"GENTLEMEN,

"I extend a cordial welcome to all of you and thank you for your kind presence here today.

"You have had with you printed copies of the Directors' report, balance sheet, and the revenue accounts of the Company for the year ended 31st December, 1959 and with your permission I shall take them as read. The main features of the business and accounts for 1959 are brought out in the Directors' report, which I have no doubt you have all read. I shall also say a few words in regard to the same but before doing so, may I take the liberty of placing before you a few facts connected with the business of the Company in the past, in the hope that you will consider the same interesting, though not very useful at present. Curiosity led me the other day to look up some of the old *Insurance Year Books* published annually under the authority of the Government of India and I came across the following information. At the end of 1940, our paid-up capital stood at 3 lakhs and 8 thousand rupees. Our business figures were Rs. 52,000 for fire business and Rs. 10,000 for miscellaneous or motor business. At that time, we had not started to transact marine insurance business. Our business funds amounted to the modest sum of Rs. 25,000. Exactly ten years later, that is, at the end of the year 1950, the position revealed by the *Year Book* is that our capital was Rs. 10 lakhs paid-up (as it is at present) and that our insurance funds amounted to Rs. 8.5 lakhs. Our net premium income was Rs. 6 lakhs in fire, Rs. 2 lakhs in miscellaneous and Rs. 6 lakhs in marine. We have now before us the accounts for 1959 which show that, while our capital remains still at Rs. 10 lakhs paid-up, our fire business shows a net premium of a little over Rs. 12.5 lakhs, our miscellaneous department has done business yielding a net premium of Rs. 7 lakhs approximately and that our marine business has brought a net premium of Rs. 6 lakhs and odd. The marine department could have shown higher figures but for the fact that in the light of bad experience in recent years, it was considered prudent to reduce our commitments in this section. Our reserves amounted to more than Rs. 20 lakhs. The figures I have quoted may or may not be impressive; that depending upon the angle from which we view them. But they convey a definite feeling that the Company's business has been steadily progressive and also that the Company's funds have been increasing. In three years when the Company celebrates its silver jubilee, it is my hope that the Company will be able to show even further progress.

Accounts

"With regard to the accounts, there is not much that calls for comment. I understand that in taking the fire premium into account, the premiums due to us from foreign Treaty Reinsurers in respect of one quarter have been omitted. These figures are usually late in coming; and in not including them in this year's account, we have merely followed a practice not unknown among insurers. They will find a place in the current year's accounts. Our premium income should have been somewhat higher, if it had been possible to incorporate these premiums in the accounts now submitted to you.

"The total net premiums received by the Company during the year under review amounted to nearly Rs. 26 lakhs—about Rs. 12.5 lakhs in fire, about Rs. 7 lakhs in the miscellaneous department and Rs. 6 and odd lakhs in marine. After meeting expenses and claims and adjusting departmental reserves so as to maintain them at 50 per cent. of the premiums in fire and miscellaneous and 100 per cent. in marine, there is a net balance of Rs. 3 lakhs 40 thousand and odd which has been transferred to the profit and loss account. Out of this, your Directors were of the opinion that a sum of Rs. 1,00,000 should be transferred to the general reserve, which now stands at Rs. 4 lakhs. After making other appropriations for taxes, etc., and taking into account the interest earned, the balance arrived at is Rs. 1 lakh 12 thousand and odd and, on this basis, your Directors have recommended payment of a dividend of 80 nP per share, subject to deduction of tax.

Expenses

"During recent times, prices of commodities have been constantly going up and the cost of living has been gradually increasing. We do not know where this will stop. But this rise in prices and in the cost of living has affected the expense side of our business adversely. To add to this, there was a recent reduction of premium rates in fire business; which implies that the same amount of labour and expense will be required for a lower premium income. It remains to be seen how this reduction in premium rates will react on the expense ratios of companies. According to Section 40-C of the Insurance Act and Rule 17-E of the Insurance Rules, which were enacted in 1939, a limitation has been placed on the expenses to be incurred for general insurance business. There was no rational basis for the rule when it was made and the rapidly changing conditions have made the rule positively unrealistic and nearly unworkable. The rule, at best arbitrary when it was brought into force long ago, has ceased to be useful for determining the necessary measure for expenses required for the conduct of business. It is now agreed on all hands that the rule does not satisfy the present-day requirements but no effort has been made to alter the rule suitably. One redeeming feature is that the Controller of Insurance is in a position to soften to a limited extent the effects of a rigorous application of the rule and companies have to depend on his judgment, understanding and goodwill when they have to face a difficult situation arising from a strict enforcement of the rule.

Group Working

"There is only one other topic in regard to which I wish to say a few words on this occasion. While it may be expected that the rapid industrialisation and growth of economic activity in the country will help to create opportunities for an increasing volume of general insurance business, it is necessary that companies carrying on business, if they are to function efficiently and well, will have to make themselves fit and ready to absorb all the new business. There is now a scramble for business on account of a large number of companies doing business and a lack of sufficient business to go round. It is necessary that the companies should grow in strength in order to meet the future requirements of the trade. One suggestion that has been made is that the existing companies should merge together by forming into groups. This suggestion is worth considering but the principal difficulty lies in finding a satisfactory formula which will not only do justice to the companies seeking to join together but give satisfaction to all the interests concerned. A change in the general outlook of insurers in regard to the future organisation of business will also be needed in order to bring the proposition within the range of a practical scheme."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

SITALAKSHMI MILLS LTD.

The year ended 30th June 1960 represents the first full year of production of the Sitalakshmi Mills Ltd. (Managing Agents: Messrs. C. S. Ramachary & Co., Pasumalai, Madurai) after it started working in August 1958. During the short period of its working, the Company has made creditable progress. It had paid a modest dividend of 3 per cent. (subject to deduction of tax) on the ordinary shares in the first year of its working, namely 1958-59, and has stepped it up to 9 per cent., subject to deduction of tax, for the following year, and that too after building up a decent reserve, thanks to the appreciable increase in its earnings. In the year 1958-59, when the Company's mills had worked only for about eight months, it had earned a gross profit of Rs. 3.40 lakhs and this has trebled itself to Rs. 10.24 lakhs in the year under review. After setting aside Rs. 82,473 for Managing Agents' remuneration, as against Rs. 19,511 for the previous year, and providing Rs. 2.78 lakhs for depreciation (Rs. 1.43 lakhs) and Rs. 70,000 (*nil*) for taxation, the net profit amounts to Rs. 5.94 lakhs, which compares very favourably with Rs. 1.78 lakhs for 1958-59.

Out of the net profit, a sum of Rs. 4.66 lakhs has been transferred to the development rebate reserve, the corresponding addition made last year being Rs. 1.35 lakhs, and Rs. 30,000 to the general reserve. The dividend on the 6 per cent. tax-free preference shares has been maintained at 6 per cent. (net). The Company is entitled to tax exemption under Section 15(C) of the Income-tax Act. After taking into account such exemption, the net amount of tax deducted from the dividends on preference and ordinary shares is 19.2 per cent.

The Company is a purely spinning unit, with a capactiy of 12,000 spindles. In fact, the installation of the full complement of 12,000 spindles was completed only in March last.

The following synopsis of the latest balance-sheet will give an idea of the Company's financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital (paid-up)	10,00,000	Gross block	30,68,764
Reserves and surplus	6,33,599	*Less*—Depreciation	4,17,257
Borrowings	11,72,734	Net block	26,41,507
Current liabilities and provisions	3,70,029	Stock-in-trade and stores	3,14,478
		Book debts	2,05,581
		Investments	3,377
		Cash	11,469
	Rs. 31,76,362		Rs. 31,76,362

The additions to the block account during the year under review amounted to Rs. 9.03 lakhs.

PREMIER FERTILISERS LTD.

The Premier Fertilisers Ltd., one of the new units to be set up in the State of Madras for the manufacture of fertilisers, will shortly enter the capital market, with an equity offer for providing a part of the capital cost of the project. The authorised capital of the Company is Rs. 1 crore, made up of 250,000 9 per cent. taxable preference shares of Rs. 10 each and 750,000 ordinary shares of Rs. 10 each, of which ordinary shares of the value of Rs. 50 lakhs will be issued for the present. The Directors, signatories to the memorandum and their friends have already taken up Rs. 12 lakhs and the Industrial Credit and Investment Corporation of India has agreed to subscribe Rs. 3 lakhs. The balance of Rs. 35 lakhs will be available for public subscription. The entire public issue is being underwritten by two banks to the extent of Rs. 20 lakhs in the aggregate and a group of five brokers in Bombay, Madras and Calcutta to the tune of Rs. 15 lakhs. Out of the equity capital of Rs. 35 lakhs offered, a sum of Rs. 7.5 lakhs is being reserved to the underwriting brokers, that is, to the extent of 50 per cent. of their underwritings, so that the balance actually available to the public is Rs. 27.5 lakhs only. The list for public subscription is expected to open in the second week of November. A sum of Rs. 5 per share is payable on application and the balance of Rs. 5 on allotment.

(*Continued on page 742*)

SYNOPSES OF COMPANY REPORTS

Sangameshwar Coffee Estates Ltd.

THE directors of the above Company (Chairman: Mr. R. Radcliffe, Madras) present the audited accounts of the Company for the year ended 31st March 1960.

After providing for depreciation and all charges except taxation, the accounts show a profit of Rs. 2,10,255 (Rs. 2,54,816) to which is added the balance brought forward from last year of Rs. 15,748 (Rs. 13,432) making a total of Rs. 2,26,003 (Rs. 2,68,248). After deducting from this the dividend on preference shares up to 31st March 1960—subject to tax, absorbing Rs. 29,750 (Rs. 24,500), transferring to taxation reserve Rs. 63,500 (Rs. 85,000) and transferring to development reserve Rs. 50,000 (Rs. 35,000) there remains a balance of Rs. 82,753 (Rs. 1,23,748). The directors recommend payment of a dividend of 6 (9 per cent. free of tax) per cent. on equity shares—subject to tax, absorbing Rs. 72,000 (Rs. 1,08,000) leaving a balance to be carried forward to next year's account of Rs. 10,753 (Rs. 15,748).

The capital expenditure under the various heads—without including Rs. 26,417 on account of work in progress—amounted to Rs. 55,390.

Crop and costs.—The crop harvested during the year was disappointingly small at 177,568 tonnes at a cost of Rs. 131.62 per 50 kilograms compared with the original estimate of 371 tonnes. Among other factors, the unsatisfactory blossom showers by their late arrival and insufficiency, caused poor setting of the blossom while the unfavourable weather conditions of a severe and prolonged south-west monsoon caused a considerable shortfall in the crop outturned for the year. The poor outturn of clean coffee to fruit picked and below-average sizing of berries have also added to the shortfall. This experience has been more or less general throughout Mysore where a fall of 30 to 40 per cent. from the estimated crop occurred in a number of places. By reason of the substantially smaller crop, the cost of production on the estates has inevitably increased. The estate expenditure for 1959-60 amounted to Rs. 4,67,432 representing Rs. 402.00 per acre or Rs. 2,632 per metric tonne. This expenditure has borne the cost of one manurial application as against two in previous years. Comparative statement of production and costs for the last three years is as under:—

Year	*Coffee crop in tonnes*	*Estate expenditure per metric tonne*	*All-in-cost per metric tonne*
		Rs.	Rs.
1957-58	432.142	1,589	1,969
1958-59	271.470	2,179	2,718
1959-60	177.568	2,632	3,307

The crop harvested and delivered to the Coffee Board has been valued at Rs. 2.25 per point. Outturn statements and valuation reports in respect of this crop have been received only partially. Final payment on 1957-58 season crop has been received making the total for the year Rs. 2.51 per point. 1958-59 season crop has been valued at Rs. 2.40 per point being the figure so far disbursed by the Coffee Board.

1960-61 *season crop.*—The prospects for the current year's crop are considered good and the present estimate is Arabica 282 tons and Robusta 58 tons. This estimate should be treated with reserve owing to the new disease that has struck coffee in South India but present indications are that this figure will be reached. It shows a very considerable shortfall from the expectations made in March 1960 and is largely due to a poor 'set' of the blossom flower and to a certain amount of crop dropping in the past month.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,50,000	Gross block	18,80,245

Amalgamated Coffee Estates Ltd.

The directors of the above Company (Managing Director: Mr. K. N. Neelakantan, Seetagundy Estate, Palghat District, Kerala State) present the audited accounts of the Company for the year ended 31st March 1960.

The result of the year's working after providing for depreciation on buildings, machinery and furniture, etc., amounting to Rs. 55,762 (Rs. 70,622) after paying debenture interest of Rs. 28,500 (Rs. 28,500) and income-tax on debenture interest of Rs. 12,239 (Rs. 12,252) and after providing for income-tax and Kerala agricultural income-tax amounting to Rs. 1,40,600 (Rs. 97,507) is a net profit of Rs. 1,19,757 (Rs. 1,22,507) to which must be added Rs. 57,315 (Rs. 1,21,432) brought forward from last year's account, making a total of Rs. 1,77,072 (Rs. 2,43,939). Out of this, 6 per cent. dividend, subject to deduction of tax, on preference shares for the year amounting to Rs. 36,000 (Rs. 36,000) has since been paid leaving a balance of Rs. 1,41,072 (Rs. 2,07,939) now available. The directors recommend the following appropriations:—

To pay a dividend of 10 (7½ per cent. free of tax) per cent., subject to deduction of tax, on the equity shares for the year ended 31st March 1960, absorbing Rs. 67,500 (Rs. 50,625), to transfer to development reserve Rs. 50,000 (Rs. 1,00,000) leaving a balance of Rs. 23,572 (Rs. 57,315) to be carried over to next year's account.

A total crop of 33,052 bushels of coffee which gave an outturn of 399 tonnes and 799 kgs. cured coffee and 45,518¾ pounds of cardamom were harvested during the year ended 31st March 1960. Coffee was produced at a cost of Rs. 138.33 nP per 50 kgs. and cardamom at Rs. 6.30 nP per pound. The average price realised on coffee was Rs. 173.35 nP per 50 kgs. and that of cardamom was Rs. 9.68 nP per pound.

The estimates for the year ending 31st March 1961 provide for 200 tons of coffee and 60,000 pounds of cardamom.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,75,000	Gross block	19,03,351
Debentures ...	4,75,000	*Less*—Depreciation ...	2,97,284

Provision for taxation ...	1,78,946	Net block ...	16,06,067
Liabilities ...	9,74,662	Stock of coffee	10,92,478
Profit and loss account (surplus) ...	23,572	Stores ...	2,98,959
		Book debts ...	74,063
		Cash ...	16,140
Rs.	30,87,707	Rs.	30,87,707

Badra Coffee Estates Ltd.

The directors of the above Company (Managing Agents: Young India Agencies (Private) Ltd., Bangalore) present the audited accounts of the Company for the year ended 31st May 1960.

The Company's working for the year resulted before allocations in a profit of Rs. 1,41,646 (Rs. 1,62,520). To this is added the balance brought forward from last year of Rs. 35,949 (Rs. 35,306) making a total of Rs. 1,77,595 (Rs. 1,97,826). From this amount the directors recommend payment of a dividend on preference shares at 7½ (7½) per cent. per annum free of tax absorbing Rs. 11,250 (Rs. 11,250), 10 per cent. of the net profits to managing agents Rs. 14,165 (Rs. 16,252), transfer to general reserve Rs. 47,634 (Rs. 50,000), provision for taxation Rs. 15,000 (Rs. 10,000) and payment of a dividend on equity shares at 15 (17½) per cent. absorbing Rs. 63,750 (Rs. 74,375) leaving a balance to be carried forward to next year's account of Rs. 25,796 (Rs. 35,949).

The coffee crop harvested during the year is 147.967 tons consisting of 15.425 tons of arabica and 132.542 tons of robusta. The estimate for the next year is 17 tons of arabica and 195 tons of robusta making a total of 212 tons.

The crop of coffee this year is lower than the previous year. The profit this season is also lower than the last season and hence a dividend of 15 per cent. on equity shares has been recommended. The estates are well maintained.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,75,000	Gross block	8,56,375
Reserves ...	4,00,000	*Less*—Depreciation ...	92,884
Provision for taxation ...	1,97,032		
Liabilities ...	2,26,974	Net block	7,63,491
Profit and loss account (surplus)	25,796	Stock of coffee	3,78,366
		Stores, etc.	13,541
		Book debts	1,58,640
		Investments	11,658
		Cash ...	39,106
Rs.	14,24,802	Rs.	14,24,802

Gohpur Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The season's working resulted in a profit on revenue account of Rs. 1,97,576 (Rs. 1,98,439) after providing for depreciation amounting to Rs. 58,327 (Rs. 48,064) writing off development expenditure of Rs. 16,549 (Rs. 21,291) during the year on Tea Estate and providing Rs. 40,000 (Rs. 30,000) for contingencies. After transferring the above profit, making various adjustments, setting aside for taxation Rs. 96,000 (Rs. 1,05,000 including Rs. 1,500 for wealth tax), transferring to building reserve Rs. 50,000 (*nil*) the balance available on profit and loss account amounts to Rs. 1,98,856 (Rs. 1,77,153 after adjustment). From this amount it is proposed to pay a dividend of 10 (5 per cent. tax-free) per cent. for 1959, absorbing Rs. 67,600 (Rs. 33,800) leaving to be carried forward Rs. 1,31,256 (Rs. 1,43,353). In view of the extremely difficult cash position of the Company, the directors regret that it is not possible for them to recommend a higher rate of dividend for the season 1959.

The following are comparative statistics of sales for the past three years:—

	Pounds	*Average price per lb.*
1957	609,452	Rs. 2/69
1958	635,432	Rs. 2/46
1959	586,588	Rs. 2/61

The estimate for 1960 provides for a crop of 281.230 kg. or 620,000 lbs. of tea at a cost of Rs. 4/54 nP per kg. or Rs. 2/06 nP per lb.

The term of office of Messrs. Williamson Magor & Co., Ltd. as managing agents of the Company expired on 15th August 1960 in terms of Section 330 of the Companies Act, 1956. The Company in General Meeting held on 24th September 1959 had already approved of the proposal that Messrs. Williamson Magor & Co., Ltd. be reappointed managing agents for a further term of ten years from 15th August 1960 subject to the approval of the Central Government. The Central Government gave its approval to the reappointment but reduced the term of office to five years and also prescribed a sliding scale of remuneration instead of the flat rate as under the previous agreement and as proposed under the terms of reappointment. At the Company's general meeting held on 13th August 1960 the reappointment with these modifications was formally confirmed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Soom Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The season's working resulted in a profit on revenue account of Rs. 2,10,134 (Rs. 3,18,205) after providing for depreciation amounting to Rs. 14,372 (Rs. 9,492) and writing off expenditure of Rs. 95 (Rs. 562) incurred on Tea Estate during the year. After transferring the above profit, making various adjustments, setting aside Rs. 95,000 (Rs. 1,59,654 including Rs. 3,000 for wealth tax), for taxation and paying interim dividend of 15 (15 per cent. tax-free) per cent. for 1959, absorbing Rs. 45,000 (Rs. 45,000) the balance available on the profit and loss account amounts to Rs. 2,70,267 (Rs. 2,52,909 after paying a second interim dividend of 10 per cent. absorbing Rs. 30,000). From this amount it is proposed to transfer to repairs and renewals reserve account Rs. 25,000 (*nil*), to building reserve account Rs. 25,000 (*nil*) and to pay a final dividend of 15 (25 per cent. tax-free) per cent. for 1959 absorbing Rs. 45,000 (Rs. 75,000) leaving to be carried forward Rs. 1,75,267 (Rs. 1,82,909 after transferring Rs. 5,000 to staff account).

The following are comparative statistics for the past three years:—

	Pounds	*Average price per lb.*
1957	301,467	Rs. 3/26
1958	312.398	Rs. 3/49
1959	312,255	Rs. 3/17

The estimate for 1960 provides for a crop of 304,000 lbs. or 137,900 kg. of tea at a cost of Rs. 2/63 nP per lb. or Rs. 5/81 nP per kg.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Gross block ...	7,56,966

Hansqua Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts disclose a working profit of Rs. 2,54,113 (Rs. 3,013). On transfer of this sum to profit and loss account and after sundry adjustments, including the transfers of Rs. 5,000 (Rs. 13,500) to development rebate reserve, and Rs. 50,000 (*nil*) to investment reserve, there is a balance at credit of profit and loss account amounting to Rs. 1,06,457 (Rs. 6,841). The directors recommend that a dividend of 17½ (*nil*) per cent. be declared at the annual general meeting, leaving Rs. 18,957 (Rs. 6,841) to be carried forward.

Tea crop was 6,01,231 lbs. as compared with 5,20,265 lbs. in 1958. The average selling price realised was Rs. 2.08 per lb., as against Rs. 1.74 per lb. in the previous year.

Estimates for 1960 provide for a crop of 2,35,000 kilograms or 5,20,000 lbs. at an outlay of Rs. 9,47,852, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Gross block	14,91,443

Dimakusi Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The season's working resulted in a profit on revenue account of Rs. 3,63,120 (Rs. 2,95,598) after providing for depreciation amounting to Rs. 62,779 (Rs. 60,690) and Rs. 65,000 (Rs. 40,000) for contingencies. After transferring the above profit, making various adjustments, setting aside

Rs. 1,50,000 (Rs. 1,35,000 including Rs. 5,000 for wealth tax) for taxation and paying an Interim Dividend of 15 (10 per cent. tax-free) per cent. for season 1959 on ordinary shares absorbing Rs. 71,010 (Rs. 47,340) the balance available on profit and loss account amounts to Rs. 2,83,502 (Rs. 2,67,581). From this amount it is proposed to transfer to building reserve Rs. 50,000 (Rs. 25,000 to repairs and renewals reserve) pay a cumulative preference dividend of 8 (8) per cent. for season 1959 absorbing Rs. 5,608 (Rs. 5,608), pay a final dividend of 15 (15) per cent. for season 1959 on ordinary shares absorbing Rs. 71,010 (Rs. 71,010) and carry forward Rs. 1,56,884 (Rs. 1,65,963).

The crop of tea sold in 1959 amounted to 678.462 (682,908) pounds and the average sale price per pound of tea was Rs. 2.80 (Rs. 2.63).

The estimate for 1960 provides for a crop of 704,000 lbs. [319,330 kg.] of tea at a cost of Rs. 2.06 nP per lb. [Rs. 4.55 per kg.].

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Kalasa Tea and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Mangalore) submit the audited accounts of the Company for the year ended 31st March 1960.

Crops and Costs.—The tea crop for the year amounted to 481,973 (506,751) pounds. The all-in-cost per pound was 166 (159) cents. The average sale price per pound of tea was 212 (199) cents.

After providing for depreciation and all charges, except taxation the accounts show a profit of Rs. 2,26,621 (Rs. 2,13,561) to which is added the balance brought forward from last year of Rs. 67,834 (Rs. 76,650) and surplus reserves for taxation no longer required of Rs. 2,628 (*nil*) making a total of Rs. 2,97,083 (Rs. 2,90,211). After deducting provision for taxation of Rs. 77,000 (Rs. 86,277), transfer to general reserve of Rs. 50,000 (Rs. 41,500) and transfer to development rebate reserve of Rs. 1.850 (Rs. 4,600) there is left an available balance of Rs. 1,68,233 (Rs. 1,57,834). The directors recommend payment of a dividend of 20 (15 per cent. free of tax) per cent. absorbing Rs. 1,20,000 (Rs. 90,000) leaving a balance to be carried forward of Rs. 48.233 (Rs. 67,834).

The estimates for the current year provide for a crop of 5,34,500 pounds, at an estate expenditure of 128 cents per pound. The all-in-cost per pound would come to 160 cents per pound.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Barnagore Jute Factory Co., Ltd.

The directors of the above Company (Chairman: Sir John H. Burder, London) present eighty-ninth annual audited accounts of the Company for the year ended 31st March 1960.

The profit for the year amounts to £308,964 (£286,539) from which has to be deducted depreciation of fixed assets amounting to £50,773 (£55,154) leaving a net profit of £258,191 (£285.619 including £54,234 being refund of income-tax. To this amount has to be added the balance brought forward from last year's account of £67,968 (debit of £175,567) leaving a balance of £326,159 (£110,052). Out of this amount the directors have transferred to general reserve £150,000 (*nil*), to contingencies reserve £25,000 (*nil*) and to development rebate reserve £2,104 (£1,815) leaving a balance of £149,055 (£90,937 after providing £5,800 for Indian wealth tax and paying £11,500 on account of arrears of preference dividends). Out of this amount the directors propose the payment of the following dividends for the year ended 31st March 1960: A dividend of 5 per cent. on preference shares less tax, absorbing £6,125 (£6,125) and a dividend of 30 (10) per cent. on ordinary shares less tax, absorbing £50,531 (£16,844) leaving a balance to be carried forward of £92,399 (£67,968).

As foreshadowed in the last report of the directors the results of the year's trading were satisfactory. On account of past losses and depreciation allowances the Company is not liable to tax in either the U.K. or in India.

Prospects for the current year at the time of writing this report are far from encouraging so far as the industry's profits and its foreign markets are concerned and, in fact, the profits of the Company for the first quarter of the current year show a substantial fall; but there are indications that more stable conditions are now returning. Although jute constitutes the largest portion of the cost the other main factor in the cost of production is wages, and the report of the setting up of a Wage Board for this industry in India prompts the directors to express the hope that any increase in wages which it may be found necessary and desirable to award will be accompanied by a fully compensating increase in the productivity of labour. Meanwhile the process of further modernisation continues and additional machinery is now on order, which is calculated to show a valuable return in economy of labour as well as in an improvement in the quality of the fabrics produced.

The directors referred in their last report to a contract for the sale of the South Mill land, buildings and machinery, and they advised that a dispute had arisen regarding the terms of the agreement and that a case had been instituted in the High Court in Calcutta. They now report that this case has been amicably settled whereby it has been agreed that the sale agreement shall be regarded as cancelled, and an agreement has been entered into for the sale as scrap of certain obsolete machinery in the South Mill. As far as can be ascertained at present the excess of the written down value of the machinery scrapped over the proceeds of sale is approximately £55,000. The transaction will be given effect to in next year's accounts when the contract should be completed. The South Mill buildings and land remain the Company's property, and fresh consideration is being given to the best use or disposal of these assets.

Accounts in brief are as under:—

Reliance Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The profit and loss account, after providing the sum of Rs. 26,000 (Rs. 9,811) for depreciation and payment of Rs. 1,03,751 (Rs. 98,339) as retrenchment compensation to workers, shows a balance of profit for the year of Rs. 17,52,377 (Rs. 7,47,842). Out of this amount the directors have provided for taxation Rs. 69,000 (Rs. 17,000 for wealth tax) and for contingencies Rs. 9,32,000 (*nil*) leaving a balance of Rs. 7,51,377 (Rs. 7,30,842). Against this amount has to be adjusted the balance at the debit of profit and loss account as at 31st March 1959 amounting to Rs. 38,95,850 (Rs. 46,26,693) leaving a balance at the debit of profit and loss account of Rs. 31,44,473 (Rs. 38,95,851) to be carried forward to the next account.

In compliance with the working time agreement of the Indian Jute Mills Association the mill was permitted to work 48 hours per week with 14 per cent. sealed from the beginning of the accounting period. As a result of a substantial improvement in the unhealthy stock position, Association Members were permitted to unseal 1½ per cent. on 22nd June 1959 and a further 2½ per cent. was unsealed on 24th August 1959, leaving a total of 10 per cent. under seal. This figure was reduced by a further 1 per cent. with effect from 1st May 1960.

The Company's quota of current loom hours was again sold for a period of six months from 7th September 1959 and the arrangement has been further continued for the sixth months to 3rd September 1960.

The lease of various jute and gunny godowns to the Government of India for foodgrain storage continues and it has been possible recently to make more godowns available to the Government, thereby bringing in a further Rs. 6,000 per month income, the total now receivable from the Government amounting to Rs. 25,000 per month. As a result of the regular monthly profit the Company has been able to clear its indebtedness to the managing agents.

The directors do not consider the time has yet come to reopen the mill. Present trading prospects for manufacture on old type machinery are not favourable and a machinery modernisation programme cannot be embarked upon until the debit balance on profit and loss account has been materially reduced.

Accounts in brief are as under:—

RUBY GENERAL INSURANCE CO., LTD.

A perceptible improvement in net premium is disclosed by the accounts of the Ruby General Insurance Company Ltd. (General Manager: Mr. B. K. Setalvad, Calcutta) for the year ended 31st December 1959. The combined net premium rose slightly from Rs. 1.32 crores in 1958 to Rs. 1.34 crores during the year under review. Ten years ago, the premium income of the Company was less than half this figure, Rs. 61.43 lakhs to be precise, indicating the more than 100 per cent. rise in premium in a decade. Of the premium incomes during the year under review, the fire department accounted for Rs. 57 lakhs, miscellaneous for Rs. 57.13 lakhs and marine for Rs. 20.04 lakhs. The corresponding figures for 1958 were Rs. 56.40 lakhs, Rs. 59.73 lakhs and Rs. 15.71 lakhs, respectively. There was thus a substantial rise in the premium in the marine section, a moderate rise in the fire department, while, in the miscellaneous section, the net premium declined.

The rise in premium, coupled with a slight decline in the claims ratio, resulted in a higher net profit of Rs. 4.52 lakhs, as against Rs. 3.67 lakhs in the previous year. A part of this has been utilised for strengthening the reserve for doubtful debts and the taxation reserve, the former by Rs. 6,560 and the latter by Rs. 1,25,000. Out of the balance, the Directors have recommended a dividend of 80 nP per share of Rs. 8 paid-up, subject to tax, which after deduction of tax, works out to 56 nP per share, as compared with 62 nP tax-free for the previous year.

The combined net premium from the three departments, namely, fire, miscellaneous and marine, as noted above, aggregated Rs. 1.34 crores. Net claims paid and outstanding amounted to Rs. 73.52 lakhs, comprising Rs. 20.76 lakhs in the fire department, Rs. 33.64 lakhs in the miscellaneous department and Rs. 19.12 lakhs in the marine department, as against Rs. 73.72 lakhs in all the three departments in the previous year. Commission and expenses aggregated Rs. 49.23 lakhs made up of Rs. 22.12 lakhs in the fire department, Rs. 23.56 lakhs in the miscellaneous department and Rs. 3.55 lakhs in the marine department. After the requisite transfers to the reserves for unexpired risks, the accounts disclose an underwriting profit of Rs. 2.57 lakhs. This was due entirely to the profit made by the fire department which not only made good the loss in others (Rs. 8.06 lakhs in the marine department and Rs. 88,258 in the miscellaneous department), but also left a substantial margin indicating thereby the extent to which the Company, like all other general insurers in this country, leans on fire business for its very existence.

After taking into account interest, dividends, rent and other miscellaneous income and expenses not applicable to any particular account and miscellaneous outgo, there is a net profit of Rs. 4.52 lakhs to which is added the net balance of Rs. 8,214 brought in from the previous year, making in all Rs. 4.59 lakhs. Out of this Rs. 1.25 lakhs has been transferred to the reserve for taxation and Rs. 6,560 to the reserves for doubtful debts. The dividend of 80 nP per share absorbs Rs. 3.20 lakhs, leaving Rs. 8,270 to be carried forward.

The capital and reserves of the Company stood at Rs. 1.23 crores, as on 31st December 1959, made up of a paid-up capital of Rs. 32 lakhs and departmental reserves of Rs. 70.26 lakhs. Ten years ago, the Company's owned resources were no more than Rs. 79.97 lakhs. There has thus been a 50 per cent. rise in resources since then.

COMPANY AFFAIRS

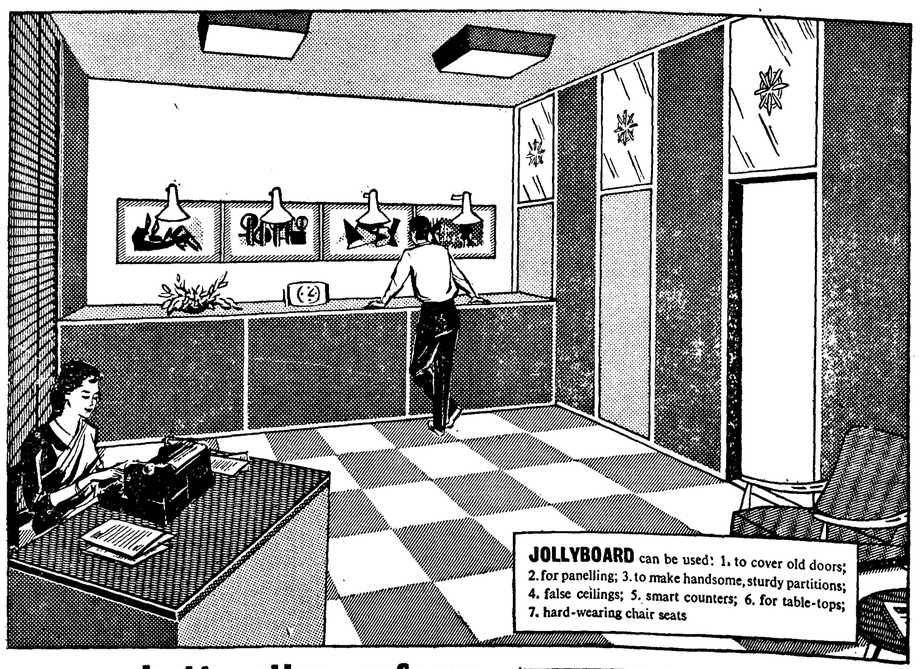
(*Concluded from page 739*)

The capital cost of the project to reach the stage of production is estimated at Rs. 63.50 lakhs, which will be met by the proposed equity issue (Rs. 50 lakhs), a foreign exchange loan of Rs. 11 lakhs from the I.C.I.C.I. and the balance of Rs. 2.50 lakhs by borrowings from banks.

The plant will be located at Cuddalore—a port town—in the Madras State and will have an annual capacity of 40,000 tons of superphosphate and 16,500 tons of sulphuric acid. The situation of the factory is ideal from the point of view of transport facility and of quick disposal of its products to the agriculturists in South Arcot and other neighbouring districts. The plant and machinery will be supplied by three West German firms, which will be responsible for their erection, for bringing them into production and for training the Company's personnel. The profit-earning capacity of the fertiliser industry is claimed to be fairly high and the Company, with its modern plant, is expected to do well and give a reasonable return on the capital employed.

The Company is being promoted by Mr. M. Ct. Muthiah, Chairman of the Indian Overseas Bank Ltd. and United India Fire and General Insurance Company Ltd., Madras, who will be the Chairman of the Board of Directors. The other Directors of the Company are: Mr. M. Ct. Pethachi, Mr. S. P. Virmani, Mr. D. P. Goenka and Mr. AR. Ramanathan. Messrs. Emcete and Sons Private Ltd. will be the Managing Agents of the Company.

JOLLYBOARD the multi-purpose material



several attractive surfaces— in full supply everywhere

GET smartness like this for your shop or office; whatever the improvements you have in mind, JOLLYBOARD can make them look far better, last far longer, at about the same cost. For JOLLYBOARD is India's top-quality hardboard—the modern building and decorating material—at prices as low as, if not lower than, inferior substitutes.

AT SURPRISINGLY LOW PRICES!

JOLLYBOARD • Very strong, light and durable; is made from wood-fibre, compressed into solid sheets—to British Standard Specifications. • Comes in many sizes, thicknesses and attractive surfaces; a versatile building and decorating material. • No laminations, plies or knots; won't split or crack. • Easily sawn to any shape, easily affixed to any surface. • Quicker to work with, finer in finish. Takes paint, varnish or polish perfectly. • Certified by the Government Test House, Calcutta.

Thicknesses: 3 mm, 4.5 mm, 6 mm
Sizes: 12'x4', 8'x4', 6'x4', 4'x4'
Insulation Board will be available soon

RESERVES AND DIVIDENDS

The Company has transferred to its General Reserve Account various amounts during the past years, which stands at Rs. 8 lacs as on 31st December 1959. From the accounting results of the Company for the last 7 years, it would appear that it has paid dividend at good rates on its Ordinary Shares, which is as under:—

1. 1953	17.092%	Free of tax
2. 1954	11%	do.
3. 1955	8%	do.
4. 1956	13%	do.
5. 1957	14%	do.
6. 1958	18%	do.
7. 1959	26%	Free of company's tax

DIVIDEND ON PRESENT ISSUE

The shares allotted in terms of this issue shall rank for any dividend declared after the date of allotment in proportion to the period during which such shares have been held.

PROSPECTS

In the trading business according to the accounting practice of the Company, the commission received from the foreign Principals is booked on actual receipt basis, and profits on self-buyer business on the basis of final completion of the contracts. Against the orders already booked, secured and confirmed and contracts under execution, commissions and profits exceeding **Rs. Seventy lacs (Rs. 55 lacs as commission and Rs. 15 lacs as margin on contracts under completion) have accrued to the Company as on 1st July 1960.** These profits and commissions are due to be received in next 3-4 years, and would form part of the profits of the Company during the years 1960 to 1964. The Company has for past several years established Branch offices in important towns like Calcutta, Bombay, Madras, Delhi, Patna and Kanpur, etc., and has a well spread Sales and Service Dealer organisation in most of the important towns in India.

MANUFACTURING SCHEMES

Piston Rings: In 1956 the Company brought about an agreement to manufacture Piston Rings and Cylinder Liners by Goetze (India) Private Ltd., under the Technical and Financial Collaboration and Licence of Messrs. Goetzewerke Friedrich Goetze A.G. Burscheid (West Germany) who are the largest producers of Piston Rings in Europe. Goetze (India) Private Limited, a subsidiary of the Company are suppliers of original equipment to automotive and engine builders in India.

Pistons: The Company has established under Licence No. L/7(5)N-13/58 dated 24th May 1958 granted by the Government of India under the Industries (Development and Regulation) Act, 1951, a factory for manufacturing Pistons in Patiala in collaboration with **Messrs. Mahle Komm.-Ges.-Stuttgart-Bad Cannstatt, West Germany.** The factory commenced production in May 1960 and has already supplied several lacs worth of Pistons to Automobile Manufacturers as original equipment and replacement. The manufacturing is phased to reach complete manufacture in 1961. The annual installed production capacity of the Piston factory from 1961 is expected to exceed Rs. 60 lacs.

X-Ray Equipment: The Company has been granted an Industrial Licence No. L/5(7)-N-3/59 dated 23rd November 1959 by the Government of India under the Industries (Development and Regulation) Act, 1951, for manufacturing X-Ray equipment in India. The scheme

INTER-BANK CALL MONEY DEARER

(From Our Own Correspondent)

BOMBAY, 19*th October*

Conditions in the short-term money market have become more difficult for borrowers. In addition to the usual pre-*Divali* trade demand, banks' borrowings from the market to reduce their own borrowings from the Reserve Bank in order to avoid penal rates of interest have added to the pressure. This is reflected in a further upswing in inter-bank call money rate from 4 per cent. to 4½ per cent. House money at 21 days' notice is, however, unchanged at 2 per cent. fixed by the Reserve Bank. Short-term deposits for one to two months are being bid at 3¼ per cent. and for three months and over at 3½ per cent.

The 91-day Treasury Bill discount rate is maintained at 2.560 per cent. per annum. The total amount offered in this week' sale of these bills by dealers was Rs. 2,40 crores. Tenders for next week are unchanged at Rs. 2 crores. There were no sales of Intermediate Bills, but they will continue to be offered at the self-same discount rate of 2.496 per cent. per annum.

The Reserve Bank of India statement for the week ended 14 October 1960 discloses a slight fall of Rs. 2.27 crores in notes in circulation and a rise of Rs. 2.18 crores in notes held in the Banking Department. There is no change in foreign securities, while balances held abroad show a negligible rise. The total foreign assets now stand at Rs. 140.85 crores. There has been a decline of Rs. 2.66 crores in Central Government's deposits, while other Government's deposits are up by Rs. 32.55 crores and deposits of banks by Rs. 4.54 crores. Loans and advances to Governments show a decline of Rs. 12.95 crores. A spectacular rise of Rs. 59.83 crores is noted in investments, while Treasury Bills holdings are lower by Rs. 6.58 crores.

The Scheduled banks' statement for the week ended 7th October 1960 is the first one after the imposition of penal rates of interest on banks' borrowing from the Reserve Bank. It shows that the banks as a whole have reduced their borrowings to such an extent as to escape the penal rates. The picture is, however, vitiated by the inclusion of the data relating to the State Bank of India, which has no borrowing from the Reserve Bank. If the State Bank's figures are excluded, it is found, on a rough calculation, that the excess of borrowings of other Scheduled banks over the quota (that is, 50 per cent. of the statutory minimum to be kept with the Reserve Bank) is about Rs. 9 crores as on 7th October, on which the banks must have paid interest at 5 per cent. The statement discloses a sharp rise of Rs. 16.29 crores in demand deposits and a decline of Rs. 15.22 crores in time deposits over the week. There is thus a net rise of Rs. 1.07 crores in total deposits, despite a decline of Rs. 2.36 crores in deposits of the State Bank of India. Inter-bank borrowings are lower by Rs. 2.98 crores; borrowings from the Reserve Bank have declined by 2.87 crores and those from the State Bank by Rs. 2.71 crores. A fall of Rs. 5.58 crores is noted in advances, of which the State Bank accounts for Rs. 5.15 crores. Investments stand reduced by Rs. 6.27 crores, despite a rise of Rs. 1.23 crores in the State Bank's portfolio. Cash balances have, however, swollen by Rs. 8.21 crores, notwithstanding a shrinkage of Rs. 6.37 crores on State Bank's account.

The Gilt-edged market is distinctly easy, with sellers over and a sizable setback in Central Government and State Government issues. 3 per cent. 1986 Conversion Loan has dropped 10 nP to Rs. 73.65. 3 per cent. 1970-75 has shed 15 nP to Rs. 89.85 and 3 per cent. 1964 and 1963-65 10 nP each to Rs. 97.90. 3¼ per cent. 1965 and 1967 have declined by 10 nP each to Rs. 99.60, 3½ per cent. 1974 by 10 nP to Rs. 99.50 and 4 per cent. 1972 by 15 nP to Rs. 100.70. In the State loans section, 4¼ per cent. issues have been marked down by 25 —75 nP and 4 per cent. 1971 loans by a rupee.

There has been a hardening of the rupee in terms of the U.S. dollar. Banks' selling rate for U.S. T.T. (ready) has fallen from Rs. 476.50 to Rs. 476 per $100 and their buying rate from Rs. 473.25 to Rs. 472.75 per $100. This is in consonance with the recovery in sterling abroad, spot sterling in New York moving up from 280.86-280.89 cents to 281.15-281.18 cents and three months' forward from 279.60-279.63 cents to 279.64-279.67 cents.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 17*th October*

Quietly steady conditions were witnessed in the foodgrains market during the past week, thanks to reports of heavy losses to crops due to untimely heavy rains in the beginning of October and consequent floods in many parts of the country and locust invasions in M.P., Saurashtra and Gujerat. Preparation of land for *rabi* sowings is in full swing and in some places sowings of coarse grains, including peas and gram are under way. It is, however, feared that a large tract of land, which was waterlogged recently, due to floods would not at all be available for *rabi* sowings.

Wheat prices at Hapur recorded modest gains. The ruling price is Rs. 17 a maund for average quality and upto Rs. 18 for better farm produce. Daily arrivals of wheat here have mounted to an average of 250 maunds, partly due to clear, sunny weather and partly due to the fact that wheat seed supplied to cultivators through Government seed stores and co-operative societies is again being resold in the open market. The U.P. Government is selling wheat through ration shops and each card holder is now further allowed to purchase Rs. 10 worth of wheat flour. Rice prices continued quiet

MARGIN ON BULLION

(From Our Own Correspondent)

BOMBAY, 19*th October*

After displaying a firm undertone in the first three sessions of the week, the bullion market developed a sagging tendency on Monday which persisted practically till the close yesterday. The *Moorat* trading will be held today from 6 p.m. to 9-30 p.m. The firmness early in the week was engendered by emergence of pre-*Deepavali* demand for both gold and silver. Consequently, prices registered a rise. On Monday and Tuesday, however, both the metals encountered selling, thanks to heavy arrivals and stale liquidation. The previous gains were completely erased. Actually in gold, yesterday's closing rates were lower than those at the end of last week, while silver reverted to last week's levels.

A notable development of the week was the commencement of trading in *Margashir* (December) settlement in both gold and silver on Tuesday the 18th inst. Trading is subject to the same margin regulations as are applicable to the *Kartik* (November) settlement. Immediately after business in this settlement started, the rate for transferring commitments from *Kartik* settlement payable by bulls increased from the stipulated level of 75 nP to 90 nP. The bears in *Kartik* settlement were, therefore, obliged to pay a margin of Rs. 800 per kilogram. The *Margashir* settlement commenced at Rs. 115.35 and, after declining to Rs. 115.25, recovered to close at Rs. 115.50. *Kartik* settlement fluctuated between Rs. 115.30 and Rs. 114.50 before winding up the week at Rs. 114.60, as against Rs. 115.05 on Wednesday last week. Ready gold dropped 50 nP to Rs. 113.75.

In silver, *Kartik* settlement rose from Rs. 192.80 to Rs. 193.90 on Saturday and, after easing to Rs. 192.50, recovered to Rs. 192.80 yesterday. *Margashir* settlement began at Rs. 194.15 and closed at Rs. 194.30. Ready silver stood at Rs. 191.55 yesterday, as against Rs. 191.10 a week ago, the highest and lowest levels touched being Rs. 191.70 and Rs. 190.10, respectively.

Reflective of good demand, the average daily offtake of gold and silver during the week were larger at 4,400 tolas and 8 bars, as against 3,600 tolas and 6 bars, respectively, in the previous week. The average rate of arrivals were smaller, being 8,000 tolas and 23 bars, as against 9,000 tolas and 26 bars, respectively. The floating stocks of gold are estimated at 35,000 tolas and those of silver are reported to be around 625 bars.

The world price for gold in the London bullion market now stands at $35.30 per ounce, the peak level touched since trading in that market was resumed in 1954. At this level, the premium commanded over the U.S. official selling price of $35.08 comes to a record of 22 cents. The firmness of gold is attributable partly to continued purchases by some central banks and partly to exchange of large private holdings of dollars into gold. The purchase of gold, it is said, is being encouraged by persistent rumours concerning the possibility of a rise in the U.S. buying price for gold which has stayed put at $35 an ounce for over 25 years now. There were also rumours regarding both the U.S dollar and the German Deutsche Mark. Ready gold in London has risen from 250s. 9¾d. on the 11th inst. to 251 yesterday. Ready and forward silver, however, were both unaltered this week too at 79¼d., as also silver in New York at 91.375 cents.

The feature of trading in the *moorat* session today was the imposition of margins in both gold and silver, following the sharp rise in the *budli* payable by bulls for transferring commitments from *Kartik* to *Margashir* settlement, the rate of *budli* being more than a rupee in gold and Re. 1.50 in silver. The bears in gold and silver *Kartik* settlement were obliged to deposit a margin of Rs. 2,000 per kilogram and Rs. 300 per bar, respectively. Gold *Kartik* settlement began at Rs. 114.55 and, after declining to Rs. 114.10, finished at Rs. 114.30. *Margashir* settlement fluctuated between Rs. 115.65 and Rs. 115.20 before closing at Rs. 115.40. In silver, *Kartik* and *Margashir* settlements commenced at Rs. 192.90 and Rs. 194.35. After receding to Rs. 192.70 and Rs. 194.25, they finished at Rs. 193 and 194.55, respectively.

KIPS ARRIVALS SMALLER

(From Our Own Correspondent)

MADRAS, 17*th October*

Arrivals of kips are smaller than usual. Shippers are active, as the U.K. importers are slowly paying increased prices. Top marks are in good demand and higher prices have been established without difficulty. U.K. demand for cow hides and cow calf skins lower ends is brisk. Arrivals of buff hides are small and prices are ruling firm. The cow calf market has also improved following a few sales to the U.K. Buff calf is neglected, unless at very low levels.

Owing to good demand from the Continent, prices of tanned goat skins have hardened further. Tanned sheep skins remain unchanged.

---

when *sela basmati* was quoted at Rs. 30 to Rs. 33, *mainpuri* at Rs. 22.87, *ramajwayan* at Rs. 24, *raimunia* at Rs. 25 and *gadda* at Rs. 19.62 a maund. Supply position of rice was satisfactory and new paddy is reaching the markets in larger quantities as harvesting of paddy is nearing completion.

Gram prices improved fractionally to Rs. 16 a maund, for Punjab variety, while old stocks sold by U.P. Government recently were quoted at Rs. 15 a maund. Punjab advices also indicated a steady trend in gram prices. Demand for seed purposes is also reported. Barley was priced at Rs. 12.75 a maund and *bejhar* at Rs. 12 a maund for *matrelli* quality and Rs. 12.75 a maund for *moongia* variety. New maize continued to attract good consumer demand. Prices sought higher levels as arrivals were still poor. Maize was quoted at Rs. 12.75 to Rs. 13.12 and *guwar* and *jowar* at Rs. 12 to Rs. 13 and Rs. 13 to Rs. 14 a maund.

TRADING IN NEW CROP HEDGE CONTRACT BEGINS

(From Our Own Correspondent)

BOMBAY, 19*th October*

After remaining closed for about two months, the cotton futures market has again sprung to life. On Tuesday the 18th inst., at 11.17 a.m., to be precise, official trading in new crop futures contract commenced with the blessings of all concerned. The first deal in I.C.C. Jarilla, April 1961, the new hedge contract, was struck at Rs. 567.25 per three quintals. It is noteworthy that not only was the opening rate lower than the unofficial quotation for the contract a few days back but even after its appearance on the Board, the Contract showed signs of slight weakness and declined to Rs. 565.50 as the session advanced. This rate, which was very much lower than the unofficial quotation prevailing only a few days back, attracted spot houses support. Consequently, the Contract improved to Rs. 572 at close which, incidentally, was the highest for the day. Today there was no regular session of the market. The Contract was unofficially quoted at Rs. 570.

The new Contract's horoscope, according to competent observers, does not indicate any bullish future. The bearish slant of the Contract, with a wide range of varieties tenderable against it, the possibility of a good crop of about 5 million bales, adequate supplies of foreign cotton and the strict control over the marketing of cotton exercised by the Government make the outlook for the Contract somewhat bearish. Much, however, will depend on the size of the crop, which, in spite of good progress made so far, has still not passed the critical stage. The *Moorat* trading which will be done today from 6-30 to 10-30 p.m. and tomorrow from 4 to 6 p.m., will give an indication of the operators' current assessment of the Contract's future.

Spot prices at Sewri also showed an easier tendency, thanks to larger arrival of new crop. Mill demand centred round CO2. But Berar and Khamgaon growths also received some attention. Mills were inclined to postpone purchases in anticipation of quota allocation and a fall in prices. The delay in the issue of quota for new crop Indian cotton to mills also affected business. The time limit for completing purchase of old crop against last season's quota was again extended from 15th to 31st October. This gave rise to the feeling that the issue of quota for new crop might be delayed further. It was also thought that the quotas will be given on staggered basis to prevent any possible spurt in prices.

Export demand was considerably less than in the previous season. The suggestion of the Cotton Advisory Board not to issue quotas at present disappointed the traders who had done substantial business in anticipation of quota. They point out that undue delay in issuing the quota will adversely affect the export prospects, as foreign buyers will cover their requirements from alternative sources.

Interest in foreign cotton was well maintained early in the week, though, towards the close of the week, a holiday mood prevailed. Americans, East Africans and Sudans attracted good attention. Prices of Egyptians hardened on bullish advices from Alexandria.

Indian spinners had a rare opportunity this week to meet Mr. Loutfy Mansour, a member of the U.A.R. parliament and a prominent exporter of Egyptian cotton, and exchange ideas regarding trade in Egyptian cotton. Mr. Mansour said that the U.A.R. was trying to do away with export discount altogether. The discount rate, which stands at 6 per cent. at present, will be further reduced and eliminated completely. Referring to the complaints about the quality of Syrian cotton, Mr. S. Hamwi, Acting Consul General of the U.A.R., in Bombay, observed that since Indian buyers entered Syrian market late, only after most of the Syrian cotton crop which is comparatively of small quality, was sold, the little that remained was perhaps not upto the mark. This remark implies that they should enter the Syrian cotton market sufficiently early in the season if they wish to buy good quality cotton. This seems to be quite a convincing explanation.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

CO2 1,165-1,170; Laxmi (Old crop) 1,025; American G.M. 1" on type 1,100; California 1-5/32" 1.255; B.P. 52 1,398; Busoga 1,250.

BEMBERG YARN MOVES DOWN

(From Our Own Correspondent)

BOMBAY, 19*th October*

For the first time after eleven weeks, cupressa Bemberg yarn (60×1) suffered a setback during the week under review. The setback followed liquidation by some bulls who were sitting tight over their holdings all these days on rumours of heavy arrivals in the next two weeks. Spot cupressa fell from Rs. 2,314.83 to Rs. 2,286.17 per 100 kilograms. October delivery receded from Rs. 2,246 to Rs. 2.222 and December position from Rs. 2,258 to Rs. 2,252. Imported and indigenous art silk yarns of 120 and 150 deniers met with good buying support induced by hopes of enlarged demand following better performance on the fabrics export front. 120 Japan spurted by Rs. 22.04 to Rs. 1.267.64 and 150 Japan by Rs. 13.24 to Rs. 1,391.11. 120 Italy was firm at Rs. 1,212.53, as also 150 Italy at Rs. 1,364.65. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade picked up 12 nP to Rs. 11.63 per kilogram.

In sympathy with art silk yarn and on reports that the Government had abolished controls on export of staple fibre yarn, prices in this section tended to move up. 40×2 December position hardened by Rs. 4 to Rs. 753 per 90.72 kg. and

October delivery by Rs. 3 to Rs. 753. Spot Kohinoors strengthened by 27 nP to Rs. 8.19 and Centurys gathered 5 nP to Rs. 8.52.

Cotton yarns were dull in the absence of any encouraging development. Traders preferred to await emergence of demand from both consuming centres and overseas buyers. The latest available quotations—in Rs. per bundle of 10 lbs.—for a few counts are: 10 Podar 18.75; 20 Modern 23.50; 40 Madura 31.75; 60 Raghuvamshi 58; Finlay 79.79.

Moorat trading in the yarn market will commence at 5 p.m. tomorrow.

OILSEEDS QUIET

(From Our Own Correspondent)

BOMBAY, 19*th October*

A new scheme for expanding exports of groundnut oil has been announced by the Government of India. Tenders have been invited, for the first time, from exporters, including established shippers, for the shipment of groundnut oil and salad oil.

Under the scheme, for every ton of groundnut oil exported, 3½ tons of groundnut expeller cake will also be allowed to be exported. Similarly, for every ton of salad oil exported, four tons of groundnut expeller cake will be permitted to be exported. Import of copra and palm oil will also be allowed against the exports. Tenders should be forwarded to Mr. M. P. Mathur, Director of Export Promotion, Ministry of Commerce and Industry, New Delhi, by name before the end of this mnth. Tenders should indicate the quantity of groundnut oil or salad oil which the party will undertake to export on a firm basis during the period ending 31st January 1961, the minimum quantity of copra and palm oil sought to be imported against these exports, the countries to which exports would be made and the ports from which shipments would be effected. Export permits in respect of groundnut oil and salad oil will be granted immediately to those whose tenders are accepted. Each tender should be accompanied by a bank guarantee of 5 per cent. of the value of the tender as security for completing the shipment of the export quota of groundnut oil and salad oil allotted to them during the prescribed period. The bank guarantee will be released on fulfilment of the export by the parties.

The scheme is designed to compensate for the loss suffered from export of groundnut oil (the world prices of which are considerably lower than domestic prices). The technique of linking the export of expeller cake (in which India has a distinct price advantage) with that of oil has already been in practice. Of late, the price of oil has gone up, while the export demand for expellers has come down. In order, apparently, to bridge this widening gap, the Government has linked the oil exports with imports of copra and palm oil—the ruling domestic prices of which are substantially higher, as compared with their world prices. Apparently, there is an element of gambling in this scheme in view of the possibility of fluctuation in prices of all the commodities involved. Tenders are to be submitted now (presumably on the basis of current prices), for transactions to be made before the end of next January; but by December, it is likely that domestic price of copra will decline because of larger arrivals during that season from Alleppey and Cochin. Consequently, the margin of profit for importers of copra, too, will decline. The bank guarantee is another risk for the exporter of groundnut oil, because he may lose that amount in case he is not able to fulfil his undertaking. Viewed from a wider angle, it is doubtful whether all these artificial measures to boost exports are worth the trouble. Ultimately, the domestic consumer has to bear the cost of these incentives.

In view of the many uncertainties involved, this export promotion scheme failed to enthuse operators in the groundnut section. In fact, values in the groundnut section drifted to lower levels, thanks mainly to larger arrivals and relatively smaller purchases by *vanaspati* manufacturers and crushers. Persistent reports of better crops also induced speculative sellings. In these conditions, groundnut February 1961 contract, which had closed at Rs. 206.50 last week, declined to close today at Rs. 205.50, after fluctuating between Rs. 204.75 and Rs. 207.50. Khandesh quality gave way from Rs. 48.75 to Rs. 47.50. Oil ex-mill lost Re. 1.40 to Rs. 20.50.

Castorseeds, too, were subdued in the absence of any encouraging advices. Brazilian supplies of castor oil, it is said, have been making their presence felt on the American market. Favourable weather conditions in the major producing areas in India aggravated the downward trend. Castor May 1961 fell from Rs. 174.75 to Rs. 172.87, before closing today at Rs. 173.37. Ready Madras eased by 30 nP to Rs. 33.50. Oil Commercial declined from Rs. 14.10 to Rs. 14.

Distinctly easy conditions prevailed in the cottonseed section, following reports of larger cotton crop this year. The cottonseed February 1961 contract fell from Rs. 88 to Rs. 85.50. Berars shed 25 nP to Rs. 20. Non-white also lost a like amount to Rs. 20. White was neglected at Rs. 20.

The linseed section, however, was slightly better, mainly on account of some Australian enquiries for linseed oil. The linseed May 1961 contract rose from Rs. 33.06 to Rs. 33.19. Bold ready was steady at Rs. 32.37 as also linseed oil at Rs. 14.

BLACK PEPPER CLIMBS DOWN

(Messrs. Parekh & Co.)

BOMBAY, 18*th October*

The usual review of the pepper market did not appear last week, as trading remained suspended from the 4th to 10th inst. This week, despite various devices to prop up prices, Malabar black pepper (garbled) declined to a new low level of Rs. 217½ for October delivery, owing to liquidation by stale bulls at the time of due date. Ungarbled climbed down to Rs. 1,250. Calicut was marked down to Rs. 1.350. The decline was accelerated following the declaration of an emergency, the closure of the market under one pretext or another for about six days and the enforcement of new procedure to close the trading ring at every advance or fall of Rs. 4 on any working day. A section of the trade believed that the prices would not have declined so much if trading had been free and adjustments of positions either by bulls or bears were allowed without hindrance.

December delivery was quoted at Rs. 211½. At the time of writing, it improved to Rs. 216½ on stray enquiries and on hopes that tenders of about 180 tons issued against October delivery would be lifted without difficulty.

Singapore, after touching the low of Str. $140 and Str. $222½, improved to Str. $145 and Str. $232½ for black and white, respectively, on short covering following meagre arrivals of Sarawak white. The market at the time of writing is reported to be steadier, as sizable sales of Lampong black to the U.S.A. at prices ranging from $0.42 to $0.45 were reported done.

Spot in New York improved from $0.45 to $0.48, due to some demand from grinders who thought that it was advisable to do some buying at around $0.42, as there would be resistance from sellers at lower prices.

New crop arrivals of Malabar black have started coming in at Alleppey, though in small quantity. Henceforward, if weather remains clear, arrivals are likely to augment and Asta quality is expected to arrive in the first or second week of next month.

The future depends upon the attitude of the sellers of Lampong in Indonesia and Singapore. Next month when the Malabar crop starts moving, India may sell in competition, as there is no advance sales against the new crop so far.

Ready pepper in Bombay is quoted at Rs. 240 per 100 kilos.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 17*th October*

There was virtually no change in the linseed market this week. Firm prices were maintained, while the turnover was rather limited. Millers were not very active, owing to unfavourable crushing margins.

The oil market ramained steady. There was a notable improvement in the local demand and also enquiries from Australia.

The oilcake market ruled firm, due to good local demand and limited stocks with mills.

Ready was quoted at Rs. 25.62 per maund.

DEMAND FOR TEA LESS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 11*th October*

Sale No. 39:—Just over 480,000 kilograms were catalogued for Sale No. 39 held on Tuesday, 11th inst. Quality was well maintained. There was less general demand, but clean black fannings came to a strong and dearer market. Selected best liquoring highgrowns were firm to dearer, but the lesser sorts were 25-50 nP lower. Good medium descriptions were firm. Medium and low medium kinds eased 10-20 nP, except clean fannings in these categories which advanced by a similar margin. Lowgrown and plain sorts declined 5-10 nP per kilo. C.T.C. and legg-cut teas were firm. Tippy teas sold at a drop of 50 nP to Re. 1 per kilo. Whole leaf grades again came to an easier market.

	1960 Rs.	1959 Rs.
Low medium	4.30-4.60	3.75-3.97
Medium	4.60-4.85	4.08-4.63
Good medium	4.85-5.50	4.63-5.18
Quality	5.50-9.10	5.84-9.26

The average price realised in Sale No. 39 was Rs. 5.00 per kilo, as compared with Rs. 5.17 for the previous week and Rs. 5.09 in the corresponding sale of 1959.

Dust Sale 'KK':—258,000 kilograms were offered in Sale No. 'KK' held on 13th October 1960. Quality generally showed a slight decline with a few brighter invoices on offer. There was a good general demand. Mediums were well supported, but were irregular and generally easier by 5 nP to 10 nP per kilo with the exception of the coloury sorts which realised fully firm rates. The residual grades registered declines of 10 nP to 20 nP per kilo. Highgrowns received less attention and sold at lower rates. C.T.C. and legg-cut types received good support, but came to an easier market.

The average price realised in Dust Sale 'KK' was Rs. 4.54 per kilo, as against Rs. 4.49 in the previous sale and Rs. 3.99 in the corresponding sale of 1959.

Export Quota:—There are large sellers at ½ nP per kilo.

Colombo:—Just over 6 million lbs. were offered. Highgrown brokens were generally 10 cents to 20 cents easier, but fannings met with better demand and were mainly dearer. Good mediums eased 10 cents to 15 cents, whilst lesser mediums and lowgrowns were up to 5 cents easier. Persian Gulf sorts and bought leaf descriptions were steady.

London: North Indian and other growths:—In Monday's auction, there was a good demand. Useful liquoring Assams were irregular and occasionally easier following quality, but medium and plain descriptions were dearer.

Ceylon and South Indians:—On Tuesday, 21,000 packages were offered, of which 7,304 packages were from South India. The market met with an active demand and prices were very firm on last week's rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 40:—600,000 kilograms. Good demand for low medium and medium, which are fully firm. Good medium and best liquoring irregular and easier, following quality. Whole leaf strong and dearer.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 17*th October*

Despite good festival demand for *Diwali*, sugar prices ruled quiet. Prices quoted were Rs. 112 per bag in wholesale and Re. 1.09 per *seer* in the open market, thanks to easier supply position. No free sale releases were made to the factories in U.P., Punjab and Bihar. The sugar which reached the market, was through sales by the Government ration shops, as a sequel to the increase in sugar quota from three to four and a half seers *per capita* for *Diwali*. The sugar factories, which were planning to start earlier, are, however, obliged to revise their programme due to acute shortage of coal.

Prices in the sugar market at Muzaffarnagar showed slight improvement in the week-end. Smaller grains were quoted at Rs. 112 to Rs. 113 per bag, while bold crystal was quoted at Rs. 114 to Rs. 115 per bag due to brisk festive demand. New crushing would not begin before beginning of November. Sugar prices ruled quiet in the Kanpur market also, thanks to satisfactory supply position.

Khandsari prices showed a sagging tendency during the week. Demand was reported to be slack reflecting easier supply. Few crushers have gone into production by purchasing cane at Re. 1 per maund, but they are manufacturing *gur* instead of *khandsari*, which would be produced at a later stage. Prevailing prices of *khandsari* at the week-end were: Galawat Rs. 22 to Rs. 25, inferior *khandsari* Rs. 28 to Rs. 32, superior Rs. 33 to Rs. 37, crystal Rs. 34 to Rs. 38, boora Rs. 35 to Rs. 37 a maund.

New *gur* arrivals have mounted to an average of 500 maunds. But outside demand and festive enquiry were brisk. Prices of new *gur* consequently registered sharp rises to quote at Rs. 20 per maund. Old stocks were neglected at Rs. 15 per maund, for *kotha* quality. Cane crop prospects are very bright.

Old *gur* prices sought lower levels in the Muzaffarnagar market owing to beginning of new season and lack of demand for old stocks. Stocks were being cleared by despatching the goods on unsold accounts to consuming areas. New arrivals would soon mount and week-end prevailing prices were: Old *gur* chaku Rs. 16.50, *kotha* dry-wet Rs. 15, wet Rs. 14, *gur pansera* new Rs. 19.75, dana minja Rs. 13.50 to Rs. 16.50 a maund.

After early fall, *gur* futures advanced on bull support. *Gur* fagun, after having opened at Rs. 13.50 last Monday, declined to Rs. 13.20 and then improved to Rs. 13.42 quoted today.

MARKET GOSSIP

(*Concluded from page 715*)

classic example of success of what industry and hard work can accomplish."

The progress made by Alind is to be attributed in no small measure to the tariff protection granted to the bare conductor industry. But, lately, the advantage of protect.ve tariffs is being neutralised by the decline in foreign conductor prices, on the one hand, and the high cost of bare metal in India following imposition of excise duty (Rs. 300 per metric ton) on electrolytic aluminium, on the other. This aspect figured prominently in the speech of Mr. S. Narayanaswamy, Chairman of the Company, at its recent annual meeting, the full text of which is published on pages 730 and 731 of this issue. A foreign seller of bare conductors, Mr. Narayanaswamy said, was in a position to place his wares on the Indian market on terms more attractive than the domestic producers when rupee payment was acceptable to the seller. Naturally, the Indian conductors made with indigenous high-cost metal with excise duty pyramided thereon create an impression of exorbitance which, he averred, was not healthy for a growing industry. It is to be hoped that this point will be taken into consideration by the Tariff Commission which is currently examining the question of continuing protection for the industry.

Alind's Chairman was also very critical of the fixation of ex-factory prices on the basis of costing principles approved by the Tariff Commission. He wondered if the fixation afforded any satisfaction to the consumer "who is," to quote him, "intrigued by the spectacle of the same Central Government levying excise duty on the very articles the factory cost of which is so painstakingly investigated by the cost accountants of the Tariff Commission who, incidentally, take care to see that, in the process, some very legitimate outgoings by way of expenditure are disallowed." Mr. Narayanaswamy approvingly drew the attention of the authorities to the World Bank Mission's recommendation that the present system of price fixation by the Commission based on a 8 to 12 per cent. return on capital employed be re-examined. The system, as he rightly remarked, has whittled down retainable resources at a time when the cost of expansion is high. Surely, it will be in the interests of internal capital formation in industry as well as in that of the consumers at large if the present system of fixing retention prices is re-examined and replaced by a more rational formula. By focussing attention on this issue, Mr. Narayanaswamy has, indeed, done real service in the cause of industrial development in general.

ESCORTS LIMITED

(*Concluded from page 743*)

involving collaboration with **Messrs. Westinghouse Electric International Co. (U.S.A.)** has been approved. The manufacture is scheduled to commence by June 1961. Under the agreement the Company will be producing all types of diagnostic fluoroscopic and therapeutic X-Ray equipment for medical purposes and also diagnostic and fluoroscopic, X-Ray equipment for Industrial use. The annual turnover of finished X-Ray equipment is expected to exceed Rs. 50 lacs.

Razor Blades: Sharpedge Private Ltd., a subsidiary company, has established a blade factory in Okhla Industrial Estate. It has installed one of the latest German Plants with a capacity of over two crores blades per annum. Increase in production by additional machinery is planned.

Railway Shock Absorbers: The Company has received Industrial Licence No. L-7(4)/2/MEI/60 dated 20th July, 1960 from the Government of India, under the Industries (Development and Regulation) Act, 1951, for manufacturing Shock Absorbers for the Indian Railways under the technical and financial collaboration of Messrs. Rheinmetall GmbH., W. Germany. The Company is expected to go into manufacture during the year 1961 and the annual turnover is expected to be Rs. 20 lacs.

Heating Elements for Electrical Appliances: The Company has entered into Technical Collaboration Agreement with Messrs. Eltra K.G., West Germany for the manufacture of Heating Elements (both round and flat type) required for almost all types of household electrical appliances. The technical collaboration agreement has been approved by the Government of India and the Industrial Licence No. L-5(9)-2/EEI/1960 dated 26th July 1960 has been received.

TRADE WITHIN THE COMMONWEALTH

(*Concluded from page 720*)

Canada's economy from that of the rest of the Commonwealth.

But, by the same token, convertibility has largely removed the incentive that the previous structure of exchange control gave to trade among sterling countries of the Commonwealth. This gives no cause for regret—rather it is a source of satisfaction that sterling has been able to dispense with the crutches that it had to rely on for so many years after World War II.

It does, however, raise questions about the future of Commonwealth trade, in particular whether so large a proportion of trade will in future be transacted "within the family." Certainly, the inducements to intra-Commonwealth trade offered by Imperial Preference have been severely whittled down since World War II. An analysis by Sir Donald MacDougall and R. Hutt in the journal of the Royal Economic Society, *Economic Journal*, in 1954 of the extent of such preferences revealed that, whereas in 1937, the average margin of preference accorded to Britain's exports to the Commonwealth and that accorded by Britain to imports from the Commonwealth were both 10 to 12 per cent., by mid-1953 they had fallen to about six per cent. It has almost certainly fallen further since, and the decline seems likely to continue as new trade and tariff agreements are negotiated, though any firm forecast must wait upon the relationship eventually established between the Commonwealth and the trading blocs now emerging in Europe.

If, therefore, trade within the Commonwealth is to expand in the years ahead, it will almost certainly have to do so by natural means. The basis for such an expansion is not lacking. The Commonwealth presents a market of nearly 700,000,000 consumers, and a market within which labour, capital and managerial skills as well as physical goods have traditionally been free to move.

Unhappily, in recent years that freedom has been limited in some directions and the basic unity and manner of the market disturbed. In some cases, tariffs or quotas have been imposed to protect newly-established industries, in others to protect old and declining industries from the competition of new and cheaper sources of supply. Any such retreats from the traditional freedom of movement within the Commonwealth market must be viewed with grave misgivings.

The Commonwealth should show itself adaptable to the new pattern of trade that is likely to emerge gradually in the years ahead as the industrialisation of many of the oversea members gathers pace. If, in the future, a greater proportion of Commonwealth trade is accounted for by the exchange of manufactures against manufactures this would simply be parallel to the recent—and prospective—trend in world trade. Indeed, as living standards rise, the demand for manufactured goods is likely to expand more quickly than the demand for primary products, and an increase in trading in manufactures would seem essential, if the Commonwealth is to retain its share of total world trade.

The fundamental governing policy should surely be to let production flow naturally from the producers with the greatest comparative advantage and not to try to distort that flow by erecting obstacles to trade. The prime aim must always be to reduce trade barriers, wherever they are. In the long run, this may mean that Commonwealth countries do a larger share of their trade with outside countries. If the total of world trade is increased thereby, this should give no cause for disquiet.

COTTON

(*Concluded from page 726*)

for plant growth and a rapid development of the bolls. Undoubtedly, some lasting damage had been caused in the eastern and south-eastern parts by floods, following torrential rains, early in August. From the other parts of the Punjab, however, there has been nothing but good news so far. Notwithstanding the generally favourable weather conditions upto now, a realistic assessment of crop prospects in the Punjab must take into account the fact that the overall acreage under cotton there has, in the recent past, tended to decrease from year to year. Whilst the western half of the Punjab—and particularly the Ganganagar circle of Rajasthan—has been expanding the acreage under cotton, a large number of cotton fields have disappeared in the eastern half where water-logging caused by excessive rains plus seepage from irrigation canals over the last few years, has rendered vast tracts unfit for cotton cultivation. Too optimistic production forecasts for the Punjab have, therefore, to be regarded with a great deal of caution. Meanwhile, arrivals of Bengal *Deshi* have already started, and provided we have dry weather from now onwards, P/American will be ready for marketing early in November.

"The central belt—consisting of Omras, Gujarat and Saurashtra—has witnessed a most orderly withdrawal of the monsoon current. Long periods of dry and sunny weather were interrupted by short spells with moderate rains. Cotton plants developed most satisfactorily under these favourable conditions. A most unexpected threat to the standing crop has now turned up in the shape of an unheard-of invasion of locust. Enormous swarms of locusts have been sighted in various parts in the Omras and some damage to cotton has already been reported from some isolated places. A fierce battle is being fought now in order to destroy the menace, and it is hoped that further damage can be prevented. Lately some further rains have been reported from various parts of the Omras which, though not very desirable for the early 197/3 crop, do not seem to have caused any damage worth mentioning.

"Down south, heavy and widespread rains provided all the moisture needed for a proper development of the early varieties and the sowings of the main crops. Towards the end of September, the need for an immediate break in the rainy weather was increasingly felt.

"With normal crop development, from now onwards, a crop of some 5,000,000 bales is now a distinct possibility."

Thus, all available indications are that the authorities should be watchful and, if they must err, they should do so on the side of safety.

ENGINEERING

(*Concluded from page 734*)

burn stone which they are supplied with in the name of coal. Wise counsels like those of Mr. J. J. Ghandy have been advising against the erection of another steel plant at Bokaro when even the existing ones are not able to get their supply of coking coal. So Mr. Malaviya has to 'discover' the much-needed stuff to silence the Cassandras at the nick of time. Hence the timing of the new 'discovery.'

"One can only be amused at Mr. Malaviya's emphasising the point that the newly-discovered coking coalfield is 'within a stone's throw' of the proposed steel plant at Bokaro when one remembers that I.I.S.Co's Kulti works which are located right on a coking coal mine and their Burnpore works which are on the very edge of coking coal mines have both been suffering from inadequate supplies of this coal. But what is one to think of a responsible Minister who in the same interview states, first, that 'these three big discoveries could provide enough coal for more and more steel plants for a pretty long time,' and follows it up by the startling revelation: "We have yet to prove the quantitative dimensions of the new deposits.' Or is it once again a case of Mr. Malaviya deciding beforehand the quantity of coking coal that should be discovered to meet the requirements of all the steel plants, including that at Bokaro, for decades to come, and then entrusting the task of 'proving the quantitative dimensions of the new deposits' to the Indian Bureau of Mines?

"What Mr. Malaviya calls 'discoveries' have been known to everyone who had spent some time in the coalfields of Bengal and Bihar, and had, in fact, been discovered long before Mr. Malaviya was born. Only, in those days and down to yesterday, grade one coal could not be used in blast furnaces because coal washing was still in its infancy. If Mr. Malaviya has any doubts, let him go through the publications of the Geological Survey of India and the reports of the geologists employed by Messrs. Bird & Co.

"I say all this because the Geological Survey of India, which is as much a part of Mr. Malaviya's Ministry as the Indian Bureau of Mines, was busy for five years geologically resurveying these areas and for another five years riddling them with diamond-drill holes. A fraction of the number of these holes drilled would, in the hands of competent men, have been considered more than adequate not only to make detailed estimates of the quantity of coal and its quality, but also to block out optimum size producing units, to arrive at decisions regarding which blocks to work by open cast and which by underground methods and to collect such other relevant data for safe and economical working of these units, namely, the make of water, noxious and inflammable gases, strata conditions, etc.

"If after all this puncturing of these areas with bore-holes literally producing the effects of confluent smallpox and not scientific prospecting we are yet to make a beginning with the proving of the reserves under the ægis of the Bureau of Mines, are we dealing with technical organisations engaged in finding facts or executive arms of professional politicians wielding unbridled power to assist them in cooking up figures?"

Notice

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE posts of Deputy Chief Officers in the Department of Banking Operations of the Bank.

(A) **Scale of Pay**:—Rs. 1,275-75-1,575

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scale.

In addition to pay, the selected candidates will be eligible to draw local pay (at centres where it is admissible) and house allowance at the rates prescribed by the Bank from time to time.

(B) **Age Limit**: Candidates should not be over 45 years of age as on 1st November 1960.

(C) **Qualifications:** Applicants should have a minimum of 15 years' commercial banking experience out of which not less than five years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POST AND ONLY THOSE CANDIDATES WHO STRICTLY SATISFY THE ABOVE REQUIREMENTS ARE ADVISED TO APPLY.

2. Applicants for the above post must remit with their applications a fee of Rs. 7.50 by cheque or bank draft on a *Scheduled Bank* payable at Bombay or by Postal Order. The application fee is in no case refundable.

3. Applications in the prescribed form obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Trivandrum and Patna accompanied by copies (*originals should not be sent*) of *at least* two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1, so as to reach him on or before the 12th November 1960.

4. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected, at the time of their appointment in the Bank's service.

5. Selected candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

6. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

7. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgment Due." Apart from those who may be specially called, interviews will not be granted to candidates, nor will the Bank enter into correspondence with them.

8. Canvassing will be regarded as a disqualification.

OIL MINISTER'S FOLLY

THE more we study the statements of Mr. K. D. Malaviya, Union Minister for Mines and Oil, the more we feel convinced that his policies and actions are not conducive to the rapid development of petroleum industry in this country. Indeed, they will prove to be a formidable stumbling block to the country's economic progress as a whole, unless they are modified in good time. In the earlier issues of this journal, we have explained how "the dog in the manger" and "pennywise and pound foolish" characteristics of his policies have made a significant contribution to India's current foreign exchange problem. But, unfortunately, Mr. Malaviya thinks that his critics are shortsighted and biassed in favour of private enterprise and foreign capital. He seems to be clear in his mind that all further expansion in the petroleum industry should only be in the public sector. It is, therefore, almost useless to hope that further comments will make any impression on him. It is for the public to judge whether he is right or wrong and be forewarned of the possible damage to the third Plan.

From time to time, especially at crucial moments, when the controversy reaches an awkward stage or when he has to make a policy pronouncement for public consumption, Mr. Malaviya does concede that the Government would welcome the co-operation of private sector and that the task awaiting the country is so enormous that there is room for both the sectors to expand. But, sooner or later, he contradicts the spirit of this statement by doing or saying something that cold douches the desire of the existing foreign companies to invest more in this country. We advisely say "desire," instead of "enthusiasm," for these companies can hardly be enthusiastic now, after all the cold-war tactics that have been indulged in by the Minister in his anxiety to clear the field for the public sector.

It must be made perfectly clear here that the opposition to the public sector entering the oil business is based not on any ideological grounds, though they are sound by themselves, but on purely practical considerations. In the first place, the Government has not the large financial resources required to develop and handle, in a short period of five years from now, a turnover of some six to eight million tons of petroleum products right from the stage of prospecting to that of marketing. Even if it can obtain them somehow, they can be utilised for other urgent purposes, because the private sector is willing to find the capital for oil, given appropriate working conditions. Secondly, the Government does not possess the necessary personnel, both technical and managerial, nor is there any bright prospect of it being able to assemble a sufficient number of competent workers within any reasonable time. And, thirdly, it has no previous experience whatever in oil business and is purely at the mercy of foreign advisers who are by no means friends of democracy. It is clear from some of the statements of the Minister himself that he is not as well informed as he should be about this complicated and intricate business to take right judgments. Some in this country are inclined to think that Prime Minister Nehru's observations in the latest session of the U.N. General Assembly on international problems have marred the prospects of getting foreign aid for the third Plan. This may or may not be true, though we are of the view that there is hardly any substance in that opinion. But we think that Mr. Malaviya's policies and pronouncements are distinctly harmful to the prospects of receiving adequate foreign assistance, because they are lacking in economic realism and are motivated by devotion to a particular dogma. They will surely make the task of the World Bank and the Finance Minister, in regard to securing aid from the Western countries, extremely difficult.

It is common knowledge now that the Burmah-Shell Refineries Ltd. has put forward an attractive scheme for expanding its refinery capacity by approximately a million tons to four million tons and for the addition of a lubricating oil plant (*vide* page 424 of Commerce dated 3rd September 1960 for details). The Company has undertaken to find the necessary foreign exchange on its own responsibility. It is confident of completing the refinery expansion in 18 months and the lubricating plant within a further year. The demand for petroleum products is going up quite fast and the need for this additional capacity is clearly there. On the understanding that this proposal would be considered purely on its economic merits by the Government, the Company voluntarily surrendered the duty protection last year, with retrospective effect from 1st October 1956 on motor spirit and from 1st July 1959 on high speed diesel oil, low diesel oil and furnace oil. In addition to this, it has also expressed its readiness to negotiate on the other aspects of refinery agreement considered as harsh on the country by Mr. Malaviya, provided it is allowed to proceed with this expansion scheme. But what has Mr. Malaviya done? It is reported—and the report remains uncontradicated though full ten days have passed—that he has decided to expand substantially the planned public sector refineries, one at Nunmati (Assam) and the other at Barauni (Bihar), meant for refining the crude discovered in Assam oilfields. Although the exact figure is not mentioned, it is said the Minister wants to expand the capacity of these two refineries from the present target of 2.75 million tons to 4 million tons. This means that he is not willing to sanction the Burmah-Shell's scheme for expansion.

Apparently, Mr. Malaviya is not a believer in the popular saying that "a bird in the hand is worth two in the bush." This may be a hackneyed adage and one may sound school-boyish in quoting it. In this context, however, it is very appropriate. Here is a company, known for its efficiency and integrity, with an eighty-year-old association with this country, with enormous world-wide experience and resources in men and material alike. Even if it is a devil, it is a known devil. It is quite willing to expand its activities, involving heavy investments. But Mr. Malaviya has spurned its offer, for no other reason than his belief that the public sector can do the job better and more remuneratively for the country. This is a questionable assumption, for reasons already mentioned and those that follow. First, he is evidently banking on more Russian help about which nothing is known and, even if it can be had, it could be used for other public sector purposes for which Western aid is not forthcoming or, if available, is inadequate. Secondly, there is no knowing when even the original plans for the Nunmati and Barauni refineries will fully fructify. Even now there are doubts about the appropriateness of Barauni as the ideal site. The plans are, of course, so well advanced that they will one day be executed, but a delay of two or three years more is quite a possibility. And it is only after that the expansion of these refineries will be taken up. This may mean that, at best, the four-million-ton capacity will be reached in the last year of the third Plan. As against this, if the Burmah-Shell scheme is allowed to go through, this additional refinery capacity can be attained by the end of the first year of the Plan. Thirdly, though some additional oil deposits have been discovered in Assam in the current year, it is still a gamble to plan on the basis that there will be sufficient crude production in Assam to feed a refining capacity of four million tons per annum in Eastern India. And, fourthly, the cost of refining oil in Nunmati and Barauni is very likely to be substantially higher than in a port like Bombay.

The slow pace at which the Oil and Natural Gas Commission—the body through which Mr. Malaviya operates—is working in regard to prospecting is already well known in knowledgeable circles. The lay public, however, is not aware of it, because of the wide publicity given to the spectacular "discovery" of oil in the Cambay and Baroda region. But the seaboard of Gujarat is not the whole of India. It represents only a fraction of the area to be prospected. It is estimated that India has 400,000 square miles of sedimentary areas worthy of being prospected. The Indo-Stanvac project in West Bengal has now been abandoned after drilling a few dry holes. Even in the Cambay region, the oil reserves are yet to be established. The job that remains is far too big to be handled by the public sector. Realising this, the Government invited foreign prospectors to submit their proposals. Although the rules and regulations it announced towards the close of 1959 were vague and left many fundamental issues to be decided through negotiation with the Government, quite a good number of foreign companies, including those already operating in this country, responded. Ten months have passed since the last date for submission of applications. Yet the Commission has not been able to conclude agreement with any one of them and has sent a mission to Europe for exploration and study. The chief reason for this delay is the reluctance of Mr. Malaviya to negotiate with the existing operators in the country. He wants to see whether anyone else will offer better terms. Meanwhile, much valuable time is being lost and the world oil market has turned in favour of buyers, with a large surplus of crude. Delay in exploration and discovery of oil will be very expensive in terms of foreign exchange of which the country has very little. In his anxiety to save pennies for the country, Mr. Malaviya may unwittingly hitch the wagon to the stars of prospectors who are of doubtful merit. Let not the public forget about the way in which technical collaboration was secured for the Visakhapatnam shipyard

from a country not known for its talent in ship-building and the results that followed.

Undue zeal for expanding the public sector—Mr. Malaviya is the leader of the socialist ginger group within the Congress Party—and excessive care for economy in the cost of foreign assistance are not qualities that can be regarded as valuable assets in the leadership of a country which is not endowed with technical skill, managerial ability and money in sufficient quantity, but which at the same time wants to make rapid economic progress. The Minister for Oil must have the mind of an industrialist who is anxious to show quick results and does not higgle-haggle over the terms of getting foreign collaboration. The pity is that the Government does not learn even from experience. Mr. Malaviya's present policy reminds us of many missed opportunities for this country. Two of these may be recalled here: the loss of fertiliser production which could have been avoided if the Burmah-Shell's proposal to put up a fertiliser plant at Trombay three or four years ago had been accepted and the loss of several crores worth of industrial goods, as well as the delayed growth of quite a few industries, on account of power shortage caused by the fruitless controversy between Tatas and the erstwhile Bombay Government over the Trombay power project. Mr. Malaviya's vendetta with oil companies is similar to that of Dr. Jivraj Mehta with Tatas early in the fifties and the consequences seem to be almost identical. The refusal to allow the scheme for expanding the Burmah-Shell Refinery means the loss of scope for establishment of a number of subsidiary industries in Maharashtra, not to speak of the possibility of a shortage of oil itself. It is, therefore, to be hoped that the Union Minister for Oil will reverse his decision before it is too late.

PRIVATE COLLIERIES CAN DO IT

BY all accounts, the coal industry in the private sector has not been fighting a losing battle. That its pleas are just beginning to be heard is confirmed by the latest agreement at Calcutta between its representatives and the Union Ministry of Steel, Mines and Fuel. This agreement, under which there will be no ceiling on coal production in the private sector during the third Plan period, is no small gain. If anything, it is a distinct improvement in the sense that there may be some elbow room for the private collieries to expand their production to a higher level than the 60 million tons laid down in the Draft Outline of the third Plan. Since a flexible target in this case can conceivably turn out to be a higher target, there should be no hesitation in congratulating Sardar Swaran Singh on what is probably one more instance of the dawn of realism in the high quarters of Government. But we must hasten to add that there is still a long way to go before the industry's just battle for a fairer deal can be won, for several are the hurdles still on its way.

There is, at the outset, no certainty whether the aggregate of additional production programmes which the individual collieries are now asked to frame will be definitely accepted as the private sector's target, if it turns out to be much in excess of the 16 million tons laid down in the Draft Outline. Already the Joint Working Committee of the four mining organisations covering the private sector coal industry has estimated, on the basis of returns from 151 units, that an additional production of 19.5 million tons (as against 16.0 million tons laid down in the Draft Outline) will be possible. Since there will be a shortfall of 3.5 million tons (targeted 44.0 million tons *minus* 40.5 million tons of actual production in 1960-61) in the private sector's achievement of its second Plan target, the additional production in the third Plan, according to the industry's own expectation, will have to be 23.0 million tons (19.5 *plus* 3.5). This should be the minimum additional target according to the industry's recent estimates which seem to be rather cautious. Indeed, the aggregate of individual collieries' production programmes would have to be higher than this 23 million tons if the overall target for the industry in both the sectors were to be hit. Otherwise, the public sector will have to raise in all an additional 26.5 million tons by 1965-66, which will mean an increase of 250 per cent. over its actual production of about 8 million tons in 1960-61. (The figure of 26.5 million tons, it may be noted here, represents the third Plan target of 21 million tons of additional production *plus* 9 million tons to make up for its shortfall in the achievement of its second Plan target of 16 million tons *minus* 3.5 million tons out of the 19.5 million tons now suggested for the private sector.) It may not be in a position to achieve that much increase, if past experience is any guide. What is, therefore, necessary is to make a realistic assessment of the limitations of the public sector and to pitch its target at a lower but feasible level. Unless this is done in advance, the private sector will not know, as it ought to, at the very beginning itself, to what extent it should expand, so that the overall target of 97 million tons per annum is reached in time. If the public sector's target is brought down to the manageable level of, say, 22 million tons as of 1965-66, the private sector's share will become 75 million tons by that year.

The question is whether the private collieries will be able to increase their production from 40.5 million tons in 1960-61 to 75.0 million tons in 1965-66. This may seem to be a more optimistic estimate of expansion possibilities in the private sector than what its own representatives have now indicated. But it need not be so, if the "basic requirements" listed by the industry are fully met. These requirements are economic prices for coal, additional finance needed for development and improved raisings, adequate subsidy for stowing and also for deep and difficult mining operations, sufficiency and regularity in the supply of wagons for coal movement from pitheads, greater facilities for imports of essential stores which are in short supply, and security of tenure of working leases. The industry's hope is that, if the hurdles now hampering the full utilisation of its potential are removed, the total figure of 23 million tons of additional production in 1965-66 as compared with 1960-61 can be taken as good as actual production. This is a case of restrained optimism. After all, the industry's representatives seem to have overestimated the expansion possibilities of the public sector coal industry in the belief that there is no room for practical adjustment between the two sectors under the Industrial Policy Resolution of 1956.

A more forthright stand is certainly called for not from the sectional point of view of the private coal industry but from the national point of view. What the national interest requires is more coal. And this can be more easily produced by the private coal companies, which have been so long in the field and have built up so much experience, than the public sector which is lacking in these qualities. The following passage in the recent World Bank Mission's report may be appropriately quoted in this context:

> "The expansion of the private sector has been restricted as an act of Government policy, which has reserved the opening up of new areas to the public sector. Price control has also discouraged the private companies from investing more in the industry. It is possible to sympathise with some of the considerations underlying the Government's policy and yet to feel that the way in which this policy has been applied is contrary to the nation's economic interests. As the Mission sees it, the overriding need now is to get more coal quickly and other considerations should be subordinated to this purpose."

The Mission's specific recommendations to meet this situation are that private collieries be encouraged to raise all the coal they can, restrictions on the issue of new mining leases be lifted, prices be adjusted to provide the industry with larger resources for investment, and the differential between prices of coking and non-coking coal be increased. If these recommendations are accepted by the powers-that-be, the existing collieries will be in a position not only to plough back more profits for financing expansion but to raise fresh capital from the public.

The price question is most crucial in this context. Although two small price increases have been given since March last—the first in April to the tune of 81 nP per ton and the second in September to the tune of 6 nP per ton—they are both intended to cover the additional incidence of labour costs resulting from the Das Gupta Award and the Mines (Amendment) Act, 1959. The industry's case for a price increase on the ground of higher manufacturing costs and greater need for augmenting internal resources for reinvestment is yet to be fully conceded. It is not clear from the reports of the recent conference in Calcutta between Sardar Swaran Singh and the representatives of the industry whether any price increase will be sanctioned. The Minister's assurance that the Government would decide, before 10th November, on the attitude to be adopted with regard to the industry's difficulties, probably covers the price question also. Probably it does not, because the offer of assistance from the Coal Cess Fund (created in February last) to gassy mines and those involving heavy pumping is intended to meet their higher costs of production. Whether this assistance is thought of as a substitute for a general price increase in the industry as a whole, is the question.

If the answer is in the negative, it will be very good indeed. It will be pertinent to add that the industry's profit-margin (after tax) works out, as of 1958, to no more than 4.9 per cent. of net worth—a rate which is less than in the case of industries such as textiles other than cotton, engineering, mineral oils, cement, sugar, paper, matches, electricity generation and tea. If this is all that a wasting industry can earn, how can it make greater allocations to development reserves and give higher dividends which alone will bring about a climate in which fresh capital issues for expansion can be successful? The fact that not a single coal company in recent years has issued fresh equity capital for expansion is an eloquent commentary on the present deplorable state of affairs.

RESOURCES FOR AGRICULTURE

THE Planning Commission's Panel on Agriculture has just put forward a demand for additional financial allocations for agriculture in the third Plan on the ground that the 'reasonable' targets therefor cannot otherwise be achieved. In a sense, this is not an unreasonable demand, for, if financial expenditure is taken as a rough-and-ready index of physical performance, the proposed aggregate outlay (public and private) of about Rs. 2,500 crores on agriculture, community development and irrigation in the third Plan will be just 50 per cent. more than the corresponding outlay in the second Plan, whereas the targeted level of agricultural production in 1965-66 is required to be about two-thirds more than the corresponding level in 1955-56. If private investment in agriculture falls short of the estimate of Rs. 800 crores, as it well may in the context of doctrinaire reforms now being enforced, the financial allocation will be found still more inadequate.

There are two conceivable ways in which this situation of inadequacy of resources in relation to the necessary agricultural targets can be remedied. One of these will be to make a judicious use of the available resources; this can be done by executing less expensive but more labour-intensive schemes in the fields of irrigation (especially minor), reclamation and soil conservation and by administering aids to agriculture more efficiently so that they are not wasted or misused. And the other way will be to negotiate, if necessary, another P.L. 480 deal with the United States for the exclusive purpose of providing some additional resources for the agricultural plan. An appropriate number of unemployed and under-employed rural labourers, for instance, can be employed at an annual cost equivalent to one million tons of P.L. 480 foodgrains in schemes connected with the construction of distributaries and field channels in the commanded areas of major and medium irrigation projects, renovation of silted-up tanks, digging of wells, raising of green manure, etc. It may be that both these methods can be combined, so that there will be no need for disturbing the Draft Outline's pattern of outlays by sectors.

The Panel's view, like that of the Food and Agriculture Ministry, cannot be easily brushed aside, if actual achievement is to correspond to the physical targets. Particularly in the matter of food, the effort for achieving self-sufficiency will have a reasonable chance of success, if the financing potential of P.L. 480 food is utilised as much as possible for agriculture and its allied sectors. A target of 100-105 million tons is by no means high. If anything, it is probably on the low side because an estimated population of 480 million in 1966 should reasonably have 110-115 million tons which alone, after a deduction of 12½ per cent. for seeds and wastage and 5 million tons as emergency reserve, will mean a net availability of 20 oz. *per capita* per day for actual consumption. The Planning Commission, it may be recalled, had originally provided for a *per capita* daily consumption of 20 oz. on the basis of an originally estimated population of 434 million in 1966. But, in the light of the present estimate of 480 million mouths in 1966, the target of *per capita* daily consumption has actually been brought down to 18 oz. This is the barest minimum because, after allowing for an acceleration of 2 oz. in demand that may be caused by additions to incomes flowing from development, it will virtually represent no more than what was available in 1959. So the food production target of 100-105 million tons, appropriate to a *per capita* daily availability of 18 oz., is not on the high side. And it will not be impossible of achievement, if such constructive proposals as are put forward by the Food and Agriculture Ministry find favour with the Planning Commission and the State Governments alike.

MARKET GOSSIP

Dollar in the Ringer

ON the eve of the last general elections in Britain, there was a flight of money from the pound sterling, as it was believed by a section of international financiers and British investors themselves that, if the Labour Party were to return to power, it would pursue inflationary policies, in order to keep up the domestic economy which in turn would affect the external value of the currency. Now a similar scare about the U.S. dollar has been started, with the U.S. Presidential election due to be held in ten days' time. There have been reports that, if the Democrats were to win, they would follow a policy of cheap money which would ultimately debase the dollar. Some of the observations made by the contestants to the Presidentship have themselves proved to be the grist to the speculators' mill. The only difference is that, when capital starts moving out of Britain, it does not upset the price of gold in terms of dollars, for the pound sterling is convertible into dollar and the sterling-dollar rate is defended by the Bank of England when it tends to reach the lower level of the parity. But, when there is a flight of capital from dollar for want of confidence, the price of gold in terms of dollar is directly affected, for the external value of dollar is expressed in terms of gold. If confidence in dollar suffers a setback, the only other store of value that attracts the attention of dollar-holders is gold.

One way of restoring confidence in dollar is its acceptance by the U.S. Federal Reserve Bank against payment in gold. But the rub here is that the Federal Reserve Bank at New York sells gold only to central banks and, that too, only for "legitimate monetary purposes." Consequently, when individuals and private institutions scramble for gold, as they did in the London market this week, there are not sufficient floating supplies to meet such demand and the prices shoot up. Under the I.M.F. rules, the Bank of England or the central bank of any other country for that matter cannot take advantage of this situation and sell gold at above the parity, that is, $35 plus the cost of transferring gold from New York. Further, if they sell at the parity price in order to meet what is admittedly a demand for hoarding, they will be breaking the gentlemen's understanding with the U.S. Federal Reserve Bank. Even if they do, they will not be able to sell for long, because they will find it difficult to replenish their gold reserves. The Federal Reserve Bank may refuse to oblige them, for accepting dollars against payment in gold in such circumstances will mean selling gold for non-monetary purposes. The significance of this condition is that a foreign private holder of U.S. dollars is in the same position as a U.S. citizen; he has no right of converting his dollar balances into gold. If he wants to have that privilege, he should pay the price of gold ruling in markets outside the world.

Strictly speaking, the existence of the London gold market, where anyone can buy gold against payment in dollar, has facilitated the present international speculative run on the dollar. Two years after the Conservative Party returned to power, that is, in 1954, the British Government allowed the London market to be reopened as a well-organised free world market. The object was to augment the U.K.'s invisible exports by encouraging private arbitrage business in gold which was till then a post-war monopoly of Zurich in Switzerland. The Bank of England itself has been keeping the London market alive by supplying limited quantities of gold from time to time. Now that the price of gold has gone into a heavy premium, ranging from 10 to 14 per cent., the British Press has been suggesting that the Federal Reserve should abandon its policy of not intervening in overseas gold markets and of selling gold only in New York at $35.0875 per fine ounce and conduct open market operations in London till such time as the premium on gold disappears. This is a very funny suggestion and we have no doubt that the U.S. authorities will treat it as such. Why should they oblige the speculators in London? They could as well allow a free market in gold in New York itself.

Indeed, the existence of a free gold market in London is against the spirit of I.M.F. regulations. The best solution would be to close the London gold market. If it is conceded, as all responsible sections of the British Press have done, that a devaluation of the dollar is not in the best interests of the free world, then all avenues which facilitate sniping at the dollar by speculators should be eliminated.

Much of the present selling pressure on dollar and the resultant rise in the price of gold are the outcome of the activities of international financiers and speculators who do not hesitate to make the best out of every possible opportunity. Today it may be dollar and tomorrow it may be sterling. This is one of the disadvantages inherent in convertibility of currencies. But some safeguards must be evolved under the I.M.F. rules whereby this freedom to speculate is not allowed to be carried on to such an extent as to stampede the world into a currency crisis, which will have serious repercussions on world trade and the economic development of poor countries such as India. Surely, there is need for fresh thinking on this subject by the I.M.F. With ideas of Welfare State dominant in every country of the world and with new forms of international co-operation in vogue, the present-day world is by no means suited to return to the days of *laissez faire*.

It is absurd to try to judge the real value of dollar by the price of gold ruling in a narrow market dominated by speculators and hoarders. The U.S. economy is undoubtedly the strongest in the world. The suggestion that a country with an export surplus of well over $3,000 million should devalue its currency is unconvincing. It is true that the U.S. has a deficit of some $3,000 million on its balance of payment position, but this is solely due to its investments abroad, defence aid to the free countries, including the richest nations in Western Europe, and economic aid to underdeveloped countries. Must such a country which has been cheerfully and readily discharging its international obligations be forced to devalue its currency? The West European countries would be ungrateful to the U.S., their benefactor, if they were to allow such a development to take place. Viewed thus, the reduction in the British Bank rate on the 27th inst. from 6 per cent. to 5½ per cent. is a move in the right direction, though a belated and inadequate one. The rush for gold in the London market seems to be rapidly subsiding now with the latest quotation being no more than $35.75, as compared with a high of $41 seen a week ago.

International Air Fares

One of the most knotty problems of international aviation has been solved for the time being. After deliberations lasting for about a month, the International Air Transport Association (I.A.T.A.) agreed last week at Cannes to a reduction in passenger fares. Most substantial reductions are between North and South America, the West Coast of the U.S. and Tokyo. Fares between Europe, Africa and the Middle East and between Europe and the Far East and Australia, however, have been kept unchanged, in view of the reduction in fares on most of these routes that was effected early this year. The pattern of special group and inclusive tour fares designed to promote greater off-season tourist traffic will be further expanded and improved. Special holiday fares, which proved successful last spring, will be offered again this autumn. Cargo rates, however, will be kept at their present levels, pending a special conference to be held early next year. The I.A.T.A. has also decided that economy class passengers should, in future, be served with meals. If the Government concerned approve of the new fare schedules, it will come into force either on 1st December next or 1st April 1961 and will be valid for two years.

Thus the talks on fares, which had meandered on to dead ends at the Tokyo meeting, have proved fruitful at Cannes. The reduction in fares would not have been possible but for the record profit made by most airline companies last year. In fact, 1959 was the most profitable year in the history of international air transport industry, with a profit of £50 million, as compared with a mere £5.5 million in the previous year. Operating revenues last year increased by 11.8 per cent. to £1,646 million and operating expenses by 8.8 per cent. to £1,596 million. This improvement was the result of a marked expansion in all types of traffic. Thus, during the year under review, scheduled passenger traffic on all the world's airlines was up by 14 per cent. as compared with that in 1958, cargo traffic by 16 per cent. and mail by a like percentage. Increases made by I.A.T.A. members, who carry 88 per cent. of the world traffic, were even better.

Prominent among those who had been pressing for a cut in fares was Sir William Hildred, Director-General of the I.A.T.A. In his annual report to the I.A.T.A., Sir William vigorously pleaded that, in order to attract new traffic and new markets which, he thought, airlines should do if they were to make their operations profitable, especially in view of the introduction of the costly jet aircrafts, fares must be reduced. The best way of reducing fares was through economy in expenditure, though this was a hard thing to do. In order to achieve this result, he advised air transport companies to devote steady and fanatical attention to economy in every phase of operation.

Emphasising the need for cutting costs, Sir William pointed out that, though the industry had enjoyed a "breath of fresh air" last year, the introduction of jets, which had raised the available seat capacity to a peak, posed many problems to the industry, financial and others. It rendered the piston-engined aircraft obsolete and re-equipment of airlines with jets a necessity. The process of re-equipment was no doubt continuing at a "fantastic rate." At the end of 1958, for instance, the I.A.T.A. members had only 14 jets. Nine months later, they had 110. By the end of September this year, they had 290 and by the close of 1962 they would have as many as 600 jets.

This programme has had a tremendous financial impact on the industry. The new capital required, according to Sir William, "has been happily forthcoming," thanks to the strong faith shown by manufacturers, governments, banks, insurance companies, etc., in the future of the industry. But the disposal of the obsolete aircrafts has posed a problem of considerable magnitude. It is estimated that there will be a surplus in the industry of anywhere from 1,200 to 1,800 piston-engined aircrafts by the end of next year. A solution to this problem will tax the ingenuity of the leaders of aviation industry.

Beirut Oil Congress

Writing on the deliberations of the conference of five oil-producing nations in Middle East and Venezuela, held at Baghdad from 10th to 17th September last, we stated in these columns five weeks ago that the oil companies would henceforth be confronted by something approaching collective bargaining on the part of producing States. The veracity of this statement is amply borne out by the *communique* issued at the end of the week-long second Arab Petroleum Congress at Beirut in Lebanon on Saturday the 22nd inst. The *communique* contains the most important resolutions adopted at the Congress the full text of which is not available at the time of writing. But it leaves the decisions taken by the Congress in no doubt at all. Thus, the Congress has (a) pledged support to the Governments of producing countries in their refusal to recognise the recent price cuts; (b) denounced the companies for having reduced the prices of crude oil and petroleum products without the approval of the Governments of the Arab producing countries; and (c) agreed to support the Arab Government's demands and efforts aimed at improving oil concession terms.

The Beirut Congress was attended by about 550 delegates from 15 countries. In addition to all the Arab League States excepting Tunisia, Kuwait and Qatar also attended as full participants. There were also observer delegations from India, Pakistan, Japan, Venezuela, Mexico, Turkey, Indonesia, Brazil and Argentina, as well as representatives of the oil companies having relations with the Arab States. The Indian delegates were Mr. A. M. Ghosh, a senior member of the Oil and Natural Gas Commission, and Mr. S. D. Bhambri, Deputy Secretary to the Ministry of Oil.

There were interesting discussions on three papers contributed by members of the Saudi Arabian delegation—"Oil prices" by Sheikh Tariki, Director-General of Petroleum Affairs, "Pro-rationing" by Mr. Mathew Skidick, and "Government's right to abrogate contracts unilaterally" by Mr. Frank Hendryx, American Oil Adviser. The most controversial of these was the note on oil prices. In this note, Sheikh Tariki contended that the oil companies were making enormous "unshared profits" outside those declared by the Middle East operating companies. Many delegates are reported to have repudiated this contention in varying terms.

On their part, the representatives of the oil companies forcefully defended the move to reduce prices in the light of recent developments. And it is a pity that the official spokesmen of the Arab oil-producing countries should have denounced the move by ignoring these developments. There is, for instance, the increasing threat from the Soviet Union the crude oil exports of which are currently running at 350,000 barrels a day. Moreover, the world surplus productive capacity of crude oil itself is appreciable, estimated at as much as 250 million tons annually. When such is the position, the prices of petroleum products cannot be artificially maintained at very high levels. The mainstay of the Arab countries' economies is no doubt oil, but the Governments of the countries cannot be oblivious of the need for ensuring to the consumers a legitimate share of the benefit of enhanced supplies through lower prices.

No less important is the fact that, if oil is to continue playing an all-important role in the economic development of the countries, they should not, as Mr. John Ivers and Mr. Edward Symonds of the First National City Bank of New York, stressed in a paper entitled "Energy for economic development" submitted at the Beirut Congress, disturb their existing relationship with the oil companies. Appropriately enough, the authors drew attention to the "very heavy investment" required for the development of new oil markets in developing countries—as much as $1,700 million over the next decade on the basis of $6,000 for every barrel of oil produced per day—and warned the Arab countries against the danger of taking any step that might undermine the position of their petroleum in meeting the strong competition, particularly in the mass markets of Europe and North America, or other energy form such as hydro-electricity, natural gas and nuclear power.

General Tyres

As has been expected for some time now, the pace of new issues in the capital market is rising. The latest in the field is General Tyres Ltd., a public limited company incorporated in June last and promoted by the National Rubber Manufactures Ltd., Calcutta, which is itself one of the largest manufacturers of mechanical rubber goods and cycle tyres and tubes in India. The National Rubber has, since its incorporation in 1946, rapidly expanded its activities, its *monthly* turnover increasing from Rs. 11 lakhs in 1956 to about Rs. 21 lakhs during the first six months of 1960. In pursuance of its policy of expansion, the N.R.M. sponsored the project for the manufacture of automobile tyres and tubes and promoted a separate company, General Tyres Ltd., for this purpose, and will be its Managing Agents.

The authorised capital of General Tyres Ltd. is Rs. 2 crores, made up of 1.5 million equity shares of Rs. 10 each and 50,000 preference shares of Rs. 100 each, of which 450 equity shares of Rs. 10 each has already been issued. It is now proposed to issue a further 799,550 equity shares of Rs. 10 each at par and 20,000—9 per cent. (free of company's tax, but subject to deduction of tax at the prescribed rate) cumulative redeemable preference shares of Rs. 100 each at par. This means that the issued and subscribed capital will be Rs. 1 crore. Of the proposed issue, the Directors and their friends have agreed to subscribe Rs. 14.955 lakhs in equity shares and the Managing Agents have undertaken to get Rs. 25 lakhs of equity shares subscribed by their own shareholders. The balance available for public subscription is only 400,000 equity shares of Rs. 10 each (Rs. 40 lakhs) and 20,000 preferences of Rs. 100 each (Rs. 20 lakhs).

The entire equity issue available for the public has been underwritten by the Bank of Baroda Ltd., Calcutta, and the entire preference issue by the Industrial Finance Corporation of India, New Delhi. Thus, the Company is fully

(Continued on next page)

EQUITIES RETREAT

SENTIMENT DEPRESSED

(From Our Own Correspondents)

BOMBAY, *27th October*

A CHILL wave blew over the Stock Exchange during the week under review and sentiment remained depressed, in the absence of any fresh lead. The *Moorat* session for the new *Samvat* year 2017, held on Thursday the 20th inst., was devoid of its traditional exuberance. Trading appeared to be more formal to mark the occasion and, as such, fluctuations were confined to a narrow range. Activity in the subsequent sessions of the week was also far from brisk and cheerful. There was a disposition on the part of operators not to enter into fresh commitments and, if possible, to lessen them as much as they could. There was, therefore, a further drop in prices over a wide front. The stringent credit conditions would appear to be a serious handicap to operators. End-of-account considerations also weighed heavily with the operators. Further, they were inclined to await the outcome of the forthcoming session of the A.-I.C.C. at Raipur commencing on the 29th inst.

Operators in Standard Mills' shares were sadly disappointed when the Chairman of the Company announced, at an extraordinary general meeting held on the 26th inst., that the Company proposed to float a separate concern for the manufacture of various petro-chemical products. The shares of the Company experienced hectic activity for sometime past on expectations that the Company would expand its activity by taking up this line and offer rights shares to raise fresh capital for the purpose. Those who had pushed up the scrips on that account were, therefore, disappointed yesterday when the Chairman disclosed that a separate company would be floated with foreign collaboration. This would mean that the investors in this venture would have to wait for a few years to get returns, unlike in the case of rights shares if the new venture had been part and parcel of the Standard Mills, even if it be that they might be asked to pay a stiff premium or the rights issue. The shares of the new Company will, however, be offered at par. The broad details of the new venture are: (1) The capital cost will amount to Rs. 7.5 to Rs. 8 crores. (2) The factory will be located in the Thana or Kolaba district of Maharashtra. (3) The scheme envisages the manufacture of 24 chemical products, some of the important chemicals being, 16,500 tons of caustic soda and/or caustic potash, 13,200 tons of chlorine, 5,000 tons of polyvinyl chloride, 4,000 tons of aluminium chloride, 1,000 tons of ethylene oxide and glycol, 720 tons of carbon tetrachloride, 300 tons of hydrofluoric acid and 300 tons of freon gas, all per annum. (4) Some of the chemicals to be manufactured will be based on petroleum feed stocks, while a few of them will be manufactured for the first time in this country. And (5) Negotiations are being carried on with foreign firms for technical collaboration.

In reply to the shareholders' demand for offering the shares to the shareholders of the Standard Mills, the Chairman said that the Directors would give due consideration to this request and see how best it could be conceded. The meeting gave its approval to the Standard Mills Company's proposal to acquire one of the mills of the Surat Cotton Spinning and Weaving Mills Private Ltd. at Dewas, near Indore. The Dewas unit is said to be equipped with automatic looms. Being situated in a deficit State (Madhya Pradesh) in respect of cloth, there is scope, according to the Chairman, for utilising profitably the surplus funds and capacity of the Standard Mills at Dewas.

To revert to the trend of the market. Steel shares were distinctly quiet, Tata Ordinaries declining from Rs. 145.25 (the closing level in the pre-*Moorat* session) to Rs. 141.75 today. Indian Irons showed a steady trend in the *Moorat* trading with a rise from Rs. 22.92 to Rs. 23.20, but subsequently gave way to Rs. 22.52.

Standards gave a lead to the downward trend in textiles, just as they led the section in the boom period. The scrips fell by no less than Rs. 242 over the week to Rs. 1,075. Centurys shed Rs. 12.50 to Rs. 452.50. Bombay Dyeings provided an exception, but the fluctuations were narrow and a small gain was recorded at Rs. 63.20. Central Indias were marked down by Rs. 6 to Rs. 107, Gokaks by Rs. 13 to Rs. 162. Khataus by Rs. 33.75 to Rs. 476.25 and Kohinoors by Rs. 17 to Rs. 282. Svadeshis suffered a sharp fall of Rs. 15 at Rs. 233.50. Morarjees, New Great, Shree Niwas, Simplex, Tata Mills and Mafatlals were the other prominent counters which participated in the reactionary trend.

Despite the credit restraints, bank shares were steady. United Commercials were conspicuous with a rise of Re. 1.80 to Rs. 78.80, Centrals (new) put on Re. 1 to Rs. 54.50 and Bank of Indias gained a rupee to Rs. 102.

Sugar shares followed the general trend, Belapurs moving down from Rs. 367 to Rs. 362. Maharashtra Sugars shed Rs. 12 to Rs. 245 and Kesar Sugars Rs. 26.25 to Rs. 198.75. Walchandnagars were, however, a shade better at Rs. 298.75.

Shipping and automobile scrips were lethargic. Scindias gave way to Rs. 13.44, after an improvement in the *Moorat* session from Rs. 13.72 to Rs. 13.96. After moving up from Rs. 18.72 to Rs. 19.20, Hindustan Motors drifted down to Rs. 18.80. Premier Automobiles fell over the week by Rs. 2.50 to Rs. 161.25.

Engineering shares were conspicuous with sizable falls all round. Aicocks were marked down by Rs. 4 to Rs. 252. Tata Locomotives gave way from Rs. 284 to Rs. 272. Premier Constructions declined by Rs. 9.50 to Rs. 297, Voltas by Rs. 12.50 to Rs. 256.50, Mahindras by 76 nP to Rs. 21 and Larsen and Toubros by 25 nP to Rs. 34.

In the miscellaneous section, Bombay Burmahs (old) dipped from Rs. 571.50 to Rs. 562. Rayons were weak, National Rayons suffering a loss of Rs. 11.50 to Rs. 458.50, Gwaliors Re. 1 to Rs. 40, Barodas Rs. 6.50 to Rs. 139 and Indian Rayons Rs. 2 to Rs. 66. Tata Oils recorded a fall of Re. 1.50 to Rs. 73 and Wimcos Rs. 12 to Rs. 266. Losses in the cash section were particularly heavy, chemicals and dyes being the worst sufferers. Ceat Tyres declined precipitously from Rs. 240 to Rs. 220 and Premier Tyres from Rs. 87 to Rs. 82. West Coast Papers provided one of the few exceptions, with a rise of Rs. 3.50 to Rs. 195.

* * * *

Madras Stock Exchange

MADRAS, *26th October*

Steady conditions prevailed on the Stock Exchange during the week under review. There was a revival of investment support in several counters. Plantation shares were well favoured. thanks largely to the amendment of the Kerala Agrarian Relations Bill exempting plantations from the provision of ceiling. In particular, teas were keenly bid. The rise in prices was also helped by encouraging advices from auction centres which suggested better export demand. Rubbers, too, attracted good support, induced by the proposed grant of an enhanced rate of subsidy (Rs. 1,000 per acre) for replanting low yielding unselected rubber areas registered with the Rubber Board. Coffees, however, were somewhat subdued, presumably owing to the news that a new disease was affecting coffee plantations in Mysore. Textiles tended to move up, following reports of good overseas enquiries for piecegoods and yarn. Sugars and miscellaneous industrials were quite active.

Among teas, Peermades spurted by 53 nP to Rs. 23.85. Chembras rose by 20 nP to Rs. 5.15. Parksides put on 15 nP to Rs. 28.15. Neelamalais were higher by 5 nP at Rs. 4.85. Blue Mountains improved from Rs. 4.90 to Rs. 5.02 before closing at Rs. 4.94 today. Devasholas changed hands at Rs. 29.87. Kil Kotagiris at Rs. 5.70 and Nonsuchs at Rs. 27.25. But Waterfalls shed 8 nP to Rs. 4.30. Periakaramalais initially rose from Rs. 3.51 to Rs. 3.54, but eased subsequently to Rs. 3.50.

In the rubber group, Cochin Malabars hardened by 10 nP to Rs. 7.05. Midlands gained a like amount to Rs. 11.85. Thirumbadis gathered 3 nP to Re. 1.53. Kailas were fully maintained at Rs. 5.10.

Coffee shares, as already stated, were generally easy, Consolidated Coffees declining by Re. 1.35 to Rs. 23.15, Coffee Lands by Re. 1.25 to Rs. 23.25 and Cowcoodys by 8 nP to Rs. 5.12. Rajendras were neglected at Rs. 14.35, as also Balanoors at Rs. 16.70. Ouchterlonys, however, attracted special support and picked up 15 nP to Rs. 5.05.

In the textile section, South Indias rallied from Rs. 150 to Rs. 160. Travancores rose from Rs. 32.95 to Rs. 33.60 before finishing at Rs. 33. Lakshmis spurted by Rs. 5 to Rs. 145. Bangalore Woollens advanced by 50 nP to Rs. 197. Maduras put on 10 nP to Rs. 33.85. Buckinghams were fancied at Rs. 196.50, Coimbatore Cottons at Rs. 160, Metturs at Rs. 380 and Premiers at Rs. 225. Vijayakumars were unaltered at Rs. 122. The Directors of the Company have declared a dividend of 6 per cent., taxable (equivalent to 4.2 per cent. tax-free) for the year 1959, as against 6 per cent., tax-free, for the previous year. Radhakrishnas were enquired at Rs. 28.50, Pankajas at Rs. 69 and Kotharis at Rs. 12. But Janardanas were marked down by Rs. 4 to Rs. 57, reflecting the disappointment of operators over the decision of the Directors of the Company to pass over the dividend for the year 1959 also. Dhanalaxmis lost a rupee to Rs. 223. Coimbatore Pioneers decreased by 50 nP to Rs. 347.

A feature of trading in the sugar section was the rise in the quotation for East India Distilleries from Rs. 42 to Rs. 44. Deccans strengthened by 40 nP to Rs. 15.40; they had gone up to Rs. 15.65 earlier in the week. Travancores scored a gain of 20 nP to Rs. 12.10. United Breweries were firm at Rs. 114.50. Indias, however, shed 28 nP to Rs. 12.62 and Cauverys 25 nP to Rs. 141.

Cements and chemicals were generally well favoured. Among the former, Indias rose from Rs. 6.92 to Rs. 7.20. Orissas were higher by 10 nP at Rs. 13.25. Travancores were steady at Rs. 8.55 and Dalmias at Rs. 12. Among chemicals, Mysore Fertilisers put on 15 nP to Rs. 10.60. Metturs improved by 9 nP to Rs. 12.65. Mysore Chemicals and F.A.C.Ts were fairly steady at Rs. 27.50 and Rs. 10, respectively. Among other miscellaneous industrials, Textools gathered a rupee to Rs. 189. Aluminium Industries firmed up by 80 nP to Rs. 22.80 *ex-div.* Ashok Leylands gathered 25 nP to Rs. 8.30. Western India Plywoods were quoted at Rs. 230, same as last week. Indian Steel Rollings changed hands at Rs. 10.62.

Calcutta Stock Exchange

CALCUTTA, *26th October*

The special session held on Wednesday last marked the beginning of the Hindu New Year on the Calcutta Stock Exchange. Although business passing was restricted on that day, deals were put through at firm rates. The Exchange remained closed on Thursday and Friday, and the feature of trading in the subsequent sessions was that, while speculatives recorded fractional losses, interested support pushed up miscellaneous shares from the attractive low levels touched previously following the Government measures to curb speculation. It would appear that the worst phase of the recessionary trend is over, and that genuine investment support is once again filtering through, albeit in small measure. Hectic rises are ruled out for the time being, and it would not be a surprise if the convalescence period is prolonged. Budget uncertainties would certainly act as a cautioning influence, and yield considerations should prove the guiding factor. Rumours that the L.I.C. would soon be in the market for some of the "blue chips" was a factor which arrested the selling pressure in evidence in recent weeks, when the heavy bull liquidation had scissored many a bulge. Anxiety continues to centre around foreign aid prospects, on which depend the possibility of unhindered imports of raw materials and essential items for industry. Meanwhile, Government's changed attitude to the private collieries, as evidenced during Monday's conference between the Union Minister for Steel, Mines and Fuel and the representatives of the coal industry has been noted with satisfaction by operators in the coal section, while the high fibre prices and New York reports of a shift of consumer-interest to cheaper-priced substitutes, in view of the high prices of jute goods, drove away buying interest from jute shares.

(Concluded from previous page)

assured of the success of its entire issue. The list for public subscription will open on 3rd November 1960 and will remain open till 8th November in respect of equity shares and till 10th November in respect of preference shares. The Directors have, however, the discretion to close the list for equity shares earlier, but not before 7th November 1960. A sum of Rs. 5 per share is payable on application in respect of equities and Rs. 50 per share on preference shares, the balance being payable on calls at not more than 50 per cent. per call.

The Company's factory will be situated in Kankinarrah District, 24 Parganas, West Bengal, which is about 20 miles from Calcutta. The plant will have a licensed capacity for an annual production of 120,000 tyres and 120,000 tubes for buses and trucks and 60,000 tyres and 60,000 tubes for passenger cars. The Company has entered into a technical collaboration agreement with Technoexport Foreign Trade Corporation, Praha, Czechoslovakia, a well-known firm in the field of rubber goods manufacture, for the supply and erection of plant and machinery and for technical assistance in the production of tyres and tubes. The Government of India has granted a licence for the import of a complete automobile tyre and tube plant of the value of Rs. 80 lakhs from Czechoslovakia.

The total capital outlay required for the project is Rs. 2.20 crores, which will be provided thus: Rs. 1 crore from share capital issue, Rs. 60 lakhs by way of loan from the Industrial Finance Corporation of India, Rs. 40 lakhs by deferred payment and Rs. 20 lakhs by borrowings from banks. The I.F.C.I. has agreed to guarantee the deferred payment to the extent of Rs. 40 lakhs to the Czechoslovakian firm.

In view of the enlarged capacity target fixed under the third Five-year Plan, which is double the capacity in 1960-61, the Directors are optimistic that there will not be any difficulty in selling the entire production. Investors will, no doubt, have to wait for a few years to earn a dividend, but they can hope to get a reasonable return after the Company goes into production.

The Company has an influential Board of Directors, under the chairmanship of Dr. A. Ramaswami Mudaliar.

Premier Fertilisers

Another new public issue which will be placed on the market in a few days' time is that of Premier Fertilisers Ltd. (Managing Agents: Messrs. Emcete and Sons Private Ltd., Madras). The details of this issue were given in our issue dated 22nd October 1960 (*vide* page 739) and the public announcement is published on pages 772-73 of this issue. The list for public subscription will open on 7th November and will close on the 14th or earlier at the discretion of the Directors, but not earlier than 11th November 1960. The issue is a relatively small one, amounting to Rs. 50 lakhs, of which only Rs. 35 lakhs will be available for the general public.

The bright prospects for the Company are highlighted by two factors, namely, (1) the demand for fertilisers will be in excess of the supplies for at least some years to come, and (2) the factory is situated in a district where paddy, sugarcane and groundnut are grown and the demand for superphosphate fertiliser will be continuous. Further, the demand from the neighbouring districts is also very high. Apart from the fact that the Company can thus find a ready market for its products, the agriculturists from these districts can get their requirements without incurring heavy cost on transport.

NEWS IN BRIEF

INVESTIGATIONS conducted at the Forest Research Institute, Dehra Dun, have shown that jute sticks can be used to make pulp suitable for newsprint-grade paper. The yield is officially estimated at 85 per cent.

Production of iron ore during the month of August 1960 was 826,000 metric tons. This brings the total output during January-August 1960 to 7,094,000 tons which was higher by 40 per cent., as compared with the 5,078,000 tons produced in the corresponding period last year.

The Government of Mysore is reported to be considering the question of handing over the management of the Kolar Gold Mines, either to the Central Government or to a separate Corporation to be set up by the State Government itself. The mines were nationalised in 1956.

All restrictions on exports of staple fibre yarn, activated coconut shell, charcoal, silk yarn—hand spun made out of silk waste, generators, gas engines and steam engines, as also bort, industrial diamonds, cinematograph equipments and bamboo used as paper-making material, have been abolished.

Trade between India and Poland is expected to increase by 20 per cent., under the terms of a new agreement signed at Warsaw last week. Under the agreement, Poland will export to India industrial equipment, machine tools, mining machinery, rails, chemical products and paper, in exchange for vegetable fibres, ores, untreated leather and food products.

The Central Government has decided to institute one prize of the cash value of Rs. 3,000 along with a President's gold medal for evolving improved bullock-drawn implements and another prize of the cash value of Rs. 2,000 for the hand tools, including garden tools. The prizes are to be awarded annually commencing from 1961-62 to successful competitors.

The World Bank has agreed to grant a loan of $20 million to the Industrial Credit and Investment Corporation of India. A formal agreement to this effect is to be signed shortly. The I.C.I.C.I. had received two loans of $10 million each in 1955 and 1959. The I.C.I.C.I. is the only organisation in the country that gives foreign exchange facilities to industrialists.

The Tariff Commission has been asked to undertake a fresh examination of the cost of cement production in the different manufacturing units for determining the fair ex-works prices payable to producers from 1st July 1961. The three-year period, for which the Government had fixed fair ex-works prices on the basis of the Tariff Commission's recommendations in 1958, will expire on 30th June 1961.

The production of copper ore during January-August 1960 was 291,414 metric tons. This represents an increase of about 8 per cent., as compared with the output of 269,252 metric tons in the corresponding period of the preceding year. The entire production was reported from the Singhbhum district of Bihar State. The production of copper metal during the same period was 5,904 metric tons, as compared with 5,184 metric tons in the corresponding period of 1959.

A licence has been granted for the establishment of a Rs. 9-crore pulp and paper factory to be located in the North Canara district in Mysore State. The factory will be put up in the private sector in collaboration with a French company which will participate in the issue capital to the extent of Rs. 50 lakhs, besides providing a deferred credit of Rs. 362 lakhs. The proposed factory, expected to go into production by 1962, will manufacture 110 tons of dissolving pulp per day from bamboo.

An Indian delegation, led by Mr. Karnail Singh, Chairman of the Railway Board, is expected to visit Karachi for talks with the representatives of the Pakistan Government over the proposal to have a railway link between the two wings of Pakistan, that is, from Rawalpindi to Dacca through Indian territory. The talks are scheduled to take place for three days from 14th November. It will be recalled that some discussions on this subject were held at New Delhi previously, but no agreement has so far been reached on important questions, such as relaxation of customs and visa regulations.

The U.S. Government has approved of a $25 million D.L.F. loan (Rs. 11.9 crores) to India for financing the purchase of equipment for small and medium-scale private enterprises in the fields of metallurgy, electrical installations, machine tools, earthmoving machinery and chemicals. The loan is repayable in rupees. The approval of a loan of this type marks a departure from the practice of D.L.F. in recent months, during which it has given only project-type loans. This is the 22nd loan given to India by the D.L.F. and brings the total amount of U.S. economic assistance received by India to $3,654 million (Rs. 1,739 crores).

The Central Board of Revenue has decided that the existing Tobacco Regional Advisory Committee and the Manufactured Products Advisory Committee functioning in each Central Excise Collectorate should be merged into one Advisory Committee for both manufactured and unmanufactured products in each collectorate. The existing non-official members of both the Committees will continue as members of the newly constituted single committee for their full term. The functions of this Committee will be purely advisory and it is constituted mainly for resolving procedural difficulties of a general nature.

The Madhya Pradesh Government has decided so to amend the ceiling on Agricultural Holdings Bill (already passed by the Vidhan Sabha) as to reduce the ceiling from 28 "standard acres" to 25 "standard acres." This move is a sequel to the suggestion made by the Central Committee for Land Reforms. It is also proposed to lower the maximum acreage permitted for dependents from 53 to 50 standard acres and to impose certain restrictions on the price to be charged by individual holders for the surplus land to be disposed off by them within the prescribed period.

A simple and economic method of manufacturing diaminophenol sulphate, an important chemical used in photography and for dyeing hair and fur, has been developed at the Central Electro-Chemical Research Institute at Karaikudi. Among the advantages of the new method are the low cost of the base material, a yield of 60 to 65 per cent. and the facilities of re-use of the spent catholyte. The cost of production of diaminophenol sulphate in a plant with an annual capacity of 15,000 lbs. has been estimated at Rs. 6.30 per lb., the lowest compared with other electrolytic and chemical processes. The cost of the imported material under the trade name *Amidol* is said to be Rs. 36 per lb.

During the half-year ended 30th September 1960, the Import Trade Control Organisation received a record number of 216,073 applications, as compared with 178,762 during the corresponding period last year. The disposal of applications kept pace with receipt and the number of pending applications was 1,403 only or 0.6 per cent. of the total applications. In addition, the Organisation also dealt with a large volume of correspondence on the question of policy, interpretation of rules and regulations, appeals, etc., from the trade and various chambers of commerce and trade associations. The number of such communications during the period was over 750,000. A close watch was kept in order to prevent malpractices. Forty-one firms were black-listed during this period for contravention of the Import and Export Trade Control Regulations. In order to simplify the procedure and ensure speedier handling of applications, a large number of items were licensed on a yearly basis. The "repeat-value" licensing scheme introduced during the period October 1959-March 1960 was continued. Facilities were also extended for import of essential raw materials and equipment by the indigenous industries during this period.

From Abroad

Nigeria has joined the General Agreement on Tariffs and Trade (G.A.T.T.) as a full member.

Cuba has withdrawn its membership of the International Bank for Reconstruction and Development.

Soviet scientists are claimed to have discovered a new antibiotic, called *Monomycin*, that is very effective in surgical operations on the abdominal cavity.

The Government of Cuba has nationalised the import trade. All imports will, hereafter, be made by the Cuban Bank of Foreign Trade. Export trade had already been nationalised three months ago.

Italy and Russia signed last week a barter deal under which, the former will buy Soviet oil in exchange for 240,000 tons of steel tubing for oil and gas pipelines as well as a few other goods.

The first fully-automated post office in the U.S., capable of handling 1.5 million pieces of mail a day, has been inaugurated at Providence, Rhode Island. The new post office uses automated machinery to convey, sort, cancel and route letters and parcels.

The U.S. Government has banned all kinds of exports to Cuba, except those of medicines and some food materials. At the same time, the Maritime Administration has barred the sale, transfer or charter of American ships to Cuban interests without its approval.

The Indian rupee has ceased to be legal tender in Kathmandu, Nepal, with effect from the 17th inst., as part of the Government's policy to end the dual currency system in the country. Elsewhere in the country, the Indian rupee will continue to be in currency for some time more.

National income in the U.S. rose to a new high annual rate of $419,000 million in the second quarter of 1960, which was higher by $5,000 million as compared with the first quarter of 1960, and $14,000 million above the corresponding quarter of 1959. Most of the major types of income, other than corporate profits, shared in the rise in income.

West German coal and steel industries spent DM 45 million for research and promotion of science last year. About DM 10 million were non-committed grants of steel companies for German science. Another DM. 7 million were spent for university and other non-industrial research in steel. The balance of DM 28 million was mostly used to finance joint research programmes of the coal industry.

In order to expand exports, the U.K. Government has decided to set up a new Export Council for Europe on the lines of the existing Dollar Export Council. The Council, headed by Sir William McFadzean, President of the Federation of British Industries will initially be concerned with the U.K.'s trade problems *vis-a-vis* the members of the European Free Trade Association, and reach out to the rest of Europe at a later stage. Besides, the Government has authorised the Export Credit Guarantee Department to insure credit on longer terms than the normal maximum in certain special cases.

In a report published recently, the U.N. Food and Agriculture Organisation has forecast a continuous increase in world agricultural production in 1960-61. Wheat, sugar, fats and oils, meat, cotton and some other commodities are expected to touch record levels of output. Large grain crops in exporting countries this autumn indicates, according to the report, that stocks of wheat and coarse grains will rise sharply in 1960-61. Coffee stocks, too, will increase further. Prices for agricultural products had varied little so far this year, as against 1959, but there may have been "a slightly further increase" in their relation to the prices of manufactured goods.

The growth rate of West German automobile industry slowed down somewhat in September. The industry produced 157,908 passenger cars. This was, no doubt, higher by about 20 per cent., as compared with September 1959, but not quite as much as the 27 per cent. growth rate reported for the first nine months of 1960 taken together, as against the comparable period of 1959. Baby cars, with less than 500 c.c. of cylinder volume, are losing ground. The production of this type of car was 25 per cent. lower, as compared with the first three quarters of 1959, while production increases ranging from 23 and 117 per cent. were recorded, by different types of larger cars.

With a view to curbing the rapid economic expansion in West Germany, the Association of German Chambers of Commerce and Industry has put forward a five-point plan. The provisions of the plan are: 1. Neutralisation of purchasing power by not spending all taxation revenue and by permitting industrial concerns to deposit money with the Central Bank. 2. Powers to control hire-purchase on the British model. 3. Restriction of taxation concessions made for funds invested in housing. 4. Increased aid to the developing countries to be financed by loans raised from business on the model of the DM. 1,000 million (£85 million) development loan fund, to which industry proposes to subscribe. 5. Measures to encourage private capital exports.

The saving potential, especially voluntary private saving, has played a major role in the remarkable economic growth of Japan in recent post-war years, according to the September issue of the quarterly *Economic Bulletin* of the Economic Commission for Asia and the Far East. Defining "saving" as the "residual of current income after appropriation for current expenditure," irrespective of whether this residual is in the form of tangible or financial assets, the article analyses the formation and distribution of saving and the channels through which it is transformed into investment. Stating that the propensity of urban workers to save has gradually risen and is at present by no means lower than that both of pre-war Japan and of developed countries today, the article emphasises that the most significant reason for this high propensity is the traditional saving custom, supported by the wide propagation of education, hard-working habits, strong will to raise the standard of living of the Japanese people and so on.

PERSONAL

MR. R. D. Birla, chief of Birla Brothers, Bombay, has returned to Bombay after spending two months in the U.K.

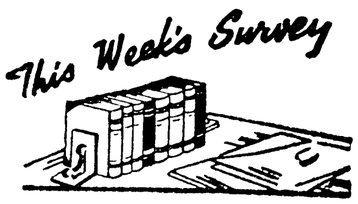
Dr. H. Winkhaus, a noted West German industrialist, has arrived in India for a three-week visit of important industrial centres, including Rourkela.

Mr. G. D. Birla, who went on a business tour of Western Europe, has returned. He has deferred his intended tour of Russia as a guest of the Soviet Government to a future date.

Mr. P. S. N. Prasad, a former Economic Adviser to the Reserve Bank of India and a member of the Economic Division of the World Bank, has been appointed Economic Adviser to the Federal Government of Nigeria. The World Bank has lent his services to the latter for a maximum period of three years.

Mr. K. Swarup, Chief Administrative Officer, Integral Coach Factory, and Mr. R. Rajagopalan, Director, Standards (Mechanical) of the Research (Design and Standards) Organisation of the Ministry of Railways, have left for Argentina to study the requirement of the Argentine Government in respect of the global tender they have called for about 300 railway passenger coaches, and explore the possibilities of the Indian railways giving quotation against the tender.

Mr. G. Pande, until recently Chairman of the Hindustan Steel Ltd., and a former Chairman of the Railway Board, has been appointed Chairman of the Advisory Committee on the manufacture of low-cost cars in the public sector. The other members of the Committee are: Messrs. K. B. Lall, Additional Secretary, Ministry of Commerce and Industry, V. K. R. Menon, Director, International Labour Bureau (Indian Branch), New Delhi, K. L. Ghei, Joint Secretary, Ministry of Finance, Rear-Admiral D. Shankar, Controller-General, Defence Production Organisation, Ministry of Defence, and Dr. B. D. Kalelkar, Senior Industrial Adviser, Ministry of Commerce and Industry.



COMMODITY PRICES

THE trend of commodity prices in India continued to be upward during the third quarter of the current calendar year. The all-India index number of wholesale prices (base: 1952-53=100) for the last week of September stood at 125.4 -it was higher still at 125.7 in the week ended 8th October—as against 122.9 three months before, 117.7 early in the year and 116.2 a year before. Thus, over the year ended September 1960, the index advanced by 9.2 points, or a rise of nearly 8 per cent. The increase in prices during the third quarter was accounted for by all the constituents, with the solitary exception of liquor and tobacco, the average index of which receded from 109.5 in June to 105.5 for the last week of September. The index of food articles moved up from 120.3 to 122.9, of industrial raw materials from 139.7 to 145.7, of intermediates (manufactures) from 127.2 to 129.2, of finished products from 118.7 to 122.5, and of fuel, power, lighting and lubricants from 118.0 to 119.5.

Among the food articles, pulses contributed largely to the rise in prices, their combined index rallying from 90.0 in June to 94.7 towards the close of September. As for cereals, the price index, which had gone up from 107.0 in June to 110.0 in July, tended to decline thereafter and stood at 107.4 during the week ended 1st October. The following table indicates the trend of prices of a few important foodgrains prevailing at Hapur, as well as other agricultural commodities:

Commodities	Latest available	Three months ago	At the begining of the year	A year ago
Foodgrains :				
Wheat (per maund) ..	17.50	17.75	18.62	17.50
Rice (Basmati) (per maund)..	31.50	33.00	31.00	33.50
Maize (per maund) ..	12.94	12.25	11.37	11.41
Jowar (per maund) ..	13.50	15.00	11.75	13.00
Other commodities :				
Gur (pansera) (per maund) ..	17.75	17.00	17.25	23.00
Khandsari (dry) (per maund..	34.00	39.50	42.00	44.00
Pepper (ready) (per maund) .	245.00	225.00	205.00	98.50
Oilseeds :				
Groundnut (Nizam bo'd) Per cent	44.00	49.50	39.25	36.00
Castorseed (Madras) Per cwt.	33.87	35.25	32.50	30.37
Linseed (Bold) Per cwt. ..	32.50	33.62	34.00	34.62
Cotton (Mogtal Jarilla Fine H") per candy	820.00	950.00	950.00	755.00

The latest reports from the different parts of the country indicate that prices of foodgrains have generally registered a fall and that they have not shown any distinct tendency to rise even in areas affected by drought such as Andhra Pradesh and Mysore or in the flood-affected areas in Orissa. The decline in prices is attributed to larger arrivals in the terminal markets and brighter crop prospects for the 1960-61 season. The comfortable supply position must be attributed to large-scale distribution of grains through fair-price shops and continued curbs on bank advances against grains. The total production of foodgrains in 1960-61 is expected to be of the order of 74.00 million tons, as against 71.75 million tons in 1959-60 and 74.92 million tons in 1958-59; sometime last month, Mr. S. K. Patil had put the production even at 75.00 million tons. In a Press interview at Madras on Sunday this week, Dr. Punjabrao Deshmukh, Union Minister for Agriculture, stated that there would be a record paddy crop this year, despite droughts and floods in several regions. He expected the country to be fairly self-sufficient in rice, especially because many people had started supplementing their diet with wheat.

With the anticipated increase in production and the monthly arrivals of about 300,000 to 350,000 tons of foodgrains from the U.S. under the 17-million-ton P.L. 480 agreement, the prices of foodgrains should, other things remaining the same, seek lower levels in the coming months. In sympathy with foodgrains and following improvement in the production of sugarcane, *gur* and sugar, the prices of these sweetening agents may also be expected to record a fall. The sugarcane crop harvested in 1959-60 was a bumper one, being 75.04 million tons, which compared very favourably with 70.46 million tons produced in 1958-59. Indications are that the current season will witness a still higher level of cane output. The all-India first estimate of the cane crop for 1960-61 puts the total area at 5,157,000 acres (2,087,000 hectares), as against 4,975,000 acres (2,013,000 hectares) sown in the previous season.

Another important agricultural commodity the prices of which have tended to recede of late is cotton. Moglai Jariila (25/32" staple length length) is currently quoted in Bombay at Rs. 820 per candy of 784 lbs., as against Rs. 950 touched in July. Nevertheless, it is still much higher as compared with the rate of Rs. 755 prevailing this time last year. The prices may fall further, albeit only slightly, as more and more of the current crop and also imported cotton arrive in the different markets. The psychology of shortage among traders is gradually yielding place to one of adequacy.

Oilseeds have also staged a retreat in the past few weeks, but market circles feel that prices will once again harden in the not too distant future. This view is based on the ground that the supply position will fail to keep pace with the rising trend of demand. The trade estimates of the oilseeds crops for 1960-61 place the total output at no more than 6,440,000 tons, which, though it compares slightly favourably with 6,352,000 tons in 1959-60, is substantially lower than what was actually harvested in the 1958-59 season, namely, 6,907,000 tons. The groundnut crop is estimated at 4,500,000 tons in shell (4,390,000 tons in 1959-60 and 4,812,000 tons in 1958-59), castorseed at 115,000 tons (108,000 tons and 112,000 tons), linseed at 422,000 tons (425,000 tons and 447,000 tons), sesamum at 400,000 tons (392,000 tons and 511,000 tons), and rape and mustard at 1,000,000 tons (1,037,000 tons and 1,025,000 tons).

It will be evident from this brief resume that agricultural commodities will generally rule easier in the next few months. If the advantage of a fall in prices is to be enjoyed by the widest section of the community, the Government should allow sufficient time for prices to stabilise themselves at a reasonably lower level before plunging into price support measures. One is constrained to stress this point, because of Dr. Deshmukh's remark early in the week that the Government should protect the farmer when there are bumper crops and prices fall and that minimum prices must be fixed for various commodities in consonance with the prices of other articles. This journal is no less anxious than the Government that agriculturists should be assured of fair prices. Only, fair prices should not mean inflated prices which are not fair to consumers.

ENGINEERING EXPORTS

It is now abundantly clear that a viable balance of payments position cannot be reached by India, unless its capacity to export is strengthened alongside expansion of production in the different sectors. Although every effort must be made to augment exports of traditional commodities like tea, cotton textiles, jute manufactures, coffee, vegetable oils, tobacco, shellac and pepper, increasing reliance will have to be placed on new items of exports such as engineering, chemical and pharmaceutical goods in which India has made some substantial progress in recent years. The scope for earning much precious foreign exchange through enlarged sales abroad of engineering goods in particular seems to be vast. This at any rate is the view held by persons who are well informed. In his speech at the recent annual meeting of the Jay Engineering Works Ltd. held at Calcutta, Lala Shri Ram, Chairman of the Company, for instance, expressed his confidence that, by the end of the third Plan, exports of engineering goods alone could rise to Rs. 50 crores a year, provided the Government and the manufacturers were to "make up their minds."

The Government is no doubt fully conscious of the urgency of promoting exports. In fact, quite a number of steps have been taken. Nevertheless, much still remains to be done. Of utmost importance is the need for a quick decision on the part of the Government as regards the various incentives to be given for exports or difficulties to be removed. Lala Shri Ram did well to lay special stress on this aspect. An interesting suggestion he threw here was the appointment of a high-power committee consisting of, say, the Secretaries of the Finance, Industries, Steel and Railway Ministries and two representatives of the Export Promotion Councils, "with very wide power to take quick decisions and implement them without too much of red-tapism." He also urged provision of long-term credit on exports of engineering goods at a low rate of interest and concessions in income-tax.

Lala Shri Ram had also a word or two to say to fellow industrialists. He exhorted them to make every effort to export more and more year after year, though the margin of profit might be lower than in the case of the domestic market. Indeed, he wanted them to share *pro rata* on the basis of their production such loss as might be suffered by those whose goods were of approved quality and who exported over a specified minimum. He even went to the extent of suggesting that, if manufacturers could not form their own associations for this purpose, a small cess might be levied and that the exports of these goods might be handed over to the State Trading Corporation which would utilise the normal trade channels for the purpose.

The aforesaid suggestions of Lala Shri Ram amount to a plea for the provision of a subsidy. There is nothing revolutionary nor novel about it. Even highly developed countries have resorted to such practices from time to time. Britain, for instance, has followed for a long time a system of two prices, one for the home market and another for export markets. As engineering industries in India will have to compete with their confreres in the developed countries, who have had the benefits of low capitalisation and higher technological and marketing efficiency, there is a strong case for giving special facilities to exporters of engineering goods, though this may not be true of consumer goods or food articles. But care must be taken to ensure that such assistance does not (*a*) lead to an unduly high price for domestic buyers of engineering goods, (*b*) serve as a cover for inefficiency on the part of either management or labour and (*c*) engender a sense of complacency among the exporters in the discharge of their normal functions such as market research and sales promotion. Lala Shri Ram, however, carries his enthusiasm for exports too far when he advocates the use of State Trading Corporation. While there may be a need for collective action on the part of manufacturers to push through exports of products which have to face stiff competition from superior sources, the S.T.C. is unlikely to replace or meet that need effectively. Lala Shri Ram's confidence in the ability of the S.T.C. to pioneer export markets in engineering items, requiring after-sales servicing, etc., is unlikely to be shared even by his colleagues in industry and trade.

TOBACCO

India is one of the largest producers of tobacco, next only to the U.S. and China. Although the area under tobacco cultivation in India is only about 0.4 per cent. of the total area under cultivation, it plays a significant role in the economy of the country. Tobacco provides employment to about 1,600,000 growers and 900,000 curers in the country. Besides, about 500,000 merchants and commission agents are engaged in this trade. Moreover, the industry gives employment to millions of people in different forms and in different parts of the country. Tobacco is a good source of income to growers and traders alike. Indeed, in some parts of the country, tobacco constitutes the most important cash crop and the mainstay of the cultivators. Apart from earning about Rs. 12—14 crores of foreign exchange annually, it contributes about Rs. 45 crores to the Government's revenue by way of excise duty. The value of the total output of raw tobacco is estimated at about Rs. 50 crores a year. The total production rose to 281,000 tons in 1959-60, from 261,000 tons in the previous year. Despite the puritanical aversion for smoking and chewing in India, the consumption of this commodity has been on the increase in recent years reflecting the extent to which the country is getting sophisticated. Inaugurating the All-India Tobacco Seminar at Guntur (Andhra Pradesh) this week, Dr. Punjabrao Deshmukh, Union Minister for Agriculture, pointed out that, along with the increase in population and national income, the domestic demand for this stimulant also would steadily go up in the years to come. He, therefore, emphasised the need for raising production of good quality tobacco. Emphasis should be laid, he took care to add, on increasing the yield per acre. This point needs to be particularly stressed, since extensive cultivation of this cash crop will trespass upon the land available for food and vital cash crops. The output of tobacco should, therefore, be raised mainly by adopting better techniques of production, use of good seeds and the like.

While an increase in tobacco production will be quite welcome, it must be borne in mind that adequate outlets also must be found for it. In recent years, tobacco growers have been experiencing periodical crisis of mounting stocks and fall in prices. This state of affairs will not be conducive to the growth of tobacco cultivation. Now, only about 14 per cent. of tobacco produced in the country is exported. It should be possible to raise this percentage, provided the right type of tobacco were grown. Dr. Deshmukh rightly insisted that growers should devote greater attention to improve the quality of their produce, if they wished to sell more of it in overseas markets. The prospects for exporting top grade tobacco, such as the *virginia* variety, are quite bright. Dr. Deshmukh highlighted this point by drawing attention to the fact that, although top grades accounted for only about one-third of the total production, they accounted for as much as two-thirds of the total value of exports. Practically, the entire top grade tobacco was being purchased by the U.K. Emphasising the need for expanding production of top-grade tobacco further, Dr. Deshmukh observed:

"By and large, there has been no difficulty in the marketing of our top grades and even medium grades of *virginia* tobacco. There is, however, no regular outlet for the low grades. You will recollect that some time back, the low grades had accumulated and had presented a serious problem. They were, however, cleared, albeit with some difficulty, thanks to the interest shown by China in these grades. China took 28 million lbs. of unmanufactured tobacco in 1956-57 and 21 million lbs. in 1958-59. She, however, did not enter the market during last year nor is there any indication that she will do so this year. It is, therefore, necessary to find alternative markets for these low grades, so that the tobacco trade is not faced with the problem of accumulation of stocks. Simultaneously, however, efforts shbuld be made to improve the quality of our produce so as to minimise the outturn of low grade."

It will be seen from the aforesaid quotation that Dr. Deshmukh has clearly established the case for switching over from low and medium grades to high grades. But it is not enough if this point were established before a select gathering in Guntur. The message must be conveyed to every tobacco grower in the country and, what is more, he must be enabled to effect the necessary change in cultivation. It is the responsibility of Dr. Deshmukh to see that the State Governments concerned successfully carry out the task.

There is no denying the fact that grading and standardisation of tobacco, and the compulsory scheme for quality control, introduced in 1945, have gone a long way towards winning the confidence of importers abroad. Before the introduction of these measures, Indian exports of tobacco were quite insignificant, fetching no more than a crore of rupees. This has now gone up by over 10 times. India has now actually become the fifth leading world exporters of tobacco, after the U.S., Federation of Rhodesia and Nyasaland, Turkey and Greece. The moral is clear.

I.B.R.D. SURVEY OF LIBYA

Libya brings immediately to one's mind the decisive battles waged by the British Army against the Germans on the North African front in the last World War. This former Italian colony became independent in 1951 and has since been governed by a constitutional monarchy, with a federal system of government which provides for a large measure of autonomy to each of its three provinces, Tripolitania, Cyrenaica and Fezzan. But this Moslem country which has four (federal and three provincial) separate governments, each with its own head of state, parliament, cabinet and extensive range of departments, has a population of only 1,153.000. With an area well over half the size of India and a population density of one per square kilometre, Libya may seem to be woefully underpopulated. But there is no warrant for any such impression, for the land is almost entirely desert and most of the people live along the narrow Mediterranean coast and just 100,000 near oases widely scattered throughout the country.

This underdeveloped country, for which national income statistics are not readily available. seems now to be poised for expansion under the impact of the recent discovery of oil. This much is recognised in the report (*The Economic Development of Libya*) of a survey mission organised by the World Bank at the request of the Libyan Government. But this recognition that the discovery of oil holds out the long-term prospect of establishing a prosperous economy is qualified by the finding that the petroleum industry is unlikely in itself, either directly or indirectly, to provide employment and wages for more than a fraction of the Libyan people. The qualification is certainly necessary in the light of experience in some Middle East countries which, with their excessive reliance on the petroleum industry, have not developed well in all directions. It is. perhaps, with a view to avoiding a repetition of such experience in Libya, too, that the World Bank Mission has surveyed the possibilities, and suggested plans for all-round economic development of that country. The Mission's specific recommendations for a five-year plan are calculated to develop all sectors of the economy.

A high priority in this plan is rightly given to training of skilled manpower, because the rate of economic growth will be powerfully influenced by the supply of professional and technical personnel. An equal priority is assigned to the creation of a more effective organisation to plan and execute economic policies and projects. This, according to the Mission, can be done only by strengthening the authority of the federal government and by securing better co-ordination between the Centre and the provinces. Since the oil boom has its inflationary impact on the Libyan economy, the Mission has suggested liberalisation of import policy, immigration of skilled workers from abroad and invitation to foreign firms to undertake major construction projects. Even if all this is done, conditions in Libya will still not favour the development of industry on a large scale. Greater reliance will, therefore, have to be placed on agriculture, animal husbandry and fisheries and on tourism for increasing the national income. The Mission has suggested several suitable measures for the development of these sectors.

COLOMBO PLAN

In assessing the achievements of the Colombo Plan, the Colombo Plan Council has, indeed, been very modest. The Plan alone, says the Council in its annual report for 1959-60, cannot claim credit for the changes for the better that have occurred in the countries covered by the Plan since its inception in 1950. But it justifiably claims that "it can record that the novel forms of international co-operation that it was convened to promote only nine and a half years ago are accepted and working smoothly in South and South-East Asia and in the Colombo Plan countries outside the area."

Here is proof of the more tangible benefits which the Colombo Plan has brought to member-countries apart from encouraging economic and technical co-operation which it, no doubt, did. Since 1950, when the plan took shape, as many as 15,116 persons in South and South-East Asia learnt new skills and attained higher standards of efficiency in skills previously acquired. 1,729 experts visited the countries of the region to perform and demonstrate a wide variety of highly technical tasks. Equipment valued at £9.50 million came into South and South-East Asia. The overall cost of the Colombo Plan technical aid borne by countries providing the training or supplying the experts and equipment is estimated at £46.40 million. In 1959-60 alone, 4,268 persons received training in skills, ranging from steel engineering to journalism and printing. 535 new experts, in addition to those already in the field, and equipment valued at £2.96 million were supplied by the donors to the member-countries.

It is gratifying to note that India played a leading role in this international give and take of technical assistance. Of the 4,268 trainees given training last year, 1,045 persons were from India. Of the 535 experts, India received 93. On its part, India supplied four experts and provided training facilities for 272 trainees, bringing the total number of persons trained by it since the inception of the Plan to a respectable figure of over one thousand. In fact, of the eleven countries which provided training facilities to their Colombo Plan partners in 1959-60, India ranked fifth, next only to the U.S., the U.K., Australia, and Canada.

It is a measure of the success of technical co-operation under the Colombo Plan and other aid programmes that, in a number of practical and technical skills, the countries of South and South-East Asia are now in a position to provide a high level of training for their own people. It is a heartening feature of the Plan that member-countries, which have good training facilities to offer, are willing to make them available to others that still lack them. It is true, as the annual report of the Council pertinently remarks, that ten years is too short a time to bring about dramatic changes in the welfare of 700 million people. But there can be no doubt that, apart from providing training facilities, experts and equipment so badly needed by the countries of the region, the Colombo Plan has been instrumental in the recipient fostering that spirit of international economic co-operation among the member-countries for which it has become almost a synonym.

THE GOLD RUSH

(From Our Own Correspondent)

LONDON, 21*st October*

THE fantastic rise in the price of gold on the London Bullion Market at the end of this week is the result of speculative frenzy operating with inadequate supplies. The possible repercussion of this agitation of the market and the rumours to which it gives rise may become significant. At the moment of writing, it is a tempest in a teacup.

LONDON LETTER

The London gold market works in a fairly rigid manner. Every morning, the broker members meet to marry off purchases and sales and to agree on a price at which all such business should be settled. Gold may be purchased by holders of foreign currencies or overseas holders of free sterling; apart from the direct offerings which may be made to brokers, the only source of supply which they have is the Bank of England which is acting as the agent of Commonwealth banks of producer countries. The market itself is completely free and, when there is no speculative rush, sales from the Bank of England to the market or even by the Federal Reserve Bank (the U.S.) are enough to keep it in balance. The price at which it will be kept in balance is normally the price at which gold, sold by the Federal Reserve Bank at a fixed $35 per ounce can be resold in England—allowing about 9 cents for the Federal Reserve Bank's charges and about 15 cents for shipment, there should normally be a ceiling price in the market of not more than $35.25. But, on Tuesday the 18th inst., the ceiling was exceeded by 10 cents, on Wednesday by a further 20 cents; and, on Thursday, the normal price was lost in a wave of speculation which at one time put the price at $41.

Anyone buying gold at this price is going to lose money, unless the American price of gold is altered; that is, the dollar is formally devalued in terms of gold.

The position of the Federal Reserve Bank is that it buys and sells gold without limit at $35, but only to and from central banks and, of course, U.S. producers. Theoretically, the Bank of England could buy gold from the Federal Reserve Bank and sell it in the London Bullion Market and make a profit until prices come back to parity. But, if it did this, it would be indulging in the same game of speculation against the dollar and, since the Federal Reserve Bank could quite easily sell gold into London if it wants to, the business of controlling the market can just as well be left to the American authorities.

Each week sees a gold drain from America. The total for the year to date is some $875 million, reducing the present stock to the equivalent of some £6.500 million. The U.S. remains the world's richest gold depository, and it can afford a drain even of this order for some time. The reason for the drain is not the activity of the gold market, except in a very indirect sense. Americans and dollar holders can get better rates on their money in Germany and the United Kingdom than in the United States. There have been heavy flows of dollars (hot money) into these countries and Switzerland. But now that Switzerland is penalising hot money by refusing to pay interest on it and even charging a commission, some of the American funds are being switched into gold.

There are, therefore, two gold markets in the world. The first market between central banks in which gold is priced at $35, and the second the free gold markets, such as the London Bullion Market in which the price may be anything if demand sufficiently outruns the supply. The latter market is at the present moment simply the playground of either scared American investors or anti-dollar speculators. The Federal Reserve Bank and, indeed, the American Government have stated that there is no intention to devalue the dollar and the buyers on the gold market can do what they like—it will make no difference to the transactions between central banks. On the other hand, there is no doubt that they would like to see Bank rates in Germany and Britain come down and so stop the excitement of the American dollar exporter. The real culprit is considered here to be Western Germany, which, with a very active balance of payments, persists in operating as if it were a poor country which must fight inflation and can neither invest enough abroad or attract sufficient imports.—*All Rights Reserved.*

EFFECTS OF HIGH TAXATION

KEYNES' OBSERVATIONS IGNORED

THE idea that increased taxation is necessarily anti-inflationary is based on a peculiarly static view of the economic process. It assumes that, if the Government imposes higher rates of taxation or additional (new) taxes, the extra revenue represents money extracted from the community and to that extent the community's spending is reduced. But this approach ignores entirely the dynamics of the matter—it ignores entirely how the community is likely to react to the additional taxation which it now finds itself compelled to pay. The community does not submit passively to higher taxation. It finds the increased taxes irksome, and the natural irritation which it feels is translated into a desire to do something about it. In one way or another, the different sections of the community eventually take action to counter the effects of the increased taxes on their own pockets. And this activity inevitably gives rise to inflationary consequences.

Let us suppose that the increased taxation takes the form of higher rates of personal income taxation, designed, in the main, to reduce consumer expenditure. The wage- or salary-earner finds his pay packet lighter; the private business man his profits lowered; the professional man his income reduced. They do not take this "lying down." They seek round for ways to circumvent the impact of the higher taxes on their incomes. In the case of the wage- and salary-earner, this will soon result in a "build-up" of pressure for higher wages or salaries; the professional man may decide to raise the scale of his fees or charges; the business man will endeavour where possible to lift his prices so as to maintain his profits intact.

Nor would these consequences be avoided if the increased taxation took the form of higher indirect taxes on items of consumer expenditure. Apart from the undesirable direct effect of such taxes in raising prices, the higher living costs will give rise to a similar series of consequences as the various sections of the community adjust themselves to the new situation and endeavour to maintain their real income intact.

On the other hand, if company tax is increased, the tendency of companies will be to treat the additional tax as a cost and raise their selling prices in order to maintain their profits. For instance, companies engaged in constructional work, which look for a given profit on jobs they quote for, will almost certainly raise their quotes to cover the additional tax. If the jobs are Government jobs, the practice will increase the cost of capital projects and involve Governments in additional expenditure.

Raw Material of Economics

One of the great laws of economics which Keynes propounded—but which has somehow been mislaid by many of his followers—is that people develop a habitual standard of life which they do not willingly or easily relinquish and which they strive to maintain. Keynes never forgot—indeed how could he—that the primary raw material of economics, in its practical sense, consists of human beings and that natural human reactions to given measures of policy could be ignored only at the possible cost of rendering the measures abortive. With too many economists today economics has become a kind of exercise in simple mathematics, of addition and subtraction, so that, if you subtract so much from this form of expenditure and add it on to that, total expenditure is unaltered and balance is maintained. This ignores human reactions to the measures undertaken and makes of economics a far simpler thing than in fact it is.

Keynes applied his concept of a "habitual standard of life" to his analysis of the effect of a change in income upon the spending and saving of the income recipient. He argued that, faced with a reduction in income, a man would tend to reduce his savings rather than his customary expenditure on consumption. This is not without relevance to the problem we are considering.

An increase in taxes designed to reduce expenditure on consumption will be nullified, at least in part, by the fact that people will call upon their savings in order to maintain their spending on their everyday needs. Increased taxation will thus mean a reduction in voluntary savings.

It might be argued that, while increased taxation would have little or no effect on spending for consumption, the drawing down of savings will mean that less money will be available for private investment. As a consequence, investment expenditure will be reduced and this will have at least some deflationary effect. But, in an environment of full employment and rapid economic development and expansion of markets, it is hardly likely that business men will submit tamely to this situation. They will strive to obtain their funds from other sources, by additional borrowing or, if that is denied to them, by competing for some of the savings going into Government and semi-Government investment; or by raising prices to provide additional finance from their own earnings. All these responses would intensify inflationary pressures—the first and third obviously, the second, by forcing the Government to seek other avenues of finance to maintain its own expenditure.—*By courtesy of* REVIEW, *published by The Institute of Public Affairs, Victoria, Australia.*

DOUBLE TAXATION IN EUROPE

The third report of the O.E.E.C. Fiscal Committee, entitled *The elimination of double taxation* follows on the two reports published under the same title in 1958 and 1959. It contains a new series of five articles which the Council of the O.E.E.C. recommended member-countries to adopt in the double taxation conventions applying between themselves, together with detailed commentaries of an illustrative and interpretative nature. Two of these articles are of special importance, as they contain uniform rules concerning the allocation of profits to permanent establishments and associated enterprises. The adoption of these articles in double taxation conventions will make it possible to clarify, standardise and guarantee the fiscal situation of taxpayers in each member-country who are engaged in commercial, industrial or financial activities in the member-countries.

E. R. W.
TUBES FOR
ELECTRICAL
EQUIPMENT

Highly suitable for use in a wide variety of electrical equipment, E.R.W. Tubes manufactured by Indian Tube, can be employed to great advantage in Transformers, Condensers, Refrigerators and Air-Conditioning machinery. Close dimensional tolerances and a smooth finish are standard features of E.R.W. Tubes: in addition, their great strength combined with their light weight render them eminently suitable for electrical appliances.

