First, there is the benefit that we have obtained from the care that has been taken for some years past in the underwriting of our business, especially the important classes such as compulsory motor insurance. Secondly, there is the saving that has been made by a further reduction in the ratio of our expenses to our premium income. This deduction reflects the benefit of mechanised processes, introduced some years ago and yielding more and more saving as the volume of business increases, but it is also due to constant supervision and examination of methods with a view to improving and standardising them on the most efficient and economical lines. Both are tributes to the careful and far-seeing management of our United States Branch. The prospects for the United States are still, particularly for motor business, rather unsettled, but we feel that the root sources of the striking recovery that we have made in the last two years are such as will help us in 1960 and in the future.

Staff

"Let me conclude by reminding you of the reference that I made last year to the work of Mr. Keysell and the officials and staff. I told you then how resolutely they were tackling the difficulties with which they were faced. It is pleasant to be able to point simply to the results that have been achieved, especially in the United States under the guidance of Mr. Frank J. Carey, in justification of my words. Certainly the profit of one year does not prove by itself the efficiency of an insurance company, but, in times which all must agree are arduous, I hope you will feel that so fine a recovery, is evidence that your affairs are in good hands."

SETTING UP NEW UNITS FOR MANUFACTURE OF GAS CYLINDERS

The Government of India has decided to permit the setting up of units for the manufacture of gas cylinders in the country. The decision has been taken, in view of the large-scale expansion in the production of various industrial gases likely in the next few years and the corresponding rise in the domestic demand of cylinders for bottling and transporting these gases. While the sizes and specifications of the cylinders vary according to the nature of the gases, it has been estimated that, by the end of the third Plan, about 100,000 cylinders would be required. By the end of the fourth Plan, the domestic requirement is expected to be double this number.

In forwarding their proposals to the Union Ministry for Commerce and Industry, for Government approval, intending *entrepreneurs* have been asked to indicate particularly what arrangements they have made for importing the required capital equipment. The Government would prefer import of capital equipment through the utilisation of the share of the foreign collaborator in the capital structure of the scheme. Import of capital machinery and equipment required for the project under long-term credit arrangements or long-term deferred payments acceptable to Government or through rupee payment arrangements will also be considered.

The applicants should also indicate the terms of royalty and other technical fee which involves payment in foreign exchange. Details regarding the manufacturing process, arrangements for securing the necessary raw materials, etc., should also be furnished. The proposals should be submitted before the end of 1960.

AMAR DYE-CHEM LIMITED

SPEECH OF THE CHAIRMAN, MR. A. K. DOSHI

THE following are extracts from the speech delivered by the Chairman, Mr. A. K. Doshi, at the Sixth Annual General Meeting of the Shareholders of the Amar Dye-Chem Ltd., held at Bombay on 11th July, 1960:

"GENTLEMEN,

"It is my proud privilege and pleasure to welcome you all here this afternoon to the sixth annual general meeting of the Company.

"As we are meeting soon after the historic event, before I start my speech, I would ask you to join me in paying our tributes to the two new States that have emerged, viz., Maharashtra and Gujarat, after the bifurcation of the erstwhile bilingual State of Bombay, and in praying that they may be rich in resources, talents and enterprise.

"The balance-sheet and profit and loss account for the year that ended on the 31st of December 1959 together with your Directors' report and the Auditors' report have been already sent to you separately. With your permission, I take them as read.

Year of Consolidation and Development

"The year under review may be considered a year of consolidation and development. It is the fourth year of our commercial production. The year's working has resulted in a sharp rise in profits. This is due, in large measure, to purposeful and profitable utilisation of enlarged resources rendered possible by the sustained demand for the full range of our products.

Balance Sheet and Profit and Loss Account

"I shall now proceed to deal with some of the salient features in the Company's balance-sheet and profit and loss account for the year 1959.

General Reserve Fund

"The exceptionally good profits have enabled your Directors to create a general reserve fund by transferring the substantial sum of Rs. 7,50,000 and it is not designed to meet any liability, contingency, commitment or diminution in value of assets known to exist at the date of the Balance Sheet, but available for utilisation towards redemption of the Preference Shares.

Development Rebate Reserve and Development Reserve

"It is to be recognised that the allocations for the year under report to the 'development rebate reserve' and 'development reserve,' amounting to Rs. 1,03,882 and Rs. 12,32,673 respectively, are profits ploughed back into the business of the Company. Such appropriation of earnings retained in the Company are essential elements in a capital-intensive industry like that of ours and especially so when the Company is engaged in a forward looking programme of expansion.

Depreciation Reserve

"Further, the amount of Rs. 8,81,573 is a provision for depreciation for the years 1956 and 1957 and is retained by way of providing against diminution in value owing to wear and tear. All these reserves and further increase in some of them are essential and are dictated by a policy of prudent stewardship of your affairs, as chemical plants are not calculated to possess good life. In this case, I must comment on the unsatisfactory depreciation allowances in the matter of chemical plants under the I.T. Act as they are prescribed by rules made when there were no chemical plants in India.

Sales

"The sales have been exceedingly satisfactory in the year under report, as they are 62 per cent. higher than those for the previous year. This is because we have an efficient distribution system, which apart from assuring proper offtakes also stimulates new demands.

Capital Expenditure for Fixed Assets

"As already intimated in the Directors' Report, we have built residential flats to accommodate on site, needy members of staff and new recruits, as it is extremely difficult for them to find accommodation in the over-congested city of Bombay and the suburbs roundabout. For these and other additions we have made capital expenditure to the extent of Rs. 12,66,696 and they were towards additions in the buildings, plants and machinery, etc., which were necessary to create proper plant and working facilities and to reduce the operational costs.

Recapitulation of the Ranges of Products Manufactured

"It would be interesting to recapitulate here how your Company's range of products have been placed on the market.

"*Amarthol Plant*: The first trial batch was charged in Amarthol Plant on 18th May 1956. After some trial runs, the regular production was started in the last quarter of 1956. Seven varieties were put on the market in 1956, four more were added during 1957 and 1958, making a total of eleven. The range was further expanded by adding three more items making a total now of fourteen important Amarthols. It can be safely asserted that your Company manufactures almost the full range of Amarthols, except one item, viz., Naphthol AS-LB, which may be added shortly.

"*Fast Base Plant*: At the fag-end of the year 1956, this plant was commissioned and only one item, viz., Fast Scarlet RC Base was made in 1956. During 1957 seven more products were added so that the total was brought up to eight. Six more important items were manufactured in 1958 and one more Base, viz., Fast Blue BB Base, was marketed in 1959. Thus, fifteen different varieties of Fast Developing Bases are now manufactured regularly.

"*BON Acid Plant*: This plant although ready in 1957 did not work satisfactorily till November 1958. There were mishaps twice. A new heating system has been installed and regular production has been established. The plant has worked for the whole year of 1959 and helped us to save foreign exchange of approximately Rs. 7,00,000 from the allocation of raw materials to us, which has been, unfortunately, stationary for the last three years, inspite of considerable increase in production. Due to foreign exchange difficulty, the Government of India finds it difficult to allot increased foreign exchange to meet our expanding requirements.

Progress of Production and Sales

"In spite of all these difficulties, the production and sales steadily mounted up, which could be seen from the following figures:—

	Production in metric tons (approximate) Amarthols and bases	*Net sales*
		Rs.
1956	83	3,85,200
1957	365	46,24,000
1958	400	1,06,28,000
1959	775	1,72,40,000

"During the year 1959, the performance of Fast Base Plant was excellent. The plant that was designed to make 300 metric tons is now capable, after certain modifications, of making about 600 metric tons and in some months, the average figure of 50 metric tons per month was reached. Want of raw materials is the only bottleneck for production to the full capacity.

Increase in the Authorised Capital

"You will have seen that your Directors are recommending that the authorised capital be increased by Rs. 4,00,00,000 and that this be done by creating 4,00,000 shares of Rs. 100 each, which shall, for the time being, remain unclassified. It is felt that an expansion in the authorised capital is necessary, taking a forward view of the Company's future requirements, and the creation of unclassified shares will allow the maximum flexibility in the capital structure.

Productivity Technique and Quality Control

"We are now busy standardising the quality of our products. Productivity techniques and quality control are being implemented at the factory. We are also developing a properly scheduled and planned scheme to prevent the incidence of breakdowns generally known as 'preventive maintenance.' In connection with all these endeavours, I sincerely hope that all our employees will extend their fullest co-operation so that maximum quality and quantity output could be achieved. I assure the employees that with uninterrupted production and better earnings of the Company, they will also get their due share in the prosperity of the Company.

Labour

"Relations between the employer and employees are getting harmonious and on favourable consideration of certain facilities and amenities the labour problem has eased. We hope the Incentive Scheme that is working satisfactorily will induce sense of realism, maturity and increased awareness of responsibilities in our common and joint endeavour. I presume we shall reach full production target in the near future and the country will be self-sufficient in the dyes manufactured by the Company. Efforts are also being made to enter into a 3/5 years' agreement with the labour union to guarantee industrial peace as recommended by our worthy and far-sighted Chief Minister, Mr. Yeshwantrao Chavan, who is also in charge of Industries portfolio.

Expansion and Diversification. T.P.M. Dyes, Beta Naphthol and Intermediates

"Expansion and Diversification for the Industrial Undertaking' is the principle adopted by your Directors. In course of time, a suitable programme is worked out for economic and rapid development. At present the expansion scheme for your Company is in the matter of products like T.P.M. Dyes, Beta-naphthol and Intermediates. I would like to review them here.

"*T.P.M. Dyes*: The technical Participants, Messrs. A.C.N.A., are working for the Company on designing of the plants for the manufacture of 500 tons of Basic and Acid Dyes of the T.P.M. series and we hope to order out the plant requirements and proceed with the installation as soon as possible.

"*Beta-naphthol*: Your Company hold licence for the manufacture of 1,000 tons of Beta-naphthol—a vital basic raw material for the manufacture of BON Acid, and with the approval of the Government, have decided to go ahead with this scheme.

"*Intermediates*: An ambitious and comprehensive scheme to manufacture important intermediates from basic raw materials has been submitted by your Company to the Government and the same is under their active consideration.

"Your Directors hope to execute all these projects with the minimum of foreign exchange either for technical know-how, or for plants, machinery and equipments. If the sheme is sanctioned by the Government, it will make your Company almost independent of most of the raw materials.

Research Laboratory

"It has been decided to establish up-to-date control and research laboratory at the factory. It shall test, improve and develop new processes discovered during the course of manufacture with respect to our products or make new researches for expansion. In course of time about 50 chemists will be working with the chief. It will be equipped with various pilot plants, so that products developed in the research laboratory may be tried on a pilot plant scale. Thus, you will see that we propose to go on expanding so that within a few years hereafter we shall not have to depend on foreign collaboration for improving our present processes and for the manufacture of additional ranges of dyestuffs. With the raw materials available from the central plant or with those of our own production and with the help of our own research staff, we hope to be completely independent in every possible manner in course of time.

Foreign Exchange for Expansion Programme

"I am glad to inform you that the Industrial Credit and Investment Corporation of India Limited have agreed, in principle, to grant to the Company a loan of Rs. 15 lakhs in foreign currency from the World Bank for expansion of not only our present lines of production, but for expansion of the projects which we have undertaken. With the help of this foreign exchange loan it will be possible for us to purchase new machinery and plant for our Basic and Acid colours projects, new BON Acid plant and partly for Beta-naphthol project also. Thus, your Directors have been successful in tiding over the foreign exchange difficulty which otherwise would have come in our way in successfully implementing our programme.

Thanksgiving

"Before I close, I would seize this opportunity to express our thanks to the staff and all the employees for their continued loyalty and efficient services. With the expansion programme in hand, we shall, I am sure, be faced with a number of problems, many of which may be somewhat different from those we have had to overcome in the past. I am, however, confident that we shall meet any challenge with which the future may confront us.

Thanking Co-Directors

"And I thank my co-Directors for their help and work and their advice in circumstances of business which are by no means easy, hedged about as we are, with taxes, restrictions and laws which tend to make the life of those who work in the private sector more and more difficult."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

the key to better motoring

When you switch on the ignition and start your engine it commences to use petrol and oil, both rather expensive items these days. So it's quite important that your car (and you) receive the kindest treatment. And, the wise motorists are those who always use Caltex petrol and oils—there's nothing as good as Caltex for better performance and proved economy.

THE METAL BOX COMPANY OF INDIA LIMITED

REVIEW BY THE CHAIRMAN, MR. K. C. MAHINDRA

THE Twenty-seventh Annual General Meeting of The Metal Box Company of India Limited will be held on Wednesday, 20th July, 1960, at 59C, Chowringhee Road, Calcutta. The following is a copy of the Review by the Chairman, Mr. K. C. Mahindra, which has already been circulated to members:

"Once again, it is my pleasant privilege to review a successful year with sales at Rs. 830 lakhs, 19 per cent. over last year's. This increase was achieved notwithstanding unexpectedly poor offtake by the new fish canning and milk processing industries; it is substantially due to your Company's success in enlarging exports and sales of non-tinplate products, namely, plastics, industrial components and machinery made at the newly constituted Calcutta No. 2 Factory. The improved exports I anticipated last year have been realised: we registered a sevenfold increase. We sought markeas far and wide; during the year, we exported goods to Ceylon, Burma, Thailand, Iran, Hongkong, East Africa, Pakistan, Malaya, Italy, the Fiji Islands and Aden, with particular emphasis on the first four. Having established ourselves in these export markets, we can with confidence look forward to a further expansion this year, but for achieving this it is vital that the concessions on tinplate prices applicable last year for export purposes—but reduced progressively since December 1959—should be restored to their previous level.

New Excise Duty

"The new excises on tinplate and aluminium were not imposed until March and have had no effect on the year's operations. But, in view of the success I reported to you last year in effecting, in the face of rising costs, price reductions following greater operational efficiency, these imposts are most disappointing. Faced with the task of bridging a large gap between expenditure and revenue, and in pursuance of a policy of broadening the base of indirect taxation, the Finance Minister, in his latest budget, made use of the fact that there is scarcely any income group in urban India which does not purchase packaged goods; these heavy excises, added to the already abnormally high prices charged for tinplate and aluminium, will bear down upon poor and rich alike. However simple they may be as a device for collecting taxes, these excises have a damaging social side effect with repercussions on the nation's health. This step must adversely affect the province of the Health Ministry, since the most effective single remedy for the evil of food adulteration and the trade in spurious goods is pilferproof consumer packaging. Through its own Research Division, its Technical Development Section and its Technical Consultants overseas, your Company has played a leading part in developing the mass production and sales at economic rates of tamperproof containers which now constitute the major part of its business. The result: instead of being sold loose in unhygienic bulk containers which are a standing temptation to adulteration, an increasing volume of goods is being packed in factory-sealed consumer units. These branded consumer packages—containing from a few grams to a few kilos—may be Notampa-sealed Rigid Tubes, pockets made from heat-sealing aluminium foil laminate, bottles and cans sealed with R.S. closures, open top cans, diaphragm cans, scored cans or cans fitted with capsule overseals. Surely any Government which has declared its intention of beating the problem of food adulteration should encourage the use of these packages.

Sound Packaging at a Disadvantage

"What we find happening in reality is the imposition of a heavy excise on two of our essential raw materials for producing tamperproof packages. With the latest impositions, for example, tinplate will bear some 33⅓ per cent. in the form of excise, sales tax and the levy for the Steel Equalisation Fund. Likewise aluminium will now cost your Company—and ultimately the public—almost twice as much as it does manufacturers in the U.S.A. and U.K. Particularly affected by this increase will be the R.S. Closure which has been accepted in the last six years as the most efficient seal in preventing adulteration and substitution in the ethical drug, fruit drinks, and other beverages trades.

"It may be argued that the excise will not affect the current year's sales, and that there is no harm introducing deterrents against the use of materials in which the country is not yet self-sufficient. No doubt in short-term no damage may be done but the long-term implications are clear: self-sufficiency is in sight both in respect of tinplate and aluminium and there is a simple choice on the one hand between condoning adulteration and, on the other, of encouraging the use of packages which protect their contents from adulteration. By making the materials from which they are produced freely available at the lowest possible prices, much food adulteration could be prevented and the maximum use could be made of the country's installed capacity to protect consumer goods. My hope is that there will be some rethinking in high places and that these discouragements to sound packaging will either be removed altogether or substantially reduced.

Raw Materials

"At the beginning of the year under review, stocks of tinplate were so low that it was not possible to meet adequately the normal demands placed on us by our customers and, to keep packing industries supplied as far as possible, uneconomical sizes of plate had to be used. The position had an adverse effect on the efficiency of our operations.

"It was, indeed, fortunate that indigenous supplies were well maintained. Without these supplies, the delayed arrivals of imported materials would have had serious repercussions on our production.

"Towards the second half of the year, the stock levels had improved but the forward position was still a matter of grave concern. Past experience has shown that the availability of tinplate both at home and abroad can change at very short notice. It is, therefore, essential that we be permitted a stock level which will cover such vagaries.

"Furthermore, because of the length of the order books of foreign producers, it is essential, in today's conditions, that licences are granted for adequate quantities well in advance.

"Having regard to the relatively high capital-output ratio of secondary steel products, it is to be hoped that Government will make available as quickly as possible within the country a capacity of at least 250,000 tons of tinplate per annum. If this is not achieved over the next five years, the development of packaging will be held back.

"The position in respect of supplies of aluminium has also presented difficulties. It was not so many years ago that your Company was asked to make an all out effort to help develop the use of aluminium to provide an outlet for the increased production of aluminium envisaged at that time. Your Company made the effort and its consumption of aluminium increased from 327 tons in 1956-57 to 827 tons in 1959-60. It is hoped the new units licensed for the manufacture of primary aluminium will soon come into production.

"As a result of the efforts of the Company's Research Division, more and more ancillary materials are being developed from indigenous sources and the quality of these products is showing a marked improvement. However, although work is in hand on new formulæ, the supply position needs constant watching as a number of these materials are still dependent on a comparatively small percentage of imported constituents. As you can imagine, this will remain a frustrating experience for all concerned, until a more liberal attitude is possible towards the licensing of such materials.

"As in the past, the full resources of your Company will be concentrated on obtaining the desired materials to maintain its output but in the last analysis its success will depend upon the support received from the Government.

Developments

"I would again like to comment on the new Calcutta No. 1 Factory and I am pleased to report that the improvement in the operational efficiency mentioned last year resulting from the new premises has continued proving beyond all doubt the advisability of building a new factory which allowed of adequate space for well-laid-out equipment and a well designed flow from raw materials to finished products.

"At the rehabilitated old factory, reorganised as Calcutta No. 2, the expanded production of plastics envisaged there, embracing injection moulding, polyethylene extrusion, printing and bag-making, was implemented. I am pleased to report that the establishment of these processes was significantly devoid of the teething troubles normally expected with new projects which reflects well on those responsible.

"The Machinery Building Section of the Calcutta No. 2 Factory has been expanded and now produces for our customers an increased range of closing and ancillary equipment. In addition, it has undertaken the manufacture of individual production machines to help towards the conserving of foreign exchange that would otherwise be required to import the equipment. To the same end, it is undertaking the manufacture of spare parts. Development in these directions must be dependent on the availability of adequate machine tools. If these are supplied, there is the skill and knowledge present to make great progress.

"Your Company's efforts to provide industrial components for many of the new products which are now being manufactured in India continue and the Company's range of these products has widened considerably. It produces many such components which hitherto were imported from overseas.

"During the year, the Company's Technical Development Section was transferred from its existing premises to the Calcutta No. 2 Factory to provide space for the expansion of the Company's Research Division. This expansion was necessary to progress the development of indigenous raw materials and to increase the facilities to meet the manifold packaging problems encountered by our customers.

"The factory at Faridabad, New Delhi, has been completed and the transfer of equipment from the old premises at Azadpur will be effected shortly. Delay in moving was caused by the shortage of power at Faridabad and even now it can only be made available during restricted hours. It is hoped that this position will improve during the current year with the increase in power supply planned by Government.

Rights Issue

"As forecast in my last review, the rights issue at par in the ratio of two new shares for every five shares held was made in December 1959. The money so raised has already been fully utilised.

"It seems to us that, if a rights issue is made at an attractive price, extra care should be taken to ensure that, as far as possible no shareholder loses by his failure to take up the shares to which he is entitled. In our case, only 656 shares were not taken up by the shareholders entitled to them. The Directors decided to allot these to a Board of Trustees who promptly sold the shares at market prices. The profit on sale was then paid to the shareholders originally entitled to the rights shares. By this means, the best interest of all our shareholders was safeguarded.

Industrial Relations

"In the present stage of development, it would be most unusual if I had nothing to report in that most important field of employee relations. There has been a lot of activity. In the main, the good relationship normally found in the Company between management and employees has continued and almost without exception any dispute that has arisen has been settled on a bipartite basis. The negotiations on this basis show an awareness on the part both of management and employees that there must be 'give and take.' I hope that the employees are as proud of their Company as the Company is of the employees.

"The apparently inevitable rise in the cost of living led, during the year, to negotiations in respect of dearness allowance, apart from which, in certain cases, there has been a revision of grading schemes. In nearly all cases agreement was reached on a basis of understanding and friendliness to the mutual benefit of all concerned.

"Last year, it was reported that a revised production bonus had been introduced in Bombay. This has been extended to the other units in the Company with a substantial increase in productivity and a comparable increase in earnings.

"The Directors' offer to increase the level of contributions to the provident fund from 6¼ per cent. to 8⅓ per cent. was much appreciated by the employees of the Company.

"The only tripartite negotiations have been in respect of the hourly rated employees of the Madras Branch. Their demands are still under negotiation on a tripartite basis, but it is to be hoped that ultimate agreement will be reached without recourse to the time-consuming processes of the Industrial Courts.

"In the field of training, there has been considerable development and, as forecast in last year's review, the training staff of the Company has been substantially reinforced. Apart from the training organised within the Company, the Company has participated actively in all available spheres of external training. Only recently, the second course in the Primary Centre established under the Workers' Education Scheme sponsored by the Government was inaugurated in Calcutta at the Company's No. 1 Factory there.

"The Company again offered facilities for parties of employees to visit projects being developed under the Five-year Plans which were attended with continuing enthusiasm.

Staff

"In times of rapid economic expansion, a multiplicity of problems in running a business is to be expected, problems which seem to be inevitable and of a nature difficult to forecast. The officers and staff responded once again admirably to those which had to be faced during the year and I have ever-growing confidence in the ability of our officers and staff to deal satisfactorily with these problems as and when they arise.

"We continue to receive the benefit of overseas training in the U.K. with the Company's Associates there. Within India, we are participating more and more in Management and Technical courses being organised throughout the country and through facilities provided by the National Productivity Council.

"I would also like to make reference to successful efforts to promote social and sports activities within the Company, the importance of which should not be overlooked as a valuable contribution to the consolidation of a fine team spirit so essential to an effective organisation.

"I thank the officers and staff for a year of hard work and successful results.

Visits from Associates

"It was with great pleasure that, towards the end of the year, we welcomed to India Sir Harold Roxbee Cox, Deputy Chairman of The Metal Box Company Limited, England, accompanied by Lady Roxbee Cox, and also Mr. K. D. Brough, Managing Director of The Metal Box Company Overseas Limited. The purpose of their visit was, as representatives of our Technical Consultants, to see at first-hand the industrial expansion so rapidly progressing in India and the developments that had taken place in your Company with a view to assessing in which directions they could make the most effective contributions.

"Whereas we have had the opportunity of welcoming Mr. Brough from time to time over a considerable number of years, it was Sir Harold's first visit and, as a prominent industrialist and a renowned scientist, he evinced keen interest in all aspects of the Company's activities and India's progress. He has subsequently told me how impressed he was and for my part I would like to thank him for the refreshing results of his visit which helped to cement the growing mutual understanding and respect between members of your Company and those of its Associates in the U.K."

FORWARD MARKETS BULLETIN

(Monthly)

Published by Forward Markets Commission
Government of India, Bombay

REGULAR FEATURES

- A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
- Special articles on technical aspect of forward trading
- Extensive information relating to developments in futures markets
- Detailed commodity market reviews
- Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
- About 200 pages in print in crown ¼ size
- Attractive get-up

Annual subscription		Single copy	
In India ..	Rs. 24.00	In India ..	Rs. 2.50
Abroad ..	Rs. 40.00	Abroad ..	Rs. 4.00

ECONOMIC AND MARKETING RESEARCH

ITS DEVELOPMENT IN INDIA TRACED

By Shankar V. Borkar

DIRECTOR OF MARKETING AND RESEARCH,
J. WALTER THOMPSON CO. (PRIVATE) LTD.

THERE is no bibliography of research work produced in India, nor is any literature available on the subject. The following information is therefore based on our own knowledge of the situation. The biggest and oldest research project in India, as in most other countries, is the census of population. Decennial census reports are available from 1881 onwards, the last (1951) providing us with much additional data not previously available. Preparations are now being made for the 1961 census, which will bring in still more information of a socio-economic value.

Apart from the census, the conduct of research studies, both economic and marketing, really commences from the period immediately following the First World War. In earlier years, studies were very few in number and confined to subjects of basic economic importance, such as the national income and the marketing of agricultural commodities. The sharp rise in prices which took place at the end of World War I led the Provincial Governments to conduct socio-economic enquiries amongst the working classes for measuring the cost of living. These initial family-budget enquiries were not very scientific and were confined to a few industrial centres. World War II also brought in its wake a sharp rise in consumer prices, which gave impetus for the conduct of working class family-budget enquiries, on more scientific lines, and the construction of a cost of living index.

Planning

The idea of planned economic development was taken up in 1938 by the Indian National Congress, which appointed a National Planning Committee with Mr. Jawaharlal Nehru as Chairman to suggest practical schemes for economic development. The Committee undertook a series of important studies on subjects such as rural and cottage industry, internal trade, transport, etc.

The Planning Commission was set up in 1950 to prepare a plan for the "most effective and balanced utilisation of the country's resources." In connection with the formulation of the first Five-year Plan (1950-51/55-56), the Planning Commission felt the need for reliable data relating to production, consumption, and other aspects of social and economic life in India, and a Central Statistical Organisation was established for the development and processing of statistics. The National Income Committee also was appointed in the same year to report on the national income and related estimates, to suggest measures for improving the quality of the available data, to collect further essential statistics and to recommend ways and means of promoting research in the field of national income. This Committee brought out its final report in 1954, giving estimates of national income for the years 1948-49 to 1950-51 based on a study of all economic activity. Annual estimates of national income have been made since then by the Central Statistical Organisation, using the method outlined by the National Income Committee.

The National Sample Survey was established by the Government of India in 1950 as a continuing sampling organisation to collect essential information through sample surveys. This organisation, working in collaboration with the Indian Statistical Institute, has been collecting data separately for the urban and rural areas of the country in consecutive rounds. They have published about 25 reports on ten rounds and their findings on the pattern of consumer expenditure provide the first national assessment of family budgets at various economic levels. The National Sample Surveys are described in a U.N. report as "the biggest and most comprehensive sampling enquiry which has so far been undertaken in any country of the world."

Special Studies

The Planning Commission and the State and Central Governments frequently organise special investigations into selected problems of development in co-operation with universities, schools of economics, social welfare agencies and other institutions. The Statistical Bureaus of State Governments also undertake a good deal of socio-economic research, mainly in rural areas.

Reports of Government departments and official *ad hoc* committees and commissions are available on such varied subjects as socio-economic conditions of selected States, towns and villages, particular manufacturing industries, rural and urban economic problems, industrial and agricultural labour, agricultural marketing, foodgrains distribution, transport conditions, the condition of the Press, export promotion, etc.

Besides the Plan for the public sector, the Planning Commission has formulated development programmes for 51 types of industries in the private sector, based on a comprehensive study of individual industries with respect to production, consumption, imports, exports, future outlook, etc.

The Tariff Commission was appointed by the Government of India in 1952. It considers the desirability of granting protection to specified industries and for this purpose investigates the working of those industries. The reports of the Commission provide a comprehensive picture of the situation in such industries with reference to markets, growth of demand, etc.

The Department of Research and Statistics of the State-owned Reserve Bank of India conducts studies to obtain information on developments in the economic sphere in general and in the financial and monetary fields in particular. The Department makes available to the public the results of its research work through the Bank's monthly bulletin and also provides a series of official reports and research publications. The Bank periodically carries out investigations of India's foreign liabilities and assets.

The National Small Industries Corporation was set up by the Government of India in 1955 to provide assistance to small industrial units. Among the various schemes which the Corporation undertakes are market research surveys for specific products. A number of such surveys have been carried out and their findings published by the Corporation.

Export Promotion Councils for different commodities were established by the Government of India in 1957 to stimulate exports. These Councils send out trade delegations to various countries to study market conditions for various commodities and publish reports of their findings. Market surveys are also carried out by Commercial Representatives attached to the Government of India Missions abroad. The reports of all these surveys are published and distributed to all manufacturers and exporters of the respective commodities through the Director of Export Promotion.

Census of Manufactures

Comprehensive data on industries are available in the Census of Manufactures annually undertaken since 1946 by the Directorate of Industrial Statistics. This census provides figures of quantum of output, number of persons employed, net value by manufacture and other details. The coverage of the census is being gradually expanded.

So far, we have dealt with official agencies engaged in economic and marketing research. It is clear that there has been a great spurt in research carried out by official agencies during the last decade and the trend is unmistakable that the Central and State Governments are relying more and more on research for formulating their plans and policies.

Private Agencies

Information is lacking on specific research jobs carried out by private agencies, but it is known that all kinds of marketing research work is being handled by them, although the total volume of such work continues to be small. It is only in recent times that a few of the largest producers of goods and services have undertaken their own marketing research. The bulk of medium and small-scale industries do not use marketing research beyond what is provided by the National Small Industries Corporation. The reason is not so much ignorance as a ready market and the high cost of thorough research work relative to other distribution expenses.

The practitioners in this field are a few private organisations, the leading advertising agencies, and some big manufacturers. Among the latter, a few have their own Marketing Research Departments, but others entrust their research work to their advertising agencies or to private research organisations.

A leading manufacturer of consumer goods has organised a Consumer Panel and a Dealer Panel to cater to his own needs. Both the panels are operated in a few cities. In the Consumer Panel, the same person is called upon four or five times a month to find out her purchases of certain types of articles. Thus, a continuous picture of buying habits over a period is obtained. The Dealer Panel is operated

BRITISH COMPANIES WORKING FOR INDIA

A DECADE OF TECHNICAL ASSISTANCE

U.N.'S SPLENDID RECORD

THE United Nations Expanded Programme of Technical Assistance (E.P.T.A.) completed ten years in 1959 and has now entered its eleventh year. There is no doubt that, during the past decade, the Programme proved to be increasingly well adapted to the needs of less-developed countries and territories and demonstrated its effectiveness as an instrument of international co-operation. With the accession, in 1959, of the International Atomic Energy Agency (I.A.E.A.), the E.P.T.A. now consists of nine participating organisations, namely, the United Nations Technical Assistance (U.N.T.A.), I.L.O., F.A.O., U.N.E.S.C.O., International Civil Aviation Organisation (I.C.A.O.), W.H.O., International Telecommunication Union (I.T.U.), World Meteorological Organisation (W.M.O.) and I.A.E.A., each representing a special field of competence. Together, they encompass almost every field of economic, social and scientific activity.

A disappointing development last year, according to the annual report of the U.N. Technical Assistance Board for 1959, however, was that contributions to the Programme fell substantially short of the level achieved in the previous year. For the first time since the beginning of the Programme, the amount of contributions pledged was less than that promised for the previous year and the actual payment of pledged contribution was less satisfactory than usual. Pledges aggregating $29.66 million represented about $1.65 million less than the amount contributed in 1958. Moreover, actual contributions amounted to only 89.1 per cent. at the end of the year, as compared with 92 per cent. in the previous year. Even more serious was the fact that, on 31st December 1959, approximately $4.7 million remained outstanding in respect of contributions pledged from 1954 to 1959. This is the largest amount outstanding in the history of the Programme.

The report points out that the administrative problems, arising from the pledging of contributions in currencies with restricted convertibility, continue to be burdensome. In order to make fuller use of the various currencies contributed, the Board decided that, beginning in 1960, the currency distribution of available resources should be taken into account in "earmarking" of funds within the allocations made to the participating organisations. While the recent decision of several Governments to make their contributions freely, or increasingly, convertible has relieved the administrators of the Programme of considerable labour and anxiety, the effectiveness of the Programme and the smoothness of its operation, the report adds, would be much improved if other Governments could do the same. There are, it points out, three ways in which Governments could greatly assist the effective operation of the Programme, apart from increasing their pledges: (1) by paying off outstanding arrears in contributions and local cost dues, (2) by paying contributions and local dues as early as possible in the financial year, and (3) by paying contributions, as far as possible, in convertible or readily usable currencies.

Operations

The decline in resources was reflected—although not as drastically as was originally feared—in the level of assistance rendered during the year. Operations under the Programme in 1959 reached a total of $32.84 million, representing a drop of almost one million dollars from the record level achieved in 1958. This was mainly reflected in a reduction in the number of experts in the various fields in which assistance is offered from 2,427 in 1958 to 2,291 in 1959. The amount spent on equipment declined from $3.2 million to $1.9 million. The number of fellowships awarded, on the other hand, increased by nearly 20 per cent. from 1,759 to 2,107.

Notwithstanding the appreciable decline in their number, the experts continued to be drawn from many different parts of the world. This wide geographical range of possible recruitment continues to be one of the most important advantages of the Programme. The 2,291 experts serving in 1959 were drawn from no less than sixty-four countries and territories. In addition to their technical qualifications, they brought to their work a great variety of linguistic and cultural experience. Year by year, the Programme is able to call on an increasing number of experts who have already had practical experience in its service in many less-developed countries. This experience normally brings with it better understanding of the problems of social and economic development and of the human factors which have to be taken into account in dealing with them. It usually makes for better adaptation to conditions of life and service in new environments and for the application of proved measures to analogous situations in other countries. The quality of the men and women who serve the Programme, according to the report, remains, its outstanding asset, and the maintenance of the quality its most important task.

As in previous years, the Programme reflected in 1959, the great care and skill devoted to its preparation by many officials of Government departments throughout the world and of various international agencies. It continued to cover a wide geographic range. As many as 102 countries and territories received assistance during 1959. The distribution of technical assistance among different regions of the world remained much the same, except for a further modest shift in favour of Africa, made possible mainly by slight reductions in the shares of Latin America and the Middle East.

At a time when resources were dwindling, it was only natural that there should be an ever greater concentration than hitherto on projects originating in previous years. In spite of this limitation, a number of new projects were initiated last year in almost every field of activity. Apart from several regional projects, there were sizable undertakings by U.N.T.A. in some thirty countries and territories, U.N.E.S.C.O. and W.H.O. in about twenty countries and territories and by the I.L.O., F.A.O., and I.C.A.O. (International Civil Aviation Organisation) in over ten countries and territories. New projects were also started in many countries by the International Telecommunication Union (I.T.U.) and World Meteorological Organisation (W.M.O.).

New Participant

An important source of new projects during the year under review was the International Atomic Energy Agency (I.A.E.A.) which participated in the Programme for the first time in 1959. Twenty-one countries received assistance from the Agency under the Programme, during the initial stages, mostly in the form of fellowships. The main fields of training were radio-isotope applications and reactor-engineering. Fellowships were also awarded for study in nuclear physics, radiation protection, instrumentation and geology of nuclear raw materials. In addition, a few experts were assigned in 1959 to advise Governments on the preparation of plans for peaceful uses of atomic energy.

In 1959, as noted above, technical assistance was provided to 102 countries and territories. In addition, some fifteen countries participated in regional or inter-regional projects, without having programmes of their own. The total obligations incurred during the year amounted to $32.84 million, including $6.30 million for administrative and operational service costs. The cost of the field programme, that is, direct projects costs thus amounted to $26.54 million. This fell short of the comparable expenditure in 1958 by about four per cent. Of the $26.54 million, F.A.O. contributed the largest share, $6.82 million, or 25.7 per cent. The U.N.T.A. ranked second, accounting for $5.85 million or 22 per cent. U.N.E.S.C.O. and W.H.O. were on a par, contributing $4.3 million (16.3 per cent.) and $4.44 million (16.8 per cent.), respectively. The I.L.O. share aggregated $2.87 million or 10.8 per cent.

Field Programme Costs

(In thousands of U.S. dollars)

	1957		1958		1959	
	Amount	%	Amount*	%	Amount*	%
By region:

* Including local costs.

The table in the previous column gives the regional distribution of the field programme costs and their distribution by major fields of activity. As is evident from the table, assistance to Africa both in absolute terms and as a percentage of the total programme, increased; it moved up from $3.4 million in 1958 to $3.75 million in 1959, from 12.2 per cent. to 14.1 per cent. This increase was accompanied by some reduction in assistance rendered to Latin America and the Middle East.

An analysis of the costs of the field programme according to the type of assistance given shows that provision of experts accounted for 75.9 per cent. of the costs in 1959, fellowships for 16.9 per cent. and equipment and supplies for 7.2 per cent. During the year experts were drawn from sixty-four different countries or territories. Almost 60 per cent. of them came from Europe, 15 per cent. from North America, 12 per cent. from Asia and the Far East, nine per cent. from Latin America and about five per cent. from the Middle East and Africa. In this respect, there was no significant change from the distribution of the previous year.

It is noteworthy that a significant portion of experts—more than twenty-five per cent.—continued to be drawn from the countries which are themselves receiving technical assistance. This underlines the multilateral and co-operative character of the Programme which sometimes finds expression in a real chain of aid.

India's Share

India, naturally, played an active role in this international give and take of technical assistance. In fact, year by year, the contributions pledged by the Government of India have been increasing progressively. Even in 1959, when the contributions of many Governments were lower than what they paid in the previous year, India pledged the same amount, that is, $525,000. At the end of March 1960, although total contributions outstanding aggregated $4.19 million, India had fully paid the amount it pledged.

As regards the benefits received, E.P.T.A. project costs in India during 1959 aggregated $2.48 million, as against $2.73 million in 1958 and $1.91 million in 1957. India's share in the 2,290 experts engaged under the E.P.T.A. in 1959 was 112. Of the 2,107 fellowships award during the year, India obtained 130. At the same time, this country received 54 scholars for studies under the expanded and regular programmes.

An objective evaluation of the activities of the Programme during the year under review on the lines suggested by the U.N. Technical Assistance Committee in 1958, revealed a picture containing both lights and shades. In some countries, especially in Latin America, the Programme made inadequate progress, because of unstable political conditions and financial problems of the Governments. In some others, defective programming and the absence of a central co-ordinating and evaluating authority for technical assistance, coupled with lack of national programmes, resulted in the countries obtaining only half the benefits which the E.P.T.A. could provide.

In some Asian countries, the implementation of the Programme was disappointing, because the Governments were not ready to carry out the projects which it had requested, and in others, there was difficulty in recruiting experts. Moreover, owing to change of personnel in the administrative machinery of the Government, there had been changes in the official attitude to particular projects and problems involved. The overall picture was, however, bright and definitely reassuring. The great majority of the Resident Representatives of the Programme in the main centres of activity were of the view that the Programme, taken as a whole, was making a valuable contribution to the recipient countries. Their overall appraisal can perhaps be best expressed in the words of a Resident Representative in an Asian country:

"I sincerely believe that, within its limitations and for the purpose for which it is intended, the technical assistance programme is an extremely valuable and effective device. It has overcome many difficulties and produces, in general, a very high quality of experts with good standards of performance; the so-called delays and obstacles to effective work appear to be those inherent in social change and those which come from the fact that Governments are beset with broad political, economic and social problems to which the application of technical assistance alone cannot produce solutions. The Government's appreciation is high, and the results and benefits are many."

In 1959, the E.P.T.A. was joined by a partner in the broad field of technical assistance, namely, the U.N. Special Fund. From the beginning, every effort was made to ensure close co-operation between the two Programmes, so as to enhance the overall effectiveness of their activities and avoid any possible duplication. Apart from structural differences, which have important implications, the Special Fund, as presently constituted, is distinguished from the E.P.T.A. in two respects. First, the resources of the Special Fund are wholly devoted to assisting in the pre-investment financing of natural resources surveys, research establishments and training institutes, whereas the operation of the E.P.T.A. cover a much larger area. Second, the Fund is specially enjoined to concentrate on relatively large projects. In practice, its minimum project is set at about $250,000 in order to eliminate any overlapping with the E.P.T.A. The Special Fund and the Programme complement each other in other ways also. For example, the Fund does not finance the establishment of basic Government services of a technical nature such as national, geological, agricultural or statistical services. At the same time, the advice and assistance provided by the E.P.T.A. in setting up such basic service prepare the ground for the next stage where projects can be usefully undertaken by the Special Fund. Similarly, a preliminary study by E.P.T.A. mission may help to define the framework of an intensive resource survey to be financed by the Special Fund.

Financial Outlook

As regards the financial outlook for the Programme, the report observes that, after the disappointments of 1959, there are grounds for encouragement in the fact that contributions pledged for 1960 are expected to reach approximately $33.4 million. This amounts to an increase of $3.74 million, or 12.7 per cent., over that pledged for 1959. It is the largest annual increase in absolute figures since the Programme began and is the result of larger contributions from twenty countries, including substantial increases from the two largest contributors, namely, the U.S. and the U.K. The increased contribution of the U.S. is partly due to a welcome decision to include in its pledge the matching of local cost contributions of recipient countries.

The financial recovery of the Programme in 1960 after the decline of its future last year according to the report, has gone some way towards averting the danger of failure to provide the volume of technical assistance approved by the Technical Assistance Committee. On the face of it, the increase in contributions will be sufficient to carry out the planned Programme for 1960 in full, with a small margin for safety. But the difficulty of utilising some currencies, it fears, may well lead to a shortfall in the fulfilment of the Programme.

Looking ahead to 1961-62, the report observes that a further increase, comparable to that achieved in 1960, will be needed, if the Programme is to fulfil its minimum responsibilities in the newly-independent countries without penalising others whose needs are hardly less urgent. On a long-range view, a gradual but assured expansion of the resources of the Programme towards the goal of $50 million a year would, says the report, at least enable it to keep pace with the increasing calls on its services which are now in prospect.

U.K. MINISTER ON I.L.O.

Addressing the International Labour Conference, recently held at Geneva, the British Minister of Labour, Mr. Edward Heath, said it was time to consider whether the I.L.O. was wise to use so much of its time and energy every year in the elaboration of more and more conventions and recommendations. "The time and energy devoted to meticulous preparation of texts is time and energy not devoted to some other activity of a more general, and perhaps more useful, character," he said.

The main question, according to him, was how practical help could best be given to improve the conditions of labour in those countries, including new members of I.L.O., where this help was most needed. What was really required was detailed practical guidance about particular problems.

In Mr. Heath's view, it was essential that financial contributions from member nations should increase, in order to enlarge I.L.O. technical assistance programmes in favour of the newly-emerging States in Africa and elsewhere.

This development of technical assistance, he maintained, was not only a matter of money. It also involved training and technicians, and the more highly developed member States should make training facilities available and provide the services of experts to go abroad.

"As a direct result of research by the Oil Industry, refining processes are becoming increasingly complex, for as a result of this research not only are new and more specialized products being produced, but methods have also been devised for more efficiently converting Crude oil to meet the constantly changing pattern of commercial requirements. With a capacity to refine 2.6 million tons of Crude oil per year, the Burmah-Shell Refinery is the largest in India."

NEW PRODUCTS AND PROCESSES

Looms of Circular Form

A LOOM of circular form, designed by a Belgian inventor and costing about £3,500, is claimed to weave many types of yarn at a rate several times greater than that of conventional weaving machines. Four similar looms are reported to have been working on a commercial basis in Belgium during the last four years. Models based on a prototype at present being evaluated in the U.K. are due to be marketed early next year by Safety Research Services of Norwood Avenue, Shipley, Yorks. The machine stands 7 feet high and the weaver works on a platform several feet above the ground. Simplicity of design and operation is said to enable operators to be trained in a short time and one weaver can attend four to six looms. The loom will be of special interest, it is thought, to weavers of asbestos, cotton, jute and man-made fibres. Although primarily designed for "plain" and "semi-plain" manufacture, simple designs and colour effects may, it is stated, be incorporated in the weave.

Driving Trainer for Learner Motorists

A basic driving trainer, which will enable drivers to become completely at ease in a motor car and to get the "feel" of driving before venturing on the road, was demonstrated in London recently. The equipment is claimed to be unique because any type of car can be used and the characteristics accurately translated onto an 8 ft. × 4 ft. screen in front of the car. The screen shows a typical roadway complete with road signs, side roads, telegraph poles, hedges and trees. The driver, with an instructor beside him, can "drive" anywhere he chooses within the limits of the shadowgraph model. The trainer comprises a shadowgraph linked to the car's controls. A stationery point of light, level with the driver's eye, throws the picture on the screen from a disc on which the roadway model is built. The dics moves about the light source in response to the driver's use of the controls. This results in a highly realistic moving scene. The noise of the car is electronically simulated and a control panel, held by the instructor, reflects the pupil's use of gadgets such as the gears, clutch and brake. This means that where advanced driving techniques, such as double de-clutching, are being taught the instructor can see that they are carried out correctly. Attached to his panel is a speedometer showing the simulated speed in miles per hour. Should the driver touch the side of the road a buzzer sounds in the car. Additional refinements include a reaction timer measuring in tenths of seconds the time from the instructor signalling an emergency stop and the pupil depressing the brake pedal. To set up the trainer the car to be used is driven onto a ramp and the front wheels guided into a pair of swivel units. These allow the steering wheel freedom of movement throughout its full range. The normal steering "feel" of the car to be used can be obtained through adjustment of the units. The off-side unit is connected to the shadowgraph and by it the position of the car relative to the picture on the screen is dictated. The normal foot pedals are used but behind them are slipped three separate controls mounted on a panel designed for the particular car. When the driver used any foot control, the coincident pedal is actuated and this again affects the movement of the shadowgraph. For the driving school the advantages of the trainer are said to be many. It can be used irrespective of weather conditions such as ice, snow or fog and during the long winter evenings. Furthermore there is no wear and tear on the car, no insurance, no maintenance and no running costs except for a negligible amount of electricity.

New Method of Steel Frame Erection

Factory extensions and farm buildings are being provided in a hurry by a Bradford, Yorkshire, firm which has developed a new method of steel frame erection. In just one day the firm claims that eight men can erect the frame of a building 100 ft. by 40 ft. without the help of cranes and other expensive equipment. By comparison such a building erected by more conventional methods would take the same gang about a week. The new method employs rectangular hollow section steel girders which are hinged together at points corresponding to the apex of the roof and the eaves, to form the wall struts and roof span. For transport (the steelwork for an entire building can be loaded on to one lorry) each section is folded up rather like a carpenter's three-foot rule; on arrival at the site it is opened out and locking pins inserted at the hinges. With nothing more complicated than a rope and pulley-block each section can then be manœuvred into position and secured. Almost any material can be used for cladding the skeleton, but factories and farm buildings favour brickwork up to window height followed by asbestos sheet. Weighing only half as much as comparable normal steel structures but having the same strength and life, these frames are finding an increasing market all over Britain, and have excited enquiries from oversea countries including India and Australia. The savings in haulage costs and erection time put the price of these folding frames at about 30 per cent. cheaper than any other. At the moment spans from 9 ft. to 60 ft. are available, but drawings are being prepared to extend the present maximum span. In addition to industrial buildings the firm has also designed three different sizes and styles of bungalow to suit all classes from the working man to the executive.

Moulded Circuits

The development of a new method of producing circuits for radio and TV receivers and electronic equipment has been announced. Developed in France and not yet in commercial use, the method of production is claimed to represent a considerable advance in contemporary circuit engineering. The circuits are made from rigid phenol-formaldehyde mouldings with the circuit pattern produced as grooves and holes and into which a nickel-phosphorus alloy is deposited by a chemical plating technique known as the Kanigen process. All circuits, however complex, can be produced as channels and holes in the plastic base, it is stated, the nickel-phosphorus metal being deposited after "masking" the remainder of the base with a chlorinated rubber paint. The completed circuit can be used as a chassis and there is no need for separate sockets for such components as valves or condensers. The method of producing the new circuits is said to offer considerable advantages over that used for the conventional types. There are only four basic production stages—moulding of the base, sensitisation of the base, masking and plating—and it is claimed that it is possible to arrange manufacture on a continuous flow basis.

Novel Canteen Furniture

A Netherlands factory manufactures combined canteen tables and stool seats which can be whisked away under the table. This furniture is made of reinforced tubular frame with cross tubes. It is claimed to be of excellent workmanship, has a white bake-enamel finish and is provided with fireproof and washable heavy-duty plastic table tops and clear-varnished stool seats. The simplest design consists of one table and four stools but the furniture can be supplied in any length, number and arrangement of stools required. The furniture can also be supplied with a different table-top surfacing, e.g. washable polyvinyl or a different colour of varnish. If desired, the stool seats can be matched with this top-surfacing. This furniture is said to be especially suitable for use in canteens because each stool has its fixed place and can be swung out or in as required, any disorder in the position of the stools thus being avoided. At the end of the meal interval the canteen manager simply folds back the stools, wipes the tables and cleans the floor, and this takes little time as there are no chair legs.

New Method of Handling Cement

The Swedish system for bulk shipment and handling of cement based on the use of specially built vessels combined with loading and unloading installations ashore is being increasingly adopted.

Developed by two of Sweden's leading cement producers, the system has so far been "installed" in four vessels of about 2,000 tons each, while a fifth unit of 2,500 tons is nearing completion. There are loading installations at four cement works and unloading facilities at ten ports along the Swedish coast. From the works, the cement flows through a flexible tube on the quay down to a transverse screw conveyor on the ship and is distributed into the holds by longitudinal screw conveyors on deck. In the unloading harbour, the cement is transported from the holds by means of chain conveyors and screw lifts up to the transverse conveyor, which feeds the cement through a similar tube on the quay to the stationary transport equipment. Loading as well as unloading, is entirely mechanical, only one operator being required. For unloading in ports with small silos, a minor ship has been equipped for pneumatic transport of the cement into the silos.

Geodesic Measurement

A new method of geodesic measuring has been completed after years of research by a Swedish team of scientists connected with various natural sciences. Professor Arne Bjerhammar, of the Royal Technical Institute, Stockholm, head of the team, last week announced that with the new method it may be possible to determine the height of any given point on the surface of the globe within an inch or less. Using the indications of gravitation at different points of the earth and feeding the information into a data processing machine the scientists have succeeded in obtaining a basis on which to calculate the exact size and shape of the planet—a complicated problem, which has been subject of intense studies since the advent of modern science. It is claimed that the new system may have an important bearing on the calculation of the route of space rockets. Special instruments designed by the research team are at present being built. The problems of land surveying are expected to be greatly facilitated by means of the automatic methods used.

New Milling Machine for Colour Printing

A new electronically controlled automatic milling machine for use in milling in printing blocks used for colour printing in rotary printing machines has been developed in Norway. The new machine is said to enable the milling of some six to eight blocks to be performed automatically and simultaneously. This is important because for colour printing a number of blocks are necessary as two blocks are used on each colour on each press, and all areas outside the colour spots must be milled away. Previously all this milling work had to be done on each block separately and as a result consumed both labour and time, slowing down the production of the finished colour print. The new system is controlled by means of magnetic tape from which electrical impulses are automatically transferred to the milling machine. They make it possible, it is claimed, for colour prints to be produced for newspaper printing shops far more rapidly and much more cheaply than has hitherto been possible.

RAMTIRTH

HINDI MONTHLY

Editor: YOGIRAJ SHRI UMESHCHANDRAJI

Published by:

SHRI RAMTIRTH YOGASHRAM, Bombay

* MORE THAN 130 PAGES PER ISSUE *

The main idea behind this magazine is to develop the physical, mental and moral aspect of the common man. Detailed information about the cure of diseases by naturopathy and yogic treatment is discussed also.

Annual Subscription Rs. 4/- only. Single Copy 40 nP only.

Agents shall place their orders and requirements by 15th of each preceding month.

RAMTIRTH BRAHMI OIL

Special No. 1 Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cools brain, improves system, and brings sound sleep. Most ideal for body massage. It is useful to every one in all seasons. Prices : Rs. 4/- for big bottle and Rs. 2/- for small. Available everywhere.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: Rs. 2.50 including Postage, to be sent by M.O. only.

YOGIC CLASSES are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers instruct Ladies.

NEW EMPHASIS ON AGRICULTURE

PRODUCTION TO GO UP THIRTY PER CENT.

A STRIKING feature of the investment pattern, proposed in the Draft Outline of the third Five-year Plan (1961-62 to 1965-66), is the emphasis laid on the development of agriculture and allied pursuits (for details *vide* last week's *Commerce*, pages 78-79). The total outlay in the public sector on agriculture, including irrigation as well as community development and co-operation, amounts to Rs. 1,675 crores, or 23.1 per cent. of the total outlay of Rs. 7,250 crores, the corresponding figures for the current Plan being Rs. 980 crores, or 21.3 per cent. of Rs. 4,600 crores. (This proposed outlay excludes Rs. 240 crores set apart for the development of fertilisers, and also the estimated private investment of Rs. 800 crores during the third Plan period.) The actual outlay on agriculture, etc., in the first Plan, it may be recalled, aggregated Rs. 654 crores, representing as much as about 33 per cent. of the total outlay of Rs. 2,012 crores. The allegation that, in the second Plan, greater attention had been devoted to the growth of non-agricultural sectors, seems to have induced the planners to give second thought on the role of agriculture in ensuring development with stability.

Admittedly, the agricultural situation in the country during the current Plan so far has not been quite satisfactory, even as compared with the first Plan. This, in fact has been particularly disquieting in the sphere of foodgrains. Prices have gone up in the second Plan period by about 20 per cent., largely as a result of a sizable shortfall in agricultural production; whereas at the end of the first Plan period, prices had been actually lower by about 13 per cent. than those at the beginning, thanks mainly to the virtual fulfilment of agricultural targets. Incidentally, those who believe that agricultural production can be stepped up without a corresponding increase in the outlay, but merely by relying on non-investment factors, are now perhaps wiser than they were. For the actual achievements in the field in the current Plan has fallen far short of the targets, revised upwards in November 1956 without making any provision for increasing the outlay on agriculture. Viewed thus, the pride of place reassigned to agriculture in the third Plan is quite understandable.

Principal Objective

The principal objective of the third Plan, so far as agriculture is concerned, is to attain "self-sufficiency in foodgrains and increase in agricultural production to meet the requirements of industry and exports." Accordingly, the total agricultural production is proposed to be raised by 30-33 per cent. The additional output of foodgrains in the next Plan is placed at about 25-30 million tons, that is, from an estimated production of 75 million tons in 1960-61 to 100-105 million tons by 1965-66. This is designed to provide about 15 ounces of cereals and three ounces of pulses *per capita* per day, besides providing for some margin against emergencies. It is also envisaged to expand the output of commercial crops, such as cotton, jute and tea.

The table given on this page shows at a glance the targets of production envisaged in the third Plan, along with the trend of production during the last ten years.

The targets which have been laid down for agriculture in the third Plan envisage large increases in production. But, when they are viewed against the background of the recent trends in agricultural production, there is reason to feel doubtful about the possibility of realising these targets. It is true that the overall trend has been upward. But the pace itself has been too slow. In respect of foodgrains, it is estimated that production will touch 75 million tons in 1960-61, which falls short of the revised target of 80.5 million tons by six per cent. or 5.5 million tons. The annual additional output in the second Plan period will thus be of the order of about two million tons. What is now proposed is an increase of 30 million tons over the following five-year period, or 6 million tons per year. This means a threefold annual increase, as compared with what took place in the second Plan period.

As regards commercial crops, it is doubtful whether the output of cotton could be stepped up to 7.2 million bales in the third Plan period, though more land will be brought under irrigation in cotton-growing belts. It is however, possible that the targets relating to oilseeds and sugarcane will be reached. Much, of course, depends on the vigour with which the agricultural programme is implemented. The following table shows the second Plan targets (revised), as compared with the actual production in 1958-59, the latest year for which official estimates are available:

	2nd Plan Target	*Production 1958-59*
Foodgrains (million tons) ...	80.5	73.50
Oilseeds (million tons) ...	7.6	7.0
Sugarcane (million tons) ...	7.8	7.2
Jute (million bales)	5.5	5.2
Cotton (million bales) ...	6.5	4.7

Agricultural Programmes

The experience of the second Plan shows clearly that much greater efforts will be called for in the third Plan, both in terms of investment and non-investment factors, including better organisation for effectively mobilising human and other resources in the rural areas. While the scope for bringing into cultivation new land is rather limited, greater attention should necessarily be given to intensive methods of cultivation. In this context, mention may be made of the lines of development programmes, proposed to be undertaken in the third Plan. The Draft Outline points out that the major programmes around which intensive work has to be organised in each area are: (1) irrigation, (2) soil conservation, dry farming and land reclamation, (3) supply of fertilisers and manures and (4) better ploughs and implements.

From large and medium irrigation projects, the additional area to be benefited will be about 13 million acres, or, after allowing for areas sown more than once, about 11.5 million acres during the third Plan period. It is considered that the minimum additional area to be benefited from minor irrigation schemes will be about 13.5 to 14 million acres (gross), about 10 million acres being irrigated from schemes financed by provisions under the agricultural programmes and about 3.5 to 4 million acres from those under the community development programme. The net area to be irrigated from these programmes will be 12 million acres. After making allowance for depreciation and the fact that some of the works undertaken are primarily for stabilisation of existing irrigation, the net irrigated area is expected to increase from about 70 million acres at the end of the second Plan to about 90 million acres at the end of the third Plan. Extension of irrigation on this scale, which could be further stepped up if the programme for the fuller utilisation of rural manpower resources is effectively implemented, will, it is said, provide considerable scope for the expansion of double cropping and for increase in yields. It may be pointed out that, in new areas where irrigation facilities are made available, attention should be given to the education of farmers in the technique of wet farming, apart from ensuring full utilisation of water resources.

The planners have suggested that, in the unirrigated areas, large-scale soil conservation and dry farming should be undertaken on the basis of mass participation. These schemes are expected to cover over 60 million acres, as is shown below:

	(Million acres)
Soil conservation with contour bunding	13
Other soil conservation programmes including river valley projects	2
Dry farming practices	40
Land reclamation	1
Reclamation of saline and alkaline lands	0.4
Flood control, drainage and avoidance of water-logging	5.0

Consumption of Fertilisers

Besides, it is proposed to increase the consumption of nitrogenous fertilisers from about 360,000 tons at the end of the second Plan to one million tons in terms of nitrogen, and of phosphatic fertilisers from about 67,000 tons to about 400,000-500,000 tons in terms of P_2O_5. The programmes relating to urban composting are estimated to benefit 24 million acres. The target for the additional area which should benefit from green manures is placed at about 50 million acres.

There are indications that greater attention will be devoted to promote the use of better ploughs and other implements by farmers. The Draft Outline observes, in this connection, that, with the studies which have already been made, it is proposed, in the coming months, to prepare a detailed development programme for agricultural implements as an essential feature of the third Plan. This will include measures relating to (*a*) selection and demonstration of the improved implements which have been already established, (*b*) training of village blacksmiths and carpenters in the repairs and manufacture of improved implements, and (*c*) closer co-operation between research and extension agencies and those engaged in the manufacture of implements industry, along with more satisfactory arrangements for the supply of steel and for transport and distribution. Arrangements are proposed to be made in every State for the establishment of at least one centre run by Government for the manufacture of agricultural implements of improved types to which other manufacturers can turn for technical advice, designs and other guidance. In the community development blocks also, the provision of facilities, including credit, for the adoption of improved implements has now to be taken up as a primary extension programme. In addition, steps will be taken to set up more seedfarms to cover an area of about 150 million acres in the third Plan. Similarly, pest and disease control schemes are also expected to cover an area of 75 million acres.

