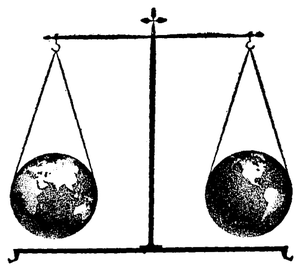
ASSOCIATES: AIR-INDIA, EAA, MEA AND QANTAS



In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

PALM 'GUR' INDUSTRY IN INDIA

DEVELOPMENT TO BE GREATLY INTENSIFIED

THE development of palm *gur* industry may receive great momentum in the next few years, if the programme formulated by the *Khadi* and Village Industries Commission is fully accepted and implemented. Details of the programme such as those pertaining to the target of output and outlay are, however, not yet available. The importance of the industry stems from three chief considerations. One, the industry is highly labour-intensive, because palm *gur* and palm sugar manufacture must necessarily be carried on near the source of the raw material, that is, the palm, on the decentralised basis of a single or a group of families where the womenfolk and the grown-up children also contribute their labour. Two, the palm constitutes a source of sugar which, it is claimed, is capable of supplementing the increasing requirements of the sweetening agents. Three, to the extent palm *gur* and sugar production is stepped up, fertile land can be released from cane growing to the cultivation of food and other agricultural crops. The palm *gur* industry is said to hold out potentiality of relaxing pressure on fertile land to the tune of a million acres.

It is estimated that there are at present 86.6 million juice-yielding palm trees (excluding coconut palm trees) in India. Of this number, 50 million trees are tappable and, if all these are tapped, about 1.5 million tons of palm *gur* can be obtained every year. The actual production in 1958-59 was only 70,200 tons. The development of the industry to this level, it is further estimated, will provide seasonal employment to 1.8 million persons and off-season employment to 600,000 persons—tappers, boilers and auxiliary rural artisans. The number of persons actually engaged in 1958-59 is placed at 298,234. It is said that, besides offering part-time and full-time gainful employment to tappers and the auxiliary rural artisans during the palm *gur* season, the industry is capable of engaging them in the manufacture of palm leaf fibre and timber utility articles. Whenever the agriculturists and others are involuntarily idle due to the slackness in agricultural operations, they can turn to the production of palm leaf fibre and timber utility articles which are in ever-increasing demand from buyers at home and abroad. The table at the end of the article gives State-wise figures relating to palm *gur* production and employment position in the industry.

Palm *Gur* in Second Plan

The second Plan development programme for palm *gur* industry, it will be recalled, envisaged the establishment of different types of production units to suit the varying skills of tappers. In addition, assistance was to be extended to tappers in different areas. An important item of the programme was assistance to co-operative societies and federations of co-operatives for undertaking and encouraging additional lines of production such as manufacture of palm *gur*, palm leaf and other subsidiary products. According to the revised programme of the All-India *Khadi* and Village Industries Commission, the total development expenditure is expected to increase from Rs. 59 lakhs in 1956-57 to Rs. 86 lakhs in 1960-61, the total expenditure over the Plan period being Rs. 5 crores.

The Central Government subsidises the development schemes of the States on the basis of 50 per cent. of total recurring expenditure. The subsidy is, however, more liberal, namely, 66⅔ per cent., in the case of Orissa in view of its peculiar conditions. The primary objectives of the Centre's assistance are co-ordination of development activities, greater stress on organised production and propagation of the industry throughout the country. Formerly, financial assistance was being given to palm *gur* co-operatives and other registered institutions in the shape of development units of various categories. Such direct assistance has been discontinued since 1958-59. During 1958-59, the *Khadi* and Village Industries Commission disbursed Rs. 21.31 lakhs, of which Rs. 17.48 lakhs were given as grant and Rs. 3.83 lakhs as loans towards the development of industry.

A notable feature of development in the palm *gur* industry in recent years is the formation of units on a co-operative basis. Each unit engages 11 male and 11 female artisans, provides employment for 335 days in a year, the daily number of working hours being eight, and assures an earning of Rs. 100 per month to a family. During 1958-59, 2,743 palm *gur* co-operative societies, with a total membership of 275,000, were working. In order to co-ordinate and consolidate the activities of the societies, State Federations have been established. There are at present eleven such Federations to which are affiliated 1,057 societies. There is also the central federation, called *Akhil Bharatiya Tad Gud Sahakari Mahasangh Ltd.* This institution has been recognised as the chief implementing agency to speed up the pace of progress of the industry on commercial and co-operative lines. Activities like central demonstration squad, propaganda, publicity, exhibitions, conferences and pilot stations have been transferred to this body.

Training

Efforts are being made to impart training in the field of palm *gur* manufacture. During 1958-59, the *Bharatiya Tad Gud Shilpa Bhavan*, the body in charge of technical and specialised training courses, imparted training to 67 stipendiary and 21 non-stipendiary students. The candidates for training were selected from 12 States. In order to investigate the possibilities of tackling the economic problems of the industry, the Economic Research Section of the Commission conducted three enquiries bearing on rent of palm trees, price fixation and Rajasthan evaluation enquiry.

An outstanding accomplishment of the research wing of the *Bharatiya Tad Gud Shilpa Bhavan* is the success in discovering SO_2 preservative as a substitute for lime. This new preservative, it is claimed, will help reduce the cost of production and preserve *neera* for a comparatively longer time. Several improvements have been effected in the tools and equipment used in the palm *gur* industry and these are said to have become popular among artisans. The field trials in the realm of agronomical treatments constitute one of the steps that are being taken to secure a better yield of *neera*.

SUGAR EXPORT TO U.S.

Discussing the issue of sugar exports to the U.S., we stated in these columns two weeks ago (*vide* page 460) that, since Indian sugar was refined, it might get a higher price than what was recently paid by the U.S. to Brazil, namely, 6.50 cents (about 31 nP) per lb. Apropos this reference, an esteemed reader of *Commerce* observes, in the course of a communication to us, that the word "refined" was not used correctly. Explaining his point, he says:

"..... Indian sugar is what is technically known as 'Plantation white sugar' and so it cannot be termed as 'refined.' Our white sugar is made from sugarcane, either by sulphitation or carbonation process of juice clarification, whereas refined sugar is made from raw sugar in large-scale refineries by a different process of filtration, using either bonechar, vegetable carbon or clarifying chemicals. Refined sugar is much superior in whiteness and standing quality to our plantation white sugars. It is, therefore, just possible that our sugar may not be so acceptable to United States as refined sugar which the people there are accustomed to use so long.

"We should not, therefore, be surprised if Indian sugar does not get as high a price as expected."

HIGHER RECOVERY OF SUGAR FROM CANE JUICE

Higher quantity of sugar from cane juice can be secured if interfering 'non-sugars' are removed out of it. This can be better achieved with the help of Ion-Exchange resin. These findings have been confirmed by the National Sugar Institute, Kanpur, as a result of large-scale experiments carried out in the pilot plant fabricated and installed for this purpose in the Institute. Cane juice contains, besides sugar, many soluble mineral salts and organic substances which are broadly termed as 'non-sugars.' Cane juice is first purified by the conventional liming and sulphuring method (sulphitation) and then filtered to remove all the suspended impurities. Nearly 200 gallons of filtered and purified juice are then treated by the Ion-Exchange process to remove the non-sugar mineral impurities. The demineralised juice is then concentrated and crystallised repeatedly to obtain the maximum amount of sugar. Finally, waste-molasses is obtained which generally contains 30 to 35 per cent. sugar. As a result of this process, an appreciable increase in the recovery of sugar as compared to usual purification system is obtained. Besides, due to the removal of impurities, the waste-molasses so produced from demineralised juice has much better edible characteristics.

GAP BETWEEN OUTPUT AND DEMAND FOR RUBBER LIKELY TO WIDEN

TARIFF COMMISSION'S SUGGESTIONS FOR RAISING PRODUCTION

NOTWITHSTANDING the various measures taken so far to improve rubber cultivation, the gap between the output and consumption is widening, thanks to the rapid pace of increase in the latter, with which the trend in production is unable to catch up. In the first six months of 1960, for instance, whereas the total production of natural rubber was 9,660 tons, representing an increase of no more than 780 tons over that in the corresponding period of 1959, the total consumption (of natural and synthetic) was of the order of 21,320 tons, having gone up from 18,915 tons in the first six months of last year, or a rise of over 2,400 tons. The gap had to be filled up by substantially larger imports, which rose from 6,290 tons to 9,045 tons. This gap is bound to widen in the coming years, for all available indications go to show that the demand for rubber will expand faster than production.

That this trend is only a continuation of the trend noted for some years past is borne out by the following comparative table:

(In tons)

Year	Production	Consumption			
		Natural	Synthetic	Reclaimed	Total
1956	23,444	28,906	2,409	3,261	34,666
1957	23,767	31,765	3,032	3,837	38,634
1958	24,358	34,756	3,252	4,051	42,059
1959	23,395	38,663	4,342	4,454	47,459
1960 (Jan.-June) ..	9,660	..	..	..	21,320

Between 1956 and 1959, while consumption went up by 12,793 tons, of which natural rubber alone accounted for 9,667 tons, the production shows very little variation, so that the shortfall in supplies of natural rubber alone was of the order of 15,265 tons. It will also be seen from the table that the demand for natural rubber has been rising at the rate of 3,000 tons per annum, while the consumption of synthetic and reclaimed rubber is restricted to the minimum to meet only such demands as cannot be satisfied with the available supplies of natural rubber. On the basis of the trend noted in the past few years, the Tariff Commission, in its latest report on raw rubber prices, estimates the demand in 1960 at 42,000 tons of natural rubber, 5,000 tons of synthetic rubber and 5,000 tons of reclaimed rubber, or a total of 52,000 tons.

Future Demand

As regards the future demand, the Tariff Commission has not been able to make any accurate forecast, in the absence of a clearer picture of the likely development of industries depending on rubber, including synthetic rubber, but it is of the view that the estimates made by the Working Group appointed by the Planning Commission "represent the trend in the growth of future consumption." The Working Group's estimates of the demand and of the shortfall in natural rubber production during the six years 1960-61 to 1965-66 are as follows:

(In tons)

Year	Total demand	Demand for natural rubber	Production of natural rubber	Shortfall in natural rubber
1960-61 ..	52,500	40,000	26,000	14,000
1961-62 ..	50,700	42,700	28,000	14,700
1962-63 ..	67,000	44,000	30,300	13,700
1963-64 ..	74,800	45,800	34,400	11,400
1964-65 ..	83,800	48,800	39,400	9,400
1965-66 ..	93,800	54,300	40,800	13,500

It will be clear from the above table that the gap between domestic production and demand for natural rubber is not likely to narrow down in the immediate future. On the contrary, according to the Tariff Commission, it may even increase with the expansion of industry during the third Plan period. Giving out the reasons for such a conclusion, the Commission adds:

"In the case of natural rubber it takes a minimum period of about eight years from the time trees are planted to realise production. That would mean that during the third Plan period increased production could be expected only from trees already planted. At the same time, it should also be remembered that a large number of trees are due for felling and replanting on a large-scale will have to be undertaken hereafter. In estimating future production, it is, therefore, necessary to take into account the likely loss in current production due to the felling of trees for replanting."

The Working Group is, however, of the view that the aforesaid estimates of production of natural rubber can be improved upon by 1,700 tons in 1962-63, by 1,600 tons in 1963-64, by another 1,600 tons in 1964-65 and by as much as 4,200 tons in 1965-66, provided the planters make some special efforts, such as manuring mature and immature low-yielding areas which are under poor soil conditions, adopting proper protective measures against secondary leaf-fall diseases, taking to intensive methods of tapping and use of yield stimulants, concerting measures for fuller co-operation between labour and employer, so as to increase labour output.

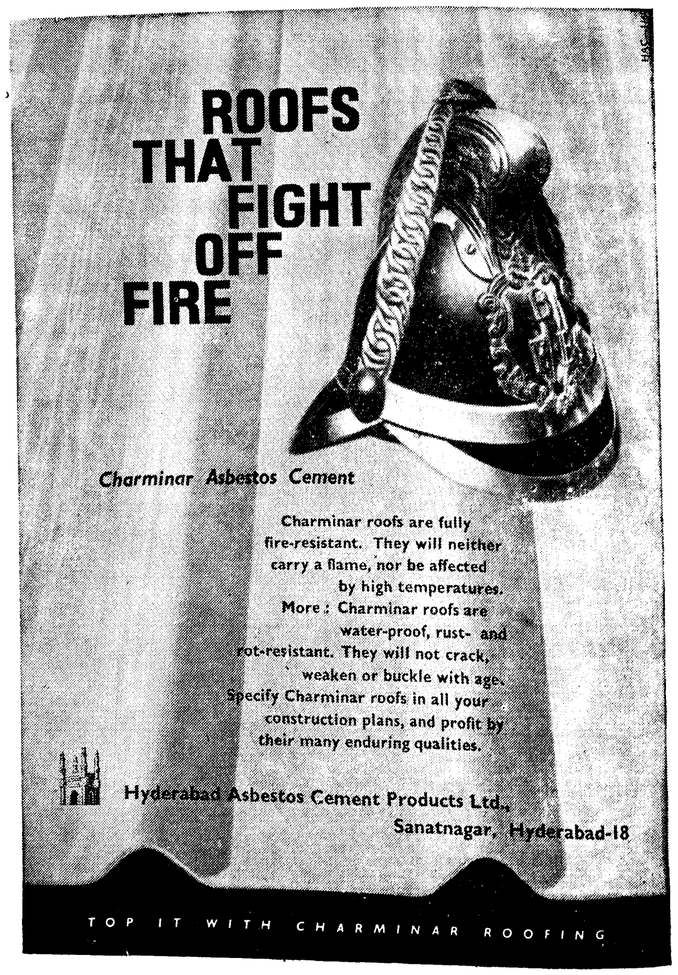
Low Yield

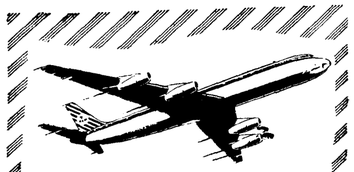
The slackness in domestic production is due to the predominance of small holdings, most of which are uneconomic and the yield on which is poor. In the small holdings (with an area of less than 50 acres) which account for 25 per cent. of the total production, the yield (as of 1958) is 181 lbs. per acre, as against 175 lbs. in 1952. During the same period, the yield on large holdings has risen from 351 lbs. to 419 lbs. per acre. The average yield for the industry as a whole is 314 lbs., having improved from 279 lbs. in 1952. It does not, however, compare well with that of Malaya, at 417 lbs. and Ceylon at 414 lbs. It may be further noted that, in 1959, the yield in Malaya was as high as 1,200 lbs. per acre in some of the high-yielding areas and the average for all selected areas with high-yielding mature rubber was no less than 854 lbs. per acre.

The Tariff Commission is of the view that the solution to the problem of raw rubber shortage in India is a long-term one, but this is inevitable. There are two methods by which this can be done. The first is new planting with high-yielding planting materials on a large scale and the second is the replanting of old and low-yielding with high-yielding varieties. The Commission adds that planting and replanting with high-yielding seedlings cannot be delayed, if the cost of production of rubber in the country is to be brought down in line with costs elsewhere. Otherwise, the high cost of indigenous raw rubber will remain a drag on the manufacturing industry.

A disconcerting feature in the development of rubber noted by the Tariff Commission is the growth of holdings with less than five acres, most of which are planted with ordinary seedlings. "Whatever the reasons for these trends," it adds, "they should be checked immediately so as to strengthen the economic base of the industry." It has, therefore, recommended that, in future, no licence should be given for planting of rubber with ordinary seedlings and encouragement should be given to economic holdings to undertake planting with high-yielding material. The other measures suggested by the Commission for increasing production are: (1) immediate drop in production should be avoided by undertaking replanting on a planned basis; (2) high-yielding planting material should be distributed to small growers at cheap rates; (3) if local nurseries cannot provide the high-yielding material, the Rubber Board should be given facilities to import sufficient quantity of high-yielding planting material suited to the soil conditions of the rubber growing areas; (4) a separate financial agency should be set up to grant financial assistance for the development of a long-term crop like rubber, particularly for stepping up the tempo of new planting; and (5) labour productivity team to investigate means of increasing output and bringing down cost.

Over 250 delegates have now registered for the biggest international conference on natural rubber ever to be held—the Natural Rubber Research Conference at the headquarters of the Rubber Research Institute of Malaya in Kuala Lumpur. The conference, which will begin on 26th September and will end on 1st October this year, is a further reflection of the determination of the Malayan Government and natural rubber interests to make the industry one of the most progressive in the world.





KLM

the first airline to introduce the DC-8 Intercontinental Jet through India

LONG RANGE

The answer to your repeated question! Fly KLM's Intercontinental Jet, equipped with lounge, luxurious chairs; designed with *you* in mind! Wide, wide aisles! Personalised service, anticipating your slightest wish. Fly KLM—the Royal airline!

For Westbound destinations, you have a choice of flying via New Delhi (Dep. Thursdays at 8.05 p.m.) or via Karachi from where KLM operates daily DC-8/Electra services.

For Eastbound destinations, take advantage of KLM's DC-8 flight leaving Calcutta every Wednesday at 7.15 a.m.

ROAD TRANSPORT'S CONTRIBUTION TO PUBLIC EXCHEQUER

NATIONAL COUNCIL'S PIONEER STUDY

THE National Council of Applied Economic Research, New Delhi, recently completed an enquiry, on behalf of the Union Ministry of Transport, into the financial contribution of road transport to the public exchequer. This is rightly claimed to be a pioneer study, because there is here, for the first time, a systematic presentation of "the dispersed and often incomplete accounts of a decentralised industry which lies partly in the public and partly in the private sector." Its usefulness is also enhanced by the fact that even the Masani Committee on Road Transport Reorganisation which reported last year had not done its own enquiries to give the finding "that, while the railways return to the State only 4 per cent. on public investment, the road transport returns, excluding revenue duties, contribution to the Central Road Fund and road maintenance, as much as 8 per cent. on the investment on roads and 10 to 12 per cent. on the investment on vehicles and also pays income-tax which the railways do not pay." Since the Masani Committee was in no position to establish the authenticity of these estimates made by others, it was only appropriate that the issue raised by it was referred to a research body for comprehensive examination.

This appraisal by the National Council has led to a series of findings which add up to the general conclusion that the financial contribution of the road transport industry to the public exchequer is greater than that of the railways in absolute terms. How great that contribution is, may be known, in the first instance, from the Council's estimate of "gross contribution" which consists partly of payments made by the industry in the course of its operations and partly of payments from its profits, both being made partly to the Centre and partly to the States and local authorities. This "gross contribution" is estimated at Rs. 133.6 crores for 1957-58, the latest year for which complete details were available to the research workers. What follows is a breakdown of this estimate:

(Rupees in lakhs)

	1957-58	1958-59
Public income		
Operational payments :		
Central Road Fund	375	330
Motor vehicle taxation	1,792	1,937
Local Boards	292	292
Excise and import duty	6,498	6,422
Sales tax on fuel	1,020	1,229
Sales tax on vehicle	495	N.A.
Passenger and goods tax	522	642
Octroi, terminal tax, etc.	1,100	1,100
Punitive payments	125	122
Appropriations :		
Income-tax	398	397
Profit of Government road transport undertakings in Union Territories	—5	—2
Railways' share in the profits of Road Transport Corporation	22	N.A.
Profits of State Transport Undertakings	531	554
Interest	154	181
B.E.S.T.	37	N.A.
Total	13,356	N.A.

The gross contribution is then compared with the public costs of roads and road transport, which are termed "cost offsets," so as to arrive at the "net contribution." The estimates of cost offsets have been made for two years—1957-58 and 1958-59 as under:

(Rupees in lakhs)

Cost offsets	1957-58	1958-59
Expenditure on road building :		
Centre	1,655	2,086
States	3,574	3,749
Expenditure on road maintenance :		
Centre	510	548
States	1,846	1,981
Local Boards	300	300
Cost of establishment :		
Centre	26	27
States	559	618
Expenditure on Road Transport Administration :		
Centre	22	23
States	111	114
Cost of traffic control	72	84
Interest on capital invested in nationalised undertakings	154	181
Cost of tax collection	200	200
Total	9,029	9,911

In calculating the overall net contribution, the National Council has adopted two methods. Under the first method, the cost offset for the construction of roads is not allowed for; hence the overall net contribution comes to Rs. 95.6 crores (Rs. 133.6 crores of gross contribution *minus* Rs. 38.0 crores of cost offsets excluding capital construction cost) for 1957-58. Under the second method, all the cost offsets in the above table are taken into account; hence the overall net contribution comes to Rs. 43.3 crores (Rs. 133.6 crores of gross contribution *minus* Rs. 90.3 crores of all cost offsets) for 1957-58. This latter figure of Rs. 43.3 crores probably errs on the side of being conservative, because, while most of the cost offset items are fully accounted for, certain gross contribution items like the revenues of the local boards are described as underestimates. In the opinion of the National Council, the net contribution could be higher, given better transport administration designed to prevent the evasion of certain tax payments, particularly income-tax, passenger and goods taxes and to secure greater profits from State transport undertakings.

Be that as it may, what is relevant in the figure of Rs. 43.3 crores is that it represents 48 per cent. of the total annual public costs of Rs. 90.3 crores on account of roads and road transport. This rate of return is manifestly very high. On another basis, namely, a comparison of the net contribution of Rs. 95.6 crores under the first method with the total capital expenditure (Rs. 500 crores) on the road system, the rate of return works out to only 19.1 per cent. Here the estimate of Rs. 500 crores represents the historic cost and not the replacement cost which would be higher; the National Council's preference for this historic cost is justified on the ground that the capital outlay as calculated by the railways is also the historic cost. Yet another assessment of the net contribution of Rs. 95.6 crores in terms of the investment (Rs. 392 crores in 1957-58) in the road transport industry at the operating level gives a figure of 25 per cent.; here the computation of investment has been confined to the commercial sector (buses and trucks) of the industry. Incidentally, a breakdown of this estimate of investment will be interesting:

(Rupees in crores)

Sector	1957-58
Passenger sector :	
Vehicles	120.7
Workshops	7.9
Land and buildings	33.7
Goods sector :	
Vehicles	195.0
Workshops	24.9
Total investment	382.2

Perhaps the most appropriate basis of assessing the net contribution of Rs. 95.6 crores under the first method is to relate it to the nation's overall capital (Rs. 882 crores) invested in roads and road transport. So assessed, the rate of return works out to 10.8 per cent.—a figure which might come down to 8.8 per cent. if the value of non-commercial vehicles and motor cycles, auto-rickshaws, etc., which the National Council has estimated at Rs. 121 crores, is taken into account. What is noteworthy here is that even if pleasure vehicles, which are not commercial capital assets, are included, the percentage return of 8.8 is still substantial on the nation's entire outlay (Rs. 882 crores *plus* Rs. 121 crores) on roads and road transport.

Whether this rate of return is higher than what is obtained from the railways is the next question. This controversial question, however, has been neatly disposed of by the National Council after a preliminary examination of some railway figures. The Council's considered view here is that "any attempt to calculate and compare precise rates of return (in the case of railways) would involve intricate computations of the capital involved, theoretical estimates of income-tax which might be payable and similar uncertainties." In the result, no firm conclusion that road transport is more profitable to the public exchequer than railways is possible. But, then, the National Council's comparative analysis, howsoever rough it may be, goes to suggest by implication that the railways' contribution is substantially less than that of road transport. While the anxiety of the Council not to get itself involved in the road-rail controversy is understandable, its "rough generalisation" that the railways have been earning about 5 per cent. net on capital does raise the issue to the level of controversy although this rate may not be strictly comparable with the rate of 8.8 per cent. on the entire capital outlay on roads and road transport. The National Council has thus unwittingly raised an issue which calls for further examination.

E.C.A.F.E. EXPERTS ON HOUSING

Housing experts from 12 Asian countries have just completed a study tour, jointly sponsored by the E.C.A.F.E. and the U.N. Bureau of Technical Assistance, of five European countries—Czechoslovakia, Denmark, the Federal Republic of Germany, the Netherlands and the United Kingdom. The study has been largely confined to questions like housing policy, construction and design, building materials and building research. One of the principal conclusions and recommendations of the study is that existing small towns in Asia should be revitalised, with the private sector participating more fully in housing development side by side with co-operative and self-help housing schemes. Another recommendation is that suitable land policies should be adopted and housing loans and small savings encouraged. A third recommendation is to the effect that Governments of the E.C.A.F.E. region should be encouraged to establish Ministries for Housing and Town and Country Planning, if they have not already done so.

There are also three recommendations regarding construction itself. These are: (i) overcrowding should be avoided, building materials improved and equipment standardised; (ii) the use of existing, traditional building materials should be encouraged and the building materials industry should be left in the hands of the private sector; and (iii) research and construction should be more fully co-ordinated and facilities for studies and tests improved. Another noteworthy conclusion of the study is that the time is not yet ripe for full, large-scale prefabrication of houses in E.C.A.F.E. countries, though it should be possible even now to encourage prefabrication of flooring and roofing components

MANUFACTURE OF DAVID BROWN TRACTORS IN INDIA

David Brown's plans to manufacture tractors in India have been given a new impetus by the Indian Government's decision to allow the British company to build up to 3,500 tractors a year—nearly three times the output permitted under the initial manufacturing licence granted last year. The licence, which covered manufacture of only the 14 h.p. David Brown 2-D, has now been amplified to cover the manufacture of the latest David Brown 850-D and 950-D implematic tractors, of 35 h.p. and 42.5 h.p. respectively. Manufacture will be carried out by David Brown and Mahindra Tractors (Private) Ltd., a company jointly owned by the British company and its Indian distributors, Mahindra and Mahindra Ltd., of Bombay.

A new factory is now being built near Bombay to undertake production of the three types of tractors and implements. Until these premises are ready, part of the existing Mahindra and Mahindra plant is being utilised for assembly and distribution. The first consignment of semi-knocked-down (S.K.D.) tractors was shipped from the United Kingdom last month.

Tooling equipment for the 2-D tractor manufacture has been supplied by the David Brown factory at Huddersfield, Yorkshire, which is now preparing detailed plans for the provision of the extra plant needed for building the 850-D and the 950-D implematic tractors in India. These will initially be shipped S.K.D., but eventually it is planned to manufacture up to 66 per cent. of the components in India. A higher percentage of indigenous manufacture may be feasible ultimately, provided that local industrial development reaches the stage envisaged under India's current development plans.

ASHOK LEYLAND BUSES

In keeping with the latest overseas trends of replacing trams with diesel engined buses, Delhi Transport Undertaking has placed an order with Ashok Leyland Ltd. for the supply of 10 Comet ECPO2/3AR 163" wheelbase chassis to operate in the congested areas of Old Delhi at present served by the tramway division of D.T.U. The new chassis will, with the exception of the wheelbase, be identical with the 340 Comet ECPO2/1R buses at present operated by D.T.U. and the 50 vehicles ordered earlier this year. The communality of running units will facilitate easy maintenance and interchangeability of components but the reduced wheelbase will give greater manouevrability and enable faster schedules to be maintained particularly during peak-hour periods. Tenders for bodywork have been issued and it is expected that the buses will be ready for operation early next year.

NEW PRODUCTS AND PROCESSES

Novel Flow Indicator

THE fouling of sight glasses by highly detergent oils used in the mechanical lubricators of modern diesel engines has led to the development of a new type of flow indicator, in which the approximate rate of flow is shown by the height of a ball in a tapered perspex tube. The inner diameter of the tube increases with height, so that when flow occurs the ball (made of glass or metal according to the viscosity and density of the oil) rises automatically to an equilibrium position, or falls out of sight when the flow is interrupted. A number of ships and power stations have already been equipped with the new indicators, which are made by Alan Muntz & Company, Ltd., Browells Lane, Feltham, Middlesex, England. They have been designed to work at pressures up to 1,000 p.s.i. (70.3 kg./cm.²) and are suitable for any fluid, including gasses. For example, a firm using a corrosive liquid as the catalyst in an electronic paint spraying process has found them of particular value, their main advantages being simplicity, ease of reading and the elimination of any maintenance, since the ball is the only moving part in the device. Alan Muntz & Company have also perfected a new quick-acting non-return air valve, which they hope to exhibit at Olympia next April. Basically this unit consists of a group of tapered channels made of a light alloy with stainless steel membranes or flaps in their sides, which lift to allow the passage of air in one direction but close immediately if a pressure of 1 p.s.i. (0.7 kg/cm.²) in the opposite direction is established. The valve is designed to open and close at 3,000 cycles per minute, and has in fact been tested successfully up to 5,000 cycles per minute. It was originally developed for small, portable air compressors, but could well be used for larger compressors and trials have shown that it may be specially suitable as a suction valve in two-stroke engines, replacing the piston-controlled port inlet system at present in use. Another likely application is as a rapid shut-off valve for use in many types of chemical plant.

Rust Remover

One of the latest rust removers to come on the market is claimed to be as suitable for treating the interior of closed systems such as boiler units, as it is for separate metal components. Among the main advantages claimed for the product is that it can be used without dismantling the equipment being treated and it can be left in a system indefinitely without damaging or affecting in any way the unrusted metal surface. The remover can be added directly to water being circulated through a system without shutting the latter down.

Allweather Paints Ltd., London, the manufacturers, state that "unlike strong aqueous solutions of phosphoric and hydrochloric acids, the new rust remover removes iron oxide by a mild complexing action and does not attack the molecular structure of the unrusted metal body." This feature, it is added, enables the remover to convert iron oxide to a completely soluble form, thus eliminating the need for removing residue from inaccessible places. For cleaning separate items, the product is diluted in the proportion of one part rust remover to 19 parts of water, the components being soaked in the resulting solution for a period of between 4 and 48 hours. Complete plants such as heating and sprinkler systems, heat exchangers and other closed systems can be treated by filling the system with a similar solution and leaving it there for between 24 and 72 hours before rinsing it through. All the ingredients used in the preparation are said to be non-combustible and non-toxic. It sells at £2 10*s.* per gallon.

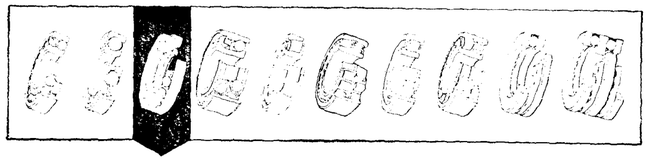
New Synthetic Rubber

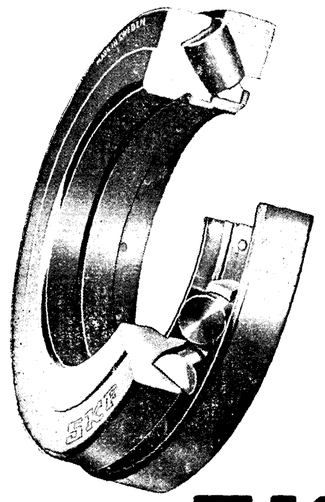
An international synthetic rubber company's plant at Hythe on Southampton Water has brought a new industry to Britain. It was built at a cost of £6,000,000 to make a valuable and versatile synthetic rubber known technically as styrene-butadiene. Until the opening of the plant two years ago Britain had never produced a general purpose synthetic rubber commercially. Heavy as the U.K. industries' demands were—they increased by 2,100 per cent. in the period 1950 to 1958—all of this type of rubber had to be imported at heavy cost in dollars and with no certainty of delivery on time. The Hythe plant is the most modern of its kind in the world producing rubbers of the highest qualities. The product is nowadays used in so many ways, from cars to tap washers, from surgical to sporting goods, as waterproof sheathing, belting, flooring, sponge, in many mechanical applications, as shoe solings—it has become indispensible feature of everyday life. The potential of the plant—100,000 tons a year—is sufficient to meet the increasing requirements of the many consuming industries at home and overseas for a long time to come.

Combine-drier

Two engineers of the Ministry of Agriculture of Byelorussia, I. Safronov and A. Taubin, have designed a continuous-operation grain drier functioning on a self-propelled S-4 combine. Before being fed to the bunker, grain passes through two revolving drums where it is shovelled, dried by a stream of a hot gas-air mixture and freed from weeds for 10-12 minutes. Then a pneumatic elevator carries it to the upper bunker and meanwhile it is cooled. A centrifugal pump installed on the axis of the motor next to the pulley of the combine supplies to the drums the air heated by the water radiator, collector, discharge pipe and sump. This heat is sufficient to lower the moisture content of grain by 6 per cent. from 20 to 14 per cent. The use of the combine-drier makes it possible to do away with the threshing floors at collective and state farms, reduces the shipments of grain and the time of harvesting and prevents grain losses.

SKF offer the widest selection of bearings





Illustrated here is the SKF SPHERICAL ROLLER THRUST BEARING which has one row of obliquely disposed rollers guided by a high flange on the shaft washer and running on a sphered track on the housing washer. It combines very high carrying capacity with complete self-alignment. The surface of the roller end next to the guiding flange is so formed that the rollers are always separated from the flange by an oil film when under load. The bearing can therefore be used at relatively high speeds, even if the load is very heavy. Unlike other thrust bearings, it can also carry radial loads.

THE INDIA CEMENTS LIMITED, MADRAS

ADDITIONAL FACTORY LIKELY TO BE SET UP AT SALEM

MR. P. SURYANARAYANA'S SPEECH

ADDRESSING the shareholders of the India Cements Limited at their Fourteenth Annual General Meeting held at Madras on 2nd September 1960, Mr. P. Suryanarayana, Chairman, disclosed that the starting of a branch factory in Visakhapatnam District in Andhra Pradesh had been delayed. Meanwhile, the Directors, he added, were exploring the possibilities of starting a cement factory in Salem.

The following is the full text of Mr. Suryanarayana's speech:

"GENTLEMEN,

"It gives me very great pleasure in welcoming you to the fourteenth annual general meeting of your Company. The report of the Directors and the audited statement of accounts for the year ended 31st March 1960 have been in your hands for sometime now and, with your kind permission, I will take it as read.

"It is needless for me to offer any detailed explanation regarding the financial position and the other aspects of the Company, as the figures in the balance-sheet bear ample testimony to the continued strong and stable position of your Company.

"The working of the factory during the year has been quite satisfactory and was not hampered by any power cut which was till now an annual feature. The factory is functioning with both economy and efficiency. The production has been above rated capacity. The 750 tons plant in Talaiyuthu went into production in August 1959 well ahead of the schedule as envisaged by me during the last general body meeting. But for some minor teething troubles, the new plant is working satisfactorily.

A Decade of Solid Progress

"The infant Indian Republic completed the first decade of its existence, ten years of stress and strain but also of solid progress in many fields. The country has embarked upon successive Five-year Plans for converting an essentially agrarian economy into an industrial one, with the avowed object of making available to the teeming millions of this country the fruits of the present-day scientific and technological advance that tend to raise the living standards. The economic climate has almost been revitalised, so much so that today an investment of Rs. 10 thousand crores for the third Five-year Plan or a rise of 5 per cent. in the national income which would have been considered fantastic in 1951-52, apart from the misgivings of the economic plans as instruments of realisation of certain basic social and economic activities, is now in the realm of possibility of achievement and it is deemed inevitable to sustain a minimum rate of growth. Grave doubts were entertained about the contribution of private enterprise towards the welfare of the nation. They now stand dispelled. The part played by the private sector towards the development of the nation has been realised and the Government are planning financial and technical assistance to industries in the private sector.

Industrial Production

"The pace of industrial production which was slowed down in 1957-58 showed a marked increase in 1959. The rate of increase of general index of industrial production at 151.1 showed an increase of 8.2 per cent., as compared to 1.7 in 1958, 3.5 in 1957 and 7 to 8 per cent. in the three years 1954 to 1956. The cement industry also registered an impressive rise in production in 1959. The production of 6.8 million tons showed a rise of 13 per cent., as compared to 8 per cent. in 1958, due to the completion of many expansion schemes. Your Directors have always given serious thought about the possibilities of expansion of production in your factory and contribute their humble part in serving the expanding economy of your country. It is as a result of such constant endeavours the capacity of your factory has been increased from one lakh tons to five lakh tons.

Cement Factory at Salem

"Due to circumstances entirely beyond the control of the management the starting of the branch factory in Visakhapatnam District in Andhra Pradesh has been delayed. Orders sanctioning the requisite mining rights are still expected from the Andhra Pradesh Government. In the meantime, remittances have already been made towards the first instalment to the suppliers of both the main machinery and electric motors for the expansion scheme. Your Directors are at present also exploring the possibilities of starting a cement factory at Salem in Madras State. Our preliminary investigations have shown that adequate raw materials are available near Salem for the starting of a cement factory.

"I am glad to say that the sales of cement of your factory have been extremely good, and the temporary slowing down in the offtake which we experience during the last year no longer exists, and as envisaged by me in my speech during the last year, there has been a revival of demand and the offtake by Government and all forms of consumers has been growing considerably, and we are today experiencing an acute shortage of cement in certain provinces in the country.

Exports

"I have also referred last year to the necessity of developing the export market for the cement industry to augment the much-needed foreign exchange to carry out our national development programme. It is gratifying to note that the exports of cement in 1959 were substantially higher at 155,000 tons, as compared to 41,000 tons in 1958. The exports of your factory are of the order of 25,000 tons during last year and it would have been much more but for the fact that 20,000/25,000 tons have been diverted to Bombay and Calcutta markets to meet the acute shortage of cement in those areas.

"Mention has been made in the Directors' report regarding the repayment of the loans obtained from the Industrial Finance Corporation of India. I am pleased to confirm that the Company has completely repaid the entire loan outstanding to the Industrial Finance Corporation of India.

Preference Dividend

"As the shareholders are aware, the preference shares of your Company carry a dividend of 7½ per cent. per annum, subject to deduction of Indian income-tax paid by the Company in respect thereof. It has been contended that where the Articles of Association or the terms of the issue of preference shares stipulate that the dividends are subject to tax, tax under Section 18(3D) only is to be deducted. The position has been examined by your Company. The management are inclined to agree, in all fairness to the preference shareholders, that tax under Section 18(3D) only should be deducted in respect of the preference shares of your Company and a voucher for the tax deducted at source be given to the shareholders. This view of the management is, however, subject to any further clarification by judicial decision or otherwise and is not to be regarded as any undertaking by the Company by itself creating any rights or making any representations as to the correct legal position or as any kind of estoppel. The steps to be taken to overcome the difficulties in the way of the preference shareholders, as they now confront your Company, with a view to equitable adjustment of the rights of the preference shareholders in the matter of entitlement to dividend are engaging the earnest attention of your Directors.

Wage Board's Recommendations

"I had occasion, last year, to refer to the setting up of a Wage Board for the cement industry by the Government of India. After examination of the points of view of both the labour and the management, the Wage Board have submitted their recommendations to the Central Government and they have been accepted by the Government of India with some modifications, in February this year. The recommendations were varied and diversified. According to the recommendations, effective from 1st January 1960, the basic emoluments of the workers have almost been doubled. As mentioned in the Directors' report, no provision has been made in the balance-sheet for the additional expenditure to be incurred for the implementation of the Wage Board recommendations. The Government of India have noted the view of the Wage Board that *prima facie*, the industry does not have the capacity to pay the wages recommended on the existing retention price, and they are now engaged in investigating into the question of additional burden on the industry on this account, which we expect the Government to pay fully. I am happy to inform you that your Company has the distinction of being the first to implement the recommendations of the Wage Board.

"The industry is faced with an increase in the cost of packing materials and coal and increased cost of transport and labour necessitating a revision in the retention price allowed to each unit. I earnestly hope that the Government of India would give their utmost consideration to this matter.

Housing for Workers

"Alive as they are to the needs and welfare of the employees, your Directors have programmed to put up tenements for the workers under the Subsidised Industrial Housing Scheme. Labour occupies a very important place in the development of any nation, and more particularly in a relatively underdeveloped country like ours. It has, definitely, a responsibility to

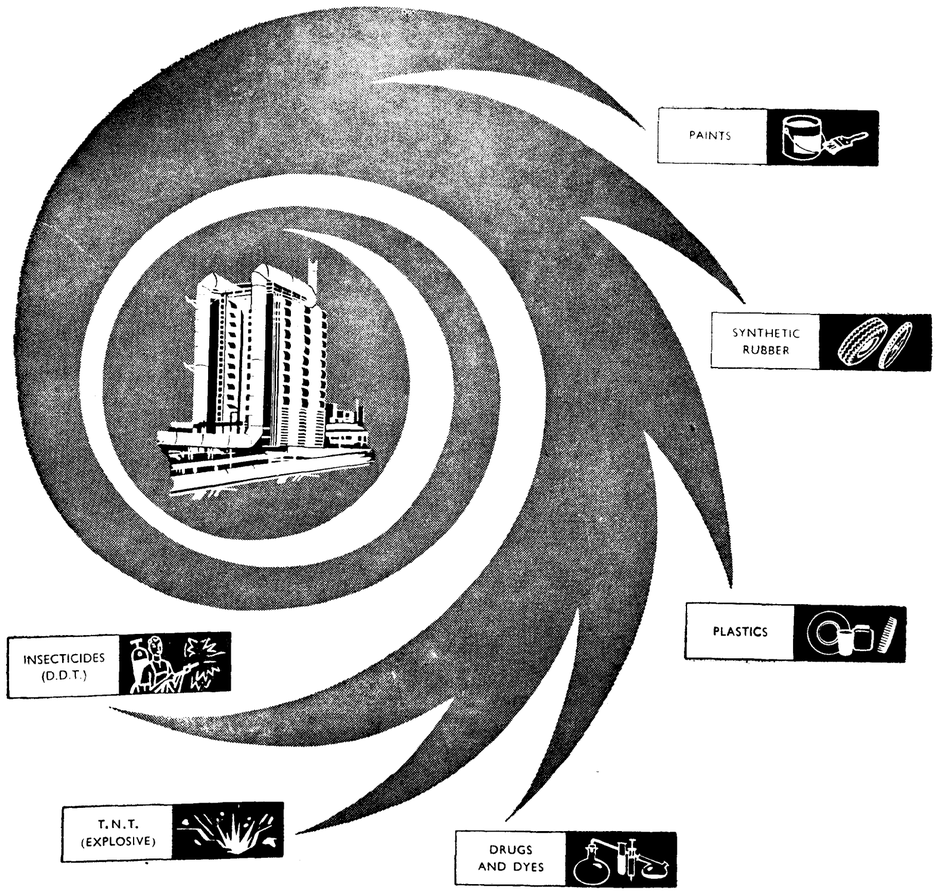
A SIDELINE OF STEEL

... By-product Coal Chemicals



A steel plant is a many-sided affair. Various iron and steel products are, of course, the main items and their effects on the economy are there for all to see. Billets from Bhilai, for instance, have already toned up an important industry in the country—the Re-rolling Mills.

But the steel plants at Rourkela, Bhilai and Durgapur have another way—somewhat indirect, but no less important—of influencing the country's economy. What may be called a sideline of steelworks, the By-product Plants attached to the coke ovens produce a variety of coal chemicals from the coke oven gas and crude coal tar obtained during the carbonisation of coal into coke. When they go into full production, these By-product Plants, set up at a cost of Rs. 20 crores, will be the biggest chemical production complex of their kind in the country.

Producing eleven different varieties of chemicals, worth Rs. 5 crores a year, the By-product Plants will stimulate a wide range of manufacturing activities. Benzene will, for instance, go into the manufacture of plastics and insecticides like DDT and will feed the proposed synthetic rubber project in Uttar Pradesh. Increased supply of creosote oil, now in short supply, will enable the Railways to treat more wooden sleepers for railway lines. The proposed intermediate dye project and the synthetic drug manfacturing projects are primarily based on by-product coal chemicals from Hindustan Steel. Other industries to be served by these chemicals are paints, disinfectants, aluminium smelting and explosives.

The coal chemicals from three plants :

BENZOL PRODUCTS	ESTIMATED ANNUAL OUTPUT
Benzol/Benzene	6 million gallons
Toluene	1½ million gallons
Xylene	500,000 gallons
Solvent Naphthas	300,000 gallons
TAR DISTILLATION PRODUCTS	
Naphthalene (Hot Pressed)	9,000 tons
Anthracene (Crude)	3,000 tons
Phenol—Pure	1,000 tons
Cresol—Pure	500 tons
Xylenol—Pure	150 tons
Creosote Oils	10,000 tons
Road Tars and Pitches	50/80,000 tons

METTUR CHEMICAL & INDUSTRIAL CORPORATION LIMITED

EXPANSION SCHEME MAKING GOOD PROGRESS

DR. P. S. LOKANATHAN'S SPEECH AT ANNUAL GENERAL MEETING

THE Twenty-third Annual Meeting of the Mettur Chemical and Industrial Corporation Ltd. was held at Mettur Dam R.S. on 12th September 1960. In the absence of the Chairman, Dr. P. S. Lokanathan, Mr. S. Narayanaswamy, Director, presided over the meeting and read the Chairman's speech. The Chairman pointed out that the first stage of the Company's expansion scheme had been successfully completed. The programme to double the caustic soda production was making good progress. In order to supplement the financial requirements of the scheme, the Company, he said, proposed to issue additional capital to the tune of Rs. 20 lakhs.

The following is the full text of Dr. Lokanathan's speech:

"GENTLEMEN,

"Once again, I have great pleasure in welcoming you all to the twenty-third annual meeting of the Company.

"With your permission. I will take the annual report and accounts as read, since they have been with you for some time. The past year has recorded better results than the previous year, in spite of several handicaps in regard to maintaining continuous and full production. The first stage of our expansion was fulfilled successfully, the production of caustic soda having been stepped up to 20 tons per day and stable bleaching powder to 30 tons.

"Now that we have commenced production of bleaching powder at a daily rate which should take care of the current consumption in India, it is our earnest hope that the Government of India will take steps to ban the imports of bleaching powder into India.

"We have also put up an electrolytic potassium chlorate plant with a capacity of two tons per day, fabricated and designed mostly by the staff of our research department; but due to non-availability of power we had to defer the commencement of production till the other day when the plant was inaugurated by the Chief Minister of Madras on 30th August 1960. This will meet the growing demand in the country for this chemical which finds the largest application in the manufacture of matches on a cottage industry basis—a large cottage industry in South India.

"As mentioned in the Directors' report, we are considerably affected by the low price fixed by the Government of India for our stable bleaching powder. However, we hope that our efforts to get a revision in price will soon bear fruit.

Additional Capital

"I am glad to inform you that our expansion scheme to double our caustic soda production is making good progress. We have just drawn the first instalment of our loan of Rs. 15 lakhs from the Industrial Finance Corporation of India, who have sanctioned us a loan of Rs. 33 lakhs. To supplement our financial requirements, consequent on increase in the cost of plant and equipment as well as other additions, your Directors have decided to issue, from out of the unsubscribed capital, Rs. 20 lakhs in the form of 2 lakhs of equity shares of Rs. 10 each at par, which issue I feel sure will meet with an overwhelming response as before from you.

"Your Directors have once before, after the commencement of the Companies Act 1956, with the unanimous approval of the shareholders of the Company, recommended the issue of equity shares to the holders of preference shares as well. The present issue of Rs. 20 lakhs face value equity shares represents one-fourth of the existing paid-up capital of the Company which includes Rs. 20 lakhs face value preference shares. Your Directors have thought it fair to ask for and obtain your sanction as on the previous occasion for extending the rights to the new issue, to preference shareholders also, being in conformity with what we have done before.

"Another interesting point to which I would like to draw the attention of this meeting in this context, is that out of a total of 770 preference shareholders on the Company's rolls today, 553 such shareholders are also holders of equity shares of the Company. These 553 preference shareholders, hold among themselves 13,561 shares or approximately two-thirds of the Company's preference capital. Only 217 preference shareholders do not happen to hold equity shares and they hold one-third of the preference share capital of the Company. The Directors have thought it appropriate that the new issue of equity shares should be offered both to equity and preference shareholders and seek your sanction for making the new issue in this manner.

"Orders for the entire plant and machinery for the expansion have already been placed and the first shipments have also started arriving.

Caustic Soda Production

"Production of caustic soda in the country during 1959-60, at 77,555 tons, was nearly 30 per cent. higher than 1958-59 production, which was 60,316 tons. Consumption of caustic soda, which was estimated at 200,000 tons by the end of the second Plan period is expected to increase to 340,000 tons by the end of the third Plan period, that is, 1965-66. Government are taking steps to license necessary additional capacity, consistent with the availability of foreign exchange. Meanwhile, the country is still importing large quantities of caustic soda to meet the gap between demand and production. Imports during 1959 stood at about 147,000 tons, being over double the 62,000 tons imported in 1958. Large releases of caustic soda to the market by the State Trading Corporation of India, through whom all imports are canalised, also created serious distribution problems to indigenous manufacturers on account of sudden gluts in the supply position. The matter was discussed by the industry with the State Trading Corporation of India, who took a helpful attitude by stopping releases for some time and later agreeing to offer regular, but restricted, quantities periodically which would be sufficient to fill the gap. The distribution position has now considerably improved as a result. It is inevitable when external agencies are relied on to make supplies of caustic soda for purposes of rectifying shortages within the country, that shipments of caustic soda should arrive in the country at spasmodic intervals and in such quantities as to have no relation to the requirements of the Indian consumer and cause imbalance in distribution. This naturally results in distress sales by the indigenous producers at a time when the ceiling prices fixed by the Tariff Commission leave a bare margin of profit to the producer, and more particularly at a time when the prices of the plant and machinery are going up day by day and consequential depreciation provisions call for a greater allocation out of gross earnings.

Power Supply

"The power supply position also has shown an improvement during the year by the bringing into commission of the Madras Government's Kundah hydro-electric scheme. However, with the rapid industrialisation which is taking place and the increasing demands for agricultural operations, the problem of overall power shortage still continues to exist. In this context, the Madras Government's Mettur hydro-electric tunnel scheme, which was recently inaugurated by the Chief Minister of Madras, is a most welcome development and with the commencement of operations by the Neyveli thermal power scheme, it is hoped that the power supply position will show further improvement. The Madras Government has also been impressing on the Centre the need for atomic power development in the State, having regard to the restricted possibilities for further power development, and it is hoped that the Centre will consider favourably the claims of Madras State in this respect.

"I should like to make reference also to the steadily increasing food prices, as a result of which there has been a steady and progressive increase in the cost of living index, so that the monthly dearness allowance paid to workers and staff rose to Rs. 65.25 at the end of the year from Rs. 58.87 at the beginning. The index is still mounting and this must be regarded as a disquieting phenomenon.

Preference Dividend

"You will have observed from the report of the Directors, the manner of computation of the net dividend distributable to the preference shareholders. The Board has endeavoured to do justice to the holders of preference shares, while conforming to the changed taxation law relating to 'tax-free' preference shares. While in effect the net dividend receivable by the preference shareholders is lower than what it was in previous years before the law was changed, it was inevitable that the computation should be made in this manner, after the change in income-tax law was made.

"I am, however, happy that the Central Government has introduced legislation to change the Income-tax Act in such a manner as to lay down clearly the procedure to be followed by companies that have 'tax-free' preference shares in their capital structure and which I expect will mitigate the injustice to the holders of 'tax-free' preference shares. I hope this Bill will be passed in the current session of Parliament.

Tax Exemption

"There have been enquiries from some shareholders as to whether the benefit of exemption availed of by the Company under Section 15(c) could not be passed on to them in the form of a direct reduction in the rate of tax that is deducted from the equity dividend. It is true that under Section 18(3F) of the Income-tax Act, an authority rests with the Company to ascertain the total relief under Section 15C and to determine with the help of the Income-tax Officer the amount of tax that can be deducted after adjusting the relief provided under Section 15C. However, such a procedure in actual practice will take time, as this will involve a reference of the audited accounts, after they are got ready, to the Income-tax Officer and in getting a ruling from him as to the actual quantum of income-tax which can be deducted from the 30 per cent. statutory deduction under sub-section 3D. This would entail delay in payment of dividend.

"The Company adopted the procedure of ascertaining the approximate relief available to them under Section 15C and deducted this amount from the total of tax provision that is made from out of the year's profits. You will appreciate that this resulted in increasing the amount available for distribution, which enabled us to decide upon a larger percentage of gross dividend than would have been possible if the approximate abatement under Section 15C had not been taken credit for in computing tax provision. This has resulted in the Board being able to recommend a rate of net dividend approximately equal to the net dividend paid in the previous year.

"I must in conclusion express my warm appreciation of the very cordial relations subsisting between labour and management and the great care and drive exercised by the management to maintain a high level of production in which all the workers and staff have given their unstinted co-operation.

"I would move that the Directors' report and audited accounts for the year ended 31st March 1960 be adopted."

Note: *This does not purport to be a report of the proceedings of the annual general meeting.*

a hive of activity

Indo-British co-operation at Durgapur is building a modern integrated steelworks for India, with a production capacity of one million ingot tons and provision for a greater output under the Third Plan. In this enterprise, thirteen leading companies of Britian's steelworks engineering industry, working jointly as ISCON, have made available their technical know-how, and are training up in their U.K. factories hundreds of Indian technicians who will man this industrial giant.

BRITISH COMPANIES WORKING FOR INDIA

IS GENERAL INSURANCE A "TOTAL LOSS"?

ROLE OF CONTROLLER OF INSURANCE

By "Insurer"

THE general insurance business is today at its lowest since its inception. Some of the companies have shut their doors, some have gone into their shells, that is, they are writing only their Directors' business, while others are gasping for breath wondering whether it is worthwhile running an insurance company with the hazards involved. In other words, the going is not good and, as is usual, the blame for it rightly or wrongly has to be shoved on someone. In the case of insurance, the person to suffer is the Controller of Insurance.

In this article, an endeavour is made to look at the existing state of affairs from the Controller's angle and it is earnestly hoped that the insurers will realise that to throw the blame on somebody's doors is incorrect and that the fault lies with themselves.

The Insurance Amendment Act 1950 has created an Executive Committee, the functions of which are mainly:

(1) "To aid and advise insurers carrying on general insurance business in the matter of setting up standards of conduct and sound practice...."

(2) "To render advice to the Controller in the matter of controlling the expenses of such insurers carrying on business in India...."

(3) "To bring to the notice of the Controller the case of any such insurer acting in the manner prejudicial to the interest of holders of general insurance policies."

It will be apparent that the orbit of this dominant and supreme body, the Executive Committee, is very wide. It has on its shoulders the responsibility of guiding the destinies of insurers and seeing that the companies run their business in a befitting manner. It will be worthwhile to remember that the Committee consists of sixteen members, of which as many as thirteen are from the trade. The remaining three are nominated by the Central Government, one of whom is a non-official not connected with the trade, and, of the remaining two, one is appointed as the chairman of the Committee.

Why Blame the Controller?

Usually, it is alleged that the Controller dominates the proceedings of this body. This may no doubt be true and it cannot be expected to be otherwise. But, surely, the Controller would not dare take any steps which were unanimously opposed by the thirteen representatives of the trade. If there were any fundamental differences on any issues, these members should have resigned *en bloc*. It is learnt that not even one member of the Executive Committee has resigned during the last ten years on account of basic differences over the steps proposed by the Controller. Is not one led by the above facts to conclude that the trade has acquiesced in the actions taken by him so far and that it is wrong to deride the Controller on this score?

The Controller of Insurance has, in fact, given the companies enough time to put their houses in order. He is of the opinion that as the insurers are the persons who have to run the business from day to day and as they are the victims of the sorry state of affairs, they should themselves agree and put forward schemes to him which are acceptable to all. The fact that the 1952 Code of Conduct and the 1957 one are voluntary proves the issue. Rather than introduce legislation, the Controller has felt that the trade should regulate itself. But it is a matter of deep sorrow that the companies have not risen to the occasion.

It is not that the insurance business is bereft of experienced leaders. There are some capable persons who have devoted their entire life to this line. But the human weakness of placing self above others can be seen at its best amongst the insurers. It goes beyond comprehension as to why, during all these years, the companies have not been able to find a workable solution agreeable to all. Each one of the insurers is frustrated and is suffering in silence. Yet no remedy has been evolved. The day all the companies sit together and bury their group rivalries, the solution to the intricate problems of the trade will be solved. Unfortunately, today, each of the two giants in the insurance trade, with their satellites, put up schemes which would be beneficial to them alone, which they alone can implement with ease. The one group tries to outdo the other, with the result that none has benefited so far. This narrow-mindedness of theirs has brought the position of the industry to what it is today.

The only successful section of the 1957 Code of Conduct (which pertains to collection premiums) is that which has been unanimously agreed to. The other sections have failed miserably as the insurers are not fully united on those issues. The question of field workers is a point which will illustrate this statement. It is an acknowledged fact that their utility has ceased and, leaving aside a few genuine field workers, the rest are being used as a mode for rebating. In spite of this glaring phenomenon, the system continues to exist, as one of the strong groups is in favour of it.

Unenviable Position

The Controller of Insurance is placed in an unenviable position at present. As long as the Insurance Act continues in its present form, he has to see that it is implemented *in toto*. The criticisms that have been heaped on him for granting latitudes to companies have forced him to adopt a stricter attitude. Companies have vehemently protested against his recent actions to tighten up the administration of the Insurance Act. The case of issuing of warnings to extravagant insurers can be taken as an example. During the last few years, several companies have exceeded the limits and it is but right that, as required by the Act, warnings should be issued to them, so that, in future, they may be careful. Instead of realising the reasons for the Controller's actions, companies are accusing the Controller of using his powers recklessly. It must be appreciated that, if the Controller is lenient and if at any time any discrepancies are found in the working of companies, he has to face a very wide and, nowadays, awake public. His accommodating the companies may one day lead to a volley of questions being asked in Parliament. As such, it will be realised that his job is an intricate and thankless one.

Another point on which one must sympathise with the Controller of Insurance is regarding the unfortunate cases where some manipulations, adjustments, or irregularities are detected in the working of the companies. Such instances have been rare in general insurance business; yet it would be worthwhile to analyse the Controller's position in this respect. The Controller's office rightly or wrongly is situated in Simla, a nice and cool but a remote city, a place which is far from the hubbub of the insurance world. He has to examine the working of the companies from the printed balance-sheets and the supporting returns that he receives. These accounts and returns are all audited by competent auditors whose integrity cannot be questioned. If these auditors who have access to all the books and also possess wide experience are unable to trace any irregularities, is it not futile to expect the Controller to fathom such errors from printed returns alone? The annual accounts do not after all disclose how, why, and under what circumstances certain transactions took place. Unless and until the Controller has some indication or even a hint of gross bungling being practised, he cannot be expected to move in the matter.

Inspection

It was felt some time ago that a surprise inspection of the books of companies would reveal some glaring irregularities and it was therefore decided to get the accounts and books of companies checked by independent auditors, that is, auditors not in any way connected with the company. It must be said to the credit of the insurers that such investigations did not reveal much and it was thought fit to drop it altogether.

The only way in which manipulations can be traced seems to be to have a very extensive inspecting machinery. The Controller of Insurance does not have at present an investigating staff worth the name. In fact, even a vast checking machinery cannot guarantee against unscrupulous persons committing irregularities. The recent happenings in the banking world is an indication. In spite of the composite inspection personnel at the disposal of the Reserve Bank some misappropriations are alleged to have taken place. As such, in the insurance sphere and under the existing conditions, if some companies close or commit blunders, the Controller should not be discredited for it.

The above remarks, it is to be hoped, will bring out the delicate position of the Controller. In fact, to criticise him is absolutely wrong. The remedy for the ills of the insurance industry lies with the trade itself. The main function of the Controller is not that of an investigator. He has to guide the companies on right lines. He can only lay down rules and regulations for running the companies in a sound and dignified manner, but it is up to the companies to run their business efficiently and in a way which will inspire confidence amongst the public. The adverse publicity recently received by the general insurance business has aided the public in the belief that the general insurance companies are not run in a straightforward manner, that at every stage manipulations are committed and that the business has come down to such a standard that God-fearing and honest people should quit this business.

It is the duty of insurers to see that the prestige of general insurance companies is restored and that they take their rightful place amongst the financial and economic institutions of the country. This can only be done if all the companies unhesitatingly unite in a spirit of sacrifice and consider the interest of all companies as their own. Then alone there is a chance of "salvaging" the general insurance business; otherwise, it will sooner or latter be a "total loss."

CLOSURE OF NEW ASIATIC

Commenting on the closure of the New Asiatic Insurance Company Ltd. we had, in one of our previous issues (*vide* page 3 of *Commerce* dated 2nd July 1960), ventured to ask whether it was a symptom of the malady afflicting general insurance in the country. Giving no credence to all sorts of wild rumours then current, we tried to correlate the closure of some units, of which the New Asiatic of the Birla group was prominent, to the difficulties experienced by the general insurance business as a whole. Information that came our way subsequently showed that there was something more than meets the eye. This was confirmed later in Parliament by the Government. In answer to a question in the Lok Sabha a few days before its adjournment, Mrs. Tarakeshwari Sinha, Union Deputy Minister for Finance, disclosed that an investigation conducted by a team of Government auditors brought out the following malpractices and manipulations:

1. Misappropriation of funds by
   (*a*) showing false payments of claims or commission;
   (*b*) showing lump sum withdrawals of money as expenses of management without indicating proper details; and
   (*c*) making false entries in books.
2. Large suppression of losses by making false entries in the books which were reversed in convenient instalments in subsequent years.
3. Large purchases and sales of shares of allied concerns, not required in the ordinary course of insurance business.
4. Falsification of returns furnished under Sections 28 and 28A of the Insurance Act in respect of investments by excluding from them purchases and sales of various shares.
5. Falsification of books of accounts and the annual returns by showing loans advanced as investments in shares and debentures and improper accounting of the interest received on the loans.
6. Falsification of the books of accounts by showing an investment in shares as a loan and, in the process, depriving the Company of a substantial capital gain on the shares.
7. Advance of loans to various parties in contravention of the provisions of Section 29 of the Insurance Act and consequently falsification of accounts by false entries passed at the end of each year to suppress this fact.
8. Utilisation of life funds by the General Department of the Company in contravention of Section 10(3) of the Insurance Act during the years 1951 to 1954.

A formal communication, according to the Minister, was sent to the Company informing it of the findings of the auditors and giving it an opportunity to explain. The report was, thereafter, examined in the light of the explanation received from the Company in consultation with the Ministry of Law and it was felt that further investigation would be necessary to locate responsibility for the acts which the auditors consider to be wrong. It was, therefore, decided to appoint two directors on the Board of Directors of the Company under the powers vested in the Government by Section 48C of the Insurance Act."

It was only after this decision of the Government that the Company's management decided to stop doing any fresh business. Mrs. Sinha also revealed that investigation by auditors into allegation of malpractices in the Ruby General Insurance Company, Ltd., another company belonging to the same group, were completed and a report was already submitted to Government. She, however, did not disclose the findings of this audit.

JOLLYBOARD India's finest hardboard

At surprisingly low prices

JOLLYBOARD, the top-quality Indian hardboard equal to the world's best, has a thousand uses in the factory, office and home. But it costs the same as, if not less than, inferior substitutes.

Thicknesses : 3 mm, 4.5 mm, 6 mm.

Sizes : 12'x4', 8'x4', 6'x4', 4'x4'

Insulation Board will be available soon

Send for free samples today!

JOLLYBOARD

* Very strong, light and durable; is made from wood-fibre, compressed into solid sheets — to British Standard Specification. * Comes in many sizes, thicknesses and attractive surfaces; a versatile building and decorating material. * No laminations, plies or knots; won't split or crack. * Easily sawn to any shape, easily affixed to any surface. * Quicker to work with, finer in finish. Takes paint, varnish or polish perfectly. * Certified by the Government Test House, Calcutta.

CENSUS OF MANUFACTURING INDUSTRIES

STATISTICAL POSITION IN 1957

THE Census of Manufacturing Industries in India, published every year by the Joint Director (Industrial Statistics), Central Statistical Organisation, Government of India, Calcutta, seeks to provide comprehensive data on the structure and pattern of 28 selected Indian industries. For the purpose of the Census, only factories registered under the Indian Industries Act, 1948, which employ 20 or more workers on any day and use power are taken into account. The latest available census—twelfth in the series—relates to the year 1957. Although it is concerned with a period which is two years out of date, it contains valuable basic data that are not easily available from other sources. Besides, the year 1957 coincided with the first year of the second Plan—a phase which is bound to go down in India's economic history as a turning point in its industrialisation.

The total number of registered units in the 28 industries was 7,754 in 1957. The data in the Census, however, cover only 6,548 factories (85 per cent.); the other units did not submit returns. The total number of persons employed in these factories aggregated over 1.81 million (including 207,134 persons other than workers). Their salaries, wages and other benefits amounted to Rs. 258 crores. The value of gross production was Rs. 1,646 crores. The value added by manufacture amounted to Rs. 445 crores. (Here the term "value added by manufacture" means "that part of the value of the product, which is created in the factory and is computed by deducting from the gross ex-factory value of output, the value at factory of fuel and materials used, work done for factory by other concerns and depreciation of fixed assets.") The value added per person (a rough measure of productivity) was Rs. 2,453 in 1957. The total capital invested in these industries was to the tune of Rs 1,063 crores, giving a capital-output ratio (productivity of capital) of 0.46 per unit of capital. The following table presents a consolidated picture of aggregates covering the 28 industries in 1957:

TABLE I

(Value in crores of rupees)

Number of factories		
(a) Registered	.. ..	7,754
(b) Returns submitted	.. ..	6,548
Average number of days worked	.. ..	258
Number of persons employed	.. ..	1,813,323
Productive capital	.. .. .. (Rs.)	1,062.61
(a) Fixed capital	.. .. .. (Rs.)	512.41
(b) Working capital	.. .. .. (Rs.)	550.20
Salaries, wages and benefits	.. .. (Rs.)	258.32
Materials, fuel, electricity, etc., consumed	.. .. (Rs.)	1,136.28
Amount paid to other concerns for work done for the factory	.. .. .. (Rs.)	9.37
Cost of transport of materials, fuel, etc., *to* factory and commission to purchasing agents	.. .. (Rs.)	12.55
Total production	.. .. (Rs.)	1,646.21
Amount received from others for work done for them	.. .. .. (Rs.)	13.26
Cost of transport of products *from* factory, commission to selling agents	.. (Rs.)	19.30
Value added by manufacture	.. .. (Rs.)	444.66

An industry-wise breakdown of the aggregates is provided in Table III at the foot of this article. It will be seen from this table that "cotton textiles" constitute the biggest single industry from the point of view of capital outlay, employment provided, total production and the value added by manufacture. It has involved a capital outlay of Rs. 317 crores accounting for 30 per cent. of the aggregate capital of the 28 industries. It gives employment to nearly 762,000 persons, accounting for 42 per cent. of the total employed persons in all the 28 industries. It manufactures goods worth Rs. 473 crores—just about 29 per cent. of the total production of all the relevant industries. And the value added by manufacture comes to Rs. 146 crores or about 33 per cent. of the aggregate value added by manufacture in all the selected industries. These facts are brought together in Table II which also gives the relevant figures in respect of five other major industries, each accounting for a total production of more than Rs. 100 crores.

The data provided by the Census can also be utilised for working out labour and capital productivity. As for labour productivity (figures for which are given in the table covering six major industries), it is measured by the average value added by manufacture per person. It may be noted here that, for inter-industry comparison of productivity, it is not advisable to take "gross physical output per worker," since the units of measurement of physical output are not uniform for all industries and all products. The approach based on "gross value of output per worker" will also be misleading, inasmuch as the proportion of raw materials entering into the final product varies considerably, that is, from over 90 per cent. in the case of processing industries, such as vegetable oils and rice milling, to just about 25 per cent. in the case of ceramics and 40 per cent. each in respect of cement, and iron and steel. It may be seen that, although cotton textile industry stands head and shoulders above other industries in respect of the quantum of capital and output, in the sphere of labour productivity, it yields place to other industries (included in Table II), inasmuch as the value added per person in that industry was only Rs. 1,920, as against Rs. 5,670 in iron and steel and Rs. 2,790 in engineering.

In respect of capital productivity or capital-output ratio (figures for which are also given in Table II covering six major industries), textile industries have fared better, securing the second place. The productivity of capital in the case of that industry is computed at 0.46 per unit of capital employed. This compares favourably with 0.44 in iron and steel and 0.42 in jute textiles, but is lower than that of engineering.

In addition to working out labour and capital productivities, the data in the Census can be employed to appraise the cost structure, trend in general profit margins, etc.

Some general observations on the Census are called for at the end. It is a matter of regret that as much as 16 per cent. of the registered factories (1,206 units) did not respond to the questionnaire of the Census authorities in 1957, though the Census has been a statutory obligation. In 1956, it may be recalled, in this connection, that the proportion of defaulters was only 7 per cent. of the registered factories. Such variations are hardly calculated to ensure strict comparability of data from year to year. It is to be hoped that the Central Statistical Organisation will devise suitable measures for ensuring the fullest co-operation of all the registered factories so as to attain cent per cent coverage.

INDO-NEPAL TRADE TREATY

A new treaty of trade and transit has been signed between the Government of India and Nepal, replacing the one signed in July 1950. It will come into force from 1st November 1960 for a period of five years and extended for another five years thereafter, subject to such modifications as may be agreed upon mutually, unless terminated by either party by giving notice of not less than one year in writing. The treaty seeks to expand the exchange of goods between the two countries, encourage collaboration in economic development, and facilitate trade with third countries. A significant feature of the treaty is the "goal of a common market" between the two countries envisaged in it, with a view to strengthening economic co-operation between them. This object is sought to be realised by the provision for exempting from customs duties and other equivalent charges, as well as from quantitative restrictions, "goods originating in either country and intended for consumption in the territory of the other," subject to such exception as may be mutually agreed upon.

According to the provisions of the treaty, while Nepal will have the right to formulate its own export and import policies, it has been agreed that these will be devised and enforced in a manner that will not injure Indian interests. Besides, any divergence by Nepal from the import policy followed by the Government of India will be preceded by mutual consultations. Nepal is expected to make half-yearly announcements on import policy, as is the case in India. A bi-annual exchange of ideas with this country is, therefore, expected to take place on the subject. The two countries will seek to ensure uniformity in the matter of their export and import duties. Otherwise, large-scale smuggling across an unregulated 500-mile border may follow. Again, if the export of a particular item is banned by India, Nepal will follow suit. Payment for goods and services between the two countries will continue to be made as hithertofore.

In respect of transit, goods intended for import into, or export from, the territories of either country from or to a third country will be accorded freedom of transit through the territories of the other party. Traffic in transit will be exempt from customs duty and from all transit duties or other charges imposed in respect of transit, except reasonable charge for transportation and such other charges as are commensurate with the costs of services rendered for the supervision of such transit.

TABLE II

(Value in crores of rupees)

Industry	Number of persons employed	Capital	Production	Value added by manufacture	Value added per unit of productive capital	Value added per person employed
						Rs.
Cotton textiles	761,758	317.43	473.40	146.06	0.46	1,920
Jute textiles	245,309	85.33	133.24	35.91	0.42	1,460
Sugar	117,059	91.33	112.11	29.17	0.32	2,490
Iron and steel	91,983	119.28	117.72	52.17	0.44	5,670
General and electrical engineering ..	189,054	102.18	147.61	52.68	0.52	2,790
Vegetable oils*	44,964	28.29	129.19	5.40	0.19	1,200

* Excluding edible hydrogenated oils.

TABLE III: *Industry-wise Breakdown*

(Value in crores of rupees)

Name of industry	No. of factories covered*	Productive capital		No. of persons employed	Salaries and wages	Materials, fuel, electricity, lubricants consumed	Total production	Value added by manufacture

"Oil has played a significant role in helping the country increase her agricultural yield... as a source of motive power for bulldozers engaged in the clearing of virgin land, in the construction of dams and irrigation systems, and in mechanized cultivation. The place the tractor occupies in Indian agriculture today owes something to the pioneering work done by Burmah-Shell in the early 1930's."

Tractor Cultivation

ALUMINIUM INDUSTRIES MAKE GOOD PROGRESS

GROSS PROFIT TREBLES IN FOUR YEARS

THE financial and production results of the Aluminium Industries Ltd. (Managing Agents: Messrs. Seshasayee Brothers (Travancore) Private Ltd., Kundara, Kerala State) for the year ended 31st March 1960 make impressive reading. Production has recorded a marked rise, the output of bare aluminium conductors having gone up from 26,300 miles (in 1958-59) to about 34,400 miles and that of covered aluminium conductors from 3.5 million core-yards to 7 million core-yards. The production of aluminium rods, accessories and tools is also said to have been maintained at a higher level. The gross profit has shot up from Rs. 36.86 lakhs (for 1958-59) to Rs. 51.99 lakhs for 1959-60, representing an increase of Rs. 15.13 lakhs or 41 per cent., thus maintaining an unbroken upward trend since 1955-56, when the gross profit stood at no more than Rs. 16.96 lakhs. In other words, the gross profit of the Company has more than trebled itself, within a short span of four years. This striking improvement is not the result of profiteering by the Company, but is the outcome of planned expansion in productive capacity.

Consequent on the sharp rise in earnings, the Company has been able to make adequate provision for depreciation in consonance with the large capital expenditure incurred during the year under review, as also to provide for the entire income-tax liability of Rs. 16 lakhs out of the year's profit. Last year, it may be noted, the Company had to draw Rs. 2.85 lakhs from the deferred taxation reserve, in addition to the provision of Rs. 10.35 lakhs made out of the profit, to meet fully the residual income-tax liability after availing itself of the advantage, in full, of the development rebate, to which it was eligible on the new plant and machinery at Hirakud. After providing for managing agency commission, the net profit, at Rs. 19.81 lakhs, represents an increase of Rs. 5.75 lakhs over that for the previous year. Out of the net profit, a sum of Rs. 4.37 lakhs has been ploughed back and this represents the addition to the development rebate reserve. As in the previous year, the Company has availed of, in full, the benefit of the development rebate on the plant and machinery commissioned during the year at Hirakud. As a result of such large addition to the statutory reserve, the Company has not been able to make any addition to its free reserves for the second year in succession. It could have done so, but it would have meant a cut in the net dividend, which is now being maintained. The Directors have recommended a distribution of 18 per cent., subject to deduction of tax, which is equivalent to a net dividend of 12.6 per cent., as compared with 12.5 per cent. free of tax, paid for the previous year.

The progress made by the Company since 1956-57 is well brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale proceeds	3,40.72	3,35.89	3,75.85	3,17.21
Closing stocks	74.60	40.24	34.03	13.51
Raw materials and stores consumed	2,73.55	2,61.48	3,24.08	2,54.12
Other expenses	15.52	37.79	16.78	38.92
Gross profit	51.99	36.86	35.48	24.32
Managing Agents' commission	3.98	2.71	2.74	1.77
Provision for—

	(18%)*	(12½%)	(12½%)	(12½%)
Carry forward	1.52	0.49	0.50	0.66

* Subject to deduction of tax.

The Company's Hirakud plant is now producing aluminium rod in excess of its requirement at Hirakud. The surplus is being sold to other conductor manufacturers. As the demand for covered aluminium conductor is rapidly expanding, the Company is making arrangements to enhance production. Despite the intense competition in the field of bare aluminium conductor, the demand for the Company's product is said to be encouraging. With the formal inauguration of the Company's rod mill at Hirakud, the factories at Hirakud have been brought to a fully productive stage. The increased capacity for aluminium rod and bare conductor has enabled the Company to offer more attractive deliveries to its customers.

The Government of India has granted a licence to the Company for the manufacture of high tensile galvanised steel wire at Kundara. The requisite foreign exchange for the importation of machinery and equipment has also been sanctioned and import licences secured. The Directors observe that the work on this project has commenced and that they expect this factory to be in operation early in 1962. The finance for this project will be mainly drawn from the issue of 200,000 ordinary shares of Rs. 10 each at a premium of Rs. 2.50 per share made in July-August 1960.

While the general outlook for the Company is thus promising, investors should take note of the fact that the levy of an excise duty of Rs. 300 per metric ton on indigenous production of aluminium ingot along with a corresponding countervailing import duty on imported aluminium ingot and rod in the last Union budget has resulted in an appreciable increase in the cost of manufacture and a consequent rise in the prices of aluminium conductors of Indian manufacture. As against this, conductors of foreign manufacture can be obtained at the same price as before the imposition of the excise and the countervailing import duties. The Company is, therefore, in a disadvantageous position and the profit-margin for the current year may be less. The Directors, however, hope that this factor will be taken into consideration by the Tariff Commission when it takes up the question of continuance of protection to the bare aluminium conductor industry beyond 31st December 1960.

The financial position of the Company is quite satisfactory, in that the reserve funds as at the end of March 1960, at Rs. 41.36 lakhs, represent more than 50 per cent. of the paid-up capital of Rs. 80 lakhs. The paid-up capital has since been raised to Rs. 100 lakhs and the reserves too stand increased at Rs. 46.36 lakhs consequent on the addition of a share premium of Rs. 5 lakhs obtained on the recent rights issue. In consonance with the expansion of the Company's activity, borrowings, too, have gone up from Rs. 56.87 lakhs to Rs. 119.38 lakhs and other current liabilities from Rs. 90.95 lakhs to Rs. 126.72 lakhs. Nevertheless, the total liabilities are more than adequately covered by current assets at Rs. 280.48 lakhs. There has been an addition of the value of Rs. 27.76 lakhs to the gross block during the year (this is on top of Rs. 36.93 lakhs added in the previous year), bringing the total cost to Rs. 138.72 lakhs. This has been written down to Rs. 83.20 lakhs. Construction works in progress amount to Rs. 3.78 lakhs.

With the additional capital raised in July-August this year, the Company's authorised capital of Rs. 1 crore stands fully issued and subscribed. In order to maintain the Company's pioneering position in the electrical manufacturing industry, it may become necessary to implement further development programmes, involving additional capital. The Directors have, therefore, considered it desirable to increase, for the present, the authorised capital to Rs. 3 crores.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 25 *cum* final *div.* At this rate, the yield works out to 5.2 per cent. per annum, free of tax.

ROHTAS INDUSTRIES LIMITED

The Directors of the Rohtas Industries Ltd. have declared an interim dividend of Rs. 2 per share or 20 per cent. (subject to deduction of tax) on ordinary shares for the year ended 31st March 1960. This will, in fact, constitute the full dividend for the year. The dividend for the previous year was 15 per cent., without deduction of tax. Since a portion of the profit of the Company for the relevant period would be exempt from tax under Section 15C of the Income-tax Act, no income-tax or super-tax will be payable by the shareholders on such portion of dividend. The Company is said to have requested the Income-tax Officer to determine the same as required by law. It is, however, understood that, according to the Company's estimates, deductions of income-tax required under Section 18(3D) of the Income-tax Act may be about 50 nP per share, as against the full incidence of deduction of 60 nP on 30 per cent. basis, leaving a net dividend of Re. 1.50 per share. In fact, the gross dividend for the year works out higher than the dividend paid by the Company in previous years as full grossing was not available to the shareholders in such previous years also, due to the entire profits of the Company being not liable to tax.

The dividend is being paid on 15th October 1960 which would enable the shareholders to utilise the amount for payment of subscription money for right shares, the date for which has also been extended to 18th October 1960.

KHATAU MILL DOUBLES DIVIDEND

GROSS PROFIT CROSSES ONE-CRORE MARK

THE recommendation of the Directors of the Khatau Makanji Spinning and Weaving Company Ltd. (Agents: Messrs. Khatau Makanji & Co. Private Ltd., Bombay) to double the dividend on ordinary shares to 32 per cent. for the year ended 30th June 1960 from 16 per cent. paid for the previous year, both subject to deduction of tax, is fully justified by the highly encouraging results of the year under review. The gross profit of the Company has just crossed the one-crore mark, perhaps for the first time in its history, to stand at Rs. 100.15 lakhs, representing an increase of Rs. 37.19 lakhs or 59 per cent. over that for 1958-59. This is on top of a rise of Rs. 33.84 lakhs recorded in the previous year. The dividend is being doubled after ploughing back more than 50 per cent. of the net profit, which has gone up from Rs. 24.51 lakhs to Rs. 42.67 lakhs, even after making a sizably larger provision for taxation, at Rs. 34.20 lakhs, or more than a third of the gross profit, as against only Rs. 18.90 lakhs provided last year. The provision for depreciation is unchanged at Rs. 14.74 lakhs, while in consonance with the increased earnings, the Agents' commission is higher at Rs. 8.54 lakhs, as against Rs. 4.82 lakhs.

The higher earnings of the Company were due to the enlargement and expansion of the manufacture of superfine varieties to meet the growing demand in the market for its well-known qualities. This in turn was enabled by the additional supply of foreign cotton, thanks to the liberalisation of imports of such cotton. The Company could get all the foreign cotton that it required and the same was made available at a premium of 20 per cent. under the Export Incentive Scheme. The rise in prices of the Company's varieties of superfine cloth during the year under review was, according to the Directors, on an average, about 5 per cent. only.

The excellent results of the year under review are highlighted against the background of those for the previous three years in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sales	5,10.08	4,90.00	4,70.49	4,26.57
Closing stocks	89.92	75.03	75.11	98.54
Raw materials, stores, chemicals, etc., consumed	2,22.53	2,41.58	2,36.06	2,42.52
Other expenses	1,89.15	1,86.66	2,07.71	1,46.02
Gross profit	1,00.15	62.96	29.15	40.45
Agents' commission	8.54	4.82	1.55	2.47
Provision for—				
Depreciation	14.74	14.73	13.63	22.59
Taxation	34.20	18.90	5.50	14.15
Net profit	42.67	24.51	8.44	1.24
Transfer from reserve	..	..	..	9.00
To reserves	21.66	18.28	1.74	..
Dividends—				
4% tax-free preference	1.71*	1.71*	1.20	1.20
Ordinary	19.15	9.58	5.98	5.98
	(32%)*	(16%)*	(10%)	(10%)†
Carry forward	0.39	0.24	0.30	0.78

* Subject to deduction of tax.
† In addition, a dividend at 4.25 per cent. was paid for the year 1953-54.

The most notable features of the year's results are: (1) sales have gone up by Rs. 20 lakhs; (2) this is accompanied by a fall of Rs. 19 lakhs in raw materials, stores, etc. consumed; and (3) the ratio of gross profit to sales is as high as 19.6 per cent., as against 12.8 per cent. in 1958-59 and only 9.4 per cent. in 1956-57.

In pursuance of the programme of replacement and renovation, the Company incurred a capital expenditure of Rs. 28.18 lakhs during the year under review, on top of Rs. 33.31 lakhs spent in the previous year. During the last five years alone, such capital expenditure has aggregated about Rs. 1.72 crores. Further orders for new machinery of the value of Rs. 59.03 lakhs for replacement and renovation were placed during the year. The gross value of the block account as at the end of the year under review is Rs. 376.13 lakhs and the book value thereof Rs. 107.21 lakhs. Thus, the fixed assets have been written down by more than two-thirds. The current assets amount to Rs. 315.31 lakhs, exceeding the current liabilities and provisions, at Rs. 249.55 lakhs, by a large margin. The net assets of the Company are worth Rs. 172.97 lakhs, represented by a paid-up capital of Rs. 89.82 lakhs and reserves and surplus of Rs. 83.15 lakhs.

The Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 615 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 3.78 per cent. per annum, free of tax.

MUKAND IRON'S PROFIT GOES UP FURTHER

NET DIVIDEND, HOWEVER, LOWER

FURTHER all-round progress is disclosed by the accounts of the Mukand Iron and Steel Works Ltd. (Managing Agents: Messrs. Jeewan Private Ltd., Bombay) for the year ended 31st March 1960. The production of bars and rods, which had consistently risen from 171,000 tons in 1954-55 to 390,000 tons in 1958-59, has further enlarged to 456,000 tons in the year under review. The upward trend in output of castings and other products which had suffered a slight setback last year from 49,000 tons in 1957-58 to 44,000 tons, has, however, further declined to 42,000 tons in 1959-60. The overall sales show a marked rise of Rs. 66 lakhs to a high of Rs. 4.22 crores. The gross profit, which had staged a sharp improvement from Rs. 24.44 lakhs (in 1957-58) to Rs. 37.22 lakhs in the following year, has advanced to Rs. 40.43 lakhs in the year under review. It may, however, be noted that the pace of increase in gross profit is very less marked than in the previous year.

The net profit, too, has gone up by Rs. 3.30 lakhs to Rs. 18.25 lakhs. The provision for depreciation has been raised from Rs. 3.87 lakhs to Rs. 5.36 lakhs, while that for taxation is lower at Rs. 13.25 lakhs, as against Rs. 15 lakhs a year ago. As in the previous year, the Directors have set aside a large part of the net profit to the reserves. While the addition to the general reserve is unchanged at Rs. 8 lakhs, the transfer to the statutory development rebate reserve has been increased from Rs. 2 lakhs to Rs. 2.50 lakhs and a small sum of Rs. 5,830 has been provided for bad and doubtful debt reserve. The Directors have recommended a dividend of 12 per cent., subject to deduction of tax, on the old ordinary shares and a *pro rata* distribution on the new shares issued during the year under review. This works out to a net distribution of 8.4 per cent., and represents a cut from 10 per cent., free of tax, distributed for the previous year. The dividend on deferred shares is, however, higher at 168.6 per cent. subject to tax, or 118.02 per cent. net, as compared with 88.6 per cent. free of tax for 1958-59.

The progress of the Company since 1956-57 is fully illustrated by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sales	4,22.11	3,56.10	3,03.01	2,71.12

† Subject to deduction of tax.

The Company's profit would have been higher still but for the sharp rise of Rs. 13.52 lakhs in other expenses, of which the wage bill alone accounts for about Rs. 8 lakhs, mainly due to higher dearness allowance, increments and larger annual and production bonuses.

The Company had the benefit of improved supply of billets, which increased the production of rolling mills. In the foundry, production of intricate steel castings for the automobile industry commenced on a large-scale basis during the year. The foundry also made all the steel castings for the first two sugar plants manufactured in India. The Company has entered into technical collaboration agreements with an American and an English firm for the manufacture of automatic centre buffer couplers. These are being made in this country for the first time. In fact, the Company has already secured orders worth Rs. 84 lakhs for these couplers from the railways. The preliminary development work in this connection has almost been completed. The Company expects to go into mass production in the near future.

The Company's prospects for the current year appear to be satisfactory. For, according to the Directors, supply of billets continues to be fully secured. Improved methods and planning have, they say, helped in better utilisation of the foundry capacity.

The financial position of the Company is fairly good. The reserves and surplus, at Rs. 45.33 lakhs, represent 63.4 per cent. of the paid-up capital of Rs. 71.43 lakhs. The borrowings and other current liabilities aggregate Rs. 86.78 lakhs, which are covered by a wide margin by current assets at Rs. 123.20 lakhs. The gross block of the value of Rs. 121.27 lakhs (including an addition of Rs. 23.90 lakhs during the year) has been written down to Rs. 80.34 lakhs.

The current market value of the Company's ordinary shares (Rs. 10 paid-up) is Rs. 25.50 *cum-div.* On an *ex-div.* basis, the shares offer a yield of 3.4 per cent. per annum, free of tax.

INDIAN TRADE AND GENERAL INSURANCE CO. LTD.

The accounts of the Indian Trade and General Insurance Company Ltd. (General Manager: Mr. T. M. Telang, Calcutta), for the year ended 31st December 1959, mirror the effect of political and economic factors beyond the control of the Company and of the measures taken by the Company itself to improve its financial and administrative position. The combined net premium of the Company during the year increased by Rs. 8.5 lakhs. Claims cost, except in the fire department, also went up, thanks to the unsettled political conditions in Africa where the Company has substantial business interests. Losses sustained in other territories by insurers who reinsure with the Company also contributed to higher claims. In addition, as a result of the Company's policy of weeding out unprofitable accounts, initiated two years ago, some backlog of claims continued to come against premium received in previous years. All these factors have gone to put up the overall claims ratio, but the rise would have been more than 3.4 per cent. recorded during the year, but for the improvement in direct-writing results in territories other than Africa.

Although the claims experience has thus been adverse, there has been a remarkable improvement on the expense side. At a time of rising prices and when the general tendency for insurance companies is to exceed even the maximum statutory limits set for expenses, it is gratifying to note that the "Indian Trade" has been able to reduce its expenses for the second year in succession. The fall is as much as five per cent. during the year under review, as against 3.4 per cent. in the previous year. In fact, the expense (including commission) ratio of 34 per cent. for the year under review is the lowest in the Company's history and compares very favourably with that of New India (36.4 per cent.), although it is still 8 per cent. higher than that of Oriental (26 per cent.). The net profit earned improved to Rs. 1.24 lakhs, as against Rs. 1.18 lakhs in the previous year. The dividend has been raised to Rs. 2 per share of Rs. 40 paid up subject to tax, as against one rupee, tax-free, in 1958. The following table summarises the working results of the Company during the three years ended 31st December 1959:

(In lakhs of rupees)

	1959	1958	1957
Fire:			
Net premium	37.44	31.53	35.03
Claims	15.67	14.59	15.33
Commission, expenses, etc.	14.73	12.76	16.85
Fire fund	18.72	15.77	17.23
Marine:			
Net premium	24.32	23.26	22.12
Claims	18.98	17.45	15.39
Commission, expenses, etc.	5.20	8.80	8.11
Marine fund	23.66	22.34	20.87
Miscellaneous:			
Net premium	29.03	28.36	22.20
Claims	21.88	16.38	11.10
Commission, expenses, etc.	10.79	10.65	8.68
Miscellaneous fund	14.96	14.18	11.10
Net profit	1.25	1.18	1.01
Dividend	1.20	0.60	0.60
	(5%)*	(2.5%)	(2.5%)
Carry forward	0.29	0.23	0.047

* Subject to deduction of tax.

As will be evident from the above table, the net premium in the fire department, which had suffered a fall of Rs. 3.5 lakhs in 1958, has more than made up the fall to show a rise of about Rs. 6 lakhs. Claims worked out to 41.8 per cent., as against 46.3 per cent. in 1958. Commission and expenses declined from 40.9 per cent. to 39.3 per cent. After transfer of nearly Rs. 3 lakhs to the reserve for unexpired risks, which now stands at Rs. 18.72 lakhs, the account shows an underwriting profit of Rs. 4.41 lakhs.

The increase in net marine premium by Rs. 1 lakh during the year to Rs. 24.32 lakhs is wholly attributed to Indian business. The back-log of claims on incoming reinsurance business led to a rise in claims ratio from 75 per cent. in 1958 to 78.1 per cent. in 1959. The administrative improvement effected in the previous year was reflected in the reduction in commission and expense ratio from 37.8 per cent. to 21.4 per cent. After keeping the reserve for unexpired risks at Rs. 23.66 lakhs, the account shows a deficit of Rs. 56,554.

The miscellaneous department bore the brunt of higher claims resulting from the unsettled political conditions in Africa. The claims experience deteriorated by as much as 12 per cent. on direct underwriting in this department. To make matters worse, claims in respect of incoming reinsurance treaties increased by about 26 per cent. Overall claims ratio rose from 57.7 per cent. to as much as 73.1 per cent., with the result that, notwithstanding the decline in commission and expenses ratio, there was an underwriting loss of Rs. 3.33 lakhs. The miscellaneous fund, at Rs. 14.96 lakhs, amounts to 50 per cent. of premium.

After taking into account interest and dividends and other incomes and debiting expenses of management not applicable to any particular fund account, bonus and other miscellaneous outgo, there is a net profit of Rs. 1.25 lakhs which has been carried to the profit and loss appropriation account. This, together with Rs. 23,075 brought in from the previous year's account, makes available Rs. 1.49 lakhs. The dividend of Rs. 2 per share, less tax, absorbs Rs. 1.20 lakhs, leaving Rs. 28,760 to be carried forward.

The funds and reserves of the Company, as on 31st December 1959, aggregated Rs. 86.39 lakhs, including, among others, a capital of Rs. 24 lakhs and departmental reserves of Rs. 57.35 lakhs.

THE CONCORD OF INDIA INSURANCE CO.

The past year was a difficult one for the Concord of India Insurance Company (Principal Officer: Mr. Noel Maurice Cole, Calcutta) as revealed by the Company's statement of accounts for the year ended 31st December 1959. The overseas business of the Company was mainly responsible for the disappointing results, which, in turn, was a reflection of the difficult conditions of foreign underwriting which the Company, in common with other insurers, had experienced. Indian business, on the other hand, showed good results. Nevertheless, the year's operations resulted in a net loss of Rs. 1.65 lakhs, as against a profit of Rs. 2.74 lakhs in the previous year. The Directors have, however, thought it fit to pay a dividend of Re. 1 per share of Rs. 5, paid-up from the amount carried forward from the previous year's account and by drawing on the contingency and general reserves to the tune of Rs. 2.75 lakhs.

The following table summarises the working results of the Company for 1959 in comparison with those for the previous two years:

(In lakhs of Rupees)

	1959	1958	1957
Fire:			
Premium	34.32	32.42	32.04
Claims	20.53	14.78	12.46
Commission, expenses, etc.	16.10	14.55	17.62
Fire fund	17.16	16.21	16.02
Marine:			
Premium	13.33	13.11	12.80
Claims	11.31	11.62	9.67
Commission, expenses, etc.	3.56	3.58	3.21
Marine fund	13.33	13.11	12.80
Miscellaneous:			
Premium	14.65	14.72	13.33
Claims	13.72	8.95	6.79
Commission, expenses, etc.	4.79	4.92	4.57
Miscellaneous fund	7.33	7.36	6.66
Net profit	—1.65	2.73	3.24
Dividend	2.70*	2.70	2.70
	(20%)	(20%)	(20%)
Carry forward	0.23	1.17	1.13

* Subject to deduction of tax.

As is evident from the table, the combined net premium from the three departments, at Rs. 62.30 lakhs, is Rs. 2 lakhs higher than that in the previous year. The bulk of the increase was accounted for by the fire business, which yielded a net premium of Rs. 34.32 lakhs, as against Rs. 32.42 lakhs in 1958. Marine insurance premium was a shade higher at Rs. 13.33 lakhs, while miscellaneous premium was lower, albeit fractionally, at Rs. 14.65 lakhs. Overall claims increased from 58 per cent. in 1958 to 72.6 per cent. in 1959. Commission and expenses, too, were higher at 40 per cent., as against 37 per cent. in 1958.

The effect of these adverse results was such that even the fire portfolio, which is the one and only profitable account for Indian insurers, suffered an underwriting loss of Rs. 3.25 lakhs, as compared with the profit of Rs. 2.90 lakhs in 1958. The marine and accident and miscellaneous accounts also were in red, the extent of loss being Rs. 1.76 lakhs in marine and Rs. 3.83 lakhs in accident and miscellaneous departments.

In view of these unfavourable results, steps have been taken to restrict the Company's foreign acceptances. Full provision has also been made for all known liabilities, including claims under litigation.

After debiting the departmental losses aggregating Rs. 8.84 lakhs, and crediting Rs. 3.87 lakhs being interest and dividends, less tax thereon, and other incomes, there is still a deficit of Rs. 1.65 lakhs which has been made good by Rs. 1.17 lakhs brought in from the previous year and Rs. 65,648 being the unclaimed dividend and excess provision for taxation in respect of previous years no longer required. This gives a credit balance of Rs. 18,040, to which has been added Rs. 2,75,000 withdrawn from contingency and general reserves making available for distribution in all Rs. 2,93,040. The dividend of Re. 1 per share absorbs Rs. 2,70,000. The balance of Rs. 23,040 has been carried forward.

SYNOPSES OF COMPANY REPORTS

Hastings Mill Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) presented the audited accounts of the Company for the year ended 31st March 1960.

The accounts reveal a profit of Rs. 20,89,374 (Rs. 24,87,053) to which is added the amount brought forward from the previous year of Rs. 2,98,063 (Rs. 3,19,473), provision for depreciation on investment no longer required Rs. 9,00,000 (*nil*) and forfeited dividends Rs. 1,08,227 (*nil*), making a total of Rs. 33,95,664 (Rs. 28,06,526). Out of this, depreciation absorbs Rs. 7,69,324 (Rs. 8,44,463) and provision for taxation Rs. 6,25,000 (Rs. 8,80,000) leaving an available balance at the credit of profit and loss account of Rs. 20,01,340 (Rs. 10,23,063). This amount the directors recommend should be appropriated as follows:—

To transfer to general reserve Rs. 2,50,000 (Rs. 3,00,000), to provision for development rebate reserve Rs. 1,11,400 (Rs. 40,000) and to transfer to investment reserve Rs. 9,00,000 (*nil*). The directors further recommend payment of dividend on 25,000 cumulative preference shares at Rs. 6 (Rs. 6.00 per share, free of tax) per share for the year, subject to deduction of tax, absorbing Rs. 1,50,000 (Rs. 1,50,000), supplemental dividend on 25,000 cumulative preference shares at Rs. 2.57 (*nil*) per share, subject to deduction of tax, in the event of the proposed amendment of the Articles of Association for variation in the dividend right of the preference shareholders being approved, absorbing Rs. 64,250 (*nil*) and payment of dividend on 40,000 ordinary shares at Rs. 6 (Rs. 6.00 per share, free of tax) per share for the year, subject to deduction of tax, absorbing Rs. 2,40,000 (Rs. 2,40,000) leaving to be carried forward to the next year Rs. 2,85,690 (Rs. 2,98,063).

Trading conditions during the first half of the year remained difficult but in the second half the demand for jute goods improved considerably and looms were unsealed gradually as stated above. However, the jute crop of 1959-60 which was expected to be sufficient to meet the requirements of the industry proved otherwise and this together with the drought in the jute growing areas in the early period of sowing worsened the position and resulted in absurdly high prices of raw jute during April and May, 1960. As a measure to meet the serious shortage in raw jute supply, the I.J.M.A. decided to allow its member mills to close down with effect from the 6th June, 1960, as many looms as mills thought fit and to allow the working hours so lost to be made up at any time after the 31st October, 1960. Accordingly, the Company also temporarily sealed 2½ per cent. additional looms from 6th June, 1960 and these will be opened as soon as the new season jute starts to arrive in adequate quantities.

Although the arrivals have been delayed by one and half months, prospects for the new crop jute for the season 1960-61 are considered bright.

Orders were placed for 20 looms with ancillary machines for manufacture of *Carpet Backing Cloth* and at the date of this report, five of the looms have already started production. It is expected that the remaining looms will be put into commission during the current year.

The practice of grossing up of dividends has been abolished by the Finance Act, 1959 and it has been made compulsory for Companies to deduct tax at source. In order to ensure the same percentage of dividend to preference shareholders the directors have recommended that their rights be modified so as to increase their dividend from 6 per cent. to 8.57 per cent. per annum.

Silk Department.—Shree Ram Silk Mfg. Co., continues to make steady progress.

The Company held 1,44,610 ordinary shares of the subsidiary, viz., The Fort William Jute Co. Ltd., as at the close of the latter's financial year ending 31st March 1960. The net aggregate amount of profit in the subsidiary Company for its last financial year with which the shareholders are concerned as the members of the Holding Company is Rs. 3,85,454. Neither this amount nor any part of it has been included in the accounts of this Company as the Holding Company. The net aggregate amount of profits of the subsidiary Company for the previous years since it became subsidiary is Rs. 22,45,354. Out of this sum, Rs. 7,59,150, has been received by the Holding Company by way of dividend on its investment in the subsidiary Company and has been included in the accounts of the Holding Company.

Mysore Electrical Industries Ltd.

The directors of the above Company (Chairman: Mr. R. D. Char, Bangalore) presented the audited accounts of the Company for the year ended 31st March 1960.

After providing for all expenses, payment of bonus to staff and operatives, depreciation provision of Rs. 1,13,026 (Rs. 1,09,829), writing off Rs. 261 (Rs. 1,990) for obsolete and discarded assets and adding Rs. 4,812 (Rs. 4,321), being last year's profit brought forward, the total amount available for appropriation is Rs. 9,72,577 (Rs. 5,68,429). The directors recommend appropriation of this amount as follows:—

To provision for income-tax Rs. 4,40,000 (Rs. 3,20,000), to development reserve Rs. 71,053 (Rs. 62,867), to rehabilitation reserve Rs. 50,000 (*nil*), to loan redemption fund Rs. 70,000 (*nil*), to employees' gratuity fund Rs. 40,000 (*nil*), to donations to Mysore Electrical Industries technical institute and other educational institutions, etc., Rs. 20,000 (Rs. 15,000), to payment of dividend at Rs. 24 (Rs. 15.00 per share free of tax) per share, subject to tax on 9,050 old shares, absorbing Rs. 2,17,200 (Rs. 1,35,750) and to payment of dividend at Rs. 12 (*nil*) per share, subject to tax on 5,000 new shares, absorbing Rs. 60,000 (*nil*) leaving to be carried forward Rs. 4,324 (Rs. 4,812 after transferring Rs. 30,000 to general reserve).

The year under review has been one of steady progress. The demand in the country for both high tension and low tension *Switchgear* is increasing with the power generation capacity planned by the Government. The Company is at present producing *Switchgear* for a service voltage upto 11 kV. and an application has been made to Government for permission to manufacture *Switchgear* for higher service voltages also. The production and planning sections as well as the design and development engineering departments have been augmented to cope up with the expansion programme of the Company. Training of personnel is being vigorously pursued at all levels.

Machine tools to the extent of Rs. 83,586 were added during the year to enable better methods of production and removal of production bottlenecks were experienced. The design of the new factory buildings has been finalised and construction work given out on contract. To finance these expansions, arrangements are finalised for a loan of Rs. 6½ lakhs from the Refinance Corporation for Industry through the Company's bankers. The balance of the present requirement was raised during the year by the issue of equity capital to the extent of Rs. 5 lakhs. The Company's shares are being regularly quoted by the Madras Stock Exchange Ltd., Madras.

Rampur Distillery and Chemical Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Govan Bros., (Rampur) Private Ltd., Rampur U.P.] submit the audited accounts of the Company for the year ended 31st March 1960.

The expansion in the production capacity of the plant has started showing improvement in the profit earnings of the Company. The operations for the year under review have resulted in a net profit of Rs. 1,33,989 (Rs. 58,726) before providing for taxation, but after meeting all expenses and providing Rs. 71,358 (Rs. 61,016) for depreciation, and Rs. 14,500 (Rs. 37,500) for development rebate. The directors recommend payment of a dividend of 4 (3 per cent. free of tax) per cent. subject to deduction of tax, for the year. Though there has been an improvement in the profits during the year under review, the directors are unable to recommend a higher dividend because they wish to conserve the resources of the Company for various capital expenses that are contemplated in the future. These include among others, expenses for further expansion in the production capacity of the Distillery. The results are better this year due to higher production resulting in decrease in production costs, better sale realisations for rectified and denatured spirits and better working results in all sections. The results would have been still better if the offtake of spirits was regular and availability of molasses more adequate. Irregular offtake of spirits had occasionally created storage problems in the past. The situation in this regard has been considerably improved by installation of additional storage space.

During the year under review the Distillery had a run of 214 days and processed 3,26,406 maunds of molasses. The average daily production achieved was 2,895 bulk gallons compared with 1,948 bulk gallons in the previous year. The yield per maund of molasses was slightly better resulting in an overall production of 6,20,889 bulk gallons.

Power Alcohol: The loss in this section has reduced this year. It is learnt that the representation of the All-India Distillers' Association regarding enhancement in the price of power alcohol was referred by the Government of India to the Development Council who have appointed a Sub-Committee to look into the matter.

Indian-made Foreign Liquors: Besides the supplies to canteen stores department, the Company has entered the field of supplies of *Rum* to the defence services through the ministry of food and agriculture, Government of India, during the second half of this year under review, with a consequential increase in sale resulting in higher profits. During the current year, further improvement in this direction is expected.

Country Spirit: All the bonded warehouses, (Rampur, Dhampur, Haldwani and Khatema) except the Bijnore one, have shown better results. The sales at all the warehouses compare favourably with last year. In the current year, 1960-61, the Company has been successful in getting in addition to its existing warehouses, at Pauri Garhwal and Mathura, and consequently better results are expected. The contract for the warehouses in some districts of Madhya Pradesh has been renewed upto 31st March 1962. The service arrangements made for running these warehouses continue to be satisfactory.

The directors have decided to increase the production capacity of the plant to 10,000 gallons per day, or 3 million gallons a year. The Company's application for a licence for this is under consideration of Government of India. The decision to increase the production capacity has been taken primarily because the anticipated requirement of alcohol under the Third Five-year Plan is estimated to be higher than at present and in meeting this demand the Company should not lag behind other distilleries. Another important consideration for this decision has been the setting up of a Synthetic Rubber factory not very far from the Company's distillery, i.e., between Rampur and Bareilly. The coming up of this factory would mean a considerably increased demand for the alcohol of the Company's distillery.

The shareholders, at their last annual general meeting, had re-appointed M/s. Govan Bros. (Rampur) Private Ltd. as the managing agents of the Company for a further period of 10 years commencing from 16th August, 1960, on a remuneration of 10 per cent. of the net profits with a minimum of Rs. 30,000 per year. The Government of India have, however, in accordance with their declared policy, approved the re-appointment with effect from 15th August, 1960, for a period of five years only, on a reducing scale of commission from 10 per cent. to 4 per cent. on the net profits as per slabs announced by the Government of India, with a minimum remuneration of Rs. 20,000 per year.

Parrys Confectionery Ltd.

The directors of the above Company (Managing Agents: Messrs. Parry & Co., Ltd., Madras) present the audited accounts of the Company for the year ended 31st March 1960.

The net profit for the year, before providing for taxation was Rs. 10,70,054 (Rs. 7,30,710) upon which taxation, including a provision of Rs. 75,000 (Rs. 6,000 for wealth tax) for super tax on bonus shares, amounts to Rs. 5,85,219 (Rs. 4,08,644). This leaves a net profit, after taxation, of Rs. 4,84,835 (Rs. 3,22,066). To this should be added the surplus brought forward from last year of Rs. 86,772 (Rs. 74,706) making a total amount available for appropriation of Rs. 5,71,607 (Rs. 3,96,772). Out of this amount the following appropriations have been made or are recommended by the directors: To transfer to capital reserve Rs. 20,000 (Rs. 10,000), to general reserve Rs. 1,00,000 (Rs. 1,50,000) and to pay a dividend of 30 (20 per cent. free of tax), per cent. subject to deduction of tax, absorbing Rs. 3,00,000 (Rs. 1,50,000) leaving a surplus to be carried forward to next year of Rs. 1,51,607 (Rs. 86,772).

The dividend of 30 per cent. subject to deduction of tax on the Company's ordinary share capital (as increased by the bonus issue made on 28th July 1960) for the year ended 31st March 1960 will be proposed at the annual general meeting and, if approved, will be paid on the day following, viz., the 1st October 1960.

Review of Operations.—Sales turnover during the year rose to a new record of Rs. 1.14 crores—a rise of no less than 28 per cent. over the year before. Most of this increase was achieved from sales of wrapped varieties and from an entirely new range of consumer packs introduced during the year. Sales in South India of medium priced *Deccan Sweets* showed a further substantial gain —more than 80 per cent. higher than last year—making a valuable contribution to total profit. Costs continued to rise throughout the year and though a part of the burden was absorbed by higher productivity some further price increases had to be made.

On 28th July 1960 a bonus issue of 2,50,000 ordinary shares of Re. 1 each was made in the proportion of one bonus share for every existing three ordinary shares held by capitalisation of the share premium account. The excess of current assets over current liabilities and provisions as on

31st March 1960 amounted to Rs. 10.24 lakhs as compared with Rs. 8.57 lakhs last year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Gross block	12,55,063
Reserves ...	5,52,000	*Less*—Depreciation ...	6,00,215

Birpara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts for the year ended 31st December 1959.

The accounts disclose a working profit of Rs. 5,97,798 (Rs. 2,82,339). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of the profit and loss account amounting to Rs. 4,57,081 (Rs. 8,15,264), of which the directors have transferred Rs. 1,75,000 (Rs. 50,000) to revenue reserve and Rs. 28,000 (Rs. 10,000) to development rebate reserve. A dividend on the preference shares at the rate of 8 per cent. for season 1959, subject to deduction of tax, is proposed since it is doubtful whether it is in fact permissible to gross up the dividend in spite of the specific provision in the Company's Articles for the payment of tax-free dividend on the preference shares. It will, however, be observed that the directors have proposed a transfer of Rs. 3,500 (*nil*) to contingency reserve to provide an additional dividend at 3.50 per cent. to the preference shareholders should it become necessary to compensate them once the position has been clarified by the relevant authorities. The directors also recommend that a dividend of 22½ (12½ per cent. free of tax) per cent. on ordinary shares for season 1959 be declared at the annual general meeting, leaving Rs. 40,081 (Rs. 38,764 after transferring Rs. 5,96,000 to buildings and machinery reserve) to be carried forward.

Tea crop was 13,30,029 lbs. as compared with 12,67,475 lbs. in 1958. The average selling price realised was Rs. 2.25 per lb. as against Rs. 2.06 per lb. in the previous year.

Estimates for 1960 provide for a crop of 5,80,000 kilograms or 12,80,000 lbs. at an outlay of Rs. 23,28,960 including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Gross block	28,48,801

		Book debts	79 015
		Investments	3,52,700
		Cash ...	3,93,600
Rs.	39.84,860	Rs.	39.84,860

Twyford Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Parkins (Private) Ltd., Kottayam) submit the audited accounts of the Company for the year ended 31st December 1959.

The result of the year's working after providing for depreciation on buildings, factory and machinery amounting to Rs. 42.126 (Rs. 52,143) and after making provision for payment of income-tax and agricultural income-tax amounting to Rs. 1,00,000 (Rs. 80.000) is a net profit of Rs. 1,13,805 (Rs. 1,06,087) to which must be added the balance of Rs. 1,260 (Rs. 31,923) brought forward from the previous year's account and a sum of Rs. 43,000 (Rs. 32,000) transferred from the dividend equalisation fund making a total of Rs. 1,58,065 (Rs. 1,70,010). Out of this amount, the directors recommend the payment of a dividend of 10 (15 per cent. free of tax) per cent. for the year 1959 on the increased capital of Rs. 15,75,000 (Rs. 11,25,000) absorbing Rs. 1,57,500 (Rs. 1,68,750) leaving a balance of Rs. 565 (Rs. 1,260) to be carried forward to next year's account.

Crop and Price.—9,63,293 (12.13,137) pounds tea was produced during the year under report against an estimate of 11,00,000 lbs. (revised estimate). The shortfall of crop was due to the adverse weather conditions. The cost of production was 179.20 cents per lb. against 152.05 cents in 1958. The net average price realised was 216.83 cents against 178.98 cents in 1958. The stock of tea remaining unsold as at 31st December 1959 was 1,54,728 lbs., all of which have been since sold.

The estimates for the year ending 31st December 1960, is 12,25,000 lbs. tea to be produced at a cost of 175.24 cents per lb. The estimate also provides for a total capital expenditure of Rs. 33,000 for buildings, for electrification of bungalows and for fencing.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,75,000	Gross block	27,37,319

Rs.	37,70,551	Rs.	37,70.551

South Behar Sugar Mills Ltd.

The directors of the above Company (Bihta, E. Railway) presented the audited accounts of the Company for the year ended 31st October 1959.

The year's working resulted in a profit of Rs. 2,43,884 (Rs. 1,76,860).

The quantity of cane crushed during the year under report was 30.92 (30.86) lakh maunds and the recovery of sugar per cent. cane was higher than the previous years due to better climatic condition for cane.

	Recovery per cent. cane
1954-55	9.325
1955-56	9.012
1956-57	8.936
1957-58	9.521
1958-59	9.613

The crushing for 1959-60 season appears promising.

Rs.	1,03,42,759	Rs.	1,03,42,759

*The loss brought forward from last year is Rs. 17,77,014. After deducting the profit for the year amounting to Rs. 2,43,884, subject to provision for depreciation and agricultural income-tax and also adjusting the reserve fund amounting to Rs. 45,287, the final debit balance comes to Rs. 14,87,843.

Hooghly Docking and Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1959.

The value of work billed during the year amounted to Rs. 98,17,824 against Rs. 81,83,506 in the year 1958 and the gross profit earned in the year under review was Rs. 8,66,804 against Rs. 6,59,829 in the previous year. Work-in-progress at the end of the year was Rs. 81,10,175 against Rs. 74,42,886 at the beginning. The entire property of the Company has been maintained in good order and repair throughout the period.

After charging all expenses including depreciation, the net profit for the year amounted to Rs. 5,28,833 (Rs. 4,76,404) to which has been added the balance brought forward from the previous year amounting to Rs. 9,214 (Rs. 5,810), making a total of Rs. 5,38,047 (Rs. 4,82,214). Out of this amount there has been provided for income-tax on the profits for the year Rs. 2,78,000 (Rs. 2,91,000 including Rs. 21,000 for wealth tax), an additional liability to tax in respect of the past years amounting to Rs. 1,50,000 (*nil*) and statutory development reserve Rs. 3,000 (Rs. 7,000) leaving a balance available for distribution of Rs. 1,07,047 (Rs. 1,84,214). A sum of Rs. 50,000 has been transferred from development reserve, making the total amount available for distribution of Rs. 1,57,047 (Rs. 1,84,214). The directors recommend that this balance be disposed of as follows:—

By payment of a dividend of 12 (10 per cent. free of tax) per cent., subject to deduction of tax at source under Section 18(3D) of the Income-tax Act absorbing Rs. 1,50,000 (Rs. 1,25,000) and by carrying forward a balance of Rs. 7,047 (Rs. 9,214 after transferring Rs. 50,000 to development reserve).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,50,000	Gross block	60,91,575
Reserves ...	23,60,000	*Less*—Depreciation ...	40.46,109
Provision for taxation ...	4.80,907		
Liabilities ...	68,93,008	Net block	20,45.466
		Stores, etc.	14,39,569
Profit and loss account (surplus)	7,047	Work-in-progress ...	23,84,499
		Book debts	50,61,860
		Cash ...	59.568
Rs.	1,09,90,962	Rs.	1,09.90,962

***N.B.**—Figures within brackets relate to the corresponding period of the previous year.*

Agent.

P.4 MISSION ROW EXTENSION,
CALCUTTA, 17*th September*, 1960.

ROHTAS INDUSTRIES LIMITED
DALMIANAGAR (BIHAR)

THE BOARD OF DIRECTORS DECLARED an interim dividend of 20 per cent. viz., Rs. 2.00 per share (subject to deduction of tax) on Ordinary Shares for the Company's financial year ended 31st March, 1960 payable to those shareholders whose names appear on the Company's Register of Members on 1st September, 1960 or to their mandatee. The dividend although termed "interim dividend" will in fact constitute full dividend for the year and no further distribution in respect of the year ended 31st March, 1960 will be recommended for consideration at the Annual General Meeting to be convened in due course.

The exact amount of tax to be deducted by the Company under Section 18(3D) of the Income-tax Act from the said gross dividend of Rs. 2 per share would be notified as soon as the Income-tax Officer determines the appropriate portion of the dividend on which tax is not payable by the recipient shareholders under the provisions of Section 15C of the Income-tax Act.

The aforesaid dividend on Ordinary Shares will be paid on 15th day of October, 1960 subject to the Income-tax Officer determining the proportion of tax-free dividend in terms of Section 18 (3F) of the Income-tax Act.

The Board of Directors have also extended the date for receipt of subscription money in respect of Right Issue of Ordinary Shares upto Tuesday, the 18th October, 1960.

FOR SAHU JAIN LIMITED,

A. P. JAIN,
Director,
Managing Agents.

15th September, 1960.

MORE CREDIT RESTRAINTS ON BANKS

(From Our Own Correspondent)

BOMBAY, 21*st September*

The most outstanding development of the week is the announcement today of a scheme to restrict Scheduled banks' borrowing from the Reserve Bank, with a view to securing the abatement of the pressure of monetary demand, which has been a contributory factor to the rise in commodity prices. Under this scheme, which will be effective from 1st October 1960, the banks' borrowings against Government securities and usance bills will be restricted to a limit equivalent to 50 per cent. of the reserves required to be kept with the Reserve Bank under Section 42(1) of the Reserve Bank of India Act (that is, 5 per cent. of demand liabilities and 2 per cent. of time liabilities). The borrowings over and above this quota will be permitted only on payment of certain penal rates of interest. The following is the schedule of charges:

Limit	*Rate of Interest*
Up to 100 per cent. of the quota	Bank rate (now 4 per cent.)
Over 100 per cent., but not more than 200 per cent. of the quota	One per cent. above Bank rate
Over 200 per cent. of the quota	2 per cent. above Bank rate.

The Reserve Bank has, however, removed, for the time being, the ceiling limits of borrowings from it, fixed for individual banks under the Bill market scheme, in view of the new system of penal rates.

In addition to the restriction on borrowings by banks, the Reserve Bank has also directed the Scheduled banks to adhere, with effect from 1st October 1960, to a minimum lending rate of 5 per cent. on all advances (clean or secured). It has also directed the banks to raise the structure of their interest rates further, so as to ensure an increase in their average lending rate by at least half per cent. This has been done with a view to "ensuring a levering up of the lending rates of banks and avoiding undue distortion in the present pattern of lending rates. The effect of this directive will be a slightly wider margin of profit for banks, without any worthwhile reduction in their advances.

Another directive issued by the Reserve Bank is that no Scheduled bank shall, with effect from 1st October 1960, pay interest at more than 2 per cent. below Bank rate on any deposit (other than inter-bank deposit) repayable on notice or on the expiry of a period not exceeding 21 days from the date of deposit. At present, the rate of interest paid by banks, under the inter-bank agreement, for deposits up to a period of one month is 3 per cent. This will have to be reduced to 2 per cent. for periods up to 21 days while banks can continue to pay 3 per cent. for periods of more than 21 days, but up to one month. In other words, the spirit of the directive can be defeated by banks accepting 22 days' money.

The restriction on borrowings by banks has been imposed, in view of the fact that the short-term money market continues to be stringent and the level of bank credit has not recorded any worthwhile decline. Further, only a few weeks more remain for the commencement of the busy season and it will be a severe strain on banks' resources when the usual seasonal pressure is superimposed on their existing lending capacity.

There has been no change in interest rates during the week under review. Inter-bank borrowings continue to be done at 3½ per cent., and house money at seven days' notice at 3 per cent. Short-term deposits up to two months are being bid at 3½ per cent. and those of three months and over at 3¾ per cent. There has been no change in the Treasury Bill discount rate either.

The total amount offered at this week's Treasury Bill sales was Rs. 2.50 crores, against the usual tenders for Rs. 2 crores. Sales of Intermediate Bills between 14th and 17th September amounted to no more than Rs. 15 lakhs at a discount of 2.476 per cent. per annum.

A fall of Rs. 15.62 crores in notes in circulation is disclosed by the Reserve Banks' statement for the week ended 16th September 1960. Notes held in the Banking Department are, however, higher by Rs. 6.93 crores, so that the total notes issued show a decline of Rs. 8.69 crores. This is covered on the assets side by a reduction of Rs. 9.94 crores in rupee securities and a rise of Rs. 1.24 crore in rupee coin. There has been no change in foreign securities, but balances held abroad are higher by Rs. 77 lakhs, so that the total foreign assets stand at Rs. 146.45 crores. Deposits of the Central Government and other Governments have gone up by Rs. 19.09 crores and Rs. 8.25 crores, respectively. Deposits of banks, however, show a marked fall of Rs. 16.06 crores. Other loans and advances are lower by Rs. 11.46 crores, while investments have risen by Rs. 23.60 crores.

The Scheduled banks' statement for the week ended 9th September 1960 shows a drop of Rs. 13.95 crores in demand deposits of banks, while time deposits are higher by Rs. 73 lakhs. Of the net decline of Rs. 13.22 crores in total deposits, the State Bank of India accounts for Rs. 4.74 crores. Inter-bank borrowings, too, have declined by Rs. 8.84 crores and borrowings from the Reserve Bank by Rs. 2.82 crores. There has been a reduction of Rs. 3 crores in advances, of which the share of the State Bank is Rs. 1.17 crores. Investments are lower by Rs. 12.44 crores, mainly due to the reduction of Rs. 17.55 crores on State Bank's account, while a rise of Rs. 7.84 crores in cash balances of the State Bank has raised the total cash balances of all banks by Rs. 2.08 crores. Money at call and short notice have gone down by Rs. 6.36 crores.

The Gilt-edged market continues to rule weak due to persistent selling pressure and absence of buyers. 3 per cent. 1986 Conversion Loan was placed at Rs. 73.80 *ex*-voucher, as against Rs. 73.85 *cum*-voucher a week ago. 3 per cent. 1970-75 has been marked down by 10 nP to Rs. 90.60. 4 per cent. 1972 has shed 10 nP to Rs. 101.15, 4 per cent. 1973 and 1979 5 nP each to Rs. 101.10 and Rs. 100.10, respectively. State loans, too, are under selling pressure and, as a result, most of the 4½ per cent. 1970 issues have declined by 50 nP to Rs. 101.

The erratic trend displayed by the pound sterling abroad during the week under review is reflected in the rupee-U.S. dollar cross rates. Banks' selling rate for U.S. dollar spot T.T., after declining from Rs. 475.75 to Rs. 475.25, has risen to Rs. 475.50 per $100. Their buying rate remains unchanged over the week at Rs. 472.25, after moving down to Rs. 472. In New York, spot sterling advanced from 281.43-281.46 cents to 281.64-281.67 cents before receding to 281.47-281.50 cents. Three months' forward was lower on balance at 279.77-279.80 cents, thanks to the widening of the discount from 1.56 cents to 1.70 cents.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, 21*st September*

Trading in the *Kartik* (November) settlement in gold and silver will commence under the metric system with effect from 1st October next. The Maharashtra Government, it will be recalled, had announced nearly three weeks ago its decision to permit the Bullion Association to start trading in *Kartik* settlement, as well as to relax margin rules in respect of this settlement (for details *vide* page 479 of *Commerce* dated 10th September). But the Association had deferred the consideration of the date of commencement pending the finalisation of arrangements for the switch-over to the metric system. The Association has since decided to introduce the metric system on and from 1st October on the following basis:

Gold: The price of gold will be quoted per 10 grams equivalent to about 0.85 tola, the unit of trading being one kilogram (roughly 85.7 tolas); the original idea was to quote the price per one gram.

Silver: The unit of pricing silver is one kilogram (approximately 85.7 tolas); the unit of trading will be one bar weighing 857.3 tolas.

These units will be fixed under the by-laws of the Association with the sanction of the Maharashtra Government.

The bullion market presented a steady trend during the week under review, barring a minor setback on Monday and yesterday caused by the fear of a possible large inflow of contraband gold from Pakistan. This fear was generated by the likelihood of relaxation of travel curbs between the two countries and the improved political relations. The earlier firmness was engendered by hopes of better demand for the precious metals in the coming months. Further, operators thought that any official move to curb speculation on stock exchanges would release large funds for investment in bullion. Consequently, values of both gold and silver tended to move up.

The average daily arrivals of gold during the week were slightly larger than in the previous week, being 6,400 tolas, as against 6,000 tolas, while actual offtake was lower at 2,800 tolas, as against 3,250 tolas. In the case of silver, both arrivals and offtake were smaller at 30 bars and 4 bars, respectively, the corresponding figures for the previous week being 40 bars and 6 bars. The floating stocks of gold are estimated at 35,000 tolas and those of silver are reported to be around 400 bars.

The *Aswayuj* (October) settlement in gold met with good support and advanced from Rs. 135.62 on Wednesday last week to Rs. 136.62 on Friday and, after easing to Rs. 135.31 yesterday, recovered to Rs. 136.09 today before finishing at Rs. 136.06. The net gain over the week was 44 nP.

In silver, *Aswayuj* settlement began the week at Rs. 226.75, as against the previous closing of Rs. 226.56. It then moved up to touch a high of Rs. 227.44 on Friday. After receding to Rs. 226.19 yesterday, it improved again to Rs. 227.12 today. The closing was lower at Rs. 226.97.

Both ready gold and ready silver continued to be quoted at a discount under the forward throughout the week; the actual discount declined from Re. 1 to 91 nP in the case of silver, while that in gold increased from 43 nP to 56 nP. Ready gold was quoted today at Rs. 135.50, as against Rs. 135.19, and ready silver at Rs. 226.06, as against Rs. 225.56. The highest levels touched in the week were Rs. 136.34 and Rs. 226.50 on Friday the 16th inst.

The following table shows the trend of the market during the week under review:

	21-9-60 (closing)	High	Low	14-9-60 (closing)

DULL CONDITIONS IN COTTON

(From Our Own Correspondent)

BOMBAY, 21*st September*

Trading in the spot cotton market continues to be limited. Barring regular mill demand for CO2 cotton, which are fetching prices ranging from Rs. 1,150 to Rs. 1,215 per candy according to type, interest in other domestic varieties is negligible. Traders are generally inclined to wait and see till October, before starting active business in new crop. By then, it is thought, a clearer picture of the crop would become available. Meanwhile, they are perturbed by the report that some quantities of cotton have been requisitioned in certain areas. In upcountry centres, especially in the Punjab traders and financiers are said to be reluctant to purchase cotton, until the practical implication of the cotton controls now in force and those likely to be introduced, are fully known. A deputation of traders from Ahmedabad is expected to meet the Textile Commissioner to request him to issue allocation for CO2 cotton to Indian mills so that they can complete the purchase of this cotton. The outcome of the proposed meeting of the Cotton Advisory Board, due to be held early next month, is also awaited with interest.

Crop developments and weather continues to be the cynosure of all eyes, for on them hangs the fate of the trade. The progress of the crop so far has been satisfactory. In the Punjab, report of the recent damage to the crop seems to have been exaggerated. In Berar and Khandesh regions, crop progress is reported to be good. Small arrivals are expected by *Deepawali*. Modlai tracts have had some limited rain which has proved beneficial. Some more rain would, however, be welcome. Crop condition in Madhya Pradesh is good. Weather is favourable. A further small instalment of rain, it is said, would be ideal. Gujerat and Saurashtra had sufficient rain last week and this has proved very beneficial to the plants. In the South, although sowings were delayed, they are now almost complete and some rain is needed. If the current progress is maintained for a few weeks more, market observers believe, the crop may well aggregate to five million bales easily.

Mill demand for foreign cotton during the week was less keen. U.S. cotton was the centre of attraction. American cotton Good Midling one inch staple and Elpaso G.M. 1-5/32" were well favoured. The rates were Rs. 1,085-Rs. 1,090 and Rs. 1,280-Rs. 1,290 per candy, respectively. Some Bombay mills showed interest in Syrian cotton, a limited quantity of which was traded at Rs. 1,170 per candy. East African B.P. (U.N.U.G.) changed hands at Rs. 1,450 for prompt shipment.

Exporters are anxiously waiting a quota announcement for Bengal *Deshi*. They are optimistic that the Government would issue a small quota some time next month.

Quiet conditions prevailed in the Karachi cotton futures market during the week. Futures moved in a narrow range in limited trading, with price showing little change over the week. Export demand was small, thanks to the high domestic ruling prices. N.T.R.G. January was unchanged at Rs. 67-2, while the March position advanced by 4 annas to Rs. 66-11. In the spot market, sellers predominated over buyers. Consequently, ready prices came down. Sind *Deshi* was quoted at Rs. 86, per maund as against Rs. 87 last week-end. Punjab *Deshi*, too, receded by one rupee to Rs. 81 per maund. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi: 4F Punjab Roller 81-15; S.G. 85-15; L.S.S. Punjab Roller 84-15; S.G. 88-15; N.T. Roller 84-15; S.G. 90-15; 289F Punjab Roller 88-15; S.G. 93-15.

Crop development so far has been very satisfactory. The dry and comparatively warm weather has been a blessing to the crop in Sind. The N.T. crop has already reached maturity and pickings have started. Sind is expected to produce a good N.T. crop, both quality-wise and quantity-wise. The crop outlook in the Punjab, too, is reported to be promising.

Cotton futures in Alexandria suffered a setback during the week under review. Last week's rise in price would appear to have been overdone and operators were quick to react. Profit-taking and long liquidation resulted in a drop in futures prices. Both the Karnak and Ashmouni Contracts came in for selling.

Expert performance of Egyptian cotton during the season just ended was good. Shipments from 1st September 1959 to 31st August 1960 aggregated 1,172,354 bales (or 730 lbs. each), as against 989,150 bales in the previous season, comprising 260,954 bales of Karnak, 532,342 bales of Menufi, 190,969 bales of Ashmouni, 65,956 bales of Giza-30, 87,256 bales of Dendera and 34,877 bales of other varieties.

Sale of new crop up to the end of last month is placed at 78,200 bales, as compared with 102,609 bales in the same period last year.

Crop reports are satisfactory. Samples of early arrivals indicate that Karnak crop will turn out to be good both in grade and staple. Ashmouni, it is said, is as good as last year while Menufi and Giza 30 are said to be poorer in grade and staple. The following are the latest available quotations—in tallaris per lb.—from Alexandria.

Karnak: November 74.15; January 74.25; March 74.35; May 74.20.

Ashmouni: October 63.80; December 63.56; February 63.65.

A mixed trend was witnessed on the Liverpool Cotton Exchange during the week. While the near deliveries of both the American and American type contracts were a shade easy, the distant positions were firm. In fact, the latter have for some time now shown sustained strength. This is attributed to two factors. First, American c.i.f. offers for the later Spring months are at present about one penny per lb. higher than those for

2 6 SEP 1960 PUBLIC DEPARTMENT

autumn shipments. There are two reasons for this: (1) C.C.C. is charging, with effect from 1st August, 25 cent points a month as carrying charges, so that, in five months, the selling price will have advanced by 125 cent points or just over one penny a lb. (2) The 1960-61 U.S. cotton crop is estimated at 14.58 million bales. But consumption *plus* exports is anticipated to be equal to this, or even more. This indicates that, towards the fag-end of the current season it might be necessary to draw on the carryover from last season. Since these would be at the prescribed selling limit of 115 per cent. of parity, as against 110 per cent. of parity set for the current crop, a higher price is indicated. As noted above, these considerations prompted good support for the more distant positions, while the near positions tended to recede. Sudan cotton Contracts in Liverpool were neglected; quotations were nominally unchanged.

The latest available quotations—in pence per lb.—from Liverpool are as under:

American cotton one inch staple contract: October 22.45; December 22.65; March 22.70; May 22.80.

American cotton mixed growth contract: October 23.00; December 22.95; March 23.05; May 23.15.

Sudan: September 34.75; November 35.00; January 35.00.

Trading in the New York cotton futures market was featureless during the week. Export demand was poor, and confined mainly to buying by shippers to fulfil nearby commitments. Mill buying and investments interest were also lacking. Net change in prices over the week was negligible.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	20-9-60	13-9-60	6-9-60
Spot	32.40	32.45	32.45
October	31.32	31.36	31.09
December	31.35	31.35	31.29
March	31.85	31.81	31.82

BLACK PEPPER ERRATIC

(Messrs. Parekh and Co.)

BOMBAY, 21*st September*

Despite easier advices from Singapore, Malabar black pepper during the week ruled steady to quiet but erratic as per alternate bouts of selling or buying by bears or bulls. As is usual in pepper, the buyers withdraw in weak market and the sellers standby when the market discloses a firm tone. Malabar has no strength of its own. Despite record export, the intrinsic position of Malabar pepper does not appear to be as sound as the speculators try to make out because the holders are becoming nervous every now and then owing to the continuous absence of demand from the U.S.A. and the proximity of the new season. The recent reported purchases of about 200-250 tons of Malabar black by Poland and Czechoslovakia were said to be responsible for the present steady tone. Interested bulls are circulating rumours that Russia is in the market, but well-informed quarters does not give any credence to such reports, as Russia is reported to have already purchased a sizable quantity at a very low rate on the basis of New York parity at $0.45/46 from Indonesia.

Estimates of production and stocks with growers are always guesswork. One's guess is as good as another's. The reliable figures available are only for exports. Generally, the trade is in the habit of giving out estimates of production and stocks according to its book positions. The bulls are giving out figures of present stock of Malabar black at 3,000 tons, while well-informed analysts are inclined to put it at around 5,000 tons.

Garbled at Cochin, after improving to Rs. 260, is moving without a definite trend at around Rs. 255. October delivery remains very sensitive and is moving up and down without listing notable business. The crop reports for the new production of Malabar are so far good. The knowledgeable source maintains it at 25,000 tons. Ungarbled pepper is quoted at Rs. 1,462½ at Cochin and at Rs. 1,575 at Calicut.

Singapore is reported to be weak. Private cables show progressively downward revision of prices, while the reports from the Reuter's Agency denote prices without any particular change during the week. Holders there are said to be offering to New York at about $0.50, but the buyers are waiting for new incentives. White pepper appears to be more soft, as Sarawak is said to be offering direct to Europe at lower prices than those quoted for Singapore. Black Lampong is also being offered by Djakarta at lower rates than those ruling at Singapore.

Spot at New York, after improving to $0.56, went down to $0.53 with business at a low ebb, as nobody wants to add to his present commitments pending the result of the present important session of the United Nations. The market is listless, as the dealers expect a further fall in prices, in view of prospects of ample supply since the turnout of a sizable crop in Lampong in Sumatra.

The future of Malabar black depends upon the buying policy of the U.S.A., in particular, as the buying by the U.S.S.R. or other East European countries are not having so much effect, as the selling to these countries is confined to a selected few.

Ready demand is reported to be satisfactory and is being quoted at Rs. 200 per Bengal maund. The spread between ready and October delivery at Cochin has recently shrunk to about Rs. 5 due to the proximity of the due date for October delivery and the move of bull speculators regularly to nibble by buying 5/10 candies of ready goods whenever the support from foreign countries is lacking for keeping up the morale of the holders and the growers who are likely to get tired any time as the new season is fast approaching.

BEMBERG YARN RALLIES FURTHER

(From Our Own Correspondent)

BOMBAY, 21*st September*

The procedure governing allocation of indigenous art silk yarn to the powerloom weaving factories for the ensuing quarter, that is, October-December, has been announced. The allocation will be on the basis of the number of loom shifts worked by the art silk mills during the three months ended June 1960. The actual quantity of yarn to be allocated is fixed at 1.6 lb. per loom per shift in the case of mills submitting monthly reports in the prescribed form regularly to the Office of the Textile Commissioner and at 0.9 lb. per loom per shift in respect of units which are not submitting monthly returns subject, however, to the condition that these units submit the returns in the prescribed WAS I form along with their applications. It is made clear that the allocation will be made only to such units as are holding valid instalment permit and/or registration certificate from the Office of the Textile Commissioner to work powerlooms on art silk yarn.

The allocation procedure was considered to be somewhat rigid and it was felt that the volume of art silk yarn sales by mills might tend to decline. This feeling led to some selling which brought about a fall in prices. National Rayons 150 Bt. cones 1st grade fell by 10 nP to Rs. 5.16 per lb. Similarly, 120 Bt. cones 1st grade dropped 4 nP to Rs. 5.80. Imported art silk yarns ruled irregular. Thus, 120 Italy eased by 6 nP to Rs. 5.50 and 120 Japan was quiet at Rs. 5.65, while 150 Italy gathered 4 nP to Rs. 6.19 and 150 Japan 3 nP to Rs. 6.12. Cupressa Bemberg Yarn (60x1) continued to rule firm, due to hectic buying by certain upcountry interests on persistent rumours of a cut in import quota during the October 1960-March 1961 licensing period. October delivery jumped up by Rs. 57 to Rs. 2,181. December contract rallied from Rs. 2,127 to Rs. 2,161. Spot Cupressa strengthened by 12 nP to Rs. 9.62.

In sympathy with Bemberg yarn and following reports of small stocks with traders and consuming interests, staple fibre yarns showed a tendency to rise. Spot Citys (40×2) hardened by 3 nP to Rs. 3.84. Centurys rose by 2 nP to Rs. 3.68. The quotations for forward deliveries, however, were a shade lower. December contract shed Rs. 2 to Rs. 734 and October position Re. 1 to Rs. 728.

Cotton yarns ruled dull, with the exception of coarse counts which were well supported. It was stated that several mills had begun to stamp prices of cotton yarns. Forty counts Minaxis declined by 44 nP to Rs. 30.31. Maduras lost 12 nP to Rs. 31.25. Sixty counts Raghuvamshis were neglected at Rs. 59, as also Finlays at Rs. 62.62. Eighty counts Moderns were unchanged at Rs. 73, Finlays at Rs. 80.80 and Mahendras at Rs. 71. Ten counts Podars, however, elicited good enquiries and spurted by 25 nP to Rs. 18.25. Gokaks put on 13 nP to Rs. 18.50. Twenty counts Gokaks improved by 25 nP to Rs. 23.50. Moderns were fully maintained at Rs. 23.50.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days ago:

	21-9-1960	14-9-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 Kg.)		
October	2,181	2,124
December	2,161	2,127
60/1 Cupressa Bemberg spot (per lb.) ...	9.62	9.50
120 Japan (per lb.)	5.65	5.65
150 Japan (per lb.)	6.12	6.09
120 Italy (per lb.)	5.50	5.56
150 Italy (per lb.)	6.19	6.15
Staple fibre yarn—		
October	728.00	729.00
December	734.00	736.00
40×2 City (per lb.)	3.84	3.81
40×2 Century	3.68	3.66
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.25	18.00
20s Gokak	23.50	23.25
40s Minaxi	30.31	30.75
60s Raghuvamshis	59.00	59.00
80s Finlay	80.80	80.80

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 21*st September*

The oilseeds market continued to display distinctly firm conditions. Groundnuts staged a smart rally, following the announcement of a repeat quota for H.P.S. groundnut kernels. A Press note issued by the Joint Chief Controller of Exports, Bombay, on the 15th inst. states that the Government of India has decided to give a second repeat allotment of H.P.S. groundnut kernels to established shippers who wish to make further shipments, equal to 20 per cent. of their basic year's exports after they have completed shipments against the current quotas and the first repeat allotment. Co-operative societies of growers of groundnuts will also be given a second repeat allotment equal to the quantity admissible to them under the existing basis of acreage under cultivation during 1956, 1957 and 1958. Shipments against this second repeat allotment granted will be allowed upto the end of December 1960.

This step was generally welcomed by the trade. The fact, however, remains that the repeat quota is not likely to have any appreciable effect on exports, since a large proportion of quotas already released still remains unutilised as the domestic prices have been out of parity with world prices for a long time. At any rate, the measure gave a psychological stimulus to the bulls. It is a debatable point whether the timing of this quota was appropriate. For it was released at a time when the market was distinctly bullish. Consequently, the very purpose of the quota has been defeated.

In view of this export promotion measure, the groundnut section came in for sustained speculative buying. Unfavourable weather conditions in the major producing centres and private estimates of smaller crop in the current season imparted further strength. There was fairly good offtake by *vanaspati* manufacturers. In these circumstances, the forward contracts spurted to new high levels. The February 1961 contract, which had wound up last week at Rs. 207.25, rallied to Rs. 210.25 by Saturday. It, however, moved down subsequently to close today at Rs. 207.25 on profit-taking and also on fears of official intervention to curb speculation. Nizam bold rose by Re. 1.25 over the week to Rs. 46. Coromandel, too, put on a like amount to Rs. 46.25. Oil *ex*-mill finished today steady at Rs. 24.50, after fluctuating between Rs. 24.62 and Rs. 24.87.

Castorseeds also continued to make considerable headway mainly on rumours that the Government of India would permit exports of castorseed. The values would have gone up further but for the protracted absence of the U.S. in the castor oil market, as a result of growing pressure of cheaper Brazilian supplies, and fears of heavy tenders against the maturing contract. Castorseed May 1961 contract advanced from Rs. 175.50 to touch a new high of Rs. 180.25 on Saturday. It eased later, following absence of fresh incentives for bulls and better weather reports. Ready Madras closed today at last week's level of Rs. 34.12, after touching Rs. 34.75 earlier. Oil Commercial hardened by 12 nP to Rs. 18.12.

The linseed section put on a cheerful appearance in the early part of the week in sympathy with other seeds. But the sentiment was subdued towards the week-end in view of dull conditions on the export front for linseed oil. The linseed May 1961 contract hardened from Rs. 33.34 to Rs. 33.75, but gave way subsequently to Rs. 33.28. Bold ready was steady at Rs. 32.12 after touching Rs. 32.37. Linseed oil closed higher at Rs. 16.87, as compared with Rs. 16.62 a week ago.

In sympathy with other seeds, cottonseeds improved initially, but lost ground later. The February 1961 contract which had improved from Rs. 92 to Rs. 93.50 by Saturday sagged later to wind up today at Rs. 91.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	21-9-1960	14-9-1960	7-9-1960
	Rs.	Rs.	Rs.
Groundnut			
February 1961	207.25	207.25	204.00
Nizam bold	46.00	44.75	46.75
Coromandel ready	46.25	45.00	46.75
Khandesh quality	46.25	44.75	46.75
Oil ex-mill ready*	24.50	24.50	24.87
Railway receipts*	24.37	24.19	26.02
Castorseed			
September 1960	—	170.00	163.87
May 1961	177.62	175.50	169.87
Ready Madras	34.12	34.12	33.12
Ready Kanpur	33.12	32.87	32.00
Oil B.S.S.†	19.50	19.31	18.94
Oil commercial†	18.12	18.00	17.75
Linseed			
September 1960	—	32.06	31.12
May 1961	33.28	33.34	32.75

September 1960	—	—	153.50
February 1961	91.50	92.00	92.75
Niger seed	36.00	37.00	37.75
Kardi seed	24.50	24.50	24.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations relate to sale per cwt. and those for oil per quarter. Rates for 1961 delivery contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms.

QUALITY TEAS LOWER

(From Our Own Correspondent)

CALCUTTA, 20*th September*

Although there was good demand in export auctions held yesterday, prices failed to improve, and that too despite the fall in output in North-East India in August. Production in August was only 95.4 million lbs., as against 101 million lbs. in August of last year. Including the figure for August, production so far totalled 267.9 million lbs., representing a decrease of 36.3 million lbs. compared to the figure for the corresponding previous period. Reflecting this decline in production, arrivals have decreased and shipments so far to the United Kingdom have not even come up to half of those in the corresponding period of last year.

Trade circles said that, thanks to the fall in output, prices of teas suitable for internal consumption might improve in the coming months. However, the price of quality teas are not expected to improve, as indications are not wanting for the illation that Ceylon had succeeded in diverting foreign interest from Calcutta to Colombo auctions. The keener competition from Ceylon coupled with a fall in output here suggests that strong measures are urgently necessary to improve India's export market.

Dusts on offer amounting to 21,133 chests during last week's internal sales met with strong demand, although prices were generally lower. Orthodox exportable teas met with support at lower levels, while the brighter liquoring teas came in for attention at higher rates. Brighter liquoring C.T.Cs were taken at reduced rates. Following quality, best liquoring C.T.Cs were irregular. A strong feature was provided by legg-cut Dooars which, on keen competition, added 15 to 20 nP. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. Rs. 6.40 to Rs. 6.80, medium Assam C.T.C. Rs. 6.00 to Rs. 6.25, medium Assam Rs. 4.80 to Rs. 5.40, and medium Dooars Rs. 4.65 to Rs. 4.80.

Leaf on offer amounting to 470 packages met with good demand.

Although prices followed an irregular trend, offerings during yesterday's export sales, amounting to 55,509 packages, met with a good general demand. A strong feature was provided by the poorer whole leaf grades which on keen competition appreciated in price. However, the better kinds of the same description were an easier market. Plain brokens and fannings also provided a feature. While the lower-priced teas advanced, the better descriptions were firm. Strong competition met legg-cut teas and prices rose impressively. The weakest feature was provided by C.T.C. teas, prices of which with the exception of the secondary fibrous lots, declined by 50 nP to Re. 1 per 1 kg. Darjeelings also declined. Although prices for bright liquoring Assam B.O.Ps and O.Fs were irregular, B.O.Ps were more wanted than O.Fs. Prices for plain liquoring B.O.Ps and O.Fs sagged by 50 nP. Medium B.Ps were fully steady as on keen competition prices hardened. Brighter liquoring fannings were also steady and prices advanced. The quotations inclusive of excise duty per 1 kg. were: best Assam C.T.C. fannings Rs. 7.50 to Rs. 8.50, best Assam C.T.C. B.P. Rs. 7.00 to Rs. 8.00, clean black pekoe Rs. 5.40 to Rs. 5.60, medium fannings Rs. 5.20 to Rs. 5.50, medium B.P. Rs. 5.00 to Rs. 5.50, plain fannings Rs. 4.50 to Rs. 4.75, and plain B.P. Rs. 4.45 to Rs. 4.60.

Export quota was on offer at ½ nP. Buyers were interested only at ¼ nP. No transactions took place.

GOOD DEMAND FOR TEAS AT DEARER RATES

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 13*th September*

Sale No. 35:—Approximately 560,000 kilograms were offered in Sale No. 35 held on Tuesday, 13th September 1960. Quality from most districts was irregular, but generally tended brighter. There was a strong general demand at dearer rates. Best and improved quality high-grown brokens came to a dearer market, but others in this category ruled firm. Their fannings advanced by a lesser margin. Good medium brokens were well supported and were quoted up to 10 nP per kilo dearer. Low medium and medium brokens received keen competition and were absorbed readily at advances of up to 20 nP per kilo. Medium fannings were the strongest feature and those free from fibre advanced by as much as 40 nP per kilo over valuation. Plainest descriptions followed the general upward trend of the market. Whole leaf grades met with strong demand at dearer rates. C.T.C. types and legg-cut teas sold well at above last rates. Tippy teas were neglected. Black leaf teas were dearer.

	1960 Rs.	1959 Rs.
Low medium	4.20-4.40	3.64-3.86
Medium	4.40-4.75	4.19-4.63
Good medium	4.75-5.40	4.85-5.18
Quality	5.40-8.15	5.29-8.71

The average price realised in Sale No. 35 was Rs. 4.88 per kilo, as compared with Rs. 4.80 in the previous sale and Rs. 4.78 per kilo in the corresponding sale of 1959.

Dust Sale 'HH':—185,000 kilograms were offered in Sale No. 'HH' held on 15th September 1960. Quality was about maintained with a few brighter invoices on offer. There was a strong and active demand at dearer rates. Good and colourey mediums came to a very receptive market registering advances of 10 nP to 20 nP per kilo and sometimes more, with buyers' emphasis on the poorer fibrous types. Keen interest was also shown for medium and low medium which sold at dearer rates. Highgrown received satisfactory support, but were irregular and tended easier. There was better interest shown in the C.T.C. type and legg-cut teas which can be quoted dearer. Black leaf teas came in for improved demand at enhanced rates.

The average price realised in Sale 'HH' was Rs. 4.52 per kilo, as compared to Rs. 4.35 in the previous sale and Rs. 4.07 in the corresponding sale of last year.

Export Quota:—The nominal price is ½ nP per kilo.

Colombo:—Just over 4½ million pounds were offered and met with a strong general demand with buyers following quality closely. Highgrowns advanced 10 cents on last week's closing prices, whilst bright liquoring useful mediums were 5 cents to 10 cents dearer. Other mediums were steady, but lowgrowns declined 5 cents.

London: North Indian and other growths:—In Monday's auction, the North Indian and African offerings came to a strong market and all descriptions sold at dearer rates.

Ceylon and South Indians:—In Tuesday's sale 29,498 packages were on offer, of which 9,744 came from South India. There was a strong market and prices were dearer throughout the sale.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 36:—417,000 kilograms. Very strong demand for low medium and medium descriptions which are 10 nP to 20 nP dearer. Good medium advanced up to 30 nP, following improved quality. Best liquoring rather less demand and irregular with quality.

RAW JUTE FIRM

(From Our Own Correspondent)

CALCUTTA, 20*th September*

While prices of jute goods moved within narrow limits and closing levels were lower on balance during the week under review, fibre prices advanced and closed Rs. 3 to Rs. 5 per 100 kgs. higher on balance. That, despite good support from foreign markets, prices of goods did not follow fully the uptrend in raw jute should be attributed to the disinclination, on the part of foreign buyers, to pay higher prices. Australia continued to buy woolpacks and cornsacks. The report of increased burlap consumption in the United States in the month of August pushed up hessian prices. Further, the New York market was steady, although primary consumers cared to add to their inventories in a small way only. The handsome increase in the output figures of mills for August was taken as an indication that mills had commenced unsealing, in stages, the percentage of looms which they had voluntarily sealed in the last two months or so in an attempt to attract reality to prices in the fibre market. The number of hours worked by mills in August was 208, as against only 200 in the previous month, and that also accounted for the higher production, at 94,200 tons, as against 86,800 tons in July. Hessian increased by only 800 tons to 35,100 tons, while sacking showed an increase of 5,900 tons at 48,300 tons. These wide variations showed that mills had transferred a portion of the hessian looms to that of sacking. Apart from the greater demand for sacking as compared to hessian, it was believed that sacking sales admitted of better profits than hessian sales at the prevailing prices of goods and raw jute.

The increased demand for sacking goods and the policy of mills to increase production, so that a squeeze in goods could be avoided and also availability of goods at reasonable prices to foreign buyers could be ensured would, in turn, increase the consumption of fibre by mills. The pre-*Pooja* recession in fibre prices has not yet occurred; on the other hand, prices are daily on the increase. That demonstrates the improved holding power of growers, which should cause no surprise since the co-operative habit has spread. It is also true that middlemen are also making huge money. Against this background, the Government of India's delay in issuing import licences for Pakistani cuttings has come in for sharp criticism. Mills have been unable to enter into commitments with Pakistani exporters in anticipation of the licences based on the quotas recently announced in view of the change in the Pakistani export licensing rule under a recent Presidential edict.

If the Government thinks that the domestic output will be sufficient to meet the demand of mills in full, it will be sadly mistaken. The carry-forward into this season has been very small. In 1959-60 imports of fibre were insignificant, and India had attained almost self-sufficiency. To enable mills to implement their policy of progressive increase in production by unsealing the idle looms, mills would require more fibre than last year. As against the official estimate of 6.2 million bales, the trade estimates that the crop would amount to only 5.5 million bales. The trade also believes that, despite removal of restrictions in the growing of jute in the border areas, the Pakistani crop might not be as big as earlier estimated. In the last week, prices of cuttings in the Pakistani Narayanganj market moved up by Rs. 2 a maund.

The rise in fibre prices, despite the almost stationary character of prices of goods on balance should also be attributed to the knowledge in the market that mills needed more fibre. Their stock position had been affected by restrained purchases in recent weeks in the belief that such a policy would bring down prices. However, this expectation was not fulfilled, and in the meantime mills' stocks depleted. During the week, the East India Jute and Hessian Exchange announced that the maximum price of Rs. 43.50 per maund on trading in raw jute hedge contract for December 1960 delivery would be continued up to 31st October 1960. Trading in raw jute hedge contract for September 1960 delivery ceased from 14th September.

On Tuesday last, ready B. twills spurted to Rs. 142.00 from Rs. 140.50, following the announcement of a Government tender for 19,000 bales of standard B. twills for November delivery. In sympathy, ready hessian 40" 10 oz. hardened to Rs. 48.50 from Rs. 48.25. Following this, there was a good deal of business both in the futures market and in ready goods. On Wednesday, therefore, B. twills at Rs. 143.75 recorded a further rise. At this stage, New York reports indicated higher burlap consumption in August. The effect was that hessian 40" 10 oz. rose to Rs. 48.90, although business passing in this construction was small. Australian interest in woolpacks was in evidence on Thursday, but bear-selling in the futures market pulled down ready B. twills to Rs. 142.55 and ready hessian 40" 10 oz. to Rs. 48.55. On Friday, there was heavy selling pressure in hessian, as a result of which the 40" 10 oz. sagged to Rs. 48.20. In sympathy, ready B. twills moved down and settled at Rs. 141.00 at close. During the week-end, business passing shrunk, and prices were affected. Thus B. twills sagged to Rs. 139.75 and hessian 40" 10 oz. to Rs. 48.10. With little interest being shown yesterday, prices were almost changed. B. twills hovered around Rs. 140 and hessian 40" 10 oz. at Rs. 48.15.

Contrary to earlier expectations, the arrivals of raw jute did not improve. Mills showed good interest, as they needed fibre for replenishment of their stocks. Sellers were reserved. There was no indication of last-minute sales by cultivators to meet cash needs for the *Durga Poojas*. October-November daissee bottoms opened at Rs. 111.25 per 100 kgs. and gradually rose to Rs. 116.50. At Rs. 113.75 September-October Assam bottoms showed a rise of Rs. 4.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 19*th September*

Sugar ruled steady during the week at Rs. 112 per bag in wholesale and at Rs. 1.09 per *seer* in the open market, as against the controlled prices of Rs. 108.50 and Re. 1.01. The supply position of sugar was reported to be easy. A part of the quota allotted through ration shops was not being lifted, but the main influencing factor was the latest release of 50,000 tons for export during the year. Exports would be handled by the Indian Sugar Mills Association, but no part of the release would be allowed to be shipped to the United States.

Sugar improved by Re. 1 to Re. 1.50 per bag in the Muzaffarnagar market in the week-end on export prospects. The latest prevailing prices are Rs. 114.50 to Rs. 115 per bag in wholesale in the open market.

Sugar also stayed steady at Rs. 113 to Rs. 114 per bag in the Kanpur market. The effects of an early export of sugar were yet to be felt in the market.

Khandsari ruled quietly steady, thanks to revival of demand from the consuming areas of the South, but loading facilities were still restricted. The latest prevailing prices in the Muzaffarnagar market where *khandsari* stocks were put at 50,000 maunds were: *Galawat* Rs. 23 to Rs. 27; inferior Rs. 30 to Rs. 34; superior Rs. 35 to Rs. 41; crystal *khandsari* Rs. 36 to Rs. 42 a maund.

Ready *gur* was depressed, as the stocks left were wet and damaged and were not at all in demand. Local stock was about 9,500 maunds. The new season's production would start by the end of the month. Old *gur* stocks were reported in *mofussil* markets and stockists were anxious sellers. Crushers would start producing *gur* and later on turn to *khandsari* production. Prevailing prices here were: *gur* dry nominal Rs. 15.75; *patra* Rs. 14; wet Rs. 12; *shakker* Rs. 16.50 a maund.

Gur also ruled quiet in the Muzaffarnagar market during the week in the absence of good demand and comfortable stocks at about 50,000 maunds. The latest prevailing prices were: *Chaku* dry Rs. 19.25 to Rs. 19.50; wet Rs. 15 to Rs. 15.50; *shakker kotha* wet Rs. 14.50 to Rs. 15; remanufactured Rs. 19 to Rs. 20; *dana minja* Rs. 15 to Rs. 17.50 a maund.

Gur futures ruled both ways during the week in speculative bouts of buying and selling. *Fagun* delivery opened at Rs. 13.87 on Monday last, touched the highest and lowest at Rs. 13.96 and Rs. 13.72, respectively, and was quoted today at Rs. 13.94.

FOODGRAINS BEARISH

(From Our Own Correspondent)

HAPUR, 19*th September*

Quietly depressed trend was witnessed in the foodgrains market during the week. Despite reports of damage to crops in many parts of the country following recent floods, arrivals in the markets improved towards the week-end, due to clear sunny weather. Heavy sales of gram by the U.P. Government in the local markets also acted as a bearish factor. After an early improvement, wheat sagged on Monday to Rs. 17 a maund for average quality and upto Rs. 18.12 for superior farm produce. Daily arrivals of wheat mounted to about 250 maunds, thanks to suspension of wheat levy scheme by the State Government. This definitely checked the rising trend in wheat prices; otherwise crop damage reports due to floods would have resulted in wheat prices touching new heights. Heavy sales of imported wheat and wheat flour through ration shops also imparted weakness.

Rice ruled quiet at almost the unchanged price level of Rs. 30 to Rs. 32 a maund for *sela basmati* quality, at Rs. 24 for *ramajwayan*, at Rs. 25 for *raimunia*, at Rs. 23 for *mainpuri* and at Rs. 19.87 for *gada* quality. The supply position of rice is reported to be satisfactory and crop prospects are also favourable, due to fairly heavy rains in producing areas.

Gram, after the last week's rise upto Rs. 16.25 a maund for Punjab produce, eased to Rs. 15.87 a maund, following heavy sales of old gram stocks by the U.P. Government which is now being resold at Rs. 15.19 a maund in the open market. The stock position of gram is reported to be satisfactory, though in the Punjab following recent damage due to floods, stockists are trying to hold up stocks, Barley was quoted slightly lower at Rs. 12.62 and *bejhar* at Rs. 12.37 to Rs. 12.87 a maund according to quality. New maize was reaching the market at an average of about 200 maunds daily which was being lifted by consumers at Rs. 13.50 to Rs. 14.50 a maund. *Jowar* was quoted lower at Rs. 12.75 to Rs. 13.25 and *guwar* at Rs. 11.50 to Rs. 12.50 a maund.

Among pulses, peas eased fractionally to Rs. 12.50 a maund for *dara* green quality and Rs. 13 for superior white stuff, while old stocks were being lifted at Rs. 11.75 a maund. Demand for peas was not brisk and local stock ran down to 55 *hatties*. Old stocks were being despatched to east U.P. for grinding into *dal*. *Arhar* eased by 50 nP a maund to Rs. 13.50 and, as demand was dormant, local stock was unchanged at 25 *hatties*. New *moong* from South was being lifted at Rs. 21 a maund, while old stuff was quoted at Rs. 19 to Rs. 20 a maund. *Urd* was quoted at Rs. 18.75 and *massor* at Rs. 14 to Rs. 17 a maund.

Preparation of land for *rabi* sowings is in full swing, but rains are now needed for timely sowings. It is reported that heavy tracts of land here recently vacated from maize and fodder crops would be available for *rabi* sowings, if it were to rain here now.

RAW HIDES EASIER

(From Our Own Correspondent)

MADRAS, 19*th September*

Trading in E.I. tanned skins and hides was selective throughout the week. In view of poor response from the U.K., prices declined by 1d. to 2d. on last week's level on hides. Buffs arrivals were fair with good clearance. Buff calf and cow calf remained quiet. In the c.i.f. section, tanned goat skins declined by 6d. but business done was negligible. Tanned prime sheep skins remained steady.

Raw prices ruled easier.

MISCELLANEOUS STATISTICAL INFORMATION

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. F.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales. If any and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

‡ General Industrial Society Ltd.—The dividends for 1956 and 1957 are on shares of Rs. 300 each which have since been sub-divided into shares of Rs. 10 each. $—On old capital.
N.B.—All dividends paid since 31st March, 1950 are shown as taxable.

MARKET GOSSIP

(*Concluded from page 535*)

the corresponding week of 1959. The production of North Indian tea up to the end of August aggregated 267.9 million lbs., representing a fall of 36.3 million lbs. over that in the corresponding period of 1959. It was expected that, after the sharp shrinkage of 30.7 million lbs. in July crop, there would be an increase in production in August, but this expectation was belied when the August crop turned out to be 5.5 million lbs. less than that in August 1959.

The crop in Pakistan, too, is far behind that in the previous season. The production up to the end of August is estimated at no more than 17.6 million lbs., as compared with 30.7 million lbs. in the corresponding period of 1959. Consequently, the Pakistan Government has found it necessary to launch a "drink less tea" campaign. In his anxiety to discourage domestic consumption of tea, the Pakistan Commerce Minister has gone so far as to question the necessity for drinking tea. "What do we get from tea by way of nourishment?", he queried, and added: "It is an established fact that tea does not provide any nourishment."

It is considered unlikely that the leeway in both North India and Pakistan will be made up during the rest of the season. This, however, does not mean that the total world supplies of ordinary teas, which constitute the bulk of the blended teas, will be short. For some of the growers in North India are likely to pick all they can in order to reduce the sh

latter is depressed, production must correspond, with less and less to invest. If increase in the national income is only postulated at 5 per cent., an increase in investment at 14 per cent. must cut consumption to the bone, leaving little market to the production. It deserves to be recognised that production and consumption are two parts of the wheels of prosperity. One without the other leads to stagnation or inflation. A fundamental change in thinking, on increasing consumption as a means to increase production, is, therefore, necessary.

The second means is an increase in basic and heavy industries, particularly steel, fuel, power and machine building. Though the second Plan was targeted to increase steel production from 1.3 million tons to 4.3 million tons, the increase in 1959 to 1.7 million tons has only been in the private sector, there being no production worth noticing in the three State factories. In the circumstances, until the present investment fructifies, further investment will only tie up the finance contributed by the people. Secondly, to the extent steel production is increased, coal, railway transport and power are diverted from other requirements of the country. Thirdly, the target of 10.2 million tons of steel and 1.5 million tons of pig iron for the third plan, without coincident development of industries is likely to prove a burden, because before the construction of steel factories began, only a small import of steel was necessary to supplement the indigenous production of 1.2 million tons.

The third means is the development of agriculture. Although even the Minister for Food admitted that our *per capita* consumption of grain is four times that of other countries, until the present habits change, food production has to be increased. The expenditure of Rs. 2,339 crores on agriculture and irrigation in the first and second Plans, however, has not done it, because the peak of production of cereals on which most of the expenditure was devoted was reached in 1954, after which there was a decline in the following four years, till the change in the monsoons brought an increase in 1959. If increase in food production is thus established as a gift of the monsoons, other incentives and instruments than those tried already for raising the food production are necessary.

The fourth means is foreign aid to reduce the dependence on foreign imports. The question is of the form of foreign aid. So long as Government reserves industries for itself, the aid has to be in the form of loans, which not only carry interest but have no assurance of return. The result is that the public have to pay interest without getting production which is cheaper or better. If, on the other hand, foreign investment is encouraged, the foreign exchange will be reduced only to the profits on articles which have served the people, on a competitive basis. The solution of both the problems of foreign exchange and industrialisation is the withdrawal of Government from the responsibilities of State enterprise to the maximum extent possible.

The fifth means is the control of prices. The Government has not learnt that decontrol of food in 1952 for the first time made the country self-sufficient, leading to a record production in 1954, which has only been exceeded now in 1959. Controls create both artificial shortages and demands. Government procurement prevents prices from falling to their natural levels, while zonal barriers relate prices to the risk and cost of crossing them. If there is any shortage, the whole country should share it, subject to such mitigations as are easily possible from the American Food Loan. The third Plan should be essentially based on decontrol, as that is not only the way to reduce prices but also to increase production. Artificial demand is created by Government through dearness allowances, which neutralise the working of the law of supply and demand, illegitimate profit in the black market for its licensed producers and stockists, disproportionate increase in wages to small sections of workers and officials and lastly the corruption which has now become part of the admin stration. If controls continue, inflation will rob the poor in favour of those in positions created by the Government.

The perspective of the third Plan should have been based on the results of the two preceding Plans, particularly the problems which remain unsolved. There is no clear recognition at all in the draft Plan of these problems, while the progress is stated in estimates, rather than actuals. It is only because the first two Plans escaped critical examination that the present one seems to be cast in a golden mist.