TAXATION IN THE THIRD PLAN

RESTRAINT ON CONSUMPTION UNDERESTIMATED

By Dr. B. Natarajan
DIRECTOR, NATIONAL COUNCIL OF APPLIED ECONOMIC RESEARCH

IT is important that we clearly understand the real magnitude of additional taxation implied in the successful carrying through of the programme of investment envisaged in the draft third Plan. For the estimates of the requirements of additional tax revenues reflect the extent to which private consumption has to be checked over the Plan period in order to finance increased Government consumption and investment without generating inflation.

Increases in income are expected to arise as a result of increased public and private investment. At the same time, the resources needed for the extended scale of investment are to be tapped from the increased flow of incomes as the process of development moves along. It is clear then that increases in investment and in income are interdependent in a very real sense. Unless incomes rise, as expected, in a given year and unless part of the increase is made available for investment, the level of investment in the subsequent year will fall below the target. Assuming that national income does increase in the given year according to expectations, there arises the crucial problem of appropriating part of the increase for purposes of investment. Failure at this point will prevent the realisation of the income targets for the succeeding years.

Part of the increase in incomes in the private sector will be made available for investment through voluntary savings by individuals and non-profit institutions and through the retention of part of the increased profits by corporations. This forms a common pool of voluntary savings on which both private enterprise and the Government have to draw upon. Over the third Plan period, the amount that is likely to be available from this pool for financing increased Government investment is expected to fall far short of needs. This shortfall has to be made good by increasing the tax and non-tax revenues of the Government. Since however, non-tax revenues are quantitatively not very significant, the major emphasis is placed on increasing tax revenues.

Increases in tax (and non-tax) revenues are required also to finance expected (and presumably unavoidable) increases in current expenditure outside the Plan as well as a certain amount of current outlay under the Plan. When one is estimating the magnitude of increase in tax revenues necessary to implement the Plan, one must consider the total requirements of finance, i.e., the total needed to meet Plan outlay and increases in expenditure outside the Plan. The Planning Commission has no doubt taken into account the probable increases in current non-Plan expenditure in estimating the resources available for financing the Plan, but it has failed to state explicitly how much of the additional resources will be required merely to meet increases in non-Plan expenditure.

While discussing the methods of financing the Plan, the draft third Plan report mentions Rs. 1,650 crores as the target of additional taxation. It must be noted here that the term "additional taxation" is used by the Planning Commission to mean only the yield, over the five-year period, of measures adopted to raise additional tax revenues. These measures would mainly consist of the raising of the rates of existing taxes and the imposition of new taxes, but measures to reduce evasion may also be included in this connection. It would be wrong to assume, however, that a sum of Rs. 1,650 crores is all that *the people are required to pay in the form of additional tax revenues* in the five-year period, because, as noted above, "additional taxation" for the planners means only the yield of additional taxes and *does not include the increases* in the yield of already existing taxes at rates at which they are presently being levied.

To explain. The total tax revenue of the Centre and the States is placed at Rs. 1,250 crores in 1960-61. Even in the absence of additional tax measures, tax revenue at the existing rates of taxation will progressively increase merely as the result of increases in income and economic activity. Therefore, the people will be paying, say, Rs. 1,345 crores in 1961-62, Rs. 1,440 crores in 1962-63 and so on; in 1965-66 tax revenue may amount to Rs. 1,710 crores. (These are only illustrative figures, but they are more or less equal to the figures arrived at by the Planning Commission in their projections of revenue at existing rates of taxation.) It follows that the additional tax (at existing rates) paid by the people in 1961-66 will amount to Rs. 1,395 crores. When the Planning Commission speaks of the target of Rs. 1,650 crores of additional taxation, it means that we should attempt to raise by additional tax measures Rs. 1,650 crores, in addition to the Rs. 1,395 crores mentioned above. If the target is to be fulfilled, the people must be made to pay total *additional* tax amounting to Rs. 3,045 crores in the five-year period. To be sure, this is supposed to be paid out of the additional incomes generated in the economy, but it is important for us to remember that this is the magnitude of restraint to be placed on increases in private consumption through the mechanism of taxation.

In view of this, it is indeed misleading to say that only Rs. 1,650 crores of additional taxation is needed to finance the Plan. Since this figure is often repeated in Parliament and outside, one may easily come to believe that the additional tax money people are asked to pay amounts only to Rs. 1,650 crores. The Planning Commission is, of course, aware that this figure refers only to the yield of new tax measures. But how many others are? Here is a report of Mr. Morarji Desai's statement in Parliament: "Stating that additional taxation to the extent of Rs. 1,650 crores both by the Centre and the States during the third Plan period was by no means easy, Mr. Desai said, 'It will certainly be a burden on the country. But the burden is not such as it cannot be borne. . .'" It is obvious that statements such as these are misleading if not actually incorrect. If the magnitude of the effort is to be fully revealed to all concerned, the total figure of Rs. 3,045 crores (or whatever the actual figure may be) should be mentioned.

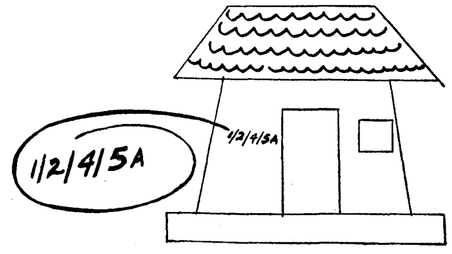
In the draft third Plan it is estimated that the balance at the present level of taxation will amount to Rs. 350 crores. This figure has been derived by deducting the projected increases in non-Plan expenditure from projected increases in revenues at the existing rates of taxation. In other words, a large part of the automatic increases in tax payments is absorbed by the increases in non-Plan expenditure. That is how the total automatic increase in tax revenues gets concealed in the figure. It would have been better for all concerned if the Planning Commission had chosen to reveal how exactly the figure of Rs. 350 crores had been derived.

We may conclude that the scheme of financing proposed by the Planning Commission carries with it the implication that the magnitude of restraint on additional private consumption, to be achieved through mechanism of additional payments, would amount roughly to Rs. 3,000 crores.

But even this degree of restraint is insufficient. The scheme contains provision for deficit financing to the tune of Rs. 550 crores. Leaving aside for the moment the concomitant expansion of private credit, we may say that deficit financing by the Government on this scale will place a further restraint on private consumption because the first result of deficit financing is appropriation by the Government of real resources in the community for purposes of investment. If national output is increasing fast, prices will tend to fall in the absence of any deficit spending. That would enable the people to enjoy an increase in real incomes and hence in consumption. By preventing or at least arresting somewhat a fall in prices, deficit spending checks a possible rise in consumption. Hence, if we take into account Rs. 550 crores of deficit spending, the total restraint on consumption or forcible withdrawal of spending power implied in the Plan scheme amounts to nearly Rs. 3,600 crores. It is against the background of this fact that the political and economic feasibility of implementing the draft Plan should be considered.

CENSUS 1961

10 February—5 March



You may find such a number already painted on the wall by your door. Or, perhaps, you will soon find one.

You will be identified and counted in the next census by this number. This number is, therefore, your census number. Please make sure that this number is preserved intact, and help the population census in every way.

DA 6(1)61

CREDIT RESTRICTIONS IN BRITAIN

GOVERNOR AGAINST KEEPING THEM TOO LONG AND TOO RIGIDLY

THE recent issue of a long-term loan—5½ per cent. Treasury stocks repayable in 2008-12—by Britain has touched off speculation in that country over the prospect of a relaxation in the application of credit restraints. This "eternity" issue, as it is called, with an incentive for overseas investors that tax will not be deducted at source, is interpreted in financial circles as a move to encourage a trend which is already in evidence, namely, substantial purchases of gilt-edged securities in the London market by foreign investors. It is felt that it is a move to retain a large part of the 'hot' money (short-term funds) which has been flowing into Britain as a result of the high interest rates prevailing in that country as permanent investment and thus prevent a flow back of the short-term funds to the countries of origin. Such retention of overseas funds might, it is felt, relieve the pressure on domestic resources and obviate the need for continuing the present credit restrictions, which have been the subject of severe criticism by British industrialists.

The prospect of an immediate relaxation of credit restraints, let alone complete removal of them, has been ruled out by the Chancellor of the Exchequer and the Governor of the Bank of England. Speaking at the Lord Mayor's dinner (commonly known as "Bankers' Dinner"), at Mansion House last week to the bankers and merchants of the city of London, the Chancellor, Mr. Selwyn Lloyd, made it clear that "it is too soon to talk of demand becoming insufficient." He, however, reiterated his assurance made two weeks ago at the Conservative Party Conference at Scarborough that "the current restrictive measures will be eased just as soon as we think it is safe to do so in the interests of the economy of the country as a whole. That is, as soon as we judge that the rate of investment and the growth of exports will not suffer thereby."

Demand Still High

Dispelling all fears that the investment demand was not sufficient, Mr. Selwyn Lloyd said:

"When we stand back at this half-way point in the financial year and look at the picture as a whole, we need a sense of proportion. In some ways, we are stronger than we have been. Our productive system is more fully employed now than it was when the restrictive measures were taken. Investment demand in particular is, and looks like remaining, strong. A high level of productive capital investment is essential, if Britain is to earn her living in world markets that are becoming increasingly competitive.

"And it was always the hope of my predecessor that the restrictive measures which he introduced earlier this year would exert a greater restraining influence on consumption than on investment, a hope which has been largely fulfilled. But we must not forget that an investment boom, however welcome in its longer-term effects, exerts, in the short run, considerable pressure on our total resources."

Speaking on the credit restraint measures, the Chancellor claimed that the new special deposit scheme had proved its worth, though he conceded at the same time that it had not been without its difficulties. "It has, like all new things," he added, "led to a good deal of discussion. I don't see any great mystery about it; the object of the calls which the Bank of England made was to put the banks concerned in a position in which it would be natural for them to take a rather stricter view of further expansions in their lendings. And this is what they have been doing. As the published figures show, there has already been a marked fall in the rate of increase in bank advances, and it may well be that the restraining influence of the calls already made is by no means exhausted." The Chancellor also justified the hire-purchase restrictions, which have provoked a considerable amount of adverse comment, probably more than any other of the measures of restraint. These restrictions have played their part in moderating the level of demand for credit. He was well aware that they bore heavily on a particular group of industries, but he added that they were a good deal milder than those imposed on previous occasions. "But in the long run," Mr. Lloyd added, "it is in the interests of all, including the manufacturers immediately affected, that the economy as a whole would be protected from more violent fluctuations."

No doubt, sterling has been strong in the exchange markets for most of this year and Britain's reserves have been rising, but the underlying position is still considered not good enough. Commenting on this judgment of the position, the Chancellor observed:

"For over a year now our current overseas earnings have not been enough to pay for imports and to meet our necessary public expenditures abroad and also to finance the large and steadily increasing flow of overseas aid and investment. Aid to underdeveloped countries is an obligation which we all accept; and we wish to do more. Overseas investment is in our long-term interest. But if our current earnings are insufficient, it means that our short-term liabilities increase and our position is necessarily weakened. It is true that the present level of our short-term interest rates has attracted a good deal of money to London. This has increased our reserves, but has brought a corresponding increase in our liabilities. Such an inflow does not provide a dependable basis for sustaining our long-term investment and aid policies."

The Only Remedy

The only remedy to correct the situation is to improve the export earnings and to restrict home demand. Emphasising this point, Mr. Lloyd said:

". . . . We have no alternative but to seek continuous improvement in our export performance. By comparison with our needs this has been disappointing in recent months. In the last six months, while imports have gone on rising, our exports have been levelling off. This makes it all the more necessary to make sure that home demand is kept within bounds, so that there is room for an expansion in exports, and a greater incentive to achieve it. We must be quite clear on the respective roles of Government and industry. The achievements of higher exports is primarily the role of exporters. The Government's role can only be indirect to help with publicity and information, to help with export credit guarantees, to reduce conflicting pressures at home, to negotiate fair trading conditions abroad and generally to remove hindrances."

With a view to improving Britain's exports, the Board of Trade has just announced the setting up of an Export Council for Europe and has made a limited extension of the facilities offered by the Export Credit Guarantee Department.

Governor's Views on Credit Restraints

The Governor of the Bank of England, Mr. Cameron Cobbold, also endorsed the views of the Chancellor on credit restrictions when he said that it would be unwise to make any changes in credit restrictions until there was no risk of "starting the pot boiling again." At the same time, he added that it would be equally unwise, in view of the developments in other centres, to maintain too much rigidity too long "merely for fear that minor adjustments might be misinterpreted as a change of direction."

Expressing his views on the special deposit scheme, the Governor observed:

"The special deposits scheme, as the Chancellor has said, is not particularly mysterious, and indeed it is very similar to schemes which have been in use elsewhere. I am not myself enamoured of any of these technical devices. Their usual purpose is to correct an excess of liquidity, which it would be better to prevent at the source. But prevention is not always possible, and special deposits have this year proved a useful addition to our monetary armoury.

"Without going too far into technicalities, I would add two comments on this subject. Experience so far has confirmed us in the view which we expressed to the Radcliffe Committee that this device is to be preferred to other similar arrangements having approximately the same effect. And I still have the feeling that any prolonged or frequent use of this system (or indeed of any form of credit squeeze on the banks, voluntary or compulsory) is both unfair to the organised banking community, and in the long run liable to be ineffective, unless some similar restraint can be applied to wider categories of short-term lenders."

Mr. Cobbold was of the view that it was too early to assess exactly the part played by monetary measures, individually or collectively, in restraining the boom which was gathering force in the last spring. "But experience since September 1957 suggests," he added, "that monetary policy, in general, and Bank rate, in particular, exercises greater influence now, when there is more underlying stability in the economy, than it could in the early years after the war, when the economy was distorted and inflationary pressures overwhelming." He, however, added that monetary policy could only carry a part of the burden of economic adjustment and could not be effective, if it was expected to work against, rather than in support of Government policies in fiscal and other fields.

The most notable development during the past twelve months was the heavy movement of international funds between different markets, as a result of different levels of interest rates in different countries. Commenting on this trend, the Governor said:

"It is a sign of freer trade and payments and of more international confidence. Provided that movements do not get too big and that there is no underlying disequilibrium, it need not bother us unduly. I see no cause to cheer when these short-term money movements cause our reserves to rise; nor shall I see cause to complain if our reserves fall because they go the other way. This is what reserves are for. And a good deal of what now looks like short-term money may, in fact, turn out to be more permanent investment.

"I hope that we shall all get more used to regarding the International Monetary Fund as a second line of reserves for this sort of purpose. Too little importance has been attached to the very large increase in their facilities which was arranged last year, and to the part which they can play in offsetting these movements. Provided that countries are pursuing proper financial policies, the Monetary Fund will doubtless be willing to stand behind them. I should like to see countries draw on these facilities as a matter of ordinary business when they need to reinforce reserves, and repay when reserves are rising; recent advance repayments by Her Majesty's Government have been an instance of this policy. If drawing on the Monetary Fund is regarded as only a last resort, then half its utility is lost because it will come to be seen as a crisis measure which may cause as much nervousness at it allays.

"Yet we cannot be wholly confident that these movements of funds between markets can always be kept within reasonable bounds. Any major and persistent movement which went unchecked might threaten stability. The mere fact that interest rates are materially higher in some countries with a balance of payments surplus than in some others with a deficit suggests that in the Central Banks and Treasuries of the world, we have still a good deal of hard thinking to do on this subject."

Cut in Bank Rate Possible

It is clear from the foregoing remarks of the Chancellor of the Exchequer and the Governor of the Bank of England that the British Government is not keen on keeping the credit restraints any longer than absolutely necessary. Observers in London feel that the day is not far off and that the restrictions may be relaxed, at least to some extent, early in the winter months. Reading between the lines of Mr. Cobbold's observations on international movement of funds, they are of the view that the Governor is not against a reduction in the Bank rate. Their expectation, therefore, is that a cut in the rate will be announced within the next few weeks.

TWO U.S. LOANS FOR INDIA

The United States Government has approved of two loans of $25 million (Rs. 11.9 crores) each, one to the Government of India for the importation of capital equipment and the other for financing imports of steel and steel products by private and public enterprises. The loans will come from the U.S. Development Loan Fund (D.L.F.), and will provide immediate help towards India's foreign exchange requirements during the closing months of the second Five-year Plan. The first loan will be used for procuring equipment to increase the productive capacity of small and medium-sized private industrial enterprises in the fields of metallurgy, electrical installations, machine tools, earthmoving equipment and chemicals.

The approval of a loan of this type marks a departure from the practice of D.L.F. in recent months, during which it has given only project type loans. In recent years, India's foreign exchange resources have been increasingly devoted to large-scale projects, in accordance with India's objective of self-sustained economic growth. Consequently, there is a need for foreign exchange to cover capital imports in the immediate months ahead for establishment, expansion and modernisation of smaller private enterprises. Funds provided by the D.L.F. are expected to attract additional investment of Indian rupees by Indian investors and to contribute substantially to strengthening the private industrial segment of the Indian economy.

Steel sheets are expected to account for more than half of the procurement under the second loan. The remainder will consist of tinplate, strips, tool and alloy steel, billets, wire and rods. This is the third loan given by the U.S. Development Loan Fund to India for steel procurement. The first agreement, signed in December 1958, provided for $40 million worth of steel for private and public sector undertakings; and the second, concluded in July 1959, for $20 million for private industrial projects. The loans bring the total of U.S. financial assistance to India so far to $3,679 million (Rs. 1,751 crores) of which the loans from the D.L.F. account for $429 million (over Rs. 200 crores). The loans from the D.L.F. are repayable in rupees.

DRAFT THIRD PLAN X-RAYED—V

TRANSPORT—COMMUNICATIONS—SOCIAL SERVICES

By J. M. Lobo Prabhu

AN investment of Rs. 1,220 crores is to be made on railways, to secure only a 3 per cent. increase in non-suburban passenger traffic, with no relief to the overcrowding. Seventy per cent. of the increase in freight will be on account of steel, coal and cement, which does not benefit the common man. An increase of 1,200 new mileage is promised, of which 200 miles is for the steel factories and the rest for areas in the north of India, to the obvious disappointment of the rest of the country. What are obvious deficiencies of the railways as far as the common man who finances the development is concerned? First, the extension of the lines to new areas. In 1947-48, the mileage was 33,985, in 1957-58 it was 34,889, the largest part of the increase serving steel factories. Independence, therefore, has not given the common people the advantage of railway connections which the British and private companies were constantly providing. The second deficiency is in respect of comfort. In spite of the heavy investment on coach-building factories, the Commission itself admits that overcrowding will continue, which implies not only discomfort but loss of revenue both from people who avoid travelling and from people who can travel without being checked. The third deficiency is that, instead of trains being speeded up, in many lines they are slower than they were thirty years ago. The fourth deficiency is failure to run in time, which is so general and chronic that the public is learning to allow at least half an hour for short runs and one hour for long runs, as railway time. The fifth deficiency is safety in travel which is alarmingly reduced by increase in accidents. If the Railway Board was challenged to furnish comparative statistics of accidents, the public would rise against it. Nonetheless, the capital at charge for railways has nearly doubled itself in the first two Plans and will be trebled in the third Plan. The Planning Commission has failed to examine all these questions, being content to be the post office of the Railway Board.

The proper programme for railways should give priority for extension of mileage as it not only serves the convenience of the people but the expansion of trade and industry. At the same time, work on the tracks can employ the idle labour in a far greater measure than work in railway factories and workshops. The commercial companies which gave India 34,000 miles of railways in ninety years knew this better than our own Government which has not given more than 900 miles, of which the greater part is for steel factories. The final Plan should, therefore, plan generously for new lines, the increased expenditure being well within the capacity of the country as it involves no foreign component.

Roads

In respect of road construction, there is similarly a neglect of the interest of the common people. While the Conference of Engineers recommended an increase of 252,000 miles for 20 years which would mean 60,000 miles for the five-year span of the third Plan, the provision is only for 20,000 miles. The Commission would rather spend Rs. 18 crores for adding 5,000 buses to State Transport Organisations, which, while denying people the convenience of private lines, are nearly all working at a loss. If there was denationalisation of motor transport, the public would gain by the competition of private lines, on one hand and by relief in taxation for maintaining uneconomic State transport organisations on the other. The increase in road mileage should not only be according to the recommendations of the Engineers but even more, as it is the best and most general way of reducing the unemployment of 45 million.

Shipping and Ports

The increase in shipping tonnage is to be welcomed, but we cannot afford State enterprise which is producing ships at double the world cost. For economy, both in investment and foreign exchange, we may invite foreign enterprise, which is all too ready to invest, in view of excess tonnage in most countries. We need not be afraid of political strings, because Cuba has just proved what was always true that, in the present conditions, it is the investing country which is more bound than the country in which the investment takes place.

In respect of ports, the Commission states that the policy is to improve the capacity of existing ports than to add new ports. This is not what the people of the country with the greatest coastline expected. The concentration on existing ports not only strains the capacity of labour and land, leading to payment of wages which are several times those of the class from which labour is drawn and creating problems of congestion, but also strains the railway system. At the same time, the other parts of the country are deprived of the benefit of shorter transport for development of their resources. Further, the whole country is exposed to the military risk of an unnecessary concentration. The Government, which appointed a Minor Ports Inquiry Committee, has wholly ignored its recommendations, thereby proving once again that committees are appointed only for their own sake and not for action to be taken. In the final Plan, unless the Government implements the recommendations of the Committee—this implies a reduction in the expenditure which Government is lavishing on its pet schemes—the maritime development of the country will be frustrated.

Aviation

There is a provision of Rs. 30 to Rs. 33 crores for air corporations. It is enough to remark that, if the Government had not nationalised air transport, the common taxpayer who cannot even afford a bullock cart would have been spared this investment and the continuing losses of income on the existing investment. On the contrary, the country would have derived revenues, as other countries do, from aviation companies which make large profits. The same is the position regarding broadcasting for which there is a provision of Rs. 7 crores. An income larger than that would have accrued if we had followed the example of at least Ceylon and left broadcasting to private enterprise. The result at present is that more people listen to Ceylon Radio than all the 28 Indian stations which broadcast only what the Government wants and not what the people like. The Planning Commission would have rendered good service to the country if it had made a listeners' research on Indian broadcasting. Both civil aviation and broadcasting are eminently suited for the denationalisation to which the Prime Minister is now attracted.

Social Services

Social overheads are very important but it is a moot question whether they are the cause or the result of economic overheads. Man does not live by bread alone but, without a sufficiency of bread, he cannot live for anything else. Education, health, social progress are only meaningful, when gnawing deficiencies do not cause frustration among people. The proposition can even be hazarded that, if the people are provided with economic competence, they will themselves take care of education, health and social progress. If without competing with other countries, the Government could concentrate on providing employment opportunities even on minimum wages to the whole population, plans for education, health, scheduled classes would follow from the people's own contributions.

The proposals for social services are further weakened by the fact that no assessment of the results during the two Plans has been made in terms of benefit to the people. Considering so much was new and experimental, the patterns adopted in the past ten years should be repeated only if they have justified themselves by yielding adequate results.

For school education, the Plan provides for an increase from Rs. 273 to Rs. 500 crores, largely to cover the increase in enrolment from 57 million to 87 million. The number of university students has increased from 634,000 in 1955-56 to 900,000 in 1960, the intake of engineering colleges from 5,888 to 13,165 and of polytechnics from 10,484 to 24,020 and the third Plan is to near double all these figures. Achievement is conceived in terms of enrolment and not of education. In the primary schools, half the students do not acquire literacy; in high schools, as well as in the recent university examinations, the proportion of failures was very high, that for the Mysore University alone being 78 per cent. In the universities, the Central Minister has recently admitted, the failures in the intermediate examination are 47 to 50 per cent., and in the degree examination 47 to 52 per cent. If failures are reduced in any proportion, there will be a virtual extension of education without extra cost. In the primary stage, the compulsion to be applied may be that no student once enrolled will leave, without attaining literacy. In the higher stages, admission may be strictly on the basis of merit, which will compel more attention to studies than any other measure. Teachers may be made more interested in their work, by being allowed a bonus related to the percentage of passes.

There are two obsessions with the Commission, first that primary education should be of the basic pattern and that higher education should be increasingly scientific and technical. The basic pattern is admitted to be more costly and has not been proved to be more efficient. No one who can afford it, including the Prime Minister and his colleagues, sends his children to the basic education schools. Unless a commission of experts, preferably foreign, examines the results of basic education, its extension should not be allowed. In respect of technical education, the danger is that there may be more qualified students than employment opportunities. Even now on the live registers of Employment Exchanges, there is a backlog of 14,000 in the industrial supervisory services, 105,000 in the skilled and semi-skilled and 69,000 in the educational service. It is even admitted in the Plan that this is in spite of the fact that technical employment is not preferred in view of the increased emoluments of unskilled workers.

The provision for health is to be increased from Rs. 230 crores to Rs. 300 crores. The results of past expenditure are not encouraging. The number of patients treated in 1947 was 430 lakhs and the expenditure Rs. 463 lakhs; in 1957, the patients were 1,334 lakhs, while the expenditure was Rs. 2,346 lakhs, which means that treatment now costs twice as much. This is not explained by any marked improvement, because corruption has now become the rule before one can get treatment in Government hospitals.

There is a provision of Rs. 25 crores for family planning, without considering the results of the past four years. With a monthly average of two cases of sterilisation, per centre at a cost of about Rs. 1,000, it would take thousands of years and thousands of crores of rupees to check the population. The experience of other countries is that a rising standard of living is the only effective check to population growth. It is on this the Government should concentrate, as also on increasing recreations which can take couples away from darkness and each other's arms. Even if the sum of Rs. 25 crores was utilised in establishing more cinemas in villages, sexual preoccupation would decrease, paradoxical as it may appear.

Housing

The provision for housing is the meagre sum of Rs. 120 crores, though 90 per cent. of the houses in villages and all houses in slums are not fit even for animals to live in. In other countries and even in our own towns, a house is regarded not only as the best investment but the highest expression of status and personality. Also, in other countries, even those most advanced, housing is subsidised by the Government, because housing provides employment by itself and in the industries which supply materials and implements to it. Our housing programme has first made the mistake of being largely confined to industrial and plantation workers, who are not satisfied because they only remain tenants, while the owners have to provide the finance the interest on which is higher than the house rent allowances they would otherwise pay. The idea of the Commission that construction of new factories will be conditional on simultaneous provision of housing will have two results: most industries will be prevented and those which are not will be so heavily capitalised that consumers will have to pay higher prices. The proper programme for housing must capitalise on house pride, induce investment of savings and provide by itself security for borrowing, being started on subsidies equal to about one-fifth of the investment. For village houses, which cost about Rs. 1,000, a subsidy of Rs. 250 involves a provision of Rs. 250 crores for one crore houses. If this provision is transferred from village and small industries, the latter will be resuscitated in a natural way, employing a vastly greater population than at present. The measure will be socialist not only because of the employment opportunities it will create but also because it will secure health and comfort through a cherished right of property created.

The provision for Social Welfare Projects has been raised to Rs. 25 crores, in spite of the finding of the Evaluation Committee that they have only provided fringe benefits to a small section of the people. Before time and money are

(Continued on page 771)

COTTON TEXTILE IMPORTS INTO U.K.

CEILING PACT BENEFITS CONTINENTAL EXPORTERS

WHAT is the future of the voluntary cotton textile export ceiling agreements entered into by India, Pakistan and Hong Kong with the United Kingdom? This question has now come to the fore, thanks to the concern expressed by some of the British textile manufacturers over the persistently upward trend of imports in recent months and the plea for ending the pact on ceiling put forward by traders and millowners in Hong Kong. One of the issues which figured prominently in the discussions at the recent Annual Conference of the U.K. Cotton Board related to the inter-industry agreements with India, Pakistan and Hong Kong. In his speech, Mr. Reginald Maudling, President of the Board of Trade, assured the Conference that he and his colleagues at the Board had been left in no doubt about the urgency of making an early approach to the other parties to the agreements about their renewal. A few days after the Conference, Sir Alfred Roberts, General Secretary of the Operative Spinners' Amalgamation, one of Britain's three big cotton unions, expressed his keen anxiety about imports of foreign grey cloth. In a statement issued to the Press on the 19th inst., Sir Alfred observed:

"The three countries which have voluntary agreements with Lancashire restricting shipments of cloth to Britain—Hong Kong, India and Pakistan—have between them increased their exports to Britain by over 58 million yards in the seven months to the end of July. These increases are provided for and are accepted. But the most disquieting feature is the increase in imports from other countries. These amounted to 114.5 million yards over the seven months as compared with 58 million yards in 1959. . . . There has been a further increase of 32 million yards in arrivals of other cotton cloth, making the total imports into Britain for the seven-month period approximately 410 million yards. This figure is slightly more than half of our own cotton cloth production for the same period. It is true that some cloths are imported for processing and re-export, but this fact by no means accounts for the substantial increase most of which is taking the place of our own production."

While the textile interests of Britain are complaining of large imports, their counterparts in Hong Kong have lately been urging the tearing up of the ceiling pact and resumption of unrestricted operations with those merchants in Lancashire who wish to acquire their cloth. A reference to this plea was made by our Manchester Correspondent in his despatch published last week (*vide* page 725). The Hong Kong General Chamber of Commerce has since come out with its review of the working of the pact during the first half of the three-year term beginning from February 1959. The chief conclusion drawn by the Chamber is that the Hong Kong-Lancashire textile pact has already cost the Colony dearly in terms of business lost to India, Pakistan and other countries such as Spain, Yugoslavia, Italy, Portugal and Sweden. "The benefit of the penalty thus imposed on the Hong Kong trade," to quote it, "is to benefit not the U.K. producer but, in the majority of cases, the overseas supplier. . . . Many Hong Kong exporters are unable to meet British orders because of a lack of available quota. This limit in supply has forced British manufacturers to turn to other sources for cloth which Hong Kong used to provide." Substantiating this charge, the Chamber has cited the following statistics:

Hong Kong's exports of cloth during 1959 were lower by 29 million square yards as compared with the previous year, while Pakistan's exports were higher by an equal quantity. Yugoslavia and Spain, which exported less than 1,000 square yards of cloth to Britain in 1958, shipped during 1959 six million yards and over seven million yards, respectively. The other countries that boosted their supplies of grey textiles to Britain were Italy (+99,000 yards) and Sweden (+129,000 square yards). Preliminary figures for the first six months of 1960 as compared with the corresponding period of 1959 show that British imports of grey cloth from India, Pakistan and European countries increased, whereas those from Hong Kong fell as is indicated below:

(In thousand yards)

	January-June	
From	1960	1959
India	128,950	80,140
Pakistan	22,029	7,023
Other countries (believed to be mainly European in origin)	49,578	6,244
Hong Kong	44,388	70,696

The Chamber has drawn attention to the many uses to which the cloth imported from Hong Kong into Britain is put. Much of the cloth forms the basis of the leather cloth that upholsters many British cars. Poplins and lightweight sheetings are used for making blouses, shirtings, pyjamas and similar articles of clothing. Heavyweight shirtings are used for bed linen and like uses. Shirtings, drills and denims find their outlet as shirts, overalls, loose covers for furniture and car seats. Gaberdines are used extensively in British-made raincoats and other cloths are used for the interlinings of suits, costumes and overcoats. The cheaper cost of the Hong Kong cloth used in these articles, it is stated, is reflected in the final cost to the public of the finished product and the fact that British manufacturers now use other and more expensive supplies means that, as a direct result of the undertaking, the prices of many goods made in the U.K. have been forced up.

Declaring that all cloth shipped to Britain from Hong Kong is sent in response to a definite order, the Chamber observes: "If a situation arises where the supplier must tell his customers that he cannot provide the required goods because he has undertaken not to do so, the customer clearly looks for another supplier not operating under such restrictions. It is well known that, in business, it is more difficult to regain a lost customer than to gain a new one, so that Hong Kong merchants may eventually find that their former customers are no longer available."

British cotton industry circles, however, feel that the arguments adduced by the Hong Kong General Chamber of Commerce are not without certain fallacies. It is pointed out, for instance, that the total annual limit for imports from the Colony was set at 164 million square yards, of which 46 million square yards were in the cloth equivalent of made-up garments. One important defect of the scheme has been to shift the emphasis from shipments of grey cloth to the provision of garments for the British home market. At the end of July 1960, imports from Hong Kong were running at an annual rate of 175 million square yards, comprising 75 million square yards of grey cloth, 10 million square yards of finished materials and 87 million square yards of made-up garments. It is, therefore, said that, although the weavers in Hong Kong may not be obtaining as big a share of the grey cloth trade as in the past, their material is being made up and exported in the shape of clothing.

There is no reason to believe that the severe criticisms levelled against the pact by the Hong Kong textile interests will result in its termination before the expiry date or in its non-renewal after the due date, though it is quite possible that, when the time comes for the renewal of the pact, the agreement will be suitably modified to accommodate the Colony's points of view. So far as India (and also Pakistan) is concerned, textile interests have made it clear to Lancashire that they would feel no longer bound to honour their own voluntary curtailment of exports, if Britain were to allow the arrangements with Hong Kong to lapse. This advance notice is, by itself, sufficient to stiffen the attitude of Lancashire interests and work hard for the renewal of the agreement. The President of the Board of Trade himself has, as mentioned at the outset, already endorsed their desire for the continuation of the present so-called voluntary understanding. All this, however, does not disprove the contention of Hong Kong that the ceiling pact has only conferred unexpected benefits on the Continental manufacturers of cotton goods at the expense of the underdeveloped Commonwealth countries. There is now sufficient evidence that the ceilings under the pact constitute an underestimate of the U.K.'s requirements. Unlike in previous years, the increase in imports of cloth into the U.K. have not in any way adversely affected production and employment in Lancashire. Nor has it created any balance of payments problem to Britain. Such being the case, there is no need for all this cry against imports of cotton textiles into Britain. Nor is there any need for renewing the present pact when it expires. Actually, Lancashire should gracefully agree not to insist on India's excess exports of cloth to be adjusted against its quota for the coming year.

STEPPING UP CLOTH PRODUCTION: A TIMELY WARNING

The series of measures taken by the Indian Cotton Mills' Federation have arrested the upward trend in cloth and yarn prices, at any rate for the time being. But if the move is to confer lasting benefits on the consumer, it is imperative to step up the production of mill-made cloth to a higher level. This will be possible provided the authorities extend all support and encouragement to the mill sector. Some of the steps that the authorities should take were impressively indicated by Lala Bharat Ram, Chairman of the Delhi Cloth and General Mills Co., Ltd., when he addressed the annual general meeting of the Company at Delhi on the 17th inst. In brief, the steps advocated by him are as follows:

Cotton imports must be immediately allowed not only to meet the needs of the current season and to make good the shortfalls of the last season but also to build up a sizable buffer-stock.

The mill industry must be provided with the means to achieve its target—sufficient supplies of raw materials at reasonable prices, adequate financial assistance for modernisation and renovation, and some restraint on fiscal burdens.

The production programme for cloth should be so drawn up as to ensure a reasonable balance between supply and demand.

In this connection, Mr. Bharat Ram warned against undue reliance on the decentralised sector to meet the expanding clothing requirements of the country in the coming years. Appropriately enough, he questioned the veracity of the figures pertaining to the production of handloom cloth, because the statistics were based not on actual reports of output but on the quantities of yarn released and the cloth that should have been woven from these. The official figure relating to output of handloom cloth is 1,900 million yards per annum, whereas it was surmised, according to Mr. Bharat Ram, that the actual production could not be more than 1,100 million yards. The gap between the two figures, he added, was so wide that one could easily imagine the situation that would arise if the increased target proposed for the handloom industry were allocated to it without scientific investigation. The points raised by Mr. Bharat Ram are quite timely and pertinent. Certainly, there is no exaggeration in his warning that there is bound to be a scarcity of cloth again with resultant higher prices, if the handloom industry fails to achieve the large increase proposed for it in the third Plan and the mill industry's output is limited to the planned target of 5,800 million yards.

FAIR PRICES FOR WOOLLEN TEXTILES

The Government of India has asked the Tariff Commission to recommend fair ex-mill prices and wholesale and retail prices for all types of woollen, shoddy woollen and worsted yarn (including hosiery yarn) and fabrics (including hosiery goods and manufactures). The Commission has also been asked to suggest fair ex-mill prices and fair prices payable by consumers in various regions. In conducting the enquiry, the Commission, it is suggested, is to take into account the cost of raw materials, power, wages and other relevant factors. The Government's decision is a sequel to the need for ensuring that woollen and worsted manufactures are made available to consumers at reasonable prices.

The cotton textile mills' production during the month of September 1960 is provisionally estimated at 145 million lbs. of yarn and 426 million yards of cloth. The corresponding figures for September last year were 148 million lbs. and 412 million yards, respectively. At the end of September 1960, the composite units of industry carried an estimated total stock of 386,000 bales of 1,500 yards each) of cotton cloth, of which 188,000 bales were unsold and 198,000 bales were sold but not lifted.

Notice

HUKUMCHAND JUTE MILLS, LTD.

NOTICE TO SHARE-HOLDERS

NOTICE IS HEREBY GIVEN THAT THE next Annual General Meeting of the Shareholders will be held at the Registered Office of the Company. 9. Brabourne Road, Calcutta, on Friday, the 18th November, 1960, at 4-30 p.m. for the following purposes:—

1. To receive and pass the Directors' Report and Audited Accounts for the year ended 31st March, 1960.
2. To declare Dividends.
3. To elect Directors in place of those retiring.
4. To appoint Auditors.
5. To transact any other business that may be brought before the meeting.

Divients, if declared. will be paid to Registered Share-holders only.

The Share Transfer Register of the Company will be closed from the 8th November, 1960 to 18th November, 1960, both days inclusive.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Managing Agents.

CALCUTTA, *the 21st October*, 1960.

COTTON BOARD'S ANNUAL CONFERENCE

MR. MAUDLING DISPELS FEARS REGARDING EFFECTS OF REORGANISATION

From Our Special Correspondent

MANCHESTER, *18th October*

MANCHESTER LETTER

FEARS that the Government's £30-million reorganisation plan for the Lancashire cotton industry would result in substantial and widespread unemployment and a scarcity of cloth had not been justified by events, said Mr. Maudling, President of the Board of Trade, at the opening of the Cotton Board's annual conference at Harrogate. "No doubt there are individual difficulties," he said, "but, in general, the problem has been more one of shortage of labour than of unemployment. Not surprisingly there has been an increase in imports which is only to be expected at a time when the industry is delivering every thing that it can physically produce." He observed: "It is a fact that, despite the widespread elimination of excess capacity and a fall in the number of employees in the industry, production of cotton, man-made fibre and mixture yarn and cloth was higher in the first half of 1960 than in the first half of 1959."

The progress made under the scheme was very encouraging, Mr. Maudling added. The scrapping phase in spinning, doubling and weaving was now over and half the spindles and 40 per cent. of the looms had gone. "The re-equipment phase," he pointed out, is getting under way and the results of increased machine utilisation can already be seen. These show a great advance on the position 12 months ago and there has been a considerable extension of shift working. If it had not been for the shortage of labour, no doubt further gains would have been achieved."

Fibres Merger

Fusion at top level between organisations representing the users of cotton and man-made fibres was urged by Lord Rochdale, Chairman of the Cotton Board, at the final session of the conference. Welcoming the prospects of a merger between the British Man-made Fibres Federation and the Cotton Board, he said he was convinced that some such development must take place and that the advantages would outweigh any temporary difficulties. He observed:

"The industry in Lancashire is one industry processing different materials, and I believe it is entirely against its interests to divide itself into two rigid camps having very little contact with each other.

Five-yearly Review

The five-yearly review of the Cotton Board had now begun, Lord Rochdale added. As independent chairman, his own personal view was to urge strongly that firms using man-made fibres, as defined in the Cotton Industry Development Council orders, should become constituents of the cotton Board, so that the central organisation in the industry should really represent the whole of the Lancashire industry. Announcing details of the progress of the redundancy schemes in the textile finishing industry, Lord Rochdale said that the minimum scrapping targets had already been reached in the yarn processing section and the bleaching sub-section. In the case of dyeing and printing, about 60 per cent. and 55 per cent., respectively, of the targets had been achieved.

Sales Stimulants

Several speakers during the discussions called for more promotional and publicity campaigns to stimulate sales of textile products, particularly cotton goods. Mr. Alan Draper, Vice-Chairman of the Textile Institute, said that the Cotton Board's promotion schemes should be intensified and emphasis directed to those sections which could be expanded more profitably.

Mr. Frank Winterbottom Managing Director of A. & S. Henry & Co., said that the Government had not done enough to prevent the erosion of Lancashire's export trade. Within the previous week, India had made an unparalleled decision to permit no imports whatever of British-made cotton cloth for balance of payments reasons, while cloth and yarn imports from India had expanded substantially. "The whole position has an air of unreality," he declared.

Scottish Prints Works to Close

After several months of speculation, the future of the Dunbartonshire dyeing and print works of the United Turkey Red Company Ltd., has been decided. The £26,000,000 Calico Printers' Association, the Manchester textile group, which bought the £1,606,120 capital of the Scottish company in June, announced last week "with great regret" that the Alexandria Print Works was to be closed under the Government reorganisation scheme for the textile finishing trade. Progressive redundancy of at least 1,200 employees will be involved by the closure of the factory during the next two or three months. Individual notices, which must be worked under the terms of the compensation agreement, will be issued as circumstances require. The Directors of the Calico Printers' Association, in an official statement, said: "This course has been adopted only after the most careful consideration of all the factors involved, including those raised when the deputation headed by Mr. Tom Steele, M.P., came to Manchester."

Full investigations into costs of production gave no promise of the works being capable of economic operation under the highly competitive conditions prevailing in textile printing, the Board added. An application to close the works under the reorganisation scheme had been lodged with the Cotton Board. Provided this was accepted employees would become eligible for compensation within the terms agreed with the various trade unions. The compensation rates for displaced workers range from £10 for men with three years' service to £4 10s. per year for those with 30 years' service and over. Women will get from £6 for three years' service to £2 15s. per year for those with 30 years' service and over.

Unified Research

Confidence in the successful outcome of the merger between the British Cotton Industry Research Association and the British Rayon Research Association was expressed by Mr. John Lindley, President of the B.C.I.R.A., at the annual meeting. The merger, which was recommended by a Working Party, involved the closing down of the modern headquarters of the B.R.R.A. at Heald Green, Cheshire, and a concentration of research effort at the Didsbury, Manchester, research station of the B.C.I.R.A. Mr. Lindley told the meeting: "The unified research efforts that will thus be available to the industry will, I confidently believe, make a timely and essential contribution to the reorganisation of the trade that is now taking place, and ensure that co-operative research makes its full contribution to the future welfare of the industry at a time when, more than ever before, its future is inextricably bound up with the successful application of scientific and technological advances."

The annual expenditure of the new research organisation is likely to be in the region of £500,000. Mr. H. A. J. Duncan, the Treasurer, said that the industry's financial support would come mainly from a statutory levy collected by the Cotton Board. Initially, this was not likely to exceed £245,000. In addition, there would be an annual grant of about £70,000 from the producers of man-made fibres and a "large annual grant" from the Department of Scientific and Industrial Research. As a result of the merger about 100 scientists, technicians and other members of staff of the two bodies will be redundant.—*All Rights Reserved.*

TERYLENE HOSE

Those who think of terylene only as a material used for making curtains, dripdry shirts and dresses will be surprised to hear about a terylene reinforced refuelling hose now used by the British Admiralty for rough weather astern refuelling at sea. This type with its good resistance to "stretch" has replaced the conventional hose and is also suitable for a variety of factory applications. Terylene belts, it is claimed, make possible saving in space, weight and cost. Terylene is valuable for tarpaulins, protective clothing, ropes, slings, webbings and safety harness, valve diaphragms, fuel and water tanks and inflatable buildings.

The cause of the generation of static electricity in synthetic fibres is now being investigated by scientists in Britain, according to Dr. D. W. Hill, Director of the Shirley Institute, Manchester. The problems arising from static electricity, especially with synthetic fibres, are well known. They cause, for example, yarns to balloon out instead of lying parallel during processing, or to cling to machinery. Similarly, garments may cling to the body or give electric sparks that constitute a fire or explosion hazard in inflammable atmospheres, including those that may exist in operating theatres.

DEMAND FOR COTTON BY 1980

AN INTERESTING PROJECTION

DURING the ten-year period, 1949-50—1958-59, cotton production in India rose by 2 million bales (of 392 lbs. each) to 4.8 million bales while mill consumption of Indian cotton rose by a like amount to 4.62 million bales. What will be the size of cotton production and the nature and extent of demand for Indian cotton twenty years hence? This question, which might at present seem only of academic interest, should exercise the minds of at least the leaders of the cotton mill industry and those in charge of planning the country's development. A study undertaken by Dr. P. C. Bansil, of the Perspective Planning Division of the Planning Commission and published in the latest issue of the *Indian Cotton Growing Review*, the journal of the Indian Central Cotton Committee, attempts to give a dimensional picture of the demand for cotton by 1930. The estimates made and conclusions drawn are entirely those of the author's and not of the Division.

The study, being an attempt to project the demand for the future, has necessarily to be based on certain assumptions. One of the assumptions is that, by 1980, when the country would have undergone a period of thirty years of planned development, sufficient purchasing power will be generated to enable every family to spend for the minimum quantity of cloth. It is assumed that, by 1980, per capita income would possibly be double that in 1960.

Projection of future demand calls for the assumption of a certain minimum requirement of cloth, an assumption which cannot but be arbitrary, subject to a large measure of error. The author is inclined to accept 35 yards of cloth for adults and 18 yards for children suggested by Dr. S. B. L. Nigam as the minimum requirement. The National Planning Committee (in 1938) had laid down 45 yards as the minimum while 30 yards were considered to be the minimum by the authors of the Bombay Plan. Stripped down to the bare bone, the reasoning is as follows:

Consumption pattern of cloth in various countries indicates that consumption has a direct relation with income levels. Egypt, with a per capita income of 170 U.S. dollars, consumes 29 yards of cloth, while India with a per capita income of 75 dollars consumes 18 yards of cloth. Climatically, according to the author, India compares quite favourably with a country like Egypt where the wearing apparel consists mostly of cotton cloth. It is assumed that India will achieve the Egyptian standard in regard to per capita income by 1980 and hence cloth consumption, at 30 yards per head, may possibly be the level which India will be able to achieve in twenty years.

If the Egyptian level of 30 yards per capita is achieved by 1980, it would mean, according to the author, an increase of 72 per cent. in per capita consumption of cloth, as compared with that at the end of the second Plan. According to the assumed minimum requirements, 35 yards will be required for adults and 18 yards for children. Some might be consuming more and some less than this minimum. Taking all these into consideration, a target of 30 yards per capita, according to the author, would be quite reasonable. An estimated population of 550 million in 1980 would, therefore, require 16.500 million yards of cloth. The author estimates the export requirement at 1.500 million yards. Assuming that one pound of cotton is sufficient to manufacture four yards of cloth, the author calculates that the cotton requirements for the manufacture of cloth alone (both for home requirements and export) would be of the order of 12 million bales. Taking into consideration requirements of cotton for other purposes, including exports, the total demand for cotton by 1930 is expected to be 13.5 million bales. The table in column 1 gives the break-up of the requirements.

The author is fully aware that the contribution of man-made fibres in meeting the demand for cloth cannot be ignored, especially in view of the large inroads they have made on cotton in countries like the U.S. and U.K. But, according to him, artificial fabrics are costlier when compared with cotton textiles and there is little possibility of their being very popular in India, particularly in rural areas. It is therefore quite possible, he believes, that, in the next 20 years, the percentage of cloth produced from man-made fibres to cotton cloth will be more or less the same as at present.

As against the projected demand of 13.5 million bales of cotton, the second Plan target is 6.5 million bales. But actual production, as judged from present trends, will not exceed 6.3 million bales. Hence, in twenty years' time, production will have to increase by more than hundred per cent. The author goes on to examine the ways and means of achieving this growth. He suggests that, since cotton yields on irrigated lands are already much higher than on rain-fed lands, if 10 million acres are brought under irrigation, as compared with a mere 2 million acres irrigated at present, out of a total of 20 million acres sown to cotton, nearly 60 per cent. of the targeted production could be raised from them.

The assumptions in the aforesaid projection are not unreasonable, but whether they are realistic is a different question. Much will depend on the type of economic policies followed by the Government and the means of production encouraged by it. An important point that should be borne in mind, in this connection, is that consumption of cloth is not inelastic and that it is sensitive to changes not only in the price of cloth but also in the price of other essential commodities and services.

(In '000 bales)

	1960-61	1965-66	1970-71	1975-76	1980-81
Net export of raw cotton	200	..	250	500	700
(a) Exports	400	500	650	800	900
(b) Imports	600	500	400	300	200
Extra-factory consumption	300	350	450	550	600

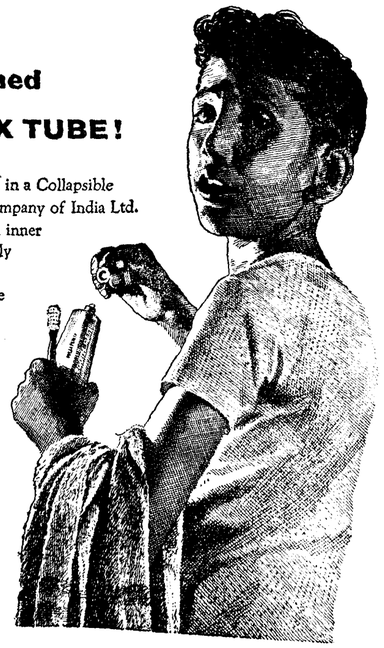
A METAL BOX TUBE!



Your favourite toothpaste comes to you in a Collapsible Tube, a speciality of The Metal Box Company of India Ltd. Wherever necessary, this tube is given an inner coating of a specially devised, chemically inert lacquer that keeps the toothpaste from reacting with the metal of the tube itself. The tube collapses with reducing contents, thereby protecting the toothpaste from oxidation and dehydration. The Metal Box Collapsible Tube is therefore a functional as well as a convenient package. It is scientifically designed to ensure that the toothpaste remains fresh for months.

Backed by their knowledge and experience drawn from India and abroad, Metal Box are manufacturing a wide range of scientifically designed packages for the consumer goods you use.

WORLD CO-OPERATION IN TAX MATTERS

FISCAL DOCUMENT BUREAU'S ENCOURAGING ANALYSIS

ONE more interesting annual report on the study of world taxation problems, that covering the calendar year 1959, has been published by the International Bureau of Fiscal Documentation, Herengracht 196. Amsterdam (Netherlands). The first report was published in 1954, although the Bureau came into existence many years earlier, in 1938, to be precise. The dominant theme of all these reports is that more attention should be devoted to the study of foreign tax systems, that the individual countries or certain interested circles in them should co-operate with one another in such a study, and that the persons who have studied other systems of taxation intensively can generally explain as to where the system is out of step with current developments and offer helpful suggestions for improvement.

It is, indeed, heartening to learn from the latest annual report of the Bureau that international co-operation in matters of taxation "is definitely developing and is tending to extend its influence to more and more bodies interested in fiscal problems." This view is supported on the following grounds:

The Fiscal Committee of the O.E.E.C. has performed "new and fundamental work" during the last few years. It has brought out two reports with recommendations for articles to be included in double taxation agreements, the result of which will eventually be a multilateral convention for the avoidance of double taxation; the Committee consists of senior officials from the finance ministries of the member-countries. (The third report of this O.E.E.C. Committee on elimination of double taxation has just been published.—ED.)

Employers' associations in several countries are beginning to co-operate and the first fruit of such co-operation will be the appearance of a new publication of major importance in the near future.

The publishers of well-known taxation journals in the six Common Market countries of West Europe, supported energetically by their editors, have begun to co-operate by publishing tables and summaries of the different tax systems, so that their readers can obtain some idea of the fiscal legislation of the countries immediately round them. The summaries are contained in a brochure published by the Bureau in the Netherlands. Towards the close of 1959, the publishers of the journals decided to extend the scale of their co-operative endeavours by issuing a quarterly.

In 1959, after some preparatory discussions, a basis was found on which the more important bodies of tax consultants in the C.M. countries could co-operate. It is their task to watch that the interests of their clients in fiscal matters receive proper consideration, particularly where the clients operate on an international scale.

Harmonisation of Taxes

The Bureau analyses the many aspects of the harmonisation of the fiscal question. As readers are aware, since the Rome Treaty was signed nearly two years ago, a number of proposals have been put forward for harmonising the fiscal legislations of various countries in Western Europe and indicating the means to be employed to achieve the ends. In this connection, the Bureau refers to the harmonisation of indirect taxes like turnover tax and excise duty as laid down in Article 99 of the Rome Convention (Common Market). The purpose of this Article was to make it clear that the first step in any scheme to harmonise taxes must be to amend suitably the regulations which, on the one hand, exempt exports from tax and, on the other, charge special supplementary turnover tax on imports to compensate for the loss of tax on exports. The Bureau considers this starting point as unsatisfactory and observes that, more and more, it is being recognised that maintenance of rules relative to refunds or compensatory taxes has the effect of buttressing the artificial fiscal frontiers which was the very opposite of what the Convention was set up to achieve. Some of the problems brought to light by investigations are summarised below:

"Too small a refund of tax or too small a charge may be expected to impair the ability of business to compete. Direct and indirect taxes are components making up one whole, the taxation system of a country. Taken together, they govern the 'fiscal climate' of a country; taken together, they determine the approximate 'fiscal equipoise' of a country. The proportions in which direct and indirect taxes constitute a burden on the taxpayer, even assuming that the respective burdens can be exactly computed, do actually differ from country to country. At any rate, for the time being, these differences in proportion will have to remain, if only for the reason that the psychological approach to taxation in general varies from country to country. Bearing in mind that, in the case of both types of tax generally, there is an opportunity of shifting the tax burden, or part of it, to someone else, that such opportunities are not always the same, because they are caused by the variations in market pressures of many kinds, and that these are quite unpredictable; it needs little proof that taxation constitutes an element in fixing the price of every product and that this element will be composed of indirect as well as of direct taxes. But so long as one does not know the relative importance of the factors involved (and it is doubtful whether that will ever be known), it would be premature to disturb the relationship between the two types of taxes mentioned before.

"Whereas business enterprises manufacturing and selling their product within one and the same country would be subject to both direct and indirect taxes, in case of exports, the existing methods would have a different consequence. Because of the refunds and compensations in respect of the indirect taxes, these taxes would be levied in the country of the consumer, not in the country where the goods were produced. In the case of direct taxes, the position is exactly the reverse. Undertakings in countries with low direct taxes and high indirect taxes are better off than undertakings exporting in the opposite direction. The former can obtain a large refund on their exports and these exports will be subject to a low compensatory tax on import, while the undertaking itself is subject to a low direct tax. In the latter case, the manufacturers will have to pay a high direct tax in the country where the goods are produced, and these goods will be subject to a severe indirect tax in the country where they are to be sold."

Difficulties in Harmonising

The Bureau has drawn attention to certain difficulties in the way of harmonising tax laws in the Common Market countries. Special mention is made of (*a*) the varying ways in which the concepts of law systems operate when applied in practice through the medium of the substantive law of a particular country to a particular situation; (*b*) the differences in the general political, religious, social or economic foundations of the countries concerned—it is emphasised that these differences can be harmonised only if it is possible to harmonise, in some degree, the principles on which the foundations of the life of countries concerned rest; and (*c*) the difficult task of attaining harmony where the fiscal systems as such are substantially different.

The Bureau then analyses the possibilities of harmonising tax laws. Its analysis reveals that the various systems of taxation could be simplified by reducing the number of taxes in force so that countries would be left with only a few main taxes. There are a number of small taxes that hardly affect the State budget, but, nevertheless, make comparisons in the matter of tax burdens more difficult. The Benelux countries, Belgium, the Netherlands and Luxemburg have indicated that it is possible to cut down the number of certain types of taxes in force. These countries have already agreed to reduce the number of excise duties levied. While it is true that it has not yet been possible to attain the desired unification, the delay can be explained as being due to two causes, the one being difficulties which were not allowed for at the time and the other that unifying involves much more in the way of consequences than merely harmonising and cannot be hurried. The fiscal legislation of the German Federal Republic is very similar to that of Luxemburg and the Netherlands, and that would facilitate the process of harmonising the fiscal systems of these three countries. The Bureau has good reason to believe that the fiscal system of Belgium will be reformed in the direction of assimilating its income-tax legislation to that of the income-tax and corporation income-tax of the Netherlands. France is now moving in the same direction; the latest measure of reform recently introduced is the substitution of single income-tax payable by individuals for the former dual system of income-tax levied both at a flat rate and on a progressive scale.

Now that the majority of countries have concluded double taxation treaties with one another, it can be said that this has resulted in a closer approximation of fiscal terms generally throughout the world. More and more the same provisions tend to be used to govern a particular situation, for instance, the treatment of real property, of royalties from parents, and the definition of permanent establishments of foreign enterprises in another country tend to be governed by provisions which have become standardised. There is even a tendency to standardise the rules applicable to movable property, although a number of problems in this connection still await solution. The Fiscal Committee of the O.E.E.C. has produced a series of recommendations designed to make multilateral conventions a possibility and in doing so has performed an important task.

Depreciation Allowances

Despite all this, the Bureau feels that the countries are still very far from the state of harmony in the matter of ascertaining profits for income-tax purposes. In its considered opinion, it will be possible to lay down common methods of computing depreciation allowances. How this scheme can be implemented is described as follows:

"Those countries which permit accelerated depreciation or investment allowances might be prevailed upon to adopt agreed standard rules in their laws. It would not be difficult to introduce identical rules governing the right to carry forward losses, or to define, once and for all, what are deductible expenses for income-tax purposes. The ideal thing would be for every country concerned to enact a model law, in which the liability to assessment would be worded in exactly the same terms. It might then be possible to call in the aid of the recommendations of the Fiscal Committee of the O.E.E.C. and to define the import of the terms 'domicile,' 'residence' and 'ordinary residence' for tax purposes. A model law of the kind contemplated could then proceed to define such matters as permanent establishment, carry-forward of losses, depreciation expenses allowable as a deduction for income-tax purposes, and so on. It might even be possible to print the sections so that one type of letter would be used only for regulations common to all model enactments, while another type would indicate the matters peculiar to the country concerned. The method we propose will naturally not solve all problems. The abstract words of the statute are not the end; they must either be interpreted by the judiciary or supplemented by implementing regulations. Inevitably, judicial interpretation will proceed by people brought up in a particular country and, inevitably, it will not be uniform. Nevertheless, a useful start could be made in this manner."

The scheme to harmonise fiscal laws, it is pointed out, is fraught with difficulties, but it has possibilities, and one thing about it is certain: harmony will not extend to the rates of tax, for the reason that, in many countries, income and profit taxes, together with taxes on property ('direct' taxes), are of paramount importance. In other countries, taxes on turnover and consumption ('indirect' taxes) play the major part in providing revenue for the State. The list which follows shows the extent of the differences, though only in a rough way; it is not entirely accurate because the countries concerned do not distinguish between direct and indirect taxes in exactly the same way, but it gives a general idea of the position:

	Direct taxes Per cent.	Indirect taxes Per cent.
Belgium	47	53
Federal Republic	53	47
France	40	60
Italy	30	70
Luxemburg	59	41
The Netherlands	60	40

Why should there be such differences and which is the system that should be given preference? Answering these posers, the Bureau says:

"It is mainly a matter of the psychology of the people of the countries concerned. In countries

which rely chiefly on direct taxes, the arguments in favour of direct taxation rest on the assumption that such taxes are inherently just in the fiscal sense and have proper regard to capacity to pay. But there are countries in which the opposition to direct taxation is so strong that the main reliance must be placed on indirect taxes as revenue-getters; the State could not obtain the revenue it required by other means. Is there any evidence to prove that a system of direct taxation is to be preferred to a system of indirect taxation or to prove the converse proposition? The answer depends again on the attitude of the people of the country concerned to fiscal exactions. No answer can be correct in all cases. As long as these psychological differences in attitude exist, it will be impossible to expect tax rates to conform to one and the same standard."

Too much reliance, the Bureau warns, should not be placed on comparisons of the tax burdens, because the total of taxes borne by an enterprise need not necessarily be higher even in a country which subjects profits to very high rates of tax than in a country where profit taxes are low, but the various kinds of indirect taxes constitute a very heavy burden. According to it, the rates of tax can only be applied to an ascertained figure of taxable income. It is really necessary to go behind this figure and find out how it is made up, that is, one should examine the allowance for depreciation, the possibility of availing oneself of investment allowances, of a carry-forward of losses, etc. One should not confine oneself to a comparison of fiscal burdens; it is necessary to assess how the advantages that a taxpayer is granted either in return for the taxes he has paid or as a member of a community that pays the taxes compare with what taxpayers in other countries get. A country may collect heavy taxes, but the benefits obtained from the taxes collected may far outweigh the benefit obtained by taxpayers in a country which has the appearance of burdening its people much less with taxation but which may impose other, non-fiscal, charges. The observations just made merely touch on some of the problems which a really profound study of taxation on an international basis would inevitably be called on to elucidate. The problems involve issues actually affecting the Common Market at the present time; and the same problems are of importance in the field of international tax law, in general.

New Fiscal Legislations

After analysing the fiscal implications of the European Common Market thus, the Bureau surveys the notable fiscal developments all over the world. The survey covers, *inter alia*, measures taken to encourage capital investment abroad, tax reform in France, changes in laws affecting death duties, turnover taxes and international tax law. It is seen from this survey that a number of developing countries, as, for example, Pakistan and Israel, have introduced measures to encourage foreign firms to invest capital in existing or new industries within their borders by granting such firms tax exemptions and privileges. Some European countries such as Belgium, the Netherlands, West Germany and Luxemburg have also adopted similar measures. In many countries, the opposite tendency has been observed. The countries include, among others, New Guinea, Uruguay and Venezuela. There are cases where new legislation has added to the fiscal burdens of non-residents, though it cannot be said that all this legislation was discriminatory. The rates of tax have been increased in Argentina, Chile, Haiti, Italy, Malacca, Singapore, Mexico, Nicaragua and Peru, while the same have been reduced to some extent in New Zealand, Sweden and the U.S. The system of taxation in France has been modified substantially on the basis of the recommendations made by the special commission on taxation. There are some changes in laws affecting death duties in France, Canada and West Germany. As for turnover taxes, major alterations have been made in Belgium and Sweden.

In the sphere of international tax law, the Bureau's report mentions the conclusion of a number of new conventions and modifications of several existing ones. Included in the list is the convention concluded in 1959 between India and the U.S. Under the convention, the U.S. allows its taxpayers a credit for a national amount of Indian tax which, in fact, has never been paid at all, because it was remitted by virtue of a tax holiday. The report also alludes to the recommendations of the O.E.E.C. Fiscal Commission on a number of tax treaty provisions relating to taxation of income from shipping, inland waterways transport and air transport enterprises and of their crews; taxation of income in respect of dependent and independent personal services; taxation of income from immovable property; and taxation of capital.

SOME IMPRESSIONS OF RUBBER CONFERENCE

MALAYA PASSING THROUGH WAVE OF PROSPERITY

By a Correspondent in Kuala Lumpur

THE Fifteenth Rubber Study Group Conference, which ended on 1st October 1960, was appropriately held in Malaya, the world's second largest producer of rubber and to the economy of which rubber is the most important single product. The Group's conferences are always shrouded in mystery, partly because Governments are its members and partly because much of the discussion nowadays tend towards a reflection of the natural rubber producers' fear of that chemical enemy, synthetic rubber. In fact, the American visitors were outspoken about their estimates of natural's remaining years. The Group for the first time implicitly recorded its acceptance of synthetic polymers in these words: "In the long run, it was felt that the increasing production of the new stereoregular synthetic rubbers will exercise an important stabilising influence on natural rubber prices at competitive levels." In other words, natural must sell at competitive prices with factory-made rubber and the superiority claimed for its qualities is no longer heard. Last year, the world's largest consumer of rubber, the U.S.A., reduced its offtake of natural to 20 per cent. of the total.

Before synthetic rubbers began to claim qualities of the natural, the two important advantages they enjoyed were fixed prices and speedy adjustability of output to visible demand. Natural took its unhurried course from planting to production which would not keep pace with the demand for rubber. That led to the alternating phases of booms and slumps. In boom times, rapid expansion of planting took place but no rubber was produced. By the time the new rubber trees came into bearing, the downswing would have already begun and the rubber planted in the boom itself was the cause of the slump. The synthetic (factory-made) rubber, however, was amenable to more precise control and less waste. As it showed in 1950-51, 1955-56 and in 1959-60, the short-term pressures for rubber supplies can raise the natural's prices to rise to giddy heights and drive manufacturers to expand the base of synthetic usage. Meeting as it did after a prolonged wave of boom conditions, the Study Group found it more than ever necessary to warn the growers of natural rubber that a wildly fluctuating price was the most dangerous malady affecting their produce and that it would, if allowed unchecked, give the victory to the synthetic.

For many years, the International Rubber Study Group has been considering various measures of stock retention, supply regulation and marketing, in order to hold prices at a steady level and this year's conference was marked for the scarcely concealed anxiety to hold down prices. Among the countries having a predominantly plantation economy, Malaya is probably one of the largest. If in Ceylon tea is responsible for 65 per cent. of the Island's export trade, in Malaya the position of rubber is even more crucial. The export duty on rubber alone accounts for 20 per cent. of the Federation's revenue. This heavy dependence on the plantation industry both in Ceylon and Malaya make the Governments of these two countries to pay close attention to the affairs of the industry and respond to its needs with an alacrity, hardly noticeable in India in the relationship between the Government and the plantation industry.

Rubber is Malaya's most important single crop and its prosperity makes Malaya one of the wealthiest among Asian countries. From about 3.5 million acres, Malaya produces rubber valued at over Rs. 220 crores. The Malayan peninsula is divided into two States and is governed under a Federal constitution. About seventy per cent. of the land is under forest, some parts of which have not yet been penetrated by man. The reasons for the country's current wave of prosperity is the high price of rubber and the large production of tin which, too, is fetching a good price. Malaya's iron ore production is rising and this year a ready buyer, Japan, will take 4,750,000 tons worth about Rs 27 crores. Last year, Malaya had a comfortable trade balance of Rs. 100 crores and the first quarter of this year was leading with Rs. 35 crores.

Flushed with money thus, Malayan building boom is at its height and, in almost every town, private residences are being constructed on a scale so lavish that it is almost difficult to believe that one is in an eastern town. Pataling Java, the new suburb of Kuala Lumpur, is almost a free copy of a modern suburb in the U.S. Kenny Hill Drive, cutting through Kuala Lumpur's fashionable residential area, reminds one of Thornhill Drive, Oakland, California, more than any South-West Asian town.

Many may not be aware that Malaya's rubber industry was founded on a grant from the Government of India which sent Wickham's expedition to the Amazon basin and subsequently took action to propagate rubber in India, Ceylon and Malaya. The cultivation of rubber begun from Wickham's seeds covered only a few hundred acres in 1896. Within the next ten years or so, over a million acres were planted to rubber and today, out of 5.5 million acres under cultivation in Malaya, 3.5 million acres are under rubber. Such a heavy dependence on rubber has its perils, though, so far, it has helped the Federation immensely. Rubber being closely related to Western industrial progress, the advance made there is instantly reflected in the price paid for rubber. The earning from this commodity has been so handsome that the Federation has been able to go ahead with standards of social welfare still in the planning stage elsewhere. The earnings from rubber will still be available to Malaya for several years to come, so that it can, if it is wise, comfortably build a modern industrial economy.

(Concluded from next column)

are registered on the Exchange. The statements called for were twofold. First, they related to outstanding position of transactions in these contracts as on 15th October 1960 relating to hessians—40" x 10 oz. and 40" x 7½ oz.—B. twills—cornsacks and heavy cees—and raw jute. These statements were required to be submitted on the 24th inst. Secondly, they were asked to submit weekly statements of transactions commencing from the week ended 22nd October in jute goods and raw jute as mentioned above. The statements should give quantities, the names of sellers and buyers and the delivery periods, and are to be submitted every Tuesday following the week for which the statement relates.

Another important factor which has been responsible for the decline in prices of raw jute is the announcement of the official estimate of Pakistani crop. According to the Provincial Directorate of Agriculture, the final estimate of jute crop in East Pakistan for the season 1960-61 is 5,625,000 bales, which represents an increase of 261,882 bales over the previous season's crop. Though it is substantially higher than the earlier expectation of a crop of 4.2 to 4.5 million bales, it falls short of the record crop of 6,001,000 bales harvested in 1958-59, but trade circles still feel that the official estimate is on the high side. The increase in output in East Pakistan, as estimated by the Government, is attributed to larger acreage, consequent on the abolition of jute licensing system and the withdrawal of the ban on cultivation of jute in the border areas. The total area under jute during the season is placed at 1,517,800 acres, as against 1,375,000 acres in the previous season.

JUTE GOODS OUTPUT LOWER

The production of jute goods during September 1960 suffered a sizable fall of 4,800 tons to 89,400 tons, in contrast to the sharp rise of 7,400 tons in the previous month. As compared with the corresponding month of 1959 also, the production in the month under review shows a decline of 3,200 tons.

The lower output in September was due to shorter working hours, the number of hours worked being 192, as against 208 in the previous month, consequent on the *Pooja* holidays. The decline was mainly in hessians, which have fallen by 2,600 tons to 32,500 tons, at which level they form 36.3 per cent. of the total output. In the previous month, they constituted 37.3 per cent. and in September 1959 they formed 40.5 per cent. of the total production. Sackings have declined by 400 tons to 47,900 tons. These represent 53.5 per cent., as against 51.3 per cent. in the previous month and 52.7 per cent. in September 1959. Miscellaneous constructions, at 9,000 tons, show a fall of 1,800 tons over the month and a rise of 2,700 tons over the year.

RAW JUTE AND GUNNY PRICES DECLINE

MORE LOOMS SEALED—MILLS BUY RAW JUTE ON QUOTA BASIS

THE speculative boom in raw jute and gunnies seems to have abated and prices have taken a downward trend, thanks to the concerted efforts of the I.J.M.A. and the East India Jute and Hessian Exchange Ltd. to curb it. In raw jute, Assam bottoms October delivery, for instance, has come down to Rs. 138 per 100 kilograms (as on the 22nd inst.) from a peak of Rs. 151.50 touched on the 13th inst., which was nearly Rs. 5.50 above the record level touched during the previous boom in May last. In jute manufactures, hessian 40" x 10 oz. October delivery has dropped from Rs. 59.25 per 100 yards to Rs. 54 and B. twills (October delivery) from Rs. 183 to Rs. 176 per 100 bags. The decline in prices is, however, not large, as compared with the sharp rise recorded since the beginning of the current season. This is presumably due to the continued uncertainty about the current year's crop of raw jute.

Following the steps taken by the East India Jute and Hessian Exchange early this month to check speculation by banning all fresh transactions in futures trading, the member-mills of the I.J.M.A. entered into a gentlemen's agreement to refrain from purchasing raw jute for one week. This was later on extended up to Friday the 14th inst. and was subsequently further extended up to the 22nd inst. Except for minor deflections, the agreement is said to have worked well. The mills have again started purchasing raw jute with effect from Monday this week, but on a quota basis, in accordance with a scheme worked out by a sub-committee of the I.J.M.A.

Close on the heels of the aforesaid agreement, the Committee of the I.J.M.A. recommended, at its meeting on the 15th inst., the sealing of 5 per cent. of the looms with effect from the 17th inst. on a voluntary basis. It was also indicated that there was a possibility of an additional 5 per cent. of the looms being sealed with effect from the 24th inst., if conditions warranted. Subsequently (on the 21st), the Committee of the I.J.M.A. recommended the further sealing of 5 per cent. of the looms with effect from Monday this week. This has brought the total sealed complement of looms to 19 per cent., including 9 per cent. compulsorily sealed. In recommending the sealing of looms on a voluntary basis, the I.J.M.A. has chosen the middle-of-the-road policy. For the I.J.M.A. was earlier reported to have been considering a proposal to seal more looms on a compulsory basis. Obviously, this proposal did not find favour with the Government of India, which still holds the view that the current season's crop of raw jute is fairly satisfactory. According to official sources, a firm assessment of the crop can be made only after a few weeks more and the question of compulsory sealing of a larger percentage of looms would have to be considered by the end of December after the Indian crop and the availability of supplies from Pakistan were known. The Committee of the I.J.M.A. has, therefore, left it to the discretion of individual mills to close the looms on the basis mentioned earlier. Many of the mills, however, have already implemented the recommendation.

Labour Feels Concerned

Meanwhile, the West Bengal Government seems to have been concerned over the implications of this move from the point of view of labour and has asked the representatives of the I.J.M.A. and the Central trade union organisations to meet the Labour Commissioner and discuss the situation arising out of the above decision. The Joint Secretary, State Labour Ministry, is also expected to meet the representatives of the I.J.M.A. These meetings are scheduled to be held this week.

The ban on fresh hedge contracts, the fixation of maximum prices and the imposition of stiff margins by the East India Jute and Hessian Exchange would appear to have diverted speculative activity to transferable specific delivery contracts. Consequently, the Exchange, with the concurrence of the Forward Markets Commission, decided to collect data relating to outstanding positions in transferable specific delivery contracts in raw jute and jute goods from the primary markets, with a view to enabling the Exchange to consider what appropriate action may be called for relating to trading in T.S.D. contracts. The Board of E.I.J.H. Exchange called for statements not only from the members of the Exchange but also from licensed brokers for raw jute and gunnies whose names

Here in January!

India's First Financial Daily Newspaper

THE FINANCIAL EXPRESS

EDITED BY G. M. LAUD

Comprehensive Coverage of

- Market Trends & Quotations
- Foreign Markets
- Banking & Finance
- Industry, Trade & Transport
- Market Intelligence
- State Policies & Trends
- New Issues & Dividends
- Investors' Queries
- News of the World

Complete News and Feature Service for Bankers, Financiers, Investors, Industrialists and Commodity Traders.

With the advent of *The Financial Express* in January, business-men will be able to read each morning the trends of the world markets and economy...latest quotations from all the stock exchanges in India and the commodity markets...news about Government policies, new enterprises, new developments in production and management...impartial analyses of company balance sheets...and intelligence reports for import-export trade.

The Financial Express will be edited by G.M. Laud, the well-known financial journalist, author and banker, backed by all the resources of the Express Group of Newspapers—your guarantee of reliability.

Business will begin each morning with The Financial Express.

A Publication of the Express Newspapers Group from Newspaper House, Bombay 5.

RUSSIA'S OIL EXPORTS

FURTHER INCREASE LIKELY IN FUTURE

RUSSIA'S massive entry into the world's oil markets has been the subject of anxious debate in recent months. Its oil deals with Italy, West Germany, Finland, the United Arab Republic, India, Japan, Cuba, etc., have generally provided for a price just below the ruling market price. It is obvious that these oil agreements are intended to get in exchange a whole range of raw materials for Russia's own development programme. Italy, for instance, is supplying, in exchange for Russia's oil and refined products (which it took at the rate of 62,000 barrels a day last year), steel tubing for oil and gas pipelines and synthetic rubber. Under the latest agreement for the import of 12 million tons of Russian oil over the next four years, Italy will have met 20 per cent. of her total oil needs from that source. If, according to one reliable forecast, Italy's oil needs are met, before many years are past, to the extent of 50 per cent. by Russia, it will have become the biggest single overseas customer for the latter's oil.

The other customers for Russian oil and refined products have also been buying substantial quantities. Last year, the United Arab Republic took 50,000 barrels a day, Germany 38,000, Finland, 36,000, and Japan 12,000. The United Kingdom, however, took last year only 580 barrels a day. What quantities have been bought by these countries in the current year and what will be bought by them in the next few years are not precisely known, although, according to Soviet statistics, Russia exported last year 1.8 million tons of crude and 5.9 million tons of refined products to West Europe alone. According to the U.N. Economic Commission for Europe, Russian oil sales to West Europe this year are not expected to be as much as in 1959 when they accounted for about 3 per cent. of total West European oil imports. India, of course, will be importing substantial quantities in the coming years. Japan will be purchasing, besides the usual quantity, substantially more under a six-year Russian contract with one of the leading independents, Idemitsu. Cuba is already and will continue to be importing large quantities. Under the proposed agreement between Russia and Pakistan for building an oil refinery, the latter country will be presumably importing Russian crude for refining.

Although a growing number of countries are thus becoming customers for Russian oil, it is not possible to work out an aggregate (covering both crude and refined products) for their possible purchases in the coming years. But there can be no gainsaying the fact that the magnitude of these purchases will be large enough to cause anxiety to the world oil companies, namely, Caltex, Stanvac and Shell. Sooner or later, these companies may have to seek an arrangement with Russia in respect of both prices and sharing of markets. The stand taken by these companies that they will not refine Russian crudes in the importing countries is understandable in the context of the composite character of their operations and the commercial competition, that is developing; this may also bring the Russians round to a satisfactory international arrangement, as has happened in the case of tin and a number of other commodities in which it is also a substantial producer. It is stated that Russia is under a necessity to export more and more crude, since the expansion of its refining capacity is lagging behind the growth of crude output. This situation may be favourable to the oil companies in their possible negotiations with Russia on the oil export question.

Be that as it may, currently the question is whether Russia is really a formidable competitor. To answer this question one will have to get an idea of its current and prospective oil production. In absolute terms, Russian oil production this year is estimated at 144 million tons (in terms of crude), as against the United States' 352 million tons. A confident forecast has it that Russian output will rise rapidly and steadily approach nearer to the current level of U.S. production. Since a growing effort is being put into the search for oil and natural gas in the U.S.S.R., it is expected that the 1965 target (230 to 240 million tons of oil) and the 1972 target (350 to 400 million tons) will almost certainly be reached or exceeded. After allowing for the export of one-fifth of Russia's planned higher production of around 350 to 400 million tons, it is estimated by the *Petroleum Press Service* that oil consumption per head in 1972 in that country will be between one and one and a quarter tons a year, representing 30 to 40 per cent. of the possible U.S. level at that time, and about 40 to 50 per cent. of what the U.S. level is today. These figures show that Russia's production, domestic consumption and export of oil will register huge increases in the coming decade. That Russia will become a formidable competitor in the world's oil markets is certain, for, in ten years' time, it may be in a position to export at an annual rate of 70 to 80 million tons.

In this context, it will be useful to have an idea of the present and prospective energy patterns of the United States and the Soviet Union. A neat picture of this position is provided in the October 1960 issue of the *Petroleum Press Service*. The relevant figures are given in the following table:

	Today		*1965 (g)*		*Early 1970s (g)*	
	U.S.S.R.	*U.S.A.*	*U.S.S.R.*	*U.S.A.*	*U.S.S.R.*	*U.S.A.*
Population (millions) ..	213(b)	177(b)	..	..	270	230
Energy use (million tons coal equiv.)..	600(a)	1,430(a)	930	..	1,700	2,500
Energy use per head (tons coal equiv.)..	3(a)	8(a)	..	..	6	11
Oil use (million tons) ..	108(b)	420(b)	190(h)	..	300(h)	725
Oil use per head (tons) ..	½(b)	2½(b)	..	..	1	3
Crude oil production (million tons)	144(e)	352(e)	235	407(d)	375	(e)
Feet drilled (millions) ..	23(a)	200(a)	52	..	..	..
Geophysical crews operating ..	758(a)	480(a)	1,200	..	..	..
Natural gas consumption (*f*) (million c.f.d.) ..	4,850(c)	31,700(b)	14,500	..	28,500	55,000

(*a*) 1958.
(*b*) 1959.
(*c*) 1960.
(*d*) Assuming growth 1960-65 at 3 per cent. a year.
(*e*) Continued growth at 3 per cent. a year would give a figure of 520 million tons by 1975.
(*f*) Figures for U.S.S.R. are gross production including whatever gas is flared.
(*g*) Some of these figures are the mean between upper and lower limits referred to in the text.
(*h*) Assuming one-fifth of planned production is exported.

With the projected increase in natural gas production in the U.S.S.R., its energy pattern will come closer to that of the United States. It is estimated, on the basis of the production targets set forth in the Soviet Seven-year Plan, that the contribution of natural gas to Russian energy consumption will rise from five per cent. in 1958 to almost 25 per cent. of the total by 1972. The contribution of oil, after allowing for export of one-fifth of its total production, to Russian energy consumption will rise from 23 per cent. in 1958 to only 26 per cent. by 1972. Meanwhile, the relative contribution of coal will drop from nearly 60 per cent. to about 40 per cent. The remaining 10 per cent. or so of Russian energy use will be contributed by other sources such as hydro-power, peat, wood, shale oil and some atomic power by 1972. As for the energy pattern in the United States, oil accounts for 46 per cent., natural gas 27 per cent., coal 23 per cent. and hydro-power 4 per cent.; here the non-commercial fuels have been left out of account. Little change is expected in this pattern of U.S. energy consumption in the next 10 to 15 years. Thus, by the mid-seventies, oil will play a lesser role and coal a greater role in the U.S.S.R. than in the U.S. Otherwise, the energy patterns of the two countries will be comparable in 10 to 15 years' time. In terms of coal equivalent, Russia's energy use by 1972 may well be 1,700 million tons or around six tons per head, while consumption in the U.S. then will be 2,500 million tons or around 11 tons per head.

A.E.I. MULTI-CHANNEL CARRIER EQUIPMENT FOR OIL INDIA PIPELINE PROJECT

The Transmission Department of A.E.I. Telecommunications Division announces that a £130,000 order for carrier transmission equipment has been received from Murphy Radio of Welwyn Garden City. The equipment will form part of an extensive radio network for the 720-mile Oil India Pipeline Project in Northern India. Work on the laying of the pipeline, considered to be one of the largest of its kind in the world, is scheduled to start in November.

The main purpose of the radio link will be to provide the control headquarters of Oil India Private Ltd., at Nunmati with telemetering facilities, ensuring a constant check on oil flow output along the pipeline from the issuing station to the terminal refinery. The radio link will have an ultimate capacity of 34 channels for telemetering and teleprinter facilities, and speech transmission. Teleprinter services will be allocated on a separate channel connecting pump and maintenance stations on an individual link basis.

The transmission path will follow the oil pipeline route from the issuing station at Nahorkatiya, in the State of Assam, westwards along the Brahmaputra Valley for 260 miles to the pipeline control headquarters and Government oil refinery at Nunmati. It will then cross to the north side of the river and continue westwards for a further 460 miles skirting the Pakistan frontier and ending at the terminal oil refinery of Barauni, in the State of Bihar.

The A.E.I. transistorised channelling equipment of the most up-to date type will be installed at the terminal and intermediate stations, and at most of the repeater stations along the route. Over the longer communication arm, to the west, fifteen radio repeaters and back-to-back terminals will be positioned with local access to A.E.I. channelling equipment, while nine radio repeaters will be spaced at intervals over the shorter distance, to the east. Access points established at the repeater pumping stations and maintenance stations will allow mobile V.H.F. links to be fed into the main network. In the event of a possible emergency breakdown, the carrier channelling equipment will automatically transfer to stand-by radio repeater units.

The A.E.I. multi-channel carrier system chosen conforms to the international standards recommended by the Comite Consultatif International Telephonie et Telegraphie (C.C.I.T.T.). Each voice channel occupies a bandwidth of 4 kc/s and will transmit speech frequencies from 300-3,400 cycles. The speech channels are combined into a basic group of 12 channels covering a frequency bandwidth of 60-108 kc/s. Three of these 12 channel groups are then translated into the frequency band 6-156 kc/s so as to allow a total of 36 channels to be transmitted over the radio path. Two of the 36 channels are concerned with the control frequencies associated with the working of the radio link, leaving a total of 34 channels available for conveying pipeline information.

The contract will be carried out in two phases. Carrier equipment for the eastern link will be shipped out in June 1961 and should be fully operational by December. The western section will follow in October 1961, and should be ready for switch-over in April 1962.

L.D. PROCESS FOR BOKARO PLANT

An Indian firm of consulting engineers is reported to have recommended the L.D. process of steel manufacture for the fourth public sector steel plant proposed to be set up at Bokaro on the ground that the installation and operating costs of this process are appreciably lower than those of the open hearth process. In the expert opinion of the firm, the L.D. process is also the best for the type of products proposed to be manufactured in the Bokaro plant. If this recommendation is accepted, there will be three L.D. converters of 120 tons capacity each for producing two million tons of ingot steel annually on the basis of 30 heats per day per converter.

In the L.D. process, developed in Austria, a stream of high pressure oxygen is blown on to a bath of molten iron under controlled conditions. Iron is quickly refined and converted into steel. According to operational data collected during pilot plant trials at the National Metallurgical Laboratory, the processing time taken in converting iron into steel—six to eight hours by the conventional steel-making process—can be cut down to 15 minutes by the L.D. Process.

The Technical Director, Hindustan Steel Ltd., has also outlined, in a recent paper, the factors in favour of the L.D. process. The most important of these are efficiency and economy. The capital cost of an L.D. plant is said to be only half that of an open hearth plant and operating costs are still lower. The L.D. process also helps to reduce investment costs in soaking pits and fuel consumption for heating because its supply of ingots is practically continuous compared with intervals of 10 to 12 hours for big open hearth furnaces. Operation of the soaking pits can, therefore, be organised in a better way.

DURGAPUR COKE FOR T.I.S.CO.

It is reported that the T.I.S.Co. has just placed a fresh order for the purchase of 50,000 tons of coking coal from Durgapur. This is to provide against a possible "lean day." This brings the total quantity of coke purchased by T.I.S.Co. from Durgapur and Rourkela coke ovens to 130,000 tons since last year, Durgapur accounting for 100,000 tons and Rourkela 30,000 tons.

It is revealing to know in this connection how the shortage of coking coal—a shortage which involves its import from Rourkela and Durgapur—has affected the T.I.S.Co's production schedules and finances alike. The purchase of coke from Rourkela and Durgapur cost the Company Rs. 7 and Rs. 10 per ton respectively in freight which is non-recoverable under the price escalation scheme currently in force. It is stated that while T.I.S.Co's expansion to an annual production of 2,000,000 tons of steel ingots was planned on the use of hundred per cent. washed coal, less than 30 per cent. of the coal consumed during the last financial year was received in washed condition, compelling the use of poorer varieties of coal and consequent curtailment in production schedules.

In its representation to the Government for an upward revision in the retention price of steel, T.I.S.Co. is understood to have pointed out that owing to deterioration in the quality of coal there was increase in the average works cost by Rs. 45 lakhs in the past two years. But this was not admitted by the Government, as it stood outside the escalator clause.

With its projected height of 537 feet reached recently, Trinity Dam in northern California has become the highest earth-filled dam in the world, according to an announcement by the U.S. Interior Department. Building the dam has required placement of 33 million cubic yards of earth and rock. Trinity is part of the Central Valley Reclamation Project. It will create a lake containing 2.5 million acre-feet of water when filled. Storage of water behind the dam will begin this autumn.

NEW PRODUCTS AND PROCESSES

Marine Loading Calculator

HULL damage caused by badly distributed cargo is an important factor in ship loading, particularly in large vessels. As a result there is a world-wide demand for a rugged, easily operated calculator that can work out hull stress quickly and accurately for every condition of loading. To meet this demand, a British Company is reported to have obtained sole manufacturing and selling rights for a device which will be marketed under the trade name Sperry-Sintef loading calculator, according to the British periodical *Engineering*. The calculator is a robust electrical computor, built from standard sub-assemblies, and does not employ valves. The sub-assemblies are arranged in a shallow alloy case for bulkhead mounting in the ship's deck office, the length of the case depending on the size of the ship. Each calculator is calibrated before installation according to the ship's characteristics. The operation of the calculator is self-evident from its control panel appearance. An engraved plan of the ship shows cargo compartments (each with its own tonnage setting), surmounted on the left by a selector switch, associated mean draught and shear stress setting knobs and a balance meter for setting to zero. On the right are similar arrangements for obtaining trim and bending movement.

Impregnated Bearings

Intensive research by a British firm on bearings impregnated with polytetrafluoroethylene, better known as P.T.F.E., has resulted in the production of not only an improved material, but a cheaper one. The new bearing, known as Polyslip I.M., has four or five times the performance merit of the earlier material. The bearings are of 14 sizes—between three-sixteenths of an inch internal diameter and two and a half inches. For each size of bore there will be two alternative lengths. The external size can be varied as desired by machining, but the internal bore must not be machined. Sizes outside the standard can be specially manufactured. Polyslip I.M. is a bearing of porous bronze produced by powder metallurgical methods with its working surface impregnated with a mixture of P.T.F.E. and a lead additive. Used dry, a bearing will last 1,000 hours under a P.V. factor of 6,500 (P.V.=lb./sq. in.×ft./min.) and does not pick up dust. The pressure element can reach 4,000 lbs. per square inch, the maximum the bronze matrix will withstand. Temperatures can be as high as 280°C, or as low as—200° C. and provided the liquid does not attack the base metal, the bearing may be totally immersed without harmful effect. Indeed, its performance is often enhanced.

Machine for Disposal of Waste

Shipping companies, hospital authorities, hoteliers, laboratories and other large administrators in fields where large quantities of waste material must be disposed of quickly and hygienically are showing interest in a new heavy-duty waste disposer machine that has been introduced by a U.K. firm. The makers, who are supplying one of the machines to a Government laboratory in Kenya, claim the unit has a unique operation enabling it to handle more categories of waste materials than previously possible with this class of unit. One feature of the machine is found in the powerful jets of water impinging into the teeth of the cutter ring from the periphery of the pulverising impeller. These jets speed the breaking up of waste as it is forced against the cutter teeth by the impeller and also wash the machine clean after use. The unit is powered by a three horse-power motor, continuously rated and fitted with a reversing contactor-starter incorporating overload protection. The motor can be supplied in either 200 or 400-volt three-phase for 50 or 60 cycle operation. The water to the machine is controlled by a magnetic solenoid valve. For applications in ships' galleys, the units are supplied with A.C. or D.C. motors conforming to sea-going specifications.

Photographic Developer

A simple and economic method of manufacturing diaminophenol sulphate, an important chemical used in photography and for dyeing hair and fur, has been developed at the Central Electro-Chemical Research Institute, Karaikudi. Among the advantages claimed for the new method are the low cost of the base material, a yield of 60-65 per cent. and the facility of re-use of the spent catholyte. The cost of production of diaminophenol sulphate in a plant with an annual capacity of 15,000 lbs. has been estimated at Rs. 6.30 per lb., the lowest, as compared to other electrolytic and chemical processes. The cost of the imported material, under the trade name *Amidol*, is Rs. 36 per lb.

Automatic Air Communications

The Radio Corporation of America has developed an automatic air traffic communications system which, it says, can contact upto 500 airplanes in two minutes on a single frequency. The system, described by RCA as the first ever developed to meet the specific requirements of air traffic control, provides for the automatic transfer of essential routine flight information from ground control centres to planes and back again. It was designed to correct the crowded communications conditions caused now by time-consuming voice reports from pilots.

Tyre-wear Measured in Laboratory

The U.S. National Bureau of Standards reports devising a laboratory method of measuring wear and tear on automobile tyres. The method, it is said, is important to tyre manufacturers who, in the past, have expended on time-consuming, expensive road-testing of tyres, where results have sometimes been conflicting. In the new method, tyres are held against the inner surface of a cylindrical roadway at selected speeds for test runs of 500 miles or more. Factors such as speed, load, temperature and inflation pressures are rigidly controlled.

JAY ENGINEERING WORKS LIMITED

SPEECH OF CHAIRMAN, LALA SHRI RAM

THE Twenty-third Annual General Meeting of the Jay Engineering Works Limited was held at Delhi on 15th October 1960. Addressing the shareholders on the occasion, Lala Shri Ram, Chairman, disclosed that steps were being taken to increase production of electrical stampings not only to meet the Company's own requirements but also to supply the needs of other consumers. He added that the production of Zig-zag sewing machines was likely to start in January or February next year.

The following is the full text of Lala Shri Ram's speech:

"LADIES AND GENTLEMEN,

"The balance-sheet and profit and loss accounts and the Directors' report have been in your hands for some time and these, with your permission, I will take as read.

"The comparative figures of sales, etc., between the year ended 31st March 1959 and the year ended 31st March 1960 are:—

	For the year ended	
	31-3-1959	31-3-1960
	Rs.	Rs.
Sales	5,33,24,107	7,20,63,503
Profit before providing for income-tax	44,22,192	51,94,362
No. of sewing machines made..	1,97,126	2,42,035
No. of fans made	2,70,807	3,45,772
No. of schools	527	716
No. of students	40,000	50,000
No. of selling points	1,500	1,800

"You will be glad to know that for the first time the fan factory was able to produce more than 50,000 fans in the month of April 1960.

Price Reduction

"As you know, at the time of the last Budget, when additional excise duty was levied on fans, we soon after reduced the prices to the extent of the additional excise duty (in spite of the fact that the excise duties on aluminium sheets and ingots, pig iron, etc., meant monthly increase in cost of over fifty thousand rupees), so that our customers did not have to pay net higher prices for our fans, in the hope that increased production will cover this loss.

"So far, we had been making electrical stampings to meet part of our requirements. We have now been granted a licence to increase our capacity for making laminations, so that we may be able not only to meet our entire requirements but also be able to supply to other manufacturers. Steps have been taken to add necessary amount of machinery, etc. for this purpose.

"We started the hire-purchase scheme not only in the case of sewing machines but in the case of fans also, particularly for the cold weather. Although our scheme will mean higher cost and less profits, yet it will help those buyers, who could not pay the full price at one time, to pay by easy instalments, total cost being the same.

"Air-circulators, exhaust fans, and fractional h.p. motors are now in regular production.

"I am sorry to say that zig-zag sewing machine is still not in production, but this time I am glad that, while we could have started production somewhere about July or August, but our design section got some new ideas, which will make the machine more efficient than before, and we are now hoping that we will start production by January or February next year.

"We have now made a good study and have good experience of the foreign markets, and the export of our sewing machines can be considerably increased.

Capacity to be Increased

"Since the present factory cannot meet the demand we have applied for a licence for a complete new unit of the capacity of 25,000 sewing machines a month, mainly of the zig-zag type, and I and my colleagues are confident of being able to export almost the whole production of the new factory. We hope the licence will be soon granted.

"During the year, we have fully mechanised our foundry and it is, if not the only one, one of the very few mechanised foundries in the country.

"As is well known, our country is in a difficult position so far as foreign exchange is concerned. In keeping with our policy of continuously increasing our exports, I am glad, that while in the year ended 31st March 1959 our exports were worth about Rs. 45 lakhs, in the year ended 31st March 1960 our exports were over Rs. 80 lakhs. Every effort is being made to see that by 31st March 1961 we may be able to increase our exports to somewhere near Rs. 1,25,00,000.

"While on the question of exports, I will appeal to all brother industrialists, particularly of the non-traditional type, to make every effort to export more and more year after year, and to those not exporting, to start exporting. It is true that the margin of profit by sale in India is much higher than what it would be if the goods are exported, but we have also to remember that these margins of profit by sale in India, are due to the Government's policy of severe restrictions on imports. It is, therefore, the duty of all of us to help our country by increasing exports in the hour of its need.

A Few Suggestions

"I will also, in all humility, make a few suggestions to the Government. It is very necessary that quick decisions should be arrived at as regards the various incentives to be given for exports, or difficulties to be removed, and I would suggest that a high-power committee consisting of, say, the Secretary of the Finance Ministry, of the Industries Ministry, the Steel Ministry, and the Railway Ministry, with two representatives of the Export Promotion Councils be formed with very wide power, to take quick decisions, and implement them without too much of red-tapism. Of course, where they may consider it necessary, they can consult higher authorities.

"Among other incentives an important one is about the long-term credit on engineering goods for export, and the other a lower rate of interest on long-term credit. Everybody is interested in export and while the Reserve Bank gives loans at concessional rates for agricultural purposes, co-operative purposes, handloom purposes, etc., in this case also it can help, particularly in the case of non-traditional items. I also think, and very strongly, that concessions in the matter of income-tax, etc., should also be given in the case of exports.

"While no doubt it is true that in a very small way there is some increase in the exports of engineering goods, but it is not enough, and I am sure that if the Government and the manufacturers make up their minds, then by the end of the third Five-year Plan, the exports of engineering goods alone should go up to worth about 50 crores of rupees a year.

Losses Should be Shared

"I would, therefore, suggest that individual industries should make their own associations to share such losses of profits as may be suffered by those whose goods are of approved quality and who export in increasing quantities. These may be shared by all manufacturers *pro rata* on the basis of their production. If, however, manufacturers cannot form their own associations, then even at the risk of incurring the displeasure of the business community, I would suggest that on such industries a small cess may be levied, and the exports of those goods may be handed over to the State Trading Corporation who I hope will utilise the normal trade channels for the purpose, but we must make up our own mind that every year the export of engineering and non-traditional goods should go on increasing so that in the last year of the third Five-year Plan we export not less than 50 crores worth of engineering goods alone, and if possible even more.

"I have pleasure in saying that the relations with our staff and workers continue to be cordial, and it is the result of these relations that we have been able to increase production steadily, and we are, therefore, grateful to all our colleagues whether in the factory side or on the sale for their devotion and hard work."

IMPORTANCE OF INDUSTRIAL SAFETY

CAUSES AND REMEDIES

By Dr. J. L. Rastogi
UNIVERSITY OF LUCKNOW

THE need for increasing productivity in Indian industries, with a view to maximum utilisation of resources, cannot be overemphasised. Productivity has been defined as "the ratio between the output of wealth and the input of resources used up in the process of production." The object of the present productivity movement, therefore, has been to increase the ratio of output to input. One of the challenges in this direction has been the rising incidence of industrial accidents. An accident is a sudden occurrence in an industrial plant causing injury or damage to men or machinery, resulting in loss of production during working hours.

In spite of the importance of industrial safety in increasing productivity in the country, so far no attempt has been made to collect adequate statistics and systematically analyse the probable causes of industrial accidents. The available accident statistics do not present the true picture of the State of affairs. Because they relate only to accidents causing injuries—fatal and non-fatal, while those not resulting in an injury are not reported and taken into account. Even the picture presented by such figures is, however, very grave. The number of accidents has continuously witnessed a rising trend, as will be seen from the accompanying table. Although partly such a trend of industrial accidents has been due to better reporting, yet it cannot be reconciled with the improved and safer conditions of work and the reduced number of working hours under the Factories Act of 1948.

Cost of Accidents

The cost of industrial accidents is usually very heavy. Besides providing first aid to the victim of an accident, the management has to compensate him according to the nature and severity of the injury. The indirect cost involved is even more important. It cannot be measured in monetary terms. An accident means loss of production during the time the work stops either due to damage to the equipment or due to an injury to an employee. It may lead to an injury or it may be without any injury. Again, an injury may be fatal or non-fatal, while the latter may be total or partial or temporary or permanent. If the injury is non-fatal, the worker may take some time to recover and his substitute may not be of the requisite standard and may damage the material, machinery and the name of the concern. Even in cases of non-fatal accidents workers sometimes migrate to their villages and fail to report on duty even after recovery. In cases of fatal accidents the loss generally becomes irreparable while accidents leading to permanent disability give rise to replacement and affect labour turnover.

Besides, more time and money are needed on the part of management for investigating and disposing of accidents and in recruiting, training and supervising new workers to prevent production hold-ups. Inadequate attention to industrial accidents, also, takes away sympathy, loyalty and co-operation of employees affecting the productivity of the concern adversely.

The hardships and difficulties caused to a victim of an accident are in no way less important. Each non-fatal accident affects the working capacity and earnings of a worker according to its nature and severity. In case of a total permanent disability, all hopes of leading a useful life are gone. If it is partial, an employee's productivity and earning capacity are considerably decreased. Even in case of temporary disability, a worker has to wait for sometime to resume normal work. Thus, in spite of the compensation workers receive under the Workmen's Compensation Act, 1923 or Employees State Insurance Act, 1948, accidents have a demoralising effect on them, increasing their proneness to accidents and decreasing their productivity.

Whose Responsibility?

The responsibility for industrial safety or for elimination of accidents is that of both management and workers. The management's responsibility for providing safe conditions of work is legal as well as moral. Under the Factories Act of 1948, management is responsible for providing adequate safeguards against mechanical hazards and use of dangerous substances. The Act provides for adequate fencing of dangerous machinery, casing of new machinery, regulation of work on or near machinery in motion and of the use of hoists, lifts, cranes, etc. It also prescribes control of employment of young persons on dangerous machinery and prohibition of employment of women and children on certain types of machinery. Adequate precautions against dangerous fumes, explosive or inflammable dust, gas and in case of fire, etc., have also to be taken.

The responsibility of the management, in this regard is, however, much more than what has been provided for in the Factories Act, because, first, safety provisions in the Act are general and do not serve the specific needs of any industry and, secondly, mere adequate safeguards against mechanical hazards and use of dangerous substances are ineffective without education of workers on safety and effective supervision to ensure strict observance of safety rules so that causes leading to accidents may be eliminated as far as humanly possible.

The moral responsibility of management for industrial safety is all the more important. Safety and well-being of workers are management's sacred trust which must be honoured by providing adequate safeguards against various industrial hazards. In fact, in view of the immense cost involved in accidents, it is in their own interest to provide safe work environment.

The management's responsibility for industrial safety is widely diffused. Partly it rests with the top executives who provide for safe and healthy work environment but largely it is vested in the foremen and departmental heads who are responsible not only for maintaining the quality and quantity of the output but also for safe performance by workers under their direct control.

While the management is thus responsible for providing safe conditions of work, the primary responsibility for safety lies with the workmen themselves. Every worker should realise the immense cost and hardships involved in accidents. The responsibility of each worker is not only to turn out the goods of requisite quantity and quality but also to perform his assignment safely.

Causes Not Far to Seek

Irrespective of the responsibility for industrial accidents, an analysis of their causes is essential to take decisive and effective steps for their prevention. But as the underlying causes of an accident may be many, it cannot be attributed to one particular cause. An attempt is made here to indicate the various causes that may, collectively or individually, lead to accidents:

1. *Mechanical Hazards.*—In the past, one of the important causes of industrial accidents was leaving the machinery largely unguarded or inadequately guarded. In those days the risk of an employment injury was regarded as a natural corollary of industrial employment for which the management was not responsible. Gradually, with the growth of public interest, workers' organisations and State interference, employers have been held responsible for providing safe conditions of work and proper protection against accidents. In spite of the fact that dangerous parts of industrial equipment have been properly enclosed and use of harmful substances controlled, accidents due to mechanical hazards are not uncommon. In the absence of adequate statistics it is not possible to assess the contribution of these to occurrence of accidents. Most of the accidents taking place under this head are, however, due to either faulty layout or defective designing of machinery.

2. *Physical Hazards.*—A number of accidents can be directly traced to work environment. In spite of the provisions of the Factories Act regulating working conditions, actual conditions with regard to workroom temperature, ventilation, lighting, etc., are far from satisfactory in most of the mills as the law is being observed only in letter and not in spirit. The incidence of accidents is high in departments where ventilation is defective and temperature uncomfortable. Improper and inadequate lighting also result in a number of accidents. Again, accidents are more common during night than in day, as work during night is uncomfortable and has to be performed in altogether artificial light which if improperly arranged gives rise to glare and strain.

3. *Personal Attributes.*—Sometimes accidents occur, in spite of the best care of the management and adequate safeguards against various industrial hazards. In such cases, particularly, and even when they are caused due to aforesaid reasons, accidents occur, due to workers' own traits and attitude of mind. Every worker has his own aims and aspirations, preferences and prides, and accident rates are generally higher where workers' reasonable desires and needs are not given proper attention. Some workers are irresponsible, careless and untrustworthy by their very nature, but these qualities are not always their hereditary attributes. Sometimes, the work environment may develop adverse qualities in employees. The main factors responsible for undesirable traits among workers are:

(*a*) *Fatigue.*—This is a natural consequence of work which, if inadequately attended, affects the productivity of the concern adversely. It leads to monotony, dullness and strain which have been the underlying causes of most of the accidents. Fatigue may be due to various reasons such as uninterrupted long hours of work, unscientific rest pauses, faulty layout causing unnecessary movement, bad lighting and ventilation, etc.

(*b*) *Wrong Selection and Placement.*—The task of selection of workers in our country is still not scientifically conducted. There is neither job analysis nor job standardisation. Vocational and psychological tests are very seldom organised. The task is still left to the *mistry*, who, due to his multifarious duties, has not been able to do full justice to this assignment. A wrongly selected and wrongly placed worker is more prone to industrial accidents, as he will fail to adjust himself to the needs of the industry and take sufficient safeguards and precautions while at work. For him, work becomes largely monotonous, strenuous and distasteful and, under such conditions, even a slight negligence gives rise to an industrial accident.

(*c*) *Inadequate Instructions and Training.*—So far adequate attention has not generally been paid to education and training of employees. There is neither any induction course nor a well planned training programme, with the result that their aptitude, initiative and interest in work remain undeveloped. In the absence of an induction course, workers fail to appreciate

Statement showing the number and incidence of injuries in manufacturing industries

Year	Fatal		Non-fatal		Total	
	Number	Per 1,000 workers employed	Number	Per 1,000 workers employed	Number	Per 1,000 workers employed
1947	214	0.09	58,549	25.74	58,763	25.83
1948	259	0.11	67,805	28.73	68,064	28.84

the importance of their work in the enterprise, the use of safety devices and the need for taking adequate precautions to avert accidents. Again due to inadequate job training, new entrants pick up the habits of other workers who are themselves not properly trained, thus perpetuating bad working methods, inefficiency and accidents.

Accident Prevention

Whatever may be the causes, it is in the interest of the national economy to reduce accidents. The success of any accident prevention programme depends on the active interest and co-operation of the management and the workers in industrial safety. Management should realise the immense cost which the factory has to bear due to accidents both in monetary and output terms.

The first step in any programme for preventing accidents would be collection of adequate statistics and analysis of the probable causes leading to accidents. However, a study of only those accidents that cause injury is not enough. It has been noticed in almost all industrially advanced countries that more than 90 per cent. accidents do not result in any injury and can easily be avoided by slight care and foresight. Thus, proper investigation of all accidents whether causing an injury or not would furnish useful lessons for prevention of accidents in future. Such an investigation will disclose whether insufficient guarding of machinery, inadequate training of workers, unsuitable working conditions or workers' own traits have been responsible for an accident.

The sixteenth session of the Labour Ministers' Conference has rightly recommended the appointment of safety officers in factories where the strength of labour exceeded a prescribed number or where the processes were of a particularly hazardous nature. They should be expert in safety engineering. Besides collecting adequate accident statistics in each concern, they should be responsible for investigating the causes of accidents and suggesting remedial measures.

Steps should be taken to provide adequate safeguards against mechanical and physical hazards and to rid the workers of their undesirable traits. So far as mechanical hazards are concerned, provisions of the relevant law should be strictly observed. Defective and dilapidated machinery should be replaced and layout of the old worksheds should be reorganised as soon as practicable. In processes where dangerous substances are used workers should be provided with proper protective apparel.

Proper workroom atmosphere is also a prerequisite for industrial safety. Conditions with regard to temperature humidity, dust and fumes, etc., should be properly controlled and ventilation and cleanliness adequately provided. Provision of lighting requires special attention in any such programme. In a modern factory, mere general lighting is not enough. Each work point should be properly illuminated and intensity of light should be adequate to enable a worker to attend to his job easily. Again, working of the night shift should not be permitted except in exceptional circumstances and in industries requiring continuous processes. Ordinarily, working hours should be fixed in such a way that the work stops by midnight so that workers may utilise the later part of the night for sleeping.

"Fatigue study" is yet another important adjunct of any safety programme. It enables employers to fix most suitable rest intervals. Thus it helps reduce monotony, frustration, strain and negligence among workers and creates their active and genuine interest in work improving their productivity and reducing accidents.

Mere control and regulation of mechanical and physical hazards are, however, not enough for industrial safety. For any effective plan for accident prevention, undesirable traits in workers should be converted into co-operative and constructive qualities. Selection of workers should be preceded by job analysis and physical and psychological tests, so that each operative has the necessary aptitude and calibre for the job he is assigned. As soon as a worker is appointed, he should be given a brief induction course introducing him to the firm, its policies, products and actual work.

Safety-consciousness

As industrial safety is a joint responsibility of all those taking part in productive effort, steps should be taken to generate safety-consciousness among departmental heads, foremen and workers. Departmental heads and foremen should be made responsible not only for requisite quantity and quality of output but also for safe performance of workers under their direct control. They should be given adequate instructions in safety engineering and training in the use of safety devices. Safety education of workers should be an integral part of an induction course. As soon as an employee joins the concern, he should be given a safety handbook and explained in detail the safety rules and the use of safety devices with practical demonstrations whenever needed. In this direction, use may be made of audio-visual media and repercussions of workers' negligence and avoidance of safety rules should be publicised through posters, playcards, cinema films, etc. Periodical refresher courses should also be organised to acquaint the departmental heads, foremen and workers in the use of latest safety devices.

Incentives—monetary and non-monetary—may also be made use of for generating and maintaining the interest of departmental heads, foremen and workers in industrial safety. Those with clean records should be properly rewarded by paying them bonus, additional wages or fixed emoluments or by granting them holidays with pay. Safety awards, however, should not only recognise past safe working but also stimulate safe performance even afterwards. Sometimes, non-financial incentives are more effective in making workers' more careful and reducing accident rates. These have to be devised by taking into account individual characteristics of employees. In order to gain the full co-operation of workers in productive and safety programmes, their aims and aspirations, pride and preferences should be honoured and given effect to. Efforts should be made to generate in them a spirit of loyalty and responsibility. Recognition to departmental heads, foremen and employees with clean records will create in them a sense of pride and satisfaction, adding to their efficiency and safe performance.

Association of Workers

The best method to arouse and secure workers' interest in industrial safety is their association in any programme of industrial safety. Workers should be encouraged to inform the management of any unsafe practice or condition as soon as it is noticed. Besides, they should be inspired to give their own suggestions for improving safety conditions in industry. For the convenience of workers, suggestion boxes should be placed near at hand. These suggestions should be periodically collected and properly scrutinised by the management and placed before a joint safety committee of the management and workers' representatives. However, only workers with clean records of service should be entitled to become the members of such committees. If found to be satisfactory, each suggestion should be given a reasonable trial and, if beneficial, adopted to benefit the employees and the industry. Those whose suggestions are adopted should be adequately rewarded as a token of their knowledge and consciousness. In case it is not accepted, the reason therefor should be promptly communicated to the worker concerned. Joint safety committees should also be responsible for conducting safety meetings, accident investigations, and for recommending measures for accident prevention.

Expenditure for providing safe work environment and safety education should no longer be regarded as waste. It is a profitable investment which more than offsets itself by reducing ineffective time on the part of the management and the workers and by preventing waste of money, material and machinery.

The proposal of the Assam Government to create a pool guarantee fund out of the ½ per cent. extra interest charged on loans given to tea estates under the second Plan for constructing houses for estate labour has been accepted by the Central Government. The tea interests were unable to avail themselves of the loan because they had no security to offer, the garden assets being already hypothecated to banks for actual working expenses. Now, a committee of the Government and planters has finalised rules making it possible for the estates to secure the loans in the current year. The estates will have the option to take loans at 4½ per cent. with adequate security or may pay 5 per cent. interest without any additional security excepting land and houses to be built thereon against the pool guarantee fund envisaged. A sum of Rs. 12.5 crores has been provided in the current year's budget towards plantation labour housing.

DRAFT THIRD PLAN X-RAYED—V

(*Concluded from page 759*)

lavished on the oddments of society, the government should take care of those who are healthy but are unemployed. Prof. Mahalanobis himself calculated that unemployment in India adds up to 45 millions. If work and wages are provided for these, they will themselves take care of the delinquent and handicapped. The needs of women and children can be entrusted to the local school teachers or the *gram sewaks*, if the latter are to be continued.

Prohibition

In respect of prohibition, the Commission evades assessment on the ground that a committee of officials and enthusiasts has been appointed to review the working. This Committee should inquire into the consequences of prohibition, which are not only involving a loss of revenue of more than Rs. 100 crores per annum but are destroying people's health and respect for law. Nearly everywhere as much illicit liquor as the people require is available at even a fraction of its previous price. This is inevitable, because liquor can be easily distilled by anyone out of raw materials which are abundant and because, while the rich may have permits for foreign liquor, the poor cannot have them for Indian liquor, even on grounds of health. While this infringes on the socialist pattern, so does the loss of revenue arising from the attempt to make a small proportion of the population abstinent at the cost of the whole population. Unless an independent Committee of Inquiry disproves these objections to Prohibition, the Planning Commission has no right to support the prohibition policy of the Government.

ESTD-1907

This is only an announcement and not a Prospectus and applications are invited on the basis of the Prospectus, copies of which are available from the Company's Registered Office, the Bankers, the Underwriters and the Brokers mentioned hereunder.

A copy of the Prospectus having attached thereto the documents referred to hereafter has been duly delivered for registration to the Registrar of Companies, Madras, as required under Section 60 of the Companies Act, 1956.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this industrial undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it.

The Madras Stock Exchange has agreed to grant an official quotation for the shares of the Company, and permission to deal in them on the Company complying with the necessary formalities after closure of the subscription list.

The Subscription List will open at 10 a.m. on Monday, 7th November, 1960 and will close at 2-30 p.m. on Monday, 14th November, 1960 or earlier at the discretion of the Directors but not earlier than 2-30 p.m. on Friday, 11th November, 1960.

PREMIER FERTILISERS LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956)

SHARE CAPITAL

AUTHORISED CAPITAL :	Rs.
2,50,000—9% Taxable Cumulative Preference shares of Rs. 10 each	25,00,000
7,50,000—Equity shares of Rs. 10 each	75,00,000
	1,00,00,000

ISSUED CAPITAL :	
Present Issue :	
5,00,000—Equity shares of Rs. 10 each	50,00,000

Out of the present issue, the signatories to the Memorandum have already subscribed among themselves for 31,200 Equity shares of Rs. 10 each to the aggregate value of Rs. 3,12,000. The promoters and their friends have further subscribed for 88,800 Equity shares of Rs. 10 each to the aggregate value of Rs. 8,88,000. The Industrial Credit and Investment Corporation of India Limited, Bombay, have agreed to subscribe for 30,000 Equity shares of Rs. 10 each to the aggregate value of Rs. 3,00,000. The balance of the issued capital, namely, Rs. 35,00,000 consisting of 3,50,000 Equity shares of Rs. 10 each is offered for public subscription at par for cash in terms of this Prospectus and is payable as follows :

On application .. .. Rs. 5 per share.
On allotment .. .. Rs. 5 ,,

Failure to pay allotment money when called for within the time mentioned shall render the share liable to forfeiture.

The entire balance of issue, namely, Rs. 35,00,000 now offered to the public has been underwritten.

No shares are issued for consideration other than cash.

The Company has agreed to give preferential allotment to the extent of 50% of the shares underwritten by each of the Brokers in respect of specific applications submitted by them and marked firm allotment.

BOARD OF DIRECTORS

150-A, MOUNT ROAD, MADRAS-2.

CONSENTS

The consents in writing of the Bankers, Brokers, Legal Adviser and Auditors of the Company to act in their respective capacities have been obtained and have been filed with the Registrar of Companies, Madras, and have not been withdrawn.

OBJECTS

The Company was incorporated on 31st March 1960 with the objects mentioned in the Memorandum of Association. The main object is to manufacture superphosphate and other chemical fertilisers.

PROSPECTS

The supply of superphosphate is very much below our country's demand being only about 10 per cent. Before the end of the Third Plan period, our requirements will be approximately 10 lakh tons. According to certain statistics, for Madras State alone, the requirement is 5 lakh tons. With the new awakening amongst farmers, the demand for superphosphate will be in excess of supply and the prospects for the Company are, therefore, bright. As the factory is being located at Cuddalore in South Arcot District, where paddy, sugarcane and groundnut are grown, the demand for superphosphate fertiliser will be continuous. Further, the demand from Tanjore District which is very near from the factory site is also very high. Therefore, the manufactured goods will easily find a sale.

PROJECT

The Company has been granted a licence by the Government of India under the Industries (Development and Regulation) Act, 1951, for the establishment of a fertiliser plant in the State of Madras, with a manufacturing capacity of 40,000 tons of superphosphate per annum and 16,500 tons of sulphuric acid per annum.

LOCATION OF THE FACTORY

A site in the vicinity of Cuddalore O.T. Railway Station in the State of Madras has been purchased for the factory, and the price for the same has been advanced by the promoters who are entitled to be reimbursed.

RAW MATERIALS

Raw materials like sulphur and rock phosphate, etc., have to be imported from abroad and hence location of the factory near a port will be advantageous. In the Third Five-year Plan, greater emphasis has been laid on the increase of foodgrains and consequently systematic use of chemical fertilisers is advocated. There will therefore be no difficulty in getting the requisite raw materials from abroad under the actual users' import licences.

SITE

A plot of approximately 20 acres of land near the Cuddalore Port has been purchased from Mr. Mohammad Ismail Maracair, Sonegar Street, Cuddalore Old Town, Cuddalore Taluk, South Arcot District, for a total cash price of Rs. 38,479 including stamp duty, registration charges, etc. It is an absolute sale of freehold property in favour of the Company.

WATER SUPPLY

Water for the factory will be taken from the bore wells that have been sunk in the factory site. The site being on the coast and in an area where the water-table is high, the factory will get sufficient water for its purposes.

ELECTRICITY

We do not anticipate any difficulty in getting the requisite electric power for the factory inasmuch as the power requirement itself is not very high and the Government of Madras have also given the necessary assurance for providing the required power, subject to prevailing grid conditions.

TRANSPORT FACILITIES

Cuddalore being a seaport, it is an additional advantage for the transportation of raw materials, etc., by sea route. The site being in close proximity to Cuddalore O.T. Railway Junction on the Southern Railway, suitable rail transport facilities are available. In addition, suitable road transport facilities also are available, giving easy connection with other important commercial towns. The manufactured goods can, therefore, be moved easily by road or by rail to any place.

PLANT AND MACHINERY

Messrs. Chemiebau Dr. A. Zieren G.M.B.H., Koln Am Rhein, West Germany, have offered to supply all the necessary plants for sulphuric acid and superphosphate and they will be responsible for the erection and bringing into operation of the factory and the training of Company's personnel. They are well known in India and have supplied acid plants to various concerns in India which have been found very satisfactory in working. The items of machinery and equipment of indigenous origin are reserved to be procured in India.

IMPORT LICENCE

The Company has obtained an Import licence No. CCP 998245/60HQ/CG. dated 23rd September 1960, from the Chief Controller of Imports and Exports, Government of India, New Delhi for the import of the above plant and machinery.

FOREIGN EXCHANGE

The Industrial Credit and Investment Corporation of India Limited, Bombay, have agreed in principle to lend to the Company an amount in foreign currencies equivalent to U.S. $235,000 (approximately Rs. 11 lakhs) to pay for the cost of the imported machinery and capital equipment for the proposed factory, subject to the approval of the International Bank for Reconstruction and Development. The loan will be repayable in half-yearly instalments extending over a period of seven years. The interest payable on this loan will be 7½% per annum, with a commitment charge of 1% per annum on the amount of the loan undrawn from time to time. In addition, an amount equal to a quarter of one per cent. of the total amount of the loan sanctioned shall be payable as an examination fee.

The loan will be secured by a first mortgage of all the existing and future moveable and immoveable properties of the Company and a floating charge on other assets subject to the hypothecation to secure bank borrowings for working capital.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

In respect of the public issue under this Prospectus, the minimum subscription on which the Directors will proceed to allotment is Rs. 20 lakhs being 2 lakhs of Equity shares of Rs. 10 each.

The capital required to reach the stage of production is estimated as follows:

	Rs. (in lakhs)
Land and Buildings	9.50
Machinery and equipment including freight, insurance and erection charges	26.50
Preliminary expenses including underwriting commission and brokerage	2.50
Working capital	25.00
	63.50

This amount is proposed to be met as follows:

Equity share capital from the promoters and their friends, and I.C.I.C.I.	15.00
Equity share capital to be raised by this issue	35.00
Foreign exchange loan from I.C.I.C.I.	11.00
To be raised from bankers and other sources as and when required	2.50
	63.50

ESTIMATE OF PROFITS

The fertiliser industry in India has shown a reasonably high potentiality for profit earning. The proposed superphosphate factory will be equipped with up-to-date plant and machinery incorporating the latest methods of fertiliser production which also effects substantial savings in cost of production. The Company, therefore, has reasonable scope for earning profits, and the Directors feel that the operation of the factory will yield a satisfactory return on the capital invested.

COMMENCEMENT OF BUSINESS

The Company has obtained a Certificate of Commencement of Business, dated 7th September 1960, from the Registrar of Companies, Madras, after filing the Statement in lieu of Prospectus. The report of the Auditors under Section 56 of the Companies Act and Schedule II is set out below and they have given their consent to the issue of the Prospectus with the Statement included in the form and context in which it is included. They have not withdrawn such consent before delivery of the copy of the Prospectus for registration.

DIRECTORS

The Articles of the Company provide that the number of Directors shall be not less than three, and until otherwise determined by a General Meeting, not more than nine excluding any Director nominated by Government or financing institutions.

The qualification of a Director other than ex-officio Director and the Directors nominated by Government or any financing institutions, shall be his holding of shares in the capital of the Company of the face value of Rs. 5,000.

The Articles provide that the remuneration of each of the Directors including the ex-officio Directors and the Directors nominated by Government or any financing institutions shall be such sum not exceeding Rs. 100 as may be decided upon by the Board of Directors from time to time for every meeting of the Board or Committee attended by him.

The Articles also provide that the Company allow or pay to any Director, such sum as the Directors may consider fair compensation for his expenses in connection with his attending the meeting, in addition to his remuneration.

APPOINTMENT OF DIRECTOR BY THE INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LIMITED, BOMBAY

The Industrial Credit and Investment Corporation of India Limited, Bombay, have, as one of the terms of their giving a loan of requisite foreign exchange for the Company, the right to appoint, if they so desire and deem it necessary, an ex-officio Director to the Board, who shall not be liable to retirement and shall not be required to hold qualification shares.

MANAGEMENT AND CONTROL

It is proposed to appoint Messrs. Emcete & Sons Private Limited, 30, Coral Merchant Street, Madras-1, as Managing Agents for 15 years and an application for the approval of the said appointment and the terms of the Managing Agency, has been made to the Government of India. According to the said draft terms, the Managing Agents will be paid by way of remuneration a commission on the net profits of the Company at the following rates:

10%	on the first	Rs.	10	lakhs or fraction thereof.	
9%	,, next	,,	10	,,	,,
8%	,, ,,	,,	10	,,	,,
7%	,, ,,	,,	10	,,	,,
6%	,, ,,	,,	10	,,	,,
5½%	,, ,,	,,	25	,,	,,
5%	,, ,,	,,	25	,,	,,
4%	on any sum over one crore of rupees.				

In the event of inadequacy or absence of profits, the Managing Agents will be paid a minimum remuneration of Rs. 50,000 per annum. The expression "net profits" shall have the same meaning as defined under Sections 349 and 350 of the Companies Act, 1956.

The Subscribed Capital of Messrs. Emcete & Sons Private Limited is Rs. 5,00,000.

The Managing Agents shall be entitled to appoint to the Board two Directors or one Director as the case may be according as the total number of Directors is more than five or less than five, and such nominated Directors shall not be liable to retire in rotation.

Subject to the Government's approval of the said appointment, the control and management of the business of the Company shall vest in the Managing Agents who will exercise all such powers of the Company required to be exercised by them as per the provisions of the Companies Act.

OPTION OR PREFERENTIAL RIGHTS TO SUBSCRIBE

No contract or arrangement has been entered into or is proposed to be entered into by the Company whereby any option or preferential right of any kind has been given or is proposed to be given to any person to subscribe for any shares, except the firm allotment to the extent of 50% of the underwriting of each of the brokers the allotment to the promoters and their friends and to the Industrial Credit and Investment Corporation of India Ltd., Bombay, for the amount subscribed by them mentioned *supra*.

UNDERWRITING AGREEMENTS

The Company has entered into agreements with the following Bankers and Brokers according to which they have agreed to underwrite Equity shares of the face value set respectively against their names:

Name	*Amount Rs. (in lakhs)*
The Indian Overseas Bank Ltd., Madras ..	10
The Bank of Baroda Ltd., Bombay ..	10
Messrs. Somayajulu & Company, Madras ..	5
,, R. R. Nabar & Company, Bombay ..	5
,, P. R. Subramanyam, Bombay ,, Maconochie & Co., Madras and ,, G. M. Pyne, Calcutta .. Jointly	5
Total ..	35

In the opinion of the Directors, the resources of the said Underwriters are sufficient to discharge their respective underwriting obligations.

The Underwriters are entitled to an underwriting commission of 2½% of the face value of the shares respectively underwritten by them exclusive of brokerage hereinafter mentioned.

Subject to clause 10 of the Articles of Association of the Company, brokerage at the rate of 1% will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised broker. Brokerage on the same basis is payable to Underwriters in addition to the underwriting commission, on allotments in respect of applications made or procured by them and bearing their respective rubber stamps.

STATUTORY AND GENERAL INFORMATION

Preliminary Expenses: The total preliminary expenses are estimated to be Rs. 2,50,000 which is inclusive of all the expenses of this issue, brokerage and the Underwriters' commission. The amount will be advanced by the promoters in the first instance and they are entitled to be reimbursed by the Company.

Save as provided above no amount or benefit has been paid or given or is intended to be paid or given to any promoter or officer of the Company.

APPLICATION FOR SHARES AND ALLOTMENT

Application for Equity shares must be for a minimum of 50 shares. All applications should be made on the form attached to the Prospectus copies of which can be had from the Registered Office of the Company, the Company's Underwriters, Bankers and Brokers.

The application forms duly completed together with cheques or drafts for the full amount of Rs. 5 per share payable on application must be delivered before the closing of the subscription list to the Company at their Registered Office or to any of the Company's Bankers, Underwriters, or Brokers.

Remittances should be made by cheques or drafts drawn on any Bank situate in Madras, Bombay, or Calcutta. Cheques or drafts on other stations must include Bank charges at 25 nP per cent. subject to a minimum of 62 nP per cheque or draft; otherwise, the application is liable to be rejected.

Cheques and drafts should be made payable to PREMIER FERTILISERS LIMITED or to one of the Company's bankers—marked "Account PREMIER FERTILISERS LIMITED" and should be crossed. A separate cheque or draft must accompany each application form.

Allotment will be notified by the despatch of Allotment Letter but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part in either case without assigning any reason. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant by cheque on the Company's Bankers at Madras within two months of the date of opening of the list. No interest will be paid by the Company. No allotment will be made in the names of Partnership firms, minors, non-residents or their nominees or Trusts. The shares when issued will be subject to the Memorandum and Articles of Association of the Company.

PROSPECTUS OF GENERAL TYRES LIMITED

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this new industrial undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any statements made or opinion expressed in regard to it.

Certificate for Commencement of Business No. 24704 dated 4th August, 1960, has been issued by the Registrar of Companies, West Bengal.

A copy of this Prospectus having attached thereto the documents mentioned hereinafter has been delivered to the Registrar of Companies, West Bengal, for registration, as required by Section 60 of the Companies Act, 1956.

Permission has been obtained from the Calcutta Stock Exchange to deal in and for an official quotation of the Shares of the Company.

The Subscription List will open at the commencement of banking hours on Thursday, 3rd November, 1960, and will remain open up to the close of banking hours on Tuesday, 8th November, 1960, in respect of the Equity Shares and up to the close of banking hours on Thursday, 10th November, 1960, in respect of the Preference Shares. The Directors at their discretion may close the Subscription List for Equity Shares earlier but not before the close of banking hours on Monday, 7th November, 1960.

In the opinion of the Directors the resources of the underwriters are sufficient to discharge their underwriting obligations.

APPLICATIONS AND SUBSCRIPTIONS

Applications for shares by members of the public must be for a minimum of 50 Shares or multiples of 50 Shares in respect of Equity Shares.

TERMS OF PAYMENT OF ABOVE SHARES

Equity Shares :

On application .. Rs. 5.00 per share
Balance .. Rs. 5.00 per share payable on calls to be made but no call will exceed Rs. 2.50 per share and there shall be an interval of at least one month between calls.

Rs. 10.00 per share

Preference Shares :

On application .. Rs. 50.00 per share
Balance .. Rs. 50.00 per share payable on calls to be made but no call will exceed Rs. 25.00 per share and there shall be an interval of at least one month between calls.

Rs. 100.00 per share

Failure to pay the balance money on any call when made will render the share liable to forfeiture.

DIVIDEND AND CAPITAL

The Company in General Meeting may declare a dividend to be paid to the members according to their rights and interest in the profits of the Company and may, subject to the provisions of Section 207 of the Companies Act, 1956, fix the time for payment.

No dividend shall be payable except out of the profits and no dividend shall carry interest as against the Company.

Rights of Preference Shares

Dividends : The Preference Shares shall confer upon the holders thereof the right to a fixed cumulative preferential dividend of 9% per annum, free of Company's tax but subject to tax deducted at source at the prescribed rate from time to time, on the capital for the time being paid up thereon. The Preference Shares shall rank for dividend from the day of allotment on the amount for the time being paid up thereon.

Capital : The Preference Shares shall also confer on the holder thereof the right on winding-up to payment of capital and arrears of dividend whether earned, declared or not upto the commencement of winding-up in priority to the Equity Shares but shall not confer any further right to participate in any profits or assets.

Subject to the provisions of the Companies Act, 1956, the Company shall have the option to redeem the whole or any part of the said Redeemable Preference Shares at par at any time or times after the expiry of 5 years but not later than 10 years from the date of issue at the option of the Company on giving not less than six months' previous notice in writing specifying the date of redemption and, in the case of partial redemption, the number of shares to be redeemed.

Rights of Equity Shares

Dividend : Subject to the provisions of the Companies Act, 1956, and to the Articles of Association of the Company the net profits of the Company from time to time determined to be divided in respect of any year or other period shall be applied first in paying the preferential dividend on the capital paid up on the Preference Shares and the surplus shall be divisible amongst the holders of the Equity Shares in proportion to the amount paid up on the Equity Shares held by them respectively.

Capital : On a winding-up the holders of Equity Shares shall be entitled to payment of capital after paying off the capital on Preference Shares and other dues thereon or in respect of other liabilities of the Company.

CONSENTS

Consent in writing of the abovenamed Bankers, Solicitors, Auditors, Brokers to act in their respective capacities have, been filed with the Registrar of Companies, West Bengal. The Auditors of the Company have given and have not upto the date of delivery to the Registrar of Companies, West Bengal, of this Prospectus for registration, withdrawn their written consent to the issue of the Prospectus with the inclusion therein of their Report set out below in the form and context in which it appears.

OBJECTS OF THE COMPANY

The Company was incorporated on 14th June 1960 with the objects mentioned in the Memorandum of Association of the Company and particularly to undertake immediately the manufacture of and carry on business in automobile tyres and tubes and components and accessories relating to tyres and tubes.

MANUFACTURING LICENCE

The Government of India has issued under the Industries (Development and Regulation) Act. 1951 a licence No. L/30-1/N-12/60 dated 19th March, 1960, for the manufacture of automobile tyres and tubes.

IMPORT LICENCE

The Government of India has issued Import Licence No. 999469/HQ dated the 30th March, 1960 for a total amount of Rs. 80,00,000 for the purchase of a complete automobile tyre and tube plant from Czechoslovakia.

FACTORY SITE, POWER AND WATER SUPPLY

The Company has entered into an Agreement to purchase from Calcutta Tanneries (1944) Ltd. of 96, Garden Reach Road, Calcutta-23, a suitable factory site at Kattadanga Road, Kankinarrah, Dt. 24 Parganas, West Bengal, which is about 20 miles from Calcutta, situated near a railway siding, the total area of land being approximately 94 Bighas. The land is permanent leasehold and on the land there are three main brick-built buildings and other structures covering an area of approximately 70,000 sq. ft. which can be converted and utilised for the purposes of the Company, which is advantageous to the early implementation of the project. The Company has agreed to pay Rs. 7,00,000 in cash as the purchase price for this factory site.

The factory site has its own power-house for the supply of part of the electricity required. Arrangements will be made with the Calcutta Electric Supply Corporation Ltd. for the supply of the additional power required.

The factory site has a 300'×6" bore Tube-well fitted with an electric pump and connected to its own reservoir which is capable of meeting the entire requirements of water-supply for the factory.

RAW MATERIALS

The basic raw material, namely, raw rubber and certain fabrics and mineral fillers are largely available from indigenous sources. Other materials such as synthetic rubber, rayon tyre-cord, carbon black and special chemicals like rubber accelerators and anti-oxidants are now being imported but manufacturing units are being set up to manufacture such items in India to meet the demand of the industry.

PLANT AND MACHINERY

The complete Automobile Tyre and Tube Plant is being purchased from Technoexport Foreign Trade Corporation, Praha, Czechoslovakia. Further reference to this Plant is made under the heading "Technical Collaboration." Technoexport has indicated that it is in a position to ship about half of the plant and machinery required within this year which would assist the early implementation of the project.

PROMOTION BY NATIONAL RUBBER MANUFACTURERS LIMITED

This Company is sponsored and promoted by National Rubber Manufacturers Limited of Calcutta. National Rubber Manufacturers Limited has since its incorporation in 1946 rapidly expanded its activities and at present is one of the largest manufacturers of mechanical rubber goods and cycle tyres and tubes in India. As a result of this expansion which is nearly complete its monthly turnover has increased from Rs. 11,00,000 in 1956 to approximately Rs. 21,00,000 during the first six months of 1960.

In pursuance of this policy of expansion National Rubber Manufacturers Ltd., has sponsored this project for the manufacture of automobile tyres and tubes in India and has promoted this Company for this purpose. It has undertaken all the preliminary work involved and has obtained the manufacturing and import licences necessary for the project and has negotiated with Technoexport Foreign Trading Corporation of Czechoslovakia for the supply of the complete Plant for the manufacture of tyres, etc. and for all technical assistance in the production. It has also negotiated the purchase of the factory site in West Bengal for the Company.

National Rubber Manufacturers Limited has acquired an extensive knowledge and experience of the Indian market and has an established sales organisation throughout India. In order to obtain the benefit of this experience the Company has appointed National Rubber Manufacturers Ltd. as its Managing Agents and arrangements are also being made for National Rubber Manufacturers Ltd. to share its sales organisation for the sale of the automobile tyres and tubes and other ancillary products manufactured by the Company once the Plant goes into production so that a ready and quick market will be available for such products.

TECHNICAL COLLABORATION

The Promoter, National Rubber Manufacturers Ltd., had negotiated and entered into an Agreement with Technoexport Foreign Trade Corporation, Praha, Czechoslovakia in November 1959 for the supply and erection of the complete Automobile Tyre and Tube plant and for technical assistance and collaboration in the operation of the Plant and the production of automobile tyres and tubes. This Agreement has with the consent of all parties concerned been assigned to this Company on the 1st October, 1960. The Government of India has given its approval to the technical collaboration with Technoexport.

Technoexport is the Foreign Trade Corporation of Czechoslovakia engaged in the export of complete industrial plant and machinery and equipment produced by the Czechoslovak Engineering Industry.

Technoexport specialises (*inter alia*) in the export of plant and machinery for processing of rubber, particularly for the production of tyres and tubes of motor cars, motor cycles, bicycles, rubber and tennis balls, rubber toys, rubber thread, etc. The rubber manufacturing Plants have been set up in 25 countries including Indonesia, Iran, Burma, Lebanon, U.A.R., Iraq, Austria, German Democratic Republic, Yugoslavia and other European countries. Recently Technoexport has supplied a complete rubber plant to Indonesia which has already been erected and put into operation with the assistance of Czechoslovak experts. The products of this factory are equal in quality to all well-known products of this kind. The Czechoslovak Rubber Tyre factories produce high quality tyres under the well-known "BARUM" brand which are exported to 68 countries including West Germany, Sweden, Near, Middle and Far East, etc.

The following is briefly the scope of the agreement entered into with Technoexport.

(1) Supply of Plant and Machinery

Technoexport will supply the plant, machinery and equipment required for the manufacture of automobile tyres and tubes for the sum of Rs. 71,00,000. It will also prepare the Final Project Report based upon the Preliminary Project Report already prepared by Technoexport comprising all technical aspects relevant to the setting up of the Plant at the Factory site. The Plant will be capable of manufacturing high quality tyres and tubes. Payments will be made on deferred terms for which the usual interest of 6% per annum will be charged. The Corporation has indicated that it is in a position to ship about half of the Plant and Machinery by December 1960.

(2) Supervision of Erection

Technoexport will arrange for selected technical personnel to be sent to India from Czechoslovakia who will erect the Plant and put it into production. The Company will bear the salaries, travelling expenses, etc., of such technical personnel who are sent to the Plant.

(3) Technical Assistance

Technoexport will send out specialised technicians who will work at the Plant for periods varying from 6 months to 24 months whose responsibility it will be to ensure that stipulated production is achieved at the Plant and Indian personnel are trained to take over the running of the Plant. Selected Indian personnel will also be sent for training to factories in Czechoslovakia at the cost of the Company. The Company will bear the expenses, salaries, etc. of the technical personnel sent to the Plant.

(4) Technical Aid and Licence to Use "BARUM" Trade Mark

Technoexport together with Rudy Rijen National Corporation, who are manufacturers of automobile tyres in Czechoslovakia, will supply to the Company all technical know-how and assistance including the use of secret processes and patents relating to the manufacture of automobile tyres and tubes according to the latest standards in Czechoslovakia. The Corporation will arrange for the use of the "BARUM" Trade Mark in India by the Company for a period of 10 years on payment of fees and subject to certain conditions.

All payments in terms of the above items are to be made in Indian rupees by virtue of the Trade Agreement entered into between the Government of India and the Government of Czechoslovakia. Therefore, there is no foreign exchange requirement in connection with this Project.

EXPORTS

No restriction has been imposed by Technoexport on the export by the Company of its tyres and tubes to any country in the world and Technoexport have also agreed to purchase at current prices 5,000 tyres and tubes per annum for a period of four years from the commencement of production for export to Czechoslovakia and other countries.

MARKET POSSIBILITIES AND BUSINESS PROSPECTS

The road mileage per 1,000 square miles of area in India is only 250 against 1,003 in U.S.A., 3,035 in France and 3,242 in U.K. Thus, there is ample scope for development of roads in this country. The Five-Year Plans envisage considerable increase in road transport facilities in India. During the period of the first Plan the road mileage increased from 2,44,000 to 3,16,668 and the expected level of achievement at the end of the Second Plan is 3,79,000 miles. The increase in agricultural and industrial production expected to take place in the Third Five-Year Plan period would naturally call for additional road transport facilities. The Draft Outline of the Third Plan provides for construction of substantial additional mileage of roads and also lays down the following targets for the manufacture of different categories of Automobiles :—

	Estimated production in 1960-61 (In Nos.)	*Target for 1965-66 (In Nos.)*
Passenger Cars ...	20,000	30,000
Commercial Vehicles ...	28,000	60,000
Jeeps and Station Wagons	5,500	10,000
Motor Cycles, Scooters and Three-wheelers	16,000	48,000
	69,500	1,48,000

The anticipated progress in the road sphere as above is sure to raise considerably the demand for automobile tyres and tubes. The position with regard to the existing and future manufacturing capacity licensed or to be licensed by the Government of India having regard to the expected demand by the end of the Third Five-Year Plan period as estimated by the Planning Commission is indicated by the following table:—

Description	*Estimated capacity by 1965-66*	*Capacity in 1960-61*
Automobile Tyres ...	3.7 millions	1.76 millions
Automobile Tubes ...	3.7 millions	1.81 millions

PRODUCTION PLANS

The Licence issued by the Government of India authorises the Company to establish a new industrial undertaking in West Bengal for the manufacture of Automobile Tyres and Tubes in collaboration with Technoexport, Praha, Czechoslovakia, with annual capacity as follows:—

	Tyres	*Tubes*
For Buses and Trucks ...	1,20,000	1,20,000
For Passenger Cars ...	60,000	60,000
Total ...	1,80,000	1,80,000

The Directors anticipate that there will not be any difficulty in selling the entire production of the Company as above in view of the large increase of demand as estimated by the Planning Commission.

ESTIMATED PROFITABILITY

The Directors have estimated the cost of production of tyres and tubes on a conservative basis. After careful scrutiny of cost of raw materials, establishment and other direct expenses and on the basis of a conservative estimate of sales the Directors think that the Company may reasonably expect to earn sufficient profit to pay a reasonable dividend on the invested Capital.

TAX BENEFITS

According to present law, the Directors consder that (*a*) the Company will be entitled to special benefits in respect of Development Rebate under the Indian Income-tax Act and may also enjoy a Tax-holiday for five years in respect of profits up to six per cent on the employed capital under Section 15C of the Indian Income-tax Act.

(b) Shareholders of the Company would also be exempt from Wealth-tax on their holdings for a period of five years under Clause XX of Subsection (1) of Section 5 of the Wealth Tax Act and may also be exempt from tax on such dividend paid from the Company's profit exempted from tax under Section 15C of the Indian Income-tax Act.

FINANCIAL ARRANGEMENTS WITH INDUSTRIAL FINANCE CORPORATION OF INDIA

(a) Loan

Industrial Finance Corporation of India have agreed to grant a loan of Rs. 60,00,000 to the Company to be utilised towards the acquisition of land, buildings, plant and machinery for the project. The loan is to be secured by a mortgage of the existing and future fixed assets of the Company at an interest of 7% per annum with a rebate of ¼% if instalments of principal and interests are paid on due dates. So long as this mortgage would subsist the Industrial Finance Corporation of India may at any time appoint not more than two persons to be Directors of the Company and such nominee Directors shall not be subject to retirement by rotation nor required to hold qualification shares. The Company may also borrow from its Bankers from time to time against hypothecation of stocks raw materials and finished goods to raise working capital. During the currency of the loan the dividend on Equity Shares shall not without the prior approval of the Corporation exceed 8% and certain other restrictions are imposed on the Directors and Managing Agents of the Company. The other terms and conditions of the loan are set out in the Corporation's letter dated 15th October, 1960 and eventually a formal agreement embodying (*inter alia*) these terms will be entered into between the Company and the Corporation.

(b) Guarantee for Deferred Payments

Industrial Finance Corporation of India have also agreed to guarantee the deferred payments in respect of the contract with Technoexport for the purchase of the Automobile Tyre and Tube Plant to the extent of Rs. 40,00,000 and will be paid a commission of 1% per annum with a rebate of ¼% on the terms and conditions of the Guarantee being duly fulfilled.

MINIMUM SUBSCRIPTION, CAPITAL OUTLAY AND SOURCES OF FINANCE

The minimum subscription in respect of the present issue on which the Directors will proceed to allotment is Rs. 60.00.000 being the whole of the share capital now offered for subscription by the public.

The Capital outlay required for this project will be as follows:—

	Rs.
Land and Building	26,00,000
Machinery, Installations and Equipments	1,07,00,000
Cost of Project Report payable to Technoexport	4,00,000
Preliminary expenses, Underwriting, Commission and Brokerage	3,00,000
Working Capital	80,00,000
Rs.	2,20,00,000

Sources of Finance

The above amount will be provided for as under:—

	Rs.
(*a*) Out of the present Issue ...	1,00,00,000
(*b*) Loan from Industrial Finance Corporation of India ...	60,00,000
(*c*) Deferred payment	40,00,000
(*d*) Loans from Banks (to meet part of the working capital as and when required in the usual course of business) ...	20,00,000
Rs.	2,20,00,000

EXPENSES OF THE ISSUE

The expenses of the Issue other than brokerage and underwriting commission are estimated at Rs. 70.000 and will be payable by the Company.

BROKERAGE

Brokerage will be paid to Brokers and Banks at 10 nP per equity Share of Rs. 10 and Re. 1 per Preference Share of Rs. 100 each on allotments made in respect of applications bearing their stamps. Place, Siddons & Gough Private Ltd., Calcutta. are the Managing Brokers to the Issue and will be in addition entitled to a commission of 5 nP per Equity Share subscribed by the public.

The total amount of brokerage payable by the Company is estimated at Rs. 80,000.

UNDERWRITING COMMISSION

Industrial Finance Corporation of India, New Delhi, will be paid an underwriting commission of 2½% and brokerage of Re. 1 per share on the number of Preference Shares that may not be taken up by the public.

The Bank of Baroda Ltd. will be paid an underwriting commission of 2½%.

The total amount of underwriting commission payable by the Company is estimated at Rs. 1.50.000.

PAYMENT TO PROMOTERS, ETC

No amount or benefit has been paid or given or is intended to be given to any Promoters, Brokers, Directors or otherwise of the Company apart from the normal remuneration.

AUDITORS' REPORT

In accordance with the provisions of Clause 24 of Part II of Schedule 2 of the Companies Act, 1956 we report that the account of General Tyres Limited which was incorporated on 14th June, 1960 has not been made up at any time since the incorporation of the Company.

6, HASTINGS STREET,
CALCUTTA, *the 1st October*, 1960.

DIRECTORS

The Articles of Association of the Company provide that:—

(*a*) Until otherwise determined by a General Meeting. the number of Directors shall not be more than 15 or less than 3.

(*b*) The qualification of a Director other than Special, Ex-officio or Debenture Directors shall be the holding of Equity Shares of the nominal value of at least Rupees One thousand in the Company.

(*c*) Until otherwise determined by the Company in a General Meeting the remuneration of a Director for his services shall be such a sum as may be fixed by the Board of Directors not exceeding Rs. 250 for each meeting of the Board or Committee thereof attended by him. Subject to the limitation provided by the Companies Act, 1956 the Directors shall be paid 1% of net profit of the Company or other remuneration as the Company in a General Meeting may from time to time determine and such additional remuneration shall be divided among the Directors in such proportion and manner as the Directors may from time to time determine provided that the Ex-officio Directors shall not be entitled to such remuneration.

The remuneration of Directors shall in so far as it consists of a monthly payment be deemed to accrue from day to day. In addition to remuneration payable as aforesaid Directors may be paid all travelling, hotel and other expenses properly incurred by them (*a*) in attending and returning from meetings of the Board of Directors or a committee thereof, or (*b*) in connection with the business of the Company.

(*d*) So long as the loan from Industrial Finance Corporation of India shall remain due it will be at liberty to appoint Directors not exceeding two to the Board of Directors of the Company. The Directors so appointed shall not be subject to retirement by rotation nor shall they be required to possess any share qualification prescribed by the Articles of Association of the Company nor shall they be counted for determining the total number of Directors.

(*e*) National Rubber Manufacturers Ltd., whilst they shall be the Managing Agents of the Company shall have the right to appoint Ex-officio Directors not exceeding two and such Directors shall not be subject to retirement by rotation nor shall they be required to possess share qualification prescribed by the Articles of Association of the Company nor shall they be counted for determining the total number of Directors.

INTEREST OF DIRECTORS AND PROMOTERS

1. Mr. J. L. Esplen, Managing Director of Place, Siddons & Gough Private Ltd., who are the Managing Brokers and one of the Brokers to the Issue, is interested in the brokerage payable to them.

2. Mr. R. G. Edwards, Managing Director of Place, Siddons & Gough Private Ltd., who are the Managing Brokers and one of the Brokers to the Issue, is interested in the brokerage payable to them.

3. Mr. H. J. Silverston is a Partner of Messrs. Orr, Dignam & Co., who are the Solicitors to the Issue. and to that extent is interested in the fee payable to this Firm.

4. Mr. K. N. Mookerjee is the Managing Director and Dr. D. Banerjee, a Director of National Rubber Manufacturers Ltd., who are the Managing Agents of the Company and as such they are interested in the remuneration payable to the Managing Agents.

5. All the Directors are interested to the extent of the shares subscribed for by or to be allotted to them and also in the remuneration of 1% of the net profit to be distributed amongst them. Save as above no Director has any financial or any other interest in the promotion of the Company and in any other property acquired or proposed to be acquired by the Company.

6. National Rubber Manufacturers Ltd. which has promoted this Company, has been appointed its Managing Agents and has also agreed to have subscribed either by itself and/or by its shareholders 2,50,000 Equity Shares of Rs. 10 each. Mr. D. N. Kapur, a Director of National Rubber Manufacturers Ltd., is also a Managing Director of Place, Siddons & Gough (Private) Ltd. and Mr. K. Kheshvala, a Director of National Rubber Manufacturers Ltd., is also a Partner of Messrs. Lewis & Jones, one of the Brokers to this Issue.

BORROWINGS

Subject to the restriction imposed by Section 293 of the Companies Act, 1956, the Directors may exercise all the powers of the Company to borrow money and to mortgage or charge the undertaking, property and uncalled capital or any part thereof and to issue Debentures and other Securities.

VOTING RIGHTS

Subject to any special rights or restrictions as to voting affecting any particular class of shares, on a show of hands every member entitled to vote and present in person shall have one vote and upon a poll every member entitled to vote and present in person or by proxy shall have one vote for every share held by him provided that no company shall vote by proxy so long as a resolution of its Directors under the provisions of Section 187 of the Act is in force. The holders of Preference Shares shall be entitled to receive notice of and to be present at any General Meeting but shall not be entitled to speak at such meeting or to vote by virtue or in respect of their holding of Preference Shares unless a resolution is proposed directly affecting the rights or privileges attached to such Preference Shares. Subject as aforesaid, every member of the Company holding any Preference Share capital shall in respect of such capital be entitled to vote on every resolution placed before the Company at any meeting if the dividend due on such capital or any part of such dividend has remained unpaid in respect of an aggregate period of not less than 2 years preceding the date of commencement of the meeting. The voting rights of such holders of Preference Shares on a poll shall subject to the provisions of Section 89 and Sub-section (2) of Section 92 of the Act be in the same proportion as the capital paid up in respect of the Preference Shares bears to the total paid-up equity capital of the Company.

VARIATION OF RIGHTS

The special rights attached to any class of shares (unless otherwise provided by the terms of issue of the shares of that class) may, subject to the provisions of Sections 106 and 107 of the Companies Act, 1956 and whether or not the Company is being wound-up, be varied with the consent in writing of the holders of three-fourths of the subscribed shares of the class or with the sanction of a special resolution passed at a special General Meeting of the holders of the shares of that class.

RESTRICTION ON TRANSFER OF SHARES

There are no restrictions on the transfer of fully paid shares, but the Directors may, subject to the right of appeal conferred by Section 111 of the Companies Act, 1956, decline to register any transfer of partly paid shares.

INDEMNITY

Every Officer or Agent for the time being of the Company shall be indemnified out of the assets of the Company against any liability incurred by him in defending any proceedings, whether civil or criminal, in which judgment is given in his favour or in which he is acquitted or in connection with any application under Section 633 of the Act in which relief is granted to him by the Court.

OPTION TO SUBSCRIBE

Save as mentioned herein no contract or arrangement has been or is proposed to be entered into whereby any option or preferential right of any kind will be given to any person to subscribe to any shares out of the present issue to the public.

ISSUES OTHERWISE THAN IN CASH: OPTION

No shares have been issued or agreed to be issued otherwise than in cash. No shares have been issued at a premium nor are any shares presently to be issued at a premium. No share or loan capital is under option or agreed to be put under option.

MANAGING AGENTS

National Rubber Manufacturers Limited, 19, Chowringhee, Calcutta, has been appointed as the Managing Agents of the Company for a period of 10 years from 1st October, 1960 with the approval of the Government of India (*vide* their letter No. 9 (770)-C.IV/60 dated 14th October, 1960). The remuneration to be paid to them in respect of their services as Managing Agents for each financial year or part thereof of the Company is based on the net profits of the Company determined in accordance with the provisions of the Companies Act, 1956 as follows:

(i) 10 per cent. on the first 10 lacs net profits or fraction thereof;

(ii) 9 per cent. on the next 10 lacs net profits or fraction thereof;

(iii) 8 per cent. on the next 10 lacs net profits or fraction thereof;

(iv) 7 per cent. on the next 10 lacs net profits or fraction thereof;

(v) 6 per cent. on the next 10 lacs net profits or fraction thereof;

(vi) 5½ per cent. on the next 25 lacs net profits or fraction thereof;

(vii) 5 per cent. on the next 25 lacs net profits or fraction thereof;

(viii) 4 per cent. on any sum over one crore of rupees net profits.

In the event of loss or inadequacy of profits in any financial year, the Managing Agents shall be entitled subject to the prior approval of the Government of India to receive by way of minimum remuneration the sum of Rs. 50,000 for such financial year.

The Managing Agents are entitled to be reimbursed by the Company the expenses incurred by them on behalf of the Company as may be determined by the Board of Directors of the Company subject to the provisions of the Companies Act, 1956. The Managing Agents are to provide the Company with office accommodation at Calcutta and at such other places in which they may be able to provide such accommodation and the Company will pay to the Managing Agents such rent and outgoings as the Board may from time to time determine. In the event of the Managing Agents being entitled to compensation for loss of office, the limit of such compensation will be governed by Section 366 of the Companies Act, 1956. The Managing Agents will have the right to nominate not more than two Directors on the Board of the Company.

The Authorised Share Capital of the Managing Agents' Company is Rs. 1 Crore and the Subscribed and Paid-up Share Capital is Rs. 60.00,000 made up of 5 lakhs Ordinary Shares of Rs. 10 each and 10.000 Preference Shares of Rs. 100 each fully paid up.

MATERIAL CONTRACTS

The following contracts not being contracts in the ordinary course of business which are or may be material have been or are proposed to be entered into by the Company:—

1. An Agreement with Technoexport Foreign Trade Corporation, Praha, Czechoslovakia, for the supply of the Automobile Tyre and Tube Plant, supervision of erection of machinery and equipment, technical assistance and licensing of the "Barum" trade mark as recorded in the Note of Discussions dated 5th November, 1959 and by supplemental agreement dated 1st October, 1960 between Technoexport, National Rubber Manufacturers Ltd. and this Company and by the letter of Technoexport dated 18th October, 1960.

2. An Agreement entered into with Calcutta Tanneries (1944) Ltd., regarding the purchase of 94 bighas of land at Kankinarrah, 24 Parganas, West Bengal, the terms of which are recorded in four letters exchanged between the parties between the 20th July, 1960 and the 9th August, 1960.

3. Agreement to sanction a loan of Rs. 60 lacs from The Industrial Finance Corporation of India, New Delhi, on the terms set out in the letter dated 15th October, 1960 with enclosed Memorandum of final terms.

4. An Agreement for the guaranteeing of deferred payments to Technoexport by Industrial Finance Corporation of India, New Delhi, up to Rs. 40 lacs on the terms set out in the letter dated 15th October, 1960.

5. An undertaking given by Technoexport to purchase for export at current prices 5,000 tyres and tubes per annum for four years as recorded in their letter dated 3rd October, 1960.

6. An Agreement between this Company and Industrial Finance Corporation of India, New Delhi, for the underwriting of the Preference Shares to the extent of Rs. 20,00,000 on the terms set out in the letter dated 15th October, 1960 with its enclosures.

7. An Agreement with The Bank of Baroda Ltd. for underwriting of Equity Shares now being offered to the public on the terms set out in their letter dated 18th October, 1960 with its enclosures.

8. An Agreement entered into on the 20th October, 1960 with National Rubber Manufacturers Ltd. appointing them Managing Agents of the Company.

9. By letter dated 17th October, 1960 Mr. K. N. Mookerjee and Dr. D. Banerjee, Directors of the Company, have given an undertaking to the Company to subscribe in cash either by themselves and/or by their friends for 149,550 Equity Shares in the Company.

10. By letter dated 15th October, 1960 National Rubber Manufacturers Ltd. has given an undertaking to the Company to get 250,000 Equity Shares subscribed by its Shareholders and to take up such number of shares, if any, as may not be subscribed for by its shareholders.

INSPECTION

A printed copy of Memorandum and Articles of Association of the Company, the Consent Order of the Controller of Capital Issues, the Licence issued by the Central Government for setting up the Factory, Import Licence in respect of Plant and Machinery, copies of the material contracts listed in this Prospectus, the Report of the Auditors of the Company, the Consent of the Central Government to the appointment of the Managing Agents and the Consent of the Ministry of Commerce and Industry (Central Government) to the arrangements with the Technical collaborators can be inspected at any time on working days during the usual office hours at the Registered Office of the Company for a period of fourteen days from the date of publication of this Prospectus or until the Subscription Lists are closed whichever is earlier.

APPLICATION FOR SHARES AND ALLOTMENT

Applications for Equity Shares must be for a minimum of 50 shares or multiples of 50 shares. Applications for Equity and Preference Shares must be made on the form accompanying the Prospectus which can be had from the Company's Bankers or Brokers to the Issue.

All application forms duly completed must be lodged together with the amount of Rs. 5 per share in respect of Equity Shares and Rs. 50 per share in respect of Preference Shares with either of the following Banks, namely:—

(1) The Bank of Baroda Ltd., Calcutta, or with any of their Branch offices in the Indian Union.

(2) Lloyds Bank Limited, Calcutta, or with any of their Branch offices at Calcutta, Bombay, New Delhi, Madras and Amritsar.

(3) The Union Bank of India Ltd., Calcutta, or with any of their Branch offices at Calcutta, Bombay, Delhi, Madras, Kanpur, Ahmedabad, Bangalore, Coimbatore, Cochin, Surat, Baroda and Hyderabad.

The remittance should be made by cheque or draft which, if it is desired to avoid payment of Bank charges, must be drawn payable either at the particular office or branch of one of the above Banks to which the application form or cheque or draft is being sent, or upon a branch of any other bank situated in the centre to which the application is being forwarded.

All cheques or drafts drawn on Banks situated at places other than those mentioned above should include a sum at the rate of 25 nP per cent. of the amount remitted subject to a minimum of 0.75 nP to cover all the commission and Bank charges; otherwise the application is liable to be rejected or the amount adjusted against the application moneys.

Cheques or drafts should be drawn in favour of one of the Bankers to the Issue "A/c General Tyres Limited—Equity Issue" in the case of applications for Equity Shares and "A/c General Tyres Ltd—Preference Issue" in the case of applications for Preference Shares. For the applicant's protection, cheques or drafts should be crossed "A/c Payee only." A separate cheque or draft must accompany each application.

Allotment will be notified by despatch of an allotment letter but the Directors reserve the full and uncontrolled right of accepting or rejecting any application in whole or in part, in either case without assigning any reason. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant in which event Bank commission, if any, will be payable by the applicant.

SHARE CERTIFICATES

Share Certificates will be issued in exchange for Letters of Allotment within six months from the date of allotment.

Dated the 21st October, 1960.

DELHI CLOTH AND GENERAL MILLS CO., LTD.

LALA BHARAT RAM ANALYSES PROBLEMS OF COTTON MILL INDUSTRY

PLEA FOR A CAREFUL ASSESSMENT OF HANDLOOMS' PRODUCTION CAPACITY

SPEAKING at the Annual General Meeting of the Delhi Cloth and General Mills Company Ltd., held at Bara Hindu Rao, Delhi, on 17th October 1960, Lala Bharat Ram, Chairman of the Company, pointed out that the cotton mill industry was now faced with a situation in which it had to meet increasing costs without having the facilities for matching these with increased productivity through renovation of machinery and improvement in techniques. He thought that the actual production of cloth by handlooms had been exaggerated and wondered whether they would be able to deliver the goods. He, therefore, pleaded for a more realistic allocation of the production target to the mill sector, so that adequate supplies of cloth might be made available to the people at reasonable and stable prices.

The following is the full text of Lala Bharat Ram's speech:

"LADIES AND GENTLEMEN,

"With your permission, I will take the accounts and Directors' report as read.

"It is a matter of satisfaction that the profits of the Company are better than in the last year.

"The cotton mill industry, as a whole, has also fared better than in the last year in the matter of profits. This, however, should not mislead us to think that the industry is set straight on the road to higher and higher prosperity and that the various difficult problems it had to face in the past no longer exist. On the contrary, it appears to me that as one set of difficulties are surmounted, another set is ready to appear in its place. During the last year, I had made a reference to the difficult situation in the matter of supplies of cotton. This continued to grow worse due to the lower Indian crop and the Government not taking timely steps to import larger quantities of cotton. There was, thus, both a physical insufficiency of raw material as well as a considerable increase in its price. As is to be expected in a period of planned development, the demand for cloth kept on rising. Consequently, the prices of cloth went up all over the country. These circumstances leading to this difficult situation have, I am afraid, not been sufficiently appreciated by those who have been criticising the cotton mill industry.

Increase in Costs

"Apart from the increases in the price of cotton and its physical insufficiency, the costs of the industry have been further increased by the recommendations of the Textile Wage Board which granted an *ad hoc* increase to all workers from 1st January, 1960, and has also stipulated a further increase with effect from 1962. At the same time, the industry has not been permitted to increase its capacity and is, therefore, unable to recoup these increasing costs by larger volumes of production. The cotton mill industry is one of the oldest in the country and a large part of its machinery is not only old in years but also obsolete in its working. Adequate replacement and renovation programmes call for large-scale financial outlay, which are beyond the limited internal resources of the industry. A considerable part of such machinery has also to be imported for which foreign exchange is not freely available. Financial institutions like the N.I.D.C., I.F.C., etc., are no doubt assisting with loans, but these are far from adequate and are subject to many limitations. The industry, therefore, faces a situation in which it has to meet increasing costs without having the facilities for matching these with increased productivity through renovation of machinery and improvement in techniques.

"If the industry is to be placed on a sound footing and the demands of consumers met at reasonable prices, it is essential that these basic problems must be identified and solved in a rational way. The first step to be taken, to my mind, is to increase at once the availability of cotton not only for the current season but over a period of years. For this purpose, I would suggest that the Government should immediately import cotton, not only to meet the needs of this season and to make good shortfalls of the last season but also to build up a sizable surplus buffer stock. The mere existence of such a buffer would have a healthy influence on the prices of cotton which in turn would enable the prices of cloth to be kept at a reasonable level.