Another project is the programme for intensive agricultural development of selected districts. For the purpose, to begin with, one district is being selected in each State. In these districts, a concentrated effort will be made to reach all farmers through co-operatives and *panchayats* and to organise village production plans which will involve all agricultural families. In the past, the coverage in community development areas has been limited, because of time lags in the utilisation of irrigation, and inadequate supplies of fertiliser, improved seeds and credit. It is hoped to overcome these deficiencies in the selected districts, so that the total effort of the community can be developed as fully as possible.

† Figures relate to 1956-57. * Unofficial estimate ‡ In terms of lakh maunds.

The International Industrial Development Centre at the Stanford Research Institute, California, has brought out a publication, entitled *Small Industry: An International Annotated Bibliography*. The bibliography, supported by a grant from the Ford Foundation, is the fourth in a series of publications by the Institute on the development of small industries. The book, which is the first comprehensive guide to international literature on small industry, is designed to aid in small industry development and to prevent duplication of effort by making available world-wide experiences in small industry problems to administrators and researchers. More than 1,100 books, articles, and pamphlet series are covered in the 218-page book, and many entries are sufficiently detailed that the reader need not refer to original sources. Annotations are organised in eight major subject areas, which are broken down into more than 100 sub-topics and completely cross-indexed.

The section entitled "Internal Management Problems of Small Industry" covers publications on financing, financial control, and industrial relations which are of practical value to small businessmen. Other sections on "Policy and Planning" and "Measures to Aid and Develop Small Industry" will be especially useful to development planners and technical advisors concerned with small industry in newly-industrialising areas. Also included are a directory of publishers and periodicals, and indices of authors and geographical place names. Compiled by Marian Crites Alexander-Frutshi, S.R.I. International economist, the book is available from The Free Press of Glencoe, Illinois at six dollars per copy.

ALL-ROUND GAIN IN RESULTS OF METAL BOX COMPANY

NET DIVIDEND COMFORTABLY MAINTAINED

AN ideal example of a dynamic industrial company is the Metal Box Company of India Ltd. (Managing Director: Mr. R. W. Westbrook, Calcutta), in that it is endeavouring to expand its production not only along its traditional lines but also by taking up the use of new products and processes that are competing in the sphere of packaging materials. Thus, besides maintaining its leadership in the field of tinplate containers, the Company has made impressive progress in the manufacture of non-tinplate products such as plastics, industrial components and machinery. It has also pioneered the use of aluminium as a packaging material by conducting research, so that India's dependence on imported tinplate may be reduced. Further, thanks to the efforts of the Company's research division, more and more ancillary materials are being developed from indigenous sources with a progressive improvement in their quality. Another line of advance made by the Company is in the export field. The Company's factories are keyed up to a high degree of efficiency through modernisation of plant and machinery. On the sales side, the Company maintains regular marketing research and offers advice and guidance on packaging to manufacturers of goods that have to be sold in tamper-proof containers. The excellent work which the Company is doing in all these directions is described by its Chairman, Mr. K. C. Mahindra, in his latest annual statement to shareholders circulated along with the Directors' report and statement of accounts for the year ended 31st March 1960 and published in full elsewhere in this issue. Yet another notable feature of the Company is the maintenance of cordial relations with its workers by the adoption of scientific management practices and prompt settlement of disputes through collective bargaining. In view of all these features, it is no wonder that the Company's shares are held in high esteem among investors.

Results Compared

The financial results of the Company for the year ended 31st March 1960 are quite encouraging. They show an all-round improvement. Sales, gross profit and net profit are all substantially above those for 1958-59 and constitute a record high. The dividend on ordinary shares has been maintained at the previous years' tax-free rate of 17½ per cent., by enhancing the gross dividend and that, too, on a higher paid-up capital. The following comparative table shows at a glance the Company's performance during the year under review against the background of the preceding three years' results:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957

* Subject to deduction of tax.
† Includes additional dividends of Rs. 40,000 for 1955-56.

Profit-margin

As compared with 1958-59, which itself was a good year for the Company, sales have gone up from Rs. 6.96 crores to Rs. 8.29 crores and gross profit (before taxation and depreciation) from Rs. 111.59 lakhs to Rs. 123.07 lakhs. The rise in gross profit has, however, slightly lagged behind that in sales, the ratio of such profit to sales being a shade lower at 14.8 per cent., as against 16 per cent. Four years earlier, that is, in 1955-56, the ratio was a little above 15 per cent. These figures bring out two things: one, the rise in profit is the result of expansion in turnover and not of any increase in the profit margin. And, two, despite modernisation and diversification of production, as well as scientific management and sales drive, the profit-margin is even slightly lower than at the beginning of the second Plan. This clearly reflects the effects of cost inflation, aggravated, to some extent, by the Government's policy of progressive increase in indirect taxation. Mr. Mahindra has, in his statement to shareholders, dwelt at some length on the adverse effects of the new excises on tinplate and aluminium. It is distressing to hear that aluminium will cost the Company almost twice as much as it does manufacturers in the U.S. and the U.K. If this is the case, how can Indian-made pharmaceuticals, fruit drinks and other beverages, canned fish and other foods packed in containers made in this country compete effectively in foreign markets or be sold in this country at reasonable prices?

The provision for depreciation has been well maintained. There is a slight relief of Rs. 5 lakhs, equal to about 9 per cent., in the provision for taxation, but this must have been more than offset by the increase in the amount absorbed by the dividend on account of tax to be deducted at source at the rate of 30 nP per rupee. It is noteworthy that the maintenance of net dividend at 17½ per cent., equivalent to a gross of 25 per cent. on a capital enhanced by issue of new shares, has not been at the expense of additions to reserves. The transfer to general reserve has been kept unchanged at Rs. 15 lakhs and that to development rebate reserve has actually been enhanced by Rs. 75,000 to Rs. 3.25 lakhs. Further, the surplus left to be carried forward at Rs. 23.97 lakhs is Rs. 4.63 lakhs more than the amount brought in.

Financial Position

The ordinary dividend is made up of an interim of 90 nP per share of Rs. 10 each on old capital and a final of Re. 1.60 per share on the new capital. It may be noted here that, in December last, the Company issued 460,000 shares of Rs. 10 each at par in the proportion of two new shares for every five held. Consequent on this, the paid-up capital has risen from Rs. 145 lakhs to Rs. 191 lakhs, which includes Rs. 30 lakhs in 6 per cent. taxable redeemable cumulative preference shares of Rs. 100 each.

The aforesaid paid-up capital is supplemented by reserves and surplus aggregating Rs. 188.72 lakhs; that is, every ordinary share of Rs. 10 is backed by about Rs. 11.68 reserves, reflected on the other side of the balance-sheet almost wholly by current assets. It must, however, be added that the reserves mentioned here include a sum of Rs. 57.00 lakhs, representing capital reserve created through revaluation of assets on 1st April 1956. Loans, current liabilities and provisions aggregate Rs. 204.50 lakhs, as against which there are current assets of the size of Rs. 373.64 lakhs, of which the major items are stock-in-trade Rs. 228.73 lakhs and book debts Rs. 106.81 lakhs. The fact that cash balances are only Rs. 19.77 lakhs and that there are no other liquid assets clearly reflects that the Company's resources are fully employed in its own business. The gross block of the value of Rs. 336.32 lakhs has been written down to Rs. 210.58 lakhs. In the last four years alone, the additions to block account were about Rs. 90 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are currently quoted at Rs. 42.25. The yield on this basis works out to about four per cent., free of tax.

(Concluded from next column)

ties and provisions are no more than Rs. 35.62 lakhs, which are covered more than three times by current assets at Rs. 109.82 lakhs, of which cash balances alone account for Rs. 31.64 lakhs.

It will be noted from the aforesaid analysis that the paid-up capital of the Company is small in relation to its turnover. Further, the Company's manufactures command a ready market, as they are quite popular and as the Company has a good sales organisation. It is, therefore, not surprising that the Company's shares (Rs. 100 paid-up) have been enjoying a very high premium on the Madras Stock Exchange. They are currently being quoted at Rs. 428 *cum-div.*, which, on an *ex-div.* basis, provide a yield of 5.1 per cent. per annum, free of tax.

The outlook for the Company, as is the case with all South Indian mills, is uncertain. While the high cost of production and scarcity of raw cotton continue to be a source of anxiety, the outcome of the present efforts at the Ministerial level to avert the threatened strike by mill workers over the question of implementing the Wage Board's award cannot be reckoned too optimistically.

METTUR INDUSTRIES PROFIT HIGHER

FINANCES SOUND

THE sharp rise in the price of raw cotton, consequent on scarcity of supplies, and the high cost of wages and other items continued to be a source of concern to cotton textile mills during the past year and had a restrictive effect on their profit-margin. Even so, mills have had a satisfactory year of trading, thanks to the improved offtake of cloth from August 1959 onwards and slightly higher price realisations. One of the units which have been able to earn a somewhat higher profit, despite the adverse factors, is the Mettur Industries Ltd. (Managing Agents: Messrs. W. A. Beardsell & Co. Private Ltd., Madras). During the year ended 31st March 1960, the Company made a gross profit of Rs. 47.98 lakhs, representing an increase of Rs. 1.88 lakhs over that for 1958-59. This improvement is on top of a rise of Rs. 4.38 lakhs recorded in the previous year.

Notwithstanding the successive increase during the last two years, the Company's gross profit for 1959-60 still falls very much short of the high of Rs. 60.75 lakhs touched in 1955-56, even though sales during the year under review were higher than those in 1955-56. This phenomenon reflects the rise in the cost of production. It is seen from a comparative study of results that, during the intervening period, the cost of raw materials and other items rose by 20 per cent., thus reducing the ratio of gross profit to sales from 39 per cent. in 1955-56 to 29.3 per cent. in 1959-60. In 1958-59, this ratio was 29.6 per cent. As readers are aware, this is a common phenomenon with all cotton mills and many other industries. But it may be noted that even this lower ratio of Mettur Industries is very much higher than the general average for cotton textile industry as a whole.

The net profit of the Company for the year under review shows a more marked rise (than the gross profit) from Rs. 11.36 lakhs (in 1958-59) to Rs. 25.49 lakhs, consequent on the sharp cut in the provision for taxation from Rs. 28.91 lakhs to Rs. 16.40 lakhs. The provisions for depreciation and Managing Agents' commission are slightly higher at Rs. 2.03 lakhs (as against Rs. 1.95 lakhs for the previous year) and Rs. 4.06 lakhs (Rs. 3.88 lakhs), respectively. The dividend has been raised from 25 per cent. to 30 per cent. Since the dividend for the year under review is subject to deduction of tax, unlike in the previous year when it was a tax-free distribution, the net dividend is sizably lower at 21 per cent. It may, however, be noted that the total distribution for 1958-59 was 75 per cent., but this included a special dividend of 50 per cent. paid in April 1958, which was distributed entirely out of the past reserves and not out of the year's profit. In fact, even to pay the normal dividend of 25 per cent. for the year, the Directors had to draw a sum of Rs. 9.75 lakhs from the general reserve. In contrast to this position, the dividend for the year under review has been fully earned and is fully covered by the net profit even after payment of Rs. 6.10 lakhs as bonus to staff. No addition has been made to the reserves, except a small sum of Rs. 21,000 to the development rebate reserve, as will be borne out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale proceeds	1,83.75	1,55.60	1,51.21	1,51.27

* Subject to deduction of tax.
† Includes a special dividend of 50 per cent. paid in April, 1958.

The Company's financial position continues to be quite sound, notwithstanding the heavy withdrawal from the reserves last year. The paid-up capital of Rs. 60 lakhs is supplemented by reserves and surplus aggregating Rs. 31.16 lakhs. The gross block of Rs. 68.46 lakhs has been written down by Rs. 51.49 lakhs, so that the net block is only Rs. 16.96 lakhs. The Company has no borrowings and the current liabili-

Continued in previous column)

INDIAN COPPER FARES WELL

SHAREHOLDERS GET A BETTER DEAL

THE results of the Indian Copper Corporation Ltd. (Managing Agents: Messrs. Gillanders Arbuthnot and Co., Ltd., Calcutta) for the year ended 31st December 1959 make pleasant reading. Although there was a sizable fall of 288 long tons in the production of refined copper to 7,553 tons and expenses recorded a sizable increase, both gross profit and net profit compare favourably with those for 1958. In fact, they are better than even those for 1957, when copper production reached a record level of 7,848 tons. Thus, the gross profit works out to £1,289,000 as compared with £1,070,000 for 1958 and £1,204,000 for 1957. The rise in net profit is even more impressive. After declining from £427,000 for 1957 to £381,000 for 1958, it has shot up to £588,000 for the year under review. This improvement has enabled the Directors of the Company to maintain the net dividend a shade higher than that for 1958. The proposed dividend is 27 per cent., subject to deduction of tax. Since 30 per cent. is the tax deductible at source, the net dividend is 18.90 per cent. This is better than the 18 per cent. tax-free dividend for 1958 and 1957, though still well below the 20 per cent., free of tax, for 1956. The dividend is well covered by the net profit, as will be clear from the following table showing the Company's progress since 1956:

(In thousands of £ sterling)

	For the year ended 31st December			
	1959	1958	1957	1956
Net sale proceeds after adjustment of stocks	3,342	2,958	3,018	3,273
Other income	57	81	74	59
Expenses	2,111	1,969	1,887	1,716

Provision for leave and furlough pay written back	..	..	16	..
To general reserve	125	125	175	175
„ development rebate reserve	56	51	..	..
Provision for gratuities and superannuation	..	7	15	..
Dividend	370 (27%)*	247 (18%)	247 (18%)	274 (20%)
Carry forward	107	71	120	115
Ore reserves (short tons)	4,203,547	4,034,147	3,850,757	3,424,594
Ore milled (short tons)	434,282	442,088	440,671	421,131
Copper content %	2.162	2.164	2.136	2.183
Refined copper (long tons)	7,553	7,841	7,848	7,628
Rolled products (long tons)	9,270	9,066	7,983	6,788

* Subject to deduction of Indian income-tax.

How was the Company able to register an increase in profit in the face of a fall in production and rise in expenses? The answer to the poser is to be found in the net sale proceeds which disclose a rise of £384,000 over that for the previous year. This in turn is due to the higher prices realised during the year under review on the Company's products as under:

(Per long ton)

	1959	1958
Copper ingots	£255	£222
Rolled brass	£275	£244
Yellow metal circles	£302	£273
Rolled copper	£362	£333

Another explanation for higher profit is provided by the increase in the production of rolled products. The Directors say that there was a good market, again, for brass sheets and strips. The only factor that had a restraining effect on production was the limited availability of zinc owing to import restrictions.

The overall operating cost, as already mentioned, rose further during the year under review. The increase was all round—extraction and development of ore absorbed £788,312 (as against £720,395 in 1958), ore treatment £744,350 (£707,231) and mine administration and general expenses £506,744 (£408,031).

The ore reserves at the end of 1959 recorded an increase of 169,400 tons over the year, but the pace of growth was somewhat lower as compared with that in 1958 and 1957. The Directors' report contains a lot of information of a technical nature in regard to ore development and other operations. It would be more useful if the significance of this information to the future of the Company is also explained in layman's language for the benefit of its shareholders.

The financial position of the Company as at 31st December 1959 is quite sound. The buildings, plant and machinery, etc., have been depreciated from £3,198,081 to £1,280,510. The net block (including £73,399 mining rights and permanent works, at cost) stands at £1,353,909. This is almost equal to the issued and paid-up capital at £1,371,300 in 13,713,000 stock units of 2*s.* each. Reserves and surplus aggregate £1,812,396. Current liabilities and provisions (including reserve for Indian income-tax 1960-61) total £2,574,329 as against which there are current assets of the order of £4,404,116, the surplus being as large as £1.83 million.

The Chairman's statement to shareholders at the forthcoming annual general meeting of the Company will, it is to be hoped, help one to get a clear picture of the prospects. The available information on the trend of copper market suggests that, in the current year, too, the Company will be able to realise satisfactory prices. After going down, to some extent, in the latter half of the first six months of 1960, the price of copper in the world markets is once again ruling at high levels. The political disturbances in South Africa and Congo and the disastrous earthquakes in Chile have tended to push up the prices of copper. Industrial relations, too, in the principal copper producing countries are still far from peaceful. In any case, there are signs of eagerness on the part of copper producers in the world not to let prices go down sharply and they are quite willing to regulate production, if need be, for that purpose. From the draft outline of the third Plan it seems that the Company has been permitted to go ahead with its plan for establishing an electrolytic plant. Although this project would cost about £700,000, the Chairman stated last year that the Company was in a position to find the necessary funds from its own resources. If this is the view of the management still, there is unlikely to be any issue of new shares in the near future. The only snag so far as this Company is concerned is the dispute with the Bihar Government regarding kyanite leases. The Company lost its case in the Patna High Court, but has appealed to the Supreme Court, where it is still pending. It is stated that the amount of this contingent liability cannot yet be determined. The outcome of this legal battle is, however, likely to have a profound effect on the market value of the Company's shares currently standing Rs. 5.15 *cum*-dividend on the Bombay Stock Exchange to yield a little over five per cent. free of tax. Even at this level, there are many confident supporters to this scrip, as it is still regarded to be relatively cheap in comparison with many other first class counters.

COMPANY REGISTRATIONS

A further rise in the number of newly-formed companies was recorded in 1959-60, according to statistics now available. The number of new companies registered during 1959-60 totalled 1,452, as against 1,095 companies formed during the previous year. Giving these figures and analysing them, an official Press note says:

"The level of new formations in 1959-60 was the highest during the last eight years and indicates that, with the progressive realisation of the significance of the various provisions of the Companies Act by the public, the trend of new registrations would steadily improve.

"Of the 1959-60 registrations, as many as 1,365 were private and 87 public companies. The authorised capital of these was Rs. 93.40 crores and Rs. 67.14 crores, respectively.

"A State-wise break-up shows that the highest number—399—of new companies was formed in West Bengal, followed by Madras where 342 new companies were registered. The number of new registrations in Bombay and Delhi was 293 and 141, respectively. New registrations in the other States ranged between 11 in Bihar and 45 in U.P.

"Broadly speaking, the industrial pattern of new companies remained unchanged. The two main industrial groups, namely, processing and manufacture and commerce (trade and finance) together accounted for 981 companies or about 68 per cent. of the new registrations during the year.

"The shift in favour of company management by board of directors as against other forms, which began with the enforcement of the Companies Act, was distinctly noticeable in 1959-60. Of the new registrations during the year, 924 companies were to be managed directly by boards of directors and 508 companies proposed to have managing directors. Only 14 companies preferred to have managing agents and three companies each were to have secretaries and treasurers and managers.

"Among the 1959-60 flotations were 31 giant companies with an authorised capital of Rs. 1 crore and above.

"The total number of companies at work in the country as on 31st March 1960 is estimated at 26,921, with a total paid-up capital of approximately Rs. 1,593 crores. Of these, the number of public limited companies is estimated to be 7,306 with an aggregate paid-up capital of Rs. 812 crores and that of private limited companies at 19,615, with a total paid-up capital of Rs. 781 crores."

COMPANY MEETINGS AND DIVIDENDS

PURTABPORE CO., LTD. Annual General Meeting, Calcutta, 18th July 1960. Dividend: *Nil*. Transfer books remain closed from 4th to 18th July 1960, both days inclusive.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD. Annual General Meeting, Calcutta, 22nd July 1960. Dividend: 25 per cent. or Rs. 2.50 per share, subject to deduction of tax. Transfer books remain closed from 8th to 22nd July 1960, both days inclusive.

NIZAM SUGAR FACTORY LTD. Annual General Meeting, Hyderabad, Andhra Pradesh, 25th July 1960. Dividend: Rs. 5.40 per share, subject to deduction of tax. Transfer books remain closed from 11th to 25th July 1960, both days inclusive.

BHARTIA ELECTRIC STEEL CO., LTD. Annual General Meeting, Calcutta, 26th July 1960. Transfer books will remain closed from 12th to 26th July 1960, both days inclusive.

MINERVA MILLS LTD. Annual General Meeting, Bombay, 26th July 1960. Dividend: *Nil*. Transfer books remain closed from 1st to 22nd July 1960, both days inclusive.

BENGAL PAPER MILLS CO., LTD. Annual General Meeting, Calcutta, 28th July 1960. Dividend: Rs. 8.00 per ordinary share (includes interim dividend of Rs. 3.00 per share), subject to deduction of tax. Transfer books remain closed from 11th to 28th July 1960, both days inclusive.

SHREE DIGVIJAY CEMENT CO., LTD. Annual General Meeting, Sikka, Gujrat State, 28th July 1960. Dividend: Rs. 9.00 per ordinary share, subject to deduction of tax, payable on and after 29th July 1960. Transfer books remain closed from 4th to 28th July 1960, both days inclusive.

BASMATIA TEA CO., LTD. Annual General Meeting, Calcutta, 28th July 1960. Rs. 3.00 per share, subject to deduction of tax. Transfer books remain closed from 15th to 28th July 1960, both days inclusive.

RAJGARH TEA CO., LTD. Annual General Meeting, Calcutta, 28th July 1960. Dividend: Rs. 3.50 per share subject to deduction of tax. Transfer books remain closed from 15th to 28th July 1960, both days inclusive.

HOOLUNGOOREE TEA CO., LTD. Annual General Meeting, Calcutta, 28th July 1960. Dividend: Rs. 20.00 per share, subject to deduction of tax. Transfer books remain closed from 15th to 28th July 1960, both days inclusive.

BURN & CO., LTD. Annual General Meeting, Calcutta, 29th July 1960. Dividend: Rs. 28.50 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 21st to 29th July 1960, both days inclusive.

ASSOCIATED RUBBER INDUSTRIES LTD. Annual General Meeting, Bombay, 29th July 1960. Dividend: Rs. 10.00 per share (Rs. 7.00 net), subject to deduction of tax, payable on and after 16th August 1960. Transfer books will remain closed from 18th to 29th July 1960, both days inclusive.

WALFORD TRANSPORT LTD. Annual General Meeting, Calcutta, 29th July 1960. Dividend: 15 per cent. on preferred ordinary shares and 20 per cent. on ordinary shares subject to deduction of tax. Transfer books will remain closed from 20th to 29th July 1960, both days inclusive.

BENGAL ASSAM STEAMSHIP CO., LTD. Annual General Meeting, Calcutta, 29th July 1960. Dividend: Rs. 3.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 22nd to 29th July 1960, both days inclusive.

OSMANSHAHI MILLS LTD. Annual General Meeting, Hyderabad, 29th July 1960. Dividend: *Nil*. Transfer books will remain closed from 18th to 29th July 1960, both days inclusive.

CAUVERY SPINNING AND WEAVING MILLS LTD. Annual General Meeting, Madras, 30th July 1960. Dividend: 13 per cent. or Re. 1.30 per ordinary share, subject to deduction of tax, payable on and from 2nd August 1960. Transfer books remain closed from 16th to 30th July 1960, both days inclusive.

CALCUTTA STEEL CO., LTD. First Annual General Meeting, Calcutta, 30th July 1960. Transfer books will remain closed from 18th to 30th July 1960, both days inclusive.

TATA OIL MILLS CO., LTD. Annual General Meeting, Bombay, 2nd August 1960. Dividend: Rs. 5.75 per ordinary share, subject to deduction of tax, payable on and after 3rd August 1960. Transfer books were closed from 20th June to 15th July 1960, both days inclusive.

HOWRAH MILLS CO., LTD. Annual General Meeting, Calcutta, 12th August 1960. Transfer books will remain closed from 26th July to 12th August 1960, both days inclusive.

ORISSA CEMENT LTD. Annual General Meeting, Rajgangpur, 2nd September 1960. Dividend: 11 per cent. or Re. 1.10 per share, subject to deduction of tax. Transfer books will remain closed from 15th August to 10th September 1960, both days inclusive.

INDIA PAPER PULP CO., LTD. Final dividend of 85 nP per share, subject to deduction of tax, for the year ended 31st March 1960.

KUMARDHUBI FIRECLAY AND SILICA WORKS LTD. Dividend of Re. 1.80 per ordinary share, subject to deduction of tax, for the year ended 31st December 1959.

SRI BALASUBRAMANIA MILLS LTD. Taxable dividend of 15 per cent. for the year ended 31st December 1959. Transfer books remain closed from 27th June to 11th July 1960, both days inclusive.

LAKSHMI MILLS CO., LTD. Taxable dividend of 20 per cent. for the year ended 31st March 1960. Transfer books will remain closed from 19th July to 3rd August 1960, both days inclusive.

TIRUPATI COTTON MILLS LTD. Taxable dividend of 8 per cent. on the ordinary shares, for the year ended 31st March 1960. Transfer books will remain closed from 12th July to 10th August 1960, both days inclusive.

ANOTHER SUCCESSFUL YEAR FOR VICTORIA MILLS

NET DIVIDEND LOWER—MORE TO RESERVES

LARGER sales, lower stocks of finished goods, better gross profit and a marked rise in net profit are the outstanding features of the performance of the Victoria Mills Ltd. (Managing Agents: Messrs. Mangaldas Mehta & Co., Bombay) during the year ended 31st December 1959. As compared with the results for 1958, sales at Rs. 219.31 lakhs are *plus* Rs. 8.34 lakhs; stocks of finished goods as at the end of 1959 have contracted from Rs. 29.20 lakhs to Rs. 24.07 lakhs; gross profit has moved up from Rs. 14.17 lakhs to Rs. 17.24 lakhs; and net profit has staged an almost 50 per cent. rise, from Rs. 4.64 lakhs to Rs. 6.87 lakhs. All these constitute a creditable achievement, considering that it was only in the last quarter of 1959 that the cotton textile industry had definitely turned the corner, after the disastrous depression of 1957 and 1958. The earnings are, however, appreciably below those for 1956, even though sales in 1959 were markedly higher. Thus, in 1956, the Company was able to report a gross and net profit of Rs. 21.08 lakhs and Rs. 9.76 lakhs, respectively, when sales fetched only Rs. 203.84 lakhs. The contraction in profit-margin reflects the irreversible increase in expenses other than raw materials consumed. As compared with 1956, this item shows a rise of Rs. 15.44 lakhs or 14 per cent. The main elements of cost that have contributed to this growth are the "stores, colours, chemicals and spare parts" and the wage bill. The cost of cotton consumed is down as compared with both 1958 and 1956, as will be seen from the table below summarising the salient features of the profit and loss, as well as appropriation, accounts of the Company for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956
Sale proceeds (gross)	219.31	210.97	202.92	203.84
Closing stocks	30.03	33.94	31.96	33.35
Cotton consumed	82.85	84.06	80.93	88.65
Expenses	119.62	116.67	104.45	104.18
Gross profit	17.24	14.17	10.49	21.08
Managing Agents' commission	1.19	0.91	0.50	1.75
Provision for—				
Depreciation	5.53	5.03	7.29	7.07
Taxation	3.65	3.60	0.45	2.50
Net profit	6.87	4.64	2.24	9.76
To reserves	2.72	1.71	1.74	3.25
,, provision for "set on" bonus				3.00
Transfer from reserve			3.52	
Dividends—				
4 per cent. preference	0.46*	0.32	0.32	0.32
Ordinary	3.20*	3.20	3.20	3.20
	(20%)*	(20%)†	(20%)†	(20%)†
Carry forward	0.77	0.28	0.87	0.46

* Subject to deduction of tax.
† Includes a cash bonus of 5 per cent.

The Company has more than maintained the transfers to essential provisions which are a first charge on gross profit. Depreciation has received Rs. 5.53 lakhs and taxation Rs. 3.65 lakhs. The rate of dividend has only been maintained at 20 per cent. per annum for the fifth year in succession, but, since this is subject to deduction of tax at 30 per cent., the net dividend is substantially lower at 14 per cent. The net profit is, of course, large enough to permit even a net dividend of 20 per cent., but the Directors have thought it wise to conserve the increase in net profit by enhancing the transfers to reserves and leaving a larger undistributed surplus. This policy is justifiable, since an important item that contributed to the improvement in net profit was a premium of Rs. 2.39 lakhs (*nil* in the previous year) under the export incentive scheme, a fortuitous source of income depending upon the Government's whims and fancy. In any case, the Company had to provide Rs. 2.04 lakhs for statutory development rebate, which, as its name itself suggests, is compulsory under our tax laws.

The Company under review is one of the cotton mills with a strong financial position. Its reserves and surplus at Rs. 65.29 lakhs are more than 2½ times the paid-up capital of Rs. 24 lakhs. Since the ordinary capital is only Rs. 16 lakhs, every ordinary share (of Rs. 100 each) has a clear fourfold cover in reserves and surplus. The preference capital of Rs. 8 lakhs (in shares of Rs. 25 each) is entitled to a tax-free preference dividend of only 4 per cent. This, it may be noted in passing, was created out of the reserves of the Company in the past through issue of bonus shares. The Company has now decided to capitalise a further, albeit small, sum of Rs. 1.60 lakhs and issue one ordinary share of Rs. 100 each in the proportion of one for ten. This issue is subject to the permission of the Government. Unsecured loans and current liabilities (inclusive of provisions) amount to Rs. 60.04 lakhs, as against which there are current assets aggregating Rs. 105.22 lakhs. Of the latter, stock-in-trade and book debts are the largest items, standing at Rs. 42.77 lakhs and Rs. 36.37 lakhs, respectively. The smallest item is "cash balances," with a mere Rs. 79,257 to its credit, a striking commentary on the stringency of the money market. The position of block account is: gross Rs. 108.96 lakhs, *less* depreciation Rs. 64.84 lakhs, that is, net Rs. 44.12 lakhs. In the last four years alone, the Company has incurred a capital expenditure of Rs. 42.04 lakhs. This will give one an idea of the amount the Company has spent on modernisation of its mills. It will also be noted that the value of net block is only Rs. 2.08 lakhs more than the additions made during the past four years.

ROYAL DUTCH-SHELL FINANCES IN 1959

The 1959 Annual Report of Royal Dutch-Shell Group of oil companies has just been received and makes interesting reading. In 1959, as in previous years, the Group has shown that its resources were such as to enable it to keep its leading place in the oil industry. The gross income of the Group from sales of oil and chemicals throughout the world for 1959 totalled £2,631 million. The Group's financial results can only be seen in true perspective by setting against this gross income the various large sums necessary for day-to-day operations, for research and capital expenditure, for taxes paid to Governments, and for the payment of dividend to shareholders.

What are these various sums, and what is left after they have been deducted from gross income? First, sales taxes, excise duties and similar levies, handed over to the Governments concerned, are included in the gross income. To this must also be added income and profits taxes and various other taxes payable to Governments throughout the world. For the year 1959 these sums amounted in round figures to £861 million or 32.7 per cent. of the total money that came in.

Operating, selling and administrative expenses of all kinds, including purchases of oil, royalties, salaries and wages, and retirement and other benefits to employees, amounted to £1,307 million or 49.7 per cent. Capital expenditure and working capital accounted for a further £396 million or 15.1 per cent. Dividends to shareholders formed no more than 2.5 per cent. of the gross income.

The trading results of Shell Group of companies in 1959 have been achieved not without problems and challenges and intense competition which remains the order of the day. Contrary to common belief, the oil industry continues to be one of the most competitive businesses.

New technique are continually being introduced in each of the principal branches from exploration to ultimate distribution, and these techniques are the applied results of research. That is why Royal Dutch-Shell Group companies, among the leaders in the field, are currently spending some £20 million a year on research and employ about 5,500 people in their international laboratories. Competition is ever present throughout the oil industry and the consumer benefits accordingly wherever he may be.

From the Royal Dutch-Shell Group's annual report for 1959 it is evident that the Group is international in character in a world beset with national prejudice. It is international in its operations as well as in its staff which are spread throughout the world. The great spread of Shell interests throughout the world enables them to take risks in any one country to an extent not open to any individual Government which is usually restricted in its operation to its own national territory, or to any other commercial concern which does not have the same spread of activity as Royal Dutch-Shell Group and no other company has.

Of all the world's companies, the Royal Dutch-Shell Group is by far the most international in scope, association and spirit. Teamed in partnership by two holding companies, one Dutch (the Royal Dutch Petroleum Company) and the other British (the Shell Transport and Trading Company Ltd.), the Royal Dutch-Shell owns or partly owns 500 world-wide subsidiaries and produces 14 per cent. of the world's oil (excluding Russia). The Group employs over 250,000 employees spread throughout the world and has wells in 17 countries, 47 refineries, the world's biggest tanker fleet, and marketing interests in 76 countries.

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them — in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

SYNOPSES OF COMPANY REPORTS

Sri Kannapiran Mills Ltd.

THE directors of the above Company (Chairman: Mr. G. Venkataswami Naidu, Coimbatore) submitted the audited accounts of the Company for the 13th year ended 31st December 1959.

The Company's working for the year after charging all working expenses interest and depreciation of Rs. 1,46,728 (Rs. 1,51,388) has resulted in a net profit of Rs. 2,90,781 (Rs. 1,48,087). The Company has paid out of this Rs. 6,837 (Rs. 1,414) as wealth-tax and Rs. 682 (Rs. 7,901) as donation and charity leaving a balance of Rs. 2,83,262 (Rs. 1,28,046 after transferring Rs. 25,824 from general reserve). The directors disposed of this balance as follows:—

To transfer to machinery development rebate reserve Rs. 1,09,226 (Rs. 50,909), to transfer to general reserve Rs. 42,444 (*nil*) and to payment of a dividend of 10 (6 per cent. tax-free) per cent. subject to tax absorbing Rs. 1,31,592 (Rs. 77,137). The dividend for the year comes to 70 nP per share, net, against 60 nP per share, paid in the previous year.

The result of the working of the company for the year must be considered very satisfactory when compared with other textile units in the district. The crisis which has been persistent in the Textile Industry since two years showed a slight improvement in the latter half of the year, which has been responsible mainly for the increase in profits.

Further there was no power cut during the year with the result there was a saving in the lay off wages. Production potential was improved by the addition of ten ring frames. The total installed capacity at the close of the year was 21,532 spindles.

The firm of Managing Agents was automatically dissolved on the death of Sri K. Krishnaswami Naidu. The Board has, subject to the approval of the Central Government, appointed Sri K. Ramachandran the sole surviving partner of the managing agents as Director-in-charge till the approval of the Central Government for appointing new Managing Agents are obtained. The Board is applying to the Central Government for approval to appoint Messrs. K. Venkataswami Naidu and Co. consisting of Sri R. Ramachandran, Sri K. Devadas and Sri K. Dorairaj as partners, as managing agents of the Company, on the terms and conditions set forth in the draft agreement approved by the Board.

Accounts in brief are as under:—

Sivanandha Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. S. R. P. Ponnuswamy Chetty and Sons, Coimbatore) submitted the audited accounts of the Company for the year ended 31st December 1959.

The working of the Mill during the year was quite satisfactory. The mill was running on 3 shifts with an installed capacity of 25,088 spindles and the average number of spindles worked during the year was 22,092. A major portion of the machinery ordered for in respect of the installation of 6,272 spindles sanctioned under the normal expansion scheme was received and erected. These additional spindles would go into production shortly.

The year's trading resulted in a net profit of Rs. 7,70,147 (Rs. 4,65,817) after deducting all working expenses, interest and providing Rs. 7,73,016 (Rs. 5,77,600) for depreciation on the assets of the company. Adding to this Rs. 3,118 (Rs. 4,266) being the balance of profit of last year, there is a sum of Rs. 7,73,264 (Rs. 4,70,083) available, which the directors recommend may be appropriated as follows:

To pay a taxable dividend of 22 (15 per cent. tax-free) per annum for the year 1959 absorbing Rs. 2,20,000 (Rs. 1,49,966), to provision for taxes Rs. 5,50,000 (Rs. 3,17,000) and balance to be carried forward Rs. 3,264 (Rs. 3,118).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Gross block	54,79,563

New Commercial Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Tricumlal Bhogilal & Co., Ltd., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year amounts to Rs. 31,34,489 (Rs. 30,03,784). From this amount is to be deducted managing agents' remuneration of Rs. 1,84,772 (Rs. 1,40,240), depreciation Rs. 6,21,074 (Rs. 6,18,110), transfer to development rebate reserve of Rs. 27,220 (Rs. 8,835), to statutory development rebate reserve of Rs. 81,662 (Rs. 26,505), to provision for taxation Rs. 7,18,000 (Rs. 8,35,000), to tax deducted on interest of securities Rs. 8,140 (Rs. 6,799) and donations and charities Rs. 32,117 (Rs. 26,136). This leaves a balance of Rs. 14,61,504 (Rs. 13,42,159) to which is added the amount brought forward from last year of Rs. 2,092 (Rs. 20,815) making a total of Rs. 14,63,596 (Rs. 13,62,974). Out of this, the directors have appropriated to provision for bonus contingency Rs. 5,10,000 (Rs. 4,71,919) leaving a balance of Rs. 9,53,596 (Rs. 8,63,492 after providing Rs. 27,563 for additional tax for 1951). The directors recommend to dispose of this amount as follows:

To payment of dividend at Rs. 5.72 (Rs. 4.00 per share free of tax) subject to deduction of tax at Re. 1.72 per share on 5,250 redeemable cumulative second preference shares for the year ended 31st December 1959 absorbing Rs. 30,030 (Rs. 21,000), to payment of dividend at Rs. 36 (Rs. 27 per share including a bonus of Rs. 7 per share, free of tax), subject to deduction of tax per share, on 25,200 ordinary shares for the year ended 31st December 1959 absorbing Rs. 9,07,200 (Rs. 6,80,400) and to provide for charity account Rs. 10,000 (Rs. 10,000) leaving a balance to be carried forward to next year's account of Rs. 6,366 (Rs. 2,092 after transferring Rs. 1,50,000 to contingency fund). The directors recommend that as preference shareholders are entitled to a dividend of 4 per cent. per annum free of income-tax and in view of the provisions of the Finance Act 1959 and the Finance Bill 1960, the Company should bear the deduction made compulsory by Section 18 (3D) of the Indian Income-tax Act, and provision has been made accordingly.

Accounts in brief are as under:—

Raymond Woollen Mills Ltd.

The directors of the above Company [Managing Agents: Messrs. J. K. (Bombay) Private Ltd., Bombay] submit the audited accounts of the Company for the year ended 31st December 1959.

The Company's operations for the year under review after meeting all manufacturing and overhead expenses, provision for normal depreciation amounting to Rs. 6,80,000 (Rs. 4,60,000) and managing agents' commission amounting to Rs. 3,22,163 (Rs. 1,48,405) have resulted in a net profit of Rs. 32,17,926 (Rs. 17,75,339). To this amount has been added the balance brought forward from the previous year amounting to Rs. 2,20,527 (Rs. 11,792) making a total of Rs. 34,38,453 (Rs. 18,27,527 including refund of taxes Rs. 40,396). From this the directors have made the following provisions and appropriations:—

To provision for bonus to employees for the years 1956-58 Rs. 2,20,000 (*nil*), to depreciation [against arrears of normal depreciation of past years] Rs. 2,20,000 (Rs. 2,25,000), to development reserve Rs. 2,40,000 (Rs. 4,00,000), to provision for taxation [income-tax and super-tax] Rs. 13,50,000 (Rs. 2,92,000), to investment depreciation reserve Rs. 60,000 (Rs. 40,000) and to reserve fund No. 2 Rs. 2,50,000 (Rs. 6,50,000) leaving an available balance of Rs. 10,98,453 (Rs. 9,45,527 after including Rs. 7,25,000 transferred from reserve fund). Out of this sum the directors recommend payment of the following dividends for the year ended 31st December 1959:—

A dividend on 5 per cent. tax-free cumulative preference shares for the year 1959 at the rate of Rs. 7.143 per share, subject to deduction of tax at the rate of Rs. 2.143 per share absorbing Rs. 1,78,575 (Rs. 1,25,000) and a dividend on ordinary shares at the rate of Rs. 11.50 (Rs. 8.00 per share, free of income-tax) per share, subject to deduction of tax absorbing Rs. 8,62,500 (Rs. 6,00,000) leaving a balance to be carried forward to the next year of Rs. 57,378 (Rs. 2,20,527). The operating results for the year under review show a substantial increase in the profits before taxation at Rs. 32.18 lakhs as against Rs. 17.75 lakhs in the previous year. The allocation to depreciation is higher at Rs. 6.80 lakhs as against Rs. 4.60 lakhs in the previous year due to the calculation of depreciation for the full year on new plant and machinery installed during 1958 and also due to further capital expenditure on new plant and machinery installed during the year under review. A further allocation of Rs. 2.20 lakhs from the appropriation account has been made for depreciation against the arrears of normal depreciation of past years. An amount of Rs. 2.40 lakhs has been transferred to the development reserve account in accordance with the requirements of the Income-tax Act.

Raw Materials:—The prices of wool tops showed an upward trend during the year under review but this Company was able to cover a substantial quantity of its requirements at advantageous prices during the earlier part of the year. The import quotas for raw materials for the woollen industry were somewhat lower than in the previous year.

The Company's Mills have been experimenting on the use of indigenous raw wool for manufacture of certain varieties of worsted suitings with encouraging results and have been assured of the fullest encouragement and help from the Government in setting up of a plant for combing of Indian wool for manufacture of woollen cloth.

Sales:—The gross turnover for the year under review showed a substantial increase at Rs. 262.25 lakhs as compared to Rs. 216.72 lakhs in the previous year. It will be interesting to note that the Company's export sales rose from Rs. 0.06 lakh in 1958 to Rs. 10.16 lakhs in 1959 and sales through retail showrooms in Bombay rose from Rs. 6.61 lakhs in 1958 to Rs. 13.05 lakhs in 1959, due mainly to the Company opening, during the year under review, its own air-conditioned sales depot at J.K. Building, Ballard Estate. There has also been a further increase, in the percentage of high quality fancy suitings manufactured by the Company during 1959 as compared to the previous year. The increase in turnover and higher percentage of high quality fancy suitings manufactured during the year, coupled with the favourable prices of raw materials, has resulted in the increase in the net profits during the year under review.

The Company has been making every endeavour to promote its sales in the export markets. The reports of the Company's sales representative who recently visited the Middle East, Africa and the Continent as well as the orders which the Company has been receiving from these countries indicate that the products manufactured by the Company have been well received and compare very favourably with other foreign manufactures in quality, finish and range. The Company also received further orders for woollen suitings from the U.S.S.R. through the State Trading Corporation of India Ltd.

J. K. Engineers' Files:—The Company's factory for the manufacture of *Engineers' Steel Files* worked satisfactorily during the year under review. The expansion programme in this branch for doubling the capacity of the factory at a total cost of approximately Rs. 4.50 lakhs is expected to be completed during the current year.

The term of office of the existing managing agents of the Company, Messrs. J. K. (Bombay) Private Ltd., will expire on 15th August 1960 under the provisions of the Companies Act, 1956. The Company has, after obtaining the approval of the shareholders, taken steps to obtain the consent of the Central Government to their reappointment for a further term of ten years.

Sendra Coal Co., Ltd.

The directors of the above Company [Secretaries: Messrs. F. W. Heilgers and Co. (Private) Ltd., Calcutta] present the audited accounts of the Company for the year ended 31st December 1959.

The profit and loss account after providing for all charges and making a provision of Rs. 58,055 (Rs. 16,619) for taxation including Rs. 16,033 (*nil*) in respect of previous years, shows a profit of Rs. 17,096 (loss of Rs. 5,273). To this is added the balance brought forward from the previous year of Rs. 355 (Rs. 628) and the amount transferred from general reserve of Rs. 16,000 (Rs. 5,000) making a total available balance of Rs. 33,451 (Rs. 355). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the ordinary shares at 3½ (*nil*) per cent. per annum, subject to deduction of tax absorbing Rs. 28,000 (*nil*) and by carrying forward Rs. 5,451 (Rs. 355).

The dividends on investments are the total amount actually received during the year. The purchases of investments made during the year have not yielded full income in certain cases in the year under review.

Revaluation of Fixed Assets.—In order to bring the value of the buildings of the Company back to their actual written down value based on the original cost, the directors have authorised the writing down of the said asset by a sum of Rs. 16,751 by debiting the reserve for revaluation of fixed assets account in the year under review in the same proportion as the asset was written up in 1948.

Colliery.—The directors are pleased to report that the buyers have paid the final instalment of Rs. 1,30,000 towards the purchase price, in January 1960.

The Karanpura Mining Syndicate.—During the year ended 31st December 1959, 1,91,578 (1,80,082) tons of coal were raised and 1,83,528 (1,80,627) tons were despatched. The managing contractor continues to raise and sell coal from Religara Colliery and this arrangement continues to work satisfactorily.

Investments.—The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of 7/60th share in The Karanpura Mining Syndicate for which no quotation is available. The market value of investments for which quotations are available together with the unquoted investment as valued by the directors amounts to Rs. 11,57,311.

As reported earlier, the Company has changed its business to that of an investment company and the managing agents resigned with effect from 15th March 1959.

Secretaries.—In pursuance of the special resolution passed at the general meeting of the Company held on 4th January 1960, Messrs. F. W. Heilgers and Co. (Private) Ltd., were appointed secretaries of the Company for a period of five

years with effect from 1st January 1960, at a remuneration of Rs. 500 per mensem.

Accounts in brief are as under:—

Runglee Rungliot Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts disclose a working profit of Rs. 33,252 (Rs. 98,364). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 1,500 (*nil*) to development rebate reserve, there is a balance at the credit of the profit and loss account amounting to Rs. 44,085 (Rs. 65,523 after transferring Rs. 18,000 to buildings and machinery reserve). The directors recommend that a dividend of 10 (30) per cent. (subject to deduction of tax) be declared at the annual general meeting, leaving Rs. 30,085 (Rs. 23,523) to be carried forward.

Tea crop was 1,91,120 lbs. as compared with 1,96,080 lbs. in 1958. The average selling price realised was Rs. 3.09 per lb. as against Rs. 3.45 per lb. in the previous year.

Estimates for 1960 provide for a crop of 83,460 kilograms (1,84,000 lbs.) at an outlay of Rs. 5,39,670, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	8,53,779	Rs.	8,53,779

Belvedere Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts, after charging all expenses and taking credit for E.P.T. post-war refund, show a profit of Rs. 12,12,070 (Rs. 6,29,414) of which provision for taxation requires Rs. 5,80,000 (Rs. 58,000) leaving a net profit of Rs. 6,32,070 (Rs. 5,71,414). From this amount the directors have transferred to development rebate reserve Rs. 1,782 (Rs. 2,285), to general reserve Rs. 1,50,000 (Rs. 3,00,000) and to contingencies reserve Rs. 21,000 (*nil*) leaving a balance of Rs. 4,59,288 (Rs. 2,69,129). With the balance brought forward from last year of Rs. 16,240 (Rs. 6,111) there is a total amount available for distribution of Rs. 4,75,528 (Rs. 2,75,240). The interim dividends on preference shares at 3.5 (*nil*) per cent. absorbed Rs. 24,500 (*nil*) and on ordinary shares at Rs. 5.00 (Rs. 2.50 per share, free of tax) per share, absorbed Rs. 1,40,000 (Rs. 70,000) leaving a balance of Rs. 1,64,500 (Rs. 2,05,240). The directors now recommend payment of final dividends on preference shares at 3.5 (7 per cent. free of tax) per cent. absorbing Rs. 24,500 (Rs. 49,000) and on ordinary shares at Rs. 8.50 (Rs. 5.00 per share free of tax) per share, absorbing Rs. 2,38,000 (Rs. 1,40,000) leaving a balance to be carried forward of Rs. 48,528 (Rs. 16,240).

The directors, at their meeting on 23rd May 1960, decided to transfer Rs. 21,000 to contingencies reserve to be applied to the payment of a further dividend of Rs. 3.00 per share to the preference shareholders in the event of the resolution passed on 25th November 1959 being ratified under Section 106 of the Companies Act, 1956. The period within which such ratification was required has however now expired without the requisite ratification having been received from the ordinary and preference shareholders. Payment of a further preference dividend under the resolution referred to will not therefore be possible, but the directors have decided not to reverse the transfer of Rs. 21,000 to contingencies reserve.

In view of the disparity between the prices of raw jute and finished goods, and the probability of production having to be curtailed until the new crop which has been delayed by the drought arrives, results for the current year are likely to be less favourable.

During the year orders were placed for modern slip draft spinning machinery to supply the warp yarns for 87½ per cent. of the mill's complement of looms. Additional orders have subsequently been placed for modern slip draft machinery to supply the weft yarns on a similar basis.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,686	Gross block	98,01,914
Reserves ...	30,71,190	*Less* Depreciation ...	56,63,641

British India Electric Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year [including items relating to previous years] after providing for taxation and depreciation, was Rs. 3,44,937 (Rs. 3,51,534) to which is added the balance brought forward from 1958 of Rs. 68,189 (Rs. 77,782) making a total of Rs. 4,13,126 (Rs. 4,29,316). The Board has transferred Rs. 32,907 (Rs. 8,706 to development rebate reserve and Rs. 1,80,726 (Rs. 2,52,421) to general reserve, leaving a balance of Rs. 1,99,493 (Rs. 1,68,189) available for distribution, which it is recommended be dealt with as follows:—To pay a dividend of 25 (20 per cent. free of tax) subject to deduction of tax, absorbing Rs. 1,25,000 (Rs. 1,00,000) leaving a balance to be carried forward of Rs. 74,493 (Rs. 68,189).

Operations.—Although there was an increase in the turnover as compared with 1958, profits were reduced, largely by the implementation of the Third Omnibus Engineering Tribunal Award which is reflected in the increase in labour costs. The increase in the turnover was attributable to higher production of switchgear, although as forecast last year, there was a reduction in the sales of motors.

Associated Rubber Industries Ltd.

The directors of the above Company (Managing Agents: The Associated Agencies Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1959.

At the last meeting the directors expressed the hope that production and sales during 1959 were expected to be higher and that as a consequence the gross earnings will also be better. The working results for the year have more than justified these anticipations. Sales have increased from Rs. 19,52,160 to Rs. 31,94,178 because of an all round increase in the demand for the products of the Company from both indigenous and foreign consumers and indigenous industrial units. This substantial increase in demand for the Company's products could be met because of modernisation of machinery and equipment in earlier years and rationalisation of methods of production during the year under review. While a considerable portion of the Company's plant at Bhavnagar has been modernised, the work of modernisation has not yet been completed and is being continued in this year as well.

The gross earnings for the year amounted to Rs. 7,33,126 (Rs. 2,85,869). Adding to this the balance brought forward from previous year's account of Rs. 10,606 (Rs. 10,183) and provision of previous years not required Rs. 31,000 (Rs. 9,694) there is a total amount of Rs. 7,74,732 (Rs. 3,05,746). After providing for depreciation on fixed assets Rs. 1,46,331 (Rs. 1,09,319), depreciation on loose tools and equipment Rs. 27,591 (Rs. 19,455), managing agents' commission Rs. 48,154 (Rs. 9,405), taxation Rs. 1,93,000 (Rs. 49,000), doubtful debts Rs. 3,500 (*nil*), development rebate reserve Rs. 30,430 (Rs. 8,325), bonus for 1956 and 1957 paid this year Rs. 57,190 (Rs. 41,321 for 1955), underwriting commission and share issue expenses Rs. 10,525 (*nil*), depreciation under-provided in previous years Rs. 62,045 (*nil*) and debenture redemption reserve Rs. 60,000 (*nil*) the amount available for disposal is Rs. 1,35,966 (Rs. 68,908). Out of this sum, the directors recommend the following dividends for the year ended 31st December 1959:—

Payment of proposed dividend at Rs. 7 per share (net) on 5,750 7 per cent. tax-free preference shares, absorbing Rs. 40,250 (Rs. 19,850). payment of tax on the preference dividend of Rs. 17,250 (*nil*), payment of proposed dividend of Rs. 7 (Rs. 7) per share (net) on 7,500 ordinary shares, absorbing Rs. 52,500 (at 7 per cent. free of tax on 5,250 old ordinary shares absorbing Rs 36,750 and on 2,250 new ordinary shares [from the date of allotment] absorbing Rs. 1,702) and payment of tax on the ordinary dividend absorbing Rs. 22,500 (*nil*) leaving a balance to be carried to next year's account of Rs. 3,466 (Rs. 10,606).

Preference shareholders are entitled to get a net return of Rs. 7 per share as per the terms of issue of these shares. Therefore the Company has to bear the deduction of tax made compulsory by the Finance Act of 1960 under Section 18(3D) of the Income-tax Act. To make the position quite clear and beyond question the directors recommend that the Articles of Association of the Company be suitably amended.

As mentioned earlier there was a sustained and increasing demand for the products of the Company throughout 1959. In the case of many products the production could not be increased sufficiently to meet fully the increased demand. This was because modernisation of equipment and rationalisation of production were not completed in 1959. The off take of automobile components continues to increase and modernisation has become necessary in this section of the Company's undertaking. The directors have already taken this work in hand during 1960.

There was a welcome improvement in the issue of licences for import of raw materials and this improvement enabled the Company to progressively increase the production of *Synthetic Rubber Cots* and *Aprons* for the textile industry and satisfy to a greater extent the demand for these products. From January 1960 Messrs. Inarco Private Limited, the Company's joint Company with Messrs. Armstrong Cork Co., Ltd., have commenced operations and it is expected that Messrs. Inarco Private Ltd.'s new factory at Bombay will go into production before the end of 1960.

The plant for dipped latex goods worked more regularly in 1959 than in the earlier years and the Company has supplied large quantities of gloves to trade and Government departments. Manufacture of goods from latex is difficult even in temperate climates but in this country with its high and varying temperatures and its dust storms, difficulties of production increase. The Company's dipped latex products are of highest quality and have been very well received by the consumer.

The oldest unit in the Company's plant is the footwear manufacturing department. In this case it is with satisfaction that the directors have to report progress in all directions. During the year under report export of footwear showed further increase. Reorganisation and modernisation of the footwear section is well in hand and the new machinery for which orders has been placed last year has already arrived in India.

ECONOMIC AND MARKETING RESEARCH

(*Concluded from page 114*)

by conducting continuous surveys among a list of shopkeepers to ascertain the movement of stocks from their shelves over a period of time. It is likely that, in the next few months, a research organisation may establish a consumer panel in a major city to cater to all those who need the service. To start with, the demand for such a service is likely to be small.

There are a number of private organisations which conduct research studies continuously. The National Council of Applied Economic Research has shot into prominence by undertaking comprehensive research on important subjects. Their techno-economic surveys of Madras, Bihar and Madhya Pradesh and research on the present and future demand for energy, for agricultural commodities, and for consumer goods have made useful contributions in the respective fields. The Association of Indian Trade and Industry, Bombay, has also provided us with valuable studies on the financial trends in important industries. The Indian Institute of Public Opinion, New Delhi, is gathering and analysing public opinions on selected economic and political problems. The Tata Institute of Social Sciences has conducted surveys on shopping habits and conveniences of the public, on the drink problem in urban areas and other socio-economic problems. The special field of study of the Demographic Training and Research Centre is the population problem.

Among the pioneering studies made by our Company is the "Thompson Index of Markets" in which we have evaluated the market potential of 504 individual towns of over 20,000 population in terms of index numbers. The 12 economic indicators on which the index numbers are based were brought together from diverse sources and involved much effort to extract data which were not available before. This work is under publication.

Since most manufacturers use marketing research only occasionally, much has still to be learned about the preferences and habits of urban households, while knowledge of rural markets is even more incomplete. Today, the consumer industries are on the threshold of new developments for the satisfaction of many consumer wants and it is certain that, as time goes by, the practice of marketing research will be needed on an increasingly wider scale.

STRINGENCY IN MONEY STAYS

(From Our Own Correspondent)

BOMBAY, *13th July*

There is nothing new to report about the trend of short-term money market. The stringency still continues. With only four more days left for the list for the Central Government's new loans to open, the banks are conserving their resources. It must be remembered that, on the 18th inst., when the list opens, the Life Insurance Corporation, the Provident Funds and other investors will draw on their deposits with banks, in order to subscribe to the new loans. Further, several banks will themselves be investing in new loans even by borrowing from the Reserve Bank, if need be. The next week will, therefore, witness an aggravation of the present stringency, with many banks rushing to the lender in the last resort for sizable accommodation. It is also stated that the demand for funds from indigenous moneylenders doing *hundi* business is rather very keen, as the Reserve Bank is believed to be applying its screw on them also through the commercial banks which discount their *hundis*.

These temporary considerations apart, the demand for credit from industries continues to be on a high scale. The increase of nearly five lakh tons in sugar production which has gone to boost the stocks with sugar mills has tied up something like Rs. 150 crores more than last year in sugar advances alone. On top of this, more and more American cotton is coming which requires a larger amount of finance than the corresponding volume of domestic cotton. Then there is the increase in the domestic production of chemicals and scores of new products. With all this, it is not going to be easy for banks to bring down the level of their loans and advances during the remaining months of the so-called slack season.

If the short-term interest rates for deposits do not reflect the continuing pressure for bank credit, it is because of the ceilings fixed under the inter-bank agreement. The fact that even inter-bank rate is as high as 3½ per cent. during mid-July is a good enough indication of the stringency in the market. The rates for other deposits are the self-same as in past weeks.

There is no change in the 91-days' Central Treasury Bills rate either. The results of weekly tenders show that, as against an invitation for Rs. 2 crores, tenders aggregated Rs. 2.02 crores, the average rate of accepted tenders being 2,745 per cent. per annum. There were no sales again of 91-days' Intermediate Treasury Bills during the period 7th to 9th July 1960. Apparently because of the Central Government's loans next week, no tenders for Treasury Bills have been invited for that week. Tenders for Rs. 2 crores of Bills, however, will be accepted on Monday the 25th inst. Successful tenderers should make payment on 29th July 1960. But sales of Intermediates are being continued. They will be available right from 13th July 1960 to 23rd July 1960 at Rs. 99.326 per cent.

After the slight contraction noted in the week ended 1st July 1960, notes in circulation have gone up by Rs. 15.59 crores in the week ended 8th July 1960. As notes held in the Banking Department are lower by Rs. 16.71 crores, the total notes issued are down by Rs. 1.12 crores.

There is no change in foreign securities held by the Issue Department, but balances held abroad have gone up by Rs. 13.08 crores, so that the total foreign assets stand at Rs. 169.67 crores. The improvement doubtless reflects the loan of £10 million granted by the British Government for financing the second Plan now in its last year.

Reflecting, in part, the aforesaid credit, the Central Government's deposits with the Reserve Bank have moved up by Rs. 14.60 crores to Rs. 69.27 crores. Deposits of other Governments are down by Rs. 5.83 crores, but those of banks have improved by Rs. 2.12 crores. Loans and advances to Government have risen by Rs. 3.00 crores and so also other loans and advances by Rs. 3.87 crores. Advances to scheduled banks against usance bills, however, are actually a shade lower at Rs. 12.71 crores.

The Scheduled Banks' statement for the week ended 1st July 1960 show only modest changes as compared with that for the previous week. Net demand and time deposits have risen by Rs. 2.95 crores and Rs. 3.12 crores, respectively. Borrowings from the Reserve Bank are nevertheless higher by Rs. 2.36 crores at Rs. 42.61 crores. This is because bank credit is up by Rs. 1.79 crores and so also investments by Rs. 4.75 crores. Cash balances are better by Rs. 2.10 crores, but money at call and short notice is down by Rs. 2.18 crores. These movements in liquid assets reflect, to some extent, window-dressing by banks at the time of half-yearly closing.