(To be continued)

INDUSTRIAL POLICY ISSUES

IT was against the background of a hopeful and, in some ways, buoyant, industrial situation that the Central Advisory Council of Industries discussed some matters of policy at its eleventh meeting at New Delhi last week. Two outstanding facts in this situation were that industrial production in the first five months of 1960 had increased by 13.4 per cent. over that of the corresponding period of 1959 and the second Plan's capacity and production targets of most industries had been fulfilled or exceeded by that time. A no less significant fact was that, in the first half of this year, the number of applications for licensing under the Industries Act was as high as 542 (against 997 during the whole of 1959), despite the fact that the Government had dispensed with the need for obtaining licences for establishing small enterprises by raising the lower limit of employment to 100 persons and of capital investment to Rs. 10 lakhs. But what greatly detracted from an otherwise encouraging situation were the critical shortages in imported raw materials and components required by the developing industries—shortages caused by continued stringency in the foreign exchange position.

There was, therefore, nothing unusual in Mr. Lal Bahadur Shastri's advice that industries should make maximum use of indigenous raw materials for increasing production. But this is a piece of advice which is more easily given than implemented. Fortunately, Mr. Shastri himself recognised that "a large part of imports of components and raw materials were basically developmental in nature." "With every stage of development," he continued, "our import requirements gradually changed from complete machinery items to components and some processed items required for the fabrication of the equipment which was previously imported. Naturally, we could not meet these increasing requirements for development from our own resources, till our economy had grown to a stage when we would be able to finance our own development. It was in support of this that we were seeking assistance from friendly countries." But it is unfortunate that this wholesome recognition of industrial realities is not reflected in an official note, prepared for the consideration of the Council.

This note, which deals with industrial development from the point of view of export promotion, records that "the new industries which have come up under the stimulation of scarcity are not as fully based on indigenous raw materials as would have been the case under more normal conditions" and "the result is that imports of the raw materials have to be permitted for a long time." What this note has failed to recognise is that, in the initial stages of development, production of quality goods might not be possible, except on the basis of imported raw materials and components of high quality. It is strange that the note should argue that "mere temporary advantages in saving foreign exchange in importing the finished products should not be the criterion for granting permission to set up an industry in the country, where such industry requires large-scale import of raw materials." If this criterion were to be followed, there would surely be no case for establishing such industries as petroleum refinery or rayon spinning units. There is no denying the fact that it is more advantageous to the country, from the point of view of foreign exchange saving and employment opportunities, to import raw materials and process them within the country than import finished goods. While it may be a good thing for every new industry to cater not merely to the internal market but to an external one as well, the suggestion that "preference be given, when issuing licences under the Industries Act, to units which undertake to export a particular percentage of their production in such a manner that the foreign exchange expenditure on imports for setting up the plant would be covered by the foreign exchange earnings within a period of two or three years and the exports would be maintained later at the same level," seems to be a tall order. Is it so very easy for a new industry to know well in advance whether there will be a secure foreign market for its products? It is surprising that, while Indian shipping which can be relied upon to earn back, within a short period, the foreign exchange allotted for its expansion has been given a rather niggardly treatment, some new industries which are not so favourably placed as shipping are expected to earn back, within two or three years, the foreign exchange expenditure on their establishment.

It would thus appear that the Council did not take any definite stand on the officially suggested criteria for licensing new industries. Actually, it was given more advice by Government than it probably gave the latter. Mr. Lal Bahadur Shastri, for example, advised the industries to undertake voluntarily fair and equitable distribution of their products and to set up their own organisations for promoting exports. These two pieces of advice were given in general terms. The Minister did not specify how, for example, industries could ensure fair prices and proper distribution at the retail end. Nor was it clear from the speech of a former President of the Federation of Indian Chambers of Commerce and Industry whether the measures taken by it to bring about voluntary price stabilisation by industry had succeeded. Perhaps, the only substantial instance of voluntary price reduction is provided by the cotton textile industry in recent months. Even here, it is premature to claim success for this experiment. The spokesmen of millowners themselves are doubtful, as witness their suggestion for statutory sanctions to enforce the controls worked out by them. In the matter of voluntary organisation for export promotion also, the idea of a pool scheme, under which the losses in exports of a certain proportion of the production of an industry as a whole are shared among all the members of that industry, may have no chance of gaining wide currency, if the experience of sugar exports is any guide. On this matter also, the Central Advisory Council of Industries did not appear to have developed a consensus of opinion.

All this does not mean that the discussions at the meeting of the Council have been entirely fruitless. They have had at least one concrete result. And it is that the Government has been persuaded to recognise the need for increasing the targets for sugar, textile and aluminium industries under the third Plan. While this is a heartening development, it only needs to be added that the increase in the textile target should be allotted to the mill sector which alone will be in a position to deliver the goods at a price the consumer can afford to pay and that new aluminium units should be large enough to achieve economic production, say, of the size of 50,000 tons, instead of the present sanctioned capacity of 10,000 to 20,000 tons. With the need for raising these three industrial targets now recognised, it may be that the third Plan investment target of Rs. 1,050 crores in the private sector industries would be enhanced suitably. In fact, this has been indicated in a way by Mr. T. N. Singh, a Member of the Planning Commission, and this will surely be welcomed by industry.

The Council meeting has, however, had no such happy result on another count, namely, the question of coal production. Although the problems of private collieries were fully explained by their representatives, the Union Minister for Steel, Mines and Fuel, Sardar Swaran Singh, held out no clear cut promises for them. The policy of price control and restrictions on expansion of private collieries have had the effect of retarding the progress of production in that sector, while the public sector collieries, too, have not been in a position to reach the ambitious production target set for them. Practical difficulties, such as the inadequacy of railway facilities and the slow execution of the schemes for washeries to supply high quality coking coal, have also come in the way of higher production in industries where coal plays a key role both as fuel and as raw material. In spite of several handicaps, the collieries in the private sector have certainly performed better than those in the public sector. And they could have performed still better, if controls on the industry had been relaxed in time and a liberal policy in regard to prices had been pursued. Sardar Swaran Singh's remark that, if the private collieries could satisfy the Government as to their optimum production programme in the existing mines, it would be prepared to consider any relaxation in its policy, is a concession which will not be effective. It is like putting the cart before the horse. Since coal is a basic raw material and fuel, the country cannot afford to take the risk of a shortfall in its production in the third Plan also. If the Government is really anxious to serve the public, it must be realistic enough to appreciate the need for giving all possible encouragement to the private sector to step up coal production. The right thing to do, therefore, would be a prior relaxation in the policy in regard to coal which restricts the scope for the expansion of the private sector and an assurance of reasonable assistance. If, after doing so, the Government invites the colliery-owners to come forward with their firm plans for maximising production, it can hope for enthusiastic response from them. But Sardar Swaran Singh's uncharitable remarks about the undoubtedly just criticisms of the World Bank Mission on India's policies on coal and oil suggest that the Government is yet unwilling to admit the realities of the situation where they clash with its major ideological predilections.

HOW TO STABILISE PRICES

By A Special Correspondent

CURRENT economic thinking in India is dominated by a curious combination of optimism and pessimism about the future. The planners believe that the end of the third Five-year Plan (1961-66) will see the country reaching what is being fashionably called the take-off stage when progress, according to them, will be not only smooth but almost automatic. The picture painted by our policy-makers is thus most alluring, but their optimism is somewhat disturbed by the fact that the goal of material prosperity, especially for the common man, may prove illusory unless prices are held in check and stabilised at a reasonable level.

The issue of holding the price line is thus of vital importance and should be dealt with firmly and realistically. The Planning Commission has been giving its most earnest consideration to the problem, though the remedial measures taken by the Government to hold inflation in check have been singularly ineffective. The first Plan document recognises the need for establishing a judicious relationship between prices and returns in both the public and private sectors, taking into account the fact that, in a developing economy, a certain change in the price structure from time to time is inevitable. But any change in prices should not be of an inflationary character, since such a development, as the Plan document rightly points out, tends to a wrongful diversion of productive resources, besides generating economic instability and social unrest.

"Increase in output," says the same authority, "through fuller utilisation of capacity, through improvement in technical and managerial efficiency, or through harder or more sustained work all round is basically the answer to inflationary pressures and this would be a far better way of bringing supply and demand into equilibrium than some of the other devices which, while doing good, have also a somewhat depressing effect on the economy." Perhaps, the ills of high costs and prices from which the country is suffering today would not have been felt in their present acuteness if practical effect had been given to this salutary admonition in good time. Had this been done, there would have been no occasion for the framers of the draft third Plan to lament that "the level of prices now is more than 20 per cent. above the level at the commencement of the second Plan" or, to reiterate the obvious fact, that "it is essential to ensure that for the third Plan period a suitable price policy is formulated and carried out."

The fact of the matter is that, on the issue of ensuring an adequate and sustained supply of the basic necessities of life, which in an underdeveloped country like India, have a decisive influence on the price structure, the Government's policy has been singularly devoid of foresight and imagination. The production in required quantities of consumer goods, more especially of food and cloth, is, perhaps, more crucial for the success of planning and for ensuring the stability of prices than even an increase in investment and in the output of industrial goods. The unsatisfactory record of the country in the agricultural sector is best illustrated by the following figures of foodgrain production from the year 1951-52 to 1958-59.

(In thousand tons)

Year	Production	Year	Production
1951-52	51,175	1955-56	65,794
1952-53	58,266	1956-57	68,748
1953-54	68,718	1957-58	62,511
1954-55	66,960	1958-59	73,503

The production target, which had originally been fixed at 75 million tons at the end of the current Plan, that is, 1960-61, was revised upwards in November 1956 to 80.5 million tons. Apart from the fact that the possibility of realising this goal within the prescribed period is extremely remote, the rapid increase in the population which, according to the Central Statistical Organisation, is estimated to be 431 million in 1961, has rendered the shortfall in the output of foodgrains a major problem.

The inevitable consequence of the shortage of foodgrains has been an aggravation of their prices, which in its turn, has caused a sharp increase in the cost of living. Food claims the largest part of the income of the common man and this is particularly so in the countryside where incomes are the lowest. Even in industrial areas, it accounts for well over 50 per cent. of a householder's total expenditure. For instance, it is nearly 78 per cent. in a place like Jharia and nearly 52 per cent. in Bombay.* Taking the consumer price index for the working class in the country as a whole, the cost of living rose from 105 in 1951 to 121 points in 1959, largely on account of dearer food.

The importance of self-sufficiency in food and the methods to be adopted for attaining it have been and are being discussed with such thoroughness that nothing useful can be added here. Nevertheless, the fact that the area under irrigation, which is proposed to be increased from some 70 million acres at the end of the current Plan to about 90 million acres by 1966, will still bear a small proportion of some 20 per cent. to the total area under cultivation, deserves to be noted when making optimistic estimates about farm output. The success of agricultural planning thus still largely depends upon the benevolence of nature, upon which too much reliance cannot be placed.

Even so, with such means as are available to the Government, efforts should be made to stabilise and even push back the food prices to a reasonable level by judiciously releasing the buffer stocks that will be acquired from the United States and by entering into long-term agreements with food surplus countries for the supply of rice and wheat over a period of years. A steady increase in the domestic output, combined with imports on favourable terms, should help to hold the price line for food. Success in this attempt will mean winning more than half the battle against inflation.

Similar forethought is necessary in the formulation of the textile policy, since, next to food, cloth has a decisive influence on the living standards of the people. The frequent fluctuations in the fortunes of the cotton mill industry during the two Plan periods is indicative of the lack of a sound textile policy. When cloth prices rose in 1956 for valid reasons, the Government in September of that year imposed a staggering excise burden on the mills as a means of inhibiting higher consumption till the threatened imbalance between the supply and demand for cloth was rectified. But, when a similar situation arose in the current year, the Government chose to adopt an entirely different course of action. It prevailed upon the industry to enforce a major cut in cloth prices on the demonstrably untenable ground that the prices of all categories of cloth had risen by 40 per cent. In actual fact, the quantity of cloth affected was only 5 per cent. of the total output and this was entirely due to the acute shortage of home-grown cotton for producing coarse and lower medium cloths in required quantities.

It is significant that, while the prices of foodgrains have remained consistently high, those of cloth have not risen in glaring disproportion to the increased cost of production. The index of wholesale prices for textiles, which stood at 130 in 1951, declined to 106 in 1956, the last year of the first Plan, and was 105 in 1959. The figure stood at 114 in January this year.

*These figures are taken from the *Indian Labour Statistics*, 1960, page 71. The figures for Jharia and Bombay are those pertaining to the years 1945 and 1944-45, respectively.

There is no doubt that, in an economy struggling to expand, any tendency on the part of prices to play truant must be effectively checked, but the root of the trouble in the organised section of the cotton textile industry is its low profitability in relation to other industries. This fact has been emphasised by the findings of several competent bodies, including the Reserve Bank of India.

So, if cloth prices are to be scaled down to reasonable levels, without affecting the solvency of the industry, the obvious course to adopt is to assist it in securing a reasonable measure of resilience in its cost structure and to enable it to put aside larger sums of money than at present for purposes of modernising its equipment. An arbitrary cut in prices without taking these basic facts into consideration will only result in greater distress to the marginal mills and the consequent setback to production. Such a development will only worsen the position relating to the supply of cloth and its prices. The industry is required to spend an estimated sum of Rs. 180 crores during the third Plan period on the rehabilitation and modernisation of its productive machinery. It is not clear how such a large sum of money can be raised, if the mills are not permitted to make adequate profits.

The question relating to the expansion of the mill industry also calls for a realistic approach. The policy-makers' strange reluctance to face this issue squarely, despite their awareness of the fact that it is only the organised sector that can prevent serious shortages of cloth, accounts in no small measure for the repeated exposure of the industry to crises. Experience during the last two Plan periods has made it abundantly clear that the mills should be given the major task of clothing the population and of achieving higher levels of exports, if it is intended that the consumer should obtain quality cloth at reasonable prices. At the same time, quick decisions are necessary, for the time-lag between the decision to expand the industry and the actual attainment of higher production is considerable.

Thus, the plea for holding the price line calls for a good deal of preparation before practical effect can be given to it. Inflation, it must be remembered, is not a mere post-war phenomenon, but a modern peace-time development. Its existence in various parts of the world is due to different reasons. In advanced countries it is stated to be the result of full employment, social welfare policies and rapid technological development. In underdeveloped countries like India, it is, perhaps, due to forced industrialisation, insufficient development of agriculture and a rapid growth of population. Whatever the reason, in economically weak countries inflation is like a boa-constrictor that devours everything that comes its way, leaving behind a trail of ruined plans and frustrated hopes.

At the same time, we must be clear in our minds as to which year should be chosen as the base year for holding the price line. It will not do to make an arbitrary choice by ignoring the sharp increase that has taken place in the cost of production during the past many years. Whether we belong to the private sector or the public sector, we cannot altogether ignore the profit-and-loss calculus, if enterprises are to remain in business and to increase their activities. What with the increase in the prices of raw materials and the rise in the wage bill, including the salaries of Central Government employees, the cost structure in both sectors of the economy has undergone a radical change. This fact should be borne in mind when measures are taken to stabilise the prices.

In the ultimate analysis, however, it is higher production, through hard work and the will to increase the national wealth, that is the best antidote to rising prices. Piecemeal attempts to secure a reduction in the prices of a few articles, without making a concerted effort to deal with the problem of inflation as a whole, are likely to accentuate the problem, instead of solving it.

MARKET GOSSIP

More on Credit Restraints

BY joining the ranks of central banks which follow unorthodox policies in regard to credit controls, the Reserve Bank of India has only postponed the day when it may have to effect an increase in the basic Bank rate itself. In Japan, the system of differential bank rates has been used mainly to promote exports and discourage imports. In this country, it is being adopted to enable the Government, the largest spender and investor, to borrow at more favourable rates than trade and industry in the private sector. But, as banks have been the largest lenders to the Government and as the demand for finance on them from the private sector is bound to increase in the coming busy season, the Reserve Bank can help the Government to borrow at the favourable (Bank) rate, only if it is prepared to take over from the banks the Government securities which they already possess. This, in effect, will be an inflationary act. The banks have been told to charge more on their advances and pay less on the very short-term deposits (maturing within 21 days). The inter-bank agreement on deposits has been left unimpaired in all other respects, so that banks' profit-margin will broaden. This state of affairs is not conducive to banks maintaining their investments in Government securities at a high level; on the contrary, it is an inducement to them to reduce such investments to the minimum.

The banks, of course, cannot disinvest Government securities on any significant scale, unless the Reserve Bank is willing to buy them. If it refuses to do so, the value of Gilt-edged securities will drop either gradually or swiftly, depending upon the pressure of demand for funds, until they reach a level at which the banks will find it difficult to absorb the capital loss. When that stage is reached, the banks will lean more and more on the Reserve Bank for the supply of funds. The penal Bank rates which they will be obliged to pay will in turn be reflected in their lending rates.

It is hard to say at present as to what will be the levels at which banks will find it not worthwhile disposing of their investments in Government securities, as much will depend on the position of individual banks. But it is generally expected in market circles that, in the busy season that lies ahead, the yield on medium-dated loans of the Union Government may rise to 4.25 to 4.30 per cent. per annum and that on long-dateds to 4.60 per cent. to 4.75 per cent., as against 3.65 per cent. and 4 per cent., respectively, at present. Already, the Reserve Bank has stopped buying any Government loans, except 2½ per cent. 1961. This one-year loan is being taken up presumably because it is maturing next year. The worst sufferers of this policy are the State loans. Almost all the issues floated a few weeks ago have dropped a rupee. The decline in Central Government loans is not yet perceptible, but the pressure is strong and business is not passing for want of buyers. Apparently, banks are generally hoping that, when the busy season starts, the Reserve Bank will be compelled by circumstances to come forward to take over large parcels from them. It remains to be seen whether this hope will materialise.

Two important considerations seem to have weighed with the authorities in not raising the Bank rate straightaway. One, it will add to the cost of Government borrowing and, two, it will bring down the value of existing Government loans, thereby inflicting on the banks heavy capital depreciation. By giving importance to these considerations, the authorities are ignoring the more important consideration of development with stability. There is a tremendous wastage of capital by the public sector, by which we mean right from the Central Government down to the village *panchayats*. A stiff Bank rate is the only way in which some regard for the value of money can be inculcated among the leaders of the public sector. One may argue that, in a planned economy, it should be possible to prevent infructuous expenditure by giving suitable directives and through exhortation. But actual experience in the past one decade has clearly shown that this argument ignores human weaknesses and that, at best, it can function only under a dictatorship. In a mixed economy, where State Governments and Local authorities enjoy a large measure of autonomy, by a growing bureaucracy, a high level of interest rate is as necessary for the public sector as it is for the private sector. On the one hand, it will discourage unproductive and wasteful expenditure, and, on the other, it will serve as a good instrument to extract maximum efficiency and return from the public sector projects. This is true of *entrepreneurs* in the private sector also. The notion that high interest rates will deter economic growth does not hold good so far as underdeveloped countries are concerned, since the element of interest charges in total cost of production is relatively small as compared with other items of cost. Higher interest rates will, on the contrary, prove beneficial by inducing economy and efficiency in the use of capital, by discouraging hoarding of food, raw materials and finished goods, by inducing a high rate of savings and by forcing the State to follow a more sensible fiscal policy. They will restrain boom on the stock exchanges which yields enormous sums of unearned profits to big investors and speculators. In fine, the advantages of high interest rates for an economy like that of India are far greater and more lasting than the disadvantages.

While an increase in the Bank rate itself would have been the right course of action, the present step designed to make bank credit substantially costlier is something better than doing nothing, as it may very well help bring down the prices of agricultural commodities when the new crop starts moving. Only, it means one more disadvantage to the private sector *vis-a-vis* the public sector and the co-operatives. The coal mines, oil enterprises, steel and cement plants, fertiliser factories, the large number of engineering units, the transport undertakings (railways, roads, aviation and shipping) and electricity projects, to mention only a few, which are in the public sector will be able to get finance at a cheaper cost than their confreres in the private sector which would not have been the case if the Bank rate had been raised. At least, the difference would not be as glaring as it will be when the new pattern of interest rates comes into force. The position would be distinctly worse in the case of those industries the prices of which are controlled by the Government either statutorily or through gentlemen's agreements. Electricity, iron and steel, cement, coal, sugar and cotton textiles are some typical examples. If the Bank rate were raised, the electricity undertakings could raise their charges to consumers in order to cover the increase in the cost of borrowed capital. This they cannot do now, unless the Government is prepared to revise the understanding with them. Cotton textiles at least can hope to get some relief by way of lower raw material prices in the coming months. The sugar industry, too, may expect to be compensated by larger supply of sugarcane and extension of crushing season. But coal, iron and steel and cement, which have been enjoying the benefit of low interest rates as prime-borrowers and which have been relying on bank finance to a very considerable extent, will be hit substantially, unless their selling prices are promptly readjusted in an upward direction. There is, however, no reason to believe that this will be done. Even as it is, an increase in the retention prices of these industries to cover the rise in production costs that has already taken place is long overdue, the delay being due to the Government's reluctance to permit it.

Having regard to the disposition of the banks' funds and considering the prospects of heavy demand for bank finance in the coming months when a progressive increase in industrial production is expected, the new credit restraints are bound to have a biting effect. The banks will find it necessary to raise their lending rates by more than half per cent. An analysis of the statistical position of Scheduled banks other than the State Bank of India suggests that, even as it is, the borrowings of these banks are nearly twice as much as their basic quota. This means that, of the outstanding borrowings from the Reserve Bank amounting to Rs. 40 crores, a little over half will be at the Bank rate; of the balance, about Rs. 11 crores will be at 5 per cent. and the remainder at 6 per cent. The position will become pretty difficult when the busy season starts and the Reserve Bank may have to relax the restraint placed through the special deposit system.

It may be noted, in passing, that the State Bank has now no borrowings from the Reserve Bank and its capacity to borrow from it at the basic Bank rate remains unutilised. It is quite likely that the other Scheduled banks may first borrow from the State Bank, say, at 4½ per cent. and repay a part of their borrowings from the Reserve Bank on which they have to pay interest at 5 and 6 per cent. But, when the busy season gathers momentum or even before that, this source may get exhausted. Consequently, even inter-bank call money rate, which is not subject to any ceiling under the inter-bank agreement, may spurt to 4½ to 5 per cent. in the next few weeks. Such a development is likely to put the inter-bank agreement on deposit rates to the severest test.

Meanwhile, the Reserve Bank has made it clear that the savings bank accounts will not be subject to its ceiling of 2 per cent. for very short-term deposits, namely, those repayable within 21 days. Some banks are of the opinion that, in view of this ceiling, the rate for deposits up to one month also should be fixed at 2 per cent., as the present ceiling of 3 per cent. is disproportionately high. As their contention appears to be reasonable, the inter-bank agreement may have to undergo a change to this extent, unless the Reserve Bank agrees to extend the usance from 21 days to one month.

A substantial increase in the banks' lending rates, unaccompanied by a corresponding rise in their deposit rates, will result in a distortion of the pattern of interest rates. Already, the pace of growth of bank deposits has slowed down and, unless this trend is reversed in the near future, the banks will find it difficult to stick to the present ceilings. Many first class industrial concerns themselves may compete with banks for deposits. They may be prepared to pay 4½ or even 5 per cent. for one- or two-year deposits and thereby limit their borrowings from banks which will cost them 5 or 6 per cent., if not more. It may be interesting to recall here that, at the last annual meeting of the T.I.S.Co., quite a few shareholders volunteered to place a part of their funds in fixed deposits with the Company, but the Chairman declined the offer, as he could borrow from banks at a cheaper rate. There will be competition for deposits from other sources as well.

I.F.C.'s Candid Comments

The International Finance Corporation has been unusually frank in its latest (fourth) annual report in discussing in detail the risks, the difficulties and the potential rewards of private capital investment in the developing countries in the free world. Under the caption, *Management of Industry in the Developing Countries*, the general chapter of the report discusses some of the special considerations governing investment in these countries. In doing so, the Corporation has drawn on its first-hand experience, through its investment activities, of the problems involved in establishing new enterprises and expanding and modernising the existing ones. During the last four years of its existence, the I.F.C., it may be noted, has made investments in 17 countries and has investigated projects in 17 others, and this has provided the Corporation a varied experience in helping to solve these problems. Though some of the drawbacks it has noticed had been drawn attention to in its earlier reports, the Corporation has thought fit to reiterate and elaborate them in its latest report, evidently for two reasons. First, the drawbacks still persist and, secondly, it is anxious to see that the developing countries' industrial economies are established on a sound basis, because of its conviction that the rewards outweigh the obstacles and risks.

The Corporation finds that financial, executive and technical experience in the developing countries is limited and political, financial and economic conditions are frequently less stable than in the more highly industrialised countries. These factors, together with the usual necessity to obtain funds and equipment from abroad, combine to create certain problems.

In regard to ownership of enterprises, while there is a wide variety of systems prevalent, the I.F.C. has found "an unquestioned trend towards joint-ventures under international and local sponsorship, based on growing evidence that the advantages outweigh the difficulties." With full realisation that each case must be judged in the light of its particular circumstances and of local conditions, including appropriate timing, the I.F.C. considers that, wherever practicable, joint enterprises are desirable.

The I.F.C. has been concerned during the last four years in a number of projects designed at least to double current production and to add new product lines. It has often found that considerable persuasion is required "to convince the owners and managers that broadening the executive staff is as essential as adding more machines." The two factors which emphasise the need for executives who are experienced, informed and receptive to developments at home and abroad and which are quoted by the I.F.C. are: (1) economic production can be achieved only in large-scale enterprises, the operations of which present complex problems of planning, financing, taxes, labour and public relations, advancing techniques and the development of new products, and (2) increasing competition. In many cases, the I.F.C. has found that the need can be met only by bringing in executives from abroad.

Another disquieting feature found by the I.F.C. is that the increasing scope and complexity of financial management are not widely recognised. It says that technical education is much more widespread than training in finance and business, so that there is more likely to be a shortage of qualified financial experts than of engineering in industrial operations. The result is that, even where management does recognise the need for strengthening its financial organisation, it is difficult to get qualified personnel, especially at the executive level. Equally important is the need for adequate "financial management tools." Unfortunately, the I.F.C. finds that, with some exceptions, even in well-established companies, accounting practices do not give the management and potential investors adequate information. It adds: "There is not only lack of substance in financial reports but also delay in preparing them. Cost accounting is especially inadequate. However, the I.F.C. has found a gratifying response to suggestions for improving accounting and reporting and

(*Continued on page 620*)

EQUITIES RETREAT

HEAVY FALL IN PRICES

(From Our Own Correspondents)

BOMBAY, *28th September*

IN distinct contrast to the steady tone and improvement in values noted in the previous week, the share market struck a diffident note during the week under review. The change in sentiment for the worse was noted particularly after the new account opened on Monday last, when there was heavy bull liquidation followed by bear sales, resulting in a sharp break in equity prices. Reports to the effect that banks would be obliged to restrict their advances on a voluntary basis and fears that the cost of borrowing by industries would be much higher than the increase of ½ per cent. as directed by the Reserve Bank would appear to have caused nervousness among the operators. Towards the close, however, there was a mild recovery on bear covering, but the overall trend was still downward and losses over the week were heavy in several leading counters. Notable among these are Centurys, Kohinoors, Standards, Khataus, Morarjees, National Rayons, Belapurs, Tata Locomotives, Constructions and Voltas in the forward list. Cash scrips too suffered a landslide.

In the steel section, Tata Ordinaries gave way from Rs. 155 to Rs. 151.75, before recouping to Rs. 153.25. Indian Irons were done at Rs. 22.52 *ex-div.*, which on a *cum-div.* basis showed a fall of 35 nP over the week.

Reports of an improvement in cloth offtake failed to arrest the decline in textile shares. After an initial improvement from Rs. 63.60 to Rs. 66.70, Bombay Dyeings relapsed to Rs. 64.80. Centurys, which had advanced from Rs. 477.50 to Rs 482 earlier in the week, touched a low of Rs. 457.50 before finishing at Rs. 462. Kohinoors lost Rs. 7.50 to Rs. 307. Finlays were marked down by Rs. 4 to Rs. 348, Khataus by Rs. 20 to Rs. 550 and Morarjee Mills by Rs. 21 to Rs. 342. Standards were marked down from Rs. 1,405 to Rs. 1,305, but closed a shade higher at Rs. 1,325. A fall of Rs. 8 to Rs. 252 was noted in Svadeshis. Shreeniwas Cottons were Rs. 2 lower, despite the announcement of a rights issue of the value of Rs. 10 lakhs at par in the ratio of one new share for every eight existing shares.

Belapurs were prominent among the sugar shares with a decline of Rs. 8 to Rs. 362. Phaltans shed Rs. 2 to Rs. 177, while Walchandnagars were unchanged at Rs. 29.75. Maharashtra Sugars suffered a loss of Rs. 14.50 to Rs. 249.50.

Cements were listless. A.C.Cs were a shade quiet at Rs. 142.50 Digvijays failed to sustain their ground and fell by Rs. 4.50 to Rs. 169, despite the Company's decision to itself undertake the manufacture of asbestos sheets and pressure pipes, which was to have been done originally through its subsidiary.

Engineerings were weak. Voltas headed the list with a marked fall of Rs. 17 to Rs. 261. Premier Constructions dropped by Rs. 15.50 to Rs. 329.50. Tata Locomotives moved down from Rs. 281 to Rs. 262.50 before gaining ground slightly to Rs. 266.50. Alcocks dipped by Rs. 5 to Rs. 285 and Texmacos by Rs. 2.32 to Rs. 22.48. Larsen and Toubros were placed at Rs. 32 *ex-right* (after going down to a low of Rs. 29.25 *ex-right*), as compared with the previous week's quotation of Rs. 42.25 *cum-right*.

In the miscellaneous section, Bombay Burmahs (old) were hammered down from Rs. 587 to Rs. 563 before recovering to Rs. 576. National Rayons hardened early in the week from Rs. 507 to Rs. 518, but soon retreated to a low of Rs. 471. At the close, however, there was a mild recovery to Rs. 478. Gwalior Rayons were relatively steady at Rs. 41, while Barodas suffered a fall of Rs. 8 to Rs. 147. Tata Oils were marked down by Re. 1.30 to Rs. 73.20 and Tata Chemicals by Re. 1.68 to Rs. 16.12 on fears about cut in dividend. Ceat Tyres were brought down by Rs. 12.50 to Rs. 222.50 and Premier Tyres by Rs. 6 to Rs. 85. West Coast Papers gave way by Rs. 6 to Rs. 190. Chemical and dye shares experienced pronounced weakness. Amar Dyes lost Rs. 30 to Rs. 395. Colour Chems Rs. 15 to Rs. 385 and Dharamsi Chemicals (New) Rs. 26.25 to Rs. 226.25. Indian Dyestuffs were marked down by Rs. 60 to Rs. 520 and Poly Chems by Rs. 15 to Rs. 255. Ferro Alloys dropped Rs. 7 to Rs. 207 and Khandelwals had a similar decline to Rs. 94.

Madras Stock Exchange

MADRAS, *27th September*

The new credit restraints announced by the Reserve Bank of India early in the week led to cautious and hesitant trading during the week under review. The measures are, penal rates of interest for borrowings from the Reserve Bank by banks in excess of the quota fixed for each bank, increased in the average lending rate by banks to their customers by half per cent. and limit on the interest rate paid by banks on short-term deposits. Operators preferred to wait and watch the impact of these restraints rather than enter into fresh commitments. Consequently, turnover was limited, with values moving narrowly. Textiles were quiet in the absence of fresh support. Teas were dull, though a few selected shares were well fancied. Coffees were subdued on account of lower prices quoted by overseas importers. Rubbers moved down in sympathy. Barring a few shares, sugars were generally easy. Miscellaneous industrials encountered some selling.

In the textile section, Bangalore Woollens were marked down by a rupee to Rs. 199.50. Buckinghams lost a like amount to Rs. 200 *ex-div.* Lakshmis receded from Rs. 141 to Rs. 140 earlier, but recovered to Rs. 140.50 today, the net loss over the week being 50 nP. Travancore Rayons shed 40 nP to Rs. 35.50. Coimbatore Cottons were neglected at Rs. 167. Coimbatore Pioneers at Rs. 347.50 and Coimbatore Spinnings at Rs. 48. Dhanalakshmis changed hands at Rs. 227, Kotharis at Rs. 12.65 and Metturs at Rs. 392. Loyals, however, put on 10 nP to Rs. 35.35.

Among teas, Peermades eased by 10 nP to Rs. 23.45. The Directors of the Company have announced an interim dividend of 7½ per cent. for the current year. Neelamalais declined by 5 nP to Rs. 4.95. Blue Mountains shed 2 nP to Rs. 5.06. Periakaramalais were subdued in the beginning of the week, but recovered subsequently at the last week's level of Rs. 3.54. Haileyburias were quiet at Rs. 14.25, as also Devasholas at Rs. 30.25 and Haileyburias at Rs. 14.25. Parksides and United Nilgiris, however, hardened by 5 nP each to Rs. 28.40 and Rs. 4.25, respectively.

In the coffee group, Cowcoodys came in for selling and fell by 30 nP to Rs. 5.25. Sangameshwars suffered a setback of 16 nP to Rs. 2.40, following announcement of a dividend at 6 per cent., taxable (equivalent to 4.2 per cent. tax-free) for the year ended March 1960, which compares unfavourably with 9 per cent. tax-free for the previous year. Rajendras closed lower by 15 nP at Rs. 14.35. Consolidated Coffees decreased by 10 nP to Rs. 25.95, after touching Rs. 26.12 earlier in the week. But Coffee Lands improved by 45 nP to Rs. 25.25. Ouchterlony Valleys picked up 10 nP to Rs. 4.85.

Among rubbers, Malankaras eased by 25 nP to Rs. 19.75. T.R. and T.'s dropped 5 nP to Rs. 7.90. Cochin Malabars sagged by 3 nP to Rs. 7.25. Thirumbadis lost 2 nP to Re. 1.47. Kailas were unchanged at Rs. 4.95 and Travancore Rubbers at Rs. 12. Highlands, however, rose by 12 nP to Rs. 14.62 and Midlands by 5 nP to Rs. 12.

In the sugar section, Deccans gave way from Rs. 15.80 to Rs. 15.40. Travancores shed 20 nP to Rs. 11.80. The Company has declared a dividend of 10 per cent., taxable (equivalent to 7 per cent. tax-free) as against 10 per cent. tax-free for the previous year. Indias were lower by 5 nP at Rs. 13. East India Distilleries, however, spurted by Rs. 2.25 to Rs. 42.25 on special support. Cauverys rose by 50 nP to Rs. 144.50.

A feature of trading in the miscellaneous section was the sharp setback of Rs. 42 suffered by Western India Plywoods. Ashok Leylands dropped 40 nP to Rs. 8.30 and Aluminium Industries by 23 nP to Rs. 22.77 *ex-div.* Among cements, Travancores lost 10 nP to Rs. 8.70. India Cements declined by 9 nP to Rs. 7.10. But Dalmias put on 15 nP to Rs. 12.15. Among chemicals, F.A.C.Ts were lower by 25 nP at Rs. 10.75. Mysore Fertilisers were neglected at Rs. 10.65, as also Mysore Chemicals at Rs. 27.87. But Mettur Chemicals were higher by 5 nP at Rs 13.25.

BIHAR CABLE AND WIRE INDUSTRIES

The Bihar Cable and Wire Industries Ltd. will shortly come to the capital market with a small equity issue of Rs. 10 lakhs, divided into 100,000 shares of Rs. 10 each. Of these, the Directors, promoters and their friends have agreed to take up 51,000 shares and the remaining 49,000 shares only will be offered to the public. The Bihar State Government is also likely to participate in this issue. The issue will be underwritten and preference in allotment will be given to small investors.

The issue will provide a part of the finance required to establish a group of small-scale units, at a cost of Rs. 20 lakhs. The balance of the cost will be met by a loan of Rs. 5 lakhs from the State Financial Corporation and by borrowings from other sources to the extent of Rs. 5 lakhs.

The Company has been formed to take over the business of Khemka Cable Works and Bihar Wire Industries, two small-scale industrial units now under construction at Patna. Both the units will function as separate units under the ægis of the public company. The Company will add more small-scale units under its phased programme. The Khemka Cable Works proposes to manufacture 20,000 coils (of 100 yards each) of rubber insulated cables and 50,000 r. ft. of welding cables per month. The Bihar Wire Industries have a manufacturing programme of 1,500 tons of galvanised iron wire and 700 tons of barbed wires, wire nails and panel pins per annum. The production capacity is likely to be raised to 12,000 tons of galvanised wire. Partial production is expected to start before the end of the current year. The Company has an influential Board of Directors, headed by Mr. S. M. Dhar, I.C.S. (Retd.), lately Agent of the Tata Iron and Steel Company Ltd. and *ex*-Secretary to the Government of India.

(Concluded from next column)

hit. But what also emerged was the feeling that Commonwealth Preference was the principal economic force holding the Commonwealth together. It certainly looks, following these explorations, that the only way Britain will be allowed to work her way into the Six will be by tagging the Commonwealth countries along with her!—*All Rights Reserved.*

LONDON LETTER

COMMONWEALTH ECONOMICS

SIX AND SEVEN

(From Our Own Correspondent)

LONDON, *23rd September*

THE Consultative Council of Commonwealth Ministers has just concluded its brief session in London with real agreement only on one point—that is, assistance to Africa. But the Special Commonwealth African Assistance Plan (S.C.A.A.P.) is not a plan in the ordinary sense of the word. It does not imply co-ordinated effort. What is intended is a combination of bilateral assistance by those countries that can give it, and Commonwealth countries will keep each other informed—but mainly by annual review—of what they are doing.

The *communique* issued at the end of the talks made no reference to British monetary policy, but the subject, and its impact on the Commonwealth countries, was discussed and stress was laid on the effect of restrictive credit in the U.K., (in particular the high Bank Rate) on the development needs of non-industrial Commonwealth countries. The side revelation of these exchanges was that the Bank of England cannot isolate the amount of hot money in the sterling balances. But the Bank has probably a keener idea, derived from the source of inflow, than the Chancellor of the Exchequer is prepared to admit. Most of the members of the sterling area were obviously rather perturbed about the extent to which the deterioration of Britain's overseas trade position was being masked by the hot money inflow.

But the real meat of the Conference came in the discussions, informal as well as formal, concerning negotiations between the European Six and the Seven, and Britain's possible intentions about linking the one with the other. The wording of the *communique* was:

"U.K. Ministers expressed their concern about the possibility of creating economic division in Europe. They gave an account of the recent discussion in which they had been engaged, making it clear that no negotiations between the two groups had yet begun. They stated, however, that the U.K. Government would be prepared to examine and discuss proposals for a satisfactory solution."

The only surprising thing in this statement was that no negotiations had begun, because the general impression which Ministers had previously given was that they were engaged in negotiations centering around problems of Commonwealth participation and the exclusion of agricultural products. These matters have certainly been discussed by the U.K. Government with the Six, but "discussions" apparently exclude "negotiations."

The Council's reaction to the U.K. statement was embraced in the simple words "it was accepted that any negotiations that took place would ensure that the interests of Commonwealth countries should be safeguarded and every account taken of the continuing importance of intra-Commonwealth trade."

It was left to the Lord Privy Seal, who has gained his rapid promotion in Government office in recent years through an outstanding ability to negotiate without fuss, to get the feelings of the Commonwealth Ministers to the possibility of Britain joining the Six or the Seven joining the Six, as the case may be. Whatever may have been discussed in the past between Britain and the Six, on one hand, and Britain and the Commonwealth on the other, may as well be forgotten, since the Conference marked a new starting point. The Lord Privy Seal, Mr. Heath, who has the special responsibility for European affairs in the Government, was at such pains to probe the views of his Commonwealth colleagues that it caused some surprise. It had not occurred to the Commonwealth Ministers that British thought on this issue was still altogether tentative. They looked in vain for answers to their own queries as to the effect on their own economies of Britain entering the Common Market, and it took a little time to reassure them that it would only be after this Conference and the sounding of the Commonwealth Ministers' views that the Government would again try to think how to get round the problems.

Most of the Ministers, and in particular the New Zealand representative, furiously attacked the idea of Britain entering the Common Market—New Zealand is particularly afraid of her butter and other agricultural exports being

(Continued in previous column)

NEWS IN BRIEF

THE Tariff Commission has taken up for consideration the question of continuance of protection to dyestuff industry. Copies of the questionnaires on the issue may be obtained from the Secretary to the Commission.

The conditions of employment in civil aviation and hours of duty and rest periods of flight personnel are being discussed at the I.L.O. *ad hoc* civil aviation meeting, which began at Geneva on 26th September and will end on the 4th inst.

The Union Government has fixed tariff values for three-phase squirrel cage electric motors of less than ½ horse-power, ranging from Rs. 110 to Rs. 200, for assessment of excise duty. The relevant details are published in the *Gazette of India* dated 24th September 1960.

The Western Shipping Corporation, Bombay, has taken delivery of the 9,300-ton freight m.v. *Vishva Kirti* from the Lubeck Flender-Worke Shipyard, West Germany. With this addition, the Corporation has now a fleet of six ships, including two tankers.

An express cargo service between India and Poland has been inaugurated with the departure of the first Indian vessel *Indian Resource* from Calcutta for Poland last week. The service is in pursuance of the shipping agreement entered into recently between the two countries.

The Indian Jute Mills Association has decided to extend up to the end of December next the scheme for voluntary sealing of jute looms by member mills. The scheme, which was introduced in June last, when the mills were running with only 9 per cent. looms sealed, was originally intended to end at the beginning of November.

A five-member woollen goods export promotion delegation sponsored by the Development Council left Bombay on Monday this week for a month's tour of the Middle East and East European countries. The delegation will explore possibilities of exporting Indian woollen goods in foreign markets and also establish contacts with foreign buyers.

The Government of India has released an export quota of 1,525 metric tons of cotton rags, hosiery cuttings and linen cuttings for the October 1960-March 1962 period. Cotton rope cuttings will also be allowed against this quota. Licensing will be done by endorsement on the shipping bills, subject to a maximum of 25 metric tons per shipper per day, the licence being valid for 15 days only.

The Employees' State Insurance Scheme has been extended to Rajnandgaon in Madhya Pradesh from 24th September 1960. As a result, 3,200 more factory workers will get medical benefits under the scheme. The families of the insured persons in this area will also be entitled to medical care 13 weeks after the insured persons themselves become entitled to medical care.

Vast sources of sulphur pyrites have been discovered in the Amjore area in Bihar, which, it is said, will meet the entire demand for sulphur in the country. The sulphide derived from pyrites can be used in the place of free sulphur now being imported. Meanwhile, the Geological Survey of India has discovered sulphur deposits of a "fairly good quality" in the Andaman and Nicobar islands during its preliminary investigations.

India will receive from the U.S. $17.1 million worth of additional agricultural commodities, under a supplemental agreement to the U.S.-India food accord concluded in May last. The new agreement, signed last week, provides for the sale of $2 million in tobacco, $6.8 million in corn, $4.3 million in milo (a grain *sorghum*), $1 million in soyabean oil and for $3 million towards ocean transportation costs. Payment will be made in rupees the bulk of which will be lent back to economic development projects in India.

Only metric weights will be used for sale of cement throughout the country from the 1st inst. The two-year transition period, when both British and metric weights were allowed to be used side by side, has thus come to an end. Cement has been sold on a gross weight basis so far. Cement bags will henceforward be marked to indicate that each bag weighs 1 cwt. or 51 kgm. gross. While switching over to the metric system, it has been decided that cement should be packed on net weight basis. Under the new system, each bag will contain 50 kgm. cement net, exclusive of the weight of the bag.

Large deposits of metallurgical coal have been located in three areas, two in Bokaro and one in Raniganj (Bihar). The reserves are expected to make India self-sufficient in grade I coal for decades to come. In one of these areas in Bokaro, coal, having coking index ranging from 21 to 23 per cent., has been discovered in an entirely new 74-foot seam broken up into two portions separated by eight feet of non-coal materials. The second deposit in the region relates to coal seams which are being worked at 2,000 feet. Mapping and investigations have shown that the seam at places runs above 1,000 feet level. The discovery at Raniganj is almost on the entire surface, extending over a mile and a half.

An agreement has been reached in Calcutta between the Employers' Association and the Dooars *Cha Bagan Mazdoor Sangha* (affiliated to the I.N.T.U.C.) on the union's main demands. Negotiations for a settlement of the dispute had begun after the issue of a strike notice which was withdrawn by the middle of last month. The agreement provides that the employers represented by the Indian Tea Association and the Indian Tea Planters' Association will give preference to workers' children in filling vacancies at gardens. The union will prepare a list of hardship cases for consideration by the employers who will, however, have the right to determine the number of workers to be employed in a garden. The employers have agreed not to withdraw free medical facilities for workers' children up to the age of 18 years.

The draft memorandum of association and rules of the Indian Investment Centre, set up as an independent non-profit making body for promoting foreign private investment in this country, have been finalised. The Centre will be formally inaugurated by the middle of this month. At a later stage, the Centre will open a branch in New York. It will be a medium through which Indian and foreign business men can co-operate to promote joint industrial enterprises. It is expected to be of special help to small and medium business men. It will also supply information about the Government's fiscal policies and particulars about various industries. It may be recalled that the U.S. Technical Co-operation Mission had given a grant of Rs. 59 lakhs for the Centre. Of this amount, Rs. 34 lakhs will be given as foreign exchange, which is required for inviting specialists from abroad. The balance is to be made available from P.L. 480 rupee funds in India.

Trade talks between India and Iraq have concluded in Baghdad. The Indian delegation to the talks was led by Mr. I. S. Chopra, Indian Ambassador in Iraq and the Iraqi delegation by Mr. Sayed Abdul Latif Alshawaf, Minister for Trade. In a joint *communique*, issued at the conclusion of the talks, the two delegations have stressed that there is considerable scope for increasing economic co-operation and trade between the two countries. Iraqi dates have a good market in India and Iraq offers considerable opportunities for export of Indian tea and other products, such as light engineering goods, hosiery and knitted garments, plastic manufactures and sports goods. It is agreed that immediate steps will be taken by both Governments to facilitate the flow of Iraqi dates to India and Indian goods to Iraq. An Indian Tea Centre will be opened in Baghdad shortly. An Indian Trade Centre is already functioning in Iraq to acquaint importers there with the range of India's products. The two delegations reviewed the difficulties currently experienced in regard to the smooth flow of trade between the two countries. The Indian delegation also had fruitful discussions with businessmen and Government authorities in Baghdad.

• • • •

From Abroad

Poland has been authorised to buy tobacco worth $1.5 million from the U.S. against payment of Polish currency. This is the first time since 1939 that Poland imports U.S. tobacco.

West German exports rose by 19 per cent. to DM 30,600 million during the first eight months of 1960, as compared with the corresponding period last year, while imports were higher by as much as 23 per cent. to DM 27,600 million. Consequently, the trade surplus fell from DM 3,200 million to DM 3,000 million.

The U.S. Development Loan Fund has granted a loan of £678,000 to Tanganyika. This is the first time when the U.S. has given aid to East Africa. The loan will finance the rebuilding of a 142-mile road between the ports of Mwanza and Musoma on Lake Victoria, the only surface link between the ports of western Tanganyika and Kenya.

The World Bank proposes to raise a loan of Swiss Frs. 60 million (£5 million) on the Swiss market. This will be the ninth Swiss loan floated by the Bank, which has already borrowed about Swiss Frs. 630 million. A group of Swiss banks will underwrite the loans which will be in the form of 4 per cent. 15-year bonds.

The Oil Consumers' Co-operative Organisation in Norway is contemplating to undertake the distribution of petroleum products, imported by the Norsk Veedol A/s. a subsidiary of the U.S. concern, the Tidewater Oil. For this purpose, the Organisation will build a chain of model petrol stations throughout the country. It will also distribute fuel oil at a later stage.

The West German industrialists, led by the Federation of Industries, propose to raise a loan fund of DM 1,000 million (about £85 million to assist underdeveloped countries. It is suggested that the concerns subscribing to the fund should be given tax concessions from the Government, thus enabling them to reduce the interest rate to the minimum.

The Monsanto Overseas S.A., a wholly-owned subsidiary of the Monsanto Chemical Company of St. Louis in the U.S., has formed a new company in Spain in collaboration with the Aiscondel S.A. of Barcelona. The new Company is the first to be formed under the recent Spanish law which permits equity participation upto 50 per cent. by foreign companies. Previously, participation of foreign companies was limited to a maximum of 25 per cent.

The Canadian Government is currently examining measures to assist the domestic shipbuilding industry. The measures include amendments to the Commonwealth Shipping Agreement which would limit or restrict entirely the free access of Commonwealth shipping to Canadian coastal and inland waters, accelerated depreciation allowances, tonnage replacement subsidy, and the requirement that some or all of Canada's Colombo Plan and N.A.T.O. overseas shipments be carried in Canadian bottoms.

World wool production in 1960-61 will be about 5,560 million lbs. (greasy basis), one per cent. less than the last season's revised total of 5,615 million lbs., according to the Commonwealth Economic Committee. Practically the whole of this anticipated decline is accounted for by Australian and South African clips, which are expected to be lower by 5-7 per cent. Output of wool in New Zealand, however, is likely to reach a new record. Besides, South American position is showing marked recovery after the last year's floods.

A new process of open hearth and blast furnace operations in iron and steel plants has been developed by Russian scientists. The process is claimed to be 30-40 per cent. more efficient than the most modern U.S. process. Disclosing this at a Press conference in Moscow, last week, Mr. Konstantin Petuchov, chief of the Soviet State Committee for Automation and Mechanisation, stated that the factors contributing to greater efficiency were use of natural gas in place of coke in the actual smelting process and cent per cent. automation of the smelting process. He added that Russia was willing to sell the process anywhere abroad.

The British automobile industry is facing serious difficulties and has announced sizable cut backs in production, following lower exports to the U.S. and credit restrictions imposed by the British Government in April last. The production of cars fell by more than seasonal levels from 94,000 in July to 86,000 in August. Exports to the U.S. in August 1960 were less than half the total for August 1959. The Standard-Triumph International Company has cut work for most of its 8,000 employees at Coventry to 19 hours a week as an alternative to wholesale dismissals. This will mean that manual workers earning around £23 a week will only put in 2½ days and have their wages slashed by between £11 and £12. The other car firms in Coventry, including Rootes, Morris and Daimler have also been hit by the slump and are already working short time.

PERSONAL

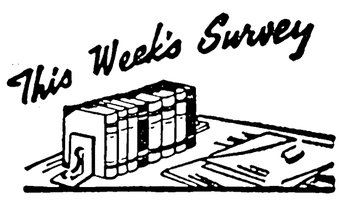
PRIME Minister Nehru left Bombay for New York on 25th September to attend the current session of the U.N. General Assembly.

Mr. G. D. Somani, M.P., and a leading industrialist, left Bombay on Monday this week for a tour of the U.S. and the Continent.

Mr. J. R. D. Tata, Chairman, Messrs. Tata Sons Ltd., has returned from Copenhagen after attending the meeting of the International Air Transport Association.

Mr. C. S. Natarajan (of Messrs. Raj and Co.) and Mr. G. R. Chandrasekariya (of Messrs. Dalal and Co.) have been elected President and Vice-President, respectively, of the Council of Management of the Madras Stock Exchange for 1960-61.

Mr. R. S. Bhatt, at present a member of the Tariff Commission, has been appointed Executive Director of the Indian Investment Centre. Besides Mr. G. L. Mehta, who is the Chairman, the first governing body of the Centre will consist of Mr. A. Ramaswamy Mudaliar, Mr. Kasturbhai Lalbhai, Mr. George D. Woods, Mr. W. G. Puller, Dr. B. K. Madan, Mr. P. C. Bhattacharya, Mr. K. R. K. Menon, Mr. S. Ranganathan and Mr. G. L. Bansal.



MIDDLE-CLASS SAVINGS

THE middle classes are alternately described as the backbone of any society and as a heterogeneous grouping of men, "always grumbling at the rich and trembling at the poor." There is also the classic Marxist portrayal of the *petit bourgeoise*, ever on the verge of proletarianisation in a capitalist society. But this dismal Marxist prognostication has been belied in the advanced non-communist countries where both the middle and the working classes have become greater sharers in general prosperity. Under conditions of democratic or of totalitarian planning, too, the middle classes have virtually become the *elite*, contributing by far the largest quota of technicians, managers, scientific workers and other educated men to the public services and ever growing in absolute numbers and in relation to the other classes. If there is a fall at any time in the real incomes of these classes in *per capita* terms, either because of inflation or because of taxation, there are also two compensating circumstances, namely, the progressive increase in the real benefits and opportunities available to these classes in the wake of economic, particularly industrial, progress and the relative increase in the very size of these classes.

These considerations, which provide a broader perspective for an understanding of the state of middle classes in India, do not, however, figure prominently in the *Plight of Middle Classes in India*—an otherwise thought-provoking pamphlet by Prof. A. R. Wadia, M.P., Director, Tata Institute of Social Sciences, Bombay, just published by the Society for the Propagation of Democratic Thought, Calcutta. The picture that Prof. Wadia has drawn is more concerned with the investing middle class which is only a segment (whatever be its size) of the middle classes in general. But it is a picture which, within its limits, is by no means overdrawn. Prof. Wadia's thesis, in short, is that the middle classes (or middle-income groups, as he seems to think of them) in India have been hit hard as much by a system of taxation which, though broadly patterned on that of Britain and America, does not go well with its struggling industries, as by the rise in their living costs which are not fully neutralised by any increase in their limited incomes. The structure of personal taxation is such that the middle-income groups have now less incentives to work, save and invest. And the middle-class investors have also been losing substantially as a result of the new system of corporate taxation.

The saving potential of middle-class investors can yet become substantial, if the maximum rate of income-tax is brought down to 45 per cent. in terms of the recommendation made by Prof. Kaldor. The present unduly high maximum rate of income-tax gives an "incentive" to the dishonest for tax evasion, while it discourages the honest taxpayers of the middle classes from working hard. In essence, Prof. Wadia's plea is for a system of taxation which will have to be less socialistic, if it is to be in keeping with our democratic polity which, in the context of economic underdevelopment, can ill afford to cut at the roots of middle-class savings. What with State-operated life insurance and State-controlled provident fund schemes pumping out such middle-class savings as are still possible, the private industrial sector is increasingly denied access to them. Joint-stock enterprise, broadly based on middle-class investors who are enabled to save more by appropriate tax concessions and reliefs, can be one of the bulwarks of democracy.

AID FROM BRITAIN

The British Treasury announced on Friday, 23rd September, the grant of financial assistance amounting to £35 million (Rs. 46.67 crores) to India. The major portion of the assistance—£30 million (Rs. 40.00 crores)—represents credits for financing imports of capital goods from Britain during the third Plan period, the balance of £5 million (Rs. 6.67 crores) being "direct" loan for securing a broad range of imports in the current financial year. The Treasury announcement followed talks which Mr. Morarji Desai, Union Finance Minister, had with Mr. Harold Macmillan, U.K.'s Prime Minister, and Mr. Selwyn Lloyd, Chancellor of the Exchequer. And, according to a news despatch from London, Mr. Desai and Mr. Lloyd have agreed that further discussions should take place on the possibility of the British Government and private sources in Britain meeting the foreign exchange cost of about £20 million (Rs. 26.67 crores) required to carry out the proposed extension of the Durgapur steel works.

Details of the credits such as repayment terms and rates of interest to be charged are not available. Presumably, the "direct" credit of £5 million (Rs. 6.67 crores) granted for utilisation during 1960-61 is on lines similar to those of the U.K. Government's Rs. 13.33-crore loan (£10 million) covered by the agreement signed at New Delhi on 16th August last. The latter loan takes a form which makes it readily available to help India's overseas payments. How timely is the grant of "direct" loan will be evident from the fact that, with India's foreign exchange reserves standing at a low level (Rs. 146.45 crores as on 16th September 1960), the problem of financing the imports of essential equipment and materials not covered by external aid received already has become pretty difficult. The loan is repayable over a fairly long period—two-thirds in twenty years and the balance in ten years. What is more, the first instalment of repayment on either portion of the loan will fall due only on 31st May 1966, that is, two months after the third Plan will have ended. Further, the rate of interest is quite reasonable, being the same as that payable by the British Government on a loan for a comparable period *plus* ½ per cent. for administrative charges.

Thanks to the two U.K. "direct" credits of Rs. 13.33 crores and Rs. 6.67 crores, India is now in a position to make purchases, albeit of a modest order, in Britain without having to make immediate payment. It may be noted here that, including the latest credit of Rs. 6.67 crores, the total amount of "direct" loans given by the British Government for India's second Plan comes to Rs. 107.33 crores. This amount, together with the Lazard Brothers' credit of Rs. 15.33 crores for Durgapur steel works, brings the total British assistance to Rs. 122.66 crores, which represents more than 8.2 per cent. of the aggregate foreign financial assistance actually made available to India so far.

The British credit of Rs. 40 crores for the third Plan is described as "an initial act of assistance." The other offers of assistance received so far for the third Plan are Rs. 607.62 crores (P.L. 480) from the U.S., Rs. 240.00 crores from Soviet Russia, Rs 23.10 crores from Czechoslovakia, Rs. 19.05 crores from Yugoslavia, Rs. 14.30 crores from Poland. The total of all these comes to Rs. 944.07 crores, as against the estimated external assistance requirements of Rs. 3,200 crores. Surely, Britain is in a position to help meet a fairly substantial part of this amount. It is reassuring to learn from Mr. Morarji Desai that he has found the climate of understanding and readiness to help India in its third Plan "quite good" in the U.K. and that the British desire to give financial assistance to India, which is always there, is getting stronger. While India will be grateful to Britain and other countries for whatever assistance they have already rendered and will render in future, it is needless to stress that the assistance should be utilised by it wisely and usefully.

LABOUR CONFERENCE

The outcome of the deliberations of the eighteenth session of the Indian Labour Conference, held at New Delhi on 24th and 25th September, has been aptly described by some as a personal triumph for Mr. G. L. Nanda, Union Minister for Labour. With the recent, short-lived strike of the Central Government employees still fresh in the memory of the delegates and with legislation to make the recurrence of such strikes impossible in future remaining on the anvil, it was thought that Mr. Nanda would be administered a dose of his own medicine. It is true that some delegates, representing the Communist-controlled A.I.T.U.C., charged the Government itself with having violated the Code of Discipline and dubbed it as the guilty party. But Mr. Nanda's cogent analysis of the genesis of the strike, the efforts made by him personally to avoid it, and the *raison d'etre* of the proposed legislation for banning strike, was so logical and convincing that even those who started a bitter critics of the Government's policy—some had even demanded the resignation of Mr. Nanda—ended up as its apologists. Mr. Nanda's performance was enthusiastically applauded and termed as "masterly" and "brilliant." It was a classic example of those who had come to scoff having stayed to praise.

The majority of the participants were of the opinion that the strike of Government employees was unjustified, that its outcome was not happy and that steps should be taken to prevent its recurrence. Opinion was divided only on the nature of the steps to be taken. The employers' representative, Mr. Naval H. Tata, cautioned against hasty legislation banning strikes in essential services, and prohibiting outsiders from the civil service and postal unions. He said that the Government could not limit the ban only to some of the essential services in the public sector. For there was essential services in the private sector also. As regards the elimination of outsiders, he felt that outsiders did not always play havoc in the industrial field. "A good outsider," he added, "was a good influence and a bad insider sometimes created more trouble." The question was, therefore, one of drawing a line between the good and the bad ones. This, of course, is true as a general observation, but it is not sufficiently convincing. None of those who contend that the unions of civil servants should be led only by insiders has stated that the leadership of these unions should be in the hands of persons who are not good. The principle that such unions should not be led by politicians is a wholesome one and the Government will do well to accept it.

The A.I.T.U.C. and the *Hind Mazdoor Sabha* delegates also expressed themselves against the ban on strikes. The I.N.T.U.C. leaders pointed out that strikes could not be curbed by law. This approach reflects much confused thinking. In order to get the correct perspective, one must separate the goat from the sheep. The civil servants, pure and simple, as distinct from the workers in the public sector industrial undertakings, cannot have the privilege of going on strike to get their grievances redressed. They must rely on a suitable machinery for negotiating with the Government. It is, here, the authorities have been at fault, though they have now conceded the need for Whitley-type councils.

Mr. Nanda certainly deserved the praises showered on him. For, with a sincerety of purpose and dedication to duty rarely to be found, he has been striving so far, not for an uneasy truce but for stable peace in industry, holding, at the same time, the scales even between employers and employees. Indeed, if, on certain occasions, the scales were found to have been tilted, the incline was towards the workers. It is, however, true to say that the improvement in the climate of industrial relations, in spite of what still remains to be achieved, is a measure of his success in infusing on both employers and employees a part of his own belief in and devotion to the ideal of peaceful settlement of industrial disputes without resort to strikes and lockouts.

In his opening address to the Conference, Mr. Nanda called the strike of the Central Government employees "an unhappy occurrence" and said that it should not be allowed to occur again. The acceptance of the principle of arbitration in the general settlement of disputes between the Government and its employees and the setting up of Joint Negotiating Machinery at various levels constituted, according to him, a remarkable advance in employer-employee relations in the public sector. He also referred to a somewhat "brighter side" of the labour situation in the country, namely, the decline in the number of man-days lost on account of strikes and lockouts since the adoption of the Code of Discipline in 1958. The number of man-days lost, which were as much as 4.7 million during the six-month period January-June 1958, prior to the coming into force of the Code, declined to 3.20 million in the first half of 1959 and to 2.89 million in the period January-June 1960. This computation, according to Mr. Nanda, did not take into account the increase in the number of employees in occupations covered by these figures, which indicated that the forces that were working for harmonious industrial relations were gradually being strengthened.

The spasmodic occurrence of strikes, accompanied by violence, continued to be a source of concern. Complete peace and harmony, he pointed out, could be realised in fullness, only if there were no breaches of the Code and if legal obligations were observed properly and awards and agreements were implemented both in letter and spirit. The faults, he felt, were not confined to one side alone. Both employers and employees had to share the blame. He did not claim perfection for the part which the Government was to play, either. Nevertheless, he felt that the performance was improving and that the conditions were now better than what they were before. Since both the parties were now fairly familiar with the implications of the Code of Discipline, he stressed that the time had now arrived when both should observe strictly the norms of conduct. In the case of lapses, there should be strict application of the sanctions under the Code and rigorous enforcement by Government in cases which involved breaches of law. It was his belief that, as the parties proceeded more and more firmly on the basis of voluntarily accepted obligations and the influence of convention grew, the occasions for the Government to have recourse to the penal provisions of law would diminish progressively. He added that, if the provisions of the Code were not to be invested with statutory force, the Code might have to be strengthened by some more self-imposed and effective sanctions. He himself was not in favour of legal compulsion and, therefore, preferred the former course. There is a lot of force in these observations of Mr. Nanda. As the climate for collective bargaining as is adopted in such countries as the U.S. and the U.K. is not obtaining in this country for a variety of reasons, perseverance with the Code of Discipline is the only practicable alternative left to employers and employees.

The scheme for workers' participation in management also figured in Mr. Nanda's speech. He announced that he proposed to have an independent evaluation of the working of the Joint Management Councils, so that suitable adjustments could be made for ensuring their more effective functioning in future. He admitted that the progress made was meagre even in quantitative terms. One reason for this, according to him, is probably "the insufficient enthusiasm for it among the ranks of both employers and employees. He, however, felt that this should not come in the way of bringing further units under the scheme. Here Mr. Nanda is not wholly convincing; nor does his proposal to extend the scheme irrespective of past performance sound logical. For, if there is lack of enthusiasm and preparedness on the part of the parties, as Mr. Nanda himself feels there is, measures should be taken for removing these defects before the scheme is sought to be extended. Otherwise, it would be another case of putting the cart before the horse.

IMPORTS OF SAW FILES

An apparent difference between what the Tariff Commission recommended (which was accepted by the Government) and what the Development Wing and the Import Control Authorities have understood or not understood has resulted in a situation which has not only denied indigenously produced saw files the benefit of protection, but also threatens to glut the market with cheap, imported files. Saw files had been included by the Tariff Commission in the protected category of files, along with engineers' steel files, but precision files and special files, such as jewellers' files, watchmakers' files, milltooth files, etc., which are not manufactured in India, were not included in the purview of protection. Presumably because the Import Control Authorities did not grasp the Tariff Commission's recommendation, saw files have been classified, along with precision files, as "special" files and imported without their being charged to the protective duty.

The import policy for the years beginning from October 1959 to March 1960 had stipulated that not more than 33⅓ per cent. of the face value of the import quota licences should be utilised for the import of machinist files, the balance being available for special and precision files. Taking advantage of the classification of saw files as "special" files, importers have utilised almost the entire balance of 66⅔ per cent. to import saw files, which account for 40 per cent. of the demand for files in the country. Indigenous producers of saw files, therefore, find the market flooded with cheap German and Japanese files. This, the manufacturers complain, has rendered idle a sizable percentage of their production capacity, which was installed at the specific request of the Tariff Commission.

Furthermore, with effect from 1st April 1960, import of machinist (engineers) steel files was completely banned. As per the Tariff Commission's recommendation, import of saw files, too, should have stood automatically banned. But, because of the anomaly in the classification, saw files continue to be imported. The Government of India recently accepted the recommendation of the Tariff Commission that the protective duty on steel files, including saw files, should be reduced to 35 per cent. *ad valorem*. This downward revision of duty, the manufacturers point out, would only aggravate the unhealthy competition from imported saw files. They, therefore, urge that the classification of saw files as "special" files should be dispensed with and that this variety should be classed along with engineers' steel files as recommended by the Tariff Commission. Unless this is done, producers of saw files aver, they would not be able to compete with the imported file. There should be no difficulty in Government conceding this request, as it is in keeping with the Tariff Commission's findings.

CONTROLS ON WOOLLEN YARN

Full-fledged controls have been clamped down on production, distribution and prices of woollen yarn, with effect from 22nd September 1960. An order to this effect was issued last week under Section 3 of the Essential Commodities Act. It empowers the Textile Commissioner (*a*) to determine the type and quantity of woollen yarn to be manufactured, (*b*) to fix the ex-factory wholesale and retail prices at which the different varieties will be sold, and (*c*) to direct any producer or dealer not to sell any yarn except under a permit issued by him.

The primary objective of the move is said to be co-ordination of woollen yarn production with public needs. But one wonders whether the objective cannot be realised by measures other than controls. After all, the gap that exists between available supplies and actual demand is not wide. The output of woollen-worsted yarn is currently running at an annual rate of nearly 24 million lbs., as against the estimated requirements of about 27-28 million lbs. The rate of output could be easily stepped up, if additional foreign exchange of a couple of crores were released to the industry for importing wool and wool tops. Incidentally, the organised woollen industry in India depends on imported raw materials to the extent of 100 per cent. for its worsted section and nearly 90 per cent. for the woollen section. The problem of getting raw materials has become very acute since wool and wool tops went off the O.G.L. It is the inadequate supplies of raw materials that is largely responsible for the lot of idle capacity—as much as 40 per cent.—at present. Apparently, the Government has come to the conclusion that it cannot afford to spare the extra foreign exchange required for importing the additional raw materials. In the context of the prevailing foreign exchange difficulty, the relevance of this decision cannot be questioned. It is, however, extremely doubtful whether price controls of the type mentioned above will benefit consumers to any significant extent.

INDUSTRIAL ESTATES

The establishment of industrial estates has come to be recognised as an integral part of the programme for the development of small industries in the country. These estates, which are being set up more or less on the pattern of similar British projects, are designed to offer to small undertakings ready-built workshops of standard construction, designed on a unit principle, with planned access for goods and labour, public utility service, opportunities for common servicing and training. Provision is also made in estates for the supply of adequate power, electricity and water. These estates thus go a long way towards removing the difficulties of small entrepreneurs in finding suitable sites equipped with all the necessary facilities. In the third Plan period, it is proposed to set up 300 industrial estates all over the country. The Draft Outline has laid down a tentative outlay of Rs. 27 crores for this programme. The original target in the second Plan was for setting up 100 industrial estates by 1960-61. Notwithstanding the fact that the Central Government grants loans to States for covering the entire cost of the estates, many of the States are yet to make any earnest efforts to implement the programme. Some States such as Bombay (undivided), Madras, Andhra Pradesh and Kerala have, however, made good progress. Nevertheless, it looks as though only about 60 estates will have been fully completed by the end of the current Plan.

PAPER MILL PLANT & MACHINERY MANUFACTURERS LTD.

STEELCRETE HOUSE, DINSHAW VACHHA ROAD

BOMBAY 1

are pleased to announce the commencement of manufacture IN INDIA of 5 and 10 Ton Paper Mill Plants—also Spare Parts and Accessories for large or small Paper Mill units.

Delivery of complete Paper Mill Plant containing 45 per cent. of imported components can be arranged in 9 months from receipt of order.

All designs and layouts are prepared by the Collaborators, Messrs. James Bertram & Son Ltd., Leith Walk, Edinburgh 6, (Scotland).

DRAFT THIRD PLAN X-RAYED—II

LESSONS OF FIRST TWO PLANS

By J. M. Lobo Prabhu

IT is difficult to accept the statistics given in the Draft Outline of the Third Plan, first because they are not of the actuals already reached but of the achievement estimated in 1960, secondly because they are in conflict with the figures furnished in other Government publications, notably, *Economic Survey* accompanying the Budget and *India 1960*, and thirdly because the general increase in prices, 20 per cent. wholesale and up to 50 per cent. retail, are interrogations of the increases claimed.

According to the *Economic Survey*, then *per capita* national income has increased from 100 in 1948-49 to 117.7 in 1958-59. Even this increase is largely due to food production, a gift of the monsoons, because, in 1957-58, the *per capita* income was only 111.6. The claim that, during the two plans, the national income is expected to increase by 42 per cent. is therefore misleading.

The Draft Outline concedes that the targets set have not been reached in respect of many commodities. For cotton, against a target of 55 lakh bales, the production just reported is of 37 lakh bales, for steel against the target of 4.3 million tons, the production was of 1.7 million tons in 1959 and, correspondingly, for cement against 130 lakh tons only 68 lakh tons, for cloth against 8,500 million yards only 6,920 million yards and for coal against 60 million tons only 46 million tons.

In power, the installed capacity is expected to be 5.8 million kw. but was actually 3.5 million in 1958-59.

No reference is made to the progress of irrigation, though for the outlay of Rs. 1,400 crores in the two plans an area of 38 million acres is expected to be irrigated on full development. The total increase in the irrigated area from 1950 to 1957 is only of 4.2 million acres. The Auditor-General mentions that for the Rs. 11 crores spent on the Konar Dam, not one kilowatt of power or one acre of irrigation has been achieved so far.

In respect of railways, while the passengers carried increased from 6,250 lakhs in 1941-42 to 13,077 lakhs in 1950-51, which is more than 100 per cent., they increased to only 14,409 lakhs in 1958-59, an increase of only about 10 per cent. The increase in freight has been largely on Government account, for steel factories and food supplies.

Surfaced roads had increased from 97,580 miles in 1950-51 to 107,000 miles in 1955-56. It is difficult to visualise their increasing to 140,000 miles by 1960.

Inflation

It is thus clear that Planning has not even served the limited purpose of achieving targets. On the other hand, it has thrown up many problems, of which the most important is that of inflation. This is by no means only 20 per cent. in the Second Plan as is stated in the Draft Outline of the Third Plan. The wholesale price index for articles in common demand has risen during the period May 1955 to January 1960 for cereals from 67 to 102, pulses 48 to 92, edible oils 76 to 131 sugar and *gur* 82 to 144. The retail price increases are much higher, some items like sugar being obtainable only in the black market. If, during the course of four years, the prices have increased by 50 per cent., not only consumption and production but also export have been depressed. The consequences of the recent wage increase for Government servants and industries governed by Wage Board awards will be a further spurt in prices which, with anticipations of the large expenditure in the Third Plan, will continue to be maintained.

The second consequence of our Plans is the increase in taxation. The first Plan was financed by taxation to the extent of Rs. 574 crores and the second to the tune of Rs. 1,270 crores. For the third, the estimate is Rs. 1,650 crores. As taxation once imposed continues, the annual burden of taxation for the Plan alone will be about Rs. 700 crores, which is much more than the total revenue of the Centre and States in 1950-51. For all this, the return is not visible, except that, of the Rs. 1,270 crores of taxation in the second Plan, Rs. 749 crores were spent on non-Plan items, which are *ex hypothesi*, unproductive.

The third problem has been the arrest of production growth by controls and competition from the State. Last year, the increase in consumer goods, the only result of industrialisation which reaches the people was only three per cent., which was an improvement on the previous two years. If taxes on income and expenditure are an index of industrialisation, they have, in spite of steep increases in rate, only risen from Rs. 125 crores in 1950-51 to Rs. 147 crores in 1959-60. Taxes on commodities and services have risen more steeply, but they are taxes on consumption paid by the whole population, largely for their necessities. Even war-devastated countries have recorded increases which are many times our increases, both in industry and agriculture. Our potential was much greater, because not only do we have undeveloped resources and deficient consumption standards but we had been released from foreign rule. It is a realisation of the importance of the private sector that has made the Third Plan less hostile to it, for, with the public sector having failed, it is only the private sector which has exceeded its targets in spite of the difficulties imposed on it.

The fourth consequence is inefficiency and corruption in the administration, which are not only costing the public more, but are retarding the growth rate of the national output on which it has now a stranglehold.

And, lastly, there has been a drying up of credit, both internal and external. This is because people are realising that, with galloping inflation, they will receive only a fraction of the value of their payments from Government securities on maturity. In the last loan issue, the Reserve Bank had to take up Rs. 40 crores. On the external side, imports are just being slashed, because, though the gap is not larger than was expected, foreign aid is beginning to fail. The U.S. may appear to be generous with its food surpluses, but its industrial equipment is too costly even if loans are made available for buying it. The third Plan is likely to shrink, because, unlike its predecessors, it will not have the same credit to ride on.

Discussion of Priorities

In these circumstances, the discussion of priorities is largely academic. Between economic and social objectives, the priority for the latter ignores that it is largely a consequence of the former. It is only when there is more of the cake that the share of those who have less can be increased. The priorities between agriculture, industry and social overheads have to be determined by the contribution each can make in the near future. In agriculture, with its low productivity, there is a large unused potential for which incentives should be provided. In industry, though more value is added to labour and material, the cost is so high that public enterprise is too much of a strain on the taxes and loans that the people can pay. It is only private enterprise which can draw and develop the resources of the people, without hurting them too much. Social overheads have no immediate tangible contribution to make to production and should wait at least till the population is provided with the minimum means of existence.

The priority between production and consumption is misconceived, because, while it is proposed to raise food consumption from 15 ounces to 18 ounces, an increase of 20 per cent., the general consumption is to go up by only 4 per cent., as if a higher standard is only a matter of eating. The other priorities, like proper phasing of projects, avoiding of bottlenecks, are only procedural but are not likely to be changed as they are inherent in State planning.

Social Objective

If any general principles are to be laid down for planning, the first may be as little planning as necessary and as much competition as possible. It is on this principle that the German economic miracle eventuated after West Germany was in a worse condition than India as a result of controls and planning. Planning may indicate outlines and make up deficiencies, leaving the intelligent self-interest of the people to respond to the economic forces. Competition will maximise production and minimise prices for the benefit of consumers, who represent the whole population. The social objective will be served from the fulfilment of the economic objective. It can be further safeguarded by assuring the right to work, by preventing the emergence of monopolies and by progressive taxation.

Second, the Government may do only what the people are unable or unwilling to do, being responsible mainly for the infra structure of services like roads, ports, irrigation, power and railways. This involves a retreat from many existing enterprises which may be effected gradually by offering capital participation to the public in State enterprises.

Third, the price line may be held and the income of the people increased by reduction of inflation, through the abolition of economic controls.

Fourth, full value for the expenditure of Government may be obtained through independent inspecting agencies with technical qualifications, under subordination, directly to Parliament.

Fifth, Government may only participate in private enterprise through loans and subsidies, if such incentives are necessary.

Sixth, rights in property may be respected to secure full contribution from the people. Right to work may also be recognised both on equitable and economic grounds.

(*To be continued*)

SUI GAS FOR INDIA?

The news from New Delhi that Pakistan's Minister for Fuel and Power, Mr. Z. A. Bhutto, is likely to arrive there shortly to negotiate with Mr. K. D. Malaviya an agreement for the purchase by India of Sui gas is heartening, all the more so because the contemplated transaction, if finalised, will be one more concrete outcome of the recent cordial talks between Prime Minister Nehru and President Ayub Khan. How greatly an Indo-Pakistan agreement covering the import of natural gas from the Sui fields in West Pakistan will bring relief to the power-hungry States of Punjab, Rajasthan, Gujarat and Maharashtra can be easily visualised when it is recalled that the reserves in the Sui gasfield alone have been estimated at 5,000,000 million cu. ft. and the actual output last year had reached a level of 16,000 million cu. ft. It may be broadly figured out that, when the Mari (Stanvac) and Uch gasfields with their reserves of 2,800,000 million cu. ft. and 2,500,000 million cu. ft., respectively, are reopened, Pakistan will have a very large export surplus.

It will be to the advantage of Pakistan to export this surplus gas to western and north-western India rather than to East Bengal for more than one reason. First, the gasfields are already connected by pipeline to Multan from where it will soon be extended to Lahore via Sukkur. As the pipeline will be very near the Indo-Pakistan border, it can be fully utilised to feed the gas into a grid on the Indian side at a comparatively low cost which will mean that this country can become a secure market therefor. Secondly, although East Pakistan can provide a secure market for the Sui gas because the Sylhet and Chhatak gasfields in that part of Pakistan have reserves of only 300,000 million cu. ft. in all, the biggest problem is one of transportation which will have to be done by big specialised tankers with deep-freeze facilities. The construction of liquefaction, storage and re-gasification plants and associated facilities at the loading and unloading ports will involve heavy outlays which will increase the unit costs of transportation from Karachi in the north of the Arabian Sea to Dacca in the north of the Bay of Bengal.

At the same time, it will be to the advantage of India to import the Sui gas for use in the four aforesaid States nearer to West Pakistan and thereby save, as much as possible, on the freight bill on account of the coal transported from East India to those States. If that much Indian coal which is not sent to the western and north-western States can be exported to East Pakistan, it will not only ease the fuel problem there but have the advantage that a secure market can be had for some quantity of Indian coal. This does not mean that India wil have an export surplus in coal for which she will necessarily have to find a market. What is meant is that the import bill on account of the Sui gas can be met by the foreign exchange earnings from the export of coal from East Indian States to East Pakistan. Since 50,000 cu. ft. of natural gas are equivalent, in calorific value, to over two tons of coal, a million tons of coal exported to East Pakistan under a possible exchange arrangement of the kind here suggested will involve the import of 25,000 million cu. ft. of natural gas from West Pakistan in a year. It will thus be to the mutual advantage of both the countries not only to bring the forthcoming negotiations to a successful conclusion but to provide in the agreement itself for an exchange of Indian coal against Pakistan's natural gas in some suitable proportion. The price question, though important, is only a matter of detail.

INDUSTRIAL FINANCE CORPORATION MAKES GOOD PROGRESS

RECORD LENDINGS—PROFIT AT A NEW HIGH

IN many respects, the year ended 30th June 1960 proved to be the most encouraging one in the history of the Industrial Finance Corporation of India (General Manager: Mr. H. V. Venkatasubbiah, New Delhi). There was a substantial increase in the lendable resources of the Corporation, thanks to the issue of 4 per cent. bonds for Rs. 5 crores and the sanctioning of a loan of $10 million by the Development Loan Fund of the U.S. Government and fresh borrowings from the Government of India. The loans sanctioned during the year reached a peak of Rs. 17.92 crores. The gross income earned was also a record, exceeding Rs. 2.50 crores, and the profit before providing for taxation crossed, for the first time in the last twelve years of the Corporation's existence, the one-crore mark to touch Rs. 1.09 crore, representing an increase of Rs. 36 lakhs over that for the previous year.

Thanks to the improvement in its finances, the Corporation has been able to strengthen its reserves sizably, adding over Rs. 38 lakhs out of its profit. For the fourth year in succession, the Corporation has been able to pay the guaranteed dividend of 2¼ per cent. out of its own earnings, without the aid of any subvention from the Government. On top of this, it has reduced its liability to the Government on account of subvention by another Rs. 10 lakhs; this has brought down the outstanding amount to Rs. 28 lakhs, which is only a little more than 50 per cent. of the total received since its inception. There has been a further welcome decline in defaults from 5.4 per cent. of the amount due in 1958-59 to 4.3 per cent. Also, the downward trend in the ratio of expenses to gross income noted since 1954-55 has been maintained during the year under review, with a further drop from 5.11 per cent. (in 1958-59) to 4.66 per cent.

The salient features of the Corporation's working results for the past four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Interest earned	2,25.40	2,00.05	1,54.36	95.93
Other income	2,83.48	3.85	0.54	0.40
Interest paid	1,28.22	1,15.75	86.85	44.17
Other expenses	13.28	10.29	9.68	8.96
Depreciation	0.12	0.12	0.14	0.13
Profit	1,09.27	73.08	53.42	43.06
Provision for—				
Taxation	49.76	37.71	25.21	8.56
Doubtful debts	..	..	..	22.25
To general reserve	38.26	14.12	11.50	..
,, reserve for contingencies	..	..	..	1.00
Subvention returned to Government	10.00	10.00	5.45	..
To dividend	11.25 (2¼%)	11.25 (2¼%)	11.25 (2¼%)	11.25 (2¼%)
Loans applied for	17,54.10	11,16.57	14,88.50	21,36.25
Loans sanctioned	17,91.74	3,79.00	7,78.50	11,90.75
Loans disbursed	8,40.81	7,47.71	8,33.35	9,77.50
Loans under consideration at the end of the year	7,88.10	11,70.97	14,08.40	11,37.00

The bulk of the rise in profit is due to the capital gain of Rs. 18.30 lakhs arising from sale of investments, including Rs. 9.74 lakhs realised on renunciation of the right to subscribe to right shares.

The number of applications for loans, as well as the amount sought for and sanctioned, recorded an increase during the year under review. There were 38 applications for an aggregate sum of Rs. 17.54 crores (as against 26 applications for Rs. 11.16 crores in 1958-59) and 29 loans for Rs. 17.92 crores were sanctioned, the corresponding figures for 1958-59 being 19 loans and Rs. 3.79 crores. The actual disbursement, at Rs. 8.41 crores, is not only higher than that (Rs. 7.48 crores) in the previous year, but is also very much above the average amount given during the ten years 1948-49 to 1957-58, namely, Rs. 3.48 crores. This brings the total amount of loans approved up to the end of the year under review to Rs. 84.61 crores, covering 329 applications, and the total amount of loans disbursed to Rs. 50.73 crores. The loans declined by the parties or not made available aggregate Rs. 10.95 crores and those awaiting Government's approval Rs. 10.42 crores. The outstanding net commitment is thus Rs. 12.50 crores.

The Corporation sanctioned during the year under review eight loans for Rs. 4.20 crores to co-operative societies, all of which are, or are to be, engaged in the sugar industry. This brings the aggregate loans approved for co-operative societies upto the end of the year to Rs. 19.13 crores, out of which Rs. 18.59 crores represent loans approved for 32 sugar co-operatives, the balance of Rs. 25 lakhs being for a co-operative spinning unit. The loans sanctioned by the Corporation so far for co-operatives represent 23 per cent. of all the loans approved by it and provides an index of the assistance given by it to co-operative societies in accordance with the declared policy of the Government.

As in the previous years, the bulk of the Corporation's loans was for new undertakings (that is, those which went into production after 15th August 1947). Thus, out of the 29 applications which were sanctioned loans during the year, 21 were from new undertakings and these were sanctioned Rs. 15.38 crores, while only eight applications from old undertakings were sanctioned Rs. 2.54 crores for renovation, modernisation and expansion.

An industry-wise analysis of the loans sanctioned during the year under review shows that food manufacturing industry (sugar) continues to top the list, followed by paper, artificial fibres and hotel industry, as will be seen from the following table:

(In lakhs of rupees)

Manufacturing industry	Amount sanctioned		
	Upto 30th June 1959	During the year ended 30th June 1960	Total upto the end of June 1960
Food (except beverage)	20,72.00	5,00.00	25,72.00
Textiles	9,72.75	25.00	9,97.75
Artificial fibres	1,10.00	3,00.00	4,10.00
Wood and cork (except furniture)	30.00	..	30.00
Paper and paper products	5,71.50	4,02.24	9,73.74
Rubber products	50.50	..	50.50
Basic industrial chemicals	7,66.00	84.50	8,50.50
Vegetable and animal oil and fats	11.00	..	11.00
Miscellaneous chemical products	77.25	..	77.25
Glass and glass products	1,27.50	35.00	1,62.50
Pottery, china and earthenware	64.25	60.00	1,24.25
Cement	6,17.00	..	6,17.00
Iron and steel	23.00	..	23.00
Non-ferrous metal	1,17.00	86.00	2,03.00
Metal products	2,90.50	50.00	3,40.50
Machinery (except electrical)	1,42.50	..	1,42.50
Electrical machinery, appliances, etc.	1,81.70	15.00	1,96.70
Rail-road equipment	70.00	45.00	1,15.00
Motor vehicles and ancillaries	1,68.00	9.00	1,77.00
Bicycles	80.50	30.00	1,10.50
Miscellaneous	43.30	..	43.30
Electric light and power	82.75	..	82.75
Hotel	..	1,50.00	1,50.00
Total	66,69.00	17,91.74	84,60.74

This is the first time that the hotel industry has been given financial assistance by the Corporation since 1957 when the I.F.C. Act was amended so as to permit the granting of assistance to this industry. As the amount involved is over Rs. 1 crore, it requires the approval of the Government and this is awaited.

A State-wise analysis of the loans sanctioned so far shows that Maharashtra heads the list, with the largest amount (Rs. 15.96 crores), followed by Madras (Rs. 9.89 crores), West Bengal (Rs. 9.10 crores), Gujarat (Rs. 7.40 crores), Uttar Pradesh (Rs. 7.16 crores), Bihar (Rs. 6.28 crores), Andhra Pradesh (Rs. 6.11 crores), Mysore (Rs. 5.91 crores), Kerala (Rs. 4.28 crores), Orissa (Rs. 3.77 crores), Assam (Rs. 3.62 crores), Punjab (Rs. 3.27 crores), Delhi (Rs. 95 lakhs), Rajasthan (Rs. 89.5 lakhs) and Madhya Pradesh (Rs. 3.5 lakhs).

As stated earlier, the ways and means position of the Corporation improved considerably during the year under review by the issue of 12-year bonds for Rs. 5 crores carrying interest at the rate of 4 per cent. per annum at Rs. 99.75 per cent. Though the terms were more favourable for the Corporation than in the case of the previous year's issue, the response was very encouraging, in that the subscriptions offered aggregated Rs. 6.53 crores. Out of this, the amount retained was Rs. 5.49 crores. This brings the total amount of bonds outstanding at the end of the year to Rs. 22.24 crores. During the year, the Corporation reduced its borrowings from the Central Government from Rs. 13 crores to Rs. 6 crores, but again drew Rs. 7.25 crores, raising the outstanding borrowings to Rs. 13.25 crores. These borrowings continue to carry interest at 4½ per cent. per annum. Borrowings from the Reserve Bank were sparingly availed of, mainly due to the comfortable funds position. The Corporation's handicap in the matter of giving foreign exchange credit was removed by the sanctioning of a loan of $10 million by the U.S. Development Loan Fund in April 1960. This facility was not availed of up to the end of the year under review.

While the applications received by the I.F.C. for guaranteeing deferred payments to foreign manuacturers on behalf of industrial concerns during the year amounted to Rs. 3.72 crores, the applications sanctioned were of the order of Rs. 7.87 crores. This was due to the large number of applications pending at the end of 1958-59. Upto the end of the year under review, the Corporation has approved of applications for guarantee of deferred payments to the tune of Rs. 12.18 crores.

The Corporation underwrote during the year under review an issue of 7 per cent. preference shares for Rs. 50 lakhs by a paper mill, out of which it had to take up Rs. 34.07 lakhs. It also approved of two more proposals for underwriting, one for Rs. 20 lakhs carrying dividend at 7 per cent. (tax-free) and the other for Rs. 25 lakhs carrying a dividend of 6½ per cent. (tax-free). The Corporation's liability in the former case was Rs. 10 lakhs and in the latter Rs. 15 lakhs, the balance being joint or sub-underwritten. These bring the total amount of underwritings approved by the Corporation up to 30th June 1960 to Rs. 187.50 lakhs. This is by no means a sizable amount, but the Corporation took to this business only two years ago.

WORLD BANK BORROWS IN SWITZERLAND

A Swiss franc issue of Bonds of the International Bank for Reconstruction and Development was offered in Switzerland on 23rd September, by a syndicate of leading Swiss banks. The banks offered at par Sw. fr. 60 million (approximately $14 million) of 4 per cent. 15-year Bonds. The Union Bank of Switzerland, the Swiss Bank Corporation and the Swiss Credit Bank head the underwriting group, as they did in previous public offerings of World Bank Bonds on the Swiss market.

The new issue, to be known as the 4 per cent. Swiss Franc Bonds of 1960, will be dated 15th October 1960 and will mature on 15th October 1975. The bonds will have no sinking fund and will be non-callable for ten years. On and after 15th October, 1970 the World Bank may redeem all or part of the issue on any interest payment date on 45 days' notice in case of partial redemption and three months' notice for total redemption. Interest will be payable annually on 15th October, with the first payment due on 15th October 1961. The issue will be listed on the stock exchanges at Zurich, Basle, Geneva, Berne and Lausanne.

This is the ninth public issue of the World Bank in Swiss francs. In addition, there have been three private placements by the Bank in Switzerland. With the present issue, the aggregate of World Bank bond and note issues outstanding in Swiss francs will amount to about Sw. fr. 690 million (approximately $160 million).

INDIAN FIRMS RECEIVE THREE U.S. LOANS

Two Indian industrial firms associated with the Kaiser Industries Corporation in the United States have received two rupee loans equivalent to a total of $3.2 million and a dollar loan of $13.6 million from the Export-Import Bank of Washington. The loan agreements, which will finance increased aluminium and cement manufacturing facilities in India, were signed last week by Mr. Chad F. Calhoun, Vice-President of the Kaiser Industries Corporation, on behalf of the two Indian firms, and by Mr. Samuel C. Waugh, President of the Export-Import Bank.

The Hindustan Aluminium Corporation, Ltd., (Hindalco) received a $13.6 million loan and a $2.1 million rupee loan for part of the cost of an aluminium reduction plant already under construction near the Rihand Dam in Uttar Pradesh. The cost of the 20,000-metric-ton reduction unit is estimated at $30 million and will provide employment for several thousand workers. Hindalco was formed jointly by the Kaiser Aluminium and Chemical Corporation of Oakland, California, and the Birla interests in India.

The Mysore Cements, Ltd., was granted a $1.1 million rupee loan under U.S. Public Law 480 which permits use of currency from the sale of U.S. agricultural products for loans to assist Indian economic development. The loan will help finance the construction of a 100,000-metric-ton cement plant near Ammasandra in Mysore State.

WORLD BANK LOAN TO COLOMBIA

The World Bank has granted a loan equivalent to $5.4 million to equip the new Atlantic railroad in Colombia. When the railroad is completed, it will interconnect Colombia's railway systems and provide the first fast and reliable transportation between Atlantic Ocean ports, central Colombia and the Pacific. The Bank's funds will finance purchases of locomotives, rolling stock and maintenance equipment.

Four private banks are participating in the loan, without the World Bank's guarantee, for a total amount of $512,000 representing the first four maturities and part of the fifth maturity which fall due between 1st May 1962 and 1st May 1964.

The loan is for a term of 15 years and bears interest of 5¾ per cent. per annum, including the 1 per cent. commission which is allocated to the Bank's special reserve. Amortisation will begin in May 1962. The loan is guaranteed by the Republic of Colombia.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A copy of the Prospectus having attached thereto the documents referred to hereafter has been duly delivered for registration to the Registrar of Companies, Bombay, as required by Section 60 (2) of the Companies Act, 1956.

The Subscription List will open at the commencement of banking hours on the eighth day of October 1960 and will close at the close of banking hours on the seventeenth day of October 1960 or later at the discretion of the Directors, but not earlier than 12th October 1960.

Application will be made to the Bombay Stock Exchange for permission to deal in and for an official quotation of the equity shares of the Company.

ANUH PHARMA LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956 ON 19TH FEBRUARY, 1960)

SHARE CAPITAL

AUTHORISED:

5,00,000 Equity Shares of Rs. 10 each .. .. Rs. 50,00,000

ISSUE OF SHARES FOR CONSIDERATION OTHER THAN CASH:

	Rs.
Out of the present issue of 1,00,000 Equity Shares of the face value of Rs. 10 each, 10,000 Equity Shares of the face value of Rs. 10 each are to be allotted as hereinafter mentioned to Dr. G. Krishna Murty, Shri Madhav Vasudeo Pathak, Shri Vinodrai Mansukhlal Shah, Mrs. Sharadabai Krishna Murty, Shri Chitrasen Krishna Murty (*minor*) and Shri Krantikumar Gudibanda in terms of the draft Agreement referred to, in Article 5 of the Articles of Association in part payment of the price for the sale of their business of Messrs. Anuh Pharma carried on by them in partnership, for consideration other than cash. The allotment of the aforesaid 10,000 Equity Shares is in payment of the price of the goodwill of the said business of the Vendors	1,00,000

ISSUE OF SHARES FOR SUBSCRIPTION IN CASH:

The Promoters, Directors and their friends have agreed to subscribe for and take 10,000 Equity Shares of the Company of the face value of Rs. 10 each by payment in cash for the said shares	1,00,000
The balance of 80,000 Equity Shares of the face value of Rs. 10 each is now offered for public subscription in cash at par in terms of the Prospectus	8,00,000
	Rs. 10,00,000

The present issue of Equity Shares except the Shares to be allotted to the Vendors as aforesaid for consideration other than cash shall be payable as follows:

On application—Rs. 2.50 per share.

On allotment—Rs. 2.50 per share.

PRESENT ISSUE:

1,00,000 Equity Shares of Rs. 10 each .. .. Rs. 10,00,000

The balance of Rs. 5 per share will be called in two instalments of Rs. 2.50 each at the discretion of the Directors at intervals of not less than three months between each call and prior notice of at least thirty days shall be given in respect of each call.

Failure to pay allotment money or any cash when due will render shares liable to forfeiture.

Applications should be for a minimum of 50 shares or any multiple of 50 shares.

MINIMUM SUBSCRIPTION

The minimum subscription in respect of the present offer on which the Directors will proceed to allotment is Rs. 3,00,000.

FINANCIAL REQUIREMENTS

The estimated financial requirements for implementing the manufacture and research programme contemplated by the Company will comprise of the following :

	Rs.
(1) Part of the consideration payable to the Vendors ..	22,101
(2) Preliminary expenses including brokerage and remuneration	60,000
(3) Costs of land and building	3,00,000
(4) Costs of machinery, laboratory apparatus and other equipment	3,00,000
(5) Working Capital	3,00,000
	Rs. 9,82,101

While part of the above expenditure may be postponed, recourse may also be made to borrowings for part of the requirements as and when necessary.

DIRECTORS

SHRI P. R. SUBRAMANYAM, Stockbroker, Bombay (Chairman).

SHRI P. V. PAKVASA, Solicitor, Bombay.

CONSENT

The consent in writing of the Directors, Auditors, Managing Brokers, Official Brokers, Bankers and Legal Advisers to the Company to act in their respective capacities has been obtained and has been filed with the Registrar of Companies, Bombay, as required by Section 60 of the Companies Act, 1956 and none of them has withdrawn the consent given.

OBJECTS

The Company was incorporated on 19th February 1960 with the objects mentioned in the Memorandum of Association, a copy thereof is annexed hereto and forms part of the Prospectus. The main object of the Company is to acquire and take over as a going concern the business now carried on in partnership at Bombay under the style and firm name Messrs. ANUH PHARMA.

PROSPECTS

The business being taken over by the Company from the said Partnership Firm ANUH PHARMA has been marketing for a short period of one and a half years pharmaceutical products based on the valuable research made by Dr. G. Krishna Murty since 1936 resulting in a number of drugs of scientific and commercial value. The said firm has been doing business on a small scale without any capital equipment and with limited working capital from September 1958 to February 1960.

The raw drugs had to be bought in small quantities and at higher prices and so the products had to be priced high. The products manufactured were all for specific diseases, and they had to be detailed only to the medical profession for which the propaganda machine was insufficient because of limited capital. For want of capital, sales and propaganda experts could not be employed. And therefore the working results of the vendor firm during the period September 1958 to February 1960 as disclosed in prospectus have not been profitable.

The future of the Industry cannot be based on the initial working during this short period. The results of the research of Dr. G. Krishna Murty are well known. The drugs on which he has worked have high scientific and commercial value. When the Company can buy raw material at low cost in bulk and when the products are manufactured at the Company's own factory the selling price can be brought down. When the Company can manufacture the active principles of these drugs, they can be exported to foreign countries. In addition, with an efficient sales and propaganda department the products now marketed and other new products can have a large turnover and yield ample profits to enable payment of fair dividend on the capital employed, besides provision for research and expansion work. It is estimated that the turnover during the 13 months ending 31st March 1961, may be about Rs. 5,00,000 and in the second year it is expected that the turnover will be about Rs. 10,00,000 with scope for further increase.

AGREEMENT

One of the main objects of the Company as contained in Clause No. 1 of the Memorandum is to acquire and take over as a going concern the business carried on in partnership at Bombay under the name and style of "ANUH PHARMA" together with the goodwill thereof and all its assets and liabilities and to enter into an Agreement referred to in Clause 5 of the Articles of Association of the Company and to carry the same into effect with or without modification.

The consideration for the sale of the said business is to be satisfied by allotment of shares of the Company as hereinafter mentioned and partly in Cash.

The consideration for the Goodwill of the said business is Rs. 1,00,000. The said consideration of Rs. 1,00,000 is payable in two instalments of Rs. 50,000 each. The first instalment of Rs. 50,000 is payable on the completion of the sale of the said business and after the registration of the Company, and the same shall be paid and satisfied by allotment to the Vendors or to their nominee or nominees 10,000 Ordinary Shares of the face value of Rs. 10 each in the capital of the Company on which a sum of Rs. 5 per share shall be credited as Paid-up thereon. The Vendors shall accept such partly paid-up shares of Rs. 5 per share to be credited as Paid-up thereon as aforesaid in payment of the first instalment of Rs. 50,000 payable as aforesaid in part payment of the first instalment of Rs. 50,000 payable as aforesaid in part payment of consideration for the Sale to the Company for Rs. 1,00,000 payable to the Vendors for the Goodwill of the Vendors' business.

The second instalment of Rs. 50,000 shall be paid on or before 30th June 1961 and the same shall be paid and satisfied by a further sum of Rs. 5 per share being credited as Paid-up on each of the Shares allotted to the Vendors as aforesaid on or before 30th June 1961. The Vendors shall accept the same in payment of the balance of the consideration money namely Rs. 50,000 payable to the Vendors for the Good will of the Vendors' business.

The said 10,000 Ordinary Shares of the Company to be allotted to the Vendors as aforesaid are to be allotted by the Company as stated in the said Agreement between the Company and the Vendors for the sale of the said business.

Part of the consideration for the Sale of the said business of the Vendors shall be the payment to the Vendors the value of Stock-in-trade and other assets of the Vendors in Cash. The value of the said Stock-in-trade and other assets of the Vendors is to be such sum as to be certified by Messrs. Hariharan & Co., Auditors of the Company to be the fair value thereof. The Auditors have now certified the value of the Stock-in-trade and all other Assets of the Vendors as Rs. 1,49,557. The liability of the Vendors as on the said date is Rs. 1,27,456. Accordingly the amount payable to the Vendors in cash is Rs. 22,101 as part consideration for sale of their business to the Company (A

(*Continued on page 617*)

WOOL AND WOOLLEN TEXTILES IN THIRD PLAN

NO MORE SPINDLES AND LOOMS TO BE ALLOWED

THE woollen industry would not be permitted to install any additional spindles and looms during the third Five-year Plan period, if the programme of development tentatively drawn up by the Planning Commission were finally accepted and implemented. This programme is in accordance with the recommendation made by the Development Council for Woollen Textiles. The Council is of the view that the present installed capacity of the industry is more than sufficient to produce the entire requirements of woollen-worsted yarn and cloth, inclusive of export demand. The weaving sector of the industry, according to it, is working, on an average, a little over 1½ shifts and the spinning sector only about one shift.

The existing installed capacity of the industry (calculated on the basis of two shifts and 300 working days) is estimated at 67 million lbs. of woollen-worsted yarn and 48 million yards of cloth, whereas the anticipated demand in the last year of the third Plan (1965-66) is put at 45 million lbs. and 30 million yards, respectively. The production targets suggested in the Draft Outline are 52 million lbs. of yarn and 35 million yards of cloth. These figures represent a rise of 18 million lbs. and 12 million yards as compared with the estimated levels of output in 1960-61. The actual production during 1955-56 (last year of the second Plan) was 21.7 million lbs. of yarn and 15.0 million yards of cloth. The productive capacity of wool tops has, however, been fixed substantially higher, at 31.5 million lbs., to be attained in 1965-66, as against 10.0 million lbs. (anticipated) in 1960-61, the actual production being put at the same level.

Trend of Output

The following table indicates the trend of actual woollen yarn and cloth production since 1951:

Year	Fabrics (million yds.)	Yarn (million lbs.)
1951	12.14	17.08
1952	11.38	16.03
1953	13.16	18.50
1954	13.75	19.36
1955	13.58	20.70
1956	16.31	25.58
1957	16.14	27.84
1958	19.37	29.14
1959	15.23	29.49
1960 (Jan.-June)	7.17	13.02
1959 (Jan.-June)	6.84	13.89

The fulfilment of the production targets for woollen yarn and cloth fixed for 1965-66 will, of course, depend largely on the availability of adequate and regular supplies of raw wool. Naturally, the third Plan Draft Outline has provided for a fairly large increase in wool production—from 72 million lbs. (anticipated) during 1960-61 to 90 million lbs. in 1965-66, representing a rise of as much as 25 per cent. It, however, remains to be seen whether such a significant rise will, in fact, be achieved. For the experience of the last few years has not been encouraging. The quantity of raw wool actually produced expanded by no more than five million lbs. during the first Plan period and the addition expected during the second Plan is just seven million lbs.

It is a well-known fact that the bulk of the wool produced in India is accounted for by carpet wool. Nearly half the output is exported every year; the actual exports amounted to 18.17 million lbs. (valued at Rs. 4.95 crores) during the first six months of 1960 and 42.11 million lbs. (Rs. 11.02 crores) in the whole of 1959. At the same time, the country imports large quantities of apparel wool. The actual imports were 12.36 million lbs. (Rs. 5.73 crores) in January-June 1960 and 20.57 million lbs. (Rs. 9.02 crores) during 1959. The third Plan Draft Outline has done well to stress the need for stepping up the yield and improving the quality of wool. During the third Plan, six new sheep breeding farms and 4,000 new extension centres are proposed to be established, the sheep population covered by each centre varying from 10,000 to 15,000. Stress is also laid on the grading of wool at the time of sheep shearing which is essential for improvements in marketing. Drawing attention to the mixture of good wools with the poorer qualities, the Draft Outline says: "It is, therefore, envisaged tentatively that about 300 wool grading and marketing centres to be run by co-operatives of producers should be set up during the third Plan. Facilities for shearing, grading, baling and storing of wool will be provided at these centres. It is expected that, by the end of the third Plan, wool production will be raised to about 90 million lbs."

By the end of the second Plan, we are told, four sheep breeding farms and 380 extension centres will have been set up. In these farms, superior rams are being produced by cross-breeding with exotic breeds and by selective breeding of indigenous breeds. The superior rams are supplied to shepherds with a view to upgrading the wool stock. In the extension centres, groups of villages with a population of 2,000 to 3,000 sheep are selected and the block-owners are provided with superior rams, indigenous or imported, so that these units may become centres of production of superior rams in large numbers. At these centres, improved methods of shearing, grading and other improved practices are demonstrated.

Types of Fabrics Produced

There are at present 162 organised woollen mills in India, of which 32 are purely spinning units, 104 purely weaving units and 26 composite mills. The installed capacity of the industry comprises 69,000 woollen and shoddy spindles, 132,000 worsted spindles, and 4,000 powerlooms. After the implementation of all the schemes licensed up-to-date, the installed capacity at the commencement of the third Plan period is expected to be 79,000 woollen and shoddy spindles, 139,000 worsted spindles and 4,000 powerlooms. Details regarding production of the different types of woollen-worsted fabrics during the years 1958 and 1959 were given in these columns two weeks ago. Details of the total production of 7.17 million yards of fabrics during the first half of 1960 are given below.

Fabrics Produced

(In yards)

Woollen: Suitings 602,470; uniform cloth 585,765; lohis 50,198.

Worsted: Suitings 2,027,142; uniform cloth 136,592; lohis 188,558.

Mixed fabrics: Suitings 117,430; uniform cloth 7,092; lohis 85,592.

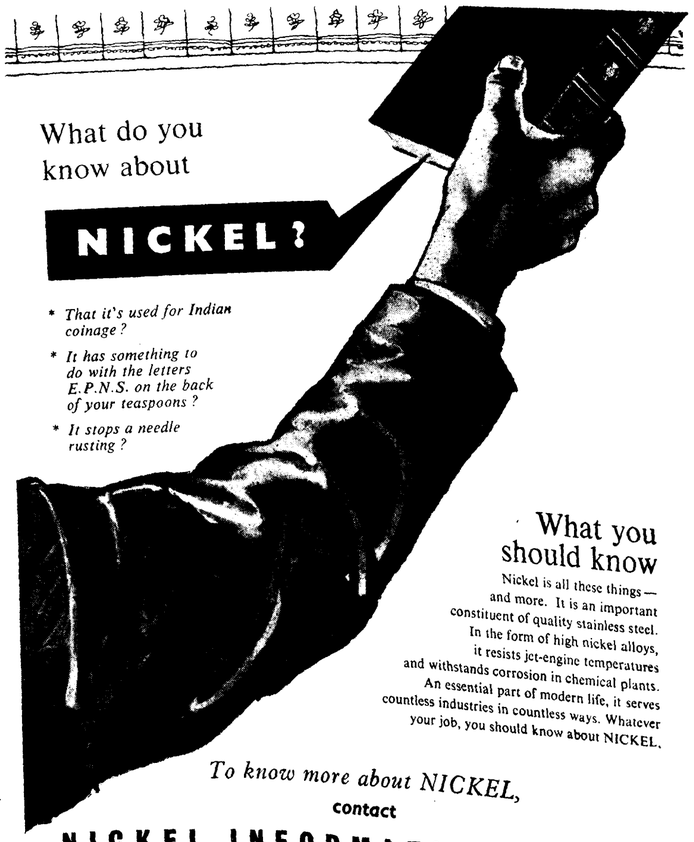
Blankets and rugs: 1,144,807.

Hosiery goods: 268,931.

Other items: 1,869,895.

Shoddy: 18,295.

The Government of India is taking action in regard to the suggestion made by the Development Council to the effect that raw wool and woollen manufactures are to be included in all bilateral agreements. It has also accepted the view that there is no need for forming a seperate *ad hoc* panel at Ludhiana for export promotion under the auspices of the National Small-scale Industries Corporation. The request of the Council to the Directorate of Export Promotion to take up with the Railway Board the West Bengal Hosiery Association's plea or a 50 per cent. rebate of railway freight on hosiery goods meant for export is under examination. The Central Government has already granted, in pursuance of the recommendations put forward by the Council, a licence for setting up a semi-worsted yarn manufacturing plant with 1,000 spindles in Rajasthan. Some time ago, the Council constituted a small committee consisting of five persons to make an on-the-spot study of the manufacturing techniques and other relevant matters for the production of druggets and *kamblis*, as well as to contact the All-India Handicraft Board, the Handloom Board and the Cottage and Development Industries Board for undertaking various schemes formulated for the cottage woollen industry. A tour programme has already been chalked out and the study is expected to be undertaken shortly.



COMPETITION FROM ASIAN TEXTILES

GOVERNMENT URGED TO TAKE SOME MEASURE OF RESTRAINT

From Our Special Correspondent

MANCHESTER, 20*th September*

MANCHESTER LETTER

RELATIVELY few companies dealing with textiles in Lancashire are sufficiently vertical in structure to give them a wide view of the industry at large. Among this minority is Barlow and Jones Ltd., whose Chairman, Mr. Eric Cartwright, is thus able to offer a balanced picture of the various sections in his annual statement. The fact that this group's latest financial results covered 18 months from the beginning of last year to mid-1960 justifies his assertion that this particular period was "one of extreme fluctuation, demonstrating the volatile nature of the industry in its most acute form."

The profits varied in the different sections in which the Company is engaged. The earnings of the condenser spinning mill and the bleach works in 1959 were below those for 1958 and continued on this basis during the current year. "It is quite evident that there is surplus capacity in both these sections," Mr. Cartwright adds, "and results will remain poor until supply and demand are brought closer together." The weaving section of Barlow and Jones made a similar profit last year as in 1958, and so did the fine spinning branch. The raw cotton section showed the greatest change—from a substantial loss in 1958 to a modest profit in the following year. The distributing department also showed better results, as is usual on a rising market.

Reorganisation in Finishing

The group is also involved in the finishing section, so that Mr. Cartwright's comments on the reorganisation scheme now being undertaken should be of interest to the trade generally. The terms of this plan, he says, are not so attractive as those in the spinning and weaving sections, and could indeed be somewhat onerous on the firms which decide to remain in business, whilst not giving great encouragement to firms to consider closure of their works. "Doubtless there were difficulties in producing a satisfactory scheme," he adds, "but it would appear that these created a paralysis which resulted in a year's delay and proposals which cannot be regarded as encouraging. The best that can be said is that the schemes should help to accomplish the very necessary step of reducing the size of the industry. In this respect, it is a little better than the situation in condenser spinning, which would appear to have to bear with the redundancy that exists."

Those who are critical of the sums of money paid out to millowners as compensation for scrapped machinery should note that Mr. Cartwright is yet another Chairman to observe that the total of levies payable will be slightly higher than the amount of compensation received by the Company. Lancashire cotton traders, he asserts, cannot afford to ignore the long-term danger of Asiatic competition. Even when completely reorganised, with all the advantages of new machinery and shift working, the industry cannot possibly compete with Asian imports. "Until the Government makes it clear that there will be some measure of restraint on foreign arrivals, a reluctance on the part of producers to invest in new machinery at today's high prices will be manifest."

Big Mill Switchover

More than 100,000 men and women are now at work in former Lancashire cotton mills which have been taken over by other industries. Between 300 and 400 mills have so far been affected by the transformation, according to the Lancashire and Merseyside Industrial Development Association.

Mr. Eric Allen, the Association Director, described the development as "staggering," with virtually every British industry represented ranging from engineering and rubber to furniture, clothing and the raising of chicks for broilers. A large number of mills had been taken over by existing Lancashire firms, but many others were new to Lancashire.

Since 1952 about 550 mills have closed down for cotton production. At the present time, only about 200 remain empty.

New Rayon Chief

Mr. Stuart Douglas, Deputy Director of the British Man-Made Fibres Federation, has been appointed Director of the Federation from 1st November, following the retirement of Mr. A. J. C. Walters. Mr. Douglas joined the Federation as Assistant Director in 1950, becoming Deputy Director three years later and has since been in charge of the Federation's London office. He was formerly Director of the Textile Institute after serving as an Assistant Secretary of the Manchester Chamber of Commerce.

The appointment can be regarded as an indication that the Man-Made Fibres Federation intends to retain its individuality in a textile industry wherein the possibility of mergers has become more marked in recent years. There have been rumours that an amalgamation of interests might take place between the Federation and the Cotton Board, owing to the growing interdependence of the various fibres in the textile range. It can now be taken for granted that the powerful producers' group in the man-made fibres industry is prepared to support the Federation as a separate entity and that an official link-up with the cotton trade organisations in the near future is unlikely. This view is strengthened by the fact that the Federation has officially stated that it intends to add to its staff by making further senior appointments in due course. Mr. Walters is to continue his association with the Federation in a consultative capacity.

Earlier this year, two moves to integrate trade associations dealing with cotton and the man-made fibres were announced. The British Cotton Industry Research Association is to amalgamate with the British Rayon Research Association in 1961 and negotiations have started for a merger between the Cotton Manufacturers' Association and the Rayon Weaving Association.

Re-training on Automatics

Re-equipment of the cotton industry is bringing its own problems to the mills, especially the provision of labour. Even those who have been employed in the trade for years require instruction when changes in mechanism take place and new methods have to be adopted. To cater for re-training schedules of this kind, the Cotton Board's Productivity Centre is planning a new series of programmes.

Some years ago, specialised operative training was introduced in the weaving section: the system has now been adapted to cover loom overlookers, for whom new courses have been developed. The methods employed are supported by both employers' and operatives' organisations, and provide the basis for special teaching.

Two types of course are available: in one, "transfer training" offers new skill and knowledge about automatic looms to overlookers unaccustomed to such machines: in the other, "refresher training" is provided for those likely to benefit from instruction in newer and more effective methods of operating automatics. A feature of the courses is that both are conducted at the mill concerned. The first step is to select an instructor from the company's overlookers: he is given initial instruction enabling him to re-train those taking the course. Detailed notes are provided to cope with queries and set out the new methods. Another advantage is that the specialised operative training can be adapted to fit the particular requirements of individual mills.

Drop in Production

July output returns failed to provide any clear picture of the situation in Lancashire. Too many towns, particularly in the weaving belt, were on holiday for suitable comparisons to be made, although it should be noted that weekly cloth production during the month at 23,900,000 yards was nearly one million yards a week lower than in July 1959. The fall was entirely the result of reduced output of cotton fabrics, as weavers of man-made fibres and mixtures stepped up their production.

A similar situation arose in the spinning branch where single yarn output was below the 1959 level. This year's July production was 12,350,000 lbs. weekly, as against 13,130,000 lbs., but, again, the output of man-made staple yarns and mixtures was slightly in excess of last year's level.

Very little change took place in the labour situation, the number of available operatives falling by 140 to 184,310. This compares with 200,420 employees on the books of spinners and weavers at the end of July 1959.—*All Rights Reserved.*

WORLD COTTON EXPORTS TOUCH AN ALL-TIME PEAK

OUTLOOK FOR THE CURRENT SEASON

THE 1959-60 world cotton season, which ended on 31st July 1960, has been termed a "bonanza one in many respects" by the International Cotton Advisory Committee, Washington. Production, consumption, and trade during the season have all been at record levels. In fact, total free world trade in cotton has exceeded any previous season's performance. Exports have amounted to an estimated 15.3 million bales (of 478 lbs. each), as compared with the previous high of 14.3 million bales shipped in 1956-57 and the five-year (1954-55 to 1958-59) average of about 12 million bales. As compared with the 1958-59 season, exports during 1959-60 had risen by nearly four million bales, the largest increase in any one season since the end of the last war. The destination-wise breakdown of the increase in exports is as follows:

	(In million bales)
Increase in exports to India	0.5
Increase in exports to other countries:	
To maintain the 1958-59 level of consumption ...	0.8
To provide for increased consumption	1.4
To build up stocks	1.2
Total ...	3.9

It will be seen from the data given above that the main stimulants to exports have been the increase in consumption and the replenishment of stocks in importing countries. Other contributory factors, however, have been the necessity for India to expand greatly its imports of cotton above the normal volume due to a big fall in its crop and the inability of importing countries to consume out of stocks as they did in 1958-59.

In the U.S., registrations under the 1959-60 U.S. cotton export sales programme are estimated to have aggregated 7.12 million bales till 31st July 1960. Actual shipments during the season amounted to 6.9 million bales, as compared with a mere 2.79 million bales in the previous season. It is noteworthy that the estimated increase in U.S. exports of 4.1 million bales is more than the rise in total world trade. Aggregate exports outside the U.S. during last season, are, therefore, expected to have been slightly less than the 8.7 million bales shipped in 1958-59.

Exports from Outside U.S.

Apart from the U.S., the only other country to record a significant increase is Egypt, exports from which are placed at 1.8 million bales, a level which is at full parity with the pre-War volume. By the end of June 1960, Egypt had already shipped over 1.7 million bales. A notable feature regarding the distribution of exports of Egyptian cotton during 1959-60 season is the sharp decline in shipments to the U.S.S.R., though that country still remains, far and away, the most important single market. Except East Germany, exports to all other destinations in Eastern Europe have been high. Mainland China took about the same quantity as during the previous season. More significant, however, is the sharply higher exports to countries outside the communist bloc. India, for example, has absorbed nearly three times as much cotton as it did in 1958-59, while several other major countries have just about doubled their imports of this growth. Variety-wise, there have been noticeable increases in all staples, except Ashmouni, with the major emphasis being on the extra-long staple varieties.

Africa

Elsewhere in Africa, larger carryover stocks at the beginning of 1959-60 season permitted increased exports from the Congo and Mozambique, while in Tanganyika a record crop was matched by record exports. In Brazil, too, where exports are under quota, there is every likelihood of exports having been higher, though still much under what they were a few years ago. Earlier in the season, it was thought that, up to half a million bales would be available for export. But reduced crop prospects in the southern States have caused estimates of exports to be lowered somewhat.

Increases are expected to have occurred in Turkey and Syria where, in both instances, exports should be over 400,000 bales, a record for Turkey. In many countries, exports have been significantly lower but little cotton remains for sale. Mexican exports are estimated to have declined to around 1.5 million bales—300,000 bales less than in 1958-59, but fully equal to the average of the previous five seasons. The contraction in exports from the Central American countries has been drastic indeed. Reflecting much reduced availabilities, shipments from Nicaragua, El Salvador and Guatemala combined, estimated at roughly 300,000 bales, are well under half their 1958-59 volume. Similarly, exports from Pakistan, Peru and Uganda are all expected to have been less, though there will be no increase in carryover. On the contrary, stocks have been much below normal, the lowest carryover for the last decade in Pakistan and only a few week's supply for the domestic textile industry. Reduced carryover and smaller crop account for the reduction in Sudanese shipments but exports are still expected to have been much higher than average.

Price

It is noteworthy that the increase in exports has been achieved without any reduction in the price level. In fact, prices now are, in every instance, perceptibly higher than what they were a year ago. During the first half of the 1959-60 season, they followed a distinctly upward trend, particularly in longer staples. The second half of the season, however, witnessed a reaction, but it was generally short-lived and prices at the end of the season, though somewhat below the peak, were noticeably higher than a year before. As the season progressed, prices in many markets came to be influenced by the development of a tight statistical situation, while in others the price trend has been activated by substantially larger export demand and continuing heavy shipments to communist countries.

Commenting on the trade prospects for the current season, the International Cotton Advisory Committee's monthly review says that, unless there is another round of increases in consumption and/or a further significant build-up in stocks in importing countries, both of which appear unlikely at present, the chances are that exports during the current (1960-61) season will decline. A return to more normal production in India will also make for lower imports, though imports into India could still be larger than normal if stocks were to be rebuilt to normal levels. This does not mean that trade prospects will be anything but favourable, as compared with previous years.

Export availabilities outside the U.S. in the 1959-60 season were about 8.75 million bales, while, in the present season, they are not likely to be much higher, despite an increase in production potential. There are two reasons for this. First, much of the production increase is expected in India, the bulk of which will be consumed domestically. The likelihood is, therefore, that any increase in production in India will probably result in lower demand for imports rather than an increase in export availabilities. Second, stocks in the net exporting countries, which during the past season were used, in some instances, to bolster exports in the face of declining production, will be at virtually minimum levels in nearly all cases. The

Protect your Office and Industrial Buildings with

Snowcem

SUPERIOR, LOW-COST, WATERPROOF CEMENT COATING.
Available in a wide range of colours

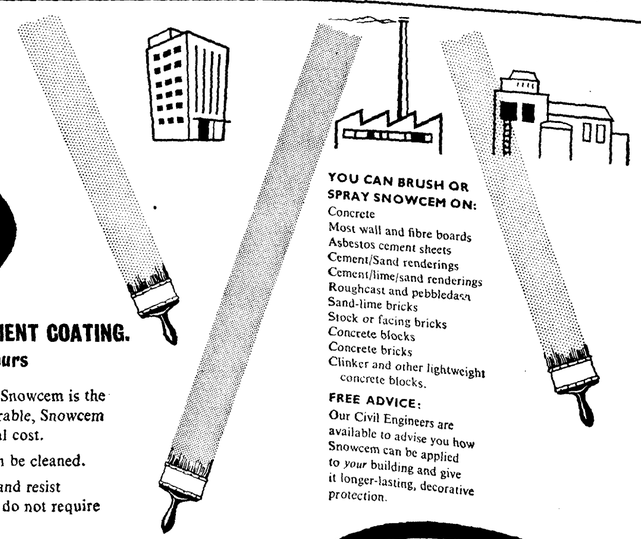
To protect your mill, factory or office building, Snowcem is the ideal coating material. Longer-lasting, more durable, Snowcem creates brighter decoration at a more economical cost.

Snowcem does not rub, flake or peel off and can be cleaned.

Snowcem coated surfaces are hard, waterproof and resist penetration of damp. Subsequent applications do not require any special preparation of surface.

Silvicrete White Cement is the base of Snowcem

Manufactured by: SNOWCEM INDIA PRIVATE LTD. BOMBAY
For detailed illustrated Instructions Booklet and further inquiries, contact
Sole Selling Agents For India: KILLICK, NIXON & CO., PRIVATE LTD.
31, Murzban Road, Bombay 1.
Regional Selling Agents: Balmer Lawrie & Co. Ltd. Calcutta 1., Martin Burn, Ltd. Calcutta 1., Bird & Co. (Private) Ltd. New Delhi 1., Best & Co. Private Ltd. Madras 1., Harrisons & Crosfield Ltd. Quilon.



YOU CAN BRUSH OR SPRAY SNOWCEM ON:
Concrete
Most wall and fibre boards
Asbestos cement sheets
Cement/Sand renderings
Cement/lime/sand renderings
Roughcast and pebbledash
Sand-lime bricks
Stock or facing bricks
Concrete blocks
Concrete bricks
Clinker and other lightweight concrete blocks.

FREE ADVICE:
Our Civil Engineers are available to advise you how Snowcem can be applied to your building and give it longer-lasting, decorative protection.

Also Available:
Impermo
CEMENT WATERPROOFING COMPOUND
Impermo is well-known as a most economical and superior water-repellent material in powder form for adding to cement to overcome the penetration of damp through cement, mortar or concrete

NEWS! India's First Financial Daily Newspaper

THE FINANCIAL EXPRESS

EDITED BY G. M. LAUD

Here Soon! India's First Financial Daily Paper to bring you every morning up-to-minute authentic information on market prices and trends—finance—and economic reports!

Complete Financial News Service for Bankers, Industrialists, Investors and Traders — Edited by G. M. Laud.

The Financial Express — India's first financial daily newspaper, is to be published by Indian Express Newspapers, Bombay, very shortly.

The Financial Express will be edited by G. M. Laud, the well-known financial journalist, author and banker, assisted by a team of experts specialised in finance, commodities, trade, industry, politics and foreign affairs. Augmented by news service from overseas markets, and a complete network of teleprinter communications between the business centres throughout India and overseas.

The Financial Express will tell you all the things you want to know in the world of business—accurately and faster than ever before!—It will only cost 25 nP a copy. So why not tell your newsagent today to reserve your copy.

- MARKET TRENDS AND QUOTATIONS
Fast teleprinter communications system will give you each morning, the latest quotations and comments from all the stock exchanges and commodity markets in India.
- FOREIGN MARKET REPORTS
London Stock Exchange Wall Street—Continental Bourses—and commodity markets will be covered by correspondents who will give you latest news and potential developments.
- MARKET INTELLIGENCE SERVICE
Expansion of export trading, will be assisted by well-informed exclusive reports on world's leading markets.
- BANKING AND FINANCE
Economists will comment and analyse everyday finance—world banking policies and international economic activities.
- INDUSTRY, TRADE AND COMMERCE
You will receive appraisals on Government policy—problems of management and labour—new developments in production techniques
- NEW ISSUES AND DIVIDENDS
Details of company registrations, and impartial analyses on new issues and balance sheets will be given by experts.
- INVESTORS GUIDE
Every week the 'Investors Guide' will give you sound advice on profitable market investments

business will begin each morning with

I. M. F. ON WORLD PAYMENTS RELATIONS

PROGRESS TOWARDS FULL CONVERTIBILITY OF CURRENCIES NOTABLE

EXPLAINING the significance of currency convertibility simultaneously undertaken by ten West European nations towards the end of 1958, we observed in the course of an editorial twenty-one months ago (*vide* page 1 of *Commerce* dated 10th January 1959) that, if the move were to succeed, the next step would be full world-wide convertibility and abolition of all quantitative restrictions on free world trade. It looks as though the forecast will prove correct in the not-too-distant future. In its latest annual report, that covering the fiscal year ended April 1960, the International Monetary Fund (I.M.F.), for instance, declares that the world is now closer to the attainment of a multilateral system of payments free from exchange restrictions than at any time since the beginning of the Second World War. This view is supported on the following grounds:

About half of the Fund's members have currencies which are convertible for virtually all non-residents.

In a number of countries, restrictions on current payments have dwindled to the point of insignificance.

Considerable progress has been made in eliminating discrimination between currencies, particularly between those of dollar and non-dollar countries.

Discriminatory restrictions imposed for balance of payments reasons are now almost completely eliminated by the great majority of Fund members.

Exchange markets are functioning smoothly; all over the world, these markets have benefited from the stability of the U.S. dollar and the external convertibility of the West European currencies.

There has been a steady and continuous decline in the number of bilateral payments agreements.

The use of advance deposit requirements as a condition for obtaining import or exchange licences or for clearing goods through customs has been reduced or eliminated in eight countries.

In countries maintaining exchange controls, the liberalisation of payments of a capital nature has been continued.

Trade Barriers Must be Reduced

It is the aforesaid developments, together with the lessening of inflationary pressures and the great degree of freedom for ordinary commercial lending in many countries, that have imparted marked strength to the payments structure of the world. "All in all, there are," to quote the I.M.F.'s annual report, "good reasons for believing that, granted effective action to control any resurgent inflationary tendencies and the avoidance of extreme creditor positions, the international payments structure that has been carefully built up over the past decade will continue to gain in strength and that it will be able, in the absence of major international disturbances, to face successfully such tests as may arise." Nevertheless, the I.M.F. urges that, in the negotiations for regional arrangements in Europe and elsewhere, "full" attention should be paid to the importance of reducing trade barriers, in order to provide greater opportunities for an expansion of world trade. For, it says, "the more widely the reductions can be extended, the better will be the prospects for a sustained growth of world trade to the benefit of all concerned." It also urges that any tendency to resort to bilateral payments arrangements should be resisted. Warning that trade restrictions are generally harmful to the world economy as a whole and will at best serve only the short-term interests of important economic groups, the Fund emphasises that their elimination requires the most determined action by Governments.

While the lessening of exchange restrictions, simplification of exchange controls and decline in the number of bilateral payments agreements are all very notable developments, there is no denying that the progress towards the establishment of multilateral system of world trade and payments in future will depend on the extent to which "the most troublesome problems" (to borrow the phrase of the I.M.F.) associated with the development of the less developed countries, particularly the primary producing countries, are solved. It is common knowledge that these countries are faced with the pressing problem of instability of export prices, on the one side, and excess of imports beyond the available foreign exchange resources caused by their heavy capital outlay on development, on the other. The I.M.F., of course, can assist these countries, but such assistance can only be indirect, being confined to temporary balance of payments difficulties. It can also impress upon these countries the need for implementing their development plans and policies within a framework of financial stability and under conditions that are free from the distorting effects of inflation. The solutions to the problems of the less developed countries, therefore, lie partly within the countries themselves and partly with the highly developed nations. This aspect has been very well brought out in the I.M.F. report. Thus, it observes:

"In countries whose economies have been tuned for many years to upward price movements and where, therefore, deep-seated distortions have to be corrected, it may not be possible to establish an environment of financial and economic stability all at once, or without transitional difficulties and delays. These temporary difficulties, however, should be weighed against the consequences of perpetuating the waste and injustice inevitably associated with inflation. Once conditions of financial stability are restored and confidence is thus assured, both at home and abroad, a reliable basis for sustained economic growth has been established. The extent to which specific measures are required to initiate or accelerate expansion on sound lines will depend on the conditions in each particular country. In some countries, resolute support of the stabilisation programme will need to be followed by resolute efforts to increase productivity and savings.

"In these circumstances, the responsibility of the more highly developed countries is not confined to the provision of capital for financing development elsewhere, or to the maintenance of more stable market conditions for primary products. Their general tariff and other trade policies are also of great importance. In the future, as in the past, economic development will call for continuous changes in the structure of international trade. These changes can take place only as more liberal trade and tariff policies are widely adopted and as appropriate safeguards are applied, so that the disposal of agricultural surpluses does not disrupt the normal channels of trade. In particular, the effective servicing of development loans would be rendered more difficult—or even made impossible—if the trade policies of the lending countries from which development financing is expected were not adjusted so as to permit easier entry for the products that the less developed countries are best fitted to produce."

Indicative of the general improvement in international payments relations is the appreciable fall in the use of the Fund's resources. The total standby arrangements in force at the end of April 1960 amounted to no more than $291.88 million, as against $1,132.84 million a year before and $884.28 million two years before. The purchases of currency from the fund by members to meet overseas payments obligations during the year 1959-60 aggregated a bare $165.53 million, as compared with $263.52 million in 1958-59, $665.73 million in 1957-58 and $1,114.05 million in 1956-57. The repurchases—this term means repayment of currency borrowed by member-countries—were of the order of $522.41 million. This sum, though it was slightly lower than the previous year's figure of $537.32 million, was the second highest in the Fund's history, having been exceeded only in 1958-59.

Gold and Exchange Reserves

Following the improvement in the free world's balance of payments relations during 1959, the total gold and foreign exchange reserves held by national monetary authorities (excluding the U.S.S.R. and the countries associated with it) fell by only $660 million, notwithstanding the fact that members of the I.M.F. had to pay more than $1,300 million through subscriptions and net repayments and that there was a reduction of a similar amount as a result of the termination of the European Payments Union. The free world official gold and foreign exchange resources as at the end of 1959 stood at $56,790 million, as against $57,450 million on the corresponding date of 1958. Of the drop of $660 million, gold reserves accounted for $220 million, the total of which as at 31st December 1959 was $37,850 million, as against $38,070 million a year before.

Despite the reduction in the total of the countries' gold and foreign exchange reserves during 1959, world liquidity actually improved. According to the I.M.F., "in evaluating changes in world liquidity, account must also be taken of the large increase in the foreign exchange holdings of commercial banks, which, in many countries was made possible by the relaxation of restrictions on movements of capital. The increase in the liquid holdings of U.S. dollars of commercial banks outside the United States alone amounted to about $1.4 billion; and there are indications that their holdings of other currencies also increased substantially. Where confidence in currencies is maintained, the increased scope for international movements of private capital should diminish the need for reserve movements to balance international transactions. On the other hand, any greatly increased flow of private short-term capital may, at certain times, increase the need for compensatory action by national authorities."

Fund's Resources

With further subscriptions and net repayments to the tune of $1,300 million made by the member-countries, the resources that the I.M.F. is able to make available rose much more. Besides gold, almost $3,900 million were subscribed in the members' own currencies. One-third of this amount was in convertible currencies, principally U.S. and Canadian dollars, and the increase in the Fund's holdings of gold and convertible currencies was thus nearly twice the amount by which transactions with the Fund reduced national holdings. Furthermore, the introduction of external convertibility by a number of countries at the end of 1958 increased the usability of the Fund's holdings of their currencies. The currencies of the industrial countries of Western Europe, which are widely used in settlement of international transactions, were thus, in effect, made convertible for current transactions. The Fund's holding of these currencies, which amounted to almost $3.2 billion at the end of 1958, were increased by $1.1 billion during 1959, mainly as a result of additional subscriptions. Because of the revolving character of the Fund's resources, gold and foreign exchange held by the Fund add substantially more to world liquidity than equal amounts held by national authorities; with an increase in the Fund's holdings of gold and of currencies suitable for international settlements that is several times the decrease in national reserves, the international payments mechanism was substantially strengthened in 1959.

A striking feature of the world's balance of payments relations during 1959 was the aggregate surplus of nearly $1,000 million enjoyed by the countries exporting mainly primary products, in contrast to a deficit of about the same size in 1958. Many of the less industrialised countries were able to bring to an end the drain on their international reserves that had been going on for some time, or actually to enlarge their reserve holdings.

The Economic Scene

As usual, the I.M.F.'s report contains an excellent review of the world economic situation during 1959. According to the review, world industrial production (outside the U.S.S.R. and associated countries), which had declined by about 2.5 per cent. in 1958, resumed its growth

last year and exceeded the previous peak of 1957 by more than 7 per cent. The renewed expansion was shared by all industrial countries. It was most striking in Japan, where the cessation of growth in 1958 was followed by a rise of 24 per cent. in output, supported by a substantial increase in both domestic investment and exports.

The recovery in industrial production was achieved with very little upward price movement. Price movements during the upswing were moderate, largely because, in most countries, the mild recession, coming after a period of heavy capital spending, had left considerable unused capacity that permitted marked improvement in output without undue pressure on prices and also because there was a tendency for labour costs per unit of output to fall. In several industrial countries such as France, Italy and the U.S., wages rose less during the recovery and expansion than in the downswing or slowing down in activity. While fiscal and monetary policies were adapted to current requirements, the Governments showed restraint in expanding overall demand, and this helped to discourage expectations of further inflationary developments. Moreover, in the face of increasing international competition, business men tended to adopt more cautious price policies. The very moderate recovery in the prices of some primary products and the continued decline in others were also factors favourable to stability in the general price level. With a few exceptions, wages in general rose somewhat less than the fairly substantial increases in productivity.

The upswing in economic activity in industrial countries during 1959 was accompanied by a renewed expansion of world trade, the value of world exports being higher by 6 per cent. as compared with the previous year which had witnessed a drop of 5 per cent. over 1957. The volume of world trade was about 8 per cent. higher than in 1958. The exports of primary producing countries rose by about the same proportion as those of industrial countries in both volume and value. The rapid expansion of world trade continued in the first quarter of 1960, when the volume of world exports was about one-sixth higher than in the same period of 1959.

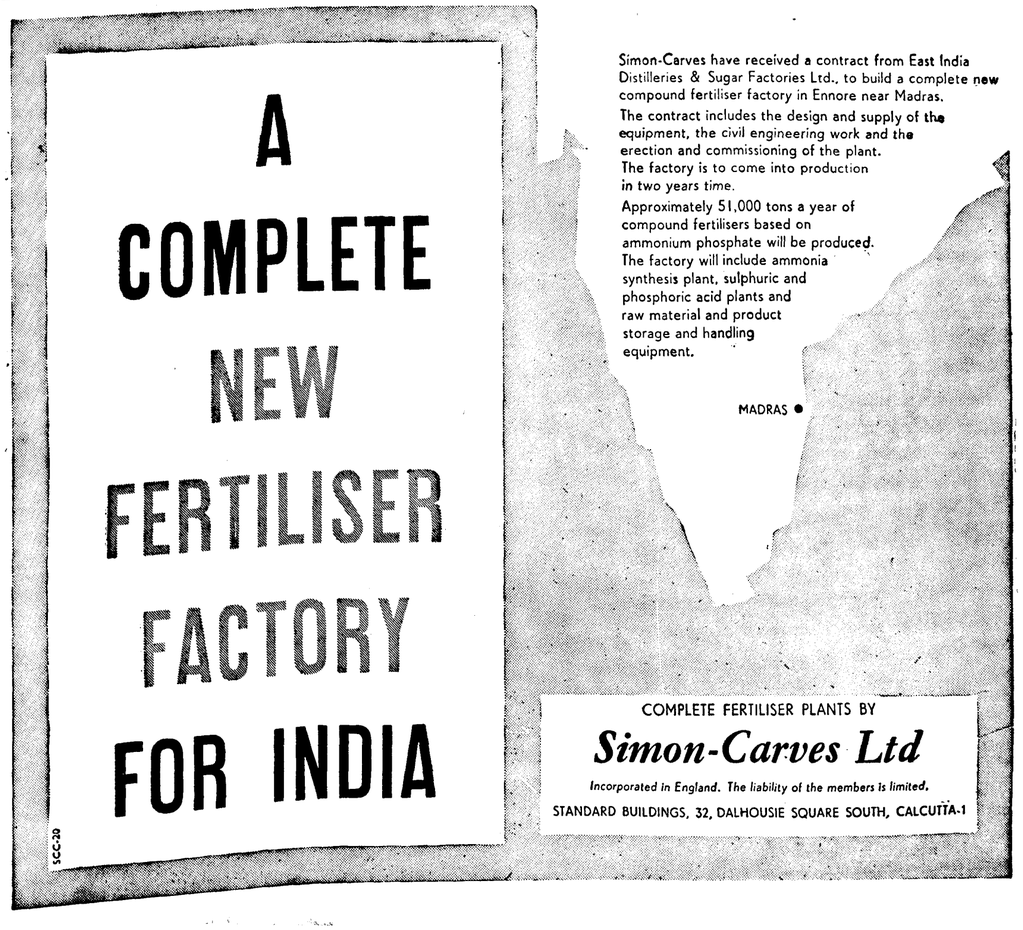
Divergent trends in the volume of trade gave rise to marked changes in the balance of trade between different groups of countries. The primary producing countries as a group improved their trade balance both with the U.S. and with the other industrial countries. The greater part of the deterioration in the trade balance of the U.S., however, resulted from the virtual disappearance of its former large export surplus with other industrial countries. The decline in this surplus was greater than that in the surplus of the other industrial countries in their trade with primary producing countries and with the Soviet area.

A special reference is made in the I.M.F. report to the financial policies in the industrial and the less industrialised countries. The financial policies of the industrial countries in 1959, as in other recent years, had to be put into effect in the context of increasing freedom for foreign exchange transactions. At the same time, attention continued to be paid to contracyclical policy. While the determination and the administration of policy were beset with many difficulties, a remarkable measure of success was, by and large, achieved in the attainment of both economic growth and price stability. This success was facilitated by the substantial increases in the gold and foreign exchange reserves of most industrial countries during 1958, which made possible a wider margin of discretion in the determination of domestic policy.

With the acceleration of private economic activity and increasing credit demands, the remaining expansionary effects of fiscal operations had to be offset by greater monetary restraint than would have been necessary in the absence of this heritage from the recession. There were, however, significant variations among the countries in the timing and the degree of these demand pressures and of the monetary measures designed to keep them under control. In many countries in Continental Europe and in Japan, the upswing gathered strength early in 1959 under conditions of monetary ease brought about partly by an accumulation of gold and foreign exchange reserves which added to bank liquidity and tended to lower interest rates, as will be seen from the table on the previous page.

Many of the less industrialised countries were able in 1959 to bring to an end the drain on their international reserves that had been going on for some time, or actually to enlarge their reserve holdings. Although the deterioration in the terms of trade of primary producers in 1958 and earlier years had been a contributing factor, the rather persistent decline in their reserves also resulted from expansionary financial policies, which, in some countries, were reflected in large and continuous budget deficits. In many countries, credit expansion was used to finance development. Structural defects in the fiscal system were also a source of financial weakness. Moreover, the authorities in several countries had burdened the monetary system with the financing of commodity stocks withheld from export markets. In some countries, excess demand, stimulated by credit expansion, had led to a rise in imports or a capital outflow rather than to any marked increase in domestic prices. In other countries, a substantial expansion of credit resulted in significant price increases, even though a part of the excess demand was absorbed by rising imports. Often a low level of international reserves meant that severe restrictions had to be placed on imports, and most of the effects of credit expansion were, therefore, concentrated upon domestic prices. On the other hand, foreign financial assistance enabled many countries to maintain imports at a higher level than would otherwise have been possible, and hence to finance development expenditure, to the extent of such assistance, without drawing on reserves.

Monetary and fiscal policies were a major factor in halting or reversing the outflow of reserves in 1959. These policies reduced credit expansion and Government expenditures, and tended to reduce the rate of monetary expansion. The resulting improvement in the balance of payments was an offsetting factor and, in a number of countries, a rise in foreign reserves was the main source of continued monetary expansion.



RUBY GENERAL INSURANCE COMPANY LIMITED

MR. M. L. SHAH ON INSURANCE PROBLEMS

NEED FOR CLOSER CO-OPERATION BETWEEN GOVERNMENT AND INSURERS

THE view that it was time the Government of India and the insurance industry jointly considered the problems facing the latter and evolved practical working formulæ to put general insurance on a sound footing was expressed by Mr. M. L. Shah, a director of the Ruby General Insurance Company Ltd., in his speech at the Twenty-fourth Annual General Meeting of the Company, held at Calcutta on 23rd September 1960. The following is the full text of Mr. Shah's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you to the twenty-fourth annual general meeting of the Company.

"The report of the Directors and the audited accounts for the year 1959 have been with you for some time and with your permission I take them as read.

"The following net premium figures reveal the progress of the Company:

	1949 Rs.	1954 Rs.	1959 Rs.
Fire	20,97,000	32,76,000	57,01,000
Miscellaneous accident ...	32,31,000	37,11,000	57,13,000
Marine ...	8,15,000	12,79,000	20,04,000
	61,43,000	82,66,000	1,34,18,000

"The Company has continued its progress which will be evident from the comparative premium figures of the last several years. The net premium for the year ending 31st December 1959 and the capital and funds as at 31st December 1959 stand at Rs. 1,34,18,000 and Rs. 1,27,81,000, as compared to Rs. 82,66,000 and Rs. 84,53,000 respectively as at the end of 1954.

Fire Department

"More attention is being given to develop the fire business as the results have been comparatively better. The working for the year shows a record profit of Rs. 11,50,000. However, there has been, again, a reduction in the fire premium rates from 1st January 1960 and it would have some effect on the working of the department but it is hoped that, with more attention being given to develop the business of the department, it would still show a reasonable profit.

Motor and Miscellaneous

"The claims experience in this department, particularly in the automobile section, which forms a major portion of the premium income, has been generally bad. We have, however, followed a cautious underwriting policy with the result that though there is a small reduction in the premium income but the working has greatly improved, which will be evident from the small loss incurred this year in the department. The motor premium rates in certain sections have been increased from August 1960 and it is hoped that it would result in some improvement in the claims experience of this section. There is considerable demand of other types of miscellaneous business and your Company is trying to develop these new types of business so that the portfolio may be more balanced and adverse results in one section do not upset the entire working of the Department.

Marine Department

"The working of the marine department shows a big loss on account of the jump in the premium reserve from Rs. 10.90,000 to Rs. 16,04,000 and the adverse claims experience, which is due to the increase in the foreign marine hull business. Your Company has, however, taken steps to reduce the foreign hull business and it is hoped that the department will show improved working in future.

"The loss experience on the import shipments also continues to be rather unfavourable owing to unsatisfactory state of affairs in the various ports of the country. Several representations have been made to the Government, and I feel that it is high time the Government had considered necessary amendment in the Port Acts so as to define more definitely the Port Commissioners' liability for loss or damage to the cargo whilst in their custody.

"Another important development, which is intimately connected with the marine insurance market is the introduction of a Bill in the Rajya Sabha to codify the law relating to marine insurance in this country. It is understood that the matter is presently engaging the attention of the Government of India in the light of the views and suggestions offered by the various bodies and State Governments. With the passing of this Bill, which has already received the support of the various commercial, shipping and insurance organisations, a great lacuna would be removed.

Overseas Business

"You are aware, we are reorganising our overseas business on the basis of the experience gained in the past and in view of the political changes in some countries in recent years which has resulted in contraction of the overseas business, but it is hoped that this will show a better overall working result.

"As is evident from the balance-sheet, the Company has a very strong financial position, the reserves amounting to Rs. 95,00,000 and there is an appreciation of Rs. 25,00.000 in its investment portfolio. It is gratifying to note that the Company continues to command the full confidence of its patrons and constituents.

"It is time the Government of India and the insurance industry sit together and seriously consider the problems facing the industry at present and evolve practical working formulæ to put this important industry on a sound footing. The Government should help the industry in maintaining its reputation and developing its business which is to the ultimate good of the country.

"I hope you will join me in expressing our sincere thanks to the executives, staff, agents, field-workers and other representatives both in India and abroad for their close co-operation which enabled the Company to maintain the progress during the year under review. I also convey my thanks to our valued clients whose support has helped the Company to achieve this position.

"I now move that the Directors' report and audited accounts and balance-sheet of the Company for the year ending 31st December 1959 be approved and adopted.

"Thanking you."

Note: *In the absence of Mr. B. M. Birla, Chairman of the Company, who is out of India, the speech was delivered by Mr. M. L. Shah, who presided over the meeting.*

COTTON

(*Concluded from page 594*)

amount available for export over the next few years, therefore, will depend almost entirely on the level of new crop production. In short, on present reckoning, the export potential outside the U.S. will be roughly the same as in 1959-60. This means that there should still be a continuing demand for U.S. cotton in the present season, albeit somewhat less than the seven million bales exported in the 1959-60 season. The U.S. Department of Agriculture is reported to have in mind an export target of 5.5 to 6.0 million bales for the current season. But, as the production in the U.S. during the current season is unlikely to be more than in the past season and, as stocks in that country have been depleted substantially, there is little possibility of prices of cotton coming down on any significant scale in the 1960-61 season, unless, of course, world demand for cotton goods sustains a sizable fall in the coming months.

Trade with Eastern countries is ever on the increase. An efficient world wide banking service with expert knowledge of market conditions is essential to develop trade. The associated banks, The Chartered Bank and The Eastern Bank Ltd. with branches in almost every commercial centre in the Middle East, South East Asia and the far East are fully equipped to provide complete Banking facilities to every trade and industry.

GENERAL ASSURANCE SOCIETY LIMITED

CHAIRMAN, MR. B. L. JALAN, SUGGESTS HIGH-POWER COMMISSION FOR GENERAL INSURANCE

SOME INTERESTING COMMENTS ON THIRD PLAN

A CRISP review of the outstanding problems confronting India and the world was provided by Mr. B. L. Jalan, Chairman, in his address to the shareholders of the General Assurance Society Limited at their annual meeting held at Calcutta on 26th September, 1960. Commenting on the third Plan, he averred that, generally speaking, deferred credits were preferable to acceptance of foreign private equity capital, as, in the long run, the latter would prove disadvantageous to the country. Referring to the difficulties of general insurers, he wanted the Government to appoint a high-powered commission to review the position afresh and suggest remedies.

The following is the full text of Mr. Jalan's address:

"The premature collapse of the Summit Conference has, once again, whipped up the cold war. The problem of disarmament is nowhere near solution. Congo continues to be in turmoil, in spite of all-out intervention by the United Nations. These developments and events appear to be quite anachronistic in the context of the unprecedented progress that is being achieved in the scientific and technological world, in the field of space and nuclear research, in medicine and in speed of transport. In fact, what we need today is a definite advance towards the 'one world' idea.

"On the contrary, you are also aware of the ideological differences which have been thrown into bolder relief between Communist Russia and China. While China was the first signatory to the doctrine of *Panch Sheel*, she seems to assert that co-existence is not possible and that war between the capitalist and the communist worlds is inevitable. If China believes in the inevitability of conflict between nations, it is no wonder that she continues to occupy forcibly and illegally territories of other nations.

Common Union

"It is, however, a good augury that there is a happy turn in our relations with Pakistan. Only last week, our Prime Minister visited that country to sign the agreement on Canal Waters, thus ending a longstanding dispute. One would only hope that all remaining differences between the two sister countries would soon be resolved. I would suggest that, at an appropriate stage, the South-East Asian countries should examine the possibilities of forming a common union on the lines of the European Common Market for freer trade and, particularly, for joint efforts with respect to investments and economic development.

"India has passed an equally uneasy year in her internal affairs. In the name of linguism, heart-rending events have taken place. It appears that we still lack the emotional integration which would make us one nation. I have been suggesting for a long time that, if the country is to function as one unit bereft of all kinds of linguistic and cultural rivalries, we must redivide the country into geographically homogenous zones.

Bold Third Plan?

"The draft Third Five-year Plan has been formulated. Even a casual look at the broad outline would show that, although it is a *very bold and ambitious programme*, it does not take care of some of our basic needs and hopes!

"Let us take the employment aspect. The planners estimate that the total employment potential of the third Plan outside agriculture might be about 10.5 million out of a total increase in the new entrants of about 15 million. The Prime Minister had rightly observed that what we have been doing so far was hardly enough even to maintain the existing low standard of living and consumption levels.

"The second Plan provided for a deficit financing of the order of Rs. 1,200 crores. It is now estimated that deficit financing of the order of Rs. 1,175 crores will have taken place by the end of the Plan period. In spite of a much larger outlay of over Rs. 10,000 crores, the planners have reduced the level of deficit financing for the third Plan to Rs. 550 crores only. It is proper that the resort to deficit financing should be controlled, as stability of prices is very essential to the successful execution of our Plans, but it is hoped that the position would be kept under constant review and that, as and when the situation demands, the rate of deficit financing would be appropriately increased.

Foreign Exchange

"The most important and crucial factor, however, in our structure of the third Plan is that of foreign exchange. Altogether, there would be a total gap of Rs. 3,200 crores in our foreign exchange budget during the third Plan period. Thus, the foreign exchange gap would be as large as one-third of our total Plan outlay.

"We have now touched the lowest levels of our foreign exchange reserves. The present balance is the bare minimum as foreign reserve. Almost all the existing credit lines of foreign loans have also been exhausted. A stage has come when Government is finding it difficult to sanction any industrial scheme, until the promoters could manage to secure private foreign capital to the extent of their foreign exchange requirements. In most cases, this is not practical. It might militate against the policy which had been adopted earlier of ensuring that the Indian promoters held the controlling interest. It is also not realised that, whenever foreign capital is sought in such proportions as are represented by the foreign exchange requirements of the project, the bargaining capacity of the Indian promoters is very much weakened and it costs us and the country as a whole much more than otherwise.

Deferred Credit Arrangements

"It is understood that, at the present time, Government does not favour even deferred credit arrangements against supply of foreign equipment and that they prefer direct capital participation by foreign collaborators or financiers. The obvious reason is that it is feared that we would not have adequate capacity to pay off the exchange liability in subsequent years by remitting due instalments. I believe that, even from a strictly exchange point of view, deferred payment facilities would be more favourable than direct capital participation.

"A single example would make the point clear. Let us assume that there are available deferred credit facilities of Rs. 10 crores spread over a period of eight years with interest at 6 per cent., for a certain project. On the basis of interest being calculated on progressively reduced debit balances, we would have to remit Rs. 1.55 crores year by year for eight years to clear up the credit facilities of the aforesaid order. Now, if in a case of direct capital participation, we were to remit dividends which may work out as high as, say, 16 per cent., we would have to remit Rs. 1.60 crores every year for an indefinite period while the basic capital liability would remain intact. This only shows that, even exchange-wise, the preference for private foreign capital to the prejudice of deferred credit arrangements will not solve our repayment and repatriation problem in subsequent years. It will only cause a perennial drain on our foreign exchange reserves.

Investment Insurance

"It is, indeed, a very happy development that American capital, the largest and most prospective source of external finance for industries, has shown a growing tendency to participate in Indian industrial ventures. At least three factors are responsible for this welcome new tendency: first, India's subscription to the risk of nationalisation under the U.S. Investment Guarantee Programme; secondly, avoidance of double taxation arrangements with America; and, thirdly, a general shift in the official policy of the country and a growing realisation in our official circles of the importance of the role which private capital, including foreign capital, can play in accelerating the rate of economic growth. The Government has now reversed its policy of reserving industries like fertilisers for the public sector. This is a pointer to our future economic policy. I would recall here my earlier suggestion for the establishment of a World Corporation of Investment Insurance. This, when established, will go a long way in encouraging inflow of foreign capital and solving not only our financial problem but also that of foreign exchange.

Idle Man-power

"It would not be out of place here to mention about the deleterious effect which recent announcements with respect to proposed amendments to the company and taxation laws produce on an otherwise cheerful capital market. The proposal to tax charitable institutions is undoubtedly an ill-conceived one, because such institutions have been a source of great assistance and relief to the poorer sections of the community.

"There is yet another aspect of our Five-year Plan, namely, that of utilisation of idle man-power in the country, which requires pointed attention. We can solve the problem of unemployment a great deal by utilising this surplus labour, on self-help basis, on programmes, such as road building, construction of houses, sinking of wells, etc. In West Bengal, 26,000 houses have been constructed by the village people on the basis of Self-help Scheme in flood-affected areas. It is very gratifying to note that the Chief Minister of Orissa, Dr. H. K. Mahatab, has also decided to follow the same scheme in his State.

Keen Competition in Insurance

"Turning now to the general insurance industry, the basic problem, as we all know, is one of severe internecine competition. It would appear that the general insurance business has ceased to be a profitable and attractive business. Restrictions imposed by Government and the Code of Conduct have only made confusion worse confounded.

"It is now time to make a proper appraisal of the results achieved by the new Code of Conduct promulgated by the General Insurance Council. I would very strongly suggest that the Government should constitute a high-powered commission consisting of all sections, including representatives of the industry, to review the position of general insurance industry in great details and evolve an entirely new basis for its reformation.

Fire Hazard

"Indian fire business is very good, but certain spasms of recurrent fires in certain areas completely upset the results. We find that, almost at an interval of every fortnight, we hear of a very big fire in some Calcutta godown, while there are hardly any fires in the mofussil godowns.

"The problem could be solved if the survey of fire claims were taken up by the Association itself which has no vested interests. The Association will have to maintain a full-fledged department specialised in survey work. The cost of the department, however, would be met out of the survey fees which may be charged on a *pro-rata* basis.

"A lot of money could also be saved, if salvage were properly disposed of. In Bombay, the industry follows the practice of auctioning off the salvaged materials soon after occurrence of fires, but, in Calcutta, this more rational and proper practice is not accepted. It is absolutely necessary that, in all areas of the country, this system of auctioning off the salvaged materials should be followed.

"I would also suggest that the India Reinsurance Corporation should not limit its activities to the conventional type of reinsurance business but must give a lead to the companies in breaking new ground as they have now started doing on a small basis."

Note: *This does not purport to be a complete report of the proceedings of the Annual General Meeting.*

The Life Insurance Corporation has announced immediate concessions for flood victims in the affected areas in Punjab and Orissa holding life insurance policies. The Corporation has waived late fee or interest on unpaid premiums for three months from the due date of the premiums. If a policyholder dies within the period of grace now allowed, the claim will be met in full, subject to deduction of unpaid premiums. These concessions will remain in force upto 31st December, 1960, and will apply to policies which were alive on 1st July, 1960.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

Speech by the Chairman, Mr. F. A. Collett, at the Forty-ninth Annual General Meeting of the Company on 21st September, 1960.

LADIES AND GENTLEMEN,

I have much pleasure in welcoming you to this, the forty-ninth Annual General Meeting of the Company.

The Notice convening this meeting, the Report of the Directors and the Accounts have been circulated, and with your approval we will take them as read. I will now ask the Secretary to read the Report of the Auditors.

Board of Directors

At the end of March this year, Mr. G. H. J. Clarke and Mr. D. B. St. John retired from the Board. Mr. Clarke had served the Company since the end of 1932, and had been a member of the Board for six years. He became Chairman of the Company in December 1955, and has presided over the last four General Meetings of the Company. I was appointed to the Board in December 1959, and following Mr. Clarke's retirement I was elected Chairman of the Company, in which capacity I aspire to serve you as well as my predecessor did.

Mr. St. John first joined the Company in December 1928 and had been a member of the Board for six years, during which time he was mainly responsible for the Company's finances. We wish Mr. Clarke and Mr. St. John much happiness in their well-earned retirement.

In April this year Mr. R. K. Banerjee was appointed Deputy Chairman of the Company, and I am quite sure that in this new capacity he will not only make a further substantial contribution to the progress of the Company, but will also prove invaluable in the assistance he will give me in my new appointment.

Also in April this year Mr. H. C. Reeve, who has served the Company for 27 years, was appointed to the Board.

Mr. J. R. Blaikie has recently resigned from the position of Secretary of the Company, and Mr. B. G. Pearson has been appointed as his successor.

Accounts

You will see from the Accounts in your possession that the net profit for the year has risen from Rs. 115 lakhs to Rs. 142 lakhs, some part of this increase being caused by a reduction in the rate of Income-tax and Super-tax from 51.5% to 45%, coupled with the discontinuance of Wealth-tax on Companies. This decrease in corporate taxation, however, has to be viewed in the context of the new basis of dividend taxation introduced by the Finance Act of 1959, whereby Income-tax is no longer deemed to be paid by the Company on behalf of the shareholders. You are all fully aware of the new provisions, and it is quite unnecessary for me to enlarge upon them.

Apart from this the Balance Sheet and the Profit & Loss Account call for no particular comment, so I will proceed with a review of the Company's activities.

Production of Spare Parts

The very necessary restriction on foreign exchange has made it difficult for the Company to obtain its essential requirements of spare parts for its production machinery. We therefore opened negotiations with the main suppliers of our cigarette making machinery with a view to obtaining increased manufacture of the required spares in India, and I am pleased to be able to tell you that on 1st July this year Molins of India Private Limited commenced manufacture in a new factory in Behala, near Calcutta. Part of the capital of Molins of India Private Limited is being subscribed by your Company, thus ensuring our active participation in the new venture, and we wish it every success.

Leaf Tobacco Supplies

You are probably aware that a very large proportion of the leaf tobacco which we use in cigarette manufacture is produced in Andhra Pradesh, where during the last two years the weather has been very unkind to the producers of flue-cured tobacco. In 1959 very heavy unseasonal rain was experienced at the end of January and the beginning of February—two vital months in tobacco cultivation—while in 1960 exceptionally high day temperatures, coupled with very low relative humidities, had a considerable influence on the quality outturn of the crop.

Events such as these, which lead to an embarrassingly large production of low-grade flue-cured tobacco, are, of course, beyond the control of the cultivator; but another, and perhaps a more serious, problem has arisen during the last few years when tobacco has been produced in undesirable growing areas, which has resulted in decided degradation in the tobacco whilst in storage. Fortunately Government are alive to this problem, which has received the earnest attention of the Indian Central Tobacco Committee, the Extension Staff of the Government of Andhra Pradesh, and the Experimental & Research Department of our main tobacco suppliers, Indian Leaf Tobacco Development Company Limited.

The efficient production of good quality flue-cured tobacco is of paramount importance not only to your Company, but also to India, for exports of unmanufactured leaf tobacco produce foreign exchange annually to the value of between Rs. 13 and Rs. 15 crores. The production of sub-standard flue-cured tobacco, coupled as it is with a tendency to increasing prices, must inevitably be viewed with disfavour by the importing countries, of which the United Kingdom is by far the most important, and they will naturally look elsewhere for their requirements if this undesirable trend is not halted.

It is most important that the cultivators lay far greater emphasis on following the cultural practices recommended by the Indian Central Tobacco Committee, and pay close attention to the proper harvesting, curing and handling of their products, for the alternative can only be continued production of unwanted low-grade flue-cured tobacco, with the inevitable loss of export markets.

New Brands

During the year under review, your Company has marketed several new brands, and with the Annual Report we have enclosed a folder depicting them. They have been designed to appeal to the changing tastes of the consumer and we are optimistic of their success. As Mr. Clarke told you last year, the marketing and advertising of new brands is expensive, particularly in the early stages, but sales in general are encouraging and we hope to reap the benefit of this year's expenditure in future years.

You will have noticed that two of the new brands depicted in the leaflet have filter tips. It is with regret that your Board has had to restrict the distribution of this type of cigarette because the filters are imported and so in short supply. However, the producers of these filters are at present negotiating with the Indian Government for their production in India, and although the establishment of a new industry cannot be hurried, we look forward to the time when local manufacture of filters will enable us to give the consumer unrestricted supplies of this type of cigarette.

Labour Relations

In his speech last year Mr. Clarke referred to the unsatisfactory operation of our factories at Monghyr due to the labour force being greater than was required for the output from that point. Although those conditions continued throughout the year under review, I am pleased to be able to tell you that as a result of improved forward requirements it has been possible to absorb some of the redundant labour by re-introducing a partial double-shift at Monghyr. At the same time we have, with the ready assistance of the Bihar Government and the Trade Union, been able to streamline the labour allocation to some extent and, as a result, we hope to operate more economically in future.

Elsewhere in the organisation also our relations with our employees have improved and it is now becoming more and more apparent to everybody that increased productivity is the only practical answer to increased benefits to the employees and the shareholders alike.

You will remember that in last year's Annual Report we included some photographs of the Company's residential training centre near Calcutta. The requirements of Staff development are by no means simple; however, it is felt that real progress in this field is being achieved and although the value of the staff training centre is difficult to assess accurately, your Board is convinced that it has been a worthwhile venture.

During the year we have extended our training activities and have started technical training for selected groups of employees at some of our production branches. This training is being carried out by our staff who have received the necessary guidance at the training centre, using the techniques of work study and training within industry. It is gratifying to know that as a result of these activities there has been a noticeable improvement in skills and at the same time an encouraging improvement in Management/Labour relations in the areas where the training has been carried out.

Your Company has continued to pursue its policy of providing amenities to its employees and of making working conditions as pleasant as possible. For some years the Company has provided free uniforms and subsidised canteens, given free medical attention in excess of statutory requirements and made annual donations to the sports clubs of the various branches. In addition to this, we have provided Institutes at some of our factories, the latest being the Clarke Institute at Bangalore, which was formally opened by the Governor of Mysore. A photograph of the Institute is reproduced on page 18 of the Annual Report.

A substantial donation was made to the new Saharanpur District Civil Hospital, thus helping towards adequate hospital and other medical facilities to the employees and their families at our Saharanpur branch.

Financial assistance has been given to certain Co-operative Credit Societies at branches where there was evidence of constructive self-help.

The efficacy of all these measures has been amply demonstrated by the increased output which we have been able to achieve. Under the scheme of productivity payments which is in operation in our factories, this increased output has resulted in financial benefit to our employees, all of whom I should like to thank for their continued co-operation.

Prospects

During the first five months of the present financial year, sales have shown a welcome increase over the previous year, in the face of intense competition, and in fact have exceeded all previous records. It is too much to expect profits to keep fully in step with sales, partly because of rising costs and partly because of the continuing tendency of the smoker to switch to lower priced and less profitable brands. Nevertheless your Board had complete confidence in declaring a first interim dividend of 2½%, subject to tax, in respect of the year to 31st March 1961.