Prospect of Scarcity of Cloth

"The production programme for cloth should be made out so as to ensure a reasonable balance between the supply and demand for cloth. The demand for cloth at the end of the third Plan period has been estimated by the Planning Commission at 9,300 million yards per annum. The Indian Cotton Mills' Federation has placed this demand somewhat higher, but even the Planning Commission's target of 9,300 million yards will call for additional cloth output of over 2,000 million yards. It would appear to be the intention of the planners that out of this increase, some 500 million yards should be allocated to the mill industry and the rest to the handloom and powerloom sectors. It is well known that the handloom sector can only thrive on the basis of subsidy and that its development must eventually be at some cost to the general public. Apart from this, it is pertinent to consider how far the handloom industry could be in a position to achieve the increase proposed for it, because, if it fails to do so, and the mill industry's production is limited to the planned targets, there is bound to be again a scarcity of cloth, with resultant, higher prices.

"The performance of the handloom industry during the second Plan period does not carry the promise that it will be able to achieve the higher targets proposed for it in the Draft Third Plan. There is considerable doubt whether the published statistics give an accurate picture of the actual production of the handloom industry. The published statistics of production by handlooms are not based on actual reports of production but derived from the quantities of yarn released for the handloom industry and the cloth that should have been produced from these. The production, according to these published statistics is of the order of 1,900 million yards per year, whereas it is surmised that the actual production could not be more than 1,100 million yards. The gap between these two figures is so wide that one can easily imagine the situation that could arise if the increases proposed for the handloom industry were allocated to it without scientific investigation.

"It is my earnest submission that we look on this as a problem, not of farming out production opportunities to this sector or that but of providing adequate supplies of cloth to the people of the country at prices which are both reasonable and stable, so that standards of living may rise. If this purpose is kept in mind all these issues fall into perspective, and it will be easy to see the need for production to be allocated on a realistic basis and for providing the industry with the means to achieve its targets, namely, sufficient supplies of raw materials at reasonable prices, adequate financial assistance for modernisation and renovation, and some restraint in fiscal and other increases in costs.

"There is another important aspect which makes it desirable that we strengthen the cotton mill industry in the country. As is well known, the textile industry is one of the major earners of foreign exchange by export of cloth. But increasingly in the past years competition in the export markets is becoming harder to face while at the same time the costs of the industry at home are going up, with the result that there is a serious threat of being priced out of the export markets. The recent conspicuous rise in the prices of cloth within the country led to diversion of cloth from exports to domestic markets. From the point of view of exports also, therefore, it is essential that domestic prices should be kept at a reasonable level, so that the exports do not suffer.

"Incidentally, you will be glad to know that the exports of your Company have further increased during the year, and we are the second largest exporters of cotton textiles from India.

"From these matters which are specific to the textile industry, let me dwell for a while on a subject basic to the progress of all our industries, namely, the problem of agricultural production and prices. Experience with the first and second Five-year Plans has taught us two important lessons. One is the imperative need, if standards of living are to rise, for keeping price levels stable over a period of years. The other is the realisation that agricultural prices are and will continue in the foreseeable future to be a major influence on price levels. In the field of agriculture, as in that of industry, the most effective means of keeping prices low and stable is to increase productivity. In fact, there is no alternative to this, for it is only on the basis of reasonable prices of agricultural products that sustained industrial progress can be built and standards of living improved.

Indiscipline Among Employees

"I know I am, perhaps, treading on delicate ground, but it does seem to me that it is time for the Government and the people to give thought to the serious indiscipline that has crept into almost every walk of life. If this is not given immediate consideration and steps are not taken to remedy the position, it is bound to lead to a permanent weakness in the structure of our society. Confining myself, however, to indiscipline among employees as a class, I would humbly urge upon the Government to consider the effect of labour legislation on this problem of discipline in industry. Our labour legislation is founded on the belief that employees are always exploited and they should be meticulously protected from such exploitation. The actual effect of such legislation, however, has often been to protect inefficiency and indiscipline on the part of the employee by making it extremely difficult for the employer to take corrective action quickly and effectively enough. I am willing to grant that in some cases individual injustices do occur, but an elaborate legal structure built to protect every one from every such injustice has resulted in large-scale indiscipline going unpunished. I would, therefore, suggest that we should weigh the two evils—one of indiscipline affecting the entire fabric of society and the other of stray cases of individual injustices occurring here or there.

"As is well known, the Company is required, under the new Income-tax Law, to deduct income-tax at 30 per cent. from all dividends. This would cause hardship to holders of preference shares with fixed rates of dividends as they would now be paid only those rates minus 30 per cent. As this is not equitable to them, you will be pleased to know that your Directors have proposed to change the rates of dividend payable on these shares so as to ensure that after deduction of 30 per cent., these shareholders will get the same net amount as before.

"Before I close, let me convey my thanks to all my colleagues who form part of this organisation—the D.C.M.—and whose efforts have been responsible for the satisfactory working of the Company."

LIFE INSURANCE IN THE U.S.S.R.

POLICYHOLDERS EXCEED 11 MILLION

By G. Ushakov

STATE insurance in the U.S.S.R. is one of the ways of building up reserve funds out of which to compensate citizens, collective farms and other co-operative organisations for losses and damages inflicted by natural calamities. The fund also serves as a source of additional security to working people in the event of total or partial disability resulting from an accident, and, finally, enables the insured to receive fixed benefits upon reaching a specified age.

Insurance is a State monopoly in the U.S.S.R. and all forms of property and personal insurance are handled by the Government. This guarantees full indemnity to the insured in the event of property loss or personal misfortune. The business is transacted by Government agencies subordinated to the finance ministries of the constituent republics. Every republic has its own self-operating Insurance Department. General supervision over the State insurance system is exercised by the Ministry of Finance of the U.S.S.R. A system of State reserves has been established for the purpose of ensuring the expansion of socialist reproduction and of eliminating possible difficulties and damages caused by natural calamities. The reserves are used to make up for any losses suffered by State enterprises and organisations.

The State insurance system protects co-operative organisations, collective farms and individual citizens in the event of loss or damage to their structures, stocks, equipment, household effects, livestock or vehicles owing to natural adversities. The Soviet Government promotes also measures to safeguard the health of the citizens and to provide for their welfare in old age and in case of disablement. This can be seen from the steady increase of appropriations for public health and social security. The right of Soviet citizens to material security in old age, and in the event of sickness or disablement, is guaranteed by the Constitution of the U.S.S.R. and is sustained by free medical service and a broad social insurance system.

Personal Insurance

Personal insurance, which guarantees fixed payments to the insured as security against certain contingencies, is supplementary to the State social insurance and social security benefits provided at the Government's expense. There are two forms of personal and property insurance—voluntary and compulsory. Compulsory insurance has a limited sphere of application; voluntary insurance has a much wider scope. Certain kinds of property, such as houses and cattle, for example, can be insured under both schemes—compulsory and voluntary. Household effects can be insured only under the voluntary scheme. The voluntary arrangement predominates in the sphere of personal insurance. Compulsory insurance of individuals extends only to persons serving at rail, water, air or motor transport (excluding commuters), to the members of local voluntary fire brigades and companies (against fire-fighting hazards) and to workers of certain other organisations.

The different forms of voluntary insurance include: compound insurance, accident insurance, life insurance, and insurance against the risk of death or disablement.

Compound Insurance

This form of insurance affords the insured and his family fuller security than any of the other forms. A compound policy provides for the payment of insurance benefits to the insured:

(a) upon attaining the age specified in the contract and the consequent expiration of its term;

(b) in the event of permanent and total disability due to a traffic accident, an explosion, a cave-in, a burn, an injury, a lightning stroke or any other misfortune stipulated in the terms of a standard contract.

In the event of the policyholder's death from any cause whatsoever, the insurance sums are paid to his family or to the beneficiaries named in his will.

Compound life insurance contracts are concluded with citizens of the U.S.S.R. between the age of 16 and 60 for terms of 5, 10, 15 and 20 years.

The premiums charged per thousand roubles of insurance depend on the age of the insured and the duration of the contract. The insurance sum is practically unlimited, and this likewise applies to all other forms of voluntary personal insurance. However, if the amount of life insurance exceeds 5,000 roubles, the policy is drawn up only after a medical examination and contingent on its result.

In the event of incapacitation, the insured is entitled to a proportionate part of the insurance sum and is also granted certain advantages. If the loss of capacity ranges from 30 to 50 per cent., his premium payments are reduced by half. If the percentage is higher, he is entirely freed from further premium payments. Should the insured wish to cancel the policy before it expires, he is entitled to a partial refund of the paid premiums. He can also receive a part of the insurance sum in the form of a loan. A compound life insurance policy can be supplemented with a contract providing for the payment of a pension to a specified beneficiary in the event of the insured's death.

Accident Insurance

Under this scheme the State pays insurance in the event of the insured's permanent disability or death resulting only from a traffic or industrial accident, from the use of firearms or tools, from an explosion, cave-in, burn, injury, lightning stroke, electric shock, frostbite or freezing, sudden poisoning, or from an attack by a beast or malefactor.

Persons from 16 to 70 years of age are eligible for insurance without any medical examination, and a policy can be taken out for a term of one to five years in varying sums. The premium rates for accident insurance range from 2.50 to 12 roubles a year per thousand roubles of indemnity, depending on the occupation of the insured. A 5 per cent. discount is offered on a three-year insurance, 10 per cent. on a four-year term, and 15 per cent. on a five-year term.

In the event of partial or permanent disability, the State pays a percentage of the insurance commensurate with the degree of incapacity caused by the accident.

The benefits under life insurance and insurance against risk of death or disablement are paid to the policyholder if he becomes disabled, or to the persons he names as his beneficiaries in the event of his death. As distinct from accident insurance, life insurance has no specified term whereas insurance against the risk of death or disablement is given for a period of up to 20 years.

Insurance under both these headings is extended to persons from 16 to 60 years of age, and the premium rates range from 1.08 to 5.75 roubles a month per thousand roubles of indemnity, depending on the age of the insured and the term of the contract.

On a life insurance policy premiums may be paid over a period as long as 10 or 20 years, but the rates in such case are somewhat higher.

Besides the aforementioned four types of life insurance, there is also a pension insurance scheme, whereby the State Insurance Department is given a certain sum, in lump or in instalments, which is paid out to the insured in the form of a pension. The pension may be paid during the policyholder's lifetime or for a fixed number of years (5, 10, 15, etc.).

Transaction of Business

Life insurances are transacted in the offices of the State Insurance agents. The agent, as a rule, has commission over a number of institutions and enterprises within a certain area where he conducts exploratory work and renders insurance services to the residents of the neighbourhood.

Insurance premiums are either collected by agents, or paid by the insured through savings banks or the inspectorates. The staff employees of the inspectorates, as well as the insurance agents, give explanatory talks on insurance at public meetings. Moreover, the public is kept informed on insurance matters through various media of advertisement.

The steady advancement of the working people's welfare, the stability of the Soviet rouble and the improvement of insurance services are factors that create favourable conditions for embracing a greater number of people with personal and property insurance. By the end of 1959, the number of policyholders exceeded 11 million. In some enterprises, up to 80-90 per cent. of the workers have taken out insurance policies.

Old Exporters... New Exporters

Safeguard the Future of Your Consignments

Are you worried about not receiving payments for goods exported on credit terms? The insolvency of the buyer or his protracted default in paying for the goods accepted by him? The wars and civil wars? Changes in the Governmental Policies, here—and over there? The natural and man-made calamities? or is your worry something special? Then let us help you. It is our business to look after *your* interests.

ERIC wants you to prosper in your export business; to compete with exporters from other countries; and obtain easier finance facilities.

The procedure is very simple. The fee is negligible—What we charge you is so less compared with the actual expenses we incur. That's because the Export Risks Insurance Corporation is wholly owned by the Government of India. It is run on "No Profit No Loss" basis.

Write to-day for further details and free literature.

EMPLOYEES' STATE INSURANCE

Total cash benefits amounting to over Rs. 9.91 lakhs were paid to the industrial workers in Greater Bombay and Vidarbha region under the Employees' State Insurance Scheme, during July last. Of this amount, Rs. 7,92,254 were paid as sickness benefit, Rs. 44,445 as maternity benefit, Rs. 80,526 as temporary disablement benefit, Rs. 35,816 as permanent disablement benefit, Rs. 9,448 as dependents' benefit and Rs. 29,442 as extended sickness benefit. According to the progress report of the scheme for the month, 9,326 workers were newly registered under the scheme, while the total number of insured workers entitled to medical care was 6,69,098 at the end of the month under report.

In Greater Bombay and four *talukas* of Thana District, 18,070 workers attended diagnostic centres, while X-Ray plates were taken in 2,004 cases and blood examination was made in 2,576 cases.

The persons admitted to hospitals numbered 1,045, while the total number of beds occupied during the month was 16,886.

Over Rs. 2.52 lakhs were spent on medicines and other appliances and the payments made to insured medical practitioners amounted to over Rs. 4.07 lakhs, during the month under review.

The medical inspectors inspected 81 dispensaries of insurance medical practitioners, 22 shops of chemists and 46 hospitals.

TRADE APPRENTICES AND EMPLOYEES' STATE INSURANCE

Ordinarily all employees in covered establishments, including the trade apprentices who are employed directly by the employer on wages, are covered under the Employees' State Insurance Act, 1948, and contributions in respect of them are payable, according to a ruling of the Regional Director, Employees' State Insurance Corporation, Bombay. But the position of such apprentices who have been allotted by the Central or State Governments or by educational institutions for training with the employers, is that they are not to be covered under the Employees' State Insurance Act, 1948 irrespective of the fact whether they are paid fully or partly by the Central or State Government or the employer.

SCOPE FOR NEW INDUSTRIES IN KOYNA AREA

BROAD INDICATIONS IN SURVEY REPORT

THE Koyna hydro-electric project, now under construction, is bound to give a fillip to the economic development of Maharashtra, particularly of the relatively backward regions around the project. For cheap power (at a tentatively estimated cost of five nP per unit for bulk consumers) from this project will make for better utilisation of local resources, both men and material, and is likely to promote the development of power-oriented industries, such as electro-chemical and metallurgical industries. Foreign experience suggests that this will be so. In the U.S., France, Scotland, Russia and Scandinavian countries, for instance, such industries have tended to gravitate to places very near the source of large blocks of low-priced hydro-electric power. In Sweden and Canada, it is said, 25 per cent. of the total power is consumed by such industries. Even in India, power supply from the Damodar Valley project in West Bengal has provided an impetus to the growth of many industries, such as iron and steel, cement, locomotive manufacture, copper, coal, mica mines and fertilisers. A similar, if not wholly identical, development may be expected in the Koyna Project region also.

As early as during the First World War, Messrs. Tatas investigated the power potential of the Koyna Valley with the main purpose of establishing aluminium and electro-chemical industries. In 1947, the Government of Bombay, with a view to meeting the increasing power requirements of the city of Bombay and its environs, revived the idea and initiated detailed investigation as a result of which the present scheme was launched in January 1954. It is proposed to develop a total power potential of about 500,000 kw. with a provision of 67,500 million cubic feet of water for power generation. The project, scheduled to be executed in three stages, is expected to generate 60,000 kw. by April 1961, with added 60,000 kw. capacity to be ready every six months thereafter until the total capacity in the first stage of 240,000 kw. is attained. Although no final estimate of the price of power from the project can yet be made, the Chief Electrical Engineer of the Koyna Project has tentatively estimated it to be about five nP per unit for bulk consumers.

Object of Survey

In this context, it is a good thing that the Economic Investigation Branch of the Small Industries Service Institute, Bombay, has completed a survey of the Koyna Project area on behalf of the State Government. The survey was designed to assess the industrial potential of the Koyna Project area, examine the scope of expansion for the existing industries and possible opportunities for the establishment of new industries and also to gauge the extent and location of demand for power from existing and prospective industries. The present report discusses the economic resources of the region, important existing industries, possibilities of new industries and future load estimates of the region and covers the districts of Sholapur, North and South Satara, Kolhapur, Kolaba and the northern part of the Ratnagiri district in the State. The factual analysis contained in the report and the recommendations made therein are bound to be useful in formulating programmes of industrial development for this area.

Among the selected districts, Kolhapur, Ratnagiri and North Satara have substantial mineral resources. Kolhapur has rich deposits of bauxite, amounting to about 15 million tons, including 5 million tons at Udgeri. Some quantity of bauxite is found in Kolaba district, too. Ratnagiri district is endowed with manganese ore, iron ore, ilmenite and chromite. There is a relatively higher percentage of cultivated land in Sholapur, North and South Satara and Kolhapur districts, the principal commercial crops being sugarcane, groundnut and cotton. The other two districts form a rice-growing tract. The four districts on the plains are more industrialised than the Konkan districts and are known for sugar, textiles and oil milling industries as well as engineering works. There are two sugar factories each in Sholapur and North Satara and one each in South Satara and Kolhapur districts. The city of Sholapur is characterised by the development of textile mills, four out of seven textile mills in the district being located in the city. The oil mills are spread all over the four districts which are rich in oilseed resources. The engineering industry, that is, small scale, is mainly concentrated in Kolhapur City, where there are at present 87 mechanical and automobile workshops. There is also one large-scale unit each in North and South Satara districts. Of the two Konkan districts, Kolaba is comparatively industrialised, on a minor scale, with the growth of rice and *poha* factories, salt and paper-making industries. The important cottage industries in the six districts are handloom, oil *ghanis*, leather work and blacksmithy. Ichalkaranji in the district of Kolhapur and Sholapur City are the important handloom and powerloom centres. Besides, Kolhapur is also known for *gur* making.

Prospects

The survey has made an attempt to assess the prospects for setting up new industrial units in the selected areas. In fact, already one sugar mill each in Sholapur, North and South Satara districts and four in Kolhapur district are scheduled to go into production soon. Kolaba district appears to offer possibilities for the establishment of caustic soda, chlorine, soda ash and chemically pure salt plants. Licence has already been granted to set up a soda ash and caustic soda plant at Uran in Kolaba.

Only broad indications of the possibilities of establishing new industrial units are given in the survey. In the absence of demand analyses and of geological surveys to assess the quantum of resources, detailed schemes have not been worked out. According to the survey, Koynanagar in North Satara district seems to offer good prospects for the setting up of phosphoric acid and superphosphate plants and Karad in the same district for an ammonium sulphate plant on account of their nearness to the power station. As Kolhapur district is rich in good quality bauxite deposits, particularly at Udgeri, it may be possible to set up a smelter for the production of alumina at Udgeri. The location of an aluminium plant for reducing alumina to aluminium metal will depend on comparative transport and power costs. Chiplun in Ratnagiri district, owing to its nearness to Koyna power station, appears to provide suitable location for a calcium carbide plant, with a capacity of 20 tons per day, but, in the absence of geological survey, the possibility of setting up such a plant needs detailed investigation. The Directorate of Industries, Bombay, has suggested the possibility of electrolytic production of caustic soda for the possible aluminium plant. Khopoli and Khorpada in Kolaba district offer some locational advantages for the development of paper-making and rayon plants.

It is also suggested that a special survey should be undertaken to examine the scope for promoting intensive development of small industries in the selected areas. Such a detailed study of small industries was not found possible in the present survey on account of the rapidity with which it was completed.

Power Consumption

The production and consumption of power have steadily been on the increase in recent years. In all the six districts, the electricity consumed for industrial purposes has registered an increase of 15.5 per cent., that is, from 12.9 to 14.90 million kw.h. during the period 1951-55. During the same period, the quantum of power generated has increased from 11,744 kw. to as much as 88,344 kw. There are now in all 31 power stations in the area. Kolaba accounts for 80 per cent. of the generating capacity and Sholapur for the maximum industrial load of 80 per cent. as of 1955. It is estimated that the demand from potential new units will aggregate 1,107,000 kw.h. per day, including 914,000 kw.h. for possible additional units and 193,000 kw.h. for licensed units. This estimate of power requirements is itself an index of the vast scope for new industries in the Koyna Project region.

The survey report has also given a district-wise break-up of the power requirements. First, Kolaba district, with locational advantages for the development of chemical and rayon industries, will account for consumption of 100,000 kw.h. per day, or 51.8 per cent. of the total estimated consumption per day, for licensed units. Kolhapur district will consume about 60,300 kw.h. per day, or 31.2 per cent., predominantly for the four sugar factories expected to go into operation shortly. The expansion of sugar industry in the districts of Sholapur, North and South Satara, consequent upon the location of one licensed sugar factory in each of the three districts, will be a significant factor in the demand for power in these three districts, which together account for 32,670 kw.h. per day or 16.9 per cent. There are no licensed units in Ratnagiri district.

As for potential estimated demand, Kolhapur district will account for 603,000 kw.h. per day, or 66.6 per cent. of the total for the six districts. This is mainly owing to the possible location of an aluminium plant requiring 600,000 kw.h. per day, for an annual capacity of 10,000 tons. Next to Kolhapur, Ratnagiri district will require 172,000 kw.h. per day, or 18.8 per cent., if selected as a site for calcium carbide and electrolytic caustic soda plants. Kolaba will consume 76,125 kw.h. per day, or 8.3 per cent., depending on the location of rayon and paper plants. The low offtake of power indicated for Sholapur, North and South Satara districts can be attributed to the fact that the future industrial pattern of this area is likely to be governed more by the expansion of existing industries than by the emergence of new power-oriented industries, with the exception of Koynanagar and Karad which may offer favourable location for superphosphate and ammonium sulphite plants, respectively. A superphosphate plant with a capacity of 100 tons per day will consume 45,000 kw.h. per day.

The survey has not, however, worked out the power requirements for the expansion of other industries, such as general engineering units, oil and *dal* milling, and tanning. Apparently, the period of one month fixed for a survey of this kind naturally circumscribed the scope and, therefore, the utility of its findings. Moreover, this report was submitted to the Bombay Government early in 1959 and the latter has taken 20 months to release the report to the public. Since the preparation of the report, much has happened and several new industries have been licensed for the area under review. It is, therefore, to be hoped that an expert body will make a further exhaustive study of the industrial potential of the areas adjoining the Koyna Project and draw up detailed project reports on the same lines as the National Council of Applied Economic Research has done in its techno-economic surveys of some States like Bihar and Madhya Pradesh.

THE HANOVER FAIR FOR 1961

The fifteenth Industries Fair will be held at Hanover between 30th April and 9th May 1961. Since the fair was first held in 1947, its importance for international trade has constantly increased. To accommodate the growing number of German and foreign exhibitors, it has been necessary to extend the exhibition area every year, but it has not yet been possible to satisfy everyone. From 30,000 sq. m. in 1947, the covered area available grew to 285,000 sq. m. in 1960, with 314,000 sq. m. being provided for 1961. The open-air section has increased from 8,000 sq. m in 1947 to 162,000 sq. m. in 1960, with 192,000 sq. m. being provided for next year. The 5,000 exhibitors expected for 1961 will thus have a total area of 506,000 sq. m. at their disposal.

The exhibitors are solely producer firms, and play an important part in foreign trade. They are represented by top-level executives, which enables vital and decisive negotations to be held. In view of this, authoritative commercial delegations and many economic experts from abroad attend the fair. Such is the scope and diversity of the German and foreign displays in each branch that the possibilities of comparison cannot be bettered. National pavilions not being permitted, each branch of industry is a self-contained entity. This feature is greatly appreciated by the visitors. German and foreign producers of a given article exhibit in the same section. All this a great aid to visitors particularly interested in a given branch. Over twenty industrial European and oversea countries maintain, in addition, information offices in Hanover, which advise on questions of foreign trade.

Foreign exhibits are a very important feature of the fair. The number has materially increased over the last few years, having doubled in four years to 836 firms out of about 4,800 exhibitors in 1960. Despite this increase in participation from abroad, many firms are still on the waiting list. Some of these will be able to exhibit in 1961. In 1960, French firms led with 177 exhibitors, followed by Great Britain and the United States with 96 and 91 respectively. Twenty-four European and oversea countries exhibited this year.

Foreign visitors have also been appearing in increasing numbers. While the 1959 fair was visited by buyers from 93 countries, visitors from 103 nations attended in 1960. Visitors from the United States were 45 per cent. above the previous year. Among these, particular reference should be made to a group of more than 100 buyers from various branches who remained several days in Hanover to make a detailed survey of the exhibits.

INDIA STEAMSHIP SUFFERS HEAVY LOSS

DIVIDEND, HOWEVER, TO BE PAID OUT OF RESERVES

IT is said of shipping companies, and experience has actually borne it out, that they rarely enjoy boom periods, while lean years, when competition assumes more serious proportions, are more common. A typical instance of such experience is provided by the results of the India Steamship Company Ltd. (Managing Agents: Messrs. Lionel Edwards Private Ltd., Calcutta) during the last few years, despite an expansion in the number of voyages and a rise in freight earned. The Company's gross profit, for instance, had gone up from Rs. 26.87 lakhs in the year ended March 1955 to a peak of Rs. 253.63 lakhs in 1957-58, all within a period of three years, when the freight earned had increased from Rs. 4.01 crores to Rs. 7.75 crores. The turn of events in the subsequent two years was so quick and adverse, following the general recession in international trade which began early in 1958, that the gross profit of the Company precipitously dwindled to Rs. 142.82 lakhs in 1958-59 and further to Rs. 48.94 lakhs in the latest year of its working, namely, the one ended 31st March 1960, notwithstanding the continued growth, albeit at a slower pace, in freight earnings to Rs. 8.38 crores during these two years. The number of liner voyages during these two years increased from 30.5 to 47.5 and of coastal voyages from 1 to 9. The cargo carried in all trades consistently rose from 532,000 freight tons in 1957-58 to 734,000 freight tons in 1958-59 and further to 894,349 freight tons in the year under review.

Two Adverse Factors

It is quite obvious that the Company could not remain unaffected by the depression in the world freight market, both in volume and freight rate which began early in 1958. During the year under review, in particular, two factors would appear to have seriously affected the Company. The first one, which was common to all liner shipping companies, was the aggressive competition from tramps which offered rates of freight which made many shippers divert their custom from their usual liner companies. The Conferences, too, reduced their freights to meet the fierce competition, particularly in commodities which could form bulk cargo; even then, the lines were heavily handicapped. The ships of the Company had to call at an even greater number of ports than usual to secure the cargo and had necessarily to incur heavy expenses by way of port dues and other similar charges. The second and more serious factor was "the unhealthy and unfair competition to which the Company was subject from some of the liner companies which are its colleagues in the main Conferences."

After providing for the minimum managing agency commission of Rs. 50,000 and Rs. 91.29 lakhs for depreciation, the Company has suffered a loss of Rs. 42.85 lakhs in the year under review, as against a net profit of Rs. 60.67 lakhs for the previous year. Last year, the entire net profit was transferred to the development rebate reserve, whereas this year, in view of the huge loss, the Directors have not been able to set aside anything for this statutory provision. Nevertheless, the dividends on ordinary and preference shares have not been skipped over. The ordinary dividend is being maintained at 10 per cent., but subject to deduction of tax. In other words, the net dividend has borne a cut of 30 per cent. The dividend on the 5 per cent. tax-free preference shares has been grossed by the extent of tax deductible at source, so as to maintain the net dividend at 5 per cent. The necessary sum (Rs. 26 lakhs) is being drawn from the dividend equalisation reserve. This is on top of Rs. 20 lakhs withdrawn last year, to make good the shortfall in the amount required for dividend distribution. Thus, in all, the dividend reserve has been depleted to the extent of Rs. 46.54 lakhs in the last two years, as will be seen from the comparative table at the foot of the previous column. Prudence demands that, as and when profit improves in future, the replenishment of these reserves be given a higher priority over an increase in the return to shareholders.

(In lakhs of rupees)

Outlook

While conditions in the shipping world have not changed for the better, the Chairman of the Company, Dr. A. Ramaswami Mudaliar, in his address to the shareholders to be delivered at the annual general meeting of the Company to be held on 14th November 1960, takes a fairly optimistic view of the future for Indian shipping, in general, and of the Company, in particular. Thus, he says:

"I have given a faithful picture of conditions that existed during the year. I confess, however, that there may be overtones in the picture presented and that it may lead you to the belief that the future is one of unrelieved gloom. I do not hold to that belief myself. International shipping is notoriously subject to fluctuations, sometimes violent fluctuations. I consider that we have passed through such a period and that it will not be unreasonable to look forward to a less anxious future. Your Company, in particular, is firmly established and rests on a solid basis. The eagerness and enthusiasm which its officers of all ranks and the staff show is unabated. The interest that is taken by the authorities in the development of Indian shipping is gratifying and encouraging..... The establishment of the Shipping Co-ordination Committee holds out promise of fair treatment to Indian shipping. When the chartering section of this Committee is properly organised and broadbased, it should help the development of Indian tramp shipping, so badly needed by the country. Above all, the development of shipping in the public sector, in so far as it is within proper limits is, in my opinion, a help and not a hindrance to the development of Indian shipping in the private sector. It will present to the authorities more directly and more vividly the difficulties and handicaps which it suffers from and thereby will increase still further the awareness of problems of Indian shipping by the authorities. I, therefore, take a fairly optimistic view of the future of Indian shipping and of your Company, in particular."

While the Company's financial position is fairly satisfactory, it is to be noted that its borrowings from the Government of India continue to grow, thus increasing the burden of interest charges. The instalments of loan received during the year amounted to Rs. 2.95 crores, while repayments during the year aggregated about Rs. 58 lakhs, bringing the net outstanding borrowings as at the end of the year to Rs. 13.09 crores. The interest charges on the Government loans have gone up during the year by Rs. 7.41 lakhs to Rs. 26.50 lakhs, which represent over 6 per cent. of the expenses other than port expenses and charter hire. The paid-up capital is unchanged at Rs. 2.75 crores, while the reserves stand depleted from Rs. 3.59 crores to Rs. 2.90 crores. The current liabilities and incomplete voyages account for Rs. 2.34 crores. The additions to the fleet during the year amounted to Rs. 4.93 crores, bringing the gross value of the block account to Rs. 22.69 crores. This has been written down to Rs. 17.73 crores. The current assets amount to Rs. 3.34 crores.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 10.52 *cum-div.* On an *ex-div.* basis, the yield on these shares works out to 7.12 per cent. per annum free of tax.

MORARJEE MILL MAINTAINS DIVIDEND

Notwithstanding the high cost of raw materials and stores, particularly of Indian cotton on account of poor crop, and the incidence of compensation payable to workers pursuant to the Supreme Court's judgment for the period 1st January 1951 to 31st July 1952 for idle hours due to failure of electricity, the Morarjee Goculdas Spinning and Weaving Company Ltd. (Managing Agents: Messrs. Piramal Sons Private Ltd., Bombay) has fared well during the year ended 30th June 1960. Its gross profit has gone up by Rs. 5.61 lakhs to Rs. 41.09 lakhs, the highest touched in recent years. This improvement is mainly due to the larger turnover, sales of cloth recording an increase of Rs. 21.52 lakhs to Rs. 394 lakhs.

The net profit is, however, lower at Rs. 15.93 lakhs, as compared with that of Rs. 17.17 lakhs earned in 1958-59, consequent on the substantially larger provision made for depreciation at Rs. 11.91 lakhs, as against Rs. 5.25 lakhs in the previous year. The addition to the reserves also has been raised from Rs. 3 lakhs to Rs. 5.65 lakhs, while the dividend on ordinary shares is proposed to be maintained at 21.5 per cent. subject to deduction of tax, or 15.05 per cent. free of tax. The dividend on the 4½ per cent. tax-free preference shares is proposed, as in the previous year, to be grossed to 6.43 per cent., so that, after deduction of tax, the net return will be unchanged at 4½ per cent., tax-free.

The salient features of the year's results are compared with those of the previous three years in the following table:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sale proceeds	3,94.00	3,72.48	3,66 08	3,23.53
Other income	8 85	4 01	0 68	0.45
Cotton consumed	155 28	138.74	159.10	158.95
Stores, spares, chemicals, power and fuel consumed	54 92	55 14	53 16	46.86
Wages and other expenses	151 56	147 13	120.37	96.26

Ordinary	11 13 (21.5%)*	11 13 (21.5%)*	7 76 (15%)	7.24 (14%)
Carry forward	0.43	2.38	0.22	0 28

* Subject to deduction of tax.

The Company appears to have stepped up its exports of cloth during the year under review, as witness the increase in premium on cotton entitlement under the export incentive scheme from Rs. 2.09 lakhs to Rs. 8.02 lakhs.

The Company's financial position is quite satisfactory. The paid-up capital of Rs. 69 lakhs is supplemented by reserves and surplus aggregating Rs. 51.12 lakhs. The outstanding borrowings have been reduced from Rs. 82.97 lakhs to Rs. 65.83 lakhs, though the other current liabilities have risen from Rs. 59.65 lakhs to Rs. 81.64 lakhs. The total liabilities are more than adequately covered by current assets aggregating Rs. 181.77 lakhs. The additions to the fixed assets during the year were of the order of Rs. 18.44 lakhs, bringing the gross value thereof to Rs. 302.82 lakhs. This has been well written down to a book value of Rs. 85.82 lakhs. In addition, the Company has placed orders for new machinery to the extent of about Rs. 24 lakhs.

The current market value of the Company's Rs. 100 fully paid-up ordinary shares is Rs. 345 *cum-div.*, at which rate the yield on them works out to 4.56 per cent. per annum, free of tax.

GREAVES COTTON & CO., LTD.

In our write-up on the working of Greaves Cotton & Co. Ltd. during the year ended 31st March 1960, published on page 703 of our issue dated 15th October 1960, the name of the Managing Director was given as Mr. W. M. Wagle, whereas it should read Mr. N. M. Wagle.

In para 3 of the same write-up, it was stated that the Company's increased turnover in 1958 benefited from the expansion of the cone and tube plant. The year of increased turnover should read 1959, or more correctly, 1959-60, instead of 1958.

ALEMBIC CHEMICALS

All shareholders of the Alembic Chemical Works Company, Ltd., Baroda will get one new ordinary share for every ten shares held at par, that is, Rs. 100 per share. The total number of new shares to be issued is only 10,000. The Directors of the Company propose to issue these after increasing the authorised capital from Rs. 1 crore to Rs. 2 crores. The required resolutions will be moved at an extraordinary meeting of shareholders convened for 17th November next. The permission of the Controller of Capital Issues is not required, as the issue is within the exemption limit of Rs. 10 lakhs.

ORIENT PAPER PUTS UP DIVIDEND

CAPACITY OF AMLAI PROJECT TO BE RAISED

CONTRARY to general expectations last year that the outlook for the year ended 31st March 1960 of the Orient Paper Mills Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) was not bright, the results of the Company for the year under review make encouraging reading. Sales have gone up by Rs. 84 lakhs and gross profit has recorded a rise of Rs. 39.59 lakhs to a fresh high of Rs. 197.71 lakhs. No doubt, the Company's production was affected by labour strike for over two months and by the unsatisfactory performance of the "soda recovery" plant and the renovated "board machine." The upward trend in the cost of raw materials, salary, wages and other expenses continued to persist, resulting in a further rise in cost of production. On top of this, the prices of paper and board were reduced with effect from 1st January 1960. The representations made by the Company to the Orissa Government for the abolition or reduction of the levy on bamboos and coal carried by means other than railways or airways did not yield results. These adverse factors were, however, offset by the better working since last summer of the "soda recovery" plant and "board machine" as a result of improvements made, as well as by the better working efficiency of the mills and increased production, consequent on the expansion and modernisation carried out by the Company.

The rise in net profit, however, is less marked, having gone up from Rs. 65.77 lakhs to Rs. 72.44 lakhs only. This is the result of larger provisions for depreciation and tax liability, as will be seen from the accompanying table. A sum of no less than Rs. 30 lakhs out of the net profit has been ploughed back, but this is smaller than the Rs. 37 lakhs added last year. The dividend on ordinary shares is being raised from 15 per cent. per annum, free of tax, paid consistently for the three years 1956-57 to 1958-59 to 22.5 per cent., subject to deduction of tax, or 15.75 per cent. (net). The dividends on 5½ per cent. tax-free and taxable preference shares are subject to deduction of tax, but the Directors propose to make such additional distributions as may be payable on the passing of the Preference Shares (Regulation of Dividends) Bill 1960.

The encouraging progress of the Company in recent years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale proceeds (gross)	7 85 12	7,01 12	5 40 90	4,57 17
Other income	21.21	9.39	7.98	14.52
Closing stocks of finished goods and stock-in-process	14.20	6.27	7.43	7.63
Raw materials, stores, spares, etc., consumed	2,69 10	2 52 78	1,81 00	1,50 29
Excise duty	1,06 16	98 28	74 51	43 29
Other expenses	2,32 59	2,01 34	1,56 01	1 36 27
Gross profit	1,97 71	1,58 12	1,37 35	1,34 98
Managing Agents' remuneration	12.77	10.70	10.55	11.32
Provision for—

Carry forward	4.23	1.69	1.20	2.63

* Subject to deduction of tax.

In pursuance of its programme of modernisation and expansion, the Company made a capital expenditure of about Rs. 41 lakhs during the year under review, bringing the total cost of the block account to Rs. 10.01 crores (including the addition of Rs. 80 lakhs on revaluation of assets effected during the half-year ended 31st March 1950). The net book value of the block account is Rs. 6.94 crores, the depreciation provided so far being Rs. 3.08 crores. This provision is less than the normal depreciation required to be provided under the Income-tax Act, but the Directors consider it adequate in view of the reserve for repairs and renewals amounting to Rs. 60 lakhs. The current assets aggregate Rs. 3.26 crores, and these are shorter than the current liabilities and provisions (including borrowings) standing at Rs. 3.68 crores. The paid-up capital has been raised from Rs. 2.82 crores to Rs. 3.27 crores, following the issue of 45,554—5½ per cent. tax-free cumulative preference shares of Rs. 100 each. The reserves and surplus amount to Rs. 3.25 crores, including a capital reserve of Rs. 87.14 lakhs created out of revaluation of assets ten years back.

The Government of India has granted a licence to the Company to increase the capacity of the paper mill to be set up at Amlai, Madhya Pradesh, from 100 to 150 tons per day. An application has been made to the Export-Import Bank of Washington for a loan to cover the foreign exchange cost of the project. Negotiations for the purchase of necessary machinery have been finalised, subject to the sanction of loan by the Ex-Imp Bank and the issue of import licence by the Government of India.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 41.15 *cum-div.*, at which rate and on an *ex-div.* basis they offer a yield of 3.96 per cent. per annum, free of tax.

ESCORTS LIMITED

The list for public subscription to the capital issue of Escorts Ltd. opened on Monday, the 24th inst. and will close at the discretion of the Directors at any time after the 29th inst. The Company is offering Rs. 41.10 lakhs, made up of 171,000 equity shares of Rs. 10 each at a premium of Rs. 5 per share and 24,000—9 per cent. (free of company's tax) redeemable cumulative preference shares of Rs. 100 each at par. The Company's present paid-up capital is Rs. 47 lakhs, made up of 389,000 equity shares of Rs. 10 each and 8,100—10 per cent. (less tax) redeemable cumulative preference shares of Rs. 100 each. Of the present issue, preference shares of the value of Rs. 17.50 lakhs have been underwritten. The Company has also agreed to make firm allotment of preference shares to the tune of Rs. 6.50 lakhs. Thus, the entire preference issue is assured of being taken up. Being an established firm with manufacturing schemes which hold promise of good demand, the Company can expect to have an encouraging response to its equity issue as well. A sum of Rs. 7.50 per equity share and of Rs. 50 per preference share is payable on application for a minimum of 50 equity shares and 5 preference shares and the balance is payable in full on allotment.

The Company was incorporated in October 1944 as a private company and was converted into a public one in December 1959. Since its inception, the Company has been functioning as representatives of world renowned foreign manufacturers like M.A.N. and A.E.G. of West Germany, Westinghouse Electric International Co. of U.S. and Massey-Ferguson of the U.K. and Canada, to mention only a few. It has been supplying, erecting and servicing heavy machinery to the various projects of the public and private sectors in the first and second Five-year Plans. It is receiving from the foreign principals commission on orders booked, as well as profit on self-buyer business on the basis of final completion of contracts. The accrued commission and profit on orders already booked and on contracts under execution amounts to Rs. 70 lakhs as on 1st July 1960. This will be received in the course of the next three or four years and will form part of the profits of the Company during the years 1960 to 1964.

In recent years, the Company has taken up manufacturing activity. This is proposed to be enlarged and extended. It is manufacturing piston rings through its subsidiary, Goetze (India) Private Ltd. in collaboration with the West German firm of Goetze. Its factory at Patiala is manufacturing pistons in collaboration with another West German firm. The factory commenced production in 1960. The Company has secured a licence to manufacture x-ray equipment in collaboration with Westinghouse. Production is expected to commence in June 1961. It has secured licence for manufacturing shock absorbers for railways and heating elements for electrical appliances. Its subsidiary, Sharpedge Private Ltd., has established a factory in Okhla for manufacture of razor blades.

The present capital issue will be used to finance partly the expansion of the piston factory at Patiala and the x-ray equipment manufactory at Faridabad, at a total cost of Rs. 70 lakhs. The balance will be obtained through borrowings from banks.

The Company has a fairly reasonable dividend record and the present issue will be entitled to any dividend that may be declared after the date of allotment in proportion to the period during which the shares have been held.

NEWSPRINT PLANT AT KARAD

A newsprint mill is shortly to be set up at Karad, 220 miles from Bombay, by Messrs. Sahu Jain Ltd., managing agents of one of India's largest industrial complexes, comprising companies engaged in paper, sugar, cement, heavy chemicals and nitrogenous fertiliser manufacturing. The plant will produce 60,000 tons of newsprint per annum from bagasse, using methods developed through eight years of American research. The Indian company has entered into an agreement with Crown Zellerbach Corporation, San Francisco, California, and the Hawaiian Development Company, for supply of technical assistance and patent rights for production of newsprint from bagasse, the fibrous residue of sugar production.

The two American organisations perfected the method during eight years of intensive research into methods for making paper of commercial quality from sugarcane fibre. The resulting newsprint has received extensive testing on high-speed news presses at speeds of more than 40,000 impressions per hour. The experience gained from this research both in Hawaii and in various Crown Zellerbach installations in the north-western United States led to patented processes for producing better quality paper than previously existing grades from this fibre source. These processes, according to the officials of Crown Zellerbach, are highly useful in areas having sources of bagasse but few sources of softwood, the usual raw material for newsprint manufacture.

The proposed Maharashtra plant, for which the Government of India has already granted an industrial licence, will represent an investment of approximately $20 million, or nearly Rs. 10 crores.

COMPANY MEETINGS AND DIVIDENDS

SWADESHI COTTON MILLS CO., LTD. Annual General Meeting, Kanpur, U.P., 31st October 1960. Dividend: Rs. 5.71 or 0.571 per cent. per share, on preferred ordinary shares. Transfer books remain closed from 24th to 31st October, 1960, both days inclusive.

WESTERN BENGAL COALFIELDS LTD. Annual General Meeting, Calcutta, 4th November 1960. Dividend: Re. 0.60 per share, subject to deduction of tax. Transfer books remain closed from 20th October to 4th November 1960, both days inclusive.

BRITANNIA ENGINEERING CO., LTD. Annual General Meeting, Calcutta, 5th November 1960. Dividend: 10 per cent. or Re. 1.00 per share, subject to deduction of tax, payable on or after 26th November 1960. Transfer books remain closed from 22nd October to 5th November 1960, both days inclusive.

SHREE BHAWANI COTTON MILLS LTD. Annual General Meeting, Calcutta, 5th November 1960. Dividend: *Nil*. Transfer books remain closed from 27th October to 5th November 1960, both days inclusive.

MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 5th November 1960. Dividend: Rs. 21.50 per share, taxable, payable from 7th November 1960. Transfer books remain closed from 10th October to 5th November 1960, both days inclusive.

TRAVANCORE SUGARS AND CHEMICALS LTD. Annual General Meeting, Trivandrum, Kerala State, 7th November 1960. Dividend: 10 per cent. or Re. 1.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 24th October to 7th November 1960, both days inclusive.

RAYON MILLS COMMERCIAL CORPORATION LTD. Annual General Meeting, Bombay, 7th November 1960. Transfer books remain closed from 25th October to 5th November 1960, both days inclusive.

ORIENT PAPER MILLS LTD. Annual General Meeting, Brajrajnagar, District Sambalpur, Orissa, 9th November 1960. Dividend: Rs. 2.25 per ordinary share, taxable. Transfer books remain closed from 20th October to 9th November 1960, both days inclusive.

CHAMPARUN SUGAR CO., LTD. Annual General Meeting, Kanpur, U.P., 10th November 1960. Dividend: 15 per cent. or Re. 1.50 per share, subject to deduction of tax. Transfer books remain closed from 25th October to 10th November 1960, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, London, 10th November 1960. Dividend: 4 per cent. final (making a total of 7½ per cent. actual for the year), payable on 14th November 1960.

TATA CHEMICALS LTD. Annual General Meeting, Bombay, 11th November 1960. Dividend: Re. 0.60 per share, subject to deduction of tax, payable on and after 14th November 1960. Transfer books were closed from 3rd September to 1st October 1960, both days inclusive.

KALPETTA ESTATES LTD. Annual General Meeting, Alleppey, Kerala State, 14th November 1960. Dividend: 12½ per cent. or Re. 1.25 per share, subject to deduction of tax. Transfer books will remain closed from 7th to 14th November 1960, both days inclusive.

INDIA STEAMSHIP CO., LTD. Annual General Meeting, Calcutta, 14th November 1960. Dividend: Re. 1.00 per share, taxable. Transfer books remain closed from 21st October to 14th November 1960, both days inclusive.

ANGLO INDIA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 16th November 1960. Dividend: 20 per cent. or Rs. 20.00 per share, subject to deduction of tax. Transfer books will remain closed from 31st October to 16th November 1960, both days inclusive.

VELLORE ELECTRIC CORPORATION LTD. Annual General Meeting, Madras, 24th November 1960. Dividend: 15 per cent. or Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 17th to 24th November 1960, both days inclusive.

COCHIN STATE POWER AND LIGHT CORPORATION LTD. Annual General Meeting, Ernakulam, 28th November 1960. Dividend: 12½ per cent. or Re. 1.25 per share, subject to deduction of tax. Transfer books will remain closed from 21st to 28th November 1960, both days inclusive.

ASHER TEXTILES LTD. Dividend of 12½ per cent. or Rs. 12.50 per share, subject to deduction of tax, for the year ended 30th June 1960. Transfer books will remain closed from 11th to 24th November 1960, both days inclusive.

ALAGESWAR ESTATES LTD. Dividend of 7½ per cent. for nine months ended 31st March 1960. Transfer books will remain closed from 17th to 27th November 1960, both days inclusive.

MIDLAND RUBBER AND PRODUCE CO., LTD. Taxable dividend of 12½ per cent. or Re. 1.25 per ordinary share, for the year ended 31st March 1960. Transfer books will remain closed from 21st to 28th November 1960, both days inclusive.

RADIO AND ELECTRICALS MANUFACTURING CO., LTD. Taxable final dividend of 11 per cent. or Re. 1.10 per share, for the year ended 31st March 1960.

TUBE INVESTMENTS OF INDIA LTD. Taxable dividend of 10 per cent. or Rs. 10.00 per share, for the year ended 31st July 1960.

SYNOPSES OF COMPANY REPORTS

Birla Cotton Spg. and Wvg. Mills Ltd.

THE directors of the above Company (Messrs. Birla Brothers Private Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The profit and loss account, after adjusting the debit balance brought forward and after transferring a sum of Rs. 1,45,289 (*nil*) from general reserve, shows a net balance of Rs. 21,53,737. Out of this, provision has been made for depreciation of Rs. 6,50,228 (Rs. 3,84,569), for development rebate Rs. 4,75,000 (Rs. 25,000) and for taxation Rs. 6,00,000 (*nil*), leaving a balance available for disposal of Rs. 4,33,509. The directors recommend payment of dividend subject to deduction of income-tax on 3,50,000 ordinary shares of Rs. 10 each at 1 (*nil*) per share, absorbing Rs. 3,50,000 (*nil*) leaving a balance to be carried forward (including credit balance at Jaipur not transferred to head office) of Rs. 83,509.

During the year under review there was further increase in the price of cotton, coal, dyes and chemicals, etc. The dearness allowance paid to the employees had also to be increased. Further from 1st January, 1960, wages had to be increased in accordance with the recommendation of the Textile Wage Board. All these factors contributed to an increase in the cost of production. There was, however, an improvement in the prices of coarse and medium quality cloth manufactured by the Company. In the circumstances the working results for the year are considered satisfactory.

The ginning and pressing factory at Malout worked satisfactorily while the tent factory worked only to a partial capacity on account of paucity of orders received from the Government.

The shareholders are aware about steps taken for the amalgamation of Merchandise and Stores Ltd. and Rajputana General Dealers Ltd. with the Company. During the current year sanction of the Punjab High Court, Circuit Bench, Delhi, was obtained for the amalgamation of the two Companies with the Company and both the Companies have been amalgamated with the Company. Necessary steps in this connection are being taken.

Accounts in brief are as under:—

		Cash ...	4,85,219
Rs.	2,33,18,952	Rs.	2,33,18,952

Champdany Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. James Finlay & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The accounts show a profit of Rs. 8,18,221 (Rs. 10,52,286) after charging Rs. 7,04,660 (Rs. 6,06,291) for depreciation and Rs. 3,74,417 (Rs. 86,347) in respect of development rebate reserve. To this profit falls to be added the credit balance brought forward from the previous year of Rs. 92,149 (debit of Rs. 5,45,989) making a total of Rs. 9,10,370 (Rs. 5,06,297). Out of this sum there has been transferred to contingency reserve account Rs. 1,50,000 (*nil*) leaving a balance available for disposal amounting to Rs. 7,60,370 (Rs. 5,06,297). The directors on 27th May, 1960, declared an interim dividend in respect of the year ended 31st March, 1960, at the rate of Rs. 4 (Rs. 3 per share, tax-free) per share subject to the deduction of income-tax absorbing Rs. 2,36,656 (Rs. 1,77,492). The directors now recommend the payment of a final dividend for the year ended 31st March, 1960, at the rate of Rs. 6 (Rs. 4 per share, tax-free) per share subject to the deduction of income-tax which will absorb Rs. 3,54,984 (Rs. 2,36,656). This will leave a credit balance of Rs. 1,68,730 (Rs. 92,149) to be carried forward to the next account.

Trading conditions during the year under review have on the whole enabled the mills to work at a profit and the benefit is now being felt from the introduction of treble shift working in the preparing and spinning departments at both Champdany and Wellington Mills. In order to obtain further economies in manufacturing costs double shift working was introduced in the weaving departments of both mills with effect from December, 1959.

Owing to uncertainties about the availability in adequate quantities of raw jute during the current year, and having regard to the ever increasing competition from Pakistan mills the outlook is obscure.

During the year the directors have placed orders for machinery required to manufacture *Wide Carpet Backing* and although there have been considerable difficulties in obtaining the necessary import licences it is hoped that this plant will be in operation at Wellington Mill by March of next year.

In accordance with the provisions of the Indian Jute Mills Association's working time agreement, the mills worked 48 hours per week during the year under report. Between 14 per cent. and 10 per cent. of the registered loomage at each mill was sealed at various times under the provisions of the working time agreement.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	59,16,400	Gross block	2,17,74,524
Reserves ...	81,81,976	*Less*—Depreciation ...	1,17,03,511

		Investments	2,05,700
		Cash ...	1,33,522
Rs.	1,73,00,086	Rs.	1,73,00,086

Champarun Sugar Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: The British India Corporation Ltd., Kanpur, U.P.) present the audited accounts of the Company for the year ended 30th June 1960.

The results for the year, after making the usual provisions for taxation, depreciation and adjustments, show a surplus of Rs. 5,80,972 (Rs. 6,80,174). The directors have transferred to rehabilitation reserve [including Rs. 36,405 (Rs. 1,944) for development rebate reserve] Rs. 3,00,000 (Rs. 4,00,000). After adding the balance from the previous year of Rs. 16,996 (Rs. 6,822), there is an available sum of Rs. 2,97,968 (Rs. 2,86,996). This amount, the directors recommend, should be disposed of as follows:—

In payment of a dividend of Re. 1.50 (Re. 1.50) per share, subject to deduction of tax, for the year ended 30th June 1960, absorbing Rs. 2,70,000 (Rs. 2,70,000) leaving to be carried forward to next account Rs. 27,968 (Rs. 16,996).

Barrah factory commenced crushing on 27th November, 1959 and ended on 8th April, 1960, while at Chanpatia factory crushing started on 9th November, 1959 and continued upto 2nd May, 1960.

The quantity of cane crushed at both the factories was the maximum available. At Barrah 26,49,700 (24,20,567) maunds of cane was crushed with a recovery of 9.49 per cent., as against 9.81 per cent. in the previous year; while at Chanpatia the crush reached 32,30,980 (33,68,876) maunds with a recovery of 9.28 per cent., as against 9.86 per cent. last year. The lower recovery is symptomatic of the general decline in recovery in the North Bihar cane delta in regard to which the Indian Sugar Mills Association have already taken up the matter with the State Government for suitable relief.

The Company's estates continued to produce cane both for crushing and seed purposes. Both the factories have been maintained in good condition.

Cane plantings for the current season in the areas serving the Company's factories have been on an increased scale as compared to the last year. The cane crop uptil now is considered to be satisfactory and it is expected that cane in larger quantities would be available for crushing in the ensuing season.

On the expiry of Messrs. Begg, Sutherland & Company Private Limited's term of the managing agency, with effect from 15th August, 1960, in pursuance of Section 330 of the Companies Act, 1956, the British India Corporation, Limited have been appointed as the secretaries and treasurers of the Company. This does not, however, involve any material change in the management of the Company as the director-in-charge as also the other technical and administrative staff remain unchanged, thereby ensuring continuity of policy and efficient management.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,00,000	Gross block	84,73,277
Reserves ...	45,46,234	*Less*—Depreciation ...	64,52,904

Cooria Spinning and Weaving Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Cowasjee Jehanjir and Co., Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March 1960.

The profit for the year after providing for depreciation Rs. 5,55,426 (Rs. 5,56,885), for development rebate reserve Rs. 10,085 (Rs. 1,93,000) and provision for taxation Rs. 2,40,000 (Rs. 1,10,000) amounts to Rs. 2,91,058 (Rs. 1,37,954). To this is added the balance brought forward from previous year of Rs. 61,364 (Rs. 58,223) and net credits relating to previous years of Rs. 9,393 (debit of Rs. 59,813) making a total amount available for disposal of Rs. 3,61,815 (Rs. 2,56,364 including Rs. 1,20,000 transferred from dividend reserve). From this the directors recommend payment of a dividend at the rate of Rs. 11 (Rs. 7.50 per share, free of tax) subject to deduction of tax, which will absorb Rs. 2,86,000 (Rs. 1,95,000) leaving a balance to be carried forward to next year's account of Rs. 75,815 (Rs. 61,364).

The Finance Act, 1959, has abolished, with effect from 1st April 1960, the legal fiction about the "grossing up" of dividend and has made it incumbent on the Company to deduct tax at source at the prescribed rate from all dividends declared for the previous year assessable to tax in the financial year 1960-61. To compensate for the loss of tax credit shareholders enjoyed prior to the said amendment the directors have recommended the payment of a gross dividend of Rs. 11 per share for the year, which will bring the dividend to be received by individual shareholders to Rs. 7.70 net per share.

During the first half of the year the cloth market was dull particularly in coarse and medium varieties but the last six months of the year witnessed a steady improvement in the prices of all varieties coupled with good demand from the local and overseas markets. The advantage the Company gained as a result of this improvement was however off-set by an abnormal increase in the cost of cotton and the higher rate of dearness allowance payable to the employees. In view of all these factors, the directors trust that the results for the year will be considered satisfactory.

The Indian Cotton Mills' Federation has called upon all the mills as from 4th September 1960 not to charge more than 25 per cent. in the case of coarse, 22 per cent. in the case of lower medium and 18 per cent. in the case of higher medium varieties over August 1959 contract prices as the extent the profit margin of the Mill for the current year.

Accounts in brief are as under:—

North-Western Cachar Tea Co., Ltd.

The directors of the above Company (Managing Agents: Assam Trading Co., Calcutta) present the audited accounts of the Company for the year ended 31st December 1959.

The profits from Kurkoori Tea Estate amounted to Rs. 2,64,309 (Rs. 1,83,433), from Bicrampore Tea Estate to Rs. 1,50,632 (Rs. 1,56,814) and Silcoorie Tea Estate to Rs. 2,85,595 (*nil*), making a total of Rs. 7,00,536 (Rs. 3,40,247). On transfer of this sum to profit and loss account and after making necessary adjustments, there remains a balance at credit Rs. 6,65,448 (Rs. 3,68,709). The directors have transferred to taxation reserve Rs. 2,55,598 (Rs. 1,55,000) leaving a balance of Rs. 4,09,850 (Rs. 2,13,709). With the balance brought forward from last year of Rs. 40,393 (Rs. 88,303), there is a total amount of Rs. 4,50,243 (Rs. 3,02,012). The directors recommend to dispose of this amount as follows: To interim dividend on 7,000 shares at Rs. 15 (Rs. 10 per share, free of tax) per share, subject to deduction of income-tax, declared on 9th March 1960, absorbing Rs. 1,05,000 (Rs. 70,000), to final dividend on 7,000 shares at Rs. 15 (Rs. 20 per share, tax-free) per share, subject to deduction of income-tax), absorbing Rs. 1,05,000 (Rs. 70,000), to transfer to development reserve Rs. 2,340 (Rs. 21,620), and to transfer to general reserve Rs. 1,00,000 (*nil*) leaving a balance to be carried forward of Rs. 1,37,903 (Rs. 40,392 after transferring Rs. 1,00,000 to dividend equalisation fund).

Outturns and average selling price are as follows:—

Tea crop from Kurkoorie Estate was 6,178 (6,228) maunds, from Bicrampore Estate 4,355 (3,976) maunds and from Silcoorie Estate 7,400 (6,557) maunds. Average selling price per pound of tea was as follows:—

Kurkoorie Re. 1.69 (Re. 1.85); Bicrampore Re. 1.70 (Re. 1.81) and Silcoorie not known (Rs. 2.06).

Estimate for 1960 provide for a crop of 17,500 maunds at an outlay of Rs. 17,50,000.

Managing Agents.—Messrs. Assam Trading Co. of 1 and 2, Old Court House Corner, Calcutta, have been appointed as managing agents of the Company for a term of five years with effect from 12th January 1960 with the prior approval of the Central Government.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Gross block	21,37,538

Hingir-Rampur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th June 1960.

Output.—Raisings for the year totalled 141,744 tons as compared with 124,475 tons for the preceding year, which shows an increase of 17,269 tons.

Sales.—The total sales for the year amounted to 143,654 tons as compared with 115,895 tons for the preceding year. This figure too could have been exceeded had wagon indents been met in full by the railway.

Coal prices.—The Company's coal was graded by the Coal Board in November 1959 and classified as grade III. The Das Gupta Award became operative from 30th December 1959 under which among other things, underground loaders became entitled to dearness allowance on lead and lift wages. To meet the additional expenditure resulting from this Award, as also the enhanced dearness allowance to all workers based on the All-India Average Consumer Price Index Number, the Central Government permitted an increase of Re. 0.81 per ton in the controlled price of the Company's coal with effect from 1st April 1960. Thus the controlled prices for steam and slack coals are now Rs. 22.06 and Rs. 21.06 per ton, respectively.

Development work.—Work on a new area, i.e., 10 dip, has been proceeding for some months past and initial raisings of approx. 2,000 tons per month of better grade coal are expected from July 1960, gradually increasing to 5,000/6,000 tons per month.

Railway siding.—Negotiations with the railway authorities regarding modification of the existing siding to handle 55/60 wagons per day instead of the present 25 wagons to which reference was made in last year's report are expected to be concluded very soon.

Managing agency agreement.—The Central Government have agreed to the re-appointment of Killick Industries Ltd. as managing agents of the Company for a further period of five years commencing from 1st July 1960.

The results of the year's working, after seting aside Rs. 1,95,369 (Rs. 1,83,603) for depreciation and amortisation and Rs. 26,834 (Rs. 36,130) in respect of development rebate reserve (as required under the Income-tax Act), show a profit of Rs. 3,77,921 (Rs. 17,155). Setting off the profit against the loss of Rs. 5,70,177 (Rs. 6,34,206) brought forward from the previous year and deducting from the balance Rs. 5,127 (Rs. 46,874), credited back in respect of provision made for additional income-tax for the year ended 30th June 1953, there is left a balance of Rs. 1,87,129 (Rs. 5,70,177) which is carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Gross block	43,44,376

Rs.	33,20,059	Rs.	33,20,059

Travancore Sugars and Chemicals Ltd.

The directors of the above Company (Managing Agents: Messrs. Parry and Co., Ltd., Trivandrum) present the audited accounts of the Company for the year ended 30th April 1960.

The net profit for the year before providing for taxation was Rs. 9,48,902 (Rs. 7,57,689) upon which taxation, less a transfer of Rs. 90,000 (Rs. 2,40,000) from taxation equalisation reserve, amounts to Rs. 4,60,000 (Rs. 2,85,000) leaving a net profit, after taxation of Rs. 4,88,902 (Rs. 4,72,689). To this should be added the surplus brought forward from last year amounting to Rs. 1,06,833 (Rs. 1,07,287) making the profit available for appropriation Rs. 5,95,735 (Rs. 5,79,976). Out of this amount the following appropriations have been made or are recommended by the directors: Transfer to capital reserve Rs. 24,000 (Rs. 16,000), to general reserve Rs. 50,000 (Rs. 50,000) and to dividends for the year as follows: On preference share capital—interim dividend of 5 per cent. subject to deduction of tax, absorbing Rs. 75,000 and ordinary share capital—10 (10) per cent. subject to deduction of tax, absorbing Rs. 3,00,000 (Rs. 3,00,000) leaving a surplus to be carried forward to next year, subject to payment of the final dividend on the 5 (5 per cent. for the whole year) per cent. preference share capital for the year ended 30th April 1960, of Rs. 1,46,735 (Rs. 1,06,833).

Review of Operations—Sugar.—Crushing for 1959-60 season commenced on 27th September 1959 and finished on 2nd March 1960, the duration of the season being 155 (184) days. During this period 1,19,273 (1,33,210) tons of cane were crushed and 9,891 (11,057) tons of sugar produced at a recovery of 8.29 (8.30) per cent. The recovery for the season is approximately the same as last year, but the tonnage crushed was lower due to lower yields obtained by the ryots.

Spirit.—Sales of spirit continued at a satisfactory level.

Pharmaceuticals.—Sales to Government and to the general public during the year continued to be satisfactory despite disturbed conditions during June and July 1959 experienced in Kerala State.

At 30th April 1960 the capital and revenue reserves of the Company, excluding the taxation equalisation reserve, aggregated Rs. 12,87,735 as against Rs. 11,73,833 last year. The liquid position of the Company has improved in so far as excess of current assets over current liabilities and provisions amounted to Rs. 31.05 lakhs as at 30th April 1960 as compared with Rs. 29.57 lakhs last year.

N.B.—Although the Preference Shares [Regulation of Dividends] Bill has been introduced into the Lok Sabha it has not yet been passed into law and certain of its provisions are by no means clear. Thus it is not possible at present to determine the full rate of dividend to be paid on the preference share capital for the year ended 30th April 1960. To alleviate hardship, the directors have decided to pay an interim dividend on the preference share capital of 5 per cent. i.e., the minimum rate applicable subject to deduction of tax and will declare the final dividend thereon immediately the position has been clarified.

Accounts in brief are as under:—

Kalpetta Estates, Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas and Co., Ltd., Alleppey, Kerala State) submit the audited accounts of the Company for the year ended 30th April 1960.

Tea crop secured during the year 2,92,637 (3,17,627) lbs. at a cost of Rs. 1.38 (Re. 1.25) per lb. against an estimate of 3,10,000 (2,80,000) lbs. at Re. 1.23 per lb. the average sale price being Re. 1.86 per lb. as against Re. 1.73 in the previous year. The shortfall in crop due to adverse weather conditions contributed mainly to the increase in cost of production.

Rubber crop harvested during the year 2,67,500 (2,71,700) lbs. at a cost of Re. 1.16 (Re. 1.17) per lb. against an estimate of 2,65,000 (2,50,000) lbs. at Re. 1.16 per lb. The average sale price realised was Re. 1.53 per lb. as against Re. 1.50 in the previous year.

Cardamom crop secured during the year was 7,523 (9,425) lbs. at a cost of Rs. 6.05 (Rs. 4.73) per lb. as against an estimate of 10,000 (10,000) lbs. at Rs. 5.06 per lb. The shortfall in crop was due to adverse weather conditions and had resulted in a higher cost of production. The average price realised this year was Rs. 8.97 per lb. against Rs. 8.23 last year.

Coffee: Against an estimate of 240 (160) cwts. at a cost of Rs. 152.16 (Rs. 200) per cwt. the crop secured was 166 (254) cwts., cost of production being Rs. 200.00 (Rs. 143.52) per cwt.

Estimate for 1960-'61

	Quantity		Cost
Tea ...	3,10,000 lbs.	Rs.	1.30 per lb.
Rubber ...	2,65,000 lbs.	Rs.	1.14 per lb.
Cardamom ...	10,000 lbs.	Rs.	5.18 per lb.
Coffee ...	200 cwt.	Rs.	229.60 per cwt.

The net profit for the year after allowing for depreciation, managing agents' commission and Central and State taxes works out at Rs. 98,865 (Rs. 94,972) to which is to be added the balance of Rs. 6,965 (Rs. 11,993) brought forward from last year. Thus the profit available for distribution will be Rs. 1,05,830 (Rs. 1,06,965). This amount the directors recommend be disposed of as under:—

To pay a dividend of 12½ (12½) per cent. subject to deduction of tax absorbing Rs. 1,00,000 (Rs. 1,00,000) to transfer to reserve for development rebate Rs. 4,500 (*nil*) and to carry forward Rs. 1,330 (Rs. 6,965).

The properties of the Company have been regularly visited and are maintained in good condition. Arrangements for extending the cardamom area in Chulika and new planting and replanting of rubber areas in Poonoor are progressing satisfactorily. A further area of 38.33 acres has been planted up with tea during this year in Chulika. During the year under review, 200 acres out of the 400 acres of abandoned rubber area have been sold and the full sale consideration received. The value of the 6,097 acres of Vellarmalai land contracted to be sold during 1956-57 has been fully received, possession handed over and the value of lands and buildings so handed over adjusted in this year's accounts.

Messrs. A. V. Thomas & Co., Ltd., have been re-appointed as managing agents for five years from 15th August 1960 and a fresh managing agency agreement has been executed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Gross block	17,97,748
Reserves ...	8,36,553	*Less*—Depreciation ...	3,49,814

BHARAT NIDHI LIMITED

5, Parliament Street
NEW DELHI

NOTICE

THE BOARD OF DIRECTORS AT A MEETING held today have decided to renounce the right of Bharat Nidhi Ltd. to subscribe new Ordinary Shares of Rs. 10 each in Rohtas Industries Ltd., against payment at par in favour of the Company's shareholders in proportion of one new ordinary share in Rohtas Industries Ltd. for every 10 fully paid ordinary shares or 40 partly paid ordinary shares held in this Company. Renunciation of this right will be made in favour of holders of ordinary shares whose names appear in the Register of Members of the Company on 31st October, 1960. Provided however that in case of non-resident and also in case the entire right or part thereof receivable by a shareholder is less than one ordinary share in Rohtas Industries Ltd., the total of rights as regards non-residents and such fraction or fractional part of the shares collectively will be renounced in favour of Sahujain Services Private Ltd. or their nominee upon trust to deal with the same (subject to sanction of the Reserve Bank of India in case of non-residents) as they think proper on behalf of and for the benefit of the shareholders concerned.

Share transfer books and register of members of the Company will be closed on 31st day of October 1960.

By Order of the Board,

SHITAL PRASAD JAIN,
Chairman.

18*th October* 1960.

STEEL BROTHERS & COMPANY LTD.,
Managing Agents.

GILLANDER HOUSE,
NETAJI SUBHAS ROAD,
CALCUTTA, 17*th October* 1960.

ACUTE STRINGENCY IN MONEY

(From Our Own Correspondent)

BOMBAY, 26*th October*

Acute stringency prevails in the short-term money market. The trade demand for credit does not seem to have petered out even after Diwali. On top of this, there has been a pressure of demand from the industrial sector. Banks are hard put to find the money to meet the situation and any borrowing from the Reserve Bank can only be at a penal rate of interest. Some of them are already said to be paying 6 per cent. on their excess borrowings from the Reserve Bank. They are also borrowing from the State Bank of India at 6 per cent. In order to avoid paying such penal rates, banks are said to be bidding inter-bank call money at higher rates. Till yesterday, the inter-bank rate among all sections of the banks for overnight money was 4½ per cent., but today the rate hardened to 4½-4¾ per cent. among the larger Indian banks and exchange banks and to 4¾ per cent. among the smaller banks. Some of them are said to have even offered 5 per cent. for seven days' money, but business at this rate is said to be limited and confined to a few small banks, who presumably find it cheaper to borrow from fellow commercial banks at this rate even after making allowance for brokerage than to pay 6 per cent. to the State Bank or the Reserve Bank. House money at 21 days' notice is, however, unchanged at 2 per cent. and short-term deposits at 3½ per cent. for one to two months and at 3½ per cent. for three months and over.

The prevailing trend is also reflected in the results of the 91-day Treasury Bill sales this week. While the amount offered is no more than that (Rs. 2 crores) invited, the discount rate has hardened a little from 2.560 per cent. to 2.565 per cent. per annum. The tenders being against maturities, they are being continued. Tenders have been invited for another Rs. 2 crores next week. There were no sales of Intermediate Bills during the period 19th to 22nd October, but they will be offered this week from the 26th to the 29th inst.

For the second week in succession, the Reserve Bank of India's statement shows no notable variations in the Issue Department. The latest statement for the week ended 21st October 1960 discloses a rise of only Rs. 3.38 crores in notes in circulation and a decline of Rs. 3.94 crores in notes held in the Banking Department. Foreign securities are again unchanged at Rs. 123.01 crores, while balances held abroad have risen by a fraction to Rs. 17.93 crores, raising the total foreign assets to Rs. 140.94 crores. In the Banking Department, deposits of banks have dwindled by Rs. 6.75 crores, while loans and advances other than to Governments are higher by Rs. 2.33 crores. Investments have risen by Rs. 1.64 crores, but holdings of Government Treasury Bills have declined by Rs. 10.23 crores.

The Scheduled Banks' statement for the week ended 14th October 1960 discloses a rise of Rs. 4.22 crores in demand deposits and a fractional fall in time deposits. Of the increase of Rs. 4.09 crores in total deposits, the State Bank of India accounts for Rs. 1.04 crores. Inter-bank borrowings have dropped by Rs. 4.08 crores and borrowings from the Reserve Bank by no more than Rs. 37 lakhs. Borrowings from the State Bank have also declined by Rs. 3.24 crores. Bank credit has fallen by Rs. 5.90 crores, despite a rise of Rs. 2.34 crores on State Bank's account. Investments stand reduced by Rs. 12.21 crores, of which the share of the State Bank of India is Rs. 10.23 crores. Cash balances have swelled by Rs. 5.44 crores, following an increase of Rs. 4.39 crores in the State Bank's till. Money at call and short notice is, however, lower by Rs. 2.43 crores.

There has been a further weakening of the trend in the Gilt-edged market, in the absence of any support and persistent offering, thanks to the stiffening of credit conditions. While 3 per cent. 1986 Conversion Loan, after sagging from Rs. 73.65 to Rs. 73.50, has improved to Rs. 73.60, 3 per cent. 1970-75 has been marked down by 75 nP to Rs. 89.10 and 3 per cent. 1966-68 by 15 nP to Rs. 95.45. 3½ per cent. 1964 is lower by 25 nP at Rs. 99.65, 3½ per cent. 1965 and 1966 has each shed 10 nP to Rs. 99.50. 3½ per cent. 1967 and 1968 has declined by 20 nP and 15 nP, respectively, to Rs. 99.25 and 3½ per cent. 1969 by 5 nP to Rs. 98.95. 3¾ per cent. 1974 is being quoted 20 nP lower at Rs. 99.30, 4 per cent. 1972 5 nP down at Rs. 100.65 and 4 per cent. 1979 has suffered a similar fall to Rs. 99.95. 4 per cent. 1980 has declined by 10 nP to Rs. 99.80. Among State loans, 4 per cent. 1969, 1970 and 1971 are all on offer and decline in prices range from 10 nP to Re. 1.65.

Thanks to the continued improvement in sterling abroad, the rupee also has further gained ground in terms of the U.S. dollar. Banks' selling rate for U.S. T.T. (ready), for instance, has dropped from Rs. 476 to Rs. 475.75 per $100 and their buying rate from Rs. 472.75 to Rs. 472.25 from $100. In New York, spot sterling has advanced from 281.15-281.18 cents to 281.35-281.39 cents and three months forward from 279.64-279.67 cents to 280.23-280.27 cents.

COW HIDES EASY

(From Our Own Correspondent)

MADRAS, 24*th October*

There was no significant change in the hides and skins market during the week under review. Prices remained firm in all sections, but cow hides were a shade weak, due to restricted buying by U.K. importers and resistance to higher prices demanded by shippers. It was reported that spot stocks in the U.K. had been cleared and dressers were not needy for stocks. With the end of the dock strike and discharge of held-up cargo, it is likely that prices of cow hides will ease to some extent. Cow calf and buff hides ruled firm in the local market, due to short arrivals. Buff calf was steady, following some inquiries for shipment to U.K. and U.S.A. Tanned goat and sheep skins ruled firm.

GOLD LEADS

(From Our Own Correspondent)

BOMBAY, 26*th October*

The first week of the Hindu new year witnessed firm conditions in the bullion market, although there was some setback today on account of profit-taking. Gold attracted excellent support induced by bullish advices from London as well as other foreign markets and sizable purchases by upcountry interests. The daily average offtake of gold during the week was of the order of 5,000 tolas, as against 4,400 tolas last week and 3,600 tolas in the week preceding it. Arrivals, too, were larger (8,600 tolas, as against 8,000 tolas), but they were well absorbed. Even reports suggesting heavy floating stocks of 45,000 tolas—some estimates place them higher at 60,000 tolas—had no effect. In sympathy with gold, silver tended to move up. There would indeed have been a notable rise in prices but for selling by Calcutta traders and scattered profit-taking at every rise. The average rate of arrivals was also less, being 14 bars, as against 23 bars. Offtake, too, was lower at five bars, as against eight bars. The floating stocks of silver are estimated at 800 bars.

In view of the reported large floating stocks, ready gold and silver continued to be quoted at a discount under the *Kartik* settlement, though the discount declined in the later sessions of the week—from 95 nP to 45 nP in gold and from Re. 1 to 30 nP in silver. Ready gold, which finished at Rs. 113.35 in the *moorat* session on Wednesday last, rallied to touch a high of Rs. 115.95 yesterday. It, however, receded to Rs. 114.80 today before closing at Rs. 115. The net gain since the commencement of the new year's business is Re. 1.65. Ready silver advanced from Rs. 192 (closing) in *moorat* session to Rs. 193.35 yesterday, but eased to Rs. 192.70 today. Towards the close, it was better at Rs. 193.

The *Kartik* (November) settlement in gold moved up from Rs. 114.30 in *moorat* session to Rs. 116.65 on Monday. After declining to Rs. 115.35 today, it recovered to Rs. 115.55. *Margashir* (December) settlement stood at Rs. 116.45 today, as against Rs. 115.40 in *moorat* session, the highest and lowest levels touched being Rs. 117.35 and Rs. 115.40, respectively. The rate for transferring commitments from the near to the distant settlement continued to be against bulls throughout, but, since the actual rate declined from more than a rupee early in the week to 90 nP today, the bears in the *Kartik* settlement were not required to pay a margin of Rs. 2.000 per kilogram as was the case in the *moorat* session and on Thursday this week.

In silver, *Kartik* settlement rose from Rs. 193.00 in *moorat* session to Rs. 194.25 on Saturday the 22nd inst. After receding to Rs. 193.40 today, it finished better at Rs. 193.70. *Margashir* settlement fluctuated between Rs. 195.75 and Rs. 194.60 and finished at Rs. 195.15 today, as against the closing of Rs. 194.55 in *moorat* session. The *budli* payable by bulls to get their commitments transferred from *Kartik* to *Margashir* settlement was below the level of Re. 1.50 at which a margin of Rs. 300 per bar comes into force. In the *moorat* session, it will be recalled, the bears had to pay the margin because the *budli* stood at Re. 1.55.

The London bullion market was in the grip of a "gold rush fever" during the week under review. Under the impetus of persistent rumours of a possible upward revision in the U.S. official price of $35 per ounce, the world quotation for gold in London scaled a peak of $40 on Thursday the 20th inst.—it was higher still at $41 in unofficial dealings—as against $35.30 two days earlier (Tuesday the 18th inst.). The quotation declined to $36-$37 on the following day but moved up again thereafter and stayed in the range of $37.75-$38.50 on Tuesday this week. On 21st October, the U.S. Treasury reaffirmed its decision to maintain the dollar at its existing gold parity and issued the following statement:

"The United States will continue its policy of buying gold from and sellling gold to foreign Governments, central banks, and, under certain conditions, international institutions, for the settlement of international balances or for other legitimate monetary purposes, at the established rate of $35 per fine troy ounce, exclusive of handling charges.

"As Treasury Secretary Robert B. Anderson has stated many times in the past, it is our firm position to maintain the dollar at its existing gold parity."

This report, however, failed to have any sustained effect on speculative buying. After a pause, the rush for gold reappeared, with London brokers receiving orders from all over the world to "buy at best."

Following firmness of the world price, ready gold forged ahead from 251*s.* to 270*s.* There was, however, no change in both ready and forward silver which stood at 79¾*d.* Silver in New York was also unaltered at 91.375 cents.

The following table shows the trend of the market during the week under review:

	26-10-60 (closing)	High	Low	19-10-60 *Moorat* (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	115.00	115.95	113.35	113.35
Forward:				
*Kartik**	115.55	116.60	114.30	114.30
Margashir	116.45	117.35	115.40	115.40
Sovereign	90.00	90.50	90.00	90.12
SILVER				
Ready (.996 fine)	193.00	194.15	192.00	192.00

Kartik	193.70	194.25	193.00	193.00
Margashir	195.15	195.75	194.60	194.55
London:	25-10-60			18-10-60
Silver Ready	79¼*d.*	—	—	79¼*d.*
Silver Forward	79¾*d.*	—	—	79¼*d.*
Gold	270*s.*	270*s.*	251*s.*	251*s.*
New York				
Silver	91.375 cents		—	91.375 cents

* 3rd November settlement. † 4th November settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES DULL

(From Our Own Correspondent)

BOMBAY, 26*th October*

Listless and quiet conditions have come to prevail in the cotton futures market. *Moorat* trading in cotton futures, which was done on Wednesday the 19th inst. from 6-30 p.m. to 9.30 p.m., was devoid of the usual excitement. Operators were cautious and seemed to mind every step they took. In fact the Jarilla April 1961 Contract moved either way, for quite some time without indicating any definite trend. The opening rate of Rs. 578.50 was the highest. Although the Contract moved down to Rs. 575 as the session progressed, it improved at close to Rs. 576, showing a net fall of Rs. 2.50. This is perhaps a reflection of the operators' assessment of the probable trend of cotton prices in the current season. In fact, in spite of the issue of new crop quotas earlier than expected, support from mills was far from being firm. They seemed reluctant to enter into firm commitments without being sure of what the crop was going to be like. In any case, the majority of operators are not prepared to take a bullish view of the future, what with the prospect of good crop and adequate supplies of foreign cotton and strict price and quality controls excised by the Government.

The price trend in the post-*Moorat* session of the market confirmed this impression. For the Contract moved steadily down from the *moorat* high of Rs. 578.50 to Rs. 568 on Monday. There has been a recovery since then which appears to have been of a technical nature. The low level, no doubt, attracted some investment support which helped the recovery. Opening at Rs. 575.50 today, the Contract firmed up to Rs. 578 before closing a shade lower at Rs. 577.75.

In the spot market, following the release by the Textile Commissioner of new crop Indian cotton quotas to mills (20 per cent. for Bombay mills and 30 per cent. for upcountry mills), there was fairly good demand from spinners for new crop Khamgaon and Berar, in addition to the usual interest in CO2. This was only in the initial stages. But soon the mills were inclined to postpone purchases as far as possible in anticipation of falling prices. The general tendency of ready prices was to move down.

A development of interest during the week was the commencement of trading in non-transferable specific delivery contracts from Monday the 24th inst. The varieties permitted for trading are Moglai, Berar, Madhya Bharat and Khandesh cotton, 520F Buri American and CO2 (both certified and uncertified). Trading in these contracts has, however, dull with limited turnover. Actual business took place only in two or three varieties although trading in as many as eight is permitted. There are traders who doubt whether the delivery contracts will have a smooth sailing in the current season.

Export inquiries for Bengal *deshi* were and still are few and far between. A moderate demand was reported for foreign cotton, particularly for U.S. cotton. Other growths were, in comparison, neglected.

The following are the latest available spot quotations—in rupees per candy of 784 lbs—from Sewri:

CO2 1.165; American G.M. 1" staple 1,100-1,115; Elpaso 1-3/16" 1,325.

Delivery contracts: Bengal 695; Berar 13/16" 870; Khamgaon 27/32" 895.

In spite of larger new crop arrivals, cotton futures in Karachi ruled firm during the fortnight under review, thanks to brisk spinner demand and renewed export inquiries. Both the January and March Contracts advanced, on good support, from Rs. 69-12 and Rs. 68 8 a fortnight ago to Rs. 69-3 and Rs. 68-14, respectively. In the spot market *deshi* prices were easy due to pressure of new crop. Sind *deshi* was quoted at Rs. 81 and Punjab *deshi* at Rs. 83. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 78-1; S.G. 82-1; L.S.S. Punjab Roller 81-1; S.G. 85-1; N.T. Roller 84-1; S.G. 89-1; 289F Punjab Roller 85-1; S.G. 90-1.

Firm conditions prevailed in the Alexandria cotton futures market. Speculative buying induced by hopes of better West German demand for Egyptian cotton, following the resumption of trade talks between West German and Egyptian representatives, and strong advices from the spot market led to a rally in prices. Although new crop arrivals were gathering momentum, they did not exert much pressure on prices, thanks to the tendency of growers and upcountry merchants for stocking. Reports from Alexandria say that picking is active and has spread to almost all districts. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being the rates prevailing a fortnight ago:

Karnak: November 75.76 (72.90); January 74.85 (72.70); March 74.70 (72.90).

Ashmouni: October 65.60 (62.18); December 65.02 (62.05); February 64.85 (62.20).

Limited turnover with narrow price movements characterised trading in the Liverpool cotton futures market during the fortnight. Interest continued to be confined to actual cotton, with only routine business being done in the forward section. Prices tended to ease. The October U.S. crop forecast had no effect on the market. The official estimate of the crop, apart from having been in line with trade expectation, showed little change from last month's figures. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 22.65; December 22.70; March 23.15; May 23.30.

American cotton mixed growth contract: October 23.20; December 23.05; March 23.50; May 23.65.

Sudan: November, January, March 35.00.

Cotton futures in New York recorded modest gains during the period under review. Although

the announcement of a higher acreage for 1961 by the Secretary of Agriculture prompted some Commission House selling, it was more than offset by the general buying movement inspired by the delay of crop movement and slow progress of pickings. Earlier losses were not only made up but the Contracts closed with net gains of over 10 cents points each.

The following are the latest available quotations from New York, as compared with those a fortnight and three weeks ago:

(In cents per lb.)

	25-10-60	11-10-60	4-10-60
Spot	32.25	32.20	32.25
October	31.53	31.55	31.49
December	32.05	31.41	31.40
March	—	31.94	31.87
May	32.40	—	—

BLACK PEPPER IMPROVES

(Messrs. Parekh & Co.)

BOMBAY, *26th October*

After the evening up of business in October delivery, Malabar black pepper improved during the week in sympathy with New York and Singapore. Spot in New York rose from $0.48 to $0.54, in view of tight stock position. Singapore ruled fairly steady, with an all-round improvement in prices, though to a small extent. Black pepper in Singapore rallied to Str.$147½ and white to Str.$245. New York dealers are reported to have paid for Malabar black for shipment by the named steamer at $0.49 and for October shipment at $0.48. The main reason for the change in sentiment at Singapore is said to be the report of some kind of restrictions on export of Lampong black pepper to Singapore from Indonesia. "Gold Rush" and the subsequent improvement in the prices of gold in London, the fear of devaluation of U.S. dollar, the signs of improvement in the Democrats chances in the coming Presidential election and the present degeneration in the political situation are some of the causes responsible for the present steadiness in both New York and Singapore. Judging from the present arrivals of light berries ex-new crop Malabar in the terminal market at Alleppey, the trade in general is expecting ASTA quality to arrive by the second week of November. The recent on-the-spot survey of the conditions of the standing crop confirmed the opinion held by a section of the trade that the new crop would be not less than 25,000 tons.

Garbled at Cochin was done at rates ranging from Rs. 217½ to Rs. 225, and ungarbled from Rs. 1,250 to Rs. 1,300. If New York continues to buy Malabar black at about $0.49/50, there are chances of a further improvement, as the liquidation by the weakholders having been finished the present holdings are now in strong hands.

The future depends upon the buying policy of New York dealers. If they buy big lots and that too rather aggressively, the market is sure to improve. But should they persist on buying hand-to-mouth and prefer to fill in their requirements from the incoming consignments, black pepper may go down when the pressure of new crop Malabar is felt, coupled with the anxiety of holders in Singapore and Indonesia to liquidate.

The present policy of the closing of the trading ring for the day when there is a rise or fall of Rs. 4 in prices is to the detriment of growers, particularly in view of the impending new crop. If there are no advance sales either in the ring or in export, it will be difficult to absorb new arrivals when the season starts. The trade in general is looking to the Forward Markets Commission for smooth and unrestricted business in the hedge market.

Ready pepper in Bombay is quoted at Rs. 245 per 50 kilos.

BUYING SPREE IN ART SILK YARN

(From Our Own Correspondent)

BOMBAY, *26th October*

There was a buying spree in art silk yarns during the week under review, the first post-*Diwali* week, thanks to apprehensions of an acute scarcity in supplies developing in the next few weeks and stray rumours of a possible enhancement of rates by foreign suppliers. Operators were busy extending their commitments, with the result that values touched dizzy heights. Induced by firmness of art silk yarns and on hopes of good overseas enquiries for Indian staple fibre yarn following the abolition of controls on exports, the prices of these also tended to move up. Cotton yarns, however, were dull, as operators preferred to await a clearer picture of the trend of output in the light of raw cotton supply position, as well as revival of demand from foreign countries.

The *moorat* trading in the yarn market on Thursday the 20th inst. was a dull affair. Business put through was limited with values moving narrowly.

Among imported art silk yarns, 150 Japan forged ahead from Rs. 1,391.11 to as high as Rs. 1,488.90. 120 Japan spurted by Rs. 41.89 to Rs. 1,309.53. 120 Italy and 150 Italy climbed up from Rs. 1,212.53 and Rs. 1,364.65 to Rs. 1,267.64 and Rs. 1,432.99, respectively. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade rose by 7 nP to Rs. 11.70. 120 Bt. cones 1st grade were done at Rs. 12.84, as against Rs. 12.88. Spot cupressa Bemberg yarn (60 x 1) advanced by Rs. 15.43 to Rs. 2,301.60. October delivery registered a rise of Rs. 24, today's closing rate being Rs. 2,246. December contract rallied from Rs. 2,252 to Rs. 2,286.

In the staple fibre yarn section, 40 x 2 October delivery put on Rs. 5 to Rs. 745. December delivery improved by Rs. 7 to Rs. 760. Spot Centurys gathered 2 nP to Rs. 8.54. Citys were firm at Rs. 8.82 and Kohinoors at Rs. 8.96.

Cotton yarns, as already stated, ruled dull. Ten counts Gokaks were unchanged at Rs. 18.75, as also Podars at Rs. 18.12. Twenty counts encountered selling. Gokaks declining by 38 nP to Rs. 23.12 and Modems by 25 nP to Rs. 23.25. Forty count Maduras, however, met with some support and picked up 75 nP to Rs. 32.50. Sixty count Raghuvamshis receded from Rs. 61.61 to Rs. 59.59. Eighty counts Moderns were quiet at Rs. 73. Mahendras at Rs. 79.79 and Citys at Rs. 70.50.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	26-10-1960	19-10-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)		
October	2,246.00	2,222.00
December	2,286.00	2,252.00
60/1 Cupressa Bemberg spot	2,301.60	2,286.17
120 Japan (per 100 kg.)	1,309.53	1,267.64
150 Japan (per 100 kg.)	1,488.90	1,391.11
120 Italy (per 100 kg.)	1,267.64	1,212.53
150 Italy (per 100 kg.)	1,432.99	1,364.65
Staple fibre yarn—		
40×2 October (per 90.72 kg.)	745.00	740.00
40×2 December (per 90.72 kg.)	760.00	753.00
40×2 Century (per kg.)	8.54	8.52
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.12	18.12
20s Gokak	23.12	23.50
40s Madura	32.50	31.75
60s Finlay	59.59	61.61
80s Modern	73.00	73.00

GROUNDNUTS TURN QUIET

(From Our Own Correspondent)

BOMBAY, *26th October*

Trading in the oilseeds exchange commenced on a buoyant note, but, towards the close, the trend became a little soft. The *moorat* trading, which was spread over two short sessions on Wednesday and Thursday (18th and 19th inst.) was marked by distinctly firm conditions. Groundnuts were well supported on hopes of better export business in groundnut oil as a result of the new export promotion scheme, announced by the Government recently (referred to in these columns last week). There were reports that substantial quantity of groundnut oil was sold to Burma and the U.K. in anticipation of acceptance of tenders by the Government. Groundnut cake, too, came in for good support from overseas buyers. Castorseeds and linseed moved up in sympathy with groundnuts. Cottonseed was held firm on news of distinctly firm conditions in the raw cotton market.

An important development of the week was the granting of permission by the Forward Markets Commission to commence trading in the 1960-61 season's transferable specific delivery contracts in groundnuts, castorseeds and linseed. Accordingly, trading in the December 1960-January 1961 delivery contract in groundnut, and February-March 1961 delivery contracts in castorseed and linseed, was started on Wednesday last. Business in these contracts will be subjected to the following conditions: (*a*) Trading in transferable specific delivery contracts in groundnut will be subject to the same scheme of special margins as has been prescribed by the Commission in respect of the February 1961 delivery in hedge contract of groundnut. (*b*) No member of the Exchange shall enter into transferable specific delivery contracts for the purchase or sale of groundnut, castorseed and linseed, the rights or liabilities under which or under any delivery order, railway receipt, bill of lading, warehouse receipt or any other document relating to which, are transferable more than six times. (*c*) The members of the Exchange shall submit statements relating to sale or purchase of these contracts in such form as may be prescribed by the Commission from time to time.

It may be noted here that the Board of the Bombay Oilseeds and Oils Exchange has urged, in a communication sent to the Government of India, the clarification of the many ambiguities involved in the latest export promotion scheme. The Board has called upon the Government to evolve an integrated policy in this respect and notify even at this stage: (1) specific quantity of groundnut oil that the Government would like to export for the period ending January 1961, (2) specific quantity of copra and/or palm oil that would be allowed to be imported against export of groundnut oil, and (3) the exact basis of allowing such exports. The Board has also appealed to the Government that the initial period of shipment should be extended upto March 1961 as it would give better opportunity for negotiating export business. An early consideration of these points by the Government will dispel the atmosphere of uncertainty prevailing among the trade regarding the new scheme.

To revert to the market trend. There were some export enquiries for groundnut oil and oilcakes and, consequently, values moved up in this section. The tables were turned subsequently, following larger arrivals of the new crop in terminal markets. In these conditions, groundnut February 1961 contract rose from Rs. 205.50 to Rs. 208.25 by Monday, but gave way later to close at Rs. 206.50. Nizam bold suffered a setback of Rs. 3 to Rs. 45.75. Oil ex-mill declined by a rupee to Rs. 19.50, after fluctuating between Rs. 20.50 and Rs. 19.25.

Although castorseed section elicited speculative support in the initial sessions on hopes of better export demand for castor oil, easy conditions prevailed towards the close on reports of Brazilian supplies of oil to the U.S. at the price lower than the domestic price. The May 1961 contract fell from Rs. 174.31 to Rs. 173.50 after touching Rs. 175.50 earlier in the week. Madras small closed unchanged at Rs. 33.62, although it had touched Rs. 33.87 on Monday. Oil Commercial rose from Rs. 14 to Rs. 14.31, but declined subsequently to close today at Rs. 14.10.

In the linseed section, the May 1961 contract declined from Rs. 33.37 to Rs. 33.31. Bold ready, however, improved from Rs. 32.37 to Rs. 32.62. Linseed oil, too, picked up 20 nP to Rs. 14.20 on some export enquiries.

In the cottonseed section, the February 1961 contract rose by 50 nP to Rs. 87.50. In the spot section, non-Whites put on 25 nP to Rs. 20.25. Whites and berars, too, gathered 25 nP each to Rs. 20.25 each.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	26-10-1960	18-10-1960	12-10-1960
	Rs.	Rs.	Rs.
Groundnut			
February 1961	206.50	205.50	206.50
Nizam bold	43.50	46.50	49.00
Coromandel ready	—	47.50	49.75
Khandesh quality	44.50	45.75	48.00
Oil ex-mill ready*	19.50	20.50	21.00
Railway receipts*	19.25	20.50	21.75
Castorseed			
May 1961	172.75	173.37	174.75
Ready Madras	33.62	33.50	33.80
Ready Kanpur	32.50	32.19	32.75
Oil B.S.S.†	15.15	14.94	15.25
Oil commercial†	14.10	14.00	14.10
Linseed			
May 1961	33.31	33.10	33.06
Bold ready	32.62	32.37	32.37
Oil ready†	14.20	14.00	14.00
Cottonseed			
February 1961	87.50	87.00	88.00
Niger seed	87.50	87.50	86.50
Kardi seed	24.25	24.25	24.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms, with effect from 1st October 1960.

GOOD DEMAND FOR EXPORT TEAS

(From Our Own Correspondent)

CALCUTTA, *25th October*

Good demand was in evidence in the export sales held yesterday. The fall in U.K. tea stocks in the week ended 14th October to 72 million lbs. from 80 million lbs. in the previous week apparently resulted in stronger demand. In addition, tea arrivals to Calcutta have declined.

Dusts on offer during the internal sales held last week amounted to 21,187 chests. The general demand was good at lower levels. Prices for the plainer medium C.T.C. teas were firm, while the brighter liquoring and smaller-sized teas eased by 10 to 15 nP. The best C.T.Cs were lower by 20 nP, while the smaller and thicker liquoring teas were Orthodox exportable teas eased by 5 to 10 nP, in good demand at firm rates. Legg-cut Dooars declined by 20 nP. The quotations per 1 kg., inclusive of excise duty, were: best Assam C.T.C. dust Rs. 6.40 to Rs. 6.70, medium Assam C.T.C. dust Rs. 6.20 to Rs. 6.30, medium Assam dust Rs. 4.90 to Rs. 5.60, and medium Dooars Rs. 4.65 to Rs. 5.00.

Leaf on offer amounting to 490 chests met with strong general demand, the green teas selling well.

In the export sales held yesterday, offerings aggregated 73,280 packages. Excepting a few lines, all teas were sold at firmer rates. Strong support was accorded from both overseas and internal buyers. Fannings were shown better attention than brokens. A decline in prices was recorded in better C.T.Cs and orthodox Assam B.O.Ps and O.Fs, while all the rest realised higher prices. The quotations per 1 kg. inclusive of excise duty were: best C.T.C. Assam fannings Rs. 6.50 to Rs. 7.00, best Assam B.P. Rs. 6.20 to Rs. 6.70, clean black pekoe Rs. 5.40 to Rs. 5.70, medium fannings Rs. 5.10 to Rs. 5.50, medium B.P. Rs. 4.70 to Rs. 5.10, plain fannings Rs. 4.70 to Rs. 5.10, and plain B.P. Rs. 4.50 to Rs. 4.65.

Export quota changed hands at ¼ nP per kilo.

TEAS WELL MAINTAINED

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *18th October*

Sale No. 40.—Offerings in Sale No. 40 held today amounted to 600,000 kilograms. Quality was generally well maintained with the exception of highgrowns, which were irregular. The market met a good demand, particularly for low medium and medium descriptions, which strengthened as the sale progressed and finished firm to dearer on last week's closing rates. Good medium teas, with the exception of those with improved quality, were often easier. Buyers showed keen interest in black leaf descriptions, particularly fannings which were the strongest feature of the sale. Highgrown continued to be irregular and prices for these declined considerably following less competition. There was a strong demand for whole leaf grades which sold at firm to dearer rates; orange pekoes being the main feature. C.T.C. and legg-cut teas met less support and sold at rates below last. A small selection of tippy teas sold around last week's rates.

	1960	1959
	Rs.	Rs.
Low medium	4.30-4.60	3.96-4.18
Medium	4.60-4.85	4.18-4.85
Good medium	4.85-5.50	4.18-5.40
Quality	5.50-6.70	4.96-5.40
		5.62-9.35

The average price realised in Sale No. 40 was Rs. 5.17 per kilo, as compared with Rs. 5.00 in the previous sale and Rs. 5.27 in the corresponding sale of 1959.

Dust Sale 'LL'.—A total quantity of 300,000 kilograms were offered in Sale 'LL' held on Friday, 21st October 1960. A useful selection of dusts were on offer. There was a good general demand, although prices were slightly easier for most of the descriptions. Buyers showed keen interest in residual and poorer descriptions which were strong and dearer. Colour mediums are quoted steady. There was fair enquiry for highgrowns but these tended easier. C.T.C. types and legg-cut types met keen competition and were strong.

The average price realised in Dust Sale 'LL' was Rs. 4.43 per kilo, as against Rs. 4.54 realised in the previous sale and Rs. 4.01 in the corresponding sale of 1959.

Export Quota.—The market remains unchanged and at the time of writing there are large sellers at ½ nP per kilo.

London:—North Indian and other growths.—18,990 packages were offered in the sale on Monday, of which 17,953 packages came from North India. The market met a good demand, particularly for teas from Dooars which were firm. Others met good support at firm to dearer rates. Assam C.T.Cs were slightly irregular.

Ceylon and South Indians.—Tuesday's sale amounted to 14,589 packages, of which 9,147 packages were from South India. The market continued strong and plainer descriptions were dearer by 1d. to 2d.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"Sale 41.—595,000 kilograms. Good general demand. Low medium and medium brokens firm to occasionally dearer, similar fannings tending easier. Good medium barely steady. Best liquoring often a rupee below valuation. Whole leaf strong."

JUTE GOODS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, *25th October*

A notable event affecting the trend in the jute markets during the week under review was the recommendation to its member-mills by the Indian Jute Mills Association to seal voluntarily an additional 5 per cent. looms from 24th October. This decision failed to have any reaction on fibre prices so far, but while prices of goods dropped in a small way, subsequently the trend firmed up in the absence of any reaction on fibre prices. It is understood that mills would seal another 5 per cent. looms, if necessary, later. However, in an attempt to drive down fibre prices to reasonable levels, mills would henceforth be purchasing fibre only on a quota system, which has been evolved by a subcommittee of the I.J.M.A. A redeeming feature in the fibre position is that arrivals, although not showing any rise, are being maintained and mofussil prices are tending to reach Calcutta's parity. Arrivals in Cossipore are estimated higher than for this time last year. The loom sealing move has naturally been ill received by the West Bengal Government, and the Labour Commissioner and the trade unions have been urged to go into the question; but in the present situation of high prices for fibre there would appear to be no alternative to adjusting production according to the availability of fibre. Production estimates have continually been very optimistic and it is expected that when once the fibre requirements of mills are reduced in tune with the present trends in the fibre markets, arrivals would increase. Thus, in the near future mills would be enabled to revise the policy of production.

The official forecast of the 1960-61 Pakistani crop is an encouraging feature. The Provincial Directorate of Agriculture in East Pakistan has now estimated production to total 5,625,000 bales which would be higher than 261,882 bales as compared to last year's actual output. It is stated that acreage has increased following the withdrawal of restrictions on the growth of jute in border areas and the cancellation of the licensing system. Meanwhile, the decision of the I.J.M.A. to restrict production of goods has arrested the uptrend in the Naranganj market. The Dundee industry has taken a grave view of the phenomenal rise in fibre prices, and the British Jute Trade Federal Council has urged the Pakistan Government to examine the position in the light of the dangers ahead. It is significant that, according to New York reports, burlap is today facing stronger competition from substitutes and that there is the danger of burlap losing ground permanently to cheaper-priced substitutes. Meanwhile, in accordance with current prices, the Pakistan Government has refixed minimum export prices for long jute on f.o.b. basis. However, jute cuttings would continue to be free from minimum prices which, it would be recalled, were removed from 21st July 1959. A disturbing news of importance to the Pakistan industry during the week was the reported South African plan to grow fibre in an area of 145,000 acres. South Africa imports Pakistan jute goods valued at £5,300,000 every year.

Very little business passed through the goods market, as the high prices for gunny kept away overseas buyers. Following selling pressure on Tuesday last, ready B. twills moved down to Rs. 168 from Rs. 178, but lower levels soon attracted buying. Hessian 40" 10 oz. dropped to Rs. 54.25 from Rs. 57. On Wednesday, the market was closed due to *Diwali*. On Thursday, conditions became steadier following buying interest at lower levels. Accordingly, hessian 40" 10 oz. hardened to Rs. 55 and B. twills to Rs. 174. On the following day, the I.J.M.A. move to reduce production was announced. Prices moved down at first following selling pressure, but soon began to move up. Ready B. twills closed lower on balance at Rs. 172 and hessian 40" 10 oz. at Rs. 54.25. Over the week-end, B. twills moved up to Rs. 176, but hessian 40" 10 oz. sagged to Rs. 54. The rates quoted yesterday were Rs. 174.50 and Rs. 54.25, respectively.

During the entire week, mills refrained from purchasing raw jute in an attempt to force down fibre prices. This caused northern bottoms to move down to Rs. 134 per 100 kg. October-November from Rs. 140.50 and daissee bottoms to Rs. 138 from Rs. 144.50. It was subsequently known that mills would henceforth purchase fibre only on a quota system and it was indicated that mills would not rush to make purchases. Northern bottoms nominally moved up to Rs. 139.50 and daissee bottoms to Rs. 143.50.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *24th October*

Quiet conditions prevailed in the foodgrains market during the week. Despite floods and droughts, rice and wheat maintained a downward trend for sometime past. Knowledgeable circles attribute this trend to the note of confidence generated by the large P.L. 480 grain imports. Rice even in drought-affected Andhra Pradesh and Mysore States showed no significant increase, as September rains had improved the crop prospects. In the flood-affected areas of Orissa, rice tended to move down since September and, in U.P., Bihar, M.P., West Bengal and Maharashtra, rice either declined or displayed steadiness in recent weeks. As for wheat, prices this year are lower than in 1959 except in Bihar. In August and September, wheat prices which had earlier registered some gains, showed a decline in U.P., M.P., Gujerat and Saurashtra. Suspension of wheat levy scheme in U.P. in August and the stoppage of procurement in M.P., resulted in a considerable fall in wheat prices in these States. Moreover, arrivals of wheat also improved considerably.

Wheat at Hapur registered a modest decline during the week to be quoted now at Rs. 17 a maund for average quality, while farm superior produce was quoted at Rs. 17.87 a maund. Daily arrivals were about 150 maunds which were being lifted by consumers and the demand for seed purposes was being met mostly by supplies through Government seed stores.

Rice was depressed during the week. *Sela basmati* was quoted at Rs. 30 to Rs. 32.50, *ramajwayan* at Rs. 23.50, *raimunia* at Rs. 24.50, *mainpuri* at Rs. 23.50 and *gadda* at Rs. 20.50 a maund. New paddy was reaching the markets in large quantities and Dr. P. S. Desmukh, Union Minister for Agriculture, has hinted that, despite droughts and floods in several regions in the country, there would be a record paddy crop this year.

Gram and other coarse grains, on the other hand, continued to rule steady to firm, following poor supply position and good seasonal demand. Gram improved to Rs. 16.25 a maund for better Punjab produce, while old stocks were quoted at Rs. 15.25 a maund. Demand for gram was increasing and advices from Punjab also recorded a steady trend. Local gram stock was put at about 13,000 maunds. Barley improved fractionally to Rs. 13 and *bejhar*, too, was quoted higher at Rs. 12.50 to Rs. 13 a maund. New maize arrivals were still small and, due to good consumer demand, prices sought higher levels at Rs. 13 to Rs. 13.25 a maund. *Jowar*, however, was quiet at Rs. 13 to Rs. 14 and *guwar* at Rs. 12 to Rs. 13 a maund.

In pulses, peas attracted good demand from the South and East U.P. side, but stockists were reluctant sellers, expecting better prices later. Peas *dara* green was quoted at Rs. 12.44, old stocks at Rs. 11.75 and superior farm white quality upto Rs. 14.50 a maund. Local peas stock was put at 45 *khatties*, the corresponding figure last year being 44 *khatties* when peas *dara* was quoted at Rs. 11.50. *Arhar* ruled quiet at Rs. 13 to Rs. 13.25 a maund and local stock was put at 22 *khatties*, the corresponding figures last year being 30 *khatties* when *arhar* was quoted at Rs. 17.37. New *urd* was done at Rs. 19, new *moong* at Rs. 19 and *massor* at Rs. 14 to Rs. 17.

Sowings to *rabi* grains is in full swing. Barring waterlogged areas following last untimely heavy rains, sowings would be timely and are expected to be on a larger scale as the land vacated from fodder and maize crops will be available for *rabi* sowings.

SUGAR RECEDES

(From Our Own Correspondent)

HAPUR, *24th October*

Despite good festival demand, sugar sought lower levels, thanks to easy supply position, as quotas were allowed to confectioners for *Diwali* and, for consumers also, sugar was made available in ample quantity. Prices eased by about a rupee per bag in the open market to be quoted wholesale at Rs. 111.50 per bag and retail at Re. 1.09 per *seer*. None of the factories in this area has as yet started crushing operations due partly to coal shortage. The factories hope to start production early next month

Sugar in the Muzaffarnagar market also drifted lower, following easy supply position despite brisk festival demand. The week-end prices were: Rs. 111 to Rs. 111.50 per bag wholesale and at Re. 1.12 per *seer* retail in the open market, as against the controlled prices of Re. 1 per *seer* retail.

Sugar in the Kanpur market also ruled quiet in the week-end at (D29) Rs. 112 to Rs. 113 per bag.

Although demand for *deshi khandsari* was brisk due to festival demand, prices eased by about Re. 1 to Rs. 2 per maund, because Gujerat and Saurashtra, the main consuming centres, showed no interest. Sugar quotas had been increased in both these centres, with the result that prices had come down sharply. Only a small quantity was sent to Punjab side. The latest prevailing prices were: *Galawat* Rs. 20 to Rs. 24; inferior Rs. 27 to Rs. 30; superior Rs. 32 to Rs. 36; crystal *khandsari* Rs. 33 to Rs. 35 a maund.

New *gur* arrivals were slowly mounting and were about 2,000 maunds today, but, although the entire arrivals were lifted to outside despatch, thanks to satisfactory loading facilities, prices eased by about Re. 1 per maund under pressure of arrivals to be quoted at Rs. 17 to Rs. 18.75 for new *pansera* quality and Rs. 20 a maund for *shakker*. Old *gur* was rotting and was not at all in demand even at the lower prices of Rs. 13 to Rs. 13.50 a maund and wet stocks were quoted as low as Rs. 10.50 a maund. Arrivals of new *gur* would soon mount and it was feared that prices would decline further.

Old *gur* and *shakker* eased sharply in the Muzaffarnagar market during the week in the absence of ready demand. New arrivals were still small at an average of 500 to 750 maunds daily, but arrivals would increase substantially within a week. Week-end prices for new stuff were: *pansera* Rs. 20, *shakker* Rs. 23; and *shakker masala* upto Rs. 25, as against the prices of old stocks at: *pansera* Rs. 15; *shakker* Rs. 18 a maund.

TIN ADVANCES

(From Our Own Correspondent)

CALCUTTA, *25th October*

Quiet conditions were in evidence in the metal market during the week under review, barring tin which staged an impressive recovery in price. The cancellation of the trade quota for import of brass and copper semis has been a subject of talk in trade circles. Considering that on an average the import of these items by the trade had been only about 30 per cent. of the annual imports, it is open to question whether this would amount to any saving in foreign exchange. What has been done is that, in future, only actual users will be able to import brass and copper semis. The trade has established good contacts, and it is a pity that this will now go waste. If by and by actual users are thus compelled to take over the business of the established importers, this would only mean annihilating a category of business and financing and forcing actual users to go through all the formalities that are necessary in import.

Mainly on considerations of limited supply position, tin spurted from Rs. 553 to Rs. 564 before closing at Rs. 562. Demand was keen and immediate arrivals were not anticipated. On the other hand, an easing trend was recorded on the L.M.E. Opening at £810 per ton, the price lost to £804½ to close at £809. The easier trend was attributed to limited prospects for industry as a whole. In view of holidays, there was hardly any demand for copper scrap here, with berry scrap at Rs. 218 a cwt. and utensil scrap at Rs. 200 a cwt. In London, copper opened at £222½ per ton and, after giving way to £218½, finished at £221½. Electrolytic zinc opened here at Rs. 170.50 a cwt. to sag to Rs. 169. Virgin lead remained unchanged at Rs. 66 a cwt.

A Complete Banking Service

★ All the usual banking facilities within convenient reach
★ Foreign exchange business of all types, including remittances
★ Special Thrift Deposit Plan
★ 3-Year and 5-Year Cash Certificates in different denominations at attractive interest rates
★ Safe Deposit lockers in many branches

SBH

STATE BANK OF HYDERABAD

H. O. : Hyderabad Dn. (A.P.)

serving you through more than 50 branches in Andhra Pradesh, Bombay City & State, Mysore State and Madras City

CONGRESS DEBATE ON THIRD PLAN

AT Shuklanagar over the week-end, Mr. U. N. Dhebar, while moving the principal resolution on the third Plan, wanted the All-India Congress Committee to approve it "with the consciousness that is required in democratic, socialist planning." What actually happened was, however, the very reverse of what Mr. Dhebar wanted. How else can the A.-I.C.C.'s uninterested but unanimous approval of the resolution be described? True, most members of that supreme Congress body were too obsessed with the elections to its Central Election Committee to give thought either to the basic premises or to the related details of the third Plan. But this only explains, not justifies, the desultory character of the debate in a political forum which is sometimes described as the nation's unofficial parliament. If most members took little or no interest in the debate but still passed the resolution unanimously, they were either absent-minded or lacked the kind of conciousness which the mover of the resolution had. Perhaps, in only one sense was this nothing like a dire misfortune; for, if the A.-I.C.C. members lacked the "democratic" consciousness required in planning, they also lacked the "socialist" consciousness! He should be a less than perspicacious observer who would say that the A.-I.C.C. is uniformly dedicated to the socialist proposition and, in this, it is a homogeneous entity. What the Congress seems to have accepted, albeit undoubtedly with some reservations, is Nehruvian Socialism and, that too, more out of a sense of devotion to Mr. Nehru's personality than out of any reasoned conviction.

This Nehruvian Socialism, repeatedly described by its author as anything but dogmatic, has at least one major dogma in it—the dogma that the public sector alone could get heavy industries going and thereby bring about industrialisation. Mr. Nehru's contention at the A.-I.C.C. meeting was that the private sector had neither the capacity nor the mental approach to set up heavy industries because, in his view, it was obsessed with securing quick dividends. Both the dogma and the contention, it would appear, have a couple of fallacies in them. One of these is that heavy industrialisation would necessarily have to be initiated by the State because it is thought of, by implication or otherwise, as an attribute of socialism. What is overlooked here is the historical fact that heavy industrialisation had been initiated by private enterprise in the advanced countries of the West. And the other fallacy is that the private sector in India does not have the 'capacity' to undertake heavy industrialisation. It is conveniently forgotten here that the private sector has been deprived of that capacity in two ways—first, through the Industrial Policy Resolution of 1956 and, secondly, through a fiscal and financial policy that leaves very little in the common pool of savings for the share of the private sector which is, thus, not in a position to mobilise the large investible resources required by heavy industries. To say that the private sector does not have the mental approach to set up heavy industries would also be less than fair. By all accounts, this sector is willing to play its part if only it is allowed to do so in collaboration with foreign private enterprise which will bring in the required technical know-how and foreign exchange resources. Only the dogma that heavy industries should belong to the socialised sector stands in the way. Since this dogma has been laid down emphatically by Mr. Nehru himself, it is not surprising that no member of the A.-I.C.C. chose to criticise it.

The A.-I.C.C. debate was otherwise notable for some constructive criticism of planning policies. Mr. Ajit Prasad Jain, former Food and Agriculture Minister, for instance, rightly criticised the Planning Commission for not according top priority to family planning for the propagation of which a committee of the Health Ministry had recommended an outlay of Rs. 100 crores during the third Plan. Since the food and population problems are inter-related and bound to become more acute at the end of the third Plan than at its beginning, the effort to bring down the birth rate would have to be intensified from now. Mr. Jain's contention that the Planning Commission had arbitrarily cut down the outlay under the family planning head to Rs. 25 crores and that this reduction would mean abandonment of plans for many more clinics and distribution of contraceptives had, therefore, a lot of force in it. He was likewise in the right where he made the point that, with the allocations now proposed for agriculture, its physical targets might not be achieved. Mr. Jain, however, did not suggest ways and means of increasing the effective resources for agriculture without disturbing the Draft Outline's pattern of outlays by sectors. That this can be done has been indicated in a leading article entitled "Resources for Agriculture"

EXPORTS OF SPICES

THE Spices Export Promotion Council, which was inaugurated at Ernakulam last week by the Union Deputy Minister for Commerce and Industry, Mr. Satish Chandra, meets a real need. Although India's name has down the ages been associated with the export of spices, there is now a genuine need for a special body which can take upon itself the responsibilities for furthering the cause of export of this variety of agricultural produce. This is because the export trade in spices continues to be threatened by other rivals. The Council will, therefore, have a somewhat difficult task in defending the present level of export and an even more difficult task in increasing the export trade.

India's exports of spices in the first half of the current year were valued at Rs. 10.21 crores, as against Rs. 10.44 crores in the whole of 1959 and Rs. 9.33 crores in the whole of 1958. These figures suggest that India's export trade has picked up. But it is well to remember that other producers are offering keen competition in world markets, so that, unless this country is constantly alive to the importance of prices and quality, there is a danger that the improvement in trade which has taken place in the first half of the year may not be maintained. Among other rivals to India, mention may be made of Borneo and Sarawak for pepper, Zanzibar for cloves, Jamaica and Sierra Leone for ginger and Guatemala for cardamom.

Among India's spices, the pride of place is taken by pepper. In the first half of the current year, its exports were valued at Rs. 6.79 crores, as against Rs. 4.27 crores in the whole of 1959 and Rs. 2.98 crores in the whole of 1958. India should be able to develop a sizable surplus in pepper for export purposes, considering that its consumption is placed at 9,000 tons, as against its output of pepper estimated at about 26,000 tons. World output this year is expected to be of the order of 59,000 tons. At the same time, world consumption is likely to move up to about 61,600 tons, of which the U.S. alone will account for 17,000 tons. Of the other major producers, Indonesia and Sarawak account for 19,500 tons and 8,500 tons, respectively. In view of the fact that world consumption is ahead of world production, there is bound to be a genuine demand for pepper from this country. A disturbing feature of world pepper economy in general, and Indian pepper economy in particular, has been the wide fluctuations in pepper prices. This often results in unexpected prosperity or unlooked for poverty for producers. This is a circumstance which is not conducive to the maintenance of a constant and prosperous export trade. Unless prices are maintained at reasonable levels after allowing for normal fluctuations arising from disturbances to supply and demand, India's export trade in pepper is bound to suffer. There is no reason why the Government should not consider pepper as an eligible candidate for receiving price support aid. In any case, any arrangement which is calculated to hold the prices at reasonable levels will increase the foreign offtake of this produce. Overseas buyers must be assured that supplies from this end will be available at all times and at correct prices.

The chief problem, however, is to increase the export surplus in pepper. This can be done only through extending the area under pepper cultivation and increasing the per-acre yield of pepper. It may be mentioned here that the third Five-year Plan aims at augmenting the area under pepper by 7,000 acres to about 240,000 acres. Other elements in the programme for pepper are replacement of non-bearing vines by superior high-yielding vines and extension of plant protection measures to an area of 20,000 acres. These measures are expected to raise the production of black pepper to about 30,000 tons by 1965-66. In the draft third Plan for Kerala, a provision of Rs. 35.71 lakhs has been included for pepper development. The schemes contemplated include grant of long-term loans to pepper growers for new planting, intensive cultivation and application of fertilisers. It would appear that at present there is practically no fertiliser application for pepper vines in this chief pepper growing region. There is no doubt that the adoption of superior agricultural practices will lead to increased production and also bring higher incomes to farmers.

Next to pepper in importance as a foreign exchange earner is cardamom. In the first half of the current year, exports of cardamom were valued at Rs. 1.57 crores, as against Rs. 3.29 crores in the whole of 1959 and Rs. 3.57 crores in the whole of 1958. The production of cardamom is expected to increase to about 2,260 tons in 1960-61, as against a mere 1,400 tons a decade ago. In the third Plan, a programme for cardamom includes the establishment of a factory in Kerala and the extension of the area under cardamom by 16,000 acres. These measures are expected to increase cardamom production to about 2,625 tons by 1965-66.

Under the next group of spices may be included ginger, turmeric and chillies; in the first half of the current year, the exports of these three commodities were valued at Rs. 35 lakhs, Rs. 20 lakhs and Rs. 49 lakhs, respectively, as against Rs. 52 lakhs, Rs. 26 lakhs and Rs. 31 lakhs in 1959 and Rs. 51 lakhs, Rs. 50 lakhs and Rs. 79 lakhs in 1958. A study of these figures will show that there was a substantial setback in export of these three items in 1959. The ground lost last year is now being made up. This is an encouraging trend. Kerala accounts for 70 per cent. of Indian output of ginger estimated at 14,500 tons. High prices have affected adversely India's exports of ginger in the last two seasons. Since those who deal in pepper deal in ginger also, there is a feeling that, if pepper rules at a high level, ginger also should command high prices. *The Export Promotion Bulletin*, issued by the Export Promotion Division of the Office of the Joint Chief Controller of Exports and Imports to synchronise with the inauguration of the Spices Export Promotion Council—it carries a wealth of information on Indian spices which is also neatly presented—records the views of an exporter of curry powder who points out that "growers and dealers of both pepper and ginger are the same in the production and sale centres and most illogically they feel that the high prices for pepper should reflect in ginger also." Perhaps, a wider dissemination of information about world prices and Indian production trends will help correct such misconception among traders. So far as turmeric is concerned, further publicity in its uses should increase its offtake. As regards chillies, there is need for adopting some scientific system of classification which will be beneficial to the producers and exporters at this end and the importers at the other.

In his address to the Export Promotion Council, Mr. Satish Chandra did well to emphasise the importance of quality control. A voluntary quality control scheme has been initiated in cardamom. Similar schemes deserve to be adopted in respect of other spices. As Mr. Satish Chandra pointed out, no enduring foreign trade can be built up without proper quality control. The Council should address itself to this task without delay, though it will be obviously some time before a suitable scheme for different spices are evolved. There is also need for streamlining the marketing arrangements, so that spices move freely from production centres to assembling centres and from there to ports. There are two factors which make the task of the Council particularly difficult, complex and onerous. In the first place, unlike many other export promotion bodies, the Council is not concerned with just one or two commodities but a whole range of commodities, coming under the term 'spices'. This classification is perhaps based on culinary, rather than economic, considerations. There are no less than 21 items under the broad group 'spices'. This suggests that the Council will be hard put to it to give adequate attention to all spices. What it can reasonably be expected to do is to concentrate its attention on some of the major spices and keep others under study. Secondly, whereas other export commodities from India have a few well-defined markets, spices are marketed in small quantities in a large number of countries. For instance, about 10,000 tons of Indian ginger find their way to no less than 60 markets. This is a source of strength as well as weakness to the export trade. Because spices are distributed among many countries, any reduction in offtake in some markets can nearly always be made up by stimulating exports to other markets. At the same time, this means that export publicity has to be undertaken in many countries. The way the Council faces up to this challenge will be watched with interest.

DEVELOPMENT AID

"POVERTY anywhere constitutes a danger to prosperity everywhere": This famous declaration by the twenty-sixth session of the I.L.O. (held at Philadelphia in May 1944) continues to pose a world challenge even today, notwithstanding all the national and international action to aid the development of backward regions. For the quantum of aid already rendered and is being rendered has not been commensurate with the actual requirements, with the result that the tempo of economic development in these regions is still very slow. Viewed against this background, Mr. B. K. Nehru, Indian Commissioner-General for Economic Affairs, may be acknowledged to have done real service to the cause of economic progress in India and other underdeveloped countries by focussing attention on the need for assistance on a massive scale. Speaking at the meeting of the U.N. General Assembly's Economic Committee at New York the other day, Mr. Nehru called upon the industrialised countries to lay aside one per cent. of their national income to provide funds for the economic development of underdeveloped nations. The funds for capital and technical assistance, he urged, should be immediately increased to $7 billion (net, not gross) per annum, the actual contributions being made by the developed countries in proportion to their national income. In this connection, he commended for acceptance the following two special measures:

(1) The United Nations should create a Capital Fund. So far, all efforts to establish such a Fund within the United Nations have "floundered on the rock of sustained opposition by the industrialised countries."

(2) The capital of the International Development Association ($1 billion, of which $250 million are contributed by the underdeveloped countries themselves) should be immediately doubled. The method of paying capital subscription to the Association should be changed to ensure that 50 per cent. of the increased capital is made available to it straightway. The rest of the capital transfers needed to conform to the standard of one per cent. of the national income might be made through bilateral arrangements or through private foreign investment or through capital markets.

Mr. Nehru's imaginative plea is reminiscent of Mr. Paul G. Hoffman's thesis on massive multilateral aid in the sixties in his recent booklet—*One Hundred Countries, One and One Quarter Billion People*. But one wonders whether Mr. Nehru's views will have any real effect, what with the persistently dim prospects of an agreement on the disarmament issue. But his suggestion for making available a substantial part of the capital assistance in the form of "soft" loans should at least be accepted and implemented by the industrialised countries. This journal has itself stressed the need for such loans on more than one occasion in the past. The economic resources of the industrialised countries are so vast that they can easily grant sizable long-term loans carrying reasonable rates of interest, repayable largely in borrower's own currency. And a good portion of the loans must be expendable anywhere in the world. Only then will the recipient countries be in a position to absorb the assistance in a gainful manner.

No less important is the need for removing the present tariff and other obstacles to the exports of underdeveloped countries. This aspect was impressively highlighted by Mr. Nehru. He said: "It seems to my delegation wholly unjustifiable that, in the second half of the twentieth century, rich and industrialised countries, whose techniques and capital resources give them a natural advantage in producing most of the complex products of modern industrial society, should continue to subsidise simple industries where they are relatively inefficient at a great cost to themselves and considerable harm to the developing countries." There is also the need for solving the pressing problem of fluctuations in the prices of primary commodities, a problem that has been confronting the underdeveloped countries for quite a long time now. Such fluctuations, as Mr. Nehru aptly remarked, constitute a drag on development and are capable of swallowing up all external assistance given by industrialised countries over the years. Here, again, Mr. Nehru's views are so refreshingly in accord with Mr. Hoffman's pregnant dictum that "development aid is in essence trade, just as increased trade is development aid."

Whatever may be the scale and nature of foreign aid made available by the economically more prosperous nations, a special responsibility is cast on the countries that receive the aid. These countries must utilise the aid wisely and not spend it on the implementation of ideological or spectacular projects. At the same time, they must endeavour their best to create conditions for attracting as much foreign private capital as possible. Even if some advanced countries think of aid as "charity", the beneficiaries should themselves feel that they are under a moral obligation to utilise it in the most effective manner.

MARKET GOSSIP

THIS week has witnessed a distinct recovery in share values in both cash and forward lists. The recovery is particularly notable in the case of leading counters. Tata Steels have advanced by Rs. 3.25, in contrast to a drop of Rs. 3.50 suffered last week. Similarly, Belapurs have risen by Rs. 17.50, Centurys by Rs. 19.50, National Rayons by Rs. 30.50 and Telcos by Rs. 12.50. In the previous week, all these scrips had staged a retreat, the actual extent of the fall being Rs. 5, Rs. 12.50, Rs. 11.50 and Rs. 12, respectively. The buoyancy of the share market has been whipped up principally by scattered rumours of a possible relaxation of credit restrictions, as well as firmness of bullion and other commodity markets. The recent purchase of scrips on a sizable scale by the L.I.C. has also imparted some strength. The market has apparently ignored Mr. Nehru's remark at the A.-I.C.C. session that the State alone could bring about an industrial revolution and not the private sector which was obsessed with securing quick dividends and lacked the capacity and the mental approach to set up heavy industries. Nor has it taken serious notice of the Union Finance Minister's call for tightening up of belts and payment of taxes necessary for development in the course of a radio interview on Saturday. It is, however, difficult to say whether the bullish phase of the market will persist in the coming weeks and, if so, how long. For much will depend on the general trend of prices which, in turn, will influence the cost structure of industries, and on the adequate availability of funds for essential production purposes.

"Dear Money" Policy

Although full five weeks have elapsed since the "dear money" policy of the Reserve Bank took effect (on 1st October), there is still no sign that the policy has had any marked effect in bringing down bank credit. It is true that the total advances of scheduled banks have declined, from Rs. 1,127.59 crores as at the end of September to Rs. 1,116.29 crores in the week ended 21st October, the latest period for which data are available, or a fall of just Rs. 11.30 crores. But this fall has been accompanied by a shrinkage of Rs. 26.49 crores in deposits in the same period—from Rs. 1,913.30 crores to Rs. 1,896.81 crores, so that there is practically no change in the credit ratio at 58.85 per cent., which is more or less the highest for the slack season of the current year and is only fractionally lower than the last busy season's peak of 59.25 per cent. It is also substantially higher than the ratio of 51.22 per cent. in the corresponding week of last year. In other words, this means that several industrial and business houses are meeting a part of their credit requirements by drawing on deposits. Similarly, the borrowings of scheduled banks from the Reserve Bank have decreased very negligibly, the total of the borrowings as on 21st October being Rs. 32.69 crores, as against Rs. 33.44 crores at the end of September. In view of penal rates on borrowings from the Reserve Bank above certain stipulated levels, high interest rate of 6 per cent. charged by the State Bank, and low rate of interest on short-term deposits under inter-bank agreement as well as on house money, the banks are finding it difficult not only to meet the growing demand of credit but also to reduce their borrowings from the Reserve Bank. No wonder, therefore, that inter-bank call money rate has gone up from 3½ per cent. before the credit restrictions were announced to 4½ per cent. at present.

It is now feared that, during the busy season, which has just commenced, the industrial and business community will experience much hardship in obtaining funds from the banking sector, so much so that it may be compelled to turn to the unorganised sector for borrowing at higher rates of interest. If such a contingency were to arise, it would, so goes the argument, step up output costs in industry, a development which nullifies the very objective of credit restraints, namely, holding of the price line. The Reserve Bank of India, however, seems to feel that such fears are exaggerated. In fact, the "dear money" policy is considered to be an urgent necessity. Addressing a meeting held under the auspices of the Society for International Development (Madras Branch) at Madras on Tuesday this week, Mr. H. V. R. Iengar, Governor of the Reserve Bank, declared that the Bank's recent policy of "dear money" was aimed at reducing the demand for credit for non-productive purposes like speculation on stock exchanges and commodity markets and that, on the whole, the policy would exercise a downward pull on inflationary pressures. Mr. Iengar, of course, stressed that the Reserve Bank's role was to reduce the pressure of monetary demand without, at the same time, hampering production; money must be made tight but not at the expense of production, for that would be self-defeating.

One, however, would ask: How can money be made tight when the money supply has increased as a result of heavy deficit financing? Mr. Iengar himself frankly admitted that money supply had proved somewhat excessive. And he did well to urge that we should be clear about the magnitude of the problem. It was here that he once again expressed concern over the price developments that have taken place during the second Plan. The concern, he said, was due to two factors—first, increase in prices affects the very essentials of existence for the people and, secondly, the rate of increase has recently been too high. Surely, the country cannot, as Mr. Iengar aptly put it, afford a continuous increase particularly at this rate and steps must be taken to halt the process.

Cotton Textile Prices

There will be an important meeting of the leading millowners and Central Government officials at New Delhi on Monday next week. The meeting has been convened to consider the terms of reference of the Tariff Commission on the issue of cotton textile prices. It is reported that the Union Ministry of Commerce and Industry is contemplating to ask the Commission to submit an interim report within two months and a detailed report later. While the consensus of opinion among millowners appears to be that the Tariff Commission enquiry will bring out clearly the reasonableness of the extent to which prices have been reduced and prove the falsity of the allegation of consumer exploitation by the industry, some textile interests are believed to have suggested the feasibility of evolving fair prices for textiles without reference to the Commission at all.

Since the trade generally prefers to await the findings of the Commission and the Government of India's decision thereon, offtake of cloth is likely to be on a restricted scale for sometime to come. As it is, the offtake is small, thanks to the disinclination on the part of many traders to lift stamped cloth in large quantities. It is stated that, in some centres, this cloth is being sold at a discount of 2 to 3 per cent. Export business in cloth is also somewhat slack. The quantity actually shipped from Bombay Port during the month of October is estimated at no more than 43.00 million yards, as against 44.73 million yards in September and 55.08 million yards in August. It is not surprising that the stocks of cloth with mills have increased. The total of these stocks, according to one estimate, is now around 600 million yards, as against 579 million yards at the end of September, 541 million yards as on 31st August and 449 million yards towards the close of July.

Indo-Soviet Trade

The joint statement by Indian and Soviet Trade Ministers on the working of the Indo-Soviet Trade Agreement of 1958 has emphasised the need for increasing the volume of trade and diversifying its content. It is expected that, at the end of the Trade Agreement period, that is, by November 1963, the present level of exports and imports will have nearly doubled itself. This expectation may well materialise only on the side of imports, because oil products will figure prominently in the coming years. It is doubtful if non-ferrous metal imports from the Soviet Union will increase greatly from their 1959 level of Rs. 12.7 crores out of that year's total imports valued at Rs. 16.7 crores from that country. Since, in the first seven months of 1960, imports as a whole have aggregated Rs. 6.8 crores only, recent trends do not point to any substantial increase in imports of paper, machinery and chemicals. If a doubling of imports takes place, it will be more on account of oil products than on account of the four familiar items including non-ferrous metals.

If the imports from the Soviet Union thus double in the next three years, it may not necessarily mean that India's exports to that country will also double. The chances are that it will only mean the raising of imports to a level of parity with our exports which, as of 1959, are at the level of Rs. 30.3 crores (composed of Rs. 11.6 crores on account of coffee, tea, etc., Rs. 5.5 crores' worth of hides and skins, Rs. 4.4 crores on account of textile yarn, fabrics, etc., Rs. 2.2 crores worth of raw textile fibres, Rs. 1.3 crore on account of footwear, and so on). Since, in the first seven months of 1960, India's exports as a whole have aggregated Rs. 15.9 crores only, recent trends do not point to any significant expansion of our exports in the coming years. It may be that what the Soviet Union aims at is only the balancing of its trade with this country by stepping up its exports by way of oil products.

Bajaj Auto

Two more industrial ventures have come out this week with offers of public issue of shares to finance their new projects. One of them is Bajaj Auto Ltd., which has recently commenced production of scooters. The authorised capital of the Company is Rs. 1 crore, all in equity shares of Rs. 100 each, of which it has already issued Rs. 9.90 lakhs. It now proposes to issue a further Rs. 60.10 lakhs, of which equities of the value of Rs. 25.74 lakhs will be offered at par to the existing shareholders of the Company. The shares not taken up by the existing shareholders or their nominees will be subscribed by the Directors and their friends. The balance of Rs. 34.36 lakhs will be available for public subscription at par. This will bring the total issued capital to Rs. 70 lakhs. The subscription list will open on the 14th inst. and will close on the 19th or earlier at the discretion of the Directors, but not before the 16th inst. A sum of Rs. 25 per share is payable on application and another Rs. 25 on allotment. The balance is payable on calls. Applications should be for a minimum of five shares.

The object of the Company is to manufacture Vespa scooters and Vespa three-wheelers, under technical collaboration with the well-known Italian firm of Messrs. Piaggio and Co., Genoa. The Company is a pioneer in introducing scooters and autorickshas in India. In 1948, it commenced importing the components and assembling them in India. In 1959, however, it was granted a licence to manufacture scooters and three-wheelers with an installed capacity of 6,000 units per annum on single-shift working. The estimated annual production of motor cycles, scooters and three-wheelers by the end of the second Five-year Plan is 16,000 units and a target of 48,000 units is fixed under the third Plan. There is, therefore, the prospect of the Company's production finding a ready market. The Company, in fact, started production in June last and in September it produced no less than 476 scooters and in October the production rose to 515. The Company expects to maintain the present rate of production of about 500 scooters per month till the factory is shifted to Poona by about the middle of 1961, when, subject to the availability of import licence for components, the Company would be in a position to step up production steeply. The Company proposes to apply later on to the Government of India for licence to expand its installed capacity. The capital requirement of the whole project is estimated at Rs. 70 lakhs, which is being met entirely by the equity issue.

The Company earned a net profit of Rs. 1.45 lakh for the year ended 31st March 1960 and paid a dividend of 20 per cent. The shares that are being offered now will not, however, be entitled to any dividend that may be declared in respect of the current year. The Company's Managing Agents are Messrs. Jamnalal and Sons Private Ltd., Bombay.

Isaac Holdens

The other venture which will open its list for public subscription of its equity issue on the 14th inst. is Isaac Holdens (India) Ltd. The authorised capital of the Company is Rs. 1.75 crore, made up of 1.50 million equity shares of Rs. 10 each and 25,000 preference shares of Rs. 100 each. Its issued and paid-up capital is Rs. 23.72 lakhs, all in equity shares, of which equities of the value of Rs. 6.38 lakhs have been issued to Isaac Holden and Sons Ltd. of Bradford (U.K.) in consideration for machinery supplied and Rs. 12.33 lakhs to the Anglo-India Jute Mills Company, Ltd., Calcutta, in consideration for the purchase of land and building for location of factory. A further equity capital of Rs. 4.28 lakhs will be issued to the British parent company, Isaac Holden and Sons Ltd., for additional machinery that is now under shipment. It is proposed to issue a further Rs. 47 lakhs, in 470,000 equity shares of Rs. 10 each. Of these, Isaac Holden and Sons of U.K. has agreed to subscribe Rs. 5.32 lakhs, the Anglo-India Jute Mills Company, Ltd. Rs. 8.65 lakhs and the Directors and friends Rs. 3.77 lakhs. This will bring the total holdings of Isaac Holdens of Britain to Rs. 15.98 lakhs or 21.3 per cent. of the total issued capital and of Anglo-India Jute to Rs. 20.98 lakhs or 28 per cent. The balance available for public subscription is Rs. 27.25 lakhs. A sum of Rs. 5 per share is payable on application and the balance in one or more calls. The list will close on the 19th inst.

The Company was incorporated in November 1959 as a private company and was converted into a public one a few days ago. It is a joint collaboration of Isaac Holden and Sons Ltd. of U.K., a leading firm of commission combers, Messrs. Duncan Brothers and Co. Ltd., a well-known agency house of Calcutta, and the Anglo-India Jute Mills Company, Ltd., the largest jute mill company in India, of which Duncan Brothers and Co. Ltd., are Managing Agents. The object of the Company is to set up a wool-top plant for sorting, scouring and combing raw wool into wool-tops. This venture is the first of its kind in this country. At present, the country's entire requirements of wool-tops are being met by imports. The establishment of the plant, with an annual capacity of 10 million lbs. of wool-tops, by Isaac Holdens will do away with a large part of the imports and thus save considerable foreign exchange. In fact, the first stage of the project is nearing completion and production is expected to commence by the end of 1960. The proposed equity issue is to provide a part of the finance required for the second stage of the project. The estimated capital cost of the first stage is Rs. 57.47 lakhs and this has been secured by issue of equity capital and loan from banks. The second stage of development is expected to cost Rs. 62.49 lakhs, of which the proposed equity issue will provide Rs. 47 lakhs. The balance will be obtained by borrowings from banks. The factory is located in the premises formerly occupied by a part of the Jagatdal Mill of the Anglo-India Jute Mills Company, Ltd. The machinery is of the most modern and up-to-date design. In addition, the Company will have the benefit of technical collaboration from Isaac Holden and Sons of U.K. As the present supply of wool-tops to the worsted spinning industry falls very much short of its requirement, the prospects for this new venture appear to be bright.

Investment Clubs in U.K.

Whether it is due to the anxiety to protect the real value of savings in an inflationary era or to the desire to participate in the rising profits of industries, the investment habit is spreading rapidly in countries like the U.K. among those who had so far remained financially unsophisticated. Middle and working classes, which had hitherto looked upon stock exchange investment as fit only for dabblers in high finance, are more and more taking to investments in equities which are regarded as a good hedge against inflation. The small investor, as this class of investors with limited incomes has come to be called, is not conversant with the working of the intricate stock exchange mechanism. Nor does he possess the skill and expertise required to make sound investment. Since his means are limited, he is not in a position to get, on his own, expert advice. Many innovations have been pioneered in Western countries to help the small man to invest wisely. The Unit Investment Trusts formed in many West European countries, which have now became an important agency in mobilising the savings of the small investors and channelling them to productive investments, have this object in view. Yet another novel idea is the investment club which is fast becoming popular in Britain.

An investment club generally consists of a group of friends, workmates or casual acquaint-

EQUITIES BULLISH

HANDSOME GAINS ALL ROUND

(From Our Own Correspondents)

BOMBAY, *3rd November*

A DISTINCT change in sentiment for the better was noted in the Stock Exchange during the week under review and there was a marked recovery in prices all round, thanks to the revival of bull support and covering by short-sellers. The improvement was particularly visible in the new account which commenced on Monday this week and was sustained during the rest of the week. The remark of Mr. Nehru to the effect that the private sector had neither the capacity nor the mental approach to undertake the industrialisation of India—a task which, according to him, could be achieved by planned activity in the public sector—and his attacks on the critics of planning did not have any adverse effect on the market. The endorsement by the A.-I.C.C. of the third Plan was construed as favourable to a further substantial growth in industrial activity. The bullish sentiment was also aided by two other factors, namely, (1) reports of purchases on a fairly large scale by the L.I.C. and (2) hopes of a relaxation of credit restrictions by the Reserve Bank to meet the demand for bank credit for essential purposes during the busy season which has just commenced. At higher levels, there was some profit-taking, but the net gains over the week were sizable and widespread.

The recovery in steels was assisted by hopes of an early announcement of retention prices and higher output of steel during the month of October. Tata Ordinaries staged a rise to Rs. 145.75, after a drop early in the week from Rs. 141.75 to Rs. 140.25. The closing was done at Rs. 145. Indian Irons advanced from Rs. 22.52 to Rs. 23.36.

Notwithstanding the slackness in offtake of cloth, textile scrips hardened, under the lead of Centurys, which shot up from Rs. 452.50 to Rs. 473.50 before closing at Rs. 472. Bombay Dyeings improved by 80 nP to Rs. 64 and Kohinoors by Rs. 6.50 to Rs. 288.50. Central Indias, Khataus, Standards, Svadeshis and Mafatlals were other prominent counters which scored handsome gains, as will be evident from the table in the third column.

A feature of the week's trading in bank shares was the spurt in United Commercials from Rs. 78.80 to Rs. 86. Central Banks (old) were marked up by Re. 1.30 to Rs. 53 and their new shares by Rs. 2.50 to Rs. 57.

Cement shares shared the general bullishness of the market, as indicated by the rise of Rs. 4.25 to Rs. 147.25 in A.C.C. Orissa Cements advanced by Re. 1.04 to Rs. 14.60.

Belapurs were conspicuous among sugars with a marked gain of Rs. 17.50 to Rs. 379.50. Phaitans were up by Rs. 3 to Rs. 181.50 and Walchandnagars by Re 1.25 to Rs. 300.

Engineering shares were in the forefront and handsome gains were recorded. Alcocks appreciated by Rs. 5.50 to Rs. 257.50. Telcos by Rs. 12.50 to Rs. 284.50, Larsen and Toubros by Rs. 3.50 to Rs. 37.50 and Premier Constructions by Rs. 14.50 to Rs. 311.50. Voltas hardened by Rs. 5.50 to Rs. 262.

While shipping shares were featureless but steady, automobiles attracted good attention, Hindustan Motors scoring a gain of Re. 1.80 to Rs. 20.60 and Premier Automobiles Rs. 11.25 to Rs. 172.50.

In the miscellaneous section, rayons provided a bright feature. National Rayons jumping up from Rs. 458.50 to Rs. 489. Gwalior Rayons added no less than Rs. 6 to Rs. 46 and Barodas Rs. 4.50 to Rs. 143.50. Bombay Burmahs (old) were firm, moving up from Rs. 562 to Rs. 584. Tata Chemicals, Tata Oils, Wimcos, and Shivrajpurs were all bid at higher levels. In the cash group, chemicals and dyes changed hands at substantially higher rates. Amar Dyes put on Rs. 32.50 to Rs. 452.50, Colour Chems Rs. 20 to Rs. 352.50, Indian Dyestuffs Rs. 27.50 to Rs. 547.50 and Poly Chems Rs. 18.75 to Rs. 250. Ceat Tyres were prominent with a rise of Rs. 30 to Rs. 250. West Coast Papers advanced by Rs. 9.50 to Rs. 204.50.

Madras Stock Exchange

MADRAS, *2nd November*

Equities on the Stock Exchange were subdued in the early sessions of the week under review in the absence of follow-up support, but picked up strength towards the close, following revival of some investment buying. Textiles were well favoured. Teas moved up on hopes of better export demand for Indian tea. Rubbers were well maintained. Coffees, too, hardened in sympathy. Sugars and miscellaneous industrials put on a cheerful appearance.

South India Viscose provided a bright spot in the textile section, the quotation advancing from Rs. 160 to Rs. 169. Laxmis spurted by a rupee to Rs. 146. Buckinghams too gained a like amount to Rs. 197.50. Travancore Rayons rose by 85 nP to Rs. 33.85. Radhakrishnas were higher by 25 nP at Rs. 28.75. Kotharis gathered 10 nP to Rs. 12.10.

In the tea section, Waterfalls advanced by 60 nP to Rs. 4.90, following the announcement that the Company had secured the Government's permission to issue as bonus 787,500 equity shares of Rs. 2 each. Heileyburias rose by 50 nP to Rs. 14. Blue Mountains firmed up by 41 nP to Rs. 5.35. The Company proposes to issue 525,000 equity shares as bonus. Peermades were higher by 20 nP at Rs. 22.80. Chembras and Parksides hardened by 15 nP each to Rs. 5.30 and Rs. 29.50, respectively. But Nonsuchs declined by 25 nP to Rs. 27, following the disappointment of the operators over the announcement of a final dividend of 10 per cent., taxable, making a total of 20 per cent., taxable (equivalent to 14 per cent. tax-free) for the year ended June 1960, which compares unfavourably with 20 per cent. tax-free, for the previous year.

Among coffees, Consolidated Coffees fell from Rs. 23.15 to Rs. 22.75, before closing at Rs. 24. Cowcoodys gathered 3 nP to Rs. 5.15. The Directors of the Company have declared a final dividend of 15 per cent., taxable, making a total of 25 per cent., taxable (equivalent to 17.5 per cent. tax-free) for the year ended June 1960, as compared with 25 per cent. tax-free for the previous year. Mysore Coffees were unchanged at Rs. 5.50. The Company has announced a dividend of 16 per cent., taxable (equivalent to 10.5 per cent. tax-free) for the year ended March 1960, as against 15 per cent. tax-free for 1958-59.

In the rubber section, Twyfords improved by 45 nP to Rs. 12. Midlands climbed up by 40 nP to Rs. 12.25. Highlands rose by 15 nP to Rs. 14.45.

In the miscellaneous section, Orissa Cements were marked up by 60 nP to Rs. 13.85. India Cements put on 5 nP to Rs. 7.25, *cum-right*. Among chemicals, F.A.C.Ts hardened by 15 nP to Rs. 10.15. Mysore Fertilisers were higher by 10 nP at Rs. 10.70. Among others, Aluminium Industries improved by 45 nP to Rs. 23.25 and Ashok Leylands by 43 nP to Rs. 8.73.

Calcutta Stock Exchange

CALCUTTA, *2nd November*

The Calcutta Stock Exchange commenced the week under review on a dull note, and most transactions earlier in the week recorded losses. Movements became narrow, but at the lower levels buying support came forth. Although in the last two sessions the volume of business remained small, share prices showed an attempt to rise from earlier low levels. The lack of any forthright decision on economic issues facing the country at the Raipur A-I.C.C. session was a whip for uncertainty. However, Bombay rumours foreseeing the likelihood of the Reserve Bank relaxing the recent credit control measures contributed to firmness for a while. Likewise, the possibility of expansion of credit, if and when the Reserve Bank revised the special deposit scheme, restricted selling pressure. The release of good corporate results, such as those of the National Insulated Cable Company of India Ltd., resulted in greater attention being paid to selected counters.

Coals were neglected. Burrakurs at first moved down to Rs. 17.50 from Rs. 17.75, but recovered the loss before closing. Equitables staged a late rise to Rs. 26.12 from Rs. 25.75, as did South Karanpuras to Rs. 11.37 from Rs. 10.81. Borreas were forced down to Rs. 20.12 from Rs. 21.62 previously.

Jutes were quiet, as it was expected that the current difficulties facing the mills would be reflected in the working results for the current year. Aucklands remained unchanged at Rs. 151, while Hukumchands, continuing the rise, touched Rs. 21.50. Agarparas fell to Rs. 11.62 from Rs. 12, while Birlas were fractionally better at Rs. 28.50.

A small recovery was in evidence in the engineering section. Indian Irons at Rs. 23.29 closed better. Texmacos opened at Rs. 21.80 and recovered to Rs. 22.85. Burn & Cos. at Rs. 450 were better by Rs. 19, while Britannia Engineerings were unchanged at Rs. 14.31.

Teas were quiet. Bishnaths, at Rs. 20, receded by 50 nP, while Hantaparas realised Rs. 128, as against Rs. 130 previously. At Rs. 15.87, Tezpores were fractionally higher, and, on interested buying, Banarhats were taken up to Rs. 314 from Rs. 303.50 previously.

Miscellaneous industrials disclosed a hardening trend, following buying support at lower levels. Following a good working report and the announcement of a dividend of 25 per cent., subject to tax, as against 20 per cent. tax-free, National Cables were better at Rs. 31.37 and, at Rs. 18.19, National Rollings accounted for a gain of Rs. 2.38. National Pipes were firm at Rs. 18.94, while Balmer Lawries changed hands a rupee lower at Rs. 213. Indian Cables hardened to Rs. 34.44 from Rs. 33.06 and Indian Oxygens were firm at Rs. 38.12.

ULTRAMARINE BLUE FACTORY

A company under the name of Ultramarine and Pigments Ltd., with an authorised capital of Rs. 50 lakhs has been registered in Bombay, promoted by Mr. N. S. Rajam and Mr. N. R. Swamy, Directors of Chemidye Trading Co. Private Ltd., Bombay. It is proposed to locate the factory in Madras with a production capacity of 100 tons Ultramarine Blue (dhobi blue or neel) per month. Necessary foreign technical collaboration has been obtained on very reasonable terms and the terms of collaboration have been approved by the Government. It is understood that, with the commissioning of the new factory, the entire demand of the country both of domestic and industrial consumers will be completely met from indigenous production. The Industrial Credit and Investment Corporation has agreed to give a loan of Rs. 7 lakhs including the necessary foreign exchange for the import of machinery. The Company is expected to come out with a public issue of shares in the course of this month.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 3rd November, 1960.

NEWS IN BRIEF

THE State Trading Corporation has decided to import 12 tons of mercury at an estimated cost of Rs. 12 lakhs. The Corporation will distribute the imported mercury among actual users, recommended by the Director of Industries in various States.

The Textile Commissioner has been empowered to regulate the production and sale of all types of woollen yarns, and to fix the maximum price of all types of woollen yarns and fabrics, including hosiery goods. An order to this effect has been issued under the Essential Commodities Act, 1955.

A Burmese trade delegation is visiting India shortly for talks with the Government representatives on the renewal of the rice agreement between the two countries. The existing agreement under which India is to buy 2 million tons of rice over a five-year period is due to expire at the end of the current year.

The Government of India has drafted a 20-year plan for the development of roads with an estimated expenditure of Rs. 5,200 crores, according to Mr. Raj Bahadur, Union Minister for Transport and Communications. The plan envisages the expansion of road mileage from 350.000 to 600,000 (both rural and highways).

Trade between India and Yugoslavia is expected to increase by about 20 per cent. in 1961 as a result of the agreement signed at Belgrade last week. The total value of trade in each direction during 1960 is estimated at $10 million. The agreement followed negotiations between an Indian trade delegation, led by Mr. K. R. F. Khilnani Joint Secretary, Union Ministry of Commerce and Industry, and the representatives of the Yugoslav Government.

Iron ore deposits have been detected in a five-mile seam of Sunkadakatte, very near the famous pilgrim centre Subrahmanya, in the South Kanara district of Mysore State. It is estimated that three to five million tons of iron ore can be mined from the area. The iron content of the ore is said to be from 56 to 58 per cent. Further investigation is being conducted by the Geological Department in a 25-mile long area between the pilgrim centre of Dharmasta'a and Subrahmanya and more iron ore deposits are expected to be found there.

An all-India agricultural census by the process of national sample survey is proposed to be undertaken by the Central Government. The object of the census is to collect data relating to the size and status of holdings, agricultural implements, livestock figures and other matters germane to agricultural planning. A proposal to conduct the census by a process of direct enumeration as part of the general census operations next year has not been accepted on account of problems of trained manpower and costs.

Two more schemes for the manufacture of razor blades have been sanctioned by the Central Government. Under these two schemes, a total production capacity of 132 million blades per annum is envisaged. There are already five units for manufacturing razor blades, with an annual production capacity of 629 million blades. The demand for razor blades in this country is computed at about 1,000 million per annum. Of late, India has been able to export some razor blades to some countries, such as Burma, Kenya, Ethiopia and Iran.

On the recommendation of the Reserve Bank of India, the Central Government has granted a moratorium to the Indo-Commercial Bank, Mayavaram, Madras, from 25th October to 24th December 1960. The grant of moratorium, it is made clear, does not indicate any sudden or recent change in the position of this or any other bank operating in the Madras area. The question of reconstructing the Indo-Commercial Bank and amalgamating it with some other major banks has been under consideration for some time past and the moratorium has been declared in the general interest of the depositors of the Bank and with a view to facilitating the contemplated reconstruction and amalgamation. Arrangements are now being made to amalgamate the Bank with the Punjab National Bank.

The Heavy Electricals Factory, Bhopal, and the two heavy electrical plants to be set up in the third Plan period are proposed to be brought under one management. The preliminary project report for the new plant to be erected with Czechoslovakian help is expected to be received in the third week of November, while the report for the other plant to be set up with Soviet help will be received towards the end of December. Two teams, one from Czechoslovakia and another from the Soviet Union, will visit India to discuss the report with the officials of the Government of India one month after the submission of the preliminary project reports. An Indian delegation, headed by Mr. K. B. Mathur, Chairman of the Heavy Electricals, has just returned after discussing the details of these two projects with the Czech and the Soviet authorities.

A pilot plant for the production of multi-purpose food, the first of its kind in India, has been installed at Coimbatore. The project is sponsored by the Central Food Technological Research Institute, Mysore. After a trial run of six months, the plant will be taken over by a leading private industrialist, Mr. G. R. Govindarajulu. The plant is capable of producing three tons of food per shift of eight hours and, if worked round the clock, it will yield nine tons. The process of production consists of mixing specially prepared low fat groundnut flour and Bengal gram in the proportion of three to one. It has been found that by mixing proteins from two vegetable sources, such as groundnut meal and Bengal gram, it is possible to get a protein mixture, more useful than any single vegetable protein. In order to make this supplementary food more complete, certain vitamin, such as vitamins A and B and calcium are also added.

Medium-wave radio transmitters will be manufactured at the State-owned Bharat Electronics Ltd., Bangalore, under an agreement signed between the B.E.L. and the Nippon Electric Company, Japan's biggest electronic manufacturing factory. The agreement marks a further step forward in the manufacture of electronic equipment in India and is the third that the B.E.L. has entered into for technical collaboration with foreign manufacturers. The other two are with Marconi and Pye of the U.K. and Philips of Holland. The medium-wave transmitters to be manufactured at the B.E.L. are to be supplied to All India Radio. Sixty sets are to be supplied in two years in the first phase. Under the terms of the agreement, the Japanese firm will train Indian personnel in their factory in Japan, besides providing them with the required technical knowhow. To start with, 30 transmitters will be imported immediately to meet the immediate requirements of All India Radio's expansion plans, while in future the transmitters will be progressively manufactured at the B.E.L. The Nippon Electric Company has installed short-wave transmitters at the lighthouse off Vizag, while another set is functioning at the Ranchi station of A.I.R.

From Abroad

The cost of living index (1947-49=100) in the U.S. rose to a record of 126.8 in September, representing an increase of 1.3 per cent., as compared with the corresponding month last year. A further rise is believed to have been recorded in October.

The two leading television radio and electronic companies of Britain, Pye and E. K. Cole, have decided to merge themselves into a £25 million group. A holding company will be set up with Mr. C. O. Stanley, Chairman of Pye, as the new Chairman, and Mr. Eric Cole, Chief of E. K. Cole, as Deputy Chairman.

The British Export Credit Guarantee Department transacted a record amount of business in the third quarter of this year. A total of £180.2 million was covered under E.C.G.D. "commercial" insurance during the period, bringing business in the first nine months of the year up to £520.7 million—£61.3 million, or 13 per cent. higher than in the same period of 1959.

Two world-famous textile firms in the U.K., Messrs. J. and P. Coats and Messrs. Patons and Baldwins, which together have assets amounting to over £130 million, are reported to be making arrangements for a merger. The main business of J. and P. Coats is manufacture of cotton and synthetic sewing thread while that of Patons and Baldwins consists of worsted woollen and synthetic yarns production.

The view that Japan's exports in 1960 will aggregate $4,138 million, or an increase of 18.4 per cent. over last year, is expressed in a report of the Japanese Ministry of Trade. Imports are expected to go up by 24 per cent. to $4.455 million. The excess of imports will be more than offset by a surplus in the balance of invisible trade. Exports during the third quarter at $1,050 million were the highest figure since the war.

Norway's new oil refinery, claimed to be Scandinavia's biggest, has now gone into production at Slangenstangen, on the Oslofjord. The new refinery, owned by A/S Esso-Raffineriet, Norge—a subsidiary of Standard Oil of New Jersey—will be able to process some 2 million tons of crude annually, producing motor spirit, jet fuel, diesel oils and fuel oils for industry and domestic heating, as well as various gases.

The largest private bank in France, the Banque de Paris, has commenced banking operations in the U.S. through a new subsidiary, the Parisbas Corporation, set up in Wall Street. The initial paid-up capital of the subsidiary will be $12 million. It is the first time in recent years that a large foreign financial house has gone into business in the U.S. and is a reversal of the trend of American banking companies opening branches overseas.

Jute mills in East Pakistan have reduced their working hours by 33 per cent., in view of tight raw jute supply position. The restriction, though described as temporary, will mean the closing down of one shift. It has been enforced, following a decision by the Pakistan Jute Mills Association that working three shifts is uneconomical in view of high prices. The mills had been working 144 hours in a six-day week to meet a growing demand for jute goods from abroad, but hours will now be restricted to 96.

The Trans World Airlines inaugurated a jet service between India and the U.S. on the 2nd inst. The Company is using the world-famed Boeing 707 Intercontinental superjets to provide the fastest service. The superjets fly from New York to Bombay, halting at Rome and Dhahran, and cover the distance of approximately 8,000 miles in 15 hours and 45 minutes flying time. The west-bound superjet makes an additional stopover at Paris. The T.W.A. superjet service expansion to Bombay brings the total of overseas cities served by T.W.A. superjets to 10 on its 50,000-mile route network.

PERSONAL

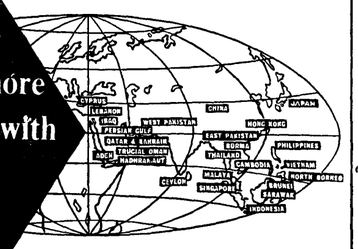
DR. B. V. KRISHNAMURTHY of the Delhi School of Economics has been appointed by the United Nations Bureau of Technical Assistance Operations to serve as Economic Adviser to the Government of Saudi Arabia.

Dr. Homi J. Bhabha, Chairman of the Atomic Energy Commission and Director of the Tata Institute of Fundamental Research, Bombay, has been elected President of the International Union of Pure and Applied Physics (I.U.P.A.P.). He will hold the office for three years.

Mr. W. H. Nicoll and Mr. R. Rievergelt have been elected President and Vice-President, respectively, of the Cochin Chamber of Commerce for 1960-61. Messrs. G. J. Asher, C. T. Jacob, T. A. K. Nair and R. J. Watson have been elected members of the Committee.

Trade with Eastern countries is ever on the increase. An efficient world wide banking service with expert knowledge of market conditions is essential to develop trade. The associated banks, The Chartered Bank and The Eastern Bank Ltd. with branches in almost every commercial centre in the Middle East, South East Asia and the far East are fully equipped to provide complete Banking facilities to every trade and industry.

More and more trade with the East



Let your worry be our pleasure

THE CHARTERED BANK

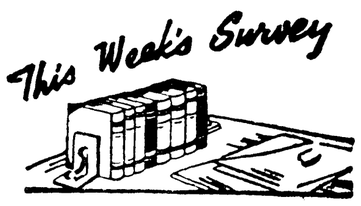
which together have a complete branch service in The East extending from Cyprus to Japan.



PHYSICIAN, HEAL THYSELF !

THERE is enough evidence to show that the holier-than-thou attitude of the public sector towards the private sector has no more basis in fact that the erroneous assumption that the former has a nobler aim and is fairer to labour. In fact, if reports in the Press are any indication, the managements of several undertakings in the public sector, far from being model employers, are worse than some unenlightened private employers. Recently, it came to light that discontent among the workers of the Bhilai project was so seething that it erupted into major disturbances which "bewildered" officials in charge. It was reported that there were no Standing Orders for the workers and that the promises of the project authorities were more honoured in the breach than in the observance. At the Rourkela steel plant, it was said, women workers were employed to work after 7 p.m. in violation of the provisions of the Factories Act.

Now comes the news that Hindustan Steel Ltd., which manages the three steel plants at Rourkela, Bhilai and Durgapur, has been found guilty of violating and disregarding labour laws by the Orissa State Labour Commissioner. An inquiry by the Commissioner is reported to have revealed, among other things, that "the prescribed limit on working hours was not observed, weekly holidays were not granted, nor overtime paid."

This is not the first instance of the Government failing to practise what it preaches to private employers. This, apart from being bad in itself, also has the undesirable consequence of weakening the moral strength of the Union Labour Ministry in its efforts to get employers and workers in the private sector to observe labour laws and implement awards and agreements. For if it cannot persuade its own sister Ministries to confirm to the labour laws and honour the Code of Discipline, how can it in fairness ask employers in the private sector to do so? The Government before pointing an accusing finger at the mote in the private sector's eye would do well to remove the beam from its own. Physician, heal thyself!

WORLD BANK LOAN TO I.C.I.C.I.

The total investment requirements of the private sector in terms of both equity capital and foreign exchange component of their development plans are great, and, if this sector is to play its part in full, adequate industrial finance has to be assured. The enhanced rehabilitation costs in industries have also added to this problem, with the result that institutional loans have become an essential prerequisite for both development and replacement. The part played by the Industrial Credit and Investment Corporation of India Ltd. (I.C.I.C.I.) in providing medium and long-term industrial finance, as well as equity capital, to the private sector has been significant. But more significant is the fact that I.C.I.C.I. is the only organisation which caters to the foreign exchange requirements of the industries in the private sector.

In this context, the news that the World Bank has approved of another loan, amounting to $20 million (Rs. 9.60 crores), to the I.C.I.C.I. is indeed welcome. It indicates the continued confidence of the World Bank in the working of the institution and also points to the brisk pace of industrial activity in the country. The I.C.I.C.I. has been able to advance loans to the full extent of foreign exchange reserves available to it. This also shows that the significant gap between sanctions and utilisation of loans apparent in its performance in previous years has been narrowed down. There is no doubt that the position in this respect is bound to improve in the future.