The Gilt-edged market was dull and featureless. There was some selling in 3 per cent. 1970-75, and 3½ per cent. 1965, as a result of which both declined by 5 nP to Rs. 90.85 and Rs. 99.80, respectively. These sales were apparently by investors who wanted to make some room for the new loans in their portfolio. At the same time, there were some buying enquiries for the extremely short-dated loans, presumably from those who do not wish to convert the maturing loans into new ones. Thus, a rise of 5 nP was recorded in 2½ per cent. 1961, 2½ per cent. 1962 and 3½ per cent. 1961 to Rs. 98.55, Rs. 98.05 and Rs. 100.05, respectively. The State loans remained unchanged.

In the foreign exchange market, the rupee reflected the strength of the pound sterling abroad. In terms of dollars, the Banks' selling rate for U.S. T.T. ready remained unchanged at Rs. 476.75 per $100, while their buying rate was a shade higher by 25 nP at Rs. 473.50. In the New York market, spot sterling was fully steady to firm till the 12th inst., when it stood at 280.82-280.88 cents per £, but dropped 0.11 cent to stand at 280.71-280.75 cents on the 13th inst. Three months' forward sterling, too, moved in that fashion and closed at 279.39-279.43 cents per £, as against 279.52-279.43 cents a week earlier.

SPECIAL MARGIN ON BULLION

(From Our Own Correspondent)

BOMBAY, *13th July*

The warning given last week by the President of the Bullion Association that the Maharashtra Government might levy special margin in *Bhadrapad* (September) settlement on both gold and silver has proved correct. For, on Thursday this week, the Government announced the imposition of special margin on all outstanding long positions with effect from Friday the 8th inst., on the following basis:

	Closing rate	*Rate of margin*	*Exemption limit*
Gold (Rs. per tola) ..	125-127	20	1,000 tolas
	127-129	25	1,000 ,,
	Above 129	50	500 ,,
Silver (Rs. per bar) ..	212-214	750	50 bars
	214-216	1,500	50 ,,
	Above 216	2,000	50 ,,

The move of the Maharashtra Government has apparently been prompted by the anxiety to check the upward tendency in bullion prices. But, despite the margin, the two precious metals continue to rule firm, today's closing rates being markedly higher than those at the end of last week. The renewed firmness is due to sustained support lent by bulls who fear that the floating stocks of gold and silver in the city might dwindle considerably as a result of the virtual suspension of arrivals following a possible prolongation of the strike by the employees of the Union Government and the Railways. The reports that several bars of silver were recently despatched to Calcutta have also imparted strength. The upward trend in gold is, of course, halting, thanks to hedge selling by spot operators against their purchases in ready, and on news that a leading operator of Madras has recently sold 4,000 tolas in ready.

The daily average arrivals and offtake of gold during the week under review amounted to 3,920 tolas and 2,700 tolas, respectively; the corresponding figures for last week were 2,000 tolas and 3,170 tolas. The floating stocks of gold are reported to be around 25,000 tolas. The daily arrivals of silver were 14 bars, same as last week, while the offtake was of the order of 6 bars, as against 7 bars. The floating stocks of silver are estimated at 500 bars.

In the gold section, *Ashad* settlement went off the board at Rs. 128.75 on the 9th inst., after touching Rs. 129 on the opening day (Thursday the 7th inst.), as against Rs. 128.84 on Wednesday last week. *Shravan* settlement met with good support and advanced from Rs. 128.59 to Rs. 129.62 yesterday and, after easing to Rs. 129.19 today, finished higher at Rs. 129.50. The rate for transferring commitments from *Ashad* to *Shravan* settlement continued to be in favour of bulls on the opening day but turned against them in the subsequent two sessions. The actual rate was 7 nP on Friday and 3 nP on Saturday.

Ready gold began the week at Rs. 129.06, as against the previous closing of Rs. 129.15, and gradually moved up to touch Rs. 129.75 yesterday. After declining to Rs. 129.19 the same day, it recovered to Rs. 129.50 today. The net gain over the week was 91 nP.

Ashad settlement in silver was well supported and improved from Rs. 216.71 to Rs. 219.12 on Monday. It, however, ran off the board higher at Rs. 218.72 on the same day. *Shravan* settlement spurted from Rs. 216.97 to Rs. 219.81 yesterday and, after declining to Rs. 218.62, moved up to Rs. 219.44 today. The closing rate was a shade lower at Rs. 219.31. A striking feature of trading in the two contracts was that the rate for transferring commitments from *Ashad* to *Shravan* settlement, which was hitherto in favour of bears, turned against them on Monday; the actual rate when the *Ashad* settlement ran off the board was 3 nP. *Bhadrapad* settlement fluctuated between Rs. 217.25 and Rs. 220.25 before winding up the week at Rs. 219.94.

Ready silver attracted good attention, the quotation rallying from Rs. 216.75 to Rs. 219.69 yesterday. Opening at Rs. 219.31 today, it softened to Rs. 218.87 but strengthened to Rs. 219.31 towards the close. The net gain over the week was Rs. 3.44.

Forward silver in the London bullion market rose by ¼*d.* to 79½*d.* during the week, while ready silver continued to remain unchanged at 79½*d.* Silver in New York was unaltered at 91.375 cents. Ready gold in London eased from 250s. 0½*d.* to 249s. 3*d.* on the 7th inst., owing to the firmness of the pound sterling *vis-a-vis* the dollar, but recovered to 249s. 11½*d.* yesterday. The latest available world price for gold in London is $35.09-$35.11.

The following table shows the trend of the market during the week under review:

	13-7-60 (closing)	High	Low	6-7-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs
Ready (.99 fine)	129 56	129.75	128 56	129.15

DEMAND FOR SHORT-STAPLES BROADENS

(From Our Own Correspondent)

BOMBAY, *13th July*

Official trading in cotton futures continued to be at a standstill during the week under review. With the hedge contract price ruling above the effective ceiling of Rs. 790, for the non-delivery period, no business could be put through officially. Transactions were of course done in private, as usual. The August contract hovered round Rs. 818.

Unless the hedge contract quotation declines to Rs. 790 no official trading is possible till 1st August when the delivery period starts. Thereafter, the contract can rise up to Rs. 820, the statutory ceiling. It is now taken for granted that the contract will go off the board at the ceiling price of Rs. 820, as its predecessor did.

The trade was disappointed that the eagerly awaited announcement regarding ceiling and floor prices did not materialise so far. It is believed that the floor and ceiling for the basic variety (Jarilla fine 25/32") would be raised by Rs. 55 per candy and Rs. 80 per candy, respectively, with appropriate changes in the floors and ceilings of other varieties.

The trade is convinced that only higher ceiling can make normal business in cotton possible in the new season. Already, it points out, futures trading is at a standstill on account of the ceiling while spot prices rule mostly above the ceiling.

A notable development of the week in the spot market was the keen interest evident in short-staple cotton. Upcountry mills, especially those from Punjab, Delhi and U.P., were regular buyers of short-staple varieties like Bengal *Deshi* and Wagad. This renewed interest was attributed to the shortage of staple varieties which forced mills to go in for shorter staples. Long-staple varieties also were in good demand. Vijay, Laxmi, Surti, Co2, etc. were well-favoured. The only limiting factor seemed to have been paucity of stocks.

Mill interest in foreign cotton was well maintained. Sudan, both medium and higher qualities, and East African cotton attracted attention. Traders noted with interest the reported purchase of 25,000 bales of Uganda cotton by China. This was said to be the first time China purchased Uganda cotton.

Reports from Punjab and Rajasthan indicate satisfactory crop conditions. The crop is stated to be progressing well. In some regions, sowings of Bengals are ahead of last year. Recent rains have proved beneficial to cotton in Gujerat, Madhya Pradesh and Maharashtra. The present lull in monsoon is also said to be good to the crop.

It is reported that the Government of India is negotiating with the U.S. Government for the import of cotton in return for ferro-manganese. Under a barter agreement concluded some time ago, India was to supply ferro-manganese and import wheat to augment her food stocks. With the conclusion of the recent agreement with the U.S. for the supply of 17 million tons of foodgrains, India is now negotiating for the supply of cotton in place of wheat as the former commodity is in short supply in the country. An agreement is likely to be reached shortly. The quantity that will be imported, it is said, will be round about 50,000 bales.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Laxmi 1,061; CO2 1,100; Digvijay 1,105; Wagad 970.

The Karachi cotton futures market ruled distinctly bullish during the week. Speculative buying, based on the entry of China in the spot market, resulted in a flare up in futures values. Under pressure of buying, N.T.R.G. July firmed up from Rs. 70-4 last week-end to Rs. 79-8. The January contract improved from Rs. 68-15 to Rs. 72-6.

Large-scale buying by China led to a spurt in ready prices. China was reported to have purchased over 40,000 bales in the course of last week. Ready stocks dwindled rapidly and prices of available lots rallied. The market was closed yesterday on account of the delay in clearing. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 91; Punjab *Deshi* 87-8; 4F Punjab Roller 94-5; S.G. 98-5; L.S.S. Punjab Roller 97-5; S.G. 103-5.

Cotton futures in Alexandria market succumbed to selling during the week under review. Bearish weather advices and the absence of export enquiries accelerated the downward trend of prices. The export price discount for old crop was reduced from 11½ per cent. to 11 per cent. while the discount for new crop was unchanged at 6 per cent.

Total exports from the beginning of the season till the end of May aggregated 1,078,491 bales of 720 lbs. each, as against 938 028 bales exported during the same period last year. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week-end rates:

Karnak: July 76.70 (78.42); November 74.00 (75.70); January 73.60 (75.45).

Ashmouni: August 63.80 (65.50); October 62.87 (64.43); December 62.85 (64.40).

Liverpool cotton futures market ruled barely steady during the week. Fluctuations were narrow, within a five-to-ten-points range. Long liquidation and hedge selling were offset to some extent by buying of new crop on American account. Advices from yarn and cloth market were unencouraging. The following are the latest available quotations—in pence per lb.—from Liverpool:

July 22.50; October 22.45; July (Sudan) 35.50.

Quiet conditions prevailed in the New York cotton futures market during the week. Volume of business was small and price movements were

irregular. Some squaring up was noted in the July contract by spot interest. Commission house buying was reported in new crop.

The Department of Agriculture estimated the acreage under cotton in the 1960-61 season at 16,306,000 acres, which is three per cent. more than in the current season. The estimate was in line with general expectation and did not have any effect on the market.

It is reported that cotton crop progress ranges from moderately rapid in the eastern half of the cotton belt to extremely rapid in the western half. Temperature, generally speaking, has been above normal for a prolonged period from California to central Texas. The crop reflects the ideal weather it has enjoyed so far.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	12-7-60	5-7-60	28-6-60
Spot	34.20	34.25	34.25
July	32.98	32.94	32.85
October	30.93	31.09	31.07
December	31.10	31.21	31.18

YARN IMPORTS LOWER

(From Our Own Correspondent)

BOMBAY, 13*th July*

The yarn market ruled fully steady during the week under review. Art silk yarn attracted good support on fears of decline in floating stocks in the market, following reduced arrivals of yarn from abroad. The quantity of art silk yarn actually imported into Bombay port during the month of June was estimated at 2,509,382 lbs., as against 3,320,090 lbs. in the previous month. Imports of synthetic yarn and cotton yarn were also lower at 187,490 lbs. and 19,335 lbs., respectively, the corresponding figures for the month of May being 298,000 lbs. and 30,356 lbs. Even reports that the upcountry traders were not inclined to make any large purchase in view of the strike by Union Government and railway employees did not have any effect. Staple fibre yarns met with enlarged demand. Cotton yarns were firm, thanks to rising tendency in cotton prices and on encouraging reports from piecegoods market. Exports of cotton yarn from Bombay port during June 1960 amounted to 322,130 lbs., as against 583,611 lbs. in the previous month. Exports of cotton sewing thread aggregated 31,454 lbs., as against 51,610 lbs.

Cupressa Bemberg yarn (60 x 1) August 1960 contract spurted by Rs. 13 to Rs. 1,950. October contract advanced by a like amount to Rs. 1,965. Spot Cupressa rose by 6 nP to Rs. 9.31. 150 Japan was well supported, the quotation rallying from Rs. 5.69 to Rs. 5.94. 120 Japan were done at Rs. 5.62. 120 Italy were firm at Rs. 6.06, as also 150 Italy at Rs. 6.19. Indigenous yarns were somewhat easy. National Rayon 150 bright cones first grade declined by 7 nP to Rs. 5.69. 120 bright cones first grade declined by 3 nP to Rs. 6.09.

Staple fibre yarns (40 x 2) August contract changed hands at Rs. 738. October contract was done at Rs. 748. Spot Centurys strengthened by 3 nP to Rs. 3.74. Citys gained 2 nP to Rs. 3.80. Kohinoors were fully maintained at Rs. 3.84.

In the cotton yarn section, ten counts Gokaks put on 25 nP to Rs. 19.25. Twenty counts New Greats were firm at Rs. 23.50 and Gokaks at Rs. 24. Forty counts Minaxis hardened from Rs. 30.44 to Rs. 30.87. Maduras were steady at Rs. 31.87. Among sixty counts, Finlays climbed up from Rs. 58 to Rs. 59.59. Raghuvamshis were firm at Rs. 56.50. Eighty counts Moderns and Finlays were both steady, the former at Rs. 75.50 and the latter at Rs. 82.82. Mahendras, however, encountered some selling and eased by 75 nP to Rs. 73.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	13-7-1960	6-7-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 Kg.)		
August	1,950	1,937
October	1,965	1,952
60/1 Cupressa Bemberg spot (per lb.) ..	9 31	9 25
120 Japan (per lb.)	5 62	5 64
150 Japan (per lb.)	5 94	5 69
120 Italy (per lb.)	6 06	6 06
150 Italy (per lb.)	6.19	6.19
Staple fibre yarn—		
40 x 2 August	738.00	740.00
40 x 2 Kohinoor (per lb.)	3.84	3.84
40 x 2 Century	3.74	3 71
Cotton yarn (per bundle of 10 lbs.)—		
10s Gokak	19.25	19 00
20s Gokak	24 00	24 00
40s Minaxi	30 87	30 44
60s Finlay	59 59	58 00
80s Modern	75 50	75.50

GROUNDNUT FIRM

(From Our Own Correspondent)

BOMBAY, 13*th July*

The oilseeds market continued to display distinctly firm conditions during the week under review, with groundnut and cottonseed futures touching new high levels. The tight supply position of groundnuts was further aggravated by the Government employees' strike and the consequent scarcity of arrivals from upcountry centres. Castorseeds which witnessed a sharp break in values in the early part of the week moved up at the close mainly on account of shortage of supplies as a result of transport difficulties. Linseed also moved up on good speculative support. Cottonseeds were held firm.

In the groundnut section, conditions continued to be buoyant, as already mentioned. Apart from the tight statistical position, crushers and *vanaspati* manufacturers were keen buyers. Besides, bullish weather reports from some of the producing centres imparted considerable strength. Reports that Karnataka Conference Lines had decided to raise the freight for both oil and cake by 10s. per ton from October next, however, have led to some caution in trading. In these conditions, groundnut August 1960 contract which had wound up last week at Rs. 215.75 rallied gradually by Rs. 3.75 to Rs. 223.50. Nizam Bold closed higher by a rupee at Rs. 48. Coromandel ready closed at Rs. 48, as against Rs. 47.25 last week-end. Khandesh quality put on 50 nP over the week to Rs. 48. Oil ex-mill which had finished at Rs. 24, after moving in a narrow range, closed higher at Rs. 25. Railway receipts rose from Rs. 23.87 to Rs. 24.75.

Steady conditions prevailed in the castorseed section. However, in the beginning of the week, castorseeds were weak mainly on account of lack of U.S. enquiries for castor oil and also reports about supplies of some castor oil in the American market from Brazil. Besides, traders feared that the strike might upset the shipping schedule. But the sentiment improved subsequently mainly on account of shortage of arrivals and also revival of some encouraging overseas advices. Castorseed September 1960 contract which had wound up at Rs. 181.12, after an initial decline, improved and closed today at Rs. 182.25. Ready Madras, however, closed today lower by 25 nP at Rs. 35.25 after moving in a narrow groove. Oil B.S.S. lost 6 nP over the week to Rs. 20.25; but oil commercial rose by 6 nP to Rs. 18.87.

There was hardly any notable development in the linseed section, but the values moved up on account of strength in other seeds and oils. The overseas demand for linseed oil continued to be dull in view of the wide disparity in the Indian and world prices for linseed oil. Linseed September 1960 contract rose from Rs. 34.47 to Rs. 34.75, after moving both ways in a limited range. Bold ready improved by 27 nP to Rs. 33.87. Linseed oil put on 38 nP to Rs. 17.25.

In sympathy with the uptrend in the prices of other major seeds, cottonseed continued to make headway. Cottonseed September 1960 contract closed today higher at Rs. 165, as compared with Rs. 163.50 last week-end.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	13-7-1960	6-7-1960	29-6-1960
	Rs.	Rs.	Rs.
Groundnut			
August 1960	223.50	219.75	219.25
Nizam bold	48.00	47.00	47.50
Coromandel ready	48.00	47.25	47.75
Khandesh quality	48.00	47.50	47.75
Oil ex-mill ready*	25.00	24.00	24.37
Railway receipts*	24.75	23.87	24.00
Castorseed			
September 1960	182.25	181.12	178.50
Ready Madras	35.25	35.37	34.87
Ready Kanpur	34.25	34.25	33.75
Oil B.S.S†	20.25	20.31	19.62
Oil commercial†	18.87	18.81	18.56
Linseed			
September 1960	34.75	34.47	34.50
Bold ready	33.87	33.50	33.87
Oil ready†	17.25	16.87	16.94
Cottonseed			
September 1960	165.00	163.50	163.00
Niger seed	38.00	37.50	37.25
Kardi seed	24.50	25.00	24.75

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

NARROW FLUCTUATIONS IN PEPPER

(Messrs. Parekh and Co.)

BOMBAY, 13*th July*

Since 22nd June, when our last report was issued, the fluctuations in Malabar black pepper have been narrow without any reportable developments. Ungarbled seesawed between Rs. 1,875 and Rs. 1,800. July delivery fluctuated following alternate bouts of selling by longs and buying by shorts in view of the proximity of the due date. Weak holders liquidated their July commitments, while the bulls switched their holdings to August at a premium of about Rs. 12½. Garbled moved from Rs. 322½ to Rs. 315. The highest and the lowest at Calicut were Rs. 1,950 and Rs. 1,850 respectively.

There was a flutter in the market on the 2nd inst. on the news that some sales of about 300-400 tons were made to Czechoslovakia and Poland. But it proved of short duration as the exporters were able to cover the quantity without much difficulty from the holders and growers who were tired of waiting for higher prices which failed to materialise so far. The bulls in India as elsewhere are trying to bolster up prices by spreading rumours that the coming crop of Malabar is damaged and that the crop will be shorter and that Russia and other East European countries are buyers of Malabar irrespective of price levels. Crop in Malabar is reported to be satisfactory so far. Nobody is giving much credence to a shorter crop as it is too early to say anything definite on the point.

Market analysts say that, as on 1st August, about 5,000-6,000 tons will be available for export and that there will be neither shortage nor tight position as to the supply. The growers who were able to market their pepper at a surprisingly high price during the earlier part of the season are, however, holding on to their stocks in anticipation of higher prices. It is possible that they may hold on until September. Thereafter, they are sure to come out to liquidate their holdings in view of the proximity of the new crop.

Singapore, after moving up to Str. $235 for black, came down to Str. $220 to improve to Str. $230. The fluctuations were erratic for want of support from consuming countries. There are reports from almost all the consuming countries that consumers are resisting higher prices and that they have reverted to their old habit of buying hand to mouth. Heavy consignments from Singapore to Europe and the U.S.A. is also a depressing factor. The increase in the bank rate to 6 per cent. in the U.K. is also a contributory factor. All Singapore is watching closely the coming crop of Lampong in Indonesia and the selling policy of the Government. There are unconfirmed reports that the Indonesian Government is negotiating with Russia some barter business in rubber, copra, spices, etc., but nothing is definitely known so far. There is a tussle between bulls and bears in Singapore. Bears, however, have failed in the first round. They were forced to cover at loss their June sales both in Lampong and Sarawak white.

Spot in New York is also reported to be erratic. Holders are reported making efforts to push up the prices in order to interest the grinders but so far, all their efforts have proved abortive. Spot fluctuated from $0.68 to $0.61. Grinders are sidelining either because they have their pipelines full for their autumn requirements or they preferred to buy hand to mouth in view of ample world supply for the remaining part of the year. Presidential election campaign in the U.S.A. from July onwards is also said to be responsible for slow consuming movements.

The future of the market depends upon the buying policy of the grinders in the U.S.A. and Europe. If they place larger orders for buying during the coming week or two against their autumn requirements, there are chances of some interesting developments. Otherwise, pepper is likely to remain a trading market with small fluctuations for the remaining part of the year, the consumers' interest being hand to mouth as they will be able to replenish their stock whenever necessary from the consignments which the holders from Singapore are regularly sending to U.S.A. to place the local bears in a tight corner for ultimate squeeze. Ready pepper in Bombay is nominally quoted at Rs. 235 per Bengal maund.

TEAS IMPROVE SLIGHTLY

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 5*th July*

In Sale No. 26 held on Tuesday, 5th July, 1,75 million lbs. of tea were offered. A slight improvement was noticeable in highgrown and good medium teas, though there were still a number of rush teas on offer. The market met with useful demand. Plain and low medium brokens were well spported at firm rates, while their fannings shed 5 nP to 10 nP. Plainer medium and good medium brokens were irregularly easier by 5 nP to 10 nP. Their fannings declined further and were the weakest feature of the Sale. Improved quality highgrowns and better liquoring teas were sold at fully firm to dearer rates. However, plainer descriptions in this category met with less support and registered a drop of 10 nP to 15 nP. Black leaf descriptions were in good demand and were quoted firm to dearer. There was useful enquiry for legg-cut and C.T.C. types which were sold at slightly lower rates than last. Whole leaf descriptions were easier, but organge pekoes ruled steady on last week's rates. The quotations were:

	1960	1959
	Rs.	Rs.
Low medium ...	1.55-1.60	1.48-1.58
Medium ...	1.65-1.75	1.60-1.75
Good medium ...	1.80-1.95	1.80-2.10
Quality ...	2.00-2.50	2.00-2.60

The export quota market remains unchanged, with last business registered at 2 nP per kilo.

Sale 7 in tea dust was held on Thursday, 7th July. Offerings aggregated 700,000 lbs. The market met with fair general demand, but prices were generally easier for most descriptions. Good mediums, mediums and low mediums were irregularly easier by 5 nP to 10 nP. The milled and residual grades met with less support and declined by 10 nP. Highgrowns evoked limited enquiries and were irregularly easier by 10 nP to 15 nP following quality. Black leaf descriptions ruled steady on last week's rates, while C.T.C. types and legg-cut teas continued to be in demand and were quoted firm.

The forthcoming auctions are: Export Sale No. 27—Tuesday, 12th July—1,662,460 lbs. Dust Sale 'AA'—Thursday 14th July—760,000 lbs. Export Sale No. 28—Tuesday, 19th July—1,675,000 lbs. Export Sale No. 29—Tuesday, 26th July—1,650,000 lbs.

No sales were held at Calcutta this week.

Another large sale aggregating 7¼ million lbs. was held at Colombo. The teas met with less demand. Dimbula and Dickoya brokens declined by 40 to 50 cents per lb. Below best declined by 15 to 20 cents per lb. Medium brokens were 5 cents lower, but all corresponding fannings met with strong demand and were sold at dearer rates. Teas from the Uva district elicited strong enquiry and were dearer, particularly the B.O.P. fannings grade.

Monday's sale in North Indian and other growths at London contained 16,500 chests, of which 2,500 chests came from North India. The North Indian offerings included a much publicised break which had been flown to the United Kingdom and represented the first of the second flush teas. The sale opened to an active demand and prices were fully firm to dearer and the airborne tea realised 9/3*d.* per lb. Offerings of Ceylon and South Indian growths amounted to 31,000 packages, of which 10,835 packages were from South India. Good teas continued to sell well and the better types were quoted steady. Others, however, tended to rule slightly easier.

WORLD SHEEP POPULATION RISES

TREND OF RAW WOOL OUTPUT UPWARD

ACCORDING to the results of the thirteenth annual questionnaire prepared by the Commonwealth Economic Committee and the International Wool Trade Organisation, the world's sheep population increased during 1958-59 for the twelfth consecutive season. At 728 million, the total numbers in the non-communist countries were about one per cent. higher than in the previous season. Taking into account the estimated numbers in the Soviet Union, Eastern Europe and China, the world's sheep population in 1958-59 is estimated at nearly 960 million, or 2½ per cent. more than the revised figure for the previous year.

Sheep numbers in Australia recovered from the check which they had sustained in the previous season and rose by 2 per cent. to a new all-time record of 153 million. In recent years, the growth of the Australian flocks appears to have been due chiefly to the development of new pastures and to improvements in water-supplies, fencing, feed and sheep mobility on existing pastures. Scientific and technical advances in reducing losses from diseases, pests and parasites, as well as rabbit control, continue to be important in sustaining sheep numbers. In New Zealand there was a 2 per cent. rise in numbers to 47 million in 1958-59; the expansion in this country over the past few years has been very striking and has been due mainly to increases in the carrying capacity of the land through aerial top-dressing, application of fertilisers and better pasture seeds to hill country, rabbit eradication, chemical weed control, closer fencing and generally better husbandry. Numbers in South Africa are officially given at 38½ million, much the same as in the previous season; widespread drought had an adverse effect on sheep farming in considerable areas of the Union.

U.S. and S. American Countries

In the United States, numbers showed a 2 per cent. increase at the January 1960 enumeration when compared with a year earlier; this was the third successive rise to be recorded since the low point reached in 1957. Among the South American countries, numbers in Argentina are officially estimated to have risen by 3 per cent. to 48 million in 1959, despite the effects of the serious flooding in the northern part of the country in the spring of that year. The same floods caused even more severe damage in Uruguay and sheep numbers there fell to just over 21 million, according to the June 1959 census; this figure was 9 per cent. less than at the previous census in 1956. In Brazil, too, substantial losses from floods were experienced in the State of Rio Grande do Sul, the main wool producing region of the country.

In Western Europe, total sheep numbers showed a further slight increase in 1958-59 as, compared with a year earlier. The United Kingdom total in June 1959 (27½ million) was 6 per cent. higher than in the previous year. Sheep numbers in Yugoslavia also rose by 6 per cent. during the same period, and there were smaller increases reported from Spain, Italy, Greece, the Irish Republic and a number of other countries.

In most of the carpet wool producing areas of the Middle East and North Africa, numbers appear to have been much the same as in 1957-58, apart from Turkey, where a marked increase took place. However, in Syria and Iraq, numbers were reported to have been reduced, owing to disease. The estimated total in India at 39.5 million is the same since 1955-56.

In the Communist Group

In the communist group of countries as a whole, sheep numbers showed a further rise last season to an estimated 231 million, or 8 per cent. more than in 1957-58. In the Soviet Union, there was a rise of 8 per cent. to 130 million, and in Bulgaria an increase of 12 per cent., but on balance, total flocks in the other East European countries were only slightly higher. For mainland China, official figures of sheep numbers have now been published up to 1957, which show rather higher totals than had previously been estimated; the only figures formerly available were combined totals for sheep and goats. For 1958 and 1959, however, estimates have again had to be made on the basis of the combined totals, assuming that 54 per cent. of the latter consisted of sheep, the same percentage as in 1957; the 1959 estimate of 60.8 million represented an increase of 4 per cent. over the previous year. At January 1960, sheep numbers in the Soviet Union were given as 136 million, representing a further increase of 5 per cent. on the previous year's total.

World production of raw wool during 1959-60 is now estimated at some 5,600 million lbs., greasy basis; this represents an increase of 5 per cent. as compared with the previous season's total of 5,350 million lbs., and constitutes a new record. On a clean basis, the current season's production is estimated at some 3,180 million lbs., also a 5 per cent. increase on 1958-59. The output of merino wool is estimated to have risen by nearly 6 per cent. and that of crossbred and carpet types by 4 and 5 per cent., respectively.

Wool production in the non-communist world (that is, excluding the Soviet Union, Eastern Europe and China) is put at just over 4,500 million lbs., greasy basis, or 4 per cent. more than the previous season's total of 4,337 million lbs. Australia has again accounted for the major part of the increase; the latest official estimate of that country's clip, made in December, put the total at 1,690 million lbs., or 6 per cent. higher than in the previous season, but it now seems certain that this figure will be exceeded.

In New Zealand, production is expected to increase by 5 per cent. to 565 million lbs., but, in South Africa, the latest estimate of the South African Wool Board is that output will be only about 2 per cent. higher than the previous season's figure of 314 million lbs. In both Australia and New Zealand, climatic conditions have been generally favourable during the past season, but parts of South Africa have suffered severely from drought. The latest estimate of the Argentina Wool Federation puts production in that country at some 434 million lbs., or 3 per cent. above that of last season; despite a 20 per cent. reduction in the provinces of Corrientes and Entre Rios, and a fall of about 15 per cent. in Santa Cruz (Patagonia), output in other parts of Argentina has shown a marked rise.

In Uruguay, this season's clip is much smaller than normal and inferior in quality, following the damage caused by last year's disastrous floods. It is, however, difficult to assess the exact size of the clip, due to the hold-up in sales resulting from the uncertainties over the Government's exchange and financial reforms at the end of last year, but production is tentatively estimated at some 150 million lbs., or 14 per cent. less than in the previous season. In the United Kingdom, the Ministry of Agriculture's estimate for 1959-60 amounts to 128 million lbs; this is 9 million lbs. more than in the previous season and constitutes a post-war record, but it should be recalled that the present season's figure includes an exceptionally heavy amount of skin wool, due to heavy slaughterings following last summer's drought.

Wool Production in India

Output in the United States this season has shown a rise of 8 per cent. as compared with a year earlier to a total of 316 million lbs., greasy basis; it is the first time that the 300 million lbs. mark has been exceeded since 1956-57. In Western Europe, too, production has risen somewhat this season, due largely to favourable climatic conditions over practically the whole continent. Among the carpet wool producing countries of the Middle East, little change has been reported, apart from a sharp rise of about 10 million lbs. in Turkish output, bringing production in that country above the 100 million lbs. level. India's estimated production at 76 million lbs. is the same as in previous year, though the provisional estimate for 1959-60 shows an increase of 2 million lbs.

Production in the Soviet Union, China and Eastern Europe in the 1959-60 season is expected to show a further increase estimated at about 8 per cent. Wool production in 1959-60 reached a new peak of some 765 million lbs. Production in Eastern Europe showed only a small rise of some 2 per cent. to just under 150 million lbs. In China, there is estimated to have been a further rise due to increasing sheep numbers, although no production figures for that country have yet been issued.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales. If any and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

General Industrial Society Ltd.—The dividends or 1956 and 1957 are on shares of Rs. 300 each which have since been sub-divided into shares of Rs. 10 each. K—On old capital.

MARKET GOSSIP

(*Concluded from page 91*)

Simon-Carves, the Electric Furnace Company, Wellman Smith Owen Engineering and Taylor Woodrow. Demag, a great name in German steel industry, in association with Krupps, which is also equally famous, heads the consortium. Other German participants are Siemens, A.E.G. and Hochtief. For West German steel industry, the Azna project is said to be the biggest of its kind, next only to the Rourkela steel works in India.

Although the agreement has been signed, detailed contracts covering various aspects of construction have yet to be worked out and finalised. Both M.E.E.Co. and the German concerns in the consortium are reported to have obtained the necessary export credit guarantee from their respective Government Credit Guarantee Departments. It is, however, not known whether the limit of five years set by the Berne Union for the guarantee period has been observed in this case. The German concerns are reported to have also obtained an assurance that they will continue to have their risks covered from another guarantee fund set up by the W. German Government. This fund, it is said, guarantees credits granted for purposes deemed to be of special importance to the German economy.

BANKING

(*Concluded from page 98*)

market in India is also comparatively well developed, though there is no active market for bills, either commercial or Treasury.

In buying and selling securities, the Reserve Bank does not deal with the public direct, but only through "approved brokers," of whom there are now twelve in Bombay, eight in Calcutta and ten in Madras. The list of approved brokers is revised from time to time and selection of brokers is made on the basis of reputation, financial standing, volume of business done, etc. By buying through only authorised brokers, the Bank is able to protect itself against the risk of defective title, difficulties regarding enforcement of contracts, etc., and to get the advice of persons who have an intimate knowledge of the market on market conditions and information on day-to-day happenings in the market.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CI. No. 2573 BOMBAY, 23rd JULY 1960 PRICE Rs. 2

ACTION ON OIL

THERE is an unfortunate tendency among some commentators in this country as well as abroad to compare the Government of India's endeavours to get more petroleum products at lower prices with the Cuban Government's actions in the same field. Even the Cuban Premier, Dr. Fidel Castro, has sought to quote the Indian Government's request to the three foreign oil companies—Burmah-Shell, Stanvac and Caltex—to refine Russian crude in their refineries as a justification for his violent action against these companies. This is not fair to India. While it is true that the Government of India would have been glad to see its proposal for refining Russian crude accepted by the oil companies, it has not, unlike the Cuban Government, retaliated against them when they gave a firm negative reply. Dr. Castro would have done a distinct service to all the capital-hungry and technologically-backward underdeveloped countries had he retracted his step and followed India's example of respecting its agreements with the oil companies and getting them modified only where possible through mutual negotiations. In fairness to the Government of India, it must be said that no political considerations are involved in its desire to buy oil from Russia. This cannot be said of the developments in Cuba. Again, the Government of India has not broken any of its international or bilateral agreements or understandings, as the Cuban Government has done in regard to sugar. And, thirdly, India has been trying to buy Russian oil long, long before the rift between Cuba and the U.S. began.

The Indian attempt at diversifying the sources of its oil supplies is based solely on economic considerations. For some time past, the Russians have been competing hard for selling their oil in several parts of the world, including Western Europe and Japan. It would be perfectly natural if the Government of India tried to avail itself of the benefits of this trend in world oil markets either to augment its revenue from oil or to bring down the cost of oil to consumers. Having regard to the set-up of oil companies in the free world and the close co-operation with which the big oil combines work, as well as to the restrictions on imports of oil on account of scarcity of foreign exchange, these benefits cannot be had for the mere asking. No manufacturer willingly surrenders his margin of profit. He has to be proded from time to time in various ways, without unduly dampening his spirit of enterprise and desire to expand his activities. This is exactly what the Government of India has been trying to do with the oil companies. It is not alone in doing so, for there are other countries, too, which keep on pressing the oil companies to accept a lower margin of profit. Oil is a complicated big business, involving a lot of give and take.

The Indian Government's efforts to raise its domestic production of oil and reduce its dependence on outside sources, as well as to bring down the *national* cost of oil, are comparable, if a comparison is to be made with those of the Italian Government. The only difference is that, whereas Signor Enrico Mattei, President of Italy's State-controlled ENI-AGIP Oil Corporation, took advantage of Persia's quarrel with the Anglo-Iranian Oil Company, during the period of Dr. Mossadeq's Government, for building up his Corporation's business and breaking up the monopoly of Anglo-American oil companies in the Middle East, Italy and certain other European countries, Mr. K. D. Malaviya, India's Minister for Oil, is working hard to establish a public sector oil enterprise right from prospecting down to marketing by trying to take full advantage of Russia's competition for securing a share of the world trade in oil. This is an important difference, because Russia is politically, and even economically to a considerable extent, antagonistic to the free world. This automatically brings the cold war prejudices into the Indo-Russian oil deals and distorts the picture, more especially because of Mr. Malaviya's pronounced bias for the public sector and his apparent leanings to Russia and the Eastern bloc countries. Somehow or other, he has, by the tone and content of his observations both in and outside Parliament, created the impression that he is unduly harsh on the foreign oil companies and soft towards the Russians, the Rumanians and the Polish. In several of his statements, he has tried to present the Western oil companies to the public in adverse light, even though they have readily given up some of the advantages they had secured in their refinery agreements. As readers are aware, Burmah-Shell took the lead in this respect and was quickly followed by Stanvac. After some interval, Caltex, too, fell in line with the other two. Further, all the three companies have reduced their prices from time to time. It is estimated that, as a result of these reductions and the surrender of duty protection for the refineries, the Exchequer has benefited to the tune of Rs. 20 crores per annum or Rs. 100 crores for five years. This is not a small amount and meets the major part of the cost of developing the oil industry in the public sector.

The oil companies are not unjustified in refusing to refine the Russian crude, nor was it injudicious on the part of the Government to have asked them whether they would accept the outside crude, for both the parties have their own problems. The foreign exchange position is so precarious that purchase of Russian crude against payment in non-convertible rupees would mean some significant relief, albeit temporary, to India. The second advantage is that the cost of Russian crude is cheaper than that imported by the oil companies. In view of these, the Government was perfectly right in asking the companies to use the Russian crude, even though, under the agreement with them, they have every right to take crude from their own sources of supply. The companies, too, have equally valid reasons for refusing to comply with the Government's suggestion. In the first place, all the three oil companies having refineries in this country are integrated enterprises. They have invested enormous sums all over the world on prospecting, mining crude oil, refining, and marketing of the finished products. How will it pay them, if they are asked to use the raw material produced not by them but by someone else? They might have agreed to accept the Russian crude, if their sources of supply had a deficit. But they, too, have a surplus of crude. Secondly, these companies have invested heavily in India itself on transport, refining, storage, and marketing of oil, whereas the Russians have not done so. The latter can, therefore, afford to undercut the foreign oil companies. In fine, the suggestion that they should refine Russian crude is something very similar to asking a sugar refinery with its own sugarcane farms and marketing organisation to accept its competitor's surplus sugarcane, leaving its own cane to stand in the fields and dry up as wood. And, thirdly, if the oil companies were to agree to the Indian Government's request to refine outside crude, they would be confronted with a similar request from the Governments of many other countries where they have refineries, as has already been the case in Cuba. Surely, it would be too heavy a sacrifice for these companies to make and it would not be fair on the part of India to expect from them such a sacrifice.

While the oil companies have turned down the Government's offer of Russian crude, they have agreed to pass on the benefit of lower crude prices to India by reducing the prices of their refinery products through a special discount. The discount given by Burmah-Shell alone, according to one report, will mean a saving of about Rs. 150 lakhs per annum. Stanvac also is stated to have cut its prices to levels that are quite competitive with Russian quotations. If Caltex has not already done so, it will soon follow suit. It would appear that the lower prices have been in force since 1st June 1960. If that were so, it is not clear why the oil companies did not make this fact known to the public earlier and why they waited for Mr. Malaviya to announce his deal with Russia first. They probably do not wish to take the initiative in these matters, lest they should be accused of interference by the Minister. In any case, it would appear that, in terms of price, the country has not lost much by not using the Russian crude.

As the consumption of petroleum products is rapidly expanding and as there is a shortage of kerosene and diesel oil, the Government's agreement with Russia signed on the 15th inst., providing for the import of 1.5 million tons of these products over a period of 3½ years, is to be welcomed. No indication of the cost of this oil in terms of foreign exchange is available yet, for Mr. Malaviya has not disclosed the price he is paying for it, except to say that it is quite competitive with that charged by the oil companies here. At the current world prices, the aforesaid quantity will cost roughly about Rs. 40 crores. The payment for this oil will be in non-convertible rupees under the Indo-Soviet trade agreement, which is for a period of five years from 1st January 1959. Under this agreement, it is the responsibility of Russia to exchange the rupees for Indian goods and it can do so within six months of the accrual of rupees to its special account with the Reserve Bank of India or with any other banks authorised to deal in foreign exchange. A bilateral trade

agreement of this sort has its own merits and demerits into which we shall not go here. Suffice it to say that it gives a temporary relief to the country's balance of payments position and provides a direct incentive to Russia to buy Indian goods. It is, however, a moot question whether India has a real surplus of goods which it could not have easily exported to other countries in return for convertible foreign exchange. This debatable issue apart, it is important to stress that, having concluded such an agreement, India must strive hard to increase the production of goods in which Russia is interested, so that the surplus available for other export markets is not curtailed. There will be no real benefit to the country from agreements of the aforesaid nature, unless the total exports of India increase at least to the extent necessary to cover the imports under them.

Another equally important point that requires to be stressed is that it is unwise, both politically and economically, to regard, much less describe, the imports of oil under reference as necessary for offering healthy competition to the oil companies. This argument implies two things: (a) the oil companies are not playing fair by the consumer, and (b) the imports that have now been arranged with Russia are large enough to create a buyers' market. Neither of these assumptions will stand the test of scrutiny. To take the first. It is a well-known fact that the Government has used the benefit of reductions in the selling prices of oil companies as well as of the protective duties surrendered to bolster its own revenue and refused to yield any of that surplus to consumers. It is also difficult to reconcile Mr. Malaviya's desire today to reduce the price of diesel oil with the substantial increase in excise duty on that fuel imposed by his Cabinet colleague, Mr. Morarji Desai, in his last budget; the latter simply turned a deaf ear to all opposition to this additional levy. Again, the selling prices of all oil products are fixed by the oil companies in consultation with the Government and they cannot vary it either way without the consent of Government. As for the second assumption, the imports from Russia cover only a part of the increase in demand and will not be sufficient to enhance the supplies to such an extent as to bring about a real buyers' market. Even assuming for argument's sake that the assumption is correct, would it be right for a country with a large investment programme, envisaging a heavy import surplus for several years to come, to indulge in bilateral agreements of dubious nature for creating a buyers' market in a commodity the price of which can be easily regulated, thanks to the efficient marketing system organised by the existing producers and distributors?

INDUSTRIAL POLICY IN THIRD PLAN

ALTHOUGH there will be no substantial departure from the industrial policy pursued in the period of the second Plan, the third Plan period may be expected to witness some toning down of the emphasis on State initiative which has gathered much momentum in the current Plan. This is the overall impression one gets from the draft outline of the third Plan. But it is not, of course, based upon any unequivocal declaration in favour of private enterprise in the draft outline. Indeed, the report reiterates the view that the "expansion of industry will continue to be governed by the Industrial Policy Resolution of April 1956." This Resolution, though not incapable of varying interpretations, has, by and large, assigned a distinctly larger role to the State. A narrow interpretation of this Policy will certainly leave less room for private initiative and effort than is either good for national economy or for the State itself. It is, therefore, with some satisfaction that one reads the affirmation of the wholesome principle that the "roles of public sector and private sector are conceived of as supplementary and complementary to one another." If this assurance governs the implementation of the Government's industrial policy, there is hope that some of the graver pitfalls into which the Party in power allowed itself to fall in the past twelve years will be avoided.

The draft outline avers that there is a "considerable" role for the private sector in the industrial sphere. It proceeds to point out that this is due, in the main, to the wide opportunities provided by the expansion of the economy under the impact of successive five-year Plans. Only, it reiterates the familiar view that "one of the main objectives of policy is that the opportunities which thus arise for private enterprise should be availed of by a large number of comparatively small and middle *entrepreneurs* and that poss ble trends towards concentration of economic power should be checked in early stages" It, however, recognises that, in the present phase of development, well-established firms have certain advantages in the shape of better access to capital market and to sources of foreign collaboration and also that modern technology favours large-sized firms or plants in certa n directions. Nevertheless, it adds: "From the broader social angle, however, it is essential that there should be a wide diffusion of enterprises in the private sector and new entrants should be encouraged and, at the same time, concentration of economic power and monopolistic tendencies should be countered effectively."

It will thus be clear that, despite its recognition of the indisputable benefits of large-scale production, the draft outline favours the medium and small-scale sectors. Herein lies an essential contradiction in Government's industrial policy. It is true that ample opportunities should be provided for the entry of new men into the ranks of industrialists. But, when the report refers to the need for curbing monopolistic tendencies, it is, perhaps, raising a false alarm. The fact is that there are no monopolistic enterprises in the country today. The so-called large-scale units are extremely small in relation to their counterpart in Western countries. Further, some aspects of the Government's industrial policy itself serve to discourage competition, as, for instance, when new large-scale units are not allowed to be set up in particular industries, thereby leaving the field free for the existing enterprises.

No one denies that small-scale industries have a large role to play in any economy, whether advanced or underdeveloped. The chief weakness of the Government's policy towards small-scale units is that they are regarded as a diminutive version of large-scale industry. In other words, they are treated as weaker rivals to organised industry. It is this attitude that makes the Government give special assistance to the small-scale sector. The Japanese team of experts, which visited India recently, stated, in effect, that such assistance might prove costly to the Exchequer, besides making the recipients continually remain inefficient. What is, therefore, essential is a certain change in the official angle. The only way in which small-scale units can find an enduring place in industrial economy is by becoming adjuncts to organised industry. This is the direction in which they have come into their own in the West. It is the complementary, rather than the competitive, character of the relationship between the two segments of the industry that deserves to be recognised and promoted. The draft outline rightly stresses the need for a "progressive and efficient decentralised sector closely integrated with agriculture as well as with large-scale industries." By "progressive," it is hoped, is meant that small-scale units should be technologically modern. The report does well to stress that small units "will be assisted to improve their organisational and technical efficiency." But what is, perhaps, open to objection is the statement that the "relative contributions of small and large units in meeting the growing requirements of the community will be defined as part of the common production programmes for various industries." Presumably, this means the continuation of the present policy of delimitation of the sphere of the organised industry; an instance of such delimitation is to be found in the restriction on the production of *saris* and *dhotis* by the mill sector. Whatever might be the short-term benefits of such a policy, there is no doubt that it cannot be continued for long without deleterious effects on economic progress, especially when it is supplemented by heavy taxation on the large-scale sector to subsidise the small-scale sector. It is wrong to argue that small-scale units should be encouraged, even if their technological level is low, because they serve to increase employment. For, in the final analysis, higher levels of technology lead to wider employment opportunities, though they may cause some disequilibrium in the initial periods.

Little exception will, however, be taken to the general emphasis on regional development and to the broad objectives of industrialisation contained in the Plan. The draft outline points out that "balanced development of different parts of the country and the stress on extending the benefits of development to the more backward regions are part of the accepted policy of the Government." To the extent that irrigation, power and road projects have been initiated in different parts of the country, the path to a wider industrial prosperity has been laid. This policy should be continued in the third Plan and subsequent periods. The report also recognises that areas which are particularly backward deserve special attention. Referring to regional development, it observes: "Regional development is often thought of in terms of States. This tendency to identify 'States' with 'regions' is natural, because planning by State Governments has an important role and the programme included in the plans of States and implemented by them have a close bearing on the levels of living of the people." But it is necessary to recognise that the identification of "regions" with "States" often leads to parochialism which must be strongly deprecated. After all, States have been formed on the basis not of natural divisions but of linguistic homogeneity. Regional development, therefore, implies active co-operation among States when a particular region cuts across State boundaries.

In the scheme of development envisaged by the Plan, industry, together with power and transport, gets a priority next only to that of agriculture. In the field of industry itself, special emphasis is placed on the development of those industries "which will help to make the economy self-sustaining, namely, steel and machine-building and the manufacture of producer goods." Necessary measures, it is stated, are also being taken to expand the production of consumer goods. Again, efforts will be made towards increasing the use of indigenous raw materials, natural and processed. The draft outline points out that, in the third Plan period, "when attention and resources will have to be devoted to the development of production which will reduce the requirements of foreign exchange for the operation of industries at the levels already reached, it will not be possible to allow significant expansion in industries, such as the rayon industry, which are largely dependent on the import of raw materials and whose expansion, therefore, at present swells the demands for foreign exchange on maintenance account." More specifically, the scheme of priorities will be:

(1) Completion of projects envisaged under the second Five-year Plan which are under implementation or were deferred during 1957-58 owing to foreign exchange difficulties;

(2) expansion and diversification of capacity of the heavy engineering and machine building industries, alloy tool and special steel, iron and steel and ferro-alloys; and step-up of output of fertilisers;

(3) increased production of major producer goods like aluminium, mineral oils, basic organic and inorganic chemicals and intermediates;

(4) fuller utilisation of existing installed capacity, where there are wide gaps between capacity and production or where, by multiple-shift operation, it is possible to economise investments and achieve better output-investment ratios;

(5) increased production from domestic industries of commodities required to meet essential needs like essential drugs, paper, cloth, sugar, vegetable oils and housing materials.

Actual industrial progress will, of course, depend mainly on the way decisions based on the broad lines enunciated in the Plan are taken and implemented. Further, it cannot be too strongly emphasised that it is of the utmost importance to the success of the Plan that the right climate for investment prevails in the country. The total investment in industry (large-scale and small-scale) and minerals is of the order of Rs. 2,935 crores—industry and minerals Rs. 2,500 crores (Rs. 1,500 crores in public sector and Rs. 1,000 crores in private sector) and village and small-scale industries Rs. 435 crores (Rs. 160 crores in public sector and Rs. 275 crores in private sector). Thus, the investment in private sector is placed at Rs. 1,275 crores or an average of Rs. 255 crores per year. Investment of this order necessarily implies that the existing industries are able to build and plough back sufficient reserves into expansion, besides supplementing their resources by drawing on the capital market where new entrants as well as the Government will be competitors for available savings. All this means that the overall climate for investment should be kept under constant review and prompt decisions on appropriate fiscal reliefs taken from time to time.

MARKET GOSSIP

A STRIKING feature of the share markets is the further marked rise in the value of certain selected cash scrips, as well as in a few forward counters, especially T.E.L.Co. Almost all the well-known chemical and plastic scrips have marched forward. They are too numerous to be listed here. The most outstanding among them are Union Carbides, Associated Batteries, Alkali, and Tata Chemicals. The new favourites such as Amar Dyes, Indian Dyestuffs, Colour-Chems, and Poly-Chems, have still not lost their charm. Among rayons, Gwalior Rayons have spurted from Rs. 40 a few days ago to Rs. 48; at one time, they even touched Rs. 50. In the engineering section, Larsen and Toubros have scored several points. Guest, Keen Williams is another counter which has appreciated sizably. In the automobile section, besides T.E.L.Cos, both Hindustan Motors and Premier Automobiles have received fresh support. Paper shares also are to the fore again. The recently floated popular issues such as Philips Carbon Black, Asian Cables and Hindustan Aluminium are commanding a fantastically high premium. In contrast to this, the shares of companies belonging to the old industries of India such as cotton textiles, iron and steel, sugar, cement, coal and planting are not evoking much attention.

Speculation Less?

It is not possible to say whether the rise in prices of the scrips mentioned above is due to heavy buying or absence of sellers, because no data on turnover of shares are published by the stock exchanges. There is an impression that much of the rise is attributable to scarcity of sellers and the rise in prices is not fully representative of turnover. Every rise in price only seems to encourage investors to hold on to their scrips in the hope of getting still better prices. Further, the companies of the scrips mentioned above are all doing well and have plans for further expansion. This has led investors confidently to expect issue of additional shares either at par or at a modest premium and payment of good dividends after the plans are implemented. Another interesting point that deserves to be mentioned here is that, since appreciation in the value of these cash scrips is rapid and heavy, there is a large element of speculation in them also. It is quite possible for one to buy any of these scrips, stick to the purchases for a while and dispose them off as soon as a substantial gain is seen. Again, there are some who sell their investments when prices reach attractive levels in the hope of buying them back at lower levels. Neither the former is keen on taking delivery, nor the latter on giving delivery. And, what is more, brokers are quite willing to oblige their customers by not insisting on delivery. Since there is always a certain amount of floating stock on blank transfers, it is quite feasible to meet the demands of those who wish to take delivery. In this way, a considerable amount of forward business is taking place in the cash scrips also.

Then, there are, of course, those who buy shares on the basis of advance information, take delivery of them with the help of bank credit and sell them when they climb up to the levels expected. In these days, with almost every company having some plan or scheme of expansion, there must be quite a few privileged people buying shares on inside information, making quite a lot of easy money. It will, therefore, be wrong to come to the conclusion that speculation in the share markets has declined, simply because the popular speculative counters have been moving only within a narrow range. In fact, with scope for speculation greatly restricted in bullion and commodity markets, where heavy margins and their frequent imposition by the Government have made the position of operators extremely uncomfortable, speculators have turned their attention more and more to shares. The controls on stock exchanges are less severe and can, in any case, be easily evaded. In addition, the scope for making quick profits ranging between 25 and 100 per cent. has turned out to be greater in shares than in bullion and commodities.

Wadias' New Ventures

Having successfully implemented the modernisation and expansion programmes of Bombay Dyeing and placed it at a level where it ranks high with any of the first class mills in the world and with practically no scope for widening their activities in their traditional field of textiles, thanks to the restrictive policies of the Government, the well-known managing agency house of Nowrosjee Wadia and Sons have turned their attention to chemical industry, which offers a variety of wide outlets for enterprising industrialists. The Wadias are, of course, already in this industry, too, in that they are the first, and only one so far, to establish a factory for the manufacture of hydrogen peroxide. They have just completed the programme for doubling the productive capacity of National Peroxide Ltd., in which Bombay Dyeing also has an interest.

Encouraged by the success that has attended this new enterprise of theirs, Wadias have, it is reliably learned, finalised their plans for establishing two more chemical industries. But these companies will be separate from Bombay Dyeing and will confer no direct benefit to the shareholders of the latter company. One of them—named the Sturdia Chemical Company, Ltd.—will manufacture precipitated and activated calcium carbonate used by the paper, rubber, paint, ink and toilet industries. It will have both technical collaboration and capital participation from a leading British manufacturer—John and Sturge of Birmingham. The factory will be located near Dehra Dun in Uttar Pradesh, where plenty of limestone in its purest form is found. The capital outlay on this project will be about Rs. 30 lakhs. Although a public limited company, its share capital will be privately subscribed, probably because it is not large enough to invite public subscription.

The other chemical company to be floated by the House of Wadias is known as Potanium Ltd. Involving a capital outlay of Rs. 3 crores, it will manufacture titanium dioxide in collaboration with one of the largest chemical manufacturers in the U.K., namely, La Port Industries. The plant will be established in the west coast of Maharashtra, near Ratnagiri, where there is a plentiful supply of ilmenite sands, the principal raw material. Titanium dioxide is considered as the pigment of the future. It is an industrial raw material used in a large number of processing industries—paints, rubber, textiles, printing ink, enamelware, soaps, leather and linoleum. The productive capacity of the factory may be in the neighbourhood of 4,500 tons per annum. A part of the capital required will be raised through public subscription.

New Loans

The response to the new loans of the Central Government is said to have been extremely poor. It would appear that several banks, including one of the "Big Five," did not apply at all for these loans. Another big bank applied for only a few lakhs worth of the short-dated loan. Technically speaking, of course, the loans have been fully subscribed and the Central Government got Rs. 175 crores, including conversions amounting to Rs. 74.25 crores, but this is largely due to heavy subscriptions by the Reserve Bank. The negligible response to the new loans portends difficult credit conditions in the forthcoming busy season. It also suggests that the State Governments will find it difficult to get their requirements in full when they enter the market next month. Almost every State has planned for a large borrowing programme. The States with loans maturing this month have advised the investors to hold on to them till the details of their new loans are finalised in consultation with the Reserve Bank. The latter may have a tough time in pruning the demands of States to levels that can be reasonably borne by institutional investors and by itself. There is no doubt that, this year, the Reserve Bank will have to take up a substantial part of loans of States as well, inasmuch as the special deposit system has practically crippled the capacity of commercial banks to oblige their respective State Governments. The current basis of Gilt-edged yields suggests that the State Governments will have to pay the investors more than they did last year.

T.E.L.Co.

In his annual statement to the shareholders of the Tata Locomotive and Engineering Company, Ltd. (T.E.L.Co.), the Chairman, Mr. J. R. D. Tata, has raised some important issues in relation to the "cheap car" or "people's car" project. It would, perhaps, be wrong to say that the project is in an embryonic stage. For it has not reached even that stage. The public is in the dark as to the Government's intentions. The Jha Committee, on its part, was content to set down the broad considerations which must govern the implementation of the "small-car" programme and reduce the medley of proposals it received into five. But one once thought that the programme would be implemented in the private sector. Apparently, the Government, for reasons known to itself, wants to undertake the manufacture of this type of car in the public sector. If this is the real position—and it is by no means clear that it is—it is time there was some official explanation. It is true that Mr. Manubhai Shah, the Union Minister for Industry, has expressed himself in favour of a people's car in the public sector. It is not, however, known whether it means a firm decision or a mere trend in official thinking. What is noteworthy is that the draft outline of the third Plan does not contain any reference at all to the subject. A valid inference is that the Government is not irrevocably committed to the establishment of the small car project in the public sector. As Mr. Tata pointed out, "with the existing automobile industry able and willing to undertake the manufacture of a small car, there can be no possible reason for Government to allocate such a project to the public sector except on grounds of socialist ideology or dogma, which Government spokesmen, including the Prime Minister, have repeatedly and unequivocally disavowed as playing any part in their policies."

Surely, if no firm decision has been reached—it is to be hoped that the Government's mind has not been unilaterally made up—the Government will certainly be well advised to re-examine the question on its merits, which will tantamount to a fresh investigation of the proposals it has received from the private sector.

Irrespective of whether the project is assigned to the public or private sector, there is no doubt that the considerations to which Mr. Tata referred will apply. In the first place, it is not merely the low cost of a car that matters, for the cost of maintenance should also be taken into account. In this connection, Mr. Tata said: "It is no doubt possible to make a very light and low-powered car for, say, Rs. 1,000 or Rs. 1,500 less than the initial cost of the D.K.W. we have proposed or similar cars, but, if such a car is capable of only half the trouble-free mileage that a more sturdy car would give, or, to put it differently, if the cost of repairs and spare parts is twice as high for the same mileage in the case of the lighter car, then the unfortunate user will in fact have, over the life of his car, paid not a lower price but a much higher price." Secondly, families, as this journal has pointed out on several occasions in the past and as Mr. Tata reiterates now, are, on the average, much larger in India than in Europe. In other words, a car, which is only an improved version of a perambulator or toy vehicle, with an engine fitted into it, will not serve Indian social conditions. Thirdly, Indian roads are much inferior to those in Europe and, therefore, "more destructive." This is an argument in favour of a reasonably sturdy car, if the need for a small low-cost car is found to be absolutely essential.

Finally, the Government should bear in mind the implications of the project in terms of foreign exchange expenditure for capital as well as current account. It may be mentioned here that the Jha Committee computed that, if a 10,000-vehicle programme proceeded on the basis of an import of the complete vehicle and a progressive development of indigenous manufacture spread over four to five years, the annual requirements of foreign exchange would be: first year, Rs. 3 crores; second year, Rs. 2 crores; third year, Rs. 1 crore; fourth year and onwards, Rs. 50 lakhs. Investment in plant and machinery would involve a foreign exchange component of Rs. 4 to Rs. 5 crores. Although this is not beyond India's foreign exchange capacity, it is obviously necessary to give some priority to a programme which, other things being equal, involves the least expenditure in foreign exchange.

To the shareholders, Mr. Tata had much encouraging information to give. In its automobile division, the programme for the expansion of the Company's manufacturing capacity to 12,000 units a year is expected to be completed by the end of the current year. The average indigenous content of the vehicles has reached 78 per cent. Of significance to the Company's locomotive division is the Railway Board's assurance that the Indian Railways will require steam locomotives for many years to come. Although the price award for supply of locomotives for two years up to the end of the year under review falls short of the Company's expectations, the Railway Board and the Company have been able to agree on the prices of locomotives to be supplied during the remaining period of the agreement. It is noteworthy that the prices the Company will receive will be lower than those at which steam locomotives can be obtained from abroad.