THE
UNITED COMMERCIAL BANK
LIMITED
Head Office: CALCUTTA

Authorised Capital	..	Rs. 8,00,00,000
Subscribed Capital	..	Rs. 4,00,00,000

ROAD TRANSPORT VERSUS RAILWAYS

NATIONAL COUNCIL'S STUDIES TOUCH OFF NEW CONTROVERSY

IN spite of its professed anxiety to avoid a new road-rail controversy, the National Council of Applied Economic Research (New Delhi) finds itself in the unenviable position of having provoked one by the very act of publishing its two recent studies on road transport. These studies—one pertaining to the contribution of road transport to the public exchequer and the other dealing with the employment potential of road transport—carry the inscription, "confidential, for private circulation only," because they have been carried out at the instance of the Union Ministry of Transport. The National Council has published the two "confidential" studies, presumably with the prior permission of the Transport Ministry which has rarely found itself in agreement with the Railway Ministry on road-rail co-ordination questions. It would appear that, with the rejoinder just issued to the Press on behalf of the Railway Ministry, to the Council's studies, the inner conflict between the two Government departments concerned has emerged into the open as a new road-rail controversy.

The railways' case in respect of their contribution to the public exchequer is first presented here, because the National Council's study on road transport's contribution to the public exchequer has already been dealt with in our last issue. The first point made out in the railways' rejoinder is that the freight rates and passenger fares on the railways are the result of Government policy in public interest and cannot, therefore, yield, in the aggregate, anything more than a reasonable return on the investment. A related point is that the railways make "colossal indirect payments" to the nation—payments which have not been computed in the Council's study; here the railways' argument is that, in the case of two commodities alone, namely, coal and foodgrains, they can quote competitive rates on a basis slightly lower than the minimum rates that can possibly be quoted by road carriers but that the nation's freight bill on account of these two items alone would then go up by over Rs. 100 crores per year. Other "indirect" contributions made by the railways, which are utilised as an instrument of Government policy as ideal employers and in the regional development of the country by adjustment of freight rates, in the promotion of exports, in the opening up of the country through uneconomic new lines, etc., have also not been appraised in precise terms. The railways' argument, thus, is to the effect that, since they have to operate more in public interest than on a strictly commercial basis, they are not in a position to make larger "direct" contributions to the public exchequer.

Major Errors

The railways' rejoinder has also referred to some errors, as distinct from the above omissions, in the National Council's computations. One such error is that the entire figure of Rs. 11 crores per year from *octroi* collections and pilgrim taxes levied by the local authorities have been treated as a contribution of road transport, whereas a substantial portion of it is derived from traffic carried by the railways. Another error is that the income-tax payments of the manufacturers of motor vehicles, etc., have been taken into account, in assessing the contribution of the road transport industry, whereas similar payments made by the private manufacturers supplying wagons, engines and other stores to the railways have not been included. Yet another error is that, in assessing the amount of customs duties paid by railways, only the customs duty on stores imported direct by the railways has been included, whereas the railways do purchase imported stores in India in equally substantial quantities on which also customs duty must have been paid by the original importers. These major errors in the Council's computations, according to the railways' rejoinder, have also been responsible for the underestimation of the railways' contribution to the public exchequer.

On the face of it, the railways' case seems to be pretty strong in the sense that, if the aforesaid omissions and errors had not been there, their contribution to the public exchequer would have been reckoned as substantial as that of road transport. While it is obvious, from the scrappy treatment accorded in the Council's study to the railways' contribution, that the question has not been fully investigated, it is not known why the Railway Board did not put the Council wise at the stage of enquiry itself. If it had more fully co-operated with the Council in its computations, it might have led to a somewhat different result. This is said on the assumption that the railways' 'indirect' contribution could be as much as what has been suggested in the rejoinder. But, if road transport could offer competitive rates for haulage—as it well may with greater encouragement—the railways' "indirect" contribution would have to be reckoned at a much lower figure. For its part, the Railway Board might have to work out the details so as to establish its case as scientifically as the National Council has done in the case of road transport. Such errors in computations as have been pointed out by the Railway Ministry could be easily rectified by the Council if, in its estimation, they have been due to oversight.

But, at the same time, the Railway Ministry would do well to recognise that there has also been an element of oversight in the Council's computation of the contribution of road transport to the national exchequer. As the railways' own reasoning that they have to operate more in public interest than on a strictly commercial basis could be applied particularly to the passenger sector of automobile transport, the latter's "indirect" payment to the nation would also have to be computed in all fairness. It is well known that road transport has been subjected to strict regulation, in public interest, by the State Governments in the matter of freight and passenger loads, fares, etc. The bus services, too, have thus to operate under conditions which rarely allow much elbow room for carrying that part of the incidence of taxation on vehicles, fuel, fares, etc., which cannot be shifted to the user. The real state of affairs is that rate-fixing on strictly commercial lines and with due regard to cost, supply and demand factors is not generally permitted in the road transport sector. Then, there is also the fact that, whereas overcrowding is a common feature of Indian railways, it is not so in regard to passenger transport on roads. If all these facts are taken into consideration, it may be that the "indirect" contribution of road transport will bear a favourable comparison with that of railways.

Oversight

The National Council's comparative study on the employment potential of road transport in 1959 has also come in for criticism at the hands of the Railway Ministry. The Council's estimate of the comparative employment potential of road transport and railways, which is given in the table below, has been questioned by the Railway Ministry on several grounds.

(In lakhs)

	Road	*Rail*
Track construction	6.61	0.08
Track maintenance	3.06	2.71
Vehicular operations	7.12	3.78
Maintenance of vehicles and supply of fuel	4.92	4.22
Terminal services—porters and traders ..	1.59	0.55
Transport administration and traffic control	0.24	0.30
Total ..	23.54	11.64

In the first place, it is argued that the Council has not taken into account the contractors' labour force engaged in railway constructional activities—the labour force which is not reflected in the Railway Board's employment statistics which pertain only to the staff directly employed by the railways. This is, of course, not a serious omission, because the labour force employed by contractors on track construction is probably not substantial now. In any case, the Railway Ministry has not given any estimate of the labour force so employed, and so the Council's following explanation may have to be taken as reasonable.

"The numbers engaged in track construction are not comparable, because the extent of road or rail construction in any year is a matter of policy. The figures indicate only that, in recent years, the construction of railways has been relatively small and the employment potential of track construction far smaller than in the case of roads. The conditions may not be materially different in the near future in this respect."

But on another ground, namely, the labour force employed in the production (as distinct from supply) of fuel (petrol and diesel oil in the case of road transport and coal in the case of railways), the railways' case seems to be strong. Since the railways consume one-third of all the coal produced in the country, the ratio of the labour force engaged in the production of the coal consumed by the railways and of the petrol and diesel oil consumed by road transport in India has been worked out as 50:1. This, according to the Railway Ministry, is a measure of the extent to which the total figures of employment potential worked out by the Council must have been vitiated by this important sector of employment having been ignored. The railways' argument is a valid one, because the Council has taken into account all subsidiary employment such as that in the supply of spare parts, supply and retreading of tyres, etc. for computing the total employment potential in road transport.

Thirdly, while computing the labour force engaged in loading and unloading of goods, the Council has taken into account only the licensed porters and the handling labour employed directly by the railways. The railways' argument here is that the labour force employed through contractors at most of the larger goods sheds and transhipment sheds has not been taken into account in the Council's computation. It is pointed out, in this connection, that the loading and unloading of all full-wagon consignments, which constitute the bulk of the traffic on the railways, is required, under the rules, to be done by the consignors and the consignees themselves.

Possible Revision

If the Council's estimates are revised in the manner suggested by the Railway Ministry, a slightly more favourable picture of employment potential may emerge in the case of railways. Since some of the omissions and errors pointed out by the Railway Ministry, whose technical competence in matters of comparative appraisal may also have to be recognised, would have to be rectified so as to bring the relevant estimates for road transport and for railways strictly comparable, anything like a firm conclusion on the present road-rail controversy seems to be premature. The National Council's broad conclusion that, "if the outlays with regard to which we have choice of investment go more into vehicles than into the building of track, the employment superiority of roads seems to be greater," may still be vindicated, even after a possible revision of its estimates in the light of criticism by the Railway Ministry. This does not mean that another elaborate investigation is called for. After all, there is no likelihood of the entire gap in the comparative employment potential of railways and road transport being narrowed by any such revision.

SALE NOTICE OF TEXTILE MILL

As ordered by the High Court of Mysore, the entire fixed assets comprising about 45 acres land, buildings—a steel structure measuring 625 ft. × 154 ft. and other buildings like workshop, office etc.—and machinery, and stores and other accessories of the KAPILA TEXTILE MILLS LTD. (in liquidation), Nanjangud, (12 miles from Mysore City), will be sold by public auction, as one unit free from encumbrances and attachments, by the Official Liquidator on Saturday, 19th November 1960, at 2 p.m., at the Mill premises.

The mill proper is a post-war composite spinning and weaving mill with 15,000 ring spindles (high draft system) and 300 Northrop type automatic looms with all necessary preparatory machinery both to spinning and weaving, with grey finishing and bleach house machinery, power house, etc. Power for the installed machinery and plentiful water supply assured.

Details regarding machinery and terms and conditions of sale will be supplied free on application to the Official Liquidator.

OFFICIAL LIQUIDATOR.

HIGH COURT OF MYSORE,
BANGALORE-1.

19th September, 1960.

NEW PRODUCTS AND PROCESSES

Measuring Thickness of Textile Threads

A NOVEL nucleonic instrument which will continuously record the variations in thickness of fine threads in textiles during either research or commercial production has been developed by the United Kingdom Atomic Energy Authority. The instrument, the work of the Establishment's Isotope Division technicians, is designed to give an exact analysis of thread, no matter how fine, even when it is used for continuously examining blended textiles where one constituent may have—for example—a relatively low equilibrium content. This is a factor which upsets conventional electrical gauges. The apparatus also possesses the advantage that, while the measurements depend on the determination of the absorption by the thread of radioactive beta particles produced from a radioactive source, the device is so designed that the beta particles are passed through the thread at various angles thereby enabling the shape of the cross section of the thread to be accurately measured. Moreover, the circuits associated with the gauge analyse the short- and long-term thickness variations, and the system is made in such a fashion that variations in air temperature, or in pressure, are automatically compensated for. The instrument, which gives continuous readings while operating, can easily be harnessed to a process control system in order to monitor and oversee the control of thread production, states the U.K.A.E.A.

Flexible Cement

A new plastic cement which is said to provide a resilient bond for surfaces that flex has been developed in Britain. Tests carried out with the new compound are said to have shown that it can be used not only for bonding shoe soles and bookbindings, which are submitted to constant flexing, but also for such diverse application as the mending of torn ship sails, the patching of raincoats and the bonding of metal parts.

The compound can, it is claimed by the scientists responsible for developing it, be used to bond effectively virtually any type of material. It can be used, for example, not only to bond plastics and to bond plastics to metals, or metals to one another, but also to bond concrete, paper, wood, glass and china.

The material is said to be easy to apply and to yield an effective bond, having a very long life even under stringent operating conditions. The flexibility, or resilience, of the bond is ensured by the fact that the compound is based on the use of neoprene man-made rubber. The compound is said to have excellent resistance to atmospheric corrosion and to attack by industrial chemicals.

It is expected to have widespread household as well as industrial applications, and can be used not merely to bond together materials but also, it is claimed, as a filler for use in conditions where resilience is an important factor.

Machine Identifies Letters

An experimental machine that can identify letters of the alphabet, after being taught to do so by a human teacher has been developed by the Cornell Aeronautical Laboratory Inc., at Buffalo, New York. Called the Mark I perceptron, the machine's remarkable abilities represent a breakthrough in data processing, the Laboratory says. Other digital computers now available handle numerical data. The perceptron is taught to recognise letters in almost the same way as a child is taught. The machine's trainer places test letter patterns in view of the machine's photoelectric eye cell. When it makes a correct identification, the trainer leaves it alone. But when it makes a mistake, the trainer corrects it, using electrical controls to make the machine answer correctly.

After only 15 exposures to a letter, the perceptron can recognise it correctly from them on, as long as the letter is written in the same style.

Insulating Material From Newspaper

The United States Insulation Company claims to have developed a method of treating old newspapers with boric acid to produce a light weight, water and heat-resistant insulating material. The insulation provided by the material is so effective, the company reports, that a person could take a handful of it in his hand and play a blow torch flame upon it without feeling any heat at all.

New Suspension Crane

A new kind of suspension crane was recently installed in an automobile factory near Cassel, Germany. Claimed to be the first of its kind in the world and a milestone in the history of crane construction, the four girder suspension crane has a span of 71.4 feet (21.76 meters) and a carrying capacity of ten tons. The fourrail trolley carries a Demag electric hoist with cab and has a special creeping speed unit for hoisting. Up till now there were only single or two-girder suspension cranes. The present span and the loads to be carried, however, required a completely new design. The crane usually unloads containers with semi-finished products, but must also handle heavy special machinery, carrying them from railroad cars or trucks to their place of mounting. From there it takes the containers with the processed parts and carries them to the transport vehicles.

New Use for Fibre-glass

An interesting experiment in the use of fibre-glass, which may have far-reaching effects on future omnibus body construction, is being carried out by the Tilling Omnibus Group at its Eastern Coach Works at Lowestoft, England. The entrance steps, of a new single deck omnibus, has been manufactured entirely from polyester resin-bended glass-fibre. The object of the experiment is to see if there would be worthwhile savings in buildings, maintenance and operating costs if fibre-glass were used on this scale in full production. Testing of the prototype under service conditions may also reveal other advantages such as quieter running owing to the non-resonant nature of the material, and greater comfort in both hot and cold weather because of the very low thermal conductivity of fibreglass compared with aluminium.

Electronic Mail Transmission

Letters may some day be sent to their destinations in less than a second, if experiments being conducted by the U.S. Postal Department are successful. The Department will place in operation in October an experimental facsimile operation for sending mail electronically at split second speeds. In the experiment, in which Government documents only will be used, the material will be transmitted between Washington and the mid-western town of Lansing, Michigan. When brought into the post office from local stations, letters to be transmitted will be opened automatically, scanned electronically and transmitted in less than a second to their destinations. At the receiving end the letters will be reproduced via photography and automatically sealed.

Industrial Thermometer

Rapid and accurate readings of the temperature of any surface or of any liquid or gas temperature can be provided by a new industrial-type thermometer which is now being produced by measuring Instruments (Pullin), Action, London, W3.

Housed in a rectangular case with a window through which the temperature is read, it is small enough to be carried in the pocket. Temperature readings are taken by means of a probe linked to the battery-powered thermometer by a cable.

Two models are available—one scaled at plus 10 degrees C. to plus 110 degrees C. and the other at minus 40 degrees C. to plus 10 degrees C. A Fahrenheit scale is also included on a dial.

Light-weight Fire Pump

A new lightweight fire pump will be shown for the first time during the U.K. annual conference of the Chief Fire Officers Association and the Institution of Fire Engineers between September 26 and 30. The unit weighs only 170 lbs. and will pump 120 gallons per minute. It is being introduced to meet the expanding needs for an ultra-light yet powerful pump and will be inspected by fire officers at the conference which takes place at Bournemouth, Hampshire. It is made by Coventry Climax Engines Ltd., who are the largest manufacturers of portable and trailer fire pumps in Britain. It is powered by an overhead camshaft engine, which is developed to ensure high efficiency, economy of operation and long life without attention. All pumps are fitted with a spring-loaded carbon face shaft sealing gland which is self-adjusting and needs no attention.

All-way-stretch Paper

A U.S. manufacturing concern, Clupak, Inc., has developed a new kind of paper that stretches in all directions. The company believes that the new paper will be of great value for use in disposable diapers, sterile medical gowns, nurses' and barbers' uniforms, bed-sheets, draperies, slipcovers and similar products. The new paper was developed as a result of research work with a commercially sold paper that stretches lengthwise. According to Gerald E. Amerman, president of Clupak, Inc., the all-way-stretch paper is now "halfway between pilot production and actual commercial manufacture." Production of the older one-way-stretch paper involves pressing together the fibres in a wet sheet of paper between a rubber blanket and a heated, polished cylinder. The new paper is made by controlling the recoil of the rubber blanket so the paper sheet is compressed in all directions, not just lengthwise.

Portable Oil Refinery

A small, portable oil refinery has been developed in the United States to help crude oil producers whose wells are not near a pipeline, railroad or other means by which their oil can be transported to a regular refinery. The refinery was developed by an engineering company in Wichita, Kansas. The refinery is so small that it can be carried on a 40-foot truck. As soon as the truck places the refinery close to an oil well, it can start to process the oil. Its capacity is about 200 barrels of oil a day and it turns out various products including gasoline and fuel oil. According to Mr. Harry Litwin, head of the engineering company, the refinery operates with electric motors and does not require water to cool it, since air cooling is used. It weighs about 15 tons. The U.S. engineering concern undertook the job of designing the refinery for a subsidiary of the Tennessee Gas Transmission Company, which has an agreement with Argentina to explore and produce oil in the difficult terrain of Tierra de Guego.

Straight from the shoulder—that's the way to get your goods where they're wanted, when they're wanted and as they're wanted. Cargo by JET means better business all round!

We offer you direct JET flights to New York, London and important cities in Europe. The spacious pressurized holds of our BOEINGS carry loads up to five tons!

FAMILY PLANNING—A "KEY" PROGRAMME

ROLE OF EMPLOYERS IN POPULARISING IT

THE need for family planning for economic and health reasons has long passed the stage of debate in this country at least. Now it is time for ensuring effective implementation of the policy accepted at the national level. The people of this country must accept the need for limiting the number of children not as an irritating austerity necessitated by a planned regime and imposed from above but as a way of life practised at individual family level. In a democratic country, family limitation cannot be achieved by legislative enactments or executive fiats. It can be done only by personal decisions taken by hundreds of thousands of wives and husbands. And a society, which professes to respect individual freedom, cannot coerce the people to restrict the size of their families; it is through education and persuasion that they should be led to space the birth and reduce the number of children. Science and modern medicine can be called in to help translate the decisions to reality on the one hand, and to provide a better and more meaningful life, on the other.

This is precisely the reason why family planning, or for that matter any programme touching upon the personal life of individuals, cannot succeed, unless it is carried right down to those who are to put it into effect and who are most affected by it. The Planning Commission has called it a "key programme" for the third and fourth Plans. It has also recognised the value of educational efforts to create the necessary social background to enable family planning to be accepted not as a necessary evil but as a rational way of ordering one's personal life. The Government's effort so far has consisted mainly of opening family planning clinics in both rural and urban areas, distributing contraceptives and undertaking promotional campaigns. Some voluntary social service organisations, too, have taken an active interest in it.

But are these measures sufficient to make the concept seep down to the masses? Efforts in this field is confined largely to some selected urban or semi-urban areas, though there is no denying that family planning clinics are being opened in a few rural centres, too. By the end of the second Plan, 1,797 such centres are expected to be established, a number by no means large for a vast country like ours. Even if this target is reached, not enough will have been done to make any significant impact on the problem. Frankly speaking, not even the fringe of the problem has been touched; and this is particularly true of the countryside.

What Employers Can Do

Something more effective and vigorous has to be done. It is here that non-official agencies other than social service organisations, come in. They can play an important role in driving home to the people the necessity and desirability of family planning. Employers in the private sector, barring a few, have so far looked upon the programme as the concern of the Government and social workers. Both from the larger point of view of the welfare of the community as a whole, as well as the narrower standpoint of the good of one's own employees, the employers have a direct interest in the success of the programme. Many of them might have desisted from taking a more active interest in popularising family planning among their workers for fear of being accused of interfering in their private affairs and religious beliefs. Early this year, Mr. D. L. Betts, Chairman of the Indian Tea Association, Calcutta, however, mustered enough courage to suggest that planters should play a more positive role in the matter. He went so far as to say that, placed as they were in positions of responsibility in respect of the welfare of lakhs of workers, they should be failing in their duty, if they did not give, through competent medical personnel, advice and counsel on a matter which had a direct bearing on the standard of living of workers. We wish all employers in this country accepted the stand taken by Mr. Betts. Since the conditions, which contributed to a high death rate in plantations, have practically disappeared, thanks to better housing and medical care, it is very necessary to make sure that birth rate, too, are controlled and restricted. Otherwise, sheer growth of numbers will not only swallow up the additional wage benefit that might be given but even cut into the existing levels of living. Hospitals and dispensaries, which most plantations of all sorts (including sugarcane) already have, are the ideal centres to "sell" the idea to workers. This is true of other industrial undertakings, too, which have, or propose to have, dispensaries or health centres. It is to be hoped that the trade unions will actively assist the employers in implementing this programme.

Bold Lead

It is rather surprising to see that the lead given by Mr. Betts of the Indian Tea Association in the North was not followed up by Mr. Wilson Mayne, the retiring President of the United Planters' Association of Southern India, when he addressed the annual meeting of the Association at Coonoor in the South last month. Mr. Mayne gave an impressive account of the planters' assistance to workers in regard to such welfare projects as housing and health. It would have been appropriate, if he had stressed the importance of planters taking the initiative to spread the knowledge of family planning techniques also to their workers. Planters have often complained about the high birth rates in their estates and their consequences. The remedy now lies in their own hands.

An important reason why employers should actively propagate birth control among their workers is the immense scope for spreading the idea and techniques in rural areas. The vast majority of workers, especially industrial workers, still have their roots in the villages from where they hail. When they and their womenfolk go "home" on a short holiday or on a visit to meet their relations, they will be in a position to pass on to the latter what they have learned about family planning. Many a time, the workers get a visit or two from their relations in the villages. Such visits, too, will facilitate the flow of knowledge and means of family planning to rural areas. It will, therefore, be no exaggeration to say that employers would be doing a really worthwhile social service, if they undertook the responsibility for helping their workers to know the art of family planning and to practise it. The numerous associations of employers, especially the Federation of Chambers of Commerce and Industry at New Delhi and the Associated Chambers of Commerce at Calcutta, should take interest in this vital problem and induce business men to give a helping hand to the Government in solving it.

The Coal Mines Labour Welfare Fund, it may be mentioned here, has set an excellent example in this respect. It has decided to give a monetary incentive to miners, both male and female, for voluntary sterilisation, subject to certain safeguards to prevent abuses or premature limitation of family. Surely, if there is sufficient response for the scheme and, if it ultimately succeeds in limiting the number of children per family and preventing improvident maternity, it could be counted as a major welfare measure taken by the Fund. The State Government of Gujarat is also reported to have decided to give cash bonuses to those who come forward for sterilisation. The Government of Madras has been following this remedy for some time now and all available reports indicate that it is gradually gaining popularity. Measures like this, coupled with well-directed promotional campaigns, can make the family planning programme a success.

An intensified programme of popularisation of family planning calls for larger funds and more organisational effort than were provided for in the first and second Plans. It is true that Rs. 25 crores for family planning proposed in the draft of the third Plan is about five times the second Plan allocation. Even so, measured against the need, the amount is small. It works out to only about 60 nP per head for five years, that is, 12 nP per head per annum. As compared with this, the proposed outlay in the third Plan on other health programmes, which have the opposite effect, is Rs. 275 crores, that is, eleven times the amount earmarked for family planning. In making this comparison, we do not mean to suggest that too much money has been set apart for health programmes. Only, as the number of mouths to be fed is an important figure in the Plan calculus, a corresponding emphasis should also be laid on family planning.

Implementation

The last word does not appear to have been said on the question of funds earmarked in the Plan. Mr. D. P. Karmarkar, Union Minister for Health, said the other day in Bangalore that the figure fixed in the Draft Outline was tentative and that the allocation would depend upon proper utilisation of funds and the progress of implementation of the programme by State Governments. The Committee on Family Planning, of the Health Panel of the Ministry of Health, had urged a provision of Rs. 50 crores for implementing a minimum programme. It is, however, not known whether the minimun programme has been worked out in detail and whether the sum of Rs. 50 crores suggested by the Committee has been arrived at by a careful assessment of the financial requirements. Experience so far shows that actual expenditure has fallen short of Plan allocation. During the first three years of the second Plan, for which figures are available, only about 16 per cent. of the second Plan provision of Rs. 5.47 crores has been spent on family planning. This indicates that the implementing machinery, which at present consists mainly of medical and health units of State Governments, should be geared to cope with an expanded programme. By simplifying administrative and financial procedures and decentralising financial and administrative authority, it should be possible to speed up the implementation of even a bigger programme.

GRANTS FOR CONTRACEPTIVES

The Government of India have decided to give a token grant of Rs. 1,000 per annum for distribution of contraceptives to commercial organisations, manufacturers, mills, factories, etc. The organisations have to be recommended by the Administrative Medical Officer of the State. They will have to establish family planning clinics in their concerns for the benefit of their workers with their own funds. Free educational material and facilities for training will also be provided by the Government of India.

BILATERALISM IN INDIA'S FOREIGN TRADE

IS IT ADVANTAGEOUS TO THE COUNTRY?

(Contributed)

LIKE many other countries of the world, India too has in the post-war period been the victim of balance of payments difficulties which have necessitated restrictionist policies both in trade and payments. Planning for economic development has also led the Government to adopt regulatory measures in the sphere of foreign trade. Notwithstanding these factors, India has not kept herself aloof from the general world trend towards currency convertibility and multilateral trade. The general foreign trade policy of the country has been basically non-discriminatory and multilateral. This is in tune with India's membership of the I.M.F. and adherence to the G.A.T.T.

Over the course of the last few years, India has, however, entered into trade agreements with a number of countries. Most of the agreements were signed by the Government of India while some of them were concluded by the State Trading Corporation. The total number of agreements in force at the end of the year 1958-59 was 27. These agreements have varied among themselves as regards purposes, scope and character. The main objects with which these agreements have been concluded are the following:

(1) to secure adequate supplies of commodities in short supply;

(2) to reduce recourse to the hard currency resources of the country by diverting purchases as far as possible to soft currency areas, and

(3) to promote trade relations with the countries concerned and to find new markets for Indian goods.

Trade agreements for the import of food have been essentially *barter deals*. The barter agreement signed with the U.S.A. in 1958 for the import of wheat against export of manganese ore and ferro-manganese is a typical example.

The agreements with the United States under P.L.480 provide for the import into India of surplus agricultural commodities, the sale proceeds of which are transferable to the Government of India as loan or grant or are otherwise spendable by the U.S. Government in India. These agreements do not, therefore, involve the immediate exchange of commodities.

Concession for Concession

Some of India's trade agreements involve the exchange of concession for concession with other countries and thus help liberalise trade. Under trade agreements with countries belonging to the O.E.E.C., India has agreed to treat these countries as falling within the soft currency area for purposes of import and export control and in return these countries have extended to India the liberalisation measures they have adopted or will be adopting to imports from other members of the O.E.E.C.

Many of India's trade agreements are of the 'goodwill' variety, with 'indicative' lists of commodities. Designed to record the desire of the contracting countries to facilitate trade between themselves, they "are intended mainly to suggest the possibilities of trade expansion between the two countries, thereby familiarising each country regarding these possibilities and stimulating trade enquiries and contacts. They carry no obligation on the part of either party to make available or purchase the goods specified and, though bilateral, do not necessarily imply bilateral balancing of trade." Prior to independence there was very little contact between India and many of the countries with which India has now signed agreements. It is claimed that the publicity given to trade agreements in India and abroad has helped foster direct contacts between Indian firms and foreign businessmen and has encouraged direct sales.

Some of India's trade agreements provide for arrangements for effecting payments for imports and exports. Agreements concluded with the U.S.S.R., some of the East European countries and China are of this type. Imports and exports are paid for in rupees. For this purpose, the State Banks of the foreign countries maintain rupee accounts with the Reserve Bank of India and other authorised banks. In the earlier agreements, provision was made for the conversion of outstanding balances at the end of any stated period into sterling. As such, they did not involve conscious attempts to equalise import and export trade. In fact, as balances were convertible into sterling, it was claimed that "these agreements are essentially multilateral in character" and as such "serve to help the promotion of world trade." In recent years, however, as these agreements were revised or new agreements concluded, this provision has been altered. Payment clauses in the agreements with China and Hungary (1957-58) provide for the settlement of all commercial and non-commercial transactions in rupees, instead of "in rupees or pounds sterling as mutually convenient." The new trade agreement with U.S.S.R. as well as some other agreements concluded or modified during the year 1958-59 provide for the payment for imports in non-convertible rupees. In so far as the balances are non-convertible, these agreements could be considered typically bilateral or barter deals. However, while the agreements embody schedules of exports and imports, goods not mentioned in the schedules may also figure in the trade between the two countries. The actual volume or value of trade is also not stipulated in the agreements and imports and exports will take place on the basis of specific contracts to be concluded.

Inconvertible Rupees

It may be observed that, whereas the world trend appears to be towards multilateral payments, the recent tendency on the part of India to conclude bilateral trade-cum-payments agreements providing for settlement in inconvertible rupees appears to be a trend in the reverse direction. Whereas the Reserve Bank's *Report* for 1956-57 *Currency and Finance*, claims that "the agreements do not envisage a bilateral balancing of accounts" and that "the agreements are essentially multilateral in character in that they provide for a settlement in sterling of the outstanding balances," the same *Report* for 1958-59 says that "many of the agreements concluded or modified during the year are directed towards ensuring a balance of India's bilateral trade in addition to enlarging the markets for Indian exports".... "by providing for payment for imports in non-convertible rupees, thereby inducing the contracting country to purchase Indian goods or to spend the proceeds within the country." It would have been helpful if an institution like the Reserve Bank of India had thrown some light on the implications of what appears to be a shift in policy.

It will not, however, be correct to consider bilateralism as an important force in India's foreign trade relations. As stated earlier, India's foreign trade is and will continue to be, by and large, multilateral. 43 per cent. of India's trade (imports *plus* exports) in 1958-59 was with the sterling area, 22 per cent. with the dollar area, 16 per cent. with the O.E.E.C. countries and 19 per cent. with the rest of non-sterling area. The State trading countries with which India has entered into trade and payments agreements form part of the last-mentioned group.

Significance

Are the bilateral trade agreements providing for payments in non-convertible rupees advantageous to India? An answer to this question could be attempted either from the long-term or from the short-term angle. In the immediate present, faced as India is with the mounting need to import capital goods for economic development, the scarcity of foreign exchange resources available and the pressing need to augment export earnings, an arrangement of this type is of obvious attraction. Trade under this arrangement would be beneficial to India—

(a) if the imports contemplated are predominantly capital goods and machinery or essential industrial raw materials not indigenously available,

(b) if the capital goods sought to be imported compare favourably with similar items obtainable from other countries as regards price, quality and technological suitability,

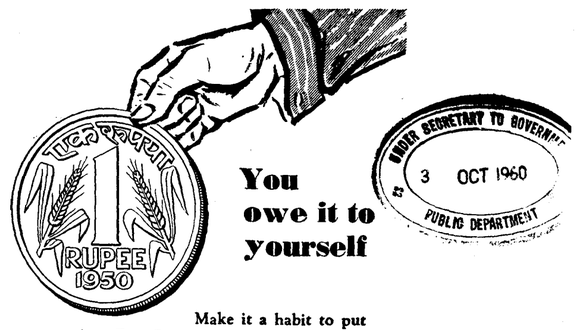
(c) if the imports are available on deferred payment basis,

(d) if this arrangement would result in the augmentation of the total value and volume of exports from India and not a mere diversion in direction, and

(e) if the exports from India are not offered at subsidised prices.

Conversely, to the extent to which any or all of the foregoing conditions are not fulfilled, the advantages to India will be consequently diminished. However, as the agreements do not specify the volume or value of the goods to be exported and imported—these being left to be settled in individual contracts—one need not apprehend any major diversion in the direction of India's foreign trade or any distortion in India's multilateral trade pattern. Further, to the extent to which production and foreign trade in India are in private hands exports at disadvantageous prices are unlikely.

Settlement of balances in non-convertible rupees may be attractive so long as our exports lag behind our import requirements. But, once we develop export balances with the countries in question, the arrangement will be of dubious advantage. In the long run, India's interests obviously lie in effective participation in a network of multilateral trade and payments. One could agree with the Planning Commission that "the objective of commercial policy must be to maximise, in step with other countries, the volume of world trade."



You owe it to yourself

Make it a habit to put away that *Extra Rupee* — regularly — and soon you will find a substantial amount at your credit. You can then confidently plan your future.

HEAD OFFICE: NEW DELHI

INDIA'S FOREIGN TRADE DURING JANUARY-JUNE 1960

A COMMODITY-WISE ANALYSIS

A BRIEF account of the general trend of India's foreign trade in the first six months of the current (calendar) year appeared in these columns (vide page 348 *Commerce* dated 29th August 1960). More detailed information on the composition of trade has since become available, with the publication of foreign trade statistics for the month of June by the Department of Commercial Intelligence and Statistics, Calcutta. Accordingly, it is proposed to analyse here India's foreign trade in the first half of this year in terms of principal commodities. It is common knowledge that the foreign trade of a country is influenced to a considerable extent by the general trend of world economic conditions. These were favourable for maintaining the world trade at a high level. Industrial production in most of the advanced countries continued to rise, except perhaps in the U.S., which, it would appear, had developed some signs of an incipient recession towards the close of the period under review. In India, both the Government and business men tried hard to promote exports in order to earn the much needed foreign exchange. Consequently, India's exports during the first half of the year were a little higher at Rs. 302 crores, as compared with Rs. 266 crores in the corresponding period last year. As compared with the previous half-year they were substantially lower by Rs. 55 crores, but this is mainly accounted for by seasonal factors. In the case of India, the second half of a calendar year usually accounts for a larger proportion of exports than the first half. So far as imports are concerned, they rose from Rs. 446 crores in January-June 1959 to Rs. 459 crores during the period under review. They were fractionally higher as compared with the second half of 1959 also when they amounted to Rs. 441 crores.

The following table shows at a glance the trend of India's foreign trade in the first half of 1960, as compared with that in four previous half-yearly periods:

(Value in crores of rupees)

	Import	*Export*	*Balance of trade*
January-June 1960 ..	459	302	—157
January-June 1959 ..	446	266	—180
July-December 1959 ..	441	357	— 85
January-June 1958 ..	390	262	—128
July-December 1958 ..	474	317	—157

Exports

Two detailed tables are also published at the lower portion of this page showing the principal commodities that figure in India's foreign trade. Table I relates to exports, including re-exports and Table II to imports. In both the tables, the position in the half-year under review is compared with that in the same half-year of 1959. It will be seen from Table I that most of India's traditional export commodities, excepting tea and coffee fared better in the first half of 1960 than in the same period last year. There was a notable increase in the export of jute goods (including webbings, carpets, sacks, etc.), the total value being higher by over Rs. 15 crores at Rs. 65 crores, thanks mainly to the steady expansion of domestic production of jute goods, notwithstanding the growing scarcity of raw jute and the consequent sealing of additional looms in jute mills. Exports of cotton yarns and fabrics, too, were higher by about Rs. 6 crores at Rs. 35 crores owing mainly to distinctly larger absorption by the U.K. The total exports of spices rose from a mere Rs. 3.7 crores to Rs. 10 crores. In particular, export of pepper alone at Rs. 7.07 crores during the six months was more than the total (Rs. 4.59 crores) in the whole of 1959, as a result of good overseas demand for Indian pepper, induced by smaller crops in Ceylon and Indonesia. The rise in the exports of iron ore is due to larger purchase mainly by Japan and Czechoslovakia under long-term agreements. Earnings from manganese ore, too, were greater mainly on better demand from the U.S. The offtake of castor oil was at a substantially higher level, thanks to heavier purchases by the U.S., following the smaller castor output in Brazil and the consequent decline in competition during the period. Further, the world demand for castor oil as a first class lubricant tended to be on the high side, due to growth in jet aircraft manufacture and aviation. Other commodities to experience a marked improvement in the shipments to foreign countries were leather goods, tobacco, hides and skins, cashew kernels, oilseeds and essential oils.

A noteworthy feature of India's export trade during the period under review was the steady but small increase in the export of comparatively new manufactured goods. Exports of chemicals, for instance, rose from Rs. 2.16 crores to Rs. 3.01 crores and those of all types of machinery by Rs. 2 crores to Rs. 5.06 crores. In this latter group, non-electric power-generators, electric fans and sewing machines staged a smart improvement. Again, exports of iron and steel were also more at Rs. 2.82 crores, as against only Rs 99 lakhs, following the commencement of production by the new iron and steel plants in the public sector.

In contrast to this improvement there was a sizable setback in some of the well-known foreign exchange earners. Thus, tea suffered a decline, as a result of growing competition from countries like East Africa and Ceylon and a fall in domestic production of tea in the face of an upward trend in home consumption. The last two factors tended to keep the prices of tea, especially plain varieties, at a high level and discouraged exports. Foreign exchange earnings from coffee, too, came down on account of increased competition from other major coffee exporting countries, particularly Brazil and Uganda, and also decline in prices in view of the extremely comfortable supply position of coffee in world markets. India's exports of raw cotton, too, suffered a setback owing to the distressingly small crop. Similarly, export earnings from raw jute fell from Rs. 71 lakhs to Rs. 23 lakhs. Although the quantum of exports of mica improved, its value was lower, presumably as a result of increased competition from Brazil and development of synthetic mica in some advanced countries, apart from the disorganised nature of India's mica trade. Despite some liberalisation of export control on coal, the export earnings from this commodity were lower. Shipments of groundnut oil suffered a distinct setback owing to the uncompetitive domestic prices.

Imports

In the sphere of imports, the improvement was accounted for mainly by larger intake of industrial raw materials. Imports of raw cotton, for instance, doubled, from only about Rs. 19 crores to over Rs. 38 crores and those of raw jute rose from a mere Rs. 57 lakhs to Rs. 4.29 crores. This was necessitated by the smaller domestic crops and rising demand. The intake of petroleum products rose from Rs. 26 crores to Rs. 28.5 crores, and petroleum crude from Rs. 4.6 crores to Rs. 11.7 crores. Similarly, there was a notable increase in the import of non-ferrous metals such as copper, aluminium, lead and zinc. Imports of food, however, were at a distinctly lower level. Thus, wheat declined from Rs. 62 crores to Rs. 21 crores, but rice rose from Rs. 3 crores to Rs. 9 crores.

The prospects for the second half-year are somewhat uncertain. According to seasonal trend, exports in the current half-year should be larger than in the first half, but it is somewhat doubtful whether they will be greater than in the corresponding half of last year. Export demand for cloth, tea, coffee and oilseeds is meeting with some resistance, owing to higher domestic level of prices. World economic trend, too, is rather soft. But, in view of the acute foreign exchange difficulty, strenuous efforts are being made to push up exports and as many as 70 more items have been freed from export controls. The export incentive scheme has also been extended to more goods. The State Trading Corporation, too, is trying to step up exports, especially to the Communist world. In view of all this, it is just possible that India may just manage to hit the export target of Rs. 650 crores fixed for the current year as a whole. There is unlikely to be any significant reduction in imports, as they are already restricted only to items essential for maintaining domestic production at full capacity. Much, however, will depend on the willingness of India's friends abroad to spare some more funds, as it has now been found that even "maintenance imports" at the budgeted level will not be possible without such assistance. The situation may clear itself in the next two or three weeks.

TABLE—I

Exports (including re-exports)

(Value in lakhs of rupees)

	1960 Jan.-June	1959 Jan.-June
Manufactures	129,40	110,25
Of which :		
Leather	13,95	12,42
Cotton yarns	5,37	4,79
Cotton fabrics	29,65	24,33
Jute goods	64,60	49,03
Cement	43	58
Iron and steel	2,82	99
Footwear	1,81	1,60
Machinery, etc.	5,06	2,99
Of which :		
Textile machinery	8	9
Diesel engines	9	4
Sewing machines	30	11
Electric fans	50	21
Power-generators (non-electric)	2,80	2,01
Food and tobacco	87,13	78,46
Of which :		
Tea	35,54	36,71
Coffee	3,82	4,07
Cashew kernel	9,32	7,10
Spices	10,07	3,73
Tobacco (including manufactured)	12,36	10,71
Crude materials	66,49	61,84
Of which :		
Hides and skins	6,41	5,21
Wool, etc.	5,35	5,49
Raw cotton	5,66	8,70
Oilseeds	2,73	2,07
Mica	4,61	5,02
Iron ore	9,57	6,47
Raw jute	23	71
Iron and steel scrap	3,13	1,82
Manganese ore	7,11	7,05
Mineral fuels	4,49	4,03
Of which :		
Coal	2,07	2,53
Petroleum products	2,42	1,49
Chemicals	3,01	2,16
Of which :		
Essential oils	1,83	1,08
Pharmaceuticals	48	38
Oils and fats	6,53	4,49
Of which :		
Castol oil	4,94	1,58
Linseed oil	72	48
Groundnut oil	48	2,05
Total (including others)	302,31	265,90

TABLE—II

Imports

(Value in lakhs of rupees)

	1960 Jan.-June	1959 Jan.-June
Manufactures	108,24	103,78
Of which :		
Iron and steel	49,25	48,42
Copper and alloys	9,99	6,43
Textile fabrics and made-up articles	8,91	11,48
Paper and board	5,58	4,14
Aluminium and alloys	3,62	2,93
Lead and tin	3,52	3,13
Zinc and alloys	4,28	2,62
Machinery, etc.	1,40,95	1,36,97
Of which :		
Power generators (non-electric)	12,34	12,94
Agricultural machinery	36	48
Tractors	2,07	4,14
Metal working machinery	16,46	82
Mining, construction and other industrial machinery	52,17	13,58
Railway vehicles	11,25	42,31
Motor vehicles	14,33	23,11
Aircraft	3,45	14,91
Food	45,64	3,44
Of which :		
Rice	9,15	80,83
Wheat	21,45	3,30
Fruits and vegetables	9,44	61,89
Crude materials	115,00	6,51
Of which :		
Petroleum	11,74	77,13
Petroleum products	28,50	4,59
Cotton	38,30	25,98
Wool, etc.	5,81	10,22
Jute	4,29	5,39
Pulp, waste paper	3,34	57
Crude rubber	5,21	3,20
Chemicals	43,24	2,78
Of which :		
Caustic soda	1,91	41,84
Soda ash	85	4,55
Fertilisers	5,73	1,02
Dyeing, tanning, colouring materials	5,60	7,63
Oils and fats	2,66	4,25
Total (including others)	4,58,72	2,10
		4,46,09

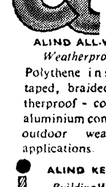
NON-FERROUS METALS

The Development Council for Non-ferrous Metals has estimated the present requirements of copper in the country at 85,000 metric tons, lead at 35,000 metric tons and zinc at 85,000 tons. The domestic production of copper and lead is no more than 8,000 tons and 4,000 tons, respectively. The supplies of zinc metals at present are entirely met by imports. The Government of India has worked out a programme for the exploitation and smelting of copper, lead and zinc ores in Rajasthan. The programme envisages the setting up of an electrolytic copper plant with an annual capacity of 10,000 metric tons of copper metal during the third Plan at Khetri in Rajasthan. The copper ore for the plant will be supplied from Khetri and also from Daribo areas being prospected by the Indian Bureau of Mines. Meanwhile, a zinc smelter with an annual capacity of 15,000 tons is being set up by the Metal Corporation of India at Udaipur. The project is likely to be completed by 1962.

. . . for adequate and economical wiring

ALIND Covered Aluminium Conductors

ALIND ALL-WEATHER *Weatherproof Wire*
Polythene insulated, taped, braided and weatherproof - compounded aluminium conductor for outdoor weather-proof applications.



ALIND KER-AL-LITE *BuildingWire*
for indoor power and light wiring in place of conventional CTS and TRS wires.

ALIND AL-VINYL *All-purpose wire*
(an ideal alternative to conventional VIR wire for conduit or casing-and-capping wiring)

Our lines include:
- Electrical conductor grade aluminium rods
- ACSR and all-aluminium conductors & conductor accessories.

Scruffy and Smarty

Smarty: "What happened?"

Scruffy: *"I asked the boss for an increment and got thrown out instead! I just don't understand. I work hard and you can't say I am inefficient"*

Smarty: "Now, now. Don't lose heart. Perhaps, you should blame your clothes...."

Scruffy: *"What do you mean clothes? I spend a lot on them."*

Smarty: "Perhaps, your choice of cloth is not good. I'd suggest you buy BINNY'S suitings. BINNY'S Quality Control their production. Defects, invisible to the naked eye, that might have crept into the cloth are carefully eliminated at every stage of production. That is why BINNY'S suitings are smart looking and long lasting."

BINNY-
a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Anticrease Suitings - Tussores - Union Fabrics - Towels - Silk Sarees - Rugs - etc.etc

REMEMBER, you can buy all your requirements of BINNY'S fabrics at our controlled rates from authorised BINNY'S Stockists who display this Sign board.

DALMIA CEMENT'S RESULTS ENCOURAGING

NET DIVIDEND IS, HOWEVER, LOWER

A SUBSTANTIAL improvement in production and despatches of both cement and ceramic has been mainly responsible for the marked rise in the earnings of Dalmia Cement (Bharat) Ltd. (Managing Agents: Messrs. Hari Brothers Private Ltd., Dalmiapuram, Madras State) for the year ended 31st December 1960. The production of cement, which had dwindled from 279,360 tons (in 1957) to 233,636 tons in 1958, increased to 268,621 tons in the year under review. Despatches, too, rose from 231,000 tons to 262,000 tons. Further progress in developing the Company's iron ore mines in the Bellary-Hospet area, resulted in an export of 115,000 tons of iron ore during the year under review. All these favourable trends are reflected in the rise in sale proceeds from Rs. 1.90 crore to Rs. 2.62 crores and in gross profit from Rs. 38.48 lakhs to Rs. 60.55 lakhs, thus making good, to a large extent, the setback from the peak of Rs. 69.12 lakhs touched in 1955.

The provision for depreciation is higher at Rs. 10.34 lakhs, as compared with Rs. 6.23 lakhs in 1958, but the tax liability is sizably lower at Rs. 10.85 lakhs, as against Rs. 17.50 lakhs for the previous year, thanks to the large development rebate available. Out of the net profit of Rs. 34.16 lakhs (which compares favourably with Rs. 11.45 lakhs earned in 1958), the transfer to the development rebate reserve amounts to as much as Rs. 22.21 lakhs, while a year ago such was no more than Rs. 3.85 lakhs. The net profit available for appropriation after setting aside such a large sum to the statutory reserve is, as the Directors point out, "inadequate for payment of the dividend recommended" by them. Consequently, they have had to draw Rs. 5.50 lakhs from the dividend equalisation reserve and Rs. 7.95 lakhs from the general reserve to make good the shortfall. The Directors have also drawn Rs. 6 lakhs from the rehabilitation and expansion reserve, being the expenditure incurred for the purpose, and Rs. 75,000 from the reserve for bad and doubtful debts and have put back Rs. 5.23 lakhs to the rehabilitation and expansion reserve.

The dividend on the 6 per cent. (that is the rate to which the preference shareholders are entitled for the year under review, under the recently amended articles of association) preference shares has been grossed to 8.57 per cent., so that after deduction of tax at 30 per cent., the shareholders will get a net dividend of 6 per cent. The dividends on ordinary and deferred shares at 12 per cent. being subject to deduction of tax, the net distributions amount to only 8.4 per cent. and represent a sizable cut from 10 per cent. paid for 1958 and more so from the 12 per cent. distributed two years ago, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956

* On a higher capital.
† Subject to deduction of tax.

The installation of the Company's third cement kiln was completed in October 1959 and clinker production was commenced. The additional output of clinker could not, however, be converted into cement, as the installation of cement mill could be completed only in January 1960. As the clinker produced from the third kiln was not ground in the year under review and has been carried forward at cost, the benefit of the tax concession under Section 15C of the Income-tax Act would be available only from 1960 onwards. The new cement plant is said to be working satisfactorily. The working of the new kiln will, therefore, be reflected in the

During the current year (up to 30th June), the quantity of iron ore shipped was about 95,000 tons, mainly under the new contract for 240,000 tons, which the Company had negotiated with the State Trading Corporation of India Ltd. Shipments against this contract are expected to be completed by the end of February 1961. The measures undertaken to improve rail transport capacity between Hospet and Cuddalore port and to increase the capacity of Cuddalore port itself are expected to stimulate further the exports of the Company's high grade iron ore.

The Company have not been able to obtain full production, according to the rated capacity, of dead burnt magnesite from the plant at Salem, set up in partnership with Dalmia Magnesite Corporation. Every effort is being made to tide over these difficulties and get normal production. The partnership is, however, said to have started earning profits.

The Company's balance-sheet as on 31st December 1959 discloses that the reserves and surplus, at Rs. 57.32 lakhs, are somewhat low, compared to its large assets and turnover. The paid-up capital amounts to Rs. 232.60 lakhs, and borrowings are at a high of Rs. 142.85 lakhs and other current liabilities and provisions at Rs. 126.41 lakhs. The gross block of the value of Rs. 263.50 lakhs has been written down to Rs. 203.02 lakhs. The gross block includes additions during the year amounting to Rs. 127.47 lakhs. Expenses on construction in progress and machinery in transit amount to Rs. 18.65 lakhs. The current assets aggregate Rs. 337.76 lakhs, of which investments alone account for Rs. 201.68 lakhs, including Rs. 24.10 lakhs in Dalmia Magnesite Corporation and Rs. 163.91 lakhs in Dalmia Cement Ltd., a wholly-owned subsidiary. The bulk of these investments are unquoted.

The Rs. 10 fully paid-up ordinary shares are being currently quoted on the Bombay Stock Exchange at Rs. 11.80 *cum-div.* On an *ex-div.* basis the yield on the shares works out to 7.6 per cent. per annum, free of tax.

NEW STANDARD ENGINEERING

The year ended 31st March 1960 has proved to be a highly favourable one for the New Standard Engineering Company Ltd. (Managing Director: Mr. J. V. Patel, Bombay), in that its turnover has expanded from Rs. 51.98 lakhs (in 1958-59) to Rs. 92.83 lakhs and its gross profit has increased from Rs. 6.47 lakhs to Rs. 11.67 lakhs. In consonance with the sizable additions to the gross block during the year under review, the provision for depreciation has been raised from Rs. 1.15 lakhs to Rs. 2.23 lakhs. The provision for taxation, too, has been increased from Rs. 1.76 lakhs to Rs. 4.26 lakhs, leaving a net profit of Rs. 5.18 lakhs, which compares very favourably with that of Rs. 3.55 lakhs for the previous year. Excepting for a sum of Rs. 1.34 lakhs added to the statutory development rebate reserve and of Rs. 25,000 to the reserve for bad and doubtful debts, no other additions to the reserves have been made. The Directors have recommended a dividend of 12 per cent., subject to deduction of tax, which is equivalent to a net distribution of 8.4 per cent., as against 9 per cent. free of tax paid for 1958-59. A similar distribution on a *pro-rata* basis has been recommended on the partly paid new ordinary shares as well. A *pro-rata* dividend at the rate of 9 per cent. per annum (gross) or 6.3 per cent. per annum (net) has also been recommended for a period of one month on the partly-paid preference shares. The dividends absorb Rs. 2.90 lakhs.

The Company was formed in May 1959 by the conversion of the firm of Messrs. Burjorji Pestonji and Sons Private Ltd. into a public limited Company and the absorption of the New Standard Engineering Company (Private) Ltd. It has three factories in Bombay, at Carroll Road, Byculla and Santa Cruz, with facilities for the manufacture of structural steelwork, grey iron castings, machine tools, industrial plant and machinery, mild steel doors and windows and railway signalling and interlocking equipment. As there is no scope for further development of these factories, the Company recently decided to set up a new factory at Goregaon, with the object of establishing a steel structural workshop, for which a manufacturing licence with an annual capacity of 8,400 tons of steel structurals has been obtained. It has also entered into an agreement with a Polish firm for the supply of machinery under deferred payment terms. It will be some time before any significant effect of this expansion programme is reflected in the working results of the Company.

During the year under review, the Company entered into collaboration agreements with a U.K. firm for the manufacture of pneumatic power hammers and with a West German firm for the manufacture of blow room machinery for textile mills. These agreements have been approved by the Government. The Company's agreement with another West German firm for the manufacture of Augusta pneumatic suction system has been extended to cover the production of overhead traveling cleaners for textile mills. The first fruits of these agreements will be seen during the current year. Subject to the approval of the Government, the Company has concluded an agreement with yet another West German firm for the manufacture of air compressors, for which it has received a manufacturing licence. As part of the second phase of development programme after the establishment of the steel structural workshop at Goregaon, the Company proposes to shift its foundry at Carroll Road, with a licensed capacity of 8,400 tons per annum, to Goregaon and modernise and expand it.

In order to finance the setting up of the steel structural workshop, the Company issued towards the end of the year under review fresh capital to the tune of Rs. 52.72 lakhs, made up of 27,723 equity shares of Rs. 100 each and 25,000 6.3 per cent. tax-free preference shares of Rs. 100 each. A sum of Rs. 50 per share has been paid-up on these shares.

The financial position of the Company is reflected in the following synopsis of its balance-sheet as on 31st March 1960:

Liabilities	Rs.	Assets	Rs.
Capital (paid-up)	48,53,925	Gross block	47,79,336
Calls in advance	4,375	*Less*—Depreciation	14,99,037
Reserves and surplus	6,29,042	Net block	32,80,299
Borrowings	16,37,153	Stock-in-trade	21,06,283
Current liabilities and provisions	17,33,537	Book debts	31,93,827
		Investments	43,619
		Cash	2,34,004
Rs.	88,58,032	Rs.	88,58,032

A NEW FIREBRICKS PROJECT

A new company, called the India Firebricks and Insulation Company Ltd., has been formed for the purpose of manufacturing refractories, such as firebricks, silica, basic high alumina, insulating materials, fire cement, mortar and dead-burnt magnesite. Preliminaries about the Company are complete and the prospectus is likely to be issued early next month. The capital of the Company will be Rs. 1 crore, comprising Rs. 75 lakhs in equity shares and Rs. 25 lakhs in preference shares. The equity shares will have a face value of Rs. 10 and the preference shares will be of Rs. 100 each. The whole of the capital will be issued straightaway. Underwriting arrangements are being made.

The factory will be situated in Ranchi Road, Bihar, in view of the proximity of raw materials. Foreign collaboration will be from a well-known U.K. firm, which, besides providing the usual know-how, will participate in capital. It is said that the foreign exchange to the equivalent of over Rs. 50 lakhs for the plant and machinery has already been sanctioned and that the contract for the supply of machinery has been made with the world-famous West German firm, Messrs. Kerabedarf.

The total cost of the project is reported to be Rs. 2.8 crores and that I.C.I.C.I Ltd. has sanctioned a loan of Rs. 54 lakhs to meet the foreign exchange requirements. The I.F.C. of India is expected to grant a long-term loan of Rs. 85 lakhs. The annual capacity of the factory will be 72,000 tons and it is said that the factory will be the biggest of its kind in India. It is likely to go into production by March 1962.

The Company, which will have no managing agents, is being promoted by Mr. Mahavirprasad Morarka. Among the Directors are the Maharaja of Baroda, Mr. Badri Narain and Mr. Kantilal Nahalchand.

SWASTIK TEXTILE MILLS

The Swastik Textile Mills Ltd. (Managing Agents: Messrs. P. Kashinath & Co., Bombay) has earned a gross profit of Rs. 7.63 lakhs for the year ended 31st December 1959, which is only a shade lower than that (Rs. 7.80 lakhs) for 1958 and is well above that (Rs. 6.40 lakhs) earned in 1957. After providing for managing agency commission, the Directors have raised the provision for depreciation from Rs. 1.68 lakhs to Rs. 1.99 lakhs and reduced the provision for taxation from Rs. 2.60 lakhs to Rs. 2.40 lakhs, leaving a net profit of Rs. 2.68 lakhs, as compared with Rs. 2.92 lakhs for the previous year.

The allocation to the reserves has been cut from Rs. 1.76 lakhs to Rs. 67,277, while the dividend on ordinary and deferred shares has been maintained at 7 per cent. and 12 per cent., respectively, but subject to deduction of tax. The dividends on the 5 per cent. preference, ordinary and deferred shares together absorb Rs. 1.97 lakhs leaving a surplus of Rs. 10,982 to be carried forward, including Rs. 7,170 brought in from 1958.

The Company's financial position is fairly encouraging, although the reserves have to be strengthened. The paid-up capital of Rs. 26.5 lakhs is supplemented by reserves and surplus amounting to Rs. 17.99 lakhs, the current assets stand at Rs. 32.92 lakhs. The gross block at Rs. 41.20 lakhs has been well written down to Rs. 21.12 lakhs.

MYSORE SPINNING EARNS MORE

EXPANSION PROGRAMME TO BE TAKEN UP

FOR the second year in succession, there has been a sizable improvement in the working of the Mysore Spinning and Manufacturing Company Ltd. (Managing Agents: Messrs. N. Sirur & Co. Private Ltd., Bombay). The gross profit of the Company, which had risen from a mere Rs. 7,890 in the year ended 28th February 1958 to Rs. 5.50 lakhs in the following year, has further gone up to Rs. 8.49 lakhs in 1959-60, thanks to the revival of demand for cloth and yarn in the second half of the year under review and better realisations. This is the highest profit earned since 1956-57. As in the previous year, only a small provision of Rs. 4,557 has been made for depreciation. The depreciation for the year amounting to Rs. 3.37 lakhs on buildings and machinery has not been provided for. This is because the Directors have found, on a review of the previous year's accounts, that the depreciation provided in the past is more than sufficient to cover the normal depreciation as per the Income-tax Act up to the end of the year under review. In fact, the excess provision amounting to Rs. 1.63 lakhs has been written back. No provision for tax on the profit for the year under review is considered necessary on account of the losses and unabsorbed depreciation allowances of previous years.

After providing for the Managing Agents' minimum remuneration, the net profit, at Rs. 7.99 lakhs, represents an increase of Rs. 3.31 lakhs over the previous year. In addition to the excess provision for depreciation written back, as mentioned above, the Directors have also drawn back the excess provision for wealth tax in respect of 1958-59 and have taken credit for the refunds in respect of insurance premia for previous years. The Directors have ploughed back Rs. 4.35 lakhs to the reserves and have set aside Rs. 2.29 lakhs for gratuity and other provisions and have recommended a dividend of 14 per cent., subject to deduction of tax, on ordinary shares. On a tax-free basis, this is equivalent to 9.8 per cent., and is more or less the same as that (10 per cent.) paid for each of the previous two years, but is on a higher capital raised by the issue of 9,892 shares of Rs. 50 each during the year under review. The dividend on the 4½ per cent. preference shares, which had hitherto been paid free of tax, has now been made subject to deduction of tax.

The progress of the Company since 1956-57 is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended February			
	1960	1959	1958	1957

* Subject to deduction of tax.

The Company has recently purchased from the Minerva Mills Ltd., as associate of the Managing Agents, its bleach and dye house and adjuncts, together with the dyeing and bleaching machinery, for a total consideration of Rs. 8.89 lakhs, with the object of developing it into a full-fledged and up-to-date processing factory for carrying on joint operations of bleaching, dyeing, mercerising and printing of cloth of both the mills more efficiently and economically to the mutual advantage of both the mills.

The Company proposes to undertake a programme of renovation and expansion. It has received permission to install 144 automatic looms by way of expansion under the export promotion scheme. It has also received permission to install a waste spinning plant which can profitably spin the soft wastes of its own mills, as also of the Minerva Mills Ltd. A licence has also been received for the import of new combers from the U.S. To finance a part of the capital expenditure involved in this programme, the Company proposes to issue shortly further equity shares of the value of Rs. 9.93 lakhs and offer the same at par to the existing shareholders in the ratio of one new share for every three existing ordinary shares.

The present paid-up capital of the Company is Rs. 37.25 lakhs and this is supplemented by a reserve of Rs. 45.22 lakhs. The total borrowings and other current liabilities, at Rs. 73.97 lakhs, are well covered by current assets amounting to Rs. 108.06 lakhs. The gross block of the value of Rs. 117.74 lakhs has been written down to Rs. 48.39 lakhs.

The Rs. 50 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 81 *cum-div.* On an *ex-div.* but *cum-right* basis, the shares offer an attractive yield of 6.4 per cent. per annum, free of tax.

COMPANY MEETINGS AND DIVIDENDS

MYSORE SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 7th October 1960. Dividend: Rs. 7.00 per ordinary share, subject to deduction of tax, payable on and after 17th October 1960. Transfer books were closed from 17th August to 3rd September 1960, both days inclusive.

ALUMINIUM INDUSTRIES LTD. Annual General Meeting, Kundara, Kerala State, 10th October 1960. Dividend: 18 per cent. or Re. 1.80 per share, subject to deduction of tax (includes interim dividend of 9 per cent. or Re. 0.90 per share). The final dividend is payable on or after 10th October 1960. Transfer books will remain closed from 4th to 10th October 1960, both days inclusive.

DALMIA CEMENT (BHARAT) LTD. Annual General Meeting, Dalmiapuram (Dist. Tiruchirapalli, Madras State), 10th October 1960. Dividend: 12 per cent. or Re. 1.20 per ordinary share and 12 per cent. or Re. 0.12 per deferred share, subject to deduction of tax. Transfer books remain closed from 12th September to 10th October 1960, both days inclusive.

MYSORE LAMP WORKS LTD. Taxable dividend of 20 per cent. or Rs. 2.00 per ordinary share, for the year ended 31st March 1960. Transfer books will remain closed from 11th to 17th October 1960, both days inclusive.

KEMP AND CO., LTD. Annual General Meeting, Bombay, 24th October 1960. Dividend: Rs. 25.00 per share, on shares of Rs. 200 paid up, subject to deduction of tax, payable on or after 7th November 1960. Transfer books will remain closed from 10th to 24th October 1960, both days inclusive.

COORLA SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 4th November 1960. Dividend: Rs. 11.00 per share, subject to deduction of tax, payable on and after 5th November 1960. Transfer books will remain closed from 14th October to 4th November 1960, both days inclusive.

CALCUTTA TRAMWAYS CO., LTD. Annual General Meeting, London, 8th November 1960. Dividend: 3½ per cent. free of tax on ordinary shares, for the year ended 31st December 1959. Transfer books will remain closed from 26th October to 8th November 1960, both days inclusive.

ROHTAS INDUSTRIES LTD. Interim dividend of 20 per cent. or Rs. 2.00 per share, on ordinary shares, subject to deduction of tax, payable on 15th October 1960. This dividend, although termed "interim dividend," will in fact constitute the full dividend for the year and no further distribution in respect of the year will be recommended.

CHAMPDANY JUTE CO., LTD. Final dividend of 6 per cent. or Rs. 6.00 per share, for the year ended 31st March 1960.

MORARJEE GOKULDAS SPINNING AND WEAVING CO., LTD. Taxable dividend of Rs. 21.50 per ordinary share, for the year ended 30th June 1960. Transfer books will remain closed from 10th October to 5th November 1960, both days inclusive.

GREAVES COTTON & CO., LTD. Taxable dividend of Rs. 11.00 per ordinary share, for the year ended 31st March 1960.

ORIENT PAPER MILLS LTD. Taxable dividend of Rs. 2.25 per ordinary share, for the year ended 31st March 1960.

JOST'S ENGINEERING CO., LTD. Taxable dividend of Rs. 4.00 per share, for the year ended 31st March 1960. Transfer books will remain closed from 3rd to 24th October 1960, both days inclusive.

NATIONAL INSULATED CABLE CO. OF INDIA LTD. Taxable dividend of Rs. 2.50 per share (on the increased Capital), for the year ended 31st March 1960.

NATIONAL ROLLING AND STEEL ROPES LTD. Taxable dividend of Re. 1.30 per share, for the year ended 30th June 1960.

(Concluded from next column)

dustry, Department of Company Law Administration, New Delhi, has approved of the reappointment of Messrs. P. Kashinath & Co. as the Managing Agents for a further period of five years commencing from 16th August 1960 and an agreement to that effect is duly executed today.

"I will now conclude my speech after expressing my gratitude and thanks to you all and other shareholders of the Company, our valued customer-merchants and also to the members of staff and labour for the co-operation the Company has received and continues to receive in its day-to-day activities."

SWASTIK TEXTILE MILLS LIMITED

MR. P. K. DIVEKAR'S SPEECH

ADDRESSING the Thirteenth Annual General Meeting of the shareholders of the Swastik Textile Mills Ltd., held in Bombay on 22nd September 1960, Mr. P. K. Divekar, Chairman, said:

"GENTLEMEN,

"I have great pleasure in welcoming you today to the thirteenth annual general meeting of the Company.

"With your permission, I will take the Directors' report and the accounts for the year ended 31st December, 1959 as read. I may mention here that the Company has continued its usual progress, in spite of heavy odds and hope to continue the same in future.

"The first point to which I would like to refer to is the question of compounded levy on cotton powerloom factories. I may recall here that in the year 1958 by a notification, the Government of India bracketed all powerloom factories on cotton with 100 and more looms with the big composite mills for the purposes of the levy of excise duty, with effect from 1st March 1958. As a result of the efforts made from all sides by way of representations, interviews with officials at various levels, the Government of India later revised its earlier decision and intimated to us that all the cotton powerloom factories over 100 looms and up to 300 looms should adjust their economy before the end of February 1960, after which date such factories will be bracketed with the composite mills for the purposes of excise duty. Efforts were again made at the proper time and proper levels which fortunately, and by the grace of the Almighty, bore the necessary fruit. The Government of India in the middle of February 1960, that is, before the expiry of the first period, announced that the concessional compounded levy to cotton powerloom factories over 100 and up to 300 looms will continue beyond the end of February 1960. Had the said concession not been allowed to us beyond February 1960, it would not have been possible for us to run our powerloom factory at Parel with 240 looms at this moment at all. I must mention here that the efforts bore the required fruits with the best wishes of all concerned and the co-operative spirit with which the units similar to us worked together when making representations and at the time of the interviews with the concerned Government officials at all levels. Our thanks to them and also to the Government are due for the same.

"In the Company's activities in the field of the processing of cloth, we have already attained a place of distinction and prominence in such artistic and specialised printing as tapestry, dressware and handkerchiefs. This is done by us by hand screen printing process. Even though these lines are quite new to us, we have confidence that we shall be able to export them in substantial quantities in the near future. It may be noted that even at present we are competing with the foreign goods of similar qualities in the market and soon we shall succeed in putting at least a partial restriction on the import of similar varieties.

"The Company has already received a brand new chainless type, Benninger-Maneklal complete mercerisation plant. The work of erection of the same is in full swing, the foundation thereof and partial installation is already complete. It is expected to start production within the next few months or so. The expected cost of the machinery, erection, installation charges and other auxiliary machinery required for the same is about Rs. 5,00,000. The addition of the mercerisation plant will open up a wide and quite a new field of textile processing for the Company and we have faith that we will fare well in this new field as we had all along done in various new fields in the past. To add to the mercerisation process, we have ordered out a brand new hot air stentering and drying machine worth over Rs. 3,50,000 and it is expected to be received in 8 to 10 months from now.

"It may be very regretfully noted here that in the processing of mineral khaki of drill, the trade is diminishing day by day for various reasons, beyond the control of the Company and hence it is quite essential for us to change over to the new lines of processing of textiles which may compensate the deficit in the other lines.

"I am glad to inform you that the Government of India, Ministry of Commerce and In-

(Continued in previous column)

SYNOPSES OF COMPANY REPORTS

Sellore Electric Supply Corporation, Ltd.

THE directors of the above Company [Managing Agents: Messrs. Chandrie & Co. (Private) Ltd., Madras] present the audited accounts of the Company for the year ended 31st March 1960.

At the outset the directors wish to report that since the close of the accounting year the Government of Andhra Pradesh have issued a notice of acquisition under the Andhra Electricity Undertakings (Acquisition) Act of 1954. Accordingly the directors expect this undertaking to vest with the Government on 10th December 1960. The directors are of the opinion that the net earning basis of compensation will be advantageous to this undertaking.

No change has been made except the withdrawal of prompt payment rebate allowed to consumers from 1st December 1959. During the year 307 new connections were effected bringing the total number of consumers to 4,151.

In the year under review the number of units purchased from the Government of Andhra Pradesh Electricity Department was 36,25,077 as against 33,34,260 in the previous year and this records an increase of 8.7 per cent.

The following table indicates at a glance the progress for the last two years.

Particulars		31-3-1959	31-3-1960
Sales in K.W.H. for:			
Public lighting		1,46,035	1,63,686

The company has during the year earned a profit of Rs. 59,250 (Rs. 32,448). The net profit of the Company after providing for depreciation Rs. 45,616 (Rs. 40,488), provision for income-tax Rs. 54,000 (Rs. 42,000), contingencies reserve Rs. 5,770 (Rs. 5,242) and development reserve Rs. 5,941 (Rs. 9,067) amounts to Rs. 55,867 (Rs. 32,448). With the balance brought forward from last year of Rs. 35,613 (Rs. 12,974) and income-tax refund of Rs. 2,703 (Rs. 6,276) there is a total amount of Rs. 94,183 (Rs. 52,891 including Rs. 1,193 being refund from State Insurance Corporation Ltd.). From this is to be deducted appropriations as per Electricity Supply Act [income-tax refund] Rs. 2,703 (Rs. 2,258 income-tax short provision for 1957-58) and appropriations as per Electricity Supply Act relating to the year of account for tariff and dividend control reserve Rs. 3,234 (*nil*) and for rebate to consumers Rs. 3,234 (*nil*) leaving a balance of Rs. 85,012 (Rs. 62,613 after transferring Rs. 11,981 from tariff and dividend control reserve). Out of the balance, the directors recommend the payment of an ordinary dividend of 10 (9 per cent. free of tax) per cent. i.e., Re. 1 (90 nP free of tax) per share for the year subject to deduction of tax and a special dividend of 10 (*nil*) per cent subject to deduction of tax as Silver Jubilee dividend. This will absorb Rs. 62,000 (Rs. 27,000) leaving a balance of Rs. 25,612 (Rs. 35,612) to be carried forward.

Apollo Mills Ltd.

The directors of the above Company [Managing Agents: The Rajputana Textiles (Agencies) Private Ltd., Bombay] present the audited accounts of the Company for the year ended 31st December 1959.

After meeting all working expenses for the year, the result of this year's working shows a loss of Rs. 9,10,020 (Rs. 21,94,602) to which is added the debit balance brought forward from the last year of Rs. 37,55,456 (Rs. 12,80,327) making a total debit balance of Rs. 46,65,476 (Rs. 37,55,456 after adjusting Rs. 4,136 being credits relating to previous years) to be carried forward.

The directors regret that the trading result of this year under review shows a loss, but it can nevertheless be said that the result is neither disappointing nor unsatisfactory when compared to the last year's result, It can be categorically stated that there is considerable improvement in the working of the Company.

The textile industry passed through one more difficult year during 1959. Stocks of cloth held by mills remained at a high level during the year and the prices, especially of coarse and medium count varieties, were also unremunerative. On the other hand, the production costs were very high due to, among other reasons, high prices of Indian cotton and advancing rates of dearness allowance the industry had to pay to the workmen. Units producing grey varieties of coarse and medium counts were more severely hit by the adverse conditions that prevailed during the year.

The directors are, however, pleased to report that the working of the current year has shown a distinct improvement and it is expected that the Company will be able to consolidate and strengthen its resources during this year and to wipe out a major portion of the carry forward loss.

The income-tax assessment of the Company are over upto the assessment year 1955-56, but the appeals are pending for the assessment years 1953-54, 1954-55 and 1955-56. In view of the trading loss, this year also depreciation has not been provided and development rebate reserve has not been created.

The Government of India has approved and sanctioned the re-appointment of Messrs. Rajputana Textiles (Agencies) Private Ltd., as managing agents of the Company, for a further period of not exceeding five years with effect from 15th August 1960.

General Industrial Society Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The result of the year's working has been a profit of Rs. 14,62,780 (Rs. 12,63,193) to which is added the credit balance brought forward from the previous year of Rs. 1,51,070 (Rs. 39,411) making a total of Rs. 16,13,850 (Rs. 13,02,604). Out of this provision for taxation absorbs Rs 2,00,000 (Rs. 5,21,000), development rebate reserve Rs. 4,68,366 (Rs. 1,50,315) and depreciation absorbs Rs. 4,60,049 (Rs. 2,64,219) leaving a balance of Rs. 4,85,435 (Rs. 3,67,070). The directors recommend that this amount should be disposed of as follows: To pay a dividend at the rate of Rs. 4 (Rs. 2.00 per share, free of tax) per share, subject to deduction of tax under Section 18(3D) of the Income-tax Act, absorbing Rs. 4,32,000 (Rs. 2.16,000) and to carry forward to next year Rs. 53,435 (Rs. 1,51,070).

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 48 hours a week throughout the year. As reported last year, a further 1½ per cent. of the registered looms were sealed with effect from 2nd March, 1959, in order to counteract the unhealthy stock position. With the improvement in the stock position, the closure of this 1½ per cent. was withdrawn on the 22nd of June, 1959 and a further 2½ per cent. were opened on the 24th of August, 1959, after which there has been no change during the period under review. One per cent. of the looms were further unsealed with effect from the 2nd of May, 1960 in compliance with the recent decision of the Indian Jute Mills' Association.

Results.—The working results have shown further improvement over the previous year. The trading conditions were difficult in the beginning of the year but by the middle of the year it improved considerably with the increase in demand for jute goods. Towards the end of the year, there was a disproportionate rise in the price of raw material which again made market conditions unfavourable. The prospects for the current year are, at the time of writing this report, not very encouraging.

Foundry.—The Company has remodelled its Cast Iron Foundry and has installed it near the mill premises. It is proposed to produce iron castings for the consumption of the mill as well as for sale to customers.

Accounts in brief are as under:—

Tyroon Tea Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. McLeod & Co., Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1959.

The season's working resulted in a profit after providing for depreciation of Rs. 5,61,499 (Rs. 4,38,302) to which must be added profit on farming of Rs. 9,179 (*nil*) and the balance brought forward from 1958 of Rs. 60,600 (Rs. 36,644) making a total of Rs. 6,31,278 (Rs. 5,01,909 including Rs. 26,963 from adjustment account). From this amount must be deducted for adjustment account Rs. 40,358 (*nil*) and provision for taxation Rs. 1,40,000 (Rs. 1,85,000) leaving a balance of Rs. 4,50,920 (Rs. 2,98,600 after deducting Rs. 18,309 being loss on farming). From this the directors have transferred to development rebate reserve Rs. 39,900 (Rs. 10,000) and to buildings and machinery reserve Rs. 1,50,000 (Rs. 1,50,000) leaving an available balance of Rs. 2,61,020 (Rs. 1,38,600) which the directors recommend should be dealt with as follows:—

In payment of a dividend for the year ended 31st December 1959, at the rate of 30 (15) per cent. or Rs. 3 (Re. 1.50 per share free of tax) per equity share, subject to deduction of tax in accordance with Section 18(3D) of the Income-tax Act, absorbing Rs. 1,56,000 (Rs. 78,000) leaving to be carried forward Rs. 1,05,020 (Rs. 60,600).

Tea Crop.—The saleable crop weighed out at 15,510 (15,467) mds. against the estimate of 17,500 (15,000) mds. and was disposed of at an average price of Rs. 2.71 (Rs. 2.47) per lb.

The estimate for season 1960 provides for a saleable crop of 17,600 mds. at a total revenue expenditure of Rs. 25,31,334.

At an extraordinary general meeting held on 25th August, 1960, Messrs. McLeod & Co., Ltd., were appointed the secretaries and treasurers of the Company for a period of five years commencing from 15th August, 1960.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,20,000	Gross block	50,60,323

	Rs. 55,91,397		Rs. 55,91,397

Alexandra Jute Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year after providing for depreciation Rs. 3,22,729 (Rs. 2,51,317) and taxation Rs. 2,05,000 (Rs. 79,500 including Rs. 13,500 for wealth tax), amounts to Rs. 3,09,538 (Rs. 2,38,529). To this must be added—West Bengal Sales Tax received from Central Government in respect of previous years amounting to Rs. 26,438 (*nil*) and the credit balance brought forward from the previous year of Rs. 1,92,640 (Rs. 1,66,651) making a total of Rs. 5,28,616 (Rs. 4,62,780 including Rs. 56,600 transferred from development rebate reserve). From this amount the directors have transferred to development rebate reserve Rs. 1,54,260 (Rs. 1,47,140) to general reserve Rs. 50,000 (*nil*) leaving a balance of Rs. 3,24,356 (Rs. 3,15,640). The directors now recommend that the following dividends be paid subject to deduction of tax in accordance with Section 18(3D) of the Income-tax Act: On 9,000 preference shares at the rate of 7 per cent. per annum or Rs. 7 per share for the year ended 31st December 1959, absorbing Rs. 63,000 (Rs. 63,000) and on 6,000 ordinary shares at Rs. 15 (Rs. 10.00 per share, free of tax) per share for the year ended 31st December 1959, absorbing Rs. 90,000 (Rs. 60,000) leaving a balance to be carried forward of Rs. 1,71,356 (Rs. 1,92,640).

Since the date of the directors' last report certain new preparing machinery has been installed which has improved the efficiency of the Mills.

As Alexandra Jute Mills Ltd. purchased the loom hours of Waverley Jute Mills Co., Ltd. which is closed, an average of 341 looms were worked 96 hours per week on double shift basis by your mills during 1959.

In the year under review trading conditions were fair but since December, 1959, raw jute prices have risen very considerably and in May, 1960, this tendency was accentuated due to the continued spell of dry weather over all the jute districts which hindered sowing operations. Weather conditions improved from the end of May, 1960, and the prospects for the 1960-61 crop are now considered good although the crop will be late by at least one month. However, as a measure to meet the emergency in raw jute supplies, the Indian Jute Mills Association decided to permit its members to close down looms voluntarily with effect from 6th June 1960, and allow the working hours so lost to be made up at any time after 31st October, 1960.

In view of the disparity between prices of raw jute and finished goods the prospects for the current year cannot at present be considered very favourable.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Gross block	76,66,446
Debentures ...	6,00,000	*Less*—Depreciation ...	46,26,917

Hantapara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs: Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The working profits for the year are as follows: Hantapara division Rs. 7,37,045 (Rs. 4,17,894) and Dumchipara division Rs. 5,97,031 (Rs. 54,648). making a total of Rs. 13,34,076 (Rs. 4,72,542). On transfer of this sum to profit and loss account and after sundry adjustments, including the transfer of Rs. 30,000 (Rs. 50.000 from development rebate reserve) from development rebate reserve, there is a balance at credit of the profit and loss account amounting to Rs. 12,15,831 (Rs. 14,81,842), of which the directors have transferred Rs. 45,000 (Rs. 1,00,000) to development rebate reserve, Rs. 1,60,000 (*nil*) to investment reserve and Rs. 4,75,000 (Rs. 13,59.000 to buildings and machinery reserve) to revenue reserve. A dividend on the preference shares at the rate of 8 per cent. for season 1959, subject to deduction of tax, is proposed since it is doubtful whether it is in fact permissible to gross up the dividend in spite of the specific provision in our Articles for the payment of tax-free dividend on the preference shares. It will, however, be observed that the directors have proposed a transfer of Rs. 1,750 (*nil*) to contingency reserve to provide an additional dividend at 3.50 per cent. to the preference shareholders should it become necessary to compensate them once the position has been clarified by the relevant authorities. The directors also recommend payment of a dividend of 12½ (*nil*) per cent. on ordinary shares for season 1959, leaving Rs. 80,081 (Rs. 18.842) to be carried forward.

Tea Crop. The outturns compared with those of the previous year are as under: For Hantapara 16,60,196 (12,84,045) pounds and for Dumchipara 14,61,009 (12,52,007) pounds. The average selling prices obtained per pound of tea were as follows:—Hantapara Rs. 2.21 (Rs. 1.86) and Dumchipara Rs. 2.17 (Rs. 1.84).

Estimates for 1960 provide for a total crop of 13,24,490 kgs. or 29,20,000 lbs. at an outlay of Rs. 63,60,355, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,50,000	Gross block	71,46,533
Reserves ...	38,35,750	*Less*—Depreciation ...	23,70,874

	Rs. 94,07,825		Rs. 94,07,825

Baradighi Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year after charging Rs. 1,54,561 (Rs. 1,41,385) for depreciation amounts to Rs. 7,78,732 (Rs. 4,23,536). To this is added the balance brought forward from the previous year of Rs. 67,174 (Rs. 85,562) making a total of Rs. 8,45,906 (Rs. 5,16,098 including Rs. 7,000 transferred from reserve for future super-tax). Out of this sum, there has been provided for taxation Rs. 3,14,000 (Rs. 1,96,500), provided for wealth tax, relating to the previous year Rs. 108 (Rs. 14,000), transferred to development rebate reserve Rs. 12,881 (Rs. 8,424) and transferred to general reserve Rs. 1,50,000 (Rs. 50,000) leaving a balance available for disposal of Rs. 3,68.917 (Rs. 2,47,174). The directors recommend payment of a dividend at the rate of 25 (15 per cent. free of tax) per cent. subject to deduction of income-tax and super-tax at the prescribed rates, absorbing Rs. 3,00,000 (Rs. 1,80,000) leaving a balance of Rs. 68,917 (Rs. 67,174) to be carried forward to the next account.

The amount of tea manufactured from the crops of leaf for the year amounted to 15,41,162 (14,93 760) pounds. For 1960 the estimated tea manufacture is placed at 14,80,000 pounds. In spite of the very severe drought in the early part of the current season the amount of tea manufactured from the crops of leaf harvested up to 15th July, 1960 was ahead of last year and it is hoped that, unless weather conditions are unfavourable during the remainder of the season, this increase will be maintained.

Sales.—The quantity of manufactured tea sold in Calcutta amounted to 14,97,366 (14,58,163) pounds and the average sale price was Rs. 2.19 (Re. 1.95) per pound. There has been an encouraging improvement in the quality of the Company's teas produced during 1959 and with the full benefit now being attained from the recently installed humidifying plant there is reason to expect some further improvement in quality during the current year.

The total cost per pound of tea was Re. 1.57 (Re. 1.53). Continued efforts have been made to reduce the cost of production but these were more than offset by a further increase under the Minimum Wages Act, 1948, by which adult worker's wages were raised by 12 nP per day and minor worker's by 6 nP per day with effect from 31st August, 1959.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Gross block	47,37,495
Reserves ...	18,39,305	*Less*—Depreciation ...	26,67,822

	Rs. 46,21,975		Rs. 46,21,975

Navsari Cotton and Silk Mills Ltd.

The directors of the above Company (Chairman: Mr. Jai H. Mehta, Bombay) submit the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year after deducting depreciation of Rs. 2,80,000 (Rs. 2,52,000), development rebate reserve of Rs. 53,000 (Rs. 1,44,000) and provision for taxation of Rs. 90,000 (Rs. 3,72,000), amounts to Rs. 3,43,183 (Rs. 4,03,380). To this is added the balance brought forward from last year of Rs. 21,883 (Rs. 21,503) and the amount transferred from dividend equalisation fund of Rs. 50,000 (*nil*) making a total amount available for disposal of Rs. 4,15,068 (Rs. 4,24,883). The directors have made the following appropriations out of this sum: To payment of proposed dividends on 5,000 cumulative 5 per cent. preference shares of Rs. 100 each, free of income-tax, absorbing Rs. 35,700* (Rs. 25,000) and on 31,500 ordinary shares of Rs. 100 each at Rs. 12 (Rs. 12.00 per share, free of income-tax) per share, subject to deduction of tax, absorbing Rs. 3,78.000 (Rs. 3,78,000) leaving a balance to be carried forward to next year's account of Rs. 1,368 (Rs. 21,883).

The Finance Act 1960, has incorporated certain changes with regard to tax to be deducted at source on dividends. The directors recommend the payment of dividend to the preference shareholders such that their income under the changed conditions is not affected, i.e., they should receive 5 per cent. tax-free dividend as in the past. The directors, therefore, propose payment of a dividend at the rate of Rs. 7.14 nP per preference share of Rs. 100 each, for the year ended 31st December 1959. Out of this sum an amount of Rs. 2.14 nP per share will be deducted and paid to the account of the Central Government as required by the provisions of Section 18 (3D) of the Income-tax Act and that the balance of Rs. 5 per share will be paid to the preference shareholders.

On ordinary shares, the directors have recommended a gross dividend of Rs. 12 per share. According to statutory requirements, deduction of tax at the prescribed rates will have to be made from this gross dividend. The ordinary shareholders (other than non-residents) will, therefore, receive a net dividend of Rs. 8.40 nP per share.

The values of mills' buildings and plant and machinery show an increase of Rs. 48,849 and Rs. 2,38,930, respectively, due to building extensions and the new machinery added. All the machines have been installed and are working satisfactorily.

Accounts in brief are as under:—

Gaekwar Mills Ltd.

The directors of the above Company (Chairman: Mr. Jal H. Mehta, Bombay) submit the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year after deducting depreciation of Rs. 4,83,000 (Rs. 4,35,000), development rebate reserve of Rs. 4,13,000 (Rs. 2,00,000) and provision for taxation of Rs. 9,51,000 (Rs. 5,99,000) amounts to Rs. 8,32,677 (Rs. 3,89,035). With the balance brought forward from last year of Rs. 7,074 (Rs. 18,039), there is a total amount available for disposal of Rs. 8,39,751 (Rs. 4,07,074). The directors have made the following appropriations out of this sum: To payment of proposed dividend on 40,000 ordinary shares of Rs. 100 each at Rs. 16 (Rs. 10.00 per share, free of income-tax) per share, subject to deduction of tax, absorbing Rs. 6,40,000 (Rs. 4,00,000) and to transfer to reserve fund Rs. 1,75,000 (*nil*) leaving a balance to be carried forward to next year's account of Rs. 24,751 (Rs. 7,074).

During the period under review, the textile industry in general has had a good year and in light of this the result of this Company may be considered quite satisfactory.

On ordinary shares, the directors have recommended a gross dividend of Rs. 16 per share. According to statutory requirements, deduction of tax at the prescribed rates will have to be made from this gross dividend. The ordinary shareholders (other than non-residents) will, therefore, receive a net dividend of Rs. 11.20 nP per share.

The values of mills' buildings and plant and machinery show an increase of Rs. 53,917 and Rs. 15,96,852, respectively, due to building extensions and the new machinery added. All the machines have been installed and are working satisfactorily.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Gross block	81,40,802
Reserves ...	56,44,510	*Less*—Depreciation	85,83,203

Liabilities ...	78,69,583	Net block	42,66,575
Profit and loss account (surplus)	24,751	Stock-in-trade	61,14.586
		Stores, etc.	21,82,402
		Book debts	36,01,868
		Investments	16,15,784
		Cash ...	6,81,608
	Rs. 1,84,62,823		Rs. 1,84,62,823

Ondal Coal Co., Ltd.

The directors of the above Company (Chairman: Mr. P. Prashad, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The Karanpura Mining Syndicate.—During the year ended 31st December 1959, 1,91,578 (1,80,082) tons of coal were raised and 1,83,528 (1,80,627) tons were despatched. The arrangements for raising and selling coal from Religara colliery continues to work satisfactorily.

The profit and loss account after providing for all charges and making provision of Rs. 1,29,862 (Rs. 1,54,788) for taxation shows a profit of Rs. 1,44,566 (Rs. 50,982) to which is added the balance brought forward from the previous year of Rs. 42,423 (Rs. 41,941) making a total of Rs. 1,86,989 (Rs. 92,923). From this is deducted the amount transferred to general reserve of Rs. 80,000 (*nil*) leaving a balance available of Rs. 1,06,989 (Rs. 92.923). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the preference shares at the rate of 6½ (6½ per cent. free of tax) per cent. per annum, subject to deduction of tax, absorbing Rs. 13,000 (Rs. 13,000), by payment of a dividend on the ordinary shares at the rate of 7 (5 per cent. free of tax) per cent. per annum, subject to deduction of tax, absorbing Rs. 52,500 (Rs. 37,500) and by carrying forward Rs. 41,489 (Rs. 42,423).

The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of 20/60th share in The Karanpura Mining Syndicate, 30,000 ordinary shares in Coal Shipments (Private) Limited and 25,000 ordinary shares in Chora Coal Co., Ltd., for which no quotations are available. The market value of investments for which quotations are available together with the unquoted investments as valued by the directors amounts to Rs. 20,84,476.

As reported earlier, the Company has virtually changed its business to that of an investment Company and the managing agents Messrs. F. W. Heilgers & Co. (Private) Ltd. resigned with effect from 31st October 1959.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,50,000	Gross block	2,62,538
Reserves ...	16,65,465	*Less*—Depreciation ...	1,42 538
Provision for taxation ...	1,91,189		
Wealth tax provision	3,822	Net block	1,20,000
Liabilities ...	1,23,071	Investments	21,15,095
Profit and loss account (surplus)	41,489	Book debts	2,43,616
		Cash ...	4,96,325
	Rs. 29,75,036		Rs. 29,75,036

Banarhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit, after charging all expenses, of Rs. 18,80,496 (Rs. 7,37,005) of which taxation provision requires Rs. 8,05,000 (Rs. 3,10 000) leaving a sum of Rs. 10.75,496 (Rs. 4,27,005). From this has to be deducted tax underprovided in previous years amounting to Rs. 18,121 (*nil*) leaving a balance of Rs. 10,57,375 (Rs. 4,27,005). With the balance brought forward from last year of Rs. 80,635 (Rs. 1,37,198) there is a total amount available for appropriation of Rs. 11,38.010 (Rs. 6,52,826 including forfeited dividends of Rs. 88,623). The directors have transferred to general reserve Rs. 1,25,000 (*nil*) and to development rebate reserve Rs. 5,195 (Rs. 6,191). The directors now recommend that the following dividends be paid: On the preference shares at 9.30 (6.5) per cent. per share, absorbing Rs. 37 200 (Rs. 26,000) and on the ordinary shares at Rs. 32.50 (Rs. 20.00 per share, free of tax) per share, absorbing Rs. 8,77,500 (Rs. 5,40,000) leaving a balance to be carried forward of Rs. 93.115 (Rs. 80.635). The dividends for 1959 are subject to deduction of tax.

A crop of 41,649 maunds was secured and sold at an average price of Rs. 2.31 per lb. which compares with a crop of 38,911 maunds in 1958, sold at an average price of Rs. 2.00 per lb.

Estimates for the current year have been framed for a crop of 40,500 maunds to cost Rs. 52,44,368. By 14th August, 1960, 6 05,219 Kgs. or 16,678 Mds. had been manufactured compared with 7,05,322 Kgs. or 19,437 Mds. to the same date last year.

The Central Government have approved the re-appointment of Andrew Yule & Co., Ltd. as managing agents of the Company for a period of 5 years from 15th August, 1960.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,00,000	Gross block	63,67,156
Reserves ...	29,62.946	*Less*—Depreciation ...	26 80.596
Provision for taxation ...	8,93,031		
Liabilities ...	33,70,828	Net block ...	36,86.560
Profit and loss account (surplus) ...	93,115	Stock of tea	26.78.754
		Stores ...	7,71,436
		Book debts ...	16,42.446
		Investments	87.063
		Cash ...	15,53,661
	Rs. 1,04,19,920		Rs. 1,04,19,920

N.B.—Figures within brackets relate to the corresponding period of the previous year.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 89th Annual General Meeting of the Company will be held at its Registered Office at Soparibaug Road, Parel, Bombay 12, on Saturday the 5th November 1960, at 11 a.m. (I.S.T.), to transact the following business:—

1. To adopt the Directors' Report and Audited Statements of Accounts for the year ended 30th June 1960.
2. To declare a Dividend on Preference and Ordinary Shares.
3. To elect a Director in place of Shri Sanwal Ram More who retires by rotation under Article 140 of the Articles of Association of the Company, but being eligible, offers himself for re-election.
4. To appoint a Director in place of Shri Gopikisan Piramal who retires by rotation and being eligible offers himself for re-appointment and to consider, and if thought fit, to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and is hereby given to the members:—

   "Resolved that Shri Gopikisan Piramal who retires by rotation and who is a Director, Member and an Associate of Messrs. Piramal Sons Private Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint an ex-Officio Director to the Board) be and is hereby re-appointed a Director of the Company."

   The reasons which make this Special Resolution necessary are fully set out in the Resolution itself and in para 1 of the Explanatory Statement annexed to this Notice.
5. To consider, and if thought fit, to pass the following Resolution as a Special Resolution:—

   "Resolved that the Company hereby accords its consent to Mahendra Jwalaprasad Tibrewala (a relative of Shri Gopikisan Piramal, Shri Mohanlal Piramal and Shri Manoharlal Jwalaprasad Tibrewala, the Directors of the Company, and an Associate of the Managing Agents of the Company) holding an office or place of profit under the Company as its Assistant Cotton Purchaser with effect from 1st December, 1960 on a monthly salary of Rs. 700 and with such increments and other allowances and benefits as may from time to time be determined by the Directors of the Company."

   The reasons which make this Special Resolution necessary are fully set out in para 2 of the Explanatory Statement annexed to this Notice.
6. To consider, and if thought fit, to pass the following Resolution as a Special Resolution:—

   "Resolved that the Company hereby accords its consent to Mohanlal Murlidhar Adukia (an associate of the Managing Agents of the Company) holding an office or place of profit under the Company as its Storekeeper with effect from 1st December 1960 on a monthly basic salary of Rs. 300 and with such increments and other allowances and benefits as may from time to time be determined by the Directors of the Company."

   The reasons which make this Special Resolution necessary are fully set out in para 3 of the Explanatory Statement annexed to this Notice.
7. To consider, and if thought fit, to pass the following Resolution as a Special Resolution:—

   "Resolved that the Company hereby accords its consent to Ramgopal Rameshwarlal Tibrewala (an associate of the Managing Agents of the Company) holding an office or place of profit under the Company as its Supervisor in the Folding Department with effect from 1st December 1960 on a monthly salary of Rs. 300 and with such increments and other allowances and benefits as may from time to time be determined by the Directors of the Company."

   The reasons which make this Special Resolution necessary are fully set out in para 4 of the Explanatory Statement annexed to this Notice.
8. To appoint Auditors for the current year and to fix their remuneration.

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

The Share Transfer Books of the Company will be closed from Monday, the 10th October 1960 to Saturday, the 5th November 1960, both days inclusive.

By Order of the Board,
For PIRAMAL SONS PRIVATE LIMITED,
MOHANLAL PIRAMAL,
Director,
Agents.

BOMBAY,
Dated, 16th September 1960.

The Dividend, if sanctioned, will be payable from Monday, the 7th November 1960, to those Shareholders whose names stand on the Register of the Company on 8th October 1960.

Dividend Warrants will be posted in due course to the Registered Addresses of the Shareholders. Change of Address, if any, should be notified without delay.

AN EXPLANATORY STATEMENT IN RESPECT OF THE ABOVE ITEMS OF SPECIAL BUSINESS IS HEREWITH ANNEXED.

Explanatory Statement Under Section 173 of the Companies Act, 1956

Re. Resolution No. 4:

Shri Gopikisan Piramal is a Director of the Company who retires by rotation and is eligible for re-appointment. A Special Notice has been received from a Member proposing the appointment of Shri Gopikisan Piramal as a Director in accordance with the provisions of Section 261 of the Companies Act, 1956. Shri Gopikisan Piramal has been a Director of the Company for several years and it is in the interest of the Company to receive the benefit of his advice as a member of the Board. As set out in the Special Notice received by the Company, the reasons which make it necessary to have the Special Resolution are as follows:—

(*a*) The Managing Agents of the Company are authorised by its Articles and by its Managing Agency Agreement to appoint a Director on the Board.

(*b*) Shri Gopikisan Piramal is liable to retirement by rotation of Directors.

(*c*) He is an Associate of the Managing Agents.

Re. Resolution No. 5:

Shri Mahendra Jwalaprasad Tibrewala is a relative of some of the members and Directors of Piramal Sons Private Ltd., the Managing Agents of the Company, and is also a relative of Shri Gopikisan Piramal, Shri Mohanlal Piramal and Shri Manoharlal J. Tibrewala, the Directors of the Company. In view of his above relationship with the members and Directors of Piramal Sons Private Ltd., and with the said three Directors of the Company, he cannot hold any office or place of profit under the Company except with the approval of the Company to be accorded by a Special Resolution under Section 314 of the Companies Act, 1956, and unless the contract of his service is approved by a Special Resolution under Section 360 of the Act. The Board of Directors have decided, subject to the approval of the Company by a Special Resolution as aforesaid, to appoint him as the Assistant Cotton Purchaser of the Company upon the terms mentioned in the Resolution No. 5 set out in the accompanying Notice. For about the last two years he has been working in the Cotton Department of the Company as an apprentice without remuneration and as such he has gained experience in the matter of purchase of cotton on behalf of the Company.

Re. Resolution No. 6:

Shri Mohanlal Murlidhar Adukia is a relative of some of the members of Piramal Sons Private Limited, the Managing Agents of the Company. In view of his above relationship with the members of Piramal Sons Private Ltd. he cannot hold any office or place of profit under the Company unless the contract of his service is approved by a Special Resolution under Section 360 of the Act. The Board of Directors have decided, subject to the approval of the Company by a Special Resolution as aforesaid, to appoint him as Storekeeper of the Company upon the terms mentioned in the Resolution No. 6 set out in the accompanying Notice. For about the last six months he has been working as an apprentice without remuneration in the Stores Department of the Company.

Re. Resolution No. 7:

Shri Ramgopal Rameshwarlal Tibrewala is a relative of some of the members of Piramal Sons Private Limited, the Managing Agents of the Company. In view of his above relationship with the members of Piramal Sons Private Ltd. he cannot hold any office or place of profit under the Company unless the contract of his service is approved by a Special Resolution under Section 360 of the Act. The Board of Directors have decided, subject to the approval of the Company by a Special Resolution as aforesaid, to appoint him as a Supervisor in the Folding Department of the Company upon the terms mentioned in the Resolution No. 7 set out in the accompanying Notice. For about the last one year he has been working with the Company as an apprentice without remuneration.

By Order of the Board,
For PIRAMAL SONS PRIVATE LIMITED,
MOHANLAL PIRAMAL,
Director,
Agents.

BOMBAY,
Dated 16th September 1960.

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Company will be held at its Registered Office, 12, Mission Row, Calcutta, on Friday the 21st day of October 1960, at 11 a.m., to consider and if thought fit to pass with or without modification the following resolutions:—

1. *As an ordinary resolution*

   That this meeting approves the re-appointment of Mr. Thomas Leslie Martin as a Governing Director of the Company (managing director for the purposes of the Companies Act, 1956) with effect from the 1st day of October 1960 on the terms and conditions contained in an Agreement dated the 29th day of April 1960 and made between the Company of the one part and Mr. Thomas Leslie Martin of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification.
2. *As an ordinary resolution*

   That this meeting approves the re-appointment of Sir Birendra Nath Mookerjee as a Governing Director of the Company (managing director for the purposes of the Companies Act, 1956) with effect from the 1st October, 1960, on the terms and conditions contained in an Agreement dated the 29th day of April 1960 and made between the Company of the one part and Sir Birendra Nath Mookerjee of the other part as modified by an endorsement thereto dated the 19th day of September 1960 copies of which were laid on the table and signed by the Chairman for the purpose of identification.

By Order of the Board,
L. K. SEN CHOWDHRY,
Acting Secretary.

12, MISSION ROW, CALCUTTA,
24th September, 1960.

N.B.—(1) Any member entitled to attend and vote at the meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(2) An Explanatory Statement is annexed to the convening notice issued to the members of the Company.

GREAVES COTTON AND COMPANY LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Fortieth Annual General Meeting of the Shareholders of GREAVES COTTON AND COMPANY LIMITED, will be held on Tuesday the 25th October 1960, at 4.30 p.m. (I.S.T.), at the Registered Office of the Company, 1, Forbes Street, Bombay, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance-sheet and Profit and Loss Account for the year ended 31st March 1960.
2. To declare dividends on preference and equity shares.
3. To elect a Director in place of Mr. Surendr Lall who retires by rotation and, being eligible for re-election under Article 148 of the Articles of Association, offers himself for re-election.
4. To elect a Director in place of Khan Bahadur C. B. Taraporvala who retires by rotation and, being eligible for re-election under Article 148 of the Articles of Association, offers himself for re-election.
5. To elect a Director in place of Mr. Karamchand Thapar, who retires by virtue of the provisions of Section 280 of the Companies Act, 1956, and being eligible offers himself for re-appointment and to consider and, if thought fit, to pass the following Ordinary Resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Karamchand Thapar, who has attained the age of 65 years and who retires under Section 280 of the said Act be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."
6. To appoint Auditors to hold office for the period from the conclusion of the meeting until the conclusion of the next Annual General Meeting of the Company and to fix their remuneration.

Notes:—(*a*) The relative Explanatory Statement pursuant to Section 173 of the Companies Act 1956 is annexed hereto.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

According to Article 118 of the Articles of Association, the instrument appointing a proxy and the power-of-attorney or other authority (if any), under which it is signed or a notarially certified copy of that power or authority, shall be deposited at the Registered Office of the Company not later than forty-eight hours before the time for holding the meeting; in default the instrument of proxy shall not be treated as valid.

(*c*) The Share Transfer Books of the Company will be closed from the 10th day of October 1960 to the 25th day of October 1960 both days inclusive.

(*d*) The dividend when sanctioned at the Annual General Meeting will be payable to those members whose names have been registered on the Company's Registers on 10th October 1960. It will be payable at Lloyds Bank Ltd., Bombay, on and after 14th November 1960.

By Order of the Board of Directors,
N. M. WAGLE,
Managing Director.

1, FORBES STREET,
BOMBAY 1.
29th September, 1960.

INDIA STEAMSHIP COMPANY LIMITED

NOTICE OF THE ANNUAL GENERAL MEETING TO THE SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Members of the India Steamship Company Ltd., will be held at the Registered Office of the Company, "India Steamship House," 21, Old Court House Street, Calcutta, on Monday the 14th November, 1960, at 4 p.m., in order to transact the following business:—

1. To receive the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1960.
2. To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1960.
3. To sanction payment of dividend on Ordinary Shares as recommended by the Directors for the year ended 31st March, 1960.
4. To appoint a Director in place of Sir Padamji P. Ginwala, B.A., Bar-at-Law, who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

   RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Padamji P. Ginwala, B.A., Bar-at-Law, who has exceeded the age limit prescribed for the Directors in the Companies Act and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.
5. To appoint a Director in place of Maharajadhiraja Sir Udaychand Mahtab Bahadur of Burdwan, K.C.I.E., who retires by rotation and is eligible for re-election.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 *of the Companies Act* 1956

The following explanatory statement as required by Section 173 of the Companies Act 1956 sets out the material facts relating to the Special business under item 5 mentioned in the accompanying Notice dated the 29th September 1960.

Mr. Karamchand Thapar has now attained the age of 65 years. Under the provisions of Section 280 of the Companies Act, 1956, he vacates the office of Director at the conclusion of the forthcoming Annual General Meeting and he cannot, therefore, be appointed a Director of the Company except by a Resolution in respect of which a special notice has been given in accordance with Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out under item 5. Mr. Karamchand Thapar has been on the Board of the Company since 1947, and with his wide and varied experience as a businessman and an industrialist has rendered valuable services to the Company. It is in the interest of the Company that it should continue to receive the benefit of his services. The resolution of which notice is given to the members is commended for acceptance.

By Order of the Board of Directors,
N. M. WAGLE,
Managing Director.

1, FORBES STREET,
BOMBAY 1.
29th September, 1960.

---

6. To appoint a Director in place of Mr. S. C. Roy who retires by rotation and is eligible for re-election.
7. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 21st October, 1960 to 14th November. 1960, both days inclusive.

By Order of the Board,
A. MUKERJI,
Assistant Secretary,
India Steamship Co., Ltd.

CALCUTTA. THE 21*st September*, 1960.

The dividend, if sanctioned, will be made payable to those Shareholders whose names stand on the Register of the Company on the 21st October, 1960, and the Dividend Warrants will be posted from 15th December, 1960 onwards.

N.B.—Member entitled to attend and vote is entitled to appoint a Proxy and the Proxy so appointed need not be a member of the Company.

Explanatory Statement as Required by Section 173 of the Companies Act, 1956

In respect of Item No. 4 of the Notice of the Annual General Meeting, Sir Padamji P. Ginwala, who retires by rotation and is eligible for re-appointment, has completed the age of 84 years and hence this needs your approval by a resolution in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. Sir Padamji P. Ginwala joined the Board of Directors of the Company in 1947. During the long period of his association with the Company, he has rendered valuable service to it and it is in the interest of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

NOTICE

Extension of date for submission of Coupons and Applications in respect of new Ordinary Shares

NOTICE IS HEREBY GIVEN THAT THE extended period for submission of coupons in respect of the new Ordinary shares in terms of the Company's Circular dated the 12th October 1959 expires on the 29th September 1960. As some shareholders have not yet exercised their right to obtain shares by submitting the requisite new Ordinary share coupons, the Directors have extended the period for submission of such coupons to 31st December 1960, and the Company's bankers have accordingly been authorised to receive applications on and after the 1st October 1960 upto but not later than the 31st December 1960 in respect of such coupons provided that along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9% per annum (which the Directors have decided to charge) shall be paid to the Company's bankers as under:—

(i) For applications with new Ordinary share coupons from *resident* shareholders from 16th December 1959 to the date of payment; and

(ii) For applications with new Ordinary share coupons in the case of *non-resident* shareholders from 1st June 1960 to the date of payment.

The Directors have also resolved that the last date for receiving applications in respect of new Ordinary *shares* from the *non*-resident shareholders which was 29th September 1960 be extended upto 31st December 1960 provided that along with each such application and the moneys to be received with such application interest at the rate of 9% per annum thereon (which the Directors have decided to charge) from 1st April 1960 to the date of payment shall be paid to the Company's bankers.

No applications received from resident shareholders on and after the 16th December 1959 and from non-resident shareholders on and after the 1st June 1960 in respect of new Ordinary share coupons and no application received from non-resident shareholders on and after the 1st April 1960 in respect of rights to new Ordinary shares will be entertained by the Directors unless interest is paid as aforesaid. No such application will be entertained after the 31st December 1960.

The above extension of date does not apply to applications in respect of "A" Second Preference shares or "A" Second Preference share coupons, the last date for submission of which was 29th July 1960.

Dated at Bombay this 28th day of September, 1960.

SURVEY

(*Concluded from page* 587)

It is to be hoped that the causes of this slow growth of industrial estates would be thoroughly diagnosed by the Planning Commission and the Governments concerned and suitable remedies to overcome these difficulties in the next Plan will be suggested. The All India Seminar on Industrial Estates, held at the Guindy Industrial Estate, Madras, this week was a welcome effort, in that it gave an opportunity for experts from different parts of the country to have useful exchange of views on problems of mutual interest. Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, who inaugurated the seminar, stressed the need for extending the scope of industrial estates to rural areas. This, he felt, would attract small industries to villages and towns and check the drift of skill and enterprise from rural to urban areas. He conceded that, for establishing these units in smaller towns and villages, Government might have to give more help, in order to provide such facilities as power and transport. He thought that it might be necessary to give some subsidy in the form of reduced rent, but, he insisted that, as far as possible, the entrepreneurs should manage without other forms of subsidies. This is a very pertinent suggestion. While the small units deserve to be given some aid in the initial stages, they should be encouraged to become self-supporting as early as possible. Sustained spoon-feeding will only retard the pace of the development of small-scale industries, for there is a limit upto which resources for this purpose can be found.

Mr. Manubhai Shah, Union Minister for Industries, in his presidential address urged the small-scale manufacturers to adopt what he called "selective industrialisation." He added that, in Switzerland one rupee worth of raw material was converted into a finished article of the value of Rs. 10. In India, according to Mr. Shah, this ratio of output to raw material was as low as 32 per cent. He wanted this to be increased in such a way as to make it possible to produce output worth Rs. 1,000 from raw materials costing Rs. 100. Mr. Shah called upon the manufacturers to concentrate their attention to selective industries that would help the country save foreign exchange.

One of the deplorable aspects of the development of industrial estates is the lack of well-defined objectives and a positive policy of action. Often, this leads to undesirable results. This may be the reason why the real objectives of the industrial estates have not so far been realised. The Estimates Committee, in its report for 1959-60, has pointed out that a major criterion for setting up the estates, namely, decentralisation of industrial development, remains unfulfilled. To take another specific instance, it is said that the Okhla estate (one of the major industrial estates) at New Delhi was set up as part of the programme for slum clearance. But, out of the 33 units in the estate, only 10 have shifted from their original location in Delhi City and the rest are either new or have dual establishments. It may be noted that, in other estates generally, only new units are preferred. In addition, hardly any progress has been made to introduce a systematic method of setting up ancillary industries. It is, however, gratifying to hear from Mr. Shastri that an expert committee would be appointed shortly to examine what items could be produced in ancillary units and to earmark such items for development in small industries. This is a good move, but its utility will depend on the competence of the members of the Committee and the promptness with which the authorities abide by its recommendations.

GOLD SALES BY THE U.S.

The net sales of gold by the United States during the second quarter of 1960 amounted to $83.5 million and were twice as much as in the first quarter, but were substantially less than those ($732.5 million) in the corresponding period of 1959. This brings the total net sales in the first half of 1960 to $125.3 million and in the fiscal year ended 30th June 1960 to $341.6 million. The list of countries to which sales were made during the year ended 30th June 1960 is headed by France, with sales aggregating $265.7 million, followed by the U.K. $150 million. Sales to Japan amounted to $62.5 million, to Belgium $50.8 million, to Austria $44.5 million and to the Netherlands $34.9 million. Sales to various other countries were of the order of $76.4 million, bringing the gross sales to $684.8 million. Purchases during the year by the International Monetary Fund amounted to $252.1 million, by the Philippines $5 million, Switzerland $20.1 million and Venezuela $65 million. The total of U.S. gold stocks, as on 14th September 1960, was $18,939 million.

A USEFUL SUGAR ANNUAL

The annuals of *The Indian Sugar Industry* (Editor: Mr. M. P. Gandhi and published by Messrs. M. P. Gandhi & Co., Nanabhay Mansion, Sir Pherozshah Mehta Road, Bombay 1, Price: Rs. 6) have been so very popular all these years that the latest 1958-59 Annual needs no elaborate introduction. This edition, as its predecessors, is quite comprehensive in coverage, in that it gives very useful information on practically all the aspects relating to sugar and sugarcane. The developments in sugar industry in India during the season 1958-59 and its position in world economy have been lucidly brought out. The Annual also gives a good account of the functions of the Central Sugarcane Committee and the Development Council, the latest statement pertaining to capital and dividend of sugar mills, comments on the cane price fixation policy and sugar exports, an analysis of the development programme for the industry in the third Five-year Plan. The feature "Sugar Industry at a Glance," which contains over 100 tables relating to production and consumption of sugar and *gur*, cane crop, etc., has been revised and brought up to date.

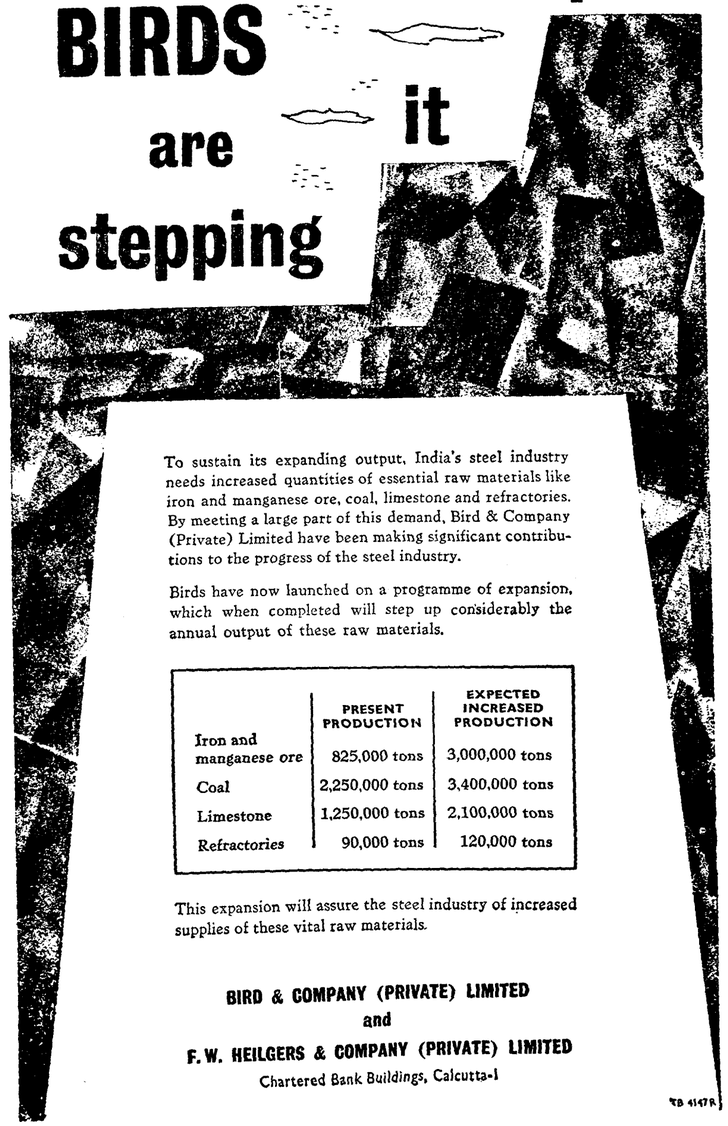
BIRDS are stepping up it



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	825,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,400,000 tons
Limestone	1,250,000 tons	2,100,000 tons
Refractories	90,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 28*th September*

With no sign of abatement of the demand for bank credit from industrial concerns, the short-term money market has continued to experience stringent conditions for yet another week. The position of banks has been rendered more difficult by the latest measures of the Reserve Bank, under which they have to bring down their borrowings from the Reserve Bank substantially in order to escape the penal rates of interest. There has, however been no change in interest rates. Inter-bank borrowings are being done at 3½ per cent., but it is feared that this rate, which is not bound by the inter-bank agreement, may harden soon even before the busy season gets into its stride. Seven days' money continues to fetch 3 per cent. Term deposits are quoted at 3½ per cent. for one to two months and at 3¾ per cent. for three months and over.

There has been no change in the Treasury Bill discount rate either, which was at 2.540 per cent. per annum. The amount offered was Rs. 2.60 crores, as against an invitation for Rs. 2 crores. Tenders for another Rs. 2 crores have been invited for next week. There were no sales of Intermediate Bills during the period 21st to 24th September 1960, but these bills are being offered this week at the same discount rate of 2.476 per cent. per annum.

A contraction of Rs. 8.63 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 23rd September 1960. There has also been a fractional fall in notes held in the Banking Department, so that the decline in total notes issued is of the order of Rs. 9 crores. This is covered by a reduction of Rs. 10 crores in rupee securities and a rise of Rs. 1 crore in rupee coin. There has been no change in foreign securities, at Rs. 123.01 crores, but balances held abroad have dwindled by Rs. 2.51 crores to Rs. 20.93 crores, so that the total foreign assets stand at Rs. 143.94 crores. Deposits of the Central Government and other Governments have declined by Rs. 5.09 crores and Rs. 12.07 crores, respectively. There has, however, been an addition of Rs. 11.10 crores in deposits of banks. Loans and advances other than to Governments show a rise of Rs. 6.03 crores, while investments are lower by Rs. 11.22 crores.

The Scheduled banks' statement for the week ended 16th September 1960 discloses a fall of Rs. 1.86 crores in demand deposits and of Rs. 9.40 crores in time deposits. The aggregate decline of Rs. 11.26 crores is mainly due to the fall of Rs. 12.06 crores in deposits of the State Bank of India. There has been a substantial reduction, to the tune of Rs. 11.63 crores, in borrowings from the Reserve Bank. On the assets side, advances and bills are together higher by Rs. 1.38 crores, consequent on the rise of Rs. 2.33 crores in the State Bank's portfolio, while investments have fallen by Rs. 6.69 crores, of which the share of the State Bank is Rs. 5.82 crores. Cash balances and balances with other banks have dwindled by no less than Rs. 19.73 crores, of which the State Bank accounts for Rs. 8.40 crores.

The Gilt-edged market continues to remain depressed with sellers over in most counters. State loans, in particular, came in for heavy unloading and losses varying from 50 nP to Rs. 2 are not uncommon in the latest 4½ per cent. issues. Among Central loans, 3 per cent. 1986 Conversion Loan is unchanged over the week at Rs. 73.80, while 3½ per cent. 1969 has shed 5 nP to Rs. 99. 4 per cent. 1972 and 1973 declined by 15 nP and 10 nP, respectively, to Rs. 101 and 4 per cent. 1979 has gone down by 10 nP to Rs. 100. Besides 4½ per cent. issues, some of the 4 per cent. 1967 and 1968 State loans too have been marked down by 10 to 20 nP.

The pronounced weakness of sterling abroad during the week under review is duly reflected in the rupee-dollar cross rates. Banks' selling rate for U.S. T.T. (ready) has gone up from Rs. 475.50 to Rs. 476.75 per $100 and their buying rate from Rs. 472.25 to Rs. 473.25 per $100. In New York, spot sterling has slumped from 281.47-281.50 cents to 280.81-280.84 cents and three months' forward from 279.77-279.90 cents to 279.41-279.44 cents.

HIDES OFFTAKE SLOW

(From Our Own Correspondent)

MADRAS, 26*th September*

Arrivals of E.I. tanned cow hides were moderate and offtake by shippers slow but at unchanged prices during the week under review. There were several U.K. inquiries for kips and many parcels of top marks were sold at prices lower than last week. German importers also took tanned cow fifths selection at prices slightly higher than U.K. levels. Demand for cow calf and buff calf was *nil*, while buffalo hides were keenly sought after by shippers to the U.S.A. and by merchants for inland trade.

Tanned goat skins declined by 6*d.*, due to selective overseas inquiries. Tanned sheep middle class tannages were weak, though primes were unchanged.

The next tanned skins auction sale in Germany is to take place on 3rd October when 68,000 goat skins, 13,000 sheep and 3,200 buff calf skins will be offered for sale.

BULLION PRICES LOWER

(From Our Own Correspondent)

BOMBAY, 28*th September*

After displaying a firm undertone in the first two sessions of the week, the bullion market developed a sagging tendency on Saturday which persisted practically till the close today. The earlier firmness was due to hopes of enlarged demand for both gold and silver during the festival days. The new measures of credit restraint announced by the Reserve Bank of India last week-end had no effect. On Saturday, however, the market suffered a setback to values, thanks to selling by spot houses and realising pressure, while fresh buying support was lacking. Consequently, the two precious metals tended to recede. The downward trend continued yesterday also on fears of large contraband arrivals from Goa, following the Government of India's move to open two new routes to Goa. Even reports that the customs authorities at Calcutta had finally confiscated about 38,000 tolas of contraband gold worth Rs. 45 lakhs from the American cargo ship *Ruth Everett* failed to have any influence. When the market opened today, prices showed a tendency to recover, but the recovery was short-lived. There soon emerged some selling, and both the metals declined. The closing rates were lower than those on Wednesday last week. The possibility of a delay in the commencement of business in the *Kartik* (October) settlement in both gold and silver also tended to keep the prices down. It is now learned that the Bullion Association has received the Maharashtra Government's permission and that trading in the new settlement will start on Saturday, 1st October, under the metric system.

The State Government has issued a special *Gazette notification* incorporating new by-laws as applicable to bullion trade under the metric system. The by-laws were considered at the meeting of the Bullion Association Board today.

There was a rise in the average daily arrivals of gold during the week as compared with the previous week, being 6,750 tolas, as against 6,400 tolas, while actual offtake was slightly lower at 2,750 tolas, as against 2,800 tolas. In the case of silver, both the daily rate of arrivals and the actual offtake were more than those last week; they amounted to 32 bars and 6 bars, respectively, as against 30 bars and 4 bars. The floating stocks of gold are reported to be around 30,000 tolas and those of silver are estimated at 500 bars.

In gold, *Aswayuj* settlement began the week at Rs. 135.87, as against the previous closing of Rs. 136.06, and advanced on good support to touch a high of Rs. 136.87 on Friday. Thereafter, the settlement slided down and stood at Rs. 134.75 at one time yesterday. Opening at Rs. 135.37, it improved to Rs. 135.44, but finished lower at Rs. 135.09. The net loss over the week was 97 nP.

The *Aswayuj* settlement in silver moved up early in the week from Rs. 226.97 to Rs. 227.81 and, after declining to Rs. 224.81 yesterday, recovered to Rs. 226.06 today. The closing was, however, lower at Rs. 225.68. The net loss over the week was Rs. 1.29.

For the third week in succession, ready gold and ready silver were both quoted at a discount under the forward. The actual discount for gold increased from 56 nP last week-end to 59 nP today, but that in the case of silver declined further from 91 nP to 68 nP. Ready gold, after rising from Rs. 135.50 to Rs. 136.87 on Friday the 23rd inst., receded to Rs. 144.06 yesterday before recovering to Rs. 134.50 today. Ready silver fluctuated between Rs. 227.00 and Rs. 224.25 and wound up the week at Rs. 225, as against Rs. 226.06.

Ready gold in the London bullion market firmed up from 250s. 3¾d. to 251s. 0¼d. during the week under review. The firmness was engendered by central bank, Continental and Middle East Buying, as well as by easiness of the pound sterling *vis-a-vis* the dollar. The latest available world price for gold is higher at $35.24-$36.26, as against $35.21½-$35.23½ a week before. Both ready and forward silver, however, were unchanged at the last week's level of 79¼*d.*, as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	28-9-60 (closing)	High	Low	21-9-60 (closing)

LINSEED STEADY

(Messrs. A. Bradley and Co.)

CALCUTTA, 26*th September*

Steady conditions prevailed in the linseed market throughout the week. Arrivals of seeds from upcountry were still scarce and turnover was small.

The oil market was stagnant; very little business was done during the week, but prices remained steady.

The oilcake market was steady, small local business passing daily for ready deliveries.

The latest quotation for Ready is Rs. 25.75 per maund.

PROSPECT FOR NEW CROP FUTURES TRADING IN COTTON

(From Our Own Correspondent)

BOMBAY, 28*th September*

With all the formalities for the commencement of futures trading in new crop cotton now over, the way has been cleared for the grant of official permission. The amendments to the by-laws relating to the new hedge contract were accepted by the general body of the East India Cotton Association, Bombay, last week-end and the revised by-laws have been forwarded to the Forward Markets Commission for approval. Traders are optimistic that the F.M.C. will give permission as a matter of course, as it would not possibly take objection to any of the amendments which have all been made after taking into consideration the realities of the cotton situation. It is hoped that trading in new crop will commence by the middle of October or by *Deepavali*, at any rate.

Crop news also has encouraged hopes of getting official permission for futures trading at an early date. The crop is said to be making good progress in all areas. Welcome rains and bright sunshine are reported in parts of Gujarat, Saurashtra, Moglai, Berar and Madhya Pradesh. Punjab and Rajasthan are also experiencing favourable weather, with bright sunshine during daytime and cool nights and dew-fall at dawn. If the present trend is maintained, a crop of about five million bales is considered quite within the limits of possibility, as compared with a mere 3.75 million bales harvested in the previous season.

Trading in the spot market was livelier during the week. The directive of the Textile Commissioner to mills to complete their purchases against the 1959-60 quotas by 15th October indused better enquiries for available lots of old crop. The directive made it clear that the unutilised quotas would automatically lapse on 15th October. CO$_4$ cotton continued to be the centre of attraction. Other growths received moderate attention.

Interest in new crop was generally subdued. Mills were inclined to watch the trend of price and developments in weather. The possibility of requisitioning of stocks by the Textile Commissioner also acted as a restraining influence.

Mill demand for foreign cotton also broadened during the week. U.S. cotton was in the limelight. Bulk purchases by Bombay and Ahmedabad mills were reported in it. East African and Sudan cottons evoked moderate interest.

The way for the import of 412,000 bales of U.S. cotton under P.L. 480 has been cleared, as the Textile Commissioner has started issuing individual quotas for the cotton to mills. These quotas are compulsory, in the sense that every mill has to deposit Rs. 25 per bale as guarantee money. Apparently, the Government wants to make sure that, in case the domestic production of cotton in the current season turns out to be good and supplies are readily available, the mills are not tempted to dishonour their commitments in U.S. cotton, leaving the baby to be held by the Government.

The news that the Government of India has approached the U.S. Government for the supply of a further quantity of one million bales of U.S. cotton under P.L. 480 has encouraged hopes of an assured, adequate supply of U.S. cotton to Indian mills in the coming years. This is said to be in addition to the quantity already contracted for and is meant for stockpiling.

Export demand for Bengal *Deshi* is fairly good. Shippers are covering against sales abroad. Business concluded (subject to availability of licence) with Japan and Continental buyers todate is placed at over 80,000 bales.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

CO$_4$ (Porbunder) 1,101; CO$_4$ (Morvi) 1,065; Hubli Laxmi 1,060; American G.M. 1" staple 1,072; October-November shipment American 1-5/32" G.M. 1,235; B.P. 52 1,385-1,390; Busoga (UNUG) 1,400.

The Karachi cotton futures market, after having ruled distinctly firm during the first half of the week under review, turned easy towards the close. Fresh export inquiries and good domestic mill demand set off a general buying movement early in the week. Consequently, N.T.R.G. January advanced from Rs. 67-2 to Rs. 68-3 on the 24th September. The March Contract was quoted one rupee higher at Rs. 67-2. These high rates attracted profit-taking and long liquidation, with the result that futures prices declined. Nevertheless, the week's closings were higher than last week-end quotations. The January Contract finished at Rs. 67-11 and March Contract at Rs. 67-9 yesterday.

In the spot section, *Deshi* prices were practically unchanged while the quotations for other growths were slightly lower. Sind *Deshi* was done at Rs. 86 per maund, the same as last week, and Punjab *Deshi* at Rs. 81. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller, S.G. 84-4; L.S.S. Punjab Roller 83-4; S.G. 87-4; N.T. Roller 81-12; S.G. 86-4; 289F Punjab Roller 87-4; S.G. 86-4; 289F Punjab Roller 87-4; S.G. 92-4.

The Alexandria cotton futures market suffered a further setback during the week. The selling pressure witnessed last week continued unabated. Bearish crop news accelerated the downward trend. Both the long-staple Karnak and medium-staple *Ashmouni* contracts were quoted lower.

In the spot market, higher turnover was reported, reflecting the larger arrival of new crop and increased pickings and ginnings. Consequently, spot premiums tended to recede.

The latest available quotations—in tallaris per lb.—from Alexandria are as under, the figures in brackets being last week-end rates:

Karnak: November 73.60 (74.15); January 73.65 (74.25); March 73.78 (74.35).

Ashmouni: October 62.52 (63.80); December 62.45 (63.56); February 62.42 (63.55).

Cotton futures in Liverpool made modest advances during the week. Net gains ranged from 15 penny points in the near and distant deliveries of both the American and American type contracts, to 5 to 10 points in the medium positions. The strength of the former was attributed to short covering while the improvement in the latter was sympathetic. Sudan cotton contracts were quietly steady.

The latest available quotations—in pence per lb.—from Liverpool are as under:

American cotton one inch staple contract: October 22.60; December 22.70; March 22.80; May 22.95.

American cotton mixed growth contract: October 23.15; December 23.00; March 23.15; May 23.30.

Sudan: September 34.75; November 35.00; January 35.00.

Conditions in the New York cotton futures market remained practically unchanged from last week. Turnover was limited. Price trend was, however, generally upwad, indicating the possibility of a tightening up of supply as the season progressed and higher prices. Report from the Cotton Belt continued to show good crop progress. This had its effect on spot prices which tended to recede.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	27-9-60	20-9-60	13-9-60
Spot	32.30	32.40	32.45
October	31.69	31.32	31.36
December	31.40	31.35	31.35
March	31.37	31.85	31.81

GROUNDNUT FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, 28*th September*

There were two important developments in the oilseeds market during the week under review, namely, (1) the anouncement of a fresh quota for linseed oilcake and (2) the decision taken by the Karmahom Conference to reduce freight rates for oilcakes. A Press note issued by the Joint Chief Controller of Exports and Imports, Bombay, on Monday this week, says that the Government of India has decided to release a quota of 50,000 tons of linseed oilcake and 15,000 tons of coconut oilcake for export to all permissible destinations, except Portuguese possessions in India, during the period October 1960-March 1961. The export quota was generally welcomed by the trade. This, however, came as a disappointment to those who had been anticipating new incentives for linseed oilcake exports. But the present domestic price of linseed oilcakes is not much above world quotations. Operators are, therefore, confident that the quota could be fully utilised if domestic prices are not rigged unduly. In this context, the present freight reduction is considered to be a helpful factor for promoting oilcake exports. The Karmahom Conference will reduce freight rates for oilcake and meal from 100s. to 85s. per ton, with effect from 1st October, apart from abolishing the freight surcharge of 5s. per ton levied on shipments from Saurashtra ports. The deferred rebate of 10 per cent. will be maintained. The revised rates will be in force till the end of December.

The aforesaid developments have not had any perceptible effect on the oilseeds market in general. On the contrary, the market displayed distinct weakness. Only linseeds and spot groundnuts were able to put on a better appearance towards the close. In the futures section, groundnuts suffered a sharp setback, following reports of steady improvement in weather conditions in the major producing centres, namely, Saurashtra and Hyderabad. Speculators became all the more cautious, in view of the fresh dose of credit restraints imposed by the Reserve Bank. The February 1961 contract, which had closed last week at Rs. 207.25, eased gradually to Rs. 205, after fluctuating between Rs. 207.75 and Rs. 205 over the week. In distinct contrast, the spot section in groundnut and groundnut oil continued to make headway thanks mainly to the present tight supply position. Besides *vanaspati* manufacturers and crushers extended sizable support—a seasonal trend on the eve of *Diwali* and *Dassera* festivals. Nizam bold spurted by a rupee to Rs. 47. *Khandesh* quality rose by 75 nP to Rs. 47. Oil ex-mill rallied by 37 nP to Rs. 25.37 and railway receipts by 75 nP to Rs. 25.12.

In the castorseed section, the futures contract came in for alternative bouts of selling and buying, following conflicting reports about weather conditions from castor-growing centres and Brazilian competition in the American market. There were also rumours that the Government of India was examining the question of permitting exports of even castorseeds as distinct from castor oil. Towards the close, however, the sentiment was rather subdued. Thus, over the week, the September 1960 contract wound up today 37 nP lower at Rs. 177.25, after moving both ways between Rs. 179.37 and Rs. 176.75. Spot castorseeds and oils continued to drift downwards. This was due mainly to the protracted absence of U.S. enquiry for castor oil and to the comfortable supply position. Kanpur lost 50 nP to Rs. 32.62. Ready Madras drifted lower by 37 nP to Rs. 33.75. Oil Commercial closed today on a subdued note at Rs. 17.62, as against Rs. 18.12 a week ago.

While groundnuts and castorseeds generally tended to ease, the linseed section elicited some fresh support, thanks to the above-mentioned export quota for oilcake and also on hopes of fresh export promotion measures for linseed oil. There were als some enquiries for linseed oil by export houses. The linseed September contract rose from Rs. 33.28 to Rs. 33.41. Bold ready put on 13 nP to Rs. 32.25. Linseed oil, too, looked up by 13 nP to Rs. 17.

Cottonseeds, however, did not share the improvement in the linseed section. Cottonseed February 1961 contract receded by 75 nP to Rs. 90.75. In the spot section, both non-white and white fell by 25 nP each to Rs. 26.50. Berar was quiet at Rs. 26.50. Oil-washed variety, however, rose by a rupee to Rs. 23.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	28-9-1960	21-9-1960	14-9-1960
Groundnut	Rs.	Rs.	Rs.
February 1961	205.00	207.25	207.25
Nizam bold	47.00	46.00	44.75
Coromandel ready	47.00	46.25	45.00
Khandesh quality	47.00	46.25	44.75
Oil ex-mill ready*	25.37	24.50	24.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter. Rates for 1961 delivery contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms.

ART SILK YARN IMPORTS TO BE CUT?

(From Our Own Correspondent)

BOMBAY, 28*th September*

Would the import quota for art silk yarn during the half-yearly licensing period commencing from 1st October be cut? This was the question posed before the trade throughout the week under review. The market was thick with rumours that the overall quota might be reduced by 10-12 per cent. These rumours led to good buying enquiries which brought about a rise in values. In sympathy with art silk yarns and on reports of small floating stocks in the market, staple fibre yarns also recorded an improvement. Cotton yarns lacked support, barring coarse counts which were in demand.

Following the sharp rally in Cupressa Bemberg yarn (60×1) last week and the week preceding it, the Yarn Merchants Association had to declare a special clearing in this yarn on Thursday the 22nd inst. The yarn continued to march upward, though the extent of the rise over the week was much less than that in the previous week. October delivery hardened by Rs. 4 to Rs. 2,185. December contract strengthened from Rs. 2,161 to Rs. 2,178. Spot Cupressa firmed up by 16 nP to Rs. 9.78. Art silk yarns imported from abroad scored handsome gains, 120 deniers Italy advancing by 37 nP to Rs. 5.87 and 150 deniers by 3 nP to Rs. 6.22. 150 Japan spurted by 7 nP to Rs. 6.19. 120 Japan was fully steady at Rs. 5.65. Among indigenous yarns, National Rayons 120 Bt. Cones 1st grade picked up 9 nP to Rs. 5.89. 150 Bt. cones 1st grade gathered 4 nP to Rs. 5.20.

Staple fibre yarn (40×2) October delivery recorded a rise of Rs. 11 over the week, today's closing quotations being Rs. 739. December position put on Rs. 12 to Rs. 746. Spot Centurys improved by 10 nP to Rs. 3.78. Kohinoors were done at Rs. 4.

In the cotton yarn section, ten counts Gokaks increased by 25 nP to Rs. 18.75. Podars were firm at Rs. 18.25. Twenty counts Moderns were steady at Rs. 23, while Gokaks eased by 25 nP to Rs. 23.25. Forty counts Minaxis encountered selling and fell by 19 nP to Rs. 30.12, but Maduras rose by 25 nP to Rs. 31.50 on special support. Sixty counts Raghuvamshis and Finlays dropped a rupee each to Rs. 58 and Rs. 61.62, respectively. Eighty counts Mahendras receded from Rs. 71 to Rs. 70 and Finlays from Rs. 80.80 to Rs. 79.79. Moderns were neglected at Rs.73.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days ago:

	28-9-1960	21-9-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 Kg.)		
October	2,185	2,181
December	2,178	2,161
60/1 Cupressa Bemberg spot (per lb.) ..	9.78	9.62
120 Japan (per lb.)	5.65	5.65
150 Japan (per lb.)	6.19	6.12
120 Italy (per lb.)	5.87	5.50
150 Italy (per lb.)	6.22	6.19
Staple fibre yarn—		
October	739.00	728.00
December	746.00	734.00
40 x 2 (Kohinoor per lb.)	4.00	—
40 x 2 Century	3.78	3.68
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.25	18.25
20s Gokak	23.25	23.50
40s Minaxi	30.12	30.31
60s Raghuvamshi	58.00	59.00
80s Finlay	79.79	80.80

BLACK PEPPER HARDENS

(Messrs. Parekh and Co.)

BOMBAY, 28*th September*

In contrast with Singapore and New York where markets continued to show a weaker tendency, Malabar black pepper hardened during the week under manipulations by a group of bulls who were banking on sizable orders from Russia and/or East European countries in the near future. But, so far, nothing more than 100 tons were reported to have been sold. It will be worthwhile to note that all the communist countries have now become more price-conscious. They do not buy for buying's sake at the price demanded by sellers even when it is a question of their buying on the rupee account or as a barter. Generally, the trade representatives of these countries base their buying prices on the London quotations for black pepper for Sarawak special. When in immediate needs, they pay sometimes 10s. to 20s. higher than the London price but not the inflated price demanded by sellers. It is, therefore, possible that, if the prices of Malabar are boosted by a manœuvring with a view to selling at higher rates, the business to these countries may be lost or they may buy a small quantity to cover their immediate needs and then seek for other sources of supplies like Indonesia, Singapore and Sarawak. The present fluctuations in the price pattern of Malabar are due more to changing moods of professional speculators than to news from overseas markets or weather report or prospects for the coming crop. A section of the trade reports that the present manœuvring is being done with a view to selling to Russia new crop Malabar for shipment during December at higher prices. The present price of Malabar being too high, no business with New York is possible. What little can be sold is to East European countries which have not covered for their autumn requirements. If they do not come out to buy a sizable quantity within a week or two, the market is likely to go down rather sharply, as the harvesting is drawing nearer. The recent curbs on bank lending imposed by the Reserve Bank of India are likely to have an adverse effect on new crop, particularly, as there are no important advance sales by exporters.

Ungarbled at Cochin, after reaching Rs. 1,550, has reacted to Rs. 1,500, with the buyers asking lower. Garbled, after improving to Rs. 265, receded to Rs. 255. October delivery was pushed up by a speculative boosting to Rs. 276½, but, for want of following, it came down to Rs. 262½. Calicut was nominally quoted at Rs. 1,600. Fluctuations in forward are erratic.

Singapore showed a continuously downward tendency under pressure of satisfactory arrivals of New Lampong and comparatively better arrivals from Sarawak. The future of white pepper depends upon the handling of the stock of which was brought back from Europe. The latest prices for black and white are Str.$157½ and Str.$255, respectively.

Quotations by *Reuter's* Agency from Singapore, which are recently marked down by Str.$2½ instead of the usual unit of Str.$0.5, are treated with reserve by the trade.

Spot at New York was marked down to $0.49, with grinders sidelining. Pressure of unsold consignments was responsible for the recent downward revision of the prices. Lampong is being offered at $0.48 for October shipment without much doing. Dealers there are unwilling to buy in a dropping market. They are waiting for new incentives. Present disappointing demand is likely to continue throughout the months of October and November, these being the election months.

The future of the market depends upon how the competition in selling between Lampong and Malabar develops on the arrival of new crop in India. It is too early to forecast the timing of new arrivals and the size of the new crop. All the reports on the subject now being circulated in the market are treated with a reserve, as these will be more or less propaganda either from bulls or from bears.

Ready pepper in Bombay is nominally quoted at Rs. 200 per Bengal maund.

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 27*th September*

In view of the *Pooja* holidays during the week, no sales were scheduled to be held during the week. However, if the rush at tea bookings for the United Kingdom this week be any guide, the forthcoming export sales should exhibit improved demand. Shippers were anxious to send as much tea as possible before the holidays commenced. Increased bookings from here to the U.K. as well as strong trend in the Mincing Lane auctions drew the inference among trade circles here that the trade in the U.K. had started replenishing its depleted stocks.

The tea industry, faced with an ever-increasing cost of production and a greedy exchequer ever ready to claim not only profits in taxation but also "capital" by way of taxation, has lacked any cheerful news in recent years. This absence was broken on Monday last when the Supreme Court, by a majority judgment, declared that the Assam Taxation (on goods carried by road or inland waterways) Act. 1954 was invalid, since it violated Article 301 of India's Constitution which guaranteed the freedom of trade, commerce and intercourse. The Court held that the impunged Act was a clear restriction on free movement of goods, inasmuch as it collected taxes on goods only because they were carried by road or inland waterways within the State. Ever since the carriage tax on tea had been imposed by Assam, the industry had spared no pains to impress upon the authorities the fact that the tax was of a discriminatory nature. All teas coming from Assam to Calcutta by road or inland waterways were subjected to this additional levy, and the levy increased the cost of production in Assam gardens. At one time, the representations of the industry went home with the Union Commerce and Industry Minister, Mr. Lal Bahadur Sastri, whereupon he declared that he sympathised with the demand of the industry and that he hoped that the Assam Government would rescind the tax. This hope was not translated into reality; but at long last, the Supreme Court has pronounced the illegality of the levy. It is to be hoped that the amounts collected by Assam from 1954 up to date would soon be returned to the tea trade and industry together with

"appropriate interest" which should be not less than the return on Government Plan Certificates!

In the internal auctions held on Wednesday last, dusts on offer amounted to 20,716 packages. Prices advanced following strong general demand. Legg-cut Dooars were a strong feature and, on keen competition, the smaller and brighter liquoring teas advanced impressively. The plainer orthodox teas, however, eased. Medium C.T.Cs. were fully steady, the brighter lines displaying an irregular tendency. The best C.T.C.s followed quality. The quotations per one kilogram (inclusive of excise duty) were: best Assam C.T.C. dust Rs. 6.40 to Rs. 6.90; medium Assam C.T.C. dust Rs. 6.20 to Rs. 6.35; medium Assam Dust Rs. 5.00 to Rs. 5.60; and medium Dooars Rs. 4.65 to Rs. 5.00.

Leaf on offer amounting to 245 chests met with good demand.

An internal sale was held at Chittagong on Wednesday last. There was good general demand. Leaf teas were lower, while green teas and dusts were fully firm. Leaf on offer amounted to 10,101 chests and dusts 2,288 chests, in addition to a supplement of 145 chests. Leaf teas opening at As. 2 to As. 4 lower improved as the sales progressed and bids were generally below As. 1/4 to As. 2 below last rates. Legg-cut fannings displayed this trend, quoting at Rs. 2-13. The best liquorings eased by As. 3 to As. 4. In green teas, the offerings of which were 504 packages, the unpolished lots rose As. 2 to As. 4 above valuations. The polished grades realised valuations with young Hyson realising Rs. 3-9-6, fine young Hyson Rs. 3-9-3, and Hyson Rs. 3-9.

The quotations—in Rs. per lb. to which As. 10 should be added by way of excise duty—were: O.F. 2-12-6 to 2-13; B.P.S. 2-11; O.P. 2-9 to 2-10; B.O.P. 2-9-6 to 2-10; Pek. 2-8 to 2-8-6; P.F. 2-7; and B.P. 2-6-6 to 2-7.

Dusts were bid at prices which were As. 1 to As. 1½ below the invoiced prices.

MEDIUM TEAS IN DEMAND

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, *20th September*

Sale No. 36: A total of 417,000 kilograms were offered in Sale No. 36 held on Tuesday, 20th September 1960. Quality in general showed little change, but certain invoices showed some improvement, particularly from the Anamalais. The sale opened to a very strong demand which eased as the sale progressed. Low medium and medium descriptions met keen competition and prices advanced up to 20 nP per kilogram. Good medium teas, particularly those with improved quality, met good enquiry and were sometimes dearer by 30 nP. There was less demand for best liquoring teas which were irregular with quality. C.T.C. types and legg-cut teas continued in demand at firm rates. Whole leaf and black leaf descriptions were strong and dearer. There was better support for a small selection of tippy teas which sold at prices above last.

	1960 Rs.	1959 Rs.
Low medium	4.25-4.50	3.85-3.96
Medium	4.50-4.85	4.29-4.85
Good medium	4.90-5.75	4.96-5.51
Quality	5.25-7.75	5.62-9.04

The average price realised in Sale No. 36 was Rs. 5.06 per kilo, as compared with Rs. 4.88 in the previous sale and Rs. 4.87 in the Corresponding sale of 1959.

Dust Sale 'II': A smaller quantity of 155,000 kilograms was offered in Sale No. 'II' held on 22nd September 1960. A useful selection of dusts was on offer. The market opened to a very strong demand which slackened at the close of the sale. Prices were generally dearer by 20 to 30 nP for most descriptions. Highgrowns were well supported and were dearer following quality. There was keen competition for milled and residual grades which were the strongest feature of the sale. C.T.C. types and Legg-cut types continued in demand and sold at rates above last.

The average price realised in Dust sale II was Rs. 4.57 per kilo, as against Rs. 4.52 in the previous sale and Rs. 4.05 in the corresponding sale of last year.

Export Quota: The market is very quiet with no business being registered. At the time of writing there are large sellers at ½ nP per kilo with buyers scarce.

Colombo: In this week's sale, just over 6 million pounds were offered and met with a strong demand with buyers following quality closely. Uvas sold at around last rates, whilst Dimbulas were irregular and occasionally easier following quality. Low medium brokens were firm, whilst the better mediums were upto 10 cents dearer. Lowgrowns eased 3 to 5 cents whilst plainest were fully firm.

London:—North Indian and other growths: In Monday's auction, there was a strong demand, particularly for best Assams, whilst Dooars and Africans came to a higher market.

Ceylon and South Indians: In Tuesday's sale, 20,611 packages were offered of which 8,345 packages came from South India. The market continued strong and dearer, particularly for teas with improved quality and plainest descriptions.

JUTE RISES, JUTE GOODS EASE

(From Our Own Correspondent)

CALCUTTA, *27th September*

A further rise in prices of jute fibre, following keen interest shown by mills, was the feature of trading in the jute markets during the week under review. But jute goods, after being steadier earlier in the week, eased on profit-taking. Business that took place with overseas buyers of goods was paltry. Although inquiries were many, shippers preferred to remain idle. Another equally significant feature was the thirty-point rise in the price of Pakistani cuttings during the week, when the Government of India released a few import licences to mills. During the last one month, prices of cuttings in Pakistan have been rising, since the demand there from overseas buyers has been fully steady. The mills which received import licences during the week entered into commitments with Pakistani exporters. At the current rate of about Rs. 145 a bale in Pakistan, the c.i.f. price in Calcutta works out to be Rs. 165 per bale, as against Rs. 100 about a month ago. The Government's inordinate delay in issuing licences against the background of desperate pleas put forward by mills to expedite the issue of these licences has done much irreparable harm to the industry. As a sequence of the rising trend in Pakistan, prices of jute yarns in Dundee were raised between £5 and £10 per ton with corresponding increases in cloth prices. These revisions became effective from 24th September.

Earlier in the week, the Committee of the Indian Jute Mills Association reviewed the raw jute stock position in the light of the present paltry arrivals into mills' stations, mills' own stocks and estimates of the current crop. That the position is grave needed no emphasis. Market circles said that the position for this season became all the graver mainly because of the poor carryover. The I.J.M.A. would appear to have realised this focal point, as its Committee thought it essential that the carryover into the 1961-62 season should be reasonable. In order to achieve this object as well as to enable the mills to carry on production within a reasonable cost, the I.J.M.A. would extend the voluntary sealing scheme up to 31st December 1960. When mills were originally permitted by the I.J.M.A. to seal off 3 to 4 per cent. of their producing looms on a voluntary basis depending upon the stock position of each individual mill, it was the hope that, as the season advanced, the raw material situation would improve and that then the scheme could be put to an end to by the end of October. This hope has not yet been realised, and present portends are such that any realisation is far away. If the fibre position failed to improve, there would be no alternative other than to increase the percentage of compulsorily sealed looms from 1st January 1961. Following this announcement early in the week under review, prices of goods firmed up. While, as an immediate reaction, fibre prices moved down by Re. 1 for 100 kgs. after a day or so, raw jute again caught the uptrend and, by the week-end, prices had reached the highest levels for the week. However, yesterday, a reaction was in evidence and a small recession was recorded.

There was a sharp rise in the prices of heavy goods on Wednesday last, following the decision of mills to carry on production at the present reduced scale. Since, however, this rise was not followed by overseas support, ready B. twill's sagged to Rs. 139.30. On the previous working day, that is, Monday, they were quoted at Rs. 140. However, hessians 40" 10 oz. closed with a net gain of 85 nP at Rs. 49.00. The rise in hessians was due to expectations of greater interest from the United States. These expectations were based upon the higher consumption figures for burlap for August—67 million yards, as against 65 million yards in August last year and 59 million yards in the previous month. The monthly average has so far been only 71 million yards, as against 74 million yards in the corresponding period of 1959. On Thursday, the spectacular feature was the rise in the price of hessian 40" 10 oz. to Rs. 50, following keen bazar buying on expectations of overseas interest. In sympathy, ready B. twills hardened to Rs. 142.90. On the following day, hessian 40" 10 oz. was unchanged at Rs. 50, while B. twills hardened to Rs. 143.50, following bullishness in fibre. Over the week-end, profit-taking intervened and prices closed at Rs. 142 for B. twills and at Rs. 49.55 for hessian 40" 10 oz. Mills sold fair quantities for forward delivery. The profit-taking phase continued yesterday, and B. twills moved down to Rs. 139.25 and hessian 40" 10 oz. to Rs. 48.75.

Although fibre arrivals increased during the week, they were ineffective in reversing the price trend, as all arrivals were promptly absorbed and demand outpaced availability. Sellers continued to be reserved and demand was of such an order that the high moisture content was ignored. The announcement by the I.J.M.A. of further measures to cope with the fibre shortage pulled down prices for a time, but soon bulls gained the upper hand. Thus, northern bottoms, after opening at Rs. 112.50, declined to Rs. 111.25, but soon rose to Rs. 116.50 at which stage a reaction set in to reduce the gain to Rs. 115.25. Daissee bottoms at one time were as high as Rs. 120.50, after opening at Rs. 115.25, but closed at Rs. 117.75.

METALS ADVANCE

(From Our Own Correspondent)

CALCUTTA, *27th September*

Following apprehensions about the import control policy, due to be announced at New Delhi on 1st October, metals advanced during the week under review. Market circles realised that the foreign exchange situation was causing anxiety and, though a cut in import quotas would appear justified, the more sober elements in the market thought that, in view of the importance of raw materials to industrial development, there would be no reduction in import quota. Uncertainty, however, clouded prospects of foreign exchange aid to tide over the payments difficulties. Market circles also remembered the recent statement of Mr. Lal Bahadur Sastri, Union Commerce and Industry Minister, that no nation would help India to finance maintenance imports and that, therefore, exports should be stepped up, so that India would be in a position to import adequate industrial raw materials to maintain production on an even keel. In this view and against the background of severe competition which the main export industries, tea, cotton textiles and jute are meeting in world markets, trade circles were not in a position to be entirely sanguine about the forthcoming policy. They also noted the Minister's assurance that there was no intention to delay the policy announcement. Market circles thought that New Delhi would, perhaps, reduce as a temporary expedient, quotas which might be reviewed later on in the six-monthly period or as and when the foreign exchange position improved or India received indications of firm commitments of foreign aid for meeting payments against imports.

Small-scale utensil manufacturers without quotas for virgin metal were in the market for copper scrap and, as a result, scrap was steady though unchanged. Utensil scrap changed hands at Rs. 202 per cwt. and the "berry" quality at Rs. 218 a cwt. In contrast, advices from the London Metal Exchange were quiet. Electrolytic copper opened at £237¼ a ton and gave way to £234. The decline followed the adverse trend in Wall Street and uncertain report from Chuquicamata.

Tin opened at Rs. 558 a cwt. and closed at Rs. 564, after being higher at Rs. 565. The metal was in short supply. Moreover, advices from the Far East markets were firm. In London, the price opened at £805½ a ton and, after being lower at £804¾, hardened to £807½ to £805. The higher trend in London was due to better demand from the Continent and steadier advices from Singapore.

Electrolytic zinc opened at Rs. 172 and closed a rupee higher on balance at Rs. 173. In mid-week, the rate was even higher at Rs. 174.50. Demand was on the high side, while there was not sufficient metal available. The price in London closed at £87 a ton as against the opening of £87⅛.

Lead here was unchanged at Rs. 66. Demand was very little, and stocks continued to be abundant. In London, the price closed lower on balance at £69½ a ton, after opening at £70⅛.

MARKET GOSSIP

(Concluded from page 583)

an increasing realisation of their importance to management."

Inadequate planning, particularly in the financial field, is another defect to which the I.F.C. has drawn attention. The Corporation attributes this to lack of properly trained personnel.

On the financial side, the I.F.C. finds that the total capital proposed to be raised for a particular project often falls short of its requirements. More as a rule than an exception, projects encounter costly delays in construction and in the time required to attain profitable operation. In many cases in which the I.F.C. has invested, the cost "overruns" have ranged from 10 per cent. to 50 per cent. above the estimates. This emphasises the need for more realistic original estimates and provision for reserve sources of finance. Experience seems to have justified the I.F.C.'s insistence on advance agreement that the shareholders be prepared to supply whatever additional equity capital may be needed to complete the projects concerned.

One of the disquieting features of the capital structure of new enterprises in the developing areas noted by the I.F.C. is the large proportion of borrowings, either by way of suppliers' credit, bank credit or borrowings from Government agencies or all of them. "It has become clear to the I.F.C.," the report says, "that, for private industrial development in the growing countries, there is a greater shortage of equity capital than of loans." In many instances, the proportion of proposed borrowings for new projects is as high as 75 per cent. of the total cost. In view of the unhealthy nature of such a capital structure, the I.F.C., as a matter of policy, refuses to invest in projects where debts, carrying fixed interest charges, are larger than the equity. In more developed countries, even this proportion is considered very high. The I.F.C. draws attention to the tendency to minimise the requirements for working capital on the assumption that these can be obtained by short-term bank credits and that banks will renew the credits indefinitely. Emphasising that such reliance can be dangerous, the I.F.C. says that provision for permanent capital should include reasonable amounts for working funds which will be needed continuously and the use of bank credit should be limited to seasonal peaks and unforeseen contingencies.

Despite the obstacles and risks involved in investing in developing countries, the I.F.C. is convinced that there are correspondingly attractions and rewards. It adds: "In the developing areas are growing markets, untapped raw materials and abundant labour able to acquire modern skills. For efficiently managed enterprises, potential profits are greater than in the highly competitive industrialised countries." As evidence of its conviction that the rewards can outweigh the risks, the I.F.C. is investing in the developing areas, sharing the risks and participating to an appropriate extent in the potential returns. A further evidence of this is provided by the latest move to amend the charter of the I.F.C. in order to enable it to invest in equities of private enterprises. At present, the I.F.C. cannot invest in capital stock or shares. However, its investments are not conventional fixed-interest loans. They combine certain features of both debt and equity, thus containing elements of venture capital. Such shares may be in the form of a right to some additional income related to earnings or an option to subscribe to share capital and often a combination of the two. The ban on direct investment in equities is said to be hampering the work of the Corporation. The latest move, which will be discussed at the annual meeting of the Corporation at Washington this week, is expected to be supported by the U.K., the second largest subscriber to the

ASIAN FEARS ABOUT COMMON MARKET

It is not unoften that a pessimistic view is more easily held than an optimistic one. This is strikingly confirmed by the approach of Asian business opinion (or, a section of it, to be precise) to the European Common Market and the European Free Trade Association and their possible impact on the trade and economies of the underdeveloped countries of Asia. At the root of this pessimism are a good many fears, some of which are exaggerated or probably unwarranted. First and foremost is the fear that the establishment of the Common Market is likely to result in higher tariffs against, or greater restrictions on trade with, the outside countries. Related to this is the fear that countries whose exports are mainly directed to the former low tariff countries of the Common Market would be adversely affected. A third fear is that the promotion of intra-regional trade of the European Economic Community by means of reduction and ultimate abolition of the import duties and import quotas might have some adverse effect on the trade of the Asian countries, particularly in semi-manufactured and simple manufactured goods. Another fear is that, as the linking of the overseas territories of each of the member-countries with the Common Market implies that the preferential treatment accorded to the exports of particular overseas territories to their metropolitan country will now be accorded by all the countries of the Common Market, it would place the Asian exporting countries in a position of competitive disadvantage *vis-a-vis* the "associated territories." There is also the fear that, in like manner, extension of the preferential treatment, now enjoyed by the exports of the metropolitan country to its overseas territories, to the products of all the countries of the Common Market, might mean that the Asian exports to the "associated territories" would have to face still greater competition with the products of the Common Market. It is further feared that the special provisions relating to agriculture in the Common Market countries, such as the use of long-term contracts and the system of minimum prices for agricultural products, could lead to the continuation of agricultural protection in the Common Market and, over a period, have a restrictive effect on imports of agricultural products from third countries. Yet another fear is that the establishment of the Common Market might lead to monopolistic tendencies and stimulate agreements on prices among the exporters of capital goods and machinery. And, lastly, it is feared that a part of the investment funds available from the Common Market countries for the economic development of the Asian region might be diverted to the "associated territories."

Not all these fears on the score of the Common Market, however, have any relevance to the European Free Trade Association (E.F.T.A.), because the latter does not involve the establishment of a common external tariff or the association of overseas territories. But otherwise, there is the fear that Asian exports of semi-manufactured and manufactured goods to countries of the Free Trade Association might be adversely affected because of the competition they would have to face from the products of the other E.F.T.A. countries which will bear lower rates of duties in the transitional period and no duties later on. And the second fear in this context is that the establishment of the E.F.T.A. might encourage the import of raw materials and unprocessed goods in place of finished goods.

The number of fears listed above, which add up to a pretty dismal picture of the possible repercussions of the European Common Market and the E.F.T.A. on the trade and economies of Asian countries, have found ample expression in a study just completed by two Indian *rapporteurs* for submission to the Ninth Session of the Commission on Asian and Far Eastern Affairs of the International Chamber of Commerce to be held at Karachi early in December next. The study has sought to justify these fears in a more detailed manner, but limitations of space forbid reference to more than a couple of them. It is argued, for instance, that the fixing of the external tariffs of the Common Market at a level of the simple arithmetic average, instead of the weighted average, of the duties levied in the four customs territories (France, Germany, Italy and Benelux) will mean a higher new tariff, because the Benelux countries and Germany, which levy comparatively lower import duties than France and Italy, have a larger trade with the outside world. This argument has led to the suggestion that the average rates of duties on various commodities be calculated after giving due weight to the quantity of goods imported at each tariff rate.

What this argument and the related suggestion seem to have overlooked is that the arithmetical average would mean an external tariff at a level lower than that of the import duties formerly levied by France and Italy. Since the Common Market will work not only as a Customs Union but also in due course as an Economic Union providing for free movement of labour and capital and for the co-ordination of social and economic policies of the member-countries, it would be unrealistic to continue to think in terms of greater exports to some countries than to others in the grouping. It is, of course, conceivable that the new external tariff might facilitate greater Asian exports to France and Italy in future. But even this consideration smacks of a geographical approach (based on frontiers) which the European countries concerned are themselves striving to discard in the sense that they want to achieve a certain economic (and even emotional) integration for removing the economic ill-effects of their political frontiers. When the European countries themselves think in terms of evolving into a single community, the Common Market in question would have to be taken as one single market for Asian exports. Moreover, with productive capacity expected to increase a great deal in the European Economic Community as a whole, the prospects of larger markets for Asian exports are distinctly there. Even if anything be lost on the swings, there is a probability of its being made good on the roundabouts. It must, however, be conceded that the Asian suggestion of an external tariff as near as possible to the tariffs levied by the low tariff member-countries of the Common Market is not unreasonable. The Asian countries are already having large adverse balances with the Common Market countries and the only way in which they can ultimately settle them is by increasing their exports to these countries. It would, therefore, be in the interest of the Common Market countries themselves to keep their external tariffs at as low a level as possible. In any case, wherever the proposed changes infringe the G.A.T.T. provisions, the Common Market countries have agreed to negotiate with the outside countries and reach a mutually satisfactory understanding. The important point to be noted here is that neither the Common Market nor the E.F.T.A. have declined to honour their commitments under the G.A.T.T.

Be that as it may, much of this discussion is only of academic interest. For the Common Market is still an experiment, now in its initial stage. Further, some drastic modifications in its present structure are also foreseen in the light of negotiations, now under way, to enlarge the Common Market of six countries by bringing in the seven countries (Austria, Denmark, Norway, Portugal, Sweden, Switzerland and the United Kingdom) of the European Free Trade Association. The whole thing is thus in a nebulous state. The study, however, has its value, in the sense that, by forewarning the Asian countries of the possible adverse consequences, it will have enabled them to be forearmed.

But, on the issues arising from the linking of the overseas territories of each of the member-countries with the Common Market, the *rapporteurs'* study has made a few sensible and worthwhile points. Since the twin fears relating to this question are not wholly unwarranted, the suggestions contained in the following quotation from the study call for serious consideration at the hands of both the G.A.T.T. and the European Common Market:

> "The association of the Associated Territories with the Common Market should be reviewed by the G.A.T.T., as these territories are not incorporated into the E.E.C. Customs Union but stand in a preferential relation to it. This association is not merely the maintenance of an existing preferential system but constitutes a substantial geographical extension of the preferential system in that reciprocal relationship will be established between each member of the Community and Associated Territories having special relationships with another E.E.C. member. The new tariff arrangement, in fairness, should be such as not to completely distort the tariff alignments *vis-a-vis* the third countries. In other words, if the preferential treatment given by an Associated Territory to the metropolitan country is fully extended to all the members of the Common Market, the difference in the tariffs applicable to all the members of the Common Market and the third countries will be wide to the disadvantage of the latter. Therefore either (*a*) the duties levied by the Associated Territories on the goods of the Common Market countries be fixed on the basis of an average; or (*b*) the duties levied on the third countries be substantially reduced."

If, thus, the "associated territories" and the Asian countries come to be placed on the same footing *vis-a-vis* the Common Market, it will be a great gain indeed. Any suggestion of

retaliation by Asian countries either by way of mutual exchange of tariff and quota concessions within the framework of the G.A.T.T. or by way of a free trade association between some selected countries of Asia would, however, be a counsel of despair and unwarranted, especially when reliance can be placed on the G.A.T.T. to square up things. When the study itself has rightly recognised that the factors which helped the formation of the European Common Market and the E.F.T.A. do not obtain in Asia, it is strange that it has nevertheless put forward a plea for a free trade association of some selected Asian countries.

FERTILISER DISTRIBUTION

THE Fertiliser Distribution Enquiry Committee, which has just submitted its report to the Union Ministry of Food and Agriculture, has made a number of recommendations, some of which are realistic and patently necessary and some others controversial and of doubtful value. The realistic recommendations are as under:

Farmers be offered sufficient fertiliser loans in kind, instead of in cash, and at a reasonable rate of interest.

The rate of commission for distribution be increased, in order to provide adequate incentives to retailers at the village level.

Sales promotion be vigorously carried out by retail distributors and actively supported by extension work for instructing farmers.

States be given in the beginning of the year an indication of the likely allocation of fertilisers quarter by quarter, so that they may be ready with despatch instructions sufficiently in advance of the commencement of supplies.

Influential farmers and dealers in fertilisers at taluk headquarters be consulted on the demand for fertilisers before estimates are prepared in each State.

Co-operative depots be kept open for the sale of fertilisers at hours convenient to farmers.

In order to promote "balanced fertilisation" and to assist in stretching the limited supplies of nitrogen over larger areas, the use of fertilisers in mixed form be encouraged.

The first of the above recommendations is by far the most important and necessary, but it is not clear whether such loans are to be distributed through the primary credit societies in terms of the recommendations of the Vaikunth L. Mehta Committee on Co-operative Credit. As the process of revitalisation and reorganisation of dormant societies and the creation of new 'viable' societies in terms of that Committee's report will take their own time, it may be advisable for the State Governments to distribute the fertilisers directly through the extension agency in the Community Development Blocks. Such a procedure, which does not bring the Revenue Department into the picture directly as an agency for the distribution of loans, will be more expeditious. It will have the added merit that the extension agency, which creates the atmosphere for fertiliser use, is conversant with the solvency of progressive farmers who are fertiliser-minded. And it will also ensure judicious use of fertilisers according to soil requirements which can be broadly appraised by the agricultural demonstrators in the extension agency.