This is the third loan sanctioned by the World Bank. Two earlier loans of $10 million each (corresponding to Rs. 4.8 crores each) were sanctioned earlier to meet the foreign exchange requirements of projects financed by the I.C.I.C.I. The latest loan is for a period of ten years which may be extended to 14 years by mutual agreement. Interest will be applied to each portion of the loan at the Bank's current rate when such portion is committed for one of I.C.I.C.I's projects. Amortisation of the loan will begin on 1st November 1963.

In the five years of its functioning, the I.C.I.C.I. sanctioned loans and direct equity participation amounting to Rs. 15.4 crores and its underwriting operation in shares aggregated Rs. 8.4 crores, of which it had to take up Rs. 3.6 crores. A part of this investment, as well as of direct equity participations has already been sold in the market at a capital profit. About 60 per cent. of the I.C.I.C.I.'s loans have been in foreign exchange and, during the past year and a half alone, foreign exchange loans averaged $10 million annually. The $20 million in foreign exchange made available by the World Bank, through its two previous loans, has been virtually exhausted. The proceeds of the new $20 million loan, it is stated, will enable it to meet the requirements of its borrowers for the next two years.

Including the new loan, the I.C.I.C.I.'s total resources amount to Rs. 42.10 crores ($89 million). Seventy per cent. of its Rs. 5 crores paid-up share capital is held by Indian shareholders and the balance by British and American investors. The Government of India has advanced Rs. 17.5 crores to the Corporation. A sum of Rs. 50 lakhs has been ploughed back out of the Corporation's earnings.

INDUSTRIALISATION OF KERALA

For the first time in hundred and three years an Indian, Mr. T. A. K. Nair, took the chair to deliver the presidential address at the annual general meeting of the Cochin Chamber of Commerce held on Friday, 28th October, at Cochin. His speech surveying the economic problems and industrial prospects of Kerala was marked by objectivity and constructive criticism of Government's policies in keeping with the Chamber's tradition.

With the formation of a fairly stable Government last year, Kerala, one of the problem States of India, began to take stock of its economic backwardness and its slower pace of industrial progress as compared with that in some other States. In a situation like this there is always a search for scapegoats and a convenient one was found in the Union Government which was accused of having neglected Kerala. The more responsible and knowledgeable sections of the people knew, as did some of the leaders too, that the chief culprit was the political instability of Kerala, with Ministries changing as if in a game of musical chairs. Now that the State has come to enjoy a period of comparative peace and stability, it is time to attend to the real problems of the State—unemployment and industrialisation.

That the business community is fully aware of the problems and is willing to share the burden of industrialisation with the Government is evident from the remarks of Mr. T. A. K. Nair, the Chamber's President. Mr. Nair hit the nail on the head when he said that the lack of a peaceful industrial climate in the past, mainly resulting from labour indiscipline, had hamstrung the State's progress. It is encouraging to be told by him that the policy statement in regard to the development of industries issued by the State Government in June last revealed "a keen awareness on the part of the Government of the industrial backwardness of the State and of the imperative need for a peaceful industrial climate as a condition precedent for accelerated industrial activity." It may be true, as Mr. V. V. Giri, Governor of Kerala, pointed out recently, that the reluctance of industrialists from outside Kerala to invest their money in the State is based on an exaggerated fear of the conditions there. But the existence of this fear, well or ill-founded, is evident from the comment, quoted by the Governor, of one industrialist, that he did not mind risking his money in Kerala but did mind risking his life there. That such an impression has deprived Kerala of many industrial enterprises is testified to by Mr. Nair. According to him, the lack of a peaceful atmosphere has deterred private *entrepreneurs* from choosing Kerala for setting up large-scale industries even in cases where the natural advantages in the State were otherwise attractive. It is to be hoped that the Kerala Government will not fail to take cognisance of this fact while implementing its industrial policy. For, as Mr. Nair rightly pointed out, unless the supreme importance of discipline and increased productivity is realised by labour and respected in practice the future of the State will be bleak.

The third Plan is in the process of taking final shape. Every State is anxiously awaiting its share of the Plan cake. The President of the Chamber therefore made more than a passing reference to the Plan. He seemed to share the view held by many in the State that the second Plan allocation to Kerala was less that what it deserved. Quoting statistics in support of his contention, Mr. Nair said that Kerala's total outlay for the second Plan was Rs. 87 crores, as against Rs. 111 crores which was considered legitimate. Again, according to him, out of the total investment proposed in the Central industrial sector of Rs. 657 crores, only Rs. 79 lakhs (for a D.D.T. factory at Alwaye), which works out to a mere 0.1 per cent. of the total, was invested in Kerala. Regarding the States third Plan, Mr. Nair made the following observation:

"Under the third Plan, a sum of Rs. 1,470 crores is proposed for the entire country for investment under industries in the Central sector. The Kerala Government consider that a minimum investment of Rs. 300 crores should be made in the Central and State sectors together out of a total outlay of Rs. 307.06 crores estimated for the State. But they have estimated that only Rs. 20 to Rs. 30 crores would be invested in the private sector during the third Five-year period. This low figure goes to show that the Government have not been able to create the proper climate for attracting necessary private capital for investment in this State. Unless this is done it would hardly be possible to achieve the basic objectives of the State's third Plan. . . . It is also not clear how the State is going to raise the resources, especially the sum of Rs. 50.6 crores from additional taxation as estimated in the Draft Plan."

Mr. Nair also referred to some fiscal matters of all-India importance. He said that the Union Government's policy in respect of personal and corporate taxation was not conducive to the creation of a proper climate for increased flow of foreign capital to the country. He cited as an instance Section 42 of the Income-tax Act which, he felt, was being interpreted to the detriment of foreign concerns which would otherwise be keen on investing in India. Clause XIV(a) to Section 4, according to him, took away the inducement of foreign technicians to stay longer than the period to which the reliefs given under the clause are applicable.

Dealing with problems of local importance, the President called for suitable modifications in tax laws to enable rapid expansion of trade and industry. One of the bottlenecks of industry, he pointed out, is the shortage of power supply. The present installed capacity of 117,500 kw., according to him, is quite inadequate to meet Kerala's power needs. When the projects contemplated, or now under construction, are completed the generating capacity will increase to 726,500 kw. by 1966 which will be adequate to meet the State's requirements. But the immediate problem is the present shortfall of about 30,000 kw. which will be acutely felt in the next two years. The only way of tiding over this difficulty, according to Mr. Nair, is to install diesel sets of suitable capacity, aggregating 20,000 kw. before June 1961. This, no doubt, would involve an outlay of about Rs. 1.5 crores. The urgency of the problem would appear to underline the need for the suggested investment.

JUTE INDUSTRY

It is most appropriate that Dr. B. P. Kedia, President of the Gunny Traders Association, should have emphatically condemned the speculative increases in raw jute and jute goods prices in his speech at the annual general meeting of the Association held at Calcutta on Friday last week. Such increases, if allowed to persist longer, would, as Dr. Kedia very pertinently warned, do irretrievable harm to export trade by undermining the competitive capacity of jute goods in foreign markets. This aspect is to be specially stressed in the present context of (a) Pakistan's renewed efforts to expand production and exports of jute goods, (b) competition from other packaging and wrapping materials, (c) imposition of certain restrictions on imports of jute manufactures by the Governments of the European Common Market countries, and (d) controls over Indian jute fabrics imports into Britain.

Jute goods, it is common knowledge, constitute one of the two largest earners of foreign exchange for the country. The total value of jute yarns and manufactures actually exported during the first seven months of 1960 was Rs. 76.59 crores, as against Rs. 49.95 crores in the corresponding period of 1959 and Rs. 110.75 crores in the whole of 1959. If India's jute fabrics are to maintain their leadership among the packaging and wrapping materials of the world, it is imperative to stabilise their prices at reasonable levels and improve their quality. Dr. Kedia did well to urge the immediate introduction of a system of quality control and compulsory inspection of jute goods prior to shipment. He also emphasised the urgency of taking effective action to curb speculative variations in prices, as well as the need for improving marketing of goods through proper publicity, advertisement, efforts to find new uses for jute goods and goodwill missions to markets abroad.

The aforesaid export promotional measures will, of course, not be of any avail unless energetic steps are taken to ensure to the jute industry adequate supplies of quality raw jute at an economic price. Of the total productive capacity, 19 per cent. is currently lying idle. The forced closure of looms, as Dr. Kedia rightly said, puts a drag on the industry's resources, besides creating unemployment. It will be recalled that, during the 1959-60 season, the jute crop suffered a distinct setback, actual production being 5,646,000 bales (including the *mesta* crop of 1,098,000 bales), as against 6,646,000 bales (1,488,000 bales of *mesta*) harvested in 1958-59, whereas the actual consumption requirements were as much as 6,800,000 bales. The Draft Outline of the third Plan envisages a production target of 1,100,000 tons of jute goods to be achieved in 1965-66. Dr. Kedia certainly struck a note of realism when he declared that the stepping up of raw jute output must remain for many years to come a matter of the highest priority. In his opinion, the third Plan target of output should not be anything less than eight million bales.

The increase in raw jute production, as Dr. Kedia pointed out, must be achieved not by raising the acreage but by intensifying cultivation. Notwithstanding all the loud talk in this direction, progress achieved has not been quite encouraging. The highest yield per acre so far obtained is 2.85 bales, as against 5.00 bales in China and 4.00 bales in Pakistan. To quote Dr. Kedia:

". . . intensification of cultivation has not received the attention that it deserves and there is ample scope for effecting improvement in this direction. . . . The results achieved so far from the experiments made at research centres in India have abundantly demonstrated that, with the help of improved methods of agriculture and by supplying better seeds and fertilisers to growers, it can be possible to get near about 4 bales of jute from one acre, on an average. . . . Along with the quantitative aspect of jute production quality is also of vital importance, because the general texture, appearance, and the finish of the manufactured goods chiefly depend on the quality of the raw material used. India is still deficit in high grade and better coloured jute required for the manufacture of good hessians. Besides possessing a stronger texture and superior weaving qualities, therefore, the fibre should have such colour as may compare well with that of its counterpart in Pakistan. For this what is needed is improvement in the techniques of retting and better facilities for same."

Since raw jute accounts for 60 per cent. of the total cost of jute goods production, its prices naturally exert a powerful influence on the prices of jute goods. Drawing attention to this aspect Dr. Kedia suggested the desirability of evolving a plan to ensure uniform regulation of jute supply in spite of Nature's vagaries. Labour cost is another important factor to which he referred. There is considerable force in his contention that increase in wages, though necessary in a developing economy, must be accompanied by higher productivity. It is to be hoped that the Wage Board for Jute Industry will bear this fact in mind.

BOMBAY PORT TRUST

The quantum of cargo handled at the docks and bunders administered by the Bombay Port Trust rose to an all-time record of 13.15 million d.w. tons in 1959-60. This is in distinct contrast to the trend in the previous year, when the total weight of the cargo transmitted through the port showed a substantial decline. The improvement in performance in 1959-60, according to the Administration Report for the year, published by the Port Trust was shared both by docks and bunders. The volume of imports which passed through docks alone increased from 3.70 million tons in 1958-59 to 3.96 million tons and exports from 1.64 million tons to 1.80 million tons. The total traffic handled by the docks thus aggregated 5.76 million tons, as against 5.34 million tons in the previous year. From the point of view of revenue earned, machinery formed the largest single item in the import trade. The other important items, in order of revenue earned on them, were grains (in bulk), iron and steel, vegetable and mineral oils, cement and cotton. In the export trade, important items, in order of revenue earned on them, were oilcakes, piecegoods, manganese ore, iron, vegetable oils and cotton. The volume of imports handled at the bunders, including Butcher Island, increased from 4.71 million tons to 5.46 million tons and that of exports from 1.70 million tons to 1.93 million tons. The total traffic touched 7.39 million tons, as against 6.41 million tons. The increase, both in imports and exports, was accounted for chiefly by bulk mineral oils.

The following table shows the trend in the expansion of trade handled by the Bombay Port during the last decade:

(In'000 D.W. tons)

	Imports	Exports	Total
1950-51	5,185	1,702	6,887
1951-52	5,807	1,673	7,480
1952-53	4,965	1,943	6,638
1953-54	4,775	1,951	6,726
1954-55	5,630	1,954	7,584
1955-56	6,707	3,599	10,306
1956-57	8,239	3,740	11,979
1957-58	9,302	3,808	13,110
1958-59	8,419	3,333	11,752
1959-60	9,413	3,733	13,146

With the expansion in the volume of traffic, the financial position also tended to improve. The general account for the year under review closed with a surplus of Rs. 2.43 crores, which compared favourably with Rs. 1.84 crores in the previous year. The aggregate revenue, on general account alone, including surcharge, amounted to Rs. 11.51 crores, as compared with Rs. 10.63 crores in the previous year. The total expenditure on general account was higher by Rs. 28 lakhs at Rs. 9.08 crores. The total revenue on general and pilotage accounts taken together (excluding special receipts) rose from Rs. 10.86 crores to Rs. 11.75 crores and expenditure from Rs. 8.93 crores to Rs. 9.22 crores.

In respect of port development and modernisation, it would appear that an effort is being made to slow down the execution of vital programmes. Representatives of trade and industry have been clamouring for the expeditious implementation of what is popularly known as the "minimum scheme," outlined as early as in 1949, for the modernisation of the

AMERICAN LETTER

ELECTION CAMPAIGN AND U.N. MEETINGS

ANOMALIES IN AMERICAN ECONOMY MANY

From Our Special Correspondent

NEW YORK, *25th October*

OUTSIDE of the usual newspaper, radio and television turmoil of the election campaign, Africa and India have become the focal points of discussion in the United States. Indeed, India emerged in the General Assembly meetings of the United Nations as the champion of the new independent countries. This was a very constructive development. Reports of these discussions were disseminated widely throughout this country. The general American public is not particularly world-wise and international-minded. Despite their various national and racial family backgrounds, most people were too busy developing this country and making money to pay much attention to the outside world.

Thrust into leadership of the Western world, they are, let us say, infants in international diplomacy and world trade. To oversimplify the issue, there are still intelligent persons in this country, perhaps even specialists in their own field who do not know the difference between Budapest and Bucharest and where they are.

Outside of the few people who have business in India, the Far East in general and in Africa, the American people know very little, if anything, about these areas, particularly Africa. In passing, it may be observed that the new member delegates from the dark Continent behaved with great dignity and wisdom, unlike Premier Castro who spoke for more than four hours and Premier Khrushchev who took off one shoe and banged it on his desk which prompted the Chairman to dismiss the Assembly.

Emphasis On Trade and Economics

Both the election campaign for President of the United States and the United Nations meetings, in a sense, were eye-openers for the proverbial man in the street. The emphasis in both areas was really on trade and economics with the possible exception of occasional anti- and pro-Soviet political outburst. Both the campaign and the meetings made it quite clear that better living conditions, generally speaking, make for less social unrest and its unpleasant consequences. Domestically, the Democrats want to achieve greater prosperity by spending and spending. In order to achieve election, which Senator John F. Kennedy is trying to buy, there have appeared out of a blue sky predictions by so-called experts, including university professors, most of whom need extra money, that a new recession is around the corner. Deficit spending, of course, means deficit financing.

The Republicans, as stated previously, are for as stable a dollar as possible and with Budget surpluses which in certain areas require tightening of belts. The British have responded to such government appeals quite admirably. Outside of the farming areas, the U.S. urban population is not quite so constituted. Also, the recent rise in the price of gold in the so-called "free markets" have left additional doubts in the minds of people about the stability of the U.S. dollar.

At the present time, Mr. Nixon still seems to be ahead. But U.S. Presidential election campaigns are too long, there is too much mud-slinging and too many unsubstantiated accusations by the candidates. The last week is the decisive one and much can happen in the meantime.

There are a number of anomalies in the U.S. economy. Despite a dip in wages, personal income has risen. Wage and salary income dropped $400 million in September, while total personal income rose by $200 million to a total annual rate of $408,400 million, according to Government statistics.

The only trouble is that, in parenthesis, there is also the invariable phrase "on a seasonably adjusted basis," but there is no explanation how this "adjustment" is being computed. But the U.S. is statistics-happy to begin with and both the optimists, and the pessimists can prove their points. Also, statistics are lagging and it takes time before they are printed and, by that time, conditions may have changed. There is also the anomaly of extremely prosperous and depressed areas, owing to changing consumer demands, changing industrial and agricultural conditions and the weather.

According to official estimates, final figures for September will show a drop of unemployment to 3.4 million, as against 3.8 million in August. This would reduce the jobless rate of the total labour force from 5.9 per cent. in August to 5.4 per cent. in September. Yet, department store sales were off last month. For the year, as a whole, however, they ran about 2 per cent. ahead of the comparable period of last year. Steel is still in the doldrums, operating at only 50 per cent. of capacity or thereabouts. Industrial inventories and sales have declined. But there were optimistic Government guestimates. Estimates place 1960 exports at $19,500 million, owing to higher shipments of raw cotton and jet airliners. Imports are estimated at $15,000 million because of reduced receipts of such items as autos, coffee, cattle and oil products.

Activity Spotty

Despite all propaganda, there is no denying that U.S. business and industrial activity is spotty, sluggish and/or stable. It is a question on one's mental outlook and a question of semantics. Consumer buying of durable goods such as appliances and furniture has not come up to expectations. Housing starts, although improving, have been running well below the comparable period of 1959. Profit margins have narrowed and aggregate corporate profits are below the glittering prospects pronounced earlier in the year, which was to be regarded as the first of the "golden 1960s".

Despite these developments, the total output of goods and services in the U.S., employment, income and in most areas, investment and spending remain at near record levels. In recent weeks, the records of which have not yet appeared in statistics, the downward pressure in the economy seems to be lessening. The marketing of crops will also help a good deal. But two disturbing factors will be with us for the rest of the year and beyond. One is the uncertainty of the policies of the incoming President and of the new Congress. The other is the uncertainties of the foreign situation. This applies not only to the accelerated cold war between the East and the West but also to the fate and future of the new independent nations in Africa and elsewhere.

Owing to the vicissitudes of economics with which every developing country is confronted, the nations will need help. Both the East and the West will try to wean them from each other. It could be a considerable strain on the U.S.—*All Rights Reserved.*

(Concluded from next column)

needed to reinforce reserves, and repay when reserves are rising ... if drawing on the Fund is regarded as only a last resort then half its utility is lost because it will become to be seen as a crisis measure which will cause as much nervousness as it allays."—*All Rights Reserved.*

"OUTER SEVEN" CONFERENCE

A political and economic conference of the seven-member countries of the European Free Trade Association (Austria, Denmark, Norway, Portugal, Sweden, Switzerland, and the U.K.) is being organised by the U.K. Council of the European Movement. It will be held in London from the 7th to 9th inst. under the joint chairmanship of Sir Edward Beddington-Behrens and Mr. Alfred Robens. Leading members of the Governments of "the Seven" will attend the opening session or the dinner on the first day. The British Prime Minister, Mr. Harold Macmillan, will speak at the dinner, and Mr. Reginald Maudling, President of the Board of Trade, will speak at the closing session on the 9th inst.

The purpose of the conference is to exchange views on the Stockholm Convention in the light of its stated aims, namely, "to promote in the area of the association, and in each member State, a sustained expansion of economic activity, full employment, financial stability, and continuous improvement in living standards." The conference will bring together politicians, industrialists, bankers, and trade-union leaders of the seven countries. While the groups have opportunities of discussing their own problems among themselves, it is pointed out, the conference will provide a platform where different points of view can be exchanged in an informal manner without the need to feel encumbered by the passing of resolutions.

UNCOMMON SENSE IN MONEY MARKET

From Our Own Correspondent

LONDON, *28th October*

THIS week's reduction in the Bank Rate by ½ per cent. to 5½ per cent. has been accompanied by all the usual statements—that it does not really mean very much, that there is no change in the policy of credit restriction and that "continued restriction is necessary." The Chancellor of the Exchequer, speaking after the change at the Dinner of the Institute of Directors' Conference, had to reconcile this interest reduction with the speech he had made just a week before at the London Bankers' Dinner, when he was justifying all the various measures that were restricting credit. Mr. Selwyn Lloyd was speaking on both occasions to a well prepared brief and it would be too much to expect him to say anything of particular interest. He, however, made it clear on both occasions that the Treasury and the Government believed that demand is still, broadly speaking, in excess of supply and that credit restrictions are necessary to divert resources to exports and investment.

LONDON LETTER

But it would be a justifiable point to say that this indication of Government policy was negative and could not carry much conviction that it would succeed in its objective. This point was reinforced by the Governor of the Bank of England, Mr. Cobbold, at the Dinner, when he went out of his way to give a closer exposition of the Bank's views on monetary policy than is usual. And, here, he admitted "that monetary policy can only carry a part of the burden of economic adjustment and cannot be effective if it is expected to work against rather than in support of Government policy in fiscal and other fields." He also drew a comparison between interest rates in countries with a balance of payment surplus and those with a balance of payments deficit. He was concerned that countries with a surplus should be maintaining high interest rates and he hinted that he would not be opposed to interest rates in this country going down—this was widely interpreted as forecasting a cut in the Bank rate, although few thought that it would take place quite so soon after such a chorus of speeches on the need to maintain credit restrictions.

Credit Policy

For the moment, the Government have no intention of making it easier to buy goods on hire purchase, nor do they propose to relax the obligation of the clearing banks to maintain 1 per cent. of their deposits with the Bank of England. But Mr. Cobbold, in the earlier speech, already referred to, emphasised that credit policy should not be too rigid. He believed that monetary policy, when an economy was reasonably stable, was much more effective than it was at present fashionable to give it credit for. And one must suppose that, since the Bank rate is the most obvious weapon of monetary policy, the Bank of England is ahead of the Treasury in seeing the need for letting up on tight money.

The Governor of the Bank had also some useful things to say on hot money and the role of the I.M.F. He saw no cause of cheer because British reserves were going up as a result of a hot money inflow, encouraged by high interest rates. And it is to be hoped that as much notice was taken of his subsequent remark "nor shall I see cause to complain if our reserves fall because they (short-term money movements) go the other way. *This is what reserves are for.*"

In the Bank's view, moreover, some of the hot money inflow may be less volatile than is usually supposed. A good deal seems to have gone into the Gilt-edged market where prices have been encouragingly low and, short of any crisis, it will take more than small changes in interest rates to cause a selling movement of Gilts and the scuttling away of the hot money.

Finally, he stressed that the proper function of the I.M.F. was to provide the second line of reserves upon which Central Banks should draw freely and not only in time of extreme difficulty. The I.M.F. has for the past year had increased resources and, subject to borrowers pursuing proper financial policies, Mr. Cobbold said that he would like "to see countries draw on these facilities as a matter of ordinary business when they

BIRKMYRE BROTHERS LIMITED
P. O. BOX 15, CALCUTTA

BIRDS cover a wide field

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—iron ore, coal, manganese ore, limestone, dolomite, refractories... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

DOES MONEY ALWAYS DEPRECIATE?

HISTORICAL PRECEDENT NOT CONCLUSIVE

NOWADAYS, savers and investors are often told by a section of investment advisers that they should not buy ordinary life insurance policies or annuities in excess of their minimum needs but should put their wealth in real estate or commodities. Investors, in particular, are advised to prefer equities to bonds or other fixed yielders. This advice generally rests on the belief that there is a historical tendency for prices to rise. It is, therefore, argued that, even though the current return from investment in bonds may be higher than on equities, the actual yield on the bond holders' investment may be very much lower than the interest earned, when the loss in real capital value due to the price rise is taken into account. It is pointed out, as an illustration of this statement, that the real return for most war-time investors in Government bonds has been negative, the average annual rate of change of prices having been greater than the money rate of interest.

This problem of the possible fall in the value of one's savings is not merely of academic interest, because, for most people, savings involve a sacrifice of the immediate satisfaction that could have been secured from present consumption. From this point of view, every saver is interested in knowing whether he will stand to lose by putting his money, say, in the form of life insurance, post office savings and national plan certificates. The question of prize bonds is, of course, different, because it raises different issues. In India, some eminent economists have been contending that the colossal magnitude of deficit financing which we have undertaken during the second Plan period is corroding the value of people's savings and this has created a psychology in favour of gold, real estate and various commodities for storing one's wealth—decidedly a bad form of investment from the point of view of economic development of the country.

This whole issue, namely, whether there is any validity in the so-called historical law of prices to rise, has been examined very thoroughly by Prof. R. G. Lipsey of the London University in the latest issue of *Lloyds Bank Review* (October, 1960) in the light of the time series data of prices extending back to 1264. While there is a general paucity of data in regard to many time series extending back to previous centuries, the valuable work of Prof. Phelps Brown and Miss Sheila Hopkins has provided an index of prices in Britain for the last seven centuries, beginning from 1264. This remarkable index provides a reasonably accurate indication of variations over the last seven centuries in the cost of purchasing a constant bundle of goods. The main commodities included in this index are: farinaceous products, meat and fish products, butter and cheese, drink, fuel and light, and textiles. Variations in this index over the periods of ten and fifty years should give a reasonably general indication of the changes in the value of the saver's and investor's pounds.

Rising Price Trend

A close study made by Prof. Lipsey of the Brown-Hopkins index indicates that the average trend in British prices over the seven centuries from 1275 has been an increase of one-half of one per cent. per annum. This rising trend provides the basis for the postulated historical law of rising prices. But it is also clear from the index that there are many periods in history in which the price level movements *do not* follow the trend line. There are actually periods in which the price level *fell*, and there are other long periods in which there is no discernible upward or downward trend in the level of prices. The percentage changes between the main peaks and troughs of the price level over these seven centuries are as follows:

Period	*Number of years*	*Percentage change in price level*
1275-1525	250	+ 29
1525-1650	125	+550
1650-1744	94	− 38
1744-1813	69	+263
1813-1893	80	− 51
1893-1920	27	+183
1920-1932	12	− 59
1932-1959	27	+322

By comparing the value of the price index in each year with its value in the preceding year, Prof. Lipsey has found that there were 343 years in which the price level rose from one year to the next, and 328 years in which the price level fell, while, in 12 years, the price level held constant. The short-term trend is noted as follows:

The longest period of *uninterrupted* price rise was the thirteen years from 1940 to 1952; the next longest period was the seven years from 1912 to 1918; and there were only three periods of six successive years of price rises—1478-83, 1762-67, 1835-40. The longest periods of successive price decreases were the three five-year periods 1473-77, 1651-55 and 1926-30.

Prof. Lipsey, therefore, concludes that the price level fell from one year to the next a most exactly as many times as it rose, and that, before giving advice to savers and investors on the basis of the "historical law of prices" to rise, a detailed examination of price level movements will be necessary. Prof. Lipsey has done this by finding out whether the price level was higher or lower ten years from 1275, that is, in 1285. Then, this procedure can be repeated every year from 1275 until 1949, noting each time whether the price level was higher or lower ten years after the date in question. This procedure may also be repeated using a time horizon of fifty years. Starting at 1275, the price level fifty years from that date, is first examined. This procedure is repeated for every year until 1909, relating the price level in that year to the price level in 1959. The results of these calculations, according to him, are as follows:

When the time-span is fifty years, there are eighty-two instances in which the price-level fell by an amount between zero and 9 per cent. The next most frequent result is for the price level to rise by an amount not greater than 10 per cent. There are sixty-nine instances in which the price-level rose by an amount not greater than 10 per cent. over a half-century period.

When the time-span is changed to ten years, the frequency of price level increases upto ten per cent. (125 instances) is almost the same as the frequency of price level decreases between zero and nine per cent. (124 instances).

Bias Towards Inflation

The frequency distribution over a fifty-year time horizon does show a definite bias towards inflation. There are 635 years between 1275 and 1909, and a guess that the price level would be higher fifty years from the date on which the forecast was made would have been correct in 66 per cent. of these years and wrong in only 34 per cent. Nevertheless, much credit cannot be given to the "historical law" of price increases, as, in one out of every three instances, the implied assumption that prices would rise over the following half-century turned out to be quite wrong. When, moreover, one adopts the time span of only ten years, one will find that the tendency towards inflation becomes much less marked than it is over a fifty-year horizon. Between the years 1275 and 1949, for instance, the guess that the price level would be higher ten years after the year in question would have been right 57 per cent. of the time and wrong for 43 per cent. Further, the periods of price increases are not spread evenly throughout the seven hundred years taken for this review. The following table summarises the results of a guess taken every year of each century as to the change in the price-level over periods of ten and fifty years:

A guess taken in each of these years that the price level would be higher	*Percentage of correct guesses*	
	Fifty-year horizon	*Ten-year horizon*
1275-1299	60	36
1300-1399	43	48
1400-1499	60	48
1500-1599	99	48
1600-1699	57	81
1700-1799	91	47
1800-1899	45	75
1900-1909	100	46
1900-1949	..	80
	..	68

The table shows that, in most centuries, it was a fairly good bet that the price level would rise over a period of fifty years. Only in the fourteenth and the nineteenth, the odds favoured a fall in the price level, when the time horizon was fifty years.

Exceptions

The evidence of history is, however, fairly strongly in favour of inflation, if one's time horizon is fifty years, although there are some quite long periods which provide exception to this rule. Thus, the peak level of 216 in the year 1316 was not again exceeded until 1546, that is, as many as 230 years later. The peak level of 1650 was not surpassed for 61 years, nor that of 1711 for 82 years. It was more than a century before prices again reached the heights seen during the Napoleonic wars.

In the case of ten-year time horizon, the picture shows a marked variation. The bet that the price level would be higher ten years hence, would be wrong more times than it would be right. This is particularly so in the thirteenth, fourteenth, fifteenth, seventeenth and nineteenth centuries. In fine, the evidence of history does *not* support an argument that runs as follows:

"Favourable inducements to invest in bonds (with, say, a ten-year maturity period) should be discounted severely, because bonds do not provide a necessary hedge against the almost inevitable inflation."

A person following this advice would have gone wrong more times than he would have been right in most of the centuries between 1275 and the present time.

From this discussion, Prof. Lipsey draws the conclusion that the basis for the widespread belief in the historical law of rising prices appears to be the fact that there were five major inflations in the seven centuries under consideration. The inflations which caused permanent increases in the price level have been concentrated into only three historical periods, the other two inflationary periods being followed by almost serious deflations. The first inflation between 1525 and 1650 was due to the debasement of the coinage by the Tudor Monarchs and the influx of Spanish gold and silver from the New World. The last half of the eighteenth century—from 1744 until the Napoleonic wars—was the second great period of prolonged inflation, the likely cause of this inflation was the rapid growth in the number of banks during this period leading to a large expansion in the money supply. The third period of inflation is associated with the Napoleonic wars (1790-1813). The price level rose rapidly from 1773 and reached the peak in 1813. The last two periods of inflation are those associated with the two world wars of this century. During the first World War, the price level rose sharply, but fell again quite drastically throughout the 1920's. The price level again rose severely during the second World War; this price level movement was not even temporarily reversed, so that a permanently higher level of prices came to be established.

The close examination of the historical data by Prof. Lipsey indicates that (1) there have been a number of major inflationary periods. Two of them, Napoleonic war period and the first World War period were followed by deflations of more or less equal severity; (2) there

THIS IS AN ANNOUNCEMENT ONLY AND NOT A PROSPECTUS.

The Consent of the Central Government has been obtained to this issue.

A Licence has been granted by the Central Government for effecting a substantial expansion of the Company's existing industrial undertaking.

A copy of the Prospectus having attached thereto documents as required under Section 60 of the Companies Act, 1956, has been delivered to the Registrar of Companies, Maharashtra, for registration.

Application will be made to the Bombay Stock Exchange for permission to deal in and for an official quotation of the shares of the Company.

The Subscription List will open at the commencement of Banking hours on the 14th day of November, 1960, and will close at the close of Banking hours on the 19th day of November, 1960, or earlier at the discretion of the Directors but not before the close of Banking hours on the 16th day of November, 1960.

UNDER SECRETARY TO GOVERNMENT 7 NOV 1960 PUBLIC DEPARTMENT

BAJAJ AUTO LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913)

CAPITAL

AUTHORISED	
1,00,000 Shares of Rs. 100 each	1,00,00,000
ALREADY ISSUED, SUBSCRIBED AND PAID UP	
9,900 Equity Shares of Rs. 100 each	9,90,000
PRESENT ISSUE	
60,100 Equity Shares of Rs. 100 each	60,10,000
As per Special Resolution passed by the Company on 15th October 1960 these shares are offered as follows :—	
TO EXISTING SHAREHOLDERS	
25,740 Equity Shares of Rs. 100 each at par	25,74,000
Shares not taken up by the existing shareholders or their nominees will be subscribed by the Directors and their friends.	
FOR PUBLIC SUBSCRIPTION	
34,360 Equity Shares of Rs. 100 each offered at par to the public for subscription in cash	34,36,000
Rs.	60,10,000

TERMS OF PAYMENT OF SHARES OFFERED TO THE PUBLIC

On application ... Rs. 25 per share
On allotment ... Rs. 25 per share
Balance ... Rs. 50 per share, as and when called in accordance with the Articles of Association, but not earlier than six months, after the date of allotment. No call shall exceed Rs. 25 per share and no call will be made payable within three months after the last preceding call was payable.

Rs. 100 per share

Applications for shares from the public must be for a minimum of 5 shares or for multiples of 5 shares.

The shares of the present issue will not be entitled to any dividend that may be declared on the Equity Shares in respect of the Company's financial year ending on 31st March, 1961.

OBJECTS OF THE COMPANY

The object of the Company is principally to carry on the business of assembly, manufacture and sale, distribution, dealership, import, export, etc., of all types of automobiles, in particular, of VESPA SCOOTERS and VESPA THREE-WHEELERS and to carry on business and activities, ancillary or supplemental thereto and other objects as set out in detail in the Memorandum of Association of the Company.

HISTORY OF THE COMPANY

This Company is pioneer in introducing Autorikshas and Scooters in India. In the year 1948, the Company commenced import of components in S.K.D. condition and assembled and built Autorikshas and Scooters.

In the year 1953, the Company alone submitted a scheme for the progressive manufacture of Scooters and three-wheelers in India to the Tariff Commission.

The Government of India has issued a Licence No. L/7(5)/N-53/59 dated 25th September 1959, for the manufacture of Scooters and three-wheelers with an installed capacity of 6,000 numbers per annum on a single-shift working.

In the draft outline of the Third Five Year Plan published by the Planning Commission, it is stated that the production of Scooters, Motor-cycles and three-wheelers in India is estimated at 16,000 units per annum by the end of the Second Five Year Plan, and the Commission have proposed a target of production of 48,000 Scooters, Motor-cycles and three-wheelers to be reached by the end of the Third Five Year Plan. The Company will, therefore, in due course apply to the Government of India for the expansion of its installed manufacturing capacity.

The Company has commenced production of Scooters in the month of June 1960, and has produced 476 Scooters in the month of September 1960.

PLANT SITE

The Plant will be located near Poona in the State of Maharashtra.

COLLABORATION AGREEMENT

The Company has been granted a Licence by Messrs. PIAGGIO & CO., Genova, Italy, for the manufacture of VESPA SCOOTERS and VESPA COMMERCIAL THREE-WHEELERS (AUTORIKSHAS). They have agreed to provide the technical know-how for the manufacture of the same, and an agreement for the Licence and the technical know-how has been entered into with them on the 18th February 1960.

Messrs. PIAGGIO & CO. are the pioneers in the Scooter Industry in the World. They, at present, produce more than a lakh and fifty thousand Scooters per year in their own plant at Pontedera, near Pisa in Italy; and VESPA SCOOTERS are being manufactured under Licence from them in five other countries, namely, France, Great Britain, Germany, the Netherlands and Spain.

Messrs. PIAGGIO & CO. have also agreed to train Indian Technical Personnel in their factory in Italy.

BROKERAGE

Brokerage will be paid by the Company to the members of a recognized Stock Exchange and to Banks at the rate of Rupee One per share allotted on the application bearing their stamps.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The minimum subscription in respect of the public issue on which the Directors will proceed to allot is Rs. 34,36,000.

The Capital requirement is estimated as follows:—

	Rs.
1. Cost of land, building, power and water	21,00,000
2. Cost of machinery, equipment, erection and electrification	42,00,000
3. Working Capital	7,00,000
Rs.	70,00,000

This requirement is proposed to be financed as under:—

			Rs.
1. Existing Share Capital			9,90,000
2. Present Issue:			
Existing shareholders, etc.		Rs. 25,74,000	
Public Subscription		34,36,000	60,10,000
		Rs.	70,00,000

PAST DIVIDENDS

Year ended	Profits before taxation	Profits after taxation	Rate of dividend
	Rs.	Rs.	
31-3-1956 ..	2,50,909	1,01,909	..
31-3-1957 ..	4,04,748	1,75,668	10%
31-3-1958 ..	3,59,605	1,70,356	18%
31-3-1959 ..	1,80,603	72,308	40%
31-3-1960 ..	2,67,652	1,45,152	20%

MANAGING AGENTS

Jamnalal Sons Private Limited, who were appointed Managing Agents of the Company in the year 1954, have been reappointed for a further period of five years from 16th August 1960, on a remuneration of 10% commission on the net profits of the Company subject to a minimum remuneration of Rs. 12,000 per financial year only in the event of absence or inadequacy of profits.

IMPORT LICENCE FOR MACHINERY

The Company has been granted by the Chief Controller of Imports a Licence for Rs. 24,97,150 in favour of the Company on cash basis under D.L.F. Line of Credit for imports of capital goods for the manufacture of Scooters and Autorikshas.

INSPECTION OF DOCUMENTS

Copies of the Prospectus and the documents mentioned therein are open for inspection at the Registered Office of the Company.

APPLICATIONS AND ALLOTMENTS

All applications must be in the Form accompanying the Prospectus which can be obtained from the Company's Office and the Company's Bankers and Brokers. All application forms properly completed must be lodged together with the amount payable on application with the Company's Registered Office or with any of the following Bankers, namely:—

1. THE PUNJAB NATIONAL BANK LTD., Karimjee House, Sir Phirozeshah Mehta Road, Bombay-1
2. THE CENTRAL BANK OF INDIA LTD., Mahatma Gandhi Road, Bombay-1

or with any of the Offices of the said Bankers in the following cities, namely, Ahmedabad, Bangalore, Baroda, Bombay, Calcutta, Delhi, Hyderabad, Indore, Jaipur, Kanpur, Madras, Nagpur, Poona, Rajkot and Trivandrum.

All Cheques or Drafts drawn on Banks situate at places other than those mentioned above should include a sum at the rate of 25 nP per cent. (minimum 62 nP) of the amount remitted to cover all the commission and Bank charges; otherwise the application is liable to be rejected.

Cheques or Drafts should be drawn in favour of "BAJAJ AUTO LIMITED, A/C. NEW ISSUE." For applicant's protection the Cheques or Drafts should be crossed "A/C. PAYEE ONLY." A separate Cheque or Draft must accompany each application.

The allotment will be indicated by the despatch of an allotment letter, but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or part without assigning any reason. Where the application is rejected or not accepted in full, the whole or any balance of the application money received as the case may be, will be refunded without any interest to the applicant (in which event, the Bank's commission, if any, will be payable by the applicant) within 2 months from the date of closing the subscription list.

ISSUE OF SHARE CERTIFICATES

Share certificates will be available for issue in exchange for letters of allotment within 9 months of allotment.

DEVELOPMENT OF WOOL IN INDIA

WHAT PRIVATE SECTOR SHOULD DO

BY A CORRESPONDENT

A REFERENCE was made to certain aspects of wool growing industry in this country by Mr. Kailashpat Singhania, Chairman of the Raymond Woollen Mills, in his speech at the annual meeting of the Company held at Bombay on 1st July 1960. He made suggestions pertaining to grading of wool and emphasised the need for improving the breeds so as to obtain finer quality which, he said, would not only offer a better outlet for indigenous manufacturers but fetch a higher value when exported. It was also strongly advocated that concentrated efforts should be made and suitable measures adopted by the Government to achieve the ultimate objective of self-sufficiency in the manufacture of items required by defence services.

Before proceeding further, it would be appropriate to examine the conditions under which sheep breeding is carried on in this country and those responsible for it. It is true that Rajasthan is one of the States which produces the largest quantity of wool. Hence it will be reasonable to state that whatever is good for the shepherds of Rajasthan should naturally be good for the shepherds of other States and it is an incontrovertible fact that the general conditions under which these shepherds work do not differ from State to State. It is also an irrefutable fact the condition under which these brave and worthy sons of India carry out their respective functions are deplorable. They do not receive any aid or contribution from the said State Governments and/or the Central Government, nor have they ever received any kind of help in any form or manner from the wool trade, industry or the public.

Role of Shepherds

A fact that must not be lost sight of is that shepherds are nomadic tribes and they are generally compelled to travel thousands of miles on foot, along with their family and livestock, in search of proper water and appropriate pastures. They do not have a fixed abode and are subject to natural calamities such as floods, famines and epidemics. Apart from these calamities to which they are constantly subject, there is an additional threat to their very existence when their flocks go astray in search of pasture lands and sometimes damage the crops belonging to farmers who then abuse and assault the poor and illiterate shepherds. It will, therefore, not be an exaggeration to state that the Indian shepherd, in spite of all these difficulties, survive and is in a position to produce an adequate supply of wool which no other shepherd in the world can produce in similar circumstances.

It will not be out of place to mention here that these worthy sons of our soil, even with all the hazards to their lives, make a notable contribution to the country's economy. Exports of wool earn foreign exchange to the tune of Rs. 10 crores annually. The shepherds also supply more than Rs. 10 crores worth of wool for home consumption, and wool for making carpets, etc., mutton, bones, hoofs and the like, skins, and manure.

Viewed thus, foremost attention should, indeed, be paid to the pressing needs of shepherds; they should have a land of their own for proper settlement, so that they could be stationed permanently in one particular area to avoid migration from time to time. In the absence of such a move, it will be useless to embark on any mission to improve the quality of wool. No doubt this task in itself is so gigantic, because the area involved is rather large, and it is a matter of doubt whether the Government can handle such a scheme successfully. It is postulated by some agencies that the Government must do this or that, but one ventures to ask: Why should we expect the Government to do everything in our country and can this not be tackled by those interested in the commodity?

It is an established fact that, in view of the poor economic conditions of our country, no import licences will be granted for import of woollen piecegoods for many years to come. This in itself is a blessing in disguise for the woollen manufacturers of this country, as they have not to fear foreign competition. This will be an excellent opportunity for the woollen industry to prove to the Government beyond a shadow of doubt that what the latter could not achieve for so many years past can successfully be achieved by the private sector. And this can be done as follows:

(a) Steps to be taken by the private sector to establish a farm of at least 10,000 acres. Special attention should be paid to the selection of the breed of ewes and rams and the same should be run on commercial basis in an economical and appropriate manner so as to prove to the Government that their academic experiments for well over 15 years have not borne the desired results.

(b) Similar large-scale farms for finer wool may be established in the Nilgiri region where the flocks should consist of foreign rams for the purpose of cross-breeding with indigenous ewes. South India is purposely selected, as there is more population of sheep there than in the North where better type of wool is obtained. By following this suggestion, the North breed will remain unadulterated, while, in the South, the advantages of improved cross-breeding will thus be achieved.

(c) Woollen manufacturers should voluntarily guarantee that they would be willing to purchase the available stock of particular count at a precise price irrespective of large or small quantity.

Large-scale Scheme Wanted

In the humble opinion of this correspondent, a large-scale scheme with proper management is vital and will also demonstrate to the Indian shepherds the advantages of better shearing and grading or sorting.

Apart from the suggested establishment of farms on an organised scale, due attention must be devoted to the sorting and grading of wool. Although there is at present compulsory Government grading scheme, which only applies to wool exported out of India, it is also a well-known fact that the scheme is still in its infancy. The scheme confines itself to colour classification and the approximate yield of the material packed and tendered for export. Even the yield is so inaccurate that foreign buyers do not recognise it and have the wool tested in independent testing houses at destination. The Government has so far neither cared nor contemplated to sort and grade the wool according to its quality, nor does it have proper wool sorters. Needless to mention that a wool sorter is a craftsman who has been trained by years of experience; he must possess important faculties such as good eyesight and a keen sense of touch and be able to render a prompt and reliable decision. Appropriate attention must be devoted to induce our younger generation to study wool technology and adequate facilities to be provided for this class of people to gain the actual experience in sorting, grading, etc., and other know-how, so that when such personnel is ready, they can be employed to check up the wool at the source at the time of shearing, before any adulteration can possibly be attempted by interested parties.

TEXTILE INDUSTRY IN SPAIN

The Government of Spain has announced the programme for modernising the textile industry. The broad details of the programme are as follows:

The industry will form a cotton textile organisation. Fundacion Textil Algodonera, to which will join companies on a voluntary basis. The organisation may finance operations by fixed interest bearing bonds. Credit may also be granted by the Bank of Industrial Credit.

In order to stimulate technical and commercial reorganisation and concentration of smaller units, concerns with spindles and looms not exceeding 10,000 and 150, respectively, will be exempt from stamp and issue duties.

Preferential treatment will be accorded to them in foreign exchange allocations for buying machinery abroad when necessary, particularly when re-equipment is required for competing in the export market. On the official side, the modernisation plan will be under the control of a co-ordination committee and also of an all-purposes committee which will fix a four-month period during which it will accept applications for assistance, after which development plans based thereon will be formulated during the succeeding three months.

Arrangements will likewise be made to meet expected redundancy arising from technological improvements.

The need for modernisation of machinery and equipment in the textile mills of Spain is urgent because a large part of the equipment is obsolete. Half the looms in existence is 40 years old and 20 per cent. of the spinning machinery was installed before 1900. What is worse, the Spanish textile industry suffers from a proliferation of small units with less than 10,000 spindles where the mass of outdated machinery is concentrated.

The industry's output capacity exceeds normal home and export demand. Notwithstanding the obsolescence of equipment, the industry has endeavoured to step up exports markedly in recent years. The value of textiles actually exported in the first half of 1960 was as much as $21.7 million, as against $16.4 million and $5.4 million in the whole of 1959 and 1958, respectively. The total exports for the entire year are expected to be of the order of $45 million. The industry has, of course, been assisted mainly by the Government which has exempted textiles manufactured for export from internal indirect taxation (12 per cent.) and permitted exporters to use the exchange accruing from their sales to buy an equivalent amount of foreign cotton.

NEW "TEFLON" FIBRE

The Du Pont de Nemours International, S.A., Switzerland, has announced the release of a new "Teflon" PEP-fluorocarbon monofilament fibre (250 deniers and 1,200 deniers) and 100 denier multifilament yarn of "Teflon," the lightest weight yarn produced of the material for experimental use. The prices quoted are $35 and $75 per lb., respectively. The Company has also announced the production, on a commercial scale, of 200 denier multi-filament "Teflon" fibre, which was hitherto being sold in experimental quantities, at $27 per lb. Further, the price of 400 denier and 1,200 denier multi-filament yarn and staple fibre of "Teflon" TFE-fluorocarbon has been revised downward from $20 to $14 per lb.

It is claimed that the "Teflon" fibre has outstanding chemical resistance, for which there is no known solvent. The fibre retains its strength even after prolonged exposure at operating temperatures ranging from minus 100 degrees Fahrenheit to plus 500 degrees. The fibre is completely mildew-resistant and is not degraded even after years of outdoor exposure to ultra-violet rays. This combination of properties of "Teflon" has, among other things, led to the development of greaseless bearings lined with the fibre, and to use in packings, seals, filters and protective suits. The new monofilament is believed to be potentially useful in such fields as chemical distallation, in vacuum filters of window screen construction, and in brushes, wherein the bristles, made of the new monofilament, can be dipped in any acid or solvent without damage.

Nearly 100 companies in the United States are producing commercial fabrics and other products of "Teflon" at present.

U.K.-HONG KONG TEXTILE PACT

The criticisms levelled against the cotton textile export ceiling agreement between Hong Kong and Great Britain by the textile interests in Hong Kong were referred to in these columns last week. A recent report from this Colony avers that a group of influential textile leaders has launched a campaign to seek "further consultation" with Lancashire regarding the present textile pact. The group is using Clause 12 of the pact as the basis of the campaign to seek suspension of the pact. The clause states that, if, during the currency of the pact, there should occur any major changes in the pattern of U.K. import trade in cotton textiles to the detriment of either the Hong Kong industry or Lancashire industry, there should be further consultation at the request of either industry to consider whether any consequential modifications to this pact are necessary.

The campaign was launched following the Hong Kong Government's reported move to map out a "mutual benefit" plan in order to renew the pact when it expires on 1st February 1962. The plan, which was said to be mutually beneficial to Hong Kong and Lancashire, will be in the form of increasing the existing quota. It is stated that Lancashire manufacturers are likely to exert pressure through the Government in order to renew or extend the pact. Mr. N. C. Chang, Chairman of the Federation of Hong Kong Cotton Weavers, is reported to have said: "We are surprised at this shocking news. In fact, we are contemplating suspension of operation of the pact, in view of rapidly increasing imports of cotton piecegoods into the U.K. from other European countries. Owing to the changing pattern of U.K. import trade, the reason for the Hong Kong Lancashire pact is no longer there."

Details regarding the offer of Japan to sell textile machinery and equipment to Pakistan were discussed by a mission sponsored by the Japanese Machinery Exporters Association with the officials of the Pakistan Ministry of Industries at Rawalpindi recently. Japan has agreed to finance 355,000 spindles and 3,000 looms worth $20 million (£7.143,000) for the production of finer quality cloth. The machinery will be supplied on an individual basis by Japanese industrialists to their Pakistani counterparts. Japan signed an agreement with Pakistan in 1953 for the supply of textile machinery on the basis of deferred payments, and, under that agreement, Japan supplied 60 per cent. of the present spindles. Most of the remainder came from Britain. The second Five year Plan envisages the installation of an additional 550,000 spindles and 5,000 looms to raise the production of yarn from 380 million lbs. to 520 million lbs.

The trading practices of Japanese exporters of wool textiles were defended recently at Bradford by Keiichi Matsumura, Commercial Counsellor at the Japanese Embassy in London. They have been criticised for the extensive use of English language markings which, it is alleged, are calculated to give the impression that the goods are of English origin. Mr. Matsumura explained that the Japanese Government's system of inspecting exports had been tightened and new standards of requirement were such as to remove causes for complaint. The new code was perhaps a little looser than the International Wool Textile Organisation's code of fair trading practices, but he believed it to be reasonable. Many Japanese manufacturers, he explained, were not members of the I.W.T.O. and it was not easy to impose the I.W.T.O. code on non-members. One difficulty, he added, rose from an apparent prejudice against Japanese goods in certain markets, which preferred to see goods marked "Foreign" rather than "Made in Japan".

MORE ON COTTON BOARD'S CONFERENCE

MANPOWER RETENTION AND PROMOTIONAL SALES DRIVE URGED

From Our Special Correspondent

MANCHESTER, 25*th October*

MANCHESTER LETTER

WHEN the representatives of employers and trade unions in the spinning and weaving branches of the Lancashire cotton industry meet at the end of this week to discuss the claim for shorter working hours, they will face a virtual *fait accompli*. The decision of the textile finishing trade to arrange for the introduction of a 42½-hour week from the end of next month has put the spinning and weaving employers on the spot. In reality, it had been generally accepted in the industry that some concession was almost inevitable, but it now looks as if the negotiations will be concentrated on the hours to be worked when shifts are in operation. In this instance, the unions have claimed that the 38½-hour week should be reduced to 37½ and those operatives already employed on a 37½-hour week should receive a compensating bonus.

The tight labour situation was frequently referred to during discussions at the Cotton Board Conference and, again, it was widely conceded that, to encourage new entrants, the terms and conditions offered must be at least as favourable as those in rival trades. The need to retain manpower, no less than to stimulate a bigger intake of young workers, is of paramount importance if the industry is to take full advantage of the current reconstruction programme. Finishers are not the only textile workers to secure a shorter week; operatives in the silk trade are to work 42½ hours weekly from the New Year and a claim is pending in narrow fabric manufacture.

Conference Roundup

Those who attended the Harrogate conference took due note of the major issues which were debated, but, amid the traditional spate of words, it is easy to miss some quite important points which crop up in discussion or as a sideline. In the final debate after Lord Rochdale's statement, Mr. W. T. Winterbottom was closely questioned about his previously expressed views that further scrapping of machinery would be necessary beyond the scale already arranged under the redundancy programmes. He reiterated his opinion that, during the re-equipment phase, more plant would have to be dismantled.

The average count of yarn spun in the industry was becoming steadily coarser, he pointed out, and it only needed to go a further 10 per cent. coarser to involve a reduction of another one million spindles within the next three years. This did not mean, he emphasised, that fewer operatives would necessarily be employed. The extension of shift-working was a vital factor and the labour shortage was likely to persist. On this point, Lord Rochdale observed that only twelve months previously any speaker who had suggested a shortage of labour in the cotton trade would have been ridiculed, but the Cotton Board's inquiry into the likely requirements of young workers over the next five years had shown that twice as many would be needed as the present rate of recruitment. Millowners had estimated they would require about 7,200 newcomers a year over the next five years.

Promotional Plans Favoured

Several speakers called attention to the importance of publicity in promoting the sale of cotton goods. In addition, it was clearly felt that more statistical information should be provided by the Cotton Board on the lines of that supplied by the Man-Made Fibres Federation. Teenage spending power was inevitably mentioned as a sector which obviously required close attention, but it is hardly likely that any farseeing distributor would ignore the size and scope of such a market in this day and age.

In connection with any promotional sales drive, the suggestion of a London centre for cotton, on similar lines to those catering for other fibres, was mentioned. There appears to be some division of opinion within the industry as to whether this project should be operated by individual firms or by the trade as a whole, but Mr. G. D. Hughes, the merchanting member of the Cotton Board, pointed out that not every firm had a London office. He felt that a centre where information could be obtained about cotton and interested buyers put in touch with producers might have favourable results.

In addition to providing news about the response to the finishing reorganisation scheme, Lord Rochdale, in answer to a question, clarified the prospects about the possibility of a re-equipment grant being provided for this section as in spinning and weaving. "It seems to me a pretty good bet that, provided the minimum targets are reached by the sections as regards scrapping, there would not be much doubt that the re-equipment grant will be made to the finishers as in the other schemes," he declared.

Seasonal Export Demand

One aspect of the export situation which is not always fully recognised was mentioned by Mr. F. E. F. Spiegelberg, the Manchester merchant. He pointed out that Lancashire shippers were greatly helped in pre-war days by having a large export offtake in the Southern Hemisphere. The seasons in the countries in that part of the world are the reverse to Britain's, so that the markets of Australia, New Zealand, South Africa and the Argentine were keeping merchants and finishers busy at times when they would otherwise have been slack. As many of these countries have now established their own industries, the impact of seasonal fluctuations in demand has become a much more serious problem.

Mr. Frank Winterbottom's contributions to these conferences in the past have often created much interest. His remarks on this occasion were no less to the point. "So far concentration seems to have reduced capacity too much," he declared. On the rise of foreign cloth imports, he said: "Presuming that what is bought and financed continues to be sold, the total yardage figures seem to throw doubt on the estimate of demand that formed the basis for the redundancy schemes in our industry here."

Part of the decline in Britain's cotton textile export markets could be attributed to the fact that the Government had not done all it could to arrest this erosion, Mr. Winterbottom contended. In the previous week, the Indian Government had made an unparalleled decision to permit no imports whatever of Lancashire cotton cloth, for balance of payments reasons. "The whole position has an air of unreality," he continued, and said: "On paper we are granted imperial preference of 40 per cent.—in practice, we get not the slighest advantage. Did we make the wrong decision when our industry declined years ago to consider a linking of two-way trade in cotton textiles with India?"

More Comment on Imports

Imports of cotton cloth into Britain in the first seven months of the year aggregated more than half of Lancashire's own cotton cloth production over the same period. Sir Alfred Roberts, General Secretary of the Cardroom Workers' Amalgamation, one of the three principal cotton unions, gave the comparison in a report which showed that the overall figure for cotton cloth imports to the end of July was approximately 410 million yards. "It is true, he said, that some cloths are imported for processing and re-export, but this fact by no means accounts for the substantial increase, most of which is taking the place of our products."

The three countries with whom Lancashire had a voluntary agreement restricting shipments—Hong Kong, India and Pakistan- had increased them by over 58 million yards in the seven-month period. These increases, however, were provided for and were accepted. What was most disquieting was the increase in imports from other countries. These amounted to 114,500,000 yards in the seven-month period, as compared with 58 million yards in 1959. There had also been a further increase of 32 million yards in arrivals of other cotton cloths.

Sir Alfred said that the export situation continued to deteriorate also, although figures were not so startling as in the case of imports. Rather was it a steady decline, year by year, in both cloth and yarn. Cotton cloth exports for the first seven months of the year were 3 million yards less than the all-time low figures of 1959 and approximately half what they were in 1954.—*All Rights Reserved.*

CHANGING FACE OF WORLD COTTON ECONOMY

SOME BASIC FACTS ABOUT PRODUCTION AND DISTRIBUTION

IN spite of the serious inroads made by artificial fibres on the market for cotton in recent years, the latter continues to be the major apparel fibre of the world—in 1959, for instance, it accounted for 63.6 per cent. of the world fibre consumption. But cotton's share in total world fibre consumption has been, and is steadily declining. In 1949, cotton accounted for 69.3 per cent. of world fibre consumption while, ten years after, that is, in 1959, it was responsible for only 63.6 per cent.

Cotton is truly an international material, in that it is produced in over sixty countries from a total sown area of 80 million acres. Although cotton growing is thus widely dispersed geographically, the major portion of production is concentrated in a few countries which have the agro-climatic conditions suitable for this crop. Thus, four-fifths of the world acreage under cotton is shared between six countries. India accounts for 24 per cent. of world cotton acreage (19.3 million acres), U.S. for 19 per cent. (15.1 million acres), China for 19 per cent. (15.0 million acres), U.S.S.R. for 7 per cent. (5.3 million acres), Brazil for 6 per cent. (4.6 million acres) and Pakistan for 4 per cent. (3.4 million acres). Of the total world production of 58 million bales (of 400 lbs. each), nearly 75 per cent. of production is accounted for by four countries. India contributes 9 per cent, (5 million bales), U.S.A. 31 per cent. (17.8 million bales), China 19 per cent. (11.0 million bales) and U.S.S.R. 15 per cent. (8.9 million bales).

Wide Disparity in Yield

Thus, it is seen that India, which has the highest acreage under cotton, accounting for 24 per cent. of the total, contributes only 9 per cent. of total world production, while the U.S., with 19 per cent. of the area under cotton, contributes as much as 31 per cent. of world production. This is due to the wide disparity in yields in these countries. In fact, cotton shows the widest disparity in yield from country to country. Average yields ranging from 700 to 900 lbs. per acre are recorded in minor cotton-growing countries such as Israel (934 lbs.), El Salvador (703 lbs.), and Guatemala (706 lbs.), and in the major cotton-growing countries, it varies from 90 lbs. in India to 329 lbs. in the U.S. and 448 lbs. in Egypt. The world average works out to 277 lbs. roughly, which is almost three times the Indian yield.

As with yield, so with staple and fineness of cotton. The longest and finest cotton in the world, Sea-Island cotton grown in the West Indies, has a staple length of 1¾" to 2", whereas the shortest staple cotton, Comilla, grown in India and Pakistan, has a staple length of ¾". The following table gives the percentage of production by staple length in some of the major producing countries:

(Approximate)

	1⅛" and above	1-1/32"-1¼"	1" to 1-3/32"	13/16" to 31/32"	Less than 13/16"	Total
U.S.A. ..	0.5	3	72.5	24	..	100
China ..	..	..	..	85	15	100
U.S.S.R. ..	8	8	83	1	..	100
India ..	..	..	10	60	30	100
Egypt ..	50	50	..	..	..	100

Raw cotton utilisation is even more widely distributed than production. Every country in the world uses cotton, the annual consumption aggregating 55 million bales (of 400 lbs. each) or over 95 per cent. of yearly production. Leading cotton consuming countries are the U.S. (10.5 million bales), China 10.2 million bales), U.S.S.R. (7.3 million bales), India (5.2 million bales) and Japan (2.9 million bales). It is noteworthy that China, a comparative newcomer in the industrial field, consumes as much cotton as the U.S., both of which together account for 38 per cent. of the world's consumption. India consumes only 10 per cent. and Japan 5 per cent. *Per capita* consumption of cotton also shows wide divergence from country to country, reflecting the standards of living, *per capita* incomes, mode of living and climatic conditions. Thus, *per capita* consumption is highest in North America, as high as 21.2 lbs., while in Europe it is almost half of this, namely, 10.7 lbs. Oceania ranks third, with a *per capita* consumption of 8.7 lbs., followed by Central and South America (7.3 lbs.) and Asia (4.8 lbs.). *Per capita* consumption is lowest in Africa, at 3.1 lbs.

The main cotton-producing countries like the U.S.A., U.S.S.R., China and India utilise by themselves a large proportion of their production. Consequently only a minor portion, that is, about 28 per cent. of world production, moves in international trade. The same is the case with cotton textiles. Out of the world production of 5.8 million metric tons, only 10 per cent. enters world trade. The main exporters of cotton textiles are Japan (134,000 metric tons), India (96,000 metric tons) and U.S.A. (59,000 metric tons).

The U.S. tops the list of producers of cotton textiles in the world, with an output of 1.4 million metric tons. China produces 0.9 million metric tons and ranks second. U.S.S.R. accounts for 0.7 million metric tons. The share of India and Japan are 0.5 million and 0.4 million metric tons, respectively.

The picture of the world cotton textile industry has changed substantially since the turn of the century. A remarkable feature is the decline of the importance of W. Europe—the cradle of the textile industry—as a producer and exporter of cotton textiles. It is quite unlikely that it will ever be able to recapture the lost position. With most of the producing countries building up their own cotton manufacturing industries. Europe's importance in world textile economy is progressively dwindling.

T.C. TO REQUISITION COTTON FOR MILLS

With the new crop movement gathering momentum in the Punjab and Berar areas, the Government is poised for immediate action to enforce the cotton control by requisitioning cotton, if prices threaten to rise above the ceiling. In a Press Note issued on Friday the 28th inst., the Textile Commissioner has invited mills to approach him, in case prices tended to rise above the ceiling in these areas, to requisition cotton for them against their quotas. Detailing the procedure, the Press Note adds:

"Mills are requested to intimate the Textile Commissioner their immediate requirements of cotton from each of the areas where it has started moving, mentioning the varieties required in accordance with the Schedule 'A' of the Textile Commissioner's notification dated 30th August, 1960 and the balance of the quota for the current season which has not been utilised.

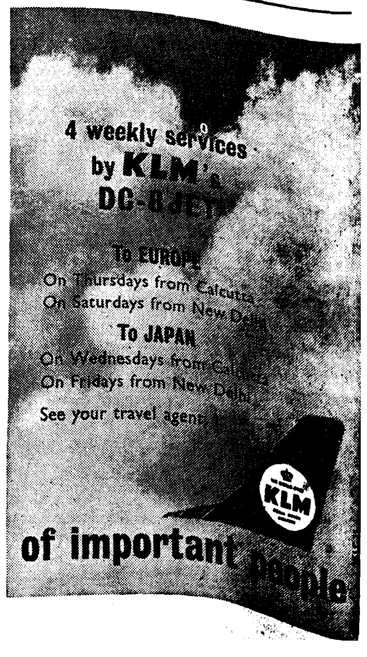
"While every effort will be made to meet the minimum requirements of the mills, there is no guarantee that the quantity asked for will be made available to them.

"With a view to ensuring that the quantities released are taken delivery of in proper time, mills which require the cotton to be requisitioned, will deposit with the East India Cotton Association Ltd., Bombay, along with a copy of their application, an advance equal to Rs. 25 per bale which will be returned after the delivery is completed. In case the full quantity is not requisitioned against such applications from mills, the deposit on such balance will be returned. If, however, the cotton requisitioned is not taken delivery of by the mills as required by the requisitioning order, this deposit will be liable to be forfeited."

The announcement has been received with considerable anxiety by the cotton trade which sees in it the danger of new crop stocks with the trade, which are comparatively small, being requisitioned. If this were done, traders point out, it will create a scare which will make the marketing of crop difficult. They wonder whether the Government will dare to requisition *kapas*, without which it will be impossible to bring down the price of lint cotton.

U.S. COTTON ACREAGE FOR 1961

U.S. cotton farmers can plant 18,398,424 acres of upland cotton next year, according to the acreage announcement for 1961 made by the Secretary of Agriculture, Mr. Benson. This is 2,088,424 acres more than the initial acreage allotment for this year's crop. On account of a choice in the programme the farmers were eventually allowed to plant 17,527,880 acres this year. The allotment for next year's crop is thus 870,544 acres more than the final plantings this year. The 1961 acreage is calculated to produce a crop of 15.56 million bales (of 500 lbs. each) of upland cotton.



REHABILITATION ALLOWANCE FOR SUGAR INDUSTRY

I.S.M.A.'S PLEA FOR ACCEPTANCE

BOTH the sugar industry and cane growers are awaiting the Tariff Commission's verdict on the price-linking formula and the Government of India's decision thereon. One of the specific issues referred to the consideration of the Commission, as readers are aware, relates to rehabilitation allowance as a prior charge on profit. For quite a long time, the sugar industry has been claiming the provision of such an allowance in the price-linking formula. In its report on the cost structure of sugar and fair price payable to sugar industry, submitted in September last, the Tariff Commission did not recommend the grant of any rehabilitation allowance for fixation of ex-factory price for the following reasons:

"... in the past, extra margins such as Rs. 2 per maund as additional profit in the season 1947-48 were allowed from time to time to factories in the price of sugar in the past decade. No one can object to the producers having carried out the expansion programmes with the resources they had, because the demand for sugar was increasing, prospects were good and additional investment was urgently necessary. On business grounds, this was a perfectly natural thing to do. But having done so, it is against canons of social justice to claim that, since they have applied the resources they had for expansion, the consumer, in whose interest control is imposed, should now be called upon to pay the cost of their rehabilitation programme which, all the available evidence shows, was delayed so long. Having considered all aspects of this question, we have come to the conclusion that there is no case for a uniform allowance for rehabilitation to all units in the sugar industry."

That the aforesaid reasons, which were accepted by the Government (*vide* its resolution dated 4th April 1960), do not constitute an objective view is impressively highlighted by the Indian Sugar Mills Association in a memorandum on the Commission's report submitted to the Government of India. The Association finds no reason why the Commission has not made any provision for rehabilitation in sugar as in the case of steel and cement industries when the need for replacement and modernisation is as pressing in the sugar industry as in the latter industries. It points out that, in view of the manifold increase in the price of machinery, the normal depreciation is inadequate to cover more than a fraction of the rehabilitation charges.

Alluding to the extra margin of Rs. 2 per maund of sugar allowed to sugar industry in 1947-48, the Association states that the Commission is, perhaps, not aware that this extra margin was allowed as the industry was constantly losing in the three seasons prior to 1947-48 because of disparity in estimates of duration and recovery per cent. taken by the U.P. and Bihar Sugar Control Board for price fixation and those actually achieved by the industry. It also alludes to the fact that the benefit of the increase in sugar price from Rs. 21-7 in 1946-47 to Rs. 35-7 in 1947-48 when the commodity was decontrolled did not go to the mills but to cane growers, the Government and the labour. For the cane price was raised from Re. 1-4 to Rs. 2 per maund, the cess on the cane crushed in mills from an anna to As. 3 per maund and the minimum wages of workers from Rs. 36 to Rs. 45. Even here, the industry was not able to realise the higher price for a substantial part of the sugar produced in 1947-48. It was so because, while fixing the price for the 1948-49 season, the carryover stocks of sugar produced in 1947-48, amounting to 175,000 tons (23 per cent. of the total sugar output of 768,000 tons in U.P. and Bihar), were valued at Rs. 32 per maund only. The former Tariff Board itself admitted this point in its report of 1949.

In this connection, the Association observes that the market price did not suddenly come down from Rs. 35-7 to Rs. 32; there was a continuous decline in the price of sugar and, even in respect of the remaining production of 593,000 tons for which there was a non-statutory price ceiling of Rs. 35-7 per maund as per the understanding between the industry and the Governments of Uttar Pradesh and Bihar, the factories realised considerably lower price, due to the persistently falling market prices. "Thus the so-called increase of Rs. 2 per maund," to quote it, "was, in fact, not realised by the factories."

By the word "rehabilitation," the Association says, is meant nothing more than the difference between the normal depreciation available on the basis of historical cost and the normal depreciation which will be available on the present-day replacement costs of the machinery. Surely, the sugar industry, as the Association avers, would not have strongly pressed its claim for rehabilitation allowance, if the prices of machinery and equipment had not risen six to seven times as compared with those prevailing before the war. But, in view of the abnormal increase in prices and since the cost schedules evolved by the Commission have provided for nothing to build up reserves, rehabilitation allowance is essential.

Proceeding, the Association refers to the inclusion of the reduction in manufacturing cost due to expansion of capacity by employment of whatever share funds the industry had with it in the assessment of cost. There seems to be some justification in its remark that the Commission, by calculating actual costs on the basis of expanded capacity, takes away from factories the benefit of expansion in terms of reduced manufacturing cost in the larger interest of the consumer and that, in the name of this interest, the factories are sought to be penalised by denying them the much needed rehabilitation allowance. It is quite correct when it says that, if fresh capital had been employed for expansion, the cost of effecting the same would not have been less than the rehabilitation cost per maund of sugar required by the industry.

The foregoing account will clearly indicate that the sugar industry's claim for the provision of an adequate rehabilitation allowance before the profit is determined for purposes of calculating the bonus for growers is a reasonable one. And it is to be hoped that the claim will be conceded by the Tariff Commission. After all, has not the Supreme Court, the highest judicial authority in the country, itself held (vide its judgment of May 1959 on the dispute between the management and workers of the Associated Cement Companies Ltd.) that the cost of rehabilitation of plant and machinery should be considered as a prior charge?

EARLY CRUSHING OF SUGARCANE

In order to induce the sugar mills to commence crushing operations as early as possible, the U.P. Government has decided to refund the cane cess at 6 nP per maund on all such cane as is crushed by a factory in excess of the quantity crushed by it during the season 1959-60. The concession will be enjoyed only by those units in West U.P. which started crushing on or before the 4th inst. and units in East U.P. which start crushing on or before the 10th inst. The concession will, however, have one disquieting effect, namely, encouragement to mills to crush cane that is not properly mature in the earlier parts of the season and, consequently, loss of sugar. One wonders whether this is a wise move, especially when the sugar supply position is highly encouraging with ample stocks with mills.

you have just opened
A METAL BOX CONTAINER!

The container in which your favourite vanaspati comes to you is specially designed to protect the contents from spoilage. The container is precision manufactured on specialised machines and the accurately fitting lid and diaphragm ensure that the contents remain free from contamination over long periods. For added protection, vanaspati containers are made pilferproof with the now-familiar aluminium foil diaphragm. An unbroken diaphragm is your guarantee that the vanaspati you are buying is genuine.

Manufacturing scientifically designed packages is the business of Metal Box, leaders in the packaging field. A result of years of research abroad and in India, the vanaspati container is another example of a Metal Box package that delivers the best in consumer goods to you.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.

TREND OF TEA MARKETS DURING CURRENT SEASON

SHARP FALL IN NORTH INDIAN CROP

THE trend of production of tea in India, especially in North-east Ind a, during the current season has not been encouraging. The estimated total output of tea up to the end of September 1960 amounts to only 487.4 million lbs., representing a fall of 26.9 million lbs. from the 514.3 million lbs. in the corresponding period of 1959. This is in distinct contrast to the slight increase of 7.6 million lbs. recorded up to the end of September 1959 over the output (506.7 million lbs.) in the corresponding period of 1958. The shortfall in crop in the current year so far is mainly accounted for by North-east India, where the production has dwindled from 401.2 million lbs. to 358.9 million lbs. and is even below the 384.3 million lbs. produced up to the end of September 1958. The decline in output in North-east India has to a large extent been made good by the increase in South Indian crop from 113.1 million lbs. to 128.5 million lbs. During the corresponding period of 1959, tea production in South India had declined by 9.3 million lbs.

Production in Pakistan, too, closely follows the pattern of North-east Indian tea and has dropped by 14.4 million lbs. to 24.9 million lbs. It also falls short of the crop in the corresponding period of 1958 by 12.4 million lbs. The decline in North-east Indian and Pakistan teas amounting to 41.3 million lbs. has more than offset the increase in output in other leading tea producing areas. Thus, the increase in South Indian crop noted above is accompanied by a rise of 21.3 million lbs. (up to the end of September) in Ceylon, of 5.4 million lbs. (up to the end of August) in British East Africa, including Nyasaland, and of 2.7 million lbs. (up to July) in Indonesia. Production in Mozambique up to the end of July shows a fractional fall, as will be seen from the following comparative table of production in leading producing countries of the world during the last three seasons:

(In million lbs.)

	1960	1959	1958
North-east India (up to Sept.)	358.9	401.2	384.3
South India " " "	128.5	113.1	122.4
Pakistan " " "	24.9	39.3	37.3
Ceylon " " "	329.1	307.8	311.9
British East Africa (up to Aug.)	52.8	47.4	41.7
Mozambique (P.E.A.) (up to July)	16.6	17.4	13.6
Indonesia (up to July) ...	56.8	54.1	57.8
Total ...	967.6	980.3	969.0

It is in consonance with the trend of production that the exports of North-east Indian tea during the current season have suffered a sharp fall. From 1st July upto 15th October 1960, the quantity of tea exported amounted to 82.3 million lbs., as compared with 138.8 million lbs. in the corresponding period of 1959. Of these, exports to the U.K. have fallen from 91.7 million lbs. to 57.9 million lbs. and to other markets from 47.1 million lbs. to 24.3 million lbs., in contrast to the successive increases noted in the corresponding periods of the previous seasons. Notable among the importing countries other than the U.K., the exports to which have declined substantially, are Sudan, the U.S., Canada, Irish Republic, Egypt, U.S.S.R., Turkey, West Germany and Eastern Europe, as will be borne out by the following comparative table:

(In million lbs.)

	14th July to 15th Oct.	
	1960	1959
U.K.	57.95	91.72
Sudan	2.34	9.03
U.S.S.R.	5.29	6.61
U.S.	3.11	5.75
Egypt	3.37	4.20
Irish Republic	1.50	4.37
Canada	2.75	4.03
Turkey	0.91	3.88
Iran	1.95	2.36
Persian Gulf and Iraq ...	1.54	1.58
West Germany	0.85	1.69
Eastern Europe	—	1.95
Other places	0.74	1.63
Total ...	82.30	138.80

Shipments of tea from Cochin from 1st April to 30th September 1960 show a small rise to 44.85 million lbs. from 42.46 million lbs. in the corresponding period of 1959, mainly due to the increase in exports to the U.K. from 22.66 million lbs. to 24.13 million lbs. and despatches to Indian ports from 5.10 million lbs. to 6.62 million lbs. There has been a marked rise in shipments to Sudan from 0.17 million lbs. to 1.25 million lbs. Exports to U.S.S.R. have also gone up from 3.10 million lbs. to 3.16 million lbs., while shipments to the U.S. have declined from 2.92 million lbs. to 2.15 million lbs., to Canada from 2.88 million lbs. to 2.22 million lbs. and to Australia from 3.45 million lbs. to 2.56 million lbs.

The trend of prices fetched by North Indian teas during the current season, both in the sales for export and for internal consumption, has been more favourable than in the previous season. The average price realised by North Indian tea in export sales up to 18th October 1960 was Rs. 5.89 per kilo, as compared to Rs. 5.36 in the corresponding period of 1959. During the same period, the price of tea dusts for internal consumption showed a rise from Rs. 4.39 to Rs. 5.29 per kilo and of other grades for consumption in India from Rs. 3.86 to Rs. 4.35 per kilo. In Cochin, the average price realised in export sales up to 25th October 1960 was Rs. 4.63 per kilo, representing a slight decline from Rs. 4.70 per kilo fetched in the corresponding period of 1959. The price of tea dusts has, however, gone up from Rs. 3.85 to Rs. 4.21 per kilo.

Thus, on the whole, the North Indian and South Indian tea estates have had a fairly satisfactory season so far in respect of prices. So far as the North Indian producers are concerned, the rest of the season is also not expected to be anything unfavourable. Discussing this in their latest monthly review, Messrs. J. Thomas and Co. Private Ltd. observe:

"During the month (September) buyers of teas suitable for consumption in India operated strongly and plain teas appreciated by about 15 nP per kilo. Thus, while we should be surprised if plain tea continued this upward tendency, we do not anticipate much of a fall in prices in the immediate future, since, due to the shortfall in crop, strong internal buying is likely to continue and this, we fear, will be at the expense of exports to the benefit of Ceylon since the price for plain tea in India is now well above current world levels.

"In London, there has been a temporary shortage of good tea, aggravated by the strike in the docks and to date the price average for North Indian teas is 9.6 pence per lb. higher than last year, but only 134,015 packages have been sold compared with 230,075 packages last season. However, at the end of the month prices for Assam teas showed a marked drop, while prices for plain tea remained firm, so that it is reasonable to expect a further fairly rapid decline in prices for the best teas as quality falls away. Thus, the familiar seasonal price pattern is again apparent, but it is possible this year that the price range between plain and the best quality teas in London may be still narrower than last year.

"Prices for dusts which are also at present at an extremely high level are unlikely to show much falling away, since, with the shortage in the North Indian crop, there is little chance of there being any surplus of this type of tea; C.T.C. type we expect to continue to sell particularly well."

The prospects for North Indian tea have been rendered somewhat encouraging by the latest ruling by the Supreme Court on the Assam Carriage Tax. The Court which heard appeals by certain producers against the State of Assam has declared void the Assam Taxation Act, 1954 for goods carried by road or inland waterways. This tax had been levied at the rate of 7 nP per lb. The Assam State Government has not, however, issued any order whether it will refund past payments of this tax to producers.

NEW WAGE AGREEMENT IN MYSORE PLANTATIONS

A new wage agreement was arrived at in Mysore a few days ago giving a general increase to all categories of daily-rated plantation workers in the State. The negotiations have been going on for sometime after the three-year agreement signed in May 1957 came to an end. The present agreement is for a period of two years, unless the proposed Central Wage Board for coffee makes its recommendations before the expiry of the period. In case there is a delay in the Board coming to a decision, the agreement will continue until its decision is given.

A significant change is that the different rates that existed between Coorg and old Mysore areas will end. But there will continue to be a difference between small holdings of below 50 acres and large holdings. But workers in both categories of hold-

BHOPAL HEAVY ELECTRICAL FACTORY

FIRST PHASE OF PRODUCTION COMING TO FRUITION

THE Bhopal Heavy Electrical Factory, the first of its kind in India and the biggest in Asia, will be formally inaugurated by Prime Minister Nehru on 6th November. This public sector unit, with which the Associated Electrical Industries of the United Kingdom have been associated as technical consultants, has already commenced production of transformers, switchgears, control gears and capacitors in its first phase. Since early 1959 it has been working on double shift so as to produce Rs. 12.5 crores worth of these items of heavy electrical equipment over a period of time. It is this plan, which has now come to fruition at a cost of about Rs. 18 crores incurred since the beginning of construction, that will receive the Prime Minister's blessings at the inauguration ceremony. Construction work connected with the second and third phases of the project is already under way; after this is completed in 1961 traction equipment, industrial motors, hydro and thermal turbines and generators will begin to be manufactured. It is noteworthy that production in the factory is being planned in close association with the Central Water and Power Commission and the Electricity authorities of the States. It is expected that by the end of the third Plan the Bhopal factory will contribute one million kilowatts of generating equipment per annum. This will be a very substantial contribution, considering that by the end of the second Plan the country will have only 5.8 million kw. electrical power capacity. And its contribution, by way of foreign exchange saving on account of one million kw. of generating equipment, will be no less substantial.

The maximum size of generators and transformers to be produced by the factory has been increased from the original 50,000 kw. to 150,000 kw. in view of the latest assessment of India's needs.

According to present production schedules, equipment that will be manufactured by the end of March 1961 will be Rs. 3 crores, in 1962 Rs. 9 crores and in the beginning of the fourth Plan Rs. 25 crores. The last figure represents the optimum output that will be reached by progressive stages from 1963 onwards. It may be that this will go up to Rs. 35 crores if further expansion is initiated. In the earlier stages, production will have a 60 per cent. indigenous content; this will go up to a higher proportion rapidly. It will be open to private parties to manufacture such imported components as would not be manufactured at Bhopal, and so suitable steps in this regard are being taken to interest them.

Construction History

The Bhopal factory, it may be recalled, was conceived during the closing years of the first Plan. In November 1956, the technical consultants (Messrs. Associated Electrical Industries of the United Kingdom) submitted their detailed project report. Subsequently, to meet the foreign exchange cost of the project, a loan of £2.72 million was also negotiated with a consortium of British banks. The consultants, who have had experience of putting up several heavy electrical factories, were at first sceptical of factory construction being finished within the time limit envisaged in their report, the more so in view of the serious shortage of steel in the country. It was not possible to adopt too many labour-saving devices in construction work because projects such as these were also expected to provide employment opportunities to large numbers of skilled and unskilled workers. Despite this handicap, the factory was constructed ahead of expectations with the assistance and encouragement of the technical consultants. The factory authorities have justly taken pride in the fact that this great venture in Indo-U.K. co-operation has worked so smoothly and efficiently. In the same way the training scheme, sponsored in association with the consultants, has worked well and contributed the required quota of technical hands for the project. A large training school and workshop—undoubtedly the largest and best-equipped in India (and ranking high by world standards)—are attached to the factory. There are now 3,000 men under training in the school. Ninety-seven experienced engineers sent to the United Kingdom for extended training courses have already returned; another 89 are still completing their training there. More are still to be sent in the next year or two to meet requirements during the later phases of development.

A special feature of the Bhopal factory is its inspection and quality control department which is intended to build up and maintain a reputation for quality. This department will ensure that no apparatus is made which does not comply with the standard required by the design engineers and agreed with the customer. It has its staff of experienced engineers spread out over the entire factory. They inspect the components and products at every stage of manufacture starting from the raw material to the finished product and reject any which fails to reach the prescribed standard. They are also responsible for witnessing tests on finished apparatus to ensure compliance with the design engineers' specification. This department is thus responsible for ensuring that the good name and prestige of the the factory are not endangered by the despatch of unsatisfactory equipment. At the same time, it is ensured that manufacturing costs are not needlessly increased by the rejection of components or apparatus for faults which would not affect the efficiency or reliability of the finished equipment.

A related feature of the factory is that it has a well equipped testing laboratory, where facilities are available for mechanical, metallurgical, chemical and electrical tests of various materials to the company's standards and specifications. The Inspection Department gets samples of raw materials thoroughly tested here.

The Preventive Service

It is stated that one of the advantages of inspection at every stage of the manufacturing cycle is the contribution to economy made by rejecting or rectifying components before too much labour had been expended on it. Apart from rejecting defective components, there is a preventive aspect to the duties of the Inspection Department. The preventive service consists of the following:

(a) Feed back of information to the production department as soon as possible, so that faulty production may be stopped.

(b) Analysing the results of inspection so that causes of defects may be recognised and avoided.

(c) Following up service reports and customers' complaints.

(d) Training operatives in methods of quality control.

(e) Studying production troubles with a view to minimising defectives.

The work of inspection in a heavy electrical factory, it is further stated, is very different from the viewing or gauging which is carried out in mass production factories making locomotives, motor cars, refrigerators, etc. In the heavy electrical factory, where things are made to customers' requirements, the inspector must be able to use his judgment to find whether a certain operation (fabrication, machining, assembly, etc.) would meet the requirements of satisfactory operation of the final product. He must be able to suggest modifications. It is not just a case of accepting if it is correct to a drawing or a gauge. If judgment is not used, the scrap will be disproportionate. For this reason, inspectors are picked from the highest class of skill available on the shop floor. The standards of inspection and quality control are thus maintained at the highest level in the Bhopal factory—standards which can be more easily ensured in all new enterprises in both the sectors—public and private.

(Concluded from next column)

and the problem posed by inadequate training facilities.

These factors should also be kept in mind as regards financing transport projects, though it was recognised "that governments should assume responsibility for providing finance to the development of transport, whether nationalised or not." Transport is an important infrastructure of the economy, investment in transport is often large, slow-yielding and risky, and the "benefits of transport are not confined only to the users of transport services, but are shared by all members of the community."

TRANSPORT DEVELOPMENT IN ASIA

BANGKOK MEETING'S CONCLUSIONS

IT may be recalled that a reference to the meeting of a United Nations Working Group recently held in Bangkok to review the whole field of transport in relation to economic development in Asia was made in the issue of "*Commerce*" dated 15th October, 1960. This meeting concluded its deliberations in the first week of October. It was agreed at the meeting that there should be an integrated approach to transport planning and adequate co-ordination in the development of the different modes of transport such as railways, roadways, airways and waterways.

The session was attended by some 59 transport experts and economists from 20 E.C.A.F.E. member countries, plus observers from a non-member nation, from two special sed agencies and four non-governmental organisations.

Among the specific suggestions made by the Working Party for future activities in this field, both by individual governments of Asia and by the E.C.A.F.E. Secretariat, were these:

Adequate statistical data should be collected for planning transport development, and governments should help in this regard particularly by collecting some data on non-mechanised means of transport.

Governments should undertake further research into the possible factors affecting the relationship between transport demand and economic growth, and also undertake surveys on future transport needs and projects.

Expert Personnel

High priority should be given to the training of expert personnel in the field of transport in the region, and techniques should be worked out for the fuller utilisation of the Asian labour force.

An inventory of existing transport facilities in the region and a survey of actual traffic conditions and needs might be valuable in determining the conditions and quality of transportation in Asia in order to plan for the future.

The report of the Working Party also noted the present status and problems of transport in the region, and its important role in general development, since "during the last decade in almost all countries of the region as much as 20 to 40 per cent. or more of total public developmental expenditures have been channelled into the transportation sector."

The document noted rehabilitation efforts made since the war to normalise transport facilities, the development of railways, roads and water routes, as well as the growing importance of air transport. It thus called for a fuller utilisation of existing capacities in this field and for the co-ordinated development of the various modes of transport.

Delegates agreed that in planning transport development, governments should take into account international and intraregional transport links and co-ordinate their transport plans.

"For instance," the report said, "the possibilities of connecting national roads and railways could be studied, shipping services could be linked, harbour facilities for handling international traffic developed and frontier formalities simplified. In this connection, mention was made of the Asian Highway project sponsored by E.C.A.F.E., as a very desirable line of development."

On the question of estimating future transport needs within the structure of development, the experts agreed that transport can at times spur general development, but that both direct and indirect effects of new transport facilities have to be taken into account in assessing their economic justification. Duplication should be avoided, and the region's limited resources should be used with the maximum efficiency.

It was also felt by the meeting that transport planning should be co-ordinated with plans for general economic development, and that the role of the private sector should be taken into account.

Regarding the choice of means of transport in planning, delegates felt that the choice would depend on geographical features in each country, the nature of existing traffic and the comparative costs of developing the various modes of transport. The shortage of foreign exchange should also be considered, as well as the role of a large labour force in the region.

(Continued in previous column)

NEW PRODUCTS AND PROCESSES

Hot-dip Aluminising of Steel Wire

A METHOD for aluminising steel wire has been worked out at the National Metallurgical Laboratory, Jamshedpur, and is being piloted to a semi-commercial stage. Hot-dip aluminising of steel wire provides excellent resistance to atmosphere and high temperature corrosion. The process uses a molten salt flux for aluminising posts and telegraph wire, an aqueous flux for continuous aluminising or an organic flux for both purposes. After picking in an alkali-lined tank for 12 seconds and washing, the steel wire enters the fluxing bath, which comprises a tank containing boiled linseed oil heated by an immersion heater. The oiled wire enters the molten aluminium bath. The length of traverse of wire through the bath is such that the wire remains in contact with metal for about 15 seconds. This period is optimum for the oil to vaporise and the metal coating to form. The surface of the aluminium bath is cleaned from time to time mechanically. The wire emerges from the bath vertically and travels in air a long way to allow the excess metal to flow down and the wire to cool.

Electric Firelighter

An electric firelighter, produced by the General Electric Company, Ltd., of London, gets a coal fire blazing in two or three minutes—without the use of paper, wood chips or matches. This is how it works. You push the nozzle of the firelighter—which resembles a toy 'space gun'—into the grate. Then you bank up coal around it. Turn a key on the appliance and a jet of hot air (temperature: 800°C.) is sprayed on the coal. When the fuel is alight you turn off the heater so that the firelighter blows cold air onto the fire. This fans the flame into a healthy blaze and cools the firelighter so that it can be put away without burning anything. The firelighter will ignite any of the usual solid fuels. It takes two or three minutes to get a coal fire alight and not more than 15 minutes for even the most intractable types of coke. It incorporates a number of safety features. The barrel is surrounded by an outer case which is cooled by an independent air stream, and never gets hot. The heater can only be switched on by a special key, and the key cannot be removed until the heat is switched off again. If the fan stops working, the current is automatically switched off.

Thickness of Electroplates

A novel technique, based on the impedance change of the stripping cell, has been developed for determining the thickness of electroplates at the Electro-Chemical Research Institute, Karaikudi (Madras). The technique consists in dissolving out a small well-defined area of the electroplate (chromium plating on copper or cadmium plating on mild steel) by passing constant current in the electrolysing system containing suitable stripping solution and superimposing with electrolysing current a small constant alternating current. The resulting D.C. voltage actuates a relay that stops a timer (Dekatron Scaler) which is started at the time when constant current is switched on and counts the pulses of the A.C. ripple. Knowing the exact time required for dissolving the electroplates its thickness is calculated by applying Faraday's Laws.

Road Tar

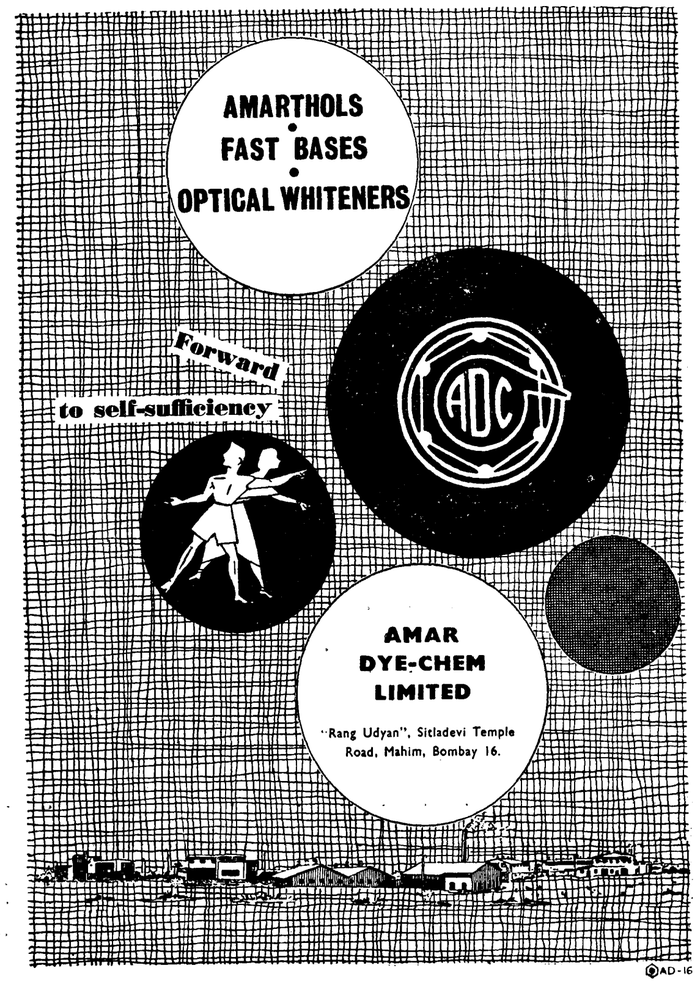
A process for the preparation of good quality road tar from tar produced by the low-temperature carbonisation of coal has been developed by the Regional Research Laboratory, Hyderabad. It essentially consists in preparing the base pitch by blowing air through the tar at about 300°C. in the presence of catalysts and blending the pitch with suitable tar oils to obtain tar of the required grade. The products have been found to be satisfactory as road binders. Large amounts of low-temperature tar will be available as by-product when commercial low-temperature carbonisation plants for the manufacture of smokeless domestic coke come into operation. About 5 million tons of the tar is likely to become available as a result of carbonisation of 70 million tons of coal annually by 1970.

Home Clothes Dryer

A new home clothes dryer invented in the U.S. will be controlled by the actual humidity left in the cloth rather than by time or temperature of drying. The innovation is expected to make for more precise drying, with greater flexibility of operation. Most present-day dryers operate for a pre-set time of 10 to 20 minutes. More sophisticated—American engineering slang for "complicated"—ones act by measuring the temperature of the exhaust. When the temperature is high enough to have dried the cloth theoretically, the dryer turns itself off. This does not always mean that such heavy, absorbent materials as towels are actually dry. The new system—mechanical details have not yet been made public—will actually measure the humidity left in the clothing before deciding to turn itself off.

New Atomic Clock

Harvard University scientists have built a new atomic clock which is said to be 100,000 times more accurate than present models. Atomic clocks are devices that trap hydrogen atoms; they tell time because the atoms give off measurable radiation at very precise intervals. Heart of the new clock is a solid-state Maser that holds the hydrogen atoms loosely so as not to distort their "tone." The clock is expected to have an accuracy of one part in 10 to the 15th power (one followed by 15 zeros). Its exact accuracy will have to be measured by an identical clock now being built.



THE ANDHRA BANK LIMITED

Central Office: MASULIPATNAM

Applications are invited for posts of Inspectors of Branches from Chartered Accountants in the grade of Rs. 300-25-650, with Dearness and House Rent Allowances as per Rules in force. Candidates having good personality, Banking experience and C.A.I.I.B. qualification will be preferred. Applications stating age, qualifications, experience, etc., should reach the General Manager on or before the 25th November, 1960.

—Chairman.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinion expressed with regard to them.

The Central Government have granted a licence (copy of which is open to public inspection at the Registered Office of the Company) for this industrial undertaking. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of the undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of this Prospectus, having attached to it the documents required by Section 60 of the Companies Act, 1956, has been delivered for registration to the Registrar of Companies, West Bengal.

Application will be made to the Calcutta and Bombay Stock Exchanges for permission to deal in and for official quotations of the Shares of the Company.

The Subscription List will open at the commencement of banking hours on Monday, 14th November, 1960, and will close at the close of banking hours on Saturday, 19th November, 1960.

ISAAC HOLDENS (INDIA) LIMITED

(INCORPORATED AS A 'PRIVATE COMPANY' ON 7TH NOVEMBER, 1959, UNDER THE COMPANIES ACT, 1956, AND CONVERTED TO A 'PUBLIC COMPANY' BY A RESOLUTION OF THE COMPANY PASSED ON 28TH OCTOBER, 1960)

AUTHORIZED CAPITAL: Rs. 1,75,00,000

Divided into

(i)	15,00,000 Equity Shares of Rs. 10 each	Rs. 1,50,00,000
(ii)	25,000 Preference Shares of Rs. 100 each	Rs. 25,00,000
		Rs. 1,75,00,000

No Preference Shares are proposed to be issued for the time being and they may only be issued with the rights approved by the Central Government.

ISSUED SHARE CAPITAL

2,37,151 Equity Shares of Rs. 10 each	Rs. 23,71,510
upon which Rs. 10 per share is credited as paid up, payment having been made as follows :—

APPLICATIONS AND SUBSCRIPTIONS

Application for shares by members of the public must be for a minimum of 100 shares or multiples of 100 shares but allotment may be made of less than 100 shares.

TERMS OF PAYMENT OF ABOVE SHARES

(a)	On application ...	Rs. 5.00 per share
(b)	Balance	Rs. 5.00 per share payable on call or calls to be made not earlier than 4 months after allotment.
		Rs. 10.00 per share.

DIVIDEND AND CAPITAL

The Company in General Meeting may on the recommendation of its Board of Directors declare a dividend to be paid to the members according to their rights and interest in the profits of the Company and may, subject to the provisions of Section 207 of the Companies Act, 1956, fix the time of payment.

No dividend shall be payable except out of the profits of the Company during the year or any other undistributed profits or out of the monies provided by the Central or State Government for the payment of the dividend in pursuance of any guarantee given by such Government and no dividend shall carry interest against the Company.

MODIFICATION OF RIGHTS

Rights attached to equity shares, preference shares and any other class of shares in the issued capital of the Company may be modified as permitted by Article 57 of the Articles of Association of the Company and the provisions of Section 106 of the Companies Act, 1956, or any statutory modification or re-enactment thereof for the time being in force.

CREATION OR ISSUE OF FURTHER SHARES

Subject to the Articles of Association of the Company shares in the capital of the Company for the time being shall be under the control of the Board of Directors, who may allot or dispose of them or any of them on such terms and conditions, either at par or at a premium or (subject to the provisions of Section 79 of the Companies Act, 1956) at a discount, as the Board may think fit. Provided that if at any time subsequent to the first allotment of shares it is proposed to increase the subscribed capital of the Company by the issue of new shares then subject to any direction to the contrary, which may only validly be given by the Company in General Meeting, the Board shall issue such shares in the manner set out in Section 81 (1) of the Companies Act, 1956, save that the Board may determine whether or not an offer of new shares shall include a right to renounce in favour of any other person.

VOTING RIGHTS

Articles 77 to 80 deal with the voting rights which members are entitled to exercise. The voting rights of members as fixed by the Articles are in accordance with the provisions contained in Section 87 of the Companies Act, 1956. Article 77 provides that subject to any restrictions for the time being attached to any class or classes of shares, on a show of hands every member present holding equity share capital in the Company, has one vote and on a poll every member present or by proxy has one vote for every equity share held by him.

Article 78 refers to the voting rights to be exercised by a body corporate. The Article provides that a body corporate which is a member of the Company may by a resolution of its Board of Directors or any other governing body in accordance with the provisions of the Section 187 of the Companies Act, 1956 authorize such person as it thinks fit to act as its representative at any meeting of the Company. The Article further provides that the person authorized by such body corporate shall be entitled to exercise the same rights and powers, including the right to vote by proxy on behalf of the body corporate which he represents, as that body could exercise as a member of the Company.

Article 79 refers to votes being exercised in respect of a deceased, insane or insolvent member. It provides that any person entitled under the transmission Article to transfer any shares may vote at any General Meeting in respect of such shares in the same manner as if he were a registered holder of such shares provided the requirements laid down in the said Article are fulfilled by such person.

Article 80 relates to the exercise of voting rights by members registered jointly in respect of a share. It provides that where there are joint registered holders any one of such persons may vote at any meeting either personally or by proxy in respect of such shares as if he were solely entitled thereto. If more than one such joint holder be present at a meeting either personally or by proxy the member whose name stands first on the Register of Members in respect of such shares shall exercise the voting rights in respect of such shares.

Article 82 requires that the instrument appointing proxies must be in writing or, if the appointer is a body corporate, under its seal or signed by an officer or a duly authorized attorney. A proxy need not be a member of the Company and any member may appoint more than one person as proxy to attend on the same occasion.

RESTRICTION ON THE RIGHT TO TRANSFER SHARES

No transfer will be registered unless a proper instrument of transfer duly stamped and executed by and on behalf of the transferor and the transferee in accordance with Article 37 of the Company's Articles of Association is delivered to the Company along with the certificate or, if no such certificate is in existence, the Letter of Allotment in respect of the shares duly endorsed by the allottee.

Subject to the provisions of Section 111 of the Act, the Board may without assigning any reason for such refusal, within two months from the date on which the instrument of transfer was delivered to the Company, refuse to register any transfer of a partly paid share upon which the Company has a lien.

No transfer may be made to a minor or person of unsound mind.

BORROWING POWERS

Article 58 provides that the Board may, from time to time at its discretion, subject to the provisions of Sections 292 and 370 of the Companies Act, 1956 raise or borrow, either from the Directors or from elsewhere, and secure the payment of any sum or sums of money for the purposes of the Company.

Article 59 provides further that the Board may raise or secure the repayment of such sum or sums in such manner and upon such terms and conditions in all respects as it thinks fit and, in particular, by the issue of bonds (perpetual or redeemable), debentures or debenture-stock or any mortgage or other security on the undertaking of the whole or any part of the property of the Company (both present and future) including its uncalled capital for the time being.

The Board of Directors of the Company is by resolution of the Company passed on 22nd August 1960 permitted to borrow monies from time to time for and on behalf of the Company, so that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) may exceed the aggregate of the paid-up capital of the Company and its free reserves, that is, reserves not set apart for any specific purpose.

OBJECTS OF THE COMPANY

The Company was incorporated on 7th November 1959 with the objects mentioned in the Memorandum of Association of the Company and in particular to carry on the business of Processors, Wool Sorters, Scourers, Machine Combers, Recombers and Dyers of all types of fibres and materials, whether natural, artificial or synthetic, for the textile industry.

HISTORY OF THE COMPANY

The formation of the Company, the first of its kind in India, is the result of collaboration between Isaac Holden & Sons Ltd. of Bradford, England, a leading firm of commission combers in the Bradford trade, Duncan Brothers & Co., Ltd. the well-known Calcutta Agency House, and Anglo-India Jute Mills Co., Ltd. which is the largest Jute Mill Company in India, Duncan Brothers & Co., Ltd., being its Managing Agents.

Wooltops are the principal raw material of the Worsted Spinning Industry and the raw wool must be sorted, scoured and combed before use by that industry. It is not intended that the Company shall purchase wool or sell tops on its own account but raw wool will be consigned to it by topmakers and others for sorting, scouring and combing into wooltops on a tariff payment basis.

The Company has obtained permission to receive for processing raw wools being the property of topmakers resident overseas without Import-Export licence formalities other than that of accounting to the governmental authorities for the disposal of all wools so received.

India's consumption of imported wooltops during the last three years has been as follows:—

	Lbs.
1957	16,266,075
1958	15,899,480
1959	15,234,080

Wooltops may only be imported against licences and the shortage in foreign exchange has resulted in the supply of tops being much below the requirement of the spinning industry. The establishment of the Company's plant will assist in rectifying this position. The decision to proceed with the present scheme was taken by the promoters after visits by Mr. W. H. Robinson, A.T.I., A.M.B.I.M., now a Director of the Company, who has considerable experience in the establishment and operation of combing mills both in the U.K. and overseas and Mr. J. R. S. Raper, the Chairman of Isaac Holden & Sons Ltd., of Bradford, England, and the project has also received the close personal attention of Mr. K. P. Goenka, Chairman of Duncan Brothers & Co., Ltd., and of Anglo-India Jute Mills Co., Ltd., and a Director and Chairman of the Board of this Company.

Manufacturing Licence: The Government of India has issued under the Industries (Development and Regulation) Act, 1951 a licence No. L/23/3/N-13/59 dated 10th July 1959 for a wool-combing plant of an installed capacity of ten million pounds of wooltops per annum. The attainment of this licensed production is planned to be achieved in two stages. First the installation of Noble Combs with necessary preparatory and ancillary machinery. Secondly, the installation of additional combs with necessary preparatory and ancillary machinery to achieve a total capacity of ten million pounds per annum. Ultimately the Company intends to install a dyeing plant.

The first stage is now in course of completion; one wash bowl unit and twelve combs with requisite machinery have been erected at the Company's factory as well as six carding engines given to the Company by Isaac Holden & Sons Ltd. (packing, carriage and freight from the U.K. being at the Company's expense) for use pending the arrival of the twelve new carding engines which are on order. Six additional combs, together with a wash bowl unit and machinery to complete the first stage are in course of transit, being supplied by Isaac Holden & Sons Ltd. in consideration of allotment of 42,849 equity shares awaiting issue. Production on that part of the first stage which has already been installed is due to commence before the end of 1960.

The proceeds of the present issue will largely be applied to financing the second stage of development. Import Licences for this stage have been applied for, it being the intention to install the plant and machinery as delivered and thereby achieve a gradual development of production up to the licensed capacity of ten million pounds per annum. The machinery to be installed will be of the most modern and up-to-date design available today and the Directors consider that the prospects for profitable working are good.

PLANT SITE AND POWER, ETC.

The factory is located in premises, formerly a part of the Anglo-India Jagatdal Jute Mill, which are suitable for the purpose and have been purchased by the Company. Accommodation for the staff and for the storage of raw wool is available on a rental basis from Anglo-India Jute Mills Co., Ltd., and certain essential administrative services are also available from that Company.

Arrangements have been made with the Calcutta Electric Supply Corporation Ltd., for provision of the electric power required and an ample supply of water is available.

VENDORS OF PROPERTY

The Company has acquired the following property for a consideration other than cash:—

1. (a) Name—Anglo-India Jute Mills Co., Ltd.
   Address—31, Netaji Subhas Road, Calcutta.
   Occupation—Public Company registered in India.
   (b) Amount Payable—1,23,345 fully paid Equity Shares of Rs. 10 each.
   (c) Nature of the title or interest in property acquired by the Company—Permanent Leasehold Land and Buildings thereon.
   (d) Nature of the transaction—The Company has acquired land and buildings consisting of part of the vacant property at Jagatdal Mill and as consideration has allotted 1,23,345 fully paid Equity Shares of Rs. 10 each to Anglo-India Jute Mills Co., Ltd. Material particulars of the parts of the properties conveyed are as follows:—
   Buildings—A block of buildings covering an area of 3.128 acres.
   Motor Alley—A two-storied building covering an area of .131 acres.
   Boiler House—Construction on an area of .058 acres.
2. (a) Name—Isaac Holden & Sons Ltd.
   Address—Alston Works, Bradford 8, England.
   Occupation—Public Company registered in the U.K.
   (b) Amount payable—1,06,655 fully paid Equity Shares of Rs. 10 each.
   (c) Nature of the title or interest in property acquired by the Company—Absolute ownership of machinery comprising two wash bowl units and eighteen Noble Combs with necessary backwashing and gilling machines and punches, more particularly described in the schedule to the Agreement dated 13th January 1960.
   (d) Nature of the transaction—The Company has purchased machinery previously used by Holdens for the purpose of treatment and processing of wool as more specifically described in the Agreement hereinbefore referred to, and in consideration the Company has agreed to allot 1,06,655 fully paid Equity Shares of Rs. 10 each to Isaac Holden & Sons Ltd., Bradford (U.K.). It was mutually agreed that shares should be allotted to Isaac Holden & Sons Ltd., Bradford (U.K.) against the rupee equivalent value of the machinery actually delivered to the Company in Calcutta. Accordingly 63,806 fully paid Equity Shares of Rs. 10 each were allotted by the Company to Isaac Holden & Sons Ltd., Bradford (U.K.) on 10th May 1960 against items of machinery delivered at Calcutta as aforesaid. The remaining 42,849 shares will be allotted when the balance of machinery now under despatch has been received by the Company.

TECHNICAL COLLABORATION

Isaac Holden & Sons Ltd., Bradford (U.K.) as Technical Consultants will for a period of ten years from 7th November 1959 advise the Company on all technical matters relating to the erection, operation and maintenance of the Company's factory, instruct and train the Company's technical personnel in India and in the United Kingdom, supply to the Company such technical experts and advisers as may reasonably be required on a reimbursement of expenses incurred basis, and act as procurement agents in the acquisition of raw materials or other commodities required by the Company.

As consideration Isaac Holden & Sons Ltd., Bradford (U.K.), will receive in Sterling in the United Kingdom payments as follows:—

A Royalty-cum-Technical Fee of 10% per annum of the net trading profits earned by the Indian Company (such net trading profits to be ascertained as prescribed in the Indian Companies Act, 1956) in each year up to the sixth year of actual production. Thereafter the Royalty-cum-Technical Fee will be reduced to 7½% of the net profits and all payments on this account will cease after the tenth year.

The minimum remuneration payable on account of the above will be Rs. 50,000 per annum but if in any year the minimum remuneration specified is not earned by the English Company the minimum remuneration will be paid as specified but any excess payment over the actual sum earned will be adjusted against payments in subsequent years.

The Government of India have approved the foregoing collaboration as well as the issue of equity share capital to Isaac Holden & Sons Ltd., Bradford (U.K.), to which reference has already been made.

DIRECTORS

The Articles of Association of the Company provide that unless otherwise determined by special resolution the number of Directors shall be not less than six nor more than nine. Provision is also made in Article 102 for the appointment by the Board of an alternate for a Director absent for a period of not less than three months from the State in which the meetings of the Board are ordinarily held.

It is also provided that Isaac Holden & Sons Ltd., Bradford (U.K.), so long as they shall hold office as Technical Consultants and that Duncan Brothers & Co., Ltd., as long as they are Managing Agents of the Company, shall each be at liberty to appoint one Director of the Company and to remove any Director so appointed and appoint another in his place. The Directors so appointed shall not be liable to retire by rotation subject to the approval of the Central Government if required to Article 103.

Unless otherwise determined by the Company in general meeting a Director is not required to hold any qualification shares.

Article 94 of the Articles of Association of the Company provides for the remuneration of the Directors. Subject to the provisions of the Companies Act, 1956 and unless otherwise determined by the Company in General Meeting each Director or his alternate shall be entitled to receive Rs. 100 for each meeting of the Board or Committee of the Board attended by him. The Directors shall also be entitled to receive a commission of 1% of the net profits of the Company in any financial year, divisible between them in such proportions as the Board may determine, or failing that in equal proportions. The Directors shall be entitled to be paid their reasonable travelling and hotel and other expenses incurred in consequence of their attending Board and Committee meetings or otherwise incurred in the execution of their duties as Directors of the Company.

Without prejudice to the generality of the foregoing Article, if any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from Calcutta for any of the purposes of the Company or in giving special attention to the business of the Company or as a member of a Committee of the Board then the Board may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise and such remuneration may be either in addition to or in substitution for any other remuneration to which he may be entitled.

INTEREST OF DIRECTORS

1. Mr. Keshav Prasad Goenka is Chairman and a Managing Director and a member of Duncan Brothers & Co. Ltd., the Managing Agents of the Company, Chairman and a Director and member of Anglo-India Jute Mills Co. Ltd. and also a Director and a member of the Bank of Baroda Ltd. which is one of the Bankers of the Company.
2. Mr. James Rhodes Stanley Raper is Chairman and Managing Director and a member of Isaac Holden & Sons Ltd., Bradford (U.K.), one of the promoters, and is therefore interested in the transactions with that Company.
3. Mr. William Henry Robinson is Director and General Manager of Holdens (Ireland) Ltd., Dublin, Eire, in which company Isaac Holden & Sons Ltd., Bradford (U.K.), have an interest, and is therefore interested in the transactions with that Company.
4. Mr. Geoffrey Edward Hoare is a Departmental Manager and a member of Duncan Brothers & Co., Ltd. Calcutta, the Managing Agents of the Company, and a member of Anglo-India Jute Mills Co. Ltd.
5. Mr. Henry Joshua Silverston is a Director and a member of Anglo-India Jute Mills Company Ltd., and a partner in Messrs. Orr, Dignam & Co., the Solicitors to the Company.
6. Mr. David Henderson Adamson is Senior Mills Manager of Anglo-India Jute Mills Co. Ltd., one of the promoters and is therefore interested in the transactions with that Company.

All the Directors will be interested to the extent of the shares in the capital of the Company subscribed or to be subscribed for and allotted to them and to companies in which they are interested.

UNDERWRITING COMMISSION

Neither is any underwriting commission payable in respect of the present issue, nor has any such commission been previously paid by the Company.

BROKERAGE

Brokerage will be paid by the Company to the Brokers to the Issue mentioned in the Prospectus and to members of any recognised Stock Exchange and to Bankers at the rate of 15 nP per share in respect of the aforesaid such Equity Shares offered to the public for subscription and allotted in respect of applications bearing their stamps.

PRE-INCORPORATION EXPENSES

The amounts of pre-incorporation expenses reimbursable to the promoters are as follows:—

	Rs.
Isaac Holden & Sons Ltd., Bradford (U.K.)	38,341.43
Duncan Brothers & Co. Ltd. ...	26,516.26
Anglo-India Jute Mills Co. Ltd.	12,220.00

The above expenses were incurred in connexion with the formation of the Company and the amounts are reimbursable by the Company

and have been paid except for the sum due to Isaac Holden & Sons Ltd. Bradford (U.K.), a non-resident, for which permission of the Reserve Bank of India is required and has been applied for.

PAYMENTS TO PROMOTERS AND COMPANIES IN WHICH THEY ARE INTERESTED

1. Amounts payable to Isaac Holden & Sons Ltd., Bradford (U.K.):—

(a) Reimbursement of pre-incorporation expenses only amounting to Rs. 38,341.45 as above.

(b) Remuneration and reimbursement of expenses in accordance with the Technical Consultants Agreement above referred to.

2. Amounts payable to Duncan Brothers & Co. Ltd. :—

(a) Reimbursement of pre-incorporation expenses of Rs. 26,516.26.

(b) Remuneration to which they will be entitled as Managing Agents of the Company, reimbursement under the agreement hereinafter referred to, and rent of office accommodation.

(c) As consideration for guarantee given to the Bank of Baroda Limited for loan of up to a limit of Rs. 10 lacs to the Company against the security of stores and stock in trade, a commission of 1% in each financial year of the Company calculated upon day to day debit balances of the Company with the Bank of Baroda Ltd. in respect of such loan.

(d) Interest at a rate of 1½% above the Reserve Bank of India rate for the time being in respect of demand loans, with monthly rests, on moneys borrowed by the Company from Duncan Brothers & Co. Ltd. from time to time.

3. Amounts payable to Anglo-India Jute Mills Co. Ltd. :—

(a) Reimbursement of pre-incorporation expenses of Rs. 12,220.

(b) Rent for staff quarters, storage of raw wool and remuneration for use of Central Services at the rate of Rs. 15 per month per worker employed by the Company.

(c) Price of a transformer and switch gear, Rs. 50,100.

Save as disclosed in the Prospectus no other payments are to be made to Isaac Holden & Sons Ltd., Bradford (U.K.), Duncan Brothers & Co. Ltd., or Anglo-India Jute Mills Co. Ltd.

Duncan Brothers & Co. Ltd. is a member and the Managing Agent of Anglo-India Jute Mills Co. Ltd.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The Capital required to complete the First Stage of operation is estimated to be as follows:

Item		*Source of Funds*
Land and Buildings	Rs. 12,33,450	Shares already issued.
Machinery	Rs. 10,66,550	Shares already issued or awaiting issue.
Twelve Carding Engines	Rs. 16,70,000	Loan from Bank of Baroda, Limited, secured by hypothecation of the twelve Carding Engines.
Pre-incorporation Expenses	Rs. 77,077	Rs. 5,00,000 shares already issued, and loan from Bank of Baroda, Limited.
Site preparation and Constructional work	Rs. 13,25,000	
Pre-operation Expenses	Rs. 3,75,000	
	Rs. 57,47,077	

The Additional Capital required to complete the Second Stage of operation is estimated to be as follows:

Process Machinery	Rs. 41,90,000	
Recombing Plant and Miscellaneous Machinery	Rs. 10,95,000	
Dyeing Plant	Rs. 7,70,000	
		Rs. 60,55,000
Expenses of this Issue—		
Brokerage	Rs. 43,875	
Miscellaneous	Rs. 1,50,000	
		Rs. 1,93,875
		Rs. 62,48,875
The amount to be raised by this Issue		Rs. 47,00,000

It is intended that the balance Rs. 15,48,875 and any increase there may be in the actual cost over the estimated cost of the plant and facilities, together with the sum required to provide working capital estimated at Rs. 15 00,000, shall be raised by loans from the Company's Bankers and if necessary other sources, including the Managing Agents.

The minimum subscription in respect of the public issue under this Prospectus on which the Directors will proceed to allot is Rs. 29,25,000 being the whole of the equity share capital offered for subscription by the public.

AUDITORS REPORT

THE DIRECTORS,
ISAAC HOLDENS (INDIA) LIMITED,
31, NETAJI SUBHAS ROAD, CALCUTTA.

4, LYONS RANGE, CALCUTTA-1.
28th *October* 1960.

Gentlemen,

In accordance with the provisions of clause 24 of Part II of Schedule II of the Companies Act, 1956, we report that no accounts of Isaac Holdens (India) Limited have been made up in respect of any period since the incorporation of the Company.

Yours faithfully,
LOVELOCK & LEWES.

MANAGING AGENTS

Duncan Brothers & Co. Ltd., 31, Netaji Subhas Road, Calcutta, have been appointed, with the approval of the Government of India, as the Managing Agents of the Company for a period of ten years from the date of incorporation of the Company at the following remuneration based on the net profits of the Company computed in accordance with the Companies Act, 1956:—

(i) 7½ per cent on the first Rs. 50 lakhs or fraction thereof.
(ii) 5½ per cent on the next Rs. 25 lakhs or fraction thereof.
(iii) 5 per cent on the next Rs. 25 lakhs or fraction thereof.
(iv) 4 per cent on any sum over one crore of rupees,

with a minimum remuneration of Rs. 20,000 per annum. Duncan Brothers & Co. Ltd. will, subject to the provisions of the Companies Act, 1956, be reimbursed for expenses incurred on behalf of the Company and paid rent for office accommodation provided to the Company. The terms upon which Duncan Brothers & Co. Ltd. hold office as Managing Agents are embodied in an agreement in writing dated 22nd August, 1960. Neither the Articles of Association nor the agreement with the Managing Agents provides for payment of compensation for loss of office and the question if it arises will be dealt with according to law.

The authorized capital of Duncan Brothers & Co. Ltd. is Rs. 2,70,00,000 divided into 45,000 4% Cumulative Preference Shares of Rs. 100 each and 2,25,000 Ordinary Shares of Rs. 100 each, while the subscribed and paid-up Capital is Rs. 1,35,00,000 divided into 45,000 4% Cumulative Preference Shares of Rs. 100 each and 90,000 Ordinary Shares of Rs. 100 each.

IMPORT LICENCE

The Company has received import licences from the Government of India for the plant and machinery, etcetera, required for the first stage of operation. Application has been made for necessary import licences to carry the second stage of operation into effect and a licence to the value of Rs. 15,00,000 has already been received.

INSPECTION OF DOCUMENTS

The following agreements and documents can be inspected at any time during the usual business hours at the Registered Office of the Company until 14 days after the opening of the subscription list:—

1. Agreement dated 13-1-60 between Isaac Holden & Sons Ltd. Bradford (U.K.), Duncan Brothers & Co. Ltd. and Anglo-India Jute Mills Co. Ltd. with reference to the formation and promotion of the Company and reimbursement of expenses incurred.

2. Print of the Memorandum and Articles of Association.

3. Licence No. L/23/3/N-13/59 dated 10th July 1959 issued by the Government of India under the Industries (Development and Regulation) Act 1951 in favour of the Company and letter reference No. CA. EC. TPQ 4016/766-59 dated 8-12-59 approving the terms of the collaboration with Isaac Holden & Sons Ltd., Bradford (U.K.).

4. Consent Order No. R272 C.C.I./60 dated October 27th 1960 issued by the Controller of Capital Issues in favour of the Company.

5. Conveyance dated 10-5-60 by Anglo-India Jute Mills Co. Ltd. to the Company, of a part of the Jagatdal Jute Mill in consideration of an allotment of 1,23,345 Equity Shares credited as fully paid up.

6. Agreement dated 13-1-60 with Isaac Holden & Sons Ltd., Bradford (U.K.), for purchase of machinery in consideration of an allotment of 1 06,655 Equity Shares credited as fully paid up.

7. Agreement dated 13-1-60 with Isaac Holden & Sons Ltd., Bradford (U.K.), for the rendering of technical assistance with subsequent amendment dated 22-8-60.

8. Agreement dated 22-8-60 setting out the terms upon which Duncan Brothers & Co. Ltd. hold office as Managing Agents and Approval No. 9(641)-C.I.I./60 dated 1st July 1960 of the Central Government under Section 326 of the Companies Act, 1956.

9. Memorandum of an agreement not in writing with Anglo-India Jute Mills Co. Ltd. for renting of staff quarters, etc., and for the use of Central Services, (latter chargeable at the rate of Rs. 15 per month per worker employed by the Company).

10. Letters of Hypothecation issued in favour of the Bank of Baroda Ltd.

11. Correspondence with Platt Brothers Ltd., concerning the supply of twelve new Carding Engines for Rs. 16,70,000.

12. Correspondence with Mackintosh Burn (Private) Ltd. for supply and construction of drains, floors and other building works for Rs. 4 01,277.21 nP.

13. Correspondence with John Thompson India Private Ltd. for supply of water softening plant for Rs. 26,934.

14. Correspondence with Stewarts and Lloyds of India Private Ltd. for fabrication and erection of piping, and supply of tanks, for Rs. 3,08,756.

15. Correspondence with Braithwaite & Co. India Ltd. for fabrication and erection of overhead tank and staging for Rs. 24,670.

16. Correspondence with the English Electric Co. Ltd. for supply of electrical equipment for Rs. 1,08,306.20 nP.

17. Correspondence with Philips India Ltd., for supply and erection of fluorescent lighting for Rs. 2.18,905.

18. Correspondence with Anglo-India Jute Mills Co. Ltd. for purchase of a transformer and switchgear for Rs. 50,100.

19. Correspondence with Duncan Brothers & Co. Ltd., relating to the terms upon which the latter will lend money to the Company and guarantee loans taken by the Company from Bank of Baroda Ltd.

MEMORANDUM OF ASSOCIATION

The Memorandum of Association has been signed by the following persons each of whom has taken up the number of shares shown against his name.

KESHAV PRASAD GOENKA, Merchant 31, Netaji Subhas Road, Calcutta.	One
GEOFFREY EDWARD HOARE, Merchant 31, Netaji Subhas Road, Calcutta.	One

APPLICATION FOR SHARES AND ALLOTMENT

Application must be for 100 shares or multiples of 100 shares and must be made on the form accompanying the Prospectus, which can be had from the Company's Bankers and Brokers to the issue. All application forms duly completed must be lodged, together with the amount payable on application, (i.e. Rs. 5/- per share) with any of the following Banks, namely:

1. THE BANK OF BARODA LTD., P.O. Box 313, India Exchange, Calcutta-1.
2. LLOYDS BANK LIMITED, P.O. Box 306, 29, Netaji Subhas Road, Calcutta-1.
3. NATIONAL AND GRINDLAYS BANK LTD., P.O. Box 218, 19, Netaji Subhas Road, Calcutta-1.

or with any of their Branch Offices at the addresses listed below.

AHMEDABAD

The Bank of Baroda Ltd., P.O. Box 44, Bhadra, Ahmedabad.

AMRITSAR

The Bank of Baroda Ltd., P.O. Box 91, Katra, Arluwalia, Amritsar.
Lloyds Bank Limited, Amritsar.
National and Grindlays Bank Ltd., P.O. Box No. 3, Hall Bazar, Amritsar.

BOMBAY

The Bank of Baroda Ltd., P.O. Box 347, Apollo Street, Fort, Bombay.
Lloyds Bank Limited, Dr. Dadabhoy Naoroji Road, Bombay-1.
National and Grindlays Banks Ltd., P.O. Box 141, Mahatma Gandhi Road, Bombay.

DELHI

The Bank of Baroda Ltd., P.O. Box 376, Connaught Circus, New Delhi.
Lloyds Bank Limited, 10, Parliament Street, New Delhi, 1.
National and Grindlays Bank Ltd., P.O. Box 317, 'H' Block, Connaught Circus, New Delhi.

KANPUR

The Bank of Baroda Ltd., P.O. Box 55, 58/65, Birhana Road, Kanpur.
National and Grindlays Bank Ltd., P.O. Box 26, 16/54, Mahatma Gandhi Road, Kanpur.

MADRAS

The Bank of Baroda Ltd., P.O. Box 1668, Errabalu Chetty Street, George Town, Madras.
Lloyds Bank Limited, 378, Netaji Subhas Chandra Bose Road, Madras.
National and Grindlays Bank Ltd., P.O. Box No. 64, 3 North Beach Road, Madras.

SURAT

The Bank of Baroda Ltd., P.O. Box 6, Bhaga Talav Kanpith, Surat.

Cheques and drafts should be drawn in favour of one of the Bankers of the Issue "A/c Isaac Holdens (India) Ltd.—Equity Issue" and should be crossed "Account Payee Only." A separate cheque or draft must accompany each application and such cheque or draft *Must* be payable at the particular centre (as above) in which the application is lodged.

Cheques *Must* be drawn on a branch of any Bank in the City where the application is tendered. *Outstation cheques will not be accepted.*

If payment is made by a Bank draft, it *Must* be drawn on a branch of a bank in the City in which the application is tendered.

Drafts or cheques drawn otherwise than in accordance with the above will NOT be accepted and the relevant application will be rejected.

BANKERS AS NOMINEES: Applications made in the names of Banks will be consolidated and treated as one, unless separate accounts are specified.

Allotment will be notified by the despatch of an allotment letter but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part without assigning any reason. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will, subject to the provisions of Section 73 of the Companies Act, 1956, be refunded within eleven weeks from the closure of the subscription list.

ISSUE OF SHARE CERTIFICATES

The share certificates will be issued in exchange of letters of allotment within nine months of allotment.

CALCUTTA, 29th October 1960.

L.I.C. COMPLETES FOUR YEARS

PROGRESS SHOWS MANY ENCOURAGING FEATURES

WITH a degree of understandable pride in its past record and justifiable confidence in the future, the Life Insurance Corporation of India entered the fifth year of its existence on 1st September 1960. Four years is no doubt too short a period to measure the success of an institution whose business is selling life insurance but it is sufficient to provide an indication of the trend and direction of progress. Growth of new business indicated in the premium income, quality of business as reflected in the percentage of lapses, efficiency of management as revealed by the trend of claims and expense ratios and quality of service, the nature and composition of assets showing the efficiency with which the investment portfolio is managed are some of the progress indicators of a life insurance company. The character of ownership of a company does not affect the nature of life insurance business and these indicators can, therefore, be relied upon to reflect a true picture of the progress of a company whether it is privately or publicly owned.

To take the first indicator, namely, new business. During the period under review, new business increased from Rs. 260.84 crores at the end of 1955 to Rs. 429 crores in 1959. The 1959 figure represents an increase of 25 per cent. over that of the previous year. The number of policies issued increased by 41 per cent. in two years to 1.15 million in 1959, bringing the number of policies in force at the end of the year nearly seven million. The total business in force, which was Rs. 1,220 crores at the end of 1955, rose to Rs. 1,964 crores in 1959, a net increase of Rs. 744 crores or more than 60 per cent. Thus, till the end of 1959 since nationalisation, new business increased by 100 per cent. and total business in force rose by more than 60 per cent.

These figures must be judged against the background of nationalisation and the developments in the economy. Nationalisation, with Government guarantee of cash payment for each and every policy issued by the Life Insurance Corporation, inspired in the insuring public a confidence which, in the politico-economic situation obtaining in India, no private company could command. Moreover, life insurance in India is still in its infancy. The vast majority of the people are uncovered. Total business in force is only about 15 per cent. of the national income, as compared with countries like the U.S. and Canada where it actually exceeds the national income. Although levels of income and standard of living in India are poor by comparison, considering the small coverage so far, the growth potential is substantial.

Life insurance, unlike property or other kinds of insurance, is a basic need of every one. Until, therefore, each and every person is covered by a life policy, life insurance can be regarded as a necessity. Upto a certain point, that is till the minimum level is reached, sales efforts are likely to produce increasing returns. Resistance will develop and become increasingly difficult to be overcome after this point and the rate of expansion may necessarily slow down then.

Targets and Performance

During the initial periods, therefore, the rate of expansion could be out of all proportion to the effort put in. In fact, promotional campaigns and sales efforts are only catalytic agents. The confidence of the public arising from Government guarantee, the impact of economic progress on income levels, the rising level of literacy coupled with the reduction in premium rates soon after nationalisation and the promotional measures undertaken by the Corporation have created an atmosphere conducive to growth of insurance. This has been exploited by the Corporation to a considerable extent through an enlarged field force and expanded office organisation. This is evident from the fact that the Corporation exceeded its five-year plan target of Rs. 415 crores fixed for 1959 by Rs. 14 crores. The performance during the first half of 1960, however, does not warrant optimism that the target for this year will be easily reached. During the first half of the year, total business completed amounted to Rs. 102.27 crores, as against Rs. 96.27 crores in the corresponding period of the previous year. Past experience has shown that the second half of the year contributes most of the increase in new business. Nevertheless, it remains to be seen whether during the six-month period, June 1960 to December 1960, the Corporation could produce more than four times the business done in the previous six months, which it must do if the target of Rs. 525 crores is to be hit.

While on new business, a phenomenon to which attention needs to be drawn is the widening gap between "the introduced" and "the completed" business which was as much as Rs. 15 crores as at the end of August 1960. The fact that some introduced business cannot be completed because of declinature, acceptance on terms other than proposed, changes in the financial position of the proposer, etc., can only partly explain this gap. The disparity is due, in quite a large number of cases, to poor salesmanship or ineffective closing. Some alteration in the plan, of which there are many variations, or some method by which it could be made easier for the party to buy and keep alive the policy, could surely bring a fair amount of this business firmly on to the books. Another reason for completed business falling far short of introduced business is the failure of agents to collect the full first premium along with the proposal. The Corporation is understood to be thinking of strictly enforcing the practice of collecting the first premium in full along with the proposal with effect from next year. This will no doubt go some way in narrowing the gap.

Lapses

The percentage of lapses, as mentioned above, gives an indication of the quality of business. Judged by the lapse ratio, the quality of business done by the Corporation has not only been good but improving steadily. The percentage of lapses to the mean business in force, which was 7.6 per cent. in 1955, declined to 6.4 per cent. in 1957 and to 5.1 per cent. in 1958. The lapse ratio for 1959 is not yet available, but if the aforesaid trend had persisted, the ratio would be lower.

That life insurance is not only a cover against risks but also a form of saving is indicated by the fact that, of the Rs. 28.14 crores paid by the Corporation by way of claims in 1959, as against Rs. 25.05 crores in 1958, Rs. 21.10 crores were maturity claims and only Rs. 7.04 crores death claims. Lately, however, a disturbing trend in claims experience has been noticed. According to the Chairman's own admission, there has been "a very large number" of early claims arising from the death of policyholders within two years of the coming into force of policies. This underlines the need for vigilance and honesty on the part of the field force and medical examiners of the Corporation. The management of the Corporation will do well to devise a system of special reward to those who bring high quality business.

It is also noteworthy that the increase in new business has not been accompanied by a rise in expenses. In fact, expenses have shown the opposite trend. The renewal expense ratio, which was 15.89 per cent. in 1957 and 15.46 per cent. in 1958, declined to 12.92 in 1959. This, it may be noted, is 2.08 per cent. below the statutory ceiling of 15 per cent.

Training of Personnel

The rate of growth of life insurance depends not upon the potential which is vast and as yet practically untapped, but on the capacity to absorb and service the business. The Corporation has made considerable headway in this respect. The number of branch and sub-offices, which was 216 on 1st September 1956, increased to 345 at the end of 1959. Efforts have also been made to improve the quality of the personnel by imparting training to agents and field officers and the administrative personnel. Since the inception of the training programme till the end of August 1960, 5,785 agents and field officers were trained in the Corporation's training establishments. This has led to be a perceptible improvement in the output of the field personnel. The average output of a field officer was Rs. 4.9 lakhs of new business in 1957. It increased to Rs. 6.5 lakhs in 1958 and to Rs. 7.5 lakhs in 1959. Similarly, the average output of agents also rose, from Rs. 31,067 of new business in 1957 to Rs. 37,494 in 1958 and to Rs. 44,435 in 1959.

Investment

The handling of the investment portfolio is an important aspect of the management of an insurance company. Since investments of the Corporation are strictly regulated by legislation, the area for exercising investment judgment and showing financial prudence is limited. Only in respect of that percentage of funds invested in the shares of companies is the Corporation called upon to prove its mettle as an investor. But considering that the Corporation's total investments are well over Rs. 10 lakhs a day, the amount going into the equities of public limited companies, though a small percentage of the total investment, could, in absolute terms, be substantial. A usual complaint of the Corporation nowadays is that it is becoming increasingly difficult to find outlets for its funds other than in Government and approved securities owing to the comparative short supply of sound scrips. Consequently there has been a decline in the percentage of investments in the shares of companies in the private sector. With the decision to revive the grant of loans on the mortgage of properties, it should be possible to offset, to some extent, the shrinkage of investment in the private sector. The spate of new issues in recent months must also have provided the Corporation an opportunity to invest in promising ventures.

EUROPEAN FREE TRADE ASSOCIATION

ITS IMPACT ON INDIA'S TRADE EXAMINED

By T. Mohan Chandar Menon

THE European Free Trade movement, which began about the middle of the 1950s, found concrete expression in the European Economic Community, popularly known as the Common Market, that was brought into being by the Rome Treaty of 1957. The establishment of the E.E.C. was also, paradoxically enough, the cause of the first major rift among the Western European countries on the proposed European integration scheme. W. Germany, France, Italy, Belgium, the Netherlands and Luxembourg, who believed in a closely integrated union, embracing all the important economic activities of their members, decided on 25th March 1957 to form the European Economic Community which went much beyond a Customs Union, and called for the sacrifice of many sovereign rights. The other group led by the United Kingdom and including Sweden, Norway, Denmark, Austria, Switzerland and Portugal, voted for a looser association where the individual members would be able to retain many of their rights as nation States. There were various other reasons for the different attitudes of the two blocs. The U.K., for example, had her Commonwealth obligations to consider, while Switzerland, with her tradition of neutrality, could not agree to any compromise on national sovereignty. Similarly, different considerations weighed with the others in their attitude towards the Common Market. And even now five members of the O.E.E.C. (Organisation for European Economic Co-operation) are outside the two groups. The second group was formed on 20th November 1959 and was named the European Free Trade Association.

There are mainly three differences between the two blocs. Firstly, while the E.E.C. will eventually abolish all internal tariffs and will have a common external tariff, the E.F.T.A. countries have decided to abolish the internal tariffs only and will retain individual external tariffs against non-members. Secondly, the E.E.C., unlike the E.F.T.A., associates the overseas territories of the members. Thirdly, the E.E.C. scheme applies to both industry and agriculture, whereas the E.F.T.A. is confined only to trade in industrial goods, because full agreement has not been achieved on a policy for agriculture. Apart from these, there are various other differences arising out of the different objectives of the two associations and on account of the fact that, while the E.E.C. has decided on a high degree of integration of economic activities among its members, the E.F.T.A. essays more modest and practical objectives.

Trade of the Seven

The E.F.T.A. comprises seven countries which are geographically dispersed and are at different stages of development ranging from the pastoral Denmark to the highly industrialised U.K. Together, however, they will form an important region in world trade. The combined total trade of the Seven in 1957 constituted 36,319 million U.S. dollars or 17.7 per cent. of world total. Their share of world imports is larger than their share of world exports. The total imports in 1957 amounted to $20,065 million or 19.0 per cent. of world total, and exports $16,254 million equal to only 16.5 per cent. of world exports. (The E.E.C.'s part in world trade is bigger than the E.F.T.A.'s, accounting, as it does, for about 23 per cent. of world exports and imports). The E.F.T.A. it may be noted, will account for a bigger share of world imports than the U.S.A., whose share is only 12 per cent.

The E.F.T.A. region as a whole has a trade deficit with the rest of the world. Portugal and Norway have the largest deficits amounting roughly to 43 per cent. and 36 per cent. reckoned as a proportion of their imports, respectively. In the case of Switzerland, exports represent only 79 per cent. of her imports, whereas the U.K.'s adverse balance in trade totals 18.4 per cent. of imports. Of the Seven, Sweden, Austria and Denmark have the smallest deficits, amounting to 12 per cent., 13 per cent. and 15 per cent. of imports, respectively.

The great differences in the economic structures of the Seven are reflected in their foreign trade. The most industrialised countries are the U.K., Austria, Sweden and Switzerland. These countries depend largely on imports for their raw materials, food and fuels. The percentage share of these items in the import bill is the highest in the case of U.K., accounting, in 1957, as they did for 72.4 per cent. of that country's total imports by value. This ratio was 44.1 per cent. for Austria, 39.7 per cent. for Switzerland and 38.1 per cent. for Sweden. In exchange, these countries export machinery, equipment and other manufactured goods. Exports of these items represent about 75 per cent. in the case of U.K. and Switzerland, and 68 per cent. and 55 per cent. for Austria and Sweden, respectively. Norway and Portugal, though not so highly industrialised as the others, do export a good deal of manufactured goods, machinery and equipment. Denmark, on the contrary, derives the bulk of her earnings abroad from her food exports which constitute 61 per cent. of the total. For Norway, Portugal and Denmark, the bulk of imports consist of manufactured goods, machinery and equipment, which account for about two-thirds of Norway's imports and half of Portugal's and Denmark's.

Table I gives the percentage composition of the Seven's foreign trade.

Effects on Third-country Exports

Non-members exporting to this region will be affected adversely mainly by two measures proposed by the E.F.T.A. The first is the elimination of tariffs on all imports originating within the region and the second the abolition of all quota restrictions against member-countries.

As the favourable treatment will be extended only to goods of the region, a scheme for determining the origin of goods has been drawn up. This scheme is based on the following principles:

1. A percentage criterion of value added to goods within the area. Commodities will qualify for area treatment if 50 per cent. of their price has been added within the region. To help calculate the percentage qualification, a basic materials list has been formed. The materials included in the list would be regarded as of area origin irrespective of their actual origin when calculating the percentage of area content in goods.

2. A process criterion. A list of qualifying processes has been drawn up. Goods would qualify for area treatment if it could be shown that one of the processes included in the list has been performed within the area.

Abolishment of Tariffs

Under the measure relating to tariffs, all duties on the imported goods originating within the area of the E.F.T.A. will be progressively dismantled. The first round of reductions took place with effect from 1st July 1960, when the member-countries cut internal tariffs by 20 per cent. This will be followed by eight annual reductions of 10 per cent. each.

The removal of tariffs on intra-regional exports will have inimical effects on exports from the outside world to the region. The actual danger to third-country exports will depend on two factors. One is the extent of competing trade that third countries have with the Seven. The second is the prevalence and height of tariffs in the E.F.T.A. countries against the outside world's trade with them.

To examine the extent of area competition to third countries' exports to the region, Table II which shows the provenance of the Seven's imports, will be useful.

From the table it is apparent that the region as a whole is dependent on the outside world for the major portion of its imports. The countries which have the largest degree of dependence on the region for their imports are Denmark and Norway, who obtain about 40 per cent. of imports from other members of the Association. The area supplies roughly a quarter of the imports of Portugal and Sweden, while for the U.K., Austria and Switzerland it is of minor significance. If, as is seen, the outside world is of major importance for E.F.T.A. imports, then, *ipso facto*, the competition from member-countries to third countries will be limited. The competition that is present from within the region seems to be more marked in machinery, transport equipment, manufactured goods and chemicals.

The E.F.T.A.'s import trade from the E.E.C. is also presented in the foregoing table, in order to show the commercial importance of

N.B.: R.W.=Rest of the world.

the Community to the Association. In fact, for Austria, Portugal, Sweden, Switzerland and the U.K., the E.E.C. accounts for a larger share of imports than the E.F.T.A. itself. Austria and Switzerland obtain more than half of their imports from the Common Market, while Denmark, Norway, Portugal and Sweden purchase well over 30 per cent. of their import requirements from the E.E.C. The U.K.'s dependence on the E.E.C. for imports, though more than her dependence on E.F.T.A., is still less than 15 per cent. of the total.

On account of the largely Europe-oriented trade structure of the six members of the E.F.T.A., it is certain that the impact of the Association will be mostly felt by the other European countries, and more especially by the Six of the E.E.C.

For the non-European countries, especially the primary goods exporters, the U.K. is the only important trading partner of the Association. As such, Britain's widely dispersed trade interests will be a mitigating factor on the adverse affects of the Association on non-members' exports to the region. This is more so when we remember that the lion's share of Britain's imports is accounted for by her Commonwealth associates whose exports already enjoy liberal tariff treatment in the U.K. market under the Commonwealth Preferences Scheme.

From the foregoing discussion, it appears that the competition to the outside world from intra-regional exports of the E.F.T.A. will be mostly felt by the E.E.C. which has such a big stake in the import trade of most members of the Association. The U.K., particularly, will gain considerably in the markets of other member-countries. To member-countries, most of the gain will be in the field of manufactured goods, namely, machinery, transport, equipment and other manufactured commodities.

More than actual trade it is the extent of "preferential trade" or area trade which will receive special tariff treatment that matters from the point of view of assessing the impact of tariff elimination within the region on imports from outside. In other words, the outside world has to bother only about those items which will have to pay a duty when imported from them, but will not have to do so when imported from within the area. For this, the structure of the tariff walls in the seven countries of E.F.T.A. has to be studied.

Tariff Structure

Tariff comparisons are difficult on account of the different nature of duties (e.g., revenue or protective; specific or *ad valorem*) and also on account of the differences in tariff classifications adopted by the various countries. The E.F.T.A. countries (except Portugal) have, however, now adopted the Brussels nomenclature, according to which all goods entering international trade are classified under some 1,100 headings. The P.E.P. (Political and Economic Planning) have recently made a useful study of the tariff structure in the West European countries. The brief examination of the tariff structure in the E.F.T.A. countries that follows is based on this publication.

The U.K. is easily the leading high-tariff country of the Association. Her tariffs are particularly high against chemicals, textiles, machinery and transport equipment. But, as mentioned earlier, the U.K. tariff wall is built against non-Commonwealth countries, and as such the high tariffs are not applicable to its purchases from Commonwealth sources, which account for a good deal of U.K. imports. Next to the U.K., Austria imposes fairly heavy duties on imports. Machinery, transport equipment, manufactures of metals, textiles, paper, rubber and leather are the items against which stiffer tariff restrictions are applied in Austria. Switzerland's tariffs are not high, but they are applied on the widest range of goods including basic materials (important for India), which is a group that is comparatively free from tariffs in the region. Norway and Sweden are examples of countries where tariffs are used selectively. A large number of items such as basic materials, leather, rubber, paper, iron and steel, and other metals are practically free from duties in these two countries. But other items like chemicals (alcohols, etc.), textiles, machinery and transport equipment face fairly high tariffs in these two countries.

Briefly stated, the impact of tariff elimination within the region on exports of non-member countries will be as follows:

First, tariffs are prevalent mostly on machinery, transport equipment, chemicals and textiles. This implies that the elimination of tariffs on intra-regional imports will tell most on countries exporting the above items such as W. Germany, France, Belgium, Italy and the U.S. Secondly, the omnipresent tariff restrictions on textiles in the E.F.T.A. will affect many of the textile exporting countries including India. Thirdly, the comparatively generous treatment meted out to basic materials should reduce apprehensions of the primary goods exporting countries, regarding the creation of the E.F.T.A

Abolishment of Quotas

In international trade, quota restrictions have been used more effectively than tariffs to control trade. For third countries, the measure regarding abolishment of quotas against member-countries' trade, therefore, assumes greater importance than the measures regarding tariff elimination. Unfortunately, information about quota restrictions is meagre to enable an assessment of the likely consequences to third country exports of the removal of quantitative limitations on member-country exports. Broadly speaking, however, the E.F.T.A. countries have not resorted to this method of trade curtailment. Some important items that have been subjected to quantitative restrictions occasionally are tobacco and textiles. Quantitative control of imports is generally resorted to in times of emergency and, for this reason, if for nothing else, the outside world can depend on the fairly good prospects of the growing prosperity of the member-countries for only a limited use of quota restrictions for regulating their imports.

India and the E.F.T.A.

The seven countries of the Association constitute an important region for India's foreign trade. The importance is more for Indian exports, as the area accounts for 30 per cent. (1958 basis) of the total, as against 21 per cent. of the total in the case of imports. Almost the whole of this trade, however, is represented by the U.K. Britain's share in India's trade amounts to roughly 20 per cent. of total imports and 28 per cent. of total exports. In the discussion that follows, only the effects on Indian exports are considered.

In Table III below exports from India to the E.F.T.A. of major items and total exports of these are given.

The table clearly reveals the insignificance of the E.F.T.A. for Indian exports, if the U.K. is excluded. On account of this, the implications of the Association for India will largely be concerned with the U.K.'s membership of the Association.

For our exports, the U.K. is a sheltered market. Our exports enjoy special tariff treatment there under the Commonwealth Preferences Scheme. These privileges are extended in the case of about 90 per cent. of our exports in the form of duty-free entry in the U.K. market. Where this is the case, at worst, Britain allowing the E.F.T.A. exports to enter free of duty can mean only a comparative loss to India, in the sense that the special privilege that she hitherto enjoyed together with other Commonwealth countries will now be extended by the U.K. to the other members of the Association.

TABLE III

Major exports from India to E.F.T.A. and exports of these items to all destinations in 1958

	India's exports in 1958 in Rs. lakhs		
	World	E.F.T.A.	U.K.
Jute fabrics	5,886.8	636.3 (11)	531.2 (9)
Cotton fabrics of standard types	2,535.5	83.1 (3)	64.6 (25)
Hides and skins, raw	717.0	63.3 (9)	53.4 (7)
Leather	1,825.4	1,239.0 (68)	1,226.0 (67)
Essential oils	208.8	56.2 (27)	42.5 (20)
Castor oils	305.4	132.0 (43)	126.4 (41)
Coffee	717.9	129.9 (18)	69.7 (10)
Tea	13,654.4	8,952.3 (66)	8,947.6 (65)
Raw cotton	1,520.0	78.8 (5)	73.6 (5)
Cotton twist and yarn—			
(i) Grey unbleached	435.1	59.7 (14)	0.4
(ii) Bleached	182.2	39.8 (22)	39.6 (22)
Wool, raw	934.6	310.8 (33)	307.0 (33)
Tobacco—			
(i) Unmanufactured	1,470.1	1,099.0 (75)	1,084.1 (74)
(ii) Manufactured	158.6	..	..
Manganese ore	15,584.4	186.0 (1)	167.7 (1)
Vegetable non-essential oils	744.8	317.4 (43)	311.7 (42)
Oilseeds and oilcakes	34.3	12.6 (37)	..
Spices	883.1	82.9 (9)	24.4 (3)
Total of above	47,798.4	13,479.1 (28)	13,069.9 (27)
Total including others	57,655.5	17,109.5 (30)	16,524.2 (29)

Figures in brackets represent percentage share of total.

This poses no real danger, as there is little competing trade from within the region. Even in commodities which appear at first to offer some competition, it is seen that the interests of the member-countries and of India do not really clash. Cotton textiles and hides and skins raw are illustrative of this. Switzerland is the member-country which exports cotton fabrics. Her interests here lie in fabrics of the white bleached and printed varieties. Now these are items of minor importance to India at present. Again, in the case of hides and skins raw, we see that the member-countries' exports consist of raw cattle hides and calf skins as against raw goat skins from India. Cattle hides and calf skins do not really compete with goat skins which is a finer, softer variety of skin used for different purposes.

Exports from India which have to pay a duty in the U.K. constitute a very minor portion of our export list. Major commodities among these are coffee, tobacco and sugar preparations. In these items, if the intra-regional exports are accorded free entry by the U.K., then she will be showing to exports of member-countries even more favourable treatment than what she accords to her Commonwealth associates. This constitutes a real source of danger to the privileged exports from the Commonwealth, if there is sufficient competing trade from within the region. Happily for India the items of her export which have to pay duty do not have any competition from regional sources. It may, therefore, be concluded that, as far as the U.K. is concerned, the interests of Indian exports are well protected.

As has been pointed out earlier, although exports from India to the other six members constitute only about 5 per cent. of its total exports to the region and as such should not be a cause for anxiety for us, it may nevertheless be worthwhile knowing what are the items of Indian export which will feel the impact of the establishment of the Association. Table III will show that, among the important commodities which are exported from India to the region, the six members account for a respectable portion of Indian exports of oilseeds and oilcakes, cotton twist and yarn grey unbleached, coffee and essential oils. Apart from these, a good deal of jute fabrics and cotton textiles of standard types are also taken by the Continental members of the Association from India. Out of these, there is scope for expansion of trade from within the region at some expense to Indian exports in items such as cotton textiles of standard types, jute fabrics and cotton twist and yarn grey unbleached, for which there is sufficient capacity within the region itself. The most important exporter of these items among the members of the Association is Britain who is likely to make some inroads into our trade. But, on account of two factors, this danger is minimised. First, the amount of trade with the E.F.T.A. in the items likely to be affected is a small portion of our total trade in these commodities. Secondly, if the U.K. will be the gainer, then some of her gains is likely to be passed on to us by way of larger U.K. imports of semi-finished goods and raw materials related to the manufacture of these commodities.

Trade-creating Possibilities

Upto now, it is only the trade-diverting aspects of the E.F.T.A. that have been discussed. It will be incorrect if before concluding we do not have a look into the other side of the picture—the trade-creating possibilities of the Association. There certainly appears to be something to look forward to in this respect. First, the Association will bring into being a trading bloc of seven countries which account for nearly one-sixth of world exports and one-fifth of world imports. The existence of such a powerful area cannot but lend some stability to world trade. World trade has been only too frequently the victim of the vagaries of economic conditions of a country like the U.S. The recent world recession brought about mainly by a slackness in economic activity in the U.S.A. was an unpleasant reminder of the old adage that, if America sneezes, the rest of the world catches pneumonia. Such a hopeless dependence on one country will certainly be reduced by the creation of other powerful trading areas. Secondly, it is one of the basic objectives of the Association to bring about a greater expansion of economic activities in the member-countries than it would be possible for these countries to achieve individually. The success of this objective will bring with it greater demand for world goods.

On balance, therefore, while we will do well assiduously to watch the developments arising out of the creation of the E.F.T.A., there is certainly no ground to take an alarmist view of the situation. There are dangers and opportunities. And, as always, the challenge is more important than the threat.—*All Rights Reserved.*

GROWING SHARE OF EUROPE IN WORLD TRADE

ANALYSIS IN A U.N. STUDY

EUROPEAN countries have been making determined efforts in recent years to establish their supremacy in international trade no less than in the sphere of industrial production. Thanks to this bid, there has been a notable increase in the share of Europe in world trade between 1957 and 1959, according to the latest issue of the *Economic Bulletin for Europe*, published by the Secretariat of the United Nations Economic Commission for Europe (E.C.E.). This increase, the *Bulletin* adds, was largely at the expense of North American exports to western Europe as well as that of overseas primary exporting countries. In these overseas primary exporting countries, however, the reduction in their share of world trade was smaller for imports than for exports since "they had been building up their foreign currency reserves." The aforesaid issue of the *Bulletin* is devoted entirely to European trade developments and problems. The following aspects are given particular emphasis: western Europe's trade with overseas countries, intra-western European trade supplemented by a summary of the latest developments in the field of the institutions, tariffs and other arrangements of the European Economic Community and European Free Trade Association and east-west European trade and payments relations. The *Bulletin* also contains a special note on recent developments and problems of export-credit guarantees.

The *Bulletin* observes that intra-western as well as intra-eastern European trade have in past years, including the first half of 1960, constituted the most expansive sectors of world trade. East-west European trade increased faster than total world trade, although the quantum of trade remained relatively small. Soviet exports to the rest of eastern Europe, which had fallen by 9 per cent. between 1957 and 1958, increased by 27 per cent. between 1958 and 1959, partly as a result of new credits extended to these countries. It may be recalled that in 1957 also there had been an increase of as much as 44 per cent. in Soviet exports to eastern Europe, on account of Soviet credits. Another feature of recent European trade highlighted by the *Bulletin* is that the trade of eastern Europe (including Soviet Russia) with overseas primary exporting countries (excluding mainland China and other countries of the eastern trading region) levelled off in 1959. In particular, there was a fall in deliveries on credit terms to such countries as India and the United Arab Republic.

W. European Imports

Thanks to the resumption of a rise in Western European production in mid-1959, there was a sizable increase in imports from overseas countries towards the end of the year and during the early months of 1960. From October 1959 to March 1960, the volume of western Europe's imports from overseas countries increased by 20 per cent., as compared with the corresponding period of 1958-59, or rather more than production. Higher imports from the U.S. were a later feature of the expansion, but such imports rose faster than imports from overseas primary-exporting countries. This movement conforms to the experience of western European expansion from 1953 to 1957. There was a time-lag between the growth of exports from the primary-producing countries to western Europe and North America and their imports from the industrialised countries. The *E.C.E. Bulletin* notes that a slight decline in western Europe's exports to the U.S. occurred since the autumn of 1959, and since imports from the U.S. increased very fast during that period, there was a sharp increase in western Europe's visible trade deficit ($939 million at an annual rate in the first half of 1960, as compared with $200 million in the second half of 1959 and with a rough balance in the first half of that year).

The *Bulletin* points out that, during the post-war period, the countries presently constituting the European Economic Community have been economically the most dynamic in western European intra-trade, thus gradually increasing their share of western European output and trade. In particular, trade among the E.E.C. countries themselves has grown faster than other sectors of intra-western European trade. But the E.E.C. countries were also the most dynamic trade partners for the other western European countries in recent years and still in 1959, when the first tariff cuts on intra-E.E.C. trade took place. The *Bulletin* states that the tariff discrimination put into effect in the E.E.C. may have resulted in some deflection of E.E.C. imports away from E.F.T.A. countries to the benefit of E.E.C. countries. There was, on the other hand, some acceleration of intra-E.F.T.A. trade already during the first half of 1960, although the first tariff cuts among the Seven took effect only on 1st July 1960.

East-West European Trade

The trade between countries of western Europe and eastern Europe continued to make much headway in 1959 and in the first half of 1960. The *Bulletin* says that the expansion in 1959 was concentrated on eastern European exports of foodstuffs (particularly wheat), petroleum, pig iron and other industrial materials, and on western European exports of industrial equipment. The Soviet Union accounted for three-fifths of the increase in eastern European exports to western European countries between 1958 and 1959. This was largely due to the bumper wheat harvest of 1958, but the percentage rise in exports was even greater for petroleum and petroleum products (6 million tons in 1958 and almost 11 million tons in 1959). However, the authors do not expect that this rate of expansion of Soviet exports of petroleum will be kept up in 1960. Soviet exports to western Europe of timber, pig iron, raw cotton, flax and many other crude materials also increased, while there was a decline in exports of aluminium, tin and cellulose. The rapid expansion in Soviet exports to western Europe in 1959 and the first half of 1960 was accompanied by a steep increase in imports of industrial equipment from that area, in particular from France, West Germany and the U.K. Data for the first half of 1960 indicate an increase in western European exports to the Soviet Union of almost 80 per cent. over the first half of 1959.

A brief account of the east-west European Payments Agreements and their implications for trade relation is also found in the *Bulletin*. The *Bulletin* has analysed the significance of the growing use of convertible western European currencies. It also stresses that "for a few western European countries, whose export structures do not correspond to the scale of import priorities of the eastern European planning authorities, and who have a weak trading position with western markets, bilateral trading may be a means of expanding their trade with eastern Europe and hence their total exports." The analysis of the changes in the bilateral component of trade during the 'fifties stresses the effect of terms-of-trade fluctuations, as well as the deliberate efforts on both sides to achieve balanced trade. The expansion in east-west European trade during that period has been concentrated on higher reciprocal exchanges between pairs of eastern and western European countries, while import and export surpluses have tended to fall.

Export Credit Guarantee

Another important aspect to which the *Bulletin* draws attention is the recent developments in the sphere of export-credit guarantee schemes prevailing in Europe. According to the *Bulletin*, recent measures by a number of Governments, especially in western Europe and North America, to expand the scope of export-credit guarantee schemes point to the growing importance of these arrangements in international trade. As long as international trade was financed principally by bank acceptances or documentary credits for short-term transactions, and by securities floated by the larger debtors on well-organised capital markets for medium-term or long-term transactions, export finance and export-credit insurance raised no special difficulties, according to the *Bulletin*. Changes were introduced into the operation of traditional schemes in the late 'forties and in the 'fifties. Recent developments represent a move towards both the standardisation of existing schemes (much along the lines of the British, French and West German systems) and their extension. For that reason, the desirability of closer co-operation among countries running export-credit guarantee schemes is emphasised. The need for such co-operation is most evident in the problem of assessing to what extent medium-term export credits might be utilised as a source of additional finance for development.

GOVERNMENT'S STORES PURCHASES

PREFERENCE FOR INDIGENOUS PRODUCTS

THE policy of the Government of India regarding the stores purchase programme is so designed as to utilise indigenous production to the maximum extent possible, even if it meant according price preference and relaxing specifications within reasonable limits. This was disclosed by Mr. K. C. Reddy, Union Minister for Works, Housing and Supply, while inaugurating the eighth meeting of the Central Purchase Advisory Council. While imported stores of the value of Rs. 44 crores were purchased by the Directorate-General of Supplies and Disposals (D.G.S. and D.) during 1955-56 out of the total purchases amounting to Rs. 120 crores, the value of imported stores purchased in 1959-60 was no more than Rs. 20 crores, as against the total purchases of Rs. 182 crores. In other words, the percentage of the imported stores to total purchases fell sharply from 37 to 16.

Mr. Reddy stated that the D.G.S. and D. had effected purchases to the tune of Rs. 780 crores, of which indigenous products accounted for Rs. 584 crores, during the first four years of the second Plan. The purchases in the final year of the second Plan (1960-61), according to Mr. Reddy, were expected to be Rs. 200 crores, making a total of Rs. 980 crores for the second Plan as a whole. He added that, in view of the considerably higher financial outlay envisaged for the third Plan, it was reasonable to expect that purchases by the D.G.S. and D. during the coming years would be substantially higher than in the second Plan.

Planning Wing

In order to handle this anticipated additional load, the D.G.S. and D. had set up a Planning Wing entrusted with the responsibility of collating demands from the indenting departments and statistics of installed indigenous capacity, with a view to enabling the Central Purchase Organisation to enter into long-term arrangements with the industry. At the last meeting of the Council, it was decided that certain problems connected with the payment of sales tax, consignee's right of rejection of stores and variation in the rates of customs duty due to changes in the classification, should be referred to the sub-committee of the Council, whose recommendations should be further considered by the Council.

The following table gives at a glance the group-wise orders for stores which were placed by different Central Government departments during 1958-59:

(Value in crores of rupees)

	Indigenous	Imported	Total
Food materials	5·36	96·17	101·52
Tobacco	0·21		0·21
Textiles	17·33	0·10	17·34
Footwear	2·23		2·23
Other leather and its products	0·32	0·01	0·33
Wood	3·79	2·13	5·92
Paper and paper products	9·54	0·48	10·02
Rubber products	4·96	0·12	5·08
Chemicals	6·52	8·57	15·09
Non-metallic mineral products	43·83	15·89	59·71
Basic metal industries	5·49	11·36	16·85
Metal products	14·08	0·45	14·53
Electric machines	20·22	6·66	27·18
Other machines	6·66	10·83	16·83
Transport equipments	43·66	30·57	74·23
Miscellaneous industries	2·76	2·04	4·80
Total	186·28	185·77	372·05

Alluding to the complaint of the All India Manufacturers' Organisation that certain Government departments were purchasing imported stores, although indigenously manufactured products conforming to the required specifications were available, Mr. Reddy pointed out that in so far as the Central Purchase Organisation was concerned, before any indigenous offer which was up to the specifications was rejected, the personal orders of the Director General were invariably taken.

The C.P.O. had been making endeavours to enter into long-term arrangements with the industry through Rate and Running Contracts, according to Mr. Reddy. In the case of some of the Rate Contracts the supply had not been regular as manufacturers had not been able to plan their production in the absence of a regular flow of orders. Instructions had now been issued to the C.P.O. to conclude Running Contracts in preference to Rate Contracts wherever it was possible to forecast requirements. The conclusion of Running Contracts would enable the industry to plan their manufacture in advance and assist the C.P.O. in rendering effective service to the indentors.

C.E.S.C.'S EARNINGS IMPROVE

PLANS FOR REPLACEMENT OF OLD PLANT DROPPED

THE industrial expansion throughout the licensed area in which the Calcutta Electric Supply Corporation Ltd. operates and the development of housing in Calcutta and its suburbs have increased the demand for power. This is fully reflected in the Company's results for the year ended 31st March 1960. There is a rise of 139.5 million units to 1,816.6 million units in the power sold and of £720,000 to £8.82 million in sale proceeds of current. There has also been an increase of £27,000 in other income, of which interest earned on Treasury Bill investments and bank deposits alone accounts for about £25,000. Consequent on the increase in demand for energy, the cost of generation and distribution has also risen by £534,000 to £4.56 million. Of this expenditure, the cost of coal, including handling and ash disposal charged, amounts to £2.83 million, representing an increase of £373,000 over the year. It may be noted in passing that this major item of outlay represents 80 per cent. of the total operating cost of generation. There has also been an increase in the cost of power purchased from the Damodar Valley Corporation. Commensurate with the expansion of the Company's system, wages and cost of materials too have moved up. Nevertheless, the Company's gross profit (before providing for depreciation and taxation) has increased from £2.63 million to £2.86 million, thus maintaining the upward trend noted for some years past.

The net profit, at £1.66 million, shows a small increase of only £63,000, consequent on the larger provision of £929,176 for depreciation (as against £900,782 for 1958-59) and of £759,324 for taxation (£623,222). The clear profit for the year, as calculated under the Electricity (Supply) Act, 1948, has, however, fallen short of the reasonable return to which the Company is entitled by £67,353 and this is made good by a corresponding transfer from the special reserve. An additional sum of £349,403 has been transferred from the special reserve, but this is entirely being placed to the consumers' benefit account as directed by the West Bengal Government. In view of the continued expansion of the Company's operations, the Directors have considered it essential to conserve its finances to meet the consequential expenditure. Accordingly, they have set aside from the year's profit £575,000 for plant expansion and replacements, on top of £525,000 added last year. To meet the statutory requirement, they have added £35,866 to the contingency reserve, which had received £33,417 a year ago, besides strengthening the debenture sinking fund and and making the usual provisions for retiring gratuity fund and writing off cost of issue of debentures. They have also recommended a slight increase in dividend from 7 per cent. to 7.5 per cent. (actual) by putting up the final distribution from 3.5 per cent. to 4 per cent.