A notable development is the move towards a further diversification of the Company's manufacturing programme. Arrangements for the manufacture of paper and pulp making machinery and power shovels have been completed. With the approval of the Government of India, the Company has concluded agreements for technical collaboration with Messrs. A. Johnson & Company, Stockholm, Sweden, for the manufacture of paper and pulp making machinery. The Company is now negotiating with other Indian concerns with a view to expanding the scheme, so as to manufacture a larger number of paper and pulp making units with a larger indigenous content. Again, with the Government's approval, the Company will manufacture power shovels in collaboration with the well-known American firm of Messrs. Harnischfegar International Corporation. Actual production is expected to start from the beginning of 1961. The additional capital requirements for these two projects will be met from the internal resources of the Company.

Besides diversifying its manufacturing activities, the T.E.L.Co. proposes to expand its capacity for the manufacture of trucks from 12,000 tons to 24,000 tons per annum, with an indigenous content of over 90 per cent. This is a major scheme of expansion, requiring a considerable amount of capital. Mr. Tata has disclosed that the Company will shortly submit its proposals to the Government for its approval and that the plan for meeting the capital expenditure will be placed before the shareholders in due course. From the targets for automobile industry in the draft outline of third Plan, it can be confidently inferred that the Government's consent to the Company's scheme will be readily forthcoming.

Cloth Prices and Exports

Two important questions are expected to figure prominently in the discussions at the forthcoming meeting of the Cotton Textiles Consultative Board at New Delhi scheduled for Friday the 29th inst.; the meeting was to have been held on Monday this week, but it had to be postponed on account of the Government employees' strike. The two questions relate to cloth prices and textile export incentive scheme. Opinions among millowners so far as the issue of prices is concerned seem to be fairly unanimous, while there would appear to have arisen a divergence of views on the export incentive scheme.

The millowners have noted the reported anxiety of the authorities at the persistently rising trend of cloth prices in internal markets. In fact, a Press despatch from New Delhi avers that the matter was considered by the Cabinet recently and, after a great deal of discussion, it was decided to take up the issue with the millowners themselves. One of the specific suggestions understood to have been made by the Government is that fair prices should be stamped on every piece of cloth in the same way as was being done during the control days in the past. This question is now engaging the serious attention of millowners. While the stand the industry should take at the Consultative Board's meeting is yet to be decided by the Committee of the Indian Cotton Mills' Federation, the general feeling is that the system of stamping prices on cloth may be followed, provided the Government (*a*) makes it voluntary, (*b*) takes into account the high unofficial premia paid by mills for cotton, as well as the enhanced incidence of wage rise and increase in the prices of stores and accessories, (*c*) extends the system to the decentralised sector also, and (*d*) exempts cloth meant for export.

On the question of export incentive scheme, the millowners, as already stated, are somewhat divided

(From Our Own Correspondents)

BOMBAY, 21*st July*

THE firm trend of the share market noted last week abated somewhat during the week under review. This was the case particularly with the equities on the forward list, barring a few notable exceptions. The volume of business put through was comparatively small, as both investors and operators were not inclined to enter into large fresh commitments. In fact, several counters suffered a distinct setback. Apart from the realising pressure attracted at the high levels which many scrips had touched last week, there was also selling by some investment houses. The sentiment of the market was adversely affected by a few unhelpful factors. There were, for instance, rumours that the Tata Steel dividend might not be decided today, on account of the delay in the announcement of the revised retention prices by the Government. There were also reports that one blast furnace of the T.I.S.Co. had been closed for a few days for modification. Cotton mill shares encountered selling, on apprehensions of official measures to check the rising tendency in cloth prices. In the cash section, however, some speculative gains were recorded. Notable among the scrips were the usual chemical counters, Gwalior Rayons and Larsen and Toubro.

In the steel section, Tata Ordinaries began the week at Rs. 162 25, as against the previous closing of Rs. 161.75, and. after improving to Rs. 163 on Monday, receded to Rs. 160 yesterday. They recovered to Rs. 162.30 today but finished lower at Rs. 161. Indian Irons, however, attracted good attention and rose in the course of the week from Rs. 24.12 to Rs. 25.10, though the closing rate today was 20 nP lower at Rs. 25.40. The net gain over the week was Re. 1.28. Mukund Irons rallied from Rs. 26.10 to Rs. 28.50 yesterday, but eased to Rs. 27 today.

Among textiles, Kohinoors came in for profit-taking and dropped Rs. 16 to Rs. 354. Simplex fell by Rs. 7 to Rs. 179. Centurys shed Rs. 4.50 to Rs. 524.50 ; at one time yesterday, they were lower still at Rs. 522, after touching as high a level as Rs. 544 on Monday. Bombay Dyeings receded from Rs. 70.40 to Rs. 68.30, a fall of Rs. 2.10. Central Indias declined by Rs. 11 to Rs. 122. Shreenivas lost Rs. 8 to Rs. 272, Indores Rs. 6 to Rs. 127, Vishnus Rs. 5.50 to Rs. 119.50, Svadeshis Rs. 2 to Rs. 256 and Tata Mills Re. 1.50 to Rs. 46.50. Standard Mills, however, continued to be sought after and forged ahead from Rs. 1,832 to Rs. 1,920, the net gain over the past fortnight being Rs. 258. Khataus strengthened by Rs. 11.50 to Rs. 497.50. Gokaks and Finlays also attracted good support ; the former rose by Rs. 8.50 to Rs. 157.50 and the latter by Rs. 8 to Rs. 338. Ahmedabad Advances picked up Rs. 8.75 to Rs. 190. New Great's improved by Rs. 5 to Rs. 183. Elphinstones and Mysores gathered Rs. 2.50 each to Rs. 66.50 and Rs. 90, respectively.

A mixed trend was in evidence in the cement and sugar groups. Among the former, Digvijays receded by Rs. 3.50 to Rs. 170. Associated Cements eased by Rs. 2 to Rs. 145.50. Orissa shed 10 nP to Rs. 13.92. Ashokas and Jaipur Udyogs, on the other hand, rose by 60 nP each to Rs. 11.92 and Rs. 14.72, respectively. Bagalkots gained 24 nP to Rs. 8.36 and Dalmias 20 nP to Rs. 11.80. Among sugars, Walchandnagars dropped Rs. 3.75 to Rs. 306.25. Phaltans were quiet at Rs. 193. Belapurs met with excellent support early in the week and advanced from Rs. 373 to Rs. 400 on Monday. Subsequently, however, they climbed down and stood at Rs. 386 today. Bhopals recorded a rise of 75 nP over the week, today's closing rate being Rs. 27.50. Changdeos gathered 15 nP to Rs. 33.75.

Electricity shares came in for selling and tended to move down. Tata Powers receded by Rs. 16.25 to Rs. 1,060, after being lower still at Rs. 1,053.75. Hydros eased by Rs. 2.50 to Rs. 105. Ahmedabad Electrics lost Rs. 2 to Rs. 84.50. Andhra Valleys were quoted today at Rs. 1.007.50, as against Rs. 1,000 on Thursday last week.

The bank shares could not keep up the upward trend witnessed last week following the publication of encouraging half-yearly results. Bank of Indias declined by Re. 1.50 to Rs. 105, while 'A' shares advanced by Rs. 7.50 to Rs. 106. Centrals dropped a rupee to Rs. 52, 'A' shares easing from ts. 54 to Rs. 53.50. Barodas shed Re. 1 to Rs. 84. Jnited Commercials picked up Rs. 2 to Rs. 70. Jnions gathered 36 nP to Rs. 6.12.

Tata Locomotives provided the brightest spot in the engineering section, the quotation climbing up by Rs. 30.50 to Rs. 308.50. The rise followed hectic buying induced by encouraging prospects of expansion and new capital issue. Premier Constructions also spurted by Rs. 12 to Rs. 377 on hopes of some favourable announcement regarding the Company's capital reconstruction scheme. Khandelwal Alloys were pushed up by Rs. 37 to Rs. 137. Jaipurs Metals strengthened by Rs. 9 to Rs. 140. Larsen and Toubros hardened by Rs. 5.50 to Rs. 51.50. Mahindras gathered a rupee to Rs. 24.24 and Kamanis 44 nP to Rs. 20.56. Alcock Ashdowns, however, were subjected to selling and taken down from Rs. 320 to Rs. 310. Structurals receded by Rs. 20 to Rs. 32.

Shipping shares lacked support. Great Easterns declined by 40 nP to Rs. 17.48 and Scindias by 20 nP to Rs. 15.52. Among automobiles. Premier Automobiles were well favoured on publication of encouraging results and increased by Rs. 11.50 to Rs. 185. The total sales of the Company for the year ended 30th June 1960 were Rs. 20.89 crores, as against Rs. 17.42 crores in 1958-59. Hindustan Motors rose by Re. 1.80 to Rs. 23.08.

In the miscellaneous section, Colour-Chems receded by Rs. 15 to Rs. 470. Dharamsi Chemicals declined by Rs. 5.74 to Rs. 240 *ex-div*. Wimcos eased by Rs. 6 to Rs. 243. National Rayons shed Rs. 5.50 to Rs. 560. Bombay Burmahs were erratic. They moved down from Rs. 656 on the opening day of the week to Rs. 639.50 on Saturday, recovered thereafter and touched Rs. 657 today before finishing at Rs. 648. The net loss over the week is Re. 1. Baroda Rayons were lower by Re. 1.50 at Rs. 162. But Gwalior Rayons jumped up from Rs. 42 to Rs. 50 and finished at Rs. 48 a gain of Rs. 6 over the week. Tata Oils shed Rs. 2.50 to Rs. 82.50. Hindustan Levers lost 50 nP to Rs. 48. T. Manoklals, however, were keenly bid and jumped up by Rs. 95 to Rs. 520. Amar Dyes advanced by Rs. 32.50 to Rs. 527.50, Indian Dyestuffs by Rs. 30 to Rs. 865 and Bombay Potteries by Rs. 21 to Rs. 185. Anil Hardboards and Poly Chems rose by Rs. 15 each to Rs. 435 and Rs. 320, respectively. West Coasts picked up Rs. 8 to Rs. 228. Kemp and Co.s gathered a like amount to Rs. 418. Voltas gained Rs. 6 to Rs. 282. Philips Carbons improved by Rs. 2.76 to Rs. 23.24.

Madras Stock Exchange

MADRAS, 20*th July*

The recovery in equities noted towards the close of last week gathered further momentum during the week under review, following the end of the Government employees' strike and the restoration of normalcy. Cleared scrips were particularly in the limelight. Turnover, of course, continued to be modest. Teas were well supported on firm advices from auction centres and reports that tea production in South India was higher by 10 million lbs. upto the end of May this year than the same period in the previous year. Coffees made handsome gains, thanks to the forecast made by the U.S. Department for Agriculture that world coffee crop in 1960-61 would fall by six million bags to 71 million bags, though it was considered that there might not be any immediate prospect of stepping up India's exports of coffee, in view of keen competition in robusta coffee from Uganda and Indonesia. Rubbers tended to move up in sympathy. Textiles were firm, induced mainly on account of growing internal demand for textile goods. Sugars met with some investment support. Cheerful conditions prevailed in the miscellaneous section as well.

Among teas, Nonsuch Teas were marked up by Re. 1.15 to Rs. 28. Blue Mountains spurted by 95 nP to Rs. 5.50. United Nilgiris improved by 38 nP to Rs. 22.25. Peermades rose by 25 nP to Rs. 23.50. Periakaramalais put on 11 nP to Rs. 3.78. Haileyburias picked up 5 nP to Rs. 15.30. Kil Kotagiris gathered a like amount to Rs. 5.50. Chembras were fully steady at Rs. 5.55, as also Parksides at Rs. 27.50. Devsholas were unchanged at Rs. 31.50. The Company has declared a final dividend of 15 per cent., taxable, making a total of 25 per cent., taxable (equivalent to 17.5 per cent. tax-free), for 1959, as compared with 25 per cent., tax-free for 1958. Neelamalais, however, shed 5 nP to Rs. 4.95.

In the coffee section, Balanoors advanced by a rupee to Rs. 16.70. Consolidated Coffees, which had remained easy in the previous week, elicited good enquiries and advanced by 80 nP to Rs. 26.80. Coffee Lands hardened by 21 nP to Rs. 26. Ouchterlony Valleys closed higher at Rs. 5.15, as against Rs. 5.06 last week-end. Cowcoodys were fully maintained at Rs. 6.05 and Rajendras at Rs. 16.

Cochin Malabars provided a bright spot in the rubber group, the quotation rising from Rs. 8.25 to Rs. 8.50. Vaikundams strengthened by 15 nP to Rs. 30.35. Kailasas were higher by 5 nP at Rs. 5.55. But Malankaras receded by 25 nP to Rs. 20.25. Midlands dropped 5 nP to Rs. 12.60.

In the textiles section, Lakshmis met with good support and advanced by Rs. 2.50 to Rs. 165.50. Bangalore Woollens improved by Rs. 2 to Rs. 199. Travancore Rayons increased by Re. 1.35 to Rs. 38.60. Cannanores closed today higher at Rs. 155.05 *ex-div*., as against Rs. 161 *cum-div*. last week-end. Buckinghams gathered a rupee to Rs. 206. despite the strike by workers in the B. and C. Mills with effect from the 15th inst., following the dispute between labour and millowners on the question of implementing the Textile Wage Board's recommendations. Loyals moved up by a rupee to Rs. 35. Coimbatore Pioneers were steady at Rs. 351.50, Dhanalakshmis at Rs. 224, Kotharis at Rs. 12.20 and South Indias at Rs. 157. Rang Vilas changed hands at Rs. 44.50. The Directors of the Company have announced a dividend of 5 per cent. taxable (equivalent to 3.5 per cent. tax-free) ; no dividend had been given last year.

Cements and chemicals were particularly firm in the miscellaneous section. Orissa Cements rose by 60 nP to Rs. 14 and Andhras by 50 nP to Rs. 10.85. India Cements put on 18 nP to Rs. 7.05. Dalmias were firm at Rs. 11.85. Among chemicals, F.A.C.Ts. advanced by Re. 1.65 to Rs. 12.30. Mettur Chemicals gathered 75 nP to Rs. 13.50. Mysore Fertilisers and Mysore Chemicals were quoted at the last week's level of Rs. 9.90 and Rs. 25, respectively. Among other miscellaneous industrials, Textools spurted by Rs. 6.50 to Rs. 186. Aluminium Industries hardened by Rs. 2.20 to Rs. 25. Ashok Leylands were higher by 40 nP at Rs. 9.35. Western India Plywoods, however, declined by Rs. 3 to Rs. 300.

MARKET GOSSIP

(Concluded from previous page)

in their opinions. One section is satisfied at the continuance of the scheme on the present basis and considers that the conditions obtaining at present do not warrant any modification. There is, however, another section which feels that, unless the percentage of import entitlement on the f.o.b. value of cloth exported is raised sufficiently from the existing level of 66⅔, not only will the high level of shipments attained in 1959—810 million yards, as against 581 million yards in 1958—not be maintained in the current and subsequent years but there will actually be a marked setback. In support of this view, it points to the keener and keener competition that is developing in world market. Naturally those who hold this view represent the mills which are endeavouring their best to export as much cloth as possible, even though the margin of profit is low as compared with what they would get on sales in the domestic market. These mills allege that there are many units in India, including those with several automatic looms, which are not at all interested in export business, because they are making handsome profits in the internal market itself. Accordingly, these units are not interested in the concessions granted under the export incentive scheme and their representatives may not be keen on supporting the demand of the representatives of predominantly export units for a larger quantum of incentives. A prominent millowner is reported to have said: Why should I bother about exports, when I am quite assured of an adequate domestic offtake which fetches me a decent profit? After all, the domestic consumers constitute the sheet-anchor of the cotton mill industry.

Both are right in a way, for, really speaking, the conflict is now between the demands of consumers and the need for foreign exchange. The question of questions is: Which comes first, the domestic market or the export market? The industry would be well advised to leave the matter to the Government for a decision. for it is the bungling by the Government in the last 10 years that has given rise to this dilemma.

Whimsical Weather

The proverbially fickle monsoon, which, through the centuries, has played hide and seek with agriculturists in India, continues to delight in the cruel pastime. Every year, the monsoon raises high hopes in the hearts of farmers only to be followed, almost without fail, by bitter disappointment as the weather takes an unexpected turn. Earlier optimistic crop estimates are found to be drastically reduced and the season ends with crops much below expectations. This year, the South-west monsoon started in good time and showed promising signs. But the dry weather, which we have been having for the past 10 to 15 days, is causing anxiety about the fate of crops based on monsoon.

So far as cotton is concerned, a crop that is most sensitive to weather, the 1960-61 season too seems to be destined to follow the pattern of the previous two seasons. Till the end of last month, crop progress, in most cotton growing regions, was reported as excellent. Weather conditions in June were ideal for sowing operations. It was, therefore, estimated that, if the favourable weather were to persist, it would be possible to harvest a crop of 5.5 million bales (of 400 lbs. each) on the same acreage that produced a mere 3.75 million bales in the current season. Messrs. Volkart Brothers, a leading cotton trading firm, summed up the progress of sowings till the end of June thus:

> "Unlike last year, monsoon rains started at exactly the right time and extended over the cotton growing areas in a most satisfactory manner. June weather conditions were thus nothing short of ideal for cotton sowings all over the rain-fed tracts. In the Punjab, where new crop cotton sowings were practically completed already by end of May, June saw a most satisfactory development of the young plants. Adequate irrigation water supplies, coupled with some showers, sent the new crop oft to an excellent start. In the Omras, in Gujerat and Saurashtra, timely rains soon enabled the farmers to start and complete new crop cotton sowings well within the time that is thought to be favourable. By end of June, most of the seed was in the ground and germination was reported to be satisfactory everywhere."

Their indication of the progress of sowings this year, as compared with last year, is as follows:

Areas	*End June 1960* Per cent.	*End June 1959* Per cent.
Khandesh	100	75
C.P./Berar ...	75-100	20-50
Madhya Pradesh ...	90	10
Broach	100	75
Surat	80	70

Unfortunately, the weather appears to have taken an adverse turn. The long drought currently being experienced is said to be fraught with dangerous consequences. Although a break in monsoon at this time of year is not unusual, the dry spell has lasted longer than usual. If this were to continue for a few more days, it could do much damage to the cotton crop.

The trade is anxiously watching the course of the weather. The trend of weather in the next few weeks will make or mar the cotton crop. The period is also of crucial importance to the cotton ther hedge trading should be permitted or not in the next season. It will also determine, to a large extent, the form and extent of distribution control on cotton.

As already stated, cotton is not the only crop that is likely to be affected by the drought. Groundnut is reported to have already suffered damage in Gujerat, Saurashtra, and Andhra. It is feared that, if the rains are delayed further, resowing might become inevitable. This deterioration in crop situation, coupled with announcement of export quota, is mainly responsible for the spurt in the price of groundnut withnessed this week; the ceiling has already been pierced.

NEWS IN BRIEF

A CENTRAL Employment Exchange has been opened at the headquarters of the Directorate-General of Resettlement and Employment, New Delhi.

A newsprint buffer stock is being built in Cochin by the State Trading Corporation, in order to meet the requirements of the Kerala newspapers against their quota allotments.

The all-India final official estimate of sugarcane for 1959-60 puts the current year's area and production at an all-time record of 5,178,000 acres and 75 038,000 tons in terms of cane (or 7,579,000 tons in terms of raw sugar, *gur*), respectively.

The village *panchayats* in the Punjab State have been given powers to impose new taxes. Accordingly, the *panchayats* are entitled to impose house tax and levy duty at the rate of not more than two per cent. on the transfer, sale, gift or mortgage of immovable property situated within their area.

The drugs factory, proposed to be set up with Soviet collaboration at Neriamangalam in Kerala State, will cost about Rs. 2-3 crores and will provide employment to about 1 200 persons. This was disclosed by the State Minister for Industries, Mr. K. A. Damodara Menon, in the Legislative Assembly.

A draft agreement seeking to place economic and commercial relations between the two countries on a basis more in accord with Nepal's wishes has been sent by the Government of India to Khatmandu. It will be the basis for further talks on the question at the official level. Broad principles that should govern trade relations between the two countries were agreed upon in March last.

The President has given assent to the East Punjab Holdings (Consolidation and Prevention of Fragmentation) (Second Amendment and Validation) Bill, 1960. The legislation intends to make provision for reservation of land for the benefit of village community. The State Government is empowered to revise or rescind a scheme prepared or confirmed under the Act. It is also authorised to recover consolidation cost from the lessees of long-term leases and the tenants of surplus land.

An automatic re-rolling plant to manufacture wire rods is being installed at Sonepat through the collaboration of Indian and American industrialists. It will have a capacity to turn out 10,000 tons of mild steel wire rods a month. The plant. when it goes into production in the first quarter of 1961, is likely to save foreign exchange to the extent of Rs. 8 crores annually. Wire rods are being imported in large quantities from foreign countries, the only existing plant is Indranagar (Tatanagar) being unable to cope with the full demand.

The Central Water and Power Commission is conducting investigations on the possibility of generating power from hillstreams in Himachal Pradesh, Jammu and Kashmir, Northern U.P., Assam, Tripura and Manipur for electrification of centres in isolated and remote areas. Surveys have also been undertaken recently to select appropriate sites for establishment of small hydro-electric units in these regions. A provision of Rs. 1.6 crores is likely to be made in the third Five-year Plan for the setting up of small hydro-electric units having a total installed capacity of 15,000 kw.

With a view to encouraging mechanised fishing techniques, the Government of Madras has sanctioned a sum of Rs. 1.4 lakh to purchase 50 marine diesel engines of five to seven h.p. for being given to fishermen for fitting them in the existing boats and also in boats that may be constructed by them. These engines will be given at a subsidised cost, namely, 50 per cent. of the actual cost of engines, after collecting a security deposit of Rs. 500 for each engine. The subsidised cost of the engines will be recovered in 30 instalments, spread over a period of three years on a slab scale, at 4½ per cent. interest.

Negotiations have been commenced between the representatives of the Indian and British Governments at New Delhi on the terms of a new British loan of £10 million, offered under the U.K. Credit Guarantee Scheme. The loan, which will be available upto the end of March next, is for meeting Indian commitments falling due in the U.K. and is not tied to any particular project. The usual period of repayment of such loans is 15 to 20 years. In view of its heavy burden of repayment during the next 15 to 20 years, the Government of India is believed to be keen on having the period extended to 25 years.

As a measure of export promotion, the Government of India proposes to grant drawback of duty on steel clips type 'U' for railway track at the rate of Rs. 52 per ton of steel content. In this respect, the Government has issued a draft notification inviting objections and suggestions, if any, before the 26th inst. Meanwhile it has been decided to allow drawback of customs and Central excise duty paid on raw materials used in the manufacture of biscuits, electric motors, and iron castings. Changes have been made in the rates of drawback for panel pins, plastic sequins, tin containers and fabrics containing *lurex* yarn. Further. items relating to pigments, colour paints, etc., have been changed from first schedule to the second schedule.

The U.S. Development Loan Fund has approved of a $2.5 million loan (Rs. 1.2 crore) to the Government of India to finance the foreign exchange cost of building a 27,000-kilowatt power plant for the Barapani hydro-electric project in Assam. The Assam Electricity Board will be the ultimate recipient of the loan. The main structure of the project will be a concrete dam 210 feet high, and 580 feet long on Umian river. The total cost of the project is estimated at Rs. 7.4 crores. The balance of Rs. 6.2 crores is expected to be met out of the counterpart funds accumulated by the U.S. through the sale of agricultural commodities to India under P.L. 480.

An arrangement has been entered into between the Government of India and the Motion Picture Export Association of America for greater collaboration between the film industries in the two countries. Under the present arrangement, the M.P.E.A. will seek to ensure a greater market for Indian films in the U.S. and other countries served by the M.P.E.A. Besides, the earnings of the U.S. films in India will be mostly utilised for the purchase or rent of Indian films, production and co-production of films in India as well as for investment in Indian Government securities. The earnings of the U.S. films in India are estimated at Rs. 50 lakhs annually The arrangement will be in force until March 1962.

The Government of India has sanctioned the setting up of a unit for radioactive tracer studies at tne Central Water and Power Research Station, Poona. The proposed unit will enable the development of utilisation of isotope techniques in the solution of hydraulic problems. By using these isotopes, it would be possible to determine ground water flow, permeability of the strata. and determination of the literal drift and sedimentation. Radioactive research has been found to be particularly useful for ascertaining the silt movement in the Bombay harbour. The experiments in the harbour consisted essentially of determining the movement of dredging material dumped on the sea. In the last four decades, the major channel of the Bombay harbour had to be frequently dredged to enable smooth passage of tenders and deep draft vessels, as the dredging material dumped into the sea is recirculated and finally redeposited in the channel. To discover safe dumping grounds at sea bed, the tests, based on radioactive stud es, were conducted by the Central Water and Power Research Station, Poona. Similarly, the studies can be used for finding out the movement of sand near Madras. Mangalore and other harbours. These studies will be conducted in co-ordination with the Atomic Energy Commission, Bombay.

From Abroad

Industrial production in Russia went up by 10 per cent. in the first half of the current year, as compared with the corresponding period in 1959.

The Pakistan Council of Scientific and Industrial Research is claimed to have developed a new and cheaper synthetic substitute for cement, called *Pak Tol*.

A leading Dutch engineering company, Werkspoor N. V. in Amsterdam, has secured an order from Russia to supply all the installations for three complete urea production plants.

Soviet Russia has agreed to buy 700,000 tons of sugar from Cuba, if the latter gets into difficulties on account of the recent revision of the U.S. import quota for sugar.

The Government of Burma has decided to set up a jute baling factory to handle its surplus jute for export. The total output of jute in Burma during 1960-61 season is estimated at 32,000 tons, of which only 24,000 tons will be required for domestic consumption.

Orders for the supply of 42 airliners, worth £53 million, were received by the British aircraft manufacturers in the first six months of the current year, and the value of orders for aero engines for installation in foreign airliners was more than £3 million.

A proposal to launch a large-scale mutual aid programme to raise living standards in the Latin American countries was announced by President Eisenhower last week. The programme envisages a contribution which is said to be " substantial but not of unusual magnitude."

The International Finance Corporation has decided to invest $960,000 in an Italian company, the Magrini Maridionale Spa, which is constructing a new plant for manufacturing electrical equipments at Casavatore in southern Italy. This Company is a subsidiary of the Magrini, Bergamo, Italy.

West Germany has concluded a technical assistance agreement with Libya, under which it will depute experts to Libya later this year to advise on the development of agriculture, fisheries, tourist trade, etc. A joint W. German-Libyan training school for mechanics and electricians will also be established.

The World Bank will receive a 240-million dollar loan from West Germany's National Bank. This is the largest loan ever obtained by the Bank outside the U.S. The new loan will bear interest at the rate of 4½ per cent.—well below the current German market rate—and will be repayable in twelve years.

The U.K. Government has offered an immediate loan of £5 million to Pakistan—the first of a series of loans Pakistan expects from friendly countries—to help finance its second Five-year Plan. A substantial part of this loan is expected to be utilised for imports of British-made machinery and equipment for textile and jute mills in Pakistan.

President Nkrumah of Ghana has urged the independent African States to agree on a date for a total economic boycott against South Africa, as a mark of protest against the apartheid policy. In particular, he asked them not to allow South Africa to use their airfields and also to stop sending oil to South Africa through their harbours.

PERSONAL

PROF. M. S. Thacker, Secretary, Ministry of Scientific Research and Cultural Affairs. Government of India, has been elected Chairman of the Commonwealth Scientific Committee with effect from January 1961.

Mr. B. R. Tandon, I.C.S., has been appointed Secretary to the Union Ministry of Health vice Mr. V. K. B. Pillai. I.C.S., who is proceeding on four months' leave preparatory to retirement with effect from 1st August.

Dr. V. K. R. V Rao, who recently relinquished office as Vice-Chancellor of the Delhi University, has taken over charge as Director of the Institute of Economic Growth, an independent and autonomous research organisation run by the Delhi School of Economics Society, with Mr. V. T. Krishnamachari as the Chairman of its governing body.

The Pakistan Government proposes to negotiate separately on tariff concessions for Pakistan exports with the six members of the European Common Market. It is particularly interested in the reduction of the high tariffs imposed by West Germany, France and Italy on exports of tea, jute goods and cotton textiles. W. Germany is reported to have already responded favourably to Pakistan's plea.

It is reported that Soviet technicians have discovered "important" deposits of oil in north Afghanistan. The Government of Afghanistan is currently considering the possibility of setting up a refinery to process its crude oil. Afghanistan is expected to become an exporter of crude oil, and construct pipelines to India and Pakistan at a later stage.

The Japanese Government is currently working out a scheme to modernise or scrap all wartime standard vessels in its merchant fleet in about two years' time. There are at present 228 such vessels, accounting for 730,000 gross tons. Of this, about 230.000 tons will be modernised and 500.000 tons scrapped. It is estimated that a sum of 50,000 million yen will be required to scrap and build 500,000 tons. Half of this amount is expected to be provided by semi-official banks in the form of low-interest long-term loans. the remainder being covered by Government subsidies, proceeds from sales of scrap, and shipowners' own funds.

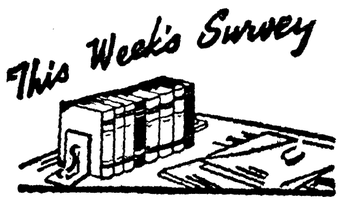
A Bill seeking to remove the existing credit ceiling has been prepared by the Government of Turkey. This decision, which has been taken by the Government after consulting the I.M.F. and O.E.E.C., has been made possible by the announcement made early this month by the U.S. Government to release a sum of £T1,052 million (£42 million) and other counterpart funds. It may be recalled that the restriction of overall banking credits to the total of the credits operative on 30th June 1958 was one of the important measures in the Economic Stabilisation Programme introduced by the Menderes Government in August 1958.

A new trade agreement between Japan and Britain was signed at London last week, after five months of negotiations. The U.K. has agreed to increase quotas for Japanese goods by £3 million. The goods include, among others, transistor radios, cameras and textiles. In return, it is expected that the British manufacturers should be able to expand their exports to Japan by about £3 5 million. Meanwhile, negotiations on a Treaty of Commerce have not been completed. Until this treaty is signed, the U.K. will continue to discrim nate against Japan, invoking Article XXXV of the G.A.T.T., and thus deny it most-favoured-nation treatment.

Wages in Europe are rising faster than those in the U.S.—but they are not expected to cause such a wage-price spiral as to make European goods less competitive in the U.S., according to a recent survey of the Chase Manhattan Bank. The survey points out that large capital investment and technical advances during the post-war years have given Europe large increases in productivity—"large enough in many industries to support the rise in wage rates and still give European producers a growing advantage in international markets.' According to it, despite the expanding tempo o wage increases in Europe. they are unlikely to reacl the U.S. levels in the foreseeable future.

In the course of a report on economic conditions in the Netherlands, the Organisation for European Economic Co-operation has asked the Government there to take effective steps for curbing inflation. The specific measures suggested include limitation of Government and local authority spending, a strict policy with regard to pay rises, an increase in tax. or hire purchase controls. and restriction of bank credit. The labour market in the Netherlands is becoming strained, says the report, and it will be difficult to maintain the rapid rise in production of the last two years. At the same time, demand is increasing faster than production. Public and private investment are rising and substantial wage increases are expected this year.

An agreement for technical and commercial co-operation between the E.M.I. Electronics of Britain and the Swedish aircraft company, the S.A.A.B., has been signed. Under this agreement, the S.A.A.B. will sell E.M.I. equipment in the industrial, automation, broadcasting, instrument and special tube fields in Sweden, Norway and Denmark through its sales organisation, S.A.A.B. Electronics, Stockholm. Likewise, E.M.I. Electronics will market S.A.A.B. products in the British Commonwealth and other countries. S.A.A.B. employs more than 8.000 workers and staff and its range of products include civil aircraft, helicopters, small cars and electronic equipment. The Company is engaged in a major programme for expanding automobile production.



SENATOR J. F. KENNEDY

WHO will be the next President of the United States? This is a question which is rather difficult to answer. So far as the Democratic Party is concerned, Mr. John Fitzgerald Kennedy, a sitting member of the Senate, has been chosen as the Party's candidate for the Presidency. Mr. Kennedy will run against the nominee of the Republican Party—most probably Vice-President Nixon—at the November Presidential election, the forty-fourth election since the U.S. developed from a small group of 13 independent colonies with fewer than four million inhabitants into a nation of 50 States with a population of nearly 180 million.

Whoever may become the chief executive of Americans, there may not be any significant change in the U.S. domestic and foreign policies. For, despite the spirited attacks directed against each other by the opposing parties, they do not seem to differ as dramatically as in the past. Both the Republicans and the Democrats, for instance, accept the broad ideals of American political democracy and the economic system of private enterprise, the disagreement being only within the framework of these fundamentals. Again, both support policies and programmes designed to assist the free world nations that have recently achieved independence. And they support assistance to developing areas through loans and grants, in order to enable them to grow stronger economically. On foreign policy, in general, the two parties as represented in Congress stand for the same basic principles.

The Democratic Party's choice of Mr. Kennedy as the Presidential candidate is to be widely welcomed from the point of view of India. If he is elected as the President, he will, there is no doubt, continue to evince the same keen interest which Mr. Eisenhower has been taking in India's economic development. Mr. Kennedy, as readers are aware, has long appreciated the problems and aspirations of India. In fact, he has been in the forefront of those calling for increased U.S. aid to India. It was he who, more than a year ago, introduced in the Senate a resolution which expressed the interest of that body in creating a special multination economic mission to study India's requirements of foreign assistance and recommend joint means by which the participants could more effectively aid the economic development of India. Here is what Mr. Kennedy said then: "India needs assurance of substantial, long-term assistance from the Western world.... As long as our efforts are aimed only at assuring short-term solvency, they only leave plans for an effective Indian development programme suspended in mid-air." Although his original resolution was later enlarged to include Pakistan, Burma, Afghanistan, Nepal and Ceylon and was not brought to a Senate vote, the Administration has reflected much of the sense of the resolution in its emphasis on increased aid to India (and Pakistan).

The interest of Mr. Kennedy in India and South Asia has gone beyond the floor of the Senate. In several public speeches, he called for increased U.S. assistance to India and other developing areas. The following is an extract from his speech at a gathering of U.S. and Indian experts held at Washington last year:

"India follows a route in keeping with human dignity and individual freedom.... It is our job to prove that we can devote as much energy, intelligence, idealism and sacrifice to the survival and triumph of the open society as the Russian despots can extort by compulsion in defence of their closed system of tyranny. We can give a convincing demonstration that we have not a propaganda or crisis interest but enduring long-term interest in the productive economic growth of the less developed nations."

There is thus sufficient indication to suggest that Mr. Kennedy, if he becomes the U.S. President, will reorient the Administration's foreign aid policy in such a way that India, as well as the other developing nations in the free world, will continue to receive substantial, long-term assistance, financial and technical. In this task, he will surely be supported by his Party to the maximum extent possible. The Party's "platform" programme of international and domestic objectives—adopted by the Democratic Convention on Tuesday last week made a special mention of India (as well as Pakistan) and said: "We recognise India and Pakistan as a major test of the capacity of free men in a difficult environment to master the age-old problems of illiteracy, poverty and disease. We will support their efforts in every practical way." Apart from the Party support, Mr. Kennedy will also be actively assisted by Mr. Lyndon B. Johnson, the Democratic Party's nominee for the Vice-Presidentship, and other sincere friends of India like Mr. Chester Bowles, a former U.S. Ambassador to India. It is, perhaps, significant that Mr. Kennedy has selected Mr. Bowles as one of his foreign policy advisers during his election campaign.

WAREHOUSING

A succinct account of the progress in the development of organised storage and warehousing of agricultural commodities in the country was given by Mr. B. B. Ghosh, the Union Food Secretary and Chairman of the Central Warehousing Corporation, while addressing the annual general meeting of the Corporation held at New Delhi on the 16th inst. The Corporation made all-round progress in 1959-60 in respect of the number of warehouses opened, stocks handled and advances made by banks to depositors. During the year under review, seventeen new central warehouses were commissioned, as against only nine in the beginning of the year. New warehouses were opened at Kozhikode, Guntur, Sriganganagar, Mangalore, Indore, Madras, Alleppey, Akola, Kotah, Cooch Behar, Nizamabad, Kolhapur, Cochin, Dalsinghsarai, Saharanpur, Coimbatore and Berhampur. The number of commodities handled rose from 30 to 60. The storage capacity available also increased from 383,000 maunds to more than 1.1 million maunds. Gross earnings from storage charges registered a fivefold increase, that is, from Rs. 76,193 in 1958-59 to about Rs. 3.81 lakhs in 1959-60. The maximum overall occupancy during the year was 83 per cent., and the minimum as high as 60 per cent.

Another favourable trend to which Mr. Ghosh drew particular attention was the increase in the number of producer-depositors taking advantages of the facilities given by the Corporation. He added that the main object of this organisation was to cater to the needs of the producers, either directly or through producers' co-operatives. He disclosed, in this context, that a central warehouse had been set up at Delhi, with a view to catering to the needs of the Federation of consumers' co-operatives.

With the increase in the volume of business handled by the Corporation, there was some improvement in the financial position. The warehouses which were started in 1958-59 showed a profit, while those started during the year under review, are expected to show a profit during the current year. The excess of expenditure incurred directly on the warehouses over earnings dropped from Rs. 1,25,000 during the previous year to a mere Rs. 19,000. Receipts from storage charges increased from Rs. 76,000 to Rs. 3.81 lakhs, as already mentioned. In this connection, Mr. Ghosh said: "There is justifiable reason to feel optimistic about the future. At the initial stage, most of the warehouses have had to be started in whatever accommodation was available on hire. As we make progress in our construction programme and succeed in having warehouses of economic size and as the total number of warehouses increases further, we can reasonably hope to realise not only our expenditure in the field, but also the expenditure on the headquarters organisation."

It may be noted that there was a significant increase in the number of shares subscribed as well. This, however, was due mainly to the purchase of 4,000 shares by the Life Insurance Corporation. Mr. Ghosh appealed to the scheduled banks in the country to participate in the venture to mutual benefit. He was of the opinion, and rightly so, that it was not desirable that a scheme of this nature should be left entirely or mostly to Government.

The expansion programmes of the Corporation are by and large only modest. The Corporation has conducted surveys of 68 additional centres all over the country for opening new warehouses. In fact, it has already undertaken construction of a number of warehouses. Construction of storage accommodation with an aggregate capacity of 212 800 maunds is nearing completion at Amravati, Sangli, Davangere and Warangal. It is stated that additional construction of a total capacity of 2,184,000 maunds was also undertaken during the year under review. During 1960-61, it is proposed to commission more warehouses with a total capacity of 1.4 million maunds, in addition to two cold storages with a capacity of 56,000 maunds each.

A notable achievement during the year was the provision for specialised storage of a number of commodities like gur, ginger, pepper and copra. Among the further schemes being considered by the Corporation are those for storage facilities for vegetable oils, molasses, wool and lac intended for export, cold storage in Delhi and Gauhati and storage of apples and potatoes at Theog in Himachal Pradesh. Apart from the storage and banking facilities provided to depositors, the Corporation further intensified its programme for training personnel. Two hundred and thirty-one persons were trained during the year in scientific storage, marketing, banking, accountancy and other allied subjects.

The expansion in the activities of the Central Warehousing Corporation was accompanied by a corresponding expansion in the activities of State Warehousing Corporations. These Corporations now have an issued share capital of Rs. 204.10 lakhs, of which the Central Corporation has so far subscribed Rs. 93.60 lakhs. The State Corporations set up new warehouses at 106 centres during the year, bringing the total number of such warehouses to 148. While Central Warehouses are set up at centres of export of inter-State trade, State Corporations' warehouses are established at places which are of importance to State trade only.

MAHARASHTRA

Elsewhere in this issue appears a factual review of the speech delivered by the Finance Minister of Maharashtra, Mr. S. K. Wankhede, on the occasion of presenting the budget for 1960-61 in the Legislative Assembly last week. While Mr. Wankhede has given a lucid exposition of the economic conditions in the State, he has sought to lay an exaggerated emphasis on the nature and extent of underdevelopment in the State. This is not quite understandable, unless, of course, this is meant to serve a political purpose, namely, to make out a claim for a larger share in the national cake of resources from the Centre. It cannot be denied that Maharashtra State is better placed than many other States in the economic map of India. As Mr. Wankhede himself has conceded, Maharashtra "inherits the premier position of the old Bombay State as a highly urbanised and industrial State." The Minister, however, contradicts himself in a way by playing up the relative backwardness of the different regions in the State through a recital of certain economic indicators relating to them, after excluding those pertaining to Greater Bombay for the purpose of his analysis. He has come to the conclusion from these premises that "the economic picture which the State presents is one of a few industrially developed cities, with a relatively underdeveloped countryside." While this contrast is quite striking, this is a contrast particularly true of the whole of India as well, especially of States such as West Bengal, Bihar, Madras, and Mysore. The wisdom of separating the indicators of economic growth of developed cities and of other backward regions within a State for examining the extent of development in that particular State is, therefore, open to question. It is patently propagandistic.

Be that as it may, the fact remains that, while Greater Bombay has been making great strides in the industrial sphere, the economic conditions in the other regions of the State continue to be relatively stagnant. The reasons for this are not far to seek. While Bombay City enjoys considerable natural advantages, apart from possessing well-developed social overheads and other factors favourable to the growth of industries, existing conditions deep in the hinterland of this premier port city are not conducive to the free flow of capital and other factors of production. Although decentralisation is a desirable objective, capital will naturally be shy of moving to those parts of the State which are lacking in adequate water-supply, power, transport and communications, to mention only a few determinants. For instance, in respect of roads, as Mr. Wankhede has admitted, even after spending Rs. 16 crores in the second Plan, the State is expected to achieve only 52.7 per cent. of the Nagpur Plan target by the end of 1960-61. It must be pointed out, however, that the situation is improving, with the discovery of mineral resources such as coal, iron ore and bauxite in the different parts of the State, and the commencement of hydro-electric schemes like the Koyna project.

What is, therefore, needed in this context is a positive policy for attracting capital to the interior and thereby encourage the establishment of industries there. It is highly regrettable that such a policy is conspicuous by its absence in the Finance Minister's budget speech. It would have been in keeping with his description of the economic picture of the State, if he had announced certain concrete proposals for inducing industrial entrepreneurs to move to the interior of the State.

It is, however, gratifying to note that Mr. Wankhede has emphasised the need for a "rigorous control on non-Plan expenditure." He considers this to be one aspect of the problem of increasing resources for development. The other aspect is that of directly increasing resources for Plan activities. This, according to him, is partly a question of further taxation. He has added that "while this will have to be resorted to, to some extent, Government is keen that the necessity for further taxation is kept to the minimum by the increasing participation of the people in the Small Savings Movement." Side by side with procuring of resources, the State Government will do well to practise utmost economy in its expenditure, with due priorities assigned to industrial development. Although the second Plan outlay in the State (Rs. 214.04 crores) is expected to exceed the original allocation by about Rs. 10 crores, this is being achieved by providing for larger expenditure under social services, community development, etc., where the return is practically nil. In the case of industries and mining, a large shortfall, that is, as much as 40 per cent., is anticipated. There is thus an urgent need for rearranging the priorities in the State Plan in such a way as to restrict the expenditure on unproductive schemes and to expand the investments on projects that will yield sizable surpluses for reinvestment.

POWER LINK ACROSS ENGLISH CHANNEL

The power link proposed to be constructed between Britain and France across the English Channel, apart from being a tour de force of modern engineering, is a remarkable example of international co-operation between two neighbours in the judicious use of their resources to mutual advantage. The cross-Channel submarine power cable link will connect the national electricity systems of Britain and France. This will enable the English housewife to cook food, at times, by melting Alpine snows and her counterpart across the Channel to heat her iron by coal from British collieries.

The cable connection will enable both the French and British networks to transfer to each other, according to needs, hundreds of megawatts of power. This is possible because of the marked dissimilarity in the patterns of electricity consumption in Britain and France. As planned at present, the connection will transfer 160 megawatts of power from one system to the other at peak periods. It will also transfer power, at other times, to meet conditions of surplus or shortage. The chief advantage of such a link is that, as one country can call upon the other for extra generating capacity, the necessity to build expensive additional plants in each country is obviated to the advantage of both.

Half the cable line will be laid by Britain and the other half by France. The Associated Electrical Industries Ltd. and the British Insulated Calender Cables Ltd. have already been given a £6,10,000-contract for laying the British half of the link by the British Central Electricity Generating Board. The other half will be laid by cable-making companies appointed by Electricite de France, the French counterpart of the British Board.

The connection between the 275,000-volt supergrid in the U.K. and the 225,000-volt French network will be by a direct current circuit of 160,000 kilowatts, with a 20 per cent. overload for isolated periods of 30 minutes. The direct current transmission will operate at 200,000 volts between poles, with its centre point earthed, and the cables will be insulated for a nominal voltage of 100,000 volts to earth. The normal, full load current will be 800 amperes. When complete, this submarine circuit will carry the heaviest D.C. load ever transmitted under water.

The channel connection will consist of two 30-mile submarine cables routed between a point near Dungeness, Kent, and Le Portel, a suburb of Boulogne in France with three-to-four-mile sections of land cable at each end. Converter stations able to rectify from alternating current to direct current and invert from direct current to alternating current are to be sited at Lydd, in Kent—from where connection will be made to the British grid system through a 275,000-volt line to Canterbury—and at Echinghen, near Boulogne. The D.C. circuit will go via underground cable from Lydd to a link-house at Dungeness. The circuit will also join the French 225,000-volt grid system by underground cable from the coast, at Le Portel, to the converter station at Echinghen. The depth of the Channel over the British half of the route reaches to a maximum of 20 fathoms, while the maximum in the French half is about 30 fathoms.

The cables themselves as developed successfully from sea trials are of the impregnated paper-insulated solid type. The land cable will be similar in design to the submarine cable, except that neither anti-twist types nor submarine anti-corrosion protection will be used. The armour wires will be considerably smaller in size. Each country will be responsible for its own land section and half of the submarine section from the coast to mid-Channel where the cables will be joined together.

The connection is one of the most ambitious submarine power transmission links ever to be installed. Work has already begun on the construction of the converter station at Lydd and, by 1961, when the manufacture and laying of the submarine and land cables will have been completed, a new reserve of power will be obtainable economically for both countries.

It is estimated that the cost of manufacturing and installing the direct current cables and associated equipment will be about £4.6 million. The power link will make available to Britain, at times of peak demand, the equivalent of generating plant capacity which, if it had to be installed, would cost about £8 million. The cross-Channel interconnection is expected to result in net annual savings of £250,000 to Britain alone.

MASTER PLAN FOR DELHI

The draft master plan for Delhi, published by the Development Authority, will be widely welcomed. For one thing, it is based upon surveys of the various aspects of the urban life in the city. It will, therefore, serve as a model of its kind for other urban planners. Secondly, the future of Delhi has more than a mere local significance. Being the capital of the country, the city should be well-planned and its standard of amenities in keeping with its national status. That today Delhi is far from being a national city is the opinion of all visitors to that centre. Neither the residential facilities for an average (as distinguished from an affluent) visitor nor the means of communication within the city itself are of an order that inspires people. The fact is that those who go to Delhi to represent their case to the Government, or for business, jobs or education, have reason to feel disappointed by the standard of amenities it affords.

The aim of the plan is to harmonise Old and New Delhi—no two areas situated so close to each other have been so further apart in spirit—to set right the adverse consequences of past unplanned growth and to regulate future development. The plan deals with four distinguishable areas: (1) Delhi-New Delhi areas (170 sq. miles); (2) rural areas (400 sq. miles); (3) metropolitan area including Ghaziabad, Faridabad, Bahadurgarh and Narela (800 sq. miles) and (4) national capital region (4,500 sq. miles). A study of Delhi's topography, it is stated, shows that there are definite limitations to expansion towards the north, because of swampy and floodable land, towards the south because of hilly and rocky land, and towards the south-west because of saltpetre in the soil. The only directions in which urban expansion can take place are towards the west, north-west and in Shahdara. There is no doubt that expansion must be planned and promptly executed. The city's population is growing. Out of the total population of 1.75 million in 1951, about 640,000 were economically active. By 1966, the working force in Delhi is expected to rise to one million, and by 1981 to two million, of which the working force in industry alone will be 525,000. It will be desirable, according to the master plan,

LONDON LETTERS

THE TWO SIDES OF CONTROL

(From Our Own Correspondent)

LONDON, 15*th July*

EARLY this week, the Opposition in Parliament had the opportunity of slating the Government for their restrictive economic policy. "In quick succession," denounced the Shadow Chancellor, Mr. Wilson, "there had been a tight Budget, hire purchase restrictions, the reintroduction of the credit squeeze, the announcement about cuts in Government expenditure and a crisis level Bank Rate of 6 per cent... simply because production has increased."

It seemed a frightening indictment, especially when the point was rubbed, in that the credit squeeze had been put on at a time when industrial investment in manufacturing industry was still below the level of 1957. While, as for the cuts in Government expenditure, what could look worse than to point out that, if they had the money, anybody could build a public house or some other place of entertainment, while a school, because it came out of public money, would be denied as inflationary. The last, indeed, was the Opposition's sharpest barb, and the one that the Government could not answer.

The Government, declared the Opposition, were hagridden by the fear of renewed inflation; they could not achieve full employment without lurching into crisis; if wages attempted to rise as fast as productivity, then the Government "reacted like a group of frightened sheep." And with all this, while imports had risen 18 per cent. in the early part of this year against last year, exports had only risen 11.5 per cent.—while, in the Sterling Area, exports were continually on the decline: 4 per cent. last year and a further 2 per cent. up-to-date this year.

Then, abandoning logic, the Opposition spokesman declared that it was an internal boom that was pushing up imports and deflecting exports. So the case against the Government became one of denouncing them for taking anti-inflationary measures and denouncing the results of the inflation against which the Government were taking measures.

However, if one leaves the political byplay aside, it still looks a frightening indictment—but the very features which build it up made the props which the Chancellor of the Exchequer, Mr. Amory, used in justifying the Government's policy.

Mr. Amory has now decided to retire at the end of the present Parliamentary session, and this occasion was the last one in which he would be sustaining the Government's economy policy—his own creation. The Chancellor believes, indeed insists, that the main enemy now and in the years to come will be inflation. He is quite prepared to give the appearance of fluctuating policy, only he insists that it is not that. The policy remains a firm one throughout—to avoid inflation. "Sound planning," he said, "could only take place against a background of an economy kept in proper balance," and there we have, in a nutshell, Mr. Amory's economic policy—to keep the economy in proper balance.

How the late Lord Keynes would have thundered against such a philosophy! In his masterly analysis of the factors that motivated capitalist economies ("The General Theory, etc.") he pointed out that it is perfectly possible to keep an economy in balance at the lowest level of activity: unemployment may be rife, the standard of living may have sunk to a subsistence level, and the economy may be in proper balance. The problem of a modern capitalist State is not simply to keep the economy in proper balance, but to have that balance at the highest possible level of productive activity. Mr. Amory has not got the answer to that, and the Opposition, when in office, never showed that they had.

When the Chancellor of the Exchequer turned to the external position of the U.K., he made an interesting declaration of British policy towards Europe. The Government, he said "wished the Governments of the European Economic Community well in their constructive project. The British Government's desire was to see a single European system established in which all could participate. That desire was shared by their partners in the European Free Trade Association and by many in the Six." But, of course, the fact that everybody would like to achieve this happy result and the happy result has not yet been achieved, makes it clear that more is needed than aspirations.

As for Britain's position *vis-a-vis* the world, the Chancellor stressed that, in 1959, the balance of payment surplus on current account was not sufficient to pay for investments, and lending and other expenditure abroad. The country needed a bigger current surplus, but yet the rise in exports appeared to have levelled off. In the Government's view, we were still not earning enough to pay for the country's overseas commitments, including very heavy capital commitments to underdeveloped countries, and that, in Mr. Amory's view, was adequate justification for all the measures of internal credit control. Productive effort had got to be directed overseas.

Finally, the Chancellor laid down his articles of faith.

(1) the more promptly controlling action was taken the less drastic and the more effective;
(2) the balance of payments must be safeguarded, sterling strengthened, inflation warded off and price stability preserved;
(3) we must be able to compete in earning revenue overseas.

So this is how Mr. Amory will now go down into history. It is good, it is fine, but it is not progressive.—*All Rights Reserved.*

II

THE FETISH OF MULTILATERALISM

LONDON, 8*th July*

(Delayed in transit)

Two things have happened recently to worry the British Government into thinking that they must gird on once more the sword of multilateralism which they wielded with such effect in the days of post-war European recovery. In those days, many countries, quite certainly all the so-called "satellite" countries, tried to do deals with Britain which were more or less naked barter. These deals, favoured by interested Supply Departments in the U.K., broke down on the rock of Treasury resistance, a rock securely rooted in American support. However simple or advantageous a barter transaction might appear, it must be condemned because it was barter. Deals must be done on a cash basis on either side—the seller free to use his money where he wished. Devices such as non-transferable sterling had sometimes to be tolerated, but the Treasury was determined, and succeeded, in abolishing these as rapidly as possible. The British Treasury had the strongest conviction that the strength of sterling depended on its universal use, and that barter, which eliminated the use of sterling, would in the long run be detrimental to the country's interests.

One of the recent incidents which has made the issue alive again has been the barter transaction between Cuba and Russia, involving the swop of sugar against oil. America has her own oil reasons for opposing the transaction, but the British Government is against countenancing it, because of its own horror of barter. Accordingly, the British Government finds itself in complete sympathy with the oil interests concerned and this is likely to make her an automatic supporter of whatever American policy over Cuba may emerge.

But, in the second instance, Britain, to her surprise, finds herself taking an opposite stand to America. The instance is the growth of the Development Assistance Group, which is the "western" consortium which embraces countries adherent to the "west," such as Japan, concerned with devising the best machinery for co-ordinating aid to deserving developing nations. This week the Group is meeting in Germany, and Britain has been concerned at the spread of the system of tied credits, a common medium of extending such aid. If the U.S. or Germany, for instance, had wished to offer aid for development, it said to the recipient country that it might draw to the extent of x million dollars or reichmarks *only to be spent* in the creditor country. Now the U.K. cannot offer as much aid as the U.S., for instance, but the U.K. can often offer the same goods more cheaply, and the British Treasury regards it as quite contrary to British interests that development credits should be given that cannot in any circumstances be spent in the U.K. Such tied credits smack of barter. They mean that trade must be bilateral instead of multilateral, and, to put the matter on a high moral plain, aid, instead of being co-operative, becomes competitive.

West Germany had a balance of payments surplus last year of £450 million and the U.K. considers that a country with such a surplus should not tie any strings to whatever form of aid is given. The U.S.A. is not enjoying a surplus at present, but Britain's appeal to her is on the broad grounds of trade policy. America is a believer in the widest freedom of trade, and it pained the members of the British Delegation to argue with those they had thought were the very apostles of the creed of freedom.

It seemed to them immoral of the U.S. Treasury representatives to argue in defence of tied credits which they said were the only means by which a country with a balance of payments deficit could give aid. The American line on this was not quite the same as the German, since they had not attempted to support tied credits by countries with a favourable balance. But the rest of the world will find it hard to accept the idea of America as a weak trading country unable to extend aid abroad, unless the dollars are spent in the U.S.A.

At the moment, it does not seem as if the U.K. Delegation will get its way, but the effect of this on the British Treasury purists will be to make them resolve more than ever to defend the principle of aid to be freely expended in the markets of the world, but, at the same time, to make them cynical of the absence of true principles governing American trade policy.

As far as recipient nations are concerned, while it is comforting to be credited with currency which could be spent anywhere else in the world, they are likely to accept that it is up to them to make the best deal they can with each potential creditor. After all, a credit with strings to it is better than no credit at all.—*All Rights Reserved.*

I.C.I. TO SPEND £10 MILLION ON NYLON EXPANSION

The Imperial Chemical Industries of Britain is to spend £10 million to provide additional capacity for the manufacture of nylon polymer. Presumably the plant, which will have a capacity of about 15,000 tons a year, will be at Wilton. The decision to build this extra plant is said to have been based on the need to "meet the expected increase in demand for nylon from the textile and plastics industries," but a clearer indication of its purpose is suggested by the fact that it will produce nylon 6 polymer. The existing ICI capacity and the one at present under construction are all designed for the manufacture of nylon 66. But nearly two months ago, British Nylon Spinners, which is owned half by ICI and half by Courtaulds, and which obtains its supply of nylon polymer from ICI, announced that it planned to expand its Gloucester factory and that the products made in the extension would be of nylon 6 types. It thus seems clear that the output of the additional I.C.I. capacity will feed the B.N.S. extension which is scheduled to come into production in about thirteen months time, according to the B.N.S. statement. In that statement it was also revealed that the extension would include "further provision for the industrial yarn market, including tyres." Nylon type 6 is generally suitable for tyres and it can also be used in various forms of heavy industrial yarn. One new feature of the planned I.C.I. expansion is that it will include facilities for the making of caprolactam, which is the monomer from which the nylon 6 polymer is derived. Caprolactam has not hitherto been produced in this country.

SURVEY

(Concluded from previous page)

to find ways and means to make available opportunities for industrial employment to about 140,000 persons in towns and cities around Delhi, in addition to those who are expected to stay there anyway.

The housing shortage, which is already acute, will become worse with the passage of time, unless constructional activity is speeded up. Last year, the shortage was estimated at 100,000. And Delhi is a city, the population of which is increasing at the rate of 100,000 persons a year. It is computed that, by the end of the third Plan, provision will have to be made for about 25,000 houses for Government employees, 25,000 subsidised houses for low-income groups and for developed land for about 60,000 dwelling units for the same category to enable them to build their own houses. In addition, steps for developing land for about 16,000 houses for the higher-income groups will have to be taken.

Impressive and well-documented as the plan is, it can by no means be regarded as a blue-print for immediate implementation. There is no indication of what the schemes it recommends will mean in financial terms. Subsequent studies are expected to tackle this problem. Those in charge of administering the plan will have to face the difficult task of laying down some order of priority in which it should be implemented. The plan suggests the appointment of an *ad hoc* committee, consisting of representatives of U.P., Punjab and Delhi to advise the Government on its implementation. Perhaps the committee could acquire a national status through inclusion of one or two Members of Parliament. After all, since Delhi is the national capital, visitors from other parts of the country should find it an agreeable place during their sojourn. A master plan for Delhi should necessarily reckon with the problem of a large floating population. No serious thought seems to have been given to this aspect of the city's development.

FOREIGN FINANCING FOR INVESTMENT PROJECTS

CRITERIA FOR ACCEPTANCE OF ASSISTANCE

By M. S. Parthasarathi

AN attempt is made in the course of this article to formulate certain criteria for judging any offer of foreign financial assistance for setting up investment projects in an underdeveloped country. The objective is to ensure that the country is not burdened with external debts which need not have been contracted at all. Incidentally, this will make certain that the country concerned accepts foreign assistance, only if the project for which aid is being offered passes certain economic tests. In any case, it is obvious that acceptance of foreign assistance can be justified only if its non-acceptance will lead to certain undesirable results or its acceptance will give rise to certain desirable results which cannot otherwise be obtained. The aid-giving countries and international organisations, as well as countries receiving aid, should be interested in seeing that international obligations between nations do not accumulate except on economically justifiable grounds. The growing volume of criticism in both aid-giving and aid-accepting countries on the misuse or wasteful use of foreign assistance makes a restatement of the principles that should govern the giving and acceptance of foreign aid important, particularly for India which is now on the threshold of the third Five-year Plan. Discussion hereafter will, therefore, be centred on the problems confronting this country.