The second recommendation, dealing with the rate of commission for retail distribution, has been justified on the ground that the apex distributing agents and the wholesale agents use up most of the commission meant for distribution, leaving very little for the retailers. If the retail distributors, who can also create some atmosphere for fertiliser use, are enabled to have a fair margin in the entire distribution cost of Rs. 30 per ton, estimated by the Committee, for sulphate of ammonia, it will be very good indeed. This will hold good as much in the case of a co-operative society which does the retailing as in the case of an individual trader. The third recommendation regarding sales promotion, which is related to the third, will also be easily implemented when retailers are assured of a fairer margin. Extension work for instructing farmers will also gather momentum when they have become fertiliser-minded.

The last recommendation regarding "balanced fertilisation" has been made, because there is an acute shortage of nitrogenous fertilisers, while the supply of phosphates exceeds the demand. While this is understandable, there is also a case for "balanced fertilisation" with the help of green manures which can fix atmospheric nitrogen, and of phosphatic fertilisers. Experiments done with different combinations of green manures, phosphates and potash have shown that optimum results can be achieved more easily than when sulphate of ammonia is used alone or in combination with phosphates.

So much about the constructive recommendations made by the Committee. The controversial or less desirable recommendations also call for comment. These recommendations are:

Sales tax on fertilisers be abolished.

Fertilisers be supplied to farmers at as low a price as possible.

A Central Fertiliser Marketing Corporation be created to take over the duties now performed by the Central Fertiliser Pool and to shoulder the additional responsibilities in regard to procurement and distribution of fertilisers in future.

Unnecessary intermediaries in fertiliser trade be eliminated.

The first of these controversial recommendations has been justified on the ground that the incidence of sales tax, which is stated to be as high as Rs. 20 per ton of sulphate of ammonia in some cases, might act as a deterrent to the increased use of fertilisers. This argument, based on the maximum incidence figure of Rs. 20 per ton *in some cases*, does not seem to be fair. The present scarcity of sulphate of ammonia shows that farmers, especially those producing cash crops, would even be prepared to pay higher prices as in fact they are paying to the inter-State smugglers of fertilisers. When supplies are so scarce as now, any idea of providing an incentive to the farmer, by way of sales tax abolition, for greater fertiliser use seems to be wholly out of place. Its only result will be that the States will be deprived of an important source of revenue at a time when they are called upon to raise more tax revenue. Sales tax abolition may also increase the margin of the smugglers and blackmarketeers without in any way benefiting the farmers.

Actually, when there is a black market in sulphate of ammonia, which sells at a higher price than the uniform rate of Rs. 350 per ton upto any rail-head destination, at which it is made available by the Central Fertiliser Pool, any price reduction at this juncture will again add to the margin of smugglers. The second recommendation is, therefore, inappropriate at the present time. When supplies increase during the third Plan period through greater domestic production and imports, if necessary, the pool price can be reduced to provide an incentive for fertiliser use. It may be noted here that even a subsidy to the extent of 25 per cent. of value, which is being given on phosphatic fertilisers and manures, provided the State Governments sponsoring the distribution scheme agree to bear one-half of the total subsidy admissible, has not operated as an incentive for the use of such phosphatic fertilisers. It is thus clear that a concession in price as such by way of either a subsidy or a reduction would be an unnecessary incentive. What the farmers need now is more fertilisers and not a lower price.

The third recommendation for the creation of a Fertiliser Marketing Corporation to replace the Central Fertiliser Pool is ill-timed. The Fertiliser Pool has worked well in the sense that fertilisers have been made available at a uniform price throughout the country—a price which would lend itself, as the Committee itself has admitted, to further reduction without in any way impairing the financial position of the Pool. It would in any case be premature to think of a central marketing body, because more large-scale units in the private sector are yet to be established. Nor is it possible to say that the idea of a central marketing body will gain acceptance at the hands of industry in the absence of a clear picture of its constitution.

The last recommendation for elimination of unnecessary intermediaries in fertiliser trade has been made in the context of a certain preference for distribution through co-operative societies. But primary societies charged with the additional function of fertiliser distribution are also expected to advance loans therefor. This is a far cry, however desirable it may be. For a long time to come, individual wholesalers and retailers will, therefore, have to be depended upon for effective distribution of fertilisers.

SAFETY IN INDUSTRY

THE disturbing revelation of Mr. G. L. Nanda, Union Minister for Labour, in the course of his address to the eighteenth session of the Indian Labour Conference held at New Delhi recently, that the rate of industrial accidents in India had more than doubled in the last twenty years, should come as a rude reminder of the comparative neglect in this country of the question of safety in industries. The increase in the number of accidents can, in a way, be related to the faster pace of industrialisation. But higher industrial activity need not necessarily lead to a higher incidence of accidents, provided adequate safety precautions are taken. In fact, in countries like the U.S. and the U.K., where, too, there has been a tremendous industrial expansion, the opposite trend has been in evidence. Thus, while the accident rate doubled in the last twenty years in India, it declined by about one-third in the U.K. during the same period.

Safety in industry depends, in practice, as much on voluntary efforts of employers and workers as upon safety regulations. The comparatively lower rate of accidents in such countries as the U.K. is the result of vigorous efforts made by the Government, employers and workers to promote a safety climate. In Britain, the concern evinced by both trade unions and employers' organisations in the safety of workers helps to maintain a high level of safety standards and the requirements about accident notification enable factory inspectors to examine the methods of accident prevention in co-operation with employers, machinery manufacturers and interested organisations. There are voluntary organisations for educational campaigns such as the Accident Prevention Movement, which is strongly supported by the Factory, Mines and Quarries Inspectorates. The Royal Society for the Prevention of Accidents helps the movement by providing publicity, and by organising conferences and courses for safety officers. Training for safety is an important facet of the safety drive. Particular attention is paid to this aspect and ample facilities are provided for training safety officers.

In the U.S., the President's Conference on Occupational Safety, an organisation of trade union leaders, industrialists and Government officials, is directly concerned with eliminating job hazards and promoting safety standards in American industry. Since the formation of this organisation in 1948, there has been a steady decline in the injury rate of factory workers.

In India, efforts in this direction have been woefully lacking. The Government, however, seems to be gradually realising the gravity of this problem. It was discussed by the States' Labour Ministers early this year and was brought before the Indian Labour Conference at its recent session. It is now reported that the Government proposes to amend the Factories Act to ensure better safety arrangements in industries. A Bill to amend the Act, it is learned, will be introduced in the next session of Parliament. The proposed amendment will make provision for (1) compulsory inquiry into serious accidents to ascertain their cause and fix responsibility and prescribe punishment for those found guilty, and (2) appointment of safety officers in factories employing more than a specified number of workers.

Among the other measures contemplated for promoting safety-consciousness are institution of safety awards at the Central and State levels, appointment, by State Governments, of one inspector for every 150 factories, and arrangements for training selected inspectors and technical officers in safety methods in foreign countries. The managements of industries will also be asked to undertake a three-point programme: (1) to impart training in safety measures to their workers, (2) to set up safety committees for training and propaganda, and (3) to institute rewards for workers making important suggestions regarding safety. The Government, it is said, will also undertake a safety survey of selected factories in the public sector.

A programme for encouraging safety-consciousness can succeed only if both management and labour co-operate. The Government would appear to have already approached the central organisation of workers for co-operation in this regard. Employers' organisations, too, should give their wholehearted support and encouragement to the programme. The law can prescribe only the minimum safety precautions. The fact that, in many countries, employers have achieved health and safety standards considerably higher than those required by law shows that compulsion has not always been the driving force in making factories and workshops safe and healthy places to work.

MARKET GOSSIP

Fund-Bank Meetings

THE fifteenth annual meetings of the International Monetary Fund and the World Bank—Fund-Bank meetings for short—held at Washington last week were uneventful, though they lasted for a week. As usual, the speeches made by the chiefs of those bodies were illuminating, containing thought-provoking remarks on current international economic problems. They are too long to receive a detailed reference in this column. Mr. Per Jacobsson, the outspoken Managing Director of the I.M.F., who had asserted last year that world inflation was over, took an optimistic view of the world situation and discounted fears of a recession being round the corner. He devoted the major part of his speech to the ways in which the less developed countries could help improve their economic positions through their own efforts, but much of this was only exhortation to them. His observations, for instance, contained no answers to India's basic economic problems. He did, of course, say that the developed countries should encourage imports from the underdeveloped countries and, in response to the valid criticisms of India's Finance Minister, Mr. Morarji Desai, that the I.M.F. was not paying adequate attention to the balance of payments problems of the developing countries, promised to institute a study on trade restrictions and their resulting problems as well as on world commodity price fluctuations. He held out a similar promise two years ago, when he spoke at the New Delhi meetings of the Fund and the Bank, but nothing tangible has emerged so far.

A common criticism about Mr. Per Jacobsson in this part of the world is that he is engrossed too much in the affairs of Europe and America and pays very little attention to the problems of Asia and Africa. In the past two years, he has done precious little to invalidate this charge. While he has ceaselessly preached to the Western world that freedom of payments from exchange restrictions should be followed by greater freedom of trade through the adoption of liberal and non-discriminatory policies, he has not used the great authority he commands as the Chief of the I.M.F. to persuade the European countries to withdraw or reduce the taxes levied by them on consumption of goods exported by the underdeveloped countries. Surely, the I.M.F. Chief must be aware that the acceptance of the sterner discipline implied in Article VIII of the Fund (regarding freedom of trade) by the developed countries will be of no use to the exports of underdeveloped countries so long as the former continue to levy heavy consumption taxes on such items as soft beverages and textiles and also follow other restrictive practices. It is to be hoped that, henceforth at least, Mr. Per Jacobsson will pay active attention to the affairs and needs of developing nations. Indeed, he should pay a visit to the developing countries in order to obtain a firsthand impression of their difficulties. It would be a good thing if the Government of India were to invite him this winter, so that he could have a more intimate picture of this country and the third Plan which is to be launched in April next. Some may say that it is too late in the day to make this suggestion, as Mr. Jacobsson is now in the last year of his term as the Managing Director of the Fund. But he is held in such high esteem by all the members of the Fund that it is almost certain that he will be requested to continue his services to the Fund for another term.

Unfortunately, Mr. Eugene Black, the dynamic President of the World Bank, who has done a great deal for the underdeveloped countries not merely through loans and technical services which the Bank is providing but also by personally prodding the developed countries to take an active interest in their economic plans for development, was not able to report to the meeting of Governors, as he was unwell. It fell to the lot of Mr. W. A. B. Iliff, Vice-President, to address the meeting. In his speech, Mr. Iliff traced the progress of the Bank in the last fifteen years, described its transformation from an essentially dollar bank even five years ago into a truly international bank, outlined the problem of providing development capital to the less developed areas of the world and stressed the responsibilities of the developed countries in this respect. It was on the whole a neat and impressive performance, with some pertinent advice to the capital-hungry nations in Africa, Asia and Latin America. The policy-makers and planners in this country, in particular, will be well advised to read his speech carefully.

Three subjects figured prominently at the Fund-Bank discussions—the U.S. balance of payments and the strain on dollar, the responsibilities of West Germany as the strongest creditor country in Western Europe, and aid to underdeveloped countries. None of these is a new problem. They have all been in existence for some time now. Although the era of world-wide inflation has ended, none of them has ceased to be a live issue. If there was anything new, it was the absence of the pound sterling in the discussions, a tribute to the able manner in which the Conservative Government has managed the affairs of Britain, both national and international. One did not come across any criticism of British policies in this august gathering of the top men of international finance. In fact, the British Chancellor of Exchequer, Mr. Selwyn Lloyd, announced at the meeting of the I.M.F. that his Government had decided to repay, out of its abundant gold and foreign exchange reserves, £20 million of the money it owed to the Fund, leaving a small outstanding of only £30 million. This balance is the remnant of the £200 million ($561 million) loan which it had obtained from the Fund in 1956 to stem the tide following the Suez episode. There was no stipulation at that time as to when and how this would be repaid, but, in March 1959, following the recovery of the British economy from the Suez and other shocks, the British Government repaid $200 million. At the beginning of 1960, it was arranged that the balance should be paid at the rate of £5 million ($14 million) per month. This it did regularly until August last, when it decided to repay in one lump sum £25 million that was due up to the end of 1960. Now it has repaid, in another lump sum, £20 million some six months in advance. This step marks the British Government's optimism about the outlook for the pound sterling and strengthened, albeit indirectly, the hands of Mr. Selwyn Lloyd in his strong criticisms of West Germany's policy of sitting tight on the enormous amount of gold and dollars it has gathered mainly through large balance of payments surpluses in recent years.

Tough Days Ahead for the Dollar

An issue that seems to have caused some anxiety among the delegates who attended the Fund-Bank meetings was the continued adverse balance of payments position of the U.S. and the resultant gold loss. Neither the carefully studied and statistically documented optimistic observations of Mr. Per Jacobsson on this subject, nor the reassuring statements of U.S. Treasury Secretary, Mr. Robert B. Anderson, appear to have cleared their misgivings. In the week ended 24th September, the U.S. lost $181 million worth of gold, the largest weekly loss since 1931. Although the total outflow of gold so far this year has been at a lower pace than in 1959 when the drain was of the order of $1,000 million, in the past eleven weeks, it has been far greater than in the past year. The questions asked are: Can the U.S. afford to lose gold at this rate? If it cannot, what will it do? Devalue the dollar? Raise the price of gold? Reduce or abolish the present 25 per cent. statutory gold cover for the note issue? Slash imports, raise tariffs, curtail foreign aid and discourage export of capital? Force a deflation in the domestic economy, in order to raise the competitive power of its industries? The speeches of Mr. Jacobsson and Mr. Anderson suggest that the U.S. gold reserves are still so large and its economy is basically so sound that none of these need happen, if only the European countries played the game by bringing down their rates of interest and by exporting more capital to underdeveloped countries in united form. But will they? Writing in the last issue of the *Economist*, our London contemporary, its special correspondent says: "Europe must not get so embroiled in its sixes and sevens that it loses sight of wider responsibilities, or jeopardises the international economic co-operation that has been so remarkable an achievement of the post-war world." This is, of course, only an exhortation, but the stake of the free world in the U.S. economy is so large that it is bound to be heeded by the quarters to which it is directed. None of the restrictive steps implied in the series of queries posed above will benefit either Europe or Asia.

Mr. Jacobsson was of the view that the present outflow of gold is due entirely to capital movements, including short-term capital movements caused by higher interest rates in certain West European countries and expectation of a revaluation of the D. Mark. While he was cautious enough to remark that it was too early to conclude that the U.S. payments difficulties had been fully overcome and that continued vigilance was necessary, he drew considerable satisfaction from the undermentioned facts about the U.S. economy: balanced U.S. Government budget, stability of both money supply and prices, and rise in exports to produce a $4,000 million surplus on current account. He was, therefore, inclined to support the U.S. Government's view that "a continuing deficit, since it arises from the movement of short-term funds and private capital, is not a cause for concern and that this is doubly true of the present gold loss."

The U.S. has still $18,700 million worth of gold, $7,700 million above its statutory minimum level of $11,000 million and sufficient to sustain a gold drain at the rate of $1,000 million for the next seven years. It is true that the U.S. has short-term foreign liabilities which are nearly as much as its gold reserves. But all of them are unlikely to be withdrawn. If any such thing were to happen, it would be like a run on the biggest commercial bank in the world. The speculators in Europe and the U.S. may attempt to transfer their funds, but the present gold reserves are large enough to satisfy their itch for making easy money. If they try to go too far, the Governments of Europe can quickly take counter-measures to thwart their attempts. The more difficult problem, however, will be for the U.S. to maintain its private capital exports and Government aid. This will be possible only if it succeeds in improving its competitive capacity in export trade and curtailing its huge defence expenditure. Hence the importance of disarmament. Prime Minister Nehru's valiant efforts at the U.N. this week will be better appreciated, if one cares to view them against this background.

The misgivings about the future of the dollar will, however, persist until a new Government is formed after the forthcoming Presidential elections and its economic policies are announced. Whichever party comes to power, it will have to decide quickly the extent to which it is prepared to attune its domestic economic policies to the needs of the United States' international responsibilities. Meanwhile, it must be recorded here that the U.S. Treasury Secretary unambiguously has reiterated the U.S. decision not to raise the dollar price of gold and his Government's determination to maintain and protect the external value of the dollar. There is no reason to think that the successor to President Eisenhower, whether he be Mr. Nixon or Mr. Kennedy, will not honour this declaration.

There was heavy pressure on Germany at the Fund-Bank meetings to alter its policies in such a way as to eliminate the persistent gain to its exchange reserves. Even France and Italy were subjected to this pressure, as these countries are also accumulating large foreign exchange reserves at the cost of the U.S. and even the U.K. Mr. Jacobsson pointed out that most of the largely developed countries had adequate or very nearly adequate reserves and building up unnecessary reserves might easily involve the misuse of resources. The Chancellor of the British Exchequer, as also the U.S. Under-Secretary of State, Mr. Dillon, stressed the need for Germany, in particular, expanding its capital exports very considerably and modifying its present high interest rate policy. The German delegation was clearly on the defensive. While flatly reiterating that the German Government has no intention of revaluing the D. Mark, Dr. Erhard, the Federal Minister for Economics, conceded the need for his country exporting more capital. He, however, gave no details of any of his Government's plans for achieving this goal, apart from stressing that the flow of private capital should be facilitated through the World Bank, the International Finance Corporation and the underdeveloped countries themselves.

Barring the consensus of opinion among the representatives of developed countries that capital exports to underdeveloped countries should be expedited, nothing concrete has emerged from the Fund-Bank meetings for the latter countries. The only consolation they can have is that the International Development Association, an affiliate of the World Bank, designed to provide loans on more easier terms than those offered by the Bank, will shortly come into being and commence its operations. It is true that the resources placed at its disposal are inadequate. But something is better than nothing and the prospect of getting its funds strengthened at a future date through a further contribution from its wealthy members cannot be ruled out.

West German Aid

The latest move of the West German industrial and financial circles to launch a DM 1,000-million (about Rs. 115 crores) plan for aiding underdeveloped countries is, indeed, heartening, although the quantum of aid is negligible when compared with the actual needs of these countries. It is heartening especially because the aid will be given in the form of long-term credits which will not be tied to any particular project or projects and the rate of interest is likely to be no more than 5½ or 5¾ per cent. which is appreciably less than the ruling rates of interest in West Germany. This move by the German business men and their assurance that they will take steps to encourage private capital exports have, of course, been prompted not so much by any anxiety to help the developing countries as by the eagerness to avoid Government's intervention to curb the boom in German industry. If the industry had not volunteered itself to help curb the boom, the Government might, perhaps, have given effect to its earlier threat of drastic corrective action.

For the purpose of granting credits to the economically backward countries, it is proposed to constitute a development loan fund the details of which were unfolded at Bonn on 29th September by Dr. H. J. Abs, Chairman of the Deutsche Bank (Dr. Abs was one of the three well-known bankers who visited India and Pakistan early this year to study economic conditions) and Herr Fritz Berg, Chairman of the German Federation of Industries. The sum of DM 1,000 million offered by the German industry will be subscribed by the bigger firms in all branches of industry, banks and insurance companies. The subscriptions, which will be entitled to an interest of 5 per cent., are expected to be made before the end of this year. They will be frozen for five years, though during this period, the bonds issued will be acceptable as collateral by banks for advances.

It is hazardous to guess as to what slice India will get out of the aforesaid DM 1,000-million development loan fund. The greater and greater collaboration between Indian and West German industrial interests in recent years, however, indicates that the slice may be quite substantial. It may be mentioned here, in passing, that West Germany has so far authorised for the second Five-year Plan of this country Rs. 107.77 crores, of which Rs. 72.64 crores had been actually utilised upto the end of March 1960. Besides, the West German Government has also agreed to accept a postponement of the repayment of loans that fall due between now and the end of the third Plan. Thus, of the sum of DM 150 million (about Rs. 17 crores) due for repayment at the end of the second Plan, one-third will be paid on the due dates and, of the balance (about Rs. 11.60 crores), one half (DM 50 million) will be repaid in 1965 with a further option to defer it by another four years, and the other half (DM 50 million) will be similarly deferred initially for four years with an option of extension for a further period of eight years, thereby giving India a full margin of 12 years. A similar concession in respect of repayments arising from the Rourkela steel project, which fall due on 31st December 1961, is under consideration. Here, India will repay on the due date only ten per cent. of the amount due; the balance will be split up into two equal instalments to be paid in eight and twelve years, respectively. Likewise, the credit of $100 million (nearly Rs. 50 crores), which Germany promised at the meeting of the World Bank consortium, for completing India's second Plan—the last instalment of $30 million of this credit will be paid this month—can be repaid in twelve years. The repayment of this credit will in no event fall due before the expiry of five years, the object of this arrangement being that the implementation of the third Plan should not be adversely affected. The effect of the adjustments indicated above is that Germany has not only fulfilled its quota of credits for the second Plan but has actually exceeded its promised help to the extent of $23 million (about Rs. 11.5 crores).

FURTHER FALL IN EQUITIES

PAYMENT DIFFICULTIES FEARED

(From Our Own Correspondents)

BOMBAY, *6th October*

AN erratically lower trend was noted on the Bombay Stock Exchange during the week under review, on alternate bear pressure and fresh support at lower levels. Despite the recovery noted on Tuesday and Wednesday from the lowest levels touched during Monday's session, the closing prices, except in scrips and a few other counters, were substantially lower on balance. This clearly shows that the market is still in the grip of fears about a rise in Bank rate. The difficulty in getting adequate bank credit in the coming months would also appear to have induced liquidation. The prospect of right issues by many companies does not seem to hold the same attraction for investors, as it did some time ago, since it is generally believed that such issues will no longer be offered at par or at only nominal premiums. Even the announcement of a higher final dividend by the Bombay Burmah Trading Corporation Ltd., which is the most outstanding news of the week, has failed to enthuse the market; on the contrary, it has been greeted with a mild setback in prices, as the dividend has fallen below the market's expectation.

The undertone of the market at the close was indecisive, on end-of-account considerations and fears of some payment difficulties. A clear picture can be expected to emerge only after the forthcoming settlement goes through. If the big bulls fail to pay the differences due from them, the market may suffer a further substantial setback.

The Directors of Bombay Burmah have recommended a final dividend of 21.2 per cent., subject to deduction of tax, for the year ended May 1960 on the three classes of shares, as against a corresponding distribution of 13 per cent., free of tax, for the previous year, as follows:

Rs. 530 per share on the 100 original shares of Rs. 2,500 each (Rs. 325)

Rs. 26.50 per share on 71,400 old shares of Rs. 125 each (Rs. 16.25)

Rs. 10.60 per share on 84,000 new shares of Rs. 125 each (Rs. 50 paid-up) (Rs. 6.50)

This, together with the interim dividend of 8.8 per cent., subject to deduction of tax paid in July last, makes a total distribution of 30 per cent., subject to deduction of tax, or 21 per cent. free of tax, and compares favourably with 19 per cent. free of tax paid for 1958-59. The transfer books will remain closed from 1st to 22nd November 1960, both days inclusive.

The output of saleable steel by the T.I.S.Co. and I.I.S.Co. during the month of September shows a divergent trend. While the production of saleable steel by the T.I.S.Co. has gone up from 102,400 metric tons in August to 108,000 metric tons, that of I.I.S.Co. shows a fall from 60,899 metric tons to 50,663 metric tons. In September 1959, the output of the two Companies was 94,600 metric tons and 50,219 metric tons, respectively. The aggregate production of pig iron and steel of the two companies during the first six months of the current financial year, as compared with that in the corresponding period of 1959-60, is as follows:

(In metric tons)

	T.I.S.Co.		*I.I.S.Co.*	
	1960-61	1959-60	1960-61	1959-60
Pig iron ...	748,600	765,100	528,007	538,839
Steel ingots ...	764,400	730,100	447,516	388,042
Saleable steel	598,700	570,500	307,345	306,633

Steel shares ruled steady, except for a short-lived dip on Monday last. Tata Ordinaries, after an early rise from Rs. 153.25 to Rs. 154.25, crept down to Rs. 161.75 on Monday. Thereafter, they regained their poise and closed at Rs. 153.50. Indian Irons moved between Rs. 22.72 and Rs. 22.28 before closing at Rs. 22.64, as compared with last week's closing of Rs. 22.52.

Textiles moved in an irregular pattern, but the trend was downward and losses over the week were widespread. Standards were conspicuous in this group, with a drop of Rs. 120 to Rs. 1,205. A pronounced weakness in National Rayons, which declined by Rs. 23 to Rs. 455, was the main feature in the miscellaneous section. On sustained liquidation, Bombay Burmahs (old) shed Rs. 12 to Rs. 564, the lowest level touched being Rs. 549. In an otherwise quiet engineering section, Tata Locomotives and Larsen and Toubros presented a steady front, Voltas were weak. Cash counters showed a mixed trend. Prominent among those which scored handsome gains were Amar Dyes, Ceat Tyres and Premier Tyres.

Madras Stock Exchange

MADRAS, *5th October*

Equities on the Madras Stock Exchange suffered a distinct setback during the week under review on heavy bull liquidation and bear selling. In view of the continued austere import policy for the current half-yearly licensing period, operators were somewhat inclined to feel that it might be difficult for industries to maintain the high level of production. Textiles ruled easy, thanks to slack buying enquiries. The Government of Ceylon's decision to ban imports of textiles costing more than Rs. 7 per yard and garments (including *saris*) costing over Rs. 40, together with the restrictions on imports of towels imposed a few months ago, was expected to affect exports of textiles to Ceylon. Teas drifted lower on fears of keen foreign competition in world markets. Coffees were dull in the absence of any encouraging overseas advices. Despite reports of a notable increase in production of natural rubber in the month of July, rubber shares too lacked support. The sugar section displayed weakness, as a result of the Government's policy of continuing the "price-linking formula" without any obligation on the part of cane growers to share the loss, if any, suffered by the sugar factories. Operators noted that the Government of India had referred the question of revising the sugar price formula to the Tariff Commission. Miscellaneous shares, particularly cements and chemicals, were depressed.

Among textiles, Buckinghams fell by Rs. 3.50 to Rs. 196.50, Lakshmis lost Rs. 2 to Rs. 138.50, Travancore Rayons declined by Rs. 2 to Rs. 33.50, Coimbatore Cottons, Coimbatore Spinnings and Janardanas moved down by a like amount to Rs. 165, Rs. 46 and Rs. 61, respectively. Kotharis shed 45 nP to Rs. 12.20. Loyals were lower by 35 nP at Rs. 35. Radhakrishnas dropped 25 nP to Rs. 28.50. Maduras fell initially from Rs. 33.85 to Rs. 33.60, but improved subsequently to close today at Rs. 33.70. Bangalore Woollens were quiet at Rs. 195.50 *ex-div.*. Dhanalakshmis at Rs. 227 and Metturs at Rs. 392. South Indias, however, were pushed up from Rs. 126.50 to Rs. 146 on special speculative support.

In the tea section, Haileyburias eased by 25 nP to Rs. 14 and Neelamalais by 17 nP to Rs. 4.78. Chembras lost 15 nP to Rs. 4.85, Peermades declined by 13 nP to Rs. 23.32, despite the announcement of an interim dividend of 7½ per cent. taxable for 1960. Blue Mountains closed lower at Rs. 4.95, as compared with Rs. 5.06 last week-end. Kil Kotagiris dropped 6 nP to Rs. 5.62 and Waterfalls 5 nP to Rs. 4.20. Periakaramalais fell from Rs. 3.54 to Rs. 3.45 before finishing at Rs. 3.50. Nonsuch were neglected at Rs. 27.25. United Nilligiris at Rs. 22.60 and Devsholas at Rs. 30.25.

Coffee Lands were prominent in the coffee section with a fall of 25 nP to Rs. 25. Consolidated Coffees, which had fallen from Rs. 25.95 to Rs. 25.75 earlier in the week, improved slightly to Rs. 25.85 today, a loss of 10 nP over the week. Cowcoodys shed 5 nP to Rs. 5.20. Ouchterlony Valleys initially eased from Rs. 4.85 to Rs. 4.80, but recovered to close at the last week's level today. Balanoors changed hands at Rs. 16.70 and Rajendras at Rs. 14.35. Mysore Amalgamateds were unaltered at Rs. 6.25. The Directors of the Company have declared a dividend of 10 per cent., taxable, (equivalent to 7 per cent. tax-free) for the year ended March 1960, as against 10 per cent. tax-free for the previous year.

Among rubbers, Cochin Malabars were marked down by 35 nP to Rs. 6.90. Midlands lost 22 nP to Rs. 11.78. The Company has announced a dividend of 12½ per cent., taxable, (8.75 per cent. tax-free) for the year ended March 1960, which compares unfavourably with 10 per cent. tax-free for the prevous year. Malankaras were unchanged at Rs. 19.75 and Kailas at Rs. 4.95.

In the sugar section, Cauverys came in for selling and lost Rs. 2.50 to Rs. 142. E.I.Ds eased by Re. 1.75 to Rs. 40.50. Deccans were lower by 45 nP at Rs. 14.95. Indias dropped 10 nP to Rs 12.90 and Travancores 5 nP to Rs. 11.25. United Breweries were quiet at Rs. 114.50 and Mysores at Rs. 60.50.

Among miscellaneous industrials, Textools declined by a rupee to Rs. 188. Among chemicals, Metturs receded by 50 nP to Rs. 12.70. Mysore Chemicals were lower by 30 nP at Rs. 27.50 and Mysore Fertilisers by 20 nP at Rs. 10.45. F.A.C.Ts closed at Rs. 10.62, as against Rs. 10.75. In the cement group, Dalmias eased by 30 nP to Rs. 11.85 and Travancores by 20 nP to Rs. 8.50. India Cements, however, put on 13 nP to Rs. 6.68. Among others, Ashok Leylands lost 35 nP to Rs. 7.95. Aluminium Industries softened by 2 nP to Rs. 22.75.

T.I.S.CO. MEETING

The Government of India has kept in abeyance the grant of licence to the Tata Iron and Steel Company, Ltd. for setting up a plant for the manufacture of alloy steel till the Government's own plan for such a project was finalised. Disclosing this at the annual general meeting of the Company held on the 6th inst. in reply to shareholders' queries, Mr. J. R. D. Tata, Chairman, added that, if the Government granted them a licence, it was the Company's intention to have some foreign associates in the project. He further added that a separate company would be formed for this purpose and the shareholders of the T.I.S.Co. would certainly be given preference for participation in the share capital of the Company.

Mr. Tata also disclosed that the Company was considering the question of placing the shares of the Indian Tube Co. (1953) Ltd. on the market as it has considerably grown in size and is doing quite well. Replying to the suggestion of the shareholders that the shares of the Company should be issued to the shareholders of T.I.S.Co., Mr. Tata said that, while it was a difficult one, in view of the relatively small number of shares to be offered for sale, as compared with that of T.I.S.Co., the suggestion would nevertheless be sympathetically considered.

The shareholders were highly critical of the Company's dividend policy. They were almost unanimous in complaining that the dividend was meagre. If this policy was continued, they were afraid, the value of the Company's shares would go down very much. Some of them warned the Chairman that the Government would nationalise the two companies in the private sector, once its own plants went into full production, in which case it would take the market value of the shares for paying compensation. They, therefore, pleaded for a more liberal dividend. While sympathising with the shareholders, Mr. Tata said that the Directors had maintained the dividend on old shares at Rs. 10.50 and have paid Rs. 9.72 on the new shares and that too within a year after the completion of the expansion programme. Recalling his earlier assurances that an increased dividend could come only out of increased profit, as a result of additional production, Mr. Tata asked the shareholders where was the increased profit. In 1958-59, there was actually a deficit in the disposable profit and, in 1959-60, it was not adequate to pay even the recommended dividend. During the last two years, the Company had actually to withdraw from the reserves nearly Rs. 4.50 *crores* to pay the dividends and how much more, he asked, could the shareholders expect the reserves to be depleted.

The following are the other points that emerged from Mr. Tata's reply to the shareholders:

1. The Company has done its best to impress on the Government the need for an early announcement of the increase in retention prices.

2. It is not in the interests of the shareholders to disclose the increase in retention price asked for by the Company. On the contrary, it will jeopardise the Company's cause.

3. There has been no serious defect in the plant; only a small section of the plant was found defective.

4. The question of inviting deposits from the shareholders will be considered, though the Chairman does not personally like the idea.

5. The Company has applied to the Ahmedabad Stock Exchange for placing the Company's ordinary shares on the forward list. A similar application will be made to the Calcutta Stock Exchange also.

6. The Company does not intend selling any more of its holdings in the Tata Engineering and Locomotive Company, Ltd.

7. The income-tax assessment has been settled up to 1956-57.

HINDUSTAN WIRES LTD.

Hindustan Wires Ltd., a public limited company incorporated in March 1959, with an authorised capital of Rs. 1 crore and a paid-up capital of Rs. 5 lakhs, has announced the details of its public issue. The Company proposes to issue Rs. 45 lakhs, made up of 450,000 equity shares of Rs. 10 each. Of this, the Directors, their friends and associates have agreed to subscribe Rs. 20 lakhs and the balance of Rs. 25 lakhs is available for public subscription. The list will open on 17th October 1960 and will close on 24th October or earlier at the discretion of the Directors, but not before 21st October. A sum of Rs. 5 per share is payable on application. No money is payable on allotment. The balance of Rs. 5 per share will be payable in one or more calls not earlier than four months after allotment.

The main object of the Company is to manufacture high tensile, spring steel, concrete re-inforcement, signal, galvanised, hard bright and annealed wires and wire products. At present, most of these items are largely imported. Indigenous production is mainly confined to bright, annealed and G.I. wires, but it is not sufficient to meet the domestic requirements. The Company has received an industrial licence for production of 5,000 tons per annum. As the domestic consumption is very much in excess of this quantity, there is scope for raising the production by the Company.

The Company's factory is ideally situated at Barrackpore Trunk Road, Sodepur, near Calcutta, with easy accessibility to raw materials, adequate rail and road transport facilities, and water and power supplies. A substantial part of the plant and machinery and auxiliary services have been installed. It is noteworthy that the Company has already gone into production. The plant already acquired and erected is of the most modern type.

The total capital outlay (including working capital) is estimated at Rs. 50 lakhs, of which a sum of Rs. 17 lakhs has already been spent out of the capital already issued, namely, Rs. 5 lakhs, and temporary loans, which will be repaid out of the proposed issue.

In view of the anticipated good demand for the Company's products, the Directors expect the Company to earn a reasonably good profit and, barring unforeseen circumstances, the Company will soon be in a position to pay reasonable dividends. Judging from the present climate in the capital market, the issue, which is only a small one, can be expected to be easily absorbed.

The steel foundry of the Durgapur Steelworks was commissioned recently. The foundry is designed to supply 5,000 tons of steel castings a year for the maintenance requirements of the steel-works. The foundry consists of an electric arc furnace of six-ton nominal capacity of the basic type with hydraulic tilting roof and swivelling mechanism.

NEWS IN BRIEF

THE first factory to manufacture scooters in Mysore State, set up by the Ideal Jawa (India) Private Ltd., with Czechoslovakian technical collaboration, is likely to go into production early next year. The factory will produce 15,000 scooters per annum.

The Government of India and the U.S. began civil aviation consultations at New Delhi on the 3rd inst. These consultations will provide the first opportunity for a general review of civil aviation matters since the two countries signed the air transport services agreement in February 1956.

The Assam Government will lose about Rs. 2.25 crores in revenue annually, as a result of the Supreme Court's judgment declaring void the Assam Taxation (on goods carried by roads and inland waterways) Act. Besides, the Government will have to pay about Rs. 13 crores, if the tax collected for the last six years is to be refunded.

Although the trade agreement between India and China expired over a year ago and has not been renewed yet, India's exports to this country would appear to have not been affected. The value of commodities (mainly jute goods) actually shipped in the first six months of the current year was Rs. 4.4 crores, as against Rs. 8.0 crores in the whole of 1959.

The Government of India has rejected the Indian Cotton Mills' Federation's plea for relaxing restrictions on imports of fluorescent tubes on the score that a Calcutta firm has already been permitted to step up its production of tubes from 1.5 million to 1.8 million annually and that a new unit with a licensed capacity of 792,000 tubes a year will go into production before the end of the year at Shikohabad. With these, the supply position is expected to improve.

Work on the construction of the Rs. 61-crore oil refinery at Barauni in Bihar will commence on 1st January next, and is expected to be completed by 1962. The refinery will have a capacity to process two million tons of crude oil annually, producing aviation *gasolene*, motor gasolene, kerosene oil, diesel oil and bitumen, among others. The crude oil will be brought to the refinery from Naharkatiya oilfields in Assam through a 104-mile pipeline. Soviet Russia is collaborating in the project.

A scheme for intensifying plant protection for oilseeds crop in the Coimbatore, Salem and South Arcot districts has been sanctioned by the Madras Government. The scheme, which is expected to cost about Rs. 5 lakhs, will be implemented with substantial aid from the Central Oilseeds Committee. Under the scheme, it is proposed to carry out effective control measures against pests and disease affecting oilseed crops, particularly groundnuts, by making available to grower, pesticides and fungicides at 50 per cent. of the actual cost.

The Government of India has referred the question of bonus to bank employees to the National Tribunal (President: Mr. Justice Desai), set up in March last to adjudicate the dispute between banking companies and their employees. The Tribunal's award will cover principles and conditions governing payment of bonus, the qualification for eligibility, and the methods of computation of bonus, after making provision for all matters required to be provided for under law or which are usually provided for by the banks.

The collieries supplying coal to steel plants have been advised to boost their production by about 16 per cent. from the present level, if necessary by working one shift on Sundays in order to overcome the present shortage. The railways have also agreed to allot 5,000 wagons a day for coal-loading during the busy season as a result of deliberations between the Union Railway Ministry and the Union Steel, Mines and Fuel Ministry. About 1,440 wagons are being allotted to meet the needs of steel plants. The collieries have been asked to utilise fully the wagons offered.

A new mechanised ore berth was commissioned at the Madras Port last week by Mr. Raj Bahadur, Union Minister for Shipping. The ore berth has adjunct to it, an ore yard. The new berth has a capacity to handle one million tons of ore. It is also designed to handle general cargo. The berth and the ore yard have been formed to expedite the export of iron and manganese ore. The berth is capable of accommodating a ship 500 feet long and 31 feet deep. There are three electric shipping cranes with a load capacity of 13 tons gross each and a working radius of 65 feet. The shipping cranes can handle over 300 tons per hour. The yard, 1,600 feet long and 110 feet wide, is bridged by two transporter cranes running along the full length of the yard. These cranes are equipped with grabs which can take five tons of ore and are capable of completing 30 cycles per hour of stockpiling of ore or loading from the stockpile. With all this equipment, it is expected that there should be no difficulty in loading ore upto 5,000 tons a day by three shifts.

• • • •

From Abroad

Poland has offered to provide Ceylon with a fleet of cargo vessels and trawlers on long-term credit.

Fresh oil and gas deposits have been discovered in the Central Asian Republics and North-West Kazakhstan of Soviet Russia. The deposits, it is claimed, compare well with those in the Near and Middle East.

The Dutch Unilever subsidiary in the U.K., Van den Berghs and Jurgens, which has been manufacturing margarine in Britain, will commence marketing a branded butter (Farm Bell), made from a blend of Commonwealth and foreign butters with effect from the 10th inst.

The U.S. earned £220 million in foreign currency from tourists trade during 1959, 11 per cent. more than that in the previous year. The number of overseas visitors was also higher at 1.39 million. It is expected that there will be a further increase in the earnings from foreign tourists in 1960.

A £1-million package deal providing for the export of British finished furniture to Russia in exchange for timber is expected to be concluded between the two countries. The details of the deal were discussed by a delegation of the British Development Council with the officials of the Russian Government at Moscow recently.

The Standard Oil Company of California in the U.S. has increased the prices it pays for certain heavier crude oils in California by as much as 10 per cent. a barrel. The upward revision has been made as a result of the steader demand for heavy crude oils and for the heavy fuel oils refined from these crudes.

The British National Union of Railwaymen has decided to strike work from the night of the 16th inst. in a bid to stop the entire railway system. This strike is designed to protest against the refusal of the British Transport Commission to offer another 4s. 6d. a week to 50,000 engineers in railway workshops. The Union has 330,000 members.

The Japanese steel company, the Sumitomo Shoji Kaisha, has completed negotiations with a Canadian firm, the Silver Standard Mines, for the purchase of one million tons of iron ore from Moresby Islands in Canada. The Japanese firm will give an advance of $1 million, out of the total cost of $2.5 million needed for commissioning the mines.

The import budget of the Japanese Government for the six months beginning from the 1st inst. is placed at $3,530 million, a record figure in Japanese history. Of this, $2,800 million is earmarked for visible imports. The total imports in the last half-year were $3,268 million. Mining and industrial production in Japan is expected to go up by about 20 per cent. during the current financial year.

The British Gas Council proposes to buy liquid gas produced at Hassi r'Mel gasfield in Sahara from 1962 onwards. The eventual output of the gasfield is placed at 20,000 million cubic metres, out of which Algeria will consume only about 5,000 million cubic metres a year, even if the tempo of its industrialisation is stepped up. Meanwhile, the construction of a pipeline connecting the gasfield with the port of Arzew will be completed shortly. This pipeline will carry gas at a rate of 4,000 million cubic metres per annum.

The Government of Belgium proposes to raise the rates of income tax with a view to procuring additional revenue to the tune of £43 million. The present tax system will also be so reformed as to enable the local authorities to levy income-tax on their own account. The Budget will be recast in such a way that current expenditure is met only from current revenue, and not from borrowed funds. The increase in taxation is, however, expected to be only of a temporary nature. The new move is prompted by the impact of the Congo crisis, which cost Belgium about £28 million in extra expenditure and a shortfall of £15 million in revenue.

PERSONAL

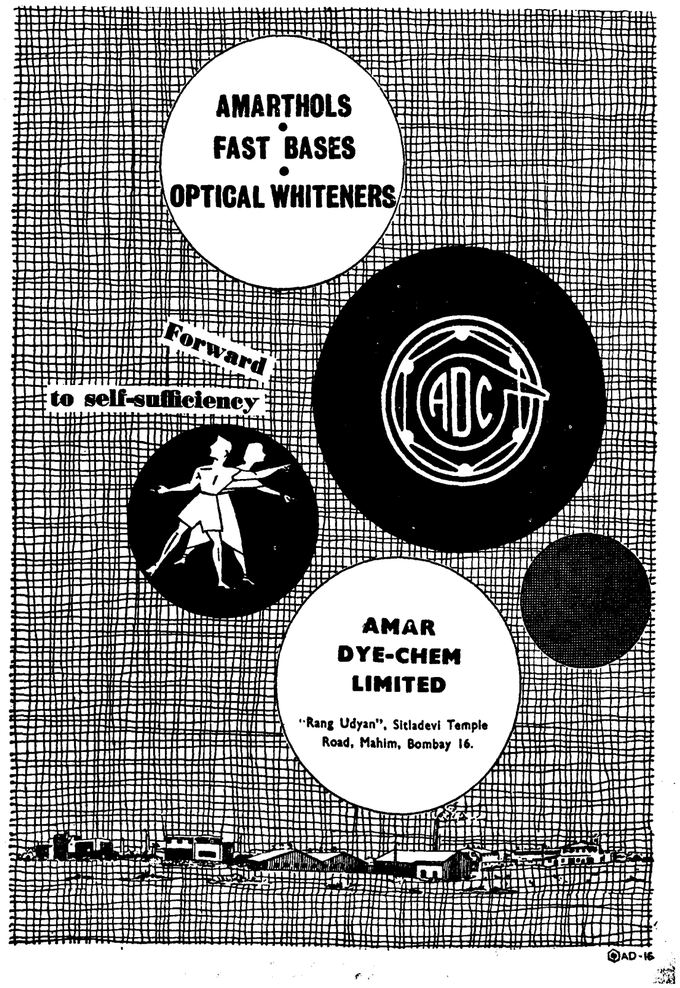
MR. G. Venkateswara Aiyar, till recently a Member of the Board of Revenue, Government of Madras, has assumed charge as the Secretary to the Department of Transport, Government of India.

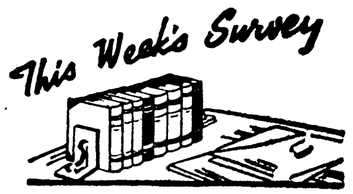
Mr. J. M. Srinagesh, I.C.S., at present Managing Director of the Indian Refineries Ltd., has been appointed Chairman of the Hindustan Steel Ltd. *vice* Mr. G. Pande, who is retiring.

Mr. Morarji R. Desai, Union Minister for Finance, has been elected Vice Chairman of the Board of Governors of the World Bank for 1960-61. Mr. Sunthorn Hongladarom, Governor for Thailand, has been elected Chairman.

Mr. G. S. Gale, President of the National Council of Wool Selling Brokers of Australia and General Manager of the New Zealand Loan and Mercantile Agency Company, has arrived in India on a brief visit to study the possibility of expanding Indo-Australian trade in wool.

Mr. Alexander D. Calhoun, Vice-President, First National City Bank of New York, has assumed general supervision of all the branches of the Bank in the Far Eastern District with effect from the 1st inst. He will be assisted by Mr. C. M. Stewart, a former Sub-Manager of the Bombay branch of the Bank.





SUGAR PRICES FORMULA

THE Tariff Commission has been asked by the Government of India to examine the formula linking the price of sugarcane with that of sugar realised by the mills in all its aspects and suggest modifications with a view to improving it, or evolve a revised all-India formula or regional formulæ in the light of the cost schedule given in the Commission's last year's report on the cost structure of sugar and fair price payable to the sugar industry. It is specially stressed by the Government that the formula recommended, whatever it be, should be simple, easy of application and intelligible to cane growers. Three other questions have also been referred to the Commission for consideration, and these are:

1. Are the industry's claims for rehabilitation allowance in the matter of sugar price division between the mills and the cane growers justified and, if so, what is the rate at which such allowance is to be provided in the price-linking formula?

2. Should the formula be applied to regions where ex-factory prices have been fixed and, in case the formula is not applied, how should the advantage of special incentives given to factories during years of control be shared between the mills and the growers?

3. What is the effect of the price-linking formula on the establishment of new sugar mills with heavy capital outlay and is it necessary to allow any concession to them?

It looks as though the whole issue of sugar prices has once again been referred to the Tariff Commission. Such a reference was inevitable, thanks to the difficulties experienced in the working of the existing formula. This formula, it may be noted, was announced in 1958. The basic principle of the formula is that the cultivators who supply cane to a sugar mill share with the mill the net sugar price realised by the latter during the year in the same ratio as the cost of cane bears to the mill's cost of producing sugar in that year, excluding taxes. For the purpose of the formula, the production cost was to be determined on the basis of the amended Naidu schedule which allowed the industry profit at the rate of As. 10-4 per maund of sugar and a rehabilitation allowance of As. 8-4 per maund. Allowance is also made for items such as selling commission on sugar, extra cost on cane transport, bonus to labour and labour awards. The formula contains a factor 'X' which has to be determined by the Central Government from time to time on the basis of recovery and duration of season of the factories concerned.

The above formula worked well for some time, but, since the Tariff Commission's report of 1959, the method of costing, which formed the basis of the formula, has become inoperative in certain respects. In the first place, apart from varying the estimates of cost of certain items, the Commission has included certain items in the production cost which, under the old formula, were to be adjusted from the prices realised. Further, the Commission has adopted an altogether different basis for determining the profit element and allowed a return of 12 per cent. on employed capital to provide not only for a reasonable profit but also for certain items of expenditure. Under the old system, a uniform element of profit was allowed on each maund of sugar produced. Again, the Commission has not allowed any rehabilitation allowance, while the old formula had provided for a specific allowance. The Government of India has accepted the Commission's recommendations and decided to make use of the cost schedules prepared by the Commission to fix the controlled prices of sugar where necessary. In view of the fundamental changes made by the Tariff Commission, the need for re-examining the price-linking formula has come to the fore.

Whatever may be the recommendations of the Tariff Commission and the Government's decision thereon, it must be said that the very principle of price-linking formula is unsound, inasmuch as it gives to the cane growers the benefit of a share in the sugar mills' profit, without any obligation to share the loss, if any, incurred by the mills. It is a case of heads I win, tails you lose. One would naturally ask: Why is it that this special benefit is conferred only on cane growers and not on the suppliers of raw materials to other industries also, such as the cotton grower and the jute cultivator? Evidently, the price-linking formula is motivated entirely by the immense political influence of cane growers in Uttar Pradesh and Bihar. An even more important reason why the price-linking formula is unsound is that it is not conducive to improving the quality of sugarcane. So long as the farmer gets a good price and a bonus on top of it irrespective of the quality of the cane he raises, he will have no incentive to grow sugarcane with higher sucrose content. As we have referred to this defect in India's sugar economy *ad nauseam*, it is unnecessary to expatiate on it here. But it is, indeed, very distressing to find that nothing effective has been done or is proposed to be done by the powers-that-be to remove this defect. On the contrary, every move that is made by them only tends to perpetuate it. If there is one occupation in this country where a premium is paid on inefficiency, it is growing of sugarcane by individual farmers.

If the Tariff Commission, too, decides not to change the formula, taking note of the aforesaid points, it must at least concede the demand of the industry that adequate rehabilitation should be provided as in the past before the sugar price is made shareable with growers. That this demand is quite justified will be evident from the clear opinion expressed by no less an authority than the Supreme Court in the course of its judgment, given in May 1959, on the dispute between the Associated Cement Companies Ltd. and its workmen. The Tariff Commission must also concede the sugar industry's claim for excluding from the formula the regions where there is control on ex-factory prices of sugar. For the controlled prices are related to the minimum price of cane and the industry as a whole is not supposed to earn anything more than statutory price.

NEW IMPORT POLICY

Neither in content nor in the basic approach has there been any significant departure in the import policy for the current half-year (October 1960 to March 1961), announced this week, as compared with that for the previous period. The policy continues to be distinctly restrictive, but with an eye to maintain production in the country at as high a level as possible. There has been a further cut in the imports of certain raw materials and consumer goods. Some more hardship to the public is, therefore, in the offing. But it must be conceded that the none-too-comfortable foreign exchange situation demands constant vigilance, lest the import bill should get out of control, creating a major crisis. India's sterling balance, it may be noted, touched a low of Rs. 144 crores last week, which compares quite unfavourably with Rs. 213 crores in the beginning of 1960 and Rs. 181 crores a year ago. Besides, the aid given by friendly countries is generally related to specific development projects and this makes it all the more difficult for the Government to use such aid for financing maintenance imports. Viewed thus, it is not surprising that the Government has had to reduce imports further. Among the consumer goods, cotton fabrics, timepieces, wines and whisky figure prominently. The Government has curtailed, or banned completely, imports of a number of industrial raw materials and components, though only those the internal production of which has gone up. These include several iron and steel products, electrical goods and automobile spare parts and raw films. There will, however, be no cuts in annual licences already granted for industrial raw materials. It may also be noted that, while quotas of established importers have been slashed, the list of items to be imported directly by the actual users has been expanded. The cuts in, or banning of, quotas of established importers is expected to result in a foreign exchange saving of Rs. 3 crores. Actual users' licences will be available for 20 new articles, including ball bearings, knitting machines and metals.

In theory, therefore, industrial production should not suffer to any significant extent. In actual practice, however, the setback in the production of certain specified industries may be greater than expected, because even the arrangements made for the past half-year proved inadequate and several industries, notably engineering and chemical units, could not maintain their production at the optimum level. It will not, therefore, be surprising if the hardship experienced by industries dependent upon imported raw materials and components increases in the coming months.

The import policy with regard to some 20 items has not been announced. These goods include machine tools (for established importers), surgical instruments, watches, tyres and tubes, spices, dates, paper, printing paper and agricultural tractors. Apparently, the Government is awaiting the return of Mr. Morarji Desai, Union Finance Minister, from Washington to assess the precise scope for securing foreign assistance likely to be available for the current biennial period. These items obviously do not rank such a high priority in regard to the maintenance of the economy and depending on the amount of foreign exchange available, their imports may be cut or increased. The only disadvantage of this policy is that it will encourage a lot of speculative activity in the goods concerned. The items that have been cut or reserved for a subsequent decision are such that will expand the scope for smuggling which has been flourishing despite all the vigilance of customs officials. Watches and foreign liquor are particularly vulnerable to the smugglers' designs. Further, the cut in liquor may adversely affect tourism, a good source of foreign exchange.

Provision has been made in the current import policy to include eight more industries under the export promotion scheme to qualify for allotment of foreign exchange for importing their essential requirements. The goods are essences for vegetable and food products, polishing rouge for lenses, graphite for pencils, art silk yarn, asbestos, mantle yarn for gas mantles, hemp twine and fish maws, abrasive grains, glass paper, felt bob and putty powder for monumental stones and granite slabs. It is to be hoped that industrialists and traders will endeavour to utilise these facilities and earn more foreign exchange.

While announcing the import policy, the Government has sought to emphasise that the policy is based on the need to effect maximum possible economy in imports. The policy, being restrictive, naturally places "a great deal of responsibility on industrial entrepreneurs and established importers." The Government has, therefore, urged them "to use their licences and quotas to make wise purchases, to make equitable distribution, to maintain a steady price line and help to expand production." The industry and trade will do well to heed this call, coming as it does at a time when the country is facing grave economic problems. The authorities, on their part, should keep a strict watch on the conditions of trade and show no mercy to erring parties.

LATEST ON LAND CEILINGS

The principle of ceiling on land holdings is now past the stage of general controversy, as the powers-that-be are giving effect to it with a determination worthy of a better cause. Already ceilings on future acquisitions have been in operation for many years now in the States of Assam, Bombay (pre-reorganised), Jammu and Kashmir, Madhya Pradesh (Madhya Bharat area), Punjab (including Pepsu area), Rajasthan, Uttar Pradesh, West Bengal, Delhi and the former States of Hyderabad and Saurashtra. Legislation for this purpose has been passed in the last year for the entire reorganised Madhya Pradesh. Already, again, ceilings on existing holdings have been authorised for some years now under suitable legislation in the States of Assam, Jammu and Kashmir, Punjab (Pepsu area), West Bengal, Himachal Pradesh and former Hyderabad State. The Punjab Government (in respect of Punjab area) has also powers to take over land held by owners under personal cultivation in excess of 30 standard acres. To what extent ceilings on existing holdings have been actually enforced in these States and what surpluses of land, if any, have been acquired are not precisely known. It would, however, appear that no uniform enforcement of legislation in all the areas of these States has yet taken place. In Kerala, the Bill passed by the Legislature with the Communist majority has just been reconstructed under the directions of the President. Over the rest of the country legislation has been undertaken only since last year. Bills, for example, have been passed in Gujarat and Rajasthan for ceilings on existing holdings, and in the other States (Andhra Pradesh, Maharashtra, Bihar, Madhya Pradesh, Mysore, Orissa, Uttar Pradesh, Delhi, Madras, Manipur and Tripura) Bills have been either adopted or introduced or published.

It is thus too late in the day to hope for any change in a policy which is already under countrywide implementation. It would, however, be different if the whole thing were to be challenged before the Supreme Court. Will Rajaji and the signatories to his memorandum to President Rajendra Prasad go to Court, now that the latter has declined to oblige him by asking for the Court's ruling? But the more relevant and live issues now centre round four major considerations—level of ceiling, transfers, partitions and compensation. The least controversial of these issues are transfers and partitions, for the Draft Outline of the Third Plan itself has admitted that "it is difficult to distinguish between transfers which are *mala fide* and those which are *bona fide*" and that "it would be justifiable to make a distinction between partitions and transfers." In regard to transfers (other than partitions), the Draft Outline has proposed that "all transfers made after the date of the publication of the ceiling proposals or an earlier date as may be prescribed in view of the local conditions, should be disregarded in computing the ceiling limit for any person or family as the case may be." It may be presumed that the crucial date in this context would be the date of publication of a land ceiling Bill; if this presumption is correct, there can be no valid objection to it. But the reference to "an earlier date as may be prescribed in view of the local conditions" is an unfair alternative which need not find its way into the final third Plan. The recent acceptance, by the Ceiling Sub-committee of the Land Reforms Panel of the Planning Commission, of the aforesaid recommendations regarding transfers and partitions should not be taken as a justification for retaining that alternative provision regarding the crucial date. As for partitions, there is no such unfairness in the approach of the Draft Outline which has laid down that, since partitions relate to separation of shares among the co-sharers, no provision would seem necessary for disregarding partitions that might be made after the crucial date.

A clear picture of the kind that has emerged in the case of transfers is, however, not to be found in the matter of ceiling levels and compensation. As no uniform standard is possible for ceiling levels in different States, it has been laid down in the second Plan itself that the ceiling might be placed at about three family holdings. Where it has been recognised that the balance of convenience lies in favour of each State specifying, according to the conditions of different regions, classes of soil, irrigation, etc., the area of land which may be declared to be a family holding, it is odd that some State Governments have formulated proposals for ceiling levels in terms of particular levels of income, which certainly give the impression that the object of ceilings is to set a limit to rural incomes generally and to urban incomes ultimately. The Draft Outline has, therefore, done well to lay down categorically that "once the ceiling has been determined and the surplus land taken over the owner will have the right to retain his remaining lands" and that "he will not be required to surrender any land if the value or income from the holding is subsequently increased on account of improvements made by him." It is gratifying to know that the Sub-committee of the Land Reforms Panel has accepted this approach of the Draft Outline. But it needs to be added that the determination of family holdings in different regions should be done scientifically with the help of settlement and revenue officers and not arbitrarily under political pressure. Until this is done, the levels of ceiling, now proposed in different States either in terms of income or in terms of area (in ordinary or standard acres) per individual owner or family, should be kept sufficiently flexible for revision in the light of determination of family holdings and prior to the actual enforcement of ceilings legislation.

As for compensation, no clear picture of its quantum has yet emerged. The second Plan no doubt left this to the discretion of the State Governments on the ground that it was an important question of policy to be considered by each State in the light of its conditions. The Draft Outline of the Third Plan has presumably accepted this approach to compensation. If that is so, it passes one's comprehension why less important questions of policy also should not have been left entirely to the discretion of State Governments. If the Planning Commission could lay down the level of ceiling for the country as a whole at three times the family holding, there is no reason why it could not lay down a fair and uniform standard for compensation. The absence of such a standard gives rise to the suspicion that a former Ceiling Sub-committee's recommendation (in 1956) that "the amount of compensation should in no case be more than 25 per cent. of the market value" may be lurking in the background. Although the suggestion of some members in the present Ceiling Sub-committee that compensation quantum should not be more than 40 to 50 per cent. of the market value of land does represent an improvement, the Sub-committee as such has made no firm recommendation. This issue calls for greater attention at the hands of the Planning Commission which is now finalising the third Plan. Meanwhile, it is a matter for further examination whether the compensation proposals in pending land ceiling legislation, which are either in terms of multiples of rental value or of land revenue assessment or in terms of some other formula, will generally work out to a rate of at least 50 per cent. of market values as ascertained from the appropriate authorities administering the Land Acquisition Acts in different States. In saying this, we do not necessarily suggest that 50 per cent. of market value is fair compensation. If respect for equity is to prevail, anything less than 100 per cent. of market value is unfair.

But at least on another ground, namely, exemption from ceiling, there is happily no ambiguity or uncertainty. The present Ceiling Sub-committee has rightly agreed, in terms of the second Plan's land reform policy, that tea, coffee and rubber plantations, orchards constituting reasonably compact areas, specialised farms engaged in cattle breeding and dairy farming, sugarcane farms owned and operated by factories, and efficiently-managed compact farms with heavy investments and permanent structures should be exempted from ceiling. It is to be hoped that the State Governments will scrupulously adhere to this recommendation in their present legislative proposals.

EMPLOYMENT AND THE PLAN

Mr. G. L. Nanda, Union Minister for Labour, had not a word of cheer to say at the second meeting of the Central Committee on Employment, held at New Delhi on the 26th September, regarding the employment situation in the country and the prospects in the third Plan period. Implicit in his statement was the admission that the picture was not likely to change much for the better in the immediate future. In fact, judging from the Draft Outline of the third Plan and the pronouncements of Mr. Nanda, it appears that the labour and employment policies of the Government have now tended to be on the defensive. For the aim is to prevent the situation from deteriorating further, which means providing jobs for all the new entrants to the labour market during the third Plan period, with the backlog of unemployed remaining the same.

According to the estimates given in the Draft Outline, even this object is not likely to be fulfilled completely, because, as against 15 million new entrants to the labour force during the third Plan period, new jobs created will be of the order of only 14 million (10.5 outside agriculture and 3.5 in agriculture). Assuming, for argument's sake, that the third Plan target of 14 million jobs will be achieved, even though the performance during the second Plan does not warrant this assumption, the backlog of unemployed at the end of the third Plan period will have increased by one million persons over that at the beginning of the Plan which itself is expected to be some 2 million higher than the 5.3 million persons remaining unemployed at the beginning of the second Plan. Thus, even after fifteen years of planning and the completion of three Five-year Plans, the unemployment problem will still remain unsolved. In fact, the number of unemployed will be more. The proportion of those without jobs to the total working force will, however, be smaller, because of the increase in the number of people employed. But for planned development, the position would undoubtedly be much worse than it actually is. From the employment angle, this is the only tangible result of planning.

Apart from pointing out the magnitude of the problem and emphasising the need for providing vocational guidance and collecting employment market information, the Minister had nothing new to add to what has already been said in the Draft. He, however, elaborated some of the methods proposed in the Draft for tackling the unemployment problem. Unemployment, according to him, could be solved, not necessarily through large-scale projects but through innumerable small programmes and projects spread throughout the country. The problem, he felt, should be divided into two parts and considered separately. First was rural unemployment. In rural areas, there was more of underemployment than unemployment and a very low standard of living. Underemployment and disguised unemployment in rural areas aggravated the trend of rural-urban migration which resulted in swelling the ranks of unemployed in the urban areas. For utilising fully the man-power resources of rural areas with a view to increasing employment and building up national assets, the Planning Commission and the Centre have recommended to State Governments the following measures:

(1) adoption of scientific methods in agriculture, (2) diversification and strengthening of the rural economic structure on a large scale, (3) the linking of the village economy with the growing requirements of neighbouring towns, and (4) the diversification of the occupational structure of rural areas through the development of processing and other small-scale and village industries.

Mr. Nanda suggested that various works programmes, which were labour-intensive and which would help in building community assets, should receive high priority.

The Minister also underlined the need for developing a large number of non-agricultural activities not only to provide employment but also to bring about a balanced development of the village economy. Rural industries had to be developed not necessarily according to the traditional methods but by using new techniques and a modern scientific approach. Another aspect of creating employment in rural areas, said Mr. Nanda, was to ensure that the various schemes under the Plan were implemented in a co-ordinated manner, so that maximum use was made by the available man-power and that marginal additions to Plans should be made, if they gave more than proportionate return in terms of employment. A pilot study was undertaken to examine this problem. One of the important findings of this study was that unemployment should be broken down into its elements, as much as possible, and tackled directly, to the extent practicable, at a number of points. The State Governments have been requested to undertake similar studies in selected areas.

Apart from the problem of underemployment in the rural areas, there is the more insistent and, in some ways, more complex problem of finding unemployment for new entrants to the labour force estimated at 10 million in the second Plan period and 15 million in the third Plan period. Surveys have shown that the problem of unemployment is more acute among the educated persons. On an average, about 290,000 educated persons join the labour force each year, the figure for the entire period of the second Plan being 1.45 million. The number of such persons remaining unemployed at the beginning of the second Plan was 550,000. The number of persons expected to be absorbed during the second Plan period is equal to the number of new entrants, 1.24 million in the public sector and 200,000 in the private sector. Here, again, those without jobs will be at least as numerous as the backlog of the unemployed at the beginning of the Plan period.

The problem of employment for the population, urban or rural, could be solved satisfactorily, Mr. Nanda averred, only as a result of economic development and that no short-term remedies were possible. In other words, growth in employment depends, to a great extent, on the pace of economic development. This is a clear admission that the Government is helpless in the matter of providing jobs to all those who seek it and that sufficient employment opportunities could result only when the economy reached the stage of self-sustaining growth and that, in the interim period, the country has got to live with the problem. This confession is by no means surprising to those who have been watching the trends in planning in the country. For employment has never been one of the primary objectives of planning in this country. This was evident from the first Plan itself, in which the chapter on employment was relegated to the end of the report and looked more like an appendix. This relative indifference to the employment aspect is evident in the Plan allocations which have not always been governed by the objective of maximisation of production and employment. Considerations which are of secondary importance, such as the relative share of the public and private sectors in the total Plan outlays and distributive justice have vitiated the system of priorities and the pattern of investment. Only an employment-oriented plan which lays less emphasis on aggregate investments and more on the creation of productive employment opportunities, whether in the public or private sectors, or rural or urban areas, can expedite the liquidation of the unemployment problem.

AMERICAN LETTER

ECONOMIC INDICATORS POINT TO A DECLINE

NEW INVENTION IN SPACECRAFT

From Our Special Correspondent

NEW YORK, *28th September*

THESE are hectic days in the United States. The General Assembly of the United Nations has re-convened. Security forces were kept busy in guarding Soviet and satellite chiefs of State. The verbal fireworks and other causes led the stock market averages decline to their lowest point in 18 months.

Both Soviet Premier Nikita Khrushchev and Fidel Castro discredited themselves thoroughly during their stay here. The Russian Prime Minister made ridiculous demands regarding revamping the United Nations. His remarks against "colonialism" could not be understood very well by the people of the U.S. because of Soviet dominance of Poland, East Germany, the Baltic States, Rumania, Hungary and so on.

Mr. Castro and the other 39 men in his retinue made a spectacle of themselves by very ill behaviour. They left their hotel rooms in a very untidy state. It seems that few used the bathrooms. Some rooms were littered with chicken feathers and there was a parade of girls, known to the New York Police Department, going and coming out of their rooms

Goodwill Being Lost

All this could be the beginning of the end of any respect for Communism and for the Red bloc itself. Speaking of Mr. Castro, it is an amazing fact that Cubans in the U.S. who favoured Castro over Batista are now bitterly opposed to Castro. Most of these people have no property holdings and, therefore, are not influenced by the policy of Cuban property expropriation.

The final two top world figures to arrive here on Sunday were Prime Minister Nehru and Prime Minister Macmillan of Great Britain.

With no reflection on the majority of the U.N. delegates, the General Assembly this time has deteriorated into a debating society. Mr. Khrushchev had the audacity to speak for two hours and 19 minutes. He must have very bad advisers, or, if he has good ones, he does not listen to them. With all the talking, nothing has been accomplished.

The mumbo-jumbo double-talk of the two U.S. Presidential candidates has not helped business either. It is the usual phenomenon every four years. All business indices have been dropping.

New Index

A new index has been added recently for the use of forecasters. It is a barometer of 'want' advertisements, that is, the number of people looking for employment. "Help Wanted Trends" is published at Philadelphia and its analysis is based on the advertisements which appear in 114 newspapers in the U.S. in the nation's key labour areas. Rightly, or wrongly, the outlook is for a downturn.

Economic indices have been dragging along. In an unusual Press conference, Mr. Per Jacobsson, Managing Director of the International Monetary Fund at Washington, urged American business to stimulate business activity by cutting prices. He spoke of a "slackening of activity"—and quite rightly so—and he said it had been going on for months. Also, he made no prediction when it would end.

Mr. Jacobsson stressed that the world no longer follows the U.S. price structure and that "the world price level is set now by the competition of many countries. This country has to adapt itself to world prices as many other countries have." This is a very good point, but hardly achievable with present labour policies which pushes up costs beyond increase in productivity.

The present decline—and nobody dares to call it a recession—has two basic reasons. One is the drop in inflationary expectations of which the Eisenhower Administration and the bankers are quite proud. Number two, as a result, there has been more cautious business and consumer buying. Strangely enough, in the U.S. people buy when prices are going up for fear of still higher prices and, when quotes are going down, they do not buy in anticipation of still lower prices.

While production was down in August by about 1 per cent., personal income was up. It set a new record to the seasonably adjusted rate of $407,600 million. This was $300 million more than in July. The biggest factor for this rise was a civil service pay rise which increased Federal wages and salaries. But there was a decline in farm income and manufacturing pay-rolls.

The national job situation is like the rest of the economy. It is not bad, but not quite good enough. Unemployment is causing concern. Specialists say the number of unemployed men is the most disturbing development. There were 1.9 million unemployed men in August. The total has now risen for three straight months. There were 816,000 people in August who had been unemployed for 15 weeks or longer.

Reflecting the worsening balance of payment position owing to the movement of dollars to better paying money markets abroad, the U.S. in the last week of September lost the largest amount of gold in a single week in 29 years. The gold loss was $181 million. It reduced U.S. gold stocks to $18,759 million, the lowest since early 1940. The decline since 1st January was $698 million.

U.S. Electric Rocket Engine

Work has commenced on the development of an electric, or plasmajet rocket engine. The device would be the size of a standard thermos bottle, according to the U.S. National Aeronautical and Space Administration. Such an engine would be three to four times more powerful and efficient that the most advanced chemical propulsion systems.

The U.S. space agency suggests that rocket engines will have to be used to push space craft through the earth's atmosphere, in order to neutralise the power of gravity. Then, the electric-plasmajet engine would take over and supply the power needed for many millions of miles, and/or kilometres, on deep space missions.

To escape from the earth's gravity, space craft have to travel at a speed of 25,000 miles, or 40,000 kilometres, an hour. This is the speed known as "escape velocity."

One important advantage electric engines have over chemical propulsion systems, now in use on the launching pads, is that they will be able to operate over a much longer period of time than their chemical contemporaries. A space craft to fly around Mars or Venus would need an engine which would supply power for a long time.—*All Rights Reserved.*

(Concluded from next column)

ther the cost of a social programme should be met as in Russia out of funds subscribed directly by State-owned industry). This programme is, of course, economically practicable, but its main snag is ensuring its political acceptance!

Everybody is agreed that the country needs increased industrial investment, more technical education and a vast increase in research spending. The Government will only admit financial controls to ensure the first and has no programme for the others. The public, enjoying its consumer boom, sees no need for the drastic programme of the socialist left. The right socialist wing is in danger of becoming lost in frustration (as the Party was in 1950), when it finds it has no power to carry through its industrial policies. Where then is the answer to be found?

If the Labour Party Conference succeeds in stimulating serious public consideration of this fundamental problem facing the British economy, it will have performed a public service. —*All Rights Reserved.*

Finland proposes to secure electric energy from Russia at a rate of 200 million kw. annually for ten years, with effect from 1st January 1961. The huge wood-working concern, Enso-Gutzeit, with mills near the eastern border, will use the power. A special power line will be constructed connecting the grids of the State-owned power company and the Soviet corporation concerned. The erection of the line will be the responsibility of the Finnish Government as far as the frontier, while the Russians will construct the line falling within their territory. Finland has already been receiving power under a similar agreement with Sweden.

THE FAMILIAR DILEMMA

(From Our Own Correspondent)

LONDON, *26th September*

LONDON LETTER

WITH the holiday season scarcely over and little of note to record in the City, interest centres in the political scene. The difficulties of working out a sensible defence policy having been demonstrated to a wondering public at the recent Conference of the Trades Union Congress, it now seems that the difficulties of working out a sensible economic policy are about to be similarly demonstrated at the forthcoming annual Conference of the Labour Party. Nor is this a matter of remote academic interest—on the ground that Labour could not form a Government for many a long day—or a matter of domestic party interest alone: the issue is a vital one for this country and it is to be hoped that the stern content of the debate will not be swamped in sterile ridicule of a party which may not seem able to make up its mind as to what it wants.

For the issue is, indeed, one which transcends party politics; though Labour sees it as a question of how they are to achieve their social ambitions even more than their economic ones, the same arguments apply if one is concerned solely with the familiar dilemma of combining an investment with a consumer boom. It is the question of how to ensure economic priorities.

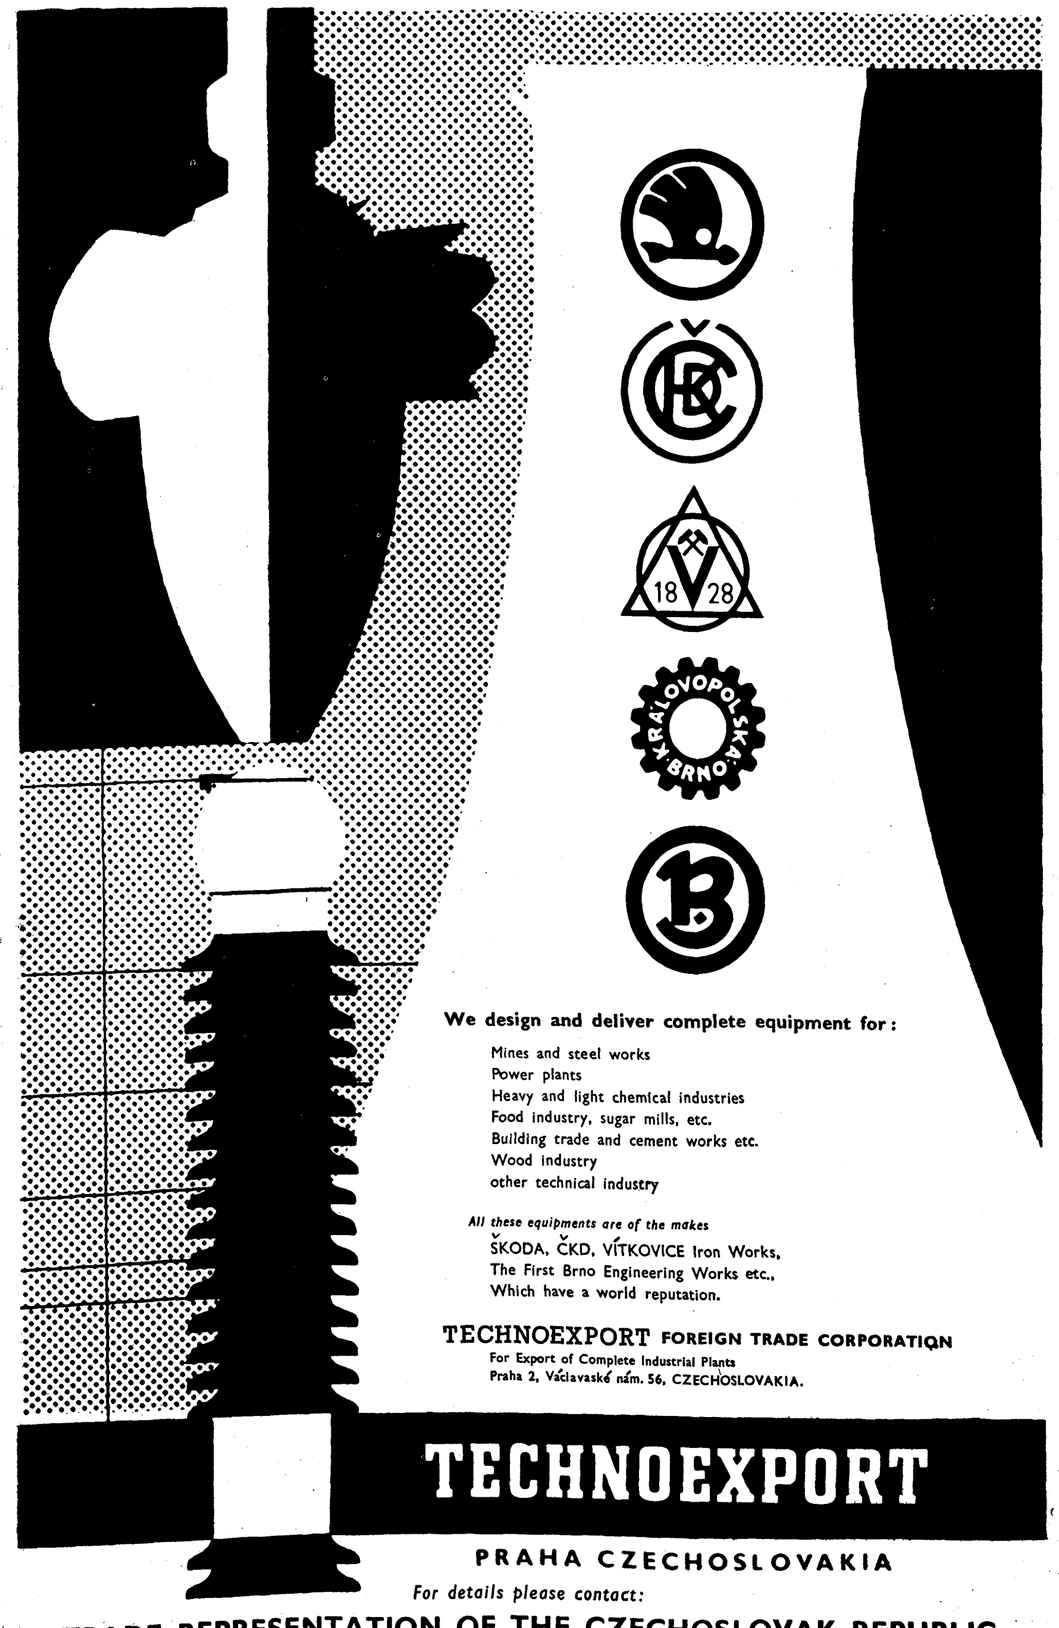
Britain's economic society successfully stimulates the demand for more and more consumer goods and investment is stimulated in so far as it creates the means for meeting such demands. The Labour Party is concerned that the economic means should also exist for a wide social programme of increased education, more public works such as roads, more social welfare, etc., and they also want to see increased investment both as a general means to the increase of wealth and as a means of ensuring this country's economic viability—for example, in increasing exports. To ensure both the increased investment and the social programme, the Labour Party traditionally demanded nationalisation at least of all the important means of production. This demand, in a relatively prosperous society, has apparently cost the Party three general elections in a row—hence the demand by the right wing of the Party, including its leader, that nationalisation should be dropped.

The debate is in danger of degenerating in the public eye into a simple issue of whether the Party is going to insist or not on nationalisation to further its aims. And the right wing is indeed endeavouring to develop this as the issue. If it were all, the Party might well be left to its internal wrangles—but it is far from being all. The issue is what forms of control does the British economy need to ensure that the essential economic priorities of the time can be enforced. The Government wants to see more investment and more exports: it wants this at a time when there is a consumer boom and it fears a strain on overall national resources. It decides, therefore, to check the consumer boom and repeats the crisis of 1954, when both spending and investment were successfully curbed—and the economy plunged into stagnation. This dilemma is fully recognised both by the Government and by all schools of economic thought. A lot of business opinion sees the only solution on traditionalist lines—let restriction lead to unemployment and thus to reduce wages, in the end providing the necessary stimulus for profitable investment. But the Government rejects that solution for political reasons and is at a loss for another one.

The right wing of the Labour Party wants to attack monopolies and restrictive practices and use the instrument of taxation to produce the resources for more social welfare and public works. But how can such a programme succeed? To prevent or break up monopolies is to go against the trend towards economic centralisation being followed by modern industrial countries—it is like demanding the abolition of modern machinery. And how much tax will the public stand? It is all very well to say that increased economic activity will automatically increase the revenue—but this begs the question, how is one to get the increased economic activity?

The left wing of the Labour Party says that increased public ownership is the only way to ensure that the right quantity of investment and the right social priorities are met (the problem of finance still arises and they do not say whe-

(Continued in previous column)



We design and deliver complete equipment for:

Mines and steel works
Power plants
Heavy and light chemical industries
Food industry, sugar mills, etc.
Building trade and cement works etc.
Wood industry
other technical industry

All these equipments are of the makes
ŠKODA, ČKD, VÍTKOVICE Iron Works,
The First Brno Engineering Works etc.,
Which have a world reputation.

DEVELOPMENT OF BANKING

FORMATION OF REGIONAL AND UNIT TYPE OF BANKS SUGGESTED

ONE of the peculiarities of the monetary system in India is that the organised banking sector covers only a limited sphere of economic activity variously estimated at between 30 and 50 per cent., and the unorganised and non-monetised sectors constitute a powerful force and a threat to the monetary balance. Bank money, according to a leading banker, is known to represent only about 30 per cent. of the functional money supply and 8 per cent. of the national income, as against about 80 per cent. and 32 per cent., respectively, in the U.S. The impact of cash money outside the banking system and of non-bank credit on economic activities in India is, therefore, of considerable proportions. This impact, it is claimed, is not amenable to the known methods of monetary control. But there is no doubt that this imbalance can be corrected if a rapid and effective expansion of the banking system is allowed to take place. Notwithstanding the limited field it covers, the banking system has been doing a useful service in the growing economy of the country. It is, however, felt that its service can be more effective and purposeful, if it is provided with better facilities and scope.

Unfortunately, the role of banking in the development of the country does not seem to have received the attention it deserves at the hands of the planners. For in none of the three Plans is there any mention about the development of banking. In the circumstances, the various suggestions put forward by Mr. B. K. Dutt, Managing Director, United Bank of India, Calcutta, in the course of Prof. Benoy Kumar Sarkar Memorial Lectures delivered by him a few weeks ago at the University of Calcutta, for a rapid and effective expansion of the banking system, deserve wide attention. Mr. Dutt, it may be noted, was a member of the Committee on Finance for the Private Sector, popularly known as the "Shroff Committee," and as such had a unique opportunity to study the problem at great length. He is also the author of a note on the need for a plan to develop banking, published a little over three years ago.

Need for a Separate Ministry

Mr. Dutt is of the view that the expansion of the banking system is a complete function in itself and needs very much more attention than it receives now. For this purpose, he says, a separate ministry should be created. Its function will be, in the words of Mr. Dutt, "to expand and develop the banking system, with a view to bringing at least the bulk of the economic transactions within its purview, to organise proper control and to manage money through its monetary policies. The Central Bank functioning within such a ministry, which will not be biased by fiscal considerations, but which will, on account of its purpose, be a willing co-operator with the fiscal authorities *on equal terms*, can function in a more effective manner than it can under the present set-up." He has also suggested the immediate formation of a Banking Expansion Commission to make a thorough study of our monetary system, in general and the banking system, in particular, and to take prompt and suitable measures for improvement and further development.

The Plan for the rapid spread of banking facilities, Mr. Dutt suggests, should be geared to the smooth and effective functioning of some other important links in the monetary chain. These include (*a*) marketing of Government securities outside the treasury group and the banking system, and (*b*) raising of risk capital and long, medium and short-term finance by the private sector for productive purposes. The spread in the holdings of Government loans can be done with the assistance of banks. While normally banks may not be willing to undertake the marketing of Government securities, as it would mean a diversion of deposits from the banks to the Government, the difficulty can, according to Mr. Dutt, be overcome, "if the Government decides to select a number of approved banks as depositories of Government funds both for revenue receipts and for sale receipts of the Government loans," as is being done in the U.S.

Banks can also render useful service in developing the capital market by participating in new share issues of sound and well managed companies. This, Mr. Dutt says, can be done by organising suitable consortiums. The development of capital market can also be done by organising unit trusts. The consortiums which take the place of issue houses, can be formed at different centres in collaboration with banks, the L.I.C., insurance companies, the State Financial Corporations, etc. The function of the consortiums is to examine new flotations and to recommend to the associates particular issues for subscription. Describing the main features of the unit trusts, Mr. Dutt says:

"Unit trust which is found in the U.S.A., the U.K. and other European countries, is formed by a company that purchases a block of specified shares and securities and hands it over to Trustees formed for the purpose. The managing company sells to the public, certificates as title to the prescribed uniform fraction of the block; these fractional titles are known as units. If a holder of such units wishes to release his holding, the managing company is obliged to buy it back. Usually banks are appointed trustees for holding the block of shares or securities in trust for the unit holders, the promoting company managing the business of the trust for a specified consideration. The net income is distributed amongst the unit holders. Such unit trusts are eminently suited for enabling participation in equity capital by middle and lower classes who are unable to operate directly on the exchanges or bear the risk of a direct investment. These trusts will also facilitate the banks' participation in consortiums by promoting liquidity of shares."

Co-ordination of the Two Sectors

The development of securities and capital markets with the help of banks will prove effective in checking flow of money into the non-monetary sector and in mobilising the available floating resources in the country and pave the way for better development of banking. There is, however, one difficulty, according to Mr. Dutt, in the way of better, quicker and systematic spread of banking, namely, the competition from the State Bank of India which is in a more privileged position than the banks in the private sector. There is "unhealthy competition" amongst the banks in the private sector, too. Mr. Dutt, therefore, emphasises the need for co-ordination of the two sectors through an effective and dynamic association, which will lead to a planned exploration of the points where banking facilities are urgently needed and the allocation of responsibility for expansion in such areas as between the different units functioning in the system. The need for co-ordination between the commercial banks and other specialised financial agencies is also emphasised by Mr. Dutt, so that the total finances required by a borrower can be provided from one source and properly channelled through banks and the specialised agencies. This will eliminate the need for industrial units obtaining their requirements from non-institutional lenders at high rates of interest.

The spread of banking through opening of branches of existing banks, particularly the better known ones, has been found to be a slow and long-term process. Despite the opening of new branches, about half of the number of towns in the country have no banking facilities. The tendency in recent years has been towards vertical growth of banks. The total number of banks has actually declined from 585 at the end of 1949 to 342 as at the end of 1959, while the number of offices has gone up from 4,359 to 4,687 only. Of the 4,687 offices at the end of 1959, 2,830 represented branches of 13 major banks, having deposits of over Rs. 25 crores. These 13 major banks accounted for over 80 per cent. of the total deposits of all Scheduled banks and for over 90 per cent. of the rise in deposits during the last one decade. Such a growth, depending on a few major banks, Mr. Dutt says, makes the system vulnerable. "The vastness of the country and wide diversity in regional economies," he adds, "point to the need for a more balanced growth of banking with not only a spread of bank offices but also a properly laid structure. In other words, the development of banking has to be more regional, so that the economy of a particular region may not suffer owing to inappropriate or inadequate appreciation of its needs by the larger banks having headquarters elsewhere and functioning in that area through branch offices." The regional development of banking, according to him, can be successful only with a horizontal growth of banking, rather than with the vertical growth.

How such horizontal growth of banking can be achieved is described by Mr. Dutt thus:

"There is need for different types of banks in the country. We must have the larger all-India banks, then we must have medium regional banks having branches at important centres of the respective regions; lower down we must have local banks, in each region, having a spread of branches in their respective areas of operation; and, at the bottom, we must have a large number of banks of the 'unit' type, each bank having one or, say, two or three offices. Let us try to adjust the structure with reference to the administrative division of the country. A unit or unit type bank may be situated at any one place (other than the provincial or divisional headquarters) and have one or two other offices in its close neighbourhood forming part of an economic entity with the town or village of the particular unit bank; a local bank may be a bank with its head office at the divisional headquarters and having offices in the different district and sub-divisional towns (such a bank need not have any office at places within its territory which are already provided with adequate banking facilities); the regional bank would be a bigger bank having its area of operation confined to its own region—for this purpose we may divide the country into, say, half a dozen or so regions. The whole structure has to be suitably co-ordinated through correspondent arrangements; the unit or unit type banks may have arrangements with the local banks, and the local banks in their turn with the regional, the latter having similar correspondent arrangement with the major national banks or other regional banks.

"If we can decide upon such a structure, the rest of the planned expansion may not be too difficult; rather, it will be possible to organise a much larger number of new banking offices in different parts of the country simultaneously and at a very much quicker pace than heretofore. The question that arises at this stage is: how can such new banks be organised? In the present structure, we already have the larger national banks as well as a number of medium banks who may act as regional banks. We, however, do not have any "local" and "unit" banks effectively functioning, except in certain parts of the country.

"I consider that it is possible to organise such local and unit banks by utilising the services of the larger national and medium regional banks. The first thing to be done would be to list the total number of places requiring banking facilities. Then, a priority plan may be chalked out. In doing so, however, due importance will have to be given to each and every region. Secondly, a number of major and medium banks may be selected and different regions may be allocated to them. These banks can then fix up amongst themselves the areas within the respective regions that each will cover. The programme they will be required to work out may provide for opening new branches at such places in their respective areas as may be served adequately through branch offices and organising new local and unit banks at other places within their respective jurisdictions. The new banks may be organised as subsidiaries in the first instance. In such a subsidiary, local interests will have to be associated by inclusion in the Board of Directors and incorporation of the condition that the subsidiary should organise local capital within a given period—say, five-years—at the end of which the capital provided by the sponsor bank will have to be fully repaid and the subsidiary will then be on its own, having only a correspondent arrangement with the sponsor bank for business facilities as well as for continuous advice and guidance. The prospect of becoming an independent unit on fulfilment of certain conditions will enthuse local interest through the initiative of the chief executive of the concerned subsidiary, and, with such local enthusiasm, mobilisation of local resources should not be a difficult task.

"There is, however, the chance of failing to mobilise adequate capital locally to pay off the sponsor bank within the given time. For such contingencies, therefore, a scheme like this will need Government backing; any shortfall should be advanced by the Government against convertible debentures or any other suitable instrument, which the concerned subsidiary, after becoming independent of the sponsor bank, would in due course take back by repaying the Government. Such a banking pattern, instead of adversely affecting the larger banks, will be, in effect, beneficial to them. With growth in the economy and development of banking habit, bank deposits will substantially increase and a consequential benefit will flow to the larger banks. Further, correspondence business between the smaller and larger banks will grow and thus bigger banks will also get the benefit of deposits to be maintained by the smaller banks; and there will also be other remunerative business coming to them from the smaller banks."

Losses to be Reimbursed

The establishment of a subsidiary and its working would also mean some losses. Such losses, Mr. Dutt suggests, should be reimbursed by the Government to the sponsor bank. It may be argued that as such losses are after all to be borne by the public, it will prove to be a burden. Mr. Dutt, however, feels that "if the nation can bear, as it should, the expenses on education and social overheads, it can and should similarly bear the cost of establishing a healthy banking system as well." According to Mr. Dutt's reckoning, the cost may not be heavy. It may not exceed Rs. 50 lakhs per annum for organising 850 unit banks and 150 local banks in the course of five years.

There are, however, some inhibiting factors which need to be removed for a proper growth of banking. These and other suggestions of Mr. Dutt will be dealt with in a subsequent article.

INDUSTRIAL FINANCE CORPORATION OF INDIA

CHAIRMAN, MR. K. R. K. MENON'S REVIEW

SIGNIFICANCE OF FOREIGN CURRENCY CREDIT EXPLAINED

SPEAKING at the Twelfth Annual General Meeting of the Industrial Finance Corporation of India held at New Delhi on 24th September 1960, Mr. K. R. K. Menon, Chairman, told the shareholders that the Corporation had already received requests for foreign exchange credit to the entire extent of the loan received from the Development Loan Fund. He hoped that the swift use of this facility would pave the way for further credits from the D.L.F. in the near future. He was also hopeful of persuading the World Bank to give the Corporation a substantial loan in convertible currency to meet the pressing needs of its constituents.

The following is the full text of Mr. Menon's speech:—

"GENTLEMEN,

"I have pleasure in placing before you the annual accounts of the Corporation and the report of the Board of Directors for the year ended 30th June 1960. Printed copies of the accounts and of the report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read.

"The year that has passed has been a noteworthy one for the Corporation from many points of view. Our gross profit for the year came to Rs. 2 crores 50 lakhs, which represents an increase of nearly 25 per cent. over that of last year. Our reserves now exceed Rs. 1 crore, after finding a sum of the order of Rs. 50 lakhs to meet a bad debt that we wrote off in 1957. We have put away Rs. 10 lakhs this year also towards repayment of the Government subvention received in the past, and I confidently hope that the balance of our debt to the Government on this account, which now stands at Rs. 28 lakhs, will be repaid in the course of the next three years, if not earlier. The total amount of loans approved by your Board of Directors during the year aggregated Rs. 17 crores 92 lakhs, out of which final sanctions were issued for Rs. 9 crores 15 lakhs, the balance Rs. 8 crores 77 lakhs having been held over pending receipt of Government's orders. The total amount approved by us during the year, viz., Rs. 17 crores 92 lakhs, besides being a very big advance from our last year's figure of Rs. 3 crores 79 lakhs, is also better than the highest figure ever reached by us previously, viz., Rs. 15 crores 18 lakhs in 1955-56. Progress was made in the field of underwriting also, the total for the period ended 30th June 1960 being Rs. 1.87 crores. And last, but not least, during this year, our efforts, dating from as long ago as 1951, to obtain credits in foreign currency, were crowned with success with the sanction by the D.L.F. of the United States Government of a loan of 10 million dollars to us towards the end of the year for being sub-loaned to industrial concerns in this country.

Main Business

"Loans continued to constitute the bulk of our business operations. We had reached in 1955-56 what till now has been the peak, viz., Rs. 15 crores 18 lakhs. It will be recollected that this figure represented a marked advance on the previous two years' figures of Rs. 7 crores 34 lakhs and Rs. 5 crores 27 lakhs, respectively. The peak year of 1955-56 was followed by three years of steady fall—Rs. 11.91 crores in 1956-57, Rs. 7.79 crores in 1957-58 and Rs. 3.79 crores in 1958-59. It is all the more gratifying, therefore, that this has been followed in 1959-60 by the remarkably steep rise to Rs. 17 crores 92 lakhs. It is noteworthy that this phenomenal improvement in our loan operations during the last year, though it partly reflects the strident advance in industrial production that has been taking place recently, cannot be attributed to any easing in the foreign exchange situation or the liberalisation to any appreciable extent in the licensing of the import of capital goods in that year. Out of the Rs. 17 crores 92 lakhs mentioned by me, only Rs. 5 crores 68 lakhs represent loans to concerns which obtained import licences during the year 1959-60; Rs. 1 crore 46 lakhs represent loans to concerns which had obtained import licences in previous years. The balance, Rs. 10.78 crores, is, in the main, accounted for partly by loans to concerns who were to utilise our rupee loans for obtaining foreign currency credits from the Central Government or directly from foreign financial institutions, and partly by loans to concerns—mostly sugar co-operatives—the large bulk of whose capital goods requirements were planned to be obtained by indigenous fabrication. This latter factor has indeed been a very welcome development, particularly the institution by the Government of the consortia for the manufacture of sugar factory machinery in the country. We in the I.F.C. may, I think, look forward with great hope to further and faster progress in this line in the period covered by the third Five-year Plan, in the confident expectation that we should thereby be enabled to play our part adequately in our function of industrial financing, in spite of the continued deficiency in foreign currency resources which has been the major obstacle in our way during the past few years.

Foreign Currency Loan

"I must, however, make it clear that, impressive as has been our achievement in this regard in the past year, the picture that I should have been able to present to you today would certainly have been a very much brighter one indeed if only we had had a certain amount of foreign currency funds also at our disposal. In January 1960, when we were negotiating for a foreign currency loan from the Development Loan Fund of the United States Government, the position was that, for want of import licences alone, loan applications aggregating Rs. 6.15 crores had had to be treated as withdrawn, and out of the remaining applications which we then had on our hands, there were applicants who were counting on foreign exchange credits of the total value of as much as Rs. 20.93 crores to be able to implement the schemes for which our financial assistance had been sought. These figures provide an index of the significance of the foreign currency component in the financing by our Corporation of large-scale industrial enterprises in India at present. Every little assistance in this direction helps, and we have, therefore, reason to be thankful to the Development Loan Fund authorities for the loan of Rs. 4.7 crores in U.S. dollars which they sanctioned to us in April this year. How much of a real need even this small loan has helped to serve can be gauged from the fact that already we have received requests for this entire amount, and we are hoping to process these before the end of a couple of months or so from now. Considering that there was a good deal of initial apathy to be overcome, arising from the fact that, except for individual loans not exceeding a hundred thousand dollars—which is less than 5 lakh rupees—loans from this D.L.F. credit can be availed of in dollars only, and must be utilised for purchase of capital goods exclusively in the U.S.A., I think we may rightly claim that we have made good and swift use of the facility already given to us. I confidently hope that this will pave the way for further credits from the D.L.F. in the future. I am also hopeful that, with the continued good offices of the Government of India, we should succeed in persuading the World Bank, at whose doors also we have been knocking persistently during the last few years, to give us a substantial loan in convertible foreign currency to meet the pressing needs of our constituents.

Terms of D.L.F. Loan

"You will no doubt be interested to know what the main terms and conditions of the D.L.F. loan that we have already obtained are. Briefly, the loan will be available to the I.F.C. for grant of sub-loans to industrial concerns in the private sector in India for approved projects in any industry, except textiles including manufacture of wearing apparel and made-up textile goods, ship-building, tobacco, beverages, petroleum refineries and hotels. Each specific project for which a sub-loan is given by us out of the D.L.F. credit will need to be approved by the D.L.F., if the sub-loan exceeds two hundred and fifty thousand dollars, which is roughly the equivalent of 12 lakh rupees. The payment of the sub-loans will be made to foreign suppliers of capital goods, materials and services, on behalf of the loanee concerns in India, by arrangements made by the D.L.F. through a bank in the U.S.A. The sub-loans will be for periods ranging from 5 to 25 years according to the needs of the industrial concerns. Repayment will be made in Indian currency. Purchases of capital equipments, materials and services out of the sub-loans must, as already stated, be made in the U.S.A. only, except where the loan is for *less* than $100,000, in which case, purchases can be made in any country included in Code 899 of the International Co-operation Administration Geographical Code Book of the U.S.A. Government; this includes U.K. and most of the Western European countries. The sub-loanee, that is, the Indian concern, will have to give an undertaking that the procurements of the capital equipments, materials and services are made in the U.S.A. or elsewhere, at reasonable prices approximating to the lowest competitive price having regard to quality, time, cost, delivery, etc.; this is certainly a wholesome provision which should curb any tendency towards extravagance. Cost of shipment of capital equipments and materials under sub-loans of amounts above $100,000 will be financed only if these are transported in U.S. vessels. 50 per cent. of the gross tonnage of such items will have, in any case, to be transported in privately owned U.S. commercial vessels if such vessels are not declared unavailable. Import duties, tariffs, etc., will not also be financed out of the sub-loans. The rate of interest to be charged by the I.F.C. on the sub-loans has not yet been decided, but it will not, under our arrangements with the D.L.F., exceed 8 per cent. per annum in any case.

Rupee Resources Augmented

"I will turn now for a moment to our rupee resources on which we have been wholly dependent up to the end of the past year. As I have stated in the annual report before you, we went in for a bonds issue again last year, and it proved to be a tremendous success, the required amount of Rs. 5 crores having been oversubscribed within a few hours of the list being opened. In accordance with the usual practice, we retained an additional sum of Rs. 48 lakhs 87 thousand out of the total amount subscribed, which resulted in the total allotment aggregating Rs. 5 crores 49 lakhs. The bonds were for 12 years this time, as against 10 in the preceding year, and the rate of interest offered was 4 per cent. only, as against the previous year's 4¼ per cent., the discount offered being also less, at 0.25 per cent., as against the previous year's 1 per cent. I am sure you will share with me our gratification at this encouraging sign of public confidence. You will also be interested to know that, out of the sum of Rs. 5 crores 49 lakhs which was allotted in all, as much as Rs. 3 crores 81 lakhs were accounted for by allotments to the private sector alone, and Rs. 1 crore 68 lakhs to the Life Insurance Corporation of India.

"Coming now to the distribution of our loan approvals as among the various industries, sugar continued to take the first place in the past year also, followed by paper and rayon. It is to be noted that the bulk of the loans to the sugar industry (Rs. 4.20 crores out of Rs. 5 crores) went to co-operative societies, the total amount of our loans to which now stand at Rs. 18 crores 89 lakhs, distributed among 32 societies located in Assam, Andhra Pradesh, Gujarat, Maharashtra, Madras, Mysore, Punjab and Uttar Pradesh. Out of these 32 sugar co-operatives, 28 availed of loans to the extent of Rs. 14.11 crores. Of these, barring five, which are still in the construction stage and one which has already repaid the loan availed of by it, the output of the remaining 22 during the year under review came to 2.45 lakh tons of sugar; this is equivalent to nearly 10 per cent. of the country's entire production of sugar. The societies have put the loans advanced by us to prof per use, and, in the matter of meeting their commitments relating to the payment of interest and repayment of principal, their record has been satisfactory, which is gratifying in view of the fact that quite a few of these societies are still in the initial stages of production and have had their share of the many teething troubles which beset newly set up factories.

ART SILK YARN SUPPLY POSITION

QUOTA FOR ESTABLISHED IMPORTERS CUT

AS was widely anticipated, the Government of India has applied the import cut axe on art silk yarn. Thus, the quota of established importers has been reduced from 7½ per cent. to 5 per cent. for the current half-year licensing period (1st October 1960-31st March 1961). The actual extent of the cut is, of course, less than what both the art silk weaving industry and the traders feared; it was rumoured that the overall imports might be slashed by 10-12 per cent. The Press version of the import policy does not say anything about the procedure applicable to actual users. It is, however, gathered from enquiries that the actual users would continue to be free to import any deniers and qualities of art silk yarn, nylon yarn and Bemberg yarn. It will be recalled that, in the import policy for the previous half-year, the Government had removed all restrictions on imports.

Two considerations have weighed with the Government in deciding to reduce the import quota for art silk yarn: one, foreign exchange difficulty and, two, marked improvement in indigenous production. The quantity of art silk yarn actually produced during the first six months of the current calendar year was 20.78 million lbs., which compares favourably with 17.22 million lbs. in the corresponding period of 1959. The rise was accounted for by both viscose and acetate yarn. The output of viscose yarn was higher at 18.68 million lbs., as against 15.55 million lbs., and that of acetate was 2.10 million lbs., as against 1.67 million lbs. While the indigenous production of art silk yarn was higher thus, there was a sharp drop in imports of foreign yarn. The total imports during the six months under review amounted to 22.87 million lbs. valued at Rs. 6.80 crores, as against 31.19 million lbs. worth Rs. 8.91 crores in the corresponding period of 1959. Consequently, the total available supplies of art silk yarn during January-June 1960 were lower at 43.65 million lbs. as against 48.41 million lbs. It is not surprising, therefore, that the prices of art silk yarn are currently ruling higher than those in the beginning of the year and a year ago as is indicated below:

(Per lb.)

	Latest available	Beginning of 1960	A year ago
Indigenous yarns:	Rs.	Rs.	Rs.
N.R. 150 Bt. cones I grade.	5.20	4.56	4.19
N.R. 120 Bt. cones I grade.	5.89	5.44	4.50
Imported yarns:			
150 Italy	6.25	5.31	4.81
60×1 Capressa Bomberg .	9.81	7.81	7.44

The statement below indicates the trend of output of the different deniers during the first half of 1959 and 1960, as also in the whole of 1959:

(In thousand pounds)

Varieties	January-June		Whole of 1959
	1960	1959	
Art silk yarn (viscose):			
100 Bright	1,401	1,177	2,166
120 ,, ...	9,961	6,692	16,184
150 ,, ...	5,446	4,924	11,356
300 ,, ...	243	277	679
Others ,, ...	99	163	260
120 Dull	1,346	1,304	2,228
150 ,, ...	167	170	170
Total ..	18,679	14,707	33,054
Art silk yarn (acetate):			
100 Bright	57	15	15
120 ,, ...	488	357	711
150 ,, ...	874	596	1,228
120 Dull	86	74	120
150 ,, ...	192	281	439
300 ,, ...	374	323	579
Others ,, ...	32	24	77
Total ..	2,103	1,670	3,169
Grand Total ..	20,782	16,377	36,223
Staple fibre yarn:			
Upto 10s	60	35	130
11-20s	1,545	2,844	4,669
21-30s	964	1,839	2,619
31-40s	1,883	2,477	4,375
Above 40s	425	389	733
Total ..	4,876	7,584	12,526

Because of the reduction in the total supply of yarns, production of art silk fabrics was substantially lower. It is common knowledge that the weavers of these fabrics have been bitterly complaining of shortage of yarns, resulting in a lot of unemployment of both men and machines. Indicative of this position is the appreciable fall in the output of fabrics produced which during the first half of the year aggregated only 178.40 million yards, as against 210.61 million yards in the same half-year of 1959. The total number of art silk weaving units known to exist is 3,883. An idea of the more important varieties of art silk fabrics produced during the first six months of 1959 and 1960 can be had from the following table:

(In thousand yards)

Varieties	January-June		Whole of 1959
	1960	1959	
Taffeta	12,759	12,267	27,757
Georgette	4,176	3,455	9,245
Crepe	21,155	23,742	54,267
Stioze	3,109	4,101	10,084
Satin	10,907	12,688	25,958
Velvet	1,544	868	2,565
Others	124,748	107,131	270,442
Total ..	178,398	164,252	400,318

The Development Council for Art Silk Industry has recommended for inclusion in the third Five-year Plan quite an ambitious target of production for art silk, staple fibre and art silk-staple fibre mixed fabrics, namely, 880 million yards (inclusive of the quantity required to meet the export demand). This target represents a rise of 480 million yards as compared with the actual output of 400 million yards in 1959.

On this issue, it will be worthwhile to refer to the views expressed by the Association of Man-made Fibre Industry. The Association has urged that the third Plan target currently envisaged by the Planning Commission must be stepped up substantially to meet the growing demands of the country. For, according to it, an increasing population and the continued rise in standard of living are bound to stimulate demand for textiles as a whole, but a large part of this increase may be expected to accrue to rayon fibres for four reasons. One, the growing demand for food production on agricultural land may limit or even reduce the supplies of raw cotton, wool and other allied fibres, by bringing more land (presently used for the growing of cotton) under the plough. Two, raw material for rayon (cellulose woodpulp) is obtained from places unsuitable for food production (from forests and craggy slopes of hills) and will not compete with arable lands desperately needed for growing food crops. Although the supply of this raw material is well assured, research is continually seeking alternative sources. Three, rayon enters into all sections of textile industry on its own or in blends and into every field of apparel, household and textile manufacture—at every price level. Four, these fibres are particularly susceptible to improvement in quality and properties, and can be produced to predetermined specifications.

The targets fixed by the Council for rayon-synthetic yarn and fibre to be achieved by the end of the third Plan (1965-66) are as under:

(In million lbs.)

Filament yarn:	
Viscose .. .. .. (on 120 denier basis)	140
Acetate .. .. .. (,, ,, ,,)	24
Cuprammonium .. .. .. (60 D basis)	10
Synthetic .. .. (30 D basis)	10
Total ..	184
Staple fibre:	
Viscose	130
Acetate	8
Synthetic	3
Total ..	141

According to the Council, though on technical basis the minimum economic size of a unit to manufacture viscose-acetate rayon yarn should be eight million lbs. per annum, initially the units may be licensed for four million lbs. capacity which can be expanded later to eight million lbs. Licensing of additional capacity for manufacturing acetate rayon yarn is to be made on the basis of allowing imports of cellulose acetate in the initial stage on the condition that, after a stipulated period, the production of acetate yarn would be based on indigenous cotton linters and alcohol.

Sometime ago, the Development Council had suggested the formation of a corporation to promote exports of art silk fabrics. The Government of India, however, does not consider it necessary to pursue this idea, since, in its opinion, the export promotion scheme for rayon textiles is functioning satisfactorily. Another suggestion of the Council was that the manufacture of rayon tyre cord and dissolving pulp industry must be brought within the purview of the Council. This matter, we are told, is still under examination. Yet another suggestion was that the Central Board of Revenue might be requested to consider the request of the Association of Man-made Fibre Industry to levy excise duty on rayon yarn on the basis of weight given on packing cases by yarn manufacturers. It is said that the Ministry of Finance has been addressed in the matter by the Commerce and Industry Ministry.

QUALITY CONTROL FOR ART SILK GOODS

Quality control in respect of all art silk goods exported under the export incentive scheme has been reintroduced with effect from the 1st inst. Accordingly, such goods should now conform to the revised regulations for inspection and minimum standard specifications as announced in the Textile Commissioner's trade notice dated 21st September 1960. Further particulars can be obtained from the regional offices of the Textile Commissioner or the Silk and Rayon Textiles Export Promotion Council, Bombay.

After the quality control was first introduced last year, the exporters of art silk goods, especially of the handloom products, made representation to the authorities that adherence to the specifications laid down had greatly handicapped exports. It was reported that actually 80 to 90 per cent. of the goods meant for exports were rejected, since they were below the required standards. As a sequel to these representations, the authorities withdrew the scheme. But now the scheme has been reintroduced with suitable modifications in the light of the views expressed by the interests concerned.

TEXTILE IMPORTS INTO CEYLON

A ban on imports of all cloth costing more than Rs. 7 per yard and garments, including *saris*, over Rs. 40 each has been imposed by the Government of Ceylon. Hitherto, these items were under open general licence. This move is described as a part of the Government's bid to conserve foreign exchange. Only four months ago, it will be recalled, Ceylon had banned the imports of towels from India.

The latest decision of the Ceylon Government is not of much significance in so far as the export trade in Indian cotton textiles is concerned, because the bulk of the cloth exported by India to Ceylon consists of varieties the prices of which are much below the Rs. 7-per-yard level. Moreover, Ceylon has ceased to be an important buyer of Indian cotton textiles. The actual offtake of piecegoods by this country during 1959 was no more than 11.5 million yards, out of the total exports of 810 million yards, as against as much as 24.9 million yards in 1954. Its offtake during 1958 and 1957 was 16.3 million yards and 15.3 million yards, respectively. The Ceylon Government's move may, however, check the upward trend in exports of rayon piecegoods, which are currently at an annual rate of nearly three million yards, as against the actual shipment of 1.08 million yards last year.

WOOL RESEARCH IN NEW ZEALAND

The establishment of an independent wool research organisation in New Zealand to carry out an expanding programme of research into the chemical and physical properties of wool is awaiting Cabinet approval. It is recommended by the New Zealand Wool Board and the Department of Scientific and Industrial Research. Growers and the Government, it is proposed, should contribute equally to the cost of the organisation which will have an initial budget of £100,000. Currently, the Wool Board spends about £30,000 a year on wool research in New Zealand and its commitment to the new project will mean a considerable increase in its research grants. Without waiting for the Cabinet's approval, the Board has already announced that it will grant scholarships immediately, so that promising graduates who would form part of the staff could have three years' study in overseas universities.

In order to co-ordinate the production of worsted yarn with the needs of the general public, the Textile Commissioner has issued a directive to the worsted mills in India, requiring that the production of worsted yarn for different purposes such as weaving, hosiery and knitting shall be in specified proportions. As a result of this directive, out of the total quantity of worsted yarn manufactured during a quarter, the quantities of worsted yarn produced for use for weaving, hosiery and knitting purposes shall have to be 47½ per cent., 32½ per cent. and 20 per cent., respectively.

The Textile Commissioner has informed the Indian Cotton Mills' Federation that the stamping of price on cloth should be done taking the yard as the measure instead of the metric system. The textile industry was to have changed over to the metric system on the 1st inst., and the mills had been asked to stamp prices on the metre basis from that date. A Press release of the Federation says: "It has also been decided that, in those places where cloth has to bear octroi duties or terminal taxes, it would be in order for the retailers to charge such duties to the extent actually borne by the cloth, over and above the retail price and excise duty as stamped on cloth. The mills are, therefore, being advised to stamp on cloth, besides its price, the words "octroi extra."

OVERSEAS TEXTILE TRADE RETURNS

EXPORTS PICK UP—INDIAN GREY CLOTH IMPORTS RISE MARKEDLY

From Our Special Correspondent

MANCHESTER, *27th September*

PERHAPS the most significant single feature of the overseas trade returns for August is the fact that the cost of imported cotton yarns and woven fabrics for the first eight months of the current year exceeded £42,500,000 and came within £25,000 of the earnings secured from British shipments of similar goods abroad. By volume, the quantity of arrivals of all types of cotton goods has far and away outstripped the same products which are exported from the United Kingdom, but now the value is inexorably being overhauled.

MANCHESTER LETTER

A little progress was made by exporters last month when 26,485,000 square yards of cloth were sent abroad, a rise of over four million yards as compared with the low point reached in July. The inward traffic, however, also increased and the total of 61,530,000 yards showed a marked advance as compared with the past few months. So far, 471,540,000 square yards of cotton cloth have been imported, representing an additional 150 million yards as compared with the end of August last year. In the case of finished fabrics, the rate of arrivals has practically doubled at 80,997,000 square yards, while a similar situation exists in the spinning section where yarn imports have reached 26,439,000 lbs. as against 13,556,000 lbs. in the first eight months of 1959.

Eastern Suppliers

Further substantial quantities of greys came from India and undesignated foreign countries during August. At the end of eight months of 1960. Indian cloth arrivals had amounted to 165,804,000 square yards, as against 106,495,000 square yards in the same period of 1959. Pakistan had more than doubled its shipments at 27,857,000 square yards, but the volume of grey cloth reaching British ports from Hong Kong had fallen from 91,753,000 square yards to 61,867,000 square yards.

Curbed by quota restrictions, the imports from China and Japan this year have shown very little change as compared with 1959 and the big adjustment has come in arrivals from other foreign countries, most of which are in Europe. In this case, the imports by the end of August had reached nearly 71 million square yards, as against only 11 million square yards in the same part of 1959.

Comparable shipments of cotton cloth from the United Kingdom are slowly slipping behind last year's level, after keeping pace with the 1959 rate for the first half of this year. The eight-month total was 220,604,000 square yards, as against 227,041,000 square yards last year. In the case of yarn exports, the figure was 14,683,000 lbs., as against 15,396,000 lbs.

More than 100 scientists, technicians and engineers will lose their jobs by the merging of Britain's research organisations in the cotton and rayon industries. They have until next March to find other employment. Sixty of them are at the Shirley Institute, Manchester, headquarters of the British Cotton Industry Research Association. A redundancy problem "of a similar order" will arise at the streamlined modern headquarters of the British Rayon Research Association at Heald Green, Cheshire, Mr. H. B. Gee, the Association Secretary, said last week.

The Rayon Association's headquarters, opened only five years ago by the Duke of Edinburgh, will be closed down when the merger goes through in March. The building will be taken over by the Geigy Company. Staff affected at Heald Green also include clerical, canteen and cleaning workers.

Mr. J. Clayton, Branch Secretary of the Association of Scientific Workers at Shirley Institute, said that compensation talks had taken place with the management. It was thought that many of the younger men would be readily absorbed into other industries, but older men—some in their fifties—might have difficulty in finding fresh jobs.

The merging of the two research organisations was recommended by a Working Party to meet the changed situation in the textile industry.

A Pattern From C.P.A.?

Can the results announced by the Calico Printers be regarded as a reliable guide to forthcoming financial statements from textile companies? That is the primary question which has been occupying the minds of those whose activities bring them in touch with Stock Exchange affairs over the past few days. Much hinges upon the answer to so relevant a feature of financial news at a time when the industry is hesitating in its steps after a period of undoubted prosperity.

During the first six months of the current year, reports received from companies predominantly dealing with cotton and man-made fibres have certainly been encouraging; occasionally the earnings revealed have been extremely favourable. Forecasts have suggested that those groups, especially the bigger combines, which draw up their accounts in the later months of the year will have some surprise packets for shareholders and the markets alike. If the record of the Calico Printers is anything to go by, the annual stocktakings will provoke much "rubbing of hands" among those directly concerned.

Since the emergence of terylene as a commercial project, the income from royalties derived by this particular Company has been the subject of intense interest. The position has now been reached when the net income from this source, after tax, is not far short of the £1,000,000-mark. But it is significant that the revenue from foreign patents provided over 50 per cent. of the royalty income in the twelve months to the end of June. In some cases, the foreign rights have several years still to run—in Germany and Italy until 1965 and in Japan until 1968. The British patents expire in 1963.

Aided by this satisfactory source of income, the Calico Printers' group increased its net profit from £232,431 to £1,865,528, notwithstanding the fact that the taxation charge was trebled at nearly £2,000,000. Satisfactory improvements occurred in the trading results of all sections of the Association's activities, the Board reports; merchanting benefited from the ideal summer weather in 1959 and notable advances were also achieved in export sales.

Shareholders are to gain from a big advance in dividend and a one-for-one scrip issue. Members of other textile companies will be heartened by the indication of the giant strides made by the mills during the past year. Despite the present hesitant mood of buyers, they can still look forward to forthcoming results with considerable confidence.

J. B. NORTON & SONS LTD.
STEPHEN HOUSE, CALCUTTA.

JB-4-59

Output of man-made fibres in the first eight months of this year was 70,000,000 lbs. higher than in 1959, reaching a new all-time peak. Figures issued by the British Man-Made Fibres Federation show that, to the end of August, production amounted to 395,160,000 lbs., as against 325,300,000 lbs. in the first eight months last year and 276,120,000 lbs. in the same period of 1958.

The August returns were the highest ever recorded for that month, the total of filament yarn and staple produced being 43,180,000 lbs., a rise of 3,500,000 lbs. on August last year. The Federation points out that the wider adoption of staggered holidays in most of the man-made fibre producing factories makes the dip in August product on not as pronounced nowadays as it was a few years ago.

With the end of the holiday period, deliveries of man-made fibre yarns and staple are continuing at a satisfactory level in most textile areas. Anxiety about raw wool prices, however, is causing some hesitation in the wool textile industry, affecting both natural and man-made products.

Judgments at Court

Fully 18 months have elapsed since the cotton trade was thrown into confusion by the adverse verdict on its price regulation systems in spinning and doubling. The Restrictive Practices Court condemned the schemes early in 1959 and the market did not settle down again until some equilibrium was restored by the big buying movement which began last summer. Ever since, producers have been so well engaged that there has been no necessity to shade quotations; efforts to procure goods at cheap rates have been uniformly unsuccessful. It can, therefore, be only of historical interest for traders to read of the progress made to date by the Restrictive Trade Practices Court, but, in view of its substantial importance to the industry at one time, the information may be valuable.

According to a statement made by the Registrar, at the beginning of August this year, there were approximately 2,300 agreements in the register. Of these, over 1,030 had been abandoned or had all restrictions removed from them; 63 agreements had been referred to the Court; 52 had not been defended and the restrictions were, therefore, found contrary to the public interest; 11 agreements had been defended; eight were found contrary to the public interest; one was found consistent with the public interest, as was most of a second and a minor restriction in a third. Dates have been fixed for hearings on nine further agreements before the Court and over 120 more cases are in various stages of preparation for hearing. The Board of Trade has authorised the Registrar to remove 26 agreements from the register as being of no substantial economic significance.

Few Escape Condemnation

The only cases in which restrictions were not found contrary to the public interest were those connected with the Blanket Manufacturers' Association, in which one restriction only was upheld; the Black Bolt and Nut Agreement, in which most restrictions were upheld, and the Water Tube Boiler Makers' Associations, all of whose restrictions were upheld. Mr. R. L. Sich, the Registrar, in a recent speech in Washington, told members of the Anti-Trust section of the American Bar Association that, in most of the cases presented, the Court had not been satisfied of the probability that the public got any substantial benefit from their operation, or would lose any by their disappearance. In some cases the Court had found that the agreements caused substantial detriment to the public. The preparation of cases took from 18 months to three years to draw up, but, on past experience, he said that few of them would get as far as a trial. The fate of a large number of registered agreements often depended upon that of others coming to trial. This inter-dependence of such pacts partly explained why so many had already been abandoned. Critics of the way in which the Restrictive Practices Act has been implemented have suggested that the abandonment of trade agreements would lead to amalgamations between firms involved in the particular industries concerned. Although admitting that some mergers had followed the ending of certain Restrictive Agreements, Mr. Sich said there was "still a long way to go on the merger road" in most British industries before monopoly was created. In a small-unit economy, large-scale operation might produce benefits for the consumer by greater efficiency to offset any loss of competition.—*All Rights Reserved.*

NEED FOR RAISING COTTON YIELDS STRESSED AGAIN

MR. RUIA ADVOCATES COLLECTIVE EFFORT

FOR all the hardships caused by the sharp decline in cotton production during the last season and the imposition of additional controls on the marketing of cotton, the experience of the season would have served some purpose if it stimulated a better appreciation of the importance of stepping up cotton production in India through intensive cultivation and led to renewed efforts towards achieving that end. There was clear appreciation of this point in the speech of Mr. Madanmohan R. Ruia, President of the Cotton Buyers' Association, at the twenty-third annual general meeting of the Association held at Bombay on the 29th September. He said that the failure of the crop had pin-pointed the attention of all sections of the cotton trade, the textile industry and the Government on this vital problem. He was of the view that this problem could not be tackled, unless a collective effort was made by the farmers, the Government and the cotton trade. Mr. Ruia, however, did not say what form this collective effort should take. But he felt that, left to themselves, the farmers would not be able to solve the problem, because farming in this country was more a way of life than a commercial proposition.

Expert Committee

He reiterated that improving the yield per acre was the only alternative left for raising cotton production in the country, because any large-scale diversion in the area under cultivation to cotton, now or at any time in the foreseeable future, had to be ruled out, in view of the more urgent need for self-sufficiency in food. This solution has been advocated time and again, but there has been no tangible result. The question of questions therefore is this: If the remedy had been known for a long time, why is the problem still with us? Mr. Ruia provided no answer to this question. He only referred, in this connection, to the proposal made at the last half-yearly meeting of the Indian Central Cotton Committee for the appointment of an expert committee to probe into price fixation, agricultural production and allied questions and said that, as far as cotton was concerned, it was a wise suggestion, because all the problems bearing on cotton could be expertly examined by it. Farmers and the trade could place their respective view points more forcefully and vigorously before this committee which could advise the Government to take more realistic steps to rectify any deficiencies or weakness in the cotton policy and to intensify the drive for increased production. But, if New Delhi reports are to be believed, the proposal for setting up an expert committee fathered by Mr. S. K. Patil, Union Minister for Food and Agriculture, has not been favourably received by the Cabinet and may, therefore, be abandoned. In any case, what can an expert committee do in regard to the basic question of raising the yield per acre? Expert committees in the past and their expert recommendations have made no difference and the problem persists. There is no reason to believe that another expert committee will be able to do anything better. Even a schoolboy knows how the yield per acre can be stepped up. What is required now is action and not enquiries. If Mr. Ruia can show how the inertia of State Governments can be replaced by vitality for an intensive drive in providing farmers with the wherewithals for raising the yield per acre, he will have done an excellent job and earned the gratitude of millions of people of this country.

Long Staple Cotton

Another important problem that remains to be solved pertains to securing an increase in the production of long staple cotton. The consumers of cloth in this country are no longer content with coarse and grey cloth. Statistics reveal that there has been a remarkable increase in the demand for medium and processed fabrics in recent years. With further improvement envisaged in the standard of living, there is every reason to expect that the consumer will ask for still finer cloth in the coming years. The extent to which the mills can increase the output of finer fabrics depends mainly on the availability of the required type of cotton and, as such, a steady rise in the production of long-staple cotton within the country is an important desideratum. But how is this need to be fulfilled? This question, too, was only posed by Mr. Ruia and not answered. He merely admitted that the problem of increasing the production of long-staple cotton was a difficult one, especially because the soil in many cotton-growing areas was not quite suitable for raising long-staple varieties. At present, the proportion of indigenous long-staple cotton to the total output was, he added, extremely low. The output of cotton of 1" staple and above, for instance, accounted for only 7 per cent. of the total in 1956-57 and 1957-58 and 10 per cent. in 1958-59. He conceded that the Indian Central Cotton Committee was doing its best to find suitable areas for growing this type of cotton, but stressed that their efforts in this direction should be intensified.

Import Policy

In any case, he added, it would be some years before the country could attain self-sufficiency in respect of its long staple cotton requirements. It would, therefore, realistic, he felt, "to reconcile ourselves to the fact that we may have to continue to import foreign cotton for some more time to come." He suggested that it was well worth examining whether, for the interim period, a short-term import policy could be devised so as to ensure continuity of supplies of foreign cotton to mills in the country, irrespective of the fluctuating fortunes of the domestic cotton crop. It was his considered opinion that this could be best done by providing suitable opportunities to both the mills and the trade to participate in the import of cotton, which would help the country to secure its requirements of foreign cotton at the right price and at the proper time. He regretted that, inspite of enlarged imports of cotton in the past season, the trade was denied the opportunity of utilising its experience and expert knowledge in procuring cheaper cotton and, at the same time, arranging for speedier shipments which could have povided a large measure of relief to the domestic textile industry. There is considerable truth in this remark of Mr. Ruia. These are days of specialisation. If the managements of mills leave the procurement of cotton required by them to traders who have specialised in this job, they can devote their time and resources to the task of improving the quality of their products and ascertaining the requirements of consumers. But the worse offenders of this good principle are invariably those business men who are both millowners and cotton merchants.

Alluding to the Central Government's cotton export policy, Mr. Ruia pointed out that the practice of determining the quantum of exports according to domestic availability, though unavoidable, had imparted an element of uncertainty to the exports. He hoped that, since the crop prospects for the current season were so far promising, the Government would issue export quotas as soon as the crop situation was properly assessed. The first-come-first served basis of issuing export licences, followed in the past two years, has proved very satisfactory not only from the point of view of earning foreign exchange but also from the standpoint of giving opportunities to as many shippers as possible. Mr. Ruia, therefore, suggested that the same policy should be continued in the current season as well.

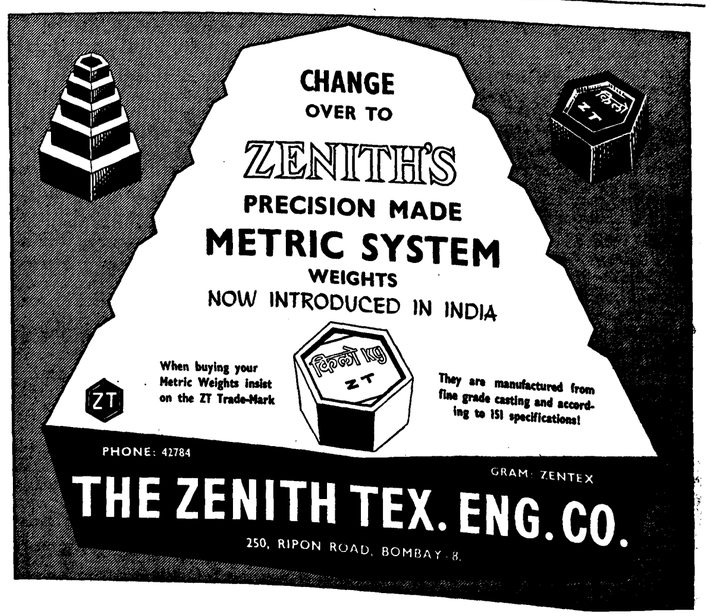
Plea for Patience

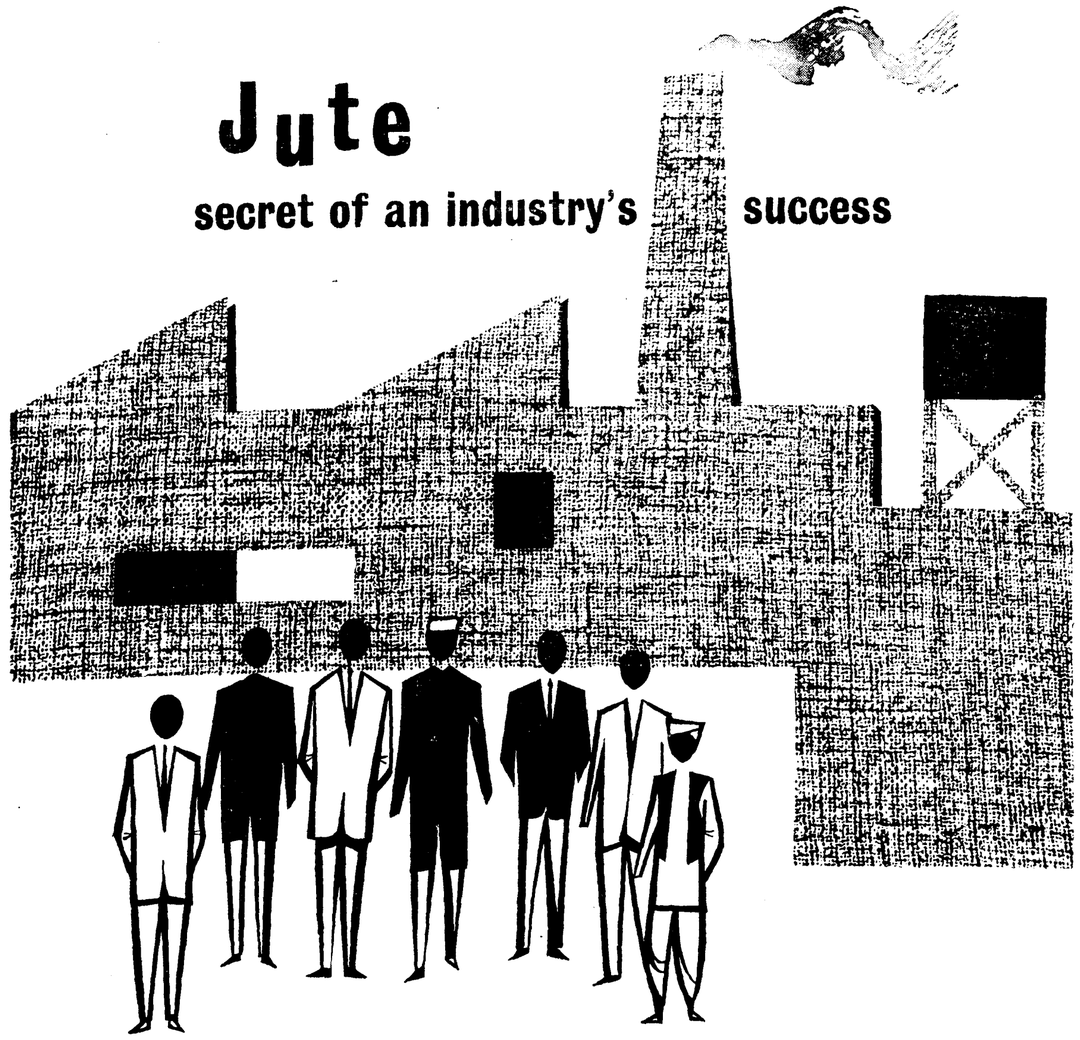
Mr. Ruia was remarkably restrained and reasonable in his comments on the present restrictions on trade and mills in the purchase and sale of cotton. He realised that the authorities were compelled to resort to drastic controls on cotton by the serious situation created by the sharp diminution in supplies. He admitted that compulsory survey of each and every lot of cotton bought or sold and the restrictions placed on mill freedom to buy within the quotas allowed to them were causing considerable hardships to trade and had resulted in a serious curtailment of normal trading activity. But he felt that there was no other conceivable alternative way of dealing with the situation. Counselling patience and understanding, he appealed to the trade to put up courageously with the hardships for a while. He was sure that, if the present optimistic expectations regarding the current season crop were to materialise, the authorities would see their way to relax, if not remove, the present restrictions. The basic problem facing the industry and the trade was to bring about, as speedily as possible, a substantial increase in domestic cotton production. Indeed, he was downright realistic when he remarked that the future of the cotton trade depended, to a large extent, on the successful tackling of this problem. This is all the more the reason why the leaders of cotton trade should take the initiative in persuading the State Governments to launch on a vigorous drive for increasing the per acre yield of cotton, instead of merely repeating the idea in their speeches year in and year out.

SUBMISSION OF RETURNS

The Textile Commissioner has once again issued a warning to traders that non-submission of fortnightly returns showing actual deliveries and sales of Indian cotton to mills will be severely dealt with. According to a notification issued on 30th August 1960, all 'A' and 'B' class licence holders, other than mills were required to furnish to the Textile Commissioner fortnightly statements showing the actual deliveries and sale of Indian cotton to the mills during each fortnight. These statements were to be despatched on or before the 3rd and 18th of each month.

A Press Note issued by the Textile Commissioner says that many licence holders have not yet submitted the returns for the first fortnight of September. They are requested to do so immediately in respect of the first fortnight of September. The Textile Commissioner desires to make it clear, the Press Note adds, that failure to submit the return within the time specified will, in addition to any other action that may be taken, result in the non-renewal or cancellation of the licence.





With a membership of 70 companies, comprising 100 manufacturing units, the IJMA represents almost 95% of the total jute loomage in India.

Providing employment to millions of farmers, traders and mill-workers ... earning about Rs. 115 crores annually in foreign exchange ... contributing large sums in taxes to the State and Central Exchequers — the Indian jute industry occupies a prominent place in the nation's economy.

Guarding the interests of this nationally important industry and guiding its destiny, is the Indian Jute Mills Association. Founded in 1884, the IJMA — representing almost 95% of India's total jute loomage — protects, forwards and defends the trade of its members. The Association carries on research ... to improve the quality of jute products and to develop new uses of this already versatile material. In the field of export promotion the Association has been active for well over a decade, undertaking publicity and promotional work which has helped make jute goods India's largest dollar-earner. Its labour welfare activities have set standards throughout industry.

The Indian Jute Mills Association looks forward to serving the Indian jute industry in ever-increasing measure in the years to come.

SUGAR INCENTIVES TO BE CONTINUED NEXT SEASON

FURTHER NOTABLE RISE IN OUTPUT LIKELY

ALL those sugar mills which produce sugar during the coming season (commencing from 1st November 1960) in excess of the average of their production in the two preceding seasons (1958-59 and 1959-60) will continue to enjoy the rebate of 50 per cent. in the basic excise duty of Rs. 11.25 per cwt. An official announcement to this effect was made in a Press note issued by the Union Ministry of Food and Agriculture on Tuesday, 27th September 1960. In the case of factories which went into production only in the 1958-59 season or thereafter or which did not function during 1958-59 and/or 1959-60, the question of granting rebate will, we are told, be considered on merits as during the current season (1959-60).

The Press note does not mention anything about the policy governing payment of cane prices by sugar mills, because the decision had already been announced several months ago, as early as in April 1960. This decision, it will be recalled, was merely a continuation of the policy adopted for the 1959-60 season. Accordingly, the basic minimum price for cane payable by vacuum pan factories during 1960-61 will be Re. 1.62 per maund for delivery at the gate of the factory, that for cane delivered at rail centres being 12 nP less at Re. 1.50 per maund. Further, there will be a deferred payment related to the price of sugar realised by the factories. This will be under the formula prescribed by the Centre, or under any alternative scheme applied in a State or region by the State Government concerned, with the previous approval of the Centre for linking the price of cane with the price of sugar as realised by the factories concerned.

Consumers' Interests Ignored

It will be evident from the foregoing account that the Government of India has continued the so-called incentive scheme for boosting white sugar output for the second season in succession. While the readiness of the Government to forgo quite a sizable revenue by granting a rebate of 50 per cent. excise duty on "excess" sugar production is commendable, inasmuch as it will provide some impetus to sugar mills to maximise production, it is unfortunate that the interests of the consumers have been relegated to the background. How else is one to explain the Government's decision to continue the enhanced price of cane, although the Government had clearly stated last year that the revised price was for the 1959-60 season only? It is true that the agriculturists will be induced to deliver more cane to factories and less for producing brown sugars (*gur* and *khandsari*). But is not the old price of Re. 1.44 per maund of cane itself very attractive as compared with the prices fetched by several other agricultural commodities? One fails to understand as to why the Government should continue the high minimum price for sugarcane alone when the general trend of agricultural commodity prices is downward. In fact, the monetary yield of cane, as this journal pointed out on an earlier occasion, will actually be much more, because, in addition to the minimum, the growers will receive a share in the prices of sugar realised by the factories in excess of what is regarded by the Government as fair ex-mill prices. Even without the upward revision in cane prices, the supplies of cane to sugar mills might have been as large as it actually was in the current season. For the size of the 1959-60 cane crop was much bigger than in the previous season. The official all-India final estimate of the cane crop for the season puts the aggregate yield at 75.04 million tons, a rise of 4.58 million tons as compared with the 70.46 million tons harvested in 1958-59. Moreover, the prices of *gur* and *khandsari* were ruling at relatively lower levels throughout the season, so that the cultivators would have any day preferred to supply cane to sugar mills even at Re. 1.44 per maund, instead of using it themselves for producing these brown sugars.

Be that as it may, the grant of the 50 per cent. rebate of excise duty on "excess" sugar is certainly an incentive to the industry to produce more. The actual sugar output of 2.41 million tons during 1959-60 was in excess of the average production of the seasons 1957-58 and 1958-59, namely, 1,947,993 tons, to the tune of 462,000 tons. On this basis, the total amount of excise duty rebate received by the mills works out to nearly Rs. 5.20 crores. But, as against this, the Government must have benefited to a greater extent, as a result of the marked increase in production on which excise duty is payable at the concessional rate. By way of the straight increase of 12½ per cent. in the minimum price of cane alone, the cane growers, too, have been benefited to the extent of several crores of rupees.

The following data show at a glance the progress of white sugar production during the past five seasons:

	(In tons)
1955-56	1,861,837
1956-57	2,026,179
1957-58	1,977,794
1958-59	1,918,192
1959-60	2,410,000

The quantum of incentive to sugar mills for the coming season is distinctly less than that for the 1959-60 season. For, by including the latter season, in which production had attained a new peak for the purpose of calculating the average, the average level of production for the industry as a whole has gone up from 1,948,000 tons to 2,164,000 tons. Consequently, the incentive will start operating only after this higher average level is crossed. Nevertheless, the continuance of the scheme of incentives will doubtless encourage the sugar mills to maintain as high a level of output as possible. And in this task, they will be further assisted by two other encouraging factors. One, the sugarcane crop is expected to be larger than in the previous season; the official first estimate of the crop for 1960-61 puts the total area at 5,157,000 acres (2,087,000 hectares), as against the corresponding adjusted estimate of 4,975,000 acres (2,013,000 hectares) for 1959-60. Two, there has been a notable expansion in the production capacity of the industry as a result partly of the establishment of a few new units and partly of the expansion of several existing units. The total annual capacity as re-assessed on the basis of average duration (actual working days) and recovery of sugar per cent. cane for the two seasons (that is, 1957-58 and 1958-59) is estimated at 2.6 million tons, as against about 2,330,000 tons in 1959-60. One estimate of sugar production in the 1960-61 season is as high as 2.70 million tons, as against 2.41 million tons in 1959-60 and 1.91 million tons in 1958-59.

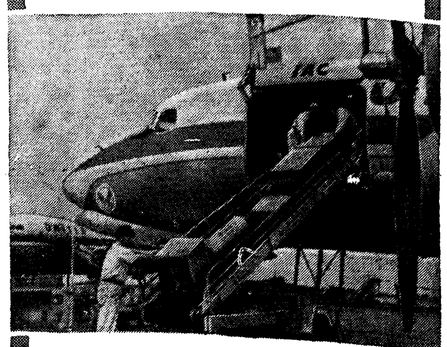
In view of the highly encouraging prospects for sugar supply position thus, there does not seem to be any justification for the present type of controls on this commodity, unless, of course, the Government's intention is to keep down domestic consumption, with a view to squeezing out a sizable amount of sugar for export. But export of sugar is a highly unremunerative proposition. If the Central Government, however, feels that a complete decontrol is not possible now, it must at least prevail upon the States to liberalise their sugar distribution policies.

SUGAR RELEASE

The Union Food and Agriculture Ministry has released 200,000 tons of sugar for sale. There will be no release for free sale from the factories in Uttar Pradesh, Bihar and Punjab, except a small quantity which will be released to each factory for sale to its employees. Allotments of sugar to Madhya Pradesh, Rajasthan, Uttar Pradesh, Bihar, West Bengal, Orissa, Madras, Kerala, Maharashtra, Gujarat, Himachal Pradesh, Assam, Manipur and Tripura from factories in the controlled region will be made only to the nominees of the State Governments. In case of the Punjab and Jammu and Kashmir, allotments will be made direct to the State Governments or to their nominees. Allotments to Delhi will continue to be made on the existing basis. Allotments will be made at prices fixed under notifications dated 25th October 1959 and 4th April 1960. The controlled ex-factory price for U.P. and North Bihar factories is Rs. 37.85 per maund and for factories in Punjab and South Bihar Rs. 38.35 per maund for I.S.S. D-29 grade with the prescribed price differentials for other grades.

FOR FASTER, SAFER & BETTER OPERATION USE 'POWELLS'

Portable Conveyors



- FOR HANDLING MATERIALS & PACKAGES
- MOBILE—CAN BE MOVED FROM PLACE TO PLACE BY ONE MAN
- ADJUSTABLE SPEED • SELF POWERED

'POWELLS' have the answer for every handling job, at airport or railway yard, at factory or dock or under-ground transport or for transporting people inside or outside a building.

Each equipment is a specialised standard job engineered to meet your individual needs and requirements with a special eye on EFFICIENCY, ECONOMY & ENDURANCE.

initiative from the shop floor

The manufacture of crowbars in Tata Steel's Agrico factory in Jamshedpur involved a number of time-consuming and uneconomic manual operations. Ratan Singh, a foreman, decided to do something to improve matters. Carefully studying the problem, he designed a die which cut down work, improved the product and substantially increased turnover at reduced cost. For his brilliant work, Ratan Singh received an award of Rs. 3,000.

In the ten years up to 1960, Tata Steel employees have put forward a total of 10,165 major and minor suggestions—an average of three a day. In the latest year, 445 suggestions were received, 54 of which have merited rewards.

Thus, initiative from the shop floor is helping to improve productivity at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

RESEARCH IN NATURAL RUBBER

LATEST DEVELOPMENTS REVIEWED

THE natural rubber research conference, the biggest international conference on natural rubber ever to be held, which began on 26th September and closed on 1st October in Kuala Lumpur, Malaya, attracted over 250 delegates from various parts of the world and about 80 papers on research on the production of natural rubber and on the preparation and use of natural rubber and latex were read at the Conference.

One of the papers describes the method of growing high-yielding rubber trees from cuttings, which may, if the experimental work proves a success, be of great help in increasing latex production. It is even said that this method can ultimately replace the present bud-grafting method of propagation, which is commonly in vogue, and improve still further the latex production of high-yielding tree. According to the author of the paper, cuttings from young seedlings root easily, but cuttings from mature bud-grafted trees, of proven high yield, are much more difficult to root. The Rubber Research Institute of Malaya has been able to take a stage further the earlier experiments in rooting cuttings and has developed a technique which is so far "the most promising method of producing clones of *Hevea* on their own roots." Several hundred rooted clonal cuttings are said to have been hardened and planted in a nursery and in the field for observation as stocks for future bud-grafting and for transplanting experiments. The growth of many of the cuttings under this method is said to have been very encouraging. One of the aspects of the new process, which is yet to be studied and determined, is its cost and the relative cheapness of the two methods. For a small unit which can produce 25,000 rooted cuttings annually, the capital cost is estimated at 3,000 Malayan dollars and the running costs at 35 cents per hardened cutting.

Intensive Tapping

A new method of tapping, to obtain the maximum amount of latex from old trees before they are felled, is described in another paper. The new method, which is already in commercial use, can double the normal yield from old trees. In some instances, production is said to have been maintained at as much as 1,000 lbs. per acre for over three years and has helped offset losses due to land being out of action for a time after replanting. Under the new technique, known as "intensive tapping," the bark of the rubber tree is tapped at high levels, above the old tapping panel, and the old tapping panel is also tapped as well. The experiments, which were started at the Rubber Research Institute, Malaya, in 1952 have shown that a highly increased yield can be obtained through alternate daily tapping of two cuts over a period of four years. This period can be extended by "opening the high cuts as high as possible and maintaining a strict tapping discipline with as little bark consumption as possible."

In the course of a paper entitled "The Stimulation of Latex Flow by Plant Growth Regulators," the author has given an analysis of the work done in various countries on the application of various substances to plants to regulate their growth, in which rapid advances have been made. Among the latest methods which have proved advantageous is the use of two hormones, known as 2,4-D and 2,4,5-T, which are applied to scraped bark below the tapping cut. A survey of the use of preliminary proprietary formulations in Malaya has shown that over 171,000 gallons of such formulations have been sold during the last four years. One gallon is sufficient to treat 200 trees twice yearly at the recommended rates and there will be about this number of trees per two acres. On a conservative basis, an increase of 200 lbs. per acre is said to have been achieved by this method. On this basis, the additional yield in Malaya over the last four years is estimated at 68.4 million lbs. In monetary terms, on the basis of the average price of rubber in each year, the additional production is equal to 63 million Straits dollars or £7.4 million. "Even if one were extra cautious and halved the totals and allowed for waste," the author of the paper says, "th s is still a very handsome return for the money spent on research."

The growing interest in "Superior Processing" rubber (SP rubber), a new form of natural rubber developed by the Rubber Research Institute, Malaya, is reflected in the fact that as many as four papers were read on the subject. "The SP rubbers are made by mixing vulcanised and unvulcanised latex before coagulation. They are easier to process than normal rubbers and help to speed up production of extruded, moulded and calendered goods. They also help to improve the quality of the product." The total shipments of SP rubbers from Malaya in June 1960 were at the rate of 3,500 tons per annum and they were shipped to 22 countries. The use of additives in the preparation of SP rubber is said to make them less expensive and it is, therefore, reasonable to expect cheaper additive rubbers in the near future.

Synthetic *Vs.* Natural

Speaking as a physical chemist, Prof. Gee of the Manchester University, the author of a paper, posed four problems on future of natural rubber *vis-a-vis* the synthetic natural rubber and other new elastomers and gave his personal answers to them as follows:

(1) There is no present evidence that a material essentially identical with natural rubber can be made synthetically at a price too low to be matched by the growers.

(2) The challenge of SBR may well be intensified by the development of further rubbers of relatively low price, and possessing properties adequate for many purposes.

(3) There is for the first time a real prospect of the development of a synthetic rubber superior to natural rubber in the important application of heavy duty tyres.

(4) Natural rubber can no longer be considered a unique material, but as a typical (though outstandingly good) member of a family of elastomers. Possibilities of modification, while more limited than those of synthetics, are not negligible, especially when attention is given to the important and developing field of blended materials.

The author expressed his confidence that the research and development policy now being pursued was the best way of ensuring a healthy future for natural rubber.

U.K. SIGNS INTERNATIONAL COFFEE AGREEMENT

Britain has signed the International Coffee Agreement for the "coffee year" beginning on 1st October on behalf of Kenya, Uganda and Tanganyika. The signing took place in Washington on 26th September at a meeting of the Board of Directors of the International Coffee Agreement. Under the agreement, Kenya, Uganda and Tanganyika will have an export quota for the year of 2,380,000 bags of coffee beans. This is 200,000 bags less than the first estimate of exportable production. If the estimate is revised upwards in March 1961, then the quota will be increased by the same amount as the estimate is raised.

Although the three East African territories voluntarily restricted their exports last year by a unilateral declaration, they had not hitherto accepted the obligation of full membersh p of the agreement. They will now play a full part in the agreement for the coming year. The decision to accede to the agreement in 1960-61 and to accept the quota on exports "was taken in a spirit of international co-operation and understanding of the problems of other major coffee-producing countries, as well as in the light of East Africa's own problems."

The International Coffee Agreement brings together most of the major coffee-producing countries. Consuming countries are not members, and although Britain has acceded on behalf of the East African territories, this does not affect the United Kingdom itself. The agreement runs for one year only and there is no commitment beyond September 1961. After that time, the policy of Britain and the East African territories will be decided in the light of the report which the Coffee Study Group is expected to produce this year. Both consuming and producing countries are represented on the study group. The United Kingdom is a member and attaches great importance to the work of the group in analysing the long-term problem of international trade in coffee.

The International Rubber Study Group estimates that, in 1960, the world consumption might be some 2,070,000 long tons of natural rubber and 1,770,000 long tons of synthetic rubber, apart from synthetic rubber produced in non-member countries. The world production of natural rubber is estimated at 2,055,000 long tons and synthetic rubber production in member-countries at 1,940,000 tons. In addition, it is estimated that some 160,000 long tons of natural rubber would be delivered from Government stockpiles. The estimated surplus of natural rubber and synthetic rubber production over consumption of 145,000 long tons and 170,000 long tons, respectively, would enable commercial stocks to be rebuilt to more normal level appropriate to the increased world consumption.

For top grade Industrial Chemicals

Monsanto works constantly to develop new, better chemicals – and to improve those chemicals you already use. In every industry, whether it be agriculture – automotive – aviation – ceramics – chemical processing – cosmetics – electrical – foods – insecticides – mining – oil – paint – paper – rubber – soaps and detergents, there is a Monsanto chemical that will help to improve production and quality.

MACHINERY MANUFACTURING INDUSTRIES' PROGRESS

RECENT DEVELOPMENTS REVIEWED

A FAIRLY up-to-date review of the progress made by the machinery manufacturing industries, including machine tools, was made available to the recent meeting of the Central Advisory Council of Industries. This review, on which this summary is based, deals only with the broad developments that have taken place so far in respect of the major industries which number 19 in all and are listed in a table hereunder. It will be seen from this table that the aggregate production of the listed industries in 1960 is valued at Rs. 43.60 crores and their aggregate production in 1965 is estimated at Rs. 221.40-226.60 crores. A fivefold increase in their production over the third Plan period is thus envisaged for all the industries, barring heavy electrical equipment and heavy machinery. The two latter industries have just started production, but their output in 1965 is expected to reach a level of Rs. 26 crores in value terms.

(In Rs. lakhs)

Name of the Industry	Estimated production in 1960	Estimated production in 1965
Paper-making machinery ..	80	650
Tea machinery industry ..	100	150
Cement machinery industry ..	60	475
Sugar mill machinery industry ..	300	1,020
Solvent extraction plant ..	48	250
Mining machinery	15	*1,600
Construction machinery	88	250
Weighing machinery	60	165
Machine tool industry	†600 ‡400	‡2,300 ‡1,500
Electric transformers	700	3,000/3,500
Electric motors	600	3,000
Diesel engine	630	1,188
Power-driven pumps	240	412
Jute mill machinery	175	230
Printing machinery	5	350
Chemical machinery	210	2,000
Boiler industry	50	1,000
Heavy electrical equipment ..	Negligible	2,500
Heavy machinery	"	100
Total ..	4,361	22,140/ 22,640

* Including public sector.
† For machine tools.
‡ For small tools.

It has not been possible to include in the above table suitable capacity figures for each industry, because the picture of approved or licensed capacities is not coherent. Nor are the projected capacity figures available in all cases. But it is still possible to indicate broadly, for each industry, the relevant capacity figures, so that an idea can be had of the progress already registered and yet to be made in the matter of actual installation of the projected capacities. It is, therefore, necessary to give an industry-wise picture of units working and proposed to be established.

Paper-making

In the paper-making machinery industry, new schemes of as many as 15 additional firms have been approved for a total capacity of Rs. 9.5 crores per year. Most of these firms, particularly the ones manufacturing complete plants, have also secured foreign technical collaboration. Four of these units will be manufacturing large-scale paper plants of capacity 50 tons per day, and they will have a total licensed capacity of Rs. 7.2 crores per year; five others will be producing small-scale paper plants of capacity 3 to 10 tons per day, and they will have a total licensed capacity of Rs. 1.2 crores per year. While three units in all have already begun to produce small-scale plants, Tata-Johnsons Ltd. have just taken up, at the Telco Works, production of large-scale paper plants.

In the tea machinery industry, the existing and projected capacity of Rs. 1.75 crores per year, it is expected, would be sufficient not only to meet the entire demand within the country but also to have a reasonable surplus for export. It is stated that Port Engineering Company, Calcutta, have already approached the Government for permission to export their products.

In the cement machinery industry the two existing schemes—A.C.C.A.V.B. works and K.C.P. Ltd.—have a total capacity of Rs. 4 to 5 crores per annum. These two units together will produce 6½ complete cement plants per annum. Two more schemes are also under consideration for approval.

The sugar mill machinery manufacturing industry has now the capacity for 12 complete new plants per year and the equivalent of nine plants per annum for meeting replacement requirements. The total estimated value of these 21 plants will be about Rs. 14 to Rs. 15 crores per year. It is noteworthy that four sugar factories, scheduled to start by 1st January 1961, will be having, for the first time, indigenously manufactured milling plants, boilers and centrifugals.

As for solvent extraction plants, four schemes, in collaboration with the leading foreign firms, have already been approved by the Government. These envisage a production of no less than 36 complete solvent extraction plants per year valued at Rs. 3.6 crores. Their production has already commenced.

Mining machinery will now be manufactured in both the sectors, public and private. The Government-owned Coal Mining Machinery Plant at Durgapur has the capacity to produce 30,000 tons of machinery items per year, valued at Rs. 15 crores. This is being expanded to 45,000 tons per annum to include specialised mining equipment for mineral oils and other minerals. In the private sector, annual production of mining machinery of the value of Rs. 1 crore is expected to commence, from 1962, in the Associated Cement, Vickers and Babcock Works now being set up at Durgapur.

The constructional machinery industry is already producing a large number of items. Two new schemes have also been approved for the manufacture of 4,000 concrete vibrators per annum, valued at Rs. 70 to Rs. 80 lakhs. It is stated that, with the increased tempo of constructional activity in the country, there will be scope for creating additional capacity in this respect.

As for weighing machines, their production in 1959 was of the value of Rs. 48 lakhs. One of the manufacturers in the line, namely, Messrs. Avery Company of India Private Ltd., is expanding its capacity by Rs. 15 lakhs worth of machines per year. It is stated that there is greater scope now for creating additional capacity for this industry.

Machine Tools

The machine tools industry, which has made steady progress in recent years, has units in both the sectors—public and private. In the public sector, the Hindustan Machine Tools will have its capacity doubled to 2,000 machines per annum; two more medium-machine tools manufacturing units are under consideration; Praga Tools Corporation is to be expanded; and a new unit to manufacture heavy machine tools, as a part of Heavy Machine Buildings, is also being set up. In the private sector, existing manufacturers are embarking on expansion programmes. Some new units, which are coming up, are also expected to make a substantial contribution. In the small-scale field also, the industry has made progress, with production having reached a level of Rs. 2.5 to Rs. 3.0 crores in 1959. The Government, it is stated, are prepared to consider arrangements involving reasonable payments by the Indian firms to obtain technical 'know-how,' which is of primary importance for making good quality machine tools. In order to step up domestic production to meet the growing demand and to save imports on account of scarcity of foreign exchange, the Government has decided to permit the private sector to set up new units for the manufacture of various items of machine tools, particularly bench lathes, cone pulley lathes, capstans and turrets, automatic milling machines, drilling machines including bench and pillar drills, radial drills, grinding machines and wood-working machines.

In the electric transformers industry, there is now a total capacity of 1.244 million KVA. Further capacity of the order of 707,800 KVA has been licensed. In addition, schemes for a total capacity of 105,000 KVA have also been approved for the grant of licences.

In the electric motors industry, there is now a total installed capacity of 602,500 h.p. per annum. Additional capacity licensed is 886,320 h.p. per annum. Further schemes for an aggregate capacity of 197,600 h.p. have also been approved for the grant of licences.

Diesel engines production, which has steadily increased from year to year, is also proposed to be expanded by the existing firms. One significant development in the year 1960 is that production of engines upto 200 h.p. would be established. The value of diesel engines expected to be produced in 1965, as per the capacity of units licensed so far, will be about Rs. 12 crores. This does not cover the ancillary industry which has kept pace with the growth of the diesel engine industry and which has increased its production to Rs. 7 crores in the past year.

In the power-driven pumps industry, several firms have not only expanded their existing capacity but also taken up new types of pumps for manufacture. The total capacity of units licensed so far will mean a production of the value of Rs. 4.2 crores per annum.

As for jute mill machinery, light yarn sliver spinning frames are the only item of modern spinning machinery now produced in the country by three firms working in collaboration with one or other of the three principal jute mill machinery manufacturers in the U.K. The machinery items required to modernise all the looms in the jute industry are estimated to number 814 roller winders, 290 pre-beamers and 17,604 shuttleless weaving machines. An *ad hoc* Government committee on jute mill machinery has recommended that the gap in the requirements of jute mill machinery for the third Plan period should be met by expansion of the existing units. New units are likely to be set up only during the fourth Plan period, as the process of modernisation of the weaving section will be spread over the third and fourth Plan periods.

In the printing machinery industry, there are now five units producing or proposing to produce some items like platen presses, stereo rotary and flat bed machines. It is stated that there is still a big gap between the demand and production of printing machinery and that, therefore, there is room for more units to be established.

Chemical Items

Chemical machinery items are now manufactured by no less than 29 firms. But their production in 1959 was just under Rs. 1 crore only. In view of the vast field open to *entrepreneurs*, the following paragraphs are quoted *in extenso* from the official review:

"It is considered that, although quite a few additional schemes have since been approved including one scheme for the manufacture of sulphuric acid and superphosphate plant of 50 and 150 tons capacity per day (production of which has already been commenced by the licensed unit), yet, by and large, most of these units are at present engaged in fabricating different items that make up a complete plant.

"It is of the utmost importance that complete design and drawing should be available in respect of complete plants as mentioned below because only then such units would be in a position to fabricate and supply complete plants. The total demand for chemical plants of types indicated below during the third Five-year Plan is expected to be in the neighbourhood of Rs. 50 crores per year. The present projected fabricated capacity is only to the extent of Rs. 4½ crores approximately. It is apparent, therefore, that considerable effort needs to be made in this field to make our country self-sufficient during the third Plan period. We would, therefore, welcome schemes for the manufacture of complete plants, *inter alia*, for the following industries:

"(a) Nitrogenous fertiliser plant; (b) phosphatic fertiliser plant; (c) soda ash plant; (d) sulphuric acid plant; (e) caustic soda plant; and (f) refining plant, etc.

"The Government of India is considering proposals to set up units in the public sector to manufacture (i) pumps, compressors and heavy duty valves; (ii) plate and vessel shops for different chemical tanks, vessels and equipment, and (iii) measuring and control instruments."

In the boiler industry, the capacities licensed and under implementation now will mean a total production of Rs. 10 crores worth of boilers and boiler parts by 1965. But an assessment of the requirements of boiler plant and machinery during the third Plan for important industries and proposed thermal power stations is Rs. 34 crores per annum. There will thus be a large gap to cover during the third Plan period.

Heavy electrical machinery will be manufactured in the Government factory set up at Bhopal with the collaboration of A.E.I. of U.K., and in two more Government units which are being planned in collaboration with the Soviet Union and Czechoslovakia. The Bhopal factory has just started production. When it goes into full production, Rs. 50 crores worth of heavy electrical equipment will be produced annually; this will be during the fourth Plan period. But, by 1965, it is expected that Rs. 25 crores worth of machinery will be produced.

The industry-wise details thus far given show that, in a number of lines, additional capacities have yet to be approved and licensed. The figures of expected production in 1965 may, therefore, come in for revision.

NEW PRODUCTS AND PROCESSES

Novel Innovations for Cars

THE newest of the American auto models has two rather startling innovations—a curved drive-shaft and a four-cylinder engine made by removing one bank of cylinders from a V-8. Both these appear on the new compact Pontiac. The Pontiac is traditionally the guinea-pig car of General Motors Corporation. New technical ideas usually appear first in the Pontiac and, when proven, are applied to other cars made by the company. A one-piece steel rod, the drive-shaft is 3-inch in diameter and about eight feet long. It is curved downward between the engine and rear axle to avoid the usual shaft hump in the floor of the car. Output shaft of the engine and input of the differential are both slanted downward, with the shaft making a 12-degree curve between them. No universal joint is used and the rod flexes as it turns. The shaft itself runs inside a torque tube. Bearings mounted inside the tube keep the shaft in line with it and ensure the shaft turns in the proper planes as it drives the rear wheels. The axis of the cropped-off engine is upright, with the four cylinders making a 45-degree angle with the vertical axis. Such ancillaries as carburettor, generator, starter and distributor take the place of the right-hand bank of cylinders. Even the distributor cap shows its V-8 origin—it has eight outlets with four of them blanked off in the four-cylinder engine. The purpose of building such an asymmetrical engine is to make use of components which have proved their reliability in the V-8. Also, since most of the engine parts are interchangeable with the present V-8, a dealer has fewer repair parts to stock.

Cold-forging Equipment

A complete cold-forging installation, claimed to be the first of its kind in the world, has been developed by a British company after extensive research and field trials. It takes the form of a complete production line capable of accepting raw barstock at one end and ejecting the finished article at the other end. The installation was shown in operation for the first time publicly at the recent Hanover Machine Tool Exhibition. The equipment shown at the exhibition is being manufactured by two companies, one in the United Kingdom and the other in Germany—both members of the Camp Bird Group, London. Altogether seven machines of the range were shown including the essential basic units required for a complete cold-forging system. These are the cropping machine, the preforming unit, the combined deburring and chamfering machine, the complete automatic cycle surface treatment plant and the actual cold-forging machine. Cold-forging techniques make accurately controlled use of the plastic flow properties of metals in a complex shaping process. This not only requires machines of exceptional rigidity but also tools designed to withstand the enormous forces of cold-forging in continuous operation. Although it will not completely displace chip-forming machining methods, there is a wide range of components in general demand which can be mass-produced by cold-forging at costs which are substantially lower than those of conventional systems.

A New Method of Welding Plastics

A portable installation for the thermal welding of plastic products has been designed at the All-Union Research Institute of Electric Welding Equipment of Leningrad. This installation is intended for electrically welding the products made of the new synthetic material: polyethylene film. This material does not lend itself to welding on high-frequency installations. The machine is capable of joining polyethylene film from 40 to 120 microns thick by the thermal method. Welding can be done at a speed up to 20 metres a minute. An electronic device in the machine ensures a constant temperature and high quality of execution while the energy consumed by the installation is quite small, 250 watts. The thermal method of joining plastics has already attracted the attention of Leningrad's railway car builders, pharmaceutical specialists and other specialists using polyethylene materials for manufacturing various waterproof containers. The laboratory continues to work on improving the regime of welding other synthetic materials by the thermal method.

Mouldable Material for Architects

A new material, which can be moulded into a variety of shapes for the external and internal finishing of walls in buildings, is likely to offer increased scope to architects and builders preparing new designs. Called Dohmcast, the material consists of fine mineral granules each coated with polythene plastic by a special process. As it can be formed under moderate heat and is bendable while remaining in the hot state curves, cornices, pyramids, domes and other forms can be readily produced, says the maker. The cast material is said to be acid-resistant, water repellent and is able to withstand temperature extremes. Costing 3d. to 4d. per pound according to the quantity ordered, Dohmcast is supplied in powder form. After heating in an oven to 125 degrees C. in a chrome-plated steel mould, the material takes shape and—after cooling to 80 or 90 degrees C.—can be tipped out ready for use. By using appropriate moulds various surface effects, such as embossing, may be imparted to the finished surface. The material is being marketed by Dohm, of 167, Victoria Street, London, S.W.1.