The salient features of the Company's results for the year under review are compared with those for the previous years in the following table:

(In £s sterling)

—	For the year ended 31st March			For 15 months ended March 1957
	1960	1959	1958	
Sale of current	8,834,610	8,114,777	7,322,268	7,987,957
Other income	141,762	114,680	145,122	113,328
Cost of generation distribution, etc.	4,557,626	4,023,443	3,511,820	4,196,813
Other expenses	1,562,756	1,577,357	1,347,499	973,615
Gross profit	2,855,990	2,628,657	2,608,071	2,931,357
Depreciation	929,176	900,782	843,551	999,579

The Company's financial position as on 31st March 1960 is quite sound. The paid-up capital of £6.16 million is supplemented by reserves and surplus aggregating £10.23 million. The Company has so far redeemed £1.38 million worth of debentures, leaving an outstanding balance of £3.63 million. The current liabilities and provisions aggregate £4.51 million. The current assets stand at £4.08 million. The cost of debenture issue yet to be written off is £162,538. The Company's capital expenditure during the year amounted to £1.16 million and was almost entirely on transmission and distribution systems. This was financed out of the provision of £929,000 for depreciation and the allocation of £575,000 for plant expansion and replacement reserve, thus demonstrating, once again, that the Company has been able to provide, within the limits permitted by the reasonable return on the capital base, internal finance for the expansion of the Company's undertaking. This brings the total capital expenditure up to the end of the year to £33.60 million, which has been well written down to a book value of £20.30 million. The Company proposes to make an annual outlay of not less than £1.25 million on its transmission and distribution systems and this estimate is based on the anticipated increase in the demand for power.

The Company's future expansion of its generating capacity has been stopped by the West Bengal Government and its additional requirements are being met by the Damodar Valley Corporation, though not to the full extent required, under an agreement with the D.V.C. The agreement provided for an initial supply of 45 MW. to be increased year after year. But the West Bengal State Government has again intervened and has placed a ceiling on the quantum of direct supply from the D.V.C. at 100 MW. Commenting on this, Sir Harry Burn, Chairman of the Company, says, in his review accompanying the Directors' report and accounts, as follows:

"The Company's understanding of the arrangement with the Damodar Valley Corporation has been that the latter would be responsible for meeting all the Company's requirements of power in excess of that provided by its own capacity and, in fact, at the beginning of last year, a supplemental agreement was completed with the Damodar Valley Corporation to govern supplies in excess of 100 MW. The Company has, however, now been advised by the West Bengal Government that it is not their policy that the Company's offtake from the Damodar Valley Corporation shall exceed 100 MW. and that its import requirements in excess of that figure will be provided through the agency of the West Bengal State Electricity Board, first from the latter's new station at Durgapur and thereafter from a super-station which they propose to build at Bandel on the west bank of the River above Calcutta. The Company has been given to understand that, under this arrangement, the State Board will be able to afford it a supply of 40 MW. by June 1963 rising to 60 MW. in June 1964 and that shortly thereafter all the Company's requirements can be met. I need hardly say that the State Board will have the Company's full co-operation in bringing this plan to the earliest possible fruition and, in this connection, negotiations are already in train for the siting of the necessary supply points, etc.

"Meantime, the demand on the Company's system continues to grow at a rate of some 7½ per cent. per annum compound, and it is feared that some restriction of supply to the public may occur before the State Board's supply is fully available. Should any such restriction become necessary, it will, needless to say, be kept to the absolute minimum, and will be done under the direction of Government acting under the powers conferred on it by the Indian Electricity Act 1910."

Though the Company was not permitted to increase its generating capacity, it had requested permission for replacing its obsolete plant at the Old Cossipore Station by the addition of one further 50 MW. set at New Cossipore. But the West Bengal Government has turned down this request also, in view of its own plans, and the Company has accordingly had to abandon this programme.

The Company's ordinary stocks of the value of £1 each are being currently quoted on the Calcutta Stock Exchange at Rs. 15.12 *cum-div.*, at which rate the yield on them is 7.1 per cent. per annum.

ANNUAL MEETING OF COMPANIES

The Department of Company Law Administration has clarified that the non-holding of annual general meeting of a company by its officers, as required under the Companies Act, will not be considered a defence against penalty for offences like failure to present accounts of the company before the general meeting, or non-filing of the annual list of members and summary of share capital with the Registrar of Companies. The Department has pointed out that a breach of each of these provisions is an independent offence and is liable to separate penalty according to the provisions of the Companies Act.

In a recent case, this failure to hold the annual general meeting was pleaded as a defence against the non-presentation of accounts. The Supreme Court held that this position was untenable and that "a person charged with an offence could not rely on his own default as an answer to the charge, and so, if the person charged is responsible for not calling the general meeting, he cannot be heard to say in defence to the charge that the annual general meeting had not been called."

TATA CHEMICALS EARN LESS

BORROWINGS MOUNT UP

AS was briefly stated in our issue dated 8th October 1960 (*vide* page 650), the working of the Tata Chemicals Ltd. during the year ended 30th June 1960 suffered a setback and, as a result, the Directors have had to prune the dividend on old ordinary shares from 7.5 per cent. (for 1958-59) to 6 per cent. and on new shares from 7.2 per cent. to 6 per cent (including interest at 4 per cent. payable out of capital). The dividends for 1958-59 and 1959-60 are both subject to deduction of tax. The full details of the accounts now available show that the gross profit has dropped from Rs. 69.15 lakhs in 1958-59 to Rs. 50.88 lakhs, due to factors beyond the control of the management. It must be noted here that the previous year's profit had included a sum of Rs. 4.77 lakhs being the net profit earned on sale of assets, whereas there has been no such extraneous earning during the year under review, so that the actual decline in profit on trading is only Rs. 13.50 lakhs. Even this setback has occurred, despite the fact that revenue from sales is maintained at the previous year's level.

The decline in profit is attributed by the Directors to the following adverse factors:

(i) The inevitable interference with the production of existing units by plants under construction, reduced operations and lower efficiencies arising from the trials and commissioning of new units under the expansion programme, (ii) the reduction of Rs. 10 per ton in the price of soda ash for the full year, as against four months in the previous year and a reduction of Rs. 30 per ton in the price of caustic soda from October 1959 following the recommendations of the Tariff Commission, (iii) the higher cost of salt due to lower production, (iv) higher interest charges and (v) the increased dearness allowances to workers and staff from December last.

The following comparative table presents the salient features of the Company's results during the last four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sale of products	341 31	340.70	341.70	265 59

Carry forward	0.14	0.07	0.04	0.09

* Subject to deduction of tax.

It will be noted that the drop in net profit is smaller than that in gross profit, thanks to the substantially lower provision for taxation. Despite the decline, the net profit for the year under review is nearly double that for 1957-58. If, however, the proposed dividend is less than that paid two years ago, it is due to the fact that as much as 53.5 per cent. of the net profit—Rs. 14.35 lakhs, to be precise—has had to be set aside to the statutory development rebate reserve, as against only Rs. 2.30 lakhs two years ago. Such a large allocation to the statutory reserve has resulted in a shortfall in the distributable sum available for paying even the reduced dividend and this is made good by drawing Rs. 2.50 lakhs from the general reserve.

The Company's production of soda ash amounted to about 62,000 tons, which was only slightly more than that of the previous year. The expectation of a much higher output was not realised due to interference with the production of existing units by plants under construction and owing to unavoidable delay in the completion of the new units. Approximately 40 per cent. of the new equipment was installed and put into commission during the year. The major units installed were the new brine refinery, the new ammonia still and the steam tube drier. The drier is the largest of its kind in India and is capable of calcining 300 tons of soda ash per day; being a new type of equipment, it has taken a somewhat longer period than expected to be brought into successful operation. The new ammonia still has, however, gone into production comparatively smoothly.

The operation of the caustic soda plant has shown an all-round improvement; as compared with the previous year, produ[illegible]

about 9 per cent. and the efficiency of the plant was also better. The output of sodium bicarbonate showed a substantial improvement over the previous year with the commissioning of new equipment. Owing to heavy rains during the monsoon of 1959 and scattered showers occurring during the precipitating season, there was a substantial fall in the production of both solar and vacuum salt. The production of solar salt was only 71,000 tons, as compared with 100,000 tons in the previous year and 154,000 tons in 1957-58. The completion of the new salt works at Samalsar was also hampered by unusually heavy rains, and these works are now expected to be completed by the end of the calendar year. The substantial fall in production depleted the normal salt reserve at Mithapur, and it became necessary for the Company to purchase salt at substantially higher cost in the current year from Saurashtra and other centres in order to maintain the higher production anticipated at the soda ash plant. The rains also affected the working of the marine products section where production was lower by about 29 per cent.

In the field of agro-chemicals, the production of BHC increased by more than 20 per cent. with the completion of the first phase of the expansion programme. Further expansion of the plant is under progress and, when completed, the manufacture of a new pesticide, "Lindane," will be taken up. Orders for the Lindane plant have been placed in Germany and the plant is expected to be completed by June 1961. The production of copper oxychloride was made to the requirements of Tata-Fison. Output was, however, restricted due to growing competition in this field from other manufacturers. A new product, copper sulphate, was placed on the market during the latter part of the year under review.

The Company's balance-sheet as on 30th June 1960 shows that its borrowings continue to mount up and consequently its burden of interest is growing. The Company issued during the year under review 5 per cent. 'A' mortgage debentures of the value of Rs. 1 crore repayable in 1970-75 and these were pledged with the State Bank of India for additional cash credit facilities. The outstanding borrowings against these and old debentures as on 30th June 1960 are Rs. 116.50 lakhs, as against Rs. 46.21 lakhs a year ago. The short-term loans also have risen from Rs. 145.75 lakhs to Rs. 208.83 lakhs, bringing the total borrowings to Rs. 325.33 lakhs, representing 48 per cent. of the capital employed; this ratio has gone up from 36 per cent. a year ago. The other current liabilities and provisions aggregate Rs. 112.56 lakhs. The total liabilities and provisions, at Rs. 437.89 lakhs, are not adequately covered by current assets which amount to only Rs. 290.61 lakhs. The additions to the block account during the year aggregate Rs. 95.04 lakhs, bringing the total cost of the block account to Rs. 589.53 lakhs. This has been written down to Rs. 382.79 lakhs. The depreciation provided so far thus amounts to Rs. 206.74 lakhs. The estimated arrears of depreciation still to be provided amount to Rs. 48.93 lakhs. In addition to the net block mentioned above, plant and machinery of the value of Rs. 30.03 lakhs are awaiting installation as at the end of the year and capital work-in-progress amounts to Rs. 88.67 lakhs. The net assets of the Company thus aggregate Rs. 354.20 lakhs and are represented by a paid-up capital of Rs. 311.88 lakhs and reserves and surplus of Rs. 42.31 lakhs. Considering the magnitude of the undertaking and the capital employed in it, the reserves of the Company are very small and need to be considerably strengthened.

The current market value of the Rs. 10 paid-up ordinary shares (old) of the Company is Rs. 15.88 *cum-div.* On an *ex-div.* basis, the yield on the shares is no more than 2.7 per cent. per annum, free of tax.

BRITANNIA ENGINEERING TO DIVERSIFY ACTIVITIES

The recommendation of the Directors of the Britannia Engineering Company Ltd. (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) to step up the dividend on ordinary shares for the year ended 31st December 1959 from 6 per cent. free of tax paid consistently for the three years 1956-58 on the present capital to 10 per cent., subject to deduction of tax, or 7 per cent. free of tax, is in consonance with the higher earnings of the Company. The gross profit has gone up from Rs. 13.23 lakhs (in 1958) to Rs. 18.86 lakhs. The net profit, too, has recorded a marked rise from Rs. 2.61 lakhs to Rs. 6.53 lakhs, in refreshing contrast to the sustained decline in the previous three years. The Directors have not added anything, as in the previous year, to the reserves of the Company, except a sum of Rs. 1 lakh to the development rebate reserve, which had received Rs. 1.06 lakh a year ago. The enhanced dividend on ordinary shares on a gross basis absorbs Rs. 1.60 lakh more, at Rs. 4 lakhs. The dividend on the 7 per cent. tax-free preference shares is subject to deduction of tax, so that the net dividend works out to only 4.9 per cent. The Directors have not made any provision for the additional distribution of 25 per cent. payable to the preference shareholders if the Preference Shares Dividend Bill becomes law.

The following comparative table brings out clearly the progress of the Company since 1956:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956

* Subject to deduction of tax.

Note.—The Company's preference shares originally carried a dividend of 6 per cent. per annum, tax-free, but in May 1958, the dividend was raised to 7 per cent. per annum, tax-free.

The Company manufactures textile machinery, tea machinery, railway carriage and wagon components, road rollers and a wide variety of other materials required for railway and other engineering companies. More recently, it has taken up wagon building activity and manufacture of printing machines. The production of road rollers during the year under review is said to have been satisfactory and, with the new plant coming into operation, the Directors anticipate a further improvement in production. There has been a sustained demand for tea dryers throughout the year and the resultant increased production thereof has, to a large extent, offset a falling-off in turnover of other items of tea machinery. The wagon building factory at Mokameh, Bihar State, has commenced production and, with increased supplies of raw materials now becoming available, the output is expected to show substantial expansion. At Titaghur, the manufacture of printing machines is well in hand and the first batch of flat bed stop cylinder machines is expected to be ready for sale shortly. The Directors have under consideration plans for further diversification of the Company's activities, in collaboration with reputable foreign firms.

In view of the Company's plans for further diversification of its production and for expansion of its activities, it is considered desirable to raise the authorised capital of the Company from Rs. 1 crore to Rs. 2 crores, by the creation of 500,000 new ordinary shares of Rs. 10 each and 500,000 unclassified shares of Rs. 10 each.

The present paid-up capital of the Company is Rs. 46.95 lakhs, made up of 400,000 ordinary shares of Rs. 10 each and 6,948 7 per cent. cumulative tax-free preference shares of Rs. 100 each. The reserves and surplus aggregate Rs. 42.06 lakhs. The total borrowings (including those against debentures of the value of Rs. 30 lakhs) amount to Rs. 130.11 lakhs and other current liabilities and provisions Rs. 61.92 lakhs. The gross block of the value of Rs. 98.27 lakhs (including additions made during the year and value added by revaluation in 1939) has been written down to Rs. 50.25 lakhs. The current assets, at Rs. 232.04 lakhs, more than adequately cover the borrowings and other current liabilities. Of the current assets, the expenditure made up to the end of the year under review on factory under construction at Mokameh accounts for Rs. 16.64 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 14.16 *ex-div.*, at which rate the yield works out to 4.9 per cent. per annum, free of tax.

TRAVANCORE RAYONS TO RAISE OUTPUT OF CELLULOSE FILM

The Travancore Rayons Ltd. has applied to the Government of India for licence to increase its production capacity of cellulose film by 5 tons per day to bring the total capacity to 15 tons per day, in view of the growing demand for this packaging material. The Company recently started its third cellulose film plant and it has already gone into full production. The Company's present capacity of cellulose film production is 10 tons per day. The increased production is expected to meet the country's demand for this versatile wrapping material and, in addition, contribute to earning some valuable foreign exchange by export of surplus film.

Production of cellulose film was first started in 1950 and the Travancore Rayons Ltd. was the pioneer manufacturer of this product in this country. The initial capacity was 1.25 tons per day and later it was brought up to 2 tons. In 1955, a second plant with a capacity of 3 tons per day was installed. The third plant, which has now been started, is a high speed machine with a capacity of 5 tons per day. The Company is also converting plain cellulose film into moisture-proof and heat-sealing type to meet the demand for this variety. At present, the Company is equipped to make 5 tons of MST per day.

Cellulose films hold an undisputed place in the ever-expanding packaging industry. Already there is good demand for this product in this country. With the introduction of newer types of cellulose film, suited for different kinds of packaging, demand is bound to increase. It is with a view to satisfying the prospective demand that the Company proposes to raise its capacity. Needless to point out that with increased production, it will be possible to export a greater quantity to foreign markets, thus saving much needed foreign exchange. The Company hopes that the Government will extend all possible assistance to such a vital industry.

COMPANY MEETINGS AND DIVIDENDS

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, London, 10th November 1960. Dividend: 4 per cent. final (making a total of 7½ per cent. actual for the year), payable on 14th November 1960.

TATA CHEMICALS LTD. Annual General Meeting, Bombay, 11th November 1960. Dividend: Re. 0.60 per share, subject to deduction of tax, payable on and after 14th November 1960. Transfer books were closed from 3rd September to 1st October 1960, both days inclusive.

AURUNGABAD MILLS LTD. Annual General Meeting, Bombay, 11th November 1960. Dividend: Nil. Transfer books remain closed from 1st to 11th November 1960, both days inclusive.

BRITISH BURMAH PETROLEUM CO., LTD. Annual General Meeting, Bombay, 16th December 1960. Dividend: Re. 0.07 (final), payable on and after 5th January 1961. Transfer books will remain closed from 18th November to 9th December 1960, both days inclusive.

ANGLO-INDIA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 16th November 1960. Dividend: Rs. 20.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 31st October to 16th November 1960, both days inclusive.

PENCH VALLEY COAL CO., LTD. Annual General Meeting, Calcutta, 17th November 1960. Dividend: 10 per cent. or Re. 1.00 per share, subject to deduction of tax. Transfer books will remain closed from 9th to 17th November 1960, both days inclusive.

AMALGAMATED COALFIELDS LTD. Annual General Meeting, Calcutta, 18th November 1960. Dividend: 10 per cent. or Re. 1.00 per share, subject to deduction of tax. Transfer books will remain closed from 9th to 18th November 1960, both days inclusive.

HUKUMCHAND JUTE MILLS LTD. Annual General Meeting, Calcutta, 18th November 1960. Dividend: Rs. 2.15 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 8th to 18th November 1960, both days inclusive.

COOPER ENGINEERING LTD. Annual General Meeting, Bombay, 22nd November 1960. Dividend: Rs. 13.00 per share (includes a bonus of Rs. 3.00 per share), on the increased capital, subject to deduction of tax, payable on and from 30th November 1960. Transfer books remain closed from 1st to 22nd November 1960, both days inclusive.

VELLORE ELECTRIC CORPORATION LTD. Annual General Meeting, Madras, 24th November 1960. Dividend: 15 per cent. or Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 17th to 24th November 1960, both days inclusive.

COCHIN STATE POWER AND LIGHT CORPORATION LTD. Annual General Meeting, Ernakulam, 28th November 1960. Dividend: 12½ per cent. or Re. 1.25 per share, subject to deduction of tax. Transfer books will remain closed from 21st to 28th November 1960, both days inclusive.

TUBE INVESTMENTS OF INDIA LTD. Annual General Meeting, Madras, 28th November 1960. Dividend: 10 per cent. or Rs. 10.00 per share, subject to deduction of tax. Transfer books will remain closed from 18th to 28th November 1960, both days inclusive.

AMALGAMATED ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 28th November 1960. Dividend: 10 per cent. or Re. 1.00 per ordinary share (includes an interim dividend of Re. 0.5 per share and a bonus of Re. 0.10 per share), subject to deduction of tax. Transfer books will remain closed from 14th November to 4th December 1960, both days inclusive.

WEST COAST ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 30th November 1960. Dividend: 15 per cent. or Re. 1.50 per ordinary share, subject to deduction of tax, payable on and from 1st December 1960. Transfer books will remain closed from 24th to 30th November 1960, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Interim dividend of Re. 1.00 per ordinary share, subject to deduction of tax, for the year ending 31st December 1960, payable on 28th November 1960. Transfer books will remain closed from 7th to 28th November 1960, both days inclusive.

BENGAL FLOUR MILLS CO., LTD. Interim dividend of 15 per cent. or Re. 1.50 per share, subject to deduction of tax, for the year ending 31st December 1960, payable on or after 15th November 1960. Transfer books remain closed from 1st to 15th November 1960, both days inclusive.

ASHER TEXTILES LTD. Dividend of 12½ per cent. or Rs. 12.50 per share, subject to deduction of tax, for the year ended 30th June 1960. Transfer books will remain closed from 11th to 24th November 1960, both days inclusive.

ALAGESWAR ESTATES LTD. Dividend of 7½ per cent. for nine months ended 31st March 1960. Transfer books will remain closed from 17th to 27th November 1960, both days inclusive.

MYSORE TOBACCO CO., LTD. Dividend of 10 per cent. or Re. 1.00 per share, subject to deduction of tax, for the year ending 31st March 1960. Transfer books will remain closed from 5th to 17th December 1960, both days inclusive.

KIL KOTAGIRI TEA AND COFFEE ESTATES CO., LTD. Interim dividend of 8 per cent. or Re. 0.16 per share, subject to deduction of tax, for the year ended 31st March 1960. Transfer books will remain closed from 14th to 25th November 1960, both days inclusive.

SYNOPSES OF COMPANY REPORTS

Amalgamated Coalfields Ltd.

THE directors of the above Company (Managing Agents: Messrs. Shaw Wallace and Co. Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The Company's profit for the year is Rs. 4,66,150 (Rs. 16,10,855). And after providing taxation on profits for the year of Rs. 1 85,336 (Rs. 11,04,891) there remains a sum of Rs. 2,79,814 (Rs. 5,05,964). To this amount is to be added provision for liabilities no longer required of Rs. 2,19,295 (Rs. 5 00,961), provision for taxation no longer required of Rs. 21,042 (Rs. 30,265), adjustment relating to previous periods of Rs. 16,219 (*nil*) and the amount brought forward from the previous year of Rs. 39,129 (Rs. 40,639) making a total of Rs. 5,75 499 (Rs. 10,77,829). From this amount has to be deducted:—Transfer to development rebate reserve of Rs. 2,23,500 (Rs. 1,03,200) and transfer to general reserve of Rs. 85,000 (Rs. 3,50,000) leaving an available sum of Rs. 2.66 999 (Rs. 4,21,629 after transferring Rs. 2,00.000 to contingencies reserve). Out of this the directors recommend payment of a dividend of 10 (15 per cent. tax-free) per cent. subject to deduction of tax, absorbing Rs. 2,55,000 (Rs. 3.82,500) leaving a credit balance to be carried forward of Rs. 11,999 (Rs. 39 129).

Output and despatches of Steam and other grades of coal for the last three years are as follows:—

Year ended	*Raisings* Tons	*Despatches* Tons
31st March 1960	9,00,348	9,05,752
31st March 1959	9,46,564	9,28,545
31st March 1958	8 61,267	8,59,453

Raisings and despatches were low during the year owing to a number of reasons, amongst them being the inadequate supply of wagons and the delays experienced in obtaining permits from the Mines Department for depillaring. These difficulties were overcome towards the end of the year which resulted in increased raisings and despatches which trend, coupled with the price increase introduced in November 1959, is expected to lead to improved results during the year ending 31st March 1961.

Capital expenditure during the year was Rs. 14,70.781 including the previous year's work-in-progress of Rs. 6,64,908. Most of this sum was spent on developing two key producing units of the Company.

To offset loss in production from Collieries whose life is nearing completion, a new property has been bought and production will start as soon as formalities have been completed. To meet the cost of this and other projected development plans, considerable finance will be necessary and it is the directors' intention to conserve as much cash as possible. Accordingly, the directors after transferring Rs. 2,23,500 to development rebate reserve and Rs. 85,000 to general reserve have recommended a dividend of 10 (15 per cent. free of tax) per cent. subject to deduction of tax.

Grading was introduced on the 16th November 1959 when the new selling prices applicable to this Company came into force.

This Company along with others in the Coal Industry was saddled with additional expenditure as a result of the Arbitration Award which had to be implemented from 31st December 1959 as well as the implementation of other Mines Rules and Regulations and it is regretted that an inadequate compensatory price increase was allowed as from 1st April 1960. Grading of Colliery workers had to be introduced as from 1st June 1960 and here again an inadequate increase in price was allowed as from 24th August 1960.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,50,000	Gross block	1,23,77,423
Reserves ...	35,44,700	*Less*—Depreciation ...	80,99,853
Provision for taxation ...	4,44 000		
Liabilities ...	43,48,395	Net block ...	42,77,570
Profit and loss account (surplus) ...	11,999	Work-in-progress ...	65,807
		Stores, etc. ...	28,59 565
		Stock ...	1,18,322
		Book debts ...	38,01,348
		Cash ...	2,76,482
Rs.	1,13,99,094	Rs.	1,13,99,094

Pench Valley Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The Company's profit for the year is Rs 4,07,190 (Rs 6,96,352) and after providing taxation on profits for the year of Rs. 2 11 785 (Rs. 4,33,435), there remains Rs. 1,96 605 (Rs. 2,62,917). To this has to be added provision for liabilities no longer required of Rs. 1,86,957 (Rs. 1,98,704) and amount brought forward from the previous year of Rs. 22,685 (Rs 38,465) making a total of Rs. 4,15,647 (Rs. 5,24,985 including Rs. 26 899 being provision for taxation not required). From this amount the directors propose to transfer to development rebate reserve Rs. 1,03,600 (Rs. 1,34 800), to general reserve Rs. 75,000 (Rs. 2,00,000) and to contingencies reserve Rs. 60,000 (*nil*) leaving an available sum of Rs. 1,72,047 (Rs. 1,90,185). Out of this amount the directors recommend payment of a dividend of 10 (10 per cent. tax-free) per cent. subject to deduction for income-tax absorbing Rs. 1,57,500 (Rs. 1,57,500) leaving a credit balance to be carried forward of Rs. 14,547 (Rs. 32,685).

Output and despatches of steam and other grades of coal for the last three years are as follows:—

Year ended	*Raisings* Tons	*Despatches* Tons
31st March, 1960 ...	4,96,108	4,97,427
31st March, 1959 ...	5,00,161	5,03,180
31st March, 1958 ...	4,80,042	4,74,880

Owing to inadequate wagon supply during the first six months, raisings and despatches during the year could not be maintained at the previous year's level. Raisings and despatches upto end of August this year show considerable improvement and, in the absence of any unforeseen adverse circumstances, this trend is likely to be maintained.

Capital expenditure during the year was Rs. 8,85,830 excluding the work-in-progress of Rs. 19,148 but inclusive of work-in-progress of the previous year of Rs. 1,92,984. To replace the loss of output of Barkui Colliery, a new area of 184.60 acres, adjacent to Dongarchickli Colliery, has been taken over and preliminary work in this area is already being undertaken.

To meet the cost of developing this new area and to carry out other contemplated development plans, considerable finance will be necessary and it is of paramount importance to conserve cash to the utmost. Accordingly the directors after transferring Rs. 1,08,600 to the statutory development reserve, Rs. 60,000 to contingencies reserve and Rs. 75,000 to general reserve, have recommended payment of a dividend of 10 per cent. subject to deduction for income-tax, leaving a carryforward of Rs. 14,547.

Grading was introduced on the 16th November 1959 when the new selling prices applicable to this Company came into force.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,75,000	Gross block	76,91,776
Reserves ...	22,83,200	*Less*—Depreciation ...	47,81,408

Liabilities ...	31,00,478	Net block ...	29,10,368
Profit and loss account (surplus) ...	14,547	Work-in-progress ...	19,148
		Stock ...	47,197
		Stores ...	16,89,623
		Book debts ...	21,41,517
		Investments	2,44,740
		Cash ...	1,28,632
Rs.	71,81,225	Rs.	71,81,225

Western Bengal Coalfields Ltd.

The directors of the above Company (Managing Agents: Hindustan Investment Corporation Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The profit for the year before charging depreciation and taxation amounts to Rs. 11 36,309 (Rs. 8,40,122) from which are deducted—provision for income-tax Rs. 2,84,000 (Rs. 2,45,000), provision for cess charges Rs. 50,000 (Rs. 35,000) and provision for depreciation Rs. 3 26,775 (Rs. 2,78,000) leaving a balance of Rs. 4,75,534 (Rs. 2 82,122). With the balance brought forward from last year's account of Rs. 7,982 (Rs. 7,951) and excess provision and refund of wealth tax now written back Rs. 1,900 (*nil*) there is a total of Rs 4,85,416 (Rs. 2 90,073). Out of this, after transferring to development reserve Rs. 1,73,000 (Rs. 82,171) there remains a balance of Rs. 3,12,416 (Rs. 2,07,902). The directors recommend payment of dividend at Re. 0.60 (Re. 0.40) per share, subject to tax, absorbing Rs. 2 99,880 (Rs. 1,99,920) leaving a balance to be carried forward to the next year's account of Rs. 12,536 (Rs. 7,982).

Report was made last year of the loss of the sand gathering station at the Samla Manderboni Colliery due to floods. An amount of Rs. 1,02,506 representing this loss has therefore, been written off in the profit and loss account this year. However, inspite of this loss and the resulting upsetting of the working, the results this year show an improvement over last year.

Raisings and Workings:

	1958-59 tons	1959-60 tons
Raisings	2,54,969	2 62,176
Despatches	2,49,458	2,47,283
Colliery consumption ...	9,179	9,491

At Moira Colliery, the sinking of the pit to the Jambad Seam has been completed and the drift to work as the second outlet has also been completed; driving in coal has now been started. The pit is being fitted out and regular raisings are expected to start in early 1961.

The collieries are again feeling the difficulty of wagon shortage which not only results in mounting of stocks at the pithead but also affects the production adversely.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	49,98,000	Gross block	86,93,251
Reserves ...	3,56,533	*Less*—Depreciation ...	32,75,682

Profit and loss account (surplus) ...	12,536	Stores, etc ...	7,56,742
		Book debts ...	25,58,475
		Investments	1,51 804
		Cash ...	64,632
Rs.	90,68,148	Rs.	90,68,148

East India Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The season's working resulted in a profit on revenue account of Rs. 2 83,363 (Rs. 1,32,821) after providing for depreciation amounting to Rs. 90,266 (Rs. 75,848) and providing Rs. 1,02,600 (Rs. 86,277) for contingencies. After transferring the above profit, making various adjustments, setting aside Rs. 1,50,000 (Rs. 38 000) for taxation and creating a development rebate reserve of Rs. 5,000 (*nil*) the balance available on profit and loss account amounts to Rs. 3,31,213 (Rs. 2,15,741). From this amount it is proposed to transfer to building reserve Rs. 1,00,000 (Rs. 50,000) and pay a dividend of 10 (5 per cent. tax-free) per cent. for season 1959 on ordinary shares absorbing Rs. 1,00,000 (Rs. 50,000) and carryforward Rs. 1,31,213 (Rs. 1,15,741).

The following are comparative statistics of sales for the past three years:—

	Pounds	Average price per pound
1957	1,182,837	Rs. 2/48
1958	1,153,223	Rs. 2/47
1959	1,191,489	Rs. 2/56

The estimate for 1960 provides a crop of 547,950 kg. or 1,208,000 lbs. of tea at a cost of Rs. 4/94 per kg. or Rs. 2/24 nP per lb.

The term of office of Messrs. Williamson Magor & Co., Ltd., as secretaries [but deemed to be managing agents] expired on 15th August 1960, in terms of Section 330 of the Companies Act, 1956. The Company in general meeting held on 24th September 1959 had already approved of the proposal that Williamson Magor & Co., Ltd., be reappointed managing agents for a further term of ten years from 15th August 1960, subject to the approval of the Central Government. The Central Government gave its approval to the reappointment but reduced the term of office to five years and also prescribed a sliding scale of remuneration instead of the flat rate as under the previous agreement and as proposed under the terms of reappointment. At the Company's general meeting held on 13th August 1960, the reappointment with these modifications was formally confirmed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Gross block	33,05,749
Reserves ...	9,57,600	*Less*—Depreciation ...	12,68,049

Liabilities ...	12,71,531	Net block ...	20,37,700
Profit and loss account (surplus) ...	1,31,213	Stock in-trade	8,41,934
		Stores, etc. ...	3,20,104
		Book debts	1,86 314
		Investments	1,19,049
		Cash ...	5,908
Rs.	35,15,309	Rs.	35,15,309

Seajuli Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The season's working resulted in a profit on revenue account of Rs. 1,38,413 (Rs. 1,84,715) after providing for depreciation amounting to Rs. 33,460 (Rs. 34,014) writing off development expenditure of Rs. 4,129 (*nil*) incurred during the year on Tea Estate and providing Rs. 55,000 (Rs. 30,000) for contingencies. After transferring the above profit, making various adjustments and setting aside Rs. 47,000 (Rs. 83,000) for taxation, transferring to building reserve Rs. 50,000 (Rs. 25,000), to staff account Rs. 4,000 (Rs. 7,000) the balance available on profit and loss account amounts to Rs. 1 34 863 (Rs. 1,66,576). From this amount it is proposed to pay a dividend of 17½ (22½ per cent. tax free) per cent. for 1959 absorbing Rs. 43,575 (Rs. 56,025) and carryforward Rs. 91,288 (Rs. 1,10,551).

The following are comparative statistics for the past three years:—

	Pounds	Average price per pound
1957	420 226	Rs. 2/91
1958	439.136	Rs. 2/74
1959	470,732	Rs. 2/65

The estimate for 1960 provides for a crop of 440 000 lbs. or 199,580 kg. of tea at a cost of Rs. 2/34 nP per lb. or Rs. 5/16 nP per kg.

The term of office of Messrs. Williamson Magor & Co., Ltd., as managing agents of the Company expired on 15th August 1960, in terms of Section 330 of the Companies Act, 1956. The Company in general meeting held on 24th September 1959, had already approved of the proposal that Williamson Magor & Co., Ltd., be reappointed managing agents for a further term of ten years from 15th August 1960, subject to the approval of the Central Government. The Central Government gave its approval to the reappointment but reduced the term of office to five years and also prescribed a sliding scale of remuneration instead of the flat rate as under the previous agreement and as proposed under the terms of reappointment. At the Company's general meeting held on 13th August 1960, the reappointment with these modifications was formally confirmed.

Accounts in brief are as under:—

Notices

THE KARANPURA COLLIERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-second Annual General Meeting of THE KARANPURA COLLIERIES LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Monday the 28th November, 1960, at 10.30 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 29th February, 1960, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

AS A SPECIAL RESOLUTION

5. To consider and if thought fit, to pass with or without modification the following Resolution which will be proposed as a Special Resolution, namely:—

"Resolved that the Company may borrow money from time to time from its Secretaries and Treasurers provided the Secretaries and Treasurers are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Secretaries and Treasurers and the Directors of the Company but so that the money lent shall not at any time exceed Rupees Two Lacs in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Secretaries and Treasurers and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended."

The Share Transfer Registers of the Company will be closed from the 14th November, 1960 to the 28th November, 1960, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries and Treasurers.

CALCUTTA, *the 27th October*, 1960.

Notes:—(*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 10th December, 1960, to those members so entitled whose names appear in the Company's books on the 28th November, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

With regard to item No. 5, it is pointed out that the Company may require temporary financial accommodation from time to time and as the Secretaries and Treasurers are prepared to lend money to it at a rate of interest which is more favourable than the Company could have obtained from its Bankers, it is proposed to take advantage thereof. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Secretaries and Treasurers at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Secretaries and Treasurers constitute a service by them in terms of Section 360 of the Act and that such arrangement should be approved by the Shareholders by Special Resolution pursuant to the above section. Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

Sir Walter Michelmore, the Chairman of the Board of Directors and member of your Company, is also Managing Director of Messrs. Bird & Co. (Private) Limited, the Secretaries and Treasurers of your Company.

To the extent indicated above the Secretaries and Treasurers of the Company may be deemed to be interested in the business referred to in the resolution.

THE BRITISH BURMAH PETROLEUM COMPANY, LIMITED

(Incorporated in England)

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Annual General Meeting of the Company will be held at Noble Chambers, Parsi Bazar Street, Fort, Bombay, on Friday the 16th December, 1960, at 4.30 p.m. (S.T.), for the following purposes:—

(*a*) To receive the Balance Sheet and Statement of Accounts for the year ended 31st March 1960 together with the Reports of the Directors and Auditors thereon;

(*b*) To declare a Final Dividend;

(*c*) To elect a Director in place of Mr. A. P. Faickney, who retires by rotation and being eligible offers himself for re-election;

(*d*) To elect a Director in place of Mr. C. R. Jussawalla, who retires by rotation and being eligible offers himself for re-election;

(*e*) To appoint Auditors and fix their remuneration;

(*f*) To transact any other ordinary business.

A Member of the Company entitled to attend and vote at the above Meeting is entitled to appoint a proxy or proxies to attend and speak, and on a poll vote in his stead. The person so appointed need not be a Member of the Company.

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD.

TIRUCHIRAPALLI

NOTICE

1. The Directors have sanctioned the payment of an *ad-interim* dividend for the year 1960-61 of 4½ per cent. less tax on Equity shares and 2¼ per cent. plus 20 per cent. thereon less Income-tax deduction of 30 per cent. on 1st and 2nd Preference shares.

2. The warrants will be made out in the names and addresses of shareholders standing registered in our books as on 26th November 1960 or holders of mandates and posted on and after 19th December 1960. The shareholders are requested to notify immediately any change of their address to the Company.

3. The Register of Members and share transfer books of the Company will be closed from 26th November 1960 to 5th December 1960 (both days inclusive).

4. Such of those shareholders who are not liable to pay Income-tax may apply to the concerned Income-tax Officers for Income-tax Exemption Certificate under the proviso to Section 18 (3D) of the Income-tax Act and file the same with the Company. In such cases of compliance, no deduction of Income-tax will be made from the dividends.

N.B.—Holders of Blank transfers are advised to have the shares registered in their names in time before closure of books.

By Order,
SESHASAYEE BROTHERS (PRIVATE) LIMITED,
Managing Agents and Chief Engineers.
TIRUCHIRAPALLI, *27th October*, 1960.

KARANPURA COLLIERIES LIMITED

AT THE MEETING OF THE BOARD OF Directors held on Thursday the 27th October, 1960, the following dividends were recommended to be paid for the year ended 29th February, 1960.

On Preference Shares at the rate of Rs. 4.40 per share per annum (being Dividend at the stipulated rate of Rs. 5.50 per share less Income-tax at the Company's rate viz. 20 per cent. thereof) after deduction of tax at source.

On Ordinary Shares at the rate of 7½ per cent. per annum subject to deduction of tax at source.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.
CHARTERED BANK BUILDINGS,
CALCUTTA, *27th October* 1960.

PLANTING

(Concluded from page 818)

ings will receive a wage increase. The new rates are:—

	For coffee estates of 50 acres and above	*Small holdings (below 50 acres)*
	Rs. nP	Rs. nP
Men	1 62	1 53
Women	1 23	1 12
Adolescents	1 00	0 95
Children	0 80	0 80

For tea estates of more than 600 planted acres, the wages are: Men Re. 1.67, women Re. 1.28, adolescents Re. 1.05 and children Re. 0.80. Maistries will receive Rs. 2.12 in Coorg area and Re. 1.85 in old Mysore area. The agreement takes retrospective effect from 1st August 1960.

The Labour Commissioner of Mysore, through whose good offices the negotiations were conducted, took an active part and helped towards an amicable settlement.

This agreement is the second one since 1957 and the total wage increase for an adult male worker in Mysore coffee estates has been of the order of 62 per cent. Coffee industry is facing hard times due to world surplus and India itself has increased its output by 176 per cent. to very nearly 50,000 tons and has an exportable surplus of about 20,000 tons. The unsold stock with the Coffee Board at the beginning of October was over 25,000 tons, while the new crop will start arriving from the latter half of November. As against Rs. 2.75 per point received by growers in 1953 the prospect for this year on the 1959-60 crop is only Rs. 2.23 per point. Notwithstanding this, the industry decided to arrive at an amicable settlement by mutual negotiations as it has done before, although the proposed Central Wage Board for coffee to be set up by the Government of India is expected to go into the wage question.

Mysore including Coorg has very nearly 160,000 acres under coffee and accounts for a total production of about 68 per cent. of India's coffee. The present agreement will cover approximately 140,000 workers and the annual increase in the wage bill for the industry is tentatively estimated at between Rs. 35 and Rs. 40 lakhs.

COMBINED OPERATION

The know-how and equipment of British technicians and British Industry have combined with India's skill and labour to build an integrated Steelworks at Durgapur for the people of India.

MONEY RATES FIRM

(From Our Own Correspondent)

BOMBAY, *2nd November*

Conditions in the short-term money market have not undergone any notable change in the last one week, except a small improvement in supplies, thanks to the return of funds to banks from up-country centres. However, the available supplies still fall far short of the demand for bank credit and banks continue to be borrowers. Consequently, inter-bank call money rate has remained firm at 4½ per cent. per annum among all sections of banks. House money at 21 days' notice is being bid at 2 per cent. and short-term deposits at 3¼ per cent. for one to two months and at 3½ per cent. for three months and over.

There has been no change in the Treasury Bill discount rate at 2.565 per cent. per annum. The amount offered at this week's sale of the Bill was, however, slightly higher at Rs. 2.35 crores, as compared with Rs. 2 crores offered last week. Tenders for next week are unchanged at Rs. 2 crores. There were no sales of Intermediate Treasury Bills during the period 26th to 29th October 1960. They will, however, continue to be offered at the self-same discount of 2.496 per cent. per annum.

A contraction of Rs. 17.84 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 28th October 1960. Notes held in the Banking Department are, however, higher by Rs. 18.72 crores, so that the net rise of Rs. 89 lakhs in total notes issued is covered by corresponding changes in rupee securities and rupee coin. There is again no change in foreign securities, but balances held abroad are higher by Rs. 1.81 crores, so that the total foreign assets now stand at Rs. 142.75 crores. Deposits of the Central Government have gone up by Rs. 12.14 crores, while those of the other Governments have declined by Rs. 8.65 crores and of banks by Rs. 2.85 crores. Loans and advances have risen by Rs. 2.51 crores, while other loans and advances have declined by Rs. 15.04 crores, of which advances to Scheduled banks against usance bills account for Rs. 2.89 crores. Investments have also decreased by Rs. 4.96 crores, but holdings of Government Treasury Bills are higher by Rs. 4.98 crores.

The Scheduled banks' statement for the week ended 21st October 1960 discloses a sharp fall of Rs. 21.65 crores in deposits of banks, of which the share of the State Bank of India accounts for Rs. 11.45 crores. There has also been a fall of Rs. 1.71 crores in inter-bank borrowings, while the borrowings from the Reserve Bank have risen by Rs. 2.49 crores. Advances are only fractionally higher and there has been no worthwhile variation in the State Bank's portfolio. Investments stand reduced by Rs. 10.73 crores, mainly due to the fall of Rs. 10.45 crores on State Bank's account. Cash balances have shrunk by Rs. 8.40 crores, and money at call and short notice by Rs. 3.66 crores, of which State Bank of India accounts for Rs. 4.18 crores and Rs. 93 lakhs, respectively.

The Gilt-edged market continues to rule weak with a further fall in prices, particularly in the State loans, where the drop in values has been heavy. Institutional support is still conspicuous by its absence. 3 per cent. 1986 Conversion Loan has, however, recorded a rise of 55 nP to Rs. 74.15 on bear covering. 3 per cent. 1970-75 has also gained 5 nP to Rs. 89.15. 3 per cent. 1964 and 1963-65 has each shed 10 nP to Rs. 97.80 and 2½ per cent. 1962 has been marked down by 15 nP to Rs. 97.85. 3½ per cent. 1964 has shed 10 nP to Rs. 99.55, 3½ per cent. 1965 20 nP to Rs. 99.30 and 3½ per cent. 1966 15 nP to Rs. 99.35. 3½ per cent. 1969 is lower by 5 nP at Rs. 98.90 and 3½ per cent. 1974 by 30 nP to Rs. 99. 4 per cent. 1972 has recorded a fall of 15 nP to Rs. 100.50 and 4 per cent. 1979 10 nP to Rs. 99.85. 4 per cent. 1980 has, however, improved by 5 nP to Rs. 99.85. Among State loans, 4 per cent. 1967 to 1971 issues are the worst sufferers. the losses ranging from 50 nP to Rs. 3. 4 per cent. 1963 and 1964 loans also have been heaviy marked down by 25 nP to 85 nP.

The persistent firmness of sterling abroad is reflected in a further hardening of the rupee in terms of the dollar. Banks' selling rate of U.S. T.T. (ready) has declined from Rs. 475.75 to Rs. 475.25 per $100 and their buying rate from Rs. 472.25 to Rs. 472. In New York, spot sterling has crept up from 281.35-281.39 cents to 281.64-281.67 cents and three months' forward from 280.23-280.27 cents to 280.43-280.47 cents.

BASE METALS EASE

(From Our Own Correspondent)

CALCUTTA, *1st November*

Base metals tended to ease during the week under review. The easiness was due to induced bright prospects of non-ferrous metals imports from the U.S.S.R. At the recent Indo-Soviet trade talks held in New Delhi, it was agreed to increase the trade between the two countries by 100 per cent. in the next three years, and non-ferrous metals have been included in the list of items offered for export to India from the U.S.S.R. Berry quality scrap declined from Rs. 200 to Rs. 218 a cwt. and utensil scrap from Rs. 218 to Rs. 215. Demand was good at these levels.

On the London Metal Exchange, electrolytic copper opened at £217¾ a ton and improved to close at £219, following good West German demand.

Electrolytic zinc opened here at Rs. 168.25 and at one time was as low as Rs. 164, before closing at Rs. 166. The lower trend, despite good demand, should be attributed to prospects of imports from Russia. The present stock position, however, continues to be tight, and there are no immediate prospects of a change for the better. In London, the price opened at £88 per ton and after hardening to £88½, gave way to £88. Virgin lead was unchanged at Rs. 66 a cwt. Demand was low, but stocks were plentiful. Tin here opened at Rs. 561 and closed higher on balance at Rs. 563.

BULLION UNDER F.M.C.

(From Our Own Correspondent)

BOMBAY, *2nd November*

The outstanding developments of the week in so far as the bullion market is concerned are the application of Sections 15 and 18(3) of the Forward Contracts (Regulations) Act, 1952 to gold and silver within the limits of Greater Bombay and the simultaneous granting, under Section 6, of recognition to the Bombay Bullion Association to conduct forward trading in the two precious metals for a period of three years. The two notifications to this effect were issued by the Union Commerce and Industry Ministry on Thursday, 27th October. Forward trading in transferable as well as non-transferable contracts is permitted in gold and silver in Greater Bombay only through the Bombay Bullion Association which has been recognised under the Bombay Forward Contracts Control Act 1947. The notification now issued maintains this position unchanged, except that the Association will now be recognised under the Forward Contracts (Regulations) Act, and will be supervised by the Forward Markets Commission, instead of by the Government of Maharashtra as hitherto. The position regarding forward trading in bullion in the rest of the country remains unchanged.

The aforesaid decision of the Government has set at rest the prolonged rumours regarding the future of forward trading in bullion, some anticipating its ban and others its continuance. Commenting on the decision, Mr. Chandulal Kasturchand Shah, President of the Association, says: "The Government has now recognised the necessity that a hedge market for silver and gold should exist."

The firm trend noted in the bullion market last week gathered fresh momentum during the week under review. The renewed firmness was engendered by reduced arrivals in the wake of rising offtake. Buoyancy of commodity markets and encouraging advices from Calcutta also imparted strength. Consequently, prices registered further gains. The daily average arrivals of gold and silver were 5,800 tolas and 17 bars, as against 8,600 tolas and 23 bars, respectively, in the previous week. Offtake of gold was of the order of 4,000 tolas (5,000 tolas last week) and that of silver 7 bars (5 bars). The floating stocks of gold are estimated at 60,000 tolas and those of silver are reported to be around 700 bars.

In gold, *Kartik* (November) settlement spurted from Rs. 115.55 to Rs. 116 yesterday and, after declining to Rs. 115.65, recovered to Rs. 115.90 today before finishing at Rs. 115.75. *Margashir* settlement fluctuated between Rs. 117 and Rs. 115.35 and closed at Rs. 116.80, as against Rs. 116.45 on Wednesday last week. Barring Friday and Saturday, the *badli* payable by bulls to get their commitments transferred from the near to the distant settlement stood at Re. 1, so that the bears in *Kartik* settlement were required to pay a margin of Rs. 20 per 100 grams. The rate widened to Re. 1.05 today.

The *Kartik* settlement in silver, which was quoted at Rs. 193.70 last week-end, touched a high of Rs. 195.20 today. The closing was a shade easy at Rs. 195.05. *Margashir* settlement was done at Rs. 196.50 today, as against Rs. 195.15 on Wednesday last, the highest and lowest levels touched during the week being Rs. 196.60 and Rs. 195.35, respectively. The rate for transferring commitments from *Kartik* to *Margashir* settlement continued to be Re. 1.45 throughout the week.

Spot prices of bullion showed a hardening tendency. Gold strengthened by 65 nP to Rs. 115.65, the highest level touched being Rs. 116 yesterday. Silver climbed up from Rs. 193 to Rs. 194.90 today.

The "gold rush" in the London bullion market subsided to a great extent during the week under review. The world price for gold was a shade over $36 per fine ounce at yesterday's "fixing," as against $37.75-$38.00 on Tuesday, 25th October. There were excellent enquiries for gold at a rate below $36, but some of the bids were withdrawn at the actual "fixing" price. In a *communique* issued on 28th October, the U.S. Treasury warned speculators that it was prepared to support the Bank of England if it decided to intervene to stabilise the currently floating gold market. The Treasury said that, since 1954, British authorities had bought and sold gold whenever they thought it advisable and recalled that the United States had for some time sold gold to the Bank of England and bought it back at the official price. The rumours that any central bank would be given a gold guarantee for its dollar stock on the condition that it holds on to it were described as "nonsense" by a spokesman of the Federal Reserve Bank of New York.

Following the decline in the world price for gold, ready gold in London climbed down from 270s. to 256s.; it was lower still at 254s. on 27th October. Ready and forward silver, however, continued to rule unchanged at 79½d., as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	2-11-60 (closing)	High	Low	26-10-60 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	115.65	116.00	114.80	115.00
Forward:				
*Kartik**	115.75	116.00	115.35	115.55
Margashir	116.80	117.00	116.25	116.45
Sovereign	90.00	90.00	89.00	90.00
SILVER				
Ready (.996 fine)	194.90	195.00	193.40	193.00
Forward:

Margashir	196.50	196.60	195.35	195.15
London	1-11 00			25-10-60
Silver Ready	79½d.	—	—	79½d.
Silver Forward	79½d.	—	—	79½d.
Gold	256s.	270s.	254s.	270s.
New York				
Silver	91.375 cents	—	—	91.375 cents

* 3rd November settlement. † 4th November settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *2nd November*

In contrast to the dull conditions witnessed last week, the cotton futures market ruled distinctly firm during most part of the week under review. Reports of damages to the crop in the Punjab and the smaller volume of new crop arrivals, as compared with the previous year, touched off a wave of buying which gathered momentum when investors and upcountry operators too entered the market and made purchases. Since the ruling spot prices were at the ceilings, the futures contract was regarded a cheap buy. Under pressure of large-scale buying, the Jarilla April 1961 contract firmed up from Rs. 581.50 (per three quintals) at the beginning of the week to Rs. 593 on Monday. This high rate naturally attracted profit-taking and values receded. Easier advices from the spot market, following large arrivals of new crop and the news that many mills had applied to the Textile Commissioner for requisitioning cotton for them against their quotas as per his notification issued on Friday, 28th October, prompted selling. From a high of Rs. 593 on Monday, the Jarilla April Contract declined to Rs. 586.25 yesterday. But it again rallied today, on firm spot house support, to Rs. 595.25. The finish was, however, a shade lower at Rs. 594. The net gain over the week was Rs. 16.25.

In the spot section, new crop cotton met with good demand. Varieties like Khandesh, Berar, Jarilla, etc., found buyers. Although prices were firm early in the week, they tended to recede towards the close due to fear of requisitioning and lower advices from upcountry centres. Mills were reluctant to purchase at the high prices. The Textile Commissioner announced on the 28th ult. mo that he would requisition cotton for mills against their quotas if approached. The procedure is as follows: Mills are to intimate the Textile Commissioner their immediate requirements of cotton from each of the areas where it has started moving, mentioning the varieties required in accordance with the Schedule "A" of the Textile Commissioner's notification dated 30th August 1960 and the balance of the quota for the current season which has not been utilised. With a view to ensuring that the quantities released are taken delivery of in proper time, mills, which require the cotton to be requisitioned, will deposit with the East India Cotton Association Ltd., Bombay, along with a copy of their application, an advance equal to Rs. 25 per bale which will be returned after the delivery is completed. In case the full quantity is not requisitioned against such applications from mills, the deposit on such balance will be returned. If, however, the cotton requisitioned is not taken delivery of by the mills as required by the requisitioning order, this deposit will be liable to be forfeited. Taking advantage of the Textile Commissioner's offer to requisition cotton for mills against their quotas some mills applied to the East India Cotton Association, Bombay, for specified quantities to be requisitioned for them. More mills are said to be approaching the E.I.C.A. for the purpose.

In pursuance of the policy of random requisitioning, the Textile Commissioner has already requisitioned 4,500 bales of cotton so far in the current season from dealers and allotted them to mills. Further quantities, it has been announced, will be requisitioned for mills in areas where the crop has started moving and where it is feared that the prices will pierce the ceiling. The Textile Commissioner has already deputed his officers to Khandesh, Marathwada and Vidarbha regions of Maharashtra and the Punjab for the purpose of requisitioning cotton, if necessary.

Export demand for Bengal *Deshi* was keen, thanks to strong rumours of an imminent export quota announcement. Prices of this variety consequently hardened. Business already done, subject to licence, is estimated to be round about 100,000 bales.

Demand for foreign cotton was fairly well maintained. Since mills have to complete their buying of U.S. cotton against their quotas before the end of this month, there was good demand for American varieties especially higher grades. Purchases out of 412,500 bales American cotton quota to date are estimated at about 235,000 bales. Among other foreign cottons, Egyptians attracted the attention of some Southern mills. Other growths were neglected.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

CO2 1,110-1,150; Moglai 810; Khamgaon 27/32" 895. American on sample 1,120. American good middling 1" staple 1,111. El Paso 1,325.

SLUMP IN BEMBERG YARNS

(From Our Own Correspondent)

BOMBAY, *2nd November*

Panicky sales of large stocks of cupressa Bemberg yarn (60 x 1) by a few holders led to a slump in the prices of these yarns. The sales followed strong rumours regarding grant of import licences under the export promotion scheme in a couple of weeks. But art silk yarns ruled firm, thanks to limited floating stocks with traders and good equities from consuming centres. Reports regarding export business in art silk fabrics were also quite encouraging. The actual exports during the month of October are estimated at 4.4 million yards, as against 3.24 million yards in the previous month. In sympathy with these yarns, staple fibre yarns also tended to look up. Cotton yarns continued to be dull. Business put through was limited, with values moving narrowly. Traders noted reports that the representatives of the cotton mill industry would be meeting the Union Minister for Commerce at New Delhi on the 7th inst., to discuss the question of referring textile prices to the Tariff Commission.

Applications for licences for import of art silk yarns during October-March 1961 are required to be submitted to the Joint Chief Controller of Imports not later than the 30th of this month in the case of powerloom units and 31st December 1950 for the remaining categories. Art silk powerloom weaving units should submit their applications giving, *inter alia*, information regarding the value of import licences for art silk yarn obtained during the period April-September 1960 and the number of powerlooms installed and working on art silk yarns only.

Cupressa Bemberg yarn (60 x 1) December delivery was subjected to nervous liquidation and fell by Rs. 148 to Rs. 2,138. February delivery was quoted today at Rs. 2,138. Spot cupressa moved down from Rs. 2,301.60 to Rs. 2,259.71. Among imported art silk yarns, 150 Japan hardened by Rs. 41.09 to Rs. 1,529.99 and 150 Italy by Rs. 26.46 to Rs. 1,459.45. 120 Japan was fully maintained at Rs. 1,309.53. 120 Italy, however, lost Rs. 15.22 to Rs. 1,252.42. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade improved by 4 nP to Rs. 11.74, while 120 Bt cones 1st grade eased from Rs. 12.84 to Rs. 12.64.

In the staple fibre yarn, 40 x 2 Citys picked up 9 nP to Rs. 8.91. Kohinoors gathered 4 nP to Rs. 9. December contract declined by Rs. 9 to Rs. 751. February contract was done at Rs. 759 today.

Among cotton yarns, ten counts Gokaks were unchanged at Rs. 18.75, as also Podars at Rs. 18.12. Twenty counts Moderns changed hands at Rs. 23.25, same as last week, and Gokaks at Rs. 23.12. Forty counts Maduras dropped 50 nP to Rs. 32. Sixty counts Finlays were quiet at Rs. 59.59. Eighty counts Moderns receded by a rupee to Rs. 72. Finlays were neglected at Rs. 59.59 and Mahendras at Rs. 79.79.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	2-11-1960	26-10-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)		
December	2,138.00	2,286.00
February	2,138.00	..
60/1 Cupressa Bemberg spot	2,259.71	2,301.60
120 Japan (per 100 kg.)	1,309.53	1,309.53
150 Japan (per 100 kg.)	1,529.99	1,488.90
120 Italy (per 100 kg.)	1,252.42	1,267.64
150 Italy (per 100 kg.)	1,459.45	1,432.99
Staple fibre yarn—		
40×2 December (per 90.72 kg.)	751.00	760.00
40×2 February	759.00	..
40×2½Century (per kg.)	8.53	8.54
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.12	18.12
20s Gokak	23.12	23.12
40s Madura	32.00	32.50
60s Finlay	59.59	59.59
80s Modern	72.00	73.00

GROUNDNUTS RALLY

(From Our Own Correspondent)

BOMBAY, *2nd November*

The oilseeds market put on a distinctly cheerful appearance during the major part of the week under review. Towards the close, however, the market became subdued mainly on profit-taking. Groundnuts and oil elicited substantial speculative support. A section of operators felt that the recent export promotion scheme for groundnut oil would open out considerable scope for stepping up shipments of oil, which would ultimately render the domestic supply position quite tight. Local crushers and *vanaspathi* manufacturers, too, extended good support. In these conditions groundnut futures staged a smart rally to touch a new high of the season, piercing the special margin levels. But for the relatively larger arrivals of the new crop, values would have made further headway. The higher levels, however, attracted profit-taking today, resulting in a notable decline in values. The groundnut February 1961 contract, which had wound up at Rs. 206.50, rose to Rs. 213.75 before closing today at Rs. 211.50. Nizam bold improved from Rs. 45 to Rs. 45.75 by Monday, but lost ground subsequently to Rs. 44.25. Oil ex-mill finished higher by 25 nP at Rs. 19.50 after fluctuating between Rs. 19.25 and Rs. 19.90 over the week.

Castorseeds displayed distinctly firm conditions, mainly on reports of some business in oil with the Communist countries. There were, however, no encouraging enquiries for castor oil from the U.S., and the prospects for its re-entering the Indian market were also uncertain in view of the increasing pressure of supplies from Brazil. Consequently, some selling was in evidence towards the close. Castor May 1961 contract initially spurted from Rs. 173.50 to Rs. 177.37 by yesterday but eased to Rs. 177.62 today. Ready Madras improved from Rs. 33.50 to Rs. 34.25, it had touched Rs. 34.44 earlier in the week. Oil commercial was higher by 25 nP at Rs. 14.25.

Steady conditions prevailed in the linseed section largely as a result of reports of firmness in North India. Linseed May 1961 contract closed at Rs. 33.69, as against Rs. 33.31 last week-end. Bold ready rose by 38 nP to Rs. 33. Linseed oil put on 6 nP to Rs. 14.25.

Cottonseed prices hardened on firm advices from raw cotton market. Cottonseed February 1961 contract rallied from Rs. 87.50 to Rs. 90.50. In the spot section, whites gathered 25 nP to Rs. 20.50. Berars and non-whites also put on 25 nP each to Rs. 20.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	2-11-1960	26-10-1960	18-10-1960
Groundnut	Rs.	Rs.	Rs.
February 1961	211.50	206.50	205.50
Nizam bold	44.25	45.50	46.50
Coromandel ready	45.00	—	47.50
Khandesh quality	45.00	44.50	45.75
Oil ex-mill ready*	19.50	19.50	20.50
Railway receipts*	19.25	19.25	20.50
Castorseed			
May 1961	175.62	173.75	173.37
Ready Madras	34.25	33.62	33.50
Ready Kanpur	33.10	32.50	32.19
Oil B.S.S.†	15.20	15.15	14.94
Oil commercial†	14.25	14.10	14.00
Linseed			
May 1961	33.69	33.31	33.19
Bold ready	33.00	32.62	32.37
Oil ready†	14.25	14.20	14.00
Cottonseed			
February 1961	90.50	87.50	87.00
Nagar seed	36.50	37.50	37.50
Kurdi seed	24.50	24.25	24.25

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms, with effect from 1st October 1960.

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, *2nd November*

During the earlier part of the week under review, Malabar black pepper continued to rule firm in sympathy with Singapore and New York. White pepper in Singapore rallied to Str.$275 establishing a rise of Str.$50 within a couple of days under manipulations by bulls. Lampong pepper in Singapore showed a gain of Str.$20 on short-covering, the greater part of the stock being in the hands of the bulls. Arrivals from Indonesia failed to come up to the general expectation of the trade.

Spot in New York climbed from $0.53 to $0.56 under buying by bulls and short-covering by bears. Higher price also brought forth some demand from grinders who did not buy in the declining market. There being a difference of nearly 7 cents between the spot and the shipments by steamers during October, there are chances of more pepper going to New York as unsold consignments from almost all the primary markets like Singapore, Djakarta and India.

The future of the market will depend upon how these consignments will be marketed. Past experience regarding the sales of unsold consignments in New York is far from pleasant. Once the pepper reaches New York, the dealers there will not buy unless at their own price, as they know that these consignments will sooner or later have to be marketed in the U.S.A.

At the time of writing, Lampong pepper in Djakarta is reported to be firm, as the Government there is trying to keep up the prices by various means. Unless there is timely demand from overseas, the market in Indonesia is likely to rebound lower, in view of the sizable production of Lampong crop this year and the poorer export to date, because of various restrictions placed by the local Government. Singapore being the entry port with more facilities for re-export, regular export of Lampong pepper is well-nigh impossible except through it.

New arrivals, both at Alleppey and Cochin, are now augmenting and are likely to have their effect by the second week of November. Malabar pepper for October shipment was reported done at prices ranging from $0.48 to $0.50½.

In the later part of the week, however, the market ruled quiet in sympathy with Singapore which was reported to have lost Str.$20 in white and Str.$2½ in black from the highest level of Str.$275 and Str.$160, respectively

Ungarbled at Cochin was done from Rs. 1,275 to Rs. 1,350, while garbled from Rs. 220 to Rs. 232½. Business in December delivery remained poor, there being a continuation of trading restrictions by the Forward Markets Commission. The forward ring at Cochin had declared an emergency twice during the year. The declaration of emergency in any forward trading is in itself bad and does not augur well for its future working as the growers and the dealers who are doing genuine hedge business will lose confidence in the trading.

The scheme for running a second forward ring for black pepper in Bombay after being almost approved by the authorities concerned has not yet been implemented. The present delay in the granting of recognition by the Government of India under the Forward Contracts Regulation Act, is reported to be due to lack of proper guidance. It will be in the interest of the export of pepper and the growers as business can be more efficiently conducted in Bombay than at Cochin.

Ready pepper in Bombay is nominally quoted at Rs. 246 per 50 kilos.

TEA PRICES FIRM

(From Our Own Correspondent)

CALCUTTA, *1st November*

Firm prices and a strong general demand were the feature during yesterday's export sales. During the week, tea bookings did not show any improvement as arrivals from gardens continued to be poor and slow.

At last week's internal sales, dusts on offer amounting to 22,537 packages met with good demand at lower prices. Excepting for the smaller orthodox teas, which were taken at firm to dearer rates, all other teas realised irregular and lower prices. Prices for the exportable teas fell by 10 nP. Brown Dooars met with good demand at lower rates. Among C.T.Cs, the mediums declined by 15 nP, and the best by 20 nP. The quotations per 1 kg. inclusive of excise duty, were: best Assam C.T.C. dust Rs. 6.30 to Rs. 6.60, medium Assam C.T.C. Rs. 6.10 to Rs. 6.25, medium Assam dust Rs. 4.90 to Rs. 5.60, and medium Dooars Rs. 4.65 to Rs. 5.00.

Leaf on offer amounting to 784 chests met with good demand, the green teas receiving the keen attention of buyers.

On offer during yesterday's export sale were 71,057 packages which met with a good general demand. However, a few lines of plain liquoring Assam B.O.Ps failed to receive the attention of bidders. With regard to the general price trend, an irregular tone was in evidence with rates showing a tendency to recede. The quotations inclusive of excise duty per 1 kg. are: best Assam C.T.C. fannings Rs. 6.50 to Rs. 7.00, best Assam C.T.C. B.P. Rs. 6.20 to Rs. 6.60, clean black pekoe Rs. 5.40 to Rs. 5.70, medium fannings Rs. 5.00 to Rs. 5.30, medium B.P. Rs. 4.70 to Rs. 5.00, plain B.P. Rs. 4.50 to Rs. 4.65, and plain fannings Rs. 4.70 to Rs. 5.00.

DUST TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *25th October*

Sale No. 41:—Approximately 595,000 kilograms were offered in Sale No. 41 held to-day. Quality was well maintained. There was a good demand, but prices were somewhat irregular. Selected best high-growns sold at below last prices, whilst the lesser kinds came to a considerably lower market, many being withdrawn without bid. Medium, low-medium and low-grown brokens sold readily at fully firm to dearer rates, but good medium brokens were barely steady. Fannings in these categories were irregular and tended easier. C.T.C. and legg-cut teas sold well. Whole leaf grades opened irregular, but towards the close sold at firm rates.

	1960 Rs.	1959 Rs.
Low medium	4.30-4.60	3.82-4.08
Medium	4.60-4.85	4.19-4.74
Good medium	4.85-5.50	4.85-5.18
Quality	5.25-8.50	5.51-9.37

The average price realised in Sale No. 41 was Rs. 5.02 per kilo, as against Rs. 5.17 in the previous sale and Rs. 5.16 in the corresponding sale of 1959.

Dust Sale 'MM': Just over 220,000 kilogrammes were offered in Sale 'MM' held on Thursday, 27th inst. There was a strong general demand. Highgrowns received more support than in recent weeks, but at slightly easier rates. All mediums came to a receptive market and sold at rates which were fully firm and up to 10 nP dearer. C.T.C. and legg-cut teas followed the upward trend of the market and were strong. A few lines of legg-cut teas, however, were barely steady.

The average price realised in Dust Sale 'MM' was Rs. 4.52 per kilo, as compared with Rs. 4.43 in the previous sale and Rs. 4.07 in the corresponding sale of 1959.

Export Quota: There has been some activity and business has taken place at ¼ nP per kilo.

Colombo: In this week's sale, just over 5½ million lbs. were offered and met with an exceptionally strong demand. Dimbulas advanced 30 to 40 cents, whilst Uvas and medium teas were 10 to 20 cents dearer. Lowgrowns advanced 5 to 15 cents.

London: North Indian and other growths: In Monday's auction, there was a good demand. Best C.T.Cs were irregular following quality, but all the remainder were fully firm to dearer.

Ceylon and South Indians: In Tuesday's sale, 14,006 packages were on offer, of which 7,040 packages came from South India. The market followed Monday's pattern. Best liquoring teas were irregular and sometimes easier. All others were dearer by 1d. to 2d.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd., wire:

"*Sale* 42:—640.000 kilogrammes. Market opened very strong, but eased later. Plain and low medium ten to twenty nP dearer, particularly black leaf types. Medium and good medium fully firm and occasionally dearer. Highgrowns very irregular. C.T.Cs and whole leaf stronger and dearer."

JUTE AND GUNNIES SPURT

(From Our Own Correspondent)

CALCUTTA, *1st November*

A feature of the trading in jute markets during the week under review was a substantial rise in prices in both jute goods and fibre. Although, in view of the prohibitive prices for jute goods, overseas buyers restricted their activity, prices rose following the Pakistan report that mills in Pakistan were contemplating a modest reduction in working hours in view of the limited availability of raw jute and the need to bring jute goods production in line with the supplies of fibre. Mills in India have already cut their production in a substantial way, and with the sealing of 5 per cent. looms a week ago, the number of looms now remaining idle have risen to 18 per cent. of the total complement. These measures have not so far had the desired effect, namely, the abatement of the uptrend in fibre prices. On the other hand, as stated earlier, fibre prices have daily been rising this week, and the trend would suggest that the climax of the hardening phase has not yet been reached. All the same, trade estimates of the size of the crop both in India and Pakistan reveal a sense of optimism, as it is stated that the crops would be sufficient to meet internal and external requirements.

Indeed, this note of optimism is borne out from the quantum of fibre arrivals in the month of September 1960, figures in respect of which are now available. For arrivals during the month

(*Continued on page 847*)

Note.—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition buildings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'F' are not included. I—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of July 1960 amount to 9.28 lakhs of rupees.

§.—The reserves of Straw Products Ltd. include a non-distributable amount of Rs. 63,40,654 brought about by revaluation of land, buildings, plant and machinery in the year ended 31st December, 1955. ‡‡ Investment at cost.
M.—Clive Row Investment.—Dividend for 1959 includes additional dividends of 9 nP for the year ended 31st March 1956 and 37 nP for the year ended 31st March 1956. * Includes bonus.
(a) United Breweries Ltd.—The dividend for 1959 consists of an interim dividend of Re. 7·50 per share and a final dividend of Re. 52.50 per share of which the shareholders will receive Rs. 2.50 in cash and Rs. 50.00 per share by the allotment of five newly created shares of Rs. 10 each. *N.B.*—Dividends paid since 31st March 1959 are shown as taxable. (k) Investments. 'C'—On increased Capital.
M.—Managed by the Board of Directors.

SURVEY

(*Concluded from page 807*)

Prince's and Victoria Docks. The scheme was expected to cost Rs. 20 crores, including a foreign exchange component of Rs. 5·7 crores. Presumably on account of the Government's reluctance to meet this expenditure, the original scheme has now been whittled down substantially. The revised scheme, which is said to be "more modest and economical and likely to increase the revenue-earning potential of the port," is estimated to cost no more than Rs. 8.35 crores, including a foreign exchange component of Rs. 1.50 crores. It provides for the combination of Victoria and Alexandra Docks by the construction of a communication passage between them and the creation of six new deep water berths along the sides of the passage. The Victoria Dock Berths will thus be served by the Entrance Lock of Alexandra Dock, instead of by the Tidal Gates of the Victoria Dock, as at present, and it will be possible for vessels with a draft upto 30 ft. to be berthed in the latter dock. The cargo-handling potential of the berths on the eastern side of the Victoria Dock will also be increased by reclaiming land on the harbour side, laying additional roads and railway sidings, constructing new transit sheds and providing space for open storage. To those in this region who expected the original scheme to be put through during the third Plan period, the revised plan has come as something of a disappointment. As is shown in the table above, the volume of trade handled by the Bombay Port has been steadily on the increase. It is reasonable to expect a further expansion in this trade during the third Plan. It would be prudent to expand port facilities in time to prevent congestion and consequent disruption of the smooth flow of trade.

BANKING

(*Concluded from page 810*)

have also been periods of long-sustained deflation comparable in size and magnitude to the major inflations. Omitting the deflations, which merely reversed the price increases of the earlier inflations, the only major long-run deflation is the one found in the nineteenth century; (3) there were also periods when the price level was approximately stable; (4) that long-run trend has been subjected to such short-term "random shocks" as variations in the level of business activity, good and bad harvests, changes in the terms of trade; etc.; and (5) the three major inflations in British history are associated with larger changes in the quantity of money.

It also follows from Prof. Lipsey's study that a person's guess about price-rise will be correct, if his time period extends into one of the major periods of economic upheavals. If inflationary periods are taken away from his time horizon, then the investor's guess will be wrong for 52 times out of 100. So the investor who uses historical precedent as a basis for an assumed bias towards inflation is actually relying on the occurrence of one of the major economic upheavals over the period of his investment.

On the complete evidence of history, there is a slight margin of the odds in favour of inflation, but it is hardly sufficient to justify ignoring any important differential inducements to invest in bonds rather than equities. On the contrary, if the investor believes that his period of investment will not extend into any major economic upheaval, the historical data gives a bias in favour of deflation rather than inflation.

Of course, the conditions will be different for an investor situated in a country like India where successive plans involve budgetary deficits. Even in advanced economies, the obligation of maintaining full employment may mean bouts of deficit financing in the years to come. These will cause a secular expansion in the money supply which will be accompanied by a secular upward drift in the price level. But this, according to Prof. Lipsey, is an argument which is unlikely to be accepted by all reasonable men as conclusive without the need for presentation of further evidence.

In conclusion, Prof. Lipsey states that, if investors are advised to expect continued inflation on the basis of the new arguments, they are being told that the future experience of changes in the money supply will be very different from what it was in the past. If the advice is based on only historical precedent, it rests on a very shaky basis, indeed. "The evidence of simple historical precedent," he avers, "is at best inconclusive."

MARKET REPORTS

(*Concluded from page 837*)

aggregating 384,300 bales (347,050 bales from India and 37,250 bales from Pakistan) were higher by 29,650 bales compared to September 1959 when arrivals amounted to only 354,650 bales. Arrivals from Pakistan were higher by 3,300 bales and those of Indian origin by 26,350 bales. It should also be noted that September arrivals were also higher by 141,100 bales (138,350 bales from India and 2,750 bales from Pakistan) compared to the revised figure of arrivals in August 1960. However, taking the figures for the present season up to now, that is, July-September, arrivals at 805,150 bales (695,250 bales from India and 109,900 bales from Pakistan) have been lower by 196,250 bales compared to the corresponding previous figure. Countrywise, arrivals from India dropped by 259,250 bales while those from Pakistan increased by 63,000 bales, which has been due to relaxation of import control.

During the week, reports from mofussil agencies indicated that fibre arrivals had increased. However, in view of the upward trend, both buyers and sellers were reserved. As stated last week, mills have been advised to purchase raw jute only on a quota system by the Indian Jute Mills' Association. According to this system, mills which have fibre stocks for three weeks or less, are authorised to buy not more than 1½ weeks' consumption.

On Tuesday last, in the goods market there was selling pressure, as a result of which ready B. twills declined to Rs. 171 from Rs. 174.50 and ready hessian 40" 10 oz. to Rs. 54.00 from Rs. 54.25. On the following day, prices fluctuated widely, but closing levels at Rs. 171.25 and Rs. 53.75 did not disclose any marked changes. Speculative buying soon followed, and a leading operator turned a big buyer. Thus, on Thursday, B. twills rose to Rs. 173 and hessian 40" 10 oz. to Rs. 55. This was followed by buying by other operators, and prices after rallying to higher levels

All preference shares are taxable unless otherwise stated.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

POLICY OF DEARER MONEY RIGHT

WITH the 1960-61 busy season well under way, the change in the Reserve Bank's policy slightly in favour of dearer money has come in for a certain amount of adverse criticism by a section of the business community. This is not surprising, for the pinch of tight money conditions is already being felt by some. The series of measures taken by the Bank were designed to hurt speculators and discourage hoarding of goods, without retarding production. If they are causing a certain amount of hardship and engendering a sense

PROPOSALS FOR PEOPLE'S SHARES

IT redounds to the credit of the official study group, headed by Mr. D. L. Mazumdar, Secretary to the Company Law Department, that it has adopted a cautious and balanced approach towards the question of public participation in the capital of State enterprises. The cautious approach is found in the group's proposal that a start be made, on an experimental basis, with a limited number of companies (Sindri Fertilisers and Chemicals Ltd., Hindustan Machine Tools Ltd., and selected State road transport corporations) and that these could offer upto 25 per cent. of their equity shares to the public. And caution is certainly necessary, for an experiment alone can help shape a final practical scheme. But, if the caution stems from the group's view or, rather, fear that the proposal might, in certain circumstances, have the effect of diverting investments from existing securities, it seems to be rather unnecessary. For an element of healthy competition in the capital market may be to the good of both the sectors —public and private.

The group's idea that a final scheme should be so devised as to tap dormant pools of resources, limited though they be, in the organised and unorganised sectors of the economy may sound practical. But it is practical only in the context of the group's disinclination to assume confidently that it will be possible for State undertakings to ensure an average net rate of return on equity capital that will compare favourably with the average net yield on investments in similar undertakings in the private sector. It is thus the fear that State enterprises might not be sufficiently profitable that seems to have persuaded the group to observe that "it should be possible through a carefully devised scheme to draw upon these (dormant) pools of resources, so that they may be utilised for participation in types of investment which provided a high degree of security, combined with a reasonable rate of return, although not necessarily a competitive rate." The underlying idea here is probably that the public sector corporations could issue equities with an assured minimum rate of return, thereby doing away with the risk of no dividend at all in some years that might turn out to be bad ones.

By and large, however, a balanced approach of limited 'denationalisation' or 'privatisation' is discernible in the extracts from the group's report which appears to have leaked out to a small section of the Press. Comment here has necessarily to be based on the published extracts in the absence of the full report on which the Planning Commission may well be sitting tight for many more months, because it is probably deemed 'confidential' still. Incidentally, the Government's, or the Planning Commission's, habit of letting out, deliberately or otherwise, portions of important reports and documents to a favoured few in the Press, instead of making them available simultaneously to all the newspapers, is to be strongly deplored.

That is by the way. Reverting specifically to the group's basic approach, it is found that the issue bearing on the probable impact of the proposal on the total pool of investible resources and the flow of these resources as between the different sectors of the economy has been presented as the most crucial one. It is argued here that, if the public are to be induced to participate in the financing of State enterprises, the average net rate of return on their investments in these undertakings should compare favourably with the average net yield on investments in similar undertakings in the private sector. *If* this is done, some significant diversion of resources from the private to the public sector may conceivably take place. *If* such diversion takes place, comparable undertakings in the private sector may be compelled to raise the average net returns on investments at the cost of undistributed reserves which might otherwise be available for re-investment. Again, *if* investments in the public sector are made nearly as attractive as those in comparable private sector undertakings, it is argued that those who have currently made investments in Government securities, national savings certificates, etc., might divert them to Government industrial ventures.

All the 'ifs' in the above arguments are theoretical ones, for they are based on the assumption—which is no small assumption in the context of the objective conditions in which public undertakings have hitherto operated and are also likely to operate in the future—that State undertakings can be as profitable as similar undertakings in the private sector. If anything, it is an unwarranted assumption, and so the entire logical edifice based on it crumbles. But these arguments, presumably advanced by representatives of private industry, have found favour with the study group which has, thus, recommended that the proposal of public participation in the capital of State enterprises be formulated "in such a way that, instead of merely diverting investments from existing securities, the scheme, in effect, makes some addition to the total investments in the public and private sectors." What this basic approach of the study group has overlooked here is the consideration that public participation in the equity capital of State enterprises has a greater psychological significance than a purely economic one. People's participation in the share capital of Government undertakings may bring the two sectors—public and private—closer together in terms of mutual understanding. Such a trend will not be out of place in a mixed economy such as ours.

Where wholesale denationalisation is ruled out, limited public participation in the capital of State enterprises will create the feeling in the public mind that 'Statism' is not an article of faith with the Government of India and the Planning Commission. It is in this context that the study group's proposal for an initial experiment, covering a limited number of companies, is to be welcomed. The companies selected by the group offer the maximum possibility of attracting private capital. It is the group's view that, if this experiment succeeds, the list of companies could be progressively extended at the discretion of the Government. It is needless to add that the offer of these issues to the public should be carefully timed. The appropriate time would be when there is a shortage of blue chips on the stock exchanges, taking up the value of equities to unduly high levels.

The group's detailed proposals covering this experiment also call for some comment. One of them is that, in order to enable persons of relatively modest means, including the employees serving in Government undertakings, to subscribe to their shares, it would be necessary to issue the shares in small denominations of, say, Rs. 100 each. This would have to be modified, for Rs. 100 is by no means a small denomination; Rs. 10 would be more appropriate. The group has not come to any definite conclusion on the point whether any limit should be laid on the maximum amount of shares which any individual could hold. Nor has it come to any definite conclusion on the point that the right of transferability of these shares be indirectly limited only to "natural persons," that is, individuals as distinct from corporate bodies. The group has wisely come to the conclusion that the question whether these limitations should eventually form part of the scheme could be considered in the light of the experience of its working for some time. The group has, however, suggested, that, if it is decided to exclude corporate bodies from the scheme, at least co-operative societies should not be debarred from taking up the shares. Why this co-operative fad should be brought in here, too, passes one's comprehension.

The group is perfectly right in holding the view that, having nursed the selected companies to their present profitable position, it would seem to be equitable for the Government to ask for a reasonable price for the portion of the equity capital of those companies which it proposes to transfer to the public. It may be noted that it is a normal practice to issue the shares of existing companies at a premium. This practice was followed by the West German Government when it denationalised two of its largest industrial undertakings. Only, the premium should not be fixed at an unduly high level. It will not be out of place to remind the Government, in this connection, that, when it compelled some of the wholly foreign-owned companies, such as Hindustan Lever, Indian Oxygen and Associated Batteries to throw open a part of their equity capital to our nationals, it allowed them to collect only a modest premium, even though their financial position and dividend record might have justified a higher premium. Incidentally, the group's proposal that as much as 75 per cent. of equity capital be held by Government would need to be modified, as it is too high. This proportion should not be more than 66⅔ per cent., for, otherwise, there will be no adequate effective voice for public shareholders in the management of these undertakings. The group's proposal that the shares offered to the public should be allowed to be listed on the recognised stock exchanges is realistic, for their transferability and negotiability alone would render them more attractive to the public. It should be possible for the Government, in consultation with the stock exchange authorities, to prevent cornering or other forms of speculative manipulations in these shares.

The study group has also examined the types of companies that are not suitable for the experiment under review. Specifying them clearly, it observes:

"Some Government companies, by reason of the activities which they carry on, or for other reasons of administrative policy, may never be suitable for inclusion in the scheme under consideration. These companies would generally fall under the following broad categories: (*a*) companies engaged in the production of goods required for the defence of the country; (*b*) companies in which security considerations would not permit public participation: and (*c*) companies engaged in monopolistic and quasi-monopolistic ventures, comparable to fiscal monopolies in some countries of the world, in which the Government may desire, as a matter of policy, to retain 100 per cent. control in its own hands."

The exemptions under (*a*) and (*b*) are unexceptionable, but not those under (*c*), for the monopolistic character of these concerns will by no means be altered by allowing the public to be minority shareholders in them. There is, for instance, no reason why a part of the share capital of the Life Insurance Corporation should not be held by individual investors.

KENNEDY'S ECONOMIC POLICIES

SENATOR John Fitzgerald Kennedy, Democratic President-elect of the United States, will have the great advantage of working in harmony with a Senate and a House of Representatives which have Democratic majorities. The economic policies he may initiate either in the domestic sphere or in the sphere of foreign aid will, therefore, have the fullest legislative backing. His election to the high office has rightly given rise to the hope that something like a Marshall Plan may be launched to aid the developing countries in Asia and in Africa. In particular, his sponsorship, more than a year ago, of a resolution in the Senate, which called for the creation of a special multi-national economic mission to recommend joint means for rendering long-term aid to India, is remembered with gratitude in this country. His remark at the time that "as long as our efforts are aimed only at ensuring short-term solvency, they only leave plans for an effective Indian development programme suspended in mid-air" is also significantly recalled by the United States Information Service itself.

While it is natural for every country to think immediately (and rather selfishly) of what the Democratic victory will mean to it, the American citizens must be fairly well aware of what it means to them. For Mr. Kennedy's domestic economic policies have been well formulated and explained at some length in the course of the election campaign. It will, however, be difficult even for Americans to predict with any degree of accuracy as to what will be the exact outcome of the implementation of these policies and whether they will be implemented at all in full, for circumstances may change beyond Mr. Kennedy's expectations. The policy of heavier public expenditure that is favoured by Mr. Kennedy, ostensibly for the purpose of stimulating a still higher rate of economic growth, for instance, may conceivably have the effect of unbalancing the Federal budget and producing inflation. If it does, it may well undermine the stability of the external value of the dollar. Since, however, Mr. Kennedy has given the twin pledge that he will not devalue the dollar or unbalance the budget, his Administration will have to find adequate ways and means of financing the promised welfare schemes. It will be relatively easy for the President-elect to keep his promise, if the buoyancy in tax yields keeps pace with the buoyancy in the economy.

Whether the buoyancy in the economy will be maintained is the fundamental question. The chances are that it will be, if the minimum wage measures are applied in a way that will not produce a cost-inflation. It is here that Mr. Kennedy's promises to labour may have to be modified in practice. While increased public expenditure on housing or teachers' salaries may be desirable from the welfare point of view, their inflationary potential will also have to be reckoned with. How the cost-price spiral will be prevented in an already high cost economy is by no means clear. It will be a challenge to the Harvard economists behind Mr. Kennedy to devise ways and means of promoting greater social welfare and ensuring a larger outflow of Federal funds to the States to keep pace with the nation's birth rate, without producing inflation in the process.

MARKET GOSSIP

THE share markets have practically ignored the victory of Senator John F. Kennedy in the U.S. Presidential elections. This development undoubtedly heightens the prospects of U.S. aid for India's third Plan. It is not that the markets are not aware of this point. Indeed, their initial reaction was slightly bullish, but later on they must have developed some second thoughts. Probably, they want to await some concrete developments. After all, it is one thing to make proposals when one is not in power and has no administrative responsibility to implement them. It is another thing when the author of these proposals comes to power. He will be confronted with a number of difficulties, political and economic. While Mr. Kennedy has undoubtedly been more imaginative and understanding than his Republican confrere so far as aid to India is concerned, it remains to be seen to what extent he will be able to fulfil his desire. The fact remains that the U.S. has a balance of payments problem, while the claimants of aid from that country are increasing in number. The task will become relatively easy, if Mr. Kennedy succeeds in bringing about disarmament at an early date. It is to be devoutly hoped that, in this respect, Providence will bestow good luck on Mr. Kennedy, instead of frowning, as it has done on President Eisenhower.

The major reasons for the failure of the share markets to sustain the bullish tempo witnessed last week are (*a*) the inordinate delay on the part of the Government in announcing the retention prices for iron and steel, and (*b*) the waning hope of any early relaxation in credit restrictions, so that money may be had more easily than at present. It is said that the former factor is the excuse given by a prominent speculator to play bear in the shares of Tata Iron and Steel. As for the second factor, the banks have urged the Reserve Bank to make some concessions, but one of their spokesmen says that they are not confident of an immediate response.

Meanwhile, the inter-bank agreement on rates of interest payable on deposits has been modified, permitting an increase of ¼ per cent. on all time deposits maturing after two months. Details of this change in the agreement are given on page 883 and the new rates will come into force from next week. This is undoubtedly a wise move on the part of banks; otherwise, the risk of a breakdown of the agreement under the stress of acute stringency will be great. Of course, it would have been better, if the banks had been a little more liberal to their time depositors, especially the small and medium types. This point will be appreciated only if the banks believe that interest rates do influence the pace of savings to a significant extent. But, unfortunately, the vast majority of bankers, especially the bigger ones, have no faith in this theory. Fed by inflation and cheap money for well-nigh twenty years, they are complacent enough to think that it is a sheer waste of money to pay any interest on deposits.

A perusal of the full text of Mr. H. V. R. Iengar's speech at Madras last week clearly shows that it is an excellent defence of the Reserve Bank's policy of making money dearer. He has effectively disposed of the contention that this policy will only accentuate inflationary pressure by adding to the cost of money and by slowing down the pace of production. While not denying that the cost of bank credit will go up, he has convincingly argued that the impact of such increase on the total cost of production and cost of living will be negligible. To those who expect any sizable relaxation in credit restrictions, he has not held out much hope. To quote him:

"Dearer money can never, at any time, be regarded as a complete policy in itself; it is a relative thing and obviously must be subject to a process of adjustment. But I foresee that, as a general policy, what will happen as a result of extension of institutional finance is a gradual reduction in the cost of money to those who are now paying unconscionable rates and perhaps a gradual rise to those who have hitherto been obtaining it very cheaply—in other words, a gradual readjustment and, in due course, a smoothening of the great inequalities in cost which now exist. The Reserve Bank can, of course, readjust its measures from time to time—tighten, as it were, the nuts and bolts. For example, we have not hitherto made any direct attempt to revise the statutory requirements in regard to the liquidity of banks. Our minimum liquidity requirements are somewhat low on world standards—being only 20 per cent. of liabilities. The minimum liquidity in the U.K. by convention is 30 per cent. and this does not include medium and long-dated securities as in the case of India. This is a matter to which, at the appropriate time, attention will have to be drawn. But this again would not be a new policy; it would be merely the tightening up of existing policy."

Cotton Textile Prices

Three important issues were discussed at the meeting of the representatives of the Indian Cotton Mills Federation and the spokesmen of the Union Ministry of Commerce and Industry at New Delhi on Monday this week. They related to (*a*) reference to the Tariff Commission of the issue of cloth and yarn prices, (*b*) stamping of prices, and (*c*) raw cotton supply position. No definite decision was taken on these issues, excepting the categorical declaration by Mr. Nityanand Kanungo, Minister for Commerce, that a Tariff Commission inquiry was inevitable. The statement thus rules out the plea for evolving fair prices for textiles without reference to the Commission put forward by some millowners. It was, however, made clear by Mr. Kanungo that what was required was not merely a short-term fixation of prices but the determination of the basis on which textile prices could be fixed from time to time, taking into account the various fluctuating elements in the cost of production, capital structure of the industry, return on capital employed and distribution charges.

The spokesmen of the Federation are believed to have indicated what it considers to be the rational approach to the problem of fixing prices of textiles. One of the specific suggestions made is that the Tariff Commission should be asked to determine both ceiling and floor prices for the different varieties of textiles (cloth and yarn), with provision for adoption of suitable official measures such as relief in taxation whenever prices go below the floor level. It is particularly emphasised that the normal forces of supply and demand should be allowed to play within these limits in the textile markets. The Minister, we are told, gave the assurance that, while making the reference to the Commission, the Government would duly consider this suggestion as well as the other views expressed by the Federation.

It is to be hoped that the Government of India will not waste much time in finalising the terms of reference of the Commission and that the Commission also will complete the inquiry as early as possible. Since the question of determining fair textile prices is quite a comprehensive and complex one, some feel that there will be prolonged delay. The Federation's spokesmen did well to stress the expeditious completion of the inquiry. It is gratifying to learn that special arrangements will be made to ensure that the Commission's findings will be finished in about four to six months. Only the Government should take speedy action on these recommendations. This aspect is to be specially stressed because the time taken between the date of submission of reports by the Commission and the date on which the Government takes its decisions is usually unduly long, as witness the position of retention prices for steel. Needless to add here that, until the Government's final decision on textile prices is made known, the pace of offtake of cloth and yarn is bound to be slow.

At the New Delhi meeting, the millowners assured the Minister that the industry was sparing no effort to give effect to the voluntary reduction in textile prices. Here is the gist of what they said:

Stamping of prices: This has had a salutary effect in bringing down prices. Most of the mills have already fallen in line with the Federation's scheme of stamping fair prices. The industry is now confident that prices would be held.

Raw cotton: The Federation has issued instructions to all the mills not to purchase raw cotton above the ceiling rates.

The attention of the Government was drawn to the impact of the rising costs of raw materials, enhanced wages and higher transportation charges. And it was urged that all these should be taken into account while fixing the fair prices of cloth and yarn

Crisis in Jute Industry

It looks as though the present crisis in jute industry is nowhere near its end. For some weeks past, the industry has been held to ransom by speculators in raw jute and gunnies and prices of the fibre have shot up to levels at which mills find it extremely difficult to buy raw jute and manufacture gunnies. Prices of gunnies, too, have gone up to staggering levels which have scared away foreign consumers. The steps so far taken by the industry and by those in charge of the market to control speculation and bring down prices do not seem to have had any sustained effect on raw jute and gunnies. On the contrary, after a pause, speculation has spread wider and prices have moved up to high levels. The resistance of foreign buyers to the sharp upturn in gunny prices is reflected in a sizable drop in the offtake of gunnies from mills. It is said that exports of jute goods during the month of October have been the poorest for any month during the last many years, resulting in a huge loss of foreign exchange, which the country can ill-afford at present.

The steps so far taken by the East India Jute and Hessian Exchange Ltd., namely, the ban on fresh hedge contracts, the fixation of maximum prices and the imposition of stiffer margins, had proved ineffective, as these measures have only served to divert speculation to transferable specific delivery contracts. The Exchange, therefore, first asked its members and all licensed brokers to submit statements of their outstanding positions in raw jute and gunnies as on 15th October 1960. On top of this step, the Exchange has now called upon all members and licensed brokers to register all T.S.D. contracts in all varieties of raw jute and in certain constructions of jute goods, passed or entered into by them on 31st October 1960 or thereafter, until further notice, within three days of the completion of the business under any of the said contracts. It is stated that some of the mills themselves have been buying T.S.D. contracts in gunnies and this is partly responsible for the present high prices of jute goods. It is evidently this undesirable practice on the part of mills that has invited the E.I.J.H. Exchange to tighten up the regulation of T.S.D. contracts. The Government of India, too, has intervened and amended the by-laws of the Exchange, with a view to conferring on the latter more powers to curb speculation. The amendments, *inter alia*, empower the Board of the Exchange to regulate trading in any delivery or deliveries in T.S.D. contracts in raw jute and jute goods, to evolve a scheme of registration of such contracts and parcel delivery orders (P.D.O.) issued the registration, to specify the number of transfers of P.D.O.s, to impose special margins on T.S.D. contracts, and to fix maximum and minimum prices and to vary them from time to time. All these powers, as also the power to close outstanding T.S.D. contracts in raw jute and jute goods, would also be exercisable by the Forward Markets Commission, if it considers that the interests of the trade or the public interest so require. In effect, the mills are to blame themselves, to some extent, for their present plight.

It is no doubt true that there is an acute shortage of raw jute in this country and this has been one basic cause for the speculative activity, despite all assertions to the contrary by the Government of India. It is distressing to note that the Government has not yet been able to make an assessment of the crop, although four months of the current season have passed. Usually at this period of the season the bulk of the crop must have been marketed. Things have been made worse by the Government by delaying the issue of import licences. By the time they announced the second quota of 2,00,000 bales, prices in Pakistan had shot up, so that the import of cuttings from that country has become costlier. The price of cuttings in Pakistan has jumped up from Rs. 185 per bale to Rs. 240, despite the official forecast of a crop of 5.6 million bales in that country. This shows that the official estimates of the crop in Pakistan are not trusted. In fact, the Pakistan Jute Mills Association, fearing an acute shortage of crop in the current season, has asked its member mills to curtail production by restricting temporarily the working week to 96 hours from the average of 133-144 hours per week hitherto. This will mean a cut in output by one-third. The sharp rise in prices in Pakistan has resulted, according to close observers in Calcutta, in smuggling of raw jute from India into Pakistan. This is an unprecedented development, as, hitherto, it was Pakistani jute that was being smuggled into India.

As if all these ills are not enough to cripple the industry, the mills are also faced with stiff opposition to the recent additional sealing of looms by 10 per cent. from the workers, as well as the State and Central Governments. According to the unions, 18,000 workers have been affected by the cut in production, while the mills say that the number is only 8,000 and that the unemployment is confined only to temporary workers. The tripartite talks held at Calcutta on Monday this week to evolve an agreement on the problem of unemployment ended in a failure. The I.J.M.A. is reported to have offered to unseal only 5 per cent. of the looms to bring the sealed complement of looms to 14 per cent., provided the workers agree to reduce the hours of work to 45 a week, so that the number of unemployed can be reduced. The mills fear that, if they do not resort to this gradual method now, they may have to seal a still larger percentage of looms in January or so. The workers' representatives are, however, somewhat uncompromising.

Meanwhile, the Chief Minister of West Bengal is said to have strongly protested to the Central Government against the Centre's belated policy in respect of raw jute import and has laid the blame squarely on its shoulders. Meanwhile, it is feared that the Centre may step in and clamp down control on the jute trade and industry, as it is credited with the view that the sealing of looms by mills at present is too drastic. It is not known when and how the whole distressing episode will come to an end.

Outlook for the Dollar

The outflow of gold from the U.S. shows no sign of having subsided. References to this subject appear on two subsequent pages in this issue. Information received after we went to press shows that, on a single day last week, on the 3rd inst., to be precise, the U.S. lost $175 million dollars worth of gold, perhaps an all-time record, bringing the total drain during the brief period of four days from 31st October to 3rd November (both days inclusive) alone to $258 million. Of the $175 million lost on the 3rd inst., as much as $117 million were bought by France to pay off its debt of $131 million to the I.M.F. The balance of $58 million, itself a large figure, was taken up by other countries. Total gold loss during the calendar week bids fair to be a record, the biggest previous loss in any banking week (ending Wednesdays) since 1931, being $181 million in the week ended 21st September 1960. As on the 3rd inst., U.S. gold stock stood at $18.159 million, still about 45 per cent. of the free world's total, as against 66⅔ per cent. in 1949 when it stood at its peak. But what has given a new edge to speculation against dollar is the fact that gold stock has fallen below the short-term dollar holdings of foreign countries, all of which are, or are capable of being converted into, claims on U.S. gold stock. Although the latest position in regard to these liabilities is not known, as on 31st August 1960, the last reported date, they stood at $17,771 million. In the months of September and October, they are expected to have increased by about the same amount as in the two previous months, August and July, namely, $552 million, to about $18,323 million, a figure that exceeds the gold stock by a small margin of $164 million. This marginal discrepancy has, however, little practical significance. There is still *nearly* hundred per cent. gold cover for all external short-term liabilities of the U.S., whereas the corresponding cover for the sterling liabilities of Britain is no more than 25 per cent.

The crucial question is this: What will happen if the drain persists and gold stocks tend to decline below the $18,000 million mark, which has come to have some special significance? This level is stated to be the minimum which defence experts are said to have considered strategically necessary

EQUITIES DRIFT LOWER

NATIONAL RAYONS, HOWEVER, SPURT

(From Our Own Correspondents)

BOMBAY, *10th November*

THE bullish fervour on the Stock Exchange noted last week proved to be a short-lived affair. Barring a few exceptions, which added further smart gains over the previous week's rises, the trend was reversed during the week under review and losses over the week were widespread. The absence of any announcement regarding the widely anticipated relaxation of credit controls and fears that there might not be any increase in retention prices for the present and that, even if any increase were given, it would be meagre, would appear to have induced a sense of caution among the bulls, who, as a result, hastened to book their profit. Selling was somewhat more pronounced in Tata Steels during the last two days. Sentiment in textile shares was also at a low ebb following the Government of India's determination to refer the question of cloth prices to the scrutiny of the Tariff Commission. There were, however, a few notable exceptions to the general trend and these were provided by Standards among textiles, Belapurs in the sugar group, Tata Locomotives among engineerings and National Rayons in the miscellaneous section. Cash scrips were on offer and losses in chemicals and dyes were fairly sizable.

After an improvement in the earlier part of the week from Rs. 145 to Rs. 146.75, Tata Steels suffered a setback to Rs. 143. Indian Irons closed with a loss of 24 nP at Rs. 23.12, after moving up to Rs. 23.52.

Textiles were listless. Centurys fluctuated between Rs. 483 and Rs. 467 before finishing at the last week's closing of Rs. 472. Bombay Dyeings came up to Rs. 64.60, but soon reverted to Rs. 64.20. Kohinoors were marked down by Rs. 5 to Rs. 283.50. Central Indias lost Rs. 6 to Rs. 106 and Finlays Rs. 5 to Rs. 341. Khataus declined by Rs. 12.50 to Rs. 450. Podars, Shree Niwas, Simplex and Svadeshis were other prominent counters which suffered losses. Standards, however, scored a gain of Rs. 33 to Rs. 1,175, on top of a rise of Rs. 67 in the previous week.

Bank shares looked up. Central Banks gaining Rs. 2 to Rs. 55 and their new shares Rs. 2.50 to Rs. 59.50. Bank of India (new) picked up Rs. 2.50 to Rs. 105, while United Commercials shed a part of their previous week's gain with a drop of Re. 1 to Rs. 85.

Cements were quiet, Associated Cements declining by Rs. 2.25 to Rs. 145. Digvijays moved down by Rs. 3 to Rs. 160. Orissas were, however, higher by 52 nP at Rs. 15.12.

Belapurs were the only bright feature in the sugar section due to proximity of dividend with a spurt of Rs. 3.50 to Rs. 383. Phaltans moved down by Rs. 2 to Rs. 179.50 and Walchandnagars by Rs. 3 to Rs. 297.

Tata Engineering and Locomotives provided the highlight of the engineering section with a gain of Rs. 7.50 to Rs. 292. The peak level touched during the week was Rs. 303.50. Alcocks shed Re. 1.50 to Rs. 256. Larsen and Toubros were a shade quiet at Rs. 37 and Premier Constructions were marked down by Rs. 4 to Rs. 307.50. Mahindras shed 40 nP to Rs. 21.08. Voltas drifted down by Rs. 2.50 to Rs. 259.50.

Shippings were quiet, Scindias giving way from Rs. 13.92 to Rs. 13.68. Great Easterns declined by 52 nP to Rs. 15.48. Sentiment in automobiles was affected by selling in Hindustan Motors which fell by Re. 1.16 to Rs. 19.44. Premier Autos were hardly steady at Rs. 173.25.

Trading in miscellaneous shares was marked by the hectic rise in National Rayons. Though the closing price, at Rs. 517, was well below the week's best level of Rs. 532, the gain over the week was no less than Rs. 28. Gwalior Rayons were, however, weak with a drop of Rs. 2.25 to Rs. 43.75. Barodas were featureless at Rs. 143. Tata Oils were marked down by Re. 1 to Rs. 73.50 and Tata Chemicals by 56 nP to Rs. 16.76. Other chemicals and dyes ruled weak. Adarsh fell by Rs. 3.50 to Rs. 66, Amar Dyes by Rs. 12.50 to Rs. 440. Colour Chems by Rs. 15 to Rs. 337.50 and Indian Dyestuffs by Rs. 17.50 to Rs. 530. Ceat Tyres suffered a loss of Rs. 10 to Rs. 240 and Premier Tyres Re. 1 to Rs. 81. West Coast Papers gave way from Rs. 204.50 to Rs. 200. Khandelwals were lower by Rs. 3.50 at Rs. 96 and Ferro Alloys by Rs. 2.50 at Rs. 195. Kirloskar Oils changed hands Re. 1.24 lower at Rs. 20.76.

* * * *

Calcutta Stock Exchange

CALCUTTA, *9th November*

A modest recovery following some amount of buying by the L.I.C. was a feature of trading on the Calcutta Stock Exchange during the earlier part of the week under review. The ground was set when the L.I.C.'s decision to purchase Rs. 1 crore worth of equities was made public, following which covering demand was lively. Further, expectations of relaxation of credit control measures by the Reserve Bank encouraged optimism, and resulted in some amount of replacement buying. However, as the week progressed, demand declined, and prices registered a fall.

Among cotton textiles, Kesorams recovered to Rs. 29.56 from Rs. 28.06 to close at Rs. 29.12. Dunbars at Rs. 23 were fractionally higher, while Basantis moved down to Rs. 8.37 from Rs. 8.69.

Excepting a few features on interested buying, coals were quiet. Bengals at Rs. 336 gained Rs. 5, and Equitables moved to Rs. 26.44 from Rs. 26.12. Central Indias, after being unchanged at Rs. 11.56, drifted down to Rs. 11.25, and after being higher at Rs. 17.94 Burrakurs lost ground to Rs. 17.50. Pench Valleys moved down to Rs. 19.50 from Rs. 20.62, but Dhemo Mains at Rs. 8.69 were higher by a few nP.

Jutes were extremely quiet, with Agarparas being unchanged at Rs. 11.62. Kelvins declined to Rs. 138 from Rs. 141. Baranagores were transacted at Rs. 119 as against Rs. 130 previously. Deltas were shown attention at only Rs. 140, as against Rs. 142 previously, while Lansdownes met with business at Rs. 100, as against Rs. 99.

Engineering shares were shown greater attention. The steady improvement in steel supplies in recent months are enabling plants to come nearer to capacity. Burn & Cos. were fully firm at Rs. 451. Jessop & Cos. changed hands at the fractionally improved rate of Rs. 21 before falling to Rs. 20.87. Indian Irons opened at Rs. 23.33 and moved up to Rs. 23.46 but fell to Rs. 23.27. Despite a fall in production in October, the hardening trend earlier in the week was attributed to rumours regarding retention prices.

Among teas, Hasimaras gained to Rs. 23 from Rs. 21.62 previously, while Dhunseris fell to Rs. 15.50 from Rs. 16.12 and Gillapukris to Rs. 26.50 from Rs. 28.37. Methonis at Rs. 19.50 were almost one point higher.

Miscellaneous industrials recorded several features. Indian Oxygens were lifted to Rs. 39.12 from Rs. 38.44. On imminence of dividend announcement, Associated Batteries were better at Rs. 37.75. National Rollings continued to forge ahead to touch a high of Rs. 18.12 and National Pipes spurted to Rs. 19.62 from Rs. 18.87. National Cables maintained Rs. 31.62, while Aikali and Chemicals were better at Rs. 33. Orient Papers rose to Rs. 42.10 from Rs. 41.70, but reacted to Rs. 41.75. At Rs. 46.12, Hindustan Levers were higher by almost one point. Martin Burns moved down from Rs. 26.50 to Rs. 27.50 and after being firm at the higher rate shed to Rs. 26.87. From Rs. 20.25, Hindustan Motors moved to Rs. 20.65 to shed to Rs. 19. Following the announcement of a rights issue of one share for one at par, Electric Constructions at Rs. 16.25 recorded a small gain.

Madras Stock Exchange

MADRAS, *9th November*

Distinctly steady conditions prevailed on the Stock Exchange during the week under review, thanks to revival of good investment and professional buying. Sugar scrips moved up on hopes that the U.S. would import Indian sugar at prices much higher than those prevailing in world markets. Teas put on a cheerful appearance, following the release of second interim export quota and reports of higher prices fetched at auction centres. Coffees, too, elicited good enquiries on reports of effective measures taken by the Government of Mysore and Kerala to eradicate the disease which recently affected coffee plantations. Rubbers hardened in sympathy. Textiles were well favoured on expectations that the industry would receive a fair deal at the hands of the Tariff Commission, which is now being asked to determine fair prices for cloth and yarn. In the miscellaneous section, chemicals and cements were particularly strong.

In the sugar section, Cauverys spurted by 50 nP to Rs. 142.50. East India Distilleries improved by 25 nP to Rs. 44.25. Indias gathered 8 nP to Rs. 12.40. United Breweries were firm at Rs. 114.50 *cum-div. cum-right*. The Directors of the Company have announced a final dividend of 35 per cent., taxable, making a total of 60 per cent., taxable, or Rs. 6 per share (equivalent to 42 per cent. tax-free) for the year ended March 1960. The Company has also announced the issue of 80,000 equity shares of Rs. 10 each at par to equity shareholders as on 30th December 1960 on a *pro rata* basis. Deccans rose initially from Rs. 15.65 to Rs. 15.80, but declined subsequently to Rs. 15.60 on profit-taking.

Among teas, Haileyburias advanced by 50 nP to Rs. 14.50. Parksides rose by 45 nP to Rs. 29.75. Nonsuchs were higher by 25 nP at Rs. 27.25. Chembras put on 10 nP to Rs. 5.40. United Nilgiris were steady at Rs. 62 and Peermades at Rs. 22.80. Waterfalls changed hands at Rs. 4.90. The Company has declared a dividend of 12½ per cent., taxable (equivalent to 8.75 per cent. tax-free) for the year ended June 1960, as compared with 12½ per cent., tax-free, last year. Blue Mountains fell from Rs. 5.35 to Rs. 5.15. The Company has declared a dividend of 12½ per cent. taxable (equivalent to 8.75 per cent. tax-free) for the period ended June 1960, as compared with 12½ per cent., tax-free, for the previous year. It has also decided to issue bonus shares in the ratio of 1:5 to holders as on 21st December 1960. Kil Kotagiris were lower by 5 nP at Rs. 5.60.

In the coffee group, Coffee Lands jumped up by Re. 1.25 to Rs. 24.50 and Consolidated Coffees by 50 nP to Rs. 24.50 on better crop reports for the respective estates for the year 1960-61. Cowcoodys put on 2 nP to Rs. 5.17. Ouchterlonys were maintained at Rs. 5. Balanoors at Rs. 16.70 and Rajendras at Rs. 14.35.

Among rubbers, Cochin Malabars advanced by 38 nP to Rs. 7.33. Midlands were higher by 10 nP at Rs. 12.35. Kailas gathered 5 nP to Rs. 5.15. Thirumbadis picked up 2 nP to Rs. 1.55. Vaikundams were fancied at Rs. 30.40. Malankaras, however, shed 25 nP to Rs. 17.75.

In the miscellaneous section, F.A.C.Ts rose by 36 nP to Rs. 10.52. Mysore Fertilisers were higher by 20 nP at Rs. 10.90. Mettur Chemicals hardened by 15 nP to Rs. 12.80. Mysore Chemicals were unaltered at Rs. 10.90. The Company has announced a dividend of 20 per cent., taxable (equivalent to 14 per cent. tax-free) for the year ended March 1960, as against 20 per cent., tax-free, for the previous year. Among cements, Orissas went up by 40 nP to Rs. 14.25. Andhras were higher by 10 nP at Rs. 9.80. Travancores were steady at Rs. 8.55. Indias, however, weakened by 13 nP to Rs. 7.12. Among others, Western India Plywoods shot up by Rs. 5.50 to Rs. 228.50. Ashok Leylands were firm at Rs. 8.73, Indian Steel Rollings at Rs. 10.50 and Textools at Rs. 190.

GENERAL MANAGER

British Company requires Senior British Executive for service in India, with headquarters Bombay. Should be aged about 35, with Sales and Administrative experience. Prospects early promotion top management. Attractive salary, including accommodation, car, generous home leave facilities and Provident Fund and Pension Scheme. Apply in strictest confidence to Box No. 971, c/o "Commerce," Brady House, Veer Nariman Road, Fort, Bombay.

NEWS IN BRIEF

WITH a view to relaxing official controls over the co-operative movement, the Government of India has decided that no Minister or Deputy Minister should hold office in co-operative organisations.

Thirteen representatives of the Japanese iron and steel industry, led by Mr. O. Ashizawa, have arrived in India for a fortnight's tour of the steel towns of Jamshedpur, Rourkela, Bhilai and Durgapur.

The West German firm, Demag, has submitted to the Government of Madras a project report on the proposed steel plant in the State, using Neyveli lignite and Salem iron ore and adopting low-shaft furnace technique.

The Punjab Government proposes to extend the present concessions granted to scheduled castes and backward classes to all people in the low-income group, that is, persons earning a monthly income of not more than Rs. 100.

A new trade and payments agreement between India and Czechoslovakia has been concluded in Prague. The agreement, which will be valid for three years, will come into effect from 1st January 1961. It provides a framework for expanding trade between the two countries on the basis of equality and mutual benefit.

A group of seven prominent Indian businessmen left New Delhi on the 1st inst. for an overseas tour, sponsored by the U.S. Government. The businessmen, who are members of the National Productivity Council's marketing and distribution team, will spend seven weeks in the U.K., the U.S. and West Germany. They will study marketing research and advertising techniques used in selling consumer, engineering and producer goods and quality and inventory controls.

The Madras Government has passed orders reverting to multi-point taxation at 2 per cent. on sales of tinned, canned, bottled or packed foods or provisions in the State. The sales tax on articles, such as fruit products, Horlicks, biscuits, honey, pickles and *appalams* will now be calculated at the rate of 2 per cent. multi-point, instead of 6 per cent. single-point on packed goods. It had been represented to the Government that the levy of single-point tax at 6 per cent. on the articles had seriously affected the trade in these articles.

Several rural automatic telephone exchanges have been specially designed and manufactured for the Ceylon Government by the Indian Telephone Industries Ltd., Bangalore. These exchanges are in units of 50 subscriber lines totally enclosed in neatly finished dust-proof metallic cabinets. It is stated that they can be extended to an ultimate capacity of 150 lines in units of 50 lines. The exchanges, with their associated equipment, were specially designed and made to the specification of Ceylon's Posts and Telegraphs Department.

The first consignments of 10,784 tons (over 3.1 million gallons) of the best quality Russian superior kerosene for the Government-owned Indian Oil Company (I.O.C.) arrived on Monday this week in Bombay. This is the second shipment of Russian petroleum products to reach India under the recent agreement between the I.O.C. and the Sojuznefteexport, the Russian Export Organisation. The first shipment of 11,390 tons of high speed diesel (gas) oil was received on 17th August. The I.O.C. will sell imports through Government agencies and through private channels.

A pilot plant for the manufacture of pulp and paper was inaugurated by Mr. M. V. Krishnappa, Union Deputy Minister for Food and Agriculture, at the Forest Research Institute, Dehra Dun. The plant is capable of producing six tons of paper daily. It has been specially designed for research on the production of different types of paper. It is also suitable for training technical personnel in pulp and paper technology. The plant costs Rs. 60 lakhs. The U.S. Technical Co-operation Mission gave aid amounting to Rs. 27 lakhs for the pilot plant in the form of equipment and technical service.

Over 200,000 acres of land were irrigated in 1959-60 by the Tungabhadra Project—an inter-State venture undertaken by the Andhra Pradesh and Mysore Governments. In addition, the Tungabhadra power system produced 160.9 million kw.h. of electricity during this period. This power was supplied to Andhra Pradesh and Mysore States, and the power system will eventually be integrated with the proposed super-grid for the southern States. The Tungabhadra's project consists of a masonry dam, creating a reservoir with a water-spread of 146 sq. miles, three main canals, and three power houses. The length of the dam is 5,712 ft. and its storage capacity 133,000 million cubic ft. of water.

A factory for the manufacture of alarm clocks is proposed to be established at Hyderabad. Two foreign firms, one French firm, "Jazz," and the other Swiss, "Favre-Leuba," are participating in the project. Mr. C. C. Desai, a former Secretary, Union Ministry of Commerce and Industry, will head the board of the company which is undertaking the project. Foreign exchange for the project will be found partly from a loan given by the Industrial Finance Corporation and partly from the capital participation by the French and Swiss firms. The factory is expected to go into production within a year. When fully completed, it will manufacture 10,000 alarm clocks a month. It will also undertake the manufacture of precision instruments.

An agreement covering supply of plant and machinery for stepping up steel production to 100,000 tons in the Iron and Steel Works at Bhadravati has been signed between the Mysore Government and three West German firms, including Demag and A.E.G. The present capacity of the plant is 30,000 tons a year. The capital cost of the scheme is estimated at Rs. 7 crores. Under the contract, necessary technical assistance will be given by the firms, besides training some Indian engineers in West Germany. The firms will also install the machinery. The scheme also includes manufacture of steel ingots by the L.D. process. The State Government, it is stated, is also thinking of setting up one more electric pig iron furnace and a tool and alloy steel plant.

The Oil Advisory Committee, which met at New Delhi on Monday the 7th inst., recommended that immediate steps should be taken to remove the imbalance in the consumption of petrol and diesel by way of adopting technological and chemical devices in the processes of consumption and supply. The appointment of a committee consisting of the representatives of the Ministries of Finance, Commerce and Industry, Transport and Communications and Steel, Mines and Fuel and the oil producing and refining companies in India for the purpose was suggested. The report of the Steering Committee appointed by the Oil Advisory Committee at its last meeting was considered. It was also suggested that the Steering Committee should review the pattern of production and consumption of petroleum products in the country on a continuing basis. Mr. K. D. Malaviya, Union Minister for Mines and Oil, who presided over the meeting, advised the Committee to take an optimistic view of the consumption pattern of petroleum products in view of the speedy pace of industrialisation that was taking place in the country. He also advised them to take a long range view of various other connected problems and find a solution in a co-ordinated way.

From Abroad

Steel output in Italy rose by 27 per cent. to 6.11 million tons during January-September 1960, as compared with the corresponding period in 1959.

Pakistan will import Japanese textile machinery up to 300,000 spindles and 3,000 looms on a long-term credit basis. An agreement to this effect has already been signed.

Rolls Royce of Britain has signed an agreement with the Continental Motors Corporation of the U.S., under which it has obtained manufacturing and sales rights in Europe for the full range of Continental piston engines for light aircraft.

The Government of Sudan has given preliminary approval for the establishment of two oil refineries, one to be put up by the Italian E.N.I. and the other by Shell and British Petroleum. Each of the refineries is expected to cost £6 million.

Under an agreement signed between the British firm of Raleighs and Bianchi of Italy, the former will undertake manufacture of Bianchi scooters in the U.K. The scooter, to be known as the "Raleigh Roma," is of 80 c.c. with three-speed gears and a dual seat.

The Indonesian Government has published a new Petroleum Bill turning over the entire oil industry in the country to State companies or contractors nominated by the Government. The Standard-Vacuum, Caltex and Shell companies control extensive oilfields in Sumatra and Borneo at present.

Britain's first two atomic-power stations under the current nuclear-power programme are stated to be now less than a year off completion. One is at Berkeley, on the River Severn, and the other at Bradwell, Essex. Both are likely to start supplying power to the national Grid at the end of next summer. Their net electrical output will be 275 megawatts and 300 MW respectively.

The view that prospects for world production of rice in the 1960-61 season are generally satisfactory, despite earlier setbacks in some Asian countries, has been expressed in a review, just published in London by the Commonwealth Economic Committee. A record crop is forecast in Japan. Large harvests are expected in Indonesia and Burma, too.

A new integrated steelworks, claimed to be one of the most advanced and economical in Europe, is to be built in Britain at an estimated cost of £60 million. The project, planned by Tube Investments Ltd., will raise the Company's steel production from 450,000 tons a year to 875,000 tons in 1965. Work is to start next year and the plant will be commissioned in 1964.

Equipment has been perfected by Electromatic Shopblinds of London to lower shopwindow blinds automatically when sunlight reaches a degree of intensity which might damage goods on display. When the level of intensity has fallen below the danger point, the blinds will be automatically raised. The unit consists of a photo-electric cell and has transistorised control.

Britain is still the greatest nation of tea-drinkers in the world, according to a review appearing in the latest issue of *Plantation Crops*, just published by the Commonwealth Economic Committee in London. Coffee-drinking is on the increase in the U.K., but the popularity of cocoa as a hot beverage is declining. In 1959, the average Briton consumed 9.6 lbs. of tea and 1.8 lb. of coffee.

Demand for capital goods reached a record level in West Germany in September, with orders exceeding deliveries by 10 per cent. Whereas August orders for capital goods were 47 per cent. higher than those in August 1959, the increase from September to September was 26½ per cent. The index figure for new orders in the capital goods industry (monthly turnover in 1954=100) was 281. For industry as a whole, the index figure was 214 and the increase over September 1959 was 12 per cent.

The Government of Israel has signed an agreement with a U.S. company, granting it prospecting rights to a part of Israel's phosphate deposits. The agreement provides that the U.S. company—the name of which has not been released—spend at least £90,000 on prospecting in the next two years. Should the deposits uncovered justify it, the Company will invest up to £3 million in erecting a processing plant capable of turning out a minimum of 500,000 tons of phosphates annually. In addition, the plant will produce several hundred thousand tons a year of phosphate-based cattle fodder.

The first unit trust in Britain catering solely for trade unions is expected to be founded soon. It will have an initial investment of under £1 million supplied by a group of unions with a total membership of over 2 million. The group includes the Shopworkers, Railwaymen, Miners, General and Municipal workers, and the London Typographical Society. Negotiations are already proceeding with a number of other interested organisations, representing a further 500,000 workers—the National Union of Seamen, the Agricultural Workers, the Woodworkers, the Weavers and the Transport Salaried Staffs' Association. It is hoped that the trust will eventually invest nearly £2 million in equities.

A British firm of automatic control manufacturers, Honeywell Controls Ltd., of Middlesex, has received the biggest single contract in its history—worth £300,000 from India. The order is for automatic fuel-measuring instruments on the 720-mile length of the new oil pipeline in eastern India. A large part of the equipment involved will be made in Scotland. The builders of the pipeline, Burmah Oil Company (Pipe Lines) Ltd., placed the order with Honeywell, whose main factory is at Motherwell in Scotland. Work on the project is expected to begin this month and finish by the middle of 1961. Manpower at the factory is to be increased by one-third in an extension programme of £1 million.

The Soviet proposal for technical assistance in exploration of oil and other technical resources has been accepted by Pakistan "in principle." The proposals were recently handed over to the Pakistan Government by a Russion oil delegation. On the basis of classified information and data supplied by the Government, the Soviet delegation is understood to have been satisfied that the possibility of striking oil in certain areas is bright. The Russian offer to Pakistan differs from the usually known Western pattern, in that Russia will not be offering any aid nor will it be forming a commercial company to search for oil. Although details are lacking, Russian participation, it is understood, will be in the form of long-term credits at low rate of interest.

Production of oil in the Middle East during the first nine months of 1960 was at the all-time record level of 193.71 million metric tons. This was higher by over 22 million tons, or about 13 per cent., as compared with the corresponding period of 1959. All the leading producing countries showed record yields. Kuwait, the largest producer in the Middle East, produced 60.88 million tons, an increase of 16 per cent. over the output in the first nine months of 1959. The next largest producer, Saudi Arabia, with 44.28 million tons, showed a 12 per cent. increase. Persian output rose by 11 per cent. to 37.39 million tons and that in Iraq by 15 per cent. to 35.02 million tons. Chief among the other producing areas were Qatar, which yielded 6.5 million tons and the Kuwait-Saudi Arabia Neutral Zone, where output of 5.24 million tons was almost 15 per cent. higher.

PERSONAL

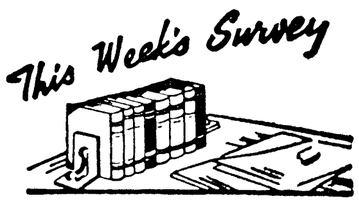
SIR Paul Gore-Booth, the U.K. High Commissioner to India, presented his credentials to the President on the 5th inst. He succeeds Mr. Malcolm Macdonald.

Dr. Hans Reuter, President of Demag and a member of the West German Atomic Commission, arrived in India on the 3rd inst. on a fortnight's visit of various industrial centres in the country.

Mr. H. Bizot, General Manager, Comptoir National D'Escompte De Paris (French Bank), will be in Bombay shortly to preside over the celebrations of the Bank's centenary in India.

Mr. W. A. Swift, Chairman of W. S. Malden Ltd., New Malden, Surrey in the U.K. will visit India this month to explore the possibility of expanding his firm's trade with India. The firm imports considerable quantities of hand-made embroidered blazer badges produced in India.

Mr. L. A. Green, of the London firm of Messrs. S. Berendsen Ltd., is now in India for the purpose of expanding business and promoting sales. Berendsens are a merchant firm dealing in a number of lines of iron and steel goods and agricultural machinery, acting as export agents for several British manufacturers.



FIFTY YEARS OF TATA ELECTRICITY

THE story of Tata Electricity is no less fascinating than the story of Tata Steel. In either case, it is a saga of enterprise and daring; in either case, the monument to Jamsetji Tata's vision and foresight not only endures but continues to expand. Scarcely have three years passed since the T.I.S.Co. celebrated its Golden Jubilee. It is now (November 1960) the turn of the Tata Hydro-Electric Power Supply Company, Ltd., to celebrate its Golden Jubilee. If the Andhra Valley Power Supply Company, Ltd., (launched in 1916) and the Tata Power Company, Ltd., (launched in 1919) are taken together in this context, it will be seen that Tatas have made a big contribution to power generation in the last 40 to 50 years.

The story of Tata Electricity may even be said to have begun much earlier than 1910, for, well before Jamsetji formed, in 1897, a small syndicate to further his plans for a hydro-electric scheme, he had come to use electricity in all his mills, albeit on a bit expensive and small scale. Jamsetji looked far ahead of others in his day and pursued his vision with a single-minded devotion in the face of heavy odds. That even the then Secretary of State for India, Lord George Hamilton, was not entirely hopeful of the success of Jamsetji's enterprise could be inferred from a letter from the India Office at that time, which said: "As to the scheme for utilising the electric power generated in the heights of the Ghats for the purposes of Bombay and its neighbourhood, Lord George can only say that, if it is brought to a successful issue, it will be an achievement of which you may indeed be proud." Even Jamsetji himself did not live to see the fruition of his dream, for he passed away in 1904. It was given to Sir Dorab to translate his father's dream into reality. Thus was born the Tata Hydro-Electric Power Supply Company, Ltd., which began selling power from February 1915. This Tata power has been sold to the consumer at the lowest rates ever since—rates which have continued thus far to be lower than those charged in any other part of India. With the expansions that have taken place from time to time in the generating capacity, Tata Electricity has made a massive contribution to industrialisation and urban well-being—a contribution of which Bombay City, no less than the House of Tatas, is justly proud.

EXCISE AND CUSTOMS

The constitution of a seven-member committee to examine the working of the Central Excise Department and to make recommendations for its reorganisation is, indeed, a commendable move. Both the choice of the personnel of the Committee and the terms of reference signify the Government's anxiety to tone up the administration of excise duties. The Committee includes well-known business men and industrialists and is presided over by no less a person than Mr. A. K. Chanda, until recently Comptroller and Auditor-General of India. The issues referred to the Committee are comprehensive in coverage, with particular stress on the need for achieving maximum efficiency at minimum cost, as well as for rationalising, simplifying and improving the Central Excise Act and the rules and procedures thereunder. The Committee is required to submit its report by the end of October next.

The great importance attached to the reorganisation of the excise machinery is only as it should be, considering the increasing reliance that is now being placed on indirect taxation to meet a larger part of the expanding expenditure of the Government. Excise duties constitute the biggest earner of revenue for the Central exchequer. Out of every Rs. 5 accruing as revenue receipts, these duties account for over Rs. 2. The estimated collections of excise in the current fiscal year, that is 1960-61—the last year of the second Plan—amount to Rs. 330 crores, representing, as much as 41 per cent. of the aggregate anticipated revenue of Rs. 920 crores. The percentage share was no more than 17 in 1950-51 (before the era of planning began), when the actual collections were Rs. 68 crores out of the total revenue receipts of Rs. 411 crores. The collections are expected to rise to Rs. 600 crores by the end of the third Plan (1965-66).

Since excise duties are such a fruitful source of revenue, it is imperative that the collecting machinery and the procedures followed by it should be examined with a view to adapting them to their new role. This view was also expressed by the Estimates Committee of Parliament in its fifty-seventh report. Equally imperative is the need for improvement in administration, for, because excise duties are collected at the source, there can be much avoidable sense of grievance if there is inexpert handling. This applies to customs administration too. Inaugurating the conference of Collectors of Central Excise and Customs in Bombay on Tuesday the 8th inst., Dr. Gopala Reddy, Union Minister for Revenue and Expenditure, did well, therefore, to urge the officials to be fair and just to the public. He said: "It is not enough, if the officials are revenue-minded; they should be careful about public opinion. . . . If the public is dissatisfied with the administration, they will feel frustrated." In his speech, Mr. V. T. Dehejia, who will shortly assume charge as the Secretary to the Revenue Department in the Union Ministry of Finance, also emphasised that the administration should not be mechanical but be fair, reasonable and efficient.

Customs duties constitute another important source of revenue to the Centre. The budget for 1930-61 has taken credit for a total collection of Rs. 162.50 crores, as against Rs. 157.15 crores in 1950-51, and the estimate for 1965-66 is about Rs. 180 crores. It is thus evident that, as compared with excise, the reliance placed on customs duties to provide additional funds is less substantial and is bound to play a diminishing role. This is because of the necessity to keep down rates of duties on imports as far as possible so as to avoid a heavy burden in the form of higher cost of production within the country. As readers are aware, the bulk of India's imports consist of capital goods, essential components and raw materials. Revenue in the form of export duties is also bound to shrink, in view of (*a*) growing competition in world trade and (*b*) the need for giving special incentives to exporters for winning more exports in order to meet the country's requirements of foreign exchange. Nevertheless, efforts must always be made to ensure a continuous improvement in administration. It is gratifying that the Government of India has already taken quite a number of measures in this direction on the lines suggested by the Customs Reorganisation Committee (Chairman: Mr. F. C. Badhwar) and also by the Customs and Central Excise Advisory Council. Even so, much still remains to done, especially in the fields of pilferage at the docks and delay in customs appraisal.

INDO-GERMAN TRADE

India's adverse balance of trade with West Germany has been a persistent headache to the Union Government all these years. Statistics of trade since 1952 show that the annual deficit has increased by leaps and bounds. In that year, it was Rs. 12.6 crores and in 1957 as high as Rs. 106.6 crores. But, in the first seven months of the current year, it is only Rs. 53.4 crores—a trend which may well mean a deficit of only about Rs. 91 crores for the whole year, if the present import and export trends are maintained. Probably this represents a turn for the better because India has exported to West Germany Rs. 11.3 crores worth of goods in the first seven months of the current year as against Rs. 10.0 crores in the whole of last year. The expected level of imports from that country to the value of about Rs. 110 crores in the whole of 1960, though not substantially less than the 1959 level of Rs. 119 crores, should not be deemed a disquieting trend by itself if India's exports have really begun to register a rising trend.

(Value in crores of rupees)

Year	India's imports from W. Germany	India's exports to W. Germany	Balance of trade
1952	25.15	12.54	— 12.61
1953	29.54	10.46	— 19.02
1954	38.60	14.75	— 23.85
1955	53.96	15.79	— 38.17
1956	81.54	14.64	— 66.90
1957	122.82	16.22	—106.60
1958	93.95	14.82	— 79.13
1959	118.72	19.61	— 99.11
1960 (Jan.-July) ..	64.69	11.30	— 53.39

But it is by no means clear that the rising trend is distinctly in evidence, for, as Mr. Lal Bahadur Shastri stated at the fourth annual general meeting of the Indo-German Chamber of Commerce at Bombay, the improvement in India's exports in the first seven months of 1960 is very slight, considering the dimensions of the problem. Even this slight improvement is only a part of, and is relatively less than, the general improvement in India's export trade with a number of countries in the first seven months of the current year as compared with the corresponding period of last year. The following figures would bear this out:

India's exports to	*Jan-July* 1959 (Rs. crores)	*Jan-July* 1960 (Rs. crores)
Canada	8.7	9.3
U.S.A.	54.9	58.3
U.K.	77.7	82.7
Belgium	2.3	2.7
Italy	3.0	4.3
Japan	20.4	21.4
Egypt	4.0	7.7

It is not surprising that imports from West Germany have also begun to register a declining trend in the context of a low level of India's annual exports to that country continuously over a number of years. This, as Mr. Lal Bahadur Shastri has rightly pointed out, should be disquieting to West Germany itself. It is clear that, unless that country imports more of Indian goods like tobacco, cotton textiles, shellac, mica, carpets, floor coverings, sports goods, handicrafts, leather, coffee and tea and some new items like sewing machines, diesel engines and iron castings, its exports to West Germany may have to appreciate the need for providing as much finance as possible for facilitating continued imports of vital machinery and equipment needed by India which, as of 1959, account for nearly two-thirds of all imports from that country. Mr. Lal Bahadur Shastri has drawn pointed attention, in this connection, to the feasibility of two types of collaboration between the two countries.

Under the first type, not only the equipment for the projects but also the continued import of raw materials will be looked after by the export potential generated by the arrangement. The idea that the equipment and know-how of West Germany should be coupled with India's own resources in men and materials so as to make it possible for a part of the manufactured products to find their way into international trade is commendable. It will mean collaboration between German industry and Indian industry in the setting up of export industries.

Under the second type of collaboration, which is now working in a small way, it will be possible for West Germany to help India to improve the quality of production of some raw materials which can thus find easier and larger markets in that country. At present, the only example of this type of collaboration is provided by the assistance rendered by a German expert working in Andhra Pradesh to produce certain varieties of virginia tobacco which are in large demand in Germany. It is expected that, when this experimental project is extended to cover a larger area, German cigarette manufacturers will purchase the tobacco produced. If this type of collaboration succeeds, it will alone mean a substantial rise in this country's exports. If, at the same time, West Germany liberalises the quota restrictions more speedily than it has done so far, it will augur still better for our exports to that country. Mr. Lal Bahadur Shastri's expectation of a much better deal from West Germany may yet be fulfilled if Indo-German trade also involves increasingly Indo-German collaboration in industry and agriculture alike.

It must, however, be recognised that the possibilities of increased export trade with Germany cannot be enhanced by mere liberalisation of import restrictions and reduction in taxes on consumption. True, such liberalisation may improve the exports of tea, coffee and cashewnuts on which heavy import duties are now levied by that country. But this will not be the case where textiles, light engineering goods and some raw materials are concerned, because these will have to face even otherwise severe competition from other exporting countries. It is, therefore, of the utmost importance that Indian producers should make their goods competitive in terms of prices, quality and salesmanship. Even if all this is done and exports increase in consequence, there will be no likelihood of Indo-German trade being fully balanced in the foreseeable future as the heavy imports from that country stem from India's developmental needs. And, since German machinery and equipment will continue to be required on a large scale for some years to come, the case for more German aid in the form of long-term loans should be self-evident.

BRITISH ECONOMY

An expert diagnosis of the causes of the slower pace of economic growth in Britain, as compared with some other countries in Western Europe, has been made by Political and Economic Planning, an independent, non-party, research organisation of Britain, better known by its initials P.E.P. In a report entitled *Growth in the British Economy*, the P.E.P. has warned that, if British economy does not expand faster, in a few years' time, Britain would find itself having a lower standard of living than many of its competitors across the Channel. A comparison of the rate of investment in seven European countries shows that Britain ranks last but one, among the seven countries arranged in descending order according to the rate of annual investment during the years 1953-57.

The P.E.P. discerns two reasons for the slow rate of growth, one psychological and the other economic. The British people, it maintains, are not sufficiently keen on economic development. Both management and labour, and, more widely, people in general, do not attach, so we are told, such high priority to material progress as might lead them to great enough efforts to achieve the economic results, for example, of the U.S., W. Germany or the Soviet countries. The British business man, according to it, lacks dynamism and that restless, aggressive spirit, which had been responsible, in no small measure, for the supremacy of Britain in the industrial field in the past. Instead, he desires "an easy life and small but safe profits." The British worker, too, the P.E.P. points out, though not less demanding than his counterparts in other countries, is not willing to put in the effort and sacrifice required for a more affluent life. In other words, although he is as persistent in demands for higher wages as workers in any other country, he is not prepared "to take risks, move to a new job and fight for advancement." The P.E.P. goes on to add: "If the prospect of more wealth is held out to him, but at the risk of unsettling his established pattern of life, perhaps of being separated from his family for a period, then he is inclined to settle for things as they are."

Among the economic reasons for the too-slow growth, the P.E.P. gives pride of place to lack of planning. There is, it is said, very little investment planning in the country. Even in nationalised industries, according to it, there seems to be a failure to co-ordinate investment plans of even closely related industries. In the private sector, there is no planning and co-ordination of investment, except in the steel industry. The P.E.P. feels that, in official economic thinking in Britain, maintenance of full employment, avoiding inflation and averting balance of payments crisis have been given higher priority than economic growth.

There is no evidence to suggest, says the report, that the high level of general taxation has been harmful to investment and industrial growth or that large spending on social security has retarded progress. On the contrary, it maintains, expenditure on health and education, as a necessary condition to expansion, should be increased. But it does concede that harm may be done by high marginal rates of tax at the early surtax level, by death duties falling on family firms and by a general bias of the tax system that tends artificially to reduce the cost of labour in relation to capital.

Having spotted the inhibitory factors, the P.E.P. goes on to suggest ways and means of stimulating economic expansion in Britain. It suggests that there should be more planning of investment programmes and production targets in the private and public sectors. The P.E.P. favours investment of a more labour-saving type, because it feels that, as the expansion of the economy proceeds in the 1960s, it will be limited by renewed shortage of labour before all the surplus capacity built up in the years of high investment since 1955 has been utilised.

The crucial problem of Britain, the P.E.P. admits, is that industrial expansion invariably leads to a crisis—either a setback in export markets owing to increased demand at home or balance of payments trouble due to excessive imports. And, when restrictive measures are introduced to remedy the situation, they also result in a slowing down of production. The only solution to this dilemma of inflation and deflation, in the P.E.P.'s view, lies in a wage policy that will see to it that the annual percentage rise in wages does not exceed the percentage rise in productivity. But it is not optimistic that such a policy would receive general endorsement in the near future.

The conclusions and recommendations of the P.E.P. study, not to mention the basis of its comparison, are highly controversial. It is not possible to comment on them at length within the scope of this short note. Suffice it to say its advocacy of "more planning" in the economy may attract some political attention and give a sharper edge to socialist swords. It is difficult to share the P.E.P.'s dissatisfaction with the rate of Britain's economic growth. It has been as high as it could for a small country, with sizable international commitments. There has been sustained full employment, with a standard of living which is, perhaps, the highest in Europe. Britain currently finds itself in the unenviable position of having to steer clear of the Scylla of inflation and the Charybdis of deflation. If, in the process, the rate of expansion suffers a little, it could not be helped. It is the price to be paid for stable, though less spectacular, progress But it is a small price, having regard to the enormous leeway that underdeveloped countries have to make up and the contribution which the developed countries such as the U.K. have to make for speeding up their progress.

RAYON MILLS' CORPORATION

It must be said to the credit of the Rayon Mills' Commercial Corporation that it has done some useful work during the brief period of fourteen months after it commenced operations on 5th September 1959. The Corporation has endeavoured to meet a part of the credit requirements of art silk weaving units which are its members. In his speech at the annual meeting of the Corporation held at Bombay on Monday this week, Mr. D. N. Shroff, Chairman, disclosed that, upto 31st of last month, the Corporation had rendered assistance to the extent of over Rs. 12.69 lakhs against pledge and nearly Rs. 11.68 lakhs against letters of credit. It had also offered hypothecation facilities for an amount of Rs. 3.70 lakhs. The credit facilities may be expected to be larger in the coming months, now that the capital of the Corporation has been raised by Rs. 5 lakhs and is proposed to be raised further by an equivalent sum. What is more, the Corporation, we are told, has made arrangements with the Bank of Baroda Ltd. for cash credit facilities to the tune of Rs. 60 lakhs against hypothecation of stock-in-trade, Rs. 30 lakhs against pledge and Rs. 50 lakhs for opening letters of credit. Further, the State Bank has been requested to grant a clean credit advance of Rs. 25-30 lakhs against yarn imported under licences issued against art silk fabric exports.

The importance of such facilities lies in the fact that the art silk weaving units are finding it difficult to secure funds as a result of the restricted credit policy of commercial banks and are not able to obtain hypothecation and other means of credit through the usual channels such as the Reserve Bank's scheme of guarantee of advances to small industries, State Bank's assistance, the Industrial Credit and Investment Corporation, the Refinance Corporation for Industry, and the co-operatives. The credit facilities made available by the Corporation have certainly enabled many units to plan a production programme and implement it, especially in slack seasons without making distress sales. Reassuring is the statement of Mr. Shroff that it is the endeavour of the Corporation to ensure that "lack of finance shall soon become a matter of the past." In addition to providing credit facilities, the Corporation has also been assisting the mills in obtaining deliveries of yarn from indigenous manufacturers.

While all this is useful work, the Corporation's move to undertake exports of fabrics and distribution of yarn imported by the State Trading Corporation under various trade agreements would appear to be not a wise one. Why should this organisation try to trade (import or export) in art silk yarns and/or fabrics, thereby displacing quite a number of persons engaged in it for several years? By all means, the Corporation can render service in the field of export by laying down and enforcing quality standards and by offering arbitration facilities.

DOLLAR *VS.* THE REST

From Our Own Correspondent

LONDON, *5th November*

LONDON LETTER

IN October, the British gold reserves rose by £46 million following a rise of £33 million in September. As a matter of policy and not of necessity, the Bank of England took the opportunity to make advance repayments of the last of its outstanding debt to the International Monetary Fund: it repaid £20 million in September and the final balance of £30 million in October (it could have held on to these balances for another year had it wished) *plus* a capital payment of £5 million in respect of the liquidation of the E.P.U. Thus, the net increase over the two months as published is £24 million, raising the reserves to £1,121 million at the beginning of this week.

All this has been done at a time of the year when the pound is traditionally weak, with import payments overseas. It has been possible, because, in the earlier part of the period, the Bank was upholding a Bank rate of 6 per cent. and in the last two or three weeks because of the panic rush into gold by Americans—a rush which has had largely to be satisfied through the London bullion market with a corresponding demand for sterling.

It is the latter which has now sent the price of sterling to its highest level for this year, namely, $2.81\frac{3}{4}$, a rate at which the Bank is obliged to convert its dollars into gold with the Federal Reserve Bank. Strong sterling and weak dollar are two sides of the same picture.

Over this same period, when the Bank has been acquiring gold, the American stock has been dwindling—in four weeks in September by £110 million and in four weeks of October by £100 million. Although it is the recent losses that have been spectacular, it must be remembered that gold has been seeping out of the United States for the past three years at a very steady rate; in 1958, $1,279 million; 1959, $1,078 million; 10 months 1960, $1,122 million, but, at present progress, 1960 will create a record.

Behind the short-term speculation, which sent gold up to fantastic prices in London a fortnight ago, it is now clear that there is a heavy bear movement against the dollar on the part of Americans themselves. The London gold price, after the first week's flurry, has moved mostly between $36 and $37 and, at $36½ for a substantial turnover (as compared with the F.R. price to other central banks of $35), it is clear that there is a flight from the dollar.

American financial policy has been opposed to meeting the speculators by making free sales of gold. Dollars have been sold to the Bank of England and to all European central banks and the latter, as their dollar stocks have swollen, have, in due course, converted them at the Federal Reserve Bank. The American Treasury could not bring itself to appreciate the wave of distrust that has been building up against the dollar, but, with reserves in excess of $18,300 million it could still swallow its pride—if it believes in an undevalued dollar—and either take the initiative in buying dollars freely from central banks against gold or (though this would offend Western canons of finance) even in selling gold to its own nationals. It is difficult to see over here what prevents the U.S. Treasury from taking the first step for nothing but harm results at present from the doubts on the stability of the U.S. dollar.

Of course, policies of easier credit in the U.K. and still more in Germany would weaken the pressure to get into other currencies, but the real trouble is deeper—it is an urge to get out of dollars. In the City—and the same is true of West European capitals—a dollar weakness is not really welcomed, as the dollar has too long been the symbol of stability on which other currencies have relied. Yet, surely this is carrying respect for American finances too high. There is, however, no disposition here to be chauvinistic and look for the day when sterling might once again supersede the dollar as a symbol of stability—though it may come without being looked for!—*All Rights Reserved.*

ON THE ARENA

BY THE ARCHER

Inflation—What Remedy ?

DURING the past few weeks, I managed to collect a sizable amount of material from newspapers and financial journals on the subject of inflation and increase in prices, their causes and cures. The cuttings which I have before me contain interesting views: one or two in defence of Government, a few wholly condemnatory of Government, one pragmatic and suggestive, and others either pedestrian, naive or pedantic. Let us have a quick look at this odd assortment.

In compliance with current-day protocol, I shall refer, first, to a speech of Dr. P. Subbarayan, Union Minister for Transport and Communications, at Erode, lamenting Rajaji's part in observing an Anti-Inflation Day. One newspaper quotes Dr. Subbarayan as having said: "There is no inflation and people are not experiencing any hardship. It is true that there was deficit financing, but Government and the Union Finance Minister would expand the currency only to the bearest minimum to finance the Plan and they are fully conscious of inflation and its evil effects." According to another newspaper, the Minister is reported to have averred that "there is no inflation due to deficit financing." I do not know which version is correct but both are good enough for comment. If the first statement is correct, the learned doctor was adopting the method pursued by most village *mantrikas* to relieve the pain of persons stung by scorpions. After mumbling a few incantations, the *mantrika* would raise his voice and shout: "You have no pain, nothing; don't whine; get up and walk; go!" and that will be the end. The sufferer would beat a hasty retreat, apparently well, but whether the pain returned after he reached home, no one knew nor cared. If, however, the second report is more authentic, we can only presume that Dr. Subbarayan was defending the limit of deficit financing, afraid, perhaps, that someone like Edwin Cannan (the Head of the London School of Economics shortly after the First World War) might bring a complaint against the Finance Minister for selling worthless paper as good money. Edwin Cannan did so before the Oxford Profiteering Tribunal impeaching the Chancellor of the Exchequer, and, may be, Dr. Subbarayan was acquainted with him during his Oxford days.

Another set of views were expressed by Mr. R. Venkataraman, Minister for Industry in Madras, at a recent symposium. He claimed that (*a*) the increasing prices in the country was a healthy sign of its growing economy and prosperity, (*b*) while capitalists and share market people may feel disconcerted about the trend of rising prices, workers should not shout, because, if prices were brought down much, their income would also go down and investment would then decrease, (*c*) monetary pressure could be reduced by absorbing the loose money into Government coffers by direct taxation and loans. Mr. Venkataraman is an old hand at labour leadership and knows that his views can be effectively driven home only if they are beamed to the working class. This obviously explains his assertion that they should put up with high prices to maintain the tempo of investment which will sustain employment and high wages. He has no solicitude for the class of people between "capitalists and stock market people," on the one hand, and "workers," on the other! He would gladly have them pulverised by high taxation. Mr. Venkataraman also disclosed that the State Government had a proposal to sponge off from circulation a part of the payments made as bonus to workers by stipulating that amounts exceeding three months' salary should be given only in the shape of National Savings Certificates. Apart from the resistance that this proposal is likely to be met with, there is the possibility that the certificates will be surrendered at the end of the first year when the post offices concerned may have to work overtime and keep open at nights and holidays to meet the rush of payments. Well-wishers of the Congress Party should suggest that proposals to siphon off bonus payments may be postponed till after the 1962 elections. In the meantime, an expert committee can be appointed to investigate the scheme and shelve it. After all, discretion is the better part of valour.

Mr. J. R. D. Tata on "Inflation"—*vide* his speech at the last annual meeting of TISCO shareholders—is crisp, suave and analytical. The substance of what he said is that, as the large-scale investments which have taken place in the past have pumped large increases of purchasing power into the economy, there has been an increase in the demand for consumer goods of which there is an acute short supply, and the only practical course open to planners is to provide for an increase in the establishment of industries to produce them. Drastic controls over price and consumption are impracticable and objectionable; additional taxation to mop up purchasing power is neither feasible nor advisable: and the Government's policy for encouraging existing consumer goods industries is deliberately restrictive. Mr. Tata suggests that, if the Government is determined to carry the Third Plan through in its draft form, it should develop such basic industries as fertilisers, power, fuel and transport with foreign capital participating in State enterprises so as to relieve the strain on our resources. His exhortation seems to me to be similar to that of the British housewife to her husband when he is going away for a few days on a business tour: "John, I wish you were not going to be away for so long; but, if you must, please be good; and, if you can't be good, please be careful!"

Under the caption "Inflation at large" (one that reminds me of man-eater at large), Prof. B. R. Shenoy has written to say that inflation has increased consumption and reduced the rate of savings and has caused undue foreign exchange difficulties; it cannot be remedied by selective credit controls which, while budget deficits continued, can only add to the chaos; it cannot be checked by price controls which only give rise to black markets; it cannot be remedied by an increase in production, as inflationary funds cannot be absorbed by larger output from factories; and it cannot be corrected by food-grain releases from buffer stocks. He ends by saying that "inflation cannot be remedied except by putting a stop to it." This looks like playing with words, but, fortunately, Prof. Shenoy clarifies the statement by demanding that deficit financing should stop. In his view, it is an "economic untruth" to say that some inflation and rising prices, balance of payment difficulties, import restrictions and strategic price controls are inevitable in a developing economy and cites the cases of Germany, Japan, Italy, Switzerland, and France where the "economic miracle" has worked. Well, well, that is that. And, if Prof. Shenoy is correct, all these countries must have had something which we do not have—some great virtue or adventitious aid—or we must be having something which they do not have—some deep-seated malady, perhaps. If we stop deficit financing, will we be in clover?

Mr. A. D. Shroff of the Swatantra Party would like to have "realistic" planning displace "ideological" planning, i.e., targets of expenditure should match available resources. Creation of purchasing power through increase of note supply has produced all the inflation that we are faced with. As against notes in circulation of Rs. 1,232 crores in 1948-49, we had a figure of Rs. 1,731 crores in March 1960. At the beginning of the second Plan, credit created by banks had grown from Rs. 979 crores to Rs. 1,017 crores, while, on 1st April 1960, it had touched Rs. 1,835 crores. All considered, Mr. Shroff is of the view that our third Plan target is overambitious, unrealistic and likely to result in widespread and extensive hardship. Since Rajaji is also of the same view, it looks as though the Swatantra Party will face the next General Election with this as the main plank in its platform.

In a somewhat prosaic article published sometime ago on "Holding the Price Line," Mr. K. Santhanam offers quite a few textbook solutions such as increased agricultural production, economy in Government expenditure, keeping down the cost of transport communications and power, excise duties and sales tax, and balancing the budget without further taxation or deficit financing. He also suggests raising the Bank rate and the rate of interest on all forms of small savings. He advocates a spirit of austerity, drastic reductions in the number of official conferences, touring committees, receptions and excessive travelling by Ministers and officials. With the last suggestion, I entirely agree, but how will the newspapers find material to fill their columns, and what about work for the press photographers?

Maximisation of output, according to Mr. H. M. Patel, is the only way to fight inflation. Incidentally, he commends the German example (after the war) wherein labour and capital entered into a truce to impose self-denying ordinances on themselves, and suspend trade unionism, with a view to plough back profits for capital development. I ask, of what use is it for us to consider this example, when we keep on calling German post-war recovery as the "German Miracle"?

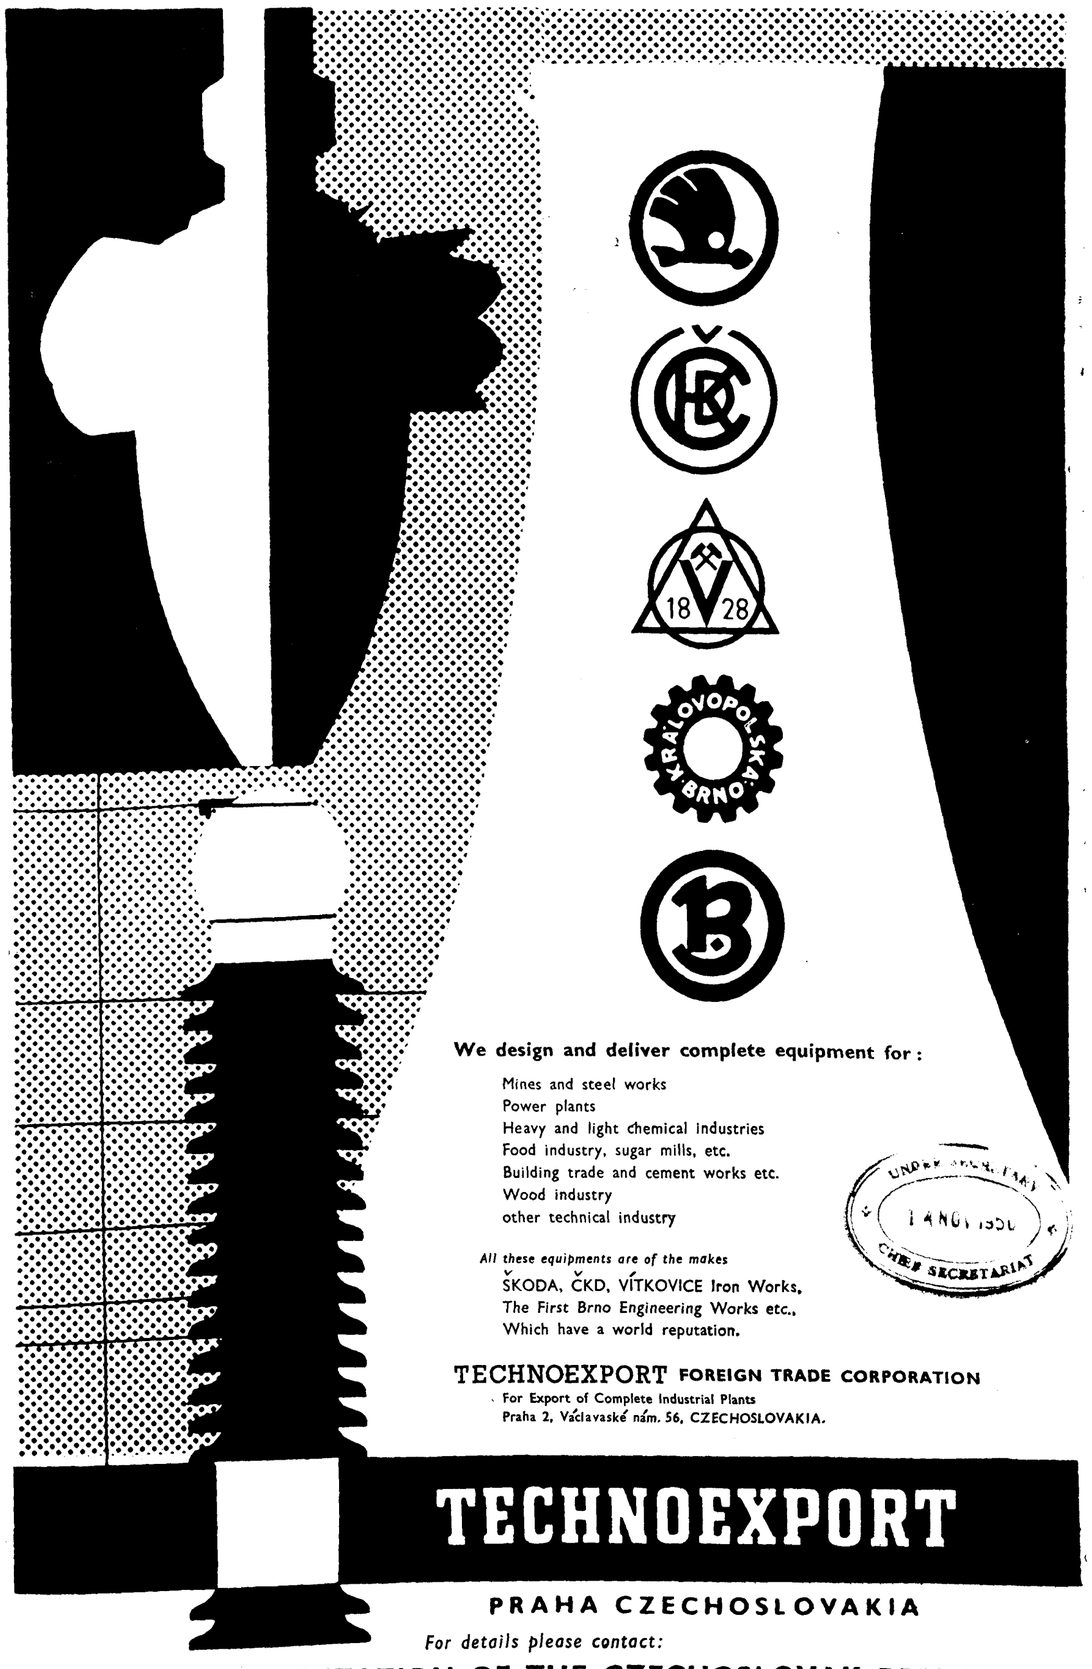
I am afraid this subject of inflation and high prices is becoming an obsession with most of us, and tends to increase our frustration. So let us change over to something less morbid.

* * * *

Protection Against Neglect By Husband

It is notified in the Press that the Madras Government has informed its employees that, in cases where a Government servant is reported to have acted in a manner unbecoming of him, as, for instance, neglect of his wife and family, departmental action can be taken against him on that score, without invoking any of the conduct rules. Government proposes to invoke the rule in the Madras Civil Service Rules which specifies the nature of penalties that may, for good and sufficient reasons, be imposed on a Government servant, and has held that neglect of his wife and family *in a manner unbecoming of a Government servant* (italics mine) may be regarded as sufficient reason for taking action under this rule. In cases where legal proceedings have been instituted by an aggrieved party, Government will take no action as it might constitute contempt.

If this decision had been framed as a Bill before the Legislature, it would have been necessary to lay down precise definitions for the terms "neglect," and "family" and the phrase "in a manner unbecoming of a Government servant." Neglect, like cruelty, is very much of a subjective term in matrimonial relationship. A very eminent film star was divorced by his wife for cruelty, the proof of which was that he used to bring home friends who talked about Kant. A wife may allege neglect on the part of the husband, if he is guilty of intelligent conversation with others in her presence, or played bridge with his friends, or went for long walks by himself or attended cinema shows twice a week without taking her along. If he worked late hours in his office or was preoccupied with looking to the comforts of his superior officer, he would be guilty of neglect of his wife and family, and the official superiors may be impleaded along with him for abetting the offence. As regards the phrase "unbecoming of a Government servant," could anyone tell me whether Government servants have a separate code of ethics superior to what is applicable to others, such as lawyers, doctors, bank officials etc.? It is bad enough to be told that attestations to pension receipts, *vakalats*, *affidavits* and declarations are valid only if they are signed by "Gazetted Officers," but it is manifestly absurd to claim that what is *becoming* of a Government servant is something very superior to what is becoming of other equally civilised members of society. And, finally, why use the word "family" if, as I presume, all that is meant is children? Would family include a man's mother-in-law or unmarried sister-in-law who may be sponging on him as dependents on the wife? Confusions, subterfuges and absurdities are bound to result when the new rule is enforced, and the Madras Government would be well advised to leave the Civil Procedure Code and the Criminal Procedure Code to take care of hard cases.



We design and deliver complete equipment for :

Mines and steel works
Power plants
Heavy and light chemical industries
Food industry, sugar mills, etc.
Building trade and cement works etc.
Wood industry
other technical industry

All these equipments are of the makes
ŠKODA, ČKD, VÍTKOVICE Iron Works,
The First Brno Engineering Works etc.,
Which have a world reputation.

TECHNOEXPORT FOREIGN TRADE CORPORATION
For Export of Complete Industrial Plants
Praha 2, Václavaské nám. 56, CZECHOSLOVAKIA.

GOLD AND DOLLARS CONTINUE TO FLOW INTO BRITAIN

WILL BANK OF ENGLAND RATE BE CUT FURTHER?

THE United Kingdom has, it is said, reduced its Bank rate as a matter of gesture to its friend across the Atlantic, the U.S. The speculation over the prospect of devaluation of the U.S. dollar, which led to a sharp rise in the price of gold to $41 in the London market, has also considerably calmed down during the last two weeks. But this does not seem to be the end of the story of flow of hot money from the U.S. into Britain and the drain of gold stocks from the former country. For the flow continues and there has been renewed speculation about the prospect of a further cut in the British Bank rate. The two main factors which have been responsible for this speculation are: (1) the sharp rise in Britain's gold and convertible currency reserves during October and (2) the wide disparity in interest rates between those in the U.S. and the U.K. in favour of the latter, notwithstanding the recent half per cent. cut in its Bank rate.

Britain has added another £11 million to its gold and currency reserves during the month of October. This increase has been arrived at after payment of £30 million to the International Monetary Fund as the last instalment on its borrowing of £200 million in September 1956 and £5 million to settle E.P.U. bilateral debts. The true increase in reserves is, therefore, of the order of £46 million and compares very favourably with £33 million in September and over £50 million each in August and July. This is the ninth month in succession to witness an increase in the reserves, from a low of £959 million at the end of January to £1,121 million at the end of October. Such a consistent rise in Britain's reserves has occurred during the months which are seasonally unfavourable for sterling area trade balance. Now that the season of adverse trade balance is over, it is expected that the addition to the reserves during the coming months is not likely to slacken. The main contributory factor for the rise in Britain's reserves during October was, as in the previous months, the flow of capital funds to London, which has more than offset the U.K.'s deficit on current account and the heavy drawing on reserves by several members of the sterling area.

During the very week in which Britain obliged the U.S. with a cut of ½ per cent. in the Bank rate, the U.S. lost $108 million of gold and increased its foreign liabilities by $157 million, thus worsening its monetary position by $265 million or nearly £100 million in one week. This has brought the U.S. gold loss during the whole of October to $280 million, in contrast to the rise of $129 million in Britain's reserves. Germany also has strengthened its reserves by $116 million to $7.3 billion (as compared with Britain's total of $3.15 billion) during the first three weeks of October. The French gold and dollar reserves rose by $25.8 million to $2,135.7 million and the Swiss reserves by 120 million Swiss francs to 9,381 million Swiss francs (equivalent to $2,182 million) during the month of October. The French and Swiss reserves included a gold stock of $875.5 million and 173 million Swiss francs ($40 million), respectively. The loss of gold by the U.S. to the tune of £100 million in one week is said to be worse than what happened to sterling even at Britain's worst post-war exchange crisis in 1957.

The loss of $280 million of gold in October has brought the total decline in U.S. gold reserves to over $850 million since the end of June. This is the result of the persistent large-scale conversion of dollar into gold by the various countries which have benefited by the huge amounts of dollars supplied by the U.S. for building up their economy during the last three years. In 1958, foreign countries were said to have utilised two-thirds of their newly acquired dollars to buy gold from the U.S. In 1959 and up to the end of June 1960, they, however, bought much less gold, but the trend has been reversed again since then. During the last three years, the U.S. has been suffering from a balance of payments deficit. In 1959, it had a deficit of $3.8 billion and in the current year it is not expected to fall much short of last year's.