Scheme in Third Plan

The third Five-year Plan, the broad outlines of which have now become public, assigns an important place to assistance from abroad in the scheme to raise resources for the public sector. (For details of the scheme, *vide* page 79 of *Commerce* dated 9th July 1960). Two objections are possible to this scheme of financing. One is that borrowings of one sort or another will be called upon to provide almost 65 per cent. of the outlays. This will add to the domestic debt burden of the Central and State Governments. The second and more serious objection is that this procedure also adds to the international debt burden of the country. This criticism is perfectly valid, particularly because the total foreign assistance expected for the third Plan is Rs. 3,200 crores, of which Rs. 300 crores is for the private sector, Rs. 500 crores to meet interest and repayment obligations and Rs. 200 crores in the form of P.L. 480 foodgrains for buffer stocks. Before proceeding further, it must be pointed out that there is no ground for entertaining any fears on account of a growing domestic public dept. Any student of economics knows that there is very little meaning to the size of a country's domestic public debt, such as to cause concern, apart from its impact on the distribution of incomes. A large internal governmental debt markedly shifts income from the working sections of the population, who are by and large non-holders of Government securities, to the non-active or comparatively less active sections. This may have two consequences. It will aggravate disparities in income, and it may act as a disincentive to greater effort by the active workers. Most modern tax systems are, however, designed to offset these effects, and many Western nations have only tolerable inequalities of incomes, and some of them are even socialistic, in spite of a huge domestic public debt. Moreover, most of the public debt is nowadays held by banks, life insurance and provident funds and other institutional investors, so that the transfer-of-incomes argument has little validity.

Drawbacks

Unlike domestic borrowings, loans from abroad, it can be argued, involve the country in some loss of real resources, taking the long run into consideration. In the first place, it is said that a country cannot borrow abroad without paying interest, so that repayment will exceed the principal by the amount of interest paid each year until the loan is finally cleared. As is well known, international price movements tend to disfavour an underdeveloped country over a period of time, with the result that the cost of imports will go up, thereby reducing the country's capacity to save out of current foreign exchange earnings to pay the interest on its foreign debt. This leads one to the second argument, namely that a country borrowing abroad will be put to loss of real resources. The terms of trade of a borrowing country, particularly if it is a developing country and an exporter mainly of primary products, tend to move against it, calling for larger exports to pay for the same quantity of imports. The chances of this happening cannot be overemphasised, since a developing country is at the same time trying to readjust the pattern of its foreign trade, and in so doing will find the traditional rigidities of world trade operating against it.

Not So Serious

But neither of these drawbacks of borrowing abroad is quite so serious. The argument that a foreign loan involves an ultimate drain on the ground that interest will have to be paid is somewhat specious, because, if domestic capital is entitled to receive interest, so is foreign capital, whether it is governmental, institutional or individual capital. Just as no individual will borrow unless he thereby hopes to make a profit, no nation will or must borrow abroad, unless the benefits thereof will outweigh the interest that will have to be paid. Thus, on balance, the ultimate and sole justification for seeking or accepting a foreign loan is that it will benefit the domestic economy after meeting the service charges on the debt.

As regards the second drawback, since international loans are generally in the currency of a country, nearly always in the currency of the lender, and not in terms of real resources or in terms of gold whose value can appreciate, the additional burden imposed by any worsening of the terms of trade will invariably be more than offset by the gradual tendency of prices in general to rise and thus depreciate the real value of any loan in terms of a specified sum of money. This, however, assumes that the unfavourable shift in the terms of trade will not force the borrowing country to devalue its currency. In fact, devaluation is the third, and worst, situation in which the borrowing country will find that it has to pay far in excess of what it borrowed to repay a foreign loan, how much in excess depending on the extent of the devaluation.

Ways of Borrowing

The three possibilities which may add to the real burden of the foreign debts of a country will not apply equally to all types of international borrowing. It is necessary here to point out that a country can contract an international debt in one of several ways. One, the Government of the country concerned can float a loan in an international money market, with the consent of the Government in whose jurisdiction the market is situated. This method of foreign borrowing is now very rarely resorted to or permitted. Two, the Government of the borrowing country can borrow from foreign governments, international agencies or foreign private financial institutions. All these loans will usually be in the currency of the lending country. Three, private businessmen in the borrowing country may seek loans from foreign and international lending institutions; these loans will usually be in foreign currencies too. Four, foreign private capital may be allowed to come into the borrowing country, either by itself or in partnership with native business men. It must be emphasised that the inflow of foreign private capital will land a country as much into debt with the rest of the world as outright borrowing by the Government of the country concerned, though the fact of the burden arising is not highlighted, as such transactions do not figure in the Governmental budget. They will, however, figure in the balance of payments, which is where one should look for gaining some idea of a country's international obligations. One point in favour of foreign private investment is that this is the only type of foreign capital inflow into a country which will not add to its international debt burden in the event of a devaluation of the borrowing country's currency.

Effect of Creeping Inflation

Before entering into a detailed analysis of whether it is worthwhile on economic grounds for a country to borrow abroad to finance investment projects, the one major factor which would favour a borrowing country in the long run needs to be re-emphasised. The general price level in all countries has a secular tendency to rise. This rise has on the average been about 2 per cent. a year even in the most prosperous and economically sound country. The result is that loans such a country gives to foreign countries depreciate annually at the same rate. Therefore, if the rate of interest is not excessive and if the terms of trade do not move too adversely, the borrowing country will find that the real burden of its international debt is getting reduced year by year. In the case of foreign private investment, this factor will operate even more in favour of the debtor country. Since it will be undergoing the processes of economic development, the debtor country will experience considerably higher price increases than will the creditor country. As private foreign investment will be in the debtor's currency, the real value of the original foreign investment will depreciate even faster. However, this may be more than offset by the larger profits of private investment. In addition, private foreign investment will be in industrial plant, buildings and other real property whose monetary value too, will appreciate all the time, perhaps keeping pace with, or very often outmatching, the general price level and the resultant depreciation in the value of the currency unit.

The foregoing preliminary considerations provide the background in which one can judge whether contracting international debts in one form or another to finance the economic development of an underdeveloped country is justifiable. One of the basic assumptions of this study is that an international debt is contracted only to finance productive investment. The question to be considered in this context is whether the product of foreign borrowing is of sufficient value and importance to warrant the additional international payment obligations being assumed by the country. It is, of course, possible that the borrowing country will fail to use a perfectly justifiable loan to good purpose or may even misuse it. These are administrative and political problems with which we are not concerned here. It is but reasonable to take it for granted that lending countries will, before giving a loan, evaluate the chances of the borrower putting the loan to good use. It is possible that creditor countries will make some allowance for waste in the utilisation of foreign assistance, but, after all, they stand to lose nothing, so long as the borrowing countries are in a position to honour the debt. It is therefore, incumbent on the borrower to take every factor into consideration before running up international obligations.

In the present situation of most underdeveloped countries, contracting, or trying to contract, external debts has almost become an essential part of their efforts to mobilise resources for development. The reasons are simple. Most underdeveloped countries unfortunately do not save enough to finance an investment programme which will set in motion within a short period of few years an automatic and self-generating process of economic expansion. Consequently, they have to depend on foreign loans to bridge the gap between available domestic savings and the minimum amount of investment needed to help the country go forward to the so-called "take-off" stage. Besides overall scarcity of savings, the pattern of production in backward economies is usually such that even the available or mobilisable domestic savings are in the form of resources which cannot be directly diverted to investment. The problem is to sell abroad domestic goods equivalent to and representing the savings available, over and above financing non-development imports, to pay for the import of additional capital goods, so that the domestic savings available can materialise into productive investment.

The Minimum Condition

It is logical, therefore, to expect underdeveloped countries seeking foreign loans to direct them into lines of activity which will make easier the task of mobilising increasing amounts of savings out of a rising national income and channelling them into investment. So long as this comprehensive objective is being accomplished, it can be asserted with confidence that foreign loans obtained have been utilised for a sound economic purpose. This statement, however, needs to be qualified. Evidently, a country will borrow abroad either to produce goods and/or services (in some cases) which will replace imports or which have a good and ready market abroad and can be exported to pay for the import of capital goods. The second alternative involves some risk as its success in expanding exports will depend a great deal on the international economic situation. Also, the domestic demand for the commodity in question may increase so much that the producer or producers feel no need to maintain or step up exports, though the interests of the country may demand that they should. In this eventuality, not only will the original purpose in contracting the loan not be realised, but even the servicing of the debt may have to be done out of the normal export earnings of the country. An investment of this type financed by a foreign loan, whether in full or only in part, can be justified only if the additional exports it helps in creating will pay for both interest payments and repayment of instalments of the principal falling due. It will be much better if, in addition, it also helps in transforming at least the extra money savings out of the additional income generated by that investment into additional real investment. In fact, such industries as can do this should be given preference. If it does not accomplish these things, it will be a misdirected and economically unjustifiable international debt. So long as a project satisfies the minimum condition, foreign assistance for the project should be welcomed, since new enterprises involving foreign collaboration, besides providing additional incomes, create new opportunities for nationals of the developing country to acquire technical and managerial skills, which will surely improve the total economic potential of the country.

Producer and Consumer Goods

In trying to replace imports of manufactured commodities by home production, an underdeveloped country may seek either to process domestically available raw material or imported raw material. In either case, so long as domestic consumption of the commodity concerned does not show any abrupt jump, domestic production will be cheaper to the country as a whole, in terms of the foreign exchange which will have to be laid out on the commodity. However, where a country borrows abroad to set up such an industry, certain factors will have to be taken into consideration. Let us first examine the case of an industry which will process domestic raw material. If it is an industry which will turn out producer goods which can directly go into investment, ordinarily no further justification for seeking a foreign loan is needed. It is possible that, in the absence of anything definitely more worthwhile to establish, establishment of an industry producing consumer goods machines will be worthwhile, as it will be easier to export these machines to earn foreign exchange in the normal way to pay for extra machinery imports in the near future. This, of course, will have to be judged on an individual basis.

On the other hand, if the new industry to be set up with foreign aid is a consumer goods industry, it will be necessary to consider what the country was doing with its output of raw materials and what quantity of the finished product it was importing. If, on balance, the export of raw material was bringing in more foreign exchange than the cost of importing finished goods, the new investment to be financed by a foreign loan should not adversely affect the country's foreign exchange earnings from the export of raw material. In addition, it must earn sufficient additional foreign exchange to service the loan, either by export of the finished product or by a more economical use of the raw material, facilitating larger earnings from the export of raw material. It may very well be that, when the idea of a foreign loan for such an industry is first mooted, the preliminary conditions stipulated above will be fulfilled. As time passes, production may be expanded without any further loan to such an extent that servicing the debt becomes a charge on the general balance of payments since this particular industry's contribution to foreign exchange earnings may dwindle to nothing. If this type of expansion takes place, and if the original foreign financing was in the form of private investment, reinvestments will multiply the service charges to many times what it was originally, and all of it having to come out of the regular foreign exchange earnings.

In the case of an industry which will have to process imported raw material, the situation can become even worse. Even here, however, if the industry for which a foreign loan is being contracted will produce investment goods, the objections will apply only in so far as it does not produce the right type of investment goods or too much of the same type of investment goods. It is, therefore, necessary to evaluate the importance of the product to the economic development of the country, the recurring saving in foreign exchange after allowing for service charges by setting up domestic capacity as compared with recurring and perhaps increasing imports, and the chances of production expanding to undesirable levels, thereby adding to the service charges in foreign exchange and import requirements of raw materials and, consequently, diverting real resources from other more desirable uses. An industry using imported raw material may easily expand production to levels far in excess of the best year's import of the final product made from that raw material, requiring larger recurring foreign exchange outlay for the import of raw material to feed the domestic industry. It may be easy to cut down the import of the final product in a tight year if there were no counterpart domestic industry, but a similar reduction of raw material import will be much more difficult since domestic productive capacity will then be forced into idleness with the resultant labour and other kindred problems. All these contentions will have greater force, if the industry proposed to be set up with foreign loan assistance is a consumer goods industry, because such an industry

speeds the nation

Remarkable Features:

Appearance: Streamlined body of superb finish.

Weight: 85 kilograms (187 lbs.) only.

Speed: Accelerates rapidly to 85 kilometres (53 miles) per hour.

Economy: 45 kilometres per litre (128 miles per gallon).

Engine: Powerful, yet extremely noiseless, due to improved new carburettor similar to that of cars. This 2-stroke 150 cc. 5.5 BHP Engine incorporates a patented timing gear system which allows the use of 2% gasoline-oil mixture (as against normal 4% to 5%). This means substantial economy in fuel consumption and reduction in maintenance costs.

UNDER SECRETARY TO GOVT. 25 JUL 1960 PUBLIC DEPARTMENT

COTTON TEXTILES IN THE THIRD PLAN

TARGET FOR DECENTRALISED SECTOR QUITE LIBERAL

THE Planning Commission expects the demand for cotton fabrics to rise by an average of 300 million yards per annum during the third Plan period. On this basis, the total domestic requirements of fabrics are estimated at about 8,500 million yards by 1965-66, as against the current annual consumption rate of about 7,000 million yards. In addition to the domestic demand of this order, the quantity of cloth required for export purposes is put at 800 million yards, which more or less represents the current rate of shipment. The aggregate requirements of cloth are thus placed by the Commission at 9,300 million yards. This compares with 7,610 million yards, the estimated production for 1960-61, the last year of the second Plan, that is, 1960-61. Accordingly, the Commission has fixed the target in the Draft Outline of the Third Plan, at 9,300 million yards. Of the additional 1,690 million yards of cloth, more than fifty per cent.—890 million yards, to be precise —has been earmarked for the decentralised sector of the cotton textile industry (handlooms, powerlooms, *Ambar charka* and *khadi*), leaving the balance (800 million yards) to be produced by the mills. The table below indicates the actual targets of production fixed for the two sectors:

(Yarn in million lbs. and cloth in million yards)

	1965-66 (Target)	1960-61 (Estimate)	1955-56 (Actual production)	1950-51 (Actual production)
Cotton yarn	2,250	1,900	1,640	1,179
Cloth:				
Mill	5,800	5,000	5,102	3,720
Handloom		2,125	1,471	742
Powerloom		405	273	148
Khadi	3,500	48	29	7
Ambar cloth ..		32	..	..
Total handloom, powerloom, etc...	3,500	2,610	1,773	897
Grand total cloth ..	9,300	7,610	6,875	4,617

The capacity targets of yarn and cloth for 1965-66 are 2,250 million lbs. and 5,800 million yards, respectively; corresponding estimated figures for 1960-61 are 2,100 million lbs. and 5,300 million yards.

It will be seen from the above table that, out of the 9,300-million-yard production target for cotton piecegoods to be reached by the end of the third Plan, the target envisaged for the decentralised sector of the textile industry is quite liberal, being 3,500 million yards. Its break-up as between the different segments, namely, handlooms, powerlooms in the handloom sector, other powerlooms and *khadi* (including that made from a mixture of *Ambar* and ordinary *charkha* yarn) is yet to be finally determined. For the handloom industry, however, a production target of 2,800 million yards by 1965-66 has been suggested and this represents a rise of 675 million yards as compared with the estimated output of 2,125 million yards in 1960-61. The additional quantity is proposed to be secured partly by bringing into active use about 200,000 looms which are at present idle and partly by improving productive efficiency through technological improvements, including gradual installation of semi-automatic looms, as well as by strengthening the structure of handloom co-operatives. With regard to the powerlooms in the handloom sector, it is proposed to concentrate on the installation of 13,000 powerlooms already approved during the second Plan period. The emphasis in organising the additional production of *khadi*, it is said, "will be on meeting local requirements of consumption, so that the difficulties of marketing large surplus quantities are avoided."

Progress Made So Far

The development programme for the decentralised sector of the cotton textile industry, as envisaged in the Draft Outline of the Third Plan, would appear to have been based on the progress reviews made by the handloom and *khadi* Working Groups. The reviews reveal that the production of handloom cloth has increased from 742 million yards in 1950-51 to about 2,125 million yards (estimated) in 1960-61 and that of traditional *khadi* from 7 million yards to 48 million yards. The estimated output of *khadi* cloth woven from a mixture of *Ambar* yarn and ordinary *charkha* yarn in 1960-61 is 32 million yards. The total number of handlooms in the co-operative sector has risen from 680,000 in the middle of 1953-54 to about 1.2 million at the beginning of 1959-60. Fuller employment, it is claimed, has been provided to approximately three million handloom [illegible] and part-time employment to nearly a million spinners, besides whole-time employment to carpenters, blacksmiths, etc., engaged in the manufacture and repair of equipment in *saranjan karyalayas*. It is said that marketing of *khadi* presented considerable difficulties during the latter half of the second Plan period and that sales of handloom cloth have also had occasional setbacks. The installation of powerlooms by co-operatives of handloom weavers has been slow. Thus, out of 13,000 powerlooms already sanctioned, only about 3,500 are expected to be installed by the end of 1960-61.

Spoon-feeding

It may be true that there has been a marked expansion in the output of handloom cloth during the last ten years, the estimate for 1960-61 being 2,125 million yards, as against 742 million yards in the base year of the first Plan (1950-51), or a rise of 1,383 million yards over the ten-year period. It must be noted that these figures are only estimates, the veracity of which is not free from doubt. The production figure for 1950-51, in particular, seems to be a gross underestimate. In any case, it is not a representative year, as yarn supply to handlooms in that year suffered a marked fall as the mills were busy with the Korean war boom. But this consideration apart, one wonders if the rise in production of handlooms would have been possible but for all the spoon-feeding by the State—reservation of markets in certain varieties of cloth *vis-a-vis* the mills, adequate yarn supply, full tax remissions, and active financial assistance in the form of loans, grants, rebate on sales, etc. The total expenditure on handlooms and powerlooms in the handloom sector during the second Plan period is put at as high as Rs. 32.1 crores and the allocation made in the third Plan is Rs. 36.0 crores.

In spite of all this State aid and encouragement, there is as yet no sufficient indication to prove that the productivity of the looms has registered any significant improvement. It is not surprising, therefore, that the prices of handloom fabrics continue to be higher than those of mill products, so that the incidence of reservation of spheres of production, the rebate scheme and the excise duty on mill cloth is ultimately borne by the consumer. It is, however, gratifying to note that the Planning Commission has emphasised in the Draft Outline that the role of subsidies, rebates on sales, and sheltered markets must be progressively reduced, and that efforts be directed more intensely towards improving the productivity of the worker through positive forms of assistance.

WOOLLEN GOODS EXPORT INCENTIVE SCHEME

The Export Promotion Directorate has revised the woollen goods incentive scheme of 21st October 1959 with effect from 1st April, 1960 without affecting the obligations undertaken by exporters under that scheme. Accordingly, exports of woollen goods and carpets made on and after 1st April 1960 are now governed by this Special Export Promotion Scheme for woollen goods for 1960-61. The exporters of carpets, druggets and rugs are now entitled to import raw materials—wool, wool tops, shoddy wool and permissible dyes and chemicals—only if they are registered under this scheme with the All-India Handicrafts Board. The import licences are issued on the following basis:

For dyes and chemicals: to the extent of 5 per cent. of the f.o.b. value of exports; these are issued to all registered exporters.

For woollen rugs and druggets and inferior carpets up to 10 per cent. and for carpets having more than 61 knots per sq. inch: 20 per cent. of the f.o.b. value of the exports; these licences are issued to the exporter/manufacturers and to the manufacturers nominated by the registered exporters.

The import licences will be normally issued on the basis of the past exports, though the All-India Handicrafts Board may also recommend issuing "Special Licences for Export Promotion" to the registered exporters on the basis of prospective exports against firm orders to the value of Rs. 25,000 or above. In the latter case, the exporter must export the required amount of goods within six months of the import of the raw material.

The scheme also applies to exports against payments in rupees under special arrangements. Exports to Nepal, Sikkim, Bhutan and Portuguese possessions in India are not taken into account.

Non-fulfilment of the export target fixed for the individual exporters without any good reason, within the specified period, will be taken into account at the time of the registration for the next or the subsequent period.

CARPET EXPORTS DURING 1959

India exported carpets worth about Rs. 5 crores during 1959, as against Rs. 4.65 crores in the previous year. Carpets earn the maximum foreign exchange for the country among the Indian handicrafts. A 2 per cent. decline in sales to the European countries at Rs. 2.93 crores was more than offset by an increase of 34 per cent. to the American countries. The American purchases aggregated Rs. 1.78 crores. Exports to African countries also recorded a rise. There was, however, a fall of 50 per cent. in exports to the Oceanic countries. Asian countries also bought less. The value of woollen carpets exported by India to some of the important countries during 1959 as compared with 1958 is given below

(In lakhs of rupees)

Countries	1959	1958

STRIKE IN B. AND C. MILLS

It is deplorable that the 15,000 workers of the Buckingham and Carnatic Mills in Madras have gone on an indefinite strike with effect from the 15th inst., despite the considerable spirit of accommodation shown by the management on the question of implementing the Wage Board award. When the millowners and labour leaders reached an understanding on the Wage Board award on 30th June last, the management of the B. and C. Mills expressed its inability to accept the terms of the agreement on the ground that its workers were given certain cash benefits which were not enjoyed by most other mill workers in the State (night-shift allowance, temporary war production bonus and one per cent. annual rise in wages of certain sections of workers) and which should be set off against the increase in wages recommended by the Board. Subsequently, however, the management agreed, thanks to the mediation of the Madras Minister for Labour and Industries, to give, in addition to the wage increase suggested by the Board, night-shift allowance and also to merge the war production bonus with the perfect attendance bonus, but stated that the one per cent. rise in wages now earned by workers would be frozen at the present level and be paid as personal pay. The spokesmen for labour, however, wanted the last item alone to be referred to arbitration, while the management contended that its offer was for an overall settlement and, if there was to be arbitration, such should be on all the three points.

BOOM IN TEXTILE INDUSTRY ENDING?

VIEWS OF TWO LEADING MILLOWNERS

From Our Special Correspondent

MANCHESTER, *12th July*

SINCE the announcement of the redundancy plans in the cotton textile finishing trades was made, market discussions have persisted on an increasing scale. This section of the Lancashire textile trade has never been particularly keen to voice its opinions publicly, and attention has been directed towards the attitude likely to be adopted by the "little men" in their approach to the problems involved. It has been suggested that one of the objects of the plans now drafted is to encourage the merging of some of the smaller units or their absorption into the combines. The mere fact that compensation will only be paid for the scrapping of a complete production unit is an obvious pointer in this direction.

MANCHESTER LETTER

Those companies which have no desire to withdraw completely from the trade and wish to retain other assets they may have are thus faced with the problem of staying in and financing others to withdraw or making arrangements to combine their activities with suitable former competitors. The time factor, as in the previous schemes in the producing sections, is again of vital importance. Minds must be made up, in all probability by the end of October with the added incentive in this instance that, unless the minimum scrapping targets are attained, the whole financial burden of redundancy will be placed squarely on the shoulders of the trade itself.

Time for Reconsideration

Some explanation should be given regarding our comments last week which indicated that no firm could withdraw from the scheme after having registered its plant for scrapping. This is true once an acceptance has been received from the Cotton Board, which will not be until the end of the first participation period of three months. A change of mind within this time will be permitted, but approval of plans to scrap will be binding.

Some criticism has arisen on the terms of compensation payable to displaced operatives, but, as in the case of the earlier schemes, this agreement has been drawn up between the employers' organisations and the trade unions involved and has the backing of both official bodies. If textile finishing follows the pattern of the earlier processes, the works should eventually operate at much nearer full capacity and provide employment for not far short of the same number of operatives. At the same time, shift-working is not as easily managed as in spinning or weaving and more overtime is used to cope with sudden rushes of demand.

Everything in the scheme is being done to encourage speedy and effective disposal of units which, it is felt, can be dismantled without disturbing the efficiency of the industry. Arising from the experience gained in the earlier plans, provision is made for the setting up of realisation companies in any section. These would be non-profit-making organisations to facilitate early closing down of units and enabling firms to hand over their assets and receive suitable payments without having to wait for the lengthy legal processes which are often necessary in such matters.

Among the varying methods of eliminating surplus capacity in finishing suggested under the proposals, it is pointed out that a firm may acquire another firm and then dispose of one or more production units under its control. So long as registration of plant for scrapping is submitted during the participation period, there is no bar against recent acquisitions being included and firms may close down production units subsequently acquired.

Subsidy Decision Needed

It is no secret that a number of influential firms outside the main combines are not entirely happy about the proposals. They contend that the terms offered to finishers are far less generous than those provided in the spinning, doubling and weaving sections and the insistence of the authorities that whole units should be scrapped is not favoured. Another point on which there is controversy is the reluctance of the Government to assure the trade that a re-equipment subsidy will follow the successful elimination of surplus plant.

While it is believed more than likely that modernisation aid will eventually be available, the finishing sections do not appear to be offered quite the same incentives as the producing branches and there is more of an air of mystery about the current schemes. The "small men" generally assert that such programmes favour the "big boys" and it must be admitted that the flexibility of the combines gives them an advantage.

At the same time, as in the case of the earlier schemes, it is extremely unlikely that another opportunity of this kind, to be paid for withdrawing from the industry, will ever again be available. In the main finishing sections, surplus capacity averaging about 30 per cent. is known to exist; in particular sub-sections, it is even more, rising to nearly 50 per cent. Some methods must be adopted to consolidate the position and put an end to weak selling by small firms which are content to run their machinery into the ground.

Hard at Work

Figures issued in the Cotton Board's latest quarterly survey indicate clearly the aftermath of the redundancy schemes in Lancashire's spinning, doubling and weaving mills. Although the returns cover weekly average machine activity during the first quarter of the year, the introductory comment provides the postscript which is the vital factor. Machinery in place after the completion of the scrapping schemes at the end of March was 13,150,000 mule equivalent spinning spindles and 166,000 looms. This compares with about 25,400,000 spindles and 259,000 looms in April 1959.

How effective the reorganisation has been can be gauged from the further information that over 95 per rent. of the spindles and about 93 per cent. of the looms available were actually running at the beginning of the second quarter of the year. Average spindle hours worked per week increased from about 44 to 53 and from 52 to nearly 60 in the case of looms.

"This is a reflection of the expansion of shift-working and the increase would undoubtedly have been greater but for the fact that a considerable number of the workers displaced by the scrapping programme have not stayed in the industry," the review points out. The effect of a fall of over 17,000 in the manpower on the books of employers in twelve months has been comparatively small. The daily output rate in the first quarter of the year was ahead of the 1959 level in both spinning and weaving.

The trade situation is summed up by reports of no obvious decline in the length of order books, the maintenance of deliveries, and the continuation of retail sales of clothing at the excellent level established in the last quarter of 1959. "Despite the strong demand from the home market, there should be no general shortage of supplies with production and imports running at their current levels, though there may conceivably be difficulties in particular lines," the review adds.

Cotton Boom Ending?

A warning that the present boom in the cotton textile industry may only last another twelve months is contained in the annual report issued by Mr. Kenneth O. Boardman, Chairman of Boardman, Marden, Ltd., the Manchester firm of manufacturers and merchants. "Excellent trading conditions which we are experiencing at the moment seem certain to continue during this year," he forecasts. "By 1961 reserve stocks, which are at present negligible, should increase." Describing the Government's reorganisation scheme for the cotton industry as "successful in so far as it has eliminated a good deal of surplus machinery," Mr. Boardman says that it has yet to prove whether re-equipment will ensure full running for an infinite period in the face of Far Eastern and European competition. "If the world textile boom subsides, which may well be about the middle of 1961," he adds, "Lancashire being one of the dearest producers would be the first to be affected."

This warning was followed by Mr. James F. Simpson, Chairman of Simpson and Godlee Ltd., the Manchester textile manufacturing and merchant group, who said: "With all this apparent and real prosperity and amidst scenes of activity that have not been enjoyed since 1952, it may seem out of place to strike a cautious note. While our present position in regard to orders is a very great deal better than 12 months ago, nevertheless there is no dramatic increase in sales of textile goods over the counter in this country and there is no sign whatever of our shipping trade improving. In those two conditions, it is difficult to see where the improvement is coming from."—*All Rights Reserved.*

If you leave it to expert's selection, 'Barmil' is the obvious choice.

WHITLEY COUNCILS FOR SETTLING DISPUTES

ARE THEY SUITED TO INDIAN CONDITIONS?

THE uneasy calm that now prevails after the recent storm of Central Government employees' strike is the appropriate occasion for some vigorous rethinking on the machinery for ensuring cordial and smooth relations between Government and its employees and for swift action to compensate for the long neglect of the problem which had precipitated the crisis. Whatever might have been the rights and wrongs of the strike, such a situation should not be allowed to arise in the future. The Government is reported to be actively considering the question of establishing staff councils on the model of the Whitley Councils, which are in vogue in the U.K., as was recommended by the Pay Commission. To the extent the question has been invested with a touch of urgency the strike has not been in vain.

What are these Whitley Councils? What is their role in the relationship between the Government and its employees? How do they function in the U.K.? Are they suited to the conditions in India? If not, what modifications are called for?

Before going into these questions, it might be appropriate to examine whether there is at all need for a machinery for settlement of disputes between Government and its employees. Since the Government is supposed to be fair to its employees—the Government itself being responsible for holding the scales even between different sections of the community and preventing the exploitation of one by the other—should it not be relied upon to be fair to its own employees? To this question, the second Pay Commission (Chairman: Justice Mr. Jagannadha Das) itself has given the answer. According to it, the Government is, no doubt, free from the profit motive in the usual sense. Even in industrial and commercial undertakings run by the Government, the profit motive is subordinated to wider considerations of public interest. But the community's pressure to keep down taxes and the desire for economy in Government expenditure might have the same effect as considerations of profit among private employers. Though divergently inspired, the ultimate result in both cases, the Commission points out, may be identical, namely, resistance to reasonable demands for increased remuneration or for improvement in conditions of service. The fact that the Government is increasingly undertaking industrial and business functions blurs the distinctions between the Government as employer and other employers.

Machinery Needed

Strike is a weapon which employees in the private sector can and do use to get their demands conceded. If Government servants are denied the right to strike, justice demands that there should be an alternative arrangement for securing equitable treatment. In the Commission's view, an adequate machinery for negotiation, redress of grievances and settlement of disputes should be established and there should be a reasonable provision for arbitration to which recourse can be had should a difference on a question of remuneration or some other particularly important condition of service remain unresolved.

Almost identical views were expressed by the first Pay Commission (Chairman: Justice Mr. Varadachariar), which had suggested that some machinery should be kept in constant operation to "secure co-operation, consultation, discussion and negotiation between the staff and the Government." In its view, it was wrong to think that anything in the nature of the Whitley system could not be usefully introduced in India. It, therefore, recommended the establishment of joint councils for Government employees on the lines of the Whitley machinery.

When these recommendations were first considered by the Government, it was decided that, in view of the changes then contemplated in the Central Secretariat services, it was premature to introduce such councils in the Ministries generally. The matter rested there until 1954, when the Government decided to establish Staff Committees (renamed Staff Councils in August 1957) in the Central Ministries. Each Ministry has now got two staff councils—a Senior Staff Council for class II and III employees and a Junior Staff Council for class IV employees.

These arrangements do not exist in the railways where staff relations have had an independent evolution. A permanent three-tier negotiating machinery was set up in pursuance of an agreement between the Railway Ministry and the employees' representatives. This machinery has been functioning since January 1952. The employees of the Posts and Telegraphs Department and the civilian staff of the industrial establishment under the Ministry of Defence have also been provided with machinery for consultation and negotiation. But there is no such machinery for the employees in industrial, commercial and financial undertakings owned and run by the Government. They are, however, covered by the Indian Trade Unions Act, 1926, and the Industrial Disputes Act, 1947, which do not make any distinction between the employees of Government and other employees. Thus, in law, the industrial staffs of the Government are well placed to secure satisfaction of their reasonable demands as any other employees. The arrangements in respect of other Government employees also might appear not unsatisfactory. But the chief criticisms of the existing machinery made by the employees are that (1) the will is lacking, on the part of the Government, to accept the principle of joint consultation as an effective instrument for prevention of disputes, (2) even where the machinery is well conceived, it is not being worked efficiently, (3) meetings are not held regularly nor decisions taken promptly or implemented, (4) some of the officers representing the administration do not have the right attitude towards the machinery which they are supposed to work.

Whitley Councils

The vast majority of Government employees, according to the second Commission, is of the view that the situation required the establishment of a machinery which, in form and spirit, largely resembled the Whitley machinery in the U.K.

This machinery consists of a National Whitley Council for the general classes of the civil service, and separate Departmental Councils for staff peculiar to a department. The object of the National Council is to secure "the greatest measure of co-operation between the State in the capacity of an employer, and the general body of civil servants in matters affecting the civil service, with a view to increasing efficiency in the public service combined with the well-being of those employed." Its constitution provides that "the scope of the National Council shall comprise all matters which affect the conditions of service of the staff." The National Council, which has a total strength of 54, is composed of two sides—official and staff—in equal numbers. The National Council is not concerned with purely departmental matters. For these, there is, in most departments, a Departmental Whitley Council, independently appointed, with official and staff sides on the lines of the National Council. Similarly, there are district or regional committees which deal with the purely local problems of the staff distributed throughout the

Are You a Small-scale Industrialist?

This will interest you

To help small-scale industries fulfil their role in the country's developing economy, the State Bank, in collaboration with other interested institutions, put into operation in 1956 a Pilot Scheme at a few selected centres to make available to them co-ordinated credit facilities.

The scheme has worked well and the Bank is now in a position to offer, at all its branches, liberalised facilities which were originally made available only at the Pilot centres.

If you require financial assistance, why not talk things over with the agent of our nearest Branch? He will welcome the opportunity of assisting you and will be glad to forward your application, if need be, to the appropriate Governmental and other authorities.

NEW PUBLICATIONS

Unions and Union Leadership : Their Human Meaning. Edited by Jack Barbash. Published by Harper and Brothers, New York. Pages : 348. Price : $ 6.00.

THIS book is a collection of essays by a number of contributors ranging from newspaper reporters to educationists, economists, sociologist and psychologists. The editor, who is a professor at the School for Workers and Department of Economics, University of Wisconsin, has himself had experience as a union official, Government employee and labour affairs commentator. The main purpose of the book, in the editor's own words, "is to give the reader some feeling for and understanding of labour union as an enterprise made up of live human beings."

In addition to general aspects of the status of labour movement and its impact on society, specific issues such as bargaining relationship between unions and management, racketeering, communist penetrations of labour ranks, violence in labour disputes and Government intervention are dealt with in some detail. The editor's introductory comment, outlining the general framework of the book, enables the individual sections to be seen as part of a whole rather than as an unrelated assortment of essays.

The preparation of a book like this is by no means easy. The editor has to strike several sorts of balances, in the design of the volume as a whole, in choosing the contributors and subjects, so as to ensure objectivity and impartiality. However much one tries, it is difficult to avoid an element of personal bias and subjectivity in the selection of authors and topics. But it must be said to the credit of the editor that he has succeeded, by and large, in achieving an overall balance of viewpoints.

This book will be found useful by the general reader, as it presents the facts behind the news in labour matters, by students of labour problems because it gives a balanced picture of the current situation and by the trade unionists as it provides an insight into the wide variety of issues involved in labour movement.

Although the book is concerned with the situation in the U.S., parts of it have more than national relevance. For instance, bargaining relationship between unions and management, violence in labour disputes, Government intervention in disputes, etc., are topics of interest to Indian readers.

Tax Problems of the Family Company. By Milton Grundy. Pages : 157. Price : 17s. 6d.

Financial Problems of the Family Company. By A. R. English. Published by Sweet and Maxwell, 2 and 3 Chancery Lane, London. Agents in India : N. M. Tripathi Private Ltd., Princess Street, Bombay-2. Pages : 164. Price : 21s.

The elder Dombey in Charles Dickens's "Dombey and Son" saw in the birth of his son rich promise of continuing prosperity for his business. There is a certain pride and exclusiveness among those who are connected with family companies which, in many countries, have survived the ravages of time and economic vicissitudes. A family company, as is well known, is an enterprise which is owned predominantly, if not exclusively, by members of a family. The two books under review deal with the problems of the family company. Although they are written from the point of view of companies owned by families in Britain, the problems they deal with are similar to those met with in India. Many such companies function in this country; some of them are models of financial rectitude and good management. Nevertheless, they have certain peculiar fiscal and financial problems. They arise from the fact that the financial and fiscal affairs of the principal shareholders are intimately connected with those of the company itself. It is these problems that form the subject matters of the two books.

The first part of *Tax Problems of the Family Company* examines the impact of different taxes, such as income-tax, surtax, profits tax and estate duty, on a family company, while the second part deals with tax planning for the family company. Written in an extremely intelligible manner, the book is one which all those connected with family companies will do well to study.

Inflation and high taxation have made it difficult for family companies to find finance for development. Sometimes, the death of a principal partner may not only deprive the company of a source of finance but expose it to the difficulty of finding money for payment of estate duty. This, of course, is only one aspect of the financial problems of the family company. Mr. A. R. English, examines the sources and kinds of capital and the ways in which financial problems of a family company could be solved. Besides covering a very wide ground, the two books supplement each other admirably.

Supplement to The Law and Practice of Income Tax. By Sir Jamshedji B. Kanga and N. A. Palkhivala. Published by N. M. Tripathi Private Ltd., Princess Street, Bombay-2. Pages : 326. Price : Rs. 12.50.

Every book on taxation today has to keep pace with the numerous amendments that are introduced in the statutes in quick succession and the development of the case law which grows in volume because of half-baked amendments which invariably go to the Courts for a verdict on their proper construction and effect. This explains the need for the book under review, which supplements the fourth edition of the authors' book on income-tax—a publication which is one of the best commentaries on the Income-tax Act. This book is referred to not only by the assessees and the lawyers and accountants who guide them but also by the judges of the various courts in this country and by the Income-tax Department itself.

The amendments to the Income-tax Act during the years 1958 and 1959 are many and of a far-reaching nature. Not only the Finance Acts of these years but also the Income-tax (Amendment) Act 1959 have effected changes in the Act. The Finance Act 1959 abolished the legal fiction under which income-tax paid by the company is deemed to have been paid by the shareholders. A shareholder is now liable to pay income-tax as well as the super-tax on dividends he receives and gets no credit for the income-tax paid by the company. This abolition necessitated the amendment to Sections 12(1A), 16(2), 18(5), 20, 35(9), 49B, 49C, 51 and 58. The book contains a detailed table of cases, the Act with all the amendments, the commentary which is now added to the fourth edition, the rules under the Act, the notifications, orders, etc., pertaining to income-tax and a chapter on "Miscellaneous Statutes" which contains the Finance Acts 1958 and 1959. An index to the book would have facilitated easy reference. The publishers have taken pains to see that the binding of this supplement is better than that of the fourth edition.

The Eastern Purchasing Journal. Edited by A. R. Palit, 76, Sunder Nagar, New Delhi. Pages : 108. Price : Rs. 3.

Although there is no dearth of technical publications on the many facets of production, curiously, there is, in this country, a woeful lack of journals dealing with purchasing—one of the most important management functions. Purchasing has long ceased to be the simple act of buying some thing at a price which it was when production was less complex than it is today. It has now developed into a highly complex and specialised function which includes, among others, procurement through sub-contracting, hiring and barter deals. It enters into a large number of related and complementary activities connected with planning, production, sales and finance.

In view of the importance of purchasing in production planning, the journal under review, which is devoted exclusively to purchasing, is welcome. The first issue is very satisfactory. It serves a rich and varied fare. Various aspects of industry and Government purchasing are discussed by eminent contributors having intimate knowledge of purchasing. Mr. V. N. Rajan, I.C.S., Director-General of Supplies and Disposals, deals with central purchase and indigenous development. Dr. Lal. C. Verman, Director, Indian Standards Institution, underlines the interrelations between standards and purchasing. Mr. D. R. Mukherjee, I.R.S.E., discusses the various aspects of purchasing.

This journal is a must for firms having or planning to have purchasing departments. It will enable them to get to know the techniques of purchasing for profit.

Survey of Milk Production in the Jamia Development Circle in 1952-53 ; Rural Credit and Co-operation in the Jamia Development Circle in 1957-58 ; Size and Distribution of Holdings in Two Villages in the Delhi State in 1952-53 ; Survey of Rural Employment in Two Villages in the Delhi State in 1955-56. Published by the Jamia Institute of Agricultural Economics and Rural Sociology, Jamia Nagar, New Delhi.

The Jamia Institute of Agricultural Economics and Rural Sociology was established on the recommendations of the Indian Universities Commission of 1950, at Jamia Nagar in September 1952. Ever since its inception, this Institute has conducted several rural surveys under the guidance and supervision of its Director, Prof. M. Aquil. The publications under review are the direct outcome of such surveys conducted from time to time. It has selected Jamia Development Circle in Delhi as its area of rural economic and sociological investigations.

The survey pertaining to Milk Production deals with milk production and consumption in Jamia region, and the success and failure in milk production. This survey is supplemented with many useful tables and charts. The survey on Rural Credit and Co-operation is an interesting one. After studying the position regarding demand and supply of rural credit in Jamia Development Circle, the authors came to the conclusion that "what is lacking is not the number of co-operatives as such or the adequate availability of financial resources but proper approach and organisation. It is the human element both in its quantitative as well as qualitative aspects which is deficient in supply and which is holding back the progress of co-operatives." The survey on Rural Employment in Taimur Nagar and Madanpur in Delhi State underlines the general conditions of rural employment in those villages. The survey dealing with the size and distribution of holdings in Jasola and Khizrabad villages in Delhi State cover the size, sub-division and fragmentation of the holdings of owners and of various categories of cultivators and vegetable growers. The Institute deserves to be complimented on its good work in the sphere of rural economic investigation.

A Primer of the Theory of Administration. By Jaroslav Tuma. Published by H. L. Mathrawala, 219, Frere Road Bombay-1. Pages : 73.

Management has now attained the status of a science. It is, of course, a great art as well. After all, the management of a factory or any enterprise, for that matter, involves not only the knowledge of physical factors and the methods of arranging them but also of human beings and their motivations. Mr. Jaroslav Tuma has written an excellent introduction to the science, giving a bird's-eye view of some of the more important aspects of management. The topics dealt with include basic principles of administration, personal qualities of administrators, labour relations and methods of management. This is a good and remarkably well written book.

SOME THOUGHTS ON PRODUCTIVITY MOVEMENT IN INDIA

NEED FOR FORMULATION OF A PUBLIC POLICY

By Dr. Om P. Nijhawan

THE concept, measurement and interpretation of productivity are somewhat new to India. In the industrially advanced countries like the United States, however, a considerable amount of work has already been done in this branch of social science. Technological innovations that form the very hub of increased productivity are sought to be introduced to yield increasing volume of production. Attempts have been made to determine the efficiency of various productive units and measures have been devised to work out new techniques to increase productivity. As a result of their efforts to increase productivity, most industries have introduced such measures as the introduction of quality control, time and motion study, standardisation of the product, etc. Efforts are also made to improve the relations between labour and management in the various segments of the economy.

This is, however, the traditional approach for increasing productivity that has been talked about for quite some time now in Western countries, and the same is being repeated in India. The National Productivity Council is doing useful work in India in trying to popularise these considerations and the "productivity movement" in general. In a recent Seminar held by the Council at New Delhi, many divergent viewpoints were expressed. While the management brought to the forefront its own problems, labour came out with complete unacceptability of the "productivity concept"—for according to it, the basic problem facing the Indian economy is the widespread unemployment and underemployment and the increase in the productivity of labour would not solve this basic problem—rather it would accentuate it.

It is not the intention of the writer to enter into any controversy with the labour or the management point of view. But there are certain basic considerations which were altogether ignored at the Seminar. For the National Productivity Movement to gain the required momentum, it is imperative to consider the factors which would help formulate a public policy. While it is not sought to minimise the importance of the factors discussed at the Seminar and the considerations mentioned above, it is necessary to add that there seems to be something lacking in the traditional approach and that is the consideration of some very important factors which may have implications to the formulation of a public policy with a view to enhancing the overall productivity of all producing units in the economy. It is the purpose of this paper to point out certain considerations on the "macro" level to help the formulation of public policy.

Potential and Effective Productivity

In approaching the question of productivity, it would seem most instructive to divide the objective—high productivity—into two parts, namely, potential productivity and effective productivity. The purpose of the separation is to enable a clear understanding concerning each category.

Productivity is defined in various ways; however, in the technical sense, it is a statistical concept showing the relationship between the output of the product and the input of some economic resources. Potential productivity generally refers to the *maximum feasible* long-run rate of production. Effective productivity, on the other hand, refers to actual productivity. While potential productivity is determined by the "state of industrial arts," effective productivity depends upon enterprise. Experience has shown that effective productivity is generally lower than potential productivity. One of the problems, then, is how to narrow the gap between effective and potential productivity or how effective productivity may equal or approach potential productivity.

Potential productivity requires close tie to full capacity and is traceable to autonomous factors. Lord Keynes has observed that the level of potential productivity that a country can attain at any given time depends significantly on the size of the capital goods industry it has already built. This, however, assumes constant technology. It may be pointed out that techniques have a tremendous bearing on potential productivity. Changes in techniques generally require the deepening of capital, resulting in a higher capital-output ratio. This, in turn, means that more capital will be required per unit of output, implying that productivity per employed worker would tend to increase. The new capital goods which give concrete shape to new techniques account for the increase in physical output. The problem of how to stimulate growth capacity becomes mainly a problem of how to advance techniques. Advance in technological know-how effects an upward shift in potential productivity.

Baseless Suspicion

There is a common suspicion, as was voiced at the National Productivity Council Seminar, that the application of new technology to the process of production reduces unit labour requirements and adversely affects the employment situation in the economy as a whole. In the long run, however, this is not true. There would generally be a certain amount of technological displacement in the beginning, but, in the long run, the actual employment situation would improve. Demand for additional equipment responsible for productivity gains will create new job opportunities in the industry supplying equipment. In case the productivity gains achieved in an industry are passed on in the form of price reduction, the purchasing power saved by the customers of the industry, if it has not been used for additional purchases from the same industry, will be spent on the products of other industries, thus stimulating the demand for labour. If the productivity gains are passed on to employers or wage earners within the industry in the form of higher profits or wages, there will be more investment or expenditure, with a resulting addition to job opportunities in other industries. The secondary repercussions of technological displacement, if allowed to unfold, will thus certainly provide at least full compensation for the primary technological labour displacement.

In an underdeveloped economy, there is actually a vast choice of what technique to use. Some of the modern techniques that may be used in the process of production might require capital-using tools and also big sums of money funds. The change of techniques in the process of production depends upon *entrepreneurs'* expectations and cost of production. Availability of funds, the purchasing power that has to be placed at the disposal of the *entrepreneurs* to bring together different factors of production into productive units, should not be allowed to become a bottleneck. In instances where *entrepreneurs* have choices to make between old and new techniques, some being more expensive than others, there are two considerations which control the choice in the long run: (1) The comparative per worker productivity of final output involved in the use of two techniques and (2) the availability of money which makes feasible the carrying out of the decisions. Each of these has a bearing on potential productivity. Financial institutions are thus placed in a new light. Their function is to make money available to *entrepreneurs*, so that they can bring about the most efficient combination of different factors of production.

Credit Policy

Thus, the recognition of the fact that high productivity depends upon technological developments and placing capital at the disposal of the *entrepreneurs* makes us focus our attention on formulation of public policy. The policy should aim at channelling these factors of production in the most effective manner. It may incidently be mentioned here that, while the Reserve Bank of India, in its effort to curb inflation, has taken various steps to impose selective credit controls, it has hardly taken any major positive steps to stimulate enthusiasm amongst the commercial banks to make available purchasing power for productive purposes through rationalisation and expansion of industry. This is just an example of the consideration that is important in the formulation of a public policy for increased productivity.

So far we have talked about the factors responsible for increasing potential productivity. It is important to focus attention on potential productivity, for it is only an increase in potential productivity which would be responsible for a higher standard of living. But, in most of the productivity discussions, attention is mainly focussed on the problem of narrowing the gap between effective and potential productivity. We must recognise that, with changing technology in a developing economy, the potential productivity must also increase at a rapid speed. It would, of course, mean that efforts at increasing effective productivity shall have to be doubly important to catch up with the potential productivity. But the idea of increasing potential productivity cannot be allowed to remain in the background.

Effective productivity, as has already been pointed out, depends upon the ability of an enterprise to utilise existing techniques. While our long-run concern is the growth in the level of potential productivity, in the short run the maximum utilisation of existing resources for higher rate of production is a matter of paramount importance. The cost of production and the propensity to save are important factors in the utilisation of full capacity, as, due to excess of savings and decrease in effective demand, some of the capacity may remain idle. These are, again, some of the considerations pertaining to effective productivity which one must take note of in formulating a public policy for increasing productivity.

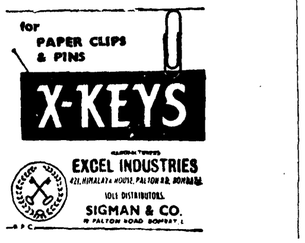
In fine, there are several factors that account for changes in productivity. In order to effect an increase in the rate of output, it would be necessary to see that the management utilises all the factors of production to yield maximum results. To accomplish this, it would, of course, be necessary to ensure that cordial relations exist between management and labour and that the man working on the job finds his work interesting and most suited to him. The real problem of management in increasing productivity is "how to make the man like his job"—whatever may be the nature of the job. These considerations fall under the "micro level" of effective productivity.

Sharing of Gains

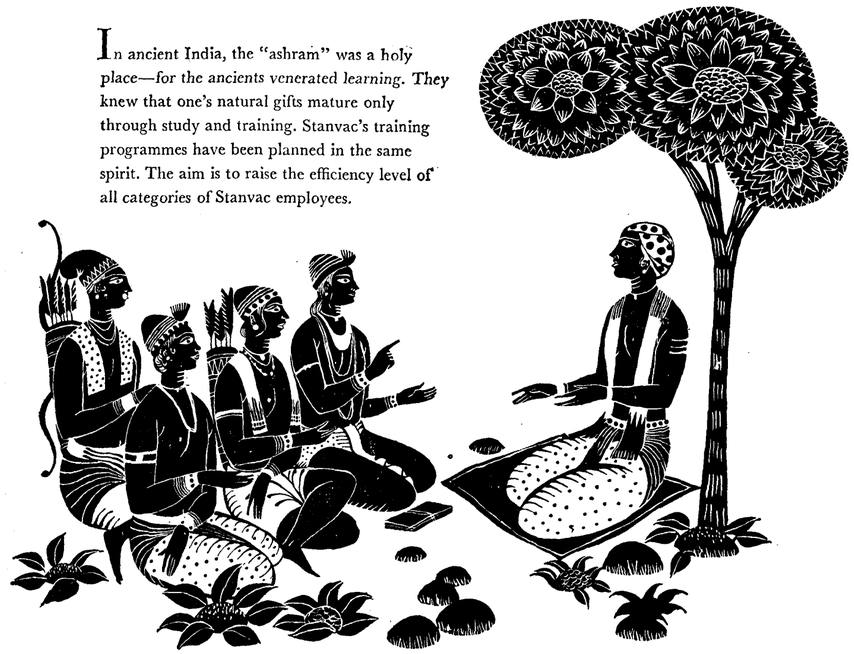
Another factor which is really important but not adequately emphasised by most people discussing productivity is the sharing of gains from increased productivity. The productivity in any sector of the economy can be expected to maintain its rising trend if the gains resulting from co-operation of various factors of production are shared more equitably. A great deal of mass enthusiasm can be created among workers, if they realise the benefits from the rise in productivity. Moreover, in an economy where production and productivity are rising, it is essential that consumer expenditure should increase which ultimately depends on the level of workers' current incomes.

Finally, it is extremely important to compile productivity data which are important for the formulation of public policy. The statistical information relating to productivity of various productive units is of over-riding significance in the case of India where charting of developmental plans and their frequent reappraisal have become almost a common phenomenon. Like the national income statistics, the productivity data aid in judiciously allocating resources in various spheres of the economy. The productivity data, in effect, help to bring out the degree of performance of a productive unit at different periods of time or as compared with similar units operating in different areas. Productivity data would also throw light on whether or not large-scale plants are more efficient than the medium or small size units. Such data would also eliminate speculation on whether or not capital-intensive plants are more productive than the labour-intensive plants producing identical products. Productivity data would also be useful for deciding whether it is economical to engage in the production of one type of product or product-mix.

The productivity movement in India is bound to gain momentum as a result of present endeavours. The formulation of a public policy on the "macro level" is, however, a need which cannot be ignored.



In ancient India, the "ashram" was a holy place—for the ancients venerated learning. They knew that one's natural gifts mature only through study and training. Stanvac's training programmes have been planned in the same spirit. The aim is to raise the efficiency level of all categories of Stanvac employees.



In 1959, Stanvac expended more than 48,500 man-hours to train employees in 30 subjects, ranging from basic courses in Business Management to advance courses in highly specialised phases of marketing, and technical branches of refining and exploration. Last year, as many as 18 Indian employees were sent overseas, for advanced training, while 22 employees received assistance for higher studies.

Moreover, Stanvac training programmes are not designed for employees only. To enlarge the trained personnel pool—a matter of national importance—Stanvac extends its training facilities to key groups outside the organisation. In pursuance of this policy, Stanvac provides training to Government-sponsored personnel. The number of such people trained in 1959 totalled 40.

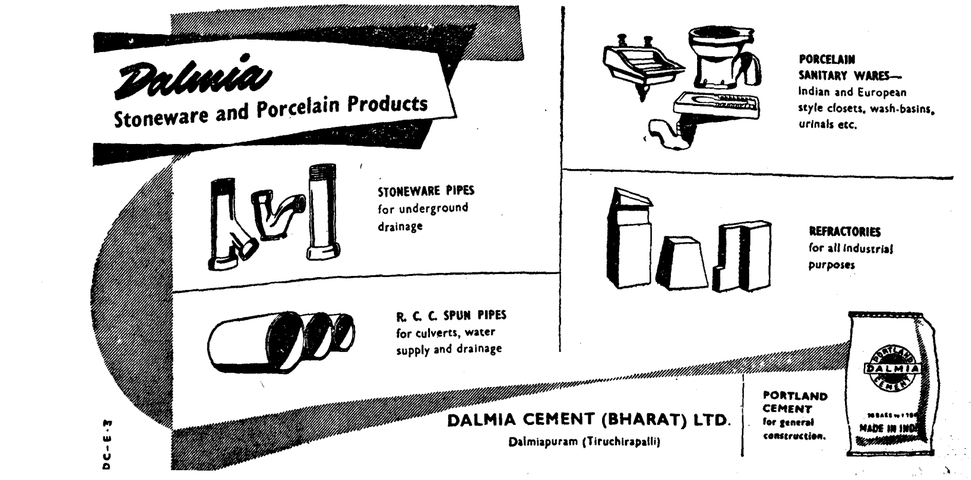
STANDARD-VACUUM OIL COMPANY Incorporated in the U.S.A. with Limited Liability

PSSVOC-10/NO



TATA LOCOMOTIVE AND ENGINEERING COMPANY LIMITED

IMPRESSIVE EXPANSION IN PRODUCTION AND SALES

MR. J. R. D. TATA'S STATEMENT TO SHAREHOLDERS

IT is proposed to expand the capacity of the Automobile Division of the Tata Locomotive and Engineering Company Limited, which produces Tata-Mercedes-Benz trucks, from 12,000 units to 24,000 units per annum. The necessary scheme has been drawn up and this will shortly be placed before the Government for approval. The capital expenditure involved will be substantial and the Directors will put up proposals to shareholders in due course. This information is given by Mr. J. R. D. Tata, Chairman of the Tata Locomotive and Engineering Company Limited, in his annual statement to shareholders, circulated along with the Directors' Report and Statement of Accounts for the year ended 31st March, 1960.

The following is the full text of the Statement:.

The Year's Results

"Production of all the Divisions has exceeded targets and the sales of the Company's products have been higher than at any time in the past. New construction and expansion have proceeded according to schedule. The programme of indigenous production of Tata-Mercedes-Benz vehicles has been completed in time and efficiency continues to increase all round. The results of the year have enabled your Directors to declare a gross dividend of 12.5 per cent. on ordinary shares. The net dividend in the hands of the shareholders after deduction of tax will be 8.75 per cent.

Profit and Appropriations

"The turnover for the year under review exceeded the previous year's figure by about Rs. 1.8 crores; and the net profits by Rs. 47 lakhs after providing Rs. 48 lakhs more for depreciation. The amount carried to the development rebate reserve has been reduced from Rs. 74.62 lakhs to Rs. 14.04 lakhs, because the value of new fixed assets installed was much lower than in the previous year. The large increase in taxation, from Rs. 13.25 lakhs to Rs. 93.30 lakhs, was due partly to higher profits and partly to the reduction in development rebate.

Expansion and Diversification of Activities

"The Company's plans for development foreshadowed in my speech last year are now taking concrete shape. Arrangements for the manufacture of paper and pulp making machinery and power shovels have been completed and production will commence shortly. The manufacture of these products, which will help your Company to utilise fully the available capacity in the General Engineering and Foundries Divisions, is expected to yield a fair margin of profit.

"The additional capital requirements for both the projects to manufacture paper and pulp making machinery and the P. & H. power shovels will be met from the internal resources of the Company.

The Automobile Division

"This year has been a period of outstanding activity and success in this Division. The expansion of our manufacturing capacity to 12,000 units a year has made satisfactory progress and is expected to be completed on schedule by the end of this year. It is gratifying for me to record that, as anticipated in my speech last year, we have fully discharged our commitment to establish in four years the manufacture of Tata-Mercedes-Benz vehicles, according to the phased programme approved by Government in 1954-55. The average indigenous content of our vehicles has reached 78 per cent. and we are now proceeding to increase this percentage still further by developing the manufacture of certain ancillary products and encouraging and assisting others to establish the manufacture of ancillary products or to increase their capacity. Members will be gratified to note the findings of the *Ad Hoc* Committee (Automobiles) on the progress and achievements of the Company, extracts from which are reproduced in the annual report. Not only have we kept strictly to the original schedule for developing indigenous manufacture, but side by side we have rapidly and systematically expanded the output and maintained the excellent quality and performance of the vehicles for which the Mercedes-Benz name is rightly famous all over the world.

"Despite the fourfold rise in the output of Tata-Mercedes-Benz vehicles, the demand has far outstripped supplies. With the industrial and agricultural development of the country, the requirements of vehicles for road transport will rise further year by year. Your Directors feel, therefore, that it is in the interests of the Company as well as of the country at large to expand the output of vehicles further as rapidly as possible. With this in view, a major scheme for increasing the output of Tata-Mercedes-Benz vehicles is in hand and proposals will shortly be placed before Government. Under this scheme the capacity of the Automobile Division will rise to 24,000 vehicles per year with an indigenous content of over 90 per cent. The capital expenditure involved will be substantial and your Directors will, in due course, put up proposals for meeting it.

DKW "Junior" Car

"In my speech last year, I had referred to the scheme submitted by the Company to Government for the manufacture of the DKW 'Junior' car. Although no decision has been announced as yet by Government, two important statements on the subject have been made public in recent months. The first is the report of the *Ad Hoc* Committee on the Automobile Industry published in January this year. While making no specific recommendations as to the selection of the make of car to be manufactured or the agency to be entrusted with the task, the Committee have recommended that the manufacture of a low cost car should be undertaken in the country and have indicated that the choice would lie between five proposals, including Telco's, amongst the twenty-five proposals received.