PRAGA TOOLS CORPORATION LIMITED

SPEECH OF MR. S. RANGANATHAN AT ANNUAL MEETING

ADDRESSING the shareholders of the Praga Tools Corporation Ltd. at their Fifteenth Annual General Meeting held at Hyderabad on 19th September 1960, Mr. S. Ranganathan, I.C.S., Chairman, observed that the shareholders might look forward now to a phase when positive profits might be made. He, however, indicated that, as a result of the recent labour troubles, the Company's production suffered to the extent of about Rs. 14 lakhs. He assured the shareholders that efforts were being made to increase the tempo of production.

The following is the full text of Mr. Ranganathan's speech:

"I have great pleasure in extending to you all a cordial welcome to this fifteenth annual general meeting of our Company. The audited statement of accounts for the period ended 30th June 1959 together with the Directors' report thereon have been with you for some time.

"You will notice that the Directors' report to the shareholders incorporated in the annual report has been made more exhaustive than in previous years; we, the Directors considered that it would be desirable to keep the shareholders fully informed of the various aspects of this Company's working. I hope the shareholders will appreciate this. I shall not, in the circumstances, elaborate the points that have already found a place in the Directors' report.

"The manufactures in which your Company has specialised are in greater demand than before and our order books continue to swell with increasing orders. This has made it necessary for us to expand our activities to meet the growing consumption of engineering goods in the country. As you are well aware, your Company is one which manufactures fundamental equipment for the steel processing industry. With the increase planned for steel production in the second and third Plan periods a very heavy responsibility lies on your Company to see that the country is adequately supplied with such equipment to meet the growing demand from the steel processing industry.

Expansion Programme

"The details of the sanctioned expansion programme of this Company have already been indicated in the Directors' report. There is to be an expenditure of Rs. 123 lakhs for increasing production in two phases from the present level of Rs. 60 lakhs per annum to Rs. 160 lakhs per annum. Apart from increased production in the existing lines, the new items of equipment we shall produce will include improved varieties of lathe chucks and drill chucks made to international standards. We are also introducing for the first time in the country the manufacture of tool and cutter grinders. We have already applied to the Andhra Pradesh Government for the acquisition of about 300 acres of land and are hopeful of securing the same at an early date. Orders for machinery have already been placed for just over Rs. 11 lakhs, of which Rs. 3 lakhs worth have been received. Tenders for further machinery are under scrutiny.

"The working results show that satisfactory progress was made during the year under review in all directions. The production for the year was Rs. 62.50 lakhs, that is, a monthly average of Rs. 5.21 lakhs, as against Rs. 4.2 lakhs of the previous year. Sales during the year have been Rs. 73.74 lakhs, that is, a monthly average of Rs. 6.11 lakhs, as against the previous average of Rs. 4.18 lakhs. Our current production consists entirely of readily saleable goods, and in most cases manufacture is being undertaken only against firm orders.

Net Profit

"After making the necessary adjustments for depreciation, taxation and development rebate, the Company has made a net profit of Rs. 4,91,952. Against this profit has to be set off the carryover loss of Rs. 9.9 lakhs. In consequence, the carry-over loss has been reduced to about Rs. 5 lakhs. This remaining loss will also be wiped off in the next balance-sheet, as the Government of Andhra Pradesh have generously waived a sum of Rs. 5.29 lakhs due to them as interest payable on the loans granted to the Company. The shareholders may, therefore, look forward now to a phase when positive profits may be made.

"During the year under report the labour-management relations continued to be cordial and satisfactory. However, after the close of the accounting year, there have been some developments. I would like to refer to these briefly to keep you fully informed of the current position.

"There were disputes between the two rival trade unions and riots inside the factory took place on 27th November 1959 and again in May 1960. In the rioting, in May 1960, workers assaulted some of the officers of the Company. Disciplinary action was taken against some of the workers and things have quietened down and the conditions can be stated to be normal now. As a result of these labour troubles production suffered to the extent of about Rs. 14 lakhs. Efforts are now being made to increase the tempo of production.

"Before I conclude, I wish to thank my colleagues on the Board for their active co-operation and guidance in all our deliberations. I also wish to express my appreciation to the staff of the Company, to the General Manager, in particular, and to the loyal workers for having contributed to the improved working results achieved during the year under review."

N.B.—*The above does not purport to be the report of the proceedings of the Fifteenth Annual General Meeting of the Company held on 19th September*, 1960.

WANTED

MANAGER TO TAKE CHARGE OF THE ENGINEERING DIVISION OF A LARGE ALL INDIA COMPANY, INCLUDING THE SALES ORGANISATION OF THE PRODUCTS OF ITS SUBSIDIARY MANUFACTURING UNITS.

ONLY APPLICANTS HAVING DRAWN MORE THAN RS. 2,500/- WITH GOOD BUSINESS EXPERIENCE, PREFERABLY WITH ELECTRICAL AND MECHANICAL QUALIFICATIONS, WILL BE CONSIDERED. AGE BETWEEN 40 AND 50.

APPLY WITH FULL DETAILS OF QUALIFICATIONS TO BOX NO. 970, C/O "COMMERCE," BRADY HOUSE, VEER NARIMAN ROAD, FORT, BOMBAY.

DRAFT THIRD PLAN X-RAYED—III

RESOURCES—ADMINISTRATION

By J. M. Lobo Prabhu

THE resources for the third Plan provide for investment at 14 per cent. and taxation at 11 per cent. of the national income. Even if a contribution of 3 per cent. of the investment is available from abroad, 22 per cent. of the national income will be under contribution for the Plan, which is not only sizable in itself but may be more so for many reasons. First, the investment, as well as the taxation, which is to be indirect and therefore additive to the price, will involve inflation, which will be more pronounced than that during the second Plan, which was only two-fifths of the size of the third Plan. It has been calculated that, while it took Rs. 3 to produce one rupee worth of production in the first Plan, it is costing Rs. 5 in the second Plan. It may cost Rs. 10 in the third Plan, which will reduce both production and consumption. Secondly, to the extent that investment will be in the public sector, it will be at the expense of the private sector, which not only produced profits but taxes of the order of Rs. 135 crores per year in the second Plan. The absence of these will *pro tanto* increase the tax burden and the inflation on the public. Thirdly, the Plan will involve administrative elaboration, in spite of all assurances to the contrary. During the second Plan, out of Rs. 1,270 crores raised as taxes, as much as Rs. 749 crores went for non-development expenditure, which was not only unproductive but was inflationary for that reason. Fourthly, the second Plan has disclosed that investment in the public sector involves diversion by way of corruption which in P.W.D. estimates can be reckoned at least at 15 per cent. and idle capacity, many machines even rotting while their use is being found. The glib assumption that the public sector is the people's property ignores what little value it represents against the contribution made by the people.

Conscious of Inflation

The Plan is dimly conscious of this and proposes various measures to restrain inflation. The first is the reduction in the consumption of consumer goods, which is not to be allowed to rise by more than 4 per cent. There is some confusion of thought in assuming a rise in *per capita* food consumption from 15 to 18 oz. namely, 20 per cent., on the one hand and restraining other consumption to 4 per cent., on the other. Not only is the consumption of grain in this country excessive by world standards, as the Food Minister is never tired of repeating, but it is also an end in itself, not being proliferative of other production. On the other hand, consumer industries add value to raw material, reaching out backwards to maintain heavy industries and forwards to ladders of trade, paying every one along the way, better than in agriculture, because the net output in agriculture is only Rs. 500 per head, against Rs. 1,700 in mining and factory establishments and Rs. 800 even in small enterprises. The abberration of the Planning Commission has obviously arisen from the fact that shortage of food, which is the largest component in the common man's budget, has inflationary potentials, which can affect the estimates of the Plan. What has not been realised is that consumer goods can compete with food and can reduce its proportions in the Budget, as in other countries, being to that extent, as deflationary as an increase of food supplies. The antithesis between capital and consumer goods is misconceived, because the purpose of the first is to produce the means and of the second the ends which satisfy the people. In the interdependent economy of the free world, many countries have highly developed consumer industries, without capital industries. In most countries, the consumer industries have led to the development of the capital industries. Only Communist countries have tried to be self-sufficient by starting with capital industries, which have served the State for purposes of defence only, so that only just recently after 30 years, consumer industries have been started to meet the minimum requirements of the people. The boast that we have the means of growth with our steel factories is as valid as saying that we have the raw material for other industries. It will be a long way before the end-use of steel is found.

Two other facts, namely, that consumer goods provide employment and taxes in a much larger volume than capital goods, have also been overlooked. On the investment of Rs. 1,100 crores, the private sector provides the State with Rs. 140 crores of taxes per annum, while the public sector with an investment of Rs. 1,500 crores has contributed nothing. In respect of employment opportunities, it is enough to mention that Rs. 180 crores invested in each steel factory can employ only 8,000, while an equal sum invested in engineering industries can employ 100,000, the proportion being higher for other industries and for construction and agriculture. Secondly, our heavy industries, mortgage the country to foreign countries, which alone can supply the equipment and spare parts, on the one hand, and the technical know-how and experts, on the other. At any moment, the countries which have put up the steel plants can disorder their working by withholding their assistance. The whole concept of heavy industries and the commitment they involve deserves to be reconsidered.

If it is conceded that consumer goods are necessary to satisfy the people for their sacrifices and to halt inflation by relieving the pressure of food, the proposals of the Plan to restrain consumption become meaningless. The measures proposed are in any case useless. Taxes on consumption reduce production more than consumption. Limits on deficit finance and credit creation are only meaningful when they restrain investment which is not productive, which, at present, is only in the public sector.

The specified resources will primarily depend on the health of the economy. The taxes will depend on the increase of production and consumption, according as they are direct or indirect and the loans on the confidence that inflation will not water them down. The last loan of the Central Government had to be bought out by the Reserve Bank to the tune of Rs. 40 crores. The loans of the State Governments this year had less response than last year despite intensive canvassing by State Ministers and they are already quoting at a discount. If the Reserve Bank is not responsible for this just now, it will be so in due course, because, during the second Plan, the loans aggregating Rs. 1,300 crores were not from the people, Rs. 670 crores being from the banks and Rs. 630 crores from funding of Treasury Bills, the whole process being back-door deficit finance, with interest to pay for the camouflage.

Surpluses from Public Sector Units

The resources are: first, revenue receipts for which an increase of Rs. 350 crores is projected, though there was a deficit of Rs. 100 crores in the second Plan. Considering the increases in pay following the recommendations of the Pay Commission, which will inevitably be reflected also in the scales of State employees, the deficit is likely to be enhanced, even if indirect taxes show improvement. Only if the Government is prepared to weed out existing posts coincidentally with elimination of fictitious and formal work, can any balance from revenues, be expected. Contribution from railways is placed at Rs. 150 crores, when it has been annually between Rs. 5 and Rs. 6 crores during the second Plan. Fares can be raised, but, apart from the unpopularity involved, the railways cannot face the competition of road transport, which will be strengthened.

Surpluses from other public sector enterprises are estimated at Rs. 450 crores, against *nil* in the second Plan. It is true that, sometime during the third Plan, the steel factories will begin production, but there is little reason to conclude that this will yield profits which can be regarded as revenue, when other factories in the public sector which have been working could not add anything up during the second Plan. In fact, there may be losses which the taxpayer may have to pay, if the conditions of the workers in the public sector are levelled with those of the workers in the private sector, as labour leaders are trying to do. One fundamental factor, which we shall have to realise is that in a democracy, the State cannot enforce its authority as employer against the employees, not only because the latter regard themselves as owners but also because everyone, including the supervising staff, tends to cushion himself on the general taxpayers. State enterprises can only go with totalitarianism, which we lack in politics and cannot have in economics.

Loans from the public are expected to be of the order of Rs. 850 crores. This sum may not be difficult to raise as long as scheduled banks and the Reserve Bank actually take them up. Since this is only deficit finance, the consequence will be inflation which will disturb the Plan estimates. The public can only be interested in loans when inflation is halted and actually reversed, so that the value of the money invested is raised. In respect of Rs. 550 crores proposed to be raised by way of small savings, I have continually pointed out, that they are a fiction. Investments in these instruments are forced by executive authorities and encashments in many States are in excess of purchases. Those who paid instalments to oblige officials, leaving the loans to the banks are less disposed to repeat their losses, while Banks are selling as soon as they can after appropriating the instalments which the investor has abandoned.

The provision of Rs. 550 crores from Provident Funds and Steel Equalisation may be realised, but it has to be remembered that higher steel prices will prevent the expansion of subsidiary industries, for which we have invested so much on steel factories. There is also a presumption that the large quantity of steel to be produced will be fully in demand to bear prices of Government's choice.

Additional taxation is placed at Rs. 1,650 crores, when Rs. 1,000 crores in the second Plan has caused inflation for the economy and distress to the people, Even if indirect, the taxes will fall not only on consumption, but ultimately on production to become progressively self-defeating. Even if the Plan pours money into the economy, the greater part of it will not be with those called upon to pay the taxes. Finance Ministers will find it extremely difficult to increase the existing tax burden.

Foreign Aid

Budgetary receipts from foreign aid are estimated at Rs. 2,200 crores, on the presumption that exports will average Rs. 690 crores, as against Rs. 576 crores in the second Plan and that obligations failing due can be converted into longer-term loans. How exports can improve when rising labour costs and taxes are pricing them out of foreign markets is difficult to see. The trouble with default in obligations due is that it reduces our credit for further loans. In fact, there is a change in the climate for foreign loans, which is making it doubtful whether we shall have, even during the next six months, the credit to import items required to maintain existing industries. There are two broad sources of foreign aid, the U.S.A. and the U.S.S.R. as competitors for our support in the cold war. Their responses may be reduced for two reasons, first that our relations with China have discounted our political influence and, secondly, the focus of the cold war seems to be shifting to Africa. American loans, except in respect of food, which we have already got, are also not very useful, because American prices for industrial equipment are too high. The second set of creditors are the U.K., West Germany and Japan, which have little political interest but are concerned first with disposing of their surplus production and second with securing future business in spare parts and equipment. Loans from these countries will be basically on commercial lines. As the planners have overestimated our internal resources, India may require larger foreign loans than that indicated in the Plan, but, as the climate has changed, we may get much smaller ones.

Deficit financing has been estimated at only Rs. 550 crores, but, because other resources will fail, it may be much more, unless the Plan is drastically cut in respect of the public sector.

The resources for the Plan, therefore, seem to be built on sand. Almost half of them are hypothetical and nearly all of them are inflationary. The Plan will inevitably shrink as the finances fail. Some of the shrinkage can be avoided by transferring the Plan, except in respect of the infra structure of services, to the private sector at once. In any case, its response should be first ascertained, before Government commits the taxpayer's money in the place of private and voluntary savings.

Planning and Organisation

This chapter of the Plan is a confession of the mistakes of the two preceding Plans, but, since the causes are not analysed, the cures are only in the nature of palliatives. The administration has been found to be a confusion of policies and responsibilities, with results not related to the staff and procedures involved. The lack of speed, economy and integrity are also admitted.

Since the administration inherited from the British was the best in the world, the deterioration, now prevailing, must be traced to subsequent changes in it. The first change was political, the Ministers, combining executive and legislative power, bestriding the administration, officials being mere courtiers to fetch and carry, instead of workers with independence and experience. The Plan suggests demarcation of authority, interference being limited to specific rules to be made. Since Ministers have few qualifications other than of political power, their part in the administration should be limited strictly to policy. Secretariat instructions, in this connection, could follow British practice, so that the country is not burdened by unqualified Ministers doing the work of qualified civil servants.

The second change has been the incursion of Government into the economic and social life of the country, through laws on the one hand and controls and State enterprise, on the other. The result is growth in the numbers and powers of officials, untrained and uninterested in the work thrust on them. It is no solution to increase the authority of officials, because they will never use it, when they are subject to political influences, on the one hand, and the criticism of multiple bodies, on the other. The only solution is for Government to retreat from State enterprises and to withdraw controls.

The third change is the introduction of fifth wheels, the Planning Commission at the Centre and the Block Development Organisation in the districts, which diffuse responsibility and add delay to those actually charged with the work. Duplication of executive agencies is the negation of administration. If these fifth wheels are to be maintained at all, their role should be only to watch and assess what the established agencies are doing.

The fourth change has been the increase in scriptory work and workers. On the civil administration of the Centre alone, the expenditure has jumped up from Rs. 35.5 crores in 1948 to Rs. 260 crores at present, with a sizable addition from the Pay Commission's proposals. The only consequence to the public is that it cannot do its own work in its own way. Delay is so regular that almost nothing gets done without personal approach to officials. The rules are so prolific that almost anything can be obstructed by them while everything is delayed. It is only from precise examination both of the procedure and the subjects of work, that the administration can be rendered workmanlike.

The administration for the villages has been obsessed by the idea of decentralisation, though, with science reducing distances, the advantages are with centralisation in the way of economy, supervision and common standards. If, for the purpose of democracy, authority is to be conveyed to the people, it should not be in respect of execution but of supervision. The *panchayats* can be suitably empowered to guide, watch, and assess the work, which the centralised agencies will do for them. This division of functions, while endowing the local bodies with authority, will not disturb departmental responsibility, so long as it is in the interest of the people. This distinction of executive from legislative and supervisory functions may involve a fundamental change but is necessary if the country is to be saved from the consequences of decentralisations, which have already been adversely noticed in Rajasthan and Andhra.

Foreign Trade

The administration in respect of foreign trade also ignores that the function of the State is to guide and assist and not to interfere and compete. Before the second Plan began, the gap in the foreign exchange was negligible. During the second Plan, it was on an average of Rs. 440 crores and during the third Plan it is expected to be Rs. 500 crores. At long last, export controls have been removed in a large way. If import controls are also removed, at least for those items for which the foreign exchange is secured by the parties themselves, the necessity for loans on a Government-to-Government basis will be greatly reduced. It could be almost eliminated, if State enterprises are transferred to the private sector, which will not only improve their returns but encourage foreign investment on which foreign exchange will only arise from the profits, when they are made. The unbalanced traffic between exports and imports is now enhancing shipping costs. Exports require to be boosted, but this involves a drastic change in policy regarding taxes and labour charges. The world is now suffering from overproduction, both agricultural and industrial, and, except in respect of items in which we have a monopoly, which are few and dwindling, we can only compete by cutting down both costs and prices.

The labour policy of the Government which the Plan supports is merely satisfaction of a pressure group of 3 million workers who are unionised, against 40 million landless workers, in particular, and the whole country, in general. The landless workers, whose average wage was Rs. 220 in 1951, are, according to the latest report of the Agricultural Labour Inquiry Committee, worse than before. A need-based wage of Rs. 125 monthly for factory workers, with fringe benefits which add up to about a third as much, is related only to the accident of the workers being in factories and unions. Arising from this need-based wage, the whole country is mulcted first by the loss of exports in competitive markets, second, by the retardation of industrialisation not only from the high proportion of labour costs, 53 per cent. according to the U.N. *Survey*, but also from Government's partiality to labour, which is always placing the employers in the dock, and, thirdly, by the reduction in consumption imposed by high prices. The mistake made by the Government is from conceiving the country as so highly industrialised that, to favour the workers is to favour the largest section of the population. As it is, for a small section, the rest of the population, some 95 per cent. is penalised with high prices, industrial retardation and loss of markets abroad.

Land Reforms

The policy regarding land reforms is similarly the result of group pressure. Broadly, the land reforms aim at giving permanent rights in a family-holding, which may be from five to thirty acres, to those in possession and by revising the rents at half to one-third of those now prevailing. The basic fact which has been ignored is that three-fourths of the rural households have less than five acres of land, one-fifth having no land at all, and one-fourth, less than one acre. What is proposed is really to extend favour to a small class at the expense of the rest who will lose their viability, on the one hand, to bigger holdings and the opportunities for work in the larger farms, on the other. At the same time, ceilings on land, to the extent they have reduced the size of holdings in anticipation of the law, have, in the first place, banished the advantages of large-scale and improved farming, secondly, have pared the surpluses of the larger farms which feed the towns and, thirdly, introduced a predatory note in village relationships, which may go beyond the present ceilings and may extend also to other incomes. If the real intention of the Government was to increase production and, consequentially, the income of every one, the only basis for the rights it was offering should have been the best use of the land. Since half the area is still not covered by land reforms, the Government may consider applying to it the strategy of rights conditional on improved farming. Otherwise, if the Government does not want a reduction of food supplies, there should be standstill on land reforms.

(To be continued)

INDIA'S FOREIGN TRADE IN AUGUST

India had an adverse balance of trade of Rs. 25.69 crores in August 1960, as against Rs. 25.16 crores in the previous month and no more than Rs. 8.08 crores in the corresponding month of the previous year. Exports at Rs. 57.04 crores were Rs. 8.50 crores higher, as compared with July, but showed a decline of Rs. 9 lakhs over that in August 1959. Imports rose from Rs. 65 crores in August 1959 and Rs. 74 crores in July 1960 to Rs. 83 crores in the month under review.

The following table shows at a glance the trend of trade in the first eight months of 1960, as compared with that in the same period of 1959.

(Value in crores of rupees)

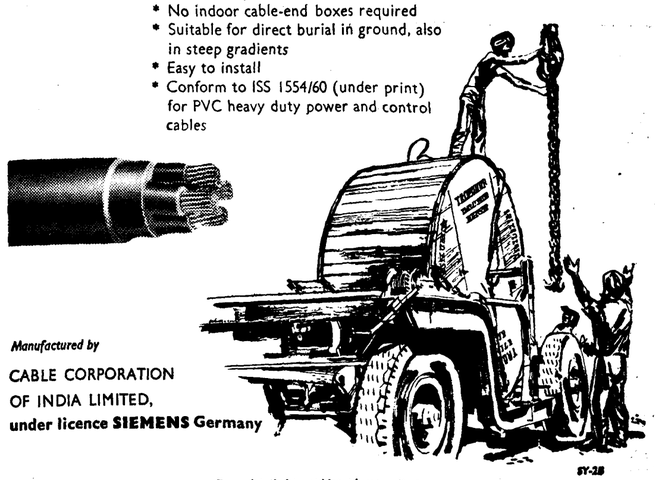
	Imports	Exports (including re-exports)	Balance of trade
1960			
January	62.68	53.06	— 9.62
February	69.12	49.81	— 19.31
March	75.67	53.37	— 22.30
April	82.00	48.58	— 33.42
May	82.77	50.74	— 32.03
June	84.95	48.94	— 36.01
July	73.70	48.54	— 25.16
August	82.73	57.04	— 25.69
Total ..	613.62	410.08	—203.54
1959			
January	80.24	45.16	— 35.08
February	71.02	42.16	— 28.86
March	73.39	46.95	— 26.44
April	91.84	44.65	— 47.19
May	73.37	44.05	— 29.32
June	81.32	42.92	— 38.40
July	67.48	50.86	— 16.62
August	65.23	57.15	— 8.08
Total ..	603.89	373.90	—229.99

During the eight months ended August 1960, India's exports improved by Rs. 36 crores to Rs. 410 crores, as compared with the corresponding period of 1959. Imports, too, went up slightly, that is, by Rs. 10 crores to Rs. 614 crores. Consequently, the adverse trade gap for the period as a whole narrowed by about Rs. 26 crores to Rs. 204 crores.

SIEMENS
INDIA

TROPODUR cables in rational metric sizes for service voltages upto 1.1 kV

* High electrical and mechanical strength
* Flame retardant
* Corrosion proof
* No indoor cable-end boxes required
* Suitable for direct burial in ground, also in steep gradients
* Easy to install
* Conform to ISS 1554/60 (under print) for PVC heavy duty power and control cables



Manufactured by
CABLE CORPORATION OF INDIA LIMITED,
under licence SIEMENS Germany

For a detailed pamphlet, please write to :

SY-28

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS AND APPLICATIONS ARE INVITED ON THE BASIS OF THE PROSPECTUS

A copy of the Prospectus, having attached to it the documents required by Section 60 of the Companies Act, 1956 has been delivered for registration to the Registrar of Companies, West Bengal.

Applications will be made to the Calcutta and Bombay Stock Exchanges for permission to deal in and for official quotations of the Shares of the Company.

Certificate of Commencement of Business has been obtained on the 11th April 1959.

The Subscription List will open at the commencement of Banking hours on 17th October 1960 and will close at the close of Banking hours on 24th October 1960. The Directors at their discretion may close the Subscription List earlier, but not before the close of Banking hours on 21st October 1960.

HINDUSTAN WIRES LIMITED

(INCORPORATED ON 28TH MARCH, 1959 UNDER THE COMPANIES ACT, 1956)

SHARE CAPITAL

AUTHORISED CAPITAL :

10,00,000 Equity Shares of Rs. 10 each .. .. .. Rs. 1,00,00,000

ISSUED, SUBSCRIBED AND PAID-UP CAPITAL :

50,000 Equity Shares of Rs. 10 each fully Paid-up, payment having been made in cash .. .. Rs. 5,00,000

PRESENT ISSUE :

4,50,000 Equity Shares of Rs. 10 each .. .. .. Rs. 45,00,000

OUT OF THE PRESENT ISSUE :

2,00,000 Equity Shares of Rs. 10 each are agreed to be subscribed by the Directors and their friends and associates .. .. Rs. 20,00,000

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION :

2,50,000 Equity Shares of Rs. 10 each .. .. .. Rs. 25,00,000

Rs. 45,00,000

TERMS OF PAYMENT FOR ABOVE SHARES

(a) On application .. .. .. Rs. 5.00 per share.

(b) No money is payable on allotment. The balance of Rs. 5.00 per share will be payable on call or calls to be made by the Board of Directors not earlier than four months after allotment.

No shares are to be allotted for a consideration other than in cash.

DIRECTORS

	Name	*Address*	*Description or Occupation*
1.	SIR D. N. MITRA (*Chairman*)	7, Ballygunge Circular Road, Calcutta	Industrialist
2.	SRI M. A. CHIDAMBARAM	Adayar House, Madras-25	Industrialist
3.	SRI HIMATLAL V. GANDHI	Jyoti Sadan, Netaji Subhas Road, Marine Drive, Bombay	Stock Broker
4.	SRI K. KHAITAN	1 & 2, Old Post Office Street, Calcutta	Attorney-at-Law
5.	SRI N. L. BHARTIA	14B, Raja Santosh Road, Calcutta	Merchant

OBJECTS

The Company was incorporated on the 28th March, 1959 with the objects mentioned in the Memorandum of Association of the Company, a copy whereof is annexed to the Prospectus and forms part thereof. The immediate aim of the Company is to manufacture High Tensile, Spring Steel, Concrete Re-inforcement, Signal, Galvanized, Hard Bright and Annealed wires (6 SWG to 30 SWG) and wire products.

PROSPECTS

At present High Tensile wires, Concrete Re-inforcement wires, fine G.I. wires, Signal wires, etc. are largely imported. Indigenous production of Hard Bright, Annealed and G.I. wires is also not sufficient to meet the requirements of various industries and therefore these wires are also being imported. The Company's plant shall help in reducing these imports.

The Company has already acquired land for the factory on Barrackpore Trunk Road, Sodepur near Calcutta. Factory buildings have been erected, electric and water installations have been completed. Substantial part of plant and machinery and auxiliary services such as pickling, baking, annealing facilities have been installed. *The plant has gone into production from August, 1960.* Some more plant and machinery have been ordered and an import application for the same is pending with the Government. The Company has been granted an Industrial Licence for production of 5,000 tons per annum, but as large quantity of wires of all types is still being imported, and with the increased production of steel in the country, there is a good scope to increase the production of wires by the Company.

PROFIT

The Company's present plant has gone into production and is likely to earn reasonably good profits. Barring unforeseen circumstances, the Company shall be in a position to pay reasonable dividends.

PLANT, MACHINERY AND TECHNICAL SERVICES

The plant already acquired and erected by the Company is of the best and latest type. It has been manufactured by the renowned and world's leading manufacturers of such plant, namely, Sir James Farmer Norton & Co., Ltd. of Manchester, U.K. The existing plant includes Gravity Blocks which have been recently developed, patented and exclusively manufactured by Sir James Farmer Norton & Co., Ltd. Orders for further plant have also been placed with the same manufacturers.

The Company's plant has been planned and installed in consultation with the resident Technical Engineer of Sir James Farmer Norton & Co., Ltd.

The Company's Works Manager is a very competent Engineer and has a very long experience in the line.

LOCATION OF FACTORY

The Company's factory is located on a spacious site at Barrackpore Trunk Road, Sodepur. This location is advantageous from the point of raw material supplies and proximity to market.

WATER SUPPLY

The Company has already installed a deep well Turbine Pump for requirement of water supply together with necessary overhead tanks, etc.

POWER

The Company has already obtained from the Calcutta Electric Supply Corporation 6 KV A/C supply at the factory and also installed a 1000 KVA Transformer together with necessary control gears.

CAPITAL OUTLAY AND WORKING CAPITAL

The estimated requirements are as follow :—

	Rs.
*(1) The cost of land, building, plant and machinery and water and electric installations	37,00,000.00
(2) Preliminary expenses including commission, brokerage and expenses for the issue	1,10,000.00
(3) Working Capital	11,90,000.00
(4) Any other expenditure ...	*Nil*
Rs.	50,00,000.00

*A sum of Rs. 17,00,000 has already been spent in purchase of land, construction of buildings, installation of plant, etc. This has been met by the present subscribed Capital of Rs. 5,00,000 and the balance from temporary loans which are intended to be repaid out of the subscription of the present issue.

The minimum amount which, in the opinion of the Directors, must be raised by this issue of Shares in order to provide the sum required to be provided as per para 5 of the Schedule II of the Companies Act, 1956 upon which the Directors will proceed to allot the shares offered by the Prospectus, has been fixed at 3,25,000 Equity Shares of the nominal value of Rs. 32,50,000 being only a part amount of this issue, out of which Rs. 20 lakhs has been agreed to be subscribed by the Directors and their friends. The balance amount of Rs. 12,50,000 will be arranged by borrowing from the banks and other sources against fixed and other assets of the Company in the ordinary course of business.

SPECIAL BENEFITS

The Company will be entitled to Special Benefits under the Indian Income-tax Act with respect to Development rebate. It will also enjoy the benefits of Section 15C of the Indian Income-tax Act whereby profits upto 6 per cent. on the employed capital will be exempted from tax for the first five years of operation.

MANAGING DIRECTOR

The Board of Directors shall, subject to the approval of the Central Government, enter into an agreement with Sri M. L. Bhartia for his appointment as Managing Director of the Company. An application in this behalf is being made to the Central Government for sanction for such appointment under the relevant provisions of the Companies Act, 1956.

The draft agreement between the Company and Sri M. L. Bhartia provides *inter alia* that Sri M. L. Bhartia shall be paid an annual remuneration of 5 per cent. commission on net profits of the Company computed in the manner laid down in the Companies Act, 1956 and that in the event of the Company having no profits, or its profits being inadequate in any financial year, he is to be paid a minimum remuneration of Rs. 30,000 per annum, provided nevertheless the said Sri M. L. Bhartia shall be entitled to draw a sum of Rs. 2,500 per month towards his remuneration as Managing Director.

APPLICATION FOR SHARES AND ALLOTMENT

Application for Equity Shares must be for 50 shares or multiple of 50 shares. All applications must be made on the prescribed forms. Copies of Prospectus on the terms of which alone applications will be considered, and application forms may be obtained from the Registered Office of the Company or from the Company's Bankers and Brokers. All application forms properly completed must be lodged together with the amount payable on application with the Registered Office of the Company or with any one of the following Banks, namely :

1. State Bank of India, Calcutta, Bombay, Madras, New Delhi.

2. The Central Bank of India Ltd., Calcutta or with any of their Branch Offices at Ahmedabad, Allahabad, Amritsar, Bombay, Baroda, Bangalore, Calcutta, Cochin, Coimbatore, Delhi, Hyderabad, Jaipur, Kanpur, Lucknow, Madras, Nagpur, Patna, Rajkot and Surat.

Cheques or drafts should be drawn in favour of HINDUSTAN WIRES LIMITED and should bear the words "Equity Issue A/c." Separate cheque or draft must accompany each application.

MUKAND IRON AND STEEL WORKS LTD.

SPEECH OF THE CHAIRMAN, MR. KAMALNAYAN BAJAJ

PLEA FOR GREATER EMPHASIS ON DEVELOPMENT OF STEEL CONSUMING INDUSTRIES

THE Twenty-second Annual General Meeting of the Mukand Iron and Steel Works Ltd. was held at Bombay on 29th September 1960. Addressing the shareholders on the occasion, Mr. Kamalnayan Bajaj, Chairman, expressed the view that the time was opportune for placing greater emphasis on development of steel consuming industries in preference to heavy investment in new steel-making units. This, he said, would help achieve a proper balance between them and consolidate industrial development.

The following is the full text of Mr. Bajaj's speech:

"LADIES AND GENTLEMEN:

"I have great pleasure in welcoming you all, and particularly the new shareholders, to the twenty-second annual general meeting of the Company. The Directors' report and the accounts for the year ended 31st March 1960 have been with you for some time. With your permission, I shall take them as read.

"Production and productivity are increasing in many industries throughout the country. Better balance has been achieved during the year by more fully utilising the installed capacities. Still, shortages of food, fuel, power and transport continue to be the major national handicaps. These have retarded further growth to some extent, and hindered at least one of our main steel plants from developing to its full capacity. Besides, until ancillary industries are developed adequately, it will be difficult to stabilise and consolidate our growing industrial economy.

"Demand is increasing at a greater pace than production, specially in consumer goods industries. This has started a spiral of increase in prices and cost of living. The estimated development outlay in the draft outline of the third Plan is far in excess of the domestic resources, which may result in further inflationary tendencies.

"The provision for deficit financing of Rs. 550 crores in the third Plan, as against Rs. 1,200 crores during the second Plan is, no doubt, more realistic. But, unless we ensure against a shortfall in external assistance by way of loans and aid, circumstances may compel us to resort to larger deficit financing, jeopardising the stability of our economy.

A Prudent Way

"It would, therefore, be prudent to divide the programme of the third Plan into two parts: the first consisting of the essential projects depending mainly on internal resources; and the second comprising the remaining schemes, listed in order of priority, to be taken up as and when external assistance is available. This will save us from the difficulties such as were experienced during the second Plan when we were forced to restrict ourselves to the core and ultimately to the hard core of the Plan deferring many of the essential projects, while being obliged to complete less important projects that had already been commenced.

"The total estimated investment during the third Plan period is Rs. 10,200 crores, of which Rs. 4,000 crores have been allocated to the private sector. There should not be any conflict between the public and private sectors, because they are, in fact, complementary aspects of the national sector. In an underdeveloped, mixed economy like ours, rapid progress in the private sector will largely depend upon the growth of the public sector which should, however, restrict its scope to basic and strategic industries. Within this framework, full scope should be given to the private sector to develop. National interest demands that allocation of industries to the public and private sectors should be made on the basis of optimum investments and returns.

"The target for steel calculated at 10.2 million tons of ingots equivalent to 7.5 million tons of finished steel is encouraging. The time is opportune for placing greater emphasis on development of steel-consuming industries in preference to heavy investment in new steel-making units. This will help achieve a proper balance between them and consolidate industrial development.

"While it is desirable to evolve a national wage policy based on a minimum wage and the cost of living index, it must also be linked with productivity. Otherwise, prices and wages will continue to chase each other and national interest will suffer.

"Nepotism, bribery and corruption are bad enough. What is more alarming is that the natural moral fibre of the people is weakening. It is the responsibility of the national leaders to keep awake *Punya Prakop* (righteous indignation) in people to resist evil.

"Prosperity which follows industrial growth and economic development is good. But we must guard against the danger of our going the way of Western countries as the craving for material wants is likely to go on ever-increasing and will be difficult to satisfy. This undesirable trend can be checked if our national leaders and the Government set examples of austerity and simplicity and create an atmosphere of moral and spiritual values in public and private life, which the people will not be slow to emulate.

Two New States

"The States of Maharashtra and Gujarat came into being with goodwill this year. I reiterate the hope I had expressed in 1956, that the rich heritage of our great languages will be utilised towards forging the bonds of unity amongst the people.

"The Government of Maharashtra is alert to the problem of stimulating planned economic development. Ways and means of accelerating the pace of development were discussed in the Maharashtra Commercial and Industrial Conference held recently in Bombay. It is hoped that a comprehensive development plan for the entire State will emerge.

"The recent establishment of the International Development Association under the World Bank will provide for a more flexible type of development lending without the burden of a fixed charge on the borrower's foreign exchange income, in addition to the Bank's regular operations. It is likely to prove beneficial to underdeveloped countries like ours by providing greater borrowing facilities for development programmes.

Manufacture of Intricate Castings

"The Company has taken up the manufacture of intricate castings for the automobile industry and sugar plants and additional components like roller bearing axle boxes and centre buffer couplers for the railways, all of which were hitherto being imported. I am proud that we have been the first to start supplying Indian-made centre buffer couplers to the railways.

"Our expansion programme was delayed as the land acquisition proceedings were contested in the Courts. The judgment of the Supreme Court of India, delivered last month, was in our favour; but a reference before the Maharashtra High Court is still pending. We hope it will be disposed of before long.

"I am glad to say the Government have accepted—though with some modifications—the recommendations of the Tariff Commission on the retention prices payable to the re-rolling industry.

"During the last five years, the average emoluments of the Company's workers have increased by 71 per cent., while the corresponding increase in the cost of living index is only 24 per cent.

"The Company's new air-conditioned office building at Kurla was occupied in February this year.

"The Company has taken out comprehensive insurance cover to safeguard against possible loss of profits due to breakdowns.

"Shri Rameshwarprasad Novatia, a Director of the Company, has been selected as the leader of the specialist team on 'Plant Layout' sponsored by the National Productivity Council of India for a study tour of Japan, United States and West Germany. Shri Viren J. Shah, our Chief Executive, was one of the 30 select participants from all over the country at the First Advanced Management Programme in India conducted by the Massachusetts Institute of Technology in collaboration with the All-India Management Association.

"The relations between the management and employees of the Company continued to be very cordial. I thank the Managing Agents, executives, staff and workers for their efforts in producing satisfactory results of working during the year."

SALE NOTICE OF TEXTILE MILL

As ordered by the High Court of Mysore, the entire fixed assets comprising about 45 acres land, buildings—a steel structure measuring 625 ft. × 154 ft. and other buildings like workshop, office etc.—and machinery, and stores and other accessories of the KAPILA TEXTILE MILLS LTD. (in liquidation), Nanjangud, (12 miles from Mysore City), will be sold by public auction, as one unit free from encumbrances and attachments, by the Official Liquidator on Saturday, 19th November 1960, at 2 p.m., at the Mill premises.

The mill proper is a post-war composite spinning and weaving mill with 15,000 ring spindles (high draft system) and 300 Northrop type automatic looms with all necessary preparatory machinery both to spinning and weaving, with grey finishing and bleach house machinery, power house, etc. Power for the installed machinery and plentiful water supply assured.

Details regarding machinery and terms and conditions of sale will be supplied free on application to the Official Liquidator.

OFFICIAL LIQUIDATOR.

HIGH COURT OF MYSORE,

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them — in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

SWITCHOVER TO METRIC SYSTEM

SCEPTICISM YIELDS PLACE TO CONFIDENCE

By K. V. Venkatachalam

MORE than one attempt was made in the past to standardise weights and measures in India. These, however, were sporadic and met with little success. As a result, there are today numerous types and denominations of weights and measures in use in different parts of the country. Even the number of such weights and measures prevailing is not known with certainty. In the middle of the last century, an attempt was made to standardise weights and measures by adopting the metric system and legislation was enacted for the purpose. Had that law been enforced, India would have been one of the first countries to adopt the metric system. This was not to be. The law remained a dead letter. In 1939, another attempt was made to standardise weights by adopting the standard seer and the pound as the primary units of weight. The law was, however, enforced only in Bombay and parts of Bihar and Punjab. An almost chaotic state of affairs in weights and measures has thus continued to the present day.

In 1955, the Central Government, in consultation with the Planning Commission and the State Governments, decided to adopt decimal coinage and the metric system of weights and measures. The chief objective of the reform was to standardise weights and measures, by establishing a single system for all purposes throughout the country. There were only two alternatives to the metric system. These were: (*a*) the imperial system and (b) the imperial system of length, area and capacity, coupled with Indian weights. Neither of the alternatives would have made the reform easier or less costly. Either of these would be as new to the large masses of the people as the metric system itself. The use of the imperial system has been largely restricted to organised industry, and only educated classes are familiar with it. The number of types of Indian weights in use is legion. Even the standard seer of 80 tolas has been in use in a very limited part of the country. The balance of advantage, therefore, lay in adopting the metric system which is easy to learn and to use, is known and recognised throughout the world, and whose use simplifies all calculations involving weights and measures.

Legislation

The Government's decision to adopt decimal coinage and the metric system was approved by the Lok Sabha in a resolution in 1955. In the same year, legislation was enacted to decimalise currency. The Act was brought into force in 1957; when decimal currency came into circulation. It was planned to replace all the anna and pie coins within three years. Although three years have passed, it has not been possible to eliminate these coins completely, since enough naya paisa coins could not be produced in time to replace them. The bulk of the coinage now in circulation is, however, naya paisa coins. It has been announced that the 2-anna and the 2-pice coins would be demonetised soon. It will not be long before 'anna' and 'pie' go out of the Indian vocabulary.

Legislation to adopt the metric system was enacted in 1956. Since this reform would affect all classes of people in their daily lives, it was necessary to proceed with caution. The Standards of Weights and Measures Act, 1956, therefore, gave the Government power to introduce the new weights and measures gradually according to a phased programme. A period of 10 years was allowed for the complete adoption of the metric system. This period would expire on 31st December 1966. During this period, Government might introduce these weights and measures by stages. They might, if they chose, introduce weights first, followed by measures later. They might introduce the new system in selected areas or classes of undertakings, and extend it to others. Even after the new weights or measures were introduced in an area or a type of undertaking, the continued use of the older weights or measures might be allowed upto three years. These powers are being used to bring about a smooth transition to the new system, with the least inconvenience and cost to Governments and the public.

Elaborate Preparation

The introduction of the new system had to be preceded by a period of elaborate preparation. In India, while standards of weights and measures are laid down by Parliament, laws for enforcing them are made by the States. The State Governments are responsible for enforcing these laws. After Parliament enacted the law to adopt the metric system, laws to enforce it had to be made by all the State legislatures. All the States, except Jammu and Kashmir, have enacted these laws. The laws are identical in all essential respects, being based on a model Bill circulated by the Central Government. This would ensure uniformity in enforcement procedure throughout the country. The States have also set up organisations for enforcing weights and measures.

The Weights and Measures Departments of Governments all over the world are self-supporting. The revenue they earn from fees for stamping weights and measures pay for their upkeep. In India, also, the departments are expected to pay their way when in full working condition. This may not, however, be possible in the beginning. The Central Government has, therefore, promised financial assistance to enable the States to meet any deficit. They have also helped the States in equipping these departments with standard weights and balances. The standards are made in the Central Government Mints, and are verified either by the Mints or the National Physical Laboratory. Balances for verifying commercial weights against the standards are also being manufactured in India now. Efforts are being made to increase the output, and improve the quality of these balances.

Arrangements have been made at Bombay and Patna for training personnel to man the Departments of Weight and Measures. The Governments, both at the Centre and the States, have also conducted publicity to make the people familiar with the new weights and measures. Besides publishing a series of folders and advertisements in the daily Press, they have distributed tables for converting weights, prices, etc., widely. A documentary film on the metric system was shown in commercial cinema houses, and in rural areas by the publicity vans of the State Governments. Sets of demonstration weights have been shown at Information Centres in Community Development and National Extension Service Blocks, and elsewhere.

Different Stages

In October 1958, metric commercial weights were introduced in selected areas in all the States. These areas include important centres of trade and industry, such as Bombay, the Calcutta-Howrah Municipal areas, Delhi, Madras, Kanpur, etc. They comprise about one-tenth of the country. In many of these areas, there had been no enforcement of weights or measures before. It was, therefore, decided to allow two years for the continued use of the older weights. A reform of this kind was, however, bound to come across inertia from the public and the trade. As a result, although the period of two years has nearly expired, very little use is being made of the new weights in these areas. But this was not unexpected. It is clear that the new weights will not come into use, so long as there is the option to use the old weights. The public and the trade in these areas are, however, familiar with the new weights. Arrangements have been made for the supply of metric weights in these areas. There is sufficient stock of weights, verified and stamped by inspectors, with licensed dealers. Inspectors have been visiting shops to help remove any difficulties that the traders may experience. Tables for converting weights as well as prices expressed in weights are being distributed free to traders. A smooth transition to the new system is expected in October 1960 in most of these areas.

On 1st April 1960, the use of metric weights was authorised in the rest of the country as well. Thus, metric weights are now recognised by law for commercial transactions throughout the country. In areas where they were introduced on 1st October 1958, their use in trade have become compulsory from 1st October 1960. Elsewhere, they will become compulsory on 1st April 1962.

On 1st October 1958, the metric system was also introduced in transactions concerning the purchase of materials or sale of products by major industries, such as cotton textiles, iron and steel, engineering, chemicals, cement, paper, etc. In the jute industry, it was introduced from the beginning of the jute season (i.e., 1st July 1958). The industries were also given a period of two years for the continued use of the older weights. Most undertakings in these industries have begun using the metric system in their transactions. A large number of weighing machines used for commercial purposes in these undertakings have been converted to the metric system. Due to the limited capacity in the country for the conversion of these machines, all the machines may not have been converted by 1st October 1960. Machines, which were not converted by 30th September 1960, will continue to be used with conversion tables.

No Misunderstanding

The metric system was adopted in the distribution of petroleum products from 1st April 1960. Although one year was allowed for the continued use of the older units, the oil companies have adopted the metric system in full. Over 10,000 petrol dispensing pumps were converted to deliver petrol in litres. The metric system was introduced in the sugar industry from the beginning of the 1959-60 season. It will become compulsory from the beginning of the 1961-62 season. Even in the 1958-59 season, however, a few sugar factories purchased sugarcane from growers in quintals (100 kilograms). More followed in 1959-60. The change in the weights did not lead to any serious misunderstanding or difficulties between the factories and the growers. Sugar bags are being marked in both kilograms and maunds or hundredweights. The metric system will be introduced in the tea trade on 1st April 1961. Tea will be sold in packages of 500 grams, 250 grams and 100 grams. Vanaspati will be sold in kilograms from 1st October 1960. It is being packed in tins of 4 kg., 2 kg., 1 kg., and ½ kg. Industrial undertakings situated in the areas where metric weights were first introduced on 1st October 1958 will not be permitted to use any other weights after 1st October 1960. A sugar factory, for instance, in these areas must, therefore, use metric weights in transactions from 1st October 1960, though sugar factories situated outside these areas have the option to use other weights till 31st October 1961.

Exports Not To Be Affected

Care has been taken to ensure that the adoption of the metric system in India does not in any way hamper the country's export trade with the U.K., the U.S., and other countries on the foot pound system, particularly in the case of commodities like jute and tea. Our customers in these countries will continue to receive goods of the same quality as in the past, packed and invoiced in the manner they prefer. The packages will be marked in foot pound units and the invoices will show the quantities in these units.

Most major industries have adopted the metric system in their transactions. It would, however, take considerably longer to change the weights and measures used in specifications and designs of products or of the manufacturing equipment used. Metric standards for various materials and products are being published by the Indian Standards Institution. Some of the manufacturers have also begun to produce according to these specifications. Steel sections, for instance, are being produced increasingly in metric sizes. The steel mills in the public sector will be producing these exclusively. The older producers of steel have also replaced their rolls and made other adjustments to enable them to produce metric sections. Very soon, the entire production of steel in India will be in metric sections.

Railways and Postal Services

The commercial branches of the railways adopted the metric system on 1st April 1960. Fare and freight tables are in metric units. Goods and luggage are weighed in metric weights. The railways' weighing machines at important stations have been converted. Where machines are not converted, conversion tables are used. Consignors have, however, been given the option to show weights in forwarding notes in maunds and seers for the time being. The railways' staff would convert these to metric rates, before charging freight.

The metric system was introduced in ports and the shipping industry on 1st July 1960. The metric system will be adopted in the levy of customs and Central excise duties from 1st October 1960. Bills have been passed by the Lok Sabha, expressing the rates of customs and Central excise duties in metric units. The existing rates have been converted and rounded off. There has been no deliberate attempt to increase the rates, and there will be no gain in revenue to the Government. A Bill to amend the Post Office Act expressing postal rates in

(*Continued on page 657*)

PROTECTION FOR BICYCLES

TARIFF COMMISSION EXAMINING CLAIM FOR ITS CONTINUANCE

THE bicycle industry has been receiving protection for the last 14 years. The current term of protection is due to expire at the end of 1960. Most of the producers have pleaded for the continuance of protection for a further period ranging from three to ten years. In response to their request, the Tariff Commission is now examining the claim of the industry for the extension of the period of protection. Some of the large-scale manufacturers of bicycles, however, do not want continuance of protection. The customary public enquiry into the question was held at Bombay on 26th September, with Mr. K. R. P. Aiyangar, Chairman of the Commission, presiding. The industry has made good progress under the shelter of protection and is now able to meet not only the entire requirements of the country but is also in a position to export its products, albeit on a small scale. Opening the tariff enquiry, Mr. Aiyangar drew the attention of the industry to the export prospects. He thought that the prospect for promoting exports of cycles was promising, provided the industry could bring down costs and maintain a high standard of quality. Domestic demand for bicycles is also bound to go up in view of the rise in the standard of living. Mr. Aiyangar pointed out that, though domestic demand had grown, it had not grown fast enough "due partly to the price factor." He, therefore, called upon the producers to ensure full utilisation of capacity, in order to reap the benefits of economies of large-scale production and "pass on the benefits of the low cost to the consumer who had so far borne the burden of protection."

History of Protection

A brief history of protection to this industry will not be out of place in this context. The industry's claim for protection was first examined by the then Tariff Board in 1946. On the recommendation of the Board, protection was granted to the industry upto the end of March 1949 by converting the prevailing revenue duty of 36 per cent. *ad valorem* standard and 24 per cent. *ad valorem* preferential into protective duties at the same rates. Following the second enquiry in 1949, the period of protection was extended upto the end of 1952 at enhanced rates of protective duties of 70 per cent. *ad valorem* standard and 60 per cent. *ad valorem* preferential. Bicycle parts and accessories were also brought within the ambit of protection. The period of protection was subsequently extended from time to time till the end of 1954.

The third tariff inquiry was held in 1954 and the Commission recommended that protection granted to the bicycle industry should be continued upto the end of December 1956 at a reduced rate of duty of 45 per cent. *ad valorem* preferential exclusive of surcharge and the standard rate to be fixed according to the terms of the Indo-British Agreement. Government accepted the recommendation regarding period of protection but fixed the rate of preferential duty at 47½ per cent. *ad valorem* or Rs. 60 per bicycle whichever was higher. The standard rate of duty was fixed at 10 per cent. higher than the preferential rate. Government also decided that the rates of protective duty on components and accessories of bicycles should continue at the then prevailing rate of 70 per cent. *ad valorem* standard and 60 per cent. *ad valorem* preferential. The period of protection was extended in consultation with the Commission for one year, that is, upto 31st December 1957. In 1957, the Commission examined once again the case for the continuance of protection to the industry and recommended protection at the same rates of duty upto 31st December 1960. As the protective duties had, however, been rounded off and modified under the Finance Act (No. 2) of 1957, the protection to the industry has been continued at the revised rate of 65 per cent. *ad valorem* preferential or Rs. 80 per bicycle, whichever was higher, and 65 per cent. *ad valorem* preferential on parts and accessories of bicycles, the standard rates of duty being 10 per cent. more in both the cases.

Production

There are at present 21 large-scale units manufacturing bicycles. At the time of the last enquiry in 1957, too, the number of units was 21, but only 17 among them, with an annual rated capacity of 954,000 cycles (on single-shift basis), were in production. The location of the existing units is fairly widespread, with six in U.P., five in the Punjab, three each in West Bengal and Delhi, and one each in Bombay, Madras, Bihar and Assam. The licensed capacity of the existing units is about 1,438,500, whereas the actual installed capacity is 1,147,500. The production rose from about 797,000 in 1957 to 913,000 in 1958 and 990,982 in 1959. In the first three months of 1960, it increased further to 269,000 bicycles, or an annual rate of over one million.

In the small-scale sector, there were 112 units in 1958, with an aggregate capacity of 500,000 bicycles. These units are located all over the country but there is some concentration in the Punjab, Delhi and U.P. There are 58 units in the northern, 22 in the eastern, 14 in the western and 18 in the southern regions. The number of bicycles produced in the small-scale sector was 132,000 in 1957, 151,000 in 1958 and 172,000 in 1959. The total production, in both the sectors taken together, rose from 928,809 bicycles in 1957 to 1.06 million in 1958 and 1.16 million in 1959.

In the field of components, besides the large-scale bicycle manufacturers who also produced a variety of components for sale, there were 22 units manufacturing exclusively spare parts and components at the time of the last inquiry. Out of those, only 18 were in production. There are at present 23 such units in production and 16 more units have been licensed to produce components.

Demand

The demand for bicycles has also been moving up in recent years. Taking into consideration all relevant factors such as production, sales, imports and exports, the demand for bicycles would appear to have gone up to 1.15 million in 1959, as against 1.06 million in 1958 and 974,000 in 1957. In connection with the present inquiry, the Commission has received varying estimates of demand. The Development Wing has estimated the current demand at 1.4 million bicycles a year and expects it to increase at the rate of 220,000 a year and reach 2.06 million in 1963. The Development Council for Bicycles has estimated the demand to reach 2.5 million bicycles a year by 1965. It is said that some of the producers are, however, experiencing accumulation of stocks and they are not very optimistic about any large increase in demand during the next three years. The Cycle Manufacturers' Association of India has estimated the current demand at 1.15 million bicycles a year and that in 1963 to be at 1.55 million. The All-India Importers' Association has estimated the current demand at 1.5 million and expects it to increase to 2.4 million in 1963 at the rate of 300,000 a year. In respect of replacement demand for components and spares, the All-India Cycle Importers' Association has placed the average cost for bicycle parts and components at Rs. 15 per bicycle a year. It has also estimated the total number of cycles on the road at eight million at present.

The overseas demand for Indian bicycles was only on a very moderate scale. It is, however, gratifying that the industry has made a small beginning. In 1959, India exported about 7,159 bicycles, valued at Rs. 9.87 lakhs, and components worth Rs. 1.61 lakhs. The quality of cycles produced by the large-scale sector, with or without foreign collaboration, is said to be satisfactory, as compared with imported products. Those produced by the small units, however, are not uniformly of good quality, according to the Commission.

Ban on Imports

Imports of bicycles have been banned since 1959. There were, however, some imports, presumably against licences granted prior to the imposition of ban. In 1959, the number of bicycles imported was 696 (valued at Rs. 1.07 lakhs, as against 7,321 (Rs. 9.44 lakhs) in 1958 and 90,180 (Rs. 98.45 lakhs) in 1957. The import of parts and components is also restricted to free-wheels, chains, B.B. fittings, and fork head fittings. Since October 1958, the quota for imports of parts and components has been reduced to 2½ per cent. of half of the best year's imports. The value of imports of components has been reduced considerably, being no more than Rs. 74 lakhs in 1959, as compared with Rs. 96 lakhs in 1958 and Rs. 190 lakhs in 1957.

It may be noted that, owing to the restrictive import control policy, some of the larger producers have intimated the Commission that they are no longer in need of protection. The other units, however, do not share this view. The reasons on which the rest of the industry has based its claim for the continuance of protection are (1) cost of production of indigenous bicycles is high due to high cost of raw materials and indigenously manufactured components, (2) inadequate supply of proper types of raw materials required by the industry, (3) higher capital investment, (4) low labour efficiency and (5) want of good technicians.

Raw Materials

The principal raw materials required by the industry are steel items such as tubes, strips, bars, sheets and wires. While tubes, sheets and black bars are now available indigenously, the requirement of strips, free cutting bars and wires is largely met by imports. Besides steel items, the other raw materials required are brass for brazing purposes, brass wires for nipples, and copper, nickel and chromium anodes. Brass wires and anodes are imported and brass for brazing purposes is available indigenously. Components, such as handle grips, pedals, tyres, tubes and brake inserts, steel balls required for steering, etc., pedal assembly, hubs, free-wheels and rims are generally bought from indigenous sources. The industry also requires a number of consumable stores, including chemicals for polishing, brazing, electroplating and heat treatment. Bulk of these items are imported. Large-scale producers as well as component manufacturers have complained about the inadequate and irregular supply of raw materials and their poor quality. It has also been represented that the procedure for the import of raw materials is cumbersome and involves delays which upsets the production schedule of the producers, particularly as there has been recently some difficulty in obtaining deliveries of steel even in overseas markets. Manufacturers have, however, stated that the licensing policy adopted since 1st April 1960 is likely to improve the raw material position and enable advance planning. Nevertheless, it is complained that the basis of 1957 performance will prove inadequate for the current level of production and the Plan target. The industry has also taken exception to the procedure adopted for obtaining steel produced in the country and defects in the supplies made.

It is to be hoped that the industry's difficulties described above will be removed to a great extent, when supplies of steel from the new iron and steel plants become available in larger quantities. Meanwhile, since the ban on imports provides a good opportunity for the industry to stabilise its position, it has an obligation to consumers to make every effort to reduce the price of cycles which compares quite unfavourably with that of foreign products. While all possible help should be given to the industry, such assistance should not amount to encouraging uneconomic units. Bicycles constitute the poor man's vehicle. The aim, therefore, should be to produce high quality cycles at as low a price as possible. This objective can be served only through mass production.

MR. MANUBHAI SHAH ON INDUSTRIAL POLICY

The imperative need for a major re-thinking on the national industrial programme with a view to assessing the totality of the new stresses and strains and devise remedies to remove them, was emphasised by Mr. Manubhai Shah, Union Minister for Industries, in Bombay last week. This re-thinking, he added, should be done not only on the national level, but also on the individual level of *entrepreneurs*. He observed that the country had begun to feel the strains involved in large-scale economic and industrial development, and, what is more, they were likely to increase in magnitude during the period of the third Plan. Mr. Shah was inaugurating the silver jubilee celebrations of the Paper Products Ltd. He also declared open the new factory of the Company at Thana which will manufacture packaging materials.

The new industrial policy of the Government, Mr. Shah pointed out, would be based on four major objectives, namely, (1) manufacture of basic raw materials within the country, (2) indigenous production of capital goods, (3) substitution and the "imports-from-where-you-can" theory, and (4) export promotion. Mr. Shah observed that all applications from *entrepreneurs* would be scrutinised from these four angles. He assured the industrialists that, if they satisfied these four basic objectives, their applications would receive expeditious consideration of the Government. Mr. Shah appealed to the business community that in future, they should regulate their plans in such a way as to find or produce their requirements of raw materials themselves. He disclosed in this connection that the Government of India propose

(*Continued on page 662*)

IMPRESSIVE RESULTS OF INDIAN CABLES

NET DIVIDEND HIGHER—OUTLOOK ENCOURAGING

THE year ended 31st March 1960 was the first year of full production of proper insulated power cables by the Indian Cable Company, Ltd. (Chairman and Managing Director: Mr. B. J. Woodley, Calcutta). The paper cable factory, which constitutes an important link in the chain of the Company's expansion projects, went into production during 1958-59, and the first fruits of this expansion were reaped in that year itself. In the year under review, the Company realised further benefit, the turnover increasing by 10 per cent. over the year. The gross profit which had gone up from Rs. 111.32 lakhs for 1957-58 to Rs. 144.80 lakhs for the subsequent year, has shot up to Rs. 167.94 lakhs, a new high in the history of the Company, exceeding the previous high touched in 1956-57 by Rs. 7.67 lakhs. The net profit, at Rs. 80.28 lakhs, also shows an impressive rise from Rs. 77.03 lakhs and that too, after an increase in the provision for taxation from Rs. 48 lakhs to Rs. 66.50 lakhs. The transfer to depreciation account remains almost unchanged. It may be noted here that the Company had to write off no less than Rs. 26.30 lakhs as bad debts out of the profit for 1958-59, so that the net profit available for appropriation was substantially lower at Rs. 50.73 lakhs.

The improved results for the year under review have enabled the Directors to recommend a gross dividend of 22.5 per cent. on both ordinary shares and participating preference shares, which, on a tax-free basis, amounts to 15.75 per cent., as compared with 15 per cent. tax-free paid for 1958-59, and more than compensates the shareholders for the amount of tax which has now to be deducted at source. In recommending this dividend, which absorbs Rs. 18.65 lakhs more than in the previous year, the Directors have, according to the Chairman, "taken into consideration the need for husbanding the Company's resources, in order to be able to meet increasing competition, as also the advisability of keeping a dividend level which can fairly be expected to be maintained in subsequent years." They have ploughed back Rs. 18.20 lakhs out of the year's profit to the various reserves, as against Rs. 25.80 lakhs in the previous year, including a sum of Rs. 13 lakhs drawn from the provision for bad and doubtful debts.

The progress of the Company since 1956-57 is clearly brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957

* Subject to deduction of tax or 15.75 per cent. net.

While the general growth of industrial activity in this country is enabling the Company to obtain the raw materials required in increasing quantities from indigenous sources, there has lately been some difficulty in obtaining coal and coke, on account of shortage of railway wagons, and the Company has been compelled to rely to a greater extent on road transport for movement of both raw materials and finished goods. There has also been an appreciable increase in prices of raw materials that are vital to the Company's production, such as cotton yarn, raw rubber, jute products and tinplate. Railway freight charges, too, have increased for the fourth time since 1956. Nevertheless, the wider spread of overhead charges by reason of increased production has permitted the Company to make substantial cuts in its selling prices. The Company hopes to pass on further similar benefits to its customers as it makes further progress.

The Company's Contracts Department has had another busy and successful year. Two of the important orders secured are: (1) erection of the mast radiators for the Dacca Navigator Chains which are being installed on the east and west coasts of India and (2) complete supply and erection of the cables for connecting the five 55 m.w. sets, transformers and their auxiliary equipment to be installed in the generating station for the Rihand Hydel Project.

The outlook for the current year is no less promising, despite the growing competition, as will be evident from the following extract from the Chairman's statement.

"Turning now to the current year, I am pleased to be able to report that the results to date are good and that we have a full order book for all our products. But, as I have already mentioned, we are beginning to face greatly increased competition. Since our last annual general meeting, two new cable factories of appreciable size have gone into product on and industrial licences have been granted for several more proposed factories. The demand for electric cables must, however, continue to grow annually and, provided that generation of electricity is expanded at the rate envisaged by the Planning authorities, I believe there will be room for all the cable production capacity so far licensed and that we need have no fear for the future prosperity of this Company."

The Company's financial position is very sound and warrants the hope that the Company will be able to stand competition well. The reserves and surplus, at Rs. 248.64 lakhs, are equal to the paid-up capital. Barring the outstanding debenture loan of Rs. 97.80 lakhs, the Company has no other borrowings. The current liabilities and provisions stand at Rs. 234.76 lakhs and are covered by a huge margin by current assets amounting to Rs. 671.57 lakhs. In pursuance of its programme of expansion, the Company has made additions to the block account to the tune of Rs. 19.62 lakhs during the year under review, bringing the total block account to Rs. 295.40 lakhs. This has been well written down to Rs. 158.29 lakhs.

The latest market value of the Company's Rs. 10 fully paid-up shares is Rs. 31.87 *cum-div.* On an *ex-div.* basis, the yield on the shares is 5.18 per cent. per annum, free of tax.

PRAGA TOOLS CORPORATION DOES WELL

The working of the Praga Tools Corporation Ltd. (General Manager: Mr. B. Venkataraman, Hyderabad) during the year ended 30th June 1959 has yielded encouraging results. The production (in terms of value) amounted to Rs. 62.50 lakhs, which is equivalent to a monthly average of Rs. 5.21 lakhs and compares favourably with that of Rs. 4.26 lakhs in the previous eighteen months. Sales, too, have improved from Rs. 4.18 lakhs per month to Rs. 6.11 lakhs and the gross profit from Rs. 8.46 lakhs (for the eighteen months ended 30th June 1958) to Rs. 11.23 lakhs for the year under review. After providing Rs. 4.81 lakhs for depreciation, as against Rs. 7.27 lakhs, and Rs. 65,000 for taxation (Rs. 14,000), the net profit for the year amounts to Rs. 5.77 lakhs and represents a marked rise from a mere Rs. 47,796 earned in the previous eighteen months. Out of the net profit, a sum of Rs. 5,000 (as against Rs. 60,000) has been transferred to the statutory development rebate reserve, leaving a surplus of Rs. 4.92 lakhs, as against a loss of Rs. 12,204, and this has been utilised to reduce the accumulated deficit of the previous years.

The Company, it may be noted, had been working at a loss since its inception and the accumulated loss at the end of June 1958 was Rs. 30.64 lakhs. This was reduced to Rs. 9.99 lakhs by writing down the share value from Rs. 50 per share to Rs. 35, as sanctioned by the High Court of Andhra Pradesh. The residuary loss was still further reduced to Rs. 5.07 lakhs by the profit earned in the year under review. This balance is expected to be wiped out during the current accounting period (the financial year of the Company is being changed to conform to the Government fiscal year), as the Andhra Pradesh Government has agreed to waive a sum of Rs. 5.29 lakhs, being the interest due to it on the loan of Rs. 17.75 lakhs granted by it. The shareholders may, therefore, look forward now, according to the Chairman, to "a phase when positive profits may be made." It may, however, be noted that the Company's working since the close of the year was affected by labour troubles, resulting in a loss of production to the tune of Rs. 14 lakhs. Efforts are, however, being made to increase the tempo of production.

The Company's manufactures are said to be in greater demand than before and its order books continue to swell with increasing orders. Now that the Company has also reached a profit-earning stage, the Directors have thought it fit to expand its activities to meet the growing demand for machine tools and machine tool accessories. The Company, it may be noted, manufactures fundamental equipment for the steel processing industry. With the increase planned for steel production in the second and third Plan periods, the demand for such equipment from the steel processing industry is expected to grow. The expansion programme is planned not only to ensure maximum utilisation and productivity of the existing plant and machinery but also of the manufacture of additional items of machine tools and accessories. The programme will be undertaken in two phases, the first phase, which has been taken in hand, being estimated to cost Rs. 38 lakhs. Orders have been placed for machinery worth Rs. 11 lakhs, of which a part has already been received. The second phase will involve an additional investment of Rs. 85 lakhs. The Company proposes to manufacture, with British collaboration, lathe chucks, drill chucks, tool and cutter grinders, in addition to the existing range of machine tools and accessories. It is stated that the manufacture of tool and cutter grinders is being introduced for the first time in India.

The most important event of the year was the change in the capital structure of the Company and the participation of the Government of India in the share capital to the tune of Rs. 70 lakhs. Of the total subscribed capital of Rs. 135.92 lakhs, the Government of India has taken up Rs. 70 lakhs, or 51 per cent., the Andhra Pradesh Government Rs. 47.57 lakhs (35 per cent.) and other private shareholders Rs. 18.35 lakhs. There is a balance of Rs. 14.58 lakhs to reach the authorised capital of Rs. 150.50 lakhs. This is earmarked for the Government of India. The share capital held by the State Government includes a sum of Rs. 17.75 lakhs representing the shares issued in adjustment of the secured and unsecured loans given by it in earlier years.

The financial position of the Company needs to be strengthened considerably. As against a paid-up capital of Rs. 135.92 lakhs, the reserves amount to only Rs. 1.68 lakh. The current liabilities and provisions aggregate Rs. 15.48 lakhs. The gross block of the value of Rs. 75.09 lakhs has been written down to Rs. 31.52 lakhs. Capital work-in-progress amounts to Rs. 2.32 lakhs. The current assets aggregate Rs. 115.16 lakhs, besides an outstanding loss of Rs. 5.07 lakhs on profit and loss account.

TATA CHEMICAL DISAPPOINTS

The preliminary results of the Tata Chemicals Ltd. for the year ended 30th June 1960 have confirmed the worst fears of the share market. The old shares of the Company slumped from Rs. 19.40 as on 16th September to Rs. 16.00 on 28th September in anticipation of a cut in dividend. These fears came true when the Directors announced their decision to recommend a reduction in dividend on the old shares from 75 nP per share of Rs. 10 each paid for 1958-59 to 60 nP for the year under review, both subject to deduction of tax. They have also recommended a dividend of 20 nP per share, subject to deduction of tax, on the new ordinary shares, *plus* interest of 40 nP per share, payable out of capital at 4 per cent. per annum, as sanctioned by the Government, making a total of 60 nP per share for the year. Last year, they had paid a dividend of 71.875 nP per share on the new shares, which included an interest element at 38.333 nP per share or 4 per cent. paid out of capital. The dividend of 33.542 nP per share paid out of the year's (1958-59) profit was subject to deduction of tax.

The cut in dividend is a sequel to the sharp fall in the Company's earnings. The profit before providing for taxation and development rebate reserve (but after making provision for depreciation) has dropped from Rs. 43.88 lakhs to Rs. 27.36 lakhs. The provision for taxation has been reduced from Rs. 12.51 lakhs to Rs. 1.05 lakhs, while the transfer to the development rebate reserve has been raised from Rs. 13.30 lakhs to Rs. 14.35 lakhs. The net profit available for appropriation after these allocations (including the surplus brought forward from the previous year) is Rs. 12.03 lakhs, as compared with the corresponding figure of Rs. 18.11 lakhs for 1958-59. As this sum falls short of the amount required to pay even the reduced dividend, namely, Rs. 14.38 lakhs (excluding that to be paid out of capital), the Directors have had to draw a sum of Rs. 2.50 lakhs from the general reserve to make good the shortfall.

On the basis of the latest quotation of Rs. 16.12 *cum-div.*, the yield on the old shares is 2.7 per cent. per annum, free of tax.

MUKAND IRON AND STEEL WORKS LTD.

While reviewing the results of the Mukand Iron and Steel Works Ltd. for the year ended 31st March 1960, in our issue dated 24th September 1960 (*vide* page 563), it was stated:

"The production of bars and rods, which had consistently risen from 171,000 tons in 1954-55 to 390,000 tons in 1958-59, has further enlarged to 456,000 tons in the year under review. The upward trend in output of castings and other products which had suffered a slight setback last year from 49,000 tons in 1957-58 to 44,000 tons, has, however, further declined to 42,000 tons in 1959-60."

The figures of production given above are incorrect. They have been exaggerated by the inadvertent addition of a zero. Thus, the statement should read:

"The production of bars and rods, which had consistently risen from 17,100 tons in 1954-55 to 39,000 tons in 1958-59, has further enlarged to 45,600 tons in the year under review. The upward trend in output of castings and other products, which had suffered a slight setback last year from 4,900 tons in 1957-58 to 4,400 tons, has, however, further declined to 4,200 tons in 1959-60."

BIRD-HEILGERS JUTE MILLS FARE BETTER

OUTLOOK FOR CURRENT YEAR OBSCURE

THE jute companies in the Bird-Heilgers group have generally had a satisfactory period of trading during the year ended 31st March 1960, thanks to the large raw jute crop of 1958-59 and the substantial carryover into the 1959-60 season which enabled them to do simultaneous business in raw jute and manufactured goods at a satisfactory margin of profit for most of the year. Out of the seven companies in the group, as many as six have earned a higher profit than in the previous year, though the extent of increase varies in each case. The only exception to the general trend is provided by the Lawrence Jute Company, Ltd. Many of them have been able to add sizable sums to the reserves and also pay a higher dividend, while only one of them, namely, Lansdowne Jute Company Ltd., while reducing the large deficit brought forward from the previous year, is still in arrears of preference dividend. The Dalhousie Jute Company Ltd., which also had a large carryover deficit, has been able not only to wipe out the deficit and clear off the arrears of preference dividend but also return to the ordinary dividend list with a token payment.

The broad outline of the performances of the seven companies during the last two years is given in the comparative table published at the foot of this page.

Notwithstanding the liberal dividend recommended in the case of Auckland Jute, the net distribution, at 18.9 per cent., is slightly less than that of 20 per cent. paid for the previous year. The Dalhousie Jute has returned to the dividend list after a lapse of three and a half years and after paying the arrears of preference dividend for the three years 1957-58, 1958-59 and 1959-60. The Lansdowne Jute, which went off the dividend list after paying the interim dividend for the half-year ended September 1955, is still in arrears of preference dividend for the three years, 1957-58, 1958-59 and 1959-60. The Directors of the Company have recommended a dividend on the 7 per cent. preference shares for only six months ended 31st March 1957 and even this is being paid out of the general reserve. The dividends of Kinnison, Lawrence and Northbrook, even on a tax-free basis, are substantially higher than those paid for the previous year, while that of Union Jute is lower at 17.5 per cent., as compared with 20 per cent. for 1958-59.

The fortunes of the industry suffered a turn for the worse since *November* 1959, when signs that the 1959-60 crop would be smaller than at first anticipated appeared and prices of raw jute shot up, without any corresponding rise in those of jute goods. While prices of raw jute advanced by 40 per cent. by the end of March 1960, B. twills moved up by only 9 per cent., thus making simultaneous business at a profit impossible. As for the current year, the prospects, according to the Directors of the Companies, are "somewhat obscure," as much will depend on the size of the crop for 1960-61 and the price at which it will be available. At the time of signing the Directors' report, that is, at the end of August, the growth of the crop was satisfactory, but since then ideas about the crop have turned out to be unfavourable. It is in view of this change in crop position that the I.J.M.A. has decided to extend the scheme of voluntary sealing up to the end of December 1960.

Further steps are being taken by some of the mills to complete their modernisation programme. The Auckland Jute has placed orders for 24 automatic weaving machines, which, subject to an import licence being granted, are expected to arrive early in 1961. These weaving machines are of the most modern type and should improve the quality of sacking fabrics, apart from the benefits which will be derived by reducing manufacturing costs. The Company has also placed orders for additional machinery for the modernisation of sacking weft section and for additional spinning and drawing frames. It has been further decided to change over from "short" to "long" draft, with a view to improving the efficiency. The Dalhousie Jute also has placed orders for additional spinning and drawing frames and to change over from "short" to "long" draft. The carpet backing looms of the Northbrook Jute worked to capacity during the year under review and orders were placed for a further 18 wide looms, five of which were erected and commissioned in December 1959. The balance of 13 looms has since been received and erection was completed in July 1960, but reduced offtake has delayed their being put into operation. Orders have been placed for 24 automatic weaving machines and these are expected to arrive towards the end of this year. The modernisation of the sacking weft section of the Kinnison Jute has been completed and orders have been placed for additional spinning and drawing frames and with this, the modernisation programme in the preparing and spinning sections of No. 1 mill is complete for the time being. The spinning and preparing machinery installed in No. 2 mill in 1949 is said to be working satisfactorily. The Directors are giving careful consideration to the possibility of introducing new types of machinery in the other sections of the mills, particularly on the weaving side.

The following are the latest market values of the ordinary shares of the aforesaid companies, as compared with those a year ago. The yield is based on the latest quotations:

	Latest Rate Rs.	*Year ago* Rs.	*Yield* %
Auckland	167.00	200.00	18.3
Dalhousie	125.00	130.00	—
Kinnison	160.00	178.00	13.6
Lansdowne	109.00	135.00	—
Lawrence	135.00	112.00	11.8
Northbrook	22.50	21.50	14.8
Union	184.00	230.00	15.0

G.E.C. AND ENGLISH ELECTRIC LIKELY TO MERGE

The General Electric Company and the English Electric Company, two giants in the British electrical industry, are holding discussions on the possibility of merging themselves into one and, if these talks prove successful, it will bring about one of the biggest industrial mergers in the U.K. for many years, with a combined balance-sheet total of £177 million. According to a statement issued by the Boards of the two companies, many of the activities of the two groups are complementary and having regard to the interests of shareholders and employees, they have agreed to explore immediately the practicability of a merger of the two groups by means of a holding company.

In view of the size of the respective groups, it will take time to examine the details and formulate any definite proposal to the shareholders, but a further statement is expected to be made as soon as possible. The two groups overlap in the fields of heavy engineering, domestic appliances, telecommunications and lighting. The English Electric has, in addition, large interests in the field of aviation, while the G.E.C. is a leading manufacturer of radio and television sets. The combined assets of the two companies will be only slightly lower than that of the other leading company in this field, namely, the Associated Electrical Industries.

WESTERN INDIA PLYWOODS LTD. Taxable dividend of 10 per cent. or Rs. 10.00 per ordinary share, for the year ended 31st March 1960. Transfer books will remain closed from *21st to 27th* October 1960, both days inclusive.

TRAVANCORE SUGARS AND CHEMICALS LTD. Taxable dividend of 10 per cent. or Re. 1.00 per ordinary share, for the year ended 30th [illegible]. Transfer books will remain closed from [illegible] ber to 7th November 1960, both days inclusive.

SYNOPSES OF COMPANY REPORTS

Karanpura Development Co., Ltd.

THE directors of the above Company [Secretaries and Treasurers: Messrs. Bird & Co. (Private) Ltd., Calcutta] present the audited accounts of the Company for the year ended 31st December 1959.

By the end of the year under review, compensation claims in respect of approximately 10,000 bighas of land, acquired by the Government of India in the Karanpura Coalfields, had been submitted to the National Coal Development Corporation, Ranchi. Since then further areas have been notified for acquisition affecting the Company's leaseholds in Religara and Dari. The directors have therefore instituted legal proceedings under Article 226 of the Constitution of India with the object of obtaining an injunction on the grounds that the two mouzahs constitute "worked areas." In regard to the Chordhara area, the Calcutta High Court has decreed the continuance of the *ad interim* injunction obtained last year by the Company's sub-lessees.

Raisings and Despatches.—During the period 1,530,850 (1,181,007) tons of coal were raised and 1,527,476 (1,152,701) tons were despatched from the Company's various collieries.

The profit and loss account after providing for all charges and making provisions of Rs. 2,04,588 (Rs. 2,28,409) for taxation and Rs. 7,243 (Rs. 5,379) for depreciation, shows a profit of Rs. 1,98,637 (Rs. 1,38,629). To this is added the balance brought forward from previous year of Rs. 3,14,490 (Rs. 1,75,861) making a total of Rs. 5,13,127 (Rs. 3,14,490). From this amount the directors have transferred to statutory development rebate reserve Rs. 1,400 (*nil*) and to general reserve Rs. 1,00,000 (*nil*) leaving a balance available of Rs. 4,11,727 (Rs. 3,14,490). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the founders' shares at the rate of 15 (*nil*) per cent. per annum, subject to deduction of tax, at source, absorbing Rs. 75,000 (*nil*), by payment of a dividend on ordinary shares at the rate of 5 (*nil*) per cent. per annum, subject to deduction of tax, at source, absorbing Rs. 75,000 (*nil*) and by carrying forward Rs. 2,61,727 (Rs. 3,14,490).

Consequent upon the termination of the managing agency of Messrs. Bird & Co. (Private) Ltd., with effect from 15th August, 1960, Mr. D. L. V. Rowe, the ex-officio director of the Company resigned. Mr. Rowe was appointed in pursuance of Clause 94 of the Articles of Association an additional director and chairman of the Board with effect from 16th August, 1960. Mr. D. L. V. Rowe having since resigned, Mr. D. C. B. Pilkington accepted the seat on the Board as its Chairman with effect from 23rd August, 1960.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Liabilities ...	42,28,088	Stock ...	82,701
Profit and loss account (surplus)	2,61,727	Stores, etc.	53,607
		Book debts	27,46,214
		Investments	18,77,482
		Cash ...	14,23,247
Rs.	93,46,214	Rs.	93,46,214

Kemp and Co., Ltd.

The directors of the above Company (Chairman: Mr. Jal H. Mehta, Bombay) present the audited accounts of the Company for the year ended 31st March 1960.

The net profit for the year ended 31st March 1960, after providing Rs. 66,040 (Rs. 62,003) for depreciation, Rs. 10,000 (Rs. 3,900) for development rebate and Rs. 1,45,000 (Rs. 1,85,000) for taxation amounts to Rs. 1,65,750 (Rs. 1,25,227) to which is added the amount brought forward from last year of Rs. 31,662 (Rs. 26,435) making a total of Rs. 1,97,412 (Rs. 1,51,662). The directors recommend appropriation of this amount as follows:—

To distribution of a dividend at Rs. 25 (Rs. 20.00 per share, free of tax), gross per share (Rs. 200 paid up) absorbing Rs. 1,50,000 (Rs. 1,20,000) leaving a balance to be carried forward of Rs. 47,412 (Rs. 31,662). The directors consider the provision for taxation as sufficient to meet this liability, and the depreciation on fixed assets as adequate.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Gross block	27,43,796
Reserves ...	6,37,883	*Less*—Depreciation ...	14,20,459

		Book debts	7,36,550
		Investments	12,056
		Cash ...	28,760
Rs.	35,41,547	Rs.	35,41,547

Davangere Cotton Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. R. Hanumanthappa & Son, Davangere) present the audited accounts of the Company for the year ended 31st March 1960.

The working result of the Company for the year is a profit of Rs. 12,40,298 (Rs. 9,27,023), after providing Rs. 7,27,159 (Rs. 7,19,542) for depreciation. After deducting therefrom Rs. 6,138 (Rs. 5,765), donations paid in the year, and including a sum of Rs. 15,442 (Rs. 21,830) brought forward from the previous year, the amount available for distribution is Rs. 12,49,602 (Rs. 9,43,088), which the directors recommend to appropriate as under:—

To development rebate reserve Rs. 1,65,000 (Rs. 3,30,000), to provision for taxes Rs. 4,60,000 (Rs. 1,85,000), to general reserve Rs. 9,664 (Rs. 25,000), to reserve for repayment of mortgage loan Rs. 2,50,000 (Rs. 1,20,000) and to payment of dividend for the year ended 31st March 1960 at 12 (9 per cent. free of tax) per cent. per annum on the paid up share capital, subject to deduction of tax, absorbing Rs. 3,55,938 (Rs. 2,62,227) leaving to be carried forward Rs. 9,000 (Rs. 15,442 after paying Rs. 5,419 on bonus account relating to 1957-58).

The yarn and cloth market was reasonably steady, particularly from the latter half of the financial year. As previously, the Company's products continue to enjoy a high reputation in the market. During the year, a small portion of the yarn production was exported, though at an unremunerative rate.

After struggling with a crisis for three years, while the industry was able to stage a recovery, it had to face a serious shortage in the Indian cotton, whereby the Government had to introduce quota system for supply of Indian cotton. But, this did not prevent prices reaching the ceiling, thereby practically taking away the price advantage on finished products.

Effective steps have been taken to improve production and quality. It is needless to add that in view of the high competition, modernisation and rationalisation are a "must" and the directors have lost no time in taking necessary action in this behalf. The expansion of the spinning section was completed in December 1959. Thus, the present capacity of the spinning section is 40,032 spindles.

The directors have already reported the purchase of Narayandas Chunilal Mills, Gadag, in the Court auction held on 28th July 1959 for Rs. 3,61,001. The original owners have filed number of petitions for cancellation of the sale, for the reason that the bid was low. The matter is still before the Court.

The directors thought it fit to purchase the Kapila Textile Mills (under liquidation) at the auction held on 18th July 1960 for a sum of Rs. 15,25,000, in view of the fact that their attempt to obtain additional allotment of looms from the Government had not met with success so far. This sale was confirmed by the High Court and in appeal, the same was cancelled and ordered to be re-auctioned.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	29,66,711	Gross block	1,21,27,978

Rs.	1,40,78,395	Rs.	1,40,78,395

Dufflaghur Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The season's working resulted in a profit on revenue account of Rs. 4,97,720 (Rs. 6,12,609) after providing for depreciation amounting to Rs. 63,649 (Rs. 63,801) and providing Rs. 60,000 (Rs. 58,300) for contingencies. After transferring the above profit, making various adjustments, setting aside Rs. 2,20,000 (Rs. 2,94,000) for taxation, paying an interim dividend of 15 (15) per cent. for 1959 absorbing Rs. 1,05,093 (Rs. 1,05,093), creating a development rebate reserve of Rs. 6,000 (*nil*) and transferring back the balance of Rs. 75,000 (*nil*) in the dividend equalisation reserve to profit and loss account, the balance available for disposal amounts to Rs. 7,23,695 (Rs. 6,52,709). The directors propose to transfer to building reserve Rs. 1,50,000 (*nil*), to repairs and renewals reserve Rs. 50,000 (*nil*) and pay a final dividend of 20 (30) per cent. absorbing Rs. 1,40,124 (Rs. 2,10,186) leaving to be carried forward a balance of Rs. 3,83,571 (Rs. 4,42,523).

The following are comparative statistics of sales for the past three years:—

	Lbs.	Average sale price per lb. Rs. nP
1957	980,116	2.76
1958	1,058,370	2.52
1959	928,388	2.71

The estimate for 1960 provides for a crop of 420,940 kg. (928,000 lbs.) of tea at a cost of Rs. 4.68 per kg. (Rs. 2.12 per lb.).

The term of office of Messrs. Williamson Magor & Co., Ltd., as managing agents of the Company expired on 15th August 1960 in terms of Section 330 of the Companies Act, 1956. The Company in general meeting held on 24th September 1959 had already approved of the proposal that Messrs. Williamson Magor & Co., Ltd., be reappointed managing agents for a further term of ten years from 15th August 1960 subject to the approval of the Central Government. The Central Government gave its approval to the reappointment but reduced the term of office to five years and also prescribed a sliding scale of remuneration instead of the flat rate as under the previous agreement and as proposed under the terms of reappointment. At the Company's general meeting held on 13th August 1960 the reappointment with these modifications was formally confirmed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,620	Gross block	27,54,322
Reserves ...	11,66,000	*Less*—Depreciation ...	14,69,122

		Stores ...	4,06,768
		Book debts	1,09,570
		Investments	5,07,774
		Cash ...	5,60,787
Rs.	37,53,878	Rs.	37,53,878

Borrea Coal Co., Ltd.

The directors of the above Company [Secretaries and Treasurers: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta] present the audited accounts of the Company for the year ended 31st December 1959.

Raisings and Despatches.—1,65,837 tons of coal were raised and 1,64,090 tons despatched during the year, compared with 1,71,109 tons raised and 1,74,148 tons despatched during 1958. The decrease in output was due to an illegal strike in March, 1959. It is satisfactory to report that within recent months there has been a substantial increase in raisings due largely to the labour position at the colliery having improved to a considerable extent.

Transport.—Wagon supplies were irregular and at times when there was a congestion of coal in the steel works, no wagons were supplied on several days. In addition, the number of covered wagons supplied prevented full use being made of the mechanical screening arrangements.

The profit and loss account, after providing for all charges, after making provision of Rs. 99,499 (Rs. 1,45,109) for taxation and Rs. 80,381 (Rs. 72,707) for depreciation, shows a profit of Rs. 1,68,376 (Rs. 1,93,549) to which is added the balance brought forward from the previous year of Rs. 20,179 (Rs. 26,931) making a total of Rs. 1,88,555 (Rs. 1,93,549). From this amount the directors have transferred to statutory development rebate reserve Rs. 12,725 (Rs. 66,120) and to general reserve Rs. 55,000 (*nil*) leaving a balance available of Rs. 1,20,830 (Rs. 1,27,429).

The directors propose to dispose of this amount as follows:—

By payment of a dividend on the preference shares at the rate of 6¼ per cent. per annum, subject to deduction of tax at source absorbing Rs. 26,000 (Rs. 26,000), by payment of a dividend on the ordinary shares at the rate of 10 (7½) per cent. free of tax) per cent. per annum subject to deduction of tax, at source, absorbing Rs. 75,000 (Rs. 56,250) and by carrying forward Rs. 19,830 (Rs. 20,179) after transferring Rs. 25,000 to dividend equalisation fund).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,50,000	Gross block	45,36,993
Reserves ...	20,32,392	*Less*—Depreciation ...	28,95,396
Provision for wealth tax	12,217		
Liabilities ...	8,86,473	Net block ...	16,41,597
Profit and loss account (surplus)	19,830	Expenditure in progress	2,50,859
		Stock ...	51,625
		Stores, etc. ...	1,64,493
		Book debts	9,05,552
		Investments	7,94,201
		Cash ...	2,92,585
Rs.	41,00,912	Rs.	41,00,912

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMMERCE AND INDUSTRY

(*Concluded from page 649*)

to bring out a list of raw materials which were in short supply. This was the appropriate time, he said, for producing them indigenously, "not so much qualitatively as quantitatively." He wanted the revival of the old spirit of *swadeshi* which was now flagging.

Elucidating the second objective, Mr. Shah expressed the view that the country should go all out to produce capital goods. The ideological conflict involved in the issue whether it was worthwhile and necessary to starve the present generation in order to feed posterity, according to him, was totally wrong. He insisted that both the private and public sectors should make efforts to reduce the dependence on imports. Industrialists were asked to endeavour to restrict imports to the minimum. The third objective of substitution meant that substitutes should be found for raw materials or machinery not available from within the country itself. Besides, if imports were unavoidable, industrialists should import from any country from where they could get it, and not insist on any selected country. He said that this would avoid unnecessary complications. Lastly, Mr. Shah made an impassioned appeal to the nation to take a "religious vow" that it would do all it could to step up exports.

Mr. S. L. Talwar, Managing Director of the Paper Products Ltd., pointed out that proper packaging was a prerequisite for the promotion of exports. He suggested the establishment of (1) an independent Development Council for the packaging industry and (2) a packaging research institute devoted solely to the problem of finding ways and means of making the best use of indigenously available materials and creating protective and functional packages to suit different climatic conditions.

Notices

THE MANDYA NATIONAL PAPER MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Second Annual General Meeting of the Members of The Mandya National Paper Mills Limited will be held at the Registered Office of the Company at 14, Palace Road, Bangalore-1, on Friday the 4th November, 1960, at 11 a.m., for the following purposes:—

AGENDA

1. To receive and adopt Directors' report and the audited accounts of the Company for the period ended 30th June, 1960 and the Auditors' report thereon.

2. To appoint a Director in place of Dharmaprakasha Shri M. V. Veerappa, who retires by rotation, and being eligible, offers himself for re-election.

3. To appoint a Director in place of Sardar Anup Singh Bedi, who retires by rotation, and being eligible, offers himself for re-election.

As Sardar Anup Singh Bedi is an Associate of the Managing Agents of the Company, a Special Notice as required by Section 261 of the Companies Act, 1956 has been received by the Company and notice is hereby given to consider and if thought fit, to pass the following resolution with or without modification as a Special Resolution:

"RESOLVED that pursuant to Section 261 of the Companies Act, 1956 Sardar Anup Singh Bedi, an associate of the Bedi and Company Management Private Limited —The Managing Agents of the Company, be and is hereby re-elected a Director of the Company."

4. To appoint a Director in place of Shri P. M. D. Thackersey, who being appointed after the date of the last annual general meeting, retires and being eligible, offers himself for re-appointment.

5. To appoint Auditors and fix their remuneration.

As Special Business

To consider and if thought fit, to pass with or without modification, the following resolutions:—.

6. *As Special Resolution*: "That consent be and is hereby accorded to Shri M. N. Govindappa and Shri N. Krishnappa, who are relatives of Dharmaprakasha Shri M. V. Veerappa, a Director of the Company, being appointed to hold an office of profit under the Company on a remuneration of Rs. 80 and Rs. 140 per month respectively subject to such terms and conditions and such increments as may be decided by the Directors or any Committee of the Directors or the Managing Agents in pursuance to the powers conferred on them in this behalf."

7. *As Special Resolution*: "That the provisions contained in the Memorandum of the Company be altered in manner following, that is to say

"that the words and figures '1,80,000 7% (seven per cent.) free of Income-tax Redeemable Cumulative Preference shares of Rs. 100 each, appearing in Clause V of the Memorandum shall be deleted, and the following new words and figures substituted therefor. '60,000 7% (seven per cent.) free of Income-tax Redeemable Cumulative Preference shares of Rs. 100 each, 1,20,000 6½% (six and a half per cent.) free of Income-tax Redeemable Cumulative Preference shares of Rs. 100 each.'"

8. *As Special Resolution*: "That the Articles of Association of the Company be altered in manner following—that is to say—the words and figures appearing in Clause 4

"1,80,000 7% (free of Income-tax) Redeemable Cumulative Preference shares of Rs. 100 each"

shall be deleted and the following words and figures substituted therefor

"60,000 7% (seven per cent.) free of Income-tax Redeemable Cumulative Preference shares of Rs. 100 each and 1,20,000 6½% (six and a half per cent.) free of Income-tax Redeemable Cumulative Preference shares of Rs. 100 each."

9. *As Ordinary Resolution*: RESOLVED that the Company hereby authorise the Board to issue five lakhs new Equity Shares of Rs. 10 each and 10,000 6½ per cent. Redeemable Cumulative Preference Shares of Rs. 100 each (Redeemable at the expiry of 15 years from the date of allotment) and to offer them for subscription on the following terms and conditions:—

(i) The new Equity shares shall rank *pari passu* with the existing Equity shares of the Company in all respects.

(ii) The new Preference shares shall also rank *pari passu* with the existing Preference shares of the Company in all respects except that they will be entitled to dividend at the rate of 6½ per cent. per annum from the date of allotment.

(iii) The new Equity shares shall be offered for subscription at par to the persons whose names appear in the Company's Registers of Members as holders of Equity shares of the Company on the date of the offer as may be fixed hereafter by the Board of Directors of the Company, as nearly as circumstances admit, in the proportion of 5 new Equity shares for every 14 Equity shares held by each such member on the said date, the shares to be allotted to be suitably adjusted to the nearest multiple of five. The holders of Equity shares may also apply for a larger number of Equity shares than they are entitled to, but their applications will be considered by the Directors after shares have been allotted in the aforesaid proportions.

(iv) The new Preference shares shall be offered for subscription at par to the persons whose names appear in the Company's Registers of Members as holders of Equity shares of the Company, on the date of the offer, as may be hereafter fixed by the Board of Directors of the Company, as nearly as circumstances admit, in the proportion of one new Preference share for every 140 Equity shares held by each such member on the said date. The members holding less than 140 shares shall also be entitled to apply and the members may also apply for a larger number of Preference shares than they are entitled to, but their applications will be considered suitably by the Directors after the shares have been allotted to the holders of the Equity shares above 140.

(v) The offer aforesaid shall be made by the Board by notice, specifying the number of shares offered and limiting the time not being less than one month from the date of the offer within which the offer if not accepted will be deemed to have been declined.

(vi) The offer aforesaid shall include a right exercisable by the member concerned to renounce the shares offered to him or any of them in favour of any other person.

(vii) After the expiry of the time specified in the notice aforesaid or on receipt of earlier intimation from the person to whom such notice is given that he declines to accept the shares offered, the Board of Directors may dispose of them in such manner as they may think fit.

(viii) The issue, offer and allotment of the new Equity shares and new Preference shares aforesaid, shall be made in such manner and on such terms consistent with this resolution as the Board may in its absolute discretion determine and without prejudice to the generality of its powers given in this resolution, the Board is hereby explicitly authorised to decide and settle all questions relating to the issue and allotment to non-resident members of the Company.

(ix) The full amount of Rs. 10 per share on Equity shares and Rs. 100 per share on Preference shares shall be payable with the application.

(x) The Certificate in respect of new Equity shares and new Preference shares shall be complete and ready for delivery within six months after date of the last allotment thereof.

(xi) For the purpose of giving effect to this resolution the Directors be and are hereby authorised to prescribe forms of application and renunciation and other documents in respect of such new Equity shares and new Preference shares and to give such other directions or do such other acts as they think fit including settling any difficulty that may arise in regard to issue and allotment of new Equity shares and new Preference shares.

(xii) The underwriting arrangements for the new issues may be made by the Directors if they think necessary, but the underwriting commission shall not exceed 2½% of the nominal value of the shares.

(xiii) The aforesaid issue shall be made by the Directors subject to the sanction of the Controller of Capital Issues and on such terms and conditions as the Controller of Capital Issues may prescribe.

10. *As Ordinary Resolution*: RESOLVED that the appointments of the under-noted parties as Sole Selling Agents in respect of areas noted against each be confirmed as required under Section 294 of the Companies Act, 1956.

Name of the Party	*Area*

BOMBAY, *29th September*, 1960.

KEMP AND COMPANY, LIMITED

NOTICE

THE SEVENTY-NINTH ANNUAL GENERAL MEETING OF THE SHAREHOLDERS OF KEMP & CO., LTD., will be held at the Office of Messrs. H. M. Mehta & Co., 'Mehta House,' Apollo Street, Fort, Bombay, on the 24th October, 1960 at 4-30 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1960.
2. To declare Dividend.
3. To elect a Director in place of Shri Jal H. Mehta, who retires by rotation and being eligible offers himself for re-election.
4. To elect a Director in place of Shri S. M. Chothia who retires by rotation and to consider and if thought fit, to pass the following resolution, of which Special Notice as required under Section 281 of the Companies Act, 1956, has been received by the Company, and the relative Explanatory Statement concerning which is annexed hereto as required under Section 173 of the Act.

   "RESOLVED that pursuant to the provisions of Section 281 and under other applicable provisions (if any) of the Companies Act, 1956, Shri Shapurji Manchershaw Chothia who has attained the age of 75 years and who retires by rotation, be and is hereby re-elected a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said said Act shall not apply to him."

5. To appoint Auditors for the current year and to fix their remuneration.

The Register of Members and the Share Transfer Register of the Company will remain closed from the 10th October, 1960 to 24th October, 1960 (both days inclusive).

Note: 1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote at the Meeting instead of himself. A proxy need not be a Member of the Company.

2. The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business in item No. 4 set out above is hereto annexed.

3. If the Dividend on Shares as recommended by the Directors is passed at the meeting it will be paid on or after 7th November, 1960 through the Company's Bankers to those Shareholders whose names are on the Company's Register of Members on 24th October, 1960.

By Order of the Board of Directors,

JAL H. MEHTA,
Chairman.

BOMBAY, *dated 9th September*, 1960.

ANNEXURE TO THE NOTICE

Explanatory Statement as Required by Section 173 of the Companies Act 1956.

Shri Shapurji Manchershaw Chothia, who retires by rotation and is eligible for re-appointment, has attained the age of 75 years. Hence he cannot be appointed a Director of the Company except by a resolution, in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a notice from a member intimating his intention to move the resolution as set out in the said item. Shri Shapurji Manchershaw Chothia joined the Board of Directors of the Company in October 1938. He has wide and varied experience, and during his long association with the Company, as Director he has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice and guidance as a member of the Board, it is desirable that he be re-appointed a Director.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

TENDER NOTICE

Manufacture of Cast Iron Sleepers

TENDERS ARE INVITED FROM ESTABlished foundries in India, having experience in the manufacture of Cast Iron Sleeper Plates for supply, by 31st December 1961, of about 3,50,000 Tons of Cast Iron CST9 Sleeper Plates both B.G. and M.G. Tenderers may quote for any small quantity according to their capacity. Tenders quoting for the supply of 3,000 Tons and above, of B.G. Cast Iron Sleeper Plates, it would be obligatory to quote for the supply of M.G. Cast Iron Plates also for a quantity of not less than 30 per cent. of the total quantity quoted for.

2. Railway Board would recommend to the Iron and Steel Controller the issue of Pig Iron according to the requirements of the supplier up to a maximum of 100 per cent. of the quantity of sleepers ordered on the firm. The firms are expected to make up the melting losses under their own arrangements.

3. Applications for tender documents should be made to any of the following officers from 7th October 1960:—

(i) The Director, Railway Stores, Railway Board, State Entry Road, New Delhi.

(ii) The Deputy Director Works (Bridges), Railway Board, 14 Strand Road, Calcutta.

Tender Documents embodying conditions of Contract will be supplied at Rs. 3 per set and will be available for sale during office hours.

Relevant drawings, if required, may be had separately on payment of Rs. 8 per set of drawing.

4. Tenders will be received upto 12.00 hours on the 18th November, 1960 and opened in the office of the Railway Board on State Entry Road, New Delhi, at 15.00 hours on the same day.

QURBAN SINGH,
Director, Railway Stores.

NEW DELHI,
Dated 26th September 1960.

WESTERN BENGAL COAL-FIELDS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta on Friday the 4th November 1960, at 3.00 p.m., for the following purposes:—

(1) To consider and adopt the Directors' Report and the Audited Accounts of the Company for the year ended 31st March 1960.

(2) To consider declaration of dividend.

(3) To elect Directors in place of Shri S. M. Mohta and Shri R. P. Goenka who retire by rotation but being eligible, offer themselves for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration. Messrs. Singhi & Co., the retiring Auditors being eligible, offer themselves for re-appointment.

(5) To transact any other business which may be brought forward at the meeting with the permission of the Chairman.

The Register of members will remain closed from the 20th October 1960 to the 4th November 1960, both days inclusive.

By Order of the Board,

HINDUSTAN INVESTMENT CORPN. LTD.,
Managing Agents.

8, INDIA EXCHANGE PLACE,
CALCUTTA 1.

N.B.:—(i) If the dividend as declared by the directors is passed at the meeting, all dividend will be posted to the Registered addresses of the shareholders whose names appear on the Company's register on the 4th November 1960 or to their order or to their bankers.

(ii) The instrument appointing a proxy shall be deposited at the Registered Office of the Company not less than 48 hours before the time for holding the aforesaid meeting.

(iii) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE AFORESAID MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the above Corporation will be closed from 1st November 1960 to 22nd November 1960, both days inclusive.

FOR THE BOMBAY BURMAH TRADING CORPORATION LTD.,
WALLACE & CO.,
Secretaries & Treasurers.

9, WALLACE STREET,
BOMBAY.

INDUSTRIAL FINANCE CCRPORATION OF INDIA

(*Concluded from page 631*)

"In the matter of the actual drawal from us of amounts against loans approved, there was appreciable increase during the past year, the total disbursements having aggregated Rs. 8.41 crores, as against Rs. 7.48 crores of the preceding year. We continued to make interim payments against approved loans on the same liberal scale as we did in the past, and this has helped considerably towards eliminating the delays that usually arise in connection with the completion of legal formalities before loan documents are finalised. A sum of the order of Rs. 6 crores was paid out during the year under report by way of interim loans alone.

"A larger percentage of loanee concerns was inspected in the course of the past year than in the previous one, and I am glad to say that in the case of the large majority of them we were completely satisfied with their progress in implementing their schemes and with their general financial position and the progress of their production. Quite a few of them also declared handsome dividends with our prior concurrence. The defaults committed by loanee concerns in the payment of interest and repayment of principal tended to come down further in the past year, the percentage being 1.2 and 4.3, as against 1.4 and 5.4, respectively, of the previous year. I would add that, in spite of our vastly increased activities, our administration expenses were not allowed to shoot up on Parkinsonian lines. As a percentage to our gross income, they came down in the past year to 4.66 from 5.11 of the previous year, and 15.65 of four years prior to that.

"I am glad to say our relations with the various Chambers of Commerce and other similar organisations continued to be as close and friendly as in the previous year, and so were our relations with our loanee concerns too. We went ahead during the year with the programme that we had initiated a few years ago of having suitable non-officials nominated as our representatives on the Boards of Directors of our loanee concerns, and I take this opportunity to thank these gentlemen on my behalf, and on behalf of our Board of Directors, for the very valuable work they have done in this capacity.

"It is also my very pleasant duty before I conclude, to convey our hearty thanks to the members of our five Advisory Committees—non-officials and officials—for the very able and effective assistance they have rendered to the Corporation. My thanks are due also to my colleagues on our Board of Directors for their very valuable co-operation and wise counsels, and their generous response to the many calls I have had to make on their time. Finally, I have also great pleasure in conveying the thanks of the Board of Directors, as well as my own, to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their part."

10 OCT 1960

MONEY RATES HARDEN

(From Our Own Correspondent)

BOMBAY, *5th October*

'Even though there are still three weeks to go for the traditional busy season to commence, conditions in the short-term money market have already become very difficult, thanks to the unabated demand for bank credit from industrial houses and the attenuated supply of funds. The position has been rendered difficult by the coming into force of the Reserve Bank's recent credit restraint measures with effect from the 1st inst. Under these measures, banks have to pay penal rates of interest on their excess borrowings from the Reserve Bank over and above 50 per cent. of the statutory reserves. They are, therefore, obliged to borrow more funds from the market and reduce their borrowings from the Reserve Bank. Further, the supply of short notice funds from business houses has also been affected by the reduction in interest rate to 2 per cent. for 21 days' money from 3 per cent. paid for periods up to one month till the end of last month. Consequently, banks have become keen borrowers and this is reflected in the hardening of inter-bank call money rate from 3½ per cent. to 4 per cent. among all sections of banks. There is, however, no change in the rates for one to two months' deposits at 3½ per cent. and for three months and over at 3¾ per cent., as these are the maximum fixed under the inter-bank agreement.

The state of the money market is also reflected in a hardening of the discount rate for 91-day Treasury Bills from 2.540 per cent. to 2.552 per cent. per annum. The amount offered at this week's sales was Rs. 2.55 crores, as against Rs. 2.60 crores last week. Tenders for next week are unchanged at Rs. 2 crores. Sales of Intermediate Bills during the period from 28th September to 1st October amounted to Rs. 8 lakhs at a discount of 2.476 per cent. per annum. These will be offered this week also, but at a higher discount of 2.496 per cent. per annum.

An increase of Rs. 6.07 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 30th September 1960. Notes held in the Banking Department are, however, lower by Rs. 6.29 crores. There is hardly any variation in rupee securities or in foreign securities, but balances held abroad have further dwindled by Rs. 4.76 crores, bringing the total foreign assets to a low of Rs. 139.18 crores, a fall of Rs. 39.80 crores over the year. There has been a decline of Rs. 13.31 crores in Central Government's deposits and of Rs. 4.97 crores in other Government's deposits. Deposits of banks, too, have fallen by Rs. 5.78 crores. A sharp decline of Rs. 12.52 crores is noted in loans and advances other than to Governments, of which advances to scheduled banks against usance bills account for Rs. 2.98 crores. Investments are higher by Rs. 7.17 crores, while holding of Government Treasury Bills are lower by Rs. 4.84 crores.

The Scheduled banks' statement for the week ended 23rd September 1960 shows a net fall of Rs. 1.31 crores in deposits, despite the rise of Rs. 3.10 crores on State Bank's account. This means that the deposits of other Scheduled banks have declined by Rs. 4.41 crores. Inter-bank borrowings are also lower by Rs. 2.13 crores, while borrowings from the Reserve Bank have risen by Rs. 6.33 crores. Advances have declined by Rs. 5.05 crores, notwithstanding a rise of Rs. 1.66 crores in State Bank's portfolio. There has been no notable variation in investments, but cash balances and balances with the Reserve Bank have enlarged by Rs. 9.55 crores, despite a fall of Rs. 2.57 crores in State Bank's balances, while money at call and short notice has dwindled by Rs. 4.63 crores.

The Gilt-edged market continues to be listless. Sellers predominated, but, in the absence of any buyers, there has hardly been any business. The growing stringency in the money market is the main restraining influence on institutional support. Though there has been no change in prices in most of the issues, the undertone of the market is reflected in the fall of 5 nP to Rs. 73.75 in 3 per cent. 1986 Conversion Loan and of 60 nP to Rs. 90 in 3 per cent. 1970-75. Among State loans, there has been a further setback in some of the 4 per cent. 1969 issues.

The recovery in sterling abroad after last week's sharp fall is reflected in the hardening of the rupee in terms of dollars. Banks' selling rate for U.S. T.T. (ready) has thus declined from Rs. 476.75 to Rs. 476.25 per $100 and their buying rate from Rs. 473.25 to Rs. 473 per $100. In New York, spot sterling has moved up erratically from 280.81-280.84 cents to 281.01-281.04 cents. Three months' forward has advanced from 279.41-279.44 cents to 279.74-279.77 cents.

LINSEED DULL

(Messrs. A. Bradley & Co.)

CALCUTTA, *3rd October*

There was no change in the linseed market during the week. Prices moved within narrow limits and dull conditions generally prevailed mainly due to the *Pooja* holidays. Seed prices continued to be firm, but sellers showed little interest.

Business in the oil market was slow with buyers and sellers pausing.

The oilcake market was unchanged, small local business being done daily. Foreign markets were dull.

Ready linseed was quoted at Rs. 25.62 per maund.

BULLION PRICES FALL FURTHER

(From Our Own Correspondent)

BOMBAY, *5th October*

Trading in the *Kartik* (November) settlement in both gold and silver under the metric system commenced on Thursday, 29th September, two days earlier than anticipated. The metric system covering the whole of bullion trade was, however, followed with effect from Saturday the 1st inst. The prices are quoted per 10 grams (about 0.85 tola) for gold and one kilogram (85.7 tolas) for silver, the unit of trading being one kilogram (85.7 tolas) and bar of 10 kilograms (857.3 tolas), respectively.

On the very first day of the commencement of business in *Kartik* settlement, there was large-scale switching of transaction from the *Aswayuj* settlement which compelled the bears to pay a high carryforward rate—80 nP in gold and Re. 1.03 in silver. In the *Kartik* settlement, the bulls were obliged to deposit on an *ex parte* basis margin at the rate of Rs. 35 per kilogram in gold and Rs. 600 per bar (of 10 kilograms) in silver; the first 33 kilograms of the yellow metal and 160 bars of the white metal were, of course, exempted. But the margins did not deter the bulls from transferring their commitments till the last days of the settlement. The carryforward rate actually increased further to Re. 1.45 in gold (yesterday) and to Rs. 2.16 in silver (today). This shows that the bears were more eager to carry forward their business to the next settlement than the bulls.

Barring a firm trend noted on Monday, the bullion market ruled easy during the week under review. The easiness was due to heavy arrivals, while offtake was not as large as is generally the case on the eve of the festivals. The average daily arrivals of gold during the week were 9,500 tolas, as against 6,750 tolas in the previous week, whereas actual offtake was only 3,750 tolas, though it was larger as compared with the last week's average of 2,750 tolas. In the case of silver, the average offtake was less than five bars, as against six bars, and arrivals amounted to 21 bars, those in the previous week being 32 bars. The floating stocks of gold are estimated at 30,000 tolas and those of silver are reported to be around 550 bars.

Business in *Kartik* settlement in gold began on Thursday at Rs. 116.60 per 10 kilograms. Due to some selling, the settlement declined to Rs. 115.50 on Saturday. At this level, fresh support emerged and the settlement recovered to Rs. 116.75 on Monday. Thereafter, it receded again and touched a low of Rs. 115.05 today before finishing at Rs. 115.10. The *Aswayuj* settlement began the week at Rs. 115.70. After fluctuating between Rs. 115.74 and Rs. 114.24, it went off the board at Rs. 114.30 yesterday.

In silver, *Kartik* settlement, which commenced at Rs. 194.80 on Thursday, was subjected to selling and moved down to Rs. 193.10 on the 1st inst. After improving to Rs. 194.40 on Monday, it eased to Rs. 193.30 today. The closing rate was slightly higher at Rs. 193.40. The *Aswayuj* settlement ran out at Rs. 191.24 today, as against Rs. 193.34 early on Thursday last. The highest and lowest levels touched during the week were Rs. 193.34 and Rs. 191.15, respectively.

Ready gold continued to be quoted at a discount under the *Aswayuj* settlement throughout, though the actual discount declined from 59 nP last week-end to 20 nP yesterday. The discount under the *Kartik* settlement was Re. 1.60, same as on Thursday, 29th September. The closing rate for the metal today was Rs. 113.50, as against Rs. 114.60 on Thursday, the highest and lowest levels touched being Rs. 115 and Rs. 113.50, respectively. In ready silver, the discount under the *Aswayuj* settlement decreased from 59 nP on Thursday to 21 nP yesterday and ultimately yielded place to a negligible premium of a naya Paisa today. The quotation for the metal receded from Rs. 192.43 early in the week to Rs. 191.35 on Saturday and, after recovering to Rs. 192.80 yesterday, moved down to Rs. 191.15 today before finishing at Rs. 191.25.

Ready gold in the London bullion market retreated from 251s. 0½d. to 250s. 6½d., following the firmness of the pound sterling *vis-a-vis* the dollar and on U.S. reports that the Administration would maintain the official price of gold at its present level. The latest available world price for gold is $35.23-$35.25, as against $35.24-$36.26 a week before. Both ready and forward silver in London improved by ¼d. to 79½d., while silver in New York was unchanged at 91.375 cents.

The following table shows the trend of the market during the week under review:

	5-10-60 (closing)	High	Low	29-9-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	113.50	115.50	113.45	114.60

FUTURES TRADING IN COTTON TO BEGIN BY DEEPAVALI

(From Our Own Correspondent)

BOMBAY, *5th October*

One more week has passed and the cotton trade has been left no wiser as to when it can start trading in the new crop hedge contract. Traders hope to strike the first deal before *Deepavali*, the exact date expected being 18th October. Dame Nature seems to be merciful this year. For the weather so far has been favourable and crop progress good. Rains in Berar over the last week-end and locusts attack in Madhya Pradesh and Akola areas, it is feared, might cast dark shadows in an otherwise bright crop picture.

Traders are optimistic that the Forward Markets Commission will not withhold permission for trading in new crop futures. But the question is an important one, considering the delicate supply situation. The F.M.C. is believed to have referred it to New Delhi for decision, which is probably awaiting a clearer picture of the crop to emerge. Perhaps, it is not without reason that the meeting of the Cotton Advisory Board, which was scheduled to be held this week, was postponed to next week. By then, a more accurate assessment of the crop may be possible.

Meanwhile steps are being taken to enforce strictly the controls introduced recently on the marketing of cotton. The Textile Commissioner has approved of the appointment made by the East India Cotton Association, Bombay, of regional survey committees for Ahmednagar, Bhatinda, Abohar, Sri Ganganagar and Delhi. These committees, which are among the 30 regional committees to be set up in the different parts of the country, are expected to survey each and every lot of Indian cotton that is brought and sold in their respective regions.

In the spot market, apart from the usual demand for CO2 cotton, spinners have shown interest in Berar and Moglai varieties. Interest in foreign cotton is mainly confined to U.S. cotton. Spinners from all mill centres, especially Ahmedabad and the South, are regular buyers of U.S. cotton. Consequently, prices have tended to harden. There have been complaints that consignments of U.S. cotton that have recently arrived, have not come up to the usual standards. Some parties are reported to have already taken up the question with the U.S. Commodity Credit Corporation whose Chairman is said to have immediately ordered samples of the defective cotton to be forwarded to him for investigation and assessment. Turnover was not much affected by this news, indicating perhaps that the deliveries were not, as a rule, of substandard quality.

Among other foreign growths, Egyptian, East African and Syrian cotton also attracted mill attention. Moderate business was put through in these, subject to availability of import licences. There are rumours of the possibility of a special payment agreement with U.A.R. involving Syrian cotton also. Such an agreement is now in force in respect of Egyptian cotton.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

CO2 1,130; American 1-5/32" Good Middling 1,275; American on sample 1,090-1,125; Busoga (UNUG) 1,395; Elpaso 1-3/16" 1,345.

Karachi cotton futures market ruled distinctly firm during the week under review. Export demand was brisk. Spinner inquiries broadened. Shippers started covering against sales overseas. Domestic mills too extended support to the market. Under pressure of buying, N.T.R.G. January Contract advanced from Rs. 67-11 last week-end to Rs. 68-11. The March Contract improved from Rs. 67-9 to Rs. 68-7. The spot market was, however, easy, thanks to large arrivals of new crop. *Deshi* varieties, in contrast to last week's keen buying, met with selling. Sind *Deshi* receded from Rs. 86 last week-end to Rs. 84. Punjab *Deshi* was done three rupees lower at Rs. 78. Other varieties also were quoted lower. The following are the available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 77-12; S.G. 81-12; L.S.S. Punjab Roller 81-12; S.G. 86-4; 289F Punjab Roller 84-12; S.G. 89-12.

Alexandria cotton futures, after having depicted a firm trend during the first half of the week, tended to recede towards the close. Both the long-staple Karnak and the medium-staple Ashmouni contracts received good buying support touched off by renewed export inquiries. Their quotations, consequently, improved. Subsequently, however, they gave way to profit-taking and liquidation. Further selling was touched off by bearish crop news. Nevertheless, the week's closings were a shade higher than the last week-end quotations. The latest available quotations—in tallaris per lb.—are as under:

Karnak: November 73.60; January 73.47 March 73.85.

Ashmouni: October 62.60; December 62.51 February 62.65.

Cotton futures in Liverpool made handsome gains during the week under review. Active trade covering and commission house buying, evidenced during the week, were influenced by the improved offtake of actual cotton. The virtual absence of hedge selling, expectation of lower tenders and the rising price of U.S. cotton for late shipments imparted further strength to the market. Sudan cotton contracts at Liverpool were neglected. The latest available quotations—in pence per lb.—from Liverpool are given below, the figures in brackets being last week's closing rates:

American cotton one inch staple contract: October 22.80 (22.60); December 23.10 (22.76) March 23.25 (22.80); May 22.95 (23.40).

American cotton mixed growth contract: October 23.35 (23.15); December 23.45 (23.00); March 23.60 (23.15); May 23.75 (23.30).

Sudan: November 35.00 (35.00); January 35.00 (35.00).

A mixed trend was witnessed on the New York Cotton Exchange during the week. While the nearby October Contract came in for selling, in view of the approaching settlement date, the more distant deliveries were steady, thanks to commission house support prompted by wet weather over the cotton belt which was expected to delay harvesting operations.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

	(In cents per lb.)		
	4-10 60	27-9-60	20-9-60
Spot	32.25	32.30	32 40
October	31.49	31.69	31.32
December	31.40	31.40	31.35
March	31.87	31.87	31.85

CUT IN ART SILK YARN IMPORTS

(From Our Own Correspondent)

BOMBAY, *5th October*

The fears of a cut in art silk yarn imports during the current half-year have proved correct. The quota for established importers has been reduced from 7½ per cent. to 5 per cent., while that for actual users is left unaltered. The actual extent of the cut is, of course, less than what was widely expected. Last week, there were rumours that the overall quota would be lowered by 10 to 12 per cent. The cut in established importers' quota led trade circles to feel that the demand pressure on available supplies from the consuming interests would increase. This feeling induced good buying support and values continued to move up. Staple fibre yarns, however, ruled easy, thanks to the Government's move to permit imports of staple fibre. Effective from 1st April last, the cotton mills which have exported staple fibre fabrics will be granted licences to import staple fibre upto 66 2/3 per cent. of the f.o.b. value of the fabrics exported. Applications for licences are required to be submitted to the Joint Chief Controller of Imports and Exports, Bombay, on a quarterly basis after the import entitlements to which the mills are eligible are certified by the Textile Commissioner. Cotton yarns were regular. Coarse counts lacked support, while medium and finer counts tended to move up.

Cupressa Bemberg yarn (60 x 1) October delivery rallied from Rs. 2,203 per case of 100 kilograms on the 1st inst., that is, before the announcement of import policy, to Rs. 2,235 today. December contract jumped up from Rs. 2,195 to Rs. 2,223. Spot Cupressa advanced by Rs. 65.82 to Rs. 2,217.82. 120 Japan rose by Rs. 10.79 to Rs. 1,247.19, 150 Japan by Rs. 9.45 to Rs. 1,371.25, 120 Italy by Rs. 2.53 to Rs. 1,212.53 and 150 Italy by Rs. 2.87 to Rs. 1,377.87. Among indigenous yarns, 150 Bt. cones 1st grade gained 2 nP to Rs. 11.46 kilogram (2.2 lbs.), while 120 Bt. cones 1st grade lost 3 nP to Rs. 12.93.

Staple fibre yarn (40 x 2) October delivery eased from Rs. 743 to Rs. 734 per case of 90.72 kilograms (200 lbs.). December contract shed Rs. 6 to Rs. 744. Spot Kohinoors were quoted today at Rs. 8.95 per kilogram, as against Rs. 9.02 on Wednesday last week. Centurys were done at Rs. 8.47.

Among cotton yarn, ten counts Gokaks and Podars were quiet, the former at Rs. 18.75 per bundle of 10 lbs. and the latter at Rs. 19.25. Twenty counts Moderns receded by 25 nP to Rs. 23.25. Gokaks declined by a like amount to Rs. 23. But forty counts Minaxis improved by 38 nP to Rs. 30.50. Maduras put on 25 nP to Rs. 31.75. Sixty counts Raghuvamshis were firm at Rs. 58, as also Finlays at Rs. 61.61. Eighty counts Finlays picked up Re. 1.01 to Rs. 80.80. Moderns were unchanged at Rs. 73 and Mahendras at Rs. 70.

SEEDS SUBDUED

(From Our Own Correspondent)

BOMBAY, *5th October*

The oilseeds market suffered a distinct setback during the week under review on sustained bull liquidation. There was, however, some improvement in the sentiment today due to some bullish hopes.

The September contracts of castorseed, cottonseed, linseed and groundnut oil went off the board at the end of last month. The board rates for these contracts were as follows: Castorseed September Rs. 138 plus a penalty of Rs. 2.50, linseed September Rs. 32.50 plus a penalty of one rupee, and groundnut oil Rs. 24 plus a penalty of 50 nP. Total tenders issued against castorseed amounted to 8,900 candies, cottonseed 900 candies and linseed 3,425 tons.

With effect from the 1st inst., prices are quoted for all spot quotations of seeds in terms of 50 kilograms and oils in terms of 10 kilograms, instead of cwts. and quarters, respectively, as hitherto.

It may be noted that the Government of India has extended the validity period for the quota of H.P.S. groundnuts in shell up to the end of March 1961. On 1st April last, the Government had extended the validity period up to the end of last month. This step did not have any perceptible effect on the market.

As already indicated, groundnuts came in for heavy selling on reports that weather conditions were improving in the major producing centres. Arrivals were also better. In a declining market, *vanaspati* manufacturers and crushers preferred not to enter into fresh business. Towards the close, however, fresh buying support was in evidence on hopes of export promotion schemes for groundnut oil and also on fears of damage to crops as a result of locust attacks. The groundnut February 1961 contract, which had wound up at Rs. 205 last week, gradually lost ground to touch Rs. 202.50 by yesterday. It, however, recovered to Rs. 204, a net loss of a rupee over the week. Nizam bold fell from Rs. 47 to Rs. 45.25. Oil ex-mill was lower at Rs. 20.25 (per 10 kilograms), as against Rs. 20.62 on Monday, and Rs. 25.37 (per quarter) last week end.

Easy conditions prevailed in the castorseed section, thanks mainly to the absence of U.S. interest in Indian castor oil and also reports of growing pressure of Brazilian supplies in the American market. But there was some revival of buying towards the close on reports of scarcity of rains in the North Gujerat region, which would affect adversely the sowings. The castorseed May 1961 contract fell sharply from Rs. 177.25 to Rs. 172.87 by Tuesday; it however, improved to Rs. 174 today. Ready Madras shed 25 nP to Rs. 33.50. Castor commercial initially drifted lower, but closed today at the last week's level of Rs. 13.90 (per 10 kilograms).

Dull conditions prevailed in the linseed section, in the absence of any encouraging overseas enquiry for linseed oil. Linseed may 1961 contract declined from Rs. 33.41 to Rs. 33.12. Bold ready lost 25 nP to Rs. 32. Linseed oil remained subdued at Rs. 13.25.

As in the case of other major oilseeds, cottonseeds displayed distinct weakness during the major part of the week. There was, however, a notable recovery today, presumably on fears of damage caused by locust attacks on cotton crop. Cottonseed September 1961 contract closed today Rs. 2 lower at Rs. 88.75, after fluctuating between Rs. 90.75 and Rs. 87 earlier in the week.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	5-10-1960	28-9-1960	21-9-1960
	Rs.	Rs	Rs.
Groundnut			
February 1961	204 00	205 00	207.25
Nizam bold	45 25	47 00	46.00
Coromandel ready	46 75	47 00	46.25
Khandesh quality	45 25	47 00	46.25
Oil ex-mill ready*	20 25	25 37	24.50
Railway receipts*	20 20	25.12	24.37
Castorseed			
May 1961	174 00	177 25	177.62
Ready Madras	33 50	33 75	34.12
Ready Kanpur	32 37	32 62	33.12
Oil B.S.S.†	14 95	19 12	19.50
Oil commercial†	13 90	17.62	18.12
Linseed			
May 1961	33.12	33 41	33.28
Bold ready	32 00	32 25	32.12
Oil ready†	13 25	17.00	16.87
Cottonseed			
February 1961	88.75	90 75	91.50
Niger seed	36 00	36 50	36 00
Kurdi seed	24.00	24 25	24.50

*Rates include excise duty but exclude sales tax.
†Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oils per 10 kilograms, with effect from 1st October 1960.

EMERGENCY IN PEPPER

(Messrs. Parekh and Co.)

BOMBAY, *5th October*

Russia having refused to walk into the parlour of the bulls, Malabar black pepper tumbled like a pack of cards during the week, bringing in its trail financial embarrassment to some who went long in October delivery at progressively high rates. The market became jittery. The holders became nervous. There was a scramble for selling, with buyers holding back. In the circumstances, the Indian Pepper and Spice Trading Association at Cochin had to declare an emergency in the trading of the pepper futures and had to close the market for two days, in view of a continuous fall in the prices. The Board of the I.P.S.T.A. fixed the floor price at Rs. 236 per cwt. and Rs. 206.25 per 50 kilograms for trading in October and December contracts, respectively. No ceiling on the rates of the pepper futures should be allowed by the Forward Markets Commission, as it will be to the detriment of the growers and of the investors who are acting as a support to the growers by buying actuals at the peak of the season and also at the time of hedge lifting. No declaration of emergency should be allowed every now and then on flimsy grounds, unless there are factors that are working against the interest of the growers.

Ready garbled, after touching the highest at Rs. 265, slipped back to Rs. 235. Ungarbled was down from Rs. 1,550 to Rs. 1,300 (nominal). October delivery after climbing to Rs. 276¼ declined to Rs. 236¼. Weakness in the stock markets in India and the recent curbs on lending by the Reserve Bank are some of the factors responsible for the present depression in pepper. There is enough floating stock in the terminal markets and in the jungle. If Russia or other East European countries do not lift a sizable quantity in time, the market is likely to go down after the present corrections. In view of the proximity of the harvesting, timely buying from overseas can only retrieve the position. Otherwise, the prices for Malabar may once again go down, possibly, lower than those at Singapore when the scramble for sellings is likely to ensue.

The future, however, depends upon the attitude of the sellers from Djakarta and Singapore.

Singapore.—Continuous downward revision of prices was witnessed as a result of the substantial arrivals from Lampong and bear pressing. The last quotations for black and white pepper are Str.$145 and Str.$237½, respectively.

Spot in New York came down to $0.45 before improving to $0.46; the highest touched was $0.58.

In London, black pepper was quoted at 36*d.* and white at 53*d.*, the highest being 48*d.* and 76*d.*, respectively.

There appears less chances of sizable buying by both New York and London, unless the market stabilises at a certain level in Singapore and India.

At the time of writing some technical improvement is noticed both in Singapore and New York, which has also its reflections on Malabar. The market having been closed at Cochin, no true assessment of the position is available. However, a section of the trade is expecting some improvement by way of reaction.

Ready pepper in Bombay is nominally quoted at Rs. 195 per Bengal maund.

HIGHGROWN TEAS IN KEEN DEMAND

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, *27th September*

Sale No. 37: Just under 424,000 kilograms were offered in Sale No. 37 held today. Quality from the Nilgiris generally showed an improvement, whilst from the other districts it was maintained. There was a strong general demand at dearer rates. Best and improved quality highgrown brokens came in for the keenest competition seen in recent weeks and advanced up to Re. 1 per kilo. The remainder in this category sold around last rates. Fannings generally advanced to a lesser extent than their corresponding brokens. Good and coloury mediums were irregular with the few imfannings were 5 nP to 10 nP dearer. Low mediums were a strong feature, selling at dearer rates with fannings advancing by a greater margin than their brokens. Tippy teas were neglected. Plainest types generally sold above last rates. C.T.C. and leggcut teas came to an irregular market. Whole leaf grades were strong and dearer. Black leaf teas followed the general upward trend of the market.

	1960	1959
	Rs.	Rs.
Low medium	4.35-4.60	3.96-4.18
Medium	4.60-4.95	4.29-4.85
Good medium	4.95-5.75	4.94-5.40
Quality	5.50-9.00	5.84-9.15

The average price realised in Sale No. 37 was Rs. 5.35 per kilo, which compares favourably with that of Rs. 5.06 obtained in the previous sale and Rs. 5.29 in the corresponding sale of 1959.

Export Quota: There are large sellers at ½ nP per kilo.

Colombo: In this week's sale, just over 6 million pounds were offered. There was a strong demand. The best Uvas came to a lower market. South-west highgrowns and mediums were 5/15 cents dearer with lowgrowns selling at fully firm to dearer rates.

London:—*North Indian and other growths*: In Monday's auction, Best C.T.C. Assams came to a considerably lower market but Orthodox types, Dooars and Africans were fully firm to dearer.

Ceylon and South Indians: Offerings on Wednesday amounted to 15,811 packages, of which 9,366 were from South India. The market met with an irregular demand and prices were generally easier for all descriptions.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd., wire:

"*Sale* 38:—550,000 kilograms. Highgrowns less in demand, sometimes a rupee lower. Good medium firm. Low medium and medium strongest feature and irregularly 10 nP to 20 nP dearer. Orange pekoe much easier."

FOODGRAINS DECLINE

(From Our Own Correspondent)

HAPUR, *3rd October*

Foodgrains ruled quietly depressed during the past week, thanks to better arrivals of wheat and new maize. Wheat registered a modest decline to be quoted on Monday at Rs. 16.62 a maund for average quality and upto Rs. 17.75 for better superior farm produce. Daily arrivals of wheat were about 150 to 200 maunds and, besides, sales of wheat flour through ration shops also lessened consumer demand for wheat.

Rice also ruled quiet. *Sela basmati* continued to be quoted at Rs. 30 to Rs. 33, *mainpuri* at Rs. 22.75, *ramajwayan* at Rs. 24, *raimunia* at Rs. 25 and *gadda* at Rs. 19.62 a maund. The supply position of rice was reported to be satisfactory and harvesting of paddy had also begun in some areas.

Gram was almost stationary during the week at Rs. 15.75 a maund for Punjab variety. The U.P. Government's old stocks sold in the market were being resold at Rs. 14.87 a maund. Demand for gram was poor and advices from the Punjab were not encouraging. New maize was attracting good consumer demand and arrivals, too, mounted to an average of 100 maunds, but prices stayed steady at Rs. 13 to Rs. 13.25 a maund according to quality. Old stocks of gram at about 3,500 maunds were lying flat. Barley continued to be stationary at Rs. 12.75 and *bejhar* at Rs. 12 to Rs. 12.75 a maund according to quality. The stock position of these grains was poor and demand, too, was reported to be slack. Preparation of land for *rabi* sowings is in full swing and, while the sowings of coarse grains, including gram, would commence in mid-October, wheat sowings would be towards the end of the month. *Jowar* ruled quiet during the week at Rs. 12.50 to Rs. 13.50 a maund and *guwar* continued to be quoted at Rs. 11.50 to Rs. 12.37 a maund.

In pulses, peas and *arhar* sought lower levels, as demand was dormant and local stocks were heavy. Peas eased by 37 nP to Rs. 11.87 for *dara* green quality and white farm produce was quoted at Rs. 12.37 and old stuff at Rs. 11.25 a maund. Agra operators were in request for some old stuff for *dal*, and peas stock was still heavy at 52 *khatties*. Peas *dal* was quoted at Rs. 13.37 a maund. *Arhar* was quoted at Rs. 13 and *arhar dal* at Rs. 17 to Rs. 18 a maund and local stock was stationary at 25 *khatties*. New *moong* and *urd* were reaching here from outside to be quoted at Rs. 20 a maund each, while old *moong* was quoted at Rs. 19 and *urd* at Rs. 18.75 a maund. *Massor* continued to be quoted at Rs. 14 to Rs. 17 a maund.

SUGAR DRIFTS LOWER

(From Our Own Correspondent)

HAPUR, *3rd October*

After early gains, sugar drifted lower in the week-end to be quoted at Rs. 112.50 per bag in wholesale and Re. 1.06 per *seer* retail in the open market. Supply position of sugar is easy and

despite festival demand, prices were depressed and the Union Government has released a further quota of 200,000 tons for sale. The Government has decided to continue the special incentive scheme and a further rise in sugar production may be expected. The Government of India, in order to export sugar to the U.S., is examining the obligations of the membership of the International Sugar Agreement and also the export quota that India will be able to fulfil. New crushing season would start early in November. The question of decontrol of sugar is being ruled out here in U.P., but more shops are being opened in rural areas to sell sugar at controlled prices.

Following comfortable supply position, sugar eased by a rupee to Re. 1.75 to Rs. 113-Rs. 114 per bag in the open market of Muzaffarnagar during the week.

Sugar was quoted lower at Rs. 112.50 per bag in the Kanpur market. A part of the released quota for sale through fair-price shops in ration was not being lifted in rural areas.

Khandsari was also depressed, the quotation declining by Re. 1 to Re. 1.50 per maund, due to poor demand and anxiety of stockists to sell before the new season's production begins. Stocks of *khandsari* in the Muzaffarnagar market were put at 35,000 maunds. The latest prevailing prices were: *galawat* Rs. 23 to Rs. 27; inferior Rs. 29 to Rs. 32; superior Rs. 33 to Rs. 40; *khandsari* crystal Rs. 36 to Rs. 40; *boora* Rs. 36 to Rs. 38 a maund.

Ready *gur* sagged heavily towards the week-end, as new arrivals mounted to 200 maunds daily and demand was reported to be slack. Prevailing prices for new quality were Rs. 16.25 to Rs. 17, as against old dry stuff quoted at Rs. 14.50 and wet at Rs. 11 a maund. New arrivals would soon mount, but the quality as yet reaching the market was poor. The cane crop was in fairly good condition. Old stocks were still reported here as well as in *mofussil* markets.

Ready *gur* also drifted lower in the Muzaffarnagar market, as old stocks were lying flat and new arrivals had begun. The week-end prevailing prices were: *Chaku* dry Rs. 19.25; *kotha* dry-wet Rs. 16 to Rs. 17; *Dana minja* Rs. 14.50 to Rs. 17.50; *shakker* dry Rs. 20 to Rs. 22 a maund.

Future *gur* moved both ways during the week. Opening at Rs. 13.60 last Monday and touching the highest and lowest at Rs. 13.77 and Rs. 13.47, respectively, *fagun* was quoted today at Rs. 13.70.

HIDES AND SKINS QUIET

(From Our Own Correspondent)

MADRAS, *3rd October*

The hides and skins market ruled quiet during the week under review. Shipment business was at a low ebb, as overseas inquiries were small and E.I. tanners were away due to *Pooja* holidays. Kips seemed to be on the low side and it was thought that there might be overseas enquiries in the near future.

Tanned goat skins 8/9 lbs. average ruled firm due to good demand from the Continent. Other average weights were quiet. Shipment business in tanned sheep skins was halting, but prices were unchanged.

In the London auctions held last week, goat skins realised irregular prices. Old stocks declined 1*s.* 6*d.* per lb. and recent arrivals 6*d.* to 1*s.* A small quantity of semi-prime sheep skins fetched 6*d.* to 9*d.* advance for run selection, while lower ends declined upto 18*d.* Other tannages remained unsold.

Shipments during September were: 2,163 bales tanned cow hides, 94 cow calf, 65 buffs, 99 buff calf, 218 goat and 334 sheep to the U.K.; 59 cow, 65 cow calf, 10 buff calf, 493 goat and 226 calf and 235 goat to the U.S.A.; 2 goat and 241 sheep to the Continent; 15 cow, 65 buffs, 53 buff sheep to Japan.

SWITCHOVER TO METRIC SYSTEM

(Concluded from page 648)

metric units was introduced in the Lok Sabha during the last session. The post office will adopt the metric system soon after the Bill is passed.

Five years ago, there was much scepticism about the proposed reform of weights and measures. This was based on past experience of failure in this regard. The situation has since altered. There is general confidence, now that some of the major difficulties have been overcome, that, by 1966, the metric system will be firmly established in the country. Every step that has so far been taken has been after full consultation with the representatives of trade and industry and it is a matter for gratification that the response from the latter has been throughout most co-operative and helpful. There is every hope that the full adoption of the new system by the end of 1966 will be accomplished smoothly and without any serious dislocation or inconvenience to the public.

An agreement has been signed by the Government of Pakistan with the International Labour Organisation and the United Nations Emergency Fund for a Rs. 1-crore project for the establishment of an industrial centre in East Pakistan. The centre, which will start functioning from January next, will be the first of its kind in the country and will train annually 350 personnel for different levels of industrial management and other posts. It envisages the establishment of a permanent headquarters at Dacca along with a centre for management and supervisory training. Two units for technical training will also be set up at the industrial towns of Narayanganj and Chittagong. The project will involve a foreign exchange expenditure of Rs. 47 lakhs which will be met by the United Nations Emergency Fund. The import of equipment and training of Pakistani instructors abroad will be arranged by the Fund, and the I.L.O. will secure foreign experts on loan.

Notice

THE CHAMPDANY JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting (being the Seventieth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, No. 2, Netaji Subhas Road, Calcutta, on 1st November, 1960, at 12 noon, for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1960, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To confirm the Interim Dividend paid on 27th May, 1960.

(3) To declare a Final Dividend.

(4) To appoint Directors in the place of those retiring.

(5) To appoint Auditors for the current year and to fix their remuneration.

The Share Register of the Company will be closed from 12th October to 1st November, 1960, both days inclusive.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons holding shares on blank transfer are advised to effect registration of scrip in their names before 12th October, 1960.

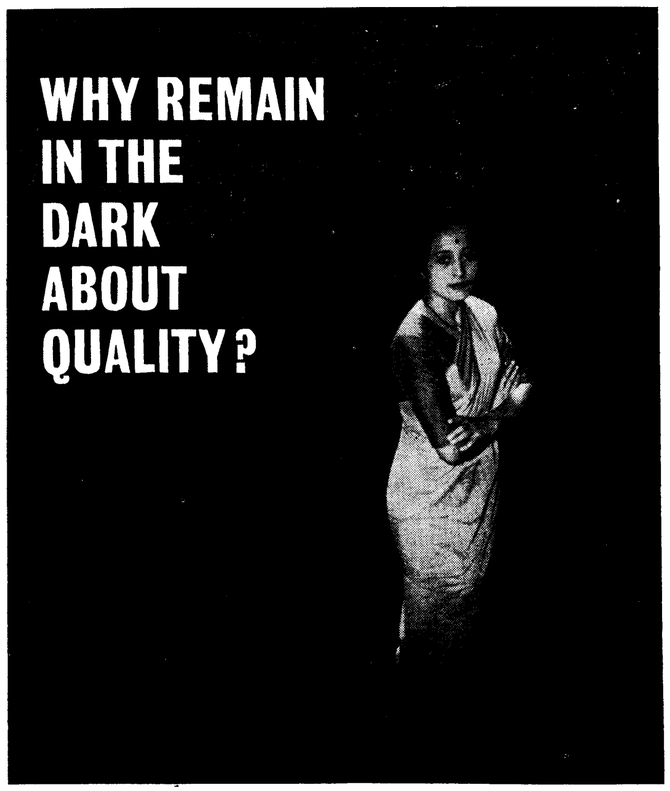
By Order of the Board,

JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, NETAJI SUBHAS ROAD,
CALCUTTA, *3rd October*, 1960.

Note:—(1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

(2) The dividend, if declared, will be paid on or after the 1st November, 1960, to those shareholders so entitled, whose names appear in the Company's Books on the 1st November, 1960, or to their mandatees.



There is no reason why you should. For, quality is obtainable wherever standards are maintained, be they in social, economic, or other spheres of human activity.

Standardization helps in promoting economy and efficiency in production and use of goods and services, by providing a common ground of understanding among producers, dealers, consumers and users. The Indian Standards Institution is responsible for developing standards on a national and international basis.

Through research, tests, and quality control schemes, goods produced to specified standards can have the assurance of quality. Many consumer and industrial articles, produced to relevant Indian standards, have been granted the ISI certification mark.

The ISI mark is the guarantee of their quality.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare." William Blake.

VOL. CI. No. 2585 BOMBAY, 15th OCTOBER 1960 PRICE Rs. 2

PROSPECTS OF FOREIGN AID

INDIA'S Finance Minister, Mr. Morarji Desai, has returned from abroad in an optimistic frame of mind. He is confident that sufficient foreign aid can be obtained for financing the third Plan. If some are sceptical of this opinion, they cannot be criticised out of hand as being pessimists. India's foreign balances today are disquietingly low and the prospects of even maintaining the existing level of economic activity are uncertain, as one does not yet know from where this country can get the foreign exchange required to finance the imports of raw materials, spare parts and machinery for re-equipment in the next one year. The first requirement of the country now is a sizable amount of "untied" loans—not "united" loans as is being wrongly printed in a number of daily papers—that could be used for meeting the pressure on our balance of payments. The U.K. and West Germany have provided some help in this direction and the U.S. may give something more. Even so, a substantial gap is still there. Naturally, when tomorrow's position is uncertain, any optimistic talk about the position of the day after is unlikely to impress those who are guided by cold logic. Perhaps, in the next few days, Mr. Morarji Desai may disclose a little more than his mere impression of the prospects that would carry some conviction to the doubting Thomases. Meanwhile, the fact remains that Mr. Desai has met the finance ministers and financiers of the free world, who had come for the annual meetings of the World Bank and the I.M.F., as well as the finance ministers of the Commonwealth at London, and sounded the prospects of future loans. Surely, he ought to know the position better than anyone else. And, what is more, he is not one who misleads others, though he is a born optimist as is the Prime Minister.

Such reports as are available about the happenings at the Fund-Bank meetings warrant the inference that, generally speaking—and this is all that Mr. Desai has done—the climate for getting substantial foreign assistance for India's third Plan is good. The spokesmen of Britain, the U.S., the World Bank and the I.M.F. have all stressed the importance of developed countries rendering adequate long-term aid to underdeveloped countries. The Chancellor of the Exchequer, Mr. Selwyn Lloyd, told the Fund-Bank meetings that, in 1960-61, Britain's aid to developing countries would be at least twice the total of £80 million in 1957-58 and the prospect was one of "steady increases." He conceded that, if the needs of the capital-hungry underdeveloped countries are to be met, "some capital has got to be pumped out of industrialised countries at the expense of their own domestic investment and consumption." Britain has already announced a loan of £30 million as "an initial act of assistance" to India and is willing to talk about further assistance, though it is guarded enough to qualify its stand by saying that it has to share its limited surplus with a number of developing countries.

The U.S. has provided massive aid to India and signed an agreement with it for supplying $500 million worth of wheat and rice during the third Plan period. A clear indication of other forms of aid to reach the industrial targets envisaged in the Plan can be had only after the U.S. elects its new President and he takes over the reins of administration. There is, however, no reason to think that the new Administration will be unresponsive to India's needs. The U.S. economy is basically sound and strong and its capacity to spare the funds required by India has not been impaired. It is true that it is now confronted with a sizable running down of its gold reserves, but it is mainly a short-term phenomenon which may get corrected when the West European countries adopt appropriate monetary measures. Mr. Robert B. Anderson, Secretary of the U.S. Treasury, is of the view that the present relative stagnation in the American economy is simply a transition to a new situation. A striking point made by him is that, "for the first time in many years, inflationary expectations (in the U.S.) have been softened substantially and there is little or no incentive for inventory hoarding or other similar speculative behaviour based on virtually automatic price increases." He believes that the adjustments made by the Administration this year in its economic policies "provide the base for a long period of sustainable non-inflationary growth." The resilience of U.S. economy is borne out by the fact that its commercial exports during the first eight months of 1960 have been 21 per cent. above those in 1959 and that export orders for machine tools in September expanded by 34 per cent. above July. The present rate of unemployment—5.9 per cent. of the labour force—is relatively high and politically unc

ance envisaged in the third Plan. There must be, as mentioned by Mr. W. A. B. Iliff, Vice-President of the World Bank, "orderly programming of projects and resources" by India itself. In this respect, the powers-that-be in this country will be well advised to heed the well-meant and friendly criticisms of the latest World Bank mission on their plans and policies. Dubbing them "uncharitable," as was done by one of the Union Ministers, or insisting on following the oily policies of the Minister for Oil will only tend to mar the climate.

F.I.C.C.I. ON THIRD PLAN

THE Federation of Indian Chambers of Commerce and Industry, which has all along fancied itself in the role of a parallel (though non-official) planning body, does not find quite a few things to its liking in the Draft Outline of the third Five-year Plan. This is as it should be, for the Federation's approach to the third Plan, though not basically different from that of the Planning Commission, has nevertheless been distinguished from it in some matters of detail. But it is difficult to say, from a perusal of the Federation's analysis of the Draft Outline, whether there is a substantially greater area of agreement than of disagreement, or *vice versa*, between the business community in general and the Planning Commission. The points on which they agree or disagree are, however, easily told and examined.

To take the area of agreement first. Here is to be found, at the very outset, a wholesome recognition by the Federation of the fact that economic development in recent years has been due to planning. This testimony by the most representative body of Indian business men has fortunately been qualified by a reference to some restrictive practices which have accompanied economic planning. The second wholesome recognition by the Federation of the factors of complementarity between the public and private sectors—factors which both the Planning Commission and the Commerce and Industry Ministry have repeatedly emphasised—has likewise been qualified by a reference to the "tendency for the authorities at different levels to enlarge their industrial and business activities" in directions which are more appropriate to the private sector. But the qualifying references, such as to "curbs on business" and the administrative tendency to expand industrial and business activities in the public sector, have not been elaborated to show how the policies adopted towards the private sector—policies as in the case of land, coal, oil, mill cloth, fertilisers, etc.—have in fact slowed down economic growth to a lower rate than it would have been otherwise. If the Federation's analysis had driven home this point, its plea for a change in the Government's industrial policy so as to allow private parties into all the fields reserved for the public sector would have gathered more weight. Whether or not the powers-that-be announce a virtually new industrial policy on those lines, it would be true to say that there is some measure of agreement between the Federation and the Government on the need for realism and flexibility in the working of the Industrial Policy Resolution of 1956. But we must hasten to add that more instances of this readjustment in the Government's policy are necessary before one can pay an unqualified compliment to the Government on this point.

As for the area of disagreement, the points at issue seem to represent some very tough problems. The first of these is the problem of bureaucratisation which, according to the Federation, "is a necessary consequence of, and is fed by, the plethora of legislation and proliferation of rules and regulations which we have today." What is the remedy against this bureaucratisation which leads to governmental interference? Since a degree of bureaucratisation is inevitable in a Welfare State, whether or not it is based on a planned economy, the administrators will never recognise either that there is no need for their own proliferation or that there is no need for more administration. The complexities of a diversified and expanding industrial economy do invite administrative interference, and so this problem would not lend itself to an easy solution. The Federation's plea that "legislation and methods of administration must be made the objects of comprehensive and far-reaching reforms" is least likely to be heard in the very quarters which would be affected by the suggested reforms. But this does not necessarily mean that the Federation's suggestion is wrong.

Another tough problem, related to the issue of land ceilings, is equally intractable. The Federation's approach to this question, though sound in principle, ignores practical factors. While it will be politically impossible for the ruling party to abandon its ceiling plank now, there is the saving circumstance that the ceiling levels proposed in different States will not release even 10 million acres of surplus lands—representing about 3 per cent. of all cultivated lands—from substantial landowners in the country as a whole. And there will be the additional saving circumstance that a part of the compensation paid to substantial landowners may become available either for industrial investment or for investment in their own reduced holdings for increasing their productivity. The Federation's plea for radical rethinking on this question of land ceilings has come too late in the day and will only fall on deaf ears.

The third issue raised by the Federation has an immediate bearing on wage policies. Its stand in this connection is to the effect that, while undoubtedly labour must share the gains of prosperity and development, the present policy almost amounts to ensuring gains in advance without even the saving grace of relating them to higher productivity. While this is a perfectly logical and sensible stand, it would be too much to expect a sudden or wholesale reversal of official policies. Greater reliance may, therefore, have to be placed on the planners' sense of pragmatism which is in evidence in some of their agricultural and industrial policies and which, in this case, may well be reflected in a possible "enforcement of productivity standards." A positive plea for the enforcement of such standards would be preferable to a negative plea against all wage increases.

The Federation's stand on price policies may or may not form part of the area of disagreement. This stand, like that of the planners, is rather vague and confused, for the Federation itself has recognised that "price policy as well as the techniques of price regulation raise very complex issues." Already the prices of a number of manufactured commodities and raw materials—iron and steel, cement, paper, sugar, tinplate, caustic soda, soda ash, coal, etc.—have come to be fixed for one reason or another. The Federation has not only not criticised this price regulation but has recognised the need for "maintaining prices at reasonable levels." But, at the same time, it has pertinently pointed out that, "in the long run, mere mechanical contrivance of price stabilisation will not result in reduction in the general level of prices." It may be that the Federation's approach to price policies will take a definite shape only when the Planning Commission evolves clear-cut policies in this regard. Since, however, the Commission is least likely to evolve such policies, there is no knowing whether the Federation will find itself in agreement or disagreement with the planners on this question.

All in all, it would appear that the issues raised by the Federation in respect of governmental interference, land ceilings, wage policies and prices are not so very significant as to constitute a major area of disagreement between itself and the Planning Commission. Where there is thus, both positively and negatively, so much in common between the approach of the Federation and that of the Planning Commission, it is not inconceivable that the latter will meet the former half-way on matters of detail like allocations for the private sector, individual industrial targets, suitable tax policies for enabling more profits to be retained, foreign exchange allocations, and so on. These matters of detail would also need to be examined here.

In the first place, the ratio of investment, assumed in the Draft Outline, of about 61:39 between the public sector and the private sector is, by itself, not a disquieting thing from the overall point of view, for private investment in agriculture, transport, housing, small industries, etc., may well exceed the present estimates even as it has exceeded the original estimates in the second Plan. But what is positively disquieting is that the share of the large and medium industries in the private sector has been fixed at a level considerably lower than that of industries in the public sector. As this share (Rs. 1,275 crores) is less than half of the share (Rs. 3,000 crores) suggested in the Federation's own Draft, a relevant point of criticism is that "the place assigned to the private sector cannot be considered to be very satisfactory." It is all the more unsatisfactory, because the consumption goods industries, which will have to be developed further—partly to stimulate economic growth, partly to neutralise the inflationary effects of development expenditure and partly to keep up the enthusiasm of the broad masses of the population—will be almost entirely in the private sector and have not received the prominence they ought to.

The Federation has, therefore, rightly pleaded for a lower allocation to the public sector and, correspondingly, for a larger allocation to the private sector. A lower target for additional taxation may well mean a substantial addition to the pool of resources available for the private sector and a more efficient utilisation of the people's savings. The Federation's view is that there is a likelihood of the private sector raising larger resources than those estimated in the Draft Outline. First, there would be scope for larger funds from institutional agencies, in view of the fact that the Refinance Corporation and the I.C.I.C.I. have now begun to provide finance and can increase their commitments to a much larger extent. So, the estimate of Rs. 135 crores, in the Draft Outline, from institutional agencies (as compared with Rs. 85 crores in the second Plan) is on the low side. Secondly, the estimate of Rs. 200 crores for new issues in the third Plan period (as against Rs. 120 crores in the second Plan period) is also on the low side, in the opinion of the Federation. Here the point is rightly made that, since the response from the private investors during the last two or three years has shown an encouraging trend, realisation of resources under this head can be much larger; this is on the twin condition that reasonable profits and dividends will be allowed to be maintained and the investment climate will not get vitiated by wrong financial and fiscal policies.

Thirdly, the internal resources of industry, the details of which are not given in the Draft Outline but which are understood to have been estimated in the Planning Commission, will be as under:

	Rs. in crores
(a) Depreciation on gross fixed block of Rs. 2,500 crores estimated to be the average value of total gross fixed assets during the third Plan period	650
(b) Retained profits forming on an average about 2.3 per cent. of total gross fixed assets in use	275
(c) Expansion of industrial credit by banks	300
(d) Trade dues and miscellaneous loans (excluding foreign assistance)	250
Total ...	1,375

Out of the above, a reduction has to be made of over Rs. 750 crores for (a) financing repayment liability of about Rs. 150 crores in respect of loans from institutional agencies, World Bank and deferred payment arrangements negotiated during the second Plan and those likely to be negotiated in the third Plan, and (b) for financing inventory accumulation and other financial assets to the extent of Rs. 600 crores.

These internal resources which will be of the order of Rs. 625 crores can well be larger, in the opinion of the Federation, if the banks expand their industrial credit and the requirements of financing the inventory accumulations can be met from other sources. How the resources can be increased in these two ways, the Federation has not explained. Surely, the banking system, if it is to operate on prudent, though not necessarily conservative, lines with the help of deposits in the main, will not be in a position to meet the enormous working capital requirements of additional industrial production in the absence of appropriate measures for enabling it to attract more savings from the public. Lastly, the Federation's view is that the estimate of Rs. 300 crores in the third Plan (as against Rs. 200 crores in the second) for direct foreign credit/participation in capital is also on the low side. Since the pace of foreign equity capital participation in private industries has shown a rise recently and a number of credits have been negotiated by private parties directly with the U.S. Export-Import Bank, the Federation's optimism on this score seems to be rather justified.

When there is thus scope for raising larger resources for the private industrial sector, provided the qualifications made by the Federation are observed, there is no reason why some individual targets of industrial production, as in the case of private collieries, private fertiliser plants, cement, paper and paper board, copper, lead, zinc, cotton textiles (mill sector), rayon and staple fibre, factory sugar and *vanaspati* should not be suitably increased. If the Federation has pleaded for an increase in the targets of these industries, it is not only because more resources can and will be found for the purpose but because their further expansion would be eminently desirable from more than one point of view. That, incidentally, will also redress the imbalance in the proposed structure of investments in heavy and light industries. The Federation has certainly made out a cogent and unanswerable case not only for a bigger allocation for the private sector but for a greater emphasis on the consumer goods industries which alone will help sustain the confidence of the masses in the Plan.

MARKET GOSSIP

An Oddity in Money Market

THE dear money policy of the Reserve Bank which took effect from the 1st inst., is beginning to make itself perceptibly felt in the short-term money market: Lenders are absolutely scarce, while there are eager borrowers. Short-term deposit rates are unchanged, because of the ceiling fixed under the inter-bank agreement, but inter-bank call money which is outside this agreement is now costing 4½ per cent. In Calcutta and Madras, it is said to be as high as 4¾ per cent. Inter-bank notice money for a short period of two or three weeks is fetching 5 per cent., but turnover is small. An interesting development is the close co-operation which the State Bank of India is extending to the Reserve Bank for ensuring that its monetary policy is effectively enforced. A fortnight ago, we indicated in these columns that, as the State Bank had no borrowings from the Reserve Bank, it might be able to draw funds from the latter at 4 per cent. to the maximum extent of its quota and lend to other banks at a margin of ¼ per cent. or so. But this has not happened. On the contrary, the State Bank is the lender in the inter-bank section in the principal cities such as Bombay, Calcutta and Madras at only 6 per cent., that is, at the maximum rate which banks will have to pay to the Reserve Bank after they exhaust the quotas under the first two slabs. In other centres, however, the State Bank is prepared to lend to banks at 5 per cent. but only limited amounts. The rate of 6 per cent., it may be noted, is higher than the 5 per cent. at which the State Bank is lending to its prime industrial borrowers. This is an unprecedented oddity in the Indian money market, for a highly liquid institution like a bank is asked to pay more than an industrial concern which bears no comparison with banks from the point of view of liquidity.

Two inferences are possible from this development. One, most of the banks must have already exhausted their borrowings from the Reserve Bank under the first two slabs. The other is that the Reserve Bank must have told the State Bank to charge at the maximum rate. Be that as it may, the effect of this development is an increase in the selling pressure in the Gilt-edged market. The Central Government loans are virtually unsaleable, as there are no buyers, except provident funds that are compelled by law to invest only in such loans. The Reserve Bank is still staying out of the market for all loans, except the one repayable next year. The banks, too, are not anxious to lighten their portfolio of Central Government loans, presumably in the hope that, willy-nilly, the Reserve Bank may come to their rescue when the busy season gathers momentum. Further, it is in their own interest not to force the pace of the fall in the value of Central loans, lest they should have to earmark at the end of the year a large part of their profits to cover the depreciation in the value of their investments. Consequently, some of the big banks have been selling their investments in State Government loans. It is understood that the Life Insurance Corporation bought a large parcel of these loans this week at a price giving a yield of 4.30 to 4.35 per cent. per annum. This was done after the meeting of the L.I.C.'s Investment Committee at Madras. All offers of these loans at a yield less than 4.30 per cent. are believed to have been rejected.

The effects of higher interest rates in the organised money market have also permeated the unorganised sector. Since the State Bank's *hundi* rate has gone up and so also the *hundi* rates of other banks, the shroffs and multanis have put up their lending rates to wholesale merchants and shopkeepers from 7½ to 9 per cent. to as high as 12 per cent. If such is the position when there is still a month for the traditional busy season to commence, the stringency in the money market will be felt even more acutely when the busy season gathers momentum, that is, during December to April. It is envisaged in banking circles that, during these forthcoming months, the inter-bank call money rate may go up to as high as 5 per cent. and that their lending rates to trade and industry, which have been put up by ½ to ¾ per cent., may have to be raised by another ½ to ¾ per cent., if not more. In such an event, the rates in the indigenous money market, too, will go up still further. If the Reserve Bank does not relax its restraints, the higher interest rates will certainly keep the goods moving from the producer to the consumer, provided the supply position does not suffer any marked deterioration and thereby encourage hoarding by speculators irrespective of the cost of money. Barring raw jute and one or two other commodities, the chances of such a setback in the supply of goods are, however, slender. The question is whether the Reserve Bank will have the courage of its conviction and stick to its present policy, until there is a perceptible impact on the price front, or whether it will succumb to the pressure of propaganda from interested parties.

Notable View on Cheap Credit

Here is one more weighty support to those who are in favour of higher interest rates and who have been pointing out that cheap credits are not compatible with the needs of an underdeveloped economy. In the course of his address to the annual meeting of the International Finance Corporation towards the close of last month, Mr. Robert L. Garner, President, said, *inter alia*, as follows:

"Historically, there is little evidence that private business men with sound projects have been deterred by borrowing costs of the level of I.F.C.'s. In most of the periods of active growth in the industrialised countries, money rates have been relatively high. If a private business is sound, it does not need subsidy in the form of cheap money. It has been well said that the most expensive kilowatt of electricity is the one which industry needs and cannot get. In the same way, the availability of capital is more vital to business than its cost. . . .

"The question whether cheap Government credits are an effective means of financing private industrial development, in my opinion, deserves more thoughtful attention than it has received. Many advocates of such cheap credit claim that it is essential, if private enterprise is to grow at a satisfactory rate. However, it seems obvious that public funds can supply the requirements of only a small part of the sound business enterprises in the developing countries. The lucky few can increase their profits and thus have an advantage over the many to whom public funds are not available. Furthermore, and even more important, it makes other business men reluctant to pay the higher rates necessary to attract private investment capital. Many of them delay projects in the hopes of eventually obtaining cheaper Government funds, thus retarding sound expansion and obstructing the increased flow of private funds into these countries. Cheap public credits may well in the long run retard rather than advance the pace of private economic development."

Interest Rates in Europe

France has reduced its Bank rate from 4 per cent. to 3½ per cent. and eased hire purchase terms. This has raised hopes that West Germany and the U.K. will follow suit. One view is that the French action is part of a plan conceived at the Fund-Bank meetings at Washington to relieve pressure on the U.S. gold reserves and to discourage the flow of "hot money" into the European financial centres. French official circles themselves have gone out of their way to extend support to this impression. But a week has gone by since France took the action and neither the German Bank rate nor the British Bank rate has been lowered. And, in any case, France did not attract much "hot money." This fact has given rise to the belief that France has taken the initiative more for domestic reasons than for international considerations. At the Fund-Bank meetings, it was Germany which was subjected to heavy pressure to bring down its interest rates, as the existing high levels are not only an attraction for hot money but also stand in the way of export of private capital to underdeveloped countries. To some extent, Britain, too, was subjected to this pressure, though not to the same extent as was the case with Germany. It is, therefore, probable that the German Central Bank may cut its Bank rate first and the Bank of England may follow in a week or two.

I.F.C.'s New Role

An important step in removing what is described as a "serious handicap" both to the growth of the International Finance Corporation's operations and the mobilisation of private capital for foreign investment was taken a few days ago, when the charter of the I.F.C. was amended at the annual meeting of the Board of Governors, so as to enable it to invest in capital stock of private industries and thus become a full "partner in progress," as was envisaged in the original proposal to create the I.F.C. The proposal, which was sponsored by the World Bank and endorsed by the International Development Advisory Board, envisaged the creation of an institution which could not only make loans without Government guarantees but also make non-voting equity investments in participation with private investors. There was, however, objection from many quarters, particularly from the U.S., to giving the I.F.C. the right to make equity investments. The management of the World Bank "reluctantly" accepted this objection and set up the I.F.C.

It was hoped at the time when the Corporation came into existence in July 1956 that this objection to invest in capital stock would not unduly restrict its operations. The experience of the last four years has, however, proved that this restriction is in practice a serious handicap not only to the growth of the institution's operations but to the mobilisation of private capital. A brief outline of the main considerations involved in the latest proposal to remove this limitation was given by Mr. Robert L. Garner, President of the I.F.C., in the course of his address at the recent annual meeting of the Board of Governors of the Corporation.

Being prohibited from making normal equity investments, the I.F.C. has been forced, all these years, into patterns of investment which are complicated and unusual. Such patterns have proved difficult to work out, as they would not easily fit into the laws of many countries. In view of their complicated nature and unfamiliarity to sponsors of industrial projects and then lawyers, they have resulted in lengthy and expensive negotiations and preparation of documents. Such delays and complications are as unwelcome to the I.F.C. as to its customers.

The I.F.C.'s terms of investment normally provide for unsecured loans at a fixed rate of interest, but carry also some additional income related to profits or options on stocks. There is a general tendency on the part of the sponsors to attempt to calculate in definite terms the value of profit participations and options. The evaluations by the sponsors of the profits usually prove to be overoptimistic and these in turn exaggerate the probable return to the I.F.C. While it is generally recognised that the future earnings and dividends on equity and the market value of shares are unpredictable, the sponsors "do not attempt to calculate the cost of straight equity money nor do they object to high rewards to shareholders including themselves." Such an attitude, Mr. Garner complained, has been an important handicap to the I.F.C.