The private capital outflow from the U.S. is currently estimated at a rate above that of $2.3 billion in 1959. Since the end of June this year, the capital outflow, normally of a long-term investment in character, has gathered momentum as a result of short-term funds to the financial centres in Europe. The most important factor said to be responsible for the flight of short-term funds is the strength of European currencies *vis-a-vis* the U.S. dollar which has made the short-term capital sensitive to interest differentials between the major financial centres. The short-term interest rates in the U.S. have declined by about 2 per cent. during the current year, while there has been a corresponding rise in the U.K. and Germany. Even after making allowance for the cost of covering the exchange risk, the interest arbitrage has proved to be profitable. Another factor which has been responsible for the flight of "hot" money (short-term funds) is the speculation over the prospect of devaluation of dollar. As the *Monthly Bank Letter* (November issue) of the First National City Bank of New York aptly remarks: "In the outflow, we have something like a cat chasing its own tail. People are moving funds abroad because of the balance of payments deficit and it is this very outflow of funds which is enlarging that deficit."

The main beneficiary of the flow of funds and gold from the U.S. is the U.K., which is the most powerful magnet for international funds. This position has been strengthened further by the cut in the French Bank rate on 6th October from 4 per cent. to 3½ per cent. Even after the more recent cut in Britain's Bank rate, the Treasury Bill rate in London, at 5½ per cent. per annum is more than two times that of 2¼ per cent. in New York and is higher than the current money rates in Germany.

The U.S. authorities are now making an all-out effort to relax their credit policy and infuse buoyancy into their economy. With this end in view, the Federal Reserve System quite recently eased the bank reserve requirements, as a result of which an extra $1,500 million of cash will soon be injected into the banking system. Examining the implications of this step, Mr. Paul Bareau, the *Daily Mail* financial columnist, says:

"By putting this large extra amount of cash at the basis of the credit system a large expansion of total bank credit could be secured.

"It is not surprising that this policy of pump priming should be taking place, since a Presidential election is impending. But it is a policy which must cause still more pressure to fall on the dollar. The lower yields in the New York market will cause still more hot money to come into London and other European capitals wh e this money can earn two or three times as much as in New York. Hence the S.U.S. messages from Washington and New York to which we have now responded, rather meagrely by the half per cent. cut in Bank Rate.

"The Germans, the main culprits in attracting gold from the United States, have so far not responded at all. They are still terrified of the very word inflation—and who would not be in a country which has seen its currency utterly wiped out by inflation twice in the course of one generation?

"In due course, however, the Germans will take the necessary step and reduce their Bank rate below the present figure of 5 per cent. When this happens and if hot money and gold continue to pour into London it should not take long to convince the Treasury and the Bank of England that another downward move in Bank rate would be in accordance with the rules of the game."

It looks as though West Germany will also oblige the U.S., if the latest step taken by the Bundesbank in pruning the interest rates for Money Market Paper is any indication. On the 2nd inst., the Bank reduced the rates by ⅛ per cent. This was followed by a further cut of ⅛ per cent. on the 3rd inst. As a result of these cuts, the Bundesbank rates for Money Market Paper are: 30-59 day Treasury Bills—4⅜ per cent., 60-90 day Bills—4½ per cent., 6-month Treasury Bonds—4¾ per cent., 18-month Bonds—5 per cent. and two-year Bonds—5⅛ per cent. This is taken as a prelude to a cut in the Bank's Discount Rate itself from the present 5 per cent. It will not be surprising if the Bank does it even before these lines are printed. The German Central Bank has not made any change in the rule forbidding the sale of Money Market Paper to non-residents, so that the latter are not directly affected by these cuts.

The International Monetary Fund received a payment on the 3rd inst. from the Government of France amounting to approximately $131.08 million, of which $116.70 million was in gold and $14.38 million in United States dollars. This completes repayment of the drawings made by France in 1957 and 1958, the total of which at one point aggregated $393.75 million.

THE PUNJAB NATIONAL BANK LTD.

ESTABLISHED 1895

HEAD OFFICE: NEW DELHI

Notices

BARAREE COKE COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventy-ninth Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta, at 11 O'clock a.m. on Friday, the 9th December, 1960, for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1960, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To appoint a Director in place of the one retiring.

(3) To appoint Auditors and to fix their remuneration.

Notice is also given that the Share Transfer Books of the Company will be closed from 30th November to 9th December, 1960, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA, *28th October*, 1960.

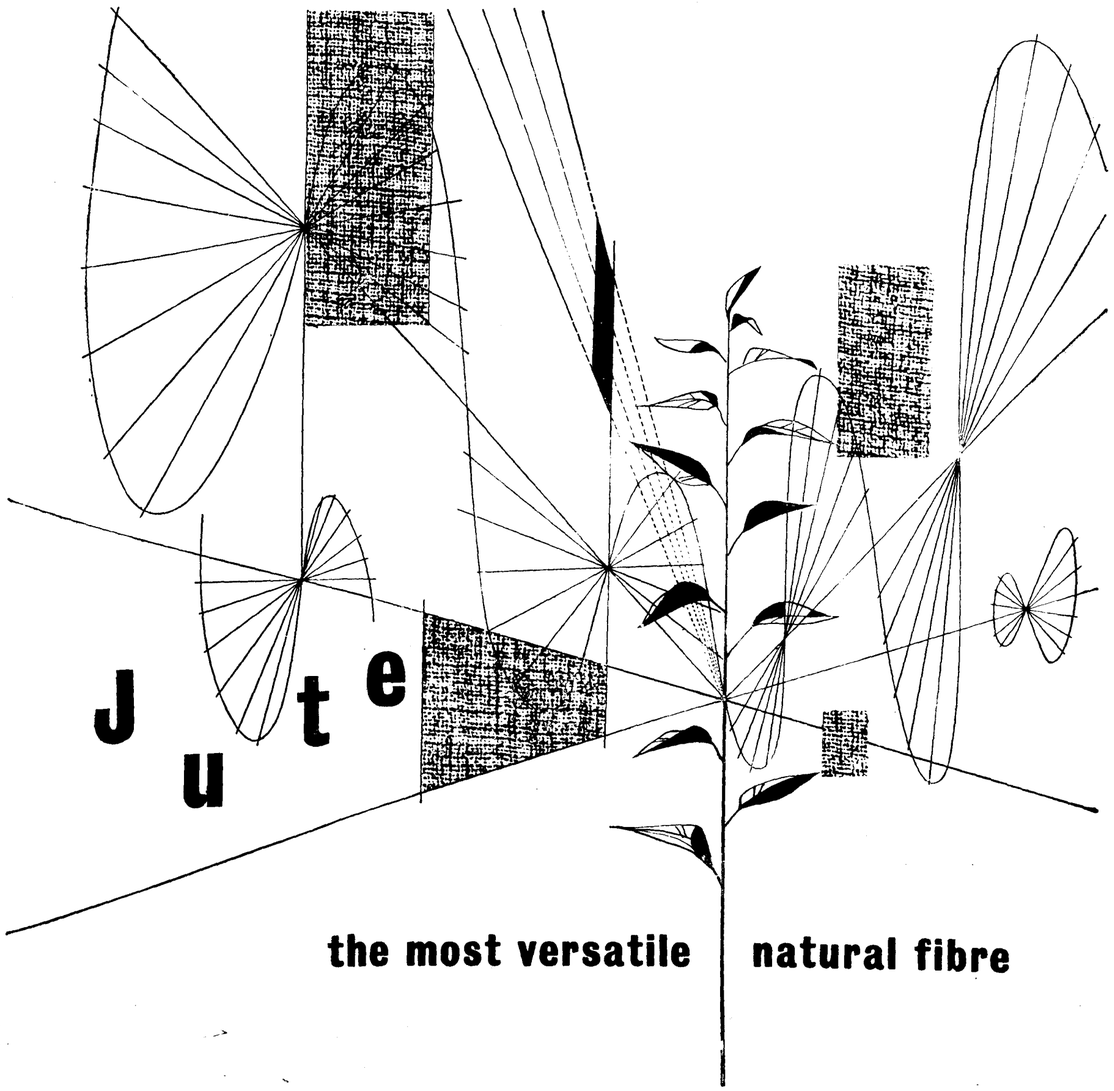
BALMER LAWRIE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors has to-day declared an Interim Dividend of 7 per cent. (subject to deduction of Income-tax) in respect of the year ending 31st December, 1960, payable on or after 14th December, 1960 to members registered in respect of shares of the Company on 14th December, 1960. Dividend warrants will be despatched to members and no application to the Company is necessary.

The Register of Members of the Company will be closed from 25th November 1960 to 14th December 1960, both days inclusive.

By Order of the Board,
D. MANSON,
Secretary.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *7th November*, 1960.



the most versatile | natural fibre

Jute products enter our daily life in many forms. Conventionally a packaging material, today jute fibres also serve as backing for linoleum and floor-cloth. They make colourful drapes, carpets and furnishings for the modern home. Jute canvas is rendered fire-proof, rot-proof and water-proof to make tarpaulins for boat-hatch and wagon covers. Coloured webbings, fancy bindings and sash-cords, cushioning belts, surgical slivers and hard-boards are all made from jute.

Strong, pliable, durable and tear-resistant, jute fabrics are the most widely used packaging material in industry, agriculture and trade. India produces 55% of the world's jute goods and earns from them on an average about Rs. 115 crores annually in foreign exchange.

Jute serves the nation in many ways, strengthens its economy.

TEXTILE IMPORTS INTO WEST EUROPE

VIEWS OF A BRITISH ECONOMIST

IT is regrettable that some in the industrially advanced countries of the free world, especially in Western Europe, continue to advocate imposition of a blanket ban on imports of cotton goods from Oriental nations. No one will, of course, object to measures such as those designed to curb dumping of textiles by countries which are noted for uncommercial selling or production methods, as, for instance, Communist China. But to impose a total ban on all imports of textiles of Asian origin will surely be a gross injustice to underdeveloped countries like India that are struggling hard to raise the woefully low level of living standards through industrialisation. The authorities in India have no doubt offered certain incentives to boost export trade in cotton textiles. The objective of the incentives, however, is not to encourage dumping of textiles in foreign markets but only to balance, to some extent, the effect of the series of adverse factors confronting the industry—steep rise in raw cotton prices, mounting labour cost and heavy tax burden. The cotton mills in India are no longer having the advantage of low cost cotton which they had enjoyed for quite sometime now, inasmuch as they are paying almost the same prices—in fact, higher prices in some cases—as those paid by their counterparts in other countries. Similarly, the incidence of wages in India is relatively higher than in Europe, having regard to the low productivity per worker in this country.

The Western nations would not be fair to India and other Asian countries, if they were to take any unilateral decision to restrict textile imports. But they can by all means try to withstand competition from imports through improvement in efficiency of manufacture and reduction of prices. This aspect was impressively brought out by Dr. Helen Makower of the London School of Economics and Political Science, in her address given before the Committee for European Affairs of the International Federation of Cotton and Allied Textile Industries at a meeting held in Stresa in Italy sometime ago.

What is 'Dumping'?

At the outset, Dr. Makower seeks to define the concept of "dumping." Dumping, she says, is selling abroad at a price below the fair market price. Referring, in particular, to the so-called social dumping—that is, selling of goods abroad at prices much lower than the importing country's price due to sweated labour or otherwise low cost abroad—she emphasises that to legislate against such imports would damage the standard of living of not only the exporting country but also the importing one. "The gains from international trade," to quote her, "*consist in* profiting from the difference in comparative cost, for example, from the fact that wages abroad compared to interest rates abroad are lower than this ratio is at home. Under free trade, both countries *gain* (this doctrine was first set out by Ricardo). We should, therefore, not try to re-define the term 'dumped goods' in order to cover the cost of low cost goods."

An interesting question posed by Dr. Makower is: Should an anti-dumping tariff be imposed in cases where the threat comes from the substitution of commercial trading by State-dictated deals in imports and exports, the motive being often military or ideological and may be in conflict with the economic motive? Dr. Makower observes that this problem is too big to be treated in this way but minces no words when she states that, at the same time, a method of anti-dumping tariffs may be too insidious to be desirable. Rather, the presence and power of authoritarian States compels the Western countries, according to her, to deal with them and the most helpful line is that of co-ordinated trade policy by the countries on the point. It is against this background that Dr. Makower sets out the approach to the problem posing the textile industry. Here are her views:

"Now we have to be extremely careful in this whole question of anti-dumping and, more broadly, prospective commercial policy. The present situation is such that it would be only too easy for the textile industry to lead the way in a general disastrous stampede of Europe down the slippery slope of inefficiency, protection, more protection, until Europe becomes an isolated island of high costs and old-fashioned methods and low standards of living. It would only take a few big industries, like the textile industry, engineering industry, motor cars and chemicals, to shut out foreign competition and settle down to inefficient, old-fashioned methods and the standard of living in Europe would be really seriously reduced. If the textile industry takes a defensive policy, it is too conspicuous for other industries not to follow. But, if three or four other big industries follow, textiles like every one else will feel the consequences in a fall in national output."

Dr. Makower has clearly warned that, where there is a recession and one big industry such as textiles takes the shortsighted line of least effort and starts upon the protective course, that action may turn the whole European Community from a regional move towards freer trade and better allocation of resources to one of protection—every man for himself, beggar-my-neighbour and poverty. She, therefore, urges that the positive action to be taken should be as follows:

1. Anti-dumping legislation to prevent real dumping (in the strict sense) of textiles.
2. Look forward to, and anticipate, the universal adoption in Europe of lowest-cost methods.

Productivity

In this connection, Dr. Makower draws attention to the varying degrees and types of protection and in the costs of production or productivity levels in the textile industry of the various European countries. Pointing out that the question of productivity is a complex one, she observes:

"Every country has a different history and a different present position as regards its textile machinery, its raw materials and its manpower. Nevertheless, you will be able to see your way through these complexities to a true assessment of which countries, and which units within those countries, are the lowest-cost producers in each line of production. Each country should then make a new appraisal of not where its cost advantage has been in the past but where its cost advantage lies now. In those lines where it has a *disadvantage*, it should set about *either* to reduce its production or else to *change its methods from the high-cost* to the low-cost ones. This will entail many different things: the scrapping of obsolete machinery and the installation of the most efficient machinery; the abandonment of restrictive practices and demarcation rigidity; the adoption of new, perhaps more intensive, marketing and sales methods."

Dr. Makower refers next to the suggestion of the Federation's Committee for European Affairs that textile imports from countries with entirely different economic and social structures, State-controlled economies or multiple exchange rates into Western Europe should be limited. She no doubt thinks that the practical solution lies not in the adoption of any one of the methods (quantitative restrictions, tariffs, customs quotas, price restrictions and anti-dumping legislation) to the exclusion of all but in the utilisation of several of them simultaneously. She, however, hastens to add that there is a principle here which is important. The principle as explained by her is as follows:

If the West European nations are to maintain their free economy and not simply to adopt the dictatorial methods of the authoritarian States, they must see to it that, in the Western Hemisphere, as between the free countries, there are really free competition, competitive prices and liberalised trade. Hence, the reduction in textile tariffs and liberalisation of textile trade are extremely important.

Dr. Makower accordingly calls upon the West European nations to make, *pari passu* with their efforts to get Government action of a protective nature against unfair exports, efforts for freeing trade and assisting production of the most efficient mills even where this means closing down certain concerns. "With this regenerated, rationalised, competitive European textile industry, we will," to quote her again, "then be strong to face the Far Eastern situation."

This is certainly quite a fair assessment of the whole problem of textile imports into the West European countries. Whatever may be the scale of imports, they have not had any serious impact on the economies of these countries at any time in the sphere of either production or employment or balance of payments. Why then should there be anxiety and agitation on the part of the West European countries over the issue of textile imports? As this journal has stressed on more than one occasion in the past, no one will complain if the Western nations succeed in withstanding competition from Asian textile exports through sheer weight of their efficiency.

FUSION OF TEXTILE ASSOCIATIONS

TALKS ON LABOUR'S CLAIM FOR SHORTER WORKING WEEK

From Our Special Correspondent

MANCHESTER, 1st *November*

STREAMLINING of employers' associations in the spinning and doubling sections of the Lancashire cotton and man-made fibres industries is recommended in a "four-into-one" plan, sent out to nearly 500 firms for their approval. The scheme has been drawn up following the concentration of the cotton and rayon textile industry under the Government's £30-million reorganisation scheme. Chiefs of the Master Spinners' Federation, Yarn Spinners' Association, Yarn Doublers' Association and Rayon Staple Spinners' and Doublers' Association have urged their members and all engaged in these branches of the trade to support their amalgamation into one new body to be called the British Spinners' and Doublers' Association. The fusion of the present associations is advocated on the grounds of effectiveness, economy and solidarity.

MANCHESTER LETTER

Millowners have been asked for their views by 10th December. It is hoped to bring the merger into effect from the beginning of April 1961.

Merger Already Agreed

Already agreed is a "marriage" between the Cotton and Rayon Research Association, scheduled for completion next year. In the weaving branch, the Cotton Manufacturers' Association and the Rayon Weaving Association are drawing up a scheme to join forces. The new organisation in the spinning and doubling sections would be financed by a levy of not more than 1½*d.* per mule equivalent spindle per annum, and a reserve fund may be provided by pooling the existing reserves of the four present associations, subject to legal advice.

Still outside the arrangements will be the Condenser and Allied Spinners and Manufacturers' Association, representing processors of cotton waste, which wishes to retain its separate entity. Lord Rochdale, Chairman of the Cotton Board, who presided over the negotiations, in a letter to the firms concerned, says: "I can only hope most sincerely that the proposals will commend themselves to you."

The six trade leaders who conducted the initial talks on the project, including Col. J. B. Whitehead, Managing Director of the Lancashire Cotton Corporation and Mr. W. T. Winterbottom, Chairman of the Fine Spinners and Doublers Ltd., says that the formation of the new single organisation would increase the solidarity and effectiveness of the trade and would be greatly in the interests of the whole industry. Unanimous support to the proposals has been given by the central committees of all four associations.

Joint talks opened in Manchester last week on the claim for a shorter working week for more than 180,000 workers in the cotton spinning and weaving industry and were adjourned to a later date to give employers an opportunity of considering the case put forward by the unions. The claim is for the basic working week of 45 hours to be reduced to 40, with adjustments also in the hours of shift workers. Union negotiators called for the concession without loss of earnings and for compensatory payments to shift workers to maintain wage differentials. The present 45-hour week has stood since 1946.

Changes in World Trade

One of the most surprising facts which statisticians at the Cotton Board have lately unearthed is that world trade in cotton cloth since the war has not followed the downward trend which most people would have sworn had occurred. In 1959, they point out in the latest quarterly review, the volume of international business in cotton goods was probably higher than in any post-war year, except 1951 and 1957. What is more, the total for 1960 will almost certainly be above last year's level.

To merchants in Lancashire who have been busily engaged in procuring goods from the Continent, following their inability to obtain supplies on reasonable price or delivery terms from Hong Kong, the news of the rapid rise in shipments from Western European manufacturing areas will come as no shock. The Cotton Board describes this development as "possibly the most striking feature of trade in the first half of 1960." The increase as compared with last year was about 35 per cent. in exports from Continental Western Europe.

Oddly enough, in a world which thinks of cotton as a declining fibre and its man-made rivals as a steadily increasing force, the post-war history of export trade in man-made fibre cloth has shown very considerable variations. After 1952, when the cotton slump in Lancashire was at its height, shipments of man-made fibre goods made a steady and rapid increase, so that the volume of export trade had more than doubled by 1957. Subsequently, smaller quantities were exchanged in both 1958 and 1959, while the business done in each of the first two quarters of this year was about 3 per cent. lower than in the same period last year.

The emergence of France as a big exporter was the major point arising from the 1959 figures. The French industry has gained further ground this year, so that not only have its exports marched ahead of Britain's but they now take third place behind Japan and India, having exceeded the rate of shipments from the United States.

Lancashire's position is being attacked from numerous sources. Although exports of cotton fabrics remain the fifth highest, the small quantity of man-made fibre cloth sent abroad means that when the totals are combined, Britain's exports are well below those of Germany as well as Holland. The falling-off in exports of cloth woven in Britain was considerably more severe than the shipment figures indicate. Re-exports of processed grey cloth expanded over the half-year, so that the disposal of Lancashire-made material represented a smaller proportion of the whole.

Expensive Imports

When the August overseas trade returns were being reviewed the point was made that the cost of imports of cotton yarn and cloth into the United Kingdom this year had practically overtaken the comparable earnings from shipments of similar goods. September saw the switch become complete, as over the nine months the amount paid for arrivals reached £48,398,319, while the value of exports was £47,553,906. There is no need to underline the fact that, on the basis of volume, the quantity of practically every type of cotton goods being imported is now more than twice the level of equivalent British exports.

During the third quarter of the year, cotton cloth shipments abroad dwindled still further, being 73,858,000 square yards, as against 84,579,000 square yards in the second quarter and 87,238,000 sq. yards in the first three months of the year. In contrast, arrivals of foreign cloth in the third quarter, at 178,332,000 sq. yards, were nearly 5,000,000 yards up on the previous three months and were only 2,000,000 yards lower than the peak reached in the first quarter of 1960.

Arrivals of all types of cotton cloth over the nine months were 532,926,000 sq. yards, as against 370,684,000 sq. yards in the same period last year, while exports were 245,675,000 sq. yards, as against 251,811,000 sq. yards. Grey cloth imports from Hong Kong put in a spurt during September, being 13,461,000 sq. yards, bringing the total from this source for the first three-quarters of the year to 75,328,000 sq. yards, out of arrivals from all quarters of 440,761,000 sq. yards. India still supplies the biggest quantity, with 14,531,000 sq. yards, and over the nine months sent 180,279,000 sq. yards of grey cloth to this country.

A significant rise has taken place in the volume of cotton yarn secured from overseas sources this year. To the end of September, exports showed little change at 16,518,300 lbs., as against 16,986,500 lbs., but foreign suppliers shipped 29,133,800 lbs. for use in British mills, compared with 14,808,800 lbs. in the same period of 1959.—*All Rights Reserved.*

TEXTILE TYPE FIBRE-GLASS

A textile type fibre-glass is now being made for the first time in Australia in the new factory of Australian Fibre Glass Pty. Ltd., at Dandenong, near Melbourne. It will be used in the thermal and acoustic insulation fields. The factory commenced production at the beginning of August, when total investment was approximately £A600,000. The new buildings house two basic production installations—one for the continuous filament textile type fibre and the other for the wool type used for its insulating properties. The textile type will be produced in rovings and chopped-strand mat form for the rapidly growing reinforced plastics industry. Rovings will also be twisted into yarn for the textile weavers, for fibre-glass decorative drapes and hangings.

WORLD COTTON SITUATION

SUPPLY AND DISAPPEARANCE MAY BALANCE THIS SEASON

THE 1959-60 season was, by common consent, one of the best years for world cotton with production, consumption, and trade, all having been at record levels. What is in store for cotton this season is a question of current interest to cotton textile mills and cotton traders throughout the world. The consensus of opinion is that last year's experience will not be repeated this season. For, as the International Cotton Advisory Committee (I.C.A.C.), Washington, points out, last year's favourable situation itself was due, to some extent, to fortuitous circumstances. On the one hand, production was held down by the low level of prices at the time of planting in some countries and by crop failure in India. On the other hand, the rate of increase in cotton consumption was exaggerated, to a certain extent, in the sense that bearish speculation in the 1958-59 season had carried consumption to an abnormally low level. The combination of reduced production in some countries and rising consumption *plus* continued heavy exports to Communist countries resulted in a further reduction in cotton surplus from 17.7 million bales (of 478 lbs. each) on 1st August 1959 to 16.4 million bales on the same date this year, the lowest level since 1953.

Exports during the past season were somewhat higher than would normally have been the case, considering the increase in consumption. During the preceding season, importers had to run down stocks to the minimum and it was only natural, therefore, that when the price trend turned upwards again, replacement demand inflated the volume of imports over and above that needed for current consumption.

These factors are relevant for judging the prospects for raw cotton for the current season. In assessing the production potential, for instance, the assumption must be, according to the I.C.A.C., that a return to more normal yields in India would occur. Here, as is common knowledge, the crop has had a good start and, barring adverse developments, production should be somewhat larger than in the previous season. Average yields in this country are about 100 lbs. per acre and, with about 20 million acres planted to cotton, production could normally be about five million bales (of 400 lbs. each) which is about 1.25 million bales more than last season's output. Everything, however, depends upon the weather. In view of adverse weather in some areas and the invasion of locusts in some others, crop ideas, which had earlier been round 5 million bales, are now being revised downwards to 4.8 million bales (of 400 lbs. each).

Acreage is reported to be significantly higher in Mexico, Central America, Egypt and Greece—all relatively high yielding areas—and production should increase. Acreage this season is expected to be higher in the Sudan and, probably, in Brazil too. Aggregate production outside the U.S. thus shows promise of being considerably higher than in 1959-60 and, depending primarily on India, could even exceed the record 17.6 million bales harvested in 1958-59. With a U.S. crop of about 14.5 million bales, this could mean a total production of around 32 million bales, which, if it materialises, will be an all-time record.

As regards the probable level of consumption, in the U.S. according to the Committee, the prospects are for a slow-down in the not too distant future. This is confirmed by the U.S. Department of Agriculture which predicts U.S. consumption in 1960-61 at 8.75 million bales, as compared with 9 million bales last season.

In Western Europe, though textile manufacturers in most countries are reported to have ample orders for the rest of 1960, the outlook for the full season will depend very much on the developments in the new year and, in particular, on the tempo of economic activity. The general feeling is that no major deviation from the 1959-60 level of cotton consumption will occur.

The difficulties recently experienced by the textile industry in India would be over, if there is an adequate supply of indigenous cotton during the season, in which case there should be a reversal of the downturn in consumption of Indian cotton witnessed during the last season (4.42 million bales, as against 4.62 million bales in the previous season). Consumption in Japan is presently running at the rate of a quarter of a million bales per month, or an annual rate of 3 million bales. Whether this rate will be maintained without a build-up in yarn stocks is open to doubt in the context of

INVESTMENT OF LIFE INSURANCE FUNDS

L.I.C.'S PORTFOLIO ANALYSED

LIFE insurance, even in countries which offer other well-developed sources of profitable investment, occupies the pride of place among the media of savings. It scores over others in that it combines the elements of risk cover and savings. In Britain, for instance, in spite of keen competition from National Savings, Building Societies, Unit Trusts, Investment Clubs, etc., life insurance retains its position as the largest haven for new net savings. Apart from offering financial protection to millions, life insurance, by providing a continuous flow of new savings to finance industrial expansion, helps the community, in general, to enjoy higher standards of living. Thanks to the rapid growth of life insurance, the latter aspect is becoming increasingly important. In Britain, for instance, life offices have about a million pounds (that is about 13½ million rupees) a day to be invested. In India, where life insurance is still in its adolescence if not infancy, investible funds arising from life insurance aggregate over a million rupees a day. How this money is invested is a question which is of more than sectional interest.

But, unlike in Britain, where the insurance companies are free to follow their own investment policies, in India, the Life Insurance Corporation's investment is strictly regulated by law. Nevertheless, periodic examination of the investment portfolio of the Life Insurance Corporation will reveal the trends in investment within the broad framework laid down by law. The latest annual report of the Life Insurance Corporation of India, covering the calendar year 1959, just published, contains detailed information regarding the Corporation's investments as on 31st December 1959. The total book value of investments pertaining to life business, as on 31st December 1959, was Rs. 455.98 crores. Of this, Rs. 443.75 crores were in India and Rs. 12.23 crores outside India. The following table gives the break-up of the investments as on 31st December 1959:

(Rs. in crores)

	In India	Outside India
Central Government and other approved securities.	315.74	..
Municipal securities not included above	0.96	..
Foreign Government, Municipal, etc., securities ..	..	11.06
Shares and debentures	81.58	0.47
Loans to State Government for Housing Schemes.	4.10	..
Amounts due from State Governments in respect of their controlled business taken over	6.45	..
Loans to co-operative housing societies	1.20	..
Loans on mortgage of property	10.37	0.11
House property	22.57	0.58
Other investments	0.77	..
Total ..	443.75	12.23

The total book value of the Corporation's investments pertaining to life business on the said date in stock exchange securities was Rs. 409.82 crores, of which Rs. 398.28 crores were in India and Rs. 11.54 crores outside India. Out of the investment in India, investments in the public sector, comprising Central and State Government securities and the major portion of "approved" securities and shares in Government companies, amounted to Rs. 311.60 crores or 78.2 per cent. of the total, while investments in the private sector, consisting of debentures and shares of joint-stock companies and also some of the approved securities, amounted to Rs. 86.68 crores or 21.8 per cent. The following table gives a comparison of investments in the public and private sectors during the three years 1957, 1958 and 1959:

(Rs. in crores)

	1959		1958		1957	
	Amount	%	Amount	%	Amount	%
Public Sector						
Central Government securities	212.18		200.42		185.55	
State Government securities.	64.66		55.37		42.53	
Approved securities	34.50		31.83		27.04	
Debentures, preference and ordinary shares in joint stock companies	0.26		0.50		..	
Total ..	311.60	78.2	288.12	78.1	255.12	77.37
Private Sector						
Approved securities ..	5.86		5.14		5.48	
Debentures, preference and ordinary shares	81.32		75.67		69.14	
Total ..	86.68	21.8	80.81	21.9	74.62	22.63

As is evident from the above table, the share of the private sector in the Corporation's investment has been steadily declining. From 22.63 per cent. in 1957, it fell to 21.90 per cent. in 1958 and to 21.80 per cent. in 1959, while that of the public sector has been correspondingly increasing from 77.37 per cent. in 1957 to 78.20 per cent. in 1959.

Total holdings in debentures and shares of joint-stock companies and co-operative societies amounted to Rs. 81.58 crores, as compared with Rs. 69.14 crores at the end of 1957. These were spread over most of the States in several industries. Industry-wise, engineering industries had the pride of place, accounting for Rs. 9.73 crores. Electricity undertakings ranked second (Rs. 9.20 crores), followed by cotton (Rs. 7.59 crores), iron and steel (Rs. 6.84 crores), cement (Rs. 4.48 crores), jute (Rs. 4.25 crores), paper (Rs. 3.24 crores), banks (Rs. 2.99 crores), coal companies (Rs. 2.24 crores), investment trusts (Rs. 1.81 crores), sugar (Rs. 1.79 crores), chemicals (Rs. 1.76 crores), managing agents (Rs. 1.70 crores), plantations (Rs. 1.66 crores), shipping (Rs. 1.60 crores), insurance (Rs. 1.60 crores), and textiles other than cotton (Rs. 1.34 crores). Other industries accounted for Rs. 17.76 crores.

Industry-wise Distribution

Although there is no marked change in the distribution of investment as between industries, it is noteworthy that, the engineering industries, which held the second place in 1957, have come to occupy the first place in the investment portfolio in terms of the quantum of investments. This is only as it should be, as engineering industries have tremendous growth prospects.

The share of investments in equities (including shares in subsidiary companies) in the private sector is as follows:

(In crores of rupees)

	1959	1958	1957
Book value	39.85	35.07	31.88
Market value ...	45.30	35.33	28.71

It will be noted from the foregoing figures that the addition to the book value of equities is of the order of Rs. 8 crores over 1957, that is, about Rs. 4 crores per annum. But the rise in market value is quite sharp, being no less than Rs. 16.59 crores. This reflects the substantial capital appreciation that took place in equities during the period under review. At the end of 1957, the market value was less than the book value, while two years thereafter, such was higher by about 13 per cent.

Similar to stock exchange investments in its effect on industrial development, is the underwriting activity of the Corporation. During the year under review, the Corporation underwrote nine new issues to the extent of a total of about Rs. 1.21 crores, comprising Rs. 30 lakhs in debentures and loans, Rs. 70 lakhs in preference shares and Rs. 20.80 lakhs in ordinary shares. Of the nine issues underwritten, six were placed in the market, out of which the Corporation received an allotment of Rs. 62.36 lakhs against Rs. 65.98 lakhs applied for. As compared with this, in the previous year, that is, in 1958, the Corporation underwrote 19 new issues to the extent of an aggregate amount of Rs. 2.74 crores. During the sixteen-month period ended 31st December, 1957, the Corporation underwrote 21 new issues involving an aggregate amount of Rs. 1.87 crores. Thus the underwriting activity of the Corporation was less in 1959 both in regard to the number as well as the amount of issues underwritten.

Comparison With Britain

A comparison of investment of life funds in India and Britain shows few similarities and many contrasts. This is not surprising because, as noted above, while the Life Insurance Corporation's investments are strictly regulated, life insurance companies in the U.K., true to the British tradition, are unfettered by law. But, by tradition and voluntary regulation, the investment policy of British life offices has attained a general pattern. Last year, 15.5 per cent. of investments pertaining to life business went into mortgages, 25 per cent. into gilt-edged securities, 21 per cent. into debentures, loan stocks, preference and guaranteed stocks and shares, 20.5 per cent. into equities and 18 per cent. into real property, a percentage distribution which is virtually unchanged from the previous year. The only change is the decline in the proportion of investments in gilt-edgeds from 26.5 per cent. to 25 per cent. which is exactly matched by a rise in investment in equities from 19 to 20.5 per cent. This trend away from fixed interest bonds and towards investments with varying yield has been the most striking feature of the investment portfolio of British offices. This is due partly to the liquidation of the massive gilt-edged portfolios built up during the war period as the insurance companies' contribution to war effort and the increasing attraction of equities as a hedge against inflation. Thus, while the proportion of investment in British Government securities declined from 43 per cent. to 24 per cent. during the period 1948 to 1958, that in ordinary shares of joint-stock companies increased from 11 per cent. to 20 per cent. In India, however, the position is different. Under law, not more than 10 to 12 per cent. of the investment could be in equities. So whatever be the advantages of equity investments from the point of view of yield and capital appreciation, the Corporation cannot overstep this limit. But the time has come when the L.I.C. should be permitted to invest a slightly larger proportion of its funds, say, upto 20 per cent. in first class equities.

RECORD FIRE LOSSES IN BRITAIN

With the occurrence of another serious fire at Chadderton last month, involving a loss estimated at about £200,000, fire losses in Britain so far this year aggregated £33 million, as compared with £24 million during the same period last year. Total fire losses last year were a record high of £44 million. Previous annual fire losses had averaged only £25 million for many years. No wonder the British Home Secretary recently described fire, crime, and road accidents as the three main enemies of society.

The increase in the incidence of fire has imparted additional urgency to fire-fighting. Insurance companies in Britain engage in the battle against fire in four main ways. Fire insurance surveyors are continually inspecting premises, and advising on fire precautions, whilst at the same time, the insurance companies have a differential premium structure which gives strong financial incentives to policyholders to take proper prevention measures. Secondly, the insurance companies founded in 1935 the Fire Research Station at Boreham Wood, and now share its cost with the Government. This station provides much valuable new information about the behaviour of materials when exposed to fire and the best techniques of fire-fighting and fire-protection in buildings. Thirdly, in order that the community might derive the utmost benefit from this research, the Fire Protection Association was formed by the companies as a national centre to formulate codes of practice for fire protection, and to give advice on problems relating to fire in all types of buildings. Finally, the companies seek to limit the damage to property once a fire has started by opening three Salvage Corps in London, Liverpool and Glasgow, whose duty it is to attend all outbreaks where salvage work may be practicable.

Notice

THE BURRAKUR COAL COMPANY LIMITED

NOTICE OF INTERIM DIVIDENDS

THE BOARD OF DIRECTORS HAVE DECLARED on 27th October, 1960, the following Interim Dividends in respect of the Company's financial year ending 30th June, 1960, subject to deduction of tax at source.

On 1st Preference Shares at the rate of Rs. 3.50 per share.

On 2nd Preference Shares at the rate of 24 naya Paise per share.

On Ordinary Shares at the rate of 50 naya Paise per share.

The above dividends will be paid on or after 16th December, 1960, to those shareholders (or their mandatees) whose names appear in the Company's books on 3rd December, 1960, as the registered shareholders of the above shares.

The Share Transfer Registers of the Company will be closed from 21st November, 1960 to 3rd December, 1960, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

WORLD FATS AND OILS

PACE OF PRODUCTION EXPANSION SLOWS DOWN

THE world prices of fats and oils have been moving rather irregularly in recent months. Thus, among oils, castor, groundnut and soya-bean oils have shown a distinctly hardening trend, while coconut, linseed and palm oils have suffered a setback. As for seeds, linseed and copra have eased, but groundnut is steady, though prices have lately tended to decline. The table below indicates the trend of prices currently prevailing in London as compared with those a year ago, as well as the highest and lowest levels touched during 1960:

Commodities	Latest available	High	Low	A year ago
Oils	£	£	£	£
Castor, Indian	129½	136½	122	115½
Coconut, Straits, 3½% ..	94	136	92	139½
Groundnut, B.W.A., 3/5% ..	109½	125½	111½	103½
Linseed, crude	107	115	100	118½
Palm, Sumatra	79	86½	78½	82
Soyabean, European	88½	86½	72	79½
Seeds				
Groundnut, Nigerian ..	65½	77½	65½	65½
Linseed, Can. No. 1 ..	49½	57½	49½	67½
Copra, Philippines	$181½	$265	$173½	$255

The behaviour of prices of fats and oils does not seem to have been influenced greatly by the supply position. A brief reference to the recent trend of world fats and oils output as reviewed by Mr. C. A. Faure of Unilever at the Congress of the International Association of Seed Crushers held at London towards the end of July was made in our issue of 13th August 1960 (*vide* page 275). A more detailed analysis of the trend based on the facts assembled by Mr. Faure is contained in *The Times Review of Industry*. This analysis shows that, although the pace of increase in production has slowed down during the current calendar year, the estimated total output is still higher as compared with that in the two previous years. Mr. Faure places the total output at 32.050 million metric tons, as against the revised estimate of 31.565 million tons produced in 1959 and 29.325 million tons in 1958. The percentage rise in 1960 over 1959 is thus 1.5, as against 5.0 in 1959 over 1958. The estimate of world production of oils and fats for 1960 is assessed after taking into account the carryover of crops harvested last autumn and not used in 1959, as well as the quantity of the final product likely to be processed from this year's harvest. The excellent prospects for the soyabean and cotton groups in the U.S., it is felt, should enable that country to exceed 7.5 million tons in fat and oil production. It is also believed that the effect of last year's olive crop will be felt in the current year's production in Western Europe and that output in Asia and Oceania is higher. African output is, however, estimated at present to be lower by about 5 per cent. in 1960.

Production

The estimated total production of fats and oils in the major producing areas of the world for the year 1960 is compared with that in 1959, 1958 and 1957 and the pre-war year in the following table:

(In thousand metric tons)

	1960*	1959*	1958	1957	Pre-war
U.S.A.	7,665	7,390	6,535	6,634	3,543
Rest of America ..	3,055	2,915	2,750	2,586	1,557
W. Europe	4,330	3,990	4,310	4,115	3,337
Rest of Europe ..	1,740	1,660	1,520	1,240	1,231
Africa	2,775	2,910	2,775	2,555	1,502
India and Pakistan ..	2,675	2,785	2,510	2,560	2,274
China and Manchuria.	3,220	3,140	2,840	2,925	3,341
Philippines	715	620	705	875	452
Rest of Asia	1,920	1,870	1,630	1,965	1,775
U.S.S.R.	3,240	3,515	3,015	2,675	2,000
Oceania	775	770	735	765	575
World Total ..	32,050	31,565	29,325	28,895	21,587

* Preliminary forecast.

The anticipated increases in the output of commodities during 1960 are fairly widely distributed. The percentage rise in 1960 over 1959 is 15 in the case of olive oil, 8 in coconut oil, 7 in soyabean and sesame oils, 6 in cottonseed oil, and 5 in palm oils. Animal fats are expected to be nearly 2 per cent. more plentiful. Butter production has gone up by about the average rate for the group as a whole, but the increase is accounted for mainly by tallow. The production of industrial oils has declined, the fall being marked in the case of linseed and minor vegetable oils. There is, however, a slight improvement in castor bean oil output.

The world exports of fats and oils are expected to touch an all-time peak of 7.854 million tons in 1960, exceeding the previous peak of 7.742 million tons reached last year. The net rise in 1960 is, of course, much less than what it was in 1959, being 112,000 tons, as against 599,000 tons. The accompanying table indicates the trend of exports of different oils and fats during the past four years as compared with the pre-war average (1934-38). It reveals that the notable rise in exports last year originated in the U.S., India, Ceylon, Oceania and some of the African territories. Supplies from Argentina and Uruguay were lower, as also those from the Philippines, Malaya and China. Exports from India and Ceylon rose by nearly 80 per cent. The position of this area has, however, changed lately. It is pointed out that the lower output in the current year, together with the increasing local needs, may before long transform it from a net exporter to a net importer.

Consequent on the higher level of home production of oils and fats (mainly olive oil and butter), the import requirements of Western Europe are rather lower in 1960. The *per capita* consumption is believed to be less than in 1959. The average consumption for all countries is slightly reduced, but population growth has raised the total usage by nearly one per cent. The U.S. which, in spite of high production, requires to import certain types of oil and fat, is also likely to take less this year. Elsewhere, the tendency is for imports to rise. Japan is

Trend of Exports

(In thousand metric tons—in terms of oil or fat)

	1960 (forecast)	1959 (partly estimated)	1958	1957	1934-38 (average)
Copra and coconut oil.	1,113	973	1,034	1,364	1,057
Palm kernels ..	397	395	409	375	320
Palm oil	581	571	566	588	447
Groundnuts	847	816	862	762	826
Soyabeans	1,286	1,213	1,028	865	432
Cottonseed	409	335	167	310	189
Linseed	374	433	370	500	572
Other vegetable oils ..	633	638	617	583	523
Butter	429	444	462	411	500
Lard	366	379	305	336	173
Tallow	955	870	665	802	162
Whale oil (including sperm)	490	489	519	499	507
Fish oils	174	186	149	170	121
Total ..	7,854	7,742	7,143	7,515	5,829

expected to step up its purchases by more than 10 per cent., and Africa, the Middle East and the Indian Sub-continent by 4 to 5 per cent.

Recent studies of past trends and future requirements of oils and fats lead to the conclusion that, over the next 15 years, world needs will have risen by about 50 per cent. This calculation rests not only on population projections but also on the assessed increase in consumption which higher standards of living are likely to bring about. In the more developed countries, an annual rate of increase of 1.5 per cent. is looked for and, in the less developed areas, the figure may be as high as 4.5 per cent.

The aforesaid estimate of 50 per cent. rise in world requirements of fats and oils over the next 15 years seems to be justified when viewed against the growth in production—average of one million tons a year—in the past 15

SHIP REPAIRS done at Mazagon Dock... help earn foreign exchange!

The ship repairing experience of Mazagon Dock is known all over the world today. During the past 5 years, over 2,500 vessels, carrying the flags of 23 countries have sailed over the horizon after effective repairs by Mazagon Dock.

By repairing such vessels, Mazagon Dock earn foreign exchange for India. Mazagon Dock also help save foreign exchange by building vessels of different types in India and by providing reliable repairs facilities for vessels which would otherwise be repaired in foreign countries.

The age-old custom of ceremonial tree-planting is much more than a colourful ritual. It is an expression of faith in a worthy enterprise — no matter how modest the beginning. It symbolises faith in the future — faith in growth.

Everything which is vital grows — a seed into a tree, an idea into an enterprise, a school of thought into a way of life. Each adds to it carefully with the passage of years. Often, the transformation of an idea into reality can be accelerated by deliberate direction and effective planning.

Standard-Vacuum's Executive Development Programme is a case in point. It began as an idea more than fifteen years ago to increase the number of Indians in management positions. At the time there were only three Indians of this category with the Company. How quickly the idea has developed into reality can be seen from the fact that at the end of last year in Stanvac's Marketing Organization alone there were 897 Indians in management positions. Another 113 Indians were holding similar positions in the Stanvac Refinery. Adding the number of Indians in management positions in the Indo-Stanvac Project, the total for 1959 came to 1040.

As more and more Indians qualify for management positions, the number of overseas personnel (who at one stage held an over-whelming majority of senior jobs) continue to decline.

RUBBER RESEARCH IN MALAYA

SOME VALUABLE LESSONS FOR INDIA

By A Correspondent

IT was a senior officer of the Rubber Research Institute's Smallholders Advisory Service who told me, in the large library which was turned into a lecture hall during the Rubber Research Conference, about the achievements of the Institute in a few short sentences. He said that Malaya had produced a strain of rubber plant which could come into bearing within 3 years and 9 months of planting and would yield 800 pounds within the first year of tapping. There are fields in the Federation capable of yielding over 1,500 pounds and having a potential reaching over 2,000 pounds. The trees are more disease-resistant and less susceptible to wind damage, a common weakness of high-yielding clonal plants.

The most important achievement of Malaya through hard-driven, lavishly financed, go-ahead research is to make the main commercial crop of the Federation to face up to the challenge posed by man-made rubber of the post-war era. The First International Natural Rubber Conference, held at Kuala Lumpur from 26th September to 1st October 1960, was actually a grand flag-hoisting ceremony by the world's greatest rubber research centre. On the third mile along Ampang Road in Kuala Lumpur City is the largest concentration of talent and experience in rubber research. Scientists from 22 different countries arrived not only to take part in the week long talks and exchanges, but to see what new advances Malaya has made in the propagation of rubber and the processing of the product. Many international rubber men stayed over from the Rubber Study Group's meetings to meet and listen to men who will make natural to compete and hold its own against the advancing waves of synthetic rubber.

India has many things to learn from Malaya in the matter of raising a successful plantation crop and controlling it without stuffily sitting on it. Rubber was introduced to Malaya in 1877 but 20 years later there were only about 350 acres under this crop on the Peninsula. Within the next 15 years, a million acres were planted and today Malaya has over 3½ million acres under hevea rubber, almost 64 per cent. of the total cultivated area in the Peninsula.

Research in rubber began almost immediately after rubber was found plantable in the Malayan soil and the pioneer in the study of the many aspects of rubber planting, Mr. Henry Nicholas Ridley, occupies a very important place in the history of rubber research and of the industry in Malaya. It was, however, in 1926 that the Institute became an autonomous body with means to support itself outside the wings of the Agricultural Department of the Federated Malayan States.

Strength of Staff

The Rubber Research Institute now employs over 70 senior research men and a supporting staff of some 470 at the headquarters in Kuala Lumpur and on the 3,000-acre Experimental Station at Sungei Buloh, about 15 miles north-west of the City. The soils, botanical and pathological divisions of the Institute conduct research in all aspects of cultivation of the rubber plants and the harvesting of the crop. The chemical division deals with the processing of the crop into the desired forms. In addition to the administrative section, the Institute has a statistics division, a publication and information section, with an excellent library and a division responsible for advisory service. Certain important changes in the organisation of the rubber industry, mainly in relation to research work, were proposed by the Committee headed by Prof. G. E. Blackman in 1952. The research organisation is now controlled by a board constituted under the Malayan Rubber Fund (Research and Development) Ordinance 1958.

The Malayan Rubber Fund (Research and Development) Ordinance is worth a close study by the Government of India in the Ministry of Commerce and Industry. As in the case of the Indian Plantation Boards, the Malayan Rubber Fund Board has an appointed chairman, but his appointment is owed to a selection board constituted under the Ordinance and having on it an equal number of nominees of Government and industry. In other words, the industry is a party to the appointment which in effect makes a lot of difference to an offhand and unquestionable Government selection. The Board itself is a compact ten-member body with the Controller of Research and Chairman as ex-officio member. Half the number of seats, namely, five, are filled by nominees of the producers' association and a further two in consultation with it. The result is a homogeneous body which has common interests and purposes. The Minister in charge of the Board is competent to give a directive to the Board and it shall be carried out by the Board, but the Board has the right, under the statute, to express its views, if it differs from the directive issued and the Minister is obliged to place, both his directive and the views of the Board, before the Federal Council. Nothing could more effectively prevent capricious interference with the autonomy of a Statutory Board or irresponsible behaviour by a Board.

The Board is supported by a fund raised from the levy of a cess on the rubber exported. During 1959, a total of over Rs. 1.80 crores were collected by the cess of which slightly over Rs. 1 crore was devoted to the Research Institute. The Board is also responsible for providing funds to develop new uses for rubber and the promotion of natural rubber throughout the world. What constitutes the most remarkable feature of the organisational pattern of the rubber industry in Malaya is that the Statutory Rubber Fund Board is charged with one clear responsibility, namely, research and development and none else. The replanting schemes are operated by another statutory organisation and its success or failure is to be attributed to that particular organisation. This separation of functions has one great advantage in that the inadequacy of an all-comprehensive Board does not blight all the vital services to an industry.

Replanting

In Malaya, replanting is not something to which the Chairman of the Board attends in his spare time. It is the responsibility of a separate Board constituted with the sole object of successfully replanting the whole stand of old trees. The replanting schemes are separated into two parts, one covering large growers owning 100 acres or more and the other covering only small holdings of less than 100 acres. The total area under small holdings is slightly in excess of 1,550,000 acres out of the 3½ million acres under rubber. The number of small holdings is estimated to be in excess of 390,000 and the task of making them replant at some loss to their current income is an immense task. In order to put the whole work force of replanting experts and administrators behind the small-holder drive, the big holdings have been left to carry out replanting on their own. Since a large proportion of big holdings had already carried out replanting before the scheme came into being, a system was devised whereby a refund could be made of the replanting cess collected from them.

To gain some idea of the task that faced the Rubber Industry (Replanting) Board in 1953, one can consult the Smallholders Enquiry Committee report, which provides a graphic account. In 1953, 937,000 acres of small holdings were over 30 years and nearly 340,000 acres were past 20 and approaching 30 years. In other words, 80 per cent. of small-holding rubber was due for replanting by 1961. During the period of the first seven-year replanting programme, 317,820 small-holding acres were replanted. This represents an area in excess of the total planted under rubber in India.

The total replanting effort of the Malayan rubber industry is, of course, greater than the small-holdings achievement. During the same period, the large holdings had replanted 414,200 acres, bringing under high-yielding strains 55.2 per cent. of the total estate acreage in the country.

Impressive Achievement

Something of the gigantic achievement in replanting comes through in yield statistics. The increase in yield per acre for the whole of Malaya for the entire industry was 181 pounds, rising from 460 to 641 pounds or by 40 per cent. in eight years. But there is a very marked difference in the average of yields between replanted and old areas in bearing. The average yield of high-yielding acreage in 1959 was 898 pounds, as against 434 pounds from old trees. It was estimated last year that over 35 per cent. of the Malayan stand yield over 800 pounds per acre.

The replanting effort is not something confined to the Replanting Board and the growers, but extend to several organisations whose active co-operation contributes to the result. Apart from the large grower organisations, the small-holder associations form an important link between the Board and the small holders. But the most striking contribution is made by the Smallholder Advisory Service, organised by the Rubber Research Institute. The purpose of this Service is to convey to the small holders, in a manner they can understand and practise, the lessons learnt from research and experiments carried out by the Institute. But the infectious enthusiasm which seemed to strike one very forcibly when talking to men of this Service at the Institute means that the Advisory Service is something more than a reproducer or interpreter of scientific tracts. Its men are friends and guides of the small holders and, very often, the acceptance of a technical advice depends on the acceptance of the adviser as a trusted friend in the first place. The Advisory Service functions with as much faith in the useful advice it can offer as on a well planned publicity drive to induce the growers to seek such advice and use it.

Labour Union

An important lesson to be learnt from this successful rubber producing country is its highly developed labour utilisation. The ratio of labour and staff to the acreage is low and it enables higher earnings for the workers and consequently a higher standard of living. About 50 per cent. of the labour force on Malayan estates are of Indian origin, about 30 per cent. Chinese and the rest Malayan. With the largest number of workers in Malaya concentrated in rubber industry, the development of the labour movement in this industry is of considerable significance to the country. What has been achieved by 'pure' trade unionism, uncorrupted by political parties, finds impressive expression in brick and mortar, glass and chromium and steel of the "Plantation House," the headquarters of the National Union of Plantation Workers in Petaling Jaya, a few miles from Kuala Lumpur. The large number of service departments and the general standard of business efficiency within "Plantation House," gave it the air of a well managed business office. One of its officials said with evident pride that, while the union intends to be powerful, it does not intend to be political. Its members are the only workers in Asia to win an output-*cum*-price rated wage scheme. It is possible for the rubber industry to pay high wages, because the employment rate varies from 6 to 10 acres per worker. Neither the employers nor the workers accept the Indian practice of a high employment rate with small output and low wages per head. The opinion expressed was that over-employment on an estate would only help to increase the number of slackers, to reduce supervisory efficiency and also the standard of living all round. The rubber worker is a substantial buyer of goods and services and, therefore, a stimulator of Malayan economy. The ratio of supervisory and managerial staff in the industry is also relatively low as compared with Indian practices.

COTTON

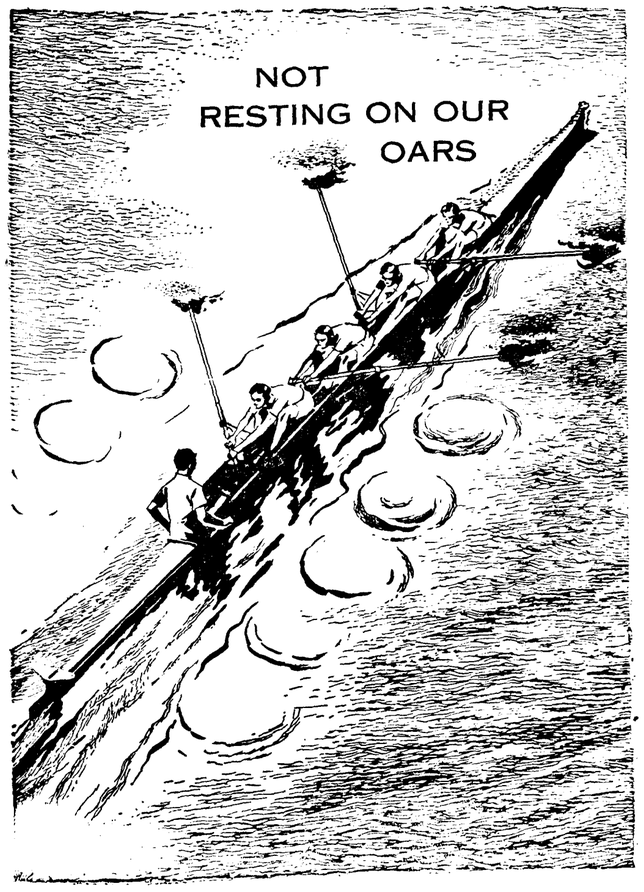
(*Concluded from page 862*)

the present difficult trading conditions. Stricter controls on cotton yarn production are reported to be under contemplation. There is some possibility, therefore, that aggregate consumption in the main cotton consuming countries taken together might decline. An offsetting factor in the past has been the rapid development of textile industry in several primary producing countries, but, even here, there has of late been a perceptible loss of momentum in some instances. In such countries, as the Philippines and Sudan, however, the textile industries are still expanding.

In fine, according to present reckoning, there will be cause for satisfaction, if consumption is maintained at the last season's level, which was an all-time record. If net exports of communist countries, too, were to remain at the level prevailing in the last three seasons, production and disappearance would roughly be in balance. There would, therefore, be little change in total carryover at the end of the season.

COMMITTEE TO REVIEW COTTON EXTENSION WORK

A cotton committee, consisting of 21 officials and non-officials, has been constituted to review from time to time, the cotton extension work in Gujerat. The Director of Agriculture would be ex-officio Chairman of the Committee. Gujerat produces, on an average, one million bales of cotton annually which constitute about 22 per cent. of the country's total cotton production.



Indian Tube is expanding again! Indeed it must, to meet the growing demand for steel tubes in step with the rising tempo of construction and industrial activity. A licence has just been received for the installation of 90,000 metric tonnes of additional capacity in continuous weld tubes, used mainly for water supply, steam and gas installations, and for a variety of structural and engineering purposes.

With the addition of a second high-speed continuous weld mill, Indian Tube's capacity in this category will go up to 200,000 tonnes, taking the total for all varieties of tube—including 30,000 tonnes of seamless, and 20,000 tonnes of electric resistance weld tubes—to 250,000 tonnes, an impressive advance achieved in the five years since the first mill came into operation. In addition, Indian Tube makes tubular steel poles for which it has a capacity of 150,000 a year.

As all the general services required for this expansion already exist at the tube works in Jamshedpur, the new mill will be completed and commissioned within a short time. This will bridge the present gap between supply and demand.

ECONOMIC TRENDS IN NETHERLANDS

GOVERNMENT TAKES MEASURES TO CURB EXCESSIVE EXPENDITURE

THE Netherlands Minister of Finance opened his explanatory memorandum for the presentation of the budget for 1961 to the States-General with a review of the economic situation and the expected economic development of the Netherlands for the years 1960 and 1961. The following has been culled from that review.

The boom which dominated the economic climate of the Netherlands in 1959 has continued unabated in 1960, considerably exceeding the expectations entertained at the turn of the year. The Dutch economy has been able rapidly to overcome the recession of 1958 and to make this give way to a renewed expansion accompanied by high levels of employment and production.

Employment

Apart from a short drop in the recession years 1952 and 1958, employment in post-war Holland has been maintained at a high level. Even in the two years mentioned, unemployment was scarcely greater or even less than in the boom years before the war. This is largely due to the fact that, while home expenditure fell, exports continued to rise in those years also. The measures adopted by the Government to stimulate business and the easiness of the capital market also contributed to the improvement of the economic situation in the course of the two recession years and to the promotion of employment.

During 1959, the unemployment figures with seasonal correction fell from 92,000 to 63,000 persons. In 1960, the drop has rapidly continued. At the end of August, the labour reserve amounted to 48,000, corresponding to 1.4 per cent. of the non-self-employed working population. The demand for labour is outstripping the supply to an increasing extent. In various sectors, particularly the metal industry and the building industry, stresses have arisen. A further increase in the tension on the labour market is expected for the coming months.

Production

The increase in employment went hand in hand with a strong expansion in production. In 1959, the total production had already risen by about 5½ per cent. Towards the end of the year, the tightness of the labour market gave rise to the expectation that the rate of expansion would drop somewhat in 1960. Nevertheless, the current year has to date shown a considerable rise in production.

The reserves in the productive machinery seem to have been greater than was initially thought. The increase in the gross real national production for 1960 is estimated to be 8½ per cent. This rise has in part been made possible by the extensive investments in recent years.

Prices and Wages

The price level has developed quietly since 1958. The cost of living in 1959 was over 1 per cent. higher than in 1958. As a result of the general rent increase on 1st April 1960 and the abolition of the consumer subsidy on milk, the cost of living in 1960 rose by about 2 per cent. as compared with 1959. Apart from this, the price level has remained stable this year.

In accordance with the adjustments agreed upon and approved, the total of wages in industry, transport and agriculture rose by about 10 per cent. in the period from mid-August 1959 (on the eve of the introduction of the new differentiated system for fixing wages) to mid-June 1960.

Consumption and Investment

As a result of the wage increases and the rise in other incomes, private consumption increased strongly in 1960 as compared with the previous year—by more than 6 per cent. in volume (as against over 3 per cent. in 1959). Investments in business were stimulated by expansion of markets at home and increase in exports. Partly as a consequence of fiscal measures to promote investment, the gross investments in fixed assets of business enterprises rose in volume by about 11 per cent. in 1959. An increase of approximately 15 per cent. is estimated for 1960. Investments in equipment are increasing sharply in particular; the extent of investments in buildings for commerce and industry is limited by the production capacity of the building industry.

The housing programme remained at approximately the same level. It has comprised 80,000 dwellings per year since 1958. Stockpiling reached about fls. 600 million (1 Dutch florin=26 U.S. cents) in 1959; a figure of fls. 1¼ milliard is estimated for 1960. After a reduction in 1959 of about 2 per cent. consumption by the Government will rise by about 2½ per cent. in 1960. On the other hand, Government investments will increase considerably less than in 1959.

Foreign Trade

The expansion in expenditure led to an increase in imports of goods and services. While 1959 showed a rise of 13½ per cent. as compared with the preceding year, an increase of about 14 per cent. is estimated for 1960. Conditions remained favourable for Dutch exports as a result both of the strong expansion in the Federal Republic of Germany and other countries on which the foreign trade of the Netherlands is concentrated and of the progressive lifting of restrictions on international trade. In 1959, exports of goods and services rose by approximately 12 per cent.; an increase of over 11 per cent. is estimated for 1960.

The percentage coverage of imports by exports was 87 for the period January-August in 1960; this percentage was 88 for the corresponding period in 1959. The surplus on the balance-of-payments current account on a transaction basis amounted to over fls. 1,800 million in 1959. It is expected that the surplus for 1960 will drop to fls. 1,250-1,300 million. On a cash basis, the balance-of-payments current account gave a surplus of fls. 545 million for the first six months of 1960, as against fls. 715 million for the corresponding period in 1959.

Economic Tension

While, in 1959, the strong growth in demand could be absorbed practically without stresses on account of the spare capacity in the productive machinery, bottlenecks are beginning to occur as the boom progresses. This applies particularly to the labour market, where the situation of 1956 is being approached. In contrast to then, however, the balance-of-payments current account shows a surplus. This difference can be explained by the fact that the overstrain in 1956 was the result of an excessive increase in internal expenditure; now, the initial impulse is derived much more from exports.

A difference with 1956 can also be established on the capital market. In that year, investments rose and savings fell, so that the rate of interest on the capital market increased. At present, partly due to the considerably greater savings, the capital market is quite easy and the rate of interest is tending rather to fall.

Although the present situation differs considerably from that in 1956, the rapid increase in expenditure and the attendant strain on the labour market have nevertheless caused the Netherlands Government to apply correcting measures to the economy. On 29th April last, some restrictions were introduced into the fiscal facilities for promoting investments. In addition, in the course of May, projects for supplementary employment were in some areas closed to workers of certain age groups or entirely shut down. The basic principle in drawing up the building programme for 1960 was that the volume of building should not rise above that for 1959; a licensing system ensures that the building programme is not exceeded.

As in 1959, liquid assets are being tied up by the Government in that more funds are being withdrawn from the capital market than are necessary to finance the deficit in the Government sector. In 1959, over one milliard more guilders were borrowed than was necessary to finance expenditure. In the months of 1960 which have already elapsed, the State has withdrawn fls. 600 million from the capital market by issuing two long-term loans; this is already more than is necessary for the entire year from the financing point of view.

Outlook for 1961

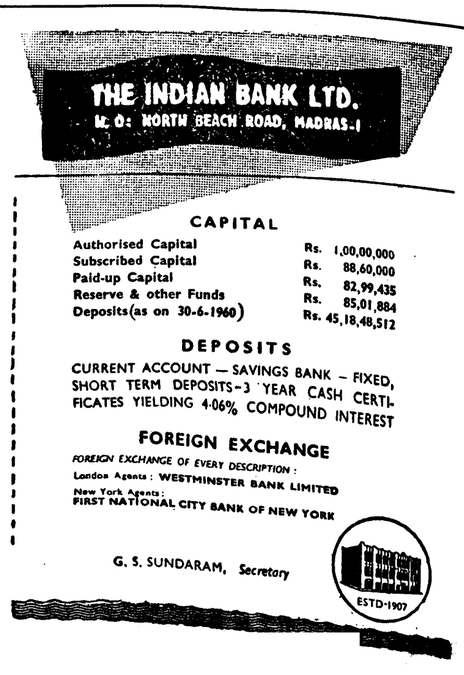
The rapid expansion in expenditure gives rise to the question of whether it must not be feared that, in 1961, the existing strain on the economy will develop into overstrain with all the consequences thereof. It is to be expected that the important impulse, which is now derived from exports, will continue in the near future. The expansion in the market areas of Western Europe, which are of importance to the Netherlands, shows no signs of diminishing. A further increase is also forecast for internal expenditure. It is, however, expected that both private consumption and investments in fixed assets of businesses in 1961 as compared with the preceding year will increase to a lesser degree than in 1960. The same levels as in 1960 are expected for housing and stockpiling; Government expenditure will increase to some extent.

The rise in the total gross national production in 1961 is estimated to be 5-6 per cent. (as against 8½ per cent. in the current year.) Exports and imports will both increase further, but probably less than in 1960. It is expected that the balance of payments in 1961 will again show a smaller surplus than in the preceding year.

The Finance Minister's general conclusion is that the economic situation in the Netherlands will continue to be tense. In his opinion, even greater caution than in 1960 will have to be exercised with regard to increase in expenditure.

AUTOMATIC POWER BAND SAW

A Dutch engineering firm has developed a new type of fully automatic power band saw with hydraulic feeding mechanism. This band saw has an accurate adjustment, a short setting-up time and a stable stop; the material itself is not used as a stop, but the sliding carriage is provided with one. The machine is also equipped with a work-clamping fixture for clamping and cutting 225×130 mm bundles of material.



Coming—

THE FINANCIAL TIMES OF INDIA

a project of prime importance to every businessman and student of economic affairs in India!

The Times of India Group takes pride in announcing the addition, in the near future, of a full-fledged daily financial newspaper, *The Financial Times of India,* to bring its readers a comprehensive and sustained flow of news and comment on the country's business life.

COMPREHENSIVE EDITORIAL COVERAGE

The newspaper will contain:

- economic news and comment of world-wide and Indian interest
- complete coverage of all six stock exchanges in India and of the London and New York Stock Exchanges
- spot news on planning and development from regional economic bureaux, and news about aid and collaboration from foreign correspondents
- extensive reporting on the hundreds of commodity markets spread all over the country
- periodical economic newsletters from State capitals done by trained editorial staff
- exclusive information from India and abroad for import and export trade
- investment guidance by experts on the editorial staff
- critical analysis of company balance sheets
- industrial surveys and research
- statistics, tables and graphs on economic trends
- articles on current topics by well-known economists
- informed leading articles

VITAL TO BUSINESSMEN

This is vital information for every modern businessman, business house, investor, banker, planner, and student of economic affairs. To satisfy their diverse requirements, The Times of India Group will devote space, talent, and money on a scale never before attempted.

DISCUSSION OF ECONOMIC PROBLEMS

The publishers feel this effort is more than justified by the need to facilitate intelligent discussion on economic problems which have assumed a new dimension and significance in India today.

LATEST REPORTS AND REVIEWS

With a decade of planned development behind us and with a much bigger Plan in prospect, *The Financial Times of India* will enable readers to keep a finger on the pulse of business, trade, industry, and agriculture in India and abroad.

RELIABILITY & INTEGRITY

The Financial Times of India will be a newspaper that no businessman can afford to go without. And it will, of course, carry the stamp of reliability and integrity associated with the Times of India Group of Publications.

Watch for further announcements about The Financial Times of India.

THE FINANCIAL TIMES OF INDIA Times of India Building, Dr. Dadabhai Naoroji Road, Bombay 1.

MORARJEE GOCULDAS SPINNING AND WEAVING CO. LTD.

ADDITIONAL AUTOMATIC LOOMS TO BE INSTALLED

CHAIRMAN, MR. GOPIKISAN PIRAMAL'S SPEECH

SPEAKING at the Eighty-ninth Annual General Meeting of the Morarjee Goculdas Spinning and Weaving Company Ltd., held at Bombay on 5th November 1960, Mr. Gopikisan Piramal, Chairman, disclosed that the Company proposed to bring the total installed capacity of the weaving shed to about 2,000 looms. It was also expanding its printing, dyeing and finishing activities to cope with increased cloth production. The Company's application for the addition of 23,000 spindles was pending with the Government and, if this were sanctioned, it would bring the installed capacity to about 10,000 spindles.

The following is the full text of Mr. Gopikisan Piramal's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you all to the eighty-ninth annual general meeting of your Company. Today's meeting will pleasantly remind you that your Company next year completes a notable career of 90 years. The Directors' report and audited statements of accounts have been with you for some time now and I trust you will permit me to take them as read.

"With the state of the economy that has been obtaining in the country for quite some years now, annual addresses from the chair cannot but be carry-overs from the preceding year's roster of caveats and dissatisfactions over the Government's conduct of economic affairs. Indeed, one is inclined to conclude that the considered expressions of those who are intimately and vitally implicated in industry and trade are persistently turning out to be the croakings of a Cassandra who could never influence the course of events in time.

"I do not propose to weary you with tedious homilies on what the Government should do and should not do in respect of such matters as the extent of the market that the organised sector of the industry (*vis-a-vis* the decentralised sector) may pre-empt, the modernisation and rationalisation of the industry, the export situation, etc. These are matters of common knowledge to you all and are the subject of constant reiteration from various quarters.

The Year's Developments

"This afternoon I will refer only to a few developments that have occurred over the year and which have immediate relevance to our industry.

"The details of the third Five-year Plan are being hammered out and the published draft outline of the Plan reveals itself as an extension of the studied policy of subordinating the interests of the organised sector of the industry to the interests of the largely subsidised decentralised sector.

"During the year both the domestic and the foreign offtake of cotton textiles has been rather satisfactory: but this has been largely due to adventitious circumstances and certainly not due to a fundamental re-ordering and realignment of the cost structure of the industry. On the contrary, fresh strains have been imposed on the industry's wage and raw material bills. The recent Wage Board recommendations of an increase in the *per capita* basic wage by Rs. 8 per month till 1961-end, with retrospective effect from January 1960, and a further increase of Rs. 2 per month from 1962 onwards, have created an additional charge on our finances. You will realise that this increase has not been linked up with industrial productivity and efficiency, but is meant only to offset the spiralling cost of living for which the Government is responsible. Secondly, the poor cotton crop has adversely affected our cost-production schedules; this year's crop expectations are, however, reported to be favourable. On the export front, apart from the fact that our price and quality manœuvrability is reduced due to these and other factors, it should also be borne in mind that most of our traditional export markets are moving towards autarky.

"Recently, the Government was seized of the question of cloth prices and its loud and soft-pedalling policy more or less obliged the industry to mark down the prices of certain varieties of cloth with August 1959 prices as the base-line. The Government's stand during this episode has clearly demonstrated that it has no rational conception of the economics of the industry and has reacted to the situation in the manner of a small-time trader. The industry still remembers that during the lean period of 1957-59, no significant countervailing measures were forthcoming from the Government. It should, therefore, be urged upon the Government that the textile industry does possess a long-term budget, that its economic accounting practices are not those of a peddler and that, unlike the Government, it does not possess the Aladdin's Lamp of deficit financing.

"The Reserve Bank of India has of late been attempting to neutralise the created money with which the economy is suffused and several monetary weapons in the Bank's armoury have been drawn out in an effort to hold the price line. Apart from selective credit controls on sugar, foodgrains, etc., variable reserve ratios, the prohibition of *budla* financing by banks, ceiling on clean advances, etc., the Reserve Bank has made the borrowing and lending operations of Scheduled banks difficult and costly. These monetary measures have the effect of reducing the liquidity of trade and industry, leading to a measure of financial inconvenience, which can be got over only at a higher cost.

Automatic Looms

"Coming closer home, that is, to the Company's activities you will be glad to know that we have been granted 96 automatic looms in replacement of existing plain looms. Out of these looms 48 have been installed and will be fully in commission by the end of this month. Your Company also expects to receive a further sanction of automatic looms for replacement purposes. Moreover, the Company has been granted an industrial licence for the installation of 336 auto looms as an addition to the existing weaving capacity of the Company under the Export Promotion Scheme. Orders will be placed for these looms immediately the import licence is received. This will bring the installed capacity of the weaving shed to about 2,000 looms. The weaving preparatory machines for these additional looms are already on order. On the finishing side, the Company is expanding its printing, dyeing and finishing activities by adding new plant and machinery to cope with the increased cloth production.

"An application is also pending with the Government for an addition of 23,000 spindles for manufacturing yarn to feed the expanded weaving capacity. This addition, if sanctioned, will bring the installed capacity to approximately one lakh spindles.

"The overall cost of these replacement and expansion operations will work out to about Rs. 75 lakhs and these activities do not involve any additional expenditure on housing the new plant and machinery as we have adequate accommodation with us.

"It will be realised that these additions and improvements to the mills that are being undertaken will enable us to turn out faultless cloth at cheaper rates thereby increasing our export potential and also our profit margin.

"The shipment of the Sanforizing range to which I had alluded last year has been delayed on account of registration of the trade mark. Negotiations between the 'Sanforized' patent owners and the Government have only recently been finalised. The range has now already been shipped by the manufacturers and will be installed in the current year.

"The Company's selling agents have resigned and your Company is handling its sales directly since March 1960. The change has been quite successful and has meant considerable saving in selling agency commission to your Company. It is, therefore, not the intention of the Company to alter the position for the time being at least.

"Over the year, it has been our constant endeavour to be in *rapport* with labour and to maintain uninterrupted industrial relations in an age of strikes and strifes.

Outlook

"In the final analysis, in spite of the handicaps under which we are functioning, the industry will always be assured of its legitimate status and prospects, because the civilised world will always have to clothe itself.

"I have to thank sincerely my colleagues on the Board, and the executives, staff and workers of the Company, for the loyal and unstinted co-operation extended by them.

"It gives me great pleasure to inform you that my brother and colleague on the Board, Dr. Mohanlal Piramal, has recently been awarded a Doctorate in Industrial Sociology by the University of Bombay. The subject of his special study and investigation was 'Social Conditions of Textile Labour in Bombay with special reference to Productivity.'

"In conclusion, I shall thank you all, gentlemen, for being kind enough to be present here today. I now move that the Directors' report and the audited balance sheet and profit and loss account for the year ended June 1960, already sent to the shareholders, be and are hereby adopted."

Note:—*This does not purport to be a report of the proceedings of the annual general meeting of the Company.*

"India can earn as much as Rs. 20 crores of foreign exchange provided she can step up her sugar exports to 300,000 tons a year. This is not difficult to achieve if control measures are undertaken to protect the sugarcane crop from the ravages of pyrilla and borers. Petroleum chemicals like aldrin and endrin have been successful in giving effective, persistent protection to one of India's most valuable cash crops."

Extract from a Burmah-Shell publication

Chemicals protect sugarcane crop

THE CONSUMER CALLS THE TUNE

SIGNIFICANCE OF BEIRUT CONFERENCE

IN any free market economy, the consumer is the ultimate arbiter of what is bought and sold and at what prices. Only where there are no substitutes available is his freedom to buy as he thinks fit decisively limited. This is the basic truth which underlies all industrial and commercial activity outside the communist countries. And even within those countries, the consumer is making his voice felt to an increasing extent. The fact that the consumer is the governing force in a free economy is often obscured by the complexities of our modern economic system, evident enough in the marketing of petroleum products. It remains, nonetheless an inescapable fact, and it is noteworthy that the interests of the consumer were not specifically discussed at the recent conference in Beirut.

The first resolution adopted a few weeks ago by the founding countries of O.P.E.C. in their initial meeting in Baghdad stated that the members of O.P.E.C. would formulate a system to stabilise crude oil prices by, among other means, the regulation of production, with due regard to the interests of the producing and of the consuming countries, and to the necessity of securing a steady income to the producing countries, an efficient, economic and regular supply to the consuming nations, and a fair return on their capital to those investing in the petroleum industry. Nothing surely, could be more unexceptionable than the sentiments expressed in the latter part of this statement of intentions. Everyone, producing countries, companies and consumers, alike must agree that all should have a fair deal. What is at stake, however, is how to interpret and apply generalised good intentions of this character.

Not Much Room for Complaint

So far, the producing countries have really very little to complain about. Only Venezuela has felt significant effects, and that largely because of the haste of a previous Government in stimulating exploration by a large number of independent U.S. companies, who were forthwith shut out of their intended markets in the United States by the U.S. Government's restrictions on oil imports. It is more a fear of the future which impels the Governments of the Middle East today to concern themselves with pricing and associated problems. In this, they are, in one sense, quite right. There is no doubt that, in the face of excess crude producing and refining capacity, competition in the crude exporting countries' biggest market, Western Europe, is very tough, although, as time passes, the cycle of adjustment will work towards bringing about a better equilibrium.

It is, moreover, certainly true that too sharp a decline in products prices, entailing corresponding declines in crude prices, would be a serious matter. Looking beyond the immediate present, this would be so, at least as much from the consumers' viewpoint, as from that of the producers. To keep pace with demand during the next 15 years, and yet still maintain a reasonable level of underground reserves, will very likely require additions of new oil reserves during that period of as much as 220 billion barrels. This would be what would be necessary if the ratio of proved reserves to current production were allowed to decline from the present 40 years to only 15 years. In itself, such a decline would not matter greatly. For many years, U.S. proved crude reserves have been only about 12 to 13 times current production. But, if the free world's reserves ratio were to drop to 15 years, it would imply that an immense new exploratory effort would have to be mounted to keep pace with the growth of demand after 1975. If, however reserves were to be kept up to the equivalent of 25 years' production at the 1975 rate, it could mean that as much as 430 billion barrels would have to be added to reserves in the next 15 years. That would entail adding to oil reserves some 40 per cent. more than was actually added in the 15 years just passed, which itself was a period of record-breaking additions.

It is clear, therefore, that oil prices must continue to be high enough to make available the very large sums of money which will have to go into continuing exploration. On the other hand, it is equally clear that consumers would not tolerate any attempt to hold them to ransom, at a time when everyone knows that there is a greater abundance of actual and potential developed oil production than has ever existed before. Among others, the countries of the European Common Market, who have already shown active interest in energy questions, would certainly react unfavourably and exert their growing strength, in energy as in other spheres, to protect their interests as energy consumers. The unhappy experiences of producers of other international commodities in attempts to create artificially high prices by restricting production is proof enough of the impossibility of continuing success in any such arrangement, where several producers or producing countries are involved and where the markets are at all widespread. In the case of oil, in the present situation in Europe, and indeed elsewhere also, it is plainly out of the question that the consumer could be exploited. And, indeed, it is unlikely that the producing countries have any intention of doing so.

The sort of reaction which might be expected may be gauged in a broad way by the recent and planned actions of a number of major consuming countries, actions taken even without a threat of having to pay unreasonable prices for oil imports. Because the U.S. Government believed that foreign supplies were insecure, it has been prepared to back the wishes of its domestic producers for one of the boldest measures of protection ever put into effect in the United States. And with shale oil in the background, already virtually economic at the prices which American consumers are used to paying, there is no necessary reason why the U.S. market should not continue indefinitely to be closed to any large new influx of foreign oil. In Europe, France, will soon be in a position to supply the whole of her oil requirements from franc zone production, largely from the Sahara, though in practice for quality and other reasons some of this production will be moved to other countries and crude from elsewhere imported into France. Argentina provides another important instance where a major and successful effort to develop indigenous production is being made.

The Great Weakness

Apart entirely from these moves to develop indigenous sources of oil supply, the great weakness of any attempt to keep oil prices unduly high would be the existence of growing production from new sources elsewhere, anxious to capture as big a share of the world market as possible. It must be doubtful whether countries such as Libya would be prepared to forgo their great opportunity for prosperity in the interests of other countries' revenues. Russian oil, too, is already a source of price weakness in Europe and elsewhere, and it cannot be lightly assumed that it will not become more troublesome in the future.

More than this, however, account must be taken also of competitive fuels. A very substantial part of oil's rapid growth in recent years has been directly due to the advance of black oils at the expense of coal. Europe's coal industries are fighting back hard. Productivity—output per man—in most major producing countries has risen sharply, production is being concentrated on the most efficient pits, and widespread efforts are being made to improve the range and efficiency of coal utilisation. What still counts most heavily against coal is its being prices. But if oil prices too were to rise, a strong reaction in favour of indigenous coal production could easily be sparked off.

Natural Gas

Natural gas, too, is becoming of major importance. Its biggest selling point is its low price. Any stiffening of oil prices would add still further to the attractions of gas. Admittedly, within a few years, much of Europe's natural gas consumption may come from other areas. But so far as the transport of frozen gas by ships is concerned, the Middle East countries are not in a very favourable position, since gas from these countries would need to come through the Suez Canal, upon which it would be unlikely that consuming countries would wish to become in any way dependent for another form of energy. And, in any event, to sell natural gas in place of oil is a poor bargain, as U.S. producers have long since discovered.

It comes down then to this, that too low oil prices would be most undesirable for all concerned, while too high prices would significantly check the growth of demand. This does not mean that no changes in prices should occur at all. In their discussions of the problems of international commodity agreements, economists have long recognised that the great vice of such agreements was the attempt to keep prices too rigid, without adequate allowance for long-term structural changes in demand and supply. When demand for a commodity is definitely in excess of supply, it is essential that some price rise should occur to encourage an increase in productive capacity. But, equally, when productive capacity is in excess of demand, it is necessary that some downward price adjustment should be made to reduce the incentive to further increase capacity. It is such a movement that is now occurring in oil. Long-term considerations dictate that it cannot go too far, but some adjustment is desirable to help bring about the correct relationship between demand and supply.

Oil Companies' Plight

In the past, the integrated oil companies have coped with this problem with remarkable success, following a steady middle course, which has promoted a high rate of growth of production while ensuring that earnings were always sufficient to provide funds for the finance of adequate new exploration and development. Their success may be judged best, perhaps, by the fact that, at various times, they have been verbally attacked by both producing and consuming interests, the first claiming that prices should be higher, the latter that they should be lower. Perhaps, the most striking instance of the latter has been the position taken up by the Indian Minister for Mines and Oil, Mr. Malaviya. Contrasting with the oil producing countries' demands for higher prices to support their development programmes, he asked for lower prices to support the balance of payments position of India in the furtherance of India's development programme.

Clearly, for both producing and consuming countries to achieve satisfaction along these lines is impossible. And Mr. Malaviya's answer is that the companies should bear the effects of the two conflicting demands by cutting their profits. In the short run, this makes a debating point. But, in the long run—and not a very long run at that—it is a barren response, since both producing and consuming countries depend on the generation of sufficient capital in the form of what are misleadingly termed oil profits. Without such generation of funds for ploughing back, the future supply of oil could not be assured.

The conclusion of the debate must be, in fact, what the resolution adopted at Baghdad (and cited above) clearly saw, that there is an essential mutuality of interests between the producing countries, the oil companies and consuming countries. All three are vitally concerned with the maintenance of a long-term supply of oil at reasonable prices. Whatever criticisms are made at Beirut or elsewhere, the fact remains that large integrated oil companies are an indispensable link between the producing and consuming countries. Their ability to explore, develop and produce is amply demonstrated. No less important is the provsion of the physical and institutional means on a vast scale of moving, storing, refining and distributing an increasing volume of oil. But, in the end, the whole vast gamut of oil operations depends on the consumer wanting the oil, and on its being available at what he deems to be a reasonable price.—*By special arrangement with the Petroleum Press Service.*

AIR-INDIA BOEING ON PROVING FLIGHT

Air-India's Boeing 707 Intercontinental jet "Annapurna" left Bombay on a proving flight to Tokyo on 5th November, on its way to Seattle, U.S.A., to undergo "flight characteristics improvements" modifications. "Annapurna" is the first of the three Air-India Boeings scheduled for modifications in U.S.A.

The modification programme, initiated by Boeing Airplane Company, is designed to improve flight handling of all Boeing jet aircraft, as a result of experience gained during one year of jet operations. The modification programme consists of installation of fully powered rudder control in place of partially powered rudder control as at present. The fully powered rudder control as at reduce rudder pedal forces required to be applied by Air-India pilots. The present vertical fin will be extended by approximately 3 feet and a small fin will be added below the tail of the aircraft. This will result in added lateral stability of the airframe at low speeds.

The second Boeing aircraft "Nanda Devi" will leave for Seattle next month and the third aircraft "Everest" by the end of the year. The entire modification programme will be completed between November 1960 and January 1961 and will be carried out without affecting flight schedules of Air-India.

NEW PRODUCTS AND PROCESSES

Treating Heart Disease

A medicinal substance unknown to science heretofore has been discovered in the cardiac muscle by the scientists of the Institute of Animal Morphology under the direction of the Corresponding Member of the U.S.S.R. Academy of Sciences Khachatur Koshtoyants. The researchers of the Institute claim to have studied the effect of this substance on individual organs of animals, in particular on an isolated heart of a rabbit. Already, after a few seconds, the muscular activity of the heart rapidly increased, as if under the action of Adrenalin or similar preparations. Yet, as shown by experiments, Adrenalin has a much weaker effect and disintegrates in 20 to 30 minutes, while the newly discovered substance isolated, for example, from the heart of a frog, has a stronger and more durable effect. It has been proved by experiments that the new substance is secreted by the heart in response, in particular, to the chemical effect of Adrenalin. At the same time chemical analysis revealed that it was not of the same kind as Adrenalin. Repeatedly testing the effect of the new substance on the hearts of different animals the scientists have drawn the conclusion that in the future it can be used for the medical treatment of cardiac and many other diseases of man.

Controlling Mine Fires

The U.S. Bureau of Mines has reported progress in the use of high expansion foam to control underground mine fires. The technique, developed originally in England, is based on the use of chemicals—frequently the home laundry type of detergent—to create the foam which is driven by air from the mine ventilating equipment toward the fire. The Bureau describes foam attacks on 16 test fires set in a mine, 14 with coal, one with wood, and one with oil as a fuel. Fighters were able to control 13 of them. Not controlled were three coal fires subjected to foam that was purposely low in water content. According to the findings, there must be a minimum of two-tenths of an ounce of water per cubic foot of foam to be effective. Studies also disclosed that, though many of the fires were completely extinguished, in other cases the foam's main effect was to cool the atmosphere around the fire which allowed the experimenters to invade the fire area and make a direct and final attack with water or other extinguishing methods or load the hot material into cars for removal from the mine. It was also found that foam has a blanketing effect which reduces oxygen and prevents air circulation.

Flame-proof Rubber

A U.S. scientist at a recent meeting of the American Chemical Society described a new type of rubber which is not only flameproof but extinguishes flame. One use for the amazing material is in coating soldiers' uniforms, reported Dr. J. C. Montermoso of the U.S. Quartermaster Research and Engineering Command, Natick, Massachusetts. It will provide some protection even against nuclear explosions, which set off intense heat. The material, called nitroso rubber, has other attractive features. It is resistant to solvents and a variety of strong chemicals, remains flexible and usable at 40 degrees below zero and stands up against sunlight and ozone, indicating a long storage and service life. Experts also predict its use in rubber parts for tanks and various other military vehicles. From the scientist's angle, the rubber is fascinating because its molecular "backbone," instead of being composed entirely of carbon, is composed of carbon, oxygen and nitrogen. The new material contains no hydrogen unlike other rubbers.

Testing Adhesive Bonds

Adhesive bonds are at present being used for many purposes and are both economically and mechanically preferable to riveted joints. Stress concentrations occur round rivets, screws and bolts, whereas the load on an adhesive bond is uniformly distributed over the surface. It will be obvious that the adhesive bond should be tested when its strength is a vital factor, for example in aircraft construction where safety is imperative. The relevant test method should naturally be non-destructive. An aircraft factory at Amsterdam, Holland with more than thirty years' experience in adhesive bonds, has developed a special non-destructive method of testing the strength of both metal-to-metal bonds and *sandwich bonds* of skin plating to core material. The apparatus can also be used to test adhesive bonds between plastics. It is the first known apparatus to provide numerical qualitative data on adhesive bonds by a non-destructive method. Numerous experiments with this apparatus have shown that a non-destructive shear strength of adhesive bonds can be evaluated with an accuracy of about 0.4 kg./sq. mm.=570 p.s.i. and a probability of 95 per cent.

Shaded Pole Motor

A new shaded pole motor which is fully tropicalised to operate in virtually any weather conditions is now being marketed by the British Vacuum Cleaner and Engineering Co., Ltd., Goblin Works, Leatherhead, Surrey, England. The motor has been produced to meet the need for precision engineering at a low price and the model meets many requirements for which more expensive types are normally employed. Typical applications are for fans and actuators and the type is already being supplied for driving mixers in corrosive atmospheres in the chemical industry, for cooling apparatus on television cameras and for use in several types of electronic computors. The unit is continuously rated (without air stream cooling) at 12 watts with 2-watt output, and operates on 230/115 mains voltage to maximum of 2700 r.p.m. A 50-watt version with an output of 12 watts is also available for use where more power is required.

New Plastics That Outwear Steel

New plastics that have greater durability than steel and stretch like rubber were revealed at a recent meeting of the American Chemical Society in New York City. The new materials, derived from a type of chemicals called polyurethanes, are expected to be used in heavy duty applications such as tyres for lift tracks, skids for jet planes and gears. The polyurethane compounds are made from a combination of three types of chemical building blocks known as isocyanates, polyesters and amines, according to C.F. Blaich, Jr. of the Carwin Company, North Haven, Connecticut. Through the proper choice and proportioning of the ingredients, compounds can be produced that are stronger than mild steel but which can be stretched to twice their length. They resume their original dimensions when the tension is relaxed.

Device to Combat Noise

Noise to the left of us, noise to the right of us, noise above and behind to bombard us throughout the day. This terrifying modern problem produces fatigue—and tired workers can be a danger to themselves and their colleagues. The Building and Insulation section of the Factory Equipment Exhibition held at Manchester from 21st September to 1st October spotlighted one way to combat noise —sprayed asbestos. It can be applied to many different kinds of surfaces, including plaster, brickwork, timber or metal. In reducing noise it cuts fire hazards too, for one inch of sprayed asbestos is equivalent in fire protection to two inches of concrete. There is also an anti-vibration felt used to isolate machinery and buildings from vibration or to deaden vibration by virtue of its high damping capacity.

Snippets

Jute sticks have been used at the Forest Research Institute, Dehra Dun, to make pulp suitable for newsprint-grade paper. The yield is 85 per cent.

Among other processes and products reported are the development at the Regional Research Laboratory, Hyderabad, of a new group of resins from castor oil for use in surface coatings; production of auto hair-hardening foundry core oil from linseed oil at the National Chemical Laboratory, Poona, and a process of electro-polishing stainless steel, using sulphuric acid in place of phosphoric acid, evolved at the National Metallurgical Laboratory, Jamshedpur.

Instrument to Aid Pathology

A tiny electrode, which directly measures oxygen in the body, may show the relationship of oxygen to life processes, says a spokesman of Beckman Instruments, Inc., of New York, makers of the device. The platinum-tipped electrode, .005 inch in diameter, can be inserted into blood vessels and other body fluid reservoirs, even the brain. Called the physiological gas analyser, it could be used to locate heart defects, informing an anæsthetist of oxygen absorption and studying prenatal brain damage and senility. The usual method of taking a blood sample results in loss of oxygen and accuracy. The electrode is so small that it fits inside a standard hypodermic needle used to make blood samples.

Fresh Water From Sea Water

Research workers of the Australian Commonwealth Scientific and Industrial Research Organisation are developing a filter for a machine to extract salt from sea water. An atomic power station operating such a machine could provide water for developing millions of semi-desert acres in Australia within the next 20 years according to Dr. R. C. Pratt, who is in charge of the C.S.I.R.O.'s chemical engineering section. Dr. Pratt says fresh water could be produced from the sea by this method within the framework of the present economic structure in Australia at a cost of seven or eight shillings per every 1,000 gallons.

Quality. Something intangible. Yet it is present in any form of human activity where certain standards are maintained.

Take everyday commerce, for example. There are many goods in the market which are not made to any standard. And yet, if they could be, they would have the assurance of quality.

Today, there are relevant standards, prescribed by the Indian Standards Institution, for the manufacture of many consumer and industrial products. On application, and after exacting tests and examinations, ISI also gives its certification mark to those manufacturers whose goods conform to specified standards. The ISI mark is the guarantee of quality.

Once the licence to use the mark is granted, ISI maintains a constant vigil to see that the quality of the products continues to be maintained and the mark is not misused in any way. For, its integrity must always be safeguarded.

RAILWAY RATES POLICY IN INDIA

NEED FOR A RATIONAL INQUIRY INTO THEIR COST ASPECT

By R. Ramadas

THE scope of this essay is limited; it intends to make out a valid plea for a cost-based approach to the problem of railway rates and to emphasise the need for the establishment of a costing service on the Indian State Railways. The British Transport Commission had set up such a service, with a Director of Costing in charge. The methods of costing as applicable for railways are still in a pioneering stage but "there is no doubt that, under the regime of the British Transport Commission, there has been very substantial progress towards identifying the numerous factors which influence the cost of different services by road and rail." The problems encountered, the formulation of suitable techniques and the results of studies are made available in the Annual Reports of the Commission for the years ended December 1950 and 1951 and in an article by A. W. Tait (B.T.C. Director of Costings) in *British Transport Review*, April 1955. A detailed investigation has also been conducted in the United States into rail, motor truck and large costs in the lower Mississippi Valley. The results of this investigation are contained in *Comparisons of Rail, Motor and Water Carrier Costs*, published by the Board of Investigation and Research. (Senate Document No. 84, 79th Congress, 1st Session.)

The view was commonly held that even to attempt to determine the particular rail costs of moving particular amounts of traffic was to try to do the impossible thing. Railway working expenses were regarded as "unallocable," being "fixed" over the short period and having been incurred commonly for a variety of services. The dominant role of railways in inland transport enabled "discriminatory charging," a policy of fixing railway charges, "discriminating between commodities by value and based upon the average costs of operating traffic over the system as a whole." The aim has been primarily to secure a certain net financial result over the railway system as a whole. But such a "management approach" has had three consequences. First, a substantial degree of "cross-subsidisation," offsetting the losses on certain services against the profits on others, resulted. Secondly, a wide divergence developed between railway charges for particular services and their costs. And, finally, "faced with competition from road services where charges are determined by the costs of the particular services run on the freight carried," railways fared badly.

When the railways possessed a virtual monopoly of inland transport, there was no pressure to ascertain the particular costs of particular services or to develop costing services. But, with the development of other forms of transport, the need to cost particular rail services became urgent. If railway rates continue to diverge from cost in such competitive conditions on services where their charges are high in relation to their costs, the railways are laid open to competition from road transport, which eats into the profits required to meet the losses sustained where their charges are low in relation to their costs. Railway charging schemes have to orient themselves increasingly in tune with influences on the cost side of provision of services. This change in the traditional attitude is necessary in the interests of railways themselves, and also because cost provides the basis of co-ordination.

If the ascertaining of the costs of particular services is in fact impossible, then there is no economic means of co-ordinating rail transport with other means of transport. This extreme view "is no longer so strongly held" in the U.K. or the U.S. In India, the railways appear to still believe in *ad-hoc* measures to check competition and the basic issues of co-ordination are yet to be recognised. The Railway Freight Enquiry Committee of 1958 has merely recommended a switch-over to the percentage method of classification of goods traffic and failed to discuss the need for costing services.

A few interesting observations of the Director of Costings, British Transport Commission, made probably on the basis of his investigations, are detailed below:

Case 1.—It is firmly held in many quarters that the carriage of minerals is one of their tasks for which the railways are particularly suited. But it was pointed out to the British Transport Tribunal by the British Transport Commission's Director of Costings, Mr. A. W. Tait,* that, while there may be some ways in which minerals make for economical running, "the necessity of returning the empty wagons after they have delivered their load is apt to involve the railway in heavy costs."

Case 2.—The traditional view that the cost of carrying a ton or a passenger for a mile diminishes the larger the number of miles for which it or he is carried is expressed in the widespread practice of "tapering" railway rates as distance increases. But larger transits generally involved a proportionately greater time spent in marshalling yards, and, even if only the trunk haul was considered—marshalling costs being excluded—there was no evidence from costing studies that its cost diminished as distance grew.†

Case 3.—It is widely believed that high density is a factor which tends to lower costs. But it is perfectly possible for traffic to be so dense that even the largest units of capacity are overtaxed and for this reason comparatively inefficient. Railway costings show that high costs are often found in the stations which handle the heaviest traffic, for precisely this reason.‡ In the context of excessive strain on existing railway assets in India, this observation is worth sober reflection.

The point of the above recapitulation of the experience of the British Transport Commission in the field of traffic costing would be lost, unless we keep in mind that, before such investigations began to shape railway rate policies, the British structure of rates and fares diverged widely from costs and that the same is substantially true of Indian State Railways even today. Why is it that railways persisted with these large divergencies between costs and rates? One fundamental reason is the statutory recognition given to "what the traffic will bear" in the General Classification. But more important was the prohibition of undue preference entailing the obligation of "equality of treatment."

Equally fundamental in perpetuating such divergencies is the force of public opinion. With the enactment of the Transport Act of 1953 in Great Britain, the railways were set free to make what charges they liked, provided these were within the maximum in each case for which a maximum would be fixed by the Transport Tribunal or in other cases provided that they could satisfy the Tribunal that their charges were reasonable. The Commission was not obliged to publish anything except its maximum charges; and it was at the same time relieved of the other main grievance of the railways, the legal prohibition of "undue preference" and the "equality clause."

With such relaxation of the legal framework and in the light of the pronouncements of the British Transport Commission that "... it is of vital importance ultimately that the true costs of the various services shall be brought home to the customer," it should be evident that the Commission is anxious to bring its charges for different services more into line with their differing costs, so far as they could be ascertained.

So far as the Indian State Railways are concerned, the Classification Scheme brought into effect from 1958 is practically subject to the same defects as the earlier one, except that classes are expressed on the percentage method. Rates continue to be fixed on value considerations and quite often diverge widely from the actual cost involved. The flexibility of the earlier practices is lost by restricting station-to-station rates and exception rates. The legal prohibition of undue preference and the operation of "equality clause" continue as before. Rates cannot be varied to suit individual needs as on the British Railways operating under the provisions of the Transport Act of 1953. The obligation to contribute to general revenues at 4 per cent. of the capital at charge is itself a rigid formula influencing the level of railway rates. One feels that the Indian State Railways are but poorly equipped to face the full effects of motor competition of the type existing in Western countries. The low manufacturing capacity of the indigenous automobile industry, restrictive licensing policies, high taxation and inadequate roads combine, however, to keep back the growth of road transport industry and thus leave the palm with the railways, at any rate for the time being.

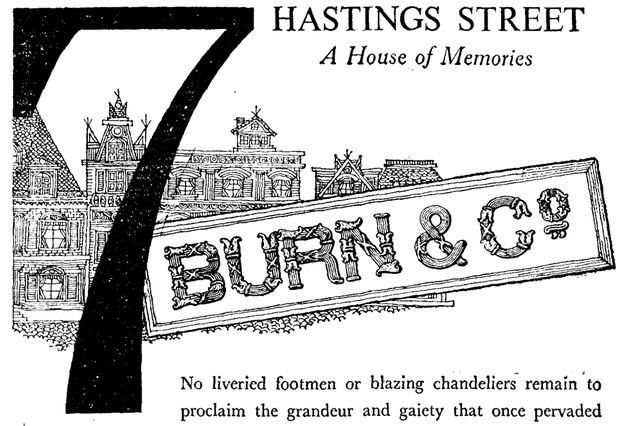
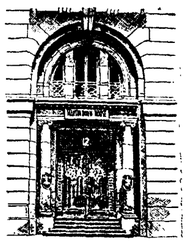
HASTINGS STREET
A House of Memories



No liveried footmen or blazing chandeliers remain to proclaim the grandeur and gaiety that once pervaded the large red brick mansion that still stands in Calcutta's Hastings Street and which Warren Hastings, India's first Governor-General, built for his charming wife as her town house. For many years this fine residence was the scene of glittering assemblies and balls, the entrée to which was considered a high social privilege.

In 1827, No. 7 was acquired for the purpose of its business by the old established engineering firm of Burn & Company which occupied it for almost a century. By reason of its expanding business, Burn & Company found this historic building with its cobbled carriage drive and spacious rooms too small, and in 1925, the Company was forced to sever its link with this house of memories and moved to larger premises in Clive Street, where it joined hands with Martin & Co.



Today, the activities of Martin Burn Ltd. cover a wide range of engineering interests including those brought to it by the renowned firm of Burn & Company all of which are vital to the rapid development of India's industrialisation.

REGIONAL INTEGRATION IN LATIN AMERICA

PROBLEMS AND PROSPECTS EXAMINED

THE movement towards closer economic integration initiated in Western Europe, with the formation of the European Economic Community (E.E.C.) of the Six (France, West Germany, Italy, Belgium, Netherlands and Luxembourg) has led to similar attempts elsewhere in the world. What is particularly remarkable is that some of the less developed countries have chosen to follow suit, with Latin American countries taking the lead. In the past two years, treaties have been signed establishing two regional groupings, together encompassing twelve of the twenty Latin American republics. Regionalism has advanced farthest in Central America, where five countries—Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua—have agreed to eliminate barriers to trade among themselves, establish a common tariff *vis-a-vis* third countries, and take measures to co-ordinate their industrial development. But, in terms of the size of the nations involved, a more far-reaching step was the signing last February of the Montevideo Treaty, according to which seven countries—Argentina, Brazil, Chile, Mexico, Paraguay, Peru, and Uruguay—agreed to free their trade with each other. Some of the Asian countries are also considering the possibility of establishing regional trading blocs. In this context, a succinct study of the problems of, and prospects for, the "Emerging Common Markets in Latin America," appearing in the September 1960 issue of the *Monthly Review of the Federal Reserve Bank of New York*, is bound to be read with interest.

Differing Problems

The author of the aforesaid study makes no secret of the fact that "integration by underdeveloped countries, whether in Latin America or elsewhere, obviously entails problems that are in many ways both different from, and more difficult than, those faced by the European nations." Elucidating this aspect, the article observes:

"In Europe, integration involves essentially the sweeping away of artificial barriers to an increase in trade for which there is already a natural basis in the existing economic structure. The European Common Market is geographically compact and possesses a superb transportation and communication network; the six nations are highly industrialised, and trade between them has long comprised a significant part of their total trade. Moreover, a strong interest in closer political ties in Western Europe has greatly facilitated the formation of a common market.

"The conditions that favour economic integration in Western Europe do not, by and large, exist today in Latin America. There is little basis for intra-regional trade in the present economic structure of the Latin American countries. They are largely self-sufficient in foodstuffs and export chiefly agricultural products and minerals. The trade of these countries has, therefore, been directed to the industrial nations that need Latin America's primary products and can supply Latin America with the manufactured goods it requires. While manufacturing has expanded rapidly in some Latin American countries in the post-war period, it is generally on a scale at most sufficient only to meet domestic requirements and characterised by high production costs. Moreover, the limited opportunities for trade between the Latin American countries has provided little incentive for bridging the region's great expanses and rugged terrain with adequate transport facilities, with the result that freight costs within the region are often prohibitively high."

The relative insignificance of intra-regional trade in Latin America, taken as a whole, can be gauged from the fact that, since 1948, the proportion of such trade is only about 9 per cent. of their total exports. In contrast, even in 1948, before the liberalisation of intra-European trade had begun, the European Common Market countries did more than 25 per cent. of their total trade with one another. Besides, within the two groups seeking integration, there are substantial differences in the relative importance of intra-regional trade to individual countries but such trade is not large for any of them, except Paraguay. Moreover, intra-Latin American trade has been concentrated on a few commodities. Venezuelan petroleum has in recent years accounted for as much as one-third of trade within Latin America, and the rest has been made up mostly of a relatively small number of foodstuffs and raw materials. Trade in manufactured goods has been very small.

But so far as the signatories of the Montivideo Treaty are concerned, the position is different. The intra-regional trade has generally been more important between these countries (except Mexico) than elsewhere in Latin America, with Brazil selling as much as about 40 per cent. of its total exports to the members of the Montivideo Treaty, Argentina 35 per cent., Peru 11 per cent., Chile 8 per cent., Uruguay and Paraguay 3 per cent. each and Mexico 1 per cent. The fact remains, however, that trade has been limited to a few primary commodities, principally wheat from Argentina, coffee and fresh fruits from Brazil, metals and petroleum from Chile, cotton from Peru, and timber from Brazil and Paraguay. The integration is sought not only to maintain existing trade, but also to develop new trade.

Ultimate Goal

The ultimate goal of the seven Latin American countries, according to the preamble to the Montevideo Treaty, is to achieve "complementarity and the integration of their national economies" in the fullest sense. However, the treaty itself actually seeks only the more limited goal of a free trade area. The heart of the treaty is the agreement by the signatories that over the next twelve years "they will eliminate gradually, for substantially all their reciprocal trade, charges and restrictions of all types that bear upon the importation of goods originating in the territory of any contracting party." There is no provision in the treaty for the formation of a full customs union through unification of the external tariffs of the seven countries. The re-export within the region of goods imported from outside countries is prohibited, except by special agreement or where the goods have undergone some processing by the importing country.

The actual reduction of tariffs, quotas and other restrictions is to be achieved through annual negotiations in which the seven countries will draw up national lists of tariff reductions for each country, together with a common list of products upon which all the countries must eliminate their tariffs. On the national lists, each country must show successive annual reductions of 8 per cent. in the weighted overall average of its tariffs on the goods that it actually imported from other treaty countries in the preceding three years. In addition, under the common-list procedure, each country will be required by the end of the twelve-year period to eliminate tariffs on goods that have been traded anywhere in the region, even if they have not entered into its own intra-regional trade. At the end of three years, the common list must include goods that account for 25 per cent. of all intra-area trade; 50 per cent. must be included after six years, 75 per cent. after nine years, and substantially all trade by the end of the twelfth year.

Limitations

The article under review seeks to emphasise that the aforesaid procedure for the reduction of tariffs and other trade barriers is limited in two important respects. In the first place, the seven countries are apparently specifically committed to include on the national and common lists only goods actually traded within the region. Secondly, the rate at which tariffs on individual commodities are to be reduced is, in effect, left to each country. The 8 per cent. annual reductions that must be shown on the national lists apply only to the average tariff level, and presumably a country may meet this requirement in any given year during the transition period by substantially reducing some duties while leaving other products fully protected. In addition, the placing of a commodity on the common list will apparently mean only that duties on it must be eliminated by the end of the twelve-year period.

Apart from these defects, it is reasonable to expect that economic integration will be beneficial so long as it leads to the establishment of a market large enough and sufficiently well endowed with a variety of natural resources to permit significant economies through specialisation and large-scale production. The seven countries' huge and diverse natural resources, according to the article, offer ample scope for the division of labour. It opines that the opportunity of serving a combined market comprising about 140 million persons should make it possible for even the more complex and capital-intensive modern industries to operate in the region on an efficient scale. So far as the Central American countries are concerned, however, not only their combined size but also the volume of their natural resources is small. Nevertheless, we are told that the proposed bloc of Central American countries appears to make possible the establishment of many lighter industries that could not function within the sheltered national markets of the participating countries. It is also possible that this bloc may only be the first step towards the formation of a wider Latin American Common Market, just as the Benelux Union led to the establishment of the Common Market.

The overall benefits that will accrue from economic integration in practice will depend, it is said, on the completeness of the integration of Latin American markets. "Production can be fully rationalised only where all sectors of the economies of the participating countries are opened to competition, so that the allocation of resources can be determined in a genuinely free market." The article adds that "partial economic integration is likely to exclude just those hard-core protected products from whose liberalisation the most important benefits can be obtained."

Conclusion

In conclusion, the article points out that the short-run impact of a reduction of trade barriers among the Latin American countries is likely to be no more than marginal, in view of the existing low level of intra-regional trade. Over the longer run, however, the broadening of Latin American markets can serve to stimulate industrialisation and give it a more rational basis than the limited national markets. But the pace of economic development cannot be stepped up without a sharp rise in investment not only in manufacturing itself, but also in such essential supporting activities as power production and transportation. The article stresses that common markets can contribute to increasing investment by opening up profitable new business opportunities in manufacturing that will attract Latin American capital away from investment in real estate and construction and that will induce Latin American investors to repatriate some of the very substantial amounts of capital they now hold abroad. In addition, its proponents hope that the possibilities of investment in industries serving Latin American common markets will stimulate the inflow of foreign capital into the region, just as the formation of the European Common Market has led to larger U.S. and other outside investment in that area.

The article then goes on to observe that the low incomes of the Latin American countries limit domestic savings, while, in many instances, fundamental fiscal and other changes are needed in order both to improve savings and investment habits and to attract a larger inflow of foreign capital. Further, "the extent to which Latin American countries will be able to take advantage of the opportunities offered by economic integration is linked to the solution of other basic economic problems, such as the maintenance of internal and external economic balance, as well as to the development of an adequate regional transportation network. The gains from economic integration will also depend on the ability of the participating countries, when implementing their respective treaties, to make the difficult transition from national protectionism to an economic environment in which the nature and direction of industrial growth and trade expansion are determined by the forces of competition."

PRODUCTIVITY IN PLASTICS INDUSTRY

The suggestion that labour should be so educated as to develop a healthy and enlightened attitude towards productivity and understand the problems faced by management in introducing the latest advances in plant and processing, has been made in a report on plastics industry, just published by the National Productivity Council. This will become certainly possible, the report adds, by fostering a sense of partnership and unity of interest between labour and management. The report was prepared by a team of experts, sponsored by the N.P.C. with assistance from the U.S. Technical Co-operation Mission. The team visited the U.S., Italy and Japan for a comprehensive study of the technological advances and productivity techniques adopted in plastics industry in respect of production, planning and marketing. It also studied the factors governing expansion in production and consumption of plastics, methods of imparting technological education in plastics as well as in plant practical training for personnel at various levels and organisation of small-scale industries in plastics. The report surveys the present position of the industry and deals with its expanding needs. The development of raw materials and their application and processing techniques have also been dealt with in the report.

ELECTRICALLY HEATED MUFFLE FURNACES FOR LABORATORIES & WORKSHOPS
Outstanding Features:
● Regulator with Scale Built-in Temperature.
● Built-in Thermocouple.
● Heating Muffle of High Quality Clay (Sillimanite) with Chrome-Nickel Heating Coils Embedded.
● Muffle can be changed while Furnace is still hot.
● Rapid Heating Time to Full Temperature in approximately 90 minutes.
● Uniform Temperature Inside Heating Chamber.
● Excellent Temperature Regulation (± 10° C).
● Double Hinged Door.
● Modern Compact Design.
● Low Operating Cost.
● Ideal for Bench use for the Annealing, Tempering and Hardening of Metals.

FIDUCIA ET FIDES
A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them — in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

IMPRESSIVE PERFORMANCE BY N.I.C.CO.

GROSS PROFIT AT A RECORD—FURTHER EXPANSION SCHEME IN HAND

THE year ended 31st March 1960 was one of substantial progress for the National Insulated Cable Company Limited (Managing Agents: Associated Industrial Development Company (Private) Ltd., Calcutta), in refreshing contrast to the sizable setback suffered in the previous year. There was a marked improvement in output due to the implementation of the expansion scheme and the demand for the Company's products continued to be good. This is reflected in the rise in turnover from Rs. 1.92 crores in 1958-59 to Rs. 3.49 crores and the sharp jump in gross profit from Rs. 43.16 lakhs to a record of Rs. 82.88 lakhs. The net profit has more than doubled itself from Rs. 16.01 lakhs to Rs. 41.72 lakhs.

In consonance with this encouraging trend, the Directors have ploughed back no less than Rs. 18.31 lakhs or about 44 per cent. of the net profit to the reserves, as against only Rs. 4 lakhs or 25 per cent. in the previous year. The dividend also is being stepped up from 20 per cent. to 25 per cent., but since the latest distribution is subject to deduction of tax, the net return works out to 17.5 per cent. This is, however, on a capital higher by 50 per cent., following the issue during the year of 300,000 ordinary shares of Rs. 10 each, so that, on the old capital, the proposed dividend represents 37.5 per cent. gross or 26.25 per cent. net, as compared with 20 per cent. free of tax paid consistently for the previous three years.

The following comparative table gives an idea of the encouraging progress made by the Company during the year under review:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale proceeds	3,49.14	1,92.50	2,84.96	3,21.59

* Subject to deduction of tax.
† On the increased capital of Rs. 90 lakhs raised in September 1959 by the issue of 300,000 shares of Rs. 10 each.

Two years ago, the Company commenced manufacture, for the first time in India, of grooved copper or cadmium copper contact wire required for electric traction schemes. As a result of this venture, the Company has been able to save for the country substantial foreign exchange. It is now only necessary to import raw copper for the manufacture of these wires, instead of importing the manufactured wire. The bulk demands for the grooved contact wire are only from new schemes of railway electrification. These demands are now said to be at their peak. Even so, the capacity of the Company's plant is, according to the management, such that it is still not fully loaded. As in the previous year, the demand for A.C.S.R. continued to be slack during the year under review also. The procurement of high tensile galvanised steel wire became rather difficult on account of the formalities involved in the procedure for importing it from abroad. In spite of this, many new units have been licensed and some of them have been established. The Government expects that the demand for A.C.S.R. and all aluminium conductors will increase, as a result of additional power generating capacity in the third Five-year Plan. If this materialises, the present units may get enough load to engage them. Otherwise, the present trend of slackness in demand, coupled with additional plants established, will bring about idle capacity in the industry.

The Company's copper rod rolling mill has been installed and trial runs have been successfully completed. The Company has in hand a further expansion programme for increasing the manufacture of existing types of products and for a new line, namely, the making of armoured cables for railway signalling and other purposes. The necessary steps are being taken to bring this expansion into effect next year. In short, barring the uncertainty regarding the demand for A.C.S.R., the outlook for the Company appears to be fair.

The Company's financial position is sound. The paid-up capital of Rs. 90 lakhs is supplemented by reserves and surplus aggregating Rs. 138.43 lakhs, of which the general reserve alone accounts for Rs. 80 lakhs. The total outstanding borrowings as at the end of the year amount to Rs. 116.12 lakhs, which include a debenture loan of Rs. 10 lakhs secured by 5¼ per cent. debentures of Rs. 2,000 each. The debentures were due for redemption on 15th July 1960, but were extended for a further period of five years, with an option to redeem them at any time after 15th July 1963. The rate of interest was also raised to 6 per cent. The Company has a debenture redemption fund of Rs. 10 lakhs. If, however, the Directors have not chosen to redeem the debentures out of this fund, it must have been due to the fact that raising of fresh funds for financing the expansion programme after repayment of the existing debenture would be costlier. The current liabilities and provisions aggregate Rs. 134.02 lakhs and these, together with the borrowings mentioned above, are more than adequately covered by current assets, book debts and cash balances at Rs. 398.73 lakhs. There has been an addition of Rs. 24.97 lakhs to the block account during the year; this is on top of Rs. 25.70 lakhs expended in the previous year and brings the total capital expenditure up to the end of the year to Rs. 131.19 lakhs. This has, however, been well written down to Rs. 79.84 lakhs.

The current market value of the Rs. 10 fully paid-up ordinary shares of the Company is Rs. 31.62 *ex-div.*, at which rate the yield on them is fairly attractive at 5.5 per cent. per annum, free of tax.

SEKSARIA MILLS

The Maharashtra State Government proposes to run the Seksaria Cotton Mills Ltd. (now in liquidation) on a leave and licence basis. It will submit its proposals regarding the same to the State High Court before 1st December 1960. This is a sequel to the order of the High Court, made on the 4th inst., asking the official liquidator of the Mills to invite offers to run the Mills on leave and licence basis from 16th December 1960 onwards. It is, however, for the High Court to choose the best offer from among similar offers from various parties. In the meantime, the Mills will continue to be in the possession of the State Government till 15th December and will be run by it on the same terms and conditions on which it had been running the Mills for the last two years. The Mills, however, have remained closed since 24th October 1960, following the order of the official liquidator. The High Court directed the official liquidator to hand over *de jure* possession of the Mills to the State Government with effect from 4th November 1960 and also ordered that the Government would be deemed to have been in possession of the Mills from the date of its closure, namely 24th October, and that the State would be liable to pay all such charges as it was paying previously.

The High Court's order arose out of an appeal filed by two workers of the Mills on behalf of themselves and other workers of the Mills against the decision of Mr. Justice Mody, who had dismissed their petition earlier. The workers, who had claimed to be unsecured creditors, had prayed that the official liquidator should be directed to call a meeting of the unsecured creditors to consider the order of the Textile Commissioner prohibiting the sale of the Mills and to allow the Government to continue to run the Mills. The official liquidator it was stated, was contemplating challenging the order of the Textile Commissioner and, in the meantime, he thought it necessary to keep the Mills closed. In the opinion of the learned judges who disposed of the appeal, it was not necessary to keep the Mills closed, simply because the liquidator contemplated challenging the Textile Commissioner's order.

The State Government has paid the workers full wages for the eleven days during which the Mills had remained closed.

(Concluded from next column)

year (in June 1960), the Company issued 30,000 —5¼ per cent. debentures of Rs. 1,000 each to meet the capital cost of the first 30 M.W. set in "C-2" extensions. Out of the proceeds, it repayed the then existing 4½ per cent. second mortgage debentures amounting to Rs. 2 crores.

The Rs. 100 fully paid-up ordinary shares are being quoted at a low of Rs. 88.50 *cum-div.* (final: Rs. 3.15 net), as against Rs. 96.20 a year ago. On an *ex-div.* basis, the yield works out to 5.7 per cent. per annum, free of tax.

AHMEDABAD ELECTRICITY EARNS RECORD PROFIT

GENERATING CAPACITY TO BE INCREASED FURTHER

THE results of working of the Ahmedabad Electricity Company Ltd. (Managing Agents: Killick Industries Ltd., Bombay) during the year ended 31st March 1960 are encouraging. As many as 10,082 new consumers were connected during the year under review, as against only 4,787 in the previous year. Sales of energy for public and private lighting and fans, which had gone up by 3.22 million Kw.h. in 1958-59, have risen by another 4.58 million Kw.h. to 34.76 million Kw.h. during the year under review. Likewise, sales of energy for power purposes have increased by 24.17 million Kw.h. to 525.07 million Kw.h., on top of a rise of 33.14 million Kw.h. in 1958-59. Supply of energy to North Gujarat Grid has, however, declined by 20.34 million Kw.h. to 138.38 Kw.h., in contrast to the increase of 22.81 million Kw.h. Nevertheless, the total sales of energy are higher by 8.41 million Kw.h., though such increase is much less than that of 59.17 million Kw.h. in 1958-59.

The gross profit of the Company has improved by Rs. 10.46 lakhs to Rs. 140.58 lakhs, following a rise of Rs. 11.51 lakhs recorded in the previous year. Despite the increase in the managing agency remuneration and provision for depreciation, the net profit, at Rs. 84.11 lakhs, has improved by no less than Rs. 11.35 lakhs, in the absence of any liability for wealth tax, which had absorbed Rs. 5.06 lakhs in the previous year. The addition to the reserves has been raised from Rs. 9.67 lakhs to Rs. 16.87 lakhs. Despite the encouraging results, the net dividend for the year is lower at 4.9 per cent. (7 per cent. subject to deduction of tax), as against 6.75 per cent., without deduction of tax, for the previous year. An increase in net dividend or even the repetition of the same dividend would have meant a cut in the allocations to the reserves. The Company's capital is so large that even an increase of ½ per cent. in net dividend would take up nearly Rs. 4.5 lakhs more, in addition to the burden of 30 per cent. tax, which the Company is bearing on behalf of the shareholders.

The following comparative table gives an idea of the progress made by the Company since 1957-58:

(In lakhs of rupees)

	For the year ended 31st March		
	1960	1959	1958
Sale of energy	4,93.27	4,55.76	3,99.99

Sales of energy (in million kw. h.)	698.21	689.80	630.63

* Provision for wealth tax.
† Subject to deduction of tax.

The Company hopes to commission the first 30 M.W. plant (in the second half of the 'C' station) in March 1962. The foreign exchange of this plant will be covered by the loan of $3.9 million granted by the Development Loan Fund, the agreement for which was signed in June 1960. To meet the ever-increasing demand for power in the city of Ahmedabad and its environment, the State Electricity Board has permitted the Company to expand its generating capacity by another 30 M.W.

The Company's paid-up capital is Rs. 8.75 crores and this is supplemented by reserves and surplus aggregating Rs. 1.17 crores. The outstanding borrowings as at the close of the year are Rs. 2.17 crores (including a debenture loan of Rs. 2 crores secured by 4½ per cent. debentures). The other current liabilities and provisions amount to Rs. 1.48 crores. The additions to the fixed assets during the year under review were of the order of Rs. 48.42 lakhs (on top of Rs. 95.31 lakhs added in the previous year), bringing the gross value of the block account to Rs. 15.24 crores. The book value thereof is Rs. 11.19 crores. Capital works-in-progress amount to Rs. 41.59 lakhs. The current assets aggregate Rs. 2.15 crores. After the close of the

(Continued in previous column)

ANGLO-INDIA JUTE PAYS MORE

MARKED RISE IN EARNINGS

THE Anglo-India Jute Mills Company Ltd. (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta), reputed to be the largest jute mill company in India, with a total complement of 2,561 looms, has been considerably benefited during the year ended 31st March 1960 by the comfortable raw jute position which enabled the industry as a whole to carry on simultaneous business in raw jute and gunnies on a profitable basis until November 1959, that is, during eight months of the year under review. Notwithstanding the subsequent sharp rise in raw jute prices on fears of a shortage of supply, the prices of gunnies were maintained at a high level throughout the year under review, thanks to the purchases by Russia and China and reasonable American offtake of hessians. As a result, the gross profit of the Company has improved by Rs. 27.80 lakhs to a peak of Rs. 72.77 lakhs. It must, however, be noted that all this rise in profit is not due to trading in gunnies. It includes a profit of Rs. 21.15 lakhs earned on sale of fixed assets. Even if this is excluded, the increase in profit is sizable, considering the high prices of raw jute which prevailed during the closing months of the year under review.

The net profit, at Rs. 25.54 lakhs, shows a rise of Rs. 15.40 lakhs, even after raising the provision for depreciation from Rs. 12 lakhs to Rs. 22.15 lakhs. This includes an additional depreciation of Rs. 12.15 lakhs provided to bring down the fixed assets to the income-tax written down value. In other words, the book value of the Company's fixed assets was in excess of the value as per Income-tax Act. A little over 50 per cent. of the net profit has been ploughed back, of which a sum of Rs. 5 lakhs has been provided as a reserve against depreciation in value of the trade investments in subsidiary companies. The Directors have also set aside Rs. 1.20 lakhs to the contingency reserve to compensate preference shareholders for tax deducted at source at the rate of 30 per cent., but the actual payment will be made in accordance with the provisions of the Preference Dividend Bill after it becomes law. Meanwhile, the dividend on the 7 per cent. preference shares is proposed to be paid after deducting the 30 per cent. tax. The Directors have recommended a dividend of 20 per cent., subject to deduction of tax, on ordinary shares. On a tax-free basis, it amounts to 14 per cent., as compared with 12.5 per cent. paid for the previous year. This is the third year in succession for which the dividend is being stepped up from 7 per cent. paid for the year ended 31st March 1957.

The salient features of the Company's results for the last four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale proceeds	6,44.69	6,28.69	5,93.21	5,15.25

* Subject to deduction of tax.

The Company owned four mills. Production was recently rationalised by closing down Jagatdal and Upper Mills and working the Lower and Middle Mills, on a multi-shift basis. During the year under review, the Company completed the sale of the Upper Mill property. A substantial part of the plant and machinery in the Jagatdal Mill has also been sold to Messrs. Isaac Holdens (India) Ltd. for the establishment of a wool combing plant, in consideration for the allotment of 123,345 equity shares of Rs. 10 each of the latter company. The Company (Anglo-India Jute) has also agreed to take up a further 86,516 equity shares of Rs. 10 each out of the proposed public issue of Isaac Holdens. The Directors are of the view that the investment in this new venture would provide a profitable source of income for the Company and there will be a saving in administrative costs also. The wool combing plant is expected to go into production during the current month.

The modernisation of the preparatory and spinning sections of the Middle Mill was completed during the year under review and both the working mills (Middle and Lower) are now fully equipped with modern sliver spinning machinery. The Company has commenced the modernisation of the winding and beaming machinery at Lower Mill and this is expected to lead to both economy in operation and an increase in efficiency through the supply of better yarn. The Company has applied for licence for importing similar modern machinery for Middle Mill also.

While the rationalisation of production and modernisation of plant and machinery will improve the efficiency and bring about economy in operation on a long-term basis, the short-term outlook depends upon the availability of adequate supplies of raw jute and at economic prices. This is the most uncertain factor at present and one cannot, therefore, be very optimistic about the current year's earnings, in view of the high prices of raw jute and drastic sealing of looms to curtail production.

The latest available quotation of the Company's Rs. 100 fully paid-up ordinary shares is Rs. 200 *cum-div.*, at which rate the yield on them is 7.5 per cent. per annum, free of tax.

WORKING OF COMPANIES ACT

During the quarter ended 30th September 1960, 108 companies (including one private company in the State of Pondicherry) with an authorised capital of Rs. 16.36 crores were registered in the southern region comprising the four States of Andhra Pradesh, Kerala, Madras and Mysore. Out of them, 7 were public companies with an authorised capital of Rs. 12.45 crores, 98 were private companies with an authorised capital of Rs. 3.91 crores, one was an association not for profit and two were guarantee companies. Transport companies continued to form the major group among the new registrations in Madras State accounting for 55 companies. The total investment by way of increase in paid-up capital of the companies was of the order of Rs. 2.03 crores. Four giant companies, namely, Madras Aluminium Company Ltd., Shardlow India Private Ltd., Aruna Sugars Limited, T.I. Diamond Chain Private Ltd., with an authorised capital of Rs. 10 crores, 1 crore, 2 crores and 70 lakhs for the manufacture of aluminium products, stampings and forgings, sugar and cycle chains and other parts, respectively, were floated in Madras State.

During the period under review one foreign company, namely, William Goodacre and Sons (India) Limited established its place of business in India at Alleppey in Kerala State, while another foreign company, S. A. Ackermans and Van Haaren India Limited, ceased to have its place of business in Andhra Pradesh.

During the quarter under review, 55 companies with a total paid-up capital of Rs. 15.69 lakhs were struck off the register of companies, 20 companies with a total paid-up capital of Rs. 17.74 lakhs went into liquidation.

* * * *

Two hundred and forty-five new companies with a total authorised capital of over Rs. 27 crores were registered under the Companies Act, 1956 in the Eastern Region comprising West Bengal, Assam and Orissa, during the half-year ended 30th September 1960. This is stated in a review of the working of the Department of Company Law Administration, Eastern Region, for the first half of 1960-61.

Of the new companies, 20 were public limited companies with an authorised capital of Rs. 16.50 crores, 221 were private companies having an authorised capital of Rs. 10.74 crores and four were companies limited by guarantee. The review adds that fifty-seven public and private companies with a total paid-up capital of Rs. 78.78 lakhs went into liquidation and 20 public and private companies with a paid-up capital of Rs. 9.86 lakhs were finally dissolved. In addition, one company limited by guarantee went into liquidation. The names of 779 companies having a paid-up capital of Rs. 46.01 lakhs were finally struck off under Section 560 of the Act.

* * * *

One hundred and twenty-one companies with a total authorised capital of Rs. 28.78 crores were registered in the Western Region comprising Maharashtra, Gujerat and Madhya Pradesh, during the quarter ended 30th September 1960. Of these, 15 were public and 106 private companies. During the previous quarter also 121 companies were registered with a total authorised capital of Rs. 15.51 crores.

Thirty companies with a total paid-up capital of Rs. 52.05 lakhs went into liquidation during the quarter, as against 24 companies in the previous quarter.

Names of 76 companies were struck off the register under Section 560 of the Companies Act, 1956. Also, 29 companies were declared to have been dissolved during the quarter under the provisions of the Act.

COMPANY MEETINGS AND DIVIDENDS

WOODLAND ESTATES LTD. Annual General Meeting, Trivandrum, 18th November 1960. Dividend: 10 per cent. or Re. 1.00 per share, subject to deduction of tax. Transfer books will remain closed from 18th to 21st November 1960, both days inclusive.

COOPER ENGINEERING LTD. Annual General Meeting, Bombay, 22nd November 1960. Dividend: Rs. 13.00 per share (includes a bonus of Rs. 3.00 per share), on the increased capital, subject to deduction of tax, payable on and from 30th November 1960. Transfer books remain closed from 1st to 22nd November 1960, both days inclusive.

ASHER TEXTILES LTD. Annual General Meeting, Tirupur, 24th November 1960. Dividend: 12½ per cent. or Rs. 12.50 per share, subject to deduction of tax, payable on or after 1st December 1960. Transfer books will remain closed from 11th to 24th November 1960, both days inclusive.

VELLORE ELECTRIC CORPORATION LTD. Annual General Meeting, Madras, 24th November 1960. Dividend: 15 per cent. or Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 17th to 24th November 1960, both days inclusive.

BHAGALPUR ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 25th November 1960. Transfer books will remain closed from 18th to 25th November 1960, both days inclusive.

VELIMALAI RUBBER CO., LTD. Annual General Meeting, Kottayam, 28th November 1960. Dividend: 12 per cent. or Re. 0.60 per share, subject to deduction of tax. Transfer books will remain closed from 26th to 28th November 1960, both days inclusive.

MIDLAND RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Alleppey, 28th November 1960. Dividend: 12½ per cent. or Re. 1.25 per share, subject to deduction of tax. Transfer books will remain closed from 21st to 28th November 1960, both days inclusive.

KARANPURA COLLIERIES LTD. Annual General Meeting, Calcutta, 28th November 1960. Dividend: 7½ per cent. or Rs. 7.50 per ordinary share, subject to deduction of tax, payable on or after 10th December 1960. Transfer books will remain closed from 14th to 28th November 1960, both days inclusive.

COCHIN STATE POWER AND LIGHT CORPORATION LTD. Annual General Meeting, Ernakulam, 28th November 1960. Dividend: 12½ per cent. or Re. 1.25 per share, subject to deduction of tax. Transfer books will remain closed from 21st to 28th November 1960, both days inclusive.

TUBE INVESTMENTS OF INDIA LTD. Annual General Meeting, Madras, 28th November 1960. Dividend: 10 per cent. or Rs. 10.00 per share, subject to deduction of tax. Transfer books will remain closed from 18th to 28th November 1960, both days inclusive.

AHMEDABAD ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 29th November 1960. Dividend: Rs. 4.50 per share, final (making a total of 7 per cent. of Rs. 7.00 per share, for the year), subject to deduction of tax, payable on and after 2nd December 1960. Transfer books were closed from 1st to 19th October 1960, both days inclusive.

BROOKE BOND ESTATES INDIA LTD. Annual General Meeting, Calcutta, 29th November 1960. Dividend: Re. 1.50 per share, subject to deduction of tax. Transfer books remain closed from 2nd to 29th November 1960, both days inclusive.

GILLAPUKRI TEA AND SEED CO., LTD. Annual General Meeting, Madras, 30th November 1960. Dividend: 25 per cent. or Rs. 2.50 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 21st to 30th November 1960, both days inclusive.

WEST COAST ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Madras, 30th November 1960. Dividend: 15 per cent. or Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 24th to 30th November 1960, both days inclusive.

BOMBAY BURMAH TRADING CORPORATION LTD. Annual General Meeting, Bombay, 2nd December 1960. Dividends: Final dividend of Rs. 530 per share, or original share of Rs. 2,500 each; Rs. 26.50 per share, on old ordinary shares of Rs. 125 each and Rs. 10.60 per share, on new shares of Rs. 125 each (Rs. 50 paid-up), all subject to deduction of tax. Transfer books remain closed from 1st to 22nd November 1960, both days inclusive.

BRITISH BURMAH PETROLEUM CO., LTD. Annual General Meeting, Bombay, 16th December 1960. Dividend: Re. 0.07 per share, final (net), payable on and after 5th January 1961. Transfer books will remain closed from 18th November to 9th December 1960, both days inclusive.

JARDINE HENDERSON LTD. Annual General Meeting, Calcutta, 22nd December 1960. Dividend: Rs. 7.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 1st to 22nd December 1960, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. *Ad-interim* dividend of 4½ per cent. or Re. 0.45 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 26th November to 5th December 1960, both days inclusive.

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO., LTD. Dividend of Re. 1.00 per ordinary share, subject to deduction to tax, for the year ended 31st March 1960. Transfer books will remain closed from 14th to 29th November 1960, both days inclusive.

SALEM-ERODE ELECTRICITY DISTRIBUTION CO., LTD. Taxable dividend of 12 per cent. or Re. 1.20 per ordinary share, for the year ended 31st March 1960.

TINNEVELLY-TUTICORIN ELECTRIC SUPPLY CO., LTD. Taxable dividend of 10 per cent. or Re. 1.00 per ordinary share, for the year ended 31st March 1960.

SYNOPSES OF COMPANY REPORTS

Cooper Engineering Ltd.

THE directors of the above Company (Managing Agents: Messrs. Walchand and Co. Private Ltd., Bombay) present the audited accounts of the Company for the year ended 30th June 1960.

The net profit for the year after providing Rs. 11,50,000 (Rs. 4,00,000) for taxation and Rs. 2,98,837 (Rs. 2,82,697) for development rebate reserve amounts to Rs. 7,78,573 (Rs. 4,61,242) to which is added the amount brought forward from the previous year of Rs. 72,169 (Rs. 63,527) making a total of Rs. 8,50,742 (Rs. 5,24,769). The directors have transferred to contingency reserve including gratuity Rs. 1,00,000 (*nil*) and to general reserve Rs. 1,00,000 (Rs. 1,25,000) leaving a balance of Rs. 6,50,742 (Rs. 3,99,769). The directors now recommend payment of a dividend on equity shares at Rs. 10.00 (Rs. 10.00) plus a bonus of Rs. 3.00 (Rs. 3.00) per share subject to deduction of tax and adjustment, absorbing Rs. 5,75,000 (Rs. 3,27,600) leaving a surplus to be carried forward of Rs. 75,742 (Rs. 72,169). The dividend for the year ended 30th June 1960 is on the increased capital of Rs. 45,19,800 (Rs. 25,20,000).

The Company has taken up the manufacture of CVR-5 *High Speed, Vertical Diesel Engine* developing 5 h.p. at 1800 RPM duly incorporating the *Ricardo Comet Combustion Chamber*. The directors also inform that GP-32" *Longest Stroke, Heavy Duty, Grade* 1 *Shaper*, ever to be made in India, was manufactured at the Company factory at Satara Road and put into operation in the machine tool division.

During the year under report the sales of oil engines, machine tools and looms, etc., have been increased by about Rs. 42,31,930 over the sales of last year. There is an increased demand for oil engines, machine tools and looms.

In respect of exports, the Company is getting a good response to the oil engines from the Middle East and Far East Countries. The Company has exported oil engines to the tune of about Rs. 4 lakhs during the year under report to Burma, Egypt, Thailand, Iran and Muscat.

The Company participated in various exhibitions where the oil engines, pumps and shaping machines were exhibited.

The construction of a new Factory of machine tools at Chinchwad is in progress and it is expected that the production will start in the near future.

The directors propose to increase the authorised capital of the Company from Rs. 1 crore to Rs. 2 crores by creation of 50.000 equity shares of Rs. 100 each and 50,000 unclassified shares of Rs. 100 per cent. each. It is also proposed that the existing unissued 50,000 5½ per cent. cumulative preference shares of Rs. 100 each be termed and known as 50,000 unclassified shares of Rs. 100 each.

During the year under report consent from the Central Government has been received approving the re-appointment of Messrs. Walchand & Co. Private Ltd. as managing agents of the Company with effect from 22nd May 1960, on the same terms and conditions as approved by the Members at the 18th Annual General Meeting held on 27th November 1958, except the terms of Office which is fixed at 5 years and remuneration which is fixed on a sliding scale. Necessary managing agency agreement has been executed accordingly.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Grob Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

Crop.—The following table shows the total crop made and the quantities sold for export and internal consumption:—

Gardens	Crop	Expenditure		Total
		Garden	Calcutta	
	Maunds	Rs.	Rs.	Rs.
Doyang	6,000	9,85,173	1,43,360	11,28,533
Dessoie	6,000	8,28,585	1,48,325	9,76,910
Kanu	11,800	14,16,226	2,90,101	17,06,327
Teen Ali	7,800	11,20,768	2,00,129	13,20,897
Total ...	31,600	43,50,752	7,81,915	51,32,667*

* Excluding expenditure of a capital nature estimated to amount to Rs. 6,96,000.

Owing to the severe drought experienced earlier this season it is unlikely that the crop originally anticipated will be harvested.

	Sold		Total
	In Calcutta for export	In Calcutta for internal consumption	
	Maunds	Maunds	Maunds
Teen Ali	6,511	568	7,079
Doyang	3,375	1,550	4,925
Dessoie	4,923	850	5,773
Kanu	9,050	1,768	10,818
Total ...	23,859	4,736	28,595

The average price realised was Rs. 2.46 nP per lb. as compared with the same price obtained for the previous season's crop of 32,205 maunds.

The Company's Export Quota for Season 1959 was:—Teen Ali 5,859 maunds; Doyang 4,751 maunds; Dessoie 3,924 maunds and Kanu 8,187 maunds.

Due to a very droughty condition prevailing in the later part of the season and owing to a severe hail damage in April 1959, at Doyang the crop harvested fell considerably short of the estimate.

The profit for the year amounts to Rs. 2,89,513 (Rs. 6,75,994). After adding to this the adjusted credit balance brought forward from 1958 of Rs. 43,281 (Rs. 96,613) and excess provision for liabilities in respect of previous years no longer required of Rs. 1,05,103 (Rs. 25,000) there is a total amount of Rs. 4,37,897 (Rs. 7,97,607). From this is to be deducted initial contribution to superannuation fund—final instalment Rs. 22,398 (Rs. 22,398) and transfer to development rebate reserve of Rs. 27,457 (Rs. 14,200) leaving a credit balance of Rs. 3,88,042 (Rs. 5,11,009 after transferring Rs. 2,00,000 to buildings and machinery reserve and Rs. 50,000 to hail insurance reserve) on profit and loss account. The directors recommend that this balance be disposed of as follows:—

To pay a dividend of 14 (15 per cent. tax-free) per cent. for season 1959, after deduction of tax, absorbing Rs. 3,26,072 (Rs. 4,65,818) and to carry-forward Rs. 61,970 (Rs. 45,191).

In September 1959, the authorised capital of the Company was increased from Rs. 20,00,000 to Rs. 30,00,000 divided into 6,00,000 equity shares of Rs. 5 each. Thereafter 1,55,272 shares of Rs. 5 each were offered and issued to the shareholders at a premium of Rs. 2.50 nP per share. The present issued capital of the Company is Rs. 23,29,085 (Rs. 15,52,725).

The estimates for season 1960 are as follows:—

Gardens	Crop	Expenditure		Total
		Garden	Calcutta	
	Maunds	Rs.	Rs.	Rs.
Doyang	6,000	9,85,173	1,43,360	11,28,533
Dessoie	6,000	8,28,585	1,48,325	9,76,910
Kanu	11,800	14,16,226	2,90,101	17,06,327
Teen Ali	7,800	11,20,768	2,00,129	13,20,897
Total ...	31,600	43,50,752	7,81,915	51,32,667*

* Excluding expenditure of a capital nature estimated to amount to Rs. 6,96,000.

Owing to the severe drought experienced earlier this season it is unlikely that the crop originally anticipated will be harvested.

Hoograjuli (Assam) Tea Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit of Rs. 3,05,064 (Rs. 50,127). Out of this provision for taxation absorbs Rs. 1,60,000 (Rs. 17,000), development rebate reserve takes Rs. 10,081 (Rs. 2,767) and general reserve Rs. 1,00,000 (*nil*) leaving a balance of Rs. 34,983 (Rs. 30,360). After adding the balance brought forward from last year of Rs. 10,955 (Rs. 5,595), adjustment from the previous year of Rs. 91,478 (*nil*) and provision for wealth tax written back of Rs. 1,952 (*nil*) the total amount available for distribution is Rs. 1,39,369 (Rs. 37,805 including Rs. 1,850 transferred from general reserve). The directors now recommend payment of a dividend at Rs. 2.50 (Re. 0.50 per share, tax-free) per share, subject to tax absorbing Rs. 1,25,000 (Rs. 25,000) leaving a balance to be carried forward of Rs. 14,369 (Rs. 10,955 after providing Rs. 1,850 for wealth tax).

The Company has extended its plantation area over 11.14 acres during the year under review. The Company has secured a crop of 8,519 maunds during the year as against 6,146 maunds produced last year. After sale, loss on handling and sampling there remained a balance of 3,234 maunds as on 31st December 1959 for sale in 1960.

It is estimated that the production in the current year will be much less than that of the year under review due to continuation of long drought over which there is no control.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Janardana Mills Ltd.

The directors of the above Company (Chairman: Mr. A. L. Govindarajulu, Coimbatore) present the audited accounts of the Company for the year ended 31st December 1959.

After deducting all working expenses and interest and providing Rs. 94,227 (Rs. 70,484) for depreciation, the year's working has resulted in a net profit of Rs. 73,103 (loss of Rs. 6,29,909). Rs. 3.459 (*nil*) and Rs. 966 (*nil*) have been expended therefrom for wealth tax and donations, respectively, leaving a balance of Rs. 68,678. This balance of profit has been adjusted against Rs. 6.29,909, the loss brought forward from last year. The balance of loss, Rs. 5,61,231, is carried over to next year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,90,000	Gross block	36,26,185
Reserves*	6,18,770	*Less*—Depreciation ...	22,28,141

		Cash ...	13,115
Rs.	33,58,982	Rs.	33,58,982

*Reserves are shown after deducting the debit balance of Rs. 5,61,231 in the profit and loss account.

Midland Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey) present the audited accounts of the Company for the year ended 31st March 1960.

Estate	*For the year ended 31st March 1960*	
	Estimate lbs.	*Crop secured* lbs.
Tea:		
Arnakal ...	15,00,000 (14,00,000)	15,01,300 (15,25,800)
Rubber:		
Mukampala ...	2,50,000 (2,25,000)	2 53,823 (2,16,055)
Perinaad ...	5,40,000 (5,40,000)	5,54,039 (5,46,177)
Sittar ...	1,50,000 (2,00,000)	4,22,490 (1,37,980)
Total ...	9,40,000 (9,65,000)	9,30,352 (9 00,212)

The tea crop for the year has exceeded the estimate, though lower than last year's. The yield per acre works out at 1,346 lbs. as against 1,397 lbs. last year. The reduction in crop is due to general adverse weather conditions in 1959. Cost of production ex-estate was Re. 1.29 (Re. 1.32) per pound. The average sale price realised during the year amounted to Rs. 2.06 (Re. 1.82) per pound. Regular shipments of the estate's teas have been sent to London during the year and the prices secured have been satisfactory.

The rubber crop secured amounted to 9,30,352 lbs. as stated above. The decrease was due to the reduction in the tapping area consequent on the replanting programme undertaken by the Company. The cost of production for the year was 98 nP (96 nP) per pound. The average sale price realised during the year was Re. 1.56 (Re. 1.55) per pound.

The net profit for the year after allowing for the usual depreciation and outgoings amounted to Rs. 12,44,566 (Rs. 9,59,406). Out of this, a sum of Rs. 6,00,000 (Rs. 4,00,000) has been provided for income-tax and Rs. 2,500 (4,000) for reserve for development rebate. This amount together with the balance brought forward from previous year of Rs. 33,748 (Rs. 2,531) makes a total of Rs. 6,75,814 (Rs. 5,41,948 after transferring Rs. 15,989 to investment depreciation reserve) available for distribution. Out of this sum, the directors have decided to pay preference dividend for the year at 6 per cent. less the tax deductible under Section 18 (3) (D) which would absorb Rs. 1,03,200 (Rs. 1,03,200), and the balance of Rs. 5,72,614 (Rs. 4,38,748) is recommended for distribution as under:—

12½ (10 per cent. tax-free) per cent. dividend, subject to deduction of tax, for the year 1959-60 on equity shares, absorbing Rs. 5,06,250 (Rs. 4,05,000) and the balance to be carried over to next year Rs. 66,364 (Rs. 33,748). The balance carried over will be sufficient to pay the increased dividend on preference capital as per provisions of the preference shares (Regulation of Dividends) Act, 1960, for which a Bill has been introduced in the Parliament. When the Bill is passed, the necessary revision for payment of the additional dividend will be given effect to and the amount of increased dividend will be paid to the Preference Shareholders.

Estimates for 1960-61—*Crop.*—Tea 15,50,000 lbs. at Re. 1.19. Rubber 9,45,000 lbs. at Re. 0.95.

The properties of the Company were regularly visited by the visiting agents and the managing agents' representatives and are reported to be in excellent order and condition. A small portion of a division of Mukampala Estate, 264.40 acres in extent has been sold for Rs. 5,50,000 and possession handed over on 2nd April 1960. It is also considered desirable to sell the balance area of Mukampala Estate at an advantageous price, in order to augment the cash resources of the Company. This will enable the Company to carry out the development and expansion schemes and particularly construction of a tea factory, on Arnakal Estate.

In accordance with the provisions of the Companies Act, 1956, Messrs. A. V. Thomas & Co., Ltd., have been reappointed as managing agents for five years from 15th August 1960.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	57,70,000	Gross block	90,79,614
Reserves ...	14,21,444	*Less*—Depreciation ...	11,84,844

		Stores, etc.	5,34,744
		Book debts	2,90,362
		Investments	1,89,035
		Cash ...	1,17,209
Rs.	94,55,431	Rs.	94,55,431

Shree Bhawani Cotton Mills Ltd.

The directors of the above Company (Managing Director: Mr. S. M. Mohta, Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The year's working shows a surplus of Rs. 8,90,362 (Rs. 4,73,146). Out of this amount provisions have been made for depreciation amounting to Rs. 6,81,113 (Rs. 2,78,704) and for development rebate reserve Rs. 2,00,000 (*nil*) leaving a sum of Rs. 9,269 (Rs. 1,94,442). To this is to be added the credit balance brought forward from the previous year's account of Rs. 7,971 (debit of Rs. 1,86,471) leaving a credit balance of Rs. 17,240 (Rs. 7,971) which the directors propose to be carried forward.

The year's working shows a considerable improvement over that of last year. Sales are higher by 18 per cent. and gross profit before depreciation by 90 per cent. The working results would have been better but for the fact that the mills experienced acute shortage of electric power during the year under review as a result of restrictions imposed on power supply by the Bakhra Nangal Hydel Project authorities due to reduced energy output caused by water shortage in the dams. The power shortage resulted in the closure of a part of the mills for a long period and there were also some sporadic shut-downs.

The cotton crop, during the cotton year 1959-60, was the lowest on record for several years and amounted to only 37¼ lakh bales as against 48¼ lakh bales for the previous year. This resulted in an acute shortage of cotton and a very substantial quantity of cotton had to be imported from abroad at prohibitive rates. The rates of indigenous cotton also rose very considerably.

The depreciation and statutory development fund provisions are higher than those of last year, but the profits for the year are still inadequate to write off entirely the up-to-date depreciation. Consequently, it has not been possible to recommend any dividend on the preference shares.

Accounts in brief are as under:

Swadeshi Cotton Mills Co., Ltd.

The directors of the above Company (Chairman: Mr. Mungturam Jaipuria, Kanpur) present the audited accounts of the Company for the year ended 31st December 1959.

After making the usual adjustments and meeting all expenses but without making any provision for development rebate or depreciation, there is a profit of Rs. 28,01,351 (Rs. 7,52,991) to which has to be added the balance brought forward from 1958 of Rs. 2,961 (Rs. 2,64,970), thus making the total of Rs. 28,04,312 (Rs. 10,17,961). Out of this amount there has been set aside for development rebate Rs. 19,00,000 (Rs. 1,75,000 for wealth tax), leaving a balance available of Rs. 9,04,312 (Rs. 8,42,961). Keeping an overall view of the financial results, the directors have not considered it necessary to make any provision for depreciation.

During the year under review the cotton textile industry in India fared comparatively better than the last year. This improvement, however, was noticeable only in the last quarter of the year. A vast majority of the mills running coarse and medium counts worked at a loss during the years 1958 and 1959. The working results of the Company's mills at Kanpur, however, resulted in profit of Rs. 26,43,396 during the year 1959 as against profit of Rs. 18,14,733 during the previous year. The Pondicherry mills suffered a loss of Rs. 9,42,265 during the year under review as against a loss of Rs. 12,04,193 in 1958. The Company's plant at Naini made a profit of Rs. 10,17,119 as against a profit of Rs. 3,15,900 in 1958. Even the Vanaspati Plant at Shegaon, which had disclosed loss of Rs. 1,73,449 during 1958 has shown a profit of Rs. 83,101 during 1959.

The directors take pleasure in reporting that the working of the various units of the Company during the year 1960 has shown very much better results. The working of the mills at Kanpur has, as usual, been up to the requisite standard of efficiency. Even the Company's mills at Pondicherry, which had been a drain on the Company's funds since its acquisition in the year 1956, has shown signs of improvement and it is expected that the losses during the current year will be considerably minimised, if not altogether eliminated. The directors are confident that if nothing untoward happens between now and the closing of the year 1960, they would be in a position to recommend the allocation of much larger amounts for the declaration of dividends.

The directors recommend that a sum of Rs. 12,00,000 (*nil*) be carved out and transferred from the reserve fund, presently showing a credit balance of Rs. 60,00,000 to be placed to the credit of profit and loss account for the specific purpose of declaration of the following dividends:—

On 35,000 preference shares of Rs. 100 each at 8.57 (6 per cent. free of tax) per cent. absorbing Rs. 3,00,000 (Rs. 2,10,000) and on 15,75,000 preferred ordinary shares of Rs. 10 each at 5.71 (4 per cent. free of tax) per cent. absorbing Rs. 9,00,000 (Rs. 6,30,000). The directors further recommend that the sum of Rs. 9,04,312 (Rs. 2,961) standing to the credit of the profit and loss account be carried forward to next year.

The Company has been making special efforts to promote export trade in textiles. To cope up with the need of the present times it is also taking steps to modernise its capital equipment in line with the latest techniques. The directors are also taking steps to install processing machinery at its Kanpur Mill with a view to change the pattern of production in order to satisfy the market demand for processed goods. The new textile mill of the Company at Udaipur which is under erection at present is, it is hoped, likely to go into production early next year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,10,00,000	Gross block	6,42,05,504

Vellore Electric Corporation Ltd.

The directors of the above Company [Managing Agents: Messrs. Chandrie & Co. (Private) Ltd., Madras] present the audited accounts of the Company for the year ended 31st March 1960.

During the year under review, the Corporation has electrified 6 villages and added to its list 1,032 new consumers bringing the total number of consumers to 12,652. The capital expenditure incurred during the year amounted to Rs. 2,59,445. The Corporation has put up 4.45 miles of H.T. lines, 25.06 miles of L.T. lines and erected 6 substations.

The following comparative statements will show the progress made during the year:

	1958-59	1959-60
Total units purchased in K.W.H. ...	1,59,81,088	1,86,63 432
Total units sold in K.W.H. ...	1,38,22,729	1,64,46.194
Cost of units purchased (in rupees) ...	5,80,460	7,61,503
Gross revenue (in rupees)	13,71,697	17,62,585
No. of villages electrified ...	57	63
No. of consumers connected ...	11,620	12,652

Tariff Rates:—As indicated in the directors' last report with increase of the supply rate by the State Electricity Board on and from 1st October 1959, the Corporation has in turn raised the tariff rates to the consumers on par with the tariff rates adopted by the State Electricity Board in their area of supply. The Corporation has not increased its rates on public lighting. There is a very great demand from prospective consumers for power and the Corporation has to carry out several extensions to see that the entire area of its licence is fully developed.

The directors have during the year under review convened an extraordinary general meeting whereby the authorised share capital was increased to Rs. 10 lakhs and since the close of the year the directors issued Rs. 4 lakhs equity share capital and they inform the shareholders that the entire issue has been subscribed for. There was a total estimate of Rs. 7½ lakhs worth of extensions on hand for which Rs. 4 lakhs have been raised by the issue of share capital. The Company had approached the State Electricity Board and the Government for a loan of Rs. 3½ lakhs out of Rs. 25 lakhs set apart by Government for advancing loans to private licensees during the year 1960-61. As this report goes to the Press the directors have intimation that the Government have allowed Rs. 2 lakhs for 1960-61. The Company may avail of the loan and thus carry out most of the obligations to the public in their licence area during the next financial year.

The profit and loss account shows a net profit of Rs. 1,02,121 (Rs. 63,997) after providing for reserve for depreciation as per Supply Act Rs. 1,56,691 (Rs. 1,34,722) provision for income-tax Rs. 85,000 (Rs. 30,000), provision for development reserve Rs. 1,000 (Rs. 20,000), provision for staff gratuity reserve Rs. 30,000 (*nil*), provision for contingent reserve Rs. 10,260 (Rs. 9,432) and provision for special reserve Rs. 11,500 (*nil*). To this is added the amount transferred from tariff and dividend control reserve of Rs. 15,866 (Rs. 11,074), the balance brought forward from previous year of Rs. 2,67,421 (Rs. 2,25,579) and excess provision for taxes made in last year of Rs. 2,093 (Rs. 8,932) making a total of Rs. 3,87,501 (Rs. 3,14,921 after including Rs. 11,074 transferred from tariffs and dividend control reserve and Rs. 5,340 being the balance in debenture security fund account). From this has been transferred to tariff and dividend control reserve Rs. 15,866 (*nil*) and to reserve for rebate to consumers Rs. 15,865 (*nil*) leaving an available balance of Rs. 3,55,769 (Rs. 3,14,921). Out of this amount the directors now recommend the payment of a dividend of 6 (6) per cent. on preference shares and 15 (10) per cent. on the ordinary shares, both subject to deduction of tax for the year ended 31st March 1960 which will absorb Rs. 67,500 (Rs. 47,500) leaving a balance of Rs. 2,88,269 (Rs. 2,67,421) to be carried forward. The dividend on ordinary shares will be paid only in respect of the capital subscribed and paid up as on 31st March 1960.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,25,000	Gross block	40,87,637
Reserves ...	9,34,990	*Less*—Depreciation ...	11,42,884
Provision for taxation ...	87,363		
Liabilities ...	20,74,160	Net block ...	29,44,753
Profit and loss account (surplus) ...	2,88,269	Stores, tools, etc. ...	2,82 230
		Book debts ...	3,54,739
		Investments	73,377
		Cash ...	2,54,683
Rs.	39,09,782	Rs.	39,09,782

VICTORIA HOUSE,
CALCUTTA, *1st November*, 1960.

Notices

CENTRAL INDIA COALFIELDS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the shareholders of the Company, will be held at the Registered Office of the Company, at 8, India Exchange Place, Calcutta 1, on Wednesday the 30th November 1960 at 3.00 p.m., for the following purposes:—

(1) To consider and adopt the Directors' Report and the Audited Accounts of the Company for the year ended 31st March 1960.

(2) To consider declaration of dividend.

(3) To elect a Director in place of Raja B. N. Ray Chowdhury who retires by rotation but being eligible, offers himself for re-election.

(4) To appoint a Director in place of Sir D. N. Mitra who retires by rotation and to consider and if thought fit, to pass the following resolution, a special notice of which, as required under Section 281 of the Companies Act 1956, has been received by the Company, and is hereby given to the shareholders.

"Resolved that Sir D. N. Mitra who has attained the age of 69 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act 1956, shall not apply to him."

Sir D. N. Mitra has rendered valuable advice from time to time since his appointment as a Director of the Company. It is desirable to avail of his valuable advice by retaining him as a Director of the Company and as such the above Ordinary Resolution shall be proposed under Section 281 of the Companies Act 1956.

(5) To appoint Auditors for the current year and to fix their remuneration. Messrs. Singhi & Co., the retiring Auditors being eligible offer themselves for re-appointment.

Special Business

(6) To pass the following resolution as a Special Resolution:—

"Resolved that the Company do hereby approve of and authorise the payment of commission at 1 per cent. of the net profits of the Company computed in accordance with the provisions of the Companies Act, 1956 to the Directors of the Company."

The Share Transfer Books of the Company shall remain closed from the 14th November 1960 to the 30th November, 1960 both days inclusive.

By Order of the Board,
HINDUSTHAN INVESTMENT CORPORATION LIMITED,
Managing Agents.

8, INDIA EXCHANGE PLACE,
CALCUTTA 1.
The 31st October, 1960.

N.B. :—(i) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE ABOVE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(ii) The instrument appointing a proxy shall be deposited at the Registered Office of the Company not less than 48 hours before the time for holding the above meeting.

(iii) *Explanatory statement with regard to the special business*:

Article 108 of the Articles of Association of the Company provides that the Directors shall be entitled to receive in each year a commission of 1 per cent. of the net profits of the Company. Although the Articles make express provision for payment of the commission as aforesaid to the Directors a view has been taken that under Section 309(4) of the Companies Act 1956, your sanction by special resolution is required for payment of the commission to the Directors. Hence the resolution is submitted for your approval.

All the Directors are to be deemed to be interested in this arrangement to the extent of remuneration proposed to be paid to them.

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninety-seventh Annual General Meeting of the Shareholders of the Corporation will be held at the Sheth Goculdas Tejpal Auditorium, Gowalia Tank T.T., Bombay 7, on Friday the 2nd December, 1960, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and audited accounts for the year ended 31st May, 1960.

2. To sanction the declaration of a dividend.

3. To elect a Director in place of Mr. Pratapsinh Mathurdas, who retires by rotation and being eligible offers himself for re-election.

4. To elect a Director in place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and being eligible offers himself for re-election.

5. To elect a Director in place of Mr. Neville N. Wadia, who retires under Section 260 of the Companies Act, 1956, and being eligible offers himself for re-election.

6. To appoint Auditors for the period until the next Annual General Meeting of the Corporation and to fix their remuneration.

7. To appoint Branch Auditors at a remuneration to be fixed by the Board.

8. To consider and if thought fit, to pass the following ordinary resolution:

"That the Corporation hereby approves of the appointment and consents to the continuance of Messrs. Montague L. Meyer (Australia) Ltd., as Sole Selling Agents of the Corporation's Timber in South Australia and the Northern Territory of Australia for a period of one year commencing from 1st July 1960 and thereafter for such further period or periods as may be deemed fit not exceeding in the aggregate five years from 1st July 1960, on a commission of 3 per cent. on C.I.F. prices, provided that the rate of commission may be decreased or increased by 1 per cent. at the discretion of the Corporation and the Agent to conform with prevailing market conditions, and provided further that the maximum commission shall not exceed 4 per cent. on the C.I.F. prices."

By Order of the Board,
WALLACE & CO.,
Secretaries and Treasurers.

BOMBAY, 18*th October*, 1960.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Corporation.

Warrants for the dividend, if declared, will be posted to shareholders on the 5th December, 1960 and will be payable on and from that date.

The Transfer Books of the Corporation will be closed from the 1st November, 1960 to the 22nd November, 1960, both days inclusive.

Explanatory Statement as required by Section 173 of the Companies Act, 1956

The Corporation, seeking to increase its sales of Timber in Australia, has appointed Messrs. Montague L. Meyer (Australia) Ltd., as its Sole Agent in South Australia and the Northern Territory for a trial period of one year, which may be extended if considered desirable. Trading conditions there are likely to vary from time to time and it is therefore thought necessary to keep the commission rate flexible; but it would generally be payable at or about 3 per cent on C.I.F. prices and would in no case exceed 4 per cent.

Section 294 of the Companies Act, 1956, requires the approval of the Corporation to this appointment, which is proposed as a Resolution under item 8 of the business of the Meeting.

THE BELAPUR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Transfer Books of the above Company will be closed from the 21st day of November, 1960 to the 20th day of December, 1960, both days inclusive, for purposes of the Declaration of Dividend.

Managing Agents.

BOMBAY, 10*th October*, 1960.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to act and vote instead of himself or herself, and the proxy need not be a member.

BANKS TO REVISE DEPOSIT RATES

(From Our Own Correspondent)

BOMBAY, 9*th November*

An event of considerable import to the short-term money market is the revision of the inter-bank agreement on maximum rates of interest on deposits. The agreement, which will come into force on Monday, the 14th inst., provides for the division of the period of deposit into several slabs and fixation of rates of interest for each slab, instead of only three slabs under the existing agreement. In revising the terms of the agreement, the banks have also increased the rates of interest on deposits by a quarter per cent. for periods over two months.

The agreement has reduced the minimum period for a term-deposit from 7 days to 3 days and the minimum notice period for withdrawal of notice money also from 7 days to 3 days.

The following are the maximum rates of interest fixed under the inter-bank agreement:

	Rate per annum
1. *For notice money:*	
(a) at a withdrawal notice of from 3 days up to and including 21 days	2 %
(b) at notice of more than 21 days ...	3 %
2. *For term deposits:*	
(a) of 3 days and over up to and including 21 days	2 %
(b) of 22 days and over up to and including 30 days	3 %
(c) 31 days to 60 days	3¼%
(d) 61 days and over, but less than 12 months	3½%
(e) 12 months and over, but less than 24 months	3¾%
(f) 24 months and over, but less than 48 months	4 %
(g) of 48 months and over, but less than 60 months	4¼%
(h) 60 months and over	4½%

The present agreement, it may be noted, provides for payment of interest for term deposits under one month and for notice money at 3 per cent. per annum, for deposits of one month and over but less than three months at 3¼ per cent. and for deposits of three months and over at 3½ per cent. The Reserve Bank has fixed the rate of interest on notice money up to and including 21 days at 2 per cent.

As in the previous agreement, banks having deposits of less than Rs. 25 crores are permitted to pay ¼ per cent. more than the above rates, except in the case of notice money and term-deposits of 3 days and over and up to and including 21 days.

The State Bank of India has accepted the suggestion that, in the case State subsidiary banks, the latter should have the discretion to offer ¼ per cent. more than the aforesaid maximum rates at the time of renewal of old deposits or accepting new deposits, only if they find that their average monthly deposits have fallen below the level at which the deposits stood on 30th June 1950.

Another important change made by the latest agreement is that, while the maximum period for a term-deposit is now fixed at two years, banks will be free to accept deposits for any length of period. Hitherto, banks could only sell savings certificates, if they wished to have funds from the public for periods longer than two years.