"One important feature of the Committee's report is that they have expressed themselves clearly against the project being undertaken in the public sector. At the end of March 1960, the Minister for Industry, in the course of a debate in the Lok Sabha, was reported by the Press as having announced that 'a car of the people to be manufactured by the people, for the people' would soon be produced. His somewhat cryptic statement was universally interpreted in the Press as meaning that the car would be made in the public sector, which seemed to be confirmed by his further statement that Government would try to take the help of the private sector for the production of component parts from their existing installed capacity.

"I am not sure I understand clearly what all this means. Possibly, Government have not made up their own mind on the subject. But if it is true that Government contemplate establishing the manufacture of a small car by the State and, if, as rumoured, the two reasons advanced for such a proposal are that the cars proposed by established manufacturers are too expensive and that Government find it difficult to choose between the many projects offered, I can only express concern and regret in regard both to the proposal and to the reasons advanced for it.

"With the existing automobile industry able and willing to undertake the manufacture of a small car, there can be no possible reason for Government to allocate such a project to the public sector except on grounds of socialist ideology or dogma, which Government spokesmen, including the Prime Minister, have repeatedly and unequivocally disavowed as playing any part in their policies.

Question of Price

"On the question of the price of the car, I trust Government will take note of the *Ad Hoc* Committee's view that such a car has to be cheap not only in initial cost but also in running and maintenance cost. When a user buys a car, he really buys a certain number of miles of road transportation. It is no doubt possible to make a very light and low-powered car for, say Rs. 1,000 or Rs. 1,500 less than the initial cost of the DKW we have proposed or similar cars, but, if such a car is capable of only half the trouble-free mileage that a more sturdy car would give, or, to put it differently, if the cost of repairs and spare parts is twice as high for the same mileage in the case of the lighter car, then the unfortunate user will in fact have, over the life of his car, paid not a lower price but a much higher price. Families are, on the average, much larger in India than in Europe, and road surfaces are much inferior and therefore more destructive. I sincerely hope that, if a small car is to be made at all, Government will approve of a reasonably roomy car, modern in design and rugged in construction, with a long and economical life built into it.

"In any case, I trust that, in arriving at a decision concerning any scheme for the manufacture of a cheap car, whether in the State or private sector, the Government of India will keep in mind, among other things, its implications in terms of foreign exchange expenditure for capital as well as current account. The *Ad Hoc* Committee (Automobiles) has rightly stated that the development of a new car presupposes that extra foreign exchange will be available and that the programme of development and expansion of the existing units will not be affected. They go further and recommend that only after certain other priority claims of the automobile industry and road transport have been fully met should any allocation of foreign exchange be made for the new programme. I trust these recommendations will find acceptance by Government.

Foundry and Forge Sub-divisions

"Members will note with satisfaction that the development of our Foundry and Forge Subdivision is progressively reducing our dependence on imported semi-finished materials. By the end of this year, all our requirements of high duty castings and a substantial part of our requirements of forgings for the manufacture of Tata-Mercedes-Benz vehicles will be produced in our own works. For the basic raw materials, namely, rolled steels of special quality, we are unfortunately still dependent to a large extent on imports. After the Rourkela steel plant goes into full production, about 65 to 70 per cent. of our requirements of steel should be available indigenously. But even thereafter materials worth about Rs. 700 per vehicle will still have to be imported. In this respect, what is true of the automobile industry is, in the main, true also of other engineering industries.

"It is unfortunate that, up to now, Government and the Planning Commission have laid so much more stress in regard to steel on the quantitative rather than the qualitative aspects of the country's requirements. The rapid industrial development and the economic strength of a country depend not so much on total self-sufficiency in ordinary, carbon steels but in the capacity and range of steel processing industries which themselves depend on quality steels and on machine tools and allied equipment. The automobile industry of India and other precision engineering industries will reach maturity and will cease to be a drain on foreign exchange resources only when all the raw materials and most of the machine tools used by the industry are made in the country. I earnestly hope that our planners and Government will keep this important aspect of the question in view when planning the future of the steel and engineering industries.

Locomotives

"Coming to the General Engineering Division in which locomotives are made, as mentioned in the report, the Railway Board have now indicated to the Company that the Indian Railways will require steam locomotives for many years to come. While the price which has been awarded by the Adjudicator for supplies of locomotives during the period of two years upto the end of the year under review falls short of our expectations, mainly because it excludes altogether the annual bonus to the staff, which is an appreciable element in our cost of production, it is gratifying to record that the Railway Board and the Company have been able to agree on the prices of the locomotives to be supplied during the remaining period of the Agreement. The price of the 325 locomotives to be delivered over a period of five years after the completion of the Agreement is still under negotiation but we have made it clear to the Railway Board that the price must be a fixed one subject only to agreed escalators as, in their interest as well as ours, there must be an end to the annual bargaining and bickering as well as the unmerited criticism which has characterised supplies of locomotives in the past few years.

"The prices which the Company will receive will in any case be lower than the prices at which similar steam locomotives can be obtained from abroad. As we have repeatedly explained in the past, the benefit of the depreciation allowed to us through prices in the past years, now flows back to the Railway Board in the shape of lower prices, as a result of lower written down value of plant and equipment.

The Future

"Whilst there is much that is encouraging in the assessment of the future, we must not forget the increased responsibilities that will have to be shouldered by us.

"If continuous progress is to be achieved, we have constantly to add to our resources in engineers, administrators and craftsmen as well as in up-to-date equipment. This is a somewhat obvious truth which, however, is not always fully appreciated in our country where industrial enterprises, particularly in the State sector, are too often visualised mainly in terms of money and machines. I am glad to say that, in your Company, very special attention has been paid to this vital problem and our skilled personnel, both in shops and offices, has been carefully employed, trained and developed along with our plant and machinery.

Housing

"The shortage of housing for the Company's workers which presents a growing problem in connection with the expansion of the Company and the increasingly heavy deficit between the costs of maintaining the colony and the rents recovered, have been a cause of growing concern. This question is receiving the urgent attention of your Directors. In the meanwhile, it is gratifying to note that the Government of Bihar, besides advancing housing loans to the industries in Jamshedpur, including your Company, are constructing a housing estate for industrial workers not far from the Company's works in Jamshedpur. It is hoped that some of the Company's workmen will be able to secure accommodation in the Bihar Government's industrial estate at Jamshedpur.

"As regards the problem of the heavy burden of maintaining the Telco Township, members will be pleased to learn that, in the conciliation settlement of 20th October, 1959, the Telco Workers' Union has agreed that 'the question of increasing the rates of rental chargeable for the Company's houses under construction in the sixth and following phases of construction be separately discussed and a suitable formula should be worked out for fair rents being fixed.'

Labour

"There have been no strikes or other disturbances to production during the year except for a minor one-day stoppage in the Welding Shop.

"The improvement in the industrial climate at Jamshedpur and particularly in the Telco Works is a gratifying development and we are anxious that it be maintained. On out part, we are convinced that the problems which inevitably arise in the labour field from time to time can be solved with mutual goodwill and confidence. I am particularly glad that, in the recent Conciliation Settlement with the recognised Telco Workers' Union, the Union have accepted the principle that any demands made on the Company should be examined on merits and without any undue emphasis on the practice of concerns in other industries in Jamshedpur which operate under materially different circumstances. It was also agreed that all difficulties between the management and the union would be resolved by peaceful and voluntary negotiations and that there would be no resort to direct action such as strikes, lockouts, go-slow and other coercive measures. In consideration of the acceptance of these principles, the Company agreed to an increase in the dearness allowance and sanctioned a scheme for the grant of sick leave in anticipation of the extension of the Employees State Insurance Scheme to Jamshedpur.

"In the engineering industry in which we operate, capital investment per employee is the highest in India. The very modern and expensive plant and equipment installed at the Telco Works offers to the employees an opportunity almost unparalleled in this country to attain high levels of productivity. The Company's ability to provide higher wages and better amenities and facilities depends on the effective utilisation of this equipment and I hope that, in the fu filment of this objective, we shall receive the wholehearted co-operation of the workers and their chosen representatives. It is only thus that increases in the emoluments of our workers, which are already among the highest in the country, can be maintained.

"Our thanks are due once more to our General Manager and all employees, whatever their degree of direct responsibility, for the results achieved. The initiative and the work that members of our staff have put in have been principally responsible for the Company's progress which is reflected in the Report and Accounts before you."

J. R. D. TATA,
Chairman.

LARGE INCREASE IN AREA UNDER IRRIGATION—NEW POWER SCHEMES

PROGRAMMES UNDER THIRD PLAN

IN the context of the continuing difficulties on the food and agricultural raw materials front, where shortages are being made up by imports and the grave scarcity of power in several areas where demand exceeds available supply, the large increases in irrigation and power potential which are expected to take place in the period of the third Plan acquire much new significance. The net effect of the programmes, according to the Draft Outline of the Third Five-year Plan, is that the total area under irrigation (from all sources) will rise to 90·0 million acres by the end of the third Plan from 70·0 million acres at the end of the second Plan, 56.2 million acres at the end of the first Plan and 51.5 million acres at the beginning of the first Plan. Installed power capacity is expected to go up to 11.8 million kw. by the end of the third Plan from 5.8 million kw. in 1960-61, 3.4 million kw. in 1955-56 and 2.3 million kw. in 1950-51.

Water Resources

Of the available water resources, only a fraction has been harnessed so far. These resources were computed in 1950 at 1,336 million acre feet, of which only 450 million acre feet are known to be "usable." By 1951, about 76 million acre feet or 17 per cent. of the "usable" flow had been utilised. By the end of the second Five-year Plan, 119 million acre feet or 26 per cent. of the "usable" flow will have been harnessed. An additional 41 million acre feet is likely to be used in the third Five-year Plan, bringing the proportion to about 35.36 per cent. Again, of the 51.5 million acres under irrigation at the beginning of the first Five-year Plan, about 22 million acres were irrigated from large and medium irrigation projects; the former are defined as those costing more than Rs. 5 crores and the latter as those costing between Rs. 10 lakhs and Rs 5 crores. It is estimated that, by the end of the fifth Five-year Plan (1975-76), it might be possible to bring about 85 to 90 million acres under irrigation from large and medium projects.

The estimated cost of major and medium irrigation schemes included in the first and second Plans is of the order of Rs. 1,400 crores and, on their completion, they are expected to irrigate about 38 million acres; by the end of the second Plan, about Rs. 770 crores will have been spent on these schemes—Rs. 380 crores in the first Plan period and Rs. 390 crores in the second Plan period. The irrigation potential created by the end of the first Plan period was 65 million acres, the gross and net utilisation being 3.3 million acres and 2·9 million acres; corresponding figures at the end of the second Plan will be 14·0 million acres, 10·5 million acres and 9.0 million acres, respectively.

The cost of completing the irrigation schemes taken up in the first and second Plans is placed at Rs. 620 crores, of which Rs. 470 crores will be provided in the third Plan, leaving the balance to be carried over to the fourth Plan. Besides Rs. 470 crores for continuing the schemes initiated in earlier years, a sum of Rs. 100 crores for new schemes (capable of creating a potential of 16 million acres and bringing actual utilisation to 13 million acres) has been provided for in the third Plan. In addition a sum of Rs. 80 crores has been provided for flood control and other measures; this is expected to benefit 5 million acres. Thus, the overall outlay on irrigation is Rs. 650 crores. With the outlay of Rs. 470 crores, an irrigation potential of 14 million acres will be created which, together with 3.5 million acres still remaining to be utilised at the end of the second Plan, will bring the total to 17.5 million acres. The total irrigation potential which will have been created by the end of the third Plan will be 28 million acres, though actual utilisation will be of the order of 23 million acres only.

The importance of prompt utilisation of irrigation potential, fixation of water rates at equitable levels, imposition of betterment levy and research in irrigation have been emphasised by the Planning Commission. It is important that, when an irrigation project is proposed for a new area, the State authorities should place the broad outlines and advantages of the scheme before the agriculturists of that area, in particular the structure of water rates, betterment levy, etc., which have to be paid by the beneficiaries. Education of public opinion along these lines, it is stated, will result in prompter utilisation of irrigation potential. Again, in order to ensure continuity in the development of water resources, projects and the areas which are likely to receive the benefit of irrigation should be determined and basic engineering surveys carried out in advance. Master plans for long-term development of irrigation should be prepared in each State to bring out clearly the ultimate potentiality of each project. It is proposed to enlarge the programme of irrigation research, in order to ensure maximum possible economies in the cost of construction by adopting improved techniques in design and construction and by proper choice of construction materials.

Power

Discussing the different ways of generating electric power, the Draft Outline points out that the suitable areas where coal-fired power stations can be located are places where large quantities of low-grade coal, not required by railways or industry are available. As a rule, hydel power is cheap. But it takes a longer period of time and larger outlay to set up hydel stations. They, however, require less foreign exchange resources. As new uranium deposits have become available, nuclear power stations have assumed particular significance. They are best located in areas which are distant from collieries and where fuel costs are high. The average production costs of electricity for hydro, coal-fired and diesel power stations are about 1·2 nP, 3 nP, and 25 nP per kw.h. respectively. The cost of atomic generation, estimated at 3.5 to 4 nP, will be comparable in areas remote from coalfields. The foreign exchange component of coal-based power stations is two to three times that of hydro station, while nuclear stations require considerably more foreign exchange than even thermal stations. The programme for the generation of power in the third Plan, as stated at the outset, aims at the creation of 11·8 million kw., as against the estimated capacity of 5·8 million kw. by 1960-61.

The break-up of the capacity in 1950-51, 1955-56, 1960-61 and 1965-66 is:

Installed Capacity

(In million kw.)

	1950-51	1955-56	1960-61*	1965-66*
State-owned public utilities	0.6	1.4	3.3	9.1
Company-owned public utilities	1.1	1.3	1.5	1.6
Self-generating indigenous establishments	0.6	0.7	1.0	1.1
Total	2.3	3.4	5.8	11.8

	1951	1956	1961*	1966*
Hydro plant	0.56	0.94	2·10	4·75
Steam plant	1.60	2·27	3.45	6.50
Oil plant	0.15	0·21	0.25	0·25
Nuclear plant	..	..	..	0.30
Total	2.31	3.42	5.80	11.80

* Estimated.

The third Plan envisages an outlay of Rs. 975 crores for power, of which Rs. 925 crores will be in the public sector and Rs. 50 crores in the private sector. The break-up of the outlay in the public sector is: hydro and thermal scheme Rs. 580 crores; atomic power Rs. 51 crores, uranium mining, fabrication and plutonium extraction plant Rs. 24 crores; transmission, distribution and rural electrification Rs. 270 crores. The foreign exchange component of the power programme in the third Plan is estimated at Rs. 270 crores.

By the end of the second Plan, the total number of towns and villages electrified in the country will be about 19,000, as against 7,400 at the end of the first Plan. The third Plan provides for the electrification of another 15,000 villages and towns at an estimated outlay of Rs. 105 crores. The following table gives the break-down in terms of population range and the number of towns and villages which will have been electrified by the beginning of the first, and the end of the first, second and third Plan periods:

Population	Total No. of towns (a)	No. electrified by March 1951	1956	1961 (b)	1966 (b)
Over 1 lakh ..	73	40	73	73	73
50,000—1 lakh ..	111	88	111	111	111
20,000 to 50,000 ..	401	240	366	399	401
10,000 to 20,000 ..	856	200	350	756	856
5,000 to 10,000 ..	3,101	258	1,200	1,800	3,101
Below 5,000 ..	556,565	3,687	7,400	19,000	34,000
Total ..	561,107	2,792	5,300	15,861	29,458

(a) 1951 census. (b) Estimated.

Several valuable suggestions for the implementation of power programme have been made in the Draft Outline. In the first place, it stresses that States should set up small committees to advise on rural development programmes. Secondly, "it is necessary that electricity undertakings in the public sector should earn reasonable surpluses and build up reserves for financing future development." Thirdly, the country's dependence on imports for electrical equipment is a serious obstacle to rapid development of power. But the programme for manufacturing such equipment, now undertaken in the public and private sectors, will serve to reduce such dependence; nevertheless, large imports will be necessary during the third Plan, as the manufacturing programme will not have gathered sufficient momentum. However, when the entire programme is completed, it will be possible to meet a substantial portion of the country's need in the fourth Plan for such equipment as hydraulic and steam turbines, boilers, alternators, motors, transformers and switchgear. Fourthly, the pace of investigation of power potential and load surveys in the country should be increased; by the end of the third Plan, only 11 per cent. of the total potential of 40 million kw. will have been exploited. Finally, the need for increased research on problems of generation, transmission and distribution of power and for a design organisation has been stressed. Research will be carried out in the Power Research Institute at Bangalore. A switchgear testing station is being set up at Bhopal for testing and developing designs of switchgear.

OUTLOOK FOR STEEL

The view that, in the context of the urgent need to develop heavy engineering industries, the expansion of steel capacity would remain an essential task for several future plans was expressed by Mr. Jehangir Ghandy, Director of the Tata Iron and Steel Company, Ltd., in the course of his address at the Defence Staff College, Wellington (Nilgiris) on 21st June last. In the third Plan the steel capacity will be increased to 9.3 million tons (or 3.3 million tons above the second Plan level). The Plan envisages expansion of the capacity in Bhilai steel plant to 2.1 million tons, in Rourkela plant to 1.8 million tons and in Durgapur plant to 1.6 million tons. A new integrated unit at Bokaro will yield 500,000 tons initially, Mysore Iron Works 100,000 tons and small-scale electric furnaces another 20,000 tons. No expansion beyond the existing three-million-ton capacity in the private sector is envisaged, although both Tatas and Indian Irons "had firmly indicated their desire to put down additional capacity." Commenting on this, he said: "My colleagues and I sincerely believe that the experience and the organisation the private sector in the steel industry has built up over the past 50 years can be put to still greater use in the country's service. I feel reasonably sure that the private sector will not be denied these opportunities, because, as the Prime Minister stated at his monthly Press Conference in March 1960, the approach should be pragmatic, the decision based on what can be done effectively and quickly in either the public or the private sector."

Discussing the technological problems of steel production in India, Mr. Ghandy pointed out that, while the country possessed large iron ore reserves, estimated at some 21,000 million tons of first grade iron ore, it had barely 2,000 million tons of coking coal. He added: "Considering that we need 1.5 tons of coking coal to make one ton of steel, the long-term outlook is grave indeed." In this connection, he called attention to advances made in France and South Africa in the matter of upgrading poorer grades. East Germany had also developed a process of producing pig iron by using lignite as fuel. This was of great interest to India, because there were, in the South, large deposits of lignite which could support a steel industry in the area. Another problem was the shortage of limestone in the vicinity of steel plants. At present, all the limestone for the steel plants was drawn from one area, the Sundergarh district (Orissa), except for Bhilai which obtained supplies from a nearby quarry at Nandini. In this connection, he urged the early construction of the Ranchi-Rourkela line which would help exploit several new deposits, including the one at Purnapani.

Mr. Ghandy next referred to two innovations which had been introduced in steel manufacture. In the first place, the L.D. process had been employed in Rourkela. Mr. Ghandy recalled how the Tatas had sent in 1953 a technical mission to Austria to examine this process for its possible adoption in India. At that time, it had not been fully developed. Later developments had made this process particularly attractive to plants where, as in Rourkela, large quantities of low-carbon steel were needed for making flat products; open hearth process had been employed in Bhilai and Durgapur where high carbon steels were needed in bulk for rails and structurals. The L.D. process was also attractive for the economies in capital cost and operating expenditure it made possible. Tatas would have adopted this process if they had been permitted to install additional capacity. The second innovation was the use of sintering to pre-treat iron ore before charging it to blast furnaces. This effected economy in blast furnace operations, particularly in reducing the consumption of coke and fluxing material.

VESPA SCOOTERS

The Draft Outline of the Third Plan has fixed the production target for motor cycles and scooters to be reached in 1965-66 at 50,000. The target represents a rise of 34,000, as compared with the anticipated output of 16,000 in 1960-61. This additional production is to be achieved by augmenting the capacity from about 24,000 in 1960-61 to anywhere between 48,000 to 60,000 partly by expanding the existing factories and partly by setting up new ones. The Government of India has already given a licence to Bajaj-Auto Private Ltd. of Bombay to manufacture 6,000 VESPA scooters and smaller three-wheelers per annum on single-shift basis. In fact, the Company commenced assembling operations last month. Mr. Ramkrishna Bajaj, a Director of the Company, disclosed at a Press conference in Bombay on Saturday last week, that the factory would reach the rated capacity by October 1960 and step up output from 500 units to 1,000 units per month by March next year when the factory will have been completely shifted to Poona.

The total cost of the plant and equipment is estimated at Rs. 75 lakhs, including the foreign exchange component of Rs. 30 lakhs which has been released to the Company out of the U.S. Development Loan Fund. The Company is expected to issue shares to the public in about two or three months' time. The amount of issue and other details are being worked out. The Poona factory will employ 800 persons per shift and, if two shifts are worked, about 400 to 500 more may be employed.

The foreign collaborators of Bajaj-Autos are Messrs. Piaggio & Co. of Italy, the pioneers in the manufacture of scooters in the world. The collaboration is purely technical and the indigenous firm will give some royalty on patent designs, etc., supplied by the Italian Company.

According to the present production programme of the Company as sanctioned by the Central Government, the indigenous content of scooters (and smaller three-wheelers) will be 40 per cent. by the end of next year and 75 per cent. by the end of 1963. The current price of the VESPA scooter is about Rs. 2,400—Rs. 2,500 (including all taxes). This compares with the price of about Rs. 1,200 for a similar scooter in Italy. The high price in India is said to be due to heavy import duty on components, freight charges, royalty, etc. Maintenance charges on the scooter are said to be low, because the vehicles gives 128 miles per gallon, with a maximum speed of 53 miles an hour.

NEW PRODUCTS AND PROCESSES

Longer-life Exhaust Silencers

AMERICAN motor-car makers are trying two lines of attack on the problem of corrosion in exhaust silencers—the component with the shortest life in the whole car. American Motors, which pioneered the small American car, will fit ceramic-coated exhaust systems to its 1961 models. Ford is trying stainless steel. General Motors is waiting to see which system wins. Exhaust pipes and silencers take as much or more punishment than any other car part. They handle hot gases while the car is running; sulphur in the petrol mixes with water condensed from the exhaust and forms corrosive acid; and there is almost always condensed water to accelerate normal rusting when the car is idle. For this reason, cars used continuously, such as taxicabs, generally show a longer silencer life. Those in private cars frequently last only eight to 15 months, and there is a flourishing business in replacements for them. American Motors aims to make this unnecessary with an exhaust system which will last the life of the car.

In the ceramic process, the silencer assembly and tailpipe will be dipped in a thick mixture of water, borosilicates, borax, titanium oxide and other refractory materials. Then the whole thing is fired at 1,500 degrees Fahrenheit to produce an enamel coating three-thousandths of an inch thick. The additional cost is estimated at about $3.50 or £1 5s. per car.

New Commercial Use for Explosives

Explosives are steadily making their way into new fields in industry in the U.S. Originally they were useful only to the civil engineer. Explosive driving of nails and heading of riverts was the next step. One new use for them this summer is in flaring the ends of thick-walled stainless steel tubing. An exploding cartridge drives a blunt, tapered tool into the end of the tube, spreading it to take fittings. Experiments are under way by one company to use explosives to form metal up to three inches thick. (They have already been used to stretch thinner gauges.) In addition, explosives can now be used to compact metal powders, instead of using hydraulic pressure. Implosion, the inward pressure of an explosion, can reduce the diameter of cylindrical parts, making them more dense. Explosives have been used experimentally to force metals together to weld them. This latter use has the advantage that there is no "heat-affected zone" around the weld. There are also novel methods of using explosives for old purposes. A new cartridge for a kiln gun packs its slug in paper so it will not wear the steel gun barrel. A kiln gun is similar to an 8-gauge shotgun except that it fires a solid 3-ounce lead slug. The gun is fired into the mass of hard clinker that accumulates in a rotary cement kiln to break it up and permit its removal. The paper cover for the slug is claimed to reduce barrel erosion and pitting, increasing its life by as much as 200 per cent.

Furnascote

A range of surface coatings to protect the refractory bricks in boilers and furnaces has recently been developed by Corrosion of Southampton (U.K.), and is now being marketed under the name Furnascote. Development of the coatings has stemmed from research into the destructive action of acids, produced by the combustion of fuel oil, on firebricks. Several types of coating have emerged from this research, each designed to fulfil a particular function and to be effective within defined temperature ranges. They contain high proportions of zircon compounds and, according to the manufacturer, they have heat resistances up to 3,500 degrees F. Their lives vary with operating conditions, but it is claimed that in many cases furnace walls can be protected for "a period of years." Furnascote is not a mere refractory wash, it is declared, but creates a barrier 1/16 inch by ⅛ inch thick. The material can either be brushed or sprayed on and it is supplied in the form of a dry powder which is mixed with water prior to use. Although a single coating is said to give a satisfactory surface, the manufacturer points out that two coatings will last much longer. Firing of the furnace can start as soon as the coating has been applied. It is claimed that after fusing, the coating prevents cracking of the underlying refractories and that it forms an impermeable barrier to gasses and particles.

Electronic Apparatus for Yarn-testing

A Dutch firm manufactures a yarn-evaluating appartus for use in spinning mills, knitwear factories and weaving mills. This apparatus enables large amounts of yarn to be tested for spinning defects, uniformity and weaving qualities. The computer with its four counters classifies the defects found into four classes and determines the numbers in each class. It is also possible to cut off the spinning defects while simultaneously sorting them into class. Each spindle of a six-spindle bobbin winder is provided with a detector. Each detector consists of a measuring condenser with a free passage and a cutting mechanism. The yarns for testing have normal and abnormal variations of mass. These variations of the mass produce changes in the capacity of the measuring condenser which are converted by the detector into electric voltage variations. A computer compares the voltage variations caused by the abnormal mass variations with those due to normal mass variations. This results in a good comparison of quality which hitherto could only be estimated visually with the use of various accessories, the degree of reliability still varying. This apparatus enables 5,700 metres of yarn to be tested a minute at bobbin speeds of up to 950 metres a minute. The yarn is not lost in the operation but can be used afterwards in production as a cone.

Protective Clothing

Protective clothing which is moisture-repellent and gives special protection against radiation heat and direct heating is being produced by a Netherlands factory. It is therefore very suitable for fire and rescue squads, it is made of a woollen material which owing to a special scientific treatment has a high reflective and heat-resistant property. The material is moth and beetle-proof even in the tropics. The protective clothing is of the overall type with mittens to match. It has a high collar which partly protects the face but does not make it difficult to wear a helmet (with a visor if required). The sloping shoulders and sleeves prevent burning chips from catching. The overall is closed by a shielded zip-fastener. A waistline adjustment is provided on the inside. The special material and design of the outfit create an insulating layer of air protecting the wearer from sudden changes in temperature. The protective clothing can be quickly pulled over an ordinary suit and is washable. This light protective clothing, weighing about 2,400 g. (5.3 lbs.) remains flexible at all temperatures, thereby giving the wearer full freedom of movement for handling his material.

Dual Fuel Storage Cell

A line of research being pursued currently in the U.S. is development of a fuel cell which can be reversed and used as a storage battery if desired. A major battery company has signed contracts with 12 makers of material-handling trucks to use the cells instead of storage batteries. But commercial production is still three years away. This cell will pass pure oxygen over zinc electrodes in a solution of potassium hydroxide. Electricity is a byproduct of the ensuing chemical reaction which is basically the reverse of the normal electrolytic process. If a truck powered by the cell is to be used continuously, the zinc electrodes can be replaced as they are used up, in which case zinc is the fuel. Otherwise, current can be passed through the cell in the reverse direction during any idle period. This re-converts the zinc oxide to pure zinc, putting the cell in service again with its original electrodes. The cells are smaller and lighter than storage batteries of an equivalent capacity. First indications are that operating costs will be less than petrol or propane engines of the same power, but there are no estimates yet of initial cost.

New Uses for Wood

In this era when plastic materials enjoy so great a success, wood is sometimes rather neglected. And yet, this noble material has its place marked in modern interiors, to which it brings a note of comfort and of distinction, which no other material is capable of giving. In order to popularise the use of wood in the arrangement of interiors, both in private and public buildings, the decoration of show-cases and shop-windows and for various other purposes, a Swiss saw-mill and factory, which specialises in veneering, has launched a new kind of overlayed wood panelling under the name of "Laril." Instead of being smooth, the visible side of "Laril" is covered with a set of moulds or grooves, which give it a modern and comfortable look, and make it easy to place the panels in juxtaposition without any visible joints. Possessing stable dimensions and forms, "Laril," which is hygienic, sound-proof, and very easy to use, to tint, stipple or paint, is delivered in standardised panels and finds a large field for its application in the modern arrangement of walls and ceilings, in all kinds of places.

New Measuring Instrument

A well-known Swiss firm which specialises in the manufacture of measuring apparatus, is now producing instruments which make it possible to determine automatically the quantities of certain substances contained in certain compounds, in chemical laboratories. The principal advantages of these instruments are that they cut down the time required for these operations and yield exact and reproducible results, even when employed by unskilled staff. This firm also produces pH meters of great precision for determining the blood pH (i.e., the degree of acidity) for the control of the pulmonary function, as well as a recording potentiograph, which makes it possible to discover the presence of the most diverse substances and to determine their quantity up to a millionth part of a gram. An operation of this kind which formerly lasted from 8 to 15 minutes, can now be effected, with a still higher precision, in one minute only.

Silicon Switching Device

A new silicon switching device which will handle power far beyond the range of previous semi-conductors has been developed in the U.S. It will carry, it is claimed, currents ranging up to 50 amperes at up to 300 volts. It will block voltages below a certain value but at this point, or on receiving a "gate" signal, it will change to a conductor. Switching time is 600 millimicroseconds. The makers claim that it has many advantages over the thyratrons formerly used to control currents of this order.

New Type of Glass

A new type of glass is expected to yield fibres withstanding temperatures above 4,500° F. and with far higher tensile strength than present glass. The new mix has a lower silica content—generally under 50 per cent.—and increased amounts of alumina, zirconia and magnesia. It is under development at the University of Pittsburgh, U.S.

EMPLOYMENT AND LABOUR POLICY IN THIRD PLAN

PROBLEM OF UNEMPLOYMENT WILL PERSIST

THE Draft Outline of the Third Five-year Plan is commendably candid in its assessment of the employment potential of the Plan. The experience of the first and second Plans seems to have enabled the planners to view the employment aspect of planning in a clearer and more realistic light. The Draft Outline does not make any pretentions to wiping out the existing unemployment and providing jobs for all the new entrants to the labour market. Its aim is modest, namely, preventing the situation from deteriorating from bad to worse, while seeking, at the same time, to provide employment to those still unemployed in avocations other than the normal economic activities.

In the first place, the Plan does not specifically provide for the backlog of unemployment that will exist at the close of the second Plan. This blacklog will be higher by some two million persons than at the beginning of the second Plan. And, secondly, there is no full provision for the new additions to labour force that will take place during the third Plan period. These additions call for the creation of 15 million jobs. As against this, it is estimated that additional employment likely to be created in the third Plan will only be of the order of 14 million, 3.5 million in agriculture and 10.5 million outside agriculture. Thus, the objective of not allowing the employment situation to worsen during the Plan period will require the provision of one million jobs in addition to those directly flowing from the Plan investments. The following measures are proposed in the Draft Outline for creating the extra one million jobs:

(1) Extension of electricity to small towns with a population of 5,000 to 20,000 so as to enable expansion of small-scale industries with the use of power.

(2) Decentralisation of production in large enterprises, with a view to taking up a fair proportion of production by smaller enterprises or even by individuals on a family basis.

(3) Location of processing industries in rural areas.

(4) Increasing the scope of utilisation of manual labour by restricting the use of machinery in projects to only such operations as would have considerable advantage in terms of costs or the period of construction.

(5) Expansion of opportunities for work at the district and block levels by suitable adjustment and expansion of development programmes relating to agriculture.

(6) Development of co-operatives for credit, marketing and farming; establishment of democratic institutions and the development of scientific agriculture to provide work opportunities for educated young men in rural areas.

(7) Training of workers for special jobs so that they can be moved from place to place to supplement local labour for special jobs.

New Channels of Employment

These measures, the authors of the Draft Plan admit, are no answer to the needs of a number of persons who will still remain unemployed. Channels for employment will have to be opened to them which the normal economic activity of the country cannot provide. Hope for them lies, according to the authors of the Plan, in the fact that there are possibilities of work which, by raising the productivity of the assets of the community, may add to its income and wealth to an extent not less than the outlays incurred. There is plenty of scope for productive activities such as the improvement of small irrigation, clearing of land, contour bunding to prevent soil erosion, planting of trees on a large scale and improving and building village roads. It should be possible to organise such local works at a low cost on wages at subsistence rather than market level.

This type of activity should, in the opinion of the Planning Commission, contribute to increased production even within the Plan period. It is proposed to provide resources in the third Plan to offer scope for such experimentation on a wide scale. The real challenge, the planners rightly recognise, is not the provision of finance, although that too is important, but the ability to organise such works on a country-wide scale.

It is clear from what is said above that full employment is a goal still a long way off. Full employment is both the object and consequences of economic development. The pace of growth of employment opportunities is, therefore, necessarily set by the rate of economic progress. The authors of the Draft Outline fully realise the limitations on the expansion of employment opportunities as the following paragraph clearly brings out:

"An increase in agricultural production would lead to a reduction in underemployment rather than to the creation of new jobs in the rural areas. The increase in industrial production does not lead to a proportionate growth of opportunities for employment, because most of the new processes used in large-scale industries are based on high productivity techniques. The number engaged in trade is unduly high in underdeveloped economies and the expansion of commerce would generally serve to reduce underemployment rather than add significantly to new employment. In this situation, it would take a good deal of time to create conditions of satisfactory full employment."

The Only Remedy

The only remedy for the unemployment problem, the authors of the Draft Plan emphasise is the continuing expansion of the national economy at a high enough rate to create adequate employment opportunities in the urban areas and to provide conditions for a sustained growth of agricultural production which would reduce underemployment and offer greater opportunities of work for landless agricultural labour and similar occupational groups. In the transitional stage, it is necessary to maintain and indeed promote labour-intensive methods of production to the fullest extent, so long as this does not lead to a smaller aggregate production in the economy. This policy was accepted in the second Plan and will be continued in the third and subsequent Plans.

Providing employment is only the first step. Unless peaceful conditions of work are also created, the Plan objective of higher production will be difficult to realise. For securing peaceful conditions in industry, the Government has, for over a decade, taken upon itself the responsibility of providing facilities for promoting the amicable settlement of industrial disputes and has assumed powers of intervention for the purpose of maintaining industrial peace. It is now recognised that, while Government intervention is unavoidable to some extent in the present circumstances, real progress lies in the development of co-operative arrangements evolved by the parties themselves in response to the needs of changing situation. For the object is to secure not peace alone but higher levels of industrial efficiency and higher standard of living for the working class.

Code of Discipline

The trends in labour policy initiated after independence and during the first Five-year Plan were consolidated and developed during the second Plan. This period also made its special contribution towards the evolution of labour policy and the realisation of its basic aims. Special mention must be made here of a few recent developments of outstanding importance which provide the main content and direction of what needs to be done with regard to labour under the third Plan. First, the Code of Discipline in Industry. The Code, which applies both to public and private sectors, has been accepted voluntarily by all the central organisations of employers and workers and has been in operation since the middle of 1958.

It lays down specific obligations for the management and the workers, with the object of promoting constructive co-operation between their representatives at all levels, avoiding stoppages as well as litigation, securing settlement of disputes and grievances by mutual negotiation, conciliation and voluntary arbitration, facilitating the free growth of trade unions, discouraging careless operation or negligence of duty on the part of the worker, and eliminating all forms of coercion and violence in industrial relations. It is obvious that a new concept with such far-reaching aims in a difficult field will require a considerable period of earnest endeavour before it gets firmly established in practice. The results so far achieved are claimed to be encouraging both in terms of reduction of man-days lost owing to stoppages and of bringing about a general improvement in the climate of industrial relations. The deplorable consequences of inter-union rivalry for industry and workers alike are well known. They have been mitigated to some extent by the Code of Conduct which was drawn up and accepted by the representatives of workers' organisations two years ago. The failure to implement awards and agreements has been a common complaint on both sides and, if this were to continue, the Codes would be bereft of all meaning and purpose. A machinery for implementation and evaluation has, therefore, been set up both at the Centre and in the States to ensure observance by the parties of the obligations arising from the Codes and from any laws or agreements.

Secondly, the scheme of workers' participation in management. The object of the scheme is to give workers a sense of belonging in the industrial unit and to stimulate their interest in higher productivity. Joint Management Councils have been set up in 24 units. The main function of the Council is to bring about mutual consultation between employers and workers.

Thirdly, workers' education. A programme of workers' education has been undertaken through a semi-autonomous board. It is being run with the full co-operation of all the employers and workers' organisations.

Lines of Action

The coming years would witness the fuller impact of these ideas which have been tried and found useful during the second Plan period. The recommendations in the first and second Plans were the product of joint consultation and were based on agreements arrived at between the representatives of the organisations of workers and employers. It is stated that the policy and programmes for the third Plan also will be evolved on the same lines and on a number of issues agreement has already been reached. Action along the following lines is proposed to be taken during the third Plan period:

(1) Efforts will be made to reduce to the minimum the recourse to tribunals and courts. This will also be a remedy for the delays which still occur in the settlement of disputes. Ways will be found for increasing application of the principle of voluntary arbitration in resolving differences between workers and employers. Works committees will be strengthened and made an active agency for the democratic administration of labour matters within an agreed sphere. Adoption of an appropriate "grievance procedure" for all industrial establishments will receive special attention.

(2) Further steps will be taken to deal with certain unfortunate aspects of trade union rivalry.

(3) Large-scale expansion of the programme of workers' education will be attempted.

(4) The scheme of workers' participation in management will be progressively extended, so as to make it a normal feature of the industrial system.

(5) The objective of raising the level of productivity will be kept in the forefront. For this purpose, a Code of Efficiency and Welfare will be worked out. The Code, it is hoped, will help cultivate the right kind of attitude on the part of management and workers and will define, in concrete terms, the responsibilities of both for achieving these ends. Technical committees will be set up for ensuring that the programme of rationalisation is implemented smoothly and in accordance with agreed principles.

(6) Studies are proposed to be organised on (a) wage differentials, (b) the manner in which wages should be linked to productivity, (c) the techniques of measuring productivity, (d) norms on the basis of which gains in productivity should be shared.

(7) Coverage of the Employees' State Insurance Scheme will be extended.

(8) It is common knowledge that the situations in respect of workers' housing has not improved, despite the subsidised housing scheme which has been in operation for several years. The whole approach to the problem will be re-examined.

(9) Schemes will be initiated for expanding research facilities and widening the base for studies in matters pertaining to labour so as to fill the gaps in the information and understanding of the conditions and problems of workers.

Agricultural Workers

The most disappointing feature of the section on labour policy in the Draft Outline during the third Plan period is that it virtually overlooks agricultural workers. Apart from a passing remark that their needs and problems should receive special consideration in the third Plan, there is no indication in the Draft that any definite measures are contemplated to improve the conditions of agricultural workers. This is indeed regrettable. While legislations have been passed in quick succession conferring benefits after benefits on industrial workers, even the Minimum Wages Act has not been enforced for agricultural workers. The two agricultural labour inquiries undertaken in 1950-51 and 1956-57 have thrown much revealing light on the plight of agricultural workers. Nothing much has been done to improve their condition in the first and second Plans. It looks as though in the third Plan too agricultural workers would continue to remain the Cinderella they have so far been.

ECONOMIC DEVELOPMENT OF MAHARASHTRA

STRESS LAID ON HARMONIOUS GROWTH OF ALL REGIONS

THE reorganisation of a State is not an end in itself; it is only a means to an end. its ultimate object is to promote the tempo of economic development through intensified efforts at mobilising the human and other resources and, thereby, to ensure a better standard of living for the people. An awareness of this goal is reflected in the speech made by Mr. S. K. Wankhede, the Finance Minister of Maharashtra, while piloting the first budget of the new State for 1960-61 in the Legislative Assembly last week; a brief account of the financial position of the State, as revealed in the Budget speech, has already appeared in the last issue of *Commerce*.

Appropriately enough, a large part of the Finance Minister's speech was devoted to the problems of, and prospects for, the economic development of the State. Mr. Wankhede stated at the outset that the economic picture which the State presented was one of a few industrially developed cities, with a relatively underdeveloped countryside. He rightly stressed that all plans for the economic development of the State would have to aim not only at the fuller exploitation of its natural and human resources for a balanced development of industry, agriculture and social services, but also at the harmonious growth as between the cities and their hinterland as among the different regions of the latter.

Area and Population

Maharashtra is the third largest State in the Indian Union, comprising as it does 10 per cent. of the total area and 9 per cent. of the population of the country. It has a population of over 32 million, spread over 35,526 villages and 373 towns. There are over 8,000 registered factories in the State, employing about 700,000 workers. The number of joint-stock companies in the State is 4,000, with a total paid-up capital of Rs. 314 crores. The principal industries are cotton textiles, general and electrical engineering, chemicals, sugar, vegetable oils (including hydrogenated oils), paper and paper boards and soap. The State is also favourably placed in regard to industrial raw materials such as cotton, oilseeds, and salt and, in minerals like manganese, coal and iron. It leads in the production of cotton, with over 26 per cent. of the total production of the country. In oilseeds also, the State accounts for about one-sixth of the area under oilseeds in the whole country. Salt is produced in the coastal districts, while manganese, coal and iron ore are mined in Vidharbha districts and, to some extent, in Ratnagiri district. The drilling operations undertaken at Kamptee (Nagpur) have proved the presence of about 300 million tons of good quality coal in the area. Further prospecting is likely to reveal deposits of the order of about 1,000 million tons. The prospecting operations for iron ore carried out at Redi in Ratnagiri district have also indicated reserves of about 20 million tons, which with further prospecting may come to the neighbourhood of about 50 million tons. The prospecting undertaken in the Udgeri hills of Kolhapur district have proved the existence of bauxite deposits at 5.7 million tons. These deposits will, we are told, provide useful raw material for an aluminium plant proposed to be set up in this area.

In the sphere of agriculture, although Maharashtra accounts for 38.5 per cent. of the total production of millets in the whole country, its output of superior foodgrains is too low, its share being no more than 4.4 per cent. in respect of rice and 3.9 per cent. of wheat. The area under irrigation is only 5.6 per cent. of the gross cropped area, as against about 17 per cent. in the whole country. Again, in regard to communications, the State is backward, the coverage by railways being only 2.24 miles and roads 17.57 miles per 100 sq. miles, as against 2.76 miles and 21.06 miles, in India as a whole.

Analysing the extent of concentration of economic activities in the capital, Mr. Wankhede stated that over 3,500 factories out of the 8,000 factories in the State were situated in Greater Bombay alone, employing about 450,000 daily workers, as against 700,000 daily workers. As much as about 3,494 joint-stock companies out of 4,000 in the State had also head offices in Greater Bombay. Besides, while the population served by a bank in the State as a whole was 40,000, in Greater Bombay, there was one banking office for every 14,000 persons. Thus, although Bombay City is highly industrialised, the other regions of the State are largely underdeveloped.

Mr. Wankhede made it clear that, owing to the high degree of development in Greater Bombay, the indicators of growth were higher on an average for the State, as compared with those for the country as a whole. This was particularly so in regard to *per capita* income, *per capita* power generation and consumption, and percentage of factory workers to total urban population. The national income of the State, Mr. Wankhede pointed out, was computed at Rs. 1,004 crores, as against Rs. 9,980 crores for the whole country for the year 1955-56. He observed that, since this accounted for about 10 per cent. of the country's national income, as against a population of 9.05 per cent. only, the *per capita* income in the State, excluding Bombay City, must be substantially lower than the *per capita* income for the country. He added that *per capita* power generation for the State was 71.01 kw.h., as against 31.42 kw.h. for the country. Power consumption was 59.90 kw.h., as against 26.06 kw.h. for the Indian Union. The percentage of factory workers to total urban population was 7.02, as compared with 4.99 for the whole country. If, however, the city of Bombay was not taken into account, these indices, according to Mr. Wankhede, would work out as follows: power generation 27.30 kw.h. *per capita;* power consumption 21.20 kw.h. *per capita;* factory employment 3.60 per cent. of urban population. Another important point made by the Minister was that, while the development achieved by a few cities and towns became at once conspicuous, the thing that was not so conspicuous was the fact that social and economic costs of concentration of population and industries called for large financial provisions for town planning, water and electricity supply, medical services, slum clearance, etc.

Progress of Second Plan

Although the progress of the various projects in the State under the second Plan was not satisfactory in the first three years (1956-57 to 1958-59), various steps had been taken to step up the Plan expenditure in the fourth and fifth years of the Plan. The total expenditure incurred during the first three years of the Plan, according to Mr. Wankhede, was only Rs. 87.93 crores, or 43 per cent. of the total Plan provision. This unsatisfactory progress of the Plan expenditure, he pointed out, was due to the fact that one year was lost due to 1956 reorganisation. Besides, on many of the schemes, which were included in the Plan, no preliminary work, such as survey and preparation of plans and estimates was done. The slow progress was also "due to dilatory procedures, delays in obtaining administrative and technical sanctions, insufficient delegation of powers and the total absence of periodical reviews of the Plan progress by co-ordinating officers."

The following table shows the expenditure incurred in the first four years of the second Plan period (1956-60) and the expenditure provided for in the current year's budget:

(Value in crores of rupees)

	Second Plan allocation	Expected expenditure upto 1959-60	Budget estimate for 1960-61	Total anticipated expenditure for five years
Agriculture and Community Development	50.76	43.29	18.82	62.11
Irrigation and power	70.03	44.34	23.30	67.64
Industries and mining	8.39	3.56	1.43	4.99
Transport and communications	12.43	13.43	5.58	19.01
Social services ..	47.87	37.96	16.89	54.85
Scientific and industrial research ..	5.93	2.03 2.66*	0.75	2.78 2.66*
	204.41	147.27	66.77	214.04

* Share of common schemes.

As a result of the various administrative measures taken and additional allocations made under various heads to expedite the implementation of Plan projects, the Plan expenditure is expected to have gone up to Rs. 147.27 crores, or 72 per cent. of the Plan provision, during the first four years of the current Plan. Provision is now made for and expenditure of Rs. 67 crores for 1960-61. The total expenditure is thus expected to be of the order of Rs. 214.04 crores for the five years, as against the total Plan allocation of Rs. 204.41 crores.

Reviewing the progress of the Plan during the first three years, the Finance Minister conceded that the execution of irrigation schemes, as also the utilisation of water resources by farmers, had been very slow. In order to protect agriculture from the vagaries of the monsoon, a large provision of Rs. 37.31 crores was made in the second Plan of Maharashtra for major and medium irrigation works. This included provision for spill-over works of Gangapur Stage I, Ranand Tank, Ghod and for a number of new irrigation works, namely, Vir dam project, Kadakvasla project, Mula, Girna, Warna, Bagh, Itiadoh, Khatepurna, Dina, Bor, Nalganga, Purna and Manar. Of these, Ranand Tank had been completed; Gangapur Stage I had also been practically completed. The construction of dam proper at Ghod had been finished, except for fixing spillway gates. All other projects were in different stages of execution. In addition to the major irrigation works, 32 medium irrigation projects were also included in the second Five-year Plan. Of these, only eight had been completed and work on the rest was in progress.

Even if all the available water resources in the State were impounded, Mr. Wankhede believed, the area that could be brought under irrigation was not likely to exceed 20 per cent. of the total cropped area. Dry farming techniques, therefore, should be promoted. Under countour bunding, Maharashtra, was likely to attain 80 per cent. of the target before the end of the Plan. Besides, 37 additional seed-farms were proposed to be set up in 1960-61. Thus, there would be 223 seed-farms by the end of 1960-61, as against the Plan target of 202 seed-farms.

Technical Personnel

In the field of industry, Mr. Wankhede dealt, in particular, with the steps taken to expand the training facilities for technical personnel. Post-graduate courses for (i) dam construction, irrigation and hydraulics, (ii) structural engineering and concrete technology, (iii) advanced electronics, and (iv) advanced metallurgy had been started at the College of Engineering, Poona, during the second Plan period. A post-graduate course in soil mechanics and foundation engineering would also be started during the current year. The Government of India had also decided to start a Central Engineering College at Nagpur with an intake capacity of 240 students from the current financial year. Two polytechnics with an intake capacity of 120 students each were established in the first two years of the Plan period at Sholapur and Karad. Two more polytechnics were being started from the current year, one with an intake capacity of 300 students at Bombay and the other with an intake capacity of 120 students at Jalgaon.

The progress of power schemes had been proceeding according to schedule. Mr. Wankhede stated that Khaparkheda first extension scheme had been completed and this would make available in the Vidarbha region 30 M.W. of power. An additional capacity of 30 M.W. would also be commissioned at Paras shortly. The Koyna Hydro-electric Project was making good progress. The road programme was also making remarkable progress. The total expenditure on roads had already exceeded the original provision of Rs. 10.43 crores. The State was expected to have 16,377 miles of metalled roads and 8,446 miles of non-metalled roads by the end of the current Plan. Mr. Wankhede averred, however, that still the State would have achieved only 52.67 per cent. of the Nagpur Plan target of 47,133 miles. It may be noted here that the Nagpur Plan target was exceeded by the country as a whole as early as in 1957.

SIMPLIFICATION OF LICENSING PROCEDURE

In order to ensure quicker disposal of applications for the establishment of new industries, the Government of India has further simplified the procedures for granting licences under the Industries (Development and Regulation) Act. Accordingly, it has been decided that, where a greater level of production can be achieved through the installation of a balancing plant or machinery, the requisite licence should be issued without prior reference to the Licensing Committee.

Earlier this year, the Union Ministry of Commerce and Industry, it may be recalled, had announced a list of 49 industries in respect of which licences for setting up fresh capacity would be issued freely. The list, which contained 22 engineering and 27 non-engineering industries, had been drawn up to facilitate the expeditious disposal of applications seeking Government's approval for setting up new units.

TATA OIL'S RECORD RESULTS

HANDSOME RETURN TO SHAREHOLDERS

THE outstanding impression that one gets from a study of the statement of accounts, Directors' report and Chairman's statement of the Tata Oil Mills Company Ltd. (Director-in-charge: Mr. P. A. Narielwala, Bombay) for the year ended 31st March 1960 is that the Company has strongly established itself in the fields of soaps, toilets, and *vanaspati* and has emerged from the fire of intense competition as a finely welded and shining organisation. Keen competition is essential for keeping the private sector in excellent fettle, free from charges of black-marketing, corruption and inefficiency and for furthering its growth on the solid foundation of efficient service to consumers. But for the competition that it has had to go through from financially and technically superior manufacturers in this country, it is a moot point whether the Tata Oil would have been able to boast of the many-sided achievements it has to its credit today—improved plant and machinery, new lines of manufacture, a modern marketing division, a streamlined administrative machinery and a contented labour force. These acquisitions, coupled with the assured growth of the economy, thanks to the Five-year Plans, have enabled the management to view the outlook for this forty-year-old concern with confidence and optimism.

The Company's results for the year ended 31st March last are the best in its history. There is a marked expansion of well over a crore of rupees in sales which crossed the Rs. 8-crore mark by a comfortable margin. Net income from other sources, such as commission on sales of Tata Chemicals' products has also registered a substantial rise. Although cost of raw materials continued to go up, their judicious and timely purchases and the larger turnover have enabled the Company to report a handsome growth of about 40 per cent. in gross profit, from Rs. 54.69 lakhs to Rs. 74.19 lakhs. After setting aside Rs. 2.10 lakhs more than last year for depreciation and Rs. 4 lakhs more for taxation, the net profit is up by 68 per cent. at Rs. 28.72 lakhs. The ordinary dividend has been enhanced to 23 per cent. (Rs. 5.75 per share of Rs. 25 each) gross, which is equivalent to a net of 16.10 per cent. (Rs. 4.02½). Last year, the dividend was Rs. 3.25 per share or 13 per cent., free of tax, and the year before that it was just Rs. 2.50 per share or 10 per cent., free of tax.

The following table shows at a glance the important features of the profit and loss, as well as appropriation, accounts for the four years ended 31st March last:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale proceeds	8,09.29	6,51.08	6,16.70	6,62.74
Other income	21.97	12.76	8.02	13.13
Stocks of finished goods and stocks-in-process	1,02.75	1,09.27	79.43	1,02.17
Raw materials and stores consumed	4,71.70	3,64.77	3,63.46	4,27.28
Other expenses*	2,87.37	2,45.87	2,29.29	2,03.98
Gross profit	74.19	54.69	35.25	34.50
Managing Agency commission	6.25	4.55	2.68	2.71
Provision for—				
Depreciation	13.47	11.30	10.80	10.30
Taxation	25.75	21.75	11.92	9.10
Net profit	28.72	17.10	10.15	12.39
To reserves	8.00	5.50	1.07	2.90
employees' gratuity	2.00	1.50	1.20	1.50
Dividends—				
4½ per cent. preference	1.34†	0.92	0.92	0.90
Ordinary	16.12†	9.11	7.01	7.01
	(23%)†	(13%)	(10%)	(10%)
Carry forward	0.46	0.12	0.05	0.10

* Inclusive of excise duty which amounted to *Rs. 43.35 lakhs* for 1959-60 and Rs. 39.06 lakhs for 1958-59.

† Subject to deduction of tax.

A notable piece of information to be gleaned from the aforesaid table is that the direct and indirect taxes paid by the Company aggregated no less than Rs. 69 lakhs during the year under review. This is exclusive of the tax to be deducted at source from both the preference and ordinary dividends.

The Directors have been quite generous to ordinary shareholders in recommending a gross dividend of 23 per cent. Thus, of the increase of Rs. 11.62 lakhs in net profit, no less than Rs. 7 lakhs are being utilised to meet the increase in dividend and only Rs. 2.50 lakhs are devoted to raise the transfers to reserves which at Rs. 8 lakhs consist of Rs. 2 lakhs to development rebate reserve, Rs. 1 lakh to general reserve and Rs. 5 lakhs to plant modernisation, and development reserve created for the first time this year. A more substantial addition to reserves would have been appropriate, considering that reserves and surplus, including the transfers now made but excluding the premium on shares amounting to Rs. 14.94 lakhs are no more than Rs. 54.93 lakhs, being equal to about 35 per cent. of the paid-up capital of Rs. 99.96 lakhs.

The Directors' report bring out the following points on the Company's working during 1959-60:

(1) There was, over the year, a steep rise in cost of all oils, coconut oil by 23 per cent., mowra oil by 18 per cent., groundnut oil by 17 per cent. and palm oil by 8 per cent. The Company, however, managed to buy at relatively more favourable prices. This, as already stated, was one of the factors responsible for the rise in profit.

(2) As compared with 1958-59, there was an increase of 11 per cent. in seeds crushing operations, of 11 per cent. in sales of laundry and toilet soaps, of 12 per cent. in the sale of glycerine, and of 21 per cent. in toilet products. The rise in *vanaspati* sales was small but encouraging. After a lapse of many years, the Company resumed sale of coconut oil in bulk at Calcutta. Exports of the Company's products rose from Rs. 19 lakhs to Rs. 30 lakhs. The groundnut meal produced by the Company has established a reputation both within the country and in foreign markets and is readily bought at a small premium.

(3) The sales agency agreement with Tata Chemicals has been renewed for three years from 1st July 1959.

(4) The Company has also a programme for expansion. It has bought a soap plant of a capacity of 7,500 tons per annum from Modi Sugar Mills, U.P., at a cost of Rs. 8.50 lakhs and is re-erecting it at a site outside Delhi. This new factory, due to be completed in the first half of 1962, will produce soaps, glycerine and *vanaspati*. The Amrut Oil Mills at Sewree, Bombay, has been taken over at a cost of Rs. 19.76 lakhs. This price covers a crushing mill, a soap plant, a *vanaspati* plant and nearly 15,000 square yards of additional land adjacent to the Company's Sewree factory. An order has been placed in Italy for a continuous soap plant. The expeller capacity is also being expanded both at Sewree and Tatapuram (Kerala). Good progress is being made with the erection of the fat splitting and fatty acid distillation plant at Tatapuram which will enable the Company to use certain non-edible oils in the manufacture of soaps. This plant, ordered from Germany, is scheduled to commence production some time next year. When all these programmes are completed, the Company's efficiency will improve further and its total capacity for laundry and toilet soaps, its principal manufacturing business, will be of the order of 45,000 tons per year or some 60 per cent. more than 10 years ago.

On the management side, the Company's departments in charge of production, marketing and sales, and purchases of raw materials have been reorganised and expanded. The Managing Director of Tata-Fisons Private Ltd., Mr. J. R. Jenk, has been appointed as Commercial Director to plan further activities for the future. Particular care is being paid to purchases of raw materials at different centres in the producing areas at appropriate seasons. The Chairman of the Company, Mr. J. R. D. Tata, says that the management is fully conscious of the fact that the overall success of its operations depends, to a considerable extent, on judicious buying of raw materials. A new technical development department has been formed to take care of all technical matters in the fields of product improvement and development, processing and plant equipment, and planning and erection of new production units.

The Rs. 25 paid-up ordinary shares are currently quoted at Rs. 84 *cum*-dividend and yield, on the basis of latest dividend, 5 per cent. per annum, free of tax.

The outlook for the Company is encouraging, as the market for the Company's products is steadily expanding. In this context, the following extract from Mr. J. R. D. Tata's statement to shareholders is relevant:

"Our long and slow climb of the last twenty years has now brought us, so to speak, to a new plateau, from which we enter the 'sixties and can view the road ahead. While I think it is unwise for any private enterprise to be unduly optimstic these days in view of the uncertainties and vagaries of economic trends and policies in the country, I feel we may look forward to continuous and perhaps accelerated progress in the years to come. Although there will no doubt be ups and downs in the working of the Company, we have the financial strength, the manufacturing resources and the organisation with which to overcome any temporary setback and continue from year to year to develop our business and widen the range of our activities. We have done much in recent years and particularly in the last year to organise ourselves to meet the opportunities and challenges of the future. . . ."

The following synopsis of the Company's balance-sheet as at 31st March 1960, as against the background of the position as at 31st March 1955, will give one an idea of not only the latest financial position but also the improvement that has taken place in the past five years:

(In lakhs of rupees)

	31-3-1960	31-3-1955
Liabilities		
Paid-up capital	99.96	99.96

*Includes 6 per cent. debentures of Rs. 50 lakhs.

The Company's management deserves to be complimented on the comprehensive information given in the Directors' report and statement of accounts in a very attractive manner. It is undoubtedly an excellent model for other joint-stock companies in this country to emulate. It gives a complete analysis of the Company's financial position and progress and contains illustrations, in attractive colours, of the various products made by it and the sources of raw materials. The Company's shares are widely held, there being no less than 6,826 ordinary shareholders and 1,962 preference shareholders. Of the ordinary shares, 2,772 holders are owning 1 to 5 shares each, 1,550 holders 6 to 10 shares, 941 holders 11 to 20 shares, 1,005 holders 21 to 50, 290 holders 51 to 100 and 268 holders 101 and over.

ASHOK PAPER MILLS LTD.