The past few years have seen both individual and institutional investors in the free world putting more of their funds into equities. Those who are willing to venture into the less-developed areas are likewise most interested in the potentials for growth and profits through equity investment. But the I.F.C. was unable to invest in shares. It, therefore, sought the nearest equivalent, namely, options on shares, which it could hope to sell to private investors. Besides the disadvantage that such options are unfamiliar and in some countries illegal, they also present some difficult technical problems. Explaining these, Mr. Garner said:

"To the I.F.C., the option must be of sufficient duration not only for the enterprise to attain results justifying increased value for the optional shares but also to enable the I.F.C. to find willing purchasers before the options expire. Obtaining options of sufficient length to afford reasonable prospects of profit has been one of I.F.C.'s most difficult points of negotiation. From the standpoint of attracting private investors, either to participate with us or to purchase our investments, we would be on more familiar ground and in a more flexible position to dispose of our holdings in shares rather than in options."

The I.F.C. operates with relatively small funds and without the security of mortgages or of Government guarantees of other public agencies. It, therefore, needs maximum flexibility in meeting the needs of private enterprises and in attracting private investments for the growth of developing countries. It is quite obvious that this will be possible only by a direct participation in capital stock of the enterprises. "Given the right to invest in equities at its discretion," Mr. Garner observed, "the I.F.C. could more effectively strengthen, by its own investment, the capital structure of enterprises; encourage private investors to join in with it in taking either preference or common shares; accept the risks and share in the profits of an enterprise in traditional form; negotiate investment terms on simpler and more acceptable lines; make more effective use of options and convertible securities; and co-operate with local institutions in the development of capital markets by underwriting issues of convertible securities and share capital for public subscription."

Mr. Garner, however, made it clear that this did not follow that all the investments of the I.F.C. would be in equity. Where suited, the present pattern would be maintained, while, in others, the investments would be partly in fixed interest loans and partly in equity.

It may justifiably be asked whether the I.F.C. is not taking greater risks in directly investing in equities than in loans. Answering this poser, Mr. Garner took an optimistic view of the prospects and said:

"Looking at each individual case, it is true that the shareholders accept greater risks than creditors. However, for successful ventures, they receive greater rewards. It is my opinion that, over the long pull and with a diversified list of investments spread about the developing world, the I.F.C. and other investors will fare better through investment in equities of well selected enterprises than in any other form."

Mr. Garner made it clear that it was not the intention of the I.F.C. to exercise control over, or participate in the management of, private business in which it invests. It would not also exercise its vote in respect of the stock it held, except in cases of "jeopardy or other special circumstances."

The I.F.C.'s proposal has received the blessings of the World Bank President, Mr. Eugene Black, who is also Chairman of the I.F.C. Endorsing the proposal for prompt and favourable consideration of the Directors, he stated:

"In my opinion, such an amendment is of vital importance to the future of the I.F.C. and would considerably increase the volume of its operations and its usefulness in economic development. The desirability of having the I.F.C. engage in direct equity investment has been mentioned on many occasions. There is no doubt, in my opinion, that such an amendment will mean accelerated activity and simpler investments by the I.F.C."

It is the firm conviction of the I.F.C. that "private industrial growth is the most dynamic force for progress on the economic frontiers of the free world." The test of the I.F.C. is, in a sense, as Mr. Garner put it, the test of the private enterprise system itself and the I.F.C. welcomes the challenge to play a worthy part in this modern venture.

Cement Industry

Cement is aptly described as a "developmental commodity." Indeed, it is impossible to think of implementing the giant multipurpose irrigation schemes and industrial, housing and road projects without the use of cement. The third Plan Draft Outline contains large-scale programmes for these projects, which means that the demand for cement will rise markedly in the coming years. The aggregate requirements in the last year of the third Plan, that is, 1965-66, are expected to be of the order of 13.50 million tons, whereas the capacity at the end of the current Plan is put at 9.50 million tons on the basis of three shifts working 300 days in a year; the existing capacity is a little over 8.32 million tons.

EQUITIES STEADY

KHATAUS IN LIMELIGHT

(From Our Own Correspondents)

BOMBAY, 13*th October*

IN refreshing contrast to the sustained weakness in the previous two weeks, trading on the Stock Exchange during the week under review displayed an improvement in sentiment and prices tended to harden. Though trading was far from brisk, presumably due to the cautious attitude of bulls, the acute stringency in the money market and the credit restraints, equities in many counters scored moderate gains; in a few cases, the gains were quite handsome. Consequent on the change in sentiment, for which there were no obvious reasons, the bulls preferred to restrict their offerings, while bears hastened to cover their sales. Fresh support was selective. Encouraging corporate news and the removal of some of the scrips from the list of shares to which special deposit making-up prices payable by bulls are applicable and the fixation of special deposit rates against bears in some scrips would also appear to have induced recovery.

The Stock Exchange authorities removed, at the end of the last settlement, the special deposit making-up prices against bulls in respect of Tata Locomotive, Alcock Ashdown and Belapur and introduced special deposit making-up prices against bears in Standard at Rs. 1,300, while the usual making-up price was Rs. 1,180, and in National Rayon at Rs. 480, against the usual making-up price of Rs. 455.

Steel shares were featureless, consequent on the delay in the announcement of new retention prices. Tata Ordinaries slipped back from Rs. 153.50 *cum-div.* to Rs. 143.25 *ex-div.* (equivalent to Rs. 150.05 *cum-div.*) and, after an improvement to Rs. 146.25, closed lower at Rs. 144.75 *ex-div.* Indian Irons moved between Rs. 22.52 and Rs. 22.84, before finishing at Rs. 22.64, with no change over the week.

Textiles, in general fared better, though leading counters recorded only small variations. Bombay Dyeings gave way from Rs. 64.30 *cum-div.* to Rs. 62.60 *ex-div.* (d.v. 70 nP) and, after gaining some ground to Rs. 63.60, reacted to close at Rs. 62.80. Centurys finished better at Rs. 456 *ex-div.* (div. Rs. 7.00), as against Rs. 460 *cum-div.* a week ago. Kohinoors came up to Rs. 303.50 *ex-div.* (div. Rs. 3.50) from Rs. 301 *cum-div.* and closed at Rs. 298 *ex-div.* The highlight of the section was provided by Khataus with a jump of Rs. 70 to Rs. 607.50. Standards recorded a spurt of Rs. 125 to Rs. 1,350. Morarjees added Rs. 10 to Rs. 360. The Company's results for the year ended June 1960 were encouraging. The Company made additions to plant and machinery to the tune of Rs. 17.57 lakhs during the year and further orders for new machinery to the tune of Rs. 24 lakhs have been placed under the scheme of expansion and modernisation.

Electricity shares elicited support and were marked up. Ahmedabad Electrics improved by Re. 1.50 to Rs. 88 and Tata Hydros by a like extent to Rs. 102.75. Andhra Valleys advanced by Rs. 15 to Rs. 1,010 and Tata Powers by Rs. 17.50 to Rs. 1,037.50.

Bank shares, too, showed an all-round improvement. Barodas gained Re. 1 to Rs. 81.50, Centrals Re. 1.50 to Rs. 50.50, Centrals (New) Rs. 2 to Rs. 54 and Bank of Indias Re. 1.75 to Rs. 101.75. United Commercials picked up 30 nP to Rs. 77.30.

A spurt of Rs. 3.25 to Rs. 144.50 in Associated Cements was the only bright feature in Cements. Digvijays showed no change at Rs. 165.50.

In an otherwise featureless sugar group, Belapurs recorded a smart rise to Rs. 364, after an initial setback from Rs. 352 to Rs. 347. At the close, there was profit-taking which pushed the scrips back to Rs. 361.50. Phaltans were dull, but steady, at Rs. 179, while Walchandnagars were a shade quiet at Rs. 297.

Scindias, among shippings, were listless, moving between Rs. 14.36 and Rs. 14.16. Great Easterns, however, improved by 32 nP to Rs. 16.36. Automobiles, too, presented a contrasting trend. While Hindustan Motors were down by 20 nP at Rs. 18.40, Premier Automobiles hardened by Rs. 2 to Rs. 158.

In the engineering section, Alcock Ashdowns were done at Rs. 256 *ex-right* (as compared with Rs. 283.50 *cum-right* a week ago), following the Company's announcement of a rights issue at par in the ratio of two new shares for every seven shares. Tata Locomotives improved by Rs. 12 to Rs. 281. Larsen and Toubros were steady at Rs. 34. At Rs. 22.52 ex-div., Texmacos showed a rise of Re. 1.32. Premier Constructions provided an exception to the general trend with a drop of Rs. 6 to Rs. 314. Mahindras too were a shade quiet at Rs. 21.24.

In the miscellaneous section, Bombay Burmahs (old) staged a recovery from Rs. 564 to Rs. 572, but could not fully recover the ground lost in the previous week. National Rayons too made a partial recovery, with a rise of Rs. 10 to Rs. 465. Gwalior Rayons were steady at Rs. 39.25, as also Baroda Rayons at Rs. 145. Indian Rayons were in demand and gained Rs. 3 to Rs. 68.50. Tata Oils improved by Re. 1.50 to Rs. 74.50, while Tata Chemicals were dull at Rs. 16.20. Voltas were a bright feature with a smart rise of Rs. 8.50 to Rs. 263, as also Wimcos with a similar gain to Rs. 278. Alembic Chemicals appreciated by Rs. 3.75 to Rs. 245, following the announcement of a rights issue at par in the ratio of one share for every ten old shares. Colour Chems were higher by Rs. 5 at Rs. 375, Dharamsi Chemicals (New) by Rs. 9.50 at Rs. 237.50 and Poly Chems by Rs. 5 at Rs. 265.

Indian Dyestuffs were in request and made a handsome gain of Rs. 55 to Rs. 580. Asian Cables were firm with a rise of Rs. 5 to Rs. 92. Ceat Tyres were marked up by Rs. 7.50 to Rs. 237.50. Hindustan Levers were steady with a rise of Re. 1.25 to Rs. 44.50. Khandelwal Ferro Alloys put on Rs. 4 to Rs. 100. West Coast Papers were in demand on reports that the Company proposed to undertake an expansion programme aimed at increasing the daily output from 60-70 tons to 140-150 tons. The scrips advanced by Re. 1.50 to Rs. 190.

* * * *

Madras Stock Exchange

MADRAS, 12*th October*

Barring textiles, coffees and a few miscellaneous scrips which encountered selling, the Stock Exchange ruled steady during the week under review, thanks to better investment support. The support emanated chiefly from the optimistic assessment of prospects for securing foreign aid for the third Plan as made by the Union Finance Minister soon after his arrival from his foreign tour. Teas elicited good enquiries on reports of encouraging production in the South Indian estates. Rubbers, too, put on a cheerful appearance. Coffees, as already indicated, were somewhat subdued as a rsult of heavy stock accumulations, following failure of demand to keep pace with increased production this year. The news that the East African coffee producers—major competitors of India—had joined the International Coffee Agreement for the current year did not have any perceptible effect. Sugars moved up towards the close, after ruling quiet in the initial stages. Business put through in this section was limited, as operators preferred to await the final decision of the Government on the question of meeting the loss arising from exports. Textiles were easy on reports of large stocks of piecegoods and yarns with mills, presumably because of the hesitancy on the part of retail traders to accept stamped goods. Dull conditions were in evidence in the miscellaneous section, the general tendency of prices being downward.

Among teas, Haileyburias hardened by 50 nP to Rs. 13.25 *ex-div.* Waterfalls put on 3 nP to Rs. 4.23. Neelamalais and Kil Kotagiris rose by 2 nP each, the former to Rs. 4.80 and the latter to Rs. 5.64. Periakaramalais fell initially from Rs. 3.50 to Rs. 3.46, but recovered subsequently to close at Rs. 3.51 today.

In the rubber section, Vaikundams improved by 41 nP to Rs. 30.40 *ex-div.* Kailas picked up 5 nP to Rs. 5. Thirumbadis gathered 3 nP to Re. 1.50. Cochin Malabars were a shade better at Rs. 6.91, after declining from Rs. 6.90 to Rs. 6.75 early in the week. Malankaras were fully steady at Rs. 19.75. But Midlands shed 8 nP to Rs. 11.70, following the announcement of a lower dividend of 12½ per cent. taxable (equivalent to 8¾ per cent., tax-free) for the year ended March 1960, as compared with 10 per cent. tax-free for the previous year.

Among coffees, Coffee Lands gave way from Rs. 25 to Rs. 24.50. Consolidated Coffees lost 35 nP to Rs. 25.50. Ouchterlony Valleys were neglected at Rs. 4.85, Cowcoodys at Rs. 5.15 and Rajendras at Rs. 14.35.

In the sugar group, East India Distilleries attracted good attenton of operators and rose by 50 nP to Rs. 41. Travancores moved up by 12 nP to Rs. 11.87. Deccans strengthened by 5 nP to Rs. 15. Mysores changed hands at Rs. 60.50, same as last week, and United Breweries at Rs. 114.50.

Textiles, as already stated, were dull. Metturs were marked down by Rs. 12 to Rs. 3.80. Premiers dropped a like amount to Rs. 225. Coimbatore Cottons climbed down from Rs. 165 to Rs. 160. Coimbatore Pioneers were done at Rs. 345, as against Rs. 347.50 last week-end. Coimbatore Spinnings eased by a rupee to Rs. 45.

Price movements in the miscellaneous section were narrow. Among cements, Orissas put on 10 nP to Rs. 13.10. Indias picked up 4 nP to Rs. 6.72. Travancores were fancied at Rs. 8.50. Andhras, however, dropped 35 nP to Rs. 10.10 and Dalmias 10 nP to Rs. 11.75. Chemicals were subdued. F.A.C.Ts receded by 37 nP to Rs. 10.25. Mysore Fertilisers and Mysore Chemicals changed hands at Rs. 10.45 and Rs. 27.50, respectively. Among others, Ashok Leylands were higher by 7 nP at Rs. 8.02. Standard Motors were steady at Rs. 17.75 and Textools at Rs. 188. Tube Investments were unchanged at Rs. 331. The Directors of the Company have declared a dividend of 10 per cent., taxable, (equivalent to 7 per cent. tax-free) for the year ended July 1960, as against 10 per cent. tax-free for the previous year. Western India Plywoods slumped from Rs. 248 to Rs. 235.

GENERAL TYRES LTD.

To the rank of firms manufacturing automobile tyres and tubes will soon be added one more unit under the name of General Tyres Ltd. It is sponsored by the National Rubber Manufacturers Ltd., Calcutta, one of the largest producers of mechanical rubber goods and cycle tyres and tubes, in collaboration with that well-known foreign trade corporation of Czechoslovakia, the Technoexport. The Company has already been incorporated, the requisite industrial and import licences secured, and a suitable factory site in West Bengal selected. Details regarding the capital structure of the Company, total outlay on the project and capacity of the factory are not available. It is also not known whether the Technoexport of Czechoslovakia will contribute to the equity capital of the Company. It is, however, stated that arrangements with the foreign firm are at an advanced stage of finalisation for the supply and erection of a complete tyre and tube plant, technical assistance, and licence to manufacture high quality products under the famous "Barum" brand.

GUEST, KEEN, WILLIAMS LTD.

The paid-up capital of Guest, Keen, Williams Ltd. is proposed to be doubled from Rs. 2 crores to Rs. 4 crores by issuing 2,000,000 ordinary shares of Rs. 10 each to existing shareholders in the ratio of one for every share held at a premium of Rs. 18.50. The new shares will rank *pari passu* in all respects with the existing shares excepting for participation in the interim dividend of 80 nP (less tax) on the existing issued capital payable on 30th November next. The transfer books of the Company will be closed from the 17th to 31st inst. (both days inclusive).

MARKET GOSSIP

(Concluded from previous page)

Viewed thus, the capacity target of 15.00 million tons fixed for cement to be achieved by 1965-66 is, as Mr. V. H. Dalmia, Chairman of the Dalmia Cement (Bharat) Ltd., pointed out in his speech at the recent annual meeting of the Company, both realistic and practical, and there should be no difficulty in expanding cement production as envisaged in the Plan.

For the fulfilment of the aforesaid target, there will necessarily have to be, besides the setting up of new units, a programme for rehabilitating and modernising the plants already working. All this will require adequate supplies of cement-making machinery and equipment. It is encouraging to hear from Mr. Dalmia that most of such machinery and equipment will be produced within the country by the middle of the third Plan. By the end of the third Plan, we are told, six to seven cement plants with a daily production capacity of 500 tons will be manufactured annually. The total value of the plants is estimated at Rs. 4-5 crores, with indigenous content of 90 per cent. Even so, "it would be unrealistic," to quote Mr. Dalmia, "to place a total embargo on import of cement machinery."

The mere achievement of the production target fixed for cement is not enough. Steps must be taken to ensure satisfactory distribution arrangements. This aspect is specially stressed because of the problems arising now and again in regard to the disposal of stocks, particularly due to transport difficulties. It is equally important that the authorities follow helpful price and fiscal policies. Given all this, the cement industry will doubtless have a bright future. But the 'if' here is a big one, as the authorities are tardy and stingy in these vital respects. This is precisely the reason why cement shares have failed to enjoy the enthusiastic support of investors.

After assessing the outlook for the cement industry, in general, Mr. Dalmia gave an idea of the progress made by his Company in fields other than cement production. It will be evident from his review that the dead burnt magnesite now being manufactured at Salem by the Dalmia Magnesite Corporation, of which the Dalmia Cement is a major partner, will be in ever-increasing demand from the steel and refractory industries. The requirements of the steel industry alone are placed at 90,000 tons, as against the current annual installed capacity of 64,320 tons. The Company has, therefore, decided to double the capacity. An application for grant of necessary licence and import facilities is being submitted to the Central Government. The shareholders of the Company must certainly have felt gratified at this disclosure by Mr. Dalmia as well as at his statement that the Company's iron ore business is developing satisfactorily.

A Trust for Service

May be, charity cannot solve an economic problem, but instances are legion of personal munificence having helped to heal the sick, wipe the tears from many sorrowful eyes, bring cheer to countless saddened hearts and champion scores of deserving but neglected causes. The sixth annual report of the Trustees of H.E.H. the Nizam's Charitable Trust for the year ended 31st March 1960 reflects the varied fields and ways in which this Trust, formed six years ago, has been carrying on its mission of mercy. Apart from donations to institutions and lumpsum grants to deserving students for studies and to patients for treatment, there is yet another unique way in which the Trust puts its funds to the service of the nation, that is, by investing its surplus funds in safe and promising industries. This not only enables the Trust to augment its income but also promotes, in the process, industrial development.

But it is distressing to note that, during the year under review, the Trustees had to withhold its funds from being invested in this manner, pending the report of the auditors appointed by the Auditor-General of India to inquire into the legality and propriety of the various transactions and investments made by the Trustees." Thereby hangs an unhappy tale of litigation which, as the Trustees point out, has held up the good work that was being done by the Trust. The surplus money has, therefore, been put part[ly] in short-term deposits and partly in Government securities and small savings. The market valu[e] of the assets, as on 31st March 1960, was Rs[.] 6.17 crores, as against Rs. 5.84 crores a year before. The Trust's income rose from Rs. 34.93 lakhs [to] Rs. 40.03 lakhs during the year under review. Very few benevolent trusts in this country can claim such a record.

The Trustees, we are [told], have decided to set apart Rs. 30 lakhs to [meet] the cost of the proposed orthopædic hospital at Hyderabad. Besides, an annual recurring grant of Rs. 7 lakhs has also been sanctioned for the [hos]pital to be made available in two half-yearly [in]stalments after the completion of the construction of the hospital. The Trustees also propose to [ad]vance the establishment of a training school for [nur]ses and mechanics.

NEWS IN BRIEF

AN official delegation is expected to visit Karachi shortly to review the working of the existing Indo-Pakistan trade agreement since it was signed in December last.

An Irish tea delegation, led by Mr. Percey McGrath, has arrived in Madras for discussions with the Tea Board on the question of promoting Indian exports of good quality tea to Ireland.

The Government of India has agreed to grant Rs. 26.5 lakhs to Nepal for financing the construction of a science college building of the Tribhuvan University and a national archives at Kathmandu.

A working group, with Dr. G. P. Kane, Senior Industrial Adviser, Government of India, as Chairman, will shortly be set up to study the various aspects of the development of petro-chemical industry in India.

The first shipload of U.S. wheat under the recent 17-million tons P.L.480 agreement has arrived in India. After unloading a part of the cargo at Madras, the ship has proceeded to Calcutta.

The Japanese Government is currently examining a proposal for extending a new loan of $20 million to India to finance the purchase of Japanese thermal power generating plants, ships and other industrial plants.

India and Tunisia have signed a five-year trade agreement covering exchange of goods worth $15.5 million. Under the agreement, India will export tea and jute while its imports will comprise mainly phosphates and phosphate by-products.

The Union Government proposes to bring forward legislation for the formation of a Central Seed Corporation. The main purpose of the Corporation will be to enable cultivators to obtain an adequate supply of pure and high-quality seed of superior maize hybrids and other varieties of crops.

A proposal for the setting up of a factory to manufacture tractors and earth-moving machinery at Ennore in Madras State has been submitted to the Government by a leading North Indian industrial house. The proposed factory is expected to secure the collaboration of an American firm.

India is among the fourteen countries where increase in food production equalled population growth or exceeded it by upto 0.9 per cent. per annum between the years 1952-53 and 1957-58, according to the latest annual report of the U.N. Food and Agriculture Organisation. India's population during the period rose by 1.3 per cent. and food production by 1.9 per cent.

Food crops worth Rs. 28 crores are damaged every year by white ants and termites in India. This was disclosed by Prof. Humayun Kabir, Union Minister for Scientific and Cultural Affairs, while inaugurating a symposium on "Termites in the humid tropics," organised jointly by the Zoological Survey of India and the U.N.E.S.C.O. South Asia Science Co-operation Office at New Delhi last week.

The Forward Markets Commission has permitted the recognised associations at Delhi, Agra, Kanpur and Bhatinda to commence trading in the 1960-61 season's hedge contract of rapeseed and mustardseed on or after the 8th inst., subject to the same system of special margins as has been prescribed for the previous season's hedge contracts.

Canada has agreed to supply India wheat worth $7 million (about Rs. 3.4 crores) under the Colombo Plan. This is part of the total Canadian assistance of $25 million allocated to India under the Plan for the year 1960-61. Counterpart funds from the sale proceeds of the wheat will be utilised to carry out projects of economic development in India. Canada supplied wheat worth $18 million in 1958-59 and $7 million in 1959-60.

A scheme for opening demonstration-cum-training units in the rice-producing States has been prepared by the Union Ministry of Food and Agriculture. In these centres, Japanese technicians, assisted by Indian farmers, will demonstrate the use of improved methods, techniques and implements for raising rice production. The Japanese Government is expected to provide the necessary technicians and farm implements.

The Planning Commission has recommended that the State Governments should receive Central assistance to the extent of 50 per cent. of expenditure on the implementation of the Nalgarh Committee's recommendations pertaining to reorganisation of agricultural services, including increase in emoluments of employees, in the first two years of the third Plan. Only the Punjab has so far forwarded concrete proposals to give effect to the recommendations.

A 10,250-ton cargo ship *Apja Sushama*, owned by the Appejay Lines, arrived in Bombay last week from West Germany. This is the second of the six second-hand cargo ships acquired by the Company under the "pay while you earn" scheme initiated by the Government of India. With the addition of the new ship, India's total shipping tonnage now comes to 873,250 (G.R.T.) which is just 26,750 tons short of the second Plan target of 900,000 G.R.T.

The Tata Oil Mills Ltd. is understood to have been selected to put up in Bombay a plant to manufacture edible groundnut flour with protein content with the help of the U.N. International Children's Emergency Fund. Another plant will be set up in Madras. The two plants will have a capacity of 10 tons each a day. In the light of the experience gained from the working of these two units, the Government proposes to permit the erection of more plants during the third Plan period.

The 1,550-mile-long canal system in the Damodar Valley which will eventually have a capacity to irrigate a million acres of land in West Bengal, will be taken over by the State Government in December next. Under the agreement now arrived at between the D.V.C. and the Government, West Bengal will keep 5 per cent. of the revenue from the water rates collected to meet the expenditure on the maintenance of the canal. As for future additions and alterations to the canal system, the State Government will submit estimates to the D.V.C. which will allocate the necessary funds to carry them out.

The Indo-Afghanistan trade arrangement has been extended upto 20th July 1961, following the discussions held by an Indian official team with the Afghanistan Government's representatives at Kabul recently. The Government of the two countries have reaffirmed their desire to promote trade between them and take such special steps in terms of the treaty of friendship and commerce between them, as might be found practicable. It has been agreed that facilities would be afforded to registered traders for importing into India dry and fresh fruits, hides and skins, etc. Likewise, facilities would be afforded for import into Afghanistan from India of goods like cotton and woollen textiles, tea, light engineering goods, pharmaceuticals, drugs and chemicals.

The Government of India has accepted in principle the recommendation of the Export Promotion Advisory Council's Standing Committee that export houses be set up for purposes of tapping the export potential of various commodities. This was announced at the meeting of the Committee at Bombay on the 6th inst. under the chairmanship of Mr. Satish Chandra, Union Deputy Minister for Commerce and Industry. The Committee held further discussion on the suggestion for the setting up of an institution for giving information in regard to status and standing of exporters. It was decided that the Federation of Indian Chambers of Commerce and Industry, the Associated Chambers of Commerce, other trade bodies and the Government should further study this problem with a view to investigating ways and means of perfecting or further improving the methods of collecting information in regard to the status of exporters, which are at present used by chambers of commerce and banks. The Committee was also informed that the Government had decided to appoint a committee for devising a machinery for quality control and pre-shipment inspection of exported goods.

The National Small Industries Corporation has introduced two new schemes for the supply of machinery to small-scale units on hire-purchase basis. A sum of $10 million has been provided by the U.S. Development Loan Fund to the Corporation for the import of machines under these schemes. The D.L.F. credit is convertible into any foreign currency, except that purchase of machines valued at about Rs. 2.5 lakhs will have to be made from the U.S. Under one of the schemes, the applicants will have to pay 20 per cent. of the value of the machines in advance to the Corporation and furnish guarantee for the remaining 80 per cent. which will be payable in four equal annual instalments. The second scheme provides for the supply of machines on payment of 20 per cent. of their value at the time of the Corporation's acceptance of the application. An additional 20 per cent. of the value of the machines will be payable before the delivery of the machines and the balance of 60 per cent. will be recovered in five equal annual instalments. Since the introduction of the hire-purchase scheme in 1956, the Corporation has supplied nearly 4,000 machines, valued at more than Rs. 3.5 crores. In all, about 4,000 applications covering 12,500 machines worth Rs. 12.58 crores have been accepted by the Corporation. Orders worth over Rs. 7 crores have so far been placed in respect of both imported and indigenous machines.

* * * * *

From Abroad

A team of Russian mineralogy experts has submitted a report to the Government of Pakistan on the exploration of oil and other minerals in the country.

The question of imposing a ban on exports of copra is now under the consideration of the Ceylon Government. Such a ban, it is pointed out, will not only secure new markets for coconut oil in Communist countries but also help the oil millers who are finding it uneconomic to buy copra at export rates.

The Leyland Motors of Britain has signed an agreement with the Israel Government under which the Company will establish a plant in Israel to produce buses and trucks upto seven tons without the participation of local interests. In the beginning, only body, radiators, tyres and a small number of parts will be made locally, the rest being imported from the U.K.

Pye, one of the U.K.'s leading television radio and electronics groups, is considering a proposal to transfer its export production operations from Cambridge to Italy. It has already secured a factory at Inverigo near Milan for this purpose. The move is said to have been prompted by the slack demand, following the unwillingness of the Government to ease credit controls and 50 per cent. purchase tax.

PERSONAL

PRIME Minister Nehru returned to India on Tuesday this week, after attending the current session of the U.N. General Assembly.

Mr. Morarji Desai, Union Finance Minister, who participated in the annual meetings of the I.M.F. and the World Bank at Washington, has returned.

Mr. M. Ct. Muthiah, Chairman, Indian Overseas Bank Ltd., has returned to Madras after a tour of the U.K. and the Continent.

Mr. S. C. Stout, United Kingdom Trade Commissioner in Singapore, has been appointed the U.K. Trade Commissioner in Bombay *vice* Mr. C. H. Bayliss who is expected to return home shortly on completion of his term of duty. Mr. Stout will assume charge of his new assignment early next month.

Soviet Russia will export 25 million tons of crude oil and oil products to the Western world this year, according to Mr. Leo D. Welch, Chairman of the Standard Oil Company of New Jersey. This will constitute an increase of two-thirds above the last year's level of 15 million tons. Although the quantities involved are relatively small, they are calculated to disturb the equilibrium of the Western oil market.

Automobile manufacturers in the U.S. have embarked on a vigorous sales drive for compact cars in Western Europe. The Chrysler International has plans to double its European sales, from 15,000 cars in the year ended September 1960 (out of its total exports of 50,000) to 30,000 cars in the current year, chiefly the Valiant and Lancer compacts assembled at its plants in Holland and Switzerland. Its best markets in Europe are Sweden, Switzerland and Benelux. The British market has turned unattractive due to the import duty of 30 per cent. there.

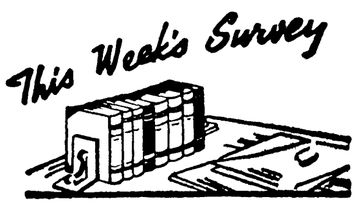
The report that the Ghana Government was contemplating to nationalise foreign firms has been denied by President Nkrumah. The President has, however, stated that the Government will seek to establish a socialist pattern of society, which does not mean nationalisation of private enterprises. According to him, there will be four sectors in the Ghanian economy, namely, State-owned, joint State-private enterprise, co-operatives and purely private enterprise. The President has emphasised that in view of the shortage of capital for development, he will welcome capital investment in Ghana from all sources.

The British Petroleum Company and the California Chemical Company of the U.S. have decided to set up a £7-million joint undertaking, called B.P. California, to construct two aromatics manufacturing plants in Europe. The units will be located adjacent to the existing B.P. refineries at the Isle of Grain, Kent and Dinslaken, West Germany. In their initial phase, the two installations will together produce 19,000 tons of orthoxylene a year and 16,000 tons of ethyl benzene raw materials for plastics, and 22,000 tons of paraxylene, the basic ingredient in the manufacture of polyester synthetic fibres.

Extra jet services to and from Australia via India are to be introduced next month by the B.O.A.C. in collaboration with the jet services of the Air-India International and the Qantas Empire Airways. An extra Comet 4 jet service will fly between London and Melbourne by way of Delhi, Rangoon and Singapore. A return service will call at Singapore, Delhi, Teheran, Istanbul and Frankfurt on its way to London. The new service will bring the total number of Britain-Australia services run by the three airlines to eleven every week—six by B.O.A.C., one by Air-India and four by Qantas Empire Airways.

Remarkable improvement in safety of air travel in recent years has been noted by the statisticians of the Metropolitan Life Insurance Company. During the years 1957-59, the passenger death rate on scheduled airlines in the U.S. averaged only 0.44 for each 100 million passenger miles travelled, as compared with a rate of 4.70 in the 1937-39 period, while, in the decade since 1947-49, there has been a 75 per cent. reduction. On international scheduled flights of U.S. airlines, the passenger death rate fell to 0.56 per 100 million passenger miles in 1957-59 from 15.66 in 1937-39.

The problems of development of the Asian pulp and paper industry will be discussed at an international conference to be held at Tokyo from the 17th to the 31st inst. Sponsored by the three United Nations agencies, the Economic Commission for Asia and the Far East, the Food and Agriculture Organisation and the U.N. Bureau of Technical Assistance Operation, the meeting will discuss technical, economic and financial questions involved in expanding Asian pulp and paper capacity to meet constantly growing demands. Though during the last ten years, domestic output of paper in Asia and the Far East has increased by almost five times, the region's net imports of pulp, paper and paperboard have more than doubled from $77 million in 1949 to more than $160 million in 1957-58. Current consumption of paper averages about 6¼ million tons per year, of which about one and a quarter million tons are newsprint. The total demand for papers and paperboard in Asia and the Far East (including mainland China) is expected to increase to almost 11½ million tons by 1965 and to almost 25 million tons by 1975 (a total practically equivalent to world consumption before World War II)—that is by more than three and a half times in less than 20 years, according to a F.O.A. study just published.



SETBACK TO NATIONALISATION

THE suggestion for altering the extremist phraseology of the policy statement on nationalisation of the British Labour Party, which had sparked off a wave of heated debate between the Party's right and left wings, received the official stamp of approval at the annual conference held at Scarborough (Britain) last week. Although Mr. Hugh Gaitskell's defence policy was rejected, he got the conference to recognise "as a valuable statement of aims" his proposal modifying the concept of wholesale nationalisation embodied in Clause 4 of the Party's Constitution. The new statement, while calling for public ownership of a few "commanding heights of the economy," envisages continuance of a wide private sector of industry. As compared with this, Clause 4, in its original form, reads as follows: "To secure for the workers by hand or by brain the full fruits of their industry and the most equitable distribution thereof that may be possible upon the basis of common ownership of the means of production, distribution and exchange and the best obtainable system of popular administration and control of each industry or service."

The right-wingers of the Labour Party, it will be recalled, attributed the unpopularity of the Party, reflected in its defeat in the last general election, mainly to its passionate addiction to the principle of nationalisation. This uncompromising position, they contended, created a false image of the Party in the public mind by associating it with wholesale nationalisation, which, in effect, would mean State capitalism.

The significance of the resolution adopted at the Scarborough conference is that, though the socialist ideal of nationalisation has received a decisive setback, it is rather premature to jump to the conclusion that it will definitely cease to be a source of doctrinal dispute within the British Labour Party. British commentators point out that the bitter controversy may flare up again in the months ahead, for the left wing may canvass support for its stand and try to get the present vote reversed at the next annual conference.

MR. TATA'S PRAGMATIC VIEWS

In his crisp and pointed speech at the fifty-third annual general meeting of T.I.S.Co., Mr. J. R. D. Tata, Chairman, has appropriately turned the spotlight on the most relevant issues of planning today. Inflation, which has been reflected in a one-third fall in the purchasing power of the rupee in the last five years, has naturally claimed his first attention. But there is no attempt here to make political capital out of a situation of inevitable inflationary pressures generated by mounting development expenditure. While their inevitability has been recognised by Mr. Tata himself, their magnitude, in his view, is not altogether uncontrollable. Since large-scale investments with long periods of fruition as in the case of basic and capital goods industries "involve pumping into the economy corresponding increases of purchasing power which are automatically translated into demands for consumer goods," the only practical course open to planners is to provide for a greater increase in the supply of such consumer goods as mill cloth and white sugar. If Mr. Tata has strongly recommended this course, it is because the other alternative of mopping up surplus purchasing power by additional taxation will involve an unbearable addition to the already excessive taxation proposed for the third Plan period.

That this is a pragmatic approach, eschewing ideological considerations, no dispassionate observer can deny. It is in the same spirit that Mr. Tata has chosen not to pursue the "unhappy controversy" over socialistic means, even though they have led to "a mass of costly, time-consuming and ineffective controls." If he has raised the issue whether it would be advisable, in the context of inflationary pressures, to give the basic and heavy industries (including steel) a 60 per cent. share in the proposed investment in industry as a whole, it is not because he invests the huge investment in heavy industries with a sinister socialistic significance. In fact, he is not against priority to steel and heavy industry, if it "can be financed in part by foreign capital which would release the pressure on our foreign exchange resources." This, again, is a severely realistic approach to heavy industrialisation which, though basically necessary for "a modern and fully industrialised nation," would have to be staggered in a less painful manner, if foreign assistance is not possible.

But, happily, circumstances seem to be more propitious for foreign participation in industry, in general. Basic and heavy industries, however, are now beyond the reach of new entrepreneurs, domestic as well as foreign, because their future development in the public sector is governed by the Industrial Policy Resolution of 1956. Pragmatism, again, should dictate that foreign private enterprise be allowed to participate in these fields. Although Mr. Tata is not excessively optimistic about the likelihood of such foreign participation in State enterprises, he has raised the issue in a form that should appeal to the powers-that-be. His twin argument that the tremendous capital expenditure involved in basic and heavy industries is a weighty consideration transcending ideology and that no risks (of, probably, foreign domination and the like) could arise in a controlled economy, politically independent, such as ours, would appear to be sufficiently persuasive. To the extent foreign participation can be secured, to that extent basic industries can be developed with less strain on the country's own resources and "the large funds released in consequence could be diverted to equally vital projects, such as additional fertiliser production and the development of power, fuel and transport resources. Mr. Tata's plea may conceivably find favour with Prime Minister Nehru, who, at one time, seemed to be favourably disposed towards foreign private participation in the Bokaro Steel Project. It is, however, on a matter of detail—whether the Government should have a 51 per cent. or 49 per cent. share in a heavy industry—that the proposition may well founder. Mr. Tata, of course, is not to be expected to take any firm stand on this aspect of the matter.

INDUSTRIAL RESEARCH

Industrial research must be taken to be still in its infancy in India, though the national laboratories organised by the Council of Scientific and Industrial Research have been active in recent years. Expert opinion, like that of Prof. J. B. S. Haldane, has been critical of the research performance of these laboratories. The general impression that they have no outstanding research achievements to their credit has also not been corrected by the C.S.I.R. By and large, it may be taken that neither the C.S.I.R. nor the industry itself has made any substantial contribution in this regard. Even where some results have been achieved by way of new products or new processes, not much is known of the extent to which they have found practical application in industry. It would appear that an industrial extension agency, comparable to the agricultural extension organisation in the Community Development Blocks, has not been operating on the requisite scale. The reasons for this poor performance in terms of laboratory research and commercial exploitation of inventions are not to be sought entirely in the relatively small annual expenditure on scientific and industrial research—just Rs. 5 crores, as compared to Rs. 425 crores in the United Kingdom in 1958-59—but in the known lack of dedication to research on the part of scientific workers in more than one national laboratory. There are also grave doubts whether the scientific talent assembled in the research institutions is uniformly of the best quality.

The situation calls for remedy not only through incentives to attract some foreign scientists and researchers but through a broader organisation for research by industry itself. The latter approach, it is gratifying to note, may be expected to gain currency in the wake of Prof. M. S. Thacker's latest announcement that industries could hope for relief in taxation if each industry could develop its own research institutions. This is the right approach, if foreign experience is any guide. Both in the United Kingdom and in the United States, it may be recalled in this connection, private industry has financed and organised research on a massive scale. In the United Kingdom alone, for example, private industry is responsible for as much as 29 per cent. of the total expenditure (£480 million as of 1958-59) on scientific and technological research. While any such contribution by industry in India is not inherently difficult, its magnitude is a matter for speculation.

As it is, the effort to organise co-operative research with industries and the C.S.I.R. as equal partners has covered only four industries —cotton textiles, silk and art silk, paints and rubber. With industrialists becoming more and more receptive to this idea of co-operative research, it may be that the third Plan will usher in more research units not only for cement, mica, foundry, radio and electronic industries according to present plans but also for a number of other industries. This is a matter of some urgency, because the exigencies of industrialisation and foreign exchange stringency involve materials substitution for which extensive research is a precondition. Industry-wise studies on wastes, as suggested by the All-India Manufacturers' Organisation at its latest quarterly meeting, are also called for in this context. They represent another precondition for research on ways and means of converting the wastes into useful by-products. Surely there is much to be done in this field, besides the present utilisation of blast furnace slag, basic open hearth slag, bagasse and molasses.

SMALL SAVINGS

Although the rate of small savings collections has gone up in recent years—from Rs. 55 crores in 1957-58 to Rs. 82 crores in 1959-60—the total collection for the whole of the second Plan period is estimated at no more than Rs. 380 crores, representing a shortfall of Rs. 120 crores as compared with the original target of Rs. 500 crores. The reasons for the shortfall are not far to seek. Primarily, they are high cost of living, unattractive return, continuous fall in the purchasing power of money and lack of adequate publicity in rural areas. While the first and last causes have come to be recognised by the authorities, the second and third causes are being slurred over. Mrs. Tarkeshwari Sinha, Union Deputy Finance Minister and Chairman of the newly constituted National Savings Central Advisory Board, put the finger on the right spot when she said, at the inaugural meeting of the Board held at Bombay early this week, that the main difficulty in the savings campaign was the successful creation of a psychology of saving in an era of rising prices, especially when the margin of savings of the wage-earning classes also kept on going down. And she candidly admitted that the savings movement had not yet made its mark in rural areas, but added that every effort was being made, through proper publicity and other measures, to overcome this handicap.

The success of the small savings movement depends as much on the ability of the people to save as on the habit of thrift among them. This aspect needs to be specially stressed, because the third Plan Draft Outline has fixed the small savings target pretty high, namely, Rs. 550 crores, as against the estimated collection of Rs. 380 crores in the second Plan (actual collections up to the end of August 1960 aggregated Rs. 324.69 crores) and Rs. 256 crores in the first Plan. If this target were to be achieved, it is imperative that the whole movement of small savings should be conducted, as Mr. S. K. Wankhede, Finance Minister of Maharashtra, aptly put it while inaugurating the Board, in a systematic and scientific way. Addressing the meeting, the Union Finance Minister, Mr. Morarji Desai, made the pertinent point that small savings constituted a measure of public interest in development and the capacity of the people to save more and more. Few would dispute the fact that, in a developing economy, the practice of austerity and thrift involves sacrifices and discomforts for the present generation, to borrow the phrase of Mrs. Sinha. But there is a limit for such sacrifices and discomforts. And, what is more, the public has a right to expect that the money raised through small savings or any other means is not frittered away on execution of ideological schemes but spent wisely on productive projects which will enable the community to enjoy the fruits of development to the fullest extent possible.

APPRENTICESHIP SCHEME

Trained workers are no less a valuable asset in industry than capital. In fact, investment in enriching human capital is as good as that in the most imaginatively planned and carefully thought out project. In countries like India, which are desperately trying to catch up with the West, supply of trained technicians, in adequate numbers and of the requisite quality, is a major desideratum. It is, *prima facie*, paradoxical that, to a country which has, within its four corners, the second largest mass of humanity in the world, manpower should be a problem. Lack of enough hands is surely not the problem, but the shortage of trained and skilled ones. Out of the schools and colleges in this country are moving the largest number of boys and girls in our history, 290,000 a year according to one official estimate. From them must come the technologists, scientists, technicians and craftsmen the country needs.

Shortage of technical personnel is generally associated in the public mind with lack of engineers and scientists. But paucity of skilled workers below the level of degree or diploma holders is an equally, or may be more, pressing problem. Their role in the scheme of industrialisation is no less important. While the former prepare the blue-prints and supervise the job, it is the skilled and semi-skilled workers who actually execute the work and keep the wheels of machines moving.

Most of the technical training centres existing in the country are a legacy of war-time when a number of them were set up to train personnel for industry which provided the sinews of war. After the war, these centres were pressed into the service of civilian needs to train demobilised soldiers for skilled, civilian vocations. This scheme of limited scope was replaced by a technical and vocational training programme drawn up by the Government under which a few centres were started by the Director-General of Rehabilitation and Employment for training 10,000 persons in chosen trades. The annual intake of training centres run by the D.G.R.E. was about 6,000 towards the beginning of the second Plan. The Advani Committee (1956) estimated the requirements for expansion and replacement of all large, medium and small-scale units in the public and private sectors during the second Plan period at 635,000. The Committee realised that the shortage could not be made good during the second Plan, if the training facilities were not expanded substantially. It, therefore, recommended a phased programme of expansion of training facilities in existing institutions and suggested the institution of regular apprenticeship courses and in-plant training in private industrial establishments under the guidance of the National Council for Training in Vocational Guidance. Thanks to the partial implementation of this recommendation, there were, as on 1st June 1960, 135 training centres functioning under the Craftsman Training Scheme of the Ministry of Labour. They imparted training in 28 engineering and 22 non-engineering trades. It is planned to set up more centres and to increase the training capacity of institutions run by D.G.R.E., so that about 30,000 more craftsmen can be trained each year by the end of the second Plan period. Under the National Apprenticeship Training Scheme, 3,296 persons will be given facilities for apprenticeship in various industrial establishments in the country.

The role of private industry in providing training facilities in this country has been negligible so far. Barring some leading, forward-looking establishments, which have their own training schools and apprenticeship schemes, the vast majority of industrial units have been deplorably indifferent to this problem which they seem to regard as the headache of the Government. Even today, in spite of all the brave talk, the position has not improved. If, therefore, with the needs of the third Plan imparting added urgency to the problem, the Government were to initiate some vigorous and concrete measures for getting things done in this sphere it could not be found fault with. The reported decision of the Government of India to launch a programme to get apprentices compulsorily trained by industry in both the public and private sectors should not cause any anxiety either among business men or consumers. The only possible ground for objection is the element of compulsion. But a reasonable measure of compulsion is preferable to leaving things to drift and getting nowhere ultimately. The only safeguard called for is against the misuse of power. The example of the advanced countries of the West like the U.K., the U.S., or W. Germany is not applicable to India. In these countries, a combination of circumstances, including shortage of manpower, have forced business enterprises to train young hands in advance to meet future needs. This, coupled with the interest taken by the Government and trade unions, led to a situation which made legislation superfluous. In Britain, for instance, trade unions have consistently shown their interest in technical education. Many unions insist on a clause for training apprentices being written into agreements with employers. One of the more interesting methods of training is what is called the "sandwich" course of alternate periods of study and industrial training which enables the industry to get men and women who have "grown up" in the works and who combine sound academic education with clear grasp of shop floor problems.

The proposed programme, which is to be initiated next year, aims at imparting training to 200,000 apprentices yearly in industrial units throughout the country. A detailed scheme is said to have already been evolved. It is proposed to give legislative sanction to the scheme by embodying it in a Bill which is under preparation and will be presented in the next session of Parliament. The Bill, we are told, will seek to set up a Central Council of Apprenticeship Training which will be empowered to constitute subordinate Councils at the State level. The function of these Councils is to prescribe, having regard to the need for technical manpower, training quotas in industrial units in the respective States. The scheme is compulsory, in the sense that every undertaking employing over a fixed minimum number of workers will have to take a specified number of apprentices and train them whether or not they will need them. Medium and smaller industrial units employing less than 500 (or is it 50?) workers will be helped by the Government with a subsidy of 50 per cent. of their expenses on training. Bigger units, however, will have to meet the entire training costs all by themselves. The apprentices will be paid monthly salaries ranging from Rs. 75 to Rs. 150 depending on the nature of the job for which they are to be trained and their basic equipment. The programme aims at building up a pool of one million trained workers by the end of the third Plan period.

Employers will be well advised to extend their full support to the scheme. Some such scheme is, in any case, essential, legislation or no legislation, if the Plan is not to flounder on the rock of shortage of men to tend the machines. If, however, employers are opposed, in principle, to legal compulsion, it is up to them to come out with an alternative concrete scheme of their own which will not be compulsory but will have the same object in view and be implemented expeditiously. If they unanimously undertake the responsibility for getting the specified number of apprentices trained within a specified period, there is no reason to suppose that the Government will still insist on legislation, for what is willingly done will be better done and be of more enduring value.

TRADE BARRIERS

It would appear that the renewed expansion of free world trade noted during 1959 persisted in the first half of the current calendar year also. No clear indication of its subsequent progress is yet available, but reports from abroad suggest that the upward trend might not have been kept up in the third quarter. In fact, talks of a slight recession are in the air. Actual figures are available only for the first quarter of 1960. These reveal that the aggregate value of world exports (f.o.b.) during the quarter under reference was at an annual rate of $111,000 million, as against $93,200 million and $94,542 million in the corresponding quarters of 1959 and 1958, respectively. While the rise in the value of exports is attributable in no small measure to the world-wide phenomenon of higher prices, there is no denying that the volume of trade itself has registered an improvement, thanks to the lessening of exchange restrictions, simplification of exchange controls and decline in the number of bilateral payments agreements. Even so, it must be admitted that trade barriers erected in a number of countries continue to hamper world trade. It was, therefore, in the fitness of things that the several leading spokesmen of the industrial and business community assembled at the Fourth International Conference of Manufacturers held at London last week should have strongly urged the need for removing barriers to world trade and setting right the severe imbalance in trade between the industrialised countries and the non-industrialised areas of the world.

The most emphatic call was made by Sir William McFadzean, President of the Federation of British Industries, who spoke of the vital importance of creating wider and freer trade rather than of restricting and confining it in sealed compartments. Here is what he said: "One of the most complex problems arises from the completely different standard of living in certain Eastern countries and the great need of these countries to maintain their respective balance of payments. The less they are able to pay for their development programmes out of export earnings, the more accommodation will the more mature and economically stable countries have to provide in terms of loans or grants-in-aid."

A more or less similar view was expressed by Mr. Fritz Berg, President of the Council of European Industrial Federations, and Mr. William Blackie, head of the U.S. Chambers of Commerce delegation. Stressing that the aim should be the establishment of a true partnership between the countries to be developed and the industrial nations, Mr. Berg observed: "This presupposes the possibility for the former to sell their products in our markets. If they are expected to repay the long-term credits we grant them, this can only be done by way of merchandise." He did well to advocate liberalisation of import policy by the Governments of the advanced countries. He displayed great understanding and right foresight when he advised the industrialised countries to prepare themselves for "certain changes in our own economic structures, giving up certain types of production and leaving them to the emergent industrial nations in Asia and Africa; after all, this is in the spirit of the international division of labour." In his speech, Mr. William Blackie mentioned the increasing volume of imports into North America from low-cost countries such as Japan and Hong Kong and said: "Some domestic industries have obtained temporary protection through voluntary restraints upon imports." Such devices, in his opinion, cannot provide a permanent solution and, yet, Japan and Hong Kong must have permanent markets for their goods. It was this consideration and the fact that the West European countries are in a better financial position now that prompted Mr. Blackie to urge these countries "to open the doors wider to imports from friends in the Far East."

It is to be hoped that the sentiments expressed by the aforesaid speakers will permeate the rank and file of business and official circles in the economically advanced countries of the West and lead to an early relaxation, if not abolition, of trade barriers. Whatever efforts that are made in this direction will, of course, be of no avail, unless they are accompanied by concrete steps to avoid a division in Europe and, at the same time, maintain the economic and political cohesion of the Commonwealth. Mr. Reginald Maudling, President of the U.K. Board of Trade, certainly struck a note of realism when he stated, in his address following a banquet to mark the Conference on the 4th inst., that it was a matter of urgency to find a solution to the threatened division of Western Europe that will be in harmony with the interests and purposes of both groups and that the traditional interests of the Commonwealth nations must be protected. It will be recalled that certain assurances were given by the spokesmen of the British Government to the Commonwealth Finance Ministers when they met at London last month to discuss matters of mutual interest. These have led to certain misgivings among the members of the Common Market. It has even been suggested by some that new obstacles to an understanding in Europe have arisen. Describing this suggestion as a complete misapprehension, Mr. Maudling observed:

"I and my colleagues have pointed out, time and again, the immense importance of the British market for our Commonwealth colleagues and the great significance of duty-free entry, in particular, in our Commonwealth trading system. As we have explained, the fact that the terms of the Treaty of Rome would bring Commonwealth free entry to an end is one of the main difficulties we have always seen in it. We still do over 40 per cent. of our trade with the Commonwealth and, vitally important as is the developing economy of Europe, we should be foolish to neglect this fact. We feel, moreover, that there are great difficulties for us and, indeed, for any industrialised country, in a course which involves putting new or higher duties on imports, thereby increasing production costs, erecting new barriers to the flow of trade, and, in many cases, creating new problems for underdeveloped countries for whom development aid and capital assistance is inadequate without a market for their products. For all these reasons, it is not surprising that, at any meeting of Commonwealth Finance Ministers, great concern should be felt by all present at any possibility of undermining the existing structure of Commonwealth trade. What was to my mind particularly encouraging at the meeting was the understanding of Britain's position and of the political issues involved shown by all our Commonwealth colleagues."

India and other Commonwealth countries will, indeed, be gratified to hear from Mr. Maudling that there is now growing realisation among the European nations of the importance to Europe of the link between Britain and the Commonwealth. Surely, the task of establishing an enlarged European free trade area without giving rise to any fresh problems of Commonwealth trade will not be difficult, provided there is, as Mr. Maudling stressed, the political will to succeed.

DRAFT THIRD PLAN X-RAYED—IV

AGRICULTURE—POWER—INDUSTRIES

By J. M. Lobo Prabhu

HOW technical manpower and scientific research have become so important as to deserve a separate chapter, the Commission has not explained. One only hopes that it does not reflect a transition from actual achievement to academic preparation. What is important to the common man, who is the taxpayer, is that his money is not spent to train a small proportion of the population at high cost for purposes which do not directly serve him and in many cases may not eventuate. The justification for the training proposed can be judged first from the increase in work as indicated by production, second the current availabilities as indicated by the live registers of unemployment.

It is proposed to increase the intake of engineering students which was 5,888 in 1955, to 13,165 in 1960 and to 18,000 in 1966. During 1959-60, industrial production, including electricity, rose from the index number of 122 to 149, about 23 per cent. Even the third Plan targets do not stretch to a 200 per cent. increase to justify an equal increase of staff. The figures for polytechnics are even higher, an increase from 10,484 in 1955 to 24,020 in 1960. to 34,000 in 1966. This is overproduction with a vengeance which the unemployment statistics confirm. The cost of technical education is at least threefold, first that of buildings and equipment required for new institutions, second of teaching, and third of apprenticeship which is going to be made compulsory on industrial establishments, which will doubtless pass the cost on to the consumer in the form of higher prices. A more realistic assessment of the technical services deserves to be made, as overestimates are neither fair to staff trained or to the common taxpayer who has to foot the bill.

There is provision for training 10,000 supervisors and 7,300 managerial staff for small-scale industries. Since there are complaints that small-scale industries are monopolies for only assembling components for supply to Governments, an independent commission should be asked to assess the costs and results, before the provision for small-scale industries is confirmed in the final plan.

There is a provision of Rs. 50 crores for research, in addition to grants made by different ministries in their own fields. The Commission admits that, since 1953, only 21 inventions have resulted from research which have been used for commercial purposes. The complaints about our research are that it attracts only those who cannot find commercial or Government appointment, that the heads of the research institutions, when they are not pinching the inventions of their subordinates, are engaged in administrative work, and that, as there are no pilot plant facilities and designs organisations, the academic results of research are not tested. Expenditure on scientific and industrial research should, therefore, be limited to getting practical results for what has been already undertaken. It would be useful if a team of competent foreign experts could give an assessment on what has been done and advise on what should be done, so that the common taxpayer is not called upon to support illusory schemes.

Agriculture and Rural Economy

There is little original in the programme for development of agriculture. The first item in the programme is irrigation, which is expected to increase by 13 million acres from large and medium projects and by 12 million acres from minor irrigation. It is claimed that, as a result of the first and second Plans, the irrigation potential will increase by 17.5 million acres, of which 12.5 million acres will be used. The record of the area actually irrigated was 4.2 million acres in 1956-57.

In the first place, there is reason very seriously to doubt these figures and the expectations of higher figures from smaller expenditure in the third Plan. Agricultural production is the best index of irrigation and this dropped, in the case of cereals, during the four years following 1954. Secondly, if irrigation is serving its purpose, why are so many States losing on their investment? Thirdly, if irrigation is popular, why is there unused potential which Government thinks will be used only from the levy of a general cess in the area commanded? The only conclusion to be reached is that, in our search for big schemes, no one considered if they would be used by the people.

Minor irrigation from tanks and wells is better but much of the investment on it has gone into the pockets of dishonest officials and contractors, who have never been checked by any proper technical authorities.

The second item is 13 million acres of soil conservation, 40 million acres of dry farming practices and one million acres of reclamation. How unrealistic these figures are can be judged from the fact that, in 1958, the Central Tractor Organisation reclaimed only 42,000 acres and terraced only 4,000 acres. During the first two years of the second Plan, only 490,000 acres were protected through soil conservation measures. Dry farming, which demands more labour and investment and carries a more uncertain and smaller return, will not interest the cultivators, unless the prices increase considerably, which is not expected in the Plan. The only alternative is that the cultivator is offered subsidies, or at least concessions in rent and revenue.

The third item is supply of fertilisers and manures. Since production fell from 1954, in spite of a considerable increase in fertilisers, the inference is possible that in proportion fertilisers increased productivity, the cultivator reduced other factors, notably labour. Care must, therefore, be taken to ensure that the plan to increase nitrogenous fertilisers by nearly three times and phosphatic fertilisers by six times should not be accompanied by a deterioration in agricultural practices. Similarly, the supply of improved implements should not increase the unemployed time of the cultivator, though there is little danger that these implements will be available, as the Council of Agricultural Research has been evolving them for an unconscionably long time and is not likely to reach results, unless it adopts the practical course of studying implements in use, which take account of the soil, animals and men, to remove obvious defects only.

Two more lines of improvement, better seed and better agricultural practices, have not received the emphasis they had in the past. It is stated that the seed multiplication programme will cover 150 million acres. It is not stated what to date is the area under improved seed which the plans have achieved. For the total period of the community projects, upto September 1958, the improved seed distributed was only 157 lakh maunds which gives an annual average of 20 lakh maunds, covering at best 2 million acres. This is a long way to 150 million acres, particularly as the seed issued each year is not self-regenerative being eaten and sold and rarely conserved for sowing in the same holding, not to think of sowing in other holdings. In respect of improved agricultural practices, the last evaluation report on community projects is depressing. The result must be so poor that the Plan has not cared to mention the achievements of the Community Projects.

From the facts that production of cereals fell after 1954 and even after, that rising prices indicate a continuing shortage, it is permissible to conclude that the expenditure of Rs. 2,339 crores during the first two Plans on agriculture and irrigation has been largely infructuous. This is mainly because Government has proceeded on spoon-feeding the cultivator, instead of stimulating his sense of self-help in respect of agricultural practices in which he is as competent as those who attempt to teach him. If Government assistance is *ex post facto* related to self-help, much more could be achieved at much less cost. What the cultivator would value most would be the gift of rights in his land, permanent tenancy, where this has not already been conferred and reduction in revenue where it has been conferred. For instance, a reduction of 5 per cent. can be allowed for each improvement like improved seed, Japanese cultivation, green and organic manuring, contour bunding, and irrigation from self-created new sources. If every holding adopts every one of these five vital improvements, the cost to Governments will be only Rs. 25 crores a year. Larger schemes of soil conservation, seed and fertiliser supplies, as also all schemes of minor irrigation, may remain with Government. It is better that minor irrigation is taken away from the revenue department and entrusted to the irrigation department, as silting has proceeded at a pace that it is nearly everywhere a major work to be done by specialist staff.

The Commission's faith in development blocks, which are to be extended to the whole country, ignores the findings of (*a*) the U.N. Committee that intentions had been confused with achievements, (*b*) of the last evaluation committee that no impression worth noticing had been made and (*c*) the findings of the numerous other State committees that money was spent mostly on staff and equipment and not on the needs of the villages. In fact, as a fifth wheel, the Block Development Organisation has distorted and diminished the work of the regular departments. Unless the Ministry can meet these charges, or appoint an independent committee to make another assessment, not one paisa of the money of the public should be spent on community projects. If the staff cannot be disbanded, it should be spread all over the country to watch and assist the departmental staff in their own work.

Co-operation

Co-operatives and democratic decentralisation are only distractions that have been introduced to mask the failure of Community Development, because co-operatives and *panchayats* were always in the development organisation and, if they could not thrive there, they are unlikely to thrive by themselves. Village democracy is meaningless, unless rights are associated with responsibilities. Merely pouring more money into old patterns may help politically, but not economically. On the other hand, the reduction of administrative authority will allow party interests to victimise the weak. Before democratic decentralisation is extended to other States, a commission of High Court judges and vice-chancellors, probably the only independent officials left, should report on its working in the States where it has been introduced.

For co-operation, a credit of Rs. 675 crores is being provided, which, serving only a limited class of well-to-do farmers, is not fair to the general public which has to bear the interest and the inevitable losses from unrepaid loans. The credit is also more inflationary than actual expenditure of Government, as it is available in the village not only for consumption purposes but for hoarding of grain.

The proposals for dairy development may be welcomed, particularly if they lead to better care of cattle. The provision of Rs. 250 crores for village and small industries can only be fruitful, if it provides for what the people want and not what is forced on them, like khadi and handlooms with subsidies. The progress of a country depends on improving the efficiency of labour and not by perpetuating obsolescence. As soon as alternative employment can be found for existing workers, industries which can survive only with the taxpayers' money must make way for those which pay for themselves, for the obvious reason that they satisfy public demand. The proposal that Government will guarantee bank loans to village and small-scale industries will lead to the suspension by banks of their normal checks, on the one hand, and to extravagance through starting and running new projects by parties who can please officials and politicians, on the other.

The idea of the Commission on improving techniques appears to be confusing. While the Khadi and Village Industries Commission are supported for introducing power, many industries which are now mass-produced are to be demarcated as small-scale. The loss of technique and efficiency, which will be consequent, will be reflected in higher prices which the common people will pay, which certainly cannot be said to be in consonance with the socialist pattern chosen as the goal for the country.

Irrigation and Power

The Commission proposes to spend Rs. 450 crores for completing the existing schemes, Rs. 100 crores for new schemes and Rs. 80 crores for control of waterlogging, flood and erosion. Though the total provision is considerable, the Commission apparently realises that it proceeded too fast in spending Rs. 1,400 crores in the first two Plans, with results which are not reflected either in the food production or in the revenue. The country was entitled to know the factors which the Commission found were responsible for irrigation systems working at a loss in nearly all States. Under the guise of planning, the Government was not justified in establishing works which are uneconomic, on the one hand, and are not fully utilised on the other. The measures now proposed by the Commission are increase of water rate, a compulsory cess in areas commanded, irrespective of the use of water, and third betterment levies. For political reasons, there is little prospect of any of these measures being undertaken. On economic grounds also, they may be reflected in an increase in food prices. There may be some relief if irrigated areas belonging to Government are leased for big farms which may be able to use the water and pay a higher water rate through efficient cultivation. If this goes against the socialist policy of Government, it will at least set up improved types of farming, employ labour on gainful wages and add to the food supplies. In due course, the argument that higher rates are uneconomic will be unsustainable when these farms can pay them. The taxpayer will be relieved that he does not have to pay interest on the investment of Rs. 1,400 crores, without getting the appropriate return in food or revenue.

The position regarding electricity is the same. The Commission mentions that three years ago the Finance Commission commented that State Electricity Boards may be run in such a manner that they meet the interest burden at least. The Commission notices that there has been no improvement since. Nonetheless, the Commission proposes that, when only 11 per cent. of the hydro-electrical potential has been utilised, thermal power, which costs 3 nP per unit and atomic power which is estimated to cost at least 4 nP, should be developed, without waiting for investigations in hydro-electrical power which costs only 1.2 nP. In respect of atomic power, there is an incomparably larger foreign exchange component, higher capitalisation and a risk which even more advanced countries like the U.K. are not willing to bear. The provision of Rs. 51 crores for atomic power, Rs. 24 crores for uranium mining and plutonium extraction is, therefore, a cruel burden on the millions who cannot afford even a wicker light.

Another burden is Rs. 105 crores for rural electrification which does not serve more than 5 per cent. of the villagers with light and less than 1 per cent. with power. With the same money, the villagers would appreciate better roads, houses, schools and drinking water. At the same time, the current will have better uses in towns to cheapen industrialisation. Whatever the political advantages of rural electrification, the subsidies necessary for it disclose its economic liabilities.

Electricity does not pay, because, being a State enterprise, no one is concerned to sell it, connections not being given for months until the staff is bribed. Service is also so bad that one does not understand why the staff is always being increased.

The proposal of the Planning Commission to produce electrical equipment in the country may not reduce cost, if the production is not under competitive conditions both in respect of price and quality. If there is a margin of profit in producing machinery and equipment for electricity in the country, the proper test is to invite foreign investment which, in the conditions of monopoly in India and overproduction elsewhere, is likely to respond quickly. Even indigenous production would do so. In the circumstances, it is not fair to risk the money and credit of the taxpayer in what may be uneconomic due to lack of proper assessment and management. Whatever Government may think of its experts, the latter have no practical experience of manufacture, no personal interest in the investment, and no independence in the management to make a success of a very highly technical production. If some encouragement is to be given to private enterprise, it may be by Government participation in the share capital which can give it a watchful interest in what others more competent than itself can do with reference to both demand and supply.

Irrigation and power are both necessary for a country, but both should be based on economic expectations and not political enthusiasms. Our experts are mushrooms of independence and do not possess the maturity of those who have grown under conditions of sustained industrialisation. In our own interest, we should not hesitate to take assistance at the highest level of those who have greater experience and education till the younger men who are growing under independence are able to lead their departments. Any false sense of self-importance will cost the country, and what is more important the taxpayer who foots the bill, in a measure which can cripple the self-generation of the country. If mistakes have been made in irrigation and electricity the nation could forgive them, counting the consequent loss as the cost of educating democracy, but, if the mistakes persist, history may not forgive or spare democracy in this country.

Industries and Minerals

There are certain axioms which must be recognised in any plan of industrialisation. The first is that the world has reached that stage of interdependence in respect of raw materials and technology that the idea of economic autarchy is outdated. Even in war, no country can survive without exchanges with other countries to maintain its industrial production. Our own industry and technical installations would not survive a month without spare parts and materials we do not and cannot produce. Even Communist countries are continually filching the technical know-how of other countries and obtaining at great cost raw materials to maintain their industrial economies. The real test, therefore, is whether we are importing what we can produce within reasonable time of comparable quality and price.

The second question is this: If there are items we can produce at comparable price and quality, to whom should the finance and risk involved be assigned? In this, two basic factors require to be recognised, first, that State enterprise is not as assertive and alert as private enterprise in which the motive of private gain is combined with the resourcefulness, sacrifice and foresight of human nature to dare much for what benefits most. The second basic factor is that, in State enterprise, the capital is of the taxes and loans of the common people, which should not be risked too much, considering how little they have to spare. In the first and the second Plan, there has been little or no income from the aggregate of all enterprises.

The third axiom is that industrial growth like other growth begins from below, capital and heavy industries being the expression of small industries which satisfy the requirements of people. Only in totalitarian countries do heavy industries take precedence, because of the demands of the Government for war-like preparations. Heavy industries and consumer industries represent the precise difference between the Sovereignty of the State and of the people. Even if the State has to back

(*Continued on page 712*)

105 million tons of food grains

Such is the target set by the Third Five Year Plan and Simon-Carves look forward to playing their part in achieving this.

Closely associated with numerous industrial enterprises in India for over a quarter of a century, Simon-Carves design, engineer and erect complete plants for : Synthesis gas, derived from coke oven gas or from gaseous, liquid or solid hydrocarbons. Ammonia synthesis by the Ammonia Casale process. Production of nitrogenous, phosphatic and complete fertilisers.

ONE MILLION TONS OF NITROGENOUS FERTILISERS

Simon-Carves have started work on building a granulated compound fertiliser plant based on synthetic ammonia for The East India Distilleries & Sugar Factories Ltd., at Ennore near Madras.

DEVELOPMENT OF BANKING—II

NEED FOR CREATING PROPER CLIMATE AND PUBLIC CONFIDENCE

THE scheme for development of banking suggested by Mr. B. K. Dutt, in the course of Prof. Benoy Kumar Sarkar Memorial Lectures, a reference to which was made in these columns last week, is only for covering the towns and other important rural or semi-urban centres, which are in need of commercial banking facilities and where conditions are suitable for development of banks. The scheme, therefore, does not come in conflict with the Government's programme for expansion of co-operative banking, which is functionally different and which will have still enough ground to cover. There are, however, some inhibiting factors which, Mr. Dutt feels, must be removed for the proper development of banking. These relate mainly to banking operations and banking control.

The major impediment to the expansion of banking operations is the low margin of profit, consequent on a disproportionate rise in operating expenses. The position can be corrected, according to Mr. Dutt, by improving operating earnings through the elimination of "unhealthy competition" and an increase in service charges. Before, however, this is done, Mr. Dutt suggests that a correct assessment of banking costs should be undertaken. It is disquieting to note that this aspect has received very little attention among banks in India. According to Mr. Dutt, very few banks in India maintain a research staff of their own to work on methods and system and costing. It is true that many banks cannot afford to have a research section of their own, but Mr. Dutt suggests that an active and efficient representative association of bankers should be formed to undertake the work for the benefit of its members.

Higher Output Needed

The cost analysis and methods study might lead to economies in certain items of expenses. But there is one item, namely, wages, the major component of the cost structure, which is beyond the control of banks. The heavy incidence of the establishment charges, which absorb about 60 per cent. of the current operating earnings, after payment of interest can, however, be minimised to a large extent by a higher *per capita* output of the banking personnel within the prescribed hours of work. This can only be achieved through the co-operation of the employees who should be made to realise their responsibility in this regard. Higher productivity can also be achieved by mechanisation of operations and adoption of modern methods of work. Very few Indian banks have resorted to mechanisation. Mr. Dutt says, from his own personnel experience—his bank, the United Bank of India, was the first in this country to mechanise operations on a major scale, including the installation of a punch card system—that it is possible to raise *per capita* output through the process of mechanisation. He, however, feels that the fullest benefit cannot be achieved without a change in the outlook of workers. Much of the mental resistance to mechanisation stems from a faulty notion that mechanisation will lead to unemployment. Dispelling this apprehension, Mr. Dutt observes:

"New fields are increasingly coming within the scope of banking operations, volume is increasing every day and more banking offices will have to be opened. Therefore, at least in the present situation, there is not only no fear of loss of employment but, on the other hand, owing to inadequacy of trained personnel, mechanisation will be useful in diverting trained personnel to man the new offices and to handle the newer types of job operations. Even in the normal course, mechanisation has never been found to limit employment opportunity; rather it has been found to extend it. It may be interesting to note here that, since World War II, despite high level of mechanisation, the number of people employed by banks in the U.S.A. has increased by about 70 per cent."

Secret Reserves

Another operational problem relates to the building up of undisclosed reserves of banks. Mr. Dutt is of the view that, though the need for building up secret reserves is widely recognised, very few banks will be able to raise such reserves, unless there is appreciable rise in the net operating profit. The difficulty will be greater still in the case of banks which have yet to bring their open reserves to the level of their paid-up capital. In this connection, Mr. Dutt makes a plea for a change in the concept of published reserves. Dilating on this point, Mr. Dutt observes:

"The concept of requiring the size of published reserves to become equal to the size of paid-up capital is misleading. Growth of deposit will necessitate expansion of capital; the published reserves can hardly keep pace with this. Even in the U.K. it has not, so far, been possible to achieve this parity. It is the size of inner reserves that makes a bank really shock-proof, not so much the disclosed reserves. I, therefore, think that Section 17 of the Banking Companies Act should be so amended that a bank may not be compelled to transfer a fixed portion of its profit to the disclosed reserves as long as its capital structure bears a specified ratio to deposits; a portion of such allocation may then go towards building the internal reserves which, it bears repetition, is no less important. Such an amendment will also facilitate, to some extent, the extension of bank capital, the need for which I have already discussed."

Bill Market Scheme

Another handicap is the limited utility of the "bill market" scheme. Mr. Dutt feels that the necessary facility should be backed by a bill market proper, where bills may pass hands. This, he says, would reduce excessive dependence on the Reserve Bank, whose lending facility should be used for ultimate finance, in case of necessity. "Such a market," he adds, "can be organised with actual participation of the commercial banks, insurance companies, L.I.C., S.F.Cs., I.F.C.I., I.C.I.C.I., etc. All these institutions may find it useful to operate in the bill market for employing such of their funds as are surplus for a temporary period. Perhaps, such a market may also operate on Treasury Bills."

Mr. Dutt urges the need for better remittance facilities for banks. At present, as between two offices of the Reserve Bank, a scheduled bank is allowed free remittance daily, but as from an office of the State Bank to an office of the Reserve Bank free remittance is restricted to three days in a week. Even this facility, Mr. Dutt says, is one-way and extends only to remittances originating from an office of the State Bank. "All remittances made by banks through the Reserve Bank or its agent, that is, the State Bank," he adds, "should be made free of charge and such facility should be available *daily*." He has also suggested the establishment of teleprinter service for quicker transmission, so that commercial banks can reduce their cash in vaults and effect a substantial economy.

Banking Control

While admitting the need for vesting powers in the Reserve Bank for effective control over and proper guidance of the banking system, Mr. Dutt points out that the existence of powers is not by itself sufficient to produce, either the necessary control or the desired guidance. "The central banking authority needs to be very careful in assessing a situation in an objective manner and both in deciding the adequacy of an action and judging its timeliness." Proceeding, he observes:

"It is also recognised that, in taking the necessary steps, the Reserve Bank should rely more on its powers of suasion, than having recourse to the sanction of law, which is to be used only in extreme cases of delinquency. But, while this objective has to be aimed at, it is at the same time true that, no executive authority, and for that matter, no human organisation, can be free from mistakes, on the one hand, and from a know-all attitude, on the other. These are human frailties, which man has not yet learnt to conquer. The task of the Reserve Bank is, therefore, unenviable. In the course of the exercise of its controlling powers, it is bound to encounter clashes and conflicts, as there is always room for honest and yet unyielding differences with the bank management. A genuine desire to help through tactful persuasion can help in reducing the degree of conflicts, but clashes cannot altogether be avoided.

"Again, banks with varying credit maturity, pattern of assets, rate of growth and degree of strength or weakness, comprise the banking system. A control without power and responsibility to take suitable steps for removing the inhibiting factors, cannot, therefore, be as effective as it is intended to be. Banking control, as has recently been pointed out by the Governor of the Reserve Bank, cannot, by itself, prevent bank failures; there are various other factors, the important ones, to my mind, being general economic situation, the pace of development, and public confidence. While banking control can help in improving the standard of bank management, it cannot, without suitable authority and responsibility, bring about the necessary climate to protect the banking system from the unsettling effects of a changing and developing economy, or even from the repercussions of the corrective measures taken against a delinquent. There is, therefore, need for vesting the banking authority with adequate powers and responsibility in the matter of taking steps necessary for a healthy development of the banking system. Banking needs determined approach and yet tender and careful handling."

This does not mean that commercial banks have no responsibility of their own in this regard. Rightly stressing the need for "further reorientation of their approach to banking control," Mr. Dutt adds: "There is also the need for a positive approach towards adopting modern techniques of management and towards better co-ordination amongst the different banks, with a view to eliminating unhealthy competition and extending more and better services to the community." Such a change in approach may be brought about, Mr. Dutt feels, through extensive training programmes in which the personnel of the banks, as well as the personnel of the central banking institution may participate. The organisation of seminars under the ægis of the Reserve Bank is also suggested by Mr. Dutt, so that the management and executives at different levels of commercial banks and the officers of the Reserve Bank can have full and frank discussion on various subjects relating to bank management and development of banking.

Decentralisation of Reserve Bank

An interesting suggestion made by Mr. Dutt for promoting closer relationship between the banks and the central banking authority is the decentralisation of the Reserve Bank. To quote his own words:

"There may be, say, four or five autonomous Regional Reserve Banks, co-ordinated by a central Board, which will evolve policies and take important decisions, the execution being entrusted to the Regional Banks. Such decentralisation will bring the local management in closer and more intimate contact with their respective regions; this will facilitate not only better appreciation of the local problems and needs but also development of the desired relationship between the banking authority and the commercial banks."

At a time when there are several forces which are threatening the unity of the country, the political implications of this suggestion are important and must be carefully examined before conceding its practicability or necessity. At present, the Reserve Bank is one of the few factors that are sustaining the unity, but the formation of Regional Reserve Banks is liable to weaken it.

Another inhibiting factor to which Mr. Dutt refers is the uncertain climate for creation of public confidence and goodwill. The removal of this uncertainty is the first prerequisite for establishing a healthy banking system. Though bank failures, which usually hit at the very root of public confidence, in this country have not so far been as serious as in many other countries, the banking system "faces uncertainties of a changing economy and has to reckon with a large measure of uncertainty with regard to public confidence." Mr. Dutt is of the view that, while banking control makes an important contribution to the establishment of proper climate, it cannot be a substitute for other measures which have to be taken in this regard. He even fears that certain corrective measures taken under banking control, however prudent, may at times shake public confidence. Such instances are not rare either in this country or elsewhere.

Deposit Insurance

Mr. Dutt has suggested two important measures which can make a significant contribution to infusing public confidence. They are: (1) insurance of bank deposits and (2) rehabilitation of weaker banks. While it is true that bigger banks will not get much direct benefit out of a deposit insurance scheme, the merit of the scheme lies in the fact that a "suitable climate will be created which will facilitate a general growth of banking, including the business of the larger banks." On the contrary, in the absence of such a scheme, a small flutter, even in a minor sector of the system, has, as experience has proved, "its chain reactions which do not always exclude large banks". Mr. Dutt, therefore, pleads that in the "enlightened self-interest" of the major banks they should not only support but also press for a scheme of deposit insurance in this country.

Mr. Dutt is personally of the view that extensive amalgamations of banks are unsuited for the health of the Indian economy. "A small member of very large banks," he adds, "cannot service our economy, efficiently fulfilling all the multifarious requirements. Amalgamations would be necessary and may have to be made in special cases. But the general pattern has to be based on a large number of banks of various sizes and functions. The reduction in the number of banks through amalgamation to a very small number of larger banks would establish a monopoly in the banking system, which is not only undesirable but also contrary to our economic and social concepts."

Rehabilitation of Weaker Banks

It may be argued that the establishment of a large number of small banks might lead to the creation of weaker and sub-standard banks and this, in turn, might make the whole banking structure vulnerable. Mr. Dutt, however, has a scheme, in addition to the deposit insurance system, for placing the weaker links on a sound footing. Based on the American model, the scheme envisages the establishment of a Bank Rehabilitation Corporation. Outlining the main functions of the Corporation, Mr. Dutt says:

"It will make a quick survey of the assets of the banks in liquidation and acquire them at a price determined on progressive terms; provide capital on preferential and redeemable basis to such of the small but sound banks as are not progressing owing to inadequacy of capital; arrange prompt merger, or conversion into subsidiaries on a workable basis, of those banks whose deposits have been impaired; arrange consolidation of uneconomic banks into viable units of suitable size; arrange proper training of the personnel (including management) of the substandard banks."

This Calcutta banker, however, concludes that any system for rehabilitation of weaker banks is bound to affect the confidence of the public and react on the other sounder banks, unless a suitable climate is first created through a scheme of deposit insurance. In other words, he wants insurance of bank deposits to be introduced first and the reorganisation of small and substandard banks later. But most of his confreres in the banking world feel the other way about. It will be interesting to see how this vicious circle is broken in the coming months.

I.F.C'S INVESTMENTS

The International Finance Corporation has announced a commitment to invest an additional U.S.$200,000 in Cementos Bio-Bio, S.A., to help finance the construction and initial operation of a cement plant near Concepcion, Chile. The commitment will bring I.F.C.'s total investment in the company to $1.2 million, the first one, made in 1959, being for $1 million.

The plant is designed to produce approximately 132,000 tons of portland, iron portland, and slag cement for domestic consumption. The cost of the project has been increased from U.S.$4.9 million to U.S.$5.7 million. In addition to I.F.C's investment, financing will be provided by a group of Chilean shareholders. The total I.F.C. investment will be in unsecured dollar notes bearing 7 per cent. interest payable in dollars and maturing between 1966 and 1976. The I.F.C. will also receive additional interest related to profits and an option to subscribe to stock of the Company.

The I.F.C. has also announced a commitment to invest U.S.$1,875,000 in Rauma-Repola Oy of Helsinki, Finland, to help finance expansion and modernisation of the Company's diversified manufacturing operations.

The I.F.C. investment will be in unsecured dollar notes bearing 6 per cent. interest payable in dollars and maturing between 1961 and 1965. In addition, the I.F.C. will receive additional payments dependent on dividends and an option to purchase stock.

WORLD COTTON TEXTILE SITUATION

CONCERN EXPRESSED OVER POSSIBLE IMPACT OF EUROPEAN DIVISION

ONE hundred and twenty delegates, representing the different West European countries, the U.S., the United Arab Republic and Japan, attended the annual meeting of the International Federation of Cotton and Allied Textile Industries held at Amsterdam, Netherlands, from 26th September to 1st October. The delegates had before them a heavy agenda, which included, besides the customary review of the present state of free world trade in cotton and textiles and future prospects, a wide range of subjects. The subjects covered, among others, are the following:

International action in the field of cotton textile market research and sales promotion;

adoption of rules designed to ensure fair trading regarding textile designs;

latest developments pertaining to the six-member Common Market and the seven-nation European Free Trade Association and their implications for the cotton and allied textile industries in Western Europe;

recommendations of the Federation's Technical Committee on fibre testing and introduction of TEX, the new universal yarn count numbering system;

discussion on moisture-content in cotton yarns;

quality aspects of raw cotton and current problems connected with cotton marketing; and

progress report on the U.S. cotton quality.

The highlight of the meeting was the presentation, by the Chairman of the Federation's Committee for European Affairs, Kommerzialrat Generaldirektor Rudolf Seidl (Austria), of an interesting report on the impact of the present division of Western Europe into two separate integrated areas on cotton textile industry. According to Mr. Seidl's analysis, much concern is expressed over the division of Western Europe which, it is feared, would inevitably have a damaging effect on the export position of the European textile industry as a whole. The Committee has, therefore, considered policies that might form the basis for an all-European integration within the sector of the cotton textile industry. The policies envisage a revision of the rules regarding area origin for tariff purposes as stipulated by the E.F.T.A. Convention, rules which are totally inadequate and leave the spinning section in jeopardy. The cotton industry in Europe is of the view that stability of the European market can be maintained only if imports from countries with entirely different economic and social structures, State-controlled economies or multiple exchange rates are kept within reasonable limits.

Controls Over Exports

The problems of customs tariffs towards third countries is one of the main obstacles to an all-European integration and, as far as textiles are concerned, it is considered advisable to arrive at a harmonisation of the customs tariffs of E.F.T.A. countries to the common outside tariff of the E.E.C. This may also solve the difficult technical problem of the rules of origin which will then become obsolete. Pointing out that the most important task was to arrive at a co-ordination of the European nations' commercial policies, Mr. Seidl observed:

"The textile industry of Europe is willing to leave a fair share of the European textile market to industries in the newly developed countries. However, it is inconceivable that there should be an unlimited increase of textile imports into Europe from year to year at the expense of the old-established European industry which has already substantially reduced its capacity and made sacrifices on world markets. As long as completely different conditions of competition exist in the textile industries of Europe and other parts of the world, order on world markets should be established through the institution of certain controls over the volume of exports."

Some of the more specific implications of the E.F.T.A. and the E.E.C. to the textile industry such as "improvement trade" in grey cloth and need for adopting effective anti-dumping legislation were also referred to by Mr. Seidl. Any arrangement likely to be arrived at on an all-European integration within the framework of the textile industry, he averred, would have to be in conformity with the G.A.T.T. and it might, therefore, become necessary to revise the G.A.T.T., in order to take account of the present conditions in world economy which were completely different from those obtaining at the time when the G.A.T.T. originated fifteen years ago. Dr. W. T. Kroese (Netherlands), President of the Federation, also dealt with the present position of the European cotton industry with particular reference to the G.A.T.T. He was highly critical of the G.A.T.T. in matters such as imports with which Western Europe was unable to compete on equal terms. He urged that 'political' imports at unrealistic prices from the communist world be banned and imports from low wage countries regulated by quota arrangements. In his speech, Mr. W. T. Winterbottom of the U.K. warned against dangers of price-cutting and, like Dr. Kroese, ended on a note of sober optimism for the future. Alluding to the reorganisation of the cotton industry in Britain, he made it clear that its success would depend on the renewal of "limitation-of-exports" agreements with India, Pakistan and Hong Kong.

Textiles in U.S. and Japan

Two interesting papers, one by Mr. R. Houston Jewell and the other by Mr. E. Shimada on the textile industries of the U.S. and Japan, respectively, were read at the meeting. The emphasis in Mr. R. Houston Jewell's paper was on the dangers to the U.S. cotton textile industry from the rising tide of imports. Many of the imported goods were made from U.S. cotton which had been bought at far lower prices than the American mills themselves could obtain it (in the U.S. buyers have to pay the Government "support" price). Mr. Jewell defended and explained the actions of his industry in seeking higher tariff protection during recent months and described the small concessions the U.S. industry had obtained. Mr. Jewell was closely questioned by the panel and the audience on the extent of the danger arising from imports and also on the subject of dual pricing of U.S. raw cotton. In his replies, Mr. Jewell made it clear that both industrialists and growers were against the present dual pricing system but that there were very serious obstacles to a return to a single price system. As regards imports, he said, it was the rate of increase in the last 18 months as much as the volume which was causing alarm.

The survey of Mr. E. Shimada described the recovery of the Japanese cotton industry from the 1958 recession. Production had now regained the 1957 level, but, in the meantime, Japanese production in general had increased substantially so that the textile industry now represented a smaller proportion of the total. This situation had led to competition for labour and the Japanese cotton industry was facing much the same difficulty in recruiting labour as Dr. Kroese and Mr. Winterbottom had reported in Europe. Mr. Shimada spoke of the advantages and disadvantages of Government controls as they exist in Japan and of the plans of the Japanese cotton industry to meet the coming liberalisation programme of their Government. As regards the future, there were good grounds for the belief that, with increasing consumer spending power in Japan, the *per capita* consumption of cotton in Japan would rise. As the population of the country was still rising, the result should be a reduced need dependance on export markets, although cotton textiles would remain one of the major components of foreign trade.

The Committee for Market Research and Sales Promotion discussed the possibility of obtaining the support of all cotton growing and exporting countries in the current efforts to increase cotton textile consumption through market research and sales promotion. The Committee for Man-Made Fibres submitted recommendations aiming at a unification of the terminology of man-made fibres. Some concern was also expressed over the excessive number of trade-marks for man-made fibres in commercial production. This tended to cause confusion among consumers. It was decided that the Federation should seek closer working contacts with the fibre producers. Resolutions submitted by the Federation's Technical Committee regarding fibre testing and standardisation were adopted. It was felt that further efforts should be made, particularly of an educational nature, to speed up the introduction of TEX, the new universal yarn count system. It was also thought that the Pressley method for measuring fibre bundle strength was not sufficiently developed to be used for purposes of arbitration. The Raw Cotton Merchants Committee considered quality aspects of cotton and problems connected with marketing. Much concern was expressed about the continued hampering of trading in futures, caused by two-price systems for raw cotton exports and other forms of governmental interference. The meeting also heard a progress report by Mr. Howard Stovall, President of Cotton Council International, on U.S. cotton quality.

The Union of Greek Cotton Textile Industrialists was accepted as a member of the Federation, and the Japan Cotton Traders' Association as an associate member. This increases the number of countries represented to eighteen. Senator Dr. Kurt Dieterich of West Germany was elected new President of the Federation in succession to Dr. Kroese of the Netherlands, whose term of office will come to an end on 1st November. The next meeting of the Federation will be held at Osaka in Japan from 7th to 13th May 1961.

ALUMINIUM IN TEXTILE INDUSTRY

A century-old dream has been achieved in the U.S. textile industry—a shuttleless loom. Another development, the first major improvement in cotton carding equipment in 60 years, eliminates flats. Both these developments have been made possible through aluminium. The shuttleless loom achieves higher speed, production savings and quieter operations over conventional methods in plain weaving. Aluminium used in ever-increasing quantities in textile processing machinery has played an important part in the production of a streamlines carding machine which combs out matted cotton, so that the fibres can be easily drawn and twisted. In both these applications, aluminium offers easy machining, good dimensional stability and resistance to corrosion.

Developed by Draper Corporation of Hopedale, Mass., the shuttleless loom has realised the dream of inventors ever since the fledging industry began in the early nineteenth century. It is described as reminiscent of the breakthrough achieved with development of the automatic loom nearly 75 years ago. Weaving consists of the interlacing of thread or yarn to produce cloth. On the conventional loom, the shuttle is tossed back and forth at almost invisible speed carrying the crosswise or filling yarn between lengthwise or "warp" threads which are raised and lowered by harness. The shuttleless loom accomplishes similar function by the use of right-hand and left-hand carriers mounted on the ends of flexible steel ribbons or tapes. These carriers respond to the oscillation of an aluminium wheel 18 inches in outer diameter situated at each end of the loom. Aluminium was selected because of its low inertia, hence low starting or moving impulse. In turn, this cuts down on maintenance. The wheels are sand cast and weigh two pounds eight ounces. The loom produces a single sheet of fabric in widths ranging from 36 to 64 inches at a speed of about 250 "picks" per minute in the narrow widths and 200 p.p.m. in the wider widths. Speed of the conventional loom is about 170 to 190 p.p.m.

The new granular card top or conversion unit which eliminates flats consists of four sand cast sections of aluminium alloy which are mounted over the card's big cylinder. The concave and ribbed sections, each weighing about 45 lbs. are set for .007 inch clearance above the cylinder. Once the section has been mounted and set properly no further adjustments are necessary. The 180-pound conversion unit replaces about 1,100 pounds of steel. The inside surface of each aluminium section is covered with pressure sensitive, adhesive-backed sheets of granules which come into contact with the cotton and provide carding action. The granular surface is made of aluminium oxide.

STAMPING OF CLOTH PRICES

A rather peculiar situation has arisen in the cotton piecegoods trade, following larger and larger supplies of stamped cloth. The merchants seem to be generally disinclined to lift such cloth. On the contrary, there is, it is reported, a rush for purchasing unstamped piecegoods, especially coarse and medium counts, which are commanding a premium of 2.5 to 3.0 per cent. over the stamped goods. Consequently, the stocks of cloth lying undisposed with mills have increased. The total of these stocks is currently put at 600.00 million yards, as against 541.5 million yards at the end of August and 449.4 million yards as on 31st July.

Textile traders are very critical of the low profit margin of 15 per cent. allowed to them by the Indian Cotton Mills' Federation. The margin is considered to be not only inadequate but also capable of rendering the scheme of distribution unworkable. Expressing this view, the Madras Piecegoods Merchants' Association points out, in a communication addressed to the Textile Commissioner, that, during the control days, the Government of India had allowed a profit margin of 20 per cent. It is stated that, out of the 15 per cent. now fixed, 3 per cent. goes to stockists at producing centres, 9 per cent. to retailers and 1½ per cent. to meet railway freight, handling charges, etc., thus leaving just 1½ per cent. to wholesalers. The Association has drawn special attention to the high interest rates, enhanced tax burden and increased cost of living and warns that the fixation of a low margin of profit for the trade is likely to induce dealers to resort to various malpractices, such as mixing of unwanted varieties with popular varieties and demanding a premium for the latter. It has accordingly requested the authorities to advise the Federation to raise the profit margin to 20 per cent. and to permit the wholesale dealers to show separately in their invoices the actual railway freight or transport charges incurred by them and collect the same from buyers.

BID TO HALT LABOUR DRIFT FROM MILLS

HOME CONSUMPTION OF TEXTILES VERY ENCOURAGING

From Our Special Correspondent

MANCHESTER, *4th October*

NEW moves to encourage the recruitment of labour in the cotton and rayon spinning and weaving industries include the provision of a higher minimum wage for low-paid operatives and the possibility of a shorter working week. In an effort to halt the drift from the mills, joint talks are scheduled between employers and representatives of the trade unions. As a result of negotiations in Manchester, the basic minimum wage has been raised by nearly 17*s.* a week, from £7 5*s.* 6*d.* to £8 2*s.* 5*d.* This only affects the lowest paid operatives and follows the wage discussions which took place earlier in the year, when a 7½ per cent. increase in earnings was conceded by the employers from the beginning of March.

MANCHESTER LETTER

The trade unions have also submitted a claim for a reduction in working hours, from 45 to 40 hours weekly. The application is in line with attempts being made in many other industries to obtain shorter hours, but the leaders of the 184,000 workers involved contend that, unless the cotton trade offers comparable terms of employment, workers will be tempted to leave the mills and find alternative jobs in competitive industries, which are springing up in the Lancashire textile area. Alderman J. W. Whitworth, General Secretary of the Operative Spinners' Amalgamation, said in Manchester: "I think we are a long way behind in the matter of working hours in the cotton industry. We are right at the back of the queue."

Shorter Working Week

Further, the unions are seeking adjustments in the length of the working week for the increasing number of operatives now employed on shifts. They urge that the 38¾-hour week should be reduced to 37½ hours and that those already working a 37½-hour week should receive higher wages in compensation. The last change in working hours in the cotton industry was in 1946, when the working week was reduced from 48 to 45 hours.

Shortage of labour has been responsible for holding up substantial contracts booked during the big buying movement, which occurred towards the end of 1959. Mills in many districts are advertising daily in local papers for operatives, but competition for labour is fierce.

A Nudge in Time?

Developments during the past few days, leading to the belief that overhead charges are shortly due for another upward revision, to say nothing of the rising movement in raw cotton prices in Liverpool, have given the market for cotton goods in Lancashire just the right amount of pressure to stimulate additional demand and encourage customers not to hang back any more. Previously, the trade had been rather in the doldrums, a state of affairs induced by hesitation among buyers and strict adherence to selling rates by producers. The situation has been aptly described in the latest survey issued by the Cotton Board, covering mainly the second quarter of the year, but indicating later trends.

The volume of orders received by the mills has been much smaller than a year ago, the Board states, but order books still remain very well filled and were even increasing, at least up to the end of July. Certain sectors of the doubling branch, however, seem to be less favourably situated than the rest of the industry.

Contrary to suggestions in some quarters, the survey gives an encouraging account of home consumption of textiles which, it says, has made "excellent progress." In the first seven months of the year, retail sales of clothing, allowing for price changes, were about 7 per cent. greater than in the same period of 1959, which was itself a good year for such business.

Impact of Scrapping

This review has a special significance, being the first to reflect the enormous changes which have taken place in the Lancashire industry since the completion of the redundancy programmes in spinning and weaving. Compared with the same period last year, the number of spindles in place in running mills in the second quarter of 1960 was 13,140,000, as against 24,090,000.

During the twelve months, the number of operable mule spindles declined from 9,380,000 to 2,940,000. In ring spindles, the fall was from 9,810,000 to 6,800,000. The important effect of the scrapping scheme can be seen in the figures relating to machine activity. This year the spinning mills were running at 90½ per cent. of capacity, whereas, in 1959, the average was below 66 per cent.

In the doubling section, the progress made was not as spectacular. The numbers at work had actually increased this year, being 15,350, as against 14,670 in the second quarter of 1959. Machine activity, however, was lower than in spinning, the average being 86.6 per cent., as against 71.3 per cent. last year.

But if this aspect is to be the criterion, the weavers have emerged most successfully from the transformation. Machine activity in the manufacturing branch reached 92.6 per cent in the second quarter this year, as against 73.9 per cent in 1959. The number of looms in place in the Lancashire area has dropped from 236,100 last year to 149,200, of which 40,100 are fully automatic machines.

Additional statistics which are now available in these returns enable comparisons to be drawn between the labour force in each section and, in particular, its composition. The spinners, for example, can boast a higher proportion of juveniles in the mills, although it still remains pitiably small in relation to the industry's needs.

From a total of 71,370 spinning operatives on the books, 24,110 are men and 47,260 women. Of these, juveniles account for 5,580, youths numbering 2,010 and girls 3,570. As recently as in 1955, there were 100,130 operatives available in spinning—35,030 men and 65,100 women. At that time, there were 8,720 juveniles, but the subsequent drift from the mills has been mainly among the girls, as, five years ago, there were 6,310 on the books.

The situation in weaving shows a labour force this year of 76,490, comprising 31,220 men and 45,270 women. Only 3,780 juveniles are available, although the number is little more than 100 below last year's level. Going back five years, however, total manpower was 109,280, including 40,070 men and 69,210 women. The juvenile figure was then 5,790, but some slight encouragement can be gained from the fact that the number of boys in weaving in the second quarter this year was exactly the same as the average in 1955, and shows an increase on those available in each of the following years.

Shift-work Problems

Badly-lit streets are worrying some Lancashire working wives who have switched to early and late shifts following the cotton streamlining plan. Mr. T. B. Boothman, Secretary of Bolton Master Spinners' Association, told the Regional Electricity Consultative Council in Manchester that some wives were making detours to reach the mills rather than go down darkened streets before six o'clock in the morning and after ten o'clock at night. "In most districts lighting in the side streets is unsatisfactory and causing quite a lot of perturbation," he said. Alderman Tom Battersby of Leigh said that his local authority had a five-year plan for lighting improvements.

Cotton Board Conference

If there were any doubts that the subject of this year's Cotton Board Conference was not of vital interest to the trade as a whole, they have been dispelled by the fact that the numbers scheduled to arrive at Harrogate at the end of next week have already exceeded those visiting the Yorkshire spa for the same gathering last year. The obvious inference is that distribution is recognised as the key to the future prospect of the industry, particularly if ways and means can be found to iron out the too frequent slumps and booms of the past. When the conference was held twelve months ago, the industry was still thunderstuck at the unexpectedly large response to the scrapping programme. Many faces will not be seen at Harrogate this year, because the individuals concerned have now left the trade. Interest in the future, however, has not diminished and it is, perhaps, significant that many of the firms which have loyally supported such meetings as those convened by the Cotton Board are still operating their machinery.

Unless there is some sudden change in the situation, it is unlikely that this year's discussions at Harrogate will make the headlines. Talk will be of trade affairs and, although sharp clashes of conflicting opinions may occur, they will probably not be regarded as "newsworthy."

WORLD COTTON SUPPLIES UNCHANGED

PRICE AND TRADE PROSPECTS ANALYSED

A FAIRLY precise idea of the supply position of free world cotton during the current (1960-61) season is now available, thanks to the data collected by the International Cotton Advisory Committee, Washington, from co-ordinating agencies and other officials in the main cotton-producing countries. These data, though preliminary and tentative, show that, for all practical purposes, total supply during the season in the free world would be more or less the same as in the last season. Certainly, no major deviation is indicated either way. Opening stocks are estimated at 16.4 million bales, that is, 1.3 million bales lower than those a year before. Offsetting this is the prospective increase in production. Some changes in the regional distribution of supply are, however, likely to occur. The following table gives an indication of the supply position of cotton during the current season with comparative figures for the past three years:

(In million bales of 478 lbs. each)

	1960-61 (estimated)	1959-60	1958-59	1957-58
SUPPLY				
United States:				
Stocks	7.5	8.9	8.7	11.4
Production	14.3*	14.5	11.5	11.0
Total ..	21.8	23.4	20.2	22.4
Other producing countries:				
Stocks	2.7	3.5	3.9	3.0
Production	17.5	16.4	17.6	16.9
Total ..	20.2	19.9	21.5	19.9
Stocks in net importing countries.	6.2	5.3	6.1	6.2
Total supply outside U.S. ..	26.4	25.2	27.6	26.1
Total ..	48.2	48.6	47.8	48.5

* Latest estimate is 14.5 million bales.

Supply in the U.S., as will be seen from the above table, will be perceptibly lower at 21.8 million bales, as against 23.4 million bales in 1959-60. In view of the exceptionally heavy exports last season, opening stocks are estimated to be down by about 1.5 million bales, while, despite an increase in acreage, the crop is estimated to be 200,000 bales lower, as compared with 1959-60. The Committee, therefore, estimates that supply in the U.S. will be in the neighbourhood of 21.8 million bales, as against 23.4 million bales in 1959-60. The latest (October) official U.S. estimate puts the season's cotton crop at 14.5 million bales, about the same as in the previous season, which indicates that the total supply will be 200,000 bales higher than the Committee's estimate at 22 million bales.

Stocks

Outside the U.S., however, carryover of stocks on 1st August was virtually unchanged as compared with those a year before. But there was the important difference that stocks in the net exporting countries were the lowest ever, particularly in relation to the continually expanding domestic consumption. By contrast, there was heavy replacement demand from importers last season and opening stocks in the aggregate are estimated to be higher by about a million bales, despite a sharp reduction in India.

Describing the position in other parts of the world, the Committee observes in the latest issue of its publication, *Cotton*, as follows:

"Acreage outside the United States will probably increase this season. More cotton has been planted in Egypt, Mexico, Central America and Greece, but acreage up to the end of June was running behind last year in Uganda. Little change in acreage is in prospect for the other major producing countries in the Northern Hemisphere. In the latter part of the season, supply will be augmented by the new crop in South America and Africa but, obviously, it is not possible to give any estimates of production in these areas. Acreage in the Sudan is scheduled to increase slightly as more land is brought under cultivation under the Managil Extension Scheme. In Brazil, cotton growers benefit from high price supports as part of the official policy to encourage production to meet the heavy demands from the domestic textile industry and maintain a satisfactory level of exports. In Argentina, more cotton has been consumed than has been produced in the last two years and production will have to be expanded if this deficit is to be eliminated. The extension of irrigation facilities in Peru has stabilised cotton acreage at around 600,000 acres. The policy in Columbia is apparently to discourage cotton cultivation in marginal areas and acreage will, in all probability, decline.

"The key to crop prospects is, unquestionably, India where production has fallen well behind the official target in the last two seasons. A return to anything like normal yields in this country could easily add a million bales to the production potential this season and could well result in record aggregate production outside the United States.

"Despite the probability of a larger world crop, the amount available for export, though still more than sufficient to cover estimated requirements, will no doubt be less than in 1959-60. In the United States, a crop of 14.5 million bales is not far short of disappearance and, on this reckoning, there would be no major variation in stocks on 1st August 1961. The situation in that country, therefore, is still one of surplus though much less so than a few years ago.

"In other countries, even if total production turns out to be higher, there is not likely to be much, if any, increase in export availabilities. For one thing, the increase in production is predicated to a large extent on a much larger crop in India which, in all probability, would have only a relatively minor effect on the export potential from this country. Second, larger crops in other countries must be set against much lower carryovers in almost all instances and the total amount available for sale abroad may be no more, and in some cases, even less than during the 1959-60 season."

Exports

What are the implications of this supply situation to international trade in cotton? According to the I.C.A.C., world cotton trade will, in all probability, decline from the 1959-60 record. Importing countries have rebuilt their stocks to more comfortable levels and a larger crop in India, which appears likely if present trends were to continue, would probably be reflected in lower imports. Nevertheless, trade is likely to be high in relation to the recent average. *Prima facie*, therefore, the cotton situation may be similar to that in 1959-60, for other countries could export to the maximum and still leave a large market for U.S. cotton. The U.S. Department of Agriculture estimates, in its latest publication, *The Cotton Situation*, that exports during the season would be around 6 million bales, as compared with 7.2 million bales during last season.

Although the Committee does not make any prediction regarding the price outlook, it looks, on present reckoning, as though the international cotton prices this season would continue to be largely determined by Government restrictions in force in the U.S. and in most other producing countries. As a result of these restrictions, the only cotton prices that have seen a major change since the beginning of this season are the spot prices in the U.S. The current spot quotation at New York is 32.25 cents per lb. which is about one cent less than the rate at the beginning of the season. This reflects the effect of the reduction in the U.S. export subsidy rate from 8 to 6 cents per lb. with effect from 1st August.

Hedging

With Government measures largely determining price trends, hedging facilities will continue to be used only on a restricted scale. It is significant that, in spite of the phenomenal increase in world production, consumption and trade since World War II—they reached an all-time peak last year—the volume of futures trading in such leading international cotton markets as New York and Liverpool, has been much below the pre-war levels. Concern was expressed at this shrinkage at the annual meeting of the International Federation of Cotton and Allied Textile Industries held at Amsterdam from 26th September to 1st October 1960. Some observers think that, for the U.S., the present is the most appropriate season for a return to a free, or at least a freer, market, to which it is committed under the National Agricultural Act of 1958, the deadline for the return to one-price system fixed under the Act being 1961-62. They, however, doubt whether political considerations will permit this change to materialise. If the Democrat candidate, Mr. John Kennedy, is elected as the President, the chances of more freedom for futures trading in the U.S. will be slender.

SUGAR INDUSTRY IN UTTAR PRADESH

STATE GOVERNMENT'S SCHEME FOR RAISING OUTPUT BY 400,000 TONS

THE Government of Uttar Pradesh has submitted to the Centre certain proposals designed to enable the sugar mills in the State to produce an extra 400,000 tons of sugar per annum. Disclosing this in the Vidhan Sabha recently, Mr. H. N. Bahuguna, Deputy Minister for Industries, stated that if the Central Government were to accept the proposals, the aforesaid target would be reached within eighteen months. The Minister did not, however, indicate what exactly these proposals were. Perhaps, they cover partly the expansion of the daily cane-crushing capacity of sugar industry from the existing level of 84,000 tons and partly the regulation of cane supplies to mills.

While the reaction of the Centre to the U.P. Government's proposals is awaited with interest, latest reports from Lucknow suggest that U.P.'s sugar output in the season 1960-61 will register a notable rise. The U.P. Government, according to Mr. Bahuguna, wants the State's sugar factories to start cane-crushing early, so that not a maund of cane grown remains uncrushed. The factories in the Central and Western districts, we are told, are expected to commence production in a day or two and the mills in the eastern districts are likely to begin operations on the 1st of next month. It would appear that the crushing season would continue for 150 days.

The U.P. Government is determined to see that the extra cane grown this year by cultivators in an additional 25,000 acres in the Terai tract of Naini Tal District is utilised by sugar factories, so that the growers do not suffer. This assurance has set at rest the misgivings of cane growers who were fearing that a large part of their produce might go waste, in view of the delay in the commencement of production by the new Kitcha Sugar Mills in Naini Tal district. The factory could not go into production during 1959-60 because of the delay in the release of foreign exchange for import of machinery and equipment. It is, however, expected to begin functioning in March 1961. The Bajpur Sugar Factory is also expected to operate to its full capacity during 1960-61.

Record Production

Thanks to the Central Government's scheme of incentives and the bumper sugarcane crop, the Uttar Pradesh sugar industry achieved during 1959-60 an all-time record output of as much as 1,221,454 tons, a rise of 333,607 tons, as compared with the production of 887,847 tons in 1959-60. The production target fixed for the season was 1,125,000 tons. The total quantity of cane crushed is estimated at more than 12.60 million tons, as against 9.24 million tons. The average recovery of sugar in 1959-60 at 9.69 per cent. was higher than that in the previous season when it was 9.61 per cent.

The sugarcane crop in Uttar Pradesh during the 1959-60 season, as already stated, was a bumper one. The quantity actually harvested was 32.03 million tons which compares favourably with 30.77 million tons. The rise in output was entirely due to the increase in the area sown. The total area under cane was 2,917,000 acres, as against 2,747,000 acres. The average per-acre yield of sugarcane was lower at 10.90 tons, as against 11.20 tons. The all-India average yield was 14.50 tons. It is thus evident that, notwithstanding all talk of sugarcane development work, the conditions under which sugarcane is raised in U.P. have not improved in the least. This unsatisfactory state of affairs is bound to persist so long as cane growers are assured of a definite return in the shape of a substantial minimum price linked only to quantity and not to sucrose-content, as well as a share in the price of sugar realised by mills.

SUGAR EXPORTS TO U.S.

The Union Food and Agriculture Ministry is now examining the obligations of members of the International Sugar Agreement and also the export quota that India will be able to fulfil. The necessity for this country to join the Agreement has arisen from the fact that the U.S. has expressed its willingness to buy Indian sugar, provided such purchases are governed by the Agreement, of which India is not a member at present. To quote a Press report: "The U.S. has thrown a hint that, if India is keen on its proposal (to sell sugar), it will have to become a member of the Agreement and obtain an export quota."

It will be recalled that informal negotiations for the export of Indian sugar to the U.S. were initiated by Mr. S. K. Patil in August last. And his deputy, Mr. A. M. Thomas, had discussions with the U.S. authorities when he was at Washington recently.

Meanwhile, the Government of India has released 50,000 tons of sugar for export to countries other than the U.S. Commenting on the anxiety of the Government to export sugar, a Press report says:

"India's keenness to export some sugar out of the surplus stock stems from two main considerations; one is India's dire need of foreign exchange, which could be met only by substantially stepping up exports; another is that, following special incentive announced by the Government last year to sugar factories and cane growers, sugar production has gone up.... With the recent decision of the Government to continue the special incentive scheme, the Government are confident of a further rise in sugar production next year."

Whatever may be the motivating influence behind the Government's move to export sugar, the fact cannot be denied that sugar exports entail much loss of revenue to the State, on the one side, and additional burden by way of enhanced prices on the consumer, on the other. This is because of the wide disparity between the Indian and world prices of sugar.

The Indian Sugar Mills Association is understood to be carefully examining the possibility of sugar exports to the U.S. and the existing legislation on sugar imports in that country. It is stated that the relevant legislation in the U.S., under which the President has power to approve ad hoc quotas for imports, is to be amended. There is a move to extend the President's power for another year, but, it is said, the U.S. Congress is unlikely to accept the proposal. The Association is examining the possible U.S. demand in respect of both quantity and quality, after India joins the International Sugar Agreement. A part of the export may be in fine sugar and the balance in raw state. The polarisation percentages of various qualities of sugar are also being studied.

Meanwhile, arrangements are being made to finalise the scheme for exporting 50,000 tons of sugar to countries other than the U.S. The Association is reported to have pleaded for an upward revision in the internal prices of sugar in order to subsidise the loss on this export, but, according to another report, no such plea has been made. It would appear that the Government expects the industry itself to share this loss as it did on the previous occasion.

SUGAR OUTPUT IN STATES

The total production of sugar in India during the 1959-60 season (up to 7th July 1960) was 2,400,763 tons. The quantities actually produced in the different States are indicated below:

	Tons
Northern India:	
East U.P.	405,746
West U.P.	815,708
Total U.P. ...	1,221,454
Bihar	325,032
West Bengal	8,808
Punjab	100,704
Rajasthan	12,053
Madhya Pradesh	28,252
Assam	4,236
Maharashtra	392,012
Gujerat	9,286
Southern India:	
Madras	
Kerala	63,208
Orissa	9,287
Mysore	2,775
Andhra	86,128
	136,988
Grand total ...	2,400,763

Every fourth sugar factory plant in the world is the work of Czechoslovak workers and technicians. Following the pre-war tradition of production and export, the Czechoslovak engineering works are now exporting plants for sugar factories in ever-increasing numbers. Among the largest customers in this line is the Soviet Union. Early last month, another important contract was concluded for delivery of two sugar factory plants whose capacity is the highest ever produced in Czechoslovakia. Each sugar factory can produce 3,000 tons of sugarbeet per day. These two bring the total sugar plants exported to the Soviet Union since 1945 to 22. Their erection will be directed by Czechoslovak experts. The contract, worth more than 100 million Kcs, concluded and signed by the representatives of Technoexport and Techmasimport (U.S.S.R.), will be realised in 1961 and 1962.

FRESH MEASURES TO CURB SPECULATION IN RAW JUTE AND GUNNIES

SEQUEL TO SHARP RISE IN PRICES

CONTRARY to earlier expectations that the *Puja* holidays would bring sobriety to the raw jute and jute goods markets and the steady upward trend in prices noted since the beginning of the current season would be halted, the prices of both raw fibre and gunnies have staged a strident rise during the post-*Puja* trading. The jump in sacking prices, in particular, has been striking, taking it beyond the previous peak touched in May this year. In the ready section of the Calcutta market, raw jute firmed up from Rs. 44.50 on the 3rd inst. to Rs. 50 per maund on the 8th which is only Rs. 4.50 less than the record touched in May last, hessian 40" x 10 oz. from Rs. 49.70 to Rs. 53.75 per 100 yards, as against the May peak of Rs. 56, and B. twills from Rs. 141.20 to Rs. 155 per 100 bags, which is Rs. 8 more than the peak of Rs. 147 touched in May.

The giddy heights to which prices have shot up have forced the East India Jute and Hessian Exchange Ltd. to take some emergency measures to control trading in hedge contracts in raw jute and gunnies with a view to checking speculative activity, which is responsible, to a large extent, for the hectic rise in prices. The authorities of the Exchange have banned, with effect from the 10th inst., all fresh transactions in raw jute December 1960 delivery and in hessian cloth and sacking bags November 1960 deliveries until 1st December and 15th November, respectively. Offsetting transactions, in respect of outstanding contracts, have, however, been permitted. The maximum price of Rs. 43 per maund for trading in raw jute, now in force up to 31st October 1960, has been extended up to 1st December 1960. In addition, maximum prices of Rs. 51 per 100 yards and Rs. 140 per 100 bags have been reimposed on hessian and sacking contracts, respectively. The authorities have also completely withdrawn the existing free limit concessions for exemption from payment of special margins in respect of hessian and sacking contracts (November deliveries) and raw jute contract (December 1960 delivery), so that special margins will be payable on all outstanding purchases as before.

Earlier Order Withdrawn

These steps followed the action taken by the E.I.J.H. Exchange last week, suspending, with effect from the 6th inst. and until further notice, all futures trading in raw jute and gunnies. Consequent on the latest steps, the Exchange has withdrawn the earlier suspension order with effect from the 10th inst.

The latest measures have not, up to the time of writing, had any adverse effect on the ready market. Prices have been ruling firm on rumours that the I.J.M.A. would be compelled, by circumstances, to seal more looms. It was only a few weeks ago that the I.J.M.A. announced its decision, after a review of the latest stock returns of mills and estimates of the 1960-61 crop, that the scheme for voluntary sealing of jute looms should be extended up to the end of the year 1960. The Association had also indicated then that, as from 1st January 1961, an increase in the compulsorily sealed complement of looms would be inevitable. It is now rumoured that a further five per cent. of the looms would be sealed next month and another five per cent. in December, bringing the total sealed complement of looms to 19 per cent.

No Effect on Prices

If these rumours of a drastic cut in working looms come true, it would only confirm the worst fears about the current crop, which have been responsible for the speculative activity in the market. For, on the basis of a closed complement of 9 per cent., the estimated consumption of raw jute for the current season was originally placed at 6.8 million bales. This, it was thought, would be more than met by the current crop of 6.2 million bales and the surplus of 1.8 million bales brought in from the 1959-60 season. The rumours of a drastic cut in the production of jute goods as mentioned above suggest that the crop position must have worsened considerably in the last few weeks. While official estimates of a crop of 6.2 million bales have not been revised downwards, trade circles fear that the crop would be very much less, but no precise indication of the unofficial estimates is available. The position has been rendered more complicated by the uncertain supply position in East Pakistan too and prices in that State have shot up considerably. Trade estimates place the crop in East Pakistan at between 4.2 million and 4.5 million bales, as against a normal crop of 6 million bales. There is said to be a veritable scramble for the available supplies from foreign buyers and local mills and sellers are scarce even at higher levels. The price of cuttings has, as a result, spiralled up by more than 50 per cent. to Rs. 180 per bale in about three weeks.

Smaller Arrivals

While no precise estimates of crop in India and Pakistan are available even at this time of the season, when normally the bulk of the crop is marketed, arrivals at mills in Calcutta have been low. During the first two months of the current season (July and August 1960), arrivals were at a low level of 409,300 bales, made up of 61,100 bales from Pakistan and 348,200 bales from India. While, as compared with the corresponding period of 1959, arrivals from Pakistan are higher by 25,900 bales, thanks to the permission given by the Government of India to import a larger quantity of Pakistani cuttings, those from India were lower by 262,500 bales, resulting in an overall shortfall of 236,600 bales. The estimated consumption during the two months is 1,011,500 bales, as against 1,020,000 bales in July-August 1959. The shortfall in actual supply as compared with the consumption has thus widened from 371,000 bales in July-August 1959 to 602,200 bales. The timely arrivals from Pakistan have been rendered infructuous by the non-receipt of licences by mills against their quota. Meanwhile, prices in Pakistan have shot up as stated above, so that even if the issue of licences is expedited, the import of cuttings from Pakistan would prove uneconomic for mills, as the landed cost in Calcutta would be over Rs. 200 per bale. In the circumstances, the reported decision of the Government of India to permit an import of 200,000 bales of cuttings from Pakistan would not only prove very much costly to mills, assuming that the mills will be able to get this entire quantity from Pakistan, but is one more proof of the Government's failure to act in time. In other words, the responsibility for any fall in overseas demand for jute goods as a result of the high prices prevailing now should fall equally on the speculators and the Government alike.

The firm trend in prices of jute goods, despite the control measures taken by the E.I.J.H. Exchange, is also attributed to shortage of gunny stocks with mills. During September, the stocks fell by 5,800 tons to 77,600 tons, bringing the aggregate decline in the last two months to 10,600 tons. At 77,600 tons, the stocks represented the lowest level since April last. As compared to the position a year ago also, the stocks show a fall of 1,100 tons. The decline in September was shared by all varieties, hessian falling by 1,500 tons to 29,400 tons, sacking by 3,700 tons to 39,400 tons and miscellaneous by 600 tons to 8,800 tons.

WORLD COFFEE CROP

The U.S. Agriculture Department has forecast that the world coffee crop in 1960-61 would be 15 per cent. smaller than that of last year. The second (September) estimate of 1960-61 world coffee crop has placed total production at 68,865,000 bags and exportable production at 55,463,000 bags. This is about 15 per cent. below the 1959-60 record, now estimated at a total of 78,066,000 bags and an exportable of 65,974,000 bags.

The North American crop would be only slightly below 1959-60, according to the Department, while the South American crop would be much smaller and the exportable output there would be 22 per cent. below the record 1959-60 production. The African output would be about 8 per cent. higher than 1959-60 production. Drought in Uganda prior to harvest is not expected to hurt the coming crop seriously, the Department's report said. Credit had been hard to obtain recently in Ruanda-Urundi.

RAMTIRTH

HINDI MONTHLY

Editor: YOGIRAJ SHRI UMESHCHANDRAJI

Published by:

SHRI RAMTIRTH YOGASHRAM, Bombay

* MORE THAN 130 PAGES PER ISSUE *

The main idea behind this magazine is to develop the physical, mental and moral aspect of the common man. Detailed information about the cure of diseases by naturopathy and yogic treatment is discussed also.

Annual Subscription **Rs. 4/-** only. Single Copy **40 nP** only.

Agents shall place their orders and requirements by 15th of each preceding month.

RAMTIRTH BRAHMI OIL

Special No. 1 Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cools brain, improves system, and brings sound sleep. Most ideal for body massage. It is useful to every one in all seasons. Prices : **Rs. 4/-** for big bottle and **Rs. 2/-** for small. Available everywhere.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: **Rs. 2.50** including Postage, to be sent by M.O. only.

YOGIC CLASSES are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers instruct Ladies.

THE TATA IRON AND STEEL COMPANY, LIMITED

CHAIRMAN, MR. J. R. D. TATA'S THOUGHT-PROVOKING REVIEW

INCREASE IN SUPPLY OF CONSUMER GOODS ONLY WAY TO RESTRAIN INFLATIONARY PRESSURE

THE following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the Fifty-third Annual General Meeting of the shareholders of the Tata Iron and Steel Company, Limited, on Thursday, 6th October 1960.

"LADIES AND GENTLEMEN,

"I must first apologise to you for the delay of a little over a month this year in holding our meeting.

"Although we have repeatedly urged the Government to come to an early decision on our long outstanding claims and pointed out the difficulties and inconvenience caused by the prolonged delay which has taken place, I am sorry to say the matter remains undecided to this day. I am, therefore, unable to enlighten you any further today on this matter which is of such great importance to us. Lest, however, undue hopes are raised in the breasts of the more optimistic amongst our shareholders, I must remind you that during the last two years, including the one under review, we have, in order to pay dividends, drawn nearly Rs. 450 lakhs from our general reserves, the replenishment of which will have first claim on any amount we may obtain in compensatory price increases.

"As my statement, published along with the annual report, included all I had to say directly concerning the accounts and affairs of our Company, I shall today only review briefly some matters of interest to us and to industry generally.

A Year of Progress

"The past year has shown progress in many directions and, in particular, a welcome spurt in industrial production. It is, therefore, all the more disappointing that agricultural output has failed to make effective progress and that the country seems to be as far away as ever from self-sufficiency in food without which all efforts at achieving rapid economic growth must fail.

"In the immediate context, however, the two most serious economic obstacles facing the country are the inflation which steadily erodes the fruits of our development plans before they can reach the people, and the foreign exchange situation which has reached another crisis even more serious than the one we faced in 1957.

"The problem of inflation is perhaps the most threatening and intractable of all. In the last five years alone, the purchasing power of the rupee has fallen by about 35 per cent and, with mounting development expenditure, inflationary pressures will increase further in the years to come. I realise the grievous dilemma and difficulty with which our Government and planners are faced in having to reconcile the need for rapid development involving large and continuous public expenditure with the need to hold the price front. May I suggest, however, that they are themselves aggravating the situation and magnifying the problem by insisting on concentrating development expenditure to the extent that is now being done on basic and capital goods industries, the products of which are incapable of absorbing the additional purchasing power pumped into the economy.

Only Practical Solution

"Large-scale investments with long periods of fruition involve pumping into the economy corresponding increases of purchasing power which are automatically translated into demands for consumer goods. Apart from the imposition of drastic controls over the whole field of consumption, which would be both objectionable and impracticable in a country like ours, the only two possible ways of relieving this type of inflationary pressure are to meet, as far as possible, the demand for consumer goods, or to mop up excess purchasing power by additional taxation which is out of the question in India as the level of taxation is already excessive and the third Five-year Plan has in any case already provided up to the hilt for taxation as the principal source of internal finance. Therefore, an increase in the supply of consumer goods is the only practical alternative at our disposal. In view of the foreign exchange situation which precludes imports other than of food financed by foreign aid, it is clear that we must turn to our own industries for additional consumer goods. Unfortunately, far from encouraging the development of consumer goods industries, the Government impose severe restrictions on further investments in them and on increased output from some sections of the industries which could otherwise help to counter inflation. One example of this is the limitation of 800 million yards, or a mere 16 per cent., imposed on the increased production of mill-made cloth by the end of the Plan period. While recognising the complexity of the problem, I submit that, unless positive steps are taken to counter the inflationary effect of large investments in heavy industry by the balancing growth of consumer goods, the spiral of inflation cannot but continue to grow.

"The gravity of the foreign exchange situation can be judged from the fact that, except for a dangerously small working balance, we have exhausted all our past accumulation of foreign resources and have an annual deficit in our current balance of trade, while we require a further Rs. 2,100 crores of foreign exchange to finance developmental imports under the third Plan, and during the same period we will have to repay foreign loans to the extent of Rs. 600 crores, including interest. It is, therefore, only too clear that unless foreign aid, loans or investments are forthcoming in full measure, the Plan will inevitably have to be pruned, and even our present rate of industrial production may be in jeopardy.

"These grim figures highlight the consequences of our failure to achieve self-sufficiency in food. Since 1st January 1948 we have spent on imports of food over Rs. 1,000 crores from our own foreign exchange resources in addition to nearly Rs. 500 crores obtained through foreign aid mainly from the United States under the P.L. 480 programme. If we had been spared these imports, there would today be no foreign exchange crisis and the task of building up the country's economy would be infinitely easier. We can only hope that the dismal lesson has been fully learnt and that in future nothing will be allowed greater priority than attaining self-sufficiency in food.

Third Plan

"An outline of the third Five-year Plan was recently published and debated in Parliament. As citizens, we are vitally interested in the nature, scope and objective of these Plans with which the Government seek to mould our future economic destinies. As I have said on many occasions before, we in private enterprise are neither against planning nor against doing so on a big scale, provided it is in due relation to available resources. We realise that the all-pervading problem of the country's poverty cannot be solved without bold action and without sacrifice in which all must share. We firmly support the objectives of raising the national income as rapidly as we can and of distributing it as widely and justly as possible. Some of us may regret that so large a part of the Government's economic policies is based on the belief that these objectives can only be attained by socialistic means, as thereby much of the country's effort is wasted in a mass of costly, time-consuming and largely ineffective controls, and the initiative and creative urge of the people is stifled. So much has been said in the past on the subject, some of it by myself, that I will not weary you with a further pursuit of this unhappy controversy. I shall only repeat that, to the extent that we are desired or permitted to do so, we shall, as in the past, continue to offer our full co-operation wherever we can be of service to the nation.

"Reverting to the third Five-year Plan, I have already mentioned the decisive extent to which our ability to raise the necessary foreign exchange will determine whether it can be adhered to or will have to be pruned. In either case, I would plead for the maximum degree of realism, untinged by ideological considerations, in regard to industrial objectives and targets. In the Plan as it stands, the most striking feature is that 60 per cent. of the investment in industry is proposed to be in basic and heavy industries, including steel. While there can be no question that a modern and fully industrialised nation must be largely self-sufficient in these basic industries, the question at issue is whether, with the strictly limited resources at our disposal, and, subjected as we are to heavy and growing inflationary pressures, we can afford at this time to give such overwhelming priority to steel and heavy industry, unless of course they can be financed in part by foreign capital which would release the pressure on our own foreign exchange resources.

"In this context, we welcome the shift in our country's policies towards foreign participation in industry. We have gone a long way from the days when such participation in industry was looked upon with suspicion and discouraged and this is obviously to the good. With the persistent shortage of foreign exchange which is bound to plague us for many years to come, it is obvious that India has much to gain from an influx of foreign capital which, it may be usefully remembered, was what made possible the initial economic growth of the United States of America in the last century.

"However much the Government might prefer to see basic industries developed in the State sector, I sincerely hope, in view of the tremendous capital expenditure involved in such industries, that they will not, on ideological grounds, oppose participation by foreign private enterprise in these fields, if such participation can be secured, which of course is by no means certain. While no risks could arise in a controlled economy such as ours, the benefits to the country would be enormous. Not only would the objective of developing basic industries be met to that extent, but the large funds released in consequence could be diverted to equally vital projects, such as additional fertiliser production and the development of power, fuel and transport resources.

"As it is, industry throughout the country, in both the public and private sectors, is suffering acutely from inadequacies in the supply and quality of raw materials. All the steel plants in India today are operating on a hand-to-mouth basis in respect of coal and rail transport. In fact, during the past few months, the commissioning of three new blast furnaces with their allied coke oven installations have had to be postponed because of lack of coal. I hope that the Government, now fully alerted to the dangers of this situation, will ensure that, in future, supplies of raw materials and transport do not lag behind the growth of industrial capacity.

Output Should Not be Restricted

"However far and fast we may wish to travel in the next five years on the road to full industrialisation, I earnestly plead that, in the final size and shape of the third Five-year Plan and those that follow, we do not at any time divert to expansion the resources required to maintain the full output of existing productive capacity. In the difficult circumstances which confront India today nothing could be more wasteful than to have to restrict output and employment because of a lack of power or raw materials or transport.

"The fact that we may be critical of the Government at times about some of their ideas or policies does not mean that we do not recognise the tremendous efforts they have made and are making to give us a sound administration and to promote the welfare of the 400 million people in their care. It is inevitable that there should be disagreements as to the best means of achieving rapid economic growth. Indeed, it is a healthy sign of vigour in our democracy that there should be such differences of opinion and that they should be fearlessly stated. So long as we share the common will to serve, there should be no possibility of misunderstanding motives and honestly held convictions.

"In the formidable undertaking of freeing in a brief space of time the people of this ancient country from their bonds of poverty, I hope that we shall have a useful part to play, and on your behalf I pledge the full support of the Tata Iron and Steel Company in this great task."

NOTE: *This is not a report of the proceedings at the above Annual General Meeting.*

ANNUAL MEETING OF DALMIA CEMENT (BHARAT) LTD.

MR. V. H. DALMIA OPTIMISTIC ABOUT OUTLOOK FOR CEMENT INDUSTRY

IRON ORE BUSINESS PROGRESSING WELL

NOTWITHSTANDING the occasional difficulties in regard to disposal of stocks, particularly due to transport bottlenecks, the cement industry has, on the whole, a bright future. This was the view expressed by Mr. V. H. Dalmia, Chairman, Dalmia Cement (Bharat) Ltd., in his speech at the Eighth Annual General Meeting of the Company, held at Dalmiapuram (Dist. Tiruchirapalli, Madras State) on 10th October 1960. He, however, feared that there would be a serious setback in the plans to expand the cement industry, if the total embargo on import of cement-making machinery were not relaxed.

The following is the full text of Mr. Dalmia's speech:

"GENTLEMEN,

"It gives me great pleasure in welcoming you to the eighth annual general meeting of your Company. The accounts for the year 1959 were sent to you some time back along with the notice of this meeting. The Directors' report which accompanied the accounts deals with some of the important aspects of your Company's operations. There has been a slight decline in the net profit as compared to the previous year. This is mainly due to the transfer of Rs. 22.21 lakhs to the development rebate reserve, as against Rs. 3.85 lakhs only in 1958 and also a higher provision for depreciation. The gross profit before providing for depreciation and development rebate reserve amounts to Rs. 55.35 lakhs, as compared to Rs. 35.18 lakhs for the year 1958. I am glad to inform you that your Company is making steady progress and there is every hope of continued improvement in the working results of your Company in the years to come.

Capacity Doubles

"This is the last year of the second Five-year Plan. As in the first Plan, great progress has been made by the cement industry in the second Plan period also. The installed capacity of the cement industry has already touched 8.35 million tons and is expected to go up to 9.5 million tons by the end of 1960-61. The production capacity has thus doubled over the second Plan period rising from 4.9 million tons to 9.5 million tons.

"Though problems arise now and again in regard to the disposal of stocks, particularly due to transport difficulties, the industry has, on the whole, a bright future. Increasing quantities of cement will be required with the growing tempo of development. In the draft outline of the third Five-year Plan, it has been estimated that by 1965-66 about 13.5 million tons of cement will be needed and to achieve this production, it is planned to raise the installed capacity to 15 million tons. In my view, the target set for the cement industry is both realistic and practical and there should be no difficulty in expanding cement production as envisaged in the Plan.

Cement Making Machinery

"It will interest you to know that, by the middle of the third Plan, most of the cement-making machineries will be manufactured in the country. By the end of the Plan period, six to seven cement plants will be manufactured yearly. The standard size of these cement plants would be 500 tons per day. The total value of the plants excluding electricals would be Rs. 4 crores to Rs. 5 crores per year and the indigenous content of the manufacture is estimated at 90 per cent. The manufacture of cement-making machineries will constitute a landmark in the development of the cement industry in our country and give a fillip to the programme of rehabilitation, modernisation and expansion of the industry. It will be obvious, however, that even though a start will be made towards manufacturing cement-making machineries in the country, the manufacturing capacity will not be able to meet a major part of the requirements of the cement industry for achieving the target of 15 million tons. It would, therefore, be necessary to allow import of plant and equipment after making an appraisal of the extent to which indigenous manufactured machineries would be available. It would be unrealistic to place a total embargo on import of cement machineries and I am afraid, if this is done, there would be serious setback in the plans to expand the cement industry to the extent envisaged in the third Plan.

"Dead burnt magnesite, which is being manufactured at Salem by Messrs. Dalmia Magnesite Corporation, a firm in which your Company is a major partner, will be in ever-increasing demand. It is required in large quantities by the steel industry and by the refractory industry for the manufacture of basic refractories. The current installed capacity for manufacture of dead burnt magnesite is 64,320 tons per annum. If the projects which have been sponsored for expansion of this industry are taken into consideration, it is estimated that, in the next three to five years, the installed capacity will go up to about 100,000 tons. Even then, the total demand for dead burnt magnesite would not be met and there is scope for further expansion of the dead burnt magnesite industry. The steel industry itself will require about 90,000 tons of dead burnt magnesite by the end of the third Plan period, for which alone it would be necessary to raise the annual installed capacity to 115,000 tons. In addition to this, the requirement of dead burnt magnesite by the refractory industry would also be on the increase with the anticipated switch over by the steel industry to all basic roof for the open hearth furnaces. In view of the considerable scope for expansion of this industry, it is proposed to double the production capacity at Salem works and an application is being submitted to the Government of India for grant of necessary licence and import facilities.

Iron Ore

"I am glad to inform you that the iron ore business of your Company is developing satisfactorily. Iron ore has now become an important foreign exchange earner. The export of iron ore has been rising steadily and, in 1958-59, India exported 2.39 million tons. The State Trading Corporation, to whom the entire export of iron ore has been entrusted, is pursuing a wise policy in promoting the exports through long-term agreements with important customers of Indian iron ore. New markets have been established, particularly in Eastern Europe, though Japan continues to be India's main buyer. In view of the growing importance of iron ore in the country's export programme, it has been decided by the Government to make substantial investments in mining, railway transport and port facilities, with a view to augmenting the export of iron ore during the third Plan period, in which considerable assistance is being received from Japan. Your Company is making its due contribution in this export drive, so as to maximise the foreign exchange earnings which are so badly needed to push forward the development plans of our country.

"In my speech last year, I had dwelt on some aspects of tax assessments which create avoidable hardships for the taxpayer. I had suggested that the power of the Income-tax Department to question any business expenditure should be confined to cases where they find the expenditure to be in the nature of tax evasion and it should not be their function to decide whether the expenditure was commercially expedient or to question the quantum of the expense. In a recent case which went up to the Supreme Court in an appeal against the judgment of an Industrial Tribunal, the learned judges of the Supreme Court held that, in the absence of cogent and compelling evidence leading to the definite conclusion and finding that a purported expenditure was sham or had been made with the express object of minimising the profits, with a view to depriving the workmen of their bonus, *it is no part of the duty of an industrial tribunal to substitute its own judgment as to what was or was not commercially justified in the place of the judgment exercised by the company and its directors, in whom in law the management of the company is confided.* The principle enunciated by the Supreme Court is applicable equally to tax assessment cases and I would urge that the law should be suitably amended so that the power of the Income-tax Department to question business expenditure is restricted to cases where on cogent evidence the conclusion is reached that the expenditure was sham or *mala fide* with the ulterior object of tax evasion.

Delays in Tax Assessments

"I would also like to draw the attention of the Government to the long delays that occur in completing the assessments. To some extent, this indifference to early disposal of tax cases can be traced to the advance deposits of taxes required under law. Taxing authorities, therefore, find themselves in no hurry to finalise the assessments. This is particularly true of cases where final assessments are likely to result in a refund. When the cases are ultimately taken up after several years, it is because they would otherwise get time-barred. The assessees are then rushed and numerous informations and statements are required to be furnished within a matter of days. At that late stage, it becomes difficult for the assessee to gather all the details, particularly, because the persons who handled the subjects or transactions may not be available or, if available, may, at that length of time, recollect little about the precise facts or circumstances of the case. The proceedings end up in a large number of arbitrary disallowances of *bona fide* items of business expenditure and the assessee gets penalised for no fault on his part. I would strongly urge that assessments should be disposed of expeditiously. This is in the interest both of revenue and the taxpayer. In this connection, I may also draw attention to the inordinate delays that take place in effecting refunds of tax. Where, on completion of final assessments, refunds become due on account of excess deposits made by way of advance payments of tax, payments should be effected promptly and refund cases should not be neglected as is usual at present. The Direct Taxes Administration Enquiry Committee has also recommended that greater importance than at present should be given to disposal of refund applications. I am glad that this recommendation has been accepted by the Government and hope that necessary instructions will be issued for according highest priority for disposal of the refund cases.

Wage Board's Report

"I would now refer to the report submitted by the Central Wage Board for the cement industry, of which I was a member representing employers. The Board was appointed by the Government of India in April 1958 to work out a wage structure based on the principles of fair wages for the employees of the cement industry. The Board has recommended a uniform set of wage grades for the industry on an all-India basis. A uniform dearness allowance has also been recommended for all the factories, with the exception of factories in Gujarat and Saurashtra regions where somewhat higher dearness allowance has been permitted. The dearness allowance would be adjusted from time to time, having been linked to the All-India Consumer Price General Index—base 1949. In our dissenting note, we the employers' representatives, stressed the importance of linking the fair wages to fair loads of work and recommended that, in accordance with this fundamental principle of wage fixation prescribed by the Fair Wages Committee, workload studies should be carried out in the cement industry. The recommendations of the Wage Board have been accepted by the Government of India. The Government have also considered the views expressed by the employers' representatives in their dissenting note and have decided that a study of workloads would be desirable and should be carried out as early as possible. The Wage Board and subsequently the Government have accepted the position that the industry does not have the capacity to pay the wages recommended by the Wage Board on the existing retention prices and it has been agreed by the Government to allow suitable increase in the ex-works price to take care of the incidence of the higher wages recommended by the Wage Board. Some of the questions arising from the Wage Board report were considered at the Third Session of the Industrial Committee on Cement which was held at New Delhi on 2nd August 1960. It was decided by the Committee that the recommendations of the Wage Board should remain in force for a period of five years with effect from 1st January 1960 and the Chief Adviser of Factories has been asked

(Continued on page 710)

H.E.H. THE NIZAM'S CHARITABLE TRUST

SIXTH ANNUAL REPORT FOR THE YEAR ENDED 31ST MARCH, 1960

1. THE Trust was created by His Exalted Highness the Nizam of Hyderabad on the 14th June 1954, with a corpus of the face value of Rs. 4,90,00,000 (Rupees four crores and ninety lakhs) for relief of the poor, support of religious institutions, provision of medical aid, advancement of education and for any other object of public utility in India in general and particularly for people in the former State of Hyderabad.

2. During the year, the number of Trustees was increased to the maximum permissible under the Deed of Trust by the appointment of Prince Mukarram Jah Bahadur and Sir Said-ul-Mulk, Nawab of Chhatari; and Prince Mukarram Jah Bahadur was unanimously elected the permanent Chairman of the Board of Trustees under Clause No. 7 of the Trust Deed. The Board now consists of:—

(i) Prince Mukarram Jah Bahadur (from 1-2-1960) ... ... *Chairman*
(ii) Sir Said-ul-Mulk, Nawab Chhatari (from 1-9-1959) ... *Member*
(iii) Nawab Zain Yar Jung Bahadur ... ... "
(iv) Shri V. P. Menon ... ... "
(v) Mr. Shavax Ardeshir Lal ... "
Khan Bahadur C. B. Taraporvala ... ... *Secretary*

3. During the period under review, eight meetings of the Board of Trustees were held to deal with the affairs of the Trust, including the consideration of applications received from various public institutions and individuals for donations, lumpsum grants, medical aid, scholarships, etc.

Large Applications

4. The Trustees received during the year a very large number of applications from poor and destitute persons, from unemployed people and poor students. The procedure employed in dealing with the applications was to obtain, where possible, the report of District Officers and heads of hospitals and educational institutions and sift the recommendations before assessing the quantum of assistance in each case. In the absence of such recommendations, the Trustees themselves caused proper investigations to be made before granting relief. The applications dealt with during the year under review are classified under the following broad categories showing the relief or assistance granted:—

A. (i) 246 poor and destitute persons and widows, who are unable to work and have, therefore, no other means of income, were granted maintenance allowances ranging from Rs. 5 to Rs. 20 per mensem.

(ii) Special maintenance allowances ranging from Rs. 25 to Rs. 50 per mensem were paid to 17 widows and poor and destitute persons who had no other source of income.

(iii) 931 poor and deserving students were granted scholarships ranging from Rs. 10 to Rs. 20 per mensem.

(iv) 33 students were awarded special scholarships ranging from Rs. 25 to Rs. 100 per mensem, for higher technical studies.

In all 5,388 beneficiaries (practically all of whom belonged to Hyderabad), including those who were recipients of financial aid before, drew either maintenance allowances or scholarships under the four categories referred to above, as on 31st March 1960, and the total of such payments during the period under review amounted to Rs. 7,28,400.

B. 1,174 patients (almost all of whom belonged to Andhra Pradesh) suffering from T.B., Cancer, Leprosy and other diseases were granted lumpsum financial aid for medical relief. The total amount of medical aid granted to such patients, during the period under report amounted to Rs. 1,05,817.40.

C. 1,069 poor and deserving students (practically all of whom belonged to Hyderabad) were granted lumpsum financial aid, ranging from Rs. 50 to Rs. 200, towards payment of their admission fees, examination fees and for purchase of books, instruments, etc. The total sum of such financial aid, during the year under review amounted to Rs. 98,000.95.

5. During the year under report, foreign scholarships and lumpsum grants for higher education abroad (*including passage money*) amounting in all to Rs. 1,59,000 were provided by the Trust. Almost all the recipients were residents of Andhra Pradesh and care was taken to select only those who had first class degrees to their credit or exceptional merit. In all 32 students have or are receiving financial aid from the Trust in foreign countries. (Appendix 'A'.)

6. Special lumpsum grants aggregating *Rs. 8,13,548.30 were given to Schools*, Athletic Institutions, Sanatoria and other beneficial objects of public utility. Most of the beneficiaries belonged to Andhra Pradesh. (Appendix 'B'.)

7. Recurring grants for periods ranging from 1 to 3 years were granted to various educational and technical institutions, involving an expenditure of Rs. 1,73,000 per annum. A large majority of these institutions are situated in Andhra Pradesh. (Appendix 'C'.)

Investment Policy

8. During the year under review, the Trustees *had to hold in abeyance the policy they* have hitherto pursued of judiciously investing surplus funds in safe and promising industries (thereby incidentally promoting the industrial *development of India and relieving unemployment*) pending the report of the Auditors appointed by the Auditor General of India in terms of the Stay Order passed by the Supreme Court on 21st December 1959 with the consent of the parties. Under the said Order, the Auditors so appointed have been specifically entrusted with the task of enquiring into "the truth, the legality *and the propriety of the various transactions and* investments of the Trustees" besides auditing the accounts of the Trust from its inception. The Auditor General has appointed Messrs. A. F. Ferguson & Co., *Chartered Accountants*, for this purpose, and they have commenced their task from the 24th March 1960, and have not completed it at the time of this report. In the meanwhile, *the surplus funds have been placed in* short-term deposits with various scheduled banks and the Trustees have decided to invest a sum of Rs. 50 lakhs in Government Securities (preferably of Andhra Pradesh) when the loans are floated during this year. They have also decided to invest the maximum permissible amounts in Government Small Savings Schemes, and Rs. 10 *lakhs in sound Preference Shares* yielding 8 per cent. per annum. The Trustees wish, however, to draw attention to the fact that due to the relatively lower yield of Government Securities, the current and future years' income is likely to diminish appreciably, unless the shortfall is made good by higher income from other investments.

9. As will be seen from the audited accounts, the market value of the assets of the Trust has increased to Rs. 6,17,00,000 *as against* Rs. 5,84,00,000 shown last year and the income of the Trust has gone up from Rs. 34,92,720 to Rs. 41,03,142 in *1959-60*. The Trustees have built up a General Reserve of Rs. 49,88,660.46, after setting aside Rs. 30 lakhs in a separate Orthopædic Hospital Fund Account. The net profit on sale of shares, amounting to Rs. 7,31,405.25, has been carried, in total, to the 'Investment Fluctuation Reserve' which now stands at Rs. 27,31,405.25.

10. During the year under report, the Trustees received offers for the purchase, at a profit to the Trust, of the entire holdings of the Trust in three companies, as these investments were the subject comments in certain quarters. In the light of the independent and expert advice obtained by the Trustees, they accepted the highest offers received for the same and the Trust has thereby secured capital profits amounting to Rs. 14,39,500. As these transactions were completed by delivery partly before and partly after the 1st April 1960, the capital profits relating to the former, amounting to Rs. 7,07,000, is shown in last year's accounts, while the capital profits relating to the latter, amounting to Rs. 7,32,500, will appear in the current year's accounts.

Deposits with Banks

11. The Trustees have decided to set apart Rs. 30 lakhs in short-term deposits with scheduled banks to meet the capital cost of the proposed Orthopædic Hospital. All arrangements for setting up and maintaining the Orthopædic Hospital have now been finalised. The hospital will be known as "The Nizam's Orthopædic Hospital," the construction and equipment of which have been entrusted to an autonomous Governing Board consisting of the Trustees and the Secretary of H.E.H. the Nizam's Charitable Trust, for the time being, and four nominees of the Government of Andhra Pradesh viz., the Secretary, Health, Housing and Municipal Administration, the Secretary, Finance Department, the Director of Medical Services, Andhra Pradesh, and the Professor of Orthopædics and Orthopædic Surgeon, Osmania Medical College. The Trustees have further undertaken to make, after the completion of the hospital, an annual recurring grant to the Governing Board of a sum not exceeding Rs. 7 lakhs, in two half-yearly instalments.

12. The other project to which reference was made in the previous Report, namely, the establishment of a school for training artisans and mechanics, is under the active consideration of the Trustees.

13. During the year under report, the Trustees framed Rules governing the grant of foreign scholarships from the Trust, and have invited, this year, applications for four foreign scholarships, two in Mechanical Engineering, one in Metallurgy and one in Pharmacology. In accordance with the above Rules. The Trustees have entrusted the selection of the candidates for foreign scholarships to three separate committees of experts who will make their recommendations after interviewing the candidates, if necessary.

THE MYSORE PAPER MILLS LIMITED

SPEECH OF MR. M. D. SHIVANANJAPPA

CAPACITY TO BE MORE THAN DOUBLED

SPEAKING at the Twenty-fifth Ordinary General Meeting of the Mysore Paper Mills Ltd., held at Bangalore on Friday, 7th October 1960, Mr. M. D. Shivananjappa, I.A.S., Chairman and Managing Director, disclosed that the Government of India had granted a licence to raise the production capacity of the mills from 8,000 tons to 18,000 tons. The capital cost of the expansion scheme would be over Rs. 3 crores, of which about one half would be required in foreign currency. The foreign currency cost was likely to be provided by the Commonwealth Development Finance Company Ltd., London, and the Industrial Credit and Investment Corporation of India Ltd.

The following is the full text of Mr. Shivananjappa's speech:

"LADIES AND GENTLEMEN,

"Before we commence the regular proceedings of the meeting of the members of the Mysore Paper Mills Ltd., it is my painful duty to refer to the sad demise of Capt. Rao Bahadur A. Thangavelu Mudaliar on the 22nd June of this year. As you all know, Capt. Rao Bahadur A. Thangavelu Mudaliar was a Director of this Company ever since its inception and he was also connected with a number of other institutions. By his genial temperament and modesty he had endeared himself to one and all in the State. We have lost one of our stalwarts on the Board and I for one have lost a personal friend. May I request you kindly to stand up in silence for a minute and pay our homage to the memory of the departed soul?

"With your permission I shall be sending the following resolution to the members of the bereaved family:—

"'The General Body of the members of the Mysore Paper Mills Ltd. have learnt with deep sorrow the sad news of the demise of Captain Rao Bahadur A. Thangavelu Mudaliar on 22nd June 1960 and wish to convey their sincere condolences to the members of the bereaved family.'"

(*The business was adjourned for two minutes.*)

"LADIES AND GENTLEMEN,

"I have great pleasure to welcome you to this, the twenty-fifth ordinary general meeting of the shareholders of the Company and to place before you the report of the Directors and the audited balance-sheet for the year ended 31st March 1960. These have been circulated already and, with your permission, I shall take them as read and would proceed to review the salient features of the year's operations.

"I am glad to state that the production during the year under review has been very satisfactory. Last year, the production was 8,000 tons and during the year under review, it has risen to 8,700 tons, exceeding all previous records. The successful implementation of the scheme of renovation and replacement and the reconditioning of the first paper machine and the fairly satisfactory working of the arrangements made for procuring the essential materials within the country and from abroad have largely contributed to this result and I can only hold out hopes of maintaining at least the same level of production during the current year, if only the arrangements made continue to work satisfactorily.

Record Turnover

"I am also happy to report that the turnover during the year has exceeded that of last year by Rs. 16 lakhs amounting to Rs. 1,41,31,000, which is also a record figure. I had informed you last year that the Government of India had referred the question of fixation of prices of paper to the Indian Tariff Commission which concluded its labours and submitted its report to the Government of India and had expressed the hope that fair and reasonable prices would be fixed. But, the Government of India, accepting the recommendations of the Tariff Commission, have issued revised price lists, which have considerably reduced the prices of different varieties of paper with effect from 1st January 1960. This reduction is bound to have greater adverse effects, particularly on smaller units like ours. I do not see any immediate prospect of decline in prices of raw materials, coal or chemicals and also in wages and salary bills. The only way to improve the position, it appears to my mind, is to secure as much economy as possible from technical and operational efficiency. The installation of the recausticising unit for which orders had been placed and equipments received, will, to some extent secure economies, which go to reduce production costs to some extent. I am only hoping that the Government of India would certainly take into consideration the adverse effects that the revision of prices has had on units like ours and would consider the question of revising the prices suitably in the interest of expansion of existing units and starting of new ones.

"I would now like to refer to the balance-sheet and accounts. The good effects of increased production and larger turnover have been reflected in the accounts as you could see. The financial results would have been still better but for the reduction of prices to which I have already referred. We have provided for depreciation on fixed assets calculated in accordance with the rates allowed for normal depreciation and extra shift allowances as per Income-tax Act, amounting to Rs. 7,63,175, Rs. 14,061 towards development rebate and a further sum of Rs. 60,000 towards retirement gratuity. A provision of Rs. 8.00 lakhs has also been made towards taxation, as the profits of the Company for the year become taxable. As on 31st March 1959, the loan of the Industrial Finance Corporation to the Company stood at Rs. 20.00 lakhs, and during the year a sum of Rs. 16 lakhs has been paid, thus reducing the balance to only Rs. 4.00 lakhs, which represents the last instalment due to the Corporation in 1970. These payments far ahead of due dates by nearly a decade have considerably reduced the interest charges. In regard to the disposal of surplus of Rs. 7,76,968 including carryover of last year, your Directors have decided to transfer Rs. 3,50,000 to the general reserve and to recommend declaration of a dividend of 15 per cent., subject to tax, absorbing Rs. 3,75,000, the balance being carried forward.

Dividend

"Last year, taking into consideration the increased production and larger turnover, your Directors recommended payment of 12½ per cent. (10 per cent. dividend and 2½ per cent. bonus) and this year also, taking into consideration the all-round progress made by the Company and having regard to the tax deduction of 30 per cent., your Directors, after careful consideration of all relevant factors, have proposed payment of 15 per cent. dividend. I am aware that deduction of tax at the rate of 30 per cent. as per Finance Act will reduce the percentage to 10.5 or Rs. 1.05 per share. I am glad, however, that a number of shareholders, whose income is not taxable, gets a net dividend of Rs. 1.50 per share, which is more than the dividend declared for last year by 0.25 nP per share.

"The Industrial Finance Corporation of India have communicated their approval to our declaration of 15 per cent. dividend in terms of the mortgage deed, for which I am thankful to them.

"It is indeed a matter for gratification that the labour-management relations continue to be very cordial. Your Directors were pleased to sanction a bonus of four months' salary or wages to the employees for the year ended 31st March 1960 and the same has been disbursed.

"Reference had been made by some shareholders at the last meeting for celebration of the Silver Jubilee of our Mills on a grand scale and I recall that I had said that steps would be taken to arrange for the celebration at the appropriate time. I find that the Company has been registered as a joint-stock company on 20th May 1936 and the foundation-stone of the factory was laid by His late Highness Sri Krishnaraja Wadiyar Bahadur of revered memory on 1st April 1937 and the Mills went into production in 1938. Taking these several dates into consideration, your Directors will be fixing up the appropriate date for the celebration of the silver jubilee during 1961-62.

Expansion Programme

"As you are aware, the question of expansion of the production capacity of your Mills is engaging attention practically ever since the first scheme of expansion was implemented. The scheme has not yet been implemented, not because of want of well-considered scheme or lack of funds, but mainly because of the difficulties of procuring the necessary foreign exchange for payment of value of plant and machinery to be imported from abroad. I informed you when we met last year about this time that we had submitted our application to the Gov-

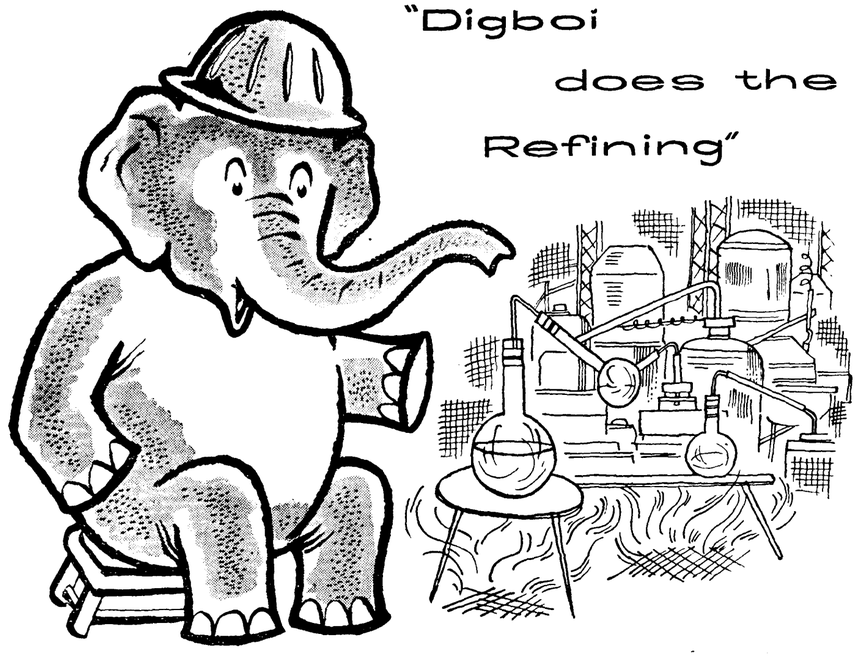
Memoirs of an Elephant—5



You know, I really can't understand these people at the AOC. After all the trouble they take to find the oil, they tell me that when they do, it is "crude" and that it has to be "refined".

It is now about 60 years since they started this "refining" business in Assam. They say that their plant in Digboi was the first in India operating on modern lines. During these years, many additions have been made to the plant. Among others they added a Dubbs Cracking Plant, an Edeleanu Plant, Atmospheric and Vacuum Tube Stills, and Oil Heaters. A new petroleum plant and a new Lubricating Oil Distillation unit were added in 1954.

One thing, they seem to keep right up-to-date in Digboi utilising all the latest technical "know-how" and equipment.

From what I have heard, this "crude" oil can produce many different things like—Motor Spirit, Kerosine, Diesel Oil and at least another hundred products.

The Digboi refinery is the only one in India producing petroleum products from indigenous "crude" oil.

—And to think that all this is due to me!

FERRO ALLOYS CORPORATION LTD.

TEETHING TROUBLES ARE OVER

CHAIRMAN, MR. DURGAPRASAD SARAF'S REVIEW

ADDRESSING the shareholders of the Ferro Alloys Corporation Ltd., at their Fourth Annual General Meeting held at Tumsar, Bombay, on 24th September 1960, Mr. Durgaprasad Saraf, Chairman, said that the Company had been able to get over the teething troubles, which were common to all industries, and that the Company was on the "path of progress and prosperity." With the disposal of accumulated stocks and with the execution of the orders on hand, he added, the Company would be able to wipe off the deficits and to declare a satisfactory dividend for the current year.

The following is the full text of Mr. Saraf's speech:

"GENTLEMEN,

"I have great pleasure to accord to you all a hearty welcome at the fourth annual general meeting of the Company and to present to you the Directors' report and the auditors' statement of accounts for the year ended 31st December 1959, for adoption.

"During the year 1959, the Company entered its second year of production and ferro-manganese worth approximately Rs. 1 crore was manufactured. Out of the three furnaces only two were under operation. The total sales aggregated to Rs. 42.43 lakhs. Although the sales during 1959 were considerably more than in the previous year 1958, the same were much below our estimates. The main reason for this was that we were under an obligation to supply a very large quantity to State Trading Corporation for the Indo-U.S. barter and, therefore, we could not take up any other large-scale commitment for supply of ferro-manganese. Besides, in the home market the demand was not very satisfactory as the steel plants in the public sector who are the largest internal consumers of this commodity, have not started production to their full capacity. In spite of these odds, it is a matter of very great satisfaction for the Company that it was able to push up its sale to the extent it has done and to introduce its produce to new markets abroad and also to new customers at home.

Delay in Shipments

"The Indo-U.S. wheat barter which, you must be aware, was finalised in 1959. Under this barter agreement your Company has been allotted the largest quota. The supplies were expected to be commenced at any moment at short notice right from November 1959. But unfortunately, the shipments did not commence until June 1960. It is the proverbial broad red-tape of the Government which takes very long to finalise any and every point. And this misfortune prevails, despite the fact that the S.T.C. is a business institution primarily, though it is owned by the Government. It will be in the interest of all concerned if Government decisions are taken quickly.

"However, you must have noted from the Directors' report that our Company has already exported two full shiploads of ferro-manganese weighing 20.090 tons during the current year and further shipments will follow soon. All the three furnaces of the Company are working to full capacity since the beginning of this year and we expect to complete our quota under the barter during the stipulated time.

"You will also be glad to learn that substantial orders for the Company's ferro-manganese have been received during the year for meeting the requirements of the steel plants of Hindusthan Steel Ltd., at Bhilai, Durgapur and Rourkela. A good portion of the orders from the H.S.L. have already been executed and necessary arrangements have been made to supply the balance. The Company is also meeting the requirement of ferro-manganese of many other foundries and iron and steel works in India. Our produce has been found to be satisfactory in all respects by our customers in India and abroad, as is evident from the repeated orders placed with us.

"It may, therefore, be certainly said that the Company's 'teething troubles' which are common to all pioneer industries, are well over and the Company is marching on the path of progress and prosperity.

"I have no hesitation in informing you that, with the disposal of the accumulated stocks for the last two years and with the execution of the orders already placed with the Company, we shall be able to wipe off all our earlier deficits and shall be able to declare a satisfactory dividend for the current year.

"From the Directors' report you might have seen the manifold activities of the Company in undertaking the various schemes of labour welfare, in increasing the production capacity and consequential reduction in the cost of production.

"An important point which I dealt with in my speech last year related to the increase in the capital of this Company. As I pointed out to you earlier, the Company now finds itself rather under-capitalised and it is necessary to increase the same adequately. An application for the required sanction has been submitted long-ago to the Controller of Capital Issues. The consent is expected shortly, after which steps will be taken to issue the capital. I may tell you that the Directors propose to offer further capital to the existing shareholders in the first instance.

Problems and Difficulties

"I would also like to avail this opportunity to say a few words about the problems and difficulties that confront our industry.

"The first and foremost difficulty arises from the incapacity of our country's transport system to meet the requirements of the industries. Under the plans of the Central and State Governments we see a large number of industries coming up every year both in the public and private sectors. All those industries require means of transport for moving huge quantities of the various raw materials to the factories and the finished products to the markets. It is a matter of regret that our means of transport have not been adequately and properly developed to cope with our requirements. Often, an industry finds itself starved of essential raw materials resulting in loss of production, unemployment of labour, and a trial of problems. This problem needs immediate attention and solution by the authorities in the Government.

"Closely concerned with the above is the problem of railway rates and the allotment of wagons on priority basis. It is an accepted principle in all countries aspiring for industrial uplift, to charge the incoming raw materials to factories and the outgoing finished products to markets at concessional rates. This is of imperative importance to industries depending on export such as the ferro-manganese industry.

"Exports of manganese and ferro-manganese which earn valuable foreign exchange for the nation, need all the protection and patronage of the Government to enable it successfully to meet the competition abroad and to establish itself firmly. It is also equally necessary to make allotment of wagons for movement of industrial materials on priority basis since the industry cannot afford to wait and watch.

"The Government should also ensure that our industry is supplied power at a cheap rate. In spite of the gigantic power projects constructed under the Five-year Plans, the rate of electricity supplied to industries is very much high as compared to the rate available to industries in foreign countries. Since power forms an important element in the cost of production of our industry, the high rate prevailing in India reduces the competitive power of our industry.

"The Company has made representations to the proper authorities and the Ferro-Manganese Producers' Association has also taken up the matter. Let us hope that they will receive due consideration of the Government.

"Trade unionism in factory labour is a healthy sign. The Government have also enacted various labour laws to ameliorate the condition of factory labour and have provided machinery for settlement of disputes. The defect in our trade unionism is often to be found in its leadership. There is rivalry for it between one group and another. Many times the leadership does no better than to exploit the poor, illiterate workers to achieve their own ends by giving false hopes to them. When they fail in fulfilling their promises they call for strikes, legal or illegal. To accept strike as a very sacred weapon to be used as the last resort is a very theoretical notion, so far as trade union leaders are concerned. The advantages and disadvantages of a strike are not properly weighed. The result is that the industry, the workers and the Government all suffer. It is necessary, therefore, that the trade union leaders give due thought to all aspects before they launch a strike. I also feel that the law relating to strike should be made more strict than it is now.

"I must also draw the attention of the Government to the urgent need for simplification of the complicated system of taxation of dividends, as also of the sales tax in the States and at the Centre; the need for expeditious disposal of import applications specially for spare parts and raw materials not available in India, and the quick settlement of claims and payment of refunds in various departments, particularly the railways. These are very important for the proper development of any industry.

Outlook for Ferro-manganese

"As regards the ferro-manganese industry, it has acquired a special significance in the context of our fourfold increase in the steel-making capacity and the need for stepping up of our foreign exchange earnings. It is, therefore, regretted that the Government propose to export manganese ore, instead of ferro-manganese, under another barter deal under negotiation for import of cotton. India's production of ferro-manganese has so far been limited, but it has got much scope for expansion. I shall, therefore, appeal to the Government to consider the interest of this industry which occupies an important place in our plan for industrialisation.

"Before I conclude I will like to express my grateful thanks to my colleagues on the Board for their valuable co-operation and guidance. I shall also like to thank the Managing Agents for steering the Company clear through a period of initial difficulties. I thank you, gentlemen, for your patience."

CAPITAL FOR ALL—BUT SAFETY FIRST

VIEWS OF A SWISS BANK

[The need for foreign capital, private and Government alike, for the development of underdeveloped countries is now universally recognised. Not all the underdeveloped countries, however, follow economic policies that facilitate the inflow of such capital. On the contrary, quite a few of them often resort to policies that scare away foreign capital. The reactions of capital-exporting countries to such policies are clearly brought out in the article on this page, published by the courtesy of the Swiss Bank Corporation, Basle. The author of the article has also briefly outlined the attempts made both in the distant past and in recent years to enunciate a code that will induce confidence among foreign investors and be acceptable to the capital-importing countries. The article is undoubtedly a timely contribution and the points of view stated therein deserve to be pondered by this country's leaders, not only because we are ourselves a capital importing-country but also because it will be to the advantage of the underdeveloped areas as a whole, if India can take the lead in evolving a code of the type mentioned here.—ED.]

MORE than ever before in peace time, foreign assets are today liable to be expropriated, confiscated or nationalised by the Governments of newly founded States. And yet, paradoxically enough, it is the less-developed countries who are, more than ever, trying to attract Western capital. At a Press conference held at Accra early in July, Dr. K. Nkrumah, Prime Minister of Ghana, expressed deep regret that the West, and the United States in particular, have not so far proposed a sufficiently courageous plan for helping the new African countries. But for their part the Western countries were at that moment faced with nationalisation in Cuba, confiscation in Indonesia, and expropriation at the very heart of Africa, in the Congo, where a few days later thousands of Europeans were forced to flee, in many cases leaving home and fortune behind them.

Will the excesses of the few now cause the industrialised countries of the West to cut down, to the detriment of the many, their programmes of economic aid? Certainly not. But the time has come to separate the wheat from the tares: the time for the honest borrowers, those ready to respect private property—whether national or foreign—to make their intentions known. The capital available in the West will be for them first.