To revert to our customary review. Conditions in the short-term money market have again turned difficult after a slight improvement in the previous week. As a result, banks are keen borrowers and interest rates are firmly held. Inter-bank call money is being bid at 4½ per cent., House money at 21 days' notice at 2 per cent. and short-term deposits for one to two months at 3½ per cent. and for three months and over 3¾ per cent.

For the third week in succession, the discount rate on 91-day Treasury Bills has remained unchanged at 2.565 per cent. per annum. The amount offered also is no more than nominal at Rs. 2.20 crores against maturities of bills of the value of Rs. 2 crores. There have been no sales of Intermediate Bills for the fifth consecutive week, but they continue to be offered.

An expansion of Rs. 14.12 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 4th November 1960. Notes held in the Banking Department are lower by Rs. 15.40 crores. Foreign securities are unchanged at Rs. 123.01 crores, while the upward trend in foreign balances noted in the previous week has been reversed with a drop of Rs. 1.47 crores, so that the total foreign assets now stand at Rs. 141.28 crores. Deposits of the Central Government have gone up by Rs. 9.16 crores, while those of other Governments are lower by Rs. 14.05 crores. A rise of Rs. 3.24 crores is noted in deposits of banks. Loans and advances to Governments show a rise of Rs. 6.56 crores and other loans and advances of Rs. 6.87 crores.

The Scheduled banks' statement for the week ended 28th October 1960 shows a rise of Rs. 7.54 crores in demand deposits of banks and a fall of Rs. 3.20 crores in time deposits. The net rise of Rs. 4.34 crores in total deposits is mainly due to the increase of Rs. 4.29 crores in deposits of the State Bank of India. Inter-bank borrowings also are higher by Rs. 3.35 crores, while borrowings from the Reserve Bank show a significant reduction of Rs. 16.07 crores and those from the State Bank Rs. 1.49 crores. Advances have declined by Rs. 5.11 crores, but these are entirely accounted for by banks other than the State Bank. Investments are lower by Rs. 7.45 crores, of which the share of the State Bank is Rs. 4.84 crores. Cash balances are lower by Rs. 2.76 crores, despite a rise of Rs. 2.11 crores in the State Bank's portfolio. Money at call and short notice has, however, gone up by Rs. 4.70 crores.

The Gilt-edged market continues to rule easy, with a further fall in values, ranging from 5 nP to 25 nP. 3 per cent. 1986 Conversion Loan has shed 10 nP to Rs. 74.05. Among State loans, 4½ per cent. loans have hardened by 10 nP to Rs. 99.35, following the decision of the Bombay Municipal Corporation to issue a loan of Rs. 3 crores, carrying an interest of 4½ per cent. at Rs. 99.25. The loan will have a maturity of 12 years.

After an initial hardening in continuation of the previous week's trend, sterling suffered a setback with a loss over the week. In New York, spot sterling closed at 281.49-281.52 cents, after gaining from 281.64-281.67 cents to 281.72-281.75 cents. Three months' forward declined over the week from 280.43-280.46 cents to 280.37-280.40 cents. This is reflected in a weakening of the rupee in terms of the U.S. dollar, banks' selling rate for U.S.T.T. (ready) having gone up from Rs. 475.25 to Rs. 475.50. Their buying rate is, however, unchanged over the week at Rs. 472 per $100.

SILVER FIRM, GOLD QUIET

(From Our Own Correspondent)

BOMBAY, 9*th November*

An irregular trend was in evidence in the bullion market during the week under review. Thus, silver ruled distinctly firm, but gold was quiet. The firmness of silver was engendered by fears that the existing stocks (estimated at 700 bars) will not be sufficient to meet the demand in the forthcoming busy season. The speculative buying from Calcutta and Delhi, in particular, was keen. Gold, however, lacked support, thanks to reports of large floating stocks of as much as 125,000 tolas in the local market as a result of heavy arrivals of contraband metal from the West Asian region.

The daily average offtake of gold during the week was lower at 3,800 tolas, as against 4,000 tolas in the previous week, while arrivals were more, being 9,800 tolas, as against 5,800 tolas. In the case of silver, offtake and arrivals were at an average of seven bars (same as last week) and 38 bars (17 bars) respectively.

The *Margashir* (December) settlement in gold began the week at Rs. 116.65, as against the previous close of Rs. 116.80, and declined to Rs. 116.05 on Monday the 7th inst. After recovering to Rs. 116.75 today, it eased again to finish at Rs. 116.60. *Kartik* settlement went off the board at Rs. 114.75 on Friday, as against Rs. 115.75 on Wednesday last. The rate for transferring commitments from *Kartik* to *Margashir* settlement, which was against bulls, widened further from Re. 1.05 to Re. 1.45 on the 4th inst., so that the bears in *Kartik* settlement continued to pay a margin of Rs. 20 per 100 grams.

Ready gold came in for selling and receded from Rs. 115.65 to Rs. 114.65 on Monday. At this level, some support emerged and the quotation improved to Rs. 115.65 today. The closing was 15 nP lower at Rs. 115.50. The discount under the *Margashir* settlement narrowed down slightly from Re. 1.15 to Re. 1.10.

In the silver section, *Kartik* settlement ran out at Rs. 195.70 on the 5th inst., as against Rs. 195.05 on Wednesday last week. The *Margashir* settlement fluctuated between Rs. 196.60 and Rs. 198.50, before winding up at Rs. 197.65, the net gain over the week being Re. 1.05. The *badli* payable by bulls to get their commitments transferred from the near to the distant settlement, after increasing from Re. 1.45 to Re. 1.55 on Friday, declined to Re. 1.45 on the following day. On Friday, the bears were obliged to pay a margin at the rate of Rs. 300 per bar.

Ready silver met with good buying support and advanced from Rs. 194.90 to Rs. 196.65 on Monday. After declining to Rs. 195.20 on the same day, it recovered thereafter and touched Rs. 196.85 today before finishing at Rs. 196. The net rise over the week was Re. 1.10.

The world price for gold in the London bullion market moved within the range of $36-$37 per fine ounce during the week, the latest available quotation being $36¼-$36⅜. Early in the week, the South African Finance Minister urged an upward revision in the U.S. official gold price of $35. Addressing the annual meeting of the Afrikaans Chamber of Commerce at Johannesburg, he said: "I wish to ask our American friends whether it would not be in their own interests to investigate the whole problem, so that the dollar price of gold can be increased at the best time and with the least disruption." Ready gold in London rose from 256*s.* to 258*s.* on the 3rd inst., but declined thereafter and stood at 255*s.* yesterday. Ready and forward silver, however, continued to remain unchanged at 79½*d.*, as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	9-11-60 (closing)	High	Low	2-11-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	115.50	115.65	114.65	115.65

COTTON FUTURES RALLY AT CLOSE

(From Our Own Correspondent)

BOMBAY, 9*th November*

With export quota rumours set at rest by the Textile Commissioner's categorical statement that no quota would be released until such time when prices came down below the ceiling and domestic needs were covered, operators in the cotton market had nothing to speculate upon except weather and crop developments. And these did play a prominent part in influencing the price trend of cotton futures during the week under review. Early in the week, the market firmed up on keen bidding touched off by rumours that a leading cotton firm had revised its crop estimate downward to 4.8 million bales from the previous estimate of 5 million bales. The smaller arrival of new crop and brisk mill demand prompted further buying. The I.C.C. Jarilla April 1961 contract spurted from the week's opening level of Rs. 596 to Rs. 609.50 on Friday, the 4th inst. This high level, however, could not be maintained for long. A react on ensued. Profit-taking and liquidation by those who had gone "long" led to a fall in prices. Reports of further requisitioning of cotton by the Textile Commissioner and the news that more mills were applying for cotton to be requisitioned against their quotas, accelerated the downward trend. From a high of Rs. 609.50 mentioned above, the April contract declined to Rs. 596 yesterday. Today, however, there was a reversal of this trend, thanks to heavy short-covering and upcountry support. The victory of Senator Kennedy in the U.S. Presidential election, which was bullishly interpreted, imparted further strength to the market. Opening today at Rs. 601.50, the Jarilla April contract spurted to Rs. 612.25, the day's highest level, and finished at that level. Thus not only were earlier losses made up but the contract closed with a net gain of Rs. 18.25 over the week.

In the spot section, there was regular mill demand for new crop Khandesh, Mogai and Berar varieties. Punjab cotton evoked interest. Export interest in Bengal *Deshi* receded following the Textile Commissioner's announcement. Prices tended to find lower levels.

Shippers are disappointed that no export quota will be released, until at least the end of December. Foreign buyers, they argue, will not wait till the Government makes up its mind to export cotton. Bengal *Deshi* crop this season is estimated at 350,000 bales, which is 150,000 bales more than what is normally required for home consumption. It is argued, therefore, that at least 100,000 bales of Bengal *Deshi* could be safely released for export. The Government, as also the mill industry, however, thinks otherwise. It fears that a quota at the present moment will bullishly react on the domestic price of cotton and make the task of holding the price line even more difficult. Perhaps it also wants to make sure that the crop will be of the size anticipated, namely, 5 million bales.

Interest in foreign cotton was largely confined to selected U.S. cotton. Other growths were neglected. Mills and importers are agitated at the report that the licensing of the import quota for 200,000 bales of cotton from any area, announced last July, will be further delayed. It is understood that mills will represent to the Government for immediate licensing.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—*from* Sewri:

Berar 875; CO2 1,240-1,250; American on sample 1,111; Californian GM 1-5/32" 1,250; Mwanza 1,265.

Cotton futures in the Karachi market tended to ease during the fortnight under review. Although export demand and domestic mill interest were good, larger new crop arrivals exerted a downward pressure on prices. N.T.R.G. January, which was quoted at Rs. 69 3 a fortnight back, is currently priced at Rs. 68-8. The March contract is quoted 8 annas lower at Rs. 68-6. Spot prices, barring those of *Deshi* varieties, which were in good demand by overseas buyers, eased. Sind *Deshi* is quoted at Rs. 81 per maund and Punjab *Deshi* at Rs. 85. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 77-2; S.G. 81-2; L.S.S. Punjab Roller 80-2; S.G. 84-2; N.T. Roller 83-10; S.G. 89.

After having ruled distinctly firm during the first few days, cotton futures in the Alexandria cotton market steadily declined in the subsequent sessions. The earlier firmness was attributed to brisk demand from communist countries. However, as the demand dried up and new crop came to the market in larger quantities, prices beat a retreat. The closing rates are, therefore, below those prevailing two weeks ago. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being the closing rates a fortnight ago:

Karnak: November 74.60 (75.76); January 73.71 (74.85); March 73.55 (74.70).

Ashmouni: December 64.23 (65.02); February 63.95 (64.85); April 64.10 (64.85).

Trading on the Liverpool cotton exchange was fairly active during the fortnight under review. Brisk offtake in the spot market, where American and Egyptian cotton met with support imparted strength to futures section. The uncertainty about the outcome of the Presidential election in the U.S. was an unsettling factor. Nevertheless, both the American and American type contracts steadily moved up. Sudan cotton contracts in Liverpool advanced on keen buying influenced by firm advices from Khartoum. The latest available quotations—in pence per lb.—from Liverpool are as under, figures in brackets being the closing rates two week's ago:

***American cotton one inch staple contract*: December 22.90 (22.70); March 23.45 (23.15); May 23.65 (23.30).**

American cotton mixed growth contract: December 23.75 (23.05); March 23.95 (23.50); May 23.95 (23.65).

Sudan: November, January, March 35.75 (35.00).

Although the volume of trading in the New York cotton futures market was small, thanks to the uncertainties of the Presidential election, prices followed an upward trend. This was due to buying support induced by reports of adverse weather at the time of harvesting in some regions and good export demand.

The following are the latest available quotations from New York, as compared with those a fortnight and a month ago:

(In cents per lb.)

	7-11-60	25-10-60	11-10-60
Spot	32.20	32.25	32.20
December	31.68	31.53	31.41
March	32.25	32.05	31.94
May	32.64	32.40	—

ART SILK YARNS DECLINE

(From Our Own Correspondent)

BOMBAY, *9th November*

There was a fall in the values of art silk yarns during the week under review, following reports of large arrivals and slack enquiries from consuming centres. Staple fibre yarns, however, ruled firm on hopes of enlarged demand. Cotton yarns were dull. Business put through was limited and prices of all counts were almost unchanged. The Press Note issued by the Textile Commissioner regarding the regularisation of unauthorised powerlooms in the different parts of the country was noted by operators, but it had no effect on the trend of the market.

Among imported art silk yarns, 150 deniers Italy fell by Rs. 26.45 to Rs. 1,433. 120 Italy dropped Rs. 13.42 to Rs. 1,239. 150 Japan shed Rs. 2.80 to Rs. 1,521.19. 120 Japan was a shade easy at Rs. 1,309.50. In the indigenous group, National Rayons 150 Bt. cones 1st grade receded by 33 nP to Rs. 11.41 and 120 Bt. Cones 1st grade by 32 nP to Rs. 12.32. Cupressa Bemberg yarn (60 x 1) moved down from Rs. 2,259.71 to Rs. 2,224.44. December and February contracts, however, were both firm at Rs. 2,143 as against Rs. 2,138.

Staple fibre yarns tended to rise. 40 x 2 December delivery hardened by Rs. 10 to Rs. 761. February delivery rose by a like amount to Rs. 769. Spot Centurys picked up 16 nP to Rs. 8.69. But Citys eased by 9 nP to Rs. 8.82 and Kohinoors by 4 nP to Rs. 8.96.

Cotton yarns were around the last week's levels. Ten counts Podars were done at Rs. 18.12. Twenty counts Moderns and Gokaks were quoted at Rs. 23.24 and Rs. 23.12, respectively. Sixty counts Finlays changed hands at Rs. 59.59. Eighty counts Moderns were unaltered at Rs. 72, as also Finlays at Rs. 79.79 and Citys at Rs. 70.50.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	9-11-1960	2-11-1960
	Rs.	Rs.
Art silk yarn		
60/1 Cupressa Bemberg (100 kg.)		
December	2,143.00	2,138.00
February	2,143.00	2,138.00
60/1 Cupressa Bemberg spot	2,224.44	2,259.71
120 Japan (per 100 kg.)	1,309.50	1,309.53
150 Japan (per 100 kg.)	1,521.19	1,529.99
120 Italy (per 100 kg.)	1,239.00	1,252.42
150 Italy (per 100 kg.)	1,433.00	1,459.45
Staple fibre yarn		
40 x 2 December (per 90.72 kg.)	761.00	751.00
40 x 2 February .. "	769.00	759.00
40 x 2¼ Century (per kg.)	8.69	8.58
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.12	18.12
20s Gokak	23.12	23.12
30s Gokak	27.00	27.00
60s Finlay	59.59	59.59
80s Modern	72.00	72.00

* * * *

The Government of India has decided that a lenient view may be taken by regularising the unregistered powerlooms through the issue of formal permits from the Textile Commissioner subject to certain conditions. All unregistered powerlooms which were declared in the census already held by the State Governments or which were in existence on 31st October 1960 and were working with an excise licence issued before that date, shall be granted an opportunity to obtain a permit from the Textile Commissioner for continued operation under such conditions as may be prescribed by him. Every owner of an unregistered powerloom which was in existence on 31st October 1960 should submit to the Textile Commissioner an application (in triplicate) in the prescribed form for a permit, so as to reach him by 30th November 1960. Each application should be accompanied by a Treasury receipt in respect of a fee at the rate of Rs. 500 per unregistered powerloom. Unregistered powerlooms in respect of which an application for permit has not been received before 30th November 1960, will be sealed and their owners prosecuted. The penalties for such breaches include imprisonment and fine, besides confiscation of looms. The grant of permits to unregistered powerlooms will not entitle the owners to claim, as a matter of right, allotment of any quota of indigenous or imported art silk or other non-cotton yarn. They will, however, be able to avail themselves of any import entitlements for yarn which they may earn under the Export Promotion Scheme. In future, no new powerloom will be allowed to be installed except in cases where it is required for the purpose of imparting vocational training in any educational institution or for some other special purpose approved by the Textile Commissioner.

SEEDS ACTIVE

(From Our Own Correspondent)

BOMBAY, *9th November*

The oilseeds market witnessed hectic activity during the week under review, with groundnuts and castorseeds forging ahead. It is not surprising, therefore, that the Forward Markets Commission should have issued a warning to the effect that it would be "constrained to resort to severe measures to stamp out illegal trading and arrest the rise in futures prices," if the operators did not take immediate steps to halt "unhealthy speculative activity, evasion of special margins and option trading." In a communication addressed to the trade, the F.M.C. states:

"Complaints have been received that the futures prices of groundnut and groundnut oil, castorseed, rapeseed and mustardseed are being rigged up owing to unbridled speculative activity, evasion of special margins and option trading. When the Commission relaxed the special margin in respect of trading in the groundnut futures (new crop) contract, it was intended as a measure of assistance to the trade. The Commission expresses regret that at a time when arrivals of groundnut at the terminal markets are good and are gathering momentum day by day, futures prices are being continuously pushed up to higher and higher levels. The removal of the special margin with regard to castorseed has been misused, and rampant speculation is pushing up prices, particularly when no demand has developed for the new crop."

While there is considerable truth in the Commission's view, the authorities have themselves to blame for the current firmness in the oilseeds market. For one of the important factors responsible for the current spurt is the Government's own new incentive scheme for the promotion of exports of groundnut oil. The scheme raised hopes of securing substantial business in groundnut oil. The speculation was only abetted by ambiguities involved in the scheme and also by the delay in announcing the basis on which permission will be granted for exports.

The performance of seeds and oils on the export front has been generally satisfactory, which, in turn, serves as a bullish factor. In October, shipments of castor oil were higher at 3,839 tons than in the previous month. Exports of linseed oil rose from 81 tons to 107 tons. Exports of groundnut oil, however, declined by 6 tons to 23 tons. Similarly exports of oilcakes were also lower.

To revert to the market trend. The groundnut section displayed distinctly firm conditions in the beginning of the week, but gave way subsequently on fears of new measures by the F.M.C. to curb speculation. Rumours that export quota for groundnut oil under the new scheme will be restricted to about 10,000 tons also dampened the enthusiasm of bulls. The sentiment at the close was further adversely affected by substantial arrivals, which brought down values in the ready section for seeds and oils. The February 1961 contract spurted from Rs. 211.50 to Rs. 212, before closing at Rs. 208.75. Nizam bold encountered selling and declined by Rs. 2.25 to Rs. 42. Oil ex-mill fell by 75 nP to Rs. 18.60.

Cheerful conditions prevailed in the castorseed section, following bullish crop reports from Gujerat. Although there were no encouraging enquiries for castor oil from the U.S. or any other important customers, the overall increase in export of castor oil so far this year encouraged the operators to extend fresh support. The May 1961 contract gradually rose from Rs. 175.62 to Rs. 176.87. Ready Madras put on 6 nP to Rs. 34.31. Oil Commercial closed steady at Rs. 14.31, as against Rs. 14.25.

In the absence of any export demand for linseed oil, the linseed section remained dull. The May 1961 contract lost 19 nP to Rs. 33.50. Bold ready receded by 38 nP to Rs. 32.62. Linseed oil, however, picked up 12 nP to Rs. 14.37.

In the cottonseed section, February 1961 contract initially rose from Rs. 90.50 to Rs. 90.75, but drifted lower subsequently to Rs. 89. In the spot section, non-white, white and Berar were steady at Rs. 20.50 each.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	8-11-1960	2-11-1960	26-10-1960
	Rs.	Rs.	Rs.
Groundnut	208.75	211.50	206.50
February 1961	42.00	44.25	45.50

Kardi seed			

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER HARDENS

(Messrs. Parekh & Co.)

BOMBAY, *9th November*

Malabar black pepper showed a hardening tendency during the week, following reports that a couple of hundred tons were purchased by Rumania. There were unconfirmed reports that Russia was in the market for Malabar and had purchased about 400 tons. Ready ungarbled was done at Rs. 1,350 while garbled was under request by exporters at about Rs. 235. Ungarbled at Calicut was nominally quoted at Rs. 1,400. Daily arrivals in both Alleppey and Cochin are now averaging more than 100 candies. The arrivals, however, are often interrupted by rains in the area. On the onset of sunny weather, there will soon be pressure of increased arrivals at the terminal centres of Alleppey and Cochin.

Singapore is quiet but steady. Values of both white and black are steadily held at the levels of Str.$257½ and Str.$155, respectively, under repeated support by bulls. Yet, the undertone is far from healthy, as higher prices are attracting increased arrivals from Sarawak and Indonesia and overseas' markets are refusing to follow.

Spot in New York is quoted at $0.55, there being manipulated shortage of "spot" pepper, the major part being in strong hands. The present sizable margin of difference between the spot and the afloat in New York indicates that heavier unsold consignments from the sources are on the way.

There being more supply of pepper in the world market, the commodity seems to have lost appeal to most dealers in consuming countries like the U.S.A. Unless war psychosis or boosting by strong bulls from producing and consuming countries working in unison, there is the possibility of pepper prices still going lower, if not immediately, in the near future.

The harvesting season in India has begun and Malabar black will have more say in the world market from now onwards. It will not, therefore, be out of place to discuss the prospects of Malabar black pepper during the coming months.

With the possibility of Lampong new crop reaching a high figure of 20,000 tons, of Malabar new at about 25,000 tons and of Brazil new at about 7,000 tons, there will be no shortage of pepper in the world. As a consequence, the U.S.A. and other important consuming countries are likely to revert to their old policy of buying hand to mouth only. The prices of Malabar black pepper are likely to go lower, as the following factors are likely to work against any higher upward surge barring manipulation by speculators or war psychosis:

Stringency in the money market in India;

curb on the lending by banks under instructions from the Reserve Bank of India;

likelihood of reduction in the loan-limit on pepper by local banks;

uncertainty regarding the future value of U.S. dollar;

lack of holding capacity of dealers in India as elsewhere;

fear of competition from Lampong black pepper both in U.S.A. and in other consuming markets, because the major part of the production is still to be marketed;

possibility of Russia diverting some of the buyings in black pepper to Indonesia, in view of the recent bilateral agreement with Indonesia;

absence of advance sales of new crop Malabar black in the overseas markets. Hedge sales on the exchange are also comparatively poor, in view of the recent restrictions placed at Cochin. Daily fluctuations of more than Rs. 4 either way are not allowed in the operation of future trading at Cochin. There is hardly any justification for such a measure, as it is against the interest of hedge sellers and growers, particularly when Indian market for pepper is guided by the U.S.A. where daily fluctuation of 4 cents per lb. (about Rs. 18 per cwt.) even on New York Exchange is officially allowed. If at all any limit for the daily fluctuations on the Cochin Exchange is necessary it should be not less than Rs. 20 per day.

Attitude of the Forward Markets Commission against higher prices on the forward rings for almost all the commodities.

At the time of writing, the market is quiet, the exporters having already covered their requirements and under the pressure of new arrivals which are now on an increase. Ungarbled is quoted at Rs. 1,300 and garbled at Rs. 227½, with buyers awaiting developments.

Ready pepper in Bombay is nominally quoted at Rs. 258 per 50 kilos.

EXPORT TEAS SHOW MIXED TREND

(From Our Own Correspondent)

CALCUTTA, *8th November*

Prices during yesterday's export auctions were firm to dearer. Note was taken of the dearer trend in the Mincing Lane sales. Bookings of tea from Calcutta port registered a small improvement during the week, and the recent fall in this regard was expected to be reflected in U.K. stocks. In the week ended 28th October, U.K. stocks increased by 3 million lbs. to 74 million lbs., as compared to the previous week. In the Colombo auctions also, a dearer trend was in evidence, and it was stated that the Middle Eastern buyers were fully active.

It can now be stated that tea production in North East Indian gardens would be similar to that of last year. This is based on the expectation that the loss in production earlier in the year due to drought would also be made good. The proportion of common teas would, however, be higher compared to superior grades. In fact, such a shift in production has been in evidence in almost all producing countries. World production is tending higher than consumption and according to a world survey output is moving up by 2 per cent. every year. Efforts at improvement of quality would be a method by which production could be reduced.

During the week it was announced that the Tea Board would make a second interim export quota release for 1960-61 to the tea estates to the extent of 5 per cent. of the crop basis, thus bringing the total so far released to 60 per cent. of the crop basis, pending final notification of export allotment for 1960-61.

Dusts on offer during the internal sales held last week totalled 21,693 packages. The general demand was good, and prices were firm at the decline. Darjeelings were fully firm to dearer. Demand for medium C.T.Cs was fair, but the price gave way by 10 nP to 15 nP. The best C.T.Cs sagged by 20 nP. Grainy legg-cut teas eased by 15 to 20 nP, while the smaller types rose. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. dust Rs. 6.30 to Rs. 6.50, medium Assam C.T.C. dust Rs. 6.00 to Rs. 6.20, medium Assam dust Rs. 4.90 to Rs. 5.60, and medium Dooars dust Rs. 4.65 to Rs. 5.00.

The offerings during the export sales held yesterday amounted to 70,836 packages. There was a strong general demand, but prices registered a mixed trend. Keen competition was offered to Dooars B.O.Ps. and all clean black fannings recorded handsome gains on good bidding. Among Darjeelings, the better lots were fully steady but the poorer ones eased. Tippy teas were irregular, although demand was good. Among C.T.Cs, the good C.T.C. fannings were fully steady and often buoyant, but the brokens of the same category met with poor demand and lost in price. Among whole leaf grades, the better and more stylish teas were shown keen attention, while the poorer teas registered a decline. Assam B.Ps also eased, but fannings of the same category were dearer. An easing trend was also recorded in medium Assam B.O.Ps and O.Fs. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 6.50 to Rs. 7.00, best Assam C.T.C. B.P. Rs. 6.10 to Rs. 6.50, clean black pekoe Rs. 5.30 to Rs. 5.70, medium fannings Rs. 5.00 to Rs. 5.40, plain B.P. Rs. 4.50 to Rs. 4.65, medium B.P. Rs. 4.65 to Rs. 4.95, and plain fannings Rs. 4.80 to Rs. 5.10.

PLAIN TEAS IN KEEN DEMAND

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *1st November*

Sale No. 42: Approximately 650,000 kilograms were offered in Sale No. 42 held today. Quality remained unchanged. The market opened to a very strong demand which eased as the sale progressed. There was keen competition for plainer and low medium descriptions, particularly fannings of black appearance which advanced by 10 to 20 nP. There was good enquiry for mediums and good mediums which were fully firm and those with quality under this category sold at dearer rates. Highgrowns were again irregular and sold at easier rates than last. However, there were a few selected lines under this category which sold at firm rates. Whole leaf grades and a small selection of tippy teas were strong and dearer.

	1960	1959
	Rs.	Rs.
Low medium	4.35 4.70	3.82-4.08
Medium	4.70-4.95	4.19-4.74
Good medium	4.95 5.50	4.85-5.18
Quality	5.28-8.50	5.51-9.37

The average price realised in Sale No. 42 was Rs. 5.09 per kilo, as against Rs. 5.02 in the previous sale and Rs. 5.27 in the corresponding sale of 1959.

Dust Sale 'NN':—*200,000* kilograms were offered in Sale 'NN' held on 3rd inst. There was a strong general demand. Highgrowns came in for useful support at slightly higher prices than last week. All other descriptions were keenly competed for at firm to dearer rates. Residuals sold at higher levels. C.T.C. types came in for useful enquiry.

The average price realised in Dust Sale 'NN' was Rs. 4.55 per kilo, as compared with Rs. 4.52 in the previous sale and Rs. 3.96 in the corresponding sale of 1959.

Export Quota:—The market remains quiet with last business being registered at ¼ nP per kilo.

Colombo:—Only 4½ million lbs. were offered this week and met with a very strong demand at dearer rates for all descriptions, except liquoring fannings which were barely steady. Highgrown brokens advanced 10 to 25 cents, mediums and plainest sorts 10 to 15 cents, whilst lowgrowns were 7 to 10 cents dearer.

London: North Indian and other growths:—In Monday's auction, there was a strong demand, particularly for teas up to 5/6d. which advanced 1d. to 3d. Best liquoring sorts were irregular with quality.

Ceylon and South Indians:—Tuesday's sale comprised 10,124 packages. Of this quantity, 6,516 packages were from South India. The market continued strong and those teas with improved quality frequently sold at dearer rates.

As we go to press, Messrs. Forbes, Ewart and Figgis Privated Ltd., wire:

"*Sale* 43:—558,000 kilograms. Strong general demand. Plain and low medium 10 nP dearer. Medium and good medium fully firm to dearer. Best liquoring highgrowns very irregular with quality black leaf, particularly fannings, strongest feature and sometimes 50 nP dearer. Whole leaf very strong and dearer."

JUTE MARKET QUIET

(From Our Own Correspondent)

CALCUTTA, *8th November*

Following anticipations of some New Delhi move towards introduction of control on the supply of raw jute to mills, quiet conditions were in evidence in the jute market during the week under review. Prices in both raw jute and goods eased but the recession was only small. Foreign buyers of goods continued to keep away from the market and reports from the New York burlap market indicated a handsome rise in prices following a similar trend in the primary market, induced by the possibility of reduced production in India and Pakistan. The warning contained in the *Jute Bulletin* issued by the Indian Central Jute Committee against the dangers of substitution in foreign countries was considered timely. Substitution takes place at the cost of heavy capital expenditure and a come-back involves time. Stating that exports of jute goods in October had been poorest in any month for many years past, the *Bulletin* pin-pointed attention at the resultant foreign exchange loss to the country and its effects on the economy at a time when the country was passing through an acute payment crisis.

Considering the rate of arrivals, trade circles are of the view that it compared favourably with that of last year and that prices have been reacting. It is thought that things would make some improvement in the near future; perhaps the decline in prices recorded during the week was the beginning of a corrective phase needed as a matter of extreme urgency. There was hardly anything of note in the freight market for gunny as buyers continued to be silent. On Tuesday last, prices of ready goods hardened following bullish activities of local operators. Ready B. twills advanced to Rs. 180.50 from Rs. 179 and ready hessian 40" 10 oz. to Rs. 58.25 from Rs. 58. On Wednesday, prices dropped following reports anticipating stern measures to end speculation in the jute trade. B. twills declined to Rs. 177.50 and hessian 40" 10 oz. to Rs. 57.25. There was practically no business on the following day and the quotations at Rs. 179.00 and Rs. 57.00 were nominal. In the absence of genuine support, operators were under selling pressure, which on Friday forced down B. twills to Rs. 177.50 and hessian 40" 10 oz. to Rs. 55.75. The quotations at Rs. 178.00 and Rs. 55.75 over the week-end were again nominal. Over the week-end, the East India Jute and Hessian Exchange announced that all members and licensed brokers of the Association should register with the Association all transferable specific delivery contracts in all varieties of raw jute and in certain specified varieties of jute goods, passed or entered into by them on 31st October and thereafter, until further notice, within three days of the completion of the business under any of the said contracts. Although no business took place yesterday, hessian 40" 10 oz. steadied up to Rs. 56.50 but B. twills were lower at Rs. 175.50.

Fibre prices eased as arrivals increased. Northern bottoms (November-December) opened at Rs. 142 per 100 kgs. and gradually declined to Rs. 136.50 to recover to Rs. 139.25. Prices in the Narayanganj market also declined and the decline was attributed to financial difficulties in the trade and fears of Government measures to stop sale of wet jute. The improved arrivals in the agencies in India gave ground for the belief that the crop would be at least as much as that of last year. In order to enable the East India Jute and Hessian Exchange to exercise greater control over trading in transferable specific delivery contracts, necessary amendment in the by-laws has been effected by the Government. The amendments give power to the Exchange for greater regulatory control, inasmuch as it can restrict transactions in the above contracts, impose special margins and fix maximum and minimum prices.

KIPS ARRIVALS SMALL

(From Our Own Correspondent)

MADRAS, *7th November*

The inflow of stocks from tanneries was small during the week under review. Prices ruled steady, following several U.K. inquiries. Exporters to America were in the market for buff calf and buff hides, and sellers were quoting stiff prices.

Tanned goat skins were firm. Demand was mostly for top grades, while tanners were interested in selling all selections combined. Consequently, export trading was small. There was no change in the tanned sheep skins market.

The third series of German tanned skins public auctions took place on 31st October. Lower selections and substandard parcels were difficult to move. Goat skins suitable for Suede and well selected sheep skins run selections fetched attractive prices.

Shipments during October were: 2,920 bales tanned cow, 143 cow calf, 37 buffs, 150 buff calf, 402 goat and 302 sheep to the U.K.; 35 cow, 154 cow calf, 45 buff calf, 570 goat and 344 sheep to the Continent; 110 buffs, 10 buff calf and 245 goat to the U.S.; 91 sheep to Japan.

RICE DEPRESSED

(From Our Own Correspondent)

HAPUR, *7th November*

Barring rice which was quietly depressed, thanks to arrivals of new paddy in the markets, all foodgrains, including pulses, ruled steady to firm during the week under review. Sowings of wheat and other coarse grains are almost over, while the sowing of peas still continues, and the land recently vacated from sugarcane crop is being used for such sowings. Wheat at Hapur registered modest gains in the week-end to be quoted at Rs. 17.25 a maund for average quality and upto Rs. 18.37 for better farm produce. Daily arrivals of wheat, which had mounted to an average of 250 maunds last month following suspension of wheat procurement by the U.P. Government in mid-August, shrinked again to about 100 maunds these days. However, the food situation in the State is reported to have improved as offtake from the fair-price shops even in deficit eastern districts has gone down and the Government is selling wheat at Rs. 15 and flour at Rs. 16 a maund through fair-price shops. The number of such fair price shops in U.P. is reported to be more than 5,000 and stocks with Government are as much as 1,25,000 tons, including wheat, gram and rice.

Rice sought lower levels to be quoted now at Rs. 29 to Rs. 31 per maund for sela basmati, while *mainpuri* was quoted at Rs. 21.50, *ramajwayan* at Rs. 22, *raimunia* at Rs. 23.50 and *gadda* at Rs. 18.75 a maund. Supply position of rice was easy, as new crop was reaching the markets. It is reported that, overall, there will be a record crop of rice this year in the country.

Hardening trend in gram prices continued, as prices touched Rs. 17 a maund for better Punjab variety, while old stocks were quoted at Rs. 16 a maund. Local stocks were fast running down and were about 9,000 maunds now. Barley continued steady at Rs. 13 and *bejhar* was quoted at Rs. 12.25 a maund for inferior quality and upto Rs. 13 for *moongia* variety. Maize was steady at Rs. 12.50 to Rs. 13 a maund according to quality and, as maize arrivals were better from outside, local stock of maize mounted to about 17,000 maunds today. *Juwar* continued to be quoted at Rs. 13 to Rs. 14 and *guwar* white at Rs. 12.50 to Rs. 13 a maund.

In pulses, peas and *arhar* attracted good demand from grinders for *dal*. Prices stayed steady, but local stocks were fast running down. Other pulses ruled quiet, as new *urd* and *moong* were reaching the markets. Prevailing prices on Monday (in rupees per maund) were peas *dara* 12.75; farm white 14.12; peas *dal* 14.25; old peas 12; *arhar* 13 to 13.75; *arhar dal* 18 to 19; new moong 19.50; new *urd* 18.75; *massor* 14 to 17.

TIN RISES, COPPER DECLINES

(From Our Own Correspondent)

CALCUTTA, *8th November*

While there was good demand for tin and the price firmed up during the week under review, copper scrap gave way, due to lower demand following availability of virgin metal to permit-holders. News of importance during the week was the announcement that, in accordance with the new policy, the State Trading Corporation would make arrangements to import 12 tons of mercury worth Rs. 12 lakhs. The S.T.C. would also distribute the same equitably among the different consumers. It would be remembered that Mr. Lal Bahadur Sastri, Union Commerce and Industry Minister, had announced in his speech at the Import Advisory Council meeting in New Delhi a couple of months ago that, in view of the allegation that established importers had exploited the scarcity of mercury and sold their holdings at high prices, the trade would be handed over to the S.T.C.

During the week, utensil scrap sagged from Rs. 200 to Rs. 198 a cwt. and berry quality from Rs. 218 to Rs. 215. Demand was poor, in view of the availability of virgin metal to consumers. On the London Metal Exchange, electrolytic copper opened at £219¼ a ton and, after being lower at £218½, hardened to close at £222. This higher trend followed continued troubled situation at Chinquicamata and encouraging trend of consumption as determined by the figure for the month of September. Tin opened here at Rs. 565 per cwt. Demand was good, but a sagging tendency developed subsequently and the price, after being lower at Rs. 562, closed at Rs. 564. The lower trend was due to easier advices from Penang. On London, there was good demand from the Continent and the price improved to £802½ a ton from £796 earlier in the week. Electrolytic zinc opened here at Rs. 166 a cwt. and closed lower at Rs. 164, following anticipations of imminent arrivals. In contrast, the London price gained from £88½ to £88¾ per ton, thanks to higher consumption report. The local quotation for lead eased from Rs. 65 to Rs. 64 a cwt., because demand was poor as compared to the comfortable stock position.

WORLD FATS AND OILS

(*Concluded from page* 864)

years. Nevertheless, *The Times Review of Industry* says:

"....it must be remembered that world output at the end of the war had suffered a setback as compared with pre-war and that the present high level of production is at least partly the result of a series of excellent harvests, especially in the United States. Since 1938, output in the United States has more than doubled and its share of world production has risen from 16 to 23 per cent. Its share of world exports has grown from less than 2 per cent. to over 30 per cent. in the same period. It is clear, therefore, that conditions in the export market in oil and oilseeds are closely linked to the fortunes of the American crops."

The availability of groundnut, linseed and lard is likely to be reduced in the coming years, but the shortfalls are expected to be more than outbalanced by larger supplies of cottonseed, soyabeans and coconut oils. In the past few years, temporary shortages of specific types of oil have forced manufacturers to explore the possibilities of substitution, and great progress is claimed to have been made in overcoming the difficulties which such substitution entails. And it is concluded that, as the problems which attend interchange of raw materials are resolved, the ability to switch from one type of fats and oils to another will have a steadying effect on the markets.

INVESTMENT TRUST MOVEMENT

SCOPE FOR ITS GROWTH FAIRLY PROMISING

THE scope for promoting growth of investment trusts in India is fairly promising, in view of the progress of economic development under the Plans, according to a study appearing in the October 1960 issue of the *Reserve Bank of India Bulletin*. The study, analyses the main distinguishing features of two types of investment trusts, namely, management investment trusts and unit trusts and gives a brief account of the investment trust movement in Britain and the U.S. Both management trusts and unit trusts in the U.K. are reviewed, while, in respect of the U.S., open-end investment companies or mutual funds (which closely correspond to unit trusts in Britain), in view of their pre-eminence, are given special attention. The study sets out next the present state of the investment trust movement in India and its deficiencies on the basis of such data as are available. In conclusion, the study examines the scope for the development of investment trusts, specially unit trusts in India, and offers some suggestions in this behalf. The following is a brief summary of the article.

The main characteristic of an investment trust is "that it enables the investor, through a single commitment, to diversify his investments over a large number of securities and thereby reduce the risks of capital depreciation and poor dividends." Broadly, there are two types of investment trusts, namely, (i) management investment trusts which are organised and function as companies and (ii) unit trusts which, unlike management investment trusts, are created under a trust deed, which provides, among other things, for the regulation of management in regard to investment of funds. In management investment trusts, the capital may consist of ordinary and preference stocks or shares and also loan capital, including debentures. They are mainly concerned with the investment of funds thus raised, in the securities of other corporations as well as Governments. The shares of these investment companies, like those of other companies, are traded on the stock exchanges. In a unit trust, there are three parties—(i) the promoter of the trust, (i) the "trustee," that is, the trust company or bank which holds the securities and/or cash authenticating and delivering the participating certificates to the promoter, and (iii) the owners of the participating certificates who, by the act of buying these certificates (from the promoters) become *ipso facto* parties to the indenture or agreement under which they are issued. Generally, the price at which the sub-units (participating certificates) are offered by unit trusts is based on the prices of the underlying securities on the stock exchange on the day of (or on the day previous to) the sale of the sub-units and is 'loaded' to cover management and other expenses like brokers' commission. The managers stand ready to buy back the sub-units from holders who wish to dispose them off, this buying back price being also based on the market prices of the underlying securities. This ensures free marketability for the sub-units. The capital structure of a unit trust is simple. Unlike in the management investment trusts, there is only one type of capital, namely, the sub-units or the certificates of participation; there is no borrowed capital employed in the trust; ownership in the unit trust assets is direct, in the sense, participating certificates or sub-units represent directly the corresponding share in the underlying securities.

Investment Trusts in U.K.

The earliest of investment trusts in the U.K. were established in 1863. The progress of the movement in the first two decades was rather slow, but, with the advent of the second industrial revolution and the prosperity which followed, the movement derived a special stimulus. The years since 1900 till about the outbreak of World War I were marked by great expansion in the U.S. railroads and a good part of the huge amounts of capital involved was financed by British investors through the medium of investment trusts. The years 1924 31 witnessed a significant expansion; by 1931, there were about 190 investment trusts with a total paid-up capital of about £250 million. British trusts were, by and large, able to pull through the crisis of the depression years, mainly because of the sizable reserves which had been built up through a conservative policy of investment and dividend distribution. The growth of the movement in the post-war years upto 1953 was somewhat slow, due mainly to the complete ban imposed on new issues of over £50,000 by investment trusts. After 1953, reflecting partly relaxation of restrictions on capital issues but mainly as a result of capital appreciation, the assets of investment trusts have grown substantially. According to the Committee on the Working of the Monetary System (Radcliffe Committee), the combined assets of 256 out of 282 members of the Association of Investment Trusts in 1957 amounted to a market value of £1,142 million, as against £619 million in 1949.

The unit trust movement in the U.K. is comparatively a later development, having originated in the U.S. The first unit trust in the U.K. was established in 1931. The progress of unit trusts in the U.K. was marked in the late 1930s. By March 1939, 96 unit trusts had been formed, their net assets being estimated at over £80 million. In the years immediately following the war, this momentum in the growth of the movement was not sustained. Like the management investment trusts, the growth of unit trusts in the post-war years was also cramped by the operation of the Capital Issues Control. In 1959, the movement appeared to have received a fresh impetus. The total funds of the unit trust movement at the end of 1959 were estimated around £200 million which are double those a year ago. Allowing for capital appreciation, new money attracted into the movement in 1959 was placed around £50 million.

Investment Trusts in U.S.A.

In the United States, the investment trust movement did not make any significant progress till late in the 1920s. Following the widespread failure of management trusts in the depression years, due partly to abuses on the part of management, fixed unit trusts became popular. The popularity of fixed trusts, however, proved short-lived. Many fixed trusts which carried railroad stocks in their portfolios suffered a sharp diminution in earnings in the 1930s, mainly because of the setback in railroad profits and partly because of the high costs of management. It is the management trusts that recorded sustained growth and at present dominate the American trust movement. The article distinguishes two types of management investment trusts, namely, closed-end investment companies and open-end investment companies. The latter, which correspond closely to British unit trusts, have recorded sustained progress in post-war II years, and hold at present a pre-eminent position among American investment companies. As of December 1959, the assets of 155 member-companies of the National Association of Investment Companies reached a new high of $15.8 billion. The number of shareholder accounts touched 4.3 million.

Investment companies are important among institutional stock holders in the U.S. According to an estimate made by the Securities and Exchange Commission, out of the estimated total holdings of $66.5 billion of common and preferred stocks as of 31st December 1954 by all institutions, investment companies (closed and open-end together) accounted for $9.1 billion or about 14 per cent.—next only to that of personal trusts and more than treble the holdings of life insurance companies.

Investment Trusts in India

Investment trusts developed in India much later than either in the U.K. or the U.S. Although the first investment trust in India was reported to have been formed in 1869, effective development of the movement is said to have commenced only in the 1930s. The reasons for the late development lie basically in the low volume of savings available for investment, as also partly in the absence of adequate investment outlets conducive to the promotion of investment trusts. Industrialisation and along with it, the growth of the joint-stock enterprise in India were slow to emerge and their growth was not significant in the initial years. The setting up in 1933 of the Industrial Investment Trust Ltd. by a prominent firm of stock brokers in Bombay (Messrs. Premchand Roychand and Sons who act as its Secretaries and Treasurers) marked the beginning of the phase of growth of investment trusts in India. A few important and large investment trusts were established in 1936. In the following year, the House of Tatas launched the Investment Corporation of India Ltd. Along with these, there was a spate of relatively small investment trust companies, most of which, however, were of the 'bucket-shop' variety. With the break in prices in 1937, most of such investment companies went into liquidation. During the world war (II) years, there was an impetus to the investment trust movement mainly because of the interest evinced by a number of managing agents in establishing investment trust companies. As of March 1959, the total number of both public and private limited investment and trust companies was 595 with a paid-up capital of Rs. 37.7 crores, as compared with 122 companies with paid-up capital of Rs. 15.2 crores in March 1936. Of the 595 investment and trust companies as of March 1959, only 5 companies had a paid-up capital each of Rs. 1 crore and above; 4 companies Rs. 50 lakhs and above but below Rs. 1 crore each and 17 companies Rs. 25 lakhs and above but below Rs. 50 lakhs each; at the other end, over one-half (305 companies) had a paid-up capital below Rs. 1 lakh each and more than one-fifth (131 companies) Rs. 1 lakh and above but below Rs. 5 lakhs each.

According to available data (in respect of 32 companies) mainly relating to the year ended 1956-57, except in a few major cases, paid-up capital consisted virtually of ordinary share capital. The stated objects of several companies included many which were not at all relevant to investment business proper.

The pattern of investments of investment companies reflected the association with managing agency or other industrial groups; in the case of several companies, such investments were spread over a few companies only, some of which were either *private* limited companies and among the rest were many companies whose shares were not quoted on the stock exchanges. By and large, there was little or no evidence of disinterested diversification of investments. Two notable exceptions mentioned in the article are the Investment Corporation of India Ltd. and the Industrial Investment Trust Ltd.; the former had, as on 30th June 1959, investments of the order of Rs. 3.96 crores, distributed among as many as 400 different securities; the latter had, as of 31st December 1959, investments of the order of Rs. 1.31 crore spread over about 200 securities.

The concluding section, which discusses the scope for development of investment trusts in India, makes some suggestions regarding the broad lines on which unit trusts can be organised in India—a proposal recommended by the Committee on Finance for the Private Sector (Shroff Committee: 1954). Considering the essential requirements for the successful launching and operation of unit trusts such as the integrity and proven record of the sponsoring management group, experience in investment techniques, contacts with the relatively big corporate houses, and a fairly large organisation on a countrywide basis, the article suggests that some of the more prominent industrial houses, brokers' firms and insurance companies would seem to be the appropriate agencies to organise and sponsor unit trusts in India. The possibility of some of the existing well run investment trusts organising unit trusts or converting themselves into unit trusts is also suggested; the availability of suitable blocks of portfolio securities and investment experience accumulated over a long period of time are points mentioned in their favour.

In a scheme for the promotion of unit trusts, tax concessions have, according to the article, a significant place. It is pointed out that, in spite of super-tax concession, the few relatively large investment trust companies in India, which function on the lines of true investment trusts, were not able to provide sufficient attraction to the small investor in the matter of returns offered as well as capital appreciation. It appears that, in fostering the promotion and growth of unit trusts in India, there is a strong case for exemption of the trust income from tax. Under the new scheme of taxation, an investor who resorts to the unit trusts is worse off than if he were to invest directly, other things remaining the same. For the investment income of the trust will be subject to income-tax (its income being, however, exempt from super-tax) and this income will again be subject to tax (deduction of tax at source) when this income is distributed by the unit trust as dividends to unit holders. To meet this situation, the article proposes that, in addition to exemption from super-tax, the unit trust income should also be exempted from income-tax; the concession should be extended to investment trusts also. The grant of this concession would, of course, be subject to suitable safeguards against abuse.

Looking to the safeguards and protection to the investor, a measure of regulation of the unit trusts in India is also proposed. The Investment Company Act 1940 in the U.S. and the Prevention of Fraud (Investments) Act, 1939 in the U.K. are mentioned as useful guidance in this regard. Since at present the investment and trust companies in India are organised and function under the Companies Act, there being no separate statute, it is considered convenient to bring the investment and trust companies and the proposed unit trusts togther under a separate piece of legislation. The article concludes that, in the task of mobilisation of resources for progressively bigger plans, there is need to experiment with the creation of new financial intermediaries to appeal to the varied interest and preferences of the investing public and that unit trusts would also contribute to the democratisation of industrial share ownership and, thus, to the furtherance of some of the objectives of the Directive Principles of State Policy.

MARKET GOSSIP

(Concluded from page 851)

to keep the economy and defence apparatus in good order. Will the U.S. authorities permit the gap between gold reserves and short-term liabilities to widen? Will the strategic minimum level itself be lowered? He will indeed be a bold man who can predict how the new Administration will tackle the problem. But one thing is certain. The new U.S. President, Senator John Kennedy, has unequivocally reiterated that there will be no devaluation of the dollar.

In U.S. banking circles, however, the present strain on the dollar is not considered as anything more than a passing phase. Currency experts are of the view that, looking ahead, there is no reason to doubt the strength of the dollar. Thus, according to the *Monthly Letter* of the First National City Bank of New York, the dollar is still a "strong and desirable currency." Other currencies, backed by productive economies and large monetary reserve also, have, it admits, grown strong and become increasingly desirable. It draws pointed attention to the fact that, in addition to its gold reserves, the U.S. has considerable short-term and long-term assets abroad. The long-term assets exceed long-term investments of foreigners in U.S. by some $28 billion. Indeed, year after year, U.S. investments abroad are larger than the combined increase in its short-term indebtedness to foreigners and its gold loss. Nevertheless, considering what has happened, the Bank's *Monthly Letter* thinks that it will be necessary for the U.S. to be watchful of its "international solvency and sensitive to weakening of confidence in the U.S. dollar as a standard of value equivalent to gold and the common denominator in international financial settlement." Much, of course, will depend upon the monetary and fiscal policies of the Democratic Administration. In this connection, the *Monthly Letter* concludes thus:

"... it is clear that we will need to exercise more discretion than at some times in the past in the use of economic stimulants. Specifically, we can no longer afford to carry cheap money to extremes or let go the reins on Government spending. ... We need to find fiscal policies, such as tax reforms, which can check recessions and stimulate creative effort and growth without opening the floodgates to inflation."

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CI. No. 2590 BOMBAY, 19th NOVEMBER 1960 PRICE Rs. 2

HASTY DECISION ON CLOTH PRICES

THE vigilance that is being exercised by Members of Parliament over the trend of prices, especially of consumer goods, is something about which the electorate could be legitimately proud. White sugar and cotton piece-goods made by mills evoke greater concern among them than any other manufactures. Neither brown sugar nor cloth made by handlooms hardly receive similar attention, whatever might be the extent of rise in their prices. This is not surprising, because of the numerical superiority of the manufacturers of these cottage-industry products over those of the mill-made goods. Any criticism of the former set of producers or the distributors of their products will be politically inconvenient. But in this country of have-nots, underemployed farmers and disgruntled employees, it pays politicians to criticise, from all available platforms, the large-scale manufacturers of piece-goods and white sugar and to keep the Ministers concerned on their toes. As many as 27 members of the Lok Sabha, for instance, participated in a short-notice question on cloth prices this week. It was almost the first subject to figure in the question hour on Monday, when the House reassembled for the winter session. Mr. Nityanand Kanungo, Minister for Commerce, and Mr. Lal Bahadur Shastri, Minister for Commerce and Industry, explained the steps taken for bringing down the prices of cloth. The latter averred that he was not satisfied with the extent of fall in prices and sounded a note of warning to millowners and cloth merchants that, if prices did not decline further, the Government would have to resort to price control and rationing. This warning seems to have had at least one effect, namely, assuage the sense of anxiety displayed by the not inconsiderable number of M.Ps over cloth prices. These guardians of the public would have served the interests of consumers better had they paid some attention to the basic causes for the rise in cloth prices and the steps taken to eliminate them. Had they done so, they would have had an occasion to comment on the failure of State Governments to take energetic measures for stepping up agricultural production and of the Central Government to act in time for averting a rise in price levels. Price variations are only the outcome of changes in the demand and supply situation. Cloth prices would not have gone up, if production had been allowed to move ahead of demand. Defects in Government policy over a number of years constitute the basic cause for the plight of consumers of cloth. It is to these—they are well known to readers of *Commerce*—that Members of Parliament must address themselves, instead of frequently nibbling at the problem.

Their superficial approach is actually compelling the Government to think in terms of palliatives which, while providing some short-lived relief, aggravate the malady in the long-term. The industry concerned becomes the victim of a chronic disease, needing crutches and sedatives for ever. There is good reason to fear that the cotton textile industry will soon be in that position, unless the Government's approach undergoes a refreshing change before it is too late. The threat of introducing controls and rationing is unnecessary and undesirable. The cloth situation is now well under control. The upward trend of prices has not only been arrested but actually reversed. After some initial mistakes in regard to securing cotton which could have been avoided if the industry's advice had been heeded, the Government acted generously and energetically in allowing massive imports of foreign cotton to make up for the drastic shortfall of nearly 1.3 million bales (of 400 lbs. each) in domestic production. As a result, production of cloth has been kept up. In the first half of the year, there was a lot of speculation in cloth and yarn, and prices were boosted. The price increases, according to millowners' own admission, were greater than warranted by the substantial rise in the prices of cotton, stores, spares and labour. There was undoubtedly a need for taking preventive measures and the industry's spokesmen themselves volunteered to take the initiative. Even at that time, when there was some justification for contemplating statutory controls over prices and distribution, the Government of India wanted, rightly in our opinion, to avoid them. Now, when the situation is easier and, what is more, the prospect of a further improvement is bright, why should the Government think and talk in terms of resorting to the use of these weapons? We see no compelling reasons.

Thanks to an improvement in weather conditions and the high level of prices realised by farmers last year, the cotton crop now being harvested promises to be in the neighbourhood of five million bales. It is true that the cotton supply position is nevertheless not that comfortable to permit free trading in the commodity. The authorities have realised this and taken a series of steps to prevent speculators from boosting the price and cornering of stocks by mills that are more happily placed in regard to resources and managerial talent. With this safeguard, it should be possible to keep the prices of cotton well within the ceilings. Thus, the main factor that generated an upward movement in cloth and yarn prices is well under control. The more than informal, but broadly workable, price control evolved by the spokesmen of the industry seems to be functioning fairly satisfactorily and has put an end to hoarding by merchants. If the present dear money policy is kept up, and there is no reason why it should not be, revival of hoarding will become pretty difficult. With production being maintained at a high level, the availability of cloth bids fair to increase in the coming months. And, if the mills succeed in getting cotton at the ceiling prices, they should be able to sell their production even below the prices which are now being stamped. They can at least compete more effectively in the export markets, now that they will be paying for cotton about Rs. 150 per candy less than they did in the 1959-60 cotton season. The Government's objective should, therefore, be to create conditions of normalcy for the industry and trade, so that they can plan their production and marketing programmes in peace and in accordance with the requirements of consumers. Indeed, the aim should be to do away with even the present informal price controls. The time and resources that will have to be expended in working out fair prices and in enforcing them may be more profitably utilised for planning expansion of production and improving the industry's efficiency. There can be no two opinions that these are the only two ways in which both the domestic and export markets can be effectively served.

For these reasons, it was unnecessary for the Government to have referred the question of fair ex-mill prices to the Tariff Commission, which is already overworked and short-staffed. It is true that some of the industry's spokesmen themselves were in favour of this course as well as introduction of statutory price controls. They, however, voted in favour of this approach out of despair. They were tired of charges of profiteering repeatedly levelled against the industry and of the pressure from the Government for further and still further reduction in prices. They thought that, if the matter were referred to the Tariff Commission, they would get a better deal than the arbitrary manner in which the Ministry of Commerce and Industry was insisting on a cut in the mills' selling prices. They favoured statutory price controls as a protection against their being maligned by politicians and labour leaders and made scapegoats of the Government's omissions and commissions. They also thought that that was the only way to make the black sheep in their midst observe the fair prices. They were right in this, because gentlemen's agreements had not been a success in the past. The Government, too, preferred the Tariff Commission's chit of fair prices to protect itself against unfair criticisms in public and Parliament.

The Tariff Commission may provide a cover against public criticism for both the industry and the Government. But such a cover may conceivably go against the long-term interests of consumers. Since cloth is produced in thousands of varieties by units of varying standards of efficiency and equipment, as well as locational advantages and disadvantages, fixation of fair prices in a manner that will not retard the modernisation of the industry and its growth along lines suited to consumer preferences will be an extremely difficult, if not an impossible, task. To fix fair ex-factory prices for bulk commodities with fewer varieties and standard specifications such as steel, cement and sugar is one thing and to fix prices for thousands of varieties, almost each with varying specifications, is another. Even in the case of a commodity like paper which has fewer varieties than cloth, the Tariff Commission's recommendations were far from satisfactory and the consumers' interests have not been fully protected in terms of either quality or types of paper. Nor is the past experience of the Tariff Commission's price fixation of cloth and yarn happy from the point of view of investors and consumers alike. Public memory is proverbially short. There can be no full-fledged price control without a strict control over the varieties and sorts of cloth to be manufactured. The reimposition of such detailed controls will result in an era of stagnation, instead of vigorous growth, for the textile industry which can thrive only under fair competitive conditions. It is suggested by some that price controls on a consumer necessity like cloth will be essential for the success of the third Plan. This is true only on paper, for the price stability under a system of controls will be of a phony type.

TRADE AND DEVELOPMENT AID

THERE is enough awareness in the West of the daily widening gap between the less-developed countries and the rest of the world. There is also equal awareness of the need to bridge this gap in two related ways. The first of these, to which the Vice-Chairman of the Contracting Parties to the G.A.T.T. referred in his closing address to the recent inaugural meeting of the 1960-61 Tariff Conference at Geneva, is to promote the exports of the lesser developed areas in the markets of the highly industrialised countries. This could be done by the advanced countries reducing the tariffs on those products which are of special interest to the poorer countries such as coffee, tea, cocoa beans, tobacco, oilseeds, certain manufactured products like textiles and light engineering goods. And the other way, to which the G.A.T.T. Annual Report on International Trade in 1959 has referred, is to help the non-industrial countries to raise their *per capita* income from the present (1960) estimated figure of 100-125 dollars to 160 dollars by 1969 and thereby bring about an annual *per capita* rate of economic growth of 3.2 per cent. during the nineteen-sixties, as against an average rate of 1.8 per cent. in the fifties. This could be done by stepping up foreign aid to these countries to the level of about £2,000 million (about Rs. 2,667 crores) a year for the next decade.

All this renewed awareness of the poverty of the non-industrial countries and of the need to assist them more effectively has stemmed from some disquieting trends in world trade in the last year. That the long-term tendency for the value of exports of non-industrial areas to industrial countries to rise less than world exports as a whole has probably come to a halt, in spite of a low level of prices for primary products, is not such a redeeming trend as it may seem, for it has been accompanied by a sudden drop (in relation to world trade) in the imports which the non-industrial areas received from the industrial countries. The trade deficit of the non-industrial areas, which had been of the order of $2,600 million (f.o.b.) in 1957 and 1958, practically vanished in 1959. This may be welcomed from the short-term financial point of view, but, as the G.A.T.T. report rightly emphasises, "it reflects, since it was brought about not only by larger exports but also by smaller imports, a decline in foreign supplies to the non-industrial areas, the continued flow of which is an indispensable condition for sustained improvements in the standard of living in the developing countries." In other words, the non-industrial countries have been compelled by balance of payments difficulties to reduce their developmental imports. Since this is a general trend, all developing countries, including India, have an interest in exporting to the industrial areas not only more primary products but also some industrial goods which they have begun manufacturing. It is in this context that the G.A.T.T. Executive Secretary's statement that "the older industrialised countries will have to surrender some sector of light manufactures to new industries in the developing countries, finding their compensation in concentrating on the more specialised and dynamic forms of industrial production on which their economic growth in any case depends," acquires a good deal of significance. It only needs to be added that, if such a fruitful and imaginative international division of labour can be brought about and international trade expands as a consequence, it will be in the interest of the richer countries themselves which, then, can reduce correspondingly the aid by way of loans and grants they are being called upon to give either on a bilateral or on a multilateral basis. In the ultimate analysis, the best form of development aid would be to enable the non-industrial countries to earn more surpluses on their trading accounts.

That, in broad outline, is the background against which two special studies forming part of the G.A.T.T. report for 1959 would need to be examined here. In the first study analysing trade between industrial and non-industrial areas during the period 1953-58 are given a number of findings, the chief of which are:

(1) The non-industrial areas exported to North America and Western Europe during the period on an average about 11 per cent. of the volume of their food production and about 40 per cent. of their production of agricultural raw materials and mining products which, respectively, accounted for almost one-tenth and one-fourth of the consumption in the industrial areas. North America and Western Europe exported 6 to 7 per cent. of their manufacturing production to the non-industrial areas, which covered about one-third of the consumption in the latter.

(2) The hypothesis set forth in earlier G.A.T.T. annual reports concerning a smaller increase in export proceeds of the semi-industrialised than of the purely primary-producing countries seems to be confirmed also for the period 1953-55.

(3) For the period as a whole, exports of manufactured goods to the non-industrial areas grew much faster both in value and in volume than the industrial areas' imports of primary products.

(4) The share of imports of manufactured goods from North America and Western Europe which non-industrial areas as a whole could finance from current income fell during 1953-58 from about 90 to 65 per cent. The increasing deficit was balanced by an increase in capital transfers of about $4,500 million, of which more than $2,500 million were official donations and official and private long-term capital made available by the industrial countries.

(5) The increasing share of exports of manufactured goods financed by capital transfers added during 1953-58 about $3,000 million at 1953 prices to the exports of the industrial areas. During the same period, the increase in export earnings of the primary-producing countries raised the volume of exports only by $1,000 million. Thus, the increase in capital transfers cushioned the repercussions of the relative decline in export earnings of the non-industrial areas on exports and production of the industrial areas, especially in Western Europe, where such transfers, though they came mostly from the United States, had a clearly positive effect on activity in manufacturing industries.

(6) Changes in the terms of trade gave North America and Western Europe an increase in real national income which can, for the period as a whole, be roughly estimated at about $2,800 million at 1953 prices. At the same time, however, the changes in terms of trade decreased the import capacity, and probably also the imports, of the non-industrial areas by about $1,700 million. Nevertheless, there was a net gain from improved terms of trade for the industrial areas of about $1,000 million.

While the above findings are mostly self-explanatory, some comment would still appear to be useful. The second finding that the export proceeds of the semi-industrialised countries have registered a smaller increase than those of other primary producing countries has a particular relevance to India. As this is a semi-industrialised country, it has the patent need to increase its export earnings by exporting some of its manufactured goods to the industrial countries from which it has to import capital goods and machinery for its further industrialisation. If it is possible for the industrial countries to trade more and more among themselves by dealing in manufactured goods, it should be possible for them to import from India too such goods to some extent. But the scope for this trade will be restricted, if Britain places a ceiling on imports of cotton goods and W. Germany restricts imports of sewing machines by subjecting them to a heavy import duty. The last three findings, taken together, show that the trade deficits of the non-industrial countries have been balanced by capital transfers from the industrial countries and that such capital transfers have financed the exports of manufactured goods from the industrial countries and thereby increased the level of their employment and industrial production, as well as of their real national income. Since these capital transfers have mostly come from the United States, it is clear that that country has contributed as much to the continued prosperity of the industrial countries as to the development of the non-industrial countries. Whether the United States will be able to make a greater contribution of this kind in the sixties in the absence of general disarmament and of greater collaboration from the other industrial countries is a moot question, President-elect Kennedy's abundant goodwill notwithstanding.

The second study contained in the G.A.T.T. report is related to the first, for it deals with the trade developments and economic progress of the non-industrial areas during the nineteen-fifties and the prospects for the future. The main findings of this study are:

(*a*) The most conspicuous trend in the trade development of the non-industrial countries over the past decade has been the continuous widening of the trade gap since the end of the Korean boom, a gap which had assumed an alarming magnitude by 1958. The growth in imports reflected the marked increase in the volume of investment and the expansion in secondary production. Besides substantial imports of capital goods and raw materials for industry, the low-income countries also imported large quantities of foodstuffs. Notwithstanding the substantial growth in domestic production of manufactured goods (by about 50 per cent., during the fifties), the total import expenditures on consumer goods were almost maintained.

(*b*) Despite the attainment of a high annual rate of growth in the nineteen-fifties—about 3.8 per cent.—in the national income of the less-developed countries, their average *per capita* income rose from $103 in 1950 to $119 in 1958, recording an annual growth rate of only 1.8 per cent. This was because of a 2 per cent. annual increase in their total population during the period.

(*c*) The persistent tendency for aggregate import expenditures to continue far in excess of such import capacity as is generated by actual exports, especially since the mid-fifties, constituted the most striking and, at the same time, the most disturbing feature of the trade developments of the non-industrial countries in the course of the last decade. Though the deteriorat on in the balance-of-trade position during the fifties was to a large extent cushioned by the supply of loans and aid and by drawings on foreign exchange reserves, the accumulation of foreign claims and the burden of servicing debts which the inflows of aid involve, are factors which may give rise to serious stresses and strains in the future course of trade and payments. While unprecedented massive amounts of investment aid, largely in the form of capital goods, would no doubt continue to be vitally needed to push forward the economic development of the non-industrial world, the problem of achieving a manageable trade balance in the nineteen-sixties would remain no less important.

These findings, again, are broadly as relevant to India as to other less-developed countries. Only one qualification is needed in so far as the applicability of a part of the first finding to this country is concerned. It is that, with the substantial growth in domestic industrial production in India, the total import expenditures on consumer goods have come to be progressively curtailed from year to year. Although India's position as a semi-industrialised country is thus somewhat different from that of other less-developed countries, its continued imports of food both on commercial and on P.L. 480 accounts suggest that its industrialisation is yet to grow to the point of having a massive dynamic impact on its agricultural production as in the United States and in Japan. The problem of achieving a manageable trade balance in the sixties in so far as India is concerned would have to be tackled in two major ways—one by greater exports of industrial goods to industrial as well as other non-industrial countries and the other by greater domestic production of foodgrains and agricultural raw materials. If the increases in imports of industrial raw materials essential for sustaining domestic production are paid for by such export earnings and by savings in the import bill for food, cotton, jute, etc., future development aid will have the more beneficial effect of pushing forward India's basic and heavy industrialisation which is still marking time.

The study's findings and conclusions in respect of capital transfers from the industrial countries in the nineteen-fifties and of capital needs of the non-industrial countries in the sixties are of great interest as much to India as to other less-developed areas. The aggregate total of the private capital flow (including re-invested profits), governmental assistance and multilateral economic aid to the low-income countries ran, according to the study, at an annual level of about $5,000 million during 1956-58, of which official grants alone accounted for about $1,500 million, originating mainly in the United States and directed to a limited number of countries. But long-term credits, carrying low interest rates, which could be repaid in local currencies were in extremely short supply during the nineteen-fifties. As for the sixties, the study forecasts greater availability of international financial assistance because the capital resources of the World Bank have been doubled, the I.M.F. quotas have been increased by 50 per cent., the International Development Association has commenced working, the Inter-American Development Bank is shortly beginning its operations, and virtually all the industrialised countries are now in a position to pool their energies to furthering the development of non-industrial countries. But this should also be accompanied by appropriate trade policies "directed to the sound use of economic resources," for trade and development aid are interrelated things. Since the estimated total import expenditures of the less-developed countries would rise progressively from $34-40,000 million in 1960 to $47-55,000 million in 1969 (at c.i.f. prices of 1960) and since external assistance to the tune of $12,500-$13,000 million a year, estimated on the basis of one set of assumptions, will not be available to finance all their additional import needs, they will have to place their reliance, in the last analysis, on an expansion of exports. It is here that the G.A.T.T. report has clinched the argument that "it would be unrealistic to envisage a continued economic growth for at least some developing countries—India at its present level of development is a classic example—without a growing volume of exports of their manufactured goods" such as cement, rayon and cotton textiles, diesel engines, bicycles, hardware items, and a wide range of light engineering products. Although there is nothing new in this idea—it has, in fact, been broadly accepted by the developed countries—it is yet to be implemented in actual practice. The G.A.T.T.'s support to it is, therefore, welcome.

MARKET GOSSIP

Special Deposits

SOON after we went to press last week, the Reserve Bank of India announced its decision to return to banks half of the special deposits collected by it from 11th March 1960 and also to suspend, for the time being, the additional reserve requirement in respect of increases in deposits that take place over the level as on 11th November 1960. This decision has been welcomed by banks in the spirit of something is better than nothing. They would have been happier if the whole of the impounded deposits had been released, as had been requested by them. The Reserve Bank, however, has chosen to go slow. The way in which the order has been issued by the Reserve Bank suggests that, in some cases, the banks may still have to keep special deposits in certain circumstances. Thus, if the level of deposits of a bank were to fall below the level that was obtaining on 11th March 1960 and rise again, 25 per cent. of that increase would have to be kept with the Reserve Bank. But, if the increase were to exceed the level as of 11th November, no additional deposit would be required. The point to be borne in mind, in this connection, is that the entire additional reserve requirement has not been suspended; it has only been modified.

Unlike the Bank of England, the Reserve Bank does not show separately the special deposits made by the banks. It is, therefore, difficult to indicate the exact amount of funds, representing the surplus, that has been released to banks in the light of aforesaid changes. But knowledgeable circles place this amount at between Rs. 16 crores and Rs. 18 crores. The effect of this development on the money market is perceptible. There are more lenders than borrowers among banks and the inter-bank call money rate has fallen from 4½ per cent. to 4 per cent. Selling of Government securities by banks has abated to a considerable extent. The share markets, too, are a little cheerful. But all this is only a change in sentiment. The amount now released will soon get absorbed in meeting the seasonal demand for bank credit. It is equal to only about 10 per cent. of the additional funds that will be required by banks between now and April next. The money market will, therefore, become tight again.

The banks had also suggested to the Reserve Bank to lift the ceiling of 2 per cent. on deposits up to and including 21 days. In other words, they wanted to revive the system of house money of seven days' notice, fetching as much as one to two months' deposits. The Reserve Bank has turned down this suggestion.

The banks are keen that the Reserve Bank should resume its support to the Gilt-edged market. So far, there has been no change in the earlier decision of the Reserve Bank to keep out of the market. The moment it decides to reverse this decision, it will be faced with large parcels of Government securities. With deposits with banks not growing by any worthwhile extent, how will the banks be able to meet the seasonal expansion in the demand for credit, except by lightening a part of their investment portfolio? They can, of course, borrow from the Reserve Bank, but they will have to pay interest at the stiff penal Bank rates. But, if the Reserve Bank were to relent and buy Government securities from banks at rates giving yields that are appreciably below the penal Bank rates, the object of dearer money policy would be neutralised to a considerable extent. Some of the banks, however, would be happy and contented, if the Reserve Bank were to give an assurance that it would not place a limit to the amount which the banks could borrow at the top penal rate of six per cent. In effect, this suggests that banks would be quite prepared to pass on to their clients the incidence of the increase in the cost of credit from the Reserve Bank.

Belapur Dividend

The shareholders of the Belapur Company, Ltd. have very encouraging news. For the year ended 30th September 1960, the Directors of the Company have recommended a dividend of Rs. 29 per share (of Rs. 50 each), subject to deduction of tax, which is equal to a net dividend of Rs. 20.70. This compares very favourably with a gross dividend of Rs. 21, or a net of Rs. 14.70, for 1958-59 and more than restores the cut made last year from the record dividend of Rs. 20 per share (including a bonus of Rs. 4 per share) for 1957-58. The profit figures have not yet been made available to the Press, but there is no doubt they must be a record; otherwise, the Directors of the Company, who have been known for their judicious appropriation policy, would not have recommended such a handsome dividend. Reliable reports indicate that the net profit has nearly doubled, as compared with that for 1958-59, and is the highest on record. It may be noted that, to pay the proposed dividend alone, the Company will require a little over Rs. 40 lakhs. In addition, the Directors must have tucked in a substantial amount to the reserves.

Stanvac

At long last, Stanvac has surrendered, with effect from the 15th inst., the duty protection on all products covered by the refinery agreement with the Government of India. The Company had, of course, given up the duty protection on petrol three years ago, but hung on to that on all other products, though its rival, Burmah-Shell, which started refinery operations later than Stanvac, had completely given it up some 16 months ago. Belated as it is, Stanvac's action is a welcome development and strengthens the case of foreign capital for expanding their investment in oil operations and marketing, which is both desirable and necessary. It is to be hoped that Caltex, too, will fall in line before long.

W. German Bank Rate

The cut in West German Bank rate by one per cent. from five to four per cent., on Thursday the 10th inst., was no surprise, as it was generally expected. In fact, it came much later than was due. The only doubt was about the extent of the cut, which, being as much as by full one per cent., was the largest reduction at one stroke since 1951. Announcing the cut, the Bundesbank said that it was done exclusively for balance of payments reasons. It also made a reference to the Federal Government's plan to aid underdeveloped countries and welcomed it "as calculated to reduce the internal circulation of money and, at the same time, to reduce surpluses in the balance of foreign payments."

Will the cut in the discount rate by one per cent. bring down the interest rates in W. Germany to parity with those in countries such as the U.K. and the U.S. and thereby stop the inflow of "hot" money into West Germany, which, together with that country's large trade surplus, has considerably dislocated the world payments pattern? Financial experts in London think that it will not. The reduction will no doubt, they concede, go some way to bridge the gap that exists between interest rates in West Germany and other countries, but it will not go far enough. As the boom in West German economy is continuing, quantitative restrictions on credit have not been relaxed. Consequently, though the reduction in discount rate has made money cheaper, it has not made it easier. The likelihood of a decline in German borrowings abroad or of German banks placing short-term funds abroad, especially in London, is, therefore, considered dim. Even after the reduction, the attraction of interest rates in London to W. German banks is negligible. It is true that the Bank rate in Britain is 1½ per cent. higher than the reduced Bank rate in W. Germany. But money is still dear in Germany. The overdraft rates ranged from 8 to 11 per cent. before the reduction in the discount rate, being the highest in the world. They are so even after making allowance for the cut by one per cent. Unless, therefore, German interest rates come down to a level which makes investment of short-term funds in foreign countries attractive, the flow of foreign funds into Germany is likely to continue. Bonn and London financial circles, therefore, think that the chances of a further cut in the German Bank rate cannot be ruled out entirely.

Plans for Pumping Out Marks

If the disparity in interest rates between Britain and W. Germany is still wide enough to attract short-term funds to Germany, it is much more so when compared with interest rates in the U.S., which are appreciably below those in the U.K. Indeed, the gap is so large that it is a moot point whether the problem can be solved merely through an adjustment in interest rates. The fear of giving encouragement to inflation is so strong in Germany that the authorities there are very reluctant to practise cheap money policy. It will be recalled that, in order to discourage flow of hot money, the German authorities directed the commercial banks (in August last) not to pay any interest on foreign-owned deposits and not to sell money market paper to non-residents. Besides, the German Central Bank announced its willingness to enter into dollar swap transactions with German banks under which it will buy forward dollars at a 1½ per cent. premium for periods upto six months. In effect, this was a subsidy to German banks to keep funds abroad. Despite all these measures, the flow of foreign money into Germany has continued, apparently because funds could still be more profitably invested in Germany than elsewhere and also because the D. mark is a stronger currency than any other.

Stopping the inflow of hot money is only a part of the problem. Some way or other must be devised to reduce the present rate of heavy balance of payment surplus of Germany, currently running at the annual rate of $2,000 million. It is this consideration that invests the plans for providing economic aid to underdeveloped countries that are now being drawn up by the Federal Government with more than usual interest. While enabling these countries to develop rapidly, enlarged aid will also help Germany to reduce its balance of payments surplus to a level at which it will not put other countries' currencies under undue strain. Giving an account of the various proposals for aid to underdeveloped countries and their position, the Bonn correspondent of the London *Economist* observes:

"There has been no dearth of ideas for dealing with the situation; but neither—unhappily for progress—has there been of conflicting assessments of what the situation is. Proposals have been aired, drafted, amended and sometimes withdrawn—such as that for a "compulsory" loan by industry to help the underdeveloped countries. Nobody knows for certain whether a general tax is to be levied for the same purpose, or whether building licences are to be introduced and industry required to pay certain taxes in advance as part of the attempt to save the economy from the dangers of overstrain. The proposals which, at the time of writing seem to be nearest fulfilment, include a Government loan to finance aid to the developing countries, to which industry, banks and insurance companies would subscribe DM 1,500 million (about £127.5 million) and the various federal states, which have financial surpluses, at least DM 500 million (£42.5 million). Further contributions are to come from the sale of Volkswagen shares between January and March (another DM 500 million), from counterpart funds (DM 200 million) and from optimistically anticipated cuts in Government spending (about DM200 million). The loan would be allocated by bilateral agreements. Germany's contribution to collective aid, chiefly through the United Nations' technical assistance programme, is to be raised by $2 million in 1961 to a total of $5.3 million (DM 22.23 million)—an increase of 56 per cent. over this year's contribution."

West Germany's friends in the Western bloc, however, continue to complain that it has been lagging behind them in helping underdeveloped countries. It is pointed out that, while the U.S., France and the U.K. spent $12 billion, $4 billion and $1 billion, respectively, for aid to underdeveloped countries during the last five years, West Germany spent barely a quarter of a billion dollars for the purpose. The *Economist*, for instance, points out that "the test will be not plans and projects but how many marks are pumped out." The U.S. now is very particular, especially in view of the recent strain on the dollar, that West Germany should shoulder a fair share of the burden. It is, perhaps, to drive home this point to West German authorities and for speeding up the aid plan that Mr. Robert Anderson, the U.S. Secretary of Treasury, and Mr. Douglas Dillon, Under-Secretary of State, are now on their way to Bonn. The most important subject of their discussion with Bonn will, of course, be an increase in Germany's share in the cost of defending Europe against Communism.

I.D.A.

Tuesday the 8th inst. was one more memorable day in the exciting career of the World Bank, in that it marked the official commencement of operations by its affiliate, the International Development Association—the I.D.A., for short—for financing economic growth of countries in the less developed regions. At the inaugural meeting held on that day, the Executive Directors of the I.D.A. sanctioned an administrative budget, approved of bylaws and seal, and authorised the I.D.A. to engage in certain financial transactions necessary for its working. Twenty-two countries, including India, have so far accepted membership of the I.D.A., with subscriptions aggregating $726.72 million payable in annual instalments over five years, the first instalment being payable within 30 days after the date of the inaugural meeting, that is, before 8th of next month. The other countries in Asia, Africa, Europe, and Latin America have completed various stages of the membership procedure. If all the 68 members of the World Bank join the I.D.A., its total initial subscriptions will amount to $1,000 million, of which over three-quarters—$787 million, to be precise—will be available on a fully convertible basis.

The functions assigned to the I.D.A. and the manner in which they will be discharged are fairly well known by now. These aspects have been extensively dealt with in an earlier issue (*vide* page 194 of *Commerce* dated 6th February 1960), so that it is unnecessary to go into them again. A brief reference to the broad functions may, however, be made here. The I.D.A. will provide financial assistance to the less developed areas of the world included within its membership on terms which bear less heavily on the balance of payments of these countries than conventional loans. A considerable degree of flexibility is permitted by the I.D.A. Articles both in terms of lending and in the purposes for which loans may be made. I.D.A. loans may carry lenient terms of repayment (for example, loans may be repayable in foreign exchange with long maturities or long periods of grace, or both, or repayable wholly or partly in local currency) or the loans may be made free of interest or at a low rate of interest, or they may incorporate some combination of these terms. It may finance a wider range of projects than the Bank, including projects which are not revenue-producing or directly productive; the only stipulation of the Articles is that projects shall be of "high developmental priority." Since both agencies will have the same management, the I.D.A. will apply the same high standards as the Bank with respect to the planning, administration and financing of the projects it assists.

The I.D.A. owes its origin to an idea first mooted more than two years ago by Senator Monroney of the U.S. and which received public support from President Eisenhower in August 1958. The capital resources of the I.D.A. being limited (just $1,000 million) and considering that the foreign aid requirements of the underdeveloped countries—there are said to be as many as 48 such countries—are very vast, estimated at about $5,600 million (Rs. 2,667 crores) a year over the next decade, the assistance which the I.D.A. can render cannot but be of a modest nature. Even so, it will doubtless be able to make a distinct contribution to the development of the economically backward nations. The success of the I.D.A. will, of course, be judged by the extent to which it will venture further than the World Bank is able to go in countries that have only a limited capacity to service conventional foreign debt and support development undertakings that hold out promise. Having as it does an influential Board of Executive Directors, presided over by that dynamic personality, Mr. Eugene R. Black, President of the World Bank, the I.D.A. can be expected to play a vigorous role in furthering the development objectives and supplementing the activities of the World Bank. Surely, the hope expressed by Mr. W. A. B. Iliff, the Bank's Vice-President, at the last annual meeting of the Bank, that, "through I.D.A., we shall be able to reach peoples hitherto unaccessible to the Bank and to give them the prospect of better, healthier and more productive lives," is not an extravagant one.

SHARE MARKET CHEERFUL

TEXTILES, HOWEVER, RECEDE

(From Our Own Correspondents)

BOMBAY, *17th November*

WITH the exception of textiles and a few scrips in other sections which ruled easy, the share market put on a cheerful appearance during the week under review, especially after the new account on Monday the 14th inst. The chief factor that inspired the buying sentiment was the relaxation in credit restrictions announced by the Reserve Bank on Friday. Operators thought that this step would greatly help the industrial and business firms to meet their credit requirements from the organised banking sector during the busy season. Simultaneously with the Reserve Bank's notification, the Government of India announced a further increase in the retention prices for steel by Rs. 4.85 per ton. The increase was considered sufficient to cover the specified cost increases under the escalator clause, though some operators preferred to await the final decision of the Government on the Company's plea for a rise in prices to compensate for the cost increases not covered by the escalator clause and for the fixation of prices for a further period commencing from 1st April 1960. The normal carry-forward charges at the last settlement, the publication of an encouraging Directors' report and statement of accounts of the Indian Iron and Steel Company, higher dividend announcement by the Belapur Company, and rumours of the official sanction for expansion of T.E.L.CO. also imparted strength, Textiles, however, encountered some selling, thanks to the threat of clamping down of controls and rationing held out by Mr. Lal Bahadur Shastri in Parliament on Monday.

Tata Steels began the week at Rs. 143.50, as against the previous close of Rs. 143, and advanced to Rs. 145 on Monday. After declining to Rs. 143 on the following day, they recovered to Rs. 144 today before finishing at Rs. 143.75. Indian Irons rose from Rs. 23.12 to Rs. 24.04, but closed a shade quiet at Rs. 24. The net gain over the week was 88 nP. Mukand Irons hardened from Rs. 23.60 to Rs. 23.76 in the later sessions. After easing to Rs. 23.24, they recovered to Rs. 23.48 today.

In the textile section, Kohinoors dropped Rs. 7.50 to Rs. 276. Finlays fell by Rs. 6 to Rs. 335. Svadeshis softened by Rs. 3.50 to Rs. 231.50. Shreenivas suffered a loss of Rs. 3, today's closing rate being Rs. 228. Indores declined by Rs. 2 to Rs. 120. New Greats shed Re. 1.50 to Rs. 190. Simplex and Standards eased by a rupee each to Rs. 162 and Rs. 1,174, respectively. Bombay Dyeings moved down from Rs. 64.20 to Rs. 63.10 today before finishing at Rs. 63.30, or a net loss of 90 nP. Tatas eased by 50 nP to Rs. 40.50. Elphinstones, however, met with special support and picked up Rs. 6 to Rs. 61. Central Indias hardened by Re. 1.50 to Rs. 107.50, Khataus by Re. 1.25 to Rs. 451.25 and Podars by Re. 1 to Rs. 136. Centurys gathered 50 nP to Rs. 472.50.

Bank shares were well fancied. Bank of Indias rallied from Rs. 102.25 to Rs. 106, 'A' shares rising by Rs. 2.50 to Rs. 107.50. Central Banks picked up 50 nP to Rs. 55.50, with 'A' shares quoted at Rs. 60.50, as against Rs. 59.50. Barodas gained 50 nP to Rs. 81.80. Punjab Nationals put on 24 nP to Rs. 19.24. Unions were fully maintained at Rs. 5.96, as also United Commercials at Rs. 85.

Sugars were firm. Belapurs provided the brightest feature, the quotation forging ahead from Rs. 383 to Rs. 402; at one time today, they were higher still at Rs. 410. The rise reflected the operators' satisfaction over the higher gross dividend of Rs. 29 recommended for the year 1959-60, as against Rs. 21 distributed in the previous year. Phaltans spurted by Rs. 5 to Rs. 184.50. Walchands improved by 50 nP to Rs. 297.50. But Changdeos were a shade easy at Rs. 33, as against Rs. 33.25.

Among cements, Associated Cements advanced by Rs. 2.25 to Rs. 147.25 and Orissas put on 12 nP to Rs. 15.24, while Digvijays shed 25 nP to Rs. 159.75.

Good buying enquiries were visible in the engineering section. The rumours of official sanction for expansion of production capacity pushed up Tata Locomotives from Rs. 292 to Rs. 308 today. At this level, some profit-taking set in and the rate declined to Rs. 307. Premier Constructions advanced by Rs. 4 to Rs. 311.50. Voltas strengthened by Rs. 3.50 to Rs. 263 on hopes of encouraging working results. Larsen and Toubros increased by a rupee to Rs. 38. Mahindras gathered 44 nP to Rs. 21.52. Ferro-Alloys moved up by Rs. 3 to Rs. 198. Alcocks, however, encountered some selling and eased by a rupee to Rs. 255. Among minings, Shivrajpurs improved by Re. 1 to Rs. 68 and Indian Coppers by 8 nP to Rs. 4.48.

Automobile and shipping shares attracted support. Premier Autos were bid Rs. 2.25 higher at Rs. 175.50 on reports of expansion plans. Hindustan Motors hardened by 80 nP to Rs. 20.24. Among shippings, Scindias rose by 80 nP to Rs. 14.48. Great Easterns scored a gain of 36 nP to Rs. 15.84. The working results of the Company for the year ended June 1960 are satisfactory, notwithstanding the depression in shipping trade. The Directors have recommended a dividend of Re. 1 on fully paid-up ordinary shares and 50 nP on partly paid shares.

In the electricity section, Andhra Valleys were well favoured and rose by Rs. 15 to Rs. 1,022.50. Tata Powers were fully maintained at the last week's level of Rs. 1,037.50. Ahmedabads and Bombay Suburbans, however, declined by 30 nP each to Rs. 88.50 and Rs. 85.50, respectively. Tata Hydros eased by 25 nP to Rs. 103.25.

Among miscellaneous industrials, Bombay Burmahs registered a rise of Rs. 9.50 to Rs. 593, following the announcement by the Company that the tea crop during the five months ended 31st October 1960 was higher at 2,646,892 lbs. (made tea), as against 2,191,298 lbs. in the corresponding period last year. T. Maneklals firmed up by Rs. 17.50 to Rs. 617.50. National Rayons strengthened by Rs. 6 to Rs. 523. Asian Cables advanced by Rs. 6.50 to Rs. 98. Anil Hardboards and W. H. Bradys rose by Rs. 2.50 each, the former to Rs. 345 and the latter to Rs. 360. Colour-Chems rose from Rs. 337.50 to Rs. 340 on satisfactory results during the first year of its working. Wimcos gathered a rupee to Rs. 272. Tata Chemicals picked up Re. 1.04 to Rs. 17.40 *ex-div.*, following the Chairman's statement at the annual meeting that the output in the current year would be higher than in 1959-60. Tata Oils gained 50 nP to Rs. 74. Indian Dyestuffs, however, came for selling and receded by Rs. 10 to Rs. 520. Ceat Tyres were neglected at Rs. 235, as against Rs. 230 last week-end. Poly Chems declined by Rs. 3.75 to Rs. 243.75. Premier Tyres shed Re. 1 to Rs. 80, Killicks 75 nP to Rs. 102.50 and Phillips Carbons 24 nP to Rs. 17.52.

Madras Stock Exchange

MADRAS, *16th November*

Equities on the Stock Exchange continued to be well maintained during the week under review, thanks mainly to the Reserve Bank's announcement releasing a part of the immobilised funds of Scheduled banks and suspending the scheme for impounding of deposits. Sugars were active due to investment support. Teas moved up on encouraging advices from auction centres. Rubbers were steady. Coffees, however, were subdued on reports of comfortable world supply position and the consequent unencouraging prospects of higher prices for domestic coffee. Moderately strong conditions prevailed in the textile section despite the warning given by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, that the Government was considering the question of introducing controls and rationing of textiles. Miscellaneous scrips, particularly chemicals and cements, ruled firm.

In the sugar section, Cauverys picked up a rupee to Rs. 143.50. East India Distilleries rose by 25 nP to Rs. 44.50. Deccans improved from Rs. 15.60 to Rs. 15.70, but closed lower at Rs. 15.65. United Breweries changed hands at Rs. 114.50, Indias at Rs. 12.40 and Mysores at Rs. 60.50.

Among teas, Haileyburias strengthened by 25 nP to Rs. 14.75. Swintons gathered 20 nP to Rs. 3.10 *cum-div.*, following the announcement of 12.50 per cent., taxable, (equivalent to 8.75 per cent. tax-free) for the year ended March 1960, as against only 7.50 per cent. tax-free for the previous year. United Nilgiris gained 13 nP to Rs. 21.75. Devasholas hardened by a like amount to Rs. 30. Kil Kotagiris put on 5 nP to Rs. 5.65. Neelamalais were higher by a naya paisa at Rs. 4.88. Periakaramalais initially improved from Rs. 3.53 to Rs. 3.54, but closed today at the last week's level. Waterfalls were maintained at Rs. 4.90, Peermades at Rs. 22.80 and Nonsuchs at Rs. 27.25. Talavars were unchanged at Rs. 1.78 *cum-div.* The Directors of the Company have announced a dividend of 8 per cent., taxable, (equivalent to 5.6 per cent. tax-free) for the year ended March 1960, as compared with 5 per cent. tax-free for the previous year. Parksides were fancied at Rs. 29.75 *cum-div.* The Company has declared a final dividend of 20 per cent., taxable, making a total of 27½ per cent., taxable (equivalent to 19.25 per cent. tax-free), for the year ended June 1960, as against 27½ per cent. tax-free for the previous year. Blue Mountains, however, lost 10 nP to Rs. 5.05.

In the rubber section T.R. and T. strengthened by 60 nP to Rs. 9.20 in anticipation of a better dividend. Midlands put on 15 nP to Rs. 12.50. Cochin Malabars closed steady at Rs. 7.33, after touching Rs. 7.35 earlier in the week. Kailas were firm at Rs. 5.15 and Vaikundams at Rs. 30.40. But Malankaras shed 5 nP to Rs. 17.70.

As already stated, coffees were easy. Coffee Lands suffered a loss of 75 nP to Rs. 23.75. Consolidated Coffees declined by 35 nP to Rs. 24.15. Rajendras were lower by 10 nP at Rs. 14.25. Ouchterlony Valleys and Balanoors were unaltered at Rs. 5 and Rs. 16.70, respectively. Cowcoodys, however, gathered a naya paisa to Rs. 5.18.

A notable feature of trading in the textile section was the spurt in the quotation of Laxmis from Rs. 150 to Rs. 156.50. Dhanalaxmis advanced by Rs. 2 to Rs. 225. Travancore Rayons were quoted higher by a rupee at Rs. 35.50. Janardanas, too, gained a like amount to Rs. 58. Maduras rose by 70 nP to Rs. 34.70. Buckinghams were fully steady at Rs. 198, so also Bangalore Woollens at Rs. 196, Kannanoors at Rs. 155, Premiers at Rs. 225, Coimbatore Pioneers at Rs. 347 and Radhakrishnas at Rs. 29. South Indias, however, came in for selling and declined by Rs. 2 to Rs. 167. Metturs fell by Re. 1.50 to Rs. 370. Coimbatore Spinnings lost 50 nP to Rs. 44.

In the miscellaneous section, Mysore Fertilisers advanced by 65 nP to Rs. 11.55. Mettur Chemicals were higher by 40 nP at Rs. 13.20. F.A.C.Ts closed at Rs. 10.50, as against Rs. 10.51. Mysore Chemicals and Travancore Chemicals were firm, the former at Rs. 27.50 and the latter at Rs. 60. Among cements, Orissas were marked up by 55 nP to Rs. 14.80. Andhras scored a gain of 20 nP to Rs. 10. Indias put on 8 nP to Rs. 7.20. Dalmias, however, shed one naya paisa to Rs. 11.25. Among others, Western India Plywoods rallied from Rs. 228.50 to Rs. 236.50. Ashok Leylands gathered 7 nP to Rs. 8.80 and Aluminium Industries 5 nP to Rs. 23.05. Tube Investments, however, gave way from Rs. 317 to Rs. 305.

Calcutta Stock Exchange

CALCUTTA, *16th November*

Absence of adequate floating funds, consequent on the mopping up of surplus investible money by the spate of new issues, explained the cautious mood of operators and the intermittent tendency for prices to sag on the Stock Exchange during the week under review. Fair conditions for a smart recovery had, however, set in, following a number of developments. First, it was easy to see that India stood to gain more from the United States with a Democratic Party President, and the President-elect had already declared his intention to accord greater help to India. Secondly, the Reserve Bank's announcement of relaxation of the recent credit curb measures with a view to enabling banks to meet the demand for funds in this busy season should have ordinarily been hailed by an increase in commitments on the Exchange, but the announcement had been anticipated for some time now. Thirdly, the long-awaited increase in steel retention prices, announced this week, did not cause a buoyancy, although this and the excellent working results of the Indian Iron and Steel Company Ltd. for the year ended March 1960 were received by the market with jubilation. It was realised that the increase of Rs. 4.85 a ton in the retention price was a fair compensation for increased working costs and that this would not increase the profitability to shareholders. Retention price for the period beginning on 1st April 1960 would be awaited with greater interest. Earlier in the week, the support accorded by the L.I.C. to several miscellaneous scrips contributed to gains and, in fact, sellers of industrials were difficult to be located. Excepting for a few features here and there on selected buying, jutes were listless, as, though the uptrend in fibre prices had been arrested as a result of the recent measures taken by the Forward Markets Commission, prices of fibre and goods were reported maintained at high levels and export inquiries in goods were insignificant.

Notice

THE MIDLAND RUBBER AND PRODUCE COMPANY LIMITED

ALLEPPEY

(Incorporated in Travancore, Kerala)

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 23rd Annual General Meeting of the Company will be held at the Registered Office in Beach Road, Alleppey, at 10 a.m., on Monday, the 28th November 1960, to transact the business as set out in the Notice sent to the members of the Company, individually.

The Directors have recommended a dividend of 12.5 per cent. on the Equity Shares for 1959-60, subject to deduction of tax under Section 18(3) (D) of the Income-tax Act, and the same, if approved by the General Body, will be paid to those Equity Shareholders whose names stand registered in the books of the Company on the 28th November 1960.

The Directors have also declared the 6 per cent. dividend on Preference Shares for 1959-60, subject to deduction of tax under Section 18(3) (D), and this will be paid to those Preference Shareholders who are on the Registers of the Company as on 28th November 1960.

The Share Transfer Books and Registers of Members of the Company will remain closed from 21st to 28th November 1960 (both days inclusive) during which period no transfer of shares will be registered.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead; a proxy need not be a member.

By Order of the Board,
A. V. THOMAS & CO., LTD.,
Managing Agents.

ALLEPPEY,
31st October, 1960.

NEWS IN BRIEF

A NEW mechanised coal berth and the remodelled south quay No. 2 in Madras harbour were declared open last week by Dr. P. Subbaroyan, Union Minister for Transport and Communications.

The final decision on the question of declaring Kandla port as a free trade zone will be taken by the Central Government soon, according to Mr. Raj Bahadur, Minister of State in the Union Ministry of Transport and Communications.

The next round of talks between the Finance Ministers of India and Pakistan on the outstanding financial issues are due to be held at New Delhi from the 23rd to 25th inst. The talks will be preceded by a meeting at official level on the 22nd inst.

The Industrial Committee on Plantations, which met at Calcutta last week, has agreed to have separate Wage Boards for tea, coffee and rubber, with two representatives from among employers and employees for each crop for each Board, instead of a Tribunal.

A five-member delegation, led by Mr. Karnail Singh, Chairman of the Railway Board, has left for Rawalpindi to discuss with the Pakistan railway officials the proposal for setting up a railway link between the eastern and western wings of Pakistan through Indian territory.

The 90,000-kw. first unit of Bhakra Dam's left-bank power house, claimed to be the biggest hydro-electric plant in Asia, was put into commission on the 14th inst. The generating unit, established in the seven-storeyed box-type earthquake-proof building, will be the first of the five units with same capacity to be installed.

The Railway Board is placing orders with foreign countries for the import of 96,000 tons of steel. The average price of imported steel is Rs. 675 c. & f. per long ton. The countries with which orders are being placed are: Japan, Holland, the U.K., West Germany, Spain, the U.S., France, Belgium, Norway, Sweden and Italy.

A teleprinter factory will be established at Guindy in Madras with the technical collaboration of Olivetti, an Italian firm. It will attain the full production capacity of 1,000 teleprinter machines, 100 printing perforators, 100 autotape transmitters and 200 reperforating attachments by 1963-64.

The International Co-operative Alliance will shortly open at New Delhi an educational centre to serve the needs of co-operative institutions in the South and South-East Asian region. The proposed centre will have a practical, rather than academic, bias. The Centre will organise courses, seminars and conferences on subjects of interest to co-operative movement in the region.

The United Arab Republic is reported to have offered to sell a further quantity of rice to India. A representative of *Misr*, Egyptian foreign trade agency, is expected to visit India for discussions with the Central Government on the matter. It may be recalled that, earlier this year, India secured 100,000 tons of rice in exchange for tea, jute, textiles and engineering goods.

Five Parliamentary committees have been constituted to consider the different aspects of the draft third Plan. The subjects to be dealt with by the committees are policy, resources and allocations (Chairman: Mr. K. Santhanam), industry, power and transport (Mr. Jairamdas Daulatram), agriculture and rural economics (Mr. Ram Subhag Singh), social services (Mr. Mahavir Tyagi) and technical manpower and scientific research (Mr. T. S. Avinashalingam Chettiar).

An amendment to the Employees' Provident Fund Act, 1952 (at present applicable to establishments employing 50 or more persons) which seeks to widen the scope of the Act to cover establishments employing 20 or more persons, was passed by the Lok Sabha on the 14th inst. Another amendment, passed by the House, makes retaining allowance paid in seasonal establishments, like sugar factories liable for provident fund contributions. These amendments are not applicable to registered co-operative societies employing less than 50 persons and working without the aid of power. Small-scale and cottage industries employing between 20 and 50 persons have been granted exemption for a period of five years.

Production of iron ore during September 1960 was 835,000 metric tons. This brings the total output during January-September 1960 to 7.97 million tons which was higher by 39 per cent., as compared with the 5.72 million tons produced in the corresponding period of 1959. Orissa was the chief producing State during September, with an output of 269,000 tons, followed by Bihar with 226,000 tons. Madhya Pradesh and Mysore recorded an output of 153,000 tons and 146,000 tons, respectively, while the output in Maharashtra was 23,000 tons. During the month, despatches of iron ore for consumption in the iron and steel plants aggregated 528,000 tons, while despatches for export were 121,000 tons.

It is learned that the Government of India has sought Japanese collaboration for setting up a plant to manufacture "people's car" in India. If the present plans materialise, Japan will invest about 2,500 million yen in the plant. The new plant is expected to produce a model of a Japanese car, probably the "Datsun Blubird", manufactured by the Nissan Motor Company. Most of the parts for assembly in the initial stage will be imported, except for pressed and cast parts. All parts of the model are expected to be produced locally within about two and a half years. Under the plan, the initial production rate will be a few thousand cars annually. This will be expanded subsequently to 20,000 or 30,000 cars a year.

On the recommendation of the Reserve Bank of India, the Central Government has granted a moratorium to the New Citizen Bank of India, Bombay, for a period of three months from 15th inst. to 14th February 1961, under the provisions of Section 45 of the Banking Companies Act, as recently amended. The grant of this moratorium, it is explained, does not indicate any sudden or recent change in the position of this or any other bank operating in the Bombay area. The question of reconstructing the New Citizen Bank of India and amalgamating it with some other major bank has been under the active consideration of the Reserve Bank and the moratorium has been declared in the general interests of the depositors of the Bank and with a view to facilitating the contemplated reconstruction and amalgamation.

The Government of India is still examining the crop insurance scheme submitted by the Punjab Government. The scheme, which is expected to cost over Rs. 1.16 crores, covers two major food crops (wheat and gram) and two important cash crops (cotton and sugarcane). It will be spread over three years starting with six centres of the size of Community Development Block in six selected districts. At the end of the three years, the progress of the scheme will be reviewed and, if found satisfactory, will be extended to other crops and other districts. In the areas of operation, insurance of crops will be made compulsory to ensure full participation and the premium is to be recovered with land revenue. The scheme will cover all risks, including losses due to floods, hail, drought, locusts, pests, etc., and calamities beyond the control of cultivators.

The programme to expand penicillin production at the Pimpri Antibiotics Factory by 60 per cent., that is, from 25 to 40 million mega units annually, has been completed. This was disclosed by Mr. Manubhai Shah, Union Minister for Industries, in the Lok Sabha this week. In regard to the manufacture of streptomycin and dihydrostreptomycin, civil works in respect of the factory building are in progress. Almost all the equipment has been ordered by the Company. An engineer from the U.S. is on site to supervise the work of installation. According to the present schedule, the new plant is likely to commence production by the end of 1961. The pilot plant for tetracyclines, with a capacity of 1.5 tons annually, is also under construction. Besides, a detailed project report for the production of 50 tons of vitamin 'C' at the Pimpri factory is being prepared in consultation with the National Chemical Laboratory.

The U.S. Ford Foundation has announced grants amounting to $169,640 for advisory and training services by the U.S. universities in fields ranging from teacher education to administration of economic development in India. Of this, a sum of $64,640 will be given for research on problems of worker-management relationship in India in the context of industrial development. Five Indian institutions will share this amount. They are the Indian Institute of Technology ($36,230), Lucknow University ($1,830), Patna University ($6,220), Tata Institute of Social Sciences ($5,200) and the Xavier Labour Relations Institute ($15,160). The remaining part of the grant, that is, $105,000, will go to consultants in India in the field of extension training, management association programmes, rural community development, teacher-education and urban community development. The Foundation has also announced grants aggregating $1,311,000 for Pakistan. Two of the grants of $531,000 and $370,000 will be used to help advance the reconstruction of Pakistan's educational system. The third grant of $410,000 will be used to continue advisory training and research assistants from Michigan State University to two academies of village development in Pakistan.

* * * *

From Abroad

The West German bank rate has been cut from 5 to 4 per cent., with effect from the 11th inst. On 3rd June last, the rate had been raised from 4 to 5 per cent.

Hourly industrial wages in West Germany in the third quarter of 1960 were about 12 to 14 per cent. higher than those a year ago. This growth rate is one of the largest in the post-war economic history of this country.

West Germany has imposed a fresh duty on imports of light engineering goods, such as sewing machines. As this will affect exports of Indian-made sewing machines, India is taking steps to lodge a strong protest against this impost.

The Pressed Steel Company in the U.K., which supplies the maiority of car manufacturers there with bodies, have announced retrenchment of workers, following cutback to production of cars in most of the automobile plants. About 1,100 workers of the Swindon plant of Pressed Steel will be relieved of duties shortly. Those remaining will have to work on short time.

A new international scheme for the development of agriculture in Africa on the lines of the Colombo Plan was suggested by Dr. B. R. Sen, Director-General of the U.N. Food and Agriculture Organisation, in his speech at the first regional F.A.O. meeting at Lagos, Nigeria, last week. Dr. Sen pointed out that the new plan should be less loose and more multilateral in character than the Colombo Plan.

PERSONAL

DR. S. Radhakrishnan, Vice-President of India, left for Paris to attend the U.N.E.S.C.O. conference, which commenced there on Monday this week.

Mr. G. D. Somani, M.P., and a well-known industrialist, returned to Bombay after a tour of the U.S., the U.K. and the Continent early this week.

Mrs. Tarakeshwari Sinha, Union Deputy Minister for Finance, left for Tokyo last week-end to attend the annual general meeting of the Colombo Plan Consultative Committee, as the leader of the Indian delegation.

Mr. P. C. Neogy, formerly Director-General, Research, Design and Standardisation Organisation, Union Ministry of Railways, has taken over charge as the General Manager of the Durgapur Steel Project from Mr. K. Sen, I.C.S.

Mr. Panampalli Govinda Menon, a former Chief Minister of Travancore-Cochin State and Mr. Mathur, an economist from Rajasthan, have been appointed members of the third Finance Commission. Mr. G. L. Mehta and Mr. G. R. Kamat have already been named Chairman and Member-Secretary, respectively.

Mr. A. R. V. Iyer, an expert in hides and skins business, and Manager of the Skins and Hides Department of Messrs. Gordon, Woodroffe and Co., (Private) Ltd., Madras, has retired after 25 years of service. Mr. Iyer has been writing the weekly report of the Madras hides and skins market for *Commerce* for several years now.

Mr. Govind R. Hada, Chief Officer of the Hindusthan Gas Company, Ltd., Calcutta, one of the Birla group enterprises, has flown to Czechoslovakia for exploring new business possibilities. He will also visit most of the other European countries to secure technical collaboration and know-how for establishing some new industries.

Mr. C. W. Hamilton, Managing Director of McCalls Macalloy Ltd., Sheffield, England and President of the Prestressed Concrete Development Group of the U.K., has arrived in India, after visiting the Company's plants in the U.S. and Australia. On behalf of his Company, Mr. Hamilton will finalise an agreement with I.R.C. Weldmesh (Private) Ltd., Calcutta, for the production of Macalloy steel in India under sole licence.

Mr. Cameron Cobbold, Governor of the Bank of England for the past eleven years, has submitted his resignation, due solely to his conviction that, "in present-day conditions, it is a mistake for any one individual to remain too long at the head of the Bank." His resignation has been accepted by the British Government and the Earl of Cromer, at present head of the United Kingdom Treasury Delegation in Washington and also Economic Minister in the British Embassy there, has been chosen as his successor. Lord Cromer has been appointed for a period of five years from 1st July 1961, as Mr. Cobbold's resignation takes effect only on 30th June 1961.

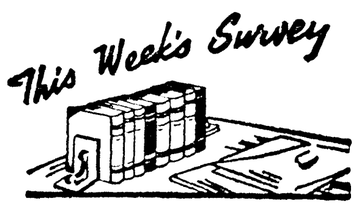
The gross national product of West Germany will go up by 7.5-8 per cent. at constant (1954) prices, as against 6.4 per cent. in 1959 and 3.2 per cent. in 1958, according to a forecast by the W. German Ministry of Economics. National productivity (production of goods and services per head of the working population) is likely to rise by about 5.5 per cent., as against 5.2 per cent. in 1959 and 2.1 per cent. in 1958.

The Republic Aviation Corporation of the U.S. and the Dutch Fokker aircraft works have decided to co-operate to produce a vertical take-off aircraft at Amsterdam. They will also establish a European inspection repair and overhaul centre, as well as an on-the-spot maintenance service to support the Republic F. 105. Another joint Republic-Fokker project will be in the sphere of production of a transport aircraft for both civil and military purposes.

The Government of Ceylon is expected to sign an oil agreement with Russia under which the latter will ensure regular supply of Soviet oil. The prices for the oil are said to be 25 per cent. below the current world market prices. The oil will be sold on a Government-to-Government basis. The Ceylon Government is already taking steps to arrange for distribution through a network of co-operative wholesale establishment depots. Engineers are also surveying storage facilities at Colombo and Trincomalee.

Japan will sell to Pakistan 300,000 spindles and 3,000 looms, worth about Rs. 10 crores, under an agreement signed between the Japanese Textile Machinery Exporters' Association and the Pakistan Industrial Finance Corporation. The financial part of the individual agreements will be underwritten by the P.I.F.C. and the Japanese Government will give assurances on the recovery of the amount if any defaults occur. Pakistan has at present 1.9 million spindles, which will be raised to 2.5 million by the end of the second Five-year Plan.

A Burmese trade mission, which has been negotiating a rice deal with the Government of Ceylon for over a month, has returned to Rangoon without reaching any agreement. It is learned that the Burmese team asked for £33 for a ton of rice, which is £1 more than the previous rate. The Ceylon Government considered the new rate to be excessive in view of the declining world rice price. Ceylon also requested that Burma should purchase more Ceylon commodities, but the Burmese representatives could give no assurance on this point.



RETENTION PRICES FOR STEEL

THE present uniform retention price of steel, including the excise duty of Rs. 52 per ton, payable to the Tata Iron and Steel Company Ltd. and the Indian Iron and Steel Company Ltd., is Rs. 470 per ton. It may be recalled that, following the recommendation of the Tariff Commission, the Government of India fixed, early in 1956, the average retention price payable to the two Companies at Rs. 393 per ton. Since then, the increase of Rs. 77 (Rs. 470 *minus* Rs. 393) has been accounted for by the excise duty of Rs. 52 and the three compensatory price increases aggregating Rs. 25. These compensatory price increases have resulted from changes in railway freight, changes in statutory prices of coal and other fuel, raw materials, stores or machinery and changes in labour costs. Of these price increases, the last one to the tune of Rs. 5 per ton was sanctioned in November 1959. It is noteworthy that the aggregate price increase of Rs. 29.85 per ton (including the latest one of Rs. 4.85 referred to below) for the five-year period comes to about 8 per cent. of the earlier retention price of Rs. 393 per ton—an increase which is less than that in the general level of prices during the same period.

The Government of India has just announced that the average retention price payable to the two companies is being increased by Rs. 4.85 per ton for the period 1955-56 to 1959-60. This increase, it is understood, is more or less in accord with the industry's representations. Of this, Rs. 2.85 is intended to compensate for the increases on admissible items of manufacturing cost under the escalator clause and Rs. 2 to cover the increases in labour costs due to negotiated settlements. With this increase of Rs. 4.85 in all per ton, the final price adjustment will have been made for the five-year period ended 31st March 1960. This price increase, however, will involve no increase in the official selling prices of steel which average Rs. 598 per ton uniformly at all rail-heads in the country. It could be easily absorbed by the Steel Equalisation Reserves, now that steel imports are running at a lower level than was estimated earlier.

What does this latest price increase mean to the T.I.S.Co? Since the adjusted 1954-55 retention price in the case of this company was Rs. 343 per ton, it has been required to credit to its Development Fund the difference (Rs. 50) between that adjusted retention price and the uniform retention price of Rs. 393 per ton fixed early in 1956. The present price increase of Rs. 4.85 per ton, it is expected, will enable the T.I.S.Co. to increase the contribution to its Development Fund by Rs. 2.22 per ton, that is, to the level of Rs. 52.22 per ton for the last year of the five-year period ended 31st March 1960.

In the case of the Indian Iron and Steel Company, it may be recalled, the 1954-55 adjusted retention price was Rs. 386 per ton, which was higher than that of T.I.S.Co.'s because of higher manufacturing costs. This Company, too, has been required to credit to its Development Fund the difference (Rs. 7) between that adjusted retention price and the uniform retention price of Rs. 393 per ton fixed early in 1956. The present price increase of Rs. 4.85 per ton will not enable the I.I.S.Co. to increase the contribution to its Development Fund; it will, at best, enable the Company to maintain its contribution of Rs. 7 per ton for the period mentioned above. This is not surprising because the I.I.S.Co. is a smaller unit and its cost increases during the period must have been relatively greater than those of the T.I.S.Co.

While the present price increase of Rs. 4.85 per ton seems to have given satisfaction to the T.I.S.Co. in so far as it covers the specified cost increases under the escalator clause, its representations for a price increase to compensate for cost increases over the five-year period not covered by the escalator clause are still pending. What the Company has asked for by way of such additional compensatory price increase is not known precisely. Unless a further increase is given, the T.I.S.Co. may be hard put to it to replenish its general reserves to the extent of Rs. 4.5 crores—the amount which has been drawn from them during the years 1958-59 and 1959-60 for the purpose of paying dividends. Apart from this, the Company has also represented to Government that the Tariff Commission's price scheme has not resulted in any accretion to the company's internal resources, during the period in question, towards financing the Two Million Ton Programme and that the price structure from 1st April 1960, should be so revised as to take into account the higher depreciation and interest charges which the Company has to bear in consequence of the increased cost of the expansion programme. So, what the T.I.S.Co. expects is a further price increase which will compensate for the cost increases not covered by the escalator clause and also for the higher depreciation and interest charges arising from the expansion programme.

PROHIBITION

The highlight of the two-day meeting of the Central Prohibition Committee, held at New Delhi this week, was the vigorous plea made by Mr. Shriman Narayan, a member of the Planning Commission, for abrupt and sudden introduction of a nation-wide prohibition programme. Violation of prohibition laws, which, he opined, attracted "exaggerated" comment in the Press, was no argument for scrapping prohibition. "We do not scrap the criminal code," he went on to add, "because there are a number of violations." Knowing fully well the economics of prohibition, Mr. Narayan, who is himself an economist, hastened to counter the economic argument against prohibition. He said that this argument was untenable, because, while the States earned a total of Rs. 40 crores as revenue from liquor, three times this amount went down the drain as people spent roughly Rs. 120 crores on drinks. He reassured the State Governments that they need not be apprehensive about the effect of total prohibition on their budget. The Planning Commission, he confidently averred, was prepared to help the States balance their budgets and suggest the feasibility of alternative sources of income. Opposing piecemeal measures, Mr. Narayan argued that, in such a matter as prohibition, too much of phasing towards progressive realisation was futile. Introduction of two or three dry days in a week or declaration of a few districts or taluks as dry in a State was only half-hearted measure. He, therefore, voted for total prohibition all over the country.

Mr. Narayan is right when he says that partial prohibition, like partial controls, cannot succeed. But does that mean that total prohibition will succeed? Enforcement of prohibition laws will be rendered no less difficult by bringing the whole country within their scope. May be, the problem of preventing smuggling from wet to dry areas will not be there, but will it prevent illicit distillation which, on the Union Home Affairs Minister's own admission, is going on on an "enormous" scale? Neither Mr. Narayan nor Mr. B. N. Datar, Minister for Home Affairs, who termed the suggestion for abolishing prohibition as "a counsel of despair," cared to ask this question or answer it. How can they, when it is no secret that, if its aim is to prevent people from consuming liquor, prohibition has not succeeded. Here is one proof, if proof is needed of the failure of prohibition in Bombay. The Prohibition Division of the Greater Bombay Police filed 2,054 cases, arrested 659 persons and seized 1,229 gallons of illicit liquor in one week alone (the week ended 3rd November). It is common knowledge that only a small fraction of the violation of the law is actually detected. It is naive to claim, in the face of such facts, that prohibition has resulted in weaning away people from alcohol.

The protagonists of prohibition point out that it has benefited many. Surely it has enriched producers and vendors of illicit liquor. The confirmed addict still gets his usual quota of inferior and injurious stuff. Money, not dearth of liquor, is the limiting factor. If, however, the aim was to make liquor unobtainable to those who would, once in a way, like to have a sip, then prohibition may be said to have fairly succeeded. But against this must be set the temptation to take to drink, which comes to have the flavour of a forbidden fruit, arising from the legal prohibition of liquor drinking. On balance, therefore, the advantage of prohibition is precious little. Prominent on the debit side is the substantial loss of revenue to the exchequer and the heavy expenditure incurred on enforcement. Are the doubtful benefits, which prohibition is claimed to have conferred on the people, really worth the price paid? Surely not, considering that, if a fraction of the revenue from liquor were spent on educating the masses on the evils of alcohol and rendering medical relief and welfare service, their results would have been more tangible and of more lasting value.

Unfortunately, these considerations did not weigh with the Central Prohibition Committee which was merely content with suggesting measures for the strict enforcement of the law in areas where prohibition is in force. The principal recommendations of the Committee are:

1. Prohibition of drinking even in wet areas, in public places, such as hotels, restaurants and clubs. Hotels, restaurants and clubs, however, may be allowed to have licensed side-rooms set apart for permit-holders.

2. Creation of ten-mile dry belts surrounding wet areas. The object is to prevent smuggling of liquor from wet areas to the adjoining dry areas.

3. Discouraging advertisements and other public inducements relating to drink by persuasion, as far as possible, and, if it fails, by legislation.

4. The progressive reduction in the strength of country liquor and the quantities supplied to liquor shops.

5. Closing liquor shops in or near specified industrial and other development project areas and transferring liquor shops to places away from main streets and living quarters in towns and villages.

6. Encouraging cheap and healthy soft drinks.

7. Systematic and planned educative propaganda to be made by social workers and welfare organisations.

All these are admirable on paper. But could they be implemented and made to produce the desired results by the weight of law? Past experience does not warrant optimism that they could be. What is required is a well-thought-out temperance movement and not enforcement of country-wide prohibition. Special steps must, however, be taken to minimise the drink evil in the rural and industrial areas. From this point of view, the recommendations 4 to 7 are pertinent and deserve to be implemented as an alternative to total prohibition.

CONFERENCE OF THE SEVEN

A political and economic conference of the seven European Free Trade Association (E.F.T.A.) countries—Austria, Denmark, Norway, Portugal, Sweden, Switzerland and the United Kingdom—was held in London last week under the auspices of the United Kingdom Council of the European movement. Statesmen, industrialists, bankers and trade unionists from these countries took part in the conference. Its four commissions also examined such questions as relationships of E.F.T.A. with the European Common Market and the rest of the world, commercial and economic development within E.F.T.A., investment, financial and monetary policy within E.F.T.A. and labour and social problems. Since the reports of these commissions are not yet available, reference is made here only to the proceedings of the plenary session on the opening day.

The pervading temper of the conference was one of European unity. This unity was not just economic and commercial; in the opinion of Mr. Selwyn Lloyd, Britain's Chancellor of the Exchequer, it had also a political value or significance. The cultural content of this unity was emphasised by the British Prime Minister, Mr. Harold Macmillan. While all this was pleasing to the ear, there were two potent factors that could cause disunity—the special interests of the partners, such as those of Britain in the Commonwealth, and the uneasy relationships between the Common Market Six and the E.F.T.A. Seven. It was, therefore, rather premature for the Chairman of the United Kingdom Council of the European movement to talk of a "Commonwealth-European solution, which would unite the free countries of Europe with Commonwealth and French and other European oversea territories"—a solution which "would create a vast and viable group, balancing raw materials and industrial production."

Before that distant goal could be reached, the Six and the Seven would have to come together in a closer relationship. Since there are no early prospects of their coming together, more immediately they would at least have "to learn to live side by side," in the words of a London paper. Mr. Edward Heath, the Lord Privy Seal, confidently averred that "the times for recrimination between the two European groups—the Six and the Seven—are past and there is now an atmosphere for better relationships." It remains to be seen to what extent this optimism will be justified by future developments. As things stand, the trend, however, seems to be in favour of "internal consolidation" as the more immediate objective of the E.F.T.A. This could conceivably come about through better exploitation

of the opportunities for increasing trade among the Seven. For, when trade inside the E.F.T.A. responds to the lowering of trade barriers, the benefits of economic integration will be more clearly seen and there will be greater industrial expansion. If the trading problem is solved at an early date, the E.F.T.A.'s greater goals, namely, a sustained expansion of economic activity, full employment, increased productivity and the rational use of resources, may well be within sight. But this will necessarily be a slower development, because the economic power of the E.F.T.A. is not as great as that of the Six in which more rapid expansion could come about, as, indeed, it has. Still the Seven have something to learn from the Six.

OILSEEDS

The view that the tentative target of 9.5 million tons set for oilseeds production for the third Plan would be insufficient to meet the growing demand for both edible and industrial requirement was expressed by Mr. Ramdas Kilachand in his presidential address at the annual general meeting of the Bombay Oilseeds and Oils Exchange Ltd., held at Bombay last week. Mr. Kilachand pleaded that the proposed target should be raised upwards to at least 11 million tons. In order to fulfil a bigger target, he called upon the State Governments to make strenuous efforts to give all possible help for increasing agricultural production by providing better seeds, fertilisers, implements and irrigation facilities. This, he felt, was necessary as it would improve the per-acre yield, which is still very low, according to international standards. In putting forward these views, Mr. Kilachand was voicing the feelings of trade and industry, not to mention those of consumers. Oilseeds constitute both food and cash crops. They are a valuable foreign exchange earner. They can perform this function satisfactorily only if the supply is adequate to take care of the domestic needs which are steadily rising under the pressure of expanding population and increasing development expenditure. His plea to State Governments is quite appropriate, because it is only they who can promote the "grow-more-per-acre" campaign, a task in which they have been significantly found wanting.

Mr. Kilachand doubted the utility of the recently announced export incentive scheme for groundnut oil, under which tenders are invited for the export of groundnut oil, linking it with imports of copra and palm oil and the issue of export quota for expeller cakes. He felt that, had the Government fixed a specific ratio between the groundnut oil and copra and palm oil, export promotion would have been served better. He then went on to say: "Another difficulty is the short period allowed to exporters for fulfilling exports. It has, time and again, been pointed out to the Government that short-term policies do not work to the advantage of our country, because the foreign buyers take full advantage of this by unnaturally reducing prices for the goods in case of our items of export. Foreign sellers also quote high prices in case of items of imports. Further, shipping difficulties may be experienced when the shipping period is short."

Mr. Kilachand, therefore, reiterated that the Government should announce its export policy on a long-term basis, stating the quantity of groundnut oil to be exported and specific import incentives.

The timing of the announcement of the tender scheme was another subject on which Mr. Kilachand had some comments to offer. He remarked that the time chosen by the Government was inappropriate and that, if the scheme had been announced in the earlier part of last season, the export of groundnut oil would have gone up as desired by Government. He felt that "if proper incentives" were given at the right time with a long-term policy, it would surely pay dividends.

While it is desirable, in theory, to have a long-term export policy, there are practical difficulties in evolving such a policy. The crucial point to be borne in mind, in this connection, is that the Government has a responsibility to domestic consumers who account for the disappearance of the bulk of the oil produced. The export policy for such agricultural commodities as groundnuts have necessarily to be subjected to periodical review, taking into account the changes in the demand and supply position. Otherwise, exports will entail a heavy cost to domestic consumers. This does not mean that the Government's export policy, on groundnut oil in particular, has always been right. The present tender system, for instance, has led to sizable speculation, which could have been avoided had the Government specified the proportion of imports of copra and palm oil that would be permitted against exports of groundnut oil. The Government could have also laid down a ceiling for the export of groundnut oil. Furthermore, tenders were submitted by the trade in October itself. But the Government has not yet announced the details of the scheme. The consequent speculation in groundnuts and side markets has invited the wrath of the Forward Markets Commission. The F.M.C. has now raised the margin level on groundnuts, apart from introducing new margins on trading in castorseeds, for the first time for the new crop. These measures could have been avoided, if the enthusiasts of export promotion had the vision to perceive the consequences of their action.

While a judicious export policy is bound to help promote shipments of vegetable oils, it is also essential that adequate shipping facilities at reasonable freight rates should be ensured. On this problem, Mr. Kilachand observed as follows:

"While the recent reduction in freight by Karmahom Conference on cakes is welcome and may help the trade to a limited extent, one cannot help having the feeling that this reduction is made rather out of compulsion as the number of non-Conference ships coming to India carrying P.L. 480 goods has increased; these ships, it may be noted, are prepared to carry goods at a much lower freight rate on their return voyage. The real and lasting remedy, in my opinion, lies in the abolition of the rebate system and, on behalf of the export trade of the country, I would, once again, urge the Government to take effective and early steps in this direction."

As a shipper of oils and oilseeds, Mr. Kilachand may be right in holding the views quoted above. But shipowners, too, have their own story to tell. They complain that the existing freight rates are uneconomic. In any case, the fact remains that Indian shipping companies have not been making much of a profit these days, a fact of which Mr. Kilachand himself must be acutely aware as one having a significant stake in India's premier shipping company. It is not for us to suggest a solution to this difficult problem. Perhaps, the right thing to do would be to see that Indian shipping expands rapidly, but, here again, the dog-in-the-manger policy is sought to be preserved and sustained by invoking nationalism to the extreme.

U.S. FOOD AID TO INDIA

The token bag of wheat that Mr. Ellsworth Bunker, U.S. Ambassador to India, presented to Mr. S. K. Patil, Union Minister for Food and Agriculture, on Saturday the 12th inst., means something more than a mere mark of the completion of delivery to India of 11 million tons of American wheat under the first four P.L. 480 agreements, begun in 1956, and the commencement of the delivery of 17 million tons under the agreement of 4th May 1960. For it also represents, as Mr. Bunker very aptly remarked, the interest that the U.S. has taken, and will continue to take, in India's economic development. Indeed, the token bag of wheat is "symbolic," to quote Mr. Patil, "of the significant measure of goodwill," constructive co-operation and democratic solidarity between the two countries."

The first P.L. 480 agreement was signed on 29th August 1956, followed by three others—on 23rd June 1958, 26th September 1958 and 13th November 1959. Under these agreements, India has received a total of 11 million tons of wheat, 400,000 tons of rice, 625,000 bales of cotton, 375,000 tons of corn and grain sorghum, 3,000 tons of tobacco and 20,000 tons of dried milk powder. The aggregate value of these commodities is Rs. 460.5 crores ($967.5 million). Besides helping India to meet a part of the food requirements in periods of scarcity, the agreements have considerably assisted this country's developmental needs. As much as 80 per cent. (Rs. 343.0 crores) of rupee proceeds amounting to Rs. 460.5 crores from the sale of commodities has been given by the U.S. Government as grants or loans to the Government of India for aiding development projects. Of the balance, Rs. 43.8 crores are given as loans to private enterprises and Rs. 73.7 crores are reserved for U.S. Government expenses in India.

The sums reserved for grants and loans to the Indian Government amount to Rs. 93.3 crores and Rs. 249.7 crores, respectively, but agreements so far concluded under these heads cover only Rs. 18.51 crores and Rs. 132.33 crores, respectively. The allocations—in crores of rupees—for the different projects are: *Grants*: River valley development 5.94; malaria eradication 8.00; U.P. Agricultural University 1.00; Indian Institute of Technology, Kanpur 0.45; Indian Investment Centre 0.22; All-India Institute of Medical Sciences Hospital, New Delhi 2.90. *Loans*: River valley development 79.16; Refinance Corporation 26.20; Sharavati Hydro-electric Project 6.97; Industrial Credit and Investment Corporation 10.00; Industrial Finance Corporation 10.00.

An understanding has been reached that the following projects, which have been granted loans by the U.S Development Loan Fund to meet their foreign exchange needs, will be given loans from P.L. 480 sale proceeds to meet their local currency costs, but separate agreements are yet to be signed; the projects will be financed in their entirety by the U.S.:

Name of project	*D.L.F. loan to meet foreign exchange costs* ($ million)	*Rupee loan from P.L. 480 sale proceeds* (Crores of rupees)
Chandrapura Thermal Power Station	30.0	20.5
Durgapur Thermal Power Station Extension	20.0	3.4
Barapani Hydro-electric Project (Assam)	2.5	6.2
Barauni Thermal Power Station (Bihar)	3.8	1.3
Kanpur Thermal Power Station Extension	1.6	1.0
Trombay Fertiliser Plant	30.0	13.3
Total	87.9	45.7

Out of the Rs. 43.8 crores reserved for loans to private enterprises under the Cooley amendment, Rs. 10.82 crores have already been sanctioned, as under:—Otis Elevator of India, Ltd. Rs. 10 lakhs; Goodyear Tyre and Rubber Company of India Rs. 2.25 crores; Mysore Cements Ltd. of Bangalore (Messrs. Sarangapani Mudaliar and Kaiser) Rs. 55 lakhs; Hindustan Aluminium Ltd. (Messrs. Birla Bros. and Kaiser) Rs. 1.00 crore; Synthetics and Chemicals, Ltd. (Messrs. Kilachand and Firestone) Rs. 3.92 crores; Messrs. Sharpe and Dohme (Private) Ltd. Rs. 50 lakhs; Ex-Cell-O India (P) Ltd. (Messrs. Amerind Engineering Company of Bombay) Rs. 20 lakhs; Premier Tyres, Ltd., Kerala (Dayton Rubber Company of U.S.A. and Indian Associates) Rs. 30 lakhs; and Seshasayee Paper and Board, Ltd. (Messrs. Seshasayee Bros. Ltd. and Parsons and Whittmore) Rs. 2.00 crores.

The fifth P.L. 480 agreement signed on 4th May 1960 and its two supplements of 29th July and 23rd September together cover commodities worth Rs. 535.3 crores ($1,334.7 million). The commodities include 16 million tons of wheat, one million tons of rice, 100,000 tons of milo, two million lbs. of tobacco, 134,000 tons of corn, 4,000 tons of soyabean oil and 330,000 bales of cotton. The wheat and rice shipments will be spread over four years, while the other commodities will arrive in the near future. Of the total sale proceeds of Rs. 635.2 crores, Rs. 535.6 crores will be given to the Government of India (half as grant and half as loans) for economic development and Rs. 31.8 crores as loans to private enterprise, the remaining portion of Rs. 67.8 crores being reserved for U.S. Government uses.

A detailed analysis of the P.L. 480 agreements has been made here specially to highlight the generous and humanitarian act of the U.S. Surely, the whole of India was with Mr. Patil when he expressed profound gratefulness to the Amerian people, the Administration and, above all, to President Eisenhower for such an Act. But for this assistance, which has helped to neutralise a good part of the inflationary effects of large doses of deficit financing, it is extremely doubtful whether the economic advance which India has made in the past ten years would have been possible at all.

RESEARCH IN INDUSTRY

An esteemed reader of *Commerce* writes:

"Your article entitled 'Industrial Research' in the October 15 issue of *Commerce* was most timely but did not hit hard enough on the present unhappy situation obtaining in that field of activity which, unprepared and ill-equipped as we are, we seem to be rushing into, because we feel every industrially advanced country is doing so and therefore, and for no other reason, we also should!! It is not merely enough either to multiply national laboratories or persuade unwilling units of industry to part with their money, in order to establish what you have called co-operative research. There should be first and foremost men of the highest calibre who can undertake to do research in the right direction. When we are so short of technical personnel even to man the industries we have started, how can we expect to have research men to work on subjects of which they neither have practical experience nor the slightest conception of the industry's requirements? You have very rightly observed in your article that expert opinion of people like Prof. J. B. S. Haidane has been critical of the research performance of the national laboratories. Instead of trying to rectify these defects, the ambition of the C.S.I.R. and its Director seems to be to multiply such laboratories—perhaps for the kudos that accrues to them for

ON THE ARENA

By The Archer

P. M. On Private Sector

DURING the last ten days, I have been trying to ascertain the reactions of a number of persons to the Prime Minister's statement at the A.-I.C.C. meeting at Shuklanagar to the effect that private industry was obsessed with securing quick dividends and lacked the capacity and the mental approach to set up heavy industry and bring about an industrial revolution in India. Most of them have lightly glossed over the Prime Minister's remarks with winks and smiles, implying that this was another of his emotional utterances; and only one person tried to explain that all that was meant was a reiteration of the philosophy underlying the Industrial Policy Resolutions of 1948 and 1956. I sincerely hope the latter is correct. But I feel that it amounts to irreverence to so august a person as the Prime Minister to gloss over his swipe at the private sector without saying "I beg your pardon." The desire to make every venture a profit-earning proposition is one that should and must govern all enterprises—private or public—and, at a sustained level, the tempo of effort may well become a laudable obsession.

The meaning of the word "obsess", according to Chamber's Dictionary, is "to occupy the thoughts of, obstinately and persistently." So, if an *entrepreneur,* who has obtained his capital from public subscription, is constantly and obstinately and persistently thinking of earning profits (and quickly, if possible) to distribute dividends to his shareholders, he should be praised for contributing to economic growth, rather than cursed as being greedy. I have no doubt that all the estimable gentlemen who have been placed in charge of the large industrial corporations in the public sector are—or should be—perpetually endeavouring to turn the enterprises into good profit-earning propositions. If they fail to do so, they will not only fail in their duty but also seriously embarrass the Finance Minister (no doubt as a member of the Planning Commission) who has assumed an income of Rs. 440 crores (among resources for the third Plan) from surpluses of public enterprises other than Railways, which are expected to yield a profit of Rs. 150 crores.

Despite what the Prime Minister feels about the propriety of aiming at quick returns, these estimable gentlemen will do well to go hammer and tongs on the job of securing profits from the State enterprises under their control. I dare say that it was some such thinking that was at the bottom of the recent increases in telephone rates through unilateral cancellation of all existing agreements governing "Own your telephone" contracts, and stepping them up; and, if this does not come under "obsession for quick profits," I should like to know what does. It is only a monopolistic State enterprise that can get away with so much as the telephone administration has; only, its excuse is that resources should be found for the third Plan. The Prime Minister might, perhaps, justify even an indecent obsession for more profits on the part of railways, posts, telegraphs and telephones on the ground that the money is obtained from the people by the people for the people, but, in the ultimate analysis, it seems to me that most other obsessions can be magnificent as long as they generate sustained human endeavour. I need only mention, as unction to my distressed mind, that so lofty a person as the Prime Minister may well word his thoughts a little more happily (and less unkindly) than he does these days; for, I feel rather strongly that it is unkind to abuse an industrialist for wanting to make quick profits as it is to say that a man is henpecked, because he is being kind to his wife.

* * * *

On Eating Rice

Mr. Nehru has given the call for an eat less rice movement; in order to ease the food position, he would like people to eat all varieties of foodgrains and vegetables. Not content with this exhortation, he has added that eating too much rice made one lethargic and idle and that he was not sure of its effect on the brain. The tragic fact, however, is that those who eat large quantities of rice, or, for that matter, wheat or maize, do so, not because they do not favour the concept of a balanced diet, but because they cannot afford the luxury of pulses, cereals, vegetables, milk and other edible products and are, therefore, forced to consume large quantities of one type of basic grain for sustenance. As regards Mr. Nehru's quip that eating too much rice dulls the brain, I may assure h.m, from my not inconsiderable personal experience, that nature has been quite fair in distributing stupid and idiotic people in all parts of the country, irrespective of the staple crop, and that, while overeating in general (of wheat or meat, rice or maize) does result in increasing blood circulation in the stomach more than in the brain, rice is not more sinister in its action than its counterparts. All this apart, may I invite Mr. Nehru's attention to a very significant passage in the New Testment (Matthew xv: 17, 18), namely, "Whatsoever entereth in at the mouth goeth into the belly and is cast out with the draught; but those things which proceed out of the mouth cometh forth from the heart, and they defile the man." So, why should we get worked up about the eating habits of our people to a greater extent than about their talking habits? Indeed, why?

* * * *

Buffaloes and Cows

In the comfortable and expansive days of the dim distant past and before I degenerated into a sophisticated member of society depending on pasteurised milk in sealed bottles, I owned cows and buffaloes and got acquainted with some elementary facts regarding their maintenance and upkeep. I was, therefore, not a little amused to read Mr. Morarji Desai's statement at Anand, when he opened the Amul Baby Food and Cheese Plant, that too much consumption of buffalo milk had resulted in our intelligence being as dense as that of the buffalo. Apart from the fact that this is an ungracious aspersion on an animal which gives away its milk even without a thought for its calf, it is unscientific to assert that buffalo milk has an adverse effect on human intellect. It is certainly richer in fat content than cow's milk, twice or more perhaps, but that only makes it more desirable for several purposes. Further, the buffalo is considered a better animal than the cow as a commercial proposition, as it eats more roughage and needs less concentrates.

In this context, I should like to record a few observations on livestock development in our country. At the outset, I would draw attention to Mr. Nehru's statement a few days ago that his Soviet cow yielded more than a maund of milk a day. I am informed by experts that this is not so spectacular a phenomenon as "to write home about" (although we might write to the Soviet Union), for cows owned by farmers in England and Sweden are reported to yield 28,000 lbs. to 30,000 lbs. per year, while one maund per day works out to 24,000 lbs. per lactation year of 300 days. As far as I can see, no attempt has been made in India to propagate cattle which can achieve high yields, and most of the State schemes for cattle development appear to be tinkering with breeds yielding two to three pounds per day. While the strains of Indian cattle can bear improvement, not all of them need to stay as poor yielders, as many a cow yields below her potential because of underfeeding. For efficient production, a cow needs plenty of grass and concentrates—neither of these is in abundance in India. Grazing lands are poor in extent and the grass that they carry is not of the best variety. Concentrates in the form of seed and oilcakes are also in poor supply, so that most of the milch animals are left to fend for themselves while the milk that they give is actually forced out of them.

In Britain, where high producing cows abound, every farmer sets apart one acre of land specifically for growing cattle fodder. Very few of our farmers can afford such allocation as the pressure on land has continuously increased by diversion to remunerative cash crops. Individual effort in this direction cannot be expected; only the State can evolve an efficient system of land utilisation and ensure that specific areas are set apart for grazing fodder. Plenty of green grass will increase milk yield and reduce the animals' need for concentrates. Britain imports practically all the nuts and seeds which go to make concentrates and, yet, milk in Britain costs only about 5d. per pound. As far as I know, there are no manufactories of concentrates in our country. The oilcakes available here are variable in quality and so adulterated that their nutritive value is doubtful. Here, again, State enterprise should fulfil the need. I understand that a Fodder and Grazing Committee has been in existence in this country for the last three decades. One has yet to see the fruits of its labours in improving fodder resources. If good cattle feed is made available in the country at a reasonable price, every cattle owner will gladly feed his animals properly. With proper feeding alone, the production of Indian cattle can be stepped up by 25 per cent.

On the breeding side also, we have made little progress. Good breeding implies the use of good foundation stock and of these we have few. It has been established that the worth of a bull or cow is decided on the basis of the progeny it produces—the progeny test. How many progeny-tested bulls have we? I believe, none. Instead, any bull that comes from a Government farm is designated a "pedigree bull" and is allowed to breed at stud. Artificial insemination which is believed to extend the use of a bull and enable him to sire hundreds of calves in a year is widely practised, and extraordinary claims are made for it in our official reports. While artificial insemination can effect quick improvements with good stock, it can do considerable damage if the basic stock is poor. To use it with unproved bulls is a most uncritical and dangerous approach. (Also, it will be psychologically deleterious for the cows.) If the process which has been in use in India for the last fifteen years has produced results, where are the fruits of it? What assessment has been made and which is the organisation doing it? I know that statistics and figures exist regarding the inseminations done, calves born, etc., but, while figures cannot lie, liars can figure. So, perhaps, that is why we see so little tangible improvement!

Government farms are no solution for a sound policy of land apportionment for animal feed. They carry heavy overheads, their utility is limited and they are, on the whole, uneconomic. The correct thing to do is to organise a livestock industry as in Western countries. The establishment of a Milk Marketing Board, as in England, charged with the responsibility, not only of marketing milk, but also of breeding good stock and feeding them, will be the right step. Co-operative farms, with local breeders as members, in each district will help solve local needs for milk. Above all, a country-wide policy of breeding the best to the best, combined with scientific feeding and management should be laid down.

Too often we hear of the rigours of the Indian climate adduced as a reason for the poor quality of our cattle. But some of the finest of the world's cattle are found in the arid regions of Africa and Australia—it is, therefore, not the climate but man's ingenuity that is responsible.

CANADA'S EXPORT DRIVE

What is described as the most intensive export drive has just been launched by Canada. Forming part of the drive is a mammoth conference of Trade Commissioners from Canada's 63 posts in 49 countries scheduled to be held at Ottawa on the 30th inst. The main objective of the conference is to explore the possibilities of expanding every trading opportunity abroad. Explaining the urgency of the situation, Mr. George Heas, Canada's Minister for Trade and Commerce, says:

"Today, we are faced with the economic resurgence of countries devastated during the war, and the even greater threat to our export lifelines, posed by the trading activities of countries endeavouring to secure our traditional markets. The global trading struggle is being further intensified by the emergence of trading blocs in Europe and a tremendous step-up in the trade promotion efforts of our competitors, including our western allies, and even other members of the Commonwealth. Trade is of such vital importance to Canada, and to each and every Canadian, that we must without delay marshal our forces to take advantage of every possible trading opportunity."

Canada is the fourth largest exporter in the world, after the U.S., the U.K. and West Germany. Its actual exports are currently at an annual rate of $5,650 million. Its endeavours to increase exports will, of course, affect its trade with India but only to a limited extent, in view of the continued tight import policy pursued by the Government of India. There has been a distinct improvement in India's trade with Canada of late. During the first seven months of 1960, India had a favourable balance to the tune of Rs. 2.80 crores, its exports and imports amounting to Rs. 9.30 crores and Rs. 6.50 crores, respectively. An adverse balance of Rs. 20.14 crores was in evidence during the year 1958 which, however, declined to Rs. 7.09 crores in the following year. The improvement was due largely to the drop in imports into India from Rs. 34.66 crores in 1958 to Rs. 22.21 crores in 1959 and partly also to the slight rise in exports from Rs. 14.54 crores to Rs. 15.12 crores.

AMERICAN LETTER

POLICIES ARE DECIDED BY CONGRESS AND NOT THE PRESIDENT

COMPACT CARS IN GOOD DEMAND

From Our Special Correspondent

NEW YORK, *8th November*

THE elections in the United States are over. The most charitable thing that can be said perhaps is the French proverb "*Plus ça change, plus ça même chose,*" or, "The more things change, the more they remain the same."

The election rallies were rather undignified, particularly the television appearances which produced nothing but platitudes. In fact, there was no outstanding issue which separated the Presidential candidates, including the big ado about economic policies.

Such policies are decided anyway by the Congress and not by the White House. The President may suggest and ask for legislation, but the Congress decides, though there is a veto power by the President which may again be overridden by the Congress.

Presidents are human, of course, and have different opinions whether or not they belong to the Party in power, or on the opposition side. It is regrettable that President Eisenhower could not have stood for election again. He could have won under any major ticket, either Democratic, or Republican, because he was essentially and still is a national hero, identified with liberation of Europe. This Presidential election revolved around words, words and promises by non-national heroes. But the American people have made up their minds, anyway.

Little Change

Economically, there will be little change, if any. And, if there are changes, they will be quite gradual. The new Congress will not convene until January, anyway. Despite soft spots in steel which is still operating at only one-half of its capacity, and some industries which are considered "soft," there is not too much wrong, drastically, with the American economy.

Almost 68 million people are gainfully employed at the present time. Personal income is running at the rate of $408,400 million a year, against $384,300 million a year ago. The change in the Presidency next January cannot possibly alter this situation drastically.

For some reason or other, there is still widespread concern about the U.S. economy. At the same time, there is a good deal of optimism.

The National Industrial Conference Board made a survey the other day, and a substantial number of 173 manufacturing companies, which were asked a number of questions, anticipate that their new orders, billings and profits in the first half of 1961 will be higher than in the first six months of 1960.

In this group of respondents, there is considerable optimism in spite of the soft spots. New orders and pre-tax profits, it is anticipated by the respondents, will increase. About one in four expects that orders will be unchanged. Only about 33 per cent. predict a decline in new orders and earnings below those of the comparable period in 1960. Statistically speaking, this is a pretty good record, all other factors being equal.

Three years ago, when the U.S. economy was entering a recession, the situation was reversed. Then, only one-third of the co-operating executives predicted an increase in new orders and in earnings.

This time one-half of all respondents who, presumably, know what they are talking about, expect their billings to gain in the first six months of 1961, as compared with the like 1960 period.

Inventories, generally, are slightly larger than they were last year, but then they were run down considerably. Not much increase is expected in this area, rather stability, or a slight decline.

The overall rate of production is anticipated to increase. Again, predictions in the fall of 1957 were virtually the reverse. Also, capital expenditures for plant and equipment, it is generally felt, will be higher from here on in, with four companies out of ten projecting their spending in this area to be the same in 1961 as in 1960.

U.S. Car Makers Learn

After several years of placidity, U.S. automobile manufacturers have finally awakened. Instead of huge autos with unnecessary fins and fancy trimmings, they are now building what they call "compact" cars. They have learned from the import of foreign makes which have achieved considerable popularity in the U.S.

The U.S. concept of "planned obsolescence" should be the next motion to fall by the wayside. This concept played on the ego of those who would not be caught with anything but the latest models. Yet, the Volkswagens and Rolls-Royce have hardly changed in appearance and enjoy great sales here.

One concrete result of the wholesale switch to "compacts" has been an increase in sales. According to the latest reports, mid-October automobile sales ran ahead of the pace set in the previous reporting periods and they were 4.1 per cent. higher than in the same period of 1959.

A rather significant development, outside of the political rantings, took place at the United Nations here. The General Assembly requested the Secretary-General to accept the offer of the Government of Chile to transfer a plot of land for the construction of a building to house U.N. and specialised agency offices.

This project might well be emulated by other nations, including India which has played such an important role in the U.N., economically, culturally and politically. Such a proposition could become the focal point for the free thinking peoples of the Far East.

The U.N General Assembly authorised the expenditure of not more than $1,550,000 for the construction of the building in Chile. There will be subsequent progress reports.

Under the agreement recently enacted, Chile undertakes to urbanise the site upon which the building will stand. It will arrange for the provision of the necessary utility services and the erection of a fence. Santiago has agreed also to regulate the use to be made of the adjacent land, so that it shall not detract from the amenities of the site. The U.N. parcel of land in Chile consists of 46,763 square metres, part of Vitacura Park under the jurisdiction of the municipality of Las Condes. The Economic Commission for Latin America will be represented there.—*All Rights Reserved.*

The world capacity to produce fully synthetic fibres this year is estimated at about 900,000 tons and is expected to rise to one million tons next year. World production during 1959 at 575,000 tons was 38 per cent. more than in the previous year. Last year's world production consisted of 335,000 tons of polyamides, an increase of 26 per cent. over 1958; 100,000 tons of acrylic fibres (+67 per cent.); 85,000 tons of polyester fibres (+55 per cent.); and 55,000 tons of other types of fully synthetic fibres (+49 per cent.).

The business machines industry is enjoying boom conditions in West Germany, reflecting the increasing efforts made to increase office workers' productivity. Production of such machines rose to DM 458 million during the first half of 1960, an increase of 18 per cent. over a year ago. Of this, about 45 per cent. were exported, and of total domestic sales, about 30 per cent. came from abroad, with the U.S. as the most important customer and supplier. Of the total world exports of business machines, the W. German industry now supplies 18 per cent., a share which puts it in the second place behind the U.S. but ahead of the U.K. and Italy.

The Australian Government has announced measures to stabilise the economy, which include an increase in the bank overdraft rate from 6 to 7 per cent. and an increase of sales (purchase) tax from 30 to 40 per cent. on motor cars and station wagons. The Government has also introduced legislation abolishing eligibility for tax deduction by companies raising money from the public by convertible notes. Further, it proposes to bring forward legislation in 1961 to make insurance companies and superannuation funds invest a minimum of 30 per cent. of their investment funds in Government securities.

Western European countries such as Italy, Belgium and Holland are currently making strong bids to extend economic ties with Mexico. Belgium has offered technicians and machinery for a zinc-refining plant in Saltillo, Coahila. Italy has offered Mexico help in exploring its agricultural, livestock, forestry, mining and pharmaceutical potential, especially with a view to exporting to Italy and the European Common Market. Italy has also plans to set up in Mexico production plants for fertilisers, insecticides and machinery, and to buy Mexican cotton, coffee, meat, cocoa and honey. A trade mission is at present exploring the possibilities. Holland, too, proposes to collaborate with Mexico in the building of one of the largest shipyards in Latin America, in the Pacific port of Mazatlan.

OUTER SEVEN ASCENDANT

(From Our Own Correspondent)

LONDON, *11th November*

LONDON LETTER

IT was, perhaps, inevitable that apart from the Prime Minister's speech at the opening in London this week of the Political and Economic Conference of the Seven, the British Press should have taken little note of what was going on, though other European countries, including America, were inclined to treat these questions of trade relationships rather more seriously than the insular English are accustomed to, and gave them far more space in their Press.

For, of course, this was not the sort of Conference from which anything spectacular could emerge: it was expected that more noble sentiments would be voiced, and they were, both by the Prime Minister and the Foreign Secretary, Mr. Lloyd—on the need for economic unity, on the desirability of fine solutions to the "many practical problems involved," on the need to work towards a wider arrangement for European trade, and so forth.

But E.F.T.A. is in its infancy. It is still setting up its machinery for consultation and if the E.F.T.A. Action Committee envisaged does get into operation, it will devise further means of strengthening E.F.T.A. It is only a year ago that the Governments concerned agreed to form a free trade area, and only on 1st July of this year that the first cut in tariffs of 20 per cent., and the increase in quotas took place. Over the next ten years, tariffs and quotas generally are to be abolished between these Seven countries by continuous percentage changes and, therefore, quite apart from any other action, trade relations between the Seven countries are bound to become much closer.

Yet E.F.T.A., unlike E.E.C., otherwise known as the Customs Union of the Six, has plenty of loopholes in its constitution, in order to make the negotiations easier, and, in particular, special arrangements will be made for agricultural products, one of the burning issues that divided the U.K. from the Common Market. The more the loopholes are used, the less effective E.F.T.A. will be, and the speech of the Chairman of the U.K. Council of the European Movement, Sir Edward Beddington Behrens, who had promoted the Conference, deserves more recognition than it has received. He seized on the second burning issue that split the U.K. from the Common Market, the issue of Commonwealth Relations, and said that he himself favoured a Commonwealth solution. He would like to see the union of the European Thirteen with the Commonwealth countries, but there is a shorter-term objective—that is, to bring the Commonwealth countries into the Seven.

Country of Origin System

E.F.T.A. could do this more easily than could the E.E.C., since E.F.T.A. is not committed to a common external tariff. It provides for such things as Commonwealth preference and differing rates of tariff by each country in accordance with its own arrangements with third parties. Thus, one of the difficult technical pieces of machinery of the E.F.T.A. is the setting up of a country of origin system, so that goods getting into the Outer Seven over the lowest tariff wall do not reach the higher tariff countries at a preferential rate. Yet, over the next ten years, these problems will disappear, except for the loopholes, and it is perhaps the feeling that the loopholes are excessive that prevents the E.F.T.A. from enjoying the same confidence as the E.E.C.

Hence, also, the new Action Committee will be required to publicise the work of E.F.T.A. as well as to enquire into investment, financial and monetary policies and taxation policies.

Finally, from the Conference, there emerged a philosophical picture which distinguishes E.F.T.A. from the E.E.C. While the Common Market relies upon the hard facts to complete economic integration to bring the countries together, and envisages further Government action towards political unification, the E.F.T.A., with its looser relationships, relies far more upon individual enterprise in forging links between the countries concerned.

E.F.T.A. will offer many opportunities to British businessmen, and to the businessmen of other countries—the larger firms here are beginning to get E.F.T.A.-minded, and are considering the effect on them in the home market and the export possibilities of reduced tariffs: but it is too soon to say that this consciousness is as widespread in the economic polity of E.F.T.A. as it is in the economic policy at home. The Government here will use exhortation to make the union effective rather than direct action.—*All Rights Reserved.*

FRENCH BANK'S CENTENARY

The Comptoir National D'Escompte De Paris, popularly known as the "French Bank," scored a century in India this year, when it completed hundred years of existence in this country. Its centenary in India was celebrated this week, to participate in which, Mr. H. Bizot, General Manager of the Bank, flew to India from Paris. Its three branches in India, one each at Bombay, Calcutta, and New Delhi, are among the total of 800 branches spread over many countries. The French Bank is thus a truly international bank. It was founded 112 years ago in Paris by virtue of a Government Decree and converted, in 1854, into a private banking institution and christened as *Comptoir D'Escompte De Paris*. It was further reorganised 35 years later in 1889 and given the present name.

It is noteworthy that the Calcutta branch of the Bank, which was opened in 1860, is one of the first foreign branches of the Bank. When European cotton industry turned its attention to India in the second half of the past century for raw cotton, the French Bank was in Bombay to help them and the exporters in India. During the past hundred years, the Bank has actively participated in India's foreign trade and played a prominent role in developing trade relations between France and India.

GOODYEAR

Corner stone of GOODYEAR'S new plant laid

On November 12th, at a sober, yet impressive ceremony, Shri Manubhai Shah, India's Minister for Industries laid the corner stone of Goodyear's new plant at Ballabgarh.

The new Factory, which involves the large investment of 6 crores of rupees, latest and modern techniques and equipment, and many years of experience will be the 59th in the series of Goodyear enterprises all over the world. When it goes into production in 1961, this factory will employ several hundred workers, and manufacture Passenger, Truck and Farm Tyres for original equipment and replacement—testimony of Goodyear's confidence in the industrial development of India.

RAISING PRODUCTIVITY OF HANDLOOMS

U.P.'S SCHEME TO INTRODUCE MORE AND MORE POWERLOOMS

THE reported move of the Uttar Pradesh Government to embark upon a more intensified programme to encourage mechanisation of the handloom industry in the State is, indeed, commendable. The programme envisages the setting up of 750 powerlooms and four yarn preparatory factories to feed these looms with sized beams in the handloom co-operative sector by the end of the second Five-year Plan (March 1961). It is stated that the primary co-operative societies of handloom weavers with satisfactory record of work will shortly switch over from handlooms to powerlooms in a bid to produce quality fabrics "to suit all pockets." Each primary society, we are told, will be allotted up to 15 powerlooms. The State Government will advance a loan of Rs. 2,500 for the purchase of looms with electric motor and Rs. 1,000 as working capital, besides Rs. 87.75 as share capital loan to each society. As for the purchase of machinery and other equipment for the preparatory factory, a sum of Rs. 1,29,750 each will be given partly as loan and partly as grant to the societies.

The progress made in the implementation of the powerloom scheme in Uttar Pradesh so far during the current financial year is claimed to be quite notable. According to a recent review of the progress, two preparatory factories are being established—one in Khalilabad and the other in Tanda—for supplying sized beams to powerloom units having six to fifteen looms scattered over a wide area all around the preparatory factory in the districts of Basti and Faizabad. All the 268 looms required to be installed in the two districts have already been purchased and received, and, along with installation of looms, the construction of loom sheds is in progress. The buildings of the preparatory factories have reached upto roof level and the consignments of the equipment have started arriving.

Weavers' Earnings Low

The active steps taken by the U.P. Government to introduce powerlooms in the handloom sector are in striking contrast to the stiff opposition offered by some State Governments to the programme. In spite of all the official spoon-feeding over a number of years, the economic conditions of handloom weavers have not improved to any significant extent. The average monthly earning of over 50 per cent. of the total number of weavers is said to be no more than Rs. 50. The low level of wages continues to be a serious problem and it becomes, as a recent study by the Indian Branch of the International Labour Office revealed, all the more complex, because of the fact that any increase in wages will go towards increasing the price of handloom cloth which will adversely affect its competitive position *vis-a-vis* the mills. The earnings of weavers can certainly be enhanced but only through measures designed to augment the present low level of productivity.

Viewed thus, the statement of Mr. M. Bhaktavatsalam, Minister for Home Affairs and Agriculture, Government of Madras, that the weavers who are members of co-operative societies are now assured of almost continuous employment with decent wages for their livelihood seems to be somewhat exaggerated. Addressing the first Madras State Handloom Finance Seminar held at Coimbatore on Thursday the 10th inst., Mr. Bhaktavatsalam said:

"The weavers' co-operative movement in the State has expanded considerably since the commencement of the second Plan and generally since the inception of the Cess Fund (in 1953). This is due to the Government pursuing a policy of utilising the co-operative machinery for the amelioration of the handloom weavers. The movement made great strides and there are now more than 1,050 weavers' co-operative societies in the State and about 210,000 looms working for them. ... The Cess Fund schemes are being implemented in the State with effect from the year 1953-54. More than Rs. 1.25 crore are being spent every year on an average on these schemes which touch all aspects of the handloom industry."

Mr. Bhaktavatsalam referred also to the series of measures aimed at ameliorating the conditions of weavers engaged in the cotton, art silk and silk industry. These measures include Government's participation in the share capital structure of the State Handloom Weavers' Co-operative Society and the three co-operative spinning mills; housing schemes for weavers; grant of loans (Rs. 25 lakhs each during 1958 and 1959) for procurement of accumulated stocks with primary societies as well as for their disposal: assistance in ensuring yarn supplies at reduced prices; loan to the State Handloom Weavers Co-operative Society for issuing loans on the pledge of stocks of "Bleeding Madras" variety of handloom cloth; and delegation to the Far East to explore the possibility of finding an alternative market for this variety.

Handlooms in Third Plan

Making a brief reference to the handloom industry in the third Plan, the Minister observed:

"The handloom industry is being given an appropriate place in the formulation of schemes under the third Plan, as the Government are conscious of the role which the handloom industry is playing in providing the cloth requirements of the nation and in providing employment opportunities to a large section of the people. The weavers' co-operatives should be assured of a congenial climate for their healthy growth and development. The first and foremost requisite for their steady development is finance for production and marketing. Finance should be made available to them irrespective of the tangible assets of the borrowers. For this very reason, the credits are canalised through the co-operative banks. This seminar has, therefore, been convened at a very appropriate moment to review the working of the Reserve Bank's scheme of financing, to find out the bottlenecks in the actual implementation of the scheme, and to evolve remedies, so that the weavers' co-operative societies may draw as much funds as they require for maintaining and increasing production and achieving the targets set before them."

The mere provision of financial assistance, though it will greatly help the weavers whose financial position is weak, is not enough. Nor will the supply of improved types of cottage looms and appliances bring about any improvement in the productivity of the handloom industry. What is more urgently wanted is, as this journal has ere now emphasised, the implementation of a bold programme for replacing the cottage type hand-operated looms with powerlooms. It is gratifying that the U.P. Government has fully recognised this aspect and it is to be hoped that its example will be emulated by the other State Governments as well. There are already signs of a change in the attitude of the Madras Government. A few weeks ago, the Chief Minister of Madras appealed to handloom weavers to go in for powerlooms, so that they could earn more and exist without subsidy from the Government. It is high time the Madras Government took energetic measures for spreading powerlooms in its area.

MAN-MADE FIBRES IN U.K.

There are at present few signs of a reversal of the upward trend of man-made fibre production in the U.K., according to Sir William Palmer, Chairman of the British Man-made Fibres Federation. Speaking at the annual meeting of the Federation in London the other day, Sir William stated that output of fibres was 420 million lbs. in 1958 and might reach nearly 600 million lbs. in the current year, that new plant had come into use and that proposals of new fibres were being considered. His review of the recent trends reveals that demand for fibres is still good. Stocks are not unduly high and retail sales of clothing, which rose steadily early in the year, showed surprisingly enough a pronounced spurt upwards in the early autumn. The future of the man-made fibre industry lies in the development of new uses rather than in the expansion of existing ones. One of the reasons for the decline in shipments is the relatively high and increasing labour costs which makes Britain less competitive in price in many parts of the world. To quote him:

"There seems, indeed, no likelihood at present of an improvement in the exports of finished man-made fibre textile products. Our exports of finished cloth declined from 13 million yards in 1957 to 64 million square yards in 1959 and an annual rate of 56 million square yards in the early part of the present year."

A part of the decline is attributed to the virtual disappearance of the trade in finishing imported grey cloth for export. There was, he declared, no hope of compensating for this by increased exports to Europe, because the total market was not large and many countries in the European Free Trade Area had efficient home industries.

Mr. Employer: to every member of your staff add four dependants—and there you have a rough idea of the extra people who depend on your payroll. These dependants are important to your organisation because upon their financial security rests your employees' peace of mind; peace of mind which makes for greater productivity, devotion to duty and loyalty. The Life Insurance Corporation offers two Schemes which, as an employer, you should know about:

Group Insurance Scheme offers low-cost Life Insurance protection to your staff under one Master Policy.

Superannuation Scheme is the cheapest method of providing retirement pension, with or without life insurance benefit.

MORE ABOUT THESE SCHEMES:

- For tax purposes premiums on both Schemes are treated as normal business expenses
- Under certain Schemes attractive tax-relief is allowed to the employees
- Employees get the benefits of these Schemes at lower cost
- They can often be instituted at no extra cost to the employer
- Administratively, they do not involve your office in anything but minor clerical work
- It is being increasingly realised that these schemes go a long way to increasing staff productivity and length of service.

When next an Insurance man calls on you about these Schemes, give him a few minutes of your time—without any commitment of course.

Life Insurance Corporation of India

SCRAPPING SURPLUS CAPACITY

TIME LIMIT FOR APPLICATIONS EXTENDED

From Our Special Correspondent

MANCHESTER, *8th November*

MANCHESTER LETTER

READING between the lines of the legal notices and the official statement from the Cotton Board that the time limit for submitting applications to scrap plant in the finishing trade's reorganisation scheme has been extended, it is reasonably fair to assume that the minimum targets have not yet been reached in all sections, but are clearly within the range of attainment. Lord Rochdale had announced at Harrogate that the targets had been passed in yarn processing and bleaching, but that the applications then received in dyeing and printing represented about 60 and 55 per cent., respectively, of the targets.

It should be recalled that the arrangements made for these redundancy programmes show distinct variations as compared with the spinning and weaving schemes. For one thing, the Cotton Board has power to reject an application, if the special committee concerned feels the dismantling of particular plant would prejudice the supply position in the section. It follows that, although negotiations have taken place between individual firms and the authorities covering an amount of machinery exceeding the minimum objective, subsequent rejections might bring the productive units concerned below the targets.