A new company, called Ashok Paper Mills Ltd., under the chairmanship of Dr. A. Ramaswamy Mudaliar, has been formed to establish a paper plant at Darbhanga in the Bihar State. The Company will install an integrated pulp and paper plant, with a daily (triple-shift) capacity of about 50 to 60 tons. It will manufacture all kinds of pulp, paper and paper boards, including writing and printing paper. Bagasse, sabi grass and bamboo will be used as raw materials by the plant.

The Company has already secured the collaboration of a French firm, Messrs. Empacel, which will supply the major portion of the plant and machinery. The other machinery and equipments, which are not available from indigenous manufacturers will be imported from the U.S. under Export-Import Bank Loan Programme. The French firm has also agreed to undertake the installation of the plant and its satisfactory operation and maintenance. The capital outlay of the project is estimated at Rs. 5.45 crores, of which building will cost Rs. 75 lakhs and plant and machinery Rs. 4.52 crores.

The authorised capital of the Company is Rs. 3 crores, divided into preference capital of Rs. 1 crore and equity capital of Rs. 2 crores. The preference capital is in 6½ per cent. tax-free, cumulative, participating and redeemable shares. The preference shares are redeemable any time after the 31st December 1970, but not later than 31st December 1975 at the option of the Company. The holders of the preference shares will also be entitled to participate in the profits at the rate of ½ per cent. for every one per cent. of dividend declared on equity shares above ten per cent., provided that the further participation by the preference shareholders will be restricted to 1½ per cent.

The issue capital of the Company will be Rs. 2.25 crores, out of which there will be 18 lakh equity shares of Rs. 10 each and 45,000 preference shares of Rs. 100 each. Equity shares of the face value of Rs. 96 lakhs have already been subscribed by the promoters, their friends and French participants. The Government of Bihar has given an undertaking that it will subscribe to and take up equity shares of Rs. 30 lakhs and preference shares of Rs. 20 lakhs out of the balance of the equity and preference shares if not taken up by the public as a result of this offer. In pursuance of this undertaking, the Bihar Government will apply for equity shares of Rs. 10 lakhs and preference shares of Rs. 20 lakhs.

HONGKONG AND SHANGHAI BANKING CORPORATION

The Board of Directors of the Hongkong and Shanghai Banking Corporation has declared an interim dividend of £1 5s. per share payable on 15th August. The transfer books will be closed from 29th July to 13th August both days inclusive.

AMBIKA SILK MILLS

SALES RISE, BUT PROFIT DECLINES

ALTHOUGH sales were higher, the gross profit of the Ambika Silk Mills Company Ltd. (Managing Agents: Messrs. Maganlal Bhagwandas and Company, Bombay) for the year ended 31st December 1959 is lower. Thus, while sales fetched Rs. 92.77 lakhs as against Rs. 85.43 lakhs for 1958, the gross profit has come down from Rs. 8.06 lakhs, which was a record, to Rs. 6.38 lakhs. This adverse result is the outcome of an appreciable increase in cost of production which more than neutralised the improvement in sale proceeds. The unsold stocks at the end of the year were also larger than a year earlier. The decline in profit is in contrast to the perceptible advance witnessed in 1958. Because of lower profit, the provision for taxation is down from Rs. 2.39 lakhs to Rs. 1.49 lakhs, but the transfer to depreciation at Rs. 3.08 lakhs is almost the same as that a year ago. The net profit has contracted from Rs. 2.04 lakhs to Rs. 1.48 lakhs. Consequently, the Directors have found it necessary to withdraw Rs. 1.19 lakhs from the general reserve, in order to permit the payment of dividend and to cover the transfer to statutory development rebate reserve, as will be seen from the comparative table published below:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956
Sale proceeds of cloth and waste	92.77	85.43	66.82	62.40
Closing stock of cloth	10.23	8.51	9.62	8.36
Yarn, stores and spares consumed	64.32	53.07	43.02	41.94
Other expenses	27.73	25.34	20.96	19.65
Gross profit	6.38	8.06	5.98	6.36
Managing Agents' commission	0.33	0.49	0.32	0.42
Depreciation	3.08	3.13	2.78	2.15
Taxation	1.49	2.39	0.80	..
Net profit	1.48	2.04	2.08	3.79
From reserves	1.19	..	..	..
To reserves	0.34	0.76	0.90	2.60
Goodwill, etc., written off	0.22	..	..	..
Dividend	2.08	1.38	1.15	1.15
	(12%)†‡	(12%)*	(15%)	(15%)
Carry forward	0.03	..	0.11	0.08

* *On the higher capital of* Rs. 11.51 lakhs raised by a fresh issue of 3,815 shares of Rs. 100 each.

† Subject to deduction of tax.

‡ On the higher capital of Rs. 17.33 lakhs raised by a further issue of 5,775 shares of Rs. 100 each.

The proposed dividend of 12 per cent. is the same as that for 1958 but only so far as the rate goes, because, whereas, last year the dividend was free of tax, this year it is subject to tax. This means that the net dividend is lower by 30 per cent. at 8.4 per cent., free of tax. Another point to be noted in regard to the dividend for 1959 is that it is on a bigger capital following the issue of 5,775 new shares of Rs. 100 each at par. In 1958, too, the Company had enhanced its capital by issuing 3,815 new shares at par. Thus, in two years, it has more than doubled its paid-up capital, from Rs. 7.70 lakhs to Rs. 17.32 lakhs, in order to support the expansion in its manufacturing capacity. It has been progressively modernising the equipment in its mills. Besides, in 1958, it took to production of knitted fabrics, a new line of activity, and, in the year under review, it expanded this business by installing two more machines.

While the aforesaid table gives an idea of the rise in cost of production, the following extract from the Directors' report supplements it by showing precisely why the Company's working in 1959 was less profitable than in the preceding year:

"During the year under review, due to acute shortage of foreign exchange, Government further cut down quotas of import licences usually granted to the consumer mills. On the other hand, under the Export Promotion Scheme sponsored by the Government, incentives in the shape of import licences for import of art silk and synthetic yarns against exports of fabrics were given. The Company entered the export trade with a view to earning foreign exchange and thus obtaining its yarn requirements under the Export Promotion Scheme. However, the price realised for exports are very much lower than those prevailing in India, but the offsetting advantage in exports is grant of import licences for yarn under the Export Promotion Scheme. The Company exported during the year some of its cloth production and earned foreign exchange of Rs. 3,54,040.16 as value thereof. By reason of these exports, the Company has earned import licences, but the advantages of such imported yarn will be realised during the current year. Many items of fabrics manufactured by the Company are becoming increasingly popular in the foreign countries and a good demand has already been established. In order to establish direct contacts with consumers, the Directors thought it advisable to start a retail shop in some good shopping area in the City. Suitable premises were acquired and turned into a modern sales centre. It will be noticed from the accounts that a part of the amount paid (Rs. 67,300) for goodwill for acquiring the premises has been written off."

The financial position of the Company, as at the end of 1959, is satisfactory and reflects the growth in its activities. As already stated, the paid-up capital has been expanded further. At Rs. 17.39 lakhs, the capital account is well in balance with the net block account of Rs. 16.18 lakhs (gross block Rs. 38.69 lakhs *minus* depreciation Rs. 22.51 lakhs). The reserves and surplus aggregating Rs. 9.09 lakhs are equal to more than 50 per cent. of the paid-up capital. Secured loans (Rs. 17.33 lakhs), current liabilities and provisions come to Rs. 34.74 lakhs, as against which there are ample floating assets of the order of Rs. 44.52 lakhs.

STERLING GENERAL INSURANCE COMPANY

The year ended 31st December 1959 witnessed concerted efforts by the management of the Sterling General Insurance Company, Ltd. (General Manager and Managing Director: Mr. M. N. Seth) to stabilise the business of the Company by weeding out undesirable business connections and by greater control over underwriting. The Company also acquired a majority of shares in the Central Mercantile Assurance Company Ltd. which has thus become its subsidiary. As a result of drastic streamlining of business, the net premium declined by Rs. 11.70 lakhs to Rs. 44.80 lakhs. Net premium in the marine department was lower by as much as 45 per cent. and in the miscellaneous department by over 33 per cent. This was, however, offset, to some extent, by the increase in premium in the fire department by 21.7 per cent.

The upward trend of claims, which had characterised the 1958 accounts, was accentuated during the year under review. The ratio of claims to net premium was higher at 74.08 per cent. in 1959, as against 62.69 per cent. in 1958. The various corrective steps already taken are, however, said to be beginning to show results and the Directors hope to bring the situation under control by the end of 1960 or 1961. As regards expenses, the measures already initiated to curb the increase have had a beneficial effect, as is evident from the slowing down in the rate of increase in expenses in 1959.

As a result of stricter control over underwriting which resulted in an underwriting profit of Rs. 51.049, as against the loss of Rs. 5,000 in the previous year, and the higher profits realised on investments, the Company has been able to show a larger net profit of Rs. 2.15 lakhs, as against Rs. 1.40 lakhs in the previous year. The distribution to shareholders has been stepped up from 5 per cent., tax-free, for 1958, to 9 per cent. taxable or 6.30 per cent., tax-free, for the year under review. The sum required to pay this dividend is nearly twice as much as that for the 1958 dividend.

The following table summarises the working results of the Company for the past three years:

(In lakhs of rupees)

	1959	1958	1957
Fire:			
Net premium	17.23	14.26	12.71
Claims	7.09	6.26	5.84
Commission	0.90	0.92	0.82
Expenses of management	4.63	4.47	4.14
Fire fund	8.61	6.37	5.73
Marine:			
Net premium	3.04	5.57	4.60
Claims	4.56	3.69	2.80
Commission	−2.06	−1.31	−0.59
Expenses of management	1.99	2.01	1.83
Marine fund	2.41	3.39	3.44
Miscellaneous:			
Net premium	24.53	36.78	37.70
Claims	21.55	25.50	23.70
Commission	−4.05	1.17	3.02
Expenses of management	18.23	12.85	11.12
Miscellaneous fund	12.26	16.18	15.88
Profit (net)	2.15	1.40	1.20
Dividend	1.26	0.68	0.62
Provision for taxation	0.85	0.72	0.56
Carry forward	0.14	0.36	0.41

In spite of the reduction in net premiums, the Company has tried to strengthen its financial position by increasing the percentage of underwriting reserves. The following table reflects the progressive strengthening of underwriting reserves during the period 1955-59:

(Percentage of Departmental reserves to net Premium)

—	Fire	Marine	Miscellaneous	Total
1955	40	40	40	40
1956	45	68	42	45
1957	45	75	42	45½
1958	45	61	44	46
1959	50	79	50	52

After meeting claims and expenses of management and providing for departmental reserves, the accounts disclose an underwriting profit of Rs. 2.36 lakhs in the fire department and losses of the order of Rs. 47,000 and Rs. 1.38 lakhs in the marine and miscellaneous departments respectively, leaving a net underwriting profit of only Rs. 51,049. This, together with income from investments and other receipts amounting to Rs. 1.85 lakhs gives a gross profit of Rs. 2.36 lakhs. Out of this, a sum of Rs. 20,466 has been written off as bad debts. This leaves a net profit of Rs. 2.15 lakhs, which, along with Rs. 3,610 brought in from the previous year's account and Rs. 1,457 being dividend forfeited, makes available Rs. 2.20 lakhs for distribution. Out of this, Rs. 85,000 has been set apart as provision for taxation. The dividend of 9 per cent. subject to tax, will absorb Rs. 1.26 lakhs. A sum of Rs. 8,000 has been earmarked for staff gratuity and charity funds. The balance of Rs. 1,417 has been carried forward.

MARINE AND GENERAL INSURANCE COMPANY LTD.

An all-round expansion in business is reflected in the statement of accounts of the Marine and General Insurance Company Ltd. (General Manager: Mr. H. Norrington, Calcutta) for the year ended 31st December 1959. But this has not meant more profit for the Company, nor a better dividend for its shareholders. Both are lower, as we shall show presently.

The combined net premium income of the Company rose by Rs. 1.12 lakhs to Rs. 7.84 lakhs, an increase of about 17 per cent. All the three departments, namely, fire, marine and miscellaneous, shared in the increase in business. Along with the increase in premium, claims, as also commission and expenses, advanced, the former from Rs. 3.11 lakhs (claims ratio 46.3 per cent.) to Rs. 4.13 lakhs (52.7 per cent.) and the latter from Rs. 2.46 lakhs (36.7 per cent.) to Rs. 2.94 lakhs (37.6 per cent.). The higher claims ratio was due mainly to the continued heavy losses resulting from jute fires which showed no improvement, as compared with the previous year. The increase in claims and expenses have eaten into the profits of the Company which disclose a marked decline from Rs. 1.42 lakhs for 1958 to Rs. 75,956 for the year under review. The rate of distribution to shareholders has been stepped up to Rs. 7 per share of Rs. 50 paid-up but, as this is subject to tax, the net dividend is a shade lower at Rs. 4.90 per share, as compared with Rs. 5 per share (free of tax) for the previous year.

The following table indicates the salient features of the working of the Company during the three years 1957, 1958 and 1959:

(In lakhs of rupees)

	1959	1958	1957
Fire:			
Net premium	5.07	4.40	4.25
Claims paid and outstanding	2.68	1.51	2.16
Commission and expenses	2.19	1.71	1.64
Fire fund	3.03	2.07	2.62
Marine:			
Net premium	1.52	1.21	1.07
Claims paid and outstanding	0.90	1.10	0.30
Commission and expenses	0.24	0.13	0.21
Marine fund	1.77	1.46	1.33
Miscellaneous:			
Net premium	1.25	1.11	0.97
Claims paid and outstanding	0.55	0.50	0.37
Commission and expenses	0.51	0.47	0.35
Miscellaneous fund	0.63	0.56	0.48
Profit	0.75	1.42	1.23
Other income	0.57	0.66	0.41
Provision for taxation	0.70	1.00	0.65
Transfer to reserves	0.25	0.46	0.25
Dividend	0.70	0.50	0.50
	(14%)*	(10%)†	(10%)†
Carry forward	0.69	0.88	0.96

* Taxable. † Tax free.

It will be observed that the improvement in business recorded in 1959 is a continuation of the upward trend witnessed in the previous year.

The net premium income in the fire department increased from Rs. 4.40 lakhs in 1958 to Rs. 5.07 lakhs in 1959. Net claims paid and outstanding amounted to Rs. 2.68 lakhs. Commission and expenses aggregated Rs. 2.19 lakhs. As a result of the increase in premium, the reserve for unexpired risks increased by over Rs. 30,000 to Rs. 2.53 lakhs. A sum of only Rs. 40,734 has been transferred as profit to the profit and loss account, as against Rs. 1.11 lakhs in the previous year.

Business of the marine department continued to expand during the year. Net premium income amounted to Rs. 1.52 lakhs, as compared with Rs. 1.21 lakhs in 1958. Claims paid and outstanding were of the order of Rs. 90,287. Commission and expenses stood at Rs. 24,660. After setting apart Rs. 1.52 lakhs as the reserve for unexpired risks, being 100 per cent. of premium income, the accounts disclose a profit of Rs. 6,201.

In the miscellaneous department net premium increased by Rs. 13,802 to Rs. 1.25 lakhs. Thanks to the decline in claims ratio from 45 per cent. to 44.1 per cent. and commission and expenses of management from 43.1 per cent. to 40.9 per cent., this department was able to show a higher profit of Rs. 11,851, as against only Rs. 7,144 in the previous year. The provision for unexpired risks has been maintained at 50 per cent. of the premium income.

After making the departmental transfers to the profit and loss account and taking into consideration non-underwriting expenses, interest and other income, the accounts disclose a net profit of Rs. 75,596. This, together with Rs. 88,382 being the balance brought forward from previous years' account and Rs. 74,376 being surplus on sale of investments, gives a total of Rs. 2.38 lakhs. Out of this, Rs. 70,000 has been set apart as provision for taxation, Rs. 29,234 has been earmarked for general and investment reserves. The proposed gross dividend of Rs. 7 per share will absorb Rs. 70,000 leaving a balance of Rs. 69,120 to be carried forward.

Notice

MINISTRY OF RAILWAYS
(RAILWAY BOARD)

IN CONNECTION WITH GLOBAL TENDER No. G.P. 22 for Wheelsets intending tenderers are requested to note that the quantities against item Nos. 1, 3, and 4 of the tender have now been amended to 212 Nos., 23772 Nos. and 4396 respectively. Offers should be submitted accordingly. The returnable date of the tender has been extended to NOT LATER THAN 12 NOON ON 31ST AUGUST 1960.

QURBAN SINGH,
Director, Railway Stores,
Railway Board,
New Delhi-2

SYNOPSES OF COMPANY REPORTS

Walford Transport Ltd.

THE directors of the above Company (Manager: Mr. R. R. Aiyer, Calcutta) submit the audited accounts of the above Company for the year ending 31st December 1959.

After writing off Rs. 51,652 (Rs. 54,636) for depreciation and setting aside Rs. 5,20,000 (Rs. 2,50,921) for taxes, the available profit for the year would be Rs. 5,16,837 (Rs. 3,33,896) including Rs. 1,40,960 (Rs. 1,35,400) brought forward from last year's account. It is recommended that this sum be dealt with as follows:—

To payment of a dividend of 15 (12 per cent. free of tax) per annum, subject to income-tax, on 2,10,200 preferred ordinary shares, absorbing Rs. 31,530 (Rs. 25,224), to payment of a dividend of 20 (14 per cent. free of tax) per annum, subject to income-tax, on 8,40,800 ordinary shares, absorbing Rs. 1,68,160 (Rs. 1,17,712) and to transfer to general reserve, Rs. 1,50,000 (Rs. 50,000 to contingency reserve) [thereby bringing it to Rs. 11,50,000] and to carry forward Rs. 1,97,197 (Rs. 1,40,960).

Compared to 1958, the turnover in 1959 was substantially higher. The volume for the year under review totalled Rs. 2.04 crores against Rs. 1.52 crores the previous year, or an increase of 34.2 per cent. Although there was some minor tax relief under the latest Finance Bill, the load is still heavy. The tax ratio represents 58.4 per cent. of gross profit, against 61 per cent. the previous year.

The flow of new vehicle inventory in the early part of 1959 was somewhat limited. It improved in the latter part of the year which enabled a better turnover. Considering the difficulties under which the manufacturers have to handle procurement and production problems, they have been sympathetic and helpful and deserve your appreciation and thanks. Our relations with them have always been most cordial. On account of the various development plans in the country and road transport expansion schemes, demand for most of the vehicle lines continues to be good. In the Finance Bill, however, Government has introduced a new excise duty on motor vehicles. The duty varies from Rs. 1,000 in the case of a small car to Rs. 4,275 in the case of a truck chassis. This is in addition to increased duty on diesel oil, automative engines, batteries, etc. Automobiles have thus become costlier either to own or to operate. Vehicle owners may thus be inclined to prolong the life of the existing vehicles by repairs rather than by replacements and, to this extent, there can be a purchase drop.

Operating expenses continue to be heavy and to increase due to various factors. Against this dealer margin was curtailed at the suggestion of the Government. The result is the narrowing down of net profit which can only be offset, to some extent, by increasing activities, and turn over where possible. The Company has in view strengthening of the existing branches and enlarging them wherever possible.

The paid up capital of the Company as compared to turn over in 1959 represents 5.1 per cent. It was possible to handle the higher volume only by utilising the reserves you built up with prudence in previous years supplemented by substantial bank borrowings. As in previous years, it has been found necessary to further strengthen the reserve to sustain the ability to handle increased turn over. Allocations have accordingly been made with the above objective in view.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,51,000	Gross block	13,10,577

Bengal Assam Steamship Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1959.

Although the accounts, after charging all expenses, show an operating loss of Rs. 4,50,690 (profit of Rs. 4,73,540) there are credits in respect of fleet depreciation reserve in respect of block sales no longer required of Rs. 3,15,185 (*nil*), profit on sale of block Rs. 40,299 (*nil*) and profit on sale of investments Rs. 1,59,625 (*nil*) leaving a credit balance of Rs. 64,419 (Rs. 1,93,540 after providing Rs. 2,80,000 for taxation). With the balance brought forward from last year of Rs. 88,927 (Rs. 36,387), there is a total available sum for appropriation of Rs. 1,53,346 (Rs. 2,29,927). The directors have transferred to capital reserve Rs. 40,299 (*nil*) and to development rebate reserve Rs. 5,637 (*nil*). The directors now recommend that the following dividends be paid:—

On preference shares at 7 per cent. per annum, absorbing Rs. 21,000 (Rs. 21,000) and on ordinary shares at Rs. 3 (Rs. 6.00 per share, free of tax) per share, absorbing Rs. 60,000 (Rs. 1,20,000) leaving a balance to be carried forward of Rs. 26,410 (Rs. 88,927).

Ratification of the special resolution passed at the extraordinary general meeting of members held on 12th January, 1960 approving the alterations of the rights attached to preference shares has not yet been received from the requisite number of ordinary and preference shareholders. The dividends now recommended to shareholders are subject to deduction of tax before payment in accordance with the provisions of the Finance Act currently in force.

The Company's disappointing operating results are due to a considerable decrease in freight earnings. A substantial increase in earnings from jute carried from Assam was more than offset by a reduction in earnings from jute imports from Pakistan and a decrease in earnings from coal exports to Pakistan due to the cessation of the Company's contract for the carriage of coal in early 1959. Prospects for the current year are more satisfactory as earnings from the carriage of jute have been maintained and the carriage of coal exports to Pakistan has recommenced.

A Hire Purchase Agreement covering the sale over a period of five years of some units of the Company's fleet registered in East Pakistan was concluded during the year, and this has enabled the Company to purchase since the end of the year a new tug, which is particularly suitable for Assam waters.

In accordance with Section 330 of the Companies Act, 1956, Andrew Yule & Co., Ltd. will cease to act as managing agents on 16th August, 1960 and the Company has applied to the Central Government for approval of the appointment of Andrew Yule & Co., Ltd. as secretaries and treasurers of the Company with effect from that date. Approval has not yet been received but is expected shortly.

Accounts in brief are as under:—

Hoolungooree Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit, after charging all expenses, of Rs. 2,92,908 (Rs. 3,47,160) of which taxation provision requires Rs. 98,000 (Rs. 1,65,000 including Rs. 9,000 for wealth tax) leaving a balance of Rs. 1,94,908 (Rs. 1,82,160). To this amount is added excess provisions of taxation in previous years now written back amounting to Rs. 10,360 (*nil*) and the balance brought forward from last year of Rs. 90,604 (Rs. 75,281) making a total available for appropriation of Rs. 2,95,872 (Rs. 2,93,583 including Rs. 9,000 transferred from investments realisation surplus and Rs. 27,142 being dividends forfeited). The directors have transferred to general reserve Rs. 25,000 (Rs. 50,000) and to development rebate reserve Rs. 21,203 (Rs. 729). The directors further recommend payment of a taxable dividend of Rs. 20.00 (tax-free dividend of Rs. 17.50 per share) per share, absorbing Rs. 1,74,000 (Rs. 1,52,250) leaving a balance to be carried forward of Rs. 75,669 (Rs. 90,604).

A crop of 14,619 maunds was secured and sold at an average price of Rs. 2.45 per lb. which compares with a crop of 15,259 maunds in 1958, sold at an average price of Rs. 2.32 per lb.

Estimates for the current year have been framed for a crop of 15,500 maunds to cost Rs. 24,04,783 but there has been a poor start to the season owing to shortage of rain and by 14th June, 1960, 27,394 kgs. (755 maunds) had been manufactured compared with 33,531 kgs. (924 maunds) to the same date last year.

Capital expenditure during the year was Rs. 3,57,537, of which approximately one-third represents the costs of implementing statutory welfare requirements in regard to labour and staff houses.

The Central Government have approved the re-appointment of Andrew Yule & Co., Ltd. as managing agents of the Company for a period of five years from 15th August, 1960 and the formal re-appointment was made by the Company at an extraordinary general meeting held on 23rd June, 1960. On 19th December, 1959, Andrew Yule & Co., Ltd. became the Company's ultimate holding Company.

Rajgarh Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit, after charging all expenses, of Rs. 1,11,231 (Rs. 73,872) of which taxation provision requires Rs. 45,000 (Rs. 36,000 including Rs. 2,000 for wealth tax) leaving a balance of Rs. 66,231 (Rs. 37,872). To this amount is added excess provisions of taxation in previous years now written back amounting to Rs. 10,167 (*nil*) and the balance brought forward from last year of Rs. 38,792 (Rs. 41,480) making a total available for appropriation of Rs. 1,15,190 (Rs. 90,339 including Rs. 2,000 transferred from general reserve and Rs. 3,987 being dividends forfeited). The directors now recommend payment of a taxable dividend of Rs. 3.50 (tax-free dividend of Rs. 2.50) per share absorbing Rs. 70,000 (Rs. 50,000) leaving a balance to be carried forward of Rs. 45,190 (Rs. 38,792 after providing Rs. 1,547 to development rebate reserve).

A crop of 5,364 maunds was secured and sold in Calcutta at an average price of Rs. 2.47 per lb. which compares with a crop of 5,755 maunds in 1958, sold at an average price of Rs. 2.19 per lb.

Estimates for the current year have been framed for a crop of 6,000 maunds to cost Rs. 9,31,455 but due to shortage of rain, there has been a poor start to the season and by 14th June, 1960, 18,689 kgs. (515 mds.) had been manufactured compared with 34.400 kgs. (948 mds.) to the same date last year.

Of the capital expenditure during the year amounting to Rs. 2,01,030, almost half relates to the cost of implementing statutory welfare requirements in regard to labour and staff houses and hospitalisation facilities.

On 19th December, 1959, Andrew Yule & Co., Ltd., became the Company's ultimate holding Company. Andrew Yule & Co., Ltd., will cease to act as managing agents of the Company on 15th August, 1960 and their appointment as secretaries and treasurers of the Company for a period of five years from that date has been approved by the Central Government.

Basmatia Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit after charging all expenses, of Rs. 3,85,664 (Rs. 2,50,331) of which taxation provision requires Rs. 1,48,000 (Rs. 1,11,500 including Rs. 5,500 for wealth tax) leaving a balance of Rs. 2,37,664 (Rs. 1,38,831). To this amount is added excess provision for wealth tax in previous years now written back of Rs. 572 (*nil*) and the balance brought forward from last year of Rs. 40,495 (Rs. 44,923) making a total available for appropriation of Rs. 2,78,731 (Rs. 1,98,283 including Rs. 5,500 transferred from general reserve and Rs. 9,029 being forfeited dividends). The directors have transferred to general reserve Rs. 70,000 (Rs. 50,000) and to development rebate reserve Rs. 12,087 (Rs. 5,788). The directors now recommend payment of a taxable dividend of Rs. 3.00 (tax-free dividend of Rs. 2.00 per share) per share absorbing Rs. 1,53,000 (Rs. 1,02,000) leaving a balance to be carried forward of Rs. 43,644 (Rs. 40,495).

A crop of 7,611 maunds was secured and sold at an average price of Rs. 2.99 nP per lb. which compares with a crop of 7,439 maunds in 1958, sold at an average price of Rs. 2.62 nP per lb.

Estimates for the current year have been framed for a crop of 8,000 maunds to cost Rs. 11,70,251 but there has been a poor start to the season owing to shortage of rain and by 14th June, 1960, 25,171 kgs. (694 maunds) had been manufactured compared with 35,734 kgs. (985 maunds) to the same date last year.

Capital expenditure during the year was Rs. 3,10,605, of which more than a quarter represents the cost of implementing statutory welfare requirements in regard to labour houses, etc.

On 19th December, 1959, Andrew Yule & Co., Ltd., became the Company's ultimate holding Company. Andrew Yule & Co., Ltd. will cease to act as managing agents of the Company on 15th August, 1960 and their appointment as secretaries and treasurers of the Company for a period of five years from that date has been approved by the Central Government.

Cauvery Spinning and Weaving Mills Ltd.

The directors of the above Company [Managing Agents: United Industries (Pudukkottai) Private Ltd., Madras] present the audited accounts of the Company for the year ended 31st March 1960.

The balance of profit brought forward from the previous year is Rs. 9,823 (Rs. 20,645). To this is added the net profit for the year ended 31st March, 1960 [after providing for depreciation and obsolescence of Rs. 3,99,093 (Rs. 3,99,342)] amounting to Rs. 5,61,182 (Rs. 2,40,678) making a total of Rs. 5,71,005 (Rs. 2,62,009) including Rs. 686 being excess provision for taxation). From this bonus for the year 1958-59 absorbs Rs. 75,887 (Rs. 51,121) and short provision in taxes Rs. 72 (*nil*) leaving a balance of Rs. 4,95,046 (Rs. 2,10,888). The directors have made the following appropriations:

To development rebate reserve Rs. 1,30,000 (Rs. 20,000), to provision for taxation Rs. 1,70,000 (Rs. 56,000), to payment of dividend at 8.93 (6¼ per cent. free of tax) per cent. subject to deduction of tax on preference shares absorbing Rs. 58,259 (Rs. 40,775) and to payment of dividend at 13 (9 per cent. free of tax) per cent. subject to deduction of tax on equity shares absorbing Rs. 1,21,753 (Rs. 84,290) leaving a balance to be carried forward of Rs. 15,034 (Rs. 9,823).

The working of the Mills should be considered satisfactory, particularly in view of the fact that there has been further increase in the dearness allowance paid to workers resulting in increased cost of production and that the rates realised for yarns during the first half of the year have been unremunerative. There has been considerable increase in the prices of cotton also.

During the year under review, a new blow room machinery has been installed which is expected to result in increasing further efficiency and the standard of the qualities of yarns.

Dividend: The Board recommends a dividend of 8.93 per cent. taxable on preference shares in order to enable the holder of these shares to obtain the same return as before and 13 per cent. taxable on equity shares.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,93,468	Gross block	68,26,050

Calcutta Steel Co., Ltd.

The directors of the above Company (Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The Company has taken over the steel rolling mills previously owned by Messrs. Bhartia Electric Steel Co. Ltd., with effect from 1st of January 1960. Therefore, the profit and loss account reflects the results of working of the factory from 1st of January to 31st of March 1960. After providing for full depreciation allowed under law and Rs. 3,07,000 for taxation the net profit available is Rs. 3,53,035 which the directors recommend for disbursement as follows:—

To payment of a dividend at 50 nP per share, subject to deduction of tax, absorbing Rs. 2,50,000, leaving to be carried over to next year Rs. 1,03,035.

During the period under review, position of raw material supplies generally improved. This improvement is likely to continue in the current year as further production of billets becomes available from the integrated steel plants in public and private sectors. The directors are glad to report that this company has obtained a licence under the Industries Development and Regulation Act for manufacture of wire rods in lieu of other categories now manufactured. In the directors' opinion, production of wire rods should be comparatively more profitable. The capacity licensed is 3,000 tons per month on a single shift basis. Major part of machinery required for manufacture of wire rods has been procured and is under installation. The work is well in hand and production of wire rods is likely to start in the current year.

Accounts in brief are as under:—

Lakshmi Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. G. Kuppuswamy Naidu and Co., Coimbatore) present the audited accounts of the Company for the year ended 31st March 1960.

The profits, after providing Rs. 16,63,659 (Rs. 12,97,828) for depreciation and Rs. 5,48,640 (Rs. 3,98,447) for managing agents' remuneration and after adding thereto Rs. 1,54,659 (Rs. 86,370) brought forward from the last year's account amounted to Rs. 61,47,057 (Rs. 37,11,047). From this amount the directors have made the following appropriations:—

To donations paid Rs. 4,181 (Rs. 3,388), to provision for income-tax Rs. 20,00,000 (Rs. 12,00,000), to development debate reserve Rs. 3,75,000 (Rs. 9,00,000), to provision for work people's gratuity Rs. 1,00,000 (Rs. 75,000), to donation to Messrs. G. Kuppuswamy Naidu Charity Trust for education and medical relief Rs. 1,00,000 (Rs. 1,00,000), to depreciation reserve Rs. 3,20,000 (*nil*), to contingency reserve Rs. 1,00,000 (*nil*), to proposed dividends Rs. 14,91,000 (Rs. 12,78,000) and to income-tax deducted on dividends Rs. 6,39,000 (*nil*) leaving a balance of Rs. 17,876 (Rs. 1,54,659) which the directors recommend to be carried forward. The directors recommend payment of a dividend at 20 (20 per cent. free of tax) per cent. on the paid-up capital subject to the deduction of income-tax absorbing Rs. 21,30,000 (Rs. 12,78,000). The income-tax at 30 per cent. on the proposed dividends payable to Government amounts to Rs. 6,39,000 (*nil*) and the balance payable to the shareholders will be Rs. 14,91,000 (Rs. 12,78,000).

During the past year, 59,680 spindles were working in Coimbatore and 51,120 spindles in the Kovilpatti Mills. 100 automatic looms have been installed and are working in the Coimbatore Mill. With the previous 200 plain looms the Company's loomage has now risen to 300. The directors report that the installation of the full complement of 21,888 spindles at Palladam Mills was completed in October 1959 itself.

During the first half of the year, trade conditions were somewhat depressed but there was a definite improvement after August 1959. Still scarcity conditions in respect of Indian Cotton prevailed which resulted in control measures greatly handicapping the Mills' spinning programme. Electricity tariff has gone up by more than 10 per cent. and the wage bill is higher due to the increased cost of living index. In view of these facts the profits earned for the year should be considered quite satisfactory.

The directors are glad to inform that Messrs. South India Viscose Ltd. is expected to go into production by 1961 and this Company's investment will bring the expected benefits in the coming years.

Accounts in brief are as under:—

Minerva Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. N. Sirur & Co. Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1959.

The result of the Company's operations during the year shows a loss of Rs. 14,285 (Rs. 7,99,852). To this is added the debit balance brought forward from the previous year of Rs. 7,73,251 (credit of Rs. 19,733) and the tax re-imbursed to the managing agents on agency commission foregone by them for the year 1951 Rs. 11,279 (Rs. 6,868 being refund of tax) making a total of Rs. 7,98,815 (Rs. 7,73,251). Deducting therefrom the refunds of insurance premia receivable in respect of previous years amounting to Rs. 59,733 (*nil*) there remains a debit balance of Rs. 7,39,082 (Rs. 7,73,251). The above debit balance is finally closed by transferring a like amount from the general reserve.

The improvement anticipated in the trading conditions did not materialise during the early part of the year under report, and the prices of coarse and medium varieties continued to be unremunerative till the middle of the year. It was only during the second half of the year under report that the markets revived and the margins began to improve. Although the working results of the year are not quite satisfactory, the deterioration which set in about two years ago was definitely halted. The management is now concentrating its efforts on putting the Mills on a sound profit-making basis. Some of the measures adopted for the purpose are (1) switching over a substantial part of the production from coarse and medium to superfine counts, and the consequent working of the spinning department on a temporary three-shift basis in order to absorb as far as possible the workers rendered surplus, (2) further rationalisation to the maximum extent possible in the various departments of the mills; (3) continuation of the programme of renovation and modernisation of plant and machinery. In pursuance of the above rationalisation programme, certain workers who were rendered surplus submitted voluntary resignations and were paid *ex-gratia* compensation amounting to Rs. 45,418. As the benefit of such rationalisation, which was effected towards the end of the ear under report, did not accrue in that year, but would be felt from this year onwards, the aforesaid compensation amounting to Rs. 45,418 has not been charged off to the profit and loss account for the year under report.

Early this year, the Mills availed themselves of the liberal allocation of foreign cottons made to the Textile Industry in view of the shortage of Indian cotton crop, and quite a sizeable spindleage was diverted to spinning super-fine counts over 60s, for which surplus *Combers* were purchased from the sister Mills in Bangalore, the Mysore Spg. & Mfg. Co. Ltd. This change in the pattern of production also enabled the Mills to effect further rationalisation in which—the directors are glad to state—labour willingly co-operated by arriving at a settlement with the management on the question of workloads, wages, etc.

Some of the new machinery like the *Barber Colman Spooler* and *Warper* was erected at the beginning of the current year and is now in operation. The Company has also received permission to install 144 automatic looms as replacement for old looms, and such replacement will form part of the second phase of the Company's programme of renovation and modernisation which will be undertaken as soon as the National Industrial Development Corporation Ltd., who have been approached, make the necessary finance available.

For many years past, the lack of adequate water facilities has been a severe handicap to the Mills, with the result that the bulk of the Company's products had to be sold in the grey state at unremunerative prices. The sister Mills, the Mysore Spg. & Mfg. Co. Ltd., have a sufficient supply of water from the water supply department, but do not have enough space for expansion of its own Bleach & Dye House. The directors of the two Companies therefore thought it advisable to pool the water supply of both the Mills at one place, that is, at the Bleach and Dye House on the premises of the Minerva Mills Ltd., and develop it into a full-fledged Processing Factory with an up-to-date *Bleaching, Dyeing* and *Mercerising* Plant, and also Printing Machinery for which a Printing Quota has been granted to the Mills. As such development programme involves heavy capital expenditure, it was considered not possible for the Company to undertake it in addition to the large renovation programme in its spinning and weaving departments. On the other hand, the Mysore Spg. & Mfg. Co. Ltd., was considered to be in a better position to undertake the development of the combined Dye and Bleach House where joint operations of bleaching, dyeing, mercerising and printing of cloth of both the Mills could be carried on more efficiently and economically. These are the circumstances that occasioned the proposal to sell to the Mysore Spg. & Mfg. Co. Ltd. the Bleach and Dye House of the Company and its adjuncts together with the dyeing and bleaching machinery for a total consideration of Rs. 8,88,958, and the proposal was approved by the Company at the Extraordinary General Meeting held on the 7th June, 1960.

Accounts in brief are as under:—

Purtabpore Co., Ltd.

The directors of the above Company (Calcutta) presented the audited accounts of the Company for the year ended 31st October 1959.

After making usual provisions for depreciation and development rebate the Company's results for the year show a profit of Rs. 2,81,058 (loss of Rs. 2,13,126). To this, a sum of Rs. 3,27,137 (*nil*) being profit on sale of agricultural land has been added. Transfers from general reserve and stock and stores reserve amounting to Rs. 25,000 (*nil*) and Rs. 1,00,000 (*nil*) respectively have also been added to this and hence the total surplus comes to Rs. 7,33,195. Against this the previous year's brought forward deficit amounting to Rs. 2,82,052 has been set and thus there remains a sum of Rs. 4,51,143 to the credit of profit and loss account which the directors recommend to distribute as follows:—

To transfer to rehabilitation reserve Rs. 3,27,137 (*nil*) and to pay a dividend on 60,000 10 per cent. cumulative preference shares of Rs. 10 each for the years 1956-57 and 1957-58 (subject to taxation) absorbing Rs. 1,20,000 leaving a balance carried forward to next year of Rs. 4,006 (debit of Rs. 2,82,052).

The quantity of cane crushed by the Company's factory during the season (1958-59) was 26,03,812 maunds with an extraction of 9.88 per cent. cane as against 24,90,615 maunds 25 seers with an extraction of 9.91 per cent. in the previous year. The sugar obtained during the season was 93,500 bags. The mills commenced crushing on 1st December 1958 and completed the season on the night of 16th April 1959.

The directors are glad to report that during the current crushing season (1959-60) the Mills have crushed 36,90,382 maunds of cane which is the highest quantity crushed since the start of the Mills with an extraction of 9.44 per cent. cane and the overall results are expected to be satisfactory.

Notices

THE CENTRAL CACHAR TEA COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Clive Row, Calcutta, on Thursday the 11th August 1960, at 3-15 o'clock in the afternoon, to consider and if thought fit to pass with or without modification, the following Resolutions, namely:—

1. (*As an Ordinary Resolution.*) "That Jardine Henderson, Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August 1960, on terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and aproved, and which for purposes of identification has been signed by the Chairman thereof."
2. (*As a Special Resolution.*) "That the Articles of Association of the Company be altered in the manner following:—
   (1) Articles 132 and 133 shall be deleted and the following two new Articles 132 and 133 substituted therefor:—
   "132—Jardine Henderson, Limited are and shall continue to be the Managing Agents of the Company up to the 14th day of August 1965."
   "133—The terms upon which Jardine Henderson, Limited hold the office of Managing Agents up to the 15th August 1960 are embodied in an Agreement dated the 30th August 1957, made between the Company and the Managing Agents and the terms upon which the Managing Agents shall continue to hold office after the said 15th August 1960, shall be embodied in a separate Agreement to be entered into between the Company and the Managing Agents."
3. (*As a Special Resolution.*) "That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 1, Jardine Henderson, Limited be and are hereby authorised to provide the Company with suitable furnished office accommodation at the Registered or Principal Office for the time being of Jardine Henderson, Limited in Calcutta and also, if so required by the Company, at any other place or places in which Jardine Henderson, Limited may be able to provide such accommodation, and the Company shall pay to Jardine Henderson, Limited a monthly sum of Rupees seventy per one hundred square feet of such accommodation PROVIDED that the Company shall be deemed to be the licensee of Jardine Henderson, Limited in respect of any accommodation so occupied and such licence shall be deemed to determine on the fourteenth day of August, one thousand nine hundred and sixty-five being the date on which the term of office of Jardine Henderson, Limited upon re-appointment expires or until the date such term of office expires whether by virtue of the Companies Act, 1956, or otherwise whichever is the earlier PROVIDED always that the Company shall neither have nor be deemed to have any exclusive right or occupation, enjoyment or use of any such accommodation and that Jardine Henderson, Limited shall always be entitled to determine the licence on giving to the Company thirty-one days' notice in writing, AND it is expressly declared that such licence is personal to the Company."

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

KAMARHATTY COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT A GENERAL Meeting of the Members of the Company will be held at the Registered Office, No. 4, Clive Row, Calcutta, on Friday the 12th August 1960, at 11-00 o'clock in the forenoon, to consider and if thought fit to pass with or without modification, the following Resolutions, namely:—

1. (*As an Ordinary Resolution.*) "That Jardine Henderson, Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August 1960, on terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and approved, and which for purposes of identification has been signed by the Chairman thereof."
2. (*As a Special Resolution.*) "That the Articles of Association of the Company be altered in the manner following:—
   (1) Articles 2A and 3 shall be deleted and the following two new Articles 2A and 3 substituted therefor:—
   "2A—Jardine Henderson, Limited are and shall continue to be the Managing Agents of the Company up to the 14th day of August 1965."
   "3—The terms upon which Jardine Henderson, Limited hold the office of Managing Agents up to the 15th August 1960, are embodied in an Agreement dated the 29th March 1957, made between the Company and the Managing Agents and the terms upon which the Managing Agents shall continue to hold such office after the said 15th August 1960, shall be embodied in a separate Agreement to be entered into between the Company and the Managing Agents."
   (2) Article 5A shall be deleted.
3. (*As a Special Resolution.*) "That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 1, Jardine Henderson, Limited be and are hereby authorised to provide the Company with suitable furnished office accommodation at the Registered or Principal Office for the time being of Jardine Henderson, Limited in Calcutta and also, if so required by the Company, at any other place or places in which Jardine Henderson, Limited may be able to provide such accommodation, and the Company shall pay to Jardine Henderson, Limited a monthly sum of Rupees seventy per one hundred square feet or part of one hundred square feet of such accommodation PROVIDED that the Company shall be deemed to be the licensee of Jardine Henderson, Limited in respect of any accommodation so occupied and such licence shall be deemed to determine on the fourteenth day of August, one thousand nine hundred and sixty-five being the date on which the term of office of Jardine Henderson, Limited upon re-appointment expires or until the date such term of office expires whether by virtue of the Companies Act, 1956, or otherwise whichever is the earlier PROVIDED always that the Company shall neither have nor be deemed to have any exclusive right or occupation, enjoyment or use of any such accommodation and that Jardine Henderson, Limited shall always be entitled to determine the licence on giving to the Company thirty-one days' notice in writing, AND it is expressly declared that such licence is personal to the Company."
4. (*As a Special Resolution.*) "That consent be and is hereby accorded to McLeod Russel & Company, Limited an Associate of the Managing Agents as defined by Section 2(3) of the Com-

panies Act, 1956, and who maintain an office at 149, Leadenhall Street, London, E.C. 3, England, for the purposes of their business of management and administration of several companies of which they are appointed secretaries and agents, acting and continuing with effect from the 1st March 1961, until the 28th February 1964, to act as agent for the purchase in the United Kingdom and on the continent of Europe of goods from time to time required by the Company and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the Company at a remuneration by way of an allowance calculated at the rate of ten shillings per registered loom per annum on the Company's loomage registered with the Indian Jute Mills Association payable by quarterly instalments in arrear on the last working day of March, June, September and December of each year; that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such agent as aforesaid other than interest on the balance from time to time outstanding on current account at the rate of 5 per cent. per annum or such higher rate as may be agreed upon subject to a maximum rate of 2 per cent. above the State Bank of India Advance Rate; that such appointment may be terminated by either party giving the other not less than six months' previous notice in writing of intention so to do.

The expenses estimated at £38,000 per annum incurred by McLeod Russel & Company, Limited in maintaining their London office are in the nature of salary and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto and the part which represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company will depend on the volume of the purchases effected and services rendered in relation to the total turnover in each year."

5. (*As a Special Resolution.*) "That this Meeting hereby authorises in conformity with the provisions of sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, such authority to be effective as from the 1st April 1961, for a period of five years, payment to the Directors to be divided equally between them in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) of an amount equal to 1 per cent. of the net profits of the Company for such financial year or part thereof computed in the manner referred to in Section 198(1) of the Companies Act, 1956."

6. (*As a Special Resolution.*) "That the following contract between the Company and an Associate of its Managing Agents as defined in Section 2(3) of the Companies Act, 1956, a draft whereof has for the purpose of identification, been subscribed by the Chairman of this Meeting be and the same is hereby approved and the Directors are hereby authorised to execute the said Agreement on behalf of the Company with all convenient despatch:—

> With The Kassipur Company Limited (an Associate of the Managing Agents) for sales of such manufactured jute goods in which the Company regularly trades or does business as may be required by the Associate as raw materials for the purpose of its business;

it being a term of the above contract that the prices at which transactions take place shall be based on rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and that payment shall be made to the Company by the Associate within one month of the date of supply or sale of goods."

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Clive Row, Calcutta, on Friday the 12th August 1960, at 11-30 o'clock in the forenoon, to consider and if thought fit to pass with or without modification, the following Resolutions, namely:—

1. (*As an Ordinary Resolution.*) "That Jardine Henderson, Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August 1960 on terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and approved, and which for purposes of identification has been signed by the Chairman thereof."

2. (*As a Special Resolution.*) "That the Articles of Association of the Company be altered in the manner following:—

   (1) Articles 126 and 126A shall be deleted and the following two new Articles 126 and 126A substituted therefor:—

   > "126—Jardine Henderson, Limited are and shall continue to be the Managing Agents of the Company up to the 14th day of August 1965."
   >
   > "126A—The terms upon which Jardine Henderson, Limited hold the office of Managing Agents up to the 15th August 1960 are embodied in an Agreement dated the 29th March 1957, made between the Company and the Managing Agents and the terms upon which the Managing Agents shall continue to hold such office after the said 15th August 1960, shall be embodied in a separate Agreement to be entered into between the Company and the Managing Agents."

   (2) Article 127A shall be deleted.

3. (*As a Special Resolution.*) "That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 1, Jardine Henderson, Limited be and are hereby authorised to provide the Company with suitable furnished office accommodation at the Registered or Principal Office for the time being of Jardine Henderson, Limited in Calcutta and also, if so required by the Company, at any other place or places in which Jardine Henderson, Limited may be able to provide such accommodation, and the Company shall pay to Jardine Henderson, Limited a monthly sum of Rupees seventy per one hundred square feet or part of one hundred square feet of such accommodation PROVIDED that the Company shall be deemed to be the licensee of Jardine Henderson, Limited in respect of any accommodation so occupied and such licence shall be deemed to determine on the fourteenth day of August, one thousand nine hundred and sixty-five being the date on which the term of office of Jardine Henderson, Limited upon re-appointment expires or until the date such term of office expires whether by virtue of the Companies Act, 1956, or otherwise whichever is the earlier PROVIDED always that the Company shall neither have nor be deemed to have any exclusive right or occupation, enjoyment or use of any such accommodation and that Jardine Henderson, Limited shall always be entitled to determine the licence on giving to the Company thirty-one days' notice in writing AND it is expressly declared that such licence is personal to the Company."

4. (*As a Special Resolution.*) "That consent be and is hereby accorded to McLeod Russel & Company, Limited an Associate of the Managing Agents as defined by Section 2(3) of the Companies Act, 1956, and who maintain an office at 149, Leadenhall Street, London, E.C. 3, England, for the purposes of their business of management and administration of several companies of which they are appointed secretaries and agents, acting and continuing with effect from the 1st March 1961, until the 28th February 1964, to act as agent for the purchase in the United Kingdom and on the continent of Europe of goods from time to time required by the Company and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the Company at a remuneration by way of an allowance calculated at the rate of ten shillings per registered loom per annum on the Company's loomage registered with the Indian Jute Mills Association payable by quarterly instalments in arrear on the last working day of March, June, September and December of each year; that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such agent as aforesaid other than interest on the balance from time to time outstanding on current account at the rate of 5 per cent. per annum or such higher rate as may be agreed upon subject to a maximum rate of 2 per cent. above the State Bank of India Advance Rate; that such appointment may be terminated by either party giving the other not less than six months' previous notice in writing of intention so to do.

The expenses estimated at £38,000 per annum incurred by McLeod Russel & Company, Limited in maintaining their London office are in the nature of salary and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto and the part which represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company will depend on the volume of the purchases effected and services rendered in relation to the total turnover in each year."

5. (*As a Special Resolution.*) "That this Meeting hereby authorises in conformity with the provisions of sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, such authority to be effective as from the 1st April 1961, for a period of five years, payment to the Directors to be divided equally between them in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) of an amount equal to 1 per cent. of the net profits of the Company for such financial year or part thereof computed in the manner referred to in Section 198(1) of the Companies Act, 1956."

By Order of the Board,
JARDINE HENDERSON LTD.,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, *9th July* 1960.

Note: A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a Member of the Company.

Explanatory Statement, Memorandum of Interest and Abstract has been annexed to the copies of this Notice posted to Members.

THE ASSOCIATED RUBBER INDUSTRIES LIMITED

REMINDER

MEMBERS ARE REMINDED THAT THE Seventeenth Annual General Meeting of the Company will be held at the Registered Office of the Company, Union Bank Building, 4th Floor, Apollo Street, Fort, Bombay, on Friday, the 29th day of July 1960, at 4-00 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1959.
2. To declare dividends on Preference and Ordinary Shares.
3. To elect Directors in place of those retiring.
4. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS

To consider, and, if thought fit, to pass the following Resolutions as Special Resolutions.

5. "RESOLVED that pursuant to Section 360 of the Companies Act, 1956 the Company hereby approves of a contract being entered into between the Company and Azofen Private Limited, an associate of Associated Agencies Private Limited, the Managing Agents of the Company, in terms of the draft initialled for the sake of identification by the Chairman of the Company, the material terms whereof are as follows:—

   > One used boiler and two used autoclaves shall be sold and delivered by the Company to Azofen Private Limited on as is and where is basis. The delivery of the said machinery shall be made within six months from the date of the agreement. The price payable by Azofen Private Limited to the Company shall be Rs. 22,000/-."

6. "RESOLVED that the present Sub-Article (1) of Article 4 of the Articles of Association of the Company be deleted and the following Sub-Article be substituted therefor:

   > '(1) The said 25,000 7 per cent Cumulative Redeemable Preference Shares shall confer on the holders thereof the right out of the profits of the Company to a fixed cumulative preferential dividend at the rate of 7 per cent per annum tax-free on the capital for the time being paid up or credited as paid up thereon and the tax for the time being deductible at source on such dividend shall be paid by the Company on behalf of the holders of such shares.'"

Note:—(a) The Transfer Books of the Company will be closed from Monday, 18th July to Friday, 29th July, 1960 (both days inclusive).

(b) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

By Order of the Board,

HOWRAH MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Clive Row, Calcutta, on Friday the 12th August 1960, at 11-45 o'clock in the forenoon, to consider and if thought fit to pass with or without modification, the following Resolutions, namely:—

1. (*As an Ordinary Resolution.*) "That Jardine Henderson, Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August 1960 on terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and approved, and which for purposes of identification has been signed by the Chairman thereof."
2. (*As a Special Resolution.*) "That the Articles of Association of the Company be altered in the manner following:—
   (1) Articles 126 and 126A shall be deleted and the following two new Articles 126 and 126A substituted therefor:—
   "126—Jardine Henderson, Limited are and shall continue to be the Managing Agents of the Company up to the 14th day of August 1965."
   "126A—The terms upon which Jardine Henderson, Limited hold the office of Managing Agents up to the 15th August 1960 are embodied in an Agreement dated the 29th March 1957, made between the Company and the Managing Agents and the terms upon which the Managing Agents shall continue to hold such office after the said 15th August 1960, shall be embodied in a separate Agreement to be entered into between the Company and the Managing Agents."
   (2) Article 127A shall be deleted.
3. (*As a Special Resolution.*) "That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 1, Jardine Henderson, Limited be and are hereby authorised to provide the Company with suitable furnished office accommodation at the Registered or Principal Office for the time being of Jardine Henderson, Limited in Calcutta and also, if so required by the Company, at any other place or places in which Jardine Henderson, Limited may be able to provide such accommodation, and the Company shall pay to Jardine Henderson, Limited a monthly sum of Rupees seventy per one hundred square feet or part of one hundred square feet of such accommodation PROVIDED that the Company shall be deemed to be the licensee of Jardine Henderson, Limited in respect of any accommodation so occupied and such licence shall be deemed to determine on the fourteenth day of August, one thousand nine hundred and sixty-five being the date on which the term of office of Jardine Henderson, Limited upon re-appointment expires or until the date such term of office expires whether by virtue of the Companies Act, 1956, or otherwise whichever is the earlier PROVIDED always that the Company shall neither have nor be deemed to have any exclusive right or occupation, enjoyment or use of any such accommodation and that Jardine Henderson, Limited shall always be entitled to determine the licence on giving to the Company thirty-one days' notice in writing, AND it is expressly declared that such licence is personal to the Company."
4. (*As a Special Resolution.*) "That consent be and is hereby accorded to McLeod Russel & Company, Limited an Associate of the Managing Agents as defined by Section 2(3) of the Companies Act, 1956, and who maintain an office at 149, Leadenhall Street, London, E.C. 3, England, for the purposes of their business of management and administration of several companies of which they are appointed secretaries and agents, acting and continuing with effect from the 1st March 1961, until the 28th February 1964, to act as agent for the purchase in the United Kingdom and on the continent of Europe of goods from time to time required by the Company and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the Company at a remuneration by way of an allowance calculated at the rate of ten shillings per registered loom per annum on the Company's loomage registered with the Indian Jute Mills Association payable by quarterly instalments in arrear on the last working day of March, June, September and December of each year; that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such agent as aforesaid other than interest on the balance from time to time outstanding on current account at the rate of 5 per cent. per annum or such higher rate as may be agreed upon subject to a maximum rate of 2 per cent. above the State Bank of India Advance Rate, that such appointment may be terminated by either party giving the other not less than six months' previous notice in writing of intention so to do.
   The expenses estimated at £38,000 per annum incurred by McLeod Russel & Company, Limited in maintaining their London office are in the nature of salary and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto and the part which represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company will depend on the volume of the purchases effected and services rendered in relation to the total turnover in each year."
5. (*As a Special Resolution.*) "That this Meeting hereby authorises in conformity with the provisions of sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, such authority to be effective as from the 1st April 1961, for a period of five years, payment to the Directors to be divided equally between them in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) of an amount equal to 1 per cent. of the net profits of the Company for such financial year or part thereof computed in the manner referred to in Section 198(1) of the Companies Act, 1956."
6. (*As a Special Resolution.*) "That the following contract between the Company and an Associate of its Managing Agents as defined in Section 2(3) of the Companies Act, 1956, a draft whereof has for the purpose of identification, been subscribed by the Chairman of this Meeting be and the same is hereby approved and the Directors are hereby authorised to execute the said Agreement on behalf of the Company with all convenient despatch:—
   With The Kassipur Company Limited (an Associate of the Managing Agents) for sales of such manufactured jute goods in which the Company regularly trades or does business as may be required by the Associate as raw materials for the purpose of its business;
   it being a term of the above contract that the prices at which transactions take place shall be based on rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and that payments shall be made to the Company by the Associate within one month of the date of supply or sale of goods."

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, *9th July* 1960.

Note: A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a Member of the Company.

Explanatory Statement, Memorandum of Interest and Abstract has been annexed to the copies of this Notice posted to Members.

POST BOX No. 570,
BANGALORE 9.

MONEY USABLE
(From Our Own Correspondent)

BOMBAY, 20*th July*

Both the new Central loans, says an official Press note, have been fully subscribed. It contains no further information, except that the lists remained open on all the three days and were closed at 1-00 p.m. today (20th July 1960). Enquiries made in market circles reveal that the response to these loans from banks was only modest, if not poor. Unofficial estimates are that the banks all over India might not have taken more than Rs. 10 crores of loans against cash. It is also felt that a very substantial part of these two new issues must have been taken up, as usual, by the Reserve Bank.

The flotation of new loans has not had any disturbing effect on the short-term money market, as the banks were fully prepared to meet the withdrawals by the L.I.C., Provident Funds, and other investors for taking up these loans. It is, however, possible that a number of banks had gone to the Reserve Bank for accommodation. Confirmation of this development will be available only when the relevant weekly statement of the Reserve Bank is published. Demand for funds from trade and industries, however, continues to be good, being well in excess of the customary return of seasonal funds. The Inter-bank call money rate was fully maintained at 3½ per cent. House money at seven days' notice was quoted at 3½-3¾ per cent. and one to six months' deposit at 3¾-3¾ per cent.

There was no sale of 91 days' Treasury Bills by tender system. Although intermediate Treasury Bills were on offer, no sales were reported during the period 13th July to 16th July 1960.

A decline of Rs. 8.45 crores in notes in circulation and a rise of Rs. 9.24 crores in notes held in the Banking Department are the principal features of the Reserve Bank's statement (Issue Department) for the week ended 15th July 1960, as compared with that for the previous week. The net increase of Rs. 79.19 lakhs in total notes issued is covered by a corresponding rise in rupee coin.

There is no change in foreign securities held in the Issue Department, but balances held abroad in the Banking Department reveal a fall of Rs. 4.32 crores, thereby bringing down the total of foreign assets to Rs. 165.36 crores.

Deposits of the Central Government with the Reserve Bank show a modest rise of Rs. 4.97 crores, while those of other Governments are down by Rs. 3.15 crores. A substantial rise of Rs. 12.37 crores has occurred in the deposits of banks. Loans and advances to Governments have moved up from Rs. 34.92 crores to Rs. 37.15 crores. Other loans and advances have gone down by Rs. 1.10 crore to Rs. 132.83 crores, of which loans and advances to banks against usance bills account for Rs. 12.42 crores—a small reduction of Rs. 29 lakhs over the week. The only other notable change is a rise of Rs. 12.43 crores in investments.

The statement of affairs of Scheduled Banks for the week ended 8th July 1960 reveals, as compared with that for the previous week, an increase of Rs. 3.90 crores in inter-bank borrowings. While demand deposits have declined by Rs. 10.16 crores, time deposits have gone up by Rs. 2.11 crores. The net total deposits as at the end of the week under review aggregated Rs. 1,962.18 crores. A fortnight earlier, they stood even higher at Rs. 1,974.04 crores, the highest level seen so far. Bank credit is higher by Rs 10.68 crores at Rs. 1,138.34 crores. Investments are up by Rs. 4.57 crores at Rs. 749.04 crores. Money at call and short notice has improved by Rs. 3.03 crores to Rs. 28.02 crores, while total cash is fractionally lower at Rs. 155.13 crores.