As vain as they are numerous have been the attempts to make creditor and debtor undertake to respect certain rules and thereby further the movement of private capital from country to country.

A conference organised in Paris by the League of Nations for codifying the economic rights of foreign nationals failed to reach an agreement in 1929. Two years later, the International Chamber of Commerce (ICC) adopted a resolution that remained however inoperative. After the Second World War, the ICC carried on with this work and succeeded in drawing up an "International code for the equitable treatment of foreign investments." Up till now, however, this code has remained a dead letter.

Many other similar schemes have met with the same lack of success during recent years. In 1953, M. Charles de Loes, president of the Swiss Bankers' Association, took up again the idea of a multilateral convention open to all countries. The experts of several States wrestled once again with the problem. Under the auspices of that well-known banker, Hermann J. Abs, the Gesellschaft zur Förderung des Schutzes von Auslandinvestitionen e. V. of Cologne submitted in 1957 to the world of international finance as a basis for discussion a draft international convention for the mutual protection of private property rights in foreign countries. Too far-reaching to be applied, even in the eyes of many of the European experts, this draft had to be much modified before it could be set before the Governments interested.

For its part, the United Nations Organisation (U.N.O.) has also given the matter some attention. It might have been hoped that, within a body where the influence of the West is not preponderant, the less developed countries would have been prepared to come to an understanding with the creditor nations satisfactory to both parties. In actual fact, the General Assembly of the United Nations adopted a resolution on 11th December 1954, "recommending the countries exporting and importing capital to ... negotiate agreements making it possible to protect investments against certain non-commercial risks, provided such agreements be compatible with their own national legislation." On 9th August 1956, the Economic and Social Council of U.N.O. approved a recommendation of similar intent. In its turn, the ICC returned to the attack and, on 3rd May 1957, suggested the holding of a conference under the auspices of the United Nations. However, this conference was never held.

One point is, alas, only too obvious: at present, it is quite unrealistic to expect all the countries requiring economic aid to subscribe to a multilateral agreement for the protection of private investments abroad. We must be content with multilateral agreements between a limited number of countries or with measures taken, either individually or bilaterally, by the countries interested.

Faithful to their ideals of universality, the United States have up till now rejected the drafts of all multilateral conventions that might not receive the approbation of at least a majority of the countries of the free world. But, being at the same time eminently practical people, the Americans are pioneers both in the matter of national guarantees for exports of capital and in that of bilateral agreements for the fair treatment of foreign investments. Though they themselves do not always respect it (cf. the conflict of Swiss and American interests over the Interhandel affair), the United States regard the sanctity of private property as a fundamental principle of their ethical code and try to implant it at the international level by means of such agreements. Recently, other creditor countries have followed in their footsteps. On March 1959, the United Kingdom concluded an agreement of this kind with Iran. On 25th November 1959, Western Germany signed with Pakistan the first agreement giving scope to her guarantee system.

Working along the same general lines, the Swiss parliament on 8th March 1960 asked the Federal government to study a proposal of M. Ernst Schmidheiny. This well-known Swiss industrialist has suggested that the Confederation should organise for the protection of Swiss investments abroad a system of guarantees similar to that operating for the export of ordinary goods. Premiums collected on foreign investments would flow into a guarantee fund, which would be utilised to compensate the investor in the case of losses due to political upheaval, nationalisations, transfer difficulties, etc. The big Swiss industrial firms are mostly in favour of the idea, whereas the banks are, for their part, showing more reserve. The changes made two years ago in the Federal law governing the guarantee against export risks have made it possible since 1959 to insure certain loans and commercial credits against political hazards. Should one go a step further? Is there not a danger that to widen the scope of the guarantee will favour undesirable State interference in the sphere of private initiative? This is an important matter for Switzerland and deserves careful study.

Speaking more generally, the idea of insuring foreign investments against risks of a non-commercial nature really means that countries who meet their engagements punctually pay for those who do not. True, the bilateral agreements usually insisted on by the Governments of the capital-exporting countries make a certain broad selection of partners possible and reduce the disadvantages of premiums that would otherwise be much too high. But it becomes very difficult to negotiate such agreements when the various exporters of capital begin to compete for the preferential treatment of foreign investments. The recent breakdown in the talks between Western Germany and Greece may give food for thought.

So it would seem that, despite their advantages, national guarantees, coupled with bilateral agreements for the protection of foreign investments form a system ill-suited to an era when the less-developed countries are no longer appealing for funds to a single creditor, but to several at once.

As they are skeptical as to finding a code of behaviour acceptable to the whole free world, and yet realise the serious limitations of national guarantees, coupled with bilateral agreements, several European countries have decided to consider the problem of protecting foreign investments in a new way.

The basic conception is that the European countries, whether industrialised or underdeveloped, should sign a multilateral convention which would then be submitted to all States ready to recognise certain principles of international law and to abide by the decisions of a tribunal of arbitration.

One of the advantages of this idea is that it would be possible to benefit by the work—now in an advanced stage—done during the last few years in view of establishing a free-trade zone among all the O.E.E.C. countries.

Wishing to further the flow of capital within the projected zone, Switzerland had submitted in 1957 to the Directorial Committee of E.P.U. a draft international convention on the guarantees to be afforded to investments of foreign capital. Also, Western Germany had submitted the draft mentioned earlier on. Objections, having been brought forward by various countries, among whom was Great Britain, the draft had to be much revised and was once more, in May of 1959, passed to the O.E.E.C.

By then, however, the free-trade zone had become impracticable. But it was becoming increasingly clear that the members of O.E.E.C. would have every reason to co-ordinate their efforts at least on one ground, namely, that of aid to underdeveloped countries. The two drafts in question were precisely intended to facilitate the unhealthy growth of a system of preferential agreements on a bilateral basis. On 7th April 1960, the Council of Ministers of the O.E.E.C. decided to instruct the Committee on Invisible Transactions to draft a new text on the basis of the existing documents. Thanks to the work done previously, this new draft was rapidly produced and, during the month of June, the experts of the countries belonging to O.E.E.C. were able to meet in Paris in order to discuss the preliminary form of the convention, as drafted by the said committee.

At this advanced stage, negotiations are at present held up by the reform of O.E.E.C. itself. There is little to fear from the delay, for O.E.C.D.—the Organisation for Economic Co-operation and Development which is to succeed O.E.E.C.—will doubtless pursue the efforts made up till now at the European level for co-ordinating aid to the underdeveloped countries. But it may be wondered whether the participation of the United States and Canada as full members will not jeopardise a project that is on the threshold of realisation.

Up till now, many compromises have been reached in the O.E.E.C. framework. Owing to lack of unanimity, certain points, such as that of collective sanctions, had to be dropped. Elsewhere, agreement could be achieved. Thus, it is generally recognised how important a part a tribunal of arbitration might come to play in the carrying-out of the agreement. And there is general approval for the method of gaining experience within a limited area of a system of mutual protection, before inviting countries from other civilisations to take part.

The method has, it is true, certain drawbacks. A multilateral convention set up on a take it or leave it basis might perhaps ruffle the feelings of less-developed States who do not share Western views on the respect due to private property. But would it not be misleading these countries, to allow them to remain in the belief that they can in future substantially increase the financial aid received from international organisations and foreign governments by recourse to private Western capital, and yet not modify their ideas on the treatment of foreign investments? And would it not be unfair if the underdeveloped countries, who are ready to join a multilateral system engineered both by creditor and by debtor States for an easier international flow of capital, should find their plans for economic expansion delayed, because the whole free world has not yet been able to agree on what guarantees should be afforded to private investments abroad?

Whatever may be the rights and wrongs of the case, the draft multilateral convention for the protection of foreign investments drawn up by O.E.E.C. in no way endangers efforts made at the world level towards a similar end, nor does it stand in opposition to existing schemes for national guarantees. By allowing underdeveloped countries adhering to the convention to enjoy the benefits of a guarantee of international security when applying for foreign capital, such a convention might well in the end induce the countries outside the scheme to make the concessions necessary for a solution applicable to the whole free world. And better than any bilateral agreement, this convention might provide the means for making that indispensable selection among potential borrowers without which any national guarantee against political risks would be too onerous.

EUROPEAN FREE TRADE ASSOCIATION AND FUTURE WORLD PROSPERITY

IS IT AN OBSTACLE IN THE WAY OR WILL IT HELP?

By Jossleyn Hennessy

AUTHOR OF "THE EUROPEAN COMMON MARKET" AND "THE OUTER SEVEN"

CAN the European Free Trade Association prosper? Will its only achievement be to consolidate Europe in two rival blocs? Will the interest of the Commonwealth suffer? These are questions which are being widely asked up and down the Commonwealth today. If the 13 European countries which comprise the European Common Market and E.F.T.A. could have formed one market, the buying power of their citizens, and their powers to import from the rest of the world, would have been greater. But if, after the failure of the negotiations to achieve such a solution, the Seven countries which had remained outside the Common Market had not grouped themselves into the E.F.T.A., Europe would have been divided, not merely into two units, but into many—the Six plus the separate units of the rest of Europe. The multiplication of wealth of Europe as a whole, and the total buying power of its importing units, would have been less than it is under the present situation.

Chances of Survival

What are the chances of E.F.T.A. surviving as a prosperous and viable trading partnership alongside the apparently far more economically powerful Six? These are much more favourable than might appear at first sight. It is true that the E.F.T.A. population—and therefore the size of its internal market—is apparently little more than half that of the European Economic Community (E.E.C.); but the combined national incomes of the Seven countries total two-thirds of those of the Six: their total foreign trade is three-quarters, and their imports of manufactures four-fifths those of the E.E.C. Clearly, the Seven have a higher *per capita* income than the Six.

It is true that the recent rate of growth of the E.F.T.A. economies appears to be slower than that of the Six. But it seems likely that a part of this advantage of the Six was due to special circumstances. Their recovery came with a rush comparatively late, whereas some members of E.F.T.A. began their recovery earlier.

Despite the war and post-war difficulties, industrial production doubled in the E.F.T.A. countries. There seems no reason why it should not continue to expand at the same rate; indeed, the high proportion of the world's technological innovations which originate within the Seven suggest that it may rise faster. Moreover, since this rate of growth was achieved in years when the E.F.T.A. countries were seven separate units, an even faster rate of growth should become possible now that they are co-operating as partners in E.F.T.A.

Commonwealth Understanding

Commonwealth countries will readily understand why the United Kingdom was unable to throw in its lots with the Six. For Britain to have joined a European Customs Union would have meant raising tariffs against imports from the Commonwealth, or creating new ones where none existed. Its membership of E.F.T.A. involves it in nothing like this. E.F.T.A. members are moving in the direction of free trade among themselves, for their greater prosperity. But nothing in the E.F.T.A. undertakings affects the trading relations of its members with third parties. E.F.T.A., like the Commonwealth itself, is based on the concept of close consultation and co-operation among a group of independent sovereign States; the E.E.C. has certain supranational features.

The E.F.T.A. emerged because, in the course of the previous free trade area negotiations, its seven members were drawn together by two basic facts: (1) a desire to co-operate in political and economic matters to the fullest extent, without (2) abandoning their independence as sovereign States.

After the failure of the wider negotiations, they were able to agree on a Convention within six months. This Convention was not an instrument of trade war, drawn up in anger against the Six. It was an agreement (1) to try to bridge differences with the Six and (2) to expand trade among themselves. The Seven thought that a smaller free trade area was better than none at all.

There was, indeed, a risk that part of the increasing trade among themselves might arise from diverting trade from the Six, and that this might create animosities. The political leaders of both Six and Seven have shown statesmanlike appreciation of this fact and have vied with each other in avoiding provocative actions. The possible extent of trade diversions has, in fact, been exaggerated, because where trade is long established and buyers accustomed to certain dealers and goods, it takes time and big price differences to induce a switch. Nor would either E.F.T.A. or E.E.C. countries be anxious for too rapid a switch in existing mutual trade for fear of provoking reprisals.

In the United Kingdom Parliament, on 25th July, Mr. Selwyn Lloyd, who was then Foreign Minister, insisted that it was in the general interest to try to reduce discrimination between the two groups; he suggested that the forthcoming G.A.T.T. (General Agreement on Tariffs and Trade) conference should be used to secure a reduction in the level of world tariffs, and, at the same time, he promised that the United Kingdom would do all in her power to strengthen the political will in Europe towards achieving agreement. All the evidence suggests that there is, in fact, a developing pressure of opinion in Europe towards such agreement.

The emergence of this new mood in Europe has been hastened by the collapse of the Summit conference, which has brought out into the open, once more, the continuing importance of the United Kingdom's role in Europe and of the value to Europe of the United Kingdom's relationship with the rest of the Commonwealth. This is illustrated by two recent events.

First, the resolution passed on 11th July by the Committee for the United States of Europe, headed by such veterans of the movement for European unity as M. Jean Monnet, which declared that "today it is possible to envisage the participation of all in the common task of uniting Europe."

Mr. Selwyn Lloyd welcomed this resolution as revealing "quite a different attitude from the exclusive idea of the Six that once existed. There is growing evidence of the political will to find a way to the goal of European unity in some form. . . . In the present state of the world—the current difficulties in East-West relations, the explosive happenings in Africa, the dangers elsewhere—it is obvious that Europe must come together." Second, the invitation of the German Chancellor, Dr. Adenauer, to Mr. Harold Macmillan to Bonn. This has been taken as showing Dr. Adenauer's adoption of the view that a continued economic split entailed grave political dangers. The meeting gave Mr. Macmillan an opportunity to stress that, while the E.F.T.A. has helped to keep alive momentum among the Seven towards greater co-operation in Europe, they also recognised that the E.F.T.A. is not a complete substitute for broader European economic arrangements, so that, while building up the Association, they were continuing to search for solutions to the wider problem. Repeated official declarations have made it clear that the United Kingdom Government recognises that no new approach can succeed if it is confined to commercial problems.

Macmillan's Views

On the other hand, Mr. Macmillan impressed on Dr. Adenauer that no new approach from the Six can succeed, if it ignores the United Kingdom's relations with the other Commonwealth countries. The Commonwealth is sustained in part by the export opportunities that the United Kingdom provides by granting free entry to Commonwealth products. Now that Europe is more than ever alive to its responsibilities to the developing countries, it is easier for the Six to appreciate the objections to any agreement which would result in reducing the export opportunities of a group which includes some of these nations and also result in weakening the Commonwealth as a whole; which is an important element in the stability of the free world.

What emerged from the Bonn conference was that Germany and the United Kingdom agreed to investigate how Commonwealth free entry could be reconciled with Britain's participation in an all-European trading area. In short, the E.F.T.A. is serving its two basic purposes: (1) the building of a bridge between the two Europes; (2) the creation by seven countries of a free market to expand trade among themselves and with other countries.

PAPERS INVITED ON

"RECENT RISE IN PRICES—CAUSES AND CURE"

from persons with minimum qualifications of an University Degree.

Prize for the best Paper Rs. 1,000 and for the 2nd best Paper Rs. 500.

Last date for submission—15th November, 1960.

Papers will be judged by Eminent and Foremost Economists.

For particulars please contact:

Honorary Secretary, Economic Committee of the Osmania Graduates' Association,
Exhibition Grounds, Mukarram Jahi Road, Hyderabad (A.P.)

AUTOMOBILE SPARKING PLUG INDUSTRY

PROTECTION TO CONTINUE

THE Government of India has recently accepted the Tariff Commission's recommendation that protection to the automobile sparking plug industry be continued upto 31st December 1963 at the existing rates of duty, which are 92½ per cent. *ad valorem* standard and 85 per cent. *ad valorem* preferential for sparking plugs of British manufacture. The relevant resolution embodying this acceptance has also drawn the attention of the industry to the Commission's recommendation that "the industry should make efforts to tap indigenous sources for the supply of raw materials such as cement filler and high refractory cement powder."

The Tariff Commission's report, on which the Government of India has passed the above resolution, has given a succinct account of the present position of the industry. There are only two units now in the country producing automobile spark plugs—Motor Industries Company Ltd., Bangalore (M.I.Co.) and Auto Accessories (India) Private Ltd., Bombay. M.I.Co. was established in 1951 in technical collaboration with Robert Bosch Gm.b.h. (West Germany) which, since 1959, has come to have a 58 per cent. share in the total issued capital of Rs. 150 lakhs. The Company has undertaken to bring back the share of Bosch to 49 per cent. when fresh rupee capital is issued. The royalty to Bosch, which was originally fixed at 4 per cent. on net sales, has been reduced at the instance of Government to 2 per cent. from 1955. The manufacturing activities of this company are at present confined to fuel injection equipment and spark plugs. The net profits earned by it, after providing for depreciation, increased from Rs. 10.3 lakhs in 1956 to Rs. 19.2 lakhs in 1957 and Rs. 69.2 lakhs in 15 months from January 1958 to March 1959. The other company, Auto Accessories (India) Private Ltd., also established in 1951, has a paid-up capital of Rs. 4.4 lakhs now. It has had, since 1956, the technical collaboration of Smith Motor Accessories, U.K. It pays a royalty of 4 per cent. on sales to Smiths for the technical know-how. And its activity is confined to the manufacture of spark plugs only. This company incurred losses in 1956-57 and in 1957-58 and made a profit of Rs. 1.1 lakh in the year ended September 1959.

Both the companies together have achieved a production of 882.000 numbers of sparking plugs in 1959 and 271.000 numbers in the first quarter of 1960. Both the companies have fixed their targets of production which they are planning to achieve during the current year and the next three years. These targets are as under:

(In thousand numbers)

	1960	1961	1962	1963
M.I.Co.	800	850	900	1,000
Auto Accessories ..	400	450	500	550

These targets are liable to vary according to demand. This demand is of two types: (i) for original equipment and (ii) for replacement. The requirement for original equipment on the basis of the anticipated production of petrol vehicles in 1960 would work out to 136.000 and the replacement demand to 890.000 on the basis that the life of the plug, if related to mileage, will be about 10.000 miles.

There has been a sharp decline in imports of sparking plugs since 1957. In 1959, for instance, the imports stood at a very low figure of 8,100 plugs as compared with about 7 lakhs in 1955. This fall is accounted for by the fact that imports of sparking plugs have been banned since 1957. As for exports, there have been virtually none. In pursuance of its policy to promote exports, the Government of India has, however, allowed rebate of customs and central excise duties paid on raw materials used in the manufacture of sparking plugs.

The most pressing problem facing the industry is in respect of raw materials, most of which have still to be imported. The ones that are now imported are "bright drawn free cuting mild steel hexagonal bars", rectangular nickel wire, round nickel manganese silicon alloy, cold drawn bright M.S. tubes, bright drawn steel wire, sodium silicate solution, cement filler and high refractory cement powder. The only item now available locally is "bright drawn free cutting brass rod". It is stated that the first three imported items, which are special alloys, are not likely to be produced in the country, unless there is substantial demand for it. The next two items will be available shortly, when the production of steel goes up. As for sodium silicate solution, it is becoming available locally. It is in regard to cement filler and high refractory cement powder that the Commission has made a specific recommendation to the effect that indigenous sources should be tapped.

Quantum of Protection

For determining the quantum of protection required by the industry, the Tariff Commission has adopted the lowest f.o.b. price of Re. 1.03 furnished by M.I.Co. With the addition of 5 nP for marine freight and insurance, the c.i.f. price at an Indian port comes to Re. 1.08 per plug. On the other side, the costs of production in M.I.Co. for three most popular types of plugs, namely, HW175 T1, HW145 T2 and HM145 T1, have been estimated by the Commission at Rs. 192.62, and Rs. 202.66 and Rs. 255.21 per 100 pieces. The Commission's estimates of fair ex-works prices based on the costs of production are given below:

(Per 100 pieces)

	HW 175 T1(N) Rs.	HW 145 T2(N) Rs.	HM 145 T1(N) Rs.
Material costs	104.65	111.42	155.68
Manufacturing costs, including royalty	87.97	91.24	99.53
Cost of production	192.62	202.66	255.21
Return on capital employed ..	18.48	19.04	22.08
Fair ex-works prices	211.10	221.70	277.29
Fair ex-works price per piece..	2.11	2.22	2.77

N.B.—In the above estimates, return on capital employed has been allowed at 10 per cent. the capital employed being taken as the value of the net assets *plus* the working capital requirements equivalent to seven months' cost of production.

The existing import duty of 92½ per cent. *ad valorem* is not to be increased, because it is sufficient, in the opinion of the Commission, to protect the indigenous industry. This conclusion has been arrived at on the following basis:

	Rs.
C.i.f. price for Bosch sparking plug	1.080
Customs duty	0.999
Clearing charges	0.005
	2.084
Landed cost without duty	1.085
Fair ex-works cost, including duty on imported components	2.111
Disadvantage of fair ex-works cost against landed cost	1.026
Disadvantage as a percentage of c.i.f. price ..	95%

The difference between the disadvantage as computed above and the existing rate of import duty of 92½ per cent. is thus too small to warrant any revision.

Finally, in recommending continuance of protection for the industry, the Commission has accepted the view of Government departments, transport organisations, automobile manufacturers and other consumers that the industry has shown good progress so far under protection. The Commission's further findings are that the quality of the output is satisfactory and prices charged are reasonable and that the domestic industry (which is dependent on imported raw material) is at a considerable disadvantage in regard to cost as compared with overseas manufacturers who produce spark plugs in millions. Since a spark plug is a vital part of the automobile engine and its manufacture as an ancillary industry is essential for the quick development of the automobile industry, the Commission has recommended that protection to this industry be continued till such time (31st December 1963) as it can bring down its cost substantially to the level of plugs produced in foreign countries. It would thus appear that the claim for continuing the protection has been fully established.

TRANSPORT DEVELOPMENT IN ASIA

The whole field of transport in relation to economic development in Asia has been under close review at a United Nations meeting held in Bangkok since 27th September 1960. The present status and problems of transport in countries of the E.C.A.F.E. region, estimates of future transport needs in the process of economic development, and the financing of transport are among the main topics discussed at the meeting on the basis of studies prepared by the secretariat of E.C.A.F.E. and the International Bank for Reconstruction and Development as well as documents presented by participating Governments.

Emphasising the role of transport in the process of economic growth, the secretariat paper dealing with the first item on the agenda points out that transport makes an indirect contribution to the national income and development through the expansion of almost all sectors of the economy. After throwing light on post-war growth and pattern of traffic and the position of existing transport facilities, the E.C.A.F.E. paper gives percentage shares of different means of transport in the expenditures earmarked for economic development in Asian countries.

Another secretariat paper brings out the close interdependence between transport development and economic growth and shows how estimates of future transport requirements could be drawn up. Outlining the various steps that can be taken to keep a balance between overall economic activity and transport development, the paper stresses that more attention should be paid to the promotional role of transport—a role which is not sufficiently emphasised in the present plans of the Asian countries.

Under the agenda item "choice of means of transport and investment criteria," another secretariat document indicates the advantages and disadvantages of alternative means of transport and emphasises the careful examination that must precede the final allocation of investments in various modes of transport.

Another E.C.A.F.E. study prepared on the subject of the financing of transport development, poses the question "What should be the appropriate rate policy for nationalised transport undertakings?" The paper emphasises that the development of transport should be viewed in the broader perspective of economic development as a whole and not as an entity in itself. From this point of view, the question of optimum allocation of the foreign assistance funds among various sectors requires to be examined and delegates attending the working party would describe the experience of their respective countries in this respect.

PUSH-BUTTON 'PORTERS' IN U.K. SHIP

Push-button 'porters' have been installed in the new 40,000-ton liner *Oriana* which is due to start trials on 22nd October. It is the first time in the building of a British merchant ship that a completely automatic system of loading and offloading baggage and stores has been installed. It will cut the turnround time in port and manual labour. The 'porters' will make the ship completely independent of shore installations for the handling of baggage and stores for the 3,100 passengers and crew. The system, which is of British design, supplants the traditional methods of manual handling with nets or cranes. The basis of the system is two conveyors, each with a central boom and two pivoted jibs. In short, these are aligned with conveyors down the centre of the vessel. Baggage is taken from the conveyors to storage rooms by endless chain elevators, the loading steward pre-selecting the deck by push-button control.

WANTED

MANAGER TO TAKE CHARGE OF THE ENGINEERING DIVISION OF A LARGE ALL INDIA COMPANY, INCLUDING THE SALES ORGANISATION OF THE PRODUCTS OF ITS SUBSIDIARY MANUFACTURING UNITS.

ONLY APPLICANTS HAVING DRAWN MORE THAN RS. 2,500/- WITH GOOD BUSINESS EXPERIENCE, PREFERABLY WITH ELECTRICAL AND MECHANICAL QUALIFICATIONS, WILL BE CONSIDERED. AGE BETWEEN 40 AND 50.

APPLY WITH FULL DETAILS OF QUALIFICATIONS TO BOX NO. 970, C/O "COMMERCE," BRADY HOUSE, VEER NARIMAN ROAD, FORT, BOMBAY.

NEW PRODUCTS AND PROCESSES

A New Medium Duty Spot Welder

ELECTRO Mechan-Heat Limited, of Surrey, London, has recently introduced the Type M.50 Mk. III medium-duty spot welder, which has a nominal rating of 50 kVA at 50 per cent. duty cycle and has been designed primarily for use with 18-22 gauge bright mild steel sheet. The machine, producing up to 300 spot welds per minute, is suitable for stitch-welding and will be of particular value in the motor industry or in sheet metal working shops, where high spot-welding speeds are required. The welding head has a very low coefficient of friction, being fitted with hardened steel rollers mounted on ball bearings and machined at the periphery to a V-shaped profile. This "V" profile engages the knife edge of a hardened steel guide, so that contact is made over a very small working surface and easy movement of the ram is assured. Welding pressure at the electrode tips is of the order of 1100 p.s.i. at an air line pressure of 80 p.s.i. This is achieved by mounting a standard 5" diameter air cylinder on the welding head. An air reservoir has been incorporated to reduce the effect of pressure irregularities due to small bore feed pipes when working at high welding speeds. An air pressure regulator has also been provided. As an optional extra a special "high lift" air cylinder can be fitted. This allows the electrode tips to be opened to a maximum of 5" for the insertion or removal of work pieces and returned to the normal gap for welding.

The electrode clamps fitted to the upper and lower arms are movable and may be turned horizontally through 180° to facilitate the spot welding of long sections. The electrode holders can be adjusted vertically in the clamps, and the lower arm can be raised or lowered through 8 inches of movement. For machines fitted with the "high lift" air cylinder, two foot pedals are supplied. The first brings the welding head down to a normal spot-welding position, the second initiates the welding cycle. The welding cycle is controlled by a 3-stage or 4-stage electronic timer in conjunction with an ignitron contactor. Squeeze, weld, forge and off time can each be varied between 3 and 70 cycles (based on a 50 cycle A.C. supply) by means of stepless controls fitted to each stage of the cycle. The machine is equipped with a standard Electro Mechan-Heat stacked-core transformer. Heat regulation is obtained through an 8-position tap link panel. The equipment is normally supplied to operate on any two phases of a 400/440 volt 50 cycle 3-phase supply.

Electrically Conductive Glass

A new process for making electrically conductive glass has been developed in Russia. In the process the glass is heated almost to its melting point and then treated with tin chloride. This process, it is claimed, causes the glass to become a permanent conductor of electricity. Glass treated in this way is said to lose some of its transparency although only a small amount, and a slight iridescence becomes noticeable, but it is claimed that this extends the use of the glass rather than limits its practical application. Tests carried out with the glass are said to have shown that it may still be used for the production of windscreens of motor-cars and aeroplanes, enabling the glass to be heated by a small electric current thereby preventing the formation of ice. The glass may also be used for heating living rooms and offices. At the same time, the process is said to be cheaper and in many ways simpler than that used so far for the production of electrically conductive films on the surface of glasses. It is believed that the electrical properties of the glass are caused by the formation of a thin film of tin oxide anchoring itself to the silica network of the surface of the glass. The tests are also said to have shown that the application of heat has very little effect on the conductivity of the glass, and as a result the new glass can be used effectively as a resistance material in electronic equipment. It may also be used, it is claimed, in advertising and in the manufacture of instrument panels, since the treated glass will transmit sufficient current to light an electric lamp. Many other industrial applications are expected to be developed.

New Hard Anodizing Processes

A competitor for existing hard-anodising processes which is said to be 10 to 50 times faster has been announced by Toro Manufacturing Corporation of Minneapolis, U.S. Regular processes take 10 to 50 minutes to build a 1-mil coating; the Toro process deposits the same coating in one minute. In addition to high speed, the process offers increased electrical efficiency, lower bath refrigeration requirements, and lighter product colour. Mechanical properties of the coating are said to be equivalent to those of the four other hard coating processes—Martin, Sanford, Alumilite and Hardas. Key to the speed of the new process is its ability to use very high current densities without burning the aluminium. Current density is 20 to 40 times greater than the 25 to 100 amperes per sq. ft. commonly used. Because of the high currents used, the process is limited by the heat conductivity and the surface-to-volume ratio of the part being treated. However, it can be used on most common products with the exception of aluminium foil and similar very thin products. The Toro coating is light in colour and ranges from a silver grey to a medium grey, as contrasted with the dark grey and black of other hard coatings. A wide range of colours can be obtained by dyeing the coating.

Micro-measuring Instrument

A new micro-measuring instrument made by the Swiss manufacturer, Projectina, is designed to permit the flawless projection, 7 to 3.000 times enlarged, of specimens in the textile, paper, chemical, metallurgical and other fields. Simultaneously with the projection of the specimen on a wall screen, microscopic examination may be carried out using a built-in eyepiece. Measurement to within 1/1,000 millimetre may be performed. The outstanding feature of the instrument, says its maker, is the incorporation of two optical sets which permits direct comparison of two specimens side by side on the same screen. A reeling attachment for the examination of two lots of wire or yarn can be provided to permit continuous comparison by the operator. Specimens can be examined by transmitted light, surface light for maximum relief effects, or by a combination of these two types of lighting. Simple polarising equipment is available and can be used for projection and microscopical work, with transmitted and surface light, for micro- and macro-projection. Photomicrography is said to be considerably simplified on the projectina instrument. With the aid of adaptors a range of photographic equipment can be used, it is stated, to give in about 60 seconds, a good photograph in the magnification range of 7 to 2,000. Depending on the various accessories required for specific applications, the apparatus varies in cost from £270 to £600.

Household Furniture by Carton

You can now buy a complete set of breakfast furniture in a carton—assemble it while the food is warming in the oven—and serve your first meal in it within 15 minutes. This ingenious product is now being manufactured for export by a British firm. The carton—no bigger than a large suitcase—weighs less than 55 lbs. Inside are four tubular steel chairs and a table (size 3 ft. x 2 ft.) in knock-down form. The table top is of stainproof construction and the chairs have foam plastic seats with washable plastic covers. A screwdriver and a spanner are the only tools required to complete the assembly of the set in 15 minutes, by following the instructions supplied with the carton. By exporting the set in 'do-it-yourself' form, the manufacturers have drastically reduced the cost of freight. The result: an inexpensive and attractive household product which, by virtue of its steel construction, is particularly suited to withstand the rigours of tropical climates.

Lint-free Cleaning Gauze

Taslan viscose rayon yarn has been used by Samuel Courtauld and Co. of Britain to produce a lint-free cleaning gauze. Since its initial launching a year ago, Courtauld reports that the gauze has found wide acceptance among manufacturers of scientific equipment, optical equipment and other products where the exclusion of dust particles is important, and Anti-Dust Services of Dudley, Worcs, has now been appointed as distributor. The maker claims the gauze is capable of absorbing liquid up to 7½ times its own weight and has chemical properties which make it suitable for a variety of cleaning purposes. It is said to be unaffected by most organic solvents, mineral acids and common alkalis in dilute solutions and to withstand temperatures of up to 150 degrees Centigrade for short periods. Anti-Dust will also market the gauze in the form of lint-free dusters 18 inches square.

Identifying Alloys

A feature of a new instrument now in full production by Townson and Mercer of the U.K. for differentiating between various alloys by indicating the difference in conductivity of a layer near the surface is that the sensing head has been made relatively insensitive to distance. It will, therefore, says the manufacturer, give a constant reading even if the head is not kept square on the surface or if the surface itself is uneven. The Sortationer, as it is called, will in addition give constant readings whether the surface is anodised or painted, or both. Normally used to identify materials which have lost their identity marks or to show the degree of heat treatment, it is also said to have proved useful for indicating which side of single-sided aluminium coated sheet is clad.

Storing Chemicals

Fuller use of existing storage capacity for bagged chemicals and similar dry powders can be obtained, it is claimed, by using a recently introduced hydraulically-operated "pallet-levelling" press. A press of this type, supplied by Heenan and Froude of Worcester, England, and installed in the warehouse of a large Midlands chemical company is claimed to have successfully increased existing storage capacity by at least 50 per cent. The press reduces the space required for storage by taking a fully loaded pallet and applying an even spread of pressure to the top of the load. This compression in addition to reducing the overall height of the loaded pallet also improves the stability of the stack; loads for transport by road can also be made more secure.

Immersion Heater for Laboratory

A useful device for the laboratory is a small rod-shaped radiant immersion heater for heating beakers, water baths or small tanks. Called the Red Rod, it has a quartz sheath which is said to be immune to attack from most chemical solutions. Hydrofluoric acid, phosphoric acid and concentrated caustic alkalies are listed as the exceptions. When used, the heater has only to be plugged into the power supply and rested against the side of the vessel. It is supplied with 6 feet of cable and is available for voltages of 100-120, 200-220 or 230-250. Three sizes are made—300, 400 and 500 watts—and they have respective overall lengths of 10, 12 and 14 inches.

METRIC WEIGHTS COMPULSORY

From October 1, 1960 only Metric Weights should be used in all transactions in the areas given below. All Metric commercial weights should be duly stamped by the Weights and Measures authority. It will be illegal to use any other weights.

ANDHRA PRADESH: Districts of Visakhapatnam, Krishna, Guntur, Kurnool, Hyderabad, Warangal, Nizamabad and all the Regulated Markets in the State.

ASSAM: District of Nowgong and town of Gauhati.

BIHAR: Divisions of Bhagalpur and Ranchi and the Municipal and Notified areas in Patna and Tirhut Divisions.

GUJARAT: Cities of Ahmedabad, Rajkot, Baroda and all the Regulated Markets in the State.

KERALA: Districts of Kozhikode, Ernakulam and Quilon.

MADHYA PRADESH: Districts of Sehore, Indore, Gwalior and Jabalpur.

MADRAS: Districts of Madras, Chingleput, South Arcot, North Arcot and all the Regulated Markets in the State.

MAHARASHTRA: Cities of Bombay, Poona, Nagpur, Aurangabad, Sholapur, Kolhapur, Akola, Amravati, Wardha, Yeotmal and all the Regulated Markets in the State.

MYSORE: Districts of Bangalore, Raichur, Dharwar and all the Regulated Markets in the State.

ORISSA: Towns of Berhampur, Cuttack and Sambalpur.

PUNJAB: Districts of Amritsar, Jullundur, Ludhiana, Ambala, Patiala, Gurgaon and all the Regulated Markets in the State.

RAJASTHAN: Districts of Ajmer, Bikaner, Jodhpur, Jaipur, Kotah and Udaipur.

UTTAR PRADESH: Towns of Meerut, Agra, Lucknow, Bareilly, Moradabad, Varanasi, Kanpur, Jhansi, Allahabad and Gorakhpur.

WEST BENGAL: Municipal areas of Calcutta and Howrah.

DELHI: The whole of Delhi.

HIMACHAL PRADESH: Districts of Mandi and Sirmur.

MANIPUR: Town of Imphal.

TRIPURA: Town of Agartala.

ANDAMAN AND NICOBAR ISLANDS: Town of Port Blair.

PONDICHERRY: The whole of Pondicherry.

★

Use of Metric System of Weights and Measures is compulsory in transactions in the following trades and industries:

Jute, Cotton, Textiles, Iron and Steel, Engineering, Heavy Chemicals, Cement, Salt, Paper, Refractories, Non-ferrous metals and rubber industries, Vanaspati, Soap, Woollen products, control of forward markets in Cotton and in transactions of the Coffee Board.

SHARING GAINS FROM HIGHER PRODUCTIVITY

COMMITTEE TO EVOLVE NORMS

JUST as every one is on the side of good and against evil, all are for higher productivity in industry, agriculture, trade and commerce, indeed in every branch of human endeavour, for, productivity, shorn of the abstractions of its concept and measurement, is a synonym for progress. Unfortunately, however, the methods of obtaining higher productivity and the relative roles of the different factors of production are not so non-controversial as they may seem to be at the surface. The question of sharing the gains of productivity, in particular, is highly controversial. Apportioning of the fruits of higher productivity presupposes value judgments, involving the entire gamut of economic, social and political considerations, which are capable of exciting conflicting viewpoints. But there can be no running away from the problem. Unless the parties know fully well how the gains are going to be shared and are satisfied with it, they cannot be expected to work wholeheartedly for raising the general level of productivity. It is, therefore, essential that certain norms governing the distribution of the gains of productivity must be laid down beforehand.

The two-day seminar on productivity at New Delhi organised by the National Productivity Council was concerned, among others, with this important question. The seminar considered, in great detail, the principles which should govern the question of sharing the gains of productivity. It reaffirmed the principles embodied in the Charter of the National Productivity Council. It was agreed that the gains of productivity should be shared between the community, the investors and the workers. The community will benefit by a reduction in prices, increase in the variety and quality of goods, increased yields from taxation and savings from development projects and welfare measures. The investors will benefit by way of higher returns and opportunities for expansion and reinvestment, while the workers will derive benefits in the form of higher wages, shorter working hours, improved working conditions and increased employment opportunities.

Priorities

From discussion of the priority to be followed in regard to the distribution of the gains of productivity, it was felt that appropriate considerations should be given to the requirements of raising the current wages to the minimum level, where they are below the need-based minimum. It was emphasised that adequate consideration should be given to all the aspects of the problem of sharing the gains. It would be necessary to ensure that higher productivity does not result in, or add to, unemployment or to demotion or loss of earnings to workers. Productivity processes should not lead to any undue intensification in workloads nor should they undermine the growth and development of trade union organisations.

The seminar recognised the difficulties involved in measuring the increase in productivity and determining the specific shares of the gains, both of which require technical appraisal. It, therefore, recommended that an expert committee, consisting of representatives of employers, workers and productivity experts, should be constituted by the National Productivity Council for recommending (a) the indices which should be used, (b) the methods to be adopted for measuring the productivity gains, and (c) the principles and methods of distributing the gains in the context of conditions prevailing in the industries now and during the next ten years.

The aforesaid committee will be well advised to study the experience of some of the advanced countries of the West on this important subject. These countries have laboured hard in the post-war years in arriving at equitable solutions to this problem. It must, however, be borne in mind that the economies of these countries are not centrally planned and the sharing is, therefore, governed not by the decisions of central planning authorities nor by principles or standards previously laid down, but by the free play of economic forces. Another significant point to be borne in mind is that, in almost all these countries, there has been full employment which has facilitated adoption of labour-saving devices, albeit at heavy capital expenditure. A recent study, by the International Labour Office, of the manner in which the benefits of industrial and technological progress were distributed in five countries, namely, W. Germany, Japan, Norway, the United Kingdom and the United States during the period 1950-57, throws some interesting light on the question.

Generally speaking, there are four ways of sharing out the benefits of higher productivity, either immediately, or after a lapse of time. They are: (1) an increase in wage (including fringe benefits), (2) increase in other incomes, (3) reduction in hours of work, or (4) reduction in prices. The ways in which these four forms combine do not follow a regular pattern. The study reveals that (a) the gross national product, at constant prices, in the period and in the countries under review, has grown much faster than the volume of employment. In other words, there has been a rapid rise in productivity. (b) The workers' share in the national income increased much faster than the rate of growth of the national product and, even if allowance were made for the expansion in employment, there is no doubt that most of the benefits of higher productivity went to the workers in the form of wage increases. And (c) there has been a general tendency for reduced hours, though the reduction is only moderate.

Lower Prices

In the countries under reference, higher productivity has led to an appreciable increase in wages, a smaller rise in other incomes and a moderate improvement in leisure. As regards the fourth way of sharing out the benefits of higher productivity, namely, lower prices, it is not easy to analyse this phenomenon, because, thanks to the presence of various built-in inflationary pressures, it is difficult to isolate the causes and relate the change in prices to changes in productivity. There is, however, clear evidence that, in these countries, the benefits of higher productivity that passed on to the community in the form of lower prices have been very substantial.

The four ways of sharing out economic progress thus appear to occur simultaneously in varying degrees. While, by and large, the greatest share of the benefit from productivity goes to wage earners mainly in the form of higher wages and, secondarily, in the form of shorter working hours, the other productive factors also receive a share and consumers, likewise, benefit through a relatively long-term fall in prices of products affected by technical progress. In other words, while these four forms of sharing exist side by side, their relative importance unquestionably varies immensely from one country and period to another.

Each of the four ways has different economic consequences, but irrespective of the consequences, each mode of sharing must be such that (1) it is fair and acceptable to all economic agents involved, (2) it must not entail either inflation or a contraction of the economy and (3) it must not compromise the prospects of continued economic growth. The economic consequences may be examined in the light of these threefold prerequisites.

First, lower prices. Theoretically, lower prices have a number of advantages. Prominent among them is that they "socialise" the benefits of higher productivity by passing them on to all members of the community. This is perfectly reasonable, since technical progress does not belong to any particular section of the community. But one disadvantage of lower prices is that they add to the burden of indebtedness by increasing the amount of real wealth represented by each monetary unit used for interest or debt payments. In other words, they fail to encourage the use of more capital-intensive methods and it is often precisely these methods that lead to higher productivity. Thus, lower prices are liable to act as anything but a stimulus to the spread of technical progress.

Secondly, higher income for the employer, that is, profits and income on capital. This automatically results, if prices do not fall in proportion to the rise in productivity, unless the workers' share in the product is increased. If productive efficiency is to continue to improve, there can be no doubt that, in the general interest, the remuneration of capital must be high enough to allow a sufficient rate of formation of new capital. This is particularly important in the case of the economically underdeveloped countries. Some economists, notably, Prof. Arthur Lewis (*The Theory of Economic Growth*), take the view that profits are the type of income most likely to be saved and invested. Others point out that this increase in the stock of capital can only be justified and will continue if the demand for consumer goods expands and this implies an all-round growth in incomes, that is, wage incomes, to a large extent. Apart from this purely economic consideration, socially speaking, it would normally be difficult to allow all the benefits of higher productivity to go to the *entrepreneurs* and capitalists. Furthermore, when higher profits are reinvested productively, it will be in the interest of the entire community, especially in underdeveloped countries, where they may help to create more jobs for the unemployed.

Thirdly, higher wages. Higher wages can be quite readily conceded if productivity rises, but the size of the workers' share in the benefits and the number of workers involved raise some very awkward problems. For instance, how large the workers' share should be is hard to assess, because financial provision has also to be made for the need to keep abreast of technical progress and to improve productive equipment.

Finally, shorter hours of working. Here, the choice could be between shorter working hours with the same earnings, assuming that the hourly rates of pay do not change, or the same working hours and higher earnings. In the long run, it is certain that shorter working hours, that is, a preference for leisure, as against higher output, result in a smaller volume of real wealth than would have been produced, if the productive effort had been maintained. Capital accumulation is inevitably curtailed and the rate of growth of the economy is restricted. Whatever the attractions of this benefit in the advanced countries, to the underdeveloped countries, this alternative can have little use. For these countries there is no escape from hard work for another 20 to 25 years.

No Universal Recipe

It is clear from the foregoing account that "sharing the benefits of higher productivity is never a completely straightforward matter and there is no universal recipe for doing it in the optimum way in all circumstances." In practice, according to the I.L.O. study, (1) the actual share taken by the various parties laying claim to the increment, or, more generally, to the benefits of higher productivity, is largely determined by their relative power, though, particularly in systems where political democracy is the rule, this relative power will largely depend on the support of public opinion for any particular claim. (2) In the short run, the impact, whether good or bad, of this sharing on the economic situation will depend on the nature of the environment in which option is exercised and, above all, on the economic position at the time. (3) In the long run, some methods are more favourable than others to capital accumulation and, therefore, to rapid economic growth.

These, then, are some of the issues and problems involved in the question of distributing the benefits of progress. In countries, the economies of which are not centrally planned, the free play of the economic forces and the relative bargaining strengths of the partners in progress have led to the evolution of patterns of distribution which vary widely from one another. In democratically planned economies such as India, however, the question cannot be left to be decided by the impersonal working of the market mechanism. Norms and guiding principles have, therefore, got to be laid down through mutual discussion and understanding among all the four interests concerned, namely, Government, consumer, labour and capital. The aim must be a balance between equity and efficiency. But this balance can only be struck if the consequences of ways of sharing the benefits of productivity are fully perceived and analysed, having regard to the special circumstances of each individual case. As the I.L.O. study rightly points out, if these consequences can be ascertained and generally recognised, the emotion can be largely taken out of the subject and economic progress and social peace ensured. It is to be hoped that the committee mentioned at the outset will make a dispassionate approach to the question.

We are rather proud of ourselves

TODAY, banking is almost a public utility. Its success depends on its ability to give friendly and helpful service.

We modestly believe that our progress shows that our clients, whether they are industrialists, exporters or just men who want to deposit Rs. 10/- in a Savings Bank account, realise that in IOB they have an institution that has made friendly service the basis for all their activities.

PRICES OF PETROLEUM CRUDE

IMPLICATIONS OF BAGHDAD MEETING

[The Arab League's second oil conference, due to be held at Beirut this month, will be dominated by the recent agreement at Baghdad between leading oil exporting countries to set up O.P.E.C. with a view to consulting together on important matters affecting their oil interests and to bringing about stability in crude oil prices. Some of the considerations which arise are outlined below. As well as providing a forum for discussing many aspects of the international oil industry, the forthcoming wide-ranging talks at Beirut should bring much enlightenment about this significant new development.]

THE evolving relationships between the international oil companies and the Governments of the main countries in which they produce their raw materials are in many respects unique. And, due to oil's immense importance in the affairs of both producing and consuming countries, these relationships extend into that nebulous shadowland where trade and politics intermingle, and there are no well-worn paths to follow. The major oil groups can each take a long view and maintain continuity of thought and policies on the complex issues involved. But, in the crude oil producing countries, Governments and ministers may come and go, and each in their time pursues policies which they believe will best serve their individual country's interests. And, as do the oil companies themselves, they come up against the hard fact that the circumstances in which international oil trading occurs, and upon which their fortunes are so dependent, lie largely beyond their influence. This is inevitable in view of the diversity and complexity of the marketing of the wide range of petroleum products in so many countries by so many companies. It cannot be compared with the marketing of a more homogeneous commodity such as coffee or sugar, which it has proved possible to bring under some sort of international agreements, although with only partial success. The major international oil groups themselves, despite their size and ubiquity, are compelled to accept changes in marketing conditions, which frequently bring big swings either up or down in the profitability of their operations.

Nevertheless, some of the major oil exporting countries are now seeking to concert their policies in the hope of exerting some influence over crude oil prices. Thus, last month, for the first time, representatives of five crude exporting countries, accounting between them for over 85 per cent. of the free world's crude exports, got together to express agreed opinions on the principles which they suggest should govern the marketing of crude oil. Principles, of course, are always much easier to agree than the ways in which they should be put into effect. And practice always reveals many problems and conflicts of interest which can be covered by forms of words so long as only generalities are involved. Nevertheless, it is significant that representatives of Iraq, Kuwait, Saudi Arabia, Persia and Venezuela attended the hastily summoned conference in Baghdad and agreed upon the setting up of the Organisation of Petroleum Exporting Countries (O.P.E.C.). The resolutions passed at the conference were submitted for approval to the Governments concerned. And the Government of Qatar, which sent an observer to the conference, has indicated that it wishes to join O.P.E.C., which is open to applications for membership from other countries.

The general objectives of O.P.E.C. are to agree upon common policies *vis-a-vis* the oil companies, and it is planned to hold the next full meeting in Caracas next January. The immediate occasion of the Baghdad meeting, however, was to voice collectively the exporting countries' objections to the recent reductions in Middle East crude oil posted prices. The conference resolved, *inter alia*, that every effort should be made to restore the price cuts and expressed its wish that the companies should consult with them, in order to explain any new circumstances requiring price changes that may arise in future.

The recent cuts in crude prices in Middle East countries, however, since they occurred at a time of fast rising crude exports, will not result in any absolute drop in the Governments' revenues. Revenues will no doubt again be higher this year, though lower than they might have been if the price changes had not been necessary. Nevertheless, the reaction has been a strong one. An important reason for this, doubtless, was the already serious concern in Venezuela at the arrested growth of its oil revenues due to static production, arising from causes which are peculiar to that country. Posted crude prices in Venezuela have not yet been changed. But they were already out of line before the recent changes in the Middle East, and it remains to be seen how Venezuelan oil can remain competitive with that of the Middle East.

It ought perhaps to be made clear that, under the contracts between the concessionary countries and the oil companies, there is freedom to fix posted prices at the levels which the companies believe to be right. They naturally have no option but to adjust prices to meet trading conditions. These embrace the marketing conditions in importing countries, where the real value of crude oil is finally established by what the various petroleum products can be sold for. And products prices, as is well known, have been very weak in the major European and other markets for some time, with price cutting for the principal products becoming progressively greater. No concession agreement with a company trading world-wide has contained a requirement for the exporting country to have a voice in fixing posted prices. The simple reason is that the company would not risk the big investment needed to find, develop and export oil under the highly competitive conditions that traditionally rule, if it could not have freedom to dispose of the oil as it thought best. The assumption underlying a concession agreement is that the oil company will always command the best price it can, in the light of all the circumstances it has to meet. To a business concern that is natural enough. Yet, in some of their remarks, some of the producing countries' spokesmen imply that oil companies somehow find an advantage in cutting prices, and that they sell oil cheaper than they need. To anyone engaged in oil marketing this is clearly very wide of the mark.

The justification which the oil producing countries find for their concern with posted prices (and in the case of Venezuela, with discounts also) is that these govern the level of their revenues, upon which their local development and

COMPANY FINANCES DURING 1958

UPWARD TREND IN GROWTH MAINTAINED, BUT AT A SLOWER PACE

ALTHOUGH the year 1958 continued to witness inflationary conditions, certain sectors of the economy experienced recessionary tendencies. Thus, as against an increase in the rate of investment in the public sector, there was a slackening of investment in the private sector, due partly to the restrictions on imports of plant and equipment. The upward trend in industrial growth noted since 1953, no doubt, continued during 1958, but the pace of expansion was slower than in 1957 and 1956. This is clearly reflected in the finances of joint-stock companies relating to 1958, an analysis of which has been published in the latest issue of the Reserve Bank of India *Bulletin*—September 1960. For the purpose of this study, the Bank has chosen 1,001 companies, the same number as for the previous three years (though not the same companies), which account for 77 per cent. of the paid-up capital of all companies in the sectors covered. It must also be noted that the study covers the financial results of companies whose accounting year ended between July 1958 and June 1959.

The fixed assets of these 1,001 companies showed a smaller expansion in 1958 than in 1957, due partly to the completion or virtual completion in the preceding two years of the investment programmes in some industries under the second Five-year Plan, while inventory build-up, which had already slowed down in 1957, was negligible in 1958, reflecting, among other things, the continued shortages of certain essential raw materials due to import restrictions. The total gross capital formation (increase in gross fixed assets and inventories) in 1958 was, therefore, smaller, at Rs. 147 crores, as compared with that of Rs. 226 crores in 1957. Sales, the main source of income, recorded a smaller rise than in 1957. Expenditure, too, rose, but the increase was, however, smaller than that under sales and other income, so that the profit (before tax), which had suffered a sharp setback in 1957, improved moderately during the year under review. Thanks to the increase in profit, dividends were somewhat higher and retained profits also increased moderately. As regards sources of finance, the share of external sources (other than free reserves and surplus, depreciation and tax reserves) declined sharply from 72.3 per cent. in 1957 to 51.5 per cent. in 1958, due mainly to the considerably reduced recourse to borrowings from banks. Correspondingly, the share of internal sources rose from 27.7 per cent. in 1957 to 48.5 per cent. in 1958.

Earnings and Expenses

The earnings, expenses, profits and allocations of companies for the four years 1955 to 1958 are compared in the following table:

TABLE I

(In crores of rupees)

	For the year			
	1958	1957	1956	1955
INCOME				
Sales	1,789.38	1,703.14	1,566.15	1,396.60
Other income	22.40	20.26	17.30	14.60
Closing stocks of finished goods and work-in-progress ..	270.43	280.85	254.37	202.52
EXPENDITURE				
Opening stocks	280.75	256.39	204.74	190.60
Raw materials consumed and other manufacturing expenses	1,007.64	1,027.46	955 23	829.70
Excise duty	114 81	89 81	62 43	52.55
Other expenses	494.14	467.48	425 96	364 98
Managing Agents' remuneration.	8.91	8.47	11 89	14 69
Depreciation provision ..	56 03	52 29	46.69	42.30
Profits before tax	119.93	107 33	130 88	118 92
Less—Tax provision	55.63*	51 57	59.10	50.57
Profits after tax	64.30*	55.76	71 78	68.05
Dividends	46.44*	42.22	42.44	38.93
Profits retained	17 86	13 54	29.34	29.12
Total ..	2,082.21	2,004.25	1,837.82	1,613.72
Ratio of—	%	%	%	%
Gross profit† to total capital employed‡ ..	8.0	7.5	9 6	10.2
Gross profit† to gross sales ..	8.7	8.2	10.1	10.4
Profit after tax to net worth§	7.1	6.4	8.8	9.1
Dividends to paid-up (ordinary) capital	9.0	8.8	9.5	9.0

* These figures are not strictly comparable with those of the previous years, on account of the changes in the corporate taxation in the Finance Act, 1959. Tax at source on dividend income of shareholders is included in dividends and not in tax provision in respect of companies which closed their accounts between April and June 1959.

† Gross profit includes Managing Agents' remuneration, interest charges and tax provision, but excludes depreciation.

‡ Capital employed represents total net assets.

§ Net worth represents paid-up capital plus free reserves and surplus.

The upward trend in sales noted since 1953 continued in 1958 also, but the pace of increase was diminishing in the last three years. The slowing-down was more pronounced in 1958 than in the previous two years. Of the increase of Rs. 86 crores in 1958, as much as Rs. 65 crores were accounted for by five major industries, namely, cotton textiles, iron and steel, sugar, cement and other textiles. On the expenditure side, there was a fall of Rs. 19.8 crores or 1.9 per cent. in raw materials consumed and other manufacturing expenses, as compared with a rise of Rs. 72.2 crores in 1957 and of Rs. 125.5 crores in 1956. The fall was particularly marked in cotton textiles, jute textiles, sugar, engineering, chemicals and trading. The decline in cotton and jute textiles was mainly attributable to decline in prices, that in chemicals and engineerings to import restrictions and in trading industry to reduced purchases. All other heads on the expenditure side recorded a rise, thanks to an increase in salaries and wages, employees' welfare expenses, interest paid consequent on heavy borrowings for developmental purposes. The excise duty paid rose by another Rs. 25 crores, thus more than doubling the burden on this account in the last three years.

Profit Higher

The sharp break in profits before tax noted in 1957 proved to be temporary, in that they rose again in 1958, but still lagged behind those in 1956 by no less than Rs. 10.95 crores. An industry-wise analysis of the profits before tax shows that, whereas in 1958, shipping, iron and steel, sugar and mineral oils recorded a fall, in 1957, textiles, tea plantations and transport equipment mainly accounted for the decline in the trend.

The aggregate net profit (after tax) for 1958, dividend and the rates of dividend are not strictly comparable with those of the previous years, consequent on the changes in the system of company taxation introduced by the Finance Act of 1959. Further, as a part of the companies chosen for the latest study closed their accounts after March 1959, in which case the new system of taxation was applicable, the comparison is not on all fours. Subject to this limitation, the net profits, dividends distributed (both quantum and rate) and profits retained were still below those for 1956 or 1955.

As will be seen from the table above, the profitability, as measured by the ratio of gross profit to total capital employed, ratio of gross profit to gross sales and the ratio of net profit to net worth (paid-up capital and reserves and surplus) was better than that in 1957, though still lower than in 1956 or 1955.

The frequency distribution of the 1,001 companies according to percentage of gross profits to total capital employed shows that, in 1958, no more than 148 companies had a profitability of over 15 per cent., while, at the other end of the scale, 111 companies suffered a deficit. 579 companies had a profitability rate of 4 to 15 per cent. and, in the case of 163 companies, the profitability rate was low, ranging from 0 to 4 per cent.

Finances Compared

The pattern of assets and liabilities for the last four years is presented in the following comparative table:

TABLE II

(In crores of rupees)

	As at the close of			
	1958	1957	1956	1955
LIABILITIES				
Paid-up capital	555.50	527.06	498.79	466.01
Of which :				
Ordinary	459.67	434.88	404.50	380.85
Preference	95.83	92.68	89.29	85.16
Free reserves and surplus ..	352.98	338.31	322.60	280.97
Tax reserve	121.80	117.05	117.91	106.30
Borrowings	552.04	510.97	408.03	312.87
From banks	261.36	253.20	204.65	139.46
From finance corporations ..	16.46	15.44	11.56	8.17
Debentures	55.14	50.58	51.58	53.04
Others	219.08	191.75	140.24	112.20
Trade dues and other current liabilities	354.30	334.26	294.23	250.13
Miscellaneous non-current liabilities	17.67	16.37	15.78	13.80
Total ..	1,954.29	1,844.02	1,652.34	1,430.08
ASSETS				
Gross fixed assets	1,389.16	1,244.71	1,070.35	935.79
Less—Depreciation	537.35	487.34	441.77	404.84
Net fixed assets	851.81	757.37	628.58	530.95
Stocks and stores	566.03	563.00	511.35	420.37
Investments	109.58	107.37	106.26	105.47
Book debts	332.16	323.51	302.02	260.46
Other assets	20.35	20.69	23.49	22.52
Cash balances	74.36	72.17	80.64	90.31
Total ..	1,954.29	1,844.02	1,652.34	1,430.08

The total gross assets at the end of 1958 shows an increase of Rs. 160 crores over the year before and of Rs. 657 crores over the three years, and the total net assets are higher by Rs. 110 crores and Rs. 524 crores, respectively, so that the addition to depreciation during these three years is Rs. 132 crores. Of the total net assets at the end of 1958, net fixed assets at Rs. 852 crores, accounted for 43.6 per cent., as against 41.1 per cent. at the end of 1957, and 37.1 per cent. at the close of 1955. The net worth (paid-up capital and free reserves) represented 46.5 per cent. of the total liabilities, the ratio having fallen from 46.9 per cent. at the end of 1957 and 52.2 per cent. at the end of 1955. The declining trend in liquidity of companies noted since 1955 continued in 1958 also, as witness the fall in the ratio of current assets to total net assets from 59.8 per cent. in 1955 to 56.5 per cent. in 1957 and further to 54 per cent. in 1958. The ratio of current assets to current liabilities also stood lower at 1.27 per cent., as against 1.31 per cent. in 1957 and 1.49 per cent. in 1955.

Gross Assets Formation

As will be seen from Table II, the gross assets formation, at Rs. 160 crores, was smaller than that (Rs. 237 crores) in 1957 and Rs. 259 crores in 1956. The rise in fixed assets amounted to Rs. 144 crores (or Rs. 30 crores less than the rise in 1957), the rate of increase falling from 16.3 per cent. in 1957 to 11.6 per cent. This reflects partly the completion or virtual completion in the preceding two years of the large investment programmes in some industries under the second Five-year Plan and partly the effect of continued import restrictions. Inventory accumulation was only meagre at Rs. 3 crores or 0.5 per cent., having fallen from Rs. 52 crores or 10.1 per cent. in 1957. Consequently, the ratio of gross assets formation to total assets formation rose from 73.5 per cent. in 1957 to 90.1 per cent. in 1958. The share of inventories in total assets formation, which had dwindled from 35.1 per cent. in 1956 to 21.8 per cent. in 1957, declined further and rather sharply to a mere 1.9 per cent.

An industry-wise analysis of gross fixed assets formation shows that iron and steel continued to dominate, accounting as it did for as much as Rs. 40 crores or 27.9 per cent. of the total gross fixed assets formation, as against Rs. 68 crores or 39.2 per cent. in 1957. Together with cotton textiles, engineering, cement and shipping, this industry contributed about two-thirds of the gross fixed assets formation in 1958. Even though additions to inventory in the iron and steel, jute, cement, paper, vegetable oil, chemicals, coal, tobacco and electricity industries together amounted to Rs. 19 crores in 1958, there was a sizable reduction in cotton textiles and sugar, resulting in a very low overall rate of inventory formation.

During the year under review, the gross capital formation, comprising fixed assets and inventories, amounted to only Rs. 147 crores, as against Rs. 227 crores in 1957. As the study covers only companies representing 77 per cent. of the paid-up capital of all companies, it is estimated that the total capital formation for the entire public limited companies sector during 1958 may be of the order of Rs. 191 crores, of which gross fixed assets would be about Rs. 187 crores and inventories Rs. 4 crores. For the three years 1956-58, which correspond roughly to the first three years of the second Five-year Plan, the gross capital formation in the private corporate sector may be placed at Rs. 778 crores, of which about Rs. 589 crores would be in fixed assets.

Sources of Finance

An analysis of the sources of finance shows that the pattern underwent a significant change during 1958. There was a marked decline in the importance of external sources (that is, those other than free reserves and surplus and depreciation and taxation reserves), whereas these had played a dominant role in 1956 and 1957. Thus, the total assets formation of Rs. 160 crores in 1958 was financed to the extent of only Rs. 82.6 crores or 51.5 per cent. by external sources, while these had accounted for 72.3 per cent. in 1957 and 63 per cent. in 1956. Borrowings from banks, which had constituted the largest single source of external finance in 1956 and 1957 and had accounted for Rs. 65.2 crores or 25.2 per cent. and Rs. 48.6 crores or 20.5 per cent., respectively, contributed no more than Rs. 8.2 crores, or 5.1 per cent., in 1958. Fresh capital issues were also lower at Rs. 20.2 crores in 1958, as compared with Rs. 27.9 crores in 1957. As already pointed out, there was a corresponding increase in internal sources, accounting, as they did, for Rs. 77.7 crores or 48.5 per cent. of the total funds in 1958, as compared with Rs. 65.8 crores or 27.7 per cent. in 1957 and Rs. 95.91 crores or 37 per cent. in 1956. The bulk of these came from depreciation reserve, which accounted for Rs. 50 crores or 31.2 per cent. in 1958, having gone up from Rs. 45.6 crores or 19.2 per cent. in the previous year. The addition to the free reserves was only slightly higher at Rs. 22.9 crores, as against Rs. 21.1 crores in 1957. The total financing during the three years 1956-58 aggregated Rs. 657 crores, of which external sources provided no less than Rs. 417 crores or 63.5 per cent. Borrowings from banks constituted the largest single source, providing nearly 20 per cent. of the total funds. It may be noted with interest that, during the preceding five years 1951-55, external sources of funds were relatively less important, the share of these in the total funds being 40 per cent., while that of internal sources was 60 per cent.

New Issues

New issues of shares and debentures in 1958, at Rs. 27.1 crores, were smaller than those (Rs. 29.1 crores) in 1957, but were larger than those (Rs. 23.8 crores) in 1956. A notable feature of the new issues was that, while the proportion of ordinary shares in total new issues declined from 84.8 per cent. in 1957 to 63.5 per cent., that of debentures rose from a mere 3.3 per cent. to 21.8 per cent. The share of preference issues also increased from 11.9 per cent. in 1957 to 14.7 per cent. in 1958. Industry-wise, engineering accounted for a large portion of the total new issues. This industry raised Rs. 7 crores by way of ordinary shares, followed by cement (Rs. 4.6 crores) and chemicals (Rs. 1.7 crores). These three industries together accounted for over three-fourths of the total issues of ordinary capital. Again, in the total new issues of preference shares amounting to Rs. 4 crores, the share of engineering industry was Rs. 1.7 crores and over three-fifths of the debenture issues were by the engineering industry alone. Bonus issues amounted to Rs. 8.3 crores in 1958, of which over 70 per cent. or Rs. 5.9 crores was by the iron and steel industry.

GREAVES COTTON DOES WELL

Notwithstanding the severe restrictions on imports, Greaves Cotton and Company Ltd. (Managing Director: Mr. W. M. Wagle, Bombay) has had a favourable year of trading during the twelve months ended 31st March 1960. Its turnover recorded a sizable improvement over the previous years, the increase over 1958-59 alone being Rs. 44 lakhs to a high of Rs. 4.95 crores. Over the past three years, the turnover shows an expansion of Rs. 1.30 crore or 35.6 per cent. This progress was mainly due to the increased supplies of products manufactured by subsidiary and associated companies, towards development and expansion of which Greaves Cotton has made substantial contributions during the past few years. In addition, the Company was able to secure during the year under review valuable business from essential projects financed from foreign aid and the profit derived from this business also served to increase its income by no less than Rs. 7 lakhs. Both these are reflected in a further rise in gross profit from Rs. 39.72 lakhs (for 1958-59) to Rs. 47.56 lakhs, bringing the aggregate increase in profit during the past three years to Rs. 24.95 lakhs (from Rs. 22.61 lakhs in 1956-57).

The net profit (after providing for depreciation and taxation) amounts to Rs. 27.82 lakhs, representing an increase of Rs. 7.34 lakhs over 1958-59. About a third of the net profit—Rs. 9.12 lakhs to be precise—has been ploughed back to the various reserves. The dividend on ordinary shares is being raised from 7.5 per cent., free of tax, paid on the present capital for 1958-59 to 11 per cent., subject to deduction of tax, or 7.7 per cent. net, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sales	4,95.13	4,50.98	4,53.36	3,65.18

† Subject to deduction of tax.

‡ On an increased capital of Rs. 135 lakhs raised by the issue of additional capital of Rs. 46.6 lakhs in 1958.

The Company's increased turnover in 1958 benefited from the expansion of the cone and tube plant. This plant is now, according to the Directors, set to run at its maximum capacity and they feel that it should contribute usefully to the Company's turnover during the current year. Further progress was made during the year in the expansion programme of Messrs. Ruston and Hornsby (India) Private Ltd., one of the subsidiaries, to cover production of air-cooled and water-cooled multi-cylinder vertical engines. Import licences have been obtained and orders placed for plant and equipment to be procured from abroad. Regular production is expected to commence in the third quarter of 1961. Enquiries from prospective users indicate that the proposed wide range of engines will meet a long-felt need for industrial applications in the country. Production of calender bowls by another new company, known as Mather Greaves Private Ltd., formed for the purpose, is expected to commence before the end of the year 1960. Production of reduction gears by Messrs. David Brown Greaves Private Ltd., formed in June last, is expected to commence in June 1961. The Company will also manufacture marine gear boxes, for which there is considerable demand in the country. Yet another new company, known as Drayton Greaves Private Ltd., was formed in August 1960 for the manufacture of steam traps and regulators. An import licence for the necessary plant and equipment has been received. There has been some delay in the finalisation of the Company's negotiations with the Australian collaborators about the terms for the manufacture of Diamond drill bits. These have now been finalised and the Company has submitted an application to the Government for sanction of the project. Once the Government's sanction is received, the Directors are confident of implementing the project expeditiously.

As and when these new projects materialise, they are expected to contribute to the Company's profits by way of providing additional supply of goods for sale, as well as by way of dividends on investment. It is gratifying to note that trading during the current year indicates a steady improvement in supplies from indigenous sources. The additional investments in the new projects are expected to be of the order of Rs. 42.67 lakhs, of which Rs. 40 lakhs will be provided from the loan secured from the I.C.I.C.I. in April last.

The Company's reserves and surplus as at the end of March 1960 stand at Rs. 50.56 lakhs, as against a paid-up capital of Rs. 185 lakhs. Borrowings amount to Rs. 88.11 lakhs, having gone up from Rs. 60.31 lakhs a year ago. The other current liabilities aggregate Rs. 155.10 lakhs. The Company's assets comprise net fixed assets at Rs. 14.20 lakhs, investments at cost at Rs. 158.76 lakhs, stock-in-trade, stores, tools, etc., at Rs. 133.49 lakhs, book debts at Rs. 151.31 lakhs and cash balances at Rs. 26.05 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 166 *cum*-div., at which rate and on an *ex*-div. basis, the yield is 4.9 per cent. per annum, free of tax.

NEW ALCAN NAME FOR LARGE U.K. FABRICATOR

Aluminium Limited's principal fabricating subsidiary, formerly known as Northern Aluminium Company, Ltd., has changed its corporate name to "Alcan Industries Limited" and is in a position to inaugurate one of the largest aluminium rolling mills in the world. The 50-year-old British subsidiary, with three plants and 7,000 employees, is the largest single user of Alcan primary aluminium produced in Canada. The change in company name is an implementation of Aluminium Limited's policy to identify its world-wide operating and trading subsidiaries under the Alcan title.

Started originally in 1909 as a sales outlet in Britain for Canadian aluminium, Alcan Industries Limited has been expanded through the years into a $50 million fabricating operation. Its newly expanded plant at Rogerstone, South Wales, contains the largest aluminium rolling mill in the world outside the United States. It will be capable of rolling plate to widths of 11 feet for use in shipbuilding, and wide sheets for structural and transportation uses. The new mill was formally inaugurated on 6th October. The change of the British company's name involves no change in ownership, manufacturing activity, or sales policies. Alcan Industries Limited formerly produced the range of products marketed by Alcan Asia Limited in the Far East under the name Noral.

FERTILISER PLANT AT INDORE

A new company, known as Agro-Chemicals and Fertilisers Ltd., has been formed to undertake the manufacture of superphosphate in Madhya Pradesh at Indore. The Government has already granted industrial licence to establish a factory for this purpose. This will be the first fertiliser factory in west Madhya Pradesh where Chambal Project will irrigate 750,000 acres of land from next year.

The authorised capital of the Company is Rs. 1 crore, consisting of 90,000 equity shares and 10,000 6¼ per cent. tax-free (that is, 9.285 per cent. taxable) cumulative redeemable preference shares of Rs. 100 each. The capital proposed to be issued is Rs. 40 lakhs in the form of 30,000 equity shares and 10,000 preference shares. The Directors and promoters have already taken Rs. 15 lakhs equity shares and Rs. 15 lakhs equity shares will be offered to the public very shortly. The total cost of the project estimated is Rs. 40 lakhs, of which Rs. 30 lakhs will be provided by the proposed capital issue. The Company has applied to the I.C.I.C.I. for foreign exchange credit and has approached the L.I.C. with a request to take up a part of the preference share capital.

The factory will produce 30,000 tons of superphosphate per year. The erection work is hoped to be completed by the end of 1961 and production is expected to commence in January 1962. There will be no managing agency.

A NEW INDO-U.S. TYRE VENTURE

India will have another large tyre manufacturing factory which, when it goes into full production, will considerably relieve the truck tyre and tube shortage in the country. The Madras Rubber Factory, Madras, one of the biggest rubber factories in India, has been given an industrial licence to manufacture automobile tyres and tubes. The new factory will manufacture tyres and tubes in collaboration with Mansfield Tyre and Rubber Company, one of the well-known rubber companies in the United States, which will also subscribe nearly 25 per cent. of the capital. The factory has also obtained a long-term loan of $2.5 million from an American bank.

The capacity of the factory, when it goes into full production early in 1962, will be over 300,000 tyres and tubes per annum. One of the highlights of the collaboration agreement is that the India-made tyres can be exported throughout the world, except the United States and Canada. While the capacity of all the factories in India is only 2.5 million tyres a year, the demand of tyres is expected to go over 4 million tyres during the third Five-year Plan.

Mansfield tyres are not new to India; they were widely in use in the country before World War II. This is Mansfield's second collaboration arrangement, the first being in Egypt.

COMPANY MEETINGS AND DIVIDENDS

DELHI CLOTH AND GENERAL MILLS CO., LTD. Annual General Meeting, Delhi, 17th October 1960. Dividend: 12 per cent. or Rs. 3.00 per share, on ordinary shares of Rs. 25 each and Re. 0.30 per share, on ordinary shares of Rs. 2.25 each.

MALANKARA RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Kottayam, Kerala State, 21st October 1960. Dividend: 15 per cent. or Re. 1.50 per share, subject to deduction of tax. Transfer books remain closed from 5th to 21st October 1960, both days inclusive.

KEMP & CO., LTD. Annual General Meeting, Bombay, 24th October 1960. Dividend: Rs. 25.00 per share, on shares of Rs. 200 paid up, subject to deduction of tax, payable on or after 7th November 1960. Transfer books remain closed from 10th to 24th October 1960, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Dividend of £4 per cent. net (Tax applicable at 7s. 9d. in the £) on the Company's ordinary stock, for the year ended 31st March 1960.

SYNOPSES OF COMPANY REPORTS

Sassoon and Alliance Silk Mill Co., Ltd.

THE directors of the above Company (Chairman: Mr. Ramnath A. Podar, Bombay) present the audited accounts of the Company for the year ended 31st December 1959.

The profit and loss account of the Company for the year shows a credit balance of Rs. 26,253. After adjusting this amount against the loss of Rs. 3,61,580 brought forward from the previous years, the balance of Rs. 3,30,227 has been carried forward to the next year, out of which Rs. 1,78,222 has been set off in the balance sheet against the general reserve.

Considering the successive heavy losses sustained since 1952, the Company has made considerable progress during the year under report. The installation of new machinery has resulted in better quality and efficiency affording more scope for changes in variety of fabrics to cater to wider markets. Production was also stepped up by about 60 per cent. as compared to last year. On the other hand, there have been quite a number of adverse factors, such as increases in excise levy on fabrics as well as yarn, cut in the import allocations for yarn, rise in dear food allowance payable to workers, etc. The directors feel that the Company should be in a position to do better in 1960.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Gross block	29,94,246

Western India Plywoods, Ltd.

The directors of the above Company (Managing Director: Mr. A. K. Kaderkutty, Baliapatam) present the audited accounts of the Company for the year ended 31st March 1960.

After providing Rs. 11,00,000 (Rs. 46,033) towards development rebate on the hard board plant, Rs. 2,02,237 (Rs. 1,45,901) for depreciation on machinery, buildings, etc., and Rs. 1,55,000 (Rs. 1,30,000) for bonus to staff and workers, the surplus as per the audited account shows a sum of Rs. 3,06,634 (Rs. 13,31,663). With the balance brought forward from last year of Rs. 16,554 (Rs. 20,286) making a total of Rs. 3,23,188 (Rs. 13,51,949). The directors recommend to dispose of this amount as follows:—

To pay a dividend of 6 (6 per cent. tax free) per cent. subject to deduction of tax, on the cumulative preference share capital of the Company absorbing Rs. 37,050 (Rs. 37,050) and to pay a dividend of 10 (10 per cent. tax free) per cent. subject to deduction of tax on the ordinary share capital absorbing Rs. 2,80,737 (Rs. 2,70,000) leaving a balance of Rs. 5,401 (Rs. 16,554 after providing Rs. 7,48,000 to reserve for income-tax and wealth tax; Rs. 50,000 to dividend equalisation reserve; Rs. 30,000 to rehabilitation reserve; Rs. 2,00,000 to reserve for Industrial Finance Corporation Loan repayment and Rs. 345 to reserve for contingencies) to be carried forward to the next year's account.

The working of the Company continues to be satisfactory. The new hard board factory went into production by the end of February, 1960 and the Company's products have already come into the market and well received.

Accounts in brief are as under:—

Mandya National Paper Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Bedi and Co. Management Private Ltd., Bangalore) present the audited accounts of the Company for the period from 1st April 1959 to 30th June 1960. As all the transactions are of a non-revenue nature representing expenditure incurred during the period of construction to be allocated towards capital expenditure, a profit and loss account has not been made up.

During the period under report, 3,97,927 equity shares of Rs. 10 each and 60,000 seven per cent. tax-free redeemable cumulative preference shares of Rs. 100 each, were offered for subscription and have been fully allotted. The directors are pleased to report the confidence of the public in the future of this Company, which is evident from the fact that the issue of equity shares was heavily over-subscribed.

Agreements with the Technical collaborators and machinery suppliers, Messrs. Parsons & Whittemore, in respect of deferred payments to the extent of Rs. 1.82 crores to meet the cost of machinery and technical services, with the Industrial Finance Corporation of India for guaranteeing the deferred payments and with the Mysore Sugar Company Limited for the supply of Bagasse (primary raw material), have been satisfactorily concluded and executed.

The Company have already acquired 28 acres and 26 guntas of land at Belagola for the construction of the Factory and that is considered adequate for the expansion scheme also. The construction of the Factory buildings is in progress according to schedule. Suitable arrangements for the additional supply of Bagasse will be made in due course with Mysore Sugar Company Limited. Negotiations are also in progress with the Government of Mysore for allocation of bamboo areas. The mills are designed on Pandia continuous system which is capable of using any raw material for pulping, be it bagasse, straw, bamboo or wood with equal ease and facility. Adequate water supply and power will be available for the expansion. The shipments of machinery from abroad have commenced. The erection and installation of plant and machinery is expected to be completed by July-August 1961.

In December 1959, the Government of India announced their acceptance of the recommendations of the Tariff Commission resulting in a substantial cut in the prices of paper from 1st January of this year. The directors have considered the expansion of the present capacity from 35 tons per day to 70 tons per day, as the proposed expansion would lead to more efficient, economical and profitable operations from lower manufacturing cost per ton of paper produced. The total cost for the expansion is estimated at Rs. 1.8 crores out of which Rs. 1.2 crores will be met by deferred payment arrangements with the Company's Technical Collaborators on similar lines as before and the balance of Rs. 60 lakhs will be met out of the present proposed issue. By addition of less than half of the original estimated capital requirement, the production capacity of the mills will be doubled.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

		Miscellaneous expenditure ...	3,75,813
Rs.	1,52,21,635	Rs.	1,52,21,635

Tulsipur Sugar Co., Ltd.

The directors of the above Company (Secretary: Mr. M. P. Jhunjhunwala, Calcutta) present the first audited accounts of the Company for the period from 21st April 1959 to 30th June 1960.

As per scheme sanctioned by the Hon'ble Calcutta High Court, the Company took over half of the assets and liabilities of Balrampur Sugar Co. Ltd., by allotment of equity shares to the shareholders of the latter Company. As a result, the Company took over the Tulsipur Sugar Factory out of the two Sugar Factories owned by the said Balrampur Sugar Co. Ltd. on the 1st July, 1959. In the matter of closing the financial year, therefore, the directors have thought it desirable to follow what has been the practice for a great number of years by the said Balrampur Sugar Company Ltd.

The results for the period after deducting all working charges and commission show a profit of Rs. 3,86,950 to which is added the provisions and sundry items amounting to Rs. 25,539 making a total of Rs. 4,12,489. Out of this provision has been made for depreciation amounting to Rs. 1,12,399, for development rebate reserve Rs. 1,34,000 and provision for taxation Rs. 60,000 leaving a balance available for disposal of Rs. 1,06,090. The Company has paid an interim dividend at 62 nP per share, absorbing Rs. 86,804 leaving a balance to be carried forward of Rs. 19,286.

The interim dividend of 62 nP per share is subject to deduction of income-tax and is in effect the final dividend payable out of the profits.

The factory started working on 21st November 1959 and continued till 5th May 1960. During the period your factory crushed 33,43,913 maunds of cane as against 21,57,885 maunds, in 1958-59, when the factory was owned by The Balrampur Sugar Company Ltd. The average recovery obtained was 9.53 per cent. compared to 9.56 per cent. for the last year. The factory worked for 143 days compared to 103 days during the previous year. The reason for the lower recovery during the period under review is heavy rains during the latter part of the year just before the commencement of the crushing which delayed the maturity of cane and affected recovery. The working of the factory resulted in the record production of more than 24 lakh tons of sugar during the season, which exceeds the target fixed for the second Five-year Plan.

The directors have been in constant correspondence with the various department of State and Central Governments for construction of the roads in neighbouring area of the factory as well as for sinking of more tubewells. Inspite of repeated representations no marked improvement is visible but the directors expect that in the coming years some definite steps towards above will be taken by the Government. On completion of the roads and sinking of more tubewells, the production and availability of cane will be increased to a great extent.

Expansion: The expansion work has been progressing well according to the schedule. The capacity of the factory has been expanded during the period from 746 tons to 890 tons. The scheme for expanding the same further to 1,200 tons is in hand and is expected to be completed by 1961. For the said expansion of 890 tons, a capital expenditure of Rs. 7,00,000 about has been incurred and it is estimated that a further sum of Rs. 15 lacs approximate will be spent in the proposed expansion of the capacity to 1,200 tons. This, it is expected will have a great influence in reducing the manufacturing expenses and increasing the overall efficiency of the factory.

Season 1960-61: According to the information available it is expected that in the coming season, the Factory shall be able to crush more cane in a shorter period, than the period under review, as a result of expanded capacity which will be commissioned before the start of ensuing season. Depending upon weather, rains and other factors such as price for raw materials and products and other expenses the directors are hopeful of getting better results next year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Malankara Rubber and Produce Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. John Sons' Estates and Agencies (Private) Ltd., Kottayam] present the audited accounts of the Company for the year ended 31st March 1960.

Rubber.—The crop harvested during the season was 6,70,174 lbs. (3,03,986 kg.) at an estate cost of Rs. 4,79,027.12, i.e., 71.48 cents per lb. compared to 6,85,499 lbs. at 67 cents per lb. during the previous season. The average price obtained for the season's rubber was 148.50 cents per lb.

Coconut.—The crop for the season was 5,56,222 nuts as compared to 5,70,984 nuts obtained during the previous season. The average price realised for the season's crop was Rs. 22.39 per 100 nuts as compared to Rs. 23.61 per 100 nuts for the previous season.

Pepper.—A crop of 8,164 lbs. pepper including rejections was collected during the season. This crop has not yet been sold.

The net profit for the season was Rs. 2,09,136 (Rs. 2,48,667) after writing down depreciation on buildings, machinery, etc., amounting to Rs. 37,582 (Rs. 31,719) and after providing Rs. 2,12,000 (Rs. 2,36,000) against income-tax both agricultural and non-agricultural for assessment year 1960-61 and also Rs. 24,552 (Rs. 2,894) against short provision of income-tax, etc., for the previous year. The Agricultural Income-tax authorities have disallowed the proportionate expenditure incurred for the upkeep and maintenance of immature rubber and treated the capital receipt from the sale of rubber trees, coconut trees and other jungle trees as revenue receipt in the previous year's assessment and consequently the agricultural income-tax assessment was much higher than that provided in the previous year's accounts. An appeal has been filed against this assessment. The final outcome of this appeal would mainly depend upon the decision of the Supreme Court of India where a test case sponsored by the Planters Association on the question whether maintenance expenses of immature plantation should be treated as revenue or capital expense is still pending.

Including the previous year's balance brought forward of Rs. 11,167 (*nil*) the sum available for allocation is Rs. 2,20,303 (Rs. 2,48,667). The directors propose to pay a dividend of 15 (16 per cent. free of tax) per cent., taxable amounting to Rs. 2,02,500 (Rs. 2,16,000). The directors have transferred Rs. 7,861 (Rs. 21,500) to general reserve account to fully provide for the capital expenditure not covered by capital receipts and depreciation provision and the balance of Rs. 9,942 (Rs. 11,167) is proposed to be carried forward to next year.

The estimate for the current season is for a crop of 6 lakhs pounds dry rubber at an estate cost of 83.12 cents per pound excluding income-tax and super tax as well as managing agency commission and head office expenses. From the result obtained so far it is expected that the actual crop for the season would exceed the estimate.

During the season 1960-61, there is replanting of rubber in 67.80 acres of old area, besides new planting in 41 acres in virgin land. Also a part of the coconut area badly affected by leaf disease, comprising of 50.07 acres, is being planted up with rubber.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,50,000	Gross block	21,39,476

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE following posts in the Bank:

(A) Posts and Scales of Pay

(i) Banking Officers:—Rs. 375-55-815 E.B. 55-925-60-1,045.

(ii) Probationary Assistants:—Rs. 250-25-450 E.B. 25-650

(iii) Banking Assistants:—Rs. 175-12.50-300 E.B. 20-440.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) Qualifications

(i) *Banking Officers*: Applicants should have:—

(*a*) a first or high second class Master's degree of any recognised Indian or foreign University with Economics, Banking, Commerce or Accountancy as a special subject of study and should also have proficiency in drafting. They should possess at least 10 years' practical experience of work in a commercial bank and should have held responsible positions such as an Agent or an Inspector of branches for some time; or

(*b*) they should be Chartered Accountants with a minimum standing of 5 years.

Preference will be given to those who have passed the examinations of the English or Indian Institute of Bankers.

(ii) *Probationary Assistants*: Applicants should have a brilliant academic record and a first or high second class Master's degree of a recognised Indian or foreign University with Economics, Banking, Commerce or Accountancy as a special subject and should also have some proficiency in drafting. Educational qualifications may be slightly relaxed in the case of candidates who have passed the Institute of Bankers' examinations and/or possess practical banking experience in a supervisory capacity in a commercial bank. Candidates who have applied recently for these posts in the Department of Banking Operations or the Agricultural Credit Department in response to previous advertisements dated the 6th February and 13th August 1960 need not apply again.

(iii) *Banking Assistants*: Applicants should have a high second class Master's degree or a first class Bachelor's degree of a recognised Indian or foreign University in Economics, Commerce, Banking or Accountancy and also have some proficiency in drafting. Educational qualifications may be slightly relaxed in the case of candidates who have passed the Institute of Bankers' examinations and/or possess some practical commercial banking experience.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) Age Limits as on 1st November 1960

(i) *Banking Officers*: Candidates should not ordinarily be over 35 years of age but the age limit may be relaxed in the case of candidates with exceptionally good experience of value to the Bank.

(ii) *Probationary Assistants*: Between 21 and 25 years.

(iii) *Banking Assistants*: Between 18 and 24 years.

In the case of (ii) and (iii) the maximum age limit is relaxable but not beyond 30 years in the case of:

(i) candidates possessing special qualifications and experience of value to the Bank;

(ii) candidates with approved war service;

(iii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iv) personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and

(v) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit *separate* applications accompanied by separate application fees and *should clearly indicate the post for which they have applied.*

3. Applicants for the posts of Banking Officers and Probationary Assistants must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a *Scheduled Bank* payable at Bombay or by Postal Order. Applicants for the posts of Banking Assistants must remit a fee of Rs. 2.00. *The application fee is in no case refundable.* Bonafide refugee candidates *not in employment* applying through Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Trivandrum and Patna accompanied by copies (*originals should not be sent*) *of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and Post Graduate degree examinations and two testimonials* should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1, so as to reach him on or before the 5th November 1960.

5. *Candidates should also indicate in their applications whether they had applied previously for a similar post in the Reserve Bank and if so with what result.*

6. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected, at the time of their appointment in the Bank's service.

7. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

8. Selected candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing will be regarded as a disqualification.

ORIENT PAPER MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-second Annual General Meeting of the ORIENT PAPER MILLS LIMITED will be held at the registered office of the Company at Brajrajnagar in the district of Sambalpur (Orissa) on Wednesday, the 9th November, 1960, at 11 a.m., for the following purposes:—

(*a*) To receive and consider the report of the Directors and to adopt the audited accounts of the Company for the year ended 31st March, 1960.

(*b*) To declare dividends on Preference and Ordinary Shares.

(*c*) To elect Directors in place of those who retire by rotation.

(*d*) To Appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

(*e*) To consider to appoint H. H. Maharajadhiraj Sir Sawai Man Singhji Bahadur of Jaipur as a Director of the Company. He was appointed as an additional Director of the Company by the Board of Directors and shall hold office under Section 260 of the Companies Act, 1956, and Article No. 126(*a*) of the Articles of Association of the Company, only upto the date of the annual general meeting. A notice has been received from a member of the Company, signifying his intention to propose at the annual general meeting that His Highness be appointed a Director of the Company.

It is considered advisable in the interests of the Company, to appoint him on the Board, to avail of his valuable advice.

(*f*) To consider and if thought fit, to pass with or without modification, the following resolutions as Special Resolutions:—

(i) RESOLVED that the payment of commission to the Directors (including whole-time or Managing Directors, if any) under Article 117 of the Articles of Association of the Company, be and is hereby sanctioned for a further period of five years with effect from the 1st April, 1961.

(ii) RESOLVED that the loans taken by the Company since 1st April, 1956, from its Managing Agents, Messrs. Birla Brothers Private Ltd., from time to time and payment of interest thereon be and are hereby approved and confirmed and that sanction be and is hereby accorded to the Directors to borrow from the Managing Agents such amount as may be considered necessary by them on such terms and conditions (including rate of interest and security) as may be considered proper by them in their discretion.

EXPLANATORY STATEMENT

f(i) The Directors (including the whole-time or Managing Directors, if any) are paid commission upto 1% on the net profits of the Company under Article No. 117 of the Articles of Association of the Company. The shareholders passed a Special Resolution at an Extraordinary General Meeting providing for payment of such commission upto 31st March, 1961. As required under the provisions of the Companies Act, 1956, this resolution has now been proposed to obtain your sanction to continue the said payment for a further period of five years with effect from the 1st April, 1961.

f(ii) Messrs. Birla Brothers Private Limited, the Managing Agents of the Company, have in the past granted interest-bearing loans to the Company from time to time for the Company's requirement. It may be necessary in future also for the Company to take loans from the Managing Agents at such rate of interest and on such terms and conditions and on such security as may be agreed to between the Board of Directors of the Company and the Managing Agents. In case the granting of such loans by the Managing Agents be considered as services rendered by them to the Company, within the meaning of Section 360 of the Companies Act, 1956, this resolution has been submitted to the Shareholders for their sanction.

With reference to the first resolution stated above, the Directors are interested to the extent of the commission payable to them. A copy of the Articles of Association may be inspected either at the registered office of the Company at Brajrajnagar or at 8, India Exchange Place, Calcutta, on any working day during business hours.

With reference to the resolution seeking for your sanction to borrow money from and payment of interest to the Managing Agents, it may be pointed out that Shri G. P. Birla and Shri A. L. Goenka are the nominee Directors of the Managing Agents on the Board of the Company. Shri G. P. Birla is also a member and an executive of the Managing Agents.

The Register of Members and the Share Transfer Books will remain closed from the 20th October to 9th November, 1960, both days inclusive.

By Order of the Board,

B. K. VYAS,
Secretary.

8, INDIA EXCHANGE PLACE,
CALCUTTA, *the 26th September*, 1960.

N.B.—(i) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The dividends, when declared, will be payable to registered shareholders as on the 9th November, 1960, on or after the 1st December, 1960.

THE MYSORE PAPER MILLS LTD.

(Concluded from page 690)

ernment of India for expansion of the production capacity from 8,000 to 16,000 tons and that it was receiving active and sympathetic consideration at the hands of the Central Government and also said that, if my anticipation of securing necessary licences be fulfilled, steps would be taken to place specific proposals before you for consideration. In this connection, I am happy to inform you that industrial licence under the Industries (Development and Regulation) Act 1951 to expand the production capacity from 8,000 tons to 18,000 tons has been received from the Government of India. As stated in the Directors' report, the scheme of expansion has been formulated and proposals have been made to finance the scheme both by borrowings and increase of share capital. The capital cost of the scheme is estimated to be over Rs. 300 lakhs, of which about one-half would be required in foreign currency.

"In the month of July of this year I had to go abroad in connection with the work of Messrs. Tungabhadra Steel Products Ltd., Tungabhadra Dam, and as per the desire of your Directors, I took this opportunity to negotiate for a foreign exchange loan with the Commonwealth Development Finance Company Limited, London. Our General Manager, Sri V. K. Subramanian, also accompanied me in my tour. We had several discussions and consultations with the authorities of the Commonwealth Development Finance Company Limited, London, and the Industrial Credit and Investment Corporation of India Limited, Bombay, and I am happy to keep you informed that our requests have been receiving favourable and sympathetic consideration at their hands. I have every hope that, subject to the usual formalities to be observed in accordance with the rules and procedures, the required loan in foreign exchange would be made available to us ere long. I should also add that both the Commonwealth Development Finance Company Limited, London, and the Industrial Credit and Investment Corporation of India Limited, Bombay, have expressed their desire to participate in the equity capital, if possible. As regards the rupee loan to be obtained, we have contacted the Industrial Finance Corporation of India, New Delhi, and I am sure that, with the cordial relations we are having with them and record of repayment of their loan, the required support and assistance would be forthcoming.

"Enquiries had been sent out and quotations from well-known machinery manufacturers have been received and they are under our consideration. The General Manager and myself, during our visit abroad, also contacted the several machinery manufacturers and had the opportunity of studying at close range the conditions and trends obtaining in capital goods markets in foreign countries. I am confident that, after the question of foreign exchange loan is finally decided, we would be able to finalise our scheme, which would be both sound and economical. I may also keep you informed that, in view of the difficult position of foreign exchange, we would like to purchase as much indigenous machinery as possible and this aspect will be kept in view while finalising the scheme.

"I now come to that aspect of the scheme which requires your immediate consideration. The proposal to raise the authorised capital to Rs. 1½ crores is before you for approval and I have no doubt you would accord your approval to the proposition to enable us to take up the scheme for implementation. I should like to add that the amount will be collected as and when the necessity for funds arises.

"Before I conclude, I wish to express on behalf of the Directors and the shareholders our grateful thanks to the Central and State Governments for the abiding interest they have in the progress of the Mills. I am very grateful to my colleagues on the Board for the uniform courtesy, consideration and valuable guidance I have been receiving. I wish also to express on behalf of the Directors and myself our warm appreciation of the willing and efficient co-operation of all our employees.

"Ladies and gentlemen, I now move that the Directors' report and the audited balance-sheet and the profit and loss account for the year ended 31st March 1960 be approved and adopted."

Note:—This is not a report of the proceedings at the above meeting, of which proceedings a separate note will be circularised.

COMMERCE AND INDUSTRY

(Concluded from page 700)

welfare programmes rest. It is human enough to want to have more and more revenue, and, as the accompanying table shows, the countries concerned have enjoyed a remarkable rise in oil revenues over the past few years. But it must be realised that prices of all commodities fluctuate from time to time. Yet, down the years, none has enjoyed such relatively stable prices as crude oil and no commodity has brought such rapid increases in income to the producing countries. The desire for security of income is, of course, understandable; but oil groups have no less concern with maintaining their levels of income.

Despite occasional fluctuations in market prices, there will be still higher oil revenues in the years ahead. Almost certainly, however, revenues will not progress on the same scale as during the past ten years or so, which must be regarded as a quite abnormal period of economic expansion. Abundant oil reserves are now available both in the Middle East and elsewhere and new producing countries are coming into the picture. Oil, like any other commodity, has no intrinsic worth other than what it will fetch from people who want it. In today's circumstances, it is a less valuable commodity in the world market than it was when relative scarcity prevailed. A comparatively new factor is the increasing competition from Russian oil which is certainly depressing market prices. Though the volume of Russian exports, now running at a rate equivalent to less than half the production in Iraq, may not seem impressive in relation to the free world's demand, the impact in certain markets has affected the price level of much larger quantities of oil. It should be remembered also, however, that, to a significant extent, competition within the oil industry arises, and will arise still more in the future, from the past actions of some of the oil producing countries themselves, who have felt it desirable to attract more concerns to their territories regardless of these concerns' lack of marketing outlets. Oil exporting countries cannot hope to isolate themselves from the workings of the highly competitive industry of which they are an integral part.

Several months ago, Dr. Perez Alfonzo, the Minister for Mineral Affairs in Saudi Arabia, first put forward the idea of international prorationing with the thought of keeping supply closer in line with demand and so maintaining the level of prices. The same idea was put forward at Baghdad in more general terms. Here again, the control which the Government would then seek to exercise over producers' outputs would run counter to the freedom to produce and export which all the concessionaires enjoy under their concession agreements. As has already been pointed out in these columns, it is hard to see how such a scheme could be carried out equitably and successfully, in view of the marked differences in the established positions of the affected countries and companies, and the fact that several new producing/exporting countries are eagerly anticipating the development of their own oil resources. The prorationing systems practised in the United States and Canada have been evolved in different legal settings and with different purposes from those of international price maintenance.

There is obviously an underlying interdependence between the producing countries and oil companies, which implies a need for mutual understanding. It is in the reaching of a better understanding that lies the primary justification for the conferences called by the Arab League last year in Cairo and again this month in Beirut. This month's conference is being attended also by observers from Venezuela and from other non-Arab countries. Nothing but good can come from the open discussion by representatives of the Governments and of the local industry of their common interests, their problems and their differences. The cut and thrust of argument can do much not only to bring mutual enlightenment in regard to facts, but to create better feelings and remove prejudices. Lack of knowledge and understanding by the producing countries of the immense complexities of the international oil business has, in the past, often led to misunderstandings and strained relationships with the oil companies and worse, sometimes to suspicion or ill-will.

If through the Arab League conferences, or through O.P.E.C., better appreciation of the problems of the oil industry can be got, then it will be all to be good. The oil companies can do something to help. Their active participation in the Arab League's conferences is very valuable. It is certainly true, however, that despite the mounting volume of information they dispense, the companies are, for fear of distortion and consequent difficulties, and for fear of competitors, still often reluctant to make pronouncements on possibly controversial matters such as prices, which are of crucial importance to all who have a stake in the industry.

It was a highy welcome feature of last year's conference in Cairo that, in the atmosphere of goodwill and bonhomie created, problems were freely and openly discussed. With that experience, one may expect similar frank and interesting discussions at Beirut this month. In one sense, the recent Baghdad meeting has stolen some of the thunder of Beirut. But the ideas evolved at Baghdad will give fresh point to the many controversial questions that will certainly be raised at this month's assembly.—*By arrangement with Petroleum Press Service.*

Notices

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

TENDER NOTICE

Manufacture of Cast Iron Sleepers

TENDERS ARE INVITED FROM ESTABlished foundries in India, having experience in the manufacture of Cast Iron Sleeper Plates for supply, by 31st December 1961, of about 3,50,000 Tons of Cast Iron CST9 Sleeper Plates both B.G. and M.G. Tenderers may quote for any small quantity according to their capacity. Tenders quoting for the supply of 3,000 Tons and above, of B.G. Cast Iron Sleeper Plates, it would be obligatory to quote for the supply of M.G. Cast Iron Plates also for a quantity of not less than 30 per cent. of the total quantity quoted for.

2. Railway Board would recommend to the Iron and Steel Controller the issue of Pig Iron according to the requirements of the supplier up to a maximum of 100 per cent. of the quantity of sleepers ordered on the firm. The firms are expected to make up the melting losses under their own arrangements.

3. Applications for tender documents should be made to any of the following officers from 7th October 1960:—

(i) The Director, Railway Stores, Railway Board, State Entry Road, New Delhi.

(ii) The Deputy Director Works (Bridges), Railway Board, 14 Strand Road, Calcutta

Tender Documents embodying conditions of Contract will be supplied at Rs. 3 per set and will be available for sale during office hours.

Relevant drawings, if required, may be had separately on payment of Rs. 8 per set of drawing.

4. Tenders will be received upto 12.00 hours on the 18th November, 1960 and opened in the office of the Railway Board on State Entry Road, New Delhi, at 15.00 hours on the same day.

QURBAN SINGH,
Director, Railway Stores.

NEW DELHI,
Dated 26th September 1960.

ASSOCIATED BATTERY MAKERS (EASTERN) LIMITED

MEMBERS OF THE COMPANY WHO HAVE not yet surrendered their Letters of Allotment in exchange for the relative Share Certificates should submit their Letters of Allotment duly endorsed to the Company's Registrars, Andrew Yule & Co., Ltd., 8, Clive Row, Calcutta-1, as soon as possible.

ASSOCIATED BATTERY MAKERS (EASTERN) LTD.,
H. M. COX,
Secretary.

CALCUTTA, *12th October 1960.*

TREASURY BILL RATE HARDENS FURTHER

(From Our Own Correspondent)

BOMBAY, *12th October*

There has been no change in the state of the money market during the week undere review. If anything, the stringency has become a little more acute. Thanks to the persistent demand for bank credit and the need for reducing borrowings from the Reserve Bank, banks are keen borrowers, but lenders are scarce. The prevailing condition is not, however, reflected in the interest rates, except in the Treasury Bill discount rate, which has hardened further. Inter-bank call money is being bid at 4 per cent. among all sections of banks and the chances of this rate moving up after the busy season sets in are not ruled out. House money at 21 days' notice is unchanged at 2 per cent., the ceiling fixed by the Reserve Bank. Short-term deposits for one to two months are being offered 3½ per cent. and for three months and over 3¾ per cent.

The 91-day Treasury Bill discount rate has, however, hardened further to 2.560 per cent. per annum from 2.552 per cent. The amount offered at Rs. 2.35 crores, is slightly less than that (Rs. 2.55 crores) received last week, against the usual invitation for Rs. 2 crores. There were no sales of Intermediate Treasury Bills during the period from 5th to 8th October. They will, however, be offered again this week at the same rate as last week, namely, Rs. 99.376 per cent., that is at a discount of 2.496 per cent. per annum.

The Reserve Bank of India statement for the week ended 7th October 1960 shows a sizable expansion of Rs. 20.87 crores in notes in circulation, while notes held in the Banking Department are lower by Rs. 2.78 crores, so that the total notes issued are higher by Rs. 18.10 crores. This is covered by a rise of Rs. 20 crores in rupee securities and a reduction of Rs. 1.90 crore in rupee coin. There has again been no change in foreign securities, but a small, but welcome, rise of Rs. 1.62 crore is noted in balances held abroad, bringing the total foreign assets to Rs. 140.80 crores. Deposits of the Central Government are lower by Rs. 7.98 crores and those of the other Governments by Rs. 7.21 crores. There has been only a fractional rise in deposits of banks. Loans and advances to Governments show an increase of Rs. 11.83 crores and other loans and advances a decline of Rs. 2.88 crores. A marked fall of Rs. 35.38 crores is noted in investments, while holdings of Government Treasury Bills have increased by Rs. 6.93 crores.

A drop of Rs. 2.87 crores in deposits is disclosed by the Scheduled banks' statement for the week ended 30th September 1960, mainly due to the fall of Rs. 4.50 crores on State Bank's account. Inter-bank borrowings have, however, gone up by Rs. 2.92 crores. While borrowings from the Reserve Bank have dwindled by Rs. 13.29 crores, those from the State Bank are higher by Rs. 2.92 crores. There has been an increase of Rs. 5.01 crores in advances and bills, of which the share of the State Bank of India is Rs. 3.03 crores. The fall in deposits and reduction in borrowings from the Reserve Bank, accompanied by an increase in advances, have resulted in a disinvestment of Government securities to the tune of Rs. 3.76 crores, the share of the State Bank being Rs. 2.05 crores, and also shrinkage in cash balances of Rs. 6.71 crores, despite an increase of Rs. 5.44 crores in the State Bank's portfolio. Money at call and short notice has, however, gone up by Rs. 5.14 crores.

The Gilt-edged market continues to be dominated by sellers and, in the absence of buyers, business in Central loans is next to nothing. State loans have been marked down heavily, the extent of fall ranging from 10 nP to 75 nP in 4 per cent. loans and up to Re. 1.50 in 4½ per cent. issues. Among Central loans, 3 per cent. 1986 Conversion Loan is stagnant at Rs. 73.75, and 3 per cent. 1970-75 Loan is stagnant at Rs. 73.75, and 3 per cent. 1966-68 has shed no less at Rs. 90, while 3 per cent. 1966-68 has shed no less than 20 nP to Rs. 95.60. 2½ per cent. 1962 has been marked down by 5 nP to Rs. 98. In the State loans section, Maharashtra 4 per cent. 1969 has declined by 10 nP to Rs. 99.65, 4 per cent. 1970 by 40 nP to Rs. 99.60, and 4 per cent. 1971 by 45 nP to Rs. 99.55. 4½ per cent. 1969, 1970 and 1971 loans have each shrunk by Re. 1.50 to stand at par. 4 per cent. 1969 West Bengal is lower by 10 nP at Rs. 99.65, similar loan of Madras by 25 nP at Rs. 99.65, Andhra by 25 nP at Rs. 98 and U.P. by Rs. 98.25, Andhra by 25 nP at Rs. 98 and U.P. by 75 nP at Rs. 98.25. 4½ per cent. 1970 loans have all moved down by 50 nP to Rs. 99.50, except West Bengal which stands at par.

There has been a slight weakening of the rupee in terms of the U.S. dollar during the week, which is reflected in a rise in the banks' selling rate for sterling abroad. Thus, in New York, spot sterling has retreated from 281.01-281.04 cents to 280.86-280.89 cents and three months' forward from 279.64-279.67 cents to 279.60-279.63 cents.

TRADING IN LINSEED LIMITED

(Messrs. A. Bradley and Co.)

CALCUTTA, *10th October*

The linseed market was rather lifeless during the week and prices showed little movement either way. The general undertone remained firm, but trading was very limited. Stocks of seed were small and sellers were reserved. Crushers were showing interest for ready and forward deliveries.

The oil market was steady, though business was negligible. Sellers were not inclined to do much at current prices.

The oilcake market ruled firm, despite the quiet trend of overseas markets. Local buyers showed great interest for ready and forward deliveries, good business passing daily.

The latest quotation for ready linseed is Rs. 25.50 per maund.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, *12th October*

The bullion market ruled distinctly easy in the first two sessions of the week, but picked up strength on Saturday which persisted till today when a sagging tendency was experienced again. The earlier easiness was due to rumours of heavy arrivals of contraband gold and large inflow of silver from upcountry centres. Selling was, therefore, in evidence and both the metals suffered a setback. Even large-scale bear-covering was not of much avail. The downward trend was checked on Saturday when continued bear-covering and scattered support led to a recovery in values. The recovery gathered momentum in the subsequent two sessions, too, thanks to the reported seizure of 17,000 tolas of gold worth Rs. 22 lakhs from the Italian liner *Asia* in Bombay on Saturday. Today the market presented a quiet trend in the absence of the usual large pre-*Deepavali* demand for precious metals. Over the week, ready gold was better, while forward gold and silver were a shade easy.

The average daily arrivals and offtake during the week were less than in the previous week, being 9,000 tolas and 3,600 tolas, as against 9,500 tolas and 6,750 tolas, respectively. But, in the case of silver, both arrivals and offtake were higher, the former at 26 bars, as against 21 bars, and the latter at six bars, as against five bars. The floating stocks of gold are reported to be around 39,000 tolas and those of silver are estimated at 600 bars.

In gold, *Kartik* settlement began the week at Rs. 114.35, as against the previous closing of Rs. 115.10, and moved down to touch a low of Rs. 113.70 on Friday. After recovering to Rs. 115.60 on Monday, the settlement receded to Rs. 114.95 today before finishing at Rs. 115.05.

The *Kartik* settlement in silver encountered selling and declined from Rs. 193.40 to Rs. 191.80 on the 7th inst. At this level, some support emerged and the quotation improved to Rs. 193.45 on Monday. After easing to Rs. 192.60 today, the settlement closed at Rs. 192.80.

Although ready gold continued to be quoted at a discount under the *Kartik* settlement throughout the week, the actual discount decreased from Re. 1.60 on Wednesday last week to 80 nP today. The ready rate fluctuated between Rs. 114.95 and Rs. 112.40 before winding-up at Rs. 114.25, that is, 75 nP higher than a week ago. In ready silver also, the discount under the *Kartik* settlement declined from Rs. 2.15 to Re. 1.70. The closing rate for the metal today was Rs. 191.10, as against Rs. 191.25 a week ago.

Ready gold in the London bullion market improved from 250*s.* 6½*d.* to 250*s.* 9¾*d.* on the 7th inst., following Continental and Far East demand. The latest available world price for gold is $35.2½-$35.23½, as against $35.23-$35.25 a week before. Both ready and forward silver in London were unchanged at 79½*d.*, as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	12-10-60 (closing)	High	Low	5-10-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	114.25	114.95	112.40	113.50
Forward:				
*Kartik**	115.05	115.60	113.70	115.10
Sovereign	89.00	89.00	88.75	88.25
SILVER				
Ready (.996 fine)	191.10	191.60	190.10	191.25
Forward:				
Kartik†	192.80	193.45	191.80	193.40
London:	11-10-60			4-10-60
Silver Ready	79½*d.*	—	—	79½*d.*
Silver Forward	79¾*d.*	—	—	79¾*d.*
Gold	250*s.* 9½*d.*	250*s.* 9½*d.*	250*s.* 6¾*d.*	250*s.* 6¾*d.*
New York:				
Silver	91.375 cents	—	—	91.375 cents

* 3rd November settlement. † 4th November settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COW HIDES FIRM

(From Our Own Correspondent)

MADRAS, *10th October*

Owing to broadening of inquiries from importers in the U.K. and the Continent, E.I. tanned cow hides firmed up sharply in the local market. Lower grades, which were a drag on the market, were taken up briskly and higher prices were established all round in the overseas market. If E.I. tanners put up their prices fantastically, importers are not likely to follow them.

Arrivals of tanned cow hides were of the usual volume and they met with ready clearance at firm prices. Buff calf and cow calf were neglected unless at bargain prices. Buffalo hides ruled firm due to U.S. demand.

Importers on the Continent and the U.K. were keen buyers of tanned goat skins 8/9 lbs. average. Top marks registered further increase. Other averages also improved in sympathy. Prime sheep was in good demand, but commons were neglected.

It is reported that the U.S.S.R. is buying raw goat skins in North India and, if the quantities taken are important, tanned goat skins will move up.

PROSPECTS FOR FUTURES TRADING

(From Our Own Correspondent)

BOMBAY, *12th October*

The cotton trade has been given a fresh lease of life. Much to the relief of traders, the Forward Markets Commission has granted permission for conducting futures trading in the new crop from 18th October under the amended by-laws of the East India Cotton Association, Bombay, which have been approved by it. The main features of the new contract, it will be recalled, are: (1) the basis to be Fine M.G. Moglai Jarilla 25/32"; (2) trading unit to be 3 quintals (300 kilograms); (3) floor and ceiling prices to be Rs. 417 and Rs. 693, respectively, for 3 quintals; (4) delivery months to be April and August; (5) there will be no trading floor and ceiling during the non-delivery period; (6) tenderable cottons 2/32" off in staple and 1½ grade off in grade.

The general feeling among traders is that business in new crop will not have to face the kind of odds it did in the past season. With the crop prospects remaining good and adequate supply of foreign cotton assured the statistical position of cotton will be such as to facilitate a fairly smooth sailing for the hedge contracts. If, however—and it is surely too early to be dogmatic—the expectations about the size of the crop, fail to materialise it will upset all these calculations.

So far crop developments have been fairly satisfactory. Weather has generally been helpful. But locusts infestation in part of Gujarat, Madhya Pradesh, Khandesh, Berar and Moglai areas is a source of anxiety. Arrivals have been delayed in Khandesh and Berar owing to recent showers. Arrivals in the Punjab are, however, gathering momentum.

The end of the uncertainty regarding futures trading had a beneficial effect on trading sentiment in the spot market. Sewri reported larger turnover. The reports of sporadic requisitioning of cotton by the Textile Commissioner in different parts of the country had an unsettling effect on business at Sewri. Mill demand was centred round CO2, but in anticipation of quota allotment for indigenous cotton, spinners showed interest in Khandesh, Berar, Moglai and Wagad cotton.

Export demand for Bengal *Deshi* was fairly good. Prices, however, tended to look down, thanks to increasing arrivals. Uncertainty about export quota following the news that mill interest was against grant of export quota until after three months, discouraged substantial business.

The demand for foreign cotton was well maintained. U.S. cotton continued to be in the limelight. But it is said that, since the deliveries received of late have been found to be not up to the usual standard, mills are going in for U.S. cotton on "type" instead of on "description" basis so that they could be sure of quality.

East African growths too came in for business. Some Bombay mills bought a limited quantity of higher grade Sudans. Only stray interest was noted in Syrian cotton. The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

CO2 1,050-1,251. Laxmi (Old crop) 1,107. American G.M. 1,100 Nov.-Dec. shipment, Elpaso 1-3/16" 1.351. Sudan XG41 1,585.

Quietly steady conditions prevailed in the Karachi cotton futures market during the week under review. In the absence of any fresh incentive, trading was featureless. Values moved in a narrow range, showing little net change over the week. N.T.R.G. January contract improved fractionally to Rs. 68-12, as against Rs. 68-11 last week-end. The March contract, too, rose by a like amount to Rs. 68-2.

In the spot market, *Deshi* prices suffered a further setback. Sind *Deshi* was quoted Rs. 2 lower at Rs. 86, while Punjab *Deshi* ruled barely steady at Rs. 78.

The downward trend noted in the Alexandria cotton futures market last week gathered momentum during the week under review. Larger arrival of new crop, coinciding with slack export demand, induced speculative selling. Futures values consequently receded. The loss was shared both by the Karnak and Ashmouni contracts. Weather conditions so far is reported to be satisfactory. The crop is likely to exceed earlier expectations. The first official estimate put the 1960-61 cotton crop at 10.75 million kantars, as against 9.96 million kantars last year. Staple lengthwise break-down is as under:

(In '000 kantars)

	1960-61	1959-60
Over 1⅛"	5,227	5,204
" 1¼"	2,491	1,529
" 1⅛"	3,017	3,231
Scarto	228	211

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 72.90; January 72.70; March 72.90; May 72.90.

Ashmouni: October 62.18; December 62.05; February 62.20; April 62.48.

Cotton futures in Liverpool remained practically unchanged during the week. Mill coverage was small and commission house buying negligible. Spinners were more interested in buying actual cotton against yarn sales than in hedging in forward cotton. Near deliveries of both the American and American types contracts, ruled remarkably steady, while the more distant positions advanced slightly on speculative support.

The latest available quotations—in pence per lb.—from Liverpool are as under:

American cotton one inch staple contract: October 22.80; December 23.00; March 23.20; May 23.25.

American cotton mixed growth contract: October 23.25; December 23.25; March 23.25; May 23.70.

Sudan: November, January, March 35.00.

In its October crop forecast the U.S. Department of Agriculture estimated the 1960-61 cotton crop at 14.55 million bales of 500 lbs., as against 14.58 million bales a month ago and last season's 14.55 million bales. The ten-year (1948-57) average is 14.04 million bales. The yield per acre was put at 450 lbs., as against 451 lbs. a month ago, 462 lbs. last season and the ten-year (1948-59) average of 329 lbs.

In anticipation of the crop report, trading in the New York cotton futures market was generally quiet. The Department's estimate turned out to be *broadly in line with general trade expectation*. While the estimate had thus little in itself to influence price trends, on expectation of higher price support, the more distant positions attracted speculative support. Spot prices, however, was five cent points lower at 32.20 cent.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	11-10-60	4-10-60	27-9-60
Spot	32.20	32.25	32.30
October	31.55	31.49	31.69

TEA DECLINES

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *4th October*

Sale No. 38: Approximately 550,000 kilograms were offered in Sale No. 38 held on 4th October 1960. Quality in general was well maintained and there was a useful selection of low medium and medium teas on offer. *Highgrowns*, in general, met less enquiry and sold at easier rates and in some cases prices declined up to Re. 1 per kilo. There was a strong demand for low medium and medium teas which declined as the sale progressed, and these were irregular and up to 20 nP dearer. Good medium brokens and fannings are quoted firm. Clean black leaf descriptions, particularly fannings, were well supported and advanced in price. C.T.C. types and legg-cut descriptions were weaker and prices eased. A small selection of tippy teas met little support. Whole leaf grades met less support than of late, particularly orange pekoe grades which were much easier.

	1960	1959
	Rs.	Rs.
Low medium	4.40-4.70	3.85-4.07
Medium	4.70-5.00	4.18-4.85
Good medium	5.00-5.70	4.85-5.29
Quality	5.50-8.75	6.28-9.37

The average price realised in Sale No. 38 was Rs. 5.17 per kilo. as against Rs. 5.35 in the previous sale and Rs. 5.27 in the corresponding sale of 1959.

Dust Sale 'JJ': A total quantity of 330,000 kilograms was offered in Sale No. 'JJ' held on 6th October 1960. There was a useful selection of dusts on offer. There was a good general demand, but prices were easier by 20 to 30 nP for most descriptions. There was less support for highgrown dusts which were often easier and a number of them were withdrawn from the sale. Keen interest was shown for clean black grainy sorts which sold at slightly easier rates than last. Low mediums and mediums were well supported, but these declined by 10 to 20 nP. Plainer sorts and milled descriptions declined further and sometimes were easier by up to 30 nP. C.T.C. and Legg-cut types also shared in the downward trend of the market.

The average price realised in Dust Sale 'JJ' was Rs. 4.49 per kilo. as compared with Rs. 4.57 in the previous sale and Rs. 4.05 in the corresponding sale of last year.

Export Quota: The market remains very dull and practically no business has taken place, although there are large sellers at ½ nP per kilo.

Colombo: In Monday's sale, there was a good demand and, although the better Dimbulas opened lower, demand strengthened as the sale progressed and they closed 10 to 20 cents dearer. Uvas were easier following quality. Mediums came to an irregularly lower market whilst lowgrowns and Persian Gulf types were up to 5 cents dearer. Highgrown fannings met with restricted enquiry.

London:—North Indian and other growths:—In Monday's auction, the market opened on an irregular note, but closed firm to dearer for all descriptions.

Ceylon and South Indians:—On Tuesday, 20,453 packages were offered, of which 8,513 packages were from South India. There was a good demand, particularly for useful coloury mediums, which often sold at dearer rates.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd., wire:

"*Sale* 39:—480,000 kilograms. Good, but irregular, demand. Low medium and medium brokens 10 to 20 nP easier, but similar fannings, particularly black leaf, irregularly 10 nP dearer. Good medium steady. Best liquoring lower, except where quality maintained. C.T.Cs firm to dearer."

BEMBERG YARN RALLIES

(*From Our Own Correspondent*)

BOMBAY, *12th October*

There was a sharp rally in Cupressa Bemberg yarn (60 x 1) during the week under review. The rally followed a buying spree which emerged from fears of scarcity in supplies of art silk yarn developing in the next few months as a result of the cut in established importers' quota for the current half-year. The marked fall in art silk yarn imports into Bombay port during September as compared with the previous month also imparted strength. The actual imports aggregated 3,769,750 lbs., as against 4,920,955 lbs. The imports of synthetic yarn were, however, higher, albeit slightly, at 237,390 lbs., as against 236,819 lbs. Staple fibre yarn lacked support, due to expectations of enlarged arrivals of fibre from abroad, in view of the official decision to permit imports. Even the possibility of reduced sales of yarn by composite mills following the cut in their fibre quota failed to enthuse operators. Cotton yarns generally tended to move up. Twenty counts were particularly firm. Exports of cotton yarn from Bombay during September were of the order of 383,472 lbs., as against 427,508 lbs. in August.

Spot Cupressa Bemberg yarn (60 x 1) forged ahead from Rs. 2,217.82 to Rs. 2,314.83 per case of 100 kilograms. October contract picked up Rs. 11 to Rs. 2,246. December delivery spurted by Rs. 35 to Rs. 2,258. 150 Japan advanced by Rs. 6.62 to Rs. 1,377.87. 150 Italy was firm at Rs. 1,212.53. 120 Japan, however, eased by Re. 1.59 to Rs. 1,245.60. 150 Italy dropped Rs. 13.22 to Rs. 1,364.65. Among indigenous yarns, National Rayons 150 Bt. Cones 1st grade hardened by 5 nP to Rs. 11.51, while 120 Bt. Cones 1st grade lost 6 nP to Rs. 12.87.

In the staple fibre yarn section, 40 x 2, October delivery rose by Rs. 3 to Rs. 737. December position gathered Rs. 5 to Rs. 749. Spot Centurys were fully maintained at Rs. 8.47. Kohinoors were done at Rs. 8.92, as against Rs. 8.95.

Among cotton yarns, ten counts Gokaks were firm at Rs. 18.75. Citys shed 13 nP to Rs. 18.12. Twenty counts Moderns and Gokaks improved by 25 nP each to Rs. 23.50 and Rs. 23.25, respectively. Forty counts Moderns were quoted at Rs. 32.75. Sixty counts Finlays were fully steady at Rs. 61.61, as also Raghuvamshis at Rs. 58. Eighty counts were firm at Rs. 73. But Finlays declined by Re. 1.01 to Rs. 79.79.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	12-10-1960	5-10-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.) October	2,246.00	2,235.00
December	2,258.00	2,223.00
60/1 Cupressa Bemberg spot	2,314.83	2,217.82
120 Japan (per 100 kg.)	1,245.60	1,247.19
150 Japan (per 100 kg.)	1,377.87	1,371.25
120 Italy (per 100 kg.)	1,212.53	1,212.53
150 Italy (per 100 kg.)	1,364.65	1,377.87
Staple fibre yarn—		
October (per 90.72 kg.)	737.00	734.00
December (per 90.72 kg.)	749.00	744.00
40+2 Kohinoor (per kg.)	8.92	8.92
40+2 Century (per kg.)	8.47	8.47
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.12	18.25
20s Gokak	23.25	23.00
40s Modern	31.75	
60s Raghuvamshis	68.00	68.00
80s Finlay	79.79	80.80

SEEDS IMPROVE

(*From Our Own Correspondent*)

BOMBAY, *12th October*

In distinct contrast to the trend in the previous week, the oilseeds market staged a smart rally during the week under review, thanks to bullish crop reports and hopes of fresh export incentives. The sentiment was, however, subdued today, mainly on account of profit-taking.

Although the actual business put through on the export front was negligible, operators took particular note of the fact that the export performance of oilseeds and oilcakes has so far been generally encouraging. Exports of castor oil rose by as much as 100 per cent. to 42,590 tons during the first nine months of 1960, as compared with the corresponding period in 1959. Exports of castorseeds are banned. In the groundnut section, the shipment of groundnut oil was somewhat lower at 2,000 tons. But exports of groundnut seeds had more than doubled during the period to 12,480 tons. Groundnut oilcakes, however, fared badly. In the linseed section, linseed oil exports were higher by over 500 tons at 5,161 tons. While exports of seeds were negligible, those of oilcakes made a substantial improvement.

The following table shows the trend of exports of seeds, oils and cakes in the first three quarters of the current year, as compared with the corresponding period of last year:

(In tons)

	Jan.-Sept.	
	1960	1959
Oilseeds:		
Groundnuts	12,480	6,169
Linseed	3	2
Sesame	403	232
Kardi	95	180
Rape and mustard ..	16	9
Oils:		
Groundnut	2,002	2,575
Linseed	5,161	4,647
Castor	42,590	21,277
Sesame	7	206
Rape and mustard ..	7	72
Oilcakes:		
Groundnut cake	17,239	29,967
Groundnut meal	90,829	92,418
Linseed	37,142	19,479
Cottonseed	2,187	10,070
Mowra	179	637
Niger	3,902	50
Sesame	20	67

To revert to the market trend. The groundnut section, which had turned steady at the close of the previous week, elicited fresh speculative support on reports of damage to crops in some of the major producing centres and also on hopes of new schemes for giving further incentives to exporters. Reports from Madras indicated widespread attack of caterpillar in certain groundnut-growing districts there. The spot section in seeds and oils, too, was distinctly cheerful and rose to new high levels of the season. This strength was induced by the tight supply position as seen from the smaller arrivals of new crop at terminal centres as well as poor carryover from the previous season. Crushers and vanaspati manufacturers extended sizable support in view of the forthcoming *Dipavali* festival. There was, however, a setback towards the close of the week, mainly as a result of larger arrivals from Khandesh and bearish crop reports. Crushers and *vanaspati manufacturers* seemed to have reached an overbought position and, consequently, their purchases tapered off. In these conditions, the groundnut February 1961 contract rose from Rs. 204 to Rs. 208.25, before closing today at Rs. 206.50. Khandesh quality spurted by Rs. 2.75 to Rs. 48, after fluctuating between Rs. 45.25 and Rs. 49.50. Oil ex-mill advanced from Rs. 20.25 to Rs. 21.90.

The castorseed section, too, was in the limelight during the major part of the week. It attracted much speculative interest on strong rumours that the Government would shortly lift the ban on exports of castorseed. There were also rumours suggesting Japanese interest in Indian castor oil. It is said that there is the possibility of a Indo Japanese barter agreement involving castor oil. Crop reports were also encouraging. Another important bullish factor was the report that the West Coast of India and Pakistan, U.S.A., Atlantic Conference lines proposed to reduce freight rates for castor oil to the U.S. in order to meet the increased competition offered by non-Conference lines. Reports of a better crop in Brazil, however, brought values to lower levels at the end of the week. Weather reports from castor-growing regions also showed signs of improvement in the crop position. Castor May 1961 contract, which had wound up last week at Rs. 174, rallied to Rs. 178 by Saturday, but drifted lower subsequently to Rs. 174.75. Ready Madras put on 30 nP to Rs. 33.80, after rising to Rs. 34.12 early in the week. Oil Commercial closed 20 nP higher at Rs. 14.10, after moving between Rs. 14 and Rs. 14.19.

The linseed section was steady but turned rather quiet at the close in the absence of any encouraging overseas advices for linseed oil. Linseed May 1961 contract rose initially from Rs. 33.12 to Rs. 33.41, before closing today at Rs. 33.06. Bold ready picked up 37 nP to Rs. 32.37. Linseed oil improved from Rs. 13.25 to Rs. 14.

Dull conditions prevailed in the cottonseed section. The cottonseed February 1961 contract fell by 75 nP to Rs. 88. In the ready section, nonwhites and Berars were quiet at Rs. 20.25 each, while whites put on 25 nP to Rs. 20.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	12-10-1960	5-10-1960	28-9-1960
Groundnut	Rs.	Rs.	Rs.
February 1961	206.50	204.00	205.00
Nizam bold	49.00	45.25	47.00
Coromandel ready	49.75	46.75	47.00
Khandesh quality	48.00	45.25	47.00
Oil ex-mill ready*	21.90	20.25	25.37
Railway receipts*	21.75	20.20	25.12
Castorseed			
May 1961	174.75	174.00	177.25
Ready Madras	33.80	33.50	33.75
Ready Kanpur	32.75	32.37	32.62
Oil R.S.S.†	15.25	14.95	19.12
Oil commercial†	14.10	13.90	17.62
Linseed			
May 1961	33.06	33.12	33.41
Oil ready†	32.37	32.00	32.25
Cottonseed	14.00	13.25	17.00
February 1961	88.00	88.75	90.74
Niger seed	36.50	36.00	36.50
Kardi seed	24.25	24.00	24.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms, with effect from 1st October 1960.

SUGAR EASY

(*From Our Own Correspondent*)

HAPUR, *10th October*

Sugar ruled quietly depressed during the week, thanks to better supply position following the fresh release of 200,000 tons. The week-end prices in the open market were Rs. 112.50 per bag and Re. 1.09 per seer (retail). Although the Union Government has issued an export quota of 50,000 tons and fresh efforts are being made to sell sugar to the U.S., export prospects are considered to be bleak, as prices abroad are much lower than those prevailing in India. The new crushing season will begin early next month; a few factories are reported to be in need of coal supplies before they commence crushing operations.

Easy tendency was witnessed in the Muzaffarnagar sugar market also, due to further easy supply position. There was less demand for sugar for conversion into *boora*, as Gujerat and Saurashtra were having better supplies. The week-end open market wholesale prices were Rs. 112 to Rs. 113 per bag. The quotas given for distribution in ration were not being fully lifted.

Sugar drifted lower in the Kanpur market too. D 29 quality was quoted at Rs. 112 to Rs. 112.50 per bag, thanks to better supply position and poor demand.

Khandsari sought lower levels, as demand was slack and the stockists were anxious sellers. The new season's production will not commence before mid-December. The latest available prices are about Rs. 2 to Rs. 3 per maund lower than those prevailing last week. *Gulawat* was quoted at Rs. 20 to Rs. 25, inferior at Rs. 27 to Rs. 32, superior at Rs. 33 to Rs. 37.50, crystal *khandsari*

at Rs. 33 to Rs. 37 and boora at Rs. 35 to Rs. 36 a maund.

After suspension due to heavy rains, *gur* production began but arrivals were still small at 50 maunds daily and that too of poor quality. Meanwhile, old stockists were anxious sellers and, although such stocks were small here at about 9,000 maunds, stocks in mofussil areas and in the Punjab were reported to be heavy. Following recent rains, cane crop prospects have become still brighter, though damage also has been reported due to gusty winds in some areas. Cane crushers have begun purchase of cane at Re. 1 per maund. The week-end prices of *gur* were: new Rs. 15 to Rs. 17; old *kotha* Rs. 13 to Rs. 15; wet Rs. 10.75 a maund.

Gur also registered a fall in the Muzaffarnagar market, due to lack of demand. *Chaku* eased by Re. 1.75 to Rs. 2 and *dana minja* lost Re. 1 per maund. The week-end prices of old stocks put at about 20,000 maunds were: *chaku* dry Rs. 17 to Rs. 17.50; dry-wet Rs. 15 to Rs. 15.25; wet Rs. 13, *dana minja* Rs. 13.50 to Rs. 16 a maund.

Gur futures were bearish, as operators from Bareilly and other centres were heavy sellers. *Fagun* opened at Rs. 13.70 last Monday, touched the lowest of the week at Rs. 13.47 and was today quoted at Rs. 13.50.

FOODGRAINS STEADIER

(*From Our Own Correspondent*)

HAPUR, *10th October*

Foodgrains depicted a steadier trend during the week under review. Business was very poor in the earlier part due to heavy rains, but it resumed towards the week-end, though daily arrivals were still meagre due to waterlogging in rural areas. The unusually heavy rains earlier last week have proved beneficial for *rabi* sowings which are now possible on enlarged scale, but many crops, including urd, *bajra*, *juwar*, cotton and even paddy standing in the fields, have been adversely affected. Rabi sowings will soon commence as weather has become clear and gram, coarse grains and peas sowings by the week-end, and wheat sowings later.

Wheat here recorded modest gains to be quoted at Rs. 17 a maund for average quality and upto Rs. 18 for better farm produce. Daily arrivals of wheat during the major part of the week were negligible due to heavy rains and paucity of arrivals and reports of losses to crop were the main factors that influenced the market sentiment. Wheat arrivals would now mount with the clearing up of weather.

Rice continued to rule quiet, *sela basmati* quoting at Rs. 30 to Rs. 33, *ramajwayan* at Rs. 24, *raimunia* at Rs. 25, *mainpuri* at Rs. 23 and *gadda* at Rs. 19.75 a maund. The supply position of rice was satisfactory and harvesting of paddy has begun and last week's heavy rains and gusty winds have caused some damage to the standing paddy crops.

Gram sought higher levels when Punjab quality was quoted at Rs. 16 and old stuff at Rs. 15 a maund. Demand for gram was fairly good and local stocks were fast running down. Punjab advices, too, recorded a steady trend. Barley was steady at Rs. 12.75, while *bejhar* at Rs. 12 a maund for inferior quality and Rs. 12.75 for *moongia* variety. New maize attracted good demand from consumers and, as arrivals were small, prices improved fractionally to Rs. 12.75 to Rs. 13.12 a maund according to quality. *Juwar* was quoted at Rs. 13 to Rs. 14 and *guwar* white at Rs. 12 to Rs. 13 a maund. With the clearing up of weather, preparation of land for *rabi* sowings had commenced and actual sowings of peas, gram and coarse grains will begin by the week-end and that of wheat a week later.

Among pulses, peas and *arhar* improved due partly to some demand from east U.P. and partly to reports of damage to *urd* and *moong* and other crops following heavy rains last week. Peas *dara* was quoted at Rs. 12.25, old stuff at Rs. 11.75 and white farm quality at Rs. 13.75 and peas *dal* at Rs. 13.75 a maund. Local peas stock ran down by two *khatties* during the week to 50 *khatties*, as against 45 *khatties* last year when peas *dara* was quoted at Rs. 11.62 a maund. *Arhar* improved by 25 nP a maund to Rs. 13.25 and *dal* was done at Rs. 17.25 to Rs. 18 a maund and *arhar* stock was unchanged at 25 *khatties* as against 30 *khatties* last year when *arhar* stood Rs. 17 a maund. Old *urd* changed hands at Rs. 18.50 and new at Rs. 19.50. *Moong* was quoted at Rs. 18.50 to Rs.19.25 a maund and *massoor* at Rs. 14 to Rs. 17 a maund.

Notice

GUEST, KEEN, WILLIAMS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Members of the Company will be held at the Offices of Jardine Henderson, Limited, 4, Clive Row, Calcutta, on Tuesday the first day of November, 1960 at 12-00 noon, for the purpose of considering and, if thought fit, passing, with or without modification, the following resolution, namely:—

That this Meeting hereby approves the proposal of the Directors that 20,00,000 Ordinary Shares of Rs. 10 each in the authorised capital of the Company be issued in accordance with the Letter of Consent dated 14th September, 1960 from the Controller of Capital Issues at a premium of Rs. 18.50 nP. per share and that such new shares shall rank *pari passu* with the shares already issued (and in particular that the new shares shall not confer on the holders thereof any right to participate in the interim dividend declared on 16th September, 1960 at the rate of 80 naye Paise per share (less tax) on the existing issued capital payable on 30th November, 1960 but shall entitle the Holders thereof to participate in all dividends declared hereafter) and shall be offered in the first instance to persons whose names are entered in the Register of Members on the 31st October, 1960 in the ratio of one new share for every share held by such persons respectively on such date and otherwise on the terms and conditions to be contained in the Letter of Rights whereby such new shares are offered to the persons aforesaid. Provided that in terms of the said Letter of Consent the subscription monies for 6,02,105 of the said new shares which are to be offered to Guest, Keen & Nettlefolds, Limited in accordance with this Resolution shall be satisfied by the transfer by Guest, Keen & Nettlefolds, Limited to Guest, Keen, Williams, Limited of 1,04,000 Ordinary Shares of Rs. 100 each in Sankey Electrical Stampings Private Limited credited as fully paid.

The Register of Members of the Company will be closed from 17th October, 1960 to 31st October, 1960 both dates inclusive.

By Order of the Board,

R. B. RITCHIE,
Secretary.

Registered Office:
41, CHOWRINGHEE ROAD
CALCUTTA-16
6th October, 1960

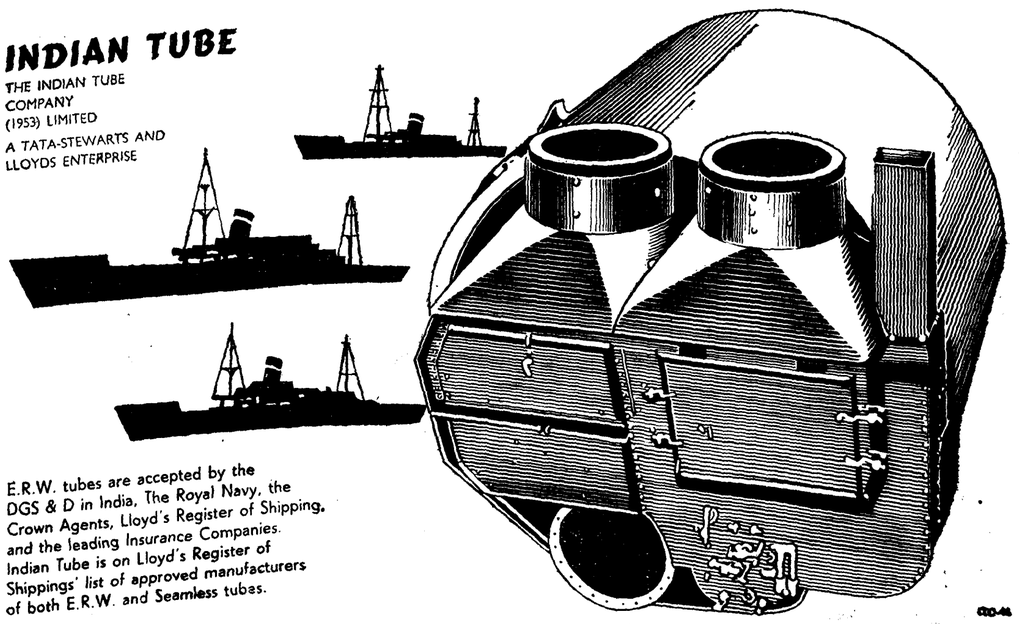
Note: A Member entitled to attend and vote at the Meeting is entitled to appoint one or more proxies to attend and vote instead of himself and such proxies need not be members of the Company. Proxies, in order to be effective, must be received at the Registered Office of the Company not less than 48 hours before the Meeting.

The Explanatory Statement as required under Section 173(2) of the Companies Act, 1956 has been issued to all Shareholders.

E.R.W. MARINE BOILER TUBES

Recognised for their outstanding performance E.R.W. steel boiler tubes, manufactured by Indian Tube, are specially designed for protracted use in land, loco and marine boilers. High frequency current ensures efficient welding, and normalising is carried out in controlled atmosphere furnaces to produce a ductile tube with a smooth, blue finish. Rigid quality control from the raw material stage to the finished product guarantees that Indian Tube's E.R.W. tubes will meet all the tests specified by Lloyd's Register of Shipping. E.R.W. tubes are, in every respect, the equivalent of seamless tubes of similar dimensions.

INDIAN TUBE
THE INDIAN TUBE COMPANY (1953) LIMITED
A TATA-STEWARTS AND LLOYDS ENTERPRISE



E.R.W. tubes are accepted by the DGS & D in India, The Royal Navy, the Crown Agents, Lloyd's Register of Shipping, and the leading Insurance Companies. Indian Tube is on Lloyd's Register of Shippings' list of approved manufacturers of both E.R.W. and Seamless tubes.

DRAFT THIRD PLAN X-RAYED—IV

(*Concluded from page 677*)

heavy industries to make up such leeway as may have been imposed by Colonial rule, the proportion with consumer industries has to be maintained in the very name of democracy and socialism. The people can be called upon to sacrifice something, but not everything for the State.

The fourth axiom is that industrial growth is a function of the general economic growth and can be in advance of it only by sacrificing the common people for the few rich and powerful. When the landless labourer has an annual income of Rs. 104, the rural population of Rs. 220 and the general population of Rs. 290, industries on the model of countries which have hundred times these incomes can neither be appropriate nor successful. The first responsibility of the Government is to foster those industries which increase the production and consumption of these classes, proceeding upwards as it succeeds in each stage.

The failure to recognise these axioms is evident in the admissions of the Commission that the steel, fertiliser, heavy electrical targets were not reached, in spite of expenditure in the public sector exceeding the provisions of the second Plan. The Commission also admits the shortage of industrial machinery, aluminium, newsprint and chemical pulp, not to speak of various consumer items. In respect of fertilisers, it is inviting private enterprise to take up the establishment of a few units.

The Plan proposes Rs. 2,500 crores for industries, Rs. 1,500 crores in the public sector and Rs. 1,000 crores in the private sector. An overall provision of Rs. 571 crores is made for steel. Before this investment is made, it will be fair to the masses, which have provided the finance, to see what steel will be available and how it will be absorbed in the economy. The pig iron, instead of the targetted steel which has so far been produced, had to be exported, straining, on the one hand, the transport and, on the other, the coal supplies which were short for such consumer needs like textiles. In 1955-56, before the construction of steel factories imposed a new demand for steel, our imports of steel were worth only Rs. 12.1 crores, less than half the interest we are paying on the investment on steel factories. Since then, industrial production has gone up by 23 per cent., against which the production of steel in the factories which existed before has increased by 42 per cent. Whatever the new State factories produce will have to be matched by new demands, which are not in view. The investment on steel factories is only part of the total, because investment on transport, coal mines and other mining add up to nearly as much. And all this may only produce for us mountains of steel for which even storage may not be available.

The target for coal has been fixed at 95 million tons, as against 46 million reached in 1959. Considering how unresponsive the private sector is on account of price policies and how slow the public sector is on account of the inexperience of management, the target appears unrealistic. The Neivelli project has also made little progress.

The foundry forge capacity may be welcome, if only to use the steel which will be produced. Being in the public sector, however, when it will be available and how it will function must remain subject of speculation. The same is true of heavy machinery plant also. The Defence prototype factory at Ambarnath does not inspire confidence after the Defence Ministry produced trucks and tractors which would not work. The expansion of the Hindustan Ship Yard would inspire more confidence if the Government could disprove that it costs twice as much to assemble the majority of imported parts than to buy a new ship. In fact, the Planning Commission had a responsibility to disclose the economics of existing State enterprises before recommending a vast expansion of capacity.

The development of mineral oils is to be welcomed, but, with the loss of nearly two years only to select the sites for the refineries to refine the Nahorkatiya crude, the production may be more of politics than oil. The whole policy in respect of oil exploration is wrong. In the first place, when we have no trained personnel worth speaking of and have to depend on foreigners, the interest of the latter can only be secured by their investment. It is stated that foreign interests have now been invited, but, if they are treated with suspicion and frightened with socialism, the response will be small. Our policy may follow that of other oil countries which have done well with the help of foreign investment, with the addition that the Government may participate in the capital from the beginning. Secondly, political interference of which the present outburst in Assam is a logical conclusion could be eliminated by leaving exploitation of oil to the private sector. Thirdly, in respect of refining and certainly in respect of distribution, Government may be duplicating the existing private capacity. It would be better if the Government's policy in respect of oil were not mixed with unnecessary vinegar.

For iron ore, a huge target of 32 million tons is set, when, in 1959, it was able to produce only about 7.5 million tons. Besides, the Government is not willing to spend enough on ports and connecting railways, on which exports depend. The expectation that the capacity for nitrogenous fertilisers, now at 148,000 tons (N), can be pushed up to 1,000,000 tons (N) appears to be unduly optimistic, considering the capital investment involved. The response of the private sector will be conditional on the present monopoly prices, which being so much higher than world prices, may not be fair to the farmer. Engineering industries for making the machines required by cement, paper, sugar, cotton and sulphuric acid factories are left to the private sector. If these factories are to be licensed, the quality may be poor and the prices too high to attract demand. If competition is allowed its way, even foreign interests may be forthcoming, with which Indian interests or even the Government can participate. In respect of automobiles, the targets are not commensurate with the demand at prices comparable in other producing countries. If only Government withdraws its taxes for revenue, the automobile industry and public transport in this country will grow to its proper size. In respect of consumer goods, a slight increase is promised in cotton and rayon textiles, which serve the general public and a little increase in paper, which serves a limited class. The imbalance between the investment on capital and producer goods, on the one side, and consumer goods, on the other, involves not only a sacrifice for the present generation but also provides a strong potential for inflation.

The whole plan for industries seems to recall children in a nursery with meccano sets. There is no maturity of thought, because the Plan lacks the foundation of current satisfaction for the people which alone can establish the demand-supply position basic to continuing production. The preceding two Plans have shown how State enterprises do not work to schedule and capacity and cannot produce profits. This is not only due to the nature of management but wrong selection of industries. If Government could suspend its incursion into the sphere of industry, the people will be spared higher taxes and prices and have things in the market that can improve their way of living and working.

(*To be continued*)

DALMIA CEMENT (BHARAT) LTD.

(*Concluded from page 688*)

to arrange intensive workload studies in selected units to begin with.

"You would be glad to learn that the outstanding dispute in regard to bonus for the year 1958, to which a reference was made in my speech last year, has been settled along with the question of bonus for the year 1959 as a result of mutual discussions with the workers' unions.

Under a settlement, which was brought about through the efforts of Shri R. Venkatraman, Minister of Industries and Labour, Government of Madras, workers have undertaken to maintain industrial peace and discipline and to forbear from having resort to any strikes or go-slow for a period of five years. The agreement lays down the procedure which is to be followed by the parties for the settlement of their differences or demands raised by any of the unions. I am sure that both the management and labour will stand to benefit by this agreement, because the smooth working of the factory is in the interests of both.

"Before I conclude, I would like to express our appreciation of the services rendered by the officers, staff and workers of the Company during the year.

"I would now request you to proceed with the consideration of the subjects on the agenda of the meeting."

N.B.—*The above extract of the speech does not purport to be the report of the proceedings of the Eighth Annual General Meeting of the Company held on 10th October 1960.*

SOLUTION TO GERMANY'S DILEMMA

THE economic prosperity of West Germany has become a problem for the Western world. It is considered to be a source of disequilibrium, the remedy for which is said to lie in the hands of Germany itself. German leaders themselves are agreed that something must be done to correct this situation. Mr. Karl Blessing, President of Deutsche Bundesbank, candidly remarked, in a recent report to the International Monetary Fund, that the experience of his country showed that "one can have too much of a good thing" and recited the series of steps taken by the German Government to discourage the inflow of "hot money." At 5 per cent., the West German Bank rate, it may be noted, is one per cent. less than that in the U.K. and yet more foreign capital is seeking investment in Germany than in Britain. As at the end of August last, gold and foreign exchange holdings of Germany were no less than $6,507 million, more than twice as much as those of Britain which had only $3,023 million. At the close of 1959, the reserves of Germany stood at $5,014 million, though a year earlier they were at $6,321 million. Besides, there is full employment in Germany. In a nation of 53 million, the number of unemployed in mid-September last was a mere 111,000, the bulk of which must be unemployable persons. Actually, there is an acute labour shortage, there being five vacancies for every man or woman wanting a job. And this is the position after permitting about 350,000 foreigners to work in Germany and after introducing quite modern labour-saving devices at all possible levels. The shortage of manpower is so acute that, in some parts of Germany, employers are said to be offering a premium for workers and in others they are willing to let army personnel do overtime during their spare hours. German firms are also spending enormous sums on advertising in Canadian papers, in order to induce German emigrants to return "home" where highly paid jobs are available for the mere asking. The German industries are still working overtime, as both export and domestic demand for goods is strong. Order books continue to lengthen. Pending contracts for delivery of capital goods at the close of August last were 50 per cent. higher than the corresponding figure a year before.

German industrial circles, however, do not fully agree with everything that is mentioned above. While admitting that the business tide in their country is running high and that there is need for preventing a runaway boom, they contend that there are some disturbing signs, too, in their economy which the foreign critics are apt to ignore. The points made by them are: Of late, both prices and cost of living in Germany have tended to rise. Wages and fringe benefits to workers have recorded a marked rise. They are no longer lagging behind the increase in the output per worker. The pressure for still higher wages and shorter working time is still being kept up by the trade unions. Export demand is tending to fall. In the first six months, Germany's export surplus suffered a fall of 20.2 per cent., as compared with the same period of 1959. There is no such thing as a guaranteed export surplus in world trade and history has many examples of nations which saw their surplus balances of trade turn into deficits in no time. As Germany is a nation living on exports, it should do nothing that will tend to depress its exports.

Many in this country may wonder as to why German prosperity should worry the other Western countries. The answer is simple. In the first place, the increase in its foreign exchange reserves is causing a strain on the U.S. dollar, the key currency of the world, and since none in the free world wants to see the U.S. economy weakened, Germany is being urged to arrest its super-boom. And, secondly, it is natural even for nations to feel jealous of one another, though they may be friends and belong to the same political camp. There is no doubt that the high degree of German efficiency and its financial virtue during the past ten years have made German manufactures highly competitive. The secret of Germany's successes in export markets is attributed to (*a*) stable and competitive prices, (*b*) high productivity, (*c*) a high rate of investment in the capital goods industry for the products of which foreign demand is strong, (*d*) a high degree of priority to foreign orders, (*e*) readiness to adjust prices to meet foreign price conditions, and (*f*) traditional export-mindedness. One of the countries to lose a sizable part of their export markets to Germany is Britain. And it is no wonder that the British Press is very liberal in its advice to Germans as to how they should end this boom and correct the excessive surplus in their balance of payments position. Among the solutions suggested three stand out prominently: a reduction in interest rates, a revaluation of the Deutsche Mark, and more aid to underdeveloped countries in the form of untied long-term loans. The emphasis laid by British financial commentators is more on revaluation of the D. Mark than on the other two. The German leaders' assertion at the I.M.F. meeting last month that they were opposed to a change in the external value of their currency, either upward or downward, does not seem to have silenced these critics.

It used to be argued some two or three years ago that W. Germany was a socially depressed country and that it must allow the standard of living of its people to rise. This criticism does not hold good any longer, for, with full employment, high wages and only a moderate rise in price levels, the living standards in Germany have staged a marked rise. Actually, the domestic demand for all types of consumer goods in W. Germany today is so high that price levels are tending to go up. This is said to be one of the reasons why the Central Bank of West Germany is reluctant to reduce its lending rate. If notwithstanding this development in recent years Germany is still in a position to export its goods on competitive terms, it is because of its high level of productivity. Must a country enhance the external value of its currency just because it is more efficient than its competitors? It would be a strange answer, indeed, if it were to be in the affirmative.

From the point of view of India and other underdeveloped countries, which have been importing capital goods, industrial raw materials and components from W. Germany and hope to continue this trade in future too, revaluation of the D. Mark will be disadvantageous and must be opposed at the appropriate forum. It does not confer any advantage on Germany itself. It is also opposed to the principle of stability of exchange rates for ensuring which the I.M.F. was established. Revaluation of D. Mark will add to the cost of imports from Germany. It will reduce the net value of such aid as Germany is willing to give to the underdeveloped countries. One may argue that it will stimulate the imports of raw materials and other goods into W. Germany. This is, however, true only upto a point and in any case this objective can be served by persuading the West German Government and industrialists to lift the restrictions on imports. Besides, since India and other developing countries will be net importers from W. Germany for a long time to come, the loss arising from revaluation of D. Mark will be more than the gain. Even from the point of view of developed countries such as the U.S. and the U.K. themselves, an upward valuation of D. Mark is an undesirable remedy, inasmuch as it will only serve to shield their inefficiency and act as a disincentive to bringing down the cost of their capital goods.

The ideal solutions to the problem of imbalance in Germany's external payments situation are the adoption by Germany of appropriate monetary measures to check the influx of hot money and the grant of long-term loans in large amounts and at reasonable rates of interest to countries like India which are in a position to absorb such assistance in a gainful manner. At least, a good part of these loans should be expendable anywhere in the world, so that they may not have a boomerang effect on German economy. It is obvious that, with German industry already fully employed, the German boom will only become hotter, if the loans are used for buying German goods. If, on the contrary, they are utilised to pay for orders placed with other countries, there will be an equitable dispersal of the excessive gold and foreign exchange reserves which are the cause of disequilibrium in the Western world. In fine, the development needs of India and similar countries provide a first class opportunity for W. Germany to get out of its dilemma of embarrassing riches with benefit to all and injury to none.

ROAD TRANSPORT

WITH the publication of the report of the Indian productivity team on the road transport industry in the United Kingdom, West Germany and the United States, the time has verily come to give the unseemly road-rail controversy its quietus. If only the Railway Board recognises without equivocation that the original narrow basis of competition between road and rail transport has simply ceased to exist in an expanding economy which provides ample room for all modes of transport, the salutary recommendations of the productivity team will be seen in their proper perspective. These recommendations, it may be straightaway acknowledged, are among the most realistic ones ever drawn up in the light of foreign experience and of our own transport conditions and are comparable in their significance to the findings of the Sarabhai delegation to Japan on productivity. And they bring, incidentally, a deal of credit to the National Productivity Council which sponsored the team for the purpose of getting the best possible advice on how to raise the productivity of road transport in India and develop it further.

The expert findings of the team (which consisted of four official and eight non-official

representatives in the line) on road transport conditions and trends in the three Western countries would need to be presented at the outset. By far the most important basic finding is that people in these countries "enjoy the fundamental right of providing better service at cheaper cost." This right is recognised by the Governments concerned, exercised by their subjects and enforced by the courts. Here is a lesson for this country, which, as the team has so happily put it, is to the effect that "a contractionist philosophy goes ill with an expansionist economy." An expanding transport economy of the kind can also, as it does in the Western countries, ensure optimum utilisation. This is where the second most important lesson is drawn. It is that "the whole of the road transport economy in these countries is patently characterised by maximum utilisation of vehicles, for the capital and overhead costs get progressively diminished per mile of a longer and longer run." And the most telling fact in this context is that high productivity is rendered possible in the Western countries by the daily mileage done by a vehicle which is often as much as 500 miles and by the annual run which is no less than 150,000 miles, if not more. The emphasis on good maintenance of vehicles and equipment, through proper schedules for docking and repairs, in large as well as small undertakings and the great importance attached to reclamation of worn out parts and to their re-use within the realms of safety are two other noteworthy features of the road transport scene in the Western countries. And these have also been conducive to higher productivity.

How State regulation of road transport in the Western countries has fostered it, and not hindered it in any way, is also admirably brought out in the team's report. In the first place, speed limits have been liberalised to permit vehicles to travel at high speeds so as to get the maximum by way of mileage and payload. The State has been able to do this, because it has provided fast highways, eliminated, by fencing or by other steps, such factors as ingress or cross-traffic which retard quick transit and also kept out slow-moving traffic from fast highways. Another vital step taken in the Western countries towards increasing productivity in the road transport industry is to permit the use of heavy trucks and truck-trailer and tractor-trailer combinations. The gross weight allowed for combinations in the United States and Germany, for instance, is 32 tons, so that a load of as much as 25 tons can be carried; this compares with a gross laden weight of eight to twelve tons permitted for trucks in India, which enables vehicles to carry a load of five to eight tons only. On the basis of their observations, the team has effectively discounted the fears expressed in some quarters in India that the use of such combinations will be a danger to public safety and that they are unfit for use on roads less than 22 feet wide. If the team has taken a forthright stand on this issue, it is because the use of these combinations has cut road transport costs in the Western countries by as much as 77 per cent. in the past two decades. The team is thus convinced that "it is these combinations that constitute the backbone of road transport productivity in the West."

Another remarkable thing about State regulation of road transport in the Western countries is that it has helped the organisation of bigger operating units. In the United States, for instance, once an operator has a certificate of public convenience and necessity, he can put as many vehicles into service as the growth of his business warrants. This certificate, again, is perpetual and does not need to be renewed periodically; the operator thereby gets every incentive to build up his concern on sound business lines. But, at the same time, it is ensured that the freedom to expand does not result in the creation of surplus transport capacity, with the consequent tendency to indulge in wasteful and cut-throat competition. The appropriate regulation in this connection is that the tariffs which are fixed by the operator and once filed with the authorities cannot be changed except with the latter's prior approval. Competition, thus, is on service and not on price.

Other striking features of the road transport industry in the West and of its regulation by the State may also be briefly summarised here. First, a good deal of development of the road transport industry in the United States, for instance, has been due to the amount of information collected by research and other means by the Inter-State Commerce Commission. Secondly, a useful practice in the United States and West Germany is that trailers do not require separate permits; they merely have to pay taxes like private cars and different trailers may be used in conjunction with any prime mover. Thirdly, in all the Western countries visited by the team, spending money on training of drivers, maintenance and managerial personnel is considered worthwhile, because the operators get returns in terms of better maintenance of vehicles, maximum utilisation and economy in the use of fuel and lubricating oils. Fourthly, a sound trade union movement, under responsible leadership, is conducive to productivity and this is what obtains in the Western countries; disputes are generally solved by mutual agreement but are, sometimes, referred to voluntary arbitration. And last but not the least is the remarkable change that has come about in the position of road transport, thanks to the facilities given by the State. This is proved by some figures. In West Germany, the share of road transport which carried 16 per cent. of the total volume of surface transport in 1950 rose to 25.8 per cent. in 1955; in the U.K., road transport accounted for 46 per cent. and railways for 54 per cent. of the total of road and rail transport (in ton-miles) in 1954 and they represented 56 per cent. and 44 per cent. respectively, in 1958. In Britain especially, according to the Ministry of Transport, "whatever unit of measurement is used, road transport is now the major means of inland carriage of goods."

It is in the light of this objective appraisal of trends and conditions in the road transport industry in the three Western countries that the Indian productivity team has framed its recommendations for application to this country. The first priority in these recommendations has been rightly accorded to the evolution of a "progressive philosophy" in relation to road transport. The need for this philosophy will be apparent when it is remembered that production of commodities is expected to reach a level of 370 million tons by 1966 and 1,000 million tons by 1980. Since the capital cost of constructing roads is substantially lower than that of railway lines and its employment potential per unit of investment far greater (being 17 per bus and 11 per truck), the powers-that-be would do well to resort increasingly to road transport as and when additions to the existing overall transport capacity are called for. If they do this, it will be in keeping with the trend in the advanced countries of the West. A related development should be that the country's 20-year road plan can usefully have at least one per cent. of the roads or 6,000 miles as special national highways exclusively for motor traffic with four traffic lanes capable of accommodating multi-axled truck-trailer combinations of 28 tons payload capacity. An equally worthwhile development could conceivably be in the direction of so designing at least 24,000 miles of roads as to enable heavy motor vehicles to run at 50/60 miles per hour. These two suggestions are so realistic and sensible that they should easily commend themselves for immediate consideration by the powers-that-be before the Planning Commission takes action on its Transport Co-ordination Committee's recommendations, whatever they be.

Of a piece with the team's plea for the highest priority to an expansionist reorientation of State policies relating to road transport is the cogent case it has put forward for many-sided productivity research. To quote the relevant extracts from the team's report:

"Research, however, can alone show us the basis and the lines of expansion; and this research has to be so designed as to increase the productivity of the road transport system in every possible way. We in fact require a wide variety of research projects; research in vehicle manufacture; research in vehicle operation and maintenance; research in dust prevention and its effect on maintenance; research in the use of oils, their reclamation, etc., research into road transport as a service for goods and passengers; research into markets, for after all road transport comes into being and flourishes on supplying markets in adequate measure and at proper time; research into refrigeration, for that would expand markets and make a wide variety of goods marketable through road transport, etc. Obviously, even this long list is illustrative.

"In collaboration with the Ministry of Finance and Departments of Finance of the State Governments, a research project on the incidence of road transport taxation needs to be undertaken as a matter of urgency; for, so far, we have been arguing in the air and on the basis of guesses and surmises as to what happens when a tax is levied, as for example, on diesel oil. If continuing research is undertaken, a rapid answer becomes possible and the State becomes free from political pressures in the application of its policies.

"A similar research project into the restrictive and other effects of the regulatory measures enforced by Governments also appears to be immediately warranted. While the State Governments go on imposing regulations for a variety of reasons, the operators go on complaining that they hamper their business. The result is that regulations are made and unmade in a somewhat irrational manner, with the exercise of authority, on the one hand, and a complaining attitude, on the other. If a comprehensive study of regulations were available alongside the collection of relevant facts and figures, each regulation could be checked up in the light of those facts and figures, and the studies already made. It would then become obvious whether a regulation was genuinely restrictive and whether it was in the public interest. . . ."

The case for research in so many lines is so self-evident that it does not call for any supporting comment. Only, it needs to be added that, if the team's recommendations based on Western experience are to be rationally applied to this country's road transport, such many-sided research is a necessary precondition therefor. An equally necessary precondition for efficiency in road transport is the creation of training facilities at every level. Noteworthy in this connection is the team's emphasis on the need for imparting special training to drivers not only in driving but also in repair and maintenance.

The team's other suggestions would also bear examination. One of these is that some sort of combination of existing small operators be brought about, so that they become economically self-sufficient. Another is that compulsory arbitration and adjudication in the settlement of labour disputes in the road transport industry is not desirable. The feasibility of these two suggestions is by no means clear, although their desirability is obvious.

But the team's specific recommendations for removal of restrictions and reduction in the incidence of taxation on road transport are as manifestly feasible as they are desirable. These recommendations are:

No conditions should be imposed on a permit in respect of route length or area of operation, which would prevent the goods vehicles being run for at least 50,000 miles a year.

There is need for a change in attitude towards speed limits. The existing speed limits of 25 to 30 miles per hour should be increased by 10 miles in both cases.

We recommend that truck-trailer and tractor-trailer combinations with a gross weight of 20 tons should be immediately permitted on our roads, the weight being increased to 28 tons in the next five years and further to 32 tons in the next ten years.

The axle-weight system should immediately replace the laden-weight system.

All road transport restrictions imposed on considerations of rail-road co-ordination should be abolished, as they constitute a brake on productivity in the road transport industry.

The team recommends a systematic and comprehensive review being made of the whole range of taxation on road transport

In particular, the team recommends reductions in vehicle taxes in Madras and Andhra and in the Central duty on petrol and diesel oil, as also the abolition of the surcharge on diesel-engined vehicles in Bombay and of the double taxation now prevalent in many States on trans-border operation of transport vehicles. Octrois which constitute a great harassment to road transport should be replaced by a surcharge on sales tax on commodities consumed in the respective municipal areas.

The foregoing suggestions deserve to be accepted for implementation early in the third Plan period not only because they are good in themselves but because they represent the unanimous conclusions of a team which included four official representatives and which "really felt like a team and enjoyed working as such." This journal has no hesitation in lending its weight to them and in subscribing to its conviction that its recommendations will become the basis of making the road transport system a more efficient instrument than it is today for movement of men and materials. This conviction is not unrelated to the vital basic trends in the transport sector—trends which are in general operation in almost every country in the world.

MARKET GOSSIP

THE steam has been let off the share markets. The last few weeks of *Samrat* 2016 witnessed distinctly sober conditions in striking contrast to the orgy of bulls right from March 1960 upto the end of July 1960. The credit for restraining the bulls goes primarily to the Government and the Reserve Bank. It is true that the Stock Exchange authorities—we refer here only to Bombay and Calcutta—did introduce some checks, but their action followed the constant prodding by the Government behind the scenes. Even then, they took action only after the unhealthy boom had gathered momentum and misled many an unwary investor. The theory that "the market contains within itself a self-adjusting mechanism" is not true, at any rate not so far as the Indian share markets are concerned. Left to itself, this mechanism will operate only after enormous damage is done to the interest of investors. It must be remembered that a boom in shares in a socialist economy, where faith in the virtues of free enterprise is lacking, is equally harmful to industries, as it gives rise to wrong notions among the powers-that-be and the adoption of wrong fiscal policies.

For a long time, the authorities themselves connived at the boom this year. They let it grow, in order to induce investors to support the capital issues of numerous companies, old and new alike, and in the mistaken belief that it would draw away speculators from the commodity markets. But they too were slow and hesitant in taking appropriate action against the bulls before the boom got out of hand. The result is that, today, there must be quite a sizable number of investors loaded with high-priced stocks which they will have to nurse for a fairly long time, if they are to receive an economic return on their investments and see even a modest capital appreciation. Meanwhile, they may have to go through many anxious moments and be disturbed by concern for the safety of their money. Some may even be tempted to cut their losses by selling out their investments. These, unfortunately, are the travails of investors who buy shares in times of boom, ignoring considerations of yield.

What finally arrested the boom and reversed the trend was the cumulative effect of a number of measures taken by the Government. The series of credit restrictions ending with the one which, in actual practice, has meant an increase in the Bank rate to 5 per cent., constitute a substantial check on speculators who went long in equities. The special margins levied on bulls by the Stock Exchange authorities has also proved useful albeit in a small way. Equally important is the change in the Government's policy in regard to issue of new shares by existing companies. This development has gone a long way towards discouraging speculation in shares based on expectations of a right issue on very favourable terms.