Another important aspect is that, once an application has been accepted, the machinery must be scrapped, irrespective of whether the section concerned attains its target, so that it is possible that the Government aid of two-thirds of the cost of the redundancy programme may not be available. The sponsors of the programmes will obviously do their best to stimulate owners of works into putting sufficient plant into the schemes to make them fully effective.

Price Level Comparisons

Regimentation has often been accused of creating a situation in industry today which offers little incentive to the individualist and provides a safeguard for the inefficient and unadventurous trader. Charges of this kind were levelled against the price regulation arrangements once in force in the spinning and doubling branches of the cotton industry, but, since their abrogation nearly two years ago, the trend of selling rates for yarn and other products has been able to develop on lines more fitting to the traditional pattern of supply and demand.

There remain critics of any system and, after the keen buying wave which occurred twelve months ago in Lancashire, there were complaints from users who contended that prices had been lifted too high. These arguments have lately gathered strength due to the latest phase of activity, in which spinners and manufacturers have booked substantial contracts at widening margins.

Producers must have listened with some satisfaction to the comments made by Lord Rochdale at the recent Cotton Board conference, when he made a number of observations on existing price levels. "I have no doubt that there may be black sheep in the cotton industry, as in any other walk of life," he said, "who have tried to take advantage of the situation and tried to get away with excessive prices, but I am quite sure that, in the main, these increases have been reasonable, due to the increase in the price of cotton, as well as to the world-wide revival in the cotton trade, rather than to the reorganisation schemes."

Similar rises in quotations, added Lord Rochdale, had occurred in the prices of cotton goods from such diverse suppliers as the United States, India and Hong Kong. At the same time, it has frequently been stated, and this was confirmed by the Cotton Board Chairman, that prices were generally uneconomic in the business recorded up to the final months of last year. This was the result of what he described as "dead weight of surplus capacity and the inevitable weak seller."

B. of T. Index Numbers

Wholesale price index numbers published monthly by the Board of Trade are based on the figure of 100 in 1954. The index for cotton yarn in February 1959, at the time of the dissolution of the Yarn Spinners' Agreement, reached a low point of 82.1, but, despite all the subsequent developments and the overwhelming call for supplies which ensued, the latest figure in September this year was exactly 100, bringing prices back to the 1954 level.

The cotton cloth quotation reached its low point in May 1959, when 86.9 was posted. The subsequent rise took the index to 96.8 by the end of last year and the figure broke through the 1954 level during March when 101.9 was quoted. By September this year, the index of representative cloth constructions was 104.7. On a similar basis, the cost of the majority of goods outside the textile field is very much higher.

Index numbers are issued by the Board of Trade covering nearly 100 commodities produced in the United Kingdom and, of these, barely a dozen show a reduction on the 1954 average. Several of these are in the textile branch, notably spun rayon yarns, linen, wool tops, worsted yarns, Harris tweed and serge. On the other hand, big advances in prices have been recorded in coal, which now stands at 145, hard coke at 147.6, iron castings at 135.8, domestic hollow-ware at 131, tools at 132.6 and aluminium products at around 130.

In addition to the orders being secured on home account for textile plant as part of the second phase in the reorganisation schemes for the cotton and allied industries, makers of British textile machinery are still managing to export bigger quantities this year than at any time since 1957. For the first nine months, shipments amounted to 981,312 cwts., an increase of nearly 170,000 cwts. as compared with last year.

Earnings from this trade have already reached nearly £38 million. Provided this level is maintained in the final quarter of the year, the value of textile machinery shipments may well break all records, exceeding the previous peak of nearly £50,500,000 achieved in 1952. Nor can this improvement be attributed to a sudden switch by foreign consumers to British plant, as the purchases from a number of sources have increased on a steady basis, with one rather notable exception. This is the very big expansion in shipments to the Soviet Union, which to the end of September this year amounted to 114,086 cwts., as against 44,751 cwts. in the same period of 1959.

At one time, India's purchases of British textile plant represented about a quarter of the available export trade, but takings have lately shrunk and, in the nine months, the figure is just under 100,000 cwts. Supplies sent to Pakistan have risen fourfold and other countries where very substantial increases in textile machinery shipments have taken place include South Africa, Poland, Portugal, Israel, Japan, the Philippines and Peru. In contrast, notable declines in shipments have occurred in the volume of plant sent to Egypt and Iran. The United States has also taken smaller supplies, as have Brazil, France, and Hong Kong, but the general picture remains encouraging.

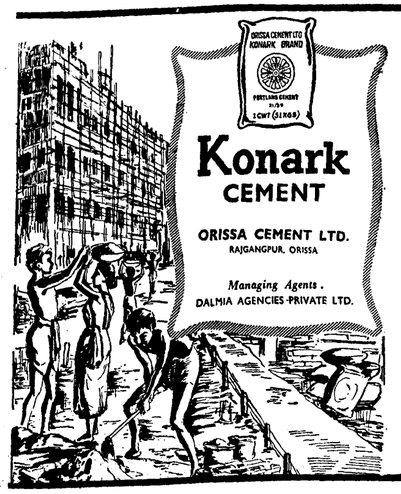
Small Companies' Profits

Nine out of ten of the smaller private companies in Britain are failing to make profits sufficient to safeguard their trading future. Mr. G. L. Page, Managing Director of the National Union of Manufacturers' Advisory Service, said in Manchester last week: "It is a serious problem—serious for the individual firms and serious for the nation when one takes account of the fact that a very important share of our labour force, probably over 40 per cent., is employed in small firms and a considerable slice of our industrial capital as well."

Among many smaller firms, there was "almost an air of indifference" to the profit objective. The question of profitability was subordinated to the current problems of getting orders, materials and production and holding on to labour.

Mr. Page, who was speaking at a one-day conference on the theme "Managing to Make a Profit," added: "The problem of small firms is not that there is no machinery available to provide their financial needs. It is that they are not a sufficiently reliable and rewarding investment. They play an essential and valuable part in making all manner of necessary goods and products but they don't make profits."

Mr. G. A. Hutcheson, Executive Director of the National Union of Manufacturers' Advisory Service, said that the proper application of work study had "time and time again" achieved increases in productivity ranging from 30 to 100 per cent. and sometimes considerably more. At the same time, unit labour costs had been reduced by 10 to 50 per cent. "With this kind of prize in sight it is surprising that less than 3 per cent. of the smaller firms in the United Kingdom have made effective use of work study," he said.—*All Rights Reserved.*



Build a Better To-morrow

Improving living conditions in the rapid expansion of the country is now the primary need—all these call for better schools, better hospitals, better roads and better homes. KONARK Cement is playing a leading role in building this better to-morrow.

INDUSTRIAL DISPUTES IN 1959

CAUSES AND RESULTS ANALYSED

ADDRESSING the eighteenth session of the Indian Labour Conference, held at New Delhi in September last, Mr. G. L. Nanda, Union Labour Minister, observed that there were signs that the forces working for harmony in industrial relations were gradually being strengthened. Quoting figures in support of his contention, Mr. Nanda said that the number of man-days lost on account of strikes and lock-outs has been steadily, though slowly, declining since the coming into force of the Code of Discipline from 1st July 1958. The number of man-days lost, which was as high as 4.7 million during the first half of 1958, declined to 3.20 million in the first half of 1959 and 2.89 million in the first six months of 1960. The number of man-days lost during the second half of 1959 was also substantially lower at 2.4 million, as compared with 3.09 million in the corresponding period of the previous year. This calculation does not take into account the increase in the number of employees during the period which is a relevant factor in the assessment of the improvement in industrial relations. The real improvement in industrial relations must, therefore, have been more marked than would appear from the figures quoted above.

The conclusion that, of late, labour unrest has been on the decline is corroborated by an analysis of industrial disputes in 1959, made by the Labour Bureau of the Union Ministry of Labour, and published in the latest (October) issue of the *Indian Labour Journal*. For the purpose of the analysis, the total number of man-days lost has been taken as an indicator of industrial unrest in different States and industries. This is a fairly reliable indicator, because it takes into account both the number of workers involved and the duration of work-stoppages. For purposes of comparison between different States and industries, however, the severity rate of industrial dispute, represented by the ratio of man-days lost to the corresponding man-days available for work, has been taken as a better indicator than absolute figures of man-days lost. Taking all the economic sectors together and comparing the position with 1958, it is seen that, though the number of disputes increased by a fraction (0.5 per cent., to be precise) in 1959, the number of workers involved and man-days lost decreased by 25.3 per cent. and 27.8 per cent. respectively. There was also a fall in the average time-loss per dispute, average number of workers involved per dispute and average duration of disputes in 1959. The details are as under:

	1959	1958
Average time-loss per dispute (man-days) ...	3,679	5,117
Average number of workers involved per dispute ...	453	609
Average duration of dispute (days)	8.1	8.4

The severity rates, however, indicated a mixed picture, with some sectors showing an improvement in industrial relations and others a deterioration. Thus, from the value of severity rates, it would appear that industrial relations in the manufacturing sector showed gradual deterioration during the period 1957 to 1959. In plantations and ports, the situation showed improvement in 1959, as compared with the preceding two years, while, in coal mines, it deteriorated slightly. Severity rates for other sectors could not be computed due to non-availability of data.

State-wise, West Bengal, Bombay, Madras and Kerala together accounted for 62.5 per cent. of the total number of disputes and 67.0 per cent. of the total number of workers involved and 64.9 per cent. of the total number of man-days lost. The average time-loss per dispute was highest in Orissa (45,483 man-days).

Industry-wise, the manufacturing sector accounted for 76.6 per cent. of the total time-loss during 1959. As for other sectors, mining and quarrying accounted for 10.9 per cent. of the total time-loss, transport and communication for 3.2 per cent., construction 2.5 per cent., agriculture, forestry, and fishing 2.4 per cent., electricity, gas, water and sanitary services 1.8 per cent., commerce 0.9 per cent., services 0.8 per cent. and others 0.9 per cent.

The highest time-loss was recorded by the cotton mill industry, followed by cement, jute mills, and silk mills. About 54 per cent. of the total time-loss in the mining and quarrying group was recorded in coal mines. As compared with the previous year, the time-loss increased in the manufacturing sector, commerce and service groups, but decreased in other major groups.

Among the major disputes resulting in a time-loss of over 100,000 man-days, the dispute in the Madura Mills Company Ltd., which involved 12,496 workers and resulted in a loss of 715,504 man-days, stands high in the list. The strike was resorted to as a protest against introduction of new workloads in some departments. Other major strikes during the year were those in the Orissa Cement Ltd. (man-days lost 250,314), Bengal Laxmi Cotton Mills Ltd., Hooghly (man-days lost 120,000), Machinery Manufacturing Company Ltd., Calcutta (man-days lost 109,000) and Orient General Industries (man-days lost 136,000).

A breakdown of the disputes according to causes indicates the relative damage done by each. The table below is self-explanatory:

Causes	1959			1958		
	No. of disputes	No. of workers involved	Man-days lost	No. of disputes	No. of workers involved	Man-days lost
Wages and allowances ..	405	138,009	10,54,611	464	340,609	31,00,576
Bonus	153	96,941	512,027	173	115,209	10,46,921
Personnel ..	382	142,883	13,46,795	443	204,921	21,91,225
Retrenchment ..	53	13,471	263,105	66	14,879	102,140
Leave and hours of work ..	55	26,124	29,173	47	23,856	174,811
Others	444	261,160	23,11,438	331	227,133	12,75,846
Not known ..	39	15,028	115,999	10	1,960	6,056
Total ..	1,531	693,616	56,33,148	1,524	928,566	77,97,585

It is, however, noteworthy that disputes relating to wages and allowances were the highest in number, followed closely by those relating to 'personnel. These two together accounted for 52.6 per cent. of all disputes regarding which information is available, 41.4 per cent. of total workers involved and 43.5 per cent. of total man-days lost. The corresponding percentages for 1958 under the same causes were 59.7, 59.0 and 67.9, respectively. Thus there was a decrease in the percentage of disputes, workers involved and man-days lost due to 'wages and allowances, and 'personnel' in 1959, as compared with 1958. The proportion of disputes and workers involved relating to 'bonus,' 'retrenchment' and 'leave and hours of work' showed only slight variations. The percentage of man-days lost relating to 'bonus' decreased and that due to retrenchment increased in 1959, as compared with 1958.

Of the total number of terminated disputes in 1959, for which data are available, 23.7 per cent. were successful, judged from the point of view of employees, 14 per cent. were partially successful and 32.3 per cent. were unsuccessful. In the remaining 30 per cent., work was resumed without any final decision having been reached, the dispute remaining either under further negotiation or under reference to an industrial tribunal. As compared with the previous year, the percentage of disputes which were successful and partially successful, decreased and that of unsuccessful disputes increased. The percentage of workers involved and time-loss in unsuccessful disputes also increased from 21.4 and 22.9 in 1958 to 40.7 and 29.7 respectively, in 1959. The percentage of number of workers involved in 'indefinite' cases decreased sharply as compared with 1958.

The number of terminated disputes, classified by duration shows that 67 per cent. of the work stoppages, which terminated in 1959, lasted for not more than five days each. Fortunately, disputes continuing for a month or more accounted for only about 9.7 per cent. of the total.

Disputes were relatively few in large undertakings. But, when they arose, they involved a large number of workers and resulted in heavy loss of man-days. During the year, units employing 1,000 or more workers were responsible for only about 21.1 per cent. of disputes, but these involved 70.5 per cent. of total workers and 61.0 per cent. of total time-loss.

An analysis of the methods of settlement of disputes indicates that Government intervention continued to play the leading role in dispute settlement. Thus, disputes which terminated as a result of Government intervention formed 39.5 per cent. of the total. Mutual negotiation accounted for 25.6 per cent. In 34.9 per cent. of disputes, the workers resumed their duties voluntarily. Most of the cases of voluntary resumption of work by the employees were unsuccessful or indefinite from the point of view of workers, whereas a large proportion of disputes terminating through conciliation and mediation by Government were wholly or partially successful from the point of view of employees. In the case of disputes terminating through mutual settlement also, a large proportion was successful or partially successful for the workers.

A computation of wages and production lost by industrial disputes would show the extent of loss suffered by workers through wages forfeited and by the employers through loss of production. Out of the 1,531 disputes in 1959, information regarding wages lost is available in the case of 1,002 disputes and data on loss of production are available in the case of 751 disputes. In these cases, the wage loss was of the order of Rs. 1.25 crores and production loss amounted to Rs. 6.93 crores.

The largest number of disputes were in cotton textile mills, being no less than 166. Although loss of production and wages involved in all these disputes are not known, it is calculated that 130 disputes resulted in a loss of Rs. 48.35 lakhs in wages to workers and 72 disputes resulted in a loss of Rs. 1.74 crores by way of production. Disputes in plantation numbered 120 of which 82 accounted for a total wage loss of Rs. 1.23 lakhs and 48 in production loss of Rs. 5.36 lakhs. There were 76 disputes in coal mines. Half of them accounted for a loss of Rs. 6.43 lakhs as wages and Rs. 25.17 lakhs as production. There were 107 disputes in metal products manufacture (except petroleum and coal), of which 41 were responsible for the loss of Rs. 3.21 lakhs as wages and 31 disputes for production loss valued at Rs. 25.67 lakhs.

Classification of disputes according to the affiliation of workers' unions revealed that the unions affiliated to the Communist-led A.-I.T.U.C. were responsible for 46.2 per cent. of the disputes for which data are available and 53.8 per cent. of the man-days lost. I.N.T.U.C. unions accounted for 26.9 per cent. of disputes and 24.6 per cent. of the man-days lost. The *Hind Mazdoor Sabha* accounted for 18.3 per cent. of disputes and 15.5 per cent. of man-days lost. The United Trade Union Congress was responsible for 8.6 per cent. of the disputes and 6.1 per cent. of the number of man-days lost.

FRINGE BENEFITS IN W. GERMANY

A comprehensive survey of fringe benefits paid to workers in trade and industry in W. Germany made recently by the Federal Statistical Office revealed that, in 1957, employers' contribution to social security and social services averaged 44 per cent. of 'straight' wages and salaries (that is, gross wages and salaries paid for time actually worked). This was made up of obligatory contributions amounting to 28 per cent. and the balance voluntary contributions. The major heads of contributions, compulsory and voluntary, were as under:

	Percentage of "straight" wages and salaries
Obligatory contributions: (by law or collective agreements)	
(1) Social security schemes	14.0
(2) Paid holidays	11.0
(3) Contributions and payments called for by special legislation	3.0
Total ..	28.0
Non-obligatory contributions:	
Contribution to pension funds	5.4
Grants for housing projects	1.1
Vocational training	0.7
Health and related services	1.5
Cash benefits (bonus, profit sharing, scholarships, allowances, etc.)	7.1
Total ..	15.8
Other voluntary contributions	0.6
Grand total ..	44.4

Although detailed figures of fringe benefits currently paid are not available, it is estimated that they would add up to roughly 46 per cent. of 'straight' gross wages. Laws raising the workers' sick pay and employers' contributions to statutory health insurance, which came into force since 1957, are expected to have increased the value of compulsory contributions. The voluntary contributions, too, must have gone up in proportion.

MANAGEMENT EFFICIENCY

Like its predecessors in the Efficiency Publication series, this little book (Management Efficiency by R. K. Murti, 194-A, Bhaudaji Road, Bombay-19, pages 111, price Rs. 10) bears the imprint of the author's unique approach to the problems of life. But unlike them, it is not intended for the general reader, although he too may profit by reading it, but is meant for the professional class of managers to help them to draw out the best in them as well as in others who work under them. It contains serious, indeed solemn, ideas, adapted and simplified for application to the problems of the work-a-day world. These ideas, which are a synthesis of the spiritual, moral, intellectual and philosophical, are all drawn from India's rich cultural heritage, tempered and tested on the anvil of the author's own personal experience. A distinguishing characteristic of the book is that it is original and refreshingly so.

BIHAR-U.P. SUGAR BOARD MEETS

PLEA FOR STILL HIGHER CANE PRICES RENEWED

ONE is simply loathed to read the report in the daily Press time and again that the Joint Sugar Control Board for Uttar Pradesh and Bihar wants an enhancement of the minimum sugarcane prices. At a meeting held at Lucknow on the 7th inst., the Board decided to recommend to the Central Government fixation of higher cane prices for the 1961-62 season, namely, Re. 1.75 per maund for gate delivery and Re. 1.62 for delivery at outstations, as against Re. 1.62 and Re. 1.50, respectively, applicable in both the past (1959-60) and current (1960-61) seasons. The Board is quite a responsible body, consisting as it does of representatives of the two State Governments, sugar millowners and cane growers, and is presided over by no less a person than the Chief Minister of Uttar Pradesh, Dr. Sampurnanand. It is deplorable that such a body should have urged a further increase in cane prices, in addition to the 12½ per cent. rise effected last year as part of the incentive scheme to boost sugar production. It is all the more deplorable because Dr. Sampurnanand and Mr. L. P. Sahi, Bihar's Deputy Minister for Industry, have joined hands in clamouring for a higher cane price, instead of impressing upon the other members of the Board the fact that any such move was beset with disquieting consequences.

The minimum price of Re. 1.62 per maund of cane is itself sufficiently high and accounts for over 50 per cent. of the cost of sugar production. The heavy incidence of cane cost is due to the low sucrose content of cane which is not taken into account at all for making payment to cane growers, inasmuch as the cane price is linked only to weight. In all other sugar-producing countries, the price of cane is *fixed on the basis of its quality*. Even in India, the same basis is adopted for determining the prices of other agricultural commodities. Naturally, the prices of cane per maund are higher than in most other countries, though the quality is poor. Whereas out of 100 maunds of cane it is possible to get 14.33 maunds of sugar in Australia, 12.25 maunds in Cuba and 11.40 maunds in Java, we hardly get 10 maunds (all-India average) in this country.

Disquieting Effect

Even with the erstwhile statutory minimum price of Re. 1.44 per maund, cane growing appeared to have been very profitable *vis-a-vis* several other crops. Otherwise, would there have been such a marked expansion in the area sown to this crop in Uttar Pradesh and Bihar? The aggregate area under cane in these two States during 1959-60 was 3,082,000 acres and 437,000 acres, as against 1,973,000 acres and 300,000 acres, respectively, in 1953-54. The increase in price to Re. 1.62 has resulted in a further substantial rise in area, especially in U.P. Any further upward revision in cane price is bound to divert to cane growing a large part of the fertile land which can be better utilised for growing foodgrains (as well as other crops) and also to add to inflation in the form of still higher prices for sugar.

Apart from the high minimum price, the cane growers also enjoy a share in the prices of sugar realised by the factories without any obligation whatever on their part to share the loss, if any, incurred by mills. Only the cane grower is the beneficiary of this distinct advantage. Why should not this advantage be conferred on the cultivators of other crops too? Surely, from whatever angle one looks at it, the aforesaid principle of sharing is most defective and irrational. The adoption of this principle in the sugar industry is bad enough. But what is worse is that the sugar mills are asked to make an advance payment to growers even months before the actual prices realised by them on sale of sugar are assessed. It is a pity that Dr. Sampurnanand has openly justified this irrational policy, as witness his following remarks at the Sugar Control Board meeting:

"This issue (payment of the deferred cane price) has been a perpetual thorn in the side of the industry and hampered considerably the creation of the much-needed congenial atmosphere. The problem needs immediate solution and, pending the final decision by the Tariff Commission on the price-linking formula, industrialists should agree to an *ad hoc* payment as a gesture of their goodwill and also restore confidence amongst the growers. Much botheration can be saved if an outright increase is given as a substitute for the formula which, in spite of all simplifications, will not be easily grasped by the cane growers."

Dr. Sampurnanand's anxiety to be on the right side of cane growers is no doubt understandable, but he should not overlook the serious repercussions on the sugar industry which is endeavouring to maintain as high a level of output as possible. The cane growers can certainly wait till the Tariff Commission submits its report and the Central Government takes its decision thereon. After all, before 1958-59, no such sugar price-sharing formula was in existence.

Be that as it may, the Sugar Control Board was informed of the progress made and difficulties encountered in the scheme for payment of cane price on quality basis which is being experimented in three sugar factories of the State. The consensus of opinion was that the experiment should be linked with price and the quality producers should be paid accordingly. The report of the Price-linking Advisory Committee was also considered by the Board. The Committee which was set up in pursuance of the recommendations of the Patna meeting of the Joint Sugar Control Board in September 1959, was entrusted with the task of evolving a similar price-linking formula, for application to the States of Uttar Pradesh and Bihar, in place of one statutorily enforced by the Government of India since 1958-59. The Central formula was considered to be too complicated to serve the interest of the cane growers. The Committee could produce no agreed formula, as the one evolved by it was not agreed to by the industrialists. After participating at the initial stages of the meeting, the sugar millowners took the firm stand that nothing should be done till the decision of the Tariff Commission was announced.

Formalities regarding the formation of the National Federation of Co-operative Sugar Factories have been completed and the Federation is expected to be registered shortly. It is organised by 24 co-operative sugar factories which produced during the 1959-60 season 286,000 tons of sugar out of the estimated production of 2.41 million tons. It will co-ordinate the working of co-operative sugar factories in the country and assist in the promotion and organisation of new co-operative factories. Seven more units will go into operation by April 1961, raising the annual sugar production on co-operative basis to about 400,000 tons. The constitution of the Federation is designed to ensure a balanced and equitable representation to all the constituents.

Although official figures are not available, the increase in sugarcane in the Eastern range of Uttar Pradesh is estimated to be roughly between four to five million maunds over that of last year. Putting it in terms of increase in the crushing season, the crushing season is expected to have a run of full six months this year, as against five and a half months last year. The increase in cane production has been due not to any improvement in the development of sugarcane but to more and more areas going under cane cultivation and lessening the acreage under food.

Sugar production in India during the season 1959-60 up to 30th September amounted to 2,415,000 tons, as against 1,914,000 tons in the corresponding period last season. The offtake of sugar from factories during September was 181,000 tons, as against 179,000 tons in the same month in 1959. The total despatches upto 30th September were 1,849,000 tons, as against 1,922,000 tons by the same date last season. The total closing stocks with factories as on 30th September were 729,000 tons, as against 337,000 tons on the same date last season.

Pardon our Presumptuousness..... but.....

The beginning and the end of a Five Year Plan are vital dates in the nation's history. Each Five Year Plan is both an assessment of the past and a call for the future. It seeks to translate into practical action the aspirations and ideals of the millions in the country and gives to each of us the opportunity of service in the common cause of eliminating poverty and raising standards of living....

Today, on the eve of the Third Five Year Plan, we of the Raza Buland Sugar Co. Ltd. believe that 25 years' useful service to the Nation is something to talk about, but we will rest contented by narrating a few facts about our "achievements" and our contribution towards raising the standard of living of our people during the past 12 months.

At the close of the last crushing season we .....

Crushed..... Over 1,13,00,000 maunds of Sugarcane
Bagged..... Over 10,93,000 maunds of Sugar
Paid to Cane-growers..... More than Rs. 1,76,00,000
Paid to Workers..... Over Rs. 17,70,000

And expect to pay to the Government and National Exchequer as Excise and Taxes Over 1,55,00,000 Rupees.

On the occasion of our Silver Jubilee celebrations recently almost a hundred of our oldest workers who had served the Raza Buland Factories for over 25 years were awarded silver medals, and cash awards.

These are our humble contributions towards the cherished targets and goals of

MALAYAN RUBBER INDUSTRY LOOKS AHEAD

PRODUCTION MAY EXCEED 1.5 MILLION TONS IN THE NEXT FIFTEEN YEARS

By A Correspondent

FOR anyone flying from Singapore to Kuala Lumpur or further on to Penang, the tremendous replanting activities going on in Malaya becomes a strikingly graphic operation. It can be seen from the air amidst mills and miles of rich forest land. The country presents an unending carpet of tufted green and it is broken by sharply cut clearings of all shapes. Each clearing, unless covered by grown plants, looks like the whorls on a gigantic fingerprint. They represent new clearing or land prepared for replanting and each of them covers thousands of acres. In India, a thousand-acre estate is considered 'large' and there are very few estates of over 2,000 acres. In Malaya, they go in for much larger units, most of them being 2,000 to 5,000 acres and several units in much larger sizes. This allows companies to have specialist services that smaller units cannot afford.

Following Japanese occupation, rubber had suffered badly and management organisation had collapsed. But the revival of the industry presented an opportunity for experimenting with new methods and some of the innovations have become permanent features. Instead of having several factories to process rubber in distant fields, the collection from the field and delivery to the factory has been motorised. With the arrival of synthetics, the industry has learnt to produce special-purpose rubber and about 55,000 tons of such chemically treated and specially packed rubber was exported last year. The preservation in latex form and the bulk transportation of liquid latex became a new development. Today, the share of latices and skim rubber in Malayan export is about 11½ per cent. of total output, or, 137,000 tons per annum. The concentration of factory operations at one central point even for the largest and most widely spread estate is quite common and management opinion is that it is cheaper and more efficient.

There are three specific objectives in the formulation of managerial attitudes in Malayan planting. The first and foremost is survival against the onslaught of man-made rubber. The industry reconciled itself to the fact that, in the world-wide market, natural must stand on its own merits of usefulness, availability and price and that no manufacturer of rubber goods will play favourites to oblige natural rubber producers. The second is that Malaya's economic progress is bound with rubber to a greater extent than even Cuba's to sugar or Brazil's to coffee. The third, and probably the most important, is the Malayan planter's acceptance of the challenge of change.

Malaya was under occupation for three years and the industry lost about 40 per cent. of its managerial personnel. In 1948 started the next crucial challenge to the existence of the country and planters were a specially favoured target of the communist terrorists. The impact of these two events, together with the threat of synthetic development, created the psychological background for the changes the industry has had during the last fifteen years.

The setting up of the Rubber Producers' Council of Malaya as the single and most authoritative spokesman of the industry was a significant act in keeping with the new direction the industry's leadership was taking and it meant carrying all shades of producer opinion together. The British part of the industry, with its long management experience, superior organisation and clearer understanding of the challenge posed before it and the country, was associating native opinion and enterprise with it as full and working partners. The technological break-through in producing rubber cheaper than synthetic, in offering types and qualities of rubber for new forms of usage and in producing enough rubber of all kinds to meet the rising world demand occurred during the last ten years were parts of the new spirit animating the industry in Malaya.

The most articulate and immediate challenge posed by synthetic rubber evoked in the ndustry the determination to develop the quali-ies and increase the yield and production of natural. The International Rubber Study Group's Conference in September saw an acceptance by the producers of natural that it has o live with synthetic rubber but also that they now how. Indeed, it was surprising for many synthetic men that natural has so developed that, quality for quality, it could be produced cheaper than isoprenes the characteristics of which could match natural's.

The planter does not overlook certain basic advantages which synthetic rubber has. It is not affected by wind or rain; it can be produced with more precision regarding characteristics, quantity and better timing than natural; the time in which synthetics can be produced from the time a need is felt is shorter than a rubber tree can be planted and a yield obtained. Nevertheless, work is going on to overcome these handicaps. The famous Gaugh plants are capable of coming into yield in less than four years after planting, that is, only a little more than the time that will be taken for the Bareilly plant to be in production. Mr. W. E. Klippert, the Chief of Goodyear's plantations division, forecasts that, at a yield rate of 1,200 pounds, rubber can be produced at U.S. cents 10 per pound. The Firestone plantations in Liberia, went past this mark for their total 87,000 acres in 1959. Over 12,600 acres obtained more than 1,300 pounds per acre in Malaya in 1959, according to the Government Statistician of the Federation. Natural rubber, provided full advantage is taken of the replanting programme, can fully face the challenge of synthetics on the price front. As for availability, the output of natural rubber exceeded 2 million tons in 1959 for the first time. The output was doubled in twenty years. The increase was almost 600,000 tons or by 43 per cent. since 1949. The rubber industry in Malaya has before it the prospects of producing 735,000 tons in 1960 or a rise of 37,200 tons over the actual of 1959, a jump to 965,000 tons by 1965, to 1,275,000 tons five years later and 1,520,000 tons by 1975. In fifteen years, the Malayan output would more than double itself. This must be seen against the fact that to reach less than 700,000 tons it took Malaya sixty years in the past.

This broad vista of progress can be seen only by a well-organised industry moving under a farsighted leadership and having a purpose broader than showing a good profit and loss account. It is the great good fortune of Malaya that it has such an industry.

Malaya's economic future, however, cannot always be tied wholly to one single industry and it is here that any Government plan for diversification and development of industries becomes a reality only because rubber produces the surplus which can be diverted for such development. Taxation does not sit so lightly on rubber in Malaya as many believe. Export duty on rubber in 1959 brought the Federation very nearly Rs. 22¾ crores. As rubber enjoyed high prices during the year, the total levy exceeded Rs. 32 crores under four different imposts. But a little more than Rs. 9 crores would flow back to the industry whether in the form of replanting subsidy, research finance or as price assistance fund during lean years. The weight of export duty and customs cess on each 100 pounds of rubber is in excess of Rs. 38¼. In addition, the Federation receives about 22 per cent. of its revenue from income-tax on rubber.

A new trend in Malaya's rubber industry has a mutually contradictory outward appearance. There have been complaints of fragmentation of large viable units, but it has not been possible to fix with any certainty the extent of planted area which fell to this misfortune. But it also led to an opposite trend, namely, the amalgamation of small and medium units to form large ones or take-over by existing large companies properties in their neighbourhood, thus leading to larger units which lend themselves to more efficient management.

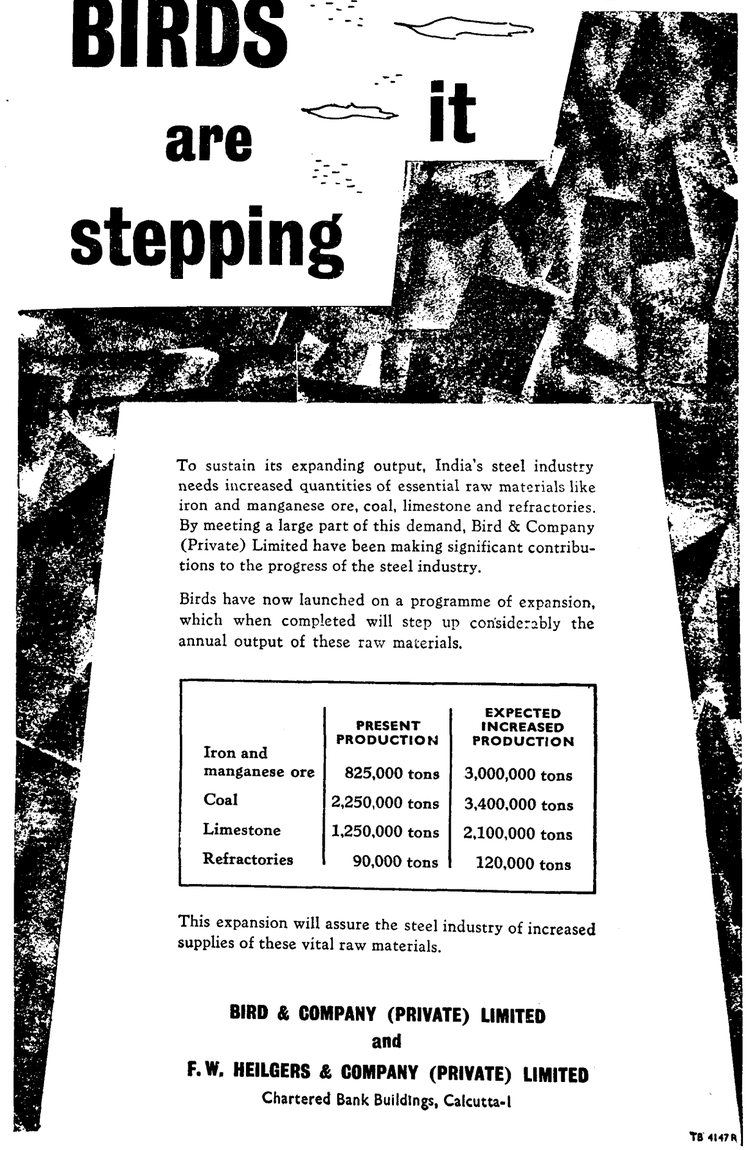
BIRDS are stepping up it



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	825,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,400,000 tons
Limestone	1,250,000 tons	2,100,000 tons
Refractories	90,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

BRITISH PROGRESS IN NUCLEAR ENGINEERING

EARLY ACHIEVEMENT OF COMPETITIVE POWER LIKELY

IN a technical sense, nuclear power has come to stay. What is more, there are indications that, by the end of this decade, it will become competitive in those areas where fuel costs are somewhat above average and that, by the mid-sixties, it may achieve competitive status in those places where fuel costs are high. These two conclusions have recently been expressed by Mr. Sterling Cole, Director-General of International Atomic Energy Agency. Already remarkable progress has been registered, in his estimation, during the last six years to make nuclear power dependable, safe, and economic. But nuclear plants are still large-sized units in the more advanced countries, but determined efforts are being made to accomplish economies in capital, fuel and operating costs. These countries are yet to develop small and medium-sized reactors which, according to expert opinion, are at a cost disadvantage as compared with large ones. The less developed countries which, in the opinion of Mr. Cole, have to look for a suitable supplementary source of power for their industrialisation have a legitimate interest in nuclear power which can be produced by small and medium-sized plants. But the more advanced countries are yet to make a joint effort to develop reactors for conditions prevalent in the less developed countries.

Cost Per Unit

As things stand, the progress that is being made in economic construction and operation of large-sized nuclear power stations is all that is noteworthy and significant. It is in this context that current experience in the United Kingdom has some relevance for India, which is to build its first large-sized atomic power station during the third Plan. The latest annual report of the United Kingdom Atomic Energy Authority gives an authoritative account of the improved U.K. techniques in nuclear engineering. It is recorded that there have been several steady but marginal improvements in this sphere, resulting in a fall in the cost of power in the nuclear stations. A series of engineering refinements and better understanding of nuclear physics have contributed to this achievement. There are now a more economic burn-up of fuel; improved transfer of heat from reactor to steam-raising plant; and higher steam temperatures, which immediately lead to better turbine performance. These have resulted from improvements in the design of the fuel containers which have led not only to greater reliability but to increased transfer of heat from the reacting uranium fuel to the gas flow that takes the heat to where it can do its job of producing steam. These advances will be fully tried out in what will be the most powerful atomic generating station, namely, the one that is being constructed at Dungeness, in the south-east of England. This will be the sixth station to be built as part of Britain's power-from-the-atom programme. It is estimated that this Station will generate power at a cost comparable with a conventional coal-fired plant in the same area—possibly below 0.7*d.* per unit.

Capital Cost

So much about the cost of power. As for the capital cost, it is steadily being brought down with each new station. This is considered vital, for, whereas the economics of conventional power generation is based on comparatively low capital cost but heavy expenditure on fuel, an atomic station is very costly to build but cheap in its fuel requirements. Any reduction in capital cost, then, is immediately reflected on cost per unit generated. A significant development in the past 12 months has been that of "new generation" reactors which promise to be more economical than the Calder Hall types which, too, have increased their thermal output to 15 per cent. above the designed capacity. The "new generation" reactors mean that more economical power stations are on their way, with a promise of substantial reductions in capital costs. One of these reactors is now being built at Windscale, within sight of the original Calder Hall. It is a prototype known by the initials A.G.R. (Advanced Gas-cooled Reactor), and is fuelled with slightly enriched uranium oxide pellets carried in stainless steel cans. Gas outlet temperature will be much higher—some 150° C higher—than that of existing plants, offering considerably greater generating efficiency. This design of reactor, according to the U.K.A.E.A., offers the best prospect of early achievement of competitive nuclear power in Britain, that is, electricity that can be less costly than that generated by the most up-to-date of coal- or oil-fired stations. An even more advanced project is the experimental high-temperature, gas-cooled reactor that is being built at Winfrith Heath, Dorset. This project, known as Dragon, is a joint undertaking in which scientists and engineers of 12 European nations are working to perfect what was initially an advanced British idea for a highly economic power-producing plant.

While the first new stations of the A.G.R. type are expected to be constructed only towards the end of the 1960's and their capital cost is estimated to be less than that of the Magnox plants now being built, it is also significant that the capital cost of the Calder Hall type stations has been reduced by an average of £8 per kilowatt a year. By this means, according to the Scientific Correspondent of the *Financial Times*, the capital cost has been reduced from £160 per kilowatt installed capacity for the Berkeley station to £110 for the Dungeness. It is likely to be £95 per kilowatt, or even less, for the Oldbury station. The capital costs for seven nuclear power stations in the U.K. are given below:

Name of station	*Capacity* MW.	*Cost* £ per kw.
Berkeley	275	160
Bradwell	300	159
Hinkley Pt.	500	133
Trawsfynydd ...	500	123
Dungeness	550	110
Sizewell	600	100
Oldbury	550	90-95

It is stated that this trend of falling capital cost will continue for a further two or three years and there is a possibility that stations of the Calder Hall or Magnox type could be built with a capital cost of £75 per kilowatt installed capacity, that is, less than half that of the Bradwell and Berkeley stations due to come into operation next year.

How India can benefit from this British experience is by no means clear, in the absence of more active Indo-British technical collaboration. The first atomic power station to be built in India would necessarily have to be based on foreign experience. Why cannot a satisfactory working arrangement be negotiated with the U.K.A.E.A., as with the Russians is the question.

HYDRO-POWER POTENTIAL

The Anniversary Number of *Bhagirath*, the irrigation and power monthly of the Central Water and Power Commission, is notable for the articles on power. It is seen from one of the articles that India's firm hydro-power resources capable of economic development, according to a recent preliminary survey, would be about 24 million kw. at 100 per cent. load factor, and 40 million kw. at 60 per unit load factor—the present annual load factor on most of our major systems. As against this potential, the total plant capacity of all hydro stations in the country at the end of the second Plan would aggregate 2.2 million kw. corresponding to a firm water power potential of about 1.7 million kw. at 60 per cent. load factor. It is suggested that, as demands for power grow rapidly, the best combination for economic generation of electricity would be to generate as much of the energy requirement as possible from "base load" thermal and nuclear power stations, and so modify the hydro schemes as to enable them to operate as non-base or peak-load stations. Their plant capacities would, of course, have to be suitably augmented for the purpose. It is calculated that, if the annual load factor on hydro stations is reduced to about 40 per cent., it would be possible to absorb on hydro stations alone, a peak demand of the order of 60 million kw. with the currently estimated total hydro-power potential of 24 million kw. at 100 per cent. load factor. Assuming that the present pattern of load demand continues, with a ratio of 6 : 4 between non-base and base loads, the corresponding base load—to be met from thermal generation, both nuclear as well as coal fired—would be 40 million kw., taking the total peak demand to 100 million kw. A specific recommendation is, therefore, to the effect that the hydro schemes, currently being developed and those under consideration, should be designed to permit this essential future peak load operation well within the life of hydro schemes, which is of the order of 100 years or more.

PETROLEUM INDUSTRY AND THIRD PLAN

The Institute of Economic Growth, Delhi, with Dr. V. K. R. V. Rao as Director, has been functioning for some time now, with a handsome grant from the Ford Foundation which has given equally handsome grants to the National Council of Applied Economic Research, New Delhi, and the Gokhale Institute of Politics and Economics, Poona. The first publication brought out by the Institute is an "occasional paper" on Petroleum Industry and the Third Plan. This study may seem to be rather superflous after the earlier projection studies by Burmah-Shell, National Council of Applied Economic Research, etc. But it has some value, in that it has highlighted the problem of growing imbalances between the demand and supply of various petroleum products. These imbalances by the end of the third Plan are estimated by Mr. P. N. Dhar, author of the paper, as under:

(In thousand tons)

Product	*Estimated demand*	*Estimated production*	*Surplus or deficit*
Motor spirit	1,000	1,725	+ 725
Kerosene	3,000	1,095	— 1,905
High speed diesel	3,000	1,529	— 1,471
Light diesel oil ..	730	559	— 171
Furnace oil	2,100	1,832	— 268
Bitumen	530	429	— 101

The main imbalances in the above table relate to motor spirit and middle distillates (kerosene and diesel fuels). The author says that these are in conformity with the general trends in many other countries. The ultimate solution to the problem of automotive fuel imbalances is to find ways by which the differences in engines and fuels will be eliminated, so that there is a common fuel for a common form of engine. But, for the immediate, the suggestion made by the author is that the tax on kerosene be increased, so as to raise its price to about Rs. 2.40 nP per gallon or by about 60 per cent. It is expected that kerosene consumption can be brought down by this fiscal method by about 0.7 million tons. A rise in the tax rate on diesel oil also is suggested to reduce the demand for it by more than 0.25 million tons. This reduction in the demand for kerosene and diesel oil *plus* the increased use of gasoline will reduce the demand for additional refining capacity by about one million tons. This reduction in refinery capacity, in turn, will mean a foreign exchange saving of Rs. 50 crores during the third Plan. All this sounds so good on paper. But how will the rural public and the road transport operators react to the suggested increases in taxes on kerosene and diesel oil?

WHEEL FORGING PRESS

The 6,000 ton hydraulic wheel forging press for the Durgapur Steel Works has been designed to forge cheese-shaped steel ingots into solid railway wheel blanks, ready for rolling and finishing, in five operations taking less than 90 seconds. The Wheel and Axle Plant at Durgapur, of which this press will be the primary productive unit, is scheduled to come into service in July 1961. The plant is planned for initial production of 45,000 railway carriage and wagon wheel sets a year (two wheels and one axle per set), with provision for subsequent expansion to 75,000 wheel-sets annually in the future. This output is required to meet the Indian Railway Board's carriage and wagon building programme, which is a vital part of India's expanding economy.

The 6,000 ton hydraulic wheel forging press has been built by Davy and United Engineering Company Ltd.—a member company of ISCON—the British Consortium constructing the Steelworks at Durgapur.

NEW PRODUCTS AND PROCESSES

Railway Wagons for Transport of Powder Substances

A DUTCH engineering firm has developed a new means of transport (pressure silo wagon) for powdered and granular substances. The pressure silo wagon consists of 15 cubic metres or 17 cubic metres spherical steel tanks mounted in a set of two on a two axle flat railway truck. The low deadweight of the spherical tanks (about 3 tons including platform, ladder, lines, oil and water separator, etc.) ensures a large capacity and a high pay load. The carrying capacity is 28 tons at a total loaded wagon weight of 40 tons (axle load 20 tons). The discharging system of the pressure silo wagons is based on the addition of air or another gas by means of a compressor with a maximum operating pressure of 2.8 atm. gauge, as a result of which the mixture of powder and gas behaves as a liquid. Hence the pressure silo wagons are provided with a system of pipelines, the necessary fittings and water and oil separators. While being unloaded the mixture can be readily pumped through the pipelines, even over a distance of a few hundred yards from the railway wagon to the processing plant in the factory. The special discharging system required for pressure silos of a similar capacity is being patented. The pressure silo wagons mean a substantial simplification of transport and saving in transport costs and are therefore eminently suitable for factories which are regularly supplied with powdered base materials such as cement, fertilisers, soda, salt, various other chemicals, flour, sugar, etc. They can be handled by one operator. The discharging time depends on the product carried, the distance and the compressor used, but averages 15 minutes per spherical silo.

Ticket and Document Conveyor

A ticket and document conveyor which will help to speed the documentation of passengers, has been installed for British European Airways at London Airport. Designed and manufactured by a U.K. firm, John Thomas Ltd., Wolverhampton, it is built in eight bays, each 6 ft. 10 ins. long, and stands 6 ft. 3 ins. from the floor, the discharge end feeding documents to the flight control desk. The total length is 62 ft. 2 ins. and can be increased if necessary. The main conveyor structure is of aluminium, with Perspex side members providing full view of the tickets or documents being conveyed. The drive unit, at floor level, is comprised of a fractional horsepower electric motor, suitably tensioned, driving an endless belt running at 160 ft. per minute which passes over aluminium rollers revolving on "Sealed for Life" bearings. The tickets are "posted" at any one of eight posting slots, one to each bay. The manufacturers say that although the conveyor at London Airport is designed to deal with tickets up to 6 ins. deep, the design could readily be adapted for using larger sheets, or could be used for handling work cards, records, and numerous types of documents and correspondence which passes between departments in large modern offices and factories where speed is essential. Many variations can be made including reversing mechanisms, speed variation, directional changes and inclines, counters, additional discharge points and stops for holding tickets for individual attention. The lightness in weight and the manufacture of standard sections provide for easy and quick installation under almost any reasonable condition.

Hydraulic Turbo-coupling

A hydraulic coupling of the hydrokinetic type which, in addition to a pump impeller and a turbine wheel, features a supply chamber which is fitted to the pump impeller and communicates by means of two ball valves with the working chamber between pump impeller and turbine wheel has been developed by a Netherlands firm. This design ensures that the quantity of oil in the working chamber which determines the power transmission is automatically adapted to the available engine power output. The inlet ball valves have independent outside adjustment, thereby enabling the engine speed to be set accurately while the working chamber is being filled by injection from the supply chamber. The engine is not connected to the machinery during the starting-up period. When the engine has reached the required speed the working chamber is filled from the supply chamber and a very smooth connection is established between engine and machinery. It is also possible to vary the speed of injection and to adapt it to the use for which the machinery is intended. At a low engine speed (e.g. during idling) part of the oil flows back from the working chamber to the supply chamber via the outlet ball valve.

New Process for Extracting Metals

A fundamentally new process of extraction of non-ferrous and rare metals from ore without smelting has been developed by Ukrainian specialists in Kiev. Under the new technique, for which only electricity and a solution are needed, all non-ferrous metals, sulphur and rare elements contained in the ore (germanium), selenium, tellurium, indium and others) are extracted separately but in one continuous process. Copper, lead, zinc, nickel are extracted in the form of oxides, sulphur in pure form, and rare elements in the form of rich concentrates. The new technique, developed by Dr. Nikolai Fortunatov of the Institute of General and Inorganic Chemistry, ensures high purity of non-ferrous metals thus obtained and radically improves working conditions. Moreover, losses of metals and rare elements in slags, dust and gases are completely eliminated. The first such pilot plant is effectively operating at the Kirovgrad Copper Refinery in the Urals where it is used to extract non-ferrous metals and rare elements from waste products such as metallurgical dust. At the present time an improved, fully automated installation has been created at the Institute. It will be used to process rare elements and such metals the separation of which is extremely difficult: lantanum, cerium, niobium and others.

Colouring Potteries

A pottery firm in the English Midlands, Wengers Ltd., which supplies ceramic colours to potters all over the world, has developed a new medium for its colours which simplifies decoration and offers substantial savings to manufacturers of china, earthenware and decorated ceramics of every kind. The old medium was oils and fats; the new medium is the secret of the company but extensive tests support the claim that it reduces the work of the decorator, reduces the number of "firings", reduces the number of handlings of the pottery and enhances the brilliance and holding qualities of the colours. Savings of up to 25 per cent. have been made in the manufacture of certain classes of pottery as a result of using the new colours. The firm say this has been achieved because the colours are supplied ready mixed, thus cutting out the process of mixing by the decorators, cutting down to one the number of "firings" and the number of times pottery pieces have to be handled under the traditional process of manufacture. The new colours do not "run" when painted on and this means that several colours can be applied before "firing". Among English manufacturers the development is considered to be a "break through" of considerable importance.

New Tool for Metallurgists

A new electronic X-ray instrument developed by British research workers has been described by a physicist as "the most powerful tool put into the hands of metallurgists since the optical microscope was adapted to their use in the early eighteenth century." It opens up new fields of research into the structure of metals because it can create visual images of the minutest particles in metals and alloys by the use of electronic X-ray beams. Magnification goes up to 3,000 times and a particle as minute as a quarter-of-a-millionth of an inch can be examined in detail. The instrument named "Scanning Electroprobe X-ray Microanalyser" is being produced by a U.K. firm, Cambridge Instrument Co., Ltd., London. Only three have so far been made but orders for five of the instruments have been received from the United States and enquiries from Europe and Japan.

Anti-Corrosion Compound

A new compound which can be applied, it is claimed, to wet surfaces to give fully effective protection against corrosion has been developed in Britain. Even when applied to very wet surfaces the compound is said to dry firmly bonded to the surface which it is designed to protect, and to produce a resilient protective film. At the same time, the material is non-toxic and has no odour or taste, and is said to be very cheap to use. One gallon of the compound will cover, it is claimed, 300 square feet. Tests carried out with the material are said to have shown that it will provide protection against corrosion even under highly corrosive conditions and long periods of exposure to the atmosphere, or to salt spray conditions. It is said to be easy to store for long periods of time and yet can be readily applied by means of a brush or similar technique.

Letter Sorter

A machine developed in the U.S. to teach mail sorters in the new automatic post offices uses the principle of conditioned reaction. Letters are presented one by one to the sorter who presses a series of buttons to set up a code which will send the letter to the right mail bag. Psychologists say that when a key pushes upward, an operator who has his fingers on it will subconsciously push against it. In the training machine, sample letters are presented and at the same time the machine pushes up the proper key to code it. A loudspeaker also announces the proper code for that address. Subconsciously, the operator learns to associate each address with the proper code.

Electronic Welding

Electronic welding is a new metal-welding method elaborated in Moscow. Its principle, in brief, is as follows: If electrons are compressed together and directed in one direction they form a powerful stream. When they hit a metal surface the electrons decelerate and collide with each other, just as the passengers of a bus would if it suddenly hit an obstacle. Practically all of the kinetic energy changes into heat energy. The metal hit by the electronic stream melts. The new welding device has been named an electronic gun. This gun, of course, serves only peaceful purposes. It can be used to weld such refractory metals and alloys as tungsten and molybdenum.

THE BANK OF INDIA LIMITED

INDIAN ECONOMIC DEVELOPMENT IN A DEMOCRATIC FRAMEWORK

REALISTIC PLANNING REQUIRED

By A. D. Shroff

PRESIDENT, FORUM OF FREE ENTERPRISE

SOCIALISM in effect means State ownership of all the means of production, distribution and exchange. Socialism means either the outright expropriation or steady deprivation of all private property from individuals. Socialism means hostility to private enterprise in any form and its replacement by State Planning of a comprehensive character. This has been described by John Strachey, British socialist theoretician, as follows:

"If we reject the self-acting mechanism of profitability, as too unjust and too wasteful, we must find some other mechanism of regulation. The sole alternative method by which complex, highly developed economic systems such as those of Britain and America can be regulated is by means of the deliberate decisions of some central body as to what goods, and how many of each of them, shall be produced. The organisation of production by means of such conscious decisions is called a system of 'planned production for use.' This is the type of economic system now being built up in the Soviet Union. It is socialism."

In view of the ideology of socialism put before our country, it is not surprising that people in high quarters should express open hostility to private enterprise. For instance, the Governor of the Punjab was reported in the Press as having said at a meeting in Patiala on 7th October 1960, that, in a backward country like India, it is criminal to have private sector at all. The offensive tone of such an unrestrained statement should be ignored but for the dangerous implications it carries to the democratic way of life.

Class Hatred

Socialism thrives on class hatred. This gospel of hatred is disastrous to social harmony and stability without which there can be no economic progress. Moreover, the preaching of hatred, however effective it may be from the point of view of capturing or maintaining political power, is anti-democratic in character. An important aspect of democracy is the rule of reason. It is difficult to see how the gospel of class hatred is compatible with the democratic concept of the rule of reason.

In the second place, those who claimed to have come into possession of the means of social progress in the socialist formula make no bones that the comprehensive State planning which they adopt for economic development has ultimately to give up all democratic pretensions in order to be effective. The lines emphasised by me in the following passages from a book by a socialist economist who was a visiting professor in the Indian Statistical Institute (which provided the draft framework of the second Five-year Plan) is revealing:

"Obviously, genuine economic planning requires an almost complete mastery over the prices of the main goods as well as over income; otherwise, there would be, through the price mechanism, such a reallocation of national income and of the investible resources that the plan would be defeated. Recent developments have shown that it was impossible to keep the desired price level, while other instances have shown also that, when powerful private interests want a given price change, they finally get it. In my opinion, this is due not to a lack of economic understanding but to a lack of economic control; for the planning authorities to fulfil big economic tasks, big economic powers are required. Such powers are not so much dependent on legal stipulations (which may be required) as on a socio-economic structure which gives real powers to the planning authorities, i.e., ultimately to the State."—Charles Bettleheim, in *Studies in the Theory of Planning.*

Lord Keynes Recalled

It is clear from happenings in other countries that, whereas private property and private enterprise are two of the essential safeguards in a democracy, the socialist society which cannot countenance these institutions and concentrates all economic power in the State naturally ends up in a totalitarian State which is the modern name for unmitigated tyranny. Even Lord Keynes, whose theories are approvingly quoted by socialists, had the following to say with regard to individual enterprise:

"Let us stop for a moment to remind ourselves what these advantages are. They are partly advantages of efficiency—the advantages of decentralisation and of the play of self-interest. The advantage to efficiency of the decentralisation of decisions and of individual responsibility is even greater, perhaps, than the nineteenth century supposed; and the reaction against the appeal to self-interest may have gone too far. But, above all, individualism, if it can be purged of its defects and its abuses, is the best safeguard of personal liberty in the sense that, compared with any other system, it greatly widens the fields for the exercise of personal choice. It is also the best safeguard of the variety of life, which emerges precisely from this extended field of personal choice, and the loss of which is the greatest of all the losses of the homogeneous or totalitarian State. For this variety preserves the traditions which embody the most secure and successful choices of former generations; it colours the present with the diversification of its fancy; and, being the handmaid of experiment as well as of tradition and of fancy, it is the most powerful instrument to better the future."

Fortunately, all over the world, there is rethinking on socialism. Socialism today is like a battered ship without rudder and engine but gifted with a mutinous crew disputing with the captain and among itself as to the captaincy of the vessel which they can neither control nor direct. Unseemly quarrels amongst heads of various socialist States and groups regarding the interpretation of the socialist theology is but an indication that socialism is fast disintegrating.

Keener Awareness

In democratic countries, which underwent to some extent socialist experimentation, the awareness of the failure of socialism is keener. For instance, after the last general election in the U.K., analysing the causes of failure of the Labour Party, one of the leading theoreticians of the Party, and the Financial Secretary of the Treasury in the former Labour Government, Dr. Douglas Jay, made some interesting comments:

"The word 'nationalisation' has become damaging to the Labour Party. This is a fact; and it is no use denying it, even if you deplore it. ...

"The myth that we intended to 'nationalise' anything and everything was very powerful in this election—any canvasser will agree. We must destroy this myth decisively; otherwise, we may never win again."

At the recent conference of the Labour Party proceedings, it was clear that the British socialists now recognise that private enterprise has a useful role to play.

Human Nature

Socialism has failed, because it has not reckoned with human nature as it is. To quote the apt words of an eminent British writer on this subject, Ivor Thomas:

"The rock on which socialistic experiments have hitherto always foundered is human nature. Any sound political system must be based on a correct appreciation of human nature; and socialism is bound to fail because it offends the best elements in human nature and panders to the worst.

"The men for whom statesmen have to legislate are neither angels nor beasts. They are neither wholly good nor wholly bad. The legislator who assumes that they are wholly good will make an error not less harmful than he who assumes that they are wholly evil; the latter will concentrate so much on repression that he will not extract the 'soul of goodness' that is to be found even in 'things evil,' 'would men observingly distil it out,' while the former's structures will be wrecked by lack of co-operation from the people he trusts. There are, indeed, some men who are almost entirely good, and others who are almost wholly evil, but the statesman would be foolish to legislate for a society either of saints or of sinners. It is his duty to construct a society which is suited to the average human being, compounded as he is of good and evil ingredients; and he must leave the extremes in either direction to be provided for by special measures.

"The prime fact of human nature which the wise statesman must take into account is that men will exert themselves for their own benefit, or for that of their families, regarded as an extension of themselves, as they will exert themselves for no one else; and, in particular, men are not prepared to work for the State or for any other collectivity as they will work for themselves or for their families. Perhaps, this is a defect in human nature, but it is a fact, and the statesman ignores it at his peril."

Socialism which arose as an ethical protest against the injustices of the earlier-day capitalism argued that concentration of economic power by the possession of huge and extensive machinery in a few hands is dangerous to democracy. Today, not only has the State come to have many weapons in its armoury to control and regulate private capital, but technology is also leading to decentralisation of both the mode of production and ownership of capital. For instance, electric power can be taken to the remotest villages where people can ply privately-owned small machines. Shares in public companies are owned by a large number of small investors. The changing pattern of industrial ownership and diffusion of the power over the means of production frustrates the socialist ambition of concentration of all the means of production in the hands of the State. Reason and commonsense demand that we, in this country, make a very close study of all these trends in economic history and technological development.

As for first-hand experience, our people have by now got a taste of socialism. The first bitter fruits are State trading, State enterprises and the evolution of a perquisitive society.

S.T.C.

The State Trading Corporation in India has not only extended its activities to cover over 50 items, but is now planning establishment of subsidiary corporations. Established channels of trade, rendering a very fine service to the community, are apprehensive that S.T.C. may render them destitute overnight. The damage done by S.T.C. to the national economy and its dangers have been pointed out by me on previous occasions. Findings of the Estimates Committee of Parliament, which recently went into the working of the State Trading Corporation, have substantiated these observations. The Estimates Committee is presided over by Mr. H. C. Dasappa, a former Finance Minister of Mysore State, and mainly consists of the members of the ruling party. In its 86th report, the Committee observed:

"There is some justification in the complaints of the private sector that the S.T.C's entry into manganese trade has not helped in securing many new fields of export or substantial increase in its value."

On S.T.C's cement handling, the Committee said:

"During the period of one year from 1st July 1956 to 30th June 1957, the S.T.C. imported 2,27,254 tons of cement. The total cost of the imported cement, including the cost of acquisition, etc., was Rs. 287.39 lakhs and the total amount of sale price, value of closing stock and value of stock in transit was Rs. 239.86 lakhs. Thus the excess of cost of the imported cement over the value realised therefrom was Rs. 47.53 lakhs.

"As against this, the S.T.C. sold during the year 50,48,837 tons of indigenous cement in the country and recovered from the consumers import subsidy amounting to the extent of Rs. 353.42 lakhs, at the rate of Rs. 7 per ton.

"Thus, deducting the loss of Rs. 47.53 lakhs incurred on imported cement, the S.T.C. earned a surplus of Rs. 306 lakhs on account of the import subsidy only during the year.

"The Committee consider it most inappropriate that, in addition to the considerable revenue raised by levy of high excise duty, Government should have taken advantage of its monopoly in raising substantial additional revenues by fixing high prices for cement. They are of the opinion that, if such additional revenue had to be raised, it should have been done through a specific taxation measure with the approval of Parliament and not under executive action by charging higher prices for an essential commodity like cement."

It is disturbing to get reports from abroad that, in their zeal to build up State trading in India, representatives of S.T.C. are condemning private enterprise with foreigners and urging them not to enter into deals with private enterprise in our country.

State Industries

The picture with regard to State industrial undertakings is equally unhappy. A recent publication by the Cabinet Secretariat, entitled *Principal Public Sector Undertakings in India,* listed 19 organisations completed and in full operation, 7 incomplete and not in full operation and 20 commercial, financial and miscellaneous undertakings. The Estimates Committee of Parliament sometime ago noted that the full picture with regard to State undertakings was not available. For years now a campaign of vilification against private enterprise has been intensively carried on. On the other hand, it is surprising that, even when legitimate criticism is levelled against State undertakings, it is resented. It is the sacred duty of the public to criticise State undertakings where and when they go wrong, as, at least theoretically, they belong to the people. It is regrettable that very little material is available on the operation of these undertakings. Even the Estimates Committee of Parliament was constrained to remark on this aspect. A newspaper report in February 1960 said:

"Considering the huge investment of public funds in these undertakings, the Committee said, the existing method, available to Parliament of keeping itself fully informed of these undertakings, is neither adequate nor satisfactory. At present, Parliament does not get a comprehensive picture. There was no consolidated information with regard to the total investment and subsequent change made therein or with regard to the working of the undertakings and its net effect on the national economy. Even with regard to individual undertakings, the information available was not adequate."

Principles of commercial administration are not prominent in the operation of State undertakings, because they are run by officers who have got power without accountability. In some cases, they are headed by individuals who do not have any business experience, but whose sole qualification is a political past which entitles them to receive favours at the hands of the Government. The question of efficiency in these undertakings rarely arises, if ever, because the general public, through taxation and excise levies, has to subsidise their losses. An investigation into their working is urgently called for.

There is one question of importance which needs to be determined with regard to State undertakings. According to the Company Law, it is obligatory to make public the appointment of relations of directors in the companies in which they have an interest. Some patient individual has calculated that there are about 65 categories of relations, both legitimate and illegitimate, who are covered by this provision. It will be in the fitness of things that a similar rule be applied to all ministers, both Central and State, M.Ps and M.L.As and Government officials drawing over Rs. 1,000 with regard to their relations employed in State undertakings.

Perquisitive Society

This aspect of State undertakings brings us to a very important outcome of a socialistic society. While socialism is out to destroy the so-called acquisitive society, it creates a perquisitive society—a society in which, as George Orwell remarked, all people are equal, but some are more equal than others. These perquisites are to be paid for by the public of the country and are insidious, in that their accumulation takes place in a gradual manner. The revelation of the Estimates Committee that, of Rs. 1,044.2 crores additional taxation collected in the name of the second Plan, only Rs. 439 crores will go for Plan expenditure should occasion a number of thoughts in the minds of the public. It shows how the precious money collected in the name of Plan is squandered away on non-developmental civil expenditure and mostly on perquisites.

Perquisites are accumulated imperceptibly. Recently, we learnt that, in Maharashtra State, the legislators are to be given free travel concessions on State Transport buses throughout the State. Occasionally, demands are made even in Parliament for free air travel, although Members of Parliament already enjoy the following benefits:

1. Free first class travel on Indian Railways.
2. Priority in rail and air bookings.
3. Rs. 400 per month salary.
4. Rs. 21 per day, while attending the session.
5. 1,800 free telephone calls.
6. Subsidised housing in New Delhi.
7. Subsidised furnishings.
8. Contributory medical health scheme.
9. Concession in flying club.

The perquisites enjoyed by Government servants at all levels are too numerous to be listed. It is desirable to make a survey of all these perquisites and to do away with them. It will be more in consonance with the spirit of democracy to give higher salaries to our Ministers, legislators and Government servants rather than to

Our Railways have another responsibility . . . of protecting costly equipment against scorching heat, lashing rain and gruelling service.

GOODLASS NEROLAC Paints share the Railway's responsibility of protecting the nation's property. Again and again, the Railways choose GOODLASS NEROLAC Speciality Paints, and Special Paints made to ISI Specifications, to preserve hundreds of coaches, wagons, bridges, signal towers and stations.

GOODLASS NEROLAC — the Paint Specialists — have twenty-five years' manufacturing experience in India, backed by a century of research in paint technology. And each year GOODLASS NEROLAC's scientists are perfecting better protective paints for every type of industry.

India's leading manufacturers of industrial paints and finishes

allow them numerous perquisites which, in the long run, cost more to the country and create "private property" of a most undesirable character, and undermine the democratic way of life.

Comprehensive Planning

To round off the picture of socialism, we must examine comprehensive planning as implemented under this ideology. It is necessary to emphasise that planning is essential for rapid and large-scale economic development of the country. It is also important to remember that planning is no monopoly of socialism. Planning in some form or other has always obtained. The difference arises as to the mode of planning.

Planning under socialism, as it obtains in an aggravated form in Russia and China and as it has been sought to be implemented in India in the second and third Plans within a democratic structure, is of a *comprehensive* character. As Walter Eucken, father of philosophy of social market economy so successfully implemented in West Germany, has pointed out, planning can be not only *centrally directed*, but also *centrally administered*. Comprehensive planning assigns to the State complete control of economic activity and also seeks to entrust to the State the task of *administering* the plan in totality. This type of planning was not unknown in historical times, as, for instance, in ancient Egypt and has led to some inevitable results like loss of freedoms and repression of the creative forces in society. In a country like India, with our cherished democratic way of life, this type of planning cannot be implemented, unless one is prepared to throw overboard the democratic constitution and resort to full-scale rationing of food and consumer articles, physical controls over raw materials, mobilisation and direction of labour, confiscation of private property, compulsory savings and, in short, economic serfdom of the people.

The Alternative

If comprehensive planning is unsuited to India, what is the alternative, it may be asked. The alternative is realistic planning. Such planning reckons that every individual and group of individuals in society have got plans of their own. It seeks to co-ordinate these plans in a direction meant to lead the country to rapid and large-scale economic development. Thus, the initiative and enterprise of the individual's is harnessed, while their liberties are preserved and utilised for furthering economic development. Realistic planning, in order to fulfil this goal, lays down targets of development reckoning the available resources. The fiscal and monetary policies, especially the policy with regard to taxation, would be such as to give incentives to the people to work hard, to save and to invest.

In realistic planning, moreover, the State concentrates upon creating pre-conditions for economic development and laying down the infra-structure. Briefly stated, the pre-conditions include development of a network of highways, railways, waterways, ports and air terminals, a first-class postal, telegraphic, telephonic and overseas communication services, educational facilities designed to increase the social and technical skills of individuals; a sound administrative set-up with clear and simple rules and regulations which do not frustrate the objective of economic development as various controls and regulations are doing today, attention to basic, though not spectacular requirements like afforestation and soil conservation measures.

Realistic planning respects the cardinal principle of planning, i.e., better co-ordination and more efficient working of existing departments rather than creation of new departments and authorities. How far our country is from providing the pre-conditions is evident from such letters as the following which appear frequently in the Indian Press:

"Today I went to the Calcutta 19 (Ballygunge) Post Office to buy three post cards and was told by the counter clerk that postcards were out of stock. This would not have surprised me if this happened in some small village post office, but Ballygunge is a post office in a big city."

Within the framework of realistic planning, free enterprise has to play a very important role. The time has come when free enterprise must look to new horizons. It is no longer a question of mere profits but also taking hold of the opportunity to serve the country.

Need for Change in Outlook

Free enterprise has to reckon with the changing social context and accordingly re-adapt some of the old principles of business management. For instance, 50 years ago, family members used to look after any established family business. That was the way business was institutionalised. Today, the economy has diversified and is undergoing further diversification. We are coming to an age of far greater division and specialisation of labour than ever before. The confines of the family cannot provide the necessary skills and talent for institutionalising a business or industrial undertaking in this changed context. Therefore, outside talent has to be recruited and fostered. Moreover, mobility within free enterprise should increase so that people of initiative and enterprise who show their mettle can rise to the topmost position. The band of *entrepreneurs* should increase and there should be more exchange of information on management techniques.

Another important direction in which free enterprise has to operate is to win the confidence of its biggest potential ally, the consumer. Efficiency, courtesy and other lubricants of the wheels of progress need to be applied to the mechanism of the economy. The consumers' desires should be ascertained by market research and their needs catered to. After all, the phrase "standard of living" has got meaning only in the context of meaningful production which, in simple terms, means catering to the needs of the consumer.

We have to grasp the significance of the new orientation of free enterprise in the changed context. Free enterprise contributed finances liberally for the freedom movement of this country. That tradition continued after independence and contributions were given to political parties for social service. Now the time has come when free enterprise, through its own representative organisations like the chambers of commerce and free voluntary organisations outside the pale of politics, should render service to the community. This service should be of such a character as to make for better citizenship, a harmonious community life and maximisation of scope for the creative talents of individuals. It is only in commercially prosperous eras that the flowering of the finest of human talents has been possible. With their shrewdness, organisational skill and resources, it will not be difficult for free enterprisers to take up this leading role again.

This new orientation will strengthen democracy considerably. In the first place, it will mean taking out many aspects of life from the pale of politics and a phenomenal increase in voluntary activity in society. As Mahatma Gandhi rightly emphasised, voluntary activity is the foundation of democracy.

Second, this would generate new and continuous leadership at various levels of life. One of the major crises of modern civilisation is the inadequate provision of leadership. The socialist ideology aims at providing a uni-central leadership for a pluralistic society and, therefore, it inevitably fails. We cannot allow society to operate in a vacuum. The leadership has to be developed throughout the country in different facets of life, in various walks of life and at all levels. This is a challenge which free enterprise must accept if it wants to survive and serve the public and wants to see that democracy also survives.

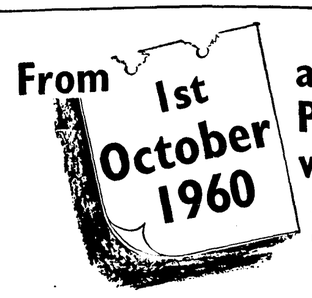
CENTRAL REVENUE COLLECTIONS

The revenue realised from items on which duties are levied and collected by the Central Government in the first six months of the financial year 1960-61 amounted to Rs. 366.65 crores. Of this, Rs. 74.68 crores were collected during September 1960. The corresponding figures for the first six months of the financial year 1959-60 and for the month of September 1959 were Rs. 328.49 crores and Rs. 77.86 crores, respectively. Following are details of the revenue realised under various heads:

(In crores of rupees)

	September		April-September	
	1960	1959	1960-61	1959-60
Customs	13.74	14.04	77.95	74.21
Union excise duties, excluding coal cess and salt cess	31.65	29.28	193.90	168.19
Corporation tax	14.51	14.43	36.78	24.43
Income-tax	13.48	18.02	47.02	50.65
Estate duty	14	19	82	97
Taxes on wealth	27	52	1.47	1.58
Expenditure tax	3	2	13	14
Gift tax	6	4	23	20
Railway passenger fare tax	N.A.	91	5.73*	0.33
Opium	80	41	2.62	1.79
Total	74.08	77.86	366.65	328.49

* Provisional upto August. N.A.—Not available.



all Shalimar Paint Products sold by weight went metric

These products are now available either in the new metric standard packs or in current standard packs with the metric equivalents clearly indicated.

We hope the following data will help you to "be Bright" and reckon right:

Old Standard Packs	Metric Equivalent Marked	Standard Metric Packs	Approx. difference between Old & New
56 lbs.	25.4 kilograms	20 kilograms	— 5.4 kilograms (11 lbs. 15 oz.)
28 lbs.	12.7 kilograms	10 kilograms	— 2.7 kilograms (5 lbs. 15 oz.)
14 lbs.	6.35 kilograms	5 kilograms	— 1.35 Kilograms (3 lbs.)
7 lbs.	3.18 kilograms	—	—
4 lbs.	1.81 kilograms	2 kilograms	+190 grams (6.7 oz.)
3 lbs. 8 oz.	1.59 kilograms	1.5 kilograms	— 90 grams (3.1 oz.)
1 lb.	454 grams	500 grams	+ 46 grams (1½ oz.)

Weight for Weight, Volume for Volume, the price is as before—as is the quality

Between October 1st 1960 and April 1st 1961, under the Standard of Weights and Measures Act, 1956, all products (sold by weight and by volume) manufactured by Shalimar Paint will go metric. We will keep you advised.

TRAVANCORE SUGARS AND CHEMICALS LIMITED

CHAIRMAN'S SPEECH AT ANNUAL GENERAL MEETING

SUGAR INDUSTRY LIKELY TO BE FACED WITH SURPLUS PRODUCTION

A NOTE of caution about the prospects for sugar industry was struck by Mr. G. N. Noel-Tod, Chairman of the Travancore Sugars and Chemicals Ltd., in his speech, read in his absence by *Rajyasevaniratha* S. Chattanatha Karayalar, at the Twenty-third Annual General Meeting of the shareholders of the Company held at Trivandrum on 7th November 1960. Mr. Noel-Tod pointed out that, with a number of new factories coming into production throughout India, it seemed probable that there would again be surplus production, which would have to be exported at a considerable loss. In view of such surplus production, it seemed odd, he said, that there should be controls over the sale of sugar and, in certain areas, even shortages due to transport difficulties.

The following is the full text of Mr. Noel-Tod's speech:

"GENTLEMEN,

"In the unavoidable absence of the Chairman, Mr. G. N. Noel-Tod, who is at present on the high seas on his way back to India, it falls to me to address you today. May I first of all extend a hearty welcome to you to this, the 23rd annual general meeting of your Company. The accounts and Directors' report for the year ended 30th April 1960 have been in your hands for the statutory period and, with your permission, I shall take them as read.

"Since we last met, there have been two changes on the Board. Owing to his preoccupation with other duties, Mr. Hadfield resigned from the Board in August this year. Due to his very considerable knowledge of the sugar industry, particularly of the cane side, his services have been of inestimable benefit to the Company and I should like to place on record our appreciation of them. In his place, Mr. M. J. Edwards has been co-opted to the Board and you will be asked to confirm this appointment later on in this meeting. We welcome Mr. K. P. Viswanathan Nair as the Government Nominee Director in place of Mr. M. Abdussalam. Mr. Abdussalam's advice and help in matters requiring reference to Government was always freely given and most welcome. We are sure that we can look forward to similar assistance from his successor.

Rise in Net Profit

"As you will have noticed, results for the year are not unsatisfactory and are very much in line with those for the previous year. There was a slight increase of Rs. 16,213 in the net profit after taxation. The value of sales and cost of sales are higher due to the increase in sugarcane price and selling price of sugar fixed by the Government of India. Perhaps I should comment on the large increase in the profit adjustments relating to previous years, which you will see from the notes attached to the accounts, is largely represented by the sum of Rs. 1,24,000 being provision for additional payment to ryots in respect of cane supplied during the 1958-59 season. There has been a small but satisfactory increase in the excess of current assets over current liabilities, and considerable improvement in the Company's cash position. Much of this, however, will be required for the enlargement and improvement of the distillery to which I will refer later.

"Last year, the Chairman told you that the start of the crushing season was delayed owing to labour troubles and this probably had some effect in depressing the average recovery of the crop. Unseasonal floods were also experienced, with the result that the total crush was slightly under 1,20,000 tons, as compared with 1,33,000 tons the previous year. The recovery was only marginally lower, 8.29 per cent., as against 8.3 per cent.

"The season began on 27th September 1959 and, on 25th October, the Government of India increased the minimum price of cane from Rs. 39.20 to Rs. 44.10 per ton. At the same time, a special excise duty of Rs. 50.40 per ton was collected on stocks of sugar held by the factory on that date, and the amount paid by us was Rs. 66,362. As a result, the Company has been unable to pay anything extra to the growers who delivered 19,270 tons of cane between 27th September and 25th October, although it seems most unfair that they should be penalised. Their claim is obviously only against the Government of India and the Company has every sympathy with it.

Sugar Price Formula

"Last year, the Chairman referred to the uncertainty of the Company's liability in respect of the Government of India's price-linking formula. The situation is worse today in that the Government of India have still made no announcement of the final factor, but have referred the formula back to the Tariff Commission for fresh examination and recommendations. Thus, the Company is faced with a possible liability of uncertain dimensions on about 2½ lakh tons of cane supplied during the past two seasons and, in the absence of any information, no conclusive provision could be made to cover it. I cannot think of any other industry which has been left in this unenviable position of having had to sell its final product without knowing what it has cost over so protracted a period. It is to be hoped that, on its re-examination, the Tariff Commission will devise some more reasonable formula. Certainly one of its terms of reference is to arrive at a simple formula which will easily be understood by the growers. I have no hesitation in saying that, if the price-linking formula were applied in the manner which has been rumoured, it is doubtful if the margin of profit left to your factory with its low recovery would be sufficient to make continued operations at all attractive. Needless to say that the strongest possible representations are being made by the South Indian Sugar Mills Association and similar bodies to the Tariff Commission to take into account the position of factories such as yours, and we can only hope that commonsense in the long run will prevail.

"Meanwhile, the Company has continued to offer the usual Brix bonus based on quality which has proved popular with the growers. It has been paid in respect of the 1958-59 season, together with an additional Rs. 2 per ton of cane. Further, the Brix bonus has been reserved in respect of the year ending 30th April 1960. These will stand to be deducted from anything Government finally order to be paid under the price-linking formula.

"The current season started as planned early in September and prospects are average. It is hoped to crush about 1,30,000 tons of cane and the quality so far is slightly better than that experienced last year.

Sugar Surplus

"As you are possibly aware, last year's all-India sugar production reached a new record of 24.1 lakh tons and the country is now faced with a surplus. It is estimated that there will be about 5 lakh tons carryover at the beginning of the 1960-61 season. To ease the situation, the Government of India have released 50,000 tons for export, of which your Company's share is 206 tons. The loss on this quantity will probably amount to about Rs. 1 lakh and this will have to be taken care of in the current year's accounts. In addition, the Government of India are understood to be negotiating with the U.S. Government to sell a large tonnage of surplus sugar on which there will also, inevitably, be a loss. It seems odd that, in view of this surplus production, there should be control over the sale of sugar and in certain areas even shortages, but these latter are due to transport difficulties. Although there has been a considerable increase in production of sugar, the offtake has shown very little improvement in the past three years, possibly due to the availability of *gur* and *khandsari* at attractive prices. There are prospects of some improvement in the offtake of sugar in the current year, but, with a number of new factories coming into production throughout India, it seems probable that there again will be surplus production, which will have to be exported at a considerable loss.

"In these circumstances, while, on the one hand, the outlook for the sugar industry cannot be considered encouraging, on the other, every State seems determined to become self-sufficient, including Kerala. Kerala is, of course, largely deficit, but whether it is an ideal area for growing sugarcane is certainly open to question. The most alarming feature is that there is a proposal to start a co-operative factory at Pandalam in the Achenkoil river valley, at a site only eight miles from Pamba river factory. It is our considered opinion that two factories situated so near together cannot obtain adequate cane supplies for economic working, and the result could only be competition for the available supplies of cane, with the result that both factories would run at a loss. Pamba river factory can easily be expanded to take additional cane when supplies are available and the quality justifies taking this step. Your Company have made strong recommendations to the Government of Kerala not to sanction the establishment of another sugar factory so close to an existing one and, in the interest of all concerned, we do hope that Government will pay heed to our warning.

Distillery

"The distillery worked continuously throughout the year and there was no difficulty in selling all the spirit we were able to produce. The present still is now 22 years old and, besides having outlived its normal useful life, is of insufficient capacity to deal with all the molasses produced by the sugar factory. Your Board has, accordingly, sanctioned the purchase of a new still of larger capacity. No difficulty is anticipated in continuing to sell our total production, as indications are that the demand for industrial spirit will continue to expand with the industrial development of the country.

"Due to a temporary disruption in our selling arrangements, there was a slight setback in the sales of potable liquor last year, but the situation is being rectified and I think from now we can look for an increase in the demand and profitability from this section of our activities.

"The pharmaceutical works registered a slight improvement in turnover, but the profits were a little lower, due to high costs and increased selling and administrative expenses. Our current agreement with Government whereby Government purchase 50 per cent. of their requirements from us, comes up for reconsideration in April next year and, if a renewal cannot be obtained on favourable terms, serious consideration may have to be given as to whether it is worthwhile continuing this branch of the Company's activities.

Labour Relations

"I am pleased to be able to report an improvement in labour relations at the factory. Last year, the Chairman told you that an agreement was reached which, among other things, covered the payment of bonus and, as a result, the current season started smoothly, for the first time for many years, without the threat of a strike. As you are probably aware, the report of the Sugar Wage Board has been submitted to Government and is expected to be published shortly and it is difficult to forecast what effect this will have on the fortunes of your Company, except that it is likely to add to the already very substantial wage bill. In anticipation of the Wage Board report, a gratuity scheme for all employees has already been introduced on the lines of what is expected to be recommended by the Sugar Wage Board.

"In the light of the actual financial results and the uncertainty regarding the future, I am sure you will appreciate why your Directors have felt unable to recommend any higher dividend than for the previous year. You will also notice in the report that, to avoid hardship, an interim preference dividend at the rate of 5 per cent. less tax is being paid, and the balance will be paid as soon as the implications of the Government's Preference Shares (Regulation of Dividends) Bill have been clarified. The balance payable will have to be met from the carry forward, and this is one of the reasons why it has been considered expedient to increase this amount by some Rs. 40,000.

"In conclusion, I should like to thank all employees of the Company for their hard work and co-operation during the year under review

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

INCREASED SALES TO ALL CLASSES OF CONSUMERS

DEMAND CONTINUES TO EXPAND

SIR HARRY BURN'S REVIEW

THE Sixty-third Annual General Meeting of The Calcutta Electric Supply Corporation Limited was held on 10th November in London.

Sir Harry Burn, K.B.E., F.C.A., the Chairman, presided.

The following is his review, which had been circulated with the report and accounts:—

Industry continues to expand throughout the whole of the licensed area, and housing development proceeds in Calcutta and its suburbs to remedy the shortage of dwelling space for all classes of the population.

The demand for energy grows, and I am able to report increased sales to all classes of consumers during the year ended 31st March 1960. The total energy sold increased by 140 million units to 1,817 million units. The major portion of the increase in demand came from industry.

Energy sold for power purposes refers principally to industrial demand, which accounted for 90 per cent. of these sales. The balance covers public water works and domestic power, the latter being mostly for air-conditioning and refrigeration. All the principal classes of industrial consumers recorded higher consumption than in any previous years. The jute industry, our largest consumer, increased their demands by 18 million units to 430 million units. Further progress in modernisation and rationalisation of jute mill machinery has helped to improve trading conditions for this industry, whose exports were the highest for 10 years. Next in importance are rolling mills and engineering workshops, whose consumption increased by 32 million units to 243 million units. Expansion will continue when supplies of steel improve. Of the remainder of our industrial consumers the most important are cotton mills, chemical works and paper mills.

Demand Rises Further

Further expansion took place in the demand for low tension industrial power, sales increasing by 14 million units to 114 million units and the number of consumers again increasing by over 1,000 to more than 15,500. Public water works and sewage pumping stations consumed 90 million units, an increase of 8 million units. Half of this increase was from the Calcutta Corporation, which is expanding its water supplies, and the remainder was from the State Government's Sonarpur-Arapanch Drainage Scheme. There was again a large increase in domestic power sales, which rose by 5 million units to 61 million units. The larger demand is mostly due to air-conditioning units, which are being manufactured locally.

Sales of energy for lights and fans rose by 16 million units to 243 million units. There has been an appreciable increase in residential buildings in our area of supply and greater use of fans resulting from improvements in the standard of living of many middle-class families.

Public lighting sales increased by one million units, which was almost entirely due to additional street lighting by the Calcutta Corporation.

The only consumer for traction purposes is the Calcutta Tramways Company Ltd. Their consumption, which rose by 3 million units to 46 million units, shows some recovery in their operations, which were disrupted by labour troubles during the previous year. Provided that their operating conditions remain stable, consumption during the current year should reach that for the year ended 31st March 1958, of more than 49 million units.

There are seven distributing undertakings taking bulk supplies from the Company. Five of these undertakings are owned by the State Electricity Board, which was thus responsible for over 92 per cent. of the total sales of 66½ million units and almost entirely for the increase of 3½ million units during the year.

Two-thirds of the sales under special contracts were at our special tariff to owners of large office and residential buildings, public institutions, cinemas, and hotels. Sales to these consumers increased by 5 million units to 61 million units during the year. The remaining consumers under special contracts are the Central and State Governments, the Calcutta Corporation, and the Calcutta Port Commissioners; consumption improved in each case

Revenue Account

The effect of the increase in the demand for energy is shown in the revenue account, where it will be seen that the receipts from sales of current have risen by over £700,000 to approximately £9,000,000. Interest received amounts to £43,727, an increase of £24,858 over the previous year, and is attributable to the return on Treasury bill investments and interest on bank deposits. As a corollary to the higher demand on the system the cost of generation and distribution increased by £534,000 to £4,560,000 and of this expenditure the cost of coal, including handling and ash disposal charges, amounted to £2,826,000 an increase of £373,000 for the year. This major item of outlay represents 80 per cent. of the total operating cost of generation. The cost of power purchased from the Damodar Valley Corporation shows a slight increase of £11,000. Increases in wages and costs in respect of materials are commensurate with the expansion of the Company's system.

The depreciation charge has risen by £29,000 to the figure of £929,000. The wealth tax, to which I made reference in last year's review, was not in fact abolished until 1st April 1960 and has thus entailed a charge of £99,700 in the revenue account. This final instalment has been calculated with reference to the values of the Company's assets at 31st March 1959, in accordance with the Indian Wealth Tax Act. The net revenue after taking into account the depreciation charge has increased by £200,000. Sales of energy for the current year show a satisfactory expansion and conform with our forecasts of future demands.

I will now deal with the net revenue account. As regards the Indian tax position I am glad to say that settlement has been reached in respect of the appeals which were pending a year ago and to which I made a reference in last year's review. The charges for United Kingdom and Indian taxation adjust the position up to 31st March 1960, but no relief is available in the tax element of the preference dividend for the year.

Th clear profit for the year falls short of the reasonable return to which the Company is entitled by the sum of £67,353, and this has been made good by a transfer from special reserve.

Special Reserve

It will be convenient here to explain how the special reserve, which stood at the figure of £961,113 on 31st March 1959, has been dealt with in this year's accounts. In order to meet an anticipated shortfall between the clear profit and reasonable return the State Government was asked to approve of an appropriation from this reserve for this purpose. In acceding to this request Government directed that the reserve should be allocated in accordance with the provisions of Clause II (1) of the Sixth Schedule of the Electricity (Supply) Act, 1948. Effect has been given to this decision relating the appropriations required to the reasonable returns of the periods of account concerned, i.e., the calendar years 1949 to 1952. Tariffs and dividends control reserve and consumers' benefit account receive allocations of £349,404 and £349,403 respectively, and a balance of £262,306 remains in the reserve which is available for meeting shortfalls between clear profit and reasonable return.

After providing for the shortfall disclosed in the accounts the reserve stands at £194,953, which amount, together with the tariffs and dividends control reserve, is to be set off against any future shortfalls of clear profit.

The allocation to the consumers' benefit account has been given effect to through the net revenue account as it is an appropriation which is not in the nature of a reserve and is in fact a charge related to the reasonable returns of the accounting periods to which I have made reference.

The allocation for the contingency reserve fund has been made as required by the Act and it is proposed to make the customary contribution to the retiring gratuity fund. Provision has been made for debenture interest and sinking fund charges. In view of the continued expansion of the Company's operations it is essential to conserve our finances to meet the consequent capital expenditure. The Board, therefore, have deemed it advisable to appropriate a sum of £575,000 to special appropriations for plant expansion and replacements. Dividends on the preference stock amounting to £65,075 have been paid and it is proposed to pay a final dividend of 4 per cent. (actual) on the ordinary stock making 7½ per cent. (actual) for the year. The net earnings for the year have enabled the Company further to strengthen its internal finances and also permit of an increase in the final dividend on the ordinary stock. The balance left to be carried forward on net revenue account is £108,138.

The balance-sheet shows an improvement in the cash position in the form of treasury bills and deposits with bankers. This accumulation of funds is in part being applied in payment of Indian tax now falling due on settlement of the appeals against which deposits are held with our bankers in Calcutta. Dividend payments are also covered and funds have been made available to meet commitments in respect of plant and other expenditure in the United Kingdom.

Capital Expenditure

Capital expenditure during the year amounted to £1,160,000 and was almost entirely for our transmission and distribution systems. By far the greater part of the expenditure was on mains and service connections. As a provision for capital expenditure during the year and pending at 31st March 1960 (£595,000) there was available the sum set aside for depreciation of £929,000 and the allocation to special appropriations for plant expansion and replacement amounting to £575,000 thus making a total provision of £1,504,000. During the period 1st January 1951 to 31st March 1960, capital expenditure totalled £11,925,000 and the depreciation provisions, together with reserves and special appropriations during that period, amounted to £12,140,000. These figures follow on those given in the 1959 review and demonstrate what has been accomplished during recent years, within the limits permitted by the reasonable return on the capital base, to provide internal finance for the expansion of the Company's undertaking.

The forecast of capital expenditure over the next four years based on the anticipated increase in demand indicates an annual outlay of not less than £1¼ million on our transmission and distribution systems.

In February of this year Sir William Lamond visited Calcutta and was there for a period of three weeks. During his visit he met the Chairman of the State Electricity Board and the Chairman of the Damodar Valley Corporation to discuss the Company's future power requirements. He also had the pleasure of meeting Dr. Roy, the Chief Minister, and discussed with him questions of interest to the Company. Dr. Roy and the Chairman of the State Board and the Damodar Valley Corporation are fully acquainted with our problems. He also took advantage of the opportunity to meet the leaders of commerce and industry in Calcutta. He found, as usual, that our officers and staff continue to devote great care and attention in promoting the interests of the Company and maintaining efficiency.

I attach importance to the training of young Indian engineers for employment in our Company. Under our technical training scheme, which has been in operation for nearly 14 years, young Indian graduates are chosen by a selection committee in Calcutta for a short period of training in our undertaking [illegible] after they are brought to the United

for further training and on their return to Calcutta they are taken on to the permanent staff. In addition to this scheme we have a phased programme for bringing to the United Kingdom various members of our permanent staff for further training and for refresher courses. We are grateful to the Electricity Council, the area boards and the various manufacturing companies who provide the facilities.

Power Situation

I should like in this review to include a note of explanation with regard to the future supply of power within the Company's licensed area. In the decade and a half that has elapsed since the end of the war the demand on the system has increased from about 150 MW sent out in 1946 to the present figure of 390 MW. To cater for this growth has entailed constant expansion of the Company's generation, transmission and distribution capacity involving an investment during the period of some £24 million. This expansion has proceeded in accordance with a coordinated plan of development designed to bring additional plant into commission before the load outstripped the capacity of existing plant and included 110 MW of new generating plant at New Cossipore and 60 MW at Mulajore; in addition certain modifications at our Southern Station increased its capacity. These additions, which added some 180 MW of generating capacity at a cost of over £10 million would, it was anticipated, have sufficed to satisfy the demand in the area until the year 1955-56 by which date our plan of development provided for the construction of yet another station adjacent to our existing Southern Station. The arrangements for the design and construction of this station were in an advanced stage when we were informed by the West Bengal Government that they would prefer us instead to take a bulk supply from the Damodar Valley Corporation which it was then considered would have a surplus of power available for export to Calcutta. The Company were naturally prepared to defer to Government's wishes in this regard and, as stockholders will be aware from my reviews of previous years, an agreement was negotiated with the Damodar Valley Corporation providing for an initial supply of 45 MW to be increased from year to year as might be required on the tendering by the Company of appropriate notice. Supply from the Damodar Valley Corporation was connected in April 1957 and, although that Corporation has not thus far been able to supply the Company with all the power it has required, we have been able, by keeping certain of our older and less economic plant in commission to meet all demands made on us without load shedding. It is anticipated that by the end of this year the Damodar Valley Corporation will have brought into service additional plant which will enable them to increase their supply to the Company to 100 MW.

Understanding with D.V.C.

The Company's understanding of the arrangement with the Damodar Valley Corporation has been that the latter would be responsible for meeting all the Company's requirements of power in excess of that provided by its own capacity and, in fact, at the beginning of last year a supplemental agreement was completed with the Damodar Valley Corporation to govern supplies in excess of 100 MW. The Company has, however, now been advised by the West Bengal Government that it is not their policy that the Company's offtake from the Damodar Valley Corporation shall exceed 100 MW and that its import requirements in excess of that figure will be provided through the agency of the West Bengal State Electricity Board, first from the latter's new station at Durgapur and thereafter from a super-station which they propose to build at Bandel on the west bank of the river above Calcutta. The Company has been given to understand that under this arrangement the State Board will be able to afford it a supply of 40 MW by June 1963, rising to 60 MW in June 1964, and that shortly thereafter all the Company's requirements can be met. I need hardly say that the State Board will have the Company's full co-operation in bringing this plan to the earliest possible fruition and in this connection negotiations are already in train for the siting of the necessary supply points, etc.

Meantime, the demand on the Company's system continues to grow at a rate of some 7½ per cent. per annum compound, and it is feared that some restriction of supply to the public may occur before the State Board's supply is fully available. Should any such restriction become necessary it will, needless to say, be kept to the absolute minimum, and will be done under direction of Government acting under the powers conferred on it by the Indian Electricity Act, 1910.

With regard now to any possible expansion of the Company's own generating capacity, Government's policy, as communicated to the Company some years ago, was that, although the Company would not be permitted to increase its capacity, we should be allowed to replace certain obsolete plant in our Old Cossipore Station by the addition of one further 50 MW Set at New Cossipore. It was, however, only this year that we could see our way clear to doing this and, in collaboration with our Consultants, a plan was worked out to put in this machine and at the same time keep 30 MW of plant at the Old Station in commission for peak load operation. On putting this plan to Government, however, we have very recently been advised that, having regard to their own plans, they no longer consider this to be necessary and in consequence we have had to abandon this project.

Company's Endeavour

Throughout this Company's long existence our earnest endeavour has always been to make available the necessary supply of power to run the wheels of industry and transport and meet the ever-increasing domestic requirements of our area; thus contributing towards the prosperity, comfort and happiness of those who dwell and earn their livelihood in the City of Calcutta, its suburbs and in the industrial areas and municipalities which lie adjacent to the city. We have so far accomplished our aim and have at no time had to restrict supply. Having set out the power position in the light of a growing demand, we will continue to travel hopefully and, within the means at our disposal, do all that is possible for those whom we serve.

Tribute to Staff

I desire to express our thanks to the staff in Calcutta. The growth of the Company's operations and the work entailed in the implementation of same bears witness to the interest and zeal taken in the Company's affairs by members of the staff and employees. Mr. Henderson, our Agent in Calcutta, has carried out his responsible duties ably and efficiently. To him and all members of our organisation we express our high appreciation of the sound and loyal services rendered during the year. I also wish to record the Board's appreciation of the able manner in which Mr. Colley has discharged his responsible duties as Secretary.

The reports and accounts were adopted.

The above statement is not a report of the proceedings of the annual general meeting referred to.

INDUSTRIAL INVESTMENT IN U.K.

An upward trend in industrial investment in the United Kingdom was reported by the Chancellor of the Exchequer, Mr. Selwyn Lloyd, when he opened a two-day debate in the House of Commons on 9th November on public investment. He also stated that by September this year there had been a record number of people in employment. Mr. Selwyn Lloyd said that the productive capacity of industry was, for the most part, fully engaged. It was 7 per cent. higher than in 1959. "There is an upward trend in industrial investment," he stated. "Plans for industrial building and orders for plant and machinery were running at a high level through the summer and autumn." The Chancellor said that a forecast supplied to the Board of Trade by private firms suggested that fixed investment by these firms in 1960 was likely to be 20 per cent. higher than in 1959. In manufacturing industries a further rise of 20 per cent. was expected in 1961.

Earlier in his address, the Chancellor observed: "We have a high level of employment. The number of people at work has been increasing steadily, and, by September this year, we reached the record figure of 23,800,000." The level of unemployment in October was only 1¼ per cent. There had been a remarkable degree of price stability since early 1958, and the index of retail prices for September was 110, only one point above its level in the first half of 1958. The Chancellor also reported that purchases in shops had been running at about 4 per cent. above the level of this time last year.

Mr. Selwyn Lloyd said of the air corporations that they had just about doubled their traffic over the last five years. They were ordering and bringing into service new fleets of aircraft, and their expenditure showed large fluctuations based on the incidence of their purchase of aircraft.

In the course of his speech, Mr. Selwyn Lloyd said that United Kingdom investment abroad amounted, in net terms, to £2,000 million in the 10 years 1950 to 1959. In addition, Government lending overseas had recently grown fast, and this year would amount of £150,000,000.

fewer children . . . happier families

In Jamshedpur, groups of workers' wives gather in the evenings at the seven maternity and child welfare clinics run by Tata Steel. Here, trained advisers tell them about the baneful effects of improvident parentage and distribute contraceptives at cost price to ensure planned parenthood. More such units are being set up. Jamshedpur is the first city in India where, since 1959, oral contraceptive pills are being tested out on a fairly extensive scale.

An important feature of these efforts is male sterilization operations being carried out since 1951 under the guidance of Dr. Harbans Lall, who is in the forefront of a devoted group of workers engaged in popularising family planning in Jamshedpur. A Fellow of London's Royal College of Surgeons, Dr. Lall has so far been responsible for carrying out over 475 operations successfully.

In keeping with the national objective of curbing the runaway growth of population, pioneering work is being done in Jamshedpur . . . a city where industry is not merely a source of livelihood but a way of life.

ECONOMIC DEVELOPMENT OF AUSTRALIA

CAPITAL INVESTMENT NEARLY £14,000 MILLION IN THIRTEEN YEARS

By C. P. Puzey

DIRECTOR, AUSTRALIAN INDUSTRIES DEVELOPMENT ASSOCIATION

AUSTRALIA now has at least 30 per cent. of its work force engaged in manufacturing activity. Its factories employ 1,000,000 people and produce goods worth more than £4,000,000,000. Until World War I, Australia was chiefly a primary producing country whose manufacturing industries were mainly directed to the processing of indigenous raw materials—including production of wool textiles and blankets, clothing, footwear and leather, a range of processed foodstuffs and so on.

During and after the war, major industrial projects were started—chemicals, motor body production, electrical and communications equipment, and other metal processing industries. In 1915, Australia's first blast furnace was blown in. Initial production was mainly rails and merchant bar for agricultural implements.

The post-war boom of the 1920s saw the continued growth of manufacturing. During the world depression of the early 1930s, however, Australia was again thrown on its own resources, because world prices for primary commodities fell so low that Australia could not find the foreign exchange necessary to import all its needs. Though the pace of development slowed down, important growth continued in the chemical, motor vehicle assembly, construction and excavating equipment and other industries.

Again in World War II, Australia could not import all its needs, as available transport was mainly required to carry troops and essential war supplies. The sound nucleus of manufacturing industry which had been built up by 1939 was added to and matured in this period.

Following the war, Australia's official policy was to build a more balanced economy and the Government gave every encouragement to the growth of manufacturing industry through the Secondary Industries Commission and the Department of Post-war Reconstruction (later the Department of National Development. World shortages of commodities and a declared policy of tariff protection to efficient industries gave further impetus to industrial expansion.

Imports Restricted

In the early 1950s, the prices of raw materials declined throughout the world, causing a temporary setback in Australia. The prices of of wool, other farm products, and minerals fell considerably and seriously reduced the nation's foreign earnings. It became necessary to impose a limit on the quantity of imports which Australia's high living standard demands—including both essential and luxury items. This led to further rapid development of local manufacturing, with beneficial and lasting results to the economy.

State Governments, eager to increase industrial activity, set up departments to assist development. In more recent years, most of the States have sent missions abroad with the aim of attracting foreign investors.

Since 1946-47, Australia's total gross capital investment has been valued at nearly £14,000 million (about Rs. 15,120 crores). Of this total, nearly £7,000 million (about Rs. 7,560 crores) has been private investment, more than £4,000 million (about Rs. 4,320 crores) public authority investment and some £850 million (about Rs. 918 crores), investment from overseas. Approximately £1,600 million has been spent directly by manufacturing industry on new plant, equipment and buildings. The sum of £850 million of overseas investment has included about £330 million of funds earned in Australia and ploughed back into overseas-owned Australian establishments. Although a relatively minor part of total investment, these overseas contributions have brought uncalculated benefits in new techniques and knowledge.

Altogether, nearly 95 per cent. of Australia's post-war development has been financed from within Australia. In the post-war period, the manufacturing work force (apart from self-employed) grew from 775,600 in 1946-47 to 1,037,800 in 1957-58. This does not tell the whole story. The servicing of this larger work force has produced employment opportunities in all tertiary fields, including the cultural, educational and scientific.

In the same period, the net value of factory production rose from £411 million to £1,731 million, and is now some 70 per cent. higher than the net value of all primary production.

A further result is reflected in the replacement of imports. While population increased by 27 per cent. and living standards rose by a somewhat similar percentage, imports have increased, in real terms, by only 9 per cent. between 1949-50 (when world supplies had returned to a reasonably normal level) and 1958-59.

In the post-war period, new products made in Australia have included motor vehicles, tractors, aircraft, jet propulsion engines, diesel-electric locomotives, synthetic fibre yarns and textiles, titanium oxide, carbon black, a range of hand and electric tools, a number of chemicals, aluminium ingot, wires and cables, television apparatus, table knives, and many others.

Growth Industries

The principal growth industries have been iron and steel, motor vehicles and parts, other transport equipment, base metals, oil refining, chemicals and pulp and paper. For instance, usage of steel per person in Australia rose from 341 lbs. in 1939 to 664 lbs. in 1959. Consumption of paper products has almost doubled to reach 145 lbs. per head in 1959; rubber consumption has almost trebled from 6½ lbs. to 18 lbs. per head.

Through public authority expenditure totalling £975 million since 1946-47, power generating capacity is now quite capable of meeting demand, and plans being implemented will continue to cope with growing demand in the foreseeable future. Consumption of electricity per person increased from 677 kw.h. in 1939 to 2,124 kw.h. in 1959. Power used per worker in industry has steadily increased.

Developments in hand or immediately planned include a £30-million expansion in the petroleum refining industry, an annual expenditure of some £25 million on steel making for a number of years, many additional millions to be invested in chemicals and petro-chemicals, pulp and paper, cable making and engineering.

The population increase resulting from a high post-war birth rate and sustained migration has reduced the age structure of Australia which now has one of the youngest populations of Western countries. In the next 10 years, the number of people of marriageable age will increase 50 per cent., indicating a remarkable potential rise in the market for all those goods which go into a home.

Local Market Demand

Australia is rapidly nearing a level of population which will provide a home market sufficient to enable considerable economies in the scale of production. It is anticipated that, overall, local market demand will rise by some 85 per cent. in the next 10 years.

Population will increase by 2.5 million in the next decade, and the work force will increase by 1.25 million. This will call for enormous capital expenditure in both the public and private sectors of the economy. The greater part of the investment will come from internal savings but Australia will still require increased overseas investment and the technical knowledge it will bring to those fields which are underdeveloped.

Australia has a tremendous store of natural resources which can provide the raw materials for a range of manufacturing industries. Many of these form the base of existing established industries. For example, the vast deposits of iron ore make Australia one of the cheapest world producers of basic steel products; our primary products (wool, grain crops, fruit and vegetables, livestock, hides and skins, and so on) are processed in Australian factories to provide consumption goods both for our own population and for export; our forest hardwood timbers have been adapted by special processes to make a range of paper products; valuable mineral deposits—coal, copper, lead, zinc, etc.—in abundance make the metal processing industries amongst Australia's most important, and these in turn provide the materials for a multiplicity of engineering and metal-goods manufacturing concerns. The continuing discovery and extending utilisation of new resources will further expand the prospects for future development.

Exports

Historically, Australia has been principally an exporter of primary produce. However, the Australian manufacturer is steadily increasing secondary industry's contribution to export income. The geographical advantage of being close to the great population centres of the Far East, and the friendships which have been built up in these areas, offer Australia an opportunity to enter these markets with quality products.

In 1957-58 and 1958-59, exports of manufactured and processed products which were directed to every Continent, were valued at £337 million and £334 million, respectively, which are approximately equal to 41 per cent. of total exports.

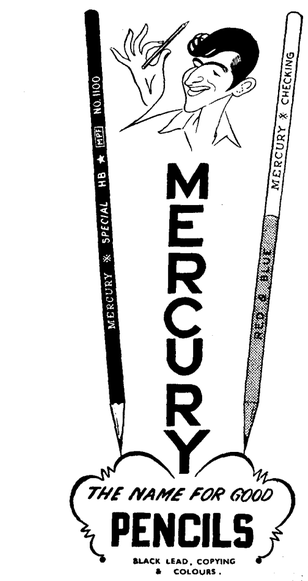
It is anticipated that the percentage of manufactured exports will steadily increase. The Government has called on the manufacturer to develop exports markets for his products and he is responding to this request. But, with relatively little background of manufactured exports in overseas markets, it has been and will continue to be necessary to sell our goods on a high quality basis.

Stress on Quality

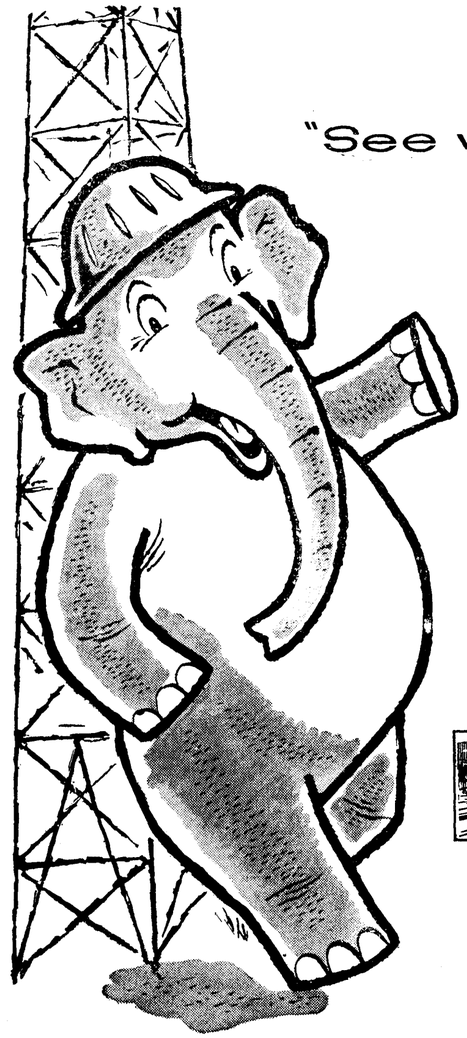
Australia has a high wage structure and high living standards, with the result that the Australian himself demands high quality in the goods he purchases. The Australian workman, skilled in modern techniques, takes a pride in his work. Quality is the objective of local production and this has helped local manufacturers to develop their home market.

Industry is at present somewhat short of technicians and technologists, but steps are being taken to overcome the shortage through the expansion of higher education facilities. Australia has licensing or service agreements with many of the world's most modern producers. In addition, Australia has itself contributed much in production techniques specially adapted to its own particular needs and in the development of ideas.

N.B.—In this article, all currency values are expressed in £ Australian, unless otherwise stated.

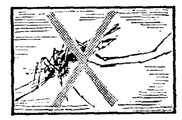


Memoirs of an Elephant—6



"See what I started"

These human beings, I tell you, are strange creatures ; at least they are here in Assam. As you know, one day far back in 1889, I walked straight into the forest and stuck my foot into that



sticky fluid—Oil. Nobody seems to credit me with the "discovery". I remember the first oil well in Digboi was drilled in a clearing in the dense jungle. It was such a black spot that people were afraid to go there (I did not mind at all !). In the 1880s there were virtually no inhabitants for miles around, the heavy smell of oil making it too unpleasant to settle in the area. But today, Digboi is one of the best towns in Assam.

In the early days the people who worked in the area were given a daily dose of quinine to keep away that terrible disease—Malaria. (No quinine for me, even in those days — I'm tough !). Today, things have changed for these human beings : Malaria carrying mosquitoes have ceased to exist in the Digboi area due to control measures.

Wherever these oilmen go they have a habit of changing the face of the place. They push back the jungle, make or improve roads and bridges, all to aid "communications" they say. (I don't like them, they give me sore feet—nothing like the jungle !)

Anyway, I have been seeing them around here for over 70 years now, since I first stepped into that pool of oil. I have been hearing the words "Assam Oil Company", "Oil Exploration know-how", "Accumulated experience", etc. .... These words all seem to go together.

SEVENTEENTH SESSION OF G.A.T.T.

STRESS ON PROBLEMS OF UNDERDEVELOPED COUNTRIES

A WIDE range of crucial problems confronting international trade have come in for detailed discussion at the seventeenth session of the Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.), which commenced at Geneva on 31st October. This session will last for three weeks and runs concurrently with the 1960-61 Tariff Conference which began at Geneva on 1st September last. The agenda of the session includes a review of progress achieved in two aspects of the G.A.T.T. Programme for Trade Expansion: first, the work of Committee II, which is dealing with the impact of national agricultural policies on international trade and, secondly, the work of Committee III, which is examining the difficulties faced by the less-developed countries in expanding their export trade with the rest of the world. The Contracting Parties have also been concerned with the problem which arises from the fact that a number of countries which no longer face balance-of-payments difficulties still maintain quantitative restrictions on certain of their imports—restrictions which, in these circumstances, are no longer justifiable under the provisions of the G.A.T.T. Besides, there has been detailed examination of the Montevideo Treaty which will establish the Latin American Free Trade Area: and the examination of the Stockholm Convention which established the European Free Trade Association, which was begun at the sixteenth session, has also been resumed.

Chairman's Address

The inaugural address by the Chairman of the Contracting Parties, Mr. E. P. Barbosa Da Silva of Brazil, was delivered, in his absence, by the Acting Chairman, Mr. Toru Haguiwara of Japan. The Chairman warned the members against being complacent over the present "continued high level of economic activity and international trade." He insisted that the members "should regard this situation as presenting us with a particularly favourable opportunity for tackling the various important problems with which we are confronted." He added that "solutions to these problems are the best means of ensuring continuous expansion of international trade which is the contribution to the process of economic growth and development for which the G.A.T.T. has a special responsibility." He was firmly of the view that, in the programme for trade expansion, the G.A.T.T. had "provided a soundly conceived basis for action by the Contracting Parties on a wide front."

The Chairman made a pointed reference to the fact that, despite the generally favourable trading conditions, the principal beneficiaries of the expansion of international trade were the highly industrialised countries and that the trade and export earnings of the less-developed countries did not share the same rate of growth. He reminded the Contracting Parties of the tremendous importance of export earnings to the economic development of the less-developed countries. He, therefore, called upon the Contracting Parties to take effective action to maintain the economic development of less-developed countries not only by giving aid but also by enabling them to receive a larger share of international trade. The G.A.T.T. Committee III has been examining the special problems of less developed countries in the matter of foreign trade. The latest report of the Committee records a number of measures taken by many Contracting Parties, which should expand the export opportunities. The report also indicates the possibilities for further action in this regard.

Tariff Negotiations

Referring to the tariff negotiations, Mr. Silva opined that the prospect of a general round of tariff negotiations was a challenging one. This move, he felt, opened out "a prospect for extending into the larger G.A.T.T. Community the process of tariff reduction and trade liberalisation which is projected on a more accelerated basis in the regional trade groups, particularly in the E.E.C. and the E.F.T.A." "To the extent that this is achieved," he added, "the adjustment in trading patterns and relationships which these regional arrangements precipitate will be greatly eased."

Discussing the implications of the tariff reforms that are being carried out by some of the Contracting Parties, Mr. Silva stated as follows: "These are always difficult questions, since they have a direct impact on tariff concessions embodied in the schedule, and the procedures for the modification of the schedules were not devised for such situations. However, the Contracting Parties have in the past dealt with such problems in a realistic fashion and, in particular, with a full realisation of the relationship between tariff revision and programmes of financial and economic stabilisation. A general tariff revision also affords to Contracting Parties embarking upon it an opportunity to review and modernise other aspects of their customs and trade regulations which may be as burdensome, or more burdensome than, high rates of duties. Thus, in some recent cases, the Contracting Parties have been able to note with satisfaction that the reform of the customs tariff has been accompanied by a substantial alleviation of consular formalities and consequent charges. I am sure that all Contracting Parties are fully alive to the general advantage of keeping these questions under continuous review and including them in the scope of any tariff revision and reform."

It may be added, in passing, that with the accession of Nigeria recently, there are, at present, thirty-eight Contracting Parties to the General Agreement. Besides, one country (Switzerland) has acceded provisionally: five countries (Cambodia, Israel, Portugal, Spain and Tunisia) will negotiate for accession in 1961, in the course of the Tariff Conference; applications for accession by Argentina and Ireland have been considered at this session: Yugoslavia has a form of association with the Contracting Parties and a form of association for Poland has been elaborated and is expected to enter into force shortly.

INDIA'S FOREIGN TRADE

With the publication of official trade figures for the month of September this week, it is now possible to analyse the trend of India's foreign trade during the first three quarters of the current year. Exports during the nine months ended September 1960 were Rs. 31 crores higher at Rs. 463 crores, as compared with those in the corresponding period in 1959. There was a small increase in imports, too. They rose from Rs. 680 crores to Rs. 689 crores. The increase in exports being higher than that in imports. India's adverse balance of trade narrowed down from Rs. 248 crores to Rs. 226 crores.

The following table shows at a glance the trend of trade in the first nine months of 1960, as compared with that in the same period of 1959:

(Value in crores of rupees)

	Imports	Exports (including re-exports)	Balance of trade
1960			
January	62.68	53.06	— 9.62
February	69.12	49.81	— 19.31
March	75.67	53.37	— 22.30
April	82.00	48.58	— 33.42
May	82.77	50.74	— 32.03
June	84.95	48.94	— 36.01
July	73.70	48.54	— 25.16
August	82.73	57.04	— 25.69
September	75.28	53.09	— 22.19
Total ..	688.90	463.17	—225.73
1959			
January	80.24	45.16	— 35.08
February	71.02	42.16	— 28.86
March	73.39	46.95	— 26.44
April	91.84	44.65	— 47.19
May	73.37	44.05	— 29.32
June	81.32	42.92	— 38.40
July	67.48	50.86	— 16.62
August	65.23	57.15	— 8.08
September	75.75	57.89	— 15.86
Total ..	679.64	431.79	—247.85

In the month of September, however, there was a decline in exports, from Rs. 57 crores in August 1960 and Rs. 58 crores in September 1959 to Rs. 53 crores. Imports, too, were lower at Rs. 75 crores, as compared with Rs. 83 crores in the previous month and Rs. 76 crores in the corresponding month of the previous year. The adverse balance of trade at Rs. 22 crores was lower by about Rs. 4 crores, as compared with August, but still higher by about Rs. 6 crores, as compared with September 1959.

A NEW YOJANA

A new format and a new approach will mark YOJANA, the journal published on behalf of the *Planning Commission*, with the issues dated November 6 (Hindi edition) and November 13 (English edition).

Yojana will now consist of 32 pages in a size which is easy to keep in your reference shelf.

Yojana, published in two separate editions—English and Hindi—will bring you every fortnight:

- Vivid reports, in words and pictures, of the progress of Development Projects.
- Well-documented and objective discussion of Plan policies and programmes.
- Articles by experts for laymen and by laymen for experts.
- Ideas which will promote higher production and better citizenship.
- Features interpreting one region of the country to another.
- Photographs that speak for themselves.

Yojana serves the *Plan and Country* and is indispensable for development workers, technicians, students, co-operators, public servants, municipal and panchayat leaders, and in fact all responsible citizens.

New Subscription rates:—Single copy, 25 nP. Annual, Rupees Five.

Yojana will now be printed on better paper.

Two to four pages in colour. And more photographs.

Send your subscription by postal order to

The Business Manager,
The Publications Division,
Old Secretariat, Delhi-6.

While writing please specify whether you want the English or the Hindi edition.

BOMBAY BURMAH FORGES AHEAD FURTHER

GROSS PROFIT MORE THAN DOUBLES ITSELF IN TWO YEARS

FOR the second year in succession, the earnings of the Bombay Burmah Trading Corporation Ltd. (Secretaries and Treasurers: Messrs. Wallace and Company, Bombay) have recorded an appreciate rise. The gross profit, which had jumped up from Rs. 68.66 lakhs in 1957-58 to Rs. 99.83 lakhs in the following year, has further advanced to Rs. 140.96 lakhs in the year ended 31st May 1960, thus more than doubling itself in two years. This is the highest level touched since 1956-57. The impressive performance during the year under review is mainly attributable to an increase in sale proceeds of timber, tea and manufactured goods, partly offset by declines in receipts from coffee and sundry services, as well as in profit on sale of assets. The larger income from trading is supplemented by substantial dividends from subsidiary companies and trade investments.

The higher gross profit has necessarily meant a larger remuneration to Secretaries and Treasurers and higher tax liability. The burden of Indian income-tax and super-tax, as well as foreign tax, was substantially heavy, but this has been offset to a large extent by the larger double tax relief and the abolition of wealth tax. The provision for depreciation is also lower, but even this lower provision is, according to the Directors, more than what is allowed under the Income-tax Rules. The net profit, after making provision for all these, amounts to Rs. 57.05 lakhs, representing an increase of Rs. 32.60 lakhs over the year. Incidentally, it may be noted, the net profit for the year under review is the highest since 1950-51. Consequent on this encouraging trend, the transfer from the reserves has been substantially reduced and the amount ploughed back has been raised. The distribution to shareholders is also proposed to be stepped up from 19 per cent., free of tax, paid for 1958-59 to 30 per cent., subject to deduction of tax or 21 per cent. net. But even this small increase of 2 per cent. in the net dividend absorbs as much as Rs. 14.71 lakhs on account of the tax deduction at source which the Company is bearing on behalf of the shareholders, as will be evident from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st May			
	1960	1959	1958	1957
Sale proceeds	4,58.85	3,96.79	3,64.67	5,04.08
Other income	61.23	70.43	64.52	66.48
Expenses	3,79.12	3,68.40	3,60.54	3,95.13
Gross profit	1,40.96	98.83	68.66	1,65.45
Remuneration to Secretaries and Treasurers	9.03	4.81	3.03	9.75
Provision for—				
Depreciation	26.68	31.71	34.40	30.36
Taxation	48.20	37.86	9.19	68.87
Net profit	57.05	24.45	22.04	56.47
Transfer from reserves and income relating to previous years	2.05	11.84	22.24	2.04
Transfer to reserves and expenses of previous years ..	18.20	10.70	15.12	22.83
Dividend	40.12 (30%)*	25.41 (19%)	30.49 (24%)†	34.24 (32%)
Carry forward	1.47	0.67	0.50	1.33

* Subject to deduction of tax or a net dividend of 21 per cent.
† Includes a special dividend of 6 per cent. in respect of 1955-56.

Varied Activities

The Company's activities, as readers are well aware, are varied and extend over several countries. The trading conditions in Burma remained restricted during the year under review and there was a falling off in the volume of repair work at the Rangoon Dockyard. The craft construction programme was likewise limited, but in the later months of the year there was an improvement. The working of both the concrete products plant and the asbestos cement plant was encouraging and, despite technical difficulties, production and sales at these two factories are being steadily brought on a satisfactory footing. While production of "made-tea" at Namshan factory was higher, as also sales, prices realised were lower and costs rose further.

In Thailand, forest activity of the Joint Timber Company, Ltd., in which the Bombay Burmah holds 26 per cent. of the equity, was largely confined to felling in small residual areas. The year's working of this Company has been very profitable and a dividend of 100 per cent., less tax, has been declared, as against 45 per cent. less tax for 1958-59. The working permits have expired and negotiations are in progress for renewal. The working of Thai Tapioca Ltd., in which also the Company has a sizable interest, was unprofitable during the year under review. For, despite the increased production of starch and reduction in costs, selling prices were unremunerative.

In Tanganyika, development of the Company's tea estates continues. Up to the end of the year under review, 890 acres have been planted with tea and further planting programme is in hand.

In India, the production of tea recorded a rise from 6.96 million lbs. in 1958-59 to a record level of 7.54 million lbs., thanks to favourable weather conditions. The cost of production of "made-tea" declined from Re. 1.380 to Re. 1.324 per lb. and the average gross return also fell, but by a lesser extent, from Rs. 2.360 to Rs. 2.336 per lb. As forecast last year, the coffee production in the Company's estates declined from 19,901 cwts. to 17,188 cwts., consequent on adverse weather conditions. Cardamom production also fell from 14,936 lbs. to 9,812 lbs. The Company has reduced the acreage under cardamom substantially and attention is being concentrated on selected areas, with a view to increasing crop yields and returns.

At the Wallace Bay (Borneo) branch of the Company, production and purchases of hardwood logs increased substantially, the bulk of these being shipped in log form. Mill production of sawn timber was also higher. Growing efficiency in forest extraction methods, the increased level of production and improved market demand resulted in a very satisfactory year of working. The Company has undertaken a survey of additional forest areas adjacent to the Company's existing concession.

The Company's financial position is as impressive as ever. The paid-up capital of Rs. 1.35 crores is supplemented by reserves and surplus aggregating Rs. 3.48 crores. The borrowings stand reduced from Rs. 52.07 lakhs to Rs. 38.81 lakhs, while other current liabilities and provisions have increased from Rs. 2.26 crores to Rs. 2.62 crores. There has been an addition of Rs. 38.88 lakhs to the fixed assets during the year, on top of Rs. 45.95 lakhs in the previous year, bringing the total gross value thereof to Rs. 5.74 crores. This has, however, been written down to a book value of Rs. 3.07 crores. The other current assets amount to Rs. 4.77 crores, of which investments in subsidiaries, other companies and Government securities account for about Rs. 94 lakhs, book debts for Rs. 1.78 crores, stock-in-trade for Rs. 1.04 crores, cash balances for Rs. 96 lakhs and other assets for Rs. 5 lakhs.

The Rs. 125 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 589 *cum-div.* (final: Rs. 26.50 per share), at which rate, they provide a yield of 4.6 per cent. per annum, free of tax.

HINDUSTAN ALUMINIUM

According to the latest information available, the plant of the Hindustan Aluminium Corporation Ltd. should be commissioned by December 1961, which by the way, is the target date fixed by the Directors of the Corporation for commencement of production. Two things have made this notable result possible. First, the Rihand Dam is now expected to be ready by March 1961, that is, six months ahead of schedule. The reservoir gates were in fact erected as early as in June, 1960, that is, before the monsoon, so that the authorities were able to store the 1960 monsoon waters also. When it is completely filled with water, this reservoir will stretch across an area of 180 sq. miles to earn the distinction of being the largest artificial water reservoir in India. The first turbine in the Hydro Rihand power station is expected to be put into commission by July 1961.

Meanwhile, the Hindustan Aluminium Corporation has recorded satisfactory progress in erecting its 20,000 tons aluminium plant at Pipri, near the Rihand Dam. Work has been going on around the clock and a team of 25 American engineers from Kaisers have joined the Corporation's Indian engineers and officers in putting the job through. About 3,000 workers are now engaged on the work. The site for the factory has already been cleared and the factory building is slowly coming up. Against the background of a hill and forests, the modern residential colony of the Corporation presents a really beautiful spectacle.

BEST IN RUBBER

RESULTS OF RUIA GROUP MILLS ENCOURAGING

DAWN AND PHOENIX RAISE NET DIVIDEND

THE working of the three cotton mills under the management of Messrs. Ramnarain Sons Private Ltd., namely, the Bradbury Mills Ltd., the Dawn Mills Company Ltd. and the Phoenix Mills Ltd., during the year ended 31st March 1960, has been very encouraging. The earnings are substantially higher as compared to the previous year, thanks to the high level of prices which prevailed during the year and larger exports of textile goods. Except the Bradbury Mills, the other two have stepped up the dividend to shareholders.

The Bradbury Mills, which had suffered a negligible loss of about Rs. 27,000 in 1958-59, which was itself an improvement over the loss of Rs. 2.54 lakhs in 1957-58, has earned a gross profit of Rs. 8.95 lakhs in the year under review. After providing for agency commission and depreciation (there is no provision for tax liability), the net profit amounts to Rs. 4.23 lakhs, which compares very favourably with the loss of Rs. 6.54 lakhs of the previous year.

The gross profit of the Dawn Mills, which had improved from Rs. 15.35 lakhs in 1957-58 to Rs. 22.06 lakhs in the subsequent year, has further risen to Rs. 32.55 lakhs in the year under review, thus more than doubling itself within a short span of two years. The net profit (after making provisions for agency commission, depreciation and taxation) has gone up to Rs. 13.06 lakhs from Rs. 5.42 lakhs, to which level it had declined slightly in 1958-59 from Rs. 6.19 lakhs for 1957-58.

After a slight decline from Rs. 19.61 lakhs to Rs. 18.75 lakhs in 1958-59, the gross profit of the Phoenix Mills has advanced to Rs. 31.28 lakhs in the year under review. The net profit for the year under review amounts to Rs. 11.39 lakhs, which is more than three times that (Rs. 3.59 lakhs) earned in the previous year and over twice the Rs. 5.58 lakhs for 1957-58.

The Directors of the Bradbury Mills have recommended a dividend of 10 per cent., subject to deduction of tax, which is equivalent to 7 per cent. net and represents a cut from 10 per cent. free of tax paid for the previous year. If the Directors have recommended this cut despite the encouraging trend in profit, it is because the amount available for distribution, after setting aside Rs. 2.03 lakhs to the statutory development rebate reserve, is just enough to cover the proposed dividends on ordinary and preference shares. Obviously, they are not in favour, and rightly so, of running down the reserves for paying a slight increase in dividend. In fact, they had drawn as much as Rs. 17.15 lakhs in the previous two years to wipe out the heavy net losses for those years and to pay moderate dividends, as will be seen from the accompanying table.

The Directors of the Dawn Mills have recommended a dividend of 30 per cent., subject to deduction of tax, which, on a tax-free basis, at 21 per cent., represents only an increase of one per cent. over that paid for 1958-59, although the profit available for distribution after setting aside Rs. 1.13 lakh to the development rebate reserve permits of a larger dividend. The Directors have, however, proposed to carry forward as much as Rs. 3.65 lakhs to the next year, without adding anything to the free reserves.

The dividend on the ordinary shares of the Phoenix Mills is proposed to be stepped up to 15 per cent., subject to deduction of tax, or 10.5 per cent., after being maintained at 10 per cent. for 1958-59 and 1957-58. In this case also, the Directors have not added anything to the reserves, except Rs. 1.73 lakh to the development rebate reserve, but propose to carry forward a sizable sum of Rs. 2.83 lakhs to the next year.

The salient features of the results of the three companies for the last three years are compared in the accompanying table, from which it will be noted that the margin of profit of the Dawn Mills is much higher than in the other two companies. This is evidently due to the fact that the Company has, in recent years, diversified its activities; from a purely spinning mill manufacturing yarns for supply to weaving mills, the Dawn Mills now manufacture sewing thread, embroidery thread, crochet yarn, hosieries of various kinds in cotton, nylon and art silk, upholstery cloth, net cloth, lace cloth, etc., which are of popular appeal and command a good demand. The quality of the articles produced is also considered to be of a high order. The other two companies are manufacturers of yarn and cloth only. The varieties of cloth are, however, being varied and improved to suit the taste of consumers.

All the three Companies are making sizable additions to plant and machinery year after year. Thus, the Bradbury has spent no less than Rs. 7.94 lakhs on additions to fixed assets during the year under review, on top of Rs. 6.53 lakhs in 1958-59, Dawn Rs. 4.06 lakhs (as against Rs. 3.32 lakhs) and Phoenix Rs. 6.67 lakhs (as against Rs. 7.23 lakhs).

The financial positions of all three Companies are satisfactory. The reserves of all of them exceed the paid-up capital. The current liabilities are more than adequately covered by current assets and their fixed assets have been well written down, as will be seen from the following synopses of their latest balance-sheets:

	Bradbury	Dawn	Phoenix
LIABILITIES	Rs.	Rs.	Rs.
Paid-up capital	24,85,000	28,00,000	48,00,000
Reserves and surplus ..	31,40,226	29,77,988	57,68,442
Borrowings	48,07,214	13,202	75,83,729
Current liabilities and provisions	36,37,650	80,89,597	92,18,292
Rs.	1,40,70,090	1,38,80,187	2,73,70,454
ASSETS			
Gross block	86,14,262	97,68,322	1,81,28,534
Less—Depreciation ..	52,94,709	63,68,559	1,22,58,132
Net block	33,19,553	33,99,763	58,70,402
Stock-in-trade, stores and spares	70,45,401	64,10,313	1,51,38 088
Investments	4,17,967	3 80,000	4,83,101
Book debts	32,30,635	35,43,576	57,26,993
Cash balances	56,534	1,46,535	1,51,870
Rs.	1,40,70,090	1,38,80,187	2,73,70,454

The current market values of the ordinary shares of Bradbury and Dawn, each Rs. 50 fully paid-up, and Phoenix (Rs. 100 fully paid-up) are Rs. 118.75, Rs. 135 and Rs. 143 (all *cum-div.*), respectively, at which rate the yields on them are 3.7 per cent., 8.4 per cent. and 8 per cent. per annum (all free of tax), respectively.

TRAVANCORE RAYONS

It is understood that the Travancore Rayons Ltd. is now exploring possibilities of exporting transparent cellulose film (Trayons Trayophane) and Rayon Yarn produced in its factory to the markets of the Far East and later on to the Middle East. A representative of the Company has already left India to make necessary contacts for sale of its products. As such, the Travancore Rayons will not only be a foreign exchange saver by producing these materials in the country, but also a foreign exchange earner. It is expected that the Company will export about 10 per cent. of its production.

The Bombay Burmah Trading Corporation has announced that the tea crop during the five months ended 31st October 1960 amounted to 2,646,892 lbs. (made tea), as compared with 2,191,298 lbs. in the corresponding period of 1959. It says: "The weather for the period was exceptionally favourable and it is not expected that this full increase can be maintained."

COMPANY MEETINGS AND DIVIDENDS

KARANPURA COLLIERIES LTD. Annual General Meeting, Calcutta, 28th November 1960. Dividend: Rs. 7.50 per ordinary share, subject to deduction of tax, payable on or after 10th December 1960. Transfer books remain closed from 14th to 28th November 1960, both days inclusive.

BROOKE BOND ESTATES INDIA LTD. Annual General Meeting, Calcutta, 29th November 1960. Dividend: 15 per cent. or Re. 1.50 per ordinary share, subject to deduction of tax. Transfer books remain closed from 2nd to 29th November 1960, both days inclusive.

SAPOI TEA CO., LTD. Annual General Meeting, Calcutta, 30th November 1960. Dividend: Rs. 2.00 per share, subject to deduction of tax. Transfer books will remain closed from 21st to 30th November 1960, both days inclusive.

BISHNAUTH TEA CO., LTD. Annual General Meeting, Calcutta, 30th November 1960. Dividend: 13 per cent. or Re. 1.30 per share, subject to deduction of tax. Transfer books will remain closed from 22nd to 30th November 1960, both days inclusive.

CENTRAL INDIA COALFIELDS LTD. Annual General Meeting, Calcutta, 30th November 1960. Transfer books remain closed from 14th to 30th November 1960, both days inclusive.

BRADBURY MILLS LTD. Annual General Meeting Bombay, 5th December 1960. Dividend: Rs. 5.00 per ordinary share, subject to deduction of tax, payable on and from 12th December 1960. Transfer books remain closed from 10th November to 7th December 1960, both days inclusive.

PHOENIX MILLS LTD. Annual General Meeting, Bombay, 6th December 1960. Dividend: Rs. 15.00 per share, subject to deduction of tax, payable on and after 12th December 1960. Transfer books remain closed from 10th November to 7th December 1960, both days inclusive.

AGRA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 6th December 1960. Dividend: 11 per cent. subject to deduction of tax. Transfer books will remain closed from 30th November to 6th December 1960, both days inclusive.

UNITED PROVINCES ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 6th December 1960. Dividend: 11 per cent. subject to deduction of tax. Transfer books will remain closed from 30th November to 6th December 1960, both days inclusive.

DAWN MILLS LTD. Annual General Meeting, Bombay, 7th December 1960. Dividend: Rs. 15.00 per ordinary share, subject to deduction of tax, payable on and from 12th December 1960. Transfer books remain closed from 10th November to 7th December 1960, both days inclusive.

TRACTORS (INDIA) LTD. Annual General Meeting, Calcutta, 7th December 1960. Dividend: Rs. 3.00 per share, subject to deduction of tax. Transfer books will remain closed from 21st November to 7th December 1960, both days inclusive.

BARAREE COKE CO., LTD. Annual General Meeting, Calcutta, 9th December 1960. Transfer books will remain closed from 30th November to 9th December 1960, both days inclusive.

MYSORE CHEMICALS AND FERTILISERS LTD. Annual General Meeting, Mysore, 14th December 1960. Dividend: 10 per cent. or Re. 1.00 per share, subject to deduction of tax, payable on and after 11th January 1961. Transfer books will remain closed from 1st to 14th December 1960, both days inclusive.

BLUE MOUNTAIN ESTATES LTD. Annual General Meeting, Madras, 21st December 1960. Dividend: 12½ per cent. or Re. 0.25 per ordinary share, subject to deduction of tax, payable on 22nd December 1960. Transfer books will remain closed from 6th to 21st December 1960, both days inclusive.

WATERFALL ESTATES LTD. Annual General Meeting, Madras, 21st December 1960. Dividend: 12½ per cent. or Re. 0.25 per ordinary share, subject to deduction of tax, payable on 22nd December 1960. Transfer books will remain closed from 1st to 21st December 1960, both days inclusive.

LAXMI STARCH FACTORY LTD. Dividend of Rs. 13.00 per share, subject to deduction of tax, for the year ended 31st March 1960. Transfer books will remain closed from 28th November to 13th December 1960, both days inclusive.

COLOUR-CHEM LTD. Annual General Meeting, Bombay, 2nd December 1960. Dividend: *Nil*. Transfer books remain closed from 18th November to 2nd December 1960, both days inclusive.

INDIAN HUME PIPE CO., LTD. Dividend of Rs. 13.00 per share, subject to deduction of tax, for the year ended 30th June 1960, on the increased capital. Transfer books remain closed from 21st November to 21st December 1960, both days inclusive.

NEW SWADESHI SUGAR MILLS LTD. Dividend of Rs. 29.00 per share, subject to deduction of tax, for the year ended 30th June 1960.

ZANDU PHARMACEUTICALS LTD. Taxable dividend of Rs. 10.00 per ordinary share, for the year ended 31st March 1960. Transfer books will remain closed from 19th to 29th November 1960, both days inclusive.

GILLANDERS ARBUTHNOT AND CO., LTD. Net dividend of 10 per cent. on the ordinary shares, for the year ended 31st March 1960.

BALMER LAWRIE & CO., LTD. Taxable interim dividend of 7 per cent. for the half-year ended 30th June 1960.

SYNOPSES OF COMPANY REPORTS

Alageswar Estates Ltd.

THE directors of the above Company (Managing Agents: Messrs. Ramani and Co. Private Ltd., Rayavaram, Trichy District) submit the audited accounts of the Company for the nine months ended 31st March 1960.

Acreage: The area under tea is 481.11 acres, coffee arabica covers 112.50 acres and coffee robusta 284.50 acres.

Crop: A crop of 2,66,803 pounds of tea was harvested for nine months at a cost of 152.09 cents including excise duty as against an estimate of 4,01,450 lbs. for 12 months at a cost of 162.34 cents. The price realised per pound works out at 214.13 cents. A coffee crop of 53 tons 920 kilograms, was harvested as against an estimate of 70 tons.

The net profit for the year after providing for depreciation Rs. 34,089 (Rs. 37,469) and provision for taxes Rs. 20,000 (Rs. 20,000) amounts to Rs. 46,296 (Rs. 25,248). With the amount brought forward from the previous year of Rs. 7,559 (Rs. 7,311) there is an available sum of Rs. 53,855 (Rs. 52,559 including Rs. 20,000 transferred from general reserve). The directors recommended appropriating the same in the following manner:—

To pay a dividend of 7½ (7½) per cent. for the period of nine months equivalent to 10 per cent. per annum subject to tax, absorbing Rs. 45,000 (Rs. 45,000) and to carry forward to the next year Rs. 8,855 (Rs. 7,559).

The Estates are reported to be in good condition. The accounts are closed with 31st March 1960 and the profit represents only 9 months working. The next accounts and reports will be for 12 months ending with 31st March 1961.

Estimate: The tea crop for the current year is estimated at 4,01,450 pounds at a cost of 153 cents. Coffee crop is estimated at 67 tons.

Asher Textiles Ltd.

The directors of the above Company (Managing Agents: Messrs. Setna and Co., Tirupur) present the audited accounts of the Company for the year ended 30th June 1960.

The year's trading has resulted in a net profit of Rs. 7,12,704 (Rs. 1,14,164) after deducting all working expenses and interest, and providing Rs. 1,75,000 towards bonus to employees of the Company, Rs. 2,48,952 (Rs. 2,63,319) for depreciation and Rs. 85,971 (Rs. 15,000) towards managing agents' remuneration. Out of this profit a sum of Rs. 1,425 (Rs. 20,711) has been spent on charities and donations leaving a balance profit of Rs. 7,11,279 (Rs. 71,916) which is recommended by the directors to be appropriated as hereunder:—

To development rebate reserve Rs. 2,50,000 (*nil*), to general reserve Rs. 58,500 (*nil*), to gratuity reserve Rs. 50,000 (*nil*), to provision for taxes Rs. 2,00,000 (*nil*) and to pay a dividend of 12½ (6 per cent.) per cent. [Rs. 12.50 (Rs. 6.00) per share] to shareholders, subject to deduction of income-tax absorbing Rs. 1,49,825 (Rs. 71,916) leaving to be carried forward to next year Rs. 3,044 (*nil*).

In view of the Company's obligation to pay gratuity to the employees of the Company at the time of their retirement, the directors have thought it advisable to make provision for the same out of the profits of every year. A beginning has been made this year by providing Rs. 50,000 for gratuity reserve.

Due to the failure of cotton crop during the year, scarcity conditions prevailed in respect of Indian Cotton which has adversely affected the mills' spinning programme. The Textile Wage Board recommendation which was implemented during the year by the mills has caused an extra burden on the cost of production. In spite of these facts the directors feel that the profits earned are very satisfactory.

The present installed capacity of the Mills is 24,800 ring spindles, 824 doubling spindles and 3 cone winders of 120 spindles each.

The Central Government have accorded their approval for the re-appointment of Messrs. Setna & Co., the managing agents of the Company for a further term of five years from 16th August 1960 in accordance with the provisions of the Company Law, now in force, in this behalf.

Cochin State Power and Light Corporation Ltd.

The directors of the above Company [Managing Agents: Messrs. Chandrie and Co. (Private) Ltd., Ernakulam, Kerala State] present the audited accounts of the Company for the year ended 31st March 1960.

During the year under review, there was no change in the tariff rates for supply to consumers. 698 new consumers of all classes were added to the list and 593 additional street lights were put up, thus making the number of consumers and street lights in the system as on 31st March 1960, 7,802 and 2,983 respectively, with a connected load of 9526.167 kws. The number of units purchased in bulk during the year stands at 1,04,47,018 as against 91,41,398 units in the previous year and this records an increase of 14.28 per cent.

Energy Sales: The following table indicates at a glance the record of sales of electricity and revenue in the last three years:

Particulars	Year ended 31st March of 1958	1959	1960
Sales in KWHrs. for:			
(a) Public lighting	3,00,501	4,00,728	4,21,968
(b) General purposes	29,76,649	29,34,993	38,63,789
(c) Power purposes	40,21,274	52,69,426	50,51,205
Total No. of units sold ..	72,98,424	86,05,147	93,36,962
Gross revenue .. Rs.	10,03,830	11,51,882	12,63,183

The maximum demand on Company's system during the year was 3,037 kw. as against 2,644.1 kw. in the previous year, showing an increase of 14.86 per cent.

The company's transmission and distribution systems were maintained in good order. Besides, 15.634 miles of high tension mains and 12.089 miles of low tension mains were constructed during the year to cater to the needs of the new consumers. The capacity of the substations has been increased and the aggregate capacity of the distribution transformers is 3,365 KVA. There is much scope for expansion in the licensed area. The Government have not replied to the company's letter relating to the acquisition of our undertaking. Hence, the directors propose to take such steps as are necessary on receipt of the Government's reply.

The net profit of the Company after providing for depreciation as per Electricity (Supply) Act, 1948 Rs. 1,11,303 (Rs. 1,00,382), provision for income-tax and super-tax Rs. 1,12,000 (Rs. 1,30,000), contingencies reserve Rs. 13,596 (Rs. 12,190), development reserve Rs. 31,198 (Rs. 28,955), special reserve under Electricity (Supply) Act 1948 Rs. 14,507 (*nil*) and for staff gratuity reserve Rs. 5,493 (Rs. 4,922) amounts to Rs. 95,586 (Rs. 1,06,522). To this is added the balance brought forward from last year of Rs. 46,675 (Rs. 40,843) making a total of Rs. 1,42,261 (Rs. 1,47,365). To this amount is added refund of income-tax in respect of accounting years 1955-56 and 1956-57 Rs. 28,728 (*nil*), waiver of arrears of subscription by the Employees' State Insurance Corporation Rs. 2,775 (*nil*), excess appropriation of development reserve in respect of accounting years 1957-58 and 1958-59 Rs. 9,604 (*nil*), amount due from the Government of Kerala in respect of share of profit under clause 17 (c) of the licence remitted in excess to the Government Rs. 14.394 (*nil*) and transfer from statutory reserves Rs. 59,668 (*nil*) making a total of Rs. 2,57,429 (Rs. 1,47,365). After deducting from this appropriation to statutory reserves Rs. 6,998 (*nil*), waiver of collection charges on levy of Electricity Duty on H. T. consumers in respect of 1958-59 accounting year Rs. 50 (*nil*) and appropriation towards income-tax and super-tax consequent to revision of I. T. assessments in respect of prior years Rs. 84,297 (*nil*), there is a final available balance of Rs. 1,66,084 (Rs. 1,36,674 after transferring Rs. 3,358 from tariff and dividend control reserve and other adjustments). Out of this balance, the directors recommend a dividend of Re. 1.25 (Re. 0.90 per share free of tax) per share, i.e., a dividend of 12½ (9 per cent. tax-free) per cent. less tax. This will absorb Rs. 1,25,000 (Rs. 90,000) leaving a balance of Rs. 41,084 (Rs. 46,675) to be carried forward to next year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Karanpura Collieries, Ltd.

The directors of the above Company [Secretaries and Treasurers: Messrs. Bird and Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 29th February 1960.

Raisings and Despatches.—Raisings were 207.846 tons and despatches 210,536 tons as compared with 171.391 tons and 172.923 tons respectively in the previous year.

Transport.—Wagon supplies showed an improvement over the previous year which brought down the stock to a reasonable level.

The profit and loss account after providing for all charges and making provision of Rs. 3,18,104 (Rs. 2,30,028) for taxation and Rs. 1,86,427 (Rs. 1,75,459) for depreciation shows a profit of Rs. 3,69,937 (Rs. 1,94,888). To this amount is added the balance brought forward from the previous year of Rs. 20,442 (Rs. 11,229) making a total of Rs. 3,90,379 (Rs. 2,06,117). From this amount the directors have transferred to statutory development rebate reserve Rs. 35,700 (*nil*) and to siding reserve Rs. 1.50,000 (*nil*) leaving a balance available of Rs. 2,04,679 (Rs. 1,58,117). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the preference shares at the rate of Rs. 4.40 (Rs. 5.50 per share tax-free) per share per annum [being dividend at the stipulated rate of Rs. 5.50 per share *less* income-tax at Company's rate, viz., 20 per cent. thereof] subject to deduction of tax, at source, absorbing Rs. 43,538 (Rs. 37,675), by payment of a dividend on the ordinary shares at the rate of 7½ (5 per cent. tax-free) per cent. per annum subject to deduction of tax, at source, absorbing Rs. 1,50,000 (Rs. 1,00,000) and by carrying forward Rs. 11,141 (Rs. 20,442).

Preference Dividend.—In view of the preference shares (Regulation of Dividend) Bill, 1960 recently introduced in the Lok Sabha, the directors have decided that dividend on preference shares be recommended for payment in the manner stated above in respect of the financial year ended 29th February 1960, and that as soon as practicable after the said preference shares (Regulation of Dividend) Bill has been enacted, steps will be taken for declaration of such additional dividend (if any) on the preference shares in respect of the said year as may be necessary to comply with the provisions thereof.

Velimalai Rubber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Ooppoottil Kurian and Co. Private Ltd., Kottayam, Kerala State) submit the audited accounts of the Company for the year ended 29th February 1960.

The area under rubber cultivation is 1,019.17 acres. Tea covers 121.34 acres. Twenty-five acres are planted with coconuts. As mentioned in last year's report 40 acres under ordinary rubber on Velimalai Estate were re-planted with budded rubber during the year, under the Rubber Board's subsidy scheme.

A rubber crop of 4,01,452 lbs. was harvested at an estate cost of 94.97 nP per lb. against 4,16,721 lbs. at an estate cost of 92.40 nP per lb. for the previous year. The short fall in the crop was owing to the uprooting of 40 acres for replanting. But this will be more than made up from 1961 as the Company has 35 acres under clonal rubber to come into tapping during that year [now included in the 508.29 acres under mature budded rubber].

The tea crop harvested was 49,305 lbs. at an estate cost of 140.10 nP per lb. against 44,698 lbs. at an estate cost of 145.63 nP per lb. for the previous year.

The net average prices realised were 159.01 nP per lb. for rubber and 168.56 nP per lb. for tea, against 156.03 nP per lb. for rubber and 150.87 nP per lb. for tea for the previous year.

The maximum controlled price for No. 1 sheet remained at 155.75 nP per lb. but the higher prices we realised were made possible by selling a portion of our produce as latex. The capacity of the latex plant is proposed to be increased by installing additional machinery.

The estimate for the current year is for a crop of 4,10,000 lbs. of rubber at an estate cost of 95.63 nP per lb. and 55,000 lbs. of tea at an estate cost of 113.22 nP per lb.

The net profit for the year is Rs. 2.08,871 (Rs. 1,77,781) after allowing for all the charges including depreciation and debenture interest but before providing for taxation. Together with the previous year's balance brought forward of Rs. 6,282 (Rs. 21,001) the amount available for appropriation is Rs. 2,15,153 (Rs. 1,98,782) which the directors propose to appropriate as below:

To reserve for taxation Rs. 75,000 (Rs. 75,000), to transfer to debenture redemption fund Rs. 40,000 (Rs. 40,000), to transfer to preference dividend account Rs. 17,500 (Rs. 17,500) to transfer to equity dividend account [at 12 (10 per cent. tax-free) per cent. taxable which the directors recommend] Rs. 72,000 (Rs. 60,000) and to carry forward Rs. 10,653 (Rs. 6,282).

The expenses of Rs. 15,802 incurred on replanting 40 acres will be more than covered by the subsidy receivable from the Rubber Board which the directors will be crediting to a replanting reserve account. Therefore no provisions for replanting expenses is now being made.

Preference Dividend: The directors are advised that in terms of the Finance Acts of 1959 & 1960 tax has to be deducted at 30 per cent. even from "Tax Free" preference dividend because the tax-free dividend in terms of the original issue implied only the payment of a fixed dividend of 7 per cent. with the additional benefit to the shareholder of refund of tax paid by the Company on its profits. This principle of treating the tax paid by the Company as tax paid by the shareholder has now been abolished and the Company is also required to deduct tax at 30 per cent. from the fixed dividend of 7 per cent. The preference shareholder will now receive a net dividend of 4.9 per cent. after deduction of 30 per cent. from the 7 per cent. dividend. But he could get refund of the 30 per cent. from the income-tax authorities, and whatever tax he may have to bear will also be exempted under the provisions of Section 49B., depending on the agricultural portion of the Company's income. As the Company's income is mostly agricultural, preference shareholders will not therefore have to suffer by the present deduction of tax. Government has now introduced a Bill to regulate dividends on preference shares and when this bill comes into Act the manner as to how the tax has to be deducted from preference dividends will have been clearly defined.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,50,000	Gross block	17,64,801
Debentures ...	3,77,000	*Less*—Depreciation ...	1.23.813
Reserves ...	4,96.000

Upper Jumna Valley Electricity Supply Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Martin Burn Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

In view of the satisfactory working results which have produced excess earnings over the permitted reasonable return as per the Electricity (Supply) Act, 1948, a general reduction in rates in respect of supplies for lighting and fans has been made with retrospective effect from the 1st April 1959. The following schedule indicates the comparative progress that has been made over the past three years:—

Year ended	*Units sold*	*Revenue* Rs.
31st March 1958	16,685,433	27,00,112
31st March 1959	18,715.154	29.74.449
31st March 1960	22,674,747	31,85,131

The reduced rate of Company taxation does not increase the reasonable return out of which distribution of dividends is made by an Electric Supply Company. It is not, therefore, possible for Electric Supply Companies, unlike other Companies, even partially to compensate shareholders for the loss of tax benefits previously enjoyed by them.

The net revenue for the year under review, after providing for taxation, depreciation and all other charges, amounts to Rs. 1,64,633 (Rs. 2,48,062). From this has been deducted a sum of Rs. 80,229 (Rs. 1,36,448) in respect of the following reserve allocations in accordance with the provisions of the Electricity (Supply) Act, 1948: To contingencies reserve Rs. 26,152 (Rs. 23,800), to development reserve Rs. 47,935 (Rs. 33,700), to tariffs and dividends control reserve Rs. 3,071 (Rs. 39,474) and to rebate to consumers Rs. 3,071 (Rs. 39,474). There remains a balance of profits amounting to Rs. 84,403 (Rs.1,11,614) to which is added Rs. 38.509 (Rs. 34,395) brought forward from the previous year making a total of Rs. 1,22,912 (Rs. 1,46,009). After setting aside Rs. 18,714 (Rs. 45,000) to general reserve, there is left a sum of Rs. 1,04,198 (Rs. 1,01,009) available for distribution, and this the directors recommend be disposed of as follows:—

By payment of a dividend at the rate of 13½ (10 per cent. free of tax) per cent. subject to deduction of tax at the prescribed rates in accordance with the provisions of Section 18(3D) of the Indian Income-tax Act, absorbing Rs. 67,500 (Rs. 50,000) and by carrying forward to next year Rs. 36,698 and by carrying forward an additional dividend of Rs. 38,509 after paying an additional dividend of Rs. 0.25 per share, absorbing Rs. 12,500).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Gross block	52,32,335
Reserves ...	11,62,458	*Less*—Depreciation ...	12,25,684
Provision for taxation ...	45,627		
Liabilities ...	43,46,031	Net block ...	40,06,651
Profit and loss account (surplus) ...	36,698	Work-in-progress ...	2,408
		Stores and tools ...	3,70,332
		Book debts ...	6,87,660
		Investments ...	1,56,055
		Cash ...	8,67,708
Rs.	60,90,814	Rs.	60,90,814

N.B.—Figures within brackets relate to the corresponding period of the previous year.

DEEDS
....Not merely words
PERFORMANCE
.....Not only promises

The beginning and the end of a Five Year Plan are vital dates in the nation's history. Each Five Year Plan is both an assessment of the past and a call for the future. It seeks to translate into practical action the aspirations and ideals of the millions in the country and gives to each of us the opportunity of service in the common cause of eliminating poverty and raising standards of living . . .

Today, on the eve of the Third Five Year Plan, we of Dalmia Cement (Bharat) Ltd. believe that almost 23 years of useful service to the Nation is something to talk about. Here are a few facts about our "achievements" and our contribution towards raising the standard of living of our people during the past few years.

For building the India of our dreams, the richer and prosperous India, there is little room for preaching by mere words and what are needed are DEEDS . . . DEEDS, in the terms of rebuilding of our nation, including higher production of some of the essential commodities like

CEMENT

the great modern material of building construction

In 1947, we had placed at the Nation's disposal over 67,000 Tons of Cement
In 1950, we had produced over 1,64,000 Tons of Cement
In 1954, we produced over 2,70,000 Tons of Cement
In 1957, our production reached nearly 2,80,000 Tons of Cement

And This Year.... in 1960

We expect to place at the nation's disposal over 4,25,000 Tons of Cement

BECAUSE WE NEED MILLIONS of TONS of CEMENT

for building the richer and prosperous India of our dreams . . .

DALMIA CEMENT (BHARAT) LTD.
Dalmiapuram (Madras State)

A National Enterprise in Nation's Service

NO, CERTAINLY NOT!

But one often feels frustrated and disgusted with a head full of grey hair, which makes him so 'unpopular'.

In the world of today, where science has done marvellous changes, no one need worry about grey hair, for "Loma", the ideal hair oil-cum-hair darkener is the safest and quickest way to regain 'youth' in your hair. The sweet aroma of "Loma" is loved by millions and that's why it stands abreast of the rest of hair oils.

Brush up with Loma Regd. for a better look

IN THE MATTER OF
MESSRS. RICHARDSON & CRUDDAS LIMITED

NOTICE

BY AN ORDER OF THE CALCUTTA HIGH Court made on the 4th July 1960, leave was given to the undersigned to file with the Registrar of Companies, West Bengal.

1. The audited Balance Sheets and Profit and Loss accounts of the Company with Auditors report thereon and other annexures thereto for the years ending 30th June 1956, 1957, 1958, and 1959, without holding a meeting of the shareholders of the said Company.

2. To keep the Register of shareholders of the said Company as prepared under his superintendence subject to rectification, if any, that may be ordered by a Court of competent jurisdiction.

3. To file with the said Registrar of Companies, West Bengal, a list of the shareholders of the said Company made out under his supervision from the Register of shareholders as aforesaid.

4. To make an additional report in respect of certain shares of the said Company.

Pursuant to the said Order, copies of the audited Balance Sheets and Profit and Loss Accounts, etc., for the years as stated above and a list of shareholders of the said Company made out from the Register of shareholders as aforesaid have been filed with the Registrar of Companies, West Bengal.

The undersigned states for the information of persons holding shares or claiming to hold shares in the said Company that the Register referred to and the list aforesaid are provisional and subject to rectification.

The audited Balance Sheets and Profit and Loss accounts with Auditors' report, etc., for the said years are being printed and printed copies will be available at the Bombay Office of Messrs. Richardson & Cruddas Limited, Byculla Ironworks, Bombay 8, from the 28th November 1960 on payment of Rs. 5.50 nP. Free copies will be mailed to persons whose names are borne on the provisional Register.

Inspection of the Register will be allowed on working days beginning from the 1st December 1960, at the Registered Office of Messrs. Richardson & Cruddas Ltd., Hindusthan Buildings, 4 Chittaranjan Avenue, Calcutta 13, during usual office hours by appointment. Subject to the permission of the Court being obtained arrangement may be made for inspection of the provisional Register at the Bombay Office.

DHIREN MITRA,
Special Officer.

14th November, 1960.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

AT A MEETING OF THE BOARD OF Directors of the above Company held on Wednesday, the 9th November 1960, the following final dividends, subject to tax deduction u/s 18(3D) of the I. T. Act, were recommended to be paid for the year ended 31st March 1960.

On First Cumulative Preference shares—8% per annum,

On Second Cumulative Preference shares—4½% per annum,

On Preferred Ordinary shares—10% per annum,

On "A" and "B" Ordinary shares—Rs. 1.30 nP per share,

subject to declaration of additional Dividends, if any, on the preference and Preferred Ordinary shares, on enactment of the Preference Shares (Regulation of Dividends) Bill 1960.

The Dividends, if declared, will be payable on or after 30th January, 1961, to those Shareholders (or their mandatees) whose names appear in the Company's books on 27th December, 1960, as the Registered Holders of the above shares.

The Share Transfer Registers of the Company will be closed from 6th to 27th December, 1960, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, 10*th November* 1960.

TRAVANCORE SUGARS AND CHEMICALS LIMITED

(Concluded from page 913)

and I do appeal to all to see that this state of affairs continues and improves still further, as in the present state of affairs, the sugar industry cannot afford to have any loss due to strikes or any other type of stoppage."

The report and accounts for the year ended 30th April 1960 were unanimously adopted and an interim dividend on the preference share capital of the Company for the year ended 30th April 1960 was declared payable on 8th November 1960 at the rate of 5 per cent. subject to deduction of tax. A dividend on the ordinary share capital of the Company for the year ended 30th April 1960 was declared payable on 8th November 1960 at the rate of 10 per cent. subject to deduction of tax.

The retiring Directors, Mr. M. J. Edwards, Mr. S. Vaidyanatha Iyer and *Rajyasevaniratha* S. Chattanatha Karayalar were re-elected and the retiring Auditors of the Company, Messrs. Lovelock and Lewes, were re-appointed on the same remuneration as for the previous year.

N.B.—*This does not purport to be a report of the proceedings of the general meeting.*

GOODYEAR TYRE AND RUBBER

The corner stone for the new Goodyear Tyre and Rubber Company factory at Ballabgarh in the Punjab was set in place early this week by Mr. Manubhai Shah, Union Minister of Industries. The ceremony was held at the 73-acre site of the new tyre and tube manufacturing factory at Ballabgarh, Punjab, 21 miles south of New Delhi, on the way to Taj Mahal, Agra.

Presided over by Sardar Pratap Singh Kairon, Chief Minister of the Punjab, the ceremony was attended by top-ranking national, State and Municipal officials and members of the press, the Goodyear International executives. Goodyear's construction of a factory in India has been commended by U.S. officials as an 'example of the cordial and friendly commerce that has existed for years between our two countries.' In addressing guests at the ceremony, Mr. R. E. O. Carey, Managing Director of Goodyear Tyre and Rubber Company of India Private Limited stated—'this country's promising future indicates sound economic growth and the decision of Goodyear to locate this factory in India is a tribute to both the Indian Government and the business community which co-operated in bringing about this development.'

The new Goodyear factory, estimated to cost Rs. 6,00,00,000 ($12,000,000) will be equipped with modern tyre manufacturing equipment to produce passenger, truck and farm tyres for replacement and original equipment markets. Ballabgarh Punjab, which offers excellent facilities for industry from the standpoint of water, labour and transportation, was chosen after a careful study of other areas, and by the desire of the Gov... dustrialise the north...

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 16*th November*

Although the traditional busy season is on, conditions in the short-term money market are distinctly more comfortable than they were a week ago. In fact, one could even go so far as to say that they are somewhat easy. In the inter-bank section, there are more lenders than borrowers and the rate for call money has come down from 4½ per cent. to 4¼ per cent. As for the interest rates for short-term deposits, they are standing at the enhanced ceiling levels which came into force with effect from the 14th inst. While details of the changes in the inter-bank agreement are given on page 883 of our last issue, it may be briefly stated here that the rate is 2 per cent. for notice money up to 21 days, 3 per cent. for deposits maturing between 22 and 30 days, 3½ per cent. for one to two months and 3½ per cent. for three to twelve months.

There has been no slackening in the demand for funds from trade and industry. The somewhat easier feeling is chiefly due to the relaxation made by the Reserve Bank in the special deposit system with effect from the 11th inst. This is said to have released to the banks an aggregate sum variously estimated from Rs. 16 crores to Rs. 18 crores.

The details of the relaxation are described in the following Press *communique* issued shortly after our last issue went to press:

"The Reserve Bank of India, in conformity with its policy of operating its credit regulation measures in a flexible manner, has relaxed, with effect from today, i.e., 11th November 1960, the maintenance of additional statutory reserves with the Bank by scheduled banks, with a view to assisting them to meet credit requirements in the ensuing busy season. The features of the relaxation are as follows:

1. The additional reserve requirement will be suspended in respect of increases in liabilities over the level as on 11th November 1960; no further impounding of deposits will, thus, for the time being, take place;

2. With effect from 11th November 1960, the additional reserve requirement will be reduced from the present level of 50 per cent. to 25 per cent. and this reduced requirement will be applied to increases in liabilities taking place since 11th March 1960; the deposits already impounded with the Reserve Bank will, thus, be reduced. The deposits rendered surplus as a result of these modifications will be released to banks."

Since the position is clearly explained in the aforesaid *communique*, there is no need for any detailed elucidation. All that requires to be added is that the Reserve Bank is still retaining half of the special deposits already lodged with it, even though it has kept the operation of the scheme under suspension in the case of fresh deposits which the banks are able to gather since the 11th inst.

The Treasury Bill results reflect the slight improvement in the supply of funds. Thus, there has been a slight rise in the amount offered for the 91-day Treasury Bills for which tenders had been invited for Rs. 2 crores. Thus, the offerings aggregated Rs. 2.24 crores, as against Rs. 2.20 crores in the previous week. The average rate of accepted tenders (for Rs. 2 crores), however, remained unchanged at Rs. 2.565 per cent. per annum, for the fourth week in succession. As regards 91-day intermediate Treasury Bills, the market was able to take up Rs. 31 lakhs, as against nothing in the previous five weeks. Their sales are being continued at the self-same rate of 2.496 per cent. per annum.