The Gilt-edged market was dull and drab, with hardly any business passing. A comparison of today's closing rates for Central loans with those a week ago discloses variations only in two loans, 3 per cent. 1986 Conversion Loan and 3 per cent. 1970-75, with both of them down by 20 nP and 5 nP, respectively. There was no change in the value of State loans either.

In the foreign exchange market the rupee was slightly better in terms of the U.S. dollars, with Banks' selling rate for ready T.T. on New York being down from Rs. 476.75 to Rs. 476.50 per $100. Their buying rate was also lower by 25 nP at Rs. 473.25 per $100. In the New York market, the £ sterling commanded a better price, the latest rate being 280.95-280.98 cents per dollar, as against 280.71-280.75 cents a week earlier. Three months' forward sterling also improved, the latest rate being 279.46-279.49 cents, an increase of 0.07 cent over the week.

LINSEED FIRM
(Messrs. A. Bradley and Co.)

CALCUTTA, 11*th July*

The linseed market continued to be firmly held during the week and sellers were reserved. The local stock position was poor, with arrivals scarce and crushers working on hand-to-mouth basis.

The oil market was firm. Local buyers were showing interest for ready and forward deliveries, but sellers were not inclined to do any business, owing to scarcity of seeds.

The oilcake market showed no change. There was small daily turnover at prevailing rates, but shippers remained out of the market with overseas buyers pausing.

The latest quotations are: Ready Rs. 25.25 and Sept. futures Rs. 25.50 per maund.

"EX-PARTE" MARGINS ON BULLION
(From Our Own Correspondent)

BOMBAY, 20*th July*

The margin regulations in bullion enforced by the Government of Maharashtra with effect from the 8th inst., were tightened further during the week under review. Thus, as against the imposition of a special margin only on the outstanding long positions in gold and silver *Bhadrapad* (September) settlement, the Government has enforced *ex-parte* margins on entire purchases without offset of sales. The margins were made applicable in *Bhadrapad* and *Asho* (October) settlements from Monday the 18th and in *Shravan* (August) settlement from Tuesday the 19th inst. The rate of margin is Rs. 60 per tola in gold when the closing price is above Rs. 127 per tola and Rs. 3,000 per bar in silver when the price exceeds Rs. 213 per bar.

Evidently, the Maharashtra Government was provoked to stiffen the margins by the persistently rising tendency in prices of both the precious metals notwithstanding the imposition of special margin in *Bhadrapad* settlement as from Friday last week. In the silver section, *Bhadrapad* settlement jumped up from Rs. 217.94 on the 8th inst., to as high as Rs. 221.06 at one time on Friday the 15th and *Shravan* settlement from Rs. 217.34 to Rs. 220.25. Similarly, over the same period, the *Bhadrapad* settlement in gold advanced from Rs. 128.44 to Rs. 130.50. The spurt in prices followed renewed buying by bulls on fears of acute shortage of supplies developing in the next few weeks. Immediately after the Government of Maharashtra announced its decision to impose *ex-parte* margins, that is, on Saturday the 16th inst., there was liquidation by bulls which led to a sharp fall in prices, gold *Shravan* settlement touching Rs. 129.19, silver *Bhadrapad* Rs. 216 and *Shravan* Rs. 216.25. The downward trend gathered further momentum on Monday. Yesterday and today, however, the market picked up strength, with both gold and silver staging a recovery. The recovery in gold was quite notable with today's closing rates being higher than those prevailing a week ago. In the case of silver, however, the rise was not marked enough to make up the earlier losses. Consequently, today's closing rates are substantially lower as compared with those on Wednesday last week.

A striking feature of trading in the two contracts in silver was that the rate for transferring commitments from *Shravan* to *Bhadrapad* settlement, which was against bulls last week and early this week, turned in their favour from Saturday onwards. The rate actually widened considerably from 56 nP on that day to Re. 1.62 today.

Ready gold began the week firm at Rs. 129.56 and spurted on excellent enquiries to touch a high of Rs. 130.94 on the 16th inst. After declining to Rs. 130 on Monday, it recovered thereafter to Rs. 131.25 today before finishing at Rs. 131.12. The net gain over the week was Rs. 2.44.

Ready silver was well supported in the earlier sessions of the week, the quotation rising from Rs. 219.31 to Rs. 220.12 on Friday the 15th inst. Subsequently, it encountered selling and climbed down to Rs. 216.62 on Monday. It, however, recovered to Rs. 218.37 yesterday and to Rs. 220.50 today before closing at Rs. 220.06.

The daily average arrivals of gold during the week under review were lower than those in the previous week, being 2,625 tolas, as against 3,920 tolas, while the offtake was higher at 3,125 tolas, as against 2,700 tolas. The floating stocks of gold are estimated at 25,000 tolas. In the case of silver, there was no change in the daily average arrivals which stood at 14 bars, but offtake was larger at 9 bars, that in the previous week being 6 bars. The floating stocks of silver are reported to be around 450 bars.

Both ready and forward silver in the London bullion market were unchanged during the week, the former at 79¼*d.* and the latter at 79¼*d.* Silver in New York, too, was unchanged at 91.375 cents. Ready gold in London eased slightly from 249s. 11½*d.* to 249s. 10½*d.* The latest available world price for gold in London is $35.09¼-$35.11½, as against $35.09-$35.11 a week ago.

The following table shows the trend of the market during the week under review:

	20-7-60 (closing)	High	Low	13-7-60 (closing)
GOLD	Rs.	Rs.	Rs	Rs.
Ready (.99 fine)	131.12	131.25	129.25	129.56
Forward:				
Shravan	129.87	130.94	129.19	129.50
Sovereign	85.50	85.37	85.00	85.75
SILVER				
Ready (.996 fine)	220.06	220.12	216.62	219.31

New York:				
Silver	91-3/5 cents	—	—	91¼ cents

GOAT SKINS RECEDE
(From Our Own Correspondent)

MADRAS, 18*th July*

The kip market has remained unchanged. U.K. buying is selective. Tanned cow hides light weights F.A.Q. marks are weak, while other averages are fairly steady and top marks rule unchanged. Buff hides and cow calf are steady but buff calf weak.

Importers have not shown interest in tanned goat skins at shippers' ideas of prices, and are bidding the prices down. Prime sheep skins are slightly firmer and semi-primes shade weak. Demand for commons is negligible.

COTTON FUTURES FLARE UP
(From Our Own Correspondent)

BOMBAY, 20*th July*

For the eighth week in succession, official trading in cotton futures was at a standstill during the week under review. In private trading, the contract attracted hectic short covering prompted by the proximity of settlement with the result that it shot up to Rs. 6 above even the statutory ceiling of Rs. 820. This is a reflection of the statistical position of cotton. Never, perhaps, in the history of cotton trading at the E.I.C.A. has a Contract been quoted at a substantial premium over the ceiling rate. The Contract continued to be quoted Rs. 4 to Rs. 6 above the ceiling through most part of the week. The announcement regarding the new floor and ceiling prices was eagerly awaited. Mill demand for ready cotton was on a wider scale. Prices continued to rise. Turnover was, however, limited, thanks to paucity of offerings. Both short-staples and finer varieties like Surti, Digvijay, L 147, Laxmi, etc., were in demand. Market observers feel that if the present trend of mill buying were to persist, it was quite likely that most mills would have covered their requirements before 1st August when the order prohibiting sales above the ceiling comes into force. Spinners are apprehensive that the period between August and December will be one of extreme scarcity, in spite of the prospect of large quantity of foreign cotton coming into the country during the period.

Demand for foreign cotton was well maintained. Renewed buying was reported in East African cotton, especially B.P. 52. Mwanza also attracted attention. American and Sudan cotton evoked moderate interest.

There was a revival of export demand for Bengal *Deshi*. Japan was mentioned as persistent buyer of new crop Bengal *Deshi*. A sizable business was reported to have been put through.

Crops in the Punjab are reported to be progressing well. Canal water supply is adequate. There were good rains in U.P. and crops are doing well. This year's crop is said to be about 30 to 40 per cent. more in U.P. than last year. Sowings in Oomra district have been completed. Germination is good; plants are healthy.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Hubli Laxmi 1,125; Surti 1,115; Co2 1,100; B.P. 52 1,380; Mwanza 1,115.

The use of the metric system of weights in cotton transactions will become compulsory from 1st October 1960. Raw cotton is now sold in bales of varying sizes and prices are also quoted in various units. In 1958, Government had issued notifications permitting the use of metric system in the purchase of cotton and sale of cloth by textile mills. For a period of two years, the simultaneous use of the existing system was allowed. This period will end on 30th September 1960, after which only metric weights can be used in transactions in cotton. The adoption of the metric system of weights and measures in the cotton trade will provide an opportunity to standardise the size of the bale, and the unit in which prices are quoted.

The Government of India has also approved of the recommendations of the representative committee set up by the Textile Commissioner that, with the adoption of the metric system by the cotton trade, prices should be quoted in rupees per quintal 100 kgs.), and that the size of the standard bale should be 180 kilograms. The Government hopes that these recommendations will be accepted by the textile industry and cotton trade throughout the country.

A divergent trend was witnessed in the Karachi cotton futures market during the week under review. While the nearby July Contract attracted support based on considerations of tenders, the new crop January Contract eased on speculative selling induced by reports of favourable weather and satisfactory crop progress. The former improved from Rs. 79-8 to Rs. 84 while the latter receded from Rs. 72-6 to Rs. 70-10.

Spot prices too were lower. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 91; Punjab *Deshi* 87-8; 4F Punjab Roller 89-8; S.G. 93-5; LSS Punjab Roller 89-5; S.G. 94-5; N.T. Roller 93-5; S.G. 97-5; 289F Punjab Roller 99-5; S.G. 1.045.

In contrast to the easiness noted during last week, Alexandria cotton futures market ruled fairly firm during the week under review. Both the long-staple Karnak and medium-staple Ashmouni contracts improved perceptibly on buying attracted by the low level of prices. The rise would have been more marked but for bearish crop news. The latest available quotations—in tallaris per lb.—are as under:

Karnak: July 78.00; November 74.75; January 74.20. *Ashmouni*: August 63.95; October 63.20; December 63.10.

Cotton futures values in Liverpool ruled barely steady during the week in dull and featureless trading. Small trade covering orders and some speculative buying were offset by hedge selling. Prices remained unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July 22.50; October 22.40; December 22.35; March 22.40.

American cotton mixed growth contract: July 22.70; October 22.70; December 22.65; March 22.75.

Sudan: July, September, November 35.50.

Modest gains were recorded by cotton futures in the New York market. Buying was mainly based on the news that the Democratic Party's farm policy favoured the return to 90 per cent. parity price supports for basic commodities. Reports that,

when the Congress reassembles next month, attempts will be made to increase farm price supports imparted further strength to the market. The higher acreage under cotton forecast by the Department of Agriculture, last week, however, acted as a restricting influence. The uncertainty regarding the results of the coming Presidential election was also a factor which induced operators to be cautious.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	19-7-60	12-7-60	5-7-60
Spot	33.95	34.20	34.25
July	—	32.98	32.94
October	31.18	30.93	31.09
December	31.33	31.10	31.21

BEMBERG YARN RISES FURTHER

(From Our own Correspondent)

BOMBAY, 20*th July*

Barring staple fibre yarn and foreign art silk yarn which were somewhat easy, the yarn market depicted a firm trend during the week under review. Cupressa Bemberg yarn (60×1) was particularly strong, as the bulls who had bought large quantities in the past were holding tight to their stocks in expectation of better prices in the coming weeks. Indigenous art silk yarns also ruled strong, thanks to the Central Government's decision to extend the date for submitting applications by art silk powerloom weaving units for quotas against July-September 1960 by two weeks, that is, up to the 29th inst. Firmness of nylon yarns also imparted strength. Cotton yarns were well supported. Imported art silk yarn, however, tended to look down. Staple fibre yarn also lacked support in the absence of encouraging advices from consuming centres.

Cupressa Bemberg yarn (60×2) August contract advanced from Rs. 1,950 to Rs. 1,963. October delivery hardened by Rs. 16 to Rs. 1,981. Spot Cupressa was done at Rs. 9.19. 120 Italy gathered 13 nP to Rs. 6.19. But 120 Japan dropped 3 nP to Rs. 5.59 and 150 Japan 7 nP to Rs. 5.87. 150 Italy declined by 13 nP to Rs. 6 06. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade spurted by 19 nP to Rs. 5.28. 120 Bt. cones 1st grade rose by 16 nP to Rs. 6.25.

In the staple fibre yarn section, 40×2 August delivery receded from Rs. 738 to Rs. 733. October delivery lost Rs. 3 to Rs. 745. Spot Centurys eased by 6 nP to Rs. 3.68. Citys shed 3 nP to Rs. 3.77. 80×2 Paramounts (imported) were quiet at Rs. 12.75.

Among cotton yarns, ten counts Gokaks picked up 25 nP to Rs. 19.50. Podars were firm at Rs. 19. Twenty counts New Greats and Gokaks gained 25 nP each to Rs 23.75 and Rs. 24.25, respectively. Forty counts Minaxis rallied from Rs. 30.87 to Rs. 31.19. Maduras were fully maintained at Rs. 31.87. Deals in sixty counts were put through at higher prices, Raghuvamshis rising from Rs. 56.50 to Rs. 57 and Finlays from Rs. 59.59 to Rs. 60.60. Eighty counts Finlays were steady at Rs. 82.82, as also Mahendras at Rs. 73. Moderns, however, came in for selling and dropped a rupee to Rs. 74.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	20-7-1960	13-7-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 Kg.)		
August	1,963	1,950
October	1,981	1,965
60/1 Cupressa Bemberg spot (per lb.) ..	9.19	9 31
120 Japan (per lb.)	5.59	5 62
150 Japan (per lb.)	5.87	5 94
120 Italy (per lb.)	6.19	6 06
150 Italy (per lb.)	6.06	6.19
Staple fibre yarn—		
40×2 August	733.00	738.00
October	745.00	748.00
40×2 City (per lb.)	3.77	3.80
40×2 Century	3.68	3.74
Cotton yarn (per bundle of 10 lbs.)—		
10s Gokak	19.50	19.25
20s Gokak	24.25	24.00
40s Minaxi	31.19	30.87
60s Finlay	60.60	59.59
80s Modern	74.50	75.50

GROUNDNUT HITS CEILING

(From Our Own Correspondent)

BOMBAY, 20*th July*

Groundnuts continued to soar upward during the week under review, with the August contract, hitting the ceilings, for the first time, on Monday. Official dealings in this section thus came to a standstill since Tuesday. The sustained rally in groundnuts was mainly due to pronounced scarcity of supplies and distinctly bullish weather reports from producing centres. The announcement of the new export quota for H.P.S. groundnuts on Monday, too, induced further momentum. A Press note issued by the Joint Chief Controller of Exports, Bombay, states that the Government of India has decided to give repeat allotment of H P S. groundnut kernels to established shippers who wish to make further shipments, equal to 20 per cent. of their basic year exports after they have completed shipment against the current quotas. Co-operative societies of growers of groundnuts will also be given repeat allotment of H.P.S. groundnut kernels equal to the quantity previously allowed on the basis of acreage under cultivation during 1956, 1957 and 1958 after they have completed shipment of quotas against the current releases, if these societies wish to make further shipments. Shipment against repeat allotments granted thus will be allowed upto the end of December 1960. In case established shippers and co-operative societies are able to secure business in excess of the quantity remaining unutilised in their hands out of the current quotas, they will be granted on application repeat allotment for shipment upto the end of December 1960, on production of valid firm sale contract.

The measure has generally been welcomed by the traders. It is, however, pointed out that the timing of the announcement is rather inappropriate, coming as it does in the wake of an unprecedented spurt in prices and particularly at a time when the Forward Markets Commission has been reluctant to grant permission for the commencement of new contracts. The new allotment will obviously encourage bulls.

Side by side with the increase in Indian prices of groundnuts and oil, their world prices have also been moving upwards. Reports from London indicate that groundnut and oil prices were generally higher by 10 per cent. above the last year's level. This rise in prices is attributed mainly to small crops harvested at the close of 1959 in West Africa, which accounts for about 50 per cent. of total supply of groundnuts in the world market. It is said that the statistical position will continue to be tight until new West African crop is harvested at the end of the year.

The production of rapeseed and mustard in India during the latest crop year has shown slight improvement over the previous year. The All-India final estimate of rapeseed and mustard for 1959-60 puts the current year's area and production at 7,167,000 acres and 1,037,000 tons, as against the partially revised estimate of 6,021,000 acres and 1,025,000 tons for 1958-59. These show an increase of 1,146,000 acres or 19.0 per cent. in area and 12,000 tons or 1.2 per cent. in production. The increase in area during the current year is accounted for mainly by Uttar Pradesh—the major rapeseed and mustard producing State—and partly by West Bengal and Bihar and is due mainly to favourable weather conditions during sowing period this year than last year. This increase has, however, been offset to some extent by decrease in area reported from Punjab and Rajasthan attributed to unfavourable weather conditions at sowing time.

To revert to the trend in the local oilseeds market. As already mentioned, there were no official dealings, in futures contract, but privately the August 1960 contract was quoted at about Rs. 227, Rs. 2 above the ceiling level. Crushers and *vanaspati* manufacturers were keen buyers in the spot section. On top of this, overseas enquiries for cakes were encouraging. August contract, which had wound up at Rs. 223.50 last week-end, rose to Rs. 225 by Monday. Nizam bold spurted by 75 nP to Rs. 48.75. Oil ex-mill gathered 50 nP to Rs. 25.50.

In contrast, the castorseed section gave way, after an initial spurt. The setback is attributed to sizable bull liquidation, following the protracted absence of any sizable export enquiries for oil. Some operators also felt that arrivals would be larger, now that the Government employees' strike was over. September 1960 contract, which had finished last week at Rs. 182.25, eased to Rs. 181 today, after moving both ways between Rs. 182.25 and Rs. 180.37 over the week. Ready Madras, however, looked up by 25 nP to Rs. 35.50. Oil commercial was steady at Rs. 18.87.

In the linseed section, conditions continued to be quiet. Traders took note of the relaxation of restriction on exports of linseed and abolition of 20 per cent. retention tax on the export of edible oils in Argentina. The new system is designed to promote exports; but sufficient care has also been taken to protect its domestic crushing industry. With the linseed crop this year in Argentina estimated at 736,000 tons, a quantity of about 236,000 tons is expected to be available as exportable surplus In linseed, the September contract fell from Rs. 34.75 to Rs. 34.56. Bold ready, however, picked up 13 nP to Rs. 34, mainly on account of firm advices from rapeseed markets. Linseed oil gathered 7 nP to Rs. 17.32.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	20-7-1960	13-7-1960	6-7-1960
	Rs.	Rs.	Rs.
Groundnut			
August 1960	—	223 50	210 75
Nizam bold	48.75	48 00	47 00
Canvassed ready	49.25	48 00	47 25
Khandesh quality	49 25	48 00	47 50
Oil ex-mill ready*	25.50	25.00	24 00
Railway receipts*	25.25	24.75	23.87
Castorseed			
September 1960	181.00	182.25	181 12
Ready Madras	35.50	35 25	35 37
Ready Kanpur	34.50	34 25	34 25

September 1960	—	165.00	163 50
Niger seed	38.50	38.00	37.50
Kardi seed	24.50	24.50	25.00

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are in terms of candy, except linseed which is in cwt. A candy is 560 lbs. except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

BLACK PEPPER WEAK

(Messrs. Parekh and Co.)

BOMBAY, 20*th July*

After moving within a narrow range without any definite trend for the last three weeks, Malabar black pepper eased under pressure of sellings by stale bulls following the easier advices from Singapore where the holders appeared to be feeling nervous in view of the proximity of the harvesting season of Lampong and owing to the continued absence of foreign demand from both the U.S.A. and Europe. The noteworthy features of the Indian market are: (1) slow inland demand; (2) resistance of consumers to higher prices; (3) trade's estimate of exportable surplus of about 6,000 tons of Malabar pepper as available on 1st August which is considered rather heavy, in view of the poor foreign offtake, owing to the keen competition by Singapore; (4) selling policy of growers and holders to come out to sell in a quiet market and to withdraw in a rising one, and (5) satisfactory news regarding the conditions of the coming Malabar crop.

Garbled at Cochin slipped from Rs. 327½ to Rs. 290 and ungarbled from Rs. 1,875 to Rs. 1.625. Calicut sagged to Rs. 1,725. August delivery on the trading ring collapsed to Rs. 292½, the highest being Rs. 352½. At the time of writing, however, there is some improvement, but it is considered to be a technical correction only. Ready ungarbled is now quoted at Rs. 1,675 with inquiries from the exporters who are reported to have sold some parcels to Russia. This sale, however, is lacking confirmation. As now Russia is having trade agreement with Indonesia, whenever the U.S.S.R. buys pepper, it will buy only after comparing the prices from India as well as from Indonesia. This means that there will be competition in future between Indonesia and India in selling pepper to the U.S.S.R. It is also possible that Russia may put one against the other for obtaining the lowest price. Lampong black pepper is being offered at $0.56½ without success by Singapore holders.

The important news of the week is the move on the part of some Chinese merchants to corner white pepper in Singapore, the total production of white pepper from Sarawak and Muntok being limited and thus easily manageable. But the trade in general is doubtful about the success of such enterprise for two reasons, among others. One is the resistance of higher price by consumers in Europe and the U.S.A. and the other is the heavy new production of Lampong black plus the coming new crop of Malabar. If the spread between the price of white and black is enlarged over Str. $150, there are all possibilities of black being turned into white. The latest prices for white and black in Singapore are Str. $300 and Str. $195, respectively.

The spot at New York has come down to $0.59 with grinders side-lining. August on the Exchange is quoted at $0.56. The wide difference in the price ideas between buyers and sellers on the Exchange denotes the weak undertone for the future. Autumn demand from the U.S.A. is still lagging behind and as such grinders prefer to side-line and to consume from their past high-priced inventories which are said to be rather large, particularly, with the big grinders. The coming months being the Presidential Election period in the U.S., the usual demand during July to November is likely to remain below the usual mark. Unsold consignments of black pepper to the U.S. from Singapore is a depressing factor. Demand from Europe is also unsatisfactory, because there are large quantities of unsold consignments lying in all the important ports of Europe.

Ready pepper in Bombay is nominally quoted at Rs. 225 per Bengal maund. Demand is unusually poor, as important consuming centres like Delhi, Amritsar, Calcutta and Kanpur are reported to be overstocked and the quotations there are much below the replacing parity.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 18*th July*

Steady conditions were witnessed in the foodgrains market during the week. This was due to reports of firm prices of gram in the Punjab and poor arrivals in the market following heavy rains all over the week. *Kharif* crop prospects were also adversely affected, due to exceptionally heavy rains in the last fortnight. The U.P. Food Minister, however, opined that the small increase in prices in the last few days was a normal feature at this time of the year and prices were still lower than what they were at this time last year and stock position of foodgrains in the State was satisfactory.

Wheat at Hapur recorded fractional gains to be quoted on Monday at Rs. 17 a maund for average quality and upto Rs. 18.25 for farm produce. Daily arrivals dropped to an average of 100 maunds, which were insufficient even for local requirements. Consequently, sales through fair price shops started increasing, but the quality offered there was reported to be poor.

Rice continued to rule steady and stocks with the trade were not heavy, as the State Government had purchased heavy surplus from the market. The U.P. Government has offered 100,000 tons of rice to other States, of which West Bengal had taken 25,000 tons and Bombay and Gujarat have asked for 13,500 and 5,500 tons, respectively. The week-end prevailing prices of rice here were: *sela basmati* Rs. 31 to Rs. 35; *ramajwayan* Rs. 25; *raimunia* Rs. 26; *mainpuri* Rs. 24.37; gadda Rs. 21.75 a maund.

Gram recorded fractional gains to Rs. 15.62 a maund and superior quality was quoted upto Rs. 15.75 and this rise was mainly due to higher Punjab advices. Stocks of gram here with trade were reported to be heavy at about 34,000 maunds and the U.P. Government has invited tenders to sell its local stocks of 107,000 maunds. Barley improved slightly to Rs. 13 and *bejhar* was also quoted higher at Rs. 12.25 to Rs 13 a maund. This was due to poor supply position and firmness of gram prices. *Jowar* and *guwar* ruled quiet at Rs 14-Rs. 15 and Rs. 12.50-Rs. 13, respectively, thanks to fall in ready demand. Heavy rains have marred prospects of maize crop and sowings in some areas have been unduly delayed.

Ready peas continued to record a rising trend during the week due to brisk outside demand mostly in the form of *dal* from Madras side, but loading restrictions hampered despatches. Daily arrivals of peas, too, were small and local stock is put at 90 *khatties*, as against the corresponding figure last year of 48 *khatties*. Total arrivals of peas here during the current season were put at 103,000 maunds. *Arhar* also ruled steady in sympathy with peas and local stock of peas is put at 26 *khatties*, as against 30 *khatties* last year. Other pulses also stayed steady and week-end prevailing prices were: Peas *dara* Rs. 12.37; old Rs. 12.12; farm white Rs. 13.25; peas *dal* Rs. 14.25; *arhar* Rs. 13.75 to Rs. 14; *arhar dal* Rs. 18.25 to Rs. 19.12; *urd* Rs. 20; *moong* Rs. 20.50 to Rs. 22.50; *Mussor* Rs. 15 to Rs. 18 a maund.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 18*th July*

Sugar ruled quiet during the week around Rs. 113 per bag and in retail at Rs. 1.12 per *seer* in the open market, the controlled prices of the commodity being Rs. 108.50 and Rs. 1.06, respectively. The supply position of sugar continues to be easy and trade circles are still clamouring for withdrawal of control on sugar, but the Government in consultation with millowners, is more inclined to follow "wait and watch" policy.

Despite easy supply position, sugar recorded modest gains in the Muzaffarnagar market, due to keen demand for crystal *boora*. The prevailing price was Rs. 116 per bag, as against the controlled price of Rs. 112.50. A quota of three *seers* per head a month was available in ration at the controlled price of Re. 1.04 per *seer*. Sugar in the Kanpur market, however, sought lower levels, due to easy supply position and slack demand. The prevailing prices in the week-end were Rs. 111 per bag.

On resumption of loading facilities after some week's lull, *khandsari* recorded fractional gains during the week on brisk demand from the consuming areas of the South, Saurashtra and Kutch and also from the Punjab. Traders expect further improvement in prices next month when festival demand would mount. The latest prevailing prices in the Muzaffarnagar market where *khandsari* stock was put at 60,000 maunds, were: inferior Rs. 30 to Rs. 32; superior Rs. 33 to Rs. 38.50; crystal *khandsari* Rs. 36 to Rs. 40, *boora* from crystal Rs. 44 a maund.

Owing to resumption of loading facilities, despatches of ready *gur* during the week were 15 wagonloads and prices improved fractionally to Rs. 16.12 for dry quality and Rs. 15.75 for *kotha* dry-wet stocks. *Shakker* was quoted at Rs. 19. Local stock of *gur* is now put at 18,000 maunds, the corresponding figure last year being 41,000 maunds. Total arrivals in the current season were put at 586,000 maunds, as against 661,000 maunds last year.

Heavy rains during the week have proved very beneficial to the cane crop.

Gur also improved fractionally in the Muzaffarnagar market during the week on good demand. *Chaku* quality was being converted into *shakker*. *Rana Minja* is attracting demand from M.P. Rajasthan and Jammu and Kashmir. Ready stocks of *gur* at Muzaffarnagar were now put at 120,000 maunds and prevailing prices were: *Chaku* dry Rs. 19 to Rs. 19.75; *kotha* dry-wet Rs. 17 to Rs. 18; *rana minja* Rs. 18 to Rs. 21.50; *shakker dara* Rs. 20 to Rs. 21; *masala* Rs. 20 to Rs. 22.50 a maund.

Future *gur* prices recorded a bullish trend on gra speculators purchases, but latest prices were noted slightly lower than the highest for the week ue to profit-taking sales. *Fagun* opened at s. 13.65, touched the highest of the week at s. 14.43 on Saturday and was today quoted at s. 14.22.

JUTES FINISH BETTER

(From Our Own Correspondent)

CALCUTTA, 19*th July*

With two virtual holidays necessitated by the general strike and the absence of public transport, quiet conditions were in evidence in the jute markets during the week under review. When the threatened strike by Central Government employees became a reality and many postal and railway facilities were withdrawn, buyers were disinclined to enter into any large commitments. However, with the gradual improvement in the strike situation, confidence soon returned and, towards the week-end, covering business was being done on a moderate scale. When the market opened on Tuesday a week ago, prices were low and, as covering business took place towards the week-end, closing levels were higher on balance. There were reports of the Government of India purchasing 6,000 bales of B. twills for despatch to various centres. Both the U.K. and the United States continued to show interest for small quantities of hessian. Earlier in the week, it was announced that output in June was lower at 89,100 tons, as against 91,700 tons in the previous month. The number of hours worked was only 200, as against 208. Production of hessian and miscellaneous constructions was almost the same at 37,400 tons and 9,600 tons, as against 37,700 tons and 9,500 tons, respectively, but that of sacking goods at 42,100 tons registered a more marked fall of 2,400 tons. The slightly better conditions in the New York burlap market were noted here and were attributed to revival of buying interest by primary consumers following the decline in stock of goods with mills and the declared policy of mills to re-seal more looms in this and next months in order to cope with the raw jute shortage.

Market reports indicated that, in New York, the heavy hessian 40" 10 oz. improved to 11.40 cents per yard from 11.20 cents. Similarly, the lighter hessian at 8.45 cents per yard added a few cents. Raw jute prices here for the new crop added substantial gains. The gains in the forward positions followed the expectation that mills would require a greater quantity of jute in the coming months to enable them to put back the sealed looms to operation. Since, however, the jute crop was expected to be good and also since with moderate rains interspersed by bright sunshine weather conditions continued to be highly encouraging, market circles thought that fibre prices would break sooner than expected. This week's disturbance to the railway communications were not expected to affect fibre movements, as by the time new crop movements commenced, the railways would have cleared the back-log.

Concern was expressed following the reported reaffirmation by the Management Committee of the European Jute Association of the Association's basic policy of seeking to limit imports of jute goods from low-wage cost countries in the East and State trading countries in Eastern Europe. It was stated that such a policy was directed to curb competition against producers in Western Europe and that greater imports of jute goods would be contrary to the long-term interests of the world jute economy. Market circles here thought that this reaffirmation of policy was only a representation of the Western producers to their Governments in order to limit issue of import licences. With the rapid expansion of the Pakistan jute mills industry and Pakistan's need to consume more fibre, the producers in Dundee and elsewhere would not get sufficient supplies of fibre to increase production to such an extent as to meet demand for goods without imports. The cheaper-priced goods from Pakistan and India would continue to receive the patronage of all countries.

On Tuesday last, with the threat to strike work by sections of the employees of the Central Government having become a cold reality, prices of goods moved within narrow limits and quiet conditions were in evidence. Ready hessian 40" 10 oz. was priced at Rs. 43.40 and B. twills at Rs. 122.80. On the previous day, the prices were Rs. 43.30 and Rs. 122.50, respectively. On the following day, that is, Wednesday, conditions improved, as buying interest from foreign buyers was forthcoming at lower levels. Australian buyers placed orders for cornsacks against shipment in August-September. Other foreign buyers also sent in modest inquiries for hessian and sacking goods. Also, the trend in the futures market registered a small improvement following buying interest at lower levels. Ready hessian 40" 10 oz. hardened to Rs. 44.20 and B. twills to Rs. 123.70. On Thursday, there was no trading on account of the dislocation to transport facilities, but, when the market reopened on Friday, fibre prices moved up and, in sympathy, goods also rose. However, no interest was shown by foreign buyers at the higher levels. All the same, there was some covering business for ready and near deliveries. Hessian 40" 10 oz. at Rs. 44.75 recorded a small improvement, as did ready B. twills at Rs. 124.50. There was no trading on Saturday on account of the general *hartal*. It was known yesterday that burlap consumption in the U.S. during June was less by 3.2 million yards as compared with May. Earlier in the day, hessian was steadier, but, following this news, a sagging tendency set in and 40" 10 oz. hessian gave way to Rs. 44.50. On the other hand, B. twills moved up to Rs. 124.75. Moderate business was done yesterday in B. twills on local account.

Fibre prices recorded some improvement. The uptrend followed when mills turned buyers, and sellers became reserved. Good business was reported in near delivery new crop. The following table compares the latest quotations for the different varieties of new crop jute with those of a week ago.

(In Rs. nP. per 100 kilos)

cost of production was more, reducing the profits. You are aware that under the Income-tax Act, a sum equivalent to 25 per cent. of the value of plant and machinery installed is allowed as development rebate and allowed as an admissible item of expenditure in the income-tax assessment, provided 75 per cent. of such development rebate is charged against the profits. In order to avail of the benefit under this provision, a sum of Rs. 3,85,937 is debited in the profit and loss account and taken to a specific reserve. In view of the allowance under development rebate, the Company has no taxable income for the year 1959.

"I am glad to inform you that the relationship between labour and management has been cordial during the year 1959. Let me thank you all for coming here today and also other shareholders, the officers, staff and workers for their valued co-operation extended to your Company during 1959.

"I now move that the Directors' report and the audited accounts for the year ended 31st December 1959, be adopted."

Note.—*This does not purport to be a record of the proceedings of the annual general meeting.*

TRAVANCORE CEMENTS LIMITED

MR. C. S. LOGANATHAN'S SPEECH AT ANNUAL MEETING

ADDRESSING the Thirteenth Annual General Meeting of the Travancore Cements Ltd., held at Kottayam on Monday, 11th July, 1960, the Chairman of the Company, Mr. C. S. Loganathan, observed that they could be reasonably proud of the white cement produced in the Company's factory. He stated that the quality of the cement compared favourably with that produced in other countries.

The following is the full text of Mr. Loganathan's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to the thirteenth annual general meeting of our Company.

"Before I proceed to review the Company's affairs during the year 1959, I would like to refer to the sad demise of two of our Directors, Messrs. A. V. George and H. D. Rajah, since we met last. We bemoan their loss and let us place on record our sincerest appreciation of the services rendered and the valuable contribution made by them towards the progress of our concern.

"The balance-sheet as at 31st December 1959 and the profit and loss account for the period from 1st January 1959 to 31st December 1959 together with your Directors' Report have been already sent to you separately. With your permission I shall take them as read.

Production and Sales

"Our total turnover during the year 1959 has been less compared to the previous year. The total sales for the year was Rs. 33,33,896 and the corresponding figure for the year 1958 was Rs. 48,02,092. During the year 1959, there was some loss of production on account of the change over to white cement production. Being the first year of change over to white cement, besides the loss of production, we had to pass through experimental stages until quality production could be achieved. We can be certainly proud of the white cement produced in our factory for its quality and I am glad to inform you that our white cement compares very favourably with the superior quality white cement produced in other countries and has been well received throughout India.

Imports

"Due to the trade holding considerable stocks of imported white cement on the basis of licences issued in 1958 and 1959 our sales are rather slow. In this connection, it is gratifying to note that the Central Government has now discontinued the issue of further licences for such imports and is expected that there will be appreciable improvement in our sales without delay. I may also inform you that our Vembanad brand white cement is now marketed all over India and export possibilities are also being explored.

Wages

"In my speech last year, I had mentioned that a Central Wage Board for cement industry had been set up by the Government of India. The Wage Board has submitted their recommendations to the Government, and the Government have, in accepting the recommendations, requested the cement producers to implement the same with effect from 1st January 1960. The Wage Board has recommended fair wages for the different categories of operatives and clerical, supervisory and lower technical staff. The minimum wage recommended for an unskilled employee is Rs. 91 per mensem including dearness allowance and house rent allowance. There will be a large increase in the total wages when the Wage Board's recommendations are implemented, but the Government have agreed to increase the retention price payable to the producers to the extent of the increase in wages.

Profit and Taxation

"It may be noted from the profit and loss account for the year ended 31st December 1959 that the working has resulted in a net loss of Rs. 88,787. This loss is after charging a sum of Rs. 3,85,937 towards development rebate reserve in the profit and loss account and without this the results would have been a profit of Rs. 2,97,150. Further, during the experimental stages of white cement production, capacity production was not obtained and, therefore, the

FOREIGN FINANCING

(*Concluded from page 151*)

has no direct investment potential from out of its own product.

While the foregoing discussion has highlighted the sort of considerations which should weigh with the Government of an underdeveloped country in examining offers of foreign public or private loans, certain special features in allowing foreign private investment must be mentioned. In some respects, foreign private capital inflows may be the best means of borrowing abroad, since no debt burden is involved if the venture fails. This, however, is a simplification. For, while it is evident that foreign private capital will be willing to take many risks, it will not come in without a fair chance of the venture proving successful. The superior technical and managerial skills available to foreign business men, in contrast to national borrowers from underdeveloped areas, go to improve their prospects of success. This apart, it has already been pointed out that foreign private capital investment tends to appreciate along with the general economic development of the country. Though this may look like an unnecessary burden for a poor, borrowing country to assume, private investment brings along with it advanced technical and managerial abilities from which local industry and labour will benefit. This is a contribution the value of which cannot be precisely estimated. Therefore, where a proposed foreign private venture satisfies the other criteria and pays for its servicing charges in foreign exchange earnings or savings, it should be welcomed.

This article can now be concluded by a restatement of some of its broad conclusions on the conditions under which it is, on economic grounds, justifiable to contract an international debt to finance a domestic investment project. The scheme should earn or save sufficient foreign exchange to pay for its service charges, including repayment of principal, and also to transform the additional savings generated by it into investment. The scope and range of its operations should not be so expanded as to add to the service and repayment obligations without corresponding benefits on the foreign exchange side. Nor should its foreign exchange requirements for continued operation rise to a level beyond what it could save or earn in foreign exchange. Even if it is based on domestic raw material, the magnitude of the manufacturing activities should not grow so as to affect the foreign exchange earnings from the export of raw material when it cannot itself compensate such loss by facilitating the export of the finished product. While from the point of view of service charges Government-to-Government borrowing is preferable, there are certain not precisely calculable advantages in allowing private capital to come in from abroad into the right lines of manufacture. These advantages will, very probably in the long run, outweigh the disadvantages of additional service charges. Some of these criteria are valid even for offers of foreign assistance in the form of grants.

WHITLEY COUNCILS FOR SETTLING DISPUTES

(*Concluded from page 154*)

country. There is no hierarchical connection between the National and the Departmental Councils. The National Council must, however, approve all Departmental Council constitutions; and it is kept informed of departmental developments which seem to be inconsistent with national agreements or to have application or consequences beyond the Department concerned.

There are, however, limitations, constitutional and otherwise, on the working of the machinery. There is an agreement between both sides which specifically states that the establishment of Whitley Councils cannot relieve the Government of any part of its responsibility to Parliament and that Ministers and heads of departments acting under the general or specific authority of Ministers must take such action as may be required in any case in the public interest. This condition, the agreement further states, is inherent in the constitutional doctrines of parliamentary government and ministerial responsibility. It follows from this constitutional principle that, while acceptance by the Government of the Whitley system implies an intention to make the fullest possible use of Whitley procedure, the Government has not surrendered, and cannot surrender, its liberty of action in exercise of its authority and the discharge of its responsibility. In fine, the position is that the supremacy of Parliament and control of Government over matters relating to the civil service remain intact.

There are other limitations on the scope of the Council. In practice, the staff sides do not attempt to discuss by Whitley machinery the pay or the grading of the highest posts in the service. Again, Whitleyism has not superseded direct negotiations with the staff association. In fact, questions of class or grade remuneration are more often dealt with by direct negotiation. Moreover, the Councils have confined themselves largely to "bread and butter" questions.

The Whitley Councils have not generally interested themselves in the bigger, non-economic problems of administration. But they have helped, in the words of Mr. Douglas Houghton, a former Chairman of the staff side of the National Whitley Council, "to keep the peace and make people happy in their work."

If, as is the case, the Whitley Councils do not, in reality, reduce the powers of the Government and its administrative authority, what is it that gives satisfaction to the staff? Here is the second Commission's assessment:

"The Whitley Councils are not purely consultative bodies, with no power to take decisions. They are authorised to, and do, take decisions; and the decisions do not, in fact, require anybody's approval to become operative. From the point of view of the staff, this is a far more satisfactory procedure than one providing for mere consultation to be followed by action according to the judgment of the Government. The official side has to discuss matters fully and to justify its standpoint. It may differ from the staff side, but the difference has to be based on grounds which would have to be stated at a meeting of the two sides and rationally justified; and, in actual working, there is a substantial difference between such an arrangement and one under which the official representatives may meet even an eminently reasonable proposal of the staff with the observation that they would place it before the Government. If a Whitley type machinery is introduced, the position would be comparable to that in industry where the manager negotiates and enters into agreements with the employees, even though he acts under the authority of, and in matters of importance, with the explicit approval of the directors. And it would give to the staff the kind of satisfaction which collective bargaining in industry gives to employees."

The Commission does not agree with those who argue that the Whitley type of machinery, together with compulsory arbitration, is peculiar to Britain and that it might be imprudent to transplant these particular British institutions on Indian soil. In support of this contention it is pointed out by those who oppose Whitley Councils that similar bodies established in some Provinces of Canada have not been successful and that no machinery of the Whitley type exists in the U.S. The Commission does not entertain this fear, because, according to it, the U.S. example is inappropriate in this context. In that country, Congress exercises close control over civil service matters. The employees and their organisations have ample opportunities to have their views considered by the Congress. There is a law in the U.S. which provides that "the right of persons employed in the civil service of the U.S., either individually or collectively to petition Congress or any member thereof or to furnish information to either House or Congress or to any Committee or member thereof, shall not be denied or interfered with." In India, though the ultimate authority is Parliament, most civil service matters are decided by the Government. The position here is, therefore, the Commission maintains, nearer that obtaining in the U.K. than the situation in the U.S. "We are convinced," the Commission asserts, "that the conditions in India do not make it imprudent to set up a Whitley type machinery and to provide for compulsory arbitration; on the contrary, the conditions require that such a machinery should be set up and compulsory arbitration provided."

The Commission, after examining the question whether the Whitley type machinery could be developed from the existing Staff Councils, has come to the conclusion that it is not possible to do so. The main reason is that the Staff Councils have little in common with the Whitley machinery—except the similarity of nomenclature. Their objects have been laid down in wide terms but their powers and procedures greatly limit their effective scope. It is easier, the Commission points out, to develop the Whitley type of machinery out of the existing arrangements under the Ministry of Railways and Defence and the Posts and Telegraphs Department.

It is clear from the foregoing account that the Commission has made out a convincing case for the establishment of a Whitley type of machinery in India. The existing arrangements have not proved a success. Obviously, there is need for trying out an alternative method. Considering the background of the civil service in India, its evolution and close similarity to that in Britain, the British system stands a fairer chance of success than any other conceivable alternative. An important point that needs to be emphasised is that, if the spirit of mutual trust and co-operation, which has made the Whitley Councils the remarkable success they have been, is lacking in both sides which have to work the scheme, no machinery, however ingeniously devised and nobly conceived, can succeed.

MARKET REPORTS

STRONG DEMAND FOR EXPORT TEA

(From Our Own Correspondent)

CALCUTTA, 19th July

Strong demand for tea was in evidence during export sale held yesterday. The quantity on offer was low, and this is explained by the disturbance to railway communications. Arrivals from some parts of Assam are small, and this is attributed to the disturbed conditions in these areas following the language controversy. Tea shipped from Calcutta port during the week registered a fall following limited arrivals and the railways' ability to handle a lower volume only. However, with the resumption of full working in the railways, conditions are expected to improve.

London stocks of tea were only 118.76 million lbs. in the week ended 8th July, as against 123.17 million lbs. in the previous week. This was believed here as being due to a fall in arrivals from India, as the crop here in recent months had been much lower due to the prolonged drought conditions. Such a state of affairs explained the prevalence of good demand at last week's sales in Mincing Lane, and North Indian new teas commanded good attention of blenders.

Trade circles have expressed some concern at the slow progress Indian tea is making in the United States. For Indian tea exported to the U.S. in the five months to May 1960 amounted to 11,900,000 lbs. which represented just a nominal improvement of only 300,000 lbs. as compared with the corresponding previous period. Against this, it should be noted that Ceylonese tea sent to the U.S. in the same period amounted to 18,400,000 lbs., registering the substantial increase of 3 million lbs.

Offerings during yesterday's export sales amounted to 35,797 chests, which included 70 packages of last season's teas. Demand was fair, buyers showing selective attention. On the whole, quality showed a general improvement, and the offerings included a few bright liquoring teas. Among Darjeelings, those lots with flavour were in good demand, but the plainer teas met with a declining market. Strong competition met the very best C.T.Cs possessing bright liquors, and prices for these gained. However, other C.T.Cs were a poor market and prices eased up to 30 nP necessitating good withdrawals. Tippy teas were in limited demand, while whole leaf grades fell by 20 nP. Generally orthodox Assams were firm. Fannings and plain brokens added a small gain, but the lower-priced legg-cuts were sold up to 10 nP below last rates. The quotations were medium B.P. Rs. 5.00 to Rs. 5.20 (nom.); clean black pekoe Rs. 5.00 to Rs. 5.20; plain B.P. Rs. 4.60 to Rs. 4.70; best Assam C.T.C. fannings Rs. 8.50 to Rs. 9.50; best Assam C.T.C. B.P. Rs. 8.00 to Rs. 9.00; and plain fannings Rs. 4.40 to Rs. 4.60. Medium fannings were not quoted. Quotations are inclusive of excise duty and are per 1 kg.

Export quota changed hands at 2 nP per kilo. Subsequently, sellers raised the price to 2½ nP.

Offerings in the internal sales held last week amounted to 10,823 packages. Prices registered modest additions, following strong demand. Keen competition was offered to the legg-cut Dooars, prices of which improved by as much as 25 nP. Prices for orthodox grainy teas also improved. The demand for the smaller and liquoring types of teas was equally good. Darjeelings were fully steady. Among C.T.Cs., prices of the smaller and brighter types hardened, the plainer types being fully firm. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. Rs. 6.20 to Rs. 6.50, medium Assam C.T.C. Rs. 5.60 to Rs. 6.00, medium Assam Rs. 4.50 to Rs. 4.80 (nominal), and medium Dooars Rs. 4.30 to Rs. 4.35.

There was good demand for leaf on offer amounting to 284 packages. Prices were higher.

METALS DULL

(From Our Own Correspondent)

CALCUTTA, 19th July

Although prices were firm, quiet conditions were in evidence in the metal market during the week under review. With the uncertainty caused by the limited functioning of the P. and T. Department and the railways, anxiety was entertained and there was a general disinclination to add to inventories. Rail booking of finished products was practically at a standstill, and anxiety was all the more, since, in view of the strict import control, manufacturers were carrying only limited raw material stocks. Note was taken of the rise in the price of electrolytic copper on the London Metal Exchange from £255 to £264 a ton, but, as the week progressed, sobriety returned and the rate closed at £256½.

Local prices for copper scrap remained unchanged. In London, tin at one time was as high as £810 a ton, as against £807 early in the week, to close at £808. Tin was quoted here at £548 a cwt. with little business passing. Electrolytic zinc in London closed at £90 a ton, after being higher at £90¾, while lead eased to £70¾ a ton from £71¼.

PLAN FOR PLENTY OF TEA

THE tea industry is, perhaps, the only one among the producers of consumer goods to be content with production and export targets in the third Five-year Plan which are smaller than even those advocated by the Government. About the middle of February last, it was reported that the Working Group on tea appointed by the Planning Commission had recommended a production target of 850 million lbs. and an export target of 550 million lbs. to be reached in 1965-66. Commenting on these targets in these columns, we stated, in our issue of 12th March 1960, that they were timid and that the increases envisaged in both over the industry's performance in 1958 and 1959 were inadequate to meet the rapidly expanding domestic consumption and the necessity for increasing exports. At the time these comments were made, the suggestions of the Working Group were only tentative and there was sufficient time to improve them in the light of arguments advanced by us for higher targets. Now that the targets included in the Draft Outline are the same as those mentioned above, it is obvious that the Working Group was not impressed by our case.

It is a pleasant surprise to find that, on this question, the Union Ministry of Commerce and Industry also had felt the same way as we did. We are told by no less an authority than Mr. Satish Chandra, Deputy Minister for Commerce and Industry, that his chief, Mr. Lal Bahadur Shastri, is deeply disappointed with these targets and that, while the Government representatives in the Working Group pressed for higher targets, the industry's representatives were strongly opposed to them. The latter were undoubtedly unwise in doing so for reasons given in our issue of 12th March last, as well as elsewhere in this issue. But why did the Government representatives not press their points of view or advise the Planning Commission to ignore the recommendations of the Working Group and, instead, accept the targets proposed by their officers? Its explanation, according to Mr. Satish Chandra, is that, as the responsibility for development of tea industry falls on private initiative and enterprise, it was not inclined to fix arbitrarily the production and export targets. This is not a wholly convincing explanation. The Government has not hesitated to overrule the recommendations of the private sector in regard to Plan targets for other industries, as, for instance, cotton textiles and steel. A cynic may be tempted to argue that the Government did not want to take the initiative in this respect, lest the industry should try to use it for strengthening its case for relief in taxation, low-cost credit and other facilities. But it is hard to believe that a person like Mr. Lal Bahadur Shastri would have been motivated by such a minor consideration in deciding an issue of great national importance. In any case, it is clear from the speech of Mr. Satish Chandra, at the fourth annual meeting of the Tea Association of India, Calcutta, that his Ministry is still keen that the industry should "seriously reconsider these targets, in the context of India's leading position in the world as producer and exporter of tea."

One is unable to understand as to why the tea planters should insist on very modest targets for production and export, when the Government itself is strongly in favour of bigger targets. Surely, the Government cannot be unaware of the prerequisites for implementing its proposals. Mr. Satish Chandra's observations show that it is quite alive to them. The relevant portion from his speech is worth recording here:

"I agree with your President when he says that, if the industry is to achieve a higher target of production, it should have the means and the tools to accomplish it. It is true that the yield from a tea bush is directly related to the timely application of fertilisers. It is appreciated that we must either make the latest type of machinery or import it, if the quality and output of tea are to be improved. There may be some force in the argument that the tea industry must be enabled to raise additional financial resources, in order to achieve ambitious targets. The first essential requirement is, however, the manifestation of a desire to move forward with faith and confidence in the capacity of tea industry itself. If you have a bold and forward-looking approach, Government will make all possible endeavours to provide you with reasonable facilities for the achievement of higher targets of production and export."

What more categorical assurance and friendly advice do the planters need? It is obvious from the aforesaid quotation that, if they decide on higher targets, their case for relief in taxation and other forms of assistance will evoke a more sympathetic hearing than otherwise.

A section of tea producers is of the view that the stress should be on market targets rather than on production targets. Since new markets do not develop of themselves merely by producing more crop, the third Plan should, in its opinion, lay emphasis on the active promotion of tea in winning new markets and the expansion of those that exist. Further, it is confident that the industry can always make production meet demand even in a comparatively short-term, provided a sufficiency of sulphate of ammonia is ensured to meet its requirements of fertiliser. And it quotes in support of this assertion the experience of the past ten years during which period production caught up with all genuine and strong demand at a fair price.

The merits of these arguments have to be conceded, for, in general terms, they are not without substance. But they do not go far enough in meeting the case for targets bigger than those specified in the Draft Outline. It would be a wrong inference to think that those who suggest bigger targets are oblivious of the need for, and importance of, developing the existing markets and establishing new ones. But mere promotion campaigns, however intensive they may be, will not do. As Mr. Satish Chandra pertinently remarked: "We should have enough tea to feed the supply line. The prices should, quality for quality, be competitive in an international market. Efforts should be made to improve the quality in each estate. . . . Specifications and delivery schedules should be strictly adhered to." Since the consumer goes by brand names after the tea from a particular country has lost its separate identity in the process of blending, promotional efforts abroad serve a limited and general purpose. They have to be supplemented by individual efforts of producers and exporters by developing a scientific mechanism for securing additional business and by inspiring confidence among the blenders and packers in foreign countries in the quality of their teas.

The contention of some producers that supply could be easily stepped up if demand increased is debatable. It is common knowledge that, of late, the increase in domestic consumption has tended to push up prices of medium teas, making them less competitive in world markets. Mr. Satish Chandra himself gave an instance to illustrate that the supply of Indian tea is by no means so elastic as is made out. He said:

"When our exports in the beginning of 1959 fell steeply by about 40 million lbs., we were

told that the entire North Indian exportable surplus of the season had been sold out in the last quarter of 1958 and there was hardly any tea of exportable grades left for sale in the early months of 1959. Naturally, when some countries with whom we have long-term bilateral arrangements offer to take more tea in a particular year, we hesitate to accept the additional commitment, because we do not wish to explore new markets by diverting supplies from our traditional buyers."

The aforesaid instance may seem to be a rare occurrence by past standards, but there are enough indications to warrant the conclusion that, unless steps are taken to raise production at a greater pace in the third Plan period than is provided for in the Draft Outline, there is every possibility of India not being able to meet its requirements of tea for both domestic consumption and export. India's purchases from Russia and Eastern Europe are growing and they are being paid for almost wholly through bilateral trade agreements. Tea is proving to be one of the commodities in which India can pay for such imports. It must also be remembered that world consumption of tea is going up and that, during the past few years, world demand has been in excess of world production. Again, the tea industry is being subjected to heavy indirect taxation, in addition to direct taxation on the profit it makes. The former comprises a variety of taxes, such as excise, carriage tax, entry tax and export duty which aggregate, in the case of tea exported, 50 nP in the rupee. But the industry's plea for relief in taxation will fall on deaf ears, so long as tea prices stay at high levels. And the only way to keep prices at reasonable levels is to ensure adequate supplies.

INDO-PAKISTAN RELATIONS

INDIAN owners of factories and other assets in Pakistan find it increasingly difficult to operate in that country. In East Pakistan, the Indian owners of property, who are now settled in India, are unable to recover the rents from their tenants. The Pakistani authorities, it is stated, have framed false charges against the management of the Chittaranjan Cotton Mills to the effect that they have fraudulently shifted their head office from Dacca to Calcutta. The management of the Assam Bengal Cement Company Ltd., an Indian-owned concern, has been simultaneously asked to expand production but denied the necessary import licences and *visas* for its technicians. The Associated Cement Company Ltd. in W. Pakistan has not been able to repatriate its profits. Its decision to expand production, which was taken at the instance of the Pakistan Government, has been frustrated by the official attitude towards its plan for inviting foreign collaboration. *Commerce*, too, has a small balance of a few thousand rupees which it is not allowed to repatriate to this country. These balances represent subscriptions to our journal from our readers in Pakistan accepted in Pakistan rupees, a practice we had to abandon when remittances were not freely allowed.

All this tantamounts to convincing evidence of vexatious interference with Indian concerns and discriminatory treatment. If industrial concerns are denied ordinary import licences for capital goods and raw materials, they cannot be expected to function efficiently. Nor can the managements continue to serve the country where they work if they are not allowed to remit profits earned from year to year. The Pakistan Government's attitude seems to be that profits should be remitted by means of Government of India securities held in Pakistan. The Government of India has rightly stuck to the view that such transfers would constitute capital transfers which should not be utilised for effecting current transfers. Clearly, the Pakistan Government's present policy runs counter to the understanding reached at the Indo-Pakistan financial conference in 1951 when it was agreed that no restrictions should be placed on the remittance of profits, dividends and rents. The Union Government, however, continues to permit transfers of profits by Pakistan firms in India to their home country. It imposes only minimum restrictions, such, for instance, as the production of a tax clearance certificate; even here, it is prepared to accept an auditor's certificate to the effect that sufficient funds have been retained in India to meet tax liabilities. It will thus be clear that, while the Indian Government continues to abide by the letter and spirit of the 1951 agreement, the Pakistan Government has not.

It is, however, true that Pakistan is faced with foreign exchange difficulties which compel that country to impose restrictions on transfers of funds. The Pakistan Finance Minister, Mr. Mohamed Shoaib, it is stated, has denied that there is any discrimination against Indian industries. The Government, according to him, is prepared to permit repatriation of a reasonable amount of profits, but, in view of the acute shortage of foreign exchange, it wants the profits to be remitted in the shape of Government of India securities at prevailing market prices. This, however, is a device to circumvent the obligations of Pakistan to India in regard to pre-partition debts. Besides, it does not answer the criticism of the Government of India referred to above. But this apart, the question is whether the restrictions, now imposed, could be wholly attributed to balance of payments difficulties. The foreign exchange resources of Pakistan (excluding its claims on India) have distinctly improved in the last two years. Thus, its foreign assets as on 24th June 1960 stood at Rs. 105.36 crores, as against Rs. 82.65 crores a year before and Rs. 71.01 crores two years earlier. Further, it does not appear that similar restrictions have been imposed on other foreign firms. Even if one allows for the inevitable impact of shortage of foreign exchange on transfer arrangements, there is a certain element of discrimination. How else can one explain the Pakistan Government's action in denying import licences to Indian-owned factories while insisting upon an increase in their production, or, for that matter, its denial of *visas* to Indian technicians? Small wonder, then, that its action is being interpreted as an indirect pressure on Indian firms to sell their assets to Pakistan nationals; what is, perhaps, even worse is that it is creating conditions under which the sale could be effected only at distress prices. This is the kind of attitude which, in the long run, must inflict irreparable damage on Pakistan's economy itself. For it is bound to scare away other foreign investors. In international economic sphere, a country cannot practise discrimination against another for long, without in some way reducing its own credit in world markets.

CUSTOMS AND EXCISE

CUSTOMS and excise duties constitute a significant part of the Union Government's income. Over the period of the second Plan, they accounted for Rs. 2,323 crores or 65 per cent. of the Central Government's tax revenue. In the third Plan, which envisages additional taxation and increase in surpluses of State enterprises to the tune of Rs. 1,650 crores, it is not unlikely that greater reliance will be placed on these two duties. This consideration alone should induce the authorities to see that the administration of the customs and excise duties is toned up. Even apart from this consideration, the need for continuous improvement in administration will become clearer if it is remembered that these two items of revenue are collected at the source, so that, in the event of inexpert handling, they could give rise to much avoidable sense of grievance. It is, therefore, gratifying to find from the deliberations of the Customs and Central Excise Advisory Council, which met at New Delhi this week, that the authorities are fully alive to the importance of review and reform of the administration of these two taxes. The Union Minister for Revenue and Civil Expenditure, Dr. B. Gopala Reddi, in the course of his address to the Council, observed that it was his belief that "deliberations of this Council have assisted, in a large measure, in establishing closer relations between the Government and the public and enabled both to have a more lively appreciation of each other's points of view." It is true that the Council, by the very nature of its composition and functions, cannot examine the larger issues of fiscal policy. But it could and should be able to suggest the measures whereby the taxes that have been imposed are administered with minimum hardship to taxpayers.

Some of the points made by Mr. Gopala Reddi should be of interest to the representatives of trade and industry. In order to eliminate possible disputes regarding assessable values in the administration of an *ad valorem* tariff, a beginning has been made in establishing tariff values in respect of some of the newly excised items, such as electric motors, internal combustion engines and motor vehicles. The Government is engaged in a comprehensive revision of the Sea Customs Act, with a view to eliminating some of its unnecessary provisions and loopholes and ambiguities. The Customs House Agents' Licensing Rules 1960 have been relaxed. Formal tests, for instance, have been dispensed with in respect of existing licensees and the licence fee has been reduced to Rs. 10 for *dalals* and *mucadams*.