It may be recalled here that, in order to help companies to raise their requirements of capital, the Government was following a liberal policy. It insisted on companies collecting only a nominal premium, irrespective of the market value of their existing shares. In several cases, it permitted the issue of new shares even at par. It was exercising wide discretion in this matter and the considerations that weighed with it in deciding the terms of issue were not disclosed to the public. Indeed, there were so many incongruities that one used to wonder whether the Government had any policy at all and whether it was not functioning in an arbitrary fashion. Even now, one does not know whether it has evolved a clear-cut policy and spelled out the principles for determining the premium to be collected on the issue of new shares. By keeping the investing public in the dark on a very important point like this, the Government itself is encouraging speculation, even though its declared intention is to the contrary. One fails to understand the need for secrecy in this matter. It is not suggested that the policy should be rigid. It could, and should, be flexible, but there can be no policy without some basic principles. If these basic principles are evolved and made known to the public, every one concerned will know where he stands.

In the case of Guest Keen Williams' issue of new shares, the Directors had originally proposed that the premium would be 100 per cent. of the paid-up value, that is, Rs. 10 for Rs. 10. Subsequently, the Government seems to have insisted on the premium being raised to as high as 185 per cent. This came as a shock to the stock markets and depressed not only the G.K.W. shares but also other scrips (Standards, for instance) which had sky-rocketed in expectation of right issues with high growth prospects at par or at only a small premium. Obviously, the Government's intention was to teach a lesson to speculators and the G.K.W. new issue came quite handy for this purpose.

Be that as it may, the share markets are greeting *Samvat* 2017 in a chastened mood. During the last few days, the bears naturally tried to take advantage of the break in the bull phase, but, unlike in the case of a boom and perhaps stung by the repeated charges of bolting the stable door after the horse has been stolen, the Stock Exchange authorities acted more promptly in restraining the enthusiasm of bears. In Calcutta, sensitive and technically vulnerable counters were protected against a bear raid by abolition of short sales in the critical week. In Bombay and Ahmedabad, stringent margins were imposed on bears. These steps have limited the bearish mischief. Further, the fear that a leading bull operator might not honour his commitments has proved false. It is said that he has met all the payments due from him on account of the last settlement, though it amounted to a sizable sum, variously put at between Rs. 25 lakhs and Rs. 30 lakhs. In Calcutta, too, there have been no payment difficulties. This development has instilled confidence among the operators.

Although in a sober mood, the share markets are not taking a sombre view of the future. Undoubtedly, there are many risks, as the problems confronting the country are tough and the situation contains many uncertainties. But, as Prime Minister Nehru is wont to say, only the dead have no problems and it is only he who dares will have the opportunity of getting a handsome reward. It is relatively easy to give a long list of misgivings and the dangers lurking in the scene, but more difficult to paint an optimistic picture. While we reserve a detailed analysis of both the sides for our next issue, our conclusion is that the time is opportune for selective buying of growth stocks giving a yield of 4 per cent. to 5 per cent., tax-free. This advice holds good only to genuine investors, that is, those who have funds to spare and are in a position to sit tight on their investments at least for the next two years, if not longer. It is not for those who wish to pick up investments with the help of borrowed money, for credits will cost dearly in the coming months and may not be easily available. Further, there are quite a few risks that make the short-term outlook highly uncertain.

Oil—Who is Exploiting?

It is a trait among some individuals and institutions to accuse others of exploitation just to cover up the very same defect from which they themselves suffer. To this category belongs the Government of India, the Minister for Oil, Mr. K. D. Malaviya, to be more precise. Time and again, Mr. Malaviya has charged the oil companies on the score of reaping enormous profits year after year. This allegation does not seem to be well founded, if the data contained in the survey of the activities of the Burmah-Shell Oil Storage and Distributing Company of India Ltd. during the year 1959 are any guide. This Company is the largest of the three distributors of petroleum products, the total quantity handled by it last year being 3,628,123 metric tons, as against 2,976,813 tons in the preceding year. Out of the aggregate trading receipts of the Company amounting to Rs. 152.16 crores, the F.O.B. value of products accounted for Rs. 49.33 crores (32.42 per cent. of the total), distribution costs, including depreciation and amortisation, for Rs. 33.89 crores (22.28 per cent.), and ocean freight for Rs. 7.34 crores (4.82 per cent.). Of the balance of Rs. 61.60 crores, as much as Rs. 58.93 crores (38.73 per cent. of the total) represented payments to the Government, leaving just Rs. 2.67 crores, or 1.75 per cent. of the total proceeds, for reinvestment and payment of dividends to shareholders. Who then is exploiting the consumer—the oil companies or the Welfare State?

It will be seen from the aforesaid details that oil companies, in general, and Burmah-Shell in particular, are golden geese. If they are nourished and encouraged to grow, they will yield more and bigger golden eggs. Instead, Mr. Malaviya seriously thinks that the public sector itself can take up this function, so that the country can have the eggs without having to pay for the cost of feeding these geese. On the face of it, his idea sounds attractive. But, on deeper thought, one gets the doubt whether the public sector has the capacity to produce the golden eggs as frequently and as cheaply as these foreign geese can.

To return to the Burmah-Shell's activities. Mention must be made here of the reductions in the ceiling on selling prices of specified petroleum products effected by Burmah-Shell twice, in May 1958 and October 1959. The benefit of these reductions, however, has been denied to the consumer because the Government has absorbed it itself through additional excise duty in the name of finding resources for financing the second Plan. In fact, despite reductions in the Company's selling prices, the consumer today is paying more for his requirements of motor spirit and high-speed diesel as compared with the position before the reductions. Thus, the Company's prices of motor spirit and high-speed diesel have been lowered from Re. 1.10 and 87 nP per gallon on 19th May 1958 to 87 nP (on 1st November 1959) and 72 nP (on 1st March 1960), respectively, whereas the corresponding consumer prices have risen from Rs. 2.95 and Re. 1.63 to Rs. 2.98 and Rs. 2.31, respectively.

Apart from the meagre balance of Rs. 2.67 crores left for reinvestment and payment of dividends to shareholders, the Burmah-Shell has practically no control over items of distribution costs such as wharfage, pumping charges and Port Trust dues, packages and internal freight. Similarly, the cost of raw materials like steel and cement is predetermined and the wages paid to personnel are to a large extent, set by the scales prescribed by Industrial Tribunals. No wonder the Company is constrained to remark that "the margins available under the prices instituted by the agreements are extremely slender and the generation of funds for reinvestment and for the remuneration of shareholders is going to be an extremely difficult exercise." When such is the position, how can one expect the oil companies to find the enormous amounts of capital required to meet the expanding demand for petroleum products? It is estimated that the total consumption of these products, which has increased from 2.2 million tons in 1948 to 6.6 million tons in 1959—an average growth of over 10 per cent. per annum—will more than double itself by the end of the third Plan. Oil experts put the investment needed for locating and marketing every extra ton of oil at Rs. 600 and, on this basis, the total outlay required to meet the growth of Indian demand in the third Plan period comes to Rs. 500 crores. In view of the magnitude of the problem involved thus, would the oil companies not be justified if they were to ask the powers-that-be to accord to them a more helpful and sympathetic treatment?

Problem of Surplus Coffee

Coffee planters in India are faced with the problem of marketing the rapidly rising crop, consequent on the none-too-encouraging internal offtake and fall in exports as a result of a world surplus. The 1959-60 crop has so far (up to the end of September) yielded 49,106 metric tons, representing an increase of nearly 3,000 metric tons over the receipts in the corresponding period of 1959 and constituting a new record in the history of coffee planting in this country. The internal offtake during the first nine months of 1960 aggregated 21,556 metric tons, which shows a fall of 1,420 metric tons from that in the first nine months of 1959. Up to the end of September 1960, exports out of the 1959-60 crop amounted to 9,787 metric tons, as against 12,634 metric tons up to 8th October 1959 out of the 1958-59 crop. Tenders have been invited for exporting another 2,784 metric tons. Assuming that this quantity is exported, it will still leave a surplus of 8,029 metric tons to be sold against the allocation of 20,600 metric tons from the 1959-60 crop. Last year, the Coffee Board had fixed an export quota of 17,000 metric tons out of the 1958-59 crop and a quantity of 3,367 metric tons was left to be sold at this time last year.

The problem is expected to assume a more serious proportion next year when the exportable surplus will be still higher, as a bumper crop is anticipated. The planters cannot, however, think of reducing coffee production, as it would mean a higher cost of production and would result in many companies suffering losses. Even with the increasing production and a larger per acre output, the cost per acre has gone up many times during the last few years, while the return to the grower has actually declined. Thus, in 1952, the return to the grower was fixed at Rs. 2.25 per point, but because of the realisation of higher export prices, the actual return was better at Rs. 2.75. Eight years later, notwithstanding all the rise in cost of production, the retention price is lower at Rs. 2.20 per point. What is more, it is considered very unlikely that in the coming years producers will get more than the present price. Highlighting this problem, Mr. U. K. Lakshman Gowda, Chairman of the Mysore State Planters' Association, in his speech at the second annual meeting of the Association held at Mysore this week, said:

"Without increasing our production per acre and the size of our total crop, we cannot meet the increase in costs. But the more we produce the larger the surplus. If the world price is lower than the retention price, then the greater the loss we have to bear. The consumers who have long been accustomed to the idea that their coffee should be subsidised for them would now resent a subsidy in the reverse, namely, a subsidy on export. The growers, in fact, face a very difficult situation and it requires organised approach if we are to meet the problem of crop disposal."

One of the means of meeting this problem of surplus is to enlarge the internal market. The problem of marketing coffee has not been a matter of deep thought for growers during the last 15 years. It is being looked after by the Coffee Board. With the marked change in the world market and rise in domestic production, the growers are now seriously concerned over the future of Indian coffee. They are considering certain proposals in this connection. One of them, according to Mr. Lakshman Gowda, is the creation of a Commonwealth Pool, to which the Indian surplus coffee can be consigned and can be marketed from London. They are also considering the question of setting up a joint propaganda organisation for Commonwealth coffee. The East African producers have now a joint representation in London and are considering the question of setting up an African Coffee Promotion Board. If this idea, before it takes final shape, could be converted into a Commonwealth Coffee Propaganda Board, Mr. Lakshman Gowda suggested, it might help Indian coffee and also save a great deal by way of cost. How far this idea will bear fruit remains to be seen, but an attempt is worth making.

Alind's Progress

On the occasion of its Decennial Celebrations held at Kundara in Kerala on the 8th inst., the Aluminium Industries Ltd.—"Alind," for short—could certainly look back upon its career with much pride and satisfaction. The Company has achieved notable progress in the production sphere, the actual output of bare aluminium conductors having risen from less than 3,000 miles in 1951 to as much as 34,400 miles during the year ended March 1960 and that of covered conductors from about 1.5 million core-yards in 1958, when production was first undertaken, to 7.0 million core-yards in 1959-60. A high level of production is also being maintained in aluminium rod, accessories and tools. The covered conductor manufacturing capacity is being further increased in order to cater to the expanding market for this product. The Company has now gone into the manufacture of high-tensile galvanised steel core wire and is continuously exploring the possibilities of new lines of development. Truly, the Company is fully worthy of the tribute paid by Mr. Panampalli N. Govinda Menon, a former Chief Minister of Kerala, that it "furnishes a

ANOTHER GAINFUL YEAR FOR EQUITIES

UNDERTONE AT CLOSE QUIETLY STEADY

(From Our Own Correspondent)

BOMBAY, 18*th October*

THE trading on the Stock Exchange for the *Samvat* year 2016 came to a close yesterday. The *Moorat* trading for the coming year will be done on Thursday the 20th inst., between 5 p.m. and 6 p.m. As this issue has to go to press two days earlier than usual on account of holidays, it is not being covered here. It is, however, proposed to make a brief survey of the trend of the market in the Hindu year now drawing to a close. The year has turned out to be another gainful one, on the whole, for investors in equities. It is true that the undertone at the close of the year was somewhat subdued, due to a variety of factors, such as imposition of heavy margins and special deposits on leading speculative counters by the Stock Exchange authorities, the application of credit restraints by the Reserve Bank to curb excessive speculative activity, the extreme stringency in the money market, the increase in the lending rates of banks, fears of further severe action by the Government to check speculation and the prospect of a rise in the Bank rate. But, on the whole, it was a year of boom for the stock exchanges. The trend was bullish and several counters touched new high levels, exceeding the previous year's peaks by a sizable margin.

The trend is reflected in the rise in the index number of variable dividend industrial security prices for Bombay (base: 1952-53=100) from 159.9 for the week ended 31st October 1959 to a peak of 189.1 in the week ended 23rd July 1960 before reacting to 170.1 in the week ended 8th October, representing a gain of 10.2 points over the year. The highest point touched in the previous *Samvat* year was 162.7 in the week ended 10th October 1959.

The highlights of the year's trading were provided by Century, Khatau, Standard and Mafatlal in the textile group, rayons, chemicals and dyes in the miscellaneous section and Larsen and Toubro, Tata Locomotive and Voltas in the engineering group. There were, no doubt, exceptions too to the general trend, prominent among them being the steel shares, A.C.C. in the cement section, and all shipping scrips. Cash scrips provided a bright feature of the year's trading and gains were marked in chemicals and dyes. The year was also noted for the keen demand for new issues, the number of which was considerably larger than in the previous year. Many of them were heavily oversubscribed and established unprecedented records.

The following table gives an idea of how the leading counters fared during the year under review.

	Pre-*Diwali* closing 1959 28-10-1959	Highest since	Lowest since	Pre-*Diwali* closing 1960 17-10-1960
	Rs.	Rs.	Rs.	Rs.
Tata Steel Ordinary	154.50*x.d.*	164.50	143.00	145.25*x.d.*
Indian Iron	23.84*x.d.*	26.55	21.84	22.92*x.d.*

Wimco	227.00	283.00	225.00	278.00
Scindia	16.92	17.32	13.40	13.72

To revert to our customary weekly review. Trading during the week under review was restricted to three days in view of the intervening holidays for *Diwali*. Though activity was far from brisk, the undertone was steady and the recovery noted last week was sustained in many counters. There was a general feeling that the long-term outlook for the economy as a whole was bright, thanks to the proposed large outlay on the third Plan and good prospects of getting larger foreign capital. There was, nevertheless, an undercurrent of hesitancy and operators were unwilling to go headlong, in view of the Budget uncertainty. The Budget for 1961-62, the first year of the third Plan, is expected to be a crucial one.

Steel shares were steady. Tata Ordinaries gaining ground from Rs. 144.75 to Rs. 145.25 and Indian Irons from Rs. 22.64 to Rs. 22.92.

Textile scrips too were a shade better. Bombay Dyeings were done up to Rs. 63.10, as against last week's closing of Rs. 62.80, and finished at last week's closing of Rs. 62.90. Centurys gained Rs. 9 over the week to Rs. 465. Kohinoors picked up a rupee to Rs. 299. Finlays were done Rs. 2 higher at Rs. 348. A notable exception was provided by Khataus which fell by Rs. 97.50 to Rs. 510, presumably due to disappointment over the Chairman's statement at the annual general meeting on Friday last that the Directors did not have under consideration any scheme for diversification of the Company's activity. He also ruled out the prospect of undertaking a new project unless it was closely allied to the main line of activity of the Company. Further, he indicated the possibility of the current year's profit showing a considerable fall and that as the Company was within the mischief of Section 23A of the Income-tax Act, the dividends were bound to fluctuate. All these remarks completely belied the rumours prevailing in the market earlier which were primarily responsible for the sharp rise in the price of this scrip. Standards shed a part of their last week's gain, falling from Rs. 1,350 to Rs. 1,317.

Sugar shares gained some ground under the lead of Belapurs, which hardened by Rs. 5.50 to Rs. 367. Walchandnagars were steady at Rs. 297.50.

Cements were conspicuously dull, A.C.C. showing hardly any change over the week at Rs. 144.50. Digvijays were a shade lower at Rs. 165.

In the engineering section, Premier Constructions were prominent with a drop of Rs. 7.50 to Rs. 306.50. Tata Locomotives hardened to Rs. 284, after an initial setback from Rs. 281 to Rs. 273. Alcocks were unchanged over the week at Rs. 256. Voltas were marked up by Rs. 6 to Rs. 269.

Shippings were quiet, with Scindias dipping to Rs. 13.72. Automobiles, however, were steady, Premier Autos being a bright feature with a gain of Rs. 5.75 to Rs. 163.75.

In the miscellaneous section, Bombay Burmahs were listless, fluctuating between Rs. 576 and Rs. 561. National Rayons added a further gain of Rs. 5 to Rs. 470, while Gwaliors were a shade quiet at Rs. 39. Chemicals and Dyes were lower, Amar Dyes declining by Rs. 10 to Rs. 425, Colour Chems by Rs. 5 to Rs. 370, Indian Dyestuffs by Rs. 16.25 to Rs. 563.75 and Poly Chems by Rs. 10 to Rs. 255. Ceat Tyres hardened by Rs. 2.50 to Rs. 240, while Premier Tyres shed Rs. 2.30 to Rs. 87.

WM. POWELL & SONS LTD.

Messrs. Wm. Powell and Sons Ltd. inform the applicants for the recent capital issue of shares of the Company that, after protracted correspondence, it has been decided by the Calcutta Stock Exchange Committee to allot the shares as follows:—

For applicants of 50 shares—5 shares for each applicant with alternate allotment eliminating 50 per cent. of the applicants. This alternate allotment to be made under the supervision of the member of the Committee.

For applicants for 100 shares to 950 shares—at 5 per cent.

For over 1,000 shares—at 4 per cent.

The allotment and regret letters are now being issued.

NSIC FORGES AHEAD...

★ Contracts valued at approximately Rs. 7 crores have been secured by the small units with the assistance of the Corporation.

★ About 4,000 machines, both imported and indigenous, worth over Rs. 3.5 crores have been supplied to small units on easy instalment payment basis.

★ Besides exporting leather footwear and stockinette valued over Rs. 176 lakhs, small-scale industries products valued over Rs. 50 lakhs have been marketed under the various internal Marketing Aid Schemes of the Corporation.

★ Factory buildings costing approximately Rs. 75 lakhs in the Industrial Estate at Okhla (Delhi) and Naini (Allahabad), have already been constructed and expansion programme of the former estate estimated to cost Rs. 45 lakhs is under execution.

★ A Prototype Production and Training Centre at Rajkot has already been set up; 75 per cent of the work of construction of workshop buildings for another such Centre at Okhla, has also been finished. These Centres will impart training to artisans and develop prototypes of machine tools for production on commercial scale by small-scale units.

Do you own a small-scale unit or wish to start a small-scale industry? You can also avail of the benefits of our Schemes.

THE NATIONAL SMALL INDUSTRIES CORPORATION LIMITED

RANI JHANSI ROAD, NEW DELHI-1

UNESCO 25 OCT 1960 717

NEWS IN BRIEF

THE Russian-built rolling mills at Bhilai, with an annual capacity of 400,000 tons, will be commissioned by Prime Minister Nehru on the 30th inst.

A four-member Soviet delegation, led by Mr. N. S. Patolichev, Minister for Foreign Trade, has arrived in New Delhi to finalise trade arrangements between the two countries for the next three years.

Eleven Indian-built Leyland Comet bus chassis were loaded at the Madras Wharf for delivery to Ceylon last week. This shipment completes the first contract for twelve Indian-built Comets received recently by the Ashok Leyland Ltd., Madras, on behalf of Leyland Motors Ltd. from the Ceylon Transport Board.

The Government of India has sanctioned a scheme for granting enhanced rate of subsidy of Rs. 1,000 per acre from this year onwards for replanting low-yielding unselected rubber areas registered with the Rubber Board. The subsidy will be paid in seven annual instalments, the first being Rs. 400 per acre and the remaining Rs. 100 per acre each year.

An official delegation (leader: Dr. D. S. Kothari, Scientific Adviser to the Union Defence Minister) has left for Moscow to conclude a deal for the purchase of transport aircraft, helicopters and certain categories of engineering equipments from Russia. These supplies, it is said, are required urgently for the development of communications in the northern border areas.

The second coke-oven battery of the Durgapur Steelworks was lighted by Mr. Macolm Macdonald, the U.K. High Commissioner in India, on the 13th inst. The first battery was lighted in August 1959. The Durgapur plant will have three batteries in all, which together will carbonise every day 5,200 tons of dry coal into 3,900 tons of coke. Each battery consists of 78 ovens.

The Indian collieries produced 29.64 million tons of coal during January-July 1960, as against 27.60 million tons in the corresponding period in 1959. Of this quantity, the private sector alone accounted for 25.10 million tons. The Raniganj coalfields led with a production of 10.27 million tons, followed by the Jharia coalfields the share of which was 9.14 million tons.

A jute delegation, led by Mr. D. C. B. Pilkington, Chairman of the Indian Jute Mills Association, has left on a tour of the U.S., Argentina, Canada and the U.K., to establish personal contacts with customers and to study prospects for expanding exports. The visit has been timed to coincide with the autumn meeting of the Textile Bag Manufacturers' Association, which represents the U.S. importers of burlap.

The U.S. Government has announced that it will finance the entire cost of the proposed Trombay fertiliser plant estimated at Rs. 27.6 crores. The foreign exchange component of Rs. 14.3 crores will come from the U.S. Development Loan Fund, while the rupee cost of the plant will be met by a loan of about Rs. 13.3 crores from the P.L. 480 counterpart funds. The details of the loan agreement are still to be negotiated. The aid brings the total U.S. aid to India to Rs. 1,727 crores.

A study group to examine the question of starting certain industries with the joint effort of the Government and the private sector in Maharashtra, has been set up by the State Government in accordance with the suggestion of the State's Consultative Committee on third Plan. Mr. R. G. Saraiya, a well-known industrialist and banker, is the chairman of the group, the members being Messrs. Naval H. Tata, S. M. Joshi, A. R. Bhat, R. M. Deshmukh and A. B. Bardhar. The Secretary to the Industries and Labour Department is the member secretary of the group.

The total purchases made by the Government of India from indigenous manufacturers has gone up from Rs. 42 crores in 1953-54 to Rs. 161 crores in 1958-59. In 1959-60, it amounted to Rs. 153 crores out of the total purchases worth Rs. 182 crores. This information was furnished by Mr. N. E. S. Raghavachari, Director-General of Supplies and Disposals, in his speech at the fifth meeting of the Western Regional Purchase Advisory Council held in Bombay last week. The foreign exchange component in the Government's purchases fell by Rs. 13 crores in 1959-60, as compared with the previous year.

The Union Government has decided to permit the imports of fruits (dried and fresh), asafœtida, cumin seed and medicinal herbs from Afghanistan on an *ad hoc* basis during the period ending 20th July 1961. This step has been taken in pursuance of the trade arrangement recently agreed to between the two countries. Those who have participated in the Indo-Afghan trade in these commodities during the four years ended June 1956 and who have already been registered as approved importers will be eligible for the import permits. Imports will be allowed within a limited monetary ceiling.

An exhibition of the industrial designs in vogue in the U.S. and the U.K. was declared open by Mr. Sri Prakasa, Governor of Maharashtra, in Bombay, on Monday this week. The exhibition is organised by the Museum of Modern Art, New York, under the auspices of the National Small Industries Corporation. On display are 300 articles of everyday use—household china and cutlery, porcelain and glassware, electrical and sound equipment, sanitary fittings, tools and furniture made of iron, wood, cane and nylon. The Ford Foundation has given a grant for meeting the expenditure on the acquisition of exhibits as part of its efforts in India "to stimulate industrial growth, particularly among the small-scale industrialists."

The Kerala Assembly has voted for exemption of plantations from the provision of ceiling fixed in the Agrarian Relations Bill. The Bill was originally passed by the erstwhile Communist Government, but was returned by the President for its reconsideration by the newly elected legislative body. An official amendment adopted by the House also exempts lands owned or held by a university, religious, charitable or educational institutions, or a public trust, including *wakfs*, the income of which is appropriated entirely for such institutions, from the ceiling provision of the Bill. Except on has also been made applicable to land granted to defence personnel for gallantry for the duration of their lifetime. Another amendment adopted lays down that a landlord may take over from a tenant any holdings comprising agricultural land if such holding is necessary for plantation purposes or if the tenant wilfully commits any damage to the land. In such cases, the tenant shall be entitled to solatium in the manner prescribed.

From Abroad

The U.S. Export-Import Bank has announced the authorisation of a $6.4-million credit to Pakistan for the purchase of U.S. equipment to process raw cotton, including gins, precleaning elements and delinting machines.

Almost every second West German employer contributes to the transportation cost of his wage and salary earners. The percentage of workers receiving such contributions varied from three to five per cent. of the firm's labour force. It is highest in rural areas where employers have difficulties in getting the necessary manpower.

The Government of Pakistan is negotiating with the West German company, the Daimler-Benz, to establish a plant for manufacturing trucks and buses in the country in association with local capital. The proposed plant will have a capacity of 1,500 units per year. The country's need for trucks and buses is growing rapidly and it is estimated that, during the next five years, an additional 24,000 trucks and 12,000 buses will be needed. Moreover, the Government intends to denationalise road transport in some regions and this will result in a further increase in demand.

West German collieries are making headway in their efforts to mechanise coal production and make life easier for the miners. In July 1960, about 36 per cent. of total coal output in the Ruhr area came from 287 fully mechanised collieries, as against only 15 per cent. (139 fully mechanised collieries) in 1957. Meanwhile, first tests have begun in the Ruhr area to make the big dream of the mining engineers come true: the fully mechanised "deserted" coal face requiring no human labour at all.

The West German Government has approved of a Bill authorising the Ministry of Federal Property to make available upto DM 1,500 million (£130 million) for aid to less-developed countries. The Government proposes to expand its aid programme further. It is proposed to use the Fund for granting long-term credit "on terms acceptable to the recipient countries." In addition to these measures, the industrial concern have volunteered to contribute to a DM 1,000-million loan fund for the needy countries. This fund will be administered by the publicly owned Reconstruction Bank, which will pay an interest of 5 per cent. to depositors. It will, in turn, be able to lend the money at interest of about 5½ per cent.

U.S. Companies added $2,500 million to their investments in foreign subsidiaries and branches in 1959, a larger increase than in 1958 but substantially, less than that of the peak year 1957, according to a recent report of the U.S. Department of Commerce. Capital outflow of $1.4 million and reinvested earnings of $1.1 million last year raised the total value of U.S. firm's foreign investments to $30,000 million. The flow in 1959 included some $160 million to acquire additional stock of existing subsidiaries or other companies already established abroad. The share of the U.K. in the additions being made to direct investments in Europe was about 45 per cent. Much of the increase in the recent flow to Europe has gone to West Germany and France, with Italy and the Netherlands also showing large gains.

Several automobile manufacturers in the U.K. have announced cutbacks in production, following the general pause in world trade, partial return to seasonal trading, hire-purchase restrictions, etc. The British Motor Corporation, for instance, has announced curtailment of output to the extent of 12½ per cent., which will put on short time 23,500 workers out of the 51,500 employed. Its output will decline by 2,000 vehicles a week, though it will still be higher than last year. The Rover Company has decided that all car assembly line workers will go on to a four-day week "for the time being." Vauxhalls have already laid off 1,000 persons and asked another 26,000 employees to go on to a four-day four-night week, with effect from the 14th inst. About 700 men have been dismissed from the Mullners body-making subsidiary of the Standard Triumph International, and, at the Coventry motor plant, 2,000 workers are on a 2½-day week and another 6,000 have lost one shift. The other automobile firms have also followed suit.

Industrial production in the Common Market countries of Western Europe (France, West Germany, Italy, Belgium, Netherlands and Luxembourg) is expected to be higher by 11 per cent. in 1960, as compared with last year, according to the latest quarterly report of the Commission for European Economic Community. The percentage rise was 7½ in 1959 and 3 in 1958. The report says that economic expansion will continue in the first half of 1961 also, but there are some doubts of exports to outside countries resuming their increase over this period. There has already been a fall in exports, notably because of diminished sales to the U.S., and the Community's trade balance has gone slightly into deficit.

YOU CAN ALWAYS TRUST WHEN IT'S Shanks

Approved by the Malaria Institute of India

SHANKS single-pull "NOMOS" Cisterns are mosquito-proof and work on the valveless syphon principle. They last long and outdo other varieties in working efficiency.

MR. V. Nanjappa, I.C.S., Joint Secretary, Atomic Energy Establishment, has been appointed Director-General of Posts and Telegraphs *vice* Mr. V. Shankar, I.C.S., who will assume charge as the Special Secretary, to the Union Ministry of Food and Agriculture shortly.

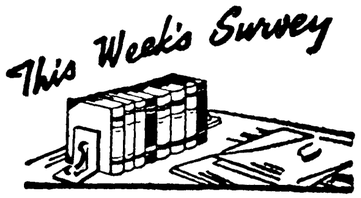
Mr. S. Ranganathan, I.C.S., Secretary, Union Ministry of Commerce and Industry, is scheduled to leave for Geneva on Friday next week to attend the forthcoming meeting of the G.A.T.T. as the leader of the Indian delegation.

Captain Dennis I. Peacock has been appointed Chief of Flight Operations of the B.O.A.C. with effect from 15th inst. in the place of Captain T. W. Farnsworth, who recently resigned.

Dr. N. G. Chokkanna, Director of Research, Coffee Board, has left for Ivory Coast to attend the F.A.O. technical meeting on coffee production and protection which commences at Abidjan on the 21st inst.

Mr. Harish C. Jain, Chairman and Managing Director of the National Advertising Service and Vice-President of the Advertising Agencies Association, will lead the Indian delegation to the second Asian Advertising Conference to be held at Tokyo at the end of this month.

Mr. W. P. G. Maclachlan, M.B.E., General Manager of the Assam Oil Company, will be leaving India shortly. His place as representative and General Manager of the Burmah Oil Company's interests in India will be taken by Mr. M. J. Condon, C.B.E., who has also been appointed to succeed Mr. Maclachlan on the Board of Oil India (Private) Ltd. As the headquarters of the Company is being transferred to New Delhi, Mr. Condon will be stationed there. At the same time, Mr. G. N. S. Robertson is taking over the administration of the Assam Oil Company with his headquarters at Digboi in Assam.



ANOTHER MAHALANOBIS COMMITTEE

THE Planning Commission has just announced the composition and terms of reference of the Distribution of Income and Leveis of Living Committee, a subject which, it may be recalled, figured prominently in the recent debate in Parliament on the Draft Outline of the third Plan. This committee, which is headed by Prof. P. C. Mahalanobis, Honorary Statistical Adviser to the Government of India, is composed of eight other members, namely, Dr. V. K. R. V. Rao (Director, Institute of Economic Growth, Delhi), Dr. P. S. Lokanathan (Director-General, National Council of Applied Economic Research, New Delhi), Dr. B. N. Ganguli (Director, Delhi School of Economics), Mr. Vishnu Sahay (Secretary, Planning Commission), Mr. D. L. Mazumdar, (Secretary, Department of Company Law Administration), Dr. B. K. Madan, (Executive Director of the Reserve Bank of India), Mr. B. N. Datar (Adviser, Ministry of Labour and Employment) and Mr. P. C. Mathew (Director, Central Statistical Organisation) as Member-Secretary. The expert composition of the committee suggests that its labours may be informed by a high degree of objectivity.

The terms of reference of the Committee also suggest that it will not be concerned merely with a probe into concentration of wealth. While, no doubt, it is particularly expected "to ascertain the extent to which the operation of the economic system has resulted in concentration of wealth and means of production," it will also review changes in levels of living during the first and second Plan periods and study recent trends in the distribution of income and wealth. Since there are gaps in the existing statistical and economic data—gaps which the Committee is expected to identify—the guess may be hazarded that it may not reach any sweeping conclusions on the basis of imperfect and incomplete data. The need for a committee of this kind for appraising objectively all the real benefits, besides additional money incomes, accruing to wide sections of the population under conditions of planning, has already been emphasised in a leading article in this journal (*vide* page 534 of the issue dated 24th September 1960). The changes in levels of living will not, of course, lend themselves easily to precise statistical computation. But, then, this has got to be done on a continuous basis, so that it can be statistically established that the continued existence of the few rich does not militate against the betterment of the poor. It is to be hoped that the Mahalanobis Committee will conduct its enquiries quietly and scientifically without unduly publicising them. If its integrity and objectivity are not to be questioned later, it should studiously avoid publicity and political involvement.

SUGAR TARGET

It is not merely the sugar industry but the consumer also that has reason to feel gratified at the statement of Mr. Manubhai Shah, Union Minister for Industry, made while inaugurating the twenty-eighth Annual Convention of the Sugar Technologists' Association of India held at Kanpur on Saturday the 15th inst., that the third Plan target for white sugar production was being stepped up from 3.0 million tons to 3.5 million tons, in view of the need for exporting sugar arising from scarcity of foreign exchange. On more than one occasion in the past, this journal has pointed out that the three-million-ton target is a conservative one, inasmuch as it does not take into account (a) the nutritional requirement of sugar (estimated by experts at nearly 23.00 lbs., as against 13.87 lbs. assumed by the Planning Commission), (b) the possible increase in consumption of sugar if its price is brought down to a reasonable level, and (c) the need for earmarking a portion of output for purposes of buffer-stock, not to speak of the exigency of meeting export demand. The more responsible section of the industry has itself warned against the danger of sugar output failing to keep pace with enhanced demand at the end of the Plan, unless the target is raised now alone, since it requires at least three years to bring additional capacity into existence.

Viewed thus, the latest move of the authorities to raise the target is, indeed, commendable. But the question is: Will the consumer of sugar enjoy the fruit of such an expansion of production? This poser is specially raised, because, although the quantity of sugar actually produced has risen markedly in recent years—from less than a million tons in 1949-50 to 2.42 million tons in 1959-60—the price paid by the consumer continues to be high in all conscience. The reasons are not far to seek. Apart from the poor sucrose-content in cane and the defective system of linking cane prices to quantity irrespective of quality considerations, the incidence of taxation is pretty heavy. On every pound of sugar costing 55 nP (retail), the Government collects by way of excise duty as much as 13 nP, as against 3.3 nP levied in 1950-51, when the price of sugar was about 35 nP per lb. In other words, excise duty now accounts for 24 per cent. of the sugar price, as against just 10 per cent. ten years ago. Further, the main ground on which the Government is willing to enhance the target is not underestimate of domestic demand but the need for developing an export market. While this need is undoubtedly there, it is a moot point whether its fulfilment is a feasible proposition. The Government's desire to promote exports of sugar may, however, be welcomed, if it at least succeeds in driving home the point that the efficiency of sugarcane growing requires to be vastly improved.

It will be highly desirable to reach the increased target of 3.5 million tons through an all-round rise in efficiency, that is, in the farms and factories alike. Mr. Manubhai Shah no doubt did stress this aspect, but his remarks sounded hackneyed and well-worn. For he said:

"While the industrial and mechanical engineers are busy with their slide rules and drawing boards in designing and fabricating the required machinery for the factory, on the field side the soil chemists, the biologists and other agricultural scientists have to pursue vigorously their quest for more knowledge about the cane plant. . . . The most important feature of the sugar industry is its close tie with agriculture, affecting the fortunes of millions of cultivators. . . . Unless the needs of the ordinary cane growers, who form the backbone of this agricultural industry, are taken into consideration while suggesting improved patterns, no real and substantial improvement can be expected. Work in test fields and laboratories should be continued for finding out higher yielding varieties of sugarcane, more effective fertilisers and better agricultural methods."

Such sentiments have been expressed so often and so repeatedly without being followed by energetic steps to translate them into action that they have almost lost their force. If the authorities are really earnest about solid improvement in sugarcane growing, they must unhesitatingly accept and implement the system of paying for cane on the basis of both weight and quality, as is the case of all other agricultural commodities. Payment on quality basis, as Mr. Desraj Narang, President of the Convention, rightly declared, would arouse the necessary quality-consciousness among cultivators, for, once the grower realises that quality cane will receive a premium, he will be anxious to improve the quality of his produce and take appropriate steps in that direction. It is true that there are certain inherent difficulties in the way of implementing the scheme in North India, but "it is," to quote Mr. Narang, "upto the Government and the various organisations concerned to devote attention to remove them."

CUBA AND GHANA: THE CONTRASTS

By the end of June last, Dr. Fidel Castro's revolutionary Government in Cuba had expropriated a number of foreign properties including the Shell refinery. Almost half the American investments (valued at $1,000 million) had been taken over by that time or prepared for seizure. Last month, the American banks in Cuba were also nationalised. Till very recently, the campaign of seizure of foreign properties has been sought to be justified on the ground of nationalism (or anti-Americanism) and anti-imperialism. But, with the latest nationalisation measures announced by the Cuban Government, Dr. Castro's revolution is now clearly seen as a full-fledged Communist revolution. The earlier unverified story that several leading members of the Castro Government are actually Communist party members seems to have been confirmed now. Cuba, thus, may virtually become a part of the Communist bloc and its foreign policy will be increasingly co-ordinated with Soviet "cold war" directives.

It is in this "cold war" context that the latest nationalisation measures in Cuba have acquired an alarming significance. Almost the entire economy is now socialised, following the Government's order to nationalise banks and most commercial enterprises and key industries of the country. The expropriation law covers 382 enterprises, including 105 Cuban sugar refineries, 50 textile factories, 13 big stores, eight rail-road lines, five big breweries, 18 rum and alcohol distilleries, 19 construction enterprises, 13 maritime firms, 47 commercial warehouses, 11 coffee companies and 11 cinema circuits. The tobacco industry, too, has already been taken over. Among the enterprises now expropriated are American-owned sugar mills, nickel mines, rubber factories, railroads and commercial companies. At one sweep, therefore, almost all foreign private enterprises and virtually all domestic private enterprises have been eliminated. Nobody knows what compensation will be given, for the expropriation law has merely stated "that indemnities would be paid in accordance with terms to be set later." All this means that the Cuban revolution is following the typical Communist pattern.

No such alarming development has, however, taken place in Ghana which, according to rumours last week, was on the point of taking over foreign-owned commercial interests. Dr. Nkrumah's Government in Ghana, like the Nehru Government in India, seems to be only moderately socialist, and so its latest policy announcement, which has belied last week's rumours, has been greeted with "qualified satisfaction" in London. Although, according to this policy statement, Ghana is to evolve a socialist pattern of society, no nationalisation of existing private enterprises is contemplated. What is contemplated is only a mixed economy with four sectors—State-owned, joint State-private, private enterprise, co-operatives, and purely private. Dr. Nkrumah's salutary recognition that there is an acute world shortage of capital for development and that foreign capital should be encouraged in such a way as to guarantee a reasonable return for investment, has gone a long way towards scotching the nationalisation rumours. In fact, he has described them as "pernicious, wicked and deliberately calculated to damage the reputation and good faith which Ghana has built up." This forthright statement, together with the accent on the word "evolution" in relation to the socialist pattern of society, distinguishes Dr. Nkrumah so fully from Dr. Castro that no further comment is required on the two contrasting pictures. The only question is whether a moderately socialist lead such as that of Dr. Nkrumah, who seems to have taken a leaf out of Mr. Nehru's book, will wean the newly independent African countries away from the influence of Communists.

DEFINITION OF "WORKER"

Two recent judgments of the Supreme Court on the definition of the term 'worker' in the Indian Factories Act have made an amendment to the Act necessary if the object of the legislation is not to be defeated. The term 'worker,' according to the Court, covered only persons who had the relationship of servant to the factory and that it did not extend to the employees of a contractor working in the same premises. The latest of the two decisions on this question was made by the Court on the 12th inst., while dismissing the appeal filed by the State of Kerala against Messrs. Gujrat Travancore Agency from the judgment of the Kerala High Court. The facts of the case are as follows:

The Inspector of Factories, Kerala, during his inspection of the premises occupied by the respondent, found 23 persons employed in garbling pepper and packing it in bags. The Agency was prosecuted for failing to register the concern under the Factories Act and commencing work without prior permission on the contention that, since the Agency was employing more than 20 persons in a manufacturing process, it was bound to register itself under the provisions of the Factories Act. It was argued on behalf of the Agency that the premises was not a factory and that the persons employed in garbling pepper were not 'workers' within the meaning of the Factories Act.

The case originated in the magistrate's court and travelled all the way through sessions to the High Court and finally to the Supreme Court. The magistrate convicted the Agency. The Sessions Court upheld the conviction. The Kerala High Court, however, set aside the conviction. The State, therefore, went in appeal against the Court's decision.

The Supreme Court held that there was no doubt that the Agency was engaged in a manufacturing process and, if 20 or more 'workers' were employed in it, it would be considered 'factory.' But the crucial question was whether the 23 persons employed within the premises were 'workers.' To decide this, the Court examined the definition of the term 'worker.' Referring to one of its earlier decisions, the Supreme Court recalled that it was held that, to determine whether a person was a worker, "the proper test was to see whether or not the employer had control and supervision over the manner in which the work was to be done." It was held therein that the employees of a contractor working on the premises were not workers. Giving the same interpretation, the Court held that the employees involved in the case under reference were not workers and that, therefore, the view held by the High Court was correct. The appeal was, accordingly, dismissed.

If this definition of the Supreme Court is allowed to stand without amendment to the Indian Factories Act, it may encourage employment of workers in factories through independent contractors in order to escape the obligations involved under the Act. This tendency is likely to prevail in small establishments, where it is that non-observance of the provisions of the Act is generally found. All that an employer has to do is to engage less than 20 persons and use contract labour for the rest of his requirements. This ambiguity would not have arisen, if the Act had made it clear that it meant to cover contract labour of the kind mentioned above. This again underlines the need for greater care and clarity in the drafting of statutes.

TRADE UNIONISM

Mr. V. V. Giri, Governor of Kerala, and a former Labour Minister of the Government of India, is a firm believer in the principle that a strong trade union movement is a bulwark of industrial democracy. He is against everything that has the effect of weakening the trade union movement. And he never misses an opportunity to drive home this point. Sometime ago he suggested suspension of adjudication for a period of three years on a trial basis, for adjudication, in his view, cut at the root of the trade union movement. His reasoning is that, as long as the law courts were there to decide industrial disputes, workers would be inclined to go to the court, to the neglect of the union.

Less controversial, however, is his stand on the question of multiplicity of unions. Mr. Giri thinks that one union for one industry is the ideal arrangement. Inaugurating a cellulose film factory at Rayonpuram (Kerala) this week, Mr. Giri again reiterated this stand. He said that, in the interest of bargaining power, there should be one body to deal with employers and the latter must feel that they were dealing with a representative body. Mr. Giri, however, seems to slur over the difficulties in achieving the object. Equally unrealistic is his recent suggestion that all the three democratic, all-India trade union organisations in the country, namely, the I.N.T.U.C., H.M.S. and U.T.C., should join together to form one single unit. Whatever the advantages of this merger—and it will certainly not be an unmixed blessing—it is difficult to conceive of an overnight change of heart in the unions' bosses, which alone could bring it about. And considering the fact that all unions other than the I.N.T.U.C. directly derive their inspiration and leadership from political parties which are rival to the one in power, it is futile to think of these unions coming together, unless they are prepared to sink their political identity by merging with the Congress Party or, alternatively, cease to be political parties, confining themselves only to trade union work.

Multiplicity of unions itself is the result of the existence of different political parties trying to win over the support of workers by championing their cause. If, therefore, unions should merge together and organise themselves on the basis of one union for one industry, politicians must withdraw themselves from the field. Their presence has led to the growth of mushroom unions, with weak finances and undesirable leadership. This is confirmed by a study made by the Labour Bureau of the Government of India. According to a note prepared by the Bureau on the subject, in spite of State encouragement, trade unionism in India continues to suffer from some major weaknesses. The Bureau has listed four of them: (1) political rivalries leading to multiplicity of unions owing allegiance to rival political parties and thus leading to disunity in the ranks of the working class, (2) outside leadership of unions, (3) inadequacy of funds, and (4) illiteracy among workers. The first two, it may be noted, is the direct result of political parties dominating the trade union field.

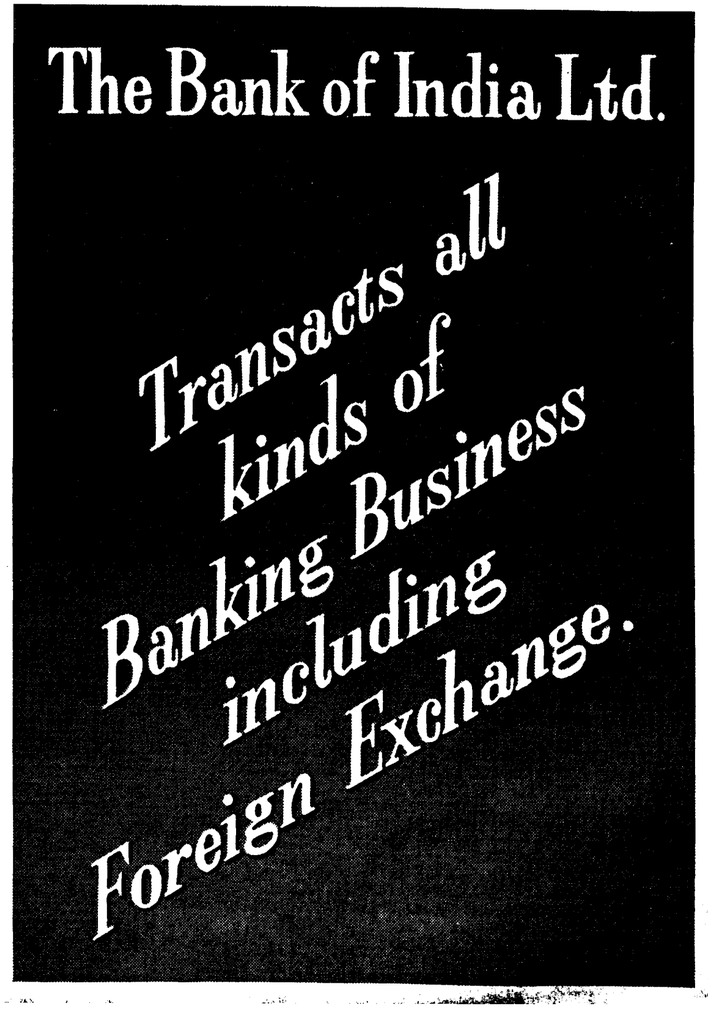
AGRICULTURAL IMPLEMENTS

It is common knowledge that one of the principal factors that retard productive efficiency in Indian agriculture is the continued use of outmoded tools and implements for farm operations. Although substantial sums have been spent on agriculture in the first and second Plans, no effective measures have been taken so far to ensure steady technical progress in this sector. In the Draft Outline of the third Plan, the Planning Commission has candidly confessed that, "despite frequent consideration of the subject at the expert level and general recognition of the importance of improved tillage and harvesting practices for scientific agriculture, practical action has invariably lagged behind." It is to be hoped that the second conference of experts on production, distribution and popularisation of improved agricultural implements, held at Kharagpur, West Bengal, last week, will not be as ineffective as the previous discussions. The Conference, inaugurated by Dr. Punjab Rao S. Deshmukh, Union Minister for Agriculture, was attended by senior officials of the Indian Council of Agricultural Research, representatives of the Central Government, State Governments, manufacturers of agricultural implements, educationists and farmers.

Improvement in agricultural tools does not imply mechanisation as is prevailing in the U.S. or the U.K. or Russia. It chiefly means that Indian farmers should be enabled to possess better and more efficient types of tools than they have at present. The introduction of these tools need not necessarily displace any labour. On the contrary, it may even lead to larger employment, albeit in other farms. There is even scope for mechanising certain operations. Explaining this point, Dr. Deshmukh observed that, if the fields could be tilled and got ready at a faster rate than now, with the help of machine-driven implements, such as small tractors extensively used in Japan, it would enable timely sowing of seeds over much larger areas under crops. A moderately-priced thresher driven by an oil engine or an electric motor, which was cheap enough in operation costs, since rural electrification was making some progress, would certainly be a good thing for Indian farmers. Dr. Deshmukh added that winnowing machines would also be most useful in any region where there was not enough blowing wind.

While these suggestions are theoretically sound, their implementation will not be easy. In the first place, cultivators must be convinced of the increased dividends they will get by adopting new techniques. Secondly, the Government will have to come to the assistance of private industrialists to ensure steady supply of the relatively new types of tools. All these call for concerted efforts on the part of the Government, the industry and other agencies concerned with agricultural development.

The Planning Commission has asked the States to evolve a programme of action for improving the financial returns from the irrigation projects during the third Plan period. Provisional estimates of receipts on revenue account for the third Plan has been roughly estimated at Rs. 100 crores from irrigation, that is, an annual average of Rs. 20 crores, as against the annual average of Rs. 10 crores during the second Plan period. The Commission has laid stress on upward revision of water rates, with a view to relating them more closely to the current value of crops and bringing in greater uniformity in the system and the scales of existing water rates in various regions. The State Governments' attention has also been drawn to the recommendation of the Taxation Inquiry Commission (1953-54) that a compulsory water cess should be levied on the entire area for which irrigation facilities are provided, irrespective of whether water is taken by cultivators or not.



AMERICAN LETTER

RUSSIAN PREMIER MAKES LITTLE IMPRESSION

ECONOMIC TREND UNCERTAIN

From Our Special Correspondent

NEW YORK, *13th October*

ACTIVITY has been increasing in certain lines of business in the beginning of the autumn season, but the bedlam in New York continues with the General Assembly of the United Nations still in session at this writing.

Prime Minister Fidel Castro of Cuba has left. It was reported in one of the papers here the other day, rightly or wrongly, that he and his brother Raoul had deposited $50 million (U.S.) in Swiss banks.

Premier Khrushchev has just left, after haranguing the U.N. on several occasions. Whether he knows it or not, he has made many enemies. He showed not only bad manners, but, as psychiatrists tell me, there are slight indications of a mental case. This may or may not be so. For, it is very difficult for Westerners to understand and gauge the psychology of a Slav, who is kind-hearted, on the one hand, and brutal as well as ill-mannered, on the other. But even the African bloc, with its new members in the U.N., which Russia wants to wean away from independence into its Soviet orbit, have been shying away from the Kremlin "protectors."

This was very evident in the U.N. meetings. A neutralist bloc emerged and Prime Minister Nehru of India emerged as the leader. He was widely acclaimed by many, but not by all. But he was very cordially received officially on all Government levels.

Police motor cycle sirens continue to scream in mid-town New York as they escort dignitaries hither and yon and often one cannot get across the street because of security measures.

As readers in India will know from their daily papers, President Eisenhower is refusing to see Premier Khrushchev after he wrecked the summit conference and after his ill behaviour here. This was done with the full approval of British Prime Minister Macmillan who was rudely interrupted during his U.N. speech by the Soviet Prime Minister. Mr. Macmillan came out on top and behaved with the utmost reserve, while Mr. Khrushchev was almost hysterical without getting anywhere.

This is an inside report worth noting in India. It also explains, in part, the behaviour of the American economy. There is caution in the air. Mr. Khrushchev's threats of force are not taken too lightly, although they are being discounted in many quarters.

There are many anomalies in the situation. Prominent labour leaders refused to see the Soviet Prime Minister. Yet, he was wined and dined at the Biltmore Hotel here by one of the richest men in the U.S., Cleveland financier Mr. Cyrus Eaton. There were pickets around and police in great numbers kept them away from the hotel entrance. Policemen are being paid overtime these days.

Disappointing Aspects

Partly because of this, there have been disappointing aspects in the U.S. economy. Capital investment has levelled off rather than increased. The general expectation was for an appreciable gain. There is also disappointment over the rate of growth, or the lack of it, in overall industrial production, personal income and the gross national product. The figures in themselves leave little to be desired. New jobs in the service industries have taken up the slack in the manufacturing industries. More people than ever before were employed gainfully last summer.

Including the armed forces, the employed numbered about 71 million and the upward trend is expected to continue. The only question is whether this growth rate is sufficient, in view of the increasing population and the increasing requirements resulting from this development. Nobody has the answer whether or not that growth rate will take care of the increasing wants, needs and desires of the expanding U.S. population in the face of the Soviet threat to overtake heavy industrial production by 1970 without loss of the present standard of living.

There are other disturbing factors. One is the discouraging steel production rate. Another is rising labour and production costs which have been pricing this country out of many markets. This, in turn, has led to an increase of imports and to a considerable outflow of gold. As a chain reaction, there has also been a squeeze on profit margins which is aggravated by an unrealistic tax structure.

In addition, the forthcoming Presidential elections next month and the inherent uncertainties of future Government policy make for caution and conservative planning.

Pro and con debates are raging about another possible recession in the U.S. There is no ready answer for that. To stem fears, the Federal Reserve system, as stated in previous despatches, has softened its credit policy. The Treasury, as well, has been quite careful in its refunding and new money raising operations. Caution by manufacturers is matched by consumers. Buying plans, as determined by the U.S. Census Bureau survey, show little change from last year. Financial expectations vary only slightly.

Farm Outlook

The farm outlook is better than expected. Farm surpluses are piling up at the expense of the Government. The income of farmers is running very close to last year's level. Earlier forecasts predicted a decline of 7½ per cent. in 1960, as compared with 1959. But for the first eight months of this calendar year, cash receipts from farm marketings, of $19,500 million, were ½ per cent. higher than last year. Farm product prices rose—particularly those for dairy products, fruits and eggs. This was offset by lower quotes for meat animals, chicken and potatoes.

The $1,000 million Inter-American Development Bank opened for business on the first of the month. It has received already capital subscriptions of nearly $110 million from 12 countries in addition to substantial amounts of other national currencies. The paid-up share capital will amount to $381 million of which half will be in U.S. dollars. Felipe Herrera of Chile is President of the new Bank and the U.S. Executive Director is Mr. Robert Cutler. There are great hopes that the new Bank will improve materially U.S.-Latin American relations, Premier Castro of Cuba notwithstanding.

Presidential Election

In the meantime, the U.S. Presidential election campaign is entering its final phase. Vice-President Richard Nixon, the Republican candidate, and Senator John Kennedy, the Democratic candidate, have seen fit to discuss public issues on television. Before election day, early in November, there will have been four such panel meetings. The first two were rather boring, in my opinion. At this point, the vote may be close, but the outcome will depend on last minute developments. Although Mr. Kennedy has a more forceful personality than Mr. Nixon, I cannot see him as the next President of the U.S. I may be wrong. Either way, it will not make too much difference.—*All Rights Reserved.*

Notice

THE AMALGAMATED ELECTRICITY COMPANY, LIMITED

THE REGISTERS OF MEMBERS AND Transfer Books of the Company will be closed from 14th November to 4th December 1960, both days inclusive, in connection with Final Dividend for the remaining part of the year ended 31st March 1960, payable on or after 5th December 1960.

By Order of the Board,

For THE AMALGAMATED ELECTRICITY CO., LTD.,

TRADE WITHIN THE COMMONWEALTH

THE NEW PATTERN

By F. Cassell

THE economics of the Commonwealth defy precise analysis. The Commonwealth is not, was not, and was never intended to be, primarily an economic association.

Yet, from the outset, its economic aspects have loomed large, because trade invariably accompanied the flag—either a step ahead or a step behind—in its progress round the world. In that sense, the Commonwealth was founded on trade. The pattern of that trade was simple enough; goods manufactured in Britain were exchanged for the primary foods and raw materials produced by the colonies overseas.

The United Kingdom capital and management largely developed the mines and plantations and financed the building of the railways to open up the deep continental interiors to the world market. Britain's ships carried the products, mainly to London, where they were sold in the great commodity markets of the City, and British bankers tided the producer over the gap between production and sale. The City, in short, was the hub.

This pattern of trade and finance, it must be stressed, evolved naturally. It was suited both to the needs of the colonies and to the needs of Britain's manufacturers. It required no Government assistance—the spirit of the age, in any case, was firmly against such assistance. The trade flowed through natural channels and was not directed by discriminatory tariffs.

Today, the pattern of Commonwealth trade and finance is far more complex. Britain is no longer the sole—or even the principal—supplier of manufactured goods in the world. The City of London is no longer the pre-eminent source of development capital. Many of the oversea members of the Commonwealth have important manufacturing sectors in their own economies and most of them are actively trying to stimulate the growth of such sectors. The natural pattern of trade, moreover, is distorted by the imposition of tariffs, import quotas and exchange controls.

Surplus of Primary Products

Even so, the underlying basis on which the growth of trade was based can still be discerned. The typical transaction is still the exchange of New Zealand butter or Australian wool for locomotives or insurance services from Britain. The oversea Commonwealth remains basically a producer of primary products. It produces half or more of the free world's total output of wool, jute, sisal, gold, platinum, nickel, manganese, titanium, cocoa, tea, pepper, barley and asbestos; more than a third of its natural rubber, tin, chrome, rice, groundnuts and copra; and more than a fifth of its bauxite, copper, lead, zinc, silver, wheat, oats, cane-sugar, vegetable oils and oilseeds, butter, diamonds, and wood-pulp.

In many primary products, therefore, the Commonwealth is able to achieve a substantial export surplus. Similarly, Britain remains essentially an exporter of manufactured goods—indeed, the steep decline in coal exports since 1914 has made manufactures bulk even more heavily in Britain's export list. As such natural incentives to trade are strong. Commonwealth countries now account for approximately under a third of the total world trade and about half of this trade is with other members. The proportion is highest for New Zealand and the Federation of Rhodesia and Nyasaland, about three-quarters of whose trade is within the Commonwealth. It is lowest for Canada—about one-fifth.

Canada's close economic ties with the United States of America no doubt largely account for the relative smallness of its trade within the Commonwealth, but it seems unlikely that they can account for it entirely. Canada's trade figures suggest that, in the post-World War II period, the trade and exchange restrictions associated with the inconvertibility of sterling have been a more important influence on Commonwealth trade than have the preferences accorded to Commonwealth imports under the Ottawa Agreements of 1932. The move to external convertibility at the end of 1958, followed as it logically was by the relaxation of most discriminatory restrictions on dollar imports, should enable Canada to expand her trade with other Commonwealth countries. The convertibility of sterling has thus removed the major obstacle that, since 1939, has divided

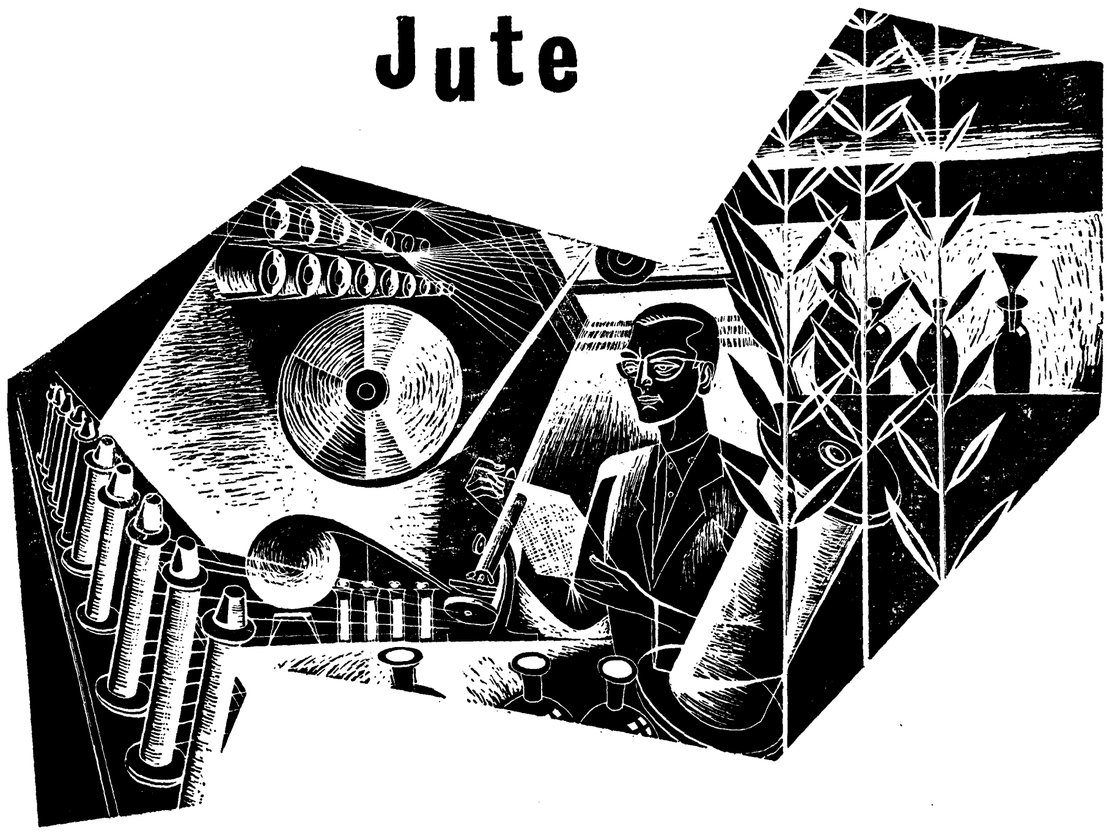
Jute



— an industry on the march

Long regarded as the cheapest heavy-duty packaging material, jute is today claiming attention as a fabric with greater possibilities and wider applications.

Laminated with paper or plastic, jute fabrics provide moisture-proof containers for fine or high-grade products. Treated with chemicals, they offer protection against rot, mildew, corrosion and attack by rodents and insects. Scientific experiments have resulted in the production of a hessian membrane for water-proof roofing... hessian in combination with asphalt is finding increasing favour as a material for canal-lining and a moisture barrier.

These and other discoveries which have dramatically widened the scope of jute usage, stem from the fundamental and applied research carried out at the Indian Jute Mills Association's Research Institute in Calcutta. Side by side, the Institute of Jute Technology—financed by the IJMA—provides facilities for training young men for important supervisory positions in jute mills.

Founded in 1884, the Indian Jute Mills Association seeks to serve India's vital jute industry in ever-increasing measure.

OPERATIONS OF THE WORLD BANK

TRULY INTERNATIONAL IN CHARACTER

THERE is little exaggeration in the claim of Mr. W. A. B. Iliff, Vice-President of the International Bank for Reconstruction and Development, that the Bank is in every sense of the word an international bank. Mr. Iliff, who made this claim in his speech at the recent World Bank annual meeting, in the absence of Mr. Eugene R. Black, President, substantiated this with statistics relating to the growth of the Bank during the last fifteen years of its existence and more particularly in the last few years, both as a lender and as a borrower in the world capital markets. Ten years ago, the Bank had a membership of 48 nations and its lendings aggregated about $800 million to finance various projects in fourteen countries. Five years later, the membership stood at 56 and the total investments ran to about $2,300 million spread over 37 different countries. In other words, within a period of five years, the ratio of borrowing countries to the member-countries grew from 30 per cent. to 66 per cent. Today, the Bank's membership covers 68 nations and its commitments exceed $5,000 million in no less than 50 different countries, representing 78 per cent. of the member-countries. A more significant aspect of the growth of the Bank's operations is that, in the last three years alone, its lending has nearly equalled the total in the first ten years. Another equally important feature of the Bank's lending is that, consistently during the last five years, attention has been diverted more and more to the less developed areas of the globe, Asia and the Middle East receiving the largest slice of the lendings in each of these five years.

Prospect of Membership Broadening

There is every possibility of the membership of the Bank broadening in the coming years and the demand on its resources increasing. "The time is not far off," Mr. Iliff declared, "when new countries entering the community of independent nations will have brought the total number of sovereign States to more than 100. Most of these new nations will be ill-supplied with development resources and determined to do something about their poverty. Most of them will, therefore, probably become members of the World Bank."

The aforesaid growth in the Bank's lending operations would not have been possible, if there had been no corresponding expansion in its resources. Ten years ago, for instance, the available funds of the Bank for lending came almost entirely from the paid-in capital of the U.S. and Canada and from $250 million borrowed money, all of which had been raised in the American market. During the next five years, the Bank's sources of finance took on more of an international complexion; out of the total capital subscriptions amounting to $942 million, the share of countries outside the U.S. was $307 million. Today (as on 30th June), the international character of the Bank's finances has been more thoroughly established. Thus, the members' paid-in capital available for lending, exclusive of the U.S.'s subscription, amounts to more than $1,000 million, out of a total of $2,025 million. Of the Bank's outstanding funded debt at $2,073 million, about 53 per cent. is held outside the U.S., a very remarkable change from the position five years ago. In other words, ten years ago or even five years ago, the Bank was largely a dollar bank, but today it is truly international in character. The Bank's securities are widely held throughout the world. Investors in more than 40 different countries hold the Bank's securities which have been established in the money markets of Belgium, Canada, Germany, the Netherlands, Switzerland, the U.K. and the U.S.

Largest Borrowing Outside U.S.

An indication of how deep, as well as wide, are the international sources of funds available to the Bank is provided by the Bank's borrowings after the close of the fiscal year ended 30th June 1960. In July last, the Bank was able to borrow from the Central Bank of Germany an equivalent of $240 million, partly in dollars and partly in Deutschemarks, with a maturity of 12 years. This is not only the Bank's largest borrowing ever undertaken outside the U.S. but is by far the largest single borrowing the Bank has made anywhere, since the issue of $250 million in the U.S. market in the summer of 1947. It may be noted, in passing, that over the past three years, Germany has been the Bank's most important source of borrowed funds. The Bank has made three other issues since the end of the last fiscal year. The first was a roll-over operation of $30 million issue that matured in July last and extended for a period of another three years. The second was a sale outside the U.S. of two-year 3½ per cent. bonds for $100 million and the third was a public issue in Switzerland of 4 per cent. 15-year bonds for Sw. Frs. 60 million. The latest Swiss bond issue brings the total World Bank bonds and notes outstanding in Swiss francs to about Sw. Frs. 690 million.

Purchase of Loans

There has been a widening interest in the purchase of World Bank loans on the part of investors all over the world. During the last ten years, sales of parts of the Bank's loans, without its guarantee, have brought back to the Bank $804 million and, of this, $500 million have come from outside the U.S. These, in effect, represent repayments to the Bank before maturity and such early replenishment of the Bank's resources reduces, by a corresponding extent, its need to go to the market for new funds. As these loans do not carry the Bank's guarantee, such large-scale purchases of loans provide an indication of the investors' confidence in the creditworthiness of the member-Governments concerned.

In conformity with the pattern of operations set during the last few years, the Bank's lending operations during the last fiscal year, namely, the one ended 30th June 1960, were largely confined to the less-developed areas. They aggregated $658.70 million, as against $703.12 million in 1958-59 spread over as follows:

(In million dollars)

	1959-60	1958-59
Asia and Middle East	272.60	354.00
Africa	182.70	110.60
Latin America	134.40	136.52
Europe	69.00	102.00
	$658.70	$703.12

Though the total lendings were slightly lower than the record touched in the previous year—this is mainly accounted for by Asian and Middle East countries—the bulk of the loans has gone to the less developed areas. This is the fifth year in succession that Asia and the Middle East received the largest share of the year's loans. The low level of new loans to European countries reflects the ability of these countries to find enough domestic capital to meet their needs of development finance or to borrow in the capital markets of the world on their own.

Emphasis on Development of Basic Services

The pattern of lending shows the usual emphasis on the development of basic services, such as transport and power supply, as will be borne out by the purpose-wise analysis of the loans in the last two years:

(In million U.S. $)

	1959-60	1958-59
Transport	245.00	257.20
Electric power	208.00	294.00
Industry	146.00	149.00
Agriculture	60.00	3.50
	$659.00	$703.70

The new commitments made during the year under review bring the aggregate effective loans of the Bank to $3,664 million, of which $2,807 million have been disbursed. The actual disbursements during the year amounted to $544 million, as against $583 million in the previous year.

Despite the fact that the loan commitments and actual disbursements were slightly below those of 1958-59, the year under review was an active one for the Bank which established many fresh records. The Bank's net earnings amounted to $59.5 million, representing an increase of $13 million over the previous year's record. Its reserves were strengthened by $86.5 million, the largest addition made so far in any year, to a total of $506.5 million. The net borrowings of the Bank amounted to $168 million, raising the funded debt at the end of the year to $2,073 million. The year was also an active one from the point of view of technical assistance activities for the Bank, particularly in a new role, that of executing agency for projects of the U.N. Special Fund.

Prospects for Development Capital

Commenting on the outlook for the less-developed areas in so far as the availability of development capital is concerned, Mr. Iliff observes that there is a possibility of a continuing growth in the supply of capital and says:

"So far as the future is concerned, it is not always as easy to see new sources of capital as it is to see the needs for it. But there does not appear to be any shortage in sight of development capital prepared to move on conventional terms. The volume of private international lending and investment in foreign securities has been growing; foreign bonds publicly issued in the major capital markets during 1858 and 1959 amounted to more than three times the total floated in 1952 and 1953. And this is exclusive of refunding operations. This expansion has been marked by an increase in the number of countries able to invest abroad, notably, of course, those countries of Western Europe where sustained improvement on domestic and foreign account has come about.

Even the present pattern of interest rates suggests the possibility of a continuing growth in the supply of conventional development capital, while attention today is directed to the recent rise in long-term interest rates in Europe, it should not be overlooked that European interest rates in general are significantly lower now than they were at the peak of the earlier European boom in 1957. Moreover, since 1957, controls over capital movements have been eased. These are indications that the supply of capital in Europe has expanded substantially in the past three years, giving still further support to the view that capital flows to the low-income countries can continue to increase."

Change in International Relationship

In fact, as the World Bank report points out, the year 1960 marks the beginning of a period of change in international relationship, largely because of a "heightened international awareness of the financial requirements of the less-developed countries of the world." There is also a growing realisation in industrial countries of the need for exporting more development capital and to do it on more flexible terms of payment. This is reflected in the formation of a Development Assistance Group by the U.S., Canada, and the principal industrial countries of Europe, the careful study of a proposal to include the U.S. and Canada as members of the O.E.E.C. and to include development assistance as a concern of the Organisation, and the steps taken towards the establishment of the International Development Association, which will be able to provide development finance to the less-developed areas on terms more flexible than those of the World Bank's own loans. It is expected that the I.D.A. will be ready to commence operations in a few weeks.

U.K.'S NATIONAL INCOME

Details of how Britain's living standards have improved in the decade 1949-59 and of the changes in the spending habits of the average Briton are given in the national income and expenditure Blue Book just issued in London by the Central Statistical Office. Personal incomes in Britain rose by 85 per cent. in the period. Measured in real terms—that is, after allowing for rises in prices and costs—the increase was 25 per cent. National income in 1959 stood at £18,931 million, an increase of £590 million over the previous year. Total investment rose steadily over the decade. As a proportion of the gross national product, gross fixed investment increased from 14½ per cent. in 1949 to about 17¼ per cent. in 1959. Last year, shoppers spent £15,715 million on goods and services, as compared with £8,878 million 10 years ago. Nearly £4,800 million went on food, almost double the figure of 1949. In 1959, there were 12,400,000 people (counting husband and wife as one) receiving less than £500 before tax. There were 761,000 receiving between £1,500 and £5,000, and 3,000 who received more than £6,000 after tax, compared with only 900 in 1958. Out of each £1 of consumers' spending, 6s. 1d. went on food, 1s. 3d. on drink and 1s. 4d. on tobacco. Spending on cars and motor cycles more than trebled in 1959 as compared with 1949, but expenditure on entertainment was 3d. in the £, as compared with 5d. in 1949.

THE CHARTERED BANK

The Chartered Bank has raised its authorised capital from £5 million to £5.5 million by the creation of 500,000 new shares of £1 each. The decision to this effect was taken at an extraordinary general meeting of the Bank held on the 12th inst. The new shares will be issued fully paid-up to the existing stock-holders in proportion to the stock held as on the 8th inst. For this purpose, a sum of £500,000 has been capitalised out of the Bank's reserve fund. After the allotment, the new shares will be converted into £500,000 stock ranking *pari passu* with the existing stock of £5 million. The withdrawal of £500,000 from the reserve fund has been restored by a corresponding transfer from the contingency reserve, so that the reserve fund remains at £5.5 million, equivalent to the paid-up capital of £5.5 million.

The Bank, it may be recalled, recently paid an interim dividend of 8 per cent. actual, subject to deduction of income-tax at 7s. 9d. in the £. The Directors hope to maintain the total dividend for the year at 15 per cent. per annum on the increased capital.

FINANCES OF COTTON MILL INDUSTRY

PROFITS EARNED VERY LOW

THE cotton mill industry has, once again, come to be a controlled sector of Indian economy. Not only is the general level of yarn and cloth prices being regulated, but the cost structure of the industry has also become rigid, the mills being practically unable to have any influence on the different elements of cost of production. It will not, therefore, be surprising if the profitability of the industry, which is already low *vis-a-vis* a number of other industries, turns out to be lower still in the coming years. Naturally, capital will tend to shun this industry and this will result in a more serious backlog of rehabilitation and modernisation. The officially appointed Working Group has estimated the cotton mill industry's capital requirements for rehabilitation over the next five years at Rs. 180 crores. Surely, current events are not, as Mr. Krishnaraj M. D. Thackersey, Chairman of the Indian Cotton Mills' Federation, rightly pointed out at a Press conference early last month, calculated to help the industry to attract capital which seeks avenues only where returns are better.

That there is no exaggeration whatever in the aforesaid statement is clearly borne out by the Reserve Bank's study of the finances of 1,001 joint-stock companies for the year 1958, with comparative data for the preceding three years, the results of which are published in the September 1960 issue of the *Reserve Bank of India Bulletin*. It will be evident from the review that the cotton mill industry has always been making the lowest profits among the organised industries. Table III at the end of the article indicates the gross profits as percentage of gross sales earned by the cotton mill and other industries, gross profits as percentage of total capital employed, and profits after tax as percentage of net worth for the years 1956, 1957 and 1958. The figures published, which relate to bigger mills and hence present a better picture than what it really is, are up to 1958. The condition of the industry in the subsequent year was a little better, but it must have deteriorated considerably in the current year, thanks to the high cost of raw cotton and stores, increase in wages and the reimposition of price controls, albeit through a gentlemen's agreement. There is little reason to believe that the position will improve to any significant extent in the coming year.

Taxes

The Reserve Bank's study reveals that, in 1958, the 204 cotton mill companies earned a total profit (before tax) of no more than Rs. 7.48 crores which, though somewhat higher than the sum of Rs. 4.93 crores earned in the previous year, was markedly lower as compared with Rs. 24.68 crores for 1956 and Rs. 24.71 crores for 1955. Even here, tax provision absorbed quite a good bit—Rs. 6.93 crores in 1958, as against Rs. 6.50 crores in 1957, Rs. 10.76 crores in 1956 and Rs. 9.73 crores in 1955. The tax provision as percentage of profits before tax was as high as 132 in 1957 and 73 in 1958, as against 44 in 1956 and 39 in 1955. Consequently, the mill industry's net profit, that is, after tax, was a bare Rs. 55 lakhs. Actually, in 1957, there was a loss of Rs. 1.57 crore, in contrast to the profit of Rs. 13.92 crores in 1956 and Rs. 14.98 crores in 1955. The aggregate dividends distributed by the 204 mills amounted to Rs. 6.66 crores in 1958, as against Rs. 6.61 crores, Rs. 8.44 crores and Rs. 8.33 crores in the previous three years, respectively. More details are given in Table I.

Dividends constituted 7.9 per cent. of ordinary paid-up capital of 204 cotton mill companies in 1958, as against 8.0 per cent. in 1957, 10.7 per cent. in 1956 and 10.9 per cent. in 1955. The proportion no doubt appears to be sizable, but it must be remembered that the total capital actually employed by the mill industry is very much larger than the paid-up capital. A more appropriate yardstick is to express dividends as percentage of net worth (paid-up capital plus all reserves). This percentage was only 4.0 in 1958 which is lower than the figure of 5.1 for all the 1,001 companies taken for the study. The corresponding figures for the year 1955 were 5.1 and 5.2, respectively. Further, it must be noted that, for both 1957 and 1958, dividends have been paid out of profits made in the previous years. The depletion of reserves in these two years, as will be seen from the trend of profits retained in the business, is no less than Rs. 14.30 crores. To this extent, there has been a distinct deterioration in the financial strength of the industry.

The 204 cotton mill companies earned a total income of Rs. 482.49 crores in 1958, as against Rs. 469.48 crores in 1957, Rs. 450.74 crores in 1956 and Rs. 421.98 crores in 1955. The major portion of the income in 1958, Rs. 400.94 crores, to be precise, came from sales, figures for the three previous years being Rs. 382.46 crores, Rs. 379.88 crores and Rs. 373.61 crores, respectively. Included in the income is the value of closing stocks and work-in-progress which was Rs. 78.14 crores, as against Rs. 83.88 crores in 1957, Rs. 68.18 crores in 1956 and Rs. 46.28 crores in 1955. These figures clearly show a rise in sales realisation in 1958, but this was of no avail to the industry, as the benefit had been almost fully neutralised by the cost inflation.

Expenditure

On the expenditure side, the major portion is accounted for by the value of raw materials consumed and other manufacturing expenses which together accounted for Rs. 245.40 crores in 1958, as against Rs. 255.20 crores in 1957, Rs. 239.99 crores in 1956 and Rs. 216.13 crores in 1955. Salaries and wages absorbed Rs. 94.69 crores, as against Rs. 93.57 crores, Rs. 89.71 crores and Rs. 80.51 crores, respectively, in the three years preceding 1958.

The balance-sheet total of 204 cotton mills as at the close of 1958 stood at Rs. 355.45 crores, as against Rs. 354.95 crores in 1957, Rs. 331.60 crores in 1956 and Rs. 288.20 crores in 1955. It will be noted that, whereas there was an impressive increase of Rs. 66.75 crores in the balance-sheet total between 1955 and 1957, the addition to it over 1958 was a mere Rs. 50 lakhs. This reflects the stagnation that prevailed in the industry in that year and the sizable depletion of resources to pay some dividend at least to shareholders. A break-up of the liabilities and assets is given in Table II.

The foregoing analysis of the financial position of cotton mill industry will bring out the vicious circle in which the industry finds itself today. It cannot attract finance due to its low profitability and it cannot improve its profitability unless it finds the necessary money for modernisation and rehabilitation. If the industry is to be in a position to cater to the expanding clothing requirements of the nation and earn precious foreign exchange through exports, it is of the utmost importance that serious consideration be given to the problem of improving the profitability of the industry to a level at which it will have sufficient margin to plough back the amounts required to meet at least a part of the cost of replacing its assets and to sustain a level of dividend that will induce confidence among investors in the shares of cotton mill companies. The facts given here are clear enough to discredit the adverse propaganda against the industry and to justify the latter's insistence that its demand for a fair ex-mill price be referred to the Tariff Commission for its impartial verdict. In its understandable anxiety to keep the prices of cloth and yarn down by compelling the manufacturers to sell their production at unremunerative prices, the Government is actually forcing the nation to live on the capital. There is a limit upto which this can be done. It is dangerous to carry this policy too far, for, when capital, especially of a consumer goods industry like cotton textiles, is eaten away, there will be no barrier against hyper-inflation and anarchy.

ART SILK FABRICS—A CORRECTION

In the article on art silk industry appearing in these columns two weeks ago (*vide* page 632), the table relating to the production of art silk fabrics shows the total output in the first six months of 1959 as 164,252,000 yards. This figure was based on preliminary estimates. Actually, the output was 210,614,000 yards. The breakdown of the different varieties of fabrics—in thousand yards—are: Taffeta 16,700; georgette 4,040; crepe 28,861; shioze 4,966; satin 15,184; velvet 931; others 139,917.

HONG KONG WANTS PACT ON IMPORTS TO BE ENDED

DOMESTIC DEMAND FOR COTTON GOODS HIGH

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 11th October

FIGURES showing the very substantial imports of foreign cotton goods which arrived in British ports during August have brought a renewal of discussion on the whole problem of purchases of foreign cloth and the outlook in Lancashire concerning the pacts with Commonwealth countries, the first of which—with Hong Kong—is due to end early in 1962.

As the arrangements with India and Pakistan hinge on the maintenance of similar restrictions on the Colony's trade, it can be said that the whole pattern of this flimsy structure rests on the action which may be taken next year to deal with the situation. Textile industrialists in India and Pakistan have made it quite clear that they will feel no longer bound to honour their own voluntary curtailment of exports, if the arrangements with Hong Kong are allowed to lapse.

Since the agreements were originally negotiated, after tremendous efforts had been made by the British delegates, both in face-to-face discussions and at long range, some of the terms then settled have become obscured in the light of subsequent developments. It is perhaps as well that the facts of the matter should be restated, together with an up-to-date account of how the quotas are operating. Interim comments have not always been quite on the mark.

Terms of Agreement

In the first place, it should be recalled that, when the terms were settled, the arrangements with each country were entirely voluntary; the ceilings represented only cloth and garments scheduled for retention in the home market. There is no limit to the amount of goods which can be imported for subsequent re-export. Another vitally important factor is the interchange of supplies within the self-imposed quota between grey cloth, finished materials and made-up garments.

In the case of Hong Kong, the total annual limit was 164 million square yards; for India 175 million square yards and Pakistan 38 million square yards. As the pacts were spread over a three-year period, the terms permitted some overlap between each separate year, so that, if the ceiling was exceeded in, for example, 1960, smaller quantities would be shipped to this country next year.

This, in fact, has already happened in the case of India; the Board of Trade has notified British importers that the quantity allocated in 1960 is greater than the ceiling figure of 175 million square yards. As provided by the arrangements between the Cotton Board and the Indian industry, this excess will be deducted from the ceiling figure in 1961, and based period allocations for India will in all cases be less than those for 1960.

Arrivals So Far

Licences to import cloth and other cotton goods obviously do not coincide with the actual imports in a given period, due to the time lag. Over the first seven months of the current year, arrivals of cotton cloth from India, for retention in the home market, were equivalent to 122 million square yards. This included grey cloth, finished goods and the cloth equivalent of made-up garments. On this basis, India would supply Britain's home market over a full year with something like 210 million square yards—substantially more than the voluntary quota.

In contrast, the arrivals of similar goods from Pakistan this year have been slightly below the ceiling. In the first seven months, imports amounted to 19 million square yards, as against the annual quota of 38 million yards.

Traders in Hong Kong have had a lot to say lately about the possibility of tearing up the agreement and resuming unrestricted operations with those merchants in Lancashire who wish to acquire their cloth. Reports reaching Britain have made it seem that a storm was brewing, but most of the argument appears to have been, in reality, internal. When the system of ceilings was adopted, the majority of the cloth being shipped to the United Kingdom was in the grey state. Lately, the emphasis has shifted in a marked manner to the provision of garments for the British home market.

Garments to the Fore

The weavers in the Colony have been vociferous in their complaints about the arrangement, but they must surely be manufacturing most of the cloth, whether it is shipped as grey goods, processed or made up into garments. Those most likely to suffer are British garment-making firms which must already be feeling the pressure of these expanding arrivals from the Colony.

Comparative figures for Hong Kong over the first seven months of the year to those given above for India and Pakistan show actual arrivals of 102 million square yards of cotton goods. At the end of July, the rate of imports from the Colony was running at an annual level of 175 million square yards. Of this, 78 million yards represented greys, 10 million yards finished materials and 87 million yards the cloth equivalent of made-up garments.

Statements made in Hong Kong have underlined the apparent losses incurred by the effect of the ceiling plan and the apparent gains made by other countries, including India, Pakistan and European manufacturers. The very sharp rise in purchases of made-up goods has been hidden in this way, although it is clear that grey cloth sales are likely to diminish in the future. This in itself is no real hardship, as the earnings from finished cloth or garments must be far more remunerative than the shipment of fabric in loom-state.

Newcomers Send More

Figures now to hand covering the first half of the year show how several countries, whose exporting capacity was once thought negligible, have lately raised their shipments of grey cloth to the United Kingdom. A number have sent more goods in the first half of this year than throughout 1959—in some cases there have been astronomical increases.

Spain, for example, sent 24,838,000 square yards in the first half of this year against 7,681,000 square yards throughout 1959; arrivals from Portugal totalled 4,109,000 square yards against 100,000 square yards; imports from the United States were 1,387,000 square yards, against only 17,000 square yards in the whole of last year and Canada has already provided 2,109,000 square yards, against only 6,000 square yards.

Egypt's share in this trade has also broadened unmistakably—from 638,000 square yards in the whole of 1959 to 3,660,000 square yards in the first half of this year, while the Netherlands have shipped 1,257,000 square yards, as against 893,000 square yards. Imports from a number of other countries are running at well above last year's level, notably from the Irish Republic, Yugoslavia, France, the Soviet Union and Bulgaria.

Strong Retail Demand

During the summer, there were fears that the unfavourable weather would react on the textile trade, reversing the keen demand for clothing which was such a potent factor in the trade revival of 1959. Yet, considering the absence of long sunny periods, customers at retail level bought more freely than might have been expected.

According to the latest report of the Cotton and Rayon Merchants' Association, demand from the shops still continues strong. It is suggested that the imposition of hire-purchase restrictions may have helped to boost sales of textiles by diverting the purchasing power of the public towards cash transactions.

As compared with the first quarter of the year, however, a marked reduction in the level of converters' bookings of new business in cotton, spun rayon and mixture fabrics took place in the second quarter. Purchases of grey cloth by converters were also reduced, but not to the same extent as their sales.

The situation at the half-year, therefore, reflected an increase in the unsold commitments of converters which, the Association believes, were in all probability higher than for some years back. In the first six months this year deliveries of finished cloth were about 5 per cent. above the quarterly average in 1959.

Merchants to Exchange "Know-how"

Three hundred Manchester merchanting concerns, with wide experience in assessing and developing export markets, are throwing open their vast storehouse of "know-how" to smaller firms all over North-West England who, at the moment, do little or no exporting at all.

They have accepted an invitation from the Manchester Chamber of Commerce to put their experience at the disposal of "the little man" as part of an elaborate plan drawn up by the Chamber to lend maximum support to the Prime Minister's call for increased exports. Its aim primarily is to stimulate experience of a wide range of consumer goods. The Chamber has set up an advisory panel which will put the companies in touch with the big merchanting organisations.

Mr. Roland Thomas, President of the Chamber, who is also the Director of the merchanting organisation of the Calico Printers' Association, in outlining the purpose of the scheme, said Manchester was for many years the centre of what was, in its time, the world's largest export trade—exports of Lancashire-made cotton textiles. The export merchants of the city developed a close knowledge of markets and techniques in market research and, although some of the merchants had disappeared, a great many remained.

Mr. Thomas said the country's export trade was too narrowly based. About 30 per cent. of U.K. exports were handled by 40 firms, notably cars and engineering products.—*All Rights Reserved.*

COTTON CROP PROSPECTS STILL UNCERTAIN

NO DECISION YET ON EXPORTS

WITH one more critical month still to go, it is hardly surprising that the Cotton Advisory Board, which met at Bombay on the 13th inst., could not make any firm estimates of the size of the cotton crop during the current season. Weather and crop developments till the end of September were satisfactory. But developments in October and November can upset all previous calculations. The Board, therefore, wisely saddled its tentative estimate of the crop with a rider. In the Board's view, the crop would be 5 million bales of 400 lbs. each (gross), *if all went well*. The qualification in italics is important, since none can say whether all will be well in the next two months. In view of the uncertainty about the crop, the Board recommended that a decision on the question of allowing exports should wait and that no export quota should be announced at present. Those who had hoped for something concrete to emerge from the deliberations of the Board were thus disappointed. There are, however, strong reports in the cotton market that the Government is unlikely to wait that long so far as exports of *Desi* (short-staple) varieties are concerned. Apparently, the shortage of foreign exchange may force the authorities to take a risk and allow Bengals and other *Desi* varieties to be exported.

The Cotton Advisory Board also considered the question of allocation of Indian cotton to mills, reservation of certain percentage for compulsory purchase of Cambodia 'A' and 'B' cottons by mills, allocation of foreign cotton stapling 1.1/16" and above, the working of the Survey Committees, differentials for certain varieties of cotton and requisitioning of cotton. But it does not seem to have made any specific recommendation in this regard, for the official Press Note on the meeting is silent on this important aspect. No wonder the meetings of the Board have of late ceased to evoke the interest they did formerly among the traders. It is not clear as to why there should be so much secrecy about the proceedings of the Board's meeting.

Statistical Position

Be that as it may, the supply outlook has shown some change for the better. Among traders, the psychology of shortage is gradually yielding place to one of adequacy, if not of plenty. With sufficient supplies of foreign cotton taken for granted, the feeling is that the total supply of raw cotton during the current season would, in any case, be more than in the past season, provided the crop turns out to be in line with present estimates, which, though necessarily tentative, place the crop at five million bales, about 1.25 million bales higher than last season's output. As there was a carry-over stock of 985,000 bales as on 1st September 1960, the assumption is a supply of 5.98 million bales of Indian cotton, as against 5.66 million in the previous year. The position in respect of foreign cotton, too, is better. The stocks of this cotton as on 1st September, 1960 aggregated 490,000 bales. Prospective arrivals during the current season against the 1959-60 quota are estimated at 300,000 bales. In addition, import quotas released so far for the current season aggregate 600,000 bales, making in all 1.39 million bales. As compared with this, the supply of foreign cotton in the previous season, that is, carryover *plus* imports, amounted to 1.16 million bales. The following table gives the revised estimate of supply and distribution of cotton in the 1959-60 season and preliminary estimates of supply for the present season:

(In thousand of 400 lbs. each)

1959-60 season	Indian	Foreign	Total
Carryover as on 1-9-1959 ..	1,850	185	2,035
Production 1959-60 ..	3,810	..	3,810
Imports 1959-60	..	980	980
Total supply ..	5,660	1,165	6,825
Mill consumption 1959-60 ..	4,475	675	5,150
Exports	200	..	200
Disappearance 1959-60 ..	4,675	675	5,350
Carryover on 1-9-1960 ..	985	490	1,475
1960-61 *season* :			
Estimated production ..	5,000	..	5,000
Arrivals against 1959-60 import quota	..	300	300
Import quota provided so far	..	600	600
Total supply ..	5,985	1,390	7,375

Source : *Volkart Brothers.*

It is clear from the above table that *undue optimism* regarding supplies is not warranted. For, even if the present crop expectations are fulfilled, it will not materially alter the supply of Indian cotton, thanks to the lower stocks at the beginning of the season, which are only half of what they were at the start of the past season. Clearly, therefore, imports of medium-staple cotton, which had to be permitted in the last season, should, of necessity, have to continue in the present season also, if production of yarn and cloth is to be maintained and if prices are to be held even at the levels fixed by the authorities. If, unfortunately, the crop turns out to be less than expected, we will have yet another year of scarce supplies.

We reproduce below, by courtesy of Messrs. Volkart Brothers, their assessment of the crop position and prospects as at the end of September:

"In the Punjab, September passed without a drop of rain, creating very favourable conditions

It was during the reign of Emperor Sher Shah that India's famous national highway—the Grand Trunk Road—was built. To tend the needs of the traveller and his horse, *sarais* or rest houses were built at an interval of two *kos* (roughly four miles) along the entire stretch of the road.

Today there is a network of roads covering the country, and still more are being built to convert the nation into a neighbourhood. It is along these roads that merchandise can move to the remotest village or hamlet in the country. They are the highways to economic progress.

As a new source of supply of a versatile road building material, the newly-commissioned asphalt plant of the Stanvac Bombay Refinery will be a big help to India's road-building programme. Completed in ten short months at a cost of 102 lakhs of rupees, this plant can turn out in one year enough asphalt to surface 12 parallel roads, each 12 feet wide, running all the way from Delhi to Calcutta. Furthermore, the plant has increased the foreign exchange savings generated by the Company's Refinery —the first large modern one to be built in India. Since its completion in 1954 more than 73.56 per cent of all the petroleum products sold by Standard-Vacuum in India has been refined here. The initial cost of the Refinery was Rs. 1,193 lakhs. Of this total initial investment Stanvac advanced Rs. 793 lakhs and Indian sources provided another Rs. 400 lakhs. Since 1954, Stanvac has made additions totalling Rs. 401 lakhs for plant expansion and improvements. It now provides more than 20 per cent of India's total needs for refined petroleum products.

RECENT TRENDS IN WORLD SUGAR

CUBA PROPOSES TO SELL ITS ENTIRE OUTPUT TO RUSSIA

ALTHOUGH more than a month has elapsed since the Union Food and Agriculture Ministry announced the release of 50,000 tons of sugar for export to countries other than the U.S., not a ton has actually been sold and shipped so far. For arrangements are yet to be finalised for giving effect to the scheme of export. The Committee of the Indian Sugar Mills Association considered the issue at a meeting held at New Delhi recently and the Association's President, Mr. D. D. Puri, is also understood to have discussed the export programme with Mr. B. B. Ghosh, Secretary to the Food Ministry. The one question that is yet to be decided is apparently as to how the loss on sugar exports should be shared—by the industry itself or the consumers as a whole through an increase in the selling price of sugar. As for sugar exports to the U.S., the Food Ministry is contemplating to apply for membership of the International Sugar Agreement and also for an export quota.

In the context of India's efforts to build up an export market for sugar thus, a review of some of the developments that are now taking place in the world sugar trade will be quite interesting. Moves are afoot for the conclusion of a barter arrangement between Cuba and Soviet Russia under which the latter will acquire the entire annual sugar crop of Cuba for years to come in exchange for machinery and other goods needed by Cuba. The details of the arrangement are expected to be finalised by Dr. Ernesto Guevara, President of the National Bank of Cuba, during his visit to Moscow next month. Commenting on this move, the *Daily Telegraph* of London points out that one important aspect of the deal is that it would probably upset the world stabilisation agreement on sugar prices. "It would seem," to quote it, "that Dr. Guevara, on behalf of the Fidel Castro regime, intends to withdraw from the Agreement. Communist countries, including China, have already agreed to take more than a third of Cuba's 1961 crop. The U.S. formerly took about this amount. Cuba's average annual output is six million tons."

World Agreement

If the aforesaid deal were to come about, the World Sugar Agreement would have to be revised drastically. For Cuba accounts for very nearly half of the aggregate world export tonnage of 6,858,600 (excluding the Indonesian special reserve, surrendered in May 1960). In effect, as on 3rd August 1960, its export quota was 3,340,474 tons. And there are fears that Soviet Russia, after having purchased the entire Cuban sugar, will have a dominating influence in the world sugar markets.

The offer of Soviet Russia to buy the whole of Cuban sugar production has been prompted purely by political considerations and it is unfortunate that Cuba has allowed itself to be influenced by this communist country. It may be noted that the price at which sugar is proposed to be sold to Russia is only 3.25 cents per lb. which is substantially lower than the premium price of 5.25 cents paid by the U.S. and also 0.75 cent below the actual production cost of private sugar companies in Cuba.

U.S. Purchase of Cuban Sugar?

In the meantime, American officials have had second thoughts about their decision to end completely U.S. purchases of Cuban sugar, according to the U.S. correspondent of the *Financial Times*, London. The reappraisal of sugar policies, he says, has been prompted not by any *rapprochement* with Castro's regime but by the possibility of the regime being replaced one day and, therefore, the U.S. wants to maintain economic relationship with Cuba which implies keeping some portion of the total U.S. quota available for Cuban sugar. Any decision on the part of the U.S. Administration to buy Cuban sugar will necessitate an early approach to the new Congress for authority to grant Cuba a quota for 1961. In this connection, the *Financial Times* correspondent observes:

"The decision to cut off all 1960 imports from Cuba has already involved the U.S. in a complex economic and political situation. The Dominican Republic, which would normally have been one of the chief recipients of increased quotas to make up the Cuban shortfall, has been placed under the interdict of the Organisation of American States. But the Administration failed to obtain Congressional authority to deprive the Republic of its increased quota. Instead, the U.S. is to pay only 3.7 cents a pound for Dominican sugar—2 cents less than normal. A similar arrangement would probably be applied to any Cuban purchases in 1961. The fact that Dominican supplies will still be available should somewhat ease the anxiety of the sugar industry over the failure of Congress to enact a further extension of existing sugar legislation. Present authority expires on 31st March—a fact that would make early 1961 legislation essential, even if there were no plans for a partial restoration of Cuba's status."

It is Cuba's sugar deals with Soviet Russia and the U.S. that will influence the allotment of basic export tonnages to the members of the World Sugar Agreement for 1961 and subsequent years. On the fifth of this month, the Sugar Council anounced the redistribution of 457,022 metric tons of sugar surrendered by Peru (230,000 tons), Dominican Republic (140,000 tons) and China (87,022 tons), because these countries were unable to make use of the whole of their original allocation. Of this total, Cuba has been allotted 355,000 tons and Brazil 80,954 tons, the balance being spread among Hungary, Mexico and the Philippines. The announcement has not affected the sugar market, inasmuch as it makes no difference to the overall supply and demand position. Sugar is now quoted in the London market at £28¾ per ton, the same as that prevailing before the redistribution of quotas. It will be recalled that, at its seventh session held at London on 21st July 1960, the Sugar Council estimated the net import requirements of the world free market at 7,230,000 metric tons (raw value), as against the total supplies amounting to 5,978,000 tons on the basis of quotas in effect at the beginning of the season along with the anticipated supplies from non-member countries. The Council, therefore, raised the total member-countries' export quotas to 105 per cent. of their basic tonnages, that is, to 6,858,000 tons.

CANE DEVELOPMENT IN U.P.

A meeting of the representatives of nine sugar mills and cane unions in the districts of Nainital, Bareilly, Rampur, Etah, Shahjahanpur and Pilibhit in Uttar Pradesh, as well as the officers of the Cane Development Department, was held at Bareilly on the 8th inst. The meeting was specially convened to consider, among other subjects, the reservation proposals of the sugar mills. Presiding over the meeting, Mr. G. S. Chooramani, Cane Commissioner, Government of Uttar Pradesh, deprecated the lack of response on the part of sugar millowners to cane development scheme and their unwillingness to extend their full co-operation to cane growers. Revealing that only one factory in Rampur area had so far participated in the factory development plan, Mr. Chooramani urged the mills to join the scheme. He said: "It is in their own interest to co-operate with the Department, as failure to do so would only entail loss to them. The industry is faced with keen competition from the South and, unless the factories extend their fullest co-operation in developing the gate area, they very much run the risk of losing the ground."

The factory development plan, it may be noted here, envisages development of 5 000 acres of land in the area of the choice of the mills. The factory is to spend on development of cane in this area Rs. 2 lakhs by way of interest-bearing loan and Rs. 2 lakhs by way of interest-free loan. This amount is to be placed at the disposal of the Department for being spent over a period of five consecutive years. A subsidy of Rs. 50,000 is also to be paid to growers annually. The objective of the plan is to ensure that the sugar mills will not experience any shortage of cane.

The Cane Commissioner called upon the defaulting sugar mills to liquidate the dues to cane growers immediately. Otherwise, he warned that no allotment of sugarcane areas would be made to them. Further, he exhorted the cultivators to reduce the cane acreage and grow not only more cane per acre but also more sugar per acre.

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them — in fifteen states. They all have this in common : every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia : these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE ALUMINIUM INDUSTRIES LIMITED

MR. S. NARAYANASWAMY'S SPEECH

POSSIBILITIES OF NEW LINES OF DEVELOPMENT BEING EXPLORED

THE Fourteenth Annual General Meeting of The Aluminium Industries Limited was held at Kundara on 10th October 1960. Addressing the shareholders on the occasion, Mr. S. Narayanaswamy, Chairman of the Company, gave a review of the progress made by the Company so far and added that the Company was exploring the possibilities of new lines of development. At present, it was examining one particular project, in regard to which the potential seemed large. He hoped that the Company would shortly be able to announce the details, after it was assured of all the facilities for embarking on the project.

The following are extracts from Mr. Narayanaswamy's speech:

"Before I commend the results of the year for your consideration and move for adoption of the annual report and accounts, I would like to make some observations by way of review of performance and of assessment of prospects. Alind has set up some records in 1959-60. The production of bare conductors improved to 34,400 miles from 26,300 miles in the preceding year and that of covered conductors to 7 million core yards from 3.50 million core yards. Our profits before allowing for depreciation and taxes were Rs. 47,69,783.00 for the year, while the corresponding figure for the previous year was Rs. 33,54,830.00. The increase in profit of just over Rs. 14 lakhs enabled us to make provision for the increased tax liability of Rs. 16 lakhs wholly from out of the year's revenue, after providing Rs. 11,88,838.00 towards normal depreciation and Rs. 4,36,750.00 towards development rebate. This profit has enabled us to recommend a dividend of 18 per cent. for the year, which leaves in the hands of the shareholder a net dividend of 12.6 per cent., as against a 'tax-free' dividend of 12.5 per cent. which the shareholders have been receiving since the Company commenced paying dividends in 1951. Your Directors are happy to have been able to recommend a retainable dividend not below the quantum of previous years.

Covered Conductors

"The demand for our covered conductors has been increasing rapidly and we have been stepping up our manufacturing capacity to satisfy this growing demand. It is evident that our covered conductors, while fulfilling the exacting stipulations of our more fastidious customers and wiring contractors, are found to be well within the reach of middle income groups, judging by the broad pattern of our custom and the heartening absorption of our output. I have reason to hope we shall do even better in covered conductors this year. The monthly production curve in the current year seems to bear out my optimism.

Hirakud

"Our Hirakud plant has been in full commission, with the Chief Minister of Orissa doing us the honour of switching on the rod rolling mill earlier this year. Our Hirakud rod rolling mill, which is an improvement on our Kundara unit, has a rolling capacity in excess of what our cable unit can absorb. The surplus is being sold to sister bare conductors manufacturers. Our enhanced installed capacity since Hirakud was commissioned has enabled us to make nearer-dated delivery offers than before and there is evidence that consuming Governments and Electricity Boards are appreciative of our less remote-looking delivery dates. Despite increasing competition resulting from the larger installed A.C.S.R. capacity in the country, the demand for Alind conductors continues satisfactory.

"The management initiated negotiations with the Orissa Government on two matters, namely, the high sales tax incidence on aluminium ingots purchased by us from the neighbouring Indian Aluminium Company and the high electricity tariff fixed for our factory. The State Government very considerably effected a reduction in the sales tax on metal purchased. As regards electric energy rates, Government have not so far announced a reduction, though we have impressed on them the fact that high energy charges result in considerable increase in rolled-rod costing and that this in its turn results in certain anamolies. The electricity tariff now in force is such as to make it cheaper to transport our rolled rod from Kundara to Hirakud or for that matter to import it from abroad after allowing for duties. The Orissa Electricity Department are, we dare say, alive to the economics of working of so electricity-intensive a plant as our Properzi Rolling Mill and it is our hope they will pass early orders announcing concessional supply rates.

Galvanised Steel Wire Project

"At Kundara, our work in connection with the high tensile steel wire plant has commenced. The terrain having been levelled, work in connection with the factory buildings will shortly get going. I am confident we shall keep to our original time-table of commissioning the plant early in 1962. The visit of our General Manager to Japan has enabled us to get a clearer picture of the technical details as well as our commitments and this I am happy to say has enabled us to secure some economies in the capital outlay. Our Japanese collaborators, Messrs. Kokoku Iron and Steel Wire Manufacturing Company, Ltd., with whom we are already linked in regard to steel wire supplies now consumed by us, have been most helpful in meeting our requirements. We have deputed one of our engineers to Japan to get the necessary factory training meantime. On completion of this project, we shall achieve self-sufficiency in our range of bare-conductor raw material and I am glad that we shall be the first in the country to achieve it.

"The Company is continuously exploring the possibilities of new lines of development and at the moment we are examining one particular project in regard to which the potential seems large. Our colleague on the Board, Mr. B. V. D. Menon, has just returned after a trip to Europe when he has had discussions with our technical consultants who have been most helpful. The financial and foreign exchange aspects of this attractive project are under scrutiny by the Board. You will appreciate it is not in the interests of the Company that I should disclose more about it at this stage—at any rate till we are sure we have all the facilities for embarking on it. We have every hope that the Company will shortly be enabled to make an announcement.

Capital Issue and Finances

"I am happy to note that our recent issue of 200,000 shares made at a premium of 25 per cent. was well oversubscribed. With this issue our paid-up capital reaches Rs. 1 crore which is the limit of our present authorised capital. As you are aware, special resolutions are coming before this meeting to increase the authorised capital to Rs. 3 crores and to make consequential alterations in our Memorandum and Articles.

The recent issue will meet the financial requirements of about one half of the capital cost of our steel wire project. For the balance, we shall be drawing on our reserves. We have been finding in recent months that our requirements of working capital have increased considerably with the Hirakud plant in full operation. Our bankers have been most considerate and understanding of the peculiar exigencies of working capital of this Company in the past. But your Directors feel that an obligation is thrown on the Board at this stage to make satisfactory arrangements to lift the Company from a state of chronic ways-and-means squeeze. This has been caused, in my opinion, by our habit of drawing on our reserves to finance in part our expansion schemes, with the quite laudable object of keeping the capital-asset ratio at a low level; and the squeeze has been aggravated by the augmented resource needs of Hirakud. This process of drawing on reserves for capital expenditure has the indirect effect of causing capital programmes to be financed out of short-term borrowings, which your Directors consider to be an unwholesome practice. At the same time, they are not in favour of making any further issue of capital for the time being. They have, therefore, decided that the best course would be to make a medium-term debenture issue of Rs. 45 lakhs. This will amount to a partial replacement of the finance now provided by banks. Such a debenture issue will release the Company, at any rate for the time being, from periodical ways-and-means pressures. It will not, however, add to our outgoings in the form of interest charges, nor thereby reduce the Company's distributable profits; for we shall only be paying to debenture-holders, interest which we are now paying to our bankers. In short, in the context of our ways-and-means finances, it amounts to a shift in interest-receiving agencies and no more. The increased earning power of the Company will take care of our sinking fund obligations. The terms of the debenture issue will be announced, as soon as the necessary sanction from the Capital Issue Controller is received.

Review of Tariffs

"The Tariff Commission have taken up for review the question of continuing protection for the bare conductor industry as the present tariff expires in 1960. The picture as to external aluminium conductors has altered considerably in the last two years. The aluminium metal price has declined in Europe and America and there has been a corresponding marking down of bare conductor prices. World competition for bare conductor markets, particularly in project-intensive countries like India, has increased greatly. Countries that command low cost aluminium have a natural advantage over countries like India that produce them at high cost. Another new factor the Indian conductor industry has to reckon with, is the offer of bare conductors by some European countries on rupee-payment terms, which claim to take the sting out of our foreign exchange stringency. The Central Government have been inclined to encourage these rupee-payment deals in bare conductors, notwithstanding the large installed capacity in India licensed by them.

"The decline in foreign conductor prices, on the one hand, and the high cost of bare metal in India have been tending for sometime to neutralise the advantage of protective tariffs. Since the excise duty was imposed on electrolytic aluminium of Rs. 300.00 per metric ton under the Finance Act of 1960, notwithstanding the countervailing import duty, it is possible for a foreign seller of bare conductors to place his wares on the Indian market on terms more attractive than the domestic producers, when rupee payment is acceptable to the sellers. Indian conductors made with indigenous high cost metal with excise duty of Rs. 300.00 per metric ton of metal pyramided thereon create an impression of exorbitance which is not healthy for a growing industry. This is a point for serious consideration by the Tariff Commission.

Price Fixation

"Another aspect of the matter is that of fixation of ex-factory prices on the base of costing principles approved by the Tariff Commission. Price fixation is intended to protect consumers against high prices and profiteering. However, the levy of an excise duty of Rs. 300.00 per metric ton on bare metal has lifted the table of conductor prices in such a manner as to deprive ex-factory price fixation of much of its significance from the consumers' angle. I often wonder if the fixation of ex-factory prices, with which duty Central Government have charged the Tariff Commission, affords any satisfaction to the consumer, who is intrigued by the spectacle of the same Central Government levying excise duties on the very articles the factory cost of which is so painstakingly investigated by cost accountants of the Tariff Commission, who incidentally take care to see that in the process, some very legitimate outgoings by way of expenditure are disallowed.

World Bank Mission's Report

"It is interesting to observe from a Press summary recently published that the World Bank Mission have recommended a re-examination of the present system of price fixation by the Tariff Commission, based on a 8 to 12 per cent. return on capital employed, on the ground that such a system in actual experience, leaves little finance for expansions. While I have not read the full report, it is clear from the Press summary that the World Bank Mission, from a wider and more objective angle and with its vision undistorted by 'vested interests,' have strongly endorsed the view held in many responsible quarters in this country, that the present rigid price-fixing policy based on employed capital has whittled down retainable resources in the background of prevailing high cost expansion needs. The consumer in whose interests all this relentless vigilance is claimed to be exercised, finds meantime, that the small gains in ex-factory price fixations are more than cancelled out by excise duties levied on the article when it reaches him. One hopes the Central Government will give the World Bank Mission report the attention that so high-level and disinterested a document deserves, in the interests of internal capital formation in industry.

Serpent Eating Its Tail

"In the case of the aluminium bare conductor industry, about 98 per cent. of the consumption is by State Governments, project authorities and Electricity Boards. The incidence of these excise duties therefore falls on Governmental bodies and the duties have the effect of channelling revenue from States and Statutory Boards to Central Government; which means a retrocession in part of Plan finance earlier provided by the Centre to these Governments and agencies. It is a rehash of the classical story of the serpent eating its tail.

"In the process of reconnoitring for resources to finance our Plans, our tax gatherers, particularly in the field of indirect taxation, unwittingly, but not infrequently, fly to great heights only to do parachute landing on the unmuscular shoulders of State Governments, who are not slow to avail of these handsome opportunities for clamouring for larger Plan allocations to meet the larger expenditure. Today, consequently, we see this snowball of consumer prices and project costs assuming disconcerting proportions.

"In conclusion, I must take the opportunity of placing on record our great appreciation of the loyalty and capacity for team work first among the top executives of the Company, which has enabled the units at Kundara and Hirakud to be maintained at a high pitch of efficiency and, secondly, the sense of dedication with which the engineers, technicians and all ranks of skilled and unskilled workers have carried on the good work of the Company. I cannot resist paying a tribute to the work done by our colleague on the Board, Sri B. V. D. Menon, whose vigilance and foresight have enabled us to grow as we have done; to our General Manager, Sri V. G. G. Nayar, whose energy and zeal have imparted dynamism to our work both routine and developmental; to Sri N. Satyanathan, our Secretary, whose clear-headed approach to our accountancy and costing problems has enabled us to keep our affairs in proper trim.

"Gentlemen, I move that the annual report, balance-sheet, profit and loss and appropriation accounts for the year ended 31st March 1960 be adopted."

AIDING LESS-DEVELOPED NATIONS

CLIMATE FOR FOREIGN INVESTMENT MUST BE MADE FAVOURABLE

[In our last issue, we published, by the courtesy of the Swiss Bank Corporation, Basle, an interesting article on the need for creating conditions that would facilitate inflow of foreign capital, private and Government alike, into the underdeveloped countries. How imperative is this need is very lucidly brought out in a review in the October issue of the Monthly Bank Letter *published by the First National City Bank of New York. This review, which is reproduced on this page, discusses the growth of inter-Governmental loans and grants, evolution of soft loans, co-ordination of aid programmes and Russia's competition in this field. It warns that the underdeveloped countries cannot fail to establish the climate required to attract foreign private capital and, at the same time, claim more Government grants and loans to make up for the lack of private foreign investment. After all, the underdeveloped countries must remember that the people of the developed nations will be most reluctant, as the review aptly remarks, to provide, through taxes, funds that they do not wish to entrust to other nations of their own free will.*—ED.]

AT the Americas' Economic Conference in Bogatá last month, the United States promised to devote over the years "large additional resources to the inauguration and carrying forward of a broad new social development programme for Latin America." This new programme—together with the establishment earlier this year of the Inter-American Development Bank, the creation towards the end of September 1960 of the International Development Association, and President Eisenhower's call at the United Nations for a new "long-term African development programme"—brings foreign aid once again into the limelight.

Flows of Government economic aid to the underdeveloped parts of the world have never been bigger than at the present time. Yet, many wants for aid among less-developed nations remain unsatisfied. Their hunger for capital has been stimulated not only by growing populations and eagerness to raise living standards but also by quickening political and social changes since World War II.

Providing capital for less-developed nations is "the challenge of our time," as a special committee headed by Mr. W. Randolph Burgess, U.S. Permanent Representative to the North Atlantic Council, recently stated in a report dealing with future economic co-operation among the United States, Canada, and Western Europe: "We are convinced that none of the problems facing our countries collectively is more important than that of assisting the underdeveloped countries in their progress towards higher living standards, greater freedom and a fuller life for their peoples."

Inter-Governmental Loans and Grants

During the nineteenth century and, indeed, until about a generation ago, economic development proceeded by leaps and bounds without anybody's being concerned about the "problem." As Europe increased its savings, capital became available for investment in America and wherever else Western civilisation was free to enter. Individual savers in England and other European countries thus lent money to the pioneers of our prairies, the Australian bush, and the Argentine pampas; they also invested heavily in Asia and Africa. Apart from wars, Government-to-Government loans were almost unknown; there were no international development agencies and no "experts" prescribing a "rate" of economic growth. Investment rested on the free market, the rule of law, and respect for money. Progress, springing from the inventive genius of free men, could be taken for granted.

The United States and other nations that made extensive use of private foreign capital suffered in no way for having attracted it. The performance, of course, varied from country to country and from time to time. There were defaults, but, on the whole, capital-exporting nations earned reasonable rates of return for risks taken.

During the late 1920s and the 1930s, private savings in richer countries began to flow less freely into poorer lands. The virtual collapse of international bond markets in the 1930s was one of the factors which led, in due course, to the establishment of the World Bank (International Bank for Reconstruction and Development) after World War II. Owned by member-Governments, the Bank lends only to Governments or with Government guarantees. Meanwhile, the Export-Import Bank, created in 1934, continued as the principal U.S. official lending agency to foreign Governments.

The World Bank raises money to lend by selling bonds in the financial markets of the United States and Europe. But, with the notable exception of Canada, bond issues by foreign Governments and Government agencies in New York and other capital markets have remained relatively small in recent years.

Throughout the post-war years, the United States has been extending economic aid under a succession of programmes as listed in the following table which shows the U.S. and international economic aid agencies and programmes:

(In billion dollars)

	Date of establishment	Form of aid	Authorisations	Disbursements
United States:				
Export-Import Bank	1934	Loans	$10.7	$7.4*
International Co-operation Administration and predecessors	1948	Mainly grants	26.1	24.9
Sales of agricultural surpluses against local currencies and emergency food relief (PL 480)	1954	Loans and grants	4.3	3.7
Development Loan Fund	1957	Loans	1.4	0.3
Inter-American Aid for Social Development	1960	Loans and grants	0.5	..
International:				
International Bank for Reconstruction and Development	1944	Loans	5.2	3.9†
International Finance Corporation	1956	Loans	‡	‡
International Development Association	1960	Loans	..	..
United National Technical Assistance	1949	Grants	0.2	0.2
United Nations Special Fund	1959	Grants	‡	‡
Regional:				
Inter-American Development Bank	1960	Loans	..	..
European Investment Bank§	1958	Loans	0.1	‡
Overseas Development Fund§	1958	Grants	0.1	‡
Colombo Plan	1950	..	..	..

* Of which, $4.0 billion repaid. † Of which, $0.7 billion repaid.
‡ Less than $50 million. § European Common Market.

The latest addition is the Inter-American programme for social development for which Congress recently authorised, "as a first step," $500 million. (An additional $100 million was appropriated for rehabilitation of areas of Chile devastated by earthquakes earlier this year.) This programme, financed by the United States, is to be administered "primarily" by the Inter-American Development Bank, which is to begin operations later this year. Such aid is to be matched by "measures of self-help."

The United Kingdom, France, the Netherlands, and certain other countries also have Government lending agencies and programmes to provide aid. Altogether, some twenty-five agencies or programmes, including those covered in the table, operate in the field today.

"Soft" Loans

Towards the end of September 1960, the International Development Association was established as an affiliate of the World Bank. The new body is to grant loans at low interest rates, repayable in whole or in part in the borrower's own currency.

The trend is to get away from grants—which are apt to be objectionable to taxpayers—and from hard currency loans like those of the Export-Import Bank or the World Bank. Furthermore, the newer agencies are empowered to extend loans with longer maturities and at cheaper rates than are available from the older ones.

These new kinds of loans are thus designed for borrowers who want and need dollars or other hard currencies but do not have the visible ability to repay in the same coin. They are akin to grants. A point has been made that, while the newer agencies can make soft loans, they need not be soft lenders; and that soft loans are preferable to outright grants, because loan procedures exert a discipline on lender and borrower alike to ensure that a project so financed be soundly conceived. This can hold true if a country also disciplines itself in its general fiscal and monetary policies and thus preserves value for its currency in terms of local prices.

There is a natural tendency for borrowers to seek the least onerous terms. It is easier to meet the test of repayment in "local currency" than in dollars, pounds, or marks. Obviously, there is danger lest "bad loans drive out good ones."

Co-ordinating Aid Programmes

There are now so many Government-sponsored agencies and programmes working in the area of international financial aids that it is hard for the citizen to keep up with them all. It is also hard for aid applicants to know just where to go. Besides, there is a good deal of overlapping, though each new programme seemingly has had special circumstances to justify its coming into existence.

To eliminate overlapping, waste, and maladministration, particular grants and loans should be related to the recipient country's own efforts, and activities and contributions of U.S. agencies should be related to those of international institutions and others. Indeed, U.S. and other agencies have recently endeavoured to co-ordinate aid to Spain, Turkey, India, and Pakistan. A Development Assistance Group has been formed among the principal capital-exporting countries to discuss informally various aspects of co-operation in this field. With such a multiplicity of pipelines for channelling aid, the effort can be weakened by overorganisation.

The problem of co-ordination is not confined to aid programmes within each recipient country. There is also the problem of co-ordinating the whole effort of economically more-advanced nations to assist the less-developed lands. Throughout recent years, economic aid has been increasing, with the relative contribution of the United States and the other industrialised nations remaining fairly constant. In 1959, Government grants and loans by the industrialised countries of the Free World to the less-developed nations were estimated at $4 billion, of which the United States supplied about two-thirds, and France and the United Kingdom most of the remainder. The extent of economic assistance granted to less-developed nations by certain industrialised free world countries is indicated below:

(In million dollars)

Country	Annual average 1954-56	1957	1958	1959	Total 1954-59
Australia	23 7	34 3	41 5	34 7	181.6
Belgium	4 0	8 0	12 0	22 2	54 2
Canada	21 4	23 2	60 5	67 4	215 3
Denmark	..	..	0 5	0.2	0.7
France	481 4	857 1	754 6†	770 0	3,825 0
Germany‡	8 0	33 5	107 1	124 9	274 5
Italy‡	5 5	7 6	10 2	38 6	72 9
Japan‡	11 4	8 0	3 0	13 0	53 2

Grand Total‡	2,291 1	3,571 4	3,445 3	4,039 8	17,929.8

Note.—Amounts disbursed (grants and loans) during fiscal years of countries concerned.
† The apparent drop in French aid expenditures is largely accounted for by devaluations of the franc at the end of 1957 and 1958.
‡ Not including reparations payments to less-developed countries (Germany about $428 million, Japan $204 million Italy $181 million through 1959).
Source: Department of State, *Bulletin*, 22nd August 1960.

There is no accurate yardstick for comparing the degree of aid effort by various countries. However, as the table shows, there are countries economically and financially strong enough to shoulder a larger part of the aid burden than they have until now. German leaders have recognised publicly the need to assume a greater share of the overall effort.

Russia's Aid "Competition"

Russia has also engaged, since 1954, in supplying aid to less-developed nations. Including modest amounts provided by Russia's European satellites and Red China, economic aid by the Soviet bloc to other nations had reached the equivalent of $3 billion by April 1960, according to data published by the U.S. State Department. In 1959, such aid reportedly aggregated $1 billion—by far the largest amount in any single year.

These are sizable figures, but they must be seen in perspective. In the past three years, as the table shows, the United States alone has extended economic aid at a rate of $2.5 billion a year, and the other industrialised free world countries $1.2 billion. In addition, the World Bank has lent close to $700 million annually. Finally, private capital outflows from the United States, Canada, Europe, and Japan to less-developed countries must also be taken into account; these have been estimated for recent years at $2 billion annually. Thus, the total runs beyond $6 billion a year.

On paper, the terms of Soviet loans are generous, with nominal interest rates of 2 or 2½ per cent. In reality, however, they may be onerous, as many recipients have learned by comparing Russian prices, qualities, and delivery conditions with those of the West. A closer acquaintance with Russian barter dealings and State trading will make it easier to appraise realistically the "advantages" gained from Russian aid.

As time passes and the novelty of Russian aid wears off, the recipients will also realise that greater reliance on Soviet aid dangerously increases their economic dependence on Russia. In fact, these and other deficiencies and shortcomings are becoming all too apparent.

The Neglected Partner

Government grants and loans as well as credits by the World Bank and, soon, by the Inter-American Development Bank and the International Development Association aim at expanding basic economic facilities in such fields as transportation, communications, irrigation, and power. Formerly, underdeveloped nations floated Government bonds to finance such projects; but the provision of capital for public works now tends to be regarded as falling within the province of official lending.

Private investment from industrial nations has not been fully enlisted in the task of developing others. To be sure, there has been, over the past decade, a remarkable revival of private long-term investment from the United States and Western Europe. But it has gone, for the most part, to rapidly expanding countries with a substantial industrial sector, such as Canada, Australia, and Mexico. Private capital has also flowed in sizable amounts to finance the development of important natural resources like oil or metals. Little of it has gone into manufacturing and processing industries or into public utilities.

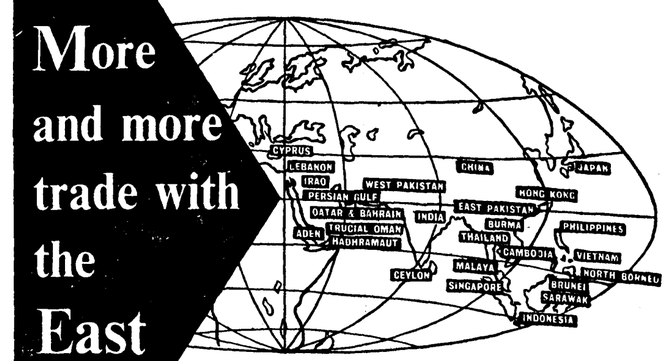
Private capital cannot be driven by compulsion. It must be attracted. Attracting American and European investment funds to less-developed countries is not an easy matter, in view of the competing demands for capital in the more-developed countries themselves. Yet, the available private capital is potentially many times as great as the amount that can be supplied from Government coffers. Investors, understandably, tend to shun countries where they encounter currency disorders, exchange controls, confiscatory taxation, expropriation, company law discrimination, and nationalistic restrictions on management. But when a country offers reasonable assurances of financial stability, respect for contracts, and equality of treatment with domestic capital, foreign capital responds favourably.

The developing nations can secure much-needed capital for development primarily in one of two ways: they can create a favourable investment climate and thus attract capital from abroad, or, alternatively, they can forgo capital imports, but they must then step up their own capital formation even at the cost of depressing already-low living standards. The first course requires a strengthening of the bonds between the more-developed and the less-developed nations—above all, free trading and payments and the rule of law. The second course entails immense material and spiritual sacrifices such as those now enforced in Communist China.

One thing is certain, however. Less-developed countries cannot fail to re-establish the conditions needed to attract foreign private capital and, at the same time, claim more Government grants and loans to make up for the lack of private foreign investment. People in the more-developed nations will be most reluctant, in the long run, to provide, through taxes, funds that they do not wish to entrust to other nations of their own free will.

Trade with Eastern countries is ever on the increase. An efficient world wide banking service with expert knowledge of market conditions is essential to develop trade. The associated banks, The Chartered Bank and The Eastern Bank Ltd. with branches in almost every commercial centre in the Middle East, South East Asia and the far East are fully equipped to provide complete Banking facilities to every trade and industry.

More and more trade with the East

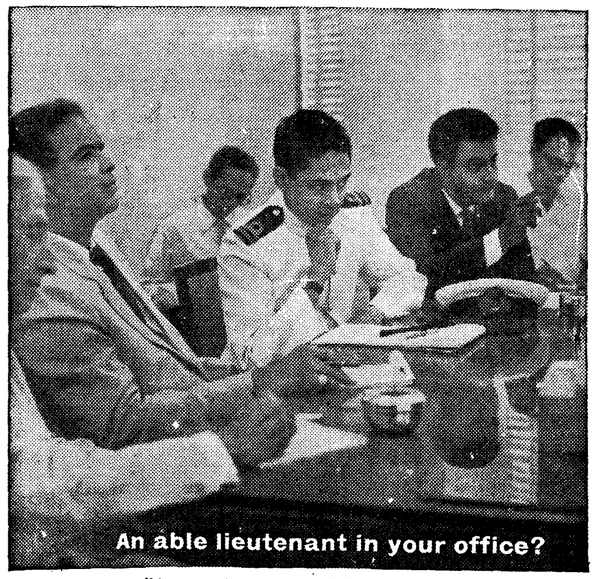


Let your worry be our pleasure.

THE CHARTERED BANK
Bombay office: 23-25 Mahatma Gandhi Road, Bombay-1.

THE EASTERN BANK LTD.
Bombay office: Dadabhay Naoroji Road, Bombay-1.

which together have a complete branch service in The East extending from Cyprus to Japan.



'Your executives are your trusted lieutenants. They implement your decisions with imagination and loyalty, making a valuable contribution to output and profits. You know the worth of these men and you certainly like to pay them accordingly.

'But, beyond a certain level, the more you pay them the less do they proportionately realise after taxes. And with the high standard of living they have to maintain, they cannot save for retirement.

'The LIC can show you a new way of remunerating them. It is through the Group & Superannuation Schemes. These Schemes possess three unique advantages:

I Your executives can receive a part of their emoluments tax-free to build up retirement benefits and maximum family security
II This may not involve any extra cost to the employer
III The employer gets tax-relief on what he pays towards the Scheme

For further information, please contact the nearest LIC Divisional office and have a word with the Manager. He will be delighted to give you full particulars.

Life Insurance Corporation of India

ADVLIC-6-10

PISTON ASSEMBLY INDUSTRY

PROTECTION TO CONTINUE FOR THREE YEARS

THE Government of India has accepted the Tariff Commission's recommendation that protection be continued to the piston assembly (pistons, piston rings and budgeon pins) industry upto 31st December 1963 at the existing rates of duty, namely, 50 per cent. *ad valorem* standard and the preferential rate of duty where applicable in accordance with the Indo-U.K. Trade Agreement. The Government has also accepted the related recommendation that chromium-plated rings be brought within the scheme of protection, and has given effect to it from 7th October 1960. The Government's resolution on the Commission's report has, at the same time, taken note of another recommendation "for suitable action to the extent possible." This recommendation is to the effect that the Development Wing of the Ministry of Commerce and Industry should ascertain from piston manufacturers the specifications and quality of pig iron required by them and arrange with the Iron and Steel Controller to plan the requirements of the industry and place allocations with those producers who can make pig iron according to the specifications of the piston manufacturers. The attention of the domestic manufacturers of internal combustion engines of all types has been drawn to the recommendation that they should finalise their arrangements for obtaining their requirements of piston assembly and components from indigenous sources and that those units of the piston assembly industry which have entered into foreign collaboration should take steps to get the restrictive provisions regarding exports suitably modified in their own interests as well as for the development of export trade. Besides, the Government has drawn the attention of the indigenous aluminium industry to the recommendation that, if it could not augment its supply of aluminium alloy ingots, it should not at least reduce the supplies to piston manufacturers below the existing levels.

The Tariff Commission's report contains a review of the progress of the industry to date. The broad findings of this review are that the industry, by its performance in the last five years, has justified the grant of protection and taken steps to expand and diversify its output but that it has not yet become fully established because there is a large measure of consumer preference for the imported product. Two other handicaps under which the industry labours at present are the relatively higher cost of indigenous alloy and other raw materials and the absence of effective integration of its production with that of the main automobile industry.

The present position of the industry would need to be described in this context. There are only two big units now in the country—India Pistons (Private) Ltd. and Goetze India (Private) Ltd. A licence has been recently issued to Escorts Agents (Private) Ltd., an associate of Goetze India, to manufacture pistons in collaboration with Messrs. Mahle, a West German firm. India Pistons is located near Madras; it has entered into a twenty-year technical collaboration agreement with Associated Engineering Holdings, a joint enterprise of four leading British manufacturers in the line, which receives an engineering fee of 5 per cent. on sales. The paid-up capital of this Company (which started production in 1950) as on 31st March 1959 is Rs. 25 lakhs. The second company—Goetze India—has its factory at Bahadurgarh in Patiala district. This company, which started production of piston rings in 1957, also manufactures chromium-plated rings. It has a technical collaboration agreement with Goetzwerke Friedrich Goetze A.G., of West Germany, which receives a royalty of 3 per cent. on net sales. The subscribed capital of the Company is Rs. 23.4 lakhs. There is also a small unit—Hindustan Pistons (Private) Ltd., Madras—which has a paid-up capital of only Rs. 1.6 lakhs. It employs less than 50 workers and produces piston assembly for industrial and agricultural engines.

These three units together produced in 1959 nearly 282,000 pistons and 276,000 gudgeon pins. The two bigger units together produced in the same year nearly 4.77 million piston rings, of which chromium-plated piston rings were about 214,000. The current total demand for pistons and gudgeon pins alone has been estimated in the Tariff Commission's report as under:

	Pistons	*Gudgeon pins*
For original equipment	314,600	314,600
For replacement ...	776,000	776,000
Total ...	1,090,600	1,090,600

The above replacement estimates have been based on the following number of motor vehicles on the road, as on 15th January 1960, reported to the Commission by the Ministry of Transport:

Private motor cars	213,327
Jeeps	18,316
Motor cabs	15,875
Motor cycles	57,345
Auto rickshaws	3,567
Other public service vehicles ...	42,507
Goods vehicles	137,749
Miscellaneous vehicles	28,834
Total ...	517,520

And the original equipment estimates have been based on the Jha Committee's estimate that the production of cars (including jeeps) and commercial vehicles will rise in the third Plan period from 20,000 and 32,000 to 48,000 and 59,000, respectively.

As for piston rings, the number required for original equipment is four for each piston and twice the number for replacement, as occasions for replacement of rings will be twice as many as pistons. On this basis, the Commission has estimated the current demand for rings at 7.5 million which is expected to increase by 10 per cent. per year in future.

After the completion of the sanctioned expansions by the end of 1960, the total capacity of the industry for pistons and gudgeon pins would be 1.4 million each and for rings 9.3 million on double-shift basis.

With current demand exceeding indigenous production, it is not surprising that imports have been substantial. As of 1959, the imports are as under:

	(Numbers)
Piston assemblies	192,231
Pistons	90,363
Piston rings	254,829
Gudgeon pins	201,511

But this situation of liberal imports, in the opinion of the Commission, need not be continued, inasmuch as the industry is now able to produce articles upto the standard required and will soon be in a position to meet the indigenous requirements in full. There are signs that the users also are becoming increasingly satisfied with the quality and performance of piston assemblies including components manufactured in the country.

While it is conceivable that, even in the absence of protection, the industry may hold its own, the case for continuance of protection rests mainly on the ground that, without it, the progress of developing indigenous designs will be seriously hampered. The Commission's costing shows that, of the five costed items, three have a fair margin *vis-a-vis* c.i.f. import prices, and that, in the case of the other two, a duty of not less than 25 per cent. will be required. Still, if the Commission has recommended neither a reduction of the rate of duty nor discontinuance of protection, it is because the industry has yet to develop good indigenous designs and, as an important automobile ancillary industry, its development requires a close watch so long as the main industry itself stands in need of protection.

The most pressing problem facing the industry is on the score of raw materials like aluminium alloy for pistons, special steel for gudgeon pins and expender rings and pig iron. At present, the requirements of aluminium alloy (LM. 13) are not met fully from indigenous sources. Already the Aluminium Corporation of India, which has been supplying aluminium alloy, has taken the stand that it would not be in a position to make the alloy in view of the extreme shortage of aluminium metal. And it has requested that it should be permitted to import virgin metal for this purpose along with the alloy metals such as nickel, silicon, magnesium and copper so that the necessary tonnage of alloy may be regularly supplied to the piston manufacturers. The Commission's recommendation in this connection is merely to the effect that the indigenous aluminium industry, if it could not augment its supply of aluminium alloy ingots, should not at least reduce the supplies to piston manufacturers below the existing levels. The need for this recommendation is not clear, particularly when the Commission itself has admitted that the import price of LM. 13 alloy is at present about Rs. 800 per ton cheaper than the indigenous product. As for special steel, it is not available indigenously and so has to be entirely imported. As for pig iron, which is available locally, its quality would need to be improved so as to reduce the phosphorus, silicon, manganese or carbon content. The Commission made an appropriate recommendation in this regard as mentioned at the outset. High speed and alloy tools, gauges, testing apparatus, etc., have also to be imported by piston manufacturers. On the whole, it has been estimated that the imported raw materials account for about 30 per cent. of the industry's present requirements. If aluminium alloy, too, comes to be imported in larger quantities, this proportion will go up correspondingly.

MINERAL "DISCOVERIES"

Mr. K. D. Malaviya's Ministry has always had an excessive craze for publicity. On more than one occasion, it has rushed to the Press with its stories of "discoveries" of oil, gas or coal, not all of which have turned out to be genuine. Public memory being proverbially short, not many know that the Ministry's penchant for "discoveries" has a long story behind it. This story, which may be likened to a tragi-comedy, is unfolded by one Mr. K. V. Subrahmanyam who seems to know what he is talking about. Writing recently in the *Hindustan Times*, he says:

"Ten years ago, about the time of the first general election, Mr. K. D. Malaviya and the then Secretary in his Ministry, Mr. S. S. Bhatnagar, announced the discovery of a 'gold belt' in Orissa such as would, according to them, transform the economy of Orissa and also provide it with a faculty of mining engineering at Utkal University. Everyone in his senses knew that it was a hoax. So has it proved itself to be. No one now talks of gold in Orissa.

"Not long after, Mr. Bhatnagar announced at a reception at Dhanbad that during the flights over Kashmir when the Baramula campaign was in progress a huge 'sulphur field' had been discovered —sulphur is one of the minerals of which India has practically no resources. Ten years after this announcement no sulphur has come from Kashmir because there is no such field in existence there. Close on the heels of the discovery of the new Klondyke in Orissa came the announcement by Mr. Malaviya of the unearthing of a new Kimberley at Majhgawan (Panna). We shall leave this subject for the present to some of our M.Ps to probe into. Meanwhile, the biggest of hoaxes, one which has cost the country a few crores of rupees and foreign exchange, was being hatched—the 'discovery' of coking coal in Korba (Madhya Pradesh) which was to enable the location of a million-ton steel plant in this State. Once that was done at Bhilai the truth was allowed to come out that there was no coking coal at Korba. All the coking coal has to come from Bengal and Bihar.

"A short while ago, Mr. Malaviya's Ministry announced the 'discovery' of huge copper deposits at Khetri in Rajasthan, and earlier figures of analysis of ½ per cent. or so moved up to 1½ per cent. thus ranking these copper deposits with those of Katanga and the Rhodesias—the deposits of Chile would pale into insignificance before the discovery. But curiously enough, none seems to be interested in these deposits except Poland, as new an entrant to modern industry as India itself.

"The latest of Mr. Malaviya's discoveries beats them all. The immediate background to the announcement of this new 'discovery' should be remembered which is as follows: There has been an acute shortage of coking coal of the right quality and in sufficient quantity at all the steel plants; and furnaces which had been built at Bhilai and Rourkela cannot be started for want of coke. Even as recently as last year, in spite of warnings by the steel producers, the Minister for Steel, Mines and Fuel defended the policy of the Government of India of encouraging the export of this precious coking coal. There has been no less a shortage of other qualities of coal as well. Railway operation has been seriously affected for want of coal because loco drivers are not magicians to

NEW PRODUCTS AND PROCESSES

Earthmoving Equipment

TWO machines which can be adapted to a variety of constructional work have been added to a range of earthmoving equipment manufactured by a U.K. firm. One is a self-propelled dumper trailer with a load capacity of up to 10 tons designed to operate in terrain which is inaccessible to lorries and tractor-towed trailers. Because it is mounted on an articulated frame the entire unit can turn in a radius of only 13 ft. and the dumpen body can be tipped to an angle of 90° to ensure complete discharge of the load. The unit has four wheels to ensure that the weight of the load is transferred to the combined driving and pivotal wheels of the power unit. The machine, diesel-powered, is equipped with hydraulic steering and air brakes. The cab is of fibre-glass construction and the engine cover is hinged to the front bumper for maximum accessibility. The second machine which can be used in conjunction with the dumper, is a mobile heavy duty excavator. It can be used for mass excavation, square-hole digging, loading, foundation digging, site skimming, land stripping, trench work and ditch and dyke cleaning. All these operations can be carried out under power through a working range of 190°. Two hydraulic outriggers which extend on either side of the machine provide good stability and they can be independently retracted to allow for excavation work close up to the foundations and walls of buildings. The fully-enclosed cab has two sliding lock-up doors, built in lockers for papers and tools, sliding windows and a fibre-glass roof which is free from drumming and admits maximum light.

Novel Car Spare Wheel

A revolutionary type of car spare wheel, which is only one inch thick when not in use, easy to handle, and can be stowed in a very small space, was exhibited at the Motor Show held in London recently. It consists of a special pneumatic tyre mounted on a modified type of wheel about one inch wide. This means that the combined tyre and wheel can be stowed away in very little space and handled with ease during an emergency. When needed, the tyre is inflated by a small cylinder of carbon dioxide, about nine inches long, and containing sufficient gas to inflate the tyre to the correct pressure. If necessary, inflation can be carried out by conventional methods. Once inflated, the tyre becomes nearly circular in cross-section and in this condition is used conventionally, being bolted on in the usual way after removal of the punctured tyre/wheel assembly. It should be driven at reasonable speeds, and will then normally be adequate for all emergencies likely to be met during the life of the car. After the punctured tyre has been repaired, the wheel is removed. The tyre, when deflated, regains its former shape.

New Polishing Process

A Swiss firm has invented a new process called "rotolisation" for polishing metal pieces. The metal pieces which have got to be scraped, cleaned and polished are placed into metal or wooden drums or barrels, which are lined with rubber, where they come into contact with an appropriate chemical product, together with small balls made of a very hard mineral substance, which are calibrated very exactly and the diameter of which varies, according to requirements, from two to forty millimetres. As a result of the rotary movement of the drum, these balls come into contact with all the parts of the metal pieces that have to be cleaned. This "rotolisation" brings with it a number of important advantages to the metallurgical industry, of which we will now only mention safety in usage and an economical efficiency.

Push-button Soldering Iron

A British product—a soldering iron which requires neither flame nor electricity—offered by Jenolite Ltd., 13-17 Rathbone Street, London, W. 1, is said to be particularly suited to underdeveloped countries. It is heated by a cartridge, fitted inside a detachable copper tip which generates at over 86° for six to eight minutes when fired by the operator. The cartridges are non-explosive and safe to handle. Soldering tips for the iron are interchangeable. Apart from the standard ⅝ inch pyramid tip, there is a ¾ inch pyramid and chisel tips of ⅜, ½ and 1 inch.

New Packaging Material

A new packaging material of plastic, aluminium foil and paper developed in the U.S. permits the electronic sterilisation of surgical sutures after they have been sealed in their container. The material is claimed to give a tight seal, not to be affected by the sterilisation beam of 7 m. electron volts radiation, and to be resistant to the alcohol-formaldehyde mixture in which the packages are stored. The radiation is claimed to kill even the bacterial spores which are most resistant to ordinary germicides.

Antiseptic Plastic

A new polyethylene plastic, claimed to have inherent antiseptic qualities, is now being used in the U.S. to cast plastic toys for very young children. The maker says the antiseptic qualities due to a germicide mixed into the plastic before casting, last the life of the toy. He also said laboratory tests show it was particularly effective against the tough staphylococcus germs. Other uses seen for the plastic are in waste baskets, door knobs, telephones and arm-rest on public vehicles.

The Tank Lorry

PRE-SHIPMENT INSPECTION OF EXPORTS

JAPAN SETS A GOOD EXAMPLE

WITH the ambitious third Plan on the anvil, India has necessarily to make a determined and concerted drive to expand its exports. There is no doubt that much greater effort than that made in the second Plan will be called for to attain this object.ve. The increase in exports during the second Plan period so far (1956-59) was barely 2.5 per cent., which compares unfavourably with the world average of 20 per cent. Both the Government and the industry have realised the gravity of the situation and the compelling urgency to boost India's export earnings. There, however, seems to be some reluctance on their part to come to grips with the basic problems affecting foreign trade. It is fairly well known, for instance, that some of the products that are exported are yet to adhere strictly to a well-defined system of quality control and standards—a prerequisite for winning the confidence of overseas buyers. As early as in 1957, the Export Promotion Comm.ttee (Mr. V. L. D'Souza: Chairman) pointed out the need for checking the quality, weight, volume, condition of goods, their containers, marks and all other particulars before shipment of Indian goods and ensuring that, in all these respects, they left nothing to be desired. No specific action has been taken to give effect to this recommendation to all goods that are exported. Subsequently, the Standing Committee of the Export Promotion Advisory Council, once again, took up the matter and recommended that the Director-General of Supplies and Disposals should undertake pre-shipment inspection of goods. The Government has apparently postponed the consideration of this scheme on grounds of administrative difficulties. It would appear, however, that the Standing Committee's repeated requests have not gone in vain. For the Government has now revised its earlier stand and decided at long last to set up a special committee to go into the question of quality control and pre-shipment inspection measures. It is to be hoped that the Committee will complete its task expeditiously and that the Government will implement the Committee's recommendations without delay.

Inspection in India

It must, however, be mentioned here that a system of voluntary pre-shipment inspection already exists in the case of a few products. The Cotton Textiles Fund Committee has a scheme of a voluntary character for the inspection of exports of cotton textiles. Art silk fabrics have also been brought under a similar scheme. Besides, exports of mica are subjected to such a scheme, operated by the Mica Export Promotion Council. The other existing measures of quality control include the compulsory grading of such goods as tobacco, hemp, raw wool, and lemon grass oil for exports, as also the voluntary quality control scheme for the E.I. tanned hides and skins operated by the Leather Export Promotion Council. It will be seen from this that, apart from these exceptions, a judicious system of pre-shipment inspection is conspicuous by its absence in the case of other export items.

In this context, it will be in the fitness of things to refer to the system followed by Japan which has emerged from the wreckage of the last war as a modern industrial colossus in the Pacific. Unlike in the 'thirties, its exports now are not confined to cheap consumer goods, fine silks and toys, but high class quality goods, heavy industrial plant and machinery, and electrical, as well as electronic, equipment of high precision. Indeed, the performance of this country on the export front during the post-war period has been so spectacular that it has become a source of some concern to exporters in the highly developed countries, such as the U.S., the U.K. and also those in the Continent. Japanese exports have staged a smart rally from no more than $820 million in 1950 to $3,457 million in 1959. During the first six months of 1960, its exports aggregated $1,842 million, or a still higher annual rate of over $3,680 million.

The factors that have contributed to this excellent progress of Japan in the sphere of world trade are many. A general improvement in world trading conditions, the necessities of the Korean war that compelled Japan to make a forced march, large U.S. aid, heavy investments on modern plant and machinery, the adoption of American productivity methods and manufacturing techniques and, above all, the innate Japanese patience, tenacity and sense of purpose, all these have been responsible for what Japan is today, namely, a modern industrial nation. But no less important is the emphasis laid in Japan on the maintenance of competitive quality and standards, as is evident from the introduction of a scheme of pre-shipment inspection of exports. As many as 145 major export goods, which account for about 50 per cent. of the total Japanese exports, are subjected to compulsory pre-shipment inspection by law. These goods include, among others, sewing machines, reagent chemicals, pottery and porcelain ware, mechanical toys, cotton textiles, rayon fabrics, plywood, and canned foods. Of the 145 products, 59 items are in the category of textiles, 36 in agricultural and aquatic products, 29 general merchandise and 25 machinery and metal manufactures. Under the new Export Inspection Law, which came into force in February 1958, exports of the specified commodities are authorised only in cases where the quality of each item is in conformity with fixed standards; in other words, their export is, in principle, prohibited, unless they are "passed" by the specially designated Government organs or private inspection organs.

Standards for Metals and Machinery

A brief account of the scheme, as well as details regarding the relevant law, is given in a brochure, compiled by the Japanese Ministry of International Trade and Industry, and published by the Japan Export Trade Promotion Agency, Tokyo. The Japanese Government has also published two books giving exhaustive details with illustrations, of the inspection standards prescribed by it in respect of appearance, structure, size function, etc., for a wide range of metal and machinery items. The first volume is concerned with wire nettings, screws and rivets, bearings, parts and accessories for textile machines, farm machines and instruments, saws, sewing machines, timepieces, electro-machinery and instruments, etc. The second volume relates to such goods as cameras, refracting telescopes, projectors, parts of automobiles, internal combustion engines and bicycles. All those who are interested in promoting India's exports, especially those who are specifically entrusted with the task of export promotion, will do well to study these publications for their guidance.

The scope of compulsory inspection of exportable goods in Japan is more comprehensive than a mere checking up of quality and standards at the final stage of shipment. The export inspection is classified into three phases: (1) inspection of quality, (2) inspection of packing conditions, and (3) inspection of materials and manufacturing process. The inspection of quality means the examination of the quality of all designated commodities with a view to testing whether their quality conforms to the standards fixed by the Government. The inspections on both quality and packing conditions are categorically performed by a single organ. But as regards some commodities, the quality of which cannot be maintained unless their packing condition is inspected by special export inspection organs, they are specially inspected by the inspection organ concerned with packing conditions. These special commodities comprise silk fabrics, bolting cloth, rayon fabrics, bemberg rayon fabrics, and acetate rayon fabrics; these are designated by Cabinet Order. All of them are required first to be inspected in regard to quality by the Textile Products Inspection House, after which they are subjected to inspection on packing conditions to be conducted by a designated inspection organ specialising in inspection of packing conditions.

Inspection of materials and manufacturing process is a supplementary inspection for finished goods. The inspection of materials is applied to the finished products, the inspection of which cannot be satisfactorily performed merely through quality inspection, and after they have passed this supplementary inspection, the finishing process is applied to them. Then these finished products are again subjected to a final inspection. This is a good way of avoiding a wasteful inspection on finished products in which bad quality materials may be used. These special commodities comprise rayon fabrics, bemberg rayon fabrics, acetate fabrics woven with long filament yarn, acetate fabrics woven with spun yarn, cotton fabrics, spun rayon velveteen, spun rayon corduroy, cotton velveteen and cotton corduroy. These commodities are always required to be inspected by export inspection organs in regard to their pre-processed goods (fabrics fresh from the weaving machine) and only if they pass the inspection, the manufacturers apply their finishing touches to them. These finished goods are again subjected to the final inspection of their quality before they are exported.

Two Methods

There are two methods of inspection, namely, the 100 per cent. inspection and the random sampling technique. The former method implies that each unit of any commodity is subjected to inspection individually. The latter method means that the quality of one lot of commodity is determined by means of scientific inspection on the basis of random sampling.

Although designated commodities are exported according to the fundamental principles of export inspection as explained above, there are some designated commodities which are not fit for such a compulsory export inspection. As regards such commodities, the qualification of quality is entrusted to the self-indication by the exporters and the manufacturers of export commodities. The export standards on quality to be applied to these commodities are also stipulated by the Government. Such items are diesel engines for railway vehicles, viscose staple fibre, rayon filament yarn, seeds, menthol, pyrethrum, dried aquatic products (excluding tangle), salted aquatic products; monosodium glutamate, timber of inch size (excluding lauan timber), flooring, electric poles, and railway timber. In the case of all these goods, manufacturers and exporters themselves inspect the quality of the commodities at their own responsibility in conformity with the inspection standards on quality, and indicate on the commodities "Export Standards," implying that their quality is in conformity with the fixed standards or marks of grades, together with the name or title of the organ and the date of indication, and report without delay to the Government Inspection Organs on the items of the designated commodities, their quantity and their destination, etc.

Apart from this procedure, the Government organs, too, conduct surprise inspections at any time on both designated commodities and others, in order to make sure that export inspection is properly conducted. The persons found violating the provisions of law in exporting their products are punished by three years' imprisonment or are fined upto 300,000 yen.

This brings us to the question of the agencies concerned with the task of inspection in Japan. There are six Government organs and 39 private institutions, authorised by the Government, to carry out inspection of exports. Both the Government and private agencies are well equipped with the necessary scientific personnel and research equipment for carrying out the inspection. The total number of officers in the Government institutes is 1,001 and the staff in the private institutes number as many as 3,567. The private institutions are absolutely independent of the industries concerned and work under the close supervision of the Government. Their status is equal to that of a judiciary and have excellent equipments for research as well. In all there were no less than 1,975 persons holding the designation of inspectors, as at the end of August 1959. It is thus evident that an elaborate machinery will be required in this country if it is to implement a comprehensive pre-shipment inspection scheme evolved on the Japanese model.

Applications are invited by **THE ANDHRA BANK LIMITED** for the post of STAFF TRAINING OFFICER to organise and conduct a STAFF TRAINING SCHOOL for the Bank. Only qualified candidates with specialised experience in the line need apply. Applications stating age, qualifications, experience and remuneration expected should reach THE GENERAL MANAGER, ANDHRA BANK LIMITED, HEAD OFFICE, MASULIPATNAM, not later than 15th NOVEMBER 1960.

historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India.

The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.

MARKED RISE IN EARNINGS OF D.C.M.

FURTHER DIVERSIFICATION OF ACTIVITY UNDER CONSIDERATION

A MARKED rise in earnings is disclosed by the accounts of the Delhi Cloth and General Mills Company Ltd. (Managing Agents: Messrs. Bharat Ram Charat Ram & Co. Private Ltd., New Delhi) for the year ended 30th June 1960. The gross profit, for instance, has recorded a rise of over Rs. 42 lakhs to Rs. 2.93 crores, thanks to an expansion of Rs. 1.71 crores in sales, consequent on an improvement in the working of the various units, notwithstanding several handicaps. With this rise, the upward trend in the Company's gross profit noted since 1956-57 has not only been maintained but has gathered momentum. Nevertheless, the gross profit still lags behind the record one of Rs. 3.24 crores earned in 1953-54, when the Company's sales aggregated no more than Rs. 19.42 crores. This shows how, despite the growth in various directions, the Company's profit margin has thinned down. This is not a peculiar feature of this Company alone and is due, as readers are well aware, to the all-round rise in costs.

The net profit, too, shows an impressive rise from Rs. 73.82 lakhs in 1958-59 to Rs. 104.42 lakhs, even after providing more for Managing Agents' remuneration, depreciation and taxation, as will be seen from the accompanying table. The total tax liability for the year under review is Rs. 126.50 lakhs (including taxation in Pakistan amounting to Rs. 38 lakhs), of which relief on account of foreign taxation is Rs. 26.50 lakhs, leaving a net tax liability of Rs. 100 lakhs. As much as 52 per cent. of the net profit, or Rs. 54.50 lakhs, is being ploughed back, as against 50 per cent. in the previous year. Last year, a sum of Rs. 30.03 lakhs was utilised to make some adjustments in respect of taxation, Managing Agents' remuneration and transfer to general reserve, but this came entirely out of the excess additional depreciation provided in previous years.

In consonance with the trend of profit, the dividend on ordinary shares is proposed to be raised from 10 per cent. to 12 per cent., both subject to deduction of tax. This works out to a tax-free distribution of 8.4 per cent., as against 7 per cent. for the previous year. In raising the dividend, the Directors have more than made good the cut made last year from 8 per cent. free of tax paid for each of the years 1957-58 and 1956-57. The additional tax burden which the Company has taken upon itself on behalf of the shareholders is Rs. 12.22 lakhs. This is on top of Rs. 10.18 lakhs paid in respect of 1958-59.

The results of the Company for the year under review are highlighted against the background of those for the previous three years in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sale proceeds	31,78.63	30,08.00	29,41.60	27,84.38

An idea of the working of the various units during the year under review can be had from the following extract from the Directors' report:

"Despite cost inflation, due to appreciable rise in cotton prices, owing to failure of crops, and enhanced incidence of wages and dearness allowance, following the implementation of the Textile Wage Board's recommendations, your textile units did well during the year. The working of silk factory, however, was handicapped on account of short supply of raw material. In spite of power supply difficulties, the working of Lyallpur Cotton Mills has been satisfactory. The working of the chemical division was marked by all-round improvement in production. However, profits of caustic soda plant have been seriously affected by price control enforced since October 1959. Fertiliser sales have shown an improvement, but will require intensive selling effort in the next few years for enabling our plant to run on full capacity. The vanaspati factory showed improvement in production, but the results have not been as satisfactory as last year, as a consequence of selling prices not moving in parity with the steep rise in oil prices. This trend may get more emphasised in the years to come. Sugar factories' working was normal. We are considering the expansion of our sugar factories. Slow, but steady, progress is being maintained in our confectionery business. The distillery showed a marked improvement all round."

The Company has a network of 275 retail shops and agencies to cater to the needs of the consumer directly at reasonable prices. The exports of cloth have increased, notwithstanding the import restrictions in the U.K. The Company has recently started exporting its Lyallpur Mills' products also.

In order to keep pace with the technological developments and to maintain the Company's competitive capacity, the Directors have taken in hand renovation and modernisation of one of the old units of the cloth mills at Delhi. Further proposals for diversification of manufacturing lines are under consideration.

The Company's balance-sheet as on 30th June 1960 shows that reserves and surplus stand at Rs. 467.21 lakhs, as against a paid-up capital of Rs. 410.76 lakhs. The borrowings (secured and unsecured), including debenture loans continue to be at a very high level, namely, Rs. 733.73 lakhs, or nearly 180 per cent. of the paid-up capital. The other current liabilities and provisions amount to Rs. 322.81 lakhs and are covered more than four times by current assets at Rs. 1,326.06 lakhs. The gross block of the value of Rs. 1,446.04 lakhs has been written down to Rs. 608.45 lakhs.

The Rs. 25 fully paid-up ordinary shares are being currently quoted at Rs. 35.35 *cum-div.*, at which rate and on an *ex-div* basis, the yield is 6.31 per cent. per annum, free of tax.

FORT GLOSTER CUTS NET DIVIDEND

CABLE PLANT DOING WELL

JUDGED against the background of the adverse turn against consumers in the raw jute and gunnies market since the end of November 1959, the performance of the Fort Gloster Industries Ltd. (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) during the year ended 31st March 1960 can be said to be satisfactory. Despite all penal measures to check speculation, prices of raw jute rose sharply on fears of acute shortage of fibre. Prices of finished goods, too, moved up in sympathy, but not in proportion to the increase in raw jute, with the result that simultaneous business became completely uneconomic during the latter part of the year under review. Nevertheless, the Company's gross profit has recorded an improvement to Rs. 37.94 lakhs from Rs. 36.58 lakhs earned in 1958-59, to which level it had jumped up successively from Rs. 12.46 lakhs in 1956-57.

The results would have been worse but for the favourable trading conditions in the earlier part of the year under review and the commencement of production of cables in January 1960. There has also been a gradual improvement in the output of cables since then. The Company had some difficulty in importing raw materials in the initial stages, but this has now been overcome to a large extent. The Company's cables are produced with the technical collaboration of British Insulated Callender's Cables Ltd., London, and are said to be popular with dealers and consumers. They have been approved by the Indian Standards Institution. There is no doubt competition from manufacturers of sub-standard cables, but the Directors hope that standard materials will continue to have its market. The full effect of the working of the Company's cable section will be reflected in the current year's results.

To revert to the financial results of the year under review. The provision for depreciation has been raised from Rs. 8.73 lakhs to Rs. 10.29 lakhs, while that for taxation has been pruned from Rs. 12.52 lakhs to Rs. 4.25 lakhs, consequent on the large development rebate to which the Company is entitled on its cable plant and on the additions to plant and machinery in jute mills. The net profit, therefore, shows a larger rise than the gross profit, having gone up from Rs. 12.03 lakhs to Rs. 20.42 lakhs. In order to get the benefit of development rebate, the Company has had to transfer as much as Rs. 13 lakhs to the development rebate reserve. The transfer of such a large slice of the net profit would have meant a drastic cut in the dividend on ordinary shares. In order to offset to some extent this inequitable position, the Directors have written back Rs. 5.50 lakhs from the general reserve. Even so, a reduction in net dividend has been inevitable after setting aside, as usual, Rs. 1.75 lakhs to the debenture sinking fund. The Directors have recommended a dividend of 25 per cent. on the fully paid-up and partly paid-up shares, subject to deduction of tax. This represents a tax-free distribution of 17.5 per cent. and does not compare favourably with the 20 per cent. free of tax paid for the previous year. They have also recommended a supplemental dividend of 3 per cent. and 2.14 per cent., on the 7 per cent. and 5 per cent. cumulative preference shares, respectively, payable in the event of the proposed amendment to the Company's Articles of Association to vary the dividend rights of the preference shares being approved.

The following comparative table gives an idea of the Company's progress since 1956-57:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sales	3,84.73	3,82.27	4,02.02	3,96.37
Other income	2.64	24.10	2.79	1.48
Closing stocks of gunnies	27.91	18.47	13.92	16.68
Raw jute consumed	2,02.84	2,25.20	2,33.56	2,36.46
Other expenses	1,56.02	1,49.14	1,43.38	1,40.77
Gross profit	37.94	36.58	25.03	12.46

Carry forward	0.72	1.94	2.54	2.45

* Subject to deduction of tax.

The outlook for the current year is rendered somewhat obscure by the uncertain position in respect of the 1960-61 raw jute crop. While official sources say that the crop is fairly satisfactory, though they add that a correct assessment would be possible only after six weeks from now, trade circles fear an acute shortage of fibre, necessitating a scaling of looms. The Company's second phase of modernisation has been handicapped due to import restrictions for want of foreign exchange. Licence for the import of a part of machinery has, however, been granted very recently and some of the machinery is expected to arrive by May 1961.

The Company's financial position is quite satisfactory, though borrowings constitute a high proportion of its working capital. Considering the size of the undertaking, the paid-up capital is small at Rs. 63 lakhs and this is supplemented by reserves and surplus amounting to Rs. 84.37 lakhs. The total borrowings (including those against debentures) have gone up over the year from Rs. 79.77 lakhs to Rs. 144.12 lakhs, while the other current liabilities and provisions stand at Rs. 80.31 lakhs. The additions to the gross block during the year under review were of the order of Rs. 82.23 lakhs, raising the total value as at the end of the year to Rs. 341.70 lakhs. The book value thereof as at the end of the year is Rs. 172.65 lakhs. Capital works-in-progress amount to Rs. 88,353. The current assets, investments, book debts and cash balances aggregate Rs. 198.27 lakhs.

The current market value of the Company's Rs. 100 fully paid-up ordinary shares is Rs. 335 *cum-div.* On an *ex-div.* basis, the yield works out to 5.5 per cent. per annum, free of tax.

TRITON INSURANCE CO., LTD.

A.D. 1959 was a year of satisfactory working for the Triton Insurance Company Ltd. (Managing Director: Sir John Brown, Calcutta). The net profit is higher at Rs. 3.58 lakhs, as against Rs. 2.94 lakhs in the previous year. The Directors have, however, thought it prudent to make some provision for the rainy day. After maintaining the dividend at the previous year's level of 45 per cent., but subject to deduction of tax (the net return to shareholders is, therefore less, at 31.5 per cent.) the whole of the balance of Rs. 1.88 lakhs has been carried forward, as against a mere Rs. 89,047 carried forward in the previous year.

The combined net premium amounted to Rs. 34.11 lakhs, comprising Rs. 23.48 lakhs in the fire department, Rs. 8.06 lakhs in the marine department and Rs. 2.57 lakhs in the miscellaneous department, as against Rs. 37.18 lakhs in the previous year. The decline in premium in the fire department was sharp, from Rs. 28.39 lakhs to Rs. 23.48 lakhs. Thus the prediction made by the Directors in the previous year's report that, as a consequence of the special reinsurance cession in reciprocation of certain credits built up in the previous years having come to an end, premiums from that source would be lower, has come true. The unexpected drop in reinsurances received from treaty reinsurers was another contributing factor. Claims aggregated Rs. 15.26 lakhs, as against Rs. 16.04 lakhs in the previous year. In the fire department, claims experience, especially in respect of the Company's overseas fire business, was adverse. Nevertheless, the accounts shows a higher profit of Rs. 4.64 lakhs, as against Rs. 3.15 lakhs for 1958. The only other department which showed a profit, though nominal, is the miscellaneous portfolio. The marine department, which yielded a surplus of Rs. 3,271 last year, was in the red to the extent of Rs. 58,910 in the year under review. This loss, the Directors point out, was mainly due to the higher hail damage claims from North Indian tea gardens. The miscellaneous account showed a higher profit margin, Rs. 28,768, as against a mere Rs. 4,449 in 1958, thanks to cautious underwriting. The net departmental contributions to the profit and loss account, after meeting claims, expenses of management and commission and maintaining the reserves for unexpired risks at 50 per cent. of premium in both the fire and miscellaneous department, excluding additional reserves, and 100 per cent. in the marine department, were Rs. 4.34 lakhs. After charging expenses not applicable to any particular account, providing for taxation and taking credit for forfeited dividends and profit on investments, there remained a balance of Rs. 3.58 lakhs. This, together with Rs. 89,047 brought in from the previous year's account, made available for distribution Rs. 4.47 lakhs. The dividend of 45 per cent. per share of Rs. 25 paid-up, absorbed Rs. 2.59 lakhs, leaving Rs. 1.88 lakhs to be carried forward.

UNDER SECRETARY TO G... 25 OCT 1960 PUBLIC DEPARTMENT

UNITED INDIA FIRE AND GENERAL INSURANCE CO., LTD.

ACTING CHAIRMAN, MR. N. RAMA RAU, SAYS CEILING ON EXPENSES NEEDS REVISION

THE formula for the limitation of expenses of management of insurance companies, which had attracted a good deal of criticism of late, came in for renewed attack at the hands of Mr. N. Rama Rau, Acting Chairman of the United India Fire and General Insurance Company. Addressing the shareholders at the Twenty-second Annual General Meeting of the Company held at Madras on 27th September 1960, Mr. Rama Rau observed that there was no rational basis for the limitation of expenses fixed under Section 40-C of the Insurance Act and Rule 17-E of the Insurance Rules and that the changed and changing conditions made the formula positively unrealistic and nearly unworkable. He regretted that nothing had so far been done to alter the rule suitably. Referring to the suggestion for group working, Mr. Rau said that a change in the general outlook of insurance in regard to the future organisation of business was necessary for it to be made a practical proposition.

The following are extracts from Mr. Rama Rau's speech:
